"(B) the fee shall not exceed 3 percent of the annual ex-vessel value of all salmon harvested in the southeast Alaska purse seine fishery.

"(d) DISBURSAL OF LOAN PROCEEDS.—If the industry fee system is approved as provided in section 312(d)(1)(B) of that Act (16 U.S.C. 1861a(d)(1)(B)), the Secretary shall disburse the loan in the form of reduction payments to participants in such amounts as the Southeast Revitalization Association certifies to have been accepted under Alaska law for reduction payments. The Secretary shall thereafter administer the fee system in accordance with section 312(d)(2) of that Act (16 U.S.C. 1861a(d)(2)), and any person paying or collecting the fee shall make such payments or collection such fees in accordance with the requirements of that Act (16 U.S.C. 1801 et seq.)". Certification. Fees.

SEC. 122. CONVERSION TO CATCHER/PROCESSOR SHARES.

(a) IN GENERAL.—

(1) AMENDMENT OF PLAN.—Not later than 90 days after the date of enactment of this Act, the Secretary of Commerce shall amend the fishery management plan for the Bering Sea/Aleutian Islands King and Tanner Crabs for the Northern Region (as that term is used in the plan) to authorize— Deadline. Alaska.

(A) an eligible entity holding processor quota shares to elect on an annual basis to work together with other entities holding processor quota shares and affiliated with such eligible entity through common ownership to combine any catcher vessel quota shares for the Northern Region with their processor quota shares and to exchange them for newly created catcher/processor owner quota shares for the Northern Region; and

(B) an eligible entity holding catcher vessel quota shares to elect on an annual basis to work together with other entities holding catcher vessel quota shares and affiliated with such eligible entity through common ownership to combine any processor quota shares for the Northern Region with their catcher vessel quota shares and to exchange them for newly created catcher/processor owner quota shares for the Northern Region.

(2) ELIGIBILITY AND LIMITATIONS.—

(A) The authority provided in paragraph (1)(A) shall— Applicability.

(i)(I) apply only to an entity which was initially awarded both catcher/processor owner quota shares, and processor quota shares under the plan (in combination with the processor quota shares of its commonly owned affiliates) of less than 7 percent of the Bering Sea/Aleutian Island processor quota shares; or

(II) apply only to an entity which was initially awarded both catcher/processor owner quota shares under the plan and processor quota shares under section 417(a) of the Coast Guard and Maritime Transportation Act of 2006 (Public Law 109–241; 120 Stat. 546);

(ii) be limited to processor quota shares initially awarded to such entities and their commonly owned affiliates under the plan or section 417(a) of that Act; and

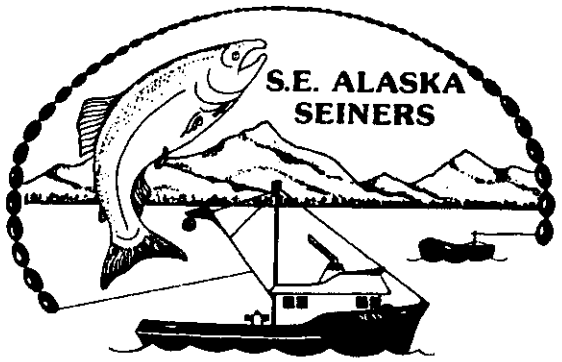
Notes:

A "*" following the year field indicates data are preliminary.
Selected data fields are represented by "." when fewer than four people participated in a fishery.
Selected data fields are represented by "0" when no activity has occurred in a fishery (i.e.,closure).
Gross earnings are estimated using an average annual ex-vessel price per area, species, and gear type.
These data are aggregated by type of permit fished, and thus contain both targeted and incidentally landed species.
Data includes only commercial catch landed on valid permits.
Data associated with test fishing, illegal landings, derbies, educational permits, or unmatchable permits are excluded.

Average Permit Price Notes:
--- indicates that there were no monetary transfers for this fishery.
... indicates confidential information because fewer than four surveys exist.



2 March 2010

The Honorable Bryce Edgmon
Chairman, House Fisheries Committee
Room 124
Alaska State Capitol
Juneau, AK 99801-1182

Dear Representative Edgmon:

The Southeast Alaska Seiners Association (SEAS) fully supports HB 365 and would appreciate the opportunity to express such support before your Committee.

SEAS is a trade association of 127 member skippers (of 5 crew), who purse seine for salmon in Southeast Alaska, predominantly with 58 foot vessels. SEAS also has nearly 60 business members who support the fleet, consisting primarily of processors, fuel docks, grocery stores and marine suppliers, contractors, electronic suppliers, mechanics, shipyards and outfitters.

