12/1/08 JOINT HEARING: DNR PERMITTING ISSUES

Joint House Judiciary and Resources Committee Hearing
DNR Permitting Issues
Monday, December 01, 2008

House Judiciary Members confirmed: Rep. Ramras, Chair; Rep. Dahlstrom, Vice-Chair; Rep. Coghill; Rep. Lynn; Rep. Samuels; Rep. Gruenberg (via teleconference)

House Resources Members confirmed: Co-chairs Rep. Johnson and Rep. Gatto; Rep. Seaton; Rep. Wilson; Rep. Kawasaki (via teleconference)

Tentative format for invited testimony:

Mr. Danny Davis, Escopeta Oil Co., Ltd.

Mr. Bruce Webb, Aurora Gas

Mr. Craig Haymes, ExxonMobil Corporation

Alaska Department of Natural Resources:
Commissioner Tom Irwin
Deputy Commissioner Marty Rutherford
Director Kevin Banks, Oil & Gas Division

Debra Higgins

Subject: FINALLY, the DENIAL of the Corsair Expansion

Attachments: DENIAL Corsair Appeal of unit expansion 12.03.08.pdf

Dear Representatives,

Apparently your hearing had little to effect on the Cook Inlet's ability to get a jack-up drilling rig, increase production, or supply hundreds of local jobs.

Rep. Ramrus asked Irwin "what if you had to make a decision?" Well he did. The same old story.... "NO!"

Attached is the DENIAL of the Corsair Unit Expansion Appeal that had sat on his desk for six months. If he (they) knew the answer was going to be no, why did they wait so long?

IT IS A SAD STATE OF AFFAIRS WHEN APPOINTED STATE OFFICIALS IGNOR THE VOICES OF THE PEOPLE OF ALASKA AND THEIR ELECTED REPRESENTATIVES.

Instead of just sitting there rolling their eyes and looking at the floor, they might as well have just spat in your face.

I am disgusted with this administration. It is time for a house cleaning. Seriously, as a life-long, loyal Alaskan, this makes me sick.

I hope Pacific Energy takes this to the Superior Court where they can get fair, unbiased treatment.

CORSAIR UNIT AGREEMENT

V. FINDINGS AND DECISION Page 12

VI. APPEAL Page 13

1810

I. INTRODUCTION

Pacific Energy Resources Limited (PERL), the Corsair Unit (Unit) operator, filed an application for the First Expansion of the Corsair Unit (Application) with the State of Alaska Department of Natural Resources (DNR), Division of Oil and Gas (Division), on March 26, 2008. On April 30, 2008, the Division Director denied the Application (Decision). On May 16, 2008, PERL appealed the Decision to the DNR Commissioner.

PERL asserts, among other things, that approval of the Application best serves the State's and public's interest, as well as PERL's, by preserving its ability to explore and develop the entire Unit structure as the sole working interest owner, and that "fragmentation of the Corsair structure into unitized and non-unitized parcels with different working interest owners would ultimately result in a waste of both economical and physical resources." PERL also maintains that approval of the Application and the proposed Expansion Plan of Exploration (POE) would result in the leases being drilled sooner than on a lease-by-lease basis. Finally, PERL asserts throughout its appeal that without the expansion leases, delivering a jack-up drilling rig to Cook Inlet, as required under the Unit's Initial POE, as amended, would be uneconomic.

II. SUMMARY OF DECISION

I affirm the Decision denying the Application as not in the public interest because it does not promote 1) the conservation of natural resources and 2) the prevention of economic and physical waste any more than non-unitized development of the individual leases, and 3) does not provide for the protection of all parties of interest, including the State. 11 AAC 83.303.

PERL submitted the Application just 42 days before the leases would expire, proposing expansion of the Unit as an oil play and delays to the existing work commitments. PERL states that it had not fully assessed the economic feasibility of the work commitments it agreed to when it assumed and accepted designation as Successor Unit Operator. The State's interest is not served by the unitization of soon-to-expire acreage, especially when an operator has not fulfilled its existing POE work commitments. DNR must be able to rely on commitments made by unit operators. When it assumed Unit operatorship, PERL committed to submit a jack-up rig contract to DNR by December 31, 2007, and bring a jack-up rig to Cook Inlet to drill for gas in the Unit by December 31, 2008. PERL defaulted on its rig contract deadline commitment and DNR has already extended the drilling deadline to June 30, 2009. Now, as part of the Application, PERL seeks to further delay well drilling in the Unit until December 31, 2009.

III. BACKGROUND

The Unit, formed effective January 31, 2007, is located in the center of upper Cook Inlet, approximately 12 miles southwest of North Cook Inlet Field. The existing Unit area covers approximately 10,185 acres including four State of Alaska oil and gas leases. The Unit's Initial five-year POE required Forest Oil Corporation (Forest), the original Unit

Operator, to, among other things, 1) provide a drilling rig commitment by December 31, 2007, 2) drill an exploration well by December 31, 2008, 3) seek participating area approval before January 31, 2010, 4) consider drilling a second exploration well before January 31, 2011, and 5) seek plan of operation approvals for pipeline and facilities construction, before January 31, 2012, to permit commercial gas production from the Unit.

On August 27, 2007, PERL acquired 100 percent of the working interest in the Unit leases from Forest. On November 6, 2007, the Division approved the assignment of Forest's lease interests PERL. On November 14, 2007, Forest resigned and designated PERL as Successor Unit Operator. On November 26, 2007, PERL "accept[ed] and assume[d] all rights and obligations as Successor Unit Operator . . . ." The Division approved PERL as Unit Operator on December 19, 2007.

On December 4, 2007, before the Division approved PERL as Unit Operator, PERL requested that the Division delay all the Initial POE commitments by one year, so that, for example, the drilling rig and initial exploration well commitments would be delayed to December 31, 2008, and December 31, 2009, respectively. These initial requests to delay were denied because PERL was aware of these obligations when they acquired this asset and committed to DNR that they would be able to meet the existing deadlines when they asked the Division to approve the assignments and accepted Successor Operatorship of the Corsair Unit.

PERL failed to fulfill the December 31, 2007, commitment to provide evidence satisfactory to the Commissioner of a rig contract that would enable PERL to meet the December 31, 2008, well drilling requirement set out in the Initial POE. Thus, on December 31, 2007, the Director defaulted the Unit and demanded, as a cure, that PERL provide evidence of a rig contract by April 1, 2008.

On January 4, 2008, PERL again requested that the Division delay the initial well drilling commitment by one year—until December 31, 2009.

On January 29, 2008, the Division extended the well drilling commitment by six months—until June 30, 2009, subject to PERL curing the drilling rig commitment by April 1, 2008, as set out in its December 31, 2007, default decision. PERL submitted a rig contract on March 14, 2008, thereby curing the default.

PERL filed the Application with DNR on March 26, 2008. It proposed an expansion of the Unit to include four additional State oil and gas leases, ADLs 389513, 389514, 389507, due to expire on April 30, 2008, and 389923 due to expire on December 31, 2008. The proposed expansion would add approximately 16,546 acres to the Unit. PERL holds 100 percent of the working interest in the existing Unit leases, as well as the leases proposed for expansion. The Application included a revised Plan of Exploration (Expansion POE), Exhibit G to the Corsair Unit Agreement (UA). In the Expansion POE

PERL proposed to drill three wells by December 31, 2009, and retain the other work commitments as set out in the Initial POE.

On April 1, 2008, the Division approved a rig contract submitted by PERL on the condition that, among other things, it provide a copy of a signed heavy lift vessel contract to the Division by July 31, 2008.

On April 30, 2008, the Division issued the Decision, which denied the expansion based on the following points.

1. No drilling had occurred within the primary term of the proposed expansion leases.

2. PERL will neither fulfill the Initial POE drilling work commitment by December 31, 2008, nor has it yet fulfilled the June 30, 2009, drilling commitment.

3. Unitization is meant to facilitate efficient reservoir production, not to enable warehousing of acreage. The proposed Unit expansion will not guarantee delineation and production of the identified oil prospect sooner than lease-by-lease development.

4. Unitization is not necessary to promote the development of a single resource by multiple working interest owners, because there is only one working interest owner, PERL, in the Unit and the proposed expanded Unit.

5. The Expansion POE would extend the Initial POE, as amended, June 30, 2009, drilling date until December 31, 2009. This is an unacceptable delay in drilling the Unit's prospects.

The Appeal, submitted on May 16, 2008, included supplemental confidential geophysical, geological, and engineering data. PERL did not request an extension for the submission of additional material and it did not request a stay of the Decision under 11 AAC 02.030(f). Despite the fact that it had submitted an acceptable drilling rig contract on March 14, 2008, which cured the Unit default, PERL now asserts throughout the Appeal that it would be uneconomic to deliver a jack-up rig to Cook Inlet and drill an exploration well in the Unit without the expansion leases.

On July 8, 2008, PERL requested, among other things, that the Division delay the July 31, 2008, heavy lift vessel contract deadline for sixty days.

On July 22, 2008, PERL clarified that it was seeking the heavy lift vessel contract deadline delay for the "*existing*" Unit leases.

On July 30, 2008, the Division approved, among other things, PERL's request to delay the heavy lift vessel contract deadline by sixty days. The Division approved the request because the delay would not, in its estimation, delay the June 30, 2009, drilling date deadline set out in the Initial POE, as amended. The Division also opined that it "interprets PERL's vessel contract extension request as a repudiation of its appeal argument that delivering a rig is uneconomic with the expansion leases." The Division observed that PERL provided no evidence for its assertion that the rig delivery would be uneconomic without the expansion leases.

On September 24, 2008, PERL requested a further delay, until October 31, 2008, of the heavy lift vessel contract deadline. The Division again approved extension of the heavy lift vessel contract deadline, until October 31, 2008.

On October 31, 2008, PERL submitted a heavy lift vessel contract. The Division did not accept the contract as a fulfillment of the work commitment and effective December 1, 2008, placed the Corsair Unit in default with a default cure period of ninety days.

IV. DISCUSSION of DECISION CRITERIA

The Appeal's title indicates that PERL seeks to both appeal and request reconsideration of the Decision. But, the text of the submittal refers to an appeal. Under 11 AAC 02.010(g) a person may not both appeal and request reconsideration of a decision. 11 AAC 02.010(e) applies here because the Commissioner did not sign or cosign the Decision. In a June 16, 2008, letter, DNR acknowledged acceptance of the Appeal.

AS 38.05.020(b)(4), AS 38.05.180(p), and Article 13.1 of the UA give the DNR Commissioner broad authority to consider an oil and gas unit expansion. See Exxon Corporation v. State of Alaska, 40 P.3d 786 (Alaska 2001).

I review unit expansion applications under the criteria set out in 11 AAC 83.303 (a) and (b). As set out below, I affirm the Decision denying the Application as not in the public interest because it does not promote 1) the conservation of natural resources and 2) the prevention of economic and physical waste any more than non-unitized development of the individual leases, and 3) does not provide for the protection of all parties of interest, including the State. My discussion of the subsection (b) criteria, as they apply to the Appeal, is set out directly below, followed by a discussion of the subsection (a) criteria.

A. Decision Criteria considered under 11 AAC 83.303(b)

1. The Environmental Costs and Benefits of the Expansion

Unitization is not required to drill wells, produce hydrocarbons and build infrastructure. Lease terms may be extended by production without unitization. Unitization may lessen environmental risks by reducing redundant facilities because it often unites multiple owners of a common resource and promotes the sharing of the cost and ownership of drill

rigs, facilities, and infrastructure, thereby reducing the environmental impact of redundant facilities.

PERL has proposed expanding the Unit, which was formed as a gas prospect, to include an oil prospect and to shift the primary target from gas to oil. In this case, PERL holds 100 percent of the working interest in the prospect that it now describes as an oil prospect underlying the Unit and the four leases proposed for expansion.

Expansion would probably not create an additional environmental risk because PERL would be the sole Operator on the prospect. Without approval, the proposed expansion leases expire and another lessee could obtain the acreage at the next lease sale. This would result in multiple owners of the oil prospect described by PERL. The cost of a drill rig would most likely be shared by parties interested in using it; unitization is not required for multiple owners to contract to share costs for exploring acreage. It is highly unlikely that lessees would bring multiple rigs to Cook Inlet because the redundant expense would not be in their financial interest.

2. The Geological and Engineering Characteristics of the Reservoir and Prior Exploration Activities of the Corsair Unit Area

Corsair Expansion Prospect

The January 31, 2007 approval of the formation of the Corsair Unit provides an in depth discussion of the Corsair prospect as does the Decision. Both decisions reference prior exploration activities in the area, mostly focused on the work by ARCO which referred to the greater geologic trend called Sunfish of which the Corsair prospect is a part. In considering the Corsair Unit Expansion application, DNR summarized the Corsair Unit prospects:

> The Corsair Unit as currently configured contains two types of hydrocarbon prospects. The primary target consists of Sterling and Beluga gas sands; a secondary target is the deeper Tyonek oil sands. In the acreage under consideration for expansion (both northern and southern leases) only a single hydrocarbon target is viable, the Tyonek oil sands. Maps provided by PERL show the expansion acreage underlain by oil-bearing sandstones of the Tyonek Formation. The gas cap located in the crestal region of the anticline is absent in both the northern and southern expansion acreage.

The existing unit overlies the crest of a geologic structure closed at all levels of economic interest. This is commonly referred to as the SRS structure. The expansion area is restricted to the SRS structure and adds acreage structurally low to the existing unit. A saddle exists between this structure and the North Cook Inlet structure to the northeast. Five wells have been drilled on the SRS structure by various operators from 1962 to 1993. These wells had numerous oil and gas shows throughout the Kenai Group as well as drill stem tests which recovered both oil and gas.

Under 11 AAC 83.306 (4) the applicant must provide the following in order for the division to deem an application complete:

(4) all pertinent geological, geophysical, engineering, and well data, and interpretations of those data, directly supporting the application;

The commissioner must consider the geological and engineering characteristics of the potential hydrocarbon accumulation or reservoir proposed for unitization, 11 AAC 83.303 9b) (2). The Division deemed the Application complete effective March 26, 2008.

Under 11 AAC 83.395. Definitions:

(5) "potential hydrocarbon accumulation" means any structural or stratigraphic entrapping mechanism which has been reasonably defined and delineated through geophysical, geological, or other means and which contains one or more intervals, zones, strata, or formations having the necessary physical characteristics to accumulate and prevent the escape of oil and gas;

The geological and geophysical data provided with the application, although complete, do not support the structural mapping on which the extent of the potential hydrocarbon accumulation is based. Therefore the proposed hydrocarbon accumulation has not been reasonably defined or delineated and does not justify expansion of the Corsair Unit.

3. Plan of Exploration and Development for the Proposed Expanded Corsair Unit

The Initial POE, as amended on January 29, April 1, and July 30, 2008, requires PERL to, among other things, submit a heavy lift vessel contract by September 29, 2008, deliver a jack-up rig, and drill an exploration well in Cook Inlet by June 30, 2009. This well drilling date represents a Division-approved six-month extension to the Initial POE, which required drilling by December 31, 2008. Under the Expansion POE, PERL sought a further six-month delay to the well drilling commitment until December 31, 2009. In its Appeal, PERL asserts that it is not requesting an extension of the June 30, 2009, date for the initial exploration well, but the language of the Expansion POE belies that assertion—"[b]y December 31, 2009, the Unit Operator will drill three (3) Exploration wells . . . ."

The State approved the Unit because Forest committed to deliver a jack-up drill rig to Cook Inlet and drill a well on a natural gas prospect in less than two years from the effective date of unitization. The potential benefits the State would reap from the delivery of a jack-up to Cook Inlet outweighed the risk that the operator would fail to develop the leases because of known geologic and economic risks. The Initial POE committed Forest and PERL, when it "accept[ed] and assume[d] all rights and obligations as Successor Unit Operator . . . ." on November 26, 2007, to drill by December 31, 2008, or the Unit would automatically terminate and all the leases would return to the State. Thus, the acreage, upon Unit termination, would immediately return

to the State effective January 1, 2009, well within the required time for the acreage to be listed as available in the May 2009 Cook Inlet Sale (May 2009 Sale).

The expiration date of three of the four Unit leases was April 30, 2007. If the leases had expired, rather than being extended by unitization, they would not have been available in time to be listed in the May 2007 Cook Inlet Sale, but they would have been listed in the May 2008 Cook Inlet Sale (May 2008 Sale). By approving the Unit, and extending the lease terms, the State missed the opportunity to receive bids on the leases in the May 2008 Sale, but exchanged the value of those bids for bid deferment payments set out in the Initial POE. If the Operator failed to fulfill the commitments in the Initial POE, the unit would terminate and the operator would pay a penalty per acre of expired acreage.

When PERL accepted and assumed the rights and obligations of Successor Unit Operator, it committed to fulfill the duties and obligations in the UA and the Initial POE, which contained the commitments Forest promised to uphold in exchange for the DNR approval of the Unit.

In the Expansion POE, PERL again proposes a well drilling date one year later than set out in the Initial POE, but also commits to drilling more wells and to pursue oil as a primary target instead of gas. The establishment and repeated fulfillment of work commitments by operators, as set out in POEs, establishes credibility. The Division has approved one six-month extension of the drilling date, as well as extensions of the drilling rig contract and heavy lift vessel contract deadlines. PERL now proposes yet another extension to drill for oil, not gas. PERL's commitment to drill more wells and pursue the structure's oil prospect lacks credibility based on its non-performance of existing commitments.

4. The Economic Costs and Benefits to the State and Other Relevant Factors

PERL filed an Application to expand the Unit to include leases that were not drilled during their primary terms just before they were due to expire, and seeks to further delay commitments that it accepted and assumed in the Initial POE.

The opportunity to promote exploration for gas reserves in Cook Inlet in a short time frame with a jack-up rig, which could be used in other parts of the Inlet, was valuable to the State when it approved the Unit. Having a jack-up brought to Cook Inlet was the benefit the State bargained for when it approved the Unit. The utilities serving Southcentral Alaska have not been able to contract for the supplies they need prospectively. Discovery and development of additional natural gas reserves soon provides enormous benefits and security to the residential, utility, and industrial users of natural gas in the region. PERL's Expansion POE would alter and further postpone realizing those benefits by targeting oil in addition to gas in the structure and delaying the Initial POE well drilling commitment.

PERL maintains that the optimal development path of the Corsair structure, as they describe it, is by a single owner, PERL, performing drilling and evaluation of well results

to determine the best location of the next well. PERL maintains that the optimal manner in which to test the Corsair structure, as PERL has mapped and described it, is for a single owner, PERL, to drill and evaluate the exploration prospect.

DNR is charged with, among other things, maximizing competition among parties seeking to explore and develop the resources; AS 38.05.180(a)(1)(B). Allowing PERL to retain non-producing acreage beyond its primary term, through unitization, decreases competition to explore for and develop the resource. The proposed expansion leases, without unitization, will expire and be available at the May 2009 Sale allowing for maximization of competition for the right to explore within primary term and develop the leases.

Although failure to fulfill the Initial POE, as amended, as well as the proposed Expansion POE, would result in bid deferment payments to the State, these payments are not intended to be used as a substitute for the sale process and further extension of lease terms and work commitments.

B. Decision Criteria considered under 11 AAC 83.303(a)

1. Promote the conservation of all natural resources and the prevention of economic and physical Waste

PERL asserts that "[t]he fragmentation of the Corsair structure into unitized and non-unitized parcels with different working interest owners would ultimately result in waste of both economical and physical resources." Appeal at p. 2. PERL expands on this point arguing that 1) without the jack-up rig in Cook Inlet no leases or units will be explored and produced in Cook Inlet, and 2) re-leasing the acreage would lead to "redundancy in facilities, operations and expenditures that would result in economic waste . . . . and physical waste."

Waste is generally defined as the ultimate loss of oil or gas. Conservation is generally the prevention of physical and economic waste.

PERL argues that expansion would conserve whatever oil and gas there is under the existing Unit and expansion leases more than re-leasing the acreage because there would be one set of facilities rather than two. This argument is unreasonable. First, it totally discounts the chance that PERL may get the leases in the next lease sale. PERL's arguments on this point are too speculative—it could get the leases back in the next lease sale or parties could share the cost of a jack-up rig, as PERL implies, to drill multiple reservoirs. Given the history here, the likelihood of redundant facilities is remote. Second, PERL argues, on the one hand, that if I deny expansion it will not deliver a jack-up rig and "no" units or leases will be produced in Cook Inlet, and on the other hand, re-leasing will lead to redundant facilities. Under PERL's theory, if it does not deliver a jack-up rig to Cook Inlet, there will be no additional Cook Inlet exploration and production; if there is no additional exploration, there cannot be any redundant facilities.

Third, redundant facilities may have environmental consequences, but do not necessarily lead to the ultimate loss of oil and gas.

Whether PERL re-leases the acreage or not, the cost of a jack-up drill rig will most likely be shared by parties interested in using it; unitization is not required for multiple owners to contract to share costs for exploring acreage. It would be highly unlikely that lessees would deliver multiple jack-up rigs to Cook Inlet because of the excessive expense.

I agree that without a jack-up rig in Cook Inlet, which PERL committed to deliver when it assumed and accepted its duties as Successor Unit Operator, neither the Unit nor other offshore leases in the area will be explored and produced. It is my desire that PERL fulfill its commitments to deliver a rig and a drill wells in the Unit. If PERL does not fulfill its commitments, the State will endeavor to find another lessee who will deliver a rig for use in Cook Inlet.

DNR questions the validity of any economic conclusions regarding the feasibility of pursuing the oil or gas prospect because PERL has not obtained or submitted enough data to make those conclusions. PERL first asserted that the project economics without the expansion were untenable, then asserted on July 22, 2008 that the project economics were sufficient without the expansion leases. Without additional data from a well drilled on the structure that PERL describes, DNR cannot determine conclusively whether there is resource to conserve. PERL has not obtained or submitted enough data for the DNR to concur that the structure underlies one third, all, or none of its leases.

2. Provide for the protection of all parties of interest, including the State.

The Unit formation was in the State's interest because it was based upon the Operator's (then Forest) commitment to bring a jack-up to Cook Inlet. Forest made this promise based on a gas play underlying the four Corsair leases. DNR approved the Unit, even though the leases had not been drilled during the primary term, because the operator promised to deliver a jack-up rig to Cook Inlet and drill a well less than two years from lease expiration.

PERL assumed Unit operatorship on November 26, 2007, which the Division approved on December 19, 2007. That approval obligated PERL to fulfill the duties and obligations set out in the Initial POE. That plan contained the commitments Forest had promised in exchange for the DNR approval of the Unit.

PERL submitted the Application 42 days before three of the four proposed expansion leases were due to expire. Unless the leases were included in a unit by April 30, 2008, they would return to the state under their terms. An application to expand (or form) a unit requires a 30-day public notice period, which must commence within ten days of the application being deemed complete for consideration. 11 AAC 83.311. Generally, the Division recommends a lead time of at least 100 days before lease expiration to consider a unit application.

The Application proposed, yet again, delaying the deadline for drilling a well in the Unit. PERL proposed an oil prospect underlying the expansion leases that had only been mapped the week before, according to PERL. PERL stated that "without the expansion leases, the prospect is uneconomical and PERL will not be able to justify the delivery of a jack-up drilling rig to the Cook Inlet." I agree with the Division that PERL repudiated this argument when it sought a two-month delay in the heavy lift vessel contract deadline. I, too, expect PERL to deliver a jack-up rig to the Unit in time to drill a well by June 30, 2009.

It is not in the State's interest to renegotiate a commitment and extend additional lease primary terms through unitization when no work was completed by any lessee during the lease primary terms. PERL appears to have not fully and seriously considered the commitment it assumed when it purchased Forest's working interests in Cook Inlet, accepted Forest's assignment of Successor Operator and received DNR's approval as Successor Unit Operator. It is the Operator who must prudently consider and weigh commitments before making them; it is not in the States' interest to accommodate late planning.

If the State were to approve the expansion, DNR would effectively provide PERL an advantage other nearby leaseholders do not have. The lessee must make a significant commitment of resources towards development of leases before the Division will agree to a unit expansion. Otherwise, the lessee is using the unitization process as a tool to avoid lease expiration and hold acreage out of a lease sale.

Although PERL may benefit from the extension of its lease beyond its primary term there are no additional benefits to the State. Unit expansion will not guarantee delineation and production of the prospect sooner than lease-by-lease development by any lessee. No drilling has occurred within the primary term of the proposed expansion leases. Approval of the Unit yielded a potential benefit to the State--jack-up rig delivery and a well within two years--although no wells had been drilled in the primary term.

PERL now seeks to further delay that the well drilling date without any guarantee to the State that it will fulfill this its commitment. Alternatively, the State's interest is protected by strictly enforcing the obligations under the Initial POE, as amended, with the drill date of June 30, 2009. Failure to fulfill the commitment may result in Unit termination, lease expiration, and acreage available for competitive bidding.

V. FINDINGS AND DECISION

1. No drilling or production has occurred within the primary term of the proposed expansion leases. PERL has yet to fulfill its paramount POE commitments—to deliver a rig to the Cook Inlet and drill a well by June 30, 2009.

2. PERL has not presented conclusive geological, geophysical, engineering or economic data to support its conclusions that the Corsair structure underlies the expansion

leases and that without those leases, pursued as an oil play, the economics of rig delivery are infeasible.

3. Unitization is meant to facilitate efficient reservoir production, not to enable lessees of soon-to-expire leases to propose more preferable work commitments.

4. Unitization is not necessary to allow multiple owners of leases to form contractual arrangements that provide for the sharing of costs.

5. I affirm the April 30, 2008, Director's Decision.

VI. APPEAL

This is a final administrative order and decision of the DNR for purposes of an appeal to Superior Court. An appellant affected by this final order and decision may appeal to Superior Court within 30 days in accordance with the rules of the court, and to the extent permitted by applicable law.

October 21, 2008

DECISION

Doyon, Limited
1 Doyon Place, Suite 300
Fairbanks, Alaska 99701-2941

Exploration License
ADL 390079

NENANA EXPLORATION LICENSE NO. 1
EXTENSION APPROVED

The State of Alaska, Department of Natural Resources, Division of Oil and Gas (Division) issued the Nenana Basin Exploration License No. 1, ADL 390079, effective October 1, 2002, with a seven-year primary term. The current licensees are Doyon, Limited (40%), Usibelli Energy, LLC (40%) and Arctic Slope Regional Corporation (20%). The license is due to expire September 30, 2009.

On June 25, 2008, Doyon, Limited, as notification lessee, requested that the license term be extended to ten years as allowed by law. The original work commitment has been met; however, due to unforeseen circumstances, the licensees were not able to accomplish additional exploration as planned.

On September 15, 2008, the Division invited public comment on the proposed license extension pursuant to public notice statutes and regulations. Comments were to be received by no later than 5:00 p.m. October 15, 2008. The Division received two comments, one from the Department of Fish and Game and the other from the Resource Development Council. Both agencies' comments were favorable to the extension.

After consideration of the case file and public comments, the Division hereby grants the three year term extension for Nenana Exploration License No. 1 with a new expiration date of September 30, 2012. The licensees must provide the Division with all data obtained to date and during the extended period. When the decision becomes final, the casefile records will be updated without further notice.

A person affected by this decision may appeal it, in accordance with 11 AAC 02. Any appeal must be received within 20 calendar days after the date of "issuance" of this decision, as defined in 11 AAC 02.040(c) and may be mailed or delivered to Tom Irwin, Commissioner, Department of Natural Resources, 550 W. 7thAvenue, Suite 1400, Anchorage, Alaska 99501; faxed to 1-907-

269-8918, or sent electronic mail to dnr_appeals@dnr.state.ak.us. This decision takes effect immediately. If no appeal is filed by the appeal deadline, this decision becomes a final administrative order and decision of the department on the 31st day after issuance. An eligible person must first appeal this decision in accordance with 11 AAC 02 before appealing this decision to Superior Court. A copy of 11 AAC 02 may be obtained from any regional information office of the Department of Natural Resources.

C. Current and Projected Uses

The Cook Inlet area's abundant moose, black and brown bear, caribou, and waterfowl, and many fish species form the resource base for subsistence, sport, commercial, personal use, and educational harvest activities, which are integral to the history and culture of the area, as well as contributing significantly to the economy. Residents and visitors use the area extensively for recreation and tourism. Other abundant natural resources support timber, agriculture, mining, and oil and gas industries.

D. Oil and Gas in Cook Inlet

The proposed Cook Inlet lease sale area has low to moderate petroleum potential, based on factors including geology, seismic data, exploration history of the area, and proximity to known hydrocarbon accumulations. Cook Inlet is a mature, producing petroleum basin, which has had extensive exploration and development over the past 40 years. The area continues to be of interest to the petroleum industry, with annual oil production of 6 million bbls (barrels) and annual gas production of 196 Bcf (billion cubic feet) in 2006.

Oil and gas activities proceed in phases; each subsequent phase's activities depend on the completion or initiation of the preceding phase. During the lease phase, the first step in the process of developing the state's oil and gas resources after the best interest finding process, the state conducts competitive areawide sales of oil and gas leases, offering for lease all available state acreage within the sale area. An oil and gas lease grants to the lessee the exclusive right to drill for, extract, remove, clean, process, and dispose of oil, gas, and associated substances; however, a plan of operations, subject to a myriad of regulatory authorities and permits, must be approved before any operations may be undertaken on or in the leased area. In the exploration phase, information is gathered about the area's petroleum potential by examining surface geology, researching data from existing wells, performing environmental assessments, conducting geophysical surveys, and drilling exploratory wells. During the development phase, operators evaluate the results of exploratory drilling and develop plans to bring the discovery into production. Production operations bring well fluids to the surface and prepare them for transport to the processing plant or refinery.

Over 5.9 million acres of state land have been leased in 52 state oil and gas lease sales in the Cook Inlet area since 1959, generating up to $67.7 million in bonuses received by the state. As of April 2008, over 1 million acres were under lease, 483,253 acres offshore and 605,144 acres onshore.

The location and nature of oil or gas deposits determine the type and extent of facilities necessary to develop and transport the resource. However, modern oil and gas transportation systems usually include the following major components: 1) pipelines; 2) marine terminals; and 3) tank vessels. Oil and gas produced in the proposed lease sale area would most likely be transported by a combination of these depending on the type, size, and location of the discovery. Because the Cook Inlet Basin has produced oil and natural gas since the 1960s, it has a well-developed infrastructure for transporting petroleum, especially in upper Cook Inlet.

The risk of a spill exists any time crude oil or petroleum products are handled. Oil spills associated with the exploration, development, production, storage, and transportation of crude oil may occur from well blowouts, or pipeline or tanker accidents. Since 1999, there have been 18 crude oil spills in the Cook Inlet area of 100 gallons or more from pipelines, platforms, onshore production facilities, storage facilities, and marine tankers. Six of these were more than 500 gallons.

E. Governmental Powers to Regulate Oil and Gas

All exploration lease activities are subject to numerous federal, state, and local laws and regulations with which the lessee is obligated to comply. These government agencies have a broad spectrum of

authorities to regulate and condition activities related to oil and gas, and their role in the oversight and regulation of oil and gas activities differ, although some agencies may have overlapping authorities. These agencies include the Alaska Departments of Natural Resources, Environmental Conservation, and Fish and Game; the Alaska Oil and Gas Conservation Commission; the U.S. Environmental Protection Agency; the U.S. Army Corp of Engineers; the U.S. Fish and Wildlife Service; and the National Marine Fisheries Service.

F. Reasonably Foreseeable Cumulative Effects of Leasing and Subsequent Activity

Potential post-lease activities that could have cumulative effects on the area's habitats, and fish and wildlife populations include seismic surveys, construction of support facilities, and drilling and production activities. Some potential cumulative effects of these activities include physical disturbances that could alter the landscape, lakes, rivers, and wetlands; habitat change; behavior changes of fish, wildlife and birds; drawdowns and contamination of groundwater; and contamination of terrestrial or freshwater habitats from discharges from well drilling and production, gas blowouts, or oil spills.

Oil and gas exploration, development, and production activities may produce emissions that have the potential to affect air quality, including carbon monoxide (CO), nitrogen oxides (NO_x), sulfur dioxide (SO_2), particulate matter-10 (PM_{10}), $PM_{2.5}$, volatile organic compounds (VOC), ozone, and greenhouse gases including carbon dioxide (CO_2), methane (CH_4), and nitrous oxide (N_2O).

Oil and gas related activities could result in increased access to hunting and fishing areas due to construction of new roads, but this could also increase competition between user groups for fish and wildlife resources. Interference with commercial fishing operations is a potential effect. A major oil spill could harm fisheries through direct lethal or sub-lethal effects to fish stocks, and could decrease resource availability and accessibility for users.

Although oil and gas activities subsequent to leasing could potentially affect habitats, fish and wildlife and their uses, subsistence, air quality, and commercial fishing, measures proposed in this preliminary best interest finding, along with regulations imposed by other state, federal, and local agencies, are expected to avoid, minimize, and mitigate those potential effects.

G. Fiscal Effects and Effects on Municipalities and Communities

Alaska's economy depends heavily on revenues related to petroleum development, which totaled $4.57 billion in fiscal year 2007. The petroleum industry is Alaska's largest industry, annually spending $2.1 billion, including $422 million on payroll and $1.7 billion on goods and services. Overall, this spending generates 33,600 jobs, $1.4 billion in payroll, and value added to the Alaska economy of $1.8 billion for total output of $3.1 billion. Oil and gas accounts for 12 percent of private sector jobs and 20 percent of private sector payroll. The oil and gas industry has the highest monthly wage in Alaska, averaging $7,754, 2.8 times higher than the statewide average of $2,798.

Demand for natural gas in the Cook Inlet area is projected to exceed supply in 2015 unless new reserves are discovered and developed, natural gas is transported to the area by a spur line from the proposed North Slope pipeline, or LNG is imported. Decreasing supplies of Cook Inlet natural gas led to the closure of the Agrium plant in 2007, resulting in the loss of 250 jobs in the Kenai Peninsula Borough. The LNG (liquid natural gas) export license and supply contracts were extended to 2011, but continued operation of the LNG plant may be jeopardized without long-term proven supplies of natural gas. Without increased Cook Inlet natural gas supplies, prices for residential and commercial natural gas and for electricity will continue to increase. Between 2000 and 2006, the

State denies permit for Point Thomson ice road

By Tim Bradner
Alaska Journal of Commerce

The state of Alaska on Nov. 14 denied a key permit to ExxonMobil for an ice road needed for drilling it plans in the disputed Point Thomson gas and condensate field on the North Slope, upping the ante in a contentious dispute between leaseholders at Point Thomson and the state Department of Natural Resources.

A statement on the agency's decision was posted on DNR's Web site. ExxonMobil said Nov. 17 that it has yet to receive a letter from DNR giving formal notification of the decision. Other state and federal agencies have given their approvals for the ice road, the company said.

The company says it will keep working on the project in hopes of resolving a dispute with the state. The dispute with the state involves past work obligations at Point Thomson. The state alleges ExxonMobil reneged on commitments and has moved to cancel leases. The issue is now in the Alaska courts, and settlement talks are underway between the companies and the state.

"We have the right to conduct drilling activities under terms of the leases. The Point Thomson working interest owners are proceeding with the project and the drilling plan while we attempt to resolve the dispute with the state," company spokeswoman Margaret Ross said.

ExxonMobil, the operator at Point Thomson, needs a state permit to build a 50-mile ice road east from Prudhoe Bay to move a drill rig to the field. Work on the ice road needs to begin in begin in November to allow the rig to be moved in time for drilling to start in late January or early February.

If the rig move cannot be done on schedule, it may delay the project because of seasonal constraints in moving equipment on the North Slope. Heavy equipment can only be moved by land during the winter on the Slope.

The Point Thomson leaseowners, which include BP, Chevron and ConocoPhillips as well as ExxonMobil and a number of minority owners, are planning a $1.3 billion gas cycling condensate production project in the field, which is undeveloped. The well planned in January is the first of five production wells needed for the project, which is to produce 10,000 barrels per day of liquid condensates beginning in 2014.

In a press release issued Nov. 17 the state called the company's effort to get the permit "an effort to force a solution" in the current negotiations over the dispute.

"ExxonMobil has been aware for many months that the state did not approve its drilling plan. Although ExxonMobil has challenged the state's decisions in court, it is not in the state's best interests to allow them to proceed until a court determines whether or not the state's actions were proper," the press release said.

Ross said ExxonMobil believes the leases are still valid.

An estimated 9 trillion cubic feet of natural gas and 200 million barrels of condensates have been discovered at Point Thomson in exploration drilling during the 1970s and 1980s.

The field has not been developed to date because of lack of a gas pipeline and technical questions over whether liquid condensates can be produced in a gas cycling project. The current project planned by the companies is intended to resolve the technical questions, ExxonMobil has said in previous briefings.

Point Thomson reservoir pressures are high, at 10,200 pounds per square inch, which complicates any development, the company has said.

ESCOPETA OIL OF ALASKA

COOK INLET BASIN – ALASKA PROGRAM

INTRODUCTION

Escopeta Oil of Alaska is the 3rd largest oil and gas leaseholder in the Cook Inlet Basin, Alaska. Escopeta has identified four prospects in its 129,618-acre position with two of these being the missing giants postulated by the U.S.G.S. in the Cook Inlet Basin, Alaska, in its Kitchen and East Kitchen prospects. Escopeta believes these two prospects will qualify for giant field status, and contain significant amounts of oil and gas.

The East Kitchen and Kitchen prospects are in 70 feet of water six miles north of the Kenai industrial complex being the oil and gas sales complex for the Cook Inlet Basin. They represent 12 years of work, including studies by geologists with extensive Cook Inlet experience and, more recently, the reprocessing of over 200 miles seismic with proprietary technology.

Escopeta began looking for opportunities in Alaska in 1993 and brought its first leases in the state in 1994. The company now owns 129,618.00 acres of state oil and gas leases in the Cook Inlet basin.

Only 4% of oil identified

U.S. Geological Survey geologists have theorized that only 4 percent of the volume of oil that theoretically generated from Cook Inlet source rock has ever been identified.

The Escopeta acreage position at Kitchen and East Kitchen (106,000-acres contiguous) is just to the east of Middle Ground Shoal and situated directly overlying the Tertiary/Mesozoic depocenter, which generates the oil for the northern part of the Cook Inlet Basin.

There is strong evidence from geological, geophysical and petrophysical analysis that these prospects are among the "Missing Giants" postulated by the U.S. Department of Energy in the published DOE Report on the Cook Inlet Basin, Alaska of 2004.

Webb had worked for the Departments of Fish and Game, Community and Regional Development, and Natural Resources... I did some checking and asking around, and I can't find any association with his name and corruption. I am voting for Webb, and the chance for new honest blood in Juneau.

www.oilonline.com/news/headlines/firms_faces/20080415.F - [Cached Version]

Fox Petroleum Inc. announced the addition of Bruce Webb as a consultant enlisted to arrange the permitting of two wells on the Catcher's Mitt prospect in Alaska's Cook Inlet.Upon permit approval, the Company plans to drill the two wells during this upcoming winter season.In consideration of the various consulting services to be provided by Mr. Webb to Fox, we agreed to pay Mr. Webb a non refundable fee of US$20,000 and issue 50,000 pre-split restricted shares of the Company's common stock upon receipt of the permitting to drill the above noted gas wells.

"Fox is eager to utilize Mr. Webb's localized knowledge and experience to permit these two wells," said Richard Moore, CEO and director of Fox.

...

Mr. Webb brings over 20 years of land negotiation, compliance and permitting experience, including 13 years with the State of Alaska's Department of Natural Resources as a Natural Resource Specialist, Permitting and Compliance and another five years with the state's Department of Community and Regional Affairs.A long-time participant in the oil and gas industry, Webb's specialty lies in his knowledge of the Alaskan permit process and in negotiating acquisitions and farm-ins.

A life-long Alaskan and well-established member of the business community, Webb is an expert on Alaskan land issues, dealing with oil and gas producers, native communities, local governments and other regulatory entities.Currently he serves as Manager of Land and Regulatory Affairs for Aurora Gas, LLC, President of Webb Petroleum and Vice President of Regulatory Affairs for Alaskan Crude Corporation.

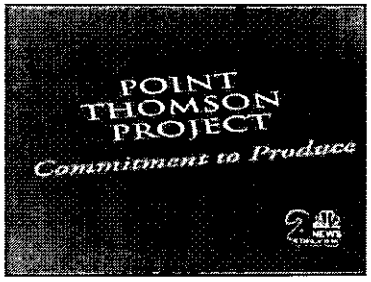
Exxon states its case for keeping Point Thomson leases



Exxon made its case to hold onto its Point Thomson leases. (Kyle Stalder/KTUU-TV)

by Rebecca Palsha
Monday, December 1, 2008

ANCHORAGE, Alaska -- State lawmakers are asking questions about the feud between ExxonMobil and the Palin administration.

Exxon told lawmakers Monday evening that the company is trying hard to develop the Point Thomson oil and gas field.

But the governor's team says that's a pitch it's heard before.

Craig Haymes spoke on behalf of Exxon. (Kyle Stalder/KTUU-TV)

It all comes down to the Department of Natural Resources and the permits the state leases to oil companies. Part of the deal is the company has to develop its plot.

At a joint House Judiciary and Resources Committee hearing, Exxon and the oil company Escopeta gave lawmakers a sort of sales pitch.

"If these leases don't get extended, we're not going to have any legal actions, I'll just go back to Texas and drill wells there," Escopeta's Danny Davis said. "I'm not here to fight the state, I'm here to work with you guys and rebuild our industry."

Marty Ritherford, Department of Natural Resources deputy commissioner (Kyle Stalder/KTUU-TV)

Exxon wants to keep its leases at Point Thomson -- a resource-rich but long-dormant area just west of the Arctic National Wildlife Refuge.

Craig Haymes with Exxon went through photo after photo showing the work the companies have done developing the area.

"What we're saying is we know we can get a minimum of 10,000 barrels per day through the facilities," Haymes said. "We're designing it for more than that, and we're hopeful when we drill these oil wells they're successful, we'll tie them in and produce the oil as well."

Danny Davis represented Escopeta (Kyle Stalder/KTUU-TV)

But the Department of Natural Resources revoked Exxon's leases, saying the company has had chance after chance to get the job done, issuing 21 plans of operation going back to 1981.

"When people don't honor those commitments we also have to be good land managers and recognize that sometimes it's gonna be the competition that provides for a greater opportunity," said Marty Rutherford, the DNR's deputy commissioner.

Exxon isn't the only company trying to hang onto its leases.

So is Escopeta, which loses its interest at the end of the month. For the past seven years the company has had the leases six miles north of the Kenai but hasn't developed the area.

A two-year extension is all the company needs.

"The future of this country is in your hands, not mine," Davis said. "I'm just going to do the job I'm supposed to do and maybe I can contribute something. But these decisions are very important to this country."

Lawmakers can't force DNR to back off, but Rep. Jay Ramras says he feels the department is holding the state back. Gas prices are high and local communities need help to develop more.

"I'm exasperated and out of patience, and so are the people of Alaska," he said.

The state and Exxon are in litigation right now over those leases, and negotiations to try to reach a settlement are underway. A decision from the court is expected sometime in the spring.

Lawmakers quiz state officials about gas leases

DISPUTES: Two firms want to start drilling but have been blocked by Alaska.

The Associated Press

(12/02/08 23:14:47)

FAIRBANKS -- State lawmakers want to understand why two energy companies ready to drill for natural gas have not received lease-related considerations from the state.

The state's Department of Natural Resources addressed the issue with two House committees on Monday.

Exxon Mobil Corp. and Escopeta Oil want to begin drilling on the North Slope and Cook Inlet, respectively, but have been blocked over lease disputes with the state.

Escopeta's leases in Cook Inlet expire in a month; meanwhile DNR terminated the Point Thomson unit operated on behalf of several partners by Exxon Mobil.

The issue: Is the state fostering development of Alaska resources, or is the agency trying to warehouse leases so it can collect more bonus payments by re-selling them to new buyers.

One lawmaker says this is in contradiction with Gov. Sarah Palin's catch phrase, "Drill, Baby, Drill."

But state officials insist Alaska's leasing program is set up to ensure the best return for Alaskans.

Members of the House Judiciary and House Resource committees quizzed officials from the state's resources department.

Majority Leader Ralph Samuels, R-Anchorage, looked to the bigger picture: what will natural gas field development mean to the state's hope for a large-diameter transcontinental gas line.

"If this state does not get a gas line, we are all so screwed and you can't get it without Point Thomson," Samuels said.

"You want Exxon and Chevron and BP and all the rest of them to put that gas into the AGIA pipeline," Samuels said. "Is that the endgame that's going on here?"

Samuels wondered whether the state seeks to leverage support for TransCanada's pipeline proposal, which was licensed under the Alaska Gasline Inducement Act.

Some say the TransCanada proposal won't succeed without the assurance of gas to come from North Slope producers Exxon Mobil, Conoco Phillips and BP PLC.

Critics also say that a producer-backed line, such as proposed by the joint venture between Conoco Phillips and BP is more likely to materialize.

DNR officials, were somewhat hamstrung because of ongoing negotiations with Exxon Mobil over the Point Thomson dispute that has led to numerous lawsuits and court filings.

"When you tell folks what you plan on doing, your leverage can evaporate," Division of Oil and Gas Director Kevin Banks said.

Banks went on to back DNR's stance of drawing the line on non-performing leaseholders such as Exxon Mobil's slowed movement on the Point Thomson fields, which hold nearly one-quarter of the North Slope's 35 trillion cubic feet of natural gas reserves.

"There comes a time when the state sometimes has to say no," he said. "We will lose control of how our land is developed."

Craig Haymes, Exxon Mobil's production manager for Alaska, told lawmakers the company is ready to move forward.

Haymes said Point Thomson gas will be "essential" to the success of any pipeline designed to carry gas to Midwest markets.

"We're working with all of the agencies," Haymes testified. "We want to work with the state of Alaska to move forward. It's in everybody's interest to drill."

RE: Kitchen Unit Plan of Exploration
Request for Amendment of the Drilling Commitment Dates

Dear Mr. Davis,

In a December 31, 2007, letter the State of Alaska, Department of Natural Resources (DNR), Division of Oil and Gas (Division) notified Escopeta Oil Company, LLC (EOC), Operator of the Kitchen Unit, (KHU) that the unit was in default because EOC had failed to drill a well at the KHU no later than December 31, 2007, as required under the KHU Plan of Exploration (POE). The Division granted EOC a one year period to cure the default, until December 31, 2008, to

1. "...drill one exploration well, within the KHU:
   a. to one of the three bottomhole (BHL) locations within the KHU, as set out in Table 1, below, and;
   b. To 16000 to 20000TVD to test the sterling, Beluga, Tyonek, and Hemlock formations;

TABLE 1: PROPOSED WELL LOCATION INFORMATION

East Kitchen #1	Kitchen #1	Kitchen#2
ADL 389926	ADL 389924	ADL 389917
T 9 N., R 11 W., S.M.	T 9 N., R 11 W., S.M.	T 8 N., R 12 W., S.M.
Sect. 22	Sect. 18	Sect. 3

The cure of default period, in effect, deferred the drilling deadline by one year as requested by EOC.

On November 20, 2008, the Division received a request from EOC to amend the KHU POE. EOC submitted a draft Amended KHU POE which proposes the following summarized extensions to the December 31, 2008 drilling commitment.

1. EOC obtain all necessary regulatory permits and authorizations for the drilling of an exploration well by December 31, 2009. If EOC fails to fulfill that commitment, the KHU will automatically terminate and EOC will pay an unspecified "potential unrealized bonus payment".
2. EOC will drill a first exploration well by December 31, 2010. If EOC fails to fulfill that commitment, the KHU will automatically terminate and EOC will pay an unspecified "potential unrealized bonus payment".
3. EOC will drill a second exploration well by December 31, 2011. If EOC fails to fulfill that commitment, the KHU will automatically terminate and EOC will pay an unspecified "potential unrealized bonus payment".
4. EOC will request approval of an Initial Participating Area within the KHU by December 31, 2010.

EOC also submitted a heavy lift vessel contract signed by EOC, Pacific Energy Resources, Ltd. (PERL), and the vessel owner, a jack up rig contract signed by PERL and Blake Offshore, LLC, owner of the Blake 151 rig, and a rig sharing agreement signed by EOC and PERL. EOC requests the Division hold these documents confidential under 11 AAC 82.810.

"The unit operator may, with the approval of the commissioner, amend an approved plan of exploration" 11 AAC 83.341 (e) Plan of Exploration. EOC's request letter incorrectly cites 11 AAC 83.343(e), Plan of Development. The Division does not approve the draft Amended KHU POE because it does does not meet the criteria necessary for approval in accordance with11 AAC 83.303(1)-(3).

Approval of the Amended KHU POE will not promote conservation of an oil or gas pool, field, or like area. 11 AAC 83.395 (1) "conservation of the natural resources of all or part of an oil or gas pool, field, or like area" means maximizing the efficient recovery of oil and gas and minimizing the adverse impacts on the surface and other resources." Escopeta has not yet drilled an exploration well which would identify a reservoir as defined by 11 AAC 83.395(6), "an oil or gas accumulation which has been discovered by drilling and evaluated by testing and which is separate from any other accumulation of oil and gas." No well has ever been drilled within the boundary of the Kitchen Unit. KHU has no production of oil or gas.

Approval of the Amended KHU POE will not promote the prevention of economic and physical waste and does not provide for protection of all parties including the state. EOC describes having "expended a very significant amount of financial and physical resources" and requests approval to "protect the vested interests of both EOC and PERL". EOC successfully bid upon leases, which when issued bound EOC to certain terms and conditions including a specific primary term which gave EOC the sole right to retain that acreage for seven years, to conduct oil and gas exploration work. Term 4(b) of the Kitchen Unit leases describes the conditions under which the lease may be

extended beyond primary term by unitization. The Division approved the formation of the Kitchen Unit, despite the absence of drilling in the leases' primary term, because it relied on the future benefit provided by fulfillment of work commitments agreed upon in the KHU POE; to bring a jack-up to Cook Inlet and drill an exploration well. In exchange for the approval of the KHU and extension of the leases' primary terms, EOC agreed to bring a jack-up to Cook Inlet and drill a well. The goal of unitization and work commitments is not to protect vested interests, but to protect the interest of all parties.

EOC submitted the confidential vessel, rig, and rig sharing contracts to demonstrate progress made in fulfillment of the work commitment, to cure the default. The Division does not accept the contract submittals as demonstrating progress.

The heavy lift vessel contract is the same confidential contract submitted by PERL to fulfill the amended Corsair Unit POE October 31, 2008 work commitment. The Division did not accept that contract as a fulfillment of the work commitment set out in the amended Corsair Unit POE, and the Division does not accept that contract here for the same reasons, see attached letter from the Division to PERL, dated December 1, 2008. The Division does not accept the rig sharing contract signed by EOC and PERL for similar reasons: the rig sharing contract does not provide an effective date, (the contract does not "commence"), does not require any deposit from EOC to PERL, and does not represent a firm commitment between the parties, as stated in the agreement itself.

The draft amended KHU POE proposes that EOC will obtain all the necessary permits to drill a well by December 31, 2009. That EOC has still not yet obtained permits for the promised well, despite the extension of the drilling date by one year, does not demonstrate EOC's progress in fulfillment of the work commitment.

The extension request from EOC also discusses the potential waste of the physical resources of the state. EOC believes that if the KHU terminates, the time and effort of the state to review, adjudicate, approve and oversee the unit to date would be wasted. EOC also observes that if the unit terminates, the KHU leases would not be available for competitive bid until the May 2010 lease sale at earliest due to

> "the time necessary to approve the 2009 Cook Inlet Areawide Best Interest finding ("BIF"), the potential appeals and litigation associated with the BIF, the subsequent appeal of the KHU POE modification denial (this request), and the necessary title research and time restraints necessary to include the KHU leases in a any upcoming lease sale, ..."

Contemplating future appeals does not form a rational basis for approving extensions to work commitments.

A person affected by this decision may appeal it, in accordance with 11 AAC 02. Any appeal must be received within 20 calendar days after the date of "issuance" of this decision, as defined in 11

AAC 02.040 (c) and (d), and may be mailed or delivered to Tom Irwin, Commissioner, DNR, 550 W. 7th Avenue, Suite 1400, Anchorage, Alaska 99501; faxed to 1-907-269-8918, or sent by electronic mail to dnr.appeals@alaska.gov. This decision takes effect immediately. An eligible person must first appeal this decision in accordance with 11 AAC 02 before appealing this decision to Superior Court. A copy of 11 AAC 02 may be obtained from any regional information office of the Department of Natural Resources.

If you have any questions regarding this decision, contact Temple Davidson with the Division at 907-269-8784.

Sincerely,

Kevin R. Banks

Subject: Heavy lift vessel contract
Corsair Unit default notice and cure

Dear Mr. Katic:

On April, 1, 2008, the State of Alaska, Department of Natural Resources (DNR), Division of Oil and Gas (Division), conditionally accepted a Corsair Unit default cure provided by Pacific Energy Resources, Ltd. (PERL), Operator of the Corsair Unit. The Division established two work commitments in that letter, one due by April 30, 2008, which PERL has satisfied, and the other due by July 31, 2008.

> [B]y July 31, 2008, the Unit Operator shall provide the Division with a copy of the signed contract for the heavy lift vessel capable of transporting the Blake 151 rig to Cook Inlet Alaska and will provide evidence of payment of the 50 percent deposit required to commence that contract. That contract must specify a departure date for the heavy lift vessel with the Blake 151 rig to Cook Inlet Alaska that will allow the Unit Operator to fulfill the June 30, 2009, drilling commitment date. Upon departure, the Unit Operator shall provide the Division with an affidavit confirming the departure date.

On July 8, 2008 PERL requested that the Division approve a 60-day extension--until September 29, 2008--to the July 31, 2008 heavy lift vessel contract submittal date. PERL also requested that the

Division revise the requirement that PERL "provide evidence of payment of the 50 percent deposit required to commence the contract" to "provide evidence of the payment for contract commencement in accordance with the terms of the vessel contract."

The Division orally requested that PERL clarify whether it requested an extension to the heavy lift vessel contract submittal date based upon the existing Corsair Unit, comprised of four leases, or the previously proposed expanded Corsair Unit, comprised of eight leases.

The Commissioner is currently reviewing PERL's appeal of the Division's April 30, 2008 decision denying PERL's March 18, 2008 application to expand the Corsair Unit. As part of the appeal, PERL had maintained that without unit expansion, it would not be economic to bring the jack-up rig. In a July 22, 2008 follow-up to its July 8th letter, PERL represented that its request for an extension to the deadline for submittal of the heavy lift vessel contract applied to the "*existing* Corsair Unit." The July 22nd follow-up letter confirmed that PERL intended to fulfill the drilling commitment agreed to in the amended Corsair Unit Plan of Exploration (Corsair Unit POE), based upon the existing Corsair Unit.

On July 30, 2008, the Division approved PERL's request to delay the heavy lift vessel contract deadline by sixty days. The Division approved the request because the delay would not impact the June 30, 2009, drilling date deadline set out in the amended Corsair Unit POE. The Division also opined that it "interprets PERL's vessel contract extension request as a repudiation of its appeal argument that delivering a rig is uneconomic with the expansion leases." The Division observed that PERL provided no evidence for its assertion that the rig delivery would be uneconomic without the expansion leases.

On September 24, 2008, the Division received yet another request to extend the contract submittal date--until October 31, 2008. In a September 29, 2008 letter, the Division approved a 32-day extension of the contract deadline, until October 31, 2008. All other provisions of the Corsair Unit POE, as amended on January 29, April 1, and July 30 2008, remained unchanged.

On October 31, 2008, PERL submitted a contract and cover letter requesting various lease "extensions and/or reinstatements" (lease requests), both of which PERL requested be held confidential. On November 6, 2008, PERL clarified the request for confidentiality, citing AS 38.05.035(a)(9)(A)-(F). For the purposes of this decision, I am assuming that PERL meant to cite the relevant portions of AS 38.05.035(a)(8)(A)-(F), which provide confidential status for "cost data and financial information." *See* AS 38.05.035(a)(8)(D).

The Division does not accept the contract as a fulfillment of the work commitment set out in the amended Corsair Unit POE for the following reasons.

First, the contract's condition precedent is unacceptable to the Division. It provides that if DNR does not grant PERL's October 31, 2008 lease requests by December 31, 2008, the contract is "null and void." *See* contract Clause 29. Similarly, the contract's lead-in language provides that it "shall become effective on the occurrence of the Leases Extension Date defined in Clause 29 hereof

provided the OWNER has a suitable vessel available for transportation of the Cargo as per Clause 29 (***"Effective Date"***). If the Effective Date does not occur, this Contract shall be null and void . . . ." In other words, the contract seems to state that it does not take effect if DNR does not approve the lease requests by December 31, 2008, or the owner does not have a suitable vessel when the requests are granted.

The amended Corsair Unit POE provides, and PERL's July 22, 2008 letter confirmed, that the contract relates to the existing Corsair Unit, not to an expanded unit or to any other state leases or lands in which PERL has or had an interest.

As stated above, the Commissioner is reviewing PERL's appeal of the Division's April 30, 2008, decision denying PERL's March 18, 2008, application to expand the Corsair Unit. The other lease requests pertain to lands or leases in which PERL either has no interests (the Kitchen Unit leases and the expired exploration license) or has existing interests either with fixed, non-extendable terms (the existing exploration license) or that are subject to extension only under certain circumstances (the four individual leases). Because these other lease requests include lands and leases in which PERL either has no interests or that DNR has no current authority to extend, DNR cannot approve the requests by December 31, 2008. Thus, the contract's condition precedent prevents the contract from ever taking effect.

Second, the Contract does not "specify a departure date for the heavy lift vessel with the Blake 151 rig to Cook Inlet Alaska that will allow the Unit Operator to fulfill the June 30, 2009, drilling commitment date." *See* April 1, 2008 Division decision quoted above. Contract Clause 7.1 provides for a "Loading Window" "between March 1, 2009 and May 15, 2009." Given the transit times set out in the transport quotes that PERL submitted on July 8, 2008 (between 46 and 169 days, weather permitting), this "window" may not allow sufficient transit time to allow PERL to fulfill the June 30, 2009 drilling commitment, as set out in the amended Corsair Unit POE. *See* January 29, 2008 Division decision. If the lift vessel arrives safely, probably in Seward, and unloads the Blake 151, which is welded to the lift vessel, the rig must be prepared for drilling, moved to the drilling location in Cook Inlet, and the well drilled. The June 30, 2009 drilling commitment requires PERL to "[d]rill a well to the lower Sterling and upper Beluga gas sands . . . ." See January 29, 2008 Division decision. These operations, after arrival of the rig, could take six weeks or more to complete.

And third, while the Division approved amending the 50 percent vessel deposit requirement on July 30, 2009, it anticipated some level of deposit based on PERL's July 8, 2008, letter and attached transport quotes, which set out deposit amounts at signing of between 10 and 15 percent. Contract Clause 5, however, provides for no deposit, and in fact, there is no payment due if DNR does not grant PERL's lease requests by December 31, 2008, or if there is not a suitable vessel at that time. Paying a significant deposit at the signing of a contract establishes the credibility of the depositor to maintain their side of the deal in exchange for receiving like value from the other party. Without significant deposits it is unlikely that PERL will secure a firm departure date on the heavy lift vessel schedule. The lack of deposit erodes the likelihood that the contract will commence.

Under 11 AAC 83.374(a), "[f]ailure to comply with any of the terms of an approved unit agreement, including any plans of exploration, . . . is a default under the unit agreement." Effective December 1, 2008, the Corsair Unit is in default because PERL has not complied with the terms of the Corsair Unit POE by failing to submit an acceptable contract, as described above. The default cure period is 90 days from the date of this notice, or March 1, 2009. On or before March 1, 2009 PERL shall submit an acceptable contract, without any conditions precedent, which would enable PERL to drill a well within the Corsair Unit no later than June 30, 2009.

A person affected by this decision may appeal it, in accordance with 11 AAC 02. Any appeal must be received within 20 calendar days after the date of "issuance" of this decision, as defined in 11 AAC 02.040 (c) and (d), and may be mailed or delivered to Tom Irwin, Commissioner, DNR, 550 W. 7th Avenue, Suite 1400, Anchorage, Alaska 99501; faxed to 1-907-269-8918, or sent by electronic mail to dnr.appeals@alaska.gov. This decision takes effect immediately. An eligible person must first appeal this decision in accordance with 11 AAC 02 before appealing this decision to Superior Court. A copy of 11 AAC 02 may be obtained from any regional information office of the Department of Natural Resources.

If you have any questions regarding this decision, contact Temple Davidson with the Division at 907-269-8784.

Sincerely,

Kevin R. Banks

Legislative Hearing on DNR Permitting and Unit Plans of Exploration and Development
December 1, 2008 in Anchorage, Alaska
Post-Hearing Comments

To: Representative Jay Ramrus
Representative Craig Johnson
Representative Ralph Samuels
Representative Nancy Dahlstrom
Representative Carl Gatto
Representative Max Gruenberg
Representative John Coghill, Jr.
Representative Paul Seaton
Representative Peggy Wilson
Representative Bob Lynn

Dear Representatives,

The views expressed herein are my own and may not be shared by Aurora Gas, LLC; Pacific Energy, Ltd; Escopeta Oil Company, LLC; or Fox Petroleum (Alaska), Inc.

As I stated in Monday's hearing, my name is Bruce D. Webb and I am a born and raised Alaska resident. I have worked for the State of Alaska for over 20 years, 13 of which with the Department of Natural Resources, 11 of those in the Division of Oil and Gas, as a Natural Resource Specialist specifically responsible for approving Plans of Operations, Oil and Gas Bonding, and site closures. I also worked very closely with Lease Administration and the Units Section.

I am currently the Land and Regulatory Affairs Manager for Aurora Gas, LLC, which is a small independent natural gas exploration and production company in the Cook Inlet. I also own and operate Webb Petroleum Services where I assist independent oil and gas companies with permitting, unitization and plans of exploration and development. In addition, I own Webb Exploration and Production, LLC and was the successful bidder on three offshore Cook Inlet Oil and Gas Leases; I own the Ridge Development Company, LLC which is a real estate holding and development company; and I am the owner and Broker of Executive Realty.

I was recently elected President of the Alaska chapter of the American Association of Professional Landmen (AAPL), which is a professional organization comprised primarily of oil and gas, and other resource development landmen and permitters. We focus on industry concerns and ethics.

As I stated in an earlier e-mail, I also ran for State House, loosing the Primary Election by only 61 votes.

As you can see, I have a fairly diverse background and considerable knowledge in land and permitting matters, specifically as they relate to resource development. I am not a fanatic, nor a slouch. I am not a liar either. If I say something, it will be the truth, without exception.

Unfortunately, I do tend to be sarcastic when things are to a point of being ridiculous, outrageous or nonsensical. I will try very hard to refrain from being sarcastic regarding the actions of the Department of Natural Resources and the Division of Oil and Gas. If I come across as being angry, it is because I am.

First and foremost, I have been proud to be an Alaskan, and I sincerely care about the direction our economy and attitude towards resource development is going. It actually embarrasses me as an Alaskan who knows full well the potential our great state has to offer, and at the same time is being stifled by the current administration.

I would like to offer the following post-hearing comments for the record. I encourage you to contact me directly if you would like to discuss any matter personally. My contact information will be at the end of my comments.

As I stated in the hearing, it has been 15 years since the Gilbert Rowe jack-up rig left the Cook Inlet. For the past 15 years, or longer, not one single major oil and gas company has bid on one single offshore Cook Inlet exploration lease. I say exploration lease, because I do not consider those leases either adjacent to the coast of adjacent to an existing platform as truly offshore exploration acreage. I am referring to only those leases that require an exploratory jack-up drilling rig. This statement is a matter of public record. There have been several independents and individuals bid on these leases, but not a Chevron, Marathon, ConocoPhillips, or the like.

Virtually every lease that has been issued in about two decades have resulted in the bonus bids and lease payments being nothing more than a charitable contribution to the State and a tax deduction to the lessee. These leases are absolutely worthless without a jack-up drilling rig. We now have two companies, fighting the DNR to get approval to explore a large block of offshore Cook Inlet leases, which they believe will be extremely productive, and which will require them to bring up a jack-up drilling rig. Instead of the DNR unequivocally granting them the permission and time needed, it instead only grants them portions of an approval with onerous commercial stipulations. Each time an agreement is fulfilled, the DNR changes the rules, adds additional requirements, and refuses to just let these companies give it their best shot. Why is the DNR making it so difficult on these two companies?

The DNR states that the companies are simply warehousing the leases with no real intention on exploring or developing them. Given the DNR's past decisions regarding the <u>only</u> two companies that have come forward in a decade and a half with offshore exploration plans, I submit to you that it is in fact the DNR itself who is warehousing the leases... but for whom? Certainly not the State of Alaska or the public.

The DNR has no qualms in issuing these leases to individuals and companies with no plans or ability to drill any wells, but when a company comes forward with plans, they look for reasons to say no, or burden the plans with such onerous and incremental requirements that it makes moving forward with any plans, especially financial ones, almost impossible. Instead, the DNR SHOULD BE encouraging them to try and succeed.

The DNR stated in Monday's hearing that their resource evaluation staff did not believe the resource was adequate for unitization. If that were true, why such resistance? If a company wants to come to Alaska, spend hundreds of millions of dollars drilling dry holes and employing Alaskans, why not let them? How could it possibly hurt? At least we would get a much needed and long awaited jack-up drilling rig here.

Throughout the Corsair Unit expansion request, it was painfully obvious that it was the DNR's predetermined decision to deny the request. Even at the application stage, the DNR tried to impose unnecessary and useless requirements on Pacific Energy in an apparent effort to delay the filing of the application to run the "public review clock" out of the required time needed by regulation, by its contention that the application was not complete. I had to go to Lt. Governor Parnell's office and speak to him and his Chief of Staff, Jay Pullins, about this unfair, nonsensical and prejudicial treatment. Sean's response was to wait and see if the DNR makes the deadline first, he didn't want to intervene on Irwin because he was afraid Irwin would "walk off the job again". Fortunately, the DNR issued the required notice the day before it ran out of time.

When the Denial was issued, it was clearly written several days before it was issued – on the absolute last day of the lease, not allowing Pacific Energy the right of due-process with the AOGCC for a compulsory unitization expansion request. They sat on the decision until 2:30 pm on the last day, knowing it would make the DNR Pacific's only choice for resolution. See the appeal. This was under-handed and in very bad faith.

Back on the Cook Inlet leases. The major oil and gas companies, who have the resources necessary and available to explore and develop these leases don't have to bid on them. They know the leases are worthless without a jack-up rig, and therefore not a threat to the closed-market here in the Cook Inlet. They just sit back and watch countless lessees waste their money. It is as though the DNR's goal is to warehouse these leases and inhibit their exploration and development, until a certain company comes forward and says they are ready. The problem is, the people of Alaska are screaming "We are ready", but to the deaf ears of the DNR. So if these appointed officials are not working for the State of Alaska or the people of Alaska, who are they working for?

If they contend that these leases will be better off being taken back and offered in a competitive bid – have them show you the competition. It simply does not exist. If they say it is better to deny Pacific's and Escopeta's plans to drill a well by June 2008, and instead offer the lease in the May 2008 sale.... how does that make any sense? Not only the obvious questions as to who will be bidding, what will they bring to get it done, and when.... but for God's sake, June of 2008 is only a month after May 2008 – doesn't it make more sense to just let them try first.

It is just terrible how the Division and the DNR is handling this, they keep stringing the companies along with little portions of an approval, without the actual go-ahead they need, and in doing so continually run them up against a time crunch and a bureaucratic barrier that requires them to ask for another extension. The DNR itself is creating a self-fulfilling prophecy to make sure these leases are not drilled and the company's fail.

NOW WE HAVE the next round of appeals from these two companies, in order to protect their investments and hopefully be allowed at some point in the future to prove up on their plans. I cannot believe Acting Director Banks stood before you, fully knowing that he had just denied their plans once again, and told you that he was "working with the companies", and that they "did not have a drilling rig contract or a heavy-lift vessel contract." Not only were these bold-faced lies to you and to Mr. Davis of Escopeta, but he didn't even have the professional courtesy or backbone to openly admit that he had already denied the requests. It is terribly unfortunate that these DNR representatives were not under oath.

Representative Ramrus made a comment about the Judiciary Committee needing to resolve all appeals with 6 months, or they didn't get paid. He went on to ask Commissioner Irwin what he would think about being required to answer an appeal in 6 months, and Irwin replied: "If I was forced to make a decision, I would make a decision." Why the does he need to be forced into making a timely decision? What has happened to professional courtesy? Why all the posturing and "leveraging" behind closed doors?

How can he or Acting Director Banks say that the appeals from Pacific Energy and Escopeta are not all related to the ExxonMobil Appeals? How can they say that they are "working with" these companies, when all they do is deny perfectly acceptable and entirely possible plans? If the answer to the Corsair appeal was so straight-forward and fair, why not rule on it now, or at least in a timely manner? Where has Good-Faith negotiating gone, and who the heck do these public officials really work for?

It is painfully clear that just because you can hear these officials say something, does not necessarily mean they are telling the truth. What exactly is going on behind closed doors that is motivating such a hard-line, anti-development attitude?

If you want to know the truth about the Jack-up drilling rig contract, or the heavy-lift vessel contract, certainly DO NOT believe anything Banks or the DNR says. In fact, you don't even have to believe Escopeta or Pacific Energy.... contact Paul Butler who operates the Blake Offshore Jack-Up Drilling Rig and Dagfinn Thorsen of Offshore Heavy Lift Transport who operates the vessel:

Paul Butler	Dagfinn Thorsen
Blake Offshore Drilling	Offshore Heavy Lift Transport
PButler@blakeoffshore.com	dt@oht.no
(504) 885-7449	+47 2301-1423 (Norway)

Get the facts about these contracts and the real possibility for them to be executed and Alaska getting the much needed jack-up drilling rig, directly from the horse's mouth.

Acting Director Banks said he was: "Not convinced a well will be drilled" by these two companies. Does that mean he IS convinced a well will NOT be drilled? Does that mean he is convinced someone else is going to magically appear out of no where and drill a well in these leases if he takes them away and runs these companies out of the State of Alaska, and possibly out of business? I think not. It is purely a biased, arbitrary, capricious and prejudicial personal assumption on his part, plain and simple.

If no other company is standing on the sidelines with a jack-up rig, ready to drill some exploration wells in the Cook Inlet, why not give these two companies a fair chance? As for "willy-nilly" lease terms and "loosing the ability to manage our lands" if these leases are extended, HARDLY. The DNR has extended many leases and unit plans of exploration and development a multitude of times in the past, and it has had absolutely no effect on the DNR's ability to manage **our** lands. Their arguments are lacking any factual basis.

Another point is that the Department of Energy has stated that the Cook Inlet has enormous potential and reserves that have not yet been adequately explored. There are a tone of unleased blocks of acreage available for other companies to bid on and explore. Why the urgency in taking back the Corsair and Kitchen leases – which these companies have invested hundreds of millions of dollars acquiring the leases, forming units, identifying the reservoir and making commitments to explore? How is it in the State's best interest to take their investment and offer it up to another company, who has no current stake in the game, and will simply be receiving an unfair enrichment?

In the most recent denials dated 12/1/08 of Pacific Energy's and Escopeta's plans, specifically relating to the DNR's rejection of the heavy-lift vessel contract – which Acting Director Banks testified as not existing on the very same day, the DNR makes very explicit points about the amount of the heavy-lift vessel earnest money amounts which the DNR wanted to require. Since when is it the DNR's responsibility to set the amounts of commercial contracts between two parties?

A company should be able to go out and secure the best deal they can, with the highest level of safeguards possible to protect their investment and limit their liability and exposure. Given the legacy of blatantly absurd and arbitrary denials form the DNR, wouldn't any prudent business owner try and protect themselves from an uncertain and unpredictable regulatory regime? Seriously, if you had no assurances you would be able to drill a well on your leases, just because the DNR decided to say no at the end of the day, wouldn't you want to protect your finances?

The DNR's responsibility is to lease and manage the lands and resources for development and the generation of revenue. It is not their responsibility to set commercial contract terms, or even to approve those contracts. They wanted evidence of a heavy-lift vessel contract, and they got it.

The DNR's July 30, 2008 letter which amended their April 1, 2008 Default Cure requirements for Pacific Energy's Corsair Unit stated, exactly:

The Division estimates that a 60-day extension of the vessel contract deadline will still allow time for PERL to transport the Blake 151 to Cook Inlet Alaska in time to fulfill the June 30, 2009, drilling date. Thus, the Division approves the request for a 60-extension to the July 31, 2008, work commitment date until September 29, 2008.

With its vessel deposit requirement request, PERL submitted a summary spreadsheet that lists six carriers' contract terms. Each carrier has different lump sum prices and payment terms. All carriers require a deposit less than 50 percent, due at signing, with a subsequent larger deposit due at loading. Thus, the Division approves the request to amend the vessel deposit requirement.

All other provisions of the Corsair Unit POE, as amended on January 29 and April 1, 2008, remain unchanged by the decision.

The requirements for the heavy-lift vessel contract in the 4/1/08 Default Cure from DNR required four things:

1. By July 31, 2008 (amended to September 29, 2008, further amended by DNR letter dated 9/28/08 to October 31, 2008 because the parties were still negotiating the contract) proof of a signed heavy lift vessel contract capable of transporting the Blake 151 jack-up drilling rig.

The heavy lift vessel contract was sign, sealed and delivered to the DNR on 10/31/08, as required.

2. Provide evidence of payment of the 50% deposit (now amended to "the required deposit") required to commence the contract.

The "required deposit" was 5%, which was paid and evidenced to the DNR. Additional incremental deposits are also listed in the contract, the next one being due on 1/15/09.

3. Specifics in the contract that for a departure date that will allow the rig to be delivered to the Cook Inlet to fulfill the June 30, 2009 drilling commitment.

The departure date is between March 1, 2009 and May 15, 2009. The March 1 date is four months before the drilling commitment date. Several factors effect this date, in particular, weather and sea condition. It is possible for the drilling rig to reach the Cook Inlet in as little as 46 days – as stated by the DNR, or delivered to the Cook Inlet as soon as April 16th. The DNR's denial of this contract is not based on facts, evidence, or precedence, it is merely supposition and a pre-determined attitude towards failure.

4. Affidavit to the Division upon the heavy lift vessel's departure.

This is a future requirement, not yet required.

All other arguments made by the DNR in reference to the Default Cure requirements, which have all now been met, are irrelevant and yet another attempt in adding additional onerous requirements and changing the terms of the previous agreement.

Pacific Energy requested, in writing, at the time they submitted the heavy-lift vessel contract to have a meeting with the DNR on a date after November 10, 2008. The DNR made no attempt to have such a meeting – contrary to Acting Director Banks' claims before you as "working with these companies". Instead of having a meeting, he once again waived his arbitrary and capricious heavy-hand and simply denied the contract and any opportunity for a meeting, forcing another round of Commissioner Appeals. If the DNR had heartburns about the heavy-lift vessel contract, or any terms within it, why not talk to the company first and try to come to some resolution? Pacific offered, and apparently all the DNR knows how to do is deny.

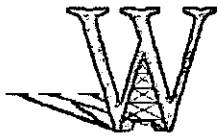
I believe in Pacific Energy and Escopeta Oil. So much so, that I spent tens of thousands of dollars acquiring three offshore Cook Inlet lease tracts. I know the management and expertise in both of these companies, and if they say they can and will bring up a jack-up rig and drill new exploration wells in the Cook Inlet, I believe them, I trust them, and I have spent my own money in support of that trust and belief. The management of DNR does not personally have a stake in this fight. They go home every night, not risking a penny, just their credibility as true public servants.

Something to note, a jack-up rig coming to the Cook Inlet is not just coming to drill the Corsair and Kitchen Units. It will be utilized by virtually every existing and new operating company offshore in the Cook Inlet. It can do step-out drilling and tie back the production to existing platforms, thereby extending their useful and economic life. Three of these platforms are currently light-housed and shut down, just sitting out in the middle of the Cook Inlet rusting – but they could be revived, creating more jobs and revenue to the State. It will bring new companies, exploration and investments to Alaska. We need this, and these two companies have tried hard and spent over a half of a billion dollars getting to where they are right now. They, and Alaska, deserve the chance to prove it.

Now, concerning ExxonMobil and their "approved permits" and subsequent denials on the next step of permits.... Dept. Commissioner Rutherford and Acting Director Banks both said that the DNR always issues "general land use permits", but would deny any "lease-specific permits". I am actually an expert on this issue, and let me say, for the record, you were fed a line of bull.

The permits that allowed ExxonMobil to add gravel to the LEASE site, drill conductor casing into the LEASE, and stage all the equipment necessary on the Lease pad to build an ice road from the Point Thomson end, was issued by the Northern Region of the Division of Mining, Land and Water. This is a Division within the DNR. It has been managed for roughly 20 years by the same gentlemen that I use to work very closely with (Gary Shultz, Leon Lynch and Larry Byrne). In reviewing this application, they would have sent it to the Division of Oil and Gas here in Anchorage – probably to Steven Schmitz, who would have reviewed it and submitted comments, concerns or objections as they would relate to Lease Operation activities.

Rutherford and Banks alluded to the possibility that this sister DNR agency lacked the expertise to adequately understand about what exactly they were approving. Again, you were deliberately being misled. These three gentlemen in the Northern Region of DNR ML&W have been doing primarily oil and gas permitting for over two decades.



They know exactly what conductor pipe is and what is will be used for in the future, the are fully aware that adding gravel to a drill site on a lease is not in any way related to the rehabilitation of a site, they are the experts for the State of Alaska concerning ice road construction and have absolutely do doubt about what equipment is necessary to build an ice road.

Now, the ice road permit that was denied..... it is a general land use permit. In fact, it is so common, that it is already categorically approved under the General Concurrences contained in the "A,B,C List" of the Alaska Coastal Management Program (ACMP) and both the DNR Division of Oil and Gas and the Division of Mining, Land and Water know this.

The fact is, simply, the DNR approved the mobilization of ice road building equipment to a Lease pad, approved the drilling and installation of well conductor casing into the Lease pad, approved the placement of camp and fuel facilities on the Lease pad, and approved the addition of gravel to the Lease pad. Now when ExxonMobil applies for a simple ice road on sea ice, it is denied. This is again, absurd. And, once again, a perfect example of bad-faith negotiating and unnecessary posturing and leveraging.

In closing, I would like to say, in my opinion, having been both on the inside and outside, that the problem with oil and gas permitting and unit actions within the State of Alaska are systemic. Certainly, a portion of the problem is inherent to the current administration and policies handed down from the Commissioner's level through the Director and onward to the staff, but is goes beyond that. Some of the problems that effect development of State resources have been being propagated for years. As just one small example, I have included my comments on the most recent Cook Inlet Areawide Best Interest Finding.

The permitting process needs to be streamlined, the bonding requirements are arbitrary and in a few cases arbitrary, capricious and prejudicial, the Cook Inlet gas market is an oligopoly, and if that isn't bad enough, the DNR itself has an anti-development mentality.

The facts are the facts:

1. There have not been any companies in Alaska over the last 15 years trying to bring up an offshore exploration drilling rig.

2. There are not any other companies sitting on the banks of the Cook Inlet yelling, "I have a drilling rig, give me the leases.

3. There has not been any interest by any company indicating that they are even contemplating coming up to this mess to try and drill and offshore Cook Inlet exploration well.

4. These two companies are promising to get a drilling rig underway to Alaska this spring, with an offshore well drilled by June 30, 2009 (a month after the next Cook Inlet lease sale).

5. The DNR is exerting tortuous interference into these two, and others, corporate business.

6. The behavior of the DNR regarding the non-issuance of the necessary permits and extensions to the Unit agreements and Plans of Exploration smacks of anti-trust, in an effort to restrict major exploration and development and keep the oligopoly and market control that currently exists with the three major producers in the Cook Inlet.

7. If no other company has, is or is willing to try and bring up a jack-up rig to the Cook Inlet, then these two companies, and the people of Alaska, deserve the chance to for them to try.

8. The appointed officials at the DNR are "public servants". I am the public, and I want some service – now, not in another 15 or 20 years.

Respectfully submitted,

Bruce Webb

RE: Proposed Cook Inlet Areawide Oil and Gas Lease Sale
Preliminary Best Interest Finding of the Director
Dated September 29, 2008

Dear Mr. Curney,

Thank you for the opportunity to comment on this ten-year Best Interest Finding. Having been on both the regulatory side and the industry side of oil and gas permitting, exploration and development for over 20 years, I have identified a few areas of concern. Because the State of Alaska receives over 90% of its revenue directly and indirectly from the oil and gas industry, the permitting process associated with oil and gas exploration projects is of significant statewide importance.

First, the mitigating measures attached with the leas documents and referenced during the permitting process have ambiguities that allow individuals within governmental agencies, who have a somewhat obstructionist attitude, to interpret them in a manner that does not encourage exploration or development. It is essential that ambiguities in regulations and particularly within the lease and mitigating measures documents are replaced with concise language that does not leave the interpretation up to the individual's personal agenda.

In that regard, I will address the mitigation measures of concern first.

Chapter Nine, A. Proposed Mitigating Measures

A. 1. c) This mitigating measure restricts development with certain distances of particular rivers and water bodies. It does not take into consideration existing facilities, such as gravel pads. In this example, if a company wished to drill and exploration well from an existing gravel pad that was within the set back requirements, it would be prohibited in doing so. Despite the fact that the DNR prefers facilities to be consolidated.

This mitigating measure was used as the basis for denying Pelican Hill's exploration plans on the west side of the Cook Inlet, on an existing gravel exploration pad that was connected to the Beluga Highway by an existing gravel access road.

1400 West Benson Blvd., Suite 410 • Anchorage, AK 99503 • (907) 277-1003 • Fax: (907) 277-1006
6051 North Course Drive, Suite 200 • Houston, TX 77072 • (713) 977-5799 • Fax: (713) 977-1347

Yet, the ADF&G was successful in killing this exploration project, which lead to the company giving up on developing the State's resources and leaving. Clearly, it made more sense economically and environmentally to use an existing gravel structure, rather than impacting new environment and expending exploration funding on a location instead of an exploratory well.

In my opinion, this mitigating measure should incorporate the DNR's preference in allowing exploration on existing pads in an effort to encourage exploration and development and consolidate facilities. I suggest revising the sentence in this mitigation measure to read: **"Additionally, with the exception of proposed facilities on existing pads, to the extent practicable, the siting of facilities will be prohibited within one-half mile of..."** This will allow for the continued responsible and environmentally preferable exploration and development of the State's resources.

A. 1. f) This mitigating measure is continually abused by the ADF&G to restrict responsible exploration and development of the State's oil and gas resources. This mitigating measure was established to limit long, linear gravel roads that have a significant surface impact during exploration phases. It was meant to allow gravel pads and airstrips in the Cook Inlet, because exploration is essential to the State of Alaska and the Cook Inlet economy. Because the winter exploration season is shorter, and much more unpredictable, than the North Slope, the use of gravel pads and airstrips is also essential.

In several arguments with the ADF&G, they have erroneously asserted that " ADF&G will not authorize the use of gravel within the Susitna Flats State Game Refuge for Exploration projects." And, "Moreover, as identified in DO&G lease sale mitigating measures for activities within Special Areas, exploration activities must be supported by existing roads and/or ice roads." This has been done without an adequate statement of facts, without the necessary regulatory authority, and with a blatant abuse of power.

The ADF&G's interpretation is not only clearly wrong as to the intent of this mitigating measure, it is also wrong on the grammatical interpretation of the language. I have attached several e-mails with the ADF&G for reference, as well as two University of Alaska Professor's opinions as to what this mitigating measure actually means.

This circumstance is important because the ADF&G blatantly abused their authority by their misinterpretation of the mitigating measures to their advantage and was successful in prohibiting a summer exploration project. The project I am referring to is the Hanna #1 gas exploration well.

This well site is adjacent to the existing gravel Beluga Highway, approximately 5 miles from the coast – separated by thick forest and vegetation. The site is also bounded by the Chugach Electric High Voltage power transmission line to the east, the Enstar gas pipeline to the west, a Chevron tie-in facility to the north and the Chugach Electric power plant a short distance to the south. It is in the heart of the west side (Beluga area) industrial development. Additionally, the surface vegetation at the site is the most common and bountiful found on the west side of the Cook Inlet.

The abuse of authority of the ADF&G must end. They cannot be allowed to constantly interpret the ambiguous language within the mitigating measures, use references out of context, and curtail responsible development of the State's resources, because of their own personal agendas.

I suggest amending the language to read: **"Gravel drill pads, airstrips, and access roads between these drill pads and airstrips are allowed for exploration activities. Roads which are permitted under A. 1. e) above are allowed on a case-by-case basis. All other exploration facilities must be consolidated, temporary and not be constructed of gravel. Use of abandoned gravel structures, including those within ½ mile of the water bodies listed in A. 1. c) above, are also allowed to promote consolidation of facilities and minimize additional surface impacts."**

Chapter Seven, 2. Plan of Operations Approval

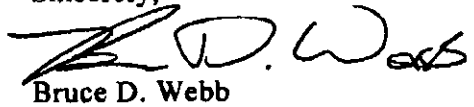
Lease Plan of Operation Approvals are administered under 11 AAC 83.158 and are suppose to regulate activities on the State of Alaska Oil and Gas leases. However, the language in the actual regulation [11 AAC 83.158 (d)(2)] is far-reaching and is used to extend the authority over the lease activity beyond the regulatory purview.

In fact, this language suggests that the Division of Oil and Gas has regulatory authority over DNR Temporary Water-use Permits, Temporary Land-use permits, and even over ADF&G Habitat and Special Areas Permits. Clearly, the expertise and regulatory purview is established within the Division of Mining, Land and Water for land-use and water-use permits, and their review and approval. Additionally, the expertise is clearly vested with the Department of Fish and Game for water withdrawal methods and quantities from anadromous streams.

The ability of the DOG to exercise its authority beyond the lease boundary is contradictory to the Statute and intent of the regulation. This has a resultant effect of unnecessary redundancy and burden on the applicant. Lease Operation Approvals should remain focused on the lease activity, and not on the other activities regulated by other governmental agencies.

Again, thank you for this opportunity to comment. Best of luck in this process.

Sincerely,



Bruce D. Webb
Manager of Land and Regulatory Affairs

Subject: RE: Hanna Well No. 1

Bruce,
As you know the Susitna Flats State Game Refuge (SFSGR) was established to protect fish and wildlife habitat and populations. Entry upon the SFSGR for purposes of exploration and development of oil and gas resources shall be permitted when compatible with the protection of fish and wildlife habitat. Mitigation Measure 21 states that gravel roads will not be allowed during exploration within Special Areas. Essentially if an operation has alternatives available to it that provide the most minimal impact to the Special Area that alternative is what is permitted. ADF&G is reasonably accommodating Aurora Gas LLC as there are other alternatives to using gravel that will allow the company to proceed as planned.
Based on your reply below, I take it that Aurora Gas LLC has agreed to not use gravel fill for the Hanna No. 1 Well Project.

"GRAVEL PADS & MATS"

In addition, ADF&G requires further clarification on your project summary:
Will Aurora Gas LLC be storing fuel for the drilling rig? –If so what type and how much?
Will this be water-based drilling?
Will any KCL/PHPA fluid be used and/or stored? –If so what type and how much?
How will drill cuttings be dealt with?

Under the Pelican Hill Special Area Permit FG-05-II-0004, Pelican had agreed to stipulations regarding potential project conflicts to the Beluga Pipeline Right-Of-Way. Is Aurora Gas LLC aware of this and is it working with Enstar to minimize potential conflicts?

Subject: RE: Hanna Well No. 1

Thank you Valerie,

We will be sure our plan reflects your guidance on this issue.

It does seem a bit confusing to me though... I could find nothing in 5AAC95 or the Susitna Flats Management Plan that prohibits the temporary use of gravel for exploration pads. And in this case, its just the portion of the pad adjacent to the existing gravel road that we want to place temporary gravel for the ramp down to the finished ice pad level.

IN fact, 3# and #11 in the Sale 49 Mitigating Measures that were adopted and attached to the SF Management Plan, and #3 and #10 of the most recent Cook Inlet Areawide Mitigating Measures (2005), indicate **permanent** gravel use for exploration pads, airstrips and roads between pads is allowed.

Is there something I am missing somewhere that would help me better understand the ADF&G's hard-line stance on this issue? Your direction to that citing would be greatly appreciated. Don't get me wrong, I'm not arguing... we will build a 4 foot thick snow and ice ramp, and it will probably melt by September... I'm just curious how I missed the authority to prohibit temporary use of gravel after almost 20 years in oil and gas permitting and regulatory compliance.

-Bruce

Bruce,
ADF&G will not authorize the use of gravel within the Susitna Flats State Game Refuge for exploration projects. This also includes temporary uses as you have described below.

Hi Valerie,

Would the use of gravel include gravel temporarily placed on Geotextile fabric, over compacted snow and ice, for off road ramp access only? It would be removed with the mats at the end of the drilling program?

Let me know if the **temporary use, not in direct contact with the ground / vegetative surface** is a deal killer, we may be able to use more snow and ice under mats.

-Bruce

Bruce,
I am in process of reviewing/drafting Aurora Gas LLC's ADF&G Special Area Permit (SAP) and wanted to notify you that ADF&G will not be authorizing the use of gravel for exploration within Susitna Flats State Game Refuge. Pelican Hill's previous ADF&G SAP FG05-II-0004 states that there will be no gravel fills associated with the exploration project. If you can confirm that Aurora Gas LLC will in fact not be adding any addition gravel for exploration purposes I can continue to complete your ADF&G SAP and have the final product to you shortly. Please feel free to contact me at any time at the number below if you have any further questions.

Subject: RE: Hanna Summer Exploration Drilling Program

Mark,

Thank you for the reply. As you pointed out, the DO&G Mitigating measures do say that exploration actiities must be supported by existing roads (Term #3), which this project most certainly would be. The Mitigating measures (Term #10 and #21 c), as well as the SFSGR Plan also indicate that pads as well as airstrips are permitted to be constructed out of gravel, permanently if necessary. (#10. "**With the exception** of drill pads, airstrips, and roads permitted under Term 3, exploration facilities must be consolidated, temporary and must not be constructed of gravel.") (#10 c. Gravel pads and wellheads are the only above ground structures that will be allowed within the primary waterfowl area above mean high tide within the Susitna Flats SGR...). Please note that Term #3 only discusses gravel roads, and that Term #10 does not say "With the exception of drill pads, airstrips, and roads, permitted under Term 3, ..." The use of a comma, or non-use as it were, after "roads" is significant in that it relates the roads, and not the pads or airstrips to Term #3. With the commas between pads, airstrips, and roads permitted under Term 3, it is the same as saying "with the exception of pads, and the exception of airstrips, and the exception of roads permitted under Term 3"...

Aurora is of the opinion that the activity, the drilling of an exploratory gas well is the same as previously permitted, we agree that the surface preparation being proposed is different, but not believe it is significant enough to warrant another full ACMP review. Deputy Commissioner Taylor and I had discussed this last year and were of the opinion it would be a good test project in the refuge to see if there would in-fact be any impacts to the vegetation. I will complete a new CPQ and Coastal Evaluation for the OPMP and their consideration.

Aurora would be happy to take you, as well as Mr. Rader and Ms. Plikat, on a site visit at your earliest convenience. We appreciate your consideration and willingness to consider this proposal. Thank you for your time, feel free to give me a call when you return to your office.

-Bruce

Subject: RE: Hanna Summer Exploration Drilling Program

Bruce/Jodi/Matt:

I do not consider summer drilling, including the use of a gravel pad, the same project as a winter activity on an ice pad (as was proposed by Pelican). Our coastal review considered winter activities. Moreover, as identified in DO&G lease sale mitigation measures for activities in Special Areas, exploration activities must be supported by existing roads and/or ice roads. Exploration is generally conducted in the winter months to preclude impacts to vegetation and, in primary waterfowl habitat, impacts to wildlife. Winter exploration supported by ice roads and pads has occurred in refuges in Cook Inlet. Although not conducted, the previously permitted Pelican project was a recent example of how ADF&G approaches exploration drilling in Su Flats. Another more recent example of this approach was the proposal by Escopeta for the North Alexander No. 1 Project.

Although winter exploration using ice roads and pads is the preferred approach to precluding impacts to a refuge,

we could consider the use of composite mats, on a case-by-case basis, in areas where it could be demonstrated that the vegetative layer would not be damaged. A site visit would likely be needed.

ADF&G may authorize the use of gravel for roads and/or pads in Special Areas for development and production activities; although gravel roads are precluded from certain areas.

Give me a call if you have questions (267-2338).

Subject: Hanna Summer Exploration Drilling Program

Jody,

I received your voicemail regarding your discussions with Mr. Mark Fink of Fish and Game, and your collective non-objection to the summer drilling program proposed by Aurora Gas, LLC (Aurora) in the Susitna Flats State Game Refuge (SFSGR). You have requested that Aurora provide a written statement that indicates all operations as originally proposed by Pelican Hill in their Plan of Operations, as approved, will remain the same during the summer as were proposed during the winter. In the attached letter to Fish and Game, dated May 29, 2008, Aurora expressed: (page two, bottom of paragraph three)

"All procedures within the previously approved plan will be followed with the exception of a temporary gravel pad instead of an ice pad, and summer operations instead of winter operations."

I would like to take this opportunity to state for the record, as requested, that ALL drilling operations will be conducted on the summer temporary gravel pad as were proposed by Pelican Hill originally during the winter on an ice pad. The only exceptions to this will of course be summer operations instead of winter operations, and temporary gravel pad instead of ice pad. As indicated in the recently submitted plan, the gravel pad will be adjacent to the gravel road, thereby eliminating the need for any new gravel access roads.

Additionally, it was requested that in accordance with 5 AAC 95.730, the SFSGR Special Areas Permit (Permit) be issued for a period of TWO YEARS. This is requested because Aurora is currently being purchased by another company and the funding for this well, during this season, is uncertain and may be postponed until next summer. Allowing the Permit to cover a two year period would eliminate the necessity of further extensions, permit renewals or other administrative actions, thereby reducing everyone's work load. There also exists the possibility that the well could be drilled this winter season, as originally proposed for last winter. I would suggest that in the Permit, it would reflect the ability for summer or winter operations, perhaps requiring written notification by Aurora before operations commence. If this is not a viable option, please issue the Permit for the summer operations, and if winter operations become necessary, Aurora will apply for another modification at that time.

Thank you for your expedient review and response to Aurora's request. It is greatly appreciated.

Jackie E. Cason, Ph.D.
Department of English
University of Alaska – Anchorage

Ms. Angela S. Anderson, M.A.
Department of English
University of Alaska – Anchorage

Dear Professors Cason and Anderson:

I am the Manager of Land and Regulatory Affairs for a small independent gas exploration and production company in the Cook Inlet region of Alaska. Prior to this position, I had served the State of Alaska in various positions, most recently as a Natural Resource Specialist for the Division of Oil and Gas. My primary focus was on lease administration, permitting and compliance.

Recently, I have had several discussions with former colleagues and other resource agency representatives on the interpretation of language contained in a Department of Natural Resources publication known as the Mitigating Measures. The entire document is attached for your reference.

The specific language I am concerned with is the first sentence in Term #10, below (emphasis added). Term #3 is included for your reference, as it is mentioned in Term #10. These Terms are:

3.* Onshore exploration activities must be supported by air service, an existing road system or port facility, ice roads, or by vehicles which do not cause significant damage to the ground surface or vegetation. Unrestricted surface travel may be permitted by the directors of DO&G and DL, if an emergency condition exists.

Construction of temporary roads may be allowed. Temporary means that a road must be removed to the extent that it is rendered impassable or is otherwise rehabilitated in a manner such that any placed gravel remaining approximates surrounding natural features. Construction of permanent roads will be prohibited during the exploration phase. *Exception - DL.

10.* **With the exception of drill pads, airstrips, and roads permitted under Term 3, exploration facilities must be consolidated, temporary, and must not be constructed of gravel.** Use of abandoned gravel structures may be permitted on an individual basis. *Exception - ADF&G, DL.

In your opinion on the use of the English language, grammar, composition and technical writing, what exactly does the first sentence of Term #10 say? Two opinions exist on the interpretation of this language:

1. Some argue that drill pads and airstrips and roads are only exempted if they are approved under Term #3.

2. While others argue that drill pads are exempted, airstrips are exempted, and roads that are permitted under Term #3 are exempted.

I am of the opinion that the use of the comma between "airstrips" (,) "and roads", as well as the non-use of a comma between "roads" and "permitted" separate drill pads and airstrips from the roads permitted under Term #3. This results in all drill pads and all airstrips being exempted, and not requiring permission under Term #3.

I believe if the intent was to make drill pads and airstrips exempted only if permitted under Term #3, then Term #3 would have listed drill pads and airstrips along with roads, or the first sentence in Term #10 would have read like this:

> "With the exception of drill pads, airstrips and roads, permitted under Term 3, exploration facilities must be consolidated, temporary, and must not be constructed of gravel."

This is an important question, as it effects gas exploration in the Cook Inlet region, where we are experiencing declining natural gas reserves and rising natural gas prices. I believe the intent, having worked in the State Division of Oil and Gas for over a decade, was to allow gravel drill pads and airstrips because the winter exploration season was not cold enough or long enough (as it is on the North Slope) to build and maintain ice pads. Gravel roads for exploration are discouraged because they impact a significantly greater amount of land as long linear gravel structures, and can be perceived by wildlife as barriers to migration.

So, my question to you, if you are able to offer your opinion, is whether or not gravel drill pads and airstrips are exempted in Term #10, and do not require prior permission being granted under Term #3.

I appreciate the time you have taken to read and consider this request. Your opinion will be greatly appreciated. Thank you.

Respectfully yours,

Bruce D. Webb
Manager, Land and Regulatory Affairs
Aurora Gas, LLC.

COOK INLET AREAWIDE 2008
COMPETITIVE OIL AND GAS LEASE SALE

Mitigation Measures and Lessee Advisories

Mitigation Measures

AS 38.05.035(e) and the departmental delegation of authority provide the director, Division of Oil and Gas (DO&G), with the authority to impose conditions or limitations, in addition to those imposed by statute, to ensure that a resource disposal is in the state's best interests. Consequently, to mitigate the potential adverse social and environmental effects of specific selected lease related activities, DO&G has developed mitigation measures and will condition plans of operation, exploration, or development, and other permits based on these mitigation measures.

Under AS 38.05.035(e), ADNR has authority to apply the following mitigation measures developed for this Cook Inlet Areawide lease sale, to all oil and gas activities performed to access the state's leased mineral interest, regardless of the surface ownership status of the land from which the lessee seeks access.

Lessees must obtain approval of a detailed plan of operations from the Director before conducting exploratory or development activities (11 AAC 83.158). An approved plan of operations is the authorization by which DO&G regulates exploration, development, and production activities.

A plan of operations must identify the specific measures, design criteria, and construction methods and standards to be employed to comply with the restrictions listed below. It must also address any potential geophysical hazards that may exist at the site. Plans of operation must comply with coastal zone consistency review standards and procedures established under 6 AAC 50 and 80 including coastal district plans. Applications for required state or federal agency authorizations or permits must be submitted with the plan of operations. DO&G will require, as a condition of consistency approval, such modification or terms as may be necessary to ensure consistency with the ACMP standards.

These measures were developed after considering terms imposed in other Cook Inlet region oil and gas lease sales; fish and wildlife resource and harvest data submitted by ADF&G; environmental data relating to air and water quality, solid and liquid waste disposal, and oil spills submitted by ADEC; consensus items from the Cook Inlet Areawide stakeholders process, as well as comments submitted by the public, local governments, environmental organizations, and other federal, state, and local agencies. Additional project-specific mitigation measures are imposed if and when oil and gas lessees submit proposed plans of exploration, operation, or development.

In addition to compliance with these mitigation measures, lessees must comply with all applicable local, state and federal codes, statutes and regulations, and any subsequent amendments. Lessees must also comply with all current or future ADNR area plans and recreation rivers plans; and ADF&G game refuge plans, critical habitat area plans, and sanctuary area plans within which a leased area is located. Federal, state and local government powers to regulate the oil and gas industry are discussed in the "Governmental powers to Regulate Oil and Gas Exploration, Development, Production, and Transportation" Chapter Eight of this finding. In addition, Appendix B lists federal and state statutes and regulations that apply to lease activities.

Information to lessees relevant to the lease sale is also presented in the "Lessee Advisories," section B, which contain precautions which may apply to post-lease sale activities, and reflect existing local, state, and federal law or policy at the time of the sale.

Hereafter, wherever abbreviations are used they mean: Alaska Coastal Management Program (ACMP), Alaska Department of Environmental Conservation (ADEC), Alaska Department of Fish and Game (ADF&G), Alaska Department of Natural Resources (ADNR), Alaska Oil and Gas Conservation Commission (AOGCC), Areas Meriting Special Attention (AMSA), Director (Director, Division of Oil and Gas), Division of Forestry (DOF), Division of Mining, Land and Water (DMLW), Division of Oil and Gas (DO&G), Division of Parks and Outdoor Recreation (DPOR), Kenai Peninsula Borough (KPB), Municipality of Anchorage (MOA), Matanuska-Susitna Borough (MSB), State Historic Preservation Officer (SHPO), and U.S. Fish and Wildlife Service (USF&WS).

Lessees are advised that portions of the sale area may be subject to special area permits by ADF&G to protect areas designated by the legislature as state game refuges in AS 16.20.010 -AS 16.20.080.

For those mitigation measures and lessee advisories that are within ADNR's authority, the Lessee may request, and the Director of DO&G may grant, exceptions if compliance with the mitigation measure is not feasible or prudent, or an equal or better alternative is offered. Requests and justifications for exceptions must be included in the initial Plan of Operations when one is required. The decision whether to grant an exception will be based on review of the Plan of Operations by the public and in consultation with appropriate state resource agencies. Mitigation measures subject to exceptions are noted with an asterisk (*), followed by the initials of the agency that must be consulted in any decision to grant an exception. Critical habitat areas and state game refuges are jointly managed by ADNR and ADF&G; exceptions to mitigation measures in these areas must be agreed to by both agencies. Agency abbreviations are: ADF&G (Alaska Department of Fish and Game), ADEC (Alaska Department of Environmental Conservation), DL (Division of Lands) and DOF (Division of Forestry).

Except as indicated, the restrictions listed below do not apply to geophysical activity on state land; geophysical exploration is governed by 11 AAC 96.

The following mitigation measures and advisories will be imposed on oil and gas activities in or on all Cook Inlet Areawide leased lands and waterbodies as a condition of the approval of plans of operation. If units are formed with leases issued under different mitigation measures, the most recent measures will most likely be applied to the whole unit.

General

1. Oil and hazardous substance pollution control: In addition to addressing the prevention, detection, and cleanup of releases of oil, contingency plans (C-Plans) for oil and gas extraction operations should include, but not be limited to, methods for detecting, responding to, and controlling blowouts; the location and identification of oil spill cleanup equipment; the location and availability of suitable alternative drilling equipment; and a plan of operations to mobilize and drill a relief well.

2. Use of explosives will be prohibited in open water areas of fishbearing streams and lakes. Explosives must not be detonated beneath, or in close proximity to fishbearing streams and lakes if the detonation of the explosive produces a pressure rise in the waterbody greater than 2.5 pounds per square inch (psi) unless the waterbody, including its substrate, is solidly frozen.

   Explosives must not produce a peak particle velocity greater than 0.5 inches per second (ips) in a spawning bed during the early stages of egg incubation. The minimum acceptable offset from fishbearing streams and lakes for various size buried charges is:

Charge Weight	Distance from Stream
1 pound charge	37 feet (11.2 m)
2 pound charge	52 feet (15.8 m)
5 pound charge	82 feet (25.0 m)
10 pound charge	116 feet (35.4 m)
25 pound charge	184 feet (50.1 m)
100 pound charge	368 feet (112.2 m)

   There are numerous fishbearing streams and lakes within the sale area. Specific information on the location of these waterbodies may be obtained by contacting ADF&G.

3.* Onshore exploration activities must be supported by air service, an existing road system or port facility, ice roads, or by vehicles which do not cause significant damage to the ground surface or vegetation. Unrestricted surface travel may be permitted by the directors of DO&G and DL, if an emergency condition exists.

   Construction of temporary roads may be allowed. Temporary means that a road must be removed to the extent that it is rendered impassable or is otherwise rehabilitated in a manner such that any placed gravel remaining approximates surrounding natural features. Construction of permanent roads will be prohibited during the exploration phase. *Exception - DL.

4. a. Removal of water from fishbearing rivers, streams, and natural lakes shall be subject to prior written approval by DMWM and ADF&G.

   b. Compaction or removal of snow cover overlying fishbearing waterbodies will be prohibited except for approved crossings. If ice thickness is not sufficient to facilitate a crossing, ice and/or snow bridges may be required.

5. Water intake pipes used to remove water from fishbearing waterbodies must be surrounded by a screened enclosure to prevent fish entrainment and impingement. Screen mesh size shall not exceed 0.04 inches unless another size has been approved by ADF&G. The maximum water velocity at the surface of the screen enclosure may be no greater than 0.1 foot per second.

Facilities and Structures

6. a. The siting of onshore facilities, other than docks, or road and pipeline crossings, will be prohibited within 500 feet of all fishbearing streams and lakes. Additionally, siting of facilities will be prohibited within one-half mile of the banks of Harriet, Alexander, Lake, Deep and Stariski creeks, and the Drift, Big, Kustatan, McArthur, Chuitna, Theodore, Beluga, Susitna, Little Susitna, Kenai, Kasilof, Ninilchik and Anchor rivers. New facilities may be sited within the one-half mile buffer if the lessee demonstrates that the alternate location is environmentally preferable, but in no instance will a facility be located within one-quarter mile of the river bank. ADF&G concurrence will be required for siting within the one-half mile buffer. Road and pipeline crossings must be aligned perpendicular or near perpendicular to watercourses.

   b. Lessees will minimize sight and sound impacts for new facilities sited less than one-half mile from river banks and in areas of high recreational use by (1) providing natural buffers and screening to conceal facilities; (2) conducting exploration operations between October 1 and April 30; and (3) using alternative techniques to minimize impacts.

   c. Surface entry will be prohibited in parcels that are within the Kenai River Special Management Area (KRSMA).

   d. Surface entry will be prohibited on state lands within the Kenai National Wildlife Refuge. This term does not limit surface entry on other private lands within the refuge.

   e. Lessees are prohibited from placing drilling rigs and lease-related facilities and structures within an area near the Kenai River composed of: all land within Section 36 in T6N, R11W that is located south of a line drawn from the protracted NE corner to the protracted SW corner of the section; all land within the western half of Section 31 in T6N, R10W and Section 6 in T5N, R10W; and all land within Section 1 in T5N, R11W.

   f. A fresh water aquifer monitoring well with quarterly water quality monitoring should be required down gradient of a permanent storage facility unless alternative acceptable technology is approved by ADEC.

7. The siting of new facilities in key wetlands and sensitive habitat areas should be limited to the extent possible. If facilities are to be located within these areas, the lessee should demonstrate to the satisfaction of the Director and ADF&G that impacts are minimized through appropriate mitigation measures.

8.* Measures will be required by the Director, after consultation with ADF&G and ADEC, to minimize the impact of industrial development on key wetlands. Key wetlands are those wetlands that are important to fish, waterfowl, and shorebirds because of their high value or scarcity in the region or that have been determined to function at a high level using the hydrogeomorphic approach. Lessees must identify on a map or aerial photograph the largest surface area, including reasonably foreseeable future expansion areas, within which a facility is to be sited, or an activity will occur. The map or photograph must accompany the plan of operations. DO&G will consult with ADF&G and ADEC to identify the least sensitive areas within the area of interest. To minimize impacts, the lessee must avoid siting facilities in the identified sensitive habitat areas. *Exception - ADF&G, ADEC.

9.* Impermeable lining and diking, or equivalent measures such as double-walled tanks, will be required for onshore oil storage facilities (with a total above ground storage capacity greater than 1,320 gallons, provided no single tank capacity exceeds 660 gal) and for sewage ponds. Additional site-specific measures may be required as determined by ADNR, with the concurrence of ADEC, and will be addressed in the existing review of project permits or oil spill contingency plans (C-Plans).

1870

Buffer zones of not less than 500 feet will be required to separate onshore oil storage facilities and sewage ponds from marine waters and freshwater supplies, streams and lakes, and key wetlands. Sumps and reserve pits must be impermeable and otherwise fully contained through diking or other means. *Exception - ADF&G, ADEC.

10.* With the exception of drill pads, airstrips, and roads permitted under Term 3, exploration facilities must be consolidated, temporary, and must not be constructed of gravel. Use of abandoned gravel structures may be permitted on an individual basis. *Exception - ADF&G, DL.

11. a. Wherever possible, onshore pipelines must utilize existing transportation corridors and be buried where soil and geophysical conditions permit. In areas where pipelines must be placed above ground, pipelines must be sited, designed and constructed to allow free movement of moose and caribou.

b. Offshore pipelines must be located and constructed to prevent obstructions to marine navigation and fishing operations.

c. Pipelines must be located upslope of roadways and construction pads and must be designed to facilitate the containment and cleanup of spilled hydrocarbons. Pipelines, flowlines, and gathering lines must be designed and constructed to assure integrity against climatic conditions, tides and currents, and other geophysical hazards.

Local Hire

12. To the extent they are available and qualified, the lessee is encouraged to employ local and Alaska residents and contractors for work performed on the leased area. Lessees shall submit, as part of the plan of operations, a proposal detailing the means by which the lessee will comply with the measure. The proposal must include a description of the operator's plans for partnering with local communities to recruit and hire local and Alaska residents and contractors. The lessee is encouraged, in formulating this proposal, to coordinate with employment services offered by the state of Alaska and local communities and to recruit employees from local communities.

Training

13. Lessee must include in any plan of exploration or plan of development, a training program for all personnel, including contractors and subcontractors, involved in any activity. The program must be designed to inform each person working on the project of environmental, social, and cultural concerns which relate to the individual's job.

The program must employ effective methods to ensure that personnel understand and use techniques necessary to preserve geological, archeological, and biological resources. In addition, the program must be designed to help personnel increase their sensitivity and understanding of community values, customs, and lifestyles in areas where they will be operating.

Access

14. a. Public access to, or use of, the leased area may not be restricted except within 1,500 feet (457 m) or less of onshore drill sites, buildings, and other related structures. Areas of restricted access must be identified in the plan of operations.

b. No lease facilities or operations may be located so as to block access to or along navigable and public waters as defined at AS 38.05.965(13) and (17).

15. Lease-related use will be restricted when the commissioner determines it is necessary to prevent unreasonable conflicts with local subsistence harvests and commercial fishing operations. In enforcing this term the division, during review of plans of operation or development, will work with other agencies and the public to assure that potential conflicts are identified and avoided. In order to avoid conflicts with fishing activities, restrictions may include alternative site selection, requiring directional drilling, seasonal drilling restrictions, subsea completion techniques, and other technologies deemed appropriate by the commissioner.

Subject: Re: Question on interpretation of written language and grammar

Dear Mr. Webb,

Few people find grammar intrinsically interesting, but many eventually discover that it can be instrumental to interpretation. I find it both interesting and instrumental, so I am intrigued by your question.

Clearly, we can say that the sentence has some ambiguity, as most language does, and the ambiguity arises from the question of what the participial phrase "permitted under Term 3" modifies. You have already identified the two possibilities. It may modify the list of three items, or it may modify only the final item in the list.

When we teach grammar and style to students, we offer two suggestions (relevant in this case) for minimizing ambiguity--1) place the modifier as close to the thing it modifies as possible, and 2) retain the comma after each item in a list, unless the writer intends the last two items to be more closely linked. In the first case, the modifier comes at the end and closest to the final item, encouraging us to see the final item as the only exemption under Term 3. In the second case, some writers see that final comma as optional, but as you've pointed out, if you leave off the comma, then the last two items become a unit rather than separate items in a list. With all commas present, we could see the final item as the only item modified.

As part of our examination, we should ask ourselves how a writer might compose that sentence to modify all three items unambiguously. The writer could have written "With the exception of **items permitted under Term 3--drill pads, airstrips, and roads**--exploration facilities must be consolidated, temporary, and must not be constructed of gravel." (Emphasis added to my change). That would have made the meaning clear in terms of the first interpretation that all items exempted must be approved under Term 3.

I tend to agree with the second interpretation of the meaning of the sentence, though my reasoning is a bit more contextual than grammatical. I know that not all writers are careful about modifier placement, even when other options are available, and that not all writers subscribe to the so-called "Oxford comma" rule. Therefore, I cannot rely strictly on grammatical analysis here and must examine the meaning of the sentence in a broader context. I therefore draw on the third item you have provided because it mentions neither airstrips nor drill pads. Rather, it focuses explicitly and exclusively on roads and purposefully defines "temporary" in relation to roads. Also, if we go back to the first part of Term 3, we read that onshore exploration *must* be supported by air service.... The whole point seems to be to minimize permanent damage and prevent further road development. Air strips and air service help minimize the permanent damage by making roads less necessary, and I don't imagine that airstrips are as likely to be temporary anyway. When roads are exempted, they need to be temporary, which is probably why ice roads are part of the list. That is why the second part of Term three focuses strongly on the definition of what "temporary" means in relation to roads. By examining Term 3 and Term 10 side by side, I would conclude that surface travel is the

most destructive in terms of permanent change to the environment. Hence, air travel and the strips that make it possible are preferable. Also, the drill pads, which are part of the exploration activity itself, are never mentioned again. I searched the remainder of the document for both airstrips and drill pads and did not find further mention. The document as a whole seems much more concerned by surface roads and seems to want to minimize any new permanent roads.

That's probably a longer explanation than you need, but you asked for some reasoning, and I thank you for offering up the context that makes such an interpretation possible. In isolation, I'd have to say the sentence is simply ambiguous and could go either way, but in context I am fairly confident that Term 3 approval applies only to roads, not airstrips or drill pads.

If you have further questions, feel free to ask.

~Jackie Cason

In your opinion on the use of the English language, grammar, composition and technical writing, what exactly does the first sentence of Term #10 say? Two opinions exist on the interpretation of this language:

1. Some argue that drill pads and airstrips and roads are only exempted if they are approved under Term #3.

2. While others argue that drill pads are exempted, airstrips are exempted, and roads that are permitted under Term #3 are exempted.

I am of the opinion that the use of the comma between "airstrips" (,) "and roads", as well as the non-use of a comma between "roads" and "permitted" separate drill pads and airstrips from the roads permitted under Term #3. This results in all drill pads and all airstrips being exempted, and not requiring permission under Term #3.

The Honorable Craig Johnson
Co-Chair, House Resources Committee
716 W 4th Ave
Anchorage, AK 99501

Re: ExxonMobil Land Use Permit for Point Thomson #3 pad

Dear Representative Johnson:

I understand that at the December 1 joint meeting of the House Resources and Judiciary Committees, an issue was raised concerning the Division of Mining, Land and Water's (DMLW) land use permit (LAS 26895) issued to ExxonMobil Corporation. At the December 1 hearing, Craig Haymes of ExxonMobil Corporation testified that the "drilling operations" ExxonMobil was conducting on the Point Thomson # 3 pad were authorized by a land use permit (LUP) issued by the Division of Mining, Land and Water. This is not correct.

The DMLW land use permit was issued for surface use only. DMLW does not regulate oil and gas drilling operations, including the placement of conductors. The LUP issued to ExxonMobil is for the purpose stated below:

> Staging of equipment, fuel, and camp at the Point Thomson Unit #3 Exploration Pad. The activity includes maintenance of the pad, with the possible placement of additional gravel within the existing pad footprint.

A copy of the permit is attached.

The LUP application submitted to DMLW likewise did not request approval of any drilling operations. When the permit was issued, ExxonMobil was notified that the permit was not a modification of DNR's position in the unit litigation. That notice is in the permit itself and the cover letter issued with the permit.

The Division of Mining, Land and Water does not issue any permits authorizing oil and gas drilling operations. It is the Division of Oil and Gas that has authority over all subsurface oil and gas development activity. A representative of DMLW inspected the site on December 4, 2008 to follow up on the testimony. A few violations were noted, and we are working with ExxonMobil to have those

corrected. A copy of the letter sent to ExxonMobil after the inspection is also attached.

I appreciate the opportunity to clarify the record.

Sincerely,

Dick Mylius

Pt. Thomson 3 Equipment Staging

Dear Mr. Dragnich:

Enclosed is your signed copy of the Land Use Permit for staging a camp, ice road construction equipment, and fuel at the Pt. Thomson 3 Pad.

Again, please note that the permit contains several conditions that are specific to the current legal issues involving Exxon Mobil and the Point Thomson Unit. These conditions are as follows:

22. Issuance of this permit does not mean DNR has changed its position on the status of the unit or leases,

23. DNR is not waiving any aspect of its PTU decisions;

24. Permittee does this work at its own risk.

If you have any questions regarding this permit, please give us a call.

Sincerely,

Gary Schultz
Natural Resource Manager

Division of Mining, Land & Water

LAND USE PERMIT
Under AS 38.05.850

PERMIT # LAS 26895

Exxon Mobil Corporation, herein known as the Permittee, is issued this permit authorizing the use of state land for storage activities, including the following location:

Section 34, Township 10 North, Range 23 East, Umiat Meridian, located in the North Slope Borough, as shown on the attached map.

This permit is effective beginning **July 1, 2008** and ending **December 31, 2009** unless sooner terminated at the state's discretion. This permit does not convey an interest in state land and as such is revocable with or without cause. No preference right for use or conveyance of the land is granted or implied by this authorization.

This permit is issued for the purpose of:

Staging of equipment, fuel, and camp at the Point Thomson Unit #3 Exploration Pad. The activity includes maintenance of the pad, with the possible placement of additional gravel within the existing pad footprint.

All activities shall be conducted in accordance with the following **General and Special Stipulations.**

General and Special Stipulations

1. **Authorized Officer.** The Authorized Officer for the Department of Natural Resources is the Regional Manager. The Authorized Officer may be contacted at 3700 Airport Way, Fairbanks, Alaska 99709 or (907) 451-2740. The Authorized Officer reserves the right to modify these stipulations or use additional stipulations as deemed necessary.

2. **Development Plan** The development of the site authorized by this permit shall be limited to the area and improvements specified in the development plan dated June 12, 2008. The permittee is responsible for accurately siting development and operations within this area. Any proposed revisions to the development plan must be approved in writing by the Authorized Officer before the change in use or development occurs.

3. **Compliance with Governmental Requirements; Recovery of Costs.** Permittee shall, at its expense, comply with all applicable laws, regulations, rules and orders, and the requirements and stipulations included in this authorization. Permittee shall ensure compliance by its employees, agents, contractors, subcontractors, licensees, or invitees.

4. **Indemnification.** Permittee assumes all responsibility, risk and liability for its activities and those of its employees, agents, contractors, subcontractors, licensees, or invitees, directly or indirectly related to this permit, including environmental and hazardous substance risk and liability, whether accruing during or after the term of this permit. Permittee shall defend, indemnify, and hold harmless the State of Alaska, its agents and employees, from and against any and all suits, claims, actions, losses, costs, penalties, and damages of whatever kind or nature, including all attorney's fees and litigation costs, arising out of, in connection with, or incident to any act or omission by Permittee, its employees, agents, contractors, subcontractors, licensees, or invitees, unless the proximate cause of the injury or damage is the sole negligence or willful misconduct of the State or a person acting on the State's behalf. Within 15 days, Permittee shall accept any such cause, action or proceeding upon tender by the State. This indemnification shall survive the termination of the permit.

5. **Valid Existing Rights.** This authorization is subject to all valid existing rights in and to the land under this authorization. The State of Alaska makes no representations or warranties whatsoever, either expressed or implied, as to the existence, number, or nature of such valid existing rights.

6. **Reservation of Rights.** The Department of Natural Resources reserves the right to grant additional authorizations to third parties for compatible uses on or adjacent to the land under this authorization which do not unreasonably interfere with Permittee's authorized uses.

7. **Performance Guaranty.** The Permittee shall provide a surety bond or other form of security acceptable to the Division in the amount of $175,000 payable to the State of Alaska. Such performance guaranty shall remain in effect for the term of this authorization and shall secure performance of the Permittee's obligations hereunder. The amount of the performance guaranty may be adjusted by the Authorized Officer upon approval of amendments to this authorization, changes in the development plan, upon any change in the activities conducted or performance of operations conducted on the premises. If Permittee fails to perform the obligations under this permit within a reasonable time, the State may perform Permittee's obligations at Permittee's expense. Permittee agrees to pay within 20 days following demand, all costs and expenses reasonably incurred by the State of Alaska as a result of the failure of the Permittee to comply with the terms of this permit. The provisions of this permit shall not prejudice the State's right to obtain a remedy under any law or regulation. If the authorized officer determines that the Permittee has satisfied the terms and conditions of this authorization the performance guaranty may be released. The performance guaranty may only be released in a writing signed by the Authorized Officer.

8. **Assignment.** This permit may be transferred or assigned with prior written approval from the Authorized Officer.

9. **Inspection.**

   a) Authorized representatives of the State of Alaska shall have reasonable access to the subject parcel for purposes of inspection.

b) The Permittee may be charged fees under 11 AAC 05.010(a)(7)(M) for reasonable routine inspections of the subject parcel, inspections concerning non-compliance, and a final close-out inspection.

10. **Violations.** This authorization is revocable immediately upon violation of any of its terms, conditions, stipulations, nonpayment of fees, or upon failure to comply with any other applicable laws, statutes and regulations (federal and state). Should any unlawful discharge, leakage, spillage, emission, or pollution of any type occur due to Permittee's, or its employees', agents', contractors', subcontractors', licensees', or invitees' act or omission, Permittee, at its expense shall be obligated to clean the area to the reasonable satisfaction of the State of Alaska.

11. **Use Fee.**

a. The permittee shall pay to the Division an annual use fee of $31,976.72 without the necessity of any billing by the Division. The use fee for the period of July 1 through December 31, 2009 may be paid on a prorated basis.

b. The use fee is due on or July 1, 2008, and annually thereafter without the necessity of any billing by the Division.

12. **Late Payment Penalty Charges.** If the required use fee is not received by the State by the 10th day of the month when due, the Permittee shall pay a late fee for any late payment. The amount of the late fee is the greater of either the fee specified in 11 AAC 05.010 or interest calculated from the due date at the rate set by AS 45.45.010(a) and will be assessed on a past-due account until payment is received by the state.

13. **Returned Check Penalty.** A returned check fee as provided in 11 AAC 05.010 will be assessed for any check on which the bank refuses payment. Late payment penalties shall continue to accumulate.

14. **Site Maintenance.** The area subject to this authorization shall be maintained in a neat, clean and safe condition, free of any solid waste, debris or litter, except containerized or otherwise legally stored.

15. **Notification.** The Permittee shall notify the Department of Natural Resources of all spills that must be reported under 18 AAC 75.300 under timelines of 18.AAC 75.300. All fires and explosions must be reported to DNR immediately. The DNR 24 hour spill report number is (907) 451-2678; the fax number is (907) 451-2751. The DEC oil spill report number is (800) 478-9300. DNR and DEC shall be supplied with all follow-up incident reports.

16. **Storage of Equipment.** The site shall be protected from leaking or dripping hazardous substances or fuel from equipment and vehicles. The Permittee shall place drip pans or other surface liners designed to catch and hold fluids under the equipment or develop an area for storage using an impermeable liner or other suitable containment mechanism.

17. **Fuel and Hazardous Substances.** Secondary containment shall be provided for fuel or hazardous substances.

a. **Container marking.** All independent fuel and hazardous substance containers shall be marked with the contents and the permittee's name using paint or a permanent label.

b. **Fuel or hazardous substance transfers.** Secondary containment or a surface liner must be placed under all container or vehicle fuel tank inlet and outlet points, hose connections, and hose ends during fuel or hazardous substance transfers. Appropriate spill response equipment must be on hand during any transfer or handling of fuel or hazardous substances to respond to a spill of up to five gallons. Transfer operations shall be attended by trained personnel at all times.

Vehicle refueling shall not occur within the annual floodplain or tidelands. This restriction does not apply to water-borne vessels provided no more than 30 gallons of fuel are transferred at any given time.

c. **Storing containers within 100 feet of waterbodies.** Containers with a total capacity larger than 55 gallons which contain fuel or hazardous substances shall not be stored within 100 feet of a waterbody.

d. **Exceptions.** The Authorized Officer may under unique or special circumstances grant exceptions to this stipulation on a case-by-case basis. Requests for exceptions should be made to the Authorized Officer.

e. **Definitions.**

"Containers" means any item which is used to hold fuel or hazardous substances. This includes tanks, drums, double-walled tanks, portable testing facilities, fuel tanks on small equipment such as light plants and generators, flow test holding tanks, slop oil tanks, bladders, and bags. Manifolded tanks or any tanks in a series must be considered as single independent containers. Vehicles, including mobile seismic tanks, are not intended to be included under this definition.

"Hazardous substances" are defined under AS 46.03.826(5) as (a) an element or compound which, when it enters the atmosphere, water, or land, presents an imminent and substantial danger to the public health or welfare, including fish, animals, or vegetation; (b) oil; or (c) a substance defined as a hazardous substance under 42 U.S.C. 9601(14).

"Secondary containment" means an impermeable diked area or portable impermeable containment structure capable of containing 110 percent of the volume of the largest independent container. Double-walled tanks do not qualify as secondary containment unless an exception is granted for a particular tank.

"Surface liner" means any safe, non-permeable container (e.g., drips pans, fold-a-tanks, etc.) designed to catch and hold fluids for the purpose of preventing spills. Surface liners should be of adequate size and volume based on worst-case spill risk.

18. **Alaska Coastal Management Program.** This project is categorically consistent with the standards of the ACMP under A-list 2a (temporary placement of camps or equipment).

19. **Site Restoration.** The site shall be restored to a condition acceptable to the Authorized Officer.

20. **Wastewater Disposal.** Disposal of wastewater from any operation associated with this authorization must satisfy the requirements of the Alaska Department of Environmental Conservation.

21. **Solid Waste.**

a. All solid waste and debris generated from the activities conducted under this authorization shall be removed to a facility approved by the ADEC prior to the expiration, completion, or termination of the authorization or activities.

b. Paper products may be burned on site provided that measures (e.g. burn barrels, clearing of burn area to mineral soil) are taken to prevent wildfires.

c. Temporary storage and accumulation of solid waste (prior to its removal) shall conform to the following:

i. solid waste shall be stored in a manner that prevents a litter violation under AS 46.06.080;

ii. putrescible wastes (material that can decompose and cause obnoxious odors) shall be stored in a manner that prevents the attraction of or access to wildlife or disease vectors; and

iii. the premises shall be maintained free of solid waste that might create a health or safety hazard.

22. Issuance of this permit does not mean DNR has changed its position on the status of the unit or leases,

23. DNR is not waiving any aspect of its PTU decisions;

24. Permittee does this work at its own risk.

I have read and understand all of the foregoing and attached stipulations. By signing this permit, I agree to conduct the authorized activity in accordance with the terms and conditions of this permit.

Pt. Thomson 3 Equipment Staging Permit

Dear Mr. Dragnich:

As you know, on December 4, 2008 I conducted an inspection of the Pt. Thomson 3 pad. ExxonMobil (XOM) is using this site to stage fuel, a camp, and ice road construction equipment under Land Use Permit LAS 26895. The purpose of this letter is to give you an overview of my observations, to identify some deficiencies, and request corrective actions.

For the most part, XOM was in compliance with the environmental stipulations of the permit. Food waste was stored inside buildings until it was incinerated. There was no food waste in dumpsters. Drums of fuel were stored in lined areas. There were no signs of spills, leaks, litter, or debris. Nearly all the fuel tanks have secondary containment. The one exception to this was a double-walled tank that had an exposed hose with connection. Fairweather believed that this type of tank does not need secondary containment. I explained that most spills are from overfilling or leaky hose connections. Therefore, DNR does require secondary containment unless the tank configuration is such that there are no exposed valves or connections. The XOM representative stated that this would be corrected promptly.

The majority of the fuel currently being stored on site was within nine fuel tankers. XOM's on site representatives believed that since the tankers are approved by DOT/PF for travel on the highways, they do not need secondary containment. However, Stipulation 17 of the land use permit states simply "Secondary containment shall be provided for fuel or hazardous substances." In this case, the tankers are being used for storage, and do need secondary containment. We appreciate that XOM did place the tankers within secondary containment. However, this containment appeared to be somewhat substandard. The liners did not appear to have good support, were pulled up in areas, pushed down by snow in other areas, and may not contain a spill if one were to happen. XOM plans to remedy this by constructing a temporary fuel storage area using four of the 400 bbl tanks that are present on site. This new temporary fuel storage area will be placed near the northeast corner of the pad. A permanent fuel storage area will then be constructed to the west of the temporary fuel area

There were some issues of non-compliance with the permit, which mostly relate to the development plan of the permit. The project description included an aerial photo (see attached) that shows the area of use to be a small area near the southwest corner of the pad for the temporary tank installation and a small area near the northwest corner of the pad to be used for

equipment staging. Thus, the permit authorizes only these small portions of the pad. Currently the entire pad is being used, and the fuel storage is not where it is shown on the plan. Another issue is the number of fuel storage tanks. The project description states that there would be 9 18,000 gallon fuel tanks on site. Instead, there are 30 400 barrel tanks on site. Thus, XOM is not in compliance with the current development plan of the permit.

To resolve this non-compliance, XOM must submit a revised development plan that reflects the current areas of use as well as any changes in the areas of use that will take place in the near future. I have included as an attachment Instructions for Completing a Development Plan for your use. Please submit the revised development plan with a $100 application fee to this office by January 9, 2009. Once we have received the plan we can start the process of project review.

One final issue is the presence of the conductors on the pad. Two conductors are present on the north side of the Pt. Thomson 3 pad. Land Use Permit LAS 26895 authorized the "staging of equipment, fuel and camp..." and other surfaces uses of the pad only. The permit did not authorize the installation of conductors, which is the first step in the drilling of the oil wells. The drilling and placement of conductors must be approved by the Division of Oil & Gas. This activity was not clearly stated in your application and was not approved. ExxonMobil may be asked to remove these conductors next summer. No additional work below the surface should be conducted without the permission of the Division of Oil and Gas.

In closing, I would like to thank XOM for making arrangements to get me to this site on short notice. The XOM representatives did a good job of giving me a thorough site tour and answering all of my questions.

If you have any questions regarding this permit, please give me a call at 451-2732.

Sincerely,

Gary Schultz

Commissioner Tom Irwin
tom.irwin@alaska.gov
550 W. 7th Avenue, Suite 1400
Anchorage, Alaska 99501-3560

RE: Commissioner Irwin's Decision, dated December 3, 2008
Pacific Energy Resources, Ltd.
REQUEST FOR RECONSIDERATION of Commissioner's DENIAL of
Appeal of Division's Denial of the First Expansion of the Corsair Unit

Acting Director Banks' Decision, dated December 1, 2008
Pacific Energy Resources, Ltd.
APPEAL of Division's Decision of Non-acceptance of Heavy-Lift Contract

Dear Commissioner Irwin,

According to 11 AAC 02, a person affected by the Decisions referenced above may appeal it to you. I am an affected person by virtue of one or more of the following qualifications:

1. I am an American citizen. The approval of feasible Plans of Exploration is essential for the security, prosperity, and promotion of the nation's energy policy;

2. Alaska Statute 38.05.180 (a) states that "The Legislature finds that (1) the people of Alaska have an interest in the state's oil and gas resources..." I am an Alaska Resident and recognize the importance of oil and gas development for Alaska's economy and my financial future;

3. I am employed in Alaska. Decisions regarding the denial of oil and gas developments affect Alaska residents, Alaskan jobs, Alaskan businesses, and the ability to not pay State income taxes;

4. I receive the Alaska Permanent Fund Dividend. Decisions regarding the denial of oil and gas developments affect the value of and my ability to receive the Alaska Permanent Fund Dividend;

5. I live in the one of the rail belt communities served by Cook Inlet basin natural gas market. There is a shortage of natural gas reserves in the Cook Inlet that must be supplemented by new exploration. Denial of Plans of Exploration by independent companies in the Cook Inlet restricts competition in the industry and forces natural gas prices higher.

6. I have an interest in oil and gas leases in Alaska. Decisions regarding the denial of oil and gas developments and subsequent lease terminations may set unfair precedence's that affect all lessees.

Reference is made to that certain Kitchen Unit Agreement, that certain Corsair Unit Agreement, all related Plans of Explorations and modifications and extensions thereto, the Amended Draft Kitchen Unit Plan of Exploration Extension Application, the Application and Appeal of the First Expansion of the Corsair Unit, the Contracts commonly known as the Heavy-Lift Vessel Contract, the Jack-up Drilling Rig Contract, the rig sharing Agreement, and all related Appeals and Requests for Reconsideration by Escopeta Oil Co, LLC and Pacific Energy Resources, Ltd., together all collectively know as "The Documents". The Documents are hereby incorporated into these Appeals by reference, and made a part hereof.

At a time of historically low oil prices, the recent addition of the Beluga whale to the Endangered Species List, the critical shortage of natural gas reserves in the Cook Inlet, the lack of interest in the Cook Inlet by new, qualified exploration companies, the existing major oil and gas producers in the Cook Inlet only performing in-field drilling, and the historically low interest in offshore Cook Inlet leases at the Areawide Lease Sales, these two Appeals are of statewide significance and importance.

I request your reconsideration of your Decision dated 12/3/08 for the following reasons:

Pacific Energy Resources, Ltd. is the Unit Operator of the Corsair Unit, offshore in the Cook Inlet. They have made significant expenditures in identifying the Corsair prospect reservoir(s), which was presented to the Division of Oil and Gas' Resources Evaluation staff who concurred with the delineation of the reservoir(s) that included the expansion acreage. Division staff stated in the Decision the expansion acreage contained a viable hydrocarbon target, the Tyonek oil sands. Inclusion of the expansion acreage into the Corsair Unit is required to preserve the entire geologic structure under one contiguous tract, having consistent administrative terms, and the ability of the individual leases to be operated under a collective agreement.

Your Decision states that you have decided the expansion of the Corsair Unit was "not in the public interest." I object. I am a member of the public and I believe it is in my interest to have the expansion acreage included in the Corsair Unit so that Pacific Energy Resources, as Operator of the Corsair Unit, can develop the entire underlying reservoir(s) efficiently. Reference is made to AS 38.05.180(p).

Your Decision states that you have decided the expansion of the Corsair Unit "does not promote the conservation of natural resources and prevention or economic and physical waste..." I disagree. By removing a portion of an oil and gas deposit from the whole, it potentially separates its control by a single operator. Multiple operators developing separate portions of the same oil and gas accumulation promotes waste of the resource, duplication of facilities, and unnecessary additional environmental impact. It is unreasonable to consider that any other party would develop the non-unitized leases on their own, without having the benefit and security that unitization of the entire reservoir(s) provide. The expansion acreage should be included in the Corsair Unit so that Pacific Energy Resources, as Operator of the Corsair Unit, can develop the entire underlying reservoir(s) efficiently.

Your Decision does not provide for the protection of Pacific Energy Resources' interest, nor does it protect my interests as a resident and consumer.

Pacific Energy Resources, Ltd. has agreed to a Plan of Exploration that includes an exploratory well being drilled by June 30, 2009. You propose to take away these leases and offer them in the upcoming May 2009 lease sale, just one month prior to the drilling commitment date, and in fact, for Pacific Energy to meet this drilling date, they would have to actually be on location in May of 2009 and drilling. If Pacific Energy does not meet that drilling commitment date, then all their acreage is relinquished to the State, including any expansion acreage that may be included. It makes no sense to NOT grant this expansion, given that Pacific Energy Resources will most likely be performing drilling operations in the Corsair Unit at the time of the May 2009 lease sale.

The Division of Oil and Gas has routinely expanded unit area boundaries in the past as a matter of necessity to allow the Unit Operator control over the entire geologic structure. Such has been the case for the Point Thomson Unit, the Prudhoe Bay Unit, the Trading Bay Unit, the Colville River Unit, the Kuparuk River Unit (Tarn and W. Sak), the Nikaitchuq Unit, the Oooguruk Unit, and many others. Allowing expansions for one company or unit, and not allowing them under similar circumstances for Pacific Energy Resources is in contradiction with the Alaska Constitution, Article 8, Section 17, which states, in part: "regulations governing the use or disposal of natural resources shall apply equally to all persons similarly situated..."

Pacific Energy Resources, Ltd. purchased Forest Oil Company for one-half a billion dollars in August of 2007. They were approved by the DNR as Unit Operator at the end of November 2007, and had only 34 days to meet the prior drilling commitment (12/31/07) made by Forest Oil Company. Because 1) Pacific Energy Resources was aware that extensions to Plans of Operations to meet difficult drilling commitment dates were routinely made by the DNR, and 2) the delivery of a jack-up drilling rig to the Cook Inlet, as well as exploration of the Corsair prospect, was in the State's best interest, the DNR approved an extension of the drilling commitment date by a mere six-months.

The DNR now tries to use that approved and necessary extension as ammunition against the Corsair Unit expansion. This is unfair and unrelated to the delineation of the Corsair prospect within the expansion acreage. Besides, the Division of Oil and Gas has routinely extended Plans of Exploration in the past as a matter of necessity to allow the Unit Operator the time required to meet certain work commitments. Such has been he case for the Point Thomson Unit, the North Fork Unit, the Cosmopolitan Unit, and many others. Allowing extensions for one company or unit, and not allowing them under similar circumstances for Escopeta Oil Company is in contradiction with the Alaska Constitution, Article 8, Section 17, which states, in part: "regulations governing the use or disposal of natural resources shall apply equally to all persons similarly situated..." Extensions of Plans of Exploration are more the "norm" than the "exception."

Frankly, Pacific Energy Resources is due equal treatment under the law, plain and simple.

The Divisions contention that the subject expansion leases can be terminated and leased to another company which will develop the resources faster has no factual, historical, or rational basis. The Division has failed to ever prove this to be the case.

In fact, the continued resistance by the DNR to exploration and development plans, and forcing companies to take their plans before the Superior Court of Alaska, is actually preventing those plans to come to fruition within the timeframes requested by the companies. It is the DNR's own actions that are making the companies need further extensions. The DNR should approve the plans and give these companies the chance to perform.

A jack-up drilling rig has not been in the Cook Inlet since 1993 – 15 years ago. Approval of the expanded Corsair Unit will allow Pacific Energy Resources the control over the entire Corsair reservoir(s) and the ability to efficiently fulfill its drilling plans in conjunction with the joint efforts it is making with Escopeta Oil Company, LLC. to bring a jack-up drilling rig to the Cook Inlet.

Further, your reversal of Acting Director Banks' 12/01/2008 Decision of "not accepting" Pacific Energy Resources' and Escopeta Oil Company's heavy-lift vessel contract is requested for the following reasons:

Pacific Energy Resources and Escopeta Oil Company have submitted valid jack-up drilling rig contracts and heavy-lift vessel contracts to the State as evidence of their forward plans to explore and hopefully develop and produce offshore Cook Inlet oil and natural gas. The Division's non-acceptance of the contracts is beyond its regulatory authority and this decision is prejudicial, arbitrary and capricious.

In the Division's attempt to impose commercial terms and stipulations in the heavy-lift vessel contract, the Division did not specify an effective date. Should the Division grant the necessary Plan of Exploration and extensions, the contract would be immediately effective. The contract itself was executed by all parties concerned and is valid as a matter of law. The Division's insistence of certain financial terms or obligations to be included in third-party commercial contracts removes a company's ability to negotiate freely and jeopardizes their ability to receive "the benefit of the bargain" they are entitled to under the law.

The heavy-lift vessel clause required by the Division to deliver the jack-up drilling rig to the Cook Inlet so a well may be drilled by Pacific Energy by June 30, 2009, although unlawful, is fulfilled. The contract specifies a loading date as early as March 1, 2009.

The Division acknowledges that the trip to the Cook Inlet could take as little as 46 days, putting the Jack-up rig in the Cook Inlet by April 15, 2009, allowing two and one-half months (ten-weeks) for drilling operations. The Division acknowledges that rig preparation, setting at the drilling location and drilling of the well could take six weeks. The Division's contention that this contract does not allow sufficient time to meet the first drilling commitment date by Pacific Energy Resources is in error, faulty and not supported by a preponderance of the facts.

The heavy-lift vessel clause required by the Division to evidence the "required deposit", although unlawful, is fulfilled. The "required deposit" at the signing date of the contract is zero-dollars. A 5% deposit is required one-day after the contract's effective date, which is the date the Division grants the necessary extensions, and that date has not come yet.

The Division does not have the authority to approve a commercial contract between third parties, nor establish commercial terms or requirements in commercial contracts between third parties. The Division's non-acceptance of the heavy-lift vessel contract is not relevant nor is it backed by precedence or law. The State of Alaska is prohibited from interfering or impairing the obligation of contracts under the Alaska Constitution, Article 1, Section 15.

Alaska Statute 38.05.180 (a) states that "The Legislature finds that (2) it is in the best interests of the state (A) to encourage an assessment of its oil and gas resources and to allow the maximum flexibility in the methods of issuing to (i) recognize the many varied geographical regions of the state and the different costs of exploring oil and gas in these regions." The unusual risks and extraordinary exploration and development costs and considerations associated with offshore Cook Inlet exploration and development are further recognized under Alaska Statute 38.05.180 (f) (4 & 5).

The actions of the Division of Oil and Gas in denying feasible unit expansions and Plans of Exploration do not encourage oil and gas exploration and production companies to want to continue to "fight" the Division in allowing them to assess the state's oil and gas resources. This is contrary to the Legislatures findings.

The offshore resources of the Cook Inlet have not been explored for over 15 years. At a time of falling oil prices, increasing natural gas utility costs in the Cook Inlet, the recessing financial stability of the nation's economy and the looming failure of many businesses, it is essential to encourage exploration and development in the Cook Inlet region.

With the three major oil and gas companies currently operating in the Cook Inlet only doing infield drilling and not exploring for new reserves, it is essential that we encourage the other companies to stay in Alaska and give them the chance to have their plans come to fruition, instead of constantly looking for reasons and methods of inhibiting their plans or even forcing them out of Alaska.

The cost of drilling a well offshore and the amount of time necessary to acquire a suitable jack-up drilling rig, heavy-lift vessel and a Jones Act waiver from the U.S. Department of Homeland Security is much more substantial than an onshore well accessible by either ice roads or gravel roads. The financial considerations, logistics and planning necessary are multitudes more complicated. However, the planning and contracting are now completed and it is just a matter of delivery time and scheduling the wells in cooperation with Escopeta Oil Company's well plans.

Denial of the plans by Pacific Energy Resources and Escopeta Oil Company does not send the right message to potential oil and gas investors or potential exploration and production companies looking at Alaska, and is contrary to the intent of the Alaska Constitution, Article 8, Section 1. Further, it is an involuntary divesting of Escopeta's and Pacific Energy's vested rights, interests and investments in the leases and prospects, in violation of the Alaska Constitution, Article 8, Section 16.

Article 1 of the Alaska Constitution, Section 2 states: "All political power is inherent in the people. All government originates with the people, is founded upon their will only, and is instituted solely for the good of the people as a whole." The DNR's decisions violate my constitutional rights and the "good of the people as a whole" are not being considered or served by these prejudicial and restrictive decisions.

Please Reconsider your Decision of 12/03/08 and reverse Director Banks' Decision of 12/01/2008 regarding Pacific Energy Resources' need for the expansion of the Corsair Unit and its contract for the use of the heavy-lift vessel.

Additionally, I request that the Unit and the Leases comprising the Corsair Unit be stayed in accordance with 11 AAC 02.060 (c)(3), and not be included in any lease sale or otherwise that may affect these leases. This stay is requested to protect my interests, the public's interest, and the interests of Pacific Energy Resources, Ltd.

Forcing yet another company to take their plans before the Superior Court of Alaska does not serve the public's interest, or the best interests of the State of Alaska.

Commissioner Irwin, these two companies are the first to attempt at bringing a jack-up drilling rig to the Cook Inlet in over 15 years. They have worked hard at getting their plans together, and not only do they deserve the chance to succeed, but as a citizen, I deserve for you to give them that chance as well.

Thank you for your consideration on this issue of statewide significance and importance.

Respectfully Submitted,

Re: ExxonMobil Testimony on Point Thomson Unit, December 1, 2008

Dear Chairman Ramras, Co-Chair Johnson and Co-Chair Gatto:

Thank you for the opportunity to present an update on ExxonMobil's drilling and work activities at Point Thomson to the Joint House Judiciary and Resources Committees. ExxonMobil remains committed to working with the State to see that Point Thomson is developed in an efficient and responsible manner.

As requested by the Committee, attached is a copy of the permit application and approval issued by the Department of Natural Resources that authorized equipment staging and site preparation activities, including the drilling and setting of conductors. We also are including a copy of the permit issued by the North Slope Borough that addressed this same activity.

If you have any further questions or if I can be of further assistance please do not hesitate to call.

Very truly yours,

Pt. Thomson 3 Equipment Staging

Dear Mr. Dragnich:

Enclosed is your signed copy of the Land Use Permit for staging a camp, ice road construction equipment, and fuel at the Pt. Thomson 3 Pad.

Again, please note that the permit contains several conditions that are specific to the current legal issues involving Exxon Mobil and the Point Thomson Unit. These conditions are as follows:

22. Issuance of this permit does not mean DNR has changed its position on the status of the unit or leases,

23. DNR is not waiving any aspect of its PTU decisions;

24. Permittee does this work at its own risk.

If you have any questions regarding this permit, please give us a call.

Sincerely,

Gary Schultz
Natural Resource Manager

LAND USE PERMIT
Under AS 38.05.850

PERMIT # LAS 26895

Exxon Mobil Corporation, herein known as the Permittee, is issued this permit authorizing the use of state land for storage activities, including the following location:

Section 34, Township 10 North, Range 23 East, Umiat Meridian, located in the North Slope Borough, as shown on the attached map.

This permit is effective beginning **July 1, 2008** and ending **December 31, 2009** unless sooner terminated at the state's discretion. This permit does not convey an interest in state land and as such is revocable with or without cause. No preference right for use or conveyance of the land is granted or implied by this authorization.

This permit is issued for the purpose of:

Staging of equipment, fuel, and camp at the Point Thomson Unit #3 Exploration Pad. The activity includes maintenance of the pad, with the possible placement of additional gravel within the existing pad footprint.

All activities shall be conducted in accordance with the following **General and Special Stipulations.**

General and Special Stipulations

1. **Authorized Officer.** The Authorized Officer for the Department of Natural Resources is the Regional Manager. The Authorized Officer may be contacted at 3700 Airport Way, Fairbanks, Alaska 99709 or (907) 451-2740. The Authorized Officer reserves the right to modify these stipulations or use additional stipulations as deemed necessary.

2. **Development Plan** The development of the site authorized by this permit shall be limited to the area and improvements specified in the development plan dated June 12, 2008. The permittee is responsible for accurately siting development and operations within this area. Any proposed revisions to the development plan must be approved in writing by the Authorized Officer before the change in use or development occurs.

3. **Compliance with Governmental Requirements; Recovery of Costs.** Permittee shall, at its expense, comply with all applicable laws, regulations, rules and orders, and the requirements and stipulations included in this authorization. Permittee shall ensure compliance by its employees, agents, contractors, subcontractors, licensees, or invitees.

4. **Indemnification.** Permittee assumes all responsibility, risk and liability for its activities and those of its employees, agents, contractors, subcontractors, licensees, or invitees, directly or indirectly related to this permit, including environmental and hazardous substance risk and liability, whether accruing during or after the term of this permit. Permittee shall defend, indemnify, and hold harmless the State of Alaska, its agents and employees, from and against any and all suits, claims, actions, losses, costs, penalties, and damages of whatever kind or nature, including all attorney's fees and litigation costs, arising out of, in connection with, or incident to any act or omission by Permittee, its employees, agents, contractors, subcontractors, licensees, or invitees, unless the proximate cause of the injury or damage is the sole negligence or willful misconduct of the State or a person acting on the State's behalf. Within 15 days, Permittee shall accept any such cause, action or proceeding upon tender by the State. This indemnification shall survive the termination of the permit.

5. **Valid Existing Rights.** This authorization is subject to all valid existing rights in and to the land under this authorization. The State of Alaska makes no representations or warranties whatsoever, either expressed or implied, as to the existence, number, or nature of such valid existing rights.

6. **Reservation of Rights.** The Department of Natural Resources reserves the right to grant additional authorizations to third parties for compatible uses on or adjacent to the land under this authorization which do not unreasonably interfere with Permittee's authorized uses.

7. **Performance Guaranty.** The Permittee shall provide a surety bond or other form of security acceptable to the Division in the amount of $175,000 payable to the State of Alaska. Such performance guaranty shall remain in effect for the term of this authorization and shall secure performance of the Permittee's obligations hereunder. The amount of the performance guaranty may be adjusted by the Authorized Officer upon approval of amendments to this authorization, changes in the development plan, upon any change in the activities conducted or performance of operations conducted on the premises. If Permittee fails to perform the obligations under this permit within a reasonable time, the State may perform Permittee's obligations at Permittee's expense. Permittee agrees to pay within 20 days following demand, all costs and expenses reasonably incurred by the State of Alaska as a result of the failure of the Permittee to comply with the terms of this permit. The provisions of this permit shall not prejudice the State's right to obtain a remedy under any law or regulation. If the authorized officer determines that the Permittee has satisfied the terms and conditions of this authorization the performance guaranty may be released. The performance guaranty may only be released in a writing signed by the Authorized Officer.

8. **Assignment.** This permit may be transferred or assigned with prior written approval from the Authorized Officer.

9. **Inspection.**

   a) Authorized representatives of the State of Alaska shall have reasonable access to the subject parcel for purposes of inspection.

b) The Permittee may be charged fees under 11 AAC 05.010(a)(7)(M) for reasonable routine inspections of the subject parcel, inspections concerning non-compliance, and a final close-out inspection.

10. **Violations.** This authorization is revocable immediately upon violation of any of its terms, conditions, stipulations, nonpayment of fees, or upon failure to comply with any other applicable laws, statutes and regulations (federal and state). Should any unlawful discharge, leakage, spillage, emission, or pollution of any type occur due to Permittee's, or its employees', agents', contractors', subcontractors', licensees', or invitees' act or omission, Permittee, at its expense shall be obligated to clean the area to the reasonable satisfaction of the State of Alaska.

11. **Use Fee.**

a. The permittee shall pay to the Division an annual use fee of $31,976.72 without the necessity of any billing by the Division. The use fee for the period of July 1 through December 31, 2009 may be paid on a prorated basis.

b. The use fee is due on or July 1, 2008, and annually thereafter without the necessity of any billing by the Division.

12. **Late Payment Penalty Charges.** If the required use fee is not received by the State by the 10th day of the month when due, the Permittee shall pay a late fee for any late payment. The amount of the late fee is the greater of either the fee specified in 11 AAC 05.010 or interest calculated from the due date at the rate set by AS 45.45.010(a) and will be assessed on a past-due account until payment is received by the state.

13. **Returned Check Penalty.** A returned check fee as provided in 11 AAC 05.010 will be assessed for any check on which the bank refuses payment. Late payment penalties shall continue to accumulate.

14. **Site Maintenance.** The area subject to this authorization shall be maintained in a neat, clean and safe condition, free of any solid waste, debris or litter, except containerized or otherwise legally stored.

15. **Notification.** The Permittee shall notify the Department of Natural Resources of all spills that must be reported under 18 AAC 75.300 under timelines of 18.AAC 75.300. All fires and explosions must be reported to DNR immediately. The DNR 24 hour spill report number is (907) 451-2678; the fax number is (907) 451-2751. The DEC oil spill report number is (800) 478-9300. DNR and DEC shall be supplied with all follow-up incident reports.

16. **Storage of Equipment.** The site shall be protected from leaking or dripping hazardous substances or fuel from equipment and vehicles. The Permittee shall place drip pans or other surface liners designed to catch and hold fluids under the equipment or develop an area for storage using an impermeable liner or other suitable containment mechanism.

17. **Fuel and Hazardous Substances.** Secondary containment shall be provided for fuel or hazardous substances.

a. **Container marking.** All independent fuel and hazardous substance containers shall be marked with the contents and the permittee's name using paint or a permanent label.

b. **Fuel or hazardous substance transfers.** Secondary containment or a surface liner must be placed under all container or vehicle fuel tank inlet and outlet points, hose connections, and hose ends during fuel or hazardous substance transfers. Appropriate spill response equipment must be on hand during any transfer or handling of fuel or hazardous substances to respond to a spill of up to five gallons. Transfer operations shall be attended by trained personnel at all times.

Vehicle refueling shall not occur within the annual floodplain or tidelands. This restriction does not apply to water-borne vessels provided no more than 30 gallons of fuel are transferred at any given time.

c. **Storing containers within 100 feet of waterbodies.** Containers with a total capacity larger than 55 gallons which contain fuel or hazardous substances shall not be stored within 100 feet of a waterbody.

d. **Exceptions.** The Authorized Officer may under unique or special circumstances grant exceptions to this stipulation on a case-by-case basis. Requests for exceptions should be made to the Authorized Officer.

e. **Definitions.**

"Containers" means any item which is used to hold fuel or hazardous substances. This includes tanks, drums, double-walled tanks, portable testing facilities, fuel tanks on small equipment such as light plants and generators, flow test holding tanks, slop oil tanks, bladders, and bags. Manifolded tanks or any tanks in a series must be considered as single independent containers. Vehicles, including mobile seismic tanks, are not intended to be included under this definition.

"Hazardous substances" are defined under AS 46.03.826(5) as (a) an element or compound which, when it enters the atmosphere, water, or land, presents an imminent and substantial danger to the public health or welfare, including fish, animals, or vegetation; (b) oil; or (c) a substance defined as a hazardous substance under 42 U.S.C. 9601(14).

"Secondary containment" means an impermeable diked area or portable impermeable containment structure capable of containing 110 percent of the volume of the largest independent container. Double-walled tanks do not qualify as secondary containment unless an exception is granted for a particular tank.

"Surface liner" means any safe, non-permeable container (e.g., drips pans, fold-a-tanks, etc.) designed to catch and hold fluids for the purpose of preventing spills. Surface liners should be of adequate size and volume based on worst-case spill risk.

18. **Alaska Coastal Management Program.** This project is categorically consistent with the standards of the ACMP under A-list 2a (temporary placement of camps or equipment).

19. **Site Restoration.** The site shall be restored to a condition acceptable to the Authorized Officer.

20. **Wastewater Disposal.** Disposal of wastewater from any operation associated with this authorization must satisfy the requirements of the Alaska Department of Environmental Conservation.

21. **Solid Waste.**

a. All solid waste and debris generated from the activities conducted under this authorization shall be removed to a facility approved by the ADEC prior to the expiration, completion, or termination of the authorization or activities.

b. Paper products may be burned on site provided that measures (e.g. burn barrels, clearing of burn area to mineral soil) are taken to prevent wildfires.

c. Temporary storage and accumulation of solid waste (prior to its removal) shall conform to the following:

i. solid waste shall be stored in a manner that prevents a litter violation under AS 46.06.080;

ii. putrescible wastes (material that can decompose and cause obnoxious odors) shall be stored in a manner that prevents the attraction of or access to wildlife or disease vectors; and

iii. the premises shall be maintained free of solid waste that might create a health or safety hazard.

22. Issuance of this permit does not mean DNR has changed its position on the status of the unit or leases,

23. DNR is not waiving any aspect of its PTU decisions;

24. Permittee does this work at its own risk.

I have read and understand all of the foregoing and attached stipulations. By signing this permit, I agree to conduct the authorized activity in accordance with the terms and conditions of this permit.

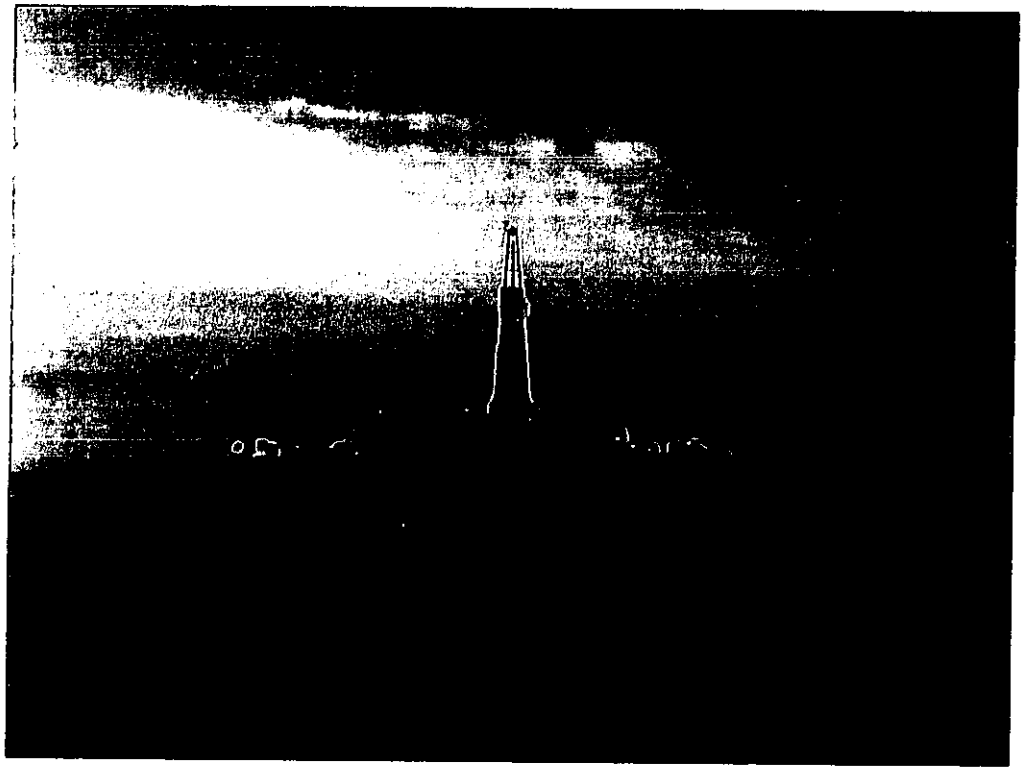
ExxonMobil

Point Thomson Drilling Program
Equipment Staging and Pad Preparation Project Description



Prepared: June 11, 2008

Exxon Mobil Corporation
Point Thomson Drilling Program
Equipment Staging and Site Preparation Project Description

1. Introduction and Project Overview

Exxon Mobil Corporation (ExxonMobil), as operator and on behalf of the Point Thomson leaseholders, proposes to stage equipment and fuel for use in ice road construction and other operations, and conduct site preparation work at the existing Point Thomson Unit #3 (PTU #3) gravel pad during July and August 2008 as the initial phase of drilling operations for the Point Thomson Drilling Program. The PTU #3 location lies 52 miles east of Deadhorse, Alaska along the Beaufort Sea coast. Ice road construction and actual drilling will be covered under subsequent permit submittals.

The proposed work includes facilitating removal of equipment currently stored on the pad by another operator; placement of ice road construction equipment, a 30-man construction camp, fuel storage tanks, and fuel associated with ice road construction and for use in other operations; and maintenance and site preparation of the existing pad. Additional project equipment to be staged onsite may include drilling rig components, casing and materials for drilling activities. The maintenance and site preparation work will include grading, placing additional gravel from the Prudhoe Bay area, and installation of a cellar(s) and conductor(s). Following site preparation work, a small staff may be maintained onsite for maintenance and security until ice road construction personnel mobilize to the PTU #3 location in November or December.

Permit approval for the work is being requested to allow the staging of ice road construction equipment and pad maintenance and site preparation work to be performed in an optimal manner during the summer. This also will allow greater utilization of the available winter drilling season on the PTU #3 location. Approximately three to four weeks can be added to the available drilling season time with summer staging of equipment and preparation of the site. Time savings will be realized by staging ice road construction equipment to allow construction of the sea ice road to occur from both the PTU #3 and Prudhoe Bay ends of the planned road and by having the site ready to accept ice road construction crews and the drilling rig.

2. Site Description

The existing PTU #3 gravel pad was used for the drilling of the Point Thomson Unit #3 exploratory well. Temporary fuel storage tanks (empty) as well as miscellaneous equipment and stacked well casing is being stored on the location by another operator. There is a gravel extension from the PTU #3 pad to the Beaufort Sea coastline that allows equipment from a barge to be transferred to the pad without crossing tundra. The site is largely surrounded by typical North Slope coastal tundra as shown in the attached aerial image, Figure 1.

1909

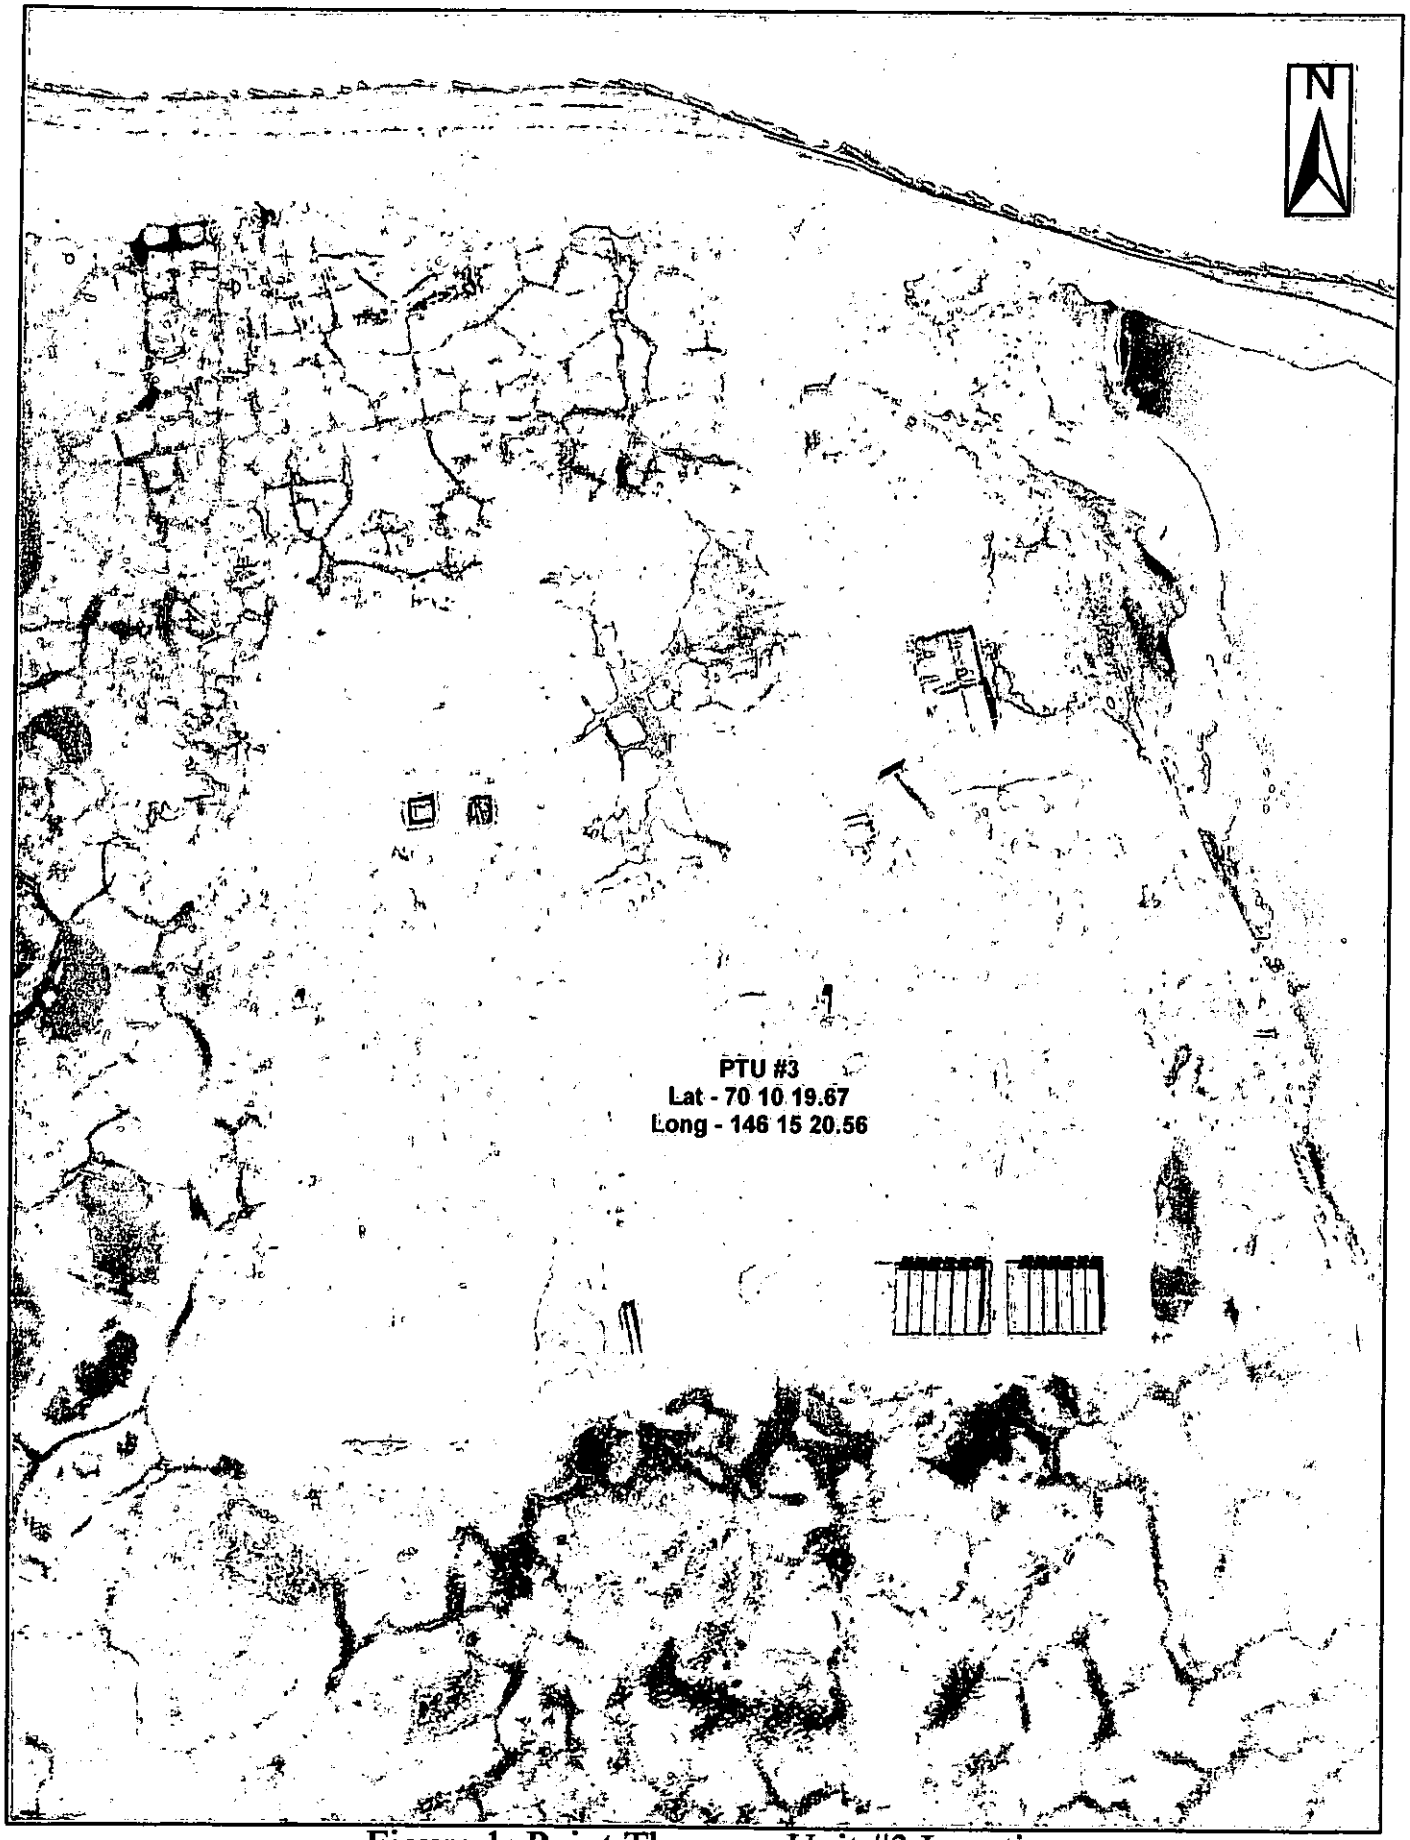


Figure 1: Point Thomson Unit #3 Location

3. Project Permitting

Permit applications and requested authorizations for the proposed activities are listed in Table 1.

Table 1: Project Permitting Requirements.

Permit Approval or Authorization	Agency
Coastal Project Questionnaire	Alaska Department of Natural Resources (ADNR)
Land Use Permit	Alaska Department of Natural Resources
Title 41/Title 16 Fish Habitat Permit	Alaska Department of Natural Resources
Development Permit	North Slope Borough Planning Department
Letter of Authorization (LOA) for the incidental taking of polar bears and Pacific walrus	U.S. Fish and Wildlife Service
Spill Prevention, Control, and Countermeasure (SPCC) Plan	U.S. Environmental Protection Agency (EPA)
Operations and Facility Response Plan	U.S. Coast Guard

Helicopter operations will be conducted consistent with ADNR's Beaufort Sea and North Slope Lease Sale Mitigation Measures, which require that helicopter operations maintain elevation of 1500' or more whenever possible and make approaches and departures from landing points in a near vertical profile when practicable.

4. Summary Operations Plan

4.1 Project Schedule

The project schedule for the equipment staging and site work is shown in Figure 2. An initial site inspection and survey, on or about June 20, 2008, is planned in advance of initiating project activities. Barging of the ice road construction equipment, 30 man camp, fuel tanks and other necessary supplies would occur in mid to late July and August. Based on the results of the June survey, gravel may be barged in to provide a stable surface for placement of the rig and drilling of the well within the existing gravel footprint. Barging activities will be confined to timeframes that do not conflict with subsistence whaling activities. A small crew may remain onsite to conduct maintenance and provide security for the equipment and materials until ice road construction personnel mobilize to the location in November or December.

Deadline

4.2 Site Access

4.2.1 Helicopter Support

Access to the PTU #3 location for personnel and small freight operations will be conducted via helicopter transportation from the Deadhorse airport. A Bell 212 or 412 helicopter will be utilized for personnel movement and emergency response during the work program.

4.2.2 Barge Transportation

Transportation of heavy equipment and materials will be via barge transportation from the Prudhoe Bay West Dock with routing along the northern Beaufort Sea coast and off-loading on the gravel beach at the north end of the PTU #3 pad. Barge operations are anticipated to require approximately 23 round trips from West Dock for the movement of ice road construction equipment, temporary fuel storage tank facilities, work camp/crew quarters, aggregate material for pad preparation, and other necessary equipment and materials. Two deck barges (60' x 200' each) with accompanying tugs will be utilized for the marine transportation requirements.

Barge activities will be confined to timeframes that do not conflict with subsistence whaling activities. The barging schedule will be coordinated with the North Slope Borough and communities of Kaktovik and Nuiqsut to avoid subsistence conflicts. The planned barging route from West Dock to the PTU #3 location is shown in Figure 3.

Access to the PTU #3 site will be controlled by onsite personnel. General public use of the area is limited to the occasional local hunters that come through the area by boat in summer and who will be able to stop and visit the location.

4.3 Onsite Personnel

Initial survey and tank inspection will consist of up to eight (8) personnel that will commute by helicopter from the Deadhorse/Prudhoe Bay area for up to six (6) days. Remaining activities will require up to 20 personnel for equipment staging and site preparation. These personnel will be housed in the crew camp facilities that will be barged to the site during this time period.

Once equipment staging, site preparation and tank installation is complete, a temporary camp for approximately two personnel will be staffed for maintenance and security purposes.

4.4 Camp Facilities

A 30 man camp will support the summer operations and will be subsequently used by the ice road construction personnel starting in November. The camp will have primary and backup generators for power of approximately 150 KW each. Fuel for these generators will be stored in the onsite fuel tanks that are to be installed and in generator day tanks. Treated camp wastewater will be discharged to the tundra in accordance with NPDES Permit No. AKG-33-0000. Sewage and sewage sludge disposition will be determined after selection of the specific camp facility by the ice road contractor. Depending on the unit selected, sludge may be incinerated on site in "Incin-o-lets" toilet units or collected and shipped offsite for disposal in the Prudhoe Bay area. Trash will be stored indoors and backhauled to Deadhorse or incinerated onsite to minimize the potential for wildlife attraction. Camp water during the summer will be delivered to the site from water sources within the Prudhoe Bay area and held in camp tanks. Resupply of the camp water will be by barge transport. Following the completion of barging, camp water will be provided by helicopter until snowmobiles are able to access water supplies at the Alaska State C-1 water pit. Water may also be taken from lakes close to the drillsite. Lake and gravel pit water usage will be less than 500 gallons/day.

4.5 Equipment Staging and Site Preparation

The anticipated equipment to be staged at the PTU #3 location is listed in Table 2. Prior to transport to the PTU #3 location, the equipment will be serviced in Deadhorse and any identified maintenance issues that could result in leaks or faulty operation will be addressed and remedied.

Table 2: Equipment to be Staged at PTU #3 Location.

Equipment	Quantity	Planned Use
Compactor	1	Gravel placement
Fuel tanks, 18,000 gallons each	9	Fuel storage
30 man camp	1	Quarters
Skid camp	1	Security crew quarters
Tucker Sno-Cat	1	Ice Road Construction
TV-145 Pumper	1	Ice Road Construction
966 Loader / Snowblower	1	Ice Road Construction
Service / Mechanic truck	1	Ice Road Construction
150 bbl water truck	1	Ice Road Construction
325 bbl water tanker	1	Ice Road Construction
Fuel truck	1	Ice Road Construction
Warehouse building	1	Maintenance, storage

Emergency shelter/oil spill container	TBD	Ice Road Construction
Light plants, heaters, other miscellaneous equipment	TBD	Ice Road Construction

Site preparation activities may include placement and compacting of approximately 2,000 cubic yards of gravel within the existing gravel footprint to provide a smooth working surface and level area for the subsequent placement of the drilling rig. Actual gravel importation quantities will be determined from site survey activities in June. Gravel will be obtained from an existing permitted pit in the Prudhoe Bay area under an existing contractor material sales contract. Additional site preparation activities include installation of temporary fuel tanks, staging of approximately 160,000 gallons of fuel, erection of a material and equipment shelter building, installation of a cellar(s) and conductor(s), and facilitate removal of existing onsite equipment. The planned location for the equipment and materials is shown in Figure 4.

4.6 Fuel and Hazardous Substances Control

Onsite equipment will use diesel fuel, hydraulic oil and lubricants for operations. Approximately 10,000 gallons of diesel fuel will be stored onsite in a tanker truck(s) to support initial site set up and preparation. An undetermined minor volume of commercial lubricants will also be located on site in secured indoor containers.

ExxonMobil plans to install temporary fuel storage tanks with an aggregate storage volume of 160,000 gallons in a lined containment area. The tanks will be double wall, API 653 certified fuel tanks. When this temporary storage facility is completed, a fuel barge will be dispatched to fill the tanks with diesel. This volume will be sufficient for the equipment staging and site preparation activities during the summer and ice construction operations in November and December 2008. After construction of the ice road, the fuel tanks will store fuel for drilling operations. The tanks will comply with ADNR, ADEC, EPA and North Slope Borough requirements. Fuel transfers from barges will comply with USCG requirements.

A Spill Prevention Control and Countermeasure (SPCC) Plan for the completed temporary tank facility and other onsite fuel storage containers will be prepared and submitted to the EPA. These temporary fuel storage facilities will also be included in the Oil Discharge Prevention and Contingency Plan (ODPCP) which will be prepared to cover the drilling activity. Containment for the temporary tank farm will consist of lined and built up cells capable of containing 110% of the storage capacity of the largest emplaced tank. The tanks will be inspected on a daily basis in accordance with the SPCC Plan requirements to verify tank integrity.

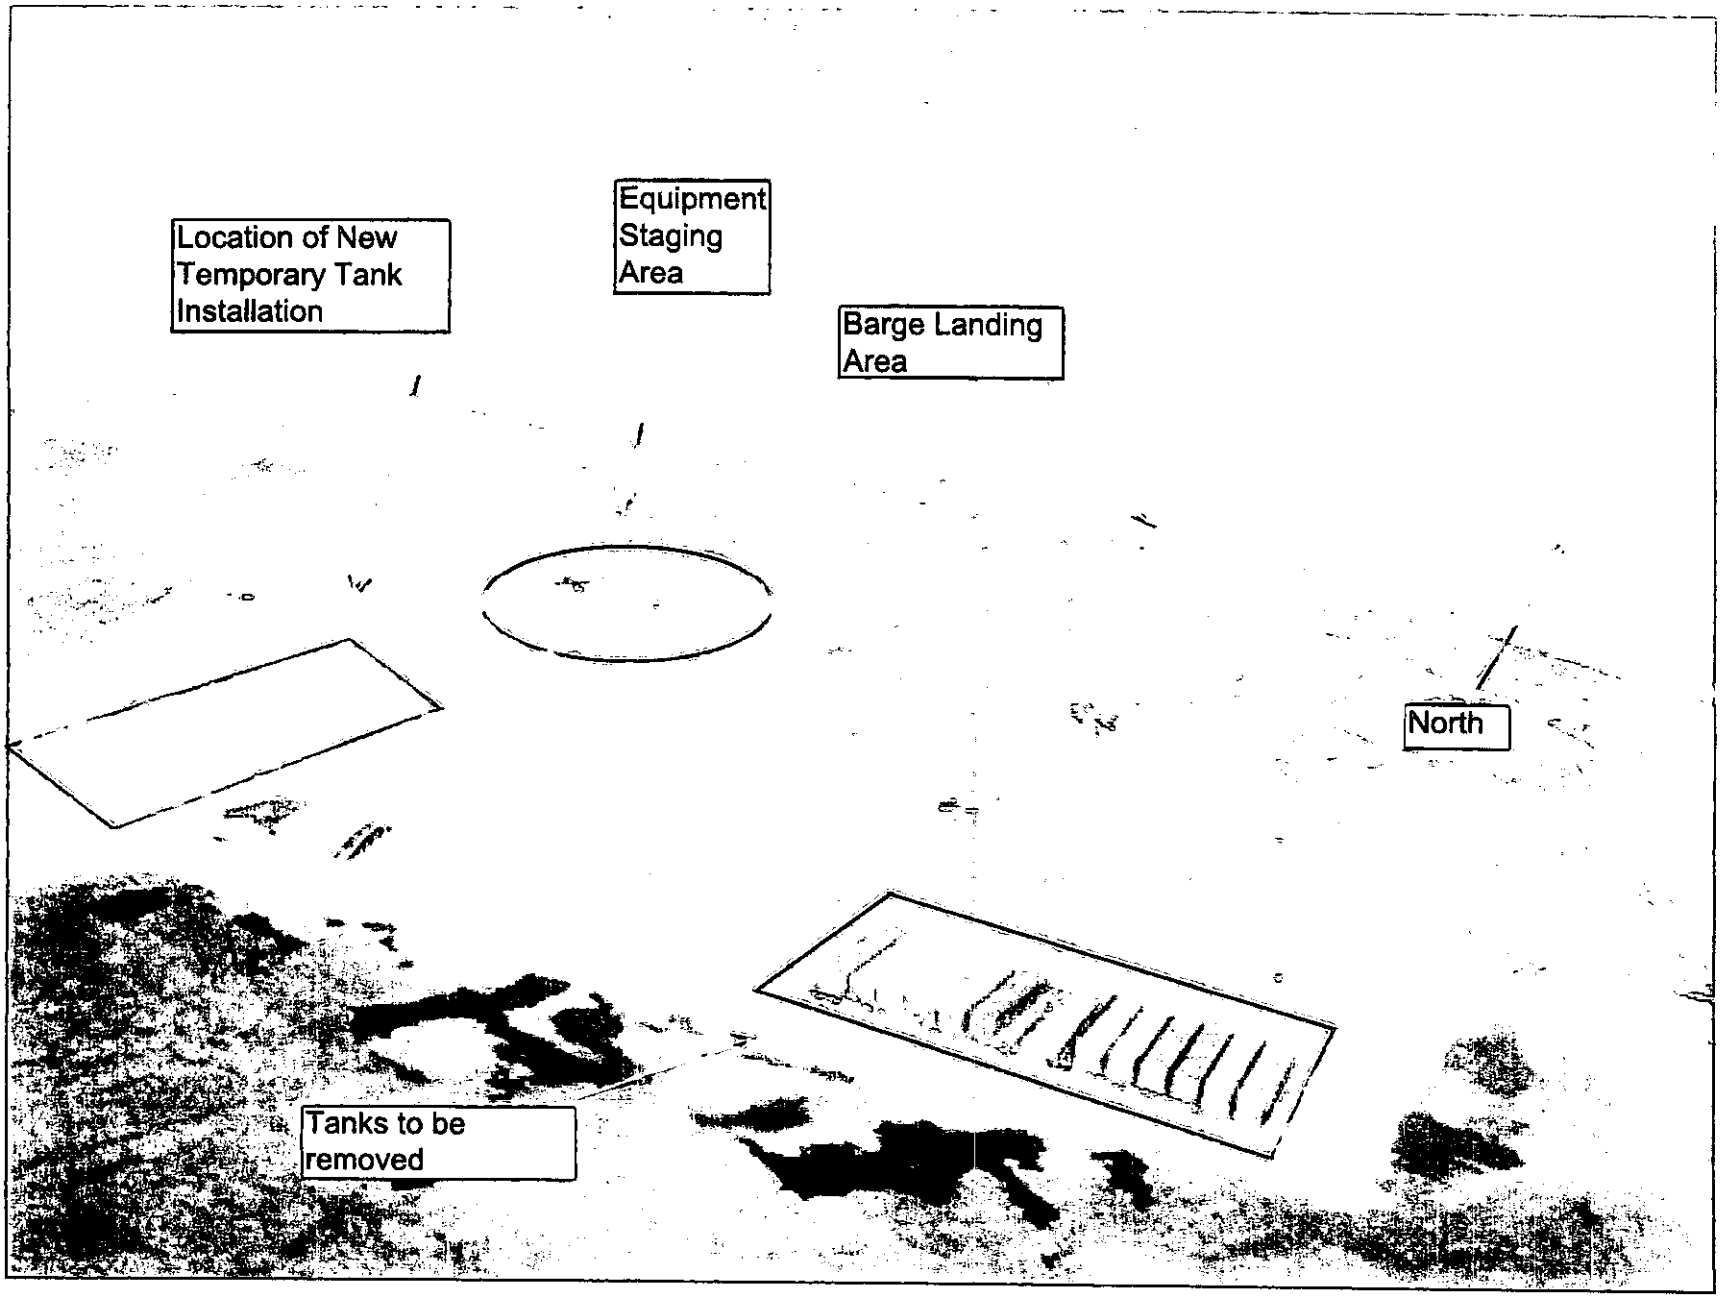

Figure 4: PTU #3 Equipment and Material Placement Areas

5. Project Representative and Contact

An ExxonMobil designated project representative will be onsite at all times during operations. Twenty-four hour phone service will be available at Deadhorse and/or the PTU #3 camp. The following persons or positions are designated contacts for the project.

RE: NSB 08-408.Conditional Use Permit, Point Thompson Equipment Staging and Site Preparation, Umiat Meridian, Point Thompson Unit #3, T10N, R23E, Section 34, Resource Development District

Dear Mr.Hayme:

We have completed our review of your request to stage equipment and fuel for use in ice road construction and other operations, associated with site preparation at the existing Point Thomson Unit #3 (PTU #3) gravel pad. This initial phase of drilling operations for the Point Thompson Drilling Program, which includes setting two conductors at the (PTU #3) pad, will take place in August and September 2008. (See attached letter).

Summer studies:

1. Bathymetry studies in the area of the proposed barge landing at the PTU #3 pad.
2. Topographic surveying of the (PTU #3) pad.
3. Geotechnical analysis (soil borings and ground penetrating radar) of the PTU #3 pad.
4. Inspection of fuel tanks and other equipment stored on the pad by another operator in preparation for removing those items.
5. Archeological studies to potential water sources along the coastline between the Prudhoe Bay area and Point Thompson area.
6. Bathymetry survey between the Endicott causeway and the PTU #3 pad.
7. Inspection of exploration drill sites in the Point Thompson area to plan well inspections and remedial work.

The project is set to commence on August 2008, with a completion date of January 31, 2009.

We have determined that your proposed activity is consistent with Title 19 and the North Slope Borough Coastal Management Program provided that you comply with the following conditions:

PROJECT SPECIFIC STIPULATIONS:

1. Exxon Mobil Corporation will submit results of any records of studies it has done on wildlife that may be affected by its activities (i.e., marine mammal observer reports) to the NSB Wildlife and Planning Departments as soon as the reports are available, but no later than July 1, 2009. This requirement does not pertain to engineering or geotechnical data not directly related to wildlife.

2. Exxon Mobil Corporation must obtain a non-objection letter from the Land Owner and must send a copy to the NSB Planning Department. To the extent the land is owned by the Alaska

Department of Natural Resources (ADNR), an ADNR permit specific to this project will suffice.

3. Permittee shall conduct activities in accordance of "economic opportunity policies" that reflects the codified section of Title 19, NSBMC 19.70.030.

4. Permittee shall consult the villages of Kaktovik and Nuiqsut regarding developments in the project, and adjust the project accordingly if need be, in response to reasonable concerns of the villages of Kaktovik and Nuiqsut. NSBMC 19.70

5. Exxon Mobil Corporation shall develop a GPS tracking system (i.e., navigation logs with coordinates in real time) for all vessels to help minimize subsistence activity conflicts. NSBMC 19.70.050 (D) (1), NSBCMP 2.4.3 (d).

6. Exxon Mobil Corporation shall have signed Conflict Avoidance Agreement (CAA) with Alaska Eskimo Whaling Commission (AEWC), the Whaling Captains of Kaktovik and Nuiqsut prior to commencement of barging activities. NSBMC 19.70.040 (E)

7. Exxon Mobil Corporation shall develop a subsistence mitigation program prior to the barging activities for the villages of Kaktovik and Nuiqsut to be implemented by the respective villages. NSBMC 19.70.050 (D) (1), (F) NSBCMP 2.4.3 (f). Exxon Mobil Corporation may satisfy this requirement by agreeing to (1) provide emergency assistance to subsistence users in the event of inclement weather; (2) assist with transportation of harvested whales to shore if required; (3) reserve 1,000 gallons of fuel for subsistence users in the event that displacement of subsistence resources requires users to travel farther in search of resources.

8. This permit shall not become effective until an ACMP review consistency determination (if required) is complete, and Alaska Department of Environmental Conservation (ADEC) approves the applicant's C-Plan (if required).

9. Exxon Mobil Corporation shall have Tribal Consultation on Regional level (with ICAS) and Tribal Entities of Kaktovik and Nuiqsut.

10. Exxon Mobil Corporation shall adhere to all conditions set forth in the July 25, 2008 Staff Recommendation.

PROJECT STIPULATIONS:

1. A Status Report for the activities conducted under this approval must be filed with the Planning Department on May 1 and January 1 each year, from the date this approval is issued and until a Completion Report is filed with the Division. Failure to file status reports or the completion report in a timely manner may result in revocation of this approval. The completion report shall contain a statement describing any clean-up activities conducted specific to the phase of activity, the method of debris disposal, and a narrative description of known incidents of surface damage.

2. The applicant shall defend, indemnify and hold the North Slope Borough harmless from any and all claims, damages, suits, losses, liabilities and expenses related to the injury to or death of persons and damage to or loss of property arising out of or in connection with the entry on and use of property within the North Slope Borough boundaries authorized under this approval by the applicant, its contractors, subcontractors and their employees.

3. Amendments and modifications to this approval require 15-day advance notice and must be approved in writing by the Land Management Administrator.

4. The applicant shall inform and insure compliance with any and all conditions of this approval by its

employees, agents and contractors, including subcontractors at any level.

5. Rehabilitation, Restoration, Remediation, and Cleanup shall be completed to the satisfaction of the Administrator.

6. Tundra travel on or across Native land claims is not authorized under this approval. The applicant shall consult Bureau of Land Management master title plats prior to any exploration or drilling to ensure surface operations do not cross or impact existing or pending native allotment claims. The purpose of this stipulation is to avoid trespass and/or damage to in-holdings on North Slope Borough-owned lands.

7. In the event of a spill, Exxon Mobil Corporation shall contact the following agencies; National Response Center (NRC): phone (800) 424-8802; ADEC – Business Hours phone (907) 451-2121, fax (907) 451-2362; ADEC –after hours and weekends call AK STATE TROOPERS (800) 478-9300; Alaska Department of Natural Resources – Oil Spill Hotline phone (907) 451-2678, fax (907) 451-2751; North Slope Borough (NSB) (907) 852-0440 (24-hour phone), fax (907) 852-5991; NSB Disaster Coordinator (Pat Patterson) phone (907) 852-2822, (907) 852-6111 (24 hours on call) fax (907) 852-2475; US Coast Guard phone (907) 271-6700, fax (907) 271-6765; US Fish and Wildlife Service (spills that may impact ANWR) phone (907) 456-0250, fax (907) 456-0248; BLM Anchorage – NPR-A phone (907) 267-1210; fax (907) 267-1304; BLM Fairbanks – NPR-A (Don Meares) phone (907) 474-2306, fax (907) 474-2386. The Northern Regional office of the Division of Mining, Land and Water shall be supplied with all follow-up incident reports.

8. The applicant shall hold well advertised meetings in Kaktovik and Nuiqsut to ensure that the activities do not conflict with subsistence uses of the area near Kaktovik and Nuiqsut. These meetings are intended to engage the subsistence hunters that use the areas that you plan to explore. If there are potential conflicts, you will develop a plan to mitigate those conflicts. Any plan must be approved by the NSB Planning Department. In the event that a meeting is not held prior to permit approval, Exxon Mobil Corporation shall provide the Planning Department (c/o Waska Williams) with an update of concerns raised by villagers, and Exxon Mobil Corporation's efforts to mitigate any conflicts.

OIL SPILL PREVENTION AND RESPONSE STIPULATIONS FOR FUEL STORAGE:

1. The permittee is reminded to conform to the provisions of NSBMC Chapter 19.70 for industrial development. The proper design, installation and operation of fuel storage, transfer and loading facilities are a condition of this permit. NSBMC 19.70.

2. Impermeable lining and diking is required for fuel storage facilities with a capacity greater than 660 gallons. The facility must be designed to hold 110% of the contents of the largest tank in the containment area, plus additional capacity to account for annual average precipitation. An engineer must certify that the lining and diking system meets these standards.

An oil spill prevention and response plan that provides for sufficient trained personnel and oil spill response equipment to respond to the worst-case discharge at this pad, must be in place prior to operating this pad.

SPILL RESPONSE TACTICS:

Compliance with the following is required:

- Place drip pans under vehicles parked over 5 minutes or during refueling
- During bulk fuel transfers, placement of vinyl liners with foam dikes with a capacity of 25 gallons under all valves or connections to diesel fuel tanks that are not within secondary containment.

Pink dye will be added to all diesel fuel prior to transporting to the field crews to aid in spill detection. All spills will be reported and cleaned up by Exxon Mobil Corporation.

HELICOPTER STIPULATIONS:

1. Exxon Mobil Corporation will communicate with the City of Kaktovik and City of Nuiqsut prior to conducting the 2008 study work in order to avoid impacting subsistence activities. NSBMC 19.70.050 (L), NSBMC 19.70.050 (J) 3.

2. Exxon Mobil Corporation shall employ subsistence representatives to assist in minimizing impacts to wildlife and local subsistence activities. Exxon Mobil Corporation is encouraged to hire its representatives from the Villages of Kaktovik and Nuiqsut (or other NSB villages if no one from Kaktovik and Nuiqsut is available). NSBMC 19.70.050 (L) 4, NSBMC 19.70.050 (J) 3.

3. Helicopter use in support of study activities shall maintain at minimum, 1,500 feet of altitude to avoid harassment over concentrations of 25 or more caribou, and over hunters in the area in of pursuit of subsistence animals, except during takeoffs and landings or as required for human safety. NSBMC 19.70.050 (L) 4, NSBMC 19.70.050 (J) 3.

4. To minimize impacts to subsistence activities, a helicopter route shall be established from routine site locations. Exxon Mobil Corporation shall not deviate from that prescribed route, unless avoidance of a large concentration of animals is occurring, or for human safety. The helicopter route for this project is limited to the study area. NSBMC 19.70.050 (L) 4, NSBMC 19.70.050 (J) 3.

5. Airports and helicopter pads are required to be sited, designed, constructed and operated in a manner that minimizes their impact upon wildlife. NSBMC 19.70.050 (L) 4, NSBMC 19.70.050 (J) 3. Vehicles, vessels, and aircraft that are likely to cause significant disturbance must avoid areas where species that are sensitive to noise or movement are concentrated at times when such species are concentrated. Concentrations may be seasonal or year-round and may be due to behavior (e.g., flocks or herds) or limited habitat (e.g., polar bear denning, seal haulouts). Horizontal and vertical buffers will be required where appropriate. Concern for human safety will be given special consideration when applying this policy. NSBMC 19.70.050 (I) 1.

SUBSISTENCE MITIGATION PROGRAM:

1. Exxon Mobil Corporation shall contact the NSB Land Management Administrator to prepare and implement a Subsistence Mitigation Program to mitigate adverse impacts to subsistence activities. Pursuant NSBMC 19.30.070 (A) (1), (2)

Exxon Mobil Corporation shall hire local subsistence representatives (preferably someone who knows the area and cabin or native allotment owners located in the general area) to work as a guide during construction and to monitor the activities of the proposed project construction.

ECONOMIC STIPULATIONS:

1. The applicant is advised that the Borough strongly encourages those seeking to do business on the North Slope to conduct their operations in a manner, that enhances locally-based economic and employment opportunities for Borough businesses and residents. In order to ensure that these goals have been considered in the design and administration of project operations the applicant shall submit an economic opportunity plan to the Land Management Administrator that outlines, in detail, how the policies outlined below and codified at **NSBMC 19.70.030** have been addressed.

Developers are encouraged to conduct operations to the extent practical and feasible:

A. Using suppliers or subcontractors from within the Borough for work, which can be accomplished competitively by local private businesses or regional or village corporations.
B. Employing local Borough residents, unless residents of the local villages express no interest in the work.
C. Utilizing flexible employment procedures, which allow the pursuit of subsistence opportunities by Borough resident employees.
D. Incorporating job-training programs targeting Borough residents.

1. The applicant shall present the economic opportunity plan to the Land Management Administrator for consideration prior to commencement of operations.

GRAVEL STIPULATIONS:

Exxon Mobil Corporation shall not expand the gravel pad already in the project area beyond its existing surface area, but may add gravel layers over the existing pad for maintenance.

The lands and facilities subject to this permit must be maintained in good condition and in conformance with the terms and conditions of this permit. You are not relieved of this requirement if you abandon the permitted activity, although you may make a good faith transfer to a third party. Should you wish to cease to maintain the authorized activity or should you desire to abandon it without a good faith transfer, you must obtain approval from the Land Management Administrator or his designated representative, which may require restoration and or re-vegetation of the area.

GENERAL STIPULATIONS

1. The permittee is reminded to conform to the provisions of NSBMC Chapters 9.08, 9.12 and 9.16 regarding solid and sanitary waste collection/disposal and potable water. The proper and lawful disposal of waste in an environmentally sound manner is a condition of this permit. If the permittee does not anticipate using facilities operated or approved by NSB, the Alaska Department of Environmental Conservation at (907) 269-7500 shall be contacted for an approved sanitary and solid waste disposal plan as well as a plan for potable water for temporary and permanent facilities described in this permit. A copy of the approved plans shall be submitted to the North Slope Borough Permitting and Zoning Division to become a part of this permit file. NSBMC 19.70.050(I)(4)&(5)

2. Should any cultural, archeological or paleontological resource materials (including, but not limited to artifacts, house mounds, grave sites, ice cellars, and fossilized animal remains) be discovered in the course of activities conducted under this permit, the site shall not be disturbed and the North Slope Borough Inupiat History, Language and Culture Commission shall be promptly notified at (907) 852-0422. NSBMC 19.70.050(E) through (G)

3. All oil and other hazardous material spills over 55 gallons shall be reported immediately to the NSB by telephoning (907) 852-0440. The follow-up written report will be faxed to the NSB Permitting and Zoning Division fax (907) 852-5991and the NSB/OSEA office at (907) 852-0327. A report of all spills shall be submitted to our office on a weekly basis. A sufficient amount of absorbent materials shall be on hand at all times in the event of any fuel, oil, or chemical spills. Spills shall be cleaned up as soon as possible. NSBMC 19.50.030(I)

4. The Land Management Administrator may require that his authorized representative be on-site during any operations conducted under this permit. NSBMC 19.30.100

5. Within the constraints of federal, state and local law, the permittee and its agents are encouraged, through a voluntary affirmative action program, to hire and train residents of the North Slope Borough.

In order to comply with this stipulation the permittee and its agents shall contact the Mayor or City Manager and the village corporation of any village most affected by this permit. In this case contact the village of Nuiqsut at (907) 480-6727 and Kuukpik Corporation at (907) 480-6220 to determine if there are qualified people available or people who could be employed for on-the-job training. NSBMC 19.70.030

6. The permittee shall comply with all local, state and federal laws and permits applicable to this project. NSBMC 19.30.100

7. This permit is valid for the duration of the existence of the development and the developer's compliance with the terms and conditions herein. This permit automatically expires within twelve months of approval if no actual development has commenced. Failure to comply with the conditions of this permit could result in immediate revocation of this permit. NSBMC 19.30.070

8. The permittee shall inform and ensure compliance with these stipulations by its agents and employees. This permit shall be posted in a conspicuous place for these individuals to see. NSBMC 19.30.100

Our review was conducted in accordance with NSBMC, Title 19. The purpose of our review is to ensure that your project achieves the goals and objectives, and implements the policies, of the Borough Comprehensive Plan, including its Coastal Management Program; to ensure that the future growth and development of the Borough is in accord with the values of its residents; to identify and secure, for present and future residents, and beneficial impacts of developments; to identify and avoid, mitigate, or prohibit the negative impacts of development; and to ensure that future development is of the proper type, design and location, and is served by a proper range of public services and facilities.

If your proposal is changed from what is represented in your application dated June 18, 2008, you must contact this office prior to the change being implemented in order to determine whether the enclosed authorization requires an amendment.

By copy of this letter, we are advising the below-listed individuals and their respective agencies that the proposal, as conditioned, complies with our District Coastal Management Program, and Comprehensive Plan.

Any aggrieved person, including the developer/applicant, may appeal the decision of the Land Management Administrator by serving written notice to the secretary of the North Slope Borough Planning Commission and the developer/applicant within 30 days of receiving this decision. The notice shall state the reasons why the appellant believes the decision of the Land Management Administrator is improper.

If you should have any questions, please contact, Waska A. Williams Jr., Land Management Specialist at (907) 852-0440 or by email at waska.williams@north-slope.org.

FEE PAID

- ☐ SPECIAL PLANNING COMMISSION MEETING $12,000.00
- ☒ DEVELOPMENT PERMIT...$2,000 + $500 PER WELL
- ☐ ADMINISTRATIVE APPROVALS ...$1500.00
- ☒ CONDITIONAL DEVELOPMENT PERMITS...$3,000.0

AMOUNT PAID $2,000

DECISION

☐ ADMINISTRATIVELY APPROVED

This is a minor amendment to a development permit or is a use of land listed under administrative approvals for this zoning district.

☐ REZONING APPROVED

This proposed development substantially complies with the Master Plan, and a use permit is issued, conditioned on compliance with all relevant Master Plan conditions, lease stipulations and provisions of state and federal law and permits served there under.

☐ DEVELOPMENT PERMIT APPROVED

The proposed development meets all applicable mandatory Policies, represents the Developer's best efforts to implement all relevant best efforts and minimization policies, and as long as any conditions set forth in the accompanying letter are complied with, will represent a net public benefit. (See accompanying letter)

☑ CONDITIONAL DEVELOPMENT PERMIT APPROVED

This is a use of land that is listed as a conditional development for this zoning district or has been elevated by the Land Management Administrator to the Planning Commission.

☐ PERMIT DENIED

(See accompanying letter)

Land Management Administrator — Date: 6-1-08

If you wish to appeal this decision, use must submit written notice to the secretary of the Planning Commission prior to the next regularly scheduled meeting, stating the policy or policies in questions and the reason you believe the decision is incorrect.

Oil & Gas Development

November 19, 2008

Kevin Banks, Acting Director
State of Alaska
Division of Oil and Gas
550 W. 7th Avenue, Suite 1100
Anchorage, AK 99501-3560

Re: Kitchen Unit Plan of Exploration
Request for Amendment of the Drilling Commitment Dates

Dear Mr. Banks:

Reference is made to that certain Kitchen Unit Agreement, approved by the Department of Natural Resources ("DNR"), effective January 31, 2007. The Kitchen Unit includes two prospects known as the Kitchen Prospect and East Kitchen Prospect, which include sixteen (16) State of Alaska Oil and Gas Leases ADL-389189, ADL-389190, ADL-389191, ADL-389192, ADL-389193, ADL-389914, ADL-389915, ADL-389917, ADL-389918, ADL-389919, ADL-389924, ADL-389925, ADL-389926, ADL-390548, ADL-390554, and ADL-391106.

The Kitchen Unit Agreement ("KHU") contained work/drilling commitments detailed in Exhibit 'G', the Initial Plan of Exploration. A request for amendment to the Plan of Exploration was subsequently submitted to the DNR on September 25, 2007. This request was denied on December 31, 2007 and the DNR issued a notice of default of the KHU. The notice of default recognized that Escopeta Oil Company, LLC ("EOC") had made "significant efforts and investments to bring a jack up rig to the Cook Inlet" and provided EOC the opportunity to cure the default under 11 AAC 83.374(b) by effectively deferring the KHU drilling deadline from December 31, 2007 to December 31, 2008, as requested in EOC's September 25, 2007 letter.

As the Division of Oil and Gas is aware, EOC and Pacific Energy Resources, LTD ("PERL") have been diligently working towards the acquisition of a suitable jack-up drilling rig, as well as an acceptable heavy-lift vessel contract for the rig's delivery to the Cook Inlet. Escopeta had begun efforts to acquire and deliver a jack-up drilling rig to the Cook Inlet back in mid-2005, before the formation of the KHU. Needless to say, this endeavor has been a complicated and costly undertaking for an independent oil and gas company.

Immediately after the acquisition of the Forest Oil Company holdings in Alaska by PERL, PERL began their quest for a jack-up drilling rig to drill the Corsair Unit prospect. Because both EOC and PERL had a common goal in the acquisition and delivery of a jack-up rig to the Cook Inlet, our two companies began coordinating efforts in the search for a suitable jack-up drilling rig and heavy-lift vessel. Additionally, EOC and PERL came to a mutually beneficial arrangement and began sharing and reprocessing seismic data to better define both unit areas.

The efforts by both EOC and PERL have now come to fruition after lengthy negotiations and considerable financial expenditures and commitments. EOC recognizes and appreciates the patience and cooperation of the DNR and the conscientious attention and assistance that has been provided to both EOC and PERL throughout this significant undertaking.

9020 Kirby, Suite 440 • Houston, Texas 77054 • Office 713.623.2019 • Fax 713.439.226 • e-mail escopeta@swbell.net

On April 30, 2008, PERL submitted to the DNR evidence of a drilling rig contract between PERL and Blake Offshore, LLC, evidence of the required down payment, and a commitment from Blake Offshore, LLC ("Blake") to provide the Blake 151 jack-up drilling rig to the Cook Inlet for drilling within the Corsair Unit no later than June 30, 2009.

On November 17, 2008, EOC and PERL entered into a rig sharing agreement for the Blake 151 offshore jack-up drilling rig. This agreement recognized the cost and risk sharing opportunities by both companies and provided for the fair and equitable sharing of the jack-up drilling rig, thereby providing for the most expedient exploration and development possible for the two companies prospects.

On October 31, 2008, PERL delivered to the DNR evidence of an executed heavy-lift vessel contract between EOC, PERL, and Offshore Heavy Transport AS ("OHT") for the use of the M/V Heavy Lift Falcon for the delivery of the Blake 151 jack-up drilling rig.

The stage has now been set by EOC and PERL for the delivery of the first jack-up drilling rig in the Cook Inlet for over two decades. This significant milestone marks the beginning of an exciting new era in offshore exploration and development in the Cook Inlet, not only for EOC and PERL, but for all offshore oil and gas lessees.

Pursuant to 11 AAC 83.343(e), EOC hereby respectfully requests the amendment of the approved KHU Plan of Exploration to allow for the successful exploration and development of the Unit. This amendment is necessary because it is impossible to drill the first exploratory well in the KHU by December 31, 2008, as indicated above. Attached and made a part hereto of the requested amendment is a draft three-year initial Plan of Exploration ("POE"). In accordance with 11 AAC 83.303, approval of this POE is in the best interests of the State of Alaska, the residents of Alaska, the energy consumers (private, commercial and industrial) in the communities along the rail-belt, all Cook Inlet offshore oil and gas lease holders, and the United States policies on domestic energy and natural resources.

Because EOC and PERL have shared their independent geologic and geophysical information and jointly developed there respective prospects within the Kitchen and Corsair units, a higher level of conservation of natural resources will occur. With both companies understanding their adjoining prospects and reservoirs, a global plan of exploration can be utilized. This "global plan" will allow both EOC and PERL to minimize economic and physical waste by the sharing of information, equipment, facilities, future infrastructure, and other mutually beneficial arrangements.

EOC has expended a very significant amount of financial and physical resources in the acquisition of the offshore leases, the acquisition and interpretation of the geologic and geophysical data, the delineation of the Kitchen and East Kitchen prospects, the four-year effort in obtaining a suitable jack-up drilling rig, the KHU formation, the multi-company negotiations and agreements, the procurement of a Jones Act Waiver, and the contract for a heavy-lift vessel. Accordingly, PERL has expended similar financial and physical resources. Approval of this requested amendment will protect the vested interests of both EOC and PERL by allowing for the execution of their plans and realization of their unwavering efforts to bring a jack-up drilling rig to the Cook Inlet.

A denial of the requested POE amendment would result in the enormous waste of financial and economic resources that has already been expended and committed by EOC, as well as by the State of Alaska in its review, adjudication, approval and oversight of the KHU and related drilling rig and heavy-lift vessel contracts.

A denial of the requested POE amendment would result in the potential waste of the physical resources of the State of Alaska. EOC has cooperated with PERL in the interpretation and development of the company's respective prospects. Another company may not be able to enjoy the

benefits of shared data and would most likely have to acquire, interpret and delineate the KHU prospect again, perhaps missing important structures or closures.

The State of Alaska's interests will be protected, as the KHU leases cannot be explored and developed faster by any other company other than EOC. The Blake 151 offshore jack-up drilling rig will not be available for any other company's use prior to the summer of 2010 because PERL will be utilizing it. There is no other drilling rig in the Cook Inlet suitable for offshore exploration of development drilling.

Should this requested POE amendment be denied and the KHU terminated, because of the time necessary to approve the 2009 Cook Inlet Areawide Best Interest Finding ("BIF"), the potential appeals and litigation associated with the BIF, the subsequent appeal of the KHU POE modification denial, and the necessary title research and time restraints necessary to include the KHU leases in a any upcoming lease sale, the KHU leases would not be available for competitive bid until the May 2010 lease sale, at the earliest. Should another company, or companies, be the successful bidder on these leases, it is unlikely the DNR would be able to issue the leases until after the 2010 offshore drilling season. Even if the leases could be immediately issued in May 2010, a new lessee, or lessees, would still have acquire and interpret the geologic and geophysical information to delineate the prospect, and would have to either acquire their own drilling rig and heavy-lift vessel, or they would need to negotiate a contract with PERL for the use of the Blake 151 jack-up drilling rig.

With all things considered, it will be impossible for any other company, or companies, to drill a well in the KHU leases during 2010, and very unlikely it would be able to occur earlier than 2012. Therefore, EOC is the only company poised to successfully drill a well in the KHU leases in 2010 or earlier, and it is in the State's best interest having EOC remain in control of the KHU leases and their exploration and development.

The environmental costs and benefits for retaining the KHU and approving the requested POE amendment to allow for the continued exploration and development of the Kitchen and East Kitchen prospects by the current Operator are significant. EOC has already completed all the necessary planning, geological and geophysical data interpretation, as well as initiating final preparation for the acquisition and delivery of the necessary offshore drilling rig. If the KHU were terminated and the leases eventually acquired by another company, or companies, duplicative environmental research and data acquisition and interpretation would have to be performed. Additionally, should multiple companies or individuals acquire the KHU leases in a subsequent lease sale, the required complex negotiations and new unit and operating agreements would delay any possible exploration. EOC as the sole Unit Operator and owner of the existing geological and geophysical data is the only company positioned to minimize additional environmental costs and maximize the benefits to the State of Alaska.

EOC already has established exploration and potential development plans for the KHU. Retaining EOC as Unit Operator by approving the requested POE amendment allows for the expedient exploration and development of the KHU oil and gas resources, thereby minimizing future economic costs to the State of Alaska and maximizing the benefits by an earlier first delivery of royalties from production. Should the requested POE amendment not be approved and the KHU terminated, a new Unit Operator would have to start from the beginning in their exploration and development plans, increasing the economic costs and delaying the delivery of first royalties to the State of Alaska.

As stated earlier, there has not been a jack-up drilling rig in the Cook Inlet for over two decades. During those two decades, not one offshore prospective oil and gas lease has been bid on by one of the three existing major oil and gas companies operating in the Cook Inlet. If one of these three existing major operators would have wanted to acquire any additional offshore oil and gas leases over the last two decades, they would have. Additional, all three of these major operators had the financial ability to also bring a jack-up drilling rig to the Cook Inlet, if they so desired, especially

during times of rising oil and gas prices. Now that the oil and gas prices are declining once again, it is unlikely these majors will express an interest. It is therefore up to the joint efforts of the independent oil and gas companies to bring such a drilling rig to the Cook Inlet.

With declining oil and gas prices and Cook Inlet oil and gas reserves, it is important that the State of Alaska foster and encourage all existing opportunities it has towards the exploration and development of its oil and gas resources. Denial of this requested POE amendment may result in the inability of the KHU resources to be timely explored and developed. In fact, a denial may have a trickle-down effect on the overall economics and justification for bringing a jack-up drilling rig to the Cook Inlet all together.

The opportunity for a jack-up drilling rig to be successfully delivered to the Cook Inlet is here, an event long overdue and a result of the diligent efforts of EOC and PERL. It is in the best interest of the State of Alaska, and its residents, to continue the good faith negotiations which will allow EOC, as well as PERL, to fulfill their exploration and development plans, thereby providing the State of Alaska royalties on the oil and gas production from the Kitchen and East Kitchen prospects at the earliest date possible.

Accompanying this request is the aforementioned Draft Revised Initial Plan of Exploration (Exhibit G to the Unit Agreement), the jack-up drilling rig contract between PERL and Blake, the rig sharing agreement between EOC and PERL, and the heavy-lift vessel contract between EOC, PERL and OHT. The drilling rig contract, rig sharing agreement and heavy-lift vessel contract are delivered under separate cover and considered commercial and proprietary in nature and are requested to be held CONFIDENTIAL under 11 AAC 82.810.

Should the Department of Natural Resources wish to discuss this request in person, prior to the issuance of a decision on the request, Escopeta Oil Company, LLC would accommodate such a request. Any such meeting would be beneficial for Pacific Energy Resources, LTD to attend as well. If you have any questions, please feel free to contact me immediately at my Houston office: (713) 623-2219, my cell phone at: (713) 828-7243, or by e-mail at escopeta@swbell.net.

Respectfully Submitted By,

Danny S. Davis
President

Oil & Gas Development

WORKING DRAFT - This is a working draft prepared for the State of Alaska, Dept. of Natural Resources, Division of Oil and Gas and represents no commitment.

Kitchen Unit
Revised Exhibit G, Initial Plan of Exploration

The Unit Operator, Escopeta Oil Company, LLC (EOC), shall complete an initial Three-Year Plan of Exploration for the Kitchen Unit (KHU), effective January 1, 2009 to December 31, 2011.

2009 Year-One, Obtain all permits necessary for the drilling of one exploration well within either the East Kitchen or Kitchen Prospects:

1. By December 31, 2009 EOC shall obtain all necessary regulatory permits and authorizations necessary for the drilling of an Exploration Well to either East Kitchen #1 or Kitchen #1 to a bottom hole location in either ADL #389926 or ADL# 389924, and as described in Table #1, to a minimum depth of between 16,000 feet TVD, penetrating the Sterling, Beluga, Tyonek and Hemlock formations.

2. If EOC fails to obtain the necessary permits and authorizations as described in item # 1 above by December 31, 2009, the KHU will automatically terminate, and EOC shall pay the state $ xxx *(amount to be determined and under review)* for potential unrealized bonus payments that might have been received on expired leases (11520 acres in ADL's 389189, 389190, 389191, 389192, 389193) in the KHU in the planned May, 2010 Cook Inlet lease sale.

2010 Year-Two, Drill one exploration well in either the East Kitchen or Kitchen Prospects:

1. By December 31, 2010 EOC shall drill an Exploration Well to either East Kitchen #1 or Kitchen #1 to a bottom hole location in either ADL #389926 or ADL# 389924, and as described in Table #1, to a minimum depth of between 16,000 feet TVD, penetrating the Sterling, Beluga, Tyonek and Hemlock formations.

2. If EOC fails to drill an Exploration Well as described in item # 1 above by December 31, 2010, the KHU will automatically terminate, and EOC shall pay the state $ xxx *(amount to be determined and under review)* for potential unrealized bonus payments that might have been received on expired leases (11520 acres in ADL's 389189, 389190, 389191, 389192, 389193) in the KHU in the planned May, 2011 Cook Inlet lease sale.

2011 Year-Three, Drill second exploration well in either the East Kitchen or Kitchen Prospects:

1. If the unit does not terminate in year one, by December 31, 2011 the Unit Operator shall drill a second Exploration Well to either East Kitchen #1 or Kitchen #1 to a bottom hole location in either ADL #389926 or ADL# 389924, and as described in Table #1 and to a minimum depth of between 16,000 feet TVD, penetrating the Sterling, Beluga, Tyonek and Hemlock formations.

2. If the Unit Operator fails to drill an Exploration Well as described in item # 1 above and in Table #1, by December 31, 2011, the Kitchen Unit will automatically terminate and EOC shall pay the state $ xxx *(amount to be determined and under review)* for potential unrealized bonus payments

Section 22	Section 18	Section 3

Additional Provisions

1) In accordance with Article 8.1.1 of the Agreement and 11 AAC 83.341, an annual report is due that describes the status of projects undertaken and the work completed during that year of the POE, as well as any proposed changes to the plan. The update to the POE must describe the applicant's proposed exploration activities, including the bottom-hole locations and depths of proposed wells, and the estimated date drilling will commence. All exploration operations must be conducted under an approved plan of exploration.

2) The Unit Operator shall submit a Second Plan of Exploration to the Commissioner at least 60 days before the POE expires. Alternatively, the Unit Operator shall request approval of the first Plan of Development, if appropriate, at least 90 days before the Initial POE expires. 11 AAC 83.341(b) and .343(c).

3) EOC shall incorporate the following terms into the next Plan of Exploration or Plan of Development: "EOC shall request approval from the Department of Natural Resources to establish an Initial Participating Area within the KHU by December 31, 2010. Any lease, or portion of a lease in the KHU not included in an approved participating area will subsequently contract out of the KHU upon approval."

RE: Corsair Unit Expansion Application
Appeal of Director Bank's Decision and Request for Reconsideration

Dear Lt. Governor Parnell and Commissioner Irwin:

In accordance with 11 AAC 02, Pacific Energy Alaska Operating LLC ("PEAO") and its parent, Pacific Energy Resources Ltd. ("PERL") (which companies are sometimes referred to collectively as "Pacific") hereby appeal the decisions of the Director of the Division of Oil and Gas (Division), dated April 30, 2008, regarding the Expansion Application for the Corsair Unit (Corsair) and Plan of Exploration (POE). PERL is the operator of Corsair and had requested the Expansion of the Corsair Unit, simultaneously offering an amended POE. The Director denied the request. A copy of Pacific's request to the Director and the Director's letter to Pacific denying its request are attached and incorporated into this appeal. At the time of the submission of the Corsair Unit Expansion Application, Pacific submitted extensive geological and geophysical (G&G) interpretations, structure maps, seismic data, well logs and evaluations to the Division in support of the Application. This G&G information is held confidentially by the Department of Natural Resources (DNR), pursuant to AS 38.05.035, and is hereby incorporated into this appeal by reference. Pacific hereby requests that all previous confidential data submitted to the Division concerning the Corsair structure remain confidential.

The subject leases of the existing Corsair Unit are ADL's 389196, 389197, 389198 and 389515, totaling approximately 10,185 acres. The requested northern expansion leases are ADL's 389513 and 389514, totaling approximately 5,082 acres. The requested southern expansion leases are ADL's 389507 and 389923, totaling approximately 11,464 acres.

The main points, among others, for this Appeal are as follows:

1. The Division did not fully consider the merits the Unit Expansion Application and the benefits to the State of Alaska and the public in its negotiations. Such actions by the Division severely prejudiced Pacific Operating Alaska, LLC and Pacific Energy Resources, Ltd.

2. The determination by the Division that the Proposed Amended POE was an "unacceptable delay" in the drilling of the unit's resources is erroneous. Rather, the Proposed Amended POE represents an acceleration in the drilling of the unit's resources.

3. The assumptions and conclusions made by the Division regarding the "warehousing" of leases are incorrect. The prejudicial and predetermined nature of the Division's Decision did not allow for the full consideration of the Expansion Application and appeared to have been written for the sole purpose of using the Decision to fortify its position taken in other pending litigation.

4. The determination by the Division that having the subject expansion leases available in the May 2009 lease sale would allow the leases to be drilled sooner and thereby conserve resources is incorrect. Rather, it would be impossible for the subject acreage to be drilled sooner on a lease-by-lease basis. The more prudent approach would be to permit the unitization of the total Corsair structure and resource, thus allowing all acreage to be made a part of a comprehensive exploration and development plan.

5. The Division's failure to unitize the entire reservoir works against the primary goal of conservation of all or part of an oil and gas resource. The fragmentation of the Corsair structure into unitized and non-unitized parcels with different working interest owners would ultimately result in a waste of both economical and physical resources.

6. The Division's conclusion that the State's and public's best interest would be served by having the expansion leases expire and become available for releasing by any potential high bidder, rather than preserving the Corsair structure and resource as a whole, operated by a single working interest owner is erroneous.

7. The Division failed to fully consider the protection of all parties of interest, including that of Pacific and the south central natural gas consumer, especially as it relates to the overall economics of bringing a jack-up drilling rig into the Cook Inlet for not only exploration of the Corsair structure, but the exploration of other offshore prospects and the step-out development drilling of the existing offshore platforms and their respective declining production and reserves.

8. The Division's Decision overlooks the technical, geological and geophysical information, as verified and supported by the Division's Resource Evaluation staff, as well as the economical and commercial aspects of the proposed Corsair exploration and development plans.

9. Denial of the Corsair Unit expansion is not in the best interest of the State and damages Pacific's capital investment in the Unit and the interpretation, evaluation and delineation of the Corsair resource.

10. The only possible parties who would benefit from the denial of the expansion application would be the existing major Cook Inlet producers. By the Division's denial of the expansion application, it is limiting competition and allowing the continued control of the market by the major Cook Inlet producers.

11. The Division's failure to adequately evaluate the expansion application in accordance with the provisions of 11 AAC 83.303 severely jeopardizes PERL's ability to economically explore and develop the Corsair prospect. The Division's failure to fully consider the merits of application prejudices and damages PERL.

These points, as well as others, are discussed in further detail, and are elaborated on as they relate to their occurrence in the aforementioned Director's Decision.

I. DECISION SUMMARY, paragraph two, finding No. 1: Does not promote the conservation of natural resources. (page 3)

The Corsair structure, as delineated and presented to the Division's Resource Evaluation staff, indicated several intervals of productive hydrocarbon sands within the Sterling, Beluga, Tyonek and Hemlock formations. Unitization of the entire reservoir, especially by a single operator, will insure the most efficient exploration and production of the resources, and the greatest ultimate recovery from the Corsair reservoirs.

Without unitization of the entire Corsair structure, the resource could be fragmented into unitized and non-unitized parcels by multiple working interest owners, requiring needless negotiations, duplication of effort, and waste. Should the subject leases be acquired by another lessee, there is no assurance that that operator will have the necessary financial capabilities or access to the required offshore drilling equipment to explore and produce those portions of the reservoir, thereby wasting the natural resources.

As the Division is aware, unitization of leases ideally encompasses the minimum area necessary to encompass the entire geologic structure or reservoirs. By denying the proposed unitization of the subject leases, the DNR effectively promotes the waste of natural resources. Therefore, Pacific maintains that the Division erred in its finding that unitization of an entire geologic structure does not promote the conservation of natural resources.

I. DECISION SUMMARY, paragraph two, finding No. 2: Does not promote the prevention of economic and physical waste any more than non-unitized development of the individual leases. (page 3)

The proposed unitization of the expansion acreage into the Corsair Unit would guarantee the efficient exploration and evaluation of the entire Corsair structure. A single operator would then be able to drill and evaluate each well and determine the optimum location of each subsequent well.

Moreover, a single operator of the entire Corsair structure can develop the resource systematically, using the same offshore drilling structure and technologies without the duplication of facilities and processes.

Should the expansion leases be acquired by another lessee on a lease-by-lease basis rather than as part of a unit, that lessee would be required to have its own offshore drilling equipment, drilling schedule, plans of exploration and development plans separate and apart from those of the Corsair Unit operator. This would result in the duplication of resources - staff, and production and transportation facilities. There is no assurance that such lessee's plans would either compliment or conflict with those plans of the Corsair Unit Operator.

The Division evaluated of the benefits and the shortcomings associated by non-unitization, as stated on page 5, paragraph three, of the Decision, and recognized that:

> *"[u]nitization may lessen environmental risks by reducing redundant facilities. Lessees operate under a unit agreement that includes a plan of exploration or development covering the entire unit area rather than individual leases."*

Non-unitized development would result in duplicative facilities and the unorganized development of the Corsair reservoirs. Without the unitization of the entire Corsair structure, by a single operator, the amount of economic and physical waste would be immense. Pacific maintains that the Division erred in its finding that unitization of an entire geologic structure does not promote the prevention of economic and physical waste, any more than non-unitized development (associated with unitized development) on the individual leases.

I. DECISION SUMMARY, paragraph two, finding No. 3: Does not provide for the protection of all parties of interest, including the state. (page 3)

At present, there are only two parties having a direct interest in the existing and the proposed expanded Corsair Unit: the State of Alaska and Pacific Energy Alaska Operating LLC, as lessee (Pacific Energy Resources Ltd., as unit operator). Other associated parties of interest include the public, the south central Alaska natural gas and gas-generated electrical consumers, adjacent lessees, and existing offshore oil and gas producers.

Pacific maintains that the Division did not adequately consider the protection of Pacific's interest. Pacific has expended approximately $500,000,000 to acquire the assets of Forest Oil Corporation (Forest), preserving the Corsair leases, evaluating and mapping the Corsair reservoirs, and the acquisition of a suitable offshore drilling structure. Without the expansion acreage, Pacific loses the economic advantage, as well as the benefit of the bargain, that they purchased from Forest and acquired through its own diligence. Moreover, Pacific loses approximately two-thirds (2/3rds) of the Corsair structure and any potential revenue derived from the production of those resources.

Denying the expansion of the Corsair Unit to encompass the entire geologic structure and all potential reservoirs severely prejudices and damages the economic investment and proprietary position that Pacific has endeavored to gain. The denial of the Corsair Unit expansion and the DNR's proposed offering of the Corsair leases that contain approximately two-thirds (2/3rds) of the Corsair structure amounts to nothing less than a taking by the DNR, and the ultimate waste of hundreds of millions of dollars of investment by Pacific.

The State of Alaska places the interests of its citizens and other directly interested parties at risk as well. In denying the Corsair expansion application, the DNR jeopardizes the economic feasibility of the Corsair prospect as well as Pacific's ability to justify the delivery of the jack-up drilling rig to the Cook Inlet. If Pacific is only left with control of approximately one-third (1/3rd) of the Corsair structure, it may not be economically feasible or prudent to invest the additional tens of millions of dollars required to secure and deliver the jack-up drilling rig to the Cook Inlet. Moreover, the State of Alaska and the south central consumers are damaged if the Corsair structure is not explored by Pacific. The State loses royalty and tax income, citizens lose potential jobs, and consumers may face higher natural gas prices. Unlike potential lessees who would not acquire leases until a lease sale could be completed, Pacific is immediately positioned and best suited to explore and develop the Corsair structure.

Any disruption of PERL's ability to deliver the contracted jack-up drilling rig to the Cook Inlet jeopardizes not only the exploration and production of the Corsair Unit structure. Such disruption threatens the exploration and production of the Kitchen Unit, the East Kitchen Unit, step-out development drilling for the existing Cook Inlet Platforms and associated reservoirs, and any new potential offshore exploration prospects.

The Decision recognizes that the Cook Inlet has not had a mobile offshore drilling structure in its waters for almost two decades. As a result, existing production from offshore platforms has declined dramatically, and offshore exploration has become stagnant. Portions of existing reservoirs currently served by existing offshore platforms are either unreachable by directional drilling or there is not sufficient space in the platform's legs to accommodate additional wells. A jack-up drilling rig could access these unreachable portions of the existing reservoirs and tie their production back to the existing platforms, thereby extending economic life of those platforms and providing the opportunity for greater recovery of the associated resources.

Without the inclusion of the Corsair expansion acreage and subsequent delivery of a jack-up drilling rig, as proposed by Pacific, the existing production from offshore platforms in the Cook Inlet will continue its decline to a point where it is uneconomical to continue operating the platforms, and those platforms will immediately become an economic and environmental liability to the State of Alaska. Additionally, without the inclusion of the Corsair expansion acreage and subsequent delivery of a jack-up drilling rig, there will be no offshore exploration or additional offshore production for what may be decades to come, resulting in continued decreased oil and gas reserves, gas shortages and higher consumer prices.

It is unlikely that another company, including the major operators in the Cook Inlet, will bring a jack-up drilling rig into the Cook Inlet in the near future. This is evidenced by both the recent history and lack of such an attempt by the majors in the past. The Division itself acknowledges this fact as follows:

> *Due to the significant capital investment required to bring a jack-up rig to the Cook Inlet, and the long lead time for scheduling a suitable heavy lift vessel for transport of the rig, it is unlikely that multiple jack-up rigs would be delivered to the Cook Inlet. Indeed there has not been a jack-up drilling rig in the Cook Inlet since the early 1990's. (Decision, page 5, paragraph 4.)*

By the denial of the Corsair expansion application, the State of Alaska risks the loss of potentially billions of dollars in royalties and taxes, increased employment opportunities, trickle-down income to hundreds of other Alaskan business, and other types of income and income-generating opportunities. The State would also incur the continued decline in production and eventual shut-down of the existing offshore production platforms and increased economic and environmental liabilities. This decision is surely not in the best interests of the State of Alaska, the existing offshore producers, the Cook Inlet natural gas industrial users and consumers, and the people of Alaska in general.

In summary, the denial of the Corsair Unit Expansion Application results in 1) the waste of natural resources in general, not confined to only the Corsair prospect; and 2) the specific economical and physical waste of the Corsair resources as well as others. Moreover, it jeopardizes the interests of PERL, the other offshore producers, the State of Alaska, the Cook Inlet gas industrial users, the south central and rail belt natural gas and natural gas-generated electrical consumers, and the people of Alaska in general.

IV. DISCUSSION OF DESIGN CRITERIA, A., 1. Environmental Costs and Benefits of the Expansion, paragraph four, which reads: (page 5)

> *In order to drill any exploratory wells in the existing unit or the proposed expansion area PERL must use a rig capable of drilling offshore without a platform, i.e. a so-called jack-up rig. Under the Initial POE, PERL has committed to drill a well by June 30, 2009 within the existing Corsair Unit regardless of unit expansion. Unit expansion will not decrease the need for such a drill rig.*

The Initial POE was negotiated by PERL's predecessor Forest Oil Corporation (Forest). Upon acquisition of Forest's assets and associated contractual obligations, it became clear to PERL that Forest did not adequately interpret the Corsair structure, did not make any efforts in obtaining a jack-up drilling rig, and therefore could not have met the pre-existing obligation of drilling a well by December 31, 2008. PERL's first priority was to evaluate the reality of having a drilling rig delivered to the Cook Inlet and the earliest date that a well could subsequently be drilled. This was the basis for requesting that the Division revise the drill-by date to June 30, 2009.

The second priority was to fully examine, delineate and evaluate the Corsair Structure and the economics of bringing a jack-up drilling rig to the Cook Inlet. It became apparent to PERL that the reason Forest did not make any attempts to acquire or deliver a drilling rig to the Cook Inlet was because the existing reservoir, as they knew it, was not adequate to support the economics of rig acquisition and delivery.

With the acquisition of additional seismic data and further interpretation and evaluation, PERL determined that the Corsair structure, having multiple reservoirs, extended considerably further than the existing unit boundaries. After this evaluation by PERL (which was not completed until after the renegotiation of the aforementioned drill-by date), PERL determined that the economics for obtaining a jack-up drilling rig were sufficient if the entire Corsair structure was included in the exploration and development.

Although unit expansion will not decrease the need for a jack-up drilling rig to meet the contractual obligations of the June 30, 2009 POE drill-by date, PERL maintains that without the inclusion of the expansion acreage it is uneconomical to acquire and deliver the drilling rig. PERL agrees with the Division's determination that unit expansion will not decrease the need for such a drilling rig [for the entire Cook Inlet, in general]. However, the Division's denial of the Corsair Unit Expansion jeopardizes PERL's ability to acquire and deliver such a drilling rig. That Decision not only purposefully forces the ultimate default of the Corsair Unit, but delays any near-future offshore exploration or development throughout the Cook Inlet. The Division offers no viable economic alternative to get the Corsair acreage drilled by an party other than PERL.

Therefore, PERL maintains that the Division's determination that the approval of the Corsair Unit Expansion Application has no additional benefits is contradictory and flawed.

IV. DISCUSSION OF DESIGN CRITERIA, A., 2. The Geologic and Engineering Characteristics of the Reservoir and Prior Exploration Activities of the Corsair Unit Area; Corsair Expansion Prospect, which reads, in part: (page 7)

"The Corsair prospect is the large NNE-SSW trending doubling plunging, SRS anticline with four-way dip closure. ... The structure is approximately 2.5 miles wide and 9 miles long. ... The seismic data over the Corsair Prospect demonstrates four way closure through the entire Tertiary section.

The Corsair Unit as currently configured contains two types of hydrocarbon prospects. The primary target consists of Sterling and Beluga sands; a secondary target is the deeper Tyonek Oil Sands. In the acreage under consideration for expansion (both northern and southern leases) only a single hydrocarbon target is viable, the Tyonek oil sands. Maps provided by PERL show the expansion acreage underlain by oil-bearing sandstones of the Tyonek Formation. ..."

According to the Division's Resource Evaluation staff, PERL is correct in its assertion that the Corsair structure extends beyond the existing boundaries of the Corsair Unit. Indeed, it is agreed that the structure is 2.5 miles wide and 9 miles long, extending into both the northern and southern expansion acreages. In PERL's interpretation and evaluation of the structure and the multiple reservoirs, it was determined that it was the deeper Tyonek oil-bearing sandstones that made the prospect economically viable to drill. PERL also believes that there are potential gas traps in the expansion acreage as well, not indicated by the Resource Evaluation staff. Confirmation of either the existence or the absence of additional gas resources in the expansion acreage cannot be determined until after actual wells are drilled in that acreage.

Additional evaluations have recently been completed on the Corsair Prospect which further quantifies the value of the expansion acreage, relative to the entire Corsair prospects economic viability. The Corsair Structure Resource Evaluation prepared by Gaffney, Cline & Associates, Inc., renowned internationally recognized technical and management advisors to the petroleum industry, was completed on May 7, 2008 for PERL. This Evaluation is attached for your review and is requested to be held confidentially, pursuant to AS 38.05.035.

Review of the aforementioned Evaluation agrees with the determination of the Division's Resources Evaluation staff: it is the larger Tyonek reservoir that determines the Corsair prospects' economically viability. Without the expansion acreage, containing approximately two-thirds (2/3rds) of the Tyonek reservoir, PERL believes the Corsair prospect will not be economically viable and will likely not be able to justify the acquisition and delivery of the jack-up drilling rig to the Cook Inlet. Without the jack-up drilling rig, the Corsair Prospect, as well as many others, will not be explored or produced. Neither PERL nor the State will benefit if this happens.

It is curious that notwithstanding its Decision to the contrary, the Division has supported PERL's conclusion that the geologic and engineering characteristics of the Corsair structure extend into the Corsair Expansion leases, and without those expansion leases a significant portion of the Corsair prospect will be lost.

IV. DISCUSSION OF DESIGN CRITERIA, A., 3. Plan of Exploration and Development for the Proposed Expanded Corsair Unit, paragraph one, which reads, in part: (page 7)

The Corsair Unit Initial POE required, among other things, that PERL submit a satisfactory drilling rig contract by December 31, 2007(attachment 5). PERL did not fulfill this commitment. On December 31, 2007, the Division notified PERL that the unit was in default and granted PERL a 90-day period, until April 1, 2008, to cure the default or the Unit would terminate. Effective April 1, 2008, the Division approved PERL's default cure, subject to the conditions set out in the Division's April 1, 2008, default cure decision. (Attachment 4). On January 29, 2008, the Division also granted PERL a six-month extension, until June 30, 2009...

PERL did not acquire the Corsair leases until August 2007. The DNR did not approve PERL as the Successor Unit Operator to Forest until November 27, 2007. This gave PERL only 34 days to meet the obligations of December 31, 2007, as stated above. To characterize this as situation of not fulfilling the obligation that PERL inherited from Forest is unfair and displays an unfavorable attitude and biased opinion towards PERL by the Division, which is prejudicial and unjustified.

Prior to the Division's issuance of the Notice of Default, mentioned above, PERL had several lengthy conversations and meetings with the Division, explaining the hardship of meeting those commitments in just 34 days after being recognized as Operator of the Corsair Unit. PERL offered a variety of options and alternatives to prevent the default of the Unit. The Division denied all proactive attempts by PERL to keep the unit out of default, and instead issued the Notice of Default with proposed cures that were essentially the same as those offered by PERL in advance of the Default.

As soon as was practical, PERL fulfilled all the requirements of the POE, the requirements to cure the Notice of Default, and all requirements due to date in the amendments or extensions to the POE. PERL has acted with only the highest regard of the Division, has always negotiated in good faith, and has fulfilled all its obligations to date. All requested amendments, extensions and expansions requested have been justified as a matter of necessity in relation to the timing of the acquisition of Forest, its data and interpretations, and the Corsair Unit POE work commitments.

IV. DISCUSSION OF DESIGN CRITERIA, A., 3. Plan of Exploration and Development for the Proposed Expanded Corsair Unit, paragraph two, which reads, in part: (page 7 to 8)

"PERL has proposed a Revised Initial POE (Attachment 3) as part of the Application, which provides for work commitments similar to those in effect under the Initial POE, as amended by the Division's decisions, but proposes extensions to the work commitment dates.

In the Revised Initial POE, PERL proposes drilling three wells by December 31, 2009, extending the current June 30, 2009, requirement for the first well by six months. PERL neither requests an extension nor provides discussion of the justification to extend that requirement to December 31, 2009."

PERL did not specifically request an extension of the June 30, 2009 drilling commitment of the first well. Instead, PERL offered the drilling of an additional two wells within the same year. The proposed extension of the drilling date to December 31, 2009 is necessary to accommodate the time required to demobilize from the first well, move the rig to the second well location, rig-up and drill the second well, demobilize from the second well, move the rig to the third well location, and rig-up and drill the third well.

PERL was remiss in not adequately explaining the time required to drill the two additional wells and the additional time mandated by the addition of that work commitment. PERL anticipated that the Division staff would be knowledgeable of the drilling process and associated time involved. The six month extension to the 2nd year work commitment (within the same calendar year) is merely needed to allow for the drilling of two additional wells. Because of the time needed to drill and mobilize the jack-up drilling rig, it would be mandatory to have the first well drilled by June 30, 2009, in order to have the next two wells drilled and tested by December 31st of that same year.

A primary consideration in the extension of the drilling commitment date to December 31st is to allow PERL to utilize the entire drilling season. The Cook Inlet experiences ice-free periods from about April through November. Offshore exploration, due to the structural integrity of the jack-up rig's legs, must be limited to periods of ice-free water to avoid the possibility of damage. Utilizing the entire open water 2009 ice-free exploration window by PERL allows the opportunity for the jack-up drilling rig to become available for contracting out to other operators during the entire 2010 ice-free exploration window.

PERL believes the justification for the December 31, 2009 drilling commitment date was self evident. Moreover, the Division receives the benefit of data obtained from drilling two additional wells within the same year. Adding two additional wells accelerates the drilling and prospect delineation schedule. Each well will cost approximately $20,000,000 to mobilize, drill, test, suspend and demobilize. The additional two wells bring approximately forty-million dollars more of activity and income to the State in the form of jobs and personal wages, supplies, taxes, income to support industry operations, and trickle-down revenue to hundreds of business.

IV. DISCUSSION OF DESIGN CRITERIA, A., 3. Plan of Exploration and Development for the Proposed Expanded Corsair Unit, paragraph two and three, which reads: (page 8)

PERL proposes submitting an application for an initial participating area (PA) by December 31, 2010 – eleven months later than the submittal date, January 31, 2010, set out in the Initial POE.

The Initial POE proposed the drilling of a second exploration well during the fourth year of the POE, by January 31, 2011. The Revised POE, which proposes to drill three wells by December 31, 2009, proposes a drilling commitment date of December 31, 2011 for a fourth well. In both POE's, PERL commits to submit the necessary applications to obtain approvals to allow construction of pipelines and infrastructure to permit commercial production from the PA. Initial POE requires the submittals by January 31, 2010, the Revised Initial POE delays the submittal date to December 31, 2010.

As the Division has reiterated above, PERL proposed to drill the second well in the same year as the first well (year two) – instead of waiting until the fourth year to drill the second well. PERL had also proposed to drill a third well in that same year as well (year two). PERL had proposed the drilling of the fourth well in the fourth year, rather than just a second well in the fourth year.

PERL had extended that drill date eleven months to accommodate the additional time needed to evaluate the results of three wells instead of only one well (the addition of well #2 and well #3) drilled in the second year, and to plan for the most optimum location of the fourth well. The additional 11 months of time would also allow for any seismic verifications and re-evaluation in conjunction with the new well data that may be necessary after the drilling of those first three wells. For this same reason, stated above, the submission of the application for the initial PA and the construction of pipelines and infrastructure would also be needed to be extended eleven months, for evaluation and planning purposes.

In its proposed Revised Initial POE, PERL had committed to three wells in the second year - instead of only one, and a fourth well in the fourth year – instead of only a second well in the fourth year. This can in no way be construed as a delay in the development of the Corsair. The additional information to be gained by these two additional wells (which would be made available to the State), the increased activity in the Cook Inlet, the income to individuals and other business derived from this activity, and the overall benefits to the State and the people of Alaska must certainly justify and offset a delay in submitting PA and construction applications by only eleven months.

IV. DISCUSSION OF DESIGN CRITERIA, A., 3. Plan of Exploration and Development for the Proposed Expanded Corsair Unit, last paragraph, which reads, in part: (page 8)

> *PERL proposes that the promise to drill multiple wells on the expansion leases justifies the expansion of the existing unit area and the extension of these leases beyond the primary term. The Operator has yet to drill the original Corsair Unit leases within the leases' primary terms. Approval of this proposed expansion, extending the primary term of the proposed expansion leases, amounts to warehousing of the proposed expansion lease acreage. ... The prospect described by PERL in the Application underlies the existing Corsair Unit as well as the proposed expansion leases. Delineation and production of the existing current leases is dependent upon fulfillment of the Initial POE obligations, securing contracts for the use and mobilization of a suitable rig, not upon unitization.* (emphasis added)

The Operator, as stated by the Division staff above, has not drilled the original Corsair Unit leases within the leases' primary terms because the primary terms of those leases will not allow adequate time for PERL to contract and deliver a jack-up drilling rig to the Cook Inlet, let alone the actual time necessary for the drilling of the well.

That commitment was made before PERL acquired those leases from Forest. It was simply impossible for PERL to have acquired and delivered a jack-up drilling rig to the Cook Inlet before it had ownership of the leases. The Division had approved the extension of the original drilling commitment, made by Forest, for reasonable and just cause. For the Division to now use this as criteria to discredit the Operator is unfair and discriminatory.

The Division met with PERL several times throughout this process, and seemingly understood the dilemma the PERL was in upon its acquisition of Forest Alaska Operating LLC and the associated work commitments. The Division was receptive to PERL's suggested amendments and extensions to the work commitments in order to have a jack-up drilling rig delivered to the Cook Inlet which would renew the stagnant offshore exploration there. The Division approved, through whichever means deemed appropriate by the Division, all amendments and extensions necessary to allow PERL to timely explore and develop the Corsair prospect.

It is neither fair nor appropriate for the Division to use its own approvals of the modifications and extensions of the Corsair Unit work commitments as justification for denying the Expansion Application. Nor is it fair or appropriate for the Division to use its approvals in a derogatory manner against PERL's reputation and ability to perform as an Operator.
As stated in IV. DISCUSSION OF DESIGN CRITERIA, A., 3. Plan of Exploration and Development for the Proposed Expanded Corsair Unit, fourth paragraph, which reads, in part: (page 8)

> *The Initial POE approved with the Corsair Unit Formation Decision committed the Operator to drill a well within twenty three months after unit formation, by December 31, 2008. The state exchanged the value of re-leasing the soon to expire acreage for a promise that the original Corsair Unit Leases would be drilled within two years. Given the prolonged contracting and scheduling efforts required to bring a jack-up to the Cook Inlet, utilizing the leases under an approved Initial POE would result in production of a commercial resource, if found, sooner than allowing the leases to expire.*

The criteria and rational used by the Division to make the above determination for the formation of the Corsair Unit on January 31, 2007, makes the best case today for the inclusion of the expansion leases. With the inclusion of the expansion leases, the State obtains a promise to drill those leases within only 20 months of its proposed approval date of April 30, 2008. The original Corsair Unit required the leases to be drilled within 23 months of the unit approval, the expansion application provides an acceleration of that requirement by three months for the same number of wells.