HB 365 Background

SEAS worked with the Congressional delegation to secure a $3 million grant that was spent in 2008, after being authorized to do so by the Alaska State Legislature, to retire 35 permits, or approximately 22% of our target permit reduction. The first part of our fleet consolidation was done under the supervision of the Commercial Fisheries Entry Commission (CFEC), the program was run by Elgee, Rehfeld, CPAs and we advertised throughout Southeast Alaska for a reverse auction. **These are the first ever Alaska state limited entry salmon permits retired under such a program.**

After the further repurchase of around 120-125 permits we expect to get to the 255-260 range of permits remaining available to fish. This time the fishermen are paying and the financing source is a National Marine Fisheries Service (NMFS) loan that fishermen will repay with a 3% assessment. A couple weeks into the 2010 legislative session the main NMFS Financial Services Division personnel came to Juneau to meet with the CFEC leadership as well as the state of Alaska in order to prepare a bill that would work as the basic "closing document" on our loan.

☼ PO Box 23081, Juneau, AK 99802 ☼ 907-463-5030 ☼ Fax: 907-463-5083 ☼

HB 365 is exactly phrased and intently written with at least a dozen basic drafts prior to introduction. There is no fiscal note and should there be any concern to processors about extra paperwork, the processor can apply for compensation from the assessment. We do not believe at this time that the financial burden of adding a box to the fish ticket will cause any undue financial concern as this is already done in many Boroughs (such as Bristol Bay) and by enhancement taxation as well in the same section of the fish ticket.

This bill is the vehicle that specifies the route and parameters of this assessment and is necessary because this is not only Alaska's first, but it is likely that this is the first state water's fishery that has ever received a NMFS restructuring loan for fleet consolidation. According to NMFS, this bill cannot be changed in any fashion whatsoever - or our $20 million loan for Alaskan fishermen will fail.

When Southeast Alaska was rolled into the state's limited entry program in 1974, there was a **larger than average number of non-resident licenses due to the close proximity to Puget Sound and the Boldt Decision**, while not made until that very year, as well as the first shot at limited entry in 1969, made for a larger fleet than existed in the decade(s) prior to limited entry.

One other compelling reason seiners have sought out fleet consolidation is due to the amount of historical and traditional fishing area currently not available to access by the seine fleet. The Icy Strait corridor of about 100 miles of fishing shoreline was closed nearly simultaneously to the initiation of limited entry. Then in 1985, the 75 mile shoreline of Noyes Island and Dall Island outside of Prince of Wales Island was closed for most of the July fishery and has remained mostly closed by Treaty since then during the month of July. The fleet was bottled up in long line-ups (*boats idling their engines while waiting for hours for the opportunity to set the net and catch fish*) for much of the season save for the peak of some of our better runs. Certainly fuel savings and energy implications were there, but this was not our impetus.

Consequent to the major price crash in 1991 (12 cents per pound for pinks) after the introduction of Russian pink salmon into the Western world, another major price crash in 1996 (7-8 cents) and then again in 2002 (7-8 cents), SEAS decided to get rolling on a major fleet consolidation program. By 2003 and 2004 the fleet had been cut to around 225 boats from 360-375 during the prior decade. Most of these boats and crews no longer fishing were non-residents. **The fleet is a stable 225 average now with as little as 205 permits operated on poorer seasons while 240 is our high in recent years.**

With over 80% of the permits bought back in the first round having been owned by non-residents, the fleet has become even more 'Alaskan'. This trend is expected to continue in the next round, thereby resulting in strong and financially viable fishing families within Alaska.

HB 365 is an important bill because it is the final hurdle to clear in order to facilitate the NMFS Federal loan program so that it will work with Alaskan limited entry fisheries. While it is not a big bill, it is a huge bill for our members and is a necessary step towards stabilizing, modernizing, and maintaining our fishery here in Southeast Alaska.

Sincerely,

Dan Castle

Representative Bryce Edgmon, Chairman
House Special Committee on Fisheries
Alaska State Legislature
State Capitol
Juneau, AK 99801

Re: Support for HB 365

Dear Representative Edgmon,

The United Fishermen of Alaska (UFA) supports passage of HB 365 / SB 255.

The bill, while extremely timely and important to certain of our members, is nothing but a "housekeeping" bill that is needed as the last piece of work to finish off the SE fleet consolidation program for SEAS but will also set up a precedence and framework for any similar effort in the state of Alaska conducted at a later date. This legislation allows NMFS to confirm fish ticket/processor data to confirm that the assessment collected to pay back the federal government for the loan is correctly determined and allow for enforcement of those that don't pay the assessment. NMFS only has access to data for a specific fishery that has a federal loan program and not access to all salmon harvest data.

When UFA embraced the Legislative Salmon Task Force in 2001, we recognized that different regions require different solutions. Some groups wanted status quo. Other groups wanted market-oriented solutions. Others wanted to restructure their fishery, or basically re-limit limited entry. We want to acknowledge that many, probably most, of our state waters groups do not support a fleet consolidation program for their own region.

But when the Legislature embarked upon the Legislative Salmon Task Force, this was one of the major solutions that came out for each region to choose from. HB286, authored in 2002 by Drew Scalzi, was one of the resulting pieces of legislation. One of our groups, the Southeast Alaska Seiners Association (SEAS) chose to follow up on this and has already "permanently retired" around 20% of their consolidation target in 2008 with $3 million in NMFS grants that were authorized by the Alaska State Legislature.

Another piece of the pie here is HB484, passed in 2006 by the Alaska State Legislature that mandates a solution in the event of an "optimum number determination" in a court of law that

causes retired permits to become reissued. HB484 allows that the Legislature "may" send the resulting funds back to the fleet consolidators, hence relieving fishermen of the uncertainty resulting from the "optimum number" issue.

In the case of SE seine fishery, the active fleet size has not exceeded the buydown goal of the buyback program since 2002. So this fleet consolidation is very unlikely to cost a single job or boat. The 3% assessment that these guys are paying is just an insurance policy for the fishermen (and processors) that there won't be a new "group" or company that will bring in some of the currently unused and dormant 140 permits. In fact there will be at least several dozen permits remaining on poor years and likely a dozen or so remaining even on good years.

UFA supports swift passage of this legislation, which is the wrap-up of the Legislative task force bill HB286 from 2002. It is now 2010 and it seems fitting that the Alaska State Legislature would be willing and able to support a "housekeeping" bill that brings to fruition a bill (nearly unanimous in passage in both the House and Senate) that was brought forth as a result of the Alaska State Legislative Task Force.

Thank you for your consideration of this legislation for one of our group members.

Sincerely,

Mark D. Vinsel

Rep. Bryce Edgmon, Chairman
House Fisheries Committee
Alaska House of representatives
Capitol Room 416
Juneau, AK 99801

RE: HB 365, Fish Processors Fees, Licenses, and Records
Hearing Date: Tuesday, March 9, 2010

Dear Chairman Edgmon:

The Southeast Revitalization Association ("SRA") is a qualified fishery association under AS 16.40.250 and was established for the express purpose of designing and implementing a fleet consolidation program for the Southeast purse seine salmon fishery for which the Commercial Fisheries Entry Commission ("CFEC") has issued limited entry permits.

The SRA consolidation program, if ultimately approved by the affected permit holders, will be funded in large part by a federal loan authorized under the Magnuson-Stevens Fishery Conservation and Management Act and administered by the National Marine Fisheries Service ("NMFS"). Permit holders remaining in the fishery will repay the loan through imposition of a fee based on the ex-vessel price of all salmon harvested in the fishery. The fee will be collected by the first buyer of the salmon and then transmitted to NMFS.

To ensure that the fee is collected and transmitted in a timely fashion, NMFS needs access to fish ticket harvest data and fish buyer annual reports maintained by the State of Alaska. These records, subject to a variety of exceptions, are confidential under AS 16.05.815. HB 365 would allow NMFS access to these state records by creating another exception. HB 365 would also require the buyers of salmon to certify the collection and transmittal of fees as a condition to renewal of their annual fisheries business license.

Passage of HB 365 is not only a condition precedent to the actual funding of the loan by NMFS, but also serves two important compliance considerations to ensure an even playing field for both fishermen and processors:

1. Assures the fisherman/permit holder paying the fee that all monies collected by the buyer are being transmitted to NMFS for repayment of the loan.

2. Assures the processor/buyer of the salmon that all other buyers are also collecting and transmitting the fee.

The SRA strongly supports SB 365 and respectively requests prompt passage by your committee.

Sincerely,

Rob Zuanich
Manager

CS FOR HOUSE BILL NO. 369(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY THE HOUSE RESOURCES COMMITTEE

Offered:
Referred:

Sponsor(s): REPRESENTATIVES CHENAULT, Ramras, Olson, Johnson

A BILL

FOR AN ACT ENTITLED

"An Act relating to an in-state natural gas pipeline, the office of in-state gasline project manager, and the Joint In-State Gasline Development Team; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 38 is amended by adding new sections to read:

Chapter 34. In-State Natural Gas Pipeline.

Sec. 38.34.010. In-state gasline project manager. (a) The position of in-state gasline project manager is created in the Office of the Governor. The Office of the Governor shall provide administrative support for the position. The position shall continue until one year after commencement of commercial operation of the in-state natural gas pipeline.

(b) The governor shall appoint an individual to the position of in-state gasline project manager. The manager is in the exempt service under AS 39.25.110. The person serving as the in-state gasline project manager may be removed from the

position at the discretion of the governor, who shall appoint another person to the position.