The Division also recognized that the inclusion of leases under an approved POE would result in the commercial production of the resource sooner than if the leases were to expire and be re-leased. Further, even if the subject leases were re-leased in any upcoming leases sale, there is no greater guarantee that the leases would be drilled by another prospective lessee on a lease-by-lease basis, than the one that PERL is presently offering on a unitized basis.

The use of the term "warehousing" of leases is apparently being used as justification to support other actions that the DNR currently has pending before the Superior Court in the ExxonMobil appeal of the termination of the Point Thomson Unit and leases. PERL maintains that the actions of Exxon vis-à-vis the Point Thomson Unit and the situation faced by PERL regarding the Corsair Unit are readily distinguishable.

Exxon and the other working interest owners monopolized the Point Thomson leases for decades without fulfilling a single work commitment. The working interest owners had local access to the necessary drilling equipment throughout the entire term of the Point Thomson Unit. Exxon has received Division approvals for more than twenty amendments to its POE / POD.

PERL has had control of the Corsair leases for only five (5) months. There is no locally available drilling rig equipped to drill offshore in Alaska. Moreover, PERL has received only one extension to its POE and is requesting the expansion leases to be included in the Corsair Unit to allow PERL to exercise a reasonable and justified opportunity to explore and develop the entire Corsair structure.

The term "warehousing of leases" is used to describe a process whereby a lessee holds acreage for an indefinite amount of time for some unknown future exploration or development activity. PERL intends to drill these expansion leases next year. This commitment is not warehousing. The expansion leases are necessary to make the exploration of the entire structure economically feasible.

Unlike the persistent inactions of the Exxon working interest owners, PERL's actions and requests have been credible and in good faith. PERL has not endeavored to delay the efficient reservoir production. Since it acquired ownership of the former Forest leases and since its approval as Successor Operator of the Corsair Unit, PERL has made a diligent and sincere progress in its efforts to insure to the State practical and efficient reservoir production.

Further, unlike Commissioner Menge's finding in the Exxon case, there has not been an unreasonable amount of time squandered in PERL's actions to go forward with drilling activates in the Corsair Unit.

Inclusion of the expansion leases into the Corsair Unit is not a warehousing of leases. It is the prudent and reasonable addition of all leases that have the underlying contiguous Corsair structure to the existing Corsair Unit. For the Division to label this proposed action as warehousing is unjustified and prejudicial.

The only purpose that can possibly be served by the Division for making such a determination, is the Division's ability to benefit from it as an example of alleged consistent behavior in other administrative proceedings.

As the Division has stated above, the Corsair prospect also underlies the expansion acreage. As with the existing leases, delineation and production of the expansion leases is dependent on the fulfillment of the proposed POE and securing the same contract for the use and mobilization of a suitable rig. PERL maintains that the delineation and production of the expansion leases is, therefore, dependent upon unit formation. Additionally, the economic viability of the existing current leases within the approved Corsair Unit is also dependent on the unitization of the expansion leases. Without the inclusion of the expansion leases in the Unit, the prospect will not be economical.

IV. DISCUSSION OF DESIGN CRITERIA, A., 3. Plan of Exploration and Development for the Proposed Expanded Corsair Unit, second paragraph, which reads, in part: (page 9)

If the expansion is not approved, the leases will expire and the acreage will be available in the May 2009 Cook Inlet Areawide Lease Sale. Provided PERL fulfills the commitment in the Initial POE, a jack-up rig will be working in the Cook Inlet by June 30, 2008. At that time PERL or any other successful bidder will have the opportunity to contract for the rig and conduct exploration and delineation drilling on any offshore lease. If the rig does not arrive, then no drilling by any party will occur on any offshore leases, regardless of unitization.

The assumption and determination by the Division that should the leases expire they will be available in the May 2009 lease sale is erroneous for two reasons:

Firstly, the upcoming May 2009 Cook Inlet Areawide Lease Sale requires a new ten-year Best Interest Finding (BIF). This process is cumbersome and often fraught with delays. In fact, the ten-year Preliminary BIF for the North Slope Areawide Lease Sale was due March 2008, and it is still pending. Once the Preliminary BIF is issued, it requires a 90-day public noticing period and an additional 30 days for information requests and responses. The Final BIF must be approved and issued 90 days prior to any lease sale date.

This entire process takes a minimum of seven-months to complete after the Preliminary BIF is drafted and published. The Preliminary Cook Inlet BIF is scheduled for July 1, 2008 in order to make the May 2009 Lease sale date. It is very likely the Final BIF will not be issued in time for the May 2009 lease sale. Once the Preliminary BIF is issued, litigation by special interest groups and obstructionist organizations often follows in attempts to stall the process. This is not an unusual occurrence in the BIF process. For these reasons, the May 2009 lease sale will likely be postponed.

Secondly, it has historically taken as long as a year to issue the leases after a lease sale. This lag time is due to the Division's work load and decision to do the necessary title work on the leases only after an acceptable bid has been received. As a result, even if the expansion acreage were to expire and be available in the May 2009 lease sale, further assuming it was held on schedule, the leases would likely not be issued until April of 2010.

Given the amount of time it would take to then evaluate and select a drilling location, formulate a drilling plan, and obtain permits, drilling in these leases would not occur until sometime in 2012. This would be a year after PERL's current proposal to have a fourth well drilled.

PERL reminds the Division that even if the May 2009 lease sale were held on schedule and the Unit expansion were approved, if PERL did not supply the Division with a signed contract for the heavy lift vessel to transport the jack-up rig to the Cook Inlet by July 31, 2008, as required in the Corsair Unit Default Cure approved by the Division, the Unit would be in default and the leases would terminate and be available in time for the proposed May 2009 lease sale.

Therefore, the State would be in no better position in denying the expansion and having the leases expire than it would be in if it approves the leases and the unit POE is ruled in default on August 1, 2008 and the leases terminate. The ONLY difference to the State is that with the denial of the Unit expansion, the acreage becomes in an un-leased condition for twelve (12) months, instead of only nine (9) months with the expansion approval and default. In either scenario, the State would collect a penalty from PERL in the amount equal to $35.00 per acre.

On the other hand, if the Expansion Application were to be approved and the July 31, 2008 commitment is met, the delivery of a jack-up drilling rig to the Cook Inlet would almost be a certainty, barring any unforeseen force-majeure situations. In this scenario, the State, PERL, the other offshore oil and gas producers and the south central Alaskan gas consumers would be the beneficiaries.

PERL maintains that the State has not convincingly demonstrated any damages or reasonable harm in an Approval of the Expansion Application and giving PERL their earned right to explore and develop those leases.

Without the expansion acreage, it is unlikely that PERL will be able to economically justify the delivery of a jack-up rig to the Cook Inlet. Although, for the sake of argument, assuming the Expansion Application denial is upheld, and the leases expire, and PERL does bring a jack-up rig to the Cook Inlet, the Division's assumption that *"any other successful bidder will have the opportunity to contract for the rig and conduct exploration and delineation drilling of any offshore lease"* is in error and has no basis in fact. Should PERL bring a jack-up rig to the Cook Inlet, there is absolutely no guarantee that this rig will be available to any other operator other than PERL. In addition, there are no U.S. registered heavy-lift vessels capable of transporting a jack-up rig, so a foreign vessel must be utilized, requiring a Jones Act Waiver from the Dept. of Homeland Security. With the current war, upcoming change of Administration and lead time necessary, it is very unlikely another company could obtain such a waiver for several years to come, thereby not being able to deliver their own drilling rig.

The Division is correct in its statement that "If the rig does not arrive, then no drilling by any party will occur on any leases, regardless of unitization." This is exactly what the Division risks for the entire State by not approving the Expansion Application.

IV. DISCUSSION OF DESIGN CRITERIA, A., 3. Plan of Exploration and Development for the Proposed Expanded Corsair Unit, third paragraph, which reads, in part: (page 9)

PERL acquired interest in the Corsair Unit with full understanding of the commitments and agreed to the terms and conditions of the Unit Agreement, which includes the initial POE, upon their acceptance of designation by Forest as the Successor Unit Operator, on November 27, 2007.

PERL acknowledges that this statement is true with the following caveat: PERL also recognized that the commitments contained in the Initial POE were in-fact impossible to meet and intended to request appropriate amendments to make such work commitments practical and feasible that once it acquired the Forest assets.

Upon the approval by the Division of PERL as Successor Operator of the Corsair Unit, the Division was also fully aware that the work commitments contained in the Initial POE were impossible to meet. The Division knew or had a reasonable certainty of knowing that PERL would apply for such amendments to allow for the successful execution of the work commitments. The Division approved those reasonable and appropriate amendments through the use of Default Cures and Extensions with full understanding that it was in the State's best interest to allow PERL a fair and just opportunity to fulfill those commitments.

The Division has been a willing participant as the land owner and regulatory authority governing leases, lessees, and unit operations, during the entire process from the acquisition of the Forest assets to this application for this Unit Expansion. For the Division to now use PERL's acceptance as Successor Unit Operator and the Division's own approval of such designation as reason for denial of the Unit Expansion Application is neither fair nor consistent treatment of PERL by the Division.

IV. DISCUSSION OF DESIGN CRITERIA, A., 3. Plan of Exploration and Development for the Proposed Expanded Corsair Unit, fourth paragraph, which reads: (page 9)

The Division has already granted a six month extension for the first well drilling commitment, which is now due on June 30, 2009. PERL must drill that well in Tract 1 or 3, which are in the original unit area. PERL now proposes to postpone that commitment by an additional six months, until December 31, 2009, and commits to drill two additional wells in the proposed expansion area, Tracts 6 and 7, within the same timeframe. The Division's April 1, 2008, decision imposed additional obligations on PERL, including obligations pertaining to the rig contract, which must be met by April 30, 2008, or the unit terminates and obligations pertaining to a heavy lift vessel, which must be met by July 31, 2008, or the unit terminates.

As previously stated, the Division's approval of the six-month extension for the first well drilling commitment of June 30, 2009 was appropriate and justified. The Division consciously approved that extension with the full knowledge that it was essential for any chance of getting a jack-up drilling rig delivered to the Cook Inlet and having the well drilled. The only stipulation made by the Division in the extension approval was that PERL cure the April 1, 2008 default, which PERL did cure on March 14, 2008 with the Division's acceptance.

The commitment in the Initial POE, as extended, requires PERL to drill a well in either Tracts 1 or 3 by June 30, 2008. The Division is in error in the instant Decision concerning PERL's request of an additional six months extension to the commitment to drill the first well. The Division has misconstrued PERL's proposed commitment to drill an additional two wells by December 31, 2009 – within the same timeframe as the first well, as it pertains to the overall year-two work commitment – as an additional six-month extension to the original first well.

The date of the Director's Decision denying the Expansion Application is April 30, 2008. However, the Division uses the language "*including obligations pertaining to the rig contract, which must be met by April 30, 2008, or the unit terminates*". In fact, PERL had fulfilled that obligation on April 24, 2008, with the payment of the required non-refundable deposit of $100,000 to Blake Offshore, LLC, which was followed up with an e-mail confirmation to the Division on April 25, 2008. The use of this language clearly after the fact of the fulfilled obligation indicates that the Decision was written several days in advance of its execution and relied on the assumption that such obligation would not be met.

There are two basic flaws apparent in this section of the Decision. First, since it is obvious that the Decision was written several days in advance of its issuance, the Division had adequate time to notify the applicant of its pending Decision and its rationale for denial. Such notice would have allowed PERL the opportunity to agree to any revision that might have made either the Expansion Application or the Revised Initial POE acceptable to the Division. Second, the Division's assumption that a work commitment would not be met and having written the Decision days in advance is arbitrary and not fair to PERL.

It is clear that the Division had no intention of approving the application soon after its submittal. This position taken by the Division prejudiced PERL by not allowing for either the fair and just evaluation of the Expansion Application, the non-biased, full consideration of the proposed work commitments, or the opportunity for PERL to discuss any alleged deficiencies with the Division prior to the Denial Decision. Further, by not informing the Applicant until the day of the leases' expiration, the Division effectively made it impossible for PERL to petition the Alaska Oil and Gas Conservation Commission (AOGCC) for compulsory unitization. PERL's right was only viable as long as the leases were in force. The Division could have in good faith notified PERL in advance of the April 30, 2008 issuance date that it intended to deny the Expansion Application, allowing PERL its right to timely petition the AOGCC for a satisfactory decision. The Division's deliberate delay in notifying PERL took away important rights, including the right to due process, and prejudiced and damaged PERL.

IV. DISCUSSION OF DESIGN CRITERIA, A., 4. The Economic Costs and Benefits to the State and Other Relevant Factors, which reads: (page 9)

> *Approval of the unit expansion as proposed postpones current commitments and delays development. Denial of the unit expansion application will result in the expiration of the leases. The leases will be available at the May 2009 Cook Inlet Sale. The competitive lease sale program provides opportunity to all potential lessees to acquire interest in acreage and to explore that acreage within the primary term of the lease.*

As demonstrated above, the Division has made an erroneous determination that the approval of the expansion application will postpone commitments and delay development. To the contrary, PERL's Revised Initial POE accelerates the drilling of the Corsair resources by adding two additional wells within the same year work commitment which in-fact expedites the development. The denial of the Expansion Application actually postpones the drilling of additional wells in the expansion acreage and delays the development, if not cancelling it all together, within the Corsair prospect.

To reiterate, the expired leases may or may not be available in May 2009 for a lease sale. By allowing the expiration of the Corsair expansion leases, and having them available to any potential lessee (other than PERL), the Division essentially gives that potential lessee an unearned interest in the Corsair reservoir, for nothing more than the highest bonus bid. This would be an unfair advantage propagated by the Division in favor of the new lessee and at the expense of and to the detriment of PERL. Should another lessee acquire these expired leases in any subsequent lease sale, there is absolutely no guarantee that that lessee will be able to either deliver its own jack-up rig to the Cook Inlet or contract for PERL's jack-up rig, if any, within the primary term of their leases. This is an erroneous assumption on the part of the Division.

By requiring PERL to competitively bid on acreage in which it has already demonstrated a hydrocarbon prospect, the State would receive an unjustified windfall in bonus bid revenue in order to insure PERL obtains such leases back. This forced re-leasing requirement is an unfair enrichment of the Division. The Division is charged with acting in the best interests of the State, the public and the Alaskan businesses, including PERL. The denial of the Corsair Unit Expansion and the resultant expiration of the leases is a taking by the Division and severely prejudices and damages PERL.

Further, the ability of the Division to "take back" the leases proposed for the unit expansion because it has the ability to re-lease the leases in a subsequent lease sale and provide an opportunity for other potential lessees to acquire those leases is not a justifiable reason for denying the unit expansion and facilitating the expiration of leases that contribute to an identified hydrocarbon deposit. In doing so, the Division is displaying blatant prejudicial treatment against PERL, and is ignoring standard leasing and unitization processes which have been established and employed industry-wide throughout the State's oil and gas leasing history.

IV. DISCUSSION OF DESIGN CRITERIA, B., 1. Promote the Conservation of All Natural Resources. (page 10)

PERL has demonstrated repeatedly that the unitization of the expansion leases will promote the conservation of not only the Corsair resources, but virtually all of the Cook Inlet offshore resources. Without the inclusion of the expansion leases, which contain approximately two-thirds (2/3rds) of the Corsair structure, it is not economically feasible for PERL to bring a jack-up rig to the Cook Inlet. Without a jack-up drilling rig, none of the Corsair leases, as well as other leases, units and existing productive reservoirs, will be explored, produced, or enabled to have step-out development drilling. The Denial Decision actually causes a waste of natural resources and forces production from the existing offshore platforms to continue to decline and stagnate.

Further, the Division has not proven that the unitized operation of the Corsair expansion leases would in any way detract form the conservation of all natural resources. Accordingly, without substantial proof to the contrary, the Division must allow PERL the benefit of the doubt in its assertion that unitization of the Expansion acreage will promote the conservation of natural resources. Therefore, the Corsair Unit Expansion, in and of itself, promotes the conservation of ALL hydrocarbon resources in the offshore area of the Cook Inlet.

V. DISCUSSION OF DESIGN CRITERIA, B., 2. The Prevention of Economic and Physical Waste. (page 10)

PERL has expended several millions of dollars in the acquisition and interpretation of the resource delineated under the existing Corsair Unit and the Expansion Area Leases. The Division's Resource Evaluation Staff has repeatedly acknowledged that the Corsair Structure extends under the existing Corsair Unit and the Expansion Area Leases. Unitization of the expansion leases insures a single unified reservoir management plan and the maximum ultimate recovery of the Corsair resource.

There have been several wells drilled in the past by other operators that were used to assist in the interpretation of seismic data and to evaluate and delineate the Corsair structure. Should the Expansion Leases remain expired and be re-leased by another operator, that operator would have to re-evaluate any available seismic data and well logs, identify their prospect, prepare their own exploration and development plan, drill its own wells and establish its own production and transportation facilities. This would clearly and ultimately result in a redundancy in facilities, operations and expenditures that would result in economic waste.

Further, separate management plans and facilities by different operators would result in poor exploration and ultimate recovery of the Corsair structure, resulting in poor reservoir management and a physical waste of the resource. Without a unified exploration and reservoir management plan, there is no way for multiple operators to insure the maximum ultimate recovery from the entire resource.

Fulfillment of the first well commitment by June 30, 2009 is in fact dependent upon approval of the proposed unit expansion. Without those expansion leases, which have been identified to contain approximately two-thirds (2/3rds) of the Corsair Structure, the existing Corsair Unit is uneconomical to explore and produce.

PERL should not be forced into reacquiring the expired leases in any future lease sale. PERL has demonstrated that the Expansion Leases contain a significant portion of the Corsair Structure, which when combined with the existing Corsair Unit leases, make the entire Corsair prospect economical. PERL has already expended enormous amounts of capital and company resources in the delineation of the Corsair Structure. Requiring PERL to bid on the acreage that it has already proven to contain a significant portion of the Corsair structure only facilitates economic waste and is prejudicial and damaging to PERL.

It is in the State's best interest for PERL to expend these monies on exploration and development, rather than the wasteful and unnecessary re-leasing of its prospect acreage.

VI. DISCUSSION OF DESIGN CRITERIA, B., 3. The Protection of All Parties of Interest, including the State. (page 10)

PERL is not at fault for not drilling either the existing Unit leases or the Proposed Expansion Unit leases. PERL did not acquire the leases until August of 2007, and did not obtain approval from the Division as Successor Operator until late November of 2007. Holding PERL responsible for its inability to drilling the leases during the leases' primary terms is unreasonable and unfair. PERL has made every diligent effort necessary, and continues to do so, in an effort to adequately explore and hopefully produce the Corsair resource, ultimately providing additional royalties and taxes to the State.

PERL is NOT using the unitization process to merely extend the primary term and "warehouse" the leases as contended by the Division. This assumption, given the amount of information and data supplied to the Division, is grossly inaccurate and puts the exploration and development of the Corsair resources, as well as the exploration and development of other prospects, at risk. It is in the best interest of the State to approve the Proposed Unit Expansion, as the expansion acreage is critical to the economical exploration and development of the Corsair resources. Without the expansion leases, the prospect is uneconomical and PERL will not be able to justify the delivery of a jack-up drilling rig to the Cook Inlet.

If the DNR approves the proposed unit expansion, the State receives the opportunity of significantly greater revenues than it would from the releasing of the expansion acreage. Increased revenue is in the best interest of the State and the people of Alaska. Should the DNR require PERL to compete for the leases it has already acquired and paid for from Forest, it would severely jeopardize the financial position of PERL in the Corsair prospect. By the Division's denial of the Proposed Corsair Expansion, the Division essentially eliminates PERL's benefit of the bargain it obtained in the acquisition of those leases.

The State's interest is best served by promoting competition for acreage offered in lease sales. However, neither the interests of the State, nor PERL are served by removing significant portions of a prospect from the whole and making the entire prospect uneconomical or functionally difficult to explore and develop. It is in the State's best interest to keep a hydrocarbon prospect intact and undivided.

In the above-referenced section, the Division uses derogatory language inferring that PERL's performance has not been adequate, which is unfair and unwarranted:

> *"- promises given by a lessee that has not timely fulfilled its existing commitments."*

This statement may indeed be applicable to Exxon and perhaps PERL's predecessor Forest , but it is not indicative of PERL's performance and pursuit of the economical and reasonable exploration and development of the Corsair prospect, over which PERL has only had control during the past five (5) months.

It is in the best interest of the public to expand the Corsair Unit, making the entire prospect and identified structure economical to explore and produce. PERL is not requesting the Division to extend these leases beyond their primary term based solely on promises to drill two wells, *despite the fact* that the Division approved the Existing Corsair Unit based solely on the promises to drill two wells. PERL had requested the Division to extend the leases beyond their primary term because those leases contained a significant portion of the Corsair structure, as identified and agreed upon by the Division's Resource Evaluation staff, which would provide for the ultimate economical viability of the entire prospect.

Again, in this section, the Division uses derogatory language unjustifiably stating that PERL's performance has not been adequate, which is unfair and unwarranted:

> *"... when PERL did not meet its drilling rig contract commitment and will not meet its original drilling commitment."*

This statement exhibits little forethought and lacks any rational deliberation as to its basis. The ability to meet the drilling rig contract commitment within only thirty-four (34) days of being approved as the Successor Operator was an impossibility, a fact recognized by the Division in its proposed cure for the Unit default. Not being able to meet the original drilling commitment of December 31, 2008 was also recognized as an impossibility by both PERL and the Division, as evidenced by the Division's approval of the six-month extension to June 30, 2009. These extensions to the work commitments as approved by the Division were necessary and appropriate for the realistic acquisition and delivery of a jack-up rig and a manageable exploration schedule. The Division was fully aware of all the circumstances and contractual difficulties involved in obtaining those POE modifications and extensions, and approved them accordingly. Since the extensions were approved by the Division, the Division is precluded from using the former commitments as justification in its denial of the expansion application.

Therefore, these comments serve no purpose other than an attempt by their author to discredit PERL as a responsible Cook Inlet Operator. These statements are prejudicial and damaging to PERL's reputation and intentions.

As was identified in a previous sections above, the Division states:

> *In addition, it is not in the public interest to expand the Corsair Unit now, given the unit could terminate automatically on April 30 or July 31, 2008, or on June 30, 2009, if PERL fails to meet it [s] current obligation under the Initial POE, as amended by the Division's January 29 and April 1, 2008, decisions.*

The fulfillment of the April 30th commitment was met on April 24th, with the payment of the required non-refundable deposit of $100,000 to the Blake Offshore, LLC. The fact suggests that the Decision was written several days before it was rendered and delivered to PERL. This apparent delay in informing PERL of its pending Decision severely prejudiced PERL and unjustly took away PERL's ability to seek due process from the AOGCC.

The Division cannot use the suspected failure of an event yet to happen in the future as a basis for denying an action in the present. The Division was in error in its conclusion that it was not in the public's interest to expand the Corsair Unit, given that certain obligations in the future may not be met. The Division does not possess the ability to predict the future, nor the authority to make determinations based on the outcome of obligations yet to be known. This determination and conclusion by the Division is both arbitrary and capricious, and exhibits a unquestionable prejudice towards PERL as an Operator and PEAO as lessee.

The Division failed to adequately consider the protection of all parties of interest including PERL, Escopeta Oil Company, LLC, Chevron Oil Company, and ConocoPhillips. By denying the Proposed Corsair Unit Expansion, the Division jeopardizes the economic viability of the exploration and development of the Corsair prospect, as well as many others.

The economic viability of the Corsair prospect is essential for PERL's ability to acquire and deliver a jack-up drilling rig to the Cook Inlet, in the near future. Without this jack-up rig, the exploration and production from the Kitchen and East Kitchen units become at risk. Without this jack-up rig, further step-out development drilling from the existing platforms become at risk as well as the continued acceleration towards the end of the economic life of those platforms. This is not in the best interest of any lessee or Operator in the Cook Inlet.

The Division also failed to adequately consider the protection of another party in interest, Renaissance Oil Company (Renaissance). Renaissance contends and alleges that their adjoining acreage to the expansion leases may hold resources that are in communication with the Corsair prospect. Although this allegation has no basis of fact or relevance according to PERL's interpretation because any communication of resources has yet to be determined, the Division none the less has removed Renaissance's ability to pursue unit negotiations with PERL for inclusion in the Corsair Unit. This is not in the best interest of Renaissance.

The Division failed to adequately consider the protection of all interested parties, including the public, more specifically, the south central Alaskan consumers. With the denial of the expansion acreage, the Division jeopardizes the economic viability of the Corsair prospect. If the Corsair prospect is not economically viable, PERL will be unable to acquire and deliver the jack-up drilling rig to the Cook Inlet. Offshore exploration has been at a virtual stand still for the last two decades. Onshore exploration has declined significantly over the past three decades. As a result of this lack of exploration, no new reservoirs of any significant size have been discovered and the existing reservoirs are in a steep decline in production and reserves. The resultant lack of natural gas reserves has increased the cost of gas dramatically in the Cook Inlet, especially over the last five years. This cost increase has been absorbed by the south central consumer in the form of higher natural gas costs and higher natural gas-generated electricity costs.

Without the arrival of the jack-up rig in the Cook Inlet, no additional offshore exploration and no additional step-out development drilling from the existing platforms will occur. This will only contribute to the acceleration of higher natural gas costs and higher natural gas-generated electricity costs. This is not in the public's interest, nor in the south central Alaskan consumer's interest. By denying the Corsair Expansion Application, the Division is facilitating the increase in natural gas related costs in the Cook Inlet.

V. FINDINGS AND DECISION (page 11)

1. No Drilling has occurred within the primary term of the proposed expansion leases.

PERL did not have the ability to contract for a drilling rig, arrange for delivery of the drilling rig to the Cook Inlet nor drill the wells in either the Corsair Unit or the proposed expansion leases until after November 27, 2007, when the Division approved PERL as the Successor Unit Operator of the Corsair Unit. Both the Division and PERL recognized the onerous commitment requirements and unfortunate inability to meet those work commitments in just thirty-four (34) days. The Division rightfully and properly approved the appropriate extensions of those commitments to allow for an adequate opportunity to reasonably fulfill those commitments. Accordingly, without the reasonable ability to fulfill the requirements of the existing Corsair Unit POE, it was impossible for PERL to drill the expansion acreage within their primary terms either.

The Division's Finding that the expansion leases were not drilled during their primary term is irrelevant. The fact remains that the Corsair structure extends under the expansion acreage. Further, the Division justified the creation of the Corsair Unit with the promise to deliver a jack-up drilling rig to the Cook Inlet and drill two wells within the first twenty-three (23) months of the Division's approval. Denying the unit expansion with a continued promise to deliver a jack-up drilling rig to the Cook Inlet and a promise to drill two additional wells within the first twenty (20) months is not a consistent evaluation and application of the Division's standards.

2. ***PERL neither fulfilled the initial POE drilling work commitment by December 31, 2008, nor has it yet fulfilled the June 30, 2009, drilling commitment.***

PERL received the Division's appropriate, necessary and rightful extension of the December 31, 2008 drilling work commitment to June 30, 2009. The Division willfully and knowingly approved that extension as an adequate measure to allow PERL the reasonable and realistic opportunity to meet the overall intent of the Corsair Unit formation and POE work commitments. The Division has been an active participant in the Corsair Unit negotiations from the date PERL fist acquired the Forest assets in August 2007. The Division seemingly understood the economical and logistical obstacles involved in meeting the onerous work commitment dates that PERL inherited from Forest. The Division acted accordingly in its approval of the necessary modifications and extensions to the original POE. The Division is barred from using its own approval of those modifications and extensions by operation of its responsibilities as the landowner and its regulatory authority over leases and units.

Neither the December 31, 2008 nor the June 30, 2009 drilling work commitment dates have passed. The Division cannot use the suspected failure of an event yet to happen in the future as a basis for denying an action in the present. Any speculation at all, especially concerning the June 30, 2009 drilling work commitment date, is inappropriate. The Division neither possesses the ability to see into the future, nor has the authority to make determinations and decisions on suppositions for activities and events that have yet to transpire.

The Division's Finding that PERL has not met either the December 31, 2008 or the June 30, 2009, drilling work commitments is correct, albeit irrelevant and inappropriate to use as justification for the denial of the Proposed Corsair Unit Expansion.

3. ***Unitization is meant to facilitate efficient reservoir production, not enable warehousing of acreage. Given the Unit's recent history, Corsair Unit expansion will not guarantee delineation and production of the prospect sooner than lease-by-lease development by any lessee.***

The Division states in the fourth paragraph on page 8 of the Decision: *"The initial POE required the Operator to timely conduct exploration, evaluation and development activities that would result in production, if a commercial resource were found, sooner than if the unit were not formed and sooner than would occur under any individual lease exploration effort."* This evaluation and prudent determination, used to justify the original Corsair Unit and POE, holds true today for the Corsair Unit Expansion and Revised POE.

Without the inclusion of the expansion leases, the Corsair prospect becomes uneconomical. Even if the existing Corsair Unit were economic, the removal of the expansion leases would result in a variety of economic and physical wastes due to the lack of efficient reservoir management and production as well as the duplication of facilities, transportation mechanisms and redundant operations.

To reiterate, there is no intention by PERL to use the unitization process as a means to warehouse acreage, as Exxon and others have done in the past with the Point Thomson acreage. Neither is there just cause for the Division to allege PERL is merely trying to warehouse acreage. PERL has made every prudent and reasonable effort to diligently interpret and evaluate the Corsair structure and to commit to realistic work commitments. PERL intends to drill the expansion leases in the next year, not to warehouse them for an indefinite amount of time for some undetermined future exploration or development. PERL's plans and intentions are definite and backed by realistic commitments in the very near future.

The Division is in error in its determination, findings and inferences that PERL is using the unitization of the expansion acreage for no other purpose than to warehouse acreage. The Divisions repeated statements regarding the alleged warehousing of leases and acreage by PERL displays a biased and prejudicial attitude towards PERL and is without any factual basis. Safeguards are built into the Corsair POE to avoid the warehousing of leases.

The Director states that, *"Given the unit's recent history ... "*. This statement implies that the unit's recent history has been unacceptable. It should be noted that the unit's recent history had only been in the control of PERL for four months at the time the Expansion Application was submitted (five months to date).

The simple fact is: The recent history of the Corsair Unit comprised a period of only four months, in which Pacific has been the Operator. This recent history reveals the ONLY concerted effort that has been made to diligently move forward towards the exploration and development of the Corsair Unit since the inception of the leases. So, to say, "given the unit's recent history" in a derogative manner as justification for denying the Corsair Unit expansion is nonsensical. Further, all circumstances concerning the Corsair Unit and the POE during its past history were known by both PERL and the Division at the time of the Division's approval of Pacific as the Successor Operator. The Division has, in fact, been an active and contributing party in both the unit's past and recent history.

The Division has been an active participant in all recent events that have transpired concerning the Corsair Unit since PERL secured the operations and responsibilities of the unit. The Division knew, or should have reasonably known, as an oil and gas lease and unit administrator, at the time of the Successor Operator approval that the existing work commitments were impossible to be met. Accordingly, the Division approved the modifications and extensions to the POE work commitments to enable PERL to have a realistic opportunity to meet those commitments. To do otherwise, the Division would not have been acting in good faith in the public's interest

Because the Division was an active participant and ultimately had control of the unit's recent history, it is inappropriate for the Division to now use any inference as to unacceptable behavior on the part of PERL during that period, given the Division's approval of those plans.

Further, the Division is remiss in its acknowledgement that it was a party to the unit's recent history and any circumstance or event that transpired during that time which was negotiated and approved by itself.

The Division erred in its determination and finding that there is no guarantee the delineation and production from the unit, if expanded, will occur sooner than on a lease-by-lease basis by any lessee. Without the expansion acreage, the economic viability of the entire Corsair prospect is at risk. Should PERL determine that the existing Corsair Unit is uneconomical on its own, without the expansion leases which contain approximately two-thirds (2/3rds) of the structure, PERL will not be able to commit to the delivery of a jack-up drilling rig to the Cook Inlet.

Without the jack-up drilling rig, not only will PERL not be able to delineate and produce the Corsair Unit, but all other potential lessees will not be able to delineate or produce any offshore leases including the expired Corsair expansion leases. To justify the cost of bringing a jack-up drilling rig to the Cook Inlet, the prospect size must be quite large

The acquisition, delivery and operation of the jack-up drilling rig is a commercial issue solely in the control of PERL. It is incumbent upon PERL to make the prudent decision to now contract a heavy lift vessel and deliver the jack-up drilling rig to the Cook Inlet.

If PERL, on its own accord and by its own evaluation, determines that the Corsair prospect is uneconomical as only the existing Unit, it will opt to not deliver the jack-up rig to the Cook Inlet and cut its losses. Additionally, even if PERL did determine the existing Corsair Unit was economic on a stand-alone basis and delivered the jack-up rig to the Cook Inlet, there is absolutely no guarantee that the rig would become available to any lessee for the development of any offshore leases.

With the inclusion of the expansion leases to the existing Corsair Unit, PERL is able to guarantee, in as much as it is able, and far beyond the ability of any other prospective lessee, that the delineation and production of the Corsair Unit and the expansion leases will occur sooner as a contiguous unit development than as would occur on a fragmented lease-by-lease development.

Further, if the expansion acreage is not included in the Corsair Unit, there will exist an almost certainty that no development on a leases-by-lease basis, as well as by a unitized basis will occur.

The Division erred in its determination and finding that the unitization of the expansion acreage will not facilitate efficient reservoir production and guarantee the delineation and production of those leases sooner than on a lease-by-lease basis. The Division did not adequately evaluate and fully consider the geological, technical, contractual, and economical implications of its denial of the Corsair Unit Expansion application. The Division offers no economically viable alternative to expansion of the unit.

4. ***Unitization is not necessary to promote the development of a single resource by multiple working interest owners, as there is only one working interest owner, PERL, in the existing Corsair Unit and the proposed expanded Corsair Unit.***

Even if this contention by the Division were true, by denying the Corsair Unit Expansion, the Division opens the door for the infusion of other, perhaps less motivated or capable, lessees, who will undoubtedly request the expired Corsair acreage to be included into the Corsair Unit, just as PERL is requesting now. In fact, by the Division's denial, the Division in and of itself becomes responsible for creating new working interest owners – thereby making unitization necessary. The Division's denial of the Corsair expansion on the grounds the unitization is not necessary because there is only one working interest owner, establishes the necessity of unitization by creating new working interest owners by its own actions.

Staggered lease terms and multiple working interest owners impede exploration and consolidation of facilities, not encourage it.

Therefore, the Division cannot validly use this argument as a reason for denying the Corsair Unit expansion. If the Division would allow the expansion acreage to be unitized in the future, it has no reason not to unitize the acreage now.

Given the enormous capital investment that PERL has expended to acquire Forest's assets, including the Corsair Unit, combined with the recent costs associated with the seismic interpretations and structure evaluations as well as the costs of the POE commitments, allowing the opportunity for another working interest owner to possibly gain an unearned economic position in the Corsair Unit gives the prospective new working interest owner an unfair advantage and does not promote the development of a single resource.

FURTHER, Pacific Energy Resources, Ltd. requests the Lt. Governor and the Commissioner to consideration on the following points:

1. The request for the Corsair Unit Expansion is not unusual, unreasonable or out of the ordinary. During the course of a unit's life, the requirement or necessity to either contract or expand a unit is a matter of continual consideration, irrespective of any subject lease's expiration date. It has been common practice for the Division since the leasing of State lands for oil and gas exploration to approve the expansion (or contraction) of unit areas as a matter of necessity to allow the unit boundaries to encompass the entire underlying reservoir.

   Additionally, it has been common practice for the Division in its leasing of State lands for oil and gas exploration to approve certain other unit actions, including Plan of Exploration amendments and expansions, as a matter of necessity to allow certain unit activities to adequately and efficiently manage or produce the unit's underlying reservoir.

In fact, albeit inappropriate and erroneous, the Division has either acquiesced in the administration of its authority or approved such amendments and extensions for Exxon's Point Thomson Unit over the past two decades. Now that the Division has decided to right that wrong with Exxon, they are apparently attempting to use the same heavy-hand inappropriately on PERL.

This is neither fair nor justified. As stated several times, and as a matter of record, PERL had only been the Operator of the Corsair Unit for four months, not thirty years, and it has only requested a couple of amendments or extensions, not dozens. To hold PERL to a higher standard than that which has been used for Exxon or any other Operator in the State of Alaska is unjust, unfair, inappropriate, prejudicial, biased, and does not afford PERL equal treatment under the law.

2. It is in the State's best interest to have a jack-up drilling rig in the Cook Inlet to put an end to the decades of non-exploration offshore. Since PERL's acquisition of Forest Oil Corporation for more than $440,000,000, PERL has endeavored to negotiate acceptable Unit agreements and Plans of Exploration and Development for its fields and prospects.

   Since the capital expenditure of more than 440 million dollars, PERL has diligently pursued the acquisition and delivery of a jack-up drilling rig to the Cook Inlet by not only accepting the additional requirements and stipulations imposed by the Division for the Corsair development, but by the following additional commitments:

   a) a $100,000 non-refundable deposit to Blake Offshore, LLC as an additional requirement to the drilling rig contract that was signed on March 7, 2008;

   b) a commitment of $12,000,000 as a drilling rig mobilization fee to Blake Offshore, LLC;

   c) a commitment of $125,000 PER DAY rig operating rate for the 1st year to Blake Offshore, LLC;

   d) a commitment of $135,000 PER DAY rig operating rate for the 2nd and 3rd years to Blake Offshore, LLC;

   e) a future commitment of at least $7,700,000 for a heavy lift vessel; and

   f) a commitment to Escopeta Oil Company, LLC for the use of its Jones Act waiver to operate the foreign heavy lift vessel in U.S. Waters.

   Because of the oceanic route that the heavy lift vessel must take to reach Alaska (around the tip of South America), and the inclement weather in the winter of the southern hemisphere, the earliest the jack-up drilling rig would be able to leave the Gulf of Mexico is late-December of 2008. It will take approximately 50 days to transport the drilling rig to the Cook Inlet, putting the drilling rig's arrival date at late February, at the earliest.

An 18,000 foot well in the Cook Inlet is estimated to require approximately six weeks, including mobilization, rig-up, drilling, testing, suspending, rig-down, and demobilization time. Accordingly, a well of this nature will cost approximately $5.25 million dollars in daily rig rates and another 14.75 million dollars in supplies and materials, putting the total well cost at approximately $20,000,000.

Therefore, the total cost to PERL to acquire, mobilize, deliver and drill the first well in the Cook Inlet will be in the neighborhood of $40,000,000, not including lease and permitting costs. PERL does not take this commitment lightly, nor should the DNR with the potential benefits that could be attributed to the State.

3. If the Division was not satisfied with PERL's proposal for the expansion of the Corsair Unit and the associated proposed Revised Plan of Exploration, given the expansion leases pending expiration, the Division could have, at any time prior to the lease's expiration, suspended operations as allowed under the lease agreement, to allow adequate time to negotiate an acceptable Unit expansion agreement and Revised Plan of Exploration, suitable to both the Division and PERL.

   The Division had other options available during the Public Review period that would have also afforded PERL the opportunity to agree to the terms and conditions necessary to make the Expansion Application and Revised Plan of Exploration acceptable to the Division.

   The Division's failure to give PERL the opportunity to accept terms for the unit expansion and Plan of Exploration, and come to a meeting of the minds, was not negotiating in good faith by the Division, and did not afford PERL its earned right as Operator and lessee to due process. Moreover, the Division denied PERL the ability to agree to terms that would have been acceptable to the Division. This questionable negotiating has severely prejudiced and damaged PERL.

4. PERL began good faith negotiations with the Division for a realistic and acceptable Plan of Exploration immediately after becoming approved by the Division as the successor Operator of the Corsair Unit. Throughout the negotiations with the Division regarding the Corsair Unit and the Plan of Exploration, and subsequent default cures, acceptance of additional stipulations, conditions, obligations and commitments by PERL, and acceptance of the default cures and extension approval, the Division has appeared, although resistant and apprehensive in many instances, to ultimately support PERL's diligent effort to meet the work commitments.

   PERL has devoted considerable financial and company resources in an effort to bring a jack-up drilling rig to the Cook Inlet to explore and produce the Corsair prospect. The Division has imposed stringent requirements and commitments on PERL to insure, to its satisfaction, that PERL will follow through with its plans to acquire and deliver a jack-up drilling rig to the Cook Inlet and explore and produce the Corsair prospect.

Now that virtually all the commitments and requirements imposed on PERL by the Division have been met, and PERL has completely interpreted the data necessary to delineate the entire Corsair structure, which indicates the primary oil targets underlie the expansion leases, and on the cusp of having the jack-up drilling rig on its way to the Cook Inlet, the Division makes an unwarranted, prejudicial and extremely damaging Decision not allowing PERL to include the leases that contain two-thirds (2/3rds) of the primary oil reservoir into the Corsair Unit.

In essence, the Division misled PERL, imposing onerous conditions and stipulations, including the required submission of a non-refundable $100,000 deposit. The Division allowed PERL to believe it would be able to explore and develop the entire Corsair prospect, and then took away two-thirds (2/3rds) of the structure which included the primary oil drilling targets. These actions and the Division's Decision to deny PERL the unit expansion are nothing less than reprehensible.

5. After spending over a half of a Billion dollars to gain the Alaskan assets and evaluate the prospects, and having only been an operating company in Alaska for eight (8) months, PERL has earned the right to prove up on its investment. The denial of the Corsair Unit expansion and the Division's preference to have the expansion leases expire are unfair takings of PERL's investment and proprietary information. To further willfully take this investment and offer it to another party with no compensation to PERL whatsoever is nothing less than constructive theft by the Division.

6. PERL is a real company with an Alaskan office and presence, it has invested real money in Alaska's economy, and has on-going operations and concerns that continue to provide revenue to the State and local businesses. It is not Exxon. The Division should be the State's advocate for responsible development of its oil and gas resources, not an agency with an adversarial role.

   When a viable and energetic company comes to the Division with a prudent and reasonable plan for <u>any</u> exploration or development activity that will enhance the current exploration and development in the State of Alaska, the Division should say: "Welcome to Alaska, how we can help you develop our resources?" Instead, in the case of PERL and the Corsair Unit, the Division appears to have more the attitude of: "Here comes another company, how can we make their efforts difficult, and how can we find a reason to say no to their plans?"

   Quite simply, this is not good business practice for the State and it DOES NOT encourage exploration and development.

7. Because the Division did not give its full and unbiased consideration of PERL's Unit Expansion Application and proposed Revised Initial Plan of Exploration; and because the Division failed to adequately consider all the aspects of PERL's proposed unit expansion and Plan of Exploration as it relates to the conservation of resources or the economical and physical waste or resources; and because the Division failed to adequately consider what

was actually in the best interest of the State, the public, and PERL; and because the Division did not adequately consider and fully evaluate the implications of its Decision; and for all of the other reasons identified throughout this Appeal; the Division's Decision to deny the Expansion of the Corsair Unit and the denial of the proposed Revised Initial Plan of Exploration is erroneous, unjustified, unwarranted, prejudicial, damaging, arbitrary and capricious, and should be reversed.

"Balance of Hardships" Test

Case law exists relative to the situations presented in this Appeal. The present matter focuses upon the Division's Denial of PERL's Application for the First Expansion of the Corsair Unit, a situation in which the Division cannot demonstrate any damages to the Department of Natural Resources or the State of Alaska if the Application were approved. Conversely, PERL can show significant damages if it is forced to relinquish the expansion acreage and the underlying resources. An appellant rule applies where the party seeking the appeal stands to suffer irreparable harm and where, at the same time, the opposing party can be protected from injury. This rule was set out by the United States Supreme Court in *Ohio Oil Co v. Conway*, 279 U.S. 813, 49 S.Ct. 256, 73 L.Ed. 972 (1929) and has been expanded by both federal and state courts in later jurisprudence:

> *Where the matters presented by an appellant for an appeal are grave, and the injury to the Appellant will be certain and irreparable if the appeal is not granted, while if the appeal is granted the injury to the opposing part will be inconsiderable, or may be adequately indemnified by a bond, the appeal usually will prevail. Id.*

This approach requires balancing the hardships by weighing the harm that will be suffered by the appellant if an appeal is not granted, against the harm that will be imposed upon the opposing party by the granting of an appeal.[1]

In this matter, an appeal pursuant to 11 AAC 83.02 of the Director's Decision to Deny the Application for the First Expansion of the Corsair Unit – ultimately resulting in the loss of a portion of PERL's oil and gas prospect to which it has devoted significant amounts of financial, tangible and intangible resources to acquire – must be granted because such a Decision will not cause either the Department of Natural Resources or State of Alaska irreparable harm. However, PERL will suffer irreparable injury and financial losses if PERL is denied the Expansion of the Corsair Unit, loses the expansion leases and the underlying resources.

Regardless of the outcome of this Appeal, the State of Alaska retains its royalty interest in the underlying resources and therefore is not at risk of any damages related to the entity that has the care, custody and control over those leases (whether the underlying resource remains in the control of PERL or any other potential lessee or Operator).

---

[1] *A.J. Industries, Inc. v. Alaska Public Service Commission*, 470 P.2d 537, 540 (Alaska 1970)(citations omitted).

Because of the reasons stated elsewhere in this Appeal, it is highly unlikely and perhaps impossible that (1) the expansion leases subject to this Appeal could be explored and produced faster by another Lessee or Operator, and (2) the resource underlying the expansion leases could be produced faster on a lease-by-lease basis than it could be produced under unitization. Therefore, the State of Alaska is at no risk of damages whatsoever should the leases remain in the control of PERL.

If PERL loses its expansion leases, it will lose the underlying resources which it has endeavored to identify and any potential revenue that might be derived from that resource. These damages speak for themselves. Further, should the leases expire and become available in any subsequent lease sale, in order for PERL to reacquire those leases it will have to be the highest bidder in a competitive lease sale, likely spending hundreds of thousands of dollars reacquiring the leases because the industry is generally aware of the underlying resources contained in these leases. This is money that PERL would not have otherwise had to spend should the leases not expire.

The State of Alaska will also suffer damage if the leases are left to expire, as fragmented lease-by-lease development will delay the time it will take to produce the leases, and will also result in a waste of economical and physical resources.

Losing the expansion leases and the underlying resources will be a grave injustice and will result in irreparable injury to PERL. Therefore, PERL urges the Lt. Governor and the Commissioner of Natural Resources to grant the Appeal and approve the Application of the First Expansion of the Corsair Unit for the reasons stated above.

IT IS THEREFORE REQUESTED by Pacific Energy Alaska Operating Ltd., as the lessee, and Pacific Energy Resources Ltd., as the Corsair Unit Operator, that the Lt. Governor of Alaska and the Commissioner of Natural Resources issue a Decision that the Application for the First Expansion of the Corsair Unit and the accompanying Revised Initial Plan of Exploration, dated March 18, 2008, is in the best interest of the State of Alaska.

IT IS FURTHER REQUESTED by Pacific Energy Operating Alaska Ltd., as the lessee, and Pacific Energy Resources Ltd. , as the Corsair Unit Operator, that the Lt. Governor of Alaska and the Commissioner of Natural Resources Approve the Application for the First Expansion of the Corsair Unit and the accompanying Revised Initial Plan of Exploration, dated March 18, 2008.

This DECISION and APPROVAL will support and allow for the prudent and responsible exploration and development of the Corsair Structure in a timely and efficient manner, it will also support and encourage PERL's efforts to bring the desperately needed jack-up drilling rig into the waters of the State of Alaska and renew the stagnated exploration and development of the Cook Inlet Basin and possibly other offshore basins throughout Alaska.

This DECISION and APPROVAL will not prejudice nor damage the State of Alaska in any manner, either administratively, procedurally or financially.

Your time and consideration of this Appeal is greatly appreciated. We look forward to discussing our plans and these issues with you, if necessary.

Respectfully Submitted,

PACIFIC ENERGY ALASKA OPERATING LLC

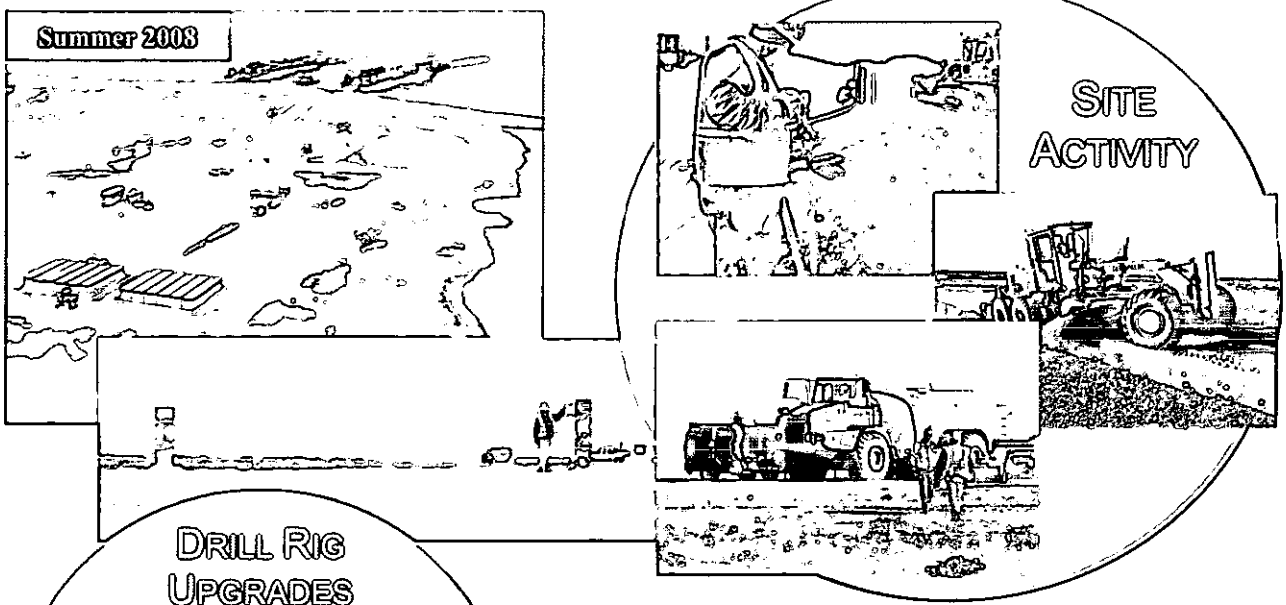
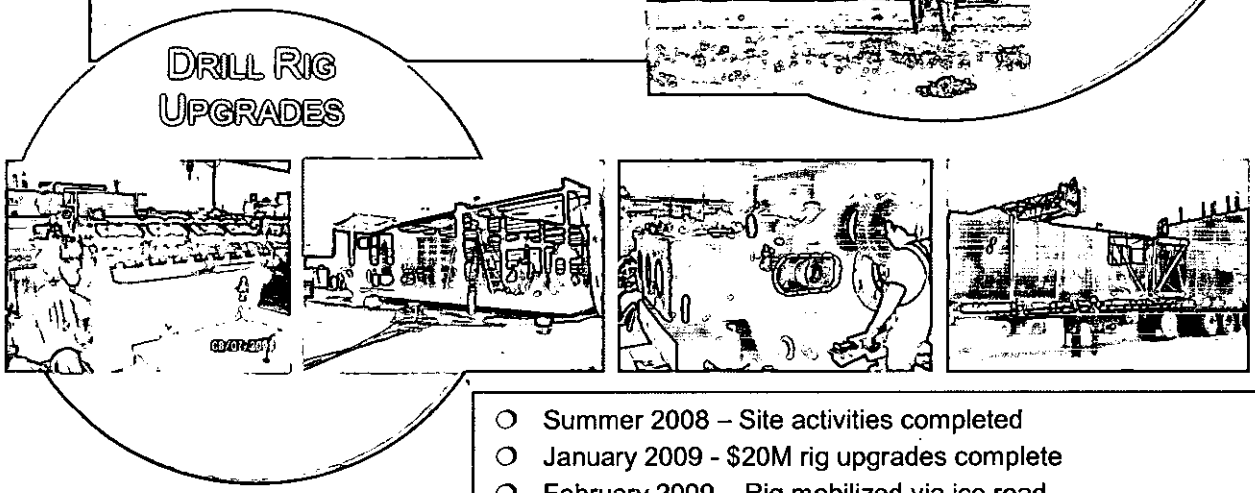
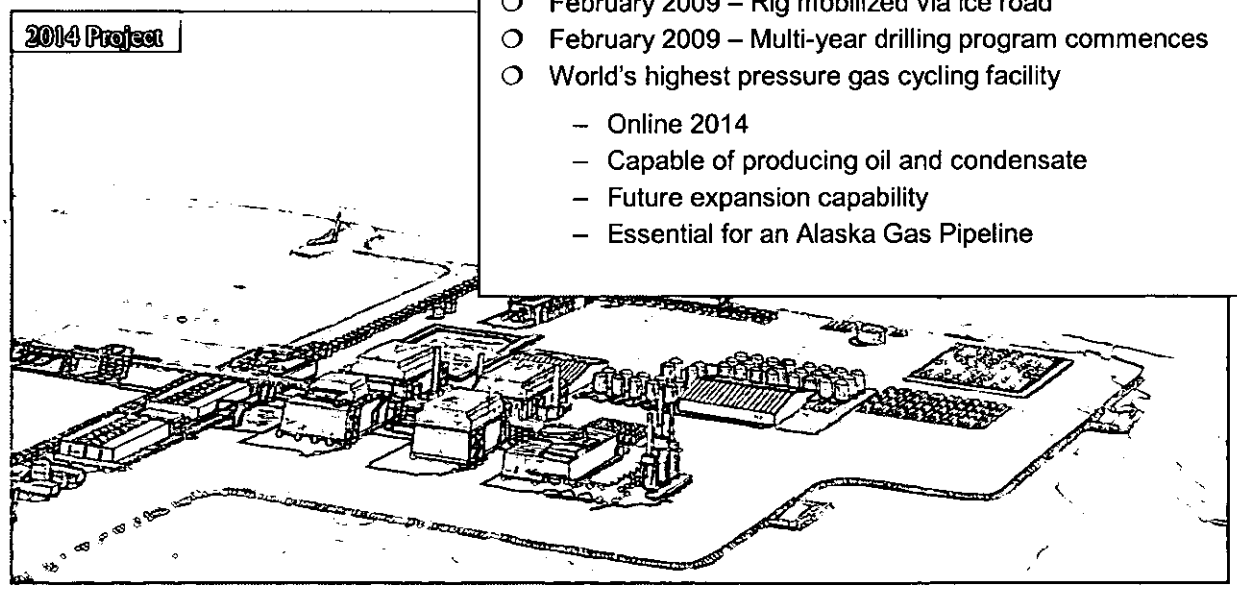
Point Thomson Project

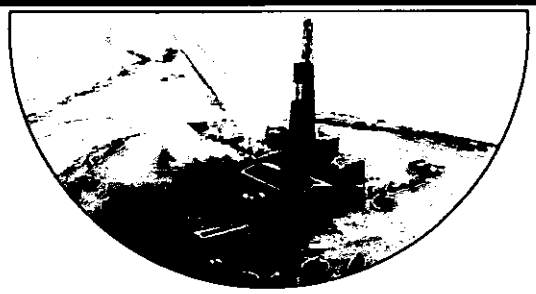




- Summer 2008 – Site activities completed
- January 2009 - $20M rig upgrades complete
- February 2009 – Rig mobilized via ice road
- February 2009 – Multi-year drilling program commences
- World's highest pressure gas cycling facility
  - Online 2014
  - Capable of producing oil and condensate
  - Future expansion capability
  - Essential for an Alaska Gas Pipeline



Progress Report: Point Thomson



The Point Thomson working interest owners are proceeding with the drilling program at the Point Thomson Unit, with drilling to commence in February 2009.

Point Thomson will be the highest pressure gas cycling project in the world, employing world-class drill wells. This project is an investment of approximately $1.3 billion, including a multi-year development and delineation drilling program.

With the arrival of equipment and materials by barge at the drilling site, the Point Thomson owners are moving forward with essential site preparation tasks to be ready to accept the upgraded drilling rig.

ExxonMobil and the other 26 Point Thomson owners wish to publically thank the more than 150 people from more than 30 companies in Alaska who are working to progress these development activities.

ExxonMobil

Taking on the world's toughest energy challenges.™

Thanks to the many Alaska companies and hundreds of employees working on Point Thomson.

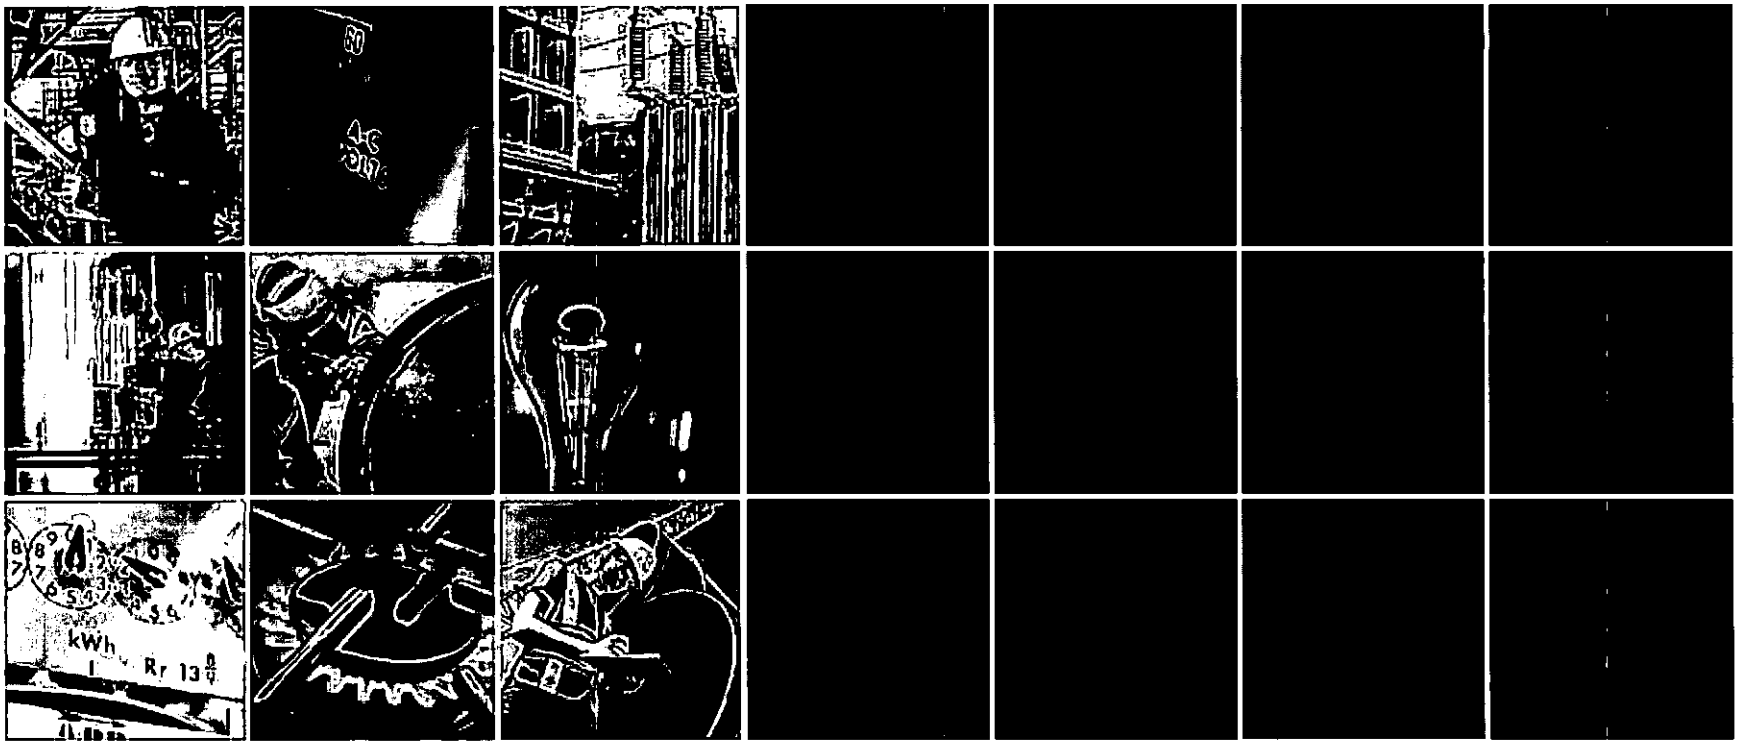
1/26/09 PRESENTATION BY TRANSCANADA: AK GAS PIPELINE

1996

1997



TransCanada's Alaska Pipeline Project
House / Senate Resources Committees

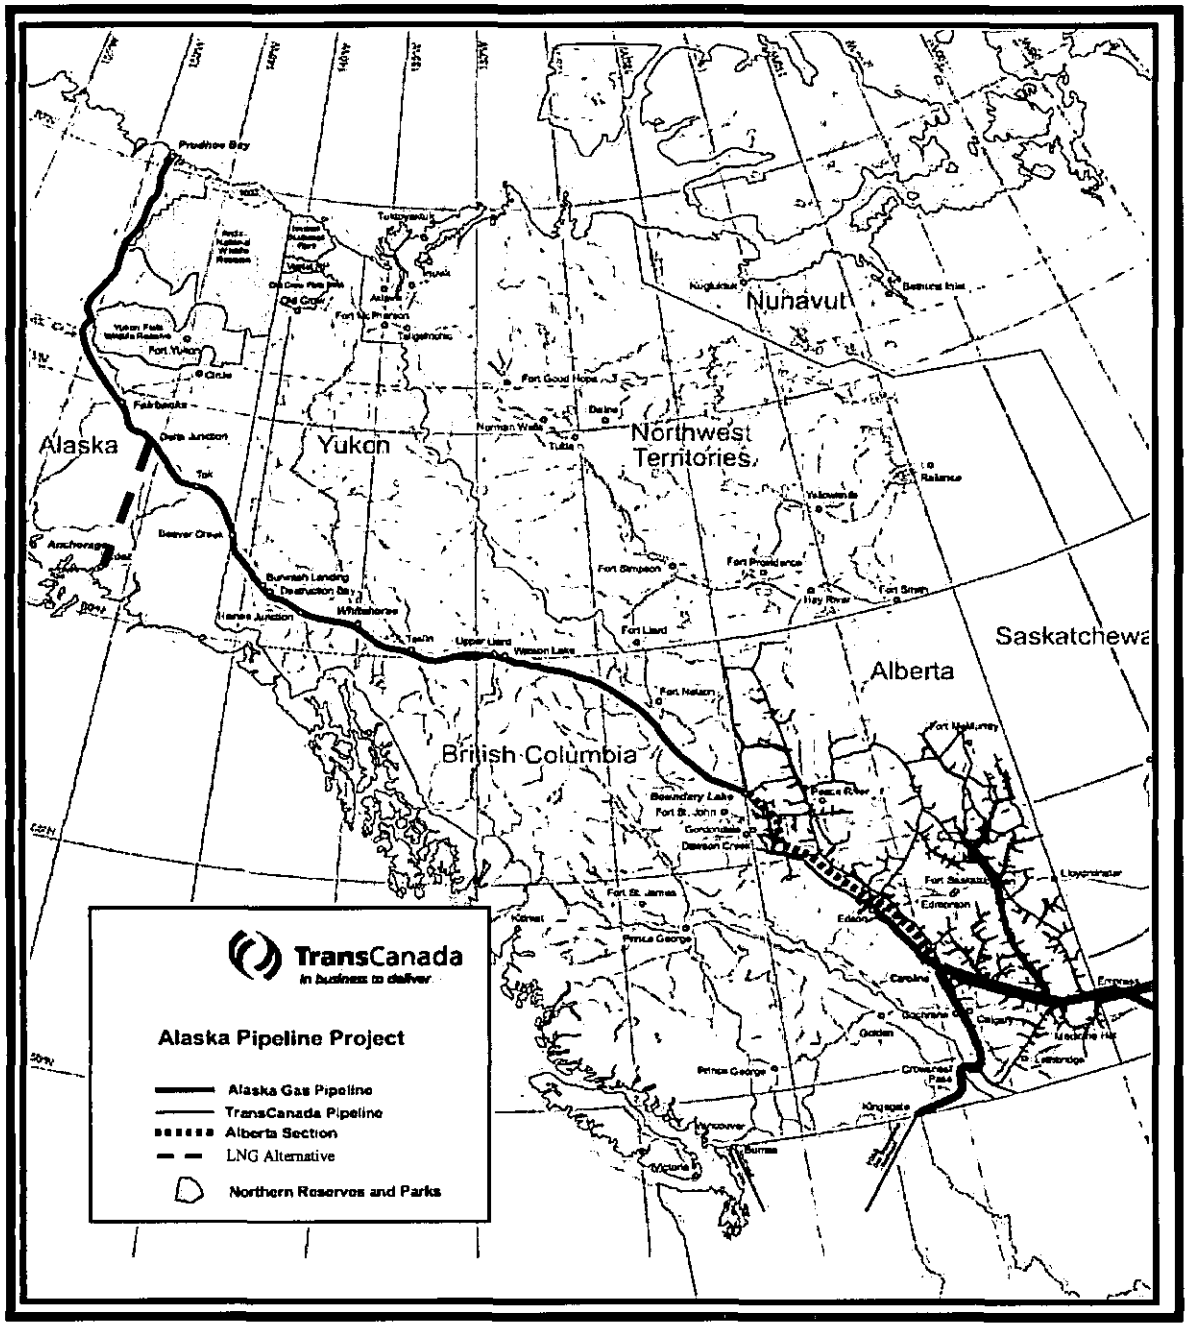
Juneau, Alaska

January 26, 2009

TransCanada

In business to deliver

1998



TransCanada's Alaska Pipeline Project

1999

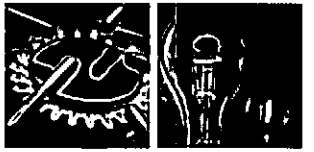
Elements of a Successful Project

- **Attractive project economics**
  - Natural gas prices are volatile and difficult to forecast
  - Conventional Lower 48 and WCSB, LNG, shale and coalbed methane all competing for market share
  - Project supporters must focus on factors that affect tolls
    - Commercial terms
    - Commercial and regulatory risk management
    - Schedule
    - Cost control
  - Current toll estimate of $US 2.76/MMBTU in 2018 to Alberta Hub
    - Important to keep tolls under $3/MMBTU (incl. fuel)

TransCanada

2000

Elements of a Successful Project



- **Government and community support**
  - U.S. / Canada
  - Alaska / Yukon / B.C. / Alberta
  - Alaska Natives and Canadian First Nations
  - Landowners
  - Other stakeholders

- **Commercial contracts with Shippers**
  - Long-term firm agreements
  - Creditworthy parties

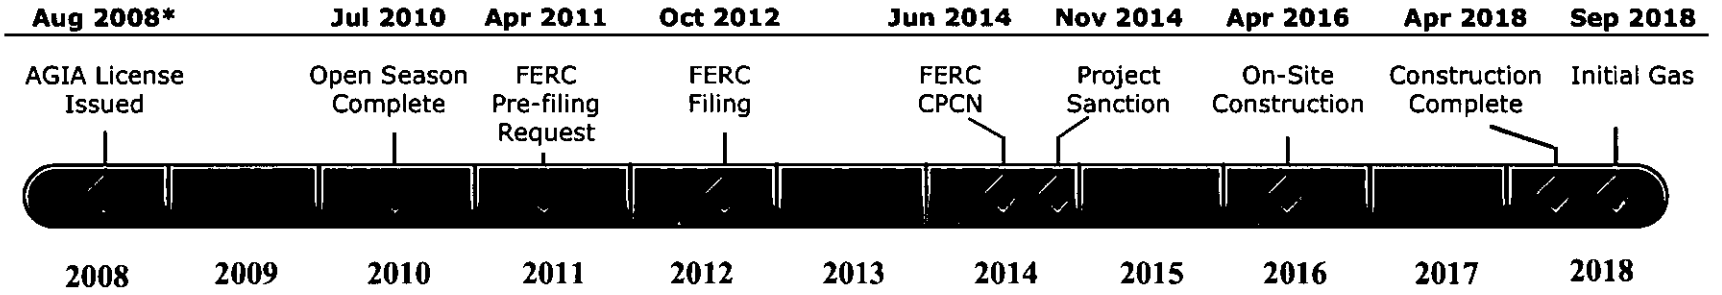
TransCanada

Elements of a Successful Project

- **Project execution**
  - Measured and focused project planning, structure and performance
  - Proven project developer
    - TransCanada has 50 year successful track record as developer of long-distance multi-jurisdictional pipeline projects

TransCanada

Project Schedule



* AGIA license assumed to be issued in August 2008 – actual date December 5, 2008

TransCanada

2003

Open Season Phase 2008 to July 2010

Key Objectives:

- Develop Class IV cost estimate to support Open Season
- Identify pipeline routing within study corridor to guide stakeholder and public engagement
- Execute preliminary environmental activities to prepare for pre-filing requirements and to develop permitting plan
- Conduct successful Open Season

TransCanada

2004

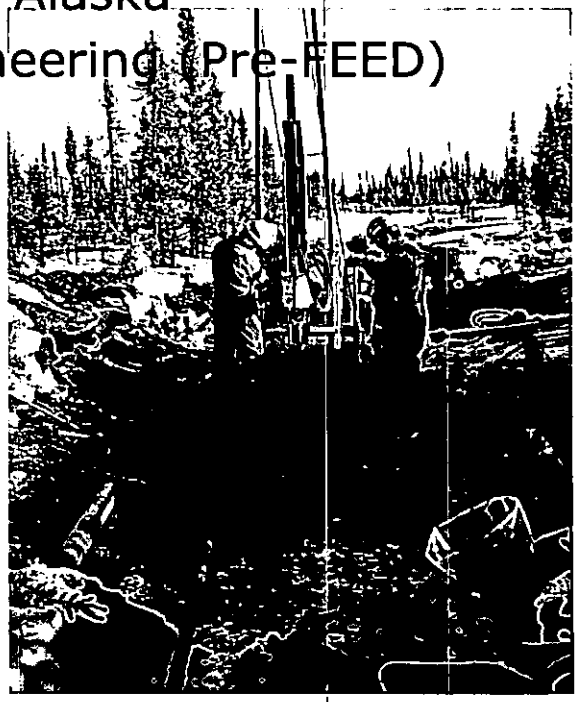
Project Status – Engineering

August 2008 – January 2009

- Developed detailed plans for technology development, engineering, construction infrastructure, logistics and cost estimating
- Aerial photography for Alaska, including LNG alternative
- Commenced terrain mapping for Alaska
- Completed 360° video in Canada
- Planned winter geotechnical field program
- Collected arctic engineering test data and research on frost heave

Outlook – Q1 & Q2 2009

- Complete terrain mapping and winter geotechnical field program in Alaska
- Continue route reconnaissance and corridor selection in Alaska
- Begin engineering (Pre-FEED) for GTP

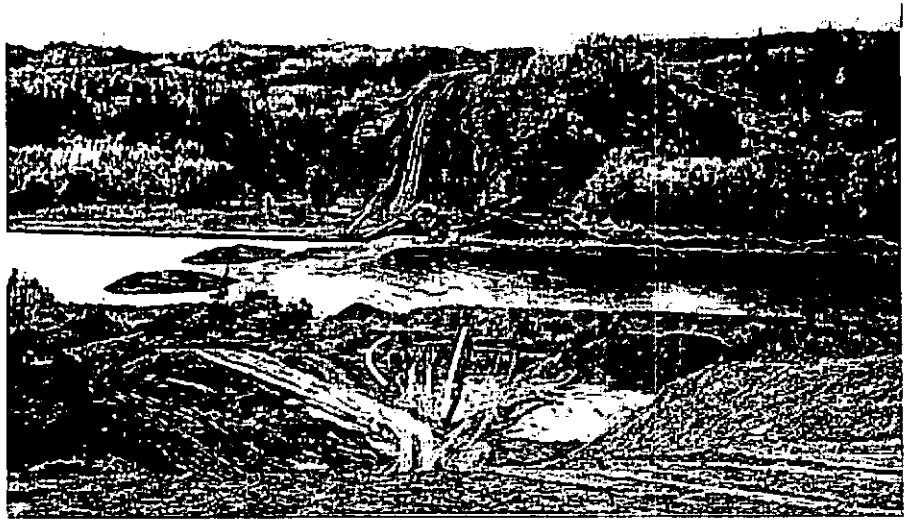


2005

Project Status - Environmental

August 2008 – January 2009

- Established GIS needs to support environmental planning and permitting
- Completed preliminary environmental constraints report for Alaska routing
- Completed initial route update review in Canada



Outlook – Q1 & Q2 2009

- Complete environmental information needs analysis with regulatory agencies
- Commence development of RFP for TransCanada environmental contractor – issuance in Q3 2009

Project Status – Regulatory / Permitting

August 2008 – January 2009

- Preliminary environmental permitting strategy for Alaska and Canada
- Submitted all permit applications to support winter geotechnical program North Slope Borough, ADNR, AF&G, USF&WS, USDOI (BLM), USACE, as well as referral to SHPO

Outlook – Q1 & Q2 2009

- Complete permitting for winter geotechnical field program
- Continue FERC discussions
- Commence discussions with individual agencies to update Environmental Information Needs Analysis

TransCanada

Project Status – Regulatory / Permitting (cont'd)

August 2008 – January 2009

- U.S. multi-agency meetings:
  - January 5 – FERC
  - January 6 – in D.C.; Office of Federal Coordinator, Departments of Defense, Energy, Homeland Security, Interior, Transportation, Commerce, State, Treasury, Advisory Council on Historic Preservation, Environmental Protection Agency, FERC, Council on Environmental Quality, Office of Management & Budget
  - January 14/15 – in Anchorage/Fairbanks; JPO/SPCO, ADNR, ADOT, ADF&G, SHPO, ADEC, NOAA, EPA, DOI (BLM), OFC, USFWS & University of Alaska Fairbanks

TransCanada

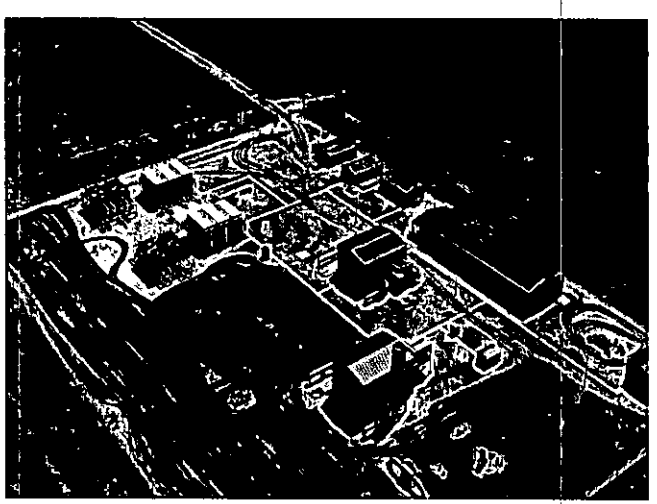
Project Status - Commercial

August 2008 – January 2009

- Continued discussions with potential shippers

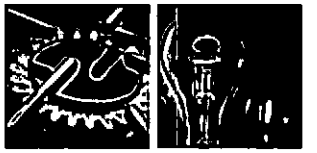
Outlook – Q1 & Q2 2009

- Select contractor for In-State Gas Study
- Continue discussions with potential shippers
- Continue to develop plans for Open Season



TransCanada

Project Status - Administrative



August 2008 – January 2009

- Office
  - Dec. 1, 2008 lease for Anchorage office
  - Dedicated project office space in Calgary
- Reimbursement
  - Initial discussions with Administration regarding AGIA reimbursement process and mechanics
  - Initiated required cost reimbursement agreements with State of Alaska and BLM for Open Season field activities including winter 2009 geotech program

Outlook – Q1 & Q2 2009

- Office
  - Anchorage Office Manager in place by early February
- Reimbursement
  - Finalize discussions with State on AGIA reimbursement details
  - Finalize reimbursement agreements with BLM and DNR (for access and permits)

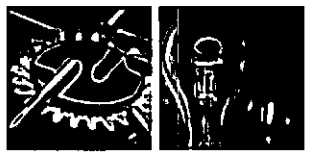
TransCanada

Project Status – Alaska Contractors

- Aerial Photography – Aero-Metric Inc., Anchorage
  - Sub-contractor - Lounsbury & Associates Inc., Anchorage
- Terrain Mapping – R&M Consultants Inc., Anchorage
- Geotechnical fieldwork – Golder Associates Inc., Anchorage,
  - Sub-contractor – Discovery Drilling Inc., Anchorage
- Environmental Planning and Permitting – ENSR AECOM, Anchorage
  - Sub-contract with Clarus Technologies LLC, Eagle River for SHPO submission
- Geothermal Modeling and Support – Northern Engineering and Scientific, Anchorage
- External relations – Jade North, Anchorage

TransCanada

Project Status – Alignment Meetings



- Alyeska, ANGDA, ENSTAR
- DOT (Alaska)
  - Alaska / Yukon Infrastructure Improvements workshop
  - State Infrastructure Conference
- Department of Labor (Alaska)
  - AGIA Training Strategic Plan Steering and Implementation Committee
  - Alaska Pipeline Trades Academy Dedication & Tour
  - Alaska Workforce Investment Board
- Alaska Natives / Socio-Economic
  - Outreach and meetings with Regional Corporations, Village Corporations and Tribal Entities that are stakeholders

TransCanada

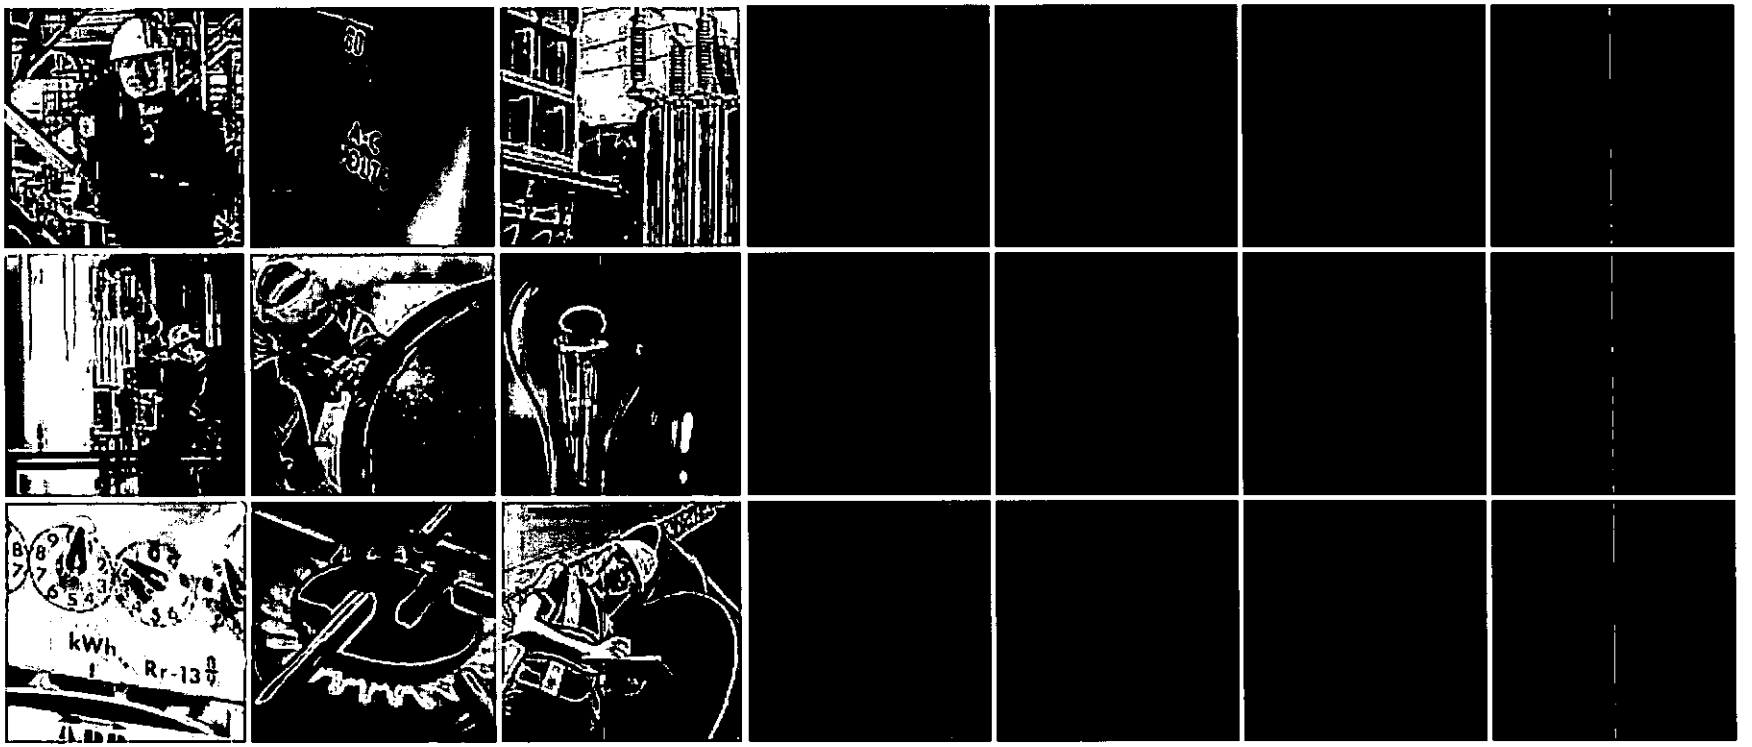
2012

Summary

- AGIA Bill approved and License issued
- Significant work underway – Engineering / Cost Estimation, Environmental, Administrative, etc.
- Commercial and Regulatory engagement commencing
- Alaska contractors retained
- Anchorage office in-place
- Target to conclude Open Season by summer 2010
- TransCanada will continue to focus on costs, schedule and attracting customers.

TransCanada

2013



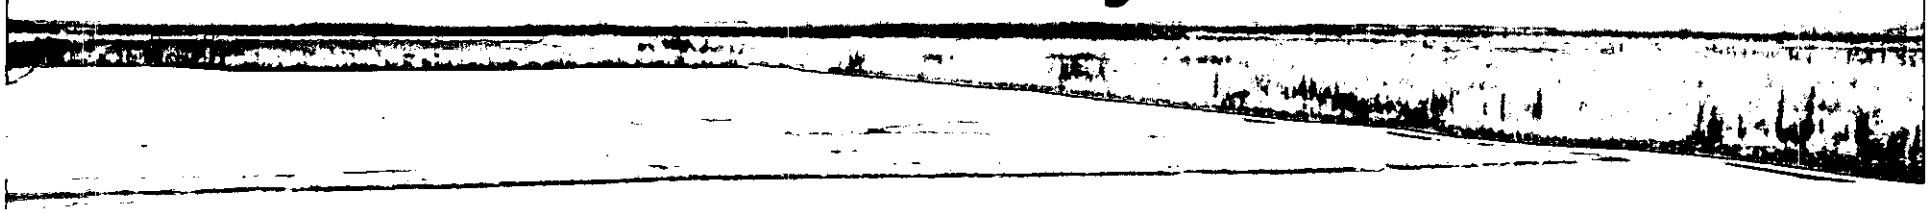
Thank You

TransCanada
In business to deliver

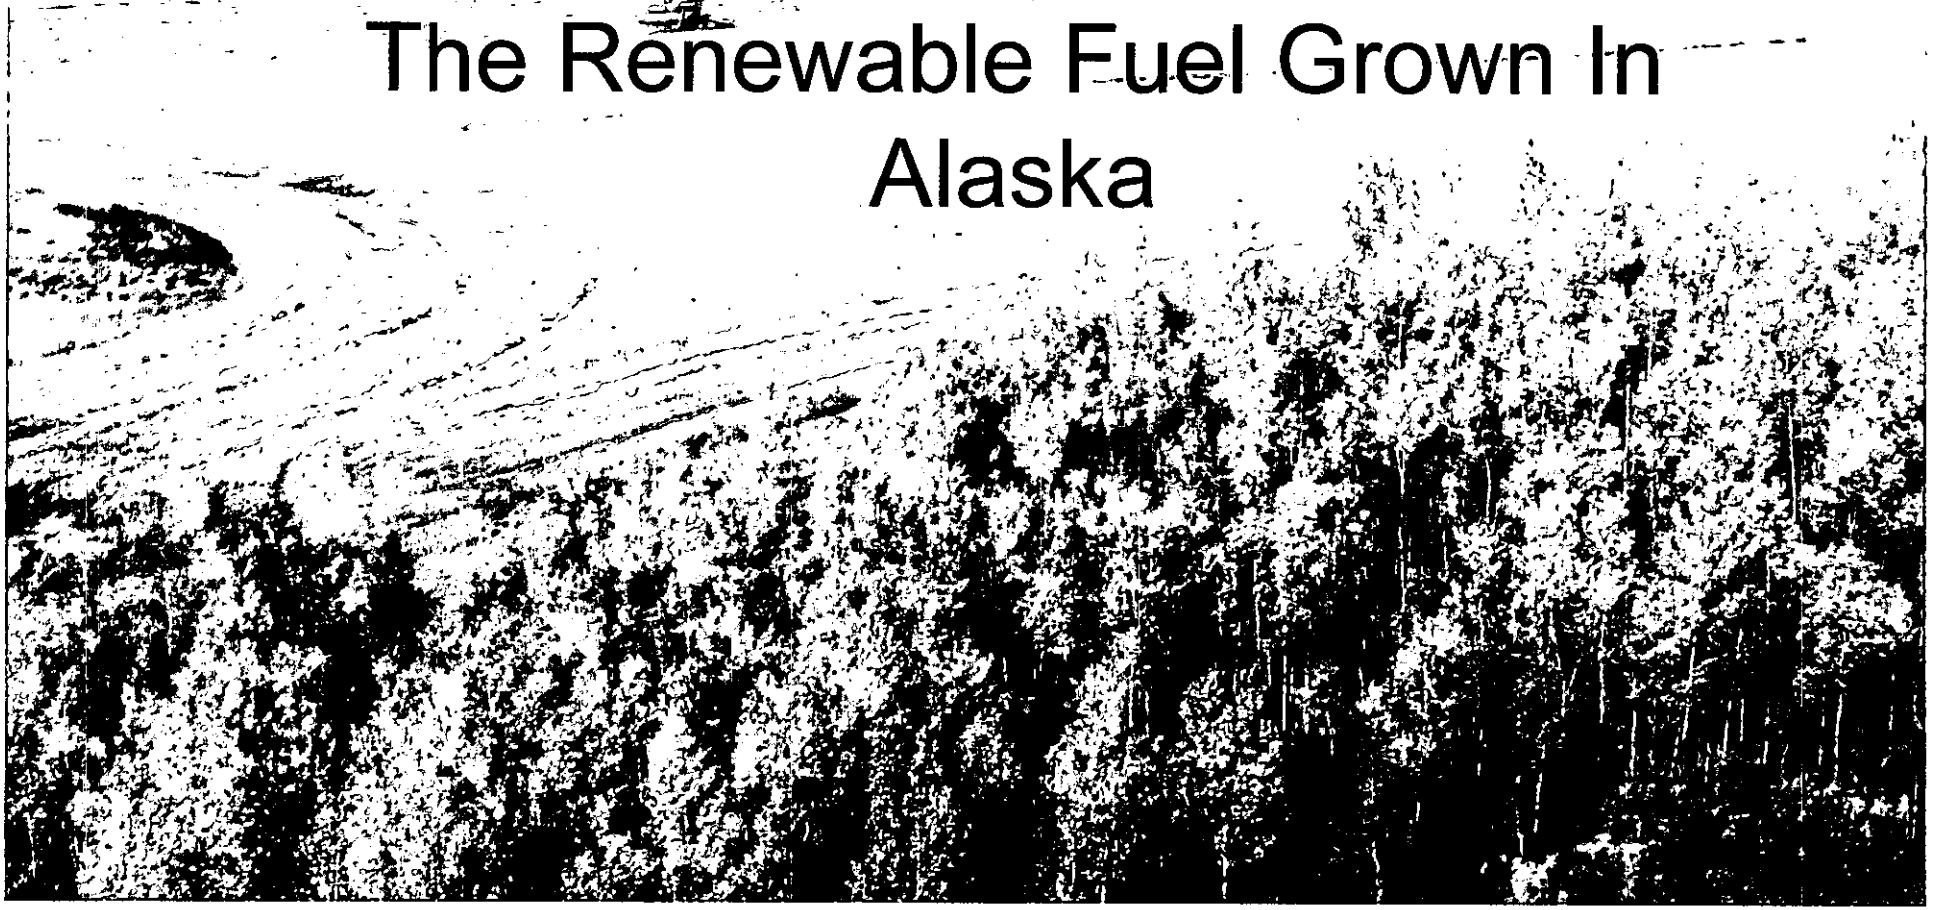
2/18/09 PRESENTATION: BARLEY FOR FUEL

2015

Barley



The Renewable Fuel Grown In Alaska

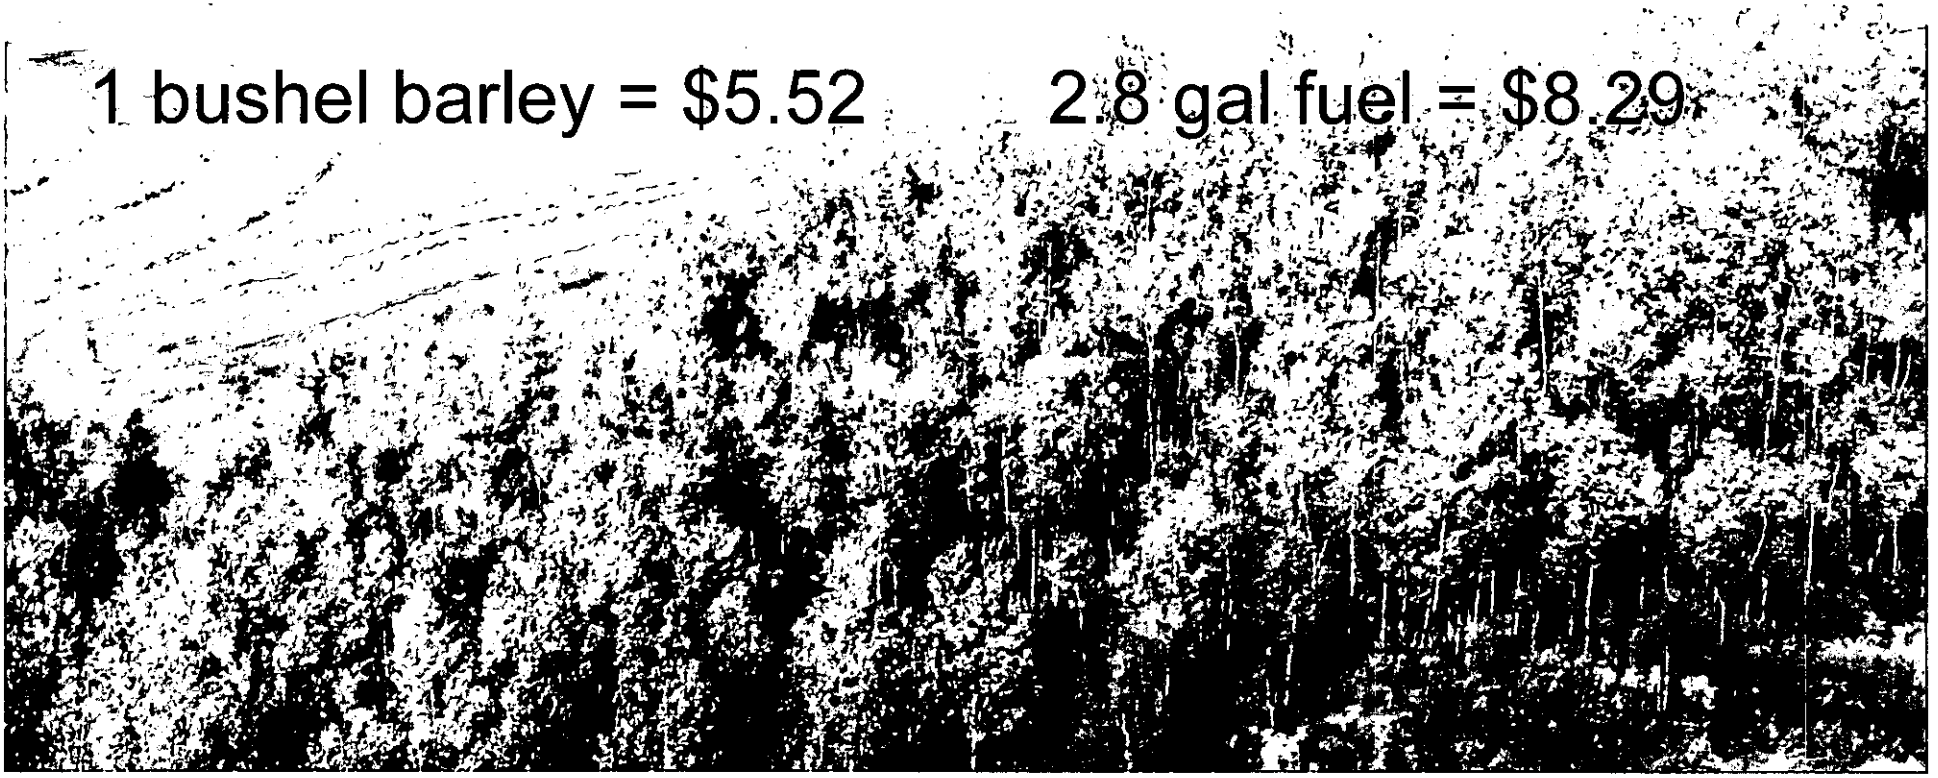


Economics

Cost comparison with fuel oil

1 bushel barley = 2.8 gallons fuel oil

1 bushel barley = $5.52 2.8 gal fuel = $8.29



Economics

Cost per million BTU

1,000,000 / 393,600 x $5.52 / .85 = $16.50 (barley)

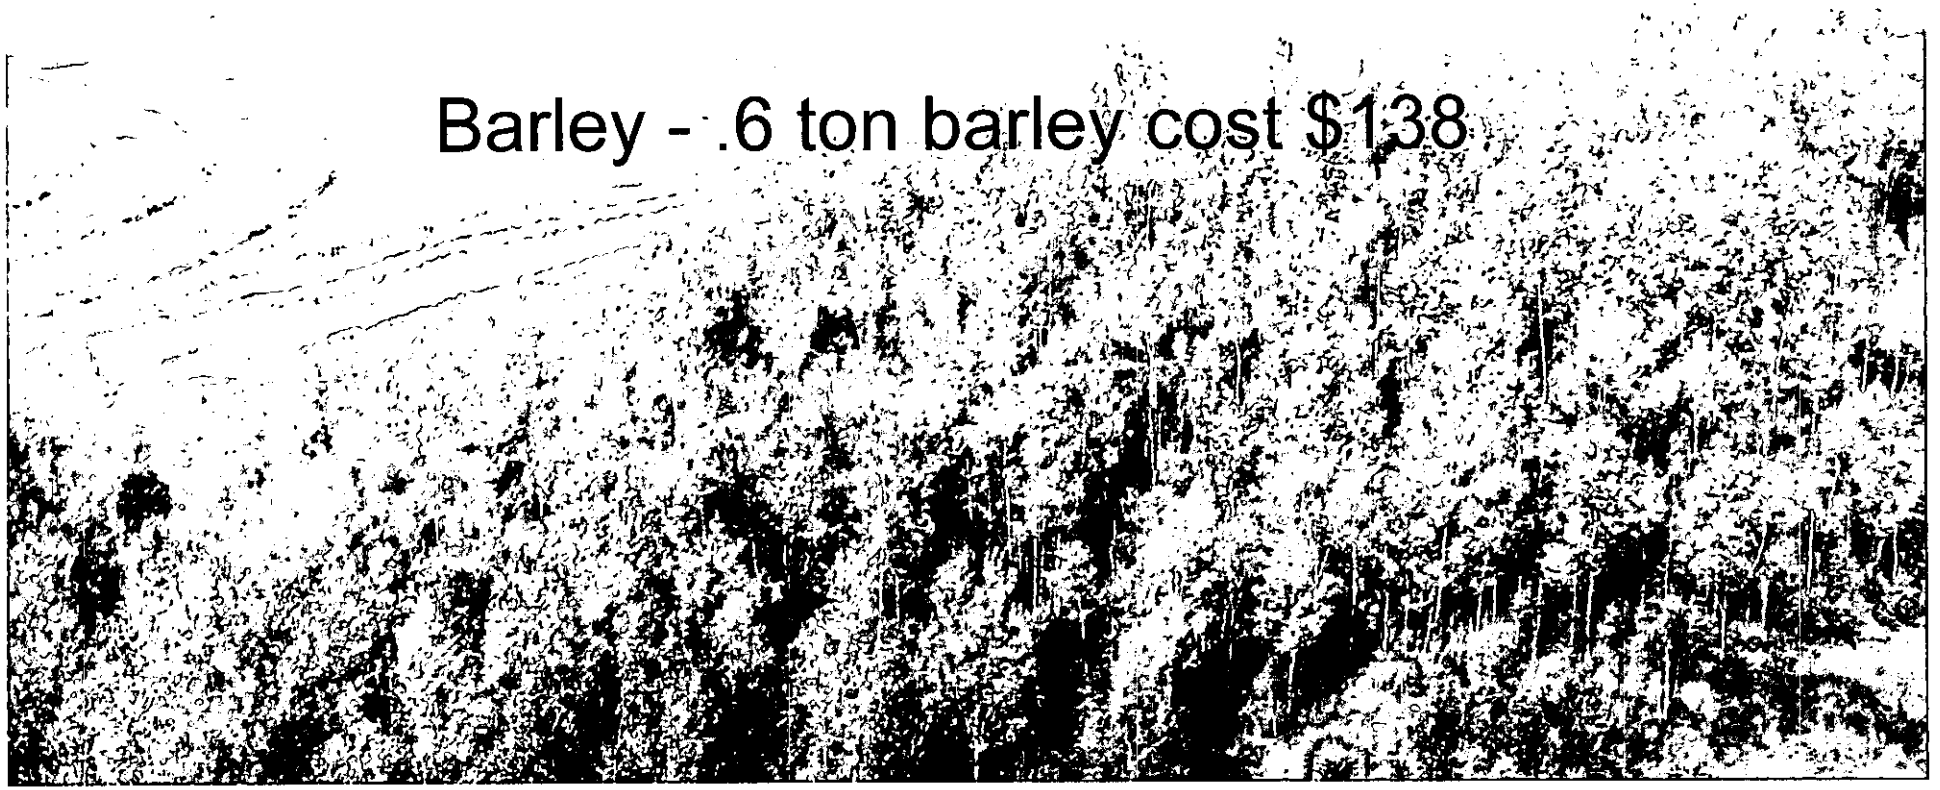
1,000,000 / 142,393 x $2.96 / .85 = $24.46 (fuel oil)

Economics

Monthly consumption

Fuel oil - 100 gal cost $296

Barley - .6 ton barley cost $138



Benefits of Barley Fuel

- 1 year harvest cycle vs. 100 years for wood and 40 million years for oil
- Most renewable resource grown in Alaska
- Low particulate levels
- Environmentally safer to ship and store
- Dollars from ag receipts stay in Alaska
- Reduce dependence on foreign oil

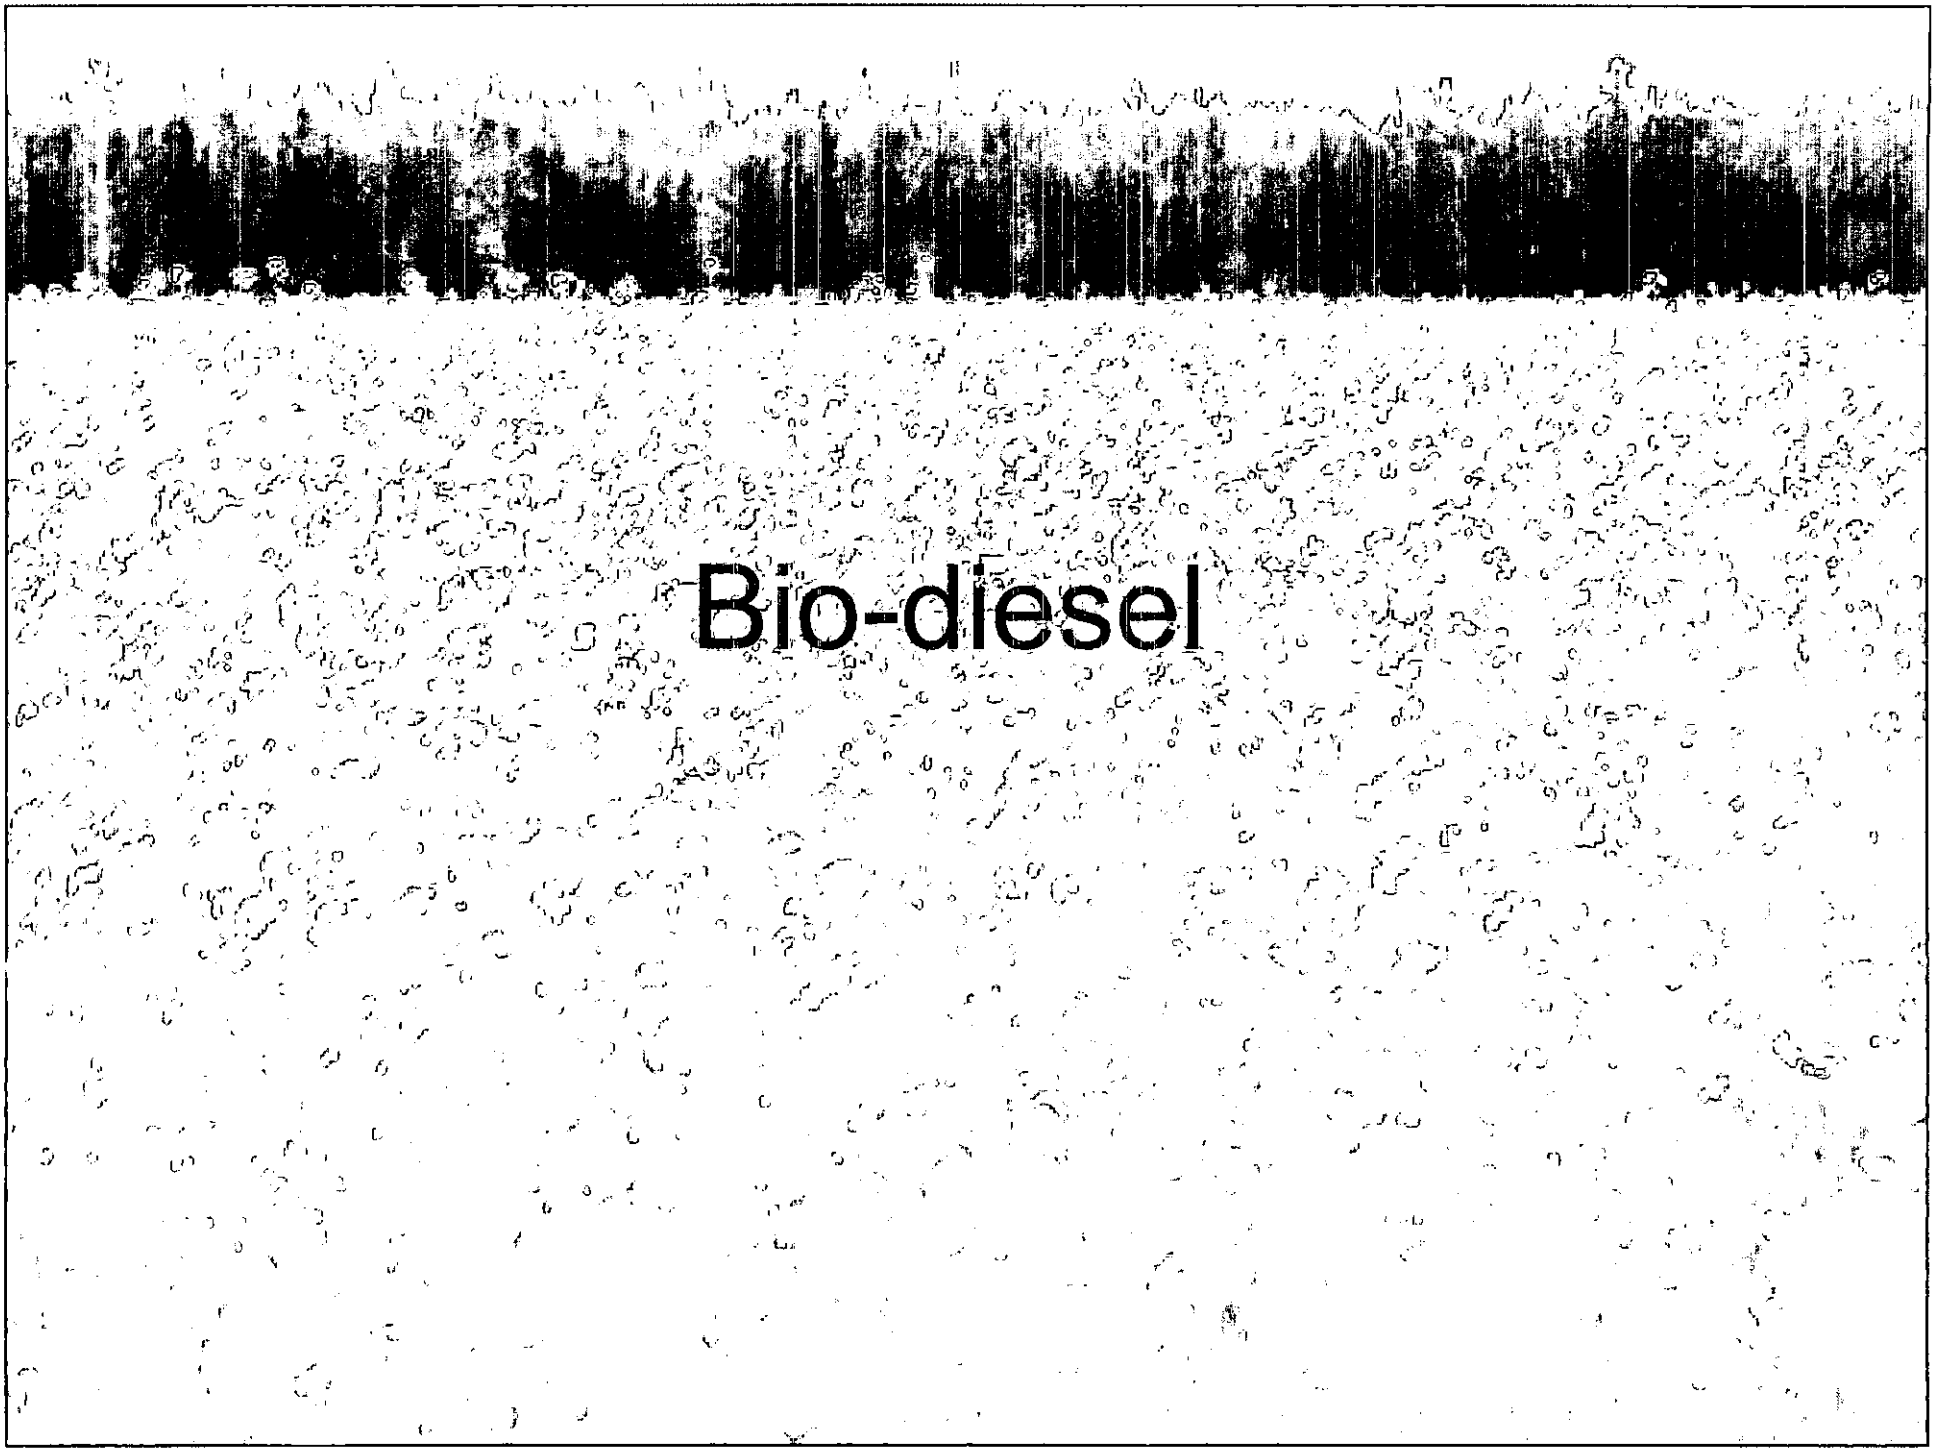
Current Production Capability

- Markets are the limiting factor to grain production in Alaska
- ~4,000 acres of barley grown in Delta last year
- 18,000 acres in Delta in < 2 years
- 25,000 acres < 3 years
- 50,000 acres is possible by 2015

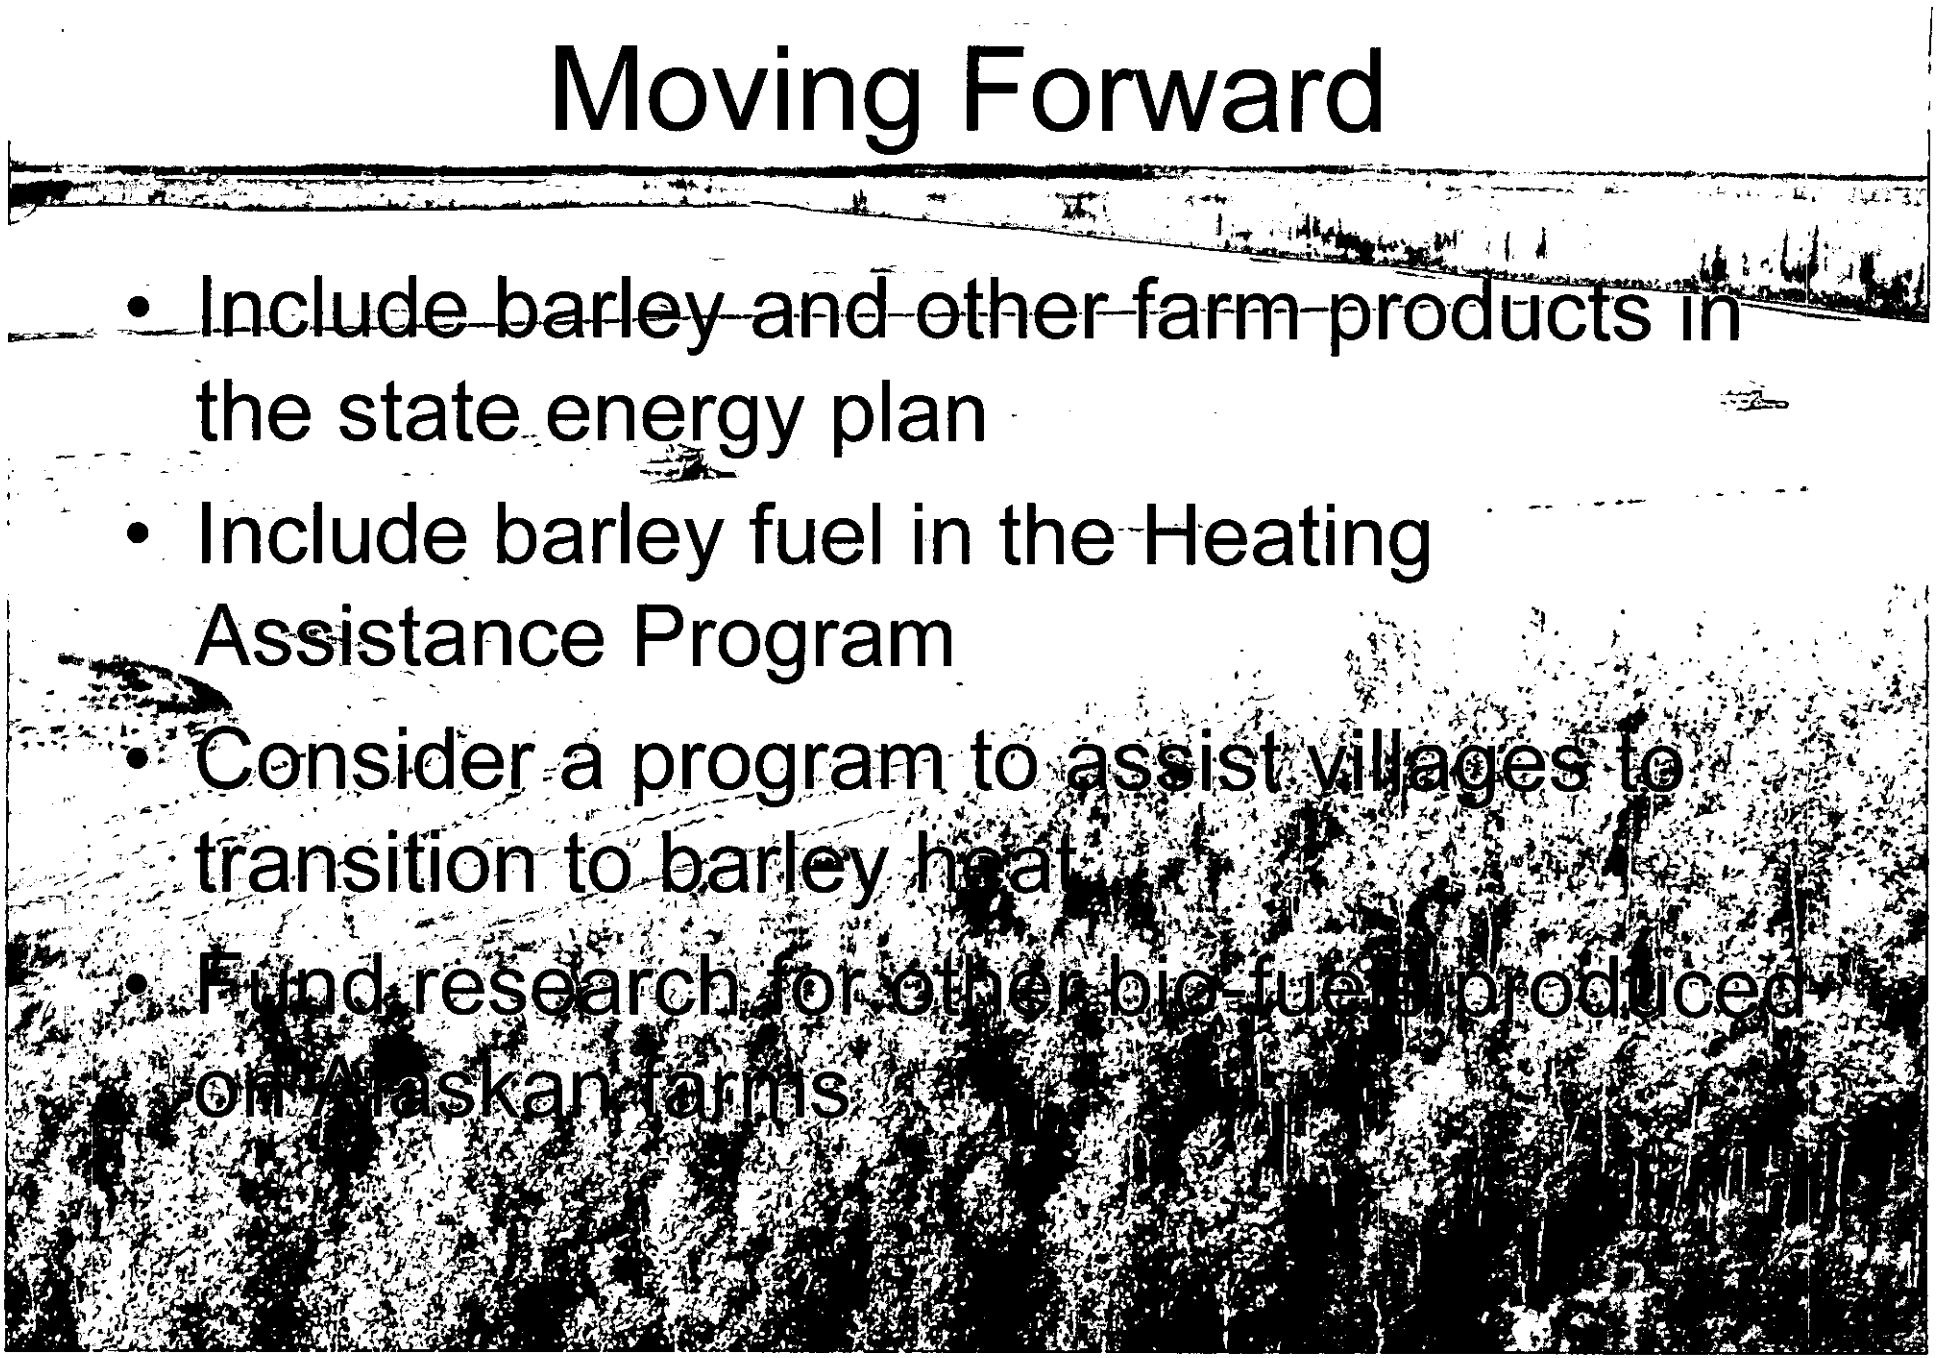
Potential Production

- 8.9-18.5 million acres in Alaska suitable for agriculture
- 500,000 acres for grain production
- 25,000 acres = ~1,000,000 bushels
- 1,000,000 bushel will heat 5,000 homes
- 500,000 acres will heat about 100,000 homes.

2022



Moving Forward



- Include barley and other farm products in the state energy plan
- Include barley fuel in the Heating Assistance Program
- Consider a program to assist villages to transition to barley heat
- Fund research for other bio-fuels produced on Alaskan farms

Questions

- Is it ethical to use feed for fuel?
- Is there be enough barley to meet feeding needs and also burn?

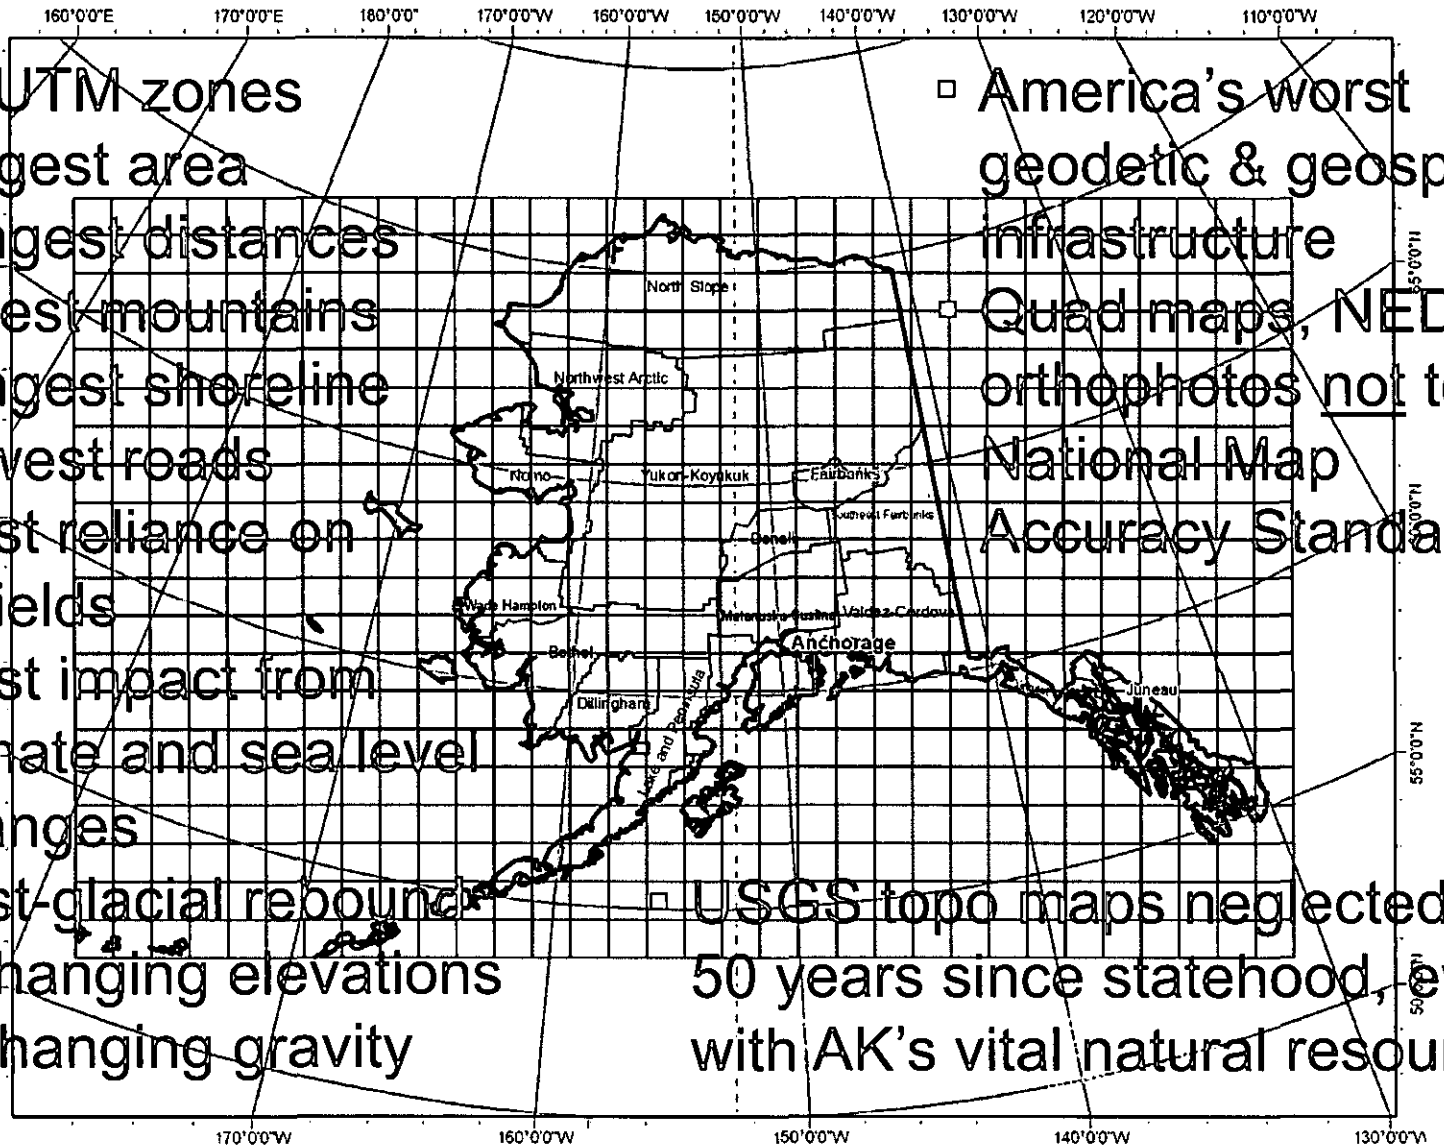
Why Alaska is Different and Changing

Ships can now transit N. Atlantic ↔ N. Pacific around N. Slope



- 10 UTM zones
- Largest area
- Longest distances
- Tallest mountains
- Longest shoreline
- Fewest roads
- Most reliance on airfields
- Most impact from climate and sea level changes
- Post-glacial rebound = changing elevations & changing gravity

- America's worst geodetic & geospatial infrastructure
- Quad maps, NED, orthophotos not to National Map Accuracy Standards
- USGS topo maps neglected for 50 years since statehood, even with AK's vital natural resources

Alaska Geoid errors ≈ 2 meters
(All other states: ± 2 cm)

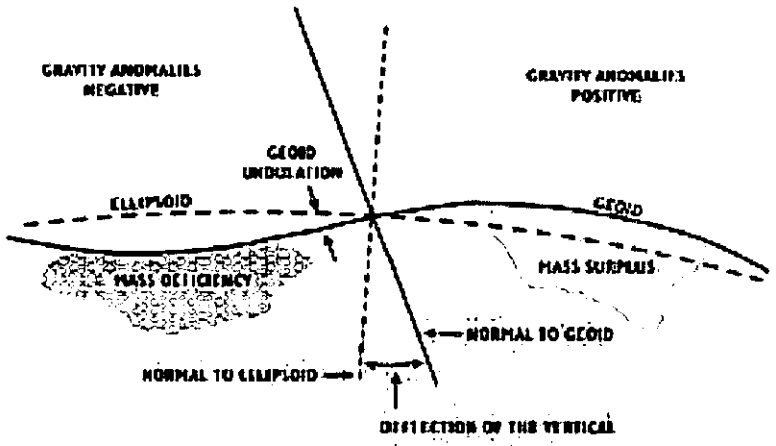


Figure 3. Ellipsoid, geoid, and geoid undulation (geoid height).

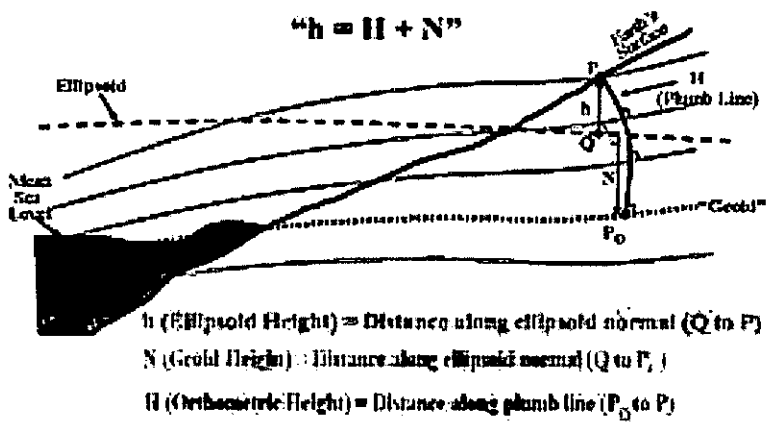

Figure 4. Geodetic formula for conversions between ellipsoid heights and orthometric heights.

Campaign I: High-Resolution Snapshot of Gravity

Phase I: Testing

Phase II: Operational Data Collection

Receiver Sampling Rate

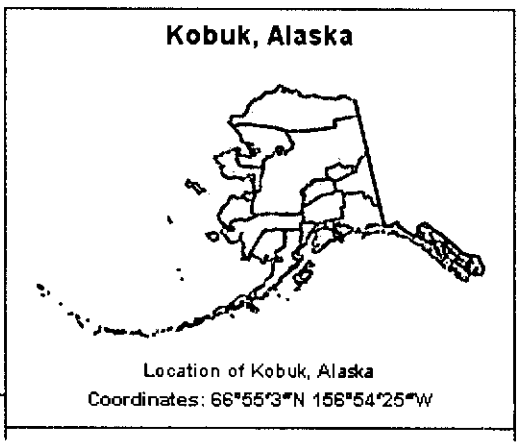
1 sec | 5 sec | 10 sec | 15 sec | 30 sec | Show All | Show Decommissioned Sites

Alaska compared with other States

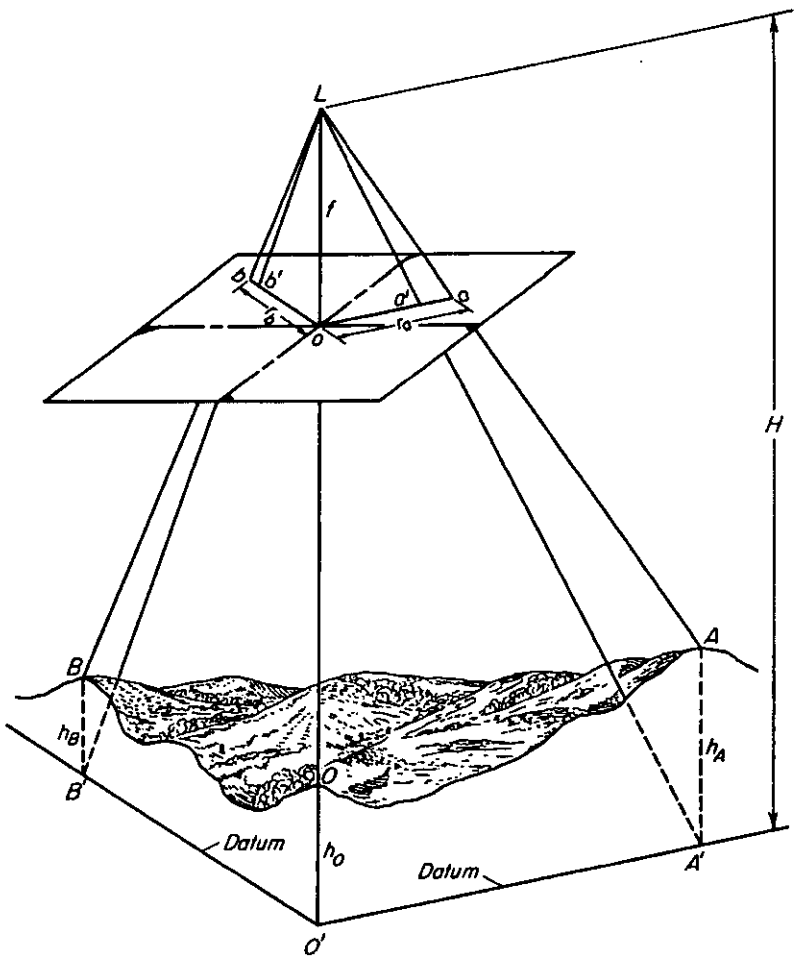
- Smaller scale (1:63,360) topographic quads in Alaska, and many do not satisfy National Map Accuracy Standards (NMAS)
- National Elevation Dataset (NED) has huge errors:
  - **Horizontal errors: several miles in some places (errors are 100 times larger than per NMAS)**
  - **Vertical errors: hundreds of meters too low**
- Few roads; rely on air transportation; even the state capitol, Juneau, is not accessible by road.
- Aeronautical charts, DEMs and eTOD data are critical to all aviators, including DOD and DHS statewide.
- Cannot accurately orthorectify images using the NED

Quotes from experienced pilot who lost many pilot friends in Alaska aviation accidents

- "On the track from Fairbanks to Kobuk, there is a mountain that is 3,000 feet higher than in the sectional aeronautical map … absolutely certain it is more than two miles displaced. It was very impressive, if flying IFR and trusting the map we would have flown right into it."
- "You'll find most mountains 300 feet too small."
- "Wolverine Mountain and Angutikada Peak are 'way off' in the sectionals."
- Appendix B in whitepaper provides many other examples.

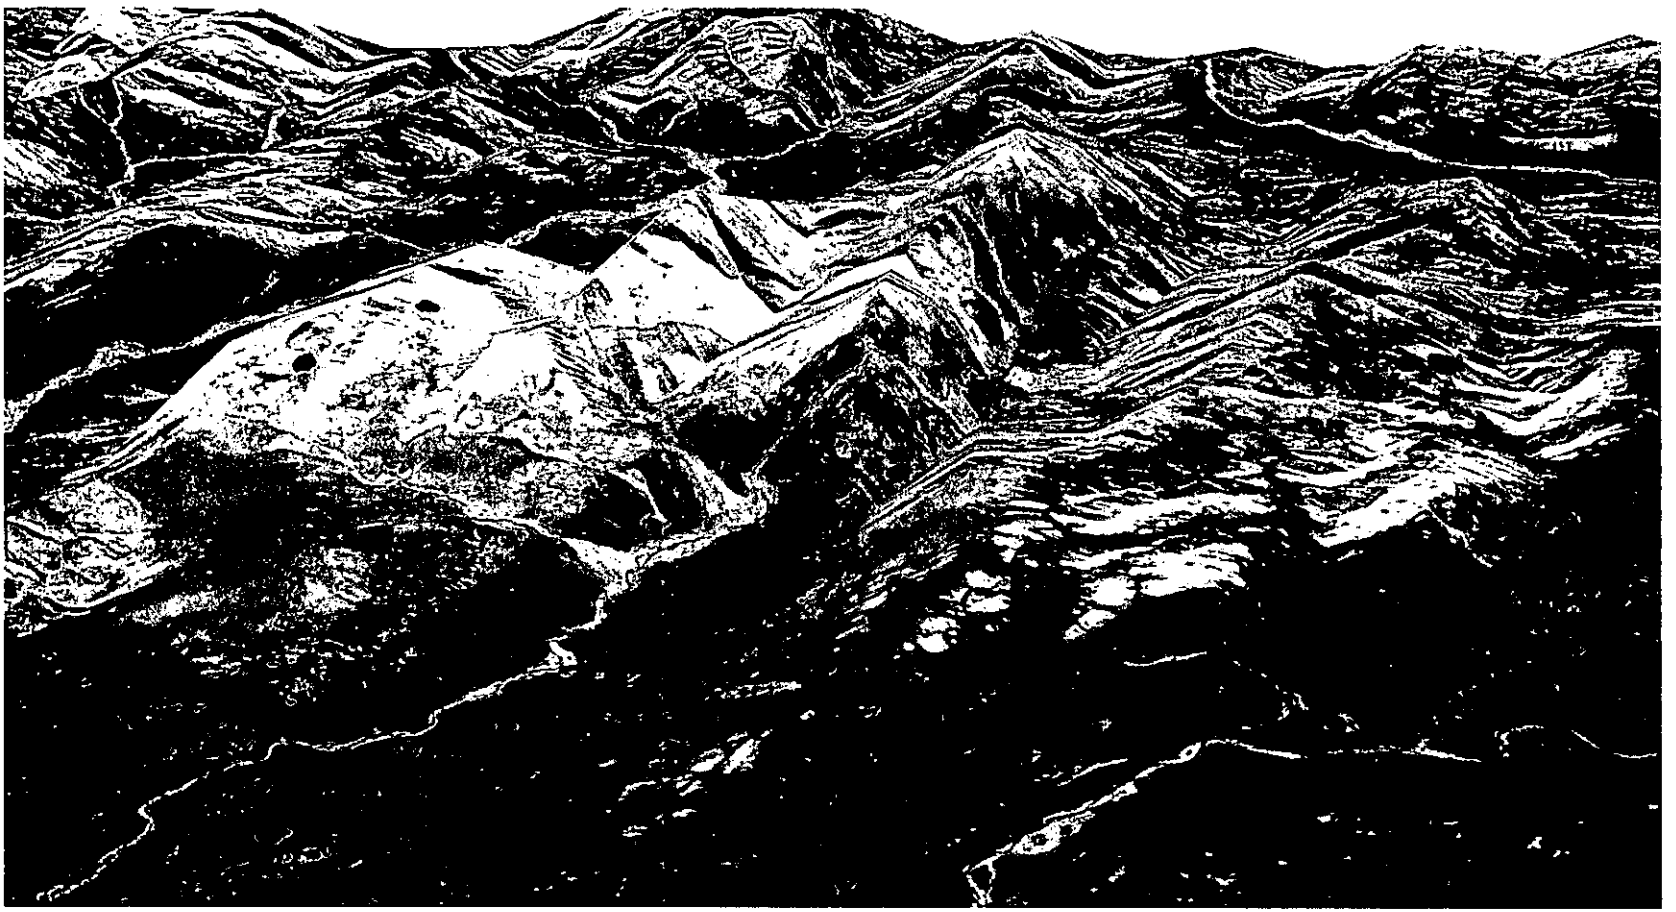


Alaska orthorectification problems



- Normally images can be "draped" over a DEM from the NED for orthorectification
- Won't work in Alaska when NED errors are:
  - 100's of meters vertical
  - 1,000's of meters horizontal
- Need to first correct Alaska NED …

… to avoid this kind of problem (Western Alaska)



Kevin Engle – UAF GINA: http://www.gina.alaska.edu

User Group 1: Aviation Safety

Interviewed

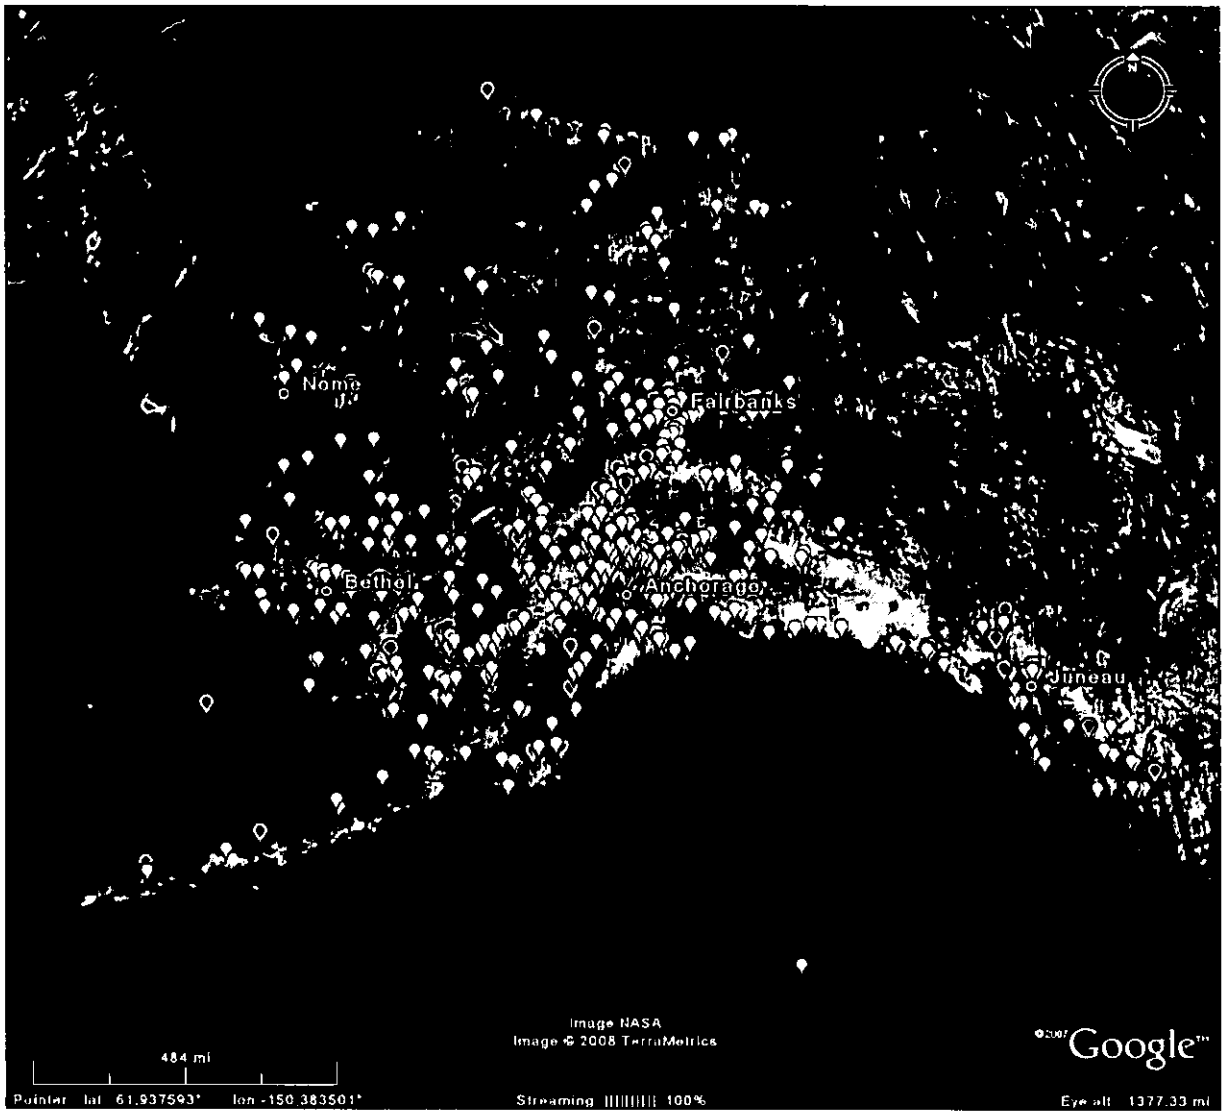
- Steve Colligan
- Lars Gleitsmann
- Nick Mastrodicasa
- George Sempeles (FAA)

Mid-accuracy (20-ft) equivalent contour accuracy is required for Alaska Area 2 IFR sites

Alaska Applications/Benefits

- FAA compliant Electronic Terrain and Obstacle Database (eTOD) required for navigation in Alaska during extensive periods of limited visibility where Instrument Flight Rules (IFR) are used.
- 20- ft contour accuracy DSMs and DTMs needed for Aviation Safety in Area 2 terminal control areas for airfields throughout Alaska
- 200-ft contour accuracy (or better) DSMs and DTMs statewide for Area 1 requirements
- Terrain avoidance; mountain passes, float plane needs are unique for Alaska

Fatal (red) & non-fatal accidents (2001-2005)



ICAO Area 1 and Area 2 standards

Because the Shuttle Radar Topography Mission (SRTM) did not collect elevation data north of 60° north latitude, and because of the major known horizontal and vertical errors in the NED, the U.S. currently does not satisfy the relatively simple Area 1 standard in Alaska (equivalent to 200-ft contour accuracy).[1] Neither is the U.S. prepared to satisfy the more-demanding Area 2 standard in Alaska (equivalent to 20-ft contour accuracy) which pertains to IFR site terminal control areas (circles with radius of 45 Km).

---

[1]During user interview on August 5, 2008, Mr. George P. Sempeles, FAA ATOR-R, Aeronautical Information Services, Cartographic Standards, stated that there is a serious lack of reliable elevation data in Alaska and that he agreed with the concerns raised by the Alaska aviation community. He stated that the area of Alaska north of 60° north latitude does not comply with ICAO Area 1 standards and that elevation data equivalent to airborne IFSAR statewide would be needed to bring Alaska into conformance with Area 2 standards, stating that it makes no sense to have high accuracy elevation data within those circles and low accuracy elevation data elsewhere.

ASTER GDEM may satisfy "Area 1" but not "Area 2" requirements.

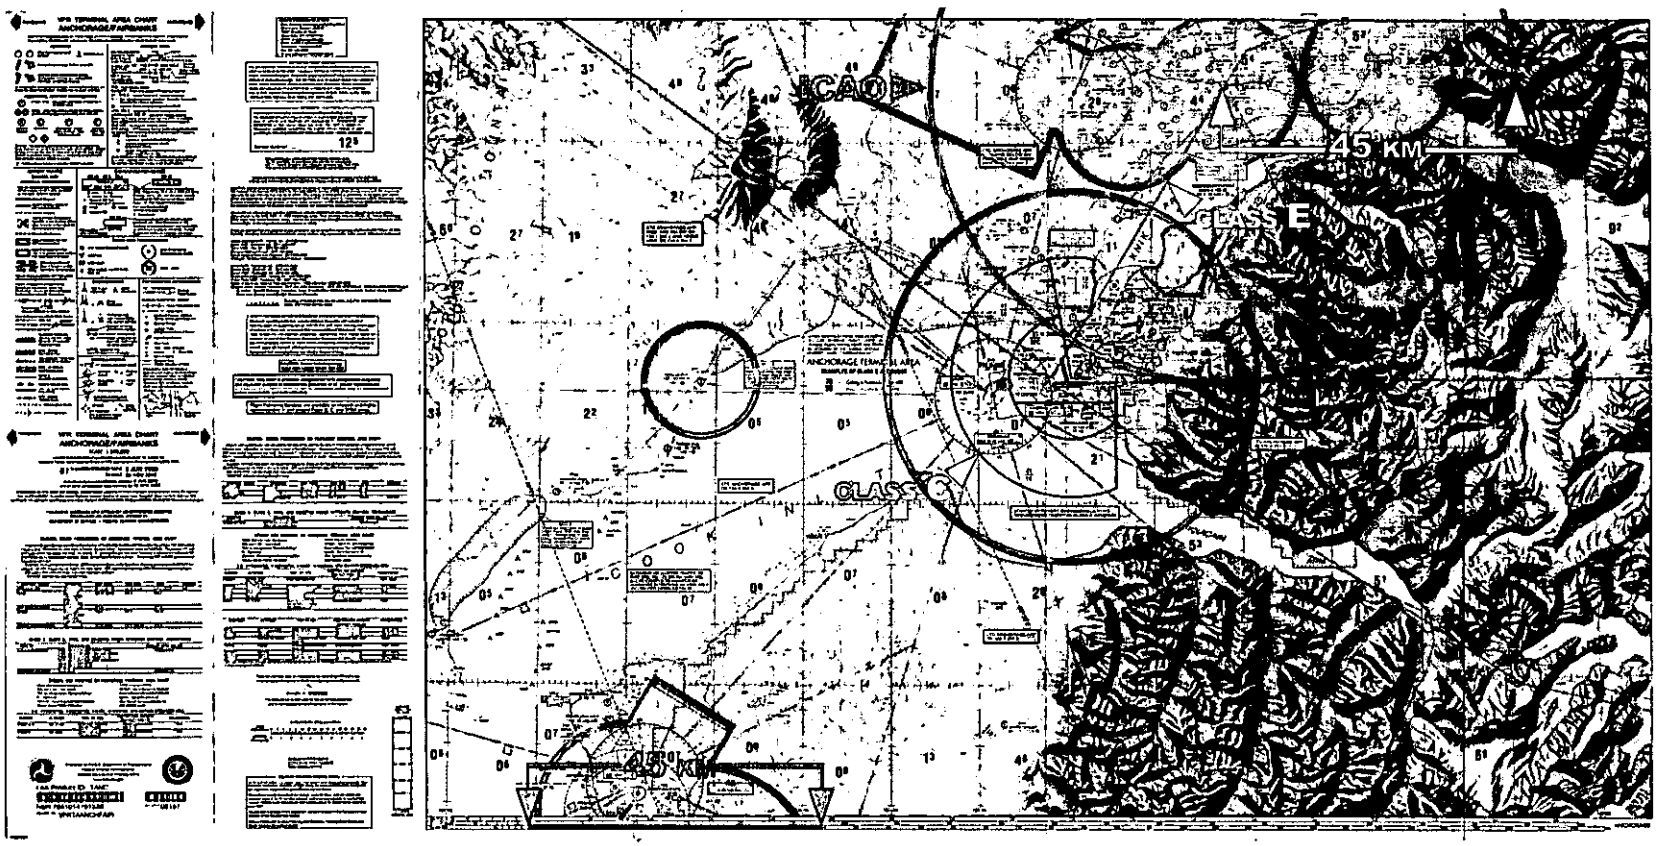
Alaska satisfies neither Area 1 nor Area 2

To satisfy identified user requirements for eTOD data, while taking into account cost-effectiveness, acquisition methods and data availability, the data are to be provided according to four basic coverage areas:

- Area 1 has a coverage over the whole territory of a state or country, including aerodromes/heliports.
- Area 2 covers the established terminal control areas, not exceeding a 45 km radius from the aerodrome reference point (ARP), to coincide with the existing specification for the provision of topographical information on the Aerodrome Obstacle Chart.
- Area 3 covers the area which is within the specified distances from the edges of a defined aerodrome or heliport surface movement area.
- Area 4 is restricted for use only for those runways where precision approach Category II or III operations have been established.

ICAO Doc 9881 provides the minimum user requirements applicable to the origination and publication of terrain data from creation through the entire life cycle of the data. It provides a minimum list of attributes associated with the terrain data and a description of associated errors that may need to be addressed. Any data processing must be accomplished in accordance with known and established quality processes and procedures.

VFR Terminal Area Chart showing red circle within which DEM w/20-ft contour accuracy would be required when landing under IFR conditions at the Wasilla Airport



What is the eTOD?

The Electronic Terrain and Obstacle Database (eTOD) is an internationally agreed-on standard to provide a accurate terrain database for safe flying and navigation under Instrument Meteorological Conditions (IMC) when pilots cannot see the terrain at all due to night and clouds or other weather such as heavy rain and snowfall.

When Visual Flight Rules (VFR) cannot be safely followed, and especially during emergency air evacuations at remote villages, aviators then operate under Instrument Flight Rules (IFR) designed to keep aircraft from unintentionally flying into obstacles due to navigation errors.

The need for elevation data to create a reliable and compliant FAA eTOD for navigation in Alaska, during periods of limited visibility, has never been greater. IMC flying conditions have to be coped with in Alaska on a regular basis for airfields throughout the state, even for airfields that are not part of the FAA's 148 IFR sites. Accurate DEMs are vital for flight planning, terrain avoidance, transiting through mountain passes, and landing of float planes on rivers and other water bodies. DEMs are also used for pilot training and simulators.

Goal: To minimize Controlled Flight Into Terrain (CFIT), a serious problem in Alaska.

Terrain data for eTOD

Note: Obstacles require "boots on the ground" surveys

Guidelines for Electronic Terrain, Obstacle and Aerodrome Mapping Information (Doc 9881)

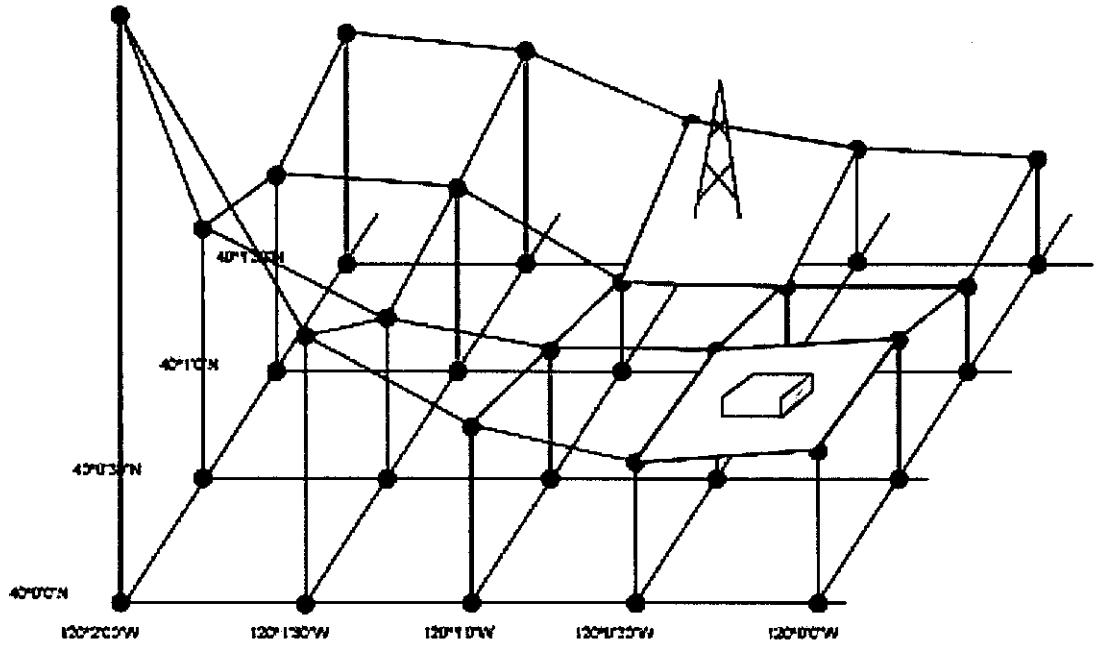


Table 2. ICAO DEM Requirements

ICAO	Area 1 Standards	Area 2 Standards
Post Spacing	3-arc-seconds (≈90 meters)	1-arc-second (≈30 meters)
Vertical Accuracy (LE90)	30 meters	3 meters
Equivalent Contour Interval	60 meters (200 ft)	6 meters (20 ft)
Vertical Resolution	1 meter	0.1 meter
Horizontal Accuracy (CE90)	50 meters	5 meters
Confidence Level	90%	90%
Compliance Date	November 20, 2008	November 20, 2010

In addition to SRTM (south of 60° north latitude) entire world may satisfy this Area 1 requirement when ASTER GDEM data is available

But what about Area 2 requirements in 2010?

ICAO Area 2 vs. DTED Level 2

- I asked George Sempeles of FAA to explain ICAO Area 2 requirements — compared with DTED Level 2 that NGA provides for airfields worldwide

Response from George Sempeles, FAA

- The Standard & Recommended Practices (SARPS) recorded in the Annexes to the ICAO convention are designed to be minimum civil aviation safety standards the world *should* adhere to. *Should* means the Annexes are not binding on any signatory State (country), and States have the option to file SARP differences with ICAO and advertise those differences in the States' Aeronautical Information Publication (AIP).

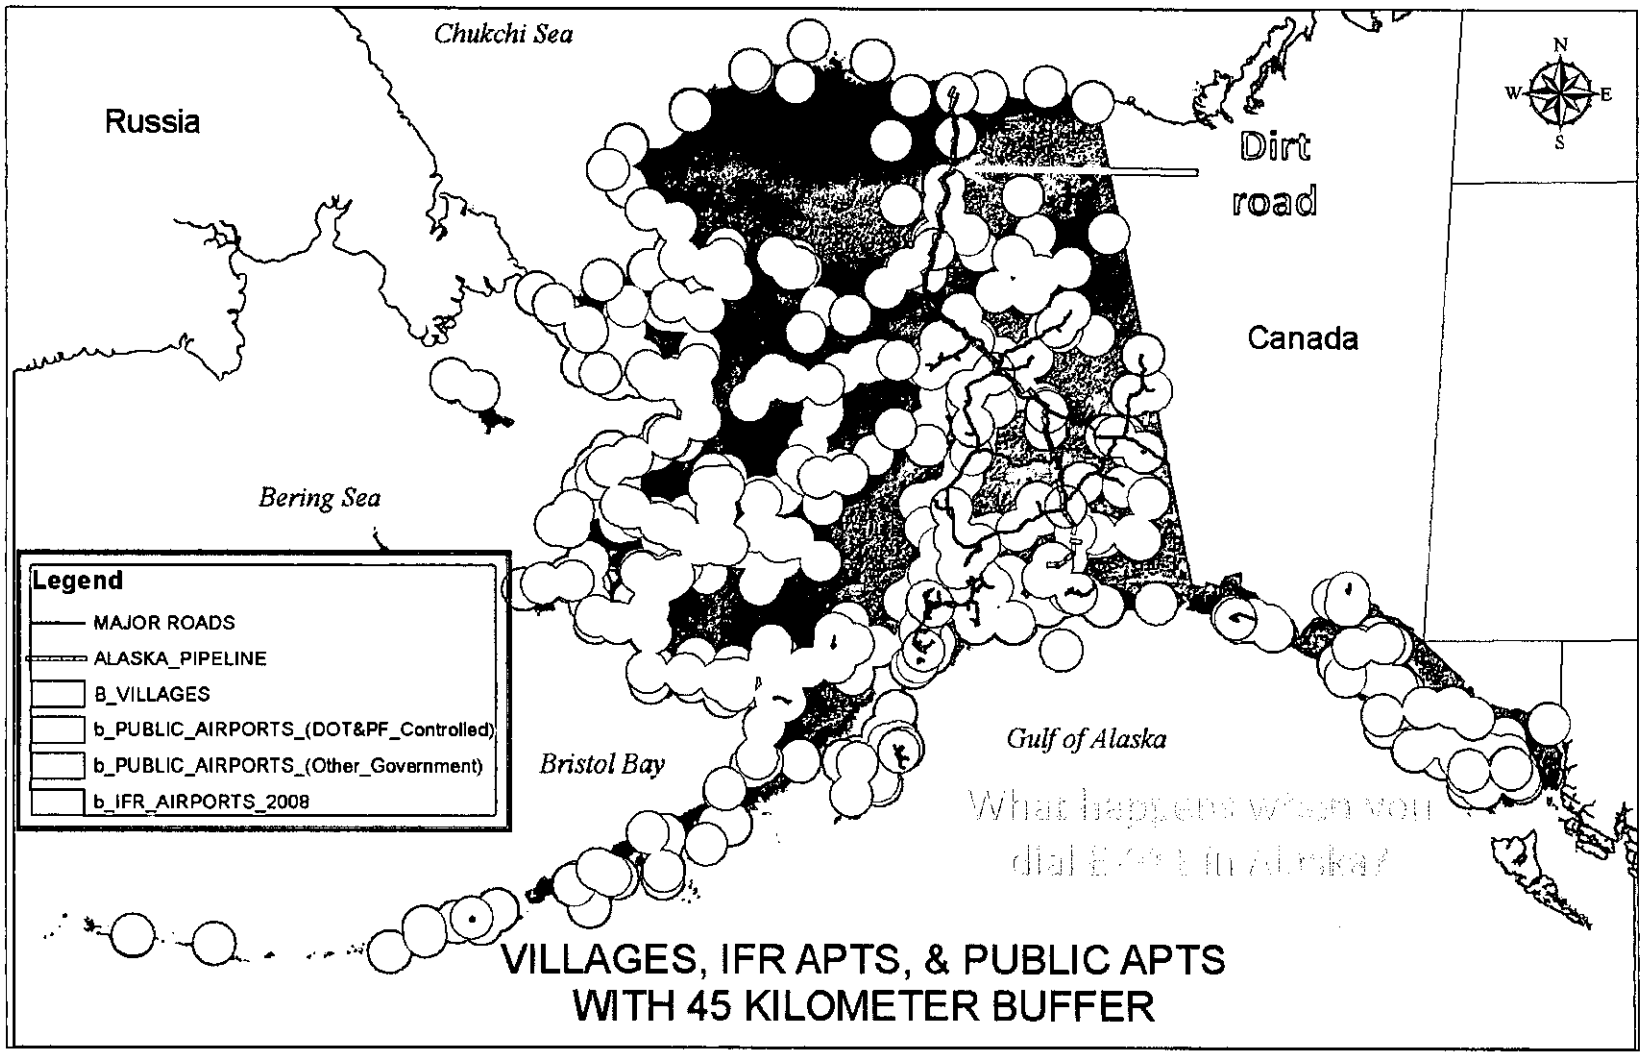
FAA comments (continued)

- (Q) Why are the Area 2 terrain accuracy requirements so accurate compared to DTED level 2?
- (A) The answer lies with the intention of Area 2. Area 2 is defined as the Terminal Control Area (TCA) of an aerodrome ... where aircraft are rapidly approaching the surface of the earth and man made obstacles, requiring greater detail of both features in order to develop Instrument Approach Procedures (IAP). Greater detail in the TCA is also required to develop missed approach, One Engine Inoperative (OEI) contingency planning, Standard Instrument Departure (SID), and Standard Terminal Arrival (STAR) procedures. According to FAA airport obstruction survey specifications, data contained in DTED level 2 would be considered not accurate enough to develop US civil procedures.

FAA comments (continued)

- In the lower 48 States, the majority of the US low altitude airspace is legally terminal airspace. So, to satisfy the ICAO SARPS, all of CONUS should be surveyed to at least Area 2 accuracies.
- As of today, the ICAO SARPs are written to include Area 2 requirements at aerodromes with IFR operations. Outside those areas, Area 1 data is required which represents the minimum requirements collectively. I tried that logic in the lower 48 and found it's more expensive to survey the IFR airports individually verses surveying the entire continental US. Judging by the distribution of IFR aerodromes in Alaska, I believe the same holds true in Alaska. I would ask InterMap and find out the price for surveying 148 widely dispersed 45 kilometer circles verses the entire state. I think you'll find it less expensive to collect it all.

148 IFR Airfields plus emergency sites



Vertical Accuracy Requirements

DEM User Groups	High-accuracy 10' and better contour accuracy (Airborne LiDAR)	Mid-accuracy 20' to 30' contour accuracy (Airborne IFSAR)	Low-accuracy 40' and worse contour accuracy (Satellite Sensors)
Alaska Aviation		20' contour accuracy ICAO Area 2 standard	200' contour accuracy ICAO Area 1 standard
Alaska DCCED	2' contour accuracy		
Alaska DGGS	2' & 10' contour accuracy		50' & 100' contour accuracy
Alaska DNR			40' contour accuracy
Alaska DOT	4' & 10' contour accuracy		
Alaska University Users	2' & 10' contour accuracy	30' contour accuracy	50' contour accuracy
BLM		20' contour accuracy	
DOD		20' contour accuracy	
NGA			50' contour accuracy
NOAA[8]	2' contour accuracy	20' contour accuracy	40' contour accuracy
NPS			40' contour accuracy
NRCS			40' contour accuracy
USFS		20' contour accuracy	
USGS	10' contour accuracy ("ideal")	20' contour accuracy ("preferred")	40' contour accuracy ("acceptable")

NRCS & USFS (Alaska) DEM Uses

- **Natural Resources Conservation Service (NRCS)**: Ted Cox. DEMs are used for orthorectification of digital imagery and for analyses of slope and aspect for the following applications: soil surveys, landscape modeling of geomorphic land forms, natural resources inventories, and engineering applications such as emergency watershed analyses. NRCS requirements can be satisfied with elevation data equivalent to 40-foot contours. NRCS Soil Survey Areas and Areas of primary interest within Roaded Corridors would be very useful to have DTM with a 5-10 meter posting. Remainder of State – a 20 meter DSM suitable for ortho-rectification to NMAS 24k.
- **U. S. Forest Service (USFS)**: Mark Riley, Jim Schramek, Joe Calderwood. DEMs are used for orthorectification of digital imagery, for hydrology, and for diverse forestry analyses to include slope and aspect, study of forest health (e.g., causes of yellow cedar decline), for determination of tree heights (DSM elevations minus DTM elevations), biomass and wildfire modeling. USFS requirements for DSMs and DTMs can be satisfied with elevation data from airborne IFSAR, i.e., equivalent to 20-foot contours.

Vertical Accuracy of Airborne IFSAR Options

Competing Airborne IFSAR Systems	Slope: 0° to 10° (Accuracy$_z$ at 95% confidence level)	Slope: 10° to 20° (Accuracy$_z$ at 95% confidence level)	Slope: 20° to 30° (Accuracy$_z$ at 95% confidence level)
Intermap's STAR-3/4/5/6			
Type III DSM	6 m ≈33-ft contour accuracy	9 m ≈50-ft contour accuracy	12 m ≈66-ft contour accuracy
Type II DSM	1.8 m ≈10-ft contour accuracy	3 m ≈17-ft contour accuracy	4 m ≈22-ft contour accuracy
Type II DTM (untested, assumed equal to DSM)	1.8 m ≈10-ft contour accuracy	3 m ≈17-ft contour accuracy	4 m ≈22-ft contour accuracy
	Flat Terrain Yahoo County, MS	**Moderate Terrain Southern California**	**Rolling Terrain Southeast Asia**
Fugro EarthData's GeoSAR X-band DSM	1.8 m ≈10-ft contour accuracy	1.86 m ≈10-ft contour accuracy	8.78 m ≈49-ft contour accuracy
P-band DTM	≈10-ft contour accuracy	≈10-ft contour accuracy	≈49-ft contour accuracy
	P-band foliage penetration (10-20m typical) is slope and foliage dependent		

Vertical Accuracy of Satellite Options

Competing Satellite Sensor Systems with contour interval (CI) accuracy	Slope: 0° to 20° Accuracy$_z$ at 95% confidence level and equivalent CI	Slope: 20° to 40° Accuracy$_z$ at 95% confidence level and equivalent CI	Slope: >40° Accuracy$_z$ at 95% confidence level and equivalent CI
ASTER Global DEM	20m (110-ft CI)	Unavailable	Unavailable
GeoEye's IKONOS, 1-arc-sec w/o GCPs **0.2-arc-sec w/1 GCP per stereo model**	24 m (132-ft CI) 16.7 m (92-ft CI)	Unavailable	Unavailable
Digital Globe's WorldView-1, w/o GCPs	8 m (44 ft CI)	Unavailable	Unavailable
Spot Image Corp's SPOT-5, w/o GCPs	11.9 m (66-ft CI)	21.4 m (118-ft CI)	35.7 m (197-ft CI)
ASRC's Cartosat-1 w/9 GCPs/scene	6-9 m (33-50 ft CI)	10-20 m (55-110 ft CI)	Unavailable
MDA's Radarsat-2, w/minimal GCPs (see mode explanations below)	**Slope: 0° to 20°**	**Slope: 20° to 40°**	**Slope: >40°**
— Multi-Look Fine (MLF) beam mode	0-10°: 8m (44-ft CI) 11-20°: 12m (66-ft CI)	21-30°: 15m (83-ft CI) 31-40°:17m (94-ft CI)	20m (110-ft CI)
— Ultra Fine (UF) beam mode	0-10°: 6m (33-ft CI) 11-20°: 8m (44-ft CI)	21-30°: 11m (61-ft CI) 31-40°: 12m (66-ft CI)	15m (83-ft CI)

ASTER GDEM now being evaluated but won't satisfy 20-ft CI need

Strengths/Weaknesses of Optical Imagery

- Neither day/night nor all-weather
- Photogrammetry produces both orthophotos and DEMs
  - DSMs produced by automated image correlation
  - DTMs produced by manual compilation, more expensive
- Difficult to accurately maps glaciers and mountains with perpetual snow cover.
- Airborne imagery: With good base/height ratio, DTM vertical accuracy comparable to 1-ft to 20-ft contours, but expensive
- Satellite imagery: Most options are DSMs only and not DTMs. Vertical accuracy comparable to 50-ft contours (very expensive, with lots of GCPs) to 200-ft contours (less expensive, w/o GCPs).

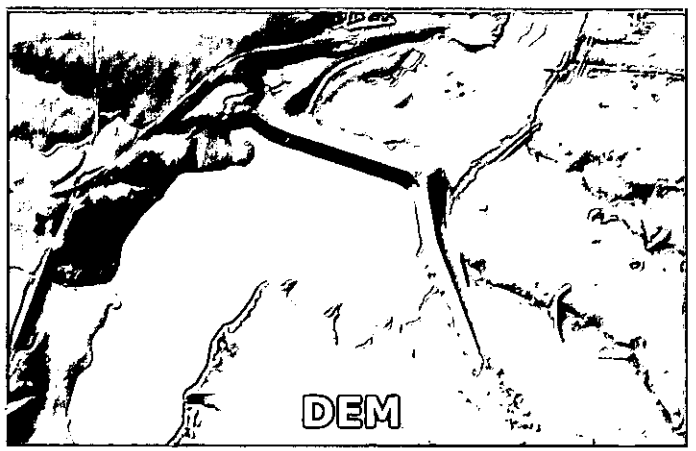
Strengths/Weaknesses of LiDAR

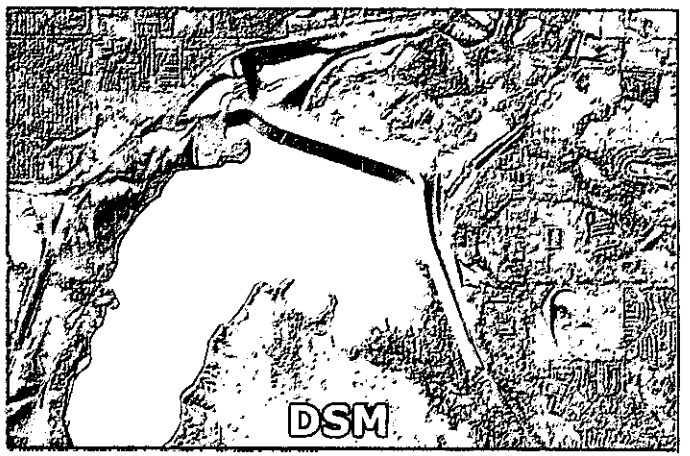
- Day/night, but not all-weather; must be cloud free
- Single laser pulses penetrate through or between trees
- Most accurate option for DTMs in dense forests and vegetation
- Most accurate elevation differences between DSM and DTM for forestry applications.
- Ideal for 1-ft to 2-ft contour accuracy requirements
- Can accurately map mountains with perpetual snow cover; tested in Greenland
- May be unaffordable statewide; but Government (NASA) may fly Alaska's major shorelines to satisfy topo/bathy needs.

Strengths/Weaknesses of IFSAR

- Both day/night and all-weather
- Flies at 35,000 to 40,000 feet AGL, perfect for GRAV-D
- Ortho-rectified radar images (ORI), plus DSMs and DTM, ideal for 10-ft to 20-ft contour accuracy
- Intermap produces DTMs by editing of DSM; Fugro EarthData produces DTMs from P-band IFSAR
- Intermap may have licensing issues; no Fugro issues
- Significantly less expensive than either airborne LiDAR or airborne imagery solutions
- Radarsat-2 has the least expensive option, but the DSM combined accuracy is equivalent to 83-ft contours
- Maps glaciers and mountains with perpetual snow cover

IFSAR DTM, DSM, ORI





- Assume Alaska orthos will be color (RGB) or 4-band
- Could register satellite imagery to ORI to improve positional accuracy with minimal GCPs

Airborne IFSAR Considerations

In addition to satisfying all statewide requirements, because their aircraft fly at altitudes between 35,000 and 40,000 feet, IFSAR aircraft could potentially be fitted to accommodate the National Geodetic Survey's GRAV-D sensor and operator in order to simultaneously collect gravity data for improving the geoid height model so desperately needed in Alaska.

- Intermap Technologies appears to have a competitive advantage by having more flexibility with a larger fleet of aircraft, and it has proven experience for large, successful projects in production of NEXTMap USA, NEXTMap Britain, and NEXTMap Europe.
- Fugro EarthData appears to have a competitive advantage because of GeoSAR's X-band and P-band sensors that may be superior for accurate mapping of both the DSM and DTM in forested regions, and images the terrain with about 4x redundancy from multiple look directions to minimize shadow & layover.

Airborne IFSAR Conclusion

An IFSAR hybrid IFSAR solution should be considered in order to benefit from the advantages of both Intermap and Fugro EarthData. Discriminating factors should include:

- Comparative costs, including licensing
- Technical advantages of X-band and P-band for different areas
- Plans to minimize and mitigate artifacts from layover/shadow
- Past performance (satisfied clients?)
- Whether or not the IFSAR aircraft could simultaneously accommodate a NGS gravimeter and operator in order to also support the GRAV-D program by collecting gravity data along the same flight lines, etc. as the IFSAR data collection.

Who Owns/Manages Alaska?

Russian traders arrived in Alaska in the mid-1700's and established small, scattered trading posts and settlements. Alaska Natives (the Eskimo, Indian, and Aleut peoples) continued as the primary landowners during that period of Russian occupation. On October 18, 1867, Russia sold Alaska to the United States government. As a result, the federal government owned the Alaska Territory, approximately 373 million acres -about one-fifth the size of the rest of the U.S.

State of Alaska - 89.8 million acres

Under the terms of the Alaska Statehood Act of 1958, the federal government granted the new state 28% ownership of its total area. Approximately 103,350,000 acres were to be selected under three types of grants:

1) Community - 400,000 acres

2) National Forest Community - 400,000 acres

3) General - 102,500,000 acres.

Additional land/water grants, for schools, university and mental health trust lands, totaling 1.7 million acres were confirmed with statehood.

All grants combined gave the State of Alaska approximately 105 million acres. To date, 89.8 million acres has been granted, with the balance expected to be granted by 2008.

ANCSA Native Corporation (Private) 39.3 million acres

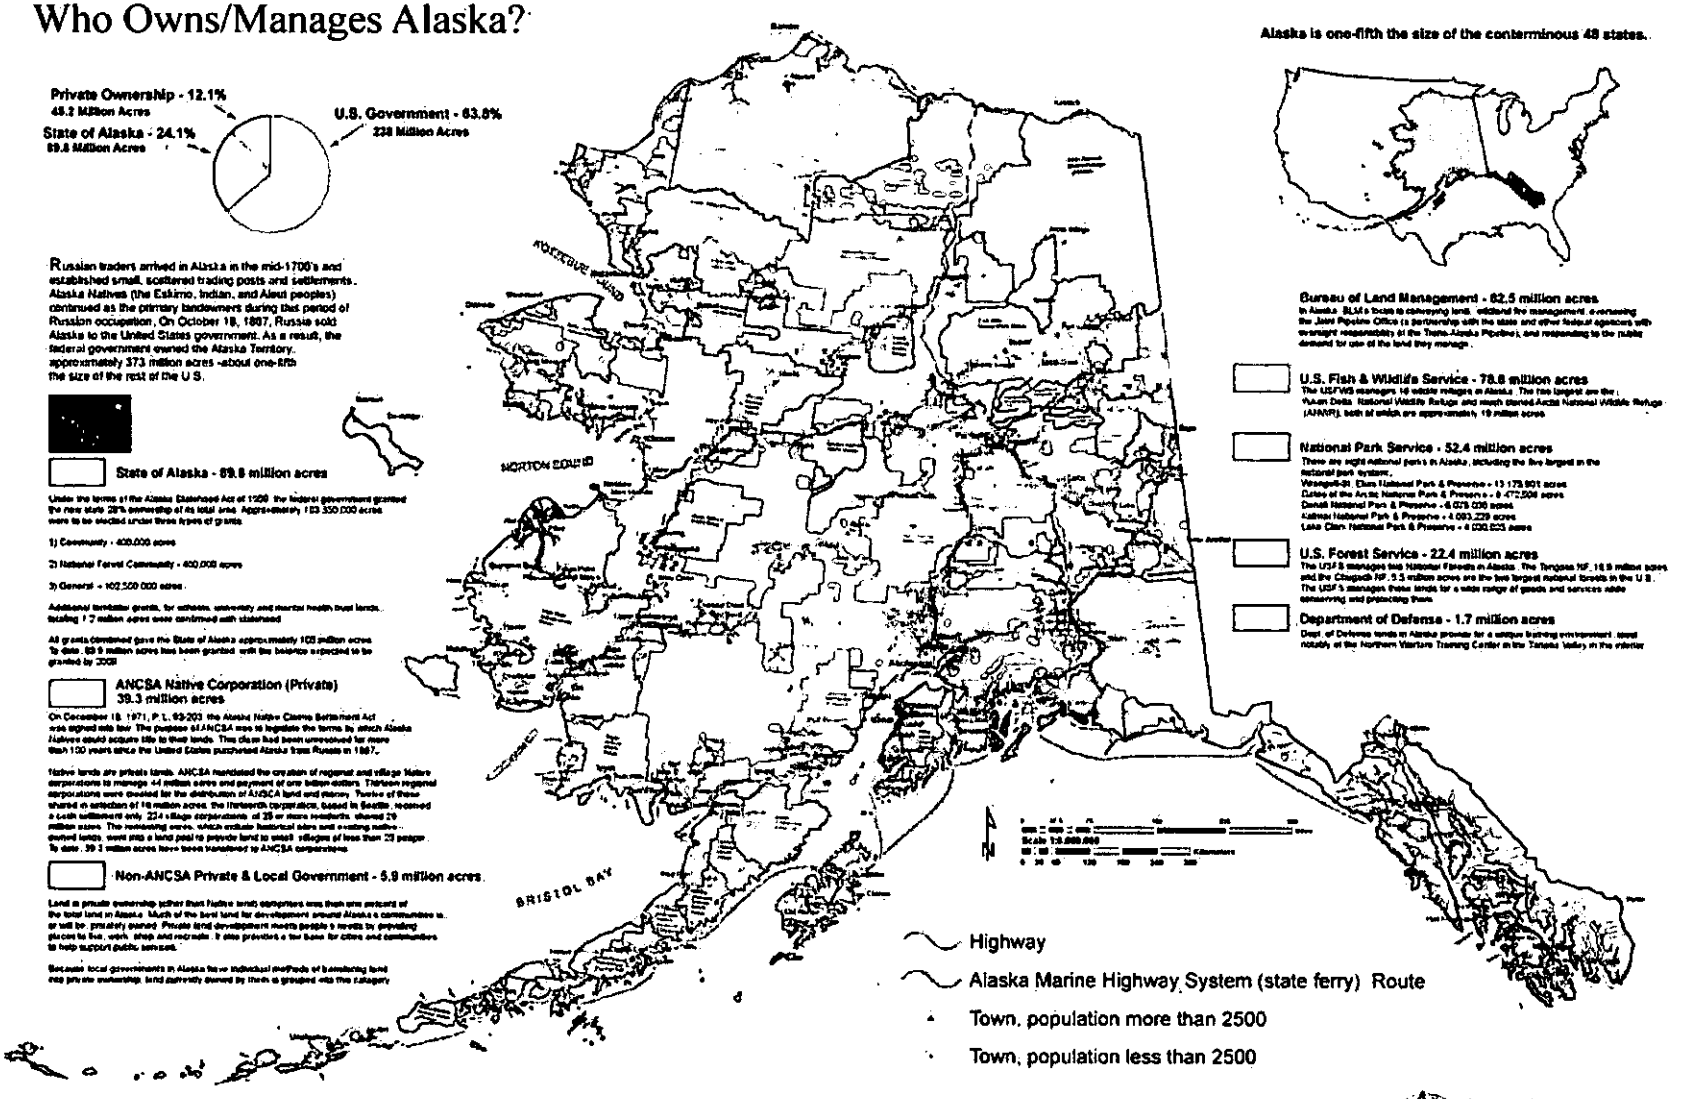
On December 18, 1971, P.L. 92-203, the Alaska Native Claims Settlement Act was signed into law. The purpose of ANCSA was to legislate the terms by which Alaska Natives would acquire title to their lands. This claim had been unresolved for more than 100 years since the United States purchased Alaska from Russia in 1867.

Native lands are private lands. ANCSA mandated the creation of regional and village Native corporations to manage 44 million acres and payment of one billion dollars. Thirteen regional corporations were created for the distribution of ANCSA land and money. Twelve of these shared in selection of 16 million acres; the thirteenth corporation, based in Seattle, received a cash settlement only. 224 village corporations, of 25 or more residents, shared 28 million acres. The remaining acres, which include historical sites and existing native-owned lands, went into a land pool to provide land to small villages of less than 25 people. To date, 39.3 million acres have been transferred to ANCSA corporations.

Non-ANCSA Private & Local Government - 5.9 million acres.

Land in private ownership (other than Native lands) comprises less than one percent of the total land in Alaska. Much of the best land for development around Alaska's communities is, or will be, privately owned. Private land development meets people's needs by providing places to live, work, shop and recreate. It also provides a tax base for cities and communities to help support public services.

Because local governments in Alaska have individual methods of transferring land into private ownership, land currently owned by them is grouped into this category.



Alaska is one-fifth the size of the conterminous 48 states.

Bureau of Land Management - 82.5 million acres

In Alaska, BLM's focus is conveying lands, wildland fire management, overseeing the Joint Pipeline Office (in partnership with the state and other federal agencies with oversight responsibility of the Trans-Alaska Pipeline), and responding to the public demand for use of the land they manage.

U.S. Fish & Wildlife Service - 76.6 million acres

The USFWS manages 16 wildlife refuges in Alaska. The two largest are the Yukon Delta National Wildlife Refuge and mesh-shaped Arctic National Wildlife Refuge (ANWR), both of which are approximately 19 million acres.

National Park Service - 52.4 million acres

There are eight national parks in Alaska, including the five largest in the national park system:

Wrangell-St. Elias National Park & Preserve - 13,175,801 acres
Gates of the Arctic National Park & Preserve - 8,472,506 acres
Denali National Park & Preserve - 6,075,028 acres
Katmai National Park & Preserve - 4,093,229 acres
Lake Clark National Park & Preserve - 4,030,033 acres

U.S. Forest Service - 22.4 million acres

The USFS manages two National Forests in Alaska. The Tongass NF, 16.9 million acres, and the Chugach NF, 5.5 million acres are the two largest national forests in the U.S. The USFS manages these lands for a wide range of goods and services while conserving and protecting them.

Department of Defense - 1.7 million acres

Dept. of Defense lands in Alaska provide for a unique training environment, used notably at the Northern Warfare Training Center in the Tanana Valley in the interior.

Maps produced by the
Alaska Dept of Natural Resources
Division of Forestry

Alaska Upland Land Ownership/Management (Statewide total ≈ 1.8 million Km^2)

Whose problem is it?

All of us; we need funding partners

	Million acres	Km^2	% of total
State of Alaska	89.8	363,408	24.1
BLM	82.5	333,866	22.1
USF&WS	78.8	318,892	21.1
NPS	52.4	212,055	14.1
ANCSA	39.3	159,041	10.5
USFS	22.4	90,650	6.0
Other private	5.9	23,876	1.6
DoD	1.7	6,880	0.5
TOTALS	**372.8**	**1,508,668**	**100.0**

Met with NDOP and NDEP in August

An additional 65 million acres of Tide and Submerged Lands are mapped for offshore drilling activities and sea ice monitoring.

Consensus points from NDOP & NDEP

We have no time to waste

- ICAO Area 1 Requirements: 11/20/2008
- ICAO Area 2 Requirements: 11/20/2010
- Other statewide user requirements: Immediate
- Alaska's mapping needs have been neglected for 50 years; unmet needs in Alaska are dire, especially aviation safety

We must remain true to Alaska's requirements

- 20' contour accuracy or better
- Both DSM and DTM, especially mountain peaks, ridgelines and hydrology
- Technology that overcomes adverse weather conditions
- Technology that maps snow-capped mountains & glaciers
- Technology that is cost-effective

We must find timely, cost-effective solution

- Only airborne mapping options can satisfy AK's technical and accuracy requirements
- Airborne IFSAR costs are significantly less than airborne LiDAR or photogrammetry
- Multiple contracting options are available to obtain the most cost-effective solution for timely delivery of quality products
- Need both federal and state funding

Other points not time-critical

We have time to reach consensus elsewhere	What other requirements should be satisfied? How? By whom?	We must find cost-effective solution
• Data acquisition and post-processing can proceed if we choose ellipsoid heights and Alaska Albers, for example, knowing that NED will be provided as geographic coordinates in ESRI grid format • Other issues can be resolved while data are being acquired and processed	• Will GINA serve multiple datasets to the public? • Will GINA provide orthometric heights that change with new geoid models? • Will GINA provide GeoTiff and/or other file formats • Who will perform hydro-enforcement of DTM? How? Who pays? • Who will filter DTM so roads are smooth on orthophotos? How? Who pays?	• Answers to these questions may depend on available funds and contract costs for data acquisition & processing • If available funds are inadequate to pay for everything as part of major contract, get data acquired and DSM/DTM delivered ASAP; then determine if those responsible for land management pay for hydro-enforcement, etc. if needed for their areas of responsibility.

2066

USGS Task Order:
Alaska DEM Initiative – Phase II

Alaska DEM Funding & Implementation Plan

- Executive Summary
- Agency Executive Leadership Communications, incl. DOI (USGS, BLM, NPS, F&WS, BIA); DOD (NGA); DHS; NGS; FAA; USDA (USFS, NRCS, FSA); State of Alaska
- Initiative Plan, incl. FGDC coordination and Agency Executive Leadership coordination
- Brief 2/27/09 at Alaska Mapping Conference

Need Funding Partners to solve a common need

Department of Interior (DOI)

- On January 27, 2009, Dave Maune and Phil Thiel met with and briefed Karen Siderelis, Associate Director for Geospatial Information and Chief Information Officer for DOI, and Kenneth Shaffer, Deputy Staff Director of the Federal Geographic Data Committee (FGDC), to discuss DOI funding support for the Alaska DEM.
- Ken arranged for Dave to brief the FGDC Coordinating Committee on February 3, 2009.
- Karen arranged for Dave to brief the national geospatial coordinators from all the DOI Bureaus plus other key personnel on February 19, 2009.

FGDC Coordination Committee Attendees

Ivan DeLoatch - FGDC	Don Buhler - BLM
Ken Shaffer - FGDC	Jeff Booth - DHS
John Mahoney - FGDC	David LaBranche - DOD
Lew Sanford - FGDC	David Morehouse - DOE
Milo Robinson - FGDC	Rani Balasubramanyam - DOJ
Pat Phillips - FGDC	Wendy Blake Coleman - EPA
Vaishal Sheth - FGDC	Donald Draper Campbell - FCC
Wonkus Baek - FGDC	Doug Vandegraft - FWS
Bonnie Gallahan - FGDC	Bill Wilen - FWS
Gita Urban Mathieux - FGDC	Bill Burgess - NSGIC
Vicki Lukas - USGS	Rhett Rebold – OSD/DISDI
Carol Giffin - USGS	Trisha Christian - SBA
Charles Hickman - USGS	Randy Fusaro - USCB
Rob Dollison - USGS	Shirley Hall - USDA
Mike Lee – USGS/DHS	Dennis Crow - USDA
Catherine Nolan – Grant Thornton	Marissa Capriotti - USDA
Phil Thiel - Dewberry	Ralph Crawford - USFS

Don Campbell has thousands of tower sites in AK with coordinates for QA/QC

U.S. Geological Survey (USGS)

- On February 5, 2009, Dave Maune met with and briefed Kari Craun, Director, National Geospatial Technical Operations Center (NGTOC)
- On February 4, 2009, Kari Craun gave a briefing on The National Map to Dave Maune and other members of the National Geospatial Advisory Committee (NGAC).

The National Map FY08 Data Partnerships

	NGP Partnership and Mapping Contracts Funding	Partner Funding	Total Project Cost	Leveraging Ratio
Imagery	$1,596,902	$30,440,552	$32,037,454	20.1
Elevation	$2,239,364	$21,326,959	$23,566,322	10.3

2071

John Wesley Powell, 2nd Director of USGS

Testimony to Congress on December 5, 1884

"A Government cannot do any scientific work of more value to the people at large, than by causing the construction of proper topographic maps of the country"

This statement remains true today in Alaska where resource management and development are critical

2072

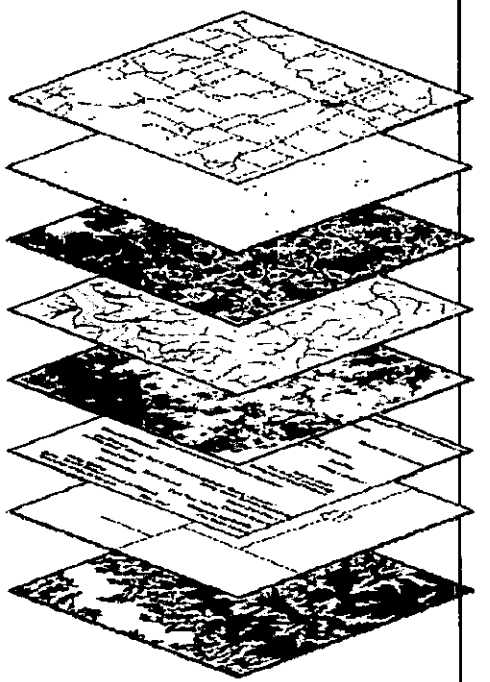
The National Map

The National Map is a collaborative effort to deliver topographic information for the nation

The goal of *The National Map* is to be the nation's source for trusted topographic data and maps online and in print

The National Map

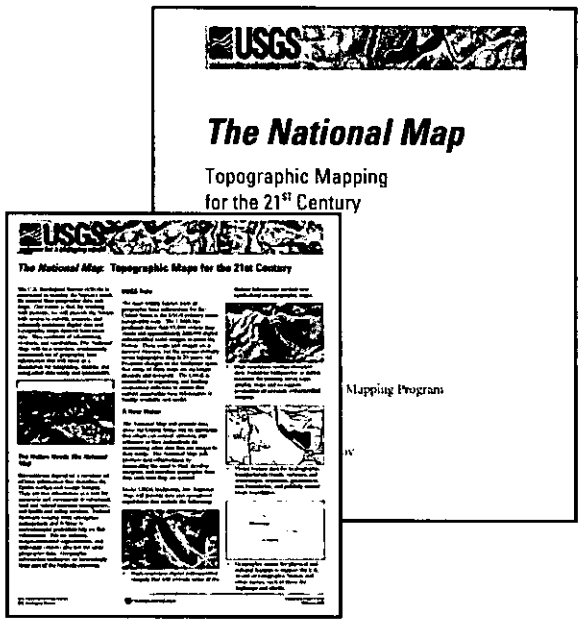
- *The National Map* contributes to the NSDI
- *The National Map* includes eight data layers: orthoimagery, elevation, hydrography, land cover, geographic names, transportation, structures, and boundaries
- Public domain data to support
  - USGS topographic maps at 1:24,000-scale
  - Products and services at multiple scales and resolutions
  - Analysis, modeling and other applications at multiple scales and resolutions
- *The National Map* is built on partnerships and standards

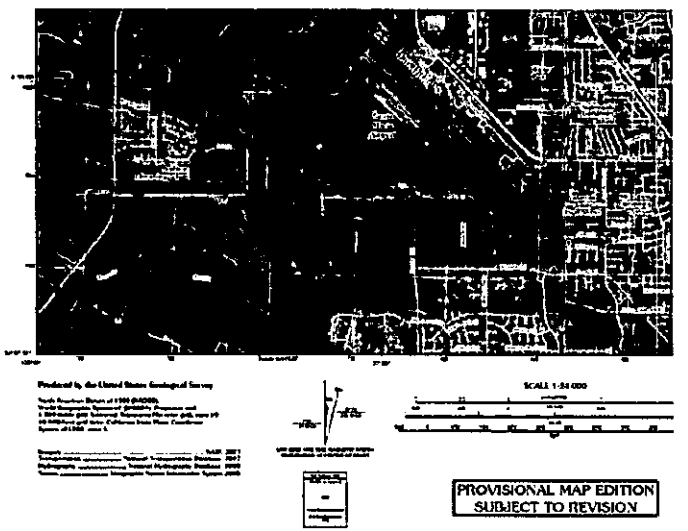


The National Map

The National Map

- Seamless, continuously maintained, nationally consistent base topographic data
- Developed and maintained through partnerships
- Available on-line
- Source for products and services
- e-Topo Image Map





Overall Strategy

- Create next-generation USGS topographic maps
- 3 year revision cycle following NAIP
- Source data from *The National Map* databases
  - National Transportation Dataset (from Census initially)
  - Names (GNIS, NHD)
  - Cartographic features (Grids, quad level metadata)
- Initial product will be basic e-Topo Image Map content
  - Image background
  - Roads
  - Names
  - 1:24,000-scale layout
- Map Product evolution
  - Data layers will be added as they become available and technical processes are in place
  - Elevation data (contours) and Hydrography highest priority

2076

Product Characteristics
(It's not your grandfather's topographic map)

- The product is a plottable digital image. It is neither a GIS dataset nor a traditional paper map, but a new kind of hybrid.
- The physical format is GeoPDF, an unpublished and proprietary format that can only be read by specific proprietary software.
- The PDF is layered and georeferenced, giving the dataset some limited GIS characteristics.

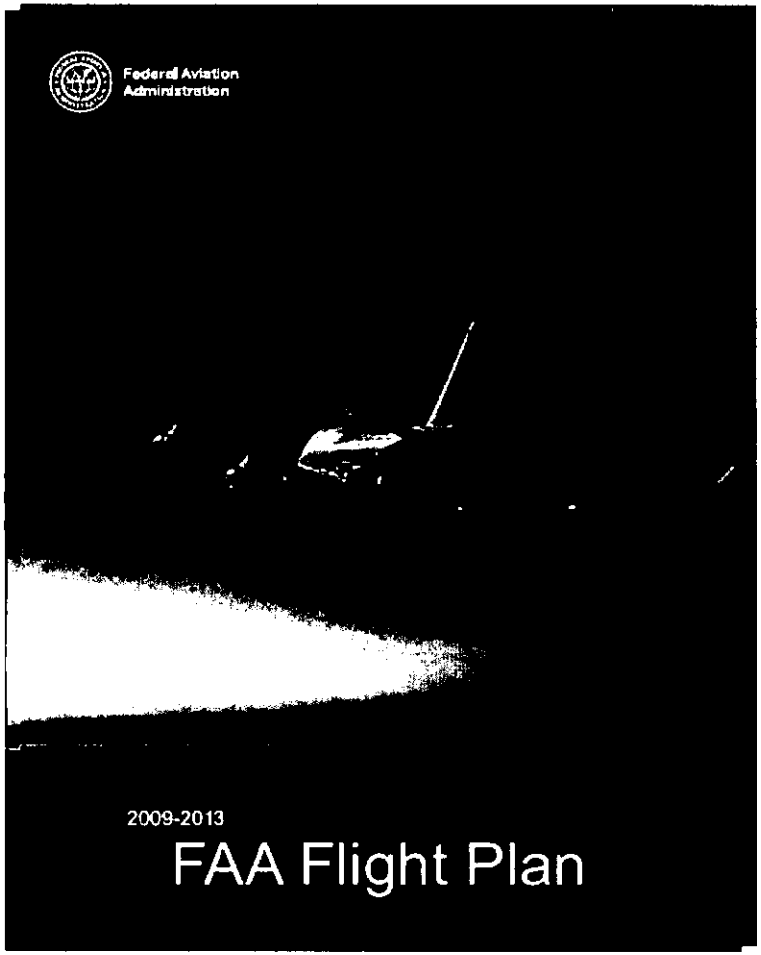
Federal Aviation Administration (FAA)

On February 11, 2009, Dave and Phil met with and briefed:

- Dick Powell, Manager, Aeronautical Information Services, FAA
- Mark Howard, Manager, Aeronautical Survey Program, NOAA
- George Sempeles, Aeronautical Information Management Quality Assurance, FAA
- Christopher Criswell, Cartographer, Aeronautical Information Services, FAA
- Adam Edmondson, Cartographer, NACO, FAA
- Nathaniel Hersh, Cartographer, NACO, FAA

FAA's Strategic Plan

Alaska is listed 8 times; no other state is listed



INCREASED SAFETY

Our goal is to achieve the lowest possible accident rate and constantly improve safety.

Our first commitment is to safety. The proof of our ability to maintain that focus is in the actual safety record itself. In fiscal years 2007 and 2008, there were no commercial passenger fatalities on commercial flights in the U.S. Knowing this, the issue facing FAA comes in the form of a simple question with an exceedingly complex answer: When a system is so safe, how do you know where to place your focus to keep it that way? With more passengers flying than ever, and fuel prices forcing airlines to look for ways to save money, the test has never been more daunting.

To address this challenge, we're moving away from the anecdotal approach to safety and instead using data-analysis to prevent accidents before they happen. Safety Management Systems (SMS) are being put in place that allow us to examine the data of what's actually happening in the system. With SMS, we examine that data to isolate the trends that very well could become the precursors to accidents themselves. Three of the agency's largest lines of business—Air Traffic, Aviation Safety and Airports—have these programs under way.

These efforts complement other areas of focus, such as the "Call to Action" we placed to industry regarding runway safety. We used the data that had been accumulated with our Safety Management System to isolate trends. With that information, we met with chief pilots, put new technology in place, and revamped airport signage to increase the levels of safety on the runway.

Even though commercial aviation draws most of the headlines, we remain diligent in our efforts to work with the pilots who form the backbone of General Aviation (GA). We work jointly with the Alaska aviation community through a number of organizations and safety programs such as: the Medallion Foundation, Alaska Air Carriers Association, Alaska Airman's Association, FAA Safety Team, and Circle of Safety. In addition to these training and education efforts, we're using new technology in Alaska, such as the satellite-based Capstone navigation and terrain awareness avionics. We're also installing 221 additional weather cameras throughout the state. These weather cameras prove that a picture that is indeed worth a thousand words and are a real-time depiction of what's happening throughout the state. The Alaskan pilot now has go/no go information that was previously unavailable.

In addition, we're using ADS-B to solidify the use of satellite surveillance in Alaska. The breadth of the geography there makes the use of radar virtually impossible. Satellites aren't encumbered by terrain. The situational awareness benefits provided by the improved surveillance, broadcast services, and improved avionics has proven to be a great success; preliminary data indicates a projected 47 percent drop in the fatal accident rate for aircraft equipped with ADS-B in Southwest Alaska.

As a result of that success, we are transferring the lessons learned in Alaska to the Gulf of Mexico, another location in which radar coverage is limited. We are increasing our outreach and training to general aviation pilots to increase their skills and awareness.

We're making similar advances to air traffic control safety. The establishment of "proximity events" last year was a recognition that our focus should be on the more serious operational errors and not on those that present little or no safety risk. Training programs and better information will help us meet our goal in FY 2009.

The section that follows identifies the measures and initiatives we have in place to improve safety. Because we always look toward continuous improvement, we have updated our safety measures and initiatives. For example, we've put in place a new metric to collect and share information from multiple programs, including the Aviation Safety Information Analysis and Sharing (ASIAS) program and the new Air Traffic Safety Action Program. We're spreading safety data as far and wide as we can. There can be no secrets in safety, and everyone including and especially the passenger, benefits with this approach.

We accelerated the expansion of the Air Transport Oversight System (ATOS) for the airlines. We're blending the oversight data ATOS is providing with our other data sources to enhance our ability to detect nationwide trends and provide a better perspective on the health and safety of the aviation system.

It is not a coincidence that we are in the safest period in the history of aviation. It took a lot of hard work and dedication from our employees, the aviation industry and external stakeholders to get us here. The system is the safest it has ever been, and we will continue to work to keep it that way.

Even though commercial aviation draws most of the headlines, we remain diligent in our efforts to work with the pilots who form the backbone of General Aviation (GA). The FAA continues to work jointly with the Alaska aviation community through a number of organizations and safety programs such as: the Medallion Foundation, Alaska Air Carriers Association, Alaska Airman's Association, FAA Safety Team, and Circle of Safety. In addition to these training and education efforts, we're using new technology in Alaska, such as the satellite-based Capstone navigation and terrain awareness avionics. We're also installing 221 additional weather cameras throughout the state. These weather cameras prove that a picture that is indeed worth a thousand words and are a real-time depiction of what's happening throughout the state. The Alaskan pilot now has go/no go information that was previously unavailable.

In addition, we're using ADS-B to solidify the use of satellite surveillance in Alaska. The breadth of the geography there makes the use of radar virtually impossible. Satellites aren't encumbered by terrain. The situational awareness benefits provided by the improved surveillance, broadcast services, and improved avionics has proven to be a great success; preliminary data indicates a projected 47 percent drop in the fatal accident rate for aircraft equipped with ADS-B in Southwest Alaska.

As a result of that success, we are transferring the lessons learned in Alaska to the Gulf of Mexico, another location in which radar coverage is limited. We are increasing our outreach and training to general aviation pilots to increase their skills and awareness.

OBJECTIVE 1

Reduce commercial air carrier fatalities.

OBJECTIVE 2

Reduce general aviation fatalities.

Performance Targets

- Reduce the fatal accident rate per 100,000 flight hours by 10 percent over a 10-year period (2009-2018).

- By the end of FY 2009, reduce accidents in Alaska for general aviation and all Part 135 operations from the 2000-2002 average of 130 accidents per year to no more than 99 accidents per year. This measure will be converted from a number to a rate at the beginning of FY 2010.

Again, only Alaska is mentioned by FAA

Strategy

Expand and accelerate implementing safety and air navigation improvement programs in Alaska.

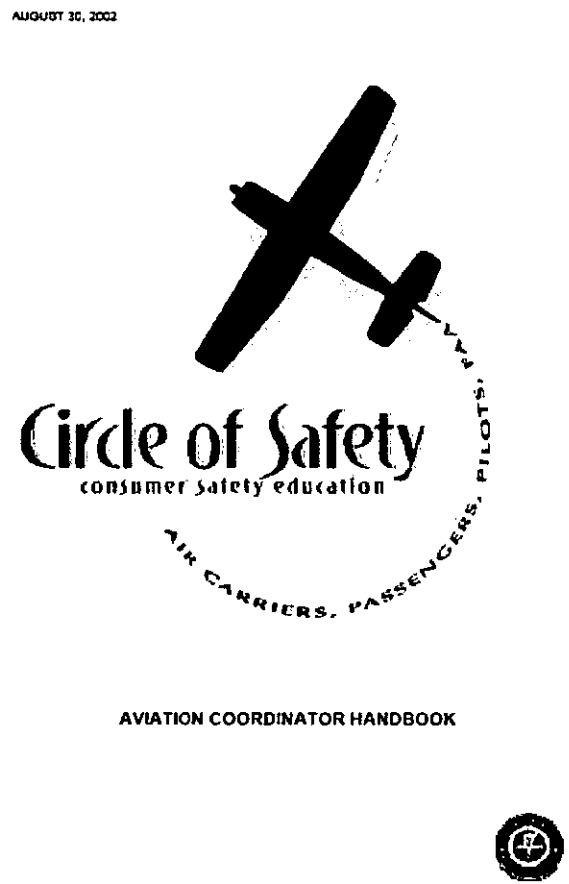
Initiatives

- Achieve full operational capability of WAAS by completing all hardware and software changes needed to complete the system.

- Continue to optimize weather camera benefits and explore alternative technologies.

- Support the Medallion, Circle of Safety, and Alaska Flight Service Safety programs.

Circle of Safety Handbook



- "According to 'Alaska CFIT Accidents'[3] between 1990 and 1998 aviation accidents in Alaska caused 100 occupational pilot deaths. This is equivalent to an occupational fatality rate of 430/100,000/year, approximately 86 times the occupational fatality rate for all workers in the United States[4] and nearly five times the national fatality rate for all commercial pilots.[5] Additionally, this is almost 24 times the rate for other Alaskan workers,[6] making flying the highest-risk occupation in Alaska."

Circle of Safety
Appendix F

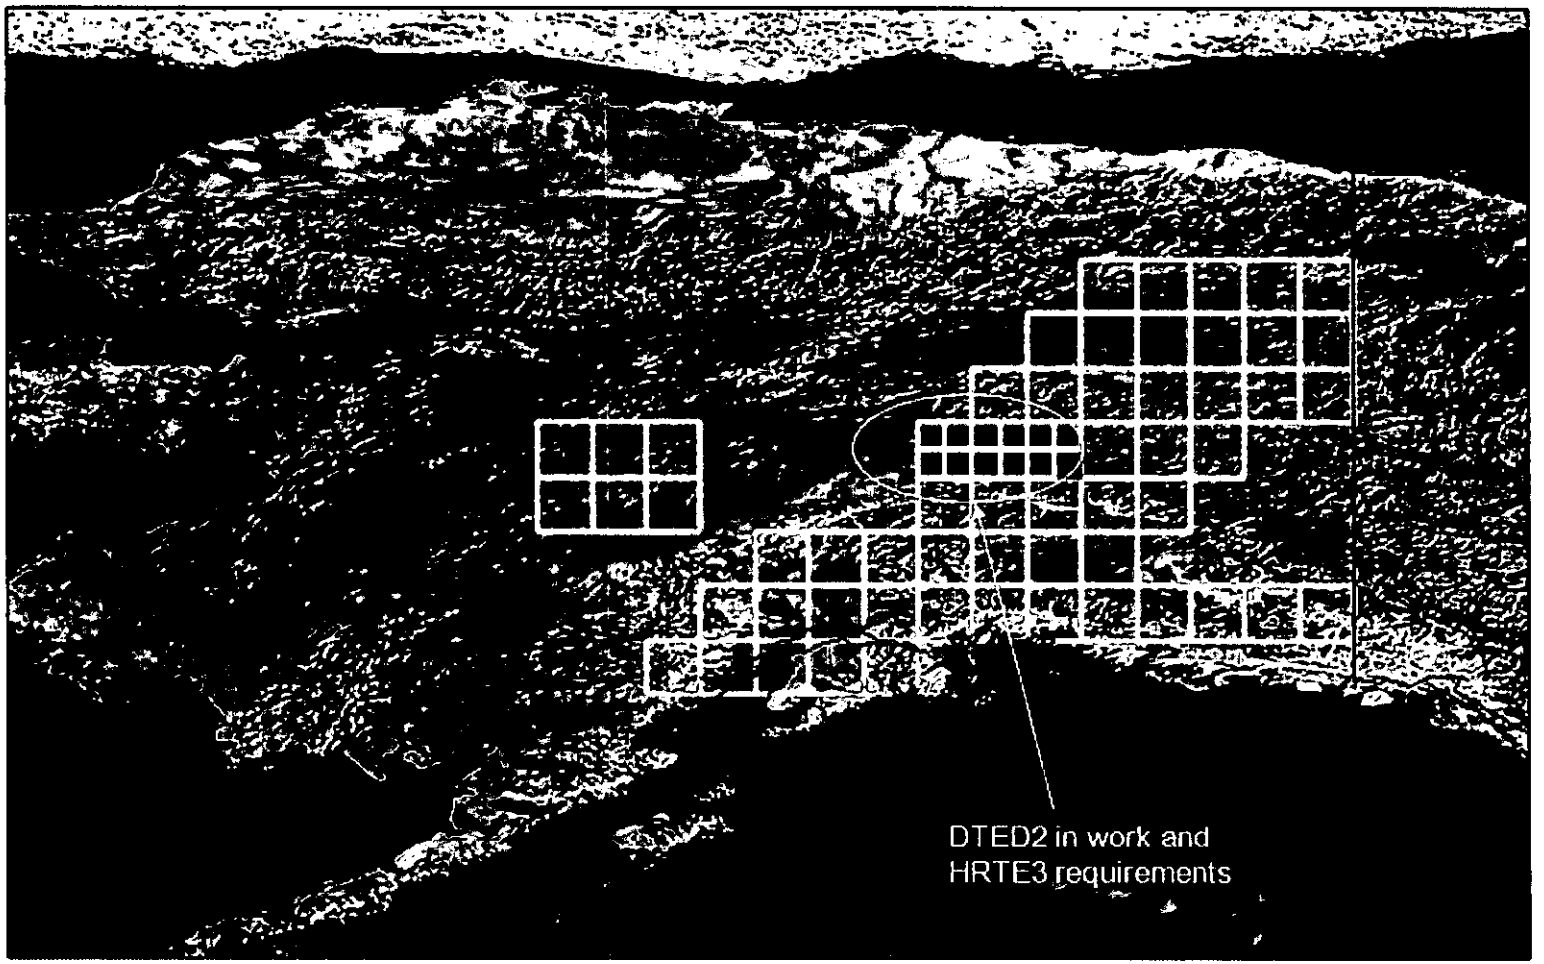
- "The high occupational pilot fatality rate in Alaska and the high fatality rate associated with CFIT crashes reinforce the importance of addressing this type of crash and examining the associated risk factors. Understanding all the factors that result in a pilot flying a properly functioning aircraft into terrain could help in the design of appropriate interventions at multiple levels within aviation and ultimately result in the reduction of commercial aviation fatalities. "
- "Most CFIT crashes are attributed to "pilot error" ... These crashes occur when failures occur at all levels, and backup safeguards are inadequate, resulting in the pilot flying the aircraft into a situation in which he is not aware of his surroundings."
- **ICAO Area 1 and Area 2 eTOD standards were developed to minimize the risk of CFIT crashes, and Alaska is the only state currently in non- compliance with these ICAO requirements.**

National Geospatial-Intelligence Agency (NGA)

On February 11, 2009, Dave and Phil met with and briefed:

- Steve Wallach, Technical Executive
- Scott Robertson, Chief of Staff, Technical Executive
- William Mullen, Staff Officer, Office of the Technical Executive
- Laura Wright Hall, Staff Officer, Office of the Technical Executive
- Jane Dickerson, Deputy Director, Office of Americas
- Barry Heady, Source Assessment & Global Foundation Group
- Joseph Purk, Deputy Director, Aeronautical Services
- Kraig Harms, SRTM DTED Program Manager
- Dale Hutchinson, NORTHCOM

DTED2 Requirements: NORTHCOM, Army and Air Force



ICAO Area 2 Requirements Compared with DTED Level 2

	ICAO Area 2 Standards	DTED Level 2
Post Spacing	1-arc-second (≈30 meters) latitude & longitude	1-arc-second (latitude) 2-4 arc-seconds (longitude)[1]
Vertical Accuracy (LE90)	3 meters	18 meters
Equivalent Contour Interval	6 meters (20 ft)	36 meters (118 ft)
Vertical Resolution	0.1 meter	1 meter
Horizontal Accuracy (CE90)	5 meters	23 meters
Confidence Level	90%	90%

[1] DTED2 has variable post spacing north of 50° North Latitude

[2] NGA states that accuracy values listed for DTED1, DTED2 and DETE3 are specification accuracy. The actual absolute accuracy varies, based on when it was produced and the source/method used. For example, the absolute vertical accuracy of DTED2 ranges from 8-34 meters (LE90), compared with 18 meter specification accuracy for DTED2. DTED2 produced from good stereo imagery is believed to be nearer the better end of the range specified here, i.e., closer to an LE90 of 8 meters (16 meter or 50-foot contour accuracy)

Take Aways

- **Wide variety of DTED – Levels 1 and 2 data available over Alaska**
  - Various sources
  - Working with USGS to ensure best data is made available
- **Limited NGA requirements for DTED over Alaska**
  - 54 DTED 2 cells
  - 12 DTED 3 quarter cells
  - Working to produce through contract production
- **Initial results show artifacts in Aster DEM data**
  - Working with USGS, evaluating 270+ cells OCONUS
  - Still early in evaluation

NGA Comments

- NGA indicated that they are trying to make as much of their Alaska DTED as possible available to all users, not just the military. However, they indicated that there are some issues in NGA's DTED production from commercial satellite and/or airborne imagery that sometimes have licensing restrictions. NGA supported the idea of simultaneous acquisition of airborne IFSAR and gravity data and NGA has a desire for improved gravity data over parts of Alaska. NGA stated that they would consider partnering (pooling resources) to acquire higher resolution/accuracy DEMs and gravity data, if it did not cost more and would not delay the production and delivery of required DTED data to US Northern Command.

National Geodetic Survey (NGS)

On February 12, 2009, Dave and Phil met with and briefed:

- Juliana Blackwell, Director, NGS
- Vicki Childers, GRAV-D Project Manager (PM)
- Daniel Roman, GRAV-D/Geoid Team Lead
- Renee Shields, National Height Modernization Program PM
- Chris Parrish, Remote Sensing, Physical Scientist
- Mark Howard, Aeronautical Survey PM

The GRAV-D Project

Phase I: Testing

Phase II: Operational Data Collection

1. Alaskan littoral regions excluding Aleutians
2. Southern Alaska
3. CONUS littoral regions
4. Hawaii & Aleutians
5. Inland CONUS
6. Northern Alaska

Current budget request: $37M over 10 years

GRAV-D Gravity Collection Priorities

- Flying height: 35-40,000' AMT
- Flightline spacing: 10 Km
- Speed: 280 knots
- Acquire gravity an additional 150-200 Km beyond the shoreline

- Acquisition of gravity on the same aircraft as the IFSAR acquisition avoids the need for duplicate flights and saves considerable costs

U.S. Department of Agriculture (USDA)

On February 17, 2009, Dave and Phil met with and briefed:

- William Belton, USFS, Asst. Remote Sensing Program Manager
- Tommie Parham, NRCS, Director, Resources Inventory & Assessment Division
- Shirley Hall, FSA, GIS Program Manager
- Jeff Bloomquist, FSA, GIS Coordinator

USDA will attempt to obtain $3.6M in funding over 2-3 years, but would prefer 5 years.

They expect to have difficulty getting approval within USDA unless they can certify that USGS, BLM, FWS, NPS, FAA, DOD, NOAA, etc. are agreeing to fund specific amounts.

Department of Homeland Security (DHS)

On February 18, 2009, Dave Maune had a discussion with Jeff Booth, Director, Geospatial Management Office, Office of the CIO, Applied Technology, DHS who had previously seen Dave's presentation. Jeff had sent information to DHS agencies:

- Customs and Border Patrol (CBP): Alaska not an issue
- U.S. Coast Guard: Coastal areas could be of interest
- FEMA Mitigation: IFSAR has been used elsewhere for flood studies in remote areas
- Doubtful that DHS would support financially

Department of Interior (DOI)

Enterprise Geographic Information Management (EGIM)

On February 19, 2009, briefed EGIM team:

- Bob Pierce, DOI & USGS, Washington, DC
- Lee Fahrner, EGIM PMP, Washington, DC
- Lorri Peltz-Lewis, DOI & BOR, Sacramento, CA
- Jacque Fahsholtz, USGS, Boise, ID
- Debra Dinville, BLM, Denver, CO
- Tom Chatfield, BLM, Denver, CO
- David Duran, NPS, Denver, CO
- Lenny Coates, MMS, New Orleans, LA
- Chris Lett, USFWS, Denver, CO

Alaska DEM, "shovel-ready"

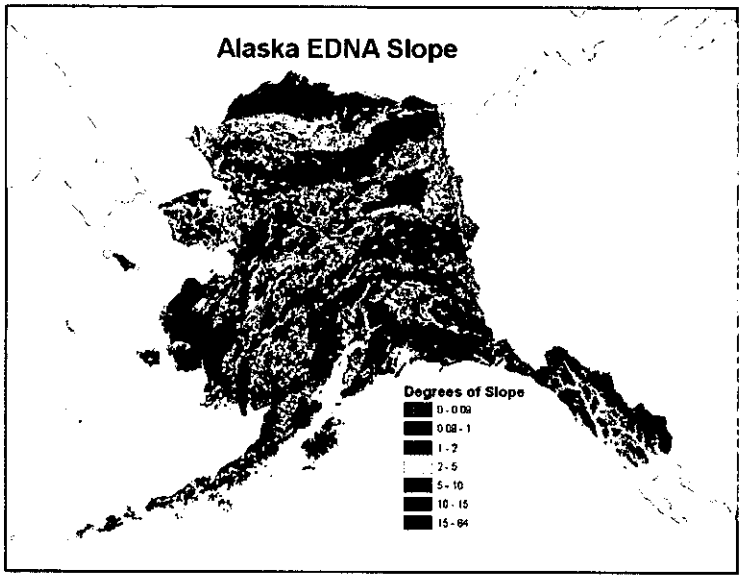
Obama eyes 'shovel-ready' fixes in a long recovery

Updated 12/8/2008 1:15 AM | Comments 2,455 | Recommend 58 E-mail | Save | Print | Reprints &

By Fredreka Schouten, USA TODAY

WASHINGTON — President-elect Barack Obama said Sunday that the nation's economic troubles likely will deepen, but he promised to deliver a vast government spending program to spur growth.

"Things are going to get worse before they get better," Obama said on NBC's *Meet the Press*.



2/25/09 ANNUAL MINING INDUSTRY UPDATE BRIEFING

ALASKA MINERS ASSOCIATION, INC.

Joint Senate & House Resources Committee

Annual Mining Industry Update Briefing
3 p.m., Wed, February 25, 2009

Introduction - Steve Borell

The Economic Benefits of Alaska's Mining Industry - Jim Calvin, McDowell Group

Update briefing - Steve Borell

Operating Mines

- Placer mines
- Usibelli Coal Mine
- Greens Creek
- Red Dog
- Fort Knox
- Pogo

Mines Currently in Idle Status

- Nixon Fork
- Rock Creek
- Kensington

Major Projects

- Chuitna Coal
- Donlin Creek
- Pebble

Other Projects of Note

- Livengood
- Niblack
- Lucky Shot

ALASKA MINERS ASSOCIATION, INC.

Issues of Concern to the Alaska Mining Industry for 2009

Actions needed by the Administration and/or the Legislature: January 2009

INTEGRITY OF PERMITTING PROCESS

Statewide Initiatives - Ensure the requirements for the ballot initiative process are open, transparent and hold proponents accountable.

State Permitting System - Support the integrity of the current, very rigorous, science-based state permitting process.

Water Quality – Support ADEC implementation of the new approved APDES program.

Water Quality Standards - Continue to revise water quality standards to ensure: 1) availability of mixing zones, 2) standards are scientifically supportable and developed using Alaska-specific criteria, and 3) are sufficient to protect water quality.

Air Quality Program - The Administration contract with air permitting experts to recommend changes that will improve DEC permit review time and address the other challenges faced by this program.

Non-Profit Foundation Money - Enact legislation to require disclosure whenever funds from 501(c)(3) non-profit foundations are involved, to include name of the source, amounts and purpose for which the moneys are given.

Wetlands - Petition the federal government to develop regulations that strictly follow the U.S. Supreme Court decisions in SWANCC, Rapanos, etc.

FISCAL ISSUES

Taxation - Maintain an equitable and stable tax structure at state and local government levels to ensure Alaska industry remains world competitive.

State Agency Funding - Provide sufficient funding for the minerals and permitting functions of the Departments of Natural Resources; Commerce, Community & Economic Development; Fish & Game; and Environmental Conservation.

Permitting Agencies - Increase salary and benefits for state agency personnel involved in minerals permitting and management so they are competitive with industry.

State Fiscal Policy - Adopt a long range fiscal plan.

State Land Entitlement - Support continued funding for DNR to process final transfer of lands from BLM.

Annual Airborne Geophysical Mapping Program - Accelerate the extremely effective program of State investment in airborne geophysical mapping along with baseline water quality mapping.

Mineral Education - Continue to support mining engineering and geological engineering, geology, the Mining and Petroleum Training Service (MAPTS), and the Delta Mine Training Center (DMTC) at levels that will ensure continued accreditation and continue funding the State's share of AMEREF (Alaska Mineral & Energy Resources Education Fund).

LAND MANAGEMENT ISSUES

State Lands - Ensure no net loss of multiple use lands and require that additions to any state parks, refuges, critical habitat areas, marine restricted areas, or any other restricted-use areas, be made only if an equal acreage of other lands already having the same designation is released and the new area being designated is first evaluated for mineral potential.

Land Transfers - Prior to any state land transfers to boroughs, land disposals/sales, or leases not required for resource development, require a detailed mineral evaluation, to include airborne geophysical surveys,

be completed to help ensure that mineralized lands or key access routes are not transferred.

Outdated Federal Withdrawals - Pursue removal of old federal land withdrawals (where purpose for withdrawal has expired) which are blocking land transfers to the State, such as PLO 5150, the outer pipeline corridor. Encourage BLM to remove such PLOs and open the lands through its land planning process.

New Federal Withdrawals - Oppose all new federal land withdrawals, roadless initiatives, marine restricted areas, Antiquities Act designations, BLM wilderness studies, etc. and fight vigorously against additional buffers or other restrictions to multiple use of federal lands in Alaska. The Alaska National Interest Lands Conservation Act (ANILCA) provides that "no more" federal land will be withdrawn for parks, preserves, monuments, wilderness designations, wild & scenic river designations, etc.

International Heritage & Biosphere Designations - Oppose establishment of international parks, biosphere reserves, and world heritage sites, such as the so-called Beringia (over the Seward Peninsula & Bering Sea), NPRA, or ANWR. International designations would - 1) surrender partial sovereignty to the United Nations, and 2) eliminate access across the affected lands and waters.

Federal Mining Law Issues - Continue to oppose changes to federal law and regulations that would be adverse to Alaska miners.

ACCESS ISSUES

Interties, Roads, Railroads, Ports - Continue investing in development of infrastructure that will help diversify the economy and encourage private investment that would benefit from such facilities.

RS-2477 Rights-of-Way - Continue to systematically and aggressively pursue the rights of the State of Alaska regarding RS-2477 rights-of-way, both administratively and in the courts. Without RS-2477s much of Alaska public lands will never have overland access.

Navigability - Continue to systematically and aggressively pursue recognition of State ownership of and authority over all navigable waters granted under the Statehood Act.

OTHER ISSUES

NEPA - The Administration develop an MOU with the Corps of Engineers to ensure timely coordination of future Environmental Impact Statements.

Energy Plan - Develop a state energy plan that addresses both local and regional needs that considers all energy sources.

Coal Development - Encourage utilization of coal liquefaction and gasification technologies for Alaska's vast coal resources.

Climate Change - Support federal actions only if they are based on sound, peer-reviewed science.

Jones Act - Because Jones Act vessels for bulk mineral shipments are not available, petition Congress to amend the Jones Act to allow use of non-Jones Act vessels for shipment of "non-petroleum bulk natural resources from Alaska".

Endangered Species Act/Essential Fish Habitat - Petition the federal government to develop new ESA and EFH regulations that strictly follow the original intent of these laws.

For further information on the above issues or for information regarding exploration and mining in Alaska please contact:

Today's Agenda

- The Economic Benefits of Alaska's Mining Industry – Jim Calvin, McDowell Group

- Review of Major Mines and Projects
  – Steve Borell, Alaska Miners Association

2100

Annual Mining Industry Briefing

Joint Senate/House Resources Committees

February 25, 2009

2101

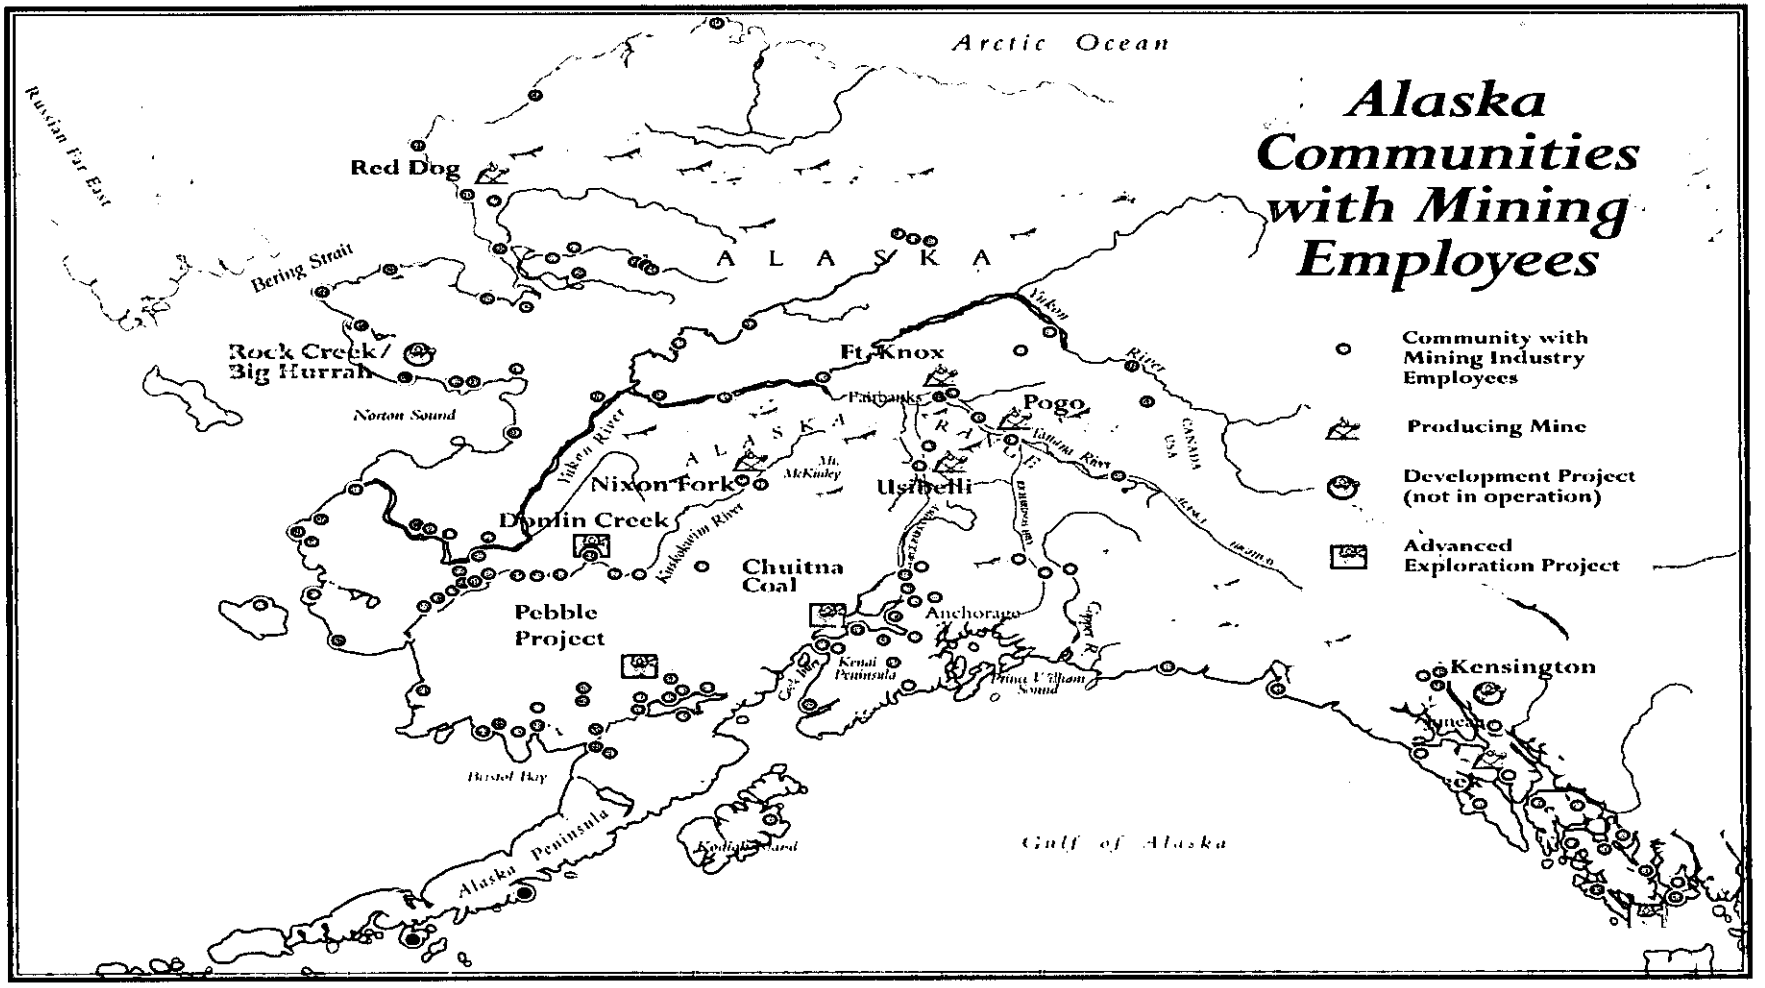
The Economic Benefits of Alaska's Mining Industry in 2008

Presented by:
Jim Calvin, Principal
McDowell Group, Inc.
Anchorage • Juneau

Statewide Employment Impacts, 2008 Estimates

- 3,500 direct jobs
- 5,500 total jobs
- $350 million total payroll
- $82,600 average industry wage

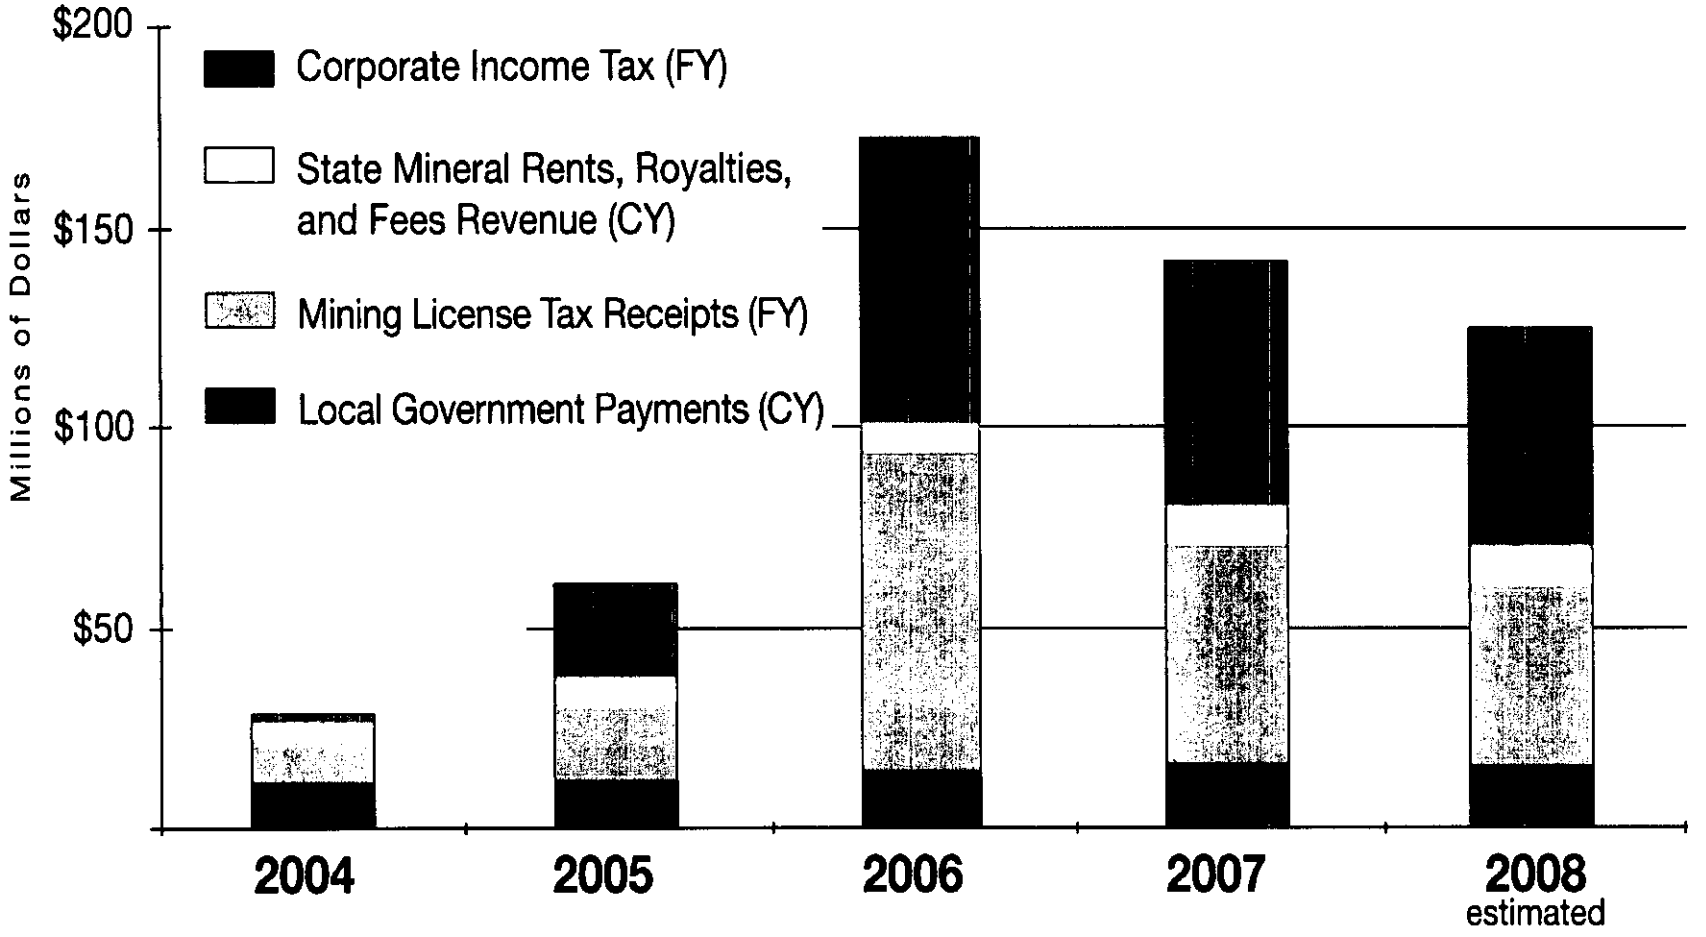
Alaska Communities with Mining Employees



Largest Producing Mines
State and Local Government Tax Obligations

	Land Status	State Royalty Payments	Mining License Tax	Local Govt Payments
Usibelli Coal	State	√	√	√
Greens Creek	Private		√	√
Red Dog	Private		√	√
Fort Knox	State/Mental Health Trust	√	√	√
Pogo	State	√	√	√

State and Local Government Revenue Impact



Payments to Local Government

- $15.6 million to local governments in 2008
  - $11.0 million in PILT to NWAB (Red Dog)
  - $2.8 million in property taxes to FNSB (Fort Knox)
  - $1.3 million in property taxes to CBJ (Greens Creek and Kensington)
  - $500,000 in PILT to City of Delta Junction (Pogo)
  - Additional tax payments to Denali Borough, City of Nome and others

Payments to State Government

- $105 million in *estimated* 2008 state revenue
  - $55 million in mining license tax, rents, royalties, fees and other payments
  - $50 million in corporate income taxes

PLUS…

- $18.5 million to the Alaska Railroad Corporation for moving coal, sand and gravel
- $22 million to AIDEA for use of state-owned facilities (Skagway Ore Terminal and Delong Trans. System)
- $1.6 million to the Alaska Mental Health Trust for rents and royalty payments, and material sales

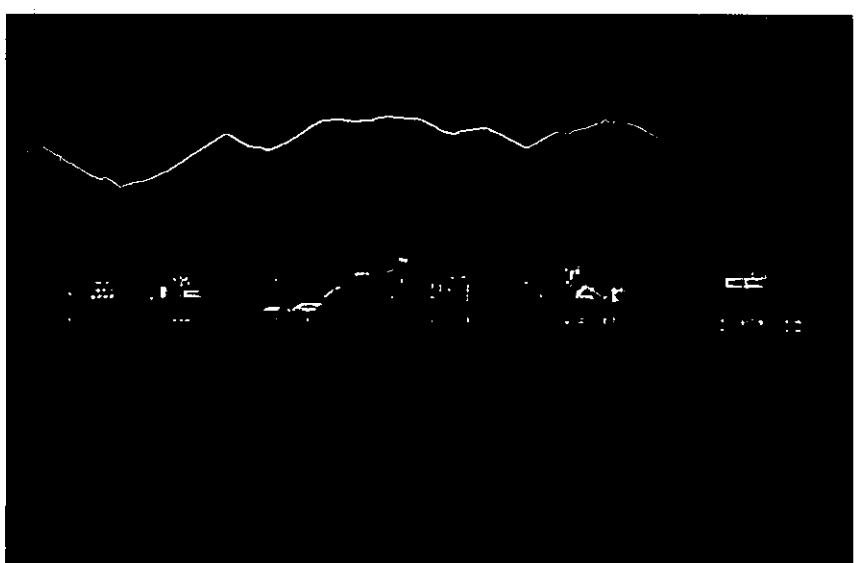
Rural and Native Benefits



Royalties....

- Red Dog paid royalties of $212 million to NANA in 2008
  - $122 million redistributed to other ANCSA regional and village corporations

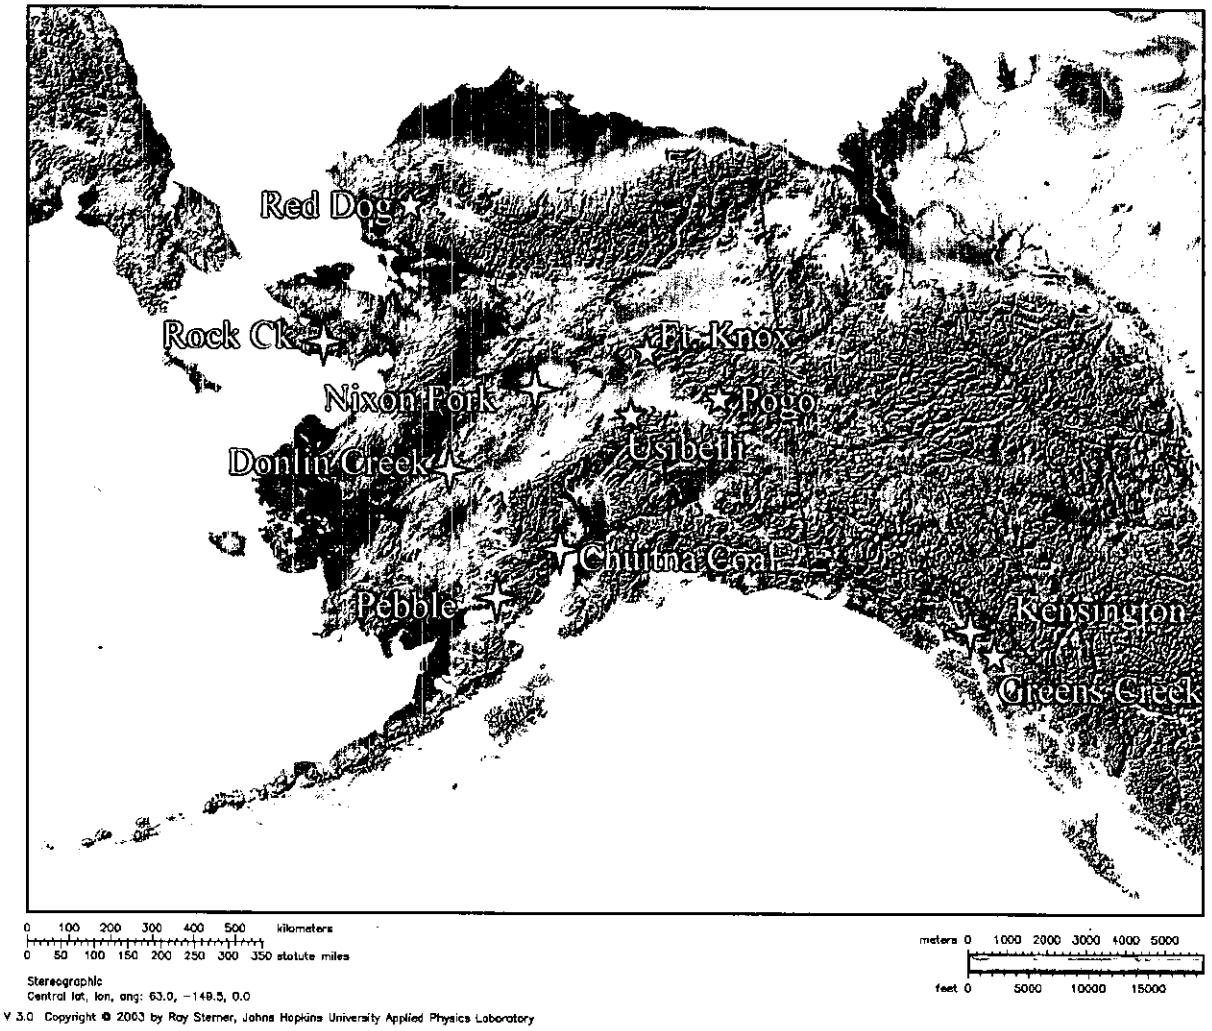
Employment....