(c) The in-state gasline project manager shall

(1) collaborate with other state agencies to perform planning and other work on the in-state natural gas pipeline project under this chapter;

(2) coordinate with government agencies and the private sector on issues involving construction, ownership, and operation of the in-state natural gas pipeline;

(3) prepare written monthly progress reports setting out the monthly expenditures of funds spent in the development of the in-state natural gas pipeline, including projections of future expenditures and efforts needed to develop the in-state natural gas pipeline, and submit each report to the legislature by the last day of the month immediately following the month covered in the report.

Sec. 38.34.020. Expedited review and action by state agencies. (a) A review conducted and action taken by a state agency relating to the in-state natural gas pipeline project under this chapter shall be expedited in a manner consistent with the timely completion of the project.

(b) Notwithstanding any contrary provision of law, a state agency may not include in any project certificate, right-of-way, permit, or other authorization issued to the licensee a term or condition that is not required by law if the in-state gasline project manager determines that the term or condition would prevent or impair, in any significant respect, the expeditious construction and operation or expansion of the in-state natural gas pipeline project.

(c) Unless required by law, a state agency may not add to, amend, or abrogate any certificate, right-of-way, permit, or other authorization issued to a licensee if the in-state gasline project manager determines that the action would prevent or impair, in any significant respect, the expeditious construction, operation, or expansion of the in-state natural gas pipeline project.

Sec. 38.34.030. Joint In-state Gasline Development Team. (a) The Joint In-state Gasline Development Team is established in the Office of the Governor. The development team consists of four members as follows:

(1) the commissioner of transportation and public facilities, or the commissioner's designee;

(2) the chief executive officer of the Alaska Railroad Corporation;

(3) the chief executive officer of the Alaska Natural Gas Development Authority; and

(4) the in-state gasline project manager.

(b) The chief executive officer of the Alaska Railroad Corporation is the chair of the development team.

(c) The development team may hire staff, enter into contracts, and exercise other powers necessary to carry out its functions.

Sec. 38.34.040. Duties of the development team. (a) The Joint In-state Gasline Development Team shall consider all aspects of the in-state natural gas pipeline project, including public or private construction of the pipeline, marketing of natural gas, a financing plan for pipeline construction, the purchase of natural gas from producers, maximizing hiring of residents in connection with the pipeline project, delivery and costs of natural gas to communities along the pipeline route, manufacturing opportunities for gas-to-liquids, plans for delivery and costs of liquefied natural gas or propane to Yukon river and coastal communities, the cost of transporting natural gas to other locations in the state, and acquisition of natural gas market share sufficient to ensure the long-term feasibility of the in-state natural gas pipeline project.

(b) The development team shall ensure that construction is ready to begin on an in-state natural gas pipeline by July 1, 2011, and take actions necessary to enable natural gas to flow down the pipeline by 2015.

(c) The development team shall

(1) select a route for an in-state natural gas pipeline that runs from the North Slope to tidewater in the state and to other locations in the state that, to the extent consistent with other requirements of this subsection,

(A) is the most economical;

(B) will provide natural gas to residents at a reasonable cost;

(C) uses state land and existing state highway and railroad

rights-of-way to the maximum extent;

(D) uses existing highway and railroad bridges, gravel pits, equipment yards, and maintenance facilities, and other existing facilities and resources to the maximum extent;

(2) identify land or rights-of-way that must be obtained for construction and operation of the in-state natural gas pipeline and take action necessary to enable the Department of Transportation and Public Facilities to acquire those interests;

(3) prepare plans and designs necessary for construction of the in-state natural gas pipeline;

(4) identify all permits and licenses needed to construct the in-state natural gas pipeline and proceed with applications for those permits and licenses;

(5) prepare and update estimates of construction and other costs of pipeline construction;

(6) take any action necessary so that construction may begin on the in-state natural gas pipeline by July 1, 2011, and report to the legislature by that date.

Sec. 38.34.050. Cooperation and access to information. (a) Notwithstanding other laws, the Joint In-state Gasline Development Team may have access to information of a state entity, including confidential information, that may relate to the in-state natural gas pipeline or prove useful in planning, design, construction, or operation of the pipeline. Confidential information received by the development team shall be kept confidential.

(b) All state agencies and other entities shall cooperate with and, except for requests from the Alaska Gasline Inducement Act coordinator (AS 43.90.250), give priority to requests for information from the Joint In-state Gasline Development Team. The development team shall avoid duplicating studies, plans, and designs that have already been produced or otherwise obtained by other state entities.

Sec. 38.34.060. Conflicts of interest. If a member of the Joint In-state Gasline Development Team acquires, owns, or controls an interest, direct or indirect, in property, an organization, or a business that might be affected by the in-state natural gas pipeline project or other matter under consideration by the development team, the

member shall immediately disclose the interest to the development team. The disclosure is a matter of public record and shall be included in the minutes of the first meeting of the development team held after the disclosure.