- 56% of Red Dog's 485 jobs held by NANA shareholders
- 86% of Donlin Creek's 210 jobs held by Calista shareholders

Alaska Major Mines and Projects

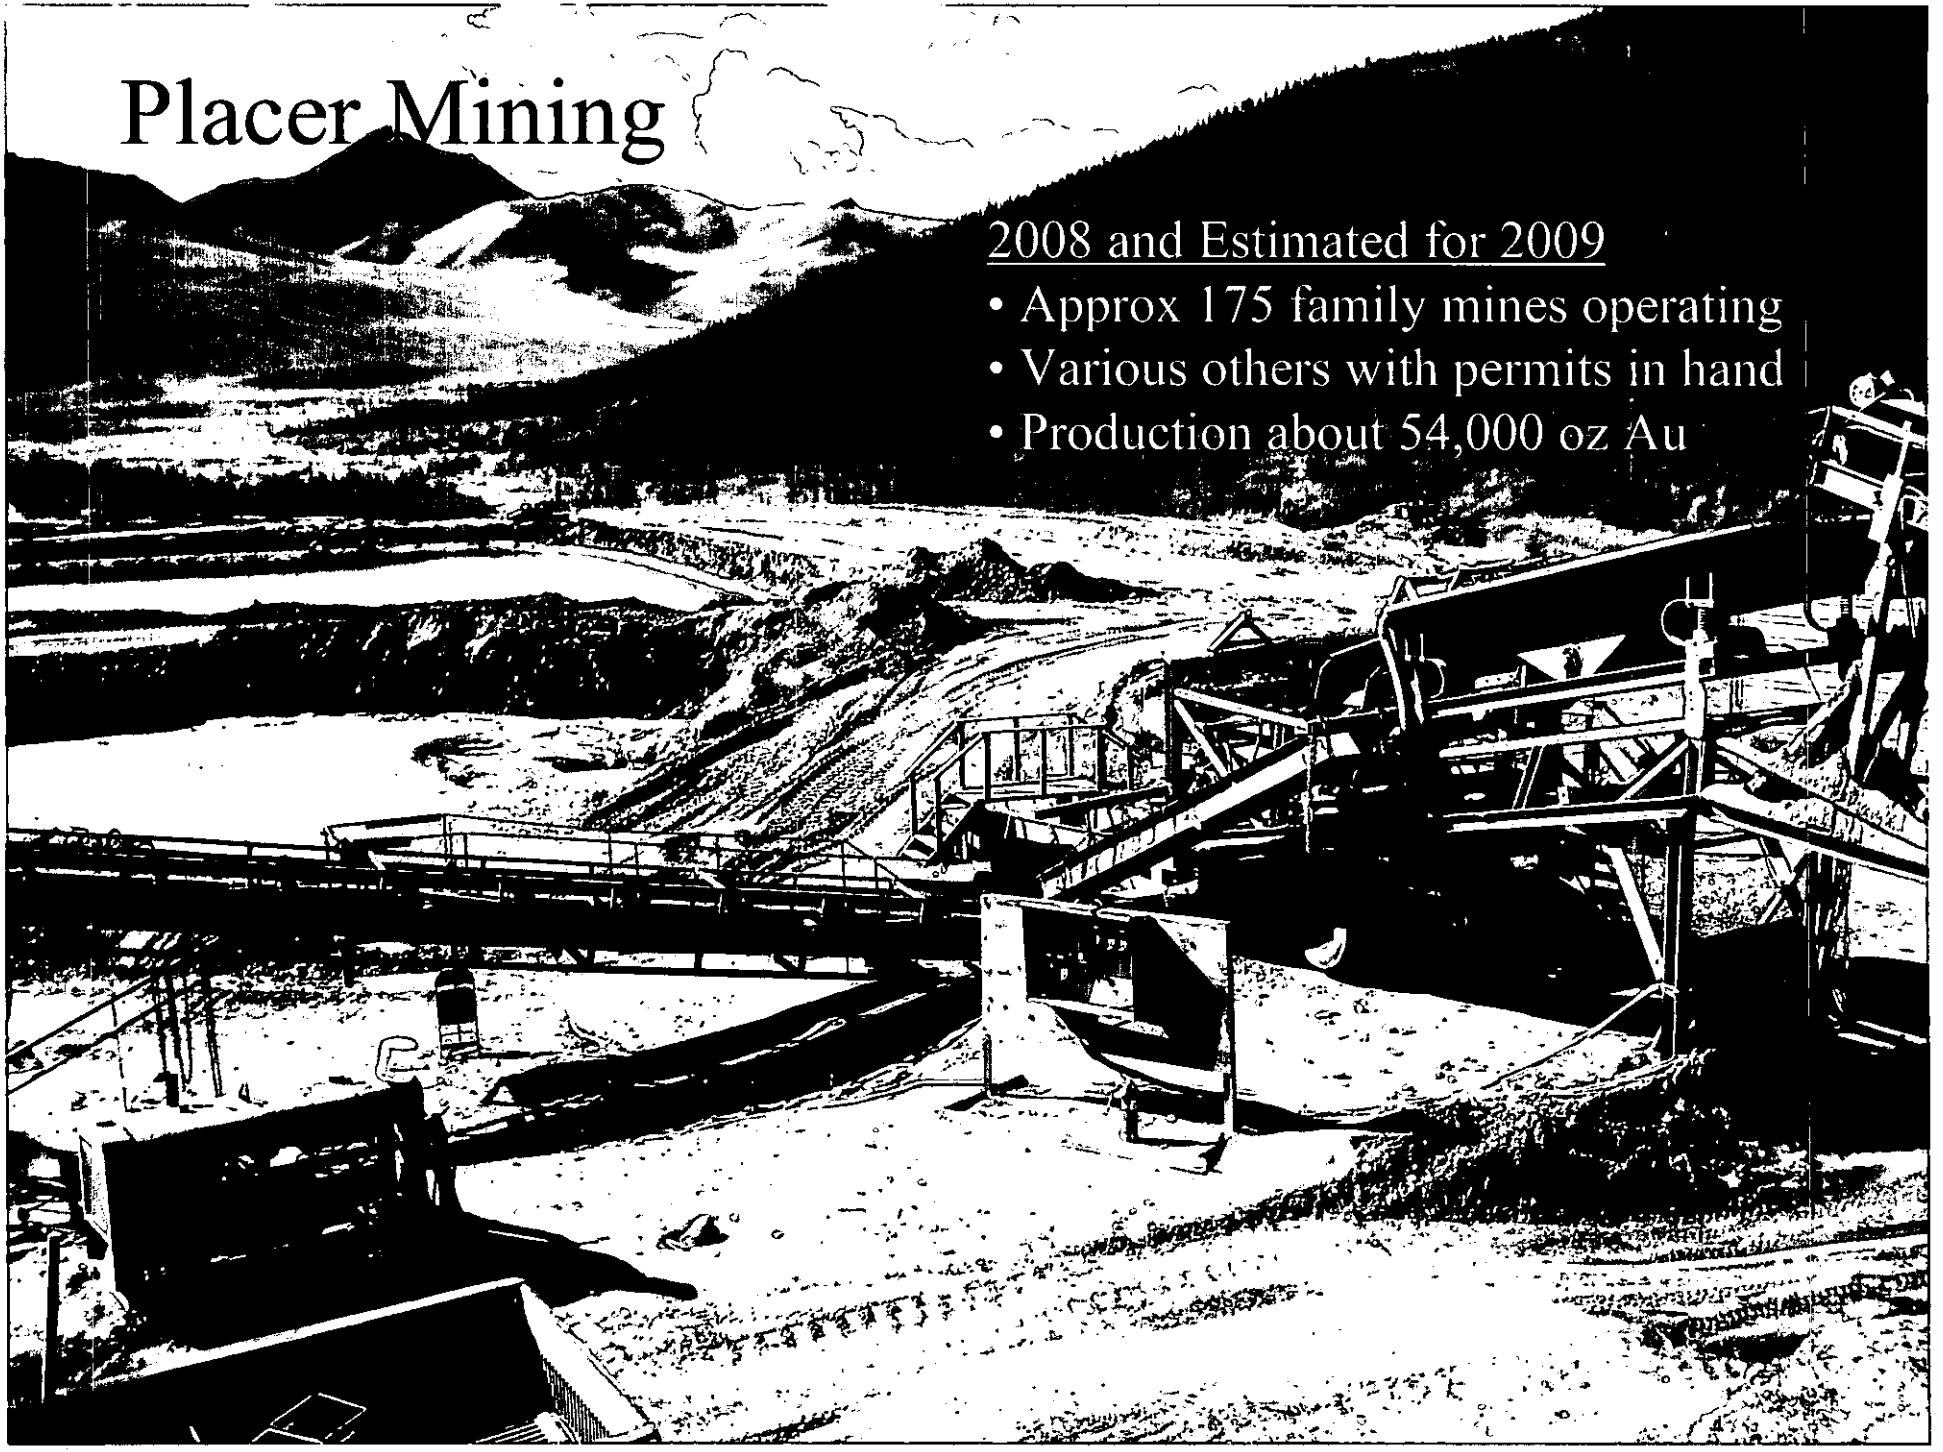
☆ **Producing mine**

✧ **Developing and major exploration projects**



Map by Ray Sterner, John Hopkins Applied Physics Laboratory, licensed to North Star Science and Technology, LLC

Placer Mining

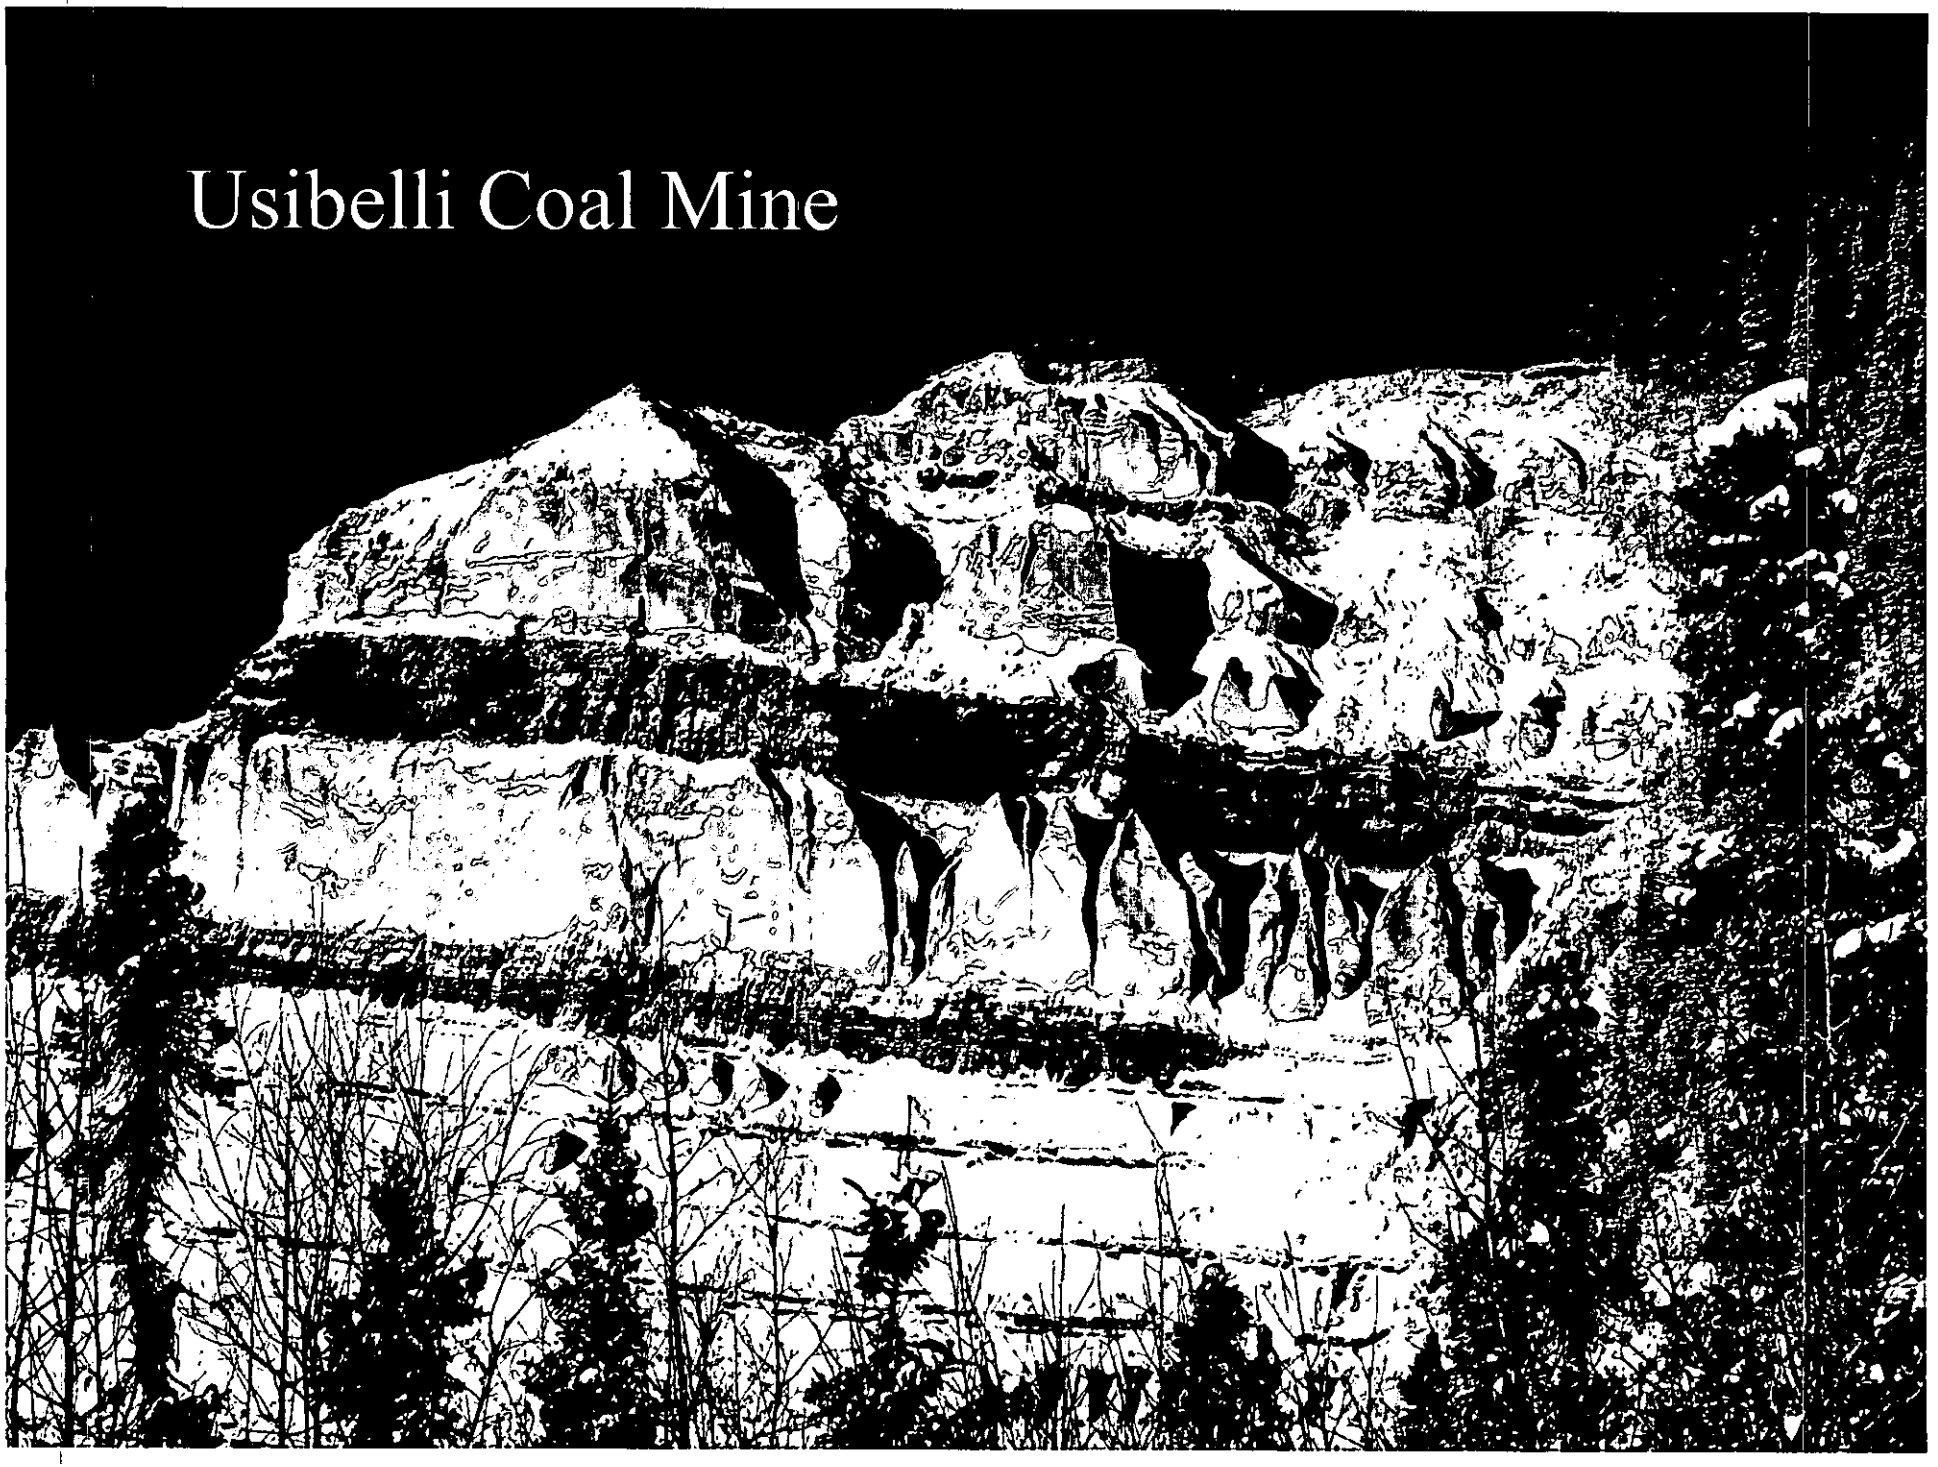


2008 and Estimated for 2009

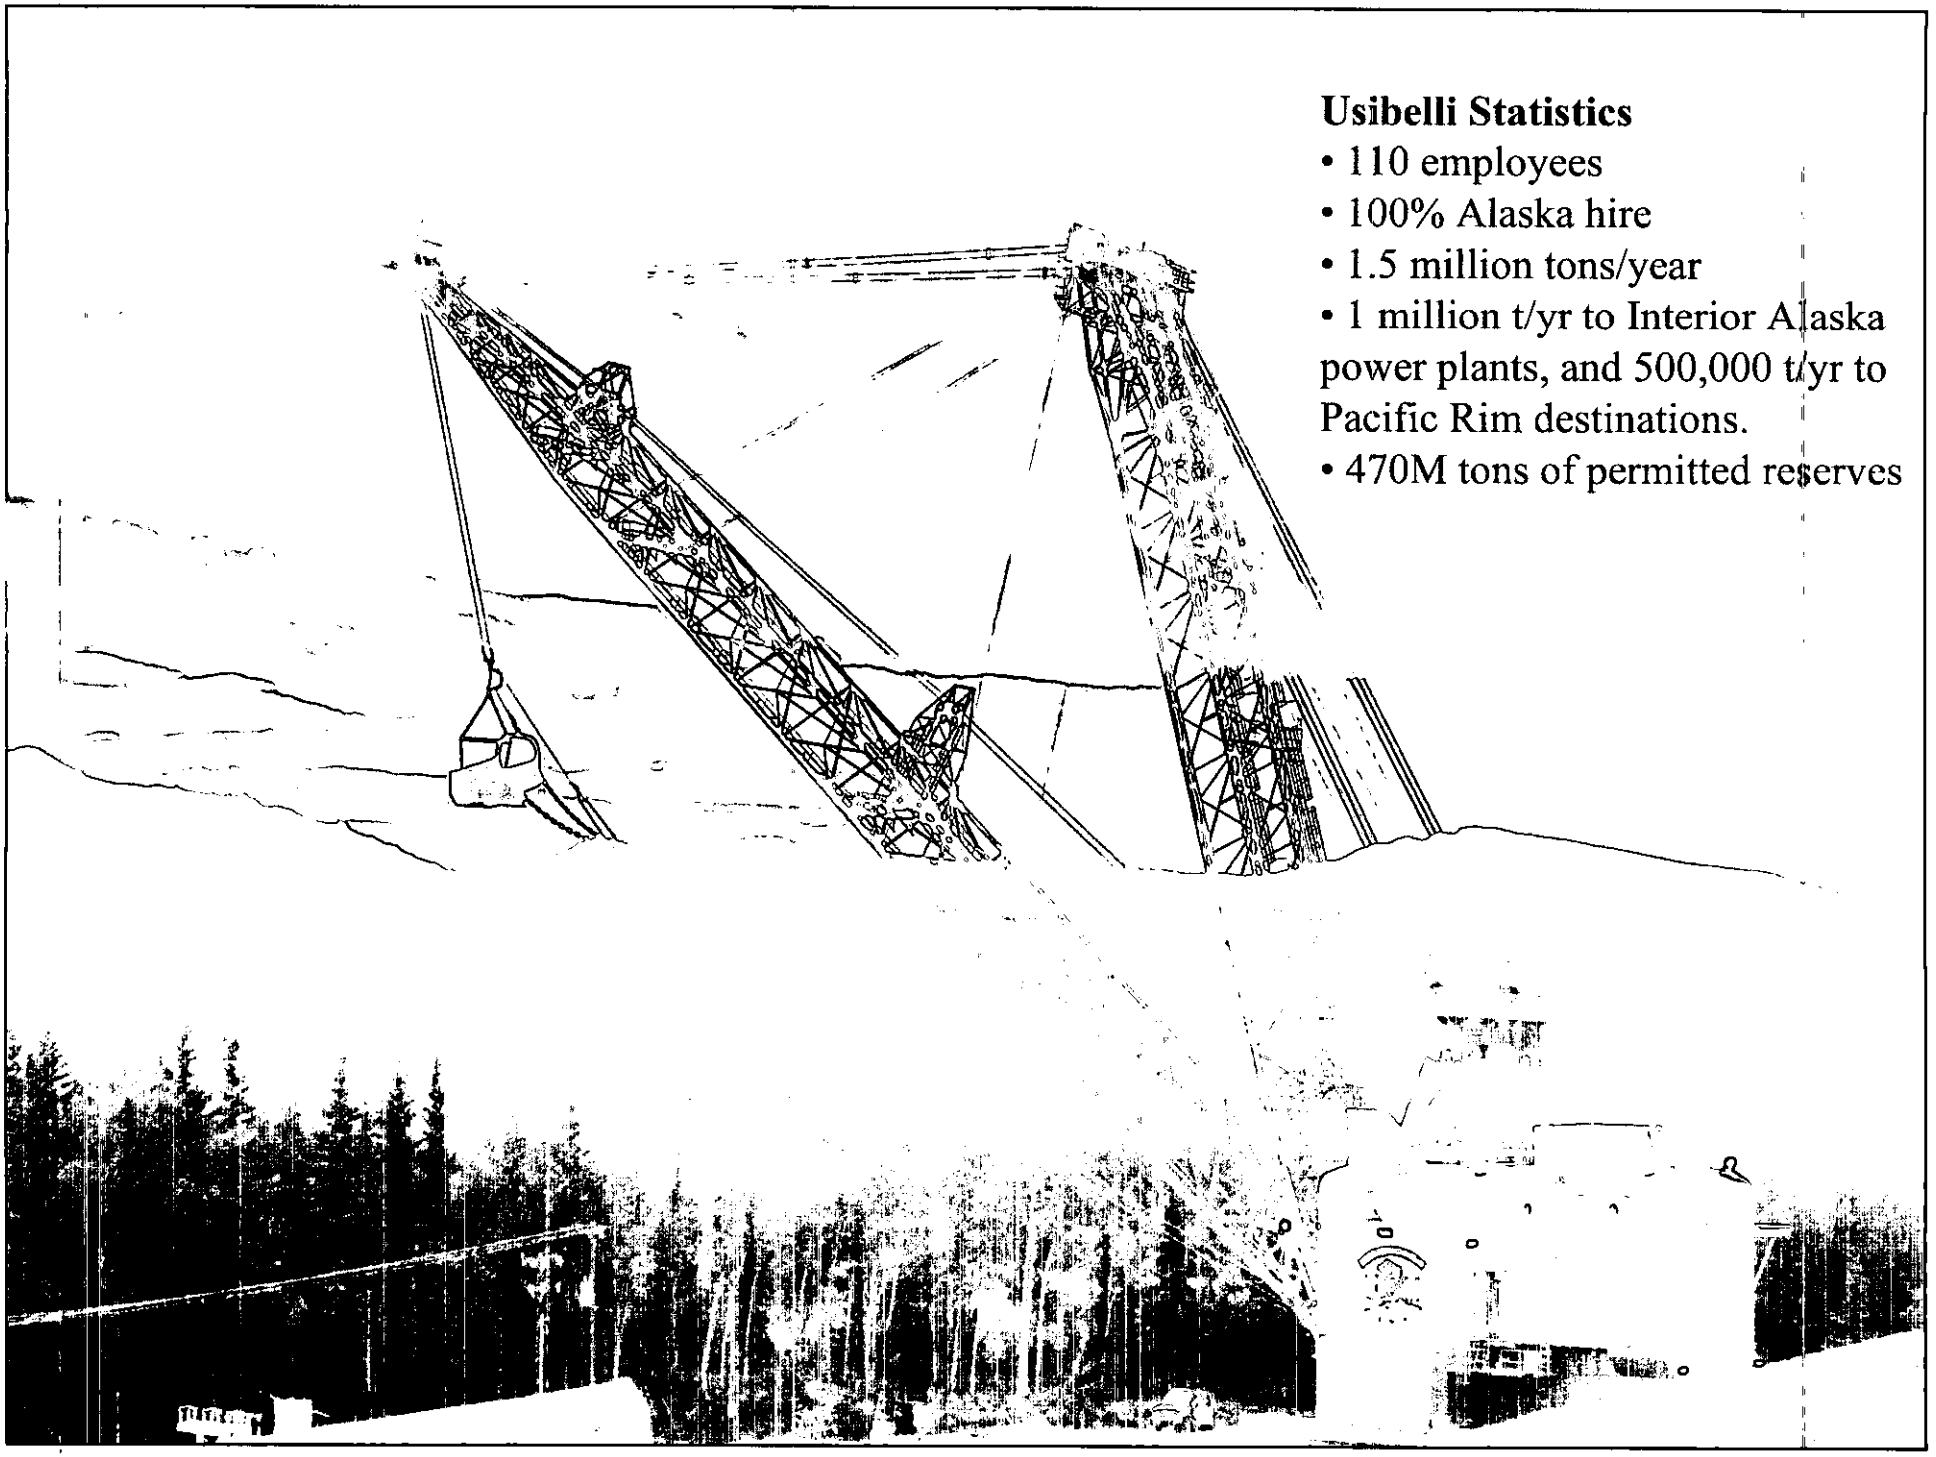
- Approx 175 family mines operating
- Various others with permits in hand
- Production about 54,000 oz Au

Large Operating Mines

1.	Two Bull Ridge	Usibelli Coal Mine
2.	Greens Creek	Hecla
3.	Red Dog	Teck
4.	Fort Knox	Kinross Gold
5.	Pogo	Teck Pogo



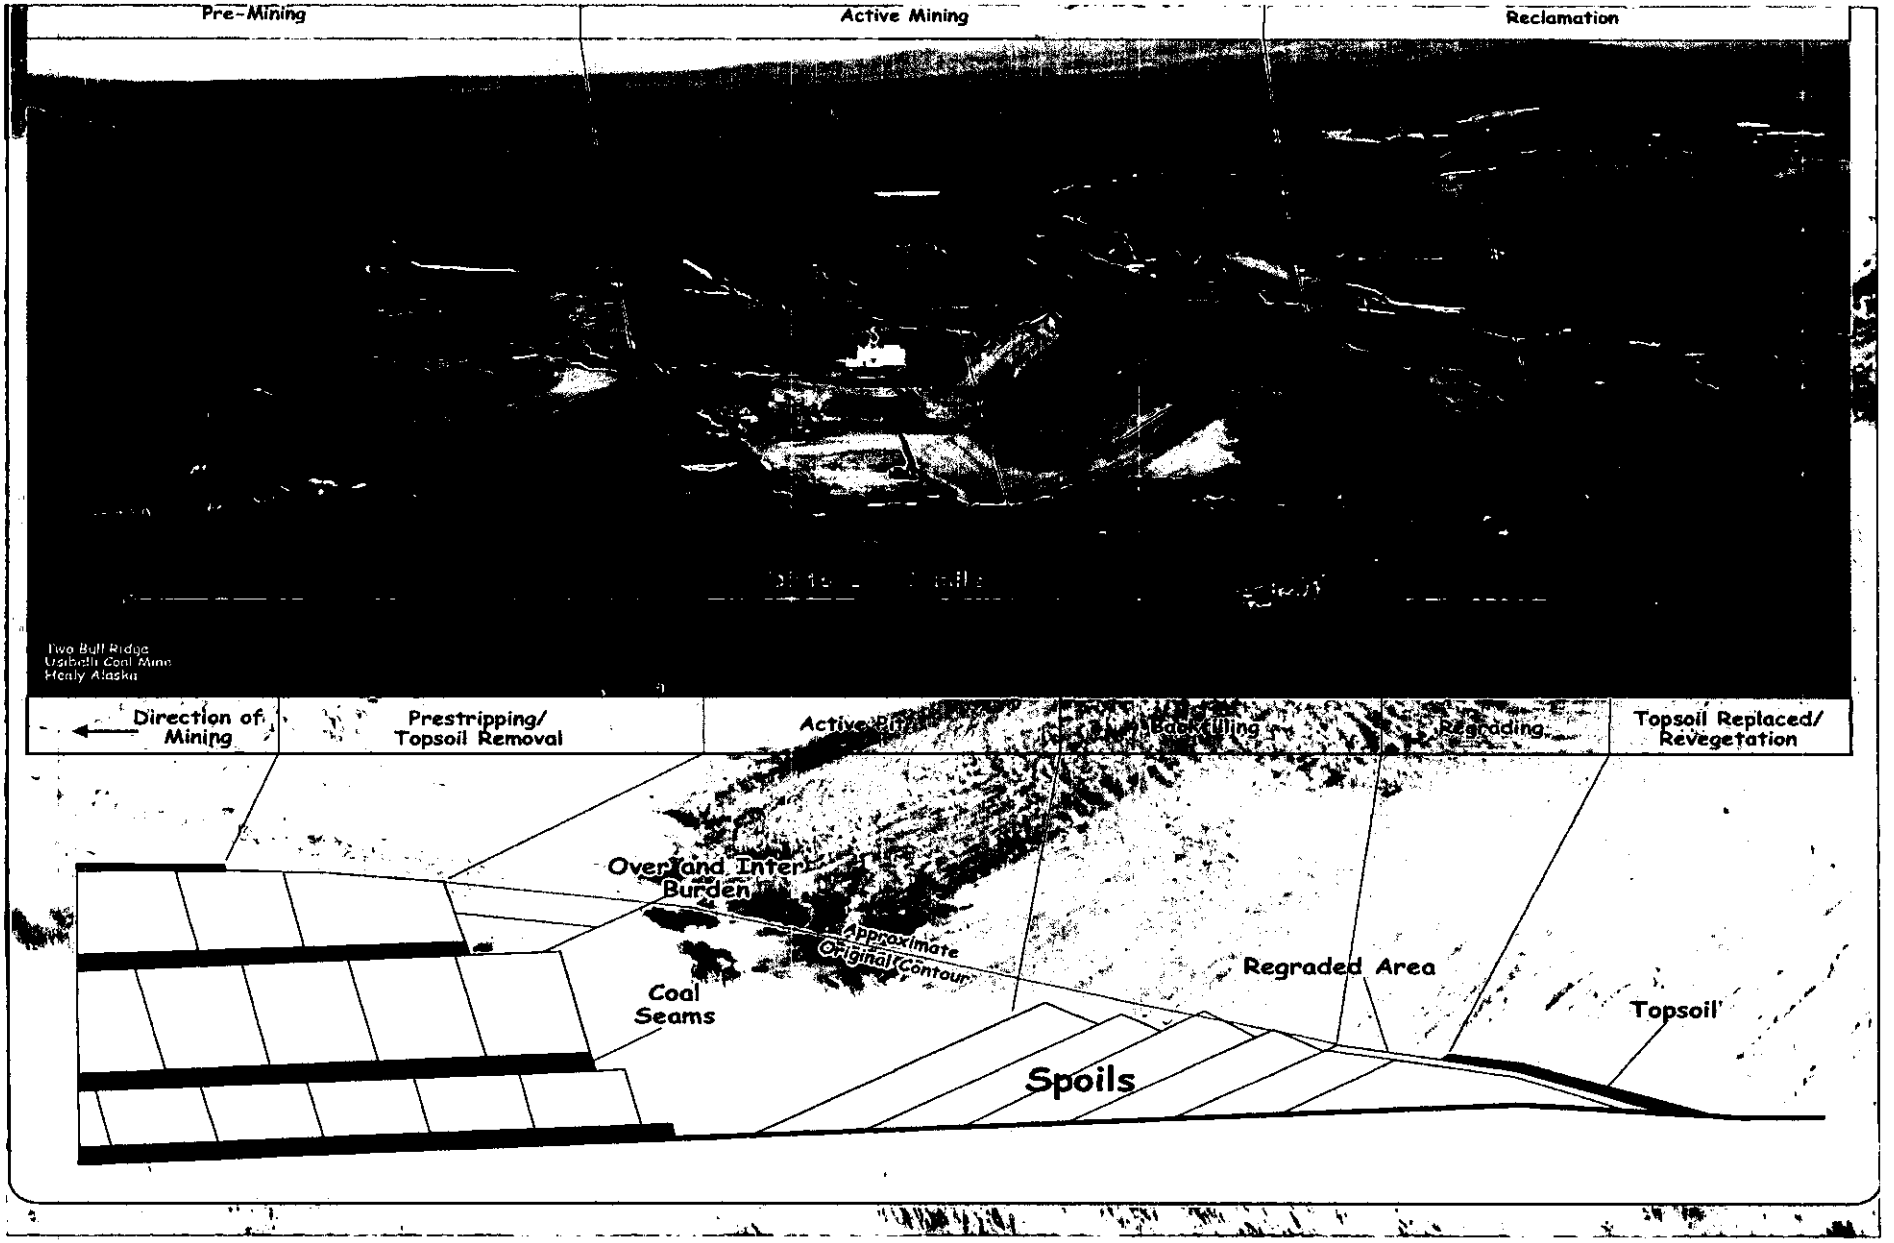
Usibelli Coal Mine



Usibelli Statistics

- 110 employees
- 100% Alaska hire
- 1.5 million tons/year
- 1 million t/yr to Interior Alaska power plants, and 500,000 t/yr to Pacific Rim destinations.
- 470M tons of permitted reserves

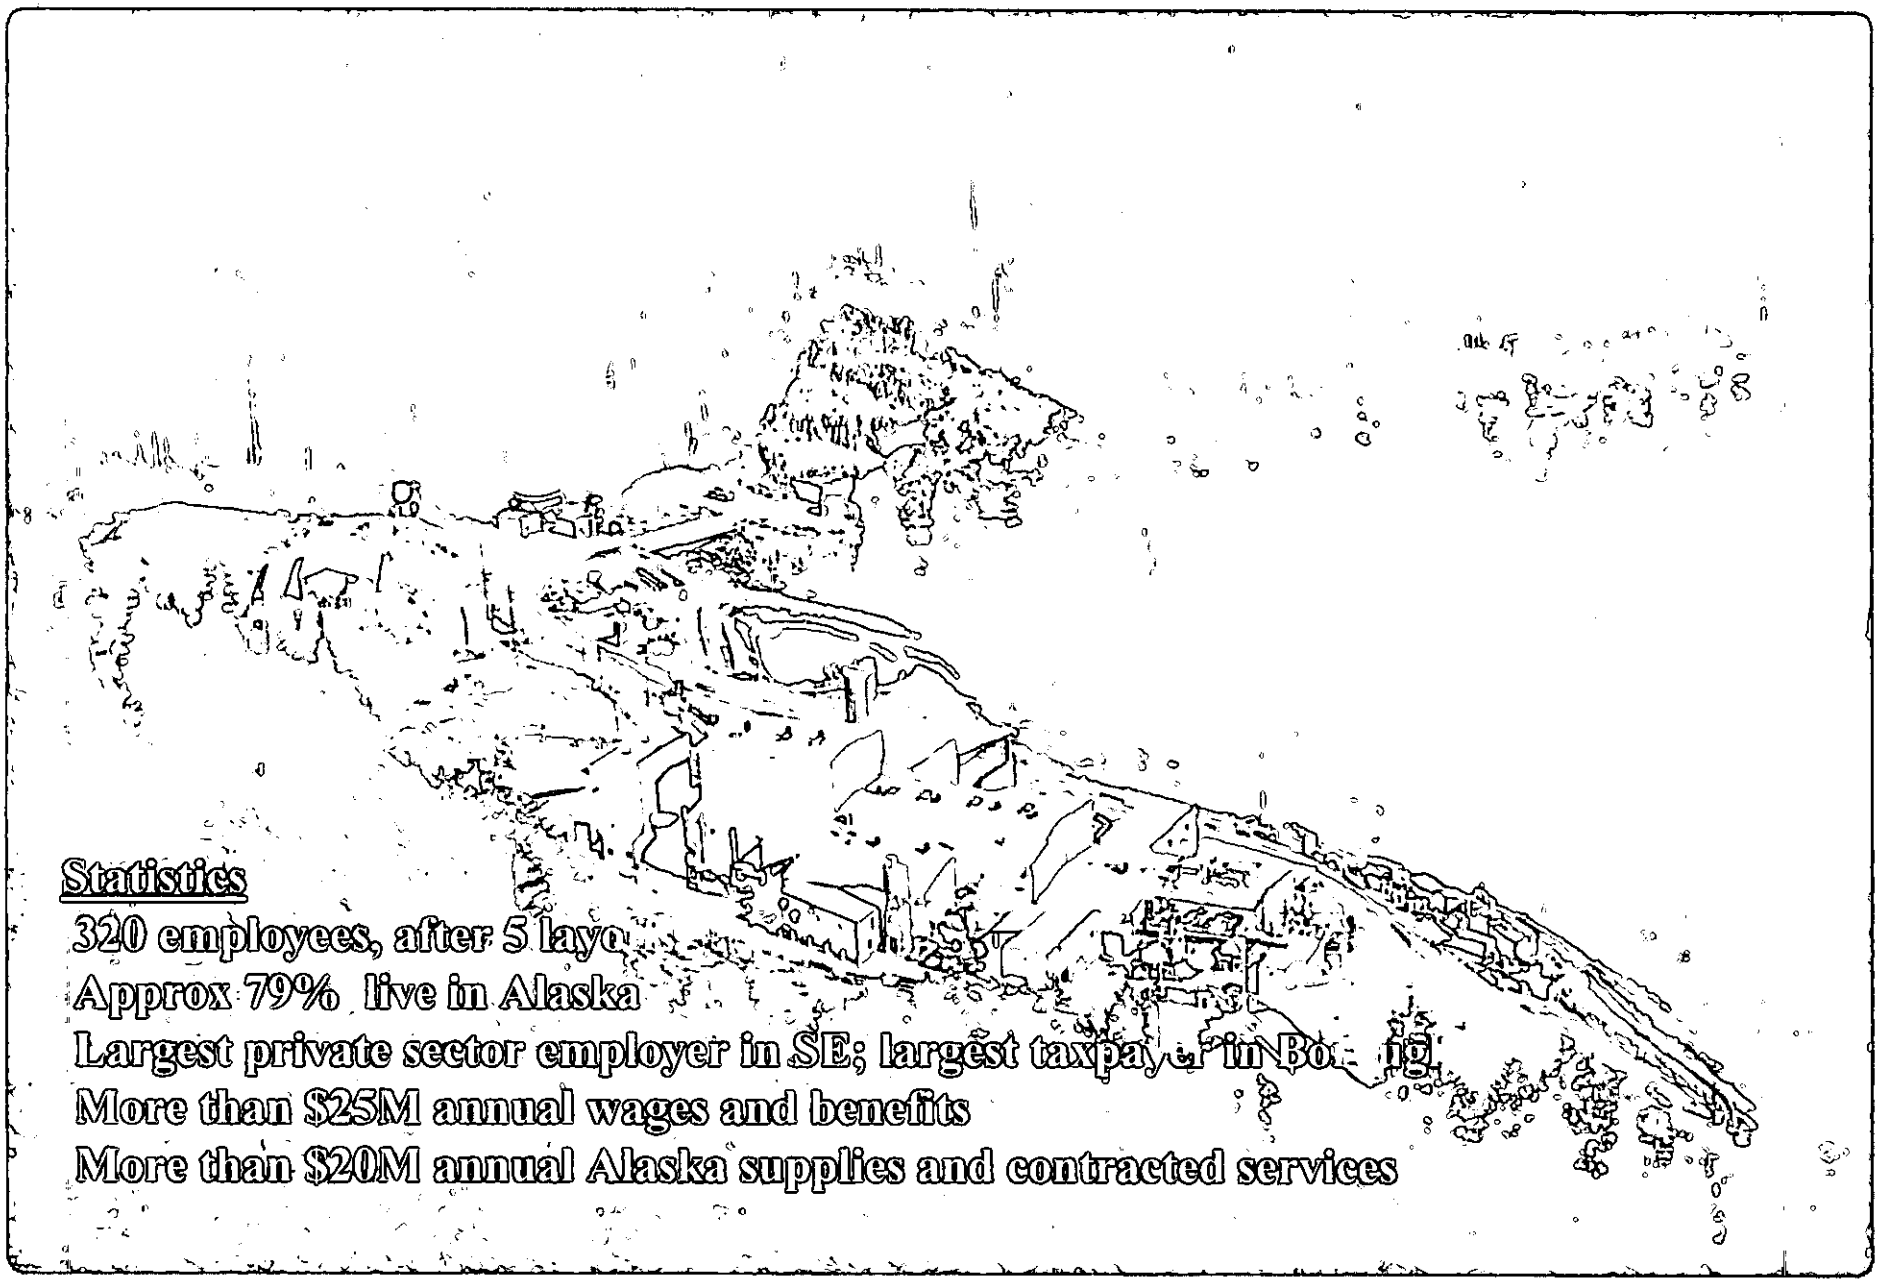
Usibelli Coal Mine



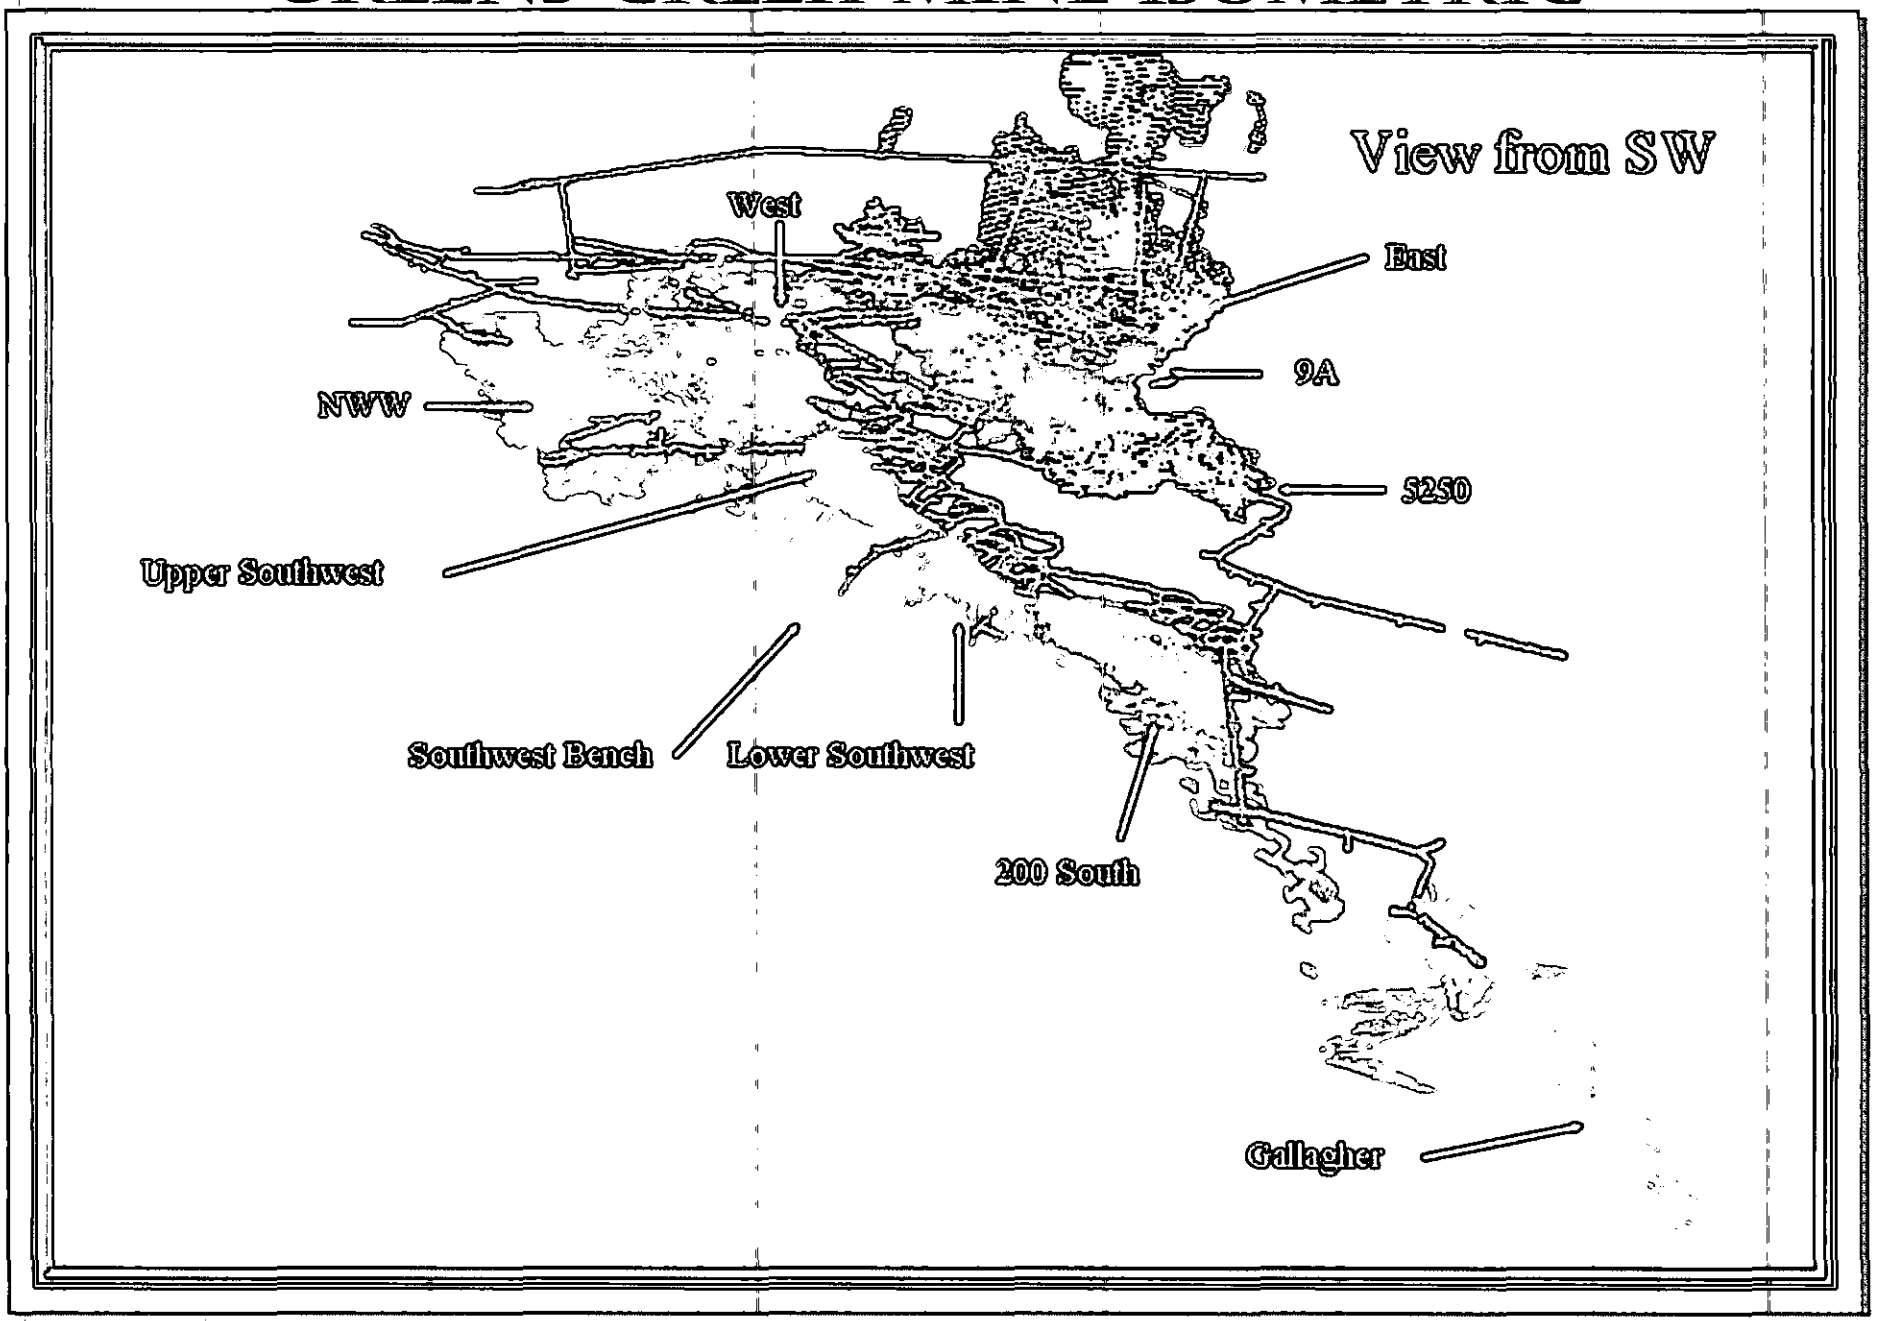
World Wide Economic Downturn - Challenges for 2009

- metal prices now down to levels last seen 5 years ago
- costs still much higher than 5 years ago
- fuel purchased at the peak in July 2008 for the following year

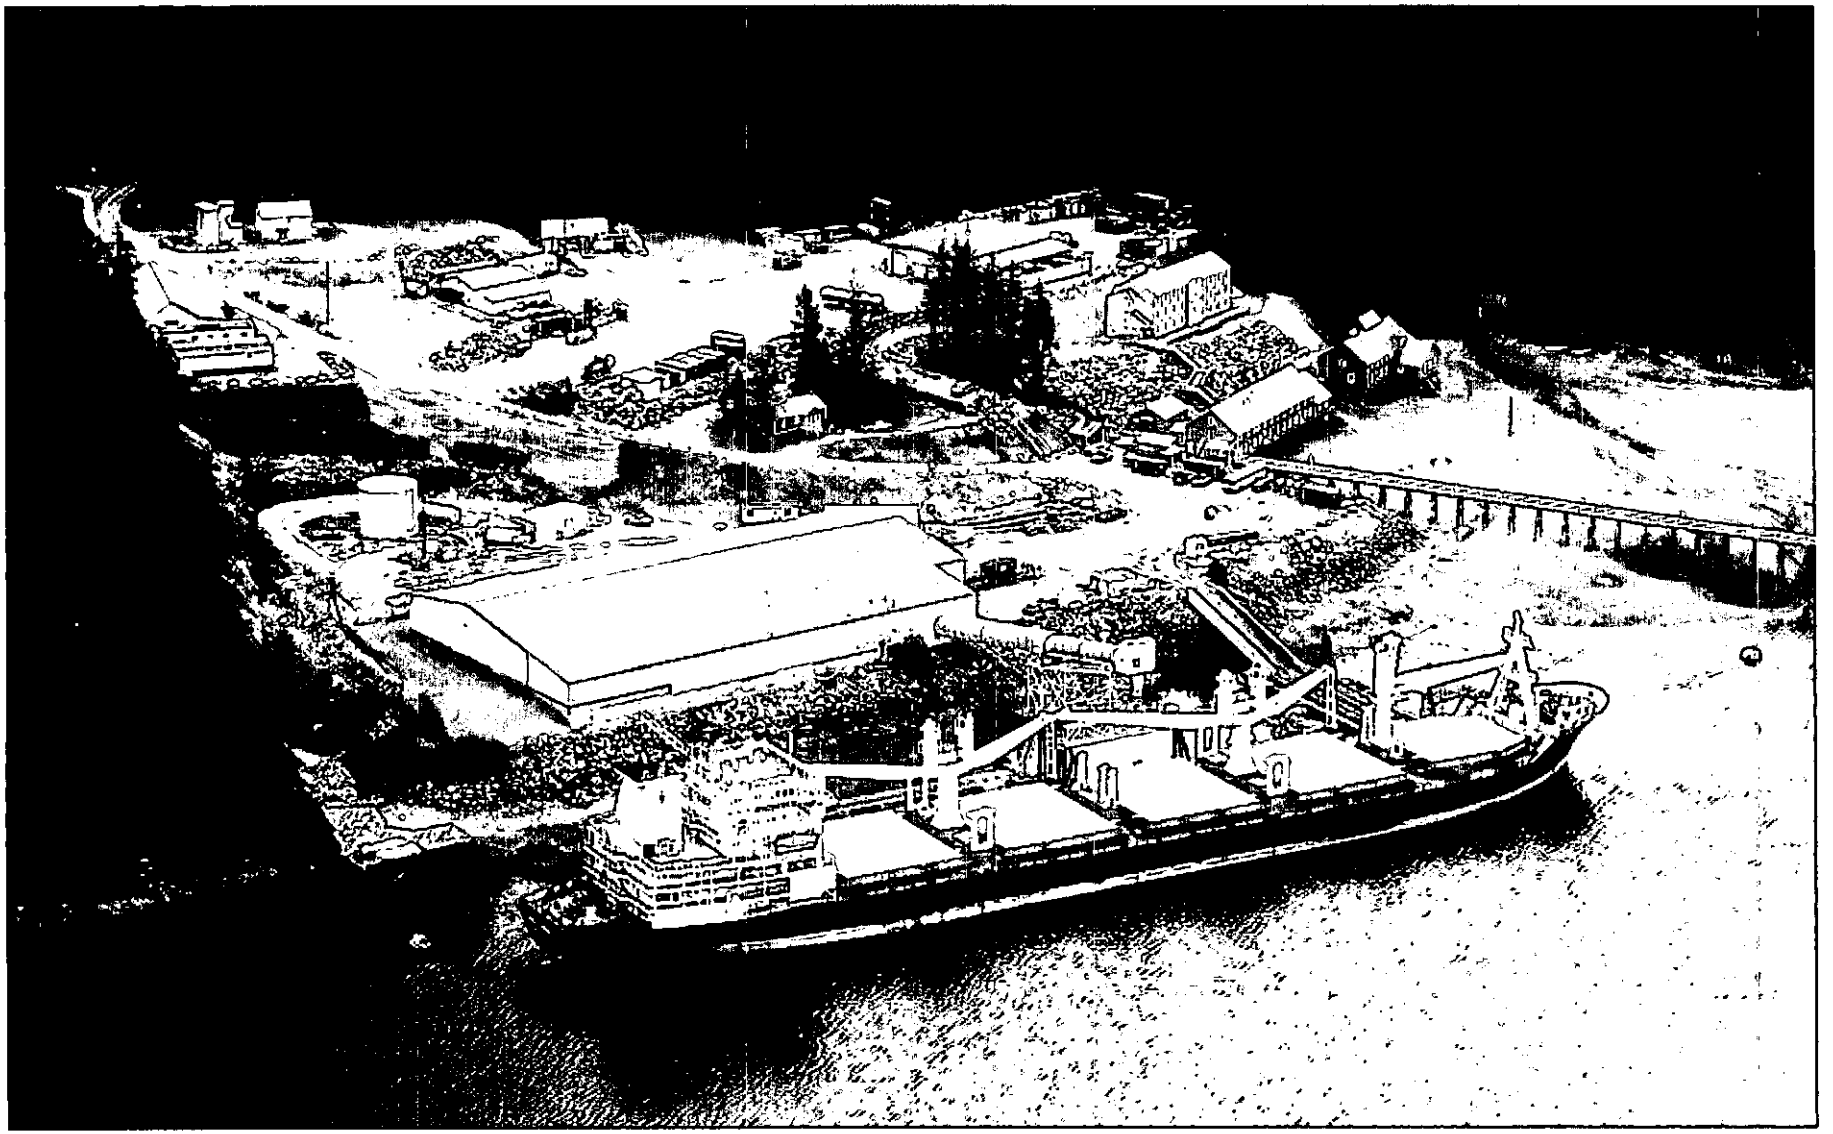
Greens Creek Mine

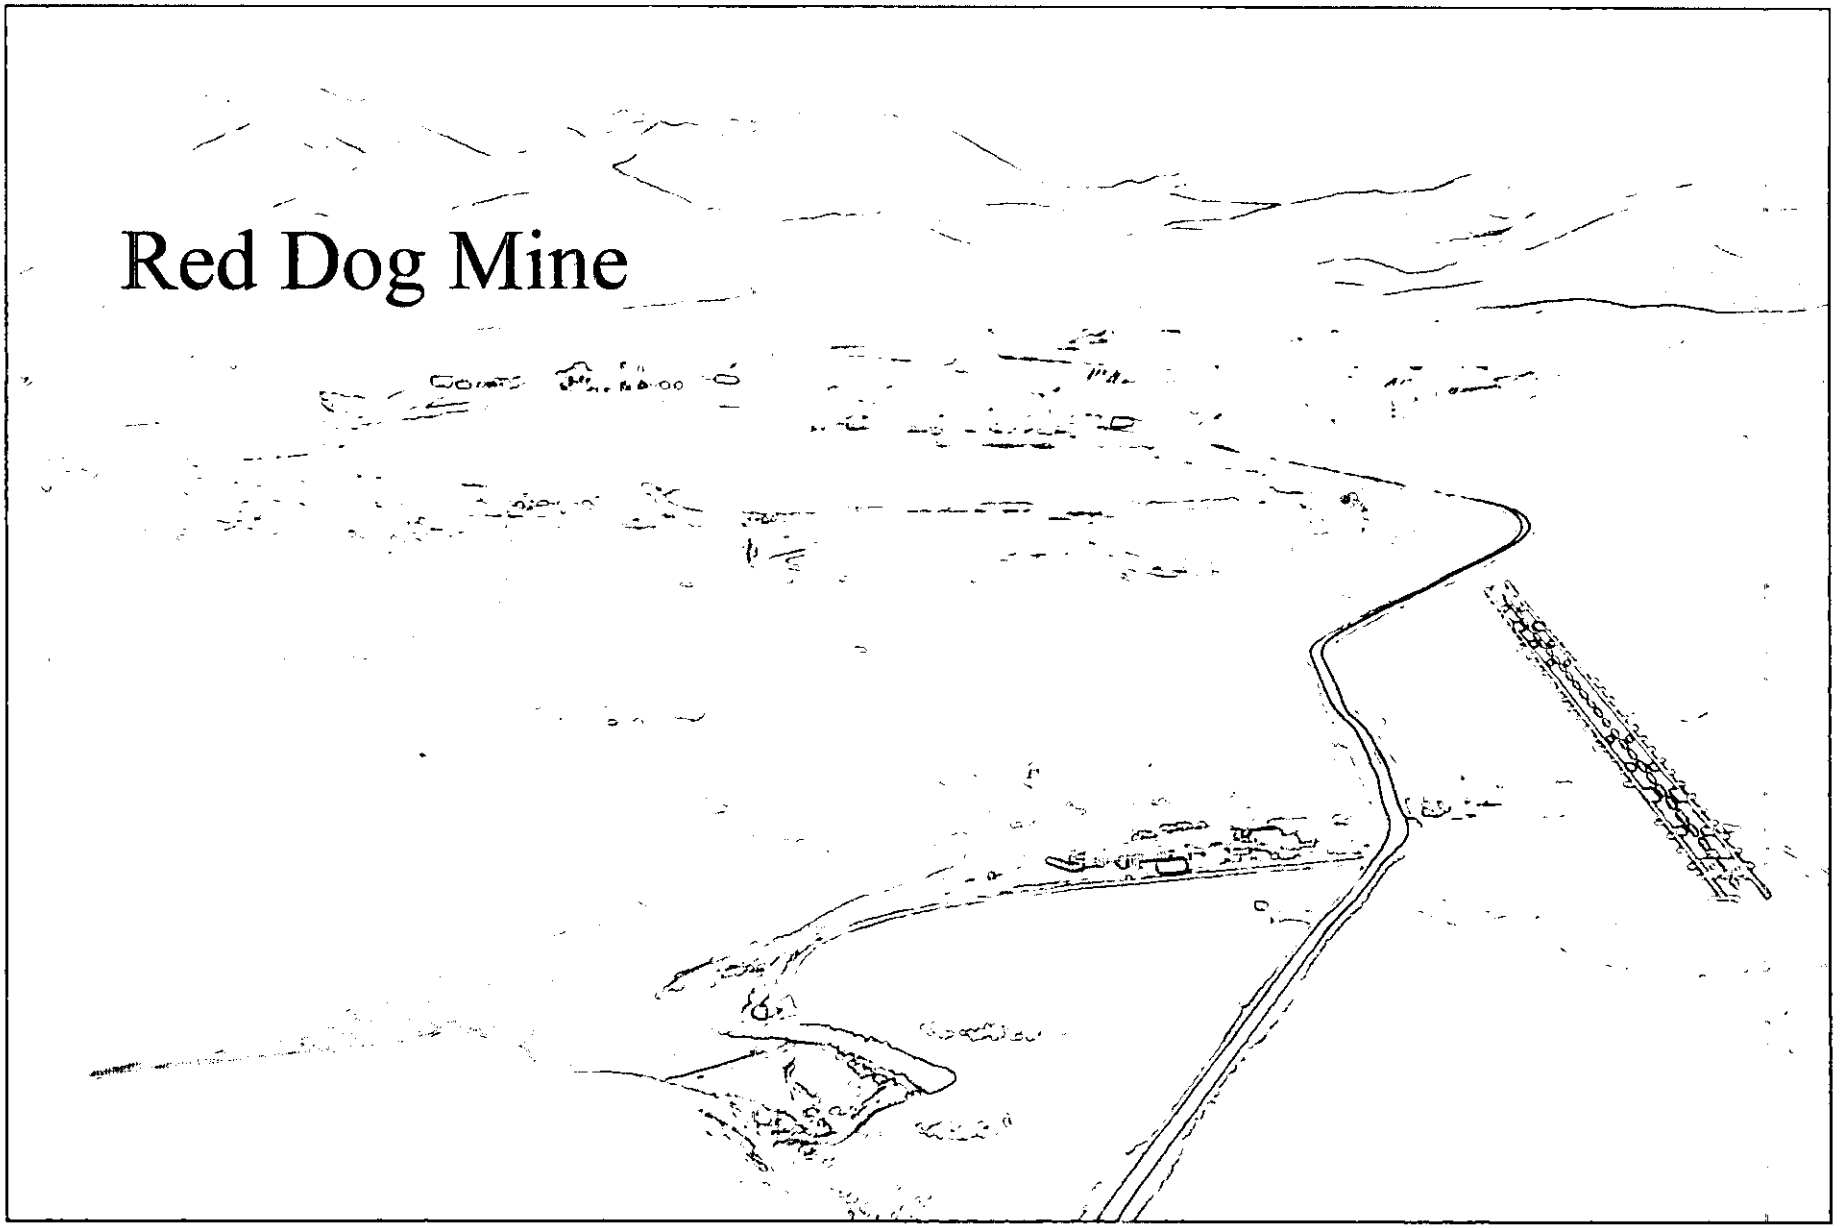


GREENS CREEK MINE ISOMETRIC



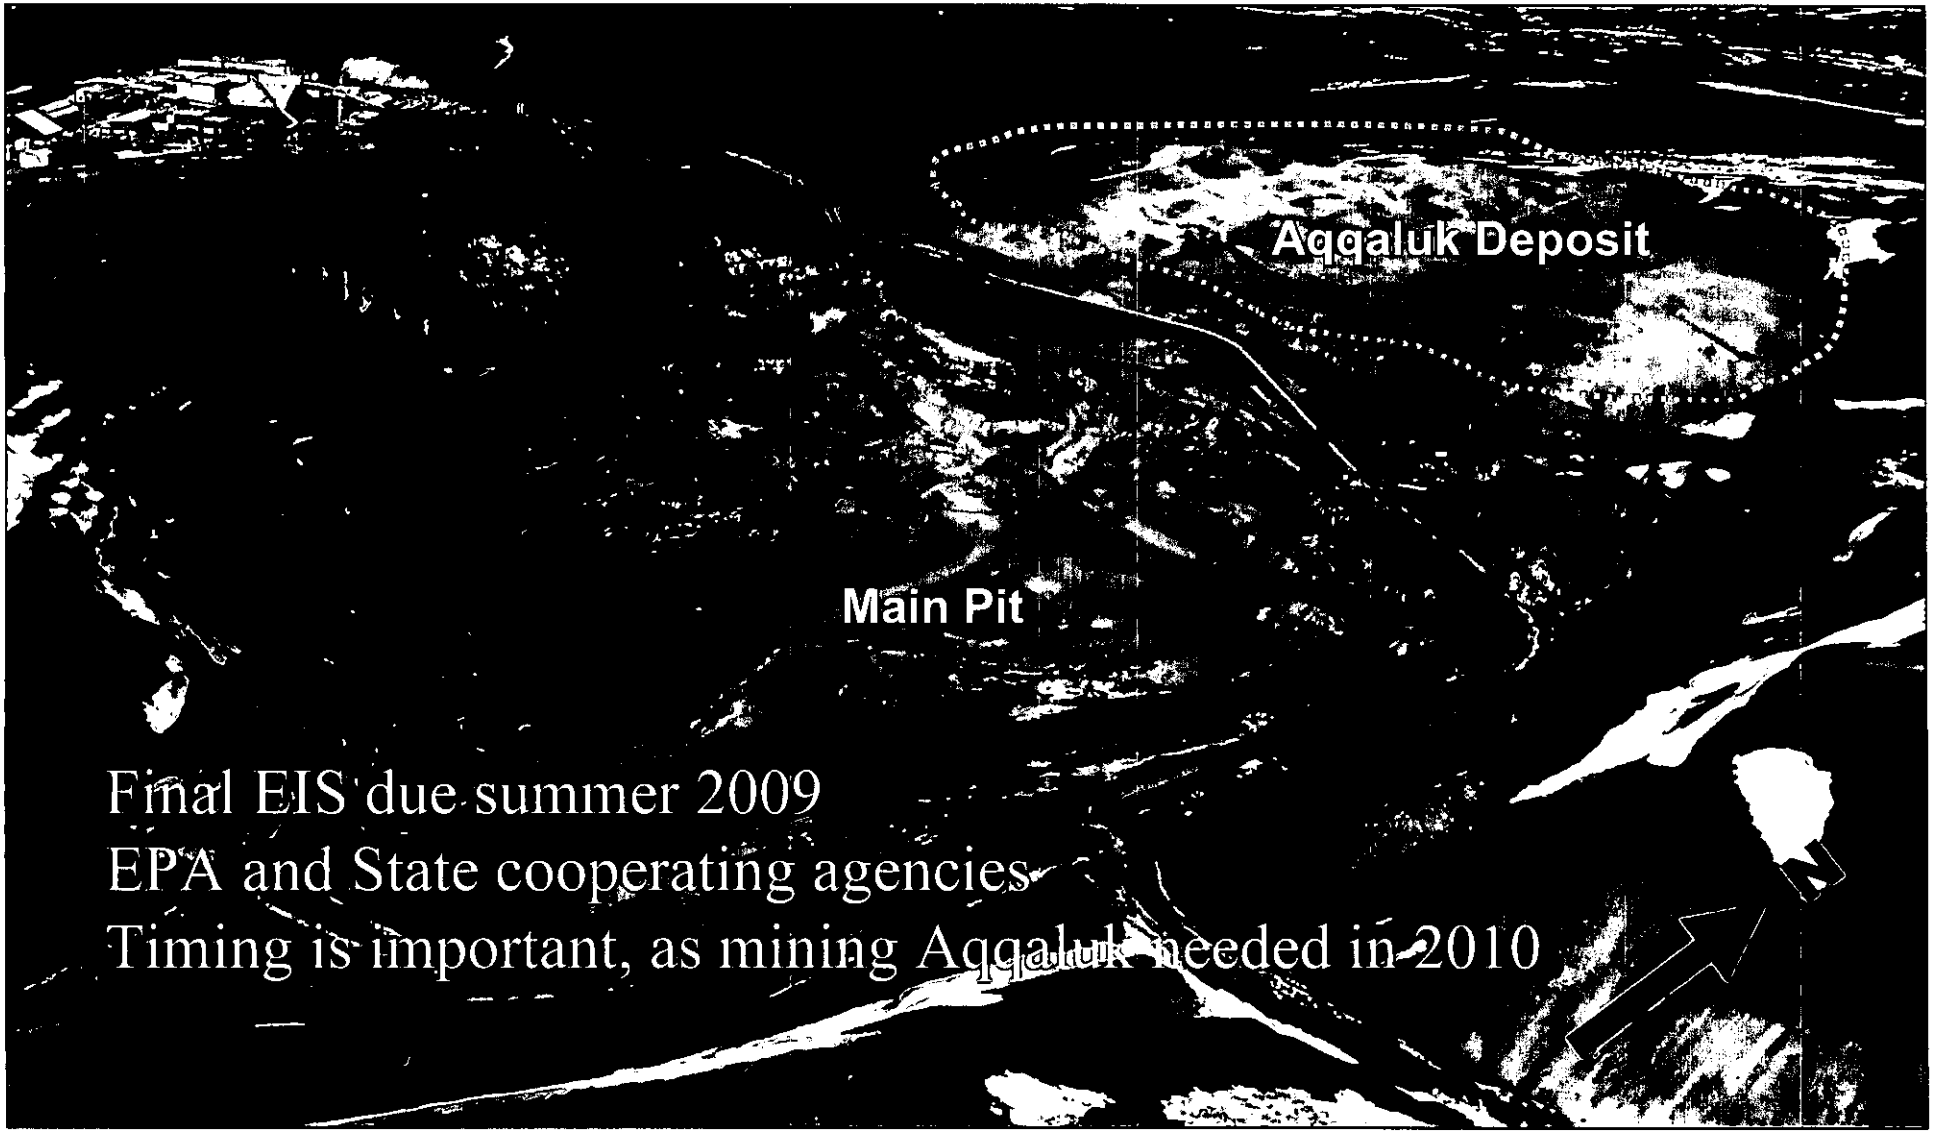
Greens Creek Ship Loading Facilities



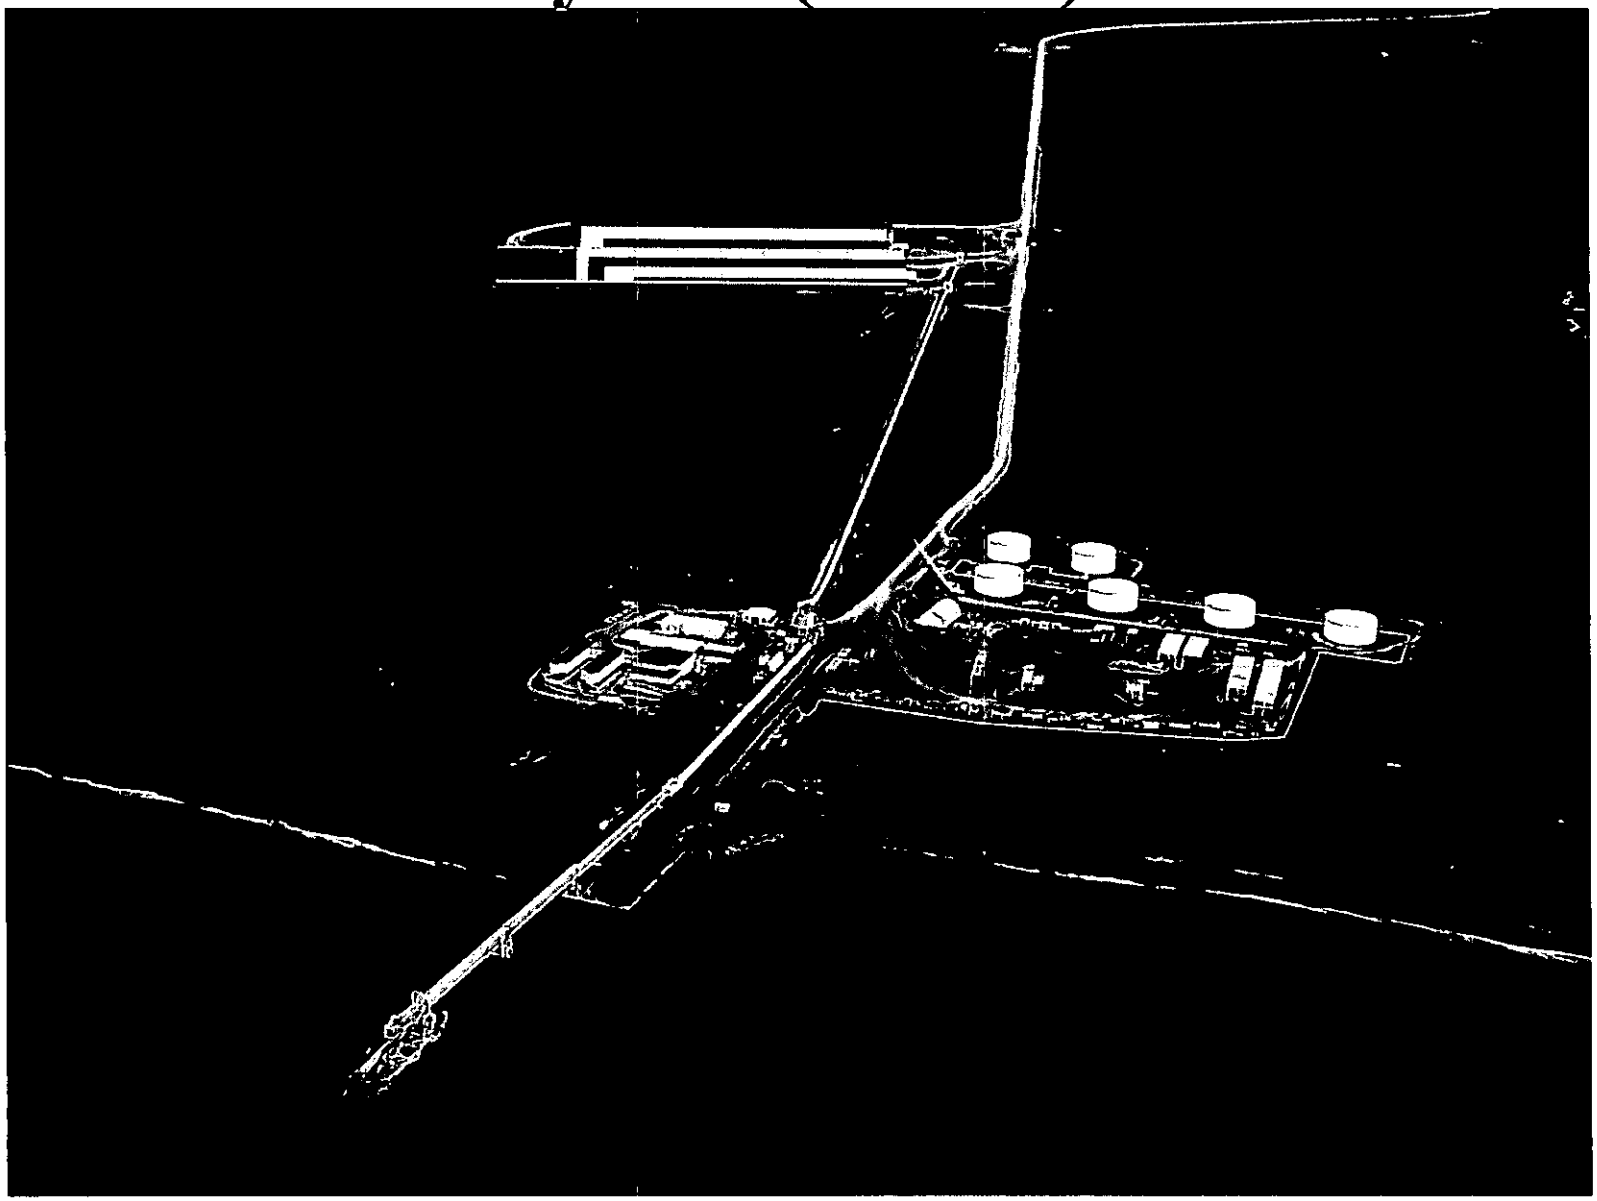


Red Dog Mine

Supplemental Environmental Impact Statement
EPA studying last 20 and next 20 years operations

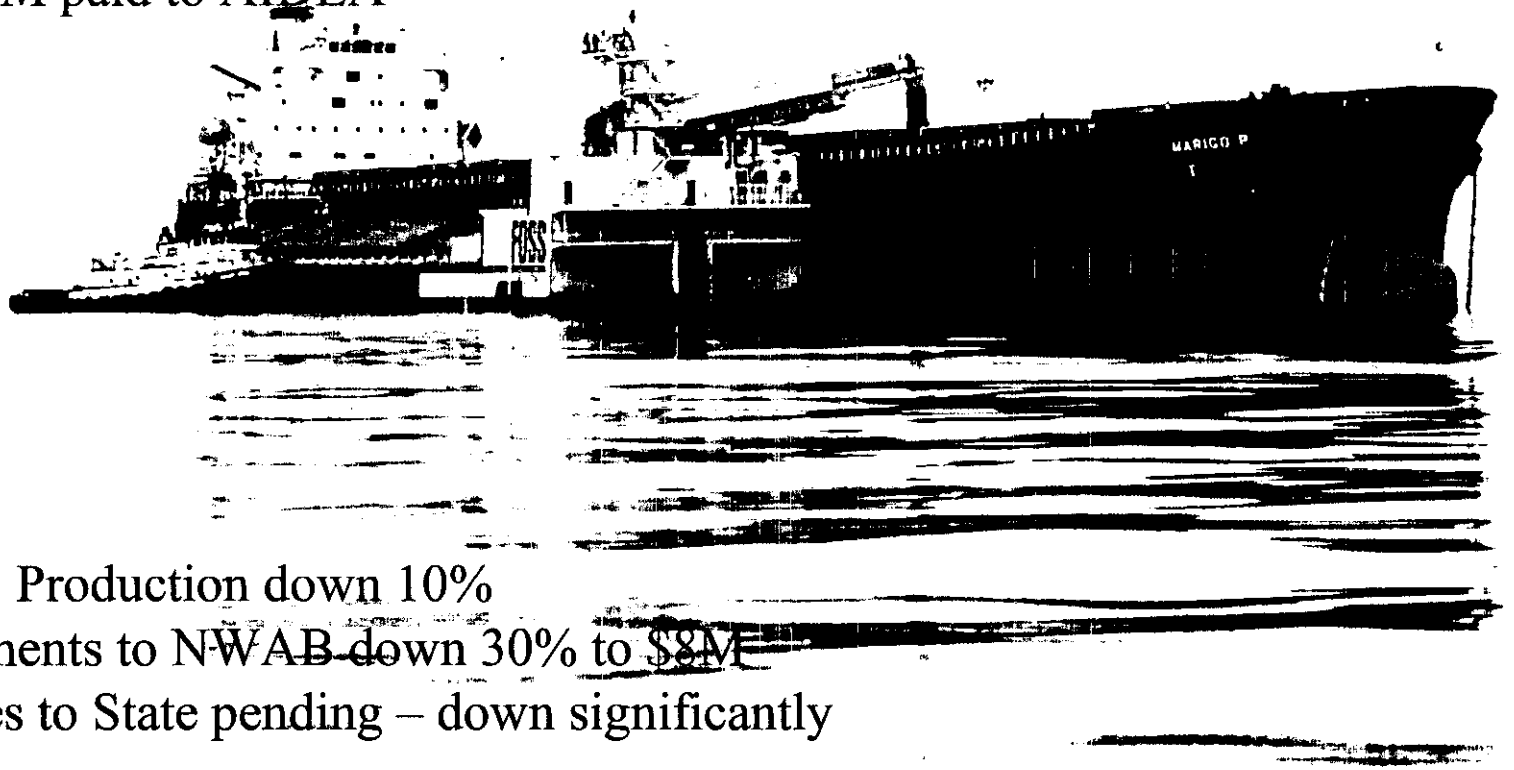


Red Dog Port Site – Delong Mts. Transportation System (DMTS)



Red Dog Statistics

- 485 employees and full time contractors, no layoffs expected
- Improvements in safety
- 57% NANA shareholder hire
- $50M annual mine wages & benefits
- $110M with NANA JV companies
- $10.8M spent to date on search for Natural Gas
- $22.5M paid to AIDEA



- 2008 Production down 10%
- Payments to NWAB down 30% to $8M
- Taxes to State pending – down significantly

2010 Winter Olympics

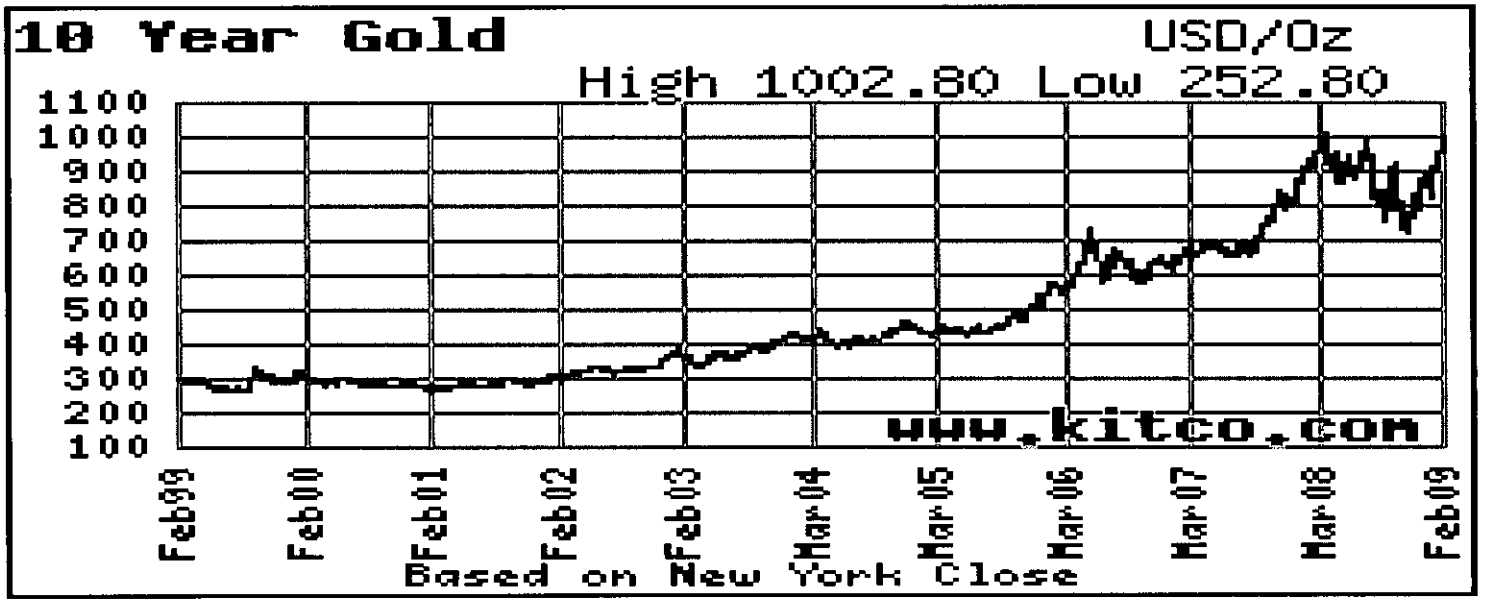
Precious Medals:
The Source of Inspiration

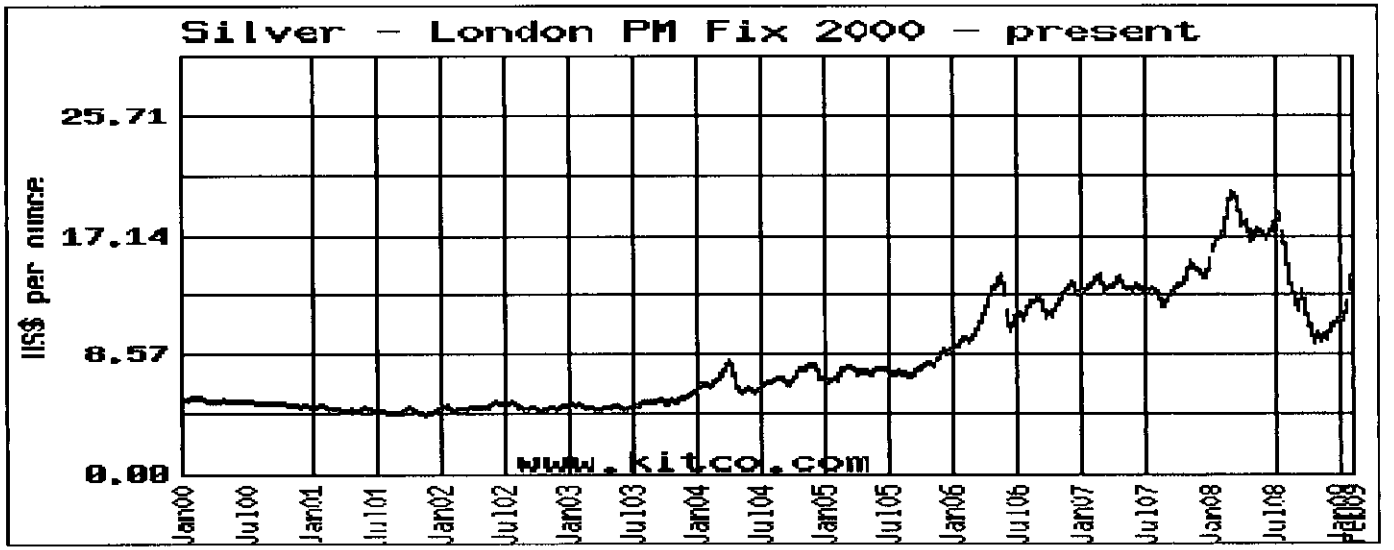
VANCOUVER 2010

teckcominco

OFFICIAL SUPPORTER

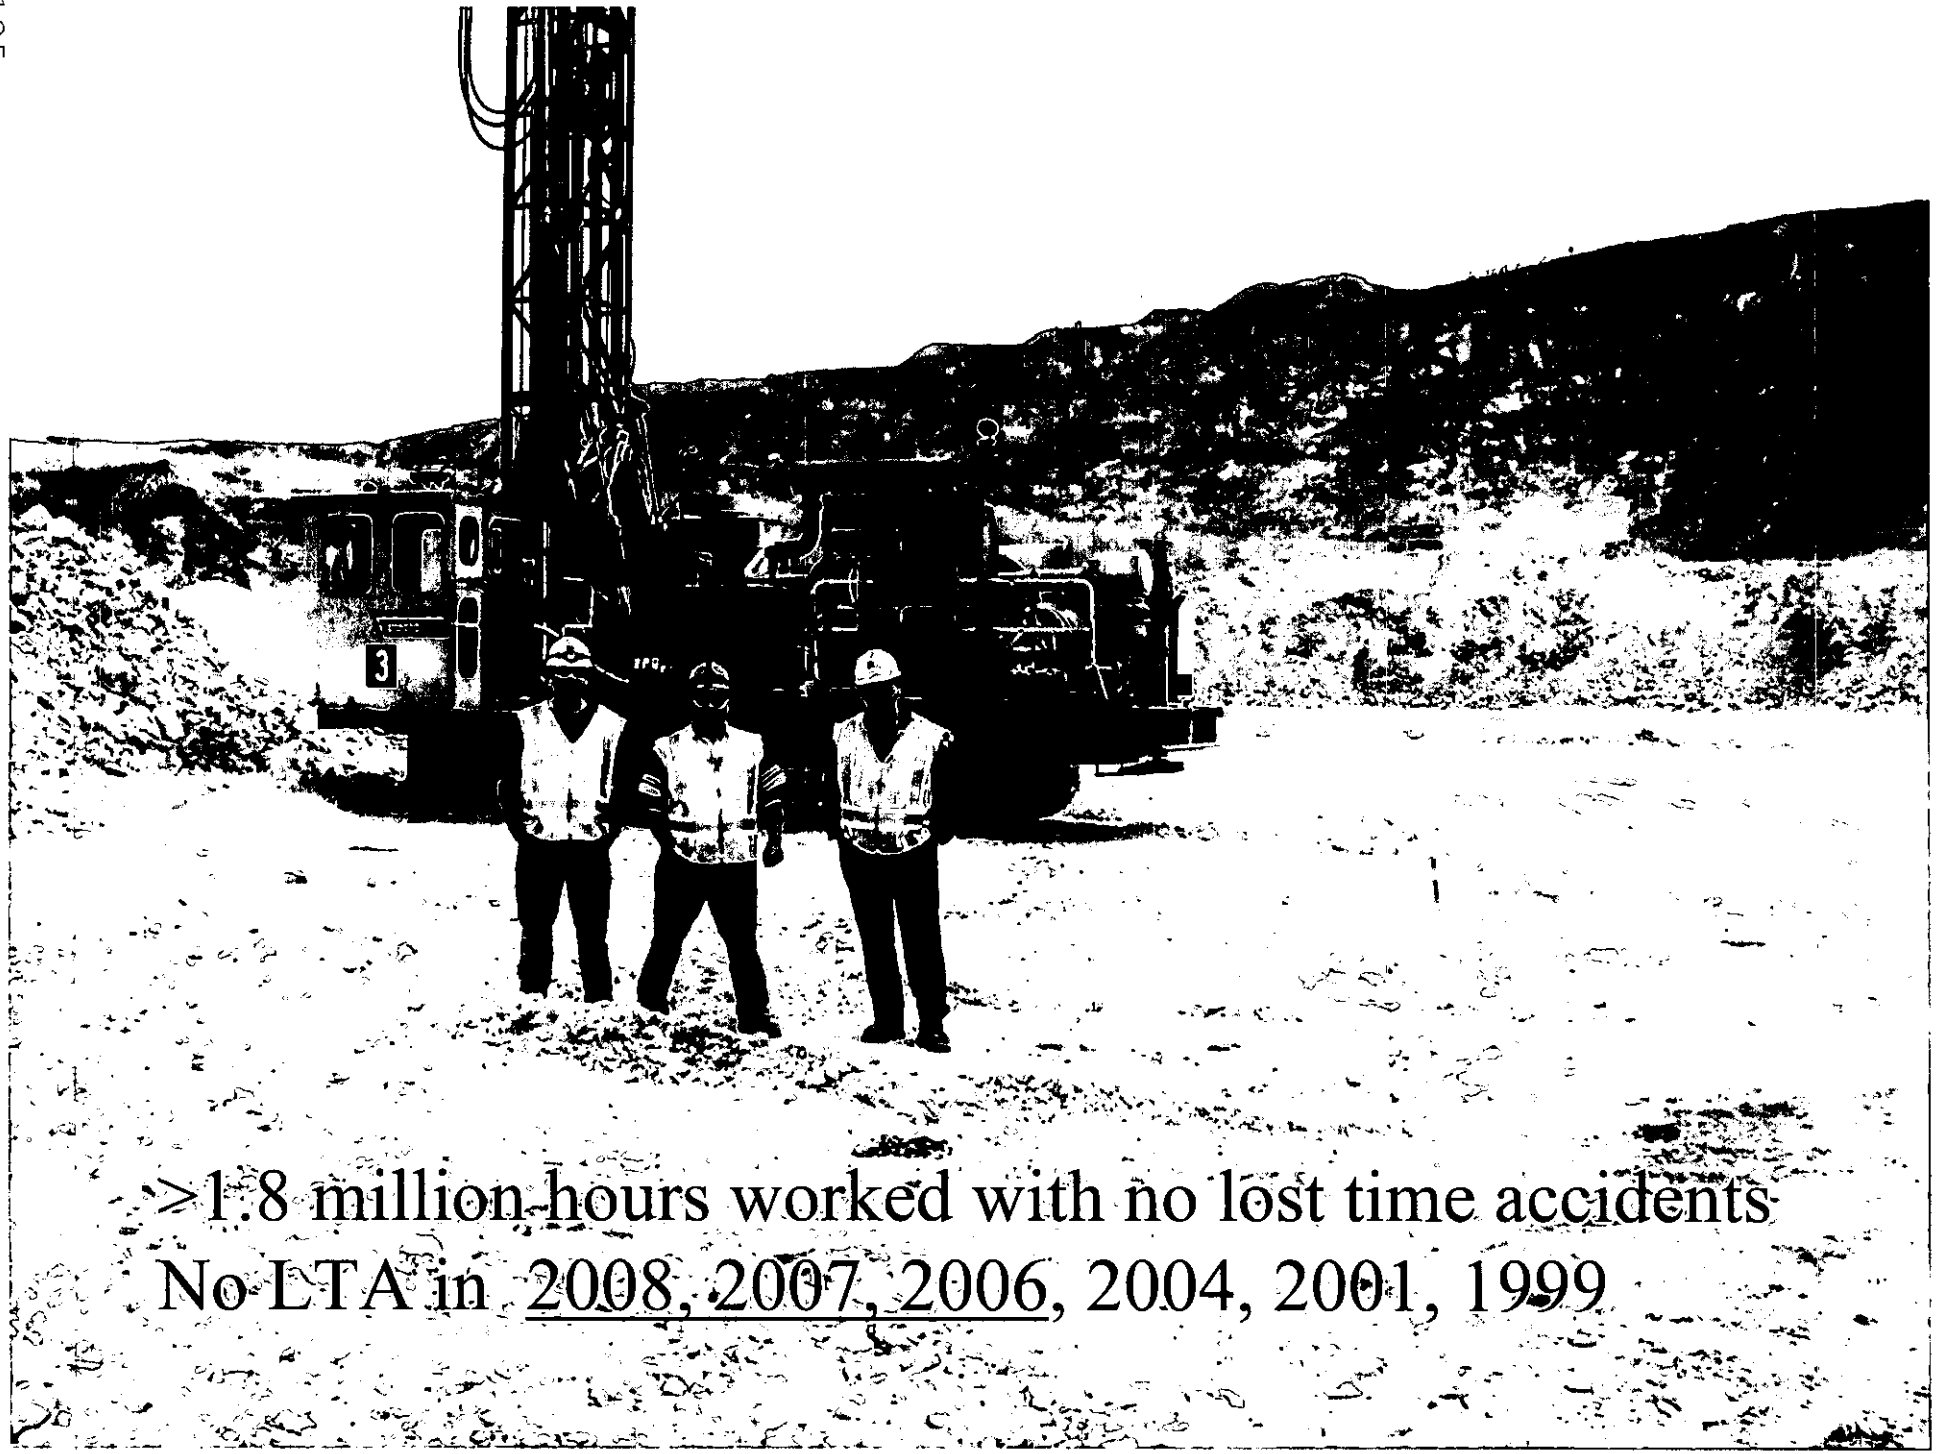
Gold & Silver Prices for Past 10 years





Fort Knox Statistics 2008

- 450 employees + 30 full time contractors
- $38M annual wages & benefits
- $28M/yr for electricity
- $15M/yr for fuel



>1.8 million hours worked with no lost time accidents

No LTA in 2008, 2007, 2006, 2004, 2001, 1999

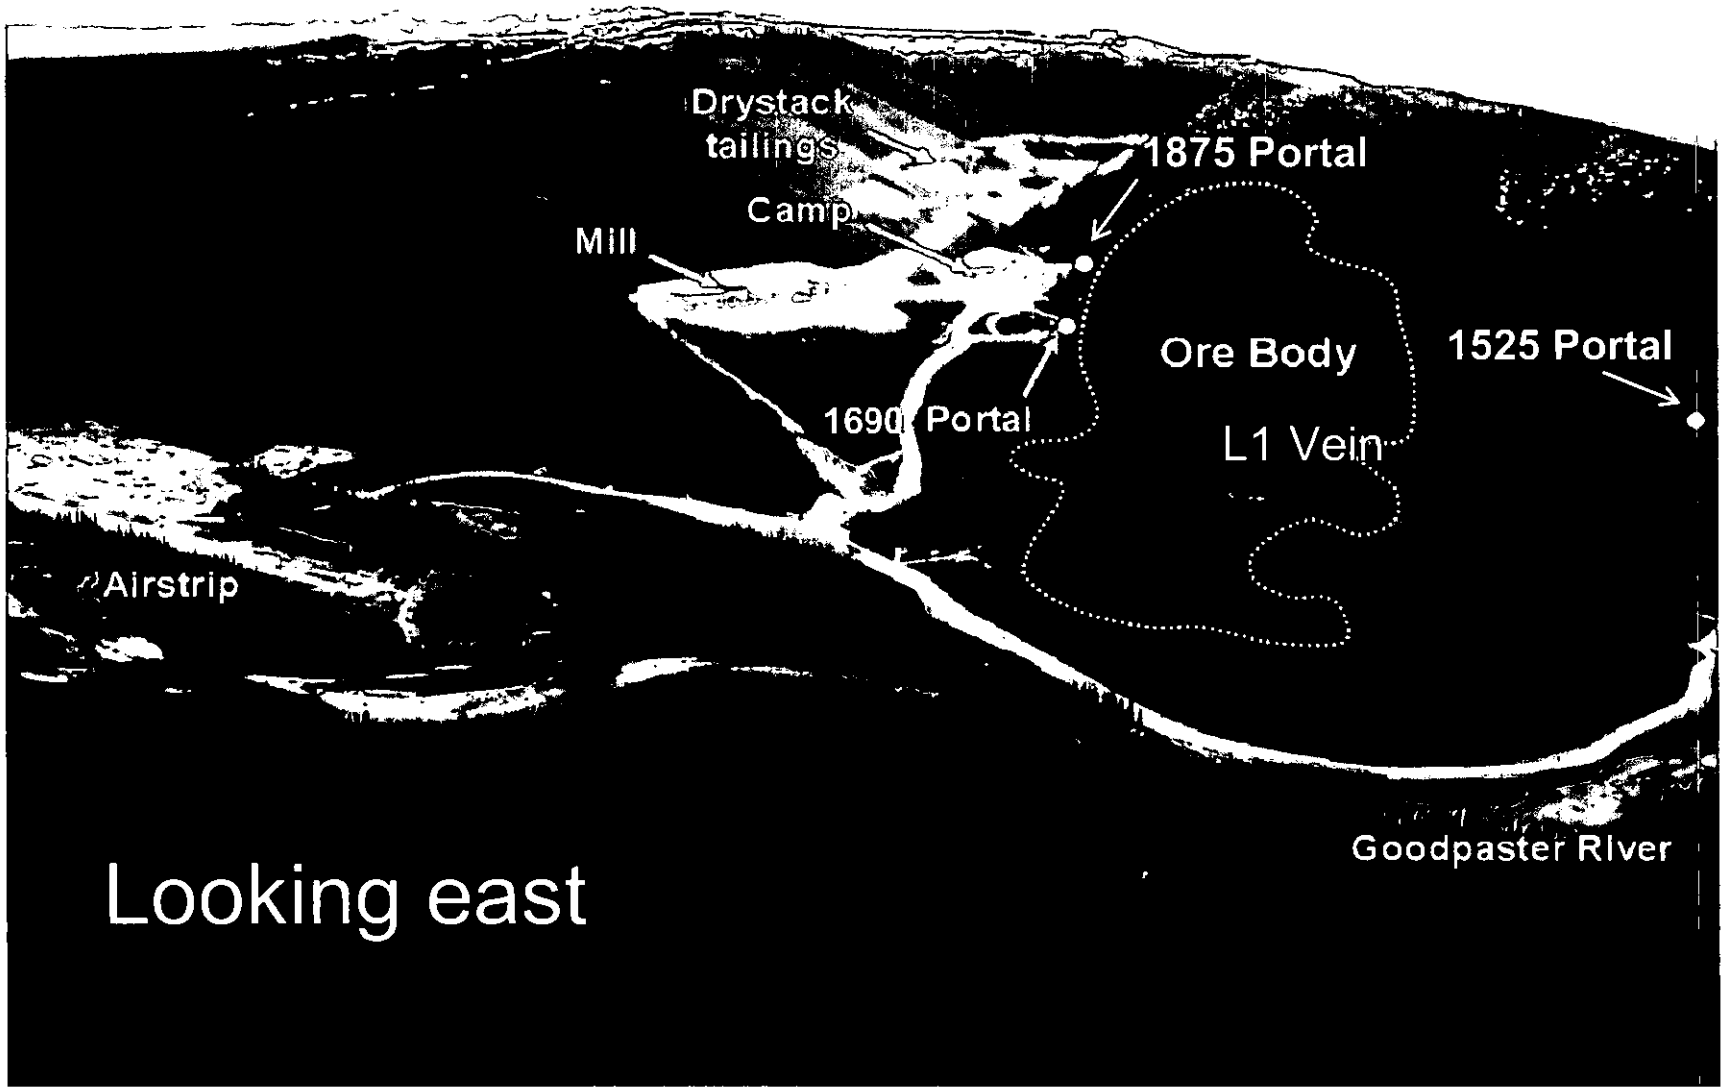
KINROSS

Fort Knox Mine

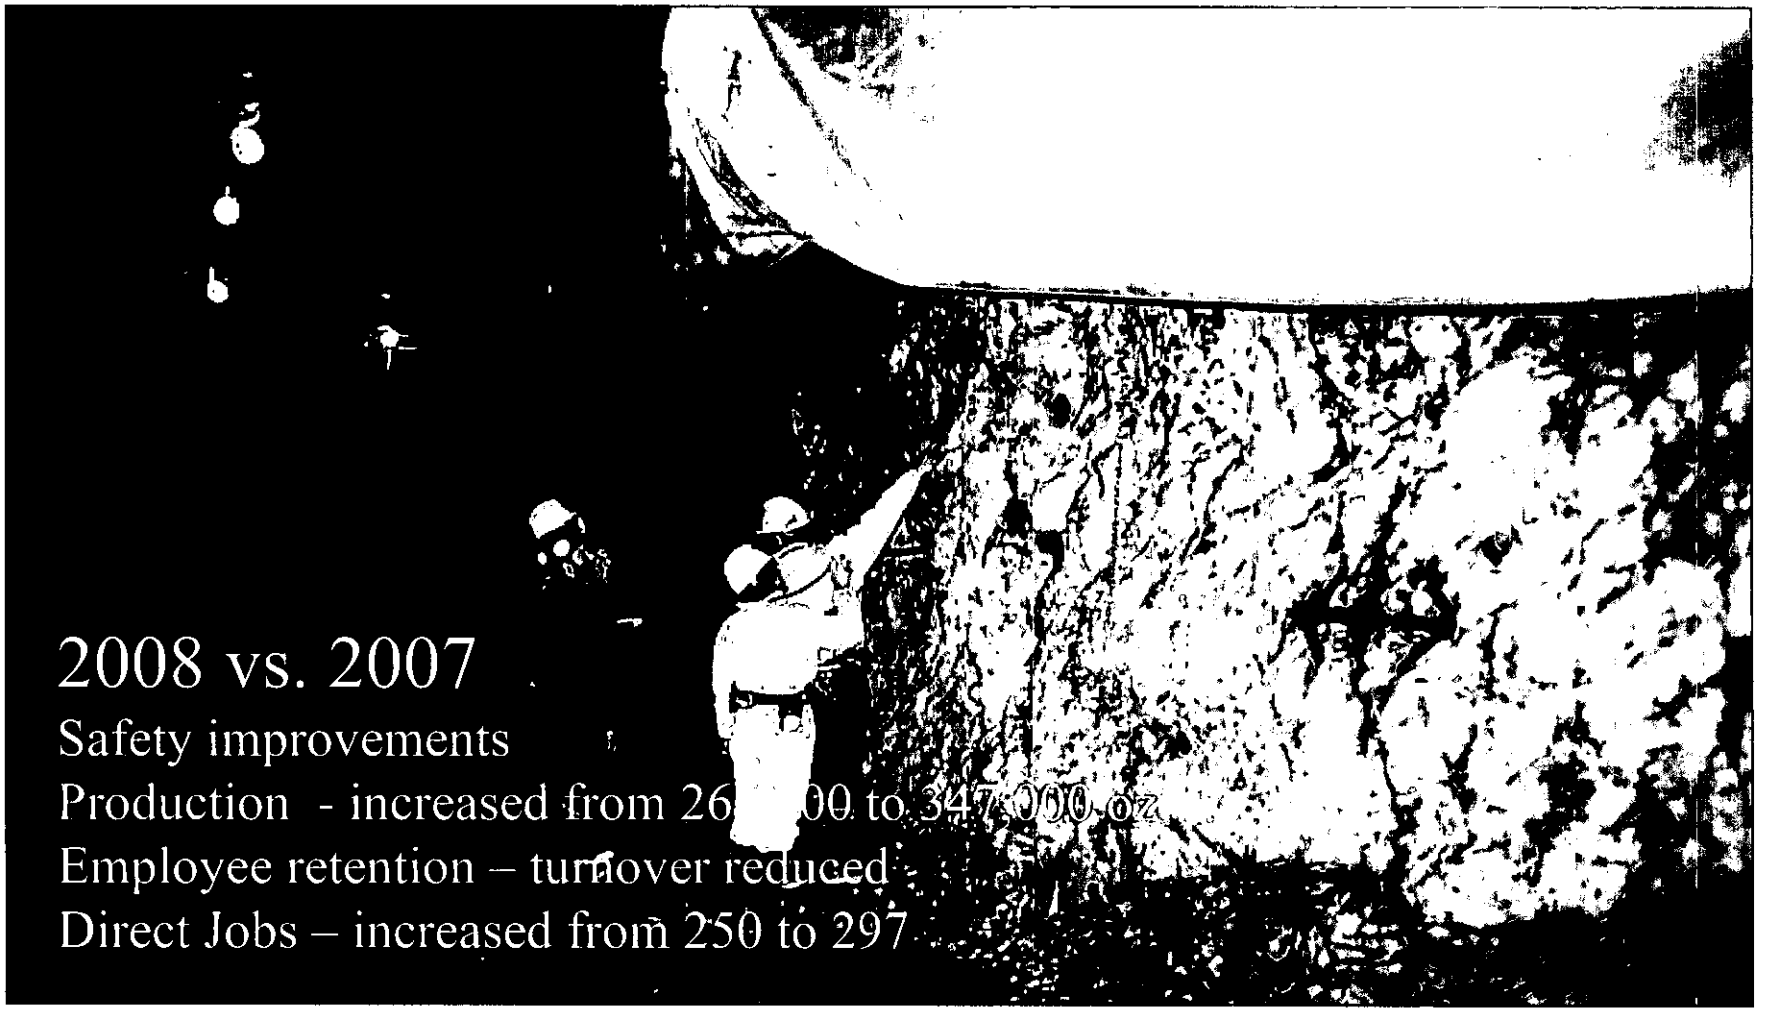
2009 Status and Plans

- Production: Approx 330,000 oz
- Heap leach facility under construction
- Phase 7 pit expansion – began Oct. 2008
- Continue exploration/drilling for potential Phase 8
- Mine life extended to 2014

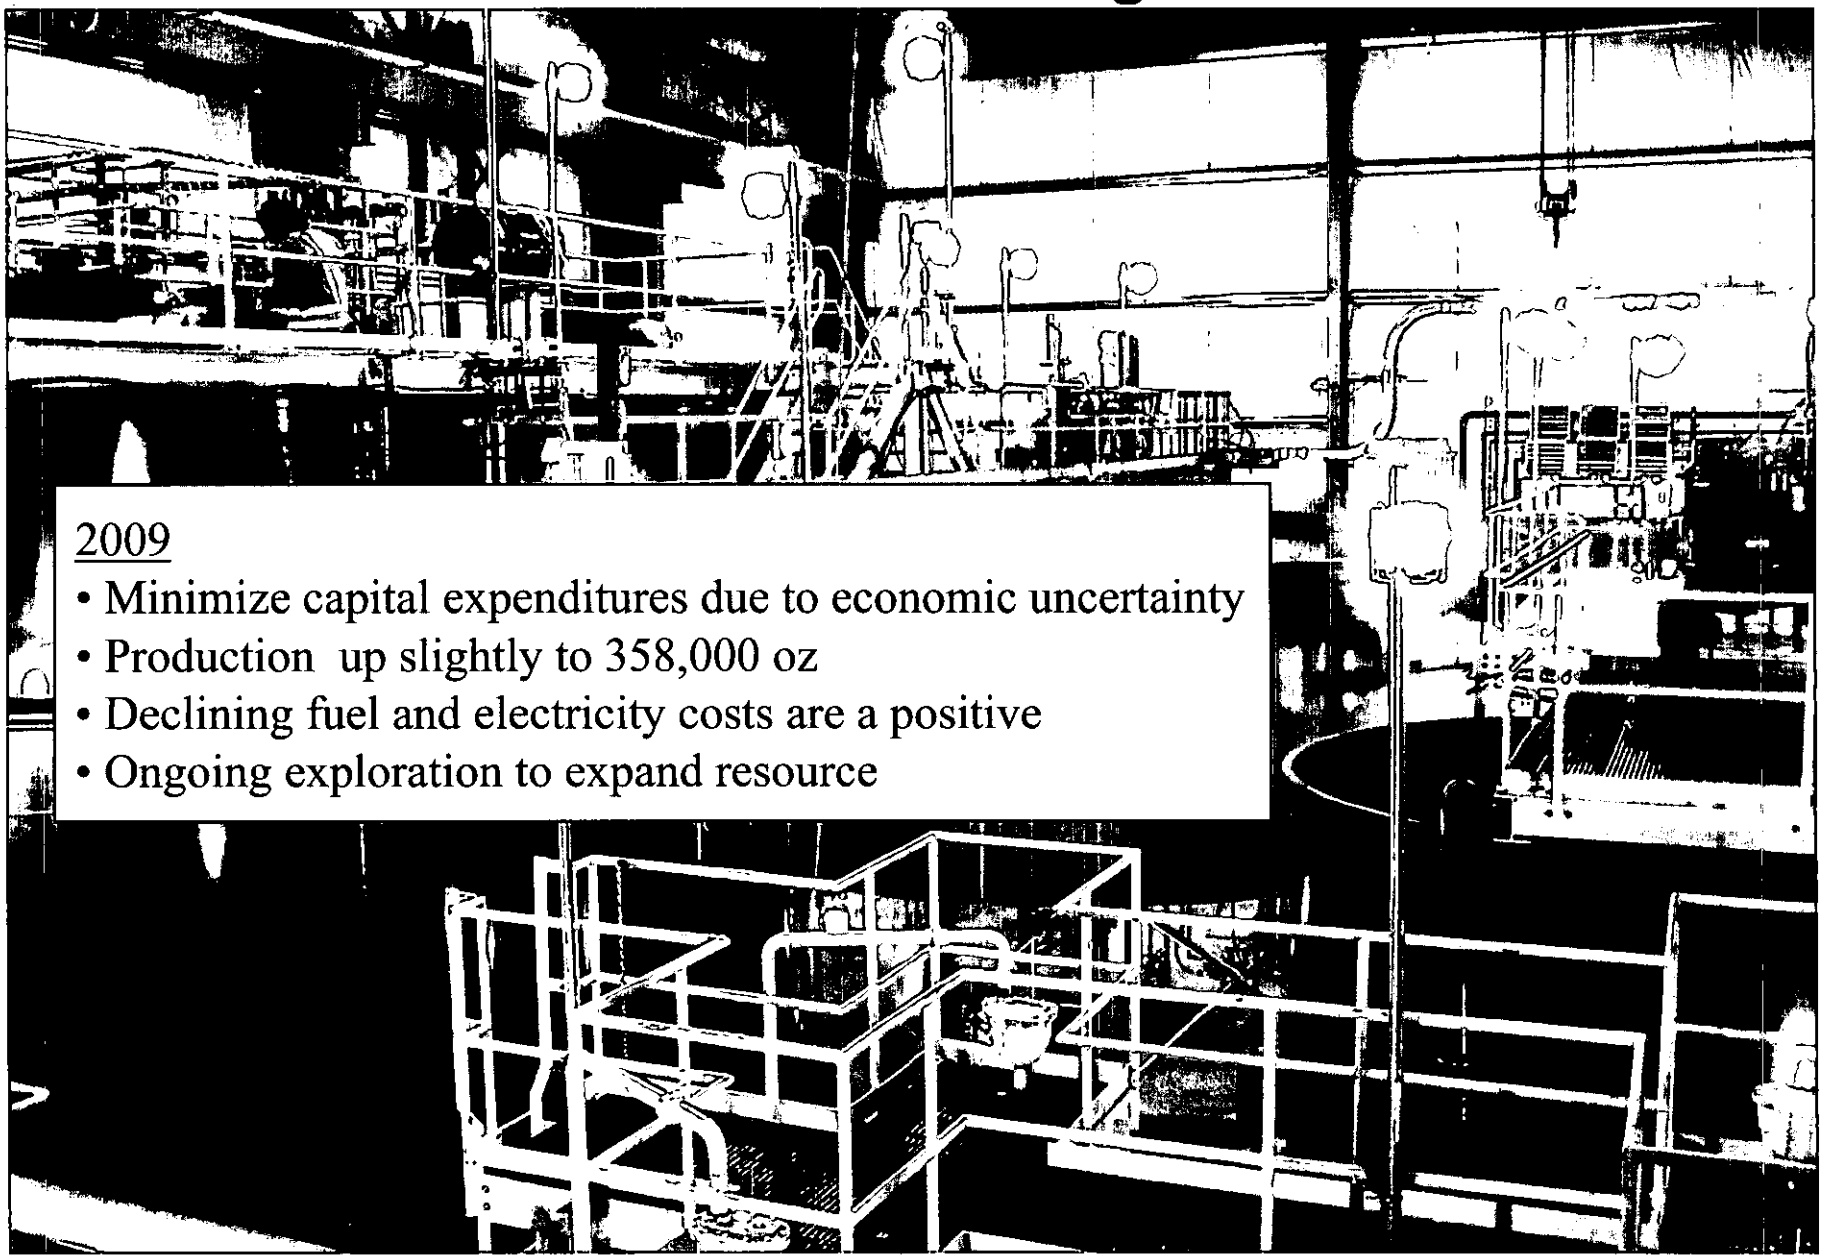
Pogo Surface Facilities & Underground Orebody



Pogo 2008 Highlights
Major Operational Improvements



Pogo Water Treatment Plant treats mine water before discharge



2009

- Minimize capital expenditures due to economic uncertainty
- Production up slightly to 358,000 oz
- Declining fuel and electricity costs are a positive
- Ongoing exploration to expand resource

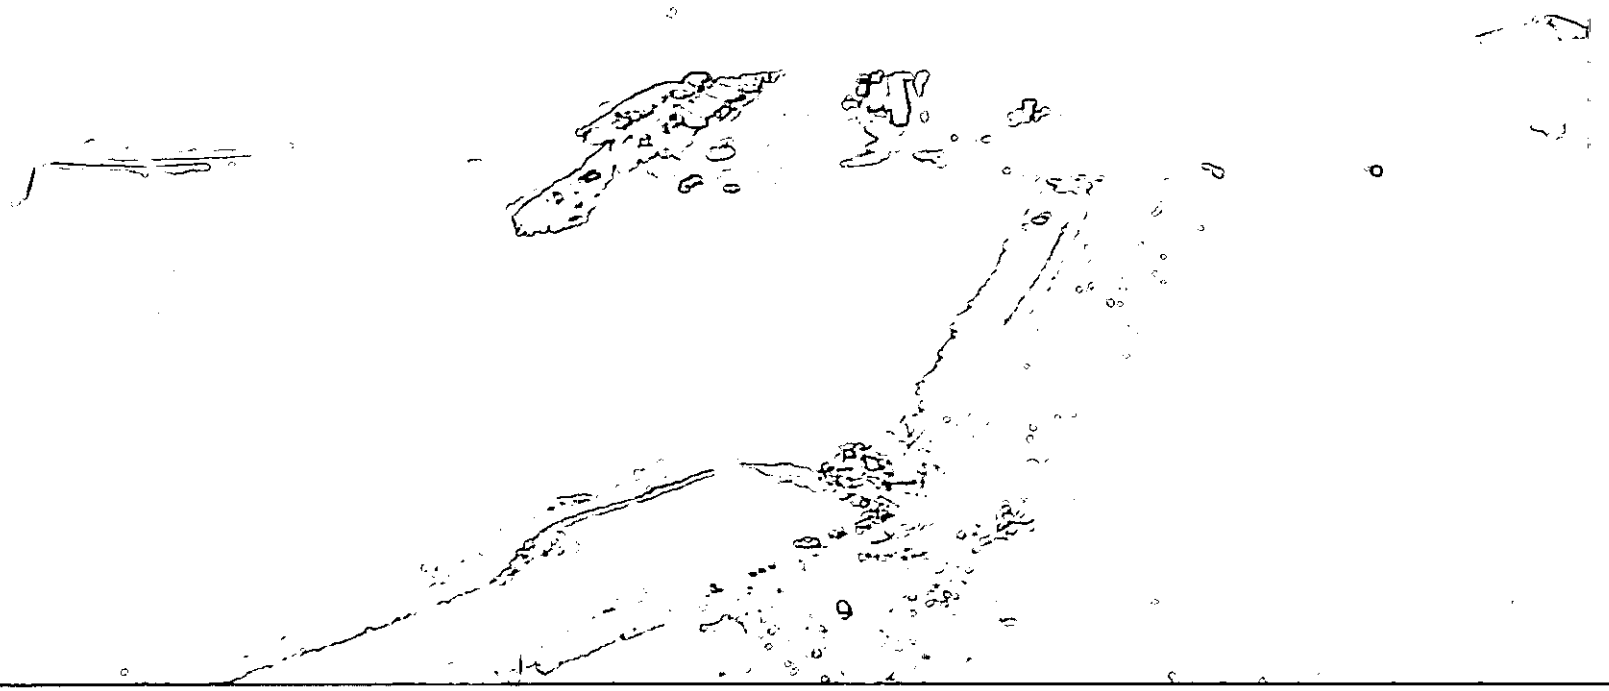
Mines Currently in Idle Status

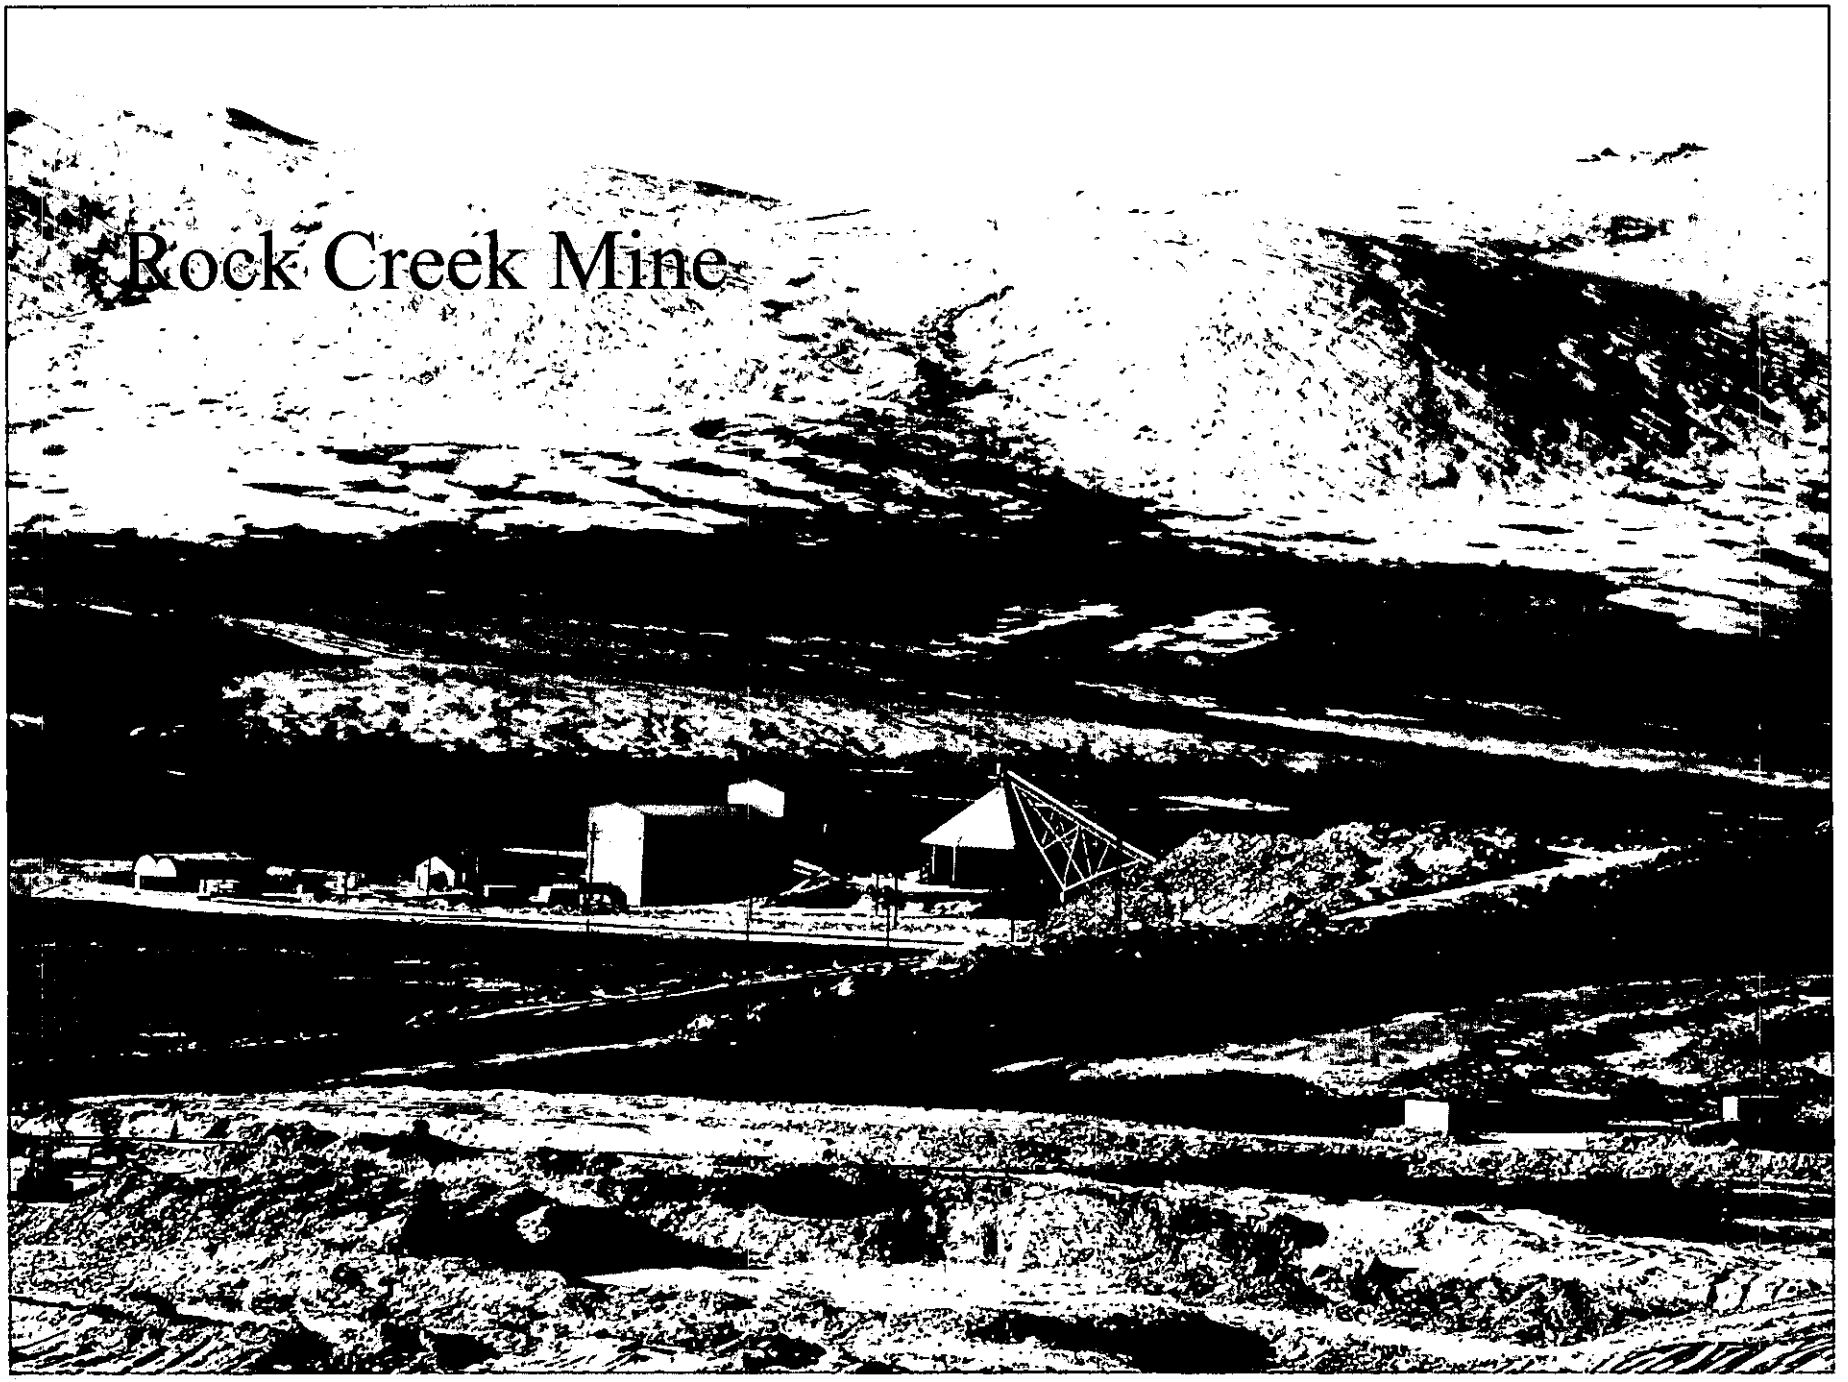
1.	Nixon Fork	Pacific North West Capital
2.	Rock Creek	Alaska Gold/NovaGold
3.	Kensington	Coeur Alaska

Nixon Fork Mine

2009

- Purchased by Pacific North West Capital
- Work plan being developed
- Next production planned in 2 years

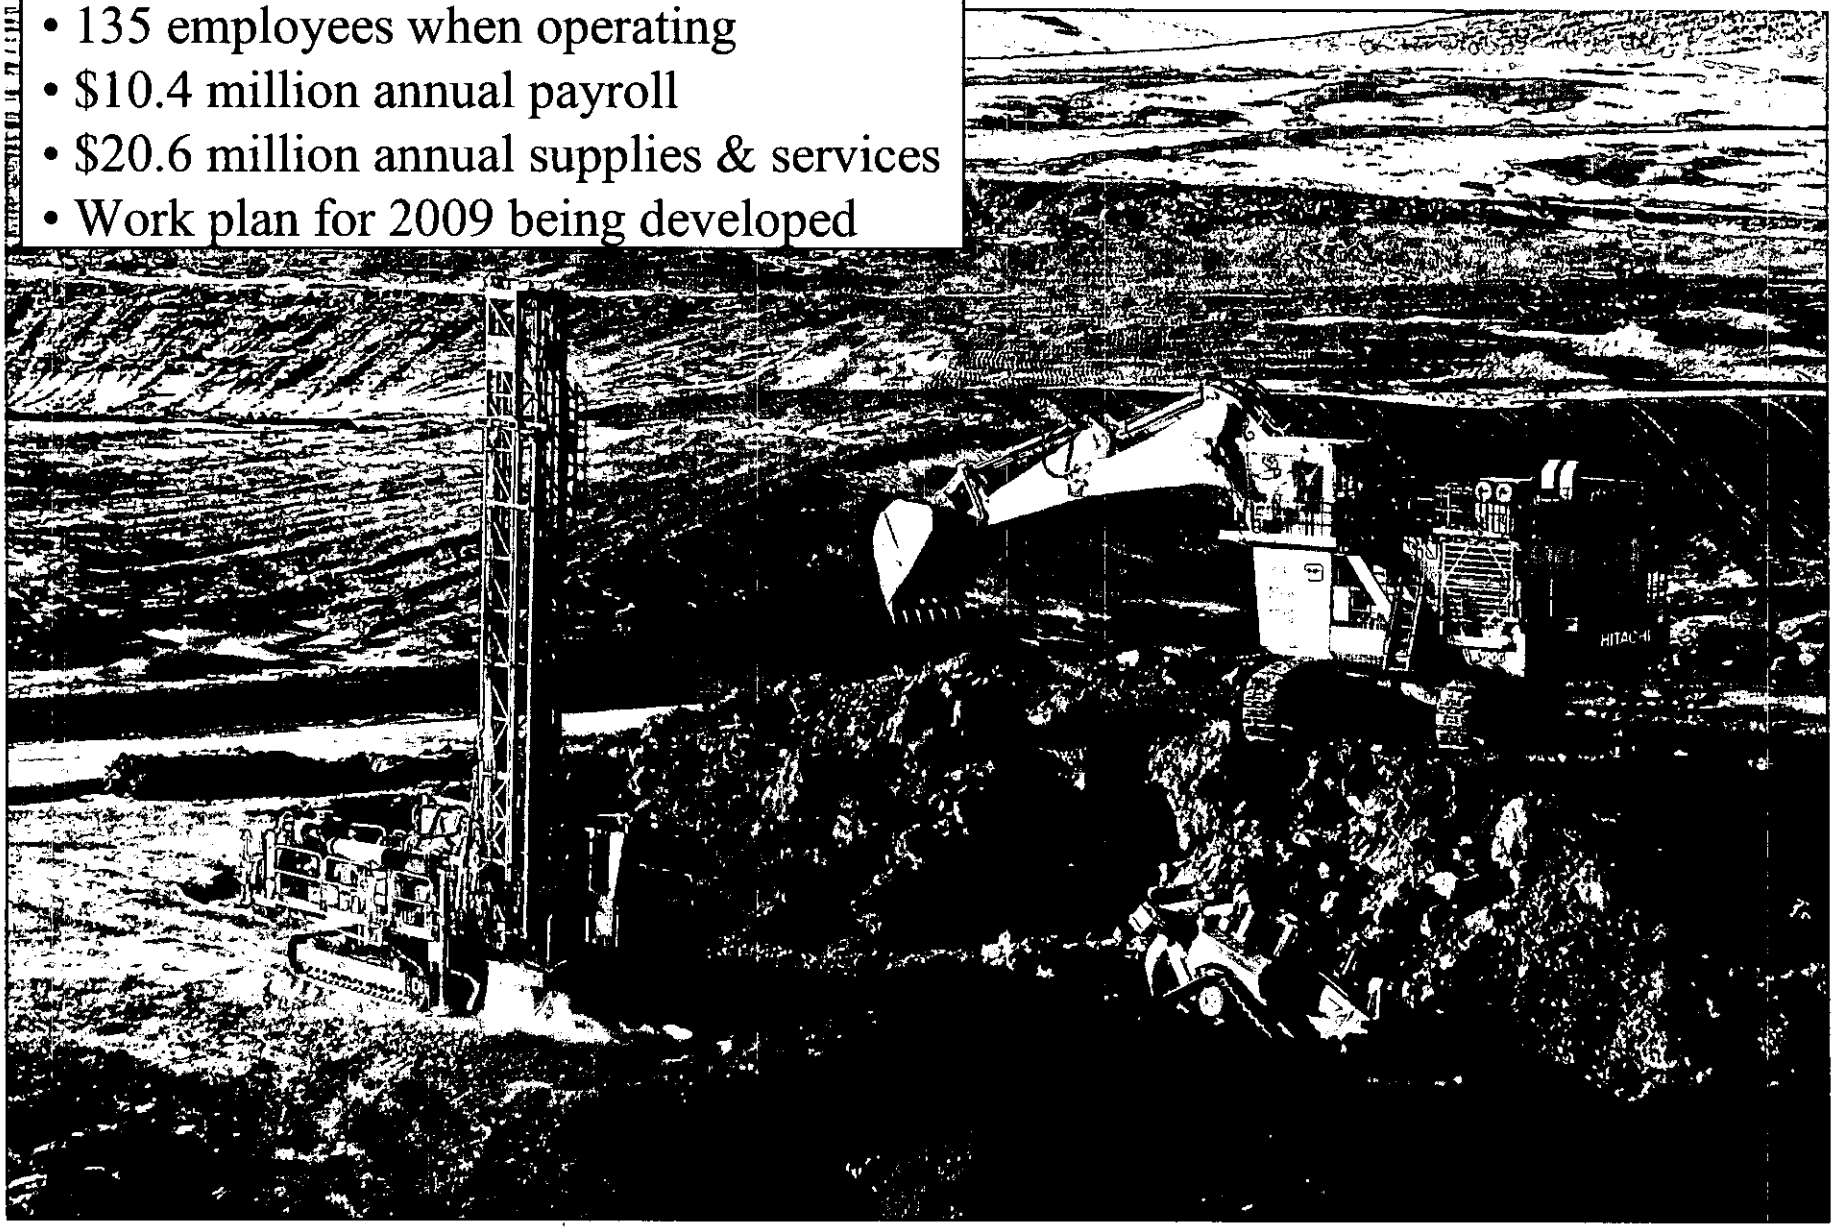


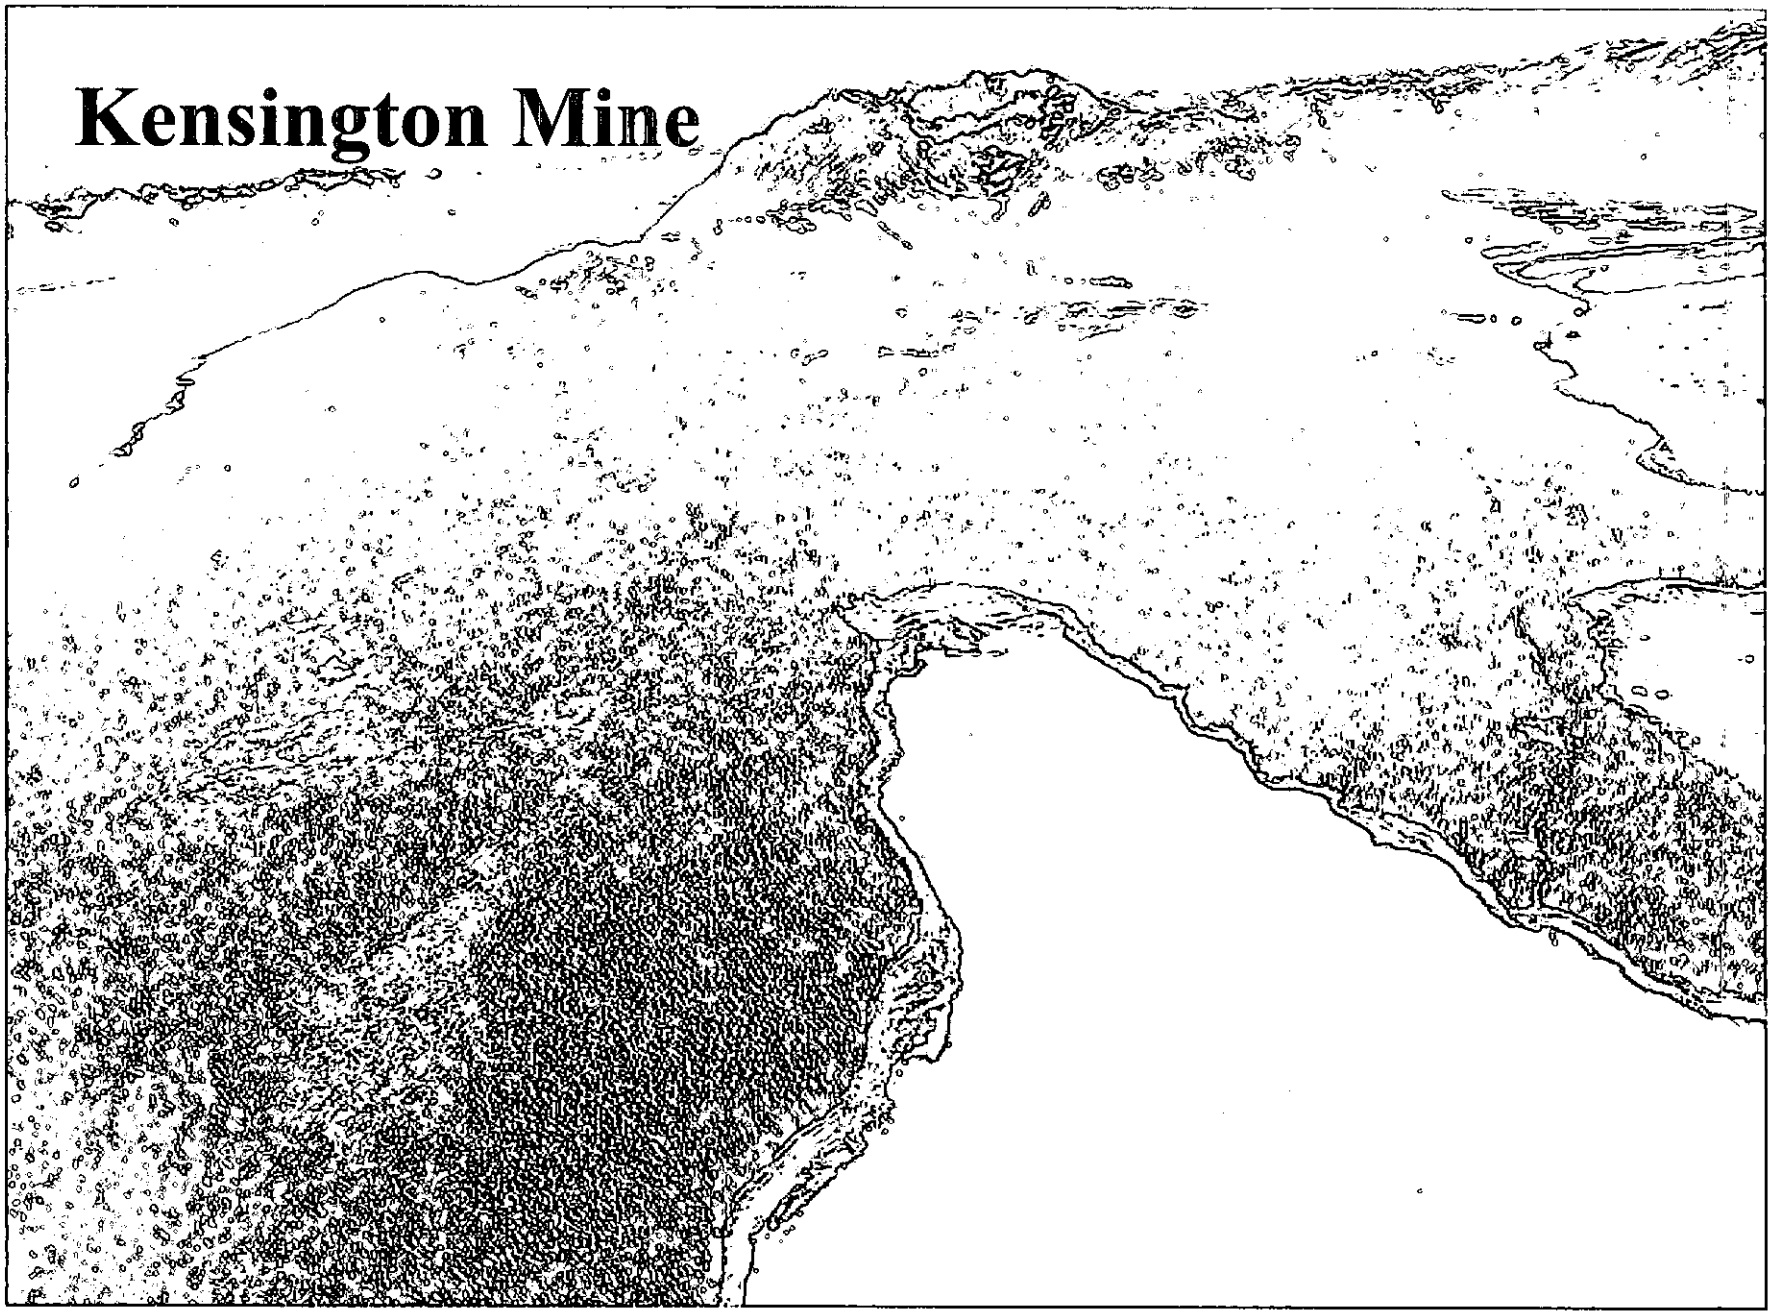


Rock Creek Mine

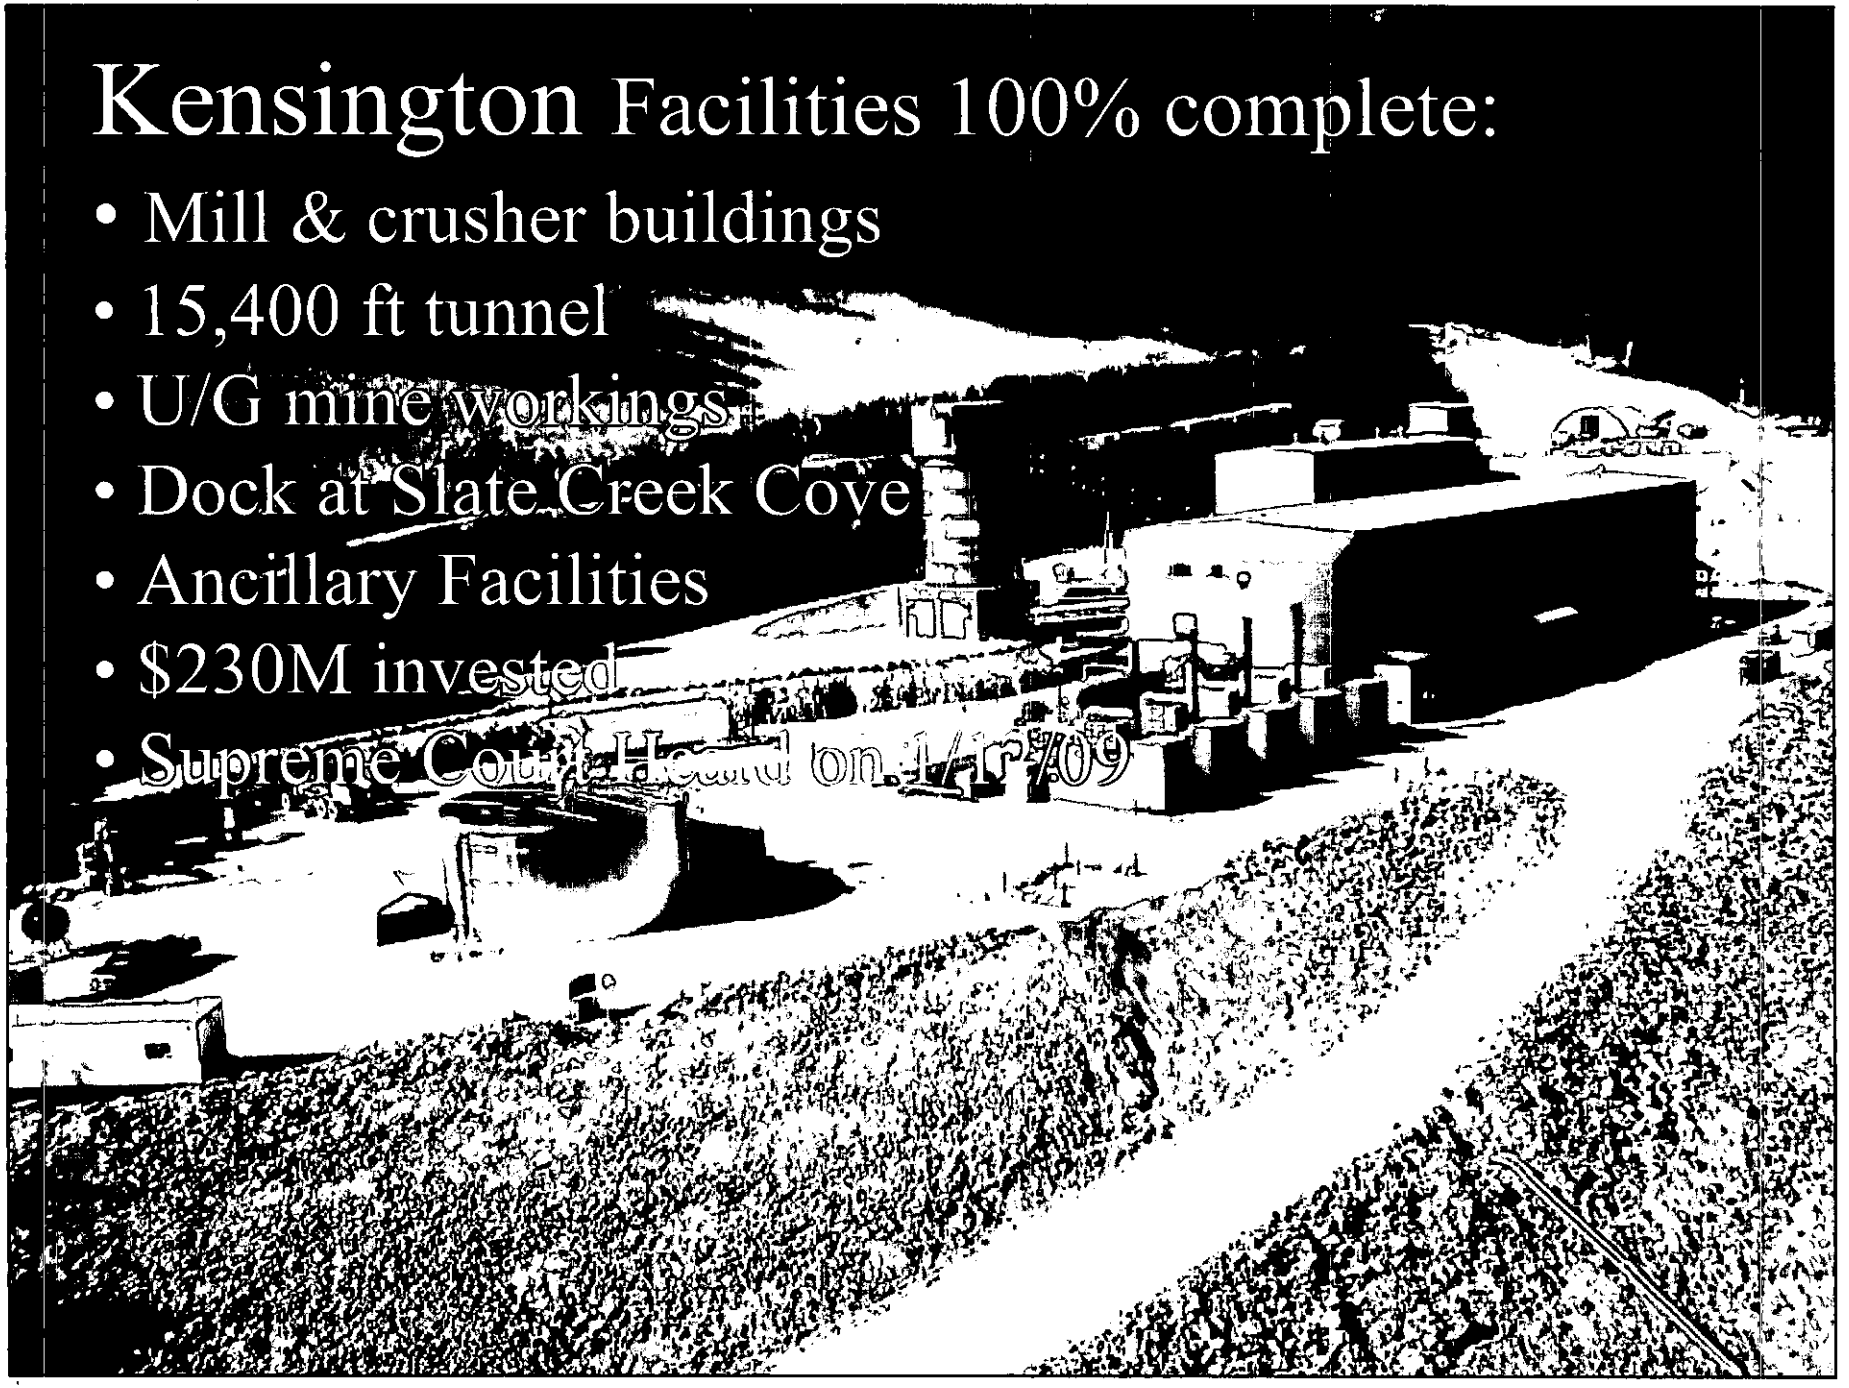
Rock Creek Statistics

- 135 employees when operating
- $10.4 million annual payroll
- $20.6 million annual supplies & services
- Work plan for 2009 being developed





Kensington Mine



Kensington Facilities 100% complete:
• Mill & crusher buildings
• 15,400 ft tunnel
• U/G mine workings
• Dock at Slate Creek Cove
• Ancillary Facilities
• $230M invested
• Supreme Court Heard on 1/r/09

Projects in Advanced Exploration and Permitting

Advanced Permitting:

1. Chuitna Coal PACRIM Coal

Advanced Exploration/Pre-permitting:

2. Donlin Creek Barrick/NovaGold JV
3. Pebble Partnership NDM/Anglo American JV

Chuitna Coal Project

Management transition in 2008

Project Statistics

- Total Investment +$600M
- 350 full-time jobs

Chuitna Coal Mine

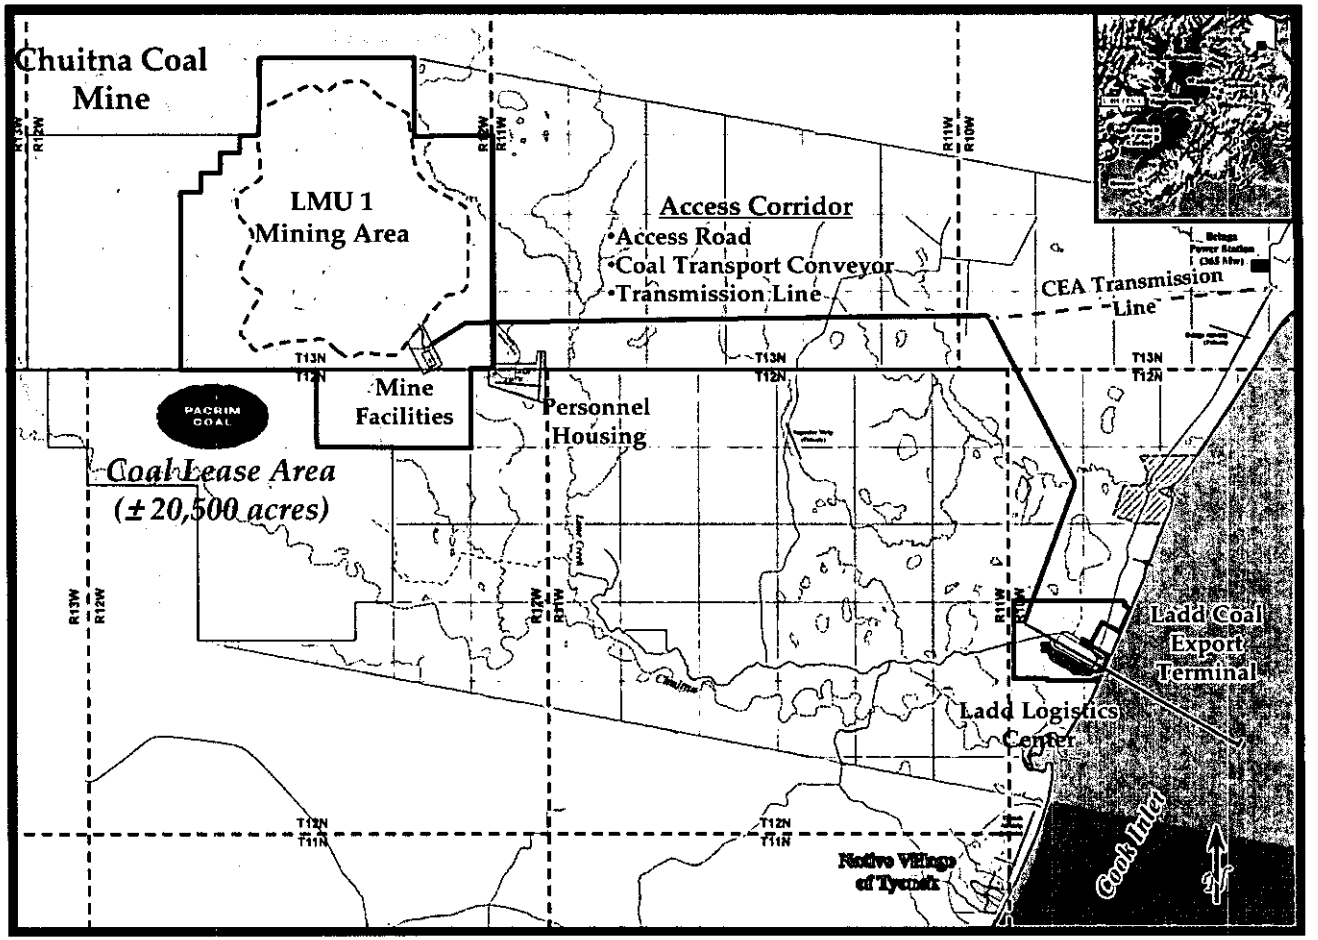
- 12MMTpy design capacity
- 300MMT mineable (LMU1)

Infrastructure

- 9 to 12 mile Access road & coal conveyor (alternatives under review)
- 138 Kv power line
- Personnel housing & airstrip

Ladd Landing

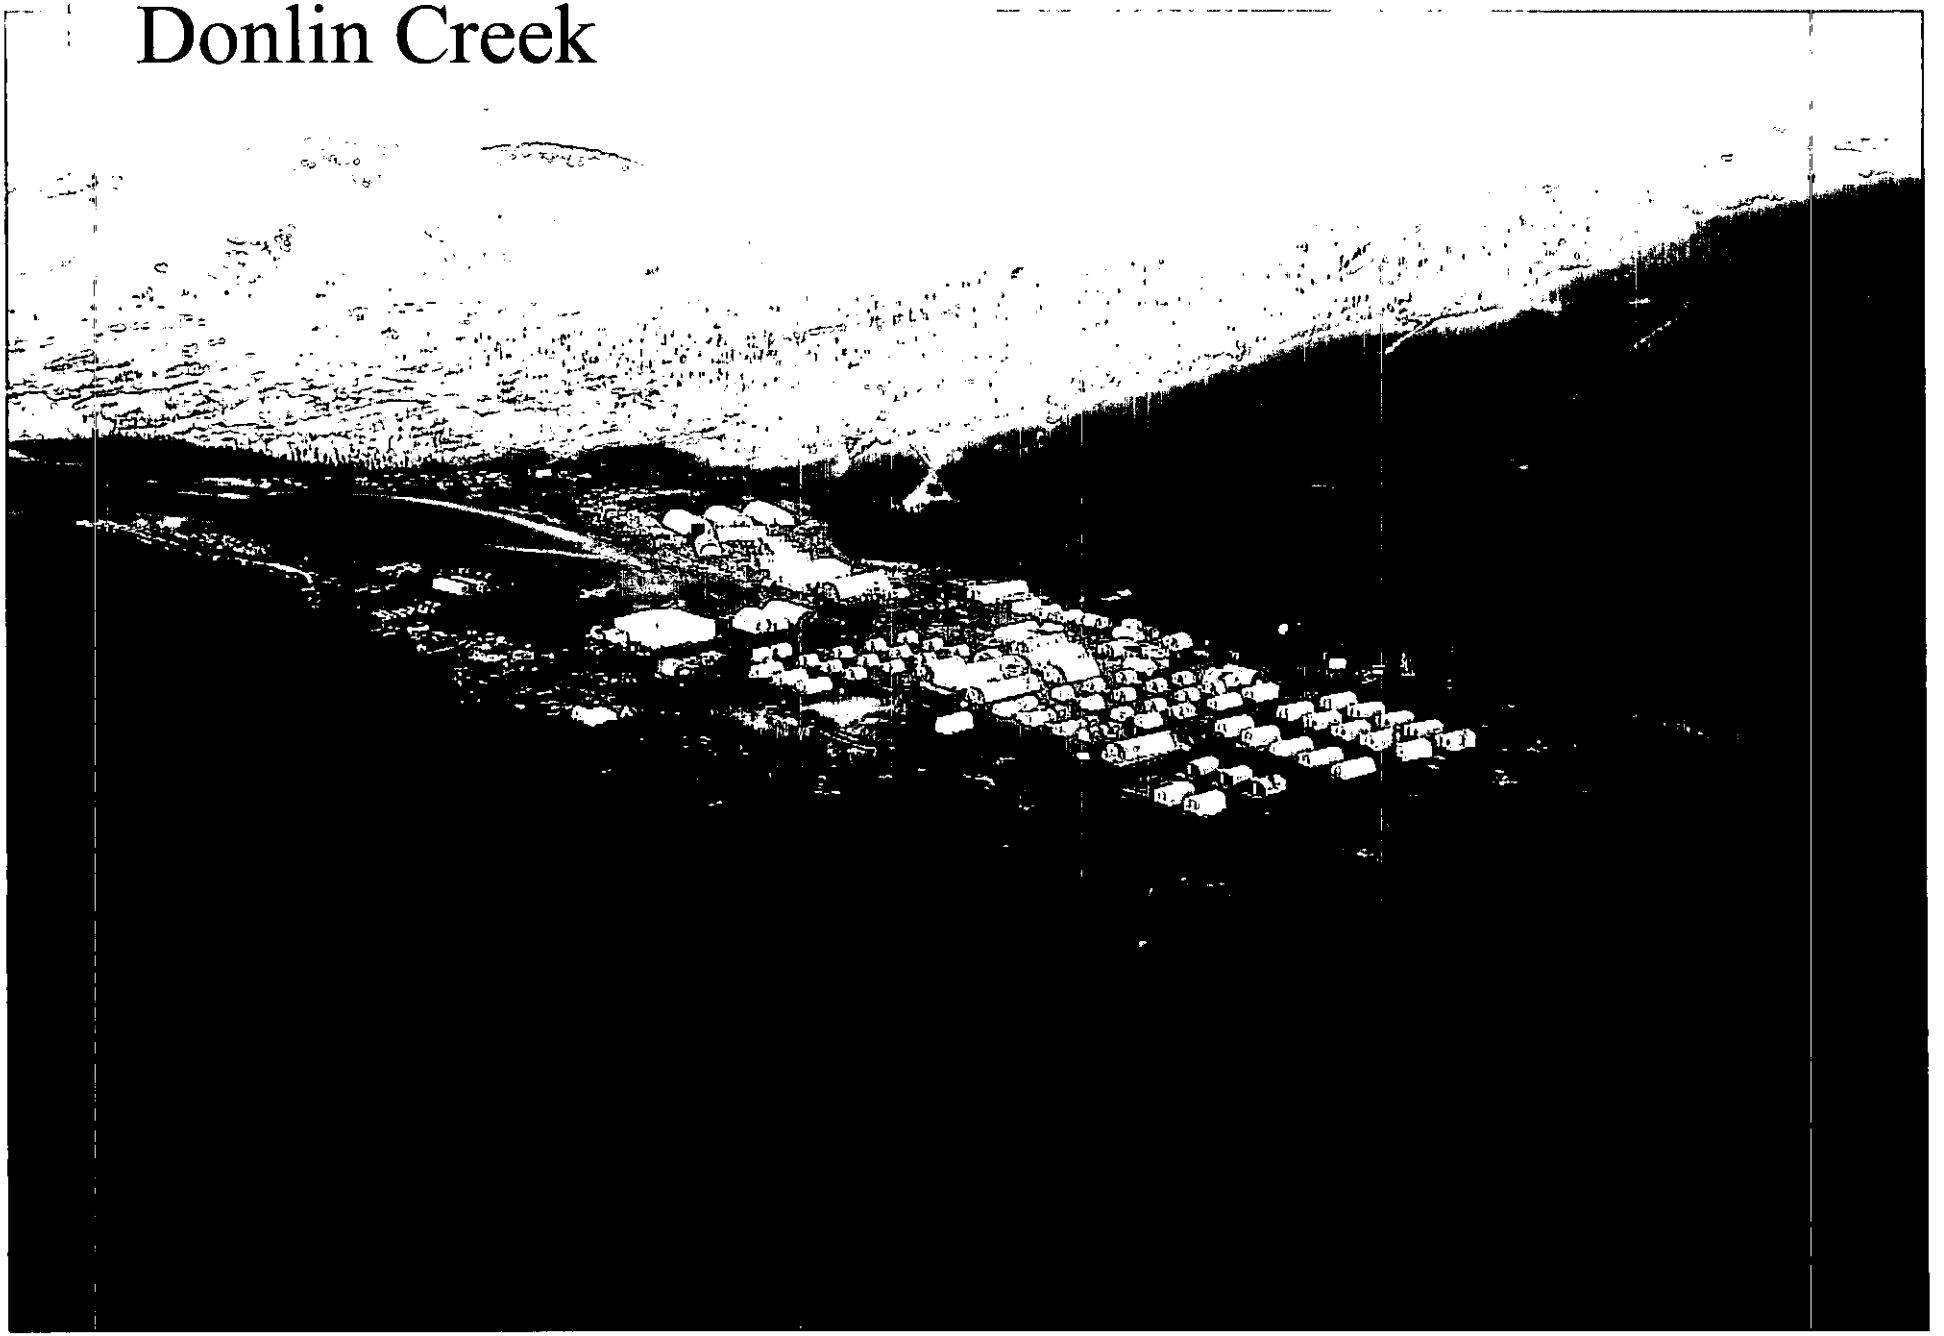
- Logistics center
- Export terminal
- Cape Class vessels 60ft draft



Permit Status

- ASCMCRA permit applications filed, public review process projected 4th Qtr 2009
- Draft SEIS in process, anticipate public review process 4th Qtr 2009
- Projected approval anticipated for late 2010

Donlin Creek



Donlin Creek Update

2008

- Completed 33,500 m of drilling
- 138 employees representing 26 Y-K villages
- Advanced project engineering and baseline environmental studies

2009

- Finalize the project feasibility study
- Submit permit applications for the project
- Conduct pre-permitting meetings with Y-K region stakeholders
  - Meetings held with representatives of 35 villages to date
  - Scheduled to meet with remaining Y-K villages in March
  - Feedback will be incorporated into permit application documents and plans

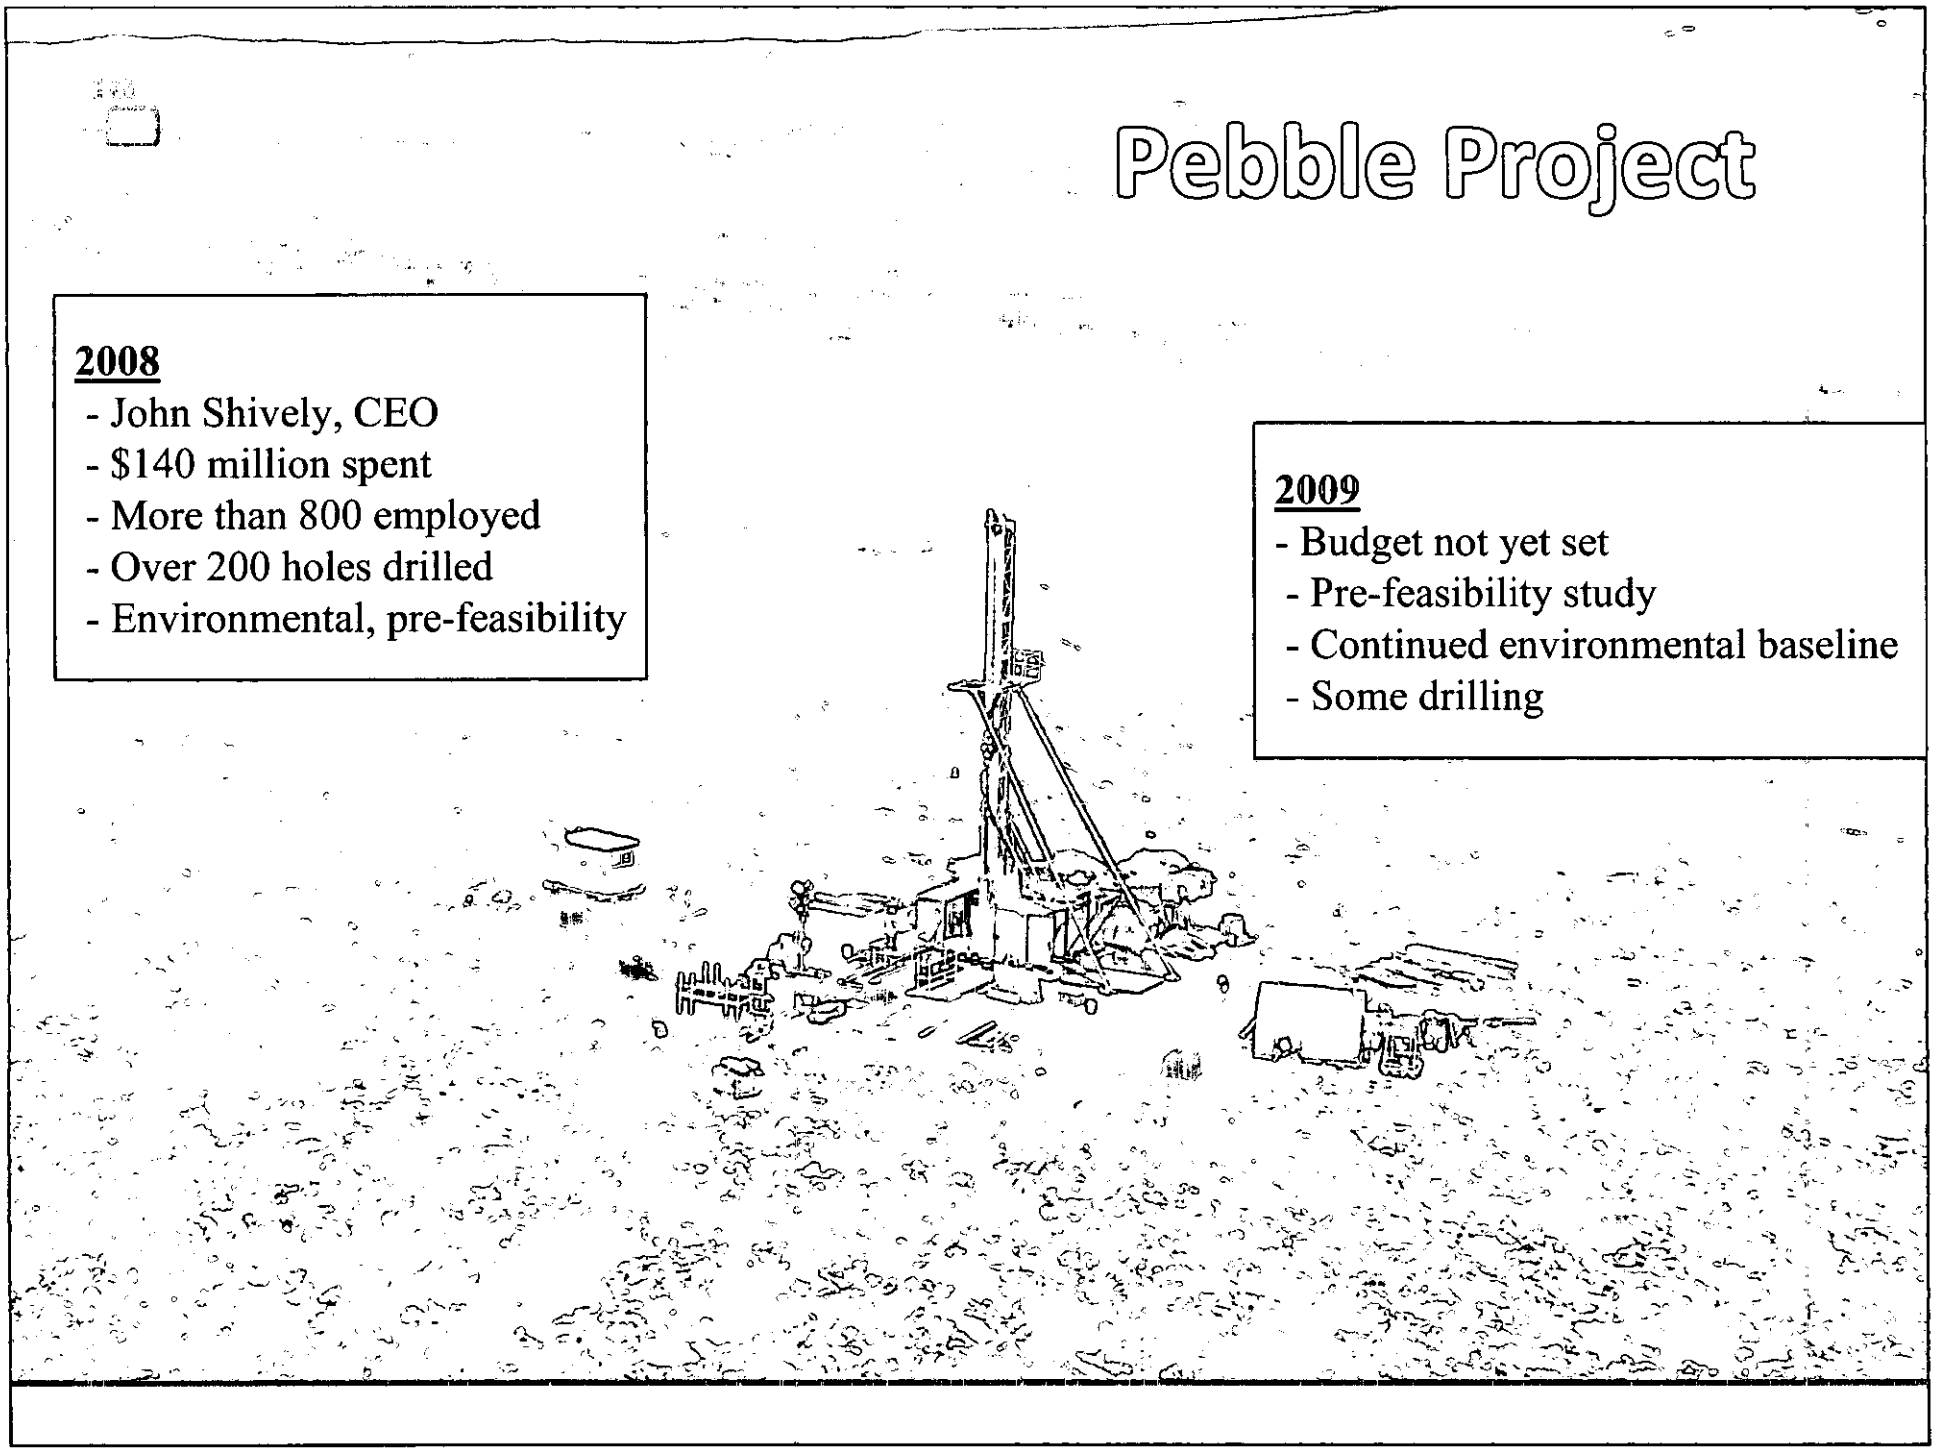
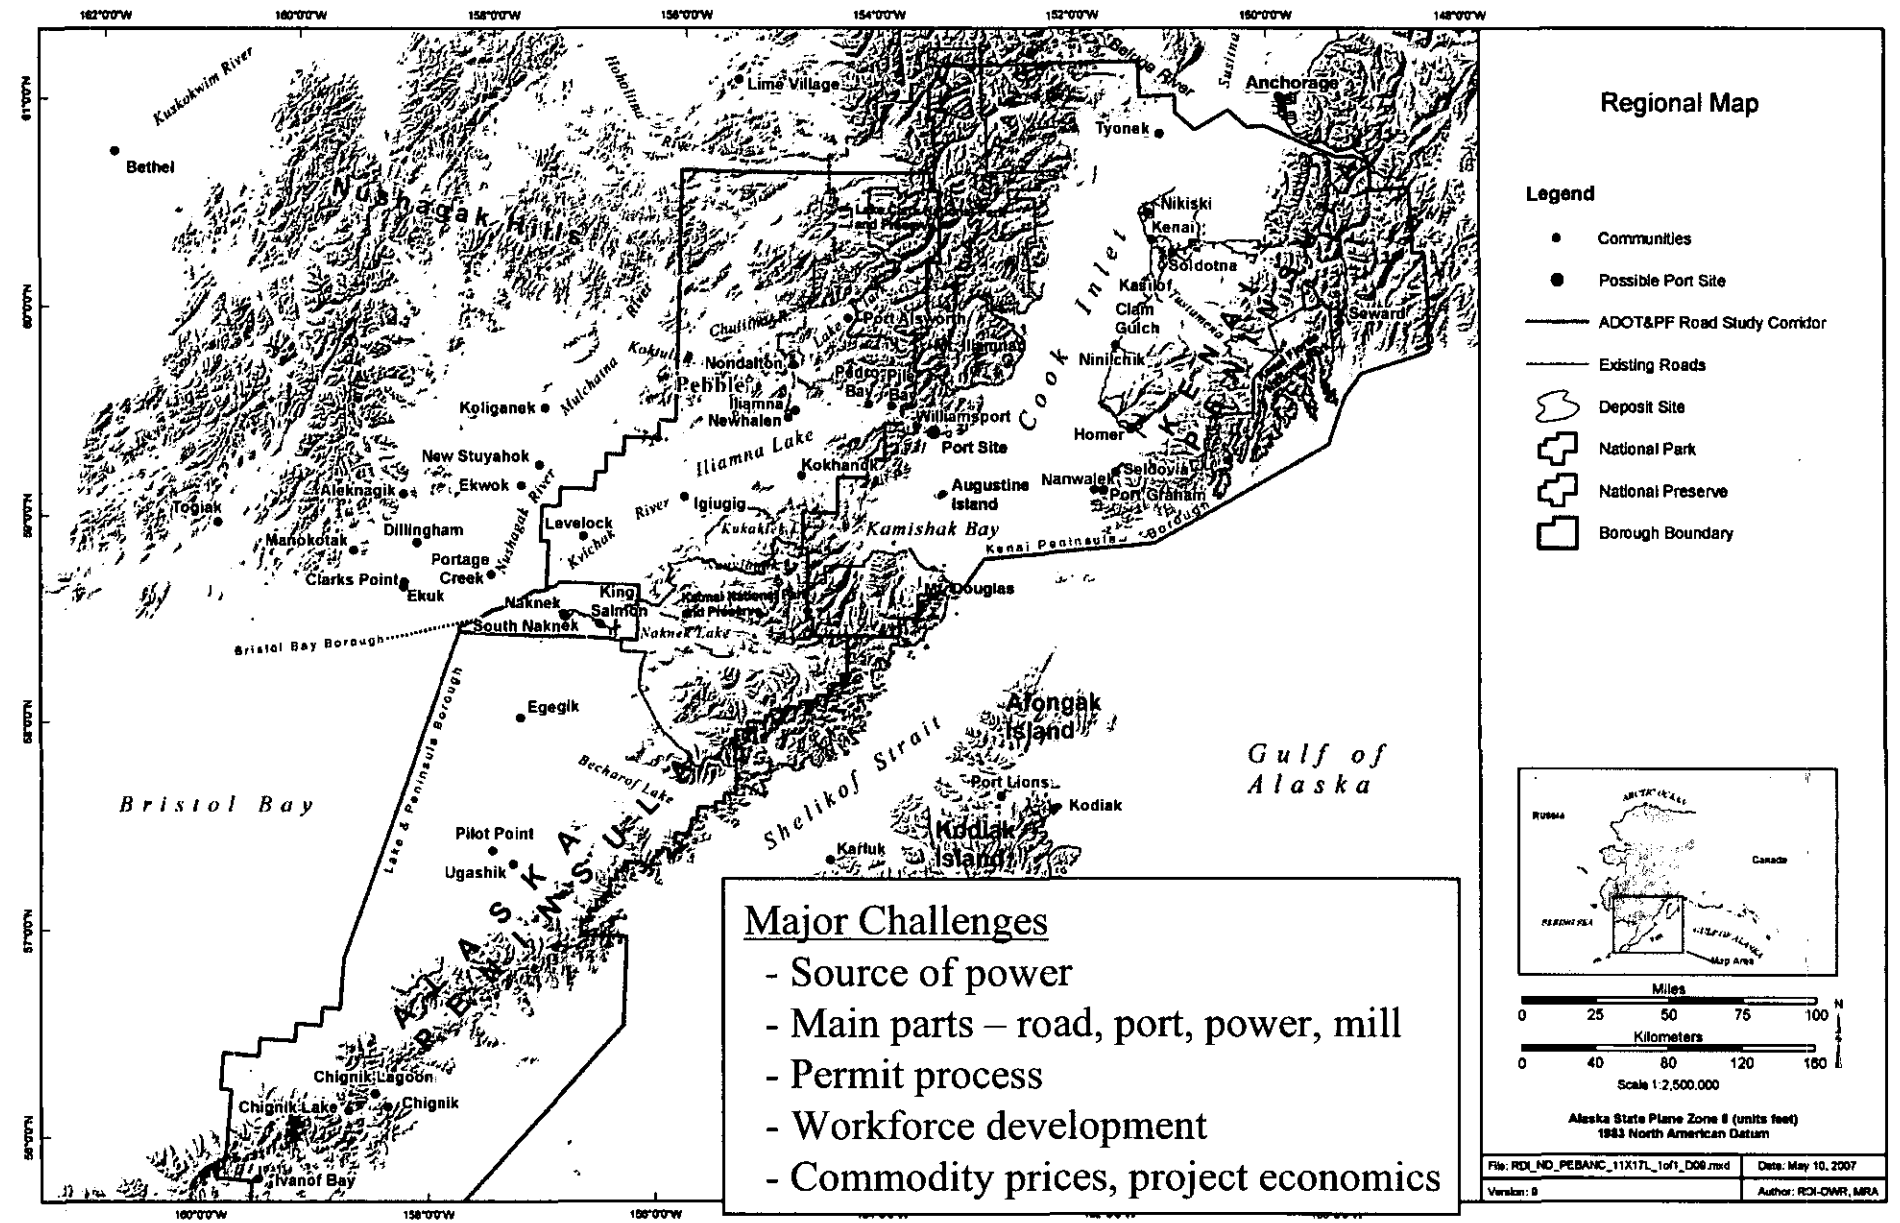
Pebble Project

2008
- John Shively, CEO
- $140 million spent
- More than 800 employed
- Over 200 holes drilled
- Environmental, pre-feasibility

2009
- Budget not yet set
- Pre-feasibility study
- Continued environmental baseline
- Some drilling



THE pebble PARTNERSHIP



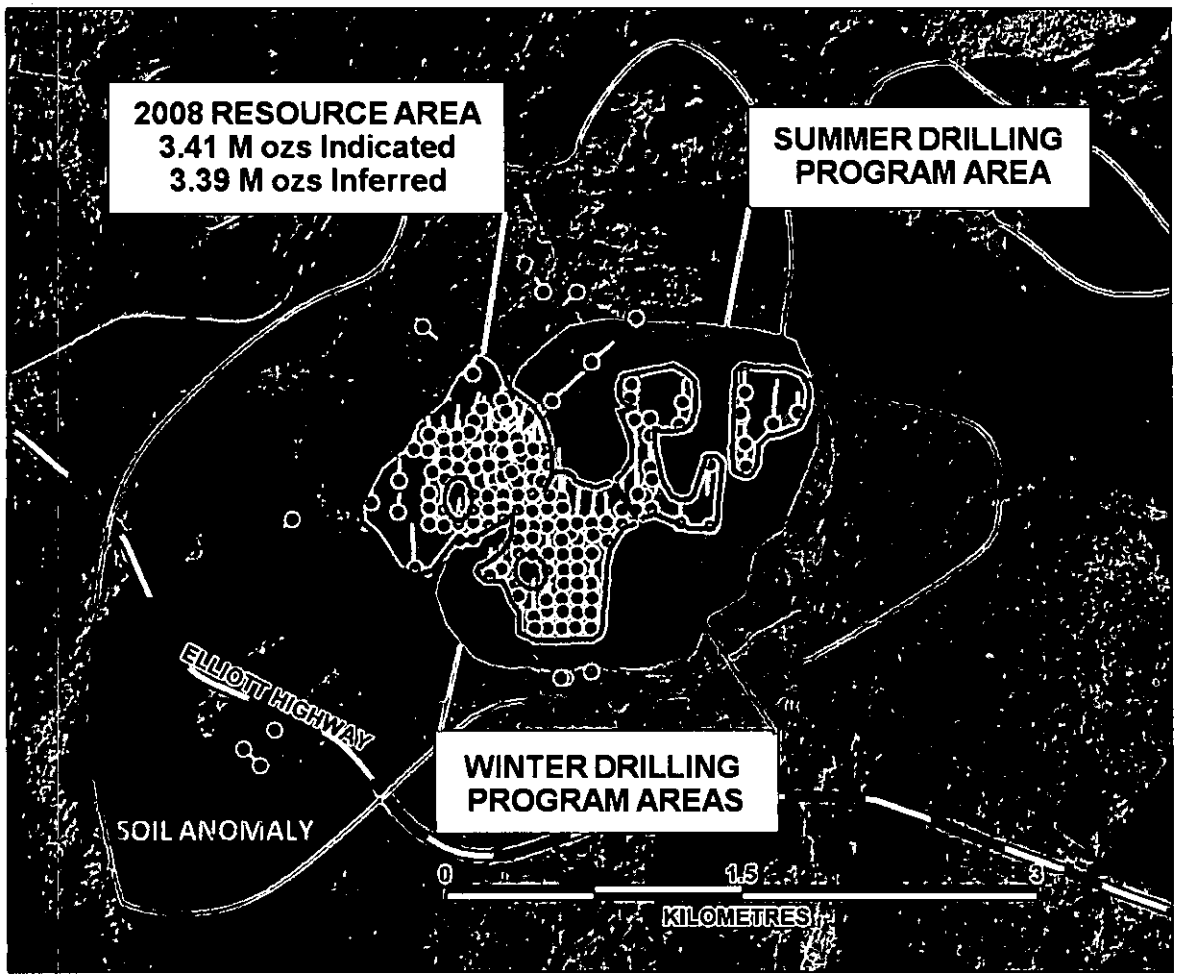
Grassroots (early stage) Exploration

- 30 projects spent >$1 million each in 2008
- Expect fewer in 2009

Examples

- International Tower Hill Mines - Livengood
- Committee Bay Resources - Niblack
- Full Metal Minerals – Lucky Shot

International Tower Hill
Livengood, Money Knob Project



Money Knob Project

Phase I & II drilling - 2008

Phase III drilling - Winter 2009

Phase IV drilling – 2009

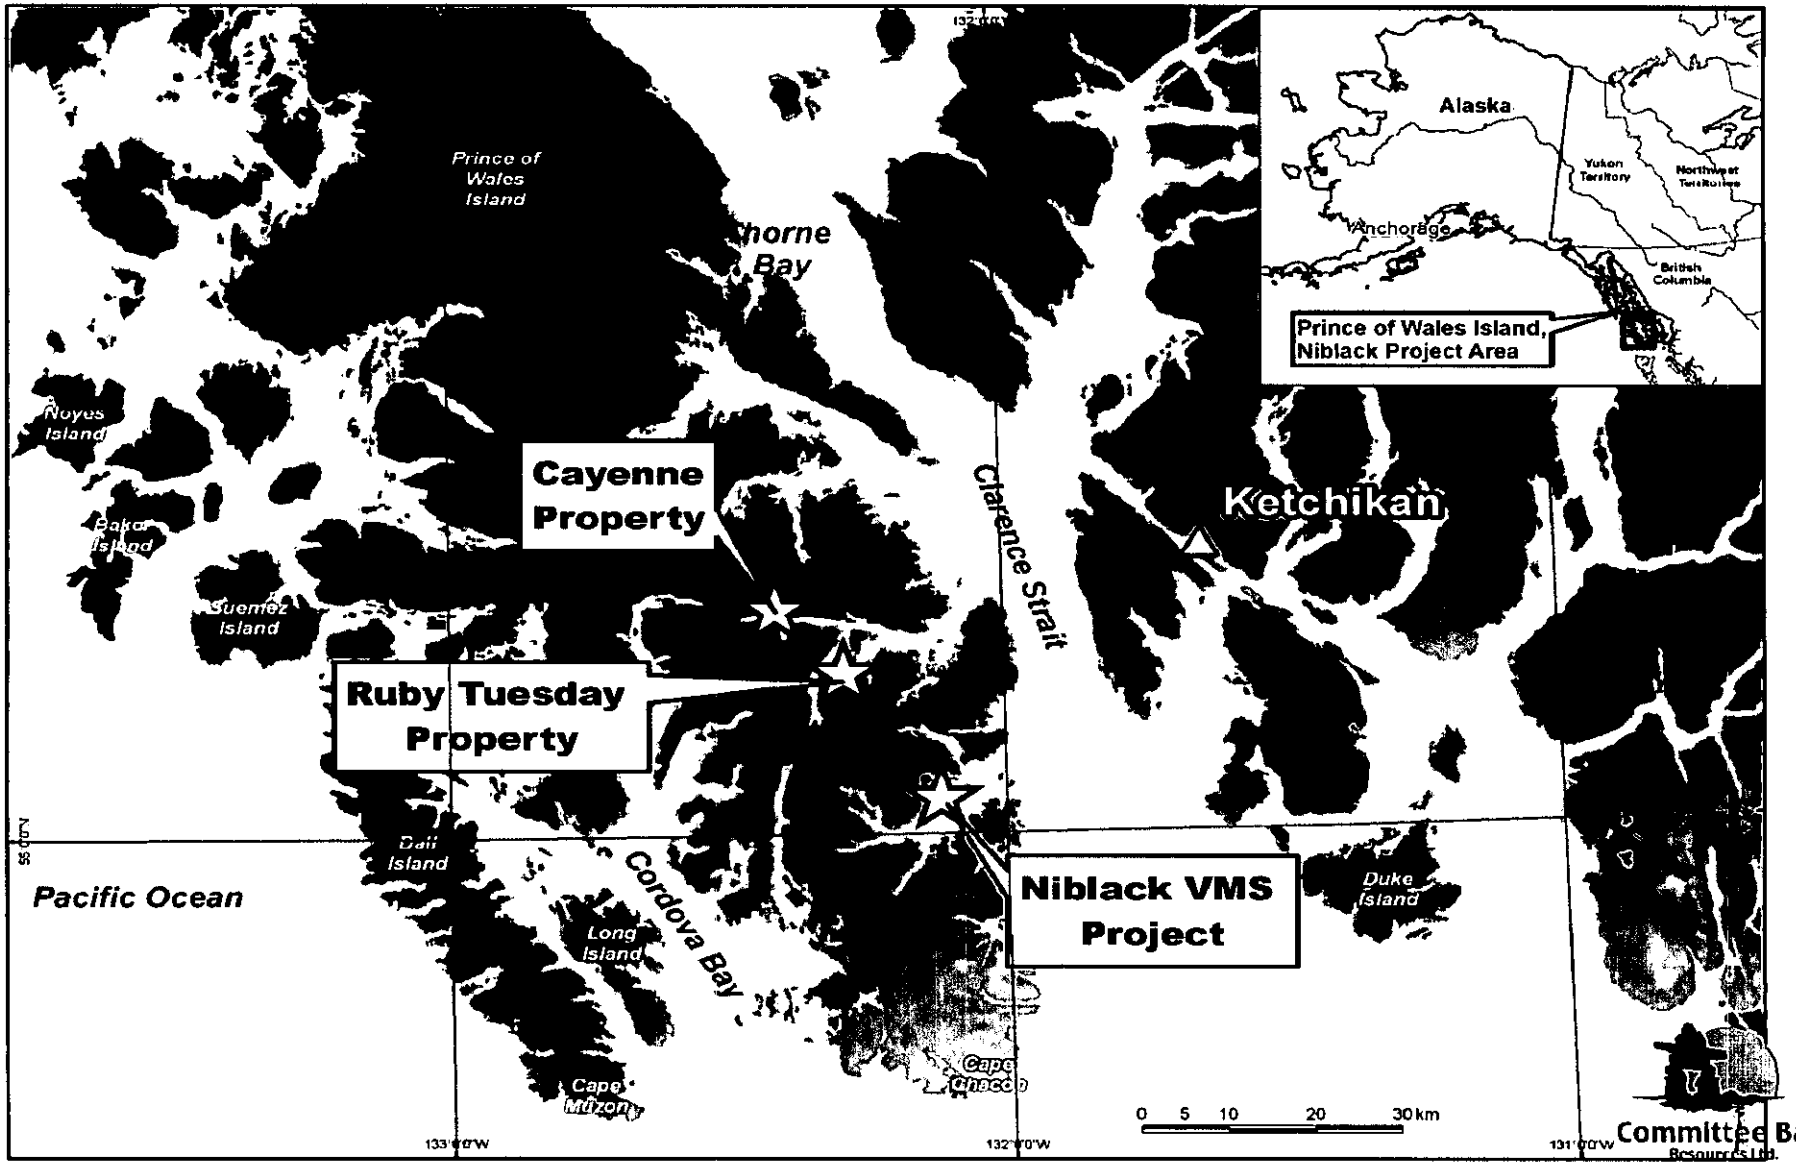
2009 Budget = $8.5 million ($8m in 2008)

45 employees (42 in 2008)

Other Alaska Projects

$1.5m in 2009 (($2m in 2008)

Committee Bay Resources
Niblack Project



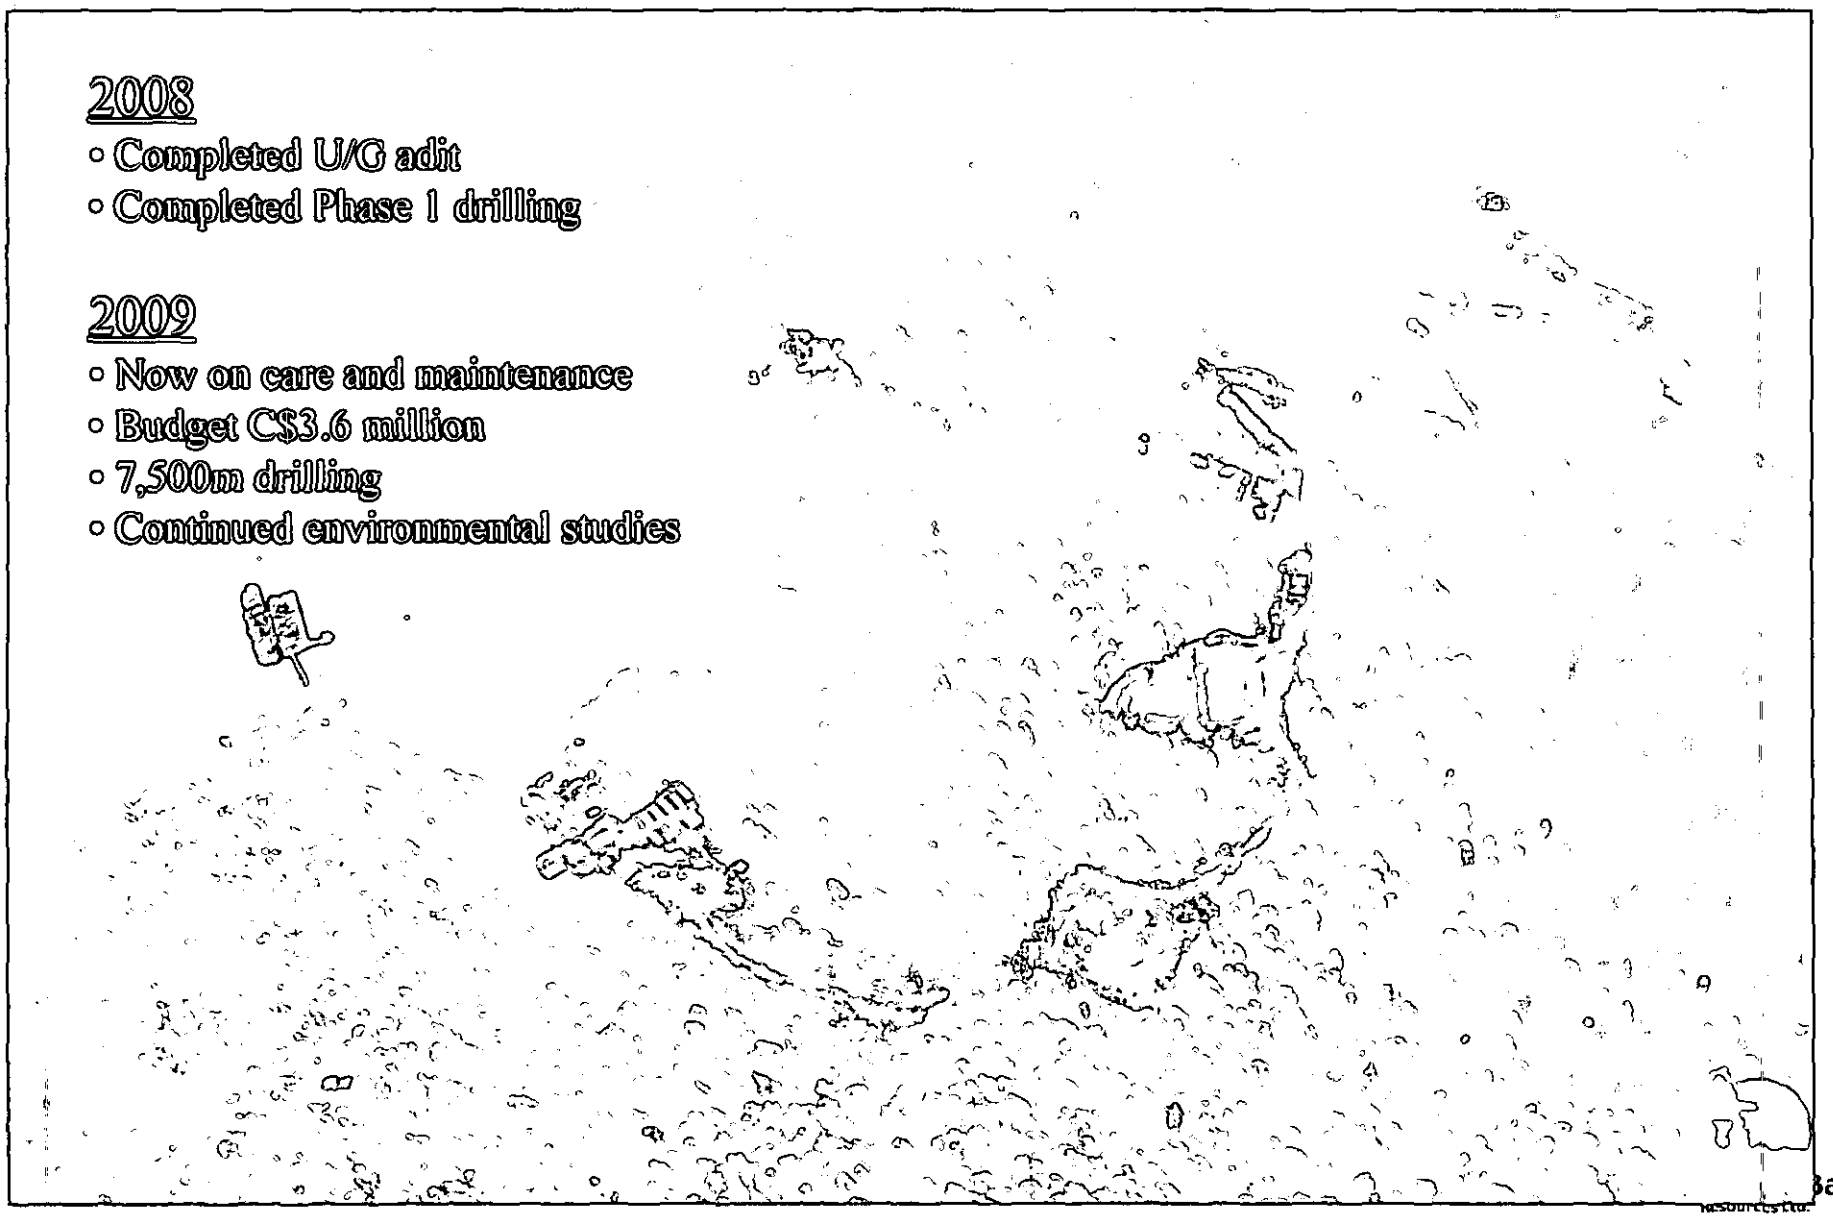
Niblack Project

2008

- Completed U/G adit
- Completed Phase 1 drilling

2009

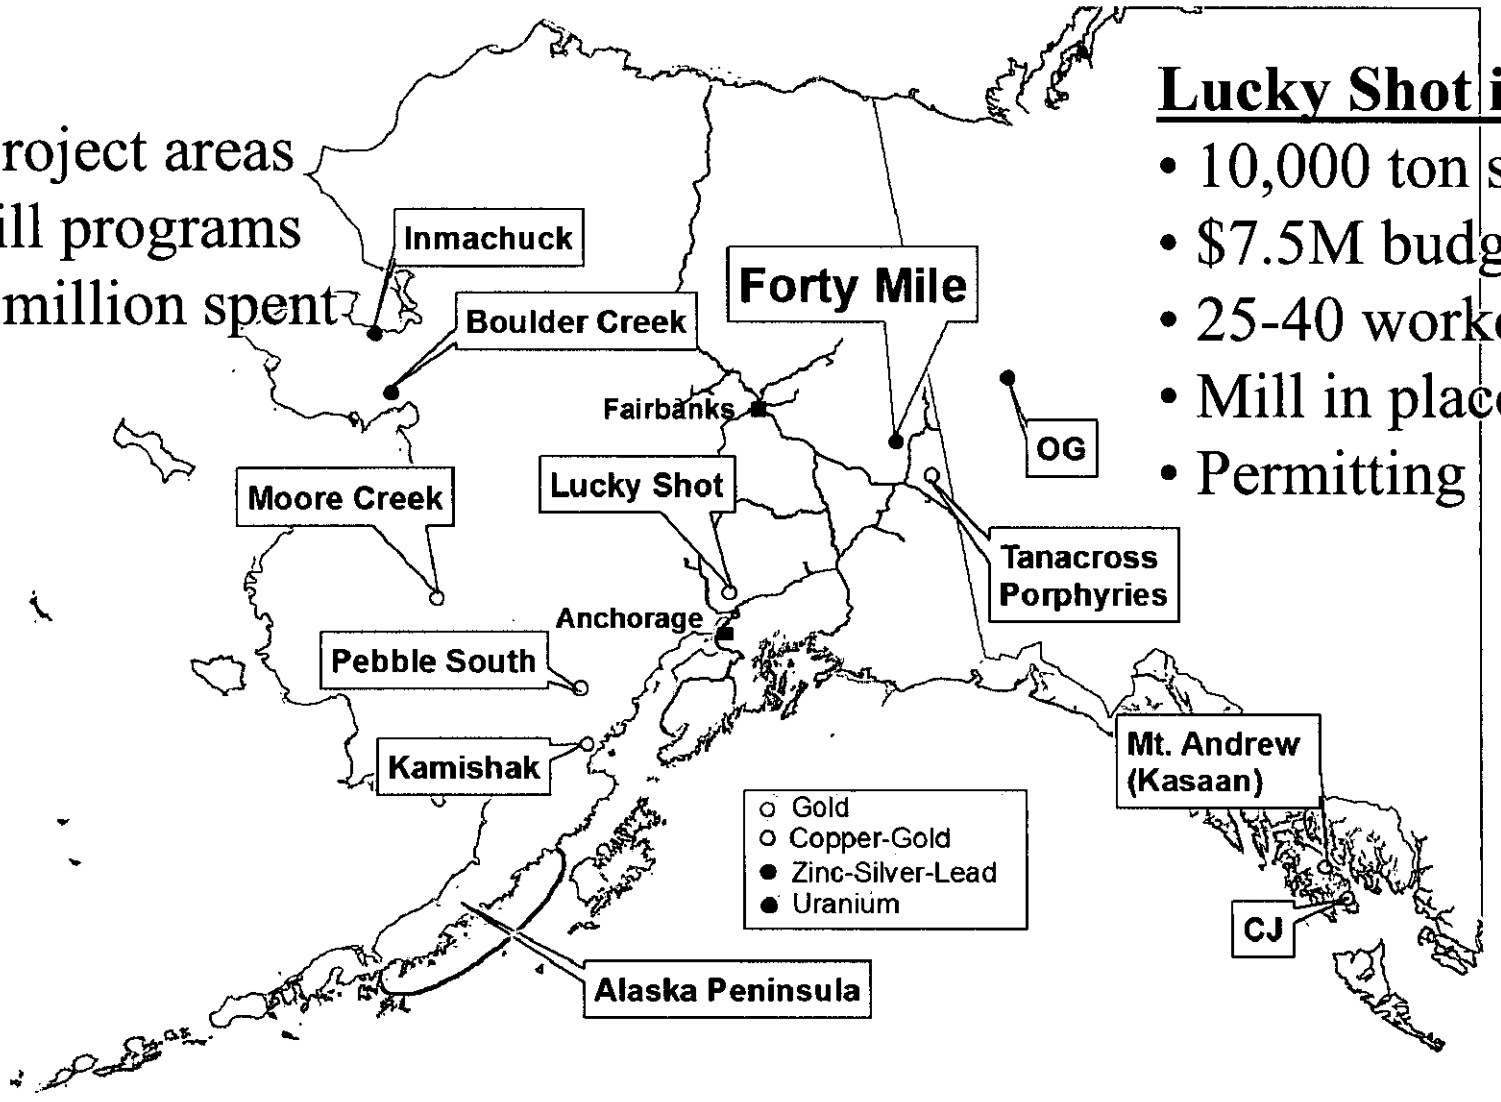
- Now on care and maintenance
- Budget C$3.6 million
- 7,500m drilling
- Continued environmental studies



Full Metal Minerals

2008

- 11 project areas
- 5 drill programs
- $21 million spent



Lucky Shot in 2009

- 10,000 ton sample
- $7.5M budgeted
- 25-40 workers
- Mill in place
- Permitting

The Economic Benefits of Alaska's Mining Industry

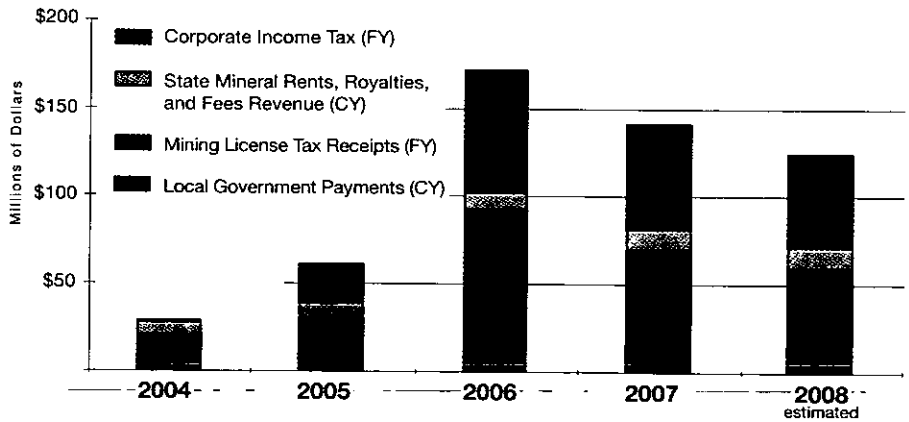
Mining is a growing force in Alaska's economy, providing jobs for thousands of Alaskans and millions of dollars of personal income throughout Alaska. Alaska's mining industry includes exploration, mine development, and mineral production. Alaska's mines produce zinc, lead, gold, silver, coal, as well as construction materials, such as sand, gravel, and rock.

2008 Economic Benefits *estimated*

In 2008, Alaska's mining industry provided:

- **3,500 direct** mining **jobs** in Alaska.
- **5,500 total** direct and indirect **jobs** attributed to Alaska mining industry.
- **$350 million** in direct and indirect **payroll**.
- Some of Alaska's highest paying jobs with an estimated **average annual wage of $82,600**, 90% higher than the state average for all sectors of the economy, second highest after oil and gas sector wages.
- **$15.6 million** in **local** government **revenue** through property taxes and payments in lieu of taxes, down 1% from 2007.
- **$105 million** to the **state** government through rents, royalties, fees, and taxes, down 17% from 2007.
- **$212 million** in payments to **Alaska Native corporations** (FY08) up 266% from FY07.
- **Jobs** for residents of more than 120 communities throughout Alaska– mostly year-round, and often in **rural areas**, where few other jobs are available.

State and Local Government Revenue Impact



Exploration

- **$293 million** spent on exploration, **down 8%** from 2007.
- **59 exploration projects** spending more than **$100,000**, of which 30 exploration projects spent **more than $1 million.**

Development

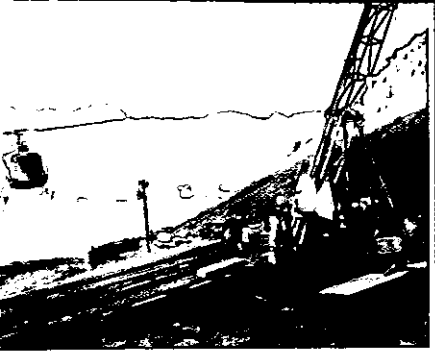
- **$331 million** spent on mine construction, up 7% from 2007, on at least 7 developing and existing mines.

Production

- **$2.4 billion** in **gross mineral production value** from Usibelli Coal, Greens Creek, Red Dog, Fort Knox, and Pogo mines, placer mines, and rock, sand, and gravel operations, down 27% from 2007.
- More than **175 placer mines** produced **54,000 ounces of gold**.
- **$102 million** in production value from more than **117 active rock quarries, and sand and gravel operations.**

Exports (2007)

- **$1.3 billion** in mining exports, or **34% of Alaska's total exports.**



Usibelli Coal Mine

Coal

- Alaska's only operating coal mine, exporting a third of its production in 2008
- Fuels 40% of Interior Alaska's electricity
- Founded in 1943
- 110 employees

Greens Creek Mine

Silver, zinc, gold, and lead

- One of the largest silver producers in North America
- Largest taxpayer in the City & Borough of Juneau
- Discovered in 1979, producing from 1989 to 1993, and since 1996
- 320 employees

Red Dog Mine

Zinc, lead, and silver

- World's largest zinc concentrate producer
- Largest taxpayer in the Northwest Arctic Borough
- Discovered in 1968, producing since 1989
- 390 employees, plus 95 full-time contractors in 2008

Fort Knox Mine

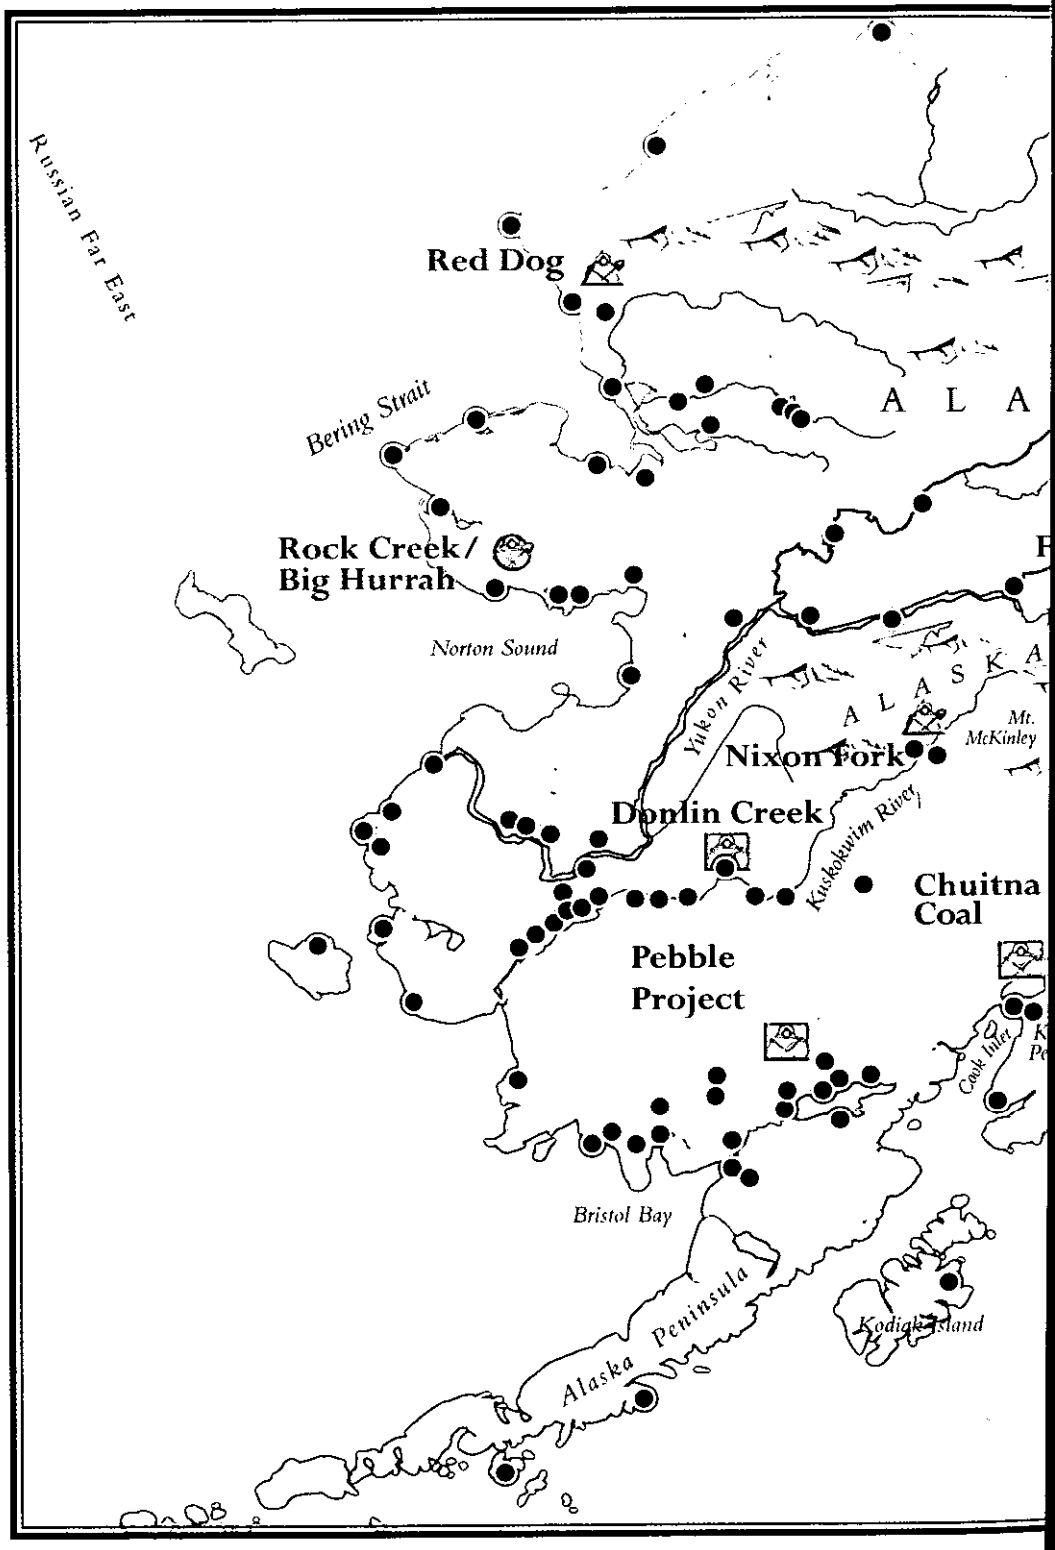
Gold

- Alaska's largest surface gold mine
- Largest single property taxpayer in the Fairbanks North Star Borough
- Discovered in 1984, producing since 1996
- 450 employees, plus 30 full-time contractors in 2008

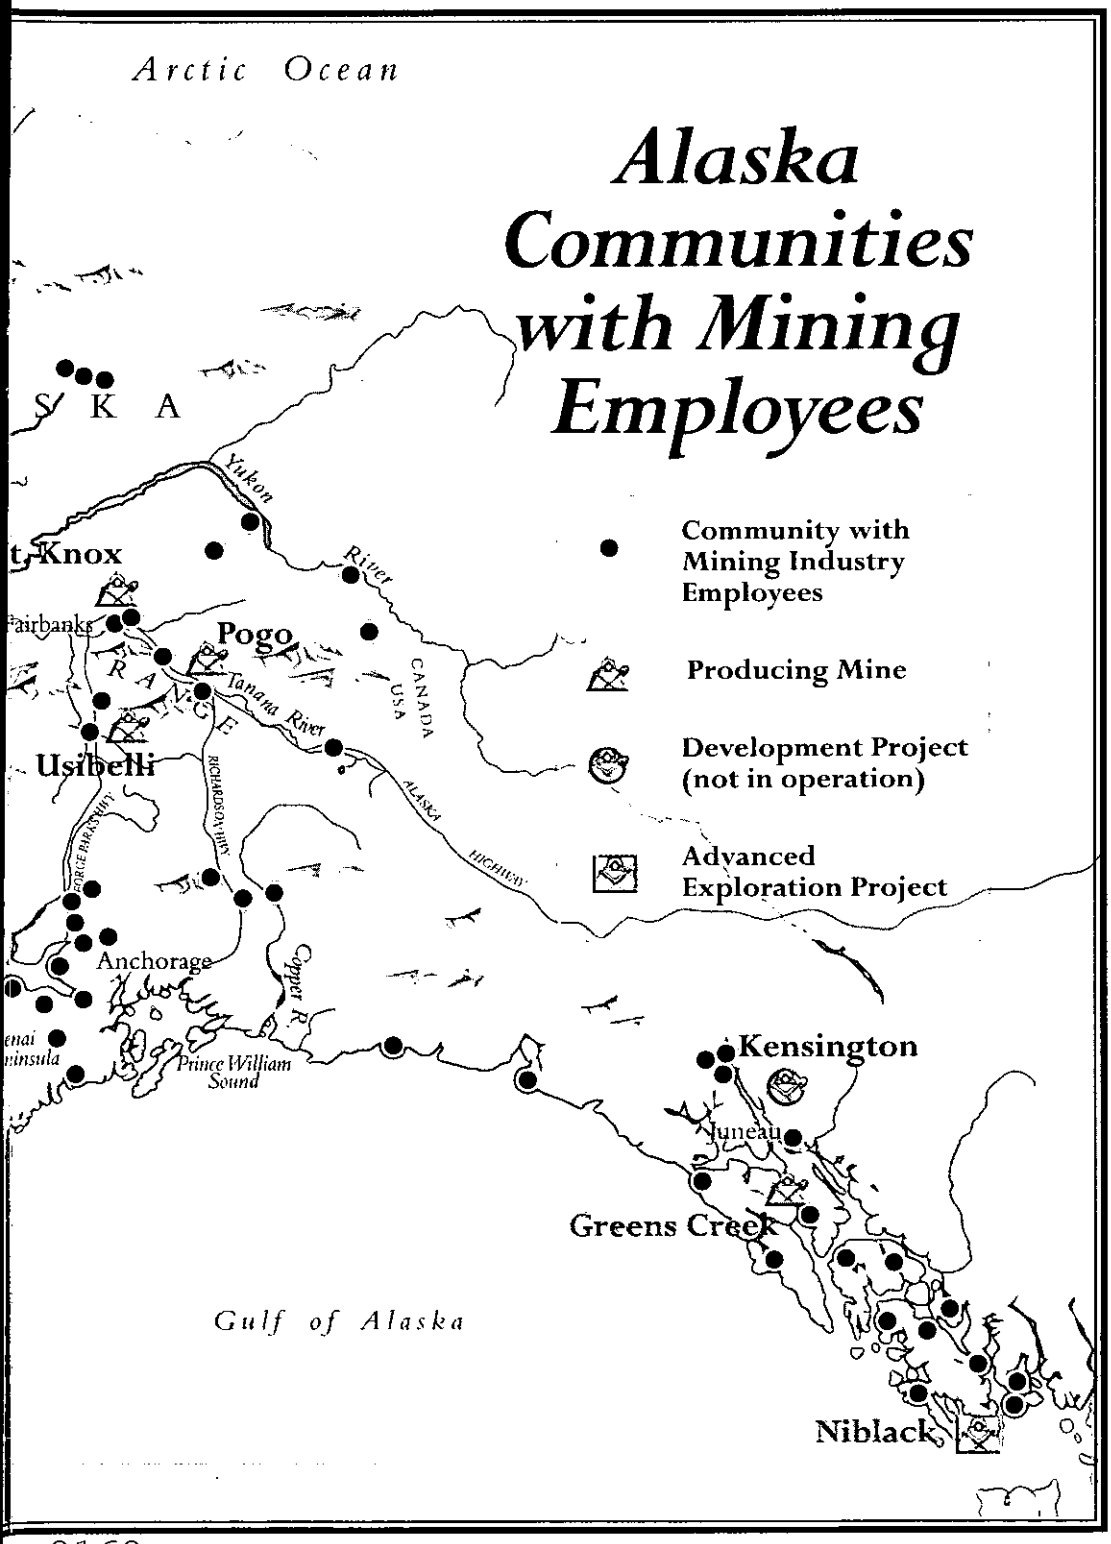
Pogo Mine

Gold

- Approximately 700,000 ounces produced 2006 through 2008
- Significant private sector payments to the City of Delta Junction
- Discovered in 1994, producing since 2006
- 280 employees, plus 60 full-time contractors in 2008



Alaska Communities with Mining Employees



Nixon Fork

Gold and copper

- Discovered in 1917, intermittent exploration since 1920s
- Production suspended in 2007 for additional drilling
- 75 potential production jobs

Rock Creek/Big Hurrah

Gold

- Started and suspended production in 2008
- $156 million invested through 2008
- 135 potential production jobs

Kensington

Gold

- $238 million invested through 2008
- 200 potential production jobs

Chuitna Coal

Coal

- Currently in the permitting process
- 300-350 potential production jobs

Donlin Creek

Gold

- Discovered in 1988, ongoing exploration since 1995
- 210 exploration jobs in 2008, 86% Calista shareholder hire
- 500-600 potential production jobs

Niblack

Gold, silver, copper, and zinc

- Ongoing exploration for more than 10 years
- Over $20 million invested through 2008

Pebble Project

Copper, gold, and molybdenum

- Discovered in 1987, ongoing exploration and environmental studies since 2002
- Over $300 million invested through 2008
- Over 1,000 potential production jobs

Alaska Miners Association, Inc. • 3305 Arctic Blvd., #105 • Anchorage, Alaska 99503

WEB: www.alaskaminers.org

Strengthening Government and Communities

Mining companies strengthen Alaska's local economies by employing Alaska residents from more than 120 Alaska communities, and purchasing supplies and services from hundreds of Alaska businesses.

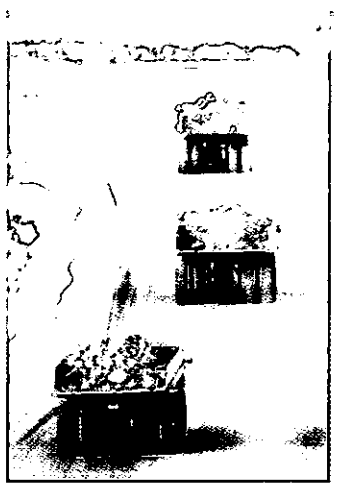
These mining companies are also an important source of stable revenue for local governments, as well as significant state government revenue. In 2008, Alaska's mining industry paid:

An estimated total of **$15.6 million** to **local governments**, including:

- **$11 million** in payment in lieu of taxes (PILT) by Red Dog to the Northwest Arctic Borough.
- **$2.8 million** in property taxes paid by Fort Knox to the Fairbanks North Star Borough.
- Over **$1 million** in property taxes paid by Greens Creek to the City and Borough of Juneau.
- **$500,000** in PILT paid by Pogo to the City of Delta Junction (FY08).
- **$295,400** in property taxes paid by Kensington to the City and Borough of Juneau. Once in production, the mine will be the largest taxpayer in Juneau.
- Tax payments to other local governments, including Denali Borough, City of Nome, and others.
- Mining industry employees also pay local property and sales taxes.

Largest Producing Mines State and Local Government Tax Obligations

	Land Status	State Royalty Payments	Mining License Tax	Local Govt Payments
Usibelli Coal	State	√	√	√
Greens Creek	Private		√	√
Red Dog	Private		√	√
Fort Knox	State/Mental Health Trust	√	√	√
Pogo	State	√	√	√



An estimated **$105 million to state government** in rents, royalties, fees, and taxes, including:

- **$55 million** in mining license tax, rents, royalties, fees, and other payments.
- **$50 million** in corporate income tax, making mining **Alaska's second highest corporate income tax paying sector** after the petroleum sector.

Over **$42.1 million in other state government-related revenues**, including:

- **$18.5 million** to the Alaska Railroad Corporation – $11.2 million for moving coal and $7.3 million for moving sand and gravel.
- **$22.0 million** to Alaska Industrial Development & Export Authority for the use of state-owned facilities.
- **$1.6 million** to the Alaska Mental Health Trust for rents and royalty payments, and construction material sales.

Partnering with Alaska Native Corporations

All Alaska Native corporations benefit from mining industry activity – in 7(i) and (j) **royalty sharing payments**, in **jobs** for shareholders, or through **business partnerships**.

- **$212 million** in royalties paid by Red Dog to NANA; of which $122 million was redistributed to other Alaska Native regional and village corporations
- 56% of the 485 year-round jobs at Red Dog are filled by NANA shareholders, including Teck Cominco, NANA Lynden and NANA Management Services jobs.
- Calista Corporation anticipates $700,000 in royalties for mineral agreements, including lode exploration, placer gold production, and construction material sales.
- 86% of the 210 jobs at Donlin Creek Project filled by Calista shareholders.

Projects with near-term potential will directly benefit Bering Straits Native Corporation and Sitnasuak Native Corporation (Rock Creek), as well as Goldbelt, Inc., Klukwan, Inc., and Kake Tribal Corporation (Kensington).

Special thanks to Rich Hughes, Minerals Development Specialist, Alaska Department of Commerce, Community and Economic Development, and Dave Szumigala, Senior Minerals Geologist, Alaska Department of Natural Resources for their assistance. Other sources used in this report include: State of Alaska Departments of Commerce, Community and Economic Development, Labor and Workforce Development, Natural Resources, and Revenue, Alaska Railroad Corporation, Alaska Industrial Development & Export Authority, various local and borough governments, and mining companies. Prepared by McDowell Group, Inc.

3/9/09 PRESENTATION BY ARMSTRONG OIL & GAS

The Armstrong Companies

The Armstrong Companies began 23 years ago with the creation of Armstrong Oil & Gas, Inc. ("AOG"), which continues to be the primary driver for the Armstrong Companies. AOG is a privately held company with the main principal being Mr. William D. Armstrong and it is the cornerstone for all other Armstrong companies ("Armstrong"). Mr. Armstrong was one of the youngest professionals to be inaugurated into the prestigious All American Wildcatters organization. Armstrong specializes in oil and gas exploration and production and maintains its headquarters in Denver, Colorado.

The primary focus of Armstrong is to generate, assemble and drill large, company impact, opportunities. Primary areas of activity to date have been located within the United States including: North Slope and Cook Inlet of Alaska, Overthrust Belt of Wyoming/Utah, San Joaquin Basin, Southern Louisiana, South Texas, Gulf of Mexico and numerous other basins within the Rocky Mountain region.

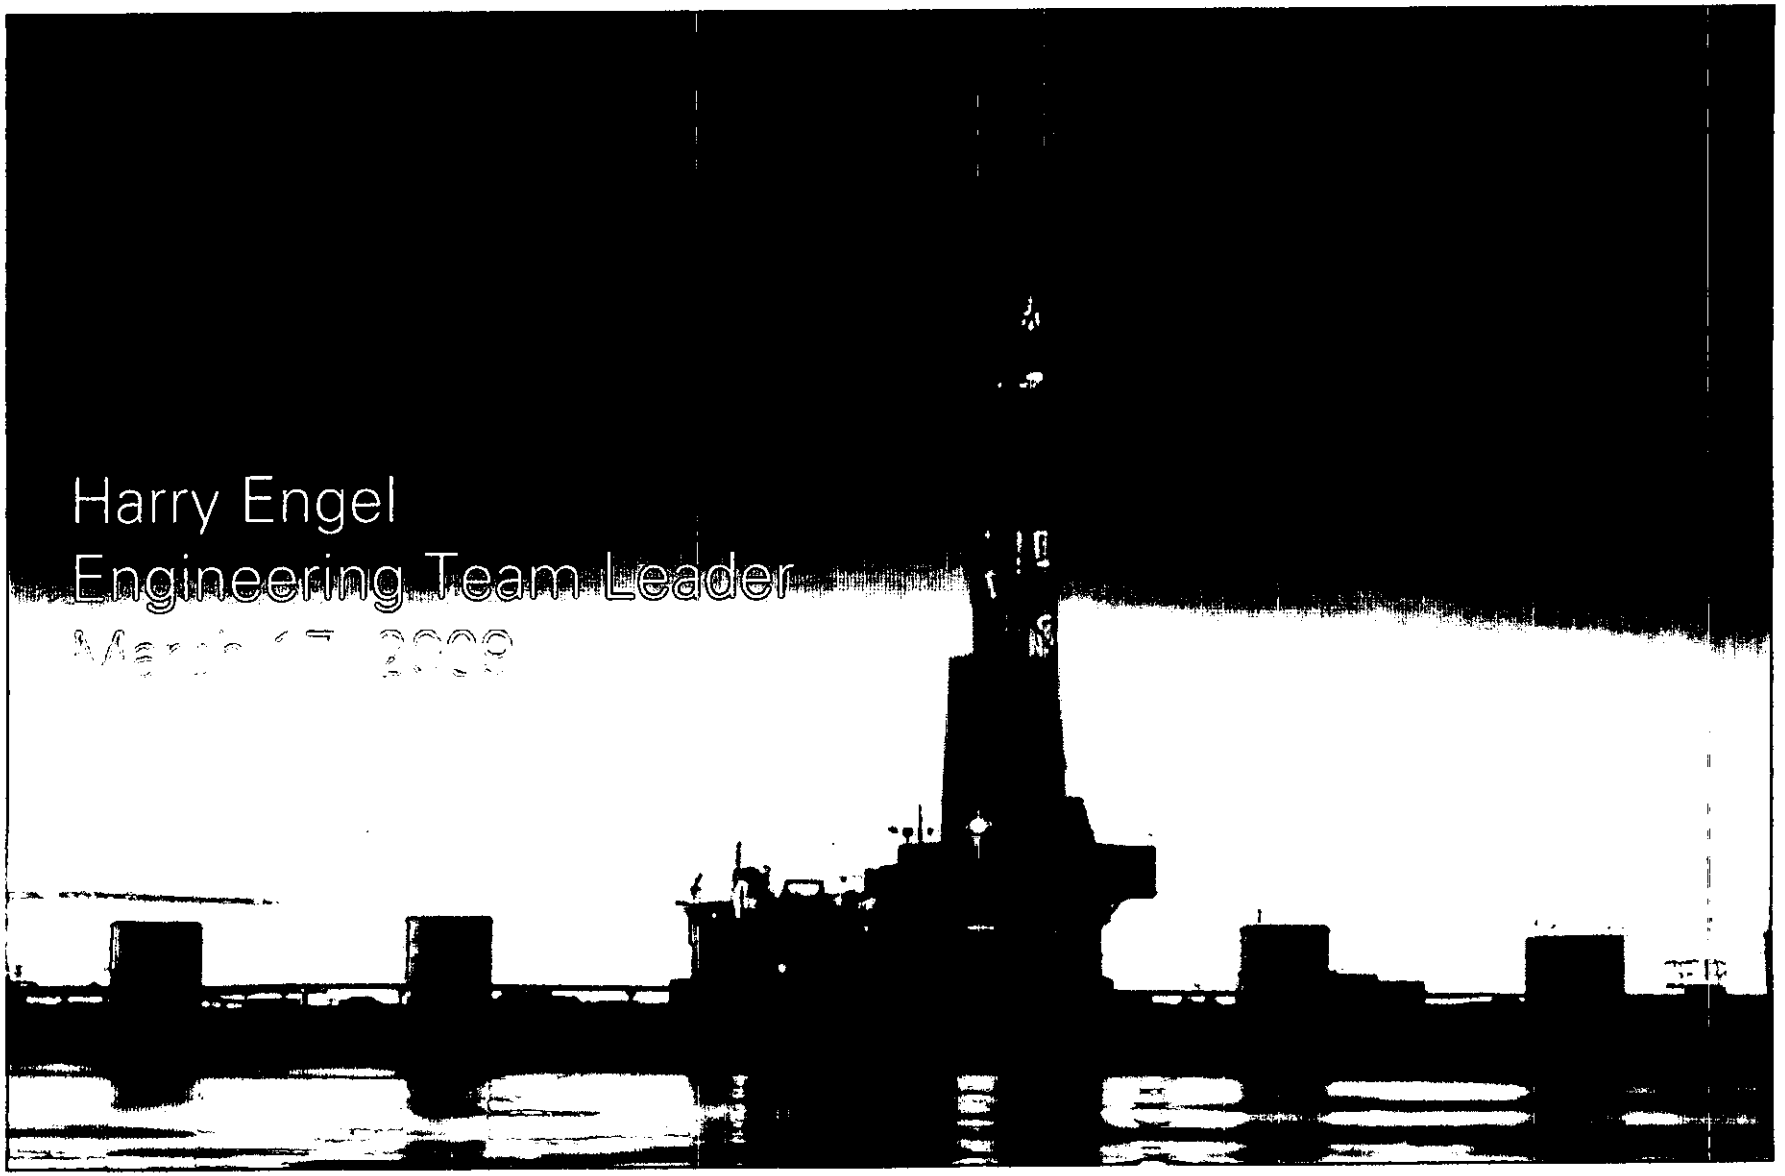
Armstrong has pushed the limits of oil and gas industry by setting new records for the deepest production within the state of California when the Bellview 1-17 well blew out at approximately 250mmcfpd in 1997. Armstrong was the first independent to generate and cause oil production to flow from the North Slope of Alaska with its Oooguruk project flowing first oil in 2008 and its Nikaitchuq project which is scheduled for first production in 2010. Armstrong has also set records for the deepest production in the Rocky Mountain Region.

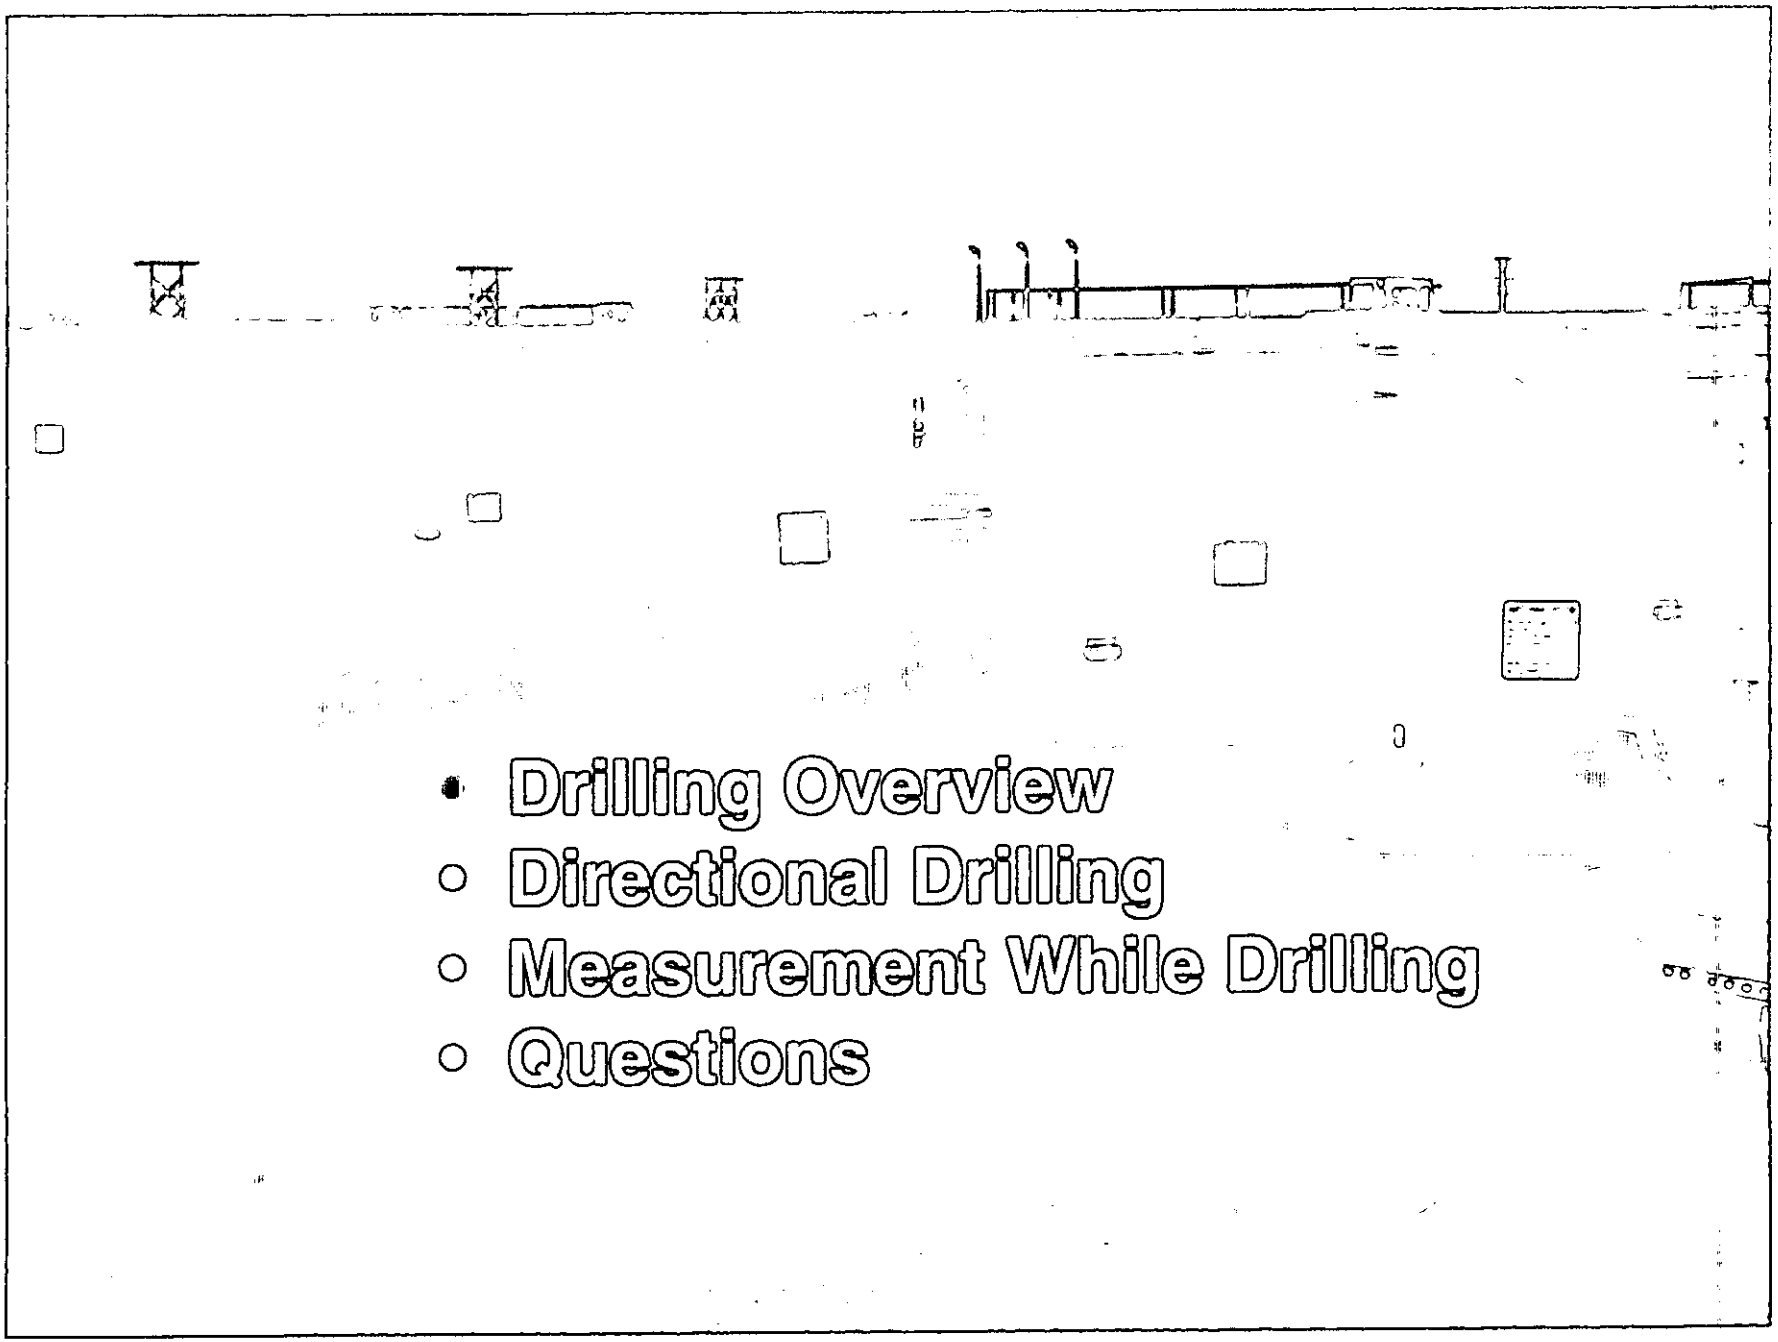
The basis for Armstrong's success has come in large part due to Mr. Armstrong's hand in selecting the best personnel out of major companies from across the globe and applying their talents in those areas that have the potential to become world class oil and gas fields. Armstrong has a history of being able to consummate transactions with the companies and government agencies it deals with, especially under difficult and problematic situations. Mr. Armstrong has a strict discipline of only applying resources in those areas that have a fiscal environment that provides for a reasonable return on capital under a stable government. This combination has allowed Armstrong to perform both in the good times as well as the difficult ones.

During the past 23 years Armstrong has drilled wells and/or developed fields with many partners, including: Anadarko Petroleum, British Petroleum, Burlington Resources, ChevronTexaco, ConocoPhillips, El Paso Corp., ExxonMobil Corp., ENI Petroleum Exploration Co., Encana, EOG Resources, Kerr-McGee Corp., Occidental Petroleum Corp., Pioneer Natural Resources, Shell Oil Company, St. Mary Land, Stone Energy Corp. and many other smaller companies.

3/17/09 LUNCH & LEARN: DIRECTION-AL DRILLING

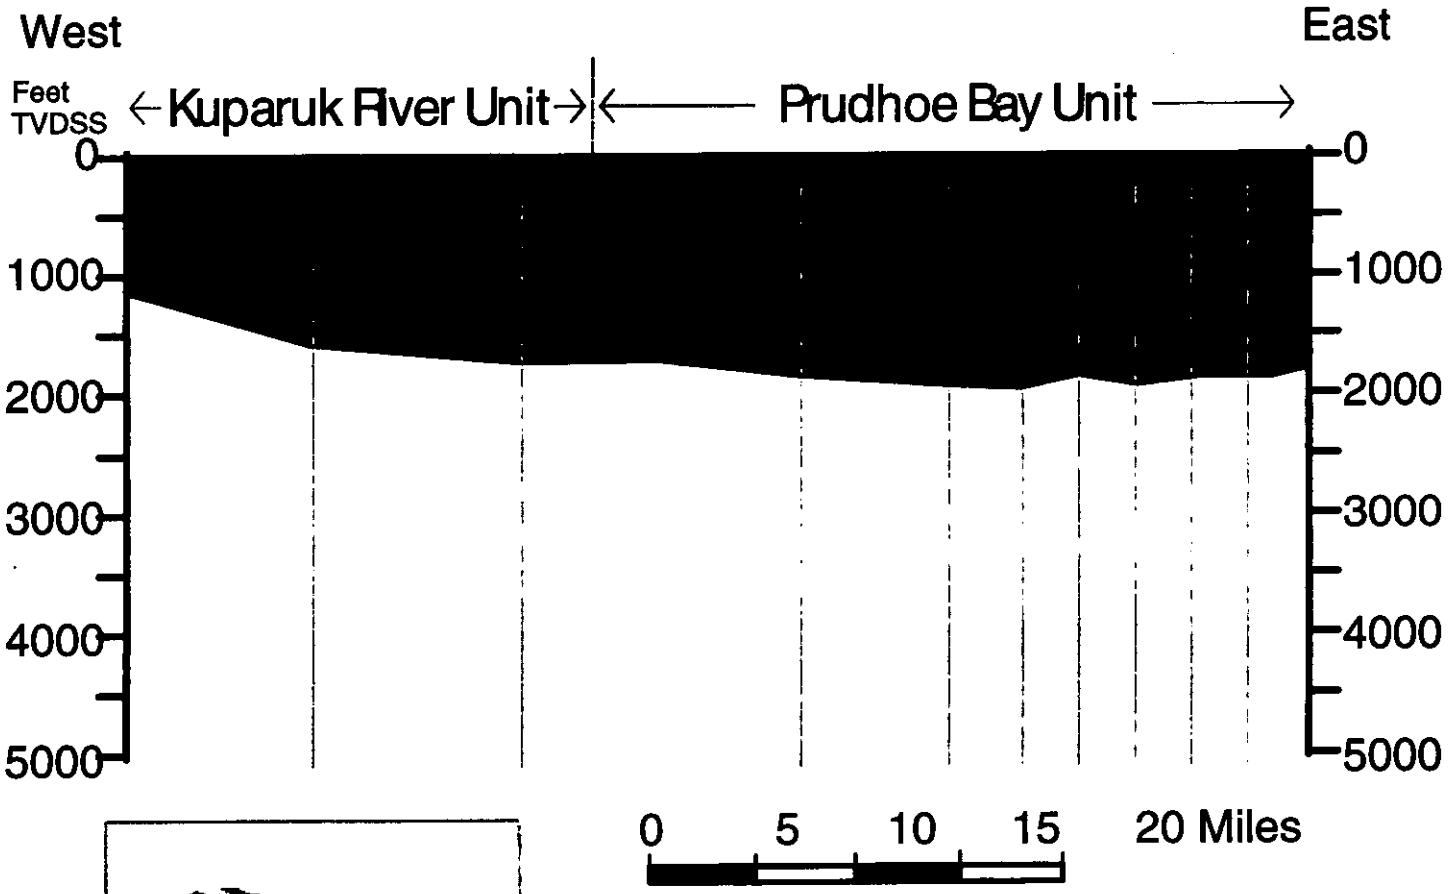
2167

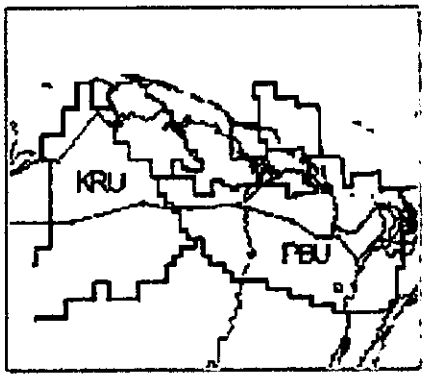




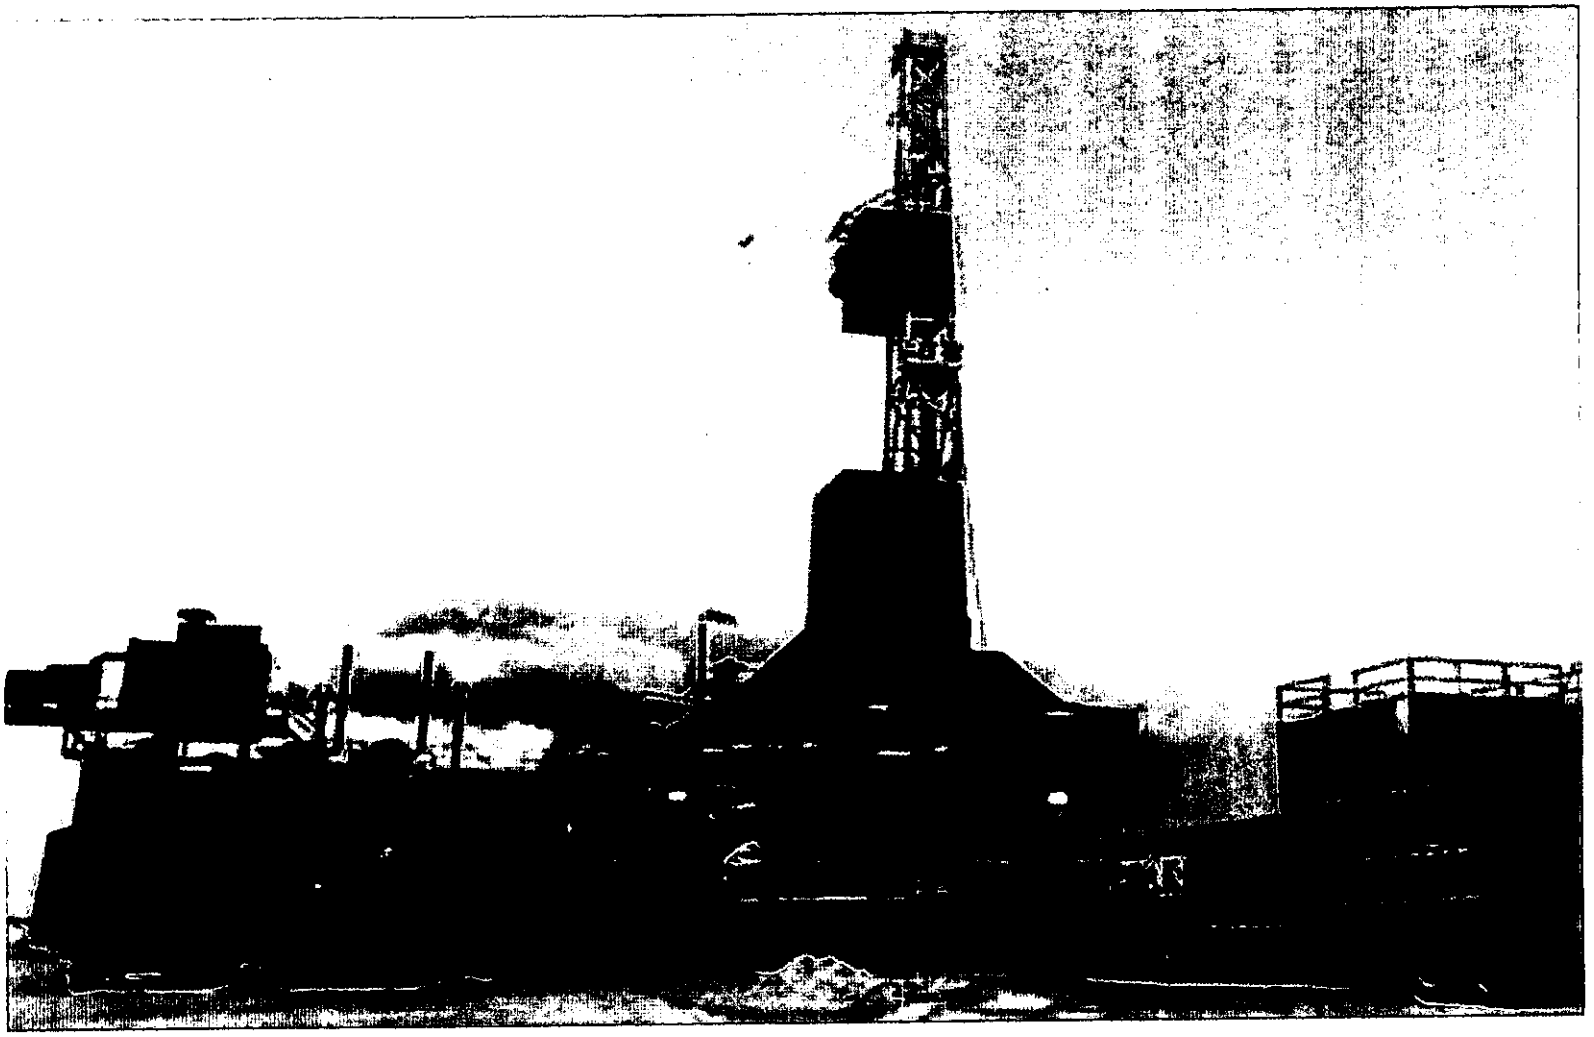
Drilling Overview
Directional Drilling
Measurement While Drilling
Questions

North Slope Permafrost

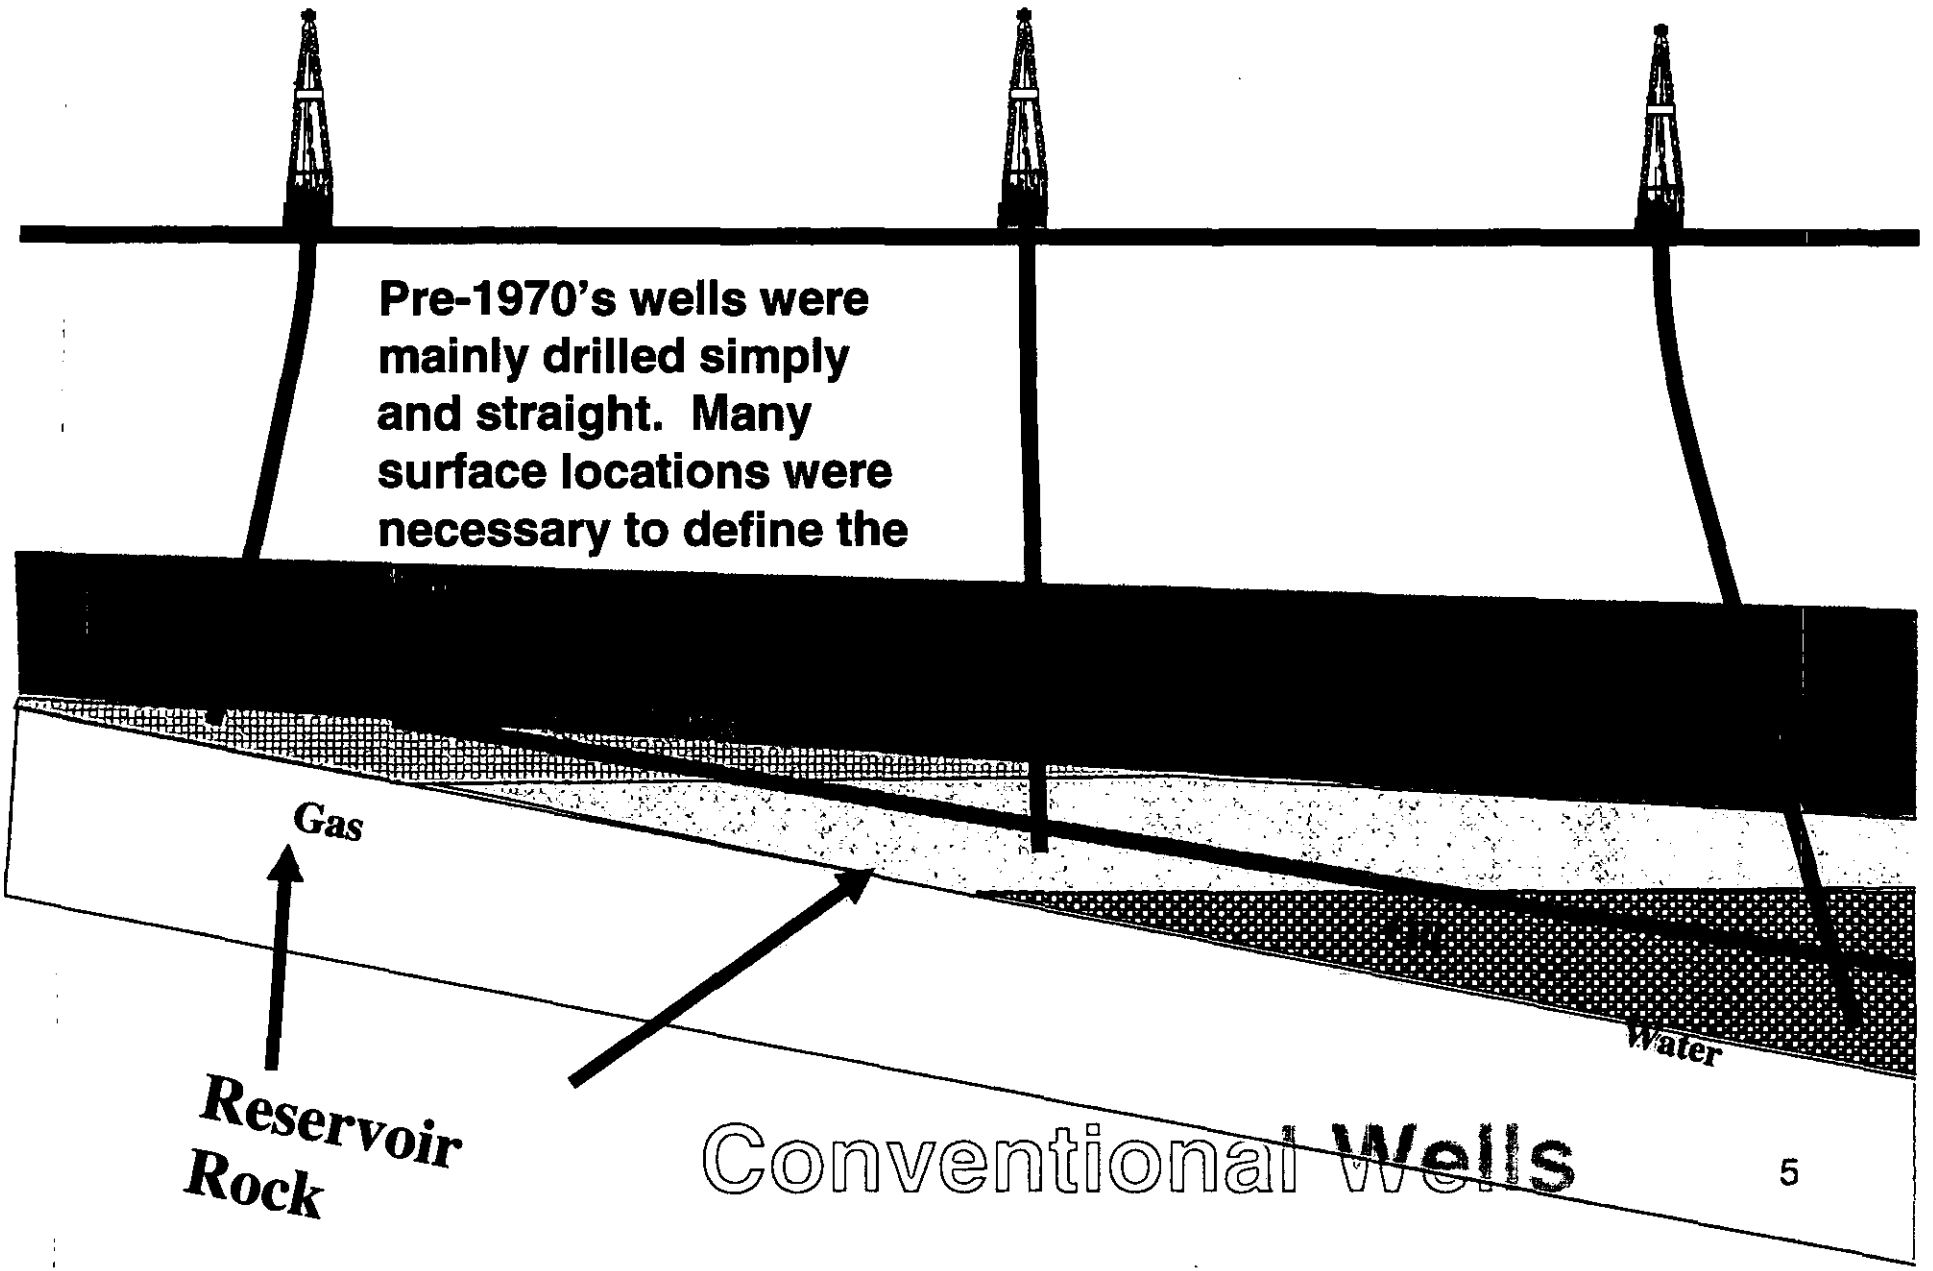




Typical Rotary Drilling Rig

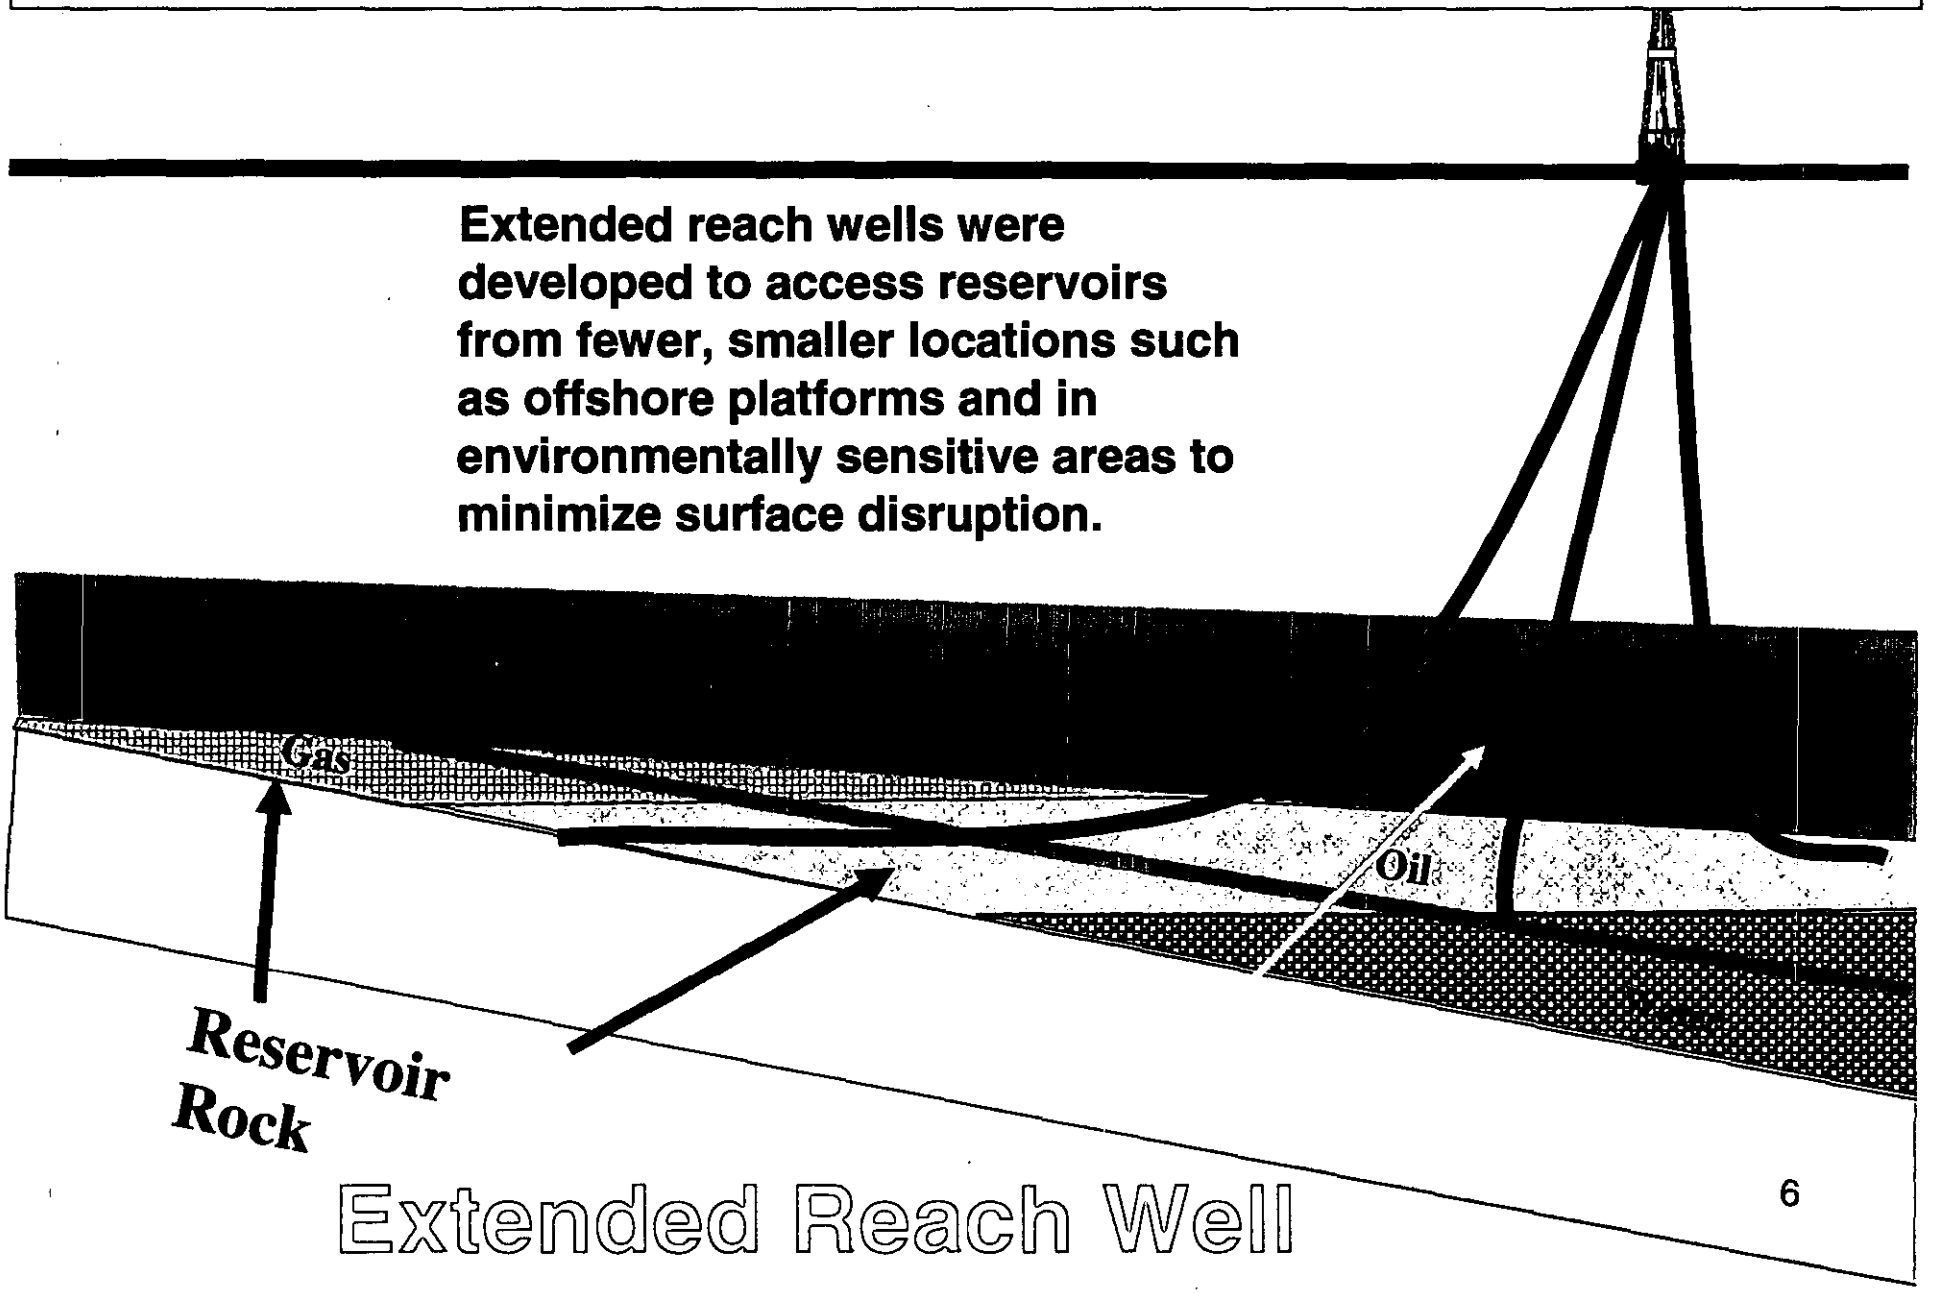


WELL CONSTRUCTION



WELL CONSTRUCTION

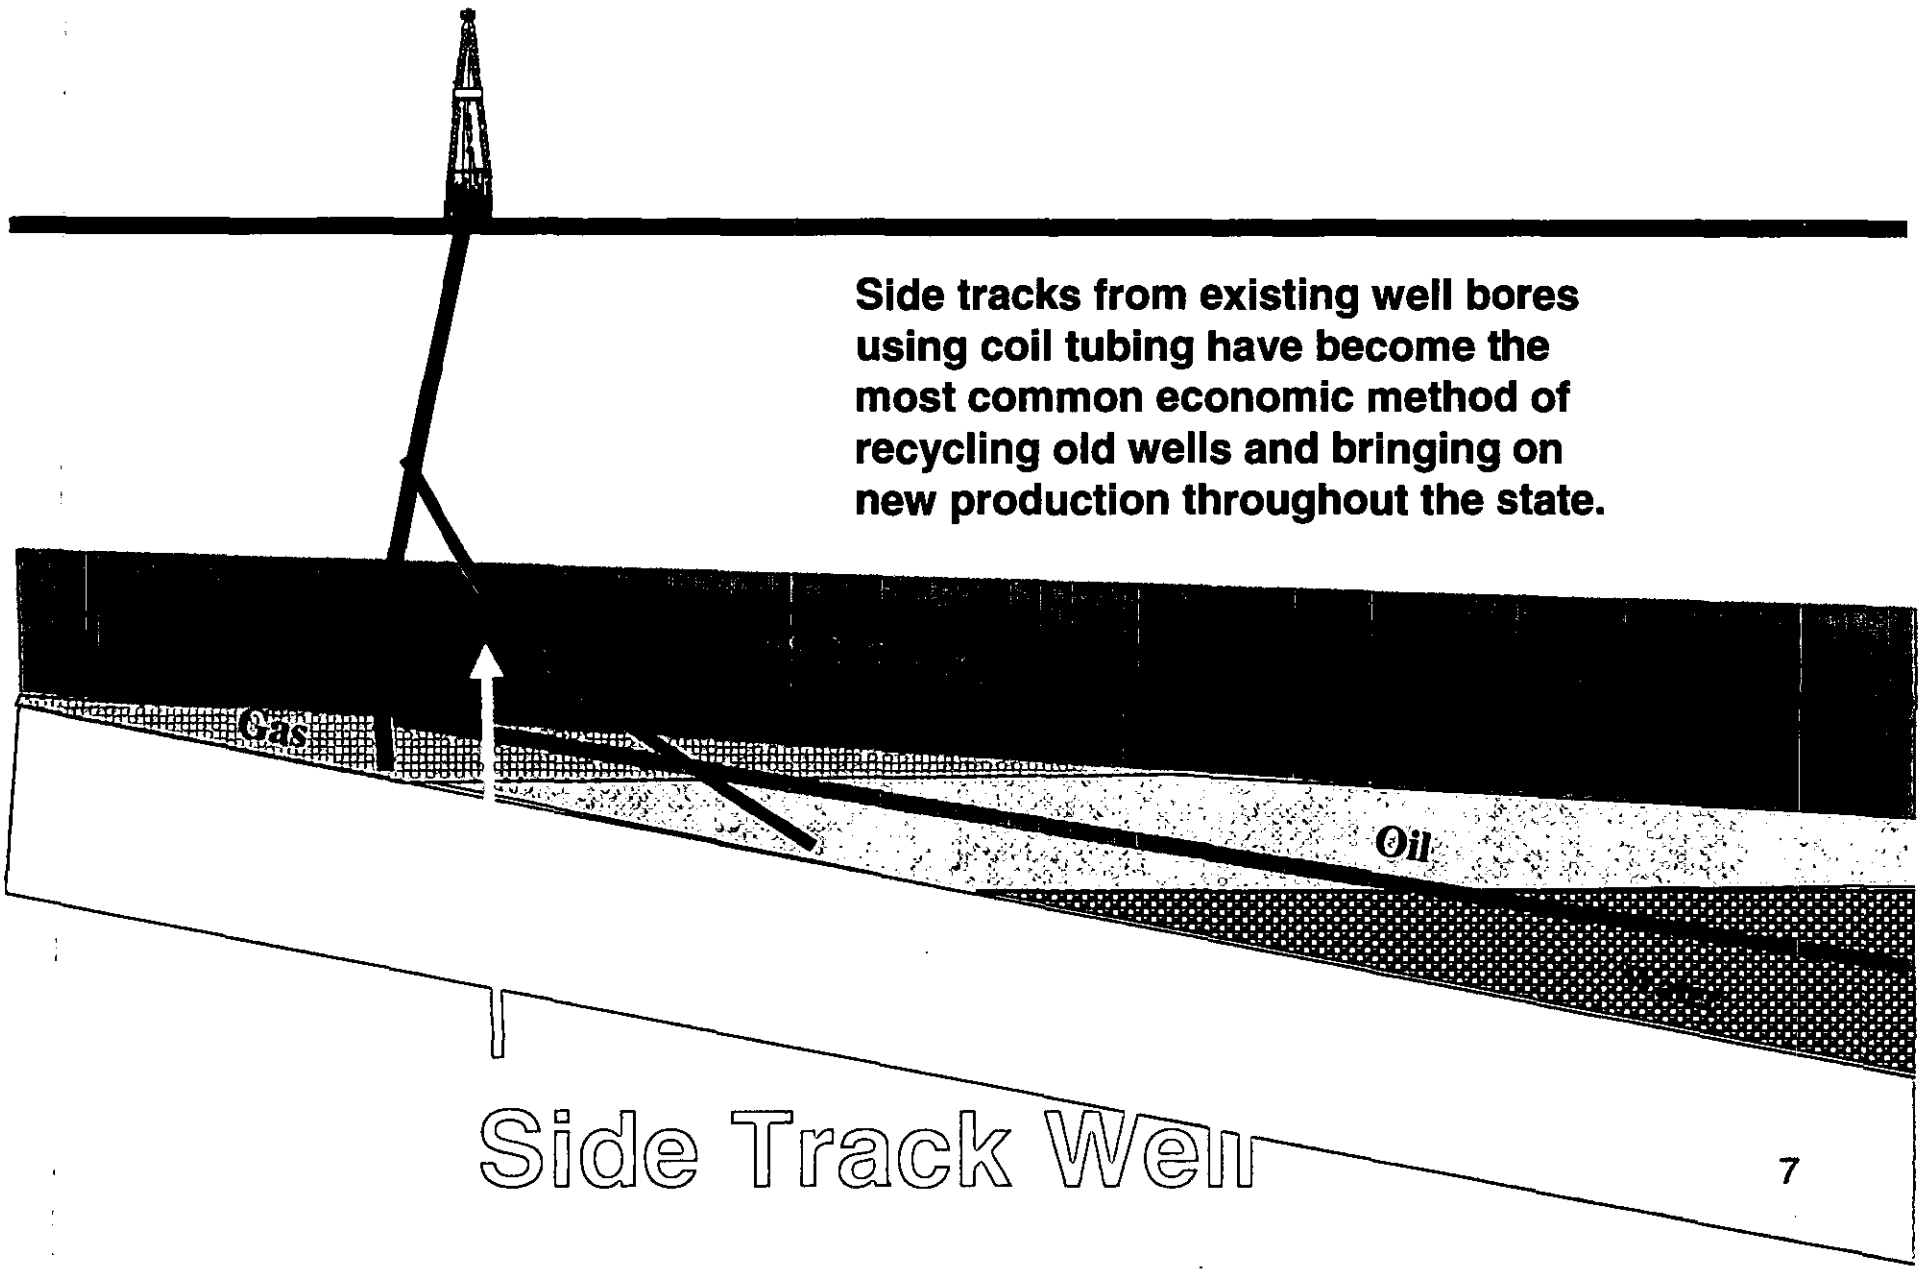
Extended reach wells were developed to access reservoirs from fewer, smaller locations such as offshore platforms and in environmentally sensitive areas to minimize surface disruption.



Extended Reach Well

WELL CONSTRUCTION

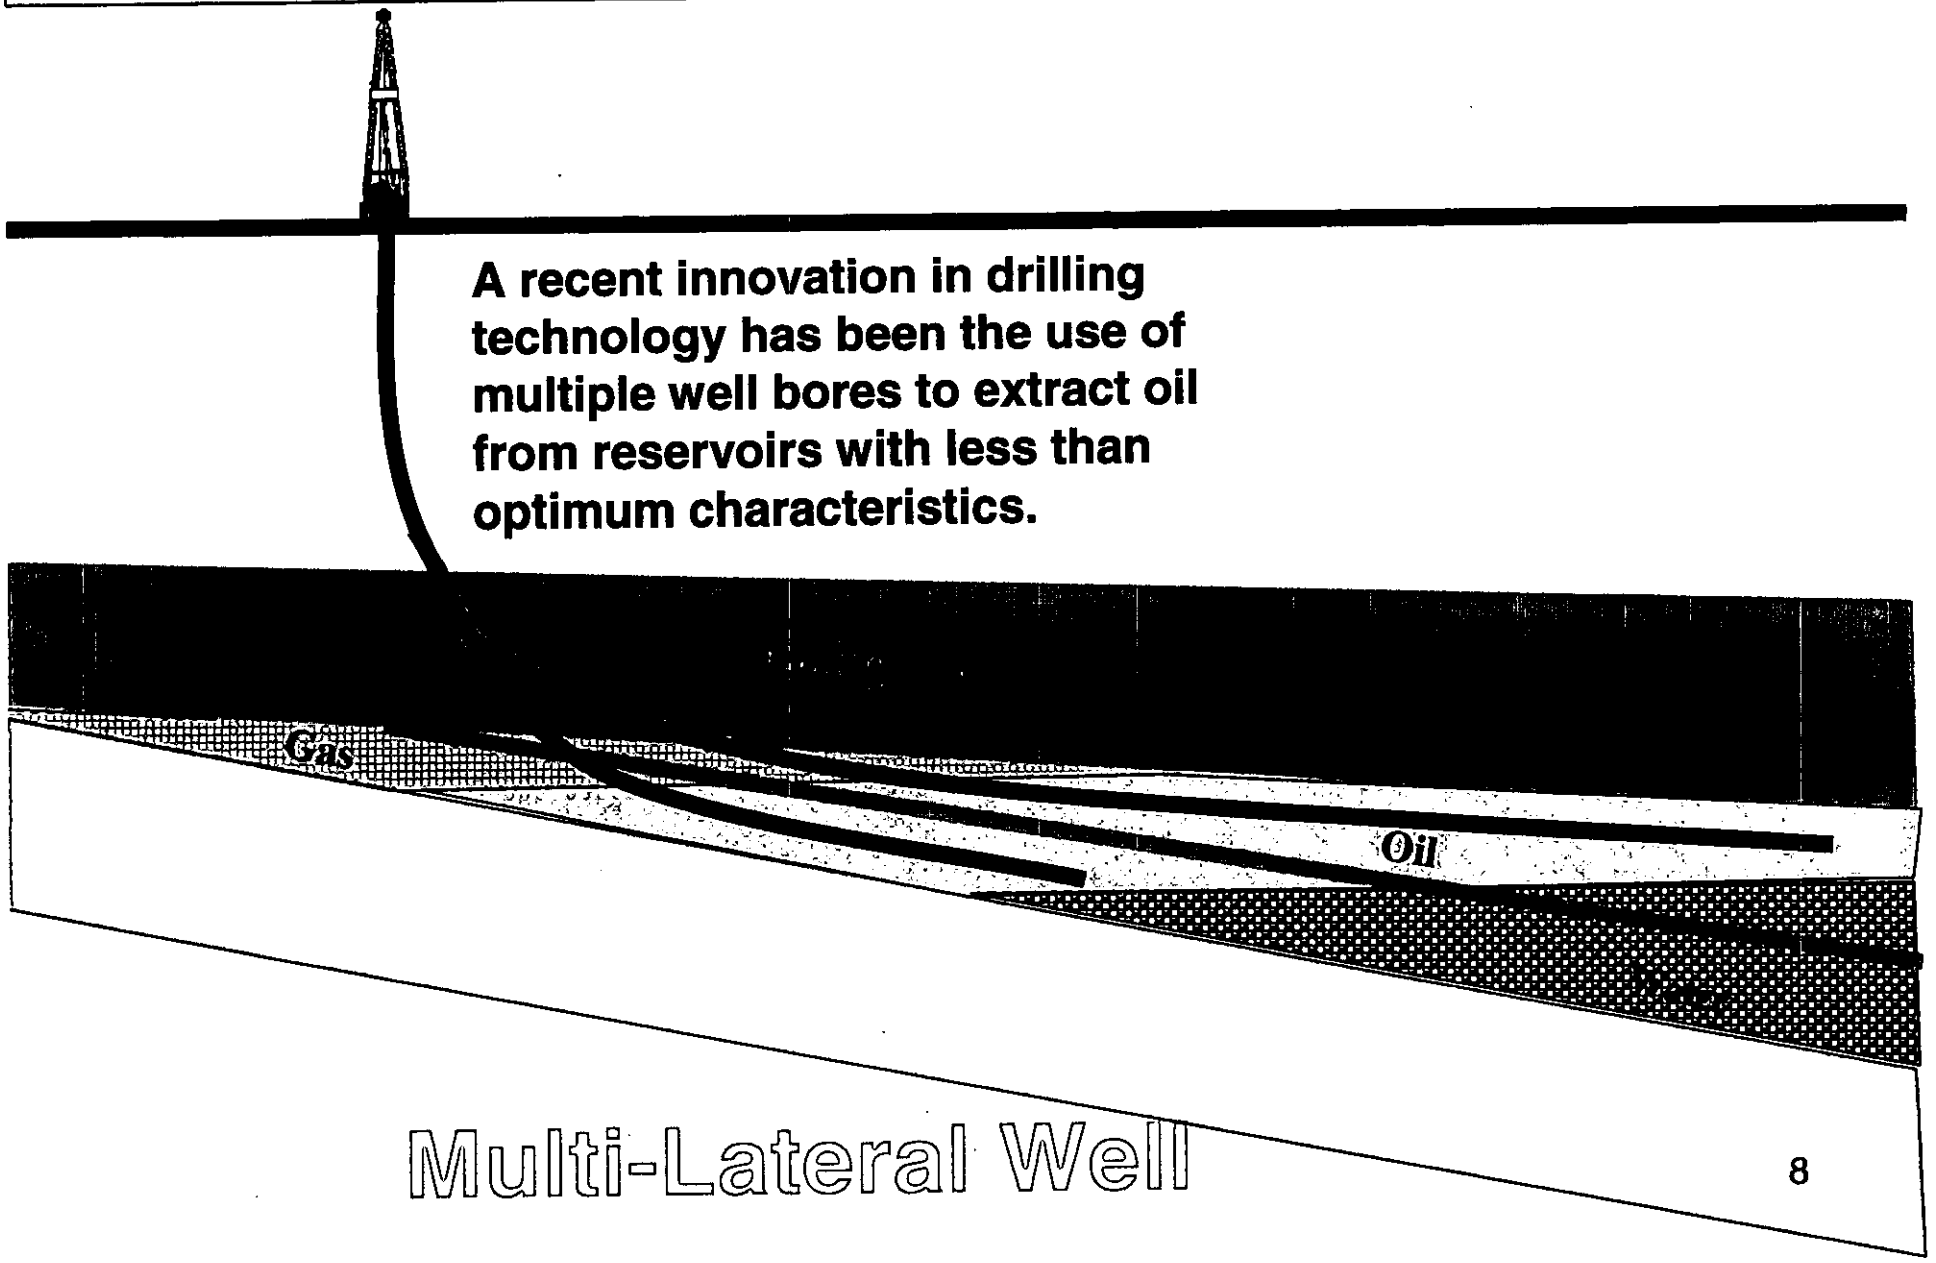
Side tracks from existing well bores using coil tubing have become the most common economic method of recycling old wells and bringing on new production throughout the state.



Side Track Well

WELL CONSTRUCTION

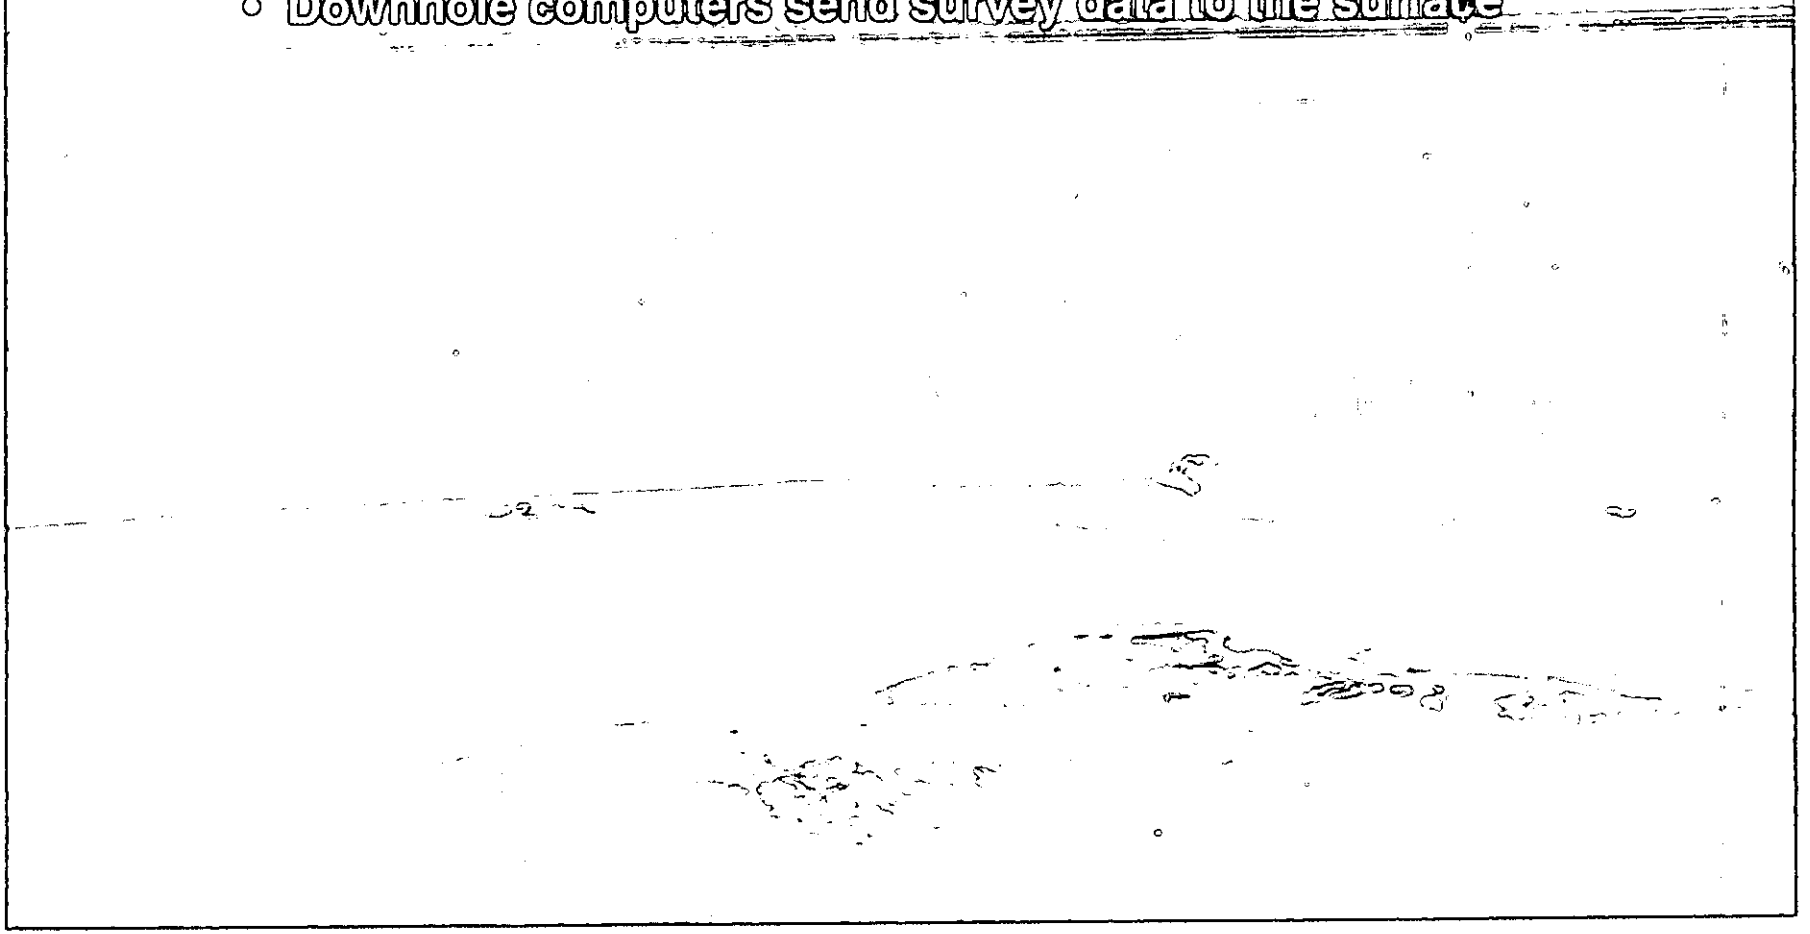
A recent innovation in drilling technology has been the use of multiple well bores to extract oil from reservoirs with less than optimum characteristics.



Multi-Lateral Well

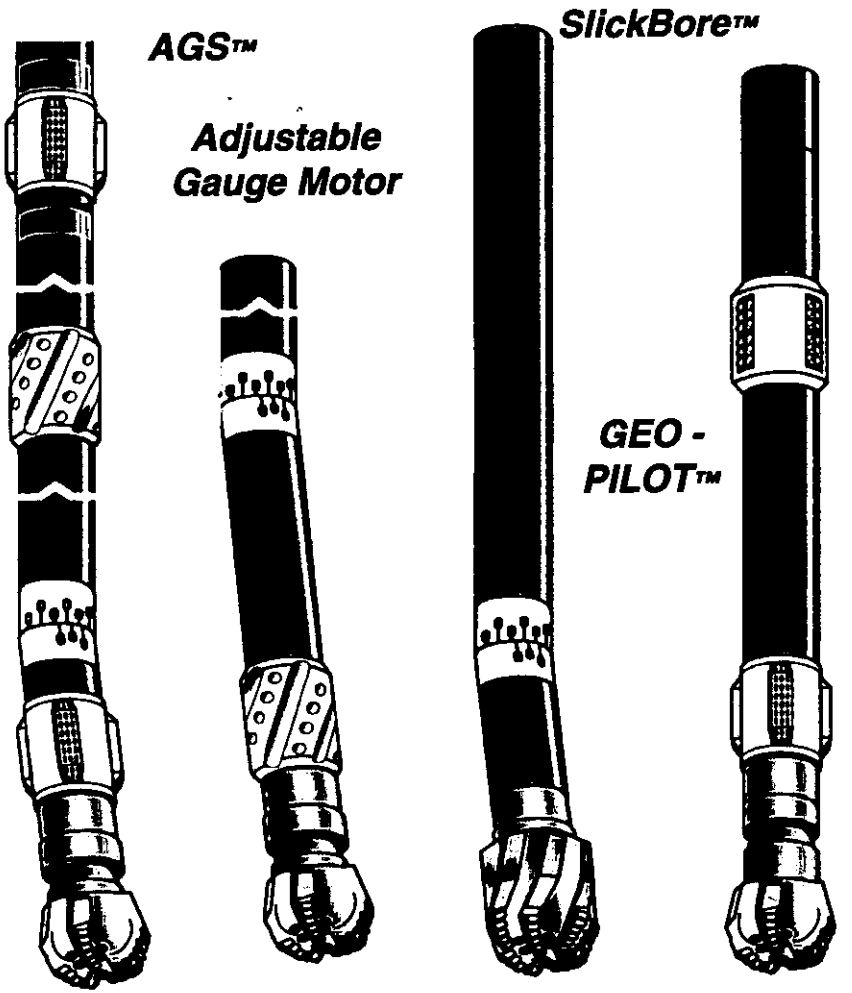
Directional Drilling

- Technology allows efficient resource development
- Minimize surface foot print
- Pinpoint reservoir target
- Surveying underground...angle, direction and distance
- Downhole computers send survey data to the surface



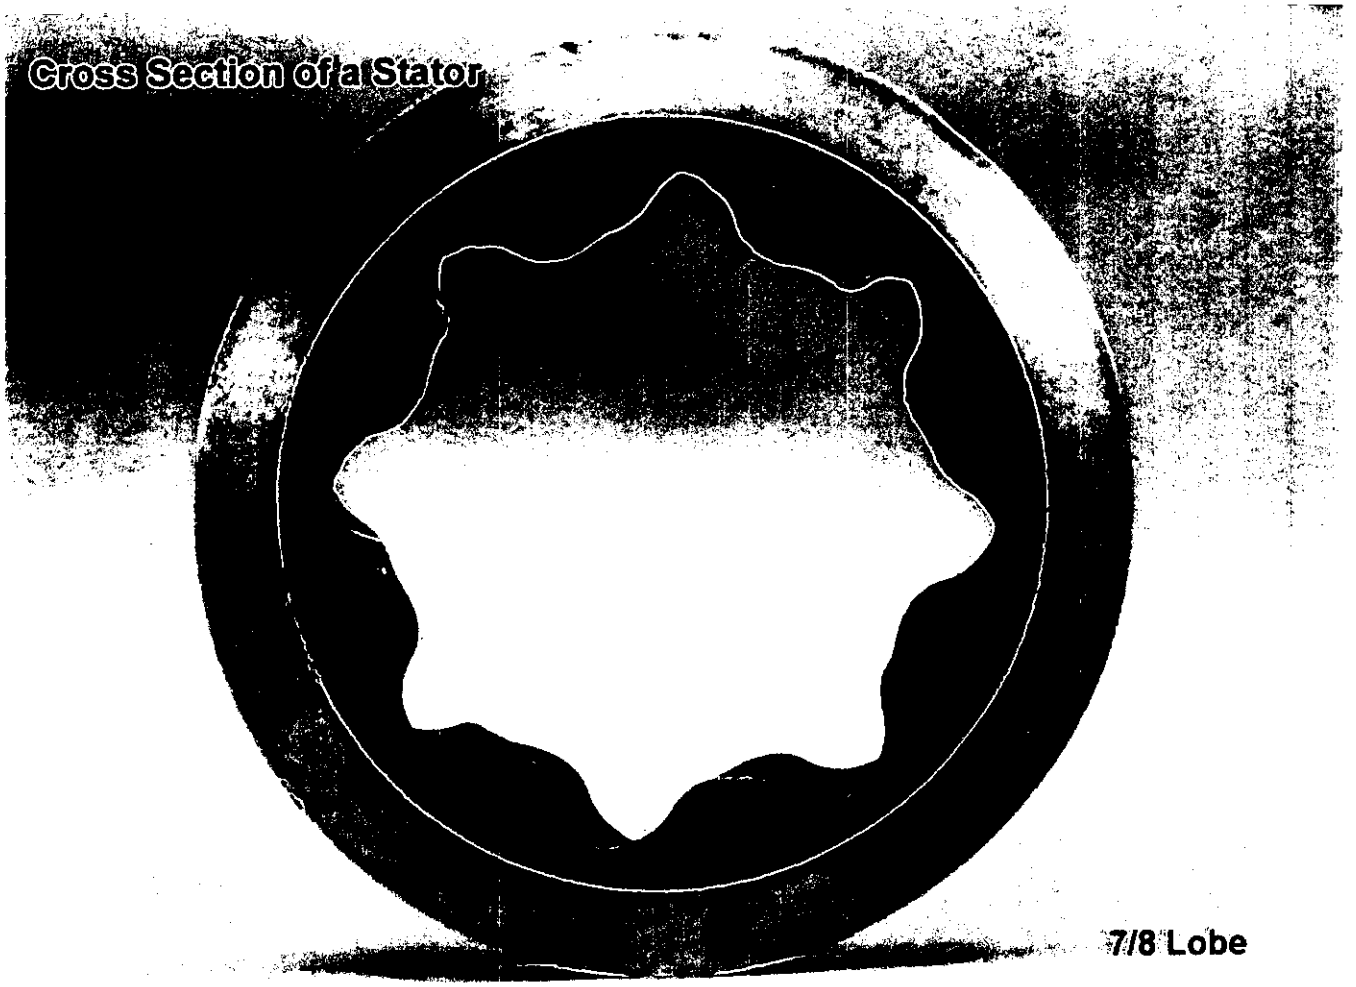
How do we "Directionally Drill"?

- Directional Drilling Systems
  - Mud Motors
  - Rotary Steerable Tools

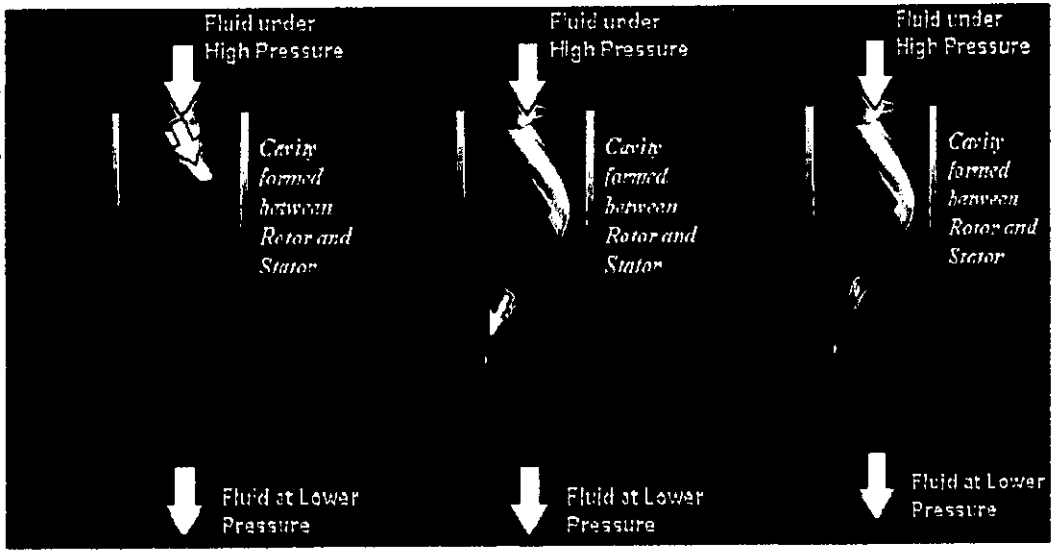


Mud Motor - Rotor

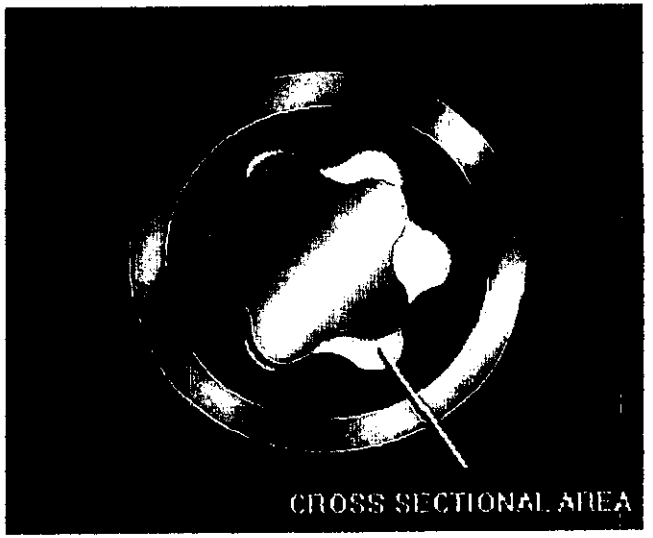
Mud Motor – Stator Cross Section



How the Motor Works?

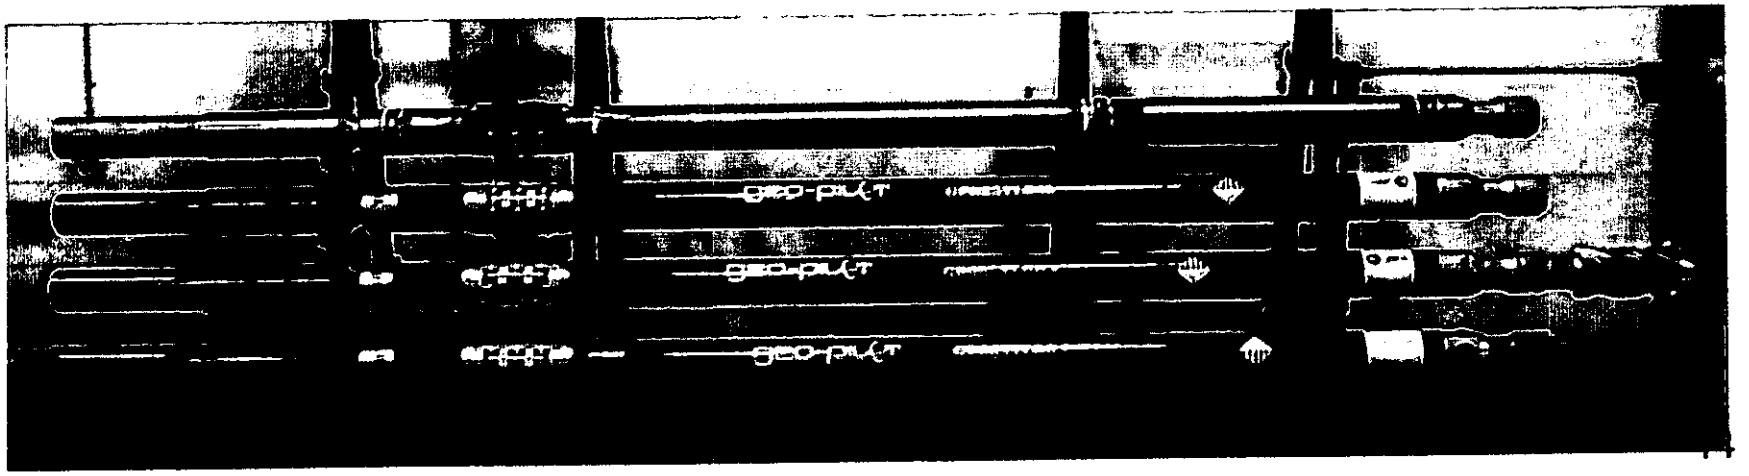


The differential pressure causes drilling fluid to enter the cavities at the top of the motor. As it moves through the motor, the fluid pushes on the rotor causing it to rotate.

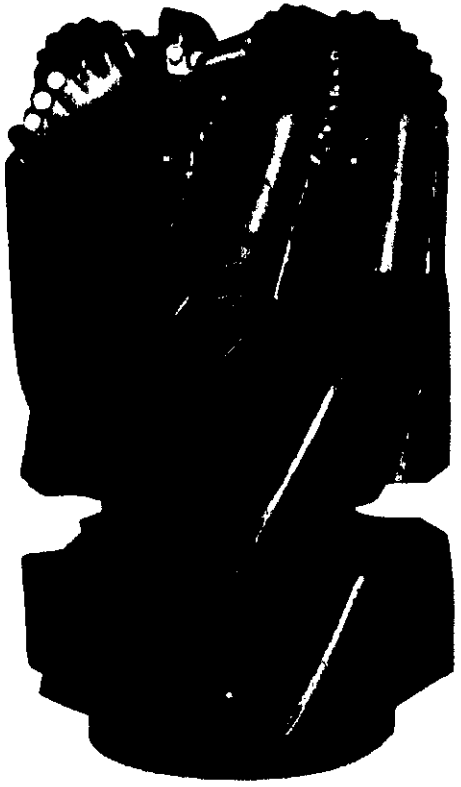


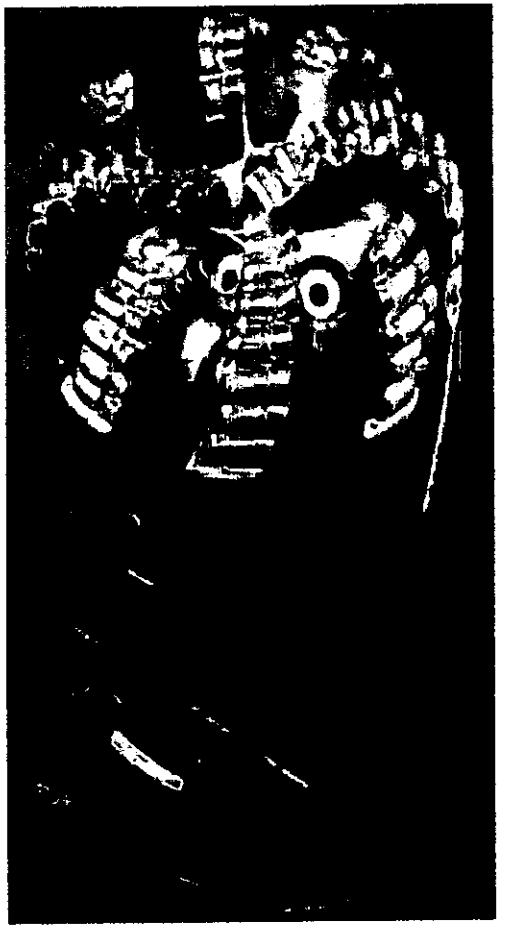
Rotary Steerable System

- Rotation comes from the rig at surface
- Drill Faster – Higher Overall Rate of Penetration due to:
  - Less friction, lower drag due to rotating 100% of the time
  - Less time spent cleaning hole
  - Fewer sticking pipe incidences
- Drill Farther – Beyond the technical limit of Mud Motors



Rotory Steerable Bits – Long Gauge





2182

Measurement While Drilling (MWD)

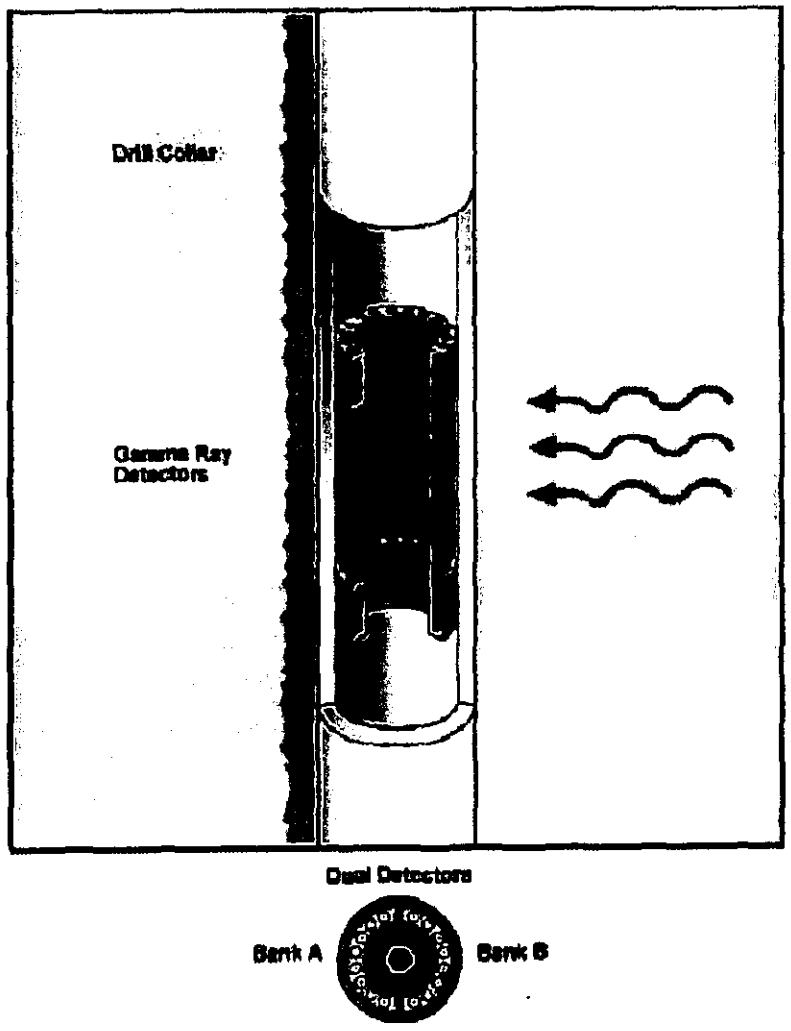
How do we know what is happening 2 miles below ground?

Basic MWD sensors and Mud Pulse Telemetry

- Gamma Ray Sensor
- Resistivity Sensor
- MWD Pulser

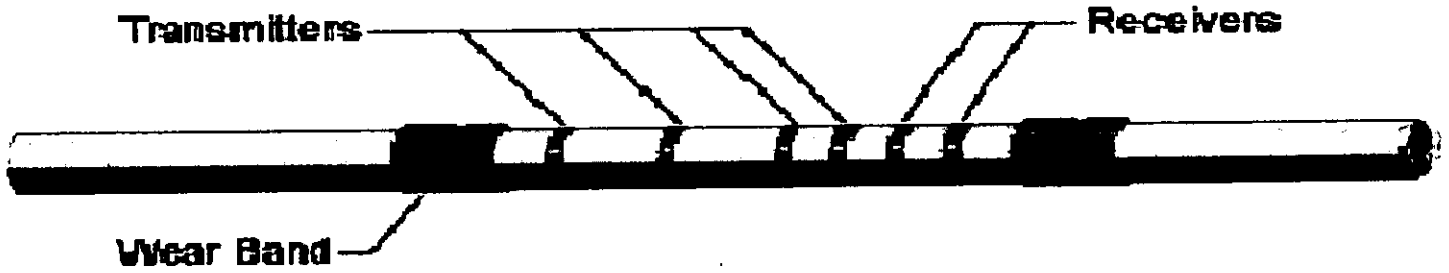
Gamma Ray Tool

- Measure background Gamma Radiation
- Lets you know if you drilling in a shale or sand
- Does not tell you if your in a oil bearing sand – Other tools are used in conjunction to answer that



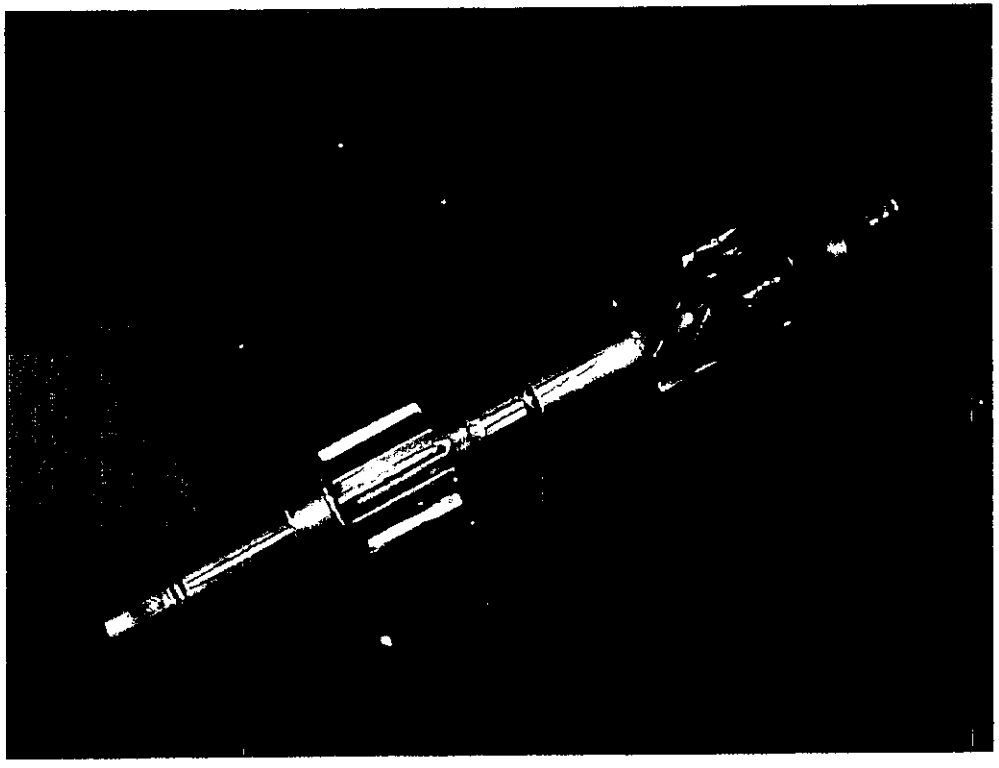
Resistivity Tool

- Tell you if your drilling through a formation with electrically conductive or insulating substance
  - Oil does not conduct electricity – High Resistivity readings
  - Water conducts electricity – Low Resistivity readings
- Think of it as sending out radio waves with receivers set at different distances



MWD Pulser

- Electrical Generator
  - Supplies Power to all MWD tools below ground
- Transfers all the data to the surface



Main steps to drill a well

- Drill the interval of interest.
- Acquire geological and reservoir information.
- Run casing over the interval.
- Cement the interval.
- Pressure test the cemented casing.
- Start over again...

3/24/09 LUNCH & LEARN: REFINING FUNDAMENTALS

TESORO

REFINING FUNDAMENTALS

Presentation Outline

- **Crude Oil Characteristics**
- **Refining Processes**
- **Refining Economics**

Crude Oil Characteristics

Crude oil quality & price is determined by 2 primary characteristics:

- Gravity (density)
  - The lighter (less dense) the crude the more desirable components it naturally contains
    - Refineries have less chemical work to do
    - Less sophisticated refineries are needed
  - Measured in units called degrees API
    - Light Crude = generally above 30 degrees API
    - Heavy Crude = generally below 30 degrees API
  - Examples
    - Tar – Gravity of about 8
    - Motor Oil – Gravity of about 40

Crude Oil Characteristics

Crude oil quality & price is determined by 2 primary characteristics:

- Sulfur Content
  - Sulfur poisons the catalysts used in refinery chemical processes/automobile catalytic converters
  - When burned, it forms sulfur dioxide- sulfuric acid
    - Corrodes engines/ boilers
    - Acid rain
  - Measured in weight percent
    - Sweet Crude = generally below 1%
    - Sour Crude = generally above 1%

TESORO

Crude Oil Characteristics

Crude oil quality & price is determined by 2 primary characteristics:

- Examples – marker crudes (large volume, pricing bases)

Crude	Gravity	Sulfur	Price(2005)
WTI (West Texas Intermediate)	39.6	0.24	$56.43
Brent (North Sea Crude)	38.3	0.37	$54.72
ANS (Alaska North Slope)	30.0	1.09	$53.35
Maya (Mexico)	21.8	3.33	$40.40

TESORO

Crude Oil Characteristics

Miscellaneous:

- Other Crude Characteristics
  - Metals- Nickel/Vanadium- poisons
  - Acid- TAN (Total Acid Number)
  - Distillation- what % boils off at each temperature
- Crude/Refining measure volume in barrels = 42 gallons
- Crude is made up of hundreds of chemical components
  - Most products produced are not pure components, but a range molecular sizes (boiling points)

    Gasoline – 100 - 400 degrees F
    Jet Fuel – 300 - 550
    Diesel – 350 - 650

TESORO

Presentation Outline

- **Crude Oil Characteristics**
- **Refining Processes**
- **Refining Economics**

TESORO

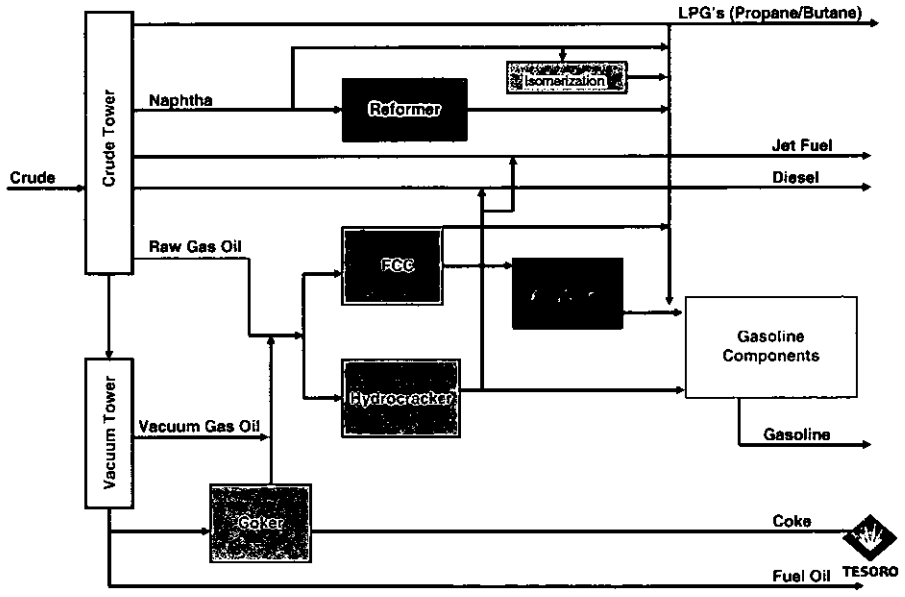
Refining Processes

Every refinery is different in terms of what units it has and how big each unit is

- Determined by crudes to be run & products to be produced
  - Far East refineries run light crude to produce distillates
  - East Coast refineries must produce home heating oil
  - Rocky Mountain refineries have limited crude access
  - West Coast refineries run heavy crude to make gasoline
- Major Groups: margin vs investment
  - Topping plants- mostly distillation
  - Cracking plants- contain cracking units to make gasoline
  - Coking plants- contain cokers to run heavy crude

TESORO

Refining Processes



Refinery Processes

- Refinery processes generally fall into one of three categories:

  - Distillation

  - Conversion

  - De-Sulfurization

Refining Processes

- **Distillation**

  – Separation of components by boiling point-does not change the chemical nature of the components

  – First process in refining- separates crude oil into groups of components to be directed to other processes

  – Used throughout refining for separation/purification

Refining Processes

- **Distillation (continued)**
  - Refinery Products in Order of Distillation-boiling point
    - Natural Gas- methane
    - LPG's- propane/butane
    - Jet Fuel
    - Gasoline Components
    - Diesel Fuel
    - Fuel Oil

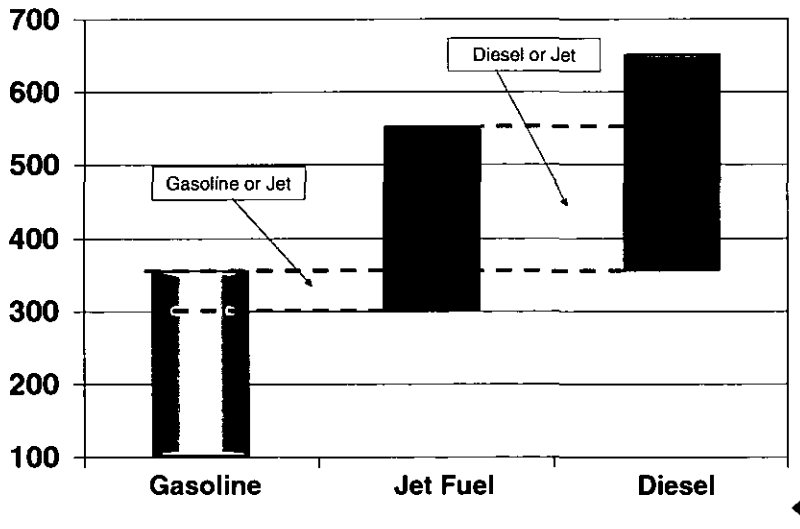
Lighter, less dense

TESORO

Initial Crude Yields

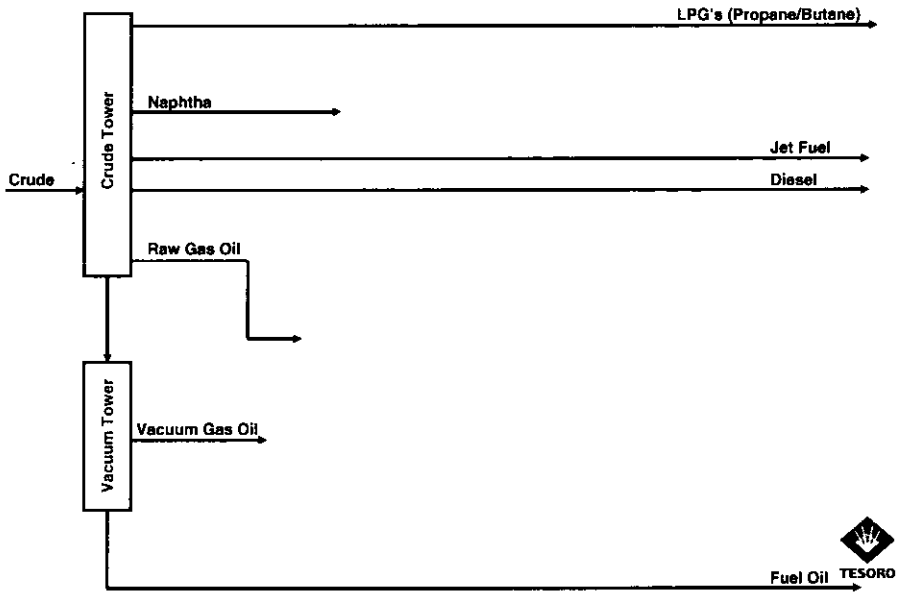
Boiling Range Degrees Fahrenheit

There is some interchangability between products



TESORO

Refining Processes



Refining Processes

- **Conversion**
  - Changes the chemical nature of the components
  - Generally require catalysts
  - Generally directed at producing gasoline components
    - Jet/Diesel occur naturally in crude-need separation
    - Gasoline is a blended product (3-8 components)
      - Heavy components are made lighter
      - Light components are made heavier
      - Natural components are changed to improve octane

TESORO

Refining Processes

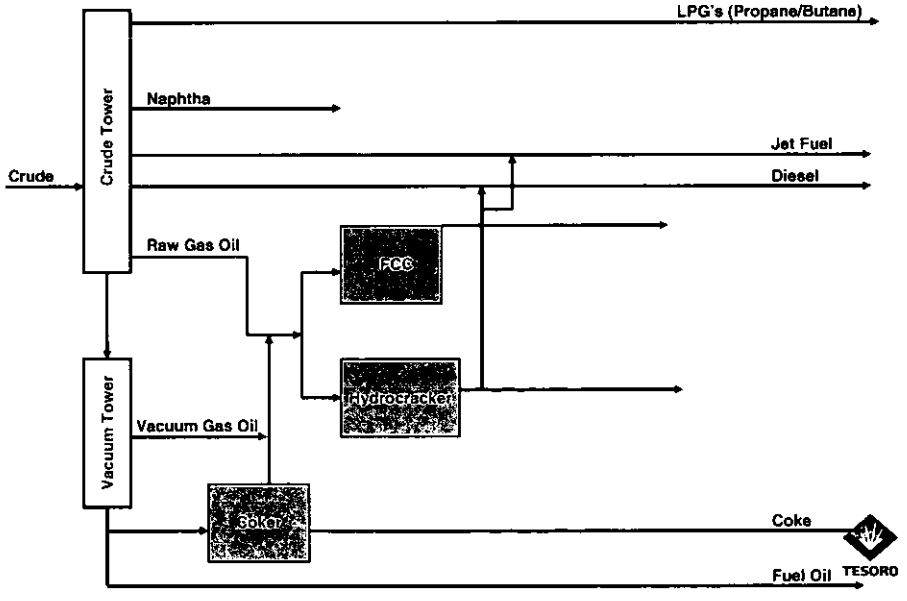
- **Conversion (continued)**

  Heavy components are made lighter

  - Coking- high temperature & pressure to breakup the heaviest components of crude- no catalyst
  - Hydrocracking- high pressure hydrogen/catalysts breakup the next heaviest components
  - FCC- fluidized catalytic cracking- uses catalysts to breakup diesel quality components

TESORO

Refining Processes



Refining Processes

- **Conversion (continued)**

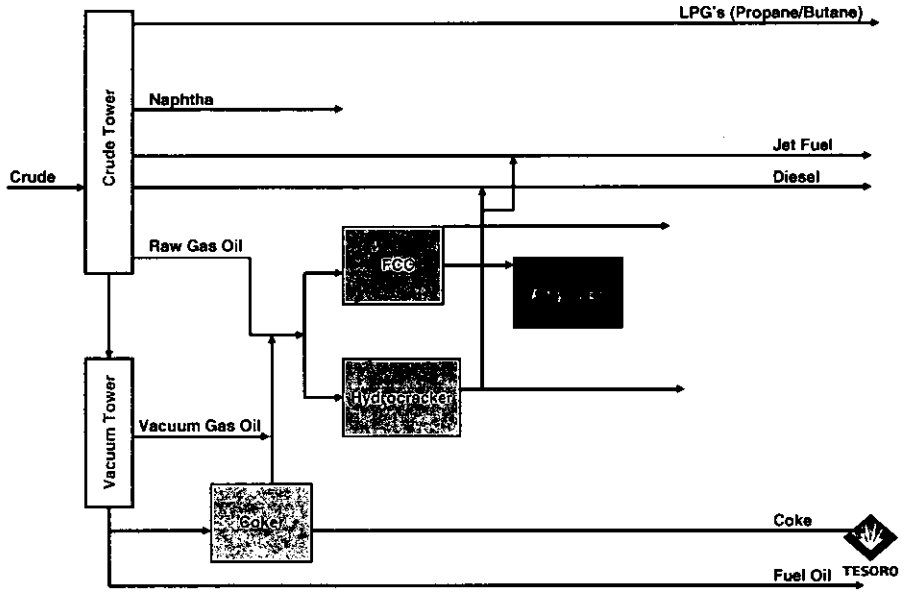
Light components are made heavier

- Alkylation
  - light ends from crude combined with by products from FCC
  - catalyst is either sulfuric acid or hydrofluoric acid

- Other older process- polymerization

TESORO

Refining Processes



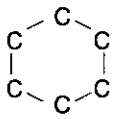
Refining Processes

- **Conversion (continued)**

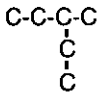
Natural components are changed to improve octane

- Straight chained molecules have low octane C- C- C- C- C- C

- Reforming- changes straight chains to rings

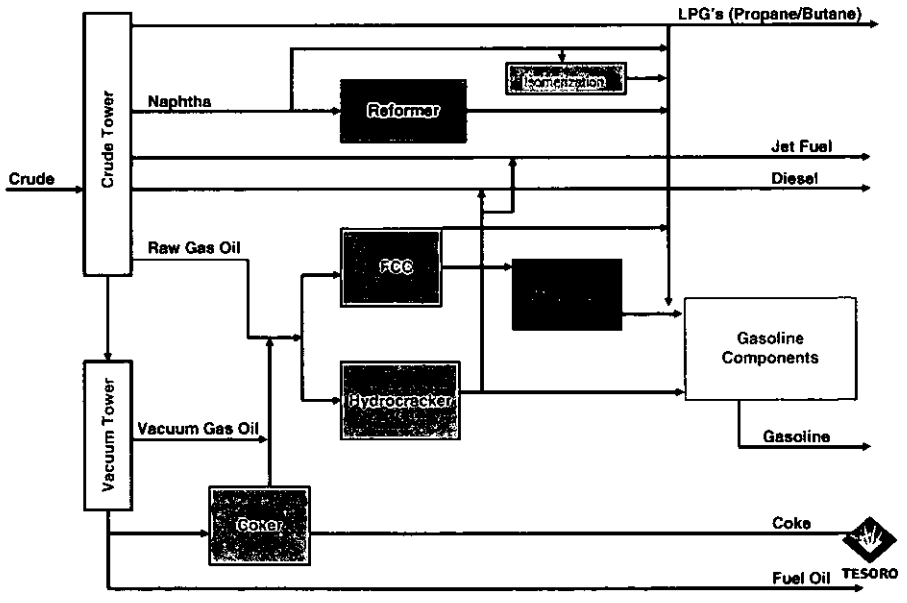


- Isomerization- changes straight chains to branches



TESORO

Refining Processes



Refining Processes

- **De-Sulfurization**

  Removes sulfur using catalysts and pressurized hydrogen

  - Low pressure - 600-800 psi -reduce to 500 ppm
  - Medium pressure - 800- 1200 psi-reduce to 50 ppm
  - High pressure -1200-1800 psi- reduce to 5 ppm

TESORO

Presentation Outline

- **Crude Oil Characteristics**
- **Refining Processes**
- **Refining Economics**

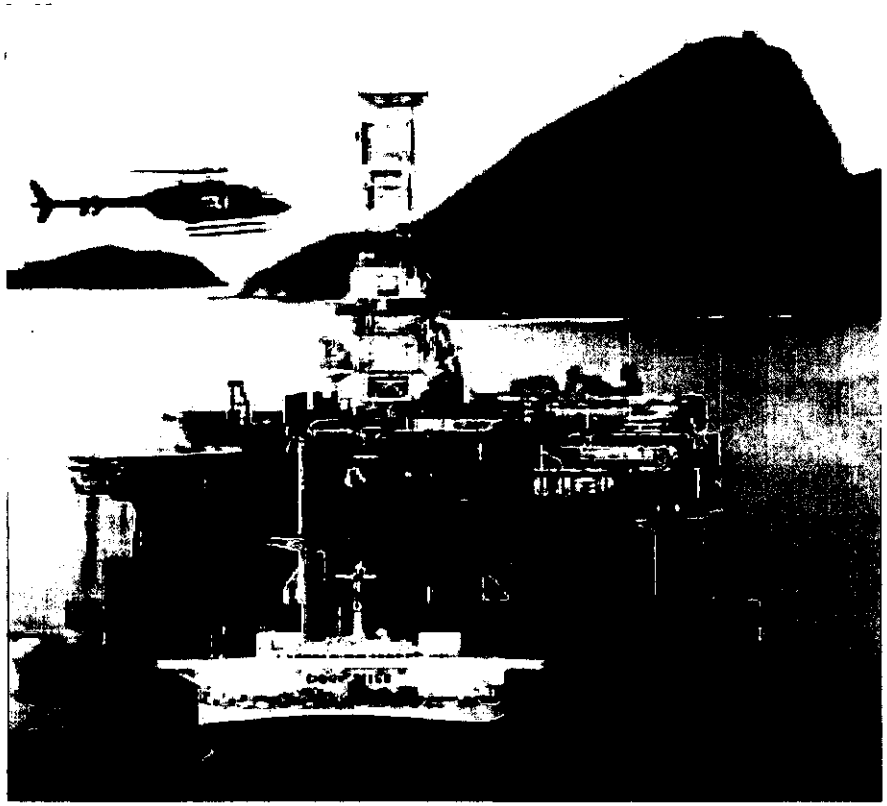
3/27/09

OVERVIEW: PETROLEUM SYSTEMS INTEGRITY OFFICE AND AK RISK...

Petroleum Systems Integrity Office

May, 2000 Petrobras 36

World's largest floating oil platform off the coast of Brazil



(www.rootcauselive.com/files)

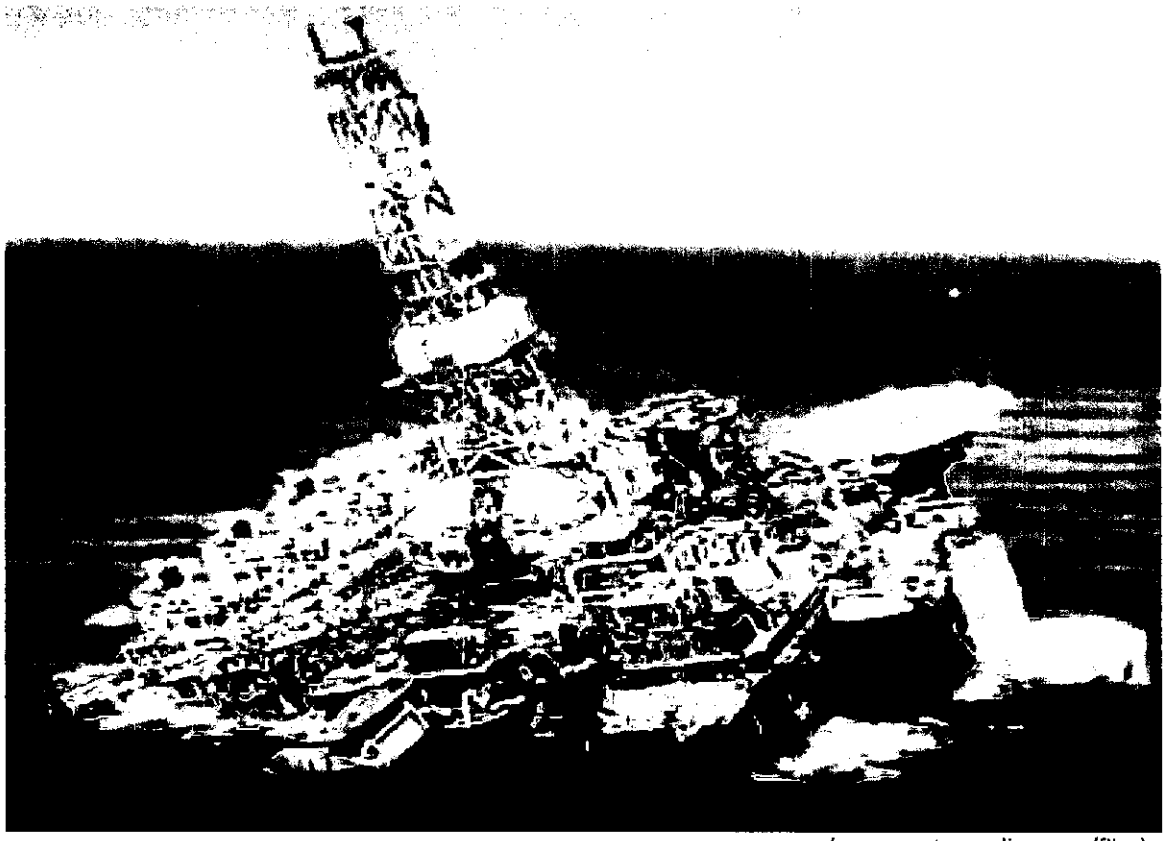
Speech on the new platform design
by a Petrobras executive

"Petrobras has established new global benchmarks for the generation of exceptional shareholder wealth through an aggressive and innovative programme of cost cutting on its P36 production facility. Conventional constraints have been successfully challenged and replaced with new paradigms appropriate to the globalised corporate market place.

Through an integrated network of facilitated workshops, the project successfully rejected the established constricting and negative influences of prescriptive engineering, onerous quality requirements, and outdated concepts of inspection and client control.

Elimination of these unnecessary straitjackets has empowered the project's suppliers and contractors to propose highly economical solutions, with the win-win bonus of enhanced profitability margins for themselves. The P36 platform shows the shape of things to come in the unregulated global market economy of the 21st Century."

March 15, 2001 Petrobras 36



(www.rootcauselive.com/files)

On March 15, 2001, the Petrobras 36 platform in the Roncador Field, Campos Basin, experienced an explosion during drainage operations. The operations were immediately suspended, and emergency trained crew attempted to put out the fire. Shortly later, a second explosion occurred, killing 11 of the 175 people onboard.

In May 2007, a federal judge ruled that Petrobras had to pay a fine of BRL100 million ($50.8 million) for environmental damages caused when the P-36 sank.

Inadequate safety inspections and virtually no quality assurance were blamed for the incident.

PSIO

- Established in April 2007 by Administrative Order 234
- Primary tasks:
  - Coordinate state, federal and local agencies
  - Incident investigation
  - Gap/Overlap Analysis
  - Quality Management

Designated Liaison Agencies

- Department of Environmental Conservation
- Department of Fish and Game
- Department of Public Safety
- Department of Revenue
- Department of Transportation and Public Facilities
- Department of Labor and Workforce Development
- Department of Law
- Department of Natural Resources
- Alaska Oil and Gas Conservation Commission
- Governor's Washington, D.C. Office

Coordinated Efforts Among Agencies

- Event notification and coordination of investigations
- Circulation of employee/public concerns
- Regular liaison interaction
- Regular contact with local, state and federal entities
- Combat the “silo effect”

Recent Coordinated Incident Investigations/Activities

- September 2008 Y-Pad artificial lift gasline rupture
- January 2009 Pump Station 1 pigging incident

Gap Analysis

The Goal of the Gap Analysis is to provide a **comprehensive and cost-effective approach to state oversight** of oil and natural gas facilities, equipment, infrastructure, and activities on state oil and natural gas units and leases.

Process

In coordination with Liaison Officers:

- Identify statutory and regulatory authorities;
- Identify how these authorities are implemented;
- Identify any gaps and overlaps;
- Assess risks associated with any gaps and overlaps;
- Coordinate the review of gaps, overlaps and risks;
- Provide recommendations to DNR Commissioner and Resources Subcabinet

Schedule

- Arcadis hired to do detailed analysis of statutory and regulatory gaps and overlaps
- Data compilation in progress – will begin meeting with PSIO liaisons soon
- Results expected August 2009

PSIO's Gap Analysis & DEC's Alaska Risk Assessment

- The Risk Assessment and Gap Analysis documents will serve as tools in determining how best to coordinate agency efforts to provide a comprehensive and cost-effective approach to oil and gas oversight activities
- Where high risks exist in areas of little or no oversight, those gaps will likely need to be filled.
- Where low risks exist in areas of duplicative oversight, those overlaps will likely need to be removed.

Quality Program

Designated agencies, to the extent authorized through existing legal authorities, shall require the industry businesses to provide a comprehensive description of current practices that includes the quality control, quality assurance, monitoring, inspection, and other practices the business uses to ensure the integrity and reliability of oil and natural gas facilities, equipment, infrastructure, and activities.

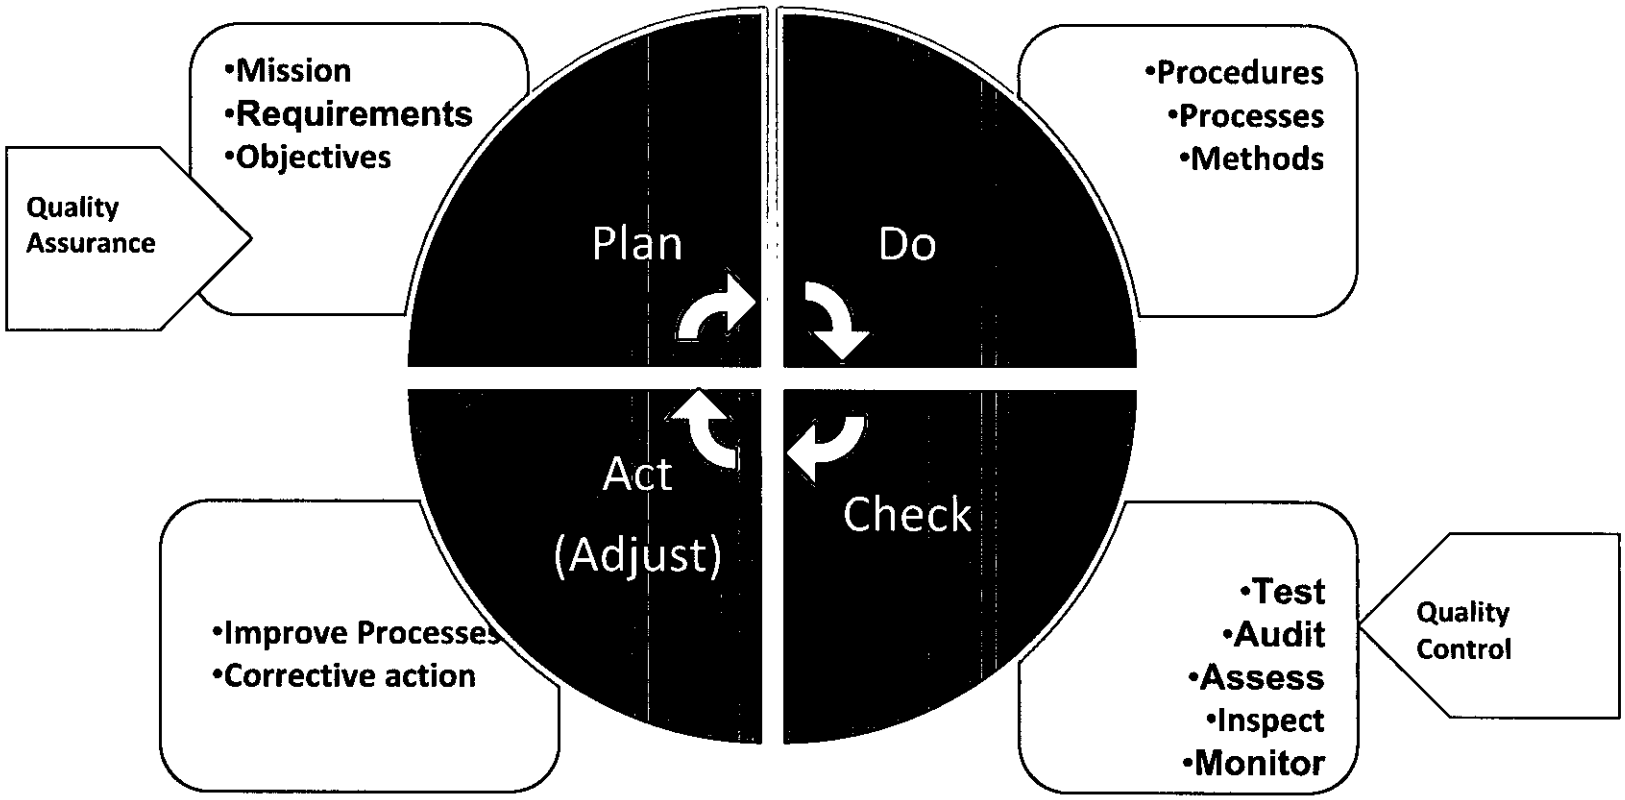
What is Quality Assurance?

- Quality assurance is any systematic process of determining if a product or service meets the mutually agreed upon characteristics and expectations for performance
- Establishes rules and methods (the process) to achieve expected results and conformance to requirements
- The "Plan" component of a quality management system
- Often confused with quality control

What is Quality Control?

- The process steps, procedures and activities employed to measure or test physical characteristics and performance requirements against predetermined criteria
- Is concerned with the product or service
- The "Check" element of a quality management system
- Should not, but is often confused with quality assurance

PDCA Cycle



•Mission
•Requirements
•Objectives
Quality Assurance

Quality Control

Quality Management Systems

Fundamentals:

- Quality control;
- Quality assurance;
- Monitoring;
- Inspection; and
- Other practices used to ensure the integrity and reliability of facilities, equipment and infrastructure

Agency Expectations of PSIO

- Help agency personnel become knowledgeable of the elements of quality management systems in order to maintain the integrity and reliability of:
  - Oil and natural gas facilities
  - Equipment
  - Infrastructure
- Understand the benefits of:
  - Plan, Do, Check (Study), Act
  - Performance measurement
  - Continuous Improvement

PSIO Expectations of Agencies

- Document evaluations of oil and gas facilities, equipment, infrastructure, work activities and where applicable in the context of quality management
- Effectively communicate results to industry
- Work with the PSIO Coordinator to coordinate review of evaluations, identify gaps, and seek remedial action.

PSIO Expectations of Petroleum Industry

Provide evidence that management systems or processes for quality control, quality assurance, monitoring, inspection and other programs are implemented, effective, and periodically evaluated by upper management.

Petroleum Systems Integrity Office (PSIO)

Administrative Order 234 issued April 18, 2007 established PSIO and outlined its three primary tasks:

1. **Coordinate state, federal and local agencies**
2. **Gap Analysis**
3. **Quality Management**

1. Coordinate state, federal and local agencies

The PSIO is an umbrella agency overseeing all oil and gas infrastructure statewide, coordinating all oil and gas activities from government agencies, so that agencies impacted by any activity are aware and informed.

Coordinated efforts among agencies

- Incident notification and coordination of investigations
- Circulation of employee/public concerns
- Regular liaison interaction
- Regular contact with local, state and federal entities
- Break down the barriers to effective communication that exist between agencies, between agencies and industry, and within agencies.

Designated liaison agencies:

- Department of Environmental Conservation
- Department of Fish and Game
- Department of Public Safety
- Department of Revenue
- Department of Transportation and Public Facilities
- Department of Labor and Workforce Development
- Department of Law
- Department of Natural Resources
- Alaska Oil and Gas Conservation Commission
- Governor's Washington, D.C. office

---

2. Gap/Overlap Analysis

The goal of the gap analysis is to provide a **comprehensive and cost-effective approach to state oversight** of oil and natural gas facilities, equipment, infrastructure, and activities on state oil and natural gas units and leases.

Process

In coordination with liaison officers from other government agencies:

- Identify statutory and regulatory authorities and practices
- Identify any gaps and overlaps
- Assess risks associated with any gaps
- Coordinate the review of gaps, overlaps and risks
- Provide recommendations to DNR Commissioner and Resources Subcabinet.

Definitions

A gap is:

- A mismatch (i.e. clarifying roles and responsibilities or definitions); or
- A lack of current jurisdictional authorities.

An overlap is:

- an authority/program with an area or range in common with another authority/program

PSIO's Gap Analysis & DEC's Alaska Risk Assessment

- The Risk Assessment and Gap Analysis documents will serve as tools in determining how best to coordinate agency efforts to provide a comprehensive and cost-effective approach to oil and gas oversight activities
- Where high risks exist in areas of little or no oversight, those gaps will likely need to be filled.
- Where low risks exist in areas of duplicative oversight, those overlaps will likely need to be removed.

Sample Gaps and Overlaps

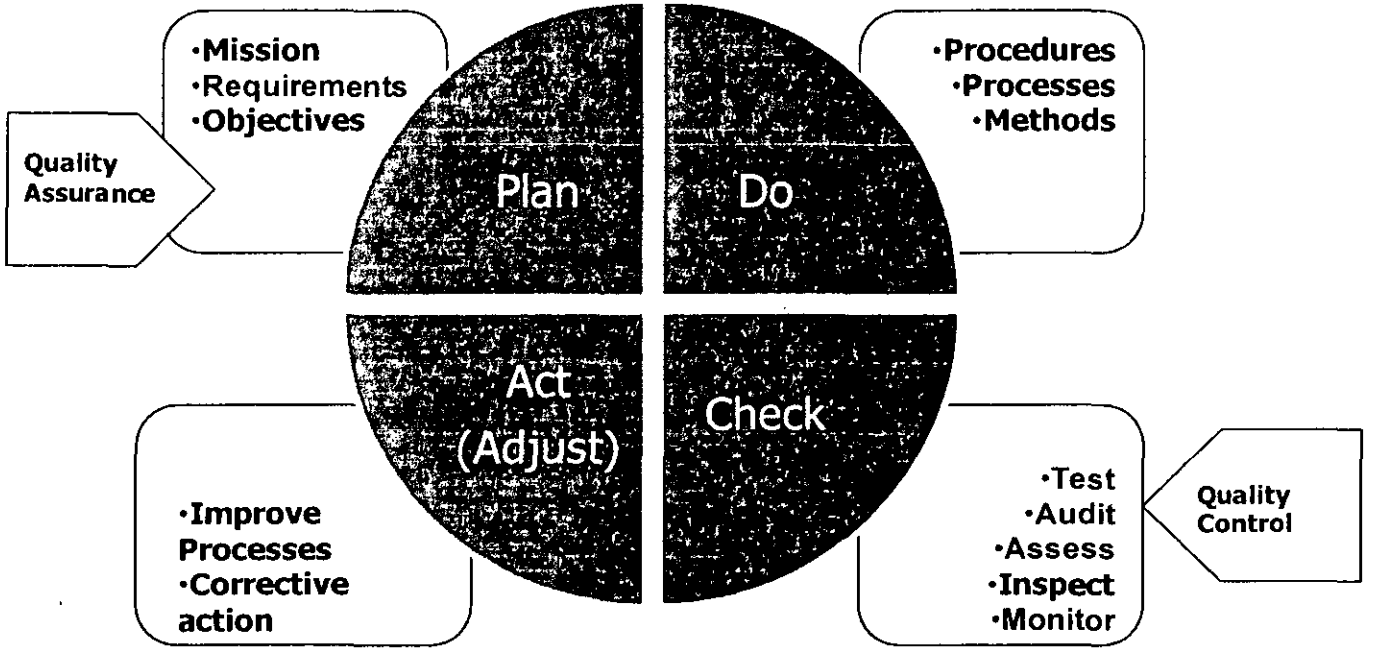
- Unclear understanding of another agency's activities/ jurisdiction
- Actual oversight vs. statutory/regulatory authorities
- Communication between state oversight agencies regarding oversight programs, activities, and investigations
- State agency knowledge of quality management programs
- Training availability and requirements for state personnel

3. Quality Management

Quality Program

Designated agencies, to the extent authorized through existing legal authorities, shall require the industry business to provide a comprehensive description of current practices that includes the quality control, quality assurance, monitoring, inspection, and other practices the business uses to ensure the integrity and reliability of oil and natural gas facilities, equipment, infrastructure, and activities.

Plan-Do-Check-Act Cycle: The Fundamentals of any Quality Management System



Agency Expectations of PSIO

Help agency personnel

- become knowledgeable of the elements of quality management systems in order to maintain the integrity and reliability of:
  - » Oil and natural gas facilities
  - » Equipment
  - » Infrastructure
- understand the benefits of
  - » Plan, Do, Check (Study), Act
  - » Performance Measurement
  - » Continuous Improvement

PSIO Expectations of Agencies

- Document evaluations of oil and gas facilities, equipment, infrastructure, work activities and where applicable in the context of quality management
- Effectively communicate results to industry
- Work with the PSIO to coordinate review of evaluations, identify gaps, and seek remedial action

PSIO Expectations of Petroleum Industry

- Document evaluations of oil and gas facilities, equipment, infrastructure, work activities and where applicable in the context of quality management
- Work with the PSIO to coordinate review of evaluations, identify gaps, and seek remedial action.

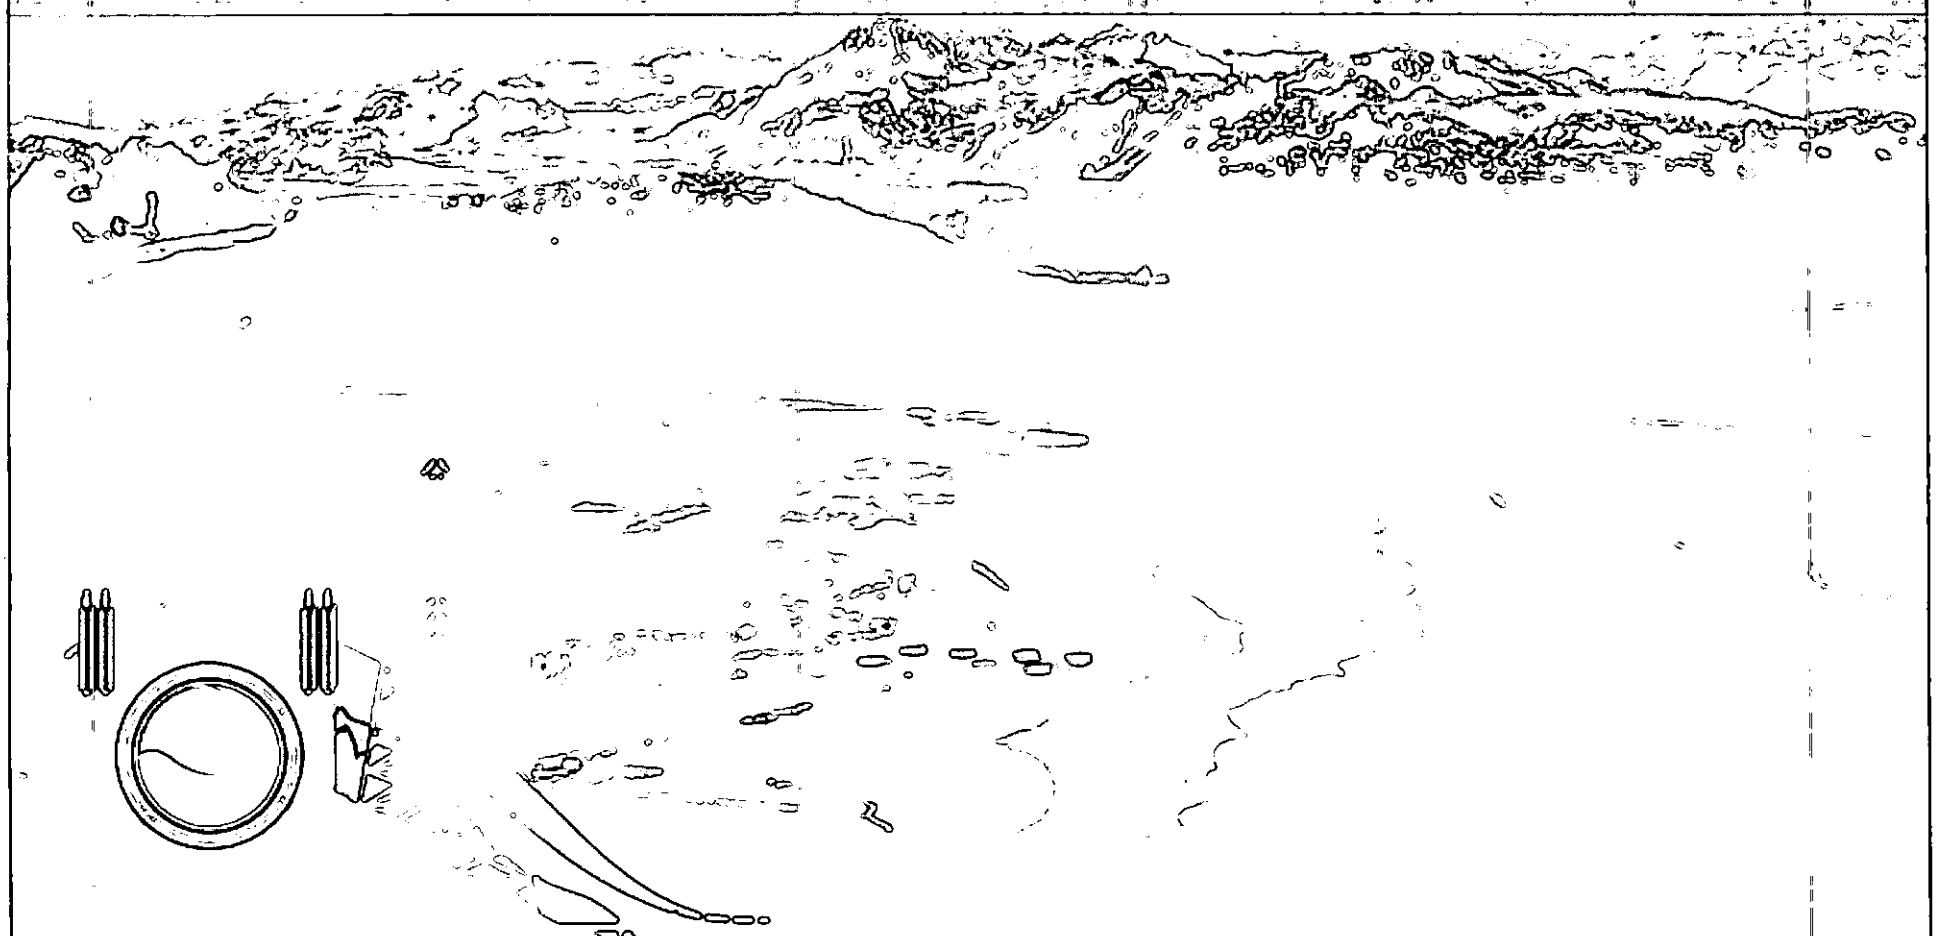
Alaska Risk Assessment of Oil & Gas Infrastructure



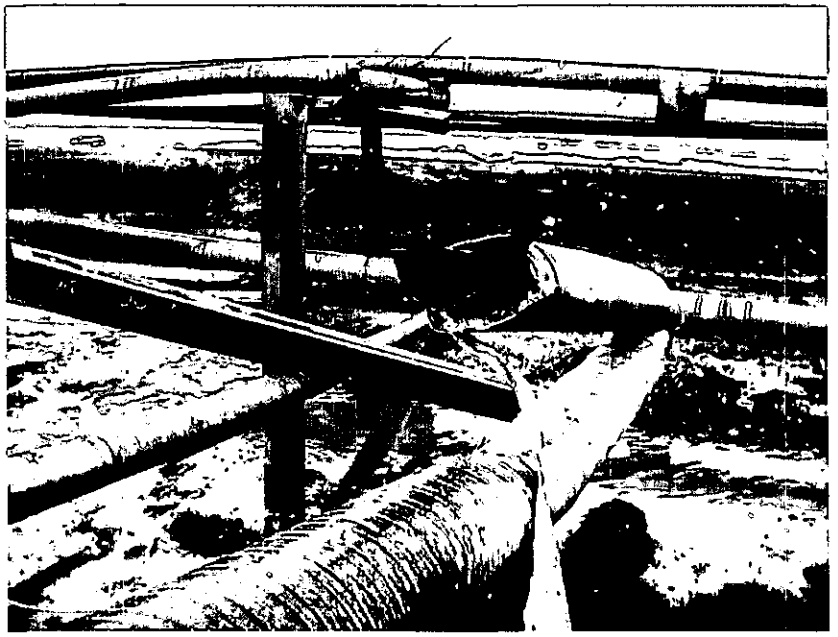
Project Objectives

- Assess the current state of infrastructure & systems in place to operate it.
- Identify and rank areas of greatest risk.
- Present findings.

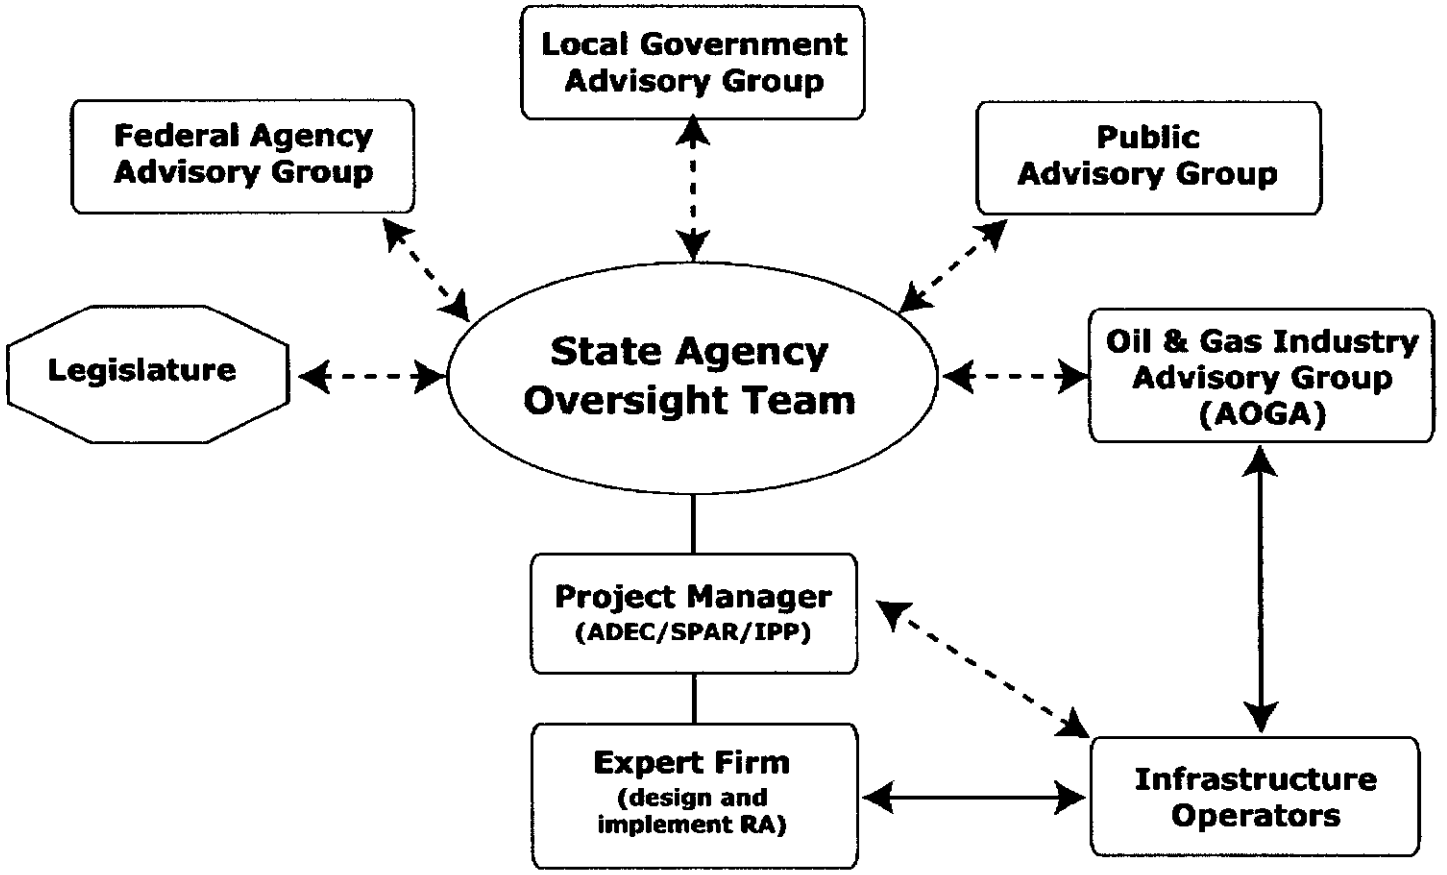
Project Background

- Parts of Alaska's complex oil and gas infrastructure have been in place since the early 1960s, and in some cases have already exceeded their original engineered lifespan.

- In 2006, North Slope oil production was interrupted with a failure in one component of the system.



Project Organizational Structure

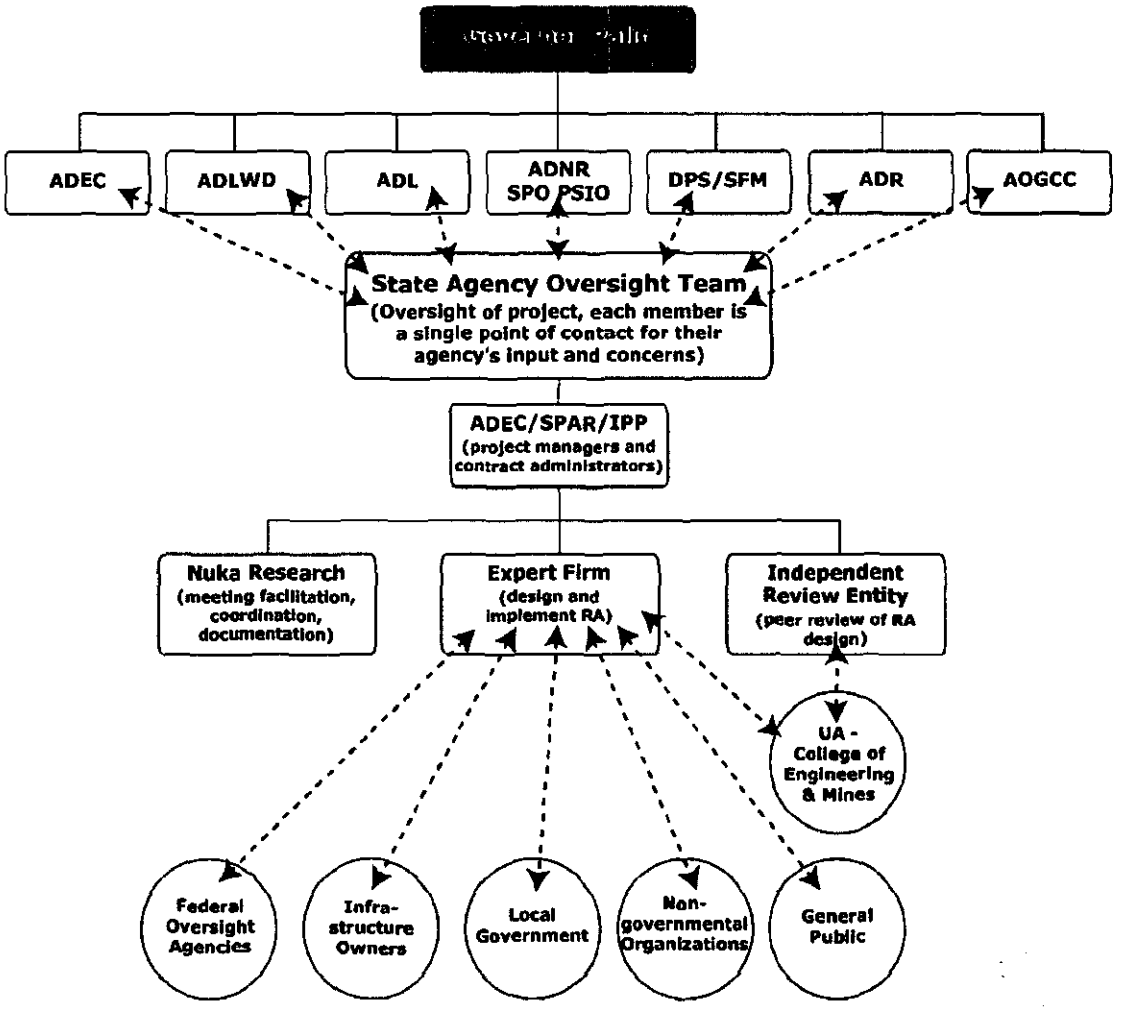


Project Organizational Structure

State Agency Oversight Team:

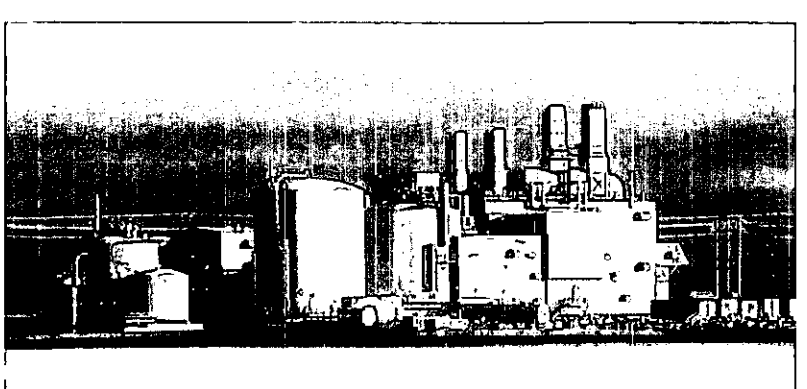
- Alaska Department of Environmental Conservation (ADEC)
- Alaska Department of Labor and Workforce Development (ADLWD)
- Alaska Department of Law (ADL)
- Alaska Department of Natural Resources (ADNR)
  - State Pipeline Office (SPO)
  - Petroleum Systems Integrity Office (PSIO)
- Alaska Department of Public Safety, State Fire Marshall (DPS/SFM)
- Alaska Department of Revenue (ADR)
- Alaska Oil & Gas Conservation Commission (AOGCC)

Alaska Oil & Gas Infrastructure Risk Assessment
Organizational Chart



Project Purpose

- **Outcome of the Risk Assessment**
  - "Picture" of the system as it stands today, highlighting the infrastructure components with the highest relative risk of a potential significant event.
  - Provide information to State agencies that is necessary for them to perform their mandated duties to oversee the steady flow of oil and gas without unplanned interruptions, while protecting the public's safety and the environment.



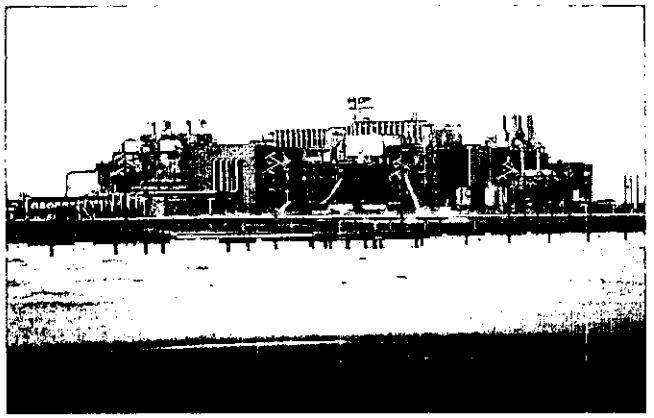
What is a Risk Assessment?

- Organized and systematic effort to identify and analyze hazardous scenarios;
- Starts with answering the question "What can go wrong?"
- Evaluate "how likely" it is that a significant event will occur;
- Evaluate "how damaging" the event would be to people, the environment, or production and state revenue if the event were to occur; and
- Combine the factors to determine an objective risk level.

Three Step Process

Step 1

- Define the significant events
- Design the risk assessment



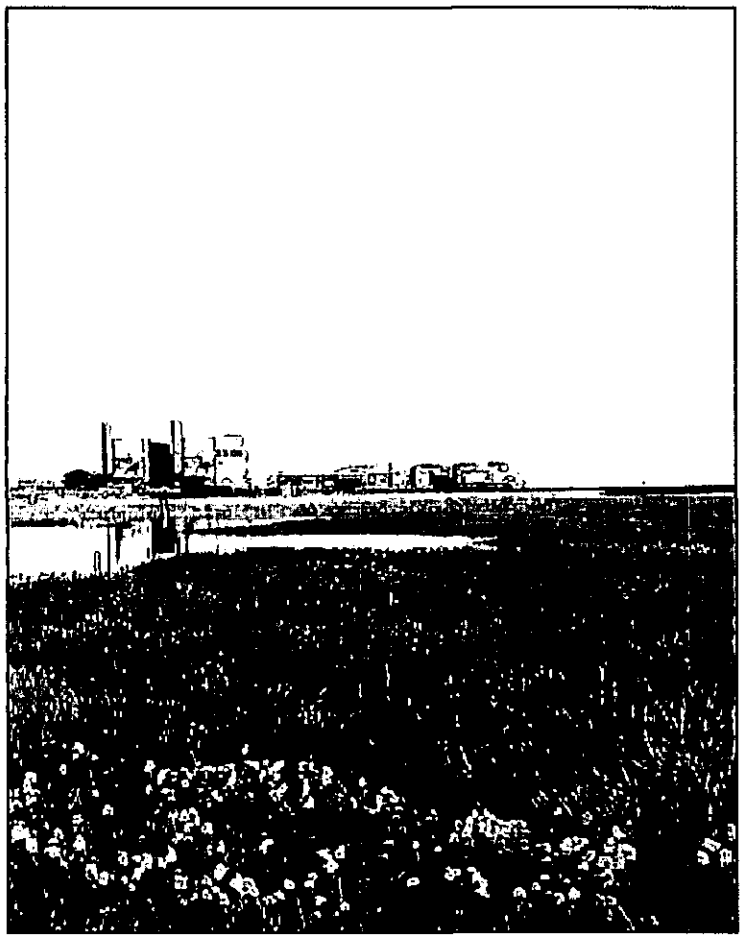
Step 2

- Conduct the risk assessment

Step 3

- Analyze the results
- Develop risk mitigation recommendations

Potential Recommendations



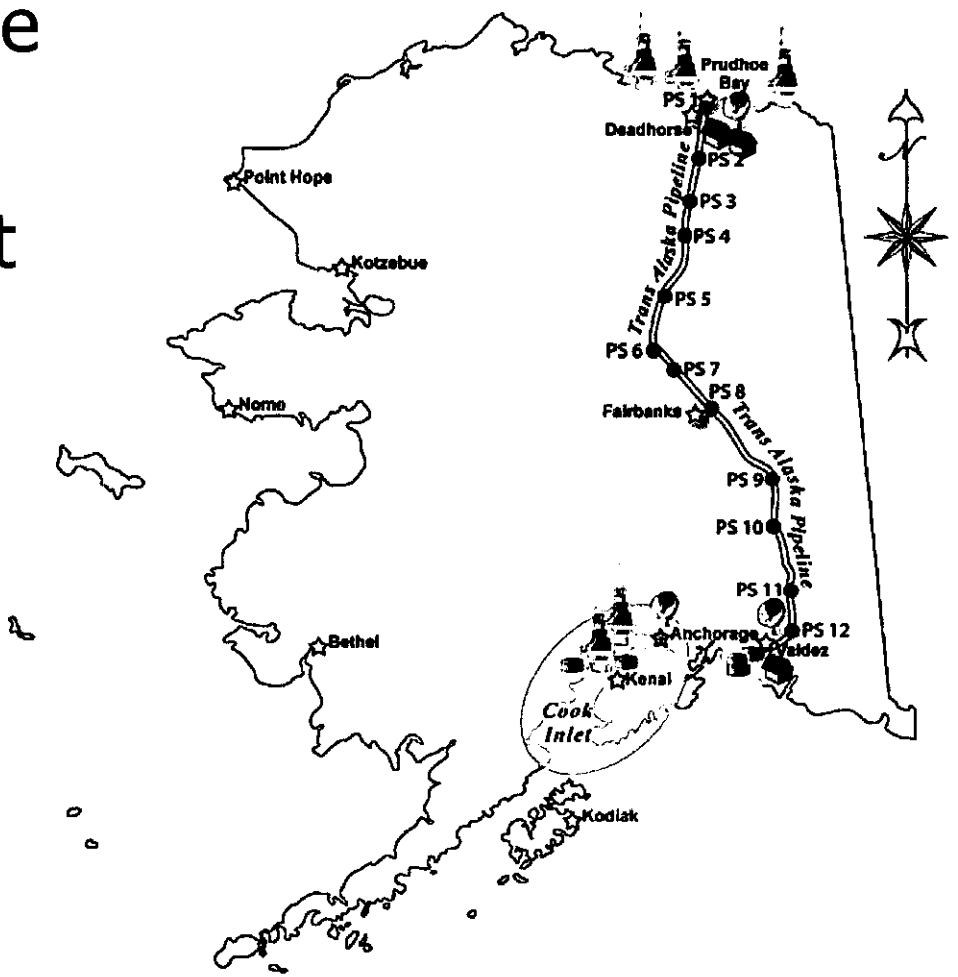
- Physical changes to infrastructure
- Changes to policies, procedures, standards, or regulations
- Changes to infrastructure audits, management, or oversight

General Project Scope

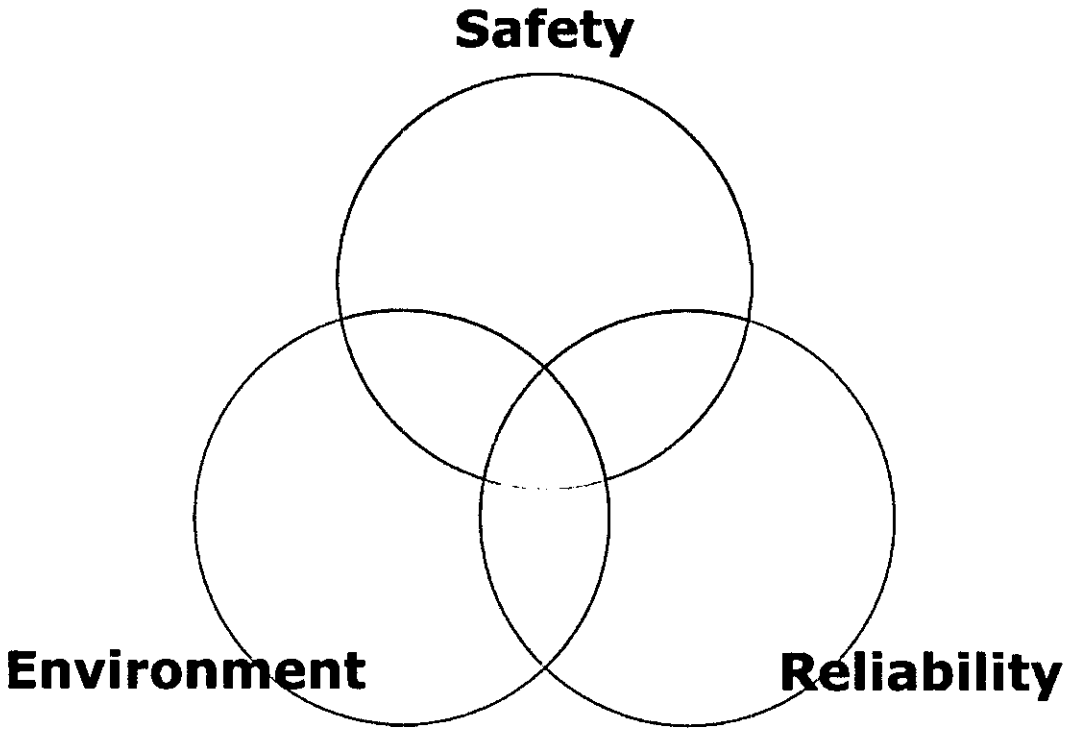
North Slope

TAPS

Cook Inlet



Areas of Interest



Schedule

Phase 1:
Risk Assessment
Methodology Design
June 2008 – Aug 2009

Phase 2:
Risk Assessment
Implementation
Aug 2009 – Feb 2010

Phase 3:
Analysis & Final Report
Feb 2010 – May 2010

Status

STATE OF ALASKA OIL & GAS INFRASTRUCTURE RISK ASSESSMENT	DURATION (in months)	START	FINISH

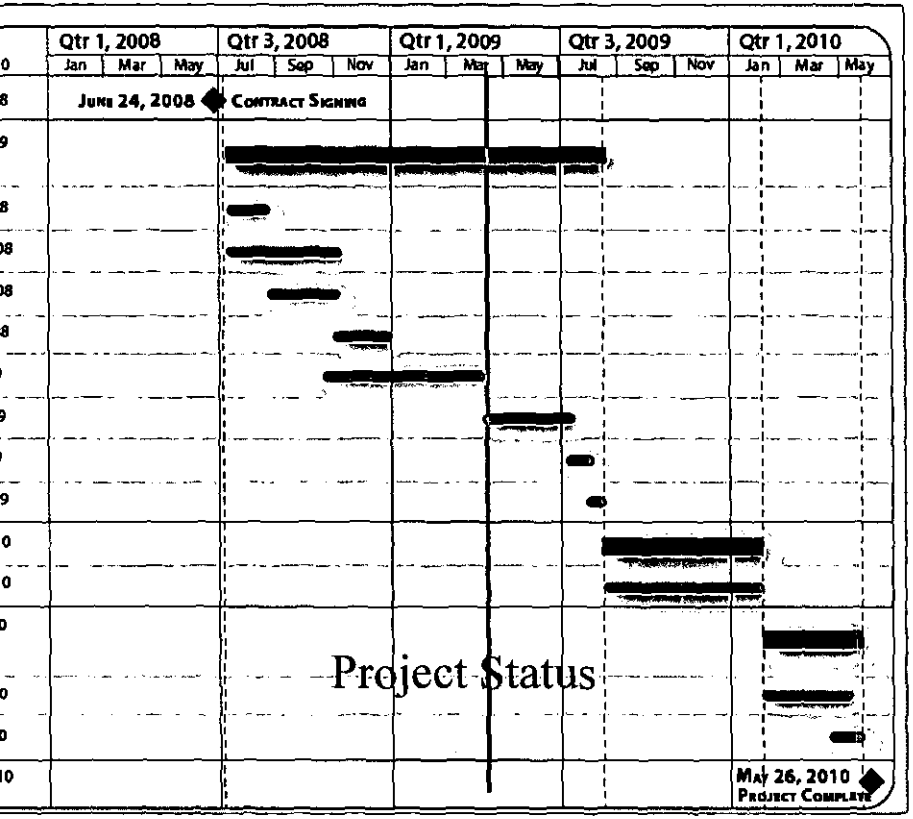
PROJECT COMPLETE	0 days	Wed 5/26/10	Wed 5/26/10



Draft Methodology Report

STATE OF ALASKA
DEPARTMENT OF ENVIRONMENTAL CONSERVATION

Press Release — COMMISSIONER'S OFFICE

FOR IMMEDIATE RELEASE

New step in study of Alaska's oil and gas infrastructure

State invites public comment on risk assessment methodology; National Academy of Sciences also to review approach

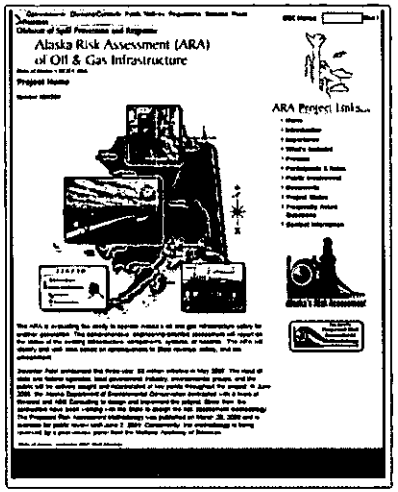
Contact: Ira Rosen, DEC project manager, (907) 465-5219

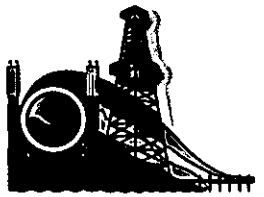
(Juneau – March 24, 2009) Members of the public now can comment on the approach developed to assess the health of the state's oil and gas infrastructure. Public meetings are planned for Anchorage, Fairbanks, Kenai, Barrow and Valdez to present the approach and answer questions. The comment period will end June 2.

Development of the methodology—a mathematical model to quantify risks—is the focus of the first phase of the Alaska Risk Assessment, a three-year, $5 million initiative to evaluate Alaska's oil and gas infrastructure. The study is an outcome of the spills, leaks and corrosion discovered on the North Slope in recent years. When complete, the assessment will report on the status of the existing infrastructure, components, systems and hazards. It will identify and rank risks based on consequences to state revenue, safety and the environment and will assist the state in making mitigation recommendations. The Alaska Department of Environmental Conservation (ADEC), working in cooperation with the Petroleum Systems Integrity Office (PSIO), is leading the risk assessment project.

"Finalizing the method we use to evaluate the condition of Alaska's oil and gas infrastructure is a key step in the overall assessment of this complex system," said Larry Dietrick, ADEC director of Spill Prevention and Response.

As part of the project, the State gathered input from government agencies, industry and the public in 2008. Those ideas helped shape the design of the risk assessment model. "Stakeholders now have a chance to confirm issues and concerns they identified have been included in our approach," said Ira Rosen, DEC project manager.





Comprehensive Evaluation and Risk Assessment of Alaska's Oil and Gas Infrastructure

Proposed Risk Assessment Methodology

–Revision 1–

March 20, 2009

Prepared By

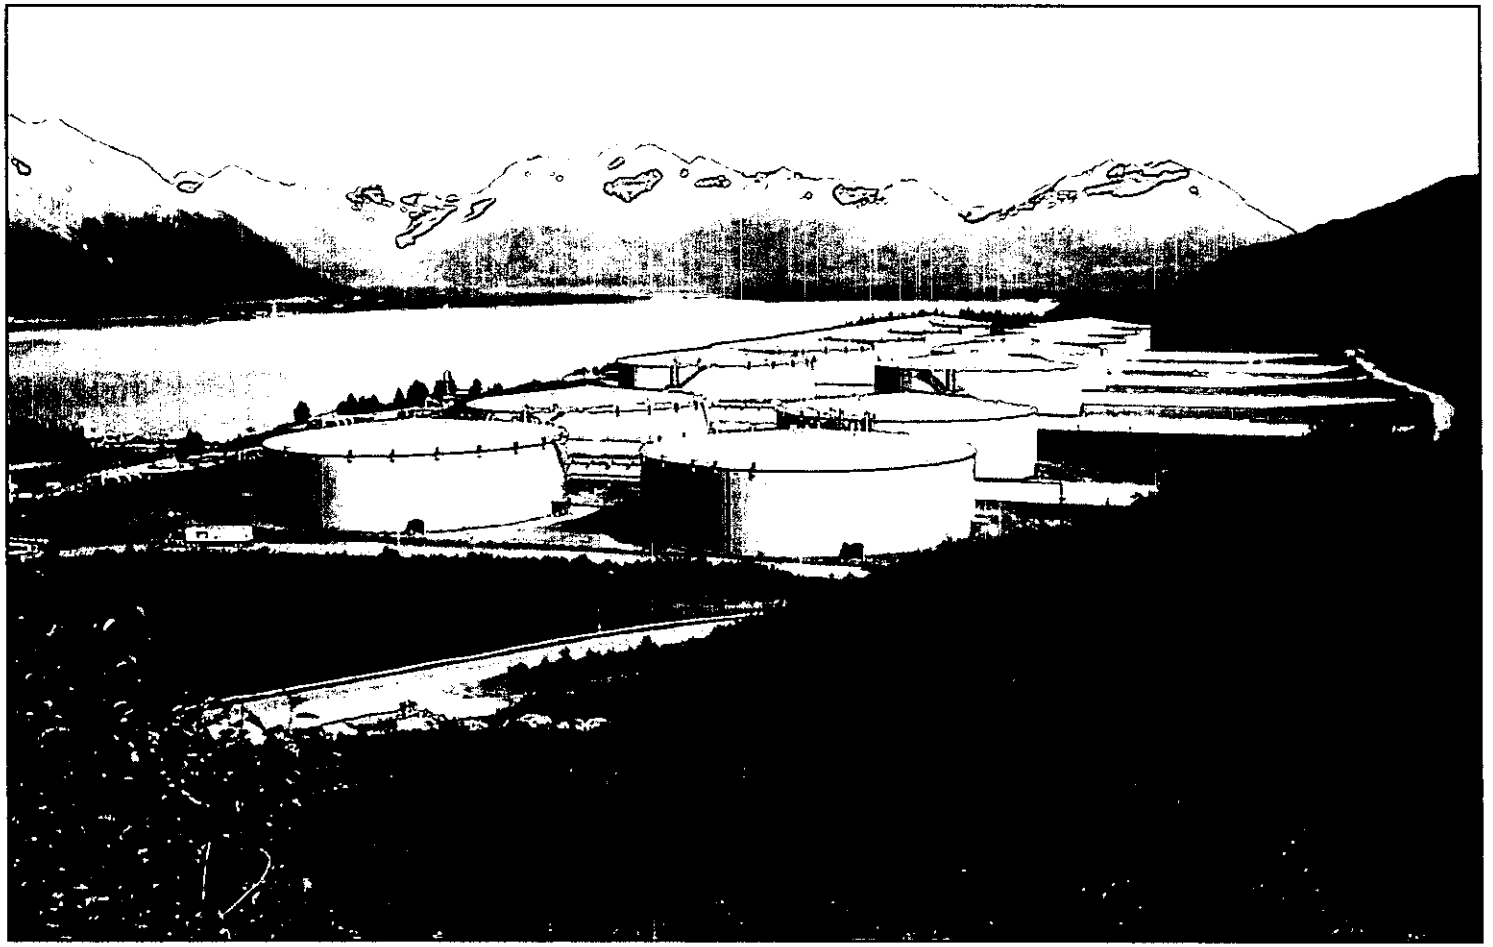
DOYONEMERALD PEOPLE ENERGY & ICE AS

ABS Consulting

Press Release announces availability of the Draft Methodology Report

Project Results

- Provide risk profile of infrastructure.
- Provide input for risk management decisions by Industry and the State.



Methods

Risk Analysis

Screening

Reliability

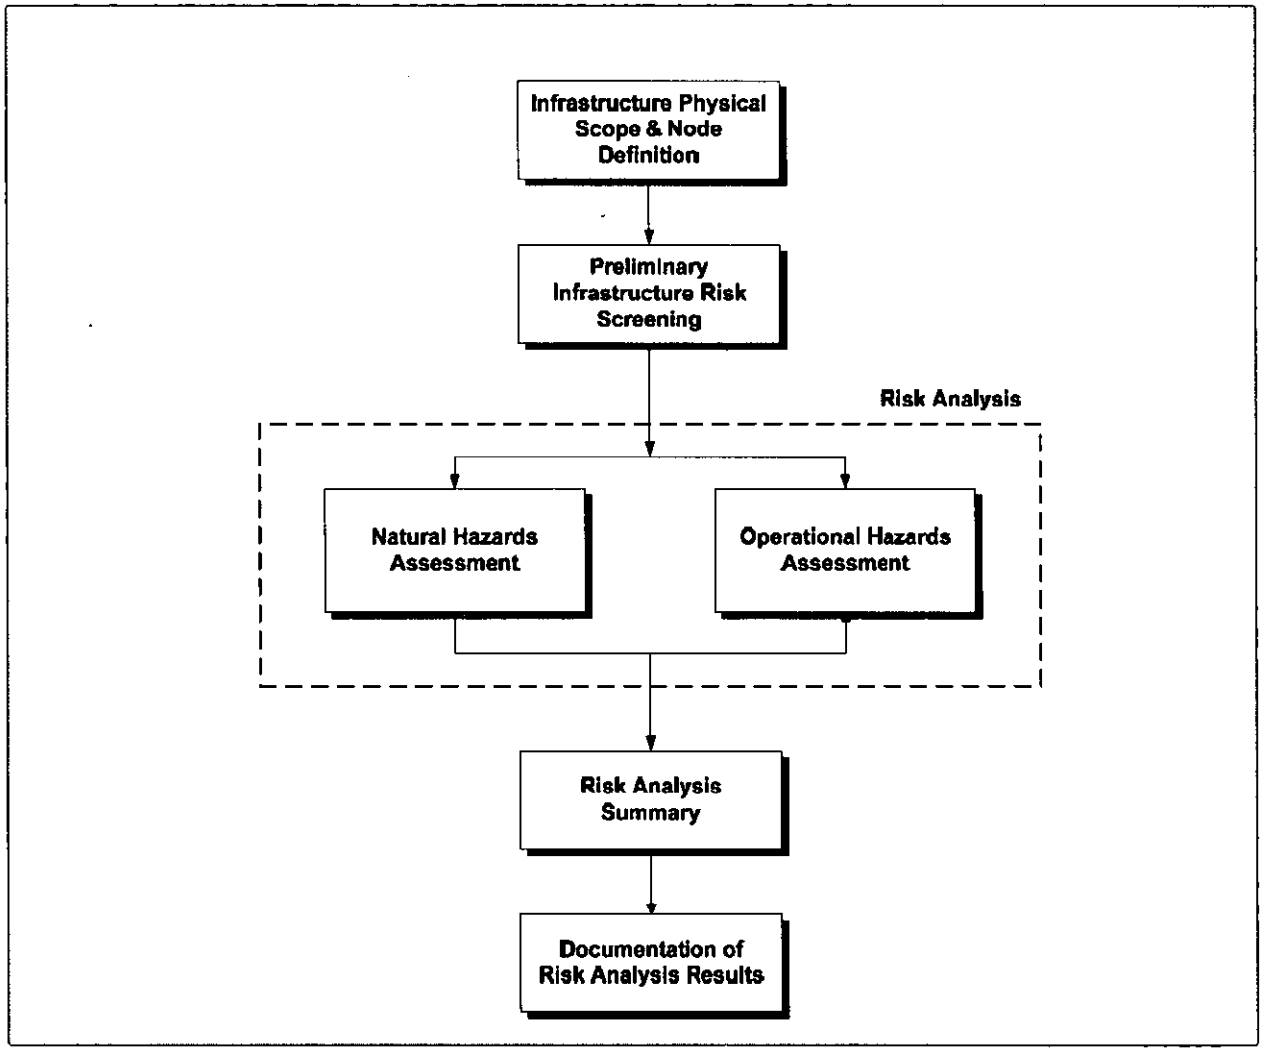
Environmental Spill Calculations

Environmental Consequences

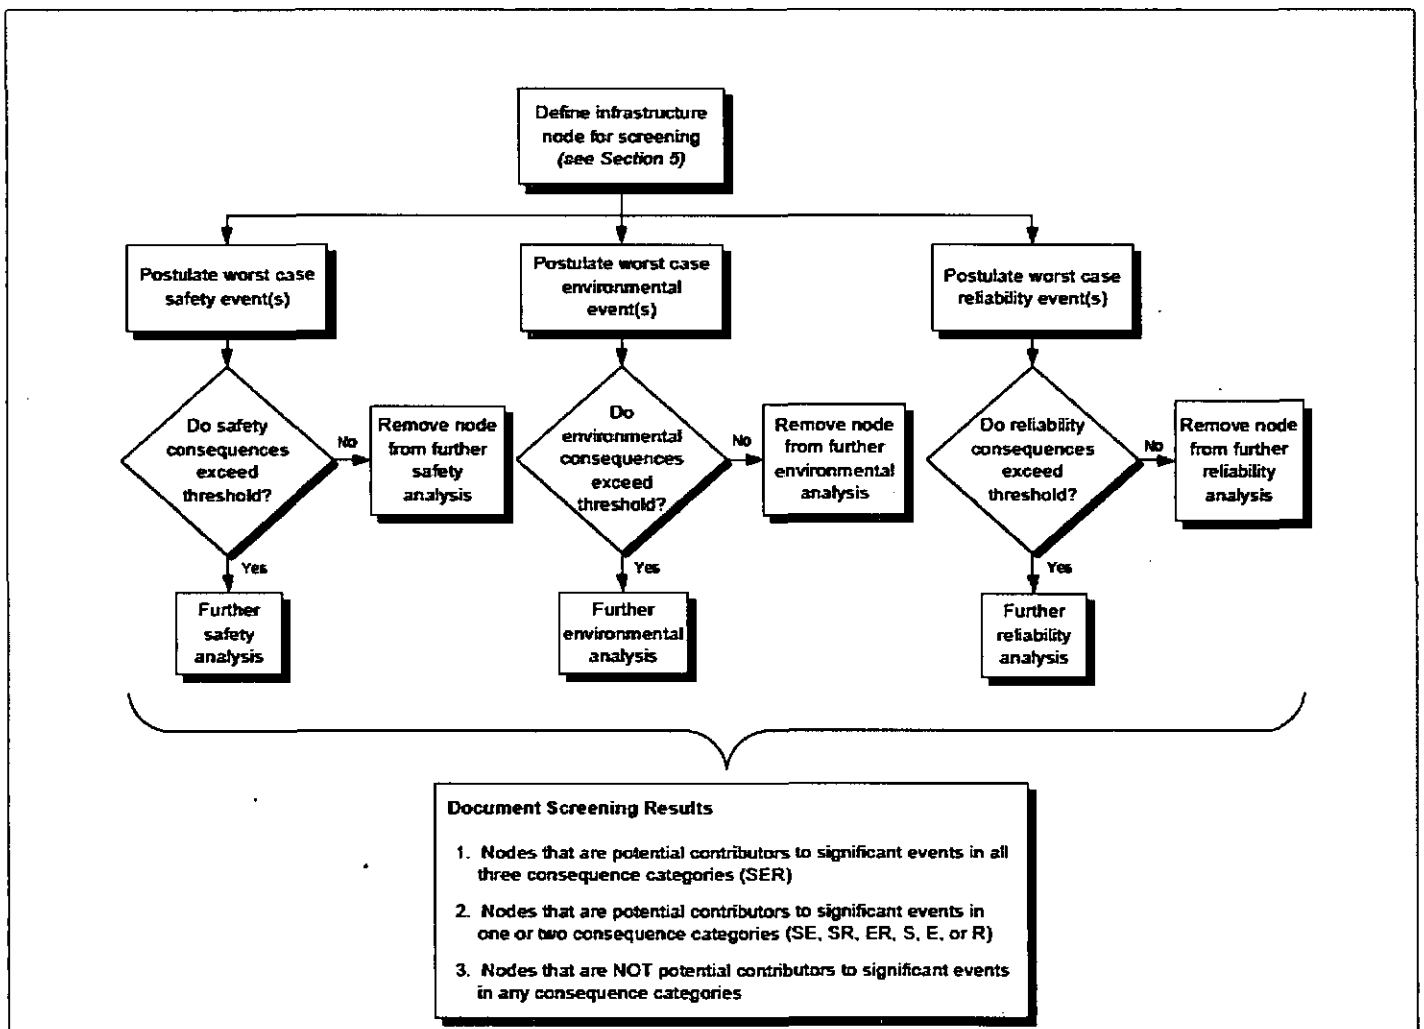
Operational Hazards

Safety

Risk Analysis



Screening



Define infrastructure node for screening (see Section 5)
Postulate worst case safety event(s)
Postulate worst case environmental event(s)
Postulate worst case reliability event(s)
Do safety consequences exceed threshold?
No
Remove node from further safety analysis
Yes
Further safety analysis
Do environmental consequences exceed threshold?
No
Remove node from further environmental analysis
Yes
Further environmental analysis
Do reliability consequences exceed threshold?
No
Remove node from further reliability analysis
Yes
Further reliability analysis
Document Screening Results
1. Nodes that are potential contributors to significant events in all three consequence categories (SER)
2. Nodes that are potential contributors to significant events in one or two consequence categories (SE, SR, ER, S, E, or R)
3. Nodes that are NOT potential contributors to significant events in any consequence categories

Reliability

Table 6-3 Reliability Consequence Levels for Preliminary Risk Screening

Category	Category Production Loss Boundaries	Explanation (see Note)
3	>42,000,000 bbls	Corresponds to about a two month full outage for TAPS
2	4,200,000 to 42,000,000 bbls	Corresponds to an outage range which includes an approximate 30 day outage for TAPS or a two week outage for a production source that is half of the TAPS throughput
1	<4,200,000 bbls	Corresponds to less than a week outage for TAPS or a 60 day outage for a production source that is 10% of the TAPS throughput.

Note: Outages assume 700,000 barrels per day TAPS throughput

Environmental Spill Calculations

Table 7-3 Release Quantity Categories

Release Quantity	Category Index Number	Explanation
Large release (>10,000 barrels)	6	Release quantities will be assessed based on normal process flow, the nature of the worst-case release considered, and the expected detection and isolation time.
Medium Release (1,001 to 10,000 barrels)	5	
Small Release (10 to 1,000 barrels)	4	

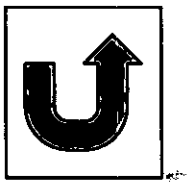
Note: The release quantity categories are assigned numbers from 4 to 6 in order to reflect the overall importance of the spill size compared to the other contributing categories (i.e., release quantity is more heavily weighted than the other factor categories, which have an index range from 1 to 3). This also allows the environmental impact to reflect an approach that adjusts spill size by expected recoverability (i.e., subtracting the recoverability category from the release quantity category) to represent the impact of the material which may actually remain in the environment long term.

Table 7-4 Release Recovery/Remediation Factor Category

Recovery/Remediation Capabilities	Category Index Number	Explanation
Little to no ability to recover/remediate this type of release	1	This category includes: • Direct spills to moving bodies of water other than contained entirely on ice (such as ocean/sea, river systems, and tributaries) • Spills to subsurface areas • Other situations assessed as difficult to recover (including requiring input from State and remediation experts
Limited to moderate capability to recover/remediate this type of release	2	This category includes: • Spills to land and tundra in other than frozen conditions • Spills to unprepared surfaces (i.e., prepared surfaces include gravel pads which have been laid for remediation ease) • Other situations assessed as limited to moderate to recover (including requiring input from State and remediation experts)
Very effective capability to recover/remediate this type of release	3	This category includes: • Spills in winter conditions contained on ice or recovered from frozen land or tundra (i.e., limited migration) • Spills to gravel pads or other prepared surfaces where recovery can be accomplished by direct removal of contaminated materials.

Table 7-5 Local Environment Sensitivity Categories

Type of Environment	Category Index Number	Type of Environment
Waterways	3	This category includes: • Waterways or direct pollution routes to waterways that support commercial fishing, aquaculture, or subsistence activities
Sensitive Lands (including surface and subsurface areas)	2	This category includes: • A land area that supports unique flora and fauna or wildlife breeding and migratory areas, which may support subsistence hunting activities (e.g. tundra or wetlands) • An area that encompasses a cultural or historical site • A Recreational Area (defined as an area that supports hunting, fishing, hiking or other outdoor recreational activities) • Areas that have been branded based on pristine conditions and which support tourism activities
Other Lands	1	This category includes: • A land area (surface or subsurface) not defined as "sensitive" in Category 2 above.



Environmental Consequences

Calculating Environmental Consequence Categories

An environmental consequence score will be calculated for each of the release events that are considered, based on the index values that are assigned in each of the above contributing factor categories. The overall environmental consequence score will be calculated using Equation 7-2:

$$\mathcal{N}_i = M_i * (Q_i - R_i) * S_i$$

Equation 7-2 Environmental Consequence Scoring Calculation

Where:

$\mathcal{N}_i$ = Event i Calculated Environmental Consequence Score (1 to 45)

$\mathcal{M}_i$ = Event i Material Composition Index (1 to 3)

Q_i = Event i Release Quantity Index (4 to 6)

R_i = Event i Recoverability/Remediation Index (1 to 3)

S_i = Event i Environmental Sensitivity Category Index Number (1 to 3)

Example calculation:

A significant release of crude oil (M = 3) that is 2,000 barrels in size (Q = 5) in an area of very high sensitivity (S = 3), but where recovery and remediation efforts can be highly effective (R= 3), would be scored as:

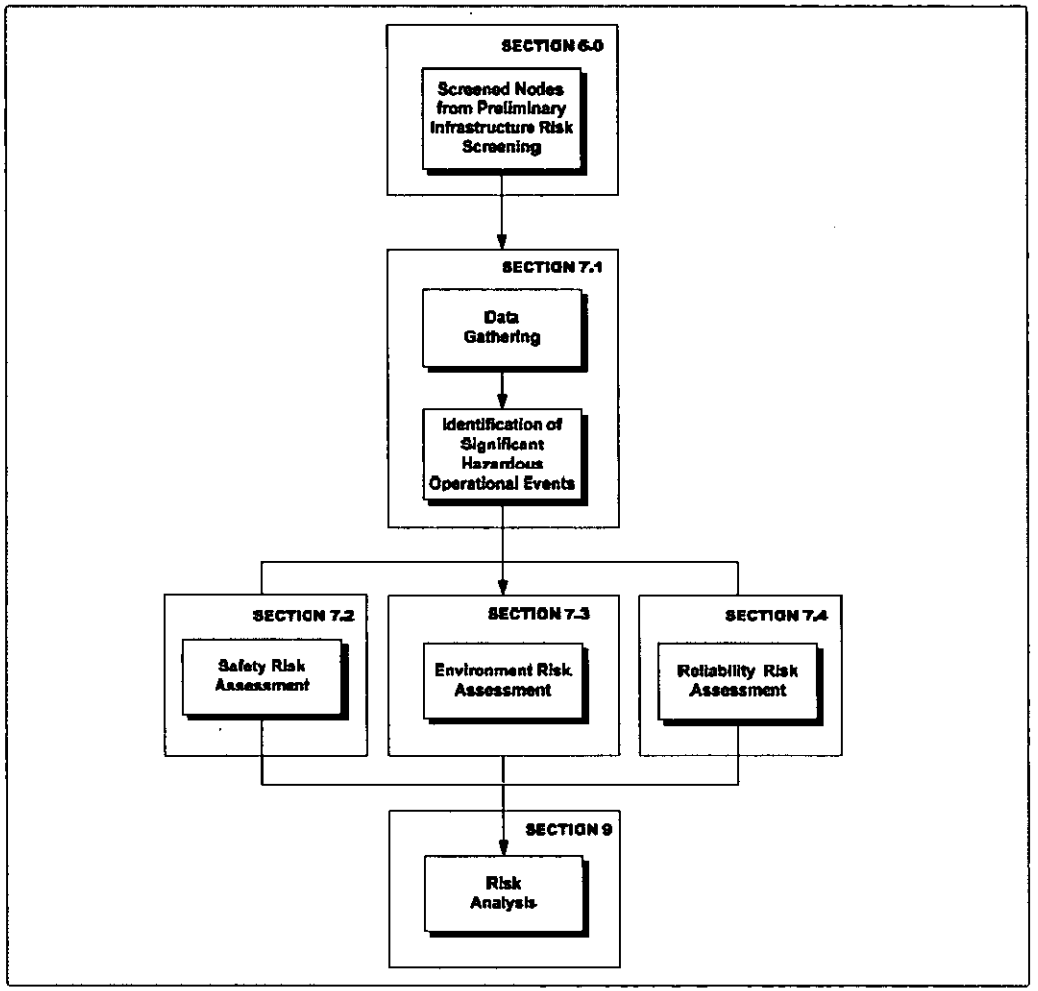
$\mathcal{N}_i = 3 \times (5-3) \times 3 = 18$

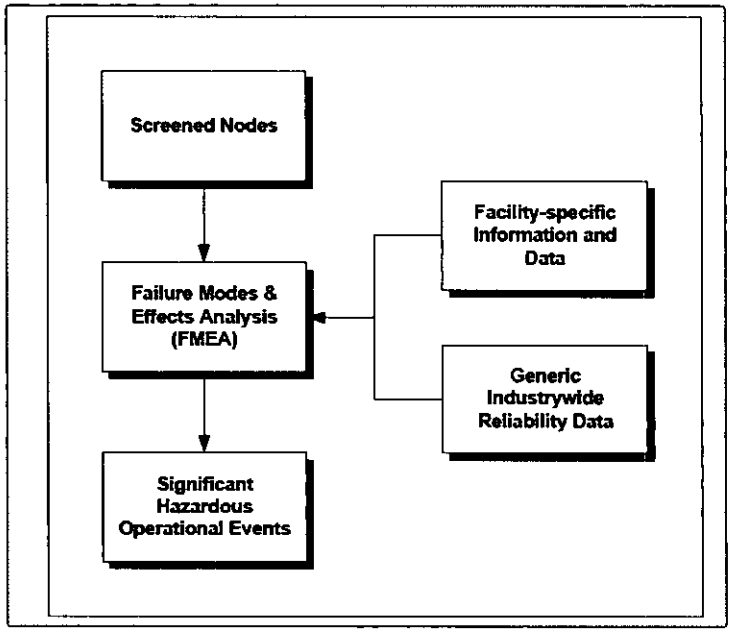
This approach represents a relative ranking of releases; it cannot be correlated to any physical meaning based on the absolute value of the numbers or index that is assigned to each factor. The value of the overall environmental consequence score can range from 1 to 45, depending on the assigned values of the contributing factor categories. Ranges of the environmental consequence score will then be used to categorize the relative environmental impacts of the potential release scenarios. See Appendix G for example scenarios that have been processed through this model.

Table 7-6 presents preliminary values that will be used for assigning the environmental consequences to each of the potential release events. The definitions and descriptions for the qualitative range of significant environmental consequences for this project in Table 7-6 were derived from input from the stakeholder consultation process that was executed at the commencement of the project.

Category Number	Environmental Impacts	Consequences Score
3	**Catastrophic** – A significant release to an area of extremely high environmental consequence that causes large-scale, widespread, non-recoverable, irreversible, and long-term damage that is severe. The damage would be considered to be extensive enough that the area would be considered unusable for the foreseeable future. The loss would prevent a return to normal life support and access for the conduct of normal activities that were once supported by the area's resources.	Greater than or equal to 30
2	**Challenging** – A significant release to an area of high environmental consequence that causes widespread and persistent damage to the area, which would cause a disruption in life support and would limit normal use and activities in the area for some time. Remediation would be required and some damage to the area may be irreversible.	Greater than 15, but less than 30
1	**Manageable** – A release to an area of some environmental consequence that results in localized and reversible effects on the environment. Results in some initial disruption of activities in the area, but normal usage can resume in a very short time frame once remediation/recovery activities have been completed.	Less than or equal to 15

Operational Hazards





Safety

After the incident scenarios for each node have been identified, the safety risk calculation will entail three major tasks:

1. Consequence Analysis – Evaluation of physical effects of incidents on people
2. Likelihood Analysis – Estimation of incident frequencies
3. Risk Calculation – Calculation of risks, which are a combination of likelihood and consequences/impacts, and presentation of results

Risk is then calculated using the "risk triplet" model, shown in Equation 7-1:

$$\mathcal{R} \equiv \langle \mathcal{E}_i, C_i, \mathcal{L}_i \rangle_n$$

Equation 7-1 Risk Triplet Model

Where:

$\mathcal{R}$ = Calculated risk

$\mathcal{E}_i$ = Significant Incident Scenario i (from the FMEA Hazard Events Identification process)

C_i = Event i consequence (from the Consequence Analysis)

$\mathcal{L}_i$ = Event i Likelihood (from the Likelihood Analysis)

n = Number of significant incident scenarios

Today's Timber Harvest

- 20 to 30 mmbf per year Tongass National Forest – Future?
- 50 mmbf per year for 3 - 5 years Sealaska
- 15 mmbf for per year 2 years Haida Corp.

Markets for SE Alaska Logs and Lumber

- Markets are global
- Products are varied
  - Fine finish wood, musical instruments, fencing, construction lumber to pallets, shipping containers and paper
  - New products may include use of milling and logging residues for bio-energy products

Sealaska Log Products

Species	Sales mmbf	Value
Hemlock	16.9	$14.5 million
Red Cedar	11.5	$14.1 million
Spruce	22.9	$26.6 million
Yellow Cedar	1.7	$1.9 million
Total	53.0	$57.1 million

Sealaska Log Markets

Market	% of Volume	% of Value
Japan	45%	47%
Korea	25%	21%
USA	12%	12%
Taiwan	6%	7%
Pakistan	1%	1%
Net	53 mmbf	$57 million

Comparison of Log and Lumber Jobs

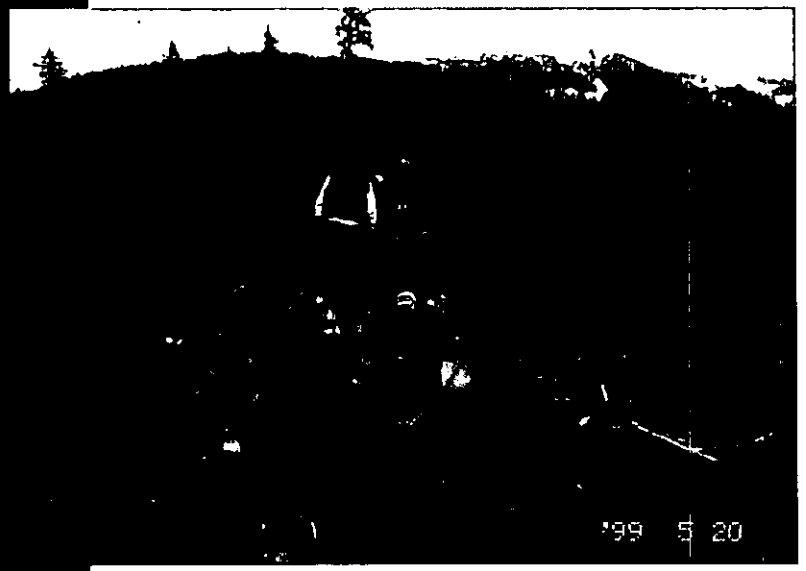
According to McDowell 2005 Report

- 4.5 logging and sawmill jobs created from Tongass National Forest
- 4.3 logging and stevedoring jobs created from Sealaska harvest

Even Aged Harvested Acres

- 430,000 acres Tongass National Forest
- 80,000 acres Sealaska
- 160,000 to 180,00 acres (estimated) for the Southeast 10 Village and Urban Corporations combined
- 680,000 acres total approximately

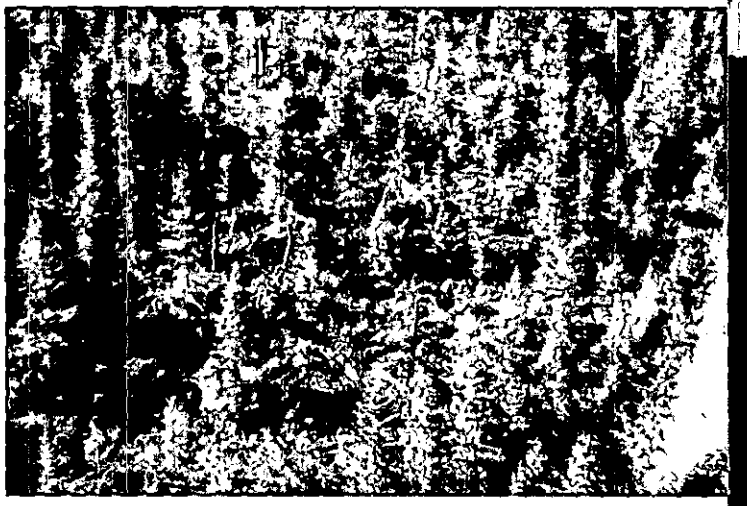
Tree Planting



Tree Planting

- Benefits
  - Ensures forest regeneration
  - Impact species composition
  - Shorten rotation
  - Mostly on the northern end of the Tongass
  - Provides local employment
- How many acres?
  - Sealaska has planted 8,000 acres
  - Tongass ?

Tree Thinning



Thinning

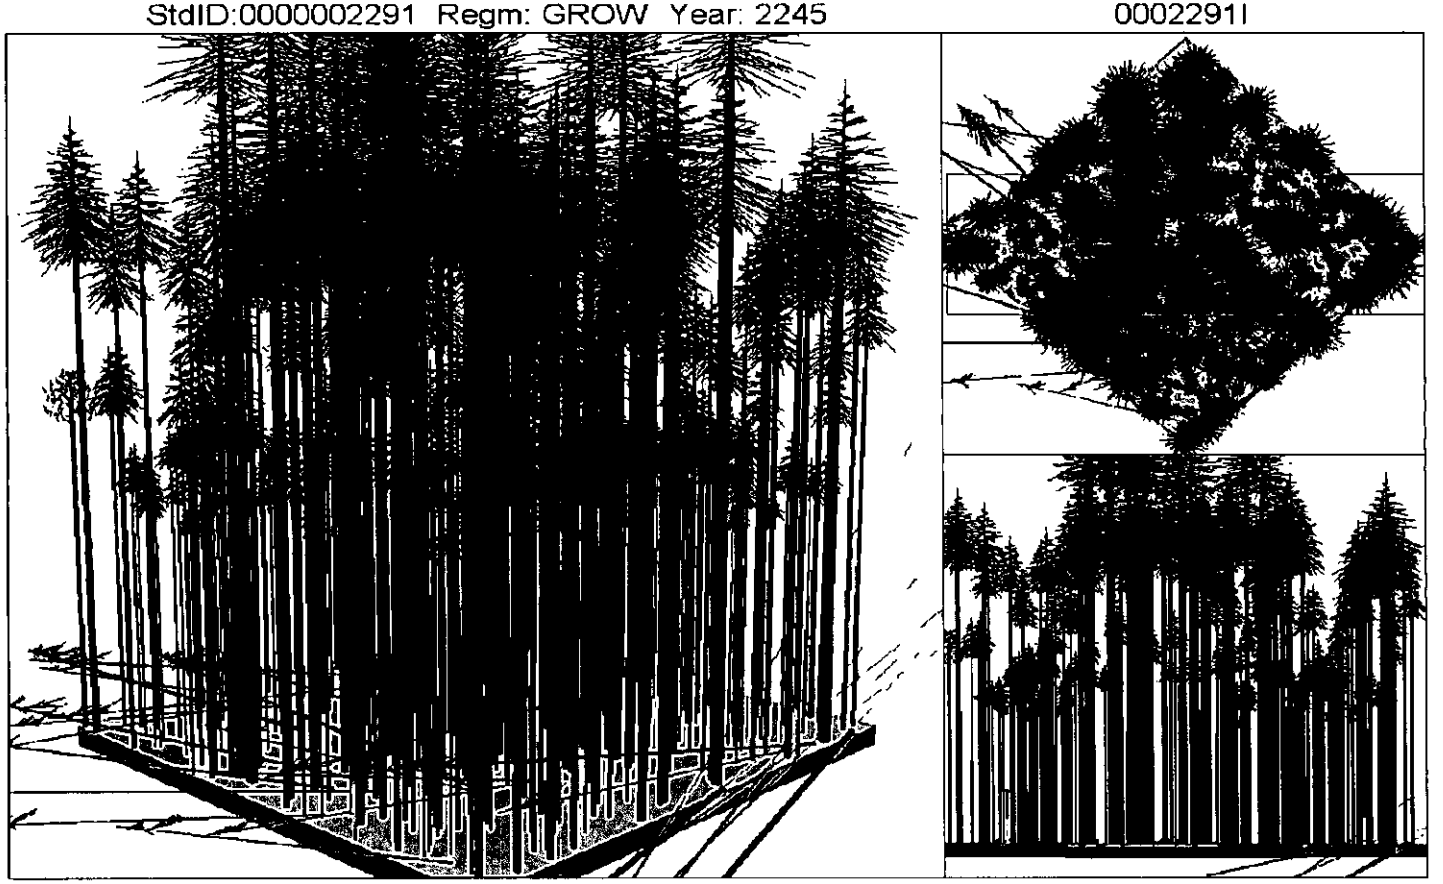
- Precommercial thinning
- Benefits
  - Wildlife
  - Species composition
  - Shorten rotation
- How many acres?
  - 160,000 acres Tongass National Forest
  - 31,320 acres for Sealaska
  - 20,000 acres for Village and Urban combined

Thinning

- Commercial Thinning
  - Product recovery
  - Restoration opportunity treat forests not precommercially thinned
  - Wildlife
  - Species composition
  - Larger sawtimber at harvest
- Opportunity
  - ~ 200,000 acres Tongass
  - ~ 100,000 acres Village and Urban Corporations
  - More with out precommercial thinning

Unmanaged Stand age 240 yrs

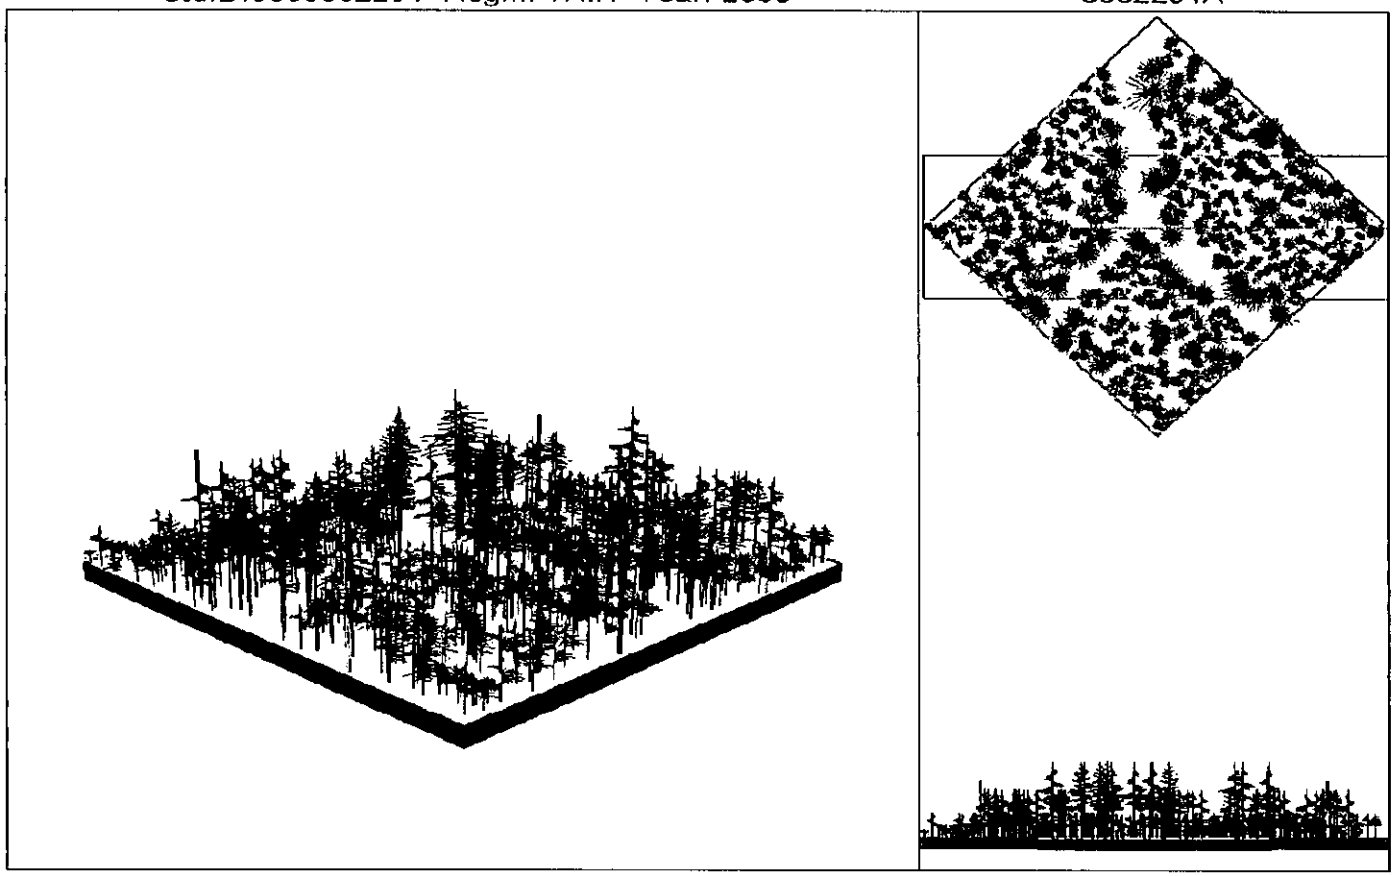
Unmanaged forest – 240 Years after harvest –
Average diameter = 14" – Stand is ready for harvest – 38 MBF/Acre



Young Stand

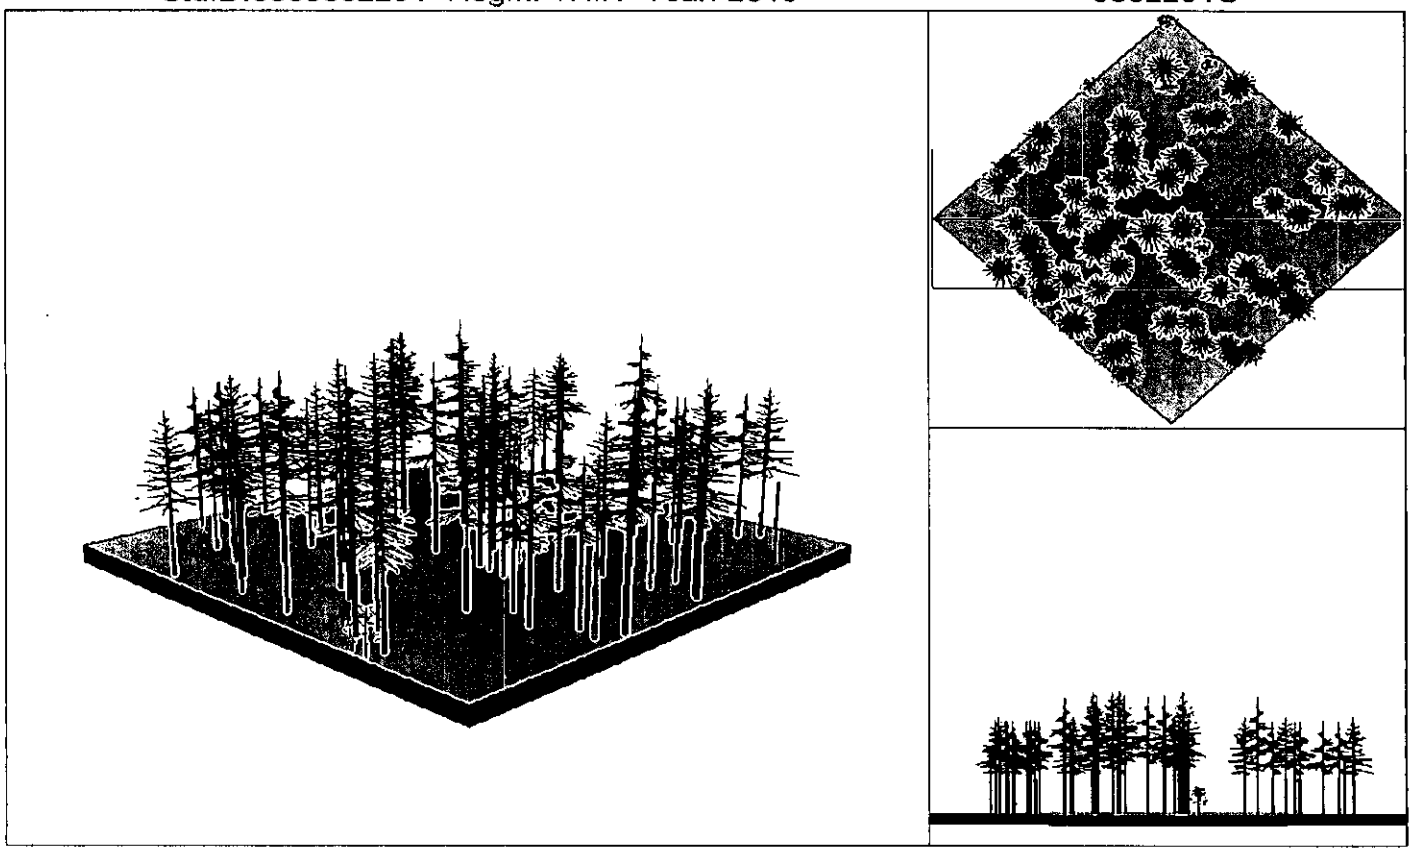
Year of timber harvest - Forest not yet managed

StdID:0000002291 Regm: THIN Year: 2005 0002291A



Precommercial Thinning age 15 – 20 yrs

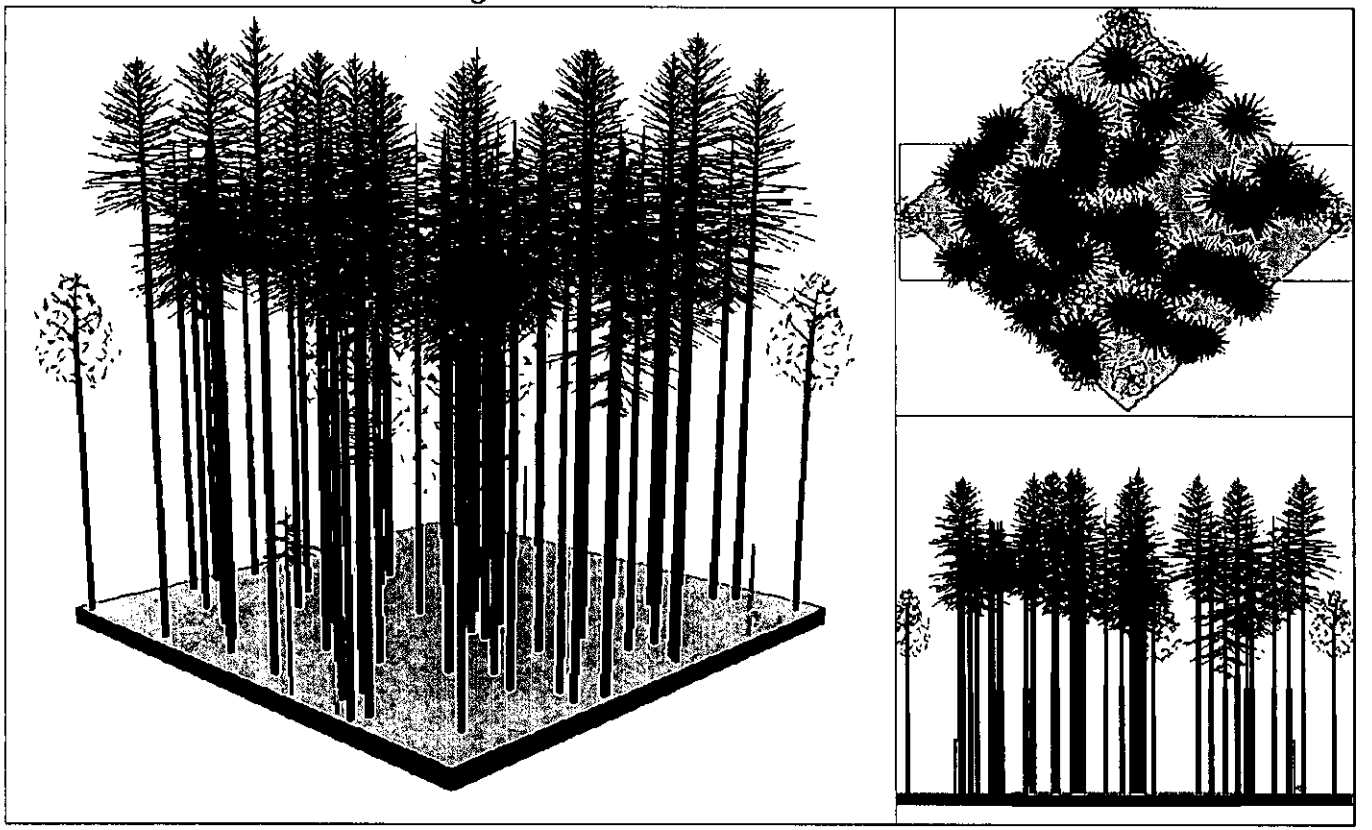
Forest 15 years after harvest – **Year of Management**



Managed Stand at age 80 yrs

Managed forest 85 years after harvest – 70 years after management
Average Diameter = 14" – Ready for harvest – 39 MBF/Acre

StdID:0000002291 Regm: THIN Year: 2085 0002291J



Tree Pruning

Basal Pruning

- Benefits
  - Wildlife
  - Promote higher value product – clear lumber
- 1,100 acres of Sealaska's forests

4/8/09 PRESENTATION: ALASKA'S NATURAL GAS & SHALE GAS

PORTER BENNETT

BENTEK Energy, LLC, 32045 Castle Court, Ste. 200, Evergreen, CO 80439
303-988-1320 • pbennett@bentekenergy.com

Porter Bennett is founder, president and CEO of BENTEK Energy. Founded in 1985, BENTEK is a leading analytics firm specializing in the US natural gas market.

Mr. Bennett is

- Chairman of Natural Gas Committee and a Director of the Independent Producers Association of Mountain States Natural Gas Committee, and
- Observer with the Potential Gas Committee and member of the Colorado Oil and Gas Association.
- Mr. Bennett is the author of various articles in the Oil & Gas Journal, American Oil Reporter and other publications. He is also a frequent speaker at GasMart and other natural gas industry forums.

Today BENTEK serves over 210 of top firms and over 5,000 traders in the energy industry, including majors, independent producers, pipeline companies, utilities, as well as the largest energy hedge funds, financial institutions and industry regulators.

Economic 'Recession' AGIA

The Alaska Gasline Inducement Act

Jim Mulva, Chairman and CEO ConocoPhillips,
March 13, 2009 - *Petroleumworld.com*

"Costs are coming down pretty dramatically," (Mulva) said. "When we say defer, we're not talking years, we're talking months, quarters, maybe up to a year."

Speaking about the Denali Alaska gas pipeline project, proposed last June by ConocoPhillips and BP, Mulva said President Barack Obama has identified the 4 Bcf/d project as a means of reducing US dependence on foreign oil.

The pipeline would bring North Slope gas down to a pipeline in Alberta for transport to the Lower 48 states. "We know it's going to get far more federal attention," he said. "Obviously, Alaska would like to see it go."

Mulva repeated the partners plan a 2010 open season for gas deliveries; first gas deliveries are eyed for 2019.

While current gas prices have led ConocoPhillips to cut back on its Canadian operations, Mulva discounted the low prices as a roadblock to the pipeline project's development.

"You can't look at gas prices today," he said. "You have to look at prices 10 years from now."

Both Lower 48 Unconventional and Alaska North Slope Gas are Needed for America's Future

CARA Gas Provinces

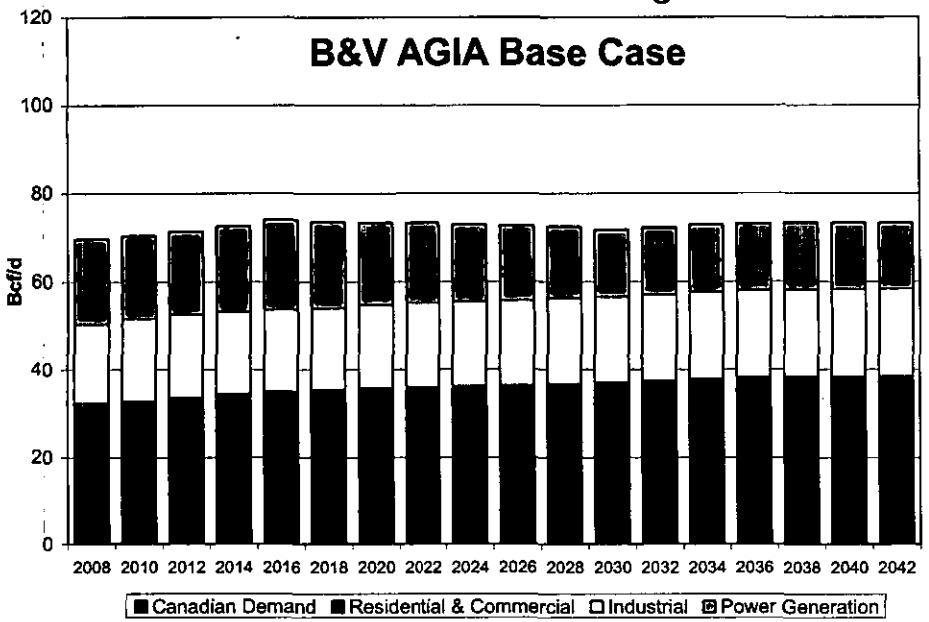
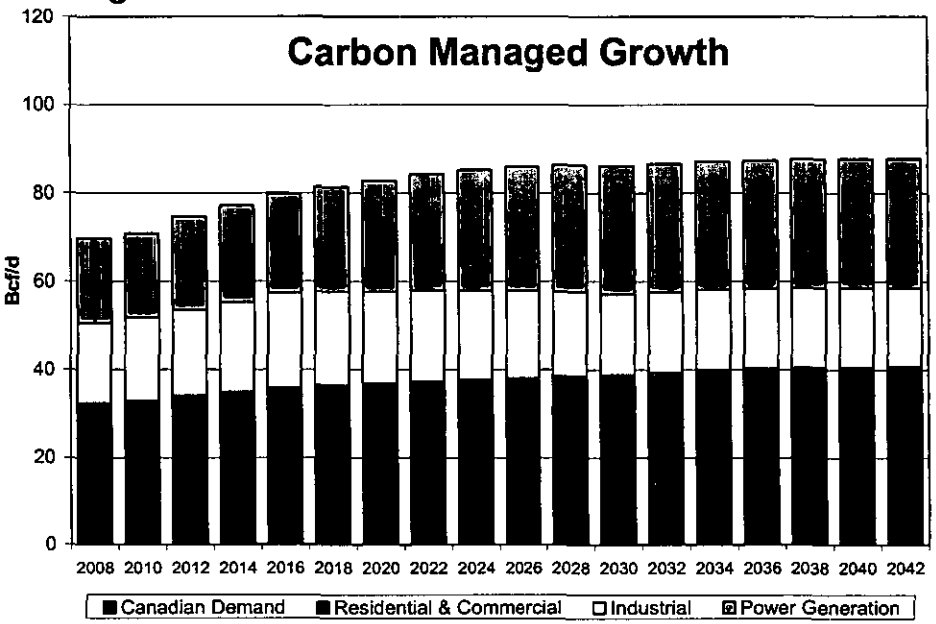
Impact of Carbon Regulation on Natural Gas Demand

AGIA
The Alaska Gasline Inducement Act

In a Carbon Managed Growth case, demand is 14 Bcf/d more than the B&V AGIA Base Case

- Policies and legislations designed to curb Green House Gas could reduce dispatch and construction of coal-fired generation facilities in favor of natural gas fired facilities, resulting in demand increase from the power sector in the US
- All resources, including renewables, nuclear and IGCC with CCS and gas fired combined cycles are all needed to meet electric demand growth. Gas demand from the power sector will grow from 19 Bcf/d in 2008 to 29 Bcf/d by 2030, with a CAGR of 2%
- Total demand in US lower 48 states is 12.1 Bcf/d higher than BV's AGIA Base Case by 2042. Canada demand is 2.3 Bcf/d higher in the Carbon Managed Growth case





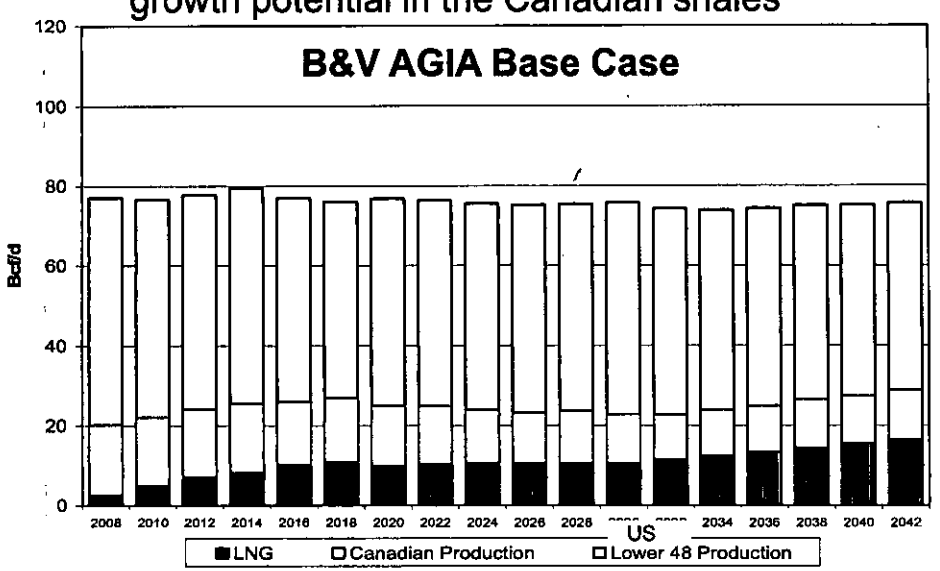
Source: Black & Veatch Analysis

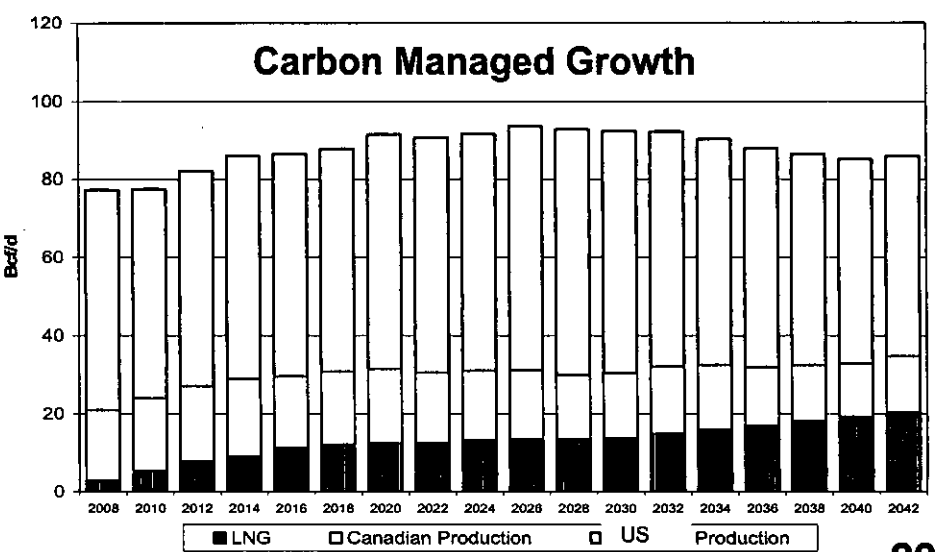
Multiple Different Sources of Natural Gas will be Needed to Meet Lower 48 Demand Growth

AGIA
The Alaska Gasline Inducement Act

Additional LNG imports and more unconventional productions from the US is necessary in order to meet the lower 48 demand growth

- Additional LNG imports will be needed to meet the demand growth; 6.4 Bcf/d by 2042 in the Carbon Managed Growth scenario
- US Production will average 58.3 Bcf/d from 2022-2042 in the Carbon Managed Growth case, which will be 7.8 Bcf/d higher than the B&V AGIA Base Case. Recent developments in shale discoveries in Haynesville and Marcellus indicate greater production potentials from these unconventional resources. The production growth can be considered as a proxy.
- Canadian production continues to decline in both cases. In the Carbon Managed Growth case, Canadian production is 3.7 Bcf/d higher than in the B&V AGIA Base Case, which may approximately reflect the growth potential in the Canadian shales



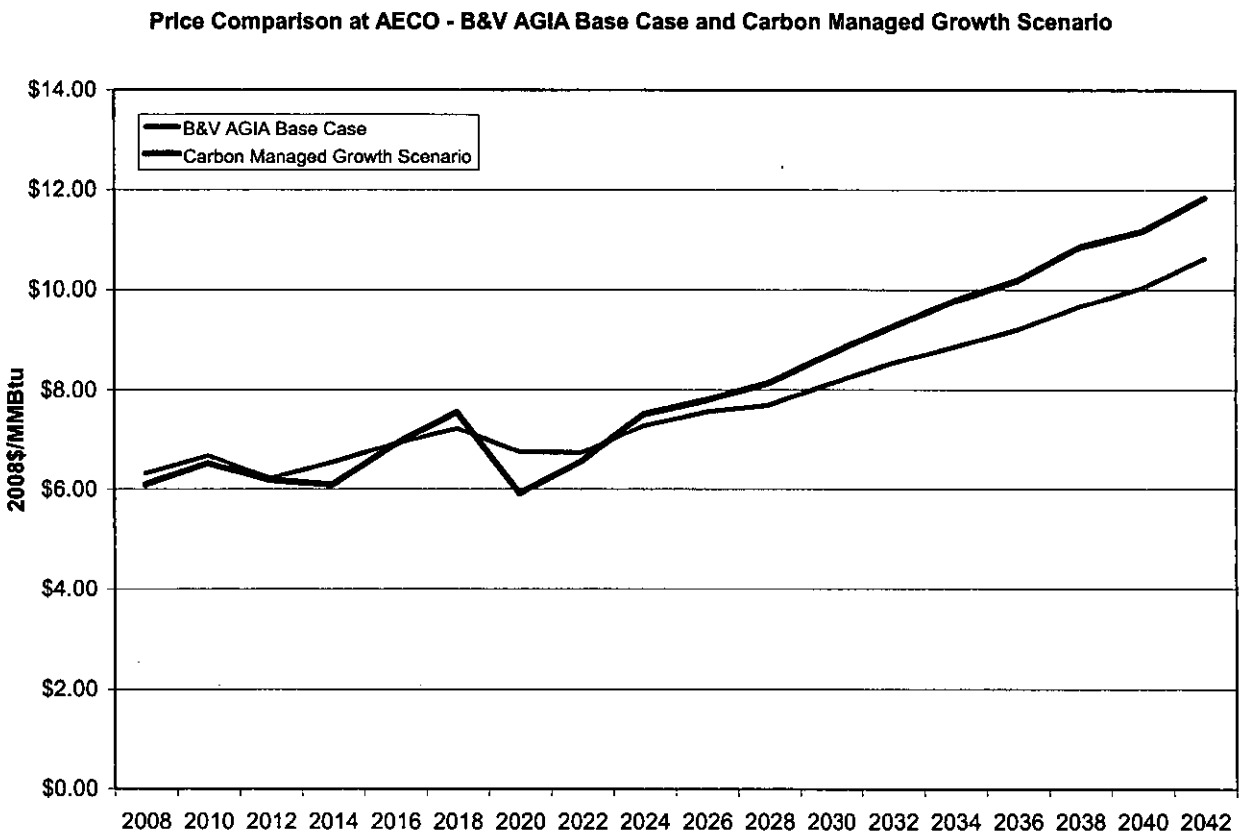


Source: Black & Veatch Analysis

Impact of Carbon Regulation on AECO Price Forecasts

AGIA
The Alaska Gasline Inducement Act

- The Carbon Managed Growth case has sufficient supplies from North America to meet the high demand from both unconventional production and slightly higher additional LNG volumes
- North American gas price is projected to have a higher price path than in the AGIA base case



Source: Black & Veatch Analysis

Liquid Natural Gas (LNG) Imports Current and Forecast Volumes

How Horizontal Drilling & Fracturing Technologies Are Changing Natural Gas Markets

Presented to:

Senate & House Resources and EDT Joint Committee Meeting

State of Alaska

April 8, 2009

BENTEK Energy LLC

32045 Castle Court, Suite 200
Evergreen, Colorado 80439
(888) 257- 4398
www.bentekenergy.com

Key Points

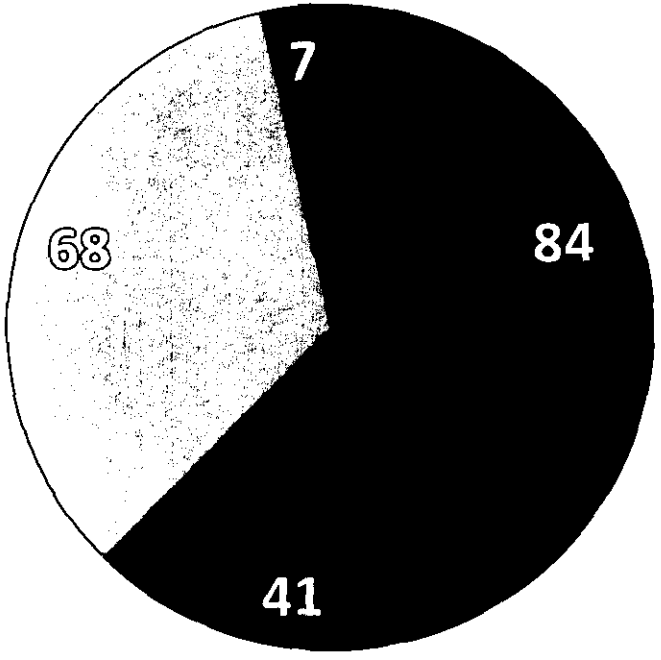
- The Energy World has changed. Technology has unlocked unconventional gas resources.
- Natural gas should no longer be viewed as unavailable, unreliable or too expensive.
- Due to unconventional gas production, the US has become supply long, prices are falling and consumers will benefit.
- Burgeoning supplies are overwhelming the nation's pipeline capacity, driving prices even lower.
- The production growth creates an historic opportunity to use gas to quickly and significantly reduce our GHGs and reduce our consumption of oil and other high emission fuels.

Presentation Outline

- US Supply Explodes: What happened in 2008
- Why It Happened: Impact of technology innovation
- What are the Impacts?
- Recent Activity
- Conclusions and Implications

Who Is BENTEK?

Distribution of Customers



- Majors, Producers, Mktrs, Industrials
- Pipelines, Utilities, Midstream
- Financial and Hedge
- Government, Associations, Consultants

- BENTEK is the leading energy analytics firm
- We provide:
  - Daily assessments of the US natural gas market fundamentals
  - Analysis of major market developments
  - Near real-time Market Fundamentals Data
  - Consulting and Advisory Services
- Over 200 clients include producers, marketers pipelines, banks, LDCs and end users
  - FERC
  - MMS
  - State PUCs via NARUC

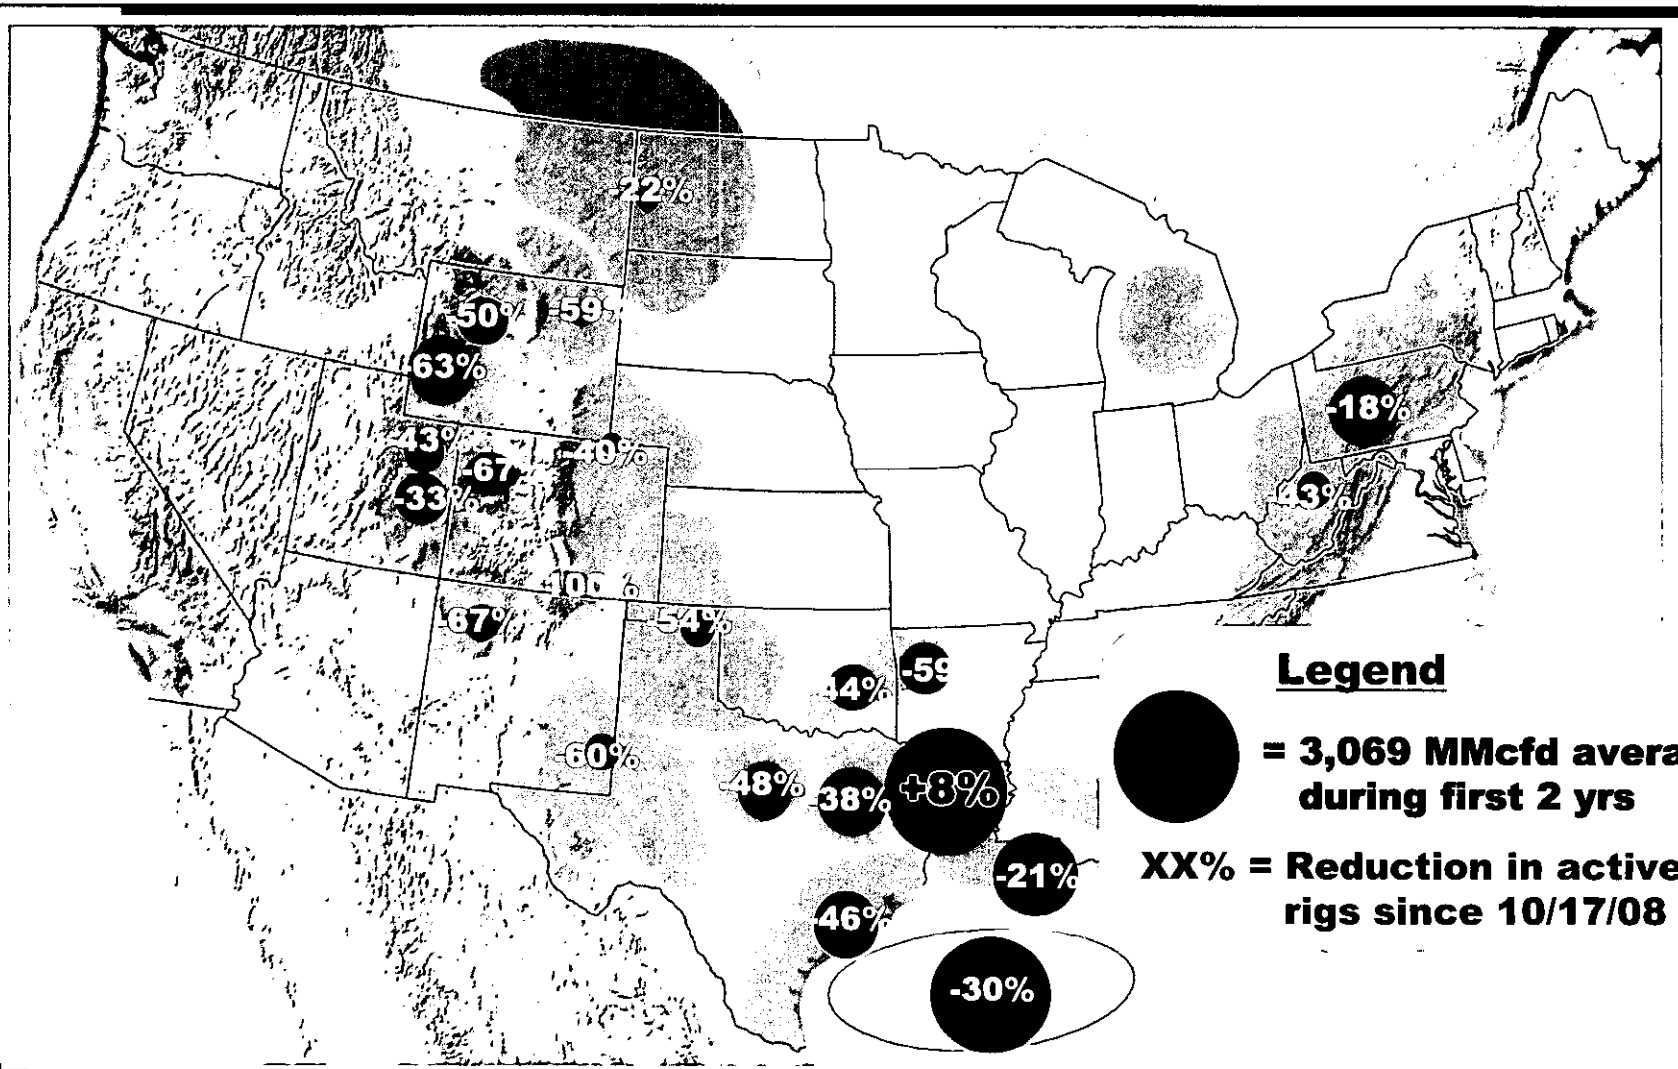
Exploration Is Concentrating In The Most Productive Basins



BENTEK Energy LLC

Conclusions

- Natural gas is the GOOD energy news for consumers.
- 2008 belied the notion that the US is running out of natural gas. Prices will continue to fall and may stay in the $3 to $6 range for many years.
- On our current pace:
  - Exploration activity will fall dramatically in 2009 from 2008 levels.
  - 2009 drilling declines will arrest production growth.
  - Because of technology and pipeline constraints, prices will continue to be volatile, but corrections will happen more quickly and the range narrower.
  - Additional pipe capacity is needed but increased demand must come first .

Implications

- The low cost of natural gas will make alternatives economically less competitive .
- We are faced with an historic opportunity: US gas supplies are sufficient to play the central role in our nation's energy policy:
  - It is abundant in the US
  - It is relatively cheap
  - It is relatively clean
  - It is N. American – it provides jobs and tax base
  - Its consumption technologies are proven
- State, local and federal government policy is critical to realizing this fragile opportunity.
- Government policy – whether state, federal or local – needs a feedback loop to accommodate market changes. Ultimately markets prevail.

Alaska Fischer-Tropsch Synthetic Fuels Pilot Program

Mr. Mark K. Iden
Deputy Director Operations

Agenda Items

First Day:

- Alaska Pilot Program Overview
- DESC Fuel Support in Alaska: Current & Future
- Contracting Issues
- Proposal, Procurement and Negotiation Processes
- Pricing / Financial Issues
- Quality / Environmental Considerations

Second Day:

- Break Out and One-on-One Sessions

Alaska F-T Synthetic Fuels Pilot Program

- Location/Fuel Type
  - State of Alaska (JP8, and possibly other jet/diesel requirements?)
- Multi-Year Contract
  - Minimum of 5 years
- Synthetic Fuel (Fischer-Tropsch Process)
  - Feedstock neutral
- 50:50 Blend
  - Require blended fuel as contract deliverable
- Competitively Priced
- Complies with Environmental Standards
  - Section 526 Life-cycle Green House Gas Requirements

Defense Logistics Agency

Defense Energy Support Center

Background

- DoD level program focusing on alternative/renewable fuels
- DESC/military service coordinated approach on Alaska F-T synthetic fuels pilot program
  - USAF previously identified goals
    - Certify all platforms by 2011
    - 50% of the domestic aviation fuel requirement using 50:50 blend by 2016
- DESC has conducted two Requests for Information (RFI) with Industry
  - May 2006 (28 responses received)
  - Sep 2007 (9 responses received)

Background (Cont'd)

- DESC short term acquisition (certification/testing)
  - Shell Malaysia contract (GTL Syn Fuel)
    - Jun 2006 – 315k USG
  - Two SASOL contracts (CTL Syn Fuel)
    - Jun 2008 60k USG
    - Jul 2008 335k USG
- DESC long term acquisition strategy (sustainment)
  - First step is Alaska pilot program
  - Domestic production capability
  - Expansion to CONUS requirements

Defense Logistics Agency

Defense Energy Support Center

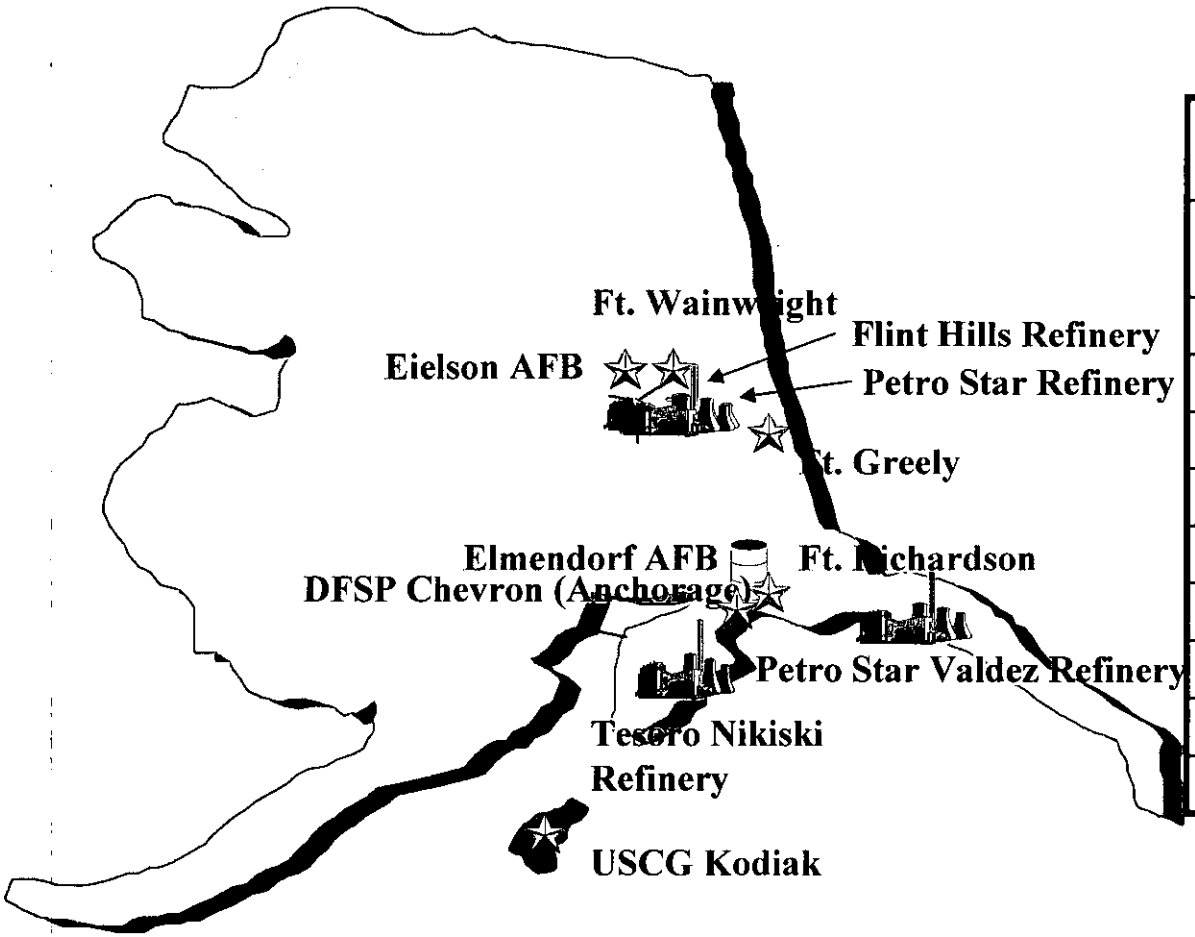
Why Do This?

- Driven by energy security concerns
- Utilization of domestic resources
- Environmental considerations
- Get ahead of customer requirements

Who Could Do This?

- Existing suppliers
- New synthetic fuel production suppliers
- Partnerships

Requirements



Bulk Fuel Annual Requirements

Location	Product	Volume (gallons)
ANG Kulis Fld (Anchorage)	JP8	2,500,000
Eielson AFB	JP4	50,000
(*)	JP8	22,000,000
Elmendorf AFB	JP8	42,000,000
Fort Greeley	JP4	500,000
Fort Richardson	JP4	200,000
	JP8	200,000
Fort Wainwright	JP4	1,000,000
	JP8	300,000
USCG Kodiak	JP5	3,800,000

(*) Requirements currently under separate Eielson AFB Coal-To-Liquid Initiative

Next Steps

- Alaska F-T Synthetic Fuels Industry Summit
  - Explain pilot program approach
  - Solicit input / comments
- Refine acquisition strategy
  - Finalize acquisition approach
  - Finalize acquisition timelines
- Issue solicitation (RFP)
- Evaluate offers
- Award contract
- Timeline for product delivery

Notional Timeline

Issue Solicitation	June 1, 2009
Close Solicitation	July 30, 2009
Initial Evaluation	August 1, 2009 – August 30, 2009
Negotiations Close	September 15, 2009 – October 30, 2009
Final Evaluations Complete	November 30, 2009
Contract Award	December 30, 2009
First Delivery	December 2014

Industry Summit Summation

Purpose of Conference Achieved!

- Gather DoD, Industry, and State/Local Political Officials to Discuss DESC Alaska Synthetic Fuel Initiative
  - 90+ Attendees the first day
  - 45+ Attendees the second day
- Solicit Feedback on DESC Planned Approach
  - 10 Take Away Issues in 3 Broad Categories
- Follow-On Session with Alaska State Legislators
- Follow-On Coordination Between DESC and USAF
- Refine Acquisition Strategy and Plot Course Ahead

Take-Away Issues

- Defining the Requirement
  - Quantity/Location
  - Commercial Sector Requirements
  - Feedstock Source/Plant Location Restrictions
  - Eielson AFB Requirements
- Structuring the RFP for Success
  - Section 526 Model
  - Quality/Technical Criteria
  - Contract Length
  - Contract Pricing Structure
- How to Proceed
  - Establish Timeline for Acquisition
  - Pre-Feasibility/Down Select Process

Areas for State Assistance

- Financial Incentives to Industry to Participate
  - Tax Credits/Incentives
  - Loan Guarantees

- Encouragement to Commercial Aviation Industry
  - Incentives for Participation
  - Price Considerations

- Streamlining Regulatory Requirements
  - Permitting/Easements
  - Environmental Standards

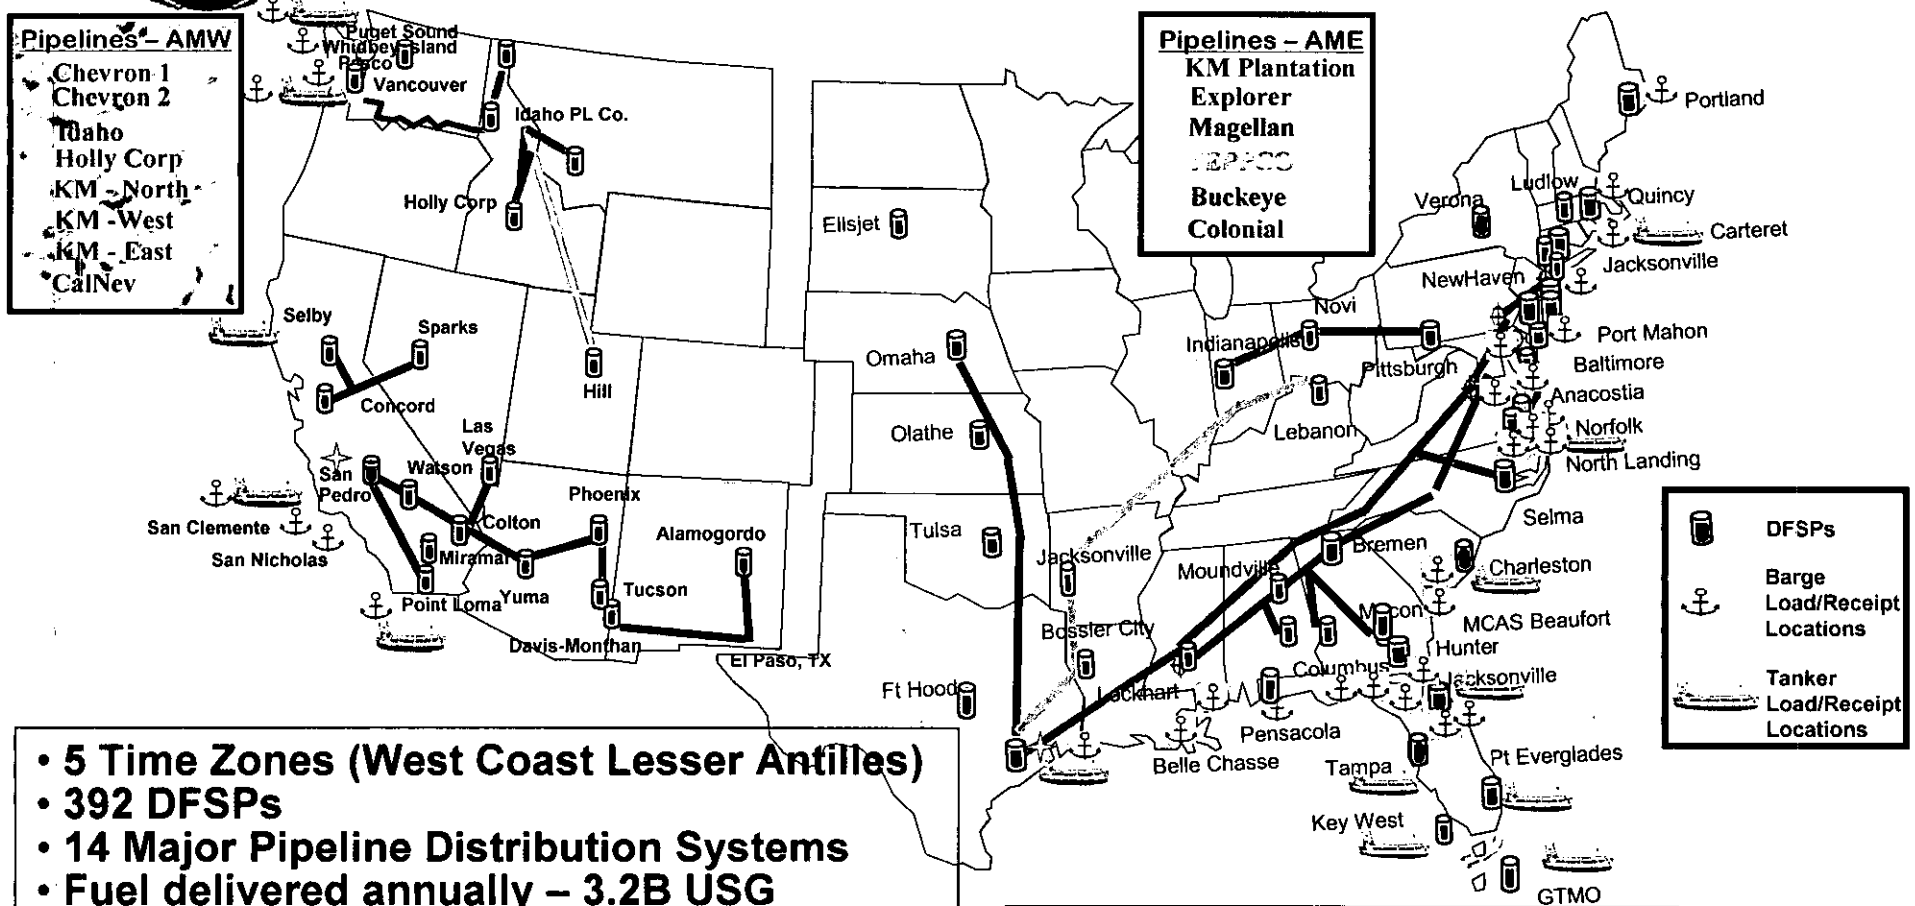
Back-Up Charts

Bulk Fuel Overview

Major Programs

- Inland/East/Gulf Coast (IEG)
  - One-year contract cycles: Apr-Mar
  - Approx. 1.7B USG
  - Approximately $3.6B
- Rocky Mountain/West (RM/W)
  - One-year contract cycles: Oct-Sep
  - Approx. 1B USG
  - Approximately $2.7B
- Western Pacific (WESTPAC)
  - One-year contract cycles: Jan-Dec
  - Approx. 1B USG
  - Approx. $4.3B
- Atlantic/European/Mediterranean (AEM)
  - One-year contract cycles: Jul-Jun
  - Approx. 491M USG
  - Approx. $1.3B

DESC Americas



- 5 Time Zones (West Coast Lesser Antilles)
- 392 DFSPs
- 14 Major Pipeline Distribution Systems
- Fuel delivered annually – 3.2B USG
- 38/38 - Suppliers / Contracts (FY08)
- $4.9 Billion - Value of Contracts (FY08)
- 2,045 – Accounts
- 9,000 to 11,000 - Movements/Month
- 400,000 to 550,000 - Transactions/Month

Latin America
DFSP Locations: 4
Forward Operating Locations: 4
Bunker Locations: 35
Into-Plane Locations: 38

Environmental Considerations

- Energy Independence and Security Act
  - Section 526
    - No Federal agency shall enter into a contract for procurement of an alternative or synthetic fuel, including a fuel produced from nonconventional petroleum sources, for any mobility-related use, other than for research or testing, unless the contract specifies that the lifecycle greenhouse gas emissions associated with the production and combustion of the fuel supplied under the contract must, on an ongoing basis, be less than or equal to such emissions from the equivalent conventional fuel produced from conventional petroleum sources.

TABLE 2. Chemical and physical requirements and test methods for JP-8 with up to 50 percent SPK blend component – Continued

Property	Min	Max	Test Methods ASTM Standards
Existent gum, mg/100 mL		7.0	D 381
Particulate matter, mg/L [8]		1.0	D 2276 or D 5452 [2]
Filtration time, minutes [8]		15	
Water reaction interface rating		1 b	D 1094
Water separation index [9]			D 3948 or D 7224 [2]
Fuel system icing inhibitor, vol percent	0.10	0.15	D 5006 [10]
Fuel electrical conductivity, pS/m [11]			D 2624
Lubricity, wear scar diameter, mm		0.85	D 5001

NOTES:

1. To be reported – not limited.
2. Referee Test Method.
3. A condenser temperature of 0° to 4°C (32° to 40°F) shall be used for the distillation by ASTM D 86.
4. ASTM D 56 may give results up to 1°C (2°F) below the ASTM D 93 results. ASTM D 3828 may give results up to 1.7°C (3°F) below the ASTM D 93 results. Method IP170 is also permitted.
5. Mid-boiling temperature may be obtained by ASTM D 86 to perform the cetane index calculation. ASTM D 86 values should be corrected to standard barometric pressure.
6. See 4.5.3 for ASTM D 3241 test conditions and test limitations.
7. Peacock or Abnormal color deposits result in a failure.
8. A minimum sample size of 3.79 liters (1 gallon) shall be filtered. Filtration time will be determined in accordance with procedure in Appendix B. This procedure may also be used for the determination of particulate matter as an alternate to ASTM D 2276 or ASTM D 5452.
9. The minimum microseparometer rating using a Micro-Separometer (MSEP) shall be as follows:

JP-8 Additives	MSEP Rating, min.
Antioxidant (AO)*, Metal Deactivator (MDA)*	90
AO*, MDA*, and Fuel System Icing Inhibitor (FSII)	85
AO*, MDA*, and Corrosion Inhibitor/Lubricity Improver (CI/LI)	80
AO*, MDA*, FSII and CI/LI)	70

*Even though the presence or absence does not change these limits, samples submitted for specification or conformance testing shall contain the same additives present in the refinery batch. Regardless of which minimum the refiner selects to meet, the refiner shall report the MSEP rating on a laboratory hand blend of the fuel with all additives required by the specification.

10. Test shall be performed in accordance with ASTM D 5006 using the DiEGME scale of the refractometer.
11. The conductivity must be between 150 and 600 pS/m for F-34 (JP-8) and between 50 and 600 pS/m for F-35, at ambient temperature or 29.4°C (85°F), whichever is lower, unless otherwise directed by the procuring activity. In the case of JP-8+100, JP-8 with the thermal stability improver additive (see 3.3.6), the conductivity limit must be between 150 to 700 pS/m at ambient temperature or 29.4°C (85°F), whichever is lower, unless otherwise directed by the procuring activity.

3.3.5 Fuel system icing inhibitor. The use of a fuel system icing inhibitor shall be mandatory for JP-8 and shall conform to MIL-DTL-85470. The point of injection of the additive for JP-8 shall be determined by agreement between the purchasing authority and the supplier. The fuel system icing inhibitor is not to be added to NATO F-35 unless so directed by the purchasing authority.

MIL-DTL-83133F
APPENDIX A

SYNTHETIC PARAFFINIC KEROSENE (SPK)

A.1 SCOPE

A.1.1 Scope. This Appendix addresses 100 percent SPK derived from manufactured products of a Fischer-Tropsch process (identified in 3.1.1). This Appendix is a mandatory part of the specification. The information contained herein is intended for compliance.

A.2 REQUIREMENTS

A.2.1 Chemical and physical requirements. The chemical and physical requirements of the SPK shall conform to those specified in Table A-I.

A.2.2 Additives.

A.2.2.1 Antioxidants. Addition of antioxidants shall adhere to the criteria specified in 3.3.1.

A.2.2.2 Static dissipater additive (SDA). If SPK is to be transported prior to blending with refined hydrocarbon distillate fuel, static dissipater additive shall be injected in sufficient concentration to increase the conductivity of the fuel to within the range specified in Table A-I. The point of injection of the additive shall be determined by agreement between the purchasing authority and the supplier. The following electrical conductivity additive is approved: Stadis® 450 marketed by Innospec Fuel Specialties LLC (formerly Octel Starreon LLC), Newark, DE 19702.

TABLE A-I. Chemical and physical requirements and test methods for 100 percent SPK.

Property	Min	Max	Test Method
Aromatics, vol percent		1	D 5186
Sulfur, total, mass percent		0.0015	D 2622, D 3120, or D 5453 [1]
Distillation temperature, °C			D 86
Initial boiling point [2]			
10 percent recovered	157	205	
20 percent recovered [2]			
50 percent recovered	168	229	
90 percent recovered	183	262	
Final boiling point		300	
Residue, vol percent		1.5	
Loss, vol percent		1.5	
Flash point, °C	38	68	D 56, D 93 [1], or D 3828
Density			D 1298 or D 4052 [1]
Density, kg/L at 15°C or	0.751	0.840	
Gravity, API at 60°F	37.0	57.0	

TABLE A-I. Chemical and physical requirements and test methods for 100 percent SPK - Continued.

Property	Min	Max	Test Method
Freezing point, °C		-47	D 2386 [1] or D 5972
Viscosity at -20°C, mm^2/s		8.0	D 445
Viscosity at 40°C, mm^2/s [2]			D 445
Net heat of combustion, MJ/kg	42.8		D 3338 or D 4809 [1]
Calculated cetane index [2]			D 976 [3] or D 4737
Naphthalenes, vol percent		0.1	D 1840
Thermal stability			D 3241
change in pressure drop, mm Hg		25	
heater tube deposit, visual rating		<3 [4]	
Particulate matter, mg/L [5]		1.0	D 2276 or D 5452 [1]
Filtration time, minutes [5]		15	
Water separation index			D 3948 or D 7224 [1]
With SDA	70		
Without SDA	85		
Electrical conductivity, pS/m [6]	150	450	D 2624

NOTES:
1. Referee Test Method.
2. To be reported – not limited.
3. Mid-boiling temperature may be obtained by ASTM D 86 to perform the cetane index calculation. ASTM D 86 values should be corrected to standard barometric pressure.
4. Peacock or Abnormal color deposits result in a failure.
5. A minimum sample size of 3.79 liters (1 gallon) shall be filtered. Filtration time will be determined in accordance with procedure in Appendix B. This procedure may also be used for the determination of particulate matter as an alternate to ASTM D 2276 or ASTM D 5452.
6. Electrical Conductivity when required per A.2.2.2 shall be determined at ambient temperature or 29.4°C (85°F), whichever is lower, unless otherwise directed by the procuring activity.

Over 80 questions were recorded during the 10 through 12 March, 2009 Alaskan Synthetic Fuels Summit. We've attempted to answer all the questions to include those which were answered during the conference, or in separate meetings. Answers to recorded questions are provided in a consolidated paragraph following the presentation format. If you find that your questions have not been answered, or that you have additional questions pls forward those to Ms Kelly Widner at kelly.widner@dla.mil.

Response to Questions from Mark Iden's presentation

Defining the Requirement

The State of Alaska has been identified as the location for the pilot program for the Fischer-Tropsch (F-T) Synthetic Fuels initiative by the Defense Energy Support Center (DESC). Alaska was chosen since it was determined the State has the necessary feedstocks (Coal and/or Natural Gas) to support such an initiative. In addition, it was determined that the somewhat isolated distribution system for DESC's customers in Alaska would support a full-scale pilot program for all of the potential customers. At this point, the Department of Defense's (DoD) current JP8 requirements supplied under DESC's Rocky Mountain/West Bulk Purchase Program will be the target for this initiative. Those combined JP8 requirements for the USAF and Army equate to approximately 67 million USG on an annual basis.

DESC will continue to review/consider additional requirements in order to bolster the overall size of the fuel requirement to support this pilot program. It is possible that additional jet fuel/ground fuel requirements for both DoD and some Federal Civilian Agencies within the State of Alaska could be added to this pilot program. Based upon feedback from the Industry Summit, DESC is also going to consider DoD fuel requirements on the West Coast of the United States.

Commercial Sector Requirements:

During the Industry Summit, commercial aviation requirements at both Anchorage and Fairbanks airports were identified to be approximately 900 million USG on an annual basis. This ratio of commercial industry requirements to DoD requirements of a 90:10 level (approximate) is typical of scenarios throughout the United States. DoD, while considered a relatively large requirement, typically only represents 10% of the overall aviation fuel marketplace. Accordingly, the ability to attract commercial sector requirements is key to enlarging the overall size of an initiative of this nature. DESC will continue dialogue with both the commercial aviation sector and with the Legislative branches of the local governments to determine the ability/interest level in increasing the requirements for this initiative.

Feedstock Source/Plant Location Restrictions:

DESC's F-T Synthetic Fuels Pilot Program within the State of Alaska is taking a feedstock neutral approach. Rather than dictating the type of feedstock a potential offeror

should use, DESC is leaving it to the commercial sector to determine the best solution regarding the type of feedstock and the location of their plant(s). The only restriction DESC will impose is a domestic source (US only) for the synthetic fuel facility. When taking into account transportation costs and the requirement to comply with Section 526 Greenhouse Gas emission limitations, economic considerations will determine the location of the plant and choice of feedstock. We feel the industry will come up with the best business case solutions on both an economic and environmental basis to offer the most competitive proposals possible.

Eielson AFB Requirements:

A separate Coal-to-Liquid Enhanced Use Lease initiative is currently underway involving Eielson AFB. That initiative is running concurrent, but separately, from the DESC F-T Synthetic Fuels Pilot Program within the State of Alaska. DESC continues to work with USAF officials to clarify whether the actual fuel requirements for Eielson AFB (approximately 22 million USG annually) can be included in the DESC program. It is expected this issue will be clarified by the end of April 2009.

Response to Questions from Kathryn Fantasia's presentation

Procurement & Solicitation Processes

Notional Acquisition Timeline:

DESC developed a notional acquisition timeline for procurement and delivery of a 50:50 blend of synthetic fuel and petroleum meeting the JP8 specification. The timeline conceived is notional, however, it is based on our experience with acquiring petroleum related services and goods at DESC. Most of the questions fell into two areas: (1) 60 days was not long enough to develop and prepare a proposal in response to the solicitation and (2) the date for delivery of finished, blended product to the customer was unrealistic.

DESC continues to research the complexity involved with developing a proposal and the timelines associated with the development. Given the complex nature of the requirement, the offeror will be required to demonstrate how it plans to meet the requirement in several areas. The financial responsibility aspect appeared troublesome to many attendees. DESC recognizes that due to the expense involved in constructing a facility, offerors will need to demonstrate their ability to either finance or offer contingent financing arrangements that demonstrate financial capability to perform. Given a 60-day timeline for proposal response, many attendees felt this timeframe was too short. As we refine our methodology to evaluate financial arrangements, we will revisit the timeframe for receipt of offers and anticipate the time allowed may be longer. The date and time for receipt of offers will be clearly spelled out in the Request for Proposals, and in the event

an offeror requires more time, he may request that of the contracting officer. The offeror will be notified of the contracting officer's decision to either grant or deny the extension.

The second concern centered on the date of first delivery of finished project. Again, the December 2014 date is notional and is based on DESC's estimate of the time required for the acquisition process as well as construction of a synthetic fuel production facility. Included in the Request for Proposals will be a requirement to clearly define project goals and milestones. Proposed completion dates will be evaluated as a part of the best value process and considered when making an award. Offerors are advised to give their best proposal, to include completion dates.

Down Select Process:

DESC is considering many approaches to the source selection process. We recognize that the cost and work involved with proposal preparation will be substantial and the suggestion was made to solicit the requirement in two phases. The first phase would require limited, conceptual approaches be submitted to DESC for consideration and evaluation. The second phase would be to "down select" and to negotiate with only those proposals that were highly rated. Because we believe that the group of offerors will be limited, and as a result of the number of responses received in response to two requests for information, we will conduct a full and open competition without the down select process.

Response to Questions from Kay Bushman's presentation

Pricing & Financial Issues

Contract length:

From previous industry feedback, DESC was advised that a long term contract would be necessary for purchasing synthetic fuel. The longest contract DESC can award is for five years with options for an additional five years, so that the term does not exceed 10 years. There have been various proposals in Congress to allow the government to award longer term contracts for the purchase of synthetic fuel but none have become law. If DESC were to receive long term contracting authority, DESC would likely solicit for the longest contract term permitted by law.

Contract pricing structure:

The goal is to purchase a substitute fuel for jet aviation at a competitive price based on the jet aviation market. DESC presented a contract pricing structure which was based on the jet aviation market. The contract prices would be tied to market based price indices and would change weekly based on the market. The prices DESC pays for jet aviation fuel in Alaska and elsewhere are available through the price adjustment tab by contract

number on the DESC web site at http://desc.dla.mil. DoD is not willing to pay a premium for the fuel. The expectation was that the costs of the facility would be amortized over each gallon of fuel and that DESC would purchase the fuel on a price per gallon basis. Payments would only begin with the first delivery. DESC did not expect to provide any contract pricing.

There were a number of questions raised about providing a different pricing structure which would include floor prices for the fuel, having the price be tied to either the natural gas or coal markets, or tied to a cost of living escalator. The concern was that too much risk would be borne by the private sector. There were also questions about pricing in today's market for a product that would not be delivered until 3-5 years out. DESC is reviewing all of these concerns and will determine if a different cost structure should be considered.

One question asked whether this could be a cost contract. No cost contract is contemplated.

Could the contract be conditioned on obtaining financing? Yes. The contract could contain a term that if specified financing is not obtained within a set time frame, that the contract would be terminated at no cost to either party.

If the government cancelled a contract, can the contract contain negotiated cancellation fees? Yes.

Financial incentives: DESC will not be offering any financial incentives. DESC is not aware of any specific incentives tied to this pilot program. There may be financial incentives available at the state level and at the financial level but interested suppliers would need to separately pursue those incentives. We are also not aware of whether there would be tax credits associated with the fuel.

Response to Questions from Pam Serino's presentation

Quality & Environmental Considerations

Lifecycle analysis:

The Air Force, EPA, FAA, DOE and DESC-Q are participating in the Interagency Working Group for Alternative Fuels Lifecycle Analysis. The group aims to develop a greenhouse gas emissions baseline for aviation fuel derived from conventional petroleum and a model to use for evaluating the greenhouse gas footprint of alternative fuels in comparison with this baseline. The EPA and DOE will ultimately decide on the model used to determine if any proposals meet the requirements of section 526. As a result any fuel procured must fall under this baseline and will therefore have less lifecycle greenhouse gas emissions than fuels derived from conventional petroleum.

Fischer Tropsch specification:

Fischer Tropsch (F-T) synthetic fuel blends procured by DESC will conform to Table 2 in MIL-DTL-83133F in order to meet Air Force requirements. Additionally, the product shall be a 50:50 blend (with a +/- blending range agreed upon by the services) of F-T synthetic fuel conforming to Appendix A of MIL-DTL-83133F and conventionally refined commercial jet fuel. Discussion is still taking place on how to effectively measure the ratio of F-T derived synthetic fuel to conventionally refined commercial jet fuel in a final blended product.

Properties of F-T synthetic fuel which may impact equipment are low aromatics (seal swelling), sulfur, lubricity and density. In order to offset any potential issues the conventionally refined commercial jet fuel blend component will have appropriate fuel properties to make up for these concerns.

Commercial applications:

DESC, the Services, and commercial industry are all participants in the Commercial Aviation Alternative Fuels Initiative (CAAFI). This organization aims to promote the development of alternative fuel options and is working to establish a commercial specification through ASTM to include F-T synthetic fuels. The next vote for the approval of a commercial F-T synthetic fuels specification by ASTM will be held in June. Regarding commercial certification, once the Air Force has certified all of their platforms and equipment then requirements for commercial certification will be satisfied.

Cost effectiveness:

DESC is looking to expand requirements in order to make F-T synthetic fuels more cost effective. Additionally, there is added value from increased energy independence and the potential for decreased lifecycle greenhouse gas emissions by procuring these fuels.

Alternative and synthetic fuels:

DESC has kept abreast of the latest developments in a variety of alternative and synthetic fuels in order to increase energy independence and decrease our carbon footprint. Currently, DESC is working with the services as they move forward to certify their platforms and equipment to use hydro-treated renewable jet and other alternative fuels derived from fats and oils.

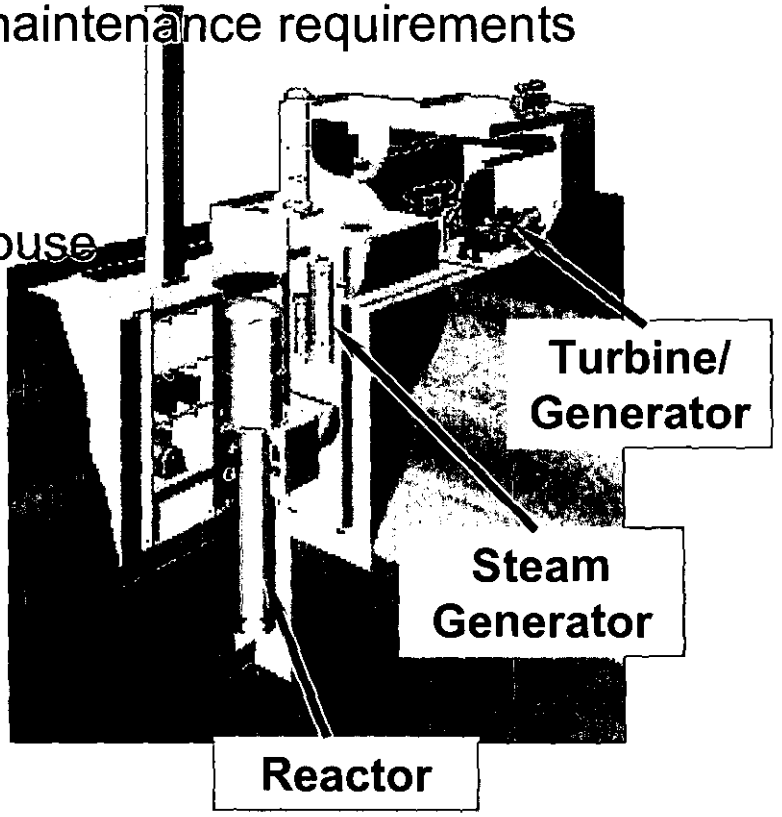
4S Presentation

- Introduction – Marvin Yoder
- 4S Overview – Kazuo Arie, Toshiba
- 4S Design - Tony Grenci, Westinghouse
- Licensing Status – Tony Grenci, Westinghouse
- Questions

Copyright 2009, Toshiba Corporation

Overview

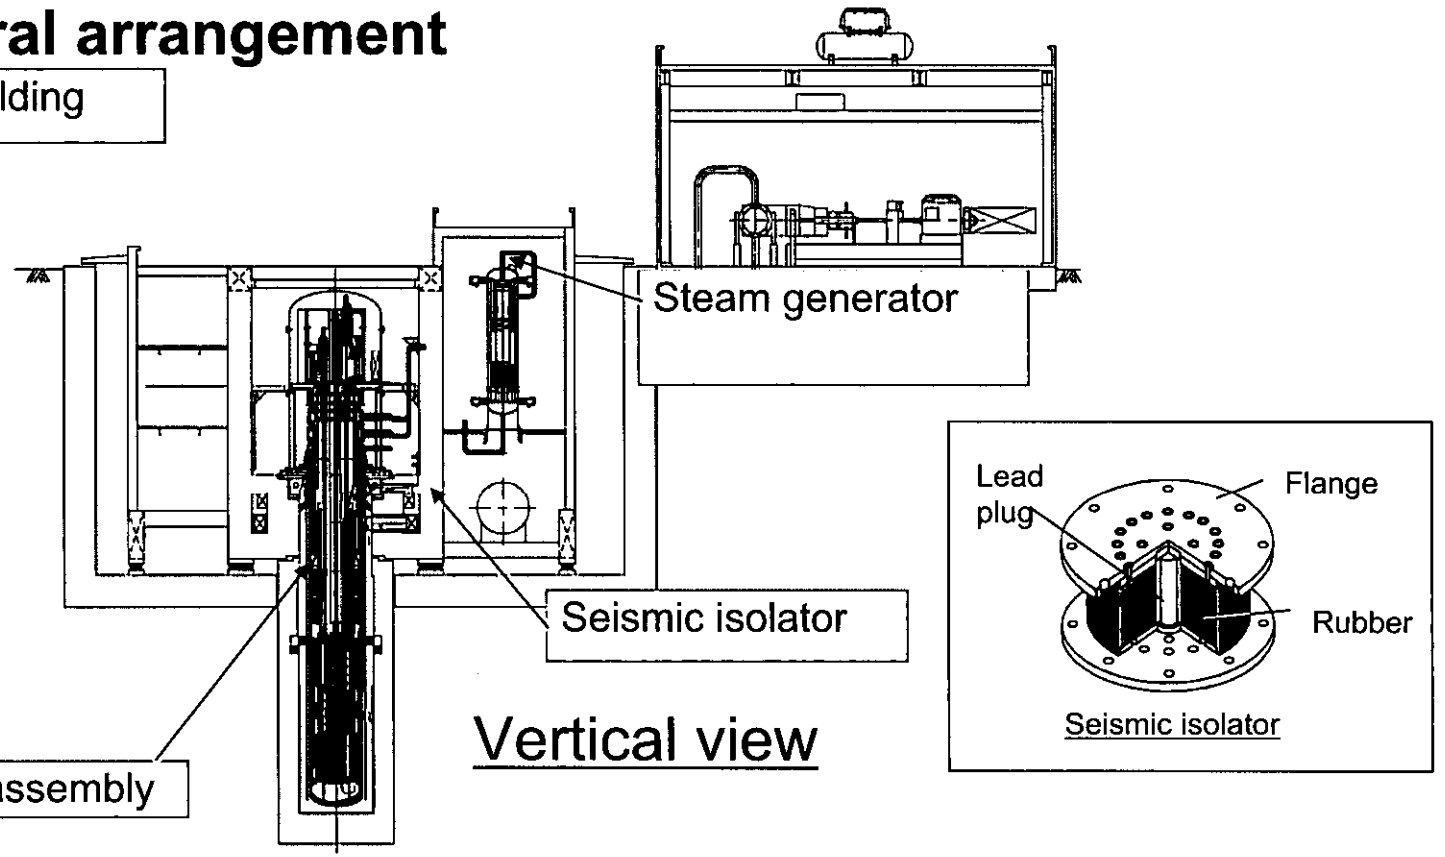
- **Goals**
  - Provide safe, clean, reliable, grid-appropriate power
  - Minimize security and proliferation risks
  - Minimize infrastructure, operation & maintenance requirements
- **Sodium cooled fast reactor**
  - Co-developer: CRIEPI
  - Developing Partners: ANL, Westinghouse
- **30 MWt (10MWe)**
  - (Initial Configuration)
- **Main features**
  - Passive safety
  - No onsite refueling for 30 years
  - Low maintenance requirements
  - High inherent security



Copyright 2009, Toshiba Corporation

Plant Description

▫ General arrangement

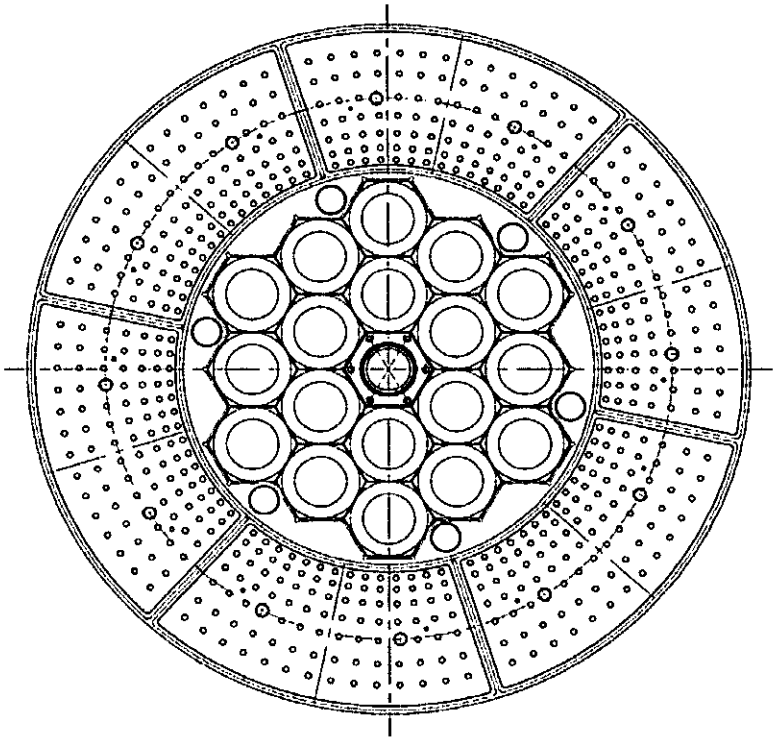


– Seismic isolation is provided for the reactor building.
– Reactor building is below grade.

TOSHIBA
Leading Innovation >>>
Copyright 2009, Toshiba Corporation
Westinghouse

4S Advantages - Economy

- Diesel fuel prices are high and unpredictable.
- Long refueling interval (10-30 years) front-loads the fuel costs.



TOSHIBA
Leading Innovation >>>

Copyright 2009, Toshiba Corporation

Westinghouse

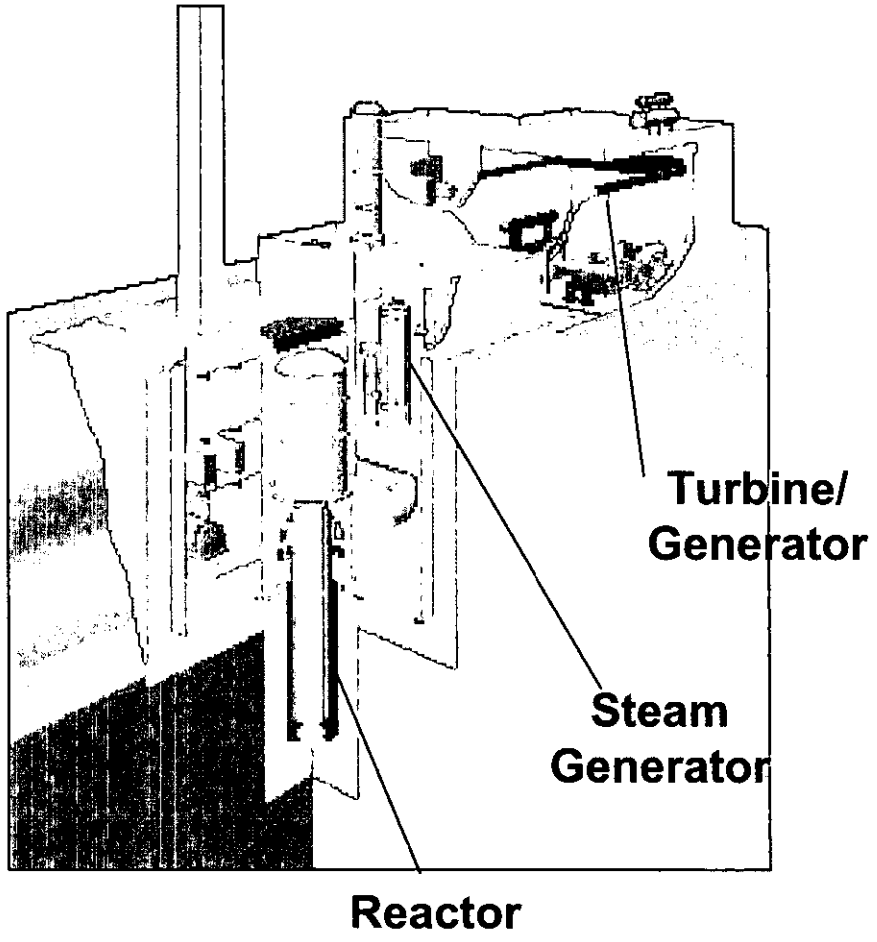
4S Advantages - Operations

- Small operations and security force
  - Simplified operations, load changes accomplished using turbine bypass
  - Automatic burnup compensation
  - Passive safety systems
  - Small plant footprint

Copyright 2009, Toshiba Corporation

4S Advantages- High Inherent Security

- Below-grade siting to protect from missile or airplane impact.
- No onsite fuel storage (10 MWe).
- Sealed Reactor Vessel.
- Heavy Lifting and Fuel Handling Equipment removed from site.
- Fuel enrichment below proliferation grade.