Sec. 38.34.099. Definitions. In this chapter,

(1) "in-state natural gas pipeline" means a pipeline for transporting natural gas that runs from the North Slope to tidewater in the state;

(2) "North Slope" means that area of Alaska lying north of 68 degrees North latitude.

*** Sec. 2.** AS 39.25.110 is amended by adding a new paragraph to read:

(43) the in-state gasline project manager appointed under AS 38.34.010.

*** Sec. 3.** This Act takes effect immediately under AS 01.10.070(c).

Subject: Press release - Resources Approves Joint In-State Gasline Development Team Bill - Speaker Chenault's HB 369
Attachments: image001.jpg; hb369_passes_resources_20100310.pdf

FOR IMMEDIATE RELEASE **PRESS RELEASE**

RESOURCES APPROVES JT. IN-STATE GASLINE DEVELOPMENT TEAM BILL

Speaker's HB 369 advances to House Finance Comm., calls for gasline online by 2015

Wednesday, March 10, 2010, Juneau, Alaska – The House Resources Committee this evening passed their committee substitute for House Bill 369, House Speaker Mike Chenault's, R-Nikiski, proposal creating the Joint In-State Gasline Development Team.

The committee amended the bill to focus the function of the team, taking out the proposed steering committee. The substitute bill, or CS, also made minor changes to clarify and further define the legislation.

Speaker Chenault says he appreciates the work done by the committee and agrees that the bill as it stands now still accomplishes his original goal: to get an in-state gasline online by 2015. "The Resources Committee identified areas of concern and made the bill better," Speaker Chenault said. "I'm grateful for the work put in on the bill, and look forward to seeing it work its way through the process. We heard from committee members, and we all agreed that it's time to focus on bringing forward an in-state line that serves all areas of the state. It was my intent to see the state unify the various agencies and assets at our disposal, and the substitute kept the emphasis in the legislation on that."

HB 369 next heads to the House Finance Committee.

ANALYSIS: *(Attach a separate page if necessary)*

DOT&PF is a member of the Joint In-state Gasline Development Team and is tasked with determining status of current right-of way (ROW), expediting permits for use of the ROW and overseeing construction to insure compliance with federal and state permit requirements. It is anticipated DOT&PF will assist in determing the needs for and acquisition of additional ROW. An Engineer V position will serve as the technical expert for the Commissioner of DOT&PF, manage consultant activities and oversee regional staff who will be issuing permits and authorizations. An Environmental Impact Analysis Manager will oversee work done in the ROW to insure compliance with federal and state requirements, insure our processes provide for rapid permitting decisions and no delays in construction. An administrative assistant will assist with the day to day activities of the two professionals.

STATE OF ALASKA
2010 LEGISLATIVE SESSION

BILL NO. HB 369

ANALYSIS CONTINUATION

DOT&PF estimates 30% of the pipeline may not be economically or efficiently located within the designated state ROW. Of that 30% it is estimated that 30% must be acquired by acquisitions with appraisals, surveys, condemnation authority, etc resulting in between 60 to 125 miles of ROW to be identified, appraised, negotiated, etc. For this fiscal note DOT&PF assumed, as a ROW owner, it makes sense for the DOT&PF to coordinate the contracts for these services and estimates a cost of $2,000.0. This does not include acquisition costs. DOT&PF has assumed that DNR will require surveys and applications for use of material sites estimates consulting services to be $1,000.0. The department anticipates the ROW and material site aquistiation costs are capital costs and will not be needed in the final year of construction.

Additional contractual costs are for annual cores service costs ($5.0) and annual lease space costs ($42.1) for these staff as our Anchorage offices are already overcrowded. In FY2012, contractual costs increase by $2.5 for annual maintenance costs for copier, printer, fax machines.

Supplies costs in FY2011 include the office start up expenses and supplies. Ongoing costs are $10.0 annually.

DOT&PF will budget the leased office space in a separate RDU (Administration and Support), Component (Leased Facilities - 2892) for centralized lease payments to DOA.

ANALYSIS: *(Attach a separate page if necessary)*

The fiscal impact of HB 369 is indeterminate at this time. Please see attached analysis

Prepared by: Linda Perez, Director — Phone 465-3876
Division Administrative Services — Date/Time 3/1/10 12:15 PM
Approved by: Bob Swenson, Project Manager — Date 3/1/2010
Office of the Governor

(Revised 11/6/2009 OMB)

Pipeline Coordinator

4724

In an attempt to meet the timeframe set out in HB 369 the in-state gas line project team has identified a number of critical work products, and a minimum staffing levels needed to direct the work. The cost associated with contractual services to perform the detailed pipeline engineering, facilities design, field work, and permitting to get the project ready to begin construction is more than $350 million dollars. However, the exact amount of funding needed cannot be determined without significant amount of additional engineering and estimation work. A class 4 cost of Transportation estimate is scheduled to be completed by the current in-state gasline work team by July 1, 2010. Additional major cost components necessary to allow construction initiation are not included in these estimates, and include the cost to purchase the pipe, and commitment to facilities construction. These later costs will likely be greater than $500 million dollars. Additionally, a realistically achievable timeline is attached to this document to provide context for the work needed prior to construction.