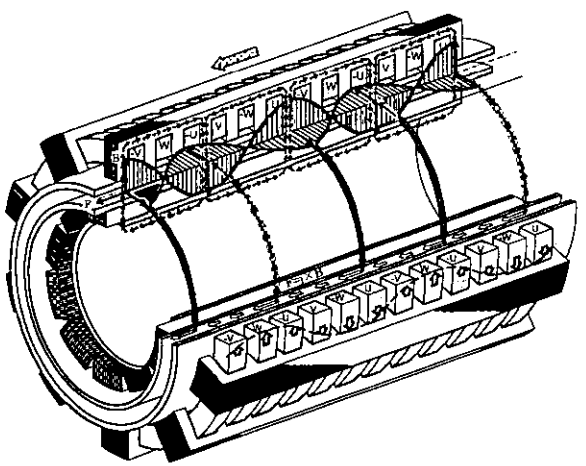
TOSHIBA
Leading Innovation >>>

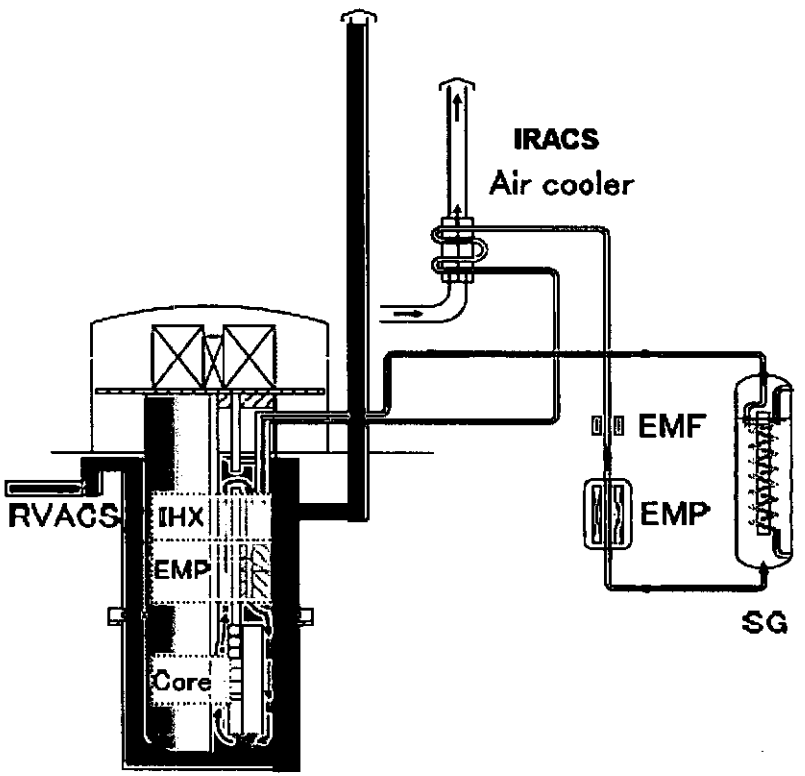
Copyright 2009, Toshiba Corporation

Westinghouse

4S Advantages - Maintenance

- Passive systems
- Materials compatibility
- Minimal moving parts
  - EM Pumps





TOSHIBA
Leading Innovation >>>
Copyright 2009, Toshiba Corporation
Westinghouse

4S Versions

- Two versions being designed simultaneously.
  - 10 MWe version
  - 50 MWe Version
- Rx Vessel, Rx Building identical for both versions.

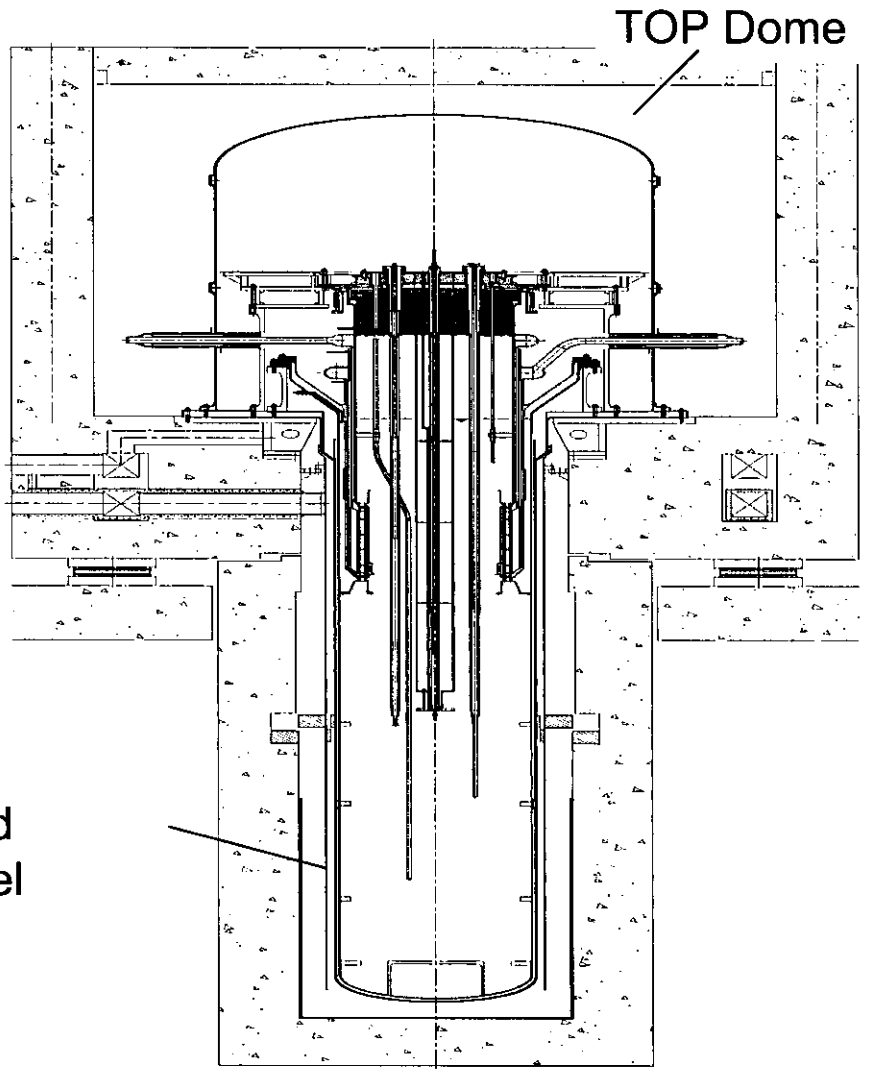
Containment

- **Guard vessel**
  - **Material:** **2 1/4Cr-1Mo**
  - **Diameter:** **3.65m**
- **Top dome**
  - **Material:** **2 1/4Cr-1Mo**
  - **Diameter:** **8m**
- **Passive heat removal system**



Copyright 2009, Toshiba Corporation

Safety Features of 4S

- **Source term reduction**
  - Low power results in low fission product inventory
  - Sodium affinity for fission products minimizes release
  - No significant release to containment due to absence of energetic and pressurization events
- **Radioactive release reduction**
  - Sealed reactor vessel and containment
  - Minimize penetrations and isolation valves
  - Threat to containment integrity is minimal due to absence of damaging phenomena (direct containment heating, steam explosion, hydrogen burning or detonation, missiles)

Copyright 2009, Toshiba Corporation

Safety Analysis Results

- **Large margin to acceptance criteria for site suitability and emergency planning**

Distance (m)	50
EAB (rem)	0.004
LPZ (rem)	0.2
Acceptance dose criteria (rem)	25

TEDE: Total equivalent dose
EAB: Exclusion area boundary
LPZ: Low population zone

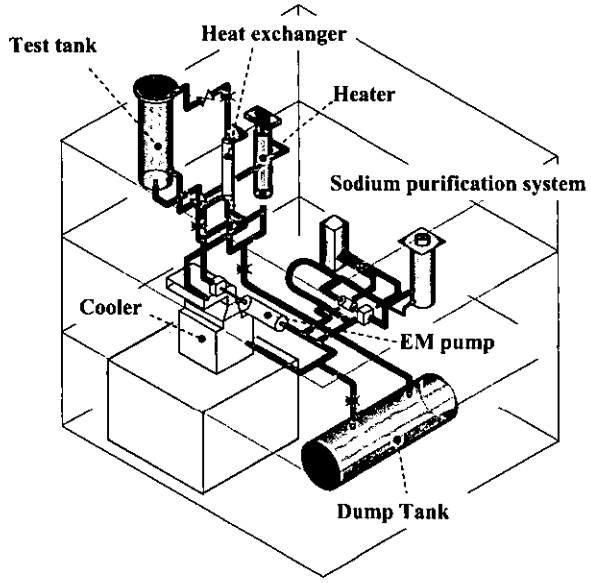
Test Facility for Further Tests

▫ TOSHIBA Sodium Component Test Facility

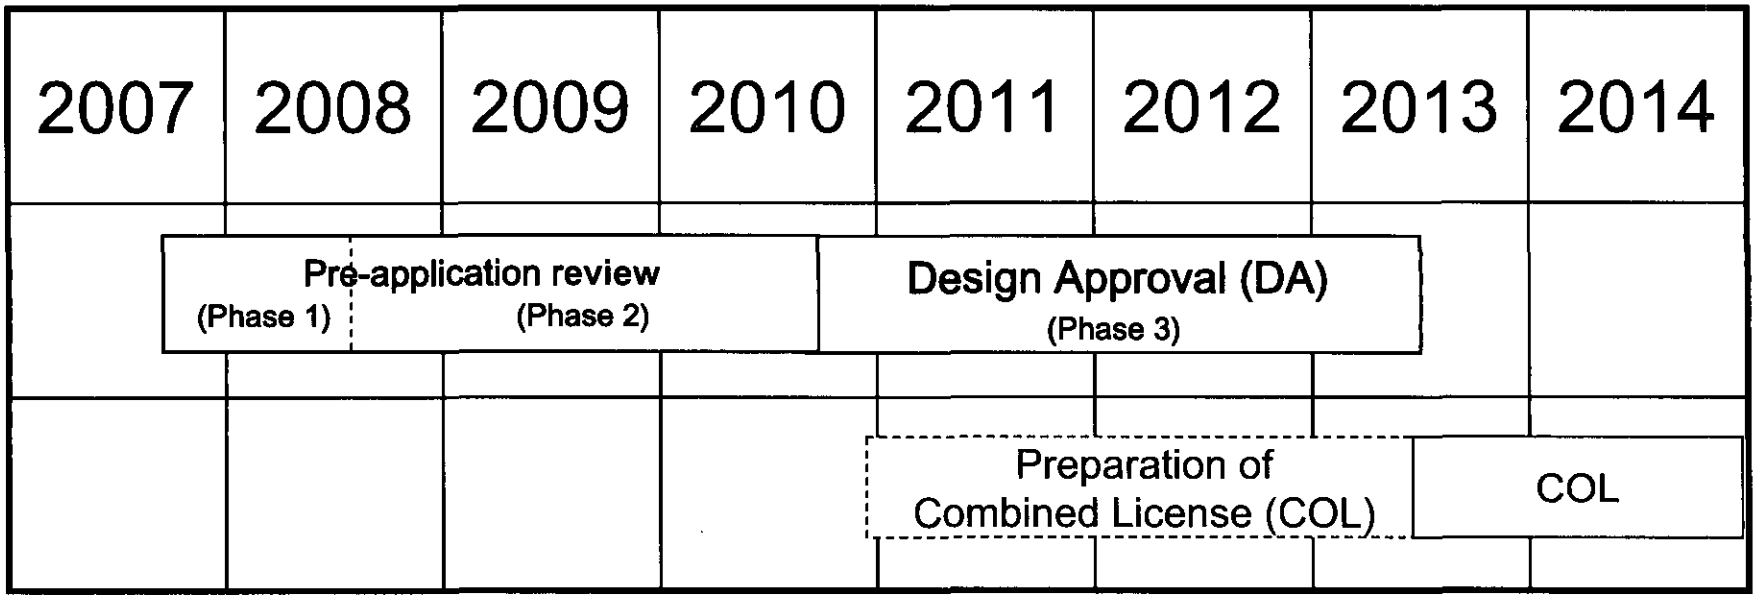
- Facility completed December 2008.
- Functional testing begun January 2009.
- Planned tests
  - Demonstration of large-scale EM pump.
  - Verification of leak detection system for a steam generator outer tube failure.



TOSHIBA
Leading Innovation >>>
Copyright 2009, Toshiba Corporation
Westinghouse

Current Licensing Schedule

- **Submit Design Approval application on October, 2010**
  - **Phase 1:** Complete a series of meetings with NRC to identify issues to be addressed before Design Approval application
  - **Phase 2:** Submit technical reports and obtain NRC feedback to address the issues identified in Phase 1
  - **Phase 3:** Submit Design Approval application and obtain SER



The licensing activity is been conducted in cooperation with CRIEPI, ANL and WEC.

Conclusions

- **4S is a mature technology that is ready for regulatory review and commercialization.**
  - Preliminary systems design complete and detailed design in progress
  - Significant body of test data to support key components
  - Proven and tested fuel experience to support the 30-year core lifetime
- **4S U.S. licensing process has begun.**
  - Pre-application review meetings & technical reports
  - Target for FDA - 2013

CHUGACH

RESOLUTION

RESOLUTION IN SUPPORT OF ALTERNATIVE ENERGY IN ALASKA

WHEREAS, Chugach Electric is currently 90% dependent on natural gas for its existing electric generation and produces just 10% of its energy with hydroelectric power;

WHEREAS, Chugach Electric has a goal to reduce its dependence on fossil fuels and transition to 90% dependence on renewable sources in the future; and therefore we adopt the 90/10 to 10/90 concept as a long-term goal.

WHEREAS, Chugach recognizes that our intermediate goals may best be meet with alternative energy sources and as such, these potential sources must be considered to help diversify our energy resources and limit price volatility for any one energy commodity.

WHEREAS, Chugach Electric strongly supports the current review and analysis of a Susitna hydroelectric generation project,

WHERAS, Chugach Electric supports continued development of additional reserves and gas storage in Cook Inlet, and the study of a natural gas bullet line from the Alaska North Slope to assure availability of natural gas for local needs;

WHEREAS, the Alaska Energy Authority (AEA) is currently undertaking a 50-year Integrated Resource Plan (IRP) and Chugach encourages AEA to analyze all alternative energy generation technologies on a level playing field of consideration to include economic, environmental, political and longevity criteria, so that we and/or the State of Alaska may construct a portfolio of alternative electric generation capabilities to meet the needs of all electric consumers in Alaska;

WHEREAS, alternative energy generation technologies include but are not limited to the following: hydroelectric, coal to liquids, coal gasification, gas to liquids, nuclear, geothermal, biomass, conservation and efficiency measures, incineration of municipal waste, tidal, wind, or solar;

WHEREAS, there are provisions in existing state law currently that limit the ability of the State of Alaska, any electric utility, any set of electric utilities, or any private entity from consideration and development of some forms of alternative energy, for example current prohibitions against nuclear energy;

NOW, THEREFORE BE IT RESOLVED that Chugach Electric Association, Inc. adopts a 90/10 to 10/90 strategy to transition away from fossil fuels to renewable energy sources and supports the evaluation by AEA of all possible potential alternative electric generation technologies to reduce our current dependence on natural gas;

CHUGACH

BE IT FURTHER RESOLVED that The Chugach Board of Directors support the immediate repeal of relevant portions of Alaska Statutes that currently prohibit development or funding of any alternative energy solution in the State of Alaska.

CERTIFICATION

I, Alex Gimarc, do hereby certify that I am the Secretary of Chugach Electric Association, Inc., an electric non-profit cooperative membership corporation organized and existing under the laws of the State of Alaska: that the foregoing is a complete and correct copy of a resolution adopted at a meeting of the Board of Directors of this corporation, duly and properly called and held on the 20th day of November, 2008; that a quorum was present at the meeting; that the resolution is set forth in the minutes of the meeting and has not been rescinded or modified.

IN WITNESS WHEREOF, I have hereunto subscribed my name and affixed the seal of this corporation the 20th day of November, 2008.

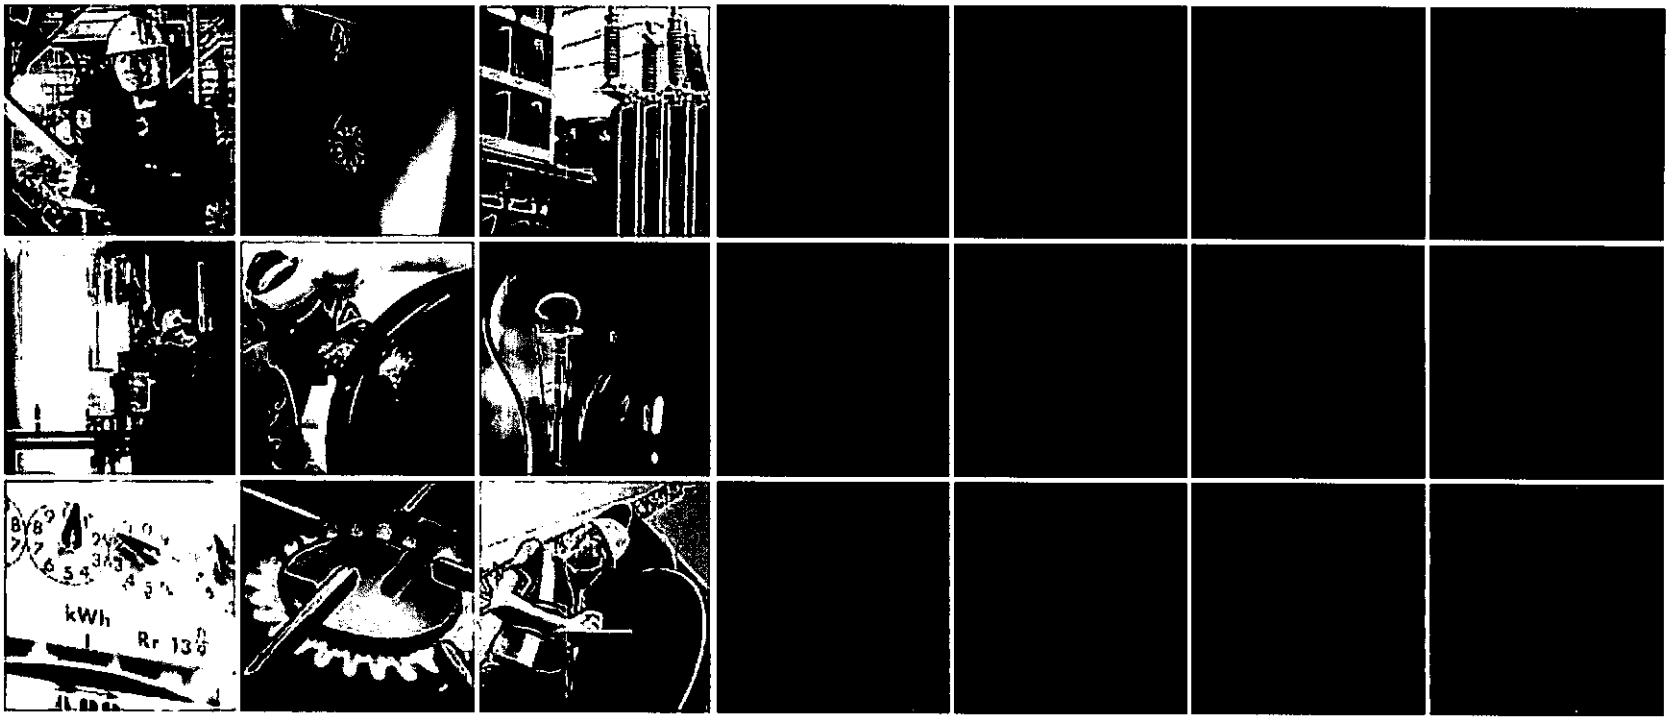
TransCanada/ExxonMobil Agreement Hearing
Tuesday, June 23, 2009
9:00am – 1:00pm
Anchorage LIO, Room 220

AGENDA

9:00-10:30	TransCanada, Tony Palmer Exxon/Mobil, Marty Massey
10:30-11:00	State of Alaska – AGIA Pipeline team
11:00-11:10	Break
11:10-12:00	Denali Pipeline Project, Bud Fackrell
12:00-12:20	BP LLC, Claire Fitzpatrick
12:30-12:45	ConocoPhillips, Wendy King



TransCanada's Alaska Pipeline Project

Senate/House Committees- Alignment with ExxonMobil

June 23, 2009

TransCanada
In business to deliver

Overview

- TransCanada (TC) and ExxonMobil (EM) have reached agreement to work together to progress TransCanada's Alaska Pipeline Project
  - Immediate EM participation and project support
  - TC / EM will jointly advance all aspects of the project – technical, commercial, regulatory, financial, etc.
  - EM contributing prior study results, existing Alaska ROW data
- TC Alaska and Foothills remain the AGIA Licensees
  - AGIA rights / obligations are unchanged and remain with Licensees
  - EM is ready to work with the State to enable full participation in the AGIA license
- Project Schedule unchanged
  - Initial Open Season target completion by July 2010

TransCanada

Overview (cont')

- AGIA Project Scope unchanged
  - GTP and pipeline from Prudhoe Bay to Alaska delivery points, LNG via Valdez, or Lower 48 markets via Alberta Hub
  - TC / EM will also advance an upstream gas transmission pipeline from Point Thomson to GTP to be included in the Open Season
    - Outside of AGIA project and ineligible for AGIA reimbursement
- Current TC / EM alignment not contingent on any commitments by State
- TC can progress project independently, if it so elects, using all jointly developed assets / information

TransCanada

Overview (cont'd)

- Legislation / Regulatory
  - Utilize ANGPA (Alaska Natural Gas Pipeline Act) in Alaska and NPA (Northern Pipeline Act) in Canada
- Upfront spending increased to $150 million through Open Season
  - Additional front-end spending reflects increased emphasis on early execution/construction planning, additional efforts in regulatory, environmental and land areas, as well as size, complexity and execution challenges of GTP
- Development costs will be shared by TC / EM
  - TC retains majority interest
  - No change to State's total reimbursement contribution of $500 million

TransCanada

Overview (cont'd)

- In early May, TC provided State Administration with full disclosure of proposed TC / EM arrangement
  - State has reviewed the TC / EM arrangement and has determined that no action is needed by the State as a result of the arrangement
  - State administration supports TC / EM alignment
- Bottom Line
  - Real progress to align all essential parties necessary for successful project
  - Combination of TC and EM brings unrivaled expertise and experience to the project
  - TC / EM share a common goal – realization of an Alaska pipeline project

TransCanada

Project Framework

Objectives

- Perform work necessary to facilitate completion by TC Licensees of Open Seasons in US and Canada by July 2010 target
- Pursue required regulatory authorizations for pipeline construction

	AGIA Licensees	IPA Parties
US PFA	• TransCanada Alaska Company, LLC	• TransCanada Alaska Development Inc. • ExxonMobil Alaska Midstream Gas Investments, LLC
Canada PFA	• Foothills Pipe Lines (North B.C.) Ltd. • Foothills Pipe Lines (South Yukon) Ltd.	• TransCanada PipeLines Limited • ExxonMobil Canada Resources Company

TransCanada

Project Framework (cont'd)

- Interim Project Agreement (IPA) establishes basis under which TC / EM work together
- Project Funding Agreements (PFA) are companion agreements to IPA
  - Executed simultaneously with IPA; separate PFA for US and Canada
  - Provides "bridge" between TC Licensees and IPA parties
- TC Licensees maintain interface with the State of Alaska and retain AGIA obligations
- TC Licensees maintain sole discretion over request for State reimbursement for qualified expenditures

TransCanada

Project Framework (cont'd)

- TC Licensees have right to all work provided to them by IPA parties for purposes of meeting TC AGIA obligations
- All major project components, including regulatory filings and Open Season contracts, will be made or entered into in the name of and on behalf of the AGIA Licensees
- TC Licensees have the right, at all times, to progress the project alone, if they so choose.
  - If TC Licensees elect to do so, they have the right to all jointly-developed work product; and both parties will retain rights to project information
  - Parties have agreed to a reasonable transition to sole management by TC in the event of a termination
- During the term of PFA, the IPA parties will earn non-voting interests in the TC Licensees, upon transfer of work product

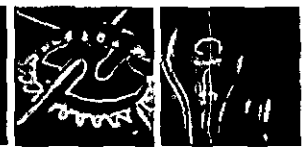
TransCanada

Project Framework (cont'd)

- When EM becomes a participant in TC Licensees, the non-voting interests will convert to voting interests in AGIA Licensees
- State reimbursements to TC Licensees will be distributed to IPA parties in proportion to their participating interests in the IPA
- IPA includes typical joint venture terms
- The project is managed by a Management Committee, with TC as chair (Tony Palmer)
- Fully-integrated project team staffed at all levels by personnel of both TC / EM
- EM is IPA lead and TC is the sub-IPA lead for the Canadian portion of the project. Through Open Season, TC remains primarily responsible for the overall pipeline / compression work and EM primarily responsible for the GTP work.
- Project costs are jointly funded based on the parties' proportionate shares.

TransCanada

Benefits of Alignment with ExxonMobil



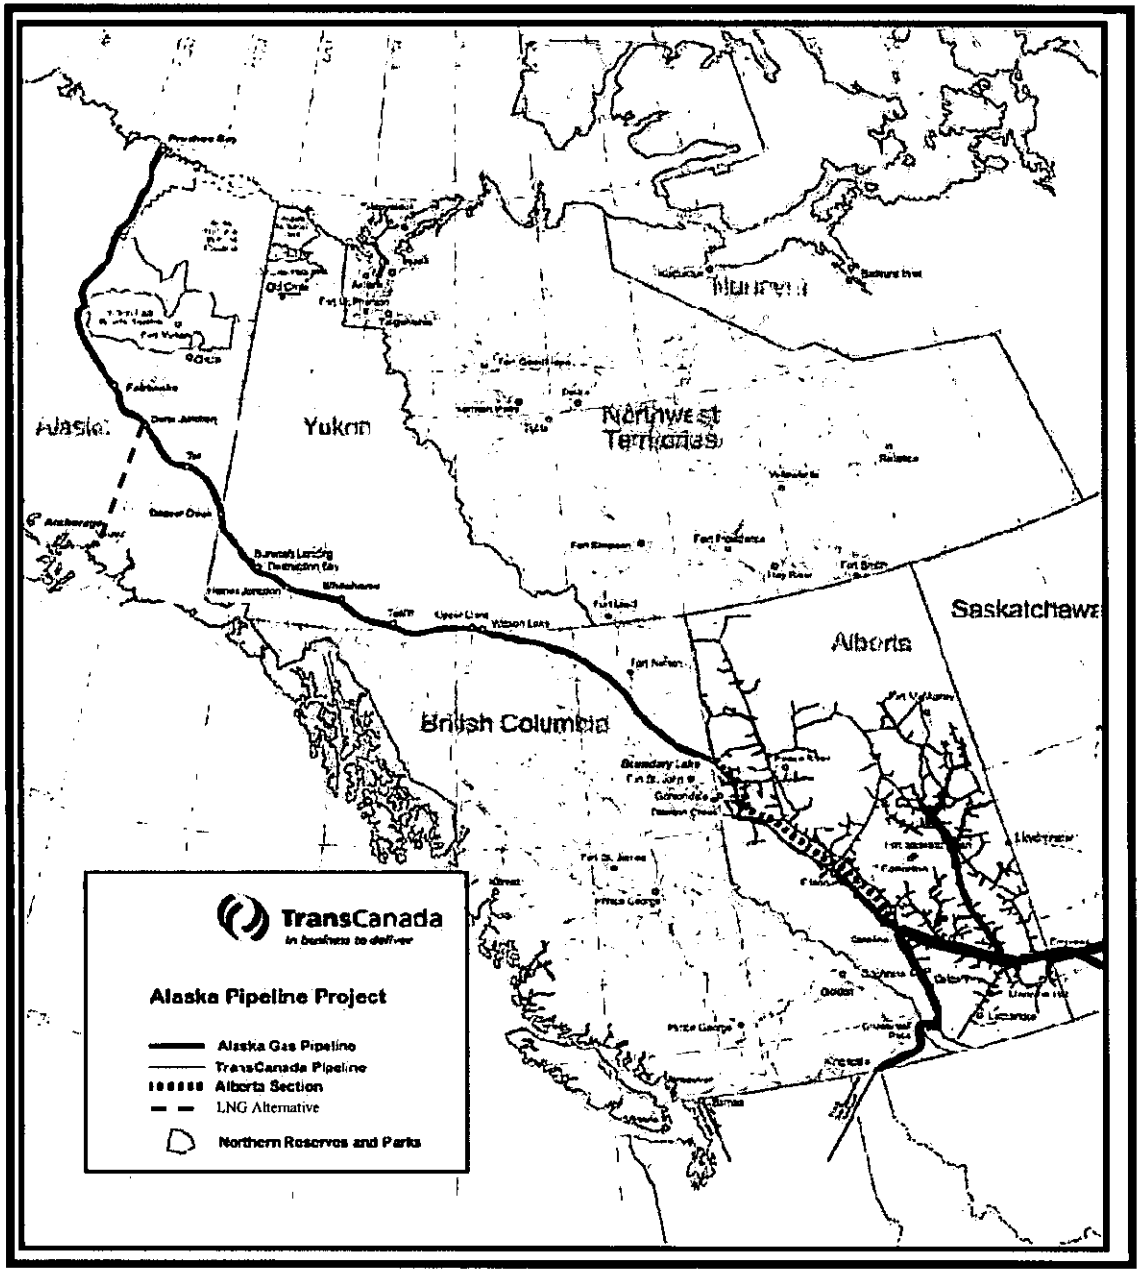
- Represents real progress to align all essential parties necessary for successful project
  - TC/State alignment under AGIA License in 2008
  - EM supports progress of TransCanada's Alaska Pipeline Project under AGIA
  - EM ready to work with State of Alaska and TC to become a full participant in AGIA Licensees
- Combination of TC and EM brings unrivaled expertise and experience to the project
  - TransCanada
    - TC has in-house expertise and experience to develop top quality CAPEX and rate estimates for the initial Open Season
    - 2000+ employees responsible for transporting 20% of North American gas
    - Recipient of the 2008 Global Pipeline Award for leading-edge technology
    - Current North American pipeline projects: $12 B Keystone Project under construction, North Central Corridor Project in Alberta under construction, Bison and Guadalajara pipelines in application/approval stages

TransCanada

Benefits of Alignment with ExxonMobil (cont'd)

- ExxonMobil
  - Global financial and project management strength
  - Recognized industry leader in execution of large complex projects
  - Substantial financial resources
  - Largest holder of discovered Alaska North Slope natural gas resources
  - Gas treatment plant technology/expertise, as well as pipeline systems
  - Decades of Alaska experience
  - Access to 2001 ANS Producer Study and TAPS information
  - Committed to timely development of Alaska's gas resources
- Combination will deliver excellence in project execution
- TC/ EM share a common goal – realization of an Alaska pipeline project constructed under AGIA
  - Need full support of State of Alaska, US/Canadian governments, North Slope producers, including ConocoPhillips and BP, and other interested parties

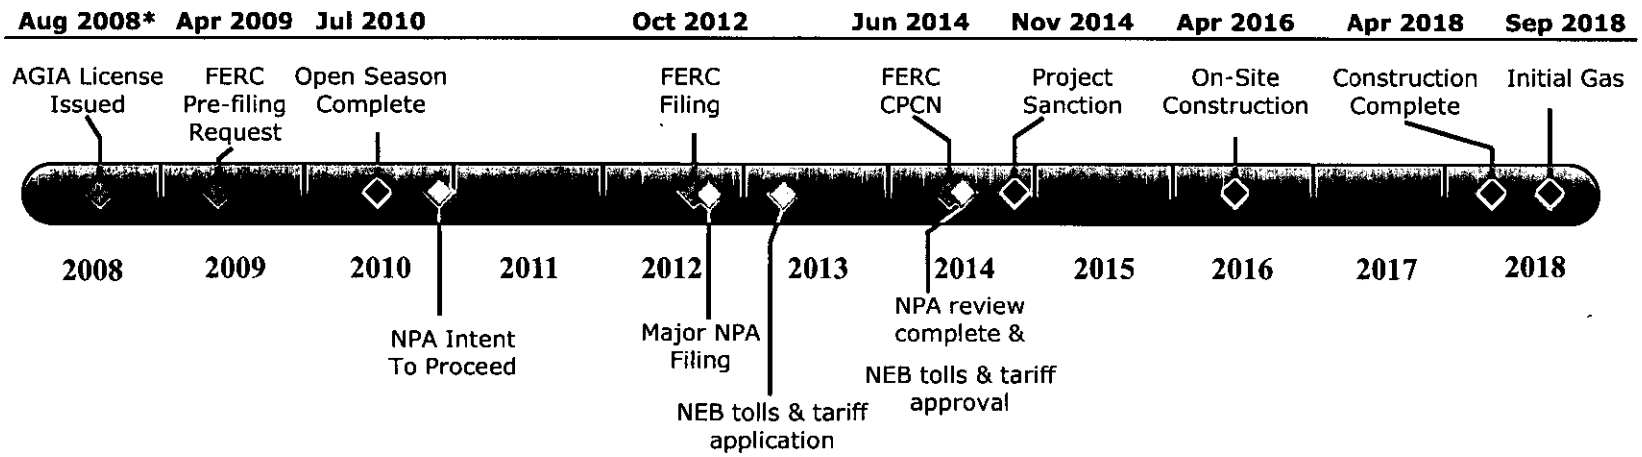
TransCanada



TransCanada's Alaska Pipeline Project

TransCanada

Project Schedule



◆ Common project activities

◇ Alaska-specific activities

◇ Canada-specific activities

* AGIA license assumed to be issued in August 2008 – actual date December 5, 2008

TransCanada

TC Project Accomplishments Since June 2008

- TC/State alignment under AGIA License
  - TC Application reviewed and License approved by Legislature
  - AGIA License issued on December 5, 2008
  - AGIA Coordinator appointed
- Alignment with ExxonMobil
  - Achieves real progress toward broader alignment
- Capital Cost Estimate – engineering, environmental, limited field work, etc.
  - Extensive work underway since August 2008
  - Project team in place
  - Pre-FEED contractors retained – significant Alaska players engaged
  - Bringing EM personnel onboard broadens the expertise and experience of TC's project team and enhances credibility with potential customers

TransCanada

TC Project Accomplishments Since June 2008 (cont'd)

- Attracting Customers
  - Ongoing discussions with potential customers for deliveries in Alaska, LNG via Valdez and to Lower 48 markets via Alberta Hub
  - Drafting of commercial terms for Open Season underway
  - EM alignment improves likelihood of success
- LNG
  - Cost estimation and commercial terms drafting underway
  - Discussions with potential customers resulted in 3.0 Bcf/d design
  - Potential customers can select Valdez as delivery point in initial Open Season

TransCanada

TC Project Accomplishments Since June 2008 (cont'd)

- Canada Regulatory
  - EM reviewed / endorsed NPA as the Canadian regulatory model for project
  - Re-staffing of Northern Pipeline Agency underway
  - Northern Pipeline Agency coordinating project within Government of Canada, and with Canadian provinces
    - Multi-department meetings completed with federal agencies, BC and Yukon
    - Individual agency meetings underway
- U.S. Regulatory
  - FERC Pre-file
    - April 2009, two years earlier than TC's approved AGIA schedule
    - Progressing communications with FERC project staff
  - Multi-agency meetings complete, individual meetings underway
  - Ongoing discussions with Federal and State coordinating agencies

TransCanada

TC Project Accomplishments Since June 2008 (cont'd)

- Canadian First Nations
  - TC has contacted all Right-of-Way First Nations and offered to negotiate Participation Agreements
  - 5 of 8 Yukon First Nations ready to discuss
  - Negotiations have commenced with some parties
- ANNGTC Withdrawn Partners
  - ANNGTC Partnership in dissolution
  - Full mutual releases in hand from all but one Withdrawn Partner
- Fort Nelson Upside
  - NEB decision approving Federal regulation for TC Alberta System improves chance of achieving Fort Nelson upside
  - TC also proposing Groundbirch and Horn River pipelines into North BC

TransCanada

TC Project Accomplishments Since June 2008 (cont'd)

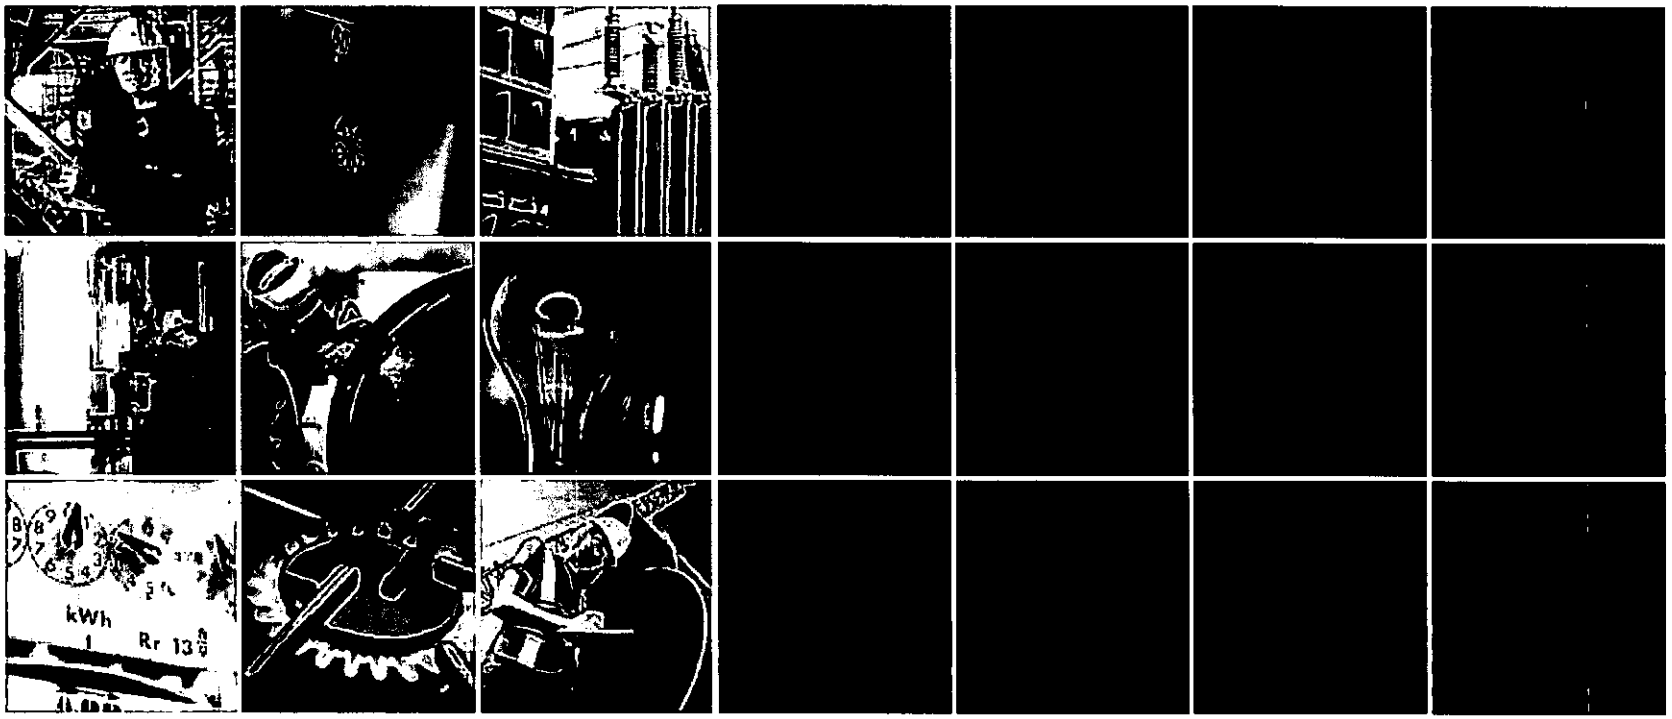
- In-State Gas Study
  - Contract awarded to Northern Economics
- Anchorage Office
  - Open in early 2009
  - Expansion planned later this summer

TransCanada

Next Steps Through Open Season to July 2010

- Complete cost estimate
  - Engineering, environmental, field work, etc.
- Finalize Commercial Terms and Precedent Agreements
- Advance Canadian First Nations Participation Agreements and Fort Nelson issue
- Complete In-State Gas Study
- Ongoing discussions with potential customers
- State/EM dialogue on issues to achieve successful initial Open Season
- File Open Season package with FERC and obtain approval
- Conduct Open Season

TransCanada



Thank You

TransCanada
In business to deliver

STATE OF ALASKA

SARAH PALIN, GOVERNOR

DEPARTMENT OF NATURAL RESOURCES & DEPARTMENT OF REVENUE

ALASKA GASLINE INDUCEMENT ACT

For Immediate Release - On Thursday June 11, the Governor's Gasline Team Lead, Marty Rutherford, issued a letter to TransCanada's Tony Palmer stating that the proposed project agreement between TransCanada Corporation and ExxonMobil would not require state approval as an amendment or modification of the license issued under the Alaska Gasline Inducement Act (AGIA).

Under the agreement, ExxonMobil will work with Alaska's project licensee, TransCanada Alaska (TC Alaska), to progress the AGIA licensed gas pipeline project. TC Alaska's obligations under the AGIA license will not be impacted by the new partnership, nor is Exxon's participation contingent upon any action or concession from the State. "The partnership is an exciting step forward," said Commissioner Tom Irwin. "It demonstrates just the type of commercial alignment which AGIA was designed to encourage."

By adopting the AGIA process, the legislature established a clear set of commercial terms for developing a pipeline to commercialize Alaska's North Slope natural gas resources. Through an open and transparent bidding process, TC Alaska was awarded the state's AGIA license. Under the license, TC Alaska has committed to advance a gas pipeline project to the point of securing a certificate of public convenience and necessity (CPCN) from the Federal Energy Regulatory Commission (FERC). In addition, the AGIA license ensures that the pipeline will be operated to provide low cost tariffs and open access for new gas shippers. In exchange for those commitments, the state will invest up to $500 million in the development of the project, and provide certain tax and royalty terms for gas which is committed during the initial Open Season.

Under the agreement, the project schedule will remain unchanged. An initial Open Season will be completed in July 2010, during which potential shippers will be provided an opportunity to make shipping commitments for capacity in the pipeline, either to Alberta and into the North American gas pipeline network, or to Valdez for liquefaction and shipment as LNG.

ExxonMobil's actions show that they believe that working with TransCanada and the state through AGIA is the best opportunity for aligning the parties to move this project forward. They bring world-class expertise to the project in construction planning, regulatory and environmental work, as well as technical capability and prior study information that will enhance development of the Gas Treatment Plant. Their early collaboration with TC Alaska will accelerate pre-Open Season spending to roughly $150 million, and will help to ensure a project design that is tailored to meet the technical needs of potential gas shippers.

The Commissioners indicated that there will be additional opportunities to enhance stakeholder alignment. "This new partnership is further confirmation of the project's commercial viability" said Commissioner Pat Galvin. "This event continues the undeniable progress in this long lead-time project. An AGIA gasline provides Alaskans with a source of careers, affordable energy, and secure state revenue. Producers and new explorers in the state will benefit from an affordable and accessible means of monetizing Alaska's vast natural gas resources. Americans will receive a plentiful and reliable source of clean energy, and a step towards energy independence."

For supporting documents and further information please visit http://www.gov.state.ak.us/agia/

###

ALIGNMENT SUMMARY

TransCanada's Alaska Pipeline Project – Alignment with ExxonMobil
June 11, 2009

- TransCanada (TC) and ExxonMobil (EM) have reached agreement to work together to progress TransCanada's Alaska Pipeline Project (details on Page 2)
- TC / EM will jointly advance all aspects of the project – technical, commercial, regulatory, financial, etc.
- TC Alaska and Foothills remain the AGIA Licensees; AGIA rights / obligations are unchanged and remain with Licensees; EM is ready to work with the State to enable full participation in the AGIA license
- Project Schedule unchanged – initial Open Season target completion by July 2010
- AGIA Project Scope unchanged – Gas Treating Plant (GTP) and pipeline from Prudhoe Bay to Alaska delivery points, LNG via Valdez, or Lower 48 markets via Alberta Hub
- Current TC / EM alignment not contingent on any commitments by State
- TC can progress project independently if it so elects, using all jointly developed assets / information
- Legislation / Regulatory – utilize ANGPA (Alaska Natural Gas Pipeline Act) in Alaska and NPA (Northern Pipeline Act) in Canada
- Upfront spending increased to $150 million through Open Season – emphasis on early execution / construction planning, regulatory, environmental, land and GTP
- Development costs will be shared by TC / EM
  - TC retains majority interest
  - No change to State's total reimbursement contribution of $500 million
- In early May, TC provided State Administration with full disclosure of proposed TC / EM arrangement
  - State has reviewed the TC / EM arrangement and has determined that no action is needed by the State as a results of the arrangement
  - State administration supports TC / EM alignment

Bottom Line Benefits

- Real progress to align all essential parties necessary for successful project
  - Need full support of State of Alaska, US / Canadian governments, North Slope producers, and other interested parties
- Combination of TC and EM brings unrivaled expertise and experience to the project
- TC / EM share a common goal – realization of an Alaska pipeline project

Project Framework

	AGIA Licensees	IPA Parties
US PFA	• TransCanada Alaska Company, LLC	• TransCanada Alaska Development Inc. • ExxonMobil Alaska Midstream Gas Investments, LLC
Canada PFA	• Foothills Pipe Lines (North B.C.) Ltd. • Foothills Pipe Lines (South Yukon) Ltd.	• TransCanada PipeLines Ltd. • ExxonMobil Canada Resources Company

- Objective is to perform work necessary to facilitate completion by TC Licensees of Open Seasons in US and Canada by target of July 2010 and pursue required regulatory authorizations for pipeline construction
- Interim Project Agreement (IPA) establishes basis under which TC / EM work together
- Project Funding Agreements (PFA) are companion agreements to IPA
  - Executed simultaneously with IPA; a separate PFA for US and Canada
  - Provides "bridge" between TC Licensees and IPA parties
- TC Licensees maintain interface with the State of Alaska and retain AGIA obligations
- TC Licensees maintain sole discretion over request for State reimbursement for qualified expenditures
- TC Licensees have right to use all work provided to them by the IPA parties for the purposes of meeting the TC AGIA obligations
- All major project components, including regulatory filings and open season contracts, will be made or entered into in the name of and on behalf of the AGIA Licensees
- TC Licensees have the right, at all times, to progress the project alone, if they so choose
  - If TC Licensees elect to do so, they have the right to all jointly developed work product and both parties will retain rights to project information
  - Parties have agreed to a reasonable transition to sole management by TC in the event of a termination

- During the term of the PFA, the IPA parties will earn non-voting interests in the TC Licensees, upon the transfer of work product
- At the time EM becomes a participant in the TC Licensees, the non-voting interests will convert to voting interests in the AGIA Licensees
- State reimbursements to TC Licensees will be distributed to the IPA parties through dividends, in proportion to their participating interests in the IPA
- IPA includes typical joint venture terms
- The project is managed by a Management Committee, with TC as chair (Tony Palmer)
- Fully-integrated project team staffed at all levels by personnel of both TC / EM
- EM is IPA lead and TC is the sub-IPA lead for the Canadian portion of the project; through Open Season, TC remains primarily responsible for the overall pipeline / compression work and EM primarily responsible for the GTP work
- Project costs are jointly funded based on the parties' proportionate shares

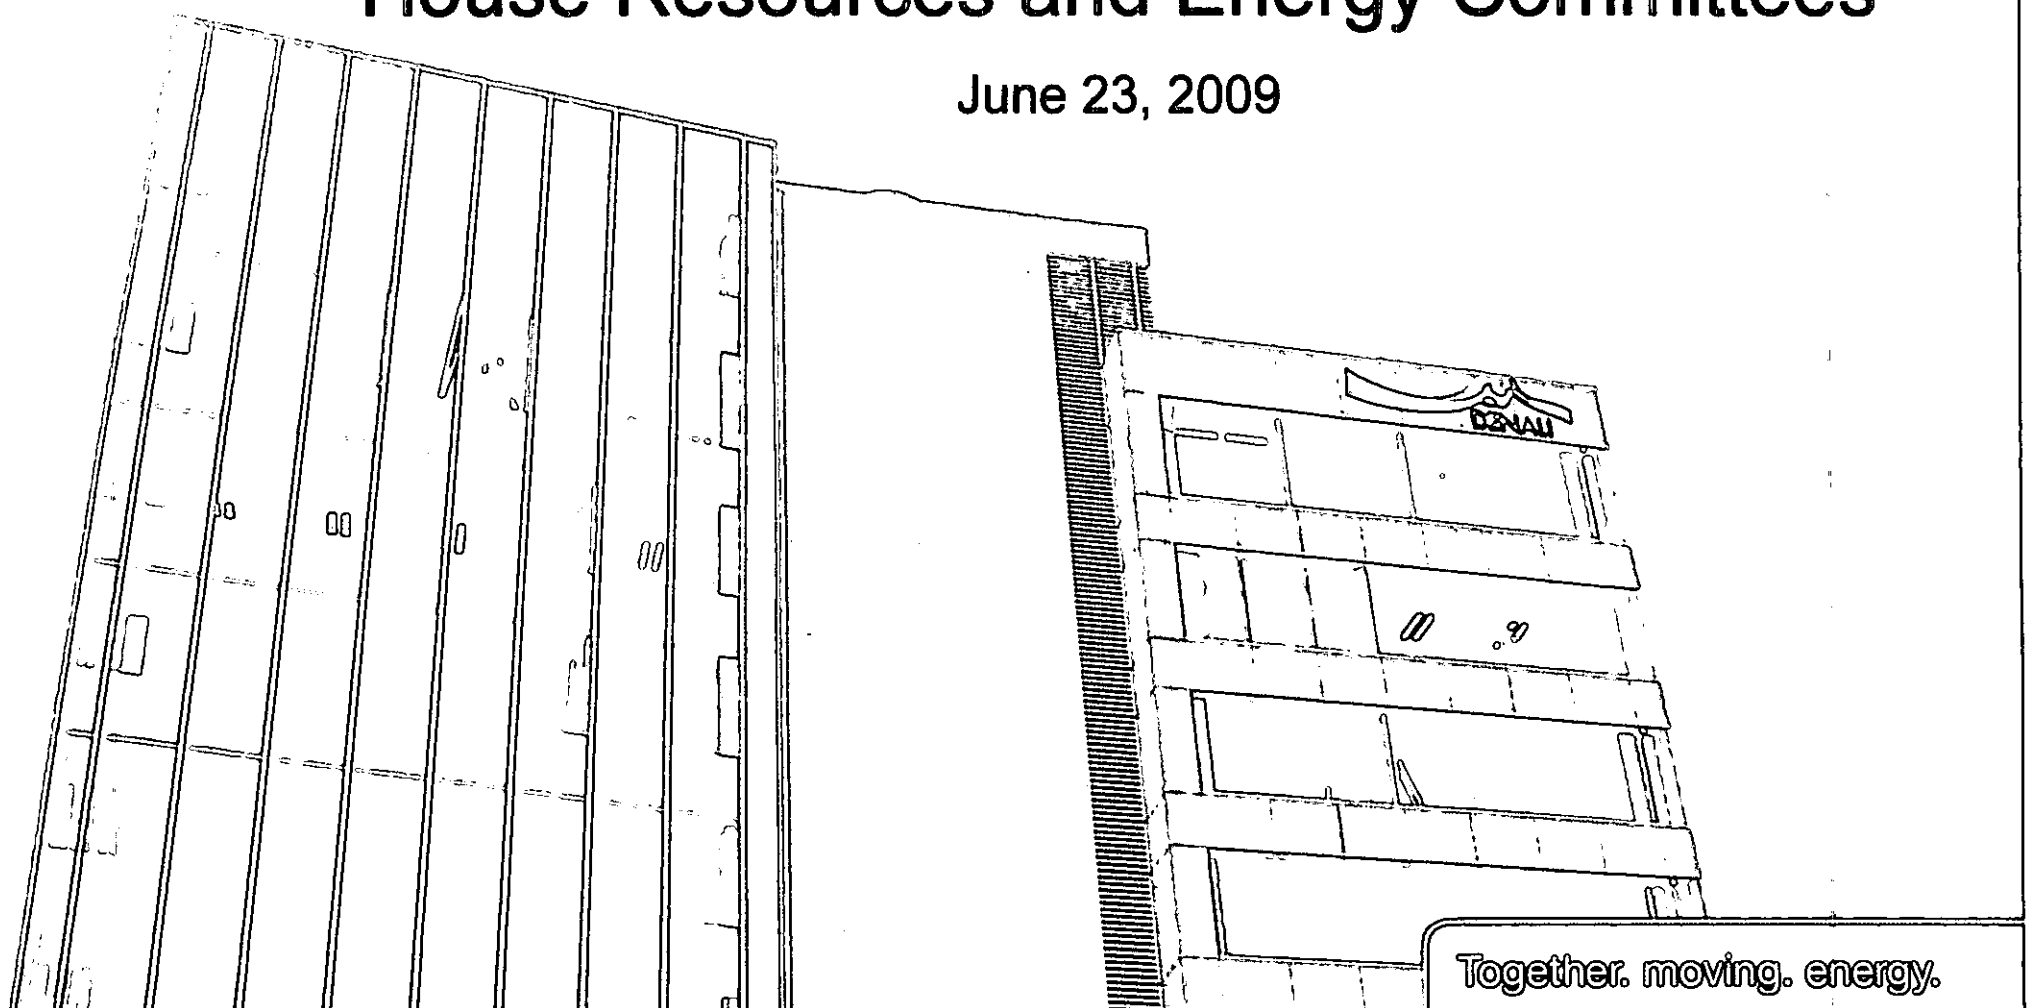
Project Update
House Resources and Energy Committees

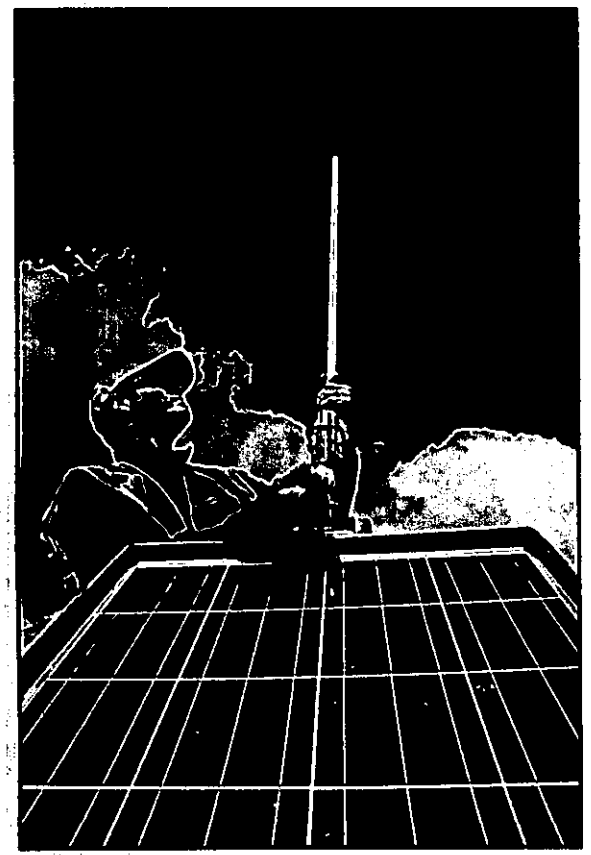
June 23, 2009



Together. moving. energy.

DENALI
the alaska gas pipeline

Denali - The Alaska Gas Pipeline



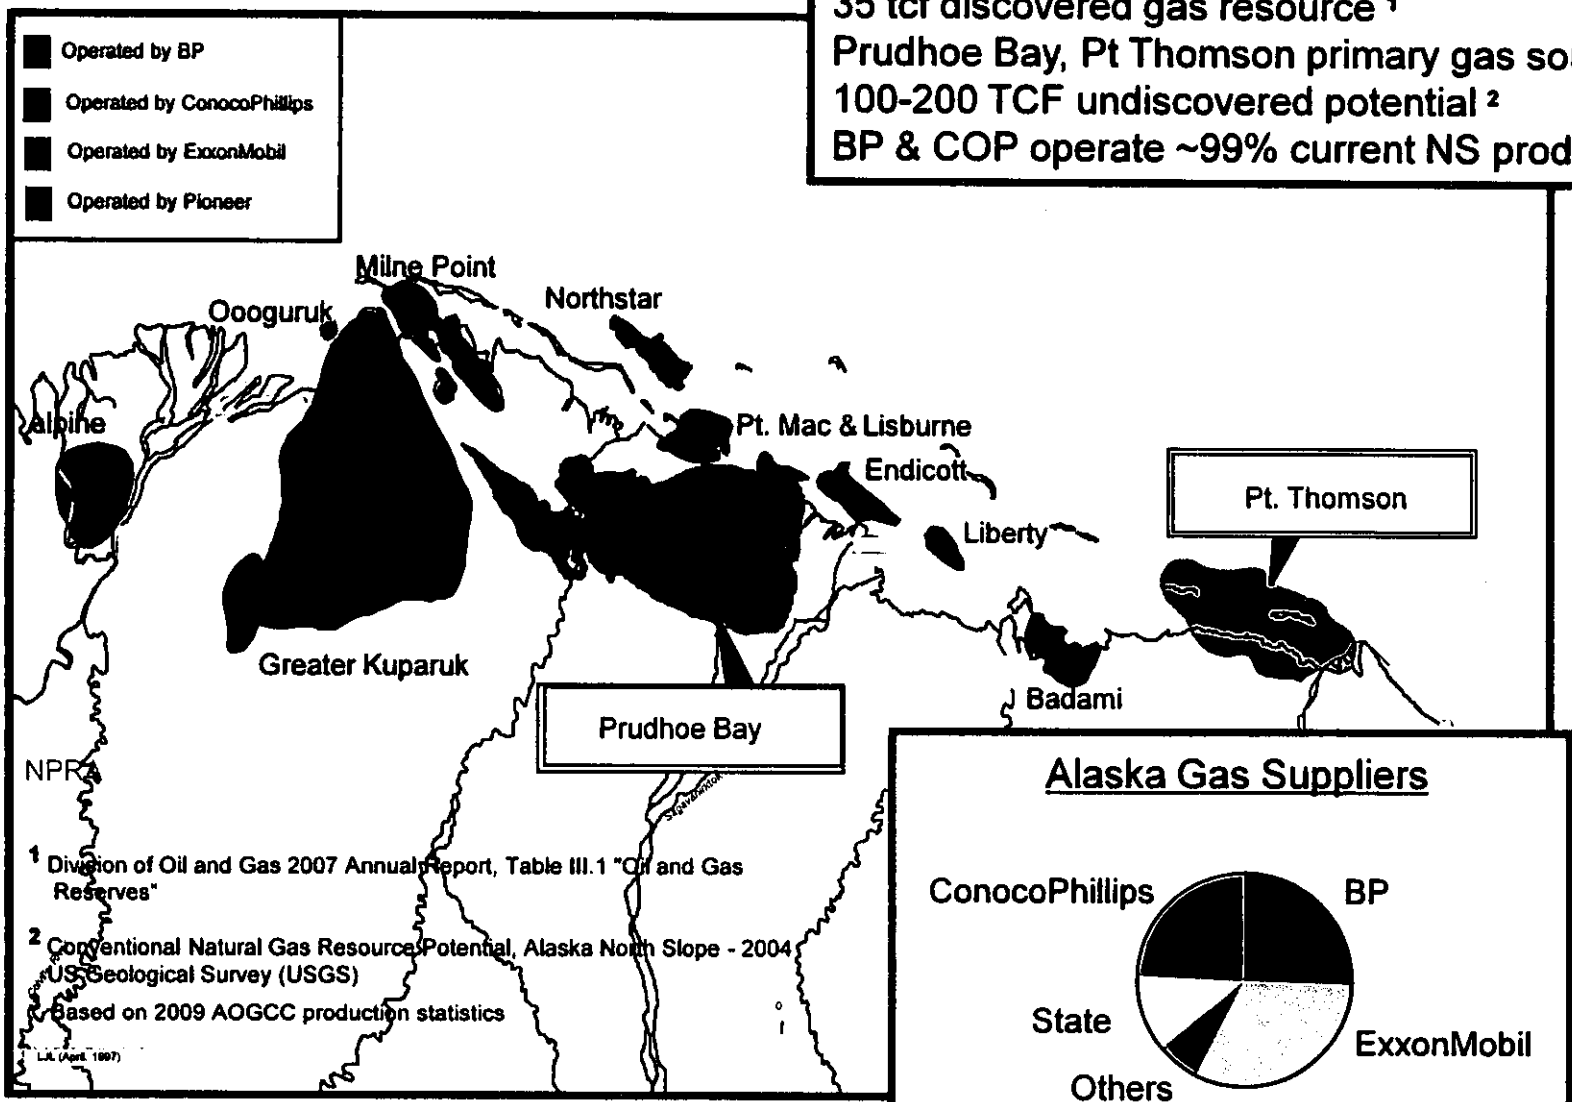
Moving Forward -

- BP and ConocoPhillips formed Denali to build the Alaska Gas Pipeline
- Denali is uniquely qualified to deliver this gigantic, complex project
  - Unparalleled experience in North Slope operations and project construction
  - Worldwide experience in constructing and operating mega projects
  - Strong balance sheets
- Denali remains on track to conduct an Open Season in 2010
- Positioned for a superior commercial offering
- The economy has not changed our focus

DENALI
the alaska gas pipeline

North Slope Oil and Gas Fields

35 tcf discovered gas resource [1]
Prudhoe Bay, Pt Thomson primary gas sources
100-200 TCF undiscovered potential [2]
BP & COP operate ~99% current NS production[3]



1 Division of Oil and Gas 2007 Annual Report, Table III.1 "Oil and Gas Reserves"

2 Conventional Natural Gas Resource Potential, Alaska North Slope - 2004 US Geological Survey (USGS)

3 Based on 2009 AOGCC production statistics

Alaska Gas Suppliers

Together. moving. energy.

DENALI
the alaska gas pipeline

Regulatory Frameworks – U.S. and Canada

U.S.

- The Federal Energy Regulatory Commission (FERC) is responsible for authorizing and ***regulating*** the project
- The Alaska Gasline Inducement Act (AGIA) is not an exclusive license to build a pipeline. Denali can proceed outside of AGIA

Canada

- Denali will use the National Energy Board (NEB) process which incorporates all of the modern environmental regulations and is open to any project proponent
- The NEB and FERC have a history of working together to approve cross-border energy projects

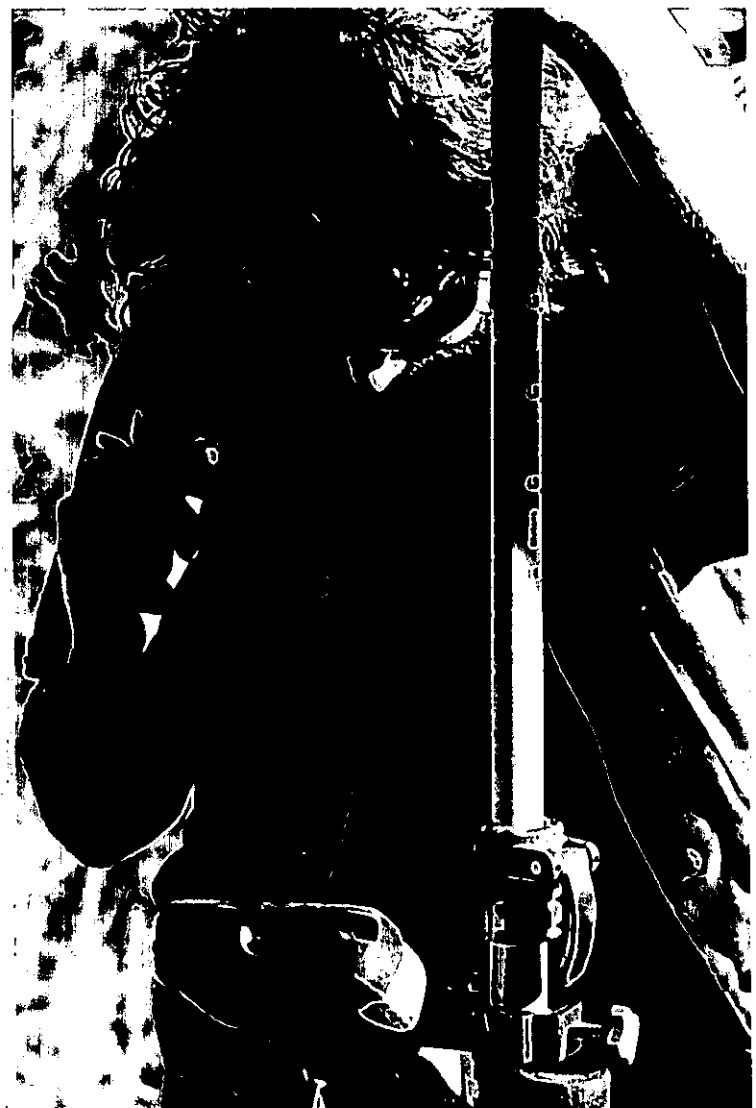
DENALI
the alaska gas pipeline

Denali Terms of Service

- Denali is an Open Access pipeline – *It's the law*
  - *"People have open access to the pipeline, not just the producers."* (FERC testimony to Joint AGIA Committee, June 16, 2008)
- Will include the gas treatment plant
- Distance sensitive transportation rates for local use
- Will use FERC mandated rolled in rates
- Design will provide for efficient expandability
- Solicit shippers every two years regarding expansion
- Will provide at least five offtake points within Alaska
- Will provide offtake points in Canada if warranted

DENALI
the alaska gas pipeline

Denali Progress – Key Accomplishments

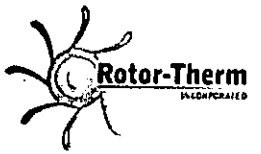


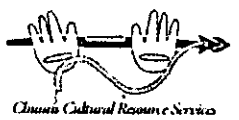
Spent ~$100 million in the past year

- Project Team mobilized
- Core team of 80 to 90 people with Anchorage and Canadian Headquarters
- FERC pre-filing request approved
- Filed Right of Way on federal lands with Bureau of Land Management
- Successful 2008 summer field program
- Community outreach meetings in Alaska and Canada
- Advanced workforce development
- Met with Alaska, U.S. and Canadian government officials
- Awarded contracts for multi-million dollar Gas Treatment Plant and Pipeline preliminary engineering

DENALI
the alaska gas pipeline

Denali has a core team of 80-90 people and dozens of contractor companies supporting its work





Together. moving. energy.

DENALI
the alaska gas pipeline

2009 Plans Focused on Open Season

- Broader work program will result in updated cost estimate – necessary for 2010 open season
- Ongoing work with DNR, FERC, NEB, OFC, BLM
- Continue to meet FERC prefiling requirements and engage FERC 3rd Party Contractor
- Work with AK DOTPF to advise on infrastructure requirements
- Field work program focused on Canada
- Workforce Development (UAF, AKDOL, survey crew training)
- Stakeholder engagement in Alaska and Canada
- Progress commercial work for open season

Fluor / WorleyParsons
ARCTIC SOLUTIONS

BECHTEL

DENALI
the alaska gas pipeline

Denali is on track and moving ahead

- Focus on 2010 Open Season
- Cost estimate will provide confidence to shippers
- Denali positioned for a superior commercial offering
- Denali does not require state funding to move forward
- The economy and competition has not changed our focus

10/9/09 OVERVIEW: COOK INLET REGIONAL INC. NEW ENERGY...

COOK INLET REGION INC.

An **Alaska Native** corporation

Energy Briefing

October 9, 2009

COOK INLET REGION INC.

An **Alaska Native** corporation

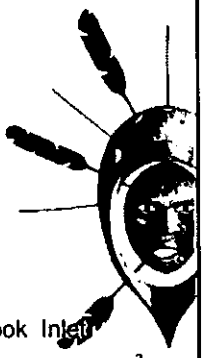
1

About CIRI

CIRI (Cook Inlet Region Inc.) is an Alaska Native corporation

Key Facts:

- One of 12 Alaska-based regional corporations established by the Alaska Native Claims Settlement Act of 1971 to benefit Alaska Natives who had ties to the Cook Inlet region
- Owned by more than 7,500 Alaska Native shareholders of Athabascan and Southeast Indian, Inupiat and Yup'ik Eskimo, Alutiiq and Aleut descent
- Based in Anchorage and has interests across Alaska, the United States and abroad
- Overall portfolio: tourism, real estate, wireless communications, traditional and alternative energy
- Substantial ownership of surface and subsurface land around cook Inlet and Southcentral Alaska



2

Need for new energy

- Southcentral Alaska faces imminent shortages of local natural gas for heat and electricity
- CIRI is developing diverse, environmentally-responsible energy solutions
- Underground coal gasification (UCG) is a timely and local energy solution

3

CIRI's project

4

CIRI's UCG project

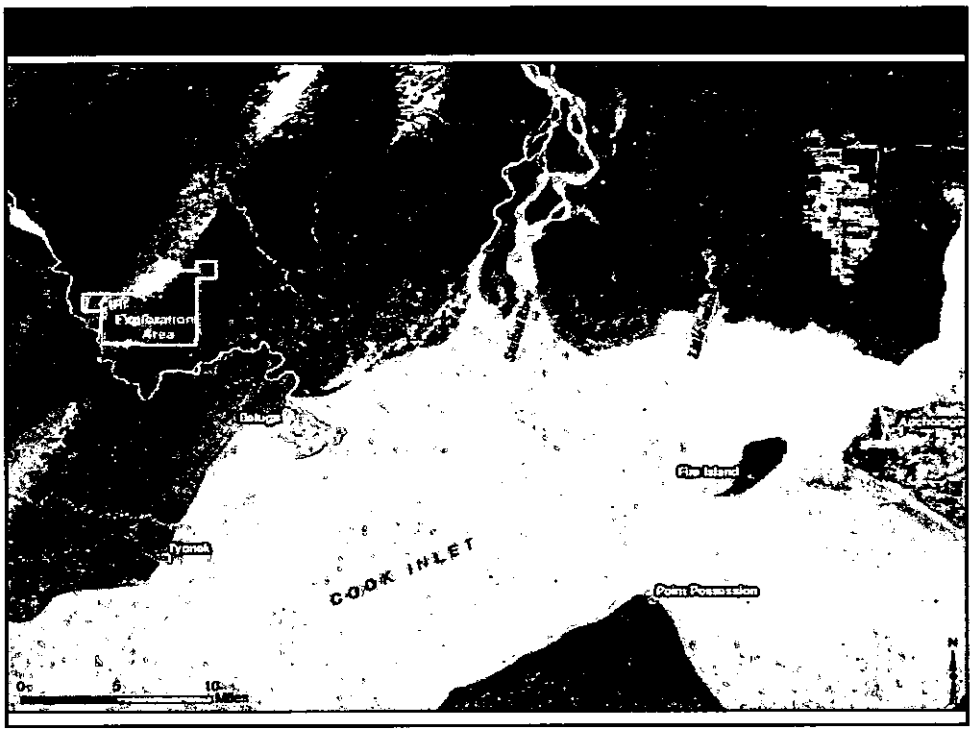
- Underground coal gasification (UCG) project sized to fuel a new 100-MW combined-cycle power plant
- Located on CIRI lands on the west side of Cook Inlet
- Create syngas (also know as a synthesis gas), which can be used to generate electricity or upgraded to synthetic natural gas or clean liquid fuels
- Committed to carbon capture and sequestration by way of enhanced oil recovery
- Integrated carbon capture and sequestration (UCG + CCS is a world-first project)

5

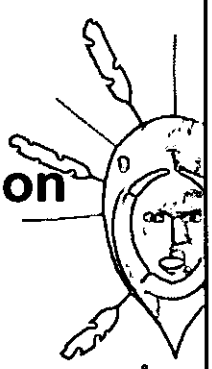
CIRI project area

- CIRI has substantial land holdings on the west side of Cook Inlet, in Alaska
- CIRI is evaluating UCG development sites near Beluga area natural gas fields and infrastructure
- Area is remote and largely unpopulated near existing infrastructure and development

6



Underground Coal Gasification



What is Underground Coal Gasification (UCG)?

UCG is a proven technological process that harnesses the energy potential of coal in the ground without mining

- Coal + H_20 + O_2 + heat = H_2 + CO + CO_2 + methane gases
- Product is "syngas," also known as a synthesis gas
- Process occurs deep underground without mining

9

Syngas

UCG produces 'syngas' (or synthesis gas)

This energy-rich gas product can be:

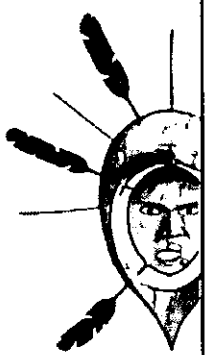
- Handled and used like natural gas
- Used to fuel a turbine to generate electricity
- Upgraded or converted to make synthetic natural gas or liquid fuels

10

As clean as natural gas

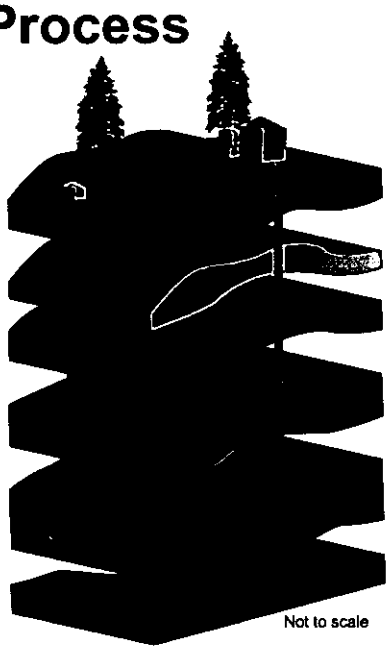
UCG-produced syngas using pre-combustion carbon capture:

- Can result in lower CO_2 emissions than a combined-cycle natural gas power plant
- Has emissions of other tracked compounds (SO_x, NO_x, etc.) comparable to natural gas

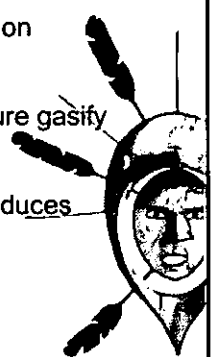


11

The Process

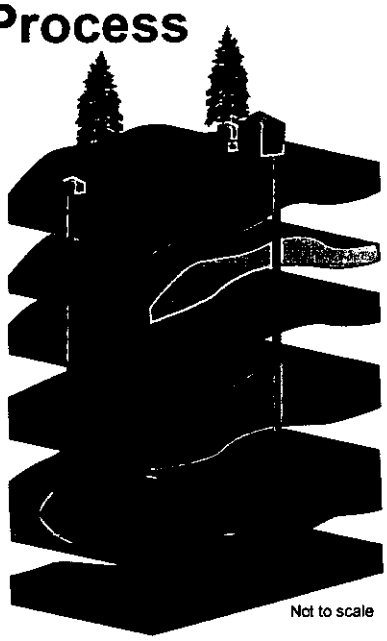


- Drill two wells and create a connection between the wells
- At one well, inject an oxidant such as air
- Start a combustion reaction
- Heat and pressure gasify the coal
- Second well produces gas to surface



12

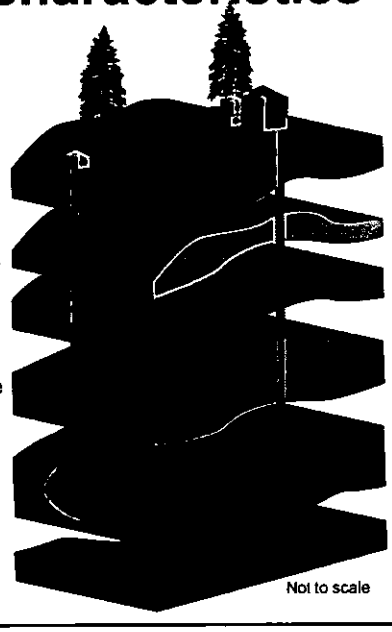
The Process



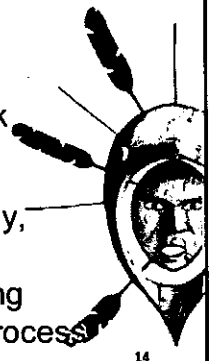
- Ash and other byproducts remain underground
- Processing and clean-up at the surface prepares gas for near-site use or transport
- Carbon capture and sequestration

13

Site characteristics



- More than 650 feet deep
- Below and isolated from the fresh water aquifer
- Strong and impermeable overlying rock layers
- Ongoing study, testing and monitoring throughout process



14

Mitigating Hazards

•Manage surface subsidence and groundwater contamination with careful site selection, site characterization, project design and operation, and subsequent monitoring

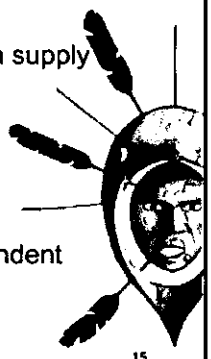
•Process pressure is carefully managed to contain contaminates in the process cavity

•Operators control or halt the process by managing oxygen supply

•Natural water influx quenches the reaction, eliminating the possibility of unwanted coal-seam fires

•Technology provider has a proven track record

•Lawrence Livermore National Laboratory is CIRI's independent technology consultant



15

Why UCG?

16

Practical, reliable energy

- Proven energy technology to access an abundant local resource
- Produces syngas (synthesis gas) that can generate electricity or be converted to other products such as synthetic natural gas
- Provides a secure domestic energy supply and a bridge fuel for the future
- Very efficient process

17

Safe and proven

- The reaction is controlled and can be stopped at any time
- Risks are mitigated by careful site selection and characterization, project design and operation, and ongoing monitoring
- More than 50 test and commercial projects completed worldwide
- A "here-now" technology that responsibly harnesses an abundant energy resource

18

Environmental Benefits

19

Low-impact energy production

- Requires minimal surface infrastructure
- Eliminates environmental risks/problems associated with coal mining, handling, transport and waste
- Leaves most coal byproducts safely contained deep underground
- Enables carbon capture and sequestration (CCS)
- Highly efficient at producing energy content of coal resource

20

Enables CCS

- UCG process produces syngas at temperatures and pressures that allow relatively easy, low-cost carbon removal at the surface, prior to burning
- UCG with carbon capture and sequestration leaves a carbon footprint that is far smaller than coal and similar to natural gas
- CO_2 is easily separated from syngas using existing scrubbing technologies for underground sequestration
- Commercial-scale carbon capture has successfully removed CO_2 at surface coal gasification plants

21

Enhanced Oil Recovery (EOR)

- Proven method of carbon sequestration
- Economically-preferred method of sequestration
- Extends productive life of existing oil fields

22

Environmental benefits of EOR

- Maximizes use of existing oilfield infrastructure
- Environmental impact of development already realized by legacy oil development
- Reduces pressure to explore and develop additional areas

23

UCG is not coal mining

•No open pits, mountaintop removal or tailing piles

•No surface water pollution or impact

•Reduces or eliminates pollutants that accompany coal mining

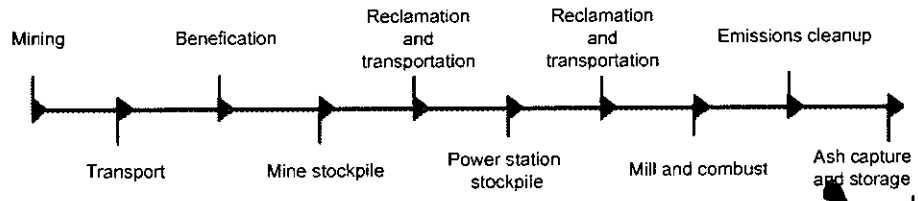
•No surface ash and slag waste handling

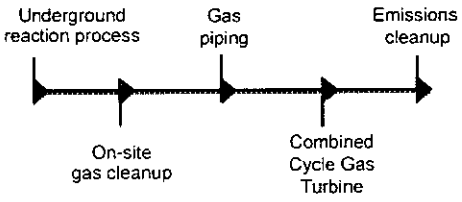
•Project site is small and easily restored upon project completion

•Not coal bed methane extraction

24

UCG is not coal mining





25

CIRI's commitment

CIRI will only begin building a UCG facility after a deliberate, thoughtful process

- Performing all necessary due diligence, Environmental Impact Statement (EIS) and securing all necessary permits
- Reaching agreements with world-class technology partners
- Evaluating input from local and national stakeholders

26

Timeline

27

Preliminary timeline

Dec. 2009: Resource Assessment drilling begins

Feb. 2010: Preliminary Resource Assessment results; Preliminary site selection

Mar. 2010: Pre-feasibility drilling begins

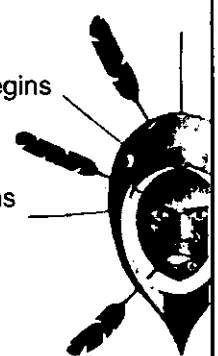
Aug. 2010: Site characterization drilling begins

Nov. 2010: Project permit application preparation begins

Nov. 2012: Project permits received

Jan. 2013: Above-ground project construction begins

Jan. 2014: Commercial operations begin



28

CIRI

What is Underground Coal Gasification?

Underground Coal Gasification (UCG) is a technology that harnesses the energy potential of coal in the ground without mining. The gasification process takes place deep underground within the coal seam. Air is injected into the coal through one well. The coal is then synthesized into a product called syngas, also known as synthesis gas, and produced from a second well. UCG uses reactions between the coal, oxygen from the injected air and water that is in the coal seam to produce hydrogen, carbon monoxide and methane. The syngas can be handled and used much like natural gas. It can, for example, be piped, stored and used to fuel a turbine to generate electricity. Syngas can also be upgraded with methanation into synthetic natural gas.

The gasification process occurs underground ("in-situ"), foregoing most of the dangerous, dirty and destructive effects of coal mining. UCG requires minimal infrastructure and involves very little physical disruption to the natural area above the coal seam. There are wells, pipelines, compressors and some gas processing equipment at the production site.

UCG represents a dramatic shift in the method of accessing and unlocking the energy potential of an abundant domestic natural resource. When combined with carbon capture and sequestration, the UCG process of producing, transporting and using coal energy leaves about the same carbon footprint as traditional natural gas.

UCG: How it works

Responsible UCG projects require careful site selection and evaluation to identify deep coal seams that are typically at least 650 feet below the surface, below the water table and contained by strong, impermeable layers of rock.

After appropriate site selection and evaluation, the process typically begins by drilling two well holes into the coal seam a few hundred feet apart. Operators inject air (for the oxygen) into one of the wells and then start a carefully-controlled combustion reaction. The heat and pressure created by the reaction converts the coal into syngas. The gas moves through a permeable path that has been created in the coal where the second well vents it to the surface. Only syngas is removed, leaving ash and most other byproducts deep underground. Following some surface processing, the gas is ready for near-site use or transport. The operation can be expanded by drilling additional process wells. Some of the coal is left in place to prevent subsidence (unintentional settling).

The UCG process is controlled from the surface by managing the injection of the oxygen. Operators can quickly halt the process at any time by cutting the oxygen supply or flooding the well with water. Natural water influx will quench the reactions, eliminating any potential for unwanted coal-seam fires.

Why consider UCG?

Commercial-scale UCG projects have been used to gasify coal for more than 50 years. There have been more than 50 test and commercial UCG projects worldwide, including in the United States. Numerous commercial operations are currently in various stages of design, development, scale-up or operation. Recent investment and scientific study have led to a better scientific understanding of the UCG process.

Commercial-scale carbon capture technologies are mature and have been successfully used for years to remove carbon dioxide from syngas produced at surface coal-gasification plants. UCG lends itself easily to carbon capture and sequestration. The UCG process also produces syngas at temperatures, pressures and CO_2 concentrations that enable relatively simple, low-cost carbon removal, prior to use. The syngas is then burned to create clean energy with a carbon emission footprint similar to that of natural gas and far below that of coal mining and combustion.

UCG with CCS eliminates most of the environmental and safety issues associated with coal mining and energy generation, including mine safety, surface disfiguration, coal dust, surface water contamination and other pollutants including carbon dioxide, nitrogen oxide, sulfur dioxide, ash, mercury, arsenic, sulfur and tar. UCG's biggest environmental concerns involve subsidence and underground residues that can be managed with careful project site selection and evaluation, design and operation.

UCG with carbon capture is clean, economical and safe. It has a small carbon and environmental footprint. UCG with CCS can become a bridge technology that will help our nation move toward domestically produced, sustainable energy resources and away from its dependence on imported oil.

Key Facts

- UCG harnesses the energy potential of coal underneath the ground—without conventional mining
- UCG produces syngas, which can be burned directly for heat or electricity, or converted to other products such as synthetic natural gas, hydrogen, methanol or hydrocarbon liquids
- UCG works well in conjunction with carbon capture and sequestration (CCS)
- UCG with CCS can provide clean, reliable and competitively-priced power to meet today's energy needs
- UCG uses coal that is otherwise not economically recoverable
- UCG is a safe technology that has been used commercially for more than 50 years
- Careful site selection and process operation assure minimal environmental impacts
- UCG with carbon capture is a bridge technology that can help Alaska and the United States move toward energy independence

CIRI

Environmental Benefits of UCG

Underground coal gasification (UCG) is a proven technology that harnesses the energy potential of coal in the ground while avoiding the environmental risks and hazards of coal mining. It represents a promising opportunity to meet our energy needs using coal, one of our most abundant natural resources, in a responsible manner. UCG offers many environmental benefits over conventional coal mining and natural gas extraction, including a lower carbon footprint and options for carbon capture and sequestration (CCS). UCG combined with carbon capture could become an important bridge technology that can help the United States transition from its unsustainable high-carbon economy based on imported oil to a more sustainable economy that relies on domestic energy resources, and ultimately to a clean renewable energy future.

Underground coal gasification represents a drastic shift away from conventional coal mining.

With UCG, coal is gasified through a controlled process that requires a series of wells drilled several hundred feet apart. Site operators inject air into one set of the wells and start a carefully- controlled combustion reaction that converts into syngas that is produced through a second set of wells. The above-ground landscape remains largely untouched. There are no open pits, mountaintop removal or tailing piles because there is no conventional mining and the environmental and health hazards associated with mining are virtually eliminated. Because little above-ground infrastructure is needed, the natural landscape is easily restored upon project completion.

UCG has a smaller carbon footprint.

With UCG, syngas is synthesized from the coal and can be used for power generation or piped to nearby locations, reducing the carbon and other emissions from handling, transportation and waste management associated with coal mining beyond extraction and burning. UCG eliminates the need for miles of conveyor belts pulling coal to rail or shipping lines. There are no clouds of coal dust polluting the environment. UCG produces clean, local, reliable energy.

The UCG process leaves most pollutants underground where they belong.

According to the Lawrence Livermore National Laboratory, UCG results in no production of criteria pollutants including SO_X and NO_X. Many other pollutants, including mercury, particulates and sulfur species, are greatly reduced and easier to handle. Likewise, UCG leaves the coal ash and other process wastes deep underground, eliminating the cost and risk of handling and disposing of dirty surface ash.

UCG syngas burns more cleanly than coal and even natural gas.

Burning UCG-produced syngas with pre-combustion carbon capture can result in lower CO_2 emissions than a combined-cycle natural gas power plant, the cleanest of all fossil fuel plants. UCG-produced syngas also significantly reduces or eliminates SO_X, NO_X, mercury, particulates, coal ash and other pollutants.

UCG lends itself easily to carbon capture and sequestration.

The UCG process also produces syngas at temperatures, pressures and CO_2 concentrations that enable relatively simple, low-cost carbon removal, prior to use.

There are well-established scientific methods for dealing with the remaining environmental risks of UCG syngas production.

The two main environmental risks associated with UCG–surface subsidence and groundwater contamination-are easily managed by careful site selection, project design and project monitoring. Subsidence is a downward shift in the earth's surface into the cavity created in the reactor zone. UCG operations cause less subsidence than underground mining, and this subsidence can be minimized or even eliminated with proper site selection, reactor zone pressure and temperature management. Likewise, the risk of groundwater contamination can be virtually eliminated by selecting a site well below the fresh-water aquifer and with the proper type of impermeable overburden strata. The process chamber pressure is carefully managed to keep it below the hydrostatic pressure in the coal seam to keep water in flux and pollutants in the process cavity.

CIRI

Frequently Asked Questions

Why is CIRI looking at Underground Coal Gasification (UCG)?

CIRI is investing in innovation, technology and a diverse portfolio of clean, dependable and economical energy sources that are critical to the future of Alaska. In addition to our interest in UCG, CIRI's energy projects and investments involve wind, biofuels, and traditional oil and gas operations. Energy is a critical part of CIRI's business and we take seriously the responsibility of providing diversified energy solutions while respecting Alaska's natural environment and cultural traditions.

What is UCG?

UCG is a technological process that harnesses the power of abundant and previously untapped underground coal resources to create cleaner energy without the environmental hazards of coal mining. Read What is UCG? for more detailed information.

Is UCG a proven technology?

Yes. Lawrence Livermore National Laboratories, a research institute funded by the U.S. Department of Energy and home to some of the nation's best minds on energy technology and security, developed UCG best practices based on factual and reliable scientific evidence. Commercial-scale UCG projects have been used to gasify coal for more than 50 years. There have been more than 50 test and commercial UCG projects worldwide, including in the United States. Numerous commercial operations are currently in various stages of design, development, scale-up or operation. Recent investment and scientific studies have led to numerous refinements that make the UCG process safer and cleaner. Several projects have demonstrated that UCG works well with carbon capture and sequestration (CCS) technologies.

How does UCG work?

UCG facilities involve wells drilled into carefully selected deep coal seams that are well below the fresh-water aquifer and contained by overlying, strong impermeable layers of rock. Site operators inject air into one set of wells and start a carefully controlled combustion reaction to convert the coal into syngas that is produced through a second set of wells. The process is designed so that operators can effectively control the oxygen supply and, thereby, combustion from the surface. The process can be stopped at any time for any reason. Read What is UCG? for more detailed information.

How is UCG different from conventional coal mining?

The environmental footprint of UCG is much smaller than both underground and surface coal mining. UCG is conducted completely underground and UCG-produced syngas extracted from the coal can be utilized near-site for power production or efficiently shipped by pipeline to other destinations. The aboveground landscape remains largely untouched. There are no open pits, mountaintop removal or tailing piles. Minimal infrastructure is needed aboveground, and the surface landscape is easily restored upon project completion. Read our Environmental Benefits for more information.

What is syngas?

Synthesis gas, or syngas, is an energy-rich product created by gasifying the carbon found in coal, petroleum-based materials or other sources that would be rejected as waste. Once created, it can be piped, stored or used to fuel a turbine to generate electricity; handled and used like natural gas; or upgraded or converted to make synthetic natural gas or other liquid fuels.

How much energy can UCG produce?

According to Lawrence Livermore National Laboratory, UCG provides the potential for an increase of 300-400 percent in recoverable coal reserves in the United States alone. These coal reserves represent an outstanding opportunity to harness the power of coal without the hazards of coal mining. For CIRI to proceed with a UCG project, we would need a project that is environmentally and economically viable from site selection to syngas production. An initial project that provides enough syngas to power a 100-megawatt combined-cycle power plant may be an economically viable option.

How does UCG compare to other energy sources?

UCG syngas burns more cleanly than coal and is comparable to natural gas. Burning UCG-produced syngas using carbon capture results in even lower emissions than a combined-cycle natural gas power plant, the cleanest of all fossil fuel plants. UCG-produced syngas also significantly reduces or eliminates pollutants including nitrogen (NO_X) and sulfur oxides (SO_X), mercury, particulates and coal ash.

How will UCG benefit Alaska?

Developing UCG facilities in Alaska will not require large public subsidies and will be faster and more economical than building a bullet line to ship natural gas from the North Slope to Southcentral Alaska. UCG with carbon capture can be a bridge technology that can help reduce our reliance on diminishing oil and to cleaner, domestic energy resources that can help Alaska regain its position as a world-class energy provider and innovator. The result is a much-needed reliable and homegrown source of clean energy for Alaska.

When will CIRI begin production?

CIRI would only begin building a UCG facility for syngas production after completing an Environmental Impact Statement, securing all necessary permits, reaching agreements with world-class technology partners and evaluating input from local and national stakeholders.

Where will CIRI's facility be located?

CIRI is evaluating its privately-owned land on the west side of Cook Inlet to identify a site with the right characteristics for a UCG development. The site will have a large and productive deeply-buried coal seam overlain by a strong and impermeable layer of rock. The site will be selected for geology and hydrogeology that would minimize any risk of environmental contamination. The site will be near existing power and natural gas infrastructure but away from any populated communities.

Should the U.S. Build Its Next Coal Plants Underground?

By: Eli Kintisch

Might burning coal thousands of feet below the surface be the secret to making coal climate friendly?

That's what fans of underground coal gasification will be saying this week at several sessions and in the keynote speech at the International Pittsburgh Coal Conference, which goes through Wednesday. Momentum is growing worldwide to look closely at the idea, a 150-year-old technique of igniting seams of coal deep under the ground to produce electrical power or chemicals. It's a proven technology: Joseph Stalin launched the first national research program into the idea in 1928 and the Soviets used it for 40 years to produce power. Since then, cheap natural gas and shallow, easy-to-mine coal burned in traditional power plants have prevented the technique from taking off. (graphic courtesy Lawrence Livermore National Laboratory)

But gasifying coal underground is now a hot topic among power companies and scientists, with at least 10 pilot projects around the world planned or underway. The cost benefits and climate advantages are among the reasons that five countries run national research programs on the technique; is the United States falling behind on the next big fossil fuel technology?

Yes, says the nonprofit Clean Air Task Force, a well-respected public health and environment advocacy group, in a report issued last week.

Recent studies suggest that energy obtained using the technique would be cheaper than more popular methods of getting low emissions coal power, like so-called Integrated Gasification Combined Cycle (IGCC), which involves gasifying coal above ground in facilities like the FutureGen project, which the Bush Administration proposed and then killed. The idea would also eliminate the need for strip mining, which is environmentally harmful, or carbon intensive shipping of mined coal.

"The enormous potential of underground coal gasification to meet rising energy demand in a CO_2-constrained world warrants a high priority effort by the United States government to speed commercialization," the Task Force study said.

The technology works by drilling two holes on either side of an underground layer of coal. If the layer is not porous, engineers drill horizontally to connect them, allowing gas to flow between the pipes. Then air or oxygen is added to one pipe and the coal ignited underground. There, the coal is partially oxidized; the gas which escapes from the second pipe is a mixture of syngas (carbon monoxide and hydrogen) and carbon dioxide and a little methane. On the surface, the hydrogen is cleanly burned in a turbine to produce electricity and the carbon dioxide, as well as processed carbon monoxide, is liquefied for underground storage.

The advantages of the techniques are myriad, says the Task Force, starting with the fact that it's a cleaner version of "clean coal" than other techniques:

> *[D]uring gasification, roughly half of the sulfur, mercury, arsenic, tar, ash, and particulates from the used coal remain in the subsurface, and any sulfur or metals that reach the surface arrive in a chemically reduced state, making them relatively simple to remove.*

The carbon dioxide that comes out of the ground is at high pressure, saving energy that in IGCC would be required to compress it for underground storage. The coal doesn't have to be mined; the facilities on the ground are much smaller than traditional coal plants with boilers or IGCC plants. The trick is to use the ground itself as a gasifier instead of having to gassify the coal in a vessel—which can cost billions.

The Task Force thinks that the technology could compete economically a natural gas plan that sequesters its carbon. That's a claim most advocates of other coal technologies cannot make. And a study that the task force cited suggested that underground gasification with the carbon capture for storage would cost a quarter as much as IGCC.

Traditionally, the coal industry looks for thick layers of coal near the surface so it can mine them relatively easily. With underground gasification, geologists would scope out thinner but broader layers of coal found much deeper. The idea would be to produce power right above those seams. So, the report argues, underground gasification makes sense for new power plants in coal rich states, say in the U.S. midwest. A report by Purdue University scientists in March, in fact, found five promising sites state in Indiana where facilities could be built.

So if underground coal gasification is so great, why are commercial projects exploiting the method so few and far in between? Up till now, the reason is the availability of cheap energy using other means, author Julio Friedmann of the Lawrence Livermore National Laboratory in California tells *Science*Insider. During the late '70s energy crisis, the technology got several demonstrations in the United States, but the coal industry stuck with the methods it liked, especially because they owned rights for coal close to the surface. Plentiful and cheap natural gas was a further disincentive.

Now though, with natural gas prices rising and climate a central concern, Australia, Canada, China, New Zealand, and South Africa all have government-funded R&D projects in this area. "China has minted 100 Ph.D.'s in this area," says John Thompson, director of the Task Force's project on coal transformation. "We are losing."

The United States, he says, has little expertise comparatively, and the clean coal programs funded by the U.S. Department of Energy all but ignore the underground gasification technique. (One earmarked research effort in Utah is examining it.) "It's just not on our radar screen," says DOE Technology Development Manager Gary Stiegel, who says that funding limitations are the main reason that the government has not looked into the technology. He says the cost advantages to the technique might one day prove accurate, but in the meantime, "Nobody's built any so how do you know?"

For its part, the report suggests DOE spend more than $100 million over the next 4 years on science, development, and demonstration efforts to try to catch up.

10/12/09 HOUSE RESOURCES COMMITTEE MEETING IN BETHEL

House Resources Committee Hearing
October 12, 2009
Bethel, Alaska

Committee Members' Itinerary

7:00am	Depart Anchorage to Bethel on Alaska Airlines Flight# 41
8:00am	Arrive Bethel, Transportation provided
9:00am	KYUK Radio news interview with Committee Co-Chairs
10:00am	US Fish & Wildlife Refuge Headquarters Tour
10:45am	Community Tour
11:30am	Lunch hosted by Yukon Kuskokwim Health Corporation, Gene Peltola – President/CEO, at YKHC Board Room with Yukon Kuskokwim Regional Leaders
12:30pm	Transportation to Bethel Council Chambers

1:00pm to 5:00pm

Location: Bethel City Council Chambers
Bethel City Hall @ 300 Chief Eddie Hoffman Highway

Agenda **1) The current health of the Arctic/Yukon/Kuskokwim (AYK) Salmon Fisheries Re: Chinook, Chum, Coho, fall Chum**

a) Overall management
b) Sonar equipment
c) Test fisheries
d) Subsistence
e) Tribes' inclusion

Invited to Testify from the YK Region:

Robert Nick
Myron Naneng, AVCP President
Dr. John White
Karen Gillis
Jack Schultheis
Fran Thomson, St Marys
Nick Andrew, Marshall
Nick Tucker, Emmonak
Martin B. Moore, Emmonak
Gene Peltola Jr, USFW - Bethel

Also Invited:

Governor Parnell's office
Alaska Department of Fish & Game
Alaska Congressional Delegation
Kawerak, Inc

Tanana Chiefs Conference
Bristol Bay Native Association

Agenda **2)** **Informational Hearing - House Bill 227, introduced by Representative Bob Herron, "An Act establishing state fish and game reserves; creating the Holitna River Basin Hunting, Fishing, and Trapping Reserve; and providing for an effective date."**

Invited to Testify:
Greg Roczicka, Orutsararmiut Native Council, Bethel
Lamont Albertson, Aniak/Bethel
Grant Fairbanks, Holitna
Sleetmute Traditional Council

Agenda **3)** **Energy Issues including transportation corridor to/from Paimuit/Kalskag.**

Invited to testify:
Mike Hoffman, AVCP Vice-President

5:00pm End of Hearing

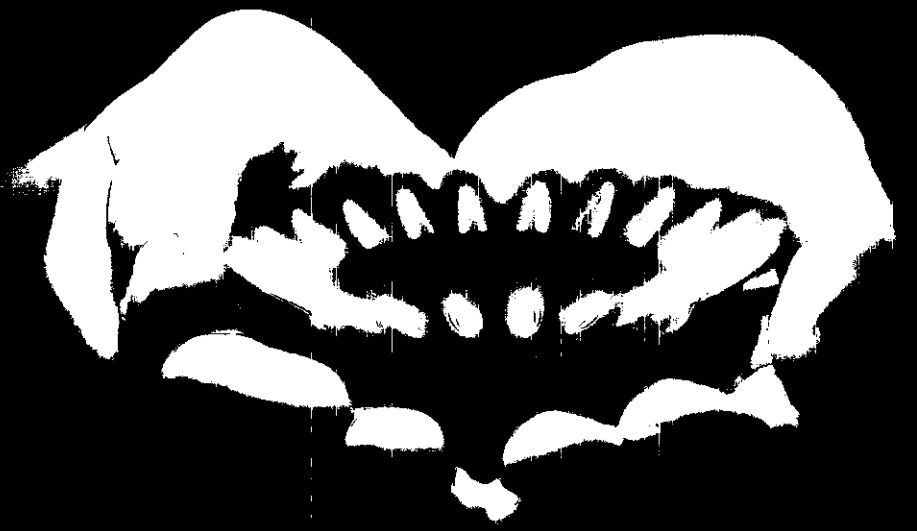
7:30pm Transportation to Airport

8:45pm Depart for Anchorage on Alaska Airlines Flight #46

9:45pm Arrive Anchorage

12/15/09 PRESENTATION: ALASKA INSTATE GAS PIPELINE PROJECT

ALASKA
IN-STATE GAS PIPELINE PROJECT



PRESENTATION TO THE ALASKA STATE LEGISLATURE

BRIEFING 3

DECEMBER 15, 2009

Purpose:

Review Status of In-State Gas Program

- Work Completed to Date
- Activities Planned in Future

State's Approach

- Intent of Effort is to Encourage the Development of a In-State Gas Pipeline
- By Reducing Risk to a Future Pipeline Developer

State's Approach

The Program was set-up to Reduce Risk by:

- Defining Costs
- Acquiring Major Permits
- Letters of Intent
  - Bring Buyer/Sellers together
  - Let the market place decide scope and timing

Work Completed

- Route Alternative Analysis - Parks and Richardson Highway routes:
  - Associated comparative cost estimates
- Project Description (for permitting)
- Initial Review of ENSTAR Capital Cost Estimate – Pipeline
- Preparation of Major Permit Applications
- Request to FERC for Jurisdictional Determination
- Set Compression Station Locations (for permitting)

Major Cost Issues That Have Come From This Work

- Cost of Gas Conditioning on the North Slope
- Marketability of NGL's if Sold at Tidewater in Cook Inlet Region

Schedule

- Complete "Cost of Transport" Estimates – Early Summer 2010
- Updated "Cost of Transport" Estimates after Field Season, November 2010
- Complete Initial Permitting Effort – February 2011
- Sell State Package – April 2011 (Bidding Process)
- Project is Currently on Track for 2015-2016 Start-up

Schedule of Permitting

▫End of Scoping Meetings	February 5, 2009
▫Scoping Report Released	March 2010
▫Draft EIS Released	July 2010
▫Public Hearings on Draft EIS	August 2010
▫Comment Analysis Report Available	October 2010
▫Final EIS Released	January 2011
▫ **Record of Decision Issued**	**February 2011**

Ongoing Engineering Work Plan

Purpose: Develop Cost of Transport

- Identify Facilities and Update Pipeline Design
- Cost of Facilities and Pipeline
- Increase Level of Confidence in System Cost Estimates
- Cost of Transport for Various Scenarios
- Identify Potentially Viable Project Configurations
- Provide Documentation to Interested Parties

Cost of Transport

Two Phase Development

- Early summer 2010 Cost of Transport delivery Focused on:
  - Facility Costs
  - Incorporating newly available Legacy Data
- Late 2010 Cost of Transport Delivery Focused on:
  - Incorporating Field Program Data
  - Update of Pipeline cost

Facilities Scenarios Identified

- CGF Residue Gas only, North Slope Gas Conditioning, Cook Inlet NGL Extraction
- CGF Residue Gas only, Cook Inlet Gas Conditioning and NGL Extraction
- CGF Residue Gas Only, North Slope Gas Conditioning, North Slope NGL Extraction
- CGF Residue Gas spiked with CGF Stabilizer Overhead Gas, North Slope Gas Conditioning, Cook Inlet NGL Extraction

Each scenario evaluated at 250, 500, 750 and 1000 MMscfd

Facilities Work Plan

Develop Schematic Flow Diagrams and Cost estimates

- Process Flow Simulations
- Generate Process Flow Diagrams (PFD) with Major Equipment for Cost Estimation
- Cost Estimate by Component
- Component by Component Basis
  - Conditioning train
  - NGL train
  - NGL fractionation and storage

Pipeline Work Plan

- Investigate Cost Reduction Opportunities
- Conduct Field Verification Investigation
- Develop more Detailed Design Basis
- Prepare Detailed Design Criteria and Procedures
- Documentation

Pipeline Work Plan

- Investigate Cost Reduction Opportunities
  - Improve Route Constructability
  - Optimize Pipeline Hydraulics
  - Length Reduction
  - Reduce ROW preparation and reclamation work
  - Investigate replacing compressor station refrigeration with air coolers
- Refine Mile-by-Mile Geotechnical Characterization of Pipeline

Pipeline Work Plan

Field Investigation

- River Crossing Assessment and Verification
- Geotechnical Borehole Program
- Material Site Program
  - Collaborate with ADOT&PF
  - Assess current sites
  - Identify and verify new sites
- Characterize Active Fault Crossings
- Constructability Assessment
- Characterize Roads, Camps, Storage Yards

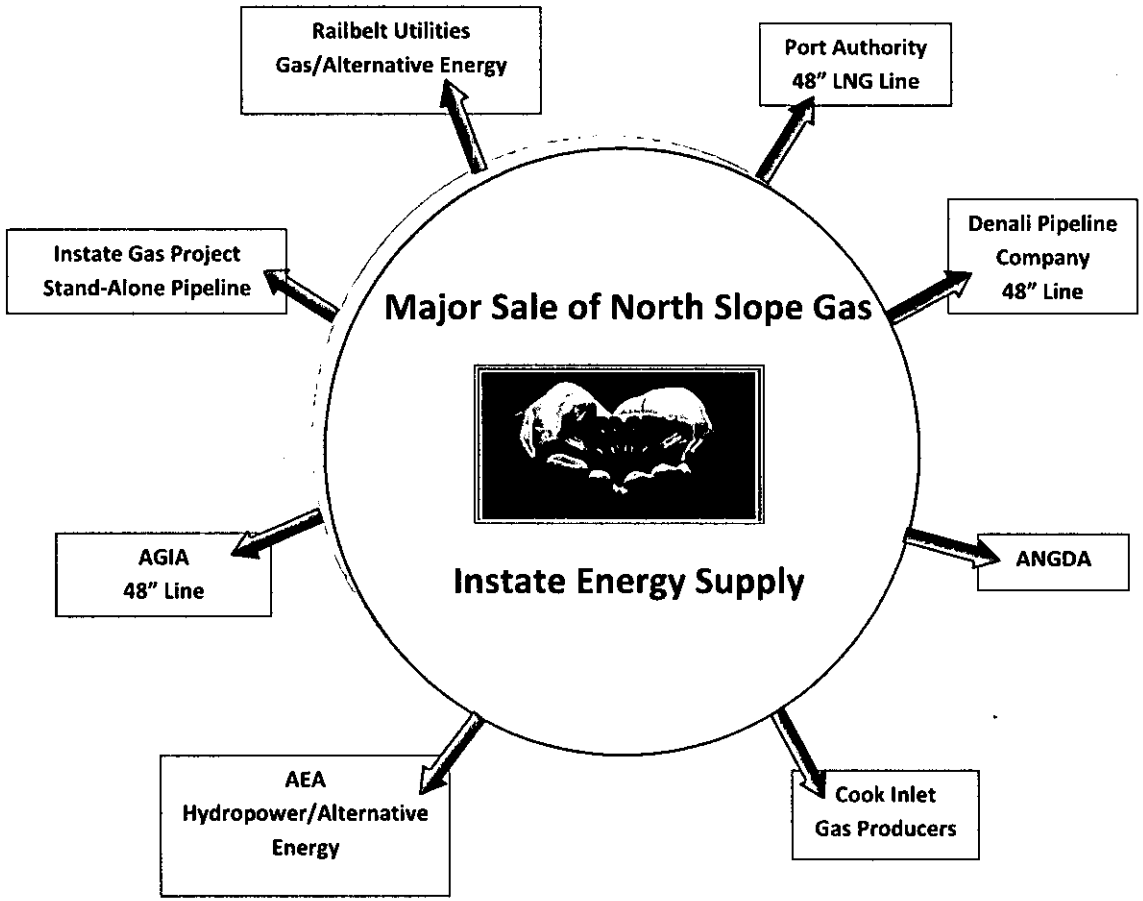
Project Documentation

- Design Basis
- Design Criteria & Procedures
- Technical Description of Pipeline and Facilities
- Updated Construction and Logistics Plan
- Cost Estimate
- Alignment Sheet Series (GIS)

Issues:

- Alaska Economy Headed for Difficult Times in Next 10Years
  - Significant Decline in Oil Flow through TAPS (Revenue)
  - Loss of Federal Dollars
- No Long Term Affordable Energy Source for Fairbanks Railbelt and Western Alaska

ENERGY TUG-OF-WAR



Define Specific Plan

Time to Make Decisions

Open Season

- Will the 48-inch Pipeline Move Forward in a Timely Manner?
- Can We Make the Open Season Work?
- Is Alaska Going to Address Fiscal Certainty?
- What is the Risk of Waiting Until 2015 to Know the Big Pipeline is Moving Forward?

Determine Back-up Plan

- Renewable Energy (major source)
- In-State Gas Pipeline

Specific Tasks to be Accomplished in Next Six Months

- "For Backup Plan"

  1. Request of AOGCC how much gas and NGL's are available for multiple projects from Prudhoe Bay.
  2. Prepare cost comparison between different backup options of renewable energy and in-state pipeline

Establish a Schedule for an Energy Project Alaska can Control

- Put the Backup Plan on a Specific Schedule!
  - Milestone

(Can always slow down if the large 48" gas line project goes forward to the lower 48 states)

Recommendations

- Define a Plan
  - Clarify fiscal certainty for open season
    - If open season is not clear – Move on
- Determine Back-up Plan
- Put Back-up Plan on a Specific Schedule
- Let Market Determine Success

Alaska In-State Gas Pipeline Project

- November Expenditures

Administrative	$ 36,184.61	$ 36,184.61

"Press Release, Dec. 2009

Sealaska to Convert Plaza to Biomass Fuel

Juneau, Alaska— In 2010, Sealaska Corporation's corporate headquarters in Juneau will become the first commercial building in Alaska to convert to renewable bio-energy. Sealaska will convert its corporate headquarters to a wood pellet fired boiler system. The Sealaska Plaza is currently heated by over **35,000 gallons** of heating oil per year. Sealaska's goal is to establish a green energy model that can be applied throughout Southeast Alaska. The effort is one element of Sealaska's green initiatives to build sustainable Southeast Alaska economies. We believe this project will show that conversion to biomass can save money, reduce hydrocarbon-based footprints and create anchor demand for resources that can be manufactured within the region."

Savings will be approx. 8400 tons CO2 over 25 yrs and over $1m in energy costs.

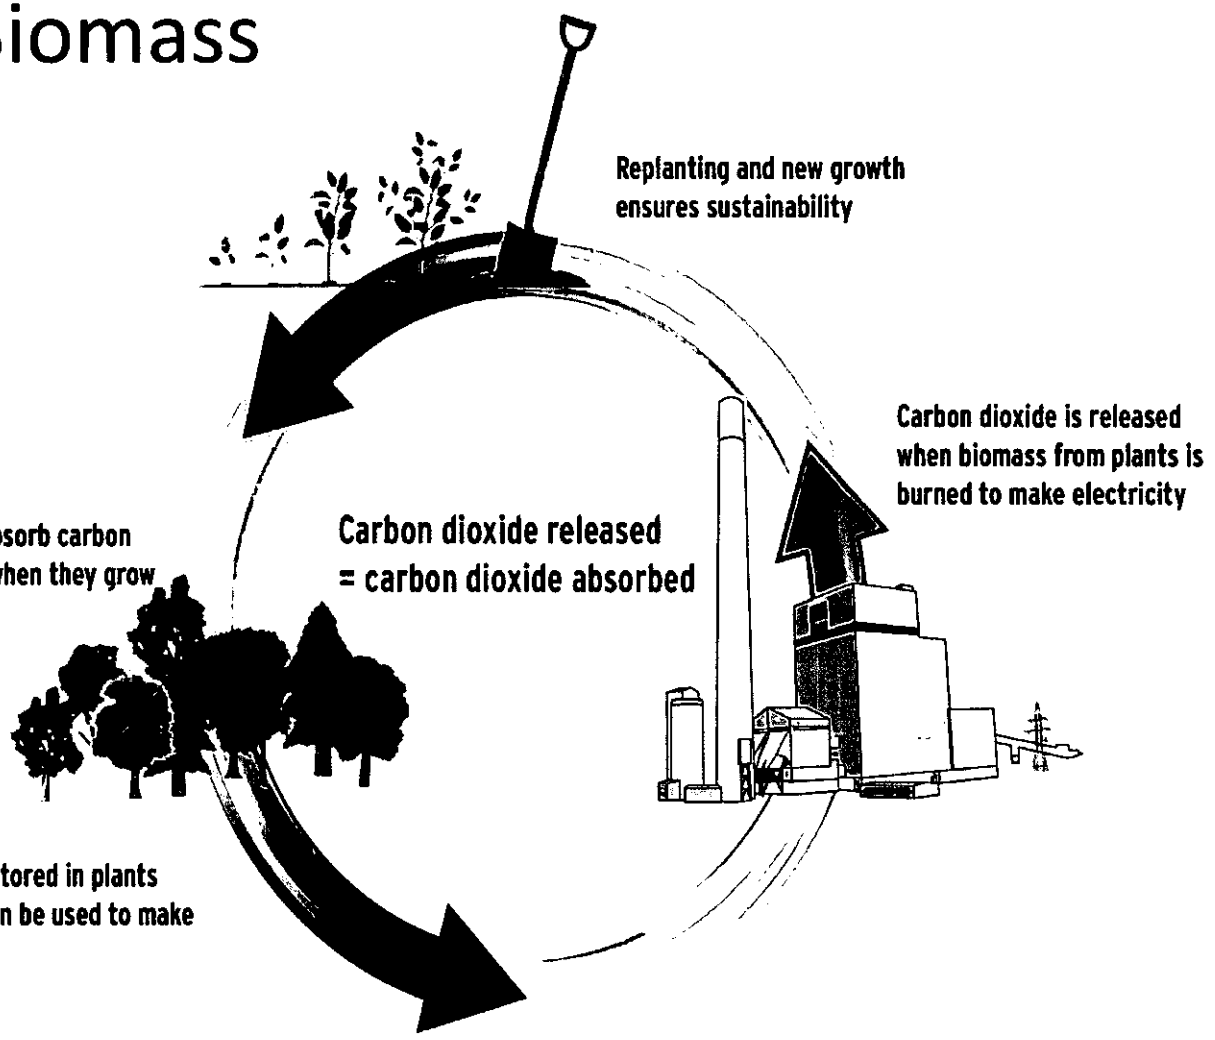
Concepts of Biomass

No new CO2 added to the environment.



As plants grow they absorb carbon dioxide, a greenhouse gas that contributes to climate change, from the atmosphere. When they are used to make electricity the carbon dioxide stored by the biomass is released. No new net greenhouse gases are produced making biomass fuel 'carbon neutral' - better than fossil fuels which are major contributors to climate change

VENTEK ENERGY SYSTEMS INC.
Bio Energy Solutions

A NATIVE CORPORATION SEALASKA

Concepts of Biomass

- Wood Pellets are "Carbon Neutral" and "Sustainable"
- Jobs and profits are local
- Energy savings are real, 30-50%
- Public is demanding reductions in carbon output
- Local impacts of climate change are very evident
- Europeans are much further ahead than N America

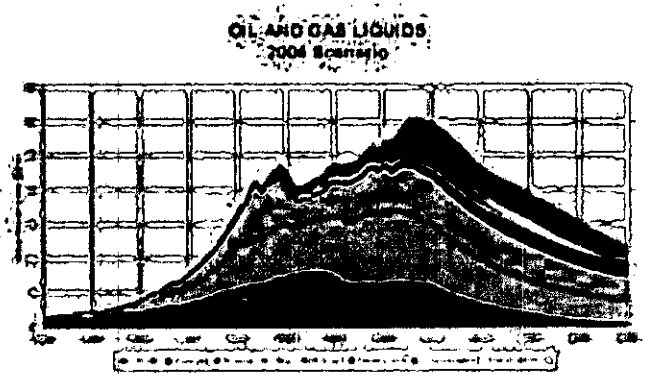
VENTEK ENERGY SYSTEMS INC.
Bio Energy Solutions

A NATIVE CORPORATION SEALASKA

Concepts of Biomass

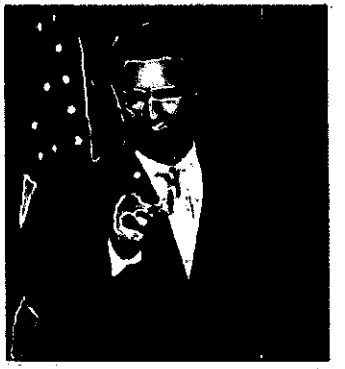
- Boiler technology is just recently being transferred from Europe
- Government incentives/penalties are just being launched
- There are many other proposed "green" solutions, such as:
  - Tidal, Micro (or small) Hydro
  - Wind and Solar
  - Geo Thermal
  - Ethanol
  - Other Biomass (Wood chips, olive pits, energy crops, etc.)
  - Controversial options such as nuclear and "clean" coal
  - Conservation…. Perhaps the biggest and most cost effective

Strong Clean Energy Market Fundamentals



- Oil & Gas peak & price
- Energy security

- Global warming & environment
- Public awareness
- Rush to benefit



(GE sales of "green" products and services now $12b/yr)

Chrysalix

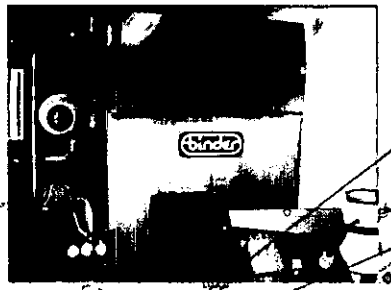
BIOMASS HEATING SYSTEMS FOR GNWT BUILDINGS

INSTALLED AND PLANNED WOOD PELLET BOILERS

OCTOBER 2009

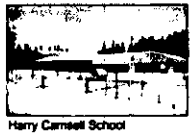


Chief Jimmy Bruneau School, Behchoko
- One KOB 750 kW wood pellet boiler
- Expected fuel oil reduction of 155,000 litres per year
- Expected GHG reduction of 410 tonnes per year
- Installation completed in October 2009

Highways Maintenance Garage, Hay River
- One KOB 200 kW wood pellet boiler
- Fuel oil reduction of 100,000 litres per year
- Expected GHG reduction of 270 tonnes per year
- Installation to be completed in 2010

Diamond Jenness School

Central Heating Plant Serving Four Schools, Hay River
- One KOB 1 MW wood pellet boiler
- Expected fuel oil and propane reduction equivalent to 318,000 litres of fuel oil per year
- Expected GHG reduction of 850 tonnes per year
- Installation to be completed in 2010
- Diamond Jenness School & new Tradeshop
- Harry Camsell School
- Ecole Boreale
- Princess Alexandra School



Harry Camsell School

Ecole Boreale

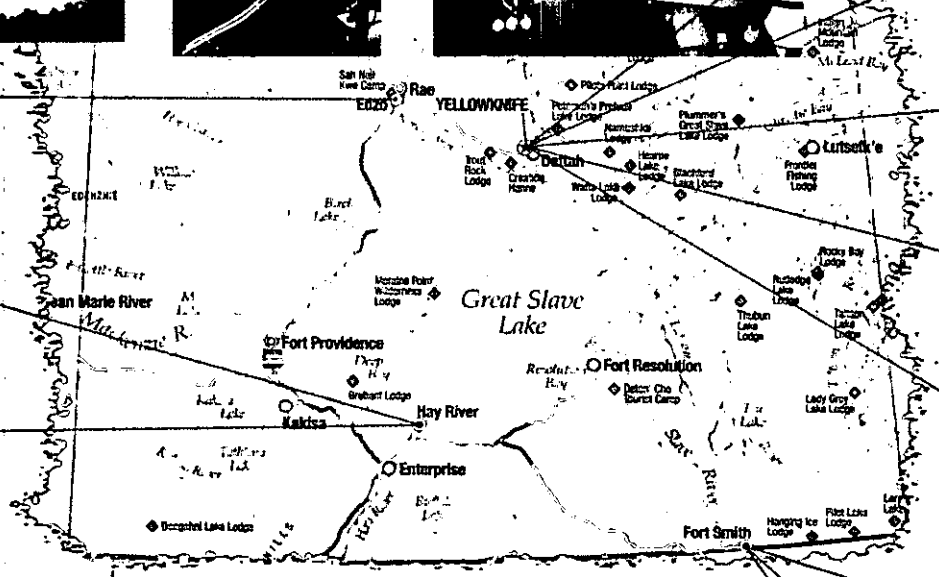
Schools to be heated by a central heating plant in Hay River



A BRIEF HISTORY

The first wood pellet boilers for a Territorial Government building were installed at the North Slave Correctional Centre in 2006. Arctic Green Energy (AGE) owns and installed the boiler, and sells heat to the Government of the NWT (GNWT). Thanks to the success of that project, the GNWT is now investing in its own wood pellet boilers for other facilities, where economically viable.

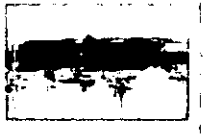
Since the cost to transport wood pellets is higher than that of other fuels, the most viable locations for wood pellet boilers are those closest to the source of wood pellets. Currently, that source is in La Crete in northern Alberta. Therefore, the GNWT is investing in wood pellet boilers in communities on the road network in the South and North Slave regions.

Kalemi Dene School, N'Dilo
- Three Bosch MESys 23 kW wood pellet boilers
- Expected fuel oil reduction of 30,000 litres per year
- Expected GHG reduction of 80 tonnes
- Installation completed in September 2009

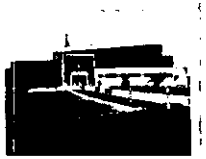
North Slave Correctional Facility, Yellowknife
- Two BINDER 750 kW wood pellet boilers
- Fuel oil reduction of 587,000 litres in 2008
- GHG reduction of 1,580 tonnes in 2008
- Installation completed in November 2006

Legislative Assembly Building, Yellowknife
- One BINDER 300 kW wood pellet boiler
- Expected fuel oil reduction of 83,000 litres per year
- Expected GHG reduction of 220 tonnes per year
- Installation to be completed in 2009/10

École St Joseph School, Yellowknife
- One KOB 540 kW wood pellet boiler
- Expected fuel reduction of 102,000 litres per year
- Expected GHG reduction of 270 tonnes per year
- Installation completed in October 2009



Sir John Franklin School, Yellowknife
- One BINDER 750 kW wood pellet boiler
- Expected fuel reduction of 142,900 litres per year
- Expected GHG reduction of 380 tonnes per year
- Installation completed in February 2008



PWK School & Recreation Complex, Fort Smith
- One KOB 750 kW wood pellet boiler
- Expected fuel oil reduction of 200,000 litres per year
- Expected GHG reduction of 530 tonnes per year
- Installation to be completed in 2010

Thebacha College, Fort Smith
- One KOB 750 kW wood pellet boiler
- Expected fuel oil reduction of 200,000 litres per year
- Expected GHG reduction of 530 tonnes per year
- Installation to be completed in 2010

Health Centre, Fort Smith
- One KOB 750 kW wood pellet boiler
- Expected fuel oil reduction of 200,000 litres per year
- Expected GHG reduction of 530 tonnes per year
- Installation to be completed in 2010

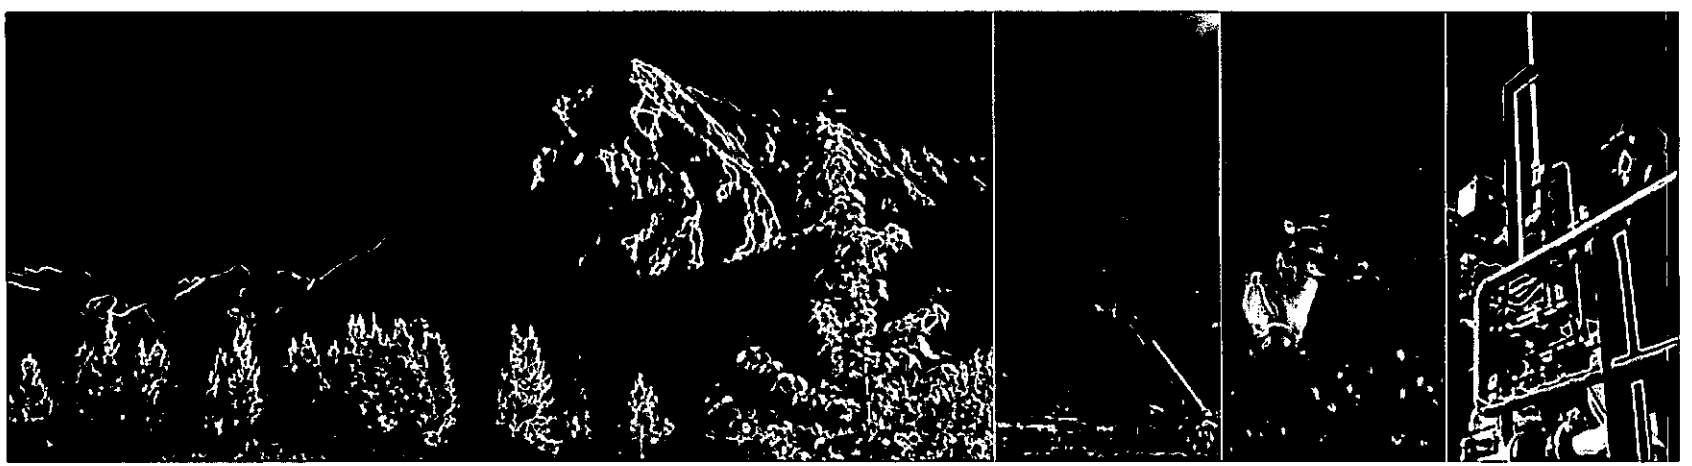
SUMMARY

- Wood pellet demand, as a preferred "green" fuel in N America, is expected to grow dramatically in the future.
- Prices will remain stable as the market matures, compared to the volatility of fossil fuels.
- There is an abundance of raw material in N America.
- Developing wood pellet applications in Alaska will create jobs, reduce carbon emissions, save money, and....

"It's the right thing to do!"

2/1/10 & 2/3/10 OVERVIEW: AGIA UPDATE/ OPEN SEASON

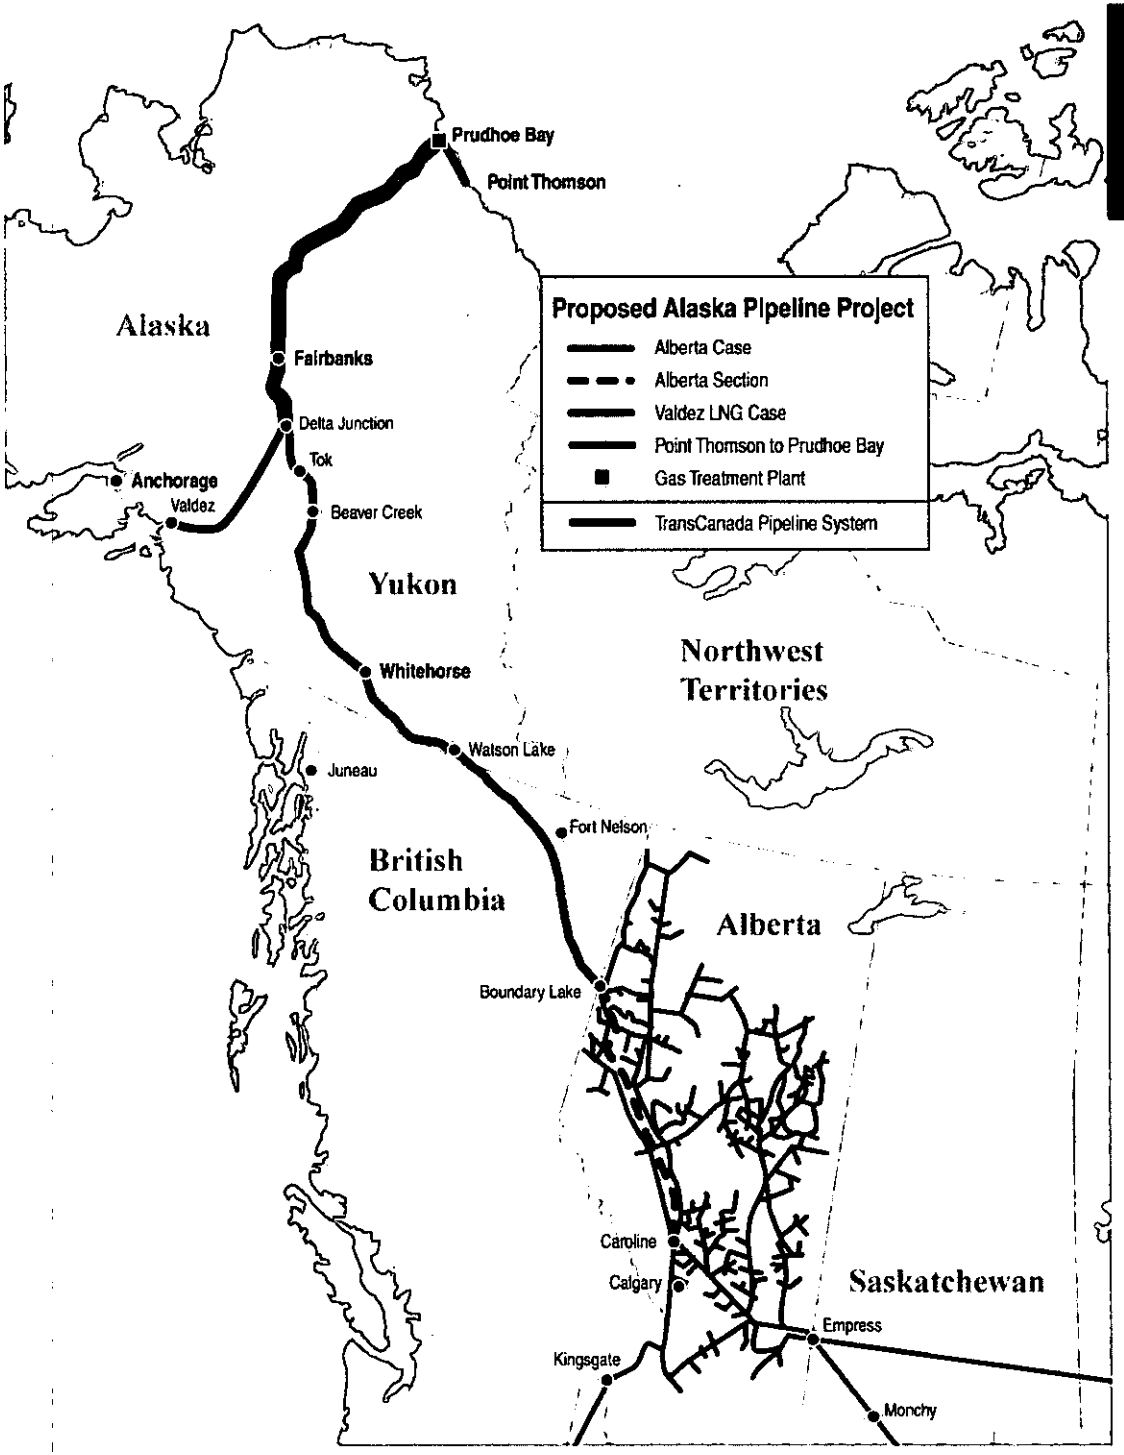
ALASKA
PipelineProject



Alaska Legislature
Senate/House Resources & Energy Committees

February 2010

TransCanada ExxonMobil

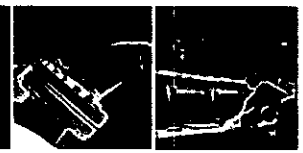


First Open Season for North Slope Gas

- On January 29, the Alaska Pipeline Project (APP) filed its plan with FERC to implement the first Open Season in history of North Slope natural gas.
- In an Open Season, the pipeline company provides potential shippers with an engineering design, commercial terms and an estimate of project costs, tariffs and timelines.
- The pipeline company is seeking shippers' contractual support for the project through executed precedent agreements.
- APP's initial Open Season offers service to potential shippers for markets in:
  - Alaska
  - Lower 48 via Alberta
  - U.S./international via Valdez

ALASKA PipelineProject

Path to In-service



- **Large pipeline projects undergo a lengthy development stage, and if successful, then move to construction and operations**
- **APP's development stage is scheduled to run through 2014**
  - Prior to Open Season – through April 2010
  - Open Season – May to July 2010
  - Post Open Season – August 2010 through 2014
- **All stakeholders in the Alaska gas pipeline have important initiatives underway to advance the project**
  - Alaska Pipeline Project, Producers / Shippers, Governments, others
  - To successfully move the Alaska Pipeline Project from the development stage onwards to the construction stage, all parties need to achieve commercial and regulatory breakthroughs

APP Development Stage – Prior to Open Season

Achievements to Date

- Producers / Shippers
  - Explored / developed gas reserves; reviewed transportation alternatives; researched potential natural gas markets
- State of Alaska
  - Established State's requirements in AGIA; granted AGIA License; finalizing royalty regulations under AGIA
- U.S. Government / FERC
  - Established legislative/regulatory structure (ANGPA); Federal Loan Guarantee; set FERC regulatory process
- Canadian Government
  - Established legislative / regulatory structure (Northern Pipeline Act); TransCanada's Right-of-Way through Yukon

APP Development Stage – Prior to Open Season

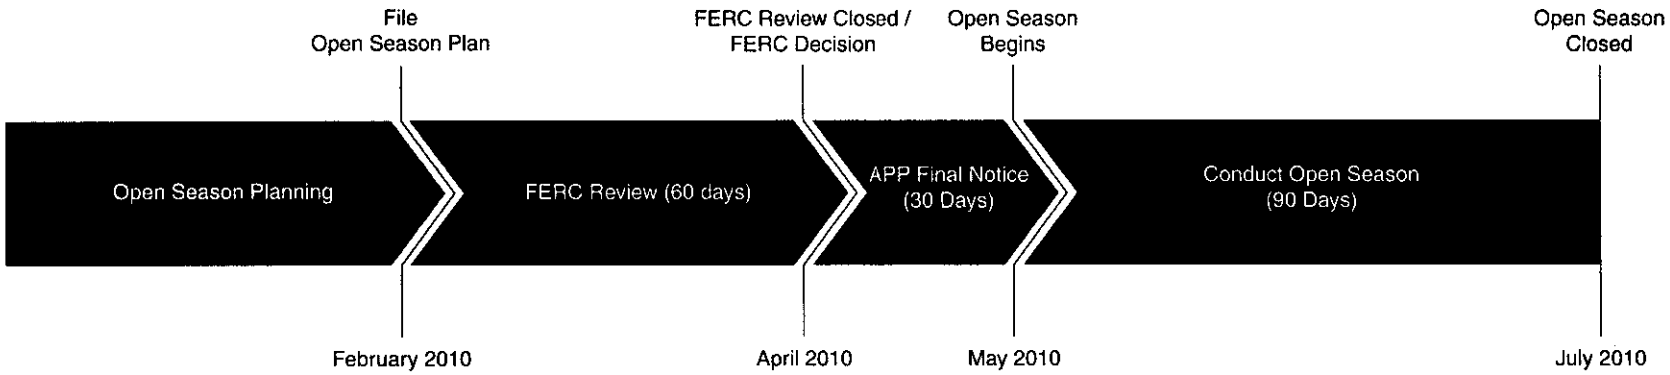
Achievements to Date

- APP
  - Alignment of key stakeholders
    - TransCanada / State of Alaska via AGIA License in 2008
    - TransCanada / ExxonMobil in 2009
    - Continue to offer equity participation to BP / ConocoPhillips
  - Initiated FERC (NEPA) pre-filing process in U.S.; Continuing interface with Northern Pipeline Agency (NPA) in Canada
  - First Nations negotiations in Canada; Interfaces with Alaska Native groups and communities along the project corridor in Alaska
  - Resolved claims on previous projects
  - Developed comprehensive Alberta and LNG alternatives – technical scope, cost estimates, schedules
  - Filed Open Season Plan with FERC
  - In-state Gas Study
    - Technical Conference in Anchorage on February 4 at 2:00 p.m.

APP Development Stage - Open Season

Timeline

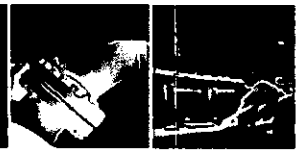
- **Filing begins 60-day FERC review for U.S. section**
- **If FERC approves plan, conduct Open Season from May-July 2010**
  - Concurrent Canadian Open Seasons for Alberta option
- **Expect APP / Shipper follow-up negotiations to resolve conditioned bids (typical situation)**
- **Final Open Season results targeted by year-end 2010**
  - Contingent on satisfactory resolution of Shippers' conditions precedent



Open Season Plan

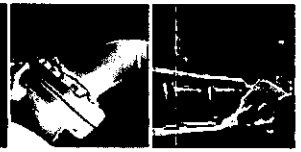
- **Comprehensive, credible and competitive Open Season plan**
  - TransCanada and ExxonMobil have unparalleled expertise / experience in interstate/inter-provincial gas pipelines and gas treatment plants
  - Over one-quarter million hours of engineering, regulatory, technical, environmental, commercial, legal and project management work
  - Builds on significant base from past initiatives for Alaska gas
- **Joint project work has provided improved understanding of scope, costs, complexities and risk for this large, complex project**

Open Season Plan



- **APP offering better commercial terms / access than in AGIA Application**
  - Available to Shippers in APP's initial Open Season
  - Comprehensive Alberta and Valdez options
    - Responsive to Shipper discussions
    - 48 inch 3.0 Bcf/d pipeline to Valdez
    - Access to other pipelines upstream of Alberta Hub
    - 20-year minimum contract term for firm service
    - Interruptible, overrun and park-and-loan services
    - Shared development costs
  - Better commercial terms reduces tolls by $500 million/year
    - 12% ROE
    - 80% capital recovery over initial contract term
    - 70/30 debt/equity ratio for expansions

Project Scope



Two pipeline options for Shipper assessment in the APP Open Season

Option One: Pipeline from Alaska's North Slope to Alberta

- 4.5 Bcf/d; approx. 1,700 miles (2,737 km); 48 inch
- Gas delivered to pipeline systems serving major North American markets

Option Two: Pipeline from the North Slope to Valdez, Alaska

- 3.0 Bcf/d; approx. 800 miles (1,287 km); 48 inch
- Converted to liquefied natural gas (LNG) in a facility to be built by others and delivered by ship to U.S. and international markets

Both options include:

- Opportunity for Alaska communities to acquire natural gas from the pipeline
    - Minimum 5 off-takes in Alaska
- A world-class natural gas treatment plant, to be located adjacent to the North Slope's Prudhoe Bay facilities
    - One of the largest facilities of its kind that would treat the gas to remove CO^2/impurities
- An approx. 58-mile (93-kilometer) transmission pipeline connecting natural gas supplies from Point Thomson field to the plant

Project Cost Estimates and Indicative Tolls

Note: All numbers 2009$US

Option One: Pipeline from Alaska's North Slope to Alberta

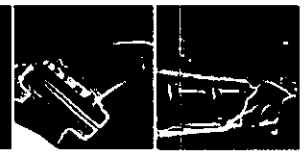
- Capital cost range $32B-$41 B
- Target in-service 2020
- Tariff range (incl. fuel)* $2.80-$3.50 / MMBtu (from GTP to Alberta Hub)
- Alberta Hub gas price** $6.25-$7.65 / MMBtu

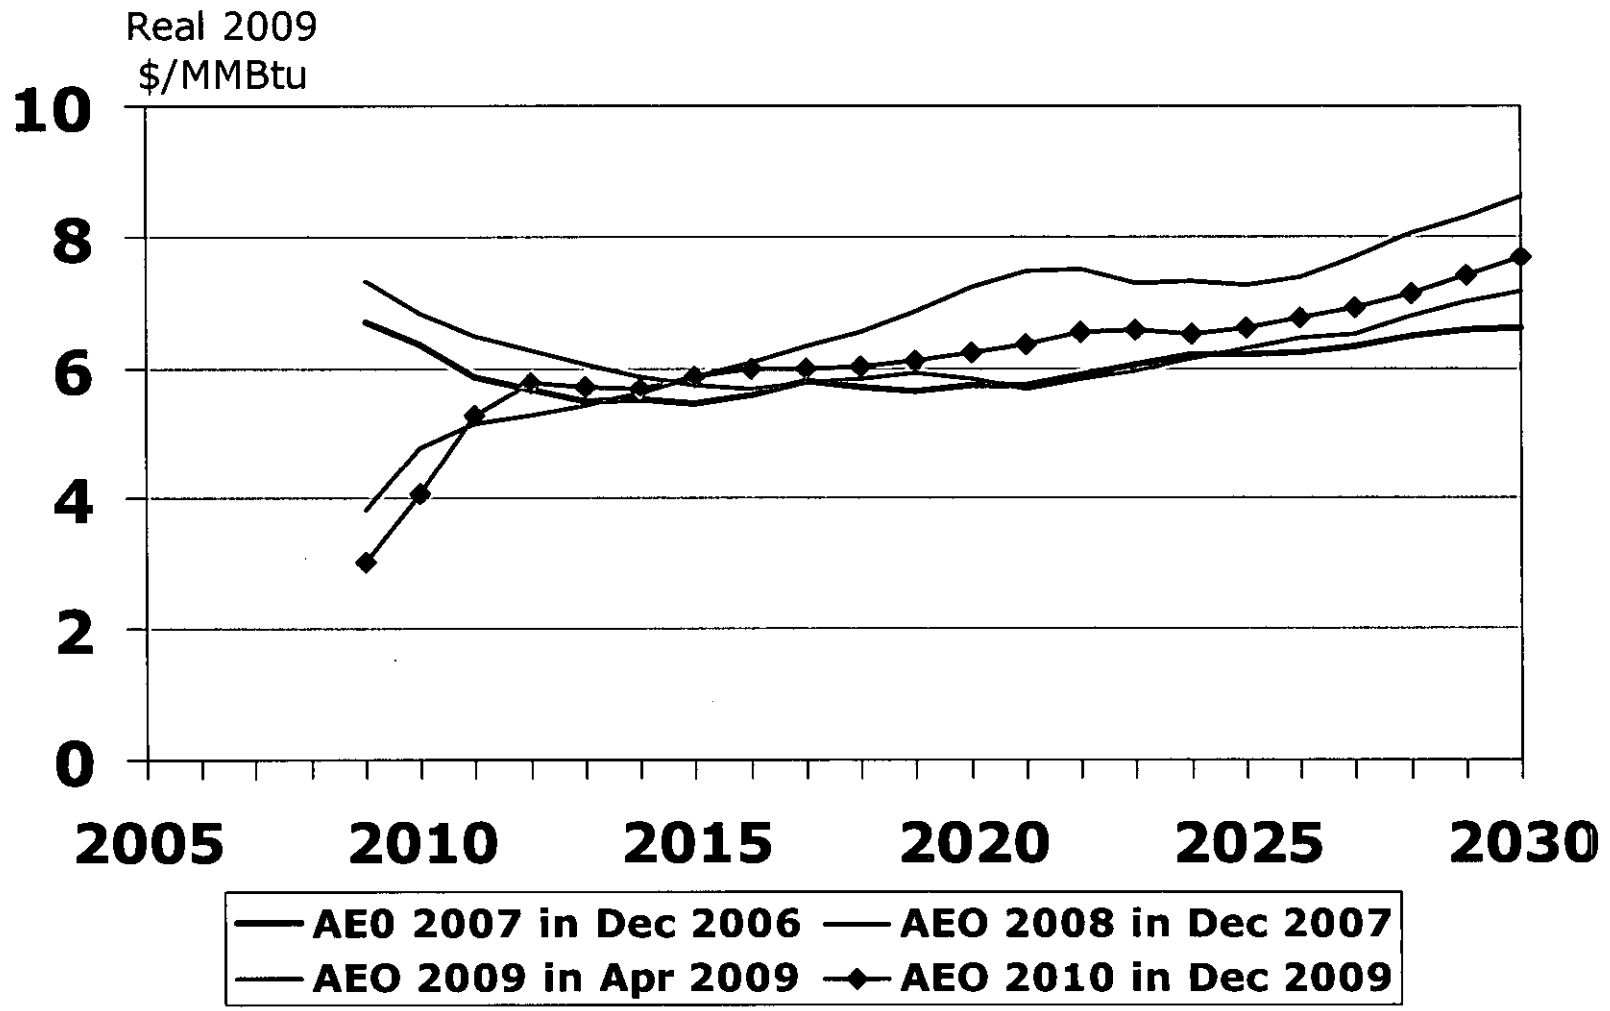
Both the Alberta and Valdez options are technically and commercially viable based on current project costs and natural gas/oil price forecasts

* Prudhoe Bay to Alberta Hub (25-yr contract term). Add $0.15-0.20 / MMBtu for Pt. Thomson line

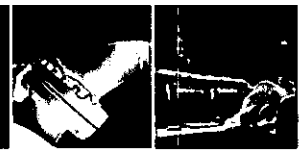
** Source: U.S. Dept. of Energy 2010 Annual Energy Outlook for the years 2020-2030

Comparison of Recent US DOE Annual Energy Outlooks for Alberta Hub Natural Gas Prices





Project Cost Estimates and Indicative Tolls



Note: All numbers 2009$US

Option Two: Pipeline from the North Slope to Valdez, Alaska

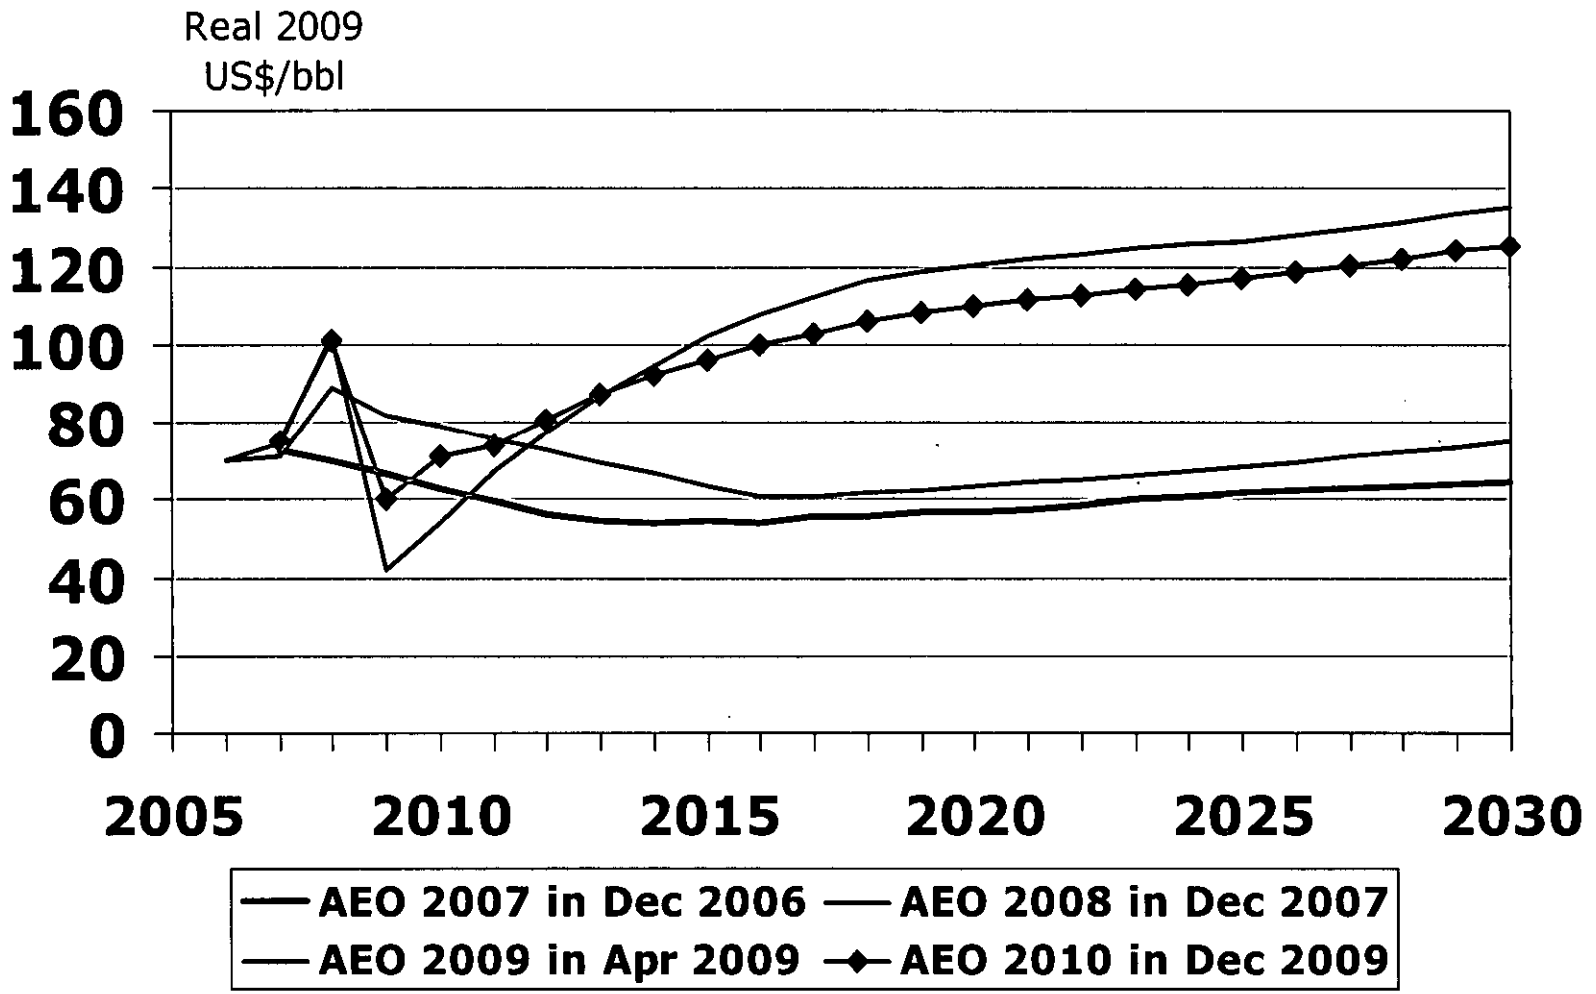
- Capital cost range $20B-$26 B
- Target In-service 2020
- Tariff range (incl. fuel)* $2.45-$3.15 / MMBtu (from GTP to Valdez)
- Henry Hub gas price** $6.75-$8.15 / MMBtu
- Oil prices** $110-$125 / bbl

Both the Alberta and Valdez options are technically and commercially viable based on current project costs and natural gas/oil price forecasts

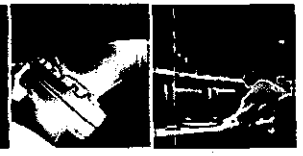
* Prudhoe Bay to Valdez (25-year contract term). Add $0.15-0.20/MMBtu for Pt. Thomson line

** Source: U.S. Dept. of Energy 2010 Annual Energy Outlook for the years 2020-2030

Comparison of Recent US DOE Annual Energy Outlooks for Light Sweet Imported Oil Prices



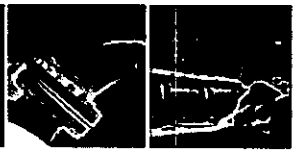
APP Development Stage – Post Open Season



Commercial / Regulatory Milestones

- APP
  - Resolve conditions precedent with Producers / Shippers
  - Progress engineering, environmental (including field work), and other work to prepare for major U.S. / Canadian permitting
    - Recent environmental contracts awarded to URS / AECOM for Alaska fieldwork commencing spring 2010
    - Canadian section awarded to TERA / Stantec
  - Meet AGIA obligations (including FERC Application in 2012)
  - Advance project in-step with commercial and regulatory breakthroughs
  - Continue to seek alignment with BP / ConocoPhillips

Post Open Season



Commercial / Regulatory Milestones

- Producers / Shippers
  - Resolve conditions precedent with APP
  - Resolve upstream fiscal / production levels at Prudhoe Bay, Point Thomson, other fields with State / AOGCC
  - Arrange downstream transportation; secure final gas markets and export permits (LNG option)
- State of Alaska
  - Resolve any upstream tax or production issues with Producers / Shippers
  - Facilitate project permitting
- U.S. Government / FERC
  - Establish Federal Loan Guarantee levels, terms and conditions
  - Facilitate project permitting
- Government of Canada / Alaska Natives / Canadian First Nations
  - Facilitate project permitting and alignment

Summary

APP Open Season May-July 2010 if FERC approves APP's plan

APP offering improved commercial terms vs. AGIA

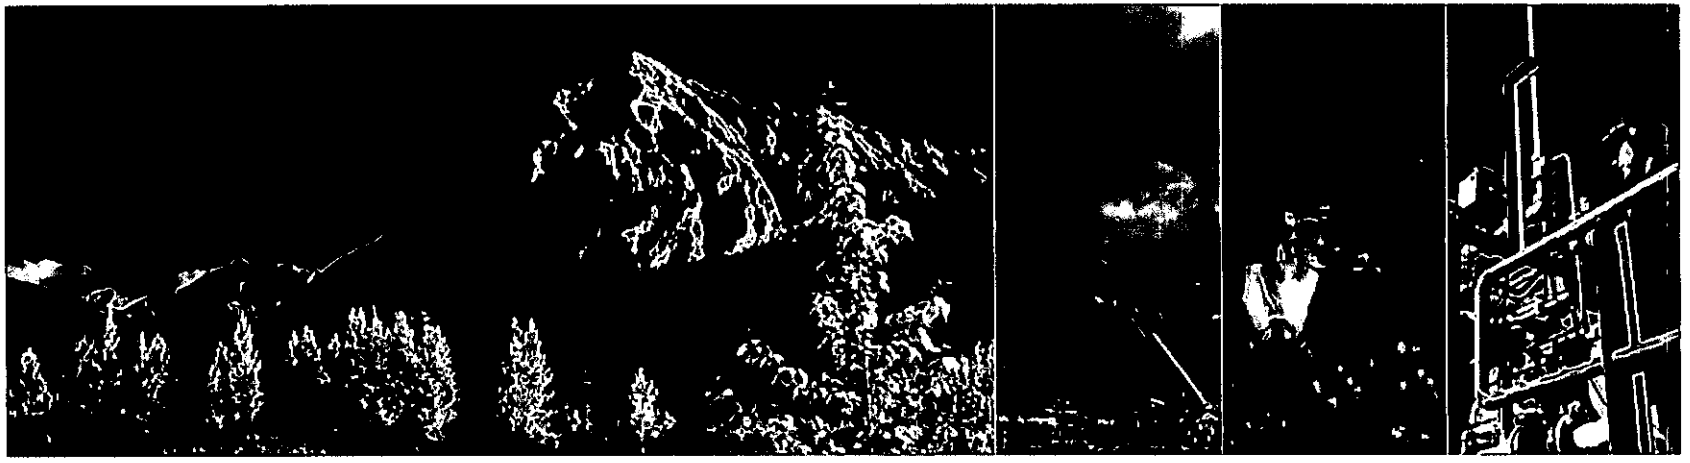
Alberta / Valdez options both viable

Regulatory / commercial breakthroughs required by APP, Producers-Shippers, and Governments

TransCanada / ExxonMobil / State working together through AGIA structure provides best opportunity to:

- Align all stakeholders
- Achieve project benefits for Alaskans and other parties

ALASKA
PipelineProject



Thank You

Abstract

In response to public concerns about discharges from large cruise ships, Alaska's Department of Environmental Conservation (ADEC) sampled numerous effluents in the summer of 2000. The data showed that basic marine sanitation device (MSD) technology for black water (sewage) was not performing as expected. Untreated gray water had high levels of conventional pollutants and surprisingly high levels of bacteria. Both black water and gray water discharges sometimes exceeded state water quality standards for toxicants. The state convened a Science Advisory Panel (the Panel) to evaluate impacts associated with cruise ship wastewater discharges. The effluent data received wide media coverage and increased public concerns. Consequently, legislative decisions were made at the State and Federal level, and regulations were imposed before the Panel completed its evaluation. The Panel demonstrated that following the rapid dilution from moving cruise ships, the effluent data from the Summer of 2000 would not have exceeded water quality standards, and environmental effects were not expected.

Keywords: Cruise ships; Wastewater; Dilution; Sewage; Black water; Gray water; Pollution

1. Introduction

The study of effluent characteristics, by itself, is not sufficient to evaluate exposure and ecological/health risks associated with any wastewater discharge and especially a discharge from a large, moving ship. An understanding of dilution in the context of a vessel moving and generating a propeller mixed wake during discharge is essential. The Science Advisory Panel (the Panel), convened by the State of Alaska, undertook a number of efforts with the goal of developing a simple method of estimating wastewater dilution in the wake of a moving large cruise ship.[2] Starting in February 2001 and continuing through September 2002 the Panel

- reviewed several published wake-mixing studies (Colonell et al., 2000; Katz et al., 2003; Csanady, 1980; Kim, 2000; ESL, 2000) and

[2] A large cruise ship is defined in Alaska Statute 46.03.490 as a commercial passenger vessel that provides overnight accommodation for 250 or more passengers for hire, determined with reference to the number of lower berths. Federal regulations written specifically for cruise ships operating in Alaska waters (33 CFR159, Subpart E) apply to vessels with accommodations for 500 or more passengers. In this document, we are using the State definition of large cruise ship.

0025-326X/$ - see front matter © 2005 Elsevier Ltd. All rights reserved.
doi:10.1016/j.marpolbul.2005.10.021

- developed a preliminary conservative mixing equation to describe wastewater dispersion behind large moving cruise ships (Science Advisory Panel 2001). The preliminary mixing equation assumed that complete mixing of a discharge occurred in a volume of water described by the width and depth of the vessel, the distance traveled by the vessel, and the rate of discharge to the volume of the receiving water. Because the preliminary equation was thought to be overly conservative, dye dispersion studies were needed to refine the equation.
- The preliminary mixing calculations were used to evaluate an extensive data set from 21 cruise ships obtained by Alaska's Department of Environmental Conservation (ADEC) in the summer of 2000 (Science Advisory Panel 2001).
- Five large cruise ships were visited in order to review how they managed their various waste streams.
- Direct observations of the depth and width of turbulence behind several moving cruise ships were made (Loehr et al., 2001).
- One member observed dye dispersion studies conducted by US EPA's Office of Water for four cruise ships off Miami, Florida.
- Studies conducted by the US Navy behind a frigate that measured and modeled dilution of a pulped waste paper discharge (Katz et al., 2003) were reviewed.
- A draft copy of US EPA's final report on the Miami cruise ship dye studies (US EPA, 2002) was reviewed.

2. Dilution following discharges from large cruise ships

The initial dilution following the discharge of wastewater from a moving large cruise ship is a function of the beam (width), the draft (depth), the speed of the vessel and the rate of effluent discharge. A moving ship displaces a volume of water that is refilled immediately as the ship passes, creating mixing astern of the ship. The ship represents a moving cross-sectional area, the larger it is and the faster it moves, the higher the dilution.

The dye studies conducted by US EPA (2002) were compared to the preliminary mixing equation that the Panel had developed in 2001. The results of the dye studies, and the direct observation of wake turbulence in the water column behind several moving cruise ships demonstrated that the preliminary mixing from the Panel's equation could be increased, resulting in the following equation which calculates the dilution factor for a discharge from a large cruise ship.

2.1. Large cruise ship

$$\text{Dilution factor} = 4 \times (\text{ship width} \times \text{ship draft} \times \text{ship speed}) / (\text{volume discharge rate})$$

$$= 4 \times (___\text{m} \times __\text{m} \times ___\text{m s}^{-1}) / (__\text{m}^3\,\text{s}^{-1})$$

The mixing equation is quite straightforward. A ship with a large cross-sectional area (draft and width) will create more mixing than a smaller ship. A ship moving faster will discharge less effluent per meter traveled than a ship moving at a lesser rate. A ship discharging at a slower rate will also discharge less effluent per meter traveled. Decreased effluent discharged per meter traveled leads to greater dilution.

Vigorous mixing occurs in the turbulent wake and extends horizontally beyond the beam (or width) and vertically below the draft (or depth) of the vessel. As time passes behind the vessel, the bubbles mixed into the water rise and spread horizontally, adding to the effective mixing. For a large cruise ship discharging at a high rate of 200 cubic meters per hour and traveling at 6 knots, the dilution factor will be greater than 50,000. (Note that industrial and municipal continuous point source discharges in the United States typically have much lower dilution factors, generally in the range of less than 10 and up to 500.) Because large cruise ships often discharge at higher speeds, and at lesser discharge rates, the initial dilution factor of 50,000 is a reasonable worst case (i.e. least dilution). Both the passage of the hull through the water and the agitation caused by the propellers assure that the mixing occurs very rapidly.

The strength of the mixing equation is best illustrated by comparing its calculations with the dilutions determined by US EPA's dye dispersion studies in the wakes of four large cruise ships. A draft report of US EPA's studies was released to the Panel in July 2002 (US EPA, 2002). Because US EPA's observations were of actual cruise ship wastewater discharges, the dye studies provided the best reference for establishing the factor in the Panel's recommended mixing equation.

Three of the large cruise ships used in the dye studies (*M/V Majesty*, *M/V Paradise and M/V Fascination*) had conventional twin propeller arrangements while one (*M/V Explorer*) had a dual azipod propulsion system (external electric motors and propellers with a shroud around them). All four vessels discharged laterally through the side of the hull (rather than downward through the bottom of the hull). The point of discharge was typically around 6 meters below the surface.

The US EPA reported measured and calculated dilution factors. The *M/V Explorer's* measured dilution factor was substantially less than the other vessels. However, the calculated dilution factors for all the vessels were similar. For both the measured and calculated dilution factors, the *M/V Paradise* had the highest dilution factors.

The Panel initially thought that the azipod propulsion may have explained the lower measured dilution factor for the *M/V Explorer*. Closer examination of the draft US EPA report lead the Panel to conclude that the dye in the wastewater tank on the *M/V Explorer* could not have been completely mixed and must have initially discharged at a much higher concentration than was intended. The Panel's analysis was based on a mass-balance calculation comparing the amount of dye discharged per meter traveled (based on the wastewater discharge rate and assuming the dye in

Table 1
Dilution comparisons for four large cruise ships

		Majesty	Explorer	Paradise	Fascination
Width	m	32.6	38.6	31.4	31.4
Depth	m	7.7	8.8	7.75	7.75
Speed	m/sec	8.96	9.78	7.72	4.68
Discharge rate	m^3/h	112	56	68	72
Discharge rate	m^3/s	0.031	0.016	0.019	0.020
US EPA "measured" dilution[a]	Factor	386,057	195,322	643,810	288,412
US EPA "calculated" dilution[a]	Factor	342,123	907,547	666,667	255,449
Panel's "equation" dilution[b]	Factor	289,031	854,309	397,918	227,992
US EPA "measured" dilution divided by US EPA's "calculated" dilution	Ratio	1.12	0.21	0.96	1.13
US EPA "measured" dilution divided by the Panel's "equation" dilution	Ratio	1.3	0.2	1.6	1.3
US EPA "calculated" dilution divided by the Panel's "equation" dilution	Ratio	1.2	1.1	1.7	1.1

[a] From US EPA (2002).
[b] Dilution factor = 4 × (ship width × ship draft × ship speed)/(volume discharge rate).

the tank was completely mixed) to the amount of dye in the water after the ship passed. At the rate of discharge of the effluent, such high dye concentrations as observed would not have been possible had the dye been fully mixed within the tank. When the area in which dye was detected was considered in the later transects behind the ships, bearing in mind that there is quite a variation for each cruise ship, the dilution achieved behind the *M/V Explorer* was reasonably close to that observed for two of the other ships. The measured dilutions assumed a uniform dye concentration in the discharge, and for the *M/V Explorer*, that clearly was not the case. Therefore, for the *M/V Explorer*, only the calculated dilution and not the measured dilution was considered in the Panel's final analysis. Erik Heinen of the US EPA presented the results of US EPA's dye studies at the Oceans 2003 conference in San Diego, California in September, 2003 and agreed that the measured dilution for the *M/V Explorer* should not be used.

Table 1 provides the width, depth, speed and discharge rate of the four cruise ships, followed by the dilution factors determined three different ways. The first two are from US EPA's dye studies (US EPA, 2002) and were reported as measured dilutions and calculated dilutions. The third set of dilution factors were determined from the Panel's mixing equation (Science Advisory Panel 2001), using the actual width, depth, speed and discharge rates. The table then presents three different comparisons of the methods. The first comparison divides the US EPA measured dilutions by the US EPA calculated dilutions. The ratios for three of the ships were 1.12, 0.96 and 1.13 showing fairly good agreement between the two US EPA methods. The ratio for the fourth vessel, the M/V Explorer was 0.21, indicating a significant difference. The second comparison presented in the table is between the US EPA measured dilutions and the dilutions from the Panel's mixing equation. The ratios for three ships were greater than 1 (1.3, 1.6, and 1.3) while the ratio for one ship, the *M/V Explorer*, was only 0.2 (see above). The final comparison in the table is the US EPA's calculated dilution factors divided by the dilutions from the Panel's mixing equation. These ratios are all greater than 1 (1.2, 1.1, 1.7, and 1.1). The table illustrates how the Panel's formula for calculating dilution is conservative when compared to the actual observations by US EPA.

In a short study of opportunity of three cruise ships near Juneau, Alaska (Loehr et al., 2001), the Panel used a fathometer to make simple but detailed observations of the depth and width of turbulent water in the wakes of three cruise ships. The cross-sectional area of turbulence was more than four times the cross-sectional area defined by the draft and beam of the vessels at the water line, providing additional physical evidence supporting the Panel's dilution equation for large cruise ships.

As is evident from the US EPA dye studies, the Panel's recommended dilution equation provides a good agreement with observations in which both the speed (4.7–9.8 m/s or 9–18.8 knots), and the discharge rates (56–112 m^3/h) of the vessels varied by a factor of 2.

3. Alaska's discharge standards for large cruise ships

Under Alaska cruise ship discharge regulations, fecal coliform densities in gray water and black water discharges from large ships may not exceed 200 per 100 mL and total suspended solids may not exceed 150 mg/L. Discharge is only allowed while the vessel is traveling at a minimum speed of 6 knots and is at least 1 nautical mile from shore (Alaska Statute 46.03.463(b) and (c)). A large cruise ship may discharge at any speed and location if they meet much more stringent federal effluent standards.[3] A large cruise ship, not able to meet the above standards, may elect to

[3] The standards established by US Title XIV—Certain Alaska Cruise Ship Operations 1404(c) require that ships must meet the following effluent discharge standards in order to discharge continuously: (1) the discharge satisfies the minimum level of effluent quality specified in 40 CFR 133.102; (2) the geometric mean of the samples from the discharge during any 30-day period does not exceed 20 fecal coliform/100 mL and not more than 10% of the samples exceed 40 fecal coliform/100 mL; (3) concentrations of total residual chlorine may not exceed 10 mg/L. The Act establishing the federal law actually states that chlorine residual cannot exceed 10 μg/L not mg/L. There apparently was a transcription error from the Act to the law that carried forward to the regulations. US EPA and the Coast Guard are in the process of reversing the typo.

hold its wastewaters and discharge them when more than 3 nautical miles from land. Since 2003, more than half of large cruise ships have installed new wastewater treatment technologies that allow them to discharge wastewater continuously in Alaska while the rest have elected to discharge outside of both State (3 miles offshore) and Federal waters (12 miles offshore).

4. Far field dispersion

Depending on the level of treatment, large cruise ships in Alaska may be discharging continuously, or at least one nautical mile from shore, or at least three nautical miles from shore. For those discharging offshore, additional mixing and dispersion following the initial dilution occurs before any effluent reaches the shore. Generally, currents flow parallel to the shoreline and onshore winds are necessary to produce onshore movement of surface waters. The shoreline is the area of most concern for bacterial contamination of shellfish. Under the least favorable conditions, the Panel estimated an additional dilution factor of 100 by the time any of the mixed water might reach the shore (Science Advisory Panel 2001), thus diluting the effluent of a vessel discharging at 200 m^3/h and traveling at 6 knots by a dilution factor of 50,000 × 100 or 5,000,000.

5. Small passenger vessel[4] dilution

The Panel reviewed two studies of smaller ships (Csanady, 1980 and Katz et al., 2003). The Csanady 1980 study was of discharges from towed barges, and the Katz et al., 2003 study was of a Navy frigate with a single propeller. Based on those studies the Panel adjusted the large ship formula by reducing the factor to 3 to create a small ship formula. The following is recommended for calculating dilution for discharges from small commercial passenger vessels:

5.1. Small cruise ship

$$\text{Dilution factor} = 3 \times (\text{ship width} \times \text{ship draft} \times \text{ship speed}) / (\text{volume discharge rate})$$

$$= 3 \times (___\text{m} \times ___\text{m} \times ___\text{m s}^{-1}) / (___\text{m}^3\ \text{s}^{-1})$$

Most of the smaller cruise ships do not have holding tanks, so they are essentially continuous dischargers. Mixing when discharging at anchor or a pier would be considerably reduced and such discharges could be a concern in some areas. Ship discharges differ from land-based point source discharges in that they are mobile, so releases to any particular area are brief, rather than continuous. Because small cruise ships have smaller releases, when their MSD is functioning properly, fecal coliform bacteria or pathogens are unlikely to be a problem, but the Panel recommended they not anchor near any shellfish harvest areas. ADEC has determined that most small ships' MSDs do not function properly on a consistent basis (see Table 14 in ADEC, 2004).

[4] AS 46.03.490 defines a small commercial passenger vessel as one that carries between 50 and 249 passengers for hire with reference to the number of lower berths. This category captures both small cruise ships and some ferries.

6. Dilution and toxicant data

Priority pollutant data were collected in the summer of 2000 from 21 cruise ships. Samples were from black water, gray water and combined discharges. Gray water discharges included many different specific types of wastes such as galley wastes, butcher shop wastes, laundry wastes, showers and sinks. The data set was from before Alaska and Federal legislation imposed additional treatment requirements on the industry and a time period before many of the cruise ships had installed advanced wastewater treatment systems. This data set is therefore appropriate for evaluating the possible impacts associated with discharges of the time, and also for evaluating the benefit of the requirements imposed by the State and Federal governments. The data set for the summer of 2000 and for samples collected in 2001 is presented in Appendix 6 of the Panel's *The Impact of Cruise Ship Wastewater Discharge on Alaska Waters* report (Science Advisory Panel and ADEC 2002). The 2000 data set clearly showed that a number of toxicants in the wastewater discharges exceeded Alaska's water quality standards. Effluent bacteria data from the same time period were also shown to greatly exceed Alaska's water quality standards (Discussed Further in Section 8). Taken together, the bacteria and toxicant data stirred public outrage, media coverage and governmental responses.

The Panel examined how the initial rapid dilution changes the evaluation of the toxicant data compared to directly comparing the effluent concentrations to the water quality criteria. Rapid dilution is relevant to considering actual potential exposures for aquatic life. Both US EPA and all 50 States typically allow the use of mixing zones in the evaluation and permitting of point source dischargers. Alaska's water quality standards are based on US EPA's recommended water quality criteria. The water quality criteria include a duration component. Acute criteria generally are based on organisms not receiving more than a one-hour exposure to levels above the criteria more than once every three years. Chronic criteria are generally based on organisms not receiving more than a four-day exposure to levels above the criteria more than once every three years. Both US EPA and Alaska specifically acknowledge a way to consider duration of exposure for acute mixing zones.

US EPA (1991) describes how an acute mixing zone should be established to prevent lethality to passing organisms. The guidance recognizes that the water quality criteria include duration of exposure considerations. Specifically, US EPA allows that a drifting organism

should not be exposed to 1-h average concentrations exceeding the acute criteria, and that if travel time for a drifting organism through the acute mixing zone is less than 15 min, then a 1-h average exposure would not be expected to exceed the acute criterion. The same demonstration is allowed for in Alaska's Water Quality Standards at 18 AAC 70.255(d). The Panel views the rapid initial dilution calculated from the recommended mixing equation as occurring within 15 min following the discharge.

Appendix 2 in the Panel's report (Science Advisory Panel and ADEC 2002) presented a table that showed for each priority pollutant from the Summer 2000 data set the number of samples analyzed; the number of samples with detections; the detection limits; the maximum concentrations detected in gray water, black water and/or combined discharges; the average concentrations in the data set; the waste concentrations after an initial dilution factor of 50,000; and the applicable State criteria for marine waters. A condensed version, showing only the maximum concentrations detected, for those priority pollutants where there were detections, and where there was a state water quality standard for comparison is presented in Table 2. The table shows the pollutant, the state water quality standard, the maximum concentration detected, and the concentration after a minimum dilution factor of 50,000.

The Summer 2000 data set represented discharges before Alaska and the Federal Government imposed new treatment requirements or discharge restrictions. After consideration of the initial rapid dilution, no large cruise ship discharge from the Summer 2000 data set resulted in an exceedance of any of the State toxicant water quality standards during underway discharge. However, many of the same discharges would have presented water quality problems if they occurred while the vessel was stationary, because the dilution benefit would be greatly reduced.

The list of priority pollutants is an old list and there are new chemicals used throughout the world that may be more important even though there are no current water quality criteria for them. In Section 8 of the Panel's report (Science Advisory Panel and ADEC 2002), the Panel noted there were numerous studies mostly in freshwaters that were partially fed either by wastewater from treatment plants or runoff from confined animal feeding operations that detected a large number of different compounds at trace (parts per trillion) levels. The most frequently detected groups of these non-traditional pollutants were steroids, nonprescription drugs, insect repellant (DEET), and detergent metabolites. In terms of highest concentrations noted in most studies of publicly owned treatment works (POTW) wastes, detergent metabolites, steroids

Table 2
Maximum observed priority pollutant data from large cruise ships during the summer of 2000, compared to water quality criteria before and after a minimal dilution factor of 50,000

Priority pollutant	Alaska Marine Water Quality Standard (μg/L)	Maximum observed effluent concentration (μg/L)	Concentration after dilution factor of 50,000 (μg/L)
Carbon tetrachloride	50,000 (acute)	27	Negligible
1,2-Dichloroethane	113,000 (acute)	1.9	Negligible
Toluene	5000 (chronic)	5.1	Negligible
Tetrachloroethene	450 (chronic)	740	Negligible
Dibromochloromethane	6400 (chronic)	93	Negligible
Ethylbenzene	430 (acute)	4.7	Negligible
Bromoform	3600 (h.health)	170	0.004
Phenol	5800 (acute)	250	0.005
1,3-Dichlorobenzene	1970 (acute)	380	0.008
1,4-Dihlorobenzene	1970 (acute)	350	0.007
1,2-Dichlorobenzene	1970 (acute)	390	0.008
2-Nitrophenol	4850 (acute)	5.4	Negligible
Naphthalene	2350 (acute)	3.0	Negligible
2,4,6-Trichlorophenol	65 (h. health)	3.2	Negligible
Dimethylphthalate	3.4 (chronic)	1.1	Negligible
Acenaphthene	710 (chronic)	7.7	Negligible
4-Nitrophenol	4850 (acute)	8.0	Negligible
Diethylphthalate	3.4 (chronic)	27	0.0005
Di-*n*-butylphthalate	3.4(chronic)	20	0.0004
Fluoranthene	16 (chronic)	1.2	Negligible
Cadmium	9.3 (chronic)	0.35	Negligible
Chromium (total)	50 (chronic for hexavalent)	53	0.001
Copper	2.9 (acute)	7100	0.14
Nickel	8.3 (chronic)	630	0.01
Zinc	86 (chronic)	1800	0.036
Lead	5.6 (chronic)	250	0.005
Mercury	0.025 (chronic)	0.67	0.00001
Silver	2.3 (acute)	7.5	0.0001
Cyanide	1.0 (chronic)	73	0.005

and plasticizers were the three categories that stood out from the others. Cruise ship wastewaters may be expected to contain the same non-traditional compounds as POTWs, but compared to POTWs on a mass-balance basis, the contributions of these chemicals to the environment by cruise ships has to be relatively minor in extent. The Panel also understood that the mixing behind moving cruise ships was much greater than for POTWs and other sources discharging to freshwater streams and rivers.

7. Dilution and whole effluent toxicity test results

There was a request from a member of the public to the ADEC to evaluate the toxicity of cruise ship effluents by the use of bioassay testing. The Panel recognized that because of the rapid dilution, such tests probably were not needed, but still recommended a limited testing program in order to answer the concern.

The use of bioassays in testing effluents is called whole effluent toxicity (WET) testing. WET testing typically involves acute and chronic bioassays conducted with a dilution series, to calculate either a no observed effects concentration (NOEC) or a point estimate of an effect such as a lethal concentration to 50% of tested organisms (LC_{50}). Dilution series for land-based point sources typically look at a progression that decreases by a factor of 2, such as 50%, 25%, 12.5%, 6.25% and 3.125% effluent. Because moving cruise ships have much greater initial dilution, the Panel recommended a dilution series that decreased by a factor of 10 (50%, 5%, 0.5%, 0.05%, 0.005% and 0.0005% effluent). Acute marine bioassays were run using mysids (shrimp) and topsmelt (fish). Chronic bioassays were run using a bivalve larvae test and an echinoderm fertilization test. A review of the 2002 WET testing data was presented as Appendix 8 in the Panel's report (Science Advisory Panel and ADEC 2002).

The WET test results were interesting. One sample came from a vessel that used a reverse osmosis treatment system, and there were no acute or chronic effects at the highest effluent concentration tested (50%). Another sample was a black water sample from a small cruise ship that used a macerator/chlorinator system that was obviously not working at the time the sample was drawn. That sample also exhibited no acute or chronic effects at the highest effluent concentration tested (50%). Other test results had acute NOECs varying from 50% to 0.5% effluent and chronic NOECs varying from 5% to 0.05%. The lowest chronic NOEC was equivalent to an effluent after a dilution factor of 2000.

Excessive residual chlorine concentrations (16,200 μg/L and 30,300 μg/L) in two of the effluents appeared to explain the WET results for the samples that exhibited the most toxicity.

Acute or chronic toxic effects on marine organisms are not expected at the high dilutions that occur when vessels are underway. ADEC designed the 2003 WET tests to determine if there were any negative effects to the marine environment during stationary discharges when the dilution factor would be low. The effluent concentrations used for the 2003 WET tests decreased step-wise by a factor of 2, similar to concentrations typically used for land-based point sources. ADEC calculated stationary dilution factors for each ship during a worst case neap tide (lowest tidal range and tidal currents) scenario. The acute NOECs ranged from 50% to 12.5% effluent. The chronic NOECs ranged from 50% to less than 1.5%. The large cruise ship specific dilution factors indicate that large cruise ships' wastewater effluent will not cause toxicity in receiving waters even during stationary discharge. Stationary wastewater discharge from small cruise ships may cause toxicity.

8. Dilution and bacteria

Section 3 of the Panel's report (Science Advisory Panel and ADEC 2002) evaluated bacteria data. The relevant scenarios of exposure to large cruise ship discharges include secondary contact recreation by fishermen, kayakers, and motor powered watercraft, such as jet skis crossing a cruise ship wake shortly after passage of the cruise ship, and raw shellfish consumers harvesting shellfish along the shoreline. The applicable standards for these two situations include the following:

- Secondary recreation, defined in Alaska water quality regulations as recreation activities in which water use is incidental, accidental, or sensory, including fishing, boating, camping, hunting, and hiking. The applicable bacteria standard is 200 fecal coliform (FC) per 100 mL as a geometric mean for samples over a 30-day period with no more than 10% of the samples exceeding 400 FC/100 mL.
- For harvesting of raw mollusks or other raw aquatic life for human consumption the applicable standard is based on a 5-tube decimal dilution test, the median most probable number (MPN) may not exceed 14 FC/100 mL, and not more than 10% of the samples may exceed a median MPN of 43 FC/100 mL.

During the Summer 2000 monitoring season, 94 black water, 81 gray water and 11 combined black and gray water samples taken from 21 different large cruise ships were analyzed for fecal coliform bacteria. The geometric mean of the effluent data was 5460 FC/100 mL, the median was 27,500 FC/100 mL and the range of values was from less than 2 to more than 32,000,000 FC/100 mL. Gray water bacteria levels were often as high as black water.

Appendix 7 of the Panel's report included a spreadsheet with all the bacteria data, showing the effluent concentrations, and the concentrations after dilution factors of 50,000, 500,000 and 5,000,000. A dilution factor of 50,000 is considered to be a minimal dilution to which someone might be exposed when engaged in secondary recreation activities in the wake of a cruise ship that was discharging. A dilution factor of 5,000,000 is considered to be a minimal dilution by the time any effluent discharged

more than a nautical mile from land might approach the nearest shore when onshore winds existed. The Panel concluded that the dilution factor of 5,000,000 was conservative for bacteria since a number of other processes also affected bacterial numbers (e.g. consumption or die-off, in the water column). Table 3 presents a summary of the bacteria data information (geomean, median, % greater than 400 and % greater than 43) of the Summer 2000 data for comparison to the applicable standards.

The available data coupled with the relevant dilutions, indicate that violations of the applicable bacterial water quality standards were not predicted to occur for any of the relevant exposure scenarios from the summer 2000 bacteria data set.

The State of Alaska and the Federal Government have established new regulatory limits for bacteria in gray water and black water discharges from large cruise ships equal to the secondary contact recreation standard. These regulations also require that a vessel must be at least one nautical mile from shore and travel at 6 knots or greater (unless they have a very high level of treatment in which case they may discharge continuously, even in port) In 2004, Alaska changed its approach to small passenger vessel wastewater effluent management. Emphasis has moved away from adherence with bacteria limits to Best Management Practices that eliminate or reduce stationary wastewater discharge (2004 Alaska House Bill 522).

Data from the summer 2001 involved fewer large cruise ships (11) and fewer samples. Twelve of the combined black and gray water samples from 2001 were from ships providing new advanced treatment and four were from an MSD system. The summer 2001 data set had a geometric mean of 1.6 FC/100 mL, a median of 1 FC/100 mL and less than 10% exceeded 43 FC/100 mL. Hence without dilution, the tested combined black and gray water effluents met the most stringent bacteria water quality standard. In compliance with the state's requirements, no vessels discharged untreated black water in the state's waters, and either provided advanced treatment or discharged more than 3 nautical miles offshore. The gray water tested in the summer of 2001 did not yet require advanced treatment and bacterial levels observed were similar to gray water from the summer of 2000.

The regulatory limit is applied directly to the large cruise ship discharge, without any consideration of the dilution attained by the 6 knot—1 nautical mile distance requirement. The Panel's evaluation of the Summer 2000 data set was based on the mixing conditions that occur under the same minimal constraints of discharge at 6 knots and one nautical mile from shore as required in the new regulations. The technology forcing standard was imposed before the Panel's report was completed. The analysis by the Panel shows that as long as discharges were at speeds greater than or equal to 6 knots and at least 1 nautical mile from the shore, the water quality standards were met and there was not a water quality reason to impose the Alaskan technology standard for bacteria.

Cruise ship discharges of bacteria should be considered within the context of a background of fecal coliform from all land-based sources. There will be a number of different sources to the nearshore bacteria that will produce significant exceedances of the standards, and the focus on offshore discharges from cruise ships does not address the real problems.

Table 3
Summary statistics for all bacteria data from Summer 2000 after applying dilution factors (DF)

	Geomean	Median	%>400	%>43
DF 50,000	5.46	27.5	2	20
DF 500,000	0.55	2.75	0	2
DF 5,000,000	0.05	0.28	0	0

Geometric mean and median values are in FC/100 mL.
Alaska's standard for secondary contact recreation was met with the dilution factor of 50,000. Alaska's raw shellfish consumption standard was met with a dilution factor of 500,000.

9. Dilution and nutrients

The limiting nutrient for phytoplankton growth in Southeast Alaska marine waters is dissolved nitrogen. From effluent nutrient data collected in the summers of 2000 and 2001, the maximum mean total nitrogen concentration in large cruise ship wastewater discharges was estimated to be 5 mmols (5 mM) or 0.07 mg/L. By applying a minimum mixing factor of 50,000, the wastewater total nitrogen concentrations after the initial rapid mixing are one-tenth to one-hundredth of the lowest Alaska marine water background concentration, or about 0.1 μmol (μM). This amount of nitrogen can be converted to a very small amount of phytoplankton over the next several days, approximately 0.03 μg of chlorophyll per liter. This amount of chlorophyll is only a hundredth to a thousandth of the naturally existing phytoplankton, and for computational purposes, is treated as if it stayed in the relatively small volume of water of initial mixing. The computation does not mean that there would be an increase of 0.03 μg per liter of chlorophyll to all the surface waters. Essentially, given the initial rapid dilution, and subsequent dilution, the discharged water will have little impact on the natural nutrient cycle.

10. Summary

The following simple equations may be used to conservatively describe dilution of wastewater discharges from moving large and small cruise ships.

10.1. Large cruise ship

$$\text{Dilution factor} = 4 \times (\text{ship width} \times \text{ship draft} \times \text{ship speed}) / (\text{volume discharge rate})$$

$$= 4 \times (___\text{m} \times ___\text{m} \times ___\text{m s}^{-1}) / (___\text{m}^3\ \text{s}^{-1})$$

10.2. Small cruise ship

Dilution factor = 3 × (ship width × ship draft × ship speed)
/(volume discharge rate)
= 3 × (___m × ___m × ___m s^{-1})/(___m^3 s^{-1})

The effects of dilution on toxicant data, whole effluent toxicity test results, bacteria data and nutrient data based on effluent data obtained before the vessels came under the new Alaska discharge standards for cruise ships, demonstrated that black water and gray water discharges from cruise ships would not have resulted in exceedances of water quality standards, provided the ships were traveling at speeds of 6 knots or greater, and were at least 1 nautical mile from shore. The Panel's final report[5] is available online.

Acknowledgement

The authors were all members of the Science Advisory Panel. Other members of the Science Advisory Panel included: Dr. Ken Hall, Department of Civil Engineering and Institute for Resources and Environment, University of British Columbia, Vancouver, B.C., Canada; Dr. Michael Stekoll, Professor of Chemistry and Biochemistry, University of Alaska, Juneau, AK, USA; and Michael Watson, Senior Toxicologist, US EPA Region X, Seattle, WA, USA. The following people also assisted the Panel. Denise Koch and Carolyn Morehouse, both who were with Alaska Department of Environmental Conservation's Commercial Passenger Vessel Environmental Compliance Program, worked directly with the Panel, providing detailed information of cruise ship operations, effluent sampling and data analysis. Denise Koch also provided very helpful editorial review of this paper. Madonna Narvaez, US EPA Region X, Seattle, WA, USA provided guidance on defining the WET testing program. David Eley, Cape Decision International Services, Juneau, AK, USA served as the facilitator for the Panel. Dr. Eric Crecelius, Battelle Pacific Northwest Laboratory, Sequim, WA, USA provided guidance on sediment accumulation rates. Representatives of Holland America, the Pacific Northwest Cruise Ship Association, and International Council of Cruise Lines provided information on vessel operations and chemical usage aboard ships.

2/16/10 LUNCH & LEARN: HEAVY OIL VS. LIGHT OIL

bp

Heavy Oil vs. Light Oil

Legislative Brown bag

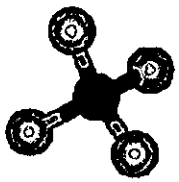
February 2010 Juneau

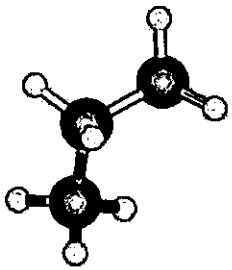
Heavy Oil – Key Properties

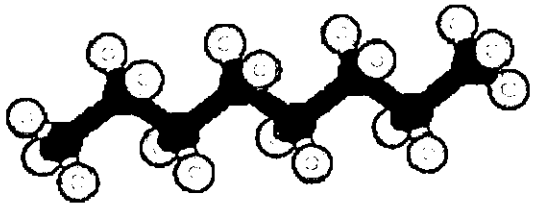
- Viscosity (Physical Property)
  - Flows through a reservoir very slowly: wells produce at lower rates than light oil wells
  - Heavy oil developments involve lots of wells
  - Waterflooding (EOR) is not viable due to the viscosity contrast between heavy oil and water
  - Thermal techniques (e.g. steam) can be effective in increasing recovery but energy balance is an issue and conditions must be just right in the reservoir
- Hydrogen Content (Chemical Property)
  - Heavy oil is depleted in hydrogen relative to light oil
  - Fewer refined products are derived from heavy oil
  - Heavy oil fetches a lower price on the market

What is heavy oil?

Light End Molecules





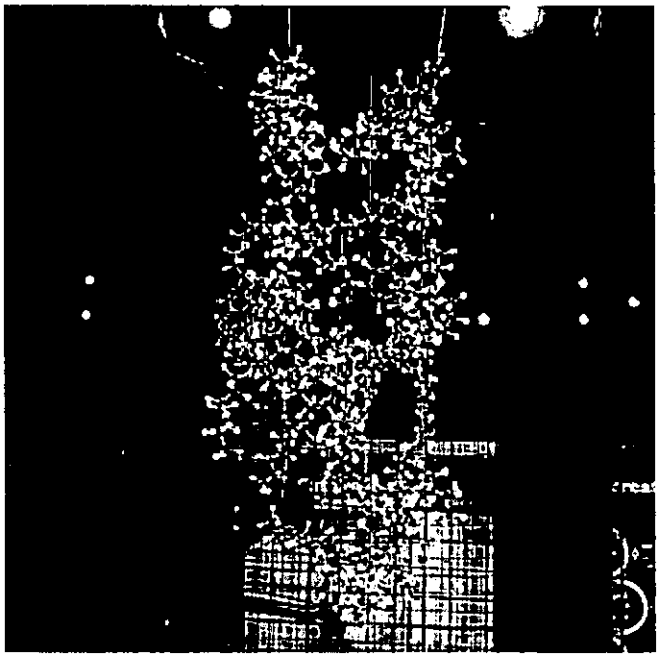


North Slope Heavy oil is a residue formed from light oil that has lost the small (light) molecules leaving the heavy ones. These form hydrocarbon compounds characterized by long, very complex molecules.

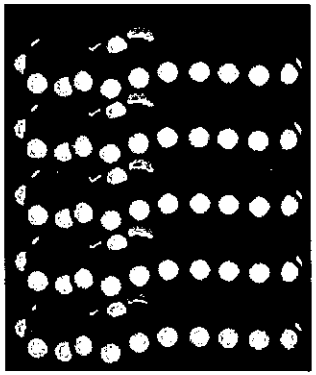
Most of the hydrogen is in the light ends so heavy oil is depleted in hydrogen.

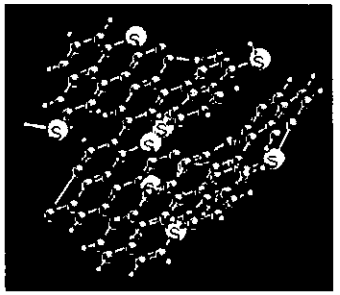
The long molecules of heavy oil impart high internal friction resulting in high viscosity.

Heavy End Molecules



A heavy oil model in a Calgary museum



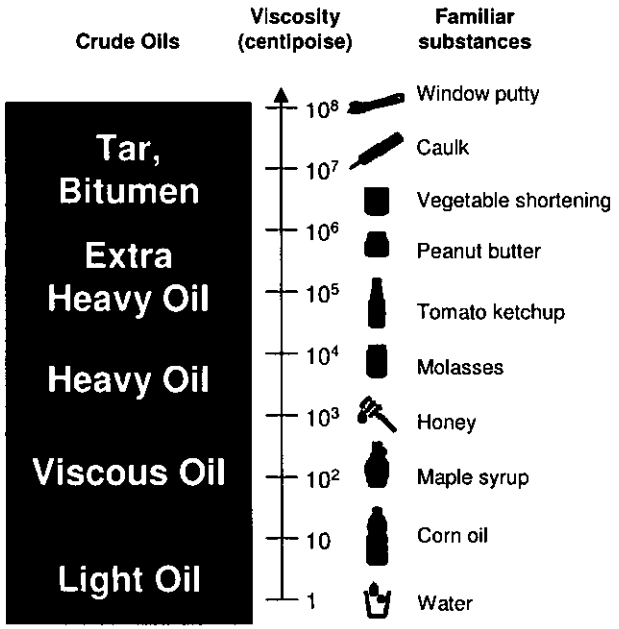


API Gravity of some standard crudes

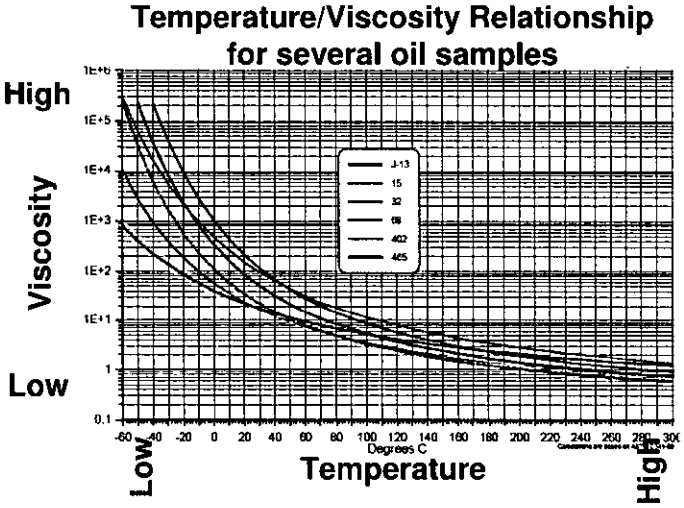
	Gravity	API Definition
• West Texas Intermediate	40	Light
• Canadian Syn-crude	33	
• Arab Light	32	
• Alaska NS Crude	29	Medium
• Arab Heavy	27	
• Alaska Viscous	16 to 24	Heavy
• Alaska Heavy (Ugnu)	8 to 14	
• Water	10	Extra Heavy
• Venezuela (Orinoco)	10	
• Canadian Lloydminster	9 to 18	
• Canadian Athabasca	6 to 10	

Gravity ≠ Viscosity
The term "Heavy Oil" is a reference to the high density (API Gravity) of those oils. The measurement that we care most about today is viscosity since that is the property which governs well productivity. Viscosity is not synonymous with Gravity. There is a positive, but very loose correlation between gravity and viscosity that is specific to a given oilfield - but any quantitative transform from API Gravity to Viscosity is a rough approximation at best and there are no transforms or rules of thumb for oils in general.

Viscosity



- Viscosity is the resistance a material has to change in form. It is commonly described as internal friction.
- Viscosity reduction
  - Heat
  - Dilution (Diluent)

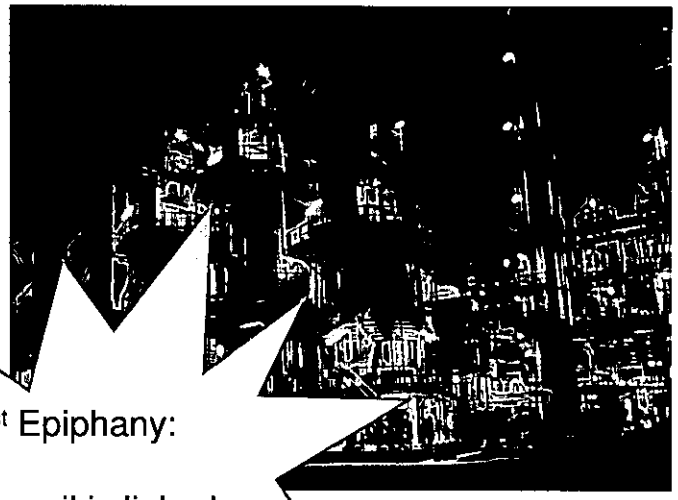


HOT

Heavy Oil Export Options

bp

- [x] Change physical properties – Upgrade
- [x] Add heat to TAPS
- [x] Dilute heavy oil with light oil



1st Epiphany:

Heavy oil is linked to light oil by Diluent

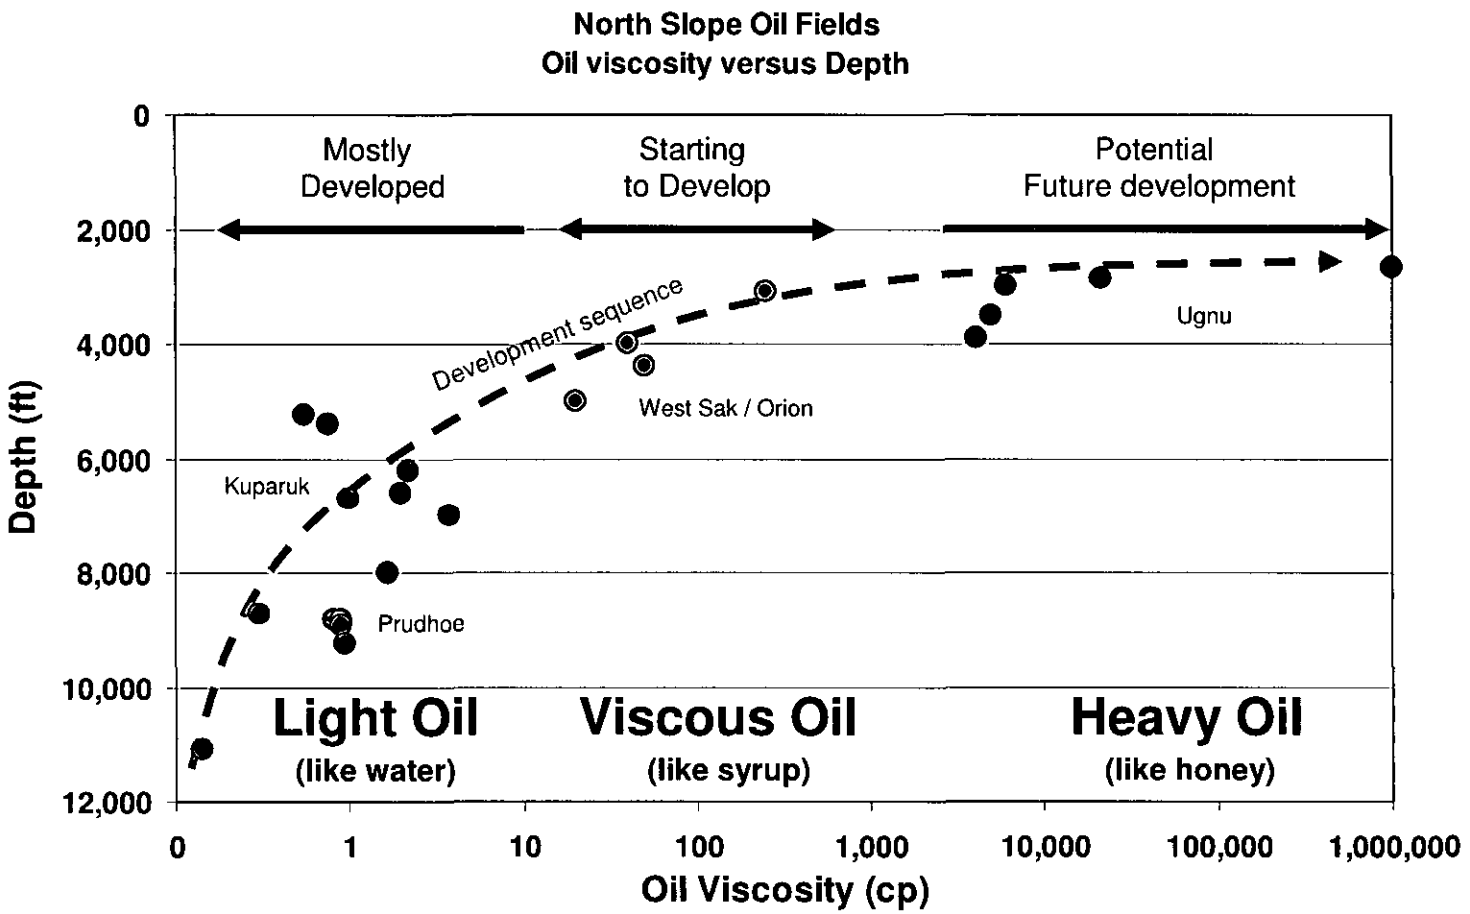
2nd Epiphany:

Given that linkage, we need to figure out heavy oil NOW - not <u>after</u> light oil

HOT

Alaska Fluid Viscosity

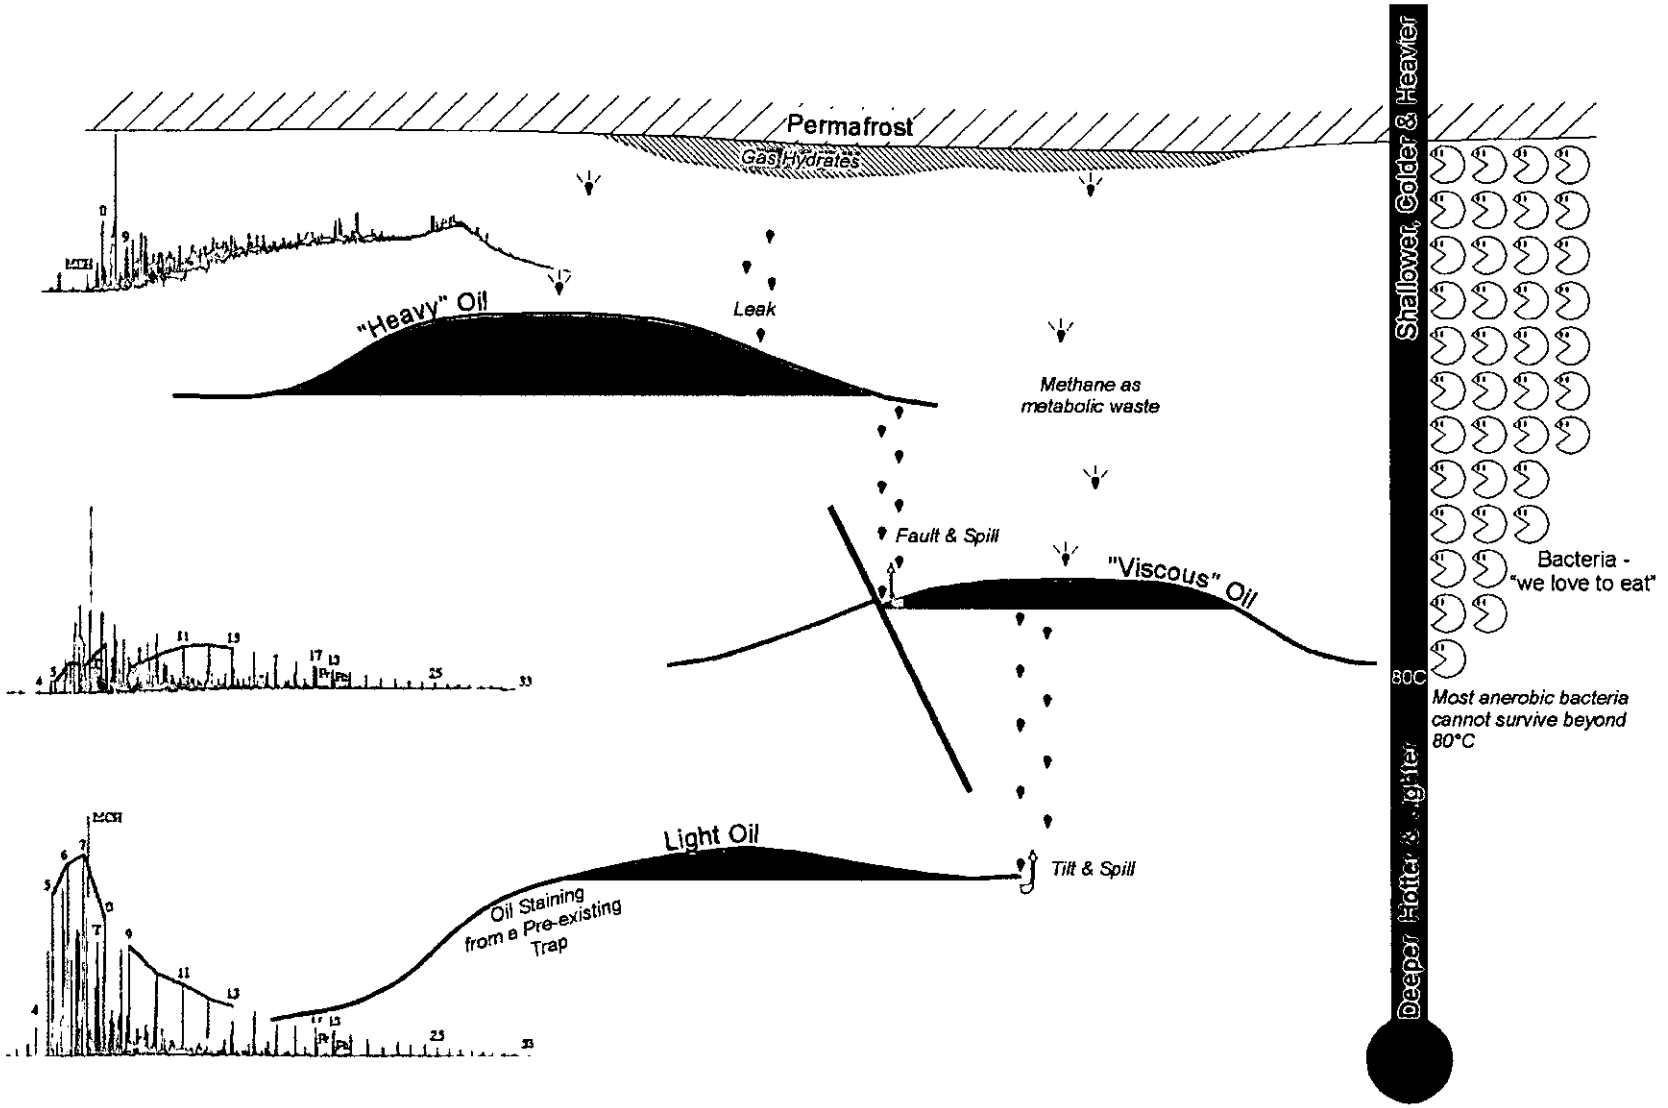
Alaska fluids range over a continuum of viscosities



The term "Viscous Oil" is a home grown, Alaska term. You won't find it defined in the literature or used outside of Alaska. What we term Viscous Oil in Alaska is referred to as Heavy Oil in the industry.

HOT

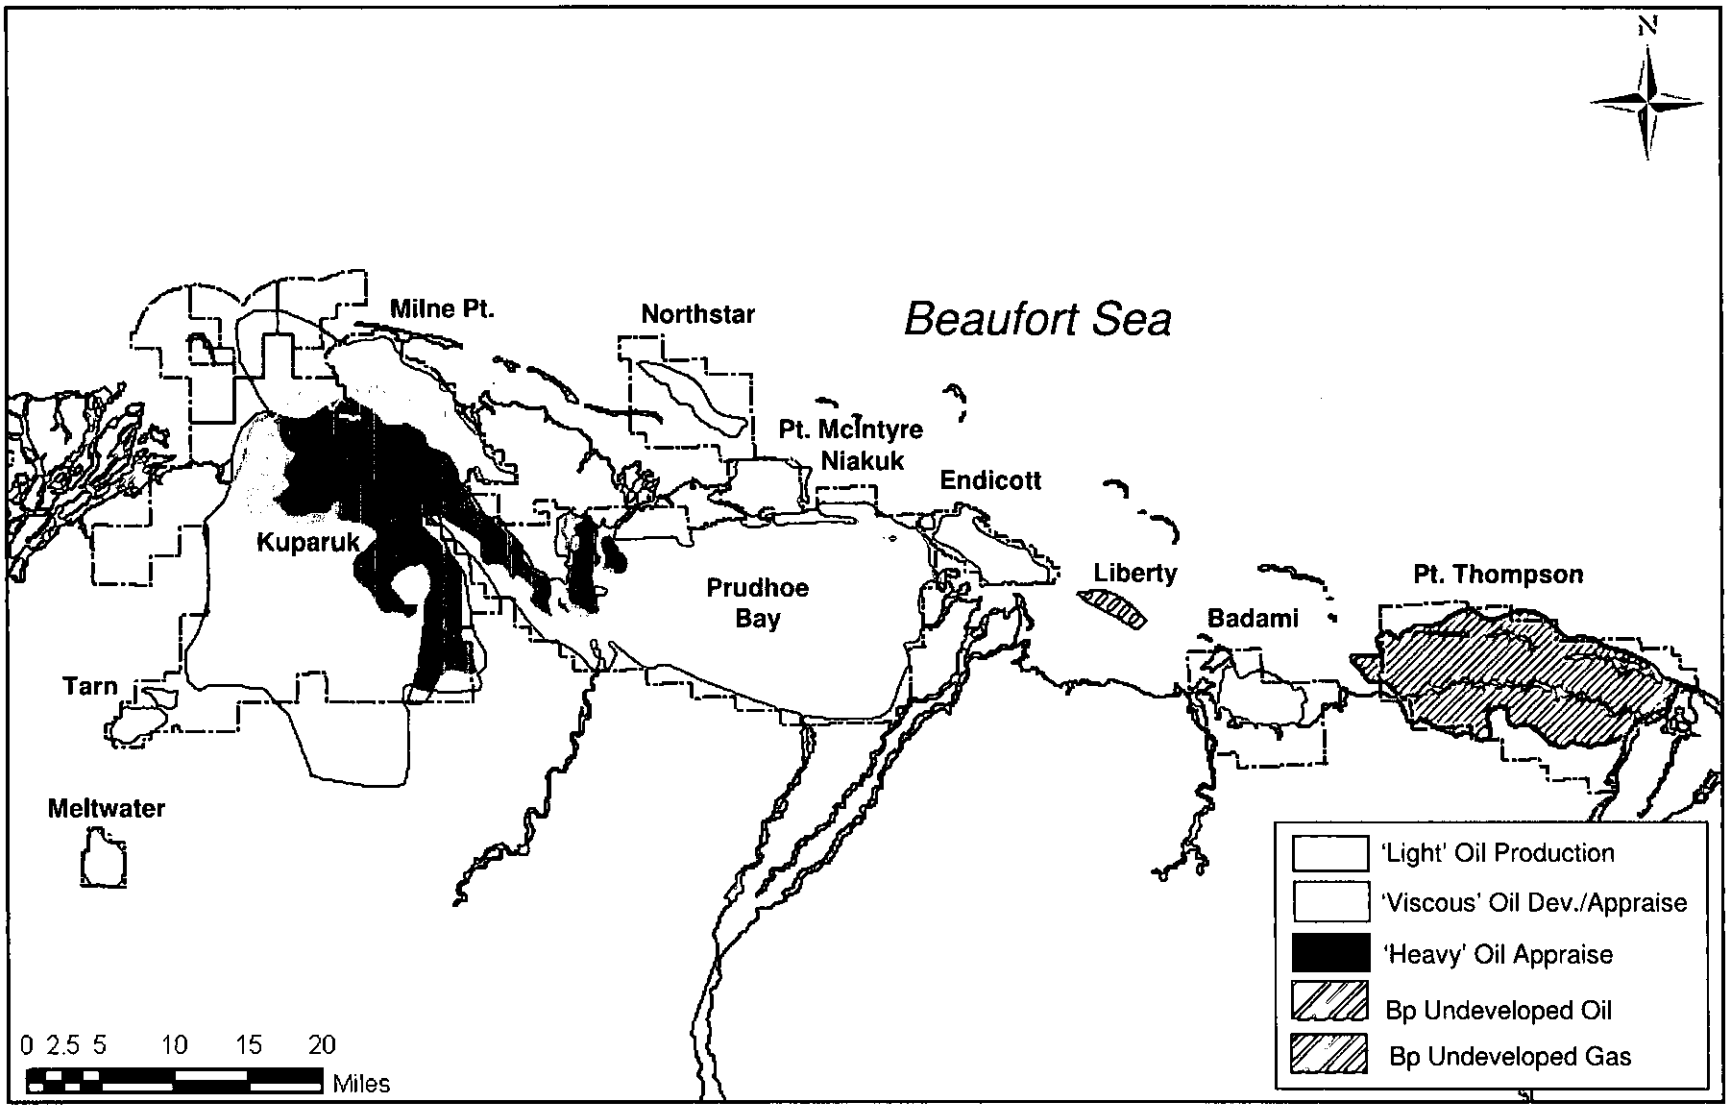
Oil vs. Bacteria



HOT

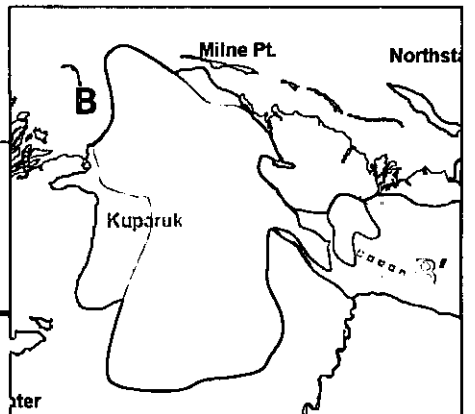
Alaska Viscous and Heavy Oil

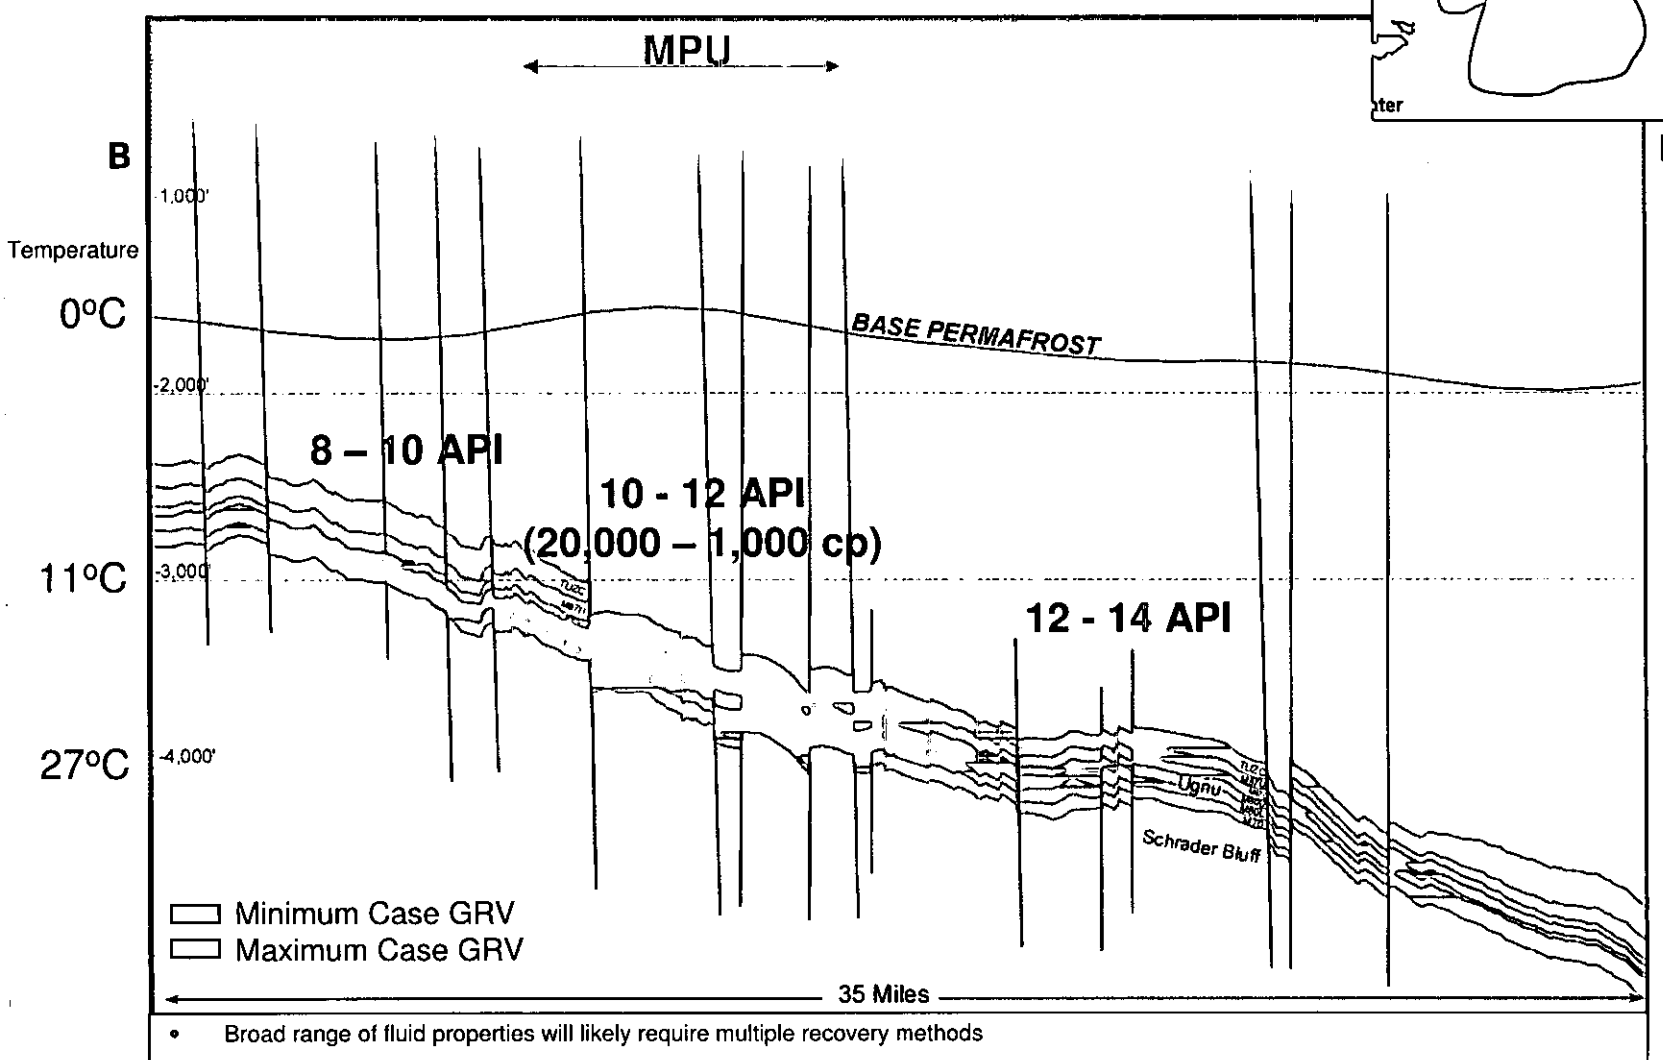
Geographic coincidence is no coincidence



CONFIDENTIAL AND PROPRIETARY DATA OF BP EXPLORATION (ALASKA) INC. DO NOT DISCLOSE WITHOUT BP'S CONSENT.

Ugnu Structure & Fluid Quality





HOT

Stratigraphic and Volumetric Distribution

Heavy oil is found in the shallowest reservoirs (Ugnu), light oil in the deepest

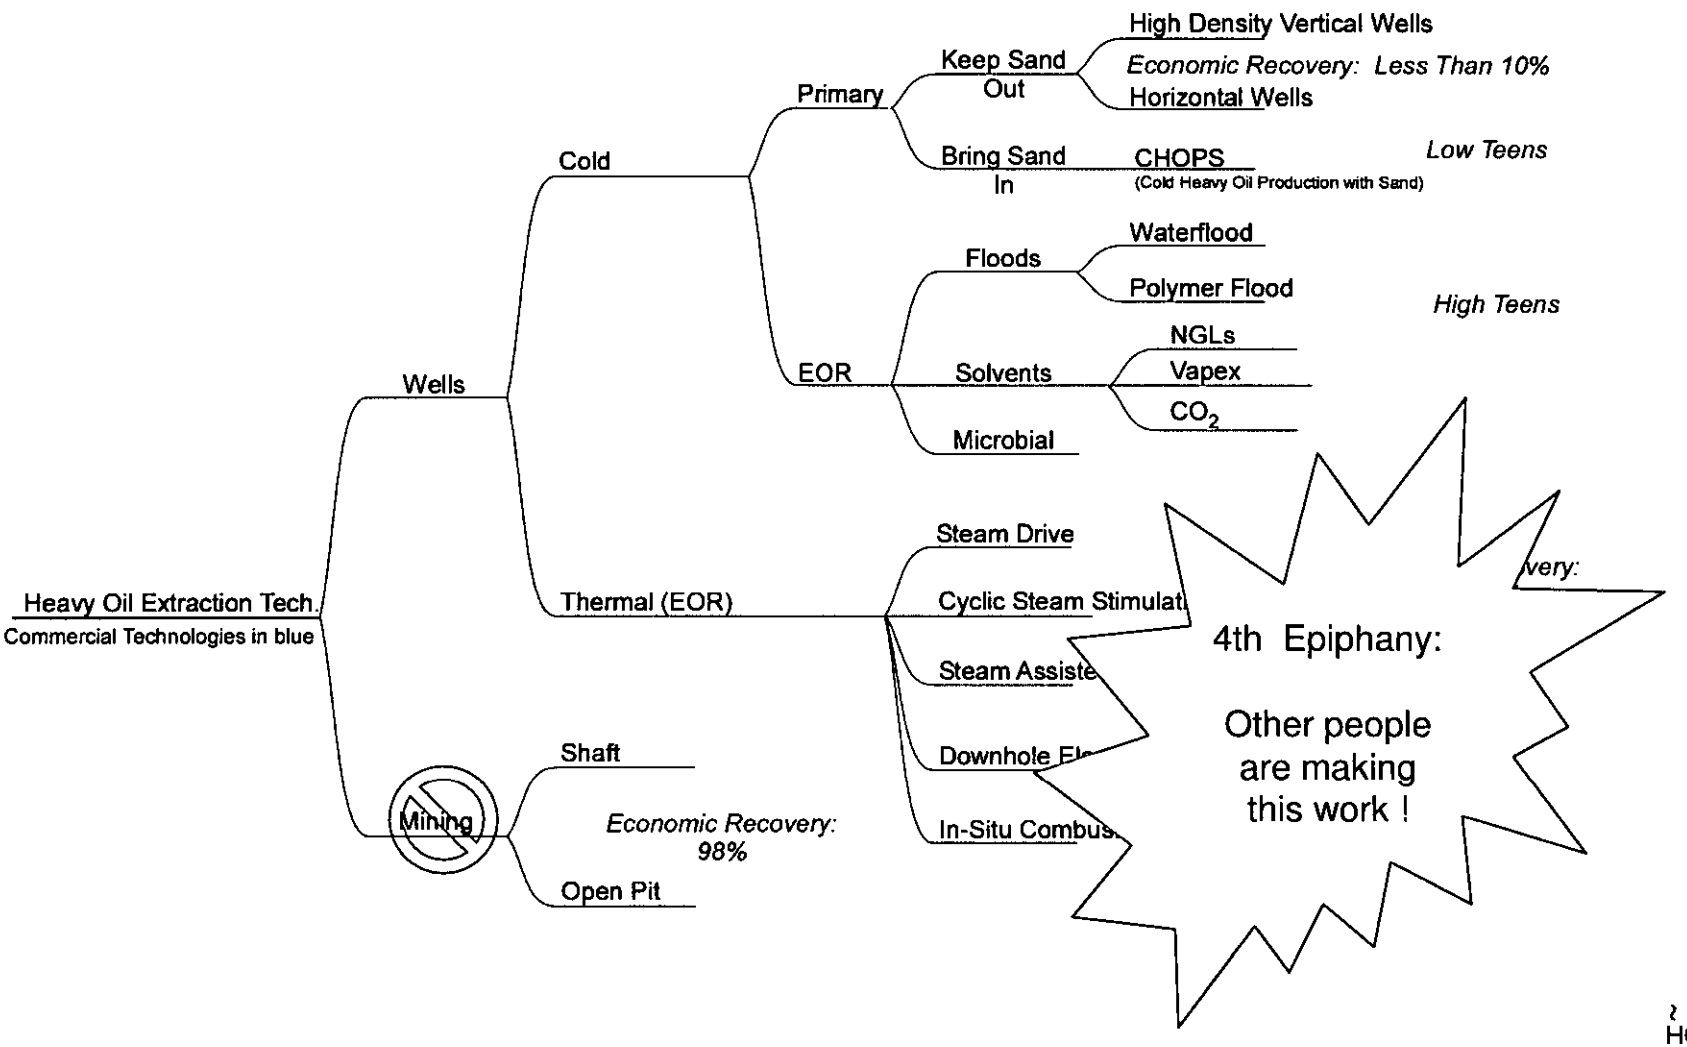
	OOIP	Produced
Ugnu Heavy Oil	13 to 21 Billion	0
West Sak & Schrader Bluff	5 to 6 Billion	150 Million
Kuparuk, Prudhoe, Pt Mac, Northstar, Lisburne, Liberty, Endicott	18 to 27 Billion	150 Millio

3rd Epiphany:

Wow – this could be really big !

HOT

Heavy Oil Depletion Technology

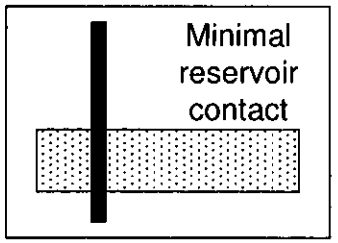


HOT

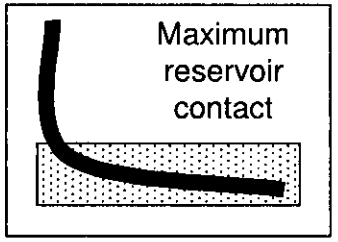
Horizontal Wells & Motherbores

The horizontal well concept is to maximize contact with the reservoir. Horizontal wells are operationally simple as they keep sand out, but recovery factor is likely low and well density must be high to compensate

Vertical Wells



Horizontal Wells

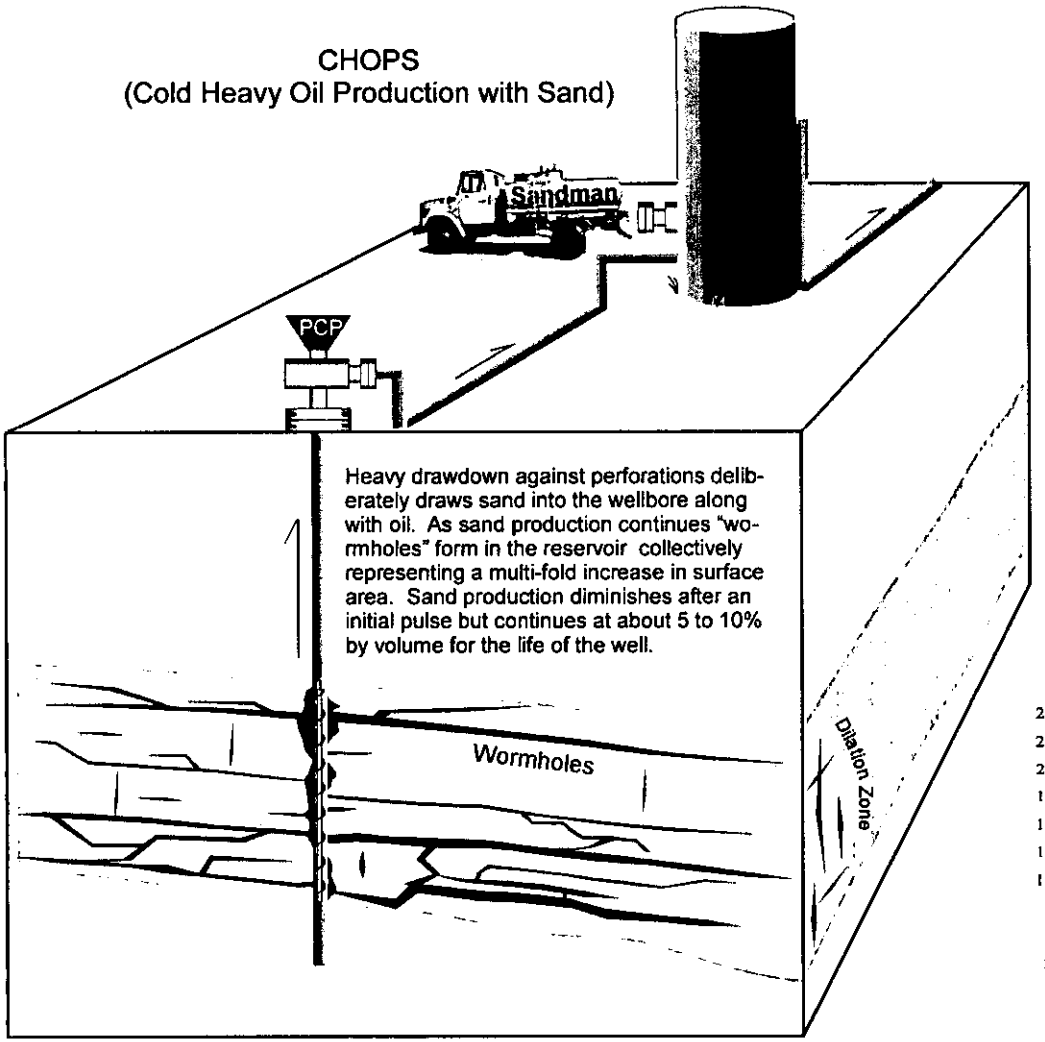


Piloting at S-Pad

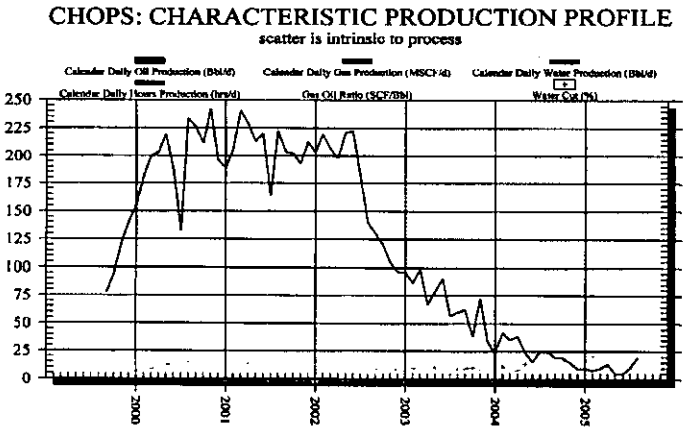
Motherbores - Many Horizontal laterals in one well

HOT

CHOPS Elements

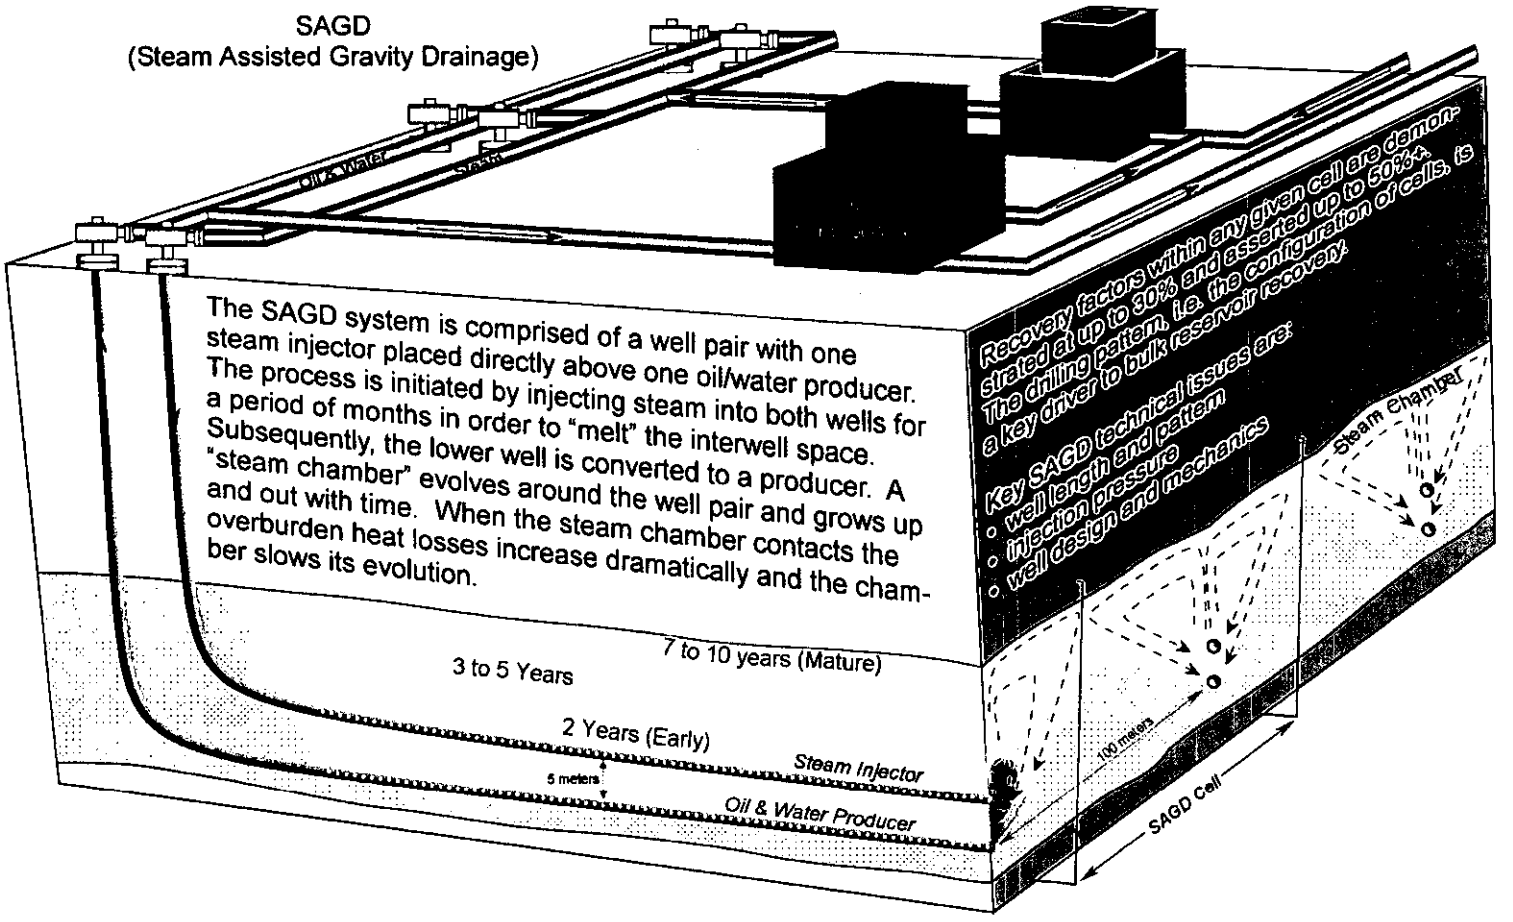


- Unconsolidated rocks
- PCP Pump
- Surface Drive
- Heated Separation Tank
- Sand Disposal

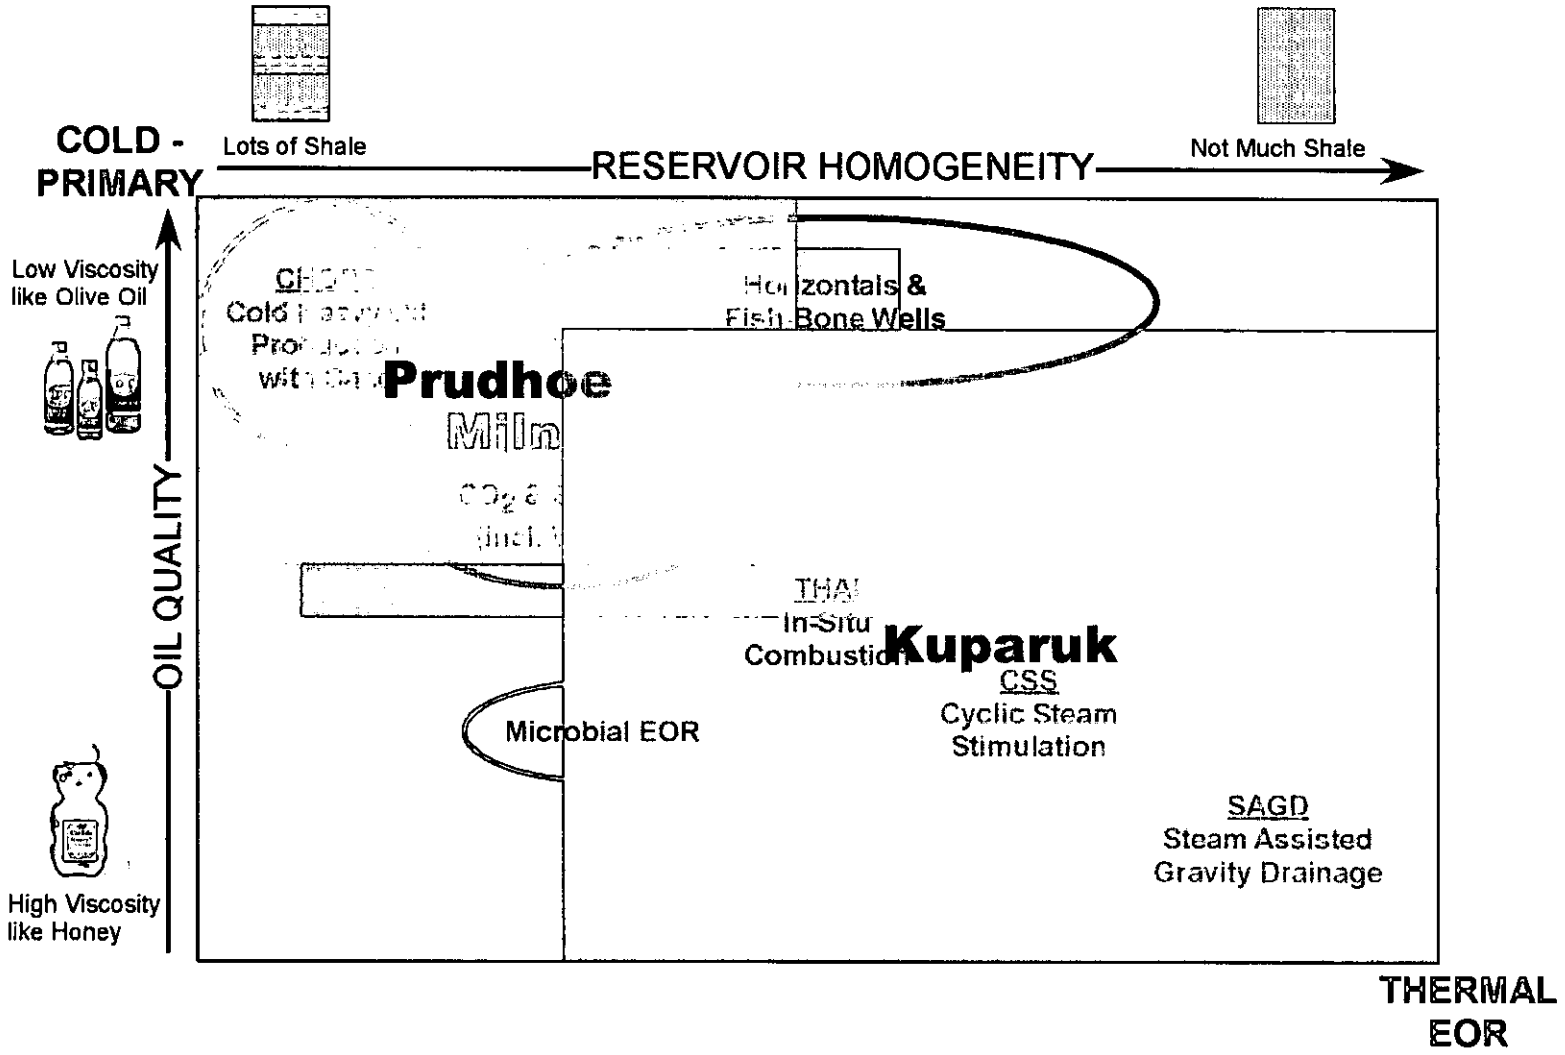


HOT

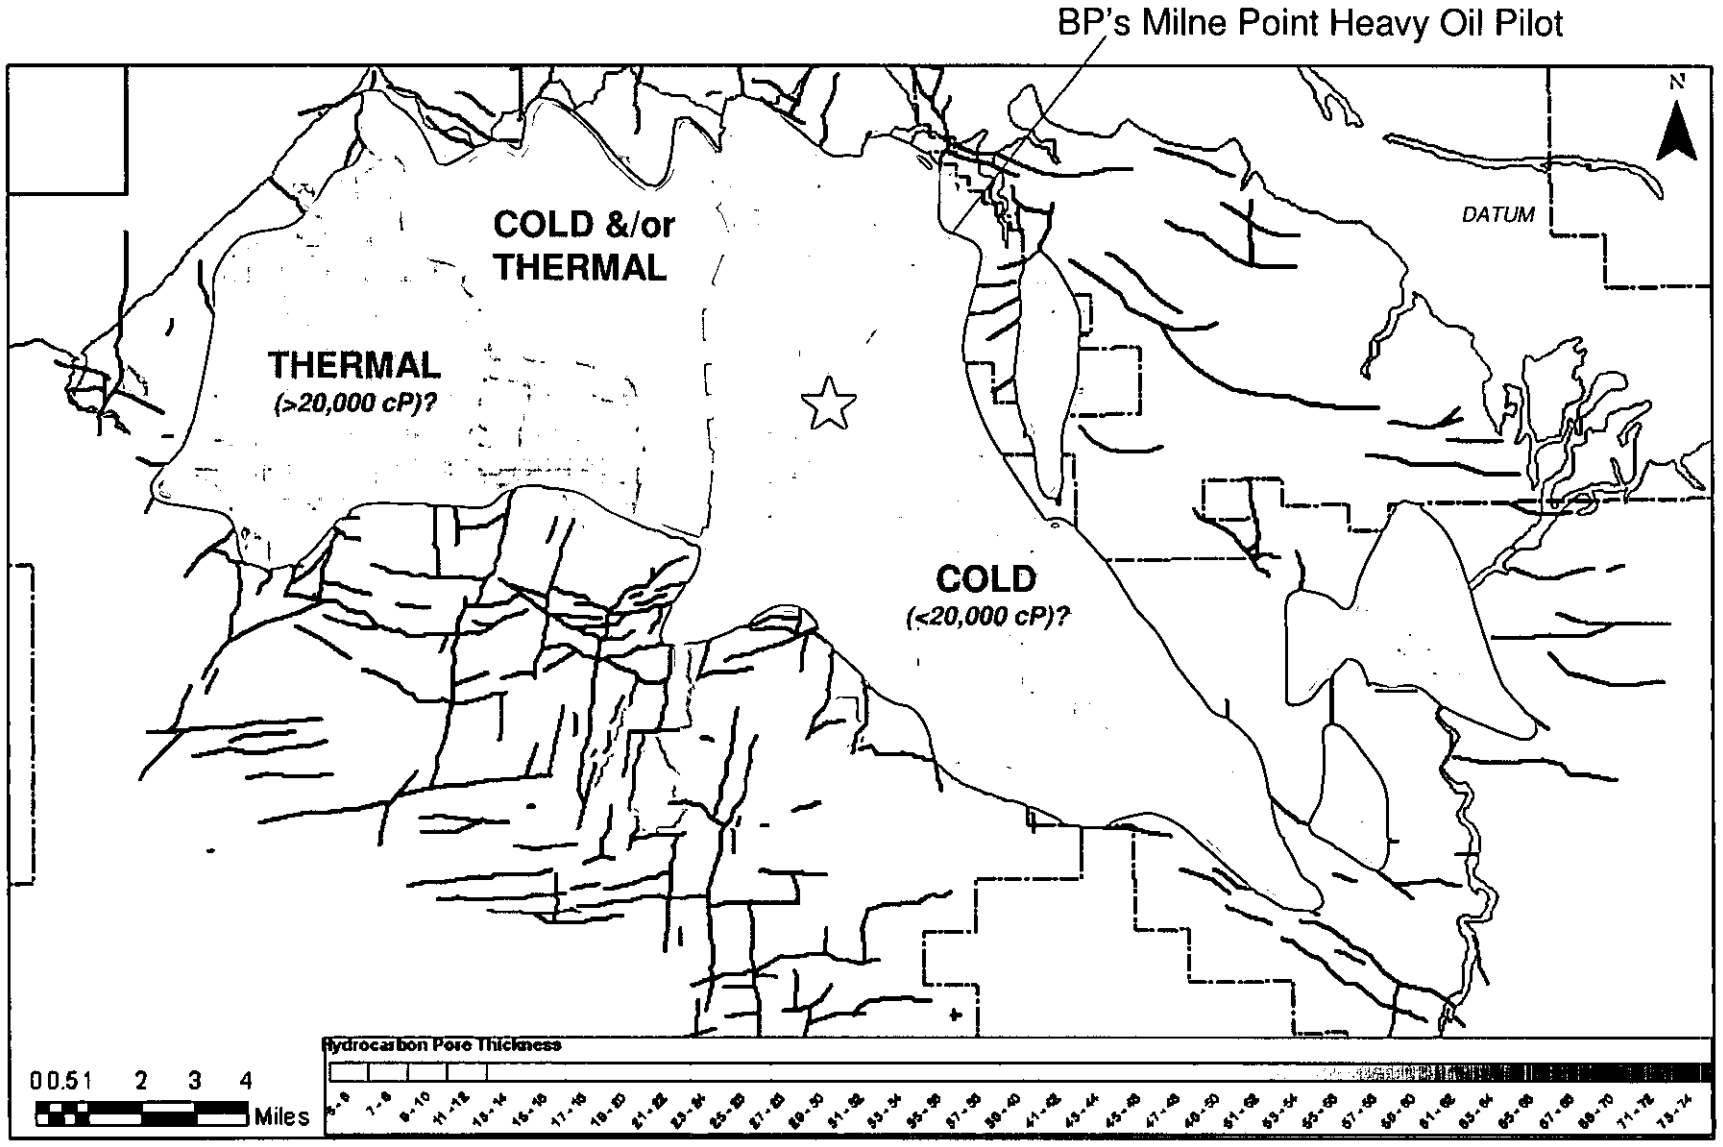
SAGD (Steam Assisted Gravity Drainage)



Recovery Methods



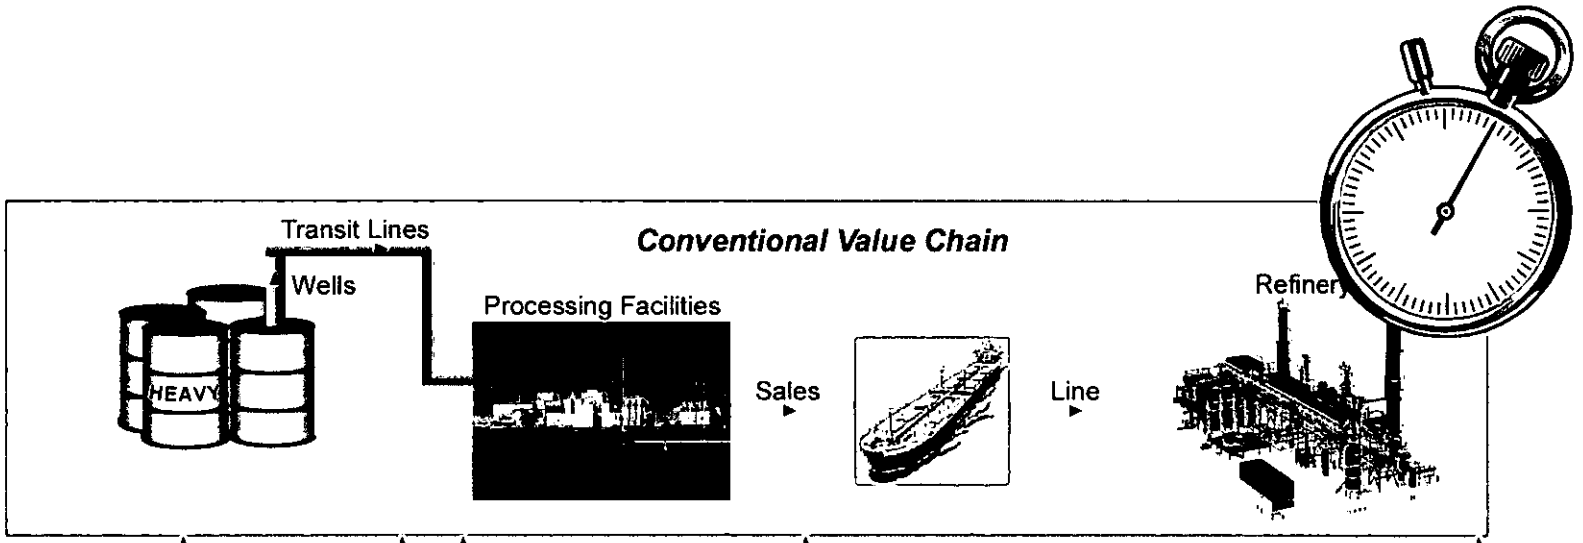
North Slope Heavy Oil Accumulation

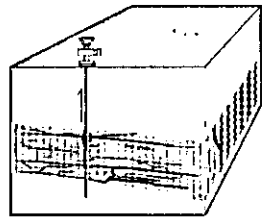


Heavy Oil Value Chain

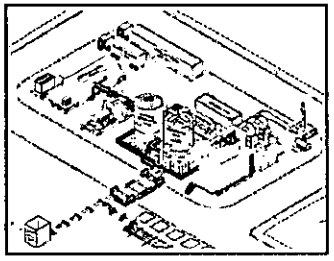
Time dependency given viability/longevity of existing architecture is driver of pace

bp

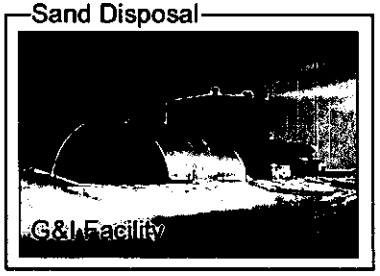




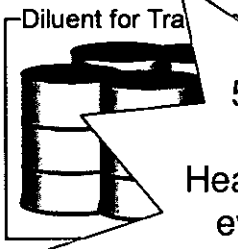
New Technology
LOTS of Wells
PCP Pumps
LOTS of well interventions



Pre-processing Kit
- Tanks
- Heaters
- Associated pumps & piping



Multiple facilities will be required



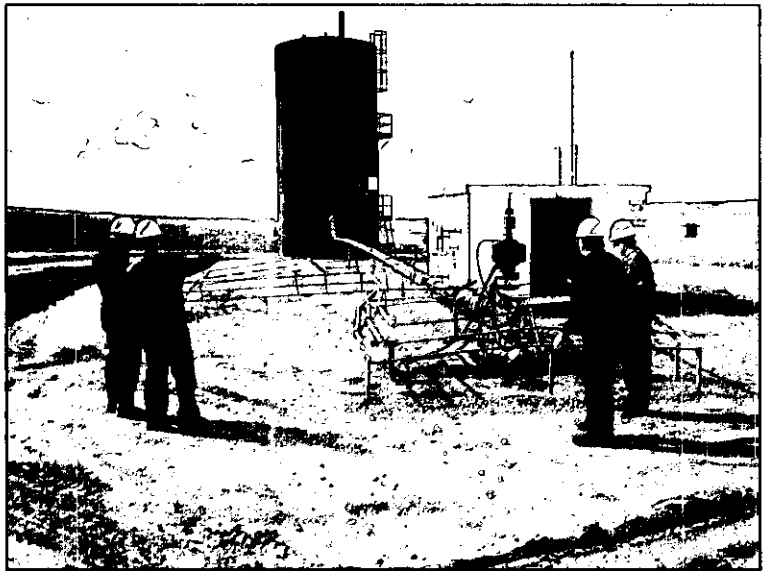
Cold
added to

5th Epiphany:

Heavy oil is unlikely ever to be more economic than light oil

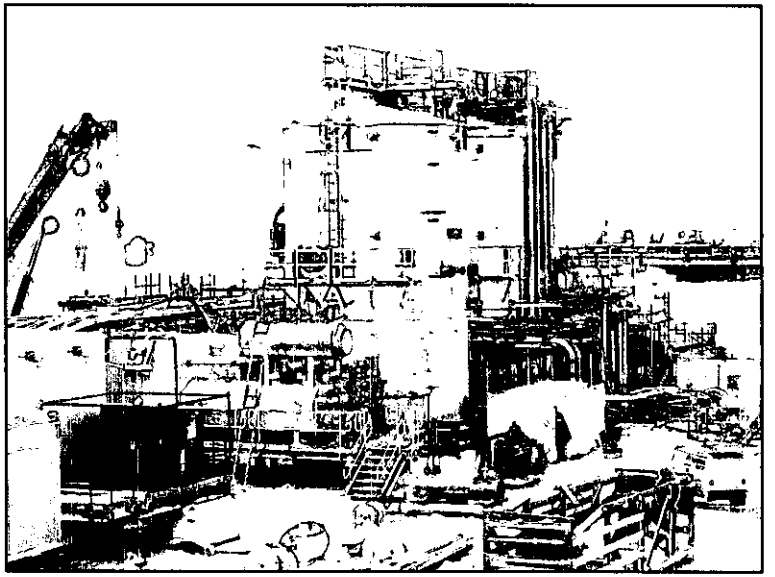
HOT

Vision vs. Reality



Canadian Design

- Single well tank battery
- Oil, water and solids trucked separately
- Gas burned or vented
- Direct fired heater
- 20+ years experience

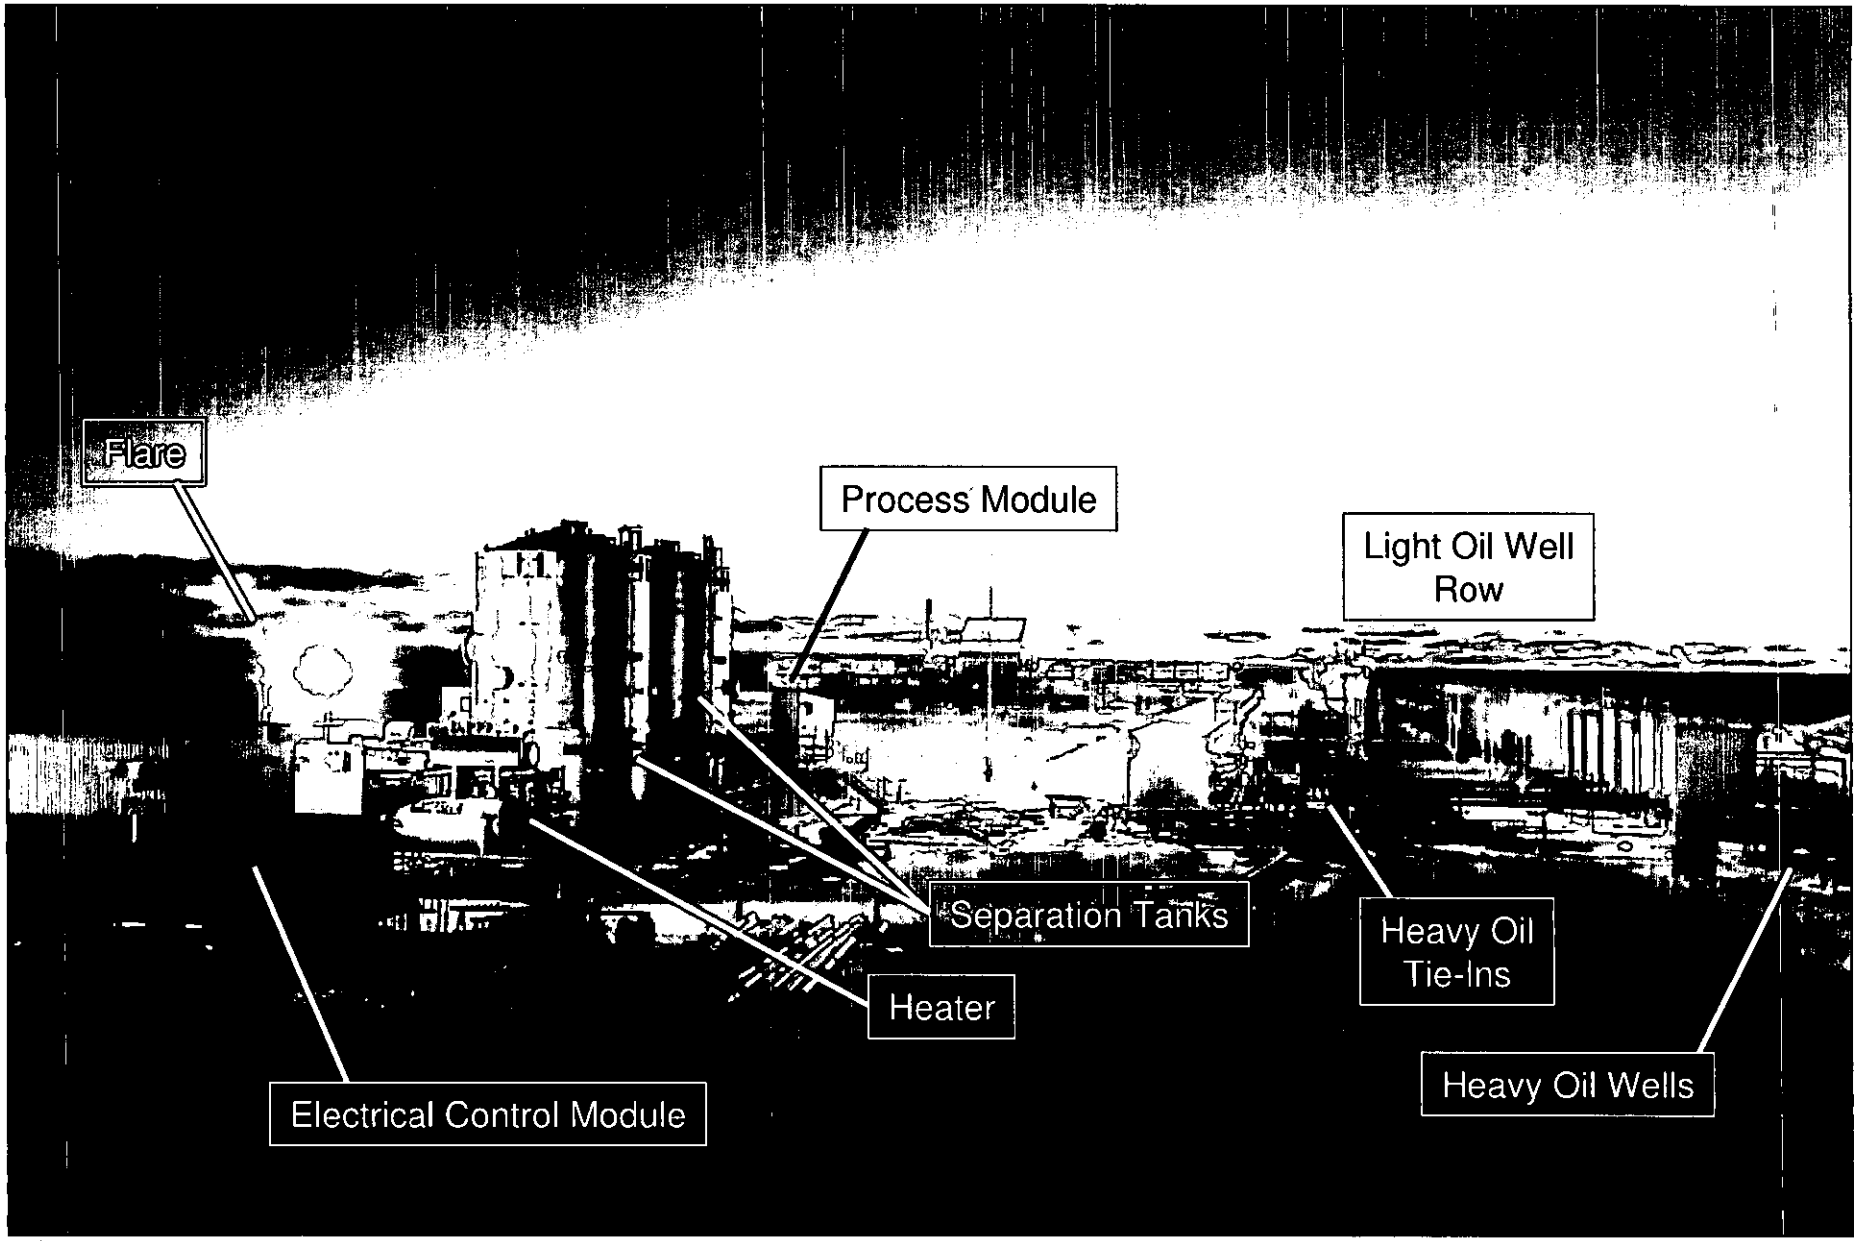


Alaska Design

- Safety & environmental constraints
  - No direct fired heaters in tanks
  - No venting of gas
  - No spills
  - Operate safely over a multi-year period
- Unknown fluid properties and behavior
- First of its kind in Alaska

HOT

New BP Heavy Oil Pilot Project, Milne Point Alaska



Take Away Messages

- Heavy oil is a world scale resource base that is intrinsic to the BP Alaska strategy
- The time for heavy oil is now due to light oil linkage through diluent and infrastructure
- Heavy oil is a different commodity than light oil with respect to extraction techniques, technical challenges, understanding, environmental challenges and market
- The technical viability of this Alaska Heavy Oil is unknown, so commercial outcome remains large range - must answer technical viability question first
- BP's Milne S-Pad pilot is an experiment and its design and appearance do not necessarily reflect what a development will look like

Reclamation & Closure

Reclamation and closure of mining projects falls under the jurisdiction of:

- **The Alaska Reclamation Act (Alaska Statute AS 27.19) administered by the Alaska Department of Natural Resources – Division of Mining, Land, and Water Management (11AAC 97) applies to state, federal, municipal and private land and water subject to mining operations.**
- **The Alaska Department of Environmental Conservation [AS 46.03.100(F), 18 AAC 15.090(3), and 18 AAC 60.265];**
- **The U.S. Army Corps of Engineers;**
- **The U.S. Environmental Protection Agency; and**
- **Federal Land Management Agencies**

2/24/10 OVERVIEW: ALASKA MINING INDUSTRY ISSUES 2010

ALASKA MINERS ASSOCIATION, INC.

Issues of Concern for the Alaska Mining Industry for 2010

Actions needed by the Administration and/or the Legislature: January 2010

CRITICAL ITEMS: INFRASTRUCTURE - ENERGY - PERMITTING INTEGRITY - ESA

Infrastructure - Advocate for and fund infrastructure that will provide access to remote areas of Alaska so natural resource projects can be developed.

- Select a route from the Parks Hwy to Nome and commence development.
- Establish an effective construction standard for pioneer roads.
- Construct roads between communities.

Energy - Advocate and adopt a state energy plan and fund interties, pipelines, hydroelectric, etc. to provide energy for resource development and communities.

- Ensure that Healy Plant #2 comes on line at the earliest possible date.
- Rationalize the management and control of the railbelt electrical intertie system.
- Fund and construct an intertie between the railbelt intertie and Bethel.
- Select, fund and design a major hydroelectric project in Southcentral Alaska.

Integrity of Permitting System - Ensure the integrity of the current, very rigorous, science-based state permitting process and fund it at a level that will ensure its integrity.

- Provide sufficient staff and funding for the minerals and permitting functions of the Departments of Natural Resources, Fish & Game and Environmental Conservation.
- Increase salary and benefits for state agency personnel involved in minerals permitting and management so they are competitive with the private sector.

Endangered Species Act/Essential Fish Habitat - Aggressively oppose ESA listings in the courts. Petition the federal government to develop ESA and EFH regulations that strictly follow the original intent of these laws.

PERMITTING PROCESS

Statewide Initiatives - Correct the ballot initiative process to ensure it is open, transparent, and holds proponents accountable.

Water Quality Standards - Continue to revise water quality standards to ensure standards are scientifically supportable and developed using Alaska-specific criteria. Ensure continued availability of mixing zones.

Non-Profit Foundation Money - Enact legislation to require public disclosure whenever funds from 501(c)(3) non-profit foundations are used to affect public policy; disclosure to include name of the source, amounts and purpose for which the moneys are given.

Financial Assurance - Ensure that financial assurance (bonding) requirements for environmental compliance are managed exclusively by the State.

FISCAL ISSUES

Taxation - Maintain an equitable and stable tax structure at state and local government levels to ensure Alaska industry remains competitive.

State Fiscal Policy - Adopt a long range fiscal plan.

Annual Airborne Geophysical Mapping Program - Increase funding for the extremely effective airborne geophysical mapping program; initiate statewide baseline water quality mapping.

Mineral Education & Training - Continue to support mining and geological engineering, geology, the Mining and Petroleum Training Service (MAPTS), and the Delta Mine Training Center (DMTC) at levels that will ensure a trained workforce; continue funding the State's share of Alaska Resources Education (formerly AMEREF).

LAND MANAGEMENT ISSUES

State Authorities - Ensure development of state-owned natural resources is not compromised by municipal or borough regulations or taxation.

Land Management Philosophy - Ensure that uses of land are not mutually exclusive - resource development and recreation; mining and fish; oil and caribou; resource development and subsistence.

Wetlands Mitigation & Banking - Ensure that mitigation or banking are not required so long as less than 1% of Alaska's wetlands are undisturbed. ANILCA guarantees most of Alaska wetlands will never be affected.

State Lands - Ensure no net loss of multiple use lands. *Oppose* additions to any state parks, refuges, critical habitat areas, marine restricted areas, or any other restricted-use areas, *unless* an equal acreage of other lands already having the same designation is released and the new area being designated is first evaluated for mineral potential.

Land Transfers - Prior to any state land transfers to boroughs, land disposals/sales, or leases not required for resource development, require a detailed mineral evaluation, to include airborne geophysical surveys, be completed to help ensure that mineralized lands or key access routes are not transferred.

Outdated Federal Withdrawals - Pursue removal of old federal land withdrawals (where purpose for withdrawal has expired) which are blocking land transfers to the State, such as PLO 5150, the outer pipeline corridor. Encourage BLM to remove such PLOs and open the lands through its land planning process.

New Federal Withdrawals - Oppose all new federal land withdrawals, roadless initiatives, marine restricted areas, Antiquities Act designations, BLM wilderness studies, etc. and fight vigorously against additional buffers or other restrictions to multiple use of federal lands in Alaska. The Alaska National Interest Lands Conservation Act (ANILCA) provides that "no more" federal land will be withdrawn for parks, preserves, monuments, wilderness designations, wild & scenic river designations, etc.

International Heritage & Biosphere Designations - Oppose establishment of international parks, biosphere reserves, and world heritage sites, such as the so-called Beringia (over the Seward Peninsula & Bering Sea), NPRA, or ANWR. International designations would - 1) surrender partial sovereignty to the United Nations, and 2) eliminate access across the affected lands and waters.

Federal Mining Law - Continue to oppose changes to federal law and regulations that would be adverse to Alaska miners.

ACCESS ISSUES

RS-2477 Rights-of-Way - Continue to systematically and aggressively pursue State rights to RS-2477 rights-of-way, both administratively and in the courts. Without RS-2477s much of Alaska public lands will never have overland access.

Navigability - Continue to systematically and aggressively pursue recognition of State ownership of and authority over all navigable waters granted under the Statehood Act.

OTHER ISSUES

NEPA - The Administration develop an MOU with the Corps of Engineers to ensure timely coordination of future Environmental Impact Statements.

Coal Development - Encourage utilization of coal liquefaction and gasification technologies for Alaska's vast coal resources.

Climate Change - Oppose all federal actions unless they are based on sound data and peer-reviewed science.

Jones Act - Because Jones Act vessels for bulk mineral shipments are not available, petition Congress to amend the Jones Act to allow use of non-Jones Act vessels for shipment of "non-petroleum bulk natural resources within or from Alaska or intra-Alaska shipments of petroleum".

For further information on the above issues or for information regarding exploration and mining in Alaska please contact:

Teck

RED DOG MINE

NANA REGIONAL CORPORATION, INC.

Status of the permit appeal

On Dec. 15, 2009, the State of Alaska issued a certification of Red Dog's National Pollutant Discharge Elimination System (NPDES) Permit, the mine's water discharge permit. On Jan. 8, the EPA approved the SEIS for the Aqqaluk Deposit and simultaneously issued a renewal of the NPDES permit.

On Jan. 15, two non-profit law firms representing local tribal and environmental groups filed an appeal of the certification asserting that certain provisions do not comply with the Clean Water Act. This action was taken by the Anchorage-based Trustees for Alaska on behalf of the Native Village of Point Hope IRA Council, the Northern Alaska Environmental Center and the Alaska Community Action on Toxics. The San Francisco-based Center on Race, Poverty and the Environment (CRPE), a national environmental justice legal organization, took this action on behalf of the Native Village of Kivalina IRA Council and the following Kivalina residents: Enoch Adams, Jr., Leroy Adams, Andrew Koenig, Jerry Norton and Joseph Swan, Sr.

The appeal claims that several parts of the permit do not comply with the Clean Water Act, even though the State certified the permit was compliant. The specific issues being appealed are mixing zones, effluent limitations, anti-backsliding (changed limits), anti-degradation and the treatment technology (appeal asserts treatment should include an ocean discharge pipeline).

On Feb. 16, the same groups appealed EPA's issuance of the mine's renewed National Pollution Discharge Elimination System (NPDES) permit which was due to come into effect on March 1st. Until EPA issues a notice clarifying which provisions of the permit are subject to appeal and consequently stayed, the entire new permit is stayed. The notice is usually issued by EPA within 30 days of the appeal. The unstayed provisions would then come into effect 30 days after the notice. The corresponding provisions of Red Dog's existing permit would remain in effect for any stayed provisions.

Until EPA issues the notice, Teck will not know whether and to what extent access to Aqqaluk, the next deposit to be mined at Red Dog, will be affected by the appeal. The current operating plan calls for continuing to mine the Main Deposit under existing permits until mid 2011. However, in order to maintain efficient production rates, Main Deposit ore will eventually need to be supplemented with ore from Aqqaluk. If permit delays extend beyond May 2010, the transition plan will be affected and production at Red Dog would likely be curtailed in October, 2010. Production would not be expected to resume until the appeal is resolved and the mine can be restarted, which could take up 18 months unless the appeal is withdrawn.

Other State and local permits required for the development of Aqqaluk were received in December, 2009. The appeal period for those permits has expired. A wetlands permit from the Army Corp of Engineers is the only outstanding agency authorization. This permit is undergoing final agency review. There is no specific period established for an appeal of this permit. An appeal of the Supplemental Environmental Impact Statement (SEIS) or wetlands permit could also delay access to the Aqqaluk deposit.

Teck

RED DOG MINE

NANA REGIONAL CORPORATION, INC.

Permit delays could halt Red Dog production

A key water discharge permit being sought by the Red Dog Mine has been appealed. If permit delays extend beyond May of 2010, production at Red Dog would likely be curtailed in October, 2010.

Permit timeline and status

2009

Dec. 2	State of Alaska approves Reclamation and Closure Plan and Waste Management Permit to authorize Aqqaluk extension
Dec. 10	Northwest Arctic Borough approves Aqqaluk extension
Dec. 15	State of Alaska issues 401 certifications of NPDES and 404 permits

2010

Jan. 8	EPA approves SEIS and issues Record of Decision and NPDES permit
Jan. 14	Kivalina and Point Hope IRA Councils appeal State 401 certification of NPDES permit
Jan. 30	Teck places $305M letter of credit as financial assurance for reclamation
Feb. 16	Kivalina and Point Hope IRA Councils appeal NPDES permit
October	Production would likely be curtailed as Main Deposit nears completion

What is at stake?

Red Dog is the economic engine for the Northwest Arctic Borough. The mine currently provides 525 good jobs in rural Alaska, 304 of which are held by NANA shareholders. Wages for 2009 topped $50 million. These year-round jobs provide critical support for families and economic stability for entire communities.

As the landowner, NANA Regional Corporation receives 25 percent of the net revenue from Red Dog. Since 2006, this has amounted to $428M. Through the revenue sharing requirements of the 7(i) provision of the Alaska Native Claims Settlement Act, NANA shares 62 percent of the revenue with other Native corporations throughout Alaska.

Red Dog is the sole private taxpayer in the Northwest Arctic Borough. Since 2006, Red Dog has paid $34M to the borough. These payments help support schools in the region as well as approximately 60 percent of the monies needed to fund other essential local government services. In addition, since 2006 Red Dog has paid $250M in state taxes, and last year alone, payments to Alaska vendors totaled $217 million.

Twenty years of data documented by the U.S. Environmental Protection Agency (EPA) in the Supplemental Environmental Impact Statement (SEIS) show ***the ecosystem downstream from the mine is healthy and productive. A permit appeal will NOT benefit the environment at Red Dog.*** An appeal does not change the fact that snowmelt and precipitation will continue to fall on-site and must be responsibly treated and discharged in order to manage water levels in the tailings pond.

There is no appeal that justifies placing the livelihood of hundreds of families at risk.

January 2010

The Economic Benefits of Alaska's

Mining Industry

Mining is an important part of Alaska's economy . . . providing jobs for thousands of Alaskans and millions of dollars of personal income throughout Alaska. Alaska's mining industry includes exploration, mine development, and mineral production. Alaska's mines produce zinc, lead, gold, silver, coal, as well as construction materials, such as sand, gravel, and rock.

In 2009, Alaska's mining industry provided:

- **3,300 direct** mining **jobs** in Alaska.
- **5,200 total** direct and indirect **jobs** attributed to Alaska mining industry.
- **$320 million** in total direct and indirect **payroll**.
- Some of Alaska's highest paying jobs with an estimated **average annual wage of $83,000**, 85% higher than the state average for all sectors of the economy, second after oil and gas sector wages.
- **$12.3 million** in **local government revenue** through property taxes and payments in lieu of taxes.
- **$35 million** in **state government revenue** through rents, royalties, fees, and taxes.
- **$39.8 million** in payments to **Alaska Native corporations** (FY09).
- **Jobs for residents** of more than **120 communities** throughout Alaska–mostly year-round, and often in rural areas, where few other jobs are available.

LARGEST PRODUCING MINES

2009 Economic Benefits
estimated

Exploration

- **$160 million** spent on exploration, down 54% from 2008.
- **39 exploration projects** spending more than $100,000, of which 17 exploration projects spent more than $1 million.
- **$2 billion** spent on exploration since 1981.

Development

- **$262 million** spent on **mine construction,** down 34% from 2008, on at least 6 developing and existing mines.

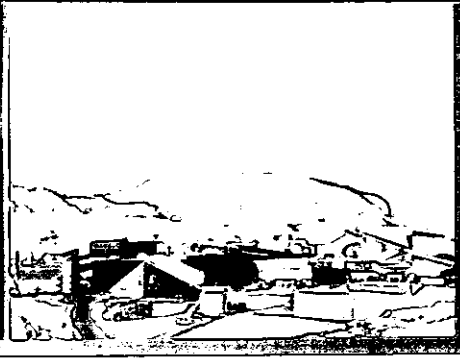
Production

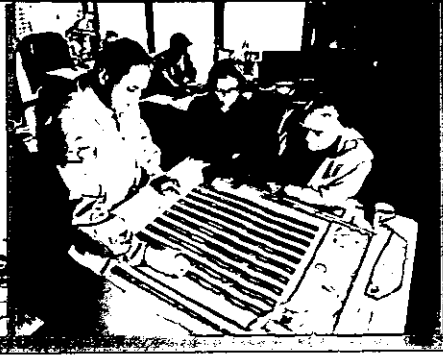
- **$2.4 billion** in **gross mineral production value** from Red Dog, Greens Creek, Fort Knox, Pogo, and Usibelli Coal mines, placer mines, and rock, sand, and gravel operations, down 2% from 2008.
- More than **175 placer mines** produced **54,000 ounces** of gold.
- **$106 million in production value** from more than 120 active rock quarries, and sand and gravel operations.

Exports

- **$750 million in mining exports,** or 21% of Alaska's total exports.

2746





Mining Activ

Usibelli Coal Mine
Coal
- Alaska's only operating coal mine, exporting 40% of its production in 2009
- Fuels 40% of Interior Alaska's electricity
- Producing an all-time high of 1.8 million tons in 2009
- Founded in 1943
- 125 employees in 2009

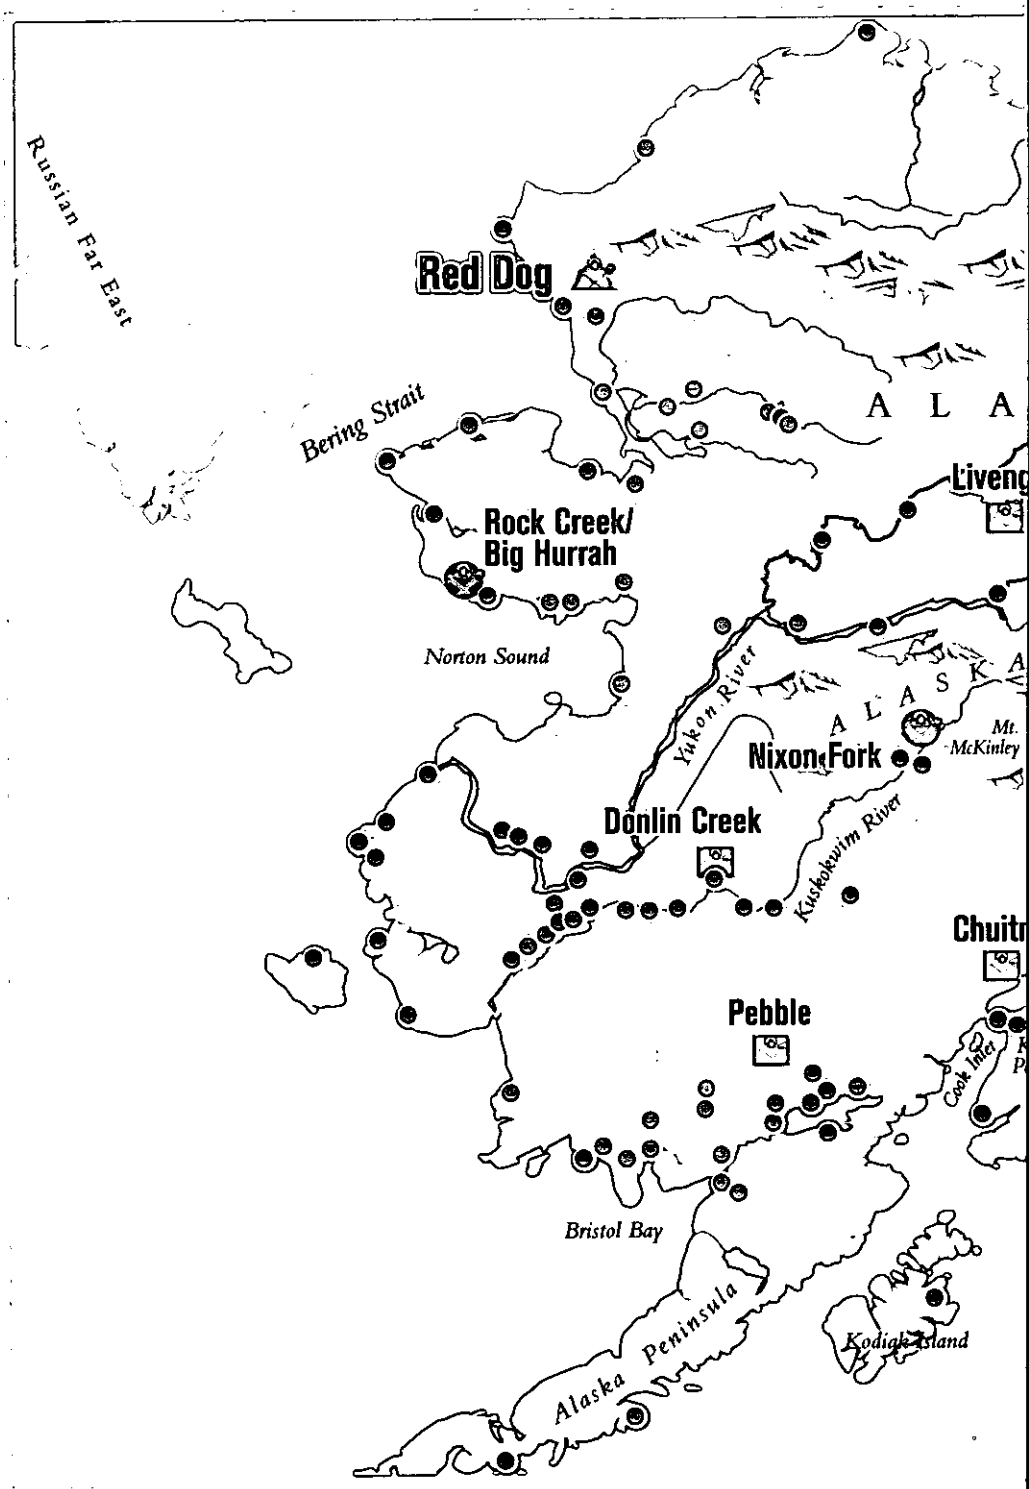
Greens Creek Mine
Silver, zinc, gold, and lead
- Largest silver producer in the US
- Largest Southeast Alaska for-profit employer, in terms of payroll
- Largest taxpayer in the City & Borough of Juneau
- Discovered in 1975, producing from 1989 to 1993, and since 1996
- 330 employees, plus 12 full-time contractors in 2009

Red Dog Mine
Zinc, lead, and silver
- One of the world's largest zinc concentrate producers
- Only taxpayer in the Northwest Arctic Borough
- Discovered in 1968, producing since 1989
- 390 employees, plus 95 full-time contractors in 2009

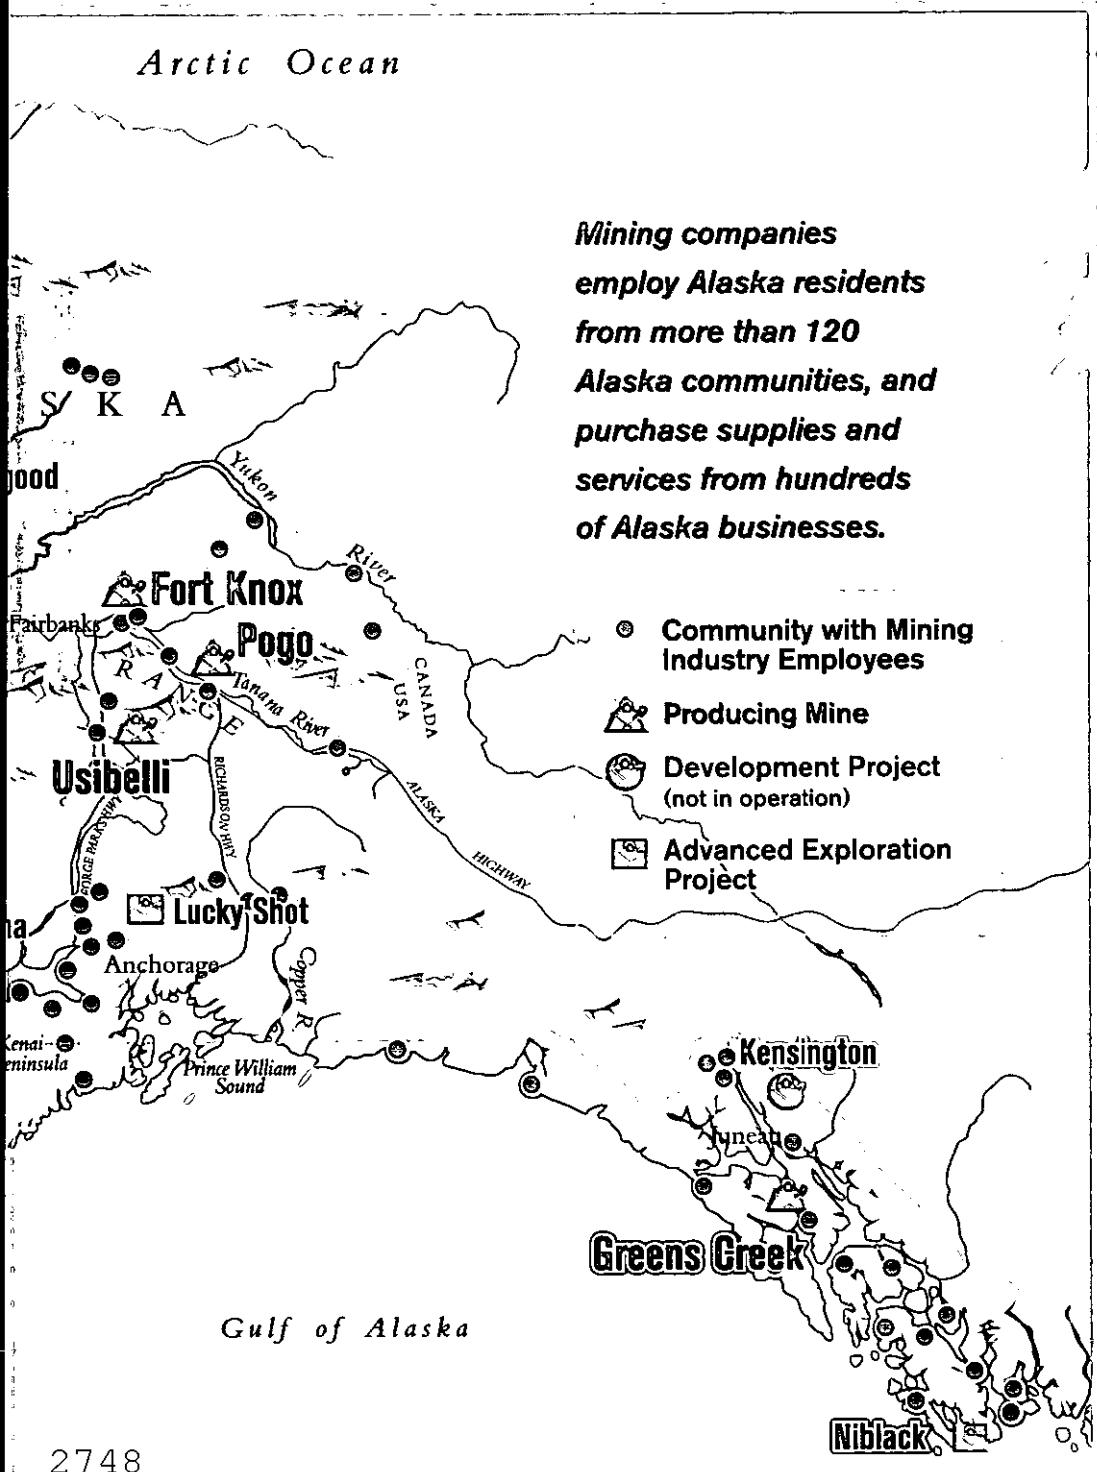
Fort Knox Mine
Gold
- More than 4.5 million ounces produced
- Largest single property taxpayer in the Fairbanks North Star Borough
- Discovered in 1984, producing since 1996
- 500 employees, plus 350 contractors in 2009

Pogo Mine
Gold
- Discovered in 1994, producing since 2006
- Reached a production milestone of a million ounces of gold in 2009
- 297 full-time employees and 97 full-time contractors in 2009
- Paid over $29 million in wages in 2009

Kensington
Gold
- 2010 expected production start date
- More than $330 million invested through 2009
- 200 expected production jobs



vity in Alaska



Rock Creek/Big Hurrah
Gold
- Started and suspended production in 2008
- $250 million invested through 2009
- 135 potential production jobs

Nixon Fork
Gold and copper
- Discovered in 1917, intermittent exploration and production since 1920s
- Production suspended in 2007 for additional drilling
- 75 potential production jobs

Chuitna
Coal
- Currently in advanced permitting stage
- 300-350 expected production jobs

Lucky Shot
Gold and copper
- Underground bulk sample planned for early 2010
- $20 million invested through 2009
- 40-50 potential production jobs

Donlin Creek
Gold
- Discovered in 1988, continued exploration since 1995
- 28 exploration jobs in 2009
- 93% Calista shareholder hire
- 600 expected production jobs

Livengood
Gold
- Discovered in 2007
- $35 million invested through 2009
- 450-500 potential production jobs

Pebble
Copper, gold, and molybdenum
- Discovered in 1987, ongoing exploration and environmental studies since 2002
- Over $400 million invested through 2009
- Over 1,000 potential production jobs

Niblack
Gold, silver, copper, and zinc
- Ongoing exploration for more than 10 years
- $38 million invested through 2009

Alaska Miners Association, Inc. • 3305 Arctic Blvd., #105 • Anchorage, Alaska 99503

Strengthening Government and Communities

In 2009, Alaska's mining industry paid:

An estimated total of **$12.3 million** to local governments, including:

- **$7.8 million in payment in lieu of taxes** (PILT) by Red Dog to the Northwest Arctic Borough, representing 100% of the Borough's tax revenue.
- **$2.8 million in property taxes** paid by Fort Knox to the Fairbanks North Star Borough.
- **$1.4 million in property taxes** paid by Greens Creek to the City & Borough of Juneau.
- **$325,550 in property taxes** paid by Kensington to the City & Borough of Juneau. Once in production, the mine will be the largest taxpayer in Juneau.
- **Tax payments to other local governments**, including Denali Borough, City of Nome and others.
- Mining industry employees also pay local property and sales taxes.

An estimated **$35 million to state government** in royalties, rents, fees, and taxes, including:

- **$22 million** in **mining license taxes, rents** and **royalties**, and other fees, payments, and taxes.
- **$13 million in corporate income tax**, making the mining sector Alaska's fifth highest corporate income tax payer after the petroleum, tourism, oil and gas services, and finance sectors.

Over **$48.9 million** in other **state government-related revenues**, including:

- **$22.6 million to the Alaska Railroad Corporation** – $16.2 million for moving coal and $6.4 million for moving sand and gravel.
- **$25.1 million to Alaska Industrial Development & Export Authority** for the use of state-owned facilities.
- **$1.2 million to the Alaska Mental Health Trust** for rents and royalty payments, and construction material sales.

Partnering with Alaska Native Corporations

All Alaska Native corporations benefit from mining industry activity – in 7(i) and (j) **royalty sharing payments**, in **jobs** for shareholders, or **through business partnerships.**

- **$38.8 million in royalties** paid by Red Dog to NANA; of which $23.0 million was redistributed to other Alaska Native regional and village corporations.
- **56%** of the **485 year-round jobs** at Red Dog are filled by **NANA shareholders**, including Teck, NANA Lynden and NANA Management Services jobs.
- Calista Corporation anticipates **$980,000 in royalties for mineral agreements**, including lode exploration, placer gold production, and construction material sales.
- **93%** of the 28 jobs at Donlin Creek filled by **Calista shareholders.**

Projects with near-term potential will directly benefit Bering Straits Native Corporation and Sitnasuak Native Corporation (Rock Creek), as well as Goldbelt, Inc., Klukwan, Inc., and Kake Tribal Corporation (Kensington).

Special thanks to Rich Hughes, Minerals Development Specialist, Alaska Department of Commerce, Community and Economic Development, and Dave Szumigala, Senior Minerals Geologist, Alaska Department of Natural Resources for their assistance. Other sources used in this report include: State of Alaska Departments of Commerce, Community and Economic Development, Labor and Workforce Development, Natural Resources, and Revenue, Alaska Railroad Corporation, Alaska Industrial Development & Export Authority, various local and borough governments, and mining companies. Prepared by McDowell Group, Inc.

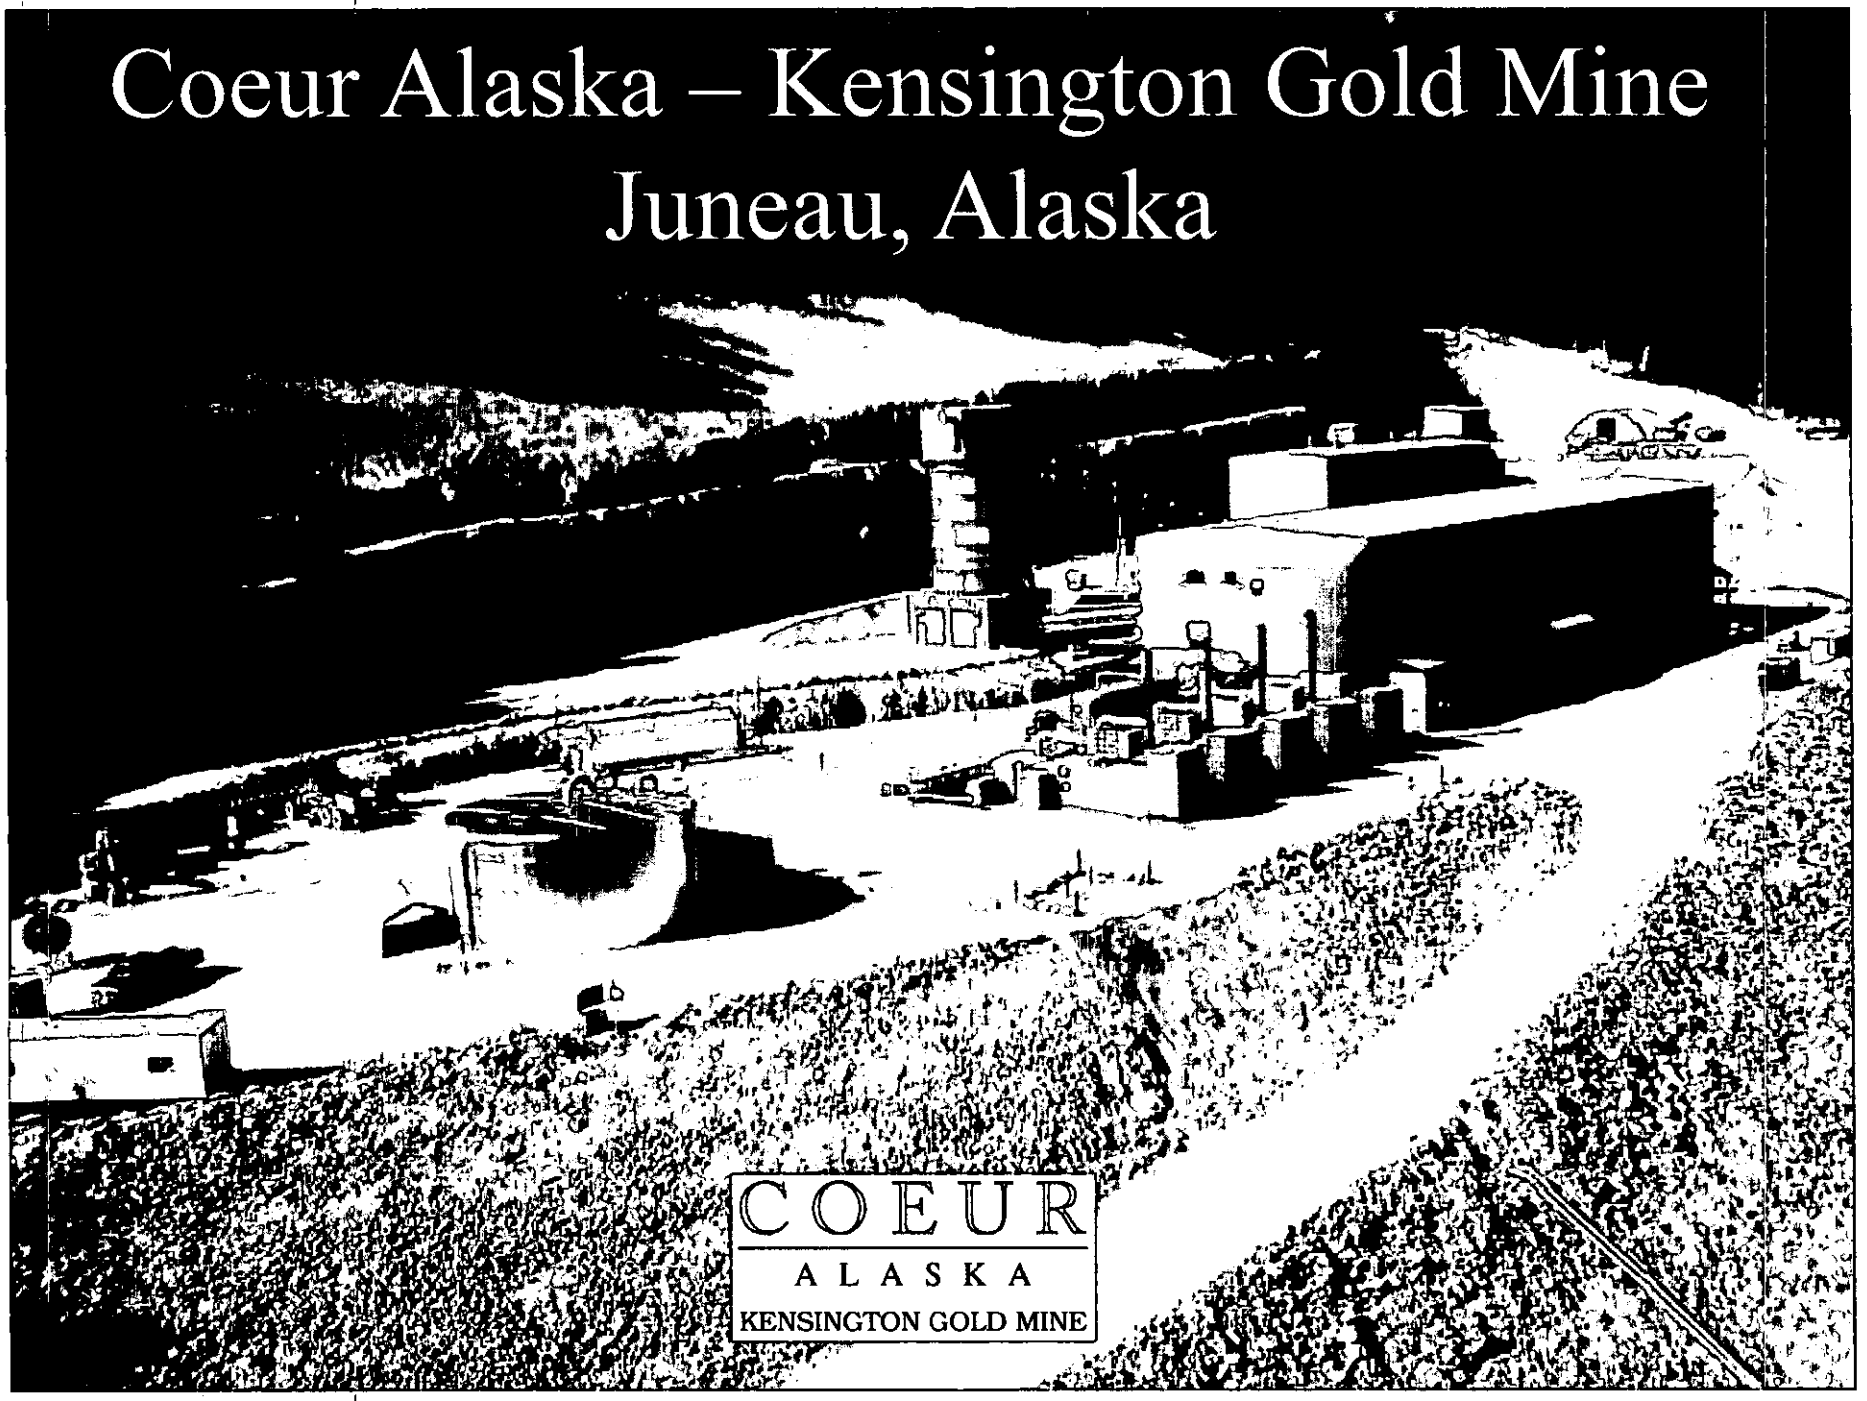
Recent Mine Permitting Experiences in Alaska

February 24, 2010

Joint House & Senate Resources Committees

cap
Council of
Alaska Producers

Coeur Alaska – Kensington Gold Mine
Juneau, Alaska



PERMITTING TIMELINE

- 1992 to 1998 – Project permitted for a 4,000 TPD operation and tailings facility
- 1998 to 2001 – Permitting process for a 4,000 TPD operation with dry stack tailings facility
- 2001 to 2009– Amended Plan of Operations submitted for a 1,250 TPD operation at Jualin with subaqueous tailings disposal

1ST PERMITTING PHASE (1992-1998)

- EIS and favorable Record of Decision in 1992
- Environmental groups appeal EIS findings and lose
- Corps willing to issue 404 for tailings dam & wetlands
- EPA-required Technical Assistance Report issued 1995, required changes to permit
- Permits finally received in 1998
- Declining gold prices and higher operating costs due to revisions keep project on hold

2ND PERMITTING PHASE (1998-2001)

- Coeur needed to improve economics of project
- Proposed submarine tailings disposal
- Entered into MOU with agencies for setting timelines for Permitting
- EPA would not approve tailings plan
- NO PERMIT ISSUED

3RD PERMITTING PHASE (2001-2009)

- Scaled down mine plan, project economics
- Moved proposed operations from Comet to Jualin Valley
- Proposed use of Lower Slate Lake – filed Amended Plan of Operations in 2001
  - EPA takes approximately 18 months to review
  - EPA Water Administrator advises lake could be used ('02 Regas Memo)

EPA issues NPDES in 2005, COE issues 404 Permit in 2005

3RD PERMITTING PHASE (2001-2009)

- Conservation groups file lawsuit against COE and US Forest Service
- Injunction on tailings facility construction
- Eventually through appeals, case reaches US Supreme Court
- State of Alaska and Goldbelt intervene on behalf of Coeur Alaska
- June 22, 2009: US Supreme Court upholds COE 404 Permit and US Forest Service Plan of Operations as granted in 2005

Coeur Alaska and supporters thank Juneau community, including too many businesses and individuals to name here, some of those instrumental in these efforts include:

The Governor's Office	Goldbelt	Southeast Conference
Alaska Congressional Delegation	Kake Tribal	JEDC
Alaska State Legislature	Klukwan	Juneau Chamber of Commerce
Alaska Dept. of Labor	Kootznoowoo	Haines Borough Chamber
CCTHITA	Huna Totem	Alaska State Chamber

THANK YOU for the many times you unanimously supported Kensington!

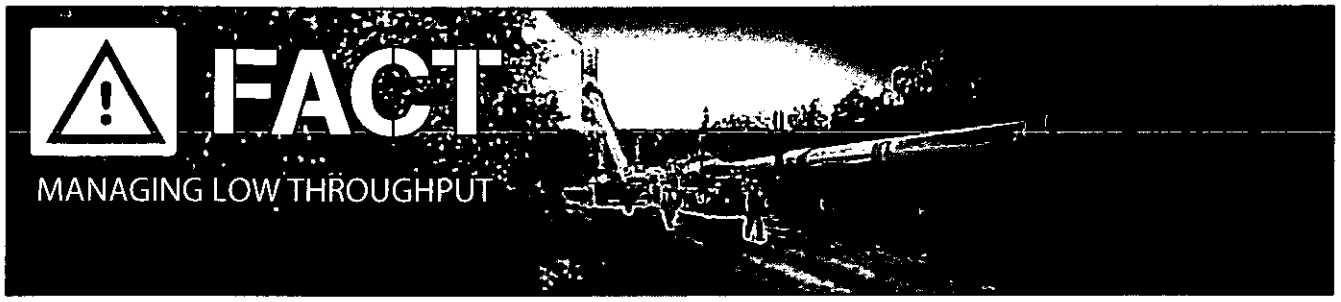
3/9/10 LUNCH & LEARN: DECLINING THROUGH-PUT ON TAPS

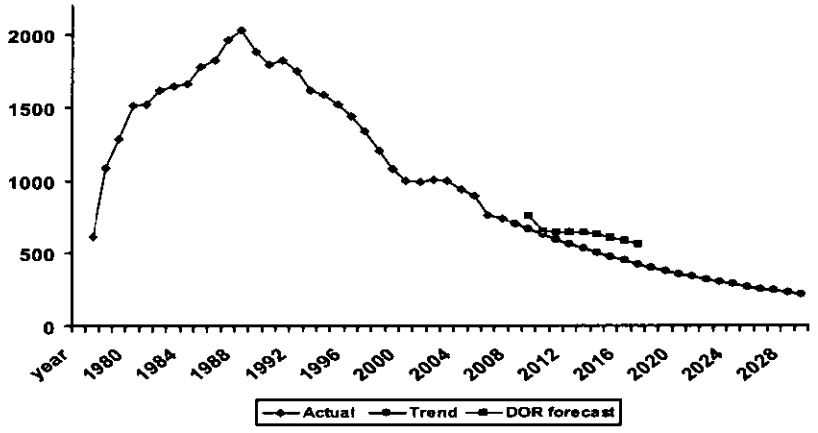


DATE 02/10

DECLINING THROUGHPUT ON TAPS

TAPS' throughput peaked in 1988 at 2.1 million barrels a day. Today, throughput is less than 700,000 barrels a day, declining about 5 percent a year. Lower throughput amounts to slower-moving oil that takes longer to get to the Valdez terminal, and is colder when it arrives. The colder, slower oil also has more water drop out and wax build up. This amounts to technical challenges and higher operating costs on TAPS. Alyeska is amid a $10 million low-flow study to determine the best future actions to keep TAPS viable for years to come. That way, TAPS can maintain its critical and iconic role in Alaska's economy.

This graph shows the predicted decline of oil without further development, according to TAPS and the Department of Revenue. TAPS could fall below 500,000 barrels a day by 2014.



FACTS ABOUT LOW FLOW

* Today, daily throughput is just under 700,000 barrels a day. Throughput is typically lower in summer months.

* The lower the throughput, the slower the oil moves. It once took oil four days to get to Valdez. Now it takes about 13.

* TAPS was designed for warm oil. Today, oil is 110 degrees entering the pipeline and around 40 degrees on reaching Valdez.

* The colder oil temperatures results in water separating and settling, leaving potential for ice formation.

* When throughput drops below 500,000 barrels a day -- potentially as early as 2014 -- oil temperature could fall below 32 degrees before reaching Valdez.

* These conditions are creating challenges today for those that operate and maintain TAPS.

PREPARING FOR AND UNDERSTANDING LOW FLOW ON TAPS

COOPERATION: Alyeska leadership is collaborating with the TAPS owners to determine the best steps to keep the pipeline viable in the future.

RESEARCH: An ongoing low flow study is analyzing implications of lower throughput, and determining potential steps for the future.

MAINTENANCE: As throughput decreases and oil cools more rapidly in transit to Valdez, there is potential for more wax to deposit on the pipeline's interior walls. Alyeska runs cleaning pigs every 10-14 days. Alyeska also continues to use smart pig technology to monitor and maintain integrity. In summer 2009, crews installed an instrument pig launcher at Pump Station 8 in order to send instrument pigs down the southern end of the line.

NEW PUMPS: Alyeska reconfigured several pump stations for today's lower flow rates. The new pump stations can also be modified to accommodate increase in throughput in the future.

INTERNAL INITIATIVES: TAPS employees are working internally to become more efficient and prepare the company for future operations.

⚠ FACT

KEEPING TAPS VIABLE: WHY IT MATTERS TO ALASKA

TAPS is facing significant technical challenges associated with lower flows, while also meeting economic challenges from declining throughput. Alyeska is committed to the long-term life of TAPS, while maintaining a commitment to safety, integrity and the environment that has earned the industry's highest honor. Alyeska is simplifying business, and reviewing its current workforce, contracts, and facilities, so that TAPS can preserve its strong role in Alaska's economy. Essential to all of this is understanding the impacts of low flow on the pipeline. The Low Flow Study is expected to substantially conclude in 2010.

POTENTIAL CHALLENGES DUE TO LOW THROUGHPUT

* Water separation and accumulation during flowing conditions

* Ice formation in the flowing crude

* Water accululation and freezing at low points during extended winter shutdowns

* Increased solids deposition in pipeline and storage tanks

* Inability to obtain continuous data from instrumented pigs

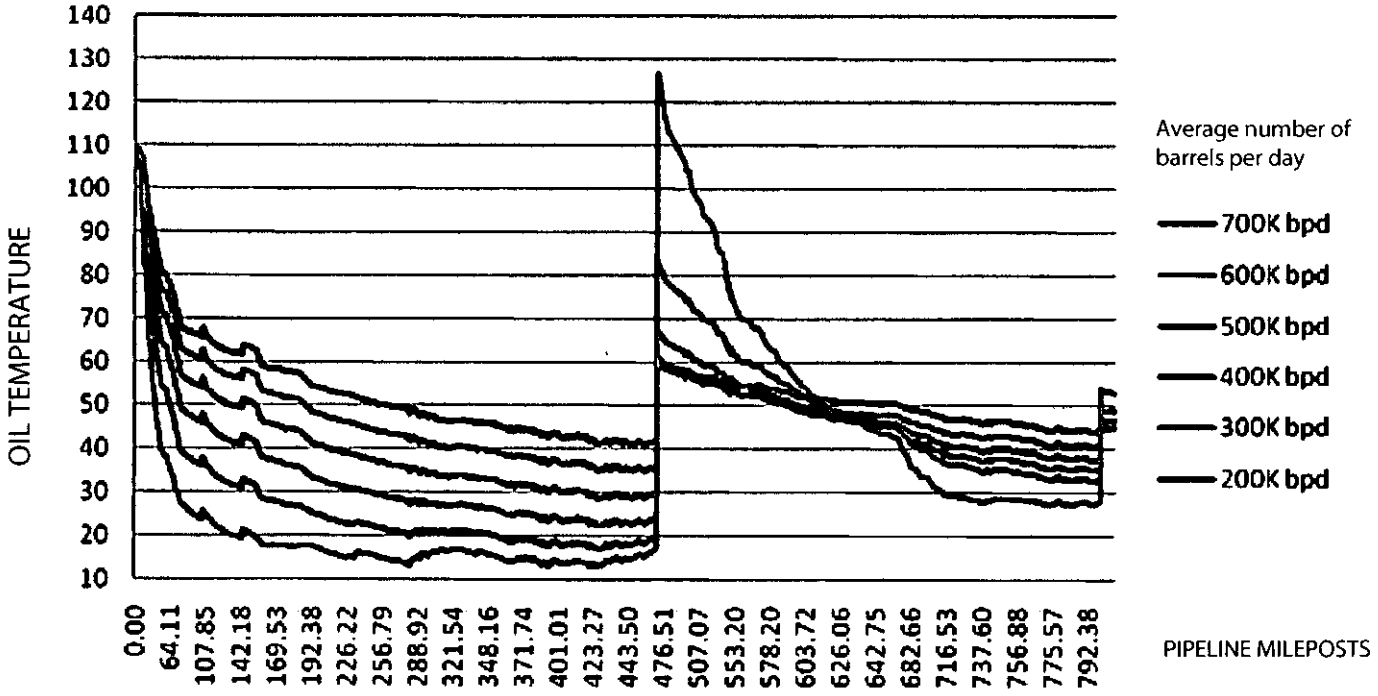
* Challenge of restarting TAPS after a prolonged winter shutdown due to gelled crude oil

* Increased potential for internal corrosion with wax deposits

* Increased wax received with scraper pigs

* Potential for frost heaves as soils refreeze

JANUARY TEMPERATURE PROFILE: A SNAPSHOT OF OIL TEMPERATURE AS IT TRAVELS THE PIPELINE



This graph illustrates how oil cools on its roughly 13-day journey to the Valdez Marine Terminal. The temperature spike near milepost 476 is where the pipeline is reinjected with warm oil from the Flint Hills Refinery.

THE pebble PARTNERSHIP

Environmental Studies

JUNE 2009 BACKGROUNDER

To the end of 2008, the Pebble Partnership has invested more than $100 million on environmental and socioeconomic studies to guide the development of a comprehensive mine plan. According to the Partnership's current schedule, the plan will be submitted for public and government review in 2010. To support this goal, the Pebble Partnership has retained leading Alaskan experts and consultants to help design a mine that can operate safely while preserving healthy fisheries, wildlife, water quality, and other valued natural resources.

Environmental baseline studies are the cornerstone of environmental planning at the Pebble Project. Data collected from these rigorous studies provide the basis for understanding how the natural environment in the project area works, and why it works the way it does. This baseline knowledge is essential to determine how the project can be responsibly developed and managed.

Sediment sampling at the Pebble Project.

The company began its environmental programs while still in the early stages of exploration at the Pebble Project. The first step has been to collect the environmental baseline data necessary to develop a detailed description of the environment surrounding the project – including water quality, wildlife and fisheries, climate, air quality, land use, and subsistence resources.

The baseline data have four important uses.:

1) To help Pebble Project regulators, stakeholders and the public understand the environment in and around the proposed project area.
2) To provide environmental input for the design process and ensure that the project will meet the requirements of state and federal regulators.
3) Baseline data are required as the basis for the environmental impact statement (EIS), mandated under the Federal National Environmental Policy Act (NEPA) as the process to identify and assess potential environmental and social issues related to the proposed project before it is built.
4) The data will also support all permitting efforts and provide the basis for a long-term monitoring plan.

While no project as important and complex as Pebble can reasonably be expected to operate without altering or affecting the environment at the mine site and associated infrastructure to some extent, the Pebble Partnership will avoid, minimize and mitigate for such effects where necessary. Protecting Bristol Bay fisheries is a primary objective. In pursuing development of the Pebble Project, the Pebble Partnership is guided by five core principles which include applying the world's best, most advanced science and co-existing with healthy fish, wildlife and other natural resources. An important requirement is to ensure that all water leaving the site during operations and post-mine closure meets water quality standards.

The Pebble Project is situated on state land designated for mineral resource development, but this status does not ensure project approval. The Pebble Partnership must first finalize its planning for the Pebble Project and submit the description of the project with its permit applications. These applications will then proceed through a rigorous review process involving 11 state and federal agencies and the citizens of Alaska. A major component of this review will be preparation (by federal agencies) of the EIS under NEPA, for which the Partnership must provide the data collected under its environmental baseline program. Only after receiving a positive result from that review will state and federal agencies grant the more than 60 permits required to construct and operate the mine. The combined review and permitting process is expected to take several years to complete.

"Tread Lightly" Program

The Pebble Partnership has adopted a number of initiatives to minimize the environmental impacts of drilling programs and other exploration activities at the Pebble Project site.

This includes ensuring that exploration activities do not disturb wildlife. The company also enforces a "no hunting, fishing or gathering" policy for employees and consultants. Disturbed surface areas, including drill sites, are reclaimed as quickly as possible in the exploration and development phase.

Environmental Baseline Studies

The Pebble Partnership has invested more than $100 million to conduct detailed multi-disciplinary environmental studies since 2004, with the assistance of some 50 independent consulting firms and 500 people, including a significant number of Alaskans. The studies are rigorous and designed to encompass all of the most important environmental and cultural values in the region.

A consultant measures low flow conditions at a stream near the Pebble Project.

- **Fisheries, and Aquatic and Marine Habitat** – Detailed studies in these areas are top priorities to ensure conservation of the fisheries. The scope of these studies includes identifying opportunities to increase the productive capacity for fish in three watersheds near the Pebble site, an activity that extends beyond regulatory requirements.
- **Surface and Groundwater Quality** – These studies are extensive and ongoing. Assessment is critical as use of water requires various permits, including special permits for any activities involving fish-bearing waters. The studies will help ensure that surface and groundwater relationships are fully understood in order to protect important resources through project design.
- **Terrestrial Wildlife/Habitat** – Assessments and ongoing studies will help protect wildlife and their habitat, and include measures to conserve and maintain resources that are important to local communities. Another goal is to ensure that subsistence users are accommodated as development proceeds.
- **Wetlands** – Detailed assessment is needed as activities within wetlands require special permits and are closely monitored by government agencies. Wetlands information is being fed into the design process to help identify the best locations for mill and tailings-storage facilities, roads and infrastructure.
- **Meteorology and Air Quality** – Studies to establish a baseline are necessary before proposing any facilities that may affect air quality.
- **Soil and Rock Geochemistry and Trace Elements** – Mineral deposits have a unique geochemical (natural chemistry) signature that must be measured and analyzed to help understand how they can be responsibly developed.
- **Socioeconomic considerations, including Recreation, Subsistence, and Cultural Resources** – The data collected by these rigorous studies are critical to designing a project that protects subsistence and recreational resources, cultural features, and environmental and community values.

Information generated by environmental baseline studies is being fed directly into the project design process, allowing Pebble's engineers and planners to respond to input from biologists and other environmental specialists. This "environmentally driven" process fosters greater cooperation among disciplines and helps engineers determine the best options for mining, milling, tailings disposal, mine-related infrastructure and water management. An important goal is to protect fisheries, wildlife and other valued natural resources while maximizing economic and social benefits for all Alaskans.

In May 2008, as part of its commitment to full and open disclosure, the Pebble Partnership initiated the release of environmental and socio-economic baseline data collected in support of the project to state and federal agencies, project stakeholders and the general public prior to project permitting. The reports, titled the *Pre-Permitting Environmental & Socio-economic Data Report Series* are publicly available on the Pebble Partnership website at www.pebblepartnership.com.

Data from environmental studies are fed into the project design process.

Documenting fish habitat on video near the site.

THE pebble PARTNERSHIP

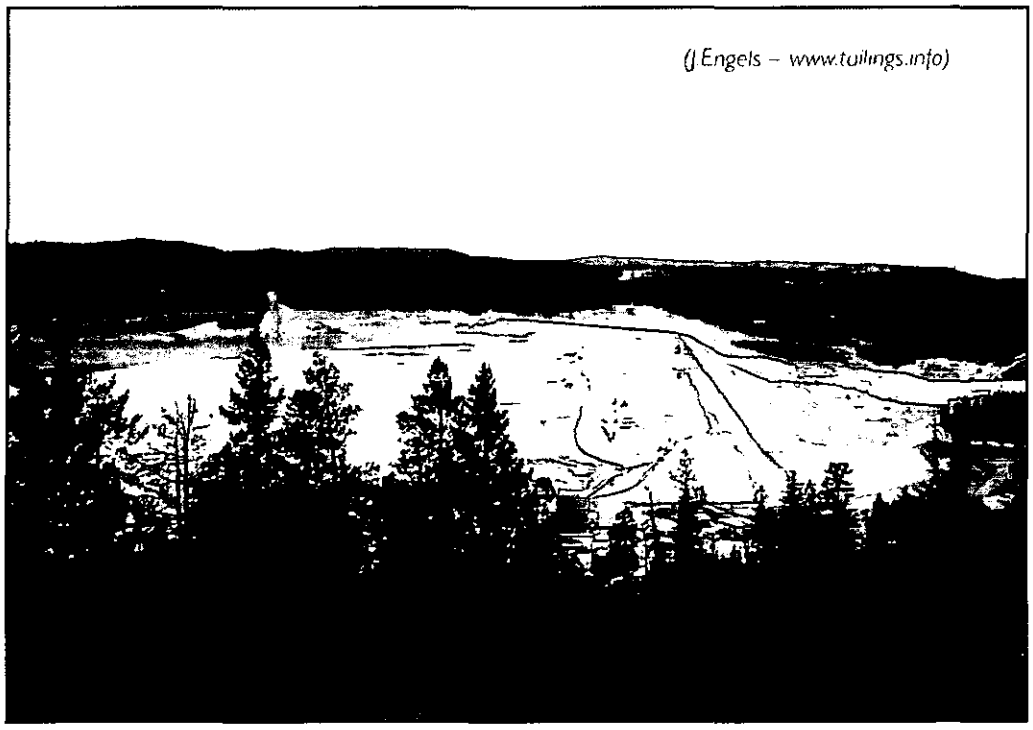
Tailings and Tailings Management

JUNE 2009 BACKGROUNDER

Building and operating a mine is a complex business. It takes rigorous study and careful planning to ensure that the mine is safe, that the environment is protected, and that the interests of local people are met.

One of the most prominent features of an open-pit or underground mine is its tailings storage area. Providing for the safe, permanent storage of tailings is important because tailings material that is not properly contained can have undesirable effects on the local environment.

This backgrounder is intended to provide Pebble Project stakeholders with an understanding of the issues and considerations for tailings management.



A tailings storage facility at the Highland Valley Mine in British Columbia.

What are tailings?

There are five different kinds of material found at a mine. Each is managed differently. They are:

1. **Overburden** is made up of soil, gravel, and other loose materials that cover the surface of a mine site. It is often used as a construction material during mine development or may be stored in large piles and used after mining is complete to restore natural conditions.
2. **Ore** is rock that contains high concentrations of minerals – such as copper, gold, molybdenum and silver. Once ore is mined and removed, it is crushed and processed in an on-site milling facility.
3. **Mine rock** is solid material removed from an open-pit or underground mine that does not contain enough minerals to be considered ore. It is stored on site and may be used to construct mine facilities – such as roads and embankments. Some mine rock can be potentially reactive, which means it produces a mild acid when exposed to air and water. Look for a future back-grounder on the presence of potentially reactive mine rock at the proposed Pebble mine, and how it will be safely managed.

Once processed at the on-site mill, ore is separated into two materials. They are:

4. **Mineral concentrate** is a mixture of water and finely ground rock that usually contains about 80 to 90 percent of the economic minerals present in ore. Once excess water is removed, mineral concentrate is transported from the mine site for further processing.
5. **Tailings** are a mixture of water and finely ground rock that is left over once mineral concentrate is removed. They are permanently stored in a secure facility at the mine site. Tailings usually contain about 10 to 20 percent of the economic minerals that could not be recovered from the ore.

Look for a future backgrounder on the milling process to be used at the proposed Pebble mine.

How are tailings managed?

Once valuable minerals have been separated from ore, the remaining tailings are sent through a pipeline to a storage facility.

A tailings facility is a large storage area that is typically located and constructed in a hollow or valley in order to take advantage of natural barriers and provide multiple layers of environmental protection. In many cases, a tailings embankment – or barrier – built of rock and other natural materials is constructed at the low end of the valley to contain the tailings material.

Once placed in a storage facility, the finely ground rock and water that together make up tailings will separate. The heavier solids will settle to the bottom of the tailings embankments for additional stability. The remaining water will accumulate at the surface to form a shallow tailings pond.

Tailings ponds provide an important water source for mine operations. Tailings water is usually pumped back to the mill to be reused in the milling process. In this way, mine water is recycled over and over again, significantly reducing the amount of water that must be taken from the environment.

What issues are raised by tailings management?

The first issue is to ensure that tailings storage areas are properly located. Extensive studies are done in an effort to select sites for tailings storage facilities away from sensitive environmental areas – such as lakes and streams, wetlands, fishing and hunting areas – to the greatest extent possible.

Secondly, care must be taken to ensure that tailings material is as environmentally friendly as possible. This can be achieved by designing a milling process that captures the vast majority of the minerals present in ore, and by ensuring that the chemicals present in tailings are kept at predictable and manageable levels.

Finally, tailings storage areas must provide for the safe and permanent storage of tailings material. This is achieved by designing tailings embankments to withstand potential catastrophic events, and by controlling the seepage of tailings water. Through modern advances in engineering and construction, it is possible to design and build permanent tailings facilities that are able to withstand severe earthquakes, floods and other catastrophic events.

The goal of the Pebble Partnership and its consultants is to design and construct a tailings facility at the Pebble Project that can operate safely and protect the environment, including downstream water quality and fisheries in the region.

What approach to tailings management will be used at the proposed Pebble mine?

The Pebble Partnership and its consultants have conducted extensive studies to determine the best design options and site locations for proposed tailings facilities at the Pebble Project.

The Partnership will apply modern engineering practices and build its facilities to meet exacting standards and safety requirements enforced by state and federal agencies. The location and footprint of the tailings storage area will be determined prior to the submission of a comprehensive mine plan for the Pebble Project targeted for 2010.

A range of options are currently being examined as part of the development of a proposed mine plan for Pebble, including a conventional open pit, an underground block caving operation, or a combination of both.

A significant portion of the material to be mined at Pebble is considered ore, which contains valuable minerals that will be extracted through the milling process. The remainder will be overburden and mine rock. Once the ore is crushed, watered and put through an on-site mill, it will be separated into mineral concentrate and tailings. Most of the total volume of processed ore will end up as tailings; the remainder will be mineral concentrates containing copper, gold, silver and molybdenum.

The Pebble Partnership will continue technical and environmental studies to refine its plans for the proposed tailings facility at the Pebble Project. Once complete, the proposed tailings facility will include embankments designed to withstand seismic events larger than could actually occur in the project area.

The final proposal for tailings management at Pebble will be included in the mine plan targeted for completion in 2010. This proposal will be subject to an exhaustive regulatory review and permitting process involving state and federal agencies and the people of Alaska that is expected to take three years to complete.

2798

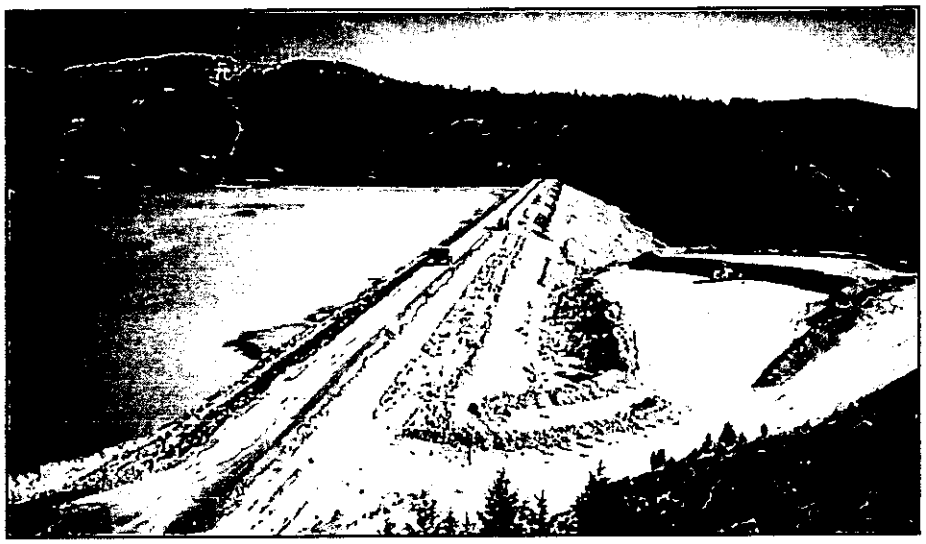
How are tailings embankments built?

Once the best possible site has been chosen for a tailings storage facility, a plan must be developed to ensure it can safely and permanently store all of the tailings produced over the life of a mine. This usually means an embankment is built at the low end of the area selected for tailings storage, and that a pipeline is constructed to carry tailings from the mill to the top of the embankment.

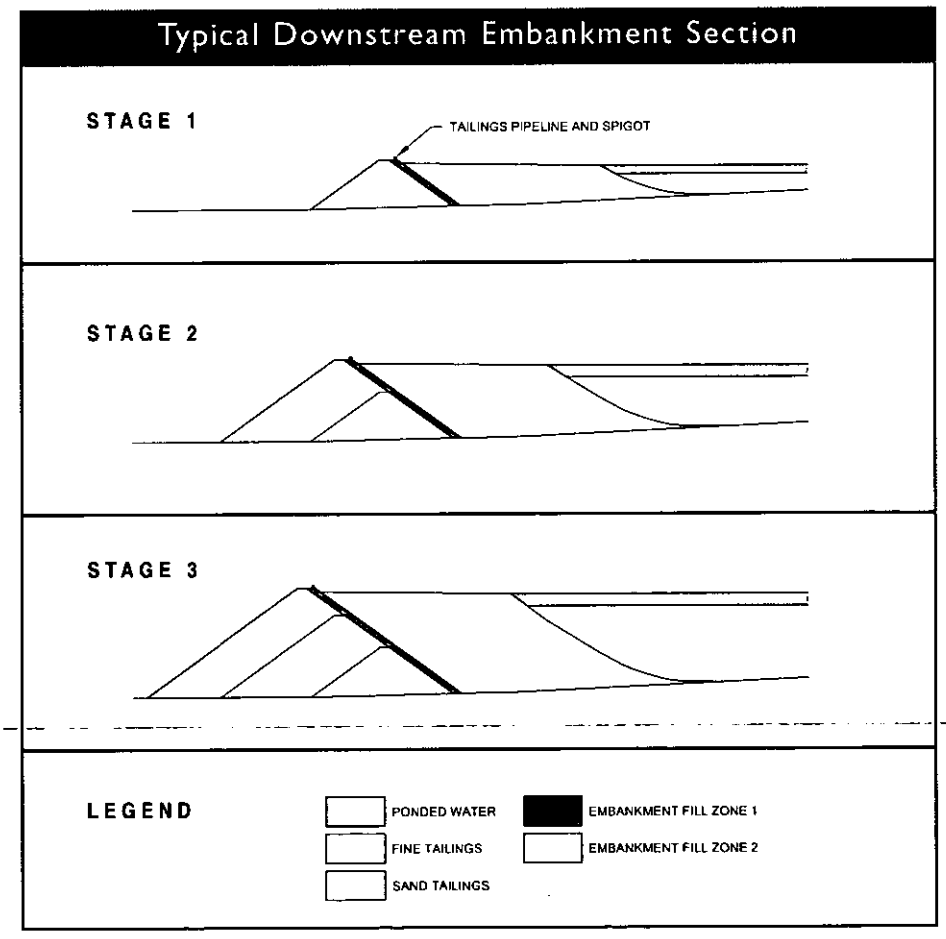
Unlike water dams, tailings embankments are made of rock and sand, and have a very wide base. They are engineered structures built to withstand earthquakes, floods, and other catastrophic events. They are designed and built to exacting standards enforced by state and federal government experts. They also employ modern engineering practices and technology from around the world.

As the volume of tailings material contained in the storage area grows, so too must the height of the tailings embankment and the elevation of the tailings pipeline. Each stage of the process is carefully planned, highly engineered and carefully scrutinized by state and federal experts.

Tailings material – water and ground rock – is transported from the mill to the tailings storage area via pipeline.



A tailings embankment – or barrier – is usually built at the low end of a valley to contain tailings material. (A tailings embankment near Jefferson City, Montana.)



As the volume of tailings material contained in the storage area grows, so must the height of the tailings embankment and the elevation of the tailings pipeline.

2799

How do you make sure that mine tailings do not harm the environment?

The first step to effective tailings management is to design a milling process that produces tailings that are as 'clean' as possible. This means that the mineral content is low, and that chemicals are kept at manageable and predictable levels.

The second priority is to ensure that tailings material remains safely stored. This is achieved by building an embankment capable of retaining all of the tailings material generated over the life of a mine. Tailings embankments are engineered to be permanent structures.

Over time, the sand and silt-sized particles within tailings will accumulate at the bottom of the storage facility to form a dense layer that is highly resistant to water movement. This natural barrier will become several hundred feet thick over the life of a mine – considerably deeper than the relatively shallow pool of water it contains.

The separation of tailings solids and tailings water is an important safeguard for the environment. Not only do tailings solids help contain the tailings pond, they also attract and accumulate the mineral content that exists in tailings water. Over time, these minerals will stabilize in the tailings solids and safely settle in the dense layer that forms at the bottom of the storage facility.

Another design feature of tailings facilities is the incorporation of seepage control and collection measures to ensure no impairment of the groundwater surrounding a mine site. This issue is managed differently at different mines.

In some cases, waterproof liners may be used in combination with water collection systems to control and manage seepage that occurs from storage areas. In other cases, water collection systems are used to ensure that any water that seeps from a tailings storage area is collected and recycled. This approach has been proven to achieve 100% recovery of tailings water at other mines.

The final design feature to be considered in tailings management relates to the control of tailings dust dispersal. This dispersal can be managed by keeping the tailings material saturated at all times.

What happens when mining is complete?

Mining companies are required to design and build permanent tailings storage facilities. But some important changes are made when mining is complete.

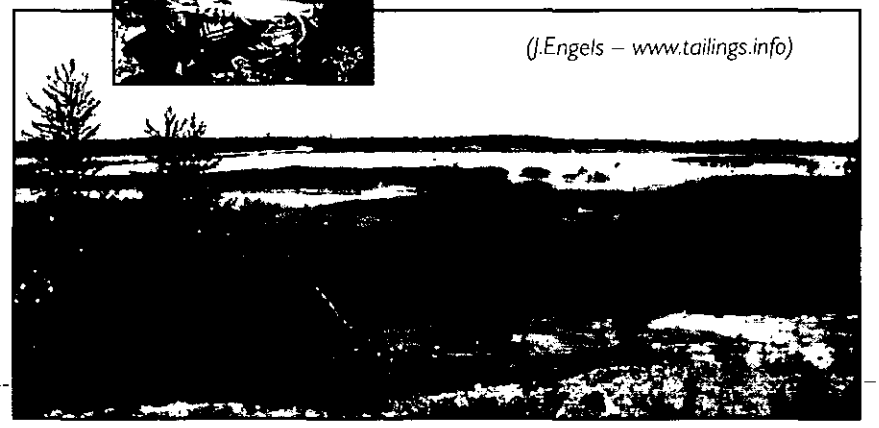
Of course, the pipelines and equipment required to transport tailings to the storage area and water to the mill are removed. The water collection system is operated until monitoring shows that water in the tailings pond is entirely safe. This may occur naturally at some mine sites, usually within five years. Ongoing water treatment may be required in some cases.

Additionally, after mining is complete, tailings storage areas are reclaimed – or returned to a natural-like condition. This means that the area is recontoured to blend into the surrounding environment. Soil and other overburden are replaced and native vegetation is re-established.

Once water in the tailings pond is safe, it can be reconnected to the natural water system through a series of channels and streams. In this way, water balance in the area can be re-established. Depending on environmental conditions before development, former tailings ponds can become lakes capable of supporting fish populations. Land areas become revegetated and provide habitat for local wildlife.

A trophy rainbow trout fishery has been established at a reclaimed tailings pond at the Highland Valley Mine in British Columbia, Canada.

(J.Engels – www.tailings.info)



A reclaimed tailings pond in Sudbury, Ontario, Canada.

In all cases, state and federal laws require that mining companies post a financial surety before any areas can be disturbed for mine construction or operations. This ensures that enough money is always available to restore disturbed areas to a natural-like condition.

3/23/10 LUNCH & LEARN: EMERGING COAL MARKETS & TECH...

Usibelli Coal Mine, Inc.

Emerging Coal Markets and Technologies

Alaska Capitol Building
Lunch and Learn Program
March 23, 2010

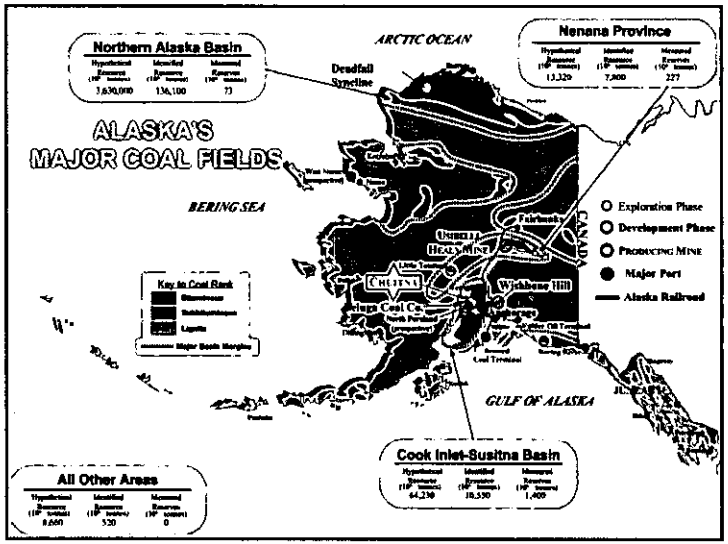
- Alaska's Export Infrastructure
- Export Markets
- Combustion Technologies
- Coal Gasification

Coal Rank

Today → 300 million Years

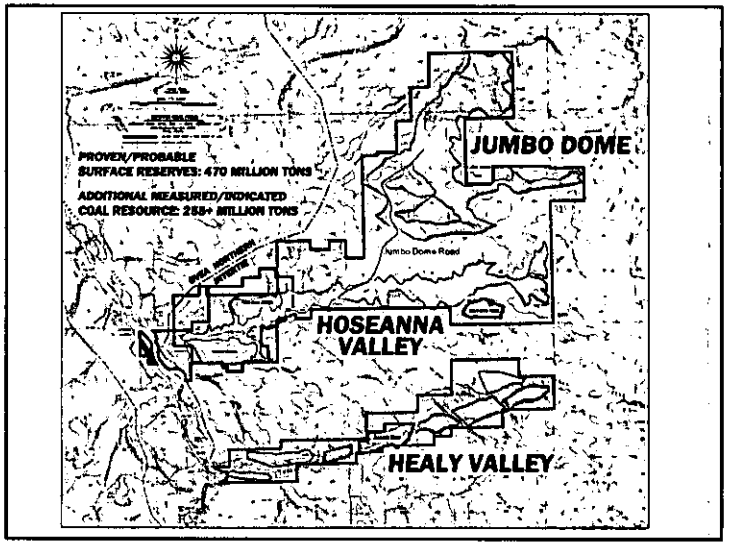
Usibelli Coal – Sub-bituminous
About 20 million years old



Alaska Coal Deposits With Export Potential

Deposit	Coal Rank	Million Short Tons	
		Reserves	Resources
Nenana (Healy)	Sub-Bituminous	500	7,000
Wishbone Hill	HV Bituminous	20	52
Cook Inlet	Sub-Bituminous	1,400	10,000
Deadfall Syncline	HV Bituminous	30	100+
Bering River	LV Bituminous	35	60

1 billion tons coal ~ 15 – 25 tcf natural gas

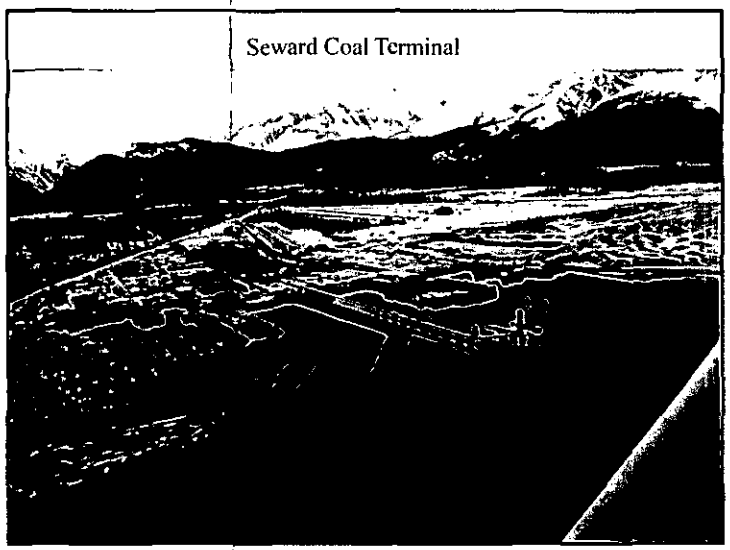


Alaska Coal Markets

- 2009 Alaska consumption – 975,578 tons
  Total for 2009 – 1,861,714 tons.
- Existing Customers
  - 5 cogeneration plants. Clear, Wainwright, Eielson, Aurora, University
  - GVEA Unit 1 mine mouth plant in Healy
  - North Pole Coal, residential/commercial space heating
  - Seward Terminal, residential/commercial space heating
- Potential new markets.
  - Healy Clean Coal Project
  - Railbelt power generation
  - Synthetic fuel production

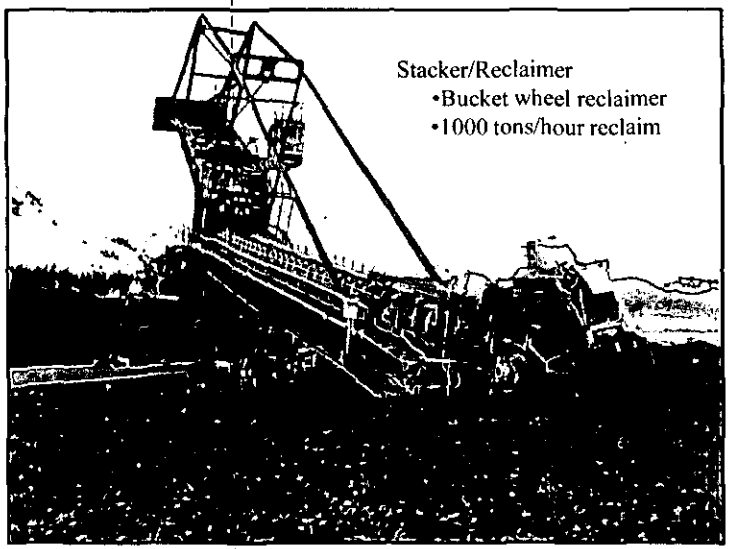
Alaska Railroad Corporation

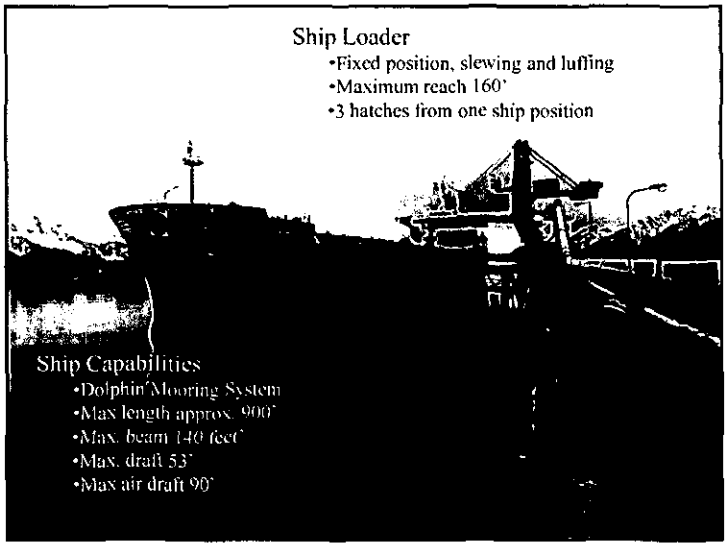
- Owned by State of Alaska
- Fairbanks to Seward – 470 miles
- Healy to Seward – 358 miles
- Mostly single line
- Severe grades and corner radius areas
- Summer traffic congestion
- Maximum 80 car unit train to Seward

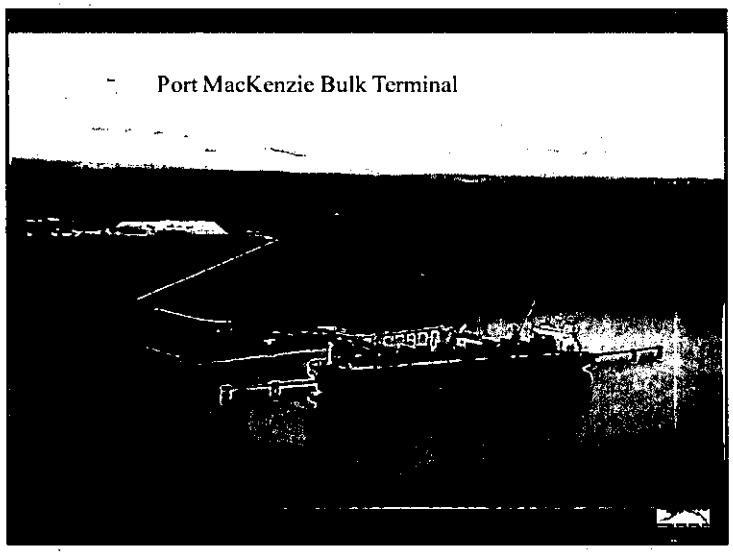


SEWARD COAL TERMINAL

- 1.5 million mt/year capacity
- 12,000 to 16,000 mt/day loading rate
- 120,000 mt stockpile capacity
- 16 meter draft (53 feet)
- 90,000 ton maximum ship size
- Owned by the Alaska Railroad Corp.
- Operated by Aurora Energy Services, LLC, affiliate of Usibelli Coal Mine, Inc.







Port MacKenzie

- Located about 150 miles closer by rail, 2-3 days longer for bulk carriers.
- Currently no rail service, 43 miles new track required.
- Cape class draft, high tide departure due to shoals.
- Extreme tide range – 35 feet
- Currents to 5 knots at angle to dock
- 9 – 10 month ice free season
- Fixed loading arm
- Currently loading wood chips and gravel

World Coal Production

EIA Preliminary 2007 Data
(million short tons)

North America	1,234
Central/South America	92
Europe	814
Eurasia	537
Middle East	1.4
Africa	289
Asia & Oceania	4,069
Total	7,036

PacRim Coal Importers

EIA Preliminary 2007 Data
(million short tons)

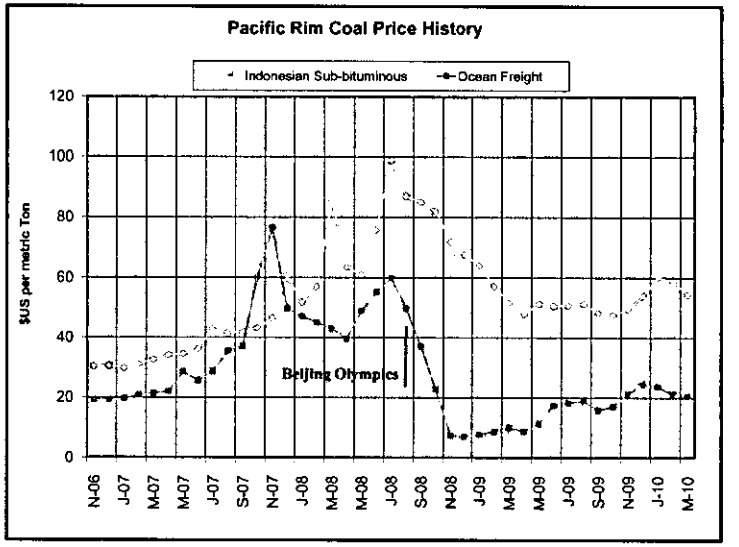
	Production	Consumption	Imports
Japan	0	207	207
South Korea	3	106	103
China/Hong Kong	2,804	2,904	100
India	528	579	51
Taiwan	0	73	73
Thailand	20	36	16
Malaysia	1	12	11
Mexico	12	19	7
Chile	1	6	5

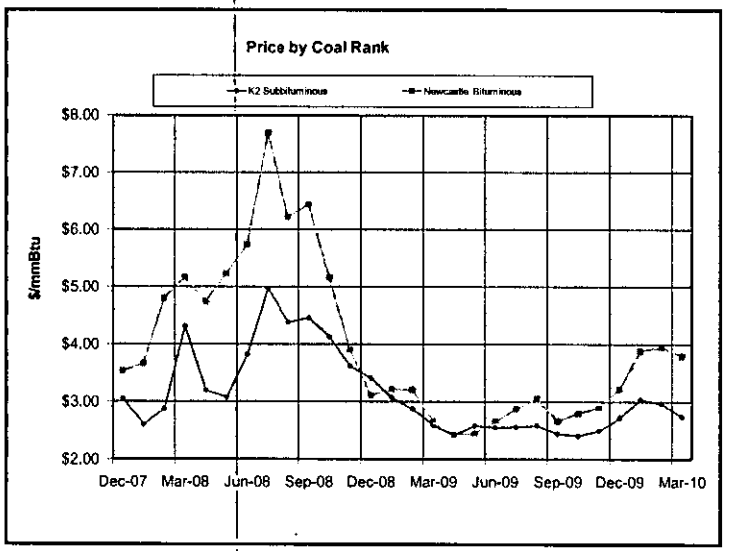
PacRim Coal Exporters

EIA Preliminary 2007 Data
(million short tons)

	Production	Consumption	Net Export
Australia	428	146	282
Indonesia	180	50	130
Russia	347	261	86
South Africa	283	203	80
Vietnam	44	19	25
USA	1,146	1,129	17
Canada	76	62	14

Approximate Total Seaborne Coal Trade – 750 million metric tons





Expanding Coal Demand

Platts International Coal Report, March 22, 2010

- Seaborne demand up by 300 million tons by 2015
  - India – 125 million
  - China – 45 million
  - Japan – 25 million
  - S. Korea – 15 million
  - Taiwan – 10 million
  - Remaining Pacific – 30 million
  - Atlantic – 45 million
- New power plant construction
  - India – 55,000 megawatts under construction
  - China – 55,000 megawatts in 2010
  - Around 1 billion tons new demand by 2015

Key Players - Demand

- India
  - Swing buyer –both Pacific and Atlantic sources
  - Committed to major coal generation expansion
  - Supply shortages from domestic producers
- China
  - Continued high growth rate.
  - Internal transportation infrastrucuture challenged
  - Large coal reserves
- South East Asia
  - High growth rate and internal consumption
  - Primarily Australia/Indonesia sources

Key Players - Supply

- Australia -Largest export supplier
  - Port and Rail limitations (50+ queue at Newcastle)
  - Large bituminous reserves
- Indonesia
  - Predominant supplier of sub-bituminous
  - High internal demand growth
- South Africa - Pacific and Atlantic supply source
- Colombia
  - Potential source for India
  - Aggressive expansion plans
- Russia
  - Both Atlantic and Pacific ports
  - Long rail transport distances

Alaska Export Opportunities

- Currently approximately 5,000 megawatts of generation can use 10 - 50% Alaska coal.
- Chile – Plans to add approximately 7000 megawatts by 2017, mostly coal.
- Japan /China/Korea – High demand growth from India and South East Asia will stress supply for North Pacific consumers.
- South Africa– Increased demand from India and SE Asia will create increased demand for Colombian coal in Europe.
- Colombia – Less attractive source for Chile due to high Europe demand.

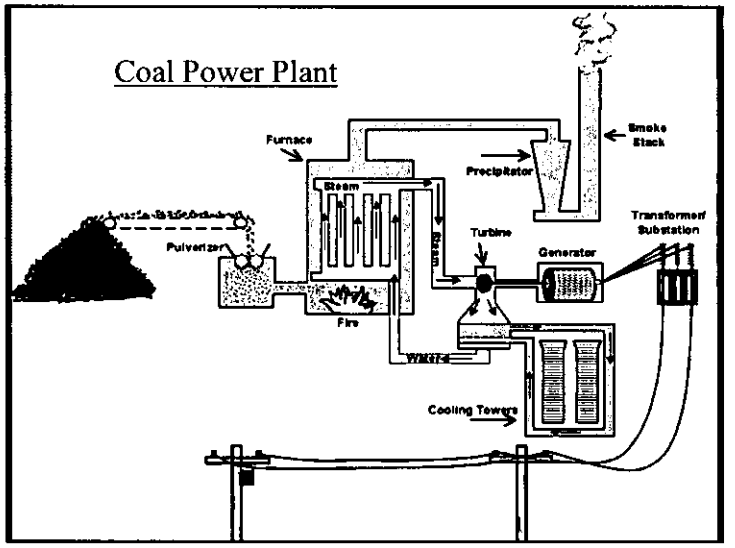
Usibelli Coal Exports

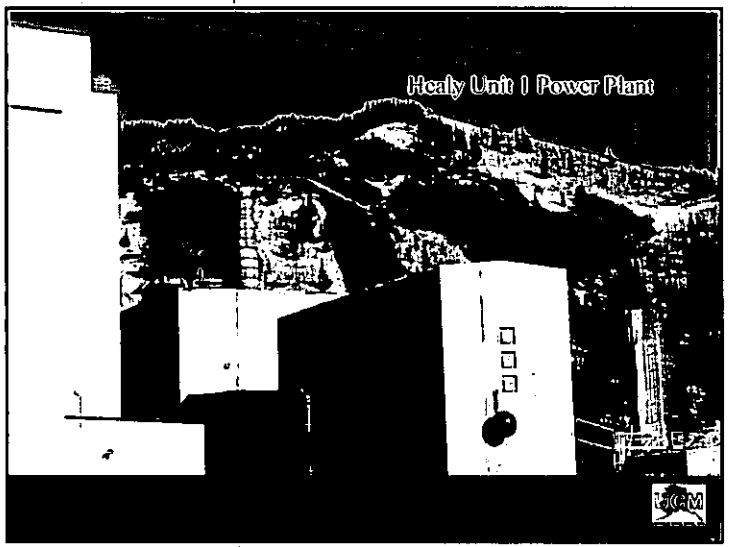
- Up to 723,000 mt to Asia 1985 - 2003
- Recent years (metric tons):

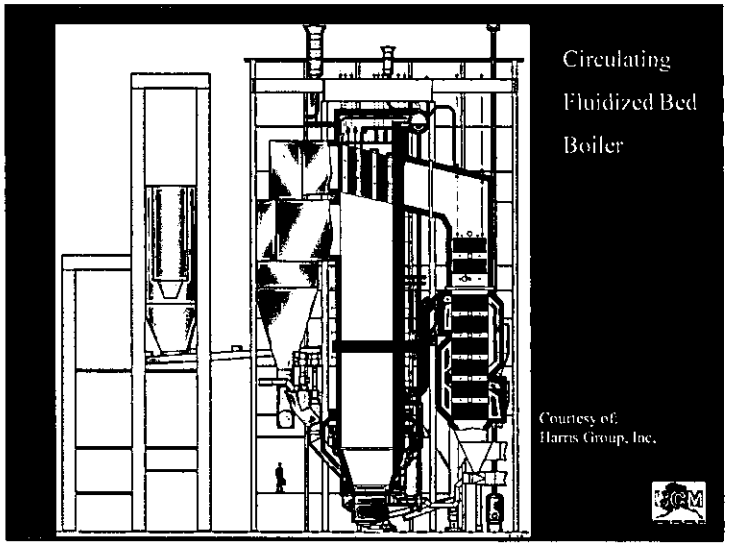
	Asia	Chile	Total
2004	408,840	86,110	494,950
2005	362,660	93,360	456,020
2006	319,610	73,170	392,780
2007	0	279,624	279,624
2008	157,582	364,994	521,000
2009	336,843	466,908	803,751

Power Generation Options

- Traveling Grate Stoker - Fairbanks
- Conventional PC Power Plant – Healy 1
- Circulating Fluid Bed – fuel diversity
- Super and Ultra Supercritical PC
  - Better efficiency and modest cost
- IGCC – high cost and high efficiency
- Gasification for polygeneration
  - Electricity plus liquid fuel or chemicals



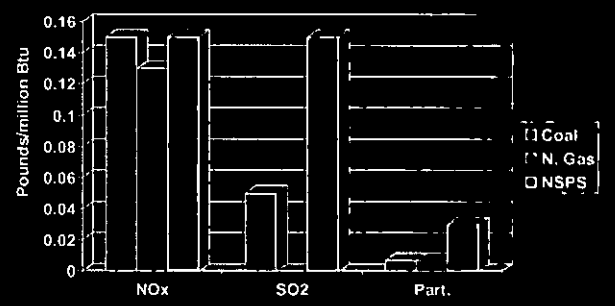




Coal
A Safe & Clean Energy Choice

- Safe to transport. Non-toxic if spilled
- Low combustion potential.
- Useful by products from ash.
- Clean burning with modern technology.
- New plants will employ pollution controls for all pollutants, including mercury.
- Mine lands reclaimed and returned to productive use.

Coal and Natural Gas
Emission Comparison



Gasification
Coal's Future?

New Life For An Old Technology

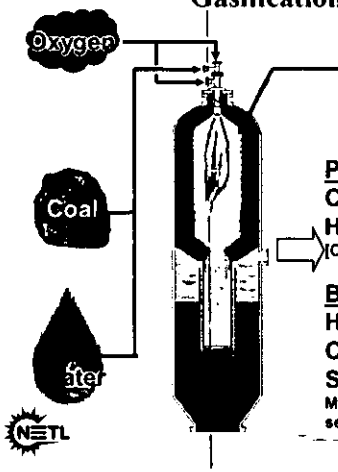
- Integrated Gasification Combined Cycle (IGCC)
- Fischer-Tropsch (FT) Fuel
- Fertilizer/Ammonia
- Petrochemicals

Gasification Process

Organic material (C + H) + Water + *Not Enough* (O_2)
+ little heat
Results in gasification:
Some Heat + Carbon Monoxide (CO)
+ Hydrogen (H_2) + ash + pollutants

- **Can convert almost any organic material into heat and a combustible gas**
- **Typically the organic material is coal or pet coke, but biomass, municipal waste, natural gas, etc. will all work (pet coke is refinery waste)**

Gasification Process #2



Extreme Conditions:
- up to 1,000 psig
- 2,600 °F
- Corrosive slag (molten rock)

Products (syngas)

CO (Carbon Monoxide)

H_2 (Hydrogen)

[CO/H_2 ratio can be adjusted]

By-products

H_2S (Hydrogen Sulfide)

CO_2 (Carbon Dioxide)

Slag (Minerals from Coal)

Mercury, arsenic, cadmium, selenium…

Mega Benefits to Alaska & Nation

ISER & Northern Economics 2009 Findings:

- 35,000 jobs over project life
- Extend the life for Trans-Alaska Pipeline
- Gas reserves for Gasline to Lower 48 States
- Domestic energy security

Alaska's Future with OCS: Mega Findings

- Jobs represent a total **payroll of $72 billion** (2007$) over the 50-year period.
- Provides **$5.8 billion** direct to State and local government
- **Reduces pipeline tariffs** for onshore production and enables development of marginal oil and gas fields
- Underpin **success of the natural gas pipeline** project

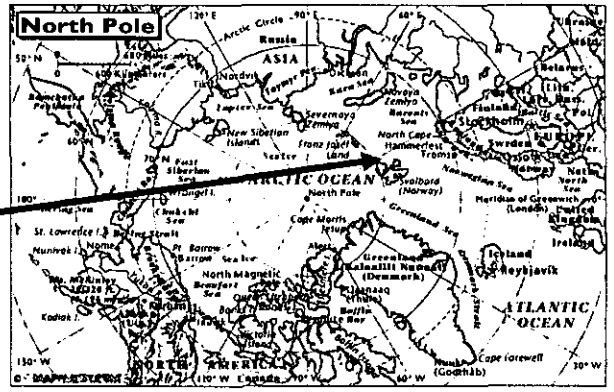
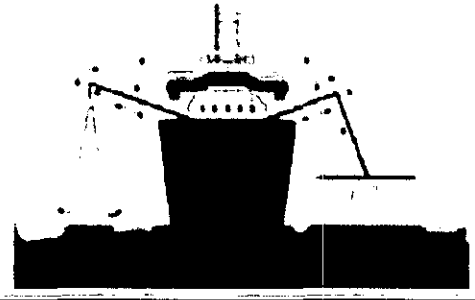
Alaska's OCS: Mega Study & Research

SINTEF

- Full-scale field experiment took place in Barents Sea May 9th – May 25th 2009
- 11 different tests



- A total release of crude oil of over 5000 bls. Treated by burning, mechanical and dispersants.
- Studies of oil slick drift, tests of new mechanical recovery equipment, in-situ burning of oil in broken ice, use of oil spill dispersants on oil weathered in high ice concentrations, and remote sensing systems for monitoring of oil



SINTEF Highlights

- The released oil was **effectively recovered and treated** by combining different response technologies in different ice conditions.

- **Ice can assist** in confining a spill and reduce further spreading and weathering of oil

- Confirmed a longer **"window of opportunity"** i.e. the time the different clean-up technologies can be used effectively.

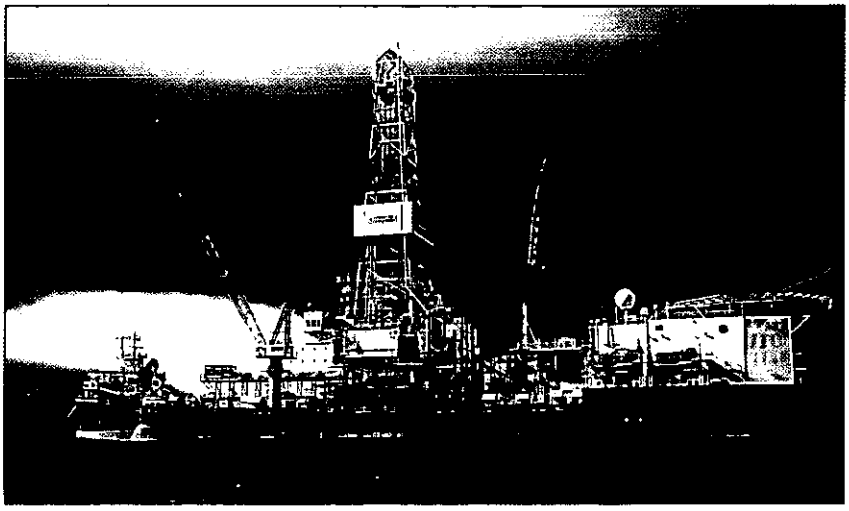
Special Edition - Offshore Drilling

Alaska's Offshore: The Next Prudhoe Bay



Nearly four decades after oil was discovered on the North Slope, Alaskans are on the leading edge of a new frontier of oil and gas development that could be as large as the first.

Beneath the water and seafloor that cover Alaska's offshore, known as the Outer Continental Shelf, or "OCS", the most promising undeveloped hydrocarbon basins in North America are believed to exist. In addition to providing thousands of jobs for Alaskans, exploration and development of Alaska's Chukchi, Beaufort and North Aleutian basins could underpin Alaska's economy and provide energy security for a nation desperate for domestic supplies of hydrocarbons.

The US Minerals Management Services conservatively estimates the federal waters adjacent to the State of Alaska contain 25 billion barrels of oil and 122 trillion cubic feet of natural gas More than a dozen companies have invested over $3 billion in recent years on Alaska OCS leases. They hope to replace declining global oil reserves by utilizing the latest technology and world class experience.

With global demand for oil & natural gas expected to increase 50 percent by 2030 it's critical that energy companies have access to domestic hydrocarbons – including Alaska's OCS where known

Alaska's Offshore: The Next Prudhoe Bay

(continued from page 1)

resources can play a crucial role in helping the U.S. meet the energy challenge. Today, about 65 percent of the US oil supply and nearly 20 percent of its natural gas supply are imported. The current trend threatens to undermine our economy and national security.

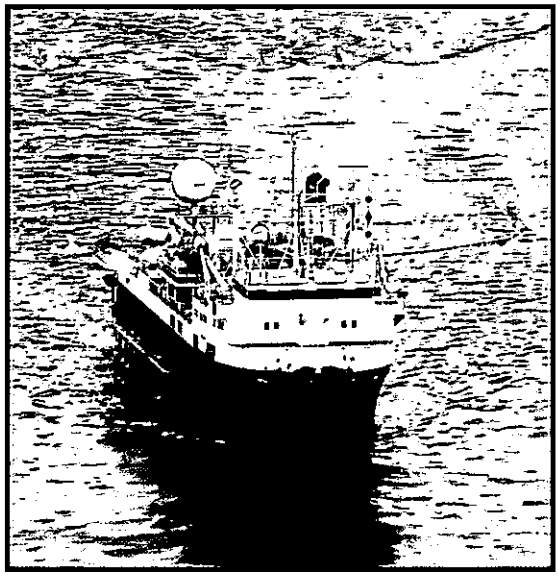
Regardless of the current world economic crisis, the pressure is very much on to develop new energy resources to meet the growing global energy demand for a more technology dependent world population. While renewable energy will be a part of the world's energy supply in the 21st Century, the hard truth is fossil fuels are at the heart of our energy system and will be for the foreseeable future. Those willing to take on the huge risks in developing both conventional and alternative development projects should be rewarded with access to new reserves in the OCS.

As the Department of Interior considers opening up new OCS areas to leasing, it's critical that Alaskans continue to demonstrate their strong support for responsible development of our offshore resources. The offshore is Alaska's next Prudhoe Bay.

Offshore Update

Alaska Already Receiving Revenue From Offshore Activity

Although the state of Alaska does not receive direct tax revenue from development of its offshore resources in the Outer Continental Shelf (OCS), the state does receive federal funds through a program called the Coastal Impact Assistance Program (CIAP). This program is implemented by the Department of Interior's Minerals Management Service (MMS) and is one of the many benefits from offshore development including local job development and indirect tax revenue (See "OCS Development: What's in it for Alaska").



"MV Gilavar" – shooting seismic in the Chukchi Sea.

Due to the successful Chukchi Sea lease sale this past February, these funds have been increased from $2.5 million each of the last two years, to between $29 million and $41.2 million in 2009 and 2010."Alaska plays a vital role in supporting our nation's offshore energy program," said former MMS Director Randall Luthi. "The CIAP program provides a means of sharing oil and gas revenues with local communities that are engaged in the hard work of supplying America's energy needs."

The CIAP was established as part of the Energy Policy Act in 2005 to distribute $250 million annually to six states. In addition to Alaska, Alabama, California, Louisiana, Mississippi and Texas also receive a portion of the funds.

(continued on page 4)

Economic Spotlight

OCS Development: What's In It For Alaska?

Recently, a landmark study was completed that has for the fist time quantified the economic benefits to the state of Alaska from potential development of Alaska's Outer Continental Shelf (OCS). The report, ***"Economic Analysis of Future Offshore Oil and Gas Development"*** was just released by the University of Alaska's Institute of Social and Economic Research (ISER) and Northern Economics. Both respected research organizations teamed up to detail the direct and indirect benefits OCS development could have on Alaska and local communities.

The report estimates the exploration and development of oil and natural gas in the Chukchi Sea, Beaufort Sea, and the North Aleutian Basin would benefit Alaska to the tune of billions of dollars. Just as importantly, offshore activity is expected to create an annual average of 35,000 new jobs with roughly $72 billion in total payroll over the 50-year life of the projects.

OCS oil and gas development could also benefit the state by lowering tariffs for users of the Trans-Alaska Pipeline System (TAPS) in addition to extending the life of TAPS well beyond the date it would be considered unviable using only onshore reserves. Additionally, with some of the largest untapped reserves of natural gas, Alaska's OCS could also play a critical role in making the Alaskan Gasline a reality.

Above right: Oil spill response crews training in Valdez.

Patrick Burden, President of Northern Economics, summed up the study's findings by comparing development of Alaska's three untapped basins as having an economic impact similar to Prudhoe Bay. While there are a great number of uncertainties in an economic study projecting out 50 years, both ISER and Northern Economics conservatively assessed these future opportunities against estimated oil and gas reserves put forward by the Minerals Management Service.

Because of the logistical barriers that need to be overcome (some leases are over 60 miles offshore) the pure cost of developing Alaska's resources requires that hydrocarbon pools be significant in size. The result would be a limited number of platforms using directional drilling to ensure the smallest possible footprint.

However the numbers pencil out over the next decade, it is clear activity in Alaska's offshore would provide a much-needed boon to the Alaska economy.

To find out about the full economic benefits of OCS development for Alaska, go to www.northerneconomics.com.

2834

Development – Past, Present & Future

The Process to Developing Alaska's Offshore

The Minerals Management Service (MMS) implements a comprehensive series of processes for development of the nation's Outer Continental Shelf (OCS). In Alaska this often takes much longer than other areas of the nation. A very abbreviated description of the process is below.

So – how does it all begin? Individual lease sales cannot be held unless they are included in a 5-year program. Development of the 5-year plan involves preparing a draft and final Environmental Impact Statement (EIS), in preparation of releasing a final program; all the while soliciting public comment a minimum of four different times.

After the 5-year leasing program is adopted, planning begins for individual sales. In preparing for a lease sale, another draft and final EIS is completed, and the area for the sale is defined and published. Again, there are multiple opportunities to comment during this process. Finally, the lease sale is held, followed by the formal issuance of the leases.

Typically the process of developing a 5-year program and planning for a specific lease sale takes approximately 3 years, but in Alaska it has taken much longer. For example, the initial planning for the recent Chukchi Sea lease sale started in 2000, and the lease sale was held in 2008. The process for the North Aleutian Basin lease sale began in 2005, and the lease sale is scheduled for 2011.

Timeline of Chukchi Sea Lease Sale:

1) Develop 5-Year Program
2000 – Planning for Chukchi Sea Began

2) Plan for Specific Lease Sale
2008 – Chukchi Sea Lease Sale Held

3) Exploration Plan Approval
2010 – First Exploration Well in Chukchi Scheduled for Completion*

4) Development & Production Plan Approval
2020 – Estimated First Oil/Gas Production in Chukchi Sea*

*Assuming all legal and permitting challenges are resolved.

After the leases are awarded, companies then begin obtaining approval of their exploration plans. This requires another environmental assessment, solicitation of public comment, plan review, and the issuance of multiple permits. Once that process is completed, the first exploration well can be drilled. The approval of Alaska's exploration plans continue to be severely hampered by challenges to permits and various lawsuits. Assuming these legal challenges can be resolved, the first exploration well will be completed in the Chukchi Sea in 2010.

After the exploration well is completed, and assuming the results are positive, the final component in this process is obtaining approval of the development and production plans. Another round of rigorous permitting occurs at this stage with additional opportunities for public comment. Once all of that has been completed, oil and gas production can begin.

A Long History – A Promising Future

OCS development in Alaska is not "uncharted waters." In fact, lease sale activity and exploration drilling have been occurring since the early 1970's. A total of 84 exploratory wells have been drilled in federal OCS waters offshore of Alaska.

In the Beaufort Sea, ten OCS lease sales have been held and 31 exploratory wells have been drilled.

Prior to last year's record-breaking lease sale in the Chukchi Sea which generated $2.7 billion in bonus bids, MMS conducted four lease sales, and five large prospects were drilled. During those years, over 100,000 line-miles of seismic data were collected.

Details on the history of activity on the Alaska OCS, as well as information on the comprehensive environmental studies program managed by the MMS can be found on the Alaska section of the MMS website at: www.mms.gov/alaska.

In the case of the Chukchi Sea, it is estimated it will take approximately ten years between the completion of the first exploration well, and first production.

So – long story short – the federal government does not rush into lease sales, and it does not just hand over leases to be developed overnight. It could take almost twenty years from the initial planning phase to first production for the Chukchi Sea. This long lead time demonstrates the importance of maintaining schedule certainty.

Currently, Alaska is operating under the 2007-2012 leasing program. To ensure a seamless transition, it is vital that the federal government continue its work on the next 5-year program.

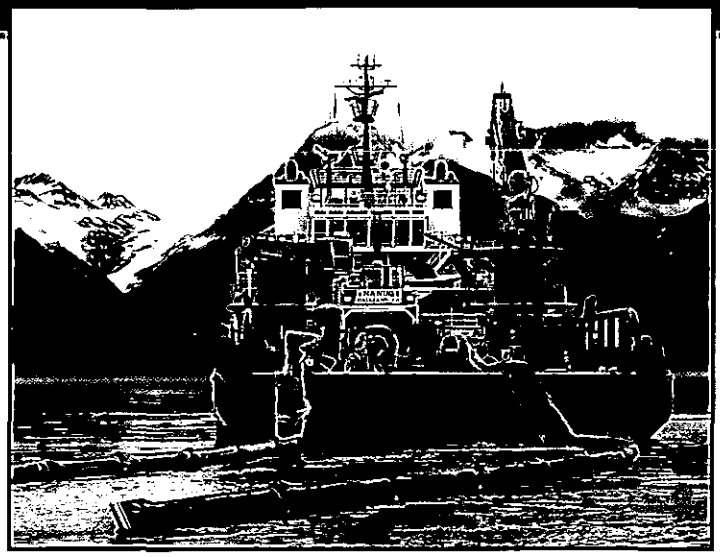
Technology Spotlight

Offshore Oil Spill Response Starts with Prevention

The history of offshore exploration and production operations around the world confirms that large spills are extremely rare events. In 2003 the National Academy of Sciences reported that less than 1 percent of the oil discharges in North American waters are related to the extraction of petroleum, and only a fraction of those are from drilling operations. There has never been an oil spill caused by a blowout from offshore exploration and production drilling in state and federal waters off Alaska or in the Canadian Arctic. According to U.S. Coast Guard classification, there have been no major spills from U.S. exploration or production platforms since 1973. **This is not by luck.** Offshore oil companies have employed the best technology and best practices from around the world to ensure their offshore operations are safe and environmentally responsible.

In the unlikely event of a spill, several response techniques are typically employed. They include mechanical recovery, dispersants (chemical agents used to reduce the effect of oil spills by changing the chemical and physical properties of the oil), and controlled in-situ burning (ignition and burning of an oil spill on the surface of the water). Detection and monitoring of oil spills are important components of spill response.

Tracking an oil spill can be accomplished through airplane and helicopter surveys, Forward Looking Infrared Radar (FLIR) systems, Global Positioning Systems (GPS), digital cameras, etc. In addition, tracking buoys and various types of radar reflectors can be launched from vessels on location at the beginning of a spill and at appropriate intervals thereafter to help track the oil. Specialized ice-strengthened beacons have been used successfully for many years to track ice movements over an entire winter season throughout the polar basin.



"Nanuq" - an ice class vessel built specifically for spill response in the Arctic.

Techniques for detecting and tracking oil under ice include drilling holes and trenches in ice, using Autonomous Underwater Vehicles (AUVs), or surface-operated, portable Ground Penetrating Radar (GPR). Off-the-shelf GPR systems are capable of airborne (helicopter) mapping of oil on the ice surface buried under snow. Alaska Clean Seas (ACS) recently acquired a GPR system to deal with the potential for pipeline spills under the snow in Prudhoe Bay fields.

Industry continues to fund projects that improve the ability to detect oil under ice. The most recent project aims at evaluating a feasibility of Nuclear Magnetic Resonance (NMR) for oil detection under ice. NMR has been used to characterize ground-water aquifers for well logging and reservoir rock core analysis in the oil industry. For applications in oil spill detection, a very important aspect of NMR is that the presence of snow or ice does not interfere with detection, and gives a promise of successful detection of oil under ice.

(Offshore Update continued from page 2)

The Act requires that all CIAP funding be used for projects and activities for the conservation, protection, or restoration of coastal areas. The funding for Alaska will be shared between the state and eight eligible boroughs, with 65 percent going to the state and the remaining 35 percent going to the boroughs.

"The development of oil and gas resources in the federal waters off the shores of Alaska can contribute greatly to the energy supplies of this nation," Governor Sarah Palin said. "The CIAP funding will provide for important projects benefiting the environment."

By increasing the CIAP allocation to the state of Alaska, the Federal Government is recognizing the significant contribution Alaska makes to our nation's energy supply and security. This may be the first step in a process that eventually leads to Alaska achieving full revenue sharing status.

exploration and production

67/68

First period of eni exploration in the US.

79/81

Opening of new eni exploration & production offices in New York. Start of activity after farm-in with Texaco on California and Texas onshore acreage (1979).
Transfer of the exploration & production offices to Houston and subsequent increase of eni's activity by acquiring exploration leases offshore Texas and Louisiana (1981).

91/93

Acquisition of 5 fields (3 operated) from Freeport McMoRan (1991).
Sale of all onshore assets.
eni fully concentrates its activity on offshore (1993).

94/96

Start-up of Grand Isle 102 field (1994).
Start-up of East Breaks 112 field (1996).

99/00

Key milestones resulting from focusing on the Gulf of Mexico (GoM) deep waters:

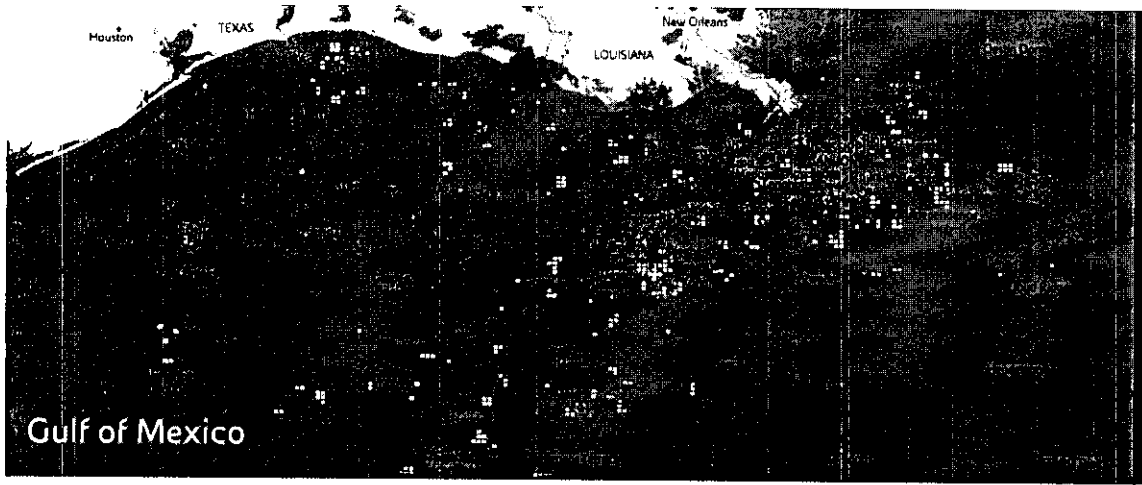
- Acquisition of Working interests in the Macaroni and Europa fields (1999) with first production in 3Q 1999 and 1Q 2000 respectively.
- Acquisition of British Borneo (2000), including operatorship of the Allegheny and Morpeth deepwater fields (100%) and an exploration lease portfolio of over 100 blocks.
- Partnering with ExxonMobil and Texaco to explore over 300 leases.

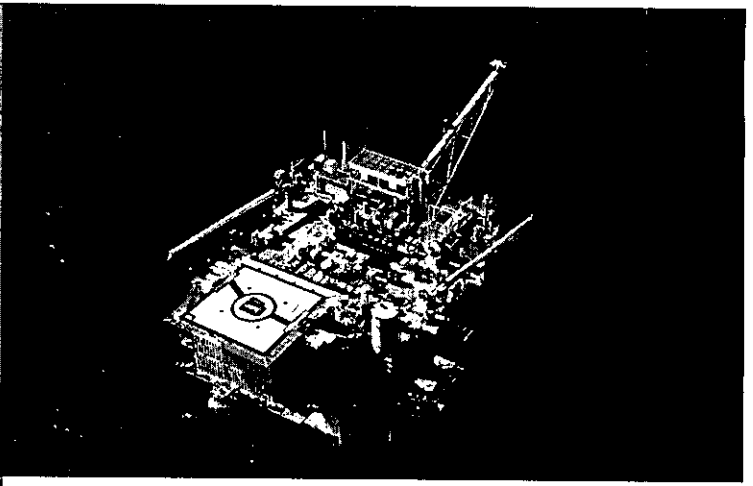
02/03

Start-up of operated production in King Kong and Yosemite gas fields which are tied-back to Allegheny TLP.
Start-up of the Medusa field (eni 25%).

04

eni makes 3 commercial discoveries: Allegheny South (operated), Ulysses and North Black Widow, all developed on a fast track basis.





eni leasehold
eni operated
eni non-operated

Deepwater Fields
Oil
Gas

09

Alaska

- Commenced production from the Oooguruk field (30%).
- eni sanctions the development, commenced development drilling and acquires 3-D seismic (OBC) for development optimization at the Nikaitchuq field (operated 100%) located on the North Slope. Nikaitchuq is the first development project operated by eni in Alaska.
- eni acquired 18 leases in the Chukchi Sea Federal Lease Sale (4 operated 100%, 14 non-operated 40%).

eni production capacity in the US amounts to 120,000 boe/day with 80% in Deepwater GoM, 15% in Shelf GoM, 3% in Barnett Shale and 2% in Alaska. eni operates over 55% of its equity production.

GoM

- eni owns interests in 369 leases in GoM of which 269 in Deepwater and 100 on Shelf.
- eni upgrades the Crystal Platform and renames it Corral Platform (75% operated) and commences production from Longhorn and Longhorn Phase II (both 75% operated). During development drilling eni discovers deeper Longhorn field pays.
- Appaloosa development is progressing timely for production in 2010.
- Production starts-up at the Thunderhawk field (eni 25%)
- eni participates in discoveries at Heidelberg (12.50%) and appraisal wells at Hadrian and Kodiak (25%).
- eni takes delivery of the newbuild Ensco 8500 rig.
- Participation in St. Malo to be developed as Jack/St. Malo project.
- Beginning of initial well under Exploration Participation Agreement with Ecopetrol.
- GoM joint venture with GdF Suez.

Alaska

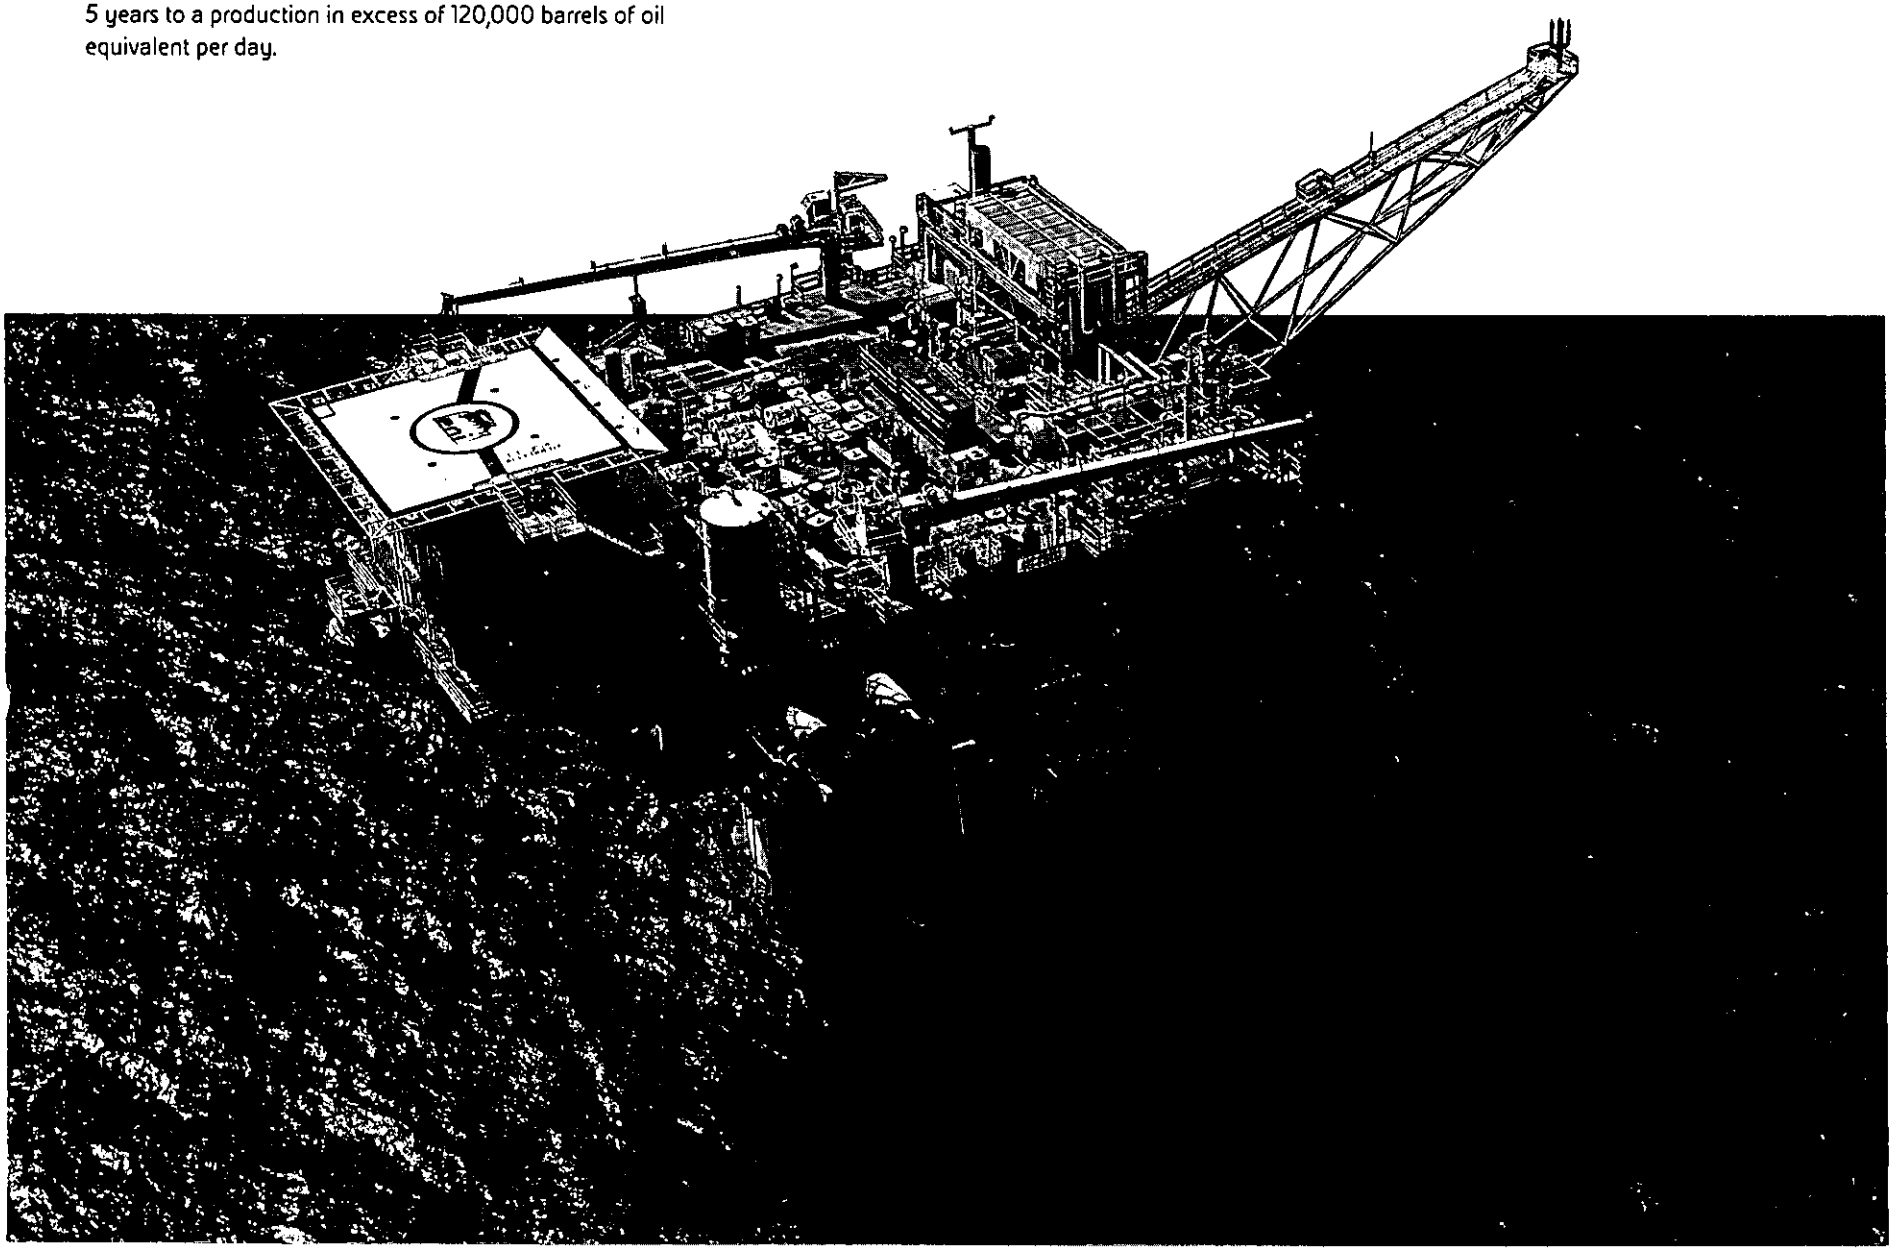
- eni owns interests in 172 leases in Alaska, of which 89 located in Federal offshore waters of the Beaufort Sea and Chukchi Sea and 83 being State onshore leases.
- Continued development drilling at Oooguruk field (30%).
- Ongoing activities concerned the phased development plan of the Nikaitchuq field (eni's interest 100%) located on the North Slope, Alaska.

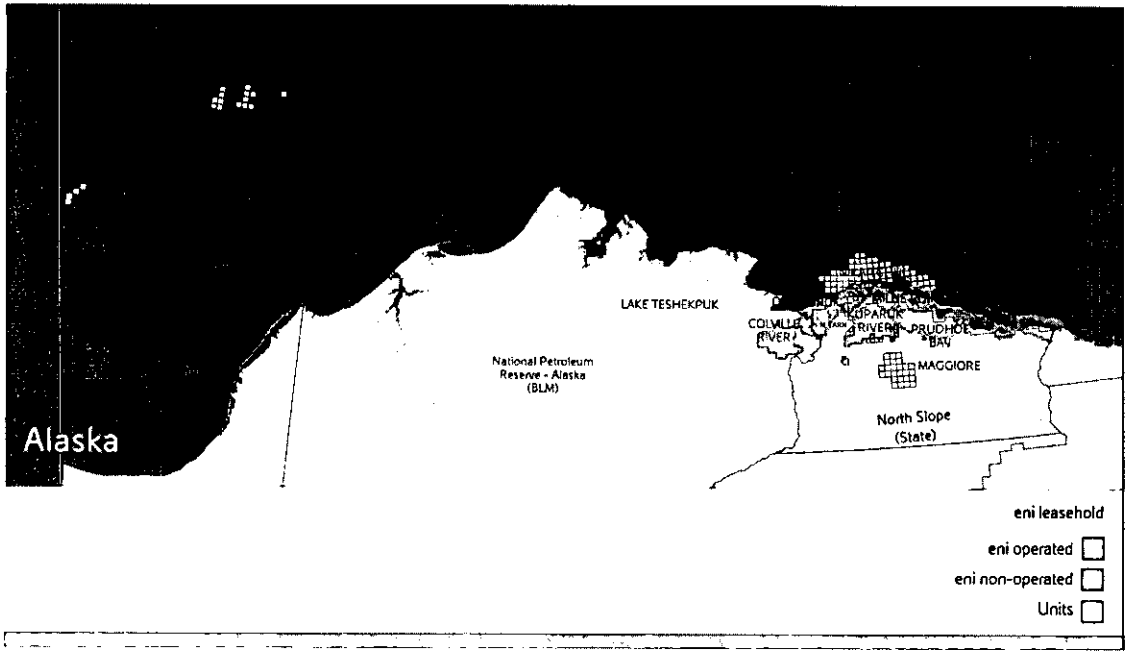
Barnett Shale - Onshore Texas

- eni acquires a 27.5% interest in the Alliance area, in the Fort Worth basin in Texas from Quicksilver Resources Inc.
- Alliance marks eni's entry into its first onshore US unconventional gas play.

eni has been operating in the US since the late 1960's, and carries out oil and natural gas exploration and production under the name of **eni petroleum**.
eni petroleum has offices in Houston and Fort Worth (TX), New Orleans (LA) and Anchorage (AK), shore-bases in Port Fourchon and Cameron, Louisiana and interests in numerous shelf and deepwater fields in the Gulf of Mexico (GoM). Net hydrocarbon production has grown significantly over the last 5 years to a production in excess of 120,000 barrels of oil equivalent per day.

eni petroleum is committed to achieving a safe and healthy incident-free workplace and protecting the environment. Since it commenced operations in the US, **eni** has had no significant environmental events.
In addition, **eni**'s management system has been certified in accordance with an internationally recognized environmental management system standard (ISO 14001), one of the first such awards in the upstream energy sector in the US.





2005

eni acquires 103 leases from Armstrong Oil & Gas in the North Slope of Alaska.
The portfolio comprises exploration leases and 2 projects at pre-development stage. In the GoM, production start-up of the K2 (operated) and Ulysses fields.

2006

Production start-up from the Allegheny South (operated) and North Black Widow Discoveries.

- New gas discoveries, Longhorn and Longhorn North (operated), in Central Mississippi Canyon area.
- Start of the exploration campaign in Alaska in the central part of the onshore North Slope region.
- Progress in development activity in the North Slope of Alaska: sanctioned the development of the Oooguruk field (eni 30%) and start-up of the appraisal phase of the Nikaitchuq field (eni 30%).

2007

- eni acquires all GoM assets of Dominion and reaches a net production of approximately 110,000 boe/d (60% operated). The main producing fields acquired are Devil's Tower, Triton and Goldfinger (75% operated) and Front Runner (37.5%).
- eni is now among the leading GoM producers.
- Extensive lease portfolio with a participating interest in approximately 400 leases in the GoM and 150 leases in Alaska.
- eni acquires an additional 70% stake and operatorship of Nikaitchuq project in Alaska from Anadarko.
- Start-up of 3 gas fields connected to Independence Hub: San Jacinto (53.3% operated), Spiderman (36.7%) and Q (50%).
- Sanctioned the development of Longhorn (75% operated) and Pegasus Field (58% operated).
- eni petroleum opens a new office in New Orleans and manages its activity from offices in Houston, New Orleans and Anchorage.
  A new organization is created consisting of eni and former Dominion staff.

2008

GoM

- GoM Lease Sales:
  eni participates in 5 different lease sale partnership arrangements, acquiring 37 leases total, all operated.
- eni sanctions the development of the Appaloosa (operated 100%) and Longhorn Phase II (operated 75%) in the Greater Longhorn Area. eni acquires the Crystal Platform as "host" for the Longhorn and Appaloosa projects.
- eni started production at Pegasus (operated 58%); tied into Allegheny TLP (100%).
- eni participates in discoveries at Kodiak (25%) and Stones (15%).
- eni executed an Exploration Participation Agreement with Ecopetrol, the state-controlled oil company of Colombia, to assign interests in at least 5 wells within 2012.

eni is a major integrated energy company, committed to growth in the activities of finding, producing, transporting, transforming and marketing oil and gas. The company has global operations in more than 70 countries and employs more than 78,000 people.

It has adopted a model of sustainability focused on the enhancement and safety of its employees and of the communities it works with, on environmental protection, on technological innovation and research, on fighting climate change and on energy efficiency.

eni has been included in the Dow Jones Sustainability Index World and in the STOXX also for the year 2009 confirming its commitment for a sustainable management at an international level for the third year in a row. Since 2007, eni has been included also in the prestigious index FTSE4Good.

eni's activities

eni's activities comprise five businesses:
exploration & production, gas & power, refining & marketing, engineering & construction and petrochemicals.

exploration & production
eni explores and produces oil and natural gas in Italy, North and West Africa, the North Sea, the Gulf of Mexico, Latin America, Australia and in high potential areas such as the Caspian Sea, the Middle and Far East, India, Russia and Alaska.
In the first half of 2009 hydrocarbon production averaged the level of 1.756 million boe/day.
Proved hydrocarbon reserves at December 31, 2008 totalled 6.6 billion boe (Russian assets at 30%), with a life index of 10 years.

gas & power
eni operates in the supply, transport, regasification, distribution and marketing of natural gas and in electricity generation and sales in Italy and abroad.
In the first half of 2009 overall sales amounted to 52.81 billion cubic meters of natural gas and 15.4 terawatthours of electricity.

refining & marketing
eni operates in oil product refining and marketing mainly in Italy and Europe. With the eni and agip brands, it is the Italian market leader in the distribution sector.
In the first half of 2009 overall sales totalled 22.13 million tons of refined products.

engineering & construction
saipem (42.9% owned by eni) is a leader in the provision of engineering, procurement, project management and construction services for the oil & gas industry, with unique capabilities in designing and executing large scale offshore and onshore projects. saipem has extensive expertise in operating in conventional and deep offshore as well as in remote areas. Order backlog was €19,015 million at June 30, 2009.

petrochemicals
polimeri europa (eni 100%) operates in the production and sale of a wide portfolio of petrochemicals and holds a significant market share in Europe where it has state-of-the-art plants all equipped with innovative technology. It also makes use of an efficient distribution network worldwide. In the first half of 2009 production amounted to 3,254 thousand tons.

House Resources
April 03, 2009
BOF Confirmation Hearing

Good afternoon, Chairman Neuman, and members of the House Resources Committee. My name is Paul Shadura, I am the Executive Director for the Kenai Peninsula Fishermen's Association, KPFA is a non profit, 501C association. We are the largest set net representation group in the Cook Inlet area; there are approximately 745 set net permit fishing families within our South Central region. Our Association has been a voice for commercial fisheries for over 50 years.
Today we would like to offer our advisement for confirmation of Board Member Karl Johnstone. Each Board Member is appointed on the basis of interest in public affairs, good judgment, knowledge… providing diversity of interest and points of view... In addition they shall be appointed without regard to political affiliation or geographical location. Mr. Johnstone has been a limited entry permit holder for 10 years. This would include salmon set net, herring roe, salmon drift, in areas such as Bristol Bay, Southeast, Prince William Sound and Cook Inlet. We have observed Judge Johnstone in action in the last few BOF meetings. We find his inquisitive nature as refreshing and positive in giving all interests a fair and impartial decision on matters before the Board. We have high hopes that in the future Mr. Johnstone will continue to seek the truth and will not polarize the users with his decisions.

Thank you.

Paul A. Shadura II

Johnstone Fisheries

Resume

Name:	Karl S. Johnstone
Address:	18618 Snowy Plover Cir Anchorage, Alaska 99516
Time in Alaska:	1967 to present
Date of Birth:	07/25/1941
Health:	Perfect
Education:	Bachelor's degree in Business, 1964 U. of Arizona Juris Doctor in Law, 1967 U. of Arizona
Work Experience:	Private Practice of Law 1968 through 1978 Superior Court Judge 1979 through July 1996 Part time mediator/arbitrator and limited practice 1997 through present
Position applying for:	Member of North Pacific Fishery Management Council or Alaska Fish Board
Related Experience:	Owned and fished Limited entry permits for set net and drift net salmon fishing in Bristol Bay from 1984 through 1988. Owned and fished Limited entry permits for gillnet herring in S.E. Alaska and Prince William Sound from 1984 through 1988. Have been an active sport fisherman through out Alaska since 1967 to present.
Other activities:	Golf, flying, building aircraft, fishing, reading.

Contact information: email: Johnstone@alaska.net Phone 928-541-1378

Employment Applicant Profile

Personal Information

First Name: karl Middle Initial: (Optional) Last Name: johnstone

Mailing Address: 18618 snowy plover cir

City: anch State: ak Zip Code: 99516 Country: U.S.

Email: (Optional) johnstone@alaska.net

Are you currently an Alaska Resident? yes Yes No

Since 03/67 (mm/yy)

Do you have a legal right to accept employment in the United States? yes Yes No

Are you related to any person currently working for the State of Alaska? Yes no No

If Yes, please list their name(s), their Departments(s), and your relationship(s):

Have you ever been convicted of a felony? Yes no No
Have you been convicted of a misdemeanor within the past five years? Yes no No

If you answered Yes to either of the above questions, please explain below:

Note: If you have been convicted of a felony, you will be required to provide a copy of your judgment if chosen for an interview.

Veterans'/National Guard Preference
Are you a veteran or a member of the Alaska National Guard? If no, you may proceed to the Optional State of Alaska Equal Employment Opportunity Questionnaire below.

Are you a veteran who served on active duty (not active duty for training) in the United States Armed Forces and did you receive an honorable or general discharge? Yes No

If Yes:

Did you serve during a war* **OR** during the period beginning April 28, 1952, and ending July 1, 1955?
OR

Did you serve for more than 180 consecutive days, any part of which occurred during the following periods:

- After November 11, 1918, and before December 2, 1919;
- After September 15, 1940, and before December 7, a941;
- After December 31, 1946, and before January 1, 1948;
- After June 26, 1950, and before April 18, 1952;
- After January 31, 1955, and before October 15, 1976; or
- In the Alaska Territorial Guard?

Did you serve during the Gulf War period beginning August 2, 1990, and ending January 2, 1992? AND If you originally enlisted after September 7, 1980, or entered on active duty on or after October 14, 1982, without having previously completed 24 months of continuos active duty, did you serve continuously for 24 months or the full period called or ordered to active duty? **OR**

Were you awarded a campaign or expedition medal or an award or decoration for heroism or gallantry in action? AND if you originally enlisted after September 7, 1980, or entered on active duty on or after October 14, 1982, without having previously completed 24 months of continuous active duty, did you serve continuously for more than 180 days or the full period called or ordered to active duty?

Yes No

OR

Are you currently a member of the Alaska National Guard and have you served for eight (8) years or longer? Yes No

*Under Title 5 Section 2108 of the United States Code the following time periods are considered periods of war.

- World War I Between April 6, 1917, and November 11, 1918, inclusive Unless service was with the United States military forces in Russia, then the ending date is April 1, 1920. Service after November 11, 1918, and before July 2, 1921, is considered World War I service if time was served in the active military, naval, or air service after April 5, 1917, and before November 12, 1918.
- World War II: Between December 7, 1941, and December 31, 1946. If in service on December 31, 1946, continuous service before July 26, 1947, is also considered World War II service.

Are you entitled to disability compensation, disability retirement benefits, or disability pension under laws administered by the United States Department of Veterans Affairs or a military department? **OR**

Were you honorably discharged and awarded the Purple Heart? Yes No

The State of Alaska complies with Title I of the Americans with Disabilities Act (ADA). Individuals with disabilities who require special accommodation, auxiliary aides or services, or alternative communication formats call 465-3897 in Juneau or (907) 465-3514 TTY.

We are an equal opportunity employer and support workplace diversity.

Applicant's Signature: Karl J Schultz

Committee Members,

My name is Stan Malcom. I own and operate a sportfishing charter service here in Peter currently the President of the Petersburg Charter Boat Association and will be testifying support of Mr. Karl Johnstone's appointment to the Board of Fisheries.

I had the opportunity to attend both the S.E. Shellfish and the S.E. Finfish meetings hel year.

At both meetings, I was impressed by Mr. Johnstone's questions, comments and ultimat expressing a strong commitment to maintaining Alaska's fishery resources.

While I did not agree with every position taken by Mr. Johnstone, I didn't see any bias f any particular user group, and his decisions seemed to be based on the facts and science him. He was readily availability to the public and that along with his interaction with the staff indicated to me an interest in fully understanding the issues.

I think Mr. Johnstone's background will allow him to become a valuable asset to the bo and I urge you to support his confirmation.

Thank you for the opportunity to comment.

Stan Malcom

Dear Co Chairs Johnson and Neuman:

The Territorial Sportsmen, Inc. (TSI) strongly supports the appointments of Teresa Sager Albaugh and Stosh Hoffman Jr. and the reappointment of Cliff Judkins to the Board of Game. We urge you confirm their appointments.

Mr. Judkins has served on the board for several years and has a proven record of good decisions regarding game management. He consistently makes fair and equitable decisions regarding allocations among the various user groups.

Ms. Albaugh has lived in rural Alaska for many years and understands the need for good wildlife management. She also has experience working for the legislature and understands the importance of effective game management. We are confident she will be an effective member of the Board of Game.

Mr Hoffman has a thorough knowledge of wildlife issues in southwest Alaska and we believe he will be an effective member of the Board of Game.

TSI supports the reappointment of Karl Johnstone to the Board of Fisheries (BOF). Mr. Johnstone has a proven record of making fair and impartial decisions regarding the allocation of fish among the various user groups.

TSI has grave concerns about the appointment of Brent Johnson to the Board of Fisheries. With the appointment of Mr. Johnson, the BOF will have four members from the Cook Inlet area or with close ties to the commercial fishery in the Cook Inlet. If Johnson's appointment is confirmed, none of the members of the BOF will reside north of Wasilla. It is not wise to leave the entire northern part of the State with representation

on the Board. Also, the addition of a set net fisherman from Cook Inlet swings the balance far toward the commercial fishing interests.

Due to these concerns, TSI does not support the appointment of Brent Johnson and urges the legislature to NOT confirm his appointment.

Territorial Sportsmen Inc. is a Juneau based organization that advocates for the rights of hunters, sport fishermen and trappers. TSI has been in existence since 1948 and currently has 1800 members.

Sincerely,

Wayne Regelin

Re: Application for the Board of Game

Dear Governor Murkowski

I would like to be considered for appointment to the Board of Game. I came to Alaska in 1962 after graduating from Humboldt State College in Northern Ca. with a Bachelors Degree in Wildlife Management. I worked for the Greater Anchorage Borough Health Departments and Environmental Quality Departments until Nov. of 1974. I was the Director of the Department of Environmental Quality when I left to build and operate Crown Point Lodge near Moose Pass. The lodge was damaged by a chemical accident in 1986. I moved to Wasilla and purchased Wasilla Mini-Storage, which I sold in 1998 and retired in the Wasilla area. While in Moose Pass I served on the Seward Fish and Game Advisory Committee. I am now the Chairman of the Matanuska-Susitna Fish and Game Advisory Committee. I have attended and testified for the AC at numerous Board of Game and Board of Fish meetings. I am an avid outdoor person and have fed my family moose, caribou and fish for forty years. My basic philosophy concerning wildlife management is that the State should work to provide an abundance of wildlife to provide for the needs of all Alaskans. Where shortages of wildlife for food occur the state should apply management techniques that assure customary users have the opportunity to harvest game for food. I would appreciate your consideration of my application for the Board of Game.

Sincerely Cliff Judkins

PERSONAL BACKGROUND

I grew up in a family where being outdoors - well out of town and away from the crowds – was considered a great thing. As a child, my five siblings and I spent summers with our mother, father, aunt, uncle and grandparents at the family cabin, where we literally got our feet wet, our faces dirty, and our hearts and minds filled with a deep appreciation for "the woods." We learned to fish with a rod and reel, handle firearms, and to clean and eat what we killed. As adults, we have continued these traditions and we have the pleasure of now passing them on to our children, nieces and nephews.

I personally have had the good fortune of many wonderful hunting opportunities for moose, caribou, sheep, bear, and deer, as well as ducks, ptarmigan and grouse. My husband, Bill, runs a trapline in the winter and as often as possible I join him to learn from and share the experience. We live in a log home, haul water, run a propane cook stove and lights, and provide our own part-time power system. Much of our diet comes from the wild food we harvest and each year's bounty from the garden.

I have no formal or professional training in wildlife management. My experience comes from a combination of personal field observation spending time in the natural environment, and a layman's study of applicable state and federal fish and game laws.

In part because of my personal interest in the outdoors, my work as a legislative aide often involved resource issues, which allowed me to hear many hours of testimony from Alaskans who expressed their perspectives and strong opinions on a wide range of fish and wildlife issues. I was also fortunate to have worked toward the passage of laws that have benefited hunters and trappers. My service on the board of directors of the Alaska Outdoor Council, including two years as president, has further broadened my understanding and appreciation of how important wildlife and the outdoors are to the people of the state. I have attended local Advisory Committee meetings, offered testimony to the Game Board, and provided public comments to the National Park Service on proposals of impact to the people, land, fish and game of my area.

Enabling present and future Alaskans to be responsible stewards of the resource, and to continue building and strengthening our outdoor heritage by assuring opportunity, are objectives I consider very meaningful and important. I believe they are goals that can be pursued and achieved through the efforts of the Board of Game, and I would be grateful for the opportunity to serve in that capacity.

Sec. ⏩16.05.221⏪. Boards of fisheries and game.

(a) For purposes of the conservation and development of the fishery resources of the state, there is created the Board of Fisheries composed of seven members appointed by the governor, subject to confirmation by a majority of the members of the legislature in joint session. The governor shall appoint each member on the basis of interest in public affairs, good judgment, knowledge, and ability in the field of action of the board, and with a view to providing diversity of interest and points of view in the membership. The appointed members shall be residents of the state and shall be appointed without regard to political affiliation or geographical location of residence. The commissioner is not a member of the Board of Fisheries, but shall be ex officio secretary.

(b) For purposes of the conservation and development of the game resources of the state, there is created a Board of Game composed of seven members appointed by the governor, subject to confirmation by a majority of the members of the legislature in joint session. The governor shall appoint each member on the basis of interest in public affairs, good judgment, knowledge, and ability in the field of action of the board, and with a view to providing diversity of interest and points of view in the membership. The appointed members shall be residents of the state and shall be appointed without regard to political affiliation or geographical location of residence. The commissioner is not a member of the Board of Game, but shall be ex officio secretary.

(c) Members of the Board of Game serve staggered terms of three years. The terms of the members of the board begin on July 1. Notwithstanding AS 39.05.080 (1), by April 1 of the calendar year in which the term expires, the governor shall appoint a person to fill the vacancy that will arise on the board because of the expiration of the term of a member of the board and submit the name of the person to the legislature for confirmation. If a vacancy arises on the board, the governor shall, within 30 days after the vacancy arises, appoint a person to serve the balance of the unexpired term and submit the name of the person to the legislature for confirmation. A person appointed to fill the balance of an unexpired term shall serve on the board from the date of appointment until the earlier of the expiration of the term or the failure of the legislature to confirm the person under AS 39.05.080.

(d) Members of the Board of Fisheries serve staggered terms of three years. The terms of members of the board begin on July 1. Notwithstanding AS 39.05.080 (1), by April 1 of the calendar year in which the term expires, the governor shall appoint a person to fill the vacancy that will arise on the board due to expiration of the term of a member of the board and submit the name of the person to the legislature for confirmation. If a vacancy arises on the board, the governor shall, within 30 days after the vacancy arises, appoint a person to serve the balance of the unexpired term and submit the name of the person to the legislature for confirmation. A person appointed to fill the balance of an unexpired term shall serve on the board from the date of appointment until the earlier of the expiration of the term or the failure of the legislature to confirm the person under AS 39.05.080.

House Resources
April 03, 2009
BOF Confirmation Hearing

Good afternoon, Chairman Neumann, and members of the House Resources Committee. My name is Paul Shadura, I am the Executive Director for the Kenai Peninsula Fishermen's Association, KPFA is a non profit, 501C association. We are the largest set net representation group in the Cook Inlet area; there are approximately 745 set net permit fishing families within our South Central region. Our Association has been a voice for commercial fisheries for over 50 years.

Today we would like to offer our advisement for confirmation of Board Member Karl Johnstone. Each Board Member is appointed on the basis of interest in public affairs, good judgment, knowledge. Providing diversity of interest and points of view. In addition they shall be appointed without regard to political affiliation or geographical location. Mr. Johnstone has been a limited entry permit holder for 10 years. This would include salmon set net, herring roe, salmon drift, in areas such as Bristol Bay, southeast, Prince William Sound and Cook Inlet. We have observed Judge Johnstone in action in the last few BOF meetings. we find this inquisitive nature as refreshing and positive in giving all interests a fair and impartial decision on matters before the Board. We have high hopes that in the future Mr. Johnstone will continue to seek the truth and will not polarize the users with his decisions.

Thank you.

Paul A. Shadura II

February 26, 2009

The Honorable Bryce Edgmon
Chair House Fisheries Committee
Representative_Bryce_Edgmon@legis.state.ak.us

Dear Chairman Edgmon:

I am writing to follow-up my responses to some of the questions raised Tuesday at my confirmation hearing before your committee.

One of the subjects addressed was the relative distribution of entry permits between Alaska residents and non-residents. Over the years, many permit holders have migrated inside and outside of Alaska with their permits, and many permit holders have transferred their entry permits. By 2008 year end, 829 more permits had moved out of Alaska with their former Alaska resident permit holders than moved into the state. However, during the same time period, Alaska residents gained 152 more permits by transfer than did nonresidents.

These trends are included in our annual permit transfer study entitled "Changes in the Distribution of Alaska Commercial Fisheries Entry Permits". An executive summary is always provided to the legislature and both versions are available on our website (www.cfec.state.ak.us). We expect the 2009 edition to be completed before the end of the fiscal year.

On the subject of the difficulties encountered by young fishermen who want to start fishing careers, I mentioned that the Division of Investments provides loan programs to help finance purchase of vessels and permits. In fact, the Division even has a special program designed for local communities to help their residents acquire limited entry permits. I want to add that the Alaska Commercial Fishing and Agriculture Bank (CFAB) does the same, as do some Alaska Native Corporations. Most importantly, I want to add that, in addition to entry level limited fisheries, there are over 100 non-limited fisheries. Young fishermen can gain experience in these fisheries without buying an expensive limited entry permit. The University of Alaska Sea Grant Program also assists young Alaskans with information about the various options and opportunities for launching a career in commercial fishing.

I hope this clarifies and supplements my responses. I would be pleased to provide any further information you or the committee members may want on these or other aspects of the Commercial Fisheries Entry Commission.

Thank you for your time and consideration.

Sincerely,

Peter Froehlich
Commissioner

RE: Support for Confirmation of Peter Froehlich as C.F.E.C. Commissioner

Dear Representative Johnson and Committee members,

United Fishermen of Alaska (UFA) is the largest statewide commercial fishing trade association, representing 37 member organizations from fisheries throughout Alaska and its offshore waters.

UFA supports the legislative confirmation of Commissioner Peter Froehlich for continued service to the Alaska Commercial Fisheries Entry Commission (C.F.E.C.). Mr. Froehlich has helped the Commission reduce the backlog of adjudication in permit disputes, and has shown dedication and willingness to work with fisheries groups and fishermen in the administration of Alaska's limited entry program.

Thank you for your consideration,

Mark Vinsel

Johnson
Fisherie.

Brent G. Johnson
resumé for application to Alaska Board of Fisheries.

Fisheries experience:
· Cook Inlet setnetter since 1962. My wife, Judy, and I have owned our own setnet site since 1977. Together with my mother and our children we currently fish 11 permits, one of the largest operations in Cook Inlet. We have developed a way to put all our fish into slush ice at the point of harvest (in the skiffs).
·Crewed on a Prince William Sound salmon seiner several times, most recently in 2008. I typically do this after the Cook Inlet setnet season has closed.
·Seined and setnet for herring in Cook Inlet.
·Crewed on Cook Inlet halibut longline vessels.
·Drafted Shore Fisheries Diagrams for clients in Cook Inlet, Kodiak, Area M and Bristol Bay.

Public service organization experience:
·Served on the Kenai-Soldotna Fish & Game Advisory Committee for about 15 years, including terms as secretary and as chairman. Last service there was about 5 years ago.
·Served on the Cook Inlet Aquaculture Association Board of Directors for about 15 years. Currently serving as president of that organization.
·Served on the Kenai Peninsula Fishermen's Association Board of Directors for about 20 years, including several terms as president. Last term as president ended in the spring of 2008. At that time I retired from the KPFA Board of Directors, though I'm still a member of the organization.
·Served as an alternate to the Cook Inlet Salmon Brand (Kenai Wild) Board of Directors.
· Served on the Kenai Peninsula Borough Planning Commission for about 12 years. This is a paid position and I continue to serve there.
·Served on the Kasilof Regional Historical Association for about 4 years. Currently president of that organization.
·Elected president of the Kenai Peninsula Historical Association in May 2008 and continue to serve in that capacity.

Education:
Graduated from Ninilchik High School in 1973.
Numerous classes for personal development from U of A, Kenai River Branch.

Pertinent family ties:
·My brother-in-law, Doug Blossom, owns the setnet site adjacent to ours. He is also Chairman of the District 34 Republican Party.
·Two of my nephews work in the sport fish guiding industry and one of my nieces is married to a Cook Inlet salmon drift fisherman.
· My 89-year-old mother has been in Alaska since 1942.

Work:
· I worked for years for my father who was a private land surveyor. My brother has taken over his business and I've physically surveyed numerous Shore Fishery Leases for them.

If appointed, a press release will be issued announcing your appointment pending the completion of the appointment process with the Governor's office. Please supply our office with the following information that will be included in the press release.

(Name): Brent Johnson (Age): 53 of (Hometown): Clam Gulch
is (Job title/Place of employment): Cook Inlet Setnetter.
(Name) holds (Listing of earned degrees like bachelor's, master's, ect.): Brent Johnson is President of Cook Inlet Aquaculture Associatio
(Or list relevant experience to the position you are being appointed to)
And has more than 40 years of experience setnetting
Examples: in Cook Inlet.

John A. Doe, 38 of Soldotna, is Director of T-Shirts & Co. Doe holds a bachelor's degree in business administration from X University and a master's degree in communications from X University.

John A. Doe, 38 of Palmer, is the owner and operator of Doe and Associates, Inc. Doe previously served as division manager at X, Inc. Doe is a certified personnel consultant.

Subject: Please oppose Brent Johnson ADF&G board

Dear Representative Johnson,

I am writing to ask you to oppose the appointment of Brent Johnson to the Alaska Board of Fisheries (BOF).

By nominating Mr. Johnson to replace Bonnie Williams on the BOF, Governor Palin would remove the only subsistence/personal use and Fairbanks representation from the BOF. If confirmed, Mr. Johnson will tip the balance on the BOF overwhelmingly towards commercial fishermen at the expense of native, subsistence, and sport fishing interests.

The BOF already has ample representation of commercial fisheries interests. Replacing an up-river user on the Board with a Cook Inlet salmon setnetter will erode public confidence in the BOF process. Mr. Johnson is past president of Kenai Peninsula Fishermen's Association (KPFA), a set netter trade association of Cook Inlet commercial fishing interests. He has consistently claimed commercial priority rights to the public fisheries of the region. Mr. Johnson has shown in his past interactions with the Board that he has not taken a fair and balanced approach to fish allocation decisions.

Mr. Johnson's confirmation would leave the BOF without Alaska Native or female representation in the management of Alaska's subsistence, sport, personal use, and commercial fisheries. The nomination of Mr. Johnson leaves the Interior of Alaska without representation on the Board and does not correct the current lack of Alaska Native representation on the BOF.

The Governor needs to reach out and find a Board of Fisheries appointee familiar with interior fisheries issues and who will provide a fair and balanced approach to governance.

Sincerely,

Mike & Sally Trotter

Subject: Brent Johnson and the Board of Fisheries

It has come to my attention that Brent Johnson favors commercial fisheries over personal use. I think that most Alaskans would disagree with this position. This would negatively affect my ability to feed my family. In these hard times I don't want to rely on Fred Meyer for the fish we eat. Also consider that when the individual harvests fish, money is being spent in local economies. Please consider anyone else who will stand up for the majority of Alaskans.
Thank you,
Sean-Michael Dunham and Family

Subject: PLEASE VOTE NO on Brent Johnson's appointment!

You would be doing your fellow Alaskans a disservice by voting to appoint Brent Johnson to the Alaska Board of Fisheries. You will be "taking the food out of babies mouths" literally. As a resident of Kenai, I along with my children fish the Kenai River Dipnet Fishery every year. What I'm able to harvest feeds my family for a year not to mention I'm able to share with those less fortunate than me and help them each year. The Kenai area has suffered tremendously this past year with the Agrium closing and people loosing their jobs left and right. People here depend on this fishing opportunity to be able to eat, survive and provide proper nutrition for their children.

Please vote NO!

Thank you,

Ellen Hampton

Subject: Board of Fish appointee concerns

As an Alaskan resident and concerned fisherman I write to voice my opposition of Governor Palin's appointment of Brent Johnson to the Board of Fish. Given the current makeup of the board, I firmly believe that this appointee should have experience with, and represent the interest of, interior and subsistence fisheries. I do not know Mr. Johnson personally, however his work experience and public comment on prior issues clearly indicate to me that he is not an appropriate choice for this position.

I support the content of the letter below and ask that you not confirm the appointment of Brent Johnson to the BOF

Respectfully,

Brooks Areson

April 10, 2009

The Honorable Sarah Palin
Governor, State of Alaska
State Capitol, Room 300
Juneau, AK 99801

Dear Governor Palin,

We commend the vetting process of members of state boards and commissions conducted by the Governor. We are confident the appointees are individuals of honesty, integrity and merit and we applaud their willingness to serve the people of Alaska. It is important for the Board of Fisheries to consist of members who are knowledgeable, honest and objective in their consideration of Alaska's fishery concerns.

It is crucial for board members to be true to the interests of all Alaskans. Appointees should have concern for those who depend on local fishing sources. Board members should be able to look at all sides of an issue without any preconceived notions. They should impartially evaluate the concerns and interests of the various groups and regions. They should also have the education to make well-studies, science-based decisions. In this sense, fairness and objectivity are essential modes of consideration and evaluation.

The Board of Fisheries should have a wide breadth of knowledge of fisheries issues across the state. It is safe to assume that each member is an expert of the issues in their residential region. A Juneau resident is familiar with the needs of Southeast commercial and sports fishermen. A Cook Inlet resident understands the needs of dipnetters and halibut fishermen. A resident of the Yukon-Kuskokwim region values the importance of fishing for personal use. A Board member from the Fairbanks area would have a profound understanding of fishing for personal use. The Chitina personal use fishery in the Copper River illustrates an Interior concern. The geographical location of Fairbanks is influential in its proximity to rural Alaska and its stature as the second largest city in the state. The Interior is largely dependent on the many services Fairbanks has to offer, particularly as a hub of economic stimulus and development for those who travel to the region to fish.

It is imperative for Board appointments to represent each unique region of our state. It is questionable whether members of the Board of Fisheries who are commercial and sports fishermen south of the Alaska Range are in tune to the needs of Interior and Native Alaskans that depend on fish for subsistence. There would be an unfair disparity among regional appointments if the Interior no longer has a representative on the Board. If the Interior goes unrepresented on the Board, this means a region that encompasses over half the state, including the Yukon River and its salmon concerns, would lack a residential voice familiar with the region and its issues and people. While current members of the Board undoubtedly serve Alaska's fisheries to the best of their abilities and knowledge, there is not a current member who is Native or resides north of Big Lake.

Given these concerns and issues, the Interior Delegation respectfully requests the Governor to appoint to the Board of Fisheries a resident from the Interior. We hope that you weigh these considerations carefully and understand the interests of this vast region of our state. While we have the utmost respect and no disregard for your appointee, the Interior Delegation feels that a representative of our region should be on the Board of Fisheries.

Thank you for your time and consideration of these important concerns expressed by our constituents. We have confidence you will consider the issues that are close to the hearts of Alaskans across the state. We appreciate your taking valuable time to find the most suitable and knowledgeable individuals to sit on the state's boards and commissions. Please feel free to contact member of the Interior Delegation if you have any questions, comments or concerns.

Respectfully,

Dear Legislator,

Our Family thanks you very much for serving us in Juneau.

We are a sport fishing family who supplements or winter food with the salmon we catch.

Please do not all the Board of Ficheries to become slanted against sportsman by allowing Brent Johnson to be confirmed. Please represent the overwhelming majority in your district by voting "NO" on Brent Johnson's nomination.

Thank you much, we look forward to your vote.

Subject: Brent Johnson On Our Alaska Board of Fish?

Dear Representative,

Brent Johnson believes that Cook Inlet Commercial fishermen have gotten a raw deal because Alaska's governor's appear to resist appointing Cook Inlet commercial fisherman to the Alaska Board of Fish. Johnson does much research within his below article, **"Something's fishy on the Board of Fish"** but he somehow forgets to reference the many decades our BOF was totally controlled statewide by his commercial fishing interests. It did not seem to matter where the commercial seats were from back then, they always voted in favor of allocating 98% of our fisheries to the commercial fishermen in Alaska.

Now that our BOF has a more even seat ratio, we are seeing up to 5 - 10 % of our fisheries being allocated to common users. It is this 10% of the fisheries pie which is upsetting Brent Johnson and the rest of the commercial fishing industry here in Alaska. I claim this is the primary reason Johnson has attempted to be placed on our BOF.

Johnson's below letter plainly claim that he is very interested in Cook Inlet achieving commercial user representation on the BOF. He states that the current 2008 BOF is "not legitimate" as he labels it a "kangaroo court", which will attempt to destroy Cook Inlet commercial fishing, thus "make commercial fishing in Cook Inlet a memory". This is a statement coming from a person who believes that the lack of a Cook Inlet Board of Fish member, will in fact lead to the destruction of Cook Inlet commercial fishing. Brent Johnson is making this statement even as he know perfectly well that any BOF member coming from Cook Inlet commercial would legally be required to recuse himself from most deliberations involving Cook Inlet commercial issues because of their conflict of interests.

A person then must ask themselves why would any person desire that a Cook Inlet commercial fisherman be on the BOF, when they would not be able to vote on Cook Inlet issues? Johnson is claiming that the situation is "rotten" since Cook Inlet lacks commercial representation on the BOF but if he got that representation, they would not be able to vote on Cook Inlet commercial issues? Johnson is claiming that Cook Inlet commercial fishers cannot get a "fair shake" without a Cook Inlet commercial fisher on the BOF, so how does a Cook Inlet commercial fisher acquire a "fair shake" with a Cook Inlet commercial fisher on the BOF, when that member would be forced to not participate in Cook Inlet issues?

Obviously there is more going on here than just seating a Cook Inlet Board Member. It is no big secret that BOF members do effect each other in a very substantial way by just talking to other BOF members. Right now it is also very obvious that Brent Johnson's commercial fishing industry is very intensely pushing our legislature to reduce or eliminate recusals for conflict of interest.

Johnson states that our BOF is unfair without a Cook Inlet commercial fisher presents but even if he had that presents, it would not be able to represent Cook Inlet commercial interests. Most people would call that a nonfunctional "catch 22 situation" but not Johnson, while commercial fishing interests lobby our legislature to reduce or eliminate recusals for conflict of interest...

The only thing Brent Johnson would "legitimately" be able to effect is fisheries issues outside Cook Inlet commercial fisheries. So why would Johnson claim that a Cook Inlet

commercial fisher on the BOF would give Cook Inlet commercial fishers a fair shake? There can only be two possible answers to this question.

1.] Johnson has an illegal agenda which seeks to correct Cook Inlet fisheries issues with a Cook Inlet commercial fisher BOF member.
2.] Johnson does not fully understand that a Cook Inlet commercial fisher board member would not be able to legally address the commercial fishing issues he is referring to.

Both of the above choices reveal that Johnson has a distorted view of what BOF members can and cannot legally do. There are no other choices within this issue. Johnson clearly states that he seeks Cook Inlet fisheries control by obtaining a Cook Inlet commercial seat on the BOF. It is common knowledge that you cannot legally obtain this kind of control over fisheries you have a conflict of interest within. So what could Johnson's agenda be?

The below article was not a slip of the lip by Johnson, I have know Brent Johnson for 30 years and over that time period I have watched him put forth at least a dozen major fisheries proposals which on the surface appeared to make no real sense. In each of these cases the reason the proposals did not make sense was because he can only process information in a way which benefits the commercial fishing industry. This would be like asking a communist to flip over and become a capitalist over night. A life-time of pushing the commercial fisheries agenda has left him with a real inability to see the "big picture" with regard to Alaska fisheries.

I claim that Johnson's agenda is one where he plans to either "knowingly or unknowingly" inappropriately influence BOF decisions over Cook Inlet issues. He has plainly stated this goal within his below article if you read between the lines.

For this reason I request that you NOT CONFIRM Brent Johnson to the Alaska Board of Fisheries.

Thank you.

Don Johnson

Letter to the Editor
Web posted Wednesday, January 30, 2008

Something's fishy on the Board of Fish
Letter to the Editor

Here's what's going down. The state Board of Fisheries (BOF) is going to hold a February meeting, put on a **kangaroo court** and enact regulations that **will likely make commercial fishing in Cook Inlet a memory**. Here's why: governors Palin, Murkowski, Knowles, Hickel, Cowper and Sheffield didn't appoint a single Cook Inlet commercial fisher to the BOF. Gov. Jay Hammond was the last to do that, with the appointment of Dannie Garroutte, a drift fisher from Ninilchik (served 1975-80).

Isn't that odd? The Cook Inlet basin includes Anchorage, has the bulk of the state's population and many Cook Inlet commercial fishers, and yet six governors chanced to not appoint a single one. In that same span (since 1979), 12 Cook Inlet basin sportfishers have served on the BOF. They are: Calvin Fair of Soldotna (1977-79), Russ Dunn of Anchorage (1975-80), Bix Bonney (Kenai River

guide, 1983-87), Bud Hodson of Anchorage (1986-93), Mike Chihuly (Ninilchik saltwater guide 1988-93), Irv Carlisle of Soldotna (1990-93), Tom Elias (president of the Alaska Sport Fishing Association 1991-93), Larry Engel (former Fish and Game sportfish biologist, 1993-2003), Dr. Dick Bower of Soldotna (1993-96), Dan Coffey (Anchorage attorney who crafted the "fish initiative," 1997-2002), Ed Dersham (Anchor Point guide, 1997-2005) and Howard Delo (Wasilla sportfisher critical of drifters 2007-).

To his credit, Gov. Steve Cowper appointed Mike Haggren, a Kodiak resident who drifted in the inlet. Before Haggren had the opportunity to actually sit at a BOF meeting, however, he was cited for a commercial fishing violation. Cowper had the courage and good sense to give his resignation. The same can't be said of current board member Jeremiah Campbell, a Murkowski appointment from Seward. Campbell, who has a guide business, was cited for a Fish and Game violation, but he will be in full participation at the upcoming BOF meeting because the same governor who criticized the Murkowski machine for dishonesty in oil and gas issues is unwilling to clean up her own administration.

Why can't Cook Inlet commercial fishers get a fair shake? I don't know, but I have an idea there's "**something rotten in Denmark**," and it comes from politics, not salmon.

Brent Johnson

Subject: Brent Johnson

Dear Representative,

This letter regards the appointment of **Brent Johnson**, by our Governor, to Alaska's Board of Fisheries.

I am a 25 year resident of Alaska and I am requesting that you **NOT CONFIRM** Brent Johnson to the Alaska Board of Fish for two reasons.
1.] The first reason is because it would leave interior Alaska and subsistence/ personal use residents without a voice on our BOF.
2.] The second reason is that we need people on our BOF who are able to see the big fisheries picture regarding our many fisheries USES here in Alaska. I have know Brent Johnson for 30 years and I personally know that he only carries a SINGLE picture in his head with regard to Alaska's fisheries. That perspective is one which enforces by regulation that commercial fishermen are allocated 98% of Alaska's fisheries and common users are given the left-overs. I believe this ratio should be the other way around, with our common users receiving priority access to our fisheries and commercial users receiving any harvestable excess, which the public cannot use.
Governor Palin has made a very poor choice with this BOF appointment of Johnson.

Thank you.

Subject: Alaska Board of Fish - Brent Johnson being the 4th commercial seat

Dear Representative,

Our Alaska Board of Fish is currently proportioned with a 3 sport, 3 commercial, 1 subsistence/person use, seat ratio. This mix of board users seats was arrived at in an attempt to bring some resemblance of peace to the "All Out Fish War" which had historically been inflicted on our BOF meetings. We must all remember that we had confrontational and unproductive BOF meetings before we arrived at our current BOF seat ratio. If you as our representative cannot remember how our BOF meetings used to not function, you will be doom to repeat that mistake. This is our BOF history, for 20 years we had haphazard BOF meetings, which resulted in the bulk of user efforts spent with user groups butting heads. These meetings bordered on being more of a circus than a BOF meeting. This is our history, when we had a majority of commercial fisherman stacked on our BOF. To repeat this kind of insanity is moving backward in time. Can you remember these meetings? They were a waste of our time.
We have not seen that circus for a while, but now with Brent Johnson being the 4th commercial seat on the Board, we will be force to begin them all over again for sure.
We constructed a [3 sport, 3 commercial, 1 subsistence/person use] seat ratio to give peace to these meetings. If Brent Johnson were added to this Board, it would cause us to go back to a commercial majority and I will guarantee you that our previous " Fish War ", will again return.
Is this what you are looking for? If people fail to remember our historic fisheries management mistakes, they are doomed to repeat those mistakes into the future.
Please DO NOT CONFIRM Brent Johnson to the Alaska Board of Fish.

Thank you.

Subject: Brent Johnson

April 13, 2009

To Whom It May Concern,

I and my family do not support the appointment of Brent Johnson to the Alaska Board of Fisheries for the following reasons:

We feel all user groups deserve a fair hearing in front of the Board of Fisheries. The Board make-up should not be over balanced in favor of one user group. Brent's appointment does just that - overweight the board representation with commercial fishing interest, with four of seven seats. The current chair John Jensen and vice-chair Vince Webster of the BOF both have commercial fishing permits, and former chair Mel Morris is employed in seafood marketing.

Brent Johnson does not have the support or trust of statewide user groups except for the commercial fishing industry. (Upper Cook Inlet Drifters Assn, (UCIDA drift netters) Kenai Peninsula Fishermen's Assn (KPFA set netters) Kenai Area Fishermen's Coalition (Commercial Joe Fisherman) and the United Fishermen of Alaska (UFA) have all come out in full support of his nomination. However, he is facing statewide opposition from all other user groups. Sport anglers, personal use dip netters, and subsistence users. Residents from around the state = Fairbanks, the Bush, Anchorage, Mat-Su, Kenai, Juneau, Sitka and Petersburg - have all expressed opposition to this appointment.

One of his main support groups, UCIDA, is advocating federal preemption of state managed salmon fisheries and seeking to outlaw the resident-only dip net fisheries, all in the name of discrimination against their non-resident membership. The suit wants the Feds to manage our salmon fisheries and ban our opportunity to go dip netting in the Copper, Kenai and Kasilof Rivers.

Based on past performance, I don't believe he will make impartial decisions on fishery conservation and allocation decisions. I don't think he will properly balance the needs of all user groups instead of just putting a priority on commercial fishing above all others

a . On fishery conservation issues, I witnessed that at the last BOF meeting for the Upper Cook Inlet, Brent argued against the need to put in place a stock of concern (SOC) status for northern district salmon.

Due to chronic failures to make minimum escapements, the BOF did make a SOC finding in the northern district. I don't think this would of happened if Brent was on the BOF.

b. Brent opposed the development and use of a peer-reviewed fisheries model developed in the 1990's and updated with more recent ADFG data to examine possible outcomes for various fishery management strategies. Risk assessment models are used by professional fisheries managers across the country, especially in salmon management. I don't want a person on the BOF who does not want fishery managers top use important tools for sustainable fish management.

c. For allocation decisions, in light of past problems with stacking the advisory committee with members of one user group reforms had to be put in place after Brent's tenure as the AC chair. There are now policies in place to have a fair and balanced representation from all user groups on the local Kenai-Soldotna AC.

With Brent's appointment, there will be No representation from the Interior or non-coastal areas of Alaska. He is being appointed to a seat that had traditionally seen representation from the Fairbanks area. Who will represent US. Next year the BOF will be making some very important decisions for the A-K-Y region of the Interior. Due to the outrageous by-catch rates of Chinook salmon in the Bering Sea Pollock Trawl Fisheries. In-river commercial, subsistence and sport users will see severe reductions in their harvest. The Interior would be best served with a person from this area on the Board who could assist in navigating what is surely to be a very contentious process next year.

The Board will not have any representation from the Alaska Native community. There are many qualified Alaska Native candidates from the interior who could serve proudly and ably

on the BOF. We encourage the Governor to seek out these qualified candidates to serve on the BOF in place of Brent Johnson.

Sincerely,

Brady, Dana and Jeff Brown
Fairbanks, Ak

To: Rep. Craig Johnson; Sen. Lesil McGuire
Subject: Dipnetting and appointment of Brent Johnson

Hello Lesil and Craig,
I live in your district, and I am a registered Independent. I believe in voting for the best person for the job regardless of party affiliation. I have been dipnetting for many years both on the Kenai River and on the Copper River, along with sport fishing all over our state. I feel that the appointment of Brent Johnson - A Cook Inlet Set-netter to the Alaska Board of Fisheries will jeopardize my ability and the ability of over 100,000 Alaskan families from the railbelt to feed our family's. We depend on Dipnetting as a source of food for our families. We, also, spend much of our summers sport fishing. By confirming Brent Johnson, you are giving the Alaska Board of Fisheries over to the commercial fishermen and basically killing both dippnetting and sport fishing in our state. With Sarah's appointment, the Board will be controlled by commercial fishermen and the voice of dippneters and sport fishermen will be gone. I would have trouble voting for anyone that is willing to give all of Alaska's fish to commercial fishermen at the expense of dippneters and sport fishermen. I hope we can keep the Alaska Board of Fisheries balanced, so that all Alaskans can use our fish resources, both commercial fishermen, dippneters and sport fishermen alike.
Thank you, for your time,
--

Subject: letter regarding the appointment of Brent Johnson, to Alaska's Board of Fisheries

Dear Representative,

This letter regards the appointment of **Brent Johnson**, by our Governor, to Alaska's Board of Fisheries.
The below letter was generated and signed by 11 Alaskan Representatives and Senators.
I agree with the content of this letter so I am now sending it to you and Governor Palin.
A final legislative confirmation vote for this BOF position will happen within 5 days, **ON APRIL 17, 2009.**

I am a 30 year resident of Alaska and I am requesting that you **NOT CONFIRM** Brent Johnson to the Alaska Board of Fish for two reasons.
1.] The first reason is because it would leave interior Alaska and subsistence/ personal use residents without a voice on our BOF.
2.] The second reason is that we need people on our BOF who are able to see the big fisheries picture regarding our many fisheries USES here in Alaska. I have know Brent Johnson for 30 years and I personally know that he only carries a SINGLE picture in his head with regard to Alaska's fisheries. That perspective is one which enforces by regulation that commercial fishermen are allocated 98% of Alaska's fisheries and common users are given the left-overs. I believe this ratio should be the other way around, with our common users receiving priority access to our fisheries and commercial users receiving any harvestable excess, which the public cannot use.
Governor Palin has made a very poor choice with this BOF appointment of Johnson.

Thank you.

Don Johnson

Thank you.

April 10, 2009

The Honorable Sarah Palin
Governor, State of Alaska
State Capitol, Room 300
Juneau, AK 99801

Dear Governor Palin,

We commend the vetting process of members of state boards and commissions conducted by the Governor. We are confident the appointees are individuals of honesty, integrity and merit and we applaud their willingness to serve the people of Alaska. It is important for the Board of Fisheries to consist of members who are knowledgeable, honest and objective in their consideration of Alaska's fishery concerns.

It is crucial for board members to be true to the interests of all Alaskans. Appointees should have concern for those who depend on local fishing sources. Board members should be able to look at all sides of an issue without any preconceived notions. They should impartially evaluate the concerns and interests of the various groups and regions. They should also have the education to make well-studies, science-based decisions. In this sense, fairness and objectivity are essential modes of consideration and evaluation.

The Board of Fisheries should have a wide breadth of knowledge of fisheries issues across the state. It is safe to assume that each member is an expert of the issues in their residential region. A Juneau resident is familiar with the needs of Southeast commercial and sports fishermen. A Cook Inlet resident understands the needs of dipnetters and halibut fishermen. A resident of the Yukon-Kuskokwim region values the importance of fishing for personal use. A Board member from the Fairbanks area would have a profound understanding of fishing for personal use. The Chitina personal use fishery in the Copper River illustrates an Interior concern. The geographical location of Fairbanks is influential in its proximity to rural Alaska and its stature as the second largest city in the state. The Interior is largely dependent on the many services Fairbanks has to offer, particularly as a hub of economic stimulus and development for those who travel to the region to fish.

It is imperative for Board appointments to represent each unique region of our state. It is questionable whether members of the Board of Fisheries who are commercial and sports fishermen south of the Alaska Range are in tune to the needs of Interior and Native Alaskans that depend on fish for subsistence. There would be an unfair disparity among regional appointments if the Interior no longer has a representative on the Board. If the Interior goes unrepresented on the Board, this means a region that encompasses over half the state, including the Yukon River and its salmon concerns, would lack a

residential voice familiar with the region and its issues and people. While current members of the Board undoubtedly serve Alaska's fisheries to the best of their abilities and knowledge, there is not a current member who is Native or resides north of Big Lake.

Given these concerns and issues, the Interior Delegation respectfully requests the Governor to appoint to the Board of Fisheries a resident from the Interior. We hope that you weigh these considerations carefully and understand the interests of this vast region of our state. While we have the utmost respect and no disregard for your appointee, the Interior Delegation feels that a representative of our region should be on the Board of Fisheries.

Thank you for your time and consideration of these important concerns expressed by our constituents. We have confidence you will consider the issues that are close to the hearts of Alaskans across the state. We appreciate your taking valuable time to find the most suitable and knowledgeable individuals to sit on the state's boards and commissions. Please feel free to contact member of the Interior Delegation if you have any questions, comments or concerns.

To: Rep. Craig Johnson
Subject: Nomination of Brent Johnson to the Board of Fish

I am writing this E-mail in regard to the nomination of Brent Johnson to the Board of Fish.

I am Richard Erkeneff, a resident of the Kenai Peninsula Borough and the owner of a Lodge and a Fishing and RV Camp on the Kenai River. I have been a resident of Alaska for approximately five years. The success of many of Alaska's small businesses and the well being of many our citizens depend upon Fish for all User Groups.

Its all about Fish! Whether your interest is Commercial, Sport, Personal Use or Subsistence, you need sustainable fisheries for **all Users**. I want to emphasize the word **ALL**. The BOF is an elite group of seven, who makes decisions regarding hundreds of proposals from all user groups. After public testimony, it is these seven members that deliberate and finally decide on issues regarding the regulations of the fisheries.

If all User groups are going to get a fair shake during these private deliberations, the board make up should not be over balanced in favor of one user group. I believe that this nomination does overweight the board representation with commercial fisherman interests to four of seven. If approved, Mr. Johnson will be the second commercial set netter (Vince Webster is the first). The Chairman of the BOF, Mr. Jensen, a commercial fisherman, and Mr. Morris, a seafood sales expeditor, the Past Chairman, support commercial fisherman interests.

During a past BOF nomination process, Mr. Johnson argued that the BOF members should have an extensive background in diverse fisheries. What does Mr. Johnson know that isn't duplicated by the abundant knowledge of Messrs. Jensen, Morris or Webster?

Additionally, one of his main support groups, Upper Cook Inlet Drifters Association (UCIDA), is advocating federal preemption of state management of salmon fisheries and seeking to outlaw the resident-only dip net fishery, in favor of non-resident commercial fishermen.

The Board will not have any representative for the Interior or non-coastal areas of Alaska if Mr. Johnson is approved.

For reasons noted above, I do not support the nomination of Mr. Johnson. I am hopeful that you will have a "nay" vote on Mr. Johnson's nomination.

To: Rep. Craig Johnson
Subject: Opposition to Brent Johnson on Board of Fish

April 12, 2009

Dear Legislator:
I am writing to you to ask that you oppose the appointment of Brent Johnson to the Alaska Board of Fisheries, because I don't think he can be fair towards other user groups besides commercial fishing. I sport fish on the Kenai River regularly during the summer months, and also make use of the Kenai dip net fishery. I also assist my daughter-in-law fish at the Kenaitze Indian Tribe's educational fishery on the Kenai beach. I helped start a new group representing dip netters – the Southcentral Alaska Dipnetters Association (SCADA), of which I am the vice president. I also served on the board of directors of the Kenai Watershed Forum for six years, and the Kenai – Soldotna AC for two years.
As a past member of the Kenai – Soldotna AC, I can say that having fair and balanced representation is important on the BOF and the local ADFG Advisory Committees. I served on the Kenai – Soldotna AC in 2006 and 2007. During this time we had an equal representation of three members active in the commercial fishing industry, and three members active in the sport guide charters. We also had a wide range of members from the general public, with representation in hunting, trapping, subsistence, personal use, and at-large.
During this time I can say I felt comfortable that the fish and game proposals we reviewed received fair and balanced treatment, with no one user group's viewpoint controlling the process. I feel we made valuable contributions through our comments and actions to both the BOF and the BOG. I feel our comments were welcomed and seen in a positive manner in the overall board processes.
I feel fortunate to have served on the Kenai – Soldotna AC when I did, because I understand that our local AC was not always viewed in such a positive light. I understand that the policy to have balanced representation from commercial and sport users on the Kenai – Soldotna AC came about *after* the tenure of Brent Johnson as the local AC Chair – because past AC's got stacked with commercial fishing interests and did not provide fair, balanced comments on fisheries proposals. From people I talked to, other user groups felt intimidated by the AC and did not feel their input was valued or wanted. There was a feeling that proposals from other user groups did not receive impartial judgments under his tenure.
I think all user groups deserve a fair shake at the BOF. As with my experience on a fair and balanced local AC, the BOF make-up should not be over balanced in favor of one user group. The appointment of Brent Johnson *does* overweight board representation to the commercial fishing industry, with four of seven seats. As such, I am afraid that other user groups will once again find problems getting fair hearing at the BOF.
What is also troubling to me is that much of Brent's support for his appointment comes from commercial fishing interests in Cook Inlet that are leading the attack on my right to dip net, something that I care very passionately about. I understand UCIDA has come out in full support of Brent's appointment, which is not surprising because he serves on the board of director of Cook Inlet Aquaculture Association with many of them.

UCIDA recently filed a Federal lawsuit wanting to ban dip netting on the Kenai, as does a similar lawsuit from other Cook Inlet commercial fishing interests. Why? Because resident only fisheries discriminate against UCIDA's non-resident members. I have seen the number of fish that non-resident drifters bring in from a day's fishing on the Inlet – many times more than the household limit I am allowed to bring back to my freezer for food. They are allowed to take home an unlimited number for home pack, and now my right to dip net is being attacked by them. This is an insult and outrage at its most basic level. Is this what I can expect from the BOF with Brent on board?

I also find it illuminating and troubling that as president of Kenai Peninsula Fishermen's Association (KPFA), Brent called for UCIDA's executive director, Roland Maw, to be the Commissioner of Fish and Game, or at the very least appointed to the BOF. I remember when the joint boards of Fish and Game refused to pass on the name Roland Maw as a qualified candidate for Commissioner. That should tell you something about how these boards felt about Roland Maw's qualifications. I was thankful of that because I witnessed more than once at Kenai – Soldotna AC meetings and BOF meetings where Roland Maw stretched, manipulated and just plain lied about the facts on proposals under consideration. The support between UCIDA and KPFA seems to be - I will scratch your back if you will scratch mine.

We don't need to stack the BOF with one user group over all others. The appointment of Brent Johnson does just that – we have seen that this approach does not work in the past – why would we expect it to work any better in the future. Please vote no on his confirmation.

Respectfully,

To: Rep. Craig Johnson
Subject: Brent Johnson's appointment to the BOF

Dear Representative Johnson-
I am writing to oppose the appointment of Brent Johnson to the Board of Fish. I know that you care greatly about the natural resources of our state since you have chosen to sit on the committees that protect them and I hope you want to protect the concept that they be accessible to all the citizens of the state... after all our constitution pretty much mandates that.

The appointment of Mr. Johnson is very likely to unbalance the Fish Board since he will be the 4th commercial fisherman on the board and the 4th to represent Cook Inlet... no one on the board will represent subsistence and personal use for the first time in something like 20 years, no one on the board will represent Alaskan Natives and no one will represent the Interior.

Mr. Johnson has been part of the commercial fishing leadership which has filed lawsuits that would have them "own" all of the salmon. It is his opinion that any fish that gets upriver over and above minimum escapement is a "wasted fish". He is a participant in current lawsuits that are attempting to usurp the powers of the Board of Fish (how ironic) and that are seeking to eliminate the popular personal use fisheries taking fish from all Alaskans to give them to the commercial fleet.

One of the main problems for the Cook Inlet commercial fishery is that you have one out of eight commercial fishermen in Alaska fishing there and they historically get only 2% of the commercially caught salmon in the state. Of course, this means higher costs and lower yields for each permit.

The answer according the commercial guys is to let them catch more fish by re-allocating more of the runs to the commercial fleet. Given that they already harvest over 80% of the fish taken, there is a very limited up side to this approach.

So, please make sure that someone more balanced is appointed to the open seat on the BOF. It will be in the best interests of the resource and the people.

Sincerely,
George Heim

Subject: Board of Fisheries Brent Johnson Opposition

Dear Legislator;

I am writing to ask you to vote against the appointment of Brent Johnson to the Board of Fisheries. I've been an Alaska resident since 1982 and an avid outdoors person, including hunting and fishing. I oppose Governor Palin's appointment for the following reasons:

- Brent Johnson appointment takes a seat from the Fairbanks / Interior area, negating an important and broad geographical region from the Board, especially in light of the upcoming 2009 / 2010 board meeting for Arctic – Yukon – Kuskokwim Finfish.
- Brent would be the fourth appointment to the board from the Southcentral / Cook Inlet region, and would leave the board without an Alaska Native or subsistence / personal use representative.
- Brent Johnson appointment puts a Cook Inlet set netter on the board, which would be the Governor's fourth appointment of commercial fishing orientation and second set netter.
- Brent Johnson is in the leadership of the Cook Inlet commercial fisheries, which has supported state lawsuits seeking to give commercial fishing permit holders private property rights to our public fishery resources. These past lawsuits failed in state court.

I do support Governor Palin's other Board appointment of Karl Johnstone. He has broad sport and commercial experience and has a good reputation with both entities. I'd like to see either a woman on the Board, or native representation. I'd ask that other nominee's be considered, like Mike Smith with Tanana Chiefs who would be fair representation of the interior Alaska as well as a Native Alaskan representation.

Please oppose the appointment of Brent Johnson to the Board of Fisheries. Thank you.

To: Rep. Craig Johnson
Subject: Oppose Brent Johnson for BOF

Dear Legislator

The following are key points why Brent Johnson should not be appointed to the Board of Fish. This is not just a Cook Inlet issue but one that would affect all areas of Alaska.

This is not personal or one sided as all user groups deserve a fair shake at the BOF. The board make-up should not be over weighted in favor of one user group. This appointment does overweight board representation with commercial fishing interest with a 4of 7 majority voice. He will not have the support or trust of statewide user groups except for commercial fishing.

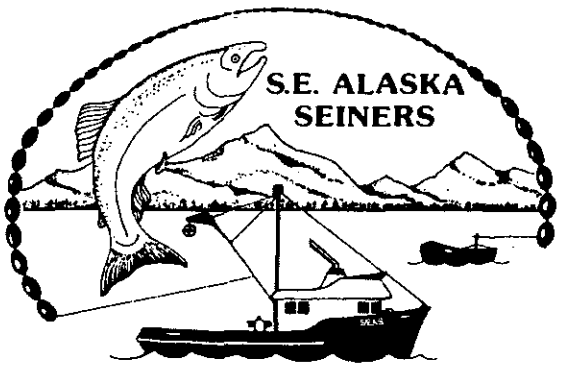
One of his main support groups, Upper Cook Inlet Drifters Association (UCIDA), is advocating federal preemption of state management of salmon fisheries and seeking to illegal the resident-only dip net fishery, in favor of non-resident commercial fisherman.

Based on past performance, I do not believe he will make balanced and impartial decisions that address the needs of various user groups. In addition, this appointment will leave the interior non-coastal area without a voice. Also, this will leave the Alaska Native community without a representative.

I strongly urge you not to confirm Brent Johnson to the BOF.

Sincerely,

Ron Rainey
Box 2004
Kenai, Ak 99611
907-953-8588



11 April 2009

Representative Craig W. Johnson
Alaska State Legislature
State Capitol, Room 126
Juneau AK 99801

Dear Representative Johnson,

Let me begin by saying that the Southeast Alaska Seiners Association would like to comment on the recent "UCIDA" resolution. For the record, we are opposed to any activities and actions, legal or otherwise, that might jeopardize state control and state management of our fisheries. We never want to see the day in which return to a Washington D.C. based Federal management scheme; one that we fought against so hard the first half of last century and finally dissolved with statehood in 1959. To that end, we oppose any and all such transfers of autonomy and authority. And to this end, we proudly support the spirit and intent of such legislative resolutions with regard to maintaining state of Alaska management authority and the ability of Alaskan residents to access the fisheries resources of this great state of ours.

Certainly the focus on the resolution could be narrowed to include those issues that are material and relevant to the real problem of the proposed legal action. We might add that there are 3 legal actions to which SEAS is opposed: the aforementioned UCIDA action, the AOC Chitina dipnet court action, and the Herb Jensen/Prince William Sound lawsuit. SEAS believes that these are all misguided and that the disposition in favor of the plaintiffs would ultimately change and usurp the management authority of the state of Alaska over its fisheries resources.

This is why we are also very interested in the recent appointments by Governor Palin to the Board of Fisheries. For while the Board of Fish is an imperfect process, we are convinced that it is the best process and if we need to refine it we are ready to rise to that occasion. The Board and its attendant processes are where we deal with the management and allocation of our fisheries resource, not at some judge's bench.

¤ PO Box 23081, Juneau, AK 99802 ¤ 907-463-5030 ¤ Fax: 907-463-5083 ¤

And not in the Alaska State Legislature *(while certainly we support any legislator's prerogative to be involved in aspects of the process of fisheries management and allocation resolution, the Alaska state legislature itself was not formed and established for this purpose).*

As such, both the balance and the talent on the Board at this time are of great importance. One of the major issues, and in many quarters, THE major issue confronting the state's salmon fisheries management is the resolution of a longer term approach to returning the Mat-Su drainages to healthy and productive conditions.

Mr. Johnstone, with his legal background, will provide structure and leadership on this board in dealing with these stock rebuilding issues. Mr. Johnson, as President of Cook Inlet Aquaculture Association and with his background in land use and planning, will inevitably be in a great position to help with any enhancement and rehabilitation of the Mat-Su salmon stocks and the attendant habitat issues. His commitment to the sustainability of the salmon resource is first and foremost and we have been told by his own fishing partners to be prepared for an objective approach to fishery management across the state of Alaska. The fish will come first and the fishermen, be they commercial or sport, will come second.

This is why we support the appointments of BOTH Mr. Johnstone AND Mr. Johnson to the Alaska State Board of Fisheries. They are the right men for the right job at the right time.

In recent days there has been talk about lack of native Alaskan representation. Western Alaska has always had one seat at the table of the seven. For a short time that representation was a native Alaskan. Many prominent and wise native leaders have served on the board over the years. A longtime past Board of Fisheries member, the late Joe Demmert, was one of our finest Southeast Tlingit leaders as well as a founder, in 1968, of our organization, the Southeast Alaska Seiners Association (SEAS).

But aside from Robert Heyano, there has not been a native Alaskan on the Board of Fisheries since Tony Knowles took office in 1994 and after all these years we have not heard any murmurs about the lack of native participation during either the Murkowski or the Knowles administrations. (And let us remember that it was Murkowski who put a native Alaskan, Robert Heyano, back on the Board of Fish). Vince Webster is the current Board member representing Western Alaska right now. Sometimes this seat migrates north to Bethel (or even further north), but right now it is in Bristol Bay. Mr. Webster has lived in western Alaska long enough to appreciate western Alaskan values and he is a main conduit through which western Alaskans can access the Board of Fisheries.

Since 1992, Fairbanks has had a seat at the table. This seems a fair shake for the Interior region- 17 years with a specific seat at the table. **It is our belief that although Mr. Delo (of Big Lake) and Mr. Johnstone (of Anchorage) do not reside in the Interior, they**

certainly can be very approachable board members for the Interior's access to the Board of Fish process and deliberations. While we sincerely feel the pain of Fairbanks folks, one should can recognize the irony of the Southcentral Alaska sports groups' concern for the lack of a Fairbanks seat when they failed to support the prior Fairbanks board member, Mrs. Bonnie Williams. We fully expected her to return and had seen her mature and grow a great deal in the 3 years she served on the Board. **Commercial fishing groups did not oppose her reappointment, even though she has never been a commercial user. Likewise, we do not oppose the reappointment of Mr. Johnstone,** even though he is widely considered to be a sport user at this time.

Let me now turn to the Cook Inlet commercial fishermen. While Fairbanks has had a seat on the Board for 17 consecutive years, **Cook Inlet commercial fishermen,** with well over 1500-2000 "boots-on" fishermen, providing direct and indirect jobs for many thousands more, **have been without a seat at the table for 31 years, since 1978.** *So while it may seem unfair to Fairbanks, what was fair about the way Cook Inlet commercial fishermen have been treated for these past 31 years? Over a dozen Cook Inlet sport seats were placed on the Board of Fisheries during this prolonged absence.* **We have a Governor who has the political will and courage to face the public opposition she knew could potentially result from this decision from sectors of Anchorage, Fairbanks and particularly her own Valley. We are hopeful that the legislature sees the wisdom in this very balanced choice of Mr. Johnstone and Mr. Johnson, regardless of their zip codes.**

We applaud the Governor's wise choice at this time and we remain unconvinced that just because past Board of Fisheries members Dr. Bouse, Mrs. Williams or Mr. Umphanauer will not be at the table that somehow Fairbanks and the Interior will be shortchanged.

Likewise, we find it disingenuous that certain sport-oriented groups would complain and portend to speak about the lack of native participation on the Board of Fisheries while the last Alaskan native on the Board (Robert Heyano, of Dillingham, whose seat was up two years ago) heartily endorsed Mr. Brent Johnson at the House Fisheries Committee last Thursday. And Mr. Johnson is not a native Alaskan----although, Mr. Johnson is a lifelong Alaskan whose family first made their home in Chugiak, where they were the 2nd family to settle in 1947, then Seldovia and, finally, Clam Gulch.

Lastly, it is amazing how fate intercedes in our lives, our careers, and our geographic locations. Today Alaskans have a much broader spectrum of life experiences and cultural differences than we did at statehood. When my great grandfather first came to Petersburg in 1903 and moved there permanently in 1910, when Anchorage hadn't even yet been founded. *Some of the old timers joke that when they came to Petersburg shortly thereafter they found no Caucasians living there----only us Norwegians and our good friends the Tlingit people.* The Valley was a very sparsely settled area for another half century.

¤ PO Box 23081, Juneau, AK 99802 ¤ 907-463-5030 ¤ Fax: 907-463-5083 ¤

Many more of us now live in cities and suburbs and these populations tend to grow at much more accelerated rates than do the smaller, rural communities. But even in our more remote areas and villages where there has been little changed over thousands of years, the transportation, energy and infrastructure base is becoming modernized and this will have profound impacts on our access and allocation of fisheries resources. Had Brent Johnson's family stayed in Chugiak, he would perhaps had chosen a different profession and his opposition ironically would have perhaps come from the very neighbors on the Peninsula where he resides.

During a meeting in 1998, a hard-working former Senator and Representative from the Valley told a large group of us commercial fishermen that he had recently had a vision. And that vision was that someday we would all get along.... Commercial, sport, personal use, guided charter and subsistence users.... and that we would work on putting the fish first and setting aside our differences to do the best for the resource -and thereby it's users- as one large happy family.

While we have not yet had the pleasure to experience what the standard bearer from the Valley experienced in real terms, we share the hope that he had and will endeavor to work together with all the fish resource users to promote the best possible outcome for all users.

Together.

We need to get along here and while we fully understand the local nature of the disappointment of some of the Southcentral and Fairbanks constituent groups with Mr. Brent Johnson's appointment, we remain unconvinced that this is such a radical departure from good Board of Fish balance. One shot in 31 years and if he isn't just about perfectly balanced in his decisions, you can rest assured that it will be another 31 years before Cook Inlet Commercial fishermen get another crack at a seat on this board.

Sincerely

Robert M. Thorstenson, Jr.

Executive Director, SEAS

Honorable Members of the House Special Committee on Fisheries,

I write to recommend your support for the nomination of Brent Johnson to the Board of Fish. I have had the opportunity to see firsthand Mr. Johnson's involvement in the community, and the characterization by his detractors as a one trick pony bent on supporting commercial fisheries a the expense of all others is erroneous and intentionally misleading.

Like most of us, Mr. Johnson's character is defined by a variety of diverse interests and activities beyond our "day job". In this case the common thread running through what I've seen of his involvement as a community historian, Planning Commission member, habitat advocate, and supporter of schools and education has been an open mind, a willingness to listen and learn, and an insistence on fair treatment for all concerned.

I am sure that if appointed Mr. Johnson will bring those same traits to the Board's deliberations, and all the different user groups can be assured that the resource and habitat protection will be paramount, and access to the resource will be fair and evenhanded. Those who would have you believe that his only goal as a Board member would be to feather his own nest and deny them access insult the Committee's intelligence, and do a disservice to those they purport to represent.

Thank you for the opportunity to comment.

Sincerely,

Ron Long

Re: Support of Brent Johnson, Board of Fisheries

Senator Wielechowski and Representative Johnson,

On behalf of the Northern District Set Netters Association of Cook Inlet, I writing in support of Brent Johnson as a Board of Fisheries Member.

Brent is an active commercial set netter in Upper Cook Inlet, and he has participated in several other fisheries including salmon seining, herring seining, and halibut longlining.

I have known Brent as a member of the Kenai Peninsula Fishermen's Association (KPFA), as Board Member on the Cook Inlet Aquaculture Association (CIAA), as a representative of the Kenai/Soldotna Fish & Game Advisory Committee, and as a shore fishery surveyor and plat preparer. I have found him to always be pleasant, objective, curious for accurate information, thoughtful, loyal to public process, fair, and willing to spend inordinate amounts of time on fisheries issues. These are all qualities that would serve him, and the public, by confirming his appointment to the Board of Fisheries.

I believe that based on Brent's long experience in and knowledge of fisheries, his willingness to listen and consider all sides of an issue, his pleasant and thoughtful manner, his constant seeking of additional information, and his tireless participation in the public process will help him serve on the Board of Fisheries.

Please work to confirm his appointment.

Thank you.

Sincerely,

Stephen R. Braund
President

Senator Wielechowski, committee members,

My name is Christine Brandt, today I represent myself and the women that I will speak about. We support Brent Johnson, and believe that he will represent any group whether they are a minority or not, with integrity, respect and honesty.

Recently I reviewed a document that was sent out by Ricky Gease that refers to letters written to our Honorable Governor, Sarah Palin. It was with disbelief and shock that someone would take a letter written by our elderly pioneering women and manipulate the content to benefit their own needs leaving out pertinent information. These are women who have homesteaded in Alaska, have toiled, while raising families, to make a living the honest way. Women who are still active in their communities. If you have come in contact with these abbreviated letters, it is my hope that you will disregard them; they are truly not relevant to the task at hand.

Balance to the current Board of Fisheries is; more than what someone does for a living, more than where someone lives, more than what someone's political affiliations are. It should be someone who is; open-minded, approachable to the public, who is willing to learn and understand different cultures and values, to be considerate, respectful, and have regard for the principles of being fair and equitable.

Let us not confuse the issue. Our Governor, Sarah Palin is not appointing any fishing group or specific type of fishery to the Board of Fish. FACT, she is appointing an active member in the community, a person involved in raising a family, that has historical roots within the Anchorage, Seldovia, and the greater Kenai Peninsula. A person that has respect for those that have worked hard to preserve this great State.

I believe Brent Johnson will be an asset to all Alaskans when he is appointed to the Board of Fish.

Senate Resources

Senator Wielechowski, committee members,

My name is Paul Shadura, I am the Executive Director of Kenai Peninsula Fishermen's Association (KPFA), I am also the Cook Inlet Region Incorporated representative, on the Cook Inlet Aquaculture Association Board, but today I am speaking on my own behalf.

I am a third generation commercial set net fisherman in Cook Inlet. My grandfather, a Russian priest, started fishing in and around the early 1900"s to provide for his families and others less fortunate. My father was Chief Russian Bear of the Kenaitze Indian Tribe. I am of Aleut descent. My great grandfather fought in the civil war, arrived in Alaska, shipped wrecked on the US Torrent off of English Bay with a group of soldiers and settles in the 1860's. Our President Kenny Rodgers is of Alaskan Native descent, he also is a commercial fisherman, he also can hunt and fish for subsistence.

It is a fact that many set net families within the State are commercial fishing and subsistence fishing people as well. Commercial fishing to many, as was with my family was a means to survive in Alaska, a way to feed and raise your family. Many pioneering families look at the progression of commercial fishing as an advance in what was traditional trade and barter.

Some interesting CFEC limited entry facts; there are 20,501 CFEC permits issued. 10,424 are limited o salmon. 4,038 or 40% of these are S04 or set net permits, the largest salmon group holders. 1,823 or 45% of these represent set net fishing families from the Kuskokwim, Norton Sound, Kotzebue, Lower Yukon and Upper Yukon.

Many Alaskans to this day whether they live in rural, roadless Alaska or urban areas look seaward for the perpetual return of salmon. Whether it be to feed their families, the community or the world. All users should have a reasonable opportunity to access the many bountiful resources Alaska provides to all its residents.

Brent Johnson as a past Board Member of KPFA has always strived to be fair and balanced in his approach to problem solving. He is considerate and would be a great asset to the people of the State.

Finally I would like to stress again that KPFA is not a direct participant in any lawsuit that denies the right to access natural resources.

Thank you,
Paul A. Shadura II

We wish to express our enthusiastic support for Brent Johnson's appointment to the Board of Fish. We have known both Brent and his entire family for many years. His father and subsequently his brother have periodically accomplished various survey jobs for us. We have worked with Brent and have watched him chair various meetings and have found him to be very fair and willing to look at all points of view and is especially knowledgeable about fishing matters. He has tremendous energy and is always seeking to avail himself of the latest information about fishing as well as seeking to insure that the data is properly interpreted. He would be a solid addition to the Board of Fish. We ask that you will give him your favorable consideration.

Hello Representative Johnson,

My Name is Chris Worley. I'm a drift gillnet fisherman from Kenai.

Want to hear a good joke? I'm a drift gillnet fisherman from Kenai. A limited entry permit holder getting my ass kicked by an unlimited mob of sport and personal use fishing interests. I feel as doomed as a dinosaur, as doomed as the river itself. Every year another section of riparian habitat gets blacktopped and another McMansion pops up along the river. Every year, there's more Crocodile Dundee-hatted sportfish guides and plastic outhouses to accomodate the dipnetters. They still defecate in the parking lots and along the banks.

I don't oppose the sport and personal use fisheries. I oppose their numbers, the obscene crowding.

Entry into Cook Inlet's commercial salmon fisheries was limited over 30 years ago. It's time for the other user groups to share the burden in conserving the watersheds and fishery resources.

Please help even up the balance of power in the Board of Fish and appoint Brent Johnson.

Thanks.

Subject: BOF appointee Brent Johnson

Dear Representative,

I am Steve Runyan, chair of the Susitna Advisory Committee. I testified today via telephone, and would just like to re-iterate my opposition to Brent Johnson to the Board.

These are my main talking points: We already have 3 commercial fishermen holding seats- Mel Morris, John Jenkins, and Vince Webster. We have 3 Southcentral seats- Morris, Delo and Johnstone. Both areas are already over represented, so to add a fourth Southcentral and commercial seat to the Board would not be in the best interests of the state. There are zero sport fish guide, personal, subsistence, or interior seats currently. Please reject the Brent Johnson nomination and look for a representative who will add balance to the Board, not further polarization. Ideally, it will be an interior person well versed in the state's subsistence, sportfish guide, and/or personal use and sport fish issues.

Mr. Johnson's history as AC chair, and as a representative for various commercial fishing organizations before the Board of Fish has been very consistently in opposition to sport and personal use fishing proposals, and very supportive of proposals shifting allocation toward commercial interests. Based on his history, on record in Advisory Committee and Board of Fish meetings, it would be akin to asking a leopard to change his spots to ask Mr. Johnson to rule objectively on the divisive allocation and conservation issues a Board of Fish member must rule on.

Thank you for your service to our state, and for your work on this committee.

Sincerely,
Steve Runyan

Subject: Brent Johnson BOF Support

Representative Craig Johnson,

Senator Lesil McGuire,

You are my Legislators in Juneau. My name is Joel Doner and I am a member of the Anchorage Fish & Game Advisory Committee. This morning I listened to the Resource Hearing teleconference regarding the Board of Fisheries appointment of Brent Johnson. During that teleconference the chair of the Anchorage AC mentioned that our committee "adamantly opposes this appointment". I believe that statement to be at best, a misrepresentation of the Anchorage Advisory Committee's position and at worst an outright lie. At the AC meeting in which our position was voted on, there were several members that did not support the Committee's opposition to Brent's appointment. The chair of the AC may "adamantly" oppose this appointment, but I assure you that the Anchorage Advisory Committee has a mix of positions on this matter. Personally, I feel that Brent is great choice for the Board of Fish. He is intelligent, friendly, open minded, and very adept at bringing opposing ideas to a solution. As for "Balance" on the Board, there currently are south-central sport fishermen sitting on the Board and recently have been south-central sport fishing guides sitting on the Board, but NEVER has there been a Cook Inlet Set net fisherman on the Board. We need that Balance. Brent Johnson has the experience of working as Cook inlet Aquaculture Board member and member of the Kenai/Soldotna Advisory committee. I hope you will consider his appointment to the BOF as a great thing for Alaska.

To whom it may concern,

I just wanted to offer my recommendation of Brent Johnson to the State of Alaska Board of Fisheries. I've known Brent for about 6 years now and know he will do a great job. He has high ethics, is a hard worker and a good example to all of u[redacted]he community. I am a commercial fisherman and business owner of a B & B in Clam Gulch Alaska. Brent is very knowledgeable about current events. He takes an interest in the community and the quality of Alaska Seafood. He has been an advocate for our fisheries. He has volunteered his time to help the Cook Inlet Aquaculture and our local KPFA (Kenai Peninsula Fisherman's Association). Not only does Brent support one of Alaska's greatest resources, but he also has great judgment and is fair to all sides. He would make a great addition to the State of Alaska Board of Fisheries. If I can help any further please don't hesitate to call me at 907-260-8037. Thank you!

SUBJ: Board of Fish Appointment

I have lived in Alaska all of my life and have hunted and fished since I was a small child. I am active in the sport fisheries and I depend on the ability to use my rod and reel to catch salmon for my dinner table and to share with others.

Most of the time I don't get involved with making recommendations on Board of Fish appointments and I can honestly say that no board decision has ever harmed my ability to continue sport fishing and putting fish in the freezer.

While I respect those who do get involved in order to voice their opinion, what I can't respect is underhanded tactics.

Last evening I received a phone call from an automated polling service telling me that I was about to receive an important message for sports fishermen and dipnetters. The voice went on to say that the governor had appointed yet another commercial fisherman to the Board of Fish and they wanted me to participate in a two-question poll.

The first question asked me to press #1 on my phone if I believed that the board should be controlled by commercial fishing interests and just to see what the second question was, I pressed #1 on my phone. The call was immediately disconnected. I never did hear the second question.

The reason for my letter to you is to alert you that you may hear from some group about the "poll" they bought to prove their point. I believe that whatever type of poll they were trying, it wasn't legitimate and they were simply trying to cheat in order to get the results they wanted. Obviously, you won't be making your confirmation decisions based on some phony poll, but I thought it was important to let you know about my experience.

I don't know Brent Johnson, but have heard that he is a decent and honorable person and I believe that he is qualified to serve on the Board of Fisheries.

Thank you for taking the time to review my concerns about someone or some group that seems to be attempting to bolster their position with a poll that isn't legitimate.

Dear Rep. Edgmon,

I have been asked to forward you a copy of a letter to the editor that I authored and it ran in the Peninsula Clarion today. It pretty much sums up the reasons Mr. Johnson would be a good choice for the position and the ethical problems that have plagued the BOF process for the last 10-12 years.

Thank you for listening. Please feel free to share this letter with any other legislators.

Dwight Kramer

Board of Fisheries Controversy

Last week Governor Palin appointed Kasilof commercial fisherman, Brent Johnson, to a seat on the BOF. Mr. Johnson has been involved in fishery issues and the BOF process for many years and is very qualified for this position. He is well respected in our community and knowledgeable in all aspects of fishery management and process.

His appointment has brought out some big hitters from the sport fishing industry rallying against him. Bob Penney's group, The Cook Inlet Caucus, bought a half page add in the AND, and Kenai River Sport Fishing Assn. issued a statewide press release suggesting he would be unfriendly toward sport fishing and personal use issues. However, the real thing that bothers them most about Mr. Johnson is that they know he is an extremely honest individual with too much integrity for them to be able to ply for their agenda. They are so used to being able to sway board members with their power, money and influence that they can't stand the thought of an appointee beyond their reach. All of the lavish dinners, drinks and expense paid fishing trips will be of no use with this candidate.

Everyone that has attended the last few Cook Inlet BOF meetings has been painfully aware of the ethical lapse that shadows this process. I am a private angler (Joe Fisherman) and I applaud Governor Palin for trying to move beyond the past by appointing people like Mr. Johnson. This is an important juncture in time where government bodies like the BOF need to foster a new ethical platform whereby powerful lobbying groups can no longer control the process.

FAX: 907-465-3445
Timothy.Clark@legis.state.ak.us

Dear Reprentative Edgmon,

I am writing to ask you to oppose the appointment of Brent Johnson to the Alaska Board of Fisheries (BOF).

By nominating Mr. Johnson to replace Bonnie Williams on the BOF, Governor Palin would remove the only subsistence/personal use and Fairbanks representation from the BOF. If confirmed, Mr. Johnson will tip the balance on the BOF overwhelmingly towards commercial fishermen at the expense of native, subsistence, and sport fishing interests.

The BOF already has ample representation of commercial fisheries interests. Replacing an up-river user on the Board with a Cook Inlet salmon setnetter will erode public confidence in the BOF process. Mr. Johnson is past president of Kenai Peninsula Fishermen's Association (KPFA), a set netter trade association of Cook Inlet commercial fishing interests. He has consistently claimed commercial priority rights to the public fisheries of the region. Mr. Johnson has shown in his past interactions with the Board that he has not taken a fair and balanced approach to fish allocation decisions.

Mr. Johnson's confirmation would leave the BOF without Alaska Native or female representation in the management of Alaska's subsistence, sport, personal use, and commercial fisheries. The nomination of Mr. Johnson leaves the Interior of Alaska without representation on the Board and does not correct the current lack of Alaska Native representation on the BOF.

The Governor needs to reach out and find a Board of Fisheries appointee familiar with interior fisheries issues and who will provide a fair and balanced approach to governance.

Thank you,

Seth Bone

Representative Craig Johnson
Representative Mark Neuman
House Resources Committee
Alaska State Legislature
120 4th Street, State Capitol, Room 3
Juneau, Alaska 99801-1182

Dear Co-chairs Johnson and Neuman,

As an Alaskan and person who has been in the seafood industry for 28 years, I support the confirmation of Brent Johnson to the Alaska Board of Fisheries.

Mr. Brent Johnson is an experienced Cook Inlet and Prince William Sound commercial fisherman. Each summer he produces high quality salmon at his Upper Cook Inlet set net site by bleeding and icing all of his catch. I believe that this conscientiousness for quality workmanship will carry over to the job he will do for the Alaska Board of Fisheries. The fact that he has his own ice machine proves that he goes out of his way to do the best job he can.

Brent has served on many boards and committees, devoting countless hours to understanding the issues faced by the multiple user groups of the resource. His sense of commitment and experience will be well used as a Board member.

Thank you for your time and consideration in the support of the confirmation of Brent Johnson to the Alaska Board of Fisheries.

Sincerely,

Charles McEldowney
Seward Fisheries Plant Manager

From: Suzi Lowell
Chief Clerk

Subject: Governor's Appointment(s)

The Speaker referred the following Governor's appointment(s) to the Resources Committee and the House Special Committee on Fisheries:

Board of Fisheries
Brent G. Johnson – Clam Gulch
Appointed: 7/1/2009 Term Expires: 6/30/2012

The Speaker referred the following Governor's appointment(s) to the Resources Committee:

Board of Fisheries
Judge Karl S. Johnstone (Retired) – Anchorage
Appointed: 12/5/2008 Term Expires 6/30/2009
Reappointed: 7/1/2009 Term Expires 6/30/2012

Judge Johnstone was previously referred to your committee for the term expiring June 30, 2009. He has been reappointed for the term beginning July 1, 2009 and expiring June 30, 2012. These dates have been combined on the new Referral for Confirmation page.

The Referral for Confirmation page(s), resume(s), and a signature page are attached for your use.

Johnson Fisheries

Brent G. Johnson
resumé for application to Alaska Board of Fisheries.

Fisheries experience:
• Cook Inlet setnetter since 1962. My wife, Judy, and I have owned our own setnet site since 1977. Together with my mother and our children we currently fish 11 permits, one of the largest operations in Cook Inlet. We have developed a way to put all our fish into slush ice at the point of harvest (in the skiffs).
•Crewed on a Prince William Sound salmon seiner several times, most recently in 2008. I typically do this after the Cook Inlet setnet season has closed.
•Seined and setnet for herring in Cook Inlet.
•Crewed on Cook Inlet halibut longline vessels.
•Drafted Shore Fisheries Diagrams for clients in Cook Inlet, Kodiak, Area M and Bristol Bay.

Public service organization experience:
•Served on the Kenai-Soldotna Fish & Game Advisory Committee for about 15 years, including terms as secretary and as chairman. Last service there was about 5 years ago.
•Served on the Cook Inlet Aquaculture Association Board of Directors for about 15 years. Currently serving as president of that organization.
•Served on the Kenai Peninsula Fishermen's Association Board of Directors for about 20 years, including several terms as president. Last term as president ended in the spring of 2008. At that time I retired from the KPFA Board of Directors, though I'm still a member of the organization.
•Served as an alternate to the Cook Inlet Salmon Brand (Kenai Wild) Board of Directors.
•Served on the Kenai Peninsula Borough Planning Commission for about 12 years. This is a paid position and I continue to serve there.
•Served on the Kasilof Regional Historical Association for about 4 years. Currently president of that organization.
•Elected president of the Kenai Peninsula Historical Association in May 2008 and continue to serve in that capacity.

Education:
Graduated from Ninilchik High School in 1973.
Numerous classes for personal development from U of A, Kenai River Branch.

Pertinent family ties:
•My brother-in-law, Doug Blossom, owns the setnet site adjacent to ours. He is also Chairman of the District 34 Republican Party.
•Two of my nephews work in the sport fish guiding industry and one of my nieces is married to a Cook Inlet salmon drift fisherman.
•My 89-year-old mother has been in Alaska since 1942.

Work:
• I worked for years for my father who was a private land surveyor. My brother has taken over his business and I've physically surveyed numerous Shore Fishery Leases for them.

In 2008, prepared and submitted a report on the status of permit adjudications for the **Alaska Department of Fish and Game's Northern Southeast Inside sablefish fishery industry meeting**.

In 2007, prepared and submitted a report to the **Southeast Alaska King and Tanner Crab Task Force** on the status of commission adjudications.

Throughout 2007, served on the advisory panel to a study commissioned by the **Bristol Bay Economic Development Corporation** to explore means to increase the number of limited entry permits held by local Bristol Bay residents.

Appointed by the U.S. Secretary of the Treasury to the **National Taxpayer Advocacy Panel** (served from 2002 through 2006; elected Chairman of the Multi-lingual Initiative Committee; worked to ensure that remedies provided for taxpayers under the 1998 IRS Reform Act continued to be available and known to Alaska commercial fishermen and other taxpayers).

Salmon Consolidation: Are Co-ops Dead Or Is Buyback Ahead? (panel presentation, Pacific Marine Expo, Seattle, November 2005).

Contributor and Editor of **Charting New Courses for Alaska Salmon Fisheries: The Legal Waters** (published by the University of Alaska Marine Advisory Program in November of 2003).

License Limitation in Alaska's Commercial Fisheries [at the request of former Governor Walter J. Hickel and the Institute of the North, wrote and presented a paper to the first Alaska meeting of the International Association for the Study of Common Property (IASCP), which has published the paper. August 2003].

Member, Advisory Panel for **An Analysis of Options to Restructure the Bristol Bay Salmon Fishery** (an independent study funded and published by the Bristol Bay Economic Development Corporation March 2003).

Status of Limited Entry Permits in Southeast Alaska Native Communities (presentation to the **Salmon for Success Summit in Juneau** sponsored by the Central Council of Tlingit and Haida Indians of Alaska. February 2003).

Presentation of Legal Issues in **A Workshop on Options for Restructuring Alaska's Salmon Fisheries at the University of Alaska in Anchorage** (sponsored by the Institute for Social and Economic Research, the University of Alaska Marine Advisory Program, and the Washington Sea Grant Program as part of the "Tools for the Salmon Industry Initiative." October 2002).

Commercial Fishing License Limitation in the State of Alaska: A Controversial System of Grandfather Rights (paper presented to and subsequently published by the International Institute of Fisheries Economics and Trade, Oregon State University, July 2000).

Fleet Reduction in Alaskan Salmon Fisheries (panel presentation, Alaska Salmon Forum '99, Anchorage).

Fleet Reduction in Bristol Bay Salmon Fisheries (panel presentation, Bristol Bay Native Association Forum, Anchorage, 1999).

Consolidating Salmon Fleets: Is Fewer Better than More? Different Alternatives to Managing Salmon (panel presentation, Fish Expo Seattle, 1999).

Coauthor, **Outline of Options for Fleet Consolidation in Alaska's Salmon Fisheries** (CFEC December 1998).

Contributor, **Limiting Access to Marine Fisheries: Keeping the Focus on Conservation**. Center for Marine Conservation and World Wildlife Fund U.S. 1994.

License Limitation in Alaskan Salmon Fisheries. Paper and panel presentation to Conference on Managing Marine Fisheries by Limited Access sponsored by World Wildlife Fund and Center for Marine Conservation. Annapolis, MD. 1992.

Getting and Keeping Alaska Limited Entry Permits in Local Rural Communities.

- Bristol Bay Native Association, Bristol Bay Fisheries Conference, Dillingham, 1992.
- Southeast Alaska ANCSA Economic Summit. Saxman, 1991.
- AFN Convention. Anchorage, 1991.

The IRS and Alaska Limited Entry Permits, University of Alaska Commercial Fishing Business Seminar, Federal Tax Impact on Commercial Fishermen. Anchorage, 1987.

Parental Involvement, Local Control, and Quality of Education, Alaska Native Education Association. Anchorage, 1981.

Alaska Native Control of Local Village Secondary School Programs, Lawyers Clinic on Parental Liberty in Education. Washington, D.C. December 1978.

SELECTED CASES, AND DECISIONS:

Simpson v. State, CFEC, 101 P.3d 650 (Alaska 2004).
The Alaska Supreme Court affirmed the commission's optimum number decision for the Northern Southeast Inside sablefish fishery.

Crivello v. State, CFEC, 59 P.3d 741 (Alaska 2002). The Alaska Supreme Court affirmed a CFEC decision that advanced commission adjudications by limiting the extent to which the commission was required to grant additional hearings under *Forquer v. State*, CFEC, 677 P.2d 1236 (Alaska 1984).

In re Francis S. Carle, CFEC 96-003-P (1996). In the face of a demand by the Internal Revenue Service to force the transfer of a Southeast salmon herring seine permit held by a 61-year-old resident of Hydaburg, the commission (in a 96 page decision, including exhibits) declined to transfer the permit.

Wilson v. Watt, 703 F.2d 395 (9th Cir. 1983). Class action with co-counsel Kathleen Strasbaugh, sought preliminary injunction against Secretary of Interior James Watt to restore BIA general assistance payments to Alaska Natives.

Fairbanks Correctional Center Inmates v. Williamson, 600 P.2d 743 (Ak. Sup. Ct. 1979).

Ferdinand v. City of Fairbanks, 599 P.2d 122 (Ak. Sup. Ct. 1979).

Co-counsel for plaintiff class of 2,667 Alaska Native secondary school age children in *Tobeluk v. Lind* (known as the Molly Hootch case), 589 P.2d 873 (Ak. Sup. Ct. 1979), which by consent decree established the entitlement of Alaska Native children in 126 villages throughout the state to attend secondary school in their home villages and further required the state to expend more than $158-million for the construction of local secondary facilities.

Horton v. Horton, 519 P.2d 1131 (Ak. Sup. Ct. 1974).

Attorney for plaintiff class of Alaska Native women and minor children in *Finnesand v. Kleppe*, No. A75-42 Civ. (U.S. District Court Alaska), which by consent decree abolished a discriminatory eligibility standard for BIA General Assistance.

Represented more than 100 Alaska Native Allotment applicants before the Department of Interior. 1972-1982.

Attorney for the Akiak Indian Reorganization Act Council and parents of grade school children in *Akiak v. Lind*, No. 4BR 8-39 Civ.

Amicus Curiae (in cooperation with the Office for Civil Rights) in *The Matter of Alaska State Department of Education and Twenty-One Regional Educational Attendance Area School Districts* S-134, a proceeding before the Department of Health, Education and Welfare, to enforce Title VI of the 1964 Civil Rights Act on behalf of Alaska Native school children.

Joel L. Hard, 907-745-8399
P.O. Box 388 Palmer Ak.99645
Superintendent, Lake Clark National Park

Specialized Experience:

I am a commercial pilot, single engine land and sea. Instrument rated with over 2670 hours total time, 2500 PIC, over 513 hours on floats, 1900 hours on conventional gear, and over 2500 hours in Alaska. I have 1533+ hours of cross-country flight time, much of which is in remote areas of Alaska and 75 hours night flight. I have federal OAS-AMD authorization for low level operations and off airport landings.

I have strived to consistently continue with flight training by taking recurrent training and participating in the F.A.A. "Wings Program". I have completed phase 11 of this program. I am a current member of the Medallion Foundation.

I have participated in several Department of Public Safety sponsored training courses on winter survival and wilderness survival. I participated in water egress training sponsored by the F.A.A. on April 21, 2006.

I have an Advanced Police Certificate and 20 years experience in Alaska law enforcement of which 18 years were in fish and wildlife enforcement.

I am an avid sportsman, hunter, fisherman and wildlife photographer, and have done many solo hunting and camping trips. I am very comfortable in a wilderness setting.

I have lived in Alaska continuously for over thirty four years.

I have been trained in Emergency Trauma Training (E.T.T.) and C.P.R.

I am experienced at report writing and documentation sufficient for presentation in courts of law.