In the absence of peer reviewed estimates, an analogy can be drawn between the instate stand-alone project, and the AGIA and Denali pipeline efforts that are on-going and in preparation to achieve project sanction. The table below outlines the estimated costs published in the AGIA January report to legislators. This amount does not bring the project to construction readiness.

Estimated Project Spending Through FERC Certification (Thousands $)								
Fiscal Year	Pre-License	2009	2010	2011	2012	2013	2014	TOTAL
Total Annual	$2,527	$17,812	$126,498	$139,517	$137,128	$137,128	$137,128	
TC Alaska/EM	$2,527	$11,431	$68,833	$18,573	$13,713	$13,713	$68,950	
State of Alaska	$0	$6,381	$57,666	$120,944	$123,415	$123,415	$68,178	
Total Cumulative	$2,527	$20,339	$146,837	$286,354	$423,482	$560,610	$697,738	**$697,738**
TC Alaska/EM	$2,527	$13,958	$82,791	$101,363	$115,076	$128,789	$197,738	**$197,738**
State of Alaska	$0	$6,381	$64,047	$184,991	$308,406	$431,821	$500,000	**$500,000**

The funding requirements below outlines the increase staff needs to manage such a project and builds on and incorporates the funding requested in the FY 2011 Governor's Office operating budget. The details of the initial 6,500.0 funding request is also attached.

PERSONAL SERVICES: 1223.2 - increased to include 7 staff as follows:

Project Manager Rg 26
Engineering Manager Rg 26
Commercial Manager Rg 26
Permitting and Right of Way Manager Rg 26

(Personal Services - continued)

Legislative Liaison/Public Outreach Officer Rg 23
Finance/budget analyst Rg 22
Schedule Coordinator Rg 21

Current 6500.0 request includes 322.2 for personal services, fiscal note increases total personal services to 1,223.2. Following years include schedules merit increases for all but professional staff.

TRAVEL: 116.8 - increases project travel to accommodate Steering Committee meetings to include 3-day meetings in Anchorage each month for 4 months, 1-day Steering Committee meeting each month for remaining 8 months in FY11. FY 2012 includes project travel and Steering Committee meetings for four months. Fiscal note includes travel costs for the 16 committee members appointed under Sec. 38.34.070 (9) and assumes that for members identified in Sec 38.34.070 (1) thru (8) travel will be paid by individual's employing agencies. FY2013 thru FY2016 reflects project travel only.

CONTRACTUAL: Indeterminate

The level of engineering and environmental work necessary to sanction and begin construction on a gas line project of this magnitude is substantial. Determining minimum cost estimates that can be included in this fiscal note is not possible with the available time. The numbers included below should be viewed as minimums and are based on pipeline construction experience and initial costing work by the contractors currently on the project. These numbers are not final and will have a wide variance as work continues.

Pipeline Engineering:
A minimum of 41,666.6 each year for 3 years (total 125,000.0) for fast track engineering costs up to project sanction. This is a very rough estimate and does not include funding for equipment, facilities and pipe purchase, or any associated pre-construction costs materials costs.

Pipeline engineering services up to construction focus on the development of the construction plan, construction schedules, determination of long lead items a funding quality cost estimate and preparation of bid ready plans and specifications,. The design effort defines and optimizes pipeline routing, pipe material and ancillaries, balancing the cost and the need to acquire permits and ensure integrity throughout the design life.

(Contractual - continued)

Key activities include:

- Refined route topographical definition through survey, aerial photography, LiDAR and other data acquisition techniques
- Additional route geotechnical characterization through field investigations, borehole acquisition, trenching and fault identification
- Refining waterway crossing designs though field reconnaissance of crossings, flow characterization, scour analysis, bank and approaches evaluation
- Pipeline design including product hydraulics analysis, coupled gas-subsurface interaction analysis, geohazards evaluation, pipe and coatings material selection, welding specifications
- Civil material source (gravel, select fill) identification and quantity/quality evaluation, site opening and operations plan, site restoration plan
- Construction logistics including facilities requirements for ports/airports/roads, new access roads, trucking requirements, laydown yards
- Construction plan including construction camp design, alignment ROW design, construction roads (ice/snow/gravel), pipe laying productivity, special design areas (e.g. Atigun Pass)
- Post-construction activities planning including ROW restoration and revegetation, monitoring of alignment and construction completion, startup of pipeline

Environmental:
10,333.3 each year for 3 years (total 31,000.0) for environmental costs up to project sanction (see ASRC cost estimate attached)

Facilities engineering: Estimated greater than 200,000.0 but indeterminate at this time. The costs for this engineering effort will be available upon completion of current facilities work, estimated availability: May of 2010. Facilities engineering services leading to construction mirror pipeline procedures and focus on completion of the design of the project facilities. This includes planning to enable procurement lead time to start the module construction, evaluation of the module transport and completion on-site, and aiding the permitting process to ensure all facilities construction and planned operations are in full compliance with regulations and stipulations. Key activities include:

- Specifications of natural gas input streams and desired product streams. Key is the development of the process flow diagrams to enable this
- Site identification and site design preparation, including development of data needs to satisfy regulatory requirements (e.g. EPA)
- Identification of major process design elements, specification of design requirements for each process element
- Identification and qualification of potential vendors for major process design elements

(Contractual – continued)

- Process and Instrumentation diagram (P&ID) depicting interconnections of mechanical and electrical systems
- Preparation of facility building design including mechanical layouts
- Design of operational requirements including controls, HAZOP, safety requirements, fulfillment of regulations and stipulated requirements
- Preparation of design for development of a funding quality cost estimate
- Preparation of construction bid(s) for both module construction, and installation on-site
- Module logistics, including transportation safety and material handling requirements
- Alaskan installation construction plan including development of construction camp, construction personnel requirements, camp support and interface with pipeline construction requirements.

500.00 for FY2011, 2012 and 2013 for commercial analysis of downstream industrial opportunities; reduced to 200.0 for 2014 thru 2016.

100.0 for public outreach, information dissemination, printing, advertising, postage.

83.0 annual office lease space

RSAs: 1172.3 - for state agencies required participation:
500.0 for Joint Pipeline office (includes funds to F&G, DEC, etc. for state permitting activities FY2011 only

672.3 DNR Division of Mining, Land, and Water - FY2011 only (see fiscal note attached)

SUPPLIES: 29.0 increases FY2011 request to 29.0 for increased staff and fast-track activities.

EQUIPMENT: 84.3 one-time office set-up

CS FOR HOUSE BILL NO. 369(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY THE HOUSE RESOURCES COMMITTEE

Offered:
Referred:

Sponsor(s): REPRESENTATIVES CHENAULT, Ramras, Olson

A BILL

FOR AN ACT ENTITLED

"An Act relating to an in-state natural gas pipeline, the office of in-state gasline project manager, and the Joint In-State Gasline Development Team; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 38 is amended by adding new sections to read:

Chapter 34. In-State Natural Gas Pipeline.

Sec. 38.34.010. In-state gasline project manager. (a) The position of in-state gasline project manager is created in the Office of the Governor. The Office of the Governor shall provide administrative support for the position. The position shall continue until one year after commencement of commercial operation of the in-state natural gas pipeline.

(b) The governor shall appoint an individual to the position of in-state gasline project manager. The manager is in the exempt service under AS 39.25.110. The person serving as the in-state gasline project manager may be removed from the

position at the discretion of the governor, who shall appoint another person to the position.

(c) The in-state gasline project manager shall

(1) collaborate with other state agencies to perform planning and other work on the in-state natural gas pipeline project under this chapter;

(2) coordinate with government agencies and the private sector on issues involving construction, ownership, and operation of the in-state natural gas pipeline;

(3) prepare written monthly progress reports setting out the monthly expenditures of funds spent in the development of the in-state natural gas pipeline, including projections of future expenditures and efforts needed to develop the in-state natural gas pipeline, and submit each report to the legislature by the last day of the month immediately following the month covered in the report.

Sec. 38.34.020. Expedited review and action by state agencies. (a) A review conducted and action taken by a state agency relating to the in-state natural gas pipeline project under this chapter shall be expedited in a manner consistent with the timely completion of the project.

(b) Notwithstanding any contrary provision of law, a state agency may not include in any project certificate, right-of-way, permit, or other authorization issued to the licensee a term or condition that is not required by law if the in-state gasline project manager determines that the term or condition would prevent or impair, in any significant respect, the expeditious construction and operation or expansion of the in-state natural gas pipeline project.

(c) Unless required by law, a state agency may not add to, amend, or abrogate any certificate, right-of-way, permit, or other authorization issued to a licensee if the in-state gasline project manager determines that the action would prevent or impair, in any significant respect, the expeditious construction, operation, or expansion of the in-state natural gas pipeline project.

Sec. 38.34.030. Joint In-state Gasline Development Team. (a) The Joint In-state Gasline Development Team is established in the Office of the Governor. The development team consists of four members as follows:

(1) the commissioner of transportation and public facilities, or the commissioner's designee;

(2) the chief executive officer of the Alaska Railroad Corporation;

(3) the chief executive officer of the Alaska Natural Gas Development Authority; and

(4) the in-state gasline project manager.