I have responded to several fatal aircraft accidents in my Trooper career. This has strongly reinforced my commitment to aviation safety.

After retiring from Public Safety I was employed by Master Guide Joe Klutsch of King Salmon Alaska, flying under Part 91 as an Assistant guide

on the Alaska Peninsula. Much of this work was low level and off-airport operations in support of a remote hunting camp.

Specialized Experience, continued:

I have always maintained an excellent safety record and was a F.A.A. volunteer Aviation Safety Counselor during my time in Coldfoot.

I have over seven years experience as a captain or crewmember of patrol boats working coastal Alaska from Kodiak Island to Bristol Bay. These boats were mostly 32' LOA but ranged up to 156' LOA. During this time I operated many kinds of smaller skiffs and inflatable boats while on duty. All of this experience was in the performance of enforcement of natural resource laws and regulations. During this time I performed most of the maintenance required for the smaller vessels and motors.

I have experience in smaller skiffs and river boats in the interior of Alaska and have operated my own 18' boat on various rivers and lakes.

I have operated four-wheeled A.T.V.'s and snow machines for much of my Trooper career, safely and prudently with respect to their environmental impact.

I have been certified as a firearms instructor by the Alaska State Troopers and maintain expert marksmanship skills. I have a perfect safety record in this area.

I have been involved in numerous search and rescue operations on both land and sea. I have coordinated many of these as incident commander or as the only searcher involved. I was awarded a medal of Bravery for the recovery of a suicidal person in Sand Point and have received letters of recognition for other search efforts.

Prior to becoming a trooper I was a member of "Dogs Organized for Ground Search" an Anchorage based Search and Rescue unit. I assisted in the training of dogs for Avalanche and ground searches and was successful in the recovery of one avalanche victim in Turnagain Pass.

In March 2006 I was appointed by Governor Murkowski to a four year term on the Big Game Commercial Services Board. This board regulates the Big Game Guides and Transporter industries. I am the Board appointed liaison with the Department of Public Safety. I have been instrumental in writing ethical standards for Big Game Guides and Transporters that have become regulation. I have an excellent attendance record and work well with the guide/transporter industries and with State and Federal agency personnel. My knowledge of fish and wildlife related laws has been an asset to this Board.

I

barrette@gci.net

I and my family have been Alaskan Residents for 21yrs. Since we chose to move to Alaska we've never thought of living anywhere else. This is the greatest state in the union. We have enjoyed all that Alaska has to offer. From the greatest hunting, fishing, and trapping opportunities, too some of the greatest sights known to the world. I and my family have always been consumptive users of most of Alaskan resources. We count it a blessing everyday that we manage its resources for the maximum benefit of its people and for its conservation. I believe its my time to step up if the honor be bestowed to me. To serve at the highest level of public participation, The Board of Game. I will bring my vast knowledge of conservation of wildlife my understanding of urban and rural social issues, my ability to listen and learn about issues that will come up that I have no or little experience with. I am able to understand and use The Alaska Fish & Game Law and Regulations to resolve situations. I'm a very pro predator management and believe the Department of Fish & Game should have all the tools necessary to manage predator and ungulates alike for sustained yield. We should be wise stewards of all our resources. As our local Department of Fish & Game can attest I'm very interested in why, how, or their ideology on management of Fish & Game.
If afforded this opportunity I would continue to what I believe is the best public process of regulating and managing users and game for the state for all current users and the future generations.

Family- Married wife Laura in 1987 (22 years), Raising 3 children all born in Fairbanks Jacob 17, Mickinze 14, Ashley 10,

Education- 1983 was certified in artificial insemination,1984 graduated high school,1992 completed apprenticeship program for heavy duty diesel mechanic,4 credit hours left on a associates degree automotive technician.

History-
Born 1965 Dollar Bay Michigan (43yrs)
Native American, Keweenan Bay Indian Community
1979 hire as dairy farm hired hand
1982 promoted to dairy herdsman
1984
1983 Joined the US Army as a vehicle mechanic, served in Washington state, South Carolina, Germany and Alaska was my last duty station.
1987 Reenlisted to be stationed in Alaska
1993 Was honorably discharged from an injury
1993 Became a disabled vet
1993 Started and operated Fairbanks Fur Tannery, 1st commercial tannery in the interior which I still continue
1995 Became involved in making proposals and learning the B.O.G process
1995 seriously started supplementing our family income from trapping
2002 Purchased the Alaskan No. 9 trap Co. And continue to manufacture the Alaskan wolf trap
2005 Was elected to the Fairbanks Fish and game Advisory Committee and appointed chairman of the trapping subcommittee. Still hold that same seat currently.
2006 Received first gunners permit in the predator control program.
2007 Became a class A Big Game Guide.

Interest-

• Educating preservationist and less educated persons on why and how come I do what I do or the science or biology behind what the State or I do.
•Showing my family how to handle fish and game properly and only take what your going to use not necessarily the limit that is afforded to us, being good stewards of the land
•Educating young and inexperienced trappers to all facets of trapping
•Thinking outside the box when persistent or longtime dilemmas exist. i.e. social or urban/rural subsistence allocations
•Learning how biology works in conjunction with the management of game
•Trying to introduce ideas to our legislators pertaining to Fish and Game
•How to reduce regulations pertaining to Fish and Game when applicable
•Big game Guiding
•Taxidermy
•Trapping
•Hunting
•Fishing
•Camping and wildlife photography

Life Memberships-
•Alaska Trapping Association A.T.C,
•The National Rifle Association N.R.A

Background:
I was raised on a farm in Indiana. My life dream was to go to Alaska. I joined the Air Force to support my family and was rewarded by a transfer to King Salmon, Alaska in 1978. There I was introduced to the commercial fishing in Bristol Bay and the greatest Rainbow Trout fishing in the world. I was transferred to Elmendorf Air Force Base from 1979 to 1982 where I continued to enjoy the great outdoors. I was offered a job in the maritime ship yards, on the west coast from 1982-1988. I purchased my first Bristol Bay Setnet permit in 1984. My wife (Sheryl) and I moved our family (Troy and Derek) back to King Salmon in 1989 for a more intimate education. Our sons went on to graduate from Eastern Connecticut State and Yale University with honors. We continue to reside in King Salmon and enjoy sharing our fishing operation with our sons and grandchildren every summer.

Work Experience:
1984-Present...Set gillnet operator in the Naknek/Kvichak District of Bristol Bay.
2004-Present...Drift gillnet operator in the Naknek/Kvichak District of Bristol Bay.
2008-Present...Engineering Heavy Equipment & Barge Operator at Katmai National Park.
2000-2008...Facilities & Maintenance Director for Lake & Peninsula School District.
1997-2000...Maintenance & Construction for Katmai National Park.
1989-1990...Cannery Construction for BKR & Associates at Cordova, Kodiak, Petersburg and Naknek, Alaska.
1982-1988...Ship Repair Coordinator & Branch Manager for Donco Inc. in California and Washington.
1975-1982...US Air Force.
1978...Managed Air Force boat dock & operated an Air Force charter boat at King Salmon.

Other Fisheries Experience:
Togiak Herring, Cinder River Salmon, Chignik Salmon, Bristol Bay Halibut and numerous sport fisheries throughout the state.

Community Service & State Positions Held:
Presently serve on the Alaska Board of Fisheries.
Served on the Naknek/Kvichak Fish and Game Advisory Committee for over 15 years.
Set on numerous fish committees & task forces.

Education & Training:
Graduated Jennings County High School, Indiana 1974.
Versailles Vocational School, Indiana 1973.
Air Force Aircraft Weapons Release Systems Tech School 1976.
USCG Merchant Mariner Credential, 100 Ton Master

Thomas G. Kluberton
P.O. Box 200
Talkeetna, AK 99676
(907)733-1457

Career Synopsis:

Tom was elected to the Mat-Su Borough Assembly in October 2006 after serving two years on the Mat-Su Planning Commission. While on the Assembly, Tom Chaired the Mayor's Blue Ribbon Sportsman's Committee, and contributed his knowledge of the Department of Transportation and Public Facilities as a member of the Mayor's Blue Ribbon Road Service Area Task Force.

Alongside positions in local government, Tom owns and operates the Fireweed Station Inn at Sunshine, south of Talkeetna, with his wife. Originally built in 1946, their Inn is listed on the National Historic Register and was thoroughly reconstructed under Tom's direction between 1993 and 2003 when it opened.

He also served as financial and part-time operating partner in an equipment rental, greenhouse/nursery, and dirt-work business with his brother in the Talkeetna area from 1998 – 2000.

Since 1973 Tom has been handed complex business challenges, analyzed their component issues, spelled-out alternatives to management for resolving those issues, guided the team responsible for resolving the challenge to consensus in choosing the best alternative, and, managed numerous such projects to completion.

In April,1994 he joined a team of eight people with a good idea to create a network simulation and management software package. By August 1996, Netsys Technologies Inc. was selling a million dollars worth of software a month throughout the world. The company was sold to Cisco in Nov. '96 for $85M.

In 1991 as Director of Information Systems at the Alaska DOT&PF, Tom was responsible for implementing the State of Alaska's first Internet-like computer network interconnecting fourteen local networks in three Alaskan Cities. This implementation was designed and modeled on a computer before being implemented to ensure success.

As a consultant with Alaska's Department of Administration Information Resource Management Division Tom was involved in hundreds of information technology and networking projects in all aspects from technical and administrative reviews, to conducting full RFP procesess and project management.

Independent Consultant – dba Denali SoftWorks (1995 - 2003)

• Assisted GCI with Cable Modem product launch, analyzing the multitude of issues surrounding integration of broadband internet into their Cable TV organization
• Sat on Technical Advisory Board of Palo Alto based software development company that developed and sold large scale internetwork management and simulation software.
• Prepared initial U.S. Patent document for internetwork management and simulation software package
• Assisted AIDEA in for with various computing-related projects
* Performed Process Review of technology acquisition cycle for ARCO Alaska Inc

NETSYS Technologies Inc. (3/94 - 8-95)
Director, Market Research & Third Party Vendor Relationships

* Responsible for establishing strategic relationships with Third Party consulting firms selected for demonstrated expertise in computer network
* Provided product requirements input to software development team based on experiences delivering client server applications and via research into market demand and trends.

Alaska Department of Transportation and Public Facilities (1987 - 1989)
Director, Information Systems (& '91 - '93)

* Implemented statewide Management Reporting system including the state's first Internet-type TCP/IP network
* Performed initial analysis, conducted RFP process and managed contractor's development of Billing System for $200 million/yr Federal Aid highways program.
* Managed RFP process and managed implementation of department wide Asset Management Application to manage maintenance of two international airports and state equipment fleet of 6800+ vehicles.

Unisys Corporation (1989 - 1991)
Sr. Account Representative

* Drove sales effort to broaden State of Alaska IBM Mainframe network (SNA/SDLC) capabilities to Open Networking (TCP/IP). Presented concepts to all levels of government from cabinet to network technicians in effort to raise awareness of the need to move from outdated technology.
* Managed accounts for all public sector customers in Alaska.

Alaska Department of Administration (1984 - 1987)
Manager, Data Center Customer Services

* Managed all customer interface requirements for large IBM Mainframe center including implementation of chargeback system, planning and microcomputer acquisition process.
* Sat on committee in review of all State of Alaska technology acquisitions.
* Managed all end-user computing support staff.
* Provided consulting services to all State of Alaska agencies as needed on computer projects, primarily project management and acquisition issues.

Crown Zellerbach Inc. (1980 - 1984)
Wilson Foods Inc. (1978 - 1980)
Continental Oil Co. (CONOCO) (1973 - 1978)
IBM Mainframe Application Development and Systems Programming

* Implemented Stock Transfer system at CONOCO, first U.S. Corp. to be its own Transfer Agent.
* Supported Order Entry and Invoicing applications
* Performed all aspects of Systems Programming: SNA network and operating system support
* Application analysis, programming and project management

MEMORANDUM

Date: 2009

To: All Committees

From: Suzi Lowell
Chief Clerk

Subject: Confirmation Committee Report (Signature Page) for Governor's Appointments

The attached Confirmation Committee Report (signature page) should be used in conjunction with the Referral for Confirmation form for the Governor's appointments to boards and commissions requiring legislative confirmation. After a committee has reviewed the qualifications of the appointee(s), the Referral for Confirmation form(s) should be dated and attached to a signature page. Have members sign the signature page and return the confirmation packet to the Chief Clerk's office.

Please use a single signature page for multiple appointees if the names of all members signing the report are the same for each attached referral. This change allows members to sign once for multiple appointments.

Attached are several signature pages for your use. We used colored paper to make them easier to identify. If you anticipate needing more forms or need assistance, please call Nancy McMullen at 6809.

Note: A separate report, including the signatures, will be used for department commissioners.

MESSAGES FROM THE GOVERNOR

Board of Fisheries

Judge Karl S. Johnstone (Retired) – Anchorage ~~FSH~~, RES
Appointed: 12/5/2008 Term Expires: 6/30/2012
Reappointed: 7/1/2009

Brent G. Johnson – Clam Gulch
Appointed: 7/1/2009 Term Expires: 6/30/2012 FSH RES

University of Alaska Board of Regents

Ashton M. Compton – Fairbanks EDC
Student Representative
Appointed: 6/1/2009 Term Expires: 5/31/2011

The resumes for these appointees have been submitted to the offices of the Senate Secretary and the Chief Clerk.

FIRST READING AND REFERENCE OF SENATE BILLS

SB 24
SENATE BILL NO. 24 by Senator Stedman, entitled:

"An Act naming the bridge over Hammer Slough on Nordic Drive in Petersburg the Louis Miller Bridge."

was read the first time and referred to the Transportation and Finance Committees.

SB 142
SENATE BILL NO. 142 by Senator Paskvan, entitled:

"An Act authorizing the conveyance of certain land of the Alaska Railroad Corporation to the Department of Transportation and Public Facilities; and providing for an effective date."

was read the first time and referred to the Transportation Committee.

Alaska State Legislature

House of Representatives

Office of the Chief Clerk

MEMORANDUM

Date: April 2, 2009

To: Representative Johnson, Co-Chair ✓
Representative Neuman, Co-Chair
Resources Committee

From: Suzi Lowell
Chief Clerk

Subject: Governor's Appointment(s)

The Speaker referred the following Governor's appointment(s) to the Resources Committee and the House Special Committee on Fisheries:

Board of Fisheries
Brent G. Johnson – Clam Gulch
Appointed: 7/1/2009 Term Expires: 6/30/2012

The Speaker referred the following Governor's appointment(s) to the Resources Committee:

Board of Fisheries
Judge Karl S. Johnstone (Retired) – Anchorage
Appointed: 12/5/2008 Term Expires 6/30/2009
Reappointed: 7/1/2009 Term Expires 6/30/2012

Judge Johnstone was previously referred to your committee for the term expiring June 30, 2009. He has been reappointed for the term beginning July 1, 2009 and expiring June 30, 2012. These dates have been combined on the new Referral for Confirmation page.

The Referral for Confirmation page(s), resume(s), and a signature page are attached for your use.

Attachments as noted

MESSAGES FROM THE GOVERNOR

Board of Fisheries FSH, RES
Judge Karl S. Johnstone (Retired)
Appointed: 12/5/2008 Term Expires: 6/30/2009

Board of Game RES
Stanley "Stosh" Hoffman Jr. 6/30/11
Appointed: 11/13/2008 Term Expires: 3/1/2011

Resumes for the appointments are on file in the Chief Clerk's office.

INTRODUCTION, FIRST READING, AND REFERENCE OF HOUSE RESOLUTIONS

HCR 2
HOUSE CONCURRENT RESOLUTION NO. 2 by Representatives Ramras, Millett, Johnson, and Chenault:

> Requesting the governor to provide energy security for all Alaskans by pursuing development of a natural gas bullet pipeline from the North Slope to the Cook Inlet region; and requesting the governor to identify and negotiate with one or more persons capable of producing natural gas from the Gubik area, and other areas on the North Slope if necessary, in sufficient quantities to support a bullet pipeline project.

was read the first time and referred to the House Special Committee on Energy and the Resources Committee.

HCR 3
HOUSE CONCURRENT RESOLUTION NO. 3 by Representatives Ramras, Millett, Johnson, and Chenault:

> Requesting the governor to provide energy security for all Alaskans by taking and encouraging all action that would support a natural gas bullet pipeline from the North Slope to the Cook Inlet region, including initiating any necessary negotiations to reopen the Agrium plant in Kenai.

was read the first time and referred to the House Special Committee on Energy and the Resources Committee.

HCR 4
HOUSE CONCURRENT RESOLUTION NO. 4 by Representatives Ramras, Millett, Johnson, and Chenault:

> Requesting the governor to provide energy security for Alaskans by taking and encouraging all action to support development of a natural gas bullet pipeline from the North Slope to the Cook Inlet region including advocating an increase in the amount of natural gas that may be exported under authority granted by the United States Department of Energy.

was read the first time and referred to the House Special Committee on Energy and the Resources Committee.

HCR 5
HOUSE CONCURRENT RESOLUTION NO. 5 by Representatives Ramras, Millett, Johnson, and Chenault:

> Requesting the governor to provide energy security for all Alaskans by working on significant elements and components to support the timely construction of a natural gas bullet pipeline from the North Slope to the Cook Inlet region and to take necessary action to assist and facilitate the process for a private entity to make a final investment decision to commit to the pipeline before November 1, 2010.

was read the first time and referred to the House Special Committee on Energy and the Resources Committee.

INTRODUCTION, FIRST READING, AND REFERENCE OF HOUSE BILLS

HB 78
HOUSE BILL NO. 78 by Representative Olson, entitled:

> "An Act extending the termination date of the Board of Public Accountancy; and providing for an effective date."

was read the first time and referred to the Labor & Commerce and Finance Committees.

HB 79
HOUSE BILL NO. 79 by Representatives Ramras and Millett, entitled:

> "An Act establishing a gas royalty and production tax fund, describing its purpose, and authorizing use of fund proceeds to support power cost equalization."

was read the first time and referred to the Finance Committee.

Subject: Allen Barrette .... Opposition

Dear House Resource Co-Chairman Johnson,

I am Jack Reakoff, and was not able to be heard on the conference call hearing regarding Allen Barrette today. I had additional comments on his qualifications to be a BOG member, that came up during his testimony to you.

He miss-lead your committee as to the BOG's intent to use HB267 snow machine use in the Dalton Highway corridor. He him self brought this issue before the BOG in November in Nome. He was pushing this a a tool to allow vast expansion of hunting opportunity to harvest by the new user group, winter snow machine hunting. He was asked on the record today if the BOG would change the regulations to allow hunting with snow machine use, he him- hawed that he was not sure. With his history on this issue he responded by trying to deceive your members.... see attachment.

The question was asked if the caribou proposal for the North Slope was ethical. He lied again to the House Resource committee and said it was presented to the BOG by ADF&G and it was supported by the Advisory committees.... The alternate proposal was submitted during the meeting, after public testimony was over. The Koyukuk River AC apposed the original proposal.... and would have vehemently apposed adding two months into the summer, allowing non-residents to kill cows with new calves, near the Dalton highway.....in view of tourists. He is proving to have little ethic in the Public process, and before his confirmation hearing. As a BOG member it is necessary to have personal ethics, and public trust.

Mr Barrette during your House Resource Committee meeting has again proven that he is un-ethical by miss leading the Resource Committee, and his conduct during the last meeting of the Board of Game. He allocates to non-residents, at the same time reduces resident allocations, and does not listen to the State Advisory committees who do not agree with uses, that are not conservation minded for the health of the resources. Ben Grusendorf is the only member that currently seated that is listening to the public and has conservation ethic. The majority of the BOG is not doing the best job for our resources health, and Allen Barrette should not continue to be a wolf in the sheep pen.

Do Not Confirm Allen Barrette to the Board of Game.

Jack Reakoff
Wiseman, Alaska

Subject: RE: GARE: BOARD CONFIRMATION (AL BARRETTE)

FROM: 26 year bush resident and 31 year AK resident
TO: elected officials making Game Board confirmations

I, Ingrid Peterson living in bush Alaska, direct you to cancel (don't confirm) Al Barrette's appointment to AK Game Board. This is because as owner of a WOLF TRAP COMPANY Barrette will serve his own (vested) interest on the Game Board and not the interests of Alaska residents or ecosystems.

Only in Alaska government, where industry's corruption of the public process abounds, would elected officials have the arrogance to suggest profiteers (like Barrette) to over-see public resources. Alaskans are tired and disgusted about sold-out politicians serving themselves and industry at the public's expense.

Your prompt attention to this matter and response to this e-mail is requested.

THANKS
Ingrid Peterson

Attachments: Al Barrette Testimony - Proposal 62 - March 5, 2010.WMA

Importance: High

Wade Willis
adventure@alaska.com

Hello House and Senate Resource Committee's;

- In testimony to the House Resources committee today Al Barrette denied having petitioned the Board of Game to allow the use of snow machines to harvest wolves in the revoked Denali wolf buffer zone. This is not true and I have attached the audio for you to listen to confirm this fact. His unwillingness to admit this request is troubling. Not one member of the BOG supported his request.

- Mr. Barrette only admitted to owning a tanning and trap making business after questioning by the committee members. Why would he be trying to hide this fact?

- Mr. Barrette also informed the committee that he is already under investigation for ethics violations.

- Mr. Barrette also seemed unwilling or unable to confirm that the National Park Service, for the first time, had submitted its own proposal to not only retain the existing wolf buffer zone but to expand it slightly due to radio collar and harvest data collected over the last six years.

- When questioned by House Resource committee members Mr. Barrette could not identify any situation or method that was not appropriate for predator control.

- Mr. Barrette confirmed that his fundamental game management philosophy is to "subdue nature and control it" and that his job is to "educate" others about how he does things. The BOG is responsible for game management on federal lands such as NPS Preserves and National Monuments where the management mandate is to promote natural diversity and abundance. Mr. Barrette seems unwilling to consider the broader scope of being a responsible member of the Board of Game and appears to lack the basic memorandum of understanding between the federal government and the state of Alaska to cooperate regarding different management mandates.

PROPOSAL 62
TOPIC: Wolf Control Plan for GMU 20C: (Contains the Former Denali Wolf Buffer Zone Region)

Debated on March 5th in the afternoon session:

Audio Attached.

3016

You can confirm this testimony and receive an independent audio copy of the testimony of Mr. Barrette regading proposal 62 by calling or emailing Board Support in ADF&G to request the audio.

Senator Hoffman and the House Resources Committee:

AVCP opposes the appointment and confirmation of Allan Barrette to the Alaska Board of Game due to his aggressive stance against Alaska Native reliance on subsistence resources and his postion on the allocation of game to non-residents and the urban hunters. His appointment to the Alaska Board of Game would further divide the state to urban vs. rural in game management issues which would only increase the urban/rural gap. His votes and comments on the record during the two Alaska Board of Game meetings clearly reflects his intentions like the Anaktuvik Pass caribou, Chisana Caribou, the Nikolai C& T on dall sheep and his attempts to override one of the most important precautionary measures the Board of Game must take in their deliberation processes, comments by the Department of Law. We believe his confirmation would be detrimental to all Alaskan, therefore, we appose his confirmation.

Dear Representative Johnson, (apologies if you received this message twice)

I am writing to you as the owner of a small business that has been operating in Anchorage for almost twenty years, and has employed hundreds of workers in that time. My business relies on tourism, and caters to those who are coming to Alaska for its natural beauty and an opportunity to enjoy its wildness.

Seeing the wolves of Denali is the highlight of the trip for any who are fortunate enough to have had that experience. The current boycott of Alaska called for by Friends of Animals because of the eradication of the Denali Park buffer zone is extremely concerning to me from an economic standpoint. Tourism traffic is way down anyway, and the appointment of people such as Al Barrette who recently vote for the eradication of the buffer zone is doing nothing but harming Alaska's image.

We don't like to think our decisions are based on what those "outside" think, but they drive a good portion of our economy, and business owners like myself rely on their perception of how we treat ALL of our resources, including wildlife.

In addition, his ownership of a commercial tannery, and a wolf trap company should disqualify him immediately from the board, as his own financial interest is affected by the way he votes on the board.

I urge you to reject Mr. Barrette's appointment for the reasons above.

Thank you for your service to the state.

Sincerely,
Jeanne Devon

Subject: My Public Comments regarding Al Barrette's Confirmation to the Alaska Board of Game

Importance: High

House Resource Committee Members:

I am writing to ask that you both REJECT Al Barrette from being confirmed to Bob Bell's seat on the Alaska Board of Game.

His deciding vote on eliminating the wolf buffer zone near Denali National Park was the last straw. I am a hunter as well as an avid outdoorsman. However, the wolf population within Denali National Park is at a 23-year low. The Alaska Board of Game is denying science and are hell-bent on creating artificially high numbers of huntable animals by eliminating all of the predators.

However, in addition to this disturbing vote, Mr. Barrette has a HUGE CONFLICT OF INTEREST! He owns the Fairbanks Fur Tannery AND The Alaska No. 9 Trap Company. Both companies profit as a result of his vote. In other words, Mr. Barrette was able to improve his personal bottom line with his public Board of Game vote at the expense of the wolves of Denali as well as tourism-based businesses that will potentially face a large boycott on top of a bad economy.

Barrette should have recused himself from this important and critical vote.

Here are some great posts from The Mudflats and Shannyn Moore. Please watch the video on the second link. It is disturbing fundamentalist comments from Al Barrette.

Shannyn Moore hosted a program on Predator Control on her television program Moore Up North over the weekend. You may view the program here: http://shannynmoore.wordpress.com/2010/04/03/moore-up-north-aerial-wolf-hunting/

I found it extremely telling that former Board of Game nominee, Bob Bell, said that he would NOT have voted to eliminate those buffer zones around Denali Park. Bob Bell was a strong predator control advocate and HE thinks Al Barrette ought to be REJECTED!

IN addition, if Al Barrette is confirmed, there will not be anyone from the largest populated city in Alaska, Anchorage, on the board of game.

Thank you for your consideration and for your REJECTION of AL BARRETTE to the Alaska Board of Game.

Sincerely,

Kelly

PS Please CONFIRM BEN GRUESSENDORF to his seat as he is currently THE ONLY Voice of REASON on the game board!

Subject: Mr. Al Barrette Board of Game confirmatioin

To:
Representatives Johnson and Neuman, Co-chairs
House Resources Committee
Alaska State Legislature

Dear Co-Chairs Johnson and Neuman, and Committee Members:

Please support confirmation of Mr. Al Barrette's appointment to the Alaska Board of Game.

Mr. Barrette is dedicated to sound conservation of Alaska's wildlife. He is a constructive, critical thinker who has the public interest in place, right after sound, scientific wildlife management. He has a wealth of experience as hunter, trapper, and naturalist.

The accusation from some of his critics that he will unfairly profit by his confirmation is false. He would not do that, most importantly because he is a man of integrity, and also because the Board of Game is bound to follow the Alaska Constitution and statutes in its decisions.

Thank you.

From: Sherry Simpson [sherrysimpson@mac.com]
Sent: Monday, April 05, 2010 12:23 PM
To: Rep. Craig Johnson
Subject: Al Barrette's confirmation hearing

Dear Rep. Johnson,

I oppose the appointment of Al Barrette to the Board of Game. I am a lifelong Alaskan who comes from a hunting family, and I follow Board of Game meetings closely. It was clear from the March meeting that Mr. Barrette never met a proposal to kill a wolf or a bear that he didn't like, and that's saying something on a board that is overwhelmingly weighted toward consumptive users.

Mr. Barrette supported proposals to allow brown bear baiting outside of predator control areas, to expand black bear baiting, to allow denning bears, and to allow bear trapping outside of predator control areas. He was often the only vote supporting such measures. Mr. Barrette's overwhelming approval for more aggressive predator control measures was never based on any scientific or management information supplied by department biologists, but on his own interests as the owner of a trapping business and as someone who fervently believes that the best use of wildlife in Alaska should be determined by consumptive users only. Yet only 15 percent of Alaskans hold hunting licenses.

I am not an antihunter by any definition, and I fully recognize the importance of managing game for genuine subsistence uses. I even think that in some areas, at some times, local communities should be allowed to undertake predator control measures when necessary. This board, however, is so bent on pleasing urban hunters who belong to such organizations as the Alaska Outdoor Council and Sportsmen for Fish and Wildlife that it is willing to damage not only Alaska's reputation but its visitor industry. The board's decision to reject popular proposals to expand no-trapping zones around Denali National Park and to remove existing buffers is an insult to tourism-based businesses owned by Alaskans. Mr. Barrette attempted to extend this decision's damaging effects further by supporting the use of snowmachines to kill wolves in this area.

From meeting to meeting, this board has approved ever-more extreme predator control measures, few of which are based on scientific data or actual censuses of moose, caribou, bears, and wolves. (I've read the management reports and scientific studies.) Regulations or "experimental programs" now allow gassing wolf pups; killing unlimited numbers of black bears in Unit 16, including sows and cubs; snaring bears; shooting brown bears over bait near McGrath; allowing private organizations such as SFW to use helicopters to transport hunters; sales of black bear hides and skulls; permits for multiple bait stations run by guides; and more. These measures are routinely approved without waiting for any monitoring research or scientific evaluation to determine their effects.
Yet at the March meeting, Deputy Commissioner Patrick Valkenburg announced department plans to reclassify grizzlies as furbearers so they, too, can be trapped or snared outside of predator control areas.

Mr. Barrette's positions, however, carry the board's current management philosophies to extremes that I don't think the state can tolerate. The legitimate hunting community, ADF&G, and the tourism industry cannot withstand the backlash against legitimate hunting and Alaskan businesses that will ensue if photographs of a bear cub being shot over bait or of bears being foot-snared are made public.

In FY 2009, Alaska spent $3.7 million on intensive management to the exclusion of watchable wildlife programs, habitat protection, and wildlife education beyond predator control propaganda. I sincerely doubt that anyone can demonstrate any significant, lasting improvement in ungulate populations despite millions spent in the last few years. A responsible Legislature would ask for an accounting.

Beyond question, hunters help pay for wildlife conservation through licenses, tags, and federal excise taxes. I own guns, so I do, too. Many Alaskans would happily contribute to genuine wildlife conservation (not game farming) by paying a viewing or recreational fee, yet a bill making this possible has failed. It is widely recognized that groups such as the AOC and SFW simply do not want nonconsumptive or multi-users to have a voice in this state's wildlife management. Mr. Barrette's appointment will only further this divisiveness.

Please support reasonable wildlife management in Alaska by not approving Mr. Barrette's nomination to the board. We can do better.

Regards,

Sherry Simpson

Subject:	Al Barrette opposition

Dear members of both the House of Resources Committee and the Senate Resources Committee:

We are writing as concerned Alaskans to express our opposition to Allen Barrette's confirmation on the state's Board of Game. We believe his positions are far too extreme, controversial and full of conflicts of self-interest to sit on such an important board. As avid outdoor enthusiasts we oppose Mr. Barrette's nomination on numerous counts.

1. Significant questions regarding conflicts of his tannery business. Mr. Barrette stands to profit from BOG decisions of liberalizing trapping harvests.

2. His key vote to oppose and revoke the Denali Wolf Buffer Zone has disenfranchised citizens. He has also supported a six year moratorium on accepting or discussing Denali Wolf Buffer proposals. Isn't the Board mandated by the legislature to address public concerns? This moratorium not only rebukes the legislature's intent upon establishing the board but isn't it also quite likely illegal? We must also point out that Mr. Barrette likely voted on the proposal as a Fairbanks AC member which would exclude him from voting on the proposal as a board member, would it not?

3. Was he not also actively involved in lobbying for sponsorship and passage of HB 267 prior to being appointed to the Board of Game where he voted to approve of the bill? Is this not also a conflict?

4. His record Opposing Rural and Native Subsistence is long and extensive.

5. His overall voting record so far has been full of extremely controversial views. After voting in favor of revoking the Denali Wolf Buffer Zone didn't Mr. Barrette petition the board to authorize using a snow machine to harvest wolves in the "old" buffer zone region (GMU 20C) along the border of the park? And not one member of the board would support Mr. Barrette's proposal, for good reason. He also voted to revoke the ADF&G's statewide bear management policy that guides the department's scientific management of Alaska's Bears. He also approved of citizens using helicopters to support the killing of wolves in the Upper Yukon Tanana Predator Control Program. These views are not only extreme in nature, but must be questioned as to the best ways to manage wildlife for the benefit of all.

The list goes on, and the details are numerous in regards to his extreme views. As Alaskans concerned for the fair and balanced management of our wildlife resources, we believe this position would be far better served by people who represent all outdoor enthusiasts who hunt, fish, and enjoy the abundance of wildlife this magnificent state offers, rather than the extreme and controversial positions Mr. Barrette is presenting. Please do not confirm his appointment to the board.

Respectfully,

Leslie Correll-LaBar and George LaBar
Two Rivers, Alaska

Subject: Oppose Al Barrette for Board of Game confirmation

Greetings,

I just wanted to express my opposition to the confirmation of Al Barrette to the Alaska Board of Game. Responsible, scientific wildlife management in Alaska has taken a real beating in recent years and has resulted in embarrassment and bad publicity for the State. It is clear that confirmation of Al Barrette to the Board of Game will only further exaggerate the problem. He is clearly not qualified, has no scientific credentials, represents a conflict of interest, further unbalances the representation of all Alaskans on the Board of Game, and apparently bases his "management" decision-making on the Old Testament. He is, in short a recipe, for more disaster. To think he is the best Alaska can do is a real indictment of our wildlife management ability.

I hope you will oppose his confirmation.

Thank you.

Wayne Hall

Subject: About Mr. Barrette

Greetings from longtime Anchoragian:

I am FOR rural subsistence priority for fish and game.
To hide behind a Bible verse and translate it without regard to the changes over time, the culture of THAT time, and actually thinking through humane management.....seems like there is a lack of reasoning and indepth study.

I am OPPOSED to hunting wolves with snowmachines, and to elimination of the 'buffer zone' ..... And very much FOR The Yukon Flats Citizen Advisory council requested limit to be set on beaver harvest. Local communities should be listened to, and they "felt it was disrespectful to have an unlimited harvest opportunity for beaver." Mr. Barrette opposed them;

In a nutshell, from my study on these issues, I am opposed to pretty much all that I have read of Barrette's style of management..... It is no longer an option to continue killing for sport, and because it has always been done that way. We needn't continue the mistakes of the past. And the 6 year moratorium on accepting/discussing the Denali Wolf Buffer Zone? I would like this to be looked into regarding its legality.

Respectfully,
Mary W. LaFever
815 West 19th Ave
Anchorage, AK 99503
907 258-7002
maryla@alaska.com

PS. I need no paper or phone response, just that my voice be heard.

Subject: confirmation of Mr Barrette

Dear Bryce--

I am taking time out of our already hectic schedule of preparing for the upcoming fishing season to write you concerning Mr Barrette's confirmation to the Board of Game.

I am *strongly opposed to his confirmation* to the board. Although I am sure he is a responsible business owner and good citizen to his city I am VERY concerned that he is not open to all points of view when it comes to game management.

One of the strong components of our Alaska system of fish and game management is its boards. Although we routinely have people with stronger areas of experience and interest I do believe that they also try to stay open to opposites point of view.

I am not seeing this in the testimony, voting and comments Mr Barrette has exhibited from his interviews, and short time on the boards.

Although Alaskans many times feel that we can thumb our noses at outside forces and do not have to be concerned with others opinions this is not the case with our game and fish. "Outsiders" are our meat and potatoes in more ways than one in these 'industries'.

We can claim 'they don't understand' or they are 'greenies' and are opposed to all hunting but I do not believe that is the case in most instances.

I have seen a HUGE sense of understanding and openness on things like predator control after the terrible wolf killing in the Chigniks. However I do not see this same understanding to the Denali buffer zone opening or snaring of bears!

Mr Barrette has shown himself to be of one mind when it comes to predator control.... anything goes, despite the possible outcome except for hunters/trappers.

This coupled with some to the recent personnel changes to the Fish and Game Department truly leave me to wonder if our state is trying its darnest to become #1 on another list of negatives, mismanagement of its game.

Please decline to confirm Mr. Barrette. I have to believe Gov. Parnell can find someone who is more open to good management of our resources for ALL visitors and residents of Alaska.

Sincerely,
Victoria Briggs

To: Rep. Craig Johnson
Subject: Please do NOT support AL BARRETTE on Board of Game

Representative Johnson,

Please do not confirm Al Barrette's seat on Alaska's Board Of Game.

His radical viewpoints have been well documented. I'm especially incensed that he didn't excuse himself as a conflict of interest regarding the Denali Wolf Buffer zone. We need to have people on the BOG that address Alaska's non-comsumptive user's and support our fellow citizen's subsistence rights.

After just returning from Anaktuvuk Pass working for the U.S. Census, I overheard comments suggesting that caribou are not migrating through their areas in the numbers they used to. Although general comments, let's not take away Anaktuvuk Pass villager's caribou hunting by putting more pressure on the Central Arctic Herd, as proposed and supported by AL BARRETTE to increase caribou limit from 2-5 AND allow snowmachine use on the haul road corridor.

There are many other conflicts I see for putting this man on the board that have been documented by others.

VOTE NO!

Sincerely,
Katharine Swift
20 year Alaska resident

Subject: Barrette - Board of Game

Dear Representative Johnson:

In the next days you will be considering the confirmation of Al Barrette to the Alaska Board of Game. Please consider Mr. Barrette's consistent and deep-seated anti-nature stances at all levels, and vote against confirming one whose vision of the relationship between man and nature so adamantly works against Alaska's most profound qualities.

Mr. Barrette's unfortunate interpretation of scripture, as he explained it in an interview last year with Backpacker Magazine, has not only given him permission to destroy nature, but has given him a mandate to do so. While he has a right to his own interpretation, I believe it is imperative that this interpretation have no more than a single citizen's voice in weighing and deciding the compelling issues of Alaska's future as one of the few places still in touch with its natural systems and processes. From subsistence issues, to wildlife protection concerns, to tourism, to Alaska's place in the American and world psyche, Mr. Barrette represents the antithesis of what Alaska has the potential to offer. A vote to confirm a person so violently and consistently opposed to a balanced view would be a tragedy, in my opinion.

Thank you for your time.

RE: Board of Fisheries Appointments – Support for Webster and Kluberton

Dear Legislator:

The Governor's office recently made the announcement for the appointment of Vince Webster and Tom Kluberton to the Alaska Board of Fisheries.

Kenai River Sportfishing Association fully supports these two appointments to the Alaska Board of Fisheries.

Mr. Webster has displayed a willingness to work with all user groups, which is an essential component of effective leadership on the Board. He has done an excellent job as Board Chair this past year.

Mr. Kluberton has been actively involved in fisheries issues during the past six years, leading the Mat-Su Blue Ribbon Sportsmen Committee. He has an excellent working knowledge of fisheries issues in Cook Inlet and elsewhere in the state.

Both appointments are solid choices and we ask for your support in confirming each to the Board of Fisheries.

Respectfully,

Subject: Al Barrette confirmation hearing

Representative Johnson,

I strongly oppose the nomination of Al Barrette to the Board of Game. He has an economic conflict of interest in matters relating to predator control. Specifically, he owns a commercial tannery and a company that manufactures wolf traps.

Mr. Barrette's bias was very evident at the recent Board of Game meeting in Fairbanks, where, among other things, he voted to allow unprecedented baiting of brown bears and voted to revoke the Denali Wolf Buffer Zone. Many Alaskans, myself included, want more balanced representation on the Board of Game.

Respectfully,

Vic Walker, Juneau 4/5/10

Subject: Comemnts on Al Barrette / House Resources
Attachments: Al Barrette Overview.pdf

Hello House Resources Committee,

I strongly OPPOSE confirming Al Barrette to the Board of Game for the following reasons:

1. If appointed – there will be no representative on the board of game for the largest population region in Alaska – Southcentral.
2. He is not a moderate – his actions at the board of game meeting in Fairbanks in March were extreme.
3. He owns a business that profits from the harvest of wild game. While the BOG has no regulation against this it is not good policy for the legislature to support such an obvious conflict of interest.
4. Mr. Barrette voted on the Fairbanks AC prior to voting on the BOG – It appears he did not indicate all the votes he participate in on the AC which is a violation of the rules.
5. The BOG needs more diversity – desperately. I want to see a representative from the Tourism industry that is also a hunter.

Please see attached overview of Mr. Barrette's vote record at the March BOG meeting in Nome. He clearly is a radical individual. The BOG voted 1 – 6 against him 4 times – BEFORE he was even confirmed, a time when you would expect him to cautious. You can only imagine what lays ahead if confirmed.

Please be sure the BOG represents ALL Alaskan's as the legislature intended.

Committee members, can you please confirm receipt of this email?

Thank you for your consideration of my concerns,

Wade Willis
adventure@alaska.com

Overview:

1. Significant questions regarding his owning a tannery and his subsequent conflict of interest regarding liberalizing harvest regulations for furbearers and big game;
    a. He declared a conflict and did not vote due to having voted as a Fairbanks AC member on one proposal yet it appears he did not preclude himself on all the proposals the Fairbanks AC voted on;
    b. He also declared a conflict of interest regarding a trapping proposal stating he stood to profit from the regulation but did not declare the same conflict regarding the Denali Wolf Buffer Zone and other proposals liberalizing trapping and harvest regulations;
2. Clearly opposed rural subsistence priority for fish and game as a member of the BOG;
3. A very "liberal" Board of Game voted 1 – 6 against Mr. Barrette ***four*** times in his first sitting on the board;
4. Founding Principle appears to be: "Nature Cannot Run Wild"

"It specifically puts out in the first book of the bible, in Genesis, that we should subdue nature and control it. We should be the managers of the animals and through the sin of Adam and Eve is what brought it on"

– Al Barrette / January 2009 Interview / Backpacker Magazine

Record Opposing Rural and Native Subsistence:

1. **Aggressively lobbied to revoke the Kanuti Control Use Area designation near Bettles:** March 6 - Afternoon Session.
    a. There was no formal public announcement or public testimony regarding revoking the CUA;
    b. The Kanuti CUA was created to protect local subsistence moose harvest and is strongly supported by the local residents;;
    c. Division of Subsistence warned Barrette that prior to such an action the Board must address meeting subsistence needs in the region;
    d. No other member of the Board of Game supports Mr. Barrette's attempts;

2. **Voted to increase the harvest in the Central Alaska Caribou herd along the Haul road from 2 to 5 caribou;**
    a. While simultaneously supporting the opening the haul road controlled use area to snow machine access:

b. The village of Anaktuvuk Pass lies within the migration route of the Central Arctic Caribou herd;

"All those villages that are in that area are only on the outside migration of the Central Arctic Caribou herd. Not really one village relies on the Central Arctic Caribou herd – it only supplements their take … and here's an opportunity to allow more Alaskan's and non residents to have greater access or opportunity to harvest more caribou and maybe help relieve some of our problems in the Nelchina, Mulchatna, and the Fortymile Caribou. To take an additional few more caribou to make the cost justifications here" – **Al Barrette**

3. **Voted against an Amount Needed for Subsistence of only 2 - 4 sheep for interior Native villages in Game Management Unit 19:** March 2 – Proposal 82;
   a. The Board found a positive Customary and Traditional Use of sheep in this region but would not designate an Amount Necessary for Subsistence;
   b. The ADF&G supported an ANS of up to 10 sheep;

   "Their subsistence needs are being met by other things but they want to add sheep to it?" – **Al Barrette**

4. **Opposed a Customary and Traditional use finding for Native subsistence harvest of the Chisana Caribou herd, in particular the community of Northway:** March 4 – Proposal 18;
   a. The ADF&G Division of Subsistence provided strong evidence of traditional Native harvest. The Chisana herd will have no preference for subsistence harvest on State lands:

   "Of the eight criteria we get to pick from it defers to reliance and I could not find a definition in the codified for reliance so I have to depend on my own until I get a dictionary and I did not think it fit on relying on that resource." – **Al Barrette**

5. **Voted against finding a positive Customary and Traditional use of black bears for rural subsistence hunters** in two Game Management Units (GMU 20 & 12) despite the documented harvest of 78 black bears by rural village communities. These are the same GMU's where he supported allowing guides to have up to 10 bait station!: March 1 – Proposal 8;

6. **Voted to repeal important Native moose harvest traditions:** March 3 – Proposal 89
    a. In the Koyokuk Controlled Use Area the local Native community considers it disrespectful to waste the head of a moose. When the Koyokuk CUA was established the regional advisory councils formed a working group and developed a moose management plan that requested the heard of a moose be harvested in their area. AHTNA Native Corporation also requires the harvest of a moose head on their lands in the region.
    b. ***Al Barrette opposed not only this salvage requirement but voted to repeal ALL discretionary salvage requirements in the Koyokuk CUA;***

7. **Opposed setting a limit on beaver harvest in the Yukon Flats region.** March 2 – Proposal 95
    a. The Yukon Flats Citizen Advisory council requested a limit be set on beaver harvest. Local communities felt it was disrespectful to have an unlimited harvest opportunity for beaver. Mr. Barrette opposed them;

Record of Conflict of Interest / Disenfranchising Citizens:

1. **Conflict of Interest Declarations by Mr. Barrette Personally:**
    a. Proposal 2: Modify Trapping Season: He wrote the proposal:
    b. Proposal 3: 72 hour trap check requirement – Conflict due to potential profit: March 1;
    c. Proposal 14: Modify the Fortymile Caribou Hunt – ***states he voted on the proposal as a Fairbanks AC member.*** The Fairbanks AC Notes (AC 5) state that all the voting took place at one meeting. The Fairbanks AC submitted 11 pages of comments to the Board of Game: March 4
    d. Proposal 70: Authorize off road vehicle access to the Wood River Controlled Use area. Both the Board of Game and the Fairbanks AC (of which he was a member) opposed Proposal 70 that Mr. Barrette personally drafted and submitted to the Interior Board of Game meeting: March 5;

2. **Key vote to oppose and revoke the Denali Wolf Buffer Zone.** March 5 – Proposal 63;
    a. Mr. Barret stands to profit from the decision of liberalizing trapping harvest by owning the local tannery;
    b. Mr. Barrette likely voted on the proposal as a Fairbanks AC member which excludes him from voting on the proposal as a board member;

c. Mr. Barrette previously declared a conflict of interest regarding proposal 3 stating he stood to profit from a 72 hour trap check requirement. Why did he not use the same logic on this vote;

3. **Opposed restricting trapping in residential areas in the Healy area**
   a. Even though there was extensive public comment regarding pets being caught and killed in traps and even people being caught in traps;

4. **Supported a six year moratorium on accepting or discussing Denali Wolf Buffer proposals;**
   a. The Board is mandated by the legislature to address public concerns and this moratorium not only rebukes the legislatures intent upon establishing the board it also is quite likely illegal;

5. **Actively involved in lobbying for sponsorship and passage of HB 267 prior to being appointed to the Board of Game where he voted to approve of the bill.**
   a. This bill would allow snow machine use in the Dalton Highway Controlled Use Area – the same region Mr. Barrette voted to increase.
   a. Voted in favor of the BOG supporting HB 267. Al Barrette was tasked with drafting the letter of support. There was no public announcement regarding discussion of this bill, no public testimony, and the public never saw a copy of the letter nor has letter ever been posted to the BOG website;

   "I think more access in the area would certainly be advantageous to people that like to hunt caribou, bears and moose etc. I just hate to see another Denali Highway where it's just like a bunch of locust inundating the whole country up there. That is how we move forward on this earth." – Cliff Judkins / Testimony in support of the HB 267 / March 6

Record regarding Wolf and Bear Management:

1. **After voting in favor of revoking the Denali Wolf Buffer Zone Mr. Barrette petitioned the board to authorize using a snow machine to harvest wolves in the "old" buffer zone region (GMU 20C)** along the border of the park;
   a. Not one member of the board would support Mr. Barrette's proposal;

   "I just cringe at the thought of a snow machine running down the park boundary chasing wolves – it's almost beyond me. It might be something to do but I don't know if I could it." **- Cliff Judkin's Chairman of the BOG responding to Al Barrette**

2. **Voted to revoke the ADF&G's statewide bear management policy that guides the department's scientific management of Alaska's Bears** March 6 – Afternoon Session
   a. This policy prohibits the snaring of bears unless conducted under the authorization of predator control program. The Board did not agree with him.

3. **Voted in favor of removing brown bear tag fees in all interior GMU's.** Tag fees are an important source of revenue for the ADF&G: March 1;

4. **Voted to authorize the baiting of Brown Bears.** Every other member of the Board strongly opposed it: March 3 – Proposal 129;

5. ***Liberalize the baiting of black bears during the entire month of July.*** Amended a proposal to allow baiting in interior Alaska when residents / tourists and families are actively fishing, hiking and camping. Every BOG member opposed Mr. Barrett's radical amendment: March 1;

6. **Voted in favor of allowing commercial guides to register up to 10 bait stations.** The first time this has ever been authorized outside the boundaries of a predator control area. A significantly more liberal allowance than resident Alaskan's are given. Promoting preferential status for the guiding industry. This may be illegal under the State Constitution's equal access clause and what about his conflict of interest regarding profiting from tanning bear hides: March 1;

7. **Voted in favor of eliminating Black Bear sealing requirements in interior Alaska:** March 1 – Proposal 11;

8. **Opposed a National Park Service request to make it illegal for Non Native urban hunters to kill black bears, including sows and cubs, in their dens using high intensity lights in Denali National Preserve.**

9. **Approved of citizens using helicopters to support the killing of wolves in the Upper Yukon Tanana Predator Control Program** March 4 – UYTPCA Department Overview Testimony

Biblical References Regarding His Game Management Philosophy:

1. **Regarding cow caribou hunting in the Fortymile Caribou herd in the Upper Yukon Tanana Predator Control area:** March 4 – Fortymile Working Group Overview

   "Speaking of teaching and training the next generation of hunters that are coming up, you know, to bring the younger generation out to the field to make them shoot a bull, and to teach them to shoot a bull even though there is ample opportunity to harvest a cow... I think it relates right back to our moose cow harvest where we are having to teach, like my generation, and maybe the one prior to mine, that it is acceptable to harvest cows and female deer of the cloved and hooved species..." - Al Barrette

2. **In an interview for Backpacker Magazine in January 2009 Mr. Barrette quotes from Genesis:**

   http://www.backpacker.com/dogs_of_war_part_3_witness_a_wolf_skinning/videos/59

   "It specifically puts out in the first book of the bible, in Genesis, that we should subdue nature and control it. We should be the managers of the animals and through the sin of Adam and Eve is what brought it on"
   – Al Barrette

Subject: Vote "NO" on confirmation of Al Barrette to AK Board of Game

Dear Members of the House and Senate Resources Committees,

I am writing to urge you strongly to oppose the confirmation of Mr. Al Barrette to the Alaska Board of Game. My reasons are as follows:

Mr. Barrette has consistently supported policies that are pro-harvest - regardless of scientific data, regardless of strong public sentiment, and often in opposition to Alaska Native subsistence traditions. As a biologist by training, I believe that Mr. Barrette's views are incompatible with the goal of maintaining a balanced harvest management program which is geared to the benefit of all users, as well as allowing for the most balanced ecological outcome.

Mr. Barrette's support of the revocation of the Denali Wolf Buffer Zone is especially disturbing, and potentially very damaging to the State of Alaska. The wolf packs in the Denali area are pivotal to the tourist industry, and treasured by Alaskans alike. Opening a hunt in this previously protected area poses a danger of permanently decimating the population of wolves in the park. It is also a public relations disaster that the State of Alaska can ill-afford. I believe that managing our wildlife resources for the benefit of all - hunters,as well as tourists and state residents who appreciate nature is a far better investment in our resources than management that favors harvest users at any cost.

Mr. Barrette's apparent disregard for Native subsistence issues and traditions, as well as his liberal use of biblical references in defense of his positions, is insulting to so many residents of this state, and are unbecoming of a person of this very public position.

One of the most disturbing issues surrounding the appointment of Mr. Barrette is the clear and irrefutable conflict of interest that he has with regard to his ownership of a trapping and tanning business. I am a state employee who is beholden to abide by all the provisions of the Ethics Act. And I cannot imagine that anyone with this type of obvious conflict of interest would even aspire to serve on the Board of Game. Turning a blind eye to this type of bias in State appointments is exactly the type of misguided policy that has so angered the citizens of Alaska in recent years. I hope that you will do the right thing for your constituents and for the sake of the public resources of this state and vote "NO" on Mr. Barrette's appointment.

Thank you-
Barbara Hanson

To: Rep. Craig Johnson
Subject: Vote AGAINST the confirmation of Al Barrette

Dear Rep Johnson:

I urge you to please vote AGAINST the confirmation of Al Barrette to the Alaska Board of Game!

My reasons are:

Mr. Barrette owns Fairbanks Fur Tannery and manufacturers wolf traps. I do not trust that his decisions will be based on scientific management of AK's wildlife but expect his decisions to benefit his business and profits. This is fundamentally wrong, unprofessional and unethical.

He is an aerial gunner; he has no understanding or respect for hunting with fair chase.

In the 4-3 vote to entirely eliminate the Denali wolf buffer zone, Mr. Barrette voted to eliminate it when he should have recused himself for obvious conflict of interest – this being his direct financial interest in continued trapping of Denali Park wolves!

Mr. Barrette was rude and biased towards the public during oral testimony at the Board of Game meeting.

He displayed a lack of knowledge of basic wildlife management in his overall comments and questions.

Mr. Barrette lacks ethical integrity, and the knowledge and ability to uphold the Board of Game's regulatory authority.

Please do what you can to stop Mr. Barrette's confirmation, and urge the Governor to instead appoint a non-consumptive user to the Board. This will ensure that ALL Alaskans have a voice in the management of our wildlife. Also ask the Governor to override the Board of Game's vote because of conflict of interest, and allow establishment of the expanded Denali wolf buffer zone which the public wants.

Sincerely,

April Warwick

Subject:	Poor Judgment and Conflict of Interest in Appointment of Al Barrette to the Alaska Board of Game

Dear Members of the House Resources Committee:

Alaska Board of Game candidate Mr. Al Barrette should NOT be confirmed.

I have just watched a video interview (link below) in which Mr. Barrette expressed his philosophy on wildlife management by quoting from the Book of Genesis, and with all due respect to religion and the Bible, Alaska's wildlife needs to be managed based upon sound science, not according to the Book of Genesis. I have no confidence and neither should you that Mr. Barrette has the ability to exercise good judgment when making decisions about the management of Alaska's wildlife.

I also consider Mr. Barrett's appointment to the Board of Game a conflict of interest, since Mr. Barrette's business (Fairbanks Fur Tannery) could benefit through more liberalized trapping regulations.

Mr. Barrett's voting record (partial) at this last BOG meeting shows his disregard for science and his bias for profiting by being on the Board of Game.

Voted to revoke the ADF&G's statewide bear management policy that guides the department's scientific management of Alaska's Bears March 6 – Afternoon Session. This policy prohibits the snaring of bears unless conducted under the authorization of predator control program. The Board did not agree with him.

After voting in favor of revoking the Denali Wolf Buffer Zone, Mr. Barrette petitioned the board to authorize using a snow machine to harvest wolves in the "old" buffer zone region (GMU 20C) along the border of the park. Not one member of the board would support Mr. Barrette's proposal.

I am disappointed by Governor Parnell's decision to appoint Mr. Barrette. Mr. Barrette's appointment represents more of the same extremist trapping and hunting value systems on a board that is supposed to represent ALL Alaskans. There are currently no non-consumptive users on the BOG, despite the fact that most people in Alaska don't hunt. We need to have a Board of Game that more accurate reflects the wildlife values and positions of the majority of Alaskans.

Again, I ask you to OPPOSE the confirmation of Mr. Barrette to the Board of Game.

Thank you all for hard work in the Legislature and your consideration of the above.

Dave Bachrach

Alaska State Legislature

Please enter into the record my testimony to the House Resource

Committees on Confirmation Hearings dated April 5 2010

My Name Is Lee Dobbins and I Reside at 1500 Aurora Drive #2, Fairbanks, Alaska, tele: 907-456-7099. Senate District 'E'; House District '9'. I'm expressing MY Concern about the nomination of Al Barrette to the BOARD of GAME. In THIS, I'm Supporting 'DEFENDERS OF WILDLIFE''s Petition to BLOCK the Endorsement of This Man for the Reasons Outlined Below. I Find MOST Appalling, The BLATANT Disregard Of the 'Conflict Of Interest' Represented Here. It IS a Clear Case Of Putting the FOX, (Or In This Case Perhaps, The WEASEL.), In Charge of Administering the HEN HOUSE.

If Mr. Barrette Is Endorsed, My Next Letter Will Be to David Letterman. HE Might Be Able to Make Some Sense of It.

- Al Barrette doesn't have the background necessary to make objective wildlife management decisions in our state.
- Mr. Barrette recently voted to eliminate the buffer zone around Denali National Park, which has protected Denali's wolf packs from hunting and trapping since 2002. This reckless decision was opposed by the National Park Service and many concerned citizens, and makes no sense for Alaska's economy or wildlife.
- Mr. Barrette owns a fur tannery and a company that makes wolf traps. His livelihood presents a direct conflict of interest when it comes to making decisions about how to manage wolves and other wildlife.
- If Al Barrette is confirmed to the Board, the unjustified and unscientific management of Alaska's wolves and other wildlife will continue.

Sincerely,

Lee Dobbins

Subject: Please Do NOT Confirm Al Barrette to Board of Game

Dear Legislators,

I strongly oppose the confirmation of Al Barrette of Fairbanks to the Board of Game (BOG). He has proved by his actions at the last BOG meeting that he does not recognize conflict of interest when it stares him in the face; that he has "biblical" views of wildlife management that are extreme (by even current BOG standards), and that he has no empathy for the subsistence needs of rural residents, particularly in the face of heavy urban hunting pressures.

This was not a wise appointment, and his nomination should be rejected. Please do the right thing.

Thank you.

Subject: Conflict of Interest?

Representative Johnson,

I've been hearing a bit about the man proposed for the Board of Game. It sounds like there might be some conflicts of interest with this man - I guess he owns a tannery? Please make sure that we aren't violating any ethical standards with this appointment. Maybe you can get them to put off the vote until more investigation is done? Something isn't right with this...

Thank you.

Subject: Al Barrette Board of Game nomination

Dear Representatives:

I am writing to ask you to vote "no" at the confirmation hearing regarding Al Barrette's appointment to the Alaska Board of Game. Mr. Barrette's public statements indicate he is not qualified to sit on the Board, and that his views on hunting and trapping are not consistent with those of most Alaskans. His support of bear baiting for brown bears, and his opposition to any form of buffer protections for national park system wolves, together with other statements, show he would not represent the interests of non-consumptive users of wildli f e - which is what a substantial majority of Alaskans are. Please vote against Mr. Barrette's confirmation.

Subject: please do not confirm Al Barrette for Board of Game

Dear Representatives:

I ask that you vote **to not confirm** the appointment of Mr. Al Barrette for the Alaska Board of Game (BOG). The BOG already well-represents Mr. Barrette's trapping constituency without his participation, while with it's current make-up the BOG does not represent non-consumptive constituencies at all.

Alaska is indeed a fishing and hunting state, and those constituencies are well-represented on the respective boards. Alaska is also a wildlife tourism and viewing state, interests not represented at all on the current BOG. That is a true travesty. Alaska's wildlife resources are owned by all Alaskans, not just those 15% of our citizenry with hunting / trapping licenses. The other 85% deserve representation no the BOG, and this is your chance to stand up for that basic fundament of representative governance.
The seat to which Governor Parnell appointed Mr. Barrette should go to a non-consumptive representative, not another constituency already well-represented (over-represented) by the current BOG.

Further, Mr. Barrette was quoted in a magazine article as having a religious zeal for "subduing" nature and animals, directed by his religion. There can simply be no place for this sort of religious zeal in the science-based management of our collective wildlife resources.

Thus, I respectfully ask that you not confirm Mr. Barrette.

Rick Steiner, Professor (University of Alaska ret.)

Subject:

Al is an active outdoorsman who hunts, traps, fishes, and enjoys just being outdoors (even if it is only to take nothing but pictures).

Al has 22 years of participation in the regulatory process; F&G Advisory committee, submitting BOG proposals, getting legislation introduced.
Al has been the Chair of the Fairbanks AC Subcommittee on trapping right up to his appointment to the BOG.
Al prepares trapping Educational Materials and teaches young and old the art of trapping and conservation.
Al is not a retiree of any state or federal bureaucracy that is responsible for management of wildlife or habitat essential for sustained-yield management. (Which means Al will consider the perspective of users not just duplicate the mandate of managers, which is represented by agencies tasked with the duty of providing science based information to the board)
Al is not anti-Alaskan Native, he deals with Alaskan Natives in the fur business and his record on the Fairbanks AC and his votes on the BOG confirm that observation.

I can't say enough how important it will be to have a person on the Board of Game who has been involved in the trapping industry as an individual and not a bureaucrat.

Subject: Al Barrette - Board of Game confirmation comments

To all,

This is Mark Richards writing. Regarding thoughts below on Al Barrette's Board of Game confirmation, I am writing only speaking for myself here, and **not** as co-chair of Alaska Backcountry Hunters & Anglers.

I **oppose** Mr. Barrette's confirmation. I hope you will take the time to read the rationale for my opposition.

I attended the recent Board of Game (BOG) meeting in Fairbanks, which was Mr. Barrette's first appearance as a BOG member. And when I testified, I welcomed Al to the Board and said he had my support. And I meant what I said then, that as a fellow trapper myself going on thirty years now (and I'm still an active trapper), it was nice to have a fellow trapper on the Board to represent our knowledge and views.

But subsequently, as the meeting went on, I was continually disappointed in how Al conducted himself, and the types of comments he made publicly about everything from supporting bear trapping/snaring, to comments on the Denali wolf buffer zone issue. He was loud and abrasive overall, and disrespectful to those who did not share his own views. That kind of conduct and verbiage paints all trappers as neanderthal extremists who don't care about anyone else's views, and it is my opinion that he will do more harm to trapping, and trappers like myself, than good, when it comes to public perception and opinion, if he is confirmed to sit on the Board of Game.

Beyond that, I have strong concerns that Al's business (he runs a fur/hide tannery and makes and markets wolf traps) is such a large conflict of interest that it will cause him to recuse himself on too many proposals related to trapping or the selling of hides/furs. In reviewing the number of times he had to recuse himself from voting on issues related to trapping or the sale/tanning of hides and furs, I don't recall every seeing such a thing happen before with any BOG member being conflicted out so much on voting. And since Al will continue to run his business...well it just seems like too much of a conflict for any BOG member who, after all, was in part chosen for the Board to represent knowledge of trapping and the trapping industry. Al can't do that because he is going to have to continually recuse himself from voting on anything related to his business of selling/tanning furs and hides and marketing wolf traps.

And while I don't believe the legal challenge will hold up, from those disgruntled with the BOG decision to do away with the Denali Park wolf buffer zone, saying that the 4-3 vote isn't valid because Mr Barrette should have recused himself from voting...it just reinforces concerns about this continual conflict of interest that will come up because of Mr Barrette's business.

Thank you for your time, and your service.
Sincerely,
Mark Richards

Allen Barrette Confirmation to the Alaska's Board of game...Oppose

Jack Reakoff
114 Newhouse Street
Wiseman, Alaska 99790
(907) 678-2007
wisemanwolf@aol.com

Dear Alaska Legislative Senate and House Resource committee members,

I have been involved in Fish and wildlife advisory committee and Regional Advisory Council's work for over 20 years. I am currently the Co-chair of the Koyukuk Advisory Committee, and chair of the Western Interior RAC.
I will be commenting from my personal perspective regarding Allen Barrette's appointment to the Alaska Board of Game (BOG). I will state first off he is a nice enough guy and is industrious. That is not the question before the Legislative Resource Committees though, but whether he will uphold the legal mandates, and has the conservation ethic to perform the role as protector of sustained yield of our game, for Alaskans.

Mr. Barrette acted as a voting Board of Game member after March 1, 2010, in Fairbanks's Interior meeting. I attended the public comment portion of the meeting and commented on many proposals for both Advisory bodies. The members of our advisory bodies are leaders in their communities, many of them chiefs. We spent several days deliberating the proposals and making recommendations to the BOG. Mr. Barrette discounted local recommendations and at times ridiculed, on the record, concerns expressed. I listened on the Internet, so am aware of his actions during deliberating the BOG proposals. I had to return home to tend my wolf traps.

Mr. Barrette several times motioned to reduce the Amounts Necessary for Subsistence, or voted to suppress the ANS amounts. These amounts are used to give Alaskan's their priority uses, which are their constitutional right. If these amounts are reduced down ward the resource is then reallocated to non-residents. Mr. Barrette and other BOG members continually suppressing ANS because they think it is the hated subsistence priority. The reality is the Alaskans are being disenfranchised of their game resource.

Mr. Barrette voted to allocate to non-resident use or suppress resident use seasons on several occasions. This occurred for caribou season use for Chisana, 40 mile and Central Arctic herds, and Dall sheep seasons for resident hunters. Obviously Mr. Barrette does not think Alaskan's deserve the use of their game.

Mr. Barrette demonstrated a complete lack of conservation ethic by not questioning the ADF&G alternate proposal # 104A in GMIU 26B on the North Slope, allowing 5 caribou including cows with 3-week old neonate calves after July 1. He did not

question the fact that the public did not see the alternate proposal, regarding harvesting lactating cows. He voted to allow non-residents to kill five cow caribou that are skinny and nursing., leaving the calf to die.
This proposal was put forward as a caribou control strategy, yet the ADF&G's own data states the herd is very healthy. The Department has not done a range assessment and high productivity is a primary indicator of ungulate population health. If there would be a need to reduce the herd, there are thousands of Alaskans that would like to harvest caribou. If it were necessary, and it is not, to reduce the herd, killing cows in October after the calf is weaned and the cow is in good harvest condition would be the wisest use of OUR resource. If the public was not informed or allowed to comment on this new proposal, otherwise we would have been pointed out this was a bad idea, but we were not!

The Legislative Senate and House Resource Committees should **not** confirm Mr. Barrette. He has already done tremendous damage to the Alaskan's priority, sustained yield, and the valid perception, that the public's wishes are not being listened to. The current majority of the BOG has violated the public's confidence, acts with impunity while violating sustained yield biologic parameters, and the resident subsistence preference. Mr. Barrette did not recuse him self from voting on issues benefiting him self monetarily. Mr. Barrette **is** a compounding factor of a building problem with the BOG process. The cumulative affect to the resources and Alaskans is damage and loss. There are many qualified Alaskans that would do a much better job working to manage our wildlife for sustained yield, with preference among beneficial uses, and listen to make informed decisions.
Be it clear I have not applied for a BOG seat, or any one I know, my ONLY interest is heath of the resource and use by Alaskans.

Do **not** Confirm Allen Barrette to the Alaska Board of Game.

Subject: Concerning Confirmation of Al Barrette for Board of Game

Dear Representative Johnson:

I am very concerned about the appointment of Al Barrette to the Board of Game. Aspects which I consider problematic with his presence on the Board include:

~ He brings absolutely no diversity to the Board;

~ He has already indicated by his vote to remove all buffer zones from the NE corner of Denali Nat. Park he is willing to ignore a majority of Alaskan residents of the area (500+ signed a petition to have the zones expanded) in favor of 4 recreational trappers who wanted them removed;

~ He has a very obvious conflict of interest (perhaps illustrated by his vote in the above matter) whereby he manufactures a wolf trap and owns a fur tannery, both of which revenue sources are directly influenced by his votes on the Board;

~ He does not consider the science involved in wildlife management but rather takes a dogmatic view of the issues in keeping with his personal biases.

His appointment has disturbed many Alaskans as indicated by various letters-to-editors appearing in Alaskan newspapers and also by online comments at those newspapers' web sites.

I would urge you to please deny his confirmation. There are many Alaskans far better qualified than he to take a position on what has become an extremely biased board representing only a narrow segment of Alaskans rather than all Alaskans as the state constitution mandates.

Thank you,

Art Greenwalt

Subject: Boards of Game and Fisheries Confirmations

Please Confirm Al Barrette to the Board of Game. Mr. Barrette brings a perspective that has not been present on the BOG for many years. He brings the voice of a serious, experienced trapper and of hundreds more trappers through his tannery and trapping supply business. There may not be another individual in the state that has the opportunity to communicate with more trappers than Mr. Barrette. I was present at the Fairbanks BOG meeting where Mr. Barrette participated well and brought many points that would have ever been heard without his presence.

Please DO NOT confirm Janet Woods for the Board of Fisheries if her name is forwarded. Ms. Woods may have a great outlook and experience with fisheries but no one would know it because she has been absent from more than half of the BOF meeting since she was appointed. When she has been present she has refused to interact with the public. Ms. Woods has been, by far, the worst appointment to either board in the last ten years.

I spend about 1000 volunteer hours per year working on fish and wildlife issues and hundreds of hours per year at BOG and BOF meeting as the Chair of the Anchorage Fish and Game Advisory Committee and interact with every board member. These are not the official opinions of the Anchorage AC although the AC has supported Mr. Barrette and opposed Ms. Woods in previous letters.

Subject: Confirm Al Barrette's appointment to the Alaska BOG

Hello My Legislators and Fellow Alaskans,

I'm writing to express my support for Al Barrette in his recent appointment to the Alaska Board of Game (BOG). I would like to request that you confirm this/his appointment. Thanks.

David Akin

Subject:	Boards of Game and Fisheries Confirmations

Please Confirm Al Barrette to the Board of Game. Mr. Barrette brings a perspective that has not been present on the BOG for many years. He brings the voice of a serious, experienced trapper and of hundreds more trappers through his tannery and trapping supply business. There may not be another individual in the state that has the opportunity to communicate with more trappers than Mr. Barrette. I was present at the Fairbanks BOG meeting where Mr. Barrette participated well and brought many points that would have ever been heard without his presence.

Please DO NOT confirm Janet Woods for the Board of Fisheries if her name is forwarded. Ms. Woods may have a great outlook and experience with fisheries but no one would know it because she has been absent from more than half of the BOF meeting since she was appointed. When she has been present she has refused to interact with the public. Ms. Woods has been, by far, the worst appointment to either board in the last ten years.

I spend about 1000 volunteer hours per year working on fish and wildlife issues and hundreds of hours per year at BOG and BOF meeting as the Chair of the Anchorage Fish and Game Advisory Committee and interact with every board member. These are not the official opinions of the Anchorage AC although the AC has supported Mr. Barrette and opposed Ms. Woods in previous letters.

Subject: Al Barrette - BOG confirmation

To Whom It May Concern:

Please confirm Al Barrette for the Board of Game.

- Al is an active outdoorsman who hunts, traps, fishes, and enjoys just being outdoors (even if it is only to take nothing but pictures).
- Al has 22 years of participation in the regulatory process; F&G Advisory committee, submitting BOG proposals, getting legislation introduced.
- Al has been the Chair of the Fairbanks AC Subcommittee on trapping right up to his appointment to the BOG.
- Al prepares trapping Educational Materials and teaches young and old the art of trapping and conservation.
- Al is not a retiree of any state or federal bureaucracy that is responsible for management of wildlife or habitat essential for sustained-yield management. (Which means Al will consider the perspective of users not just duplicate the mandate of managers, which is represented by agencies tasked with the duty of providing science based information to the board)
- Al is not anti-Alaskan Native, he deals with Alaskan Natives in the fur business and his record on the Fairbanks AC and his votes on the BOG confirm that observation.

Please show us that our opinion matters.

Sincerely,

Paula & Robert Caywood

Subject: [SPAM] Al Barrette and Denali Buffer Zones

Dear Representatives,
I would like to express my concern over the most recent appointment to the Board of Game, Al Barrette and the newest ruling of the Board of Game to eliminate the buffer zones for wolf trapping around Denali National Park. I do not believe that this ruling is in the best interest of the state in regards to tourism and the health of the wolf packs. I believe that the most recent rulings are due to the Board of Game being heavily weighted towards hunters and trappers while ignoring scientific data. Please take a stand on this matter and help ones that cannot speak for themselves. Feel free to contact me via e-mail and I look forward to your reply.
Thank you for your time.

Subject: Board of Game

Representative Johnson:
As a long time Alaskan I am urging you to not confirm Al Barette as chair of the Alaska Board of Game. I've lived in Alaska more than 45 years, hunting, trapping and even homesteading. Our family has enjoyed much of what our Great State has to offer.

Mr. Barette obviously has a conflict of interest, owning tanning businesses, thus possibly giving him access to more raw hides. But I believe more importantly was his treatment of at least one person who testified for the expansion of the wolf buffer zone for the Denali National Park. Though I have only seen a video of the Fairbanks meeting of the Board of Game, his attitude toward those who don't share his beliefs on game use are not those of a leader.

Please consider another member for the position of chairman of the Alaska Board of Game.

Thank you.

Skip Dunn

HB

12

Good Afternoon Chairman Johnson and members of the House Finance committee

For the record, my name is Sue Ely and I am here on behalf of the Alaska Conservation Alliance, a coalition of 40 Alaskan conservation organizations with a combined membership of over 38,000 Alaskans. I would like to thank you for the opportunity to speak in support of HB12, establishing the Alaska Council on Invasive Species in the Department of Fish and Game.

Alaska is home to an amazing abundance of plant and animal life. Whether valued as charismatic Alaskan icons, or as the source of our continued economic and subsistence prosperity, Alaska's flora and fauna are vital to our economic well being Alaska way of life. However, these resources could be threatened by the spread of invasive species.

Already Alaska has suffered the effects of invasive Atlantic Salmon, pike and Reed Canary grass, to name a few. Plants, animals, fish and crustaceans, introduced into an environment devoid of their natural predators and limitations can irreversibly destroy an ecosystem and that destruction can translate into direct monetary, cultural and lifestyle impacts. Invasive species have cost lower 48 economies billions of

dollars in revenue. In order for Alaska to avoid a similar fate, it is prudent to address this issue now.

I believe the 14-member Council will provide the broad stakeholder cooperation and oversight needed to prevent new invasive species from taking root in Alaska and to mitigate the damage of invasives already introduced. At risk are Alaska's biological treasures; its harvested resources and subsistence plants and animals; the beauty and diversity that make Alaska a world-class tourist destination. It is our understanding and our hope that the least amount of the least toxic management tools would be used to control marine invasive species and that pesticides be used only as a last resort.

The Alaska Conservation Alliance would like to thank you for this opportunity to voice our support for HB 12 and encourage you to pass this bill out of the House Finance Committee.

Thank you Chairman Johnson and House Finance Committee members very much for all of your hard work and for giving me the chance to speak today.

This legislation establishes a statewide, all taxa Invasive Species Council in Alaska. Personal services are required to support two new positions, an Executive Director (Range 21, $96.9) and an Administrative Assistant III (Range 15, $67.8) to oversee and facilitate the actions and deliverables dictated by the bill, and to support a council of fourteen.

Travel, lodging, and per diem for an estimated 10 of 14 council members will be required for quarterly meetings ($12.4). Meeting rooms, audio/visual equipment, printing of the strategic plan, educational materials, and website support is estimated at $12.2, and supplies & computer equipment for staff and council meetings is $6.5.

HB 12 would create in the Alaska Department of Fish and Game a Council on Invasive Species as a venue for communicating, planning and coordinating efforts that address the threats posed to Alaska by invasive, non-native species (whether plants, animals, insects, etc.). The Commissioner of the Department of Health and Social Services (DHSS) or a designee would have a seat on the council. While HB12 would allow DHSS to discuss and respond to invasive species with a direct impact on human health, such as a mosquito new to Alaska, the bill is focused primarily on invasive impacts to fish and game. It is expected that DHSS would not play a primary role but would be available to provide relevant input as needed. There is no anticipated fiscal impact on DHSS.

EXECUTIVE SUMMARY

In recent years, a number of non-native animal species have been observed in Alaska, some of which have proven to be invasive. Since animal introductions to the state are still limited in distribution, and because protecting land not yet infested by non-natives is an efficient technique for the management of invasive species, we have the opportunity to preserve Alaska's immense natural resources with careful management of invasive animal threats. However, before management efforts towards invasive species can be successful, information must be gathered to identify which non-native animal species are present in the state, where they occur, and which species pose the greatest risk to native ecosystems. In an effort to provide managers with the most up-to-date information regarding invasive animal species in Alaska, we compiled a comprehensive list of non-native animals that have been documented in the state, and also developed a list of potential future invaders based on their occurrence in neighboring states and/or provinces. We collected published and unpublished information on a number of non-native animal species that are known to pose a high risk to native ecosystems, and summarized information on their biology, modes of dispersal, documented impacts, control options, and current and historic distribution.

A total of 116 non-native animal species (including fishes, amphibians, reptiles, birds, mammals, invertebrates, parasites and pathogens) were documented as present (either historically or currently) in the state, of which 20 were designated as highly invasive species. Status reports describing biology and invasive potential were developed for 14 of the highly invasive species and are included as an appendix to this report, along with maps of their known current distribution in the state. An additional 41 species were identified as potential invaders based on their rapid spread in western North America and on their ability to disperse over large distances. Ten of the 41 potential invaders were identified as being highly invasive, and status reports were developed for 3 of those species.

The development of the first comprehensive list of non-native animals in Alaska summarizes necessary and preliminary information about the current status of these animals in the state. Information contained within the individual species status reports and associated distribution maps may be used to interpret a species' ability to spread into particular regions, and could be used in future mapping efforts to calculate rates of dispersal as well as enable prediction of future range expansions. As global climate change continues to warm the landscape, Alaska may become more susceptible to harmful invaders and the information compiled within this report could be useful in predicting and preventing animal invasions.

INTRODUCTION

Invasive species are defined in federal law as species that are both non-native (alien) to a particular ecosystem and whose introduction causes or is likely to cause economic or environmental harm, or harm to human health (Executive Order 13112 1999). In recent years, a number of non-native animal species have been observed in Alaska, some of which have proven to be invasive. Invasive species threaten native ecosystem integrity and Alaska's valuable resources in fisheries, tourism, forestry, and agriculture by the alteration and loss of natural species biodiversity and ecosystem functions. Alaska's low population and relative geographic isolation have kept introductions of new invasive species comparatively low, but increased commercial traffic, development, and changes wrought by climate change all potentially increase the risk of new introductions to the state. Since many animal introductions to the state are still limited in distribution, and because protecting land not yet infested by non-natives is an efficient technique for the management of invasive species, we have the opportunity to preserve Alaska's valuable natural resources with careful management of invasive animal threats.

Before successful management efforts towards invasive species can be implemented, information must be gathered to identify which non-native animal species are present in the state, where they occur, and which species pose the greatest risk to native ecosystems. In an effort to provide managers with the most up-to-date information regarding invasive animal species in Alaska, we compiled a comprehensive list of non-native animals that have been documented in the state, and also developed a list of potential future invaders based on their occurrence in neighboring states and/or provinces. We collected published and unpublished information on a number of non-native animal species that pose a high risk to native ecosystems, and summarized information on their biology, modes of dispersal, documented impacts, control options, and current and historic distribution.

Specific project objectives were to:

(1) Conduct a comprehensive literature review and consult with area biologists to compile a draft list of non-native animal species previously documented in Alaska. Compile a list of potential invaders to include species that have been documented in neighboring states and provinces.

(2) Through literature review and expert consultation, identify which species are accidentals and unlikely invaders in Alaska and remove these species from the list, or identify them as such.

(3) Research and synthesize information on the biology, modes of dispersal, documented impacts, and control options of listed species to identify those capable of causing the greatest impacts.

METHODOLOGY

Objective 1: To develop a comprehensive list of non-native animal species in the state, we reviewed published and unpublished information available in peer-reviewed and gray literature, museum specimen collection databases, wildlife and invasive species program websites, news reports, and personal communications with Alaska biologists and invasive

species experts for fishes, amphibians, reptiles, birds, mammals, invertebrates, parasites and pathogens. Data were compiled into two lists: 1) a preliminary list of non-native animals documented in the state (either currently or historically) and 2) a list of invasive species that have been detected in adjacent states and provinces which have the potential to spread and establish in Alaska. For animals present in Alaska, we included information about the species' status (e.g., cryptogenic, reported but not yet confirmed in the state, documented but eradicated, native but translocated). Draft lists were reviewed by local biologists and invasive species experts, and updated throughout the process of literature review and information synthesis.

Objective 2: We refined the list of non-native animal species present in Alaska by identifying those species already recognized as invasive in existing literature, reports or by experts in the state. Based on evidence in the literature, we identified a number of non-native species known to pose a high risk to native biodiversity. These "high risk" species were selected for in-depth research into their biology, ecology and possible impacts to native systems. It would require a systematic ranking scheme in order to objectively identify the highest risk species. Unfortunately, a ranking exercise was beyond the scope of this project. Instead, we selected "high-risk" species based on their widespread recognition as invasive species in the literature.

Objective 3: For select "high-risk" animal species, we summarized available information relating to the taxonomy, reproduction, feeding, habitat needs, dispersal potential, current/historic distribution, documented impacts, and control options. Maps of species' Alaskan range and/or distribution were developed using ArcGIS software.

RESULTS

The final list of non-native animal species in Alaska included 116 species documented (either historically or currently) in the state (including amphibians [3], birds [16], fishes [14], invertebrates [42], mammals [35], parasites [1], pathogens [4], and reptiles [1]; see Appendix I). An additional 41 species were identified as potential invaders based on their proximity in adjacent states and provinces and on their ability to disperse over large distances (amphibians [1], birds [1], invertebrates [37], and pathogens [2]; see Appendix II). Of those found in the state, 21 were highlighted as "high-risk" for invasiveness. Of those not yet found in the state, 10 were highlighted as "high-risk" for invasiveness. Status reports were developed for 17 species (2 amphibians, 10 invertebrates, 2 fishes and 3 mammals) and are included as Appendix III in this report.

DISCUSSION AND FUTURE DIRECTION

The majority of species listed as non-native in Alaska are not considered invasive by the formal definition. An exploration of the factors contributing to a species' invasiveness, and a systematic effort to rank species according to objective criteria would be constructive and has yet to be conducted for animals in the state. The need to evaluate and rank non-native species is a prerequisite before expensive management is attempted, so that the most threatening species are addressed first. A ranking system can help set

3090

priorities for research and control efforts for invading bird, mammal, fish, invertebrate, and pathogenic species. Since many of the species on the Alaska non-native animal list have been documented during the last 20 years (this may be due to increased number of invasions or increased reporting and research on invasive species), there is a consensus in the invasive species community that a prioritization scheme is an important first step. Biological and ecological data summarized during this project will provide a valuable reference for future ranking efforts. These data also provide basic geographic information that could form the groundwork for development of a GIS database of non-native animal species distribution.

The development of the first comprehensive list of non-native animals in Alaska, presented here, summarizes necessary and preliminary information about the current status of these animals in the state. By making this information available to researchers and the general public, we hope it will be used to identify data gaps in our understanding and help direct targeted research. We also hope that it will serve to increase public awareness of the negative impacts of invasive species, which in turn, could help prevent their future spread. Questions that need to be addressed in the future include: Which species or groups of animals have the most invasive potential, and which have already caused the most damage to native ecosystems in the state? How can we target entire groups or dispersal pathways for prevention of non-native animal introductions? Where would financial resources prove most effective in the fight against invasions, and are there invasive populations that are already beyond our control? Information contained within the individual species status reports and associated distribution maps may be used to interpret an invasive species' ability to spread into particular regions, and could be used in future mapping efforts to calculate rates of dispersal as well as enable prediction of future range expansions (Riccardi et al. 2000). As global climate change continues to warm the landscape, Alaska may become more susceptible to harmful invaders (Union of Concerned Scientists 2005) and the information contained within this report could be useful in predicting and preventing animal invasions.

ACKNOWLEDGEMENTS

This project was generously funded by the Alaska Department of Fish and Game's Invasive Species Program. We would especially like to thank Tammy Davis, the Invasive Species Program Coordinator, for her guidance and enthusiasm throughout the duration of the project.

Many thanks to those who reviewed and contributed to the lists of non-native animal species of Alaska: Blythe Brown, Kodiak Soil and Water Conservation District; Paul Hennon, USDA Forest Service; Jeff Heys, National Park Service; James Kruse, USDA Forest Service; Denny Lassuy, US Fish and Wildlife Service; Whitney Rapp, National Park Service; Barbara Schrader, USDA Forest Service; and Rick Sinnott, Alaska Dept. of Fish and Game.

APPENDIX I

List of non-native animal species documented in Alaska

3093

Appendix 1, page 1. List of non-native animal species documented in Alaska. List includes amphibians, birds, invertebrates, mammals, pathogens and reptiles. List also include information on species status (when available), whether or not a status report was developed for that species, references, and an invasiveness rank as reported in the literature.

Taxon	Scientific Name	Common Name	Status	Status Report	Reference	Invasiveness Rank
Amphibians	*Pseudacris regilla*	Pacific chorus frog		X	Schrader and Hennon 2005, USGS 2007, MacDonald 2003, Hodge 2004	Low*
Amphibians	*Rana aurora*	Red-legged frog		X	Schrader and Hennon 2005	High*
Amphibians	*Taricha granulosa*	Roughskin newt	native but moved		USGS 2007	
Birds	*Strix varia*	Barred Owl			Rapp pers. comm.	
Birds	*Colinus virginianus*	Bobwhite Quail, Northern Bobwhite			Sinnott pers. comm.	
Birds	*Molothrus ater*	Brown-headed Cowbird			Armstrong 1995, USFWS 2007b	
Birds	*Alectoris chukar*	Chukar			Burris and McKnight 1973	
Birds	*Dendragapus obscurus*	Dusky Grouse, Blue Grouse	native but moved		Burris and McKnight 1973	
Birds	*Streptopelia decaocto*	Eurasian Collared Dove			Rapp pers. comm.	
Birds	*Carpodacus mexicanus*	House Finch			Armstrong 1995, USFWS 2007b	
Birds	*Passer domesticus*	House Sparrow			Armstrong 1995, USFWS 2007b	
Birds	*Lophura leucomelanos, others*	Other pheasants (Mongolian, Nepal, Brown-eared, Kalij, Reeves, Cheer)			Burris and McKnight 1973	
Birds	*Phasianus colchicus*	Ring-necked Pheasant			Burris and McKnight 1973	
Birds	*Columba livia*	Rock dove, rock pigeon			Schrader and Hennon 2005, GISD 2007, UCS 2005	Low*
Birds	*Bonasa umbellus*	Ruffed Grouse	native but moved		Sinnott pers. comm.	
Birds	*Falcipennis canadensis*	Spruce Grouse	native but moved		Burris and McKnight 1973	
Birds	*Sturnus vulgaris*	Starling			Schrader and Hennon 2005	Low*, High^

APPENDIX II

List of non-native animal species with the potential for invasion in Alaska

3101

Appendix II, page 1. List of non-native animal species that have been not documented in Alaska, but have the potential to enter the state. List includes amphibians, birds, invertebrates and pathogens. List also include information on species status (when available), whether or not a status report was developed for that species, references, and an invasiveness rank as reported in the literature.

Taxon	Scientific Name	Common Name	Status Report	Reference	Invasiveness Rank
Amphibians	*Rana catesbeiana*	American bullfrog		Secord et al 2005	High ^
Birds	*Carpodacus mexicanus*	House Finch			
Invertebrates	*Anoplophora glabripennis*	Asian longhorned beetle		Schrader and Hennon 2005, UCS 2005	Moderate*
Invertebrates	*Urosalpinx cinerea*	Atlantic oyster drill		Secord et al 2005	
Invertebrates	*Crepidula fornicata*	Atlantic slipper snail		Secord et al 2005	
Invertebrates	*Cliona sp.*	Boring sponge		USGS 2007	
Invertebrates	*Tetropium fuscum*	Brown spruce longhorn beetle		Schrader and Hennon 2005	High*
Invertebrates	*Bugula neritina*	Bryozoan		GISD 2007	
Invertebrates	*Eriocheir sinensis*	Chinese mitten crab	X	Fay 2002	High*, High^
Invertebrates	*Botryllus schlosseri*	Colonial sea squirt		Secord et al 2005	
Invertebrates	*Didemnum lahillei*	Colonial sea squirt		Secord et al 2005	
Invertebrates	*Ilyanassa obsoleta*	Eastern mudsnail		Secord et al 2005	
Invertebrates	*Teredo navalis*	European (naval) shipworm		Secord et al 2005	
Invertebrates	*Hemichroa crocera*	European alder sawfly		Schrader and Hennon 2005	Low*
Invertebrates	*Ips typographus*	European spruce beetle		Schrader and Hennon 2005	High*
Invertebrates	*Malacosoma disstria*	Forest tent caterpillar	X	Schrader and Hennon 2005	High*
Invertebrates	*Carcinus maenas*	Green crab, European green crab		Fay 2002, UCS 2005, Aquatic Nuisance Species Project 2007	High^
Invertebrates	*Adelges tsugae*	Hemlock woolly adelgid		Schrader and Hennon 2005	Moderate*
Invertebrates	*Diadumene lineata*	Japanese anemone		Secord et al 2005	
Invertebrates	*Musculista senhousia*	Japanese mussel		Secord et al 2005	
Invertebrates	*Ocinebrellus inornatus*	Japanese oyster drill		Secord et al 2005	
Invertebrates	*Coleophora laricella*	Larch casebearer		Schrader and Hennon 2005	Moderate*
Invertebrates	*Ips cembrae*	Larch engraver		Schrader and Hennon 2005	Moderate*
Invertebrates	*Venerupis philippinarum*	Manila clam		Secord et al 2005	
Invertebrates	*Mytilus galloprovincialis*	Mediterranean mussel		Secord et al 2005	

Appendix II, page 2. List of non-native species that have been not been positively identified in Alaska, but have been documented in adjacent states and provinces, and have the potential to invade.

Taxon	Scientific Name	Common Name	Status Report	Reference	Reported Invasiveness Rank
Invertebrates	*Batrillaria attramentaria*	Mudsnail		Secord et al 2005	
Invertebrates	*Potamopyrgus antipodarum*	New Zealand Mudsnail	X	Fay 2002, UCS 2005	High*
Invertebrates	*Lymantria monacha*	Nun moth		Schrader and Hennon 2005	High*
Invertebrates	*Alitta succinea*	Pile worm		GISD 2007	
Invertebrates	*Dendrolimus pini*	Pine moth		Schrader and Hennon 2005	High*
Invertebrates	*Nuttallia obscurata*	Purple varnish clam		Secord et al 2005	
Invertebrates	*Clathria prolifera*	Red beard sponge		Secord et al 2005	
Invertebrates	*Lymantria mathura*	Rosy gypsy moth		USFS 2007	
Invertebrates	*Botrylloides violaceus*	Sheath tunicate		USGS 2007	
Invertebrates	*Ciona savignyi*	Solitary sea squirt		Secord et al 2005	
Invertebrates	*Styela clava*	Solitary sea squirt		Secord et al 2005	
Invertebrates	*Bythotrephes cederstroemi*	Spiny water flea		Fay 2002, GLIN 2007	
Invertebrates	*Adelges abietis*	Woolly spruce aphid		Schrader and Hennon 2005	Moderate*
Invertebrates	*Dreissena polymorpha*	Zebra mussel		Fay 2002, UCS 2005	High^
Pathogens	*Chrysomyxa abietis*	Foliar spruce rust		Schrader and Hennon 2005	
Pathogens	*Bursaphelenchus xylophilus*	Pine wilt nematode		Schrader and Hennon 2005	Low*

HOUSE BILL NO. 12

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY REPRESENTATIVE JOHNSON

Introduced: 1/9/09
Referred: Prefiled

A BILL

FOR AN ACT ENTITLED

"An Act establishing the Alaska Council on Invasive Species in the Department of Fish and Game."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

LEGISLATIVE FINDINGS. The legislature finds that

(1) the land, water, plants, animals, and other natural resources in the state have the potential to be severely affected by the introduction of an increasing number of invasive species;

(2) invasive species harm native species, alter ecosystem processes, transport and cause disease, and otherwise threaten human health and the state's economy;

(3) governmental, public, and private entities need a cooperative means of communicating, planning, coordinating, and collaborating in the development of a statewide plan of action in addressing the threat posed by invasive species.

* **Sec. 2.** AS 03.22 is amended by adding new sections to read:

Article 2. Alaska Council on Invasive Species.

Sec. 03.22.100. Alaska Council on Invasive Species. The Alaska Council on Invasive Species is established in the Department of Fish and Game. The purpose of the council is to plan and coordinate efforts that address the threats posed to the state and its residents by invasive species. The council shall work to foster cooperation, communication, and coordinated approaches that support federal, state, local, and regional initiatives relating to the control of harmful invasive species.

Sec. 03.22.110. Council membership. (a) The council consists of 14 members as follows:

(1) the commissioner of fish and game or the commissioner's designee;

(2) the commissioner of natural resources or the commissioner's designee;

(3) the commissioner of environmental conservation or the commissioner's designee;

(4) the commissioner of transportation and public facilities or the commissioner's designee;

(5) the commissioner of health and social services or the commissioner's designee;

(6) a member of a soil and water conservation district established under AS 41.10.130 nominated by the soil and water conservation districts;

(7) a member of a conservation organization;

(8) a person engaged in commercial production agriculture;

(9) a person engaged in the commercial landscaping or horticultural nursery business;

(10) a representative of a commercial fishermen's organization;

(11) a representative of a commercial shipping organization;

(12) an employee of the University of Alaska involved in agricultural research, extension, or outreach;

(13) a representative of a Native corporation established under 43 U.S.C. 1601 et seq. (Alaska Native Claims Settlement Act); and

(14) a public member.

(b) Members of the council serving under (a)(1) - (5) of this section serve ex officio.

(c) Members of the council serving under (a)(6) - (14) of this section shall be appointed by the commissioner.

(d) The term of a member serving under (a)(6) - (14) of this section is three years. A member may be reappointed.

Sec. 03.22.120. Compensation. Members of the council who are not state employees serve without compensation.

Sec. 03.22.130. Council staff. The commissioner may employ clerical staff to assist the council.

Sec. 03.22.140. Council meetings. (a) The council shall meet at the call of the presiding officer at least once annually and at other times as necessary to conduct its business. In the absence of a call of the presiding officer, a majority of the membership of the council may call a meeting.

(b) A majority of the membership of the council constitutes a quorum for the transaction of business and is necessary for any action taken by the council.

Sec. 03.22.150. Officers of the council. The council shall elect a presiding officer from among its members. The council may elect other officers. A member may be reelected to serve additional terms as presiding officer or other officer.

Sec. 03.22.160. Annual report. The council shall submit an annual report of its activities to the governor and the presiding officer of each house of the legislature by December 15 each year. The report must include an evaluation of the council's activities in the preceding calendar year relating to the implementation of the strategic plan under AS 03.22.180 and identify the council's priorities for the next calendar year.

Sec. 03.22.170. Duties of the council. (a) The council shall

(1) in consultation with federal, state, local, public, and private entities, provide a coordinated approach that facilitates the development of a statewide policy that addresses the risks of existing invasive species in the state and the prevention of the introduction of additional invasive species;

(2) serve as a forum facilitating the communication, cooperation, and coordination of federal, state, local, public, and private entities for the identification and control of invasive species;

(3) request the assistance and participation of federal departments and agencies;

(4) review the existing funding provided to state agencies for the control of invasive species;

(5) develop and review a comprehensive strategic plan under AS 03.22.180 to control invasive species in the state based on resources and priorities identified by the council in consultation with federal, state, local, public, and private entities;

(6) monitor and evaluate the implementation and effectiveness of the strategic plan developed by the council; and

(7) provide an annual report under AS 03.22.160 to the governor and the presiding officer of each house of the legislature.

(b) The council may

(1) publish the results of the council's efforts and disseminate information related to the control of invasive species;

(2) develop or adapt relevant educational materials and programs;

(3) act in an advisory capacity in the development of policy concerning invasive species to agencies of the United States that manage federal land in the state, state land and water users, municipalities, agencies of the state, and public and private organizations;

(4) accept, on behalf of the state, contributions of services, materials, or money to assist in meeting the cost of carrying out AS 03.22.100 - 03.22.249; and

(5) solicit proposals, review applications, and advise the commissioner as to grants, loans, and expenditures for activities related to the control of invasive species.

Sec. 03.22.180. Triennial strategic plan. (a) The council shall create a comprehensive strategic plan for the control of invasive species that

(1) addresses federal, state, local, public, and private efforts in the state

relating to the control of invasive species, including recommendations pertaining to

(A) revision of state statutes and regulations;

(B) action by state departments and agencies;

(2) addresses coordination of federal, state, local, public, and private efforts in the state relating to the control of invasive species;

(3) prioritizes efforts to control invasive species in the state;

(4) includes standards for measuring the success of state departments and agencies in controlling invasive species;

(5) provides for the early identification of and rapid response to the introduction to the state of new invasive species;

(6) provides for the inventorying and monitoring of invasive species in the state; and

(7) identifies individual projects related to the control of invasive species that can be implemented during the period covered by the triennial strategic plan.

(b) In prioritizing efforts to control invasive species under (a)(3) of this section, the council shall annually select at least one project from the triennial strategic plan for action by entities coordinating with the council.

(c) The strategic plan shall be submitted to the governor and the presiding officer of each house of the legislature by September 15 triennially.

Sec. 03.22.190. Advisory and technical groups of the council. (a) The council may establish advisory and technical groups to aid and advise the council in the performance of its duties.

(b) The council shall invite and accept nominations for membership on the advisory groups and shall consider the nominations in making appointments to the groups.

(c) The council shall provide for public notice and an opportunity to comment before accepting a nomination for membership on an advisory or technical group under (b) of this section.

Sec. 03.22.200. Federal laws. All state control and education efforts under AS 03.22.100 - 03.22.249 shall be done in cooperation with federal laws and

initiatives relating to invasive species.

Sec. 03.22.210. Agency cooperation. Each state agency, as defined in AS 39.52.960, shall cooperate with the council in the fulfillment of the council's duties under AS 03.22.170 and use its best efforts to comply with the plan developed under AS 03.22.180(a).

Sec. 03.22.220. Joint operations. The council may exercise the duties imposed by AS 03.22.170 jointly with a person, political subdivision of the state, Native village or regional corporation, or an agency of the United States or Canada.

Sec. 03.22.249. Definitions. In AS 03.22.100 - 03.22.249,

(1) "commissioner" means the commissioner of fish and game;

(2) "control" means, as appropriate, eradicating, suppressing, reducing, or managing invasive species populations, preventing the spread of invasive species from areas where they are present, and taking steps such as restoration of native species and habitats to reduce the effects of invasive species and to prevent further invasions;

(3) "council" means the Alaska Council on Invasive Species;

(4) "introduction" means the intentional or unintentional escape, release, dissemination, or placement of a species into an ecosystem as a result of human activity;

(5) "invasive species" means a group of organisms, all of which have a high degree of physical and genetic similarity, generally intrabreed only among themselves, and show persistent differences from members of allied groups of organisms, whose introduction causes or is likely to cause economic harm, environmental harm, or harm to human health.

*** Sec. 3.** AS 03.22.100, 03.22.110, 03.22.120, 03.22.130, 03.22.140, 03.22.150, 03.22.160, 03.22.170, 03.22.180, 03.22.190, 03.22.200, 03.22.210, 03.22.220, and 03.22.249 are repealed December 31, 2020.

*** Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITIONAL PROVISIONS: ALASKA COUNCIL ON INVASIVE SPECIES; FIRST MEETING. Notwithstanding AS 03.22.140, added by sec. 2 of this Act, the first

meeting of the Alaska Council on Invasive Species shall be convened by the commissioner of fish and game, who shall also serve as the presiding officer of the council until it selects a presiding officer under AS 03.22.150, added by sec. 2 of this Act. At the first meeting, the members of the council shall address council voting methods, meeting schedules, procedures for removing a member, and the need for and use of possible advisory and technical groups.

*** Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: INITIAL TERMS OF MEMBERS APPOINTED TO THE ALASKA COUNCIL ON INVASIVE SPECIES. Notwithstanding AS 03.22.110(d), enacted by sec. 2 of this Act, the terms of the initially appointed members of the Alaska Council on Invasive Species, established in the Department of Fish and Game by AS 03.22.100, enacted by sec. 2 of this Act, shall be set by the commissioner of fish and game to achieve staggered terms in the manner provided by AS 39.05.055(7).

*** Sec. 6.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITIONAL PROVISIONS: STRATEGIC PLAN AND REPORTS OF THE ALASKA COUNCIL ON INVASIVE SPECIES; RELEASE OF PLAN AND FIRST REPORTS. (a) Notwithstanding AS 03.22.170(a)(5) and 03.22.180, added by sec. 2 of this Act, the initial strategic plan shall be completed by September 15, 2011.

(b) Before the release of the initial strategic plan, the report required under AS 03.22.160, added by sec. 2 of this Act, must include the council's recommendations pertaining to statutes and regulations that relate to the existence and form of the council.

MEMORANDUM January 15, 2009

SUBJECT: Sectional Summary of House Bill No. 12
(Work Order No. 26-LS0068/R)

TO: Representative Craig Johnson
Attn: Jeanne Ostnes

FROM: Alpheus Bullard
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Provides legislative findings relating to invasive species and the need for a cooperative means of developing a statewide plan that will address the threat posed by invasive species.

Section 2. Adds a new article to AS 03.22 (Alaska Council on Invasive Species).

Sec. 03.22.100. Establishes the Alaska Council on Invasive Species in the Department of Fish and Game.

Sec. 03.22.110. Addresses council membership and membership terms.

Sec. 03.22.120. Provides that the members of the council who are not state employees serve without compensation.

Sec. 03.22.130. Allows the Commissioner of Fish and Game to employ clerical staff to assist the council.

Sec. 03.22.140. Addresses council meetings.

Sec. 03.22.150. Provides that the council shall select a presiding officer and may, if it chooses, elect other officers.

Sec. 03.22.160. Requires the council to submit an annual report to the governor and the presiding officer of each house of the legislature by December 15 of each year. The report must detail the council's activities in the preceding calendar year and the council's priorities for the next calendar year.

Sec. 3.22.170. Establishes the duties of the council.

Sec. 03.22.180. Provides that the council will create a triennial plan for the control of invasive species. Requires the council to annually choose one project for action by entities coordinating with the council. The plan must be submitted to the governor and the presiding officer of each house of the legislature by September 15 triennially.

Sec. 03.22.190. Allows the council to establish advisory and technical groups. Requires the council to invite and accept nominations for memberships on the advisory and technical groups.

Sec. 03.22.200. Provides that invasive species control and education efforts initiated by the council will be undertaken in cooperation with federal laws and initiatives.

Sec. 03.22.210. Requires that all state agencies cooperate with the council.

Sec. 03.22.220. Provides that the council may exercise its duties with a person, other entity, or other governmental agency.

Sec. 03.22.249. Provides the Article's definitions.

Section 3. Repeals the provisions of the Act on December 31, 2020.

Section 4. Provides that the first meeting of the council will be convened by the Commissioner of Fish and Game and provides what shall be addressed at that meeting.

Section 5. Provides that the terms of the first appointed members of the council shall be set to achieve staggered terms.

Section 6. Requires that the annual reports from the council submitted before December 15, 2011 include the council's recommendations addressing statutes and regulations relating to the council, and requires the initial triennial strategic plan to be completed by September 15, 2011.

REPRESENTATIVE CRAIG JOHNSON
HOUSE DISTRICT 28

SPONSOR STATEMENT
HB 12 ESTABLISHING THE ALASKA COUNCIL ON INVASIVE SPECIES

HB 12 establishes the Alaska Council on Invasive Species. A 14 member board would be established in the Department of Fish and Game with four other departments included as ex-officio members; Department of Natural Resources, Department of Transportation & Public Facilities, Department of Environmental Conservation, and the Department of Health & Social Services. The Commissioner of Fish and Game would appoint the other 9 members.

Invasive species are a relentless problem. These harmful, non-native plants, animals and microorganisms impact our economy and environment. The overall economic impact of invasive species in the U.S. was estimated in the range of tens of billions of dollars per year in 2000. The potential economic harm that invasive species could cause in Alaska is difficult to estimate. However, if just a few invasive plant species that are of known concern were to become wide-spread, they alone could cost the State's economy tens of millions of dollars annually.

Alaska is in a unique position to avoid the enormous costs associated with the widespread introduction and establishment of invasive species. Early intervention in Alaska can prevent the deterioration of the state's resources.

Formation of a unified Council for invasive species management is an important step in coordinating existing resources within Alaska and for improving our capacity for effective collaboration well into the future. The Alaska Council on Invasive Species will conduct a coordinated and comprehensive effort to keep invasive species out of Alaska and to eliminate, reduce, or mitigate the impacts of invasive species already established in Alaska.

Prevention and timely management is important for controlling the detrimental impacts of invasive species. Early detection programs and rapid response plans can help to cost-effectively mobilize resources from participating agencies.

Coordination between the organizations and agencies in Alaska is vital to identify shared priorities and avoid duplication of efforts, to promote compatibility of the collected research data, and to enhance the education and outreach activities associated with invasive species.

The State of Alaska and its partners can more strongly support regulation and enforcement efforts to protect our vital natural and economic resources. The recent actions of the Department of Natural Resources and Department of Fish and Game toward regulating such invasive species as rats, freshwater fish (non-native pike), and detrimental plant species (purple loosestrife and orange hawkweed) are positive steps toward invasive species prevention.

Effective prevention is both economically and ecologically efficient, and often more practical, than eradicating species after introduction has already occurred. Improved monitoring, inspection, and enforcement along all pathways for invasion into Alaska are needed.

Assessment of Invasive Species in Alaska and its National Forests
August 30, 2005

Compiled by Barbara Schrader and Paul Hennon

Contributing Authors:
USFS Alaska Regional Office: Michael Goldstein, Wildlife Ecologist; Don Martin, Fisheries Ecologist; Barbara Schrader, Vegetation Ecologist
USFS Alaska Region, State and Private Forestry/Forest Health Protection: Paul Hennon, Pathologist; Ed Holsten, Entomologist (retired); Jim Kruse, Entomologist

Executive Summary
This document assesses the current status of invasive species in Alaska's ecosystems, with emphasis on the State's two national forests. Lists of invasive species were developed in several taxonomic groups including plants, terrestrial and aquatic organisms, tree pathogens and insects. Sixty-three plant species have been ranked according to their invasive characteristics. Spotted knapweed, Japanese knotweed, reed canarygrass, white sweetclover, ornamental jewelweed, Canada thistle, bird vetch, orange hawkweed, and garlic mustard were among the highest-ranked species. A number of non-native terrestrial fauna species have been introduced or transplanted in Alaska. At this time only rats are considered to be causing substantial ecological harm. The impacts of non-native slugs in estuaries are unknown, and concern exists about the expansion of introduced elk populations in southeast Alaska. Northern pike represents the most immediate concern among aquatic species, but several other species (Atlantic salmon, Chinese mitten crab, and New Zealand mudsnail) could invade Alaska in the future. No tree pathogen is currently damaging Alaska's native tree species but several fungal species from Europe and Asia could cause considerable damage if introduced. Four introduced insects are currently established and causing defoliation and tree mortality to spruce, birch, and larch. The results of this assessment will be used to develop a strategy to manage invasive species by applying the principles of prevention, early detection, control, and rehabilitation in cooperation with different agencies and partners throughout Alaska.

Introduction
Invasive species threaten the integrity and sustainability of the world's ecosystems at a time of fluctuating global climate regimes, increasing disturbance—both natural and human caused—and expanding human populations (Simberloff et al. 2005, Pimentel et al. 2000). Until recently, Alaskan ecosystems have remained relatively isolated from invasive species. The state's geographic location, harsh climatic conditions, vast wilderness areas, and sparse human population with limited road access and few transportation corridors have contributed to this protective isolation (Fay 2002, Union of Concerned Scientists 2003). Increased global and national concern regarding the impact of invasive species on ecosystems and biodiversity has propelled natural resource agencies, managers, and scientists to investigate the threats posed to Alaskan ecosystems.

3116

Species are considered invasive if they are not native to an ecosystem, and are likely to cause harm to human health, the economy, or the environment (Executive Order 13112 1999). Interagency working groups such as the statewide Alaska Committee for Noxious and Invasive Plant Management (CNIPM) are beginning to accumulate information on invasive species present or with potential to appear in Alaska. Compared to the contiguous United States and Canada, Alaska currently has fewer aggressive invasive species because of its largely remote landscape and harsh climate (National Agricultural Library 2005, Canadian Wildlife Federation 2003, Fay 2002). However, invasive species are expected to increase and expand in range as transportation networks expand, traffic and travelers increase throughout the Alaskan landscape, and other changes in disturbance patterns and climate occur.

Invasive species alter Alaskan ecosystems by displacing or preying on native species, contaminating gene pools by interbreeding with native species, and through widespread killing of native species, as seen with invasive insects in native forests. Invasive animals have been intentionally introduced for sport hunting or commercial endeavors such as furbearer farms. Invasive plants may originate from escaped ornamental plants, seeding after road construction projects, or as hitchhikers on equipment or gear. Some invasive plant species occur primarily in areas that have been heavily disturbed, such as road corridors. Others, such as nitrogen-fixing plants spread readily where there is any opportunity for them to germinate (such as in riparian areas). Invasive forest insects and pathogens are typically introduced via ornamental plants or forest products.

Scope and Approach

The purpose of this Invasive Species Assessment is to inform USDA Forest Service resource managers, land owners, and other interested people of the known and anticipated threats to Forest Service land from invasive species as identified in Executive Order 13112 (1999). In this assessment, we review all non-native freshwater and terrestrial organisms known to occur on lands managed by the Forest Service in Alaska. Invasive plants, forest pathogens, and forest insects that occur in other parts of the state are included because State and Private Forestry provide technical and financial assistance to address these threats on all forested lands. We also consider species that do not now occur in Alaska, but if introduced have the potential to cause damage. Lag effects may exist between the initial recording of a non-native species and its establishment and dispersal into surrounding ecosystems (Sakai et al. 2001, Alpert et al. 2000, Williamson 1996). These lag times are important to consider given the rapidly fluctuating climatic and disturbance regimes in Alaska.

We have compiled summary assessments for each taxonomic group, a conclusion section outlining priority species in each group, and a comprehensive table of common and scientific species names. We also identify whether each organism occurs in Alaska yet, and provide a relative ranking of invasiveness.

Invasive Plants

Alaska's vast and varied landscapes support plant communities in diverse environments ranging from coastal rainforests and wetlands, to boreal forests and tundra environments,

3117

and newly emerged land surfaces at the edges of retreating glaciers and lands rebounding from glacial melt. Invasive plants may have long-term effects on Alaska native plant communities by displacing and outcompeting native plants. Extreme temperature, moisture, and light gradients at northern latitudes regulate plant composition and diversity of native ecosystems. These factors also limit the establishment and spread of invasive plant species. It is unknown how shifting climatic patterns may affect plant community vulnerability to invasion, especially if combined with disturbance, either natural or human caused. Compared to the lower 48 states, Alaska has a low level of invasive plant colonization. However, as inventories for non-native species have increased, more invasive plants have been located. Spotted knapweed (*Centaurea biebersteinii* DC), one of the worst invaders in the interior West, has been found at five different locations in the state (Alaska Exotic Plant Information Clearinghouse 2005), and may be arriving in the state on vehicles and machinery.

More than 130 non-native plant species have been identified in Alaska (Alaska Exotic Plant Information Clearinghouse (AKEPIC) 2004). Many of these species are naturalized, and others will remain contained to suburban yards or locally disturbed sites. Currently, 63 more common non-native plants have been ranked for invasiveness in Alaska on a 0-100 scale (Alaska Weed Ranking Program (http://akweeds.uaa.alaska.edu/akweeds_ranking_page.htm)), with resulting values falling between 34 and 89 (as of April 2005). Of these 63 species, 29 have an invasive ranking of 60 or greater, indicating a significant threat for invasion (Table 1). This list is still being compiled and is expected to contain nearly 100 species upon completion[1]. A number of species ranked in this project have not yet been found in Alaska but are likely to arrive soon. The ranked species range from known destructive species such as Japanese knotweed (*Polygonum cuspidatum Sieb & Zucc.*) and reed canarygrass (*Phalaris arundicacea* L.) to the common and benign pineapple weed (*Matricaria discoidea DC*).

Alaska currently has two statewide programs in place to track and rank invasive plant species in Alaska: the Alaska Exotic Plant Information Clearinghouse (2005) database and the Weed Ranking Program. The Weed Ranking Program was initiated and funded by the USDA Forest Service, Forest Health Protection Program to better assess what species will be most problematic within Alaskan ecosystems. Both of these programs are coordinated by the Alaska Natural Heritage Program and are collaborative efforts with the USDA Forest Service, Forest Health Protection Program, National Park Service, USDA Agricultural Research Service, University of Alaska Anchorage, University of Alaska Fairbanks Cooperative Extension Service, and US Geological Survey.

In ranking the invasiveness of a particular species within the framework of the Weed Ranking Project, the invasive characteristics of plants are evaluated according to their potential and actual occurrence in Alaska within three broad climatic zones: South Coastal, Interior-Boreal, and Arctic-Alpine. The ecological impact of a species on ecosystem processes is also factored into the invasiveness score. This is measured by the

[1] Shephard, Michael. 2005. Personal Communication. Ecologist, USDA Forest Service, State and Private Forestry, Suite 202, 2201 'C' Street, Anchorage, AK 99503

ability of a species to alter plant community composition and structure, its reproduction and dispersal capabilities (both natural and disturbance-enhanced), impacts higher on the food chain, and occurrence in wetland or riparian habitats. Other considerations in the invasiveness ranking include assessing global distribution, known impacts in natural areas, and feasibility of control and management.

Highly invasive plants compete effectively for resources and generally have aggressive reproductive mechanisms. On a positive note, many of these species also have rather limited dispersal capabilities, thereby increasing the chance of successful control in small populations. All of these highly invasive plants are easily spread by human activities. These species may produce many seeds or possess aggressive sprouting characteristics. In some species, any part of the plant is capable of reproducing, not just the seeds, roots and stems. Many highly invasive plants in Alaska frequently form dense thickets of vegetation and have seeds that can remain viable in soil for more than 3 years. Many of our invasive plants establish with or without ground disturbance, constituting an increased threat to native plant communities once they are introduced. Additional characteristics of highly ranked invasive plants in Alaska include recent or historical presence on three or more continents (frequently with successful invasion occurring in arctic/subarctic environments), classification as a noxious weed in most of the lower 48 states or Canada, and once established, generally requiring major long-term investment to control.

Statewide, the highest ranking invasive plant species include spotted knapweed (*Centaurea biebersteinii* DC), Japanese knotweed (*Polygonum cuspidatum* Sieb & Zucc.), reed canarygrass (*Phalaris arundicacea* L.), white sweetclover (*Melilotus alba* Medikus), ornamental jewelweed (*Impatiens glandulifera* Royle), cheatgrass (*Bromus tectorum* L.), Himalayan blackberry (*Rubus discolor* Wiehe & Nees), Canada thistle (*Cirsium arvensis* L. Scop.), bird vetch (*Vicia cracca* L.), orange hawkweed (*Hieracium aurantiacum* L.), garlic mustard (*Alliara petiolata* (Bieb.) Cavara & Grande), false brome (*Brachypodium sylvaticum*. (Huds.) Beauv), and Scotch broom (*Cytisus scoparius* (L.) Link). High ranking species not yet occurring in Alaska include: Eurasian milfoil (*Myriophyllum spicatum* L.), Atlantic cordgrass (*Spartina alternifolia* Loisel.), and giant hogweed (*Heracleum mantegazzianum* Sommier & Levier) (Table 1). Because of the large number of invasive plants, readers are referred to the comprehensive Weed Ranking Project website (http://akweeds.uaa.alaska.edu/akweeds_ranking_page.htm) for detailed information about each species.

Eradication of invasive plants is an important activity in any Invasive Species Program, and must be linked with native plant restoration and effectiveness monitoring programs. Decisions to undertake treatment are based on several factors including a landscape analysis of sensitive habitats, site vulnerability, modes of spreading, and traits of individual species including reproductive mechanisms and dispersal capabilities. Certain species with a lower invasive ranking overall may be a higher priority for treatment and control over a more highly ranked species, based on a specific threat. For example, treatments to prevent Canada thistle from entering a wetland or garlic mustard from overtaking a subsistence berry patch would likely be higher priorities than eradicating

knotweed restricted to the roadside, even though knotweed is considered a more aggressive invasive species. Likewise a species that is ranked relatively low may be important to eradicate if it is a small, incipient population that only occurs at a few sites across the state. Individual site evaluations will be needed to determine appropriateness and priority of treatments.

Increasing awareness of invasive plants within urban/rural gardening communities is an important prevention activity. Common mullein (*Verbascum thapsus*) scored 53 in the Weed Ranking Project and is unfortunately being tried as an ornamental planting by gardeners in south-central Alaska. By adding this species to its "Do Not Plant" list, the Cooperative Extension Service is attempting to eradicate small populations of this plant before it naturalizes[2].

Although invasive plant populations in Alaska are currently small, in time these populations can be expected to expand and may compromise natural ecosystems and habitats (Williamson 1996). By acting now with comprehensive inventories and eradication, monitoring, and prevention strategies, the threat from invasive plants may be manageable. It is important to recognize, however, that no other state or Canadian province has been successful in limiting the spread of invasive plants to date. Results of current invasive plant surveys conducted in Alaska suggest highest invasive plant occurrences in areas of local disturbance, including industrial, commercial, and residential sites, highways and roads, campgrounds, trailheads, and other recreational areas (DeVelice 2003, Duffy 2003, Lapina and Carlson. 2005). The Alaska Committee for Noxious Invasive Plant Management (CNIPM) formed recently as a statewide network to deal with invasive plant issues, and is an important resource for individuals and organizations interested in managing invasive plants (Alaska Committee for Noxious and Invasive Plants Management 2004). Local collaborative efforts to target species of concern must be developed to make decisions on eradication, as the nature of threat will be different across the range of environmental and site conditions. Target species in the interior of Alaska may be different than in coastal areas because of climate variation, number of roads, and wetland and wilderness habitats that may facilitate or limit spread of invasive plants.

Preventing the spread of invasive plants requires the cooperation of community members and organizations to provide a unifying focus for various land management activities. Cities and boroughs, environmental groups, and others must work collaboratively with land management agencies to prevent invasive plants from spreading within local communities and across the Alaskan landscape.

Invasive (and Non-native) Terrestrial Animals

Although non-native terrestrial animal species are found in Alaska, few are considered invasive or threatening to ecosystem health and integrity. In this assessment we identify terrestrial animals that have been introduced to coastal habitats in Alaska, even if they are not considered to be invasive at this time. Rats and other rodents, raccoons, hares,

[2] Shephard, Michael. 2005. Personal Communication. Ecologist, USDA Forest Service, State and Private Forestry, Suite 202, 2201 'C' Street, Anchorage, AK 99503

pigeons, starlings and slugs have been introduced to southeast and south-central Alaska and occur on National Forest lands. Some species were transplanted in various Alaskan locations to establish additional hunting or trapping opportunities. Elk were introduced to Afognak Island and southeast Alaska, and marten and red squirrels were transplanted into new habitats in southeast Alaska. Other introduced species include foxes, rabbits, muskox and bison; however, none of these species occupy habitats on National Forest lands.

Concentrations of Norway rats (*Rattus norvegicus* Berkenhout) occur throughout Alaska, in areas of human settlement or on coastal islands with abundant food resources. Rats likely became established along Alaska coastal islands following shipwrecks of early European explorers. Seaports continue as points of entry today (Jarrell et al. 2001). Ground-nesting birds can be negatively affected when rats colonize islands, as observed in the Aleutian and Queen Charlotte Islands (Murie 1959). This has resulted in a rat-trapping program in the Alaska Maritime Refuge System and in the Aleutian and Pribilof Islands. It is unknown what impacts rats may be having on nesting shorebirds of forested islands and other habitats in coastal Alaska. Small rodents, in particular the house mouse (*Mus musculus* Linnaeus), are likely to occur in close proximity to human habitation. House mice are commensally adapted with people, and although they are present throughout the state, exact local distributions are unknown (National Wildlife Federation 2003). There is no evidence of serious harm caused by mice.

Raccoons (*Procyon lotor* Linnaeus) were first introduced in the mid-1930s on Long Island near Kodiak and on Baranof and Prince of Wales Islands (Jarrell et al. 2001). Later introductions occurred in southeast Alaska, but with limited survival of individuals. The current population distribution of raccoons in Alaska is very small and not considered a threat to coastal Alaskan ecosystems.

Snowshoe hares (*Lepus americanus* Erxleben) were transplanted to Juneau and Douglas Island in 1924, as well as to Kodiak Island and several Aleutian Islands (Davis 1979). Generally, introductions of hares and rabbits to the wet, forested islands of southeast Alaska have been unsuccessful, with hares persisting elsewhere in low numbers. Any detrimental impact is considered to be low.

Rock doves or pigeons (*Columba livia*) and starlings (*Sturnus vulgaris*) are both well established in the cities and boroughs of Alaska north to Fairbanks (Kessel 1979, Gibson and Andres 2002). These birds are often considered pests by humans, but may not pose threats to wildlife species in Alaska. Although starlings are known as competitors to other cavity-nesting birds, the extent of their impact in Alaska in unknown.

Garden slugs (*Arion* sp.) have been found in clusters in small towns and boroughs in Alaska, most notably Anchorage, Cordova, and Yakutat. The European black slug (*Arion ater*) and leopard slug (*Limax maximus*), the most common species in Alaska, were most likely imported on horticultural materials. People in Anchorage and Cordova have raised concerns about slugs invading home gardens. It is assumed that slugs are able to overwinter in Cordova and Yakutat, and there is some concern that slugs may

move from towns into adjacent wetland habitats. It is unknown if non-native slugs are invasive or pose a threat to native vegetation or communities (Wittwer 2005),

Elk (*Cervus elaphus* Linnaeus) are not native to Alaska but were historically introduced to develop sport-hunting opportunities in south-central and southeast Alaska. Although elk are not traditionally considered an invasive species, questions exist about the effects of their population expansion. As early as 1929 elk were successfully transplanted to Afognak Islands (Van Daele and Crye 2004), but early attempts at transplants were unsuccessful in southeast Alaska. In 1987 elk were successfully established on Etolin Island in southeast Alaska (Lowell 2004). The established population on Afognak still persists, as does the population on Etolin and Zarembo Islands in southeast Alaska. Sightings have been reported for five other islands in southeast Alaska including Wrangell, Mitkof, Kupreanof, Prince of Wales and Farm islands (USDA Forest Service 2005). There are concerns that increasing elk densities will result in increased competition with native Sitka black-tailed deer (*Odocoileus hemionus* Rafinesque), an important subsistence and sport-hunting species. There is wide overlap in the habitat and diets of these two species and increases in elk population densities may lead to declines in deer densities where the two species occur together (Lowell 2004).

Range extensions of native species have been encouraged by transplants of individual animals from one area into unoccupied suitable habitats. These transplants are generally viewed as beneficial to improve hunting and trapping opportunities, but the transplanted animals may also be considered non-native to that particular system. Sitka black-tailed deer have been introduced to Prince William Sound, Yakutat, and Kodiak/Afognak Islands (Alaska Department of Fish and Game 2003). American marten (*Martes Americana* Turton) and red squirrels (*Tamiasciurus hudsonicus* Erxleben) were released in southeast Alaska to support expanding furbearer populations. Red squirrels were released on Baranof, Chichagof, and Admiralty Islands in the 1930s to supplement the diet of marten, and are not considered invasive (USDA Forest Service undated). American marten were released on Prince of Wales and Baranof Islands in 1934 and to Chichagof Island in 1949. Marten are well-established on these islands and now exist on adjacent islands. There has been recent recognition of two species of pine marten (*Martes americana* and *Martes caurina*), the latter being native to southeast Alaska (MacDonald and Cook 2000). It is unknown whether populations of *M. americana* have different life history strategies than *M. caurina*, although populations of both species may be found in places such as Admiralty Island. It has been suggested that divergence in life history traits may be reflected in different responses to forest management in southeast Alaska.[3] [4]

The European rabbit (*Oryctolagus cuniculus* Linnaeus) occurs on several islands in Alaska (Burris and McKnight 1973). Harvestable populations of European rabbits have

[3] Cook, J. 2005. Personal Communication. Professor, Department of Biological Sciences, Idaho State University, Pocatello, Idaho.

[4] Smith, W. 2005. Personal Communication. Research Wildlife Ecologist, USDA Forest Service, Forestry Sciences Lab, Juneau, Alaska 99801

evolved from unknown numbers introduced in the Aleutian Archipelago on Umnak Island in 1930 and on Rabbit Island in 1940. The time of the release on Hog Island (near Amuknak Island) is unknown. One male and three female rabbits placed on Middleton Island in the Gulf of Alaska in 1954 (O'Farrell 1965) produced a population of between 3,600 and 7,000 by 1961. These rabbits are primarily vegetarians; although there may be negative effects to native vegetation, there may be benefit to avian predators such as eagles.

The threats from invasive animals in Alaska at this point in time are very low, with a few exceptions. Rats are detrimental in coastal ecosystems because they prey on bird nests and impact breeding bird colonies; yet, little is known of rat distribution across coastal forests of Alaska. Other species of interest include non-native slugs and any effects they may be having on native vegetation in estuaries and marshes. It is unknown if these slugs escape the borders of towns such as Yakutat and Cordova, and move into sensitive environments. While elk are not considered an invasive species generally, population numbers of this introduced species are increasing in southeast Alaska. Negative effects are expected for local deer populations, and management plans will need to consider these factors. Because the Alaska Department of Fish and Game has primary responsibility for wildlife in Alaska, any considerations of invasive wildlife management must be coordinated through the Department.

Invasive Aquatic Organisms

Aquatic ecosystems in Alaska are some of the most pristine environments in the world. These high-quality habitats support important subsistence fish harvests, world class sport and commercial fishing opportunities, and a variety of outstanding recreational activities. Maintaining these high-quality environments in Alaska is a priority for all land management agencies. Aquatic habitats may be the most vulnerable to invasion by non-native species because of inherent transport capabilities of flowing water.

A number of non-native fish have been introduced into Alaskan waters over time. Fish species diversity is quite low in Alaska compared to other high-latitude regions of the world, due to physical barriers and geologic history. This has led to illegal introduction of fish from other high-latitude environments in order to establish new fishing opportunities. Because of the wide seasonal ranges in temperature, many of these introduced northern species are extremely hardy and adaptable. These introductions, along with inadvertent transplants of non-sport organisms, pose a serious threat to aquatic ecosystems in Alaska.

Eleven aquatic species are included in this assessment. Six species have already established breeding populations in National Forest lands and other areas in Alaska and include northern pike (*Esox lucius* Linnaeus), yellow perch (*Perca flavescens*), red-legged frog (*Rana aurora*), Pacific chorus frog (*Pseudacris regilla*), rainbow trout (*Oncorhynchus mykiss* Walbaum), and brook trout (*Salvelinus fontinalis*). The other five species are not established in Alaska yet, but cause widespread problems in the lower 48 states and could become problematic in Alaska. These species of concern are the Atlantic salmon (*Salmo salar*), Chinese mitten crab (*Eriocheir sinesis*), New Zealand

mudsnail (*Potamopyrgus antipodarum* Gray), goldfish (*Carassius auratus*), and the signal crayfish (*Pacifacstacus leniusculus*).

The northern pike was identified as the species of greatest immediate concern in the Alaska Aquatic Nuisance Species Management Plan (Fay 2002). The pike is native (endemic) to interior Alaska but not to Cook Inlet drainages, to Prince William Sound drainages, or, with the exception of one isolated population, to southeast Alaska (Fay 2002). Introduced populations of pike have become established throughout the Susitna River drainage, parts of the Kenai system, and a series of small ponds in Yakutat. These introduced populations have proven to be able to spread quickly and virtually eliminate other species in some habitats (Fay 2002). Pike may have a significant effect on salmon production in these systems. Once the introduced population spreads into a complex habitat of interconnected bodies of water, it is likely impossible to control or eliminate. The introduced population in Yakutat may still be contained within the small pond system. If this is so, it could be eliminated before it spreads throughout the Yakutat forelands.

The other five species that have known established populations are the yellow perch, red-legged frog, Pacific chorus frog, rainbow trout, and brook trout. The yellow perch was likely established in a small lake on the Kenai Peninsula by a person wishing to establish a new sport fishery (Fay 2002). This population is thought to have been removed with the use of pesticides.

Introduced non-native frogs have the potential to displace native amphibians from local ecosystems. The red-legged frog, native to the Pacific Northwest, has established populations on Chichagof Island throughout the Pavlov Bay drainage (MacDonald 2003). It is thought they were released there by a schoolteacher at the Freshwater Bay logging camp in 1982 or 1983. Frogs seen elsewhere on the island, near Freshwater Bay and possibly Hoonah, may be this species (MacDonald 2003). Recent surveys suggest range expansion of this species, and the red-legged frog is now found in several drainages along the west coast of Chichagof Island. Its impact to local ecosystems is unknown. At a minimum, the red-legged frog may displace endemic boreal toads (*Bufo boreas*) and/or wood frogs (*Rana sylvatica*). The red-legged frog's ability to persist and spread across drainages may represent a significant threat to local amphibian populations.
The introduced Pacific chorus frog has an established breeding population in a single pond complex on Revilla Island near Ward Lake. This population is thought to have been established in the 1960s (MacDonald 2003). Because boreal toads and rough-skinned newts (*Taricha granulose* Skilton) have successfully reproduced within the same pond complex in recent years, we may conclude that the population of chorus frogs is having little impact on native amphibians. However, this situation may change over time.

Rainbow trout and brook trout were stocked throughout southeast and south-central Alaska through the early 1900s (Fay 2002). The transplanted rainbow trout were from endemic stocks as well as from populations in the lower 48 states. The brook trout were brought up from the lower 48 and introduced to provide new sport fishing opportunities. Accurate records of these original introductions generally do not exist, and most did not

result in self-sustaining populations. The few successful introductions, however, have resulted in a number of healthy rainbow and brook trout populations scattered throughout the Tongass and Chugach National Forests. There is little concern about negative impacts, however, because endemic rainbow populations occur throughout both forests and negative impacts have not been recorded in species that share habitat with the introduced rainbow trout. Introduced brook trout are another story. Generally, where brook trout have become established, endemic Dolly Varden (*Salvelinus malma* Walbaum) are not found. The brook trout may have eliminated the endemic Dolly Varden populations, or it is possible Dolly Varden did not initially exist in these systems. Introduced brook trout populations have been a major contributing factor to the significant declines in bull trout (*Salvelinus confluentus* Suckley) populations in the Pacific Northwest (Rieman et al. 1977).

Since the 1970s, Atlantic salmon that escaped from salmon farming operations in British Columbia have had access to Alaska's coastal waters and fresh water streams. They appear in the commercial saltwater catch and occasionally in fresh water (Alaska Department of Fish and Game 2002). Reproduction has not been observed in Alaska; however, reproduction has taken place in British Columbia streams (Alaska Department of Fish and Game 2002, Volpe et al. 2000). There are concerns that established populations of Atlantic salmon could have significant negative impacts on the local salmon and trout populations and related industries. Control or elimination of established Atlantic salmon populations may be possible depending on the size and complexity of the watersheds involved. Alaska Department of Fish and Game has extensive information regarding Atlantic salmon at the following website: http://www.adfg.state.ak.us/special/as/as_home.php.

Chinese mitten crab, the New Zealand mudsnail, and goldfish are exotics that have become established in the Pacific Northwest and could become established in Alaska in the near future (Fay 2002). The Chinese mitten crab is likely transported by sea-going ships through the uptake and discharge of ballast water. This catadromous species (migrating from freshwater to the sea to breed) has significantly altered the ecosystems in places where it has become established (Sea Grant Washington 2000). Mitten crabs are highly mobile, and efficient predators that in large numbers can cause impacts to local fish populations and to commercial fishing operations (Fay 2002). Alaska Department of Fish and Game has extensive information regarding the Chinese mitten crab at the following website: http://www.wsg.washington.edu/outreach/mas/nis/mittencrab.html.

The New Zealand mudsnail is an exotic organism recently introduced to the western United States, and is currently documented in all western states except New Mexico (Montana State University 2005, U.S. Fish and Wildlife Service 2004). This organism can quickly colonize freshwater environments and dominate the invertebrate community. The mudsnail can alter aquatic ecosystems by consuming large portions of the food resources, outcompeting and physically crowding native species. Mudsnails are spread via fishing gear such as boots and waders, as well as by boat trailers and other equipment.

Goldfish have become a nuisance species throughout the world (Fossa 2004).

The one known established breeding population of goldfish in Alaska occurred on the Clear Airforce Base and was eradicated with the use of pesticides. This population established in a power plant water cooling system and became very dense before successful eradication (Fay 2002). Five large goldfish were removed from a small pond near the Mendenhall Glacier near Juneau, Alaska in 2002. Analysis of the scales showed that the fish were in the wild for 3 years prior to their capture and that they grew very well in the wild[5]. Goldfish could become a problem in small streams and ponds that are important for rearing salmon but do not have many larger predatory fish. This might be the case in some of the smaller urban streams. The mitten crab, mudsnail and goldfish are examples of species that could have impacts on the endemic salmon and trout populations and the industries that rely on them. Once established, control or elimination of these species is unlikely.

The signal crayfish is endemic to the western United States but has become an invasive species throughout the world (Fay 2002). Single individuals have been found on Kodiak Island and near Kenai. Breeding populations have not been found in Alaska, however. Where they have become invasive in many parts of Europe, they have had significant impacts on the local ecosystems (Scottish Fisheries Research Service 2005) by preying on local crayfish, carrying disease, preying on fish eggs and fry, and altering aquatic trophic structures.

An additional aquatic species, the invasive plant Eurasian milfoil, is a threat to aquatic systems. Although not documented yet in Alaska, it is a serious problem throughout the lower 48 states (National Invasive Species Council 2005). This species can become established by the introduction of small pieces of stem material, and is spread through the aquarium industry as well as by boats, trailers, and other water sports equipment. Once established, Eurasian milfoil can dominate its new environment with thick mats that shade out endemic plant species. It can reduce species diversity and increase eutrophication in some pond habitats. Eurasian milfoil is hard to control and likely impossible to eradicate once it is established. Refer to the Invasive Plant section of this document and the associated references for more information about Eurasian milfoil.

Aquatic ecosystems in Alaska are vulnerable to introduced organisms that could seriously impact system function and cause declines in native fish populations. While all of the introduced aquatic organisms are of concern, existing populations of northern pike generate the highest current threat to aquatic systems. If Atlantic salmon becomes established in coastal Alaska the impacts on native salmon populations could be severe. Similarly, introductions of Chinese mitten crab, New Zealand mudsnail, and crayfish will be difficult to control if breeding populations become established. Consideration of invasive aquatic species management must be coordinated through the Alaska Department of Fish & Game.

---

Invasive Pathogens

Invasive pathogens have had devastating ecological, economic, and social effects on forests in the United States (Anonymous 1991, Liebold et al. 1995, Ciesla 2002). White pine blister rust (*Cronartium ribicola*), Dutch elm disease (*Ceratocystis ulmi*), chestnut blight (*Cryphonectria parasitica*) and more recently, sudden oak death (*Phytophthora ramorum*) are all examples of large-scale tree mortality to native tree species. In each example, the native tree species lacked genetic resistance to the introduced pathogen because the two did not co-evolve. In the example of chestnut blight, the introduced pathogen killed every chestnut tree in its native range (Worrall 2005). Alaskan forests may be particularly vulnerable to introduced pathogens because of the relatively small number of native tree species and their narrow genetic base. Many pathogenic fungi primarily disseminate by spores on air currents and can quickly spread over large distances. The introduction of a single pathogen capable of killing one of Alaska's tree species could have enormous consequences for forest ecosystems throughout the state.

Fortunately, to date, Alaskan forests have not been affected by any such introduced tree pathogen (Holsten et al. 2001). Several tree pathogens are known to have been introduced, but their spread has been limited by the available host plants that each can infect. Fungal pathogens such as white pine blister rust (*Cronartium ribicola*) and black knot (*Apiosporina morbosa*), and the bacterial fire blight pathogen (*Erwinia amylovora*) have been introduced into ornamental plantings at several locations, but these organisms are not capable of causing widespread damage to our native tree species (Wittwer 2004).

Without any known significant introductions, the regional strategy for pathogens will focus on prevention and early detection. Unfortunately, the national database on invasive tree pathogens ("EXFOR", North American Forest Commission Exotic Forest Pest Information System http://spfnic.fs.fed.us/exfor/) has few entries on pathogens that could threaten Alaskan tree species. Thus, an assessment of such pathogens is underway by USDA State and Private Forestry forest health specialists, and will be completed in late 2005. This is challenging because minor tree pathogens in their endemic ranges can become epidemic and become agents of major tree mortality on new hosts and in new environments. This assessment evaluates pathogens native to Europe and Asia that attack tree species whose genera are represented in Alaska (e.g., spruce (*Picea*), hemlock (*Tsuga*), birch (*Betula*), etc.), and determines the type of disease they cause, their climatic limitations, and avenues of movement. The type of disease caused (i.e., root, stem canker, vascular wilt, foliar) can indicate the most likely means of introduction. This preliminary assessment has yielded the names of 13 pathogens that are not presently in Alaska, but if introduced, could threaten our native tree species. Species such as *Chrysomyxa abietis* (foliar rust of spruce), *Didymascella chamaecypari* (cedar shot hole), *Cistella japonica* (resinous stem canker), *Seiridium cardinale* (foliar and stem cankering pathogen of cedars), *Phytophthora lateralis* (root disease of cedar), and *Taphrina betulina* (foliar disease of birch) are among the potentially damaging fungi. The pine wilt nematode (*Bursaphelenchus xylophilus*) could cause a vascular wilt to spruce and pine in Alaska, and if ever introduced with its insect vector (the sawyer beetles, *Monochamus* spp.), would disrupt export of spruce wood from Alaska. Our assessment also documents

that many species of tree pathogens already have a circumpolar distribution and are native throughout Europe, Asia, and North America, including Alaska.

Knowledge of probable pathways for potential introductions will be the cornerstone of prevention and early detection. Most tree pathogens are likely to be introduced on live plant material, with ornamental plants in urban areas and towns as the most probable source. Christmas trees and wood products represent other likely sources. Thus, prevention will be conducted through public outreach efforts such as leaflets, brochures, and education and training sessions. The preliminary evaluation of potential pathogens from around the world will provide the names of pathogens that will be the focus of early detection. Monitoring for these potential pathogens occurs in nurseries and landscaping plant outlets, and will also involve observations on native trees located in strategic locations as bio-assays for early detection. Control of any introduced pathogen that is considered threatening should be conducted before it becomes established. Historically, eradication or control of established pathogens has been extremely difficult. Evaluation of economic or ecological impact should be conducted to justify the cost and any negative environmental consequences of control efforts. Restoration usually involves programs aimed at breeding for disease resistance to re-establish the native tree species that was affected. Such programs are expensive, involve long-term commitment, but have proven to be effective.

Currently, no serious outbreaks of invasive tree pathogens are found in Alaska. Thus, prevention and early detection will be the focus of most management effort toward invasive tree pathogens. The foliar rust of spruce, *Chrysomyxa abietis*, probably represents the largest potential threat. Other noteworthy potential pathogens include the foliar, stem, and root fungi of cedars, the foliar pathogen of birch, and pine wilt nematode of spruce and pine.

Invasive Insects

Invasive insects are among the most serious threats to forest ecosystems of the United States, including Alaska (Mattson 1997). Insects that are native to Canada and the lower 48 states as well as species introduced from other continents threaten native Alaskan ecosystems. The movement of insects into Alaska from the lower 48 or Canada is the most serious, and most likely threat, regardless if these insects originate from the North American continent or not. Because Alaska is increasing its role in international trade, other likely pathways of introduction for exotics are ports-of-entry. Once established, introduced insect populations can explode, and potentially bring about widespread ecological change to Alaska's forested ecosystems (Mattson 1997).

To date, several invasive species have become established in the forests of Alaska (Wittwer 2005). Some examples are larch sawfly (*Pristiphora erichsonii*), alder woolly sawfly (*Eriocampa ovata*), spruce aphid (*Elatobium abietinum*), and amber-marked birch leafminer (*Profenusa thomsoni*). Spruce aphid was probably introduced into southeast Alaska about 80 years ago, but appears to be causing more damage to spruce as the climate warms. Present on the continent for over 100 years, the amber-marked birch leafminer was introduced into south-central, interior, and southeast Alaska in the late

1990s. Populations are now established, and severe defoliation on more than 100,000 acres has occurred in south-central Alaska. The western tent caterpillar (*Malacosoma californicum*), a native to the lower 48 and Canada, has also been introduced into the Anchorage Bowl three times on nursery stock used for landscaping. Fortunately, these introduced populations were quickly eradicated.

Prevention is the first priority and will be conducted through public outreach efforts such as leaflets, brochures, and education and training sessions. This outreach will target both the public and natural resource managers and will focus on the risks and dangers associated with introduced insect pests. One such example of early detection and rapid response is the gypsy and nun moth trapping that is being conducted throughout Alaska. USDA Animal and Plant Health Inspection Service (APHIS) and the Integrated Pest Management Technician Program initiated this pheromone-based detection and trapping system over a decade ago, and it will likely continue on an annual basis. Likewise, a National Exotic Woodborer/Bark Beetle Early Warning Detection Program has been initiated in Alaska and will be carried out annually in cooperation with Alaska State and Private Forestry, Forest Health Protection staff and specialists from the Alaska State Division of Forestry.

A biological control program for the amber-marked birch leafminer is underway. A host-specific parasitoid was released in south-central Alaska in 2004 and releases will continue in 2005 and 2006. This is a cooperative program of the USDA APHIS & FS, Alaska Division of Forestry, University of Alberta, Canadian Forestry Service, and the Municipality of Anchorage.

The introduced larch sawfly has defoliated thousands of acres of tamaracks and caused extensive mortality throughout Alaska's interior forests. This insect was introduced to south-central Alaska and is defoliating ornamental Siberian larch as far south as Homer. Evaluations are ongoing to determine the amount and extent of larch mortality, and to determine if genetic conservation practices are needed to restore these severely impacted forested ecosystems.

When the insects on the list of current and potential invasive insect species are carefully considered using not only immediate tree mortality, but the ability to potentially alter an entire natural system, three species rise to the top. A European scolytid bark beetle (*Ips typographus)* has the potential to destroy large swaths of spruce forest throughout Alaska and greatly impact commercial forestry; the amber-marked birch leaf miner causes widespread defoliation of all species of birch found in Alaska, but has an unknown long-term effect on forest ecosystems; and the larch sawfly (*Pristiphora erichsonii)* which effectively kills over 80% of any larch tree attaining four inch diameter breast height and thus alters stand composition and threatens a tree species that exists in Alaska at the edge of its range where it has difficulty regenerating.

Conclusions

This invasive species assessment has identified 176 non-native species present in Alaska (Table 1). To date, 42 of these species pose a significant threat for invasion. Sixty-three plants are ranked according to their invasive characteristics and need to be assessed individually within an ecosystem context for relative importance. The highest ranking invasive plant species include Eurasian water-milfoil (not yet found in Alaska), spotted knapweed, Atlantic cordgrass (not yet found in AK), Japanese knotweed, reed canarygrass, giant hogweed (not yet found in AK), white sweetclover, purple loosestrife (no escapement in AK yet), ornamental jewelweed, cheatgrass, Himalayan blackberry, Canada thistle, bird vetch, orange hawkweed, garlic mustard, false brome, and Scotch broom. Additional plant species will be added to the Weed Ranking Project over time, so readers are encouraged to stay current with these changes.

Although many non-native wildlife species have been introduced or transplanted in Alaska, with the exception of rats in coastal ecosystems, and possibly slugs in estuaries and elk in southeast Alaska, none are considered invasive at the present. Of the nine invasive aquatic organisms identified as threats for Alaska, established populations of northern pike pose the greatest immediate concern, while the Atlantic salmon, Chinese mitten crab, and New Zealand mudsnail are species likely to invade Alaska in coming years.

Invasive tree pathogens are not currently damaging Alaskan ecosystems, but there are numerous species that could cause widespread tree mortality if introduced. Four introduced insects are currently established in Alaska: the larch sawfly, alder woolly aphid, spruce aphid, and amber-marked birch leafminer. These insects are causing widespread tree defoliation and mortality. A number of exotic insects pose a potential threat and are related primarily to transport of infested plant and wood products.

Managing invasive species on National Forest lands in Alaska will be challenging. More information must be made available to managers and landowners. Improved interagency cooperation and development of cooperative invasive species management partnerships is needed to contain Alaskan invasive species populations at current levels. The Forest Service is addressing invasive plant management through the Alaska Region Invasive Plant Strategy (2005) and the Chugach and Tongass National Forest Invasive Plant Management Guides (2005). Within the Forest Service, various approaches are in place to address four action elements in the National Strategy and Implementation Plan for Invasive Species Management (USDA Forest Service 2004). These four elements include **prevention, early detection and rapid response, control, and restoration**. Based on this Invasive Species Assessment, a Forest Service Alaska Region Invasive Species Strategy will be prepared during 2005.

Table 1. Complete list of invasive species considered threats for invasion to National Forest Land in Alaska including plants, terrestrial fauna, aquatic organisms, insects and pathogens.

Invasive Plants

	Common name	Scientific name	Present in Alaska?	Invasive ranking
1	Eurasian water-milfoil	*Myriophyllum spicatum* L.	No	89
2	Spotted knapweed	*Centaurea biebersteinii* DC	Yes	88
3	Atlantic cordgrass, saltmarsh cordgrass, smooth cordgrass	*Spartina alternifolia* Loisel.	No	86
4	Japanese knotweed	*Polygonum cuspidatum* Sieb & Zucc.	Yes	84
5	reed canarygrass, canarygrass	*Phalaris arundicacea* L.	Yes	83
6	Giant hogweed	*Heracleum mantegazzianum* Sommier & Levier	No	81
7	White sweetclover	*Melilotus alba* Medikus	Yes	80
8	Cheatgrass	*Bromus tectorum* L.	Yes	78
9	Ornamental jewelweed	*Impatiens glandulifera* Royle	Yes	78
10	Purple loosestrife, spike loosestrife	*Lythrum salicaria* L. & L. *virgatum* L.	No	78
11	Himalayan blackberry	*Rubus discolor* Wiehe & Nees	Yes	77
12	Canada thistle	*Cirsium arvensis* L. Scop.	Yes	76
13	Bird vetch, cow vetch, tufted vetch	*Vicia cracca* L.	Yes	75
14 15	Orange hawksweed, devil's paintbrush & meadow hawkweed	*Hieracium aurantiacum* L. and *Hieracium caespitosum*	Yes	71
16	Garlic mustard	*Alliara petiolata* (Bieb.) Cavara & Grande	Yes	70
17	False-brome	*Brachypodium sylvaticum*. (Huds.) Beauv.	No	70
18	English broom, scotch broom	*Cytisus scoparius* (L.) Link	Yes	69
19	Bush honeysuckle	*Lonicera tatarica* L.	No	67
20	Siberian pea shrub	*Caragana arborescens* Lam.	Yes	65
21	Yellow sweetclover, king's crown	*Melilotus officinalis* (L.) Lam	Yes	65
22	Common dandelion	*Taraxacum officinale* G.H. Weber ex Wigg	Yes	64
23	Foxtail barley	*Hordeum jubatum* L.	Yes	63
24	Yellow toadflax, butter and eggs	*Linaria vulgaris* Miller	Yes	63
25	Ragwort, stinking willie	*Senecio jacobaea* L.	Yes	63
26	Smooth brome	*Bromus inermis* ssp. *inermis* Leyss.	No	62
27	Oxeye daisy, white daisy	*Leucanthemum vulgare* Lam.	Yes	61
28	Bull thistle, common thistle	*Cirsium vulgare* (Savi) Ten.	Yes	60
29	European bird cherry	*Prunus padus* L.	Yes	60
30	Quackgrass, couchgrass, dog grass	*Elymus repens* (L.) Gould	Yes	59
31	Perennial sowthistle, moist sowthistle	*Sonchus arvensis* L. ssp. *uliginosis* (Bieb.) Nyman	Yes	59
32	White clover, ladino clover	*Trifolium repens* L.	Yes	59
33	Common tansy, garden tansy	*Tanacetum vulgare* L.	Yes	58
34	Baby's breath	*Gypsophila paniculata* L.	No	57
35	Kentucky bluegrass	*Poa pratensis* L.	No	57
36	Sulphur cinquefoil	*Potentilla recta* L.	No	57
37	Alsike clover	*Trifolium hybridum* L.	Yes	57
38	Common timothy	*Phleum pratense* L.	Yes	56
39	Perennial sowthistle	*Sonchus arvensis* L.	Yes	56

Invasive Plants Cont.

	Common name	Scientific name	Present in Alaska?	Invasive ranking
40	Bigleaf lupine	*Lupinus polyphyllus* Lindl.	Yes	55
41	Creeping buttercup and tall buttercup	*Ranunculus repens* L. and *Ranunculis acris* L.	Yes	54
42	European mountain ash, rowan	*Sorbus aucuparia* L.	Yes	53
43	Common mullein	*Verbascum thapsus* L.	No	53
44	Ground ivy	*Glechoma hederacea* L.	No	52
45	Winter vetch	*Vicia villosa* Roth	No	52
46	Purple foxglove	*Digitalis purpurea* (L.)	Yes	51
47	Annual bluegrass	*Poa annua* L.	Yes	51
48	Common yarrow	*Achillea millefolium* var. *millefolium* L.	Yes	49
49	Sneezewort	*Achillea ptarmica* L.	Yes	47
50	Flixweed	*Descurainia sophia* (L.) Webb ex Prantl.	Yes	47
51	Yellow salsify, goat's bear	*Tragopogon dubius* Scop.	Yes	47
52	Scentless false mayweed,	*Tripleurospermum perforata* (Merat) M.	Yes	
53	Scentless chamomile	Lainz		47
54	Dame's rocket	*Hesperis matronalis* L.	No	45
55	Common plantain	*Plantago major* L.	Yes	44
56	Narrow-leaf hawk's beard	*Crepis tectorum* L.	Yes	43
57	Split-lip hemp-nettle	*Galeopsis bifida* Boenn. and G. *tetrahit* L.	Yes	43
58	Common brassbuttons	*Cotula coronopifolia* L.	No	42
59	Lambsquarters	*Chenopodium album* L.	Yes	35
60	Narrow-leaved hawkweed	*Hieracium umbellatum* L.	Yes	35
61	Disc mayweed, pineappleweed	*Matricaria discoidea* DC.	Yes	34
62	Bouncing bet, soapwart	*Saponaria officinalis* L.	Yes	34
63	Wall lettuce	*Mycelis muralis* (L.) Dumort.	No	32
64	Crested wheatgrass	*Agropyron cristatum* L. Gaertn.	Yes	No Rating
65	Creeping bentgrass, red top	*Agrostis gigantea* Roth	Yes	No Rating
66	Colonial bentgrass	*Agrostis tenuis* Sibth.	Yes	No Rating
67	Water foxtail	*Alopecurus geniculatus* L.	Yes	No Rating
68	Meadow foxtail	*Alopecurus pratensis* L.	Yes	No Rating
69	Redroot pigweed	*Amaranthus retroflexus* L.	Yes	No Rating
70	Western pearly everlasting	*Anaphalis margaritacea* (L.) Benth.	Yes	No Rating
71	Mayweed, stinking chamomile	*Anthemis cotula* L.	Yes	No Rating
72	Tower rockcress	*Arabis glabra* L. Bernh.	Yes	No Rating
73	Chickpea milkvetch, cicer milkvetch	*Astragalus cicer* L.	Yes	No Rating
74	Wildoats	*Avena fatua* L.	Yes	No Rating
75	Rape	*Brassica napus* L.	Yes	No Rating
76	Field mustard	*Brassica rapa* L.	Yes	No Rating
77	Purple-topped turnip	*Brassica rapa* L. var. rapa	Yes	No Rating
78	Soft brome	*Bromus hordeaceus* L.	Yes	No Rating
79	Hedge false bindweed	*Calystegia sepium* (L.) R. Br. ssp. sepium	Yes	No Rating
80	Shepherd's purse	*Capsella bursa-pastoris* (L.) Medik.	Yes	No Rating
81	Larger mouse-eared chickweed	*Cerastium fontanum* Baumg. ssp. triviale (Link) Jalas	Yes	No Rating
82	Sticky chickweed	*Cerastium glomeratum* Thuill.	Yes	No Rating

Invasive Plants Cont.

	Common name	Scientific name	Present in Alaska?	Invasive ranking
83	Pitseed goosefoot	*Chenopodium berlanderieri* L.	Yes	No Rating
84	Chicory	*Cichorium intybus*	Yes	No Rating
85	Field bindweed	*Convolvulus arvensis*	Yes	No Rating
86	Orchard grass	*Dactylis glomerata* L.	Yes	No Rating
87	Delphinium	*Delphinium sonnei* Greene	Yes	No Rating
88	Slender hairgrass	*Deschampsia elongata* (Hook.) Munro	Yes	No Rating
89	Siberian wild rye	*Elymus sibiricus* L.	Yes	No Rating
90	Slender wheatgrass	*Elymus trachycaulus*	Yes	No Rating
91	Wormseed wallflower	*Erysimum cheiranthoides* L. subsp. *cheiranthoides*	Yes	No Rating
92	Common dogmustard	*Erucastrum gallicum* (Willd.) O.E. Schulz*	Yes	No Rating
93	Wormseed mustard	*Erysimum cheiranthoides* L. subsp. cheiranthoides	Yes	No Rating
94	Tall fescue	*Festuca arundinacea* (Schreb.) S.J. Darbyshire	Yes	No Rating
95	Brittlestem hempnettle	*Galeopsis tetrahit* L.	Yes	No Rating
96	Annual (common) sunflower	*Helianthus annuus* L.	Yes	No Rating
97	Mouseear hawkweed	*Hieracium pilosella* L.	Yes	No Rating
98	Leporinum barley	*Hordeum murinum* L. spp leporinum (Link)	Yes	No Rating
99	Common barley	*Hordeum vulgare* L.	Yes	No Rating
100	Common St. Johnswort	*Hypericum perforatum* L.	Yes	No Rating
101	Cat's-ears	*Hypochoeris radicata* L.	Yes	No Rating
102	European beggar's lice	*Lappula myosotis* Moench	Yes	No Rating
103	Prickly lettuce	*Lactuca serriola* L.	Yes	No Rating
104	European stickweed	*Lappula squarrosa*	Yes	No Rating
105	Fall dandelion	*Leontodon autumnalis* L.	Yes	No Rating
106	Common pepperweed	*Lepidium densiflorum* Schrad	Yes	No Rating
107	Pineneedle toadflax	*Linaria pinifolia*	Yes	No Rating
108	Italian rye grass	*Lolium multiflorum* Lam.	Yes	No Rating
109	Perennial rye grass	*Lolium perenne* L.	Yes	No Rating
110	Maltesecross	*Lychnis chalcedonica* L.	Yes	No Rating
111	Yellow alfalfa	*Medicago falcata* L.	Yes	No Rating
112	Black medic, hop clover	*Medicago lupulina* L.	Yes	No Rating
113	Burr medic	*Medicago minima*	Yes	No Rating
114	Blfalfa	*Medicago sativa* L.	Yes	No Rating
115	Night-flowering catchfly	*Melandrium noctiflorum* (L.) Fries	Yes	No Rating
116	Spearmint	*Mentha spicata*	Yes	No Rating
117	True forget-me-not	*Myosotis scorpioides* L.	Yes	No Rating
118	Ball mustard	*Neslia paniculata* (L.) Desv.	Yes	No Rating
119	Iceland poppy	*Papaver nudicaule* L.	Yes	No Rating
120	Canary grass	*Phalaris canariensis* L.	Yes	No Rating
121	Ribgrass, buckhorn, English plantain	*Plantago lanceolata* L.	Yes	No Rating
122	Canada bluegrass	*Poa compressa* L.	Yes	No Rating
123	Glaucous bluegrass	*Poa glauca* Vahl.	Yes	No Rating
124	Fowl bluegrass	*Poa palustris* L.	Yes	No Rating

Invasive Plants Cont.

	Common name	Scientific name	Present in Alaska?	Invasive ranking
125	Spreading bluegrass	*Poa subcoerulea* Sm.	Yes	No Rating
126	Rough bluegrass	*Poa trivialis* L.	Yes	No Rating
127	Knotweed	*Polygonum aviculare* L.	Yes	No Rating
128	Black bindweed, wild buckwheat	*Polygonum convolvulus* L.	Yes	No Rating
129	Willow weed	*Polygonum lapathifolium* L.	Yes	No Rating
130	Silverweed	*Potentilla anserina* L.	Yes	No Rating
131	Norwegian cinquefoil	*Potentilla norvegica* L.	Yes	No Rating
132	Sheep sorel	*Rumex acetosella* L. ssp. acetosella	Yes	No Rating
133	Curled dock	*Rumex crispus* L.	Yes	No Rating
134	Garden dock	*Rumex longifolius* DC.	Yes	No Rating
135	Bitter dock	*Rumex obtusifolius* L.	Yes	No Rating
136	Common groundsel	*Senecio vulgaris* L.	Yes	No Rating
137	Green bristlegrass	*Setaria virdis* L. Beauv.	Yes	No Rating
138	Red catchfly	*Silene dioica* (L.) Clairville	Yes	No Rating
139	Bladder campion	*Silene latifolia* Poir.	Yes	No Rating
140	White mustard	*Sinapis alba* L.	Yes	No Rating
141	Tumbling mustard	*Sisymbrium altissimum* L.	Yes	No Rating
142	Spurry	*Spergula arvensis* L.	Yes	No Rating
143	Purple sand spurry	*Spergularia rubra* (L.) J.& K. Presl	Yes	No Rating
144	Common chickweed	*Stellaria media* (L.) Vill.	Yes	No Rating
145	Common comfrey	*Symphytum officinale*	Yes	No Rating
146	Pennycress	*Thlaspi arvense* L.	Yes	No Rating
147	Red clover	*Trifolium pratense* L.	Yes	No Rating
148	Wheat	*Triticum aestivum* L.	Yes	No Rating
149	Thyme-leaf speedwell	*Veronica serpyllifolia* L. subsp. serpyllifolia	Yes	No Rating
150	Johnny jumpup	*Viola tricolor* L.	Yes	No Rating

Invasive Terrestrial Fauna

	Common name	Scientific name	Present in Alaska?	Invasive ranking
1	Norway rat	*Rattus norvegicus*	Yes	High
2	European black slug	*Arion ater*	Yes	Low
3	Garden slug	*Arion spp.*	Yes	Low
4	Leopard slug	*Limax maximus*	Yes	Low
5	Elk	*Cervus elaphus*	Yes	Moderate
6	House mouse	*Mus musculus*	Yes	Low
7	Starling	*Sturnus vulgaris*	Yes	Low
8	Rock dove	*Columba livia*	Yes	Low

Invasive Aquatic Species

	Common name	Scientific name	Present in Alaska?	Invasive ranking
1	Chinese mitten crab	*Eriocheir sinesis*	No	High
2	Northern pike	*Esox lucius*	Yes	High
3	Eurasian water-milfoil	*Myriophyllum spicatum*	No	High
4	Signal crayfish	*Pacifacstacus leniusculus*	Yes	High
5	Yellow perch	*Perca flavescens*	No	High
6	New Zealand mudsnail	*Potamopyrgus antipodarum*	No	High
7	Red-legged frog	*Rana aurora*	Yes	High
8	Atlantic salmon	*Salmo salar*	Yes	High
9	Pacific chorus frog	*Pseudacris regilla*	Yes	Low
10	Rainbow trout	*Oncorhynchus mykiss* Walbaum	Yes	Low
11	Brook trout	*Salvelinus fontinalis*	Yes	Low
12	Goldfish	*Carassius auratus*	Yes	Low

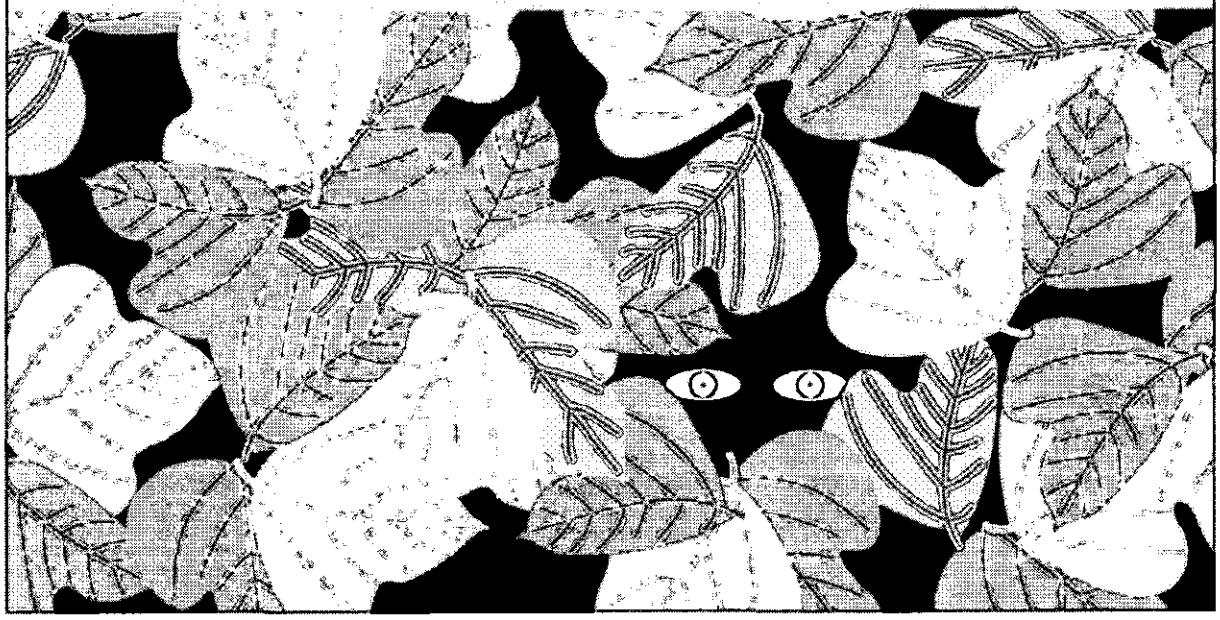
Invasive Pathogens

	Common name	Scientific name	Present in Alaska?	Invasive ranking
1	Spruce needle rust	*Chrysomyxa abietis* (Wallr.) Unger	No	High
2	Rhododendron-spruce needle rust	*Chrysomyxa ledi* var. *rhododendri* (de Bary.) Savile	No	Moderate
3	Resinous stem canker	*Cistella japonica* Suto et Kobayashi	No	Moderate
4	Cedar shot hole	*Didymascella chamaecyparidis* (J. F. Adams.) Maire	No	Moderate
5	Cedar leaf blight	*Lophodermium chamaecyparissi* Shir & Hara.	No	Moderate
6	Poplar rust	*Melampsora larici-tremulae* Kleb.	No	Moderate
7	Seiridium shoot blight	*Seiridium cardinale* (Wagener) Sutton & Gibson	No	Moderate
8	Phytophthora root disease	*Phytophthora lateralis* Tucker & Milbrath	No	Moderate
9	Needle and twig blight	*Acanthostigma parasiticum* (Hart.) Sacc.	No	Low
10	Black knot	*Apiosporina morbosa* (Schwein.:Fr.) Arx	Yes	Low
11	Pine wilt nematode	*Bursaphelenchus xylophilus*	No	Low
12	White pine blister rust	*Cronartium ribicola* J.C. Fischer: Rabh.	Yes	Low
13	Fire blight	*Erwinia amylovora* (Burrill) Winslow	Yes	Low
14	Sudden oak death	*Phytopthora ramorum* Werres deCock Man in't Veld	No	Low
15	Birch leaf curl	*Taphrina betulae* (Fckl.) Johans.	No	Low
16	Birch witches broom	*Taphrina betulina* Rostr.	No	Low
17	Valsa canker	*Valsa harioti*	No	Low

Invasive insects

	Common name	Scientific name	Present in Alaska?	Invasive ranking
1	Pine moth	*Dendrolimus pini* (L)	No	High
2	European spruce beetle	*Ips typographus* L.	No	High
3	Asian gypsy moth	*Lymantria dispar* L.	No	High
4	Nun moth	*Lymantria monacha* (L.)	No	High
5	Western and forest tent caterpillars	*Malacosoma californicum* (Packard) and *Malacosoma disstria* (Hübner)	No	High
6	Larch sawfly	*Pristiphora erichsonii* (Hartig)	Yes	High
7	Amber-marked birch leafminer	*Profenusa thomsoni* (Konow)	Yes	High
8	Brown spruce longhorn beetle	*Tetropium fuscum* (F.)	No	High
9	Woolly spruce aphid	*Adelges abietis* (L.)	No	Moderate
10	Hemlock woolly adelgid	*Adelges tsugae* Annand	No	Moderate
11	Asian longhorned beetle	*Anoplophora glabripennis* (Motschulsky)	No	Moderate
12	Larch casebearer	*Coleophora laricella* (Hübner)	No	Moderate
13	Spruce aphid	*Elatobium abietinum* (Walker)	Yes	Moderate
14	Birch leafroller	*Epinotia solandriana* L.	Yes	Moderate
15	Birch leafminer	*Fenusa pusilla* (Lepeletier)	Yes	Moderate
16	Larch engraver	*Ips cembrae* (Heer)	No	Moderate
17	European gypsy moth	*Lymantria dispar* (L.)	No	Moderate
18	Sitka spruce weevil	*Pissodes strobe* (Peck)	Yes	Moderate
19	Eastern spruce gall aphid	*Adelges piceae* (Ratzburg)	Yes	Low
20	Uglynest caterpillar	*Archips cerasivorana* (Fitch)	Yes	Low
21	Alder woolly sawfly	*Eriocampa ovata* (L.)	Yes	Low
22	European alder sawfly	*Hemichroa crocera* (Fourcroy)	No	Low
23	Birch-edge leafminer	*Heterarthrus nemoratus* (Fallen)	Yes	Low
24	Currantworm	*Nematus ribesii* (Scopoli)	Yes	Low
25	Strawberry root weevil	*Otiorhynchus ovatus* (L.)	Yes	Low
26	European pine shoot moth	*Rhyacionia buoliana* (Schiffermüller)	No	Low

THE NATIONAL INVASIVE SPECIES COUNCIL (NISC)



2008 – 2012 National Invasive Species Management Plan

August 2008

PREPARE | PREVENT | PROTECT

Executive Summary

Invasive Species introduced into the United States from around the globe are affecting plant and animal communities on our farms, ranches and coasts; and in our parks, waters, forests, and backyards. As global climate patterns shift, the distribution of species will change, and so will the susceptibility of particular habitats to the impacts of new species introductions. Human activity such as trade, travel and tourism have all increased substantially, increasing the speed and volume of species movement to unprecedented levels. Invasive species are often unintended hitchhikers on cargo and other trade conveyances. Still more species are deliberately introduced as pets, ornamental plants, crops, food, or for recreation, pest control or other purposes. Most nonnative species, including most of our sources of food and fiber, are not harmful; and many are highly beneficial. A small percentage of nonnative species cause great harm to the environment, the economy or human health. Nonnative species that cause harm are collectively known as invasive species.

It is difficult to estimate the total economic harm caused by invasive species, however invasive plants alone result in two to three billion dollars in crop loss each year (Bridges 1992). Aquatic invasive species clog irrigation canals and pipes that supply water to power plants and factories. Invasive plants, pathogens and parasites cut crop yields and sicken livestock. Humans can be affected directly. Invasive ants cause painful stings. Invasive plant pollen increases the severity of respiratory allergies and the sap of the invasive plant, Giant Hogweed, causes blisters on the skin that can lead to permanent scarring. West Nile Virus (WNV) is an invasive pathogen of humans and animals. As of July 2008, the Centers for Disease Control and Prevention report that 1,086 deaths in the United States were caused by WNV (CDC 2008).

Invasive species (such as kudzu, snakehead fish, zebra mussels, emerald ash borers, sea lamprey, tree of heaven, hydrilla, nutria, West Nile virus, and Sudden Oak Death pathogen) may prey upon, displace or otherwise harm native species. Some invasive species also alter ecosystem processes, transport disease, interfere with crop production, or cause illnesses in animals and humans; affecting both aquatic and terrestrial habitats. For these reasons, invasive species are of national and global concern.

Invasive species populations span geographic and jurisdictional boundaries; thus efforts to manage invasive species must be coordinated across boundaries. In 1999, Executive Order (EO) 13112 established the National Invasive Species Council (NISC), co-chaired by the Secretaries of the Interior, Agriculture, and Commerce. NISC members include the Secretaries of Transportation, State, Defense, Homeland Security, Treasury, and Health and Human Services; the Administrators of the Environmental Protection Agency and the National Aeronautics and Space Administration; as well as the Director of the U.S. Agency for International Development and the U.S. Trade Representative. NISC was charged with providing coordination, planning and overall leadership for federal invasive species programs and reaching out to state, tribal, local and private partners.

EO 13112 also required the Secretary of the Interior to establish the Invasive Species Advisory Committee (ISAC), a group of 30 nonfederal stakeholders from diverse constituencies (representing state, tribal, local and private concerns) around the Nation, to advise NISC on invasive species issues. In addition, EO 13112 called on NISC to prepare and issue the first national plan to deal with invasive species. Completed in 2001, the National Invasive Species Management Plan, Meeting the Invasive Species Challenge (2001 Plan), served as a comprehensive "blueprint" for federal action on invasive species, as well as NISC's primary coordination tool. This coordination tool provided the first comprehensive national plan for

invasive species action. It called for about 170 specific actions within nine categories of activity, about 100 of which have been established or completed. Actions identified in the 2001 Plan continue to be implemented.

The 2008–2012 National Invasive Species Management Plan (2008 Plan) is the first revision of the 2001 Plan, as mandated by EO 13112. This document will direct Federal efforts (including overall strategy and objectives) to prevent, control and minimize invasive species and their impacts within the next five fiscal years (2008 through 2012). If necessary, it may be updated more frequently to reflect changes in circumstances, agency plans and priorities. NISC member agencies, ISAC members, NISC staff, stakeholders and other experts have provided input in drafting this revision, which replaces the 2001 Plan.

The 2008 Plan is focused upon five "Strategic Goals": Prevention; Early Detection and Rapid Response; Control and Management; Restoration; and Organizational Collaboration. To accomplish these strategic goals, critical support for efforts such as research, data and information management, education and outreach, and international cooperation elements are included in pertinent sections of the 2008 Plan.

Each of the five strategic goals specifies on-going objectives and the long-term vision for success in that area. Under each strategic goal, "Objectives" describe what is to be accomplished over the next five years, and "Implementation Tasks" describe what agencies expect to do in order to accomplish that objective. Within the "Implementation Tasks", there are "Performance Elements" which allow for measurement of progress towards accomplishing identified tasks.

The 2008 Plan is not a comprehensive list of all federal invasive species actions. It is a targeted set of priority strategic action plans with objectives and implementation tasks that are intended to be completed in the next five years. The over-arching strategic goals and strategic action plan objectives remain consistent with the 2001 Plan. The accomplishment of specific implementation tasks and performance elements will be dependent upon agency budgets, and in some cases, legal or regulatory changes.

The 2008 Plan currently requires the work of 35 different "entities" (typically agencies or bureaus within NISC members' departments and agencies) to achieve a total of 87 Performance Elements. Participating agencies are identified either as a "Lead" or a "Participant" to describe their role in accomplishing a specific Performance Element.

Prevention is the first-line of defense. The Strategic Goal for Prevention calls for preventing the introduction and establishment of invasive species to reduce their impact on the environment, the economy and health of the United States.

Even the best prevention efforts cannot stop all invasive species. **Early Detection**, rapid assessment and **Rapid Response** (EDRR) may act as a critical second defense. The EDRR Strategic Goal calls for developing and enhancing the capacity in the United States to identify, report and effectively respond to newly discovered and localized invasive species.

The spread of widely established invasive species can be slowed and their impacts reduced. The **Control and Management** Strategic Goal calls for containing and reducing the spread of invasive populations to minimize their harmful impacts.

Invasive species can severely undermine the ability of plants and animal communities to recover. The **Restoration** Strategic Goal calls for the restoration of high-value ecosystems to meet natural resource conservation goals by conducting restoration efforts on multiple scales.

Invasive species cross jurisdictional boundaries, making coordination and collaboration critical to success. The **Organizational Collaboration** Strategic Goal calls for maximizing organizational effectiveness and collaboration on invasive species issues among international, federal, state, local and tribal governments, private organizations and individuals.

The problem of invasive species may at times seem overwhelming. However, considerable success is being achieved in the prevention, detection, eradication and control of some invasive species along with increasing emphasis in the restoration of ecosystems that have previously been dramatically affected by invasive species. Additional research and information exchange; new detection and eradication techniques; and innovative control methodologies and collaborative models are increasing our capacity to address invasive species problems. The 2008–2012 National Invasive Species Management Plan takes a strategic approach and builds on existing programs to maximize federal efforts over the next five years to prevent and control invasive species in order to enhance our environment, economy and human health.

Introduction

Invasive Species introduced into the United States from around the globe are affecting plant and animal communities on our farms, ranches and coasts; and in our parks, waters, forests, and backyards. As global climate patterns shift, the distribution of species will change, and particular habitats may become more or less susceptible to the impacts of new species introductions. Human activity such as trade, travel and tourism have all increased substantially, increasing the speed and volume of species movement to unprecedented levels. Invasive species are often unintended hitchhikers on cargo and other trade conveyances. Still more species are deliberately introduced as pets, ornamental plants and food, or for recreation, pest control or other purposes. Most nonnative species, including many of our sources of food and fiber, are not harmful; and many are highly beneficial. A small percentage of nonnative species cause great harm to the environment, the economy, or human health. Nonnative species that cause harm are collectively known as invasive species.

Executive Order 13112 (EO 13112) defines an invasive species as:

"an alien species whose introduction does or is likely to cause economic or environmental harm or harm to human health."

The definition includes many types of invasive species such as animals, plants and microorganisms. It focuses upon invasive species which are harmful, rather than focusing on nonnative species, most of which are not harmful. Several different terms have been used to describe invasive species, such as: "alien", "aquatic nuisance species", "injurious wildlife", and "noxious." In 2006, the Invasive Species Advisory Committee (ISAC) issued a white paper to provide advice on what is intended by the term "invasive species", and why so many different terms have been used in the past. The ISAC white paper is available on the Web at: <http://www.invasivespeciesinfo.gov/docs/council/isacdef.pdf>.

Invasive species *(such as West Nile virus and Sudden Oak Death pathogen, kudzu, tree of heaven, hydrilla, zebra mussels, emerald ash borers, sea lamprey, snakehead fish, and nutria)* may prey upon, displace or otherwise harm native species. Some invasive species also alter ecosystem processes, transport disease, interfere with crop production, or cause disease in animals or humans; affecting both aquatic and terrestrial habitats. For these reasons, invasive species are of national and global concern.

Invasive species populations span geographic and jurisdictional boundaries; thus efforts to manage invasive species must be coordinated across boundaries. In 1999, EO13112 charged all federal departments whose actions may affect the status of invasive species, to the extent practicable and permitted by law, to work together within their current authorities to prepare, prevent, and protect resources from harm caused by invasive species. EO 13112 also established the National Invasive Species Council (NISC), co-chaired by the Secretaries of the Interior, Agriculture, and Commerce. NISC was charged with providing coordination, planning and overall leadership for federal invasive species programs and outreach to state, tribal, local and private partners. NISC members include the Secretaries of Transportation, State, Defense, Homeland Security, Treasury, Health and Human Services; the Administrators of the Environmental Protection Agency and National Aeronautics and Space Administration; as well as the U.S. Trade Representative and an official of the U.S. Agency for International Development.

EO 13112 also required the Secretary of the Interior to establish the Invasive Species Advisory

Committee (ISAC), a group of 30 non-Federal stakeholders from diverse constituencies around the Nation (representing state, private, local and tribal concerns), to advise NISC on invasive species issues. In addition, it directed NISC to prepare and issue the first national plan to deal with invasive species. Completed in 2001, The National Invasive Species Management Plan, *Meeting the Invasive Species Challenge* (2001 Plan), serves as a comprehensive "blueprint" for federal action on invasive species, as well as NISC's primary coordination tool.

This document is the first revision of the 2001 Plan, as mandated by EO 13112. The *2008 –2012 National Invasive Species Management Plan* (2008 Plan) will direct federal efforts (including overall strategy and objectives) to prevent, control and minimize invasive species and their impacts within the next five fiscal years (2008 through 2012). If necessary, it may be updated more frequently to reflect changes in circumstances, agency plans and priorities. NISC member agencies, ISAC members, NISC staff, stakeholders and other experts have provided input in drafting this revision, which is intended to replace the 2001 Plan.

The 2008 Plan currently requires the work of 35 different "entities" (typically agencies or bureaus within NISC members' departments and agencies) to achieve a total of 87 Performance Elements. Participating agencies are identified as either a "Lead" or a "Participant" to describe their role in accomplishing a specific Performance Element.

Federal, state, local and tribal governments, as well as organizations in the private sector, have taken significant steps to meet the challenges posed by invasive species. These steps set the stage for the 2008 Plan and provide direction and focus. An estimated 59 percent of the 2001 Plan's 170 specific actions have been completed or are in progress. Among the products NISC has generated are guidance documents on early detection and rapid response, prioritization of control actions, and an analysis of major pathways for introduction of invasive species. NISC members have developed an *Invasive Species Performance (Crosscut) Budget* for fiscal years 2004–2007. ISAC members completed a white paper interpreting the EO definition of invasive species in 2006, and they provided input on the 2008 Plan and future crosscut budget categories and specific initiatives.

Awareness of the problems caused by invasive species has dramatically increased in the last eight years as evidenced by increased activity at federal, state, and local levels. More than 24 states now have invasive species coordination councils. Local governments and citizens groups of all types are active in invasive species prevention and control. Despite the significant increase in activity and awareness, much remains to be done to prevent and mitigate the problems caused by invasive species.

2008 Plan Structure and Organization

Long-range strategic planning, consistent with other government agencies' strategic plans, is necessary to address complex invasive species issues. The 2008 Plan establishes five long-term "Strategic Goals" that focus federal efforts in the areas of invasive species work related to:

1) **Prevention (P),**
2) **Early Detection and Rapid Response (EDRR),**
3) **Control and Management (CM),**
4) **Restoration (R), and**
5) **Organizational Collaboration (OC).**

The strategic goals are ongoing and serve as guideposts for managing invasive species. Each strategic goal has an associated Strategic Action Plan with long-term "Objectives" and shorter-term "Implementation Tasks" and "Performance Elements". Accomplishment of the strategic action plan objectives within each Strategic Goal will likely take longer than five years. However, the 2008 Plan specifically describes implementation tasks for each objective that the agencies expect to accomplish during the life of the 2008 Plan. Where practicable, implementation tasks define specific performance elements that can be used to gauge progress toward accomplishing the implementation tasks and achieving the objectives. These performance elements specify agencies and bureaus/offices that are assigned responsibility to be the "Lead" or a "Participant" in accomplishing each implementation task.

Structural Hierarchy of the 2008 Plan

- STRATEGIC GOALS (P, EDRR, CM, R, and OC)
  - Strategic Action Plan for each Strategic Goal
    - OBJECTIVES (e.g., P.1, P.2, P.3, etc.)
      - Implementation Tasks (e.g., P.1.1, P.1.2, P.1.3, etc.)
        - Performance Elements (e.g., P.1.1.1, P.1.1.2, P.1.1.3, etc.)
          - Leads [Agency (Bureau/Office)]
          - Participants [Agency (Bureau/Office)]

Although they are not highlighted as strategic goals, the following continue to play a crucial role in achieving success: (1) research, (2) information sharing and data management, (3) international cooperation, (4) education and outreach.

The 2008 Plan is not a comprehensive list of all federal invasive species actions. It is a targeted set of priority strategic action plans with objectives and implementation tasks that are intended to be completed in the next five years. The over-arching strategic goals and strategic action plan objectives remain consistent with the 2001 Plan. The accomplishment of specific implementation tasks and performance elements will be dependent upon agency budgets, and in some cases, legal or regulatory changes.

There have been significant advances in policy, information exchange, program activity, public awareness and control and management tools for invasive species since the 2001 Plan. A more strategic approach to prevent and minimize harm caused by invasive species over the next five years involves taking advantage of what has been learned, and creating next steps that are well planned and coordinated.

Within each implementation task, there are indices of progress called "Performance Elements."

3151

Each performance element identifies the federal agency that has a leadership (Lead) or a participant role. Because of the varied nature of the work, the responsibilities associated with a lead or participant role varies among performance elements. The specific responsibilities of leads and participants will be determined by those engaged in the work. At a minimum, participants will play a role in and provide information concerning that agency's actions on that performance element. Leads will play a major role by providing their agency's information, and will also be the primary source of information concerning joint accomplishments for that performance element. Information provided by leads and participants will be summarized in reports prepared by NISC staff.

Prevention

STRATEGIC GOAL 1: ***Prevent introduction and establishment of invasive species to reduce their impact on the environment, economy and health of the United States.***

Introduction

Prevention is the first-line of defense. It can be the most cost-effective approach because once a species becomes widespread; controlling it may require significant and sustained expenditures. Therefore, public investment in prevention tools, resources and infrastructure is indispensable in protecting human health, agriculture and natural resources. Since the original Plan was written in 2001, progress has been made on risk analyses, screening processes, evaluation of pathways, and the scientific understanding of the ecological effects of invasive species. A joint Aquatic Nuisance Species Task Force (ANSTF)/NISC Prevention Committee is currently addressing prevention issues.

Long-term success in prevention will reduce the rate of introduction, the rate of establishment and the damage from additional invasive species in the United States. Measuring success requires accurate baseline data and monitoring systems to measure long-term trends. The Implementation Tasks identified in the 2008 Plan focus on accomplishing a limited number of important and achievable tasks related to prevention within the next five years. This will substantially contribute toward the accomplishment of the Strategic Goals and Objectives.

OBJECTIVE P.1: PREVENT ESTABLISHMENT OF INTENTIONALLY INTRODUCED INVASIVE SPECIES. *Develop fair and practical screening processes that evaluate different types of species moving intentionally in trade. Encourage agencies to modify and incorporate the processes into their own regulatory and non-regulatory programs.*

- **Implementation Task P.1.1:** Develop screening processes to evaluate invasiveness of plants which are intended for planting and are moving in trade.

  Performance Element P.1.1.1: APHIS publishes proposed rule(s) on intentional introduction of potentially invasive plant species, including mechanisms to evaluate invasiveness potential and restrict introduction of species likely to be invasive.
  Lead: USDA (APHIS)
  Participants: USTR; USDA (CSREES, ARS, NRCS, FS)

3153

- **Implementation Task P.1.2:** Develop screening processes to evaluate invasiveness of terrestrial and aquatic nonnative wildlife (e.g., fish, mollusks, crustaceans, mammals, birds, reptiles and amphibians) moving in trade.

  Performance Element P.1.2.1: Develop a draft screening process.
  Leads: DOI (FWS); DOC (NOAA)
  Participants: DOI (USGS, NPS); USDA (APHIS, ARS); USTR; EPA

- **Implementation Task P.1.3:** Develop a process to identify high-priority invasive plants, animals, and plant or animal pathogens for agencies' actions.

  Performance Element P.1.3.1: Prioritization process will be developed and distributed widely via the internet, at www.invasivespecies.gov> and <www.invasivespeciesinfo.gov> for agency use.
  Lead: USDA (APHIS)
  Participants: USDA (ARS, CSREES, NRCS, ERS); DOI (FWS); USTR

OBJECTIVE P.2: PREVENT ESTABLISHMENT OF UNINTENTIONALLY INTRODUCED INVASIVE SPECIES INTRODUCED THROUGH HIGH RISK PATHWAYS.

- **Implementation Task P.2.1:** Reduce the movement of invasive plants pests and pathogens with propagative plant material.

  Performance Element P.2.1.1: APHIS will publish proposed rule(s) to revise the Quarantine on Plants for Planting (known as "Q37").
  Lead: USDA (APHIS)
  Participant: USDA (ARS)

  Performance Element P.2.1.2: Contribute to the development of a new International Plant Protection Convention (IPPC) standard for Plants for Planting that protects against pests.
  Lead: USDA (APHIS)
  Participants: USDA (ARS, FS)

- **Implementation Task P.2.2:** Sponsor research on new technologies for ballast water management and formally assess their efficacy. Sponsor research on other ship-based pathways, assessing their impacts to the environment.

  Performance Element P.2.2.1: Complete a minimum of five full scale projects.
  Lead: DOC (NOAA)
  Participants: DHS (CG); DOI; DOT (OST, MARAD, SLSDC); EPA; DOD (COE)

  Performance Element P.2.2.2: Initiate other ship-based pathways studies.
  Leads: DOC (NOAA); DHS (CG)
  Participants: EPA; DOT

  Performance Element P.2.2.3: Support additional research

efforts to mitigate movement of invasive species by aquatic recreation.
Lead: (DOI) FWS
Participants: DOC; DOI (USGS); EPA

- **Implementation Task P.2.3:** Support efforts in new techniques or practices to reduce the spread of aquatic invasive species through recreational activities.

  Performance Element P.2.3.1: Reduce the spread of zebra and quagga mussels in the Western United States.
  Lead: DOI (FWS, NPS, USGS)
  Participants: None

- **Implementation Task P.2.4:** Reduce movement of invasive species on or in Solid Wood Packing Materials (SWPM).

  Performance Element P.2.4.1: Evaluate the importance of residual bark on SWPM, and take appropriate management or regulatory measures.
  Lead: USDA (APHIS)
  Participants: USDA (FS, ARS); DHS; USTR

OBJECTIVE P.3: IMPROVE THE INTERNATIONAL, FEDERAL, STATE, AND TRIBAL STANDARDS AND GUIDELINES TO PROTECT THE UNITED STATES FROM INVASIVE SPECIES.

- **Implementation Task P.3.1:** Strengthen and/or support the development of risk-based sanitary and phytosanitary international standards and guidelines under IPPC, Office International des Epizooties (OIE), North American Plant Protection Organization (NAPPO) and other international fora.

  Performance Element P.3.1.1: In cooperation with others, APHIS will approve and implement sanitary and phytosanitary standards developed in the appropriate international fora.
  Lead: USDA (APHIS)
  Participants: DOS; USDA (ARS); NISC; USTR; EPA; DOI (FWS)

  Performance Element P.3.1.2: Provide training and capacity building for developing nations to assist them in understanding, adopting, and implementing international standards and guidelines for sanitary and phytosanitary measures.
  Lead: USDA (FAS)
  Participants: USDA (APHIS); DOI (FWS, USGS); USAID; USTR

- **Implementation Task P.3.2:** Improve and expand domestic and international risk analysis processes. Include new risk methodologies and scientific advances in understanding invasive species. Expand the scope of conducting risk assessments to include all nonnative terrestrial and aquatic organisms moved as a result of human activity or action.

  Performance Element P.3.2.1: Revise 1996 Aquatic Nuisance Species Task Force (ANSTF) risk analysis process; submit draft for review in 24 months, and finalize in 36 months.
  Leads: DOC (NOAA); DOI (USGS); ANSTF
  Participants: NISC, DOI (FWS); DOS; EPA; USDA (APHIS, ARS); DOD (COE); USTR

  Performance Element P.3.2.2: Provide training and capacity building for developing nations to assist them in utilizing new risk assessment methodologies and incorporate scientific advances in the understanding of invasive species.
  Lead: USDA (FAS)
  Participants: USDA (APHIS, ARS); USAID; DOS

  Performance Element P.3.2.3: Provide training in Hazard Analysis and Critical Control Points (HACCP) and other risk-based methods to minimize introduction of invasive species.
  Lead: DOI (FWS)
  Participants: USDA (APHIS); DOC (NOAA)

- **Implementation Task P.3.3:** Design a process to identify and rank pathways by invasive species risk. Encourage agencies to modify and incorporate the process into their own regulatory and nonregulatory programs.

  Performance Element P.3.3.1: Prepare a final draft of the pathway analysis process in 24 months; complete, **distribute and encourage use** in 36 months.
  Lead: USDA (APHIS)
  Participants: DOC (NOAA); DOI (FWS, USGS); USDA (FS, ARS); EPA; USTR; NISC Staff

- **Implementation Task 3.4:** Integrate agency data sets to improve assessment of invasive species threats prior to arrival.

  Performance Element P.3.4.1: Three (3) or more data sets are integrated and utilized.
  Lead: USDA (APHIS)
  Participants: USDA (ARS, FS, CSREES, NRCS); DHS

- **Implementation Task P.3.5:** Support efforts by non-federal stakeholders to develop/enhance codes of conduct and Best Management Practices (BMPs).

  Performance Element P.3.5.1: Encourage non-federal stakeholders to publish codes of conduct and BMPs on the Web.
  Lead: NISC Staff
  Participants: DOC (NOAA); DOI (FWS, BLM); USDA (APHIS, FS, NRCS, ARS); DOS

- **Implementation Task P.3.6:** Share BMPs among NISC members to prevent or mitigate invasive species establishment or movement.

  Performance Element P.3.6.1: Distribute any new BMPs that NISC Staff are made aware of to all relevant NISC members **and other interested parties.**
  Lead: NISC Staff
  Participants: All NISC Members

Early Detection and Rapid Response

STRATEGIC GOAL 2: *Develop and enhance the capacity to identify, report and effectively respond to newly discovered/localized invasive species.*

Introduction

Even the best prevention efforts cannot stop all invasive species. Early detection, rapid assessment and rapid response (EDRR) is a critical second defense against the establishment of invasive populations. EDRR increases the likelihood that localized invasive populations will be found, contained, and eradicated before they become widely established. EDRR can slow range expansion, and avoid the need for costly long-term control efforts. Effective EDRR depends upon the timely ability to answer critical questions such as:

a) What is the species of concern, and has it been authoritatively identified?
b) Where is it located and likely to spread?
c) What harm may the species cause?
d) What actions (if any) should be taken?
e) Who has the needed authorities and resources?
f) How will efforts be funded?

EDRR requires collaboration among federal, tribal, state, local governments, nongovernment organizations (NGOs) and the private sector. The ability to conduct EDRR has improved, and a great deal is being accomplished. NISC continues to assess the current federal capabilities and encourage agencies to enhance their EDRR activities. However, access to invasive species taxonomic and mapping information, funds, and technical resources limit efforts.

There are three components of EDRR–Early Detection (ED), Rapid Assessment (RA), and Rapid Response (RR).

In order to conduct EDRR, invasive species populations must first be found. Specimens have to be authoritatively identified, and the boundaries of the infestations determined. These essential ***Early Detection (ED)*** efforts require resources, planning, and coordination. Invasive species are often detected by chance, but they can also be detected by trained individuals and personnel through targeted invasive species surveys and by monitoring specific areas. Area monitoring, taxonomic resources and species surveys provide the information needed to construct accurate distribution maps. Maps and other ecological/biological information are critical to planning and response actions. However, invasive species monitoring, mapping, and taxonomic resources and capabilities are still lacking for much of the United States.

Rapid Assessment (RA) encompasses actions necessary to determine the appropriate response, including the current and potential range of the invasive species' infestation(s). The RA process identifies the invasive species interdiction options, timing and overall strategy for actions and provides reliable information to the public. Advanced planning that anticipates invasions and takes into account that transjurisdictional issues greatly expedites efforts.

Rapid Response (RR) is a systematic effort to eradicate or contain invasive species while infestations are still localized. RR may address totally new introductions into the United States or range expanding infestations of previously established species. Timeliness is key to RR. It is critical to quickly mobilize resources to intensely control an infestation before it becomes more widely established. Many RR efforts are led by State or local officials working with private landowners. Invasions can rapidly overwhelm local resources. The ability to share resources across jurisdictional boundaries, form strategic partnerships, and have "ready" access to plans, funds and technical resources are critical components of RR.

OBJECTIVE EDRR.1: ENHANCE CURRENT MONITORING EFFORTS FOR EARLY DETECTION.

- **Implementation Task EDRR.1.1:** Identify and evaluate monitoring efforts for high-priority invasive species and supporting technological infrastructure including an evaluation of their geographic and temporal coverage.

  Performance Element EDRR.1.1.1: Evaluate monitoring efforts for high-priority invasive species and make recommendations to address critical gaps.
  Leads: USDA (APHIS); DOI (USGS)
  Participants: USDA (ARS, CSREES, FS, NRCS); DOI (NPS, FWS, BLM); DOC (NOAA); EPA; DHS; DOD (COE)

- **Implementation Task EDRR.1.2:** Prepare protocols to identify high priority locations for targeted monitoring efforts. Initiate three systematic monitoring pilot programs.

  Performance Element EDRR.1.2.1: Develop protocols; select monitoring programs/locations and implement pilot projects.
  Leads: DOI (USGS); USDA (APHIS)
  Participants: DOI (FWS); DOT; DHS; DOC (NOAA); EPA; USDA (FS, CSREES, ARS)

- **Implementation Task EDRR.1.3:** Improve and support recruitment and training of volunteers for EDRR efforts at the local level, utilizing existing programs and infrastructure (such as Master Gardeners, Master Naturalists, Cooperative Extension, Sea Grant, National Wildlife Refuge "Friends" Groups, 4-H Groups, National Park support groups, and others).

  Performance Element EDRR.1.3.1: Develop guidance for volunteer training on at least one monitoring program. Publish guidance on invasivespeciesinfo.gov.
  Lead: USDA (APHIS)
  Participants: DOI (USGS, FWS, NPS, BLM); USDA (CSREES, FS, ARS, NRCS); DOD (COE); DOC (NOAA)

  Performance Element EDRR.1.3.2: Develop at least two citizen-based networks to detect and monitor for new invasive species.
  Lead: DOI (FWS)
  Participants: DOC (NOAA); DOI (NPS, BLM); USDA (FS, NRCS, CSREES); EPA

- **Implementation Task EDRR.1.4:** Enhance plant and animal pathogen detection methods.

  Performance Element EDRR.1.4.1: Develop enhanced identification methods and supportive technologies for at least one group of pathogens.
  Lead: USDA (ARS)
  Participants: DOI (USGS); DHS; HHS; DOD; EPA; USDA (APHIS, CSREES, FS)

OBJECTIVE EDRR.2: MAKE TAXONOMIC INFORMATION MORE READILY AVAILABLE TO GOVERNMENTS AND THE PUBLIC.

- **Implementation Task EDRR.2.1:** Develop or enhance taxonomic expert lists to facilitate identification of terrestrial and aquatic organisms.

  Performance Element EDRR.2.1.1: Identify taxonomic experts for terrestrial plants, invertebrates and vertebrates, plant and animal pathogens, and make their contact information available, as appropriate.
  Leads: USDA (ARS); SI
  Participants: USDA (APHIS, CSREES, NRCS); DOI (USGS)

  Performance Element EDRR.2.1.2: Finalize and maintain an updated database of taxonomic experts who can identify invertebrate and vertebrate aquatic species.
  Leads: DOC (NOAA); DOI (USGS)
  Participants: USDA (APHIS)

OBJECTIVE EDRR.3: DEVELOP AND ENHANCE CAPACITY AND TOOLS TO SUPPORT EDRR EFFORTS.

- **Implementation Task EDRR.3.1:** Prepare protocols to evaluate and map invasive species risks.

  Performance Element EDRR.3.1.1: Test protocols by mapping current and potential extents of three high-priority invasions.
  Leads: USDA (APHIS); DOI (FWS, USGS)
  Participants: USDA (CSREES, ERS, FS, NRCS, ARS); DHS ; DOC (NOAA); EPA ; NASA; DOD (COE)

- **Implementation Task EDRR.3.2:** Engage risk assessment experts to provide authoritative and timely assessments of current or potential invasions.

  Performance Element EDRR.3.2.1: Prepare lists of risk experts for major groups of invasive species (such as plants, terrestrial species, plant pathogens, animal pathogens, or aquatic species.) Identify gaps in available expertise.
  Leads: DOI (USGS); USDA (APHIS)
  Participants: USDA (ARS, CSREES, ERS, FS, NRCS); DOI (FWS, NPS); DOC (NOAA); DHS; HHS; SI; EPA; DOD (COE)

- **Implementation Task EDRR.3.3:** Develop and evaluate the use of predictive models to forecast the spread of specific invasive species.

  Performance Element EDRR.3.3.1: Develop and test models to forecast spread of two invasive species.
  Leads: DOI (USGS); USDA (ARS)
  Participants: EPA, USDA (APHIS, CSREES, ERS, FS); DOI (FWS, NPS, BLM); DOC (NOAA); HHS; SI; DOD (COE)

OBJECTIVE EDRR.4: ENHANCE EXISTING CAPABILITY TO CONDUCT PLANNING FOR EDRR.

- **Implementation Task EDRR.4.1:** Prepare model guidance or plans that encourage RR contingency planning at the appropriate level (such as, international, national, state, regional or local). Include planning for communications, response funding, cooperative mechanisms and other relevant issues.

  Performance Element EDRR.4.1.1: Identify and evaluate existing RR plans and identify effective mechanisms to enhance cooperation among and between state and federal agencies, and make this information available to response agencies.
  Leads: USDA (APHIS); DOC (NOAA)
  Participants: USDA (CSREES, NRCS, ARS); HHS; EPA; DOD; NASA; DOD (COE); DOI (FWS)

  Performance Element EDRR.4.1.2: Identify and describe existing international EDRR cooperation efforts among regional neighbors and trading partners.
  Leads: DOS; USTR; NISC Staff
  Participants: All NISC Members

OBJECTIVE EDRR.5: DEVELOP OPTIONS PAPER TO FUND RAPID RESPONSE EFFORTS.

- **Implementation Task EDRR.5.1:** Work with ISAC, states and others to develop mechanisms for cooperation and funding rapid response efforts, such as options for matching grants to states.

  Performance Element EDRR.5.1.1: Explore and prepare options for cooperation and funding RR; and submit to NISC for discussion and selection of preferred alternative(s).
  Lead: NISC Staff
  Participants: DOI (FWS, BLM, NPS); DOD (COE)

3161

- **Implementation Task EDRR.5.2:** Explore options for research funding for preparedness and other programs that are required for RR.

  Performance Element EDRR 5.2.1: Prepare and submit to NISC options for funding research for EDRR.
  Lead: NISC Staff
  Participants: USDA (CSREES, APHIS, ARS, FS)

Control and Management

STRATEGIC GOAL 3: *Contain and reduce the spread and populations of established invasive species to minimize their harmful impacts.*

Introduction

Eradication of widespread invasive species may not be feasible. Widespread invasive species are subject to control and management efforts that slow the rate of range expansion and lessen the impacts of invasive populations.

Invasive species can span geographic and jurisdictional boundaries. Their control and management requires interjurisdictional communication and regionally coordinated action. Information on the distribution, abundance, rates of spread, and impacts of invasive species is critical to their control.

Impacts of terrestrial invaders differ from those of aquatic species, and impacts also differ from taxon to taxon. Understanding the ecological, economic, and social impacts of invasive species is important in prioritizing control and management operations.

A variety of control and management tools is needed to assess, remove and contain invasive species populations and guide management decisions. These tools are applied within coordinated and integrated invasive species management strategies that are adjusted, as needed. Lack of financial and human resources often limits the capacity to control and manage invasive species.

OBJECTIVE CM.1: EVALUATE CONTROL AND MANAGEMENT CAPABILITIES AND IDENTIFY STRATEGIC GAPS.

- **Implementation Task CM.1.1:** Identify and evaluate regional invasive species control and management efforts.

  Performance Element CM.1.1.1: Identify and evaluate three regional control and management efforts including their geographic coverage (such as, regions, states or countries within North America.)
  Lead: DOI (BLM)
  Participants: DOI (FWS, BOR, NPS) DOD (COE); USDA (CSREES, NRCS, APHIS)

  Performance Element CM.1.1.2: Benchmark, compare and report on at least three control programs within broader regional efforts.
  Lead: USDA (APHIS)
  Participants: USDA (FS, NRCS, ARS)

3163

- **Implementation Task CM.1.2:** Identify and address strategic gaps in regional invasive species control and management efforts and tools.

  Performance Element CM.1.2.1: Identify three priority species or locations (including international border locations, if appropriate) that need additional or enhanced control methods.
  Lead: NISC Staff (to collate information)
  Participants: DOI (FWS, BLM, NPS, USGS, BOR); USDA (NRCS, APHIS); DOS; DOC (NOAA); DOD (COE)

  Performance Element CM.1.2.2: Evaluate, develop or enhance three or more biological, chemical, physical or other control methods.
  Leads: USDA (ARS); DOI (USGS); DOD (COE)
  Participants: USDA (FS, NRCS, APHIS) ; DOI (FWS)

  Performance Element CM.1.2.3: Increase acres of land or water included in regional invasive species control and management programs.
  Lead: NISC Staff (to collate information)
  Participants: USDA (NRCS, APHIS); DOI (FWS, BLM, NPS); DOD; DOD (COE)

OBJECTIVE CM.2: REDUCE THE SPREAD AND HARM CAUSED BY INVASIVE SPECIES.

- **Implementation Task CM.2.1:** Reduce the spread of invasive species.

  Performance Element CM.2.1.1: Increase the number of cleaning treatments conducted to address pathways of spread such as potentially contaminated equipment, hikers, anglers, recreation vehicles, watercraft or other conveyances. Monitor effectiveness.
  Leads: USDA (FS); DOD (COE); DOI (BLM)
  Participants: USDA (APHIS, NRCS); DOT ; DOI (NPS, FWS)

  Performance Element CM.2.1.2: Increase the number of acres treated. Encourage state and private sector partners to take steps to reduce the spread of invasive species by utilizing protective measures such as, requiring the use of weed-free forage, mulch, seed, gravel and other materials; restricting the movement of contaminated firewood and having live bait restrictions or other methods that reduce the spread of invasive species.
  Lead: DOI (BLM)
  Participants: USDA (APHIS, NRCS); DOI (NPS, FWS); DOD (COE)

- **Implementation Task CM. 2.2:** Support on-the-ground control and management efforts.

  Performance Element CM.2.2.1: Increase the percentage of high priority, at-risk acres treated according to science-based plans that monitoring has demonstrated to have been implemented successfully.
  Lead: NISC Staff (to collate information)
  Participants: USDA (APHIS, FS, ARS); DOD (COE)

  Performance Element CM.2.2.2: Increase the ratio of projects technically supported vs. the total number of on-the-ground projects requesting technical support.
  Lead: NISC Staff (to collate information)
  Participants; USDA (APHIS); DOI (BLM, FWS, NPS); DOD (COE)

  Performance Element CM. 2.2.3: Increase the number of on-the-ground projects technically supported.
  Lead: NISC Staff (to collate information)
  Participants: USDA (APHIS, ARS, FS, NRCS); DOD; DOI (BLM, FWS, NPS); DOD (COE)

  Performance Element CM. 2.2.4:. Increase the number of acres receiving "on-the-ground" control and management treatments.
  Lead: NISC Staff (to collate information)
  Participants: USDA (APHIS, FS, NRCS, ARS); DOI (BLM, FWS, NPS); DOD (COE)

OBJECTIVE CM.3: DEVELOP WORKFORCE COMPETENCIES TO PERFORM CONTROL AND MANAGEMENT ACTIVITIES.

- **Implementation Task CM. 3.1:** Increase invasive species training for land and water resource managers, and others as appropriate.

  Performance Element CM. 3.1.1: Increase the number of training workshops, training materials developed, and total number of personnel and volunteers trained, including but not limited to, training in Integrated Pest Management.
  Leads: USDA (CSREES); DOI (FWS)
  Participants: DOI (BLM, NPS); USDA (CSREES, NRCS, ERS, ARS); DOD; DOD (COE)

3165

OBJECTIVE CM.4: ENHANCE ECOSYSTEM RECOVERY PROCESSES THAT CONTRIBUTE TO CONTROL AND MANAGEMENT.

- **Implementation Task CM.4.1:** Enhance ecosystem recovery decision tools and conduct ecosystem assessments.

  Performance Element CM.4.1.1: Increase the efficiency, accuracy, and precision of monitoring and mapping operations.
  Lead: DOI (USGS)
  Participants: USDA (APHIS, NRCS, ARS, ERS, CSREES); NASA; DOD (COE)

  Performance Element CM.4.1.2: Enhance ecosystem recovery models and evaluate ecosystem assessment methods.
  Lead: DOD (COE)
  Participants: DOI (USGS); USDA (FS, ARS, CSREES)

  Performance Element CM.4.1.3: Report the number of acres and species monitored and mapped.
  Lead: NISC Staff (to collate information)
  Participants: DOI (USGS, FWS, BLM); USDA (FS, NRCS, ARS); NASA; DOD (COE)

Restoration

STRATEGIC GOAL 4: ***Restore native species and habitat conditions and rehabilitate high-value ecosystems and key ecological processes that have been impacted by invasive species to meet desired future conditions.***

Introduction

Restoration treatments are an integral part of control and management efforts to help guard against future re-infestations and further harm. Section 2(a) (2) of EO 13112 charges Federal agencies to "provide for restoration of native species and habitat conditions in ecosystems that have been invaded". Additionally, Section 4 (d) of EO 13112 calls on NISC to develop guidance, in coordination with the Council on Environmental Quality (CEQ), "including the procurement, use and maintenance of native species as they affect invasive species." New restoration guidance will be shared widely with federal, tribal, state, and private landowners and water managers.

Habitats and ecological processes can suffer cumulative impacts from the direct and indirect effects of invasive species and other environmental stressors. Complex ecological relationships that have evolved over evolutionary time scales can be at risk if invasive species interrupt nutrient cycling, pollination, predator/prey relationships or other ecological processes and services. Processes altered by human activity may promote invasion by inhibiting the reproduction and/or survival of native or desirable species.

The 2001 Plan recognized the importance of using native species to restore long-term ecosystem resiliency. For shorter term rehabilitation and site stabilization, both native and desired nonnative species appropriate to the site have been used successfully. Evaluation of available materials that can successfully compete with invasive species is needed, as is the development of new materials. These will serve as an ecological transition while native components and ecosystem processes develop. Assessment of the ecosystem's desired future condition and restoration potential across a range of spatial scales allows managers to strategically control and eradicate invasive species and to restore habitats with appropriate species. These efforts can result in lower control costs, increased effectiveness, and improved chances for ecosystem restoration success.

OBJECTIVE R.1: INCLUDE INVASIVE SPECIES CONSIDERATIONS IN FORMAL GUIDANCE FOR RESTORATION PROJECTS.

- **Implementation Task R.1.1:** Address invasive species concerns in planning for restoration projects in federal land and water management field and guidance manuals.

  Performance Element R.1.1.1: Amend existing or develop new land use planning protocols and Best Management Practices within federal agencies to include restoration activities to mitigate impacts of invasive species.
  Leads: DOI (NPS, BLM); USDA (FS)
  Participants: DOI (FWS); USDA (NRCS);DOD (COE and other agencies); DOC (NOAA)

3167

Performance Element R.1.1.2: Identify sources of native and appropriate nonnative materials for restoration projects carried out by federal agencies.
Leads: DOI (NPS); USDA (NRCS)
Participants: USDA (FS, CSREES, ARS); DOD (COE and other agencies; DOI (FWS, BLM)

Performance Element R.1.1.3: Incorporate invasive species prevention plans, such as those that utilize HACCP, into federally-funded or authorized restoration projects.
Lead: NISC Staff (to collate information)
Participants: DOI (BIA, BLM, BOR, FWS, NPS); USDA (FS, NRCS); EPA; DOD; NOAA

OBJECTIVE R.2: RESTORE HIGH-VALUE AREAS IMPACTED BY INVASIVE SPECIES.

- **Implementation Task R.2.1:** Restore sites that have the highest ecological or economic value or contribute most to protecting human health.

Performance Element R.2.1.1: Conduct and report on four interagency restoration projects that demonstrate the success of information sharing, plant (and animal) materials sharing, techniques for cost-effective modeling, and documentation of results, including decision support tools.
Leads: NISC staff, DOI (FWS, BLM, NPS); USDA (NRCS); DOD (COE)
Participants: DOI (BOR, USGS); DOD; USDA (APHIS, FS, ARS); EPA

Performance Element R.2.1.2: Provide technical assistance on the species and methods to use in restoring native species, including the use of low impact, nonnative or "transitional" species where appropriate.
Leads: DOI (FWS); USDA (NRCS); DOD (COE)
Participants: DOI (NPS, BLM, BOR, USGS); USDA (FS, APHIS, ARS)

Performance Element R.2.1.3: Provide technical assistance on site selection, site modification, and prioritization for restoration projects.
Leads: DOI (FWS, USGS); DOD (COE)
Participants: DOI (NPS, BLM, BOR); USDA (APHIS, NRCS)

Performance Element R.2.1.4: Conduct at least four (4) information sharing projects with stakeholders about invasive species restoration projects.
Lead: USDA (NRCS)
Participants: USDA (APHIS, ARS); DOD; DOI (FWS, USGS); DOC (NOAA)

OBJECTIVE R.3: RESTORE HABITAT AT MULTIPLE SCALES AND DEMONSTRATE MODEL APPROACHES THAT ENGAGE LOCAL COMMUNITIES AND THE PUBLIC.

- **Implementation Task R.3.1:** Coordinate multi-taxa restoration projects at the regional, watershed or landscape level (Healthy Lands Initiative, for example), addressing water quality, fisheries (both fresh and marine), and terrestrial plants and animals (including their pests and pathogens) in restoration planning.

Performance Element R.3.1.1: Work across agencies to create demonstration projects in at least three geographic or regional focus areas over the next three years.
Leads: DOI (FWS, NPS, BLM); DOD (COE)
Participants: DOI (BOR, USGS); DOC (NOAA); EPA

Performance Element R.3.1.2: Document four successful restoration projects involving recovery from invasive species impacts, for example on private lands or in coastal environments, with nongovernmental cooperators.
Leads: NISC staff; DOI (FWS); DOD (COE)
Participants: EPA; DOD

Performance Element R.3.1.3: Document four successful fire rehabilitation and fuels treatment projects involving recovery from invasive species impacts on different kinds of public lands (such as range, forest, shrub, and steppe).
Leads: NISC staff; USDA (FS); DOI (BLM)
Participants: DOI (OWFC, FWS, NPS, BIA)

3169

Organizational Collaboration

STRATEGIC GOAL 5: ***Maximize organizational effectiveness and collaboration on invasive species issues among international, federal,state, local and tribal governments, private organizations and individuals.***

OBJECTIVE OC.1: IMPROVE KNOWLEDGE AND UNDERSTANDING OF LEGAL AND REGULATORY TOOLS AVAILABLE TO ADDRESS INVASIVE SPECIES.

- **Implementation Task OC.1.1:** Complete an analysis of current federal laws and regulations dealing with invasive species.

  Performance Element OC.1.1.1: Complete a brief status report based on the existing legal and regulatory analyses.
  Lead: NISC Staff
  Participants: DOI; USDA; DOC and other NISC members as appropriate

- **Implementation Task OC.1.2:** Provide information and briefings as requested on invasive species issues.

  Performance Element OC.1.2.1: NISC will respond to requests for information or briefings within 30 days.
  Lead: NISC Staff
  Participants: NISC members as appropriate

OBJECTIVE OC.2: EXPAND THE COORDINATION OF INVASIVE SPECIES PROGRAMS AND EXPENDITURES TO LEVERAGE RESOURCES.

- **Implementation Task OC.2.1:** Update the invasive species crosscut budget for Federal agency expenditures concerning invasive species, changing its name to the **Invasive Species Inter-Agency Performance Budget** (Performance Budget). Request input from ISAC, ANSTF, Federal Interagency Committee on the Management of Noxious and Exotic Weeds (FICMNEW), and the Federal Interagency Committee on Invasive Terrestrial Animals and Pathogens (ITAP) on initiatives to be included in future Performance Budgets.

  Performance Element OC.2.1.1: Complete Performance Budgets for fiscal years 2010, 2011, 2012 and 2013 as directed, along with reports on prior year's performance.
  Lead: NISC Staff
  Participants: All NISC members

3170

OBJECTIVE OC.3: IMPROVE FEDERAL RESEARCH CAPACITY AND COORDINATION TO ADDRESS A BROADER ARRAY OF INVASIVE SPECIES ISSUES.

- **Implementation Task OC.3.1:** Improve the coordination and effectiveness of federal research.

  Performance Element OC.3.1.1: Establish an Invasive Species Working Group under the OSTP/Committee on Environment and Natural Resources/Subcommittee on Ecological Systems, to coordinate existing federal invasive species research activities and outline federal research priorities by February 2009.
  Lead: DOI (USGS)
  Participants: DOC (NOAA); EPA; DOD; NASA; DOS

  Performance Element OC.3.1.2: Provide research results on invasive species or summaries, as appropriate, and take steps to make information provided by agencies more readily available.
  Lead: USDA (ARS/NAL)
  Participants: NISC Staff; USDA (ARS, FS, ERS, CSREES); DOI (USGS); EPA; DOC (NOAA); NASA; DOD

- **Implementation Task OC.3.2:** Improve economic modeling of invasive species impacts.

  Performance Element OC 3.2.1: Improve modeling of invasive species prevention actions to determine their costs and benefits.
  Lead: USDA (ERS)
  Participants: EPA

  Performance Element OC 3.2.2: Improve economic modeling of control and management actions to determine their costs and benefits.
  Lead: USDA (ERS)
  Participant: DOC (NOAA); EPA

  Performance Element OC 3.2.3: Develop cost and benefit analysis models of alternative control methods.
  Leads: USDA (FS, CSREES, NRCS, APHIS, ERS)
  Participants: *None*

OBJECTIVE OC.4: ENHANCE POLICY AND IMPROVE REGULATORY PROCESSES ON INVASIVE SPECIES.

- **Implementation Task OC.4.1:** As required by EO 13112, prepare, in cooperation with the President's Council on Environmental Quality (CEQ), guidance to federal agencies to prevent and control invasive species that is fully compliant with the National Environmental Policy Act (NEPA).

Performance Element OC.4.1.1: Prepare draft NEPA guidance for CEQ consideration and finalize.
Leads: NISC Staff, CEQ
Participants: All NISC members

- **Implementation Task OC.4.2:** Collect, organize and make available federal agency guidance to prevent, control and manage invasive species.

  Performance Element OC.4.2.1: Each NISC agency shall make available their existing policies on prevention, EDRR, and control of invasive species.
  Lead: NISC Staff
  Participants: All NISC members

- **Implementation Task OC.4.3:** Develop an improved regulatory process for the development, testing, assessment and approval of biological control agents.

  Performance Element OC.4.3.1: Implement improved regulatory process.
  Lead: USDA (APHIS)
  Participants: USDA (ARS, CSREES, NRCS)

OBJECTIVE OC.5: STRENGTHEN COORDINATION AMONG FEDERAL AGENCIES TO FACILITATE THE DEVELOPMENT OF INTERNATIONAL PRIORITIES FOR INVASIVE SPECIES.

- **Implementation Task OC.5.1:** Promote and facilitate communication on international invasive species issues and activities.

  Performance Element OC.5.1.1: NISC staff prepares the monthly report of upcoming international meetings on invasive species to be distributed to federal agencies and others.
  Leads: NISC Staff; DOS
  Participants: USTR, USAID, DHS, EPA; DOD (COE)

- **Implementation Task OC.5.2:** Represent NISC interests in the formulation of United States policy positions related to invasive species in the context of discussions under relevant international organizations and agreements, e.g. Convention on Biological Diversity (CBD), International Plant Protection Convention (IPPC), Organisation International de Epizooties (OIE), World Health Organization (WHO), Food and Agriculture Organization (FAO), International Maritime Organization (IMO) and other relevant global or regional fora.

  Performance Element OC.5.2.1: In cooperation with federal agencies, NISC will contribute to the development of United States positions on invasive species during preparation for relevant international meetings.
  Leads: DOS; NISC Staff
  Participants: NISC members as appropriate

- **Implementation Task OC.5.3:** As appropriate, seek to incorporate invasive species issues into the environmental cooperation mechanisms developed in connection with free trade agreements (FTA).

  Performance Element OC.5.3.1: Department of State-led interagency working groups on FTA environmental cooperation mechanisms will assist in developing cooperative activities related to invasive species.
  Lead: DOS
  Participants: USTR, EPA, DOI, USDA (FAS, ERS, ARS, APHIS); DOC

OBJECTIVE OC.6: ENHANCE OUTREACH ON INVASIVE SPECIES.

- **Implementation Task OC.6.1:** Determine approaches regarding invasive species pathways for strategic outreach to targeted user groups and businesses.

  Performance Element OC.6.1.1: Develop outreach materials for target audiences cooperatively with relevant stakeholders and make available through the internet.
  Leads: DOC (NOAA); USDA (APHIS)
  Participants: USDA (FS, NRCS, ARS, FAS); DOI (FWS)

- **Implementation Task OC.6.2:** Work with existing educational organizations to enhance invasive species information delivery to primary and secondary educators.

  Performance Element OC.6.2.1: Information about at least eight invasive species or federal invasive species programs provided to educational organizations/invasive species outreach programs and reported to the NISC staff.
  Lead: NISC staff
  Participants: All NISC Members

- **Implementation Task OC.6.3:** Develop basic messages for common public awareness concerning invasive species for NISC member agencies and staff to utilize.

  Performance Element OC.6.3.1: Communicate clear and consistent general messages on invasive species to all NISC members and stakeholders, so that they may include these points when a new invasive species action, regulation or policy is announced. Communicate via the Internet.
  Lead: NISC Staff
  Participants: All NISC members

OBJECTIVE OC.7: IMPROVE AND STREAMLINE NISC MEMBERS' REPORTING ON INVASIVE SPECIES PROGRAMS AND ACTIVITIES.

- **Implementation Task OC.7.1:** The following reports are required.

  Performance Element OC.7.1.1: Each NISC member submits one formal (draft and final) report per fiscal year, tracking the implementation of the NISC 2008 Plan. NISC Staff will complete a streamlined reporting template within three months. Annual summary report by NISC is available on its website by February 28 of each year along with the individual NISC member reports.
  Lead: NISC Staff
  Participants: All NISC Members

  Performance Element OC.7.1.2: NISC members provide a consistently formatted written report in response to ISAC recommendations, action items and requests.
  Lead: NISC staff (in consultation with ISAC)
  Participants: All NISC Members

  Performance Element OC.7.1.3: Report on agency participation in the NISC Invasive Species Performance (Crosscut) Budget.
  Lead: NISC Staff
  Participants: All NISC Members

OBJECTIVE OC.8: ENHANCE DATA STANDARDS AND QUALITY TO IMPROVE ACCESS AND ABILITY TO SEARCH ACROSS DATA BASES AND FEDERAL DATA SOURCES.

- **Implementation Task OC.8.1:** Develop and provide portal and reference information, as well as public access to federal research information, as appropriate and consistent with applicable law.

  Performance Element OC.8.1.1: Summarize research results on invasive species and take steps to make it more readily available based on information provided by agencies.
  Lead: USDA (ARS/NAL)
  Participants: NISC Staff; All NISC Members

  Performance Element OC.8.1.2: Enhance and maintain the NISC website to provide an overview of federal invasive species efforts and policies; access to, and information about NISC member agencies and their invasive species programs and information about NISC, its activities, the Invasive Species Management Plan, and ISAC.
  Lead: NISC Staff
  Participants: All NISC Members

  Performance Element OC.8.1.3: The Invasive Species Compendium will be

developed by interested agencies.
Lead: USDA (ARS)
Participants: USDA (APHIS, CSREES, NRCS); DOC (NOAA)

Performance Element OC.8.1.4: Share information on federal invasive species grant opportunities and programs by linking from the NISC website to grant information on existing agency websites.
Lead: NISC Staff
Participants: All NISC Members

- **Implementation Task OC.8.2:** Work cooperatively to develop common data standards and enhance databases.

  Performance Element OC.8.2.1: Improve and expand participation in the aquatic invasive species information system NISbase.
  Leads: DOI (USGS); DOC (NOAA), SI
  Participants: DOI (FWS, BLM); DOD (COE); USDA (APHIS)

  Performance Element OC.8.2.2: Link and expand databases of invasive plant pathogens.
  Lead: USDA (ARS)
  Participants: USDA (FS, APHIS)

  Performance Element OC.8.2.3: Develop and implement an invasive species pathways database.
  Lead: USDA (APHIS)
  Participants: USDA (ARS, FAS); Other NISC agencies

  Performance Element OC.8.2.4: Enhance the PLANTS database in regard to invasive species and pollinators.
  Lead: USDA (NRCS)
  Participants: USDA (ARS, FS, APHIS)

  Performance Element OC.8.2.5: Improve and expand the U.S. Government's participation in the Global Invasive Species Information Network (GISIN) and the Inter-American Biodiversity Information Network (IABIN).
  Lead: DOI (USGS)
  Participants: DOS; DHS; NASA

Appendix 1: List of Acronyms Used

ANSTF	Aquatic Nuisance Species Task Force
APHIS	Animal and Plant Health Inspection Service
ARS	Agricultural Research Service
BIA	Bureau of Indian Affairs
BLM	Bureau of Land Management
BMP	Best Management Practices
BOR	Bureau of Reclamation
CBD	Convention on Biological Diversity
CDC	Centers for Disease Control and Prevention
CEQ	Council on Environmental Quality
CG	Coast Guard
CM	Control and Management
COE	Army Corps of Engineers
CSREES	Cooperative State Research, Education, and Extension Service
DHS	U.S. Department of Homeland Security
DOC	U.S. Department of Commerce
DOD	U.S. Department of Defense
DOI	U.S. Department of the Interior
DOS	U.S. Department of State
DOT	U.S. Department of Transportation
ED	Early Detection
EDRR	Early Detection and Rapid Response
EO	Executive Order
EPA	U.S. Environmental Protection Agency
ERS	Economic Research Service
FAO	Food and Agriculture Organization
FAS	Foreign Agricultural Service
FICMNEW	Federal Interagency Committee on the Management of Noxious and Exotic Weeds
FS	Forest Service
FTA	Free Trade Agreements
FWS	U.S. Fish and Wildlife Service
GISIN	Global Invasive Species Information Network
HACCP	Hazard Analysis and Critical Control Points
HHS	U.S. Department of Health and Human Services
IABIN	Inter-American Biodiversity Information Network
IMO	International Maritime Organization
IPPC	International Plant Protection Convention
ISAC	Invasive Species Advisory Council

ITAP	Federal Interagency Committee on Invasive Terrestrial Animals and Pathogens
MARAD	U.S. Department of Transportation Maritime Administration
NAL	National Agricultural Library
NAPPO	North American Plant Protection Organization
NASA	National Aeronautics and Space Administration
NEPA	National Environmental Policy Act
NGO	Nongovernmental Organizations
NISC	National Invasive Species Council
NOAA	National Oceanic and Atmospheric Administration
NPS	National Park Service
NRCS	Natural Resources Conservation Service
OC	Organizational Collaboration

WNV	West Nile Virus

2007
Facts

- Invasive species threaten Alaska's ecosystems by displacing native plants, reducing wildlife forage and shelter, altering ecosystem dynamics, and in some cases permanently changing environmental conditions.

- Annual damage from invasive species worldwide estimated at $1.4 trillion.

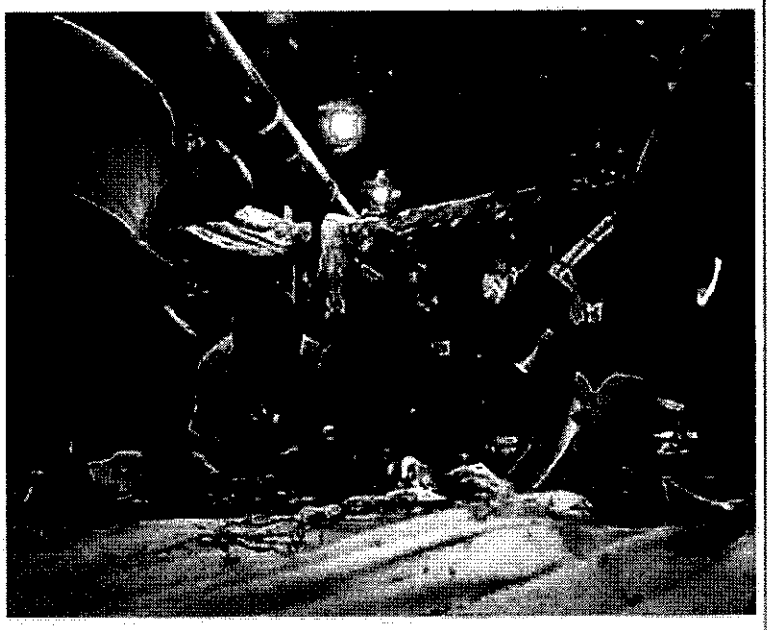
- Idaho is estimated to spend $300 million per year on invasive species control.

- One weed – spotted knapweed – now costs Montana over $14 million/year and covers over 5 million acres. In Alaska, this species has been found at over 10 sites from Ketchikan to Anchorage.

- The number of new invasive plants found in Alaska continues to rise each year.

- Many of the invasive plants in Alaska are not yet widespread and can be controlled quickly and cheaply by taking action NOW.

Alaska does not have this type of first response inspection. These trees were not accepted in Hawaii so were sent on to Alaska. Read on.



DENNIS ODA / DODA@STARBULLETIN.COM
Agricultural officials inspecting more than 3,100 Oregon-grown Christmas trees aboard a Boeing 747 aircraft yesterday found insects amid the trees. The inspectors included Dennis Nagatani, left, Elliot Nakashima, Edward O'Callaghan, Kanani Lai, scooping up an insect into a collection bottle, and Arseno Esteban. The planeload was returned to the mainland.

Wasp discoveries sting sales

Two schools were planning to sell the trees to raise funds

STORY SUMMARY »

They arrived late Thursday, but the journey wasn't quite over for a planeload of Christmas trees from Portland, Ore., which were intended for Oahu school and church fundraisers.

The 747 jet loaded with 3,150 Douglas, noble and grand firs was sent back to the mainland yesterday after the discovery of several types of wasp, two of which are not found in Hawaii.

The Department of Agriculture said it did not have the proper decontamination facilities for the first large-scale air delivery of Christmas trees to the state, so the plane was rerouted to Anchorage, Alaska.

Five churches and schools and one wholesaler were affected. One of the schools, which planned to sell the trees as a part of a fundraising project, said it stands to lose $10,000.

McMinnville, Ore.-based cargo shipper Evergreen International Aviation Inc., which handled the shipment, said it will lose $1 million from the operation.

A planeload of Christmas trees intended for sale by isle fundraisers and wholesalers was sent back to the mainland yesterday after the discovery of several types of wasp, two of which are not found in Hawaii.

The Boeing 747, which arrived in Honolulu Thursday night, contained 3,150 Douglas, noble and grand firs, marking the first large-scale air delivery of Christmas trees to the state. Five churches and schools and one wholesaler were affected.

The plane was diverted to Anchorage, Alaska, late yesterday afternoon, said David Rath, president of Evergreen Agricultural Enterprises, a division of McMinnville, Ore.-based cargo shipper Evergreen International Aviation Inc., which handled the shipment.

"We've shipped to Japan, Puerto Rico, Mexico and China and haven't had anything like this happen before," Rath said. "We asked if we could pay a charge or incinerate them there or fumigate them, but they are not allowing any of that. They wouldn't allow us to offload them at all."

Evergreen stands to lose $1 million from the diversion because the flight had to be rerouted, delaying a scheduled textile shipment out of Asia and incurring additional fuel costs. Rath said the company hopes to sell the trees at cost or give them away in Alaska.

Kailua Christian Academy and Waialua High and Intermediate School had arranged to purchase the largest portion of the trees, said Hollie Spivey, Evergreen's Christmas tree sales manager. Evergreen's aviation and ground logistics unit planned to sell 1,000 trees. Spivey declined to name the other affected buyers. Any money paid to Evergreen for the fundraisers will be refunded, Rath said.

Ben Abraham, an administrator at Kailua Christian Academy, said he purchased 1,300 trees for what was meant to be the school's only fundraiser of the year.

"This was a major fundraiser for our school, and we stand to lose $10,000," he said.

The school planned to make $40 to $60 a tree, he said, with a 6- to 7-foot Douglas fir selling for $75. He had paid to advertise the fundraiser and for a refrigerated truck to pick the trees up from the airport.

"Most were pre-sold," he said. "We have to refund the funds."

The trees were cut Wednesday at Evergreen's 800-acre tree farm and shipped out of Portland International Airport in Oregon on Thursday.

DENNIS ODA / DODA@STARBULLETIN.COM
These were some of the insects found yesterday during an inspection of Christmas trees.

The Hawaii Department of Agriculture sent a team of 10 inspectors to the plane yesterday morning, where they found three yellow-jacket wasps, including two live queens, along with two other genera of wasps, one tentatively identified as a dolichovespula, which was found alive, and a vespa, which is a type of hornet. Both are not currently found in Hawaii, said Domingo Cravalho Jr., chief of the state Department of Agriculture's Inspection and Compliance Section, which inspects all imported trees.

"The unusual thing about the entire air shipment was that many of the insects that were found in the air shipment were not found in maritime inspections of Christmas trees," he said.

Evergreen secured a certificate from the Oregon Department of Agriculture clearing the trees, meaning that they were all shaken to remove insects, Cravalho said. "Evidently it wasn't shaken enough, or it was staged in an area where it could get re-infested," he said.

Flies, parasitic wasps and other pests also were found, as well as dirt and rocks that could carry microorganisms, Cravalho said. No trees were removed from the plane during the inspection, he said.

The department was unable to clean the plane because the state's cleaning and inspection facilities are made for surface containers, he said, not large aircraft.

"It's best that the shipment move out of Hawaii and go to another destination that accepts these types of pests," he said. "We're at a greater risk because of the fact that we have warmer weather and some of these species might take hold here."

The majority of the state's 150,000 imported Christmas trees this year are shipped by sea, with the last of four Matson Navigation Co. shipments expected to arrive today.

A Boeing 747-200 can hold up to 4,500 trees, said Spivey, but some buyers backed out after wasps were found on three surface containers last month. Spivey said Evergreen plans to fly Christmas trees to Hawaii next year in containers so they can be removed and dealt with separately.

"We had such a tremendous response," she said, adding that more than a dozen cars were lined up this morning at Evergreen's airport site waiting for a tree. "Phones were ringing off the hook -- that's encouraging."

Detoured trees bring out local kindness

More than 2,000 trees were diverted to Anchorage. (Jason Kohler/KTUU-TV)

by Jill Burke
Sunday, Dec. 2, 2007

ANCHORAGE, Alaska - While many are searching for the perfect Christmas tree, one Oregon-based company is looking for a way to dump thousands of them.

Evergreen International Aviation had a planeload of Oregon trees headed for Hawaii when the Department of Agriculture refused to let them in because an inspector spotted a bug.

Northern Air Cargo C.O.O. David Karp (Jason Kohler/KTUU-TV)

The 747 wound up in Anchorage and needed to unload more than 2,000 trees.

Evergreen partnered with Northern Air Cargo and came up with an emergency strategy to unload to wayward trees -- team up with ChangePoint Church.

Northern Air Cargo C.O.O. David Karp said the companies will be donating profits to a downtown soup kitchen.

"It's just a good way to get the trees out and do some good," Karp said. "When stuff like this comes along you just make the best out of it. It wasn't the way I planned on spending my weekend but we are having a good time."

The trees range in size from 5 feet to 12 feet tall.

They are being sold for $40 each through Monday at the Northern Air Cargo facility from 9 a.m. to 4 p.m.

Invasive Species ALASKA

Finding Solutions: Protecting Our Nation's Waters – The National Aquatic Invasive Species Act (NAISA)

Congress is now considering the National Aquatic Invasive Species Act (NAISA), which builds on past legislation. As of November 2003, several subcommittees and committees in both the House and the Senate are still considering the bill.

When ships arrive from foreign ports and empty their ballast water in Alaska's waters, they are potentially introducing thousands of alien organisms. Since its passage in 1990, a single law has been the nation's chief protection against such new aquatic invasions and especially those that arrive in ballast water. That law—the National Aquatic Nuisance Prevention and Control Act (NANPCA)—was revised and reauthorized in 1996 and Congress is considering a second revision now. As state officials give more attention to problems associated with aquatic and other invaders, they estimate that the costs of preventing economic and environmental harm will be substantial. The proposed revision would provide new tools for the work they are undertaking and strengthen the use of existing ones.

Congress passed NANPCA in 1990 in response to the invasion of the zebra mussel and other species that damaged the Great Lakes. The new law brought much-needed attention to the global movement of aquatic species. It also established the federal interagency Aquatic Nuisance Species Task Force, which became a key resource for regional and state efforts. NANPCA's strictest and most detailed provisions required that ships headed for the Great Lakes exchange their ballast water at sea.

© Alaska Seafood Marketing Institute/Alaska Division of Tourism

The law was reauthorized in 1996, renamed the National Invasive Species Act, or NISA, and expanded slightly. NISA encourages all ships arriving from outside the 200-mile US Exclusive Economic Zone to exchange their ballast water, but requires them to report whether they have. NISA also authorized important research and linked its results to decisions about whether further ballast water regulation would be needed.

NISA has a number of features that help states like Alaska:

- The law established an Aquatic Nuisance Species Task Force that, in turn, set up regional groups to share information and develop cooperative plans. Alaska is a member of the Western Regional Panel, formed in 1997. Membership gives access to a wealth of information on species like the European green crab, connects experts to a system of committees on specific topics and species, and provides a forum for discussing the latest research and common policy concerns.
- The law promotes the use of comprehensive state management plans by providing federal funds (up to 75 percent) for implementing such Task Force-approved plans. States have successfully used these plans to identify their worst problems and to marshal the resources to address them. The Task Force approved Alaska's official state aquatic invasive species management plan on November 15, 2002.

Despite its successes, NISA has considerable room for improvement. Federal agencies have ignored important provisions; the law neglects important pathways of introduc-

Tourism is one of Alaska's most lucrative businesses, and is heavily dependent on healthy ecosystems and abundant native wildlife.

tion other than ballast water; all the nation's waters deserve protection equal to the Great Lakes'; and reliance on ballast water exchange to reduce organisms in ballast water doesn't work—even in the Great Lakes where exchange is mandatory.

NISA expired in September 2002, so Congress must reauthorize the law. This is an opportunity to address NISA's shortcomings. Alaska would be a major beneficiary of these improvements.

How can strengthened national aquatic invasive species legislation help Alaskans?

A broad group of stakeholders has been working with members of Congress for months to draft and revise a stronger version of NISA, titled the National Aquatic Invasive Species Act (NAISA). Generally, it extends protections to all US waters, including inland ones, and authorizes additional federal work in key areas: identifying and limiting the riskiest pathways of aquatic introductions; monitoring to detect invasive species new to the United States; and providing the means to respond quickly to such newcomers.

Much of the focus remains on ships' management of ballast water and on strengthening NISA's related provisions. For example, the many ships that travel Alaska's coast would be required to manage their ballast water in specific ways for the first time, including ships making trips within Alaska. The proposed bill also requires that ships eventually meet objective standards for reducing the number of organisms released along with ballast water discharges.

Like the 1996 law, the new bill would provide federal cost sharing up to 75 percent for states to implement aquatic invasive species management plans, but in the new bill, states could also receive federal matching funds to expand their management plans.

In addition, the bill authorizes the Task Force to increase its spending—from $4 million to $30 million—on state grants. In Alaska, where officials estimate that implementing the state aquatic nuisance species management plan will cost up to $713,500 per year, these changes should give the state greater access to federal funds.

Also, the bill lays out a timetable and a process for developing a program to evaluate, or "screen," first-time intentional introductions of species. The public often assumes that this is routinely done before species are allowed into the country. In fact, this would be the first instance that federal officials have attempted such an approach. Some of Alaska's worst invasive species were intentional imports. By more carefully weighing species' risks before they enter the country, the bill's new provisions would help prevent additional invaders. NAISA also instructs the National Science Foundation to establish a grants program to study systematics and taxonomy. This could be a boon for Alaska, where many organisms are as yet unstudied.

What's at Risk?

Alaska has vast waterways that can be protected with stronger legislation:

- Alaska has 6,640 miles of open ocean coastline and, counting islands, almost 34,000 miles of shoreline—more than one-third of the nation's coastal areas.
- Alaska has more than 3,000 rivers and three million lakes of more than 20 acres. The Yukon River is the United States' third longest.

Alaskan industries rely upon healthy ecosystems:

- FISHING: Almost 55 percent of US seafood production comes from Alaska's waters, nearly four times more than the next largest state. In 2001, commercial harvests of all fish and shellfish were worth $871 million.
- TOURISM: Tourism provides almost 17,000 direct jobs for Alaskans, more than 1.5 times the number employed in Alaska's petroleum and mining industries combined.

Invasive Species
ALASKA

What Is an "Invasive Species"?

As legally defined, an invasive species is "An alien species whose introduction does or is likely to cause economic or environmental harm or harm to human health . . . 'Alien species' means, with respect to a particular ecosystem, any species . . . that is not native to that ecosystem."[1] Alien species are also known as exotic, non-native, introduced, or non-indigenous species, and the term noxious or nuisance is sometimes used instead of "invasive" when these organisms cause harm. Since invasive species are only apparent to those few people who know their foreign origins, and because their spread can be slow, over years or even decades, we have tended to underestimate their impacts. Invasive species cause a range of problems. They can:

- threaten the survival of native plants and animals
- interfere with ecosystem functions
- hybridize with native species, resulting in negative genetic impacts
- spread easily in today's era of global commerce
- be difficult and costly to control
- impede industries and threaten agriculture
- be a significant drain on the economy
- endanger human health

How Severe Is the Invasive Species Problem in the United States?

- Invasive species are a significant threat to nearly half of the native US species currently listed under the federal Endangered Species Act.[2]
- Costs of preventing, monitoring, and controlling invasive species in the United States—not to mention the costs of damage to crops, fisheries, forests, and other resources—are huge. The economic impact of invasive plants is thought to be at least $13 billion per year.[3] Costs or losses due to our most expensive invasive species can top $100 million annually per species.[4] In addition, invasive species can impose costs that are less readily quantified, such as damage to the small organisms that are the basis of all aquatic food webs.

What Is an "Introduction"?

When an animal, plant, fungus, bacterium, or virus ends up in a new ecosystem, it is said that the organism has been "introduced" to that new ecosystem. Humans are responsible for introducing the vast majority of non-native species. We deliberately transport some organisms; others end up in a new ecosystem unintentionally.

Examples of deliberate introductions are plants that we import for gardens, fish that we keep as pets or put in pens

Various Ways that Unintentionally Introduced Species Arrive

On imported nursery stock or soil
(e.g., balsam wooly adelgid, chestnut blight, mealybug)

On imported fruits and vegetables
(e.g., Mediterranean fruit fly)

In untreated, discharged ballast water of ships
(e.g., zebra mussel, Chinese mitten crab)

In or on vehicles like boats, airplanes, trucks, ships, etc.
(e.g., Asian cockroach, poverty grass)

In bilge water, live wells, bait buckets, and on fishing gear
(e.g., European shore crab)

In packing material and shipping containers
(e.g., Asian long-horned beetle, wood-boring wasp)

Mixed in with seed packets or shipments
(e.g., serrated tussock, corn brome)

From people traveling for tourism, recreation, or commerce
(e.g., rust fungus)

Through canals and other humanly produced paths
(e.g., sea lamprey)

On imported or migrating animals (e.g., whirling disease)

Some Means of Deliberate Introductions

Sport fishing (e.g., largemouth bass, flathead catfish)

Aquaculture (e.g., Pacific oyster, Atlantic salmon, Pacific white shrimp)

Home aquaria (e.g., Asian swamp eel, hydrilla, zebra danio)

Biological control (e.g., grass carp, rosy wolfsnail)

Research facilities (e.g., giant tiger shrimp)

Seeds/Gardens/Landscaping (e.g., purple loosestrife, kudzu)

Erosion control (e.g., tamarisk [also known as saltcedar])

Fur/silk production (e.g., nutria, European gypsy moth)

for aquaculture, animals for hunting, fish we stock in lakes, and animals and insects introduced into new ecosystems to control other organisms.

Examples of unintentional introductions are insects that cling to or burrow into wooden packing material used to protect imported goods, or insects and their eggs "hitchhiking" on imported plants, in soil, or on fresh produce. We accidentally take in huge numbers of small and microscopic organisms in ships' ballast water, and we transport them to new ports of call.

When Introduction Becomes Harmful

The vast majority of species transported to a place other than their native ecosystem—whether intentionally or accidentally—do not survive. Of those that do survive, scientists estimate that approximately 15% go on to become very harmful.[5] Plants and animals may escape from confined areas, or carry a wide variety of parasites or diseases that themselves may escape, to devastating effects. People may dump no-longer-wanted fish or aquarium plants into a nearby pond or river, or discard yard waste or garden clippings in a nearby park. The species that become invasive do succeed, in part, because the new ecosystems in which they find themselves offer favorable environmental conditions and lack the natural predators, competitors, and diseases that would normally keep their populations in check.

With increased global commerce and human exploration, rates of introduction and numbers of invasive species continue to rise. For example, ships only began to use water as ballast in the mid-1800s;[6] now transport in ships' ballast water and ballast sediments is the leading means of unintentionally moving a broad range of aquatic species throughout the world.[7]

The Emerging Threat of Invasive Species in Alaska

The wild beauty that draws many people to Alaska is under quiet siege. Dozens of harmful non-native organisms, including plants, animals, and microbes, have arrived in parts of Alaska from outside the state, or from other parts of the state, and are spreading throughout large areas. They cause a range of problems, from defoliating forests, to decimating seabird colonies, to killing fish. Yet, Alaska has the opportunity to avoid some of the worst problems that plague the lower 48 states and Hawai'i and to contain existing problem species before they become well established.

Non-native and Invasive Animals and Plants in Alaska

Native and non-native species in Alaska's vast landscape have not been well catalogued. However, experts have counted almost forty species thought to be invasive, and many more established non-native species that may become invasive.[1] The species of greatest concern include:

- One mammal species (Norway rat)
- Two bird species (pigeon in Anchorage[2] and starling as far north as Fairbanks[3])
- One non-native fish species (Atlantic salmon) plus one Alaskan fish species (northern pike) moved beyond its native range
- At least eight insect species (larch sawfly in southcentral Alaska, strawberry root weevil, western tent caterpillar, white pine weevil, wooly alder sawfly, imported currant worm, ugly nest caterpillar, and amber-marked birch leaf miner)[4]
- Another invertebrate species (European black slug, a crop pest in Anchorage)[5]
- At least 11 terrestrial plant species out of approximately 170 established non-native and non-cultivated plant species[6] (Canada thistle, reed canary grass, garlic mustard, orange hawkweed,[7] white sweetclover,[8] perennial sowthistle, hawksbeard, tufted vetch, Japanese knotweed, hempnettle, and oxeye daisy)
- At least six aquatic plant species (such as common brassbuttons and several species of red and brown algae)[9]
- At least seven aquatic invertebrate species (such as a softshell clam, rope grass hydroid, and boring sponge)[10]

© Alaska Division of Tourism

Introducing foxes to Alaskan islands for the fur trade has had disastrous consequences for many native bird populations.