(b) The chief executive officer of the Alaska Railroad Corporation is the chair of the development team.

(c) The development team may hire staff, enter into contracts, and exercise other powers necessary to carry out its functions.

Sec. 38.34.040. Duties of the development team. (a) The Joint In-state Gasline Development Team shall consider all aspects of the in-state natural gas pipeline project, including public or private construction of the pipeline, marketing of natural gas, a financing plan for pipeline construction, the purchase of natural gas from producers, maximizing hiring of residents in connection with the pipeline project, delivery and costs of natural gas to communities along the pipeline route, manufacturing opportunities for gas-to-liquids, plans for delivery and costs of liquefied natural gas or propane to Yukon river and coastal communities, and acquisition of natural gas market share sufficient to ensure the long-term feasibility of the in-state natural gas pipeline project.

(b) The development team shall ensure that construction is ready to begin on an in-state natural gas pipeline by July 1, 2011, and take actions necessary to enable natural gas to flow down the pipeline by 2015.

(c) The development team shall

(1) select a route for an in-state natural gas pipeline that runs from the North Slope to tidewater that, to the extent consistent with other requirements of this subsection,

(A) is the most economical;

(B) will provide natural gas to residents at a reasonable cost;

(C) uses state land and existing state highway and railroad rights-of-way to the maximum extent;

(D) uses existing highway and railroad bridges, gravel pits, equipment yards, and maintenance facilities, and other existing facilities and resources to the maximum extent;

(2) identify land or rights-of-way that must be obtained for construction and operation of the in-state natural gas pipeline and take action necessary to enable the Department of Transportation and Public Facilities to acquire those interests;

(3) prepare plans and designs necessary for construction of the in-state natural gas pipeline;

(4) identify all permits and licenses needed to construct the in-state natural gas pipeline and proceed with applications for those permits and licenses;

(5) prepare and update estimates of construction and other costs of pipeline construction;

(6) take any action necessary so that construction may begin on the in-state natural gas pipeline by July 1, 2011, and report to the legislature by that date.

Sec. 38.34.050. Cooperation and access to information. (a) Notwithstanding other laws, the Joint In-state Gasline Development Team may have access to information of a state entity, including confidential information, that may relate to the in-state natural gas pipeline or prove useful in planning, design, construction, or operation of the pipeline. Confidential information received by the development team shall be kept confidential.

(b) All state agencies and other entities shall cooperate with and, except for requests from the Alaska Gasline Inducement Act coordinator (AS 43.90.250), give priority to requests for information from the Joint In-state Gasline Development Team. The development team shall avoid duplicating studies, plans, and designs that have already been produced or otherwise obtained by other state entities.

Sec. 38.34.060. Conflicts of interest. If a member of the Joint In-state Gasline Development Team acquires, owns, or controls an interest, direct or indirect, in property, an organization, or a business that might be affected by the in-state natural gas pipeline project or other matter under consideration by the development team, the member shall immediately disclose the interest to the development team. The

disclosure is a matter of public record and shall be included in the minutes of the first meeting of the development team held after the disclosure.

Sec. 38.34.099. Definitions. In this chapter,

(1) "in-state natural gas pipeline" means a pipeline for transporting natural gas that runs from the North Slope to tidewater in the state;

(2) "North Slope" means that area of Alaska lying north of 68 degrees North latitude.

*** Sec. 2.** AS 39.25.110 is amended by adding a new paragraph to read:

(43) the in-state gasline project manager appointed under AS 38.34.010.

*** Sec. 3.** This Act takes effect immediately under AS 01.10.070(c).

ASRC Energy Services
a subsidiary of Arctic Slope Regional Corporation

Memorandum

Date: February 25, 2010
To: Bob Swenson, Executive Director
Alaska In-State Gas Pipeline Project
From: Mike Sotak, Senior Project Manager
Subject: Rough Order of Magnitude Cost Estimate for In-State Gas Pipeline Environmental and Permitting Tasks

---

ASRC Energy Services (AES), contractor to the Alaska Department of Natural Resources (ADNR) for the In-State Gas Pipeline Project, has prepared the following rough order of magnitude (ROM) cost estimate for completing the necessary environmental and permitting tasks so that construction of the pipeline can begin eighteen (18) months from now. The ROM breaks down costs by task below:

Task Name	ROM Cost Estimate	
	Pipeline (includes Compressor Stations)	Gas Treatment Plant
• State of Alaska Right-of-Way Lease and Bureau of Land management Right-of-Way Grant Applications • U.S. Army Corps of Engineers Section 404 permit (wetlands)	$1M	$500K
• Pre-Construction