Steve Hillebrand, US Fish and Wildlife Service

Campers, such as these at the Arctic National Wildlife Refuge, can unknowingly bring invasive species into pristine wilderness areas.

As in many places, there are differing views regarding which species are native, since some, like one subspecies of bison, went extinct long ago, but another was reintroduced. In addition, there are various perspectives on which non-natives have become established in Alaska (e.g., raccoons). Nor is there always agreement on which species are truly harmful (e.g., starlings), or valuable (e.g., game species introduced in the past for subsistence and sport), since these designations are somewhat subjective. These distinctions sometimes affect management and policy choices. In general, however, there is broad consensus among Alaska's experts on the seriousness of the risk posed by many of these species.

Some intentional introductions, such as many food crops and farm animals, are beneficial. However, there are disas-

trous exceptions. Foxes, brought to more than 450 Alaskan islands for fur trapping and farming—plus the animals introduced as food sources for the foxes—have devastated native bird populations and disrupted island ecosystems.[11] As recently as 1987 the Alaska Department of Fish and Game introduced elk for hunting on Etolin Island. Elk have spread, probably by swimming, to other islands and areas in the Southeast, affecting native plants and animals. Less clear is the pre-statehood introduction of brook trout from outside the territory, and grayling and rainbow trout from other parts of the state, to southeast Alaska for food and sport fishing. The populations are self-sustaining but usually not considered invasive, although brook trout may be preying on salmon fry or hybridizing with native Dolly Varden char.[12] Alaska blackfish have been moved to the Anchorage area and may also be affecting salmon fry.[13]

Numerous pathogens and parasites have been introduced to Alaska but have not yet been well studied. Known problems include lice from domestic dogs that have infested wolves on the Kenai Peninsula[14] and black knot, a fungus so far affecting only ornamental cherry trees in Anchorage.[15]

Where Are Invasive Species a Problem?

Four elements of Alaska's landscape are most vulnerable to invasive species: ports, islands, waterways, and disturbed or reclaimed areas.

- Commercial ports, especially those in the southcentral and southeast regions, are continually exposed to new species, especially from the Pacific corridor as far south as Mexico.

An Ounce of Prevention: A Sampling of Worrisome Potential Invaders

Invasive species are a global problem, and Alaska is susceptible to many harmful invaders, particularly as global climate change is projected to warm Alaska. (Alaska has already experienced a 4°F increase in average temperature during the past 50 years, while the global average has increased only 1°F.)[16] The following species are particularly harmful and are already wreaking economic and ecological damage in the lower 48 states and Canada. Some of these species have been found in Alaska, but none is yet thought to be established.

Asian gypsy moth

Invader	Impacts	Where Found
Asian gypsy moth	Defoliates trees	Pacific Northwest
Asian longhorned beetle[17]	Kills hardwood trees	Chicago, New York region; intercepted at West Coast ports
European green crab	Competes with native crabs such as Dungeness and other shellfish	West Coast to Vancouver Island
Zebra mussel[18]	Competes with native mussels, alters nutrient balances, clogs pipes	Eastern North America waterways; population found in Kansas in 2003
New Zealand mudsnail	Concern about effects on native species (e.g., aquatic insects, native snails), fisheries (especially native trout), and aquatic ecosystems	Western US (including three national parks); population found in Lake Ontario in early 1990s
Yellow perch	Competes with native fish, restricts salmon reproduction	Widespread in northern US and Canada; eradicated from Kenai Peninsula lake
Russian knapweed	Invades riverbanks, may affect moose forage	Western US and Canada, including Yukon Territory
Purple loosestrife	Aggressively outcompetes native wetland plants	Widespread in lower 48 states including Pacific Northwest; grown in Anchorage gardens
Fire blight	Destroys apple crops, may affect related trees such as native mountain ash	Globally widespread; found in Alaska in 2000

Photo: US Department of Agriculture, Animal and Plant Health Inspection Service, Plant Protection and Quarantine Archives, www.invasive.org

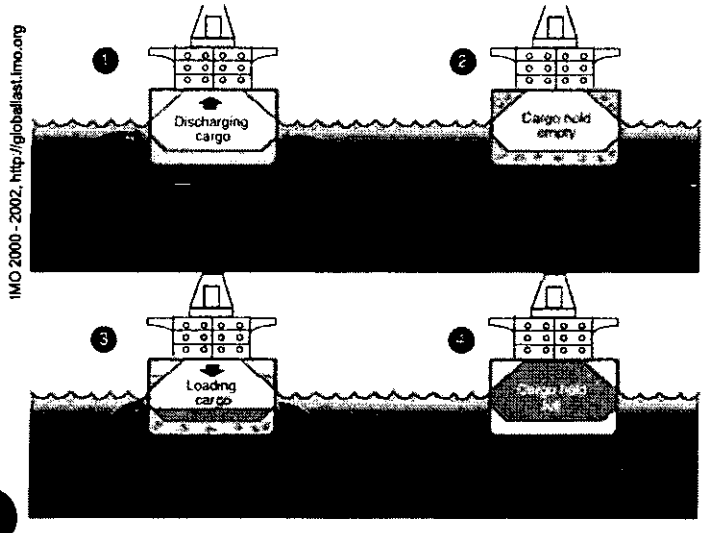
- Islands are particularly vulnerable and some have been hard hit because they typically have unique species that have evolved without grazing pressure and other predation; some have been hit hard. Dutch Harbor and other islands in the Aleutian chain, the Alexander Archipelago, and the Kodiak Archipelago are of special concern.[19]
- Waterways, including Alaska's vast rivers, streams, lakes, and wetlands, provide relatively hospitable temperatures for many aquatic invaders. Low-gradient floodplain communities with road crossings in southcentral and interior Alaska, as well as spits, barrier beaches, and coastal marshes, are especially vulnerable, as are floodplains and karst-rich sites in southeast Alaska.[20]
- Disturbed and reclamation areas associated with mining, trails, recreation, agriculture, the Alaska pipeline, and roadways commonly contain invasive plants.[21]

How Do We Bring Invasive Species to Alaska?

Fortunately, Alaska's historically low population and geographic isolation have kept introductions of new invasive species relatively low. However, increased commercial traffic (both from the continental United States and abroad) and further development increase the risk of new introductions.

Shipping: The large amount and diversity of ship traffic in Alaska—oil tankers, commercial freighters, military vessels, fishing vessels, and chip, pulp, and timber barges—bring invasive species in ballast water, bilge water, or live wells.

Port Valdez, in Prince William Sound, receives the third largest volume of tanker ballast water of US ports.[1] About one-half of this ballast water is oily and is processed at a treatment facility. The rest is discharged into the port's waters, releasing many non-native species. One study of organisms in ballast water of oil tankers arriving at Valdez found 13 species of non-native crustaceans, one fish species, as well as enormous numbers of potentially damaging smaller organisms.[2] Ships' hulls may also carry a variety of organisms, and rats, mice, other mammals, and insects arrive in cargo.



We unintentionally move thousands of aquatic species in ships' ballast water and ballast sediments.

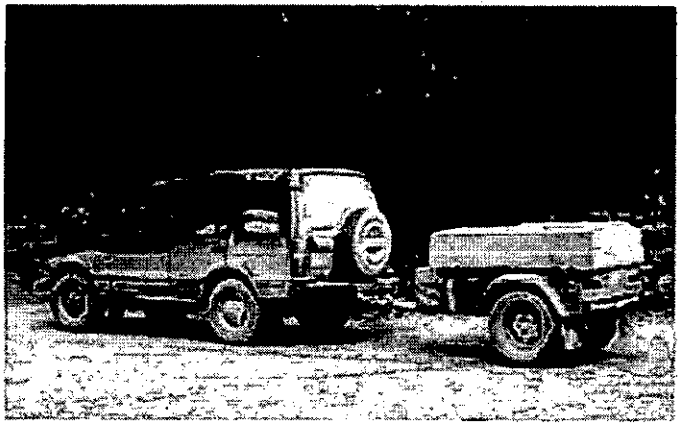
Aquaculture: Fish farming can result in severe damage to native ecosystems and fisheries when fish or hitchhiking organisms escape. Of current concern are escaped Atlantic salmon arriving in Alaskan waters from British Columbia and Washington State fish farms.

Agriculture and Horticulture: Only a very small percentage of Alaska's acreage is agricultural, but farms, nurseries, and state agencies import plants, seeds, and other products, which can either be invasive themselves or carry damaging hitchhikers. An example is Canada thistle, found in Fairbanks and southcentral Alaska, which is thought to have arrived as seed within root balls of tree-planting stock.[3] Other invasive plants, such as perennial sowthistle, are thought to have arrived as contaminants in seed mixtures. Nurseries, in most cases, are not prohibited from selling invasive plants.

© 2000 Molly Elizabeth Bagley

Canada thistle seeds are thought to have arrived in Alaska through the horticulture industry.

Recreation and Tourism: There have been intentional efforts to import species such as European grouse as game birds.[4] Pack animals, dogs, vehicles, and people can all transport seeds to backcountry areas unintentionally. In addition, hay brought in to feed horses or to use as sled dog bedding can be contaminated with weed seeds. Invasive plants have affected ostensibly pristine areas such as Denali National Park, the Tongass and Chugach National Forests, and numerous other sites in southern Alaska. Many weeds are found around roadsides, trailheads, campgrounds,



Jim Steinborn © 1988

Roads and vehicles can unintentionally bring invasive species into previously undisturbed areas.

parking lots, and other disturbed recreation-related areas.[5] While cruise ships do not usually transfer ballast water in Alaska, ships coming directly from Far East Asia or Japan do.[6] Like other ships, all can carry invaders on their hulls, in their holds, or on their decks.

Construction, Mining, and Restoration: These activities transport weed seeds, as well as other organisms, when equipment and machinery are moved without cleaning.[7]

Aquarium and Pet Trades: Aquarium fish and plants, as well as other pets, have occasionally turned up in the wild and could become a problem, especially if they carry diseases.

How Much Do Invasive Species Cost Alaskans?

In states where invasive species are a bigger problem than in Alaska, losses to industries and costs of control have skyrocketed. Alaska has a unique opportunity to avoid costly losses by focusing on preventing the introduction of additional invasive species while controlling those already established.

The costs of invasive species in Alaska take many forms, including labor and pesticides associated with eradication and control efforts, losses to fisheries and crops, and loss of native species and ecosystems.

Alaska's largest industries bring in more than $1 billion per year. Invasive species are taking a bite out of each, and costs are likely to rise.

FACT: State, federal, and private groups spend millions to manage or remove established invaders.

- Since 1949, the US Fish and Wildlife Service (FWS) has spent roughly $3 million to remove arctic and red foxes from some 40 islands where the federal government had originally introduced them to help early settlers economically.[1]
- FWS spent at least $400,000 in a two-year effort to remove abandoned reindeer that had seriously overgrazed Hagemeister Island in the Alaska Maritime National

© Alaska Division of Tourism

Fisheries and the seafood industry would likely suffer if invasive species took hold.

Wildlife Refuge.[2] Other islands have also been cleared of reindeer, cattle, and similar animals.

- FWS is now beginning to tackle the extensive problem of Norway rats and other rodents on more than 20 islands, projected to be even more expensive than the other mammal removals.[3]
- To assess the extent of the aquatic nuisance problem, the Prince William Sound Citizens Advisory Council, California Sea Grant, FWS, and other agencies have spent an estimated $500,000 on a study of ballast water introductions into the Sound, which includes the port of Valdez, and a small subset of other key Alaska ports.[4]
- Alaskan officials estimate that the state's overall aquatic nuisance species plan will cost $373,000 in 2003, increasing to $690,000 and $760,000 during the next two fiscal years.
- The Alaska Department of Fish and Game has identified the need for an estimated $200,000 emergency fund that would allow a quick response to newly identified invasions of aquatic nuisance species. Half of this money is included in the latter two estimates above. However, the fund's establishment requires new state legislation.[5]

FACT: Three of Alaska's major industries, commercial fishing, sport fishing, and tourism, risk economic losses from invasive species.

- If northern pike, Atlantic salmon, or other invasive fish continue to encroach on native salmon habitat, the $216 million salmon fishery—already experiencing four years of low prices[6]—could further decline.
- Potential invasion of the European green crab could be costly to the $117 million shellfish industry.[7]
- Tourism brings the state almost $1 billion annually from 1.4 million visitors,[8] who come expressly for Alaska's untrammeled natural beauty and wildlife. In a study of perceptions of bark beetle damage, visitors ranked views of natural scenery and wildlife as most important for their visit, and judged scenic value to decline significantly as tree damage increased.[9] Invasive species able to defoliate forests or eliminate bird, fish, or marine mammal populations would likely reduce visitor interest and spending.

Washington Department of Fish and Wildlife

European green crab

John and Karen Hollingsworth, US Fish and Wildlife Service

Alaska's robust tourism industry relies upon the health of the state's natural treasures. Here, a tourist observes wildlife at Alaska Maritime National Wildlife Refuge.

FACT: Forestry, agriculture, and other industries suffer from invasive species.

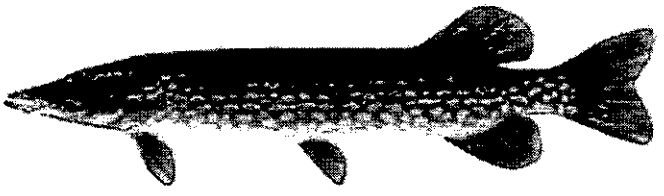
- Logging and related industries generated $64 million in wages in 2000.[10] From 1996 to 2001, almost five million out of the total 129 million forested acres in Alaska suffered insect damage from both native and non-native pests.[11]
- Agriculture in 1997 accounted for $53.4 million of the state's economy.[12] Losses from pest species are not currently quantified, but a significant proportion of agricultural weeds, insects, and diseases are non-native. Examples are sowthistle, hempnettle, and the potato late blight that was found in the Matanuska Valley in 1995 and 1998, requiring expenditures for quarantine[13] and fungicides.
- Many other industries are negatively affected by invasive species. For example, trappers experience financial losses when wolf pelts are damaged by dog lice, not to mention the substantial costs incurred by state agencies in medicating sick animals and trying to stop the infestation from spreading.

The Worst of the Worst

Norway Rat *(Rattus norvegicus)*

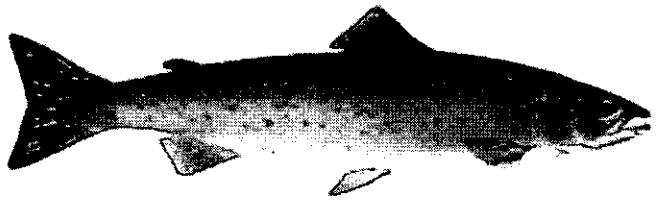
Rats are considered one of the most harmful invasive species in the world and one of the first to be transported almost everywhere that humans settle. Norway rats prey on wild birds and their eggs, kill poultry and livestock, and can transmit diseases to humans and animals. They also damage—sometimes to the point of extinction—invertebrates, reptiles, birds, and other wildlife, as well as plants. They eat stored grain and seeds and contaminate with droppings whatever they don't eat. Norway rats are especially devastating when introduced to oceanic islands. A Japanese shipwreck in 1780 introduced the first Norway rats to Alaska,[1] and by 1790 one of the Aleutians was named Rat Island. Today, rats have invaded some 30 Alaskan islands and many additional areas, coastal and otherwise. Rat "spills" (rats swimming to land from shipwrecks or walking from docked ships to land on ropes or gangplanks) are considered to be more ecologically damaging than oil spills.[2] Active efforts are in place to try to prevent further rat introductions and to control current populations.

Northern Pike *(Esox lucius)*



Although northern pike are native to northern Alaska, they have become an invasive species in southcentral Alaska, specifically in the Anchorage Bowl, Matanuska-Susitna Valley, and Kenai Peninsula. Northern pike were intentionally introduced by unknown individuals, presumably for sport fishing. These predatory fish consume salmon fry and are invading vast systems of streams and lakes. The Alaska Department of Fish and Game has found lakes (e.g., Trapper, Alexander, and Red Shirt) devoid of once-healthy trout and salmon populations and abundant with pike. Pike are also having an impact on native suckers and whitefish as well as ducklings and other waterfowl.[3] Fish, wildlife, and game managers consider established pike populations difficult to remove and their potential impact on native salmon and other fish in the Southeast to be "immense."[4]

Atlantic Salmon *(Salmo salar)*



Although finfish farms are banned in Alaska, hundreds of thousands of Atlantic salmon raised in fish farms in British Columbia and Washington State have escaped from their pens, some reaching waters near Ketchikan and Yakutat and as far north as the Bering Sea.[5] Scientists used to believe that Atlantic salmon would not venture into fresh water, but several pen-reared salmon have been found in fresh water streams. In 1998, an Atlantic salmon—sexually mature and thought to have been with a mate—was recovered north of Ketchikan at Ward Creek.[6] If such salmon successfully spawn and become established, they could compete for limited food and spawning habitat with native fish such as steel-

head, cutthroat trout, Dolly Varden char, and coho salmon. Farmed fish also present a risk in that they could spread disease and parasites. For example, scientists speculate that escaped sea lice from open net Atlantic salmon farming pens in British Columbia's Broughton Archipelago infested juvenile wild pink salmon, causing that native species' population in the province to decline sharply.[7]

Amber-marked Birch Leaf Miner *(Profenusa thomsoni)*

Most likely introduced from Europe to the northeastern United States in the 1920s, this insect—a defoliator of birch—has spread throughout southern Canada and into Alaska. It was accidentally introduced in Anchorage during the mid-1990s, most likely on ornamental birches.[8] These pests are especially damaging in Alaska, where they have no natural enemies. The larvae of the amber-marked birch leaf miner defoliated more than 30,000 acres throughout the Anchorage Bowl in 2002, have been found in the Matanuska-Susitna Valley, and were detected in 2002 in the birch-abundant area of Fairbanks. Hardest hit have been urban paper birch. Chemical treatment is the only currently available control method (for urban trees); using a certain parasitic wasp as a possible biological control agent is under investigation.[9]

Japanese Knotweed *(Polygonum cuspidatum)*

Native to eastern Asia, Japanese knotweed has spread to 37 US states with the help of gardeners who plant knotweed as an ornamental. In Alaska, Japanese knotweed was first reported in the 1940s in Sitka, although it probably arrived earlier.[10] It is now found in communities in southeastern Alaska as well as in Anchorage. Roadside planting by the Department of Transportation as well as landscaping have contributed to its spread.[11] Japanese knotweed is difficult to remove, since fragments regenerate readily and send up new shoots from rhizomes. The weed aggressively crowds out native plants along roadsides, stream banks, and woodland edges, destroying habitat for native insects, fish, birds, and other animals. It may also become an agricultural weed,[12] and increase fire risks, as it has in other states.[13] Experts recommend monitoring for new instances of Japanese knotweed and when found, thoroughly removing and carefully disposing of the plants, including all root fragments, so that the plants cannot become established.[14]

What's at Stake? Impacts on Alaska's Natural Areas and Resources

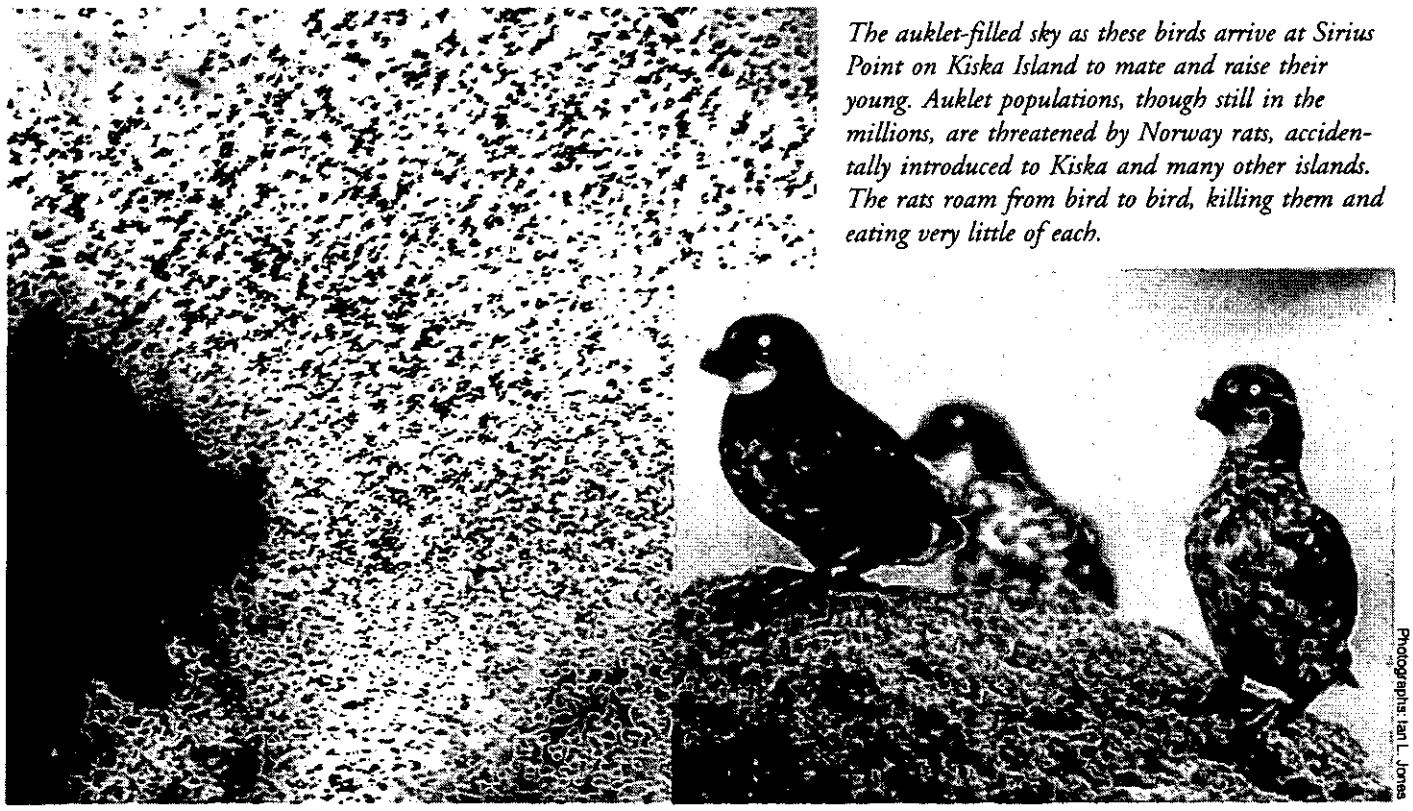
In Alaska, healthy ecosystems contribute an estimated $1.2 to $1.6 billion per year in basic ecosystem services, like nutrient cycling, waste treatment, and regulation of floods.[1] As the largest state, Alaska has an immense and diverse landscape, including tundra, wetlands, waterways, forests, farmland, coastlines, islands, and urban areas. Nearly all these types of areas show signs of emerging or well-established invasions.

FACT: Invasive species are a growing problem in areas of traffic and disturbance.

- In many national parks, forests, and wildlife refuges, non-native weeds have gained purchase in areas of human activity.
- Alaskan ecosystems support populations of large predators, such as bears and wolves. Yet, even Denali National Park—a crown jewel of the national park system—is facing pressure from proposed additional roads and traffic,[2] which would likely bring invasive species that spread disease or compete with these predators' food sources.
- In heavily traversed Prince William Sound, the proportion of aquatic non-native species is small, but increasing. The effects are only beginning to be studied. However, in other parts of the country, aquatic environments and water-based industries have been hard hit by invasives as commercial traffic grows.

FACT: Invasive species threaten Alaska's rare and unusual animals and plants, and impact the functioning of whole ecosystems.

- Roadsides in southcentral and interior Alaska are commonly filled with white sweetclover and tufted vetch, two hard-to-remove non-native weeds. These legumes alter the nitrogen balance in soils, negatively affecting organisms adapted to lower nitrogen levels, and also threaten to invade Alaska's forests, riparian areas, and non-forested wetlands.[3]
- On Kiska Island, a popular cruise ship destination, Norway rats are threatening the survival of one of the world's largest auklet colonies.[4]



The auklet-filled sky as these birds arrive at Sirius Point on Kiska Island to mate and raise their young. Auklet populations, though still in the millions, are threatened by Norway rats, accidentally introduced to Kiska and many other islands. The rats roam from bird to bird, killing them and eating very little of each.

Photographs: Ian L. Jones

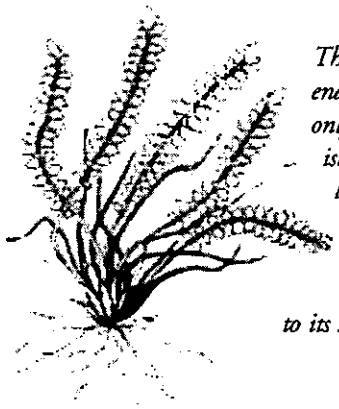
Jules Strauss © California Academy of Sciences

Even Denali National Park is not immune to potential new invaders.

- Alaska's island ecosystems contain many unique forms of plants and birds, such as the Aleutian Canada goose. The populations of these geese and nesting seabirds have declined where arctic foxes were introduced. Even where foxes have been removed, some island species have not fully recovered.[5]
- Some habitat for salmon and other native fish is being degraded and diminished from introduced northern pike in southcentral Alaska. Salmon play a crucial part in sustaining watersheds, add nutrients to aquatic systems, and are an important food for bears, eagles, and other wildlife.

Who's Tracking What's Rare?

The Alaska Department of Fish and Game lists five endangered species (identified by Alaska's Commissioner of Fish and Game as being in danger of extinction in Alaska) and 16 "species of special concern" (identified by Alaska's Commissioner of Fish and Game as declining in abundance or vulnerable to decline in Alaska).[6] Likewise, the US Fish and Wildlife Service and the Department of Commerce's National Marine Fisheries Service maintain lists for rare animals under their respective jurisdictions. These include 27 species or distinct populations considered "endangered" or "threatened." The Alaska Natural Heritage Program, the US Forest Service, the Conservation of Arctic Flora and Fauna Working Group, and other agencies all track rare plants. Together, there are several dozen such plant species. Only one—the Aleutian shield fern—is a federally listed endangered species. Invasive species affect a number of these rare species.



Ann-Lillian Schell, US Fish and Wildlife Service

The Aleutian shield fern—endemic to Alaska and found only on one or two Aleutian islands—is the only federally listed endangered plant in Alaska. Grazing by introduced caribou is considered a potential threat to its survival in the wild.

Karen Ducey, National Marine Fisheries Service, National Oceanic and Atmospheric Administration/Department of Commerce

Alaska's salmon industry is already struggling. With the added pressure of invasive species, many fishing vessels, like this salmon gillnetter in Bristol Bay, may find it even more difficult to keep their businesses afloat.

Finding Solutions: Who Deals with Invasive Species in Alaska?

Alaska's Opportunity

Alaska is blessed with abundant natural beauty and resources, which can and should be protected for the benefit of all Alaskans. Because the state currently has a relatively small problem with invasive species, it is well positioned to prevent the worst invaders from becoming established, learning from successes and failures in the lower 48 states, Hawai'i, and around the world. Alaska's two recent statewide plans are examples of strong coordinated approaches. However, more work is needed to strengthen efforts if Alaska is to protect its natural resources and economic interests.

Alaska's Cooperative Approach

In many ways, Alaska is a national leader. It has combined the expertise of federal, state, tribal, international, and private groups to produce two strategic plans. Taken together, these plans express the need for well-coordinated action to prevent and manage not only aquatic but also terrestrial invasive species, along with more effective and comprehensive planning, legal authority, enforcement, and funding to back it up.

One cooperative effort resulted in the 2001 *Strategic Plan for Noxious and Invasive Plants Management in Alaska.*[1] This plan makes a series of recommendations to heighten awareness of invasive plant problems in the state and to halt these plants' introduction and spread. Committee members from the broad-based Alaska Committee for Noxious and Invasive Plants Management have marshaled resources and implemented a number of the recommendations.

Another effort, led by the Alaska Department of Fish and Game, resulted in the 2002 *Alaska Aquatic Nuisance Species Management Plan.*[2] The federal Aquatic Nuisance Species Task Force approved this plan, as stipulated by federal law, so implementation of the plan qualifies for federal cost sharing of up to 75%. The plan's focus is on identifying and responding to the highest priority threats.[3] It concludes that, "It is in the best interest of Alaska and Alaskans that both purposeful and unintentional introductions of invasive species not be tolerated."[4]

Both of the state plans highlight the need for better public education to prevent new species' arrivals and to curb the spread of existing ones. Without public support and cooperation, resource managers will be combating not only accidental introductions, but intentional ones, such as the dandelions planted by a visitor in a national forest[5] and northern pike.

Some urgently needed education efforts are underway. The Alaska Department of Fish and Game Sport Fish Division, for example, produced television spots on aquatic invasive species and, with the US Fish and Wildlife Service, is producing identification cards with warnings about Atlantic salmon and European green crabs.[6] The Forest Service, Bureau of Land Management, Smithsonian Environmental Research Center, University of Alaska Cooperative Extension Program, Sea Grant, The Nature Conservancy, Regional Citizens' Advisory Council of Prince William Sound, and the Alaska Natural Heritage Program are also working to educate the public about non-native species. Some of these entities have substantial educational materials available to the public.

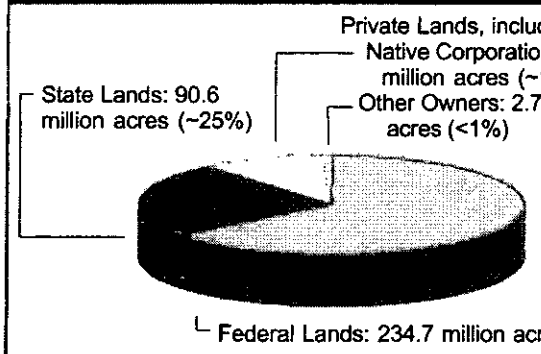
Federal and State Efforts

Implementing the above plans falls to individual state and federal agencies. Some of their most significant work is described below.

Federal Efforts

Under the new Department of Homeland Security (DHS), the Coast Guard is responsible for monitoring ships' compli-

Land Ownership in Alaska



Bureau of Land Management, Department of the Interior

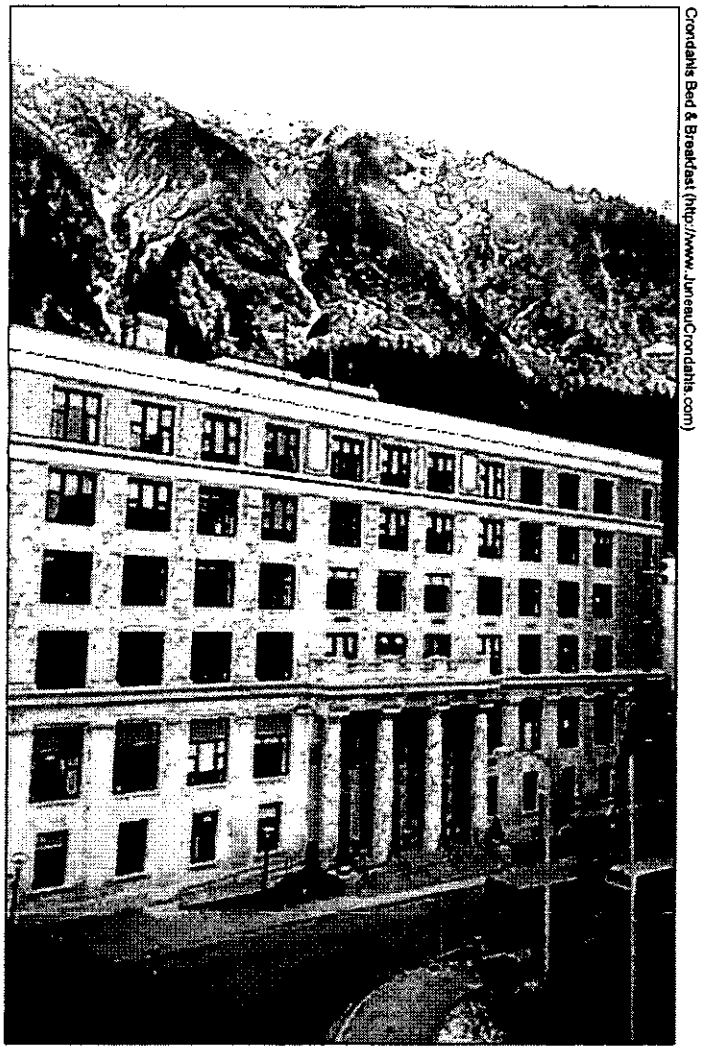
Of Alaska's 365.5 million acres, approximately 64% is federally managed, primarily by the US Department of the Interior (Bureau of Land Management, US Fish and Wildlife Service, and National Park Service) and the US Department of Agriculture (Forest Service).

ance with voluntary ballast water exchange practices and related requirements. The DHS Bureau of Customs and Border Protection and US Department of Agriculture's Animal and Plant Health Inspection Service share responsibility for protecting agriculture at and near approximately a dozen ports of entry. DHS officers inspect incoming passengers and cargo while USDA retains other key functions, such as monitoring the effectiveness of inspections, conducting emergency responses to newly detected pests, and a much-expanded effort to detect such pests, which also involves the Alaska Department of Natural Resources.

The USDA Forest Service is responsible for surveying, monitoring, and managing non-native species in national forests. In 2002, the USFS Forest Health Protection Program and the US Geological Survey Alaska Science Center launched a project to create a statewide database for invasive plants. The database incorporates data from field collaborators from federal and state agencies, universities, private consulting firms, and other interested groups.[7] Similarly, the USFS Tongass National Forest's Ecology Department recently completed an invasive plant management plan for this 17-million-acre forest to prioritize prevention/education, inventory, control, and monitoring over the next five years. That plan addresses specific stakeholders and suggests partnerships to work cooperatively. Some specific projects include efforts to eradicate or control weeds such as tansy ragwort and Japanese knotweed. In addition, the USFS has worked with other agencies, the Kake Tribal, Inc., and the Organized Village of Kake to control Japanese knotweed in the Petersburg area.[8]

The US Fish and Wildlife Service in Alaska has undertaken extensive efforts to eliminate harmful invasive species from islands in the Alaska Maritime National Wildlife Refuge, where recovery of bird populations has been dramatic. Efforts are underway elsewhere to prevent widespread rat populations from spreading. One area of particular concern is the Pribilof Islands.

Other federal agencies, including the Bureau of Land Management, the Department of Defense, and the National Park Service, are involved in surveying, monitoring, and managing non-native species in the large holdings for which they are responsible. For instance, the National Park Service hires seasonal technicians to do an extensive survey for exotic plants throughout Alaska's park system, to pull weed species, and to restore native species in Denali National Park at an estimated cost of $50,000 annually.[9]



Crondahls Bed & Breakfast (http://www.JuneauCrondahls.com)

State Law and State-based Efforts

Sizable groups of officials and other experts are working to strengthen the state's legislation and policies. The two interagency invasive species plans described above provide a strong framework for this process, as well as specific, high-priority recommendations.

When Alaska became a state, it prohibited the introduction of out-of-state fish for rearing or stocking in state waters, creating one of the strongest such laws in the country. The strength of the state's approaches to other types of introductions varies, and some important policy areas are not addressed at all.[10] For example, Alaska is the only west coast state that has not recently updated its legislation regarding non-native species in the ballast water of ships; instead, Alaska's ballast water law focuses solely on preventing discharges of petroleum.[11] State law does not authorize specific funds to implement statutes and regulations that address invasive species, nor does it have emergency powers to

address sudden outbreaks that can quickly cause widespread damage.[12]

Alaska Department of Fish and Game: Fish, Game, and Aquatic Plants

Responsibility for fish, wildlife, game, and aquatic plants falls to the Alaska Department of Fish and Game.[13] The release of fish and other aquatic animals is prohibited by law and regulated by the Board of Fisheries. Similarly, game species are prohibited without a permit from the Department of Fish and Game, unless the animal is on a "clean list" of domesticated animals, such as farm animals.

After an extensive permitting and planning process, the Alaska Department of Fish and Game has extended the natural range of some native fish, like rainbow trout and arctic grayling, by stocking hatchery-grown fish in certain lakes to enhance fishing.[14] Populations of non-native yellow perch and goldfish, which have the potential to become invasive, were chemically eradicated by the Alaska Department of Fish and Game and the US Air Force, respectively.[15]

Alaska Department of Natural Resources: Weeds, Seeds, Coasts, and Habitat

The Alaska Division of Agriculture has responsibility to prevent the arrival and spread of pests considered "injurious to the public interest, and for the protection of the agricultural industry."[16] It prohibits seeds (but not plants) of 14 noxious weeds and restricts the allowable amount of 10 other weed species in seed mixes. The regulated weeds all affect agricultural lands, although natural areas are far more extensive in the state. Alaska needs explicit regulatory action for these kinds of weeds, such as Japanese knotweed, white sweetclover, and garlic mustard, which have recently arrived in the state or are currently spreading.

The Department of Natural Resources also implements a coastal management program, which is the basis for controlling certain non-agricultural invasive plants. Also, recent legislation made the Office of Habitat Management and Permitting responsible for protecting both aquatic and terrestrial habitat via state habitat standards.

Alaska's Prohibited Noxious Weed Seeds

Austrian fieldcress	Horsenettle
Blue-flowering lettuce	Leafy spurge
Canada thistle	Perennial sowthistle
Field bindweed	Quackgrass
Galinsoga	Russian knapweed
Hempnettle	Whitetops (three species)

Alaska's Restricted Noxious Weed Seeds (only small amounts allowed):

Annual bluegrass	Tufted vetch
Blue burr	Wild buckwheat
Buckhorn plantain	Wild oats
Mustard (two species)	Yellow toadflax
Radish

Phone: 202.224.6221

Levin Introduces Bipartisan Bills to Combat Invasive Species in Great Lakes

WASHINGTON—Sen. Carl Levin, D-Mich., today introduced two bipartisan bills aimed at protecting U.S. waters from the threats posed by aquatic invasive species. The National Aquatic Invasive Species Act and the Asian Carp Prevention and Control Act would help combat these harmful species that damage U.S. aquatic ecosystems and natural resources.

"Invasive species wreak havoc on our waterways and cost us billions each year," said Levin, who is a co-chair of the Senate Great Lakes Task Force. "Because it has proven immeasurably difficult to fight invasive species once they have entered our waters, these bills are focused on preventative measures that will tackle the problem at the source."

Details of the two bills follow:

The National Aquatic Invasive Species Act would reauthorize and strengthen the National Invasive Species Act of 1996 to protect U.S. waters by preventing new introductions of aquatic invasive species. The legislation, which Levin is sponsoring along with Sen. Susan Collins, R-Maine, would regulate ballast discharge from commercial vessels; prevent invasive species introductions from other pathways; support state management plans; screen live aquatic organisms entering the United States for the first time in trade; authorize rapid response funds; create education and outreach programs; conduct research on invasion pathways, and prevention and control technologies; authorize funds for state and regional grants; and strengthen specific prevention efforts in the Great Lakes. A summary of the bill can be found **here**.

"What is so important about the National Aquatic Invasive Species Act is that it to takes a comprehensive approach toward the problem of aquatic invasive species rather than just focusing on species after they are established and a nuisance," Levin said. "The bill deals with the prevention of new introductions of species, the screening of live aquatic organisms imported into the country, the rapid response to new invasions before they become established, and the research to implement the provisions of this bill."

The Asian Carp Prevention and Control Act, which Levin is sponsoring with Sen. George Voinovich, R-Ohio, and Sen. Russell Feingold, D-Wisc., would list three species of Asian carp – the bighead, black and silver carp – as injurious wildlife under the Lacey Act. By doing so, Congress would prevent the intentional introduction of these species into the

Great Lakes by prohibiting the interstate transportation or importation of live Asian carp without a permit. Congress passed the original Lacey Act in 1900 and the Lacey Act Amendments in 1981, which make it unlawful to import, export, transport, buy or sell fish, wildlife and plants taken or possessed in violation of federal, state or tribal law. This legislation would not interfere with existing state regulations of Asian carp, and permits to transport or purchase live Asian carp could be issued for scientific, medical or educational purposes.

In addition to Levin, Voinovich and Feingold, other cosponsors of the Asian Carp Prevention and Control Act include Sens. Debbie Stabenow, D-Mich., Norm Coleman, R-Minn., Sherrod Brown, D-Ohio, Barack Obama, D-Ill., and Richard Durbin, D-Ill.

Aquatic invasive species threaten biodiversity nationwide, especially in the Great Lakes. The leading pathway for these aquatic invaders is maritime commerce. In the late 1980s, zebra mussels were released in the Great Lakes after crossing the Atlantic Ocean in the ballast tanks of ships from the Mediterranean. Zebra mussels created such a problem for the Great Lakes that Congress passed legislation in 1990 and 1996 requiring ballast water management for ships entering the Great Lakes, which has reduced, but not eliminated, the threat of new aquatic invasions.

Invasive species are also an economic drain. Estimates of the annual economic damage caused nationwide by invasive species range as high as $137 billion. Because the Great Lakes fisheries are valued at $4 billion annually, preventing invasions into the Great Lakes from ballast water, hulls or the system of canals connecting the Great Lakes to the Mississippi River and Atlantic Ocean is critical. Once an exotic species establishes itself, it is almost impossible to eradicate and usually difficult to prevent from moving throughout the nation.

Phone: 202.224.6221

Summary of the National Aquatic Invasive Species Act of 2007 (NAISA)

This act reauthorizes and amends the **Nonindigenous Aquatic Nuisance Prevention and Control Act of 1990 (NANPCA)**, as amended by the **National Invasive Species Act of 1996 (NISA)**.

Section 1: Short title; Table of Contents
Section 2: Findings
Section 3: Definitions

TITLE I – PREVENTION OF INTRODUCTION OF AQUATIC INVASIVE SPECIES IN WATERS OF THE UNITED STATES BY VESSELS

Section 101: Prevention of Introduction of Aquatic Invasive Species in Waters of the United States by Vessels

Building on the current mandatory National Ballast Water Management Program, the bill sets requirements applicable to all ships (coastal and transoceanic) operating in waters of the United States and a timeframe for compliance. In particular, it would require all vessels that ply U.S. waters, with limited exceptions, to undertake ballast management/treatment practices to minimize the risk of new introductions of aquatic invasive species in U.S. waters by any aspect of ship operations.

Requirements on Vessels Operating in Waters of the United States

Every ship operating in waters of the United States must have an Aquatic Invasive Species Management Plan, carry out Best Management Practices (including practices to reduce hull fouling), document ballast operations and management activities, and comply with applicable ballast water treatment requirements.

Ballast Water Requirements

Until the end of 2011, all existing ships entering a U.S. port must conduct ballast water

exchange and any other management practices included in regulations unless the safety of the vessel is at stake. Exceptions include vessels operating entirely within the exclusive economic zone and existing vessels that operate entirely within an enclosed aquatic ecosystem.

Beginning in 2012, all vessels entering a US port shall conduct ballast water treatment so that ballast water discharged contains less than 1 living organism that is larger than 50 micrometers in dimension per 10 cubic meters of water and less than 1 living organism that is smaller than 50 micrometers per 10 milliliters of water. The Coast Guard in concurrence with the Environmental Protection Agency (EPA) may set an alternative standard that is as protective. If the Coast Guard and EPA determine that technology to meet this standard does not exist, the Coast Guard and EPA shall require the use of treatment systems that meet or exceed the best performance available at that time, provided that the technology meets the standard adopted by the International Maritime Organization.

Approved ballast treatment technologies shall be environmentally sound. Permits to use technology are valid for the lesser of 10 years or the life of the treatment system and may be renewed if the treatment system remains in compliance with applicable standards. The Coast Guard will monitor treatment system operation and effectiveness. Permits are revocable if the performance is seriously deficient relative to expectations.

Certification Procedures

The Coast Guard and EPA shall develop protocols measuring ballast treatment performance, and approving ballast water and other treatment systems to certify effectiveness, occupational safety, environmental soundness, and its minimum lifespan. Approval of a system shall be qualified, as needed, based on voyage pattern, vessel class, and other properties that may limit system performance. Certification must include ship-based testing.

Experimental Treatment Approval

The Coast Guard shall issue and implement procedures for approving experimental ballast water treatment methods on a ship-by-ship basis, largely mirroring the Coast Guard's existing Shipboard Treatment Evaluation Program (STEP). Experimental treatment approvals are valid for the lesser of 10 years or the life of the treatment system and also may be renewed. Ship owners must agree to gather information regarding the operational and biological effectiveness of the treatment system.

Great Lakes Program

Current regulations would stay in place, but within 18 months of enactment, the U.S. Coast Guard must review and revise the Great Lakes ballast water management. Ships reporting no ballast on board or "NOBOBs" will be required to conduct saltwater flushing. Before 2011, ships may use treatment systems meeting the prevailing IMO standard in lieu of

ballast water exchange.

Section 102: Armed Services Whole Vessel Management Program

The Armed Services Whole Vessel Management Program is amended to minimize the risk of introductions of aquatic invasive species by towed vessels. This program shall not affect the current ballast program in place for Department of Defense vessels.

TITLE II – PREVENTION OF INTRODUCTION OF AQUATIC INVASIVE SPECIES IN WATERS OF THE UNITED STATES BY OTHER PATHWAYS

Section 201: Priority Pathway Management Program

The Aquatic Nuisance Species (ANS) Task Force will conduct pathway analysis in order to identify the highest risk pathways for introduction of aquatic invasive species into US waters and to implement management strategies to reduce these introductions.

Section 202: Screening Process for Planned Importations of Live Aquatic Organisms

The USGS, APHIS, and Smithsonian Environmental Research Center shall develop a catalog of aquatic species that have a documented history of being in trade. Beginning 3 years after enactment, anyone trying to import a live aquatic species not in trade, as documented by the catalog, must obtain a permit to import the species. The National Invasive Species Council will develop screening guidelines for federal agencies to use to determine if the U.S. should permit the importation of a live organism, and if so, whether the U.S. should condition the importation of the species. Federal agencies that currently have authority over the importation of an aquatic species will be in charge of screening that species though any agency may opt to give its screening authority to the Fish and Wildlife Service. The bill authorizes grant funding to help states perform their own screening processes in addition to the federal process.

TITLE III - EARLY DETECTION; RAPID RESPONSE; CONTROL AND OUTREACH

Section 301: Early Detection

The National Invasive Species Council will develop a set of sampling protocols, a geographic plan, and a budget to support a national system of ecological surveys for rapid detection of aquatic invasive species. This national system will establish clear lines of communication and help identify pathways causing distribution of newly-detected aquatic invasive species.

Section 302: Rapid Response

The bill establishes a Rapid Response Fund to provide grants to states and regions to implement approved rapid response contingency strategies. The ANS Task Force will develop model state and regional rapid response contingency strategies to aid states and regions in the development of contingency strategies. The National Invasive Species Council, within 12 months of enactment, would establish a Federal Rapid Response Team to: (1) implement eradication and control responses on federal land; (2) assist, if requested, in implementing rapid response measures on non-federal land; and, (3) provide training to state, tribal, and regional rapid responders.

Section 303: Dispersal Barriers

This bill expands the existing dispersal barrier program. The Army Corps of Engineers would complete construction and upgrades of the Chicago Ship and Sanitary Canal Dispersal Barriers, operate the barriers, and conduct a feasibility study on the full range of options to prevent spread of invasive species through the canal. The Fish and Wildlife Service would establish a monitoring program to track invasive species moving through interbasin and intrabasin waterways, asses the efficacy of dispersal barriers and other measures in preventing this spread, identify waterways suitable for dispersal barrier projects, and analyze the range of options available to prevent spread in the Lake Champlain Canal and the Upper Mississippi River.

Section 304: Environmental Soundness

The EPA will promulgate regulations to evaluate treatment methods to ensure no adverse effects on human health, public safety, or the environment result from their use.

Section 305: Information, Education and Outreach

The legislation expands on education initiatives under existing law by including new public and industry outreach programs. The Task Force, Sea Grant and the National Park Service would develop programs to address the spread of aquatic invasive species by recreational boats. The Task Force will maintain a website to inform the public on screening, monitoring and control efforts. In addition, the Task Force would carry out activities to inform and promote voluntary cooperation and regulatory compliance.

TITLE IV – AQUATIC INVASIVE SPECIES RESEARCH

Sections 401 – 404: Research

Research priorities form an integral component of this bill. Key research programs include:

- The development and implementation of ecological surveys at various sites and

invasion surveys to assess the rates and patterns of introductions of nonindigenous aquatic species in U.S aquatic ecosystems and to track the establishment of these species;

- The execution of standardized, field-based pathway surveys to monitor high-risk pathways by which nonindigenous aquatic species may be introduced into aquatic ecosystems (including ballast discharge) and to determine practices that contribute to the introduction of these species;
- The development and maintenance of a central, national pathways and ecological survey database of information collected under the Act, and the coordination of this database with other relevant previously established databases;
- The utilization of US Geological Survey field stations to perform collaborative experimental research to identify the relationship between the introduction and establishment of nonindigenous aquatic species, including organism concentration and any ambient conditions necessary for those species to survive and strive;
- Establishment of a research, development, and demonstration program to develop a wide set of environmentally sound methods and treatment tools for detecting, preventing, controlling and eradicating aquatic invasive species, including interbasin dispersal barriers and ballast water treatment technologies;
- Research to support the implementation of pathway standards;
- Encouragement of Graduate studies in taxonomy and systematics.

TITLE V - COORDINATION

Section 501: Program Coordination

The ANS Task Force membership will add the Directors of USGS, Secretary of the Department of State, and the Smithsonian. The content of State Aquatic Invasive Species Management Plans would expand to include rapid response, aquatic plant control, screening and early detection strategies, and Federal funds are made available for the development of State Management Plans.

Section 502: International Coordination

The Secretary of State would initiate negotiations with Canada to task the International Joint Commission with a review of policies to protect the Great Lakes, and with Mexico for the US-Mexican border region.

TITLE VI – AUTHORIZATION OF APPROPRIATIONS

Section 601: Authorization of Appropriations

Except as otherwise provided in this section, there are authorized to be appropriated such sums as are necessary to carry out this Act for each of fiscal years 2006 through 2010.

Task Force and Aquatic Nuisance Species Program -- $43 million

- $8,000,000 ($4,000,000 to FWS and $3,000,000 to NOAA) - Task Force Activities and $1,000,000 to NISC Sec 1202
- $30,000,000 to FWS - Grants for State Management Plans Sec 1204(b)
- $3,000,000 - Regional Panels of the ANS Task Force
- $1,000,000 to FWS to carry out screening under 1105(g)
- $1,000,000 to State Dept for coordination activities Sec 1403

Prevention of Introduction of Aquatic Invasive Species by Vessels -- $11.25 million

- $6,000,000 to USCG Sec 1101
- $2,500,000 to EPA Sec 1101
- $2,750,000 to Task Force ($1,500,000 to FWS and $1,250,000 to NOAA) Sec 1101

Prevention of Aquatic Invasive Species by Other Pathways -- $9.5 million

- $5,000,000 ($2,000,000 to NOAA and $3,000,000 to FWS) -Priority Pathway Management Program Sec 1210
- $1,000,000 to NISC - Screening Guidelines Sec 1105 (d)
- $3,500,000 to FWS - Screening Regulations Sec 1105 (e)

Early Detection and Monitoring -- $12 million
$1,000,000 to NOAA and $1,000,000 to FWS (2008 – 2009) and $5,000,000 to NOAA and $5,000,000 to FWS (2010-2012) - Survey planning and implementation Sec 1106

Containment and Control -- $2.15 million
$2,150,000 for FWS - Monitoring Program Sec 1202 (j)(2)

Rapid Response -- $27.5 million

- $25,000,000 to Secretary of Interior - Rapid Response Fund Sec 1211
- $1,000,000 – Model State and Regional Rapid Response Contingency Strategies Sec 1211
- $1,500,000 to NISC ($500,000 to NOAA and $1,000,000 to FWS) - Federal Rapid Response Teams Sec 1211 (f)

Environmental Soundness -- $0.6 million
$600,000 to EPA - Criteria for Improvement of Treatment Methods for Aquatic Invasive Species Sec 1202 (k)

Information, Education and Outreach -- $3.75 million

- $500,000 to NPS - Info and Ed program Sec 1202 (h)(2)(D)
- $750,000 to FWS - 100th Meridian Sec 1202 (h)(2)(C)
- $2,000,000 ($1,000,000 to FWS and $1,000,000 to NOAA) Task Force Activities Sec 1202 (h)
- $500,000 to NOAA – marina outreach program Sec 1202 (h)(2)(B)(ii)

Research

Ecological and Pathway Research and Analysis -- $27.15 million

- $17,000,000 to NOAA for sec 1107 and 1008 ($13,000,000 for 1107 (g)
- $4,000,000 to SERC for sec 1107 and 1108
- $4,500,000 to USGS for sec 1107 and 1108 ($500,000 for 1107 (j))
- $1,650,000 to GLERL for sec 1202 (i)

Dissemination

$500,000 to NISC Sec 1109

Technology Development, Demonstration and Verification -- $11 million

- $2,500,000 to EPA for Sec 1110 (a)
- $1,000,000 to Army Corps for Sec 1110 (b)
- $7,500,000 to NOAA for Sec 1104 and 1301 (e)

Vessel Pathway Standards Research -- $10.5 million

- $3,000,000 ($1,500,000 to EPA and $2,000,000 to USCG) for Sec 1111 (a)
- $500,000 to USCG for Sec 1111 (b) (2008-1010)
- $500,000 to USCG for Sec 1111 (c) (2008)

Systematics and Taxonomy

$2,500,000 to NSF for Sec 1112

TOTALS:

FY 2008 – $144.4 million
FY 2009 – $143.9 million
FY 2010 – $151.9 million
FY 2011 – $151.4 million
FY 2012 -- $151.4 million

TITLE VII—CONFORMING AMENDMENTS

Memorandum of Understanding
For
The Establishment, Endorsement, and Support of the Alaska Invasive Species Workgroup

Among the

STATE OF ALASKA

and

NON-GOVERNMENT ORGANIZATIONS

and

PRIVATE ORGANIZATIONS

and

FEDERAL AGENCIES

(SEE SIGNATORY PAGES FOR LISTS OF AGENCIES AND ORGANIZATIONS)

Memorandum of Understanding
For
The Establishment, Endorsement, and Support of the
Alaska Invasive Species Workgroup

This Memorandum of Understanding (MOU) is made and entered into by and among the signatory parties.

A. Purpose

The purpose of this memorandum is to establish an Alaska Invasive Species Workgroup to minimize invasive species impacts in Alaska by facilitating collaboration, cooperation and communication.

The signatory parties propose to work together within the scope of their respective authorities toward the goals outlined below.

B. Goals of the Alaska Invasive Species Workgroup

1. Clarify the jurisdictional authorities of signatory parties as they relate to invasive species management.
2. Share the scientific and technical expertise of the parties related to invasive species management.
3. Encourage and enable signatory party employees or members to work collaboratively to optimize their respective capabilities to minimize invasive species impacts.
4. Collaborate in the development of a needs assessment and drafting of a statewide strategic plan for the management of invasive species.
5. Consider the formation by the State of Alaska, in collaboration with the other signatory parties, a formal structure for continued collaboration, cooperation and communication to minimize invasive species impacts in Alaska.

C. It Is Mutually Agreed and Understood by Signatory Agencies:

1. Specific work projects or activities which involve the transfer of funds, services, or property between the parties to this MOU will require the execution of separate agreements or contracts, contingent upon the availability of funds as appropriated by the Alaska State Legislature, United States Congress, or other applicable governmental units or provided by other parties to this MOU. Each subsequent agreement or arrangement that involves the transfer of funds, services, or property among the parties to this MOU must comply with all applicable statutes and regulations, including those statutes and regulations dealing with competition applicable to procurement and financial assistance activities, and must be independently authorized by appropriate statutory authority.
2. This MOU in no way restricts signatory parties from participating in similar activities or arrangements with other public or private agencies, organizations, or individuals.
3. Nothing in this MOU shall obligate signatory parties to expend appropriations or to enter into any contracts or other obligations.
4. The workgroup coordinators and contacts for this agreement are listed under Exhibits.

5. Modifications within the scope of the MOU shall be made by mutual consent of the parties, by the issuance of a written modification, signed and dated by all parties, prior to any changes being performed.
6. This MOU is executed as of the date of last signature and is effective through December 31, 2011, at which time it will expire unless extended.

TAKE PRIDE IN AMERICA

1786 (AK-931)

NOV 17 2006

Michele Hebert, Land Resources Agent
University of Alaska - Cooperative Extension Service
1000 University Avenue
Post Office Box 758155
Fairbanks, Alaska 99775-8155

Dear Ms. Hebert:

The Bureau of Land Management-Alaska (BLM-AK) is pleased to support the establishment of the Alaska Invasive Species Workgroup. The BLM is also pleased to formalize its relationship with the other cooperating agencies or signatories to the Memorandum of Understanding (MOU). Since the majority of the signatories have signed the MOU, BLM would like to supplement the MOU to conform to our guidelines.

The MOU states, "*The signatory parties propose to work together within the scope of their respective authorities towards the goals outlined.*" However, the MOU guidelines for the BLM specify we *identify the principle statutory authorities that authorize the cooperating agencies to enter into the MOU.* The authorities are essential elements under which the BLM-AK formally enters into the Alaska Invasive Species Workgroup MOU. Please include the following authorities for the BLM-AK by attaching this letter as an appendix to the MOU.

1. Federal Land Policy and Management Act of 1976 (43 U.S.C. 1701 et seq.)
2. Federal Noxious Weed Act of 1974 as amended by Sec. 15 "Management of Undesirable Plants on Federal Lands," 1990.(7 U.S.C. 2814)
3. Non-indigenous Aquatic Nuisance Prevention and Control Act of 1990, as amended (16 U.S.C.4701 et seq.)
4. Lacey Act as amended (18 U.S.C.42)
5. Executive Order 13112, Invasive Species, 2/3/99

Thank you for the opportunity to increase federal, state and local cooperation and coordination on invasive species. Please find attached the signed MOU.

Sincerely,

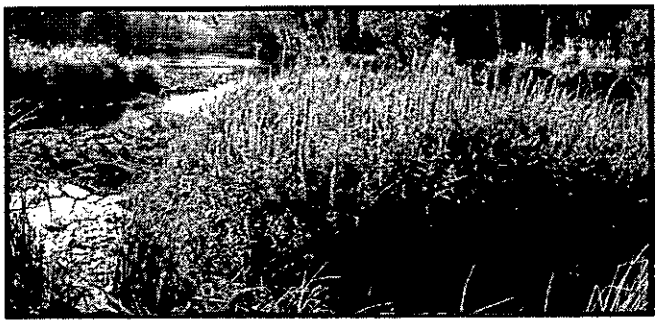
Debbi A Holl

for Julia Dougan
Acting State Director

Invasive Species

A Growing Threat to Alaska's Ecology and Economy

20 agencies have signed the AISWG MOU



Purple loosestrife along Chester Creek in Anchorage[2]. This species was popular with some gardeners, but can severely impact natural wetland ecosystems. Each plant can produce as much as 2 million seeds and sterile plants can hybridize and reproduce with non-sterile plants. This species has recently been banned from sale in Alaska.

Issue

Invasive species are a relentless problem. These harmful, non-native plants, animals and microorganisms impact our economy and environment. The economic impact of invasive species in the U.S. is estimated be over $137 billion[1] per year.

In Alaska, invasive species threaten native fish, plants and wildlife and their subsistence users as well as our resource-dependent industries, including agriculture, tourism, forestry, hunting, and fishing. Alaska has so far experienced fewer invasions than many other states, but we are at a critical point. Human-mediated mechanisms for introduction are increasing, raising the risks of invasive species reaching Alaska's shores and lands.

Alaska's vast size and the varied management of Alaska's public and private lands and waters demands collaborative efforts to ensure effective prevention, early detection, monitoring and management if we are to reduce duplication of efforts and increase our overall effectiveness.

Almost half of all states in the US have a formalized group to address strategies for managing invasive species. Alaska does not yet have a unified forum under which invasive species are managed. However, in the Fall of 2006, twenty state, federal, tribal and non-governmental organizations did sign a Memorandum of Understanding (MOU) to create the Alaska Invasive Species Working Group (AISWG) as a means to improve our collective ability to slow the pace of invasion and its impacts in Alaska.

One of the key goals of this newly formed AISWG is to help the State of Alaska establish an Alaska Invasive Species Council with a formal structure for continued collaboration, cooperation and communication to minimize invasive species impacts in Alaska.

AISWG cooperators are already working actively on improving communication by maintaining a listserv, website, sharing information and holding monthly statewide conference calls. As a means of enabling efficient collaboration, cooperators are also identifying their respective jurisdictional authorities for invasive species management and looking for how these authorities can be used and improved in a complementary way.

The AISWG is also set to host a first ever all-taxa statewide invasive species conference in Fairbanks in the fall of 2007.

Facts

- Alaska is not immune from invasion, and in the face of climate change and expanding international trade is in fact likely to see even greater invasion pressure in the future.
- Some invaders (rats, green crabs, knotweeds, purple loosestrife, and others) are threatening or already dramatically altering Alaska's native ecosystems.
- Because invading species do not recognize private or political boundaries, a coordinated and collaborative effort is needed to prevent, detect, and control invasion.
- Alaska is the only West Coast state that DOES NOT have a formal all-taxa state invasive species council.
- State of Alaska agencies increasingly recognize the importance of managing invasive species. In recent years, the Alaska Department of Fish and Game has produced an Aquatic Nuisance Species Plan, an Invasive Pike Plan, and the Invasive Rat Plan is near completion. The Department of Natural Resources has proposed expanding the list of plants considered noxious within Alaska.

"...Idaho's programs have been likened to a "patchwork quilt", where each "patch" represents an individual program or effort. So long as the patches connect, the quilt is useful, but if they do not, then there are gaps in the coverage through which undesirable species can enter." -- Idaho's Action Plan for Invasive Species

- Federal agencies, non-governmental organizations, universities, private industries, native groups, and individual citizen partners of the State are increasingly working together to help stop the spread of invasive species through a variety of institutional, group and volunteer efforts.
- The AISWG is committed to collaboration, cooperation and communication to minimize invasive species impacts and to helping the State of Alaska to improve the viability and capability of cooperative efforts by forming an all-taxa invasive species council.

Alaska — Priority List

1. Establish an Alaska Invasive Species Council or other formal structure for coordinating the management of invasive species.

Formation of a unified Council for invasive species management is an important step in coordinating existing resources within Alaska and for improving our capacity for effective collaboration well into the future.

2. Support funding of a prevention and early detection/rapid response system.

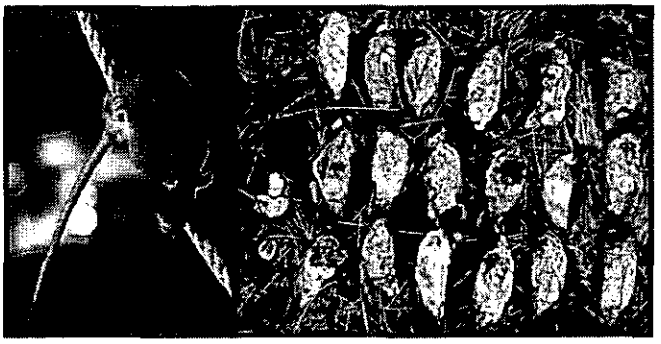
Prevention and timely management is important for controlling the detrimental impacts of invasive species. Early detection programs and rapid response plans can help to cost-effectively mobilize resources from participating agencies.

3. Enhance existing and initiate new research and public awareness campaigns.

Coordination between the organizations and agencies in Alaska is vital to identify shared priorities and avoid duplication of efforts, to promote compatibility of the collected research data, and to enhance the education and outreach activities associated with invasive species.

4. Negotiate standards to limit invasive species pests arriving in Alaska.

The State of Alaska and its partners can more strongly support regulation and enforcement efforts to protect our vital natural and economic resources. The recent actions of the Department of Natural Resources and Department of Fish and Game toward regulating such invasive species as rats, freshwater fish (non-native pike), and detrimental plant species (purple loosestrife and orange hawkweed) are positive steps toward invasive species prevention. Effective prevention is both economically and ecologically efficient, and often more practical, than eradicating species after introduction has already occurred. Improved monitoring, inspection, and enforcement along all pathways for invasion into Alaska are needed.



Rat on rope (left), and a rat cache on Kiska Island (right)[3]. Most rats on Alaska's islands are there as a result of "rat spills" from wrecked ships. Rats really do flee a sinking ship! In one rat cache on Kiska Island, researchers found over 100 least auklets[4]. Rats pose a serious threat to our globally important seabird populations.

Summary

Alaska is in a unique position to avoid the enormous costs associated with the widespread introduction and establishment of invasive species. Early intervention in Alaska can prevent the deterioration of the state's ecological and economical resources.

OBAMA
BIDEN
WWW.BARACKOBAMA.COM

BARACK OBAMA AND JOE BIDEN: COMMITED TO GREAT LAKES RESTORATION

The Great Lakes are one of the world's greatest natural treasures. They are the largest fresh water body on our planet, providing the principal source of drinking water for 42 million people, support for a $4.5 billion annual recreational and sport fishing industry, and recreational opportunities for millions of Americans who swim in the Lakes, play on the beaches and walk along the shoreline.

Today, the Great Lakes are under unprecedented stresses. Years of degradation from the build up of toxic sediments, mercury and other air pollutants, wetlands destruction, invasive species and pollution from antiquated sewage systems have left the Great Lakes at a tipping point. The impacts from global warming threaten to hasten and exacerbate this potentially catastrophic situation. Fortunately, we know many of the solutions to these serious threats. And, there is bipartisan political will and cooperative public and private goodwill to achieve them. It is time now for aggressive action to implement a comprehensive restoration plan for the Great Lakes, because the longer we wait, the worse the problems become and the higher the price of restoration. An investment in restoring the Great Lakes is an investment in our outdoor heritage and environment as well as the economy.

Barack Obama and his family have lived by the shore of Lake Michigan for 20 years. He knows, understands and cares about the Great Lakes and has the record to prove it. As a State Senator, he worked to help clean up Lake Michigan. As a United States Senator, he is a key leader on the bipartisan Great Lakes Compact -- legislation which ensures that as demand for water grows for our businesses and communities, the Great Lakes region will be ready to create jobs and support growth in a sustainable way. He was also a co-sponsor of the Great Lakes Collaboration Implementation Act and other legislation to help prevent the spread of invasive species, promote cleanup initiatives and projects, and prevent sediment pollution. In contrast, Senator John McCain has repeatedly failed to support critical legislation and even opposed measures to preserve the Great Lakes, including cleanup initiatives and projects to prevent sediment pollution. He also opposed funding to complete the Asian Carp Barrier Project to prevent invasive species from reaching the Great Lakes.

The Obama-Biden vision for the future of our Great Lakes will:

- **Provide New Federal Funding of $5 Billion to Jumpstart Great Lakes Restoration**
- **Designate a Great Lakes Coordinator to Prioritize Coordination of Federal, State and Local Agencies**
- **Ratify and Fully Implement the Great Lakes Compact to Conserve Water and Protect Against Water Diversions**

Protecting and Restoring the Natural Heritage of the Great Lakes: Barack Obama has a plan to restore the Great Lakes ecosystem and to revive this engine of economic prosperity. The plan is built around a commitment to restore our outdoor heritage: pure and safe drinking water; fish that are safe to eat; and a healthy resource for all Americans to use and enjoy. Barack Obama will replace empty talk with serious action to protect and restore our Great Lakes. His five-point plan for restoring our Great Lakes includes:

3226

1. $5 BILLION GREAT LAKES TRUST FUND

Barack Obama will provide $5 billion in new federal funds to jumpstart the restoration work and capture the economic, ecological and community quality of life values. The money to establish this trust fund will be generated from rolling back tax breaks and loopholes for big oil and gas companies.

Federal funding is desperately needed to invest in the sewage repairs, toxic cleanups, and wetlands restoration that will maintain and restore the greatness of the Lakes. The $5 billion investment will support clean beaches and new parks, build boat ramps, and protect open spaces, wildlife habitats and wetlands. An Obama-Biden administration will make the federal government a full partner with states and municipalities in addressing wastewater treatment and storm water control needs. Funding will help eliminate sources of pathogenic pollution that puts public health at risk rather than just funding to study the problem. As a State Senator with lakefront district that included beaches that regularly closed, Barack Obama understands that healthy beaches contribute to local economies and must be clean for families to enjoy.

According to the Brookings Institution, an investment in Great Lakes restoration will create jobs and improve the local economy. A healthy Great Lakes ecosystem would boost the long-term regional economy by an estimated $50 billion and create a short-term economic gain of at least $30 billion. Brookings concludes that for each $1 invested in Great Lakes restoration, $2 or more will be generated in additional jobs, property value, and other economic enhancements.

2. AGGRESSIVE TOXICS PLAN FOR THE GREAT LAKES

The Obama-Biden Administration will end the "business as usual" approach to toxic releases into the Great Lakes. Their toxics plan for the Great Lakes will comprehensively measure current toxic loadings, identify significant sources of new toxics, and develop an integrated strategy for reducing toxic deposits in the Great Lakes that harm fish, wildlife and people.

To address harmful mercury pollution, Obama will not only implement and enforce the Clean Air Act, but he will also strengthen the federal mercury pollution reduction standards in order to protect children's health and our environment. Under his Great Lakes Restoration Plan, toxic legacy "hot spots" will be prioritized and cleaned up.

3. GREAT LAKES COORDINATOR

The current piecemeal approach to dealing with the Great Lakes ecosystem is neither efficient, nor effective. The Obama-Biden Administration will designate a Great Lakes Coordinator in the U.S. Environmental Protection Agency to prioritize coordination of Federal, State and Local Agencies' agendas, policies, expertise, funds and staff.

4. ZERO TOLERANCE POLICY FOR INVASIVE SPECIES

Invasive species threaten the ecological balance of the Great Lakes; over 160 exotic species have already invaded the Lakes. Invaders like zebra mussels deprive fish of food, cause blooms of toxic algae and overtake spawning areas and drinking water intakes. Recent research indicates that invasive species are costing taxpayers hundreds of millions of dollars in ecological damage.

The Obama-Biden Administration will address the serious problem of invasive species by taking more aggressive steps to prevent their introduction into the Great Lakes. He will join in efforts with the eight Great Lakes states to stop the discharge of invasive species from the ballast water of ships. They will aggressively

pursue policies and dedicate federal funds to control and prevent Asian Carp and other new harmful species from entering the Great Lakes. They will also enhance investment in research, development and necessary actions, such as electric barriers, to support efforts to prevent, control, and eradicate invasive species, as well as to educate citizens and stakeholders.

5. "NO WATER DIVERSIONS" COMPACT POLICYTHAT WORKS FOR THE GREAT LAKES

Barack Obama is a lead cosponsor of the Great Lakes Compact legislation. The Compact is an agreement between the eight lake-bordering states to protect the Great Lakes from water diversions and exports. As President, he will work closely with the Governors and municipal leaders to encourage water conservation and avoid out-of-basin diversions in the future.

Paid for by Obama for America

To: Rep. Craig Johnson
Subject: Fw: Economic Impact of Invasive Species

Hello Representative Johnson and Ms. Ostnes,

Thank you for your interest in invasive species and NISC. My boss, Lori Williams asked me to respond to your request for information.

The number that you reference is widely used. It is based upon a compilation of cost estimates that could be found in the published literature at the time. The authors included a very broad scope of species, such as human pathogens. While it is a widely referenced citation from a peer-reviewed journal, there are other estimates that are more specific to your question.

There is no overall estimate of the economic impact of invasive plants for the U.S. The economic impact of most species is poorly documented. This is generally due to a lack of quantitative information on ecosystems impact and the challenge of assessing non-market cost, such as those to society and the environment, (e.g., changes in fire frequency, wildlife habitat, aesthetics, and biodiversity) (Duncan and Clark, 2005 – see below). For example, invasive plants in wetlands can impact recreational opportunities (fishing, swimming, boating, etc.), consumer communities, biogeochemical cycling, water levels (Shafroth and others 2005), and diversity (Schooler and others 2006). The Weed Science Society of America lists several invasive plants that cause allergic reactions. These categories of impact do not lend themselves to economic valuation.

The overall economic impact of invasive plants is difficult to estimate even well-defined systems such as row crops. A report published in 1992 estimated average annual monetary loss in the U.S. caused by weeds with current control strategies in 46 row crops to be $4.6 billion (Bridges, D. C. 1992. *Crop Losses due to Weeds in Canada and the United States*. D. C. Bridges (ed). Weed Science Society of America, 309 West Clark Street, Champaign, IL. 403 pp). I am not aware of a more recent overall estimate for row crop weed losses. Nationwide, aquatic weed control is estimated to cost 1 to 10 billion dollars annually. Florida alone spends $30 million each year to control aquatic weeds. A recent paper by Zika et. al (http://www.ehponline.org/members/2008/11501/11501.pdf) indicates that certain invasive plants such are **Canada Thistle** will become more difficult to control with herbicides at higher carbon dioxide levels.

The 2005 book edited by Duncan and Clark (Duncan, Celestine L., and Janet K. Clark, eds. *Invasive Plants of Range and Wildlands and Their Environmental, Economic, and Societal Impacts*. Weed Science Society of America, 2005) provides an overall acreage and spread estimates for 16 invasive plants. They report that these species alone infest over 126 million acres of Western range lands in 17 states. They are spreading at rates from 1.3% to 25% annually.

3229

While there are few overall estimates of economic impacts due to invasive plants, there is some specific information. **Leafy Spurge**, a Noxious Weed in Alaska, is estimated to cause an $**185 million** annual impact in Montana, North Dakota, South Dakota, and Wyoming (Duncan and Clark, 2005, page 101). They also report that **Russian knapweed**, another Alaska Noxious weed, is estimated together with spotted and diffuse knapweeds to cause **$42** million in direct and secondary costs in Montana alone each year. If even a fraction of the costs from just these two species would to occur in Alaska, the economic harm would be considerable. Alaska is fortunate; many of the invasive species that cause extensive harm in other states are largely preventable in Alaska. However, technical experts I have talked with say that many invasive plants could survive and spread in Alaska if they reach your state. The magnitude of the resources at risk in Alaska and the challenges of controlling species on such scales are great. In Alaska, maybe even more so than other places, prevention and early detection and rapid response efforts are critical.

Your statement in your sponsor statement might be something like: "**Invasive species are a relentless problem. These harmful, non-native plants, animals and microorganisms impact our economy and environment. The overall economic impact of invasive species in the U.S. was estimated in the range of tens of billions of dollars per year in 2000. The potential economic harm that invasive species could cause in Alaska is difficult to estimate. However, if just a few invasive plant species that are of known concern were to become wide-spread, they alone could cost the State's economy tens of millions of dollars annually.**"

Please let me know if I can be of service.

Thanks again, Chris

Subject: Economic Impact of Invasive Species

Hello,

We will be hearing for the first time a House Bill to form the Alaska Council on Invasive Species on February 18, 2009. I have attached the bill for your perusal. I have also attached a Sponsor Statement for the House Bill.

I was only able to find a cost figure from 2000 for an economic impact to the United States of $137 billion dollars.
(Pimentel, D., Lach, L., Zuniga, R., and D. Morrison. 2000. Environmental and Economic Costs of Nonindigenous Species in the United States. BioScience 50(1):53-65.)

Would you have an updated figure I might be able to use? I would also like to identify some cost figures to other states for their attempts to eradicate or contain invasive species.

Any help you might be able to give would be greatly appreciated.

Thanks,
Jeanne Ostnes, Staff

Costs of Invasive Species

Invasive aquatic species pose a significant problem for our state. Nationally, hundreds of millions of dollars are spent every year in efforts to control aquatic invasive species. Experts in the field agree that money spent on prevention is a wise investment. Once an invasive species takes hold, it is virtually impossible to eliminate it from a lake or stream. The cost of managing the problem, let alone the economic downside to infestations, is enormous. Here are some figures to put it into perspective:

- All the new England states as well as 41 other states and six Canadian provinces, are battling milfoil, water chestnut and other plants as well as invaders such as zebra mussels.
- Mechanical or chemical means of control can typically cost $200-2000 per lake-acre each year, with no end in sight.
- New research in Vermont shows that invasive plants can cost shoreline owners over $12,000 each in lost property values on infested lakes.
- Since the early 1980's Vermont has spent over $6 million dollars in state, federal and local funds to prevent and control the spread of invasive aquatic species. That state now spends more than $200,000 annually <u>just on staff</u> devoted to managing the problem on 46 of its 285 larger lakes.
- New Hampshire spends close to $100,000 each year in state-local operating funds to cost share on 7-9 control projects. This does not come close to the public demand for projects on their 55 infested lakes.
- Massachusetts spends over $290,000 annually on grants for local lake projects, most of which is spent on invasives control in their 298 infested lakes. The state also spends $95,000 each year for control operations just on state properties.
- In 1998 alone, Connecticut spent more than $150,000 in state funds to cost share local projects for invasives control.

Maine has been spared the worst of this problem, but already some local groups are struggling with invasive plants. The cost of these invasions could prove to be enormous. If we saw a fraction of Vermont's infestation rate just in our southern five counties, the property value loss alone would exceed $11 million and control costs could reach $2-4 million/year. This does not even begin to tally losses in local tourism dollars, fishing, and water sports opportunities, and the wholesale alteration of habitat. We should consider the very great losses we face if we do not mount an effective effort to combat the spread of these invasive species.

National invasive species panel gets a look at Alaska

The introduction of foreign species into Alaska could threaten ecosystems and damage fishing, subsistence, hunting and tourism industries. For the first time ever, the Invasive Species Advisory Committee met in Anchorage for a week-long summit. The committee, based in Washington, holds meetings in locations across the United States, in order to get a first-hand look at the issues at hand.

The committee is composed of stakeholders from state organizations, industry, conservation groups, scientists, academia and other interests from across the U.S. It advises the National Invasive Species Council, an inter-departmental body that helps coordinate federal action on invasive species.

Lori Williams, the executive director of the national council, said that, given the absence of any huge problems with invasive species in Alaska to date, she was impressed by the level of effort on the part of volunteers and agency experts to confront the issue here.

"Even though it's a small number of people and the programs are relatively small, everyone was on the right track and knew what the issues were," Williams said. "They were very aware of their challenges."

The Prince William Sound Regional Citizens' Advisory Council has held a seat on the Invasive Species Advisory Committee since 2000.

Council Director of Administration Lisa Ka'aihue worked primarily with Jeff Heys of the National Park Service to bring the Invasive Species Advisory Committee meeting to Alaska, in an effort to collaborate on invasive species prevention and to share information about the latest legislation, technologies and progress in the fight against invasive species across the U.S.

The council's Lisa Ka'aihue and Jeff Heys of the National Park Service worked to bring the Invasive Species Advisory Committee meeting to Alaska.

While Alaska is threatened by many invasive species, including Norwegian rat populations in the Aleutian Islands and several invasive weeds through the state, the council has taken a particular interest in species that could hitchhike their way into Prince William Sound on or inside the hull of an oil tanker.

The transport of coastal organisms in ballast water has been a major concern for invasions in recent years. Port Valdez ranks third in the United States for ballast water discharge, putting it at high risk for invasion.

Hull fouling is another focus of the council with regard to invasive species. Hull fouling involves organisms such as barnacles or mussels attaching themselves to ship hulls and either coming in contact with structures in a new port or releasing larvae into the water.

A critical issue for the council is the fact that the National Invasive Species Act of 1996 exempts crude oil tankers in the Alaska North Slope trade from ballast water exchange requirements. Ballast water exchange is a technique to remove coastal organisms from ballast tanks by replacing the seawater taken on in port with open-ocean seawater.

The council is currently working on several projects to defend the Sound from invasive species, including monitoring for the European green crab, partnering with U.S. Fish and Wildlife Service to identify and record hull fouling on large ships, and working with the University of Washington to develop hull sampling methods, focusing on oil tankers in particular.

Several invasive-species bills are before Congress, some addressing ballast-water management. The council has submitted comments in favor of bills that remove a trade exemption that includes Alaska tankers sailing to domestic ports, currently exempt from ballast water regulations that require exchange and reporting.

At the state level, the council has been active in the Alaska Invasive Species Working Group to coordinate efforts and push forward issues of concern.

For more information on invasive species, visit www.adfg.state.ak.us and look for the invasive species link under News & Issues. Or, visit the citizens' council website, www.pwsrcac.org.

Species documented in Alaska:				Likely or previously	
Taxon	**Scientific Name**	**Common Name**	**In AK?**	**ranked highly invasive**	**Reference**
Amphibians	*Pseudacris regilla*	Pacific chorus frog	Yes		Schrader and Hennon 2005, USGS 2007, MacDonald 2003, Hodge 2004
Amphibians	***Rana aurora***	**red-legged frog**	**Yes**	**Schrader and Hennon 2005**	**Schrader and Hennon 2005**
Amphibians	*Taricha granulosa*	rough-skinned newt	Yes		USGS 2007
Birds	*Columba livia*	rock dove, rock pigeon	Yes		Schrader and Hennon 2005, GISD 2007, UCS 2005
Birds	*Sturnus vulgaris*	Starling	Yes		Schrader and Hennon 2005
Fish	*Alosa sapidissima*	American shad	Yes		USGS 2007
Fish	*Astronotus ocellatus*	Oscars	Yes		Fay 2002
Fish	*Carassius auratus*	Goldfish	Yes		Fay 2002
Fish	*Dallia pectoralis*	Alaska blackfish	Yes - native but moved		USGS 2007, UCS 2005
Fish	***Esox lucius***	**Northern pike**	**Yes**	**Schrader and Hennon 2005, Fay 2002**	**Fay 2002, Schrader and Hennon 2005, UCS 2005, USGS 2007**
Fish	*Gambusia affinis*	Western mosquitofish	Yes - but persistance is ?		USGS 2007
Fish	*Gasterosteus aculeatus*	threespine stickleback	Yes		USGS 2007
Fish	*Oncorhynchus kisutch*	Coho salmon	Yes		USGS 2007
Fish	*Oncorhynchus mykiss*	rainbow trout	Yes		Schrader and Hennon 2005, USGS 2007
Fish	***Perca flavescens***	**yellow perch**	**Yes but eradicated**	**Schrader and Hennon 2005, Fay 2002**	**Fay 2002, USGS 2007, UCS 2005, Schrader and Hennon 2005**
Fish	***Salmo salar***	**Atlantic salmon**	**Yes**	**Schrader and Hennon 2005, Fay 2002**	**Fay 2002, UCS 2005, USGS 2007, Schrader and Hennon 2005**
Fish	***Salvelinus fontinalis***	**brook trout**	**Yes**	**Fay 2002**	**Fay 2002, USGS 2007, UCS 2005**
Fish	*Thymallus arcticus*	Arctic grayling	Yes - native but moved		USGS 2007, UCS 2005
Fish		Ornamental aquarium fish	Yes		Fay 2002
Invertebrates	*Adelges piceae*	Eastern spruce gall aphid	Yes		Schrader and Hennon 2005
Invertebrates	*Archips cerasivorana*	Uglynest caterpillar	Yes		USFS 2007, Schrader and Hennon 2005, UCS 2005
Invertebrates	*Arion ater*	European black slug	Yes		Schrader and Hennon 2005, UCS 2005

Species documented in Alaska:				Likely or previously	
Taxon	Scientific Name	Common Name	In AK?	ranked highly invasive	Reference
Invertebrates	*Arion sp.*	Garden slug	Yes		Schrader and Hennon 2005

Alaska Conservation Alliance

Uniting for Alaska's Future

February 5, 2009

House Committee on Resources
State Senate
Alaska State Capitol
Juneau, Alaska 99801-1182

Dear Representative Johnson, Buch and Munoz,

On behalf of the 40 conservation groups and the 38,000 Alaskans represented by the Alaska Conservation Alliance, I am pleased to acknowledge our strong support for HB12 to establish the Alaska Council on Invasive Species in the Department of Fish and Game. Some state economies have lost billions of dollars in revenue due to damage caused by inavasives. In order for Alaska to avoid a similar fate, it is prudent to address this issue now.

We believe the 14-member Council will provide the broad stakeholder cooperation and oversight needed to prevent new invasive species from taking root in Alaska and to mitigate the damage of invasives currently pushing our native species to the brink. At risk are Alaska's biological treasures, its flora and fauna; its harvested resources and subsistence plants and animals; the beauty and diversity that make Alaska a world-class tourist destination.

Already Alaska has suffered the effects of invasive Atlantic Salmon, pike and Reed Canary grass, to name a few. Plants, animals, fish and crustaceans, introduced into an environment devoid of their natural predators and limitations can irreversibly destroy an ecosystem and the economy and cultures it supports. These foreign species invade Alaska's ecosystem primarily due to human activities. It is therefore important that Alaskans take an active role to prevent this potential man-made disaster by serving on the Alaska Council on Invasive Species.

The Alaska Conservation Alliance would like to thank you for this opportunity to voice our support for HB 12 and encourage you to pass this bill out of the Senate Finance Committee.

Sincerely,

Kate Troll

Sent: 1/12/2009 2:12:20 P.M. Alaskan Standard Time
Subject: Letter of Support

To Whom It May Concern:

The threat from invasive weeds and other species continues to close in on Alaska every day. Work is continuing with a growing sense of urgency, and it is only with the active support of our legislators that we will ultimately succeed in protecting Alaska. We are forwarding an email we received from Representative Craig Johnson's office regarding a letter of support Senator Begich is providing for upcoming legislation in Alaska. Troy and I are asking for the continued support of Senator Murkowski, Representative Don Young and Governor Palin on these matters.

In addition to the legislation on the state level, The 100th Meridian Bill (S.1949) introduced by Senator Harry Reid would be a huge boost to Alaska's momentum and we are asking once again for it to be given a priority on the Natural Resources agenda for our legislators in Washington.

Troy and I have just returned from an interagency conference sponsored by the Oregon Dept of Agriculture, where we were invited speakers. We will be leaving to speak at another conference in Nevada next week. We receive these invitations because these groups are energized by the story of how citizens and dedicated agency experts are making a difference from the ground up in our Great land. But without support from the top down, Alaska will ultimately lose the precious ground she is holding now. Other states are watching as Alaska fights to avoid the same mistakes they made and are cheering our efforts as the sort of thing they only wish they would have had the insight to undertake when they had the opportunity. It is critical that we benefit from those who have gone before us--they are fighting losing battles to the tune of tens of millions of dollars a year because they hesitated. Alaska's economy, ecology and environment are at stake and we can not afford to be tentative. Each day adds more expense and less chance to win the battle!

We look forward to the results that will be achieved on this matter from a united Alaska!!

Troy and Lori Zaumseil

Anchorage, AK 99503

Governor Sarah Palin
Alaska State Capital Building
Third Floor
PO Box 110001
Juneau, AK 99811-0020

Dear Governor Palin:

The Board of Directors for the Alaska Committee for Noxious and Invasive Plants Management (CNIPM) would like to provide members of the legislature information about invasive species threats to natural resources and invasive species management efforts in Alaska and other states. CNIPM works for the statewide management of noxious and invasive plants in Alaska. CNIPM is an informal group comprised of individuals involved in invasive species work, representing agencies and organizations statewide. More information about CNIPM is found at our website at: http://www.uaf.edu/ces/cnipm/. The information provided may be of assistance in making decisions about House Bill 12 (HB12), "An Act establishing the Alaska Council on Invasive Species in the Department of Fish and Game".

Invasive species have proven worldwide to be a threat to natural resources because they compete with crops and native species, degrade fish and wildlife habitat, and can decrease property values. Worldwide, estimated annual costs of invasive species are $1.4 trillion. Idaho spends $300 million a year on invasive species control, and Montana spends $14 million a year on just one weed, spotted knapweed. In Alaska, spotted knapweed has been found at just more than 10 sites. Many other invasive species have been found in Alaska in similarly small populations that will expand beyond control without prompt management. Managing invasive plants species when they are in small, incipient populations is recognized by experts as the most cost effective way to prevent damage to resources and the economy. Alaska has a unique opportunity in prevention; to avoid natural resource losses, direct and indirect economic impacts and extensive herbicide use that others are experiencing.

Despite Alaska's unique opportunity, invasive species management professionals and the public have discovered well established and expanding populations of highly invasive species ranging from rat and insects to plants such as orange hawkweed. These highly invasive species are a threat to agricultural production, forestry, fisheries, tourism, subsistence resources, waterfowl, large and small game, wildlife, and non-timber forest products such as wild berries. Alaska's natural resource based industries and subsistence areas are dependent on these resources. In other parts of the world introductions of invasive species have contributed to severe impacts to these resources. To prevent losses

to resources from invasive species with the least amount of cost action should be taken now.

Other states have established Invasive Species Councils to provide affected stakeholders a cooperative means of communicating, planning, coordinating, and collaborating efforts towards invasive species prevention and management. Inclusion of an appropriate range of stakeholders on a council provides a framework for governmental, public, and private entities to identify solutions in a timely fashion. Swift coordinated management will reduce management cost and prevent major losses to resources and expenditures of state funds.

Invasive species councils develop and regularly review statewide strategic plans for invasive species prevention and management. Plans provide coordination and direction to state agencies and local weed management efforts. Strategic plans establish a state policy towards invasive species. Strategic plans developed by a council demonstrate state commitment and cooperation with local efforts. State commitment and cooperation is often a pre-requisite to acquisition of funds through grant programs supporting invasive species management.

A council's coordinated approach will serve many essential functions in advancing invasive species management. Councils facilitate the development of a statewide policy to address the risks of existing invasive species in the state and the prevention of the introduction of additional invasive species. Councils foster communication between entities, helping to develop partnerships and identify and fill gaps in funding. Federal agency involvement is essential, and often Federal departments and agencies are provided ex-officio board seats on invasive species councils. In Alaska and other parts of the United States Federal Agencies have provided essential partnerships and support for invasive species management efforts.

Development of a strategic plan will implement control of invasive species, coordinate efforts, prioritize actions, streamline management efforts, identify information gaps, and implement early detection and rapid response plans. Council developed strategic plans facilitate implementation of essential elements that are widely recognized as critical to successful invasive species management.

Thank you for your time and actions to protect Alaska's natural resources and economies related to those resources from the threat of invasive species.

Sincerely,

Gino Graziano (CNIPM Board Chair) Elizabeth Bella (CNIPM Board Vice-Chair)

Michele Hebert

January 19, 2009

Honorable Sarah Palin
Governor of the State of Alaska
P.O. Box 11001
Juneau, AK 99811-0001

Dear Governor Palin:

I am writing a letter in support of the formation of an Alaska Council on Invasive Species. I am a professor of Agriculture with the Cooperative Extension Service at the University of Alaska, Fairbanks. I chair the Alaska Invasive Species Working Group, with a mission to minimize invasive species impacts in Alaska by facilitating collaboration, cooperation and communication among Federal, State, Tribal and private groups. The establishment of a council is one of the top priorities for improving Alaska's ability to manage invasive species and protecting Alaska's industries potentially affected by problems invasive species pose.

Invasive species are a global problem, and Alaska is susceptible to many invaders, particularly as global climate change is projected to warm Alaska. Invasive species will, if not properly managed, affect all our major industries, including fisheries, tourism and transportation. The management of invasive species in other states cost millions of dollars. We have a unique opportunity in Alaska through the development of a council to be proactive and work collaboratively to reduce the introduction of new species and management efforts of species that have already entered the state.

A bill, HB 12 is being introduced by Representative Craig Johnson to the 26th Alaska Legislature. I urge you to support any legislation for the formation of an Invasive Species Council. Please support Bills that include the establishment of an Invasive Species Council and development of a strategic plan to address the threats of all invasive species in Alaska. If you have any questions, please contact Michele Hebert at 907-388-6085 or ffmah@uaf.edu.

Sincerely,

Michele Hebert
Agriculture and Horticulture Agent UAF

Dear Governor Palin:

The purpose of this letter is to express the support of the National Marine Fisheries Service (NMFS) for the formation of an Alaska Council on Invasive Species. A bill that would realize this goal is being introduced by Representative Craig Johnson to the 26th Alaska Legislature. NMFS hopes that Alaska will recognize both the threat invasive species pose to economic, environmental and human health, and the unique opportunity for Alaska to get "ahead of the curve" to prevent and control invasions early, when it is most economically feasible to do so. Invasive species experts from the lower 48 states and other countries repeatedly emphasize this advantage in the State of Alaska, but only for now. With climate change and increasing opportunities for many vectors to bring undesirable non-native species to Alaska, this enviable position will not last forever. Forming an Alaska Council to bring action to the problem will save money in the long run and preserve the integrity of Alaska's economy, environment and public health.

NMFS has been working closely with the Alaska Invasive Species Council and many other partners on the invasive species issue in Alaska. We have been impressed with the high degree of interest, enthusiasm, expertise and effort that has allowed much progress. More progress is needed, however, with the formation of an Alaska Council that is sufficiently funded to carry out its mandates. NMFS will seek to help bring success to minimizing the impacts of invasive species in Alaska as much as possible by participating as a Federal partner with an Alaska Council on Invasive Species.

Thank you for the opportunity to comment. If you have any questions regarding our support for the formation of an Alaska Council on Invasive Species, please, please contact Linda Shaw at 907-586-7643 or linda.shaw@noaa.gov.

Sincerely,

Robert D. Mecum

January 19, 2009

Honorable Sarah Palin
Governor of the State of Alaska
P.O. Box 110001
Juneau, AK 99811-0001

Dear Governor Palin:

Recently Representative Johnson introduced HB 12, "An Act establishing the Alaska Council on Invasive Species in the Department of Fish and Game." We feel this legislation is critical in helping to help protect our precious Alaska environments and economies from the threat of invasion by harmful non-indigenous organisms. Our support for this bill follows a letter we sent to you in November urging you to support the concept of an Alaska Invasive Species Council.

I am writing on behalf of the Prince William Sound Regional Citizens' Advisory Council (PWSRCAC) which is an independent non-profit corporation whose mission is to promote environmentally safe operation of the Valdez Marine Terminal and associated tankers. Our work is guided by the Oil Pollution Act of 1990, and our contract with Alyeska Pipeline Service Company. PWSRCAC's 18 member organizations are communities in the region affected by the 1989 Exxon Valdez oil spill, as well as commercial fishing, aquaculture, Native, recreation, tourism and environmental groups.

We care about HB12 because of our experience and knowledge of invasive species issues. Invasion by non-indigenous aquatic species into Alaska waters, particularly Prince William Sound, is a serious and growing concern as huge volumes of oil-tanker ballast water containing such species continue to be discharged into the Sound. In partnership with governmental agencies and industry, we have supported invasive species research several years. PWSRCAC has also held a seat on the national Invasive Species Advisory Committee for over a decade now.

Thus it is that we see a state-wide council as critical to combating harmful invasive species. The purpose of the council would be to provide a coordinated, multi-stakeholder approach for addressing the potential risks of harmful invasive organisms and agents throughout the state and to work toward preventing the future introduction of other new invasive organisms and agents to the state.

One only has to look at the rest of the United States to see the huge amounts of effort and money that has already been spent on harmful invasions. The prime example of this is in the Great Lakes region. The invasive zebra mussel

3250
Printed on Recycled Paper

has virtually taken over the Great Lakes. Damage to water pipes, boat hulls, and other hard surfaces by zebra mussels in the Great Lakes is estimated at $5 billion. We believe that the money spent on proactive coordination and planning through a state council will be minimal compared to dealing with the economic and environmental fallout from harmful invasions. We urge you to support HB12.

Sincerely,

State Capitol, Room 126
Juneau, AK 99801- 1182

Dear Representative Johnson:

Because invasive plant species threaten native fish, plants and wildlife in Alaska, I fully support HB 12 and the formation of the Alaska Council on Invasive Species.

The collaboration and strategic planning set forth in the HB 12 are important steps in addressing invasive species in Alaska. We must do all we can to prevent the introduction of invasive species and have the ability respond rapidly as a community when needed.

Thank you for your work on this matter and please let me know if my office can lend any further assistance.

Thanks for your work!

Sincerely,

Mark Begich

Climate Change's Impact On Invasive Plants In Western US May Create Restoration Opportunities

ScienceDaily (Jan. 30, 2009) — http://www.sciencedaily.com/releases/2009/01/090127112055.htm

A new study by researchers at Princeton University's Woodrow Wilson School of Public and International Affairs has found that global climate change may lead to the retreat of some invasive plant species in the western United States, which could create unprecedented ecological restoration opportunities across millions of acres throughout America. At the same time, global warming may enable other invasive plants to spread more widely.

The researchers assessed the relationship between climate change and the distribution of five prominent invasive plants in the western United States – known colloquially as the "kudzus of the West" – cheatgrass; spotted knapweed; yellow starthistle; tamarisk; and leafy spurge. Such plants are defined as invasive because they were brought into this country from other lands and now dominate and alter ecosystems in ways that threaten native wildlife, agriculture, and ranching. All have greatly expanded their ranges in recent decades in the western U.S., causing millions of dollars in damage to farmlands and rangelands. Invasive plants are increasingly expensive to control, and it is widely believed that global warming will make the problem worse.

But Bradley and her co-authors find that global warming may also reduce the competitiveness of some invasive plants if conditions become climatically unsuitable to the weeds, "creating opportunities for restoration in areas currently dominated by intractable invasive species," according to the study.

The five species were selected in part because they represent the most problematic plants in the western U.S. The study authors created "bioclimatic envelope models," wherein the authors identified where the invasive plant species occurred, and identified critical climate variables such as precipitation patterns and temperature patterns that are associated with the presence of the invasive plants under investigation. The authors then determined what combined set of climate variables best described the distribution of these weeds, and mapped all of the places in the U.S. where these climate conditions occur.

Developing such models is important because scientists can use them to assess how changing climate conditions might affect the distributions of invasive plants. Maps of how invasion risk is likely to change with global warming are also important for land managers designing long-term protocols for fighting invasive plants.

The researchers employed 10 atmosphere-ocean general circulation models (AOGCMs) that predict what climatic conditions in the West are likely to be in 2100 if emissions are not limited, and matched those predicted conditions to the climate conditions associated with each of the invasive plant species. The projected invasive species distributions for each of the models were added together to create a map of invasion risk under future climate conditions.

"Just as native species are expected to shift in range and relative competiveness with climate change," the authors wrote, "the same should be expected of invasive species."

3253

Specifically, the researchers concluded that climate change is likely to expand invasion risk from yellow starthistle in California and Nevada – and lands currently occupied by invasive populations of the weed in California, Oregon and Washington are unlikely to become unsuitable for the species; hence, they have low potential for restoration. Tamarisk distribution, they found, is unlikely to be affected by climate change.

Cheatgrass, however, is likely to be affected by climate change, potentially moving northwards into parts of Idaho, Montana and Wyoming, but retreating in southern Nevada and Utah. And, according to Bradley and her co-authors, the impacts of climate change will likely shift spotted knapweed, currently distributed throughout the foothills of the Rocky Mountains and the Colorado Plateau, to higher elevations, leading to both expanded risk and restoration opportunities in part of Montana, Wyoming, Utah, and Colorado.

Leafy spurge, abundant in northern states west of the Mississippi River and some rangeland west of the Rockies, will likely retreat from some places in the face of climate change, creating restoration possibilities in Colorado, Nebraska, Iowa, and Minnesota – but potentially expanding into parts of Canada not included in the researchers' study. In addition, the researchers found that leafy spurge is likely to retreat from Nebraska and parts of Oregon and Iowa, creating strong potential for restoration in these areas.

To better address the impacts of invasive species, the authors note, further modeling and experimental work is needed to determine which species will be able to occupy these sites if the invasive species are reduced or eliminated by climate change. Local native plants (the ones that were there prior to the arrival of the invasive species) may be unable to reoccupy these areas as a result of global warming. If local native plants cannot reoccupy the areas, then native plants from elsewhere in the West will need to be considered for restoration to prevent new invasive species from quickly invading these sites.

"The restoration opportunities associated with the retreat of currently intractable invasive species are vast in the western United States," the authors wrote. "The uncertainties associated with these changes, as well as the unknown makeup of viable future vegetation... highlight a pressing need for integrated modeling, monitoring, and experimental work to better address the ecological consequences of climate change."

"The question for policy makers and land managers is, 'What do we want these lands to be?'" said Wilcove. "These lands will change, and we must decide now – before the window of opportunity closes - whether we do nothing or whether we intervene."

"Governments need to reduce emissions quickly to avoid a variety of dangerous climate changes, Oppenheimer warned. "At the same time, it will be necessary to adapt to the inevitability of some warming. Proper management of ecosystems to minimize the damages is a key part of any effective adaptation strategy."

Thank you for this opportunity to testify. Last year, the first vital steps were taken to protect Alaska's economy, ecology and environment from the devastation of noxious weeds. Troy and I had no experience with the political process, but were very gratified by the unanimous response to HB330. When Representative Johnson proposed that legislation, we vowed to dedicate our time and effort to making people understand the importance of developing this statewide response and why it was the fiscally responsible thing for their senators and representatives to do. We have spoken to many local, state and national audiences about Alaska's fight with invasives and met experts fighting the same problems in other states that threaten Alaska. Without exception, we hear the same message--that Alaska is America's last chance to do it right and not suffer the tens of millions of dollars in expense and losses due to invasive species, but that is only possible if we act quickly and aggressively while the advantage is still ours to take. HB12 is the next important step in the process. This legislation needs your vote today and as it moves forward, but in addition, Alaska and her citizens need your continued support as the agencies and people on the ground work to prevent and control invasive species from impacting our Great Land. Thank you

Lori Zaumseil

Good afternoon. My name is Dan Gilson and I am with the Prince William Sound Regional Citizens Advisory Council. The Council is a non-profit whose mission is promoting the environmentally safe operation of the Alyeska terminal and associated tankers. The Council's 18 member organizations are communities in the Exxon Valdez oil spill impact region, as well as business, recreation, tourism, commercial fishing, Native and aquaculture groups.

Because of our concerns regarding invasive species arriving in the ballast water attached to the hulls of tankers, we are here today to support HB 12, the bill to create an invasive species council.

This legislation is vital in helping to help protect Alaska environments and economies from the threat of invasion by harmful non-indigenous organisms. We must act now in order to avoid a potential catastrophe.

The purpose of the council would be to provide a coordinated, multi-stakeholder approach for addressing the potential risks of harmful invasive organisms and agents throughout the state and to work toward preventing the future introduction of other new invasive organisms and agents to the state.

The minor amount of money spent annually on a council could save us billions of dollars in lost economies, environments and industries in addition to costs associated with controlling invasions. Just look at the situation with the zebra mussels in the Great Lakes. The government estimates that economic losses and control efforts cost the United States about $5 billion each year.

A more immediate threat to Alaska Coastlines is the European Green Crab. Green crabs eat clams, oysters, mussels, marine worms and small crustaceans that are important foods for native species. This invasive crab has marched its way up the west coast of the United States and has invaded Vancouver Island most recently. It is not a matter of "if" we get green crabs, but "where and when." To give you an idea of the economic devastation posed by the green crab, which is also invasive to the East Coast of the United States, the estimated total losses due to the green crab on the East Coast during 1975–2005 range from $719 to $806 million. Although economic impacts to the West Coast are negligible under current conditions, the West Coast impacts could increase to almost a million dollars per year if the green crab were to spread up to Alaska. And we do expect this spread to makes it way to Alaska. We know the crabs can survive and establish themselves in our waters.

There are numerous threats to Alaska in terms of invasive species and just as many horror stories of these species taking over environments in other states. Another real threat to Alaska is Purple Loosetrife which has been found in the Westchester Lagoon area in Anchorage. This plant can produce up to 2.7 million seeds per plant yearly and spreads across approximately 1 million

additional acres of wetlands each year, with an economic impact of millions of dollars. A coordinated local effort in Anchorage has been on top of that infestation, but one can easily see how a broader coordinated effort is needed to proactively deal with these issues.

At this moment in time, Alaska is relatively free from invasive species. Contrary to a popular myth, Alaska is not isolated as it receives significant amounts of air, water, and land traffic. Also, climate change is making conditions in Alaska more favorable for harmful invasive species.

Unless Alaska takes a proactive stance, Alaska will suffer the same fate as other states dealing with the management of harmful invasive species. Formation of a council to develop a strategic plan, coordinate efforts, and share information is essential to be able to take advantage of funding opportunities only available to such coordinated entities. The minor amount of money spent on a council annual will pay dividends in the significant amount of money <u>not</u> spent on managing weeds, pests and other critters.

I urge you to support this bill.

Alaska Conservation Alliance

Uniting for Alaska's Future

February 5, 2009

House Committee on Resources
State Senate
Alaska State Capitol
Juneau, Alaska 99801-1182

Dear Representative Johnson, Buch and Munoz,

On behalf of the 40 conservation groups and the 38,000 Alaskans represented by the Alaska Conservation Alliance, I am pleased to acknowledge our strong support for HB12 to establish the Alaska Council on Invasive Species in the Department of Fish and Game. Some state economies have lost billions of dollars in revenue due to damage caused by inavasives. In order for Alaska to avoid a similar fate, it is prudent to address this issue now.

We believe the 14-member Council will provide the broad stakeholder cooperation and oversight needed to prevent new invasive species from taking root in Alaska and to mitigate the damage of invasives currently pushing our native species to the brink. At risk are Alaska's biological treasures, its flora and fauna; its harvested resources and subsistence plants and animals; the beauty and diversity that make Alaska a world-class tourist destination.

Already Alaska has suffered the effects of invasive Atlantic Salmon, pike and Reed Canary grass, to name a few. Plants, animals, fish and crustaceans, introduced into an environment devoid of their natural predators and limitations can irreversibly destroy an ecosystem and the economy and cultures it supports. These foreign species invade Alaska's ecosystem primarily due to human activities. It is therefore important that Alaskans take an active role to prevent this potential man-made disaster by serving on the Alaska Council on Invasive Species.

The Alaska Conservation Alliance would like to thank you for this opportunity to voice our support for HB 12 and encourage you to pass this bill out of the Senate Finance Committee.

Sincerely,

Kate Troll

HB

41

Dear Rep. Seaton:

I am a current member of the Alaska Board of Fisheries and ask that my personal views on HB 41 be considered by the House Resources committee at the hearing scheduled for Feb. 12, 2010.

The Bill, if enacted, would among other things, permit a Board member who has a conflict of interest to deliberate, but not vote on proposals which would likely benefit the member if passed. I assume that the concept would be to give the Board information from a person who may have experience and judgment regarding the particular proposals being considered. I am opposed to the Bill for a couple of reasons. First, from a practical point of view, Board members, who are conflicted out of deliberations and voting, generally provide their point of view to other members during the course of a meeting, both prior to and during deliberations. Some Board members actively seek out those members who have been conflicted and ask their opinions and information. And in some cases members who cannot deliberate or vote seek other members and advocate for their positions similar to what other stakeholders might do with Board members. So if one of the primary reasons for allowing conflicted members to deliberate is to provide the Board with new or additional information, that goal is for the most part already achieved with the current conflict rules the Board follows.

Second, It is my belief that the integrity of the Board process would suffer a blow by allowing a member who has a clear conflict of interest to publically advocate for a position that all would know would benefit the member in a significantly beneficial manner. It would, in my opinion give a significant appearance of impropriety to the what otherwise has become over time a very dependable and honest process. It would not improve the process and perhaps would just take up time unnecessarily, since all members(and probably stakeholders as well) would more than likely know what a conflicted member's position would be anyway. Why should a Board member who stands to gain from adoption of a proposal be given anymore status than any other stakeholder.

For the foregoing reasons I am opposed to the aspect of HB41 which would permit Board members who are conflicted from voting on any proposal the opportunity to deliberate on those proposals.

I support the aspect of HB41 that narrows the definition of family members.

Thank you, Karl Johnstone

Background Information on the Alaska Board of Fisheries Conflict of Interest Disclosures and Ethics Act Compliance

In Regard to HB 41

Prepared for the
House Resources Committee
Alaska State Legislature

February 12, 2010

Prepared by

Jim Marcotte
Executive Director, Alaska Board of Fisheries
Boards Support Section
Alaska Department of Fish and Game
465-4110
jim.marcotte@alaska.gov
www.boards.adfg.state.ak.us

Introduction

Compliance with the Executive Branch Ethics Act (AS 39.52) is taken very seriously by the Board of Fisheries. Board members and their supporting staff follow the legal guidelines in the Ethics Act as they strive to maintain a high level of public credibility in the overall board process. If a member has a significant personal or financial interest in an issue before the board, he or she must refrain from deliberating or acting on that issue.

Procedures on ethics disclosures

There are several procedures that are followed by the board to help insure that these guidelines are met.

At the very beginning of each regulatory meeting, the board chairman calls on each member to present their ethics disclosure statement. The one-page *Ethics Disclosure* guide sheet (attached) is used as the outline for these disclosures. Board members describe their income sources, list any personal or financial interests they or their family members have in fishing related businesses, and identify any personal or financial interest they or their family members may have in regard to the proposals to be considered at the meeting.

The chairman then invites questions from the other board members, and invites comments from the Department of Law. Following any clarification or discussion, the chairman issues a ruling on the member's eligibility to participate on specific proposals.

A determination by the chairman can be overruled by a vote of the board. When there is a vote to overrule the chair's ruling, the member in question does not vote.

If a board member is found to have a conflict with a given proposal, that member does not participate in the committee discussion, deliberation, or in voting on the particular proposal.

Pattern from last nine years

The board addresses different geographic areas of the state on a three-year cycle and acts on 250 to 500 regulatory proposals each year. Overall, 11 percent of the proposals addressed by the board have been subject to a ruling of a conflict of interest.

The frequency of conflicts varies year to year as a function of board composition and geographic focus of the board. Conflicts are typically found when a board member or their family members have a significant economic or personal interest in a fishery, such as when an active charter or commercial fisherman fishes in an area covered in regional board meeting. In some years the conflict rate is as low as 3 percent, in other years as high as 20 percent.

Table 1 is a summary of the nine year period from October 2001 through February 2010. During this period, the board addressed a total of 3,392 proposals, 367 of which had a

board member conflict. On average, 377 proposals were addressed each year, 11 percent of which had a board member conflicted.

Table 2 presents data for the period from October 2001 through February 2010, compiled *by board member* instead of *by meeting*. Again, the pattern varied as a function of the member's personal and financial interests relative to the topics before the board.

Tables 3 - 11 provide an accounting of the number of proposals where a conflict was found including the detail *by meeting* and *by board member*. Each page is a different meeting cycle year, beginning with the 2001/2002 Cook Inlet and Kodiak cycle and continuing through the most recent meeting.

House Bill 41

House Bill 41 would result in two changes in how the Board of Fisheries approaches conflicts of interests.

First, the definition of "family" would be narrowed (see chart) It would shift away from the definition applied to the *Executive Branch*, as found in AS 39.52.960(11), and move to the definition applied to the *Legislative Branch*, as found in AS 24.60.990(6). No longer included would be a member's child, parent, or sibling when not residing with the member, when not financially dependent, or when not sharing a substantial financial interest. Also deleted would be a grandparent, aunt, uncle, spouse's parent, or spouse's sibling.

TABLE 12. Comparison of "family" definitions in state statute (February 2010)

	AS 39.52.960(11) (Executive Branch)	AS 24.60.990(6) (Legislative Branch)
Spouse, Conjugal cohabitant/ Domestic partner	Included	Included
Child (including stepchild and adopted child), Parent, Sibling	Included	Included only if: -resides with person -financially dependent, or -if shares a substantial financial interest
Grandparent, Aunt, Uncle, Spouse's parent, Spouse's sibling	Included	Not included

The second change is that the board member would be allowed to fully participate in the deliberation on a proposal. However, the bill would not change the restriction on a board member voting on a proposal or issue if the board member had a conflict.

Conclusion

Neither the Department of Fish and Game nor the Board of Fisheries has taken a position on HB 41 at this time.

REPRESENTATIVE PAUL SEATON
DISTRICT 35

Sponsor Statement
HB 41

HB 41 expands the ability of Board of Fish members to offer their experienced viewpoint during board debates.

Current law requires board members to declare a conflict and recuse themselves from discussion and voting if they, or a member of their family, have a personal or financial interest in a matter before the board. This requirement prevents commercial fishermen and sport fishing guides from discussing fishery issues that they are intimately familiar with through their participation in the fishery. HB 41 allows commercial and sport fishermen, after full disclosure, to deliberate on fishing issues in which they have a conflict based on their participation in the fishery. These members are not allowed to vote. HB 41 does not allow board members to participate on issues in which they have a paid financial interest as a consultant or a lobbyist.

The Board of Fish is composed of seven members. If one or two members are conflicted out of a discussion because of their in-depth knowledge, the entire process suffers. On average between 2001 and 2006 individual board members were required to recuse themselves on nearly ten percent of the proposals in each board cycle.

Under current law, recusals from board discussion disproportionately affect rural Alaska. Often board members from rural areas have been living in the region for generations and have extensive family involvement in regional fisheries. The applicable definition of immediate family includes parents, siblings, grandparents, aunts and uncles. This expansive definition of immediate family often takes rural representatives out of board discussion on nearly all of the proposals for their entire region, leaving the board without their representation.

A board member would have a conflict of interest on an issue under this bill when a board action might affect a member of their household. This bill applies the same definition found in the new Legislative Ethics Act for defining a board member's participatory conflict of interest.

HB 41 contains a sunset of 2012, giving the Legislature the opportunity to review the effect of the changes imposed by the bill. The Department of Fish and Game is to submit a report to the Legislature at this time, detailing the recusals prevented by this change in statute, and providing a recommendation on whether or not the statutory change should be allowed to expire.

Board of Fisheries - four recusals
(on 11 regulatory proposals)

2005

Board of Dental Examiners - one recusal
Social Work Examiners - four recusals
Local Boundary Commission - one recusal
Ag. and Conservation Board - one recusal
Board of Regents - one recusal
Railroad Corporation - one recusal
Board of Fisheries - seven recusals
(on 41 regulatory proposals)

2006

Oil and Gas Conservation Comm. - one recusal (on single issue)
Board of Regents - one recusal (on single issue)
Board of Game - one recusal (on single issue)
Board of Marine Pilots - three recusals (on single issue)
Public Broadcasting Commission - one recusal (on two issues)
Social Work Examiners - two recusals (on two issues)
Local Boundary Commission - one recusal (on two issues)
Board of Professional Counselors - one recusal (on single issue)
Board of Fisheries - three recusals
(on 103 regulatory proposals)

Quarterly Ethics reports (required of boards under AS 39.52.260) may not contain data on all conflicts because they may fail to reflect voluntary recusal where a board member does not appear at the relevant meeting or portion of a meeting because of a conflict. Reports may fail to reflect whether a recusal is for a single matter or a number of matters before a board or commission.

Introduction

Compliance with the Executive Branch Ethics Act (AS 39.52) is taken very seriously by the Board of Fisheries. Board members and their supporting staff follow the legal guidelines in the ethics act as they strive to maintain a high level of public credibility in the overall board process. If a member has a significant personal or financial interest in an issue before the board, he or she must refrain from deliberating or acting on that issue.

Procedures

There are several procedures that are followed by the board to help insure that these guidelines are met.

At the very beginning of each regulatory meeting, the board chairman calls on each member to present their ethics disclosure statement. The one-page *Ethics Disclosure* guide sheet (attached) is used as the outline for these disclosures. Board members describe their income sources, list any personal or financial interests they or their family members have in fishing related businesses, and identify any personal or financial interest they or their family members may have in regard to the proposals to be considered at the meeting.

The chairman then invites questions from the other board members, and may also ask for comments from the Department of Law. Following any clarification or discussion, the chairman issues a ruling on the member's eligibility to participate on specific proposals.

A determination by the chairman can be overruled by a vote of the board. When there is a vote to overrule the chair's ruling, the member in question does not vote.

If a board member is found to have a conflict with a given proposal, that member does not participate in the committee discussion, deliberation, or in voting on the particular proposal.

Pattern from last seven years

The board addresses different geographic areas of the state on a three-year cycle and they act on 350 to 450 proposals each year. Overall, 10 percent of the proposals addressed by the board have been subject to a ruling of a conflict of interest.

The frequency of conflicts varies year to year as a function of board composition and geographic focus of the board. Conflicts are typically found when a board member or their family members have a significant economic or personal interest in a fishery, such as when an active charter or commercial fisherman fishes in an area covered in regional board meeting. In some years the conflict rate is as low as 3 percent, in other years as high as 20 percent.

Table 1 is a summary of the six year period from 2001 through 2007. During this period, the board addressed a total of 2,458 proposals, 253 of which had a board member conflict. On average, 410 proposals were addressed each year, 10 percent of which had a board member conflicted.

Table 2 presents data for the period from 2001 through 2008, compiled by board member instead of by meeting. Again, the pattern of conflicts varied as a function of the member's personal and financial interests relative to the topics before the board.

Tables 3 - 10 provide an accounting of the number of proposals where a conflict was found including the detail by meeting and by board member. Each page is a different meeting cycle year, beginning with the 2001/2002 Cook Inlet and Kodiak cycle and continuing through the most recent meeting.

HB 41

House Bill 41 would result in two changes in how the Board of Fisheries approaches conflicts of interests.

First, the definition of "family" would be narrowed (see chart) It would shift away from the definition applied to the *Executive Branch*, as found in AS 39.52.960(11), and move to the definition applied to the *Legislative Branch*, as found in AS 24.60.990(6). No longer included would be a member's child, parent, or sibling when not residing with the member, when not financially dependent, or when not sharing a substantial financial interest. Also deleted would be a grandparent, aunt, uncle, spouse's parent, or spouse's sibling.

Comparison of "family" definitions in state statute (February 2009)

	AS 39.52.960(11) (Executive Branch)	AS 24.60.990(6) (Legislative)
Spouse, Conjugal cohabitant/ Domestic partner	Included	Included
Child (including stepchild and adopted child), Parent, Sibling	Included	Included only if: -resides with person -financially dependent, or -if shares a substantial financial interest
Grandparent, Aunt, Uncle, Spouse's parent, Spouse's sibling	Included	Not included

The second change is that the board member would be allowed to fully participate in the deliberation on a proposal. However, the bill would not change the restriction on a board member voting on a proposal or issue if the board member had a conflict.

Conclusion

Neither the Department of Fish and Game nor the Board of Fisheries has taken a position on HB 41 at this time.

3283

ETHICS DISCLOSURE

To comply with the Alaska Executive Branch Ethics Act (AS 39.52), board members are required to disclose sufficient information on the record of all interests they, or their immediate families, may have that relate to fish (Board of Fisheries members) or wildlife (Board of Game members) to enable the chair of the board to determine whether the involvement may be a personal or financial interest that constitutes a conflict of interest under the Act.

When making public ethics disclosures on the record at board meetings, members must provide sufficient information in response to the following questions to enable the chair to decide if it is necessary to inquire further to determine whether a conflict exists:

1. Explain in general terms what you do for a living:

   a. primary employer/employment,
   b. other employment or sources of income,
   c. other business interests.

For the following questions, "member of your family" includes spouse, conjugal cohabitant, child (including step-child and adopted child), parent, sibling, grandparent, aunt, uncle, and spouse's parent and sibling.

2. List all personal or financial interests you, or any member of your family, have in any business or organization relating to fish or wildlife resources.

3. Describe generally any interest you, or any member of your immediate family, have in a business or fish or wildlife organization that may be affected by any of the proposals to be discussed.

4. Describe generally any other interests of a personal or financial nature you, or any member of your immediate family, have that may be affected by any of the proposals to be discussed.

5. List all lawsuits that you, a member of your immediate family, or any organization you belong to, are involved in against the state, the board or the Department of Fish and Game, or where the state, the board, or the department is a party to the lawsuit.

   If you, or a member of your immediate family, are a member of any organization or corporation that is involved in a such a lawsuit, briefly explain what the organization is, the size of its membership and whether you, or an immediate family member, are on its board or hold some other executive or policy making position.

You must certify that your disclosure statement is "true, correct and complete."

Under the Ethics Act the chair of each board has the duty to determine whether a member's involvement in a matter violates the Act (AS 39.52.220). After each individual disclosure, the chair will rule on whether the board member has a conflict. If the chair determines that a conflict will exist if the member participates, the member must refrain from voting, deliberating, or participating in the matter. If the chair determines no conflict will exist, the member can participate fully.

Representative Bryce Edgmon, Chair
House Special Committee on Fisheries
Alaska State Legislature
State Capitol (Mail Stop 3100)
Juneau AK 99801-1182

Dear Chairman Edgmon, and Committee Members,

Southeast Alaska Fishermen's Alliance is a multi-gear membership based organization representing our members mainly involved in the salmon, crab shrimp and longline fisheries of Southeast Alaska and the Alaska halibut & blackcod IFQ fisheries.

We support HB 41 dealing with Board of Fish member's conflict of interest. We have steadfastly supported this legislation for at least the last 8 years. We believe that it is very important to clarify the regulations regarding conflict of interest as being only the immediate family that lives in the household. In addition, even if the members don't vote, they should participate in the deliberations.

A good balanced board of fish has members with a wide variety of knowledge and experience. These members are picked for that reason and then are conflicted out from participating when that knowledge is beneficial to the board because of their personal involvement in the fishery. Relaxing the conflict of interest standard for Board of Fish members while still preventing the ability to provide for their own personal financial gain is a balance to strive for and HB 41 reaches that balance.

One of the strengths of the Board of Fish is that it is still a lay board but people are reluctant to submit their name if they are unable to speak on the fisheries they are knowledgeable about.

Please support and pass HB 41. We really need to get this legislation passed through the legislature this session.

Sincerely,

Kathy Hansen

Representative Bryce Edgmon, Chair
House Special Committee on Fisheries
Alaska State Legislature
State Capitol (Mail Stop 3100)
Juneau AK 99801-1182

Dear Chairman Edgmon, and Committee Members,

United Fishermen of Alaska supports passage of HB 41 to provide for Board of Fisheries members to participate in matters before the Board, if they declare their personal or financial interest in a fishery.

Members are on the Board for their expertise in some aspect of fishing. It is vital that all seven Board members, especially those most informed of the issues concerning a fishery, be able to participate in the discussions on matters before the Board. We also support the definition of immediate family as suggested in HB 41.

UFA is the largest statewide commercial fishing trade association, representing 37 organizations participating in fisheries throughout Alaska and its offshore waters. We appreciate your consideration on this legislation.

Sincerely,

Mark Vinsel
Executive Director

Reminder:

All support found in this section of the bill packet for HB 41 was submitted for a previous version of this bill.

Representative Paul Seaton, Chair
House Fisheries
Alaska House of Representatives
State Capitol (Mail Stop 3100)
Juneau AK 99801-1182

Dear Representative Seaton and Committee Members:

The Alaska Trollers Association supports strongly supports HB 15, which seeks to allow Board of Fisheries (BOF) members to act on all matters before the Board, so long as they have declared their personal or financial interests.

In years past, BOF members were able to fully participate in all discussions and votes. Board members used a recusal process similar to the North Pacific Fishery Management Council and were rarely found to have a true conflict of interest. Due to grey areas in the state law, this has not been the case in recent years, and extremely capable Board members have been restricted from addressing and voting on the very issues they are most knowledgeable about. ATA believes that, at times, this has been damaging to the decision-making process and has been a deterrent to some well-qualified people who might have applied to serve the state on this lay regulatory board.

The strength of the BOF process is directly related to the caliber of its membership and the science, law, and policy that underpin its actions. An exceptional group of fishermen have served on the BOF over the years. When they were fully enabled to act, the resource, industry, and communities have benefited.

ATA believes that the voting mandate that serves the state legislature also serves its regulatory boards. We encourage you to pass HB 15 – let all members of the Board of Fisheries vote!

If I can be of assistance on this or other matters, feel free to contact me.

Sincerely,

Dale Kelley

Honorable Bryce Edgmon
Alaska State Legislature
House of Representatives
State Capitol, Room 424
Juneau, AK 99811

Re: House Bill 15

Dear Representative Edgmon:

The South Naknek Village Council objects to House Bill No. 15. The House Bill proposes to play a game of gamesmanship with Alaska Ethics Rules at the same time that there is a magnifying glass regarding the banality of our public servants. We object. I will describe some of the ways that House Bill 15 proposes to make a mockery of the principles of accountability and duties owed to the public by individuals accepting positions as public officials.

Section 1 of the legislation proposes to relax ethical rules so that members of the Board of Fisheries may participate in issues that come before the Board "even though the members have a personal or financial interest in the matter by virtue of their participation in a fishery." This "purpose" appears to be completely at odds with the requirements applicable to all public officials under A.S. 39.52.220. That statute requires a process leading to determine a member's right to vote if he/she has a personal or financial interest in the outcome. Thus, the laudable goal of citizen participation is significantly diminished by personal interests. The greater the financial interest, clearly, the more a position such as a member of the Board of Fisheries may be abused. Yet, Section 1 proposes to alter the existing balance in favor of those with greater power and access to power within our state. And that is wrong.

Took care with the K'C" C.S.

If this were not enough, Section 2, which is also to take effect immediately, would expressly permit (by deletion) a public officer who is a member of the Board of Fisheries from acting on matters before the Board without disclosing his/her financial interest or personal interest in a business or organization relating to the resource under consideration. Section 2 also further strips any oversight with respect to ethical conduct that A.S. 39.52.220 is intended to foster. Indeed, because A.S. 39.52.220 specifically requires full disclosure and a neutral, unbiased determination of the right to vote, while the proposed Section 2 eliminates that requirement, the amendment encourages self-interest in order to advance individual financial and personal agendas when dealing with public resources, and that is wrong.

Section 3, by virtue of Section 7 to the proposed House Bill 15, would allow any appointees to the Board of Fisheries a free pass for a period of four years, that is, coincidentally, the length of time of the first term of the present administration with respect to the Board of Fishery matters. Section 3, pursuant to the clear language of Section 7, would not take effect until June 30, 2011. That is special interest legislation in order to protect one of two members of the Board of Fisheries, and it is wrong. It is an abuse of the public process.

Similarly, Section 4 is also intended to shield a public official sitting on the Board of Fisheries from public scrutiny with respect to his/her personal and financial interests brought to the Board of Fisheries for a period of four years. Indeed, Section 4, in referencing the 'Public Officials Ethical Rules' (Ch. 52, Title 39, Alaska Statutes), expressly permits any member with a personal or financial interest in a matter coming before him/her to participate in the matter, limited only to not selling his or her vote to a third person paying for the representation. The member, under such circumstances, is only required to disclose his/her interest on the record, but that disclosure is expressly not subject to the Conflict of Interest Rules under A.S. 39.52.220, which would otherwise expressly prohibit votes based upon self-interest.

Proposed Section 4 simply confirms the cynical and self-interested reasons for HB 15: The people of the State of Alaska will be regulated with respect to fisheries resources by individuals whose sole ethical constraint is not to sell his/her vote to the highest bidder. Section 4 expressly permits such self-interested "public" service, including the use of public funds and public facilities in order to benefit that public official's personal or financial interest.

HB 15 is a bad bill. Alaska has had enough of the scandals involving public officials making decisions to benefit their own personal or financial interests involving public resources. HB 15 is an embarrassment; is a travesty; it should be soundly defeated if it is ever brought for a vote in or out of any committee.

Very truly yours,

Donald Nielsen, President
South Naknek Village Council

Representative Paul Seaton
Alaska State Legislature
State Capitol, Room 102
Juneau, AK 99801

RE: Support HB 15

Southeast Alaska Fishermen's Alliance (SEAFA) supports HB 15 (conflict of interest) which deals with the issue of allowing a Board of Fish member that is confirmed by the legislature to participate in the process. One of the main strengths of the Alaska process for the management of the fisheries is the Board of Fish and the layman board and full public process but it doesn't make sense to have a layman board and then prohibit them from participating.

We believe that passage of this legislation will make more applicants more interested in participating in the process.

Sincerely,

Kathy Hansen

March 16, 2007

Representative Paul Seaton, Chair
House Special Committee on Fisheries
Alaska State Legislature
Juneau, AK 99801 Send Via Fax to: 907-465-3472

Dear Chairman Seaton,

The United Southeast Alaska Gillnetters (USAG) supports HB 15 which would give the members of the Alaska Board of Fisheries the same privileges with respect to conflict of interest regulations as other members of Alaska's boards and commissions. Under the current restrictions, an Alaska Board of Fisheries (BoF) member must excuse themselves from the table when issues in which they have a financial interest, no matter how slight, are addressed. This makes the knowledge of the board member who is most familiar with the issues involved in an area or situation unavailable to the other board members. USAG believes one result of this is less informed decisions and in come cases inaction on particular problems that would have been addressed if the conflicted member had been able to participate. We believe the passage of this legislation will result in the BoF making better decisions in all areas of the State. Implicit in this support is the provision that the conflicted member will fully disclose any such conflicts in advance of board action.

Thank you for introducing this important Bill and considering our support for it.

Yours Truly,

Kenneth Duckett
Executive Director

HB 15 Testimony

My name is Christine Koski, I have held a Cook Inlet salmon set net permit for 15 years and have actively fished in Cook Inlet for over 25 years. I am a single mom with 4 children. The majority of my income comes from commercial fishing. I currently live in the Kenai/Soldotna area. My children are also actively involved in commercial set net fishing. and have been since they were born.

Approximately 35% of women are permit holders involved in Cook Inlet salmon set net commercial fishing as well as being involved in other commercial fisheries in the entire State.

I have attended BOF regulatory meetings for decades and in the last 5 years I have been active in the process. My involvement is to ensure that there is an opportunity for my children to continue commercial fishing as their parents and grandparents have.

It is impossible to express my concerns or to suggest changes to improve my capability to harvest salmon when I feel that there is no way to communicate with representation from the current members of the BOF.

Since I have been involved in the process there has been no set net commercial fishing person. To make matters worse it is difficult to converse with the gender bias on the Board. I can appreciate that there is a 14% representation for my gender currently, it still leaves me with a significant impediment with communicating and making changes relative to my situation. I want active participants from my area so that not only will I be able to communicate but so will other similarly situated stakeholders.

HB 15 moves to open up more representation for individuals like myself. Please consider the changes that will give more fair and equitable representation to the commercial fisher women in the State. Committee members please realize that Cook Inlet set net fisher women are hard working individuals who do not wish entitlements but want to make our own way and to instill in our children the lessons of hard work and just rewards. The majority of my livelihood is derived and supplemented with part time employment. We are not wealthy, we do not make 10's of thousands of dollars. Please support HB 15 as presented.

March 22, 2007

House Fisheries Special Committee

Dear Chair Seaton and Committee Members,

This is a note in support of HB 15.

My name is John Jensen and I'm a commercial fisherman and also a member of the Alaska Board of Fisheries. Two other members of my immediate family are commercial fishermen and are permit holders.

It is frustrating at times not being able to participate in the discussions on proposals that come before the Board of Fish that we are involved in. These three permits kept me from participating in 61 proposals (a third of the SE proposals) last year during the Southeast Alaska portion of the yearly cycle.

I am one of the two commercial seats on the board. I am a life-long fisherman from Southeast Alaska and I couldn't provide my expertise and perspective on the subjects before us in order to provide a better understanding for the rest of the Board members on the issues.

I believe a person should be able to disclose his or her interests on record and then be able to fully participate in the matters before them. Many issues require clarification that I can provide.

There is a set of criteria that we have to follow on allocative issues; these are found in AS 16.05 .251 (e). These 7 criteria are our guide lines for allocating fish between user groups and are read into the record for each allocative issue using one or all seven criteria. These criteria, in my opinion, if followed would keep personal interests on the straight and narrow.

As stated in AS 16.02. 221 (a),
The governor shall appoint each member on the basis of interest in public affairs, good judgment, knowledge, and the ability in the field of action of the board and with a view to providing diversity of interest and points of view in the membership.
Currently I am not able to fully utilize *my ability in the field of action,* and my job on the Board is compromised.
I urge you to please consider and pass HB15 so that I may fully participate in the process and be a totally effective member of the Board of Fisheries.

Respectfully submitted,
John E. Jensen

Board of Fisheries and Board of Game Conflict of Interest

Issue Statement: Currently Board of Fisheries (and perhaps Board of Game) conflict of interest rules bar commercial representatives with knowledge in a fishery from discussing the topics, losing a valuable source of information in discussions.

Discussion:

The conflict of interest interpretation has been expanded too far in the case of commercial fishermen or not far enough for other individuals. A commercial fisherman who tries to sit on the Board of Fish will be conflicted out of any discussion of any fishery he holds a permit for and additionally for any fishery that his parents, wife, brothers or sisters or children own. But in comparison a charter operator is almost never conflicted from action on any proposal even if they benefit the industry in allocation issues in an area they operate in or if they have a business partner that holds permits. At the time a proposal comes up for discussion that a board member has a conflict with the meeting is stopped until the board member has left the table and entered the audience. This policy makes it extremely difficult to get good individual to submit their name for the board of fish, and keeps the informed from participating on many matters pertaining to commercial fishing. When Board members are prevented from voting the balance of votes may be swayed.

In essence, the more you know on commercial fishing, the less likely you will be able to provide input if you are on the Board of Fisheries.

The issue does not seem to affect the Board of Game, as there are no professional market hunters that would be deemed to be at the same level of conflict of interest. A change in Board of Fisheries regulations may affect Board of Game conflicts in the future.

The Transition Team subgroups agree on the concept of allowing those with expertise to deliberate, but there are differing views as to whether those with conflicts should be allowed or required to vote, or excluded.

Recommendations:

-Legislative bills have been introduced in the last two sessions, and are expected to be introduced in the coming session, so this may not be an action item for the Governor, but the Transition Team feels compelled to advise her of the problem.

-Only the household members or immediate family should be considered for conflict so as not to unfairly bias the process against longstanding families with extensive affected relatives.

Consequences Of Inaction:

Lack of valid information in Board of Fisheries deliberations
Reluctance of well qualified members to serve on Board. Lack of public confidence in the Board of Fisheries Process, and state management.

9:52:29 AM

Rep Wilson Billin
24 legislature

ART NELSON, Chair, Board of Fisheries, testified in support of HB 241. He said the he'd like to comment on two general areas where the conflict of interest regulations have been problematic for the board. He said:

> The first one is the difficulties that it presents oftentimes with the operation of the board and our functioning and our deliberations. As the chairman of the board, I'm kind of responsible to be the ethics supervisor for all the members, and so of course before each meeting I go around to the various members, particularly those that may have conflicts arising with the different meetings we have ahead of us and ... those conflicts can be either financial or personal in nature, and can be interpreted very broadly. ... Oftentimes even if there's going to be a perceived conflict that we are advised to be conservative in that and ... it's no offense meant to the [DOL]; it's their job to be conservative and make our decisions be not only legally valid but defensible in court. ... The board spends upwards of 40 or sometimes more days per year in our regulatory meeting, and the last thing I want to have happen is ... having an extensive regulation that took a lot of time to put together be struck down because we failed to follow the letter of the ethics rules.

MR. NELSON continued:

> What's also problematic ... is the potential for losing a board member due to a conflict of interest. We're a seven-member board, and regardless of how many board members are present and participating. So whether there's absences and/or conflicts, we always still have to have four votes to carry any motion. And so especially if it's compounded with an absence by another board member, a lot of times it becomes very difficult for us to take regulatory action.

MR. NELSON noted that some well-qualified people are not even interested in being on the board because they know they wouldn't be allowed to vote on important matters.

ETHICS DISCLOSURE

To comply with the Alaska Executive Branch Ethics Act (AS 39.52), board members are required to disclose sufficient information on the record of all interests they, or their immediate families, may have that relate to fish (Board of Fisheries members) or wildlife (Board of Game members) to enable the chair of the board to determine whether the involvement may be a personal or financial interest that constitutes a conflict of interest under the Act.

When making public ethics disclosures on the record at board meetings, members must provide sufficient information in response to the following questions to enable the chair to decide if it is necessary to inquire further to determine whether a conflict exists:

1. Explain in general terms what you do for a living:

   a. primary employer/employment,
   b. other employment or sources of income,
   c. other business interests.

For the following questions, "member of your family" includes spouse, conjugal cohabitant, child (including step-child and adopted child), parent, sibling, grandparent, aunt, uncle, and spouse's parent and sibling.

2. List all personal or financial interests you, or any member of your family, have in any business or organization relating to fish or wildlife resources.

3. Describe generally any interest you, or any member of your immediate family, have in a business or fish or wildlife organization that may be affected by any of the proposals to be discussed.

4. Describe generally any other interests of a personal or financial nature you, or any member of your immediate family, have that may be affected by any of the proposals to be discussed.

5. List all lawsuits that you, a member of your immediate family, or any organization you belong to, are involved in against the state, the board or the Department of Fish and Game, or where the state, the board, or the department is a party to the lawsuit.

   If you, or a member of your immediate family, are a member of any organization or corporation that is involved in a such a lawsuit, briefly explain what the organization is, the size of its membership and whether you, or an immediate family member, are on its board or hold some other executive or policy making position.

You must certify that your disclosure statement is "true, correct and complete."

Under the Ethics Act the chair of each board has the duty to determine whether a member's involvement in a matter violates the Act (AS 39.52.220). After each individual disclosure, the chair will rule on whether the board member has a conflict. If the chair determines that a conflict will exist if the member participates, the member must refrain from voting, deliberating, or participating in the matter. If the chair determines no conflict will exist, the member can participate fully.

REPRESENTATIVE PAUL SEATON
DISTRICT 35

Sponsor Statement
HB 41

HB 41 expands the ability of Board of Fish members to offer their experienced viewpoint during board debates.

Current law requires board members to declare a conflict and recuse themselves from discussion and voting if they, or a member of their family, have a personal or financial interest in a matter before the board. This requirement prevents commercial fishermen and sport fishing guides from discussing fishery issues that they are intimately familiar with through their participation in the fishery. HB 41 allows commercial and sport fishermen, after full disclosure, to deliberate on fishing issues in which they have a conflict based on their participation in the fishery. These members are not allowed to vote. HB 41 does not allow board members to participate on issues in which they have a paid financial interest as a consultant or a lobbyist.

The Board of Fish is composed of seven members. If one or two members are conflicted out of a discussion because of their in-depth knowledge, the entire process suffers. On average between 2001 and 2006 individual board members were required to recuse themselves on nearly ten percent of the proposals in each board cycle.

Under current law, recusals from board discussion disproportionately affect rural Alaska. Often board members from rural areas have been living in the region for generations and have extensive family involvement in regional fisheries. The applicable definition of immediate family includes parents, siblings, grandparents, aunts and uncles. This expansive definition of immediate family often takes rural representatives out of board discussion on nearly all of the proposals for their entire region, leaving the board without their representation.

A board member would have a conflict of interest on an issue under this bill when a board action might affect a member of their household. This bill applies the same definition found in the new Legislative Ethics Act for defining a board member's participatory conflict of interest.

HB 41 contains a sunset of 2012, giving the Legislature the opportunity to review the effect of the changes imposed by the bill. The Department of Fish and Game is to submit a report to the Legislature at this time, detailing the recusals prevented by this change in statute, and providing a recommendation on whether or not the statutory change should be allowed to expire.

REPRESENTATIVE Paul Seaton

District 35

Mariculture has the potential to diversify the economic base of coastal communities impacted by the changing dynamics of the fishing industry. HB 43 allows this expansion of this clean water industry by permitting geoducks to be farmed subtidally in the Gulf of Alaska even if wild geoducks are not present. The bill does not exempt farmers from any health, safety, or other transfer provisions relating to hatchery seed.

The Alutiiq Pride Shellfish Hatchery is the only hatchery that supplies mariculture spat and seed in the State. It was initiated by the State to be a self-sustaining operation in association with the private mariculture farms permitted by the State. Their business plan relies on the sale of geoduck seed. However, the informal policy of the Department of Fish and Game prevents geoduck seed from being utilized by farms anywhere outside of southeast Alaska. These restrictions on the sale of geoduck seed cause the sole hatchery for the mariculture industry in Alaska to require continual subsidy by the State. HB 43 will allow the mariculture industry to develop around the Gulf of Alaska, providing a potentially strong market for seed and private sector financing for the operation of the hatchery.

As non-mobile filter feeders, farmed geoducks will not prey on any local commercial, sport or personal use fish. There have been no reports of species displacement in sedimentary habitat by geoduck clams. Farmed geoducks will not interfere with personal recreational boaters as they are cultivated in the sediment below low tide and without the numerous buoys and floating cages used in oyster farms. No infectious disease has been identified in any wild geoduck population or the geoduck farming industries of Washington, British Columbia, or Alaska.

The conflict surrounding geoducks in southeast Alaska is between the dive fishermen who harvest wild stock and farmers who wish to farm in areas with existing wild stock. HB 43 would evade this conflict because there is no wild stock in the proposed area. This bill will not override any Department of Natural Resources farm site leasing or Department of Fish & Game permit regulation.

HB 43 eliminates unnecessary hindrances to the growth of the maricluture industry in Alaska providing a potential alternative economic base for coastal communities while adequately considering the health of our marine ecosystem.

MEMORANDUM January 20, 2009

SUBJECT: Sectional Summary for HB 43 (Work Order No. 26-LS0227\A)

TO: Representative Paul Seaton
Attn: Katie Koester

FROM: Brian J. Kane BJK
Legislative Counsel

You have requested a sectional summary of HB 43, a bill relating to aquatic farming and geoducks.

A sectional summary of a bill should not be considered an authoritative interpretation of the bill. The bill itself is the best statement of its contents.

Section 1 of the bill adds a new subsection to AS 16.40.100 stating that the commissioner may not use the absence of wild geoduck stock within a management area as the basis for a denial of an aquatic farming permit. Also, if the commissioner issues a permit for an aquatic farm for geoducks in a management area that does not have a wild geoduck stock, then that permit shall not allow farming in the intertidal habitat or environment.

Section 2 of the bill adds a new section to AS 16.40 stating that, consistent with AS 16.40.140(b) - (d), a certified hatchery may transfer geoduck seed to an aquatic farm located in a fisheries management area contiguous to the Gulf of Alaska.

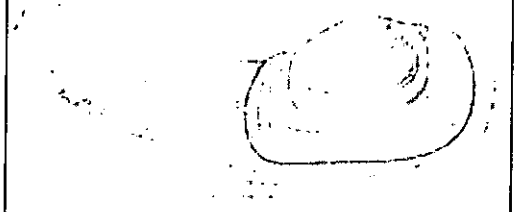
What is a GEODUCK?

HB 43 – Expanding Geoduck Farming

Geoduck

From Wikipedia, the free encyclopedia

Geoduck


Pacific geoduck clam
Scientific classification
Kingdom: Animalia
Phylum: Mollusca
Class: Bivalvia
Order: Myoida
Family: Hiatellidae
Genus: *Panopea*
Species: ***P. abrupta***
Binomial name
Panopea abrupta Conrad, 1849

The **geoduck** (pronounced /'gu:.i:.dʌk/ *i.e.* "gooey duck"[1]), *Panopea abrupta* or *Panope generosa*, is a species of large saltwater clam, also known as the **king clam** or **elephant trunk clam**.

The name is derived from a Nisqualli First Nation word meaning "dig deep", and its phonemically counterintuitive spelling is likely the result of poor transcription. Alternate spellings include *gweduc*, *gweduck* and *goiduck*.

Native to the Pacific Coast of the United States and Canada (primarily Washington, British Columbia, and Southeast Alaska), it is the largest burrowing clam in the world, weighing in at an average of one to three pounds (0.5 - 1.5 kg) at maturity, but specimens weighing over 15 pounds (7.5 kg) and as much as 2 meters (6 ft) in length are not unheard of.

It has a life expectancy of about 146 years, with the oldest recorded at over 160 years. This makes the Geoduck one of the longest-living organisms in the Animal Kingdom. Scientists speculate that the geoduck's longevity is the result of low wear and tear. A geoduck sucks plankton down through its long siphon, filters them for food and ejects its refuse out through a separate hole in the siphon. Adult geoducks have few natural predators, which may also contribute to their longevity. In Alaska, sea otters and dogfish have proved capable of dislodging geoducks; starfish also attack and feed on the exposed geoduck siphon.

Geoducks are broadcast spawners. A female geoduck produces about 5 billion eggs in her century-long lifespan—in comparison, a human female produces about 500 viable ova during the course of her life. It is possible that this fact, in conjunction with the phallic shape of the siphon, has led to the belief that the shellfish has aphrodisiac properties.

Industry and impact

The world's first geoduck fishery was created in 1970, but demand for the semi-forgotten clam was low. Today, they sell in Asia for up to US$30/lb (US$65/kg). The Jumbo clam, like abalone, is highly regarded in Chinese cuisine. Its large, meaty siphon is prized for its savory (umami) flavor and crunchy texture. It is extremely popular in Hong Kong, China and Japan, where it is considered a rare tasty treat. Geoduck is mostly eaten cooked in a fondue-style Chinese hot pot or raw sashimi style, dipped in soy sauce and wasabi. On Japanese menus, geoduck is called *mirugai* or *mirukuigai* . (Although mirugai is sometimes translated to English as "Giant Clam", it is distinguished from "Himejako" sushi made from *Tridacna gigas*.)

Seafood Geoduck display in a Chinese restaurant with price

The geoduck's high market value has created an 80-million-U.S.-dollar annual industry, with harvesting occurring in both Washington state and the province of British Columbia. It is one of the most closely regulated fisheries in both countries; in Washington, Department of Natural Resources staff are on the water continually, monitoring harvests, and the same is true in Canada where the Underwater Harvesters' Association manages the Canadian Fishery in conjunction with Canada's Department of Fisheries and Oceans. Demand has also led to a rapidly developing aquaculture industry.

Geoduck aquaculture on private tidelands in Puget Sound, particularly in South Puget Sound, has been steadily growing over the last ten years, averaging about 10 new acres of cultivation per year. Currently less than 0.001% of Puget Sound is dedicated to geoduck farming. Geoduck farms use "predator exclusion devices" in which to plant the seed geoducks. These devices are 10-14 inch long, 4-6 inch diameter PVC pipes pushed into the sediment of the tideland. There are approximately 20,000 to 43,500 of these PVC pipes planted per acre on tidelands. These nursery tubes typically stay in the beach for the first one to two years of a crop cycle.

The Environmental Defense Fund has done extensive studies of aquaculture and has found that bi-valve aquaculture like geoduck clams are very beneficial to the marine environment. {Goldburg, Rebecca, et al. "Marine Aquaculture in the United States," as prepared by Environmental Defense for Pew Oceans Commission, 2001.} The primary reason for this is because geoduck clams are filter feeders and eat micro algae which proliferates as more nitrogen enters the marine ecosystem. Increases in nitrogen are due to more septic systems as well as bigger flows from city sewage systems throughout Puget Sound, increasing quantities of pet wastes, and increased fertilizer use from farms and lawns. When farmed geoduck clams (which ingest and retain nitrogen in their tissues) are harvested there is a net reduction in nitrogen in the marine ecosystem.

It should be noted that the water must be certifiably clean in order to plant geoducks commercially. This is a requirement of the Washington State Department of Health, and of the Interstate Shellfish Sanitation Council.

While some communities in Puget Sound have installed state of the art septic systems to comply with efforts by environmental groups and state officials to clean up Puget Sound, more than 3000 acres (12 km²) of shellfish beds have been lost to farming between 1992 and 2004 due to fecal contaminantion from human activities and development. Substantial portions of the state's shorelines are already so developed or degraded that they are unsuitable for harvesting, and other areas continue to follow suit.

Some shoreline owners have expressed concerns including aesthetics, effects on native geoduck populations, wildlife interactions, farm debris, and harvest techniques. Although some marine shoreline owners take issue with the visual impacts, the tubes are actually only visible 2-3% of daylight hours over a 6-year crop cycle. The reason for the low visibility is because geoduck are farmed in the lower

elevations of the beach and are covered by water most of the time. However, since the lowest tides in the summer are during mid-day, the visual impact of the tubes is greatest at the very time when the people of Puget Sound are likely to be exploring the beach. During the summer, farms are visible for as much as 5 hours during the day, every other week.

Effects on native geoduck populations from geoduck farming will be minimal to non-existent. Each year new hatchery brood stock is taken from the wild stock. Farmed animals are not used as brood stock so genetically, farmed geoduck are the same as wild stocks. Moreover, wild geoduck occupy the intertidal zone down to 300 feet below sea level. DNR and the tribes co-manage the wild fishery and only harvest geoduck between the -18 to -70 foot depths. Most of the wild geoduck stock is left untouched and unaltered.

Wildlife interactions are a concern and geoduck growers are adapting growing techniques to minimize these effects. A biological assessment examining the impacts of geoduck farming was completed and no long term effects on threatened or endangered species were identified.

Farm debris includes displaced net tops, rubber bands, and tubes. The netting tops used on the nursery pipes can come off and float away onto other beaches as debris and the rubber bands also can become debris in Puget Sound. To offset these environmental impacts most geoduck farmers have been embraced environmental codes of practice including regular maintenance and debris clean-up of their own farms. In addition, the industry now does two annual beach cleanups to collect marine debris from all beaches in areas where they farm. Although as much as 20% of the debris collected in each cleanup has been aquaculture related, less than 5% of the 120 cubic yards collected to date has been related to geoduck farming. Unfortunately, because of the currents in Puget Sound, nets and tubing can be found far from any poorly maintained geoduck operations.

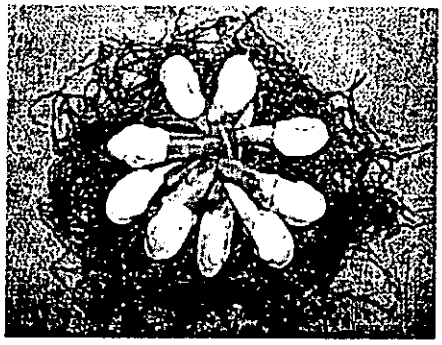
Harvesting takes place every 4-6 years. Water pressure hoses using up to 50 gallons of water per minute are used to liquefy the sediment in order to extract the geoducks. There are limilted impact studies related to intertidal harvest of geoduck as of August 2006, although the sub-tidal environmental impact studies done for the fisheries in BC and WA have found no detrimental effects in harvesting the clams. Geoduck farming is only conducted in clean, uncontaminated sediments so concern is limited to short term increases in turbidity and short term effect on benthic organisms. It should be noted that the Department of Natural Resources of Washington State conducted the environmental impact study. DNR is itself in the business of leasing subtidal lands for commercial geoduck harvest and starting this year, intertidal lands for commercial geoduck farming.

Compared to terrestrial farming, shellfish farming in general and geoduck farming in particular produces high quality protein using natural systems without the use of antibiotics, fertilizers, herbicides, or pesticides.

October 2005 Alaska Fish + Wildlife News

Geoducks: Southeast Gets a Toehold in the Market World's Largest Burrowing Clam Can Live 140 Years

By Amy Carroll



Geoducks can live for decades; growth rings on their shells have shown that some geoducks live more than 140 years.

Geoducks are the world's largest burrowing clam. Pronounced "gooey-duck," they aren't gooey and they aren't ducks. Their name is derived from a Nisqualy Indian term meaning "dig deep."

There has been a small commercial geoduck fishery in Southeast Alaska since the early 1980s. With the intent to diversify the state economy and highlight Alaska seafood in the world market, the Aquatic Farm Act of 1988 allowed The Alaska Department of Fish and Game (ADF&G) to issue permits for construction and operation of aquatic farms and hatcheries.

However, it wasn't until 2002 that the profit potential of the geoduck harvest really took off. That's when the Alaska Department of Environmental Conservation and Southeast Alaska Regional Dive Fisheries Association (SARDFA) established a more efficient Paralytic Shellfish Poisoning (PSP) monitoring plan. Test results are posted online immediately after being entered into the database, which allows more of the geoducks to enter the market live, not processed. The market price for live geoducks is $5 to $10 a pound, for processed it is less than $1 a pound. According to SARDFA, 90 percent of the 2004-2005 commercial season harvest was delivered live.

Not surprisingly, interest in geoduck farming has skyrocketed. "In the recent 2005 aquatic farm opening, over 97 percent of the 141 proposed aquatic farm sites are for culturing geoducks," said Cynthia Pring-Ham, Mariculture Coordinator for ADF&G.

Currently, most of Alaska's 400,000 pound geoduck harvest is destined for Hong Kong and China, where they sell for up to $30 a pound. Their texture has been variously described as sweet, crunchy, or rubbery.

"They are not necessarily as palatable to the North American market. They are considered a delicacy in Asian markets," said Pring-Ham.

The most prized meat is the siphon, eaten raw, sashimi style with soy sauce and wasabi, or cooked in Chinese hot pot soups.

Prime geoduck harvesting areas in Southeast Alaska include Ketchikan's Gravina Island, Craig, Metlakatla, Wrangell, and Symond's Bay near Sitka.

Geoducks reach sexual maturity at three years. After five to 10 years, when their weight is between two and four pounds, they are considered harvestable. They will continue to grow until they are about 15 years old and can reach weights of 14 pounds.

"In Washington state it takes seven years for geoducks to reach a harvestable weight of two pounds, but the waters are colder up here so they may grow slower in Alaska," Pring-Ham said. "We don't have complete growth data yet, since the most mature cultured geoducks at permitted farm sites are only three years old."

The average age of geoducks harvested commercially in Alaska is 44 years.

Wild geoducks reproduce by "broadcast spawning" – releasing eggs and sperm into the water and relying on the movement of the water to unite them. Within 40 to 50 days, the immature geoducks will slowly burrow into the muddy ocean floor at the rate of about one foot a year.

When they are about three feet deep, they settle in for life, unable to move from their burrows. A geoduck siphon may stretch to over three feet to reach the sea floor. Geoducks are filter feeders, sucking in water through the incurrent siphon to extract plankton, and pushing the remaining water out through their excurrent siphon.

Growth rings on their shell have shown that some geoducks can live for over 140 years.

Buried in the ocean floor, geoducks are filter feeders, sucking in water through the incurrent siphon to extract plankton, and pushing the remaining water out through their excurrent siphon.

Pring-Ham manages the mariculture program and issues permits for aquatic farms in Southeast Alaska. "We also do site inspections and provide technical assistance, guidance and training to farmers," she said.

Every two years, the Department of Natural Resources (DNR) provides an opening from January to April to apply for a tidal submerged land lease. A lengthy, multi-agency six-month review of the application is completed; and if it meets all the state regulatory review standards, a lease from DNR and an operation permit from ADF&G are issued for a 10-year period. An average geoduck farm site is about six acres.

Sites must be surveyed to make sure that there are no more than 12,000 pounds of wild geoducks already existing on the farmsite. Recent legislation and court rulings have made it clear that sites that attract or support a commercial fishery will not be granted an operation permit. The department is working with the farmers to find ways to decrease the survey costs and time that it takes to do them, so data is more readily available to the department for making this decision. Delays in issuing the permit may occur due to current limitations on how many surveys can be done by the department each year.

Harvesting geoducks is no walk on the beach. They are usually found in water 25 to 100 feet deep, and then another three feet down in the muddy sea floor.

Harvesting is usually by "hookah" diving – wearing a drysuit and breathing air through a hose to the surface. This allows divers to stay down longer and work harder without the inconvenience of scuba tanks. Divers carry an air hose, or "stinger," used to blow the mud and silt away from a geoduck. The blast from a stinger can stir up so much bottom silt that divers can no longer see, and must extract the geoduck by feel. Great care must be taken not to injure the geoduck's neck or shell.

Other countries are looking to contribute to the lucrative geoduck market, Pring-Ham said. "China is starting to produce hatchery-raised geoduck seed for farming, so this may mean potential competition for the U.S."

Article 02. AQUATIC FARMING

Sec. 16.40.100. Aquatic farm and hatchery permits.

(a) A person may not, without a permit from the commissioner, construct or operate

(1) an aquatic farm; or

(2) a hatchery for the purpose of supplying aquatic plants or shellfish to an aquatic farm.

(b) A permit issued under this section authorizes the permittee, subject to the conditions of AS 16.40.100 - 16.40.199 and AS 17.20, to

(1) acquire, purchase, offer to purchase, transfer, possess, sell, and offer to sell stock and aquatic farm products that are used or reared at the hatchery or aquatic farm; and

(2) except as provided in (f) of this section, harvest and, without further cultivation, sell an insignificant population that may be present at the aquatic farm site of a wild stock of a shellfish species intended to be cultured at the site.

(c) The commissioner may attach conditions to a permit issued under this section that are necessary to protect natural fish and wildlife resources.

(d) Notwithstanding other provisions of law, the commissioner may not issue a permit under this section for the farming of, or hatchery operations involving, Atlantic salmon.

(e) Upon the expiration or termination of a permit issued under this section, a person who holds a permit for an aquatic farming site where wild stocks of shellfish indigenous to the site are cultured shall, as a condition of the permit, restore the wild stock of shellfish, as consistent with sustained yield management of the wild stock, to the population level that existed on the site when the permit for the site was initially issued by the commissioner. A permit holder is not required to restore that portion of the wild stock of shellfish that was removed from an aquatic farming site by a common property fishery conducted after the issuance of the permit for the aquatic farming site.

(f) If the wild stock of a shellfish species to be cultured at an aquatic farm site exceeds the amount determined by the department to be an insignificant population and if the commissioner determines in writing that removal from the site of that portion of the stock that exceeds an insignificant population would benefit the public and that removal of the stock by a person other than the permittee would unreasonably interfere with the operation of the aquatic farm, the commissioner may authorize the permittee to remove and sell the excess amount of the wild stock from the site, if the permittee pays reasonable compensation, as defined by the department, to the department for the harvest and sale of the excess wild stock. The department shall deposit the money received under this subsection into the general fund. The legislature may appropriate the money received under this section to the department for shellfish management and enhancement.

Sec. 16.40.105. Criteria for issuance of permits.

The commissioner shall issue permits under AS 16.40.100 on the basis of the following criteria:

(1) the physical and biological characteristics of the proposed farm or hatchery location must be suitable for the farming or the shellfish or aquatic plant proposed;

(2) the proposed farm or hatchery may not require significant alterations in traditional fisheries or other existing uses of fish and wildlife resources;

(3) the proposed farm or hatchery may not significantly affect fisheries, wildlife, or their habitats in an adverse manner;

(4) the proposed farm or hatchery plans and staffing plans must demonstrate technical and operational feasibility; and

(5) the proposed farm site may not include more than an insignificant population of a wild stock, on the site, of a shellfish species intended to be cultured.

Sec. 16.40.110. Permit application, renewal, and transfer.

(a) An applicant for an aquatic farming or hatchery permit required under AS 16.40.100 shall apply on a form prescribed by the commissioner. An application for a permit must include a plan for the development and operation of the aquatic farm or hatchery, which must be approved by the commissioner before the permit is issued.

(b) An application for renewal or transfer of a permit must be accompanied by fees required by the commissioner, a report of the disease history of the farm or hatchery covered by the permit, and evidence that satisfies the commissioner that the applicant has complied with the development plan required under (a) of this section. The commissioner may require a health inspection of the farm or hatchery as a condition of renewal. The department may conduct the inspection or contract with a disease diagnostician to conduct the inspection.

(c) A person to whom a permit is transferred may use the permit only for the purposes for which the permit was authorized to be used by the transferor, and subject to the same conditions and limitations.

Sec. 16.40.120. Aquatic stock acquisition permits.

(a) A person may not acquire aquatic plants or shellfish from wild stock in the state for the purpose of supplying stock to an aquatic farm or hatchery required to have a permit under AS 16.40.100 unless the person holds an acquisition permit from the commissioner.

(b) An acquisition permit authorizes the permit holder to acquire the species and quantities of wild stock in the state specified in the permit for the purposes of supplying stock to

(1) an aquatic farm or hatchery required to have a permit under AS 16.40.100;

(2) the department.

(c) The commissioner shall specify the expiration date of an acquisition permit and may attach conditions to an acquisition permit, including conditions relating to the time, place, and manner of harvest. Size, gear, place, time, licensing, and other limitations applicable to sport, commercial, or subsistence harvest of aquatic plants and shellfish do not apply to a harvest with a permit issued under this section. The commissioner of fish and game shall issue or deny a permit within 30 days after receiving an application.

(d) The commissioner shall deny or restrict a permit under this section upon finding that the proposed harvest will impair sustained yield of the species or will unreasonably disrupt established uses of the resources by commercial, sport, personal use, or subsistence users. The commissioner shall inform the Board of Fisheries of any

action taken on permit applications for species that support commercial fisheries subject to limited entry under AS 16.43 and of any permits denied because of unreasonable disruption of an established use. A denial of the permit by the commissioner must contain the factual basis for the findings.

(e) The Board of Fisheries may adopt regulations for the conservation, maintenance, and management of species for which an acquisition permit is required.

(f) Except as provided in (d) of this section or in a regulation adopted under (e) of this section, the commissioner shall issue a permit if

(1) wild stock is necessary to meet the initial needs of farm or hatchery stock;

(2) there are technological limitations on the propagation of culture stock for the species sought;

(3) wild stock sought is not fully utilized by commercial, sport, personal use, or subsistence fisheries; or

(4) wild stock is needed to maintain the gene pool of a hatchery or aquatic farm.

(g) Aquatic plants and shellfish acquired under a permit issued under this section become the property of the permit holder and are no longer a public or common resource.

Sec. 16.40.130. Importation of aquatic plants or shellfish for stock.
A person may not import into the state an aquatic plant or shellfish for the purpose of supplying stock to an aquatic farm or hatchery unless authorized by a regulation of the Board of Fisheries.

Sec. 16.40.140. Limitation on sale, transfer of stock, and products.

(a) A private hatchery required to have a permit under AS 16.40.100 may sell or transfer stock from the hatchery only to an aquatic farm or other hatchery that has a permit issued under AS 16.40.100, except that shellfish stock may also be sold or offered for sale to an aquatic farm or related hatchery outside of the state.

(b) Stock may not be transferred to or from an aquatic farm or hatchery required to have a permit under AS 16.40.100 without prior notice of the transfer to the commissioner. A notice of transfer shall be submitted at least 45 days before the proposed date of transfer.

(c) A notice of transfer must be accompanied by a report of a health inspection of the stock. The department shall conduct the inspection or contract with a disease diagnostician to conduct the inspection. The cost of inspection shall be borne by the department.

(d) The department may restrict or disapprove a transfer of stock if it finds that the transfer would present a risk of spreading disease.

(e) A person may not sell, transfer, or offer to sell or transfer, or knowingly purchase or receive, an aquatic farm product grown or propagated in the state unless the product was grown or propagated on a farm with a permit issued under AS 16.40.100. The permit must be in effect at the time of the sale, transfer, purchase, receipt, or offer.

Sec. 16.40.150. Disease control and inspection.

(a) The department shall order the quarantine or the destruction and disposal of diseased hatchery stock or of aquatic farm products when necessary to protect wild stock. A holder of a permit issued under AS 16.40.100 shall report to the department an

outbreak or incidence of disease among stock or aquatic farm products of the permit holder within 48 hours after discovering the outbreak or incidence.

(b) A holder of a permit issued under AS 16.40.100 shall allow the department to inspect the permit holder's farm or hatchery during operating hours and upon reasonable notice. The cost of inspection shall be borne by the department.

(c) The department shall develop a disease management and control program for aquatic farms and hatcheries.

(d) The department may enter into an agreement with a state or federal agency or a private, state-certified provider to provide services under (b) and (c) of this section, or inspections under AS 16.40.110(b).

Sec. 16.40.155. Records and reports confidential.
Records required by statute or by a regulation adopted by the department concerning aquatic farm stocks or production, prices, and harvests of aquatic farm products and wild stocks, and annual statistical reports of individual aquatic farms or hatcheries required by statute or by a regulation adopted by the department are confidential and may not be released by the department, except that the department may release the records and reports

(1) to the Department of Revenue and the Department of Natural Resources to assist the departments in carrying out their respective statutory responsibilities;

(2) as necessary to comply with a court order;

(3) provided by an aquatic farm or hatchery permit holder to the permit holder whose activity is the subject of the records or reports;

(4) regarding cumulative annual harvests of wild stocks at individual aquatic farm sites.

Sec. 16.40.160. Regulations.
The commissioner may adopt regulations necessary to implement AS 16.40.100 - 16.40.199.

Sec. 16.40.170. Penalty.
A person who violates a provision of AS 16.40.100 - 16.40.199, a regulation adopted under AS 16.40.100 - 16.40.199, or a term or condition of a permit issued under AS 16.40.100 - 16.40.199, is guilty of a class B misdemeanor.

Sec. 16.40.199. Definitions.
In AS 16.40.100 - 16.40.199

(1) "aquatic farm" means a facility that grows, farms, or cultivates aquatic farm products in captivity or under positive control;

(2) "aquatic farm product" means an aquatic plant or shellfish, or part of an aquatic plant or shellfish, that is propagated, farmed, or cultivated in an aquatic farm and sold or offered for sale;

(3) "aquatic plant" means a plant indigenous to state water or that is authorized to be imported into the state under a permit issued by the commissioner;

(4) "commissioner" means the commissioner of fish and game;

(5) "hatchery" means a facility for the artificial propagation of stock, including rearing of juvenile aquatic plants or shellfish;

(6) "insignificant population" means a population of shellfish that, in the determination of the commissioner, would not attract and support a commercial fishery for that species of shellfish and the harvest and sale of the shellfish would not result in significant alteration in traditional fisheries or other existing uses of fish and wildlife resources if the population were included within an aquatic farm site;

(7) "positive control" means, for mobile species, enclosed within a natural or artificial escape-proof barrier; for species with limited or no mobility, such as a bivalve or an aquatic plant, "positive control" also includes managed cultivation in unenclosed water;

(8) "shellfish" means a species of crustacean, mollusk, or other invertebrate, in any stage of its life cycle, that is indigenous to state water or that is authorized to be imported into the state under a permit issued by the commissioner;

(9) "stock" means live aquatic plants or shellfish acquired, collected, possessed, or intended for use by a hatchery or aquatic farm for the purpose of further growth or propagation.

Notes HB43: Geoduck aquatic farming / seed transfer

(H)FISH 26 February 2009: J. Yuhas / R. Josephson

The Department of Fish and Game:

- ***Supports the goal of HB 43 to promote mariculture throughout Alaska, beyond Southeast AK***
- ***2007 co-authored at least two proposals with The Alutiiq Pride Shellfish Hatchery to obtain monies to develop sterile bivalve mollusks to promote mariculture in different regions of AK.***
- ***Is willing to support additional proposals for sterile bivalve research.***

LARVAL DRIFT ZONES:

Consistent with other stocking policies: seed or stock only approved when they come from a designated local area

- *Current regulations permit transplantation of bivalves only within six recognized larval drift zones, zones within which stocks are expected to be genetically similar. Transplantations between drift zones or beyond the species' natural range are prohibited. Similar regulations apply for salmon, restricting transports between regions.*
- *rules regulating the transplantation of geoducks stocks are already more liberal in Alaska than they are in either British Columbia or Washington (for example, BC identifies 3-5 larval drift zones for geoducks in its much more limited coastline).*
- *ADFG was extremely liberal in the two+ year deliberative process that led to the existing Larval Drift Zones*
- *ADFG compromised to meet the perceived needs of industry while instituting some protections for stock structure*

INTRODUCING A NON-NATIVE SPECIES:

Consistent with other stocking policies: size of body of water and propensity for dispersal into new uncontrolled areas are major factors along with competition for food, contamination, and habitat implications

- *many examples of injurious consequences of introduced species in the United States*
  - *Zebra mussels in the Great Lakes,*
  - *Pacific oysters into Chesapeake Bay,*
  - *Japanese oyster drill introduced into Washington with Pacific Oyster seed;*
  - *thousands of other examples may be found in common literature / even Google*

LACK OF INFORMATION ON POSSIBLE IMPACTS:

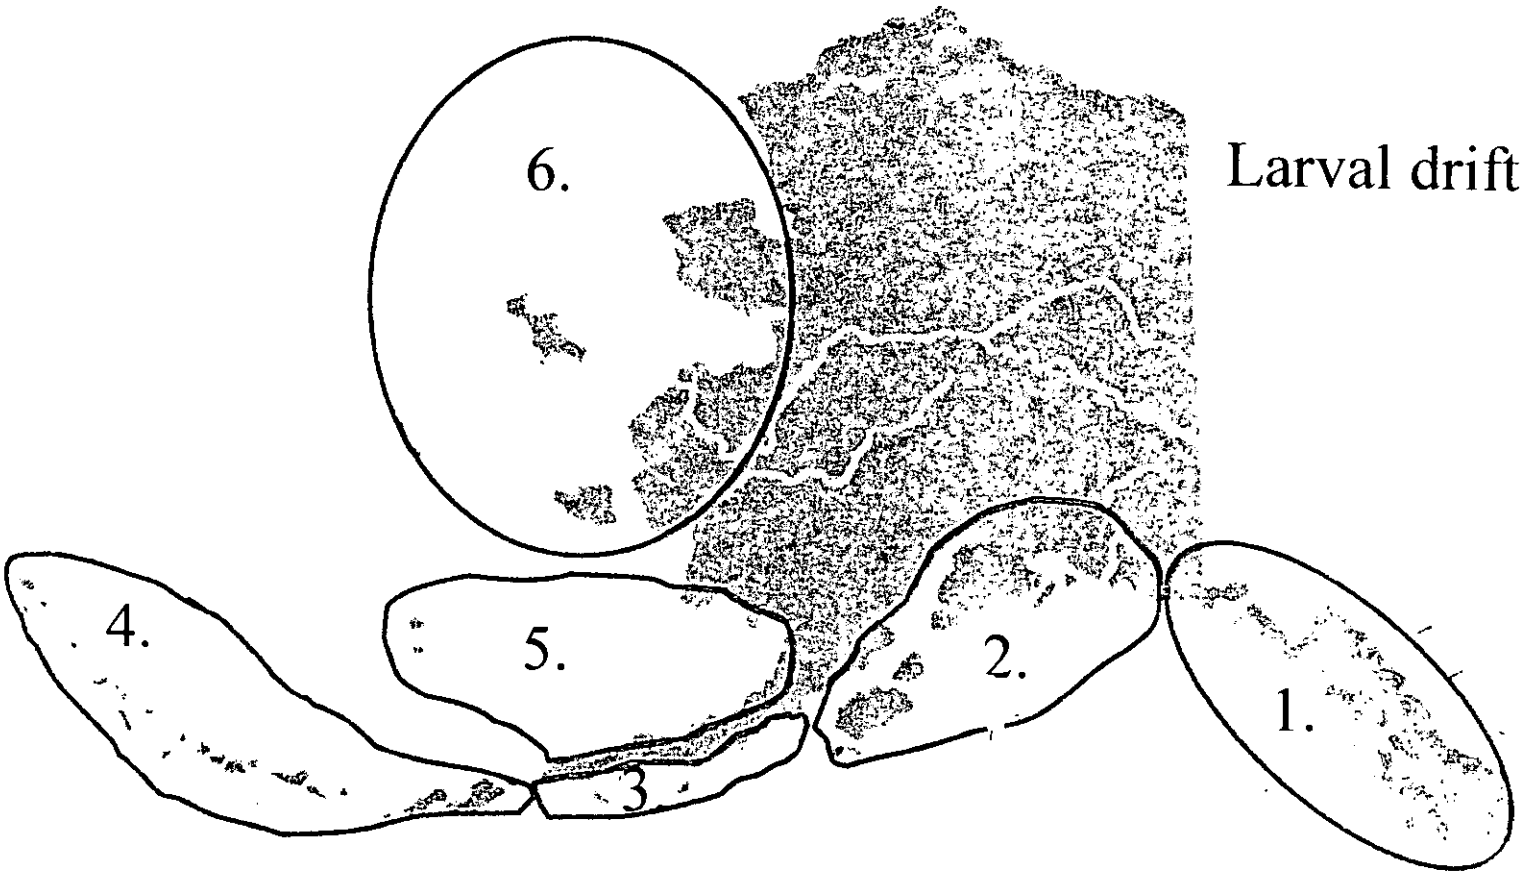
Consistent with other stocking policies: if studies are desired necessary funds must be appropriated for those purposes

- *Not possible to predict the outcome if the introduced species successfully reproduces and colonizes the new habitat.*
- *Ecosystem effects are not limited to the competition that might occur in the beach substrate, but include potential impacts of upsetting the entire food web.*
- *Geoducks are highly fecund; each female releases many millions of planktonic eggs each year making them very high risk.*
- *Many members of the committee have questioned introduction of Wood Bison without more information*

ECONOMIC DEVELOPMENT:

Impacts to existing economically viable fisheries and other industries must be taken in to account while contemplating the issue of experimental possibilities

- *Geoduck farming still in its infancy*
- *Undemonstrated benefits from geoduck farming in Southeast Alaska where the species already exists,*
- *Difficult to justify exceptions to our policies that are designed to protect the natural resources of Alaska.*
- *Many members of the committee have voiced concerns over the introduction of Wood Bison unless further information is gathered and have inferred that this project would stifle economic development of existing industries. Infinitely more information exists with regards to this project than with Southeast geoducks.*



(1) Southeastern Alaska, from the Canadian border north to Cape St. Elias.

(2) Prince William Sound and Cook Inlet, from Cape St. Elias west and south to Cape Igvak, including Kodiak Island.

(3) Chignik and the Alaska Peninsula-Aleutian Islands, from Cape Igvak west to the tip of Unimak Island.

(4) The Aleutian Islands, including all islands west of Unimak Pass.

(5) The southeast Bering Sea and north Alaska Peninsula, from the westernmost tip of Unimak Island north to the Kuskokwim River, including the Pribilof Islands.

(6) The northeast Bering Sea, including all coastal islands north of the Kuskokwim River.

February 20, 2009

Rep. Paul Seaton
State Capitol
Juneau, AK 99801

Dear Representative Seaton:

The Alaskan Shellfish Growers Association (ASGA) supports House Bill 43 and applauds your efforts to stimulate the growth of shellfish aquaculture throughout the state.

Some might criticize the bill because it would allow the introduction of this highly valuable species of shellfish beyond its "natural range." This is a concept that ASGA played a key role in removing from ADF&G's mariculture regulations several years ago.

Our argument is the "natural range" is elusive and aquatic organisms are continually responding to changing environmental conditions, such as water temperatures, availability of predator and prey, and, as we're now discovering, the amount of carbon in the water column. Just ask fisheries scientists about the shifting "natural range" of Pollock in the Bering Sea or the increasing number of salmon being caught near Barrow.

Important to consider is that geoducks are indigenous to Alaska and there is virtually no chance of spreading disease or polluting the gene pool of wild stocks if this bill is approved and implemented. Alaska has perhaps the strictest regulations in the country governing the transfer of shellfish within the state, and every movement of juvenile shellfish or "spat" must be approved by ADF&G's pathologist. And, since there are no wild stocks of geoducks north of Cape Suckling, there is not gene pool that could be compromised by their introduction to the area.

Geoducks are the world's largest burrowing clams and some of the most valuable seafood harvested in Alaska. These are not zebra mussels or some other dangerous invasive species. The worst that could happen is that the clams will thrive and create new wealth in coastal areas where local residents are leaving because there are no jobs.

In short, HB 43 is a good bill and we support it.

Sincerely,

Rodger Painter

Representative Paul Seaton
State Capitol
Juneau, Alaska 99801

Dear Representative Seaton:

The Alutiiq Pride Shellfish Hatchery appreciates your efforts with House Bill 43. We rely upon, in part, on shellfish seed sales to cover our operating expenses. Geoducks and their high value offer us the best opportunity to achieve our sales goals. To date, the demand has not been as originally projected causing a perpetual shortfall in revenue. Opening additional markets in south-central Alaska will help alleviate this deficit.

We are often frustrated by the Alaska Department of Fish and Game and their regulation of transport. It is ironic that we can transport a non-indigenous species such as oysters and cannot transport a native species outside what is considered its natural range. The fact that it may be non reproductive in South-central Alaska should make management easy.

I would suggest we promote a cooperative demonstration project exploring the feasibility of geoduck farming in south-central Alaska headed by the Department of Fish and Game, the Department of Commerce, and the Chugach Regional Resources Commission. The shellfish hatchery can provide geoduck seed for such an effort.

Sincerely,

Jeff Hetrick
Director

MEMORANDUM

TO: Representative Neuman, Co-Chair
Representative Johnson, Co-Chair
House Resources Committee

FROM: Representative Paul Seaton

DATE: Friday, January 27th, 2009

RE: Request for a hearing, HB 43

I respectfully request a hearing on HB 43 before the before the House Resources Committee.

In summary, HB 43 states that the Department of Fish and Game cannot use the absence of wild geoducks in an area to deny a farming permit.

Attached please find: HB 43, sponsor statement, fiscal note, sectional analysis, "What is a Geoduck," Article 2 Aquatic Farming, letters of support, and hand out from ADF&G "Notes HB43: Geoduck aquatic farming/ seed transfer."

Staff contact: Katie Koester, 465- 2028

HOUSE BILL NO. 43

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY REPRESENTATIVE SEATON

Introduced: 1/9/09
Referred: Prefiled

A BILL

FOR AN ACT ENTITLED

"An Act relating to aquatic farm permitting involving geoducks and to geoduck seed transfers between certified hatcheries and aquatic farms."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 16.40.100 is amended by adding a new subsection to read:

(g) The commissioner may not use the absence of wild geoduck stock within a management area described in AS 16.40.145 as the reason for denial of an aquatic farm permit under this section. If, under this section, the commissioner issues a permit for an aquatic farm to culture geoducks in a management area that does not have wild geoduck stocks when the permit is issued, the permit may not allow operations for that purpose in the intertidal habitat or environment.

*** Sec. 2.** AS 16.40 is amended by adding a new section to read:

Sec. 16.40.145. Geoduck seed transfer between a certified hatchery and an aquatic farm. Consistent with AS 16.40.140(b) - (d), a hatchery certified under AS 16.40.100 may transfer geoduck seed to an aquatic farm located in a fisheries

management area established under this title that is contiguous to the Gulf of Alaska.

CS FOR HOUSE BILL NO. 70(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY THE HOUSE RESOURCES COMMITTEE

Offered:
Referred:

Sponsor(s): REPRESENTATIVES GATTO, Ramras

A BILL

FOR AN ACT ENTITLED

"An Act establishing the farm-to-school program in the Department of Natural Resources, and relating to school gardens, greenhouses, and farms."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 03.05.010(a) is amended to read:

(a) The commissioner of natural resources shall

(1) direct, administer, and supervise promotional and experimental work, extension services, and agricultural projects for the purpose of promoting and developing the agricultural industry within the state including such fields as horticulture, dairying, cattle raising, fur farming, grain production, vegetable production, and development of other agricultural products;

(2) procure and preserve all information pertaining to the development of the agricultural industry and disseminate that information to the public;

(3) assist prospective settlers and others desiring to engage in the agricultural industry in the state with information concerning areas suitable for

agriculture and other activities and programs essential to the development of the agricultural industry in the state;

(4) review the marketing, financing, and development of agricultural products inside the state including transportation, with special emphasis upon local production, and negotiate for the marketing of agricultural products of the state with federal and state agencies operating in the state;

(5) regulate and control the entry into the state and the transportation, sale, or use inside the state of plants, seeds, vegetables, shell eggs, fruits and berries, nursery stock, animal feeds, remedies and mineral supplements, fertilizers, and agricultural chemicals in order to prevent the spread of pests, diseases, or toxic substances injurious to the public interest, and to protect the agricultural industry against fraud, deception, and misrepresentation; in this connection, the commissioner may require registration, inspection, and testing, and establish procedures and fees; [AND]

(6) regulate the farming of elk in a manner similar to the manner in which the commissioner regulates domestic animals and livestock, to the extent that is appropriate;

(7) implement the farm-to-school program established in AS 03.20.100.

*** Sec. 2.** AS 03.20 is amended by adding a new section to read:

Article 2. Farm-to-school Program.

Sec. 03.20.100. Farm-to-school program established. (a) The farm-to-school program is established in the department to increase the procurement and use by public schools of food grown in the state.

(b) The department, in consultation with the Department of Health and Social Services, the Department of Education and Early Development, the Department of Administration, and the University of Alaska Cooperative Extension Service, shall, in order of priority,

(1) coordinate with school procurement officials, buying cooperatives, and other appropriate organizations to develop uniform procurement policies and procedures, as well as materials and practical recommendations, to facilitate the

procurement and use by public schools of food grown in the state; these policies, procedures, materials, and recommendations shall be made available to school districts to adopt at their discretion;

(2) assist food producers, distributors, and food brokers to market food grown in the state to public schools by informing school districts of food procurement opportunities, bid procedures, purchasing criteria, and other relevant requirements;

(3) assist public schools in connecting with local producers by informing the schools of the resources and availability of food grown in the state and the nutritional, environmental, and economic benefits of purchasing the food grown in the state;

(4) identify and recommend mechanisms that will increase the predictability of sales for producers and the adequacy of supply for purchasers;

(5) identify and make available to public schools existing curricula, programs, and publications that educate students on the nutritional, environmental, and economic benefits of preparing and consuming food grown in the state;

(6) support efforts to advance other farm-to-school activities, including school gardens, school farms, and farm visits;

(7) as resources allow, seek additional funding to leverage state expenditures for the program.

(c) Beginning January 25, 2010, the department, in cooperation with the Department of Education and Early Development, shall collect data on the activities conducted under this section and report the data biennially to the legislature. The data collected must include the number of schools and farms participating in the program established under (a) of this section and the increase, if any, in the procurement by the public schools of food grown in the state.

(d) This section does not modify AS 36.15.050 and 36.15.060 regarding preferences for Alaska agricultural and fisheries products.

(e) In this section,

(1) "food grown in the state" includes fruits and vegetables grown in the state and meat and dairy products produced in the state;

(2) "program" means the farm-to-school program described in this

section.

*** Sec. 3.** AS 14.07.020(a) is amended to read:

(a) The department shall

(1) exercise general supervision over the public schools of the state except the University of Alaska;

(2) study the conditions and needs of the public schools of the state, adopt or recommend plans, administer and evaluate grants to improve school performance awarded under AS 14.03.125, and adopt regulations for the improvement of the public schools;

(3) provide advisory and consultative services to all public school governing bodies and personnel;

(4) prescribe by regulation a minimum course of study for the public schools; the regulations must provide that, if a course in American Sign Language is given, the course shall be given credit as a course in a foreign language;

(5) establish, in coordination with the Department of Health and Social Services, a program for the continuing education of children who are held in detention facilities in the state during the period of detention;

(6) accredit those public schools that meet accreditation standards prescribed by regulation by the department; these regulations shall be adopted by the department and presented to the legislature during the first 10 days of any regular session, and become effective 45 days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house;

(7) prescribe by regulation, after consultation with the state fire marshal and the state sanitarian, standards that will assure healthful and safe conditions in the public and private schools of the state, including a requirement of physical examinations and immunizations in pre-elementary schools; the standards for private schools may not be more stringent than those for public schools;

(8) exercise general supervision over pre-elementary schools that receive direct state or federal funding;

(9) exercise general supervision over elementary and secondary

correspondence study programs offered by municipal school districts or regional educational attendance areas; the department may also offer and make available to any Alaskan through a centralized office a correspondence study program;

(10) accredit private schools that request accreditation and that meet accreditation standards prescribed by regulation by the department; nothing in this paragraph authorizes the department to require religious or other private schools to be licensed;

(11) review plans for construction of new public elementary and secondary schools and for additions to and major rehabilitation of existing public elementary and secondary schools and, in accordance with regulations adopted by the department, determine and approve the extent of eligibility for state aid of a school construction or major maintenance project; for the purposes of this paragraph, "plans" include educational specifications, schematic designs, and final contract documents;

(12) provide educational opportunities in the areas of vocational education and training, and basic education to individuals over 16 years of age who are no longer attending school;

(13) administer the grants awarded under AS 14.11;

(14) establish, in coordination with the Department of Public Safety, a school bus driver training course;

(15) require the reporting of information relating to school disciplinary and safety programs under AS 14.33.120 and of incidents of disruptive or violent behavior;

(16) establish by regulation criteria, based on low student performance, under which the department may intervene in a school district to improve instructional practices, as described in AS 14.07.030(14) or (15); the regulations must include

(A) a notice provision that alerts the district to the deficiencies and the instructional practice changes proposed by the department;

(B) an end date for departmental intervention, as described in AS 14.07.030(14)(A) and (B) and (15), after the district demonstrates three consecutive years of improvement consisting of not less than two percent increases in student proficiency on standards-based assessments in math,

reading, and writing as provided in AS 14.03.123(f)(2)(A); and

(C) a process for districts to petition the department for continuing or discontinuing the department's intervention;

(17) notify the legislative committees having jurisdiction over education before intervening in a school district under AS 14.07.030(14) or redirecting public school funding under AS 14.07.030(15)**;**

(18) assist the Department of Natural Resources in developing and implementing the farm-to-school program established under AS 03.20.100.

*** Sec. 4.** AS 14.30 is amended by adding a new section to article 7 to read:

Sec. 14.30.375. School gardens, greenhouses, and farms. (a) A school district may authorize or operate a school garden, greenhouse, or farm. The garden, greenhouse, or farm must be used for educational purposes and for growing fruits and vegetables for consumption by the students through the school district's meal and snack program.

(b) If a school district operates a school garden, greenhouse, or farm, the district shall give students representing student organizations, including vocational programs, the opportunity to be involved in the operation of the school garden, greenhouse, or farm.

(c) When a school garden, greenhouse, or farm is used for educating students about agricultural practices, students shall be afforded the opportunity to learn about both organic and conventional growing methods.

(d) If a school district operates a school garden, greenhouse, or farm, the excess fruit and vegetables may be sold.

*** Sec. 5.** AS 03.05.010(a)(7); AS 03.20.100; AS 14.07.020(a)(18); and AS 14.30.375 are repealed July 1, 2013.

MEMORANDUM March 24, 2009

SUBJECT: CSHB 70(RES) establishing the farm-to-school program in the Department of Natural Resources, and relating to school gardens, greenhouses, and farms (Work Order No. 26-LS0284\E)

TO: Representative Craig Johnson
Co-Chair of the House Resources Committee
Attn: Debra Higgins

FROM: Theresa Bannister
Legislative Counsel

This memo accompanies the bill described above.

Dedicated fund issue. The new provision located at sec. 14.30.375(d) requires that money raised by a school district from fruit and vegetable sales under sec. 14.30.375 be used for activities under that section. This may raise an issue under the state's constitutional prohibition against dedicated funds because a school district might be considered a political subdivision of the state or an agency of a municipality, which is a political subdivision of the state.

Art. IX, sec. 7, prohibiting dedicated funds, does not mention municipalities or other political subdivisions of the state. However, the state's supreme court itself has raised the issue with regard to municipalities.[1] The question of whether municipalities as political subdivisions are constitutionally restrained from dedicating general tax revenues has not been finally resolved. Therefore, it appears that the issue of whether the dedicated funds prohibition applies to a school district, whether characterized as a state subdivision itself or as an agency of a municipality, is unresolved.

If I may be of further assistance, please advise.

(6) accredit those public schools that meet accreditation standards prescribed by regulation by the department; these regulations shall be adopted by the department and presented to the legislature during the first 10 days of any regular session, and become effective 45 days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house;

(7) prescribe by regulation, after consultation with the state fire marshal and the state sanitarian, standards that will assure healthful and safe conditions in the public and private schools of the state, including a requirement of physical examinations and immunizations in pre-elementary schools; the standards for private schools may not be more stringent than those for public schools;

(8) exercise general supervision over pre-elementary schools that receive direct state or federal funding;

(9) exercise general supervision over elementary and secondary

correspondence study programs offered by municipal school districts or regional educational attendance areas; the department may also offer and make available to any Alaskan through a centralized office a correspondence study program;

(10) accredit private schools that request accreditation and that meet accreditation standards prescribed by regulation by the department; nothing in this paragraph authorizes the department to require religious or other private schools to be licensed;

(11) review plans for construction of new public elementary and secondary schools and for additions to and major rehabilitation of existing public elementary and secondary schools and, in accordance with regulations adopted by the department, determine and approve the extent of eligibility for state aid of a school construction or major maintenance project; for the purposes of this paragraph, "plans" include educational specifications, schematic designs, and final contract documents;

(12) provide educational opportunities in the areas of vocational education and training, and basic education to individuals over 16 years of age who are no longer attending school;

(13) administer the grants awarded under AS 14.11;

(14) establish, in coordination with the Department of Public Safety, a school bus driver training course;

(15) require the reporting of information relating to school disciplinary and safety programs under AS 14.33.120 and of incidents of disruptive or violent behavior;

(16) establish by regulation criteria, based on low student performance, under which the department may intervene in a school district to improve instructional practices, as described in AS 14.07.030(14) or (15); the regulations must include

(A) a notice provision that alerts the district to the deficiencies and the instructional practice changes proposed by the department;

(B) an end date for departmental intervention, as described in AS 14.07.030(14)(A) and (B) and (15), after the district demonstrates three consecutive years of improvement consisting of not less than two percent increases in student proficiency on standards-based assessments in math,

reading, and writing as provided in AS 14.03.123(f)(2)(A); and

(C) a process for districts to petition the department for continuing or discontinuing the department's intervention;

(17) notify the legislative committees having jurisdiction over education before intervening in a school district under AS 14.07.030(14) or redirecting public school funding under AS 14.07.030(15)**;**

(18) assist the Department of Natural Resources in developing and implementing the farm-to-school program established under AS 03.20.100.

*** Sec. 4.** AS 14.30 is amended by adding a new section to article 7 to read:

Sec. 14.30.375. School gardens and farms. (a) A school district may authorize or operate a school garden or farm. The garden or farm must be used for educational purposes and for growing fruits and vegetables for consumption by the students through the school district's meal and snack program.

(b) If a school district operates a school garden or farm, the district shall give students representing student organizations, including vocational programs, the opportunity to be involved in the operation of the school garden or farm.

(c) When a school garden or farm is used for educating students about agricultural practices, students shall be afforded the opportunity to learn about both organic and conventional growing methods.

*** Sec. 5.** AS 03.05.010(a)(7); AS 03.20.100; AS 14.07.020(a)(18); and AS 14.30.375 are repealed July 1, 2013.

MEMORANDUM March 6, 2009

SUBJECT: Sectional summary of CSHB 70( ) establishing the farm-to-school program in the Department of Natural Resources, and relating to school gardens and farms
(Work Order No. 26-LS0284\R)

TO: Representative Carl Gatto
Attn: Sandra Wilson

FROM: Theresa Bannister
Legislative Counsel

You have requested a sectional summary of the above-described bill. As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents.

Section 1. Directs the commissioner of natural resources to implement the farm-to-school program established by AS 03.20.100.

Section 2. Sec. 03.20.100. Establishes the farm-to-school program.

Sec. 03.20.100(a). Establishes the farm-to-school program in the Department of Natural Resources to increase public school use of state-grown food.

Sec. 03.20.100(b). Directs the department to perform certain tasks, as prioritized in the subsection, in consultation with other listed state agencies. The tasks relate to uniform procurement policies and procedures, assisting the food industry to market food to public schools, assisting public schools to connect with local producers, mechanisms for increasing sales and supply predictability, educating students, advancing other farm-to-school activities, and program funding.

Sec. 03.20.100(c). Directs the department, in cooperation with the Department of Education and Early Development, to collect data on the activities under this section and to report biennially to the legislature.

Sec. 03.20.100(d). States that this section does not affect two statutes related to state agricultural and fisheries product preferences.

Sec. 03.20.100(e). Defines terms for the section.

Section 3. Directs the Department of Education and Early Development to assist the Department of Natural Resources to develop and implement the farm-to-school program under AS 03.20.100.

Section 4. Sec. 14.30.375. Adds a new section relating to school gardens and farms.

Sec. 14.30.375(a). Allows a school district to authorize or operate a school garden or farm for educational purposes and for growing fruits and vegetables for the students.

Sec. 14.30.375(b). Requires a district to give students representing student organizations the opportunity to be involved in the operation of the garden or farm.

Sec. 14.30.375(c). Requires that, when the garden is used for education about agricultural practices, students be given the opportunity to learn about both organic and conventional growng methods.

Section 5. Repeals the provisions in this bill on July 1, 2013.

If I may be of further assistance, please advise.

A Farm-to-School program - as outlined in Sec. 2 of HB 70 - would be created in the Division of Agriculture to work with the Department of Education and Early Development, School Nutrition Program to increase procurement and use of Alaskan grown food in the public schools. A Development Specialist, Range 18, $81.5, in conjunction with a part-time Agricultural Inspector, Range 16 $30.5 would implement Sections 2 and 4. Travel expenses will be used to cover travel to remote districts to educate students on the benefit of growing and consuming local produce. Contractual will cover the cost of curriculum coordinated with the Department of Education to educate youth on the benefits of growing and consuming local produce. Section 8 of the bill repeals the Farm to School program in July 1, 2013 (end of FY 2012).

MEMORANDUM January 27, 2009

SUBJECT: Sectional summary of HB 70, a bill establishing food programs (Work order No. 26-LS0284\A)

TO: Representative Carl Gatto
Attn: Sandra Wilson

FROM: Theresa Bannister
Legislative Counsel

You have requested a sectional summary of the above-described bill. As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents.

Section 1. Directs the commissioner of natural resources to implement the farm-to-school program established in AS 03.20.100.

Section 2. Establishes the farm-to-school program in the Department of Natural resources. Aims at increasing public schools' use of food grown in the state. Directs the department, in consultation with other identified departments and the Cooperative Extension Service to perform certain listed tasks. Requires the department to collect and report to the legislature data on the activities under this section. Does not change certain preferences for the state's agricultural and fisheries products. Makes the section subject to legislative appropriation of funds for the purposes in (a) - (c) of the section.

Section 3. Directs the Department of Education and Early Development to assist the Department of Natural Resources to develop and implement the farm-to-school program.

Section 4. Establishes the Alaska grown fresh fruit and vegetable grant program in the Department of Education and Early Development. Aims at improving student health and expanding the market for locally grown fresh produce. Lists criteria for the program. Allows a school district to apply to the department for a grant under this section. Indicates what makes a school district eligible for a grant. Prioritizes funding when there are insufficient funds for all the eligible school programs. Directs the department to establish measures for the outcome of the program. Does not change certain preferences for the state's agricultural and fisheries products. Makes the section subject to legislative appropriation for the program's purposes described in (a) - (f) of the section.

Section 5. Allows a school district to authorize or operate a school garden or farm. Requires that the garden or farm be used for educational purposes and for growing fruits and vegetables for consumption by the students. Requires a school district that operates a school garden to allow students to be involved in the operation. Requires that, when a garden or farm is used for agricultural education, the students be given the opportunity to learn about organic and conventional growing methods.

Section 6. Establishes the farmers' market technology improvements pilot program in the Department of Environmental Conservation. Aims at increasing the access to fresh fruits and vegetables and quality meat and dairy products. Also aims at increasing the number of food stamp recipients using food stamp benefits through electronic benefits transfer at farmers' markets. Requires the department to assist farmers' markets to develop the ability to accept wireless electronic payment cards for food purchases. Requires the department to report to the legislature with data collected about electronic funds transfers at farmers' markets. States that this section is subject to legislative appropriation for the purposes described in (a) of the section.

Section 7. Establishes the farmers to food banks pilot program in the Department of Commerce, Community, and Economic Development. Allows nonprofit entities that deliver social services to submit proposals. Directs the department to select between two and five proposals after following the listed criteria. Allows a pilot program to use the money to contract with local farmers to provide certain food to low-income persons at food banks. Requires the department to collect data on the activities of the program and report biennially to legislative committees. States that the section is subject to legislative appropriation for the purposes described in (a) and (b) of the section.

Section 8. Repeals the provisions in this Act July 1, 2013.

If I may be of further assistance, please advise.

This legislation adds one FTE in the Department of Education & Early Development (EED), estimated to be a range 16A. This position would coordinate efforts with the Departments of Natural Resources, Envirmental Conservation and Commerce, Community & Economic Development.

EED will need $7,000 in supplies for the new position in the way for computers and etc. for set-up.

The State grant was calculated using the federal program rate of $75 per child per year for 130,684 students.

This legislation is repealed on July 1, 2013.

Sponsor Statement
HB 70
ALASKA GROWN AGRICULTURAL PRODUCTS

The Farm-to-School Act is similar to programs proposed in several other states. Its intent is to strengthen links between state agriculture and state food procurement in schools, expand local markets, improve nutrition, and even benefit the environment. It improves upon current law that requires schools receiving state moneys to purchase agricultural products harvested in the state if, and only if, they are priced no more then seven percent higher then similar products imported to Alaska.

A Farm-to-School Program is created to facilitate increased procurement of Alaska grown foods by schools. The program will, in order of priority:

- Identify and develop policies and procedure, including proposed uniform procurement procedures, to implement and evaluate the program;
- Assist food producers, distributors, and brokers to market Alaska grown food to schools by informing them of opportunities and requirements;
- Assist schools in connecting with local producers by informing them of sources, availability and benefits of Alaska grown foods;
- Indentify and recommend ways to increase predictability of sales and adequacy of supply;
- Make available publications allowing students to see the benefits of preparing and consuming locally-grown food;
- Support efforts to advance other farm-to-school extensions such as school gardens or farms, and farm visits; and
- Seek additional funds to leverage state expenditures.

The Division of Agriculture must, cooperating with the Department of Education & Early Development, collect data on program activities and report biennially to the Legislature their progress beginning January 2010.

HB 70 also gives schools the authorization to create a school garden or even a farm. In doing so they must allow students representing student organizations the opportunity to be involved in the garden or farm operation. Schools may teach both organic and traditional farming methods.

This bill sunsets on July 1, 2013.

Farm to School: nourishing kids and community.

Farm to School brings healthy food from local farms to school children nationwide. The program teaches students about the path from farm to fork, and instills healthy eating habits that can last a lifetime. At the same time, use of local produce in school meals and educational activities provides a new direct market for farmers in the area and mitigates environmental impacts of transporting food long distances.

More than 30 million children eat a school lunch five days a week, 180 days a year. If school lunch can taste great, and support the local community, it is a win-win for everyone.

The National Farm to School Network sprouted from this desire to support community-based food systems, strengthen family farms, and improve student health by reducing childhood obesity. Eight regional lead agencies and national staff provide free training and technical assistance, information services, networking, and support for policy, media and marketing activities. Farm to School is a comprehensive program that extends beyond farm fresh salad bars and local foods in the cafeteria to include waste management programs like composting, and experiential education opportunities such as planting school gardens, cooking demonstrations and farm tours. The Farm to School approach helps children understand where their food comes from and how their food choices impact their bodies, the environment and their communities at large.

National Farm to School Network

In order to sustain and build on the momentum created through the National Farm to School Program, over 30 organizations across the nation gathered to explore the opportunities for a collaborative national farm to school structure that strengthens and expands activities in states with existing programs and assist others that do not yet have programs. Out of this **planning process** supported by the W. K. Kellogg Foundation, the National Farm to School Network was born. **Eight regional lead agencies** and **national staff** provide free training and technical assistance, information services, networking, and support for policy, media and marketing activities. **Click here for a summary of our first year's accomplishments**. The National Farm to School Network is supported in part by a $2.4 million grant from the W.K. Kellogg Foundation. The Kellogg Foundation grant enables the Network to establish a viable and sustainable mechanism to coordinate, promote, and expand the farm to school movement at the state, regional, and national levels. Contact **Anupama Joshi** for more information and join our network **here**.

The National Farm to School Program

The National Farm to School Program is a collaborative program of **Center for Food & Justice** (CFJ), a division of the **Urban & Environmental Policy Institute** at **Occidental College** and the **Community Food Security Coalition** (CFSC). Initiated in 2000, the National Program has spearheaded the development of the farm to school movement across the country, successfully assisting organizations in starting up and sustaining farm to school efforts, fundraising, and providing informational resources, education and training for farm to school stakeholders. When did farm to school programs start? What were the major milestones? **This brief factsheet lays out the history of farm to school.**

The program is jointly managed by staff from the two organizations:

Origins of the National Farm to School Program date back to a collaborative project led by the Center for Food & Justice. The four-year project funded by USDA Initiative for Future Agriculture and Food Systems (IFAFS 2000-2004) jumpstarted the development of farm to school projects in several states. The lessons, models and evaluation results from this project have been shared nationwide and are providing solutions to issues emerging in other states.

Thank You

This website came together with the help of many people who shared with us their information, photos, time, and resources. Thank you to all those who contributed their energy to this project.

Welcome to the Connecticut Farm-to-School Program

Participating Schools & Districts | Participating Farmers

Farm-to-School Promotional Materials & Programs

Other Links | Publications | Wholesalers

Contact Us

The Farm-to-School Program is a statewide program designed to use Connecticut Grown fresh fruits and vegetables in your schools' cafeteria meals and snacks. This project is twofold: to support local farms and to offer fresher, more nutritious produce in the school meals. Getting locally grown products into school cafeterias is a win-win situation for you and your school kids! It will meet newest guidelines to improve children's health and nutrition while also increasing marketing opportunities and income for our Connecticut farmers. The alarming upswing in childhood and adult obesity rates affect health care costs for us all as taxpayers in Connecticut. Eating healthier lunches and snacks at school is one way to improve the diets of our young people.

A connection to the food system through the promotion of local food and the people that grow it can be used to make kids more interested in learning and living a healthier lifestyle, including the consumption of more Connecticut Grown fresh fruits and vegetables! We now have colorful Point of Sale signage for participating schools.

We continue to work with other state agencies such as Dept of Education, Dept of Administrative Services, Dept of Public Health, as well as other organizations like the CT Food Policy Council, Ag in the Classroom, CT Dept of Environmental Protection, CT Apple Marketing Board, 5-3-1 for Healthy Kids, Food Land and People, among others.

The Farm-to-School Program at the Connecticut Department of Agriculture would like to thank those of you already in the program. For those non-participating schools we encourage you to contact Jane.Slupecki@ct.gov and begin participation in the Farm-to School Program!

Fact Sheet HB 70

"An Act establishing the Farm-to-School program in the Department of Natural Resources, and relating to school gardens and Farms."

What is the Farm-to-school Program?

- Fresh local foods served in schools
- In class nutrition education
- School gardens or farms
- Farm tours

Farm-to-School impacts:

- Increased fruit & vegetable consumption
- Improved knowledge, attitudes, and behavior concerning healthy eating

Sustainable food is:

- Grown organically/with natural methods…
- On a small or medium sized family farm…
- That treats its workers well…
- And then is sold for a fair price…
- Transported and bought relatively close to where it was grown…
- And eaten fresh and in season.

Impacts of current food system

- Chronic diseases, antibiotic resistance & food-borne illnesses
- Sprawl & farmland loss
- Water contamination
- Crop and biological diversity
- Pesticide exposure
- Air quality & energy use
- Economic justice

Farm-to-School can:

- Support sustainable farmers
- Teach kids to make lifelong healthy choices
- Reinvigorate school meal programs
- Support the local economy

Healthy Kids, Healthy Farmers

Results from the 2008 Colorado Producer Survey

In cooperation with: The Colorado Institute of Public Policy, Western SARE, Rocky Mountain Farmers Union, Colorado Department of Agriculture, Colorado Farm Bureau and Colorado Organic Producers Association

Purchasing locally grown food supports local farmers and ensures the long-term heritage of small scale agriculture in Colorado.

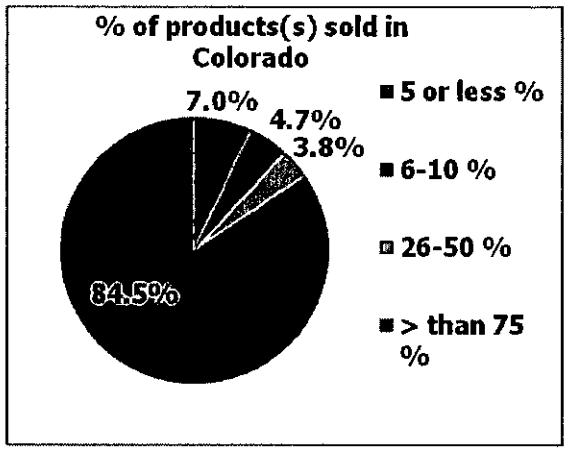
Colorado contains roughly 31 million acres of farmland, representing almost half of the total land in the state. Although Colorado is best known for its cattle country, it is one of the leading states in production of potatoes, onions, lettuce and sweet corn. Colorado is also well known for its tree fruits grown on the Western Slope

Findings from a previous survey (Singley, 2006) found that K-12 schools are interested in integrating high-quality locally-grown products into school cafeterias. Of highest interest are apples, lettuce, carrots, spinach, tomatoes, and onions – all of which are abundantly produced in Colorado.

> *Our state produces quality fruits, vegetables, meat, and dairy products. Creating new policies to ensure that all of our residents, particularly children, have access to healthy foods are critical to our future.* - **Barbara O'Brien, Lieutenant Governor**

Key findings from the 389 Colorado producers that responded to the 2008 Colorado producer survey:

Products are sold in Colorado. 85% report that more than 75% or more of their products are sold in Colorado.



Producers are concerned about the future of agriculture. Of highest concerns were water, fuel, and competing land uses.

Producers are interested in selling products directly to consumers and schools.

Would like to sell	Direct to individuals	C.S.A.'s	K-12 Schools
More	77%	31%	89%
Less	2%	1%	0%
Same	21%	7%	11%

Producers respond positively to selling products locally. 50% report that selling locally is important. 41% strongly agreed that selling products locally is important for economic health.

Producers are interested in selling to schools. 5% of respondents report that they have sold some products to schools and 18% are interested in selling to schools.

http://www.farmtoschool.org

Healthy Kids, Healthy Farmers

Results from the 2008 Colorado Producer Survey

In cooperation with: The Colorado Institute of Public Policy, Western SARE, Rocky Mountain Farmers Union, Colorado Department of Agriculture, Colorado Farm Bureau and Colorado Organic Producers Association

If we could provide as much food as possible locally for our K-12 students, they would have access to safer and more nutritional food... – **Colorado Producer**

For each county that contained a producer interested in selling to schools, there was a school or school district interested in buying local products. The greatest interest in selling to schools was concentrated in the Front Range, Western Slope, and Southwestern regions of the state.

Producers have a wide variety of products to sell to schools. The top three categories included packaged meat, cool season vegetables, and dairy and eggs.

Products are of high quality. While only 4% of survey respondents identified their product as "certified organic", >50% identified their product as differentiated by other qualities such as "natural", "grass-fed" (beef), or "organic not certified".

Products are insured. 56% reported having liability insurance for their products – an important factor for schools when deciding where to purchase their products.

Recommendations

- **Coordinate efforts between schools and producers.** Many producers and schools were unaware of opportunities to purchase/sell foods locally and were also unfamiliar with the farm-to-school concept.
- **Develop tools and resources.** Provide schools and producers with information that will aid in the development of a farm-to-school program.
- **Determine a fair price.** Schools have tight budgets, which could restrict them from making local purchases. For producers to make a profit, they typically need to sell at wholesale price or above.
- **Establish statewide policies in support of farm-to-school programs.** Schools need to have access to more flexible spending so they can support alternative markets.
- **Start small.** Begin with a handful of local products and slowly scale up, allowing schools to learn more about what products are locally available.

The Honorable Representative Carl Gatto
State Capitol
Juneau, AK 99801

March 10, 2009

Dear Representative Carl Gatto.

My name is Amy Lee and I currently reside in Anchorage. I am writing to you regarding House Bill 70: Alaskan Grown Agricultural Products. I am so happy to hear that you are the sponsor for this bill. As a teacher, I believe it is important for students to learn about their own environment and this bill providing teaching gardens and small farms is exactly what students need to enhance their understanding of natural resources. In addition, the students will be nourished with local products and learn about self-sustainability at a smaller scale. There are so many benefits of this bill and I am in full support.

Thank you again and best of luck.

Sincerely,

Amy Lee

March 12, 2009

Representative Carl Gatto
State Capitol, Room 108
Juneau, AK 99801-1182

Dear Representative Gatto:

It is my pleasure to write a letter in support of House Bill 70, Alaska Grown Agricultural Products. This bill would truly improve the health and lives of school children in Alaska while at the same time providing positive benefits to the natural environment.

The craze for locally grown foods is increasing rapidly throughout the US, and for good reason. Through supplying local schools with Alaskan grown food, students will be eating vegetables and fruits at their prime. Fresh food from local farms is healthier because it doesn't spend days sitting on trucks, barges and planes losing nutrients. Eating locally in Alaska is especially important. Most of our imported food comes from thousands of miles away, resulting in wilted, nutrient deficient food and the burning of a tremendous amount of fossil fuels. Also, locally grown food is often subjected to fewer pesticides and preservatives, resulting in healthier, better tasting food.

If enacted, House Bill 70 would provide wonderful benefits for Alaskan communities and for the health of the environment. I am happy to express SEACC's support for this bill.

Sincerely,

Lindsey Ketchel

Sponsor Statement

CS HB 74 Coastal Management Program

"An act relating to the Alaska coastal management program; and establishing the Alaska Coastal Policy Board."

HB 74 is an effort to strengthen the partnership between the State of Alaska and coastal communities under the Coastal Management Program. This legislation will restore inter-agency cooperation in approving coastal districts enforceable policies, and will reinstate a meaningful seat at the table for coastal districts in the review of proposed state and federal resource development actions.

The bill focuses on four areas:

1. Restoring checks and balances by establishing a Coastal Policy Board representing coastal districts and state resource agencies;

2. Streamlining project reviews by reincorporating air and water quality concerns of the Department of Environmental Conservation into the consistency review process;

3. Restoring the ability of coastal districts to establish enforceable policies that do not conflict with state or federal law or address matters preempted by state or federal agencies; and

4. Restoring States' rights by reinstating provisions eliminated by 2003 legislation.

I support responsible development of our coastal resources. I believe this can best and most expeditiously be accomplished through restoring some meaningful involvement of coastal communities in development decisions that directly affect them.

CS House Bill 74 – Alaska Coastal Management Program (ACMP)
Sectional Analysis
26-LS0322/S

Section 1: Establishes the Alaska Coastal Policy Board (Board), composed of 5 public members representing coastal districts and commissioners of natural resources, fish and game, environmental conservation, and commerce, community and economic development.

Section 2: Clarifies that the Department of Natural Resources (Department) coordinates project consistency reviews for projects with only Department permits or for projects that involve two or more state resource agency permits.

Section 3. Establishes authority for the Department to adopt regulations after approval by the Board.

Section 4: Establishes powers for the Board including the ability to accept grants and take reasonable action to carry out provisions of AS 46.39 and AS 46.40.

Section 5: Establishes duties of the Board to approve statewide ACMP standards and criteria for district plan approval.

Section 6: Defines "board."

Section 7: Provides for approval of ACMP program changes by the Board.

Section 8: Adds subsistence to the list of resources included in the ACMP objectives.

Section 9: Subsection (a) removes requirement for district enforceable policies to meet statewide standards. Clarifies that district enforceable policies apply to all land and water issues subject to the plan. Removes requirement to describe proper and improper uses. Changes the term "areas meriting special attention" to "special management areas." Subsection (b) requires district enforceable policies to be clear and concise, prescriptive or performance-based, and supported by evidence if more specific than state or federal statutes or regulations.

Section 10: Makes conforming changes for board approval of ACMP regulations. Deleted language in AS 46.40.040(a)(2) – (5) moved to a new subsection (d).

Section 11: Moves language deleted from AS 46.40.040(a) to a new section outlining responsibilities of the Board.

Section 12: Makes conforming amendments by clarifying district plans must be approved by the Board.

Section 13: Establishes the review and approval process for coastal district plans, including provisions for districts to work with the Department to resolve issues before the Board approves a plan. Allows districts to request mediation of the Board's decision.

Section 14: Establishes criteria for board approval of district plans and clarifies that district enforceable policies may not address matters preempted by state or federal laws.

Section 15: Makes conforming changes for board approval of ACMP regulations.

Section 16: Changes the term "subsequent review" to the commonly used term "elevation" and clarifies that the three state resource agencies make the final decision on a project elevation.

Section 17: Clarifies that aspects of an activity covered by a general or nationwide permit are excluded from a consistency review (rather than the entire activity). Eliminates language exempting Department of Environmental Conservation permits from consistency reviews.

Section 18: Makes conforming changes for Board approval of district enforceable policies.

Section 19: Allows ACMP consistency review of projects inland of the coastal zone if there would be direct and significant effects to coastal uses or resources. Clarifies that seismic survey activities in federal waters are subject to consistency reviews.

Section 20: Clarifies that categorically or generally consistent activities are for routine projects.

Section 21: Exempts federal activities and federally-permitted projects from the 90-day consistency review time limit. Allows extension of the time limit for adjudication of coastal district permits.

Section 22: Clarifies that "affected coastal resource district" includes districts with a publicly-reviewed draft plan or approved plan.

Section 23: Requires an individual consistency review for each Outer Continental Shelf lease sale.

Section 24: Gives the Board authority to act on a petition regarding non-implementation of a coastal district plan.

ction 25 - 28: Makes conforming amendment regarding Board action for a petition regarding non-implementation of a coastal district plan.

Section 29: Clarifies a coastal resource service area (CSRA) may accept new matter submitted by a city or village into its coastal management plan.

Section 30: Clarifies that municipalities and CRSAs are not prohibited from joint administration of functions.

Section 31: Removes language about boroughs that do not exercise planning and zoning authority.

Section 32: Makes conforming amendment clarifying the board's role in coastal boundary changes.

Section 33 - 34: Makes conforming amendment regarding the board's role in approving district plans and district enforceable policies.

Section 35: Clarifies that the term "project" includes federal activities and federally-permitted activities.

Section 36: Adds new definitions for the terms "Board" and "special management areas."

Section 37: Repeals exemption of Department of Environmental Conservation permits from consistency reviews (AS 46.40.040(b)–(c) and AS 46.40.096(i)). Removes requirement for re-submittal of district plans every 10 years (AS 46.40.050(a)). Removes exemption of shallow gas projects from ACMP reviews (AS 46.40.205). Removes definition for "areas meriting special attention" (AS 46.40.210(1)).

Changes between HB 74 (CRA, 26-LS0322\R) and CS HB 106 (CRA, 26-LS0402\S)

March 10, 2009

Section 9

Page 7 lines 17-22 were amended to elucidate the requirements for coastal district enforceable policies. The first substantive amendment eliminates "contemporary or traditional local knowledge" as forms of evidence to support a coastal district policy, leaving "scientific or local knowledge" as appropriate evidence. The second substantive change is that district policies must be supported by evidence if "more specific" than state or federal law. This replaces the requirement of evidence if the policy is "stricter or more specific" than state or federal law.

Section 14

This section was amended to clarify requirements for board approval of district management plans. The first amendment at page 11 line 13 adds to the criteria for board approval a requirement that enforceable policies cannot be preempted by state law in addition to federal law, which appears in version \R. The second amendment at page 11 lines 22-25 is the addition of an explanation for what constitutes state preemption of a coastal district policy.

Section 30

Version \S retracts the insertion of a new section 46.40.190(a) pertaining to cooperative administration of the ACMP, which in \R occurred on page 16 line 21.

Section 31

Version \S retracts an amendment to the definition of "coastal resource district," which occurred in \R on page 17 lines 8-23.

April 18, 2009

The Honorable Mark Neuman
Alaska House of Representatives
State Capitol, Rom 432
Juneau, AK 99801-1182

RE: Alaska Coastal Management Program

Dear Mr. Neuman:

In our conversation on April 14 and in the House Resources committee hearing on April 15, you requested that I put together a list or otherwise summarize the issues that were identified by Alaska Coastal Management Program (ACMP) participants during the recent re-evaluation effort led by the Department of Natural Resources, Division of Coastal and Ocean Management (DCOM). The following is a list of those issues with a brief description. It is important to recognize that there were comments addressing each of the following that either supported or opposed change to the ACMP subject.

1. Oversight of the ACMP – Comments addressed the development, structure, role, authority, and appropriateness of an oversight body for the ACMP (e.g., Coastal Policy Board or Council). Comments were also received addressing the location of the ACMP and DCOM (e.g., relocated to DFG, DCCED, or the Governor's Office).

2. Department of Environmental Conservation "carve-out" – Comments addressed the carve-out of DEC authorities from the coordinated consistency review, as well as whether coastal districts could address air and water quality issues under DEC authority.

3. Consistency review issues related to project review – Comments addressed the scope of the consistency review, the coastal project questionnaire, the application and management of the ABC List, and elevations and appeals of consistency determinations.

4. Statewide standards – Comments addressed all of the statewide standards of the ACMP at 11 AAC 112, including the purview, substance, form, authority, and structure of the standards, whether the focus of the standards should be tied to the direct interaction with coastal water or more broadly throughout the coastal zone, and whether the burden of proof in demonstrating compliance with the standards is on the applicant, the commentor, or the State.

5. District enforceable policies – Comments addressed the purview, substance, form, authority, and structure of coastal district enforceable policies, designated areas, and the revision process for amending coastal district plans.

6. General, non-categorized comments – Comments addressed the objectives of the ACMP, the subject uses of the ACMP, the basic structure of the ACMP and the available types/options of state coastal programs available under the federal CZMA, whether climate change should be addressed under the ACMP, whether the ACMP should directly address cumulative impacts, and whether ACMP staff should have a field presence.

At your request, I have listed above and summarized the key issues that ACMP participants have raised during the re-evaluation process. As a reminder, DCOM solicited written public comments on potential changes to the ACMP in July and November 2008, and held numerous public meetings to further gather input and share ideas for successful ACMP implementation. The public comments and the DCOM processes and products are available for reviewing and downloading at http://www.alaskacoast.state.ak.us/Enews/Re-eval2008/index.html. Significant effort was put into the development and consideration of these comments by ACMP participants. You may be interested in reviewing these more detailed comments and familiarizing yourself with the various issues surrounding the passionate debate on change to the ACMP laws.

I look forward to continuing to work with you on these important issues, and I thank you for taking an interest in the ACMP and the issues surrounding the implementation of a meaningful and balanced program.

If you have any questions, please do not hesitate to contact me.

Sincerely,

Randy Bates
Director

Coastal Impact Assistance Program
(CIAP)

Schedule

(Subject to change - last updated 1/22/09)

Project Solicitation: State-Initiated Projects

- December 3, 2008: Initiate solicitation of state projects
- February 2, 2009: Close solicitation of state projects – start to review and rank state initiated projects

Open Solicitation: Public initiated projects

The Alaska Department of Commerce, Community, and Economic Development (Commerce) is currently developing regulations to establish the open solicitation grant procedures for the 30% of available funds affecting the public. The Schedule below regarding the open solicitation of projects from the public is dependant on the progress of the regulations.

- January 26, 2009: Commerce initiates 30-day public comment period on regulations establishing the grant procedures affecting the public.
- March 2, 2009: Initiate open solicitation of projects from the public
- April 24, 2009: Regulations in effect
- April 25, 2009: Close solicitation of projects from the public – start to review and rank non-state initiated projects

Plan Amendment Schedule

- April 15, 2009: MMS determines final allocation for FY 2009 and FY 2010
- May 31, 2009: Finalize project recommendation to Ocean Policy Cabinet
- June 30, 2009: Initiate 30-day public review of draft Amended CIAP Plan
- June 30, 2009: Submit draft Amended CIAP Plan to MMS for review and comment
- October 11, 2009: Submit final Amended CIAP Plan to MMS
- October 31, 2009: MMS deems Amended CIAP Plan complete and initiates 90 day review
- January 29, 2010: MMS approves Alaska's Amended CIAP Plan

Coastal Impact Assistance Program (CIAP) Themes for Open Solicitation – applicable to all projects considered under the open solicitation (30%)

Approximately 70% of the CIAP allocation will be used for state initiated projects. Approximately 30% of the allocation will fund projects identified through an open solicitation process and will include both state and non-state initiated projects. In order to ensure that non-state initiated projects still focus on state priorities while addressing community needs, the Ocean Policy Cabinet and Department of Natural Resources/Division of Coastal and Ocean Management identified five themes. All non-state initiated projects must address one of these themes. In addition, those state projects that did not make the state-initiated (70%) project cut are automatically bumped into the open solicitation (30%) process and must also meet one of the five themes to be considered.

Themes

1. Waste Management and Clean Up
    a. Marine debris clean-up projects (e.g., projects to collect, transport and dispose of marine debris from shorelines, etc).
    b. Clean harbor projects to improve water quality at harbors (e.g., sewage pump-out stations and waste oil collection facilities, etc.).
    c. Waste management projects (e.g., projects to collect, consolidate, transport, and dispose of household hazardous waste present in remote communities, etc.).

2. Data Collection, Data Analysis, Planning, and Mapping
    a. Community-based assessment and monitoring of environmental and habitat variables in order to evaluate and/or mitigate impacts of development (e.g., water quantity and quality monitoring; collection of traditional knowledge regarding changes in natural ecosystems; data collection and/or analysis; habitat mapping for baseline information, long-term monitoring, and/or detection of change in order to evaluate impacts of development, etc.).
    b. Collection and/or analysis of baseline data on fish or wildlife and/or their habitat that is needed to evaluate or develop mitigation strategies for potential impacts from oil and gas, mining, and other development activities.
    c. Projects that would analyze or prepare for the impacts of climate change or natural hazards on communities.

3. Habitat Restoration and Rehabilitation Projects
   (e.g., stream bank restoration projects, prescribed burning to restore moose habitat, replacement of culverts that impede fish passage, wetland restoration projects, etc.).

4. Mitigation Projects
   Projects to mitigate impacts from development activities and/or climate change.

5. Community Environmental Education Projects, Not to Exceed $35,000
   Projects to educate the public about environmental issues/topics (e.g., educational materials, signage, targeted conferences, etc.). Projects proposed under this category will be evaluated separately from the other project categories. Up to $1,500,000 will be allocated to this category.

COASTAL IMPACT ASSISTANCE PROGRAM

Section 384 of the Energy Policy Act of 2005 established the Coastal Impact Assistance Program (CIAP). The Act authorizes the U.S. Department of Interior, Minerals Management Service to distributed $250 million annually for the years 2007 through 2010 to Outer Continental Shelf (OCS) oil and gas producing states and coastal political subdivisions (CPSs) to mitigate the impacts of OCS oil and gas activities.

Per a formula prescribed by the Act, Alaska's eight eligible CPSs will receive a combined total of 35 percent of Alaska's allocation. The remaining 65 percent is allocated directly to the state.

In 2007 and 2008 Alaska was allocated 1 % of the national CIAP funds. Due to the recent Chukchi Lease Sale, MMS has projected that Alaska's allocation will increase to be between 12% and 17 % of the national CIAP allocation in 2009 and 2010. MMS will announce final allocation in April 2009.

The tables below show the annual and total projected CIAP allocations to the state and the CPSs for both the high and low estimates.

Allocation Directly to State (65% of total to state)

	Total	2007	2008	2009	2010
Low end (12% of total federal funds for 2009 and 2010)	**40,982,500.00**	1,576,250.00	1,576,250.00	18,915,000.00	18,915,000.00
High end (17% of total federal funds for 2009 and 2010)	**56,745,000.00**	1,576,250.00	1,576,250.00	26,796,250.00	26,796,250.00

Allocation Directly to CPSs - Low end (35 % of total to state)

	Total	2007	2008	2009	2010
Municipality of Anchorage	**3,581,586.76**	137,767.88	137,767.88	1,653,025.50	1,653,025.50

ANALYSIS: *(Attach a separate page if necessary)*

HB 74 will have the following fiscal impact:

1. Travel - It is expected that the Coastal Policy Board (CPB) will need to meet at least four times annually to fulfill the obligations and provide the services outlined in HB 74. Travel (including air, hotel, and per diem) for appointed members, designated members, and state agency staff is included.
2. Contractual - In order to re-write the guiding regulations, DNR must secure contractual services for the promulgation and final Department of Law review of the regulations (FY 2010 only). In addition, contractual services for the CPB meetings must be procured, and will be an annual expense.
3. Supplies - The CPB meetings will require some level of supplies for ensuring the members have proper materials.

ANALYSIS: *(Attach a separate page if necessary)*

This legislation amends Alaska statutes related to the Alaska Coastal Management Program (ACMP). The bill requires that the Department of Environmental Conservation process its permits in accordance with the ACMP coastal consistency review procedures where permits are currently processed independent from those procedures. The increased work load for existing staff is estimated at one-half of the salary cost of a Range 19 position.

In addition to increasing the effort required to process a permit, the changes require a new half-time position to serve as ACMP lead for DEC with responsibility for internal and external coordination of ACMP matters. The fiscal note reflects the personnel and support costs of a new, part-time (0.5 FTE, Range 20) position to serve as DEC's ACMP Program Coordinator. First-year costs include one-time supply costs that are not reflected in subsequent years.

Honorable Lyman Hoffman
Senate Resources Committee
Capitol Building
Juneau, AK 99801

Re: SB-4, Alaska Coastal Zone Management

Dear Senator Stedman and Senator Hoffman,

We have reviewed CSSB-4(FIN) Version S which proposes major changes to the Alaska Coastal Zone Management Program. The Finance CS makes some changes to SB-4 but the bill still contains other concerns that must be addressed before we can support it.

At the hearing on this bill yesterday you asked for specific concerns that we have with CSSB-4(FIN) Version S and these follow.

The Legislative Budget & Audit review of the program that is scheduled for this year should be allowed to proceed as directed in past legislation.

Section 1. Eliminate the Coastal Policy Board. The actions and attempted actions of this board have been a source of controversy for the ACMP. We are not aware of other states that have this type of board and there is no need for it in Alaska. In other states, and in Anchorage, the ACMP is incorporated into the municipal ordinances. All coastal municipalities could do the same. Eliminating the Board would correct many of the problems with the bill and would alleviate many of the concerns of both the State and industry. This board in not in the current program and should not be added.

If the Coastal Policy Board is not eliminated, it will be necessary to Balance the Board. The board should be balanced to have 1/3 from agencies, 1/3 from the districts and 1/3 from the regulated community. If there is a board, it is essential that the regulated community have a voice on the board. Without including the regulated community, this group that can create new jobs and economy for the state will not have the input necessary.

Section 2. Do not expand the items requiring consistency determination. Remove the phrase "from the department or" that was added by SB-4. This phrase would increase the number of permits, leases and authorizations that would require consistency determinations. The workload of each office in DNR, including DCOM, would be increased.

Section 3. Regulations should have the advice but not the approval of the board. If the board is retained, the board should comment on the regulations before adoption, but should not have approval power over them. Regulations are an agency function which includes drafting to conform with other laws, defined public comment periods, a clear detailed avenue for appeal, and final review by the Lt Governor. Change Section 3 to read "The Department may adopt regulations, after review and comment by the board, necessary to implement this chapter."

Section 4. Eliminate the change to (a) subsection (1). As written, the Governor's budget for a Division within DNR would require approval of the Board. The Commissioner and the Governor must have the power to budget and manage funds without such a requirement. As written, the Governor may not send in his budget for DCOM without the approval of the Board.

Section 5. This section would be workable, **only if, the board is balanced** (1/3, 1/3, 1/3).

Section 7. This section would be workable, **only if, the board is balanced** (1/3, 1/3, 1/3).

Section 9. In Subsection (a) the language "statewide standards and" **must be retained.** In Subsection (b) the phrase "meet the requirements of AS46.40.070 and may not duplicate, restate, or incorporate by reference statutes and administrative regulations adopted by state or federal agencies" **must be retained.**

Section 17. Eliminate this section to keep in the DEC carve-out.

Section 21. Eliminate the new language in Subsection (o)(1)(B) and (C). The affect of including this language would be to eliminate all deadlines by which actions must be completed.

Section 35. Eliminate the new language defining a "Project" which incorporates state rules (i.e., regulations). Agency regulations are rules specifically intended to alter uses, including those in the coastal zone. This new definition would subject all regulations of DNR, DF&G, and DEC to a veto by each coastal district in the state with respect to that area.

The above items are based on a rapid review of Version S and are in no way a comprehensive evaluation. ACMP requires a comprehensive review as proposed by a privious Legislature and any changes to the program must not be rushed through without that review. Thank you for your consideration of our concerns.

Sincerely,

Steven C. Borell, P.E.
Executive Director

CC: Senator Donny Olson

The Honorable Mike Chenault
Speaker, Alaska House of Representatives
State Capitol Room 208
Juneau, AK 99801

Cc: House Resources Committee; Senate Finance Committee

Senator Stevens and Representative Chenault:

The associations listed below represent companies that employ tens of thousands of Alaskans in high-paying jobs depending on resource development.

Each of our organizations is concerned about pending legislation that would drastically change the Alaska Coastal Management Plan (ACMP), jeopardizing long-term investment in resource development projects and costing Alaskans jobs and business opportunities. Senate Bill 4 and House Bill 74 would most certainly delay indefinitely, if not completely derail, responsible resource development across our state.

With each of our industries coping with rising unemployment in the current economy, we join in urging you not to pass any legislation that alters the current ACMP and further aggravates Alaska's serious economic challenges. We endorse the creation of a task force of affected stakeholders to evaluate concerns which have been raised about the current ACMP. The task force could make recommendations to the next legislature on how to address those concerns without giving up state sovereignty and without harming responsible resource development.

Respectfully,

Re: SB-4 and HB 74, Changes to the State of Alaska Coastal Zone Management Program

Dear Senators and Representatives:

I am writing to express great concern with the above proposed bill. Alaska is a resource rich state which cannot exist without resource based industries that put our people to work. The Alaska Coastal Zone Management Program (ACMP) certainly could be improved to better incorporate the concerns of citizens; however, as proposed, this bill will increase uncertainty, risks, and costs to future business investments which are needed to provide jobs in our state.

Our specific concerns with the bill include the following:

- Alaska Coastal Policy district boards will be local individuals appointed and put in charge and in control of the ACMP program. The concern: the ability to make laws and regulations should reside with State of Alaska elected officials and regulatory departments, to ensure broad statewide perspectives and public policies are maintained for the good of all citizens.

- Coastal districts will have authority to obtain grants and staff to directly carry out the process of approving or disapproving permits. The concern: the transfer of the authority of the legislature and state departments to non-elected persons or staff appointed by coastal districts. The bill could put individuals without the required technical expertise into a role of making wide ranging policy decisions that impact business and the economic health of the entire state.

- The districts will have authority to change existing statewide Alaska Department of Environmental Conservation (ADEC) established standards and permits for water, wastewater, and air quality. These technical, scientific, quantitative-based

regulations took years to develop and receive federal Environmental Protection Agency (EPA) approval for long sought-after Alaska primacy to administer. The concern: multiple districts possessing the ability to over-ride, change or eliminate complex scientific based standards and permits will create unacceptable confusion, inconsistency, and uncertainty in Alaska.

- Established timelines for agency and coastal districts taking permit actions would be eliminated. The concern: Lack of timelines for action creates a process that lacks accountability and cost restraint, and raises compliance issues due to policies and regulations that are unenforceable.

- Coastal district boards could regulate any project that "may" impact a coastal use or resource. The concern: This expands the inland and offshore boundaries of the coastal zone to an unknown extent, while potentially placing Alaska and State agencies in conflict with federal jurisdictions, such as offshore.

Stable, consistent rules, standards, and timelines are critical to all business interests, financers, and any development effort. Those certainties would no longer exist, making it extremely difficult for anyone needing permits for projects. The proposed bill as written imposes more unknowns on a process already quite complex and burdensome, and will drive good businesses elsewhere to friendlier environments as we have been seen over the past couple of years.

Sincerely,

June McAtee

March 29, 2010

The Honorable Donald Olson
Alaska State Senator
Room 514, State Capitol
Juneau, AK 99801

The Honorable Reggie Joule
Alaska State Representative
Room 502, State Capitol
Juneau, AK 99801

Subject: Senate Bill 4 and House Bill 74 -- An Act relating to the Alaska Coastal Management Program; and establishing the Alaska Coastal Policy Board.

Dear Senator Olson and Representative Joule:

In the two years since I came to Alaska to head Shell's business, I have shared with you our enthusiasm and genuine optimism for the oil and gas potential we see in the Chukchi and Beaufort Seas. We at Shell firmly believe oil and gas exploration and development activities in the Alaska Arctic will create thousands of jobs for Alaskans, including the residents of the North Slope, and generate billions in revenues. These potential developments will result in oil production that could last for 30 to 40 years, thereby extending the life of the Trans Alaska Pipeline and facilitating new, as yet unknown opportunities for additional hydrocarbon production. Most importantly, Shell as well as other industry participants believe that history will repeat itself and that the success industry had 20 years ago, drilling 35 exploration wells in the Beaufort and Chukchi Seas, will once again be achieved. These activities will unquestionably be conducted with the most technologically advanced, environmentally sensitive methods.

To date, Shell and several other world-class offshore companies have invested several billions of dollars just for the opportunity to explore for those resources. Billions have been spent on leases, specialized drilling equipment, baseline science, litigation, permitting and program modifications, including significant expenditures to accommodate local concerns (discussed further below). Shell's planned exploration drilling activities in 2010 alone will cost in excess of $400 million, requiring more than 100 separate contracts, and as many as 700 people either employed or contracted. We see the real potential for the investment of billions more in future years.

However, all of the potential for future production, as well as all of the investments made to date by my company and others, are in jeopardy by the proposed ACMP legislation being advanced in Juneau. Offshore oil and gas exploration projects in Alaska already face significant challenges in becoming commercial developments, including economics, expansive permitting requirements, extremely high logistics costs, aggressive environmental group litigation, and international competition for investment dollars. Passage of HB 74 or SB 4 would only increase those challenges. I strongly encourage your careful consideration of the impacts and implications of this proposed ACMP legislation. I am available at your convenience to discuss further the concerns I have outlined below.

Key elements of the ACMP bills that threaten future investment in offshore oil and gas exploration and production activities include:

- ADEC Carve Out – Opens extremely technical federal and state air and water permits to contradictory local standards, unnecessarily restrictive requirements, costly last-minute modification and extended approval timelines.
- Delayed Consistency Reviews – Defers consistency reviews until after **ALL** federal and state permits/authorization are in hand and eliminates all established timelines, which will result in the loss of the short exploration season.
- Expanded Regulatory Authority – Empowers local districts to establish restrictions beyond those imposed by state and federal law.
- Conflicting Standards – Imposes no requirement that local permit standards be consistent with controlling state and federal standards, thereby leading to additional litigation, increased costs and project delays.
- Local Veto – Effectively establishes a local veto over development of the resources that belong to all the people of Alaska and the Nation.

For this year's open water season, Shell proposes to drill two exploration wells in the Beaufort and/or Chukchi Seas, collect shallow hazards information and conduct biological marine surveys. To gain approval for these activities, Shell must secure 37 federal, state and North Slope Borough permits or authorizations. To date, only two permits/approvals have been issued final – we are still waiting for 35 additional approvals! I can assure you it is not because Shell has delayed applying for these permits. Many of the federal agencies deliver what is called 'just-in-time' permits, permits received just prior to operations commencing. All but two of these permits are annual permits, and we have already begun preparing permit applications for 2011.

In addition, Shell has invested significant time, energy and financial resources to address local concerns. Regulatory requirements for permits sought to date require a project applicant to conduct numerous community meetings. Shell believes that local input and participation in the permitting and leasing processes provides valuable information to ensure safe and environmentally sensitive operations. Shell has participated in over **250 engagements since 2007** to explain our plans, identify issues of concern and modify our program to address those concerns. I must add that consultation is the bedrock for all of these permitting processes. There is substantial opportunity for comments from residents. In fact, Shell has modified its program as a result of certain comments from communities.

Permit delays and overly restrictive limits are the single greatest risk to Shell's Alaska offshore exploration program.

This ACMP legislation places control of offshore activities in the hands of the local districts at almost every juncture – with much open-ended language and timeframes, subject to wide interpretation. In effect, it hands veto power over all oil and gas development to a local district that is officially opposed to offshore drilling. Regulatory uncertainty created by the proposed ACMP changes creates a powerful disincentive for Arctic exploration and development.

As an example, blackout dates for migrating bowhead whale cows with calves described in the North Slope Borough's draft District Enforceable Policies of May 10 - July 1 and August 1 - October 15 in effect end any chance of operating during the short open- water season. These restrictions are not even considered by the National Marine Fisheries Service, the agency responsible for protecting bowhead whales, because they are not necessary or supported by science. One needs to remember that over $500 million in studies have been completed over the last three decades to support these initial exploration leases.

The requirement that all federal and state permits for exploration are final before beginning the ACMP process may effectively kill any attempt to drill an offshore well.

This bill allows districts, without the limitation of respecting the limits of state or federal law, to attach any stipulation they wish to offshore permits.

Once again, Shell is committed to working with local communities in the leasing and permitting processes and has a proven track record of taking steps necessary to address the concerns presented to us. The capital we have expended to date in pursuit of this project is an indication on our part of a desire to modify our program as a result of consultations that already exist in the permitting process. However, placing local districts in charge of whether permits are issued or lease sales are held places unprecedented control of projects that will have statewide and national impact into the hands of only a few individuals. Such an unprecedented transfer of power – from collective decision making to local control - would, have far-reaching impacts on Alaska and the nation.

Alaskans want to see more exploration drilling and new oil for TAPS. The governor, legislature and citizenry are all looking for ways to provide an incentive and encourage companies to explore. And Shell is attempting to conduct just such a multi-year multi-well program with potentially huge benefits for Alaskans. Passage of HB 74 or SB 4 would tremendously compromise our ability to achieve those objectives and put Alaska's future financial stability at risk. I hope this provides you with the reasoning behind Shell's inability to support this legislation.

Sincerely,

Pete Slaiby
Vice President, Shell Alaska

March 22, 2010

Representative John Coghill, Chair
Members, of the House Resources Committee

Re: HB 74

Dear Representative Coghill and House Resources Committee Members,

The issue of the Coastal Zone Management has been bantied about for a number of years. HB 74 is meaningful in that it will re-establish a policy Board to give valuable guidance regarding development of coastal management enforceable policies. This is especially critical for the Kenai Peninsula with its miles and miles of coast line.

I am attaching the Resolution passed by the Kenai Peninsula Borough Assembly last year. It is as valid today as it was then.

Please support HB 74 and support Alaska's coastal communities.

Thank you,

Milli Martin

MEMORANDUM

To: Assembly Members

From: Assembly President Milli Martin

Date: April 7, 2009

Re: Resolution 2009-030, Supporting Legislation Regarding the Alaska Coastal Management Program

The attached resolution offers general support for legislation now before both the House and Senate concerning the Alaska Coastal Management Program (ACMP). In my view, the ACMP is very important to the Kenai Peninsula Borough, as this borough has, mile for mile, the longest borough coastline in the state.

The Coastal Policy Council that was originally established in the legislation of 1977 worked well. The key to both pending bills is the reestablishment of the ACMP Coastal Policy Board that existed before the legislature removed it in 2003 with the enactment of HB 191. It is also a mechanism for coastal districts to appeal the decisions of the Department of Natural Resources (DNR) regarding the adoption of enforceable policies. Under the current policy, DNR has the final authority to interpret statutes and administrative code provisions, and deny policies on that basis. During the statutorily required rewrite of the Kenai Peninsula Borough Coastal Management Plan in 2003, a number of policies the borough used successfully for all concerned during 15 years of implementation were denied without appeal. Among policies DNR denied were those related to consideration of the impact of development in uplands adjacent to important river habitat, dredging and filling in water bodies, resource extraction on shorelines, and development in unstable areas.

In addition to the creation of the Board, a number of statutory and administrative code changes are necessary for the ACMP to live up to the purpose for which it was created. This purpose is to help those who want to invest in and develop projects to do so in a way that protects the uses and resources of coastal areas. The only opportunity the borough has "to have a seat at the table" during the project permitting process is through the ACMP.

I believe the Kenai Peninsula Borough has demonstrated over the years that both development and protection of resources can be accomplished. ACMP has been an integral part of the KPB since it was adopted by the borough in 1990.

I also recognize these bills will probably take two years for passage. However, I feel it is imperative to let members of the Legislature know the Assembly supports these efforts. The Alaska Municipal League has a letter of support on file, as did the cities of Cordova, Valdez, and Pelican, and the Aleutians West Coastal Resource Service Area. Resolutions from the Kodiak Island Borough and the City and Borough of Sitka have been sent to the legislature. I anticipate others will follow.

I ask your support of this resolution.

KENAI PENINSULA BOROUGH
RESOLUTION 2009-030

A RESOLUTION SUPPORTING LEGISLATION TO ENABLE ALASKA'S COASTAL COMMUNITIES TO MORE EFFECTIVELY PARTICIPATE IN THE ALASKA COASTAL MANAGEMENT PROGRAM

WHEREAS, the passage of House Bill 191 by the Alaska Legislature in 2003 at the request of the Murkowski Administration attempted to "streamline the Alaska Coastal Management Program (ACMP) and through its implementation by statutory and regulatory amendments, forced a complete revision of all Alaska Coastal Management Plans in Alaska, including the Kenai Peninsula Borough plan; and

WHEREAS, as a result of the passage of HB 191, and new regulations imposed by the Alaska Department of Natural Resources, the Kenai Peninsula Borough lost more than 70 percent of the policies the borough had utilized effectively during the previous 15 years to assist development applicants while exercising appropriate stewardship of our natural resources; and

WHEREAS, Alaska Coastal Districts are unanimous in their appeal for revisions in Alaska Statutes and regulations to restore the ability of Alaskan communities to regain "a meaningful seat at the table" when management and development decisions affecting Alaska's coastal zones are being made; and

WHEREAS, Legislation with the following key provisions could restore to local governments a more meaningful role in the local development decisions and stewardship of coastal resources:

- Reestablishes an oversight board for the ACMP composed of five public members representing coastal districts and five commissioners of State resource agencies to make ACMP policy decisions.
- Establishes that the duties of the Board are to approve ACMP standards and criteria for district plans.
- Restores the ability of coastal districts, through their political bodies, to write meaningful enforceable policies by enabling policies to be prescriptive or performance-based, stricter or more specific than state or federal laws, but not violative of either.
- Reincorporates the Department of Environmental Conservation in the consistency review process.
- Reestablishes the ability of coastal districts, through their political bodies, to consider cumulative impacts in project reviews.

NOW, THEREFORE, BE IT RESOLVED BY THE ASSEMBLY OF THE KENAI PENINSULA BOROUGH:

SECTION 1. That the Kenai Peninsula Borough supports the revision of the Alaska Coastal Management Program to restore and establish these provisions, among others, and permit the Assembly to consider the adoption of policies that are more reflective of the borough's concerns in its coastal zone.

SECTION 2. That a copies of this resolution be forwarded to Governor Sarah Palin, Senator Al Kookesh, Representative Woodie Salmon, Senator Con Bunde, Representative Mike Hawker, Senator Thomas Wagoner, Speaker Mike Chenault, Representative Kurt Olson, Senator Gary Stevens, Representative Paul Seaton, Senator Donald Olson, Representative Reggie Joule, Representative Bryce Edgmon, Representative Bob Buch and Department of Natural Resources Commissioner Tom Irwin.

SECTION 3. That this resolution takes effect immediately upon its adoption.

ADOPTED BY THE ASSEMBLY OF THE KENAI PENINSULA BOROUGH THIS 7TH DAY OF APRIL, 2009.
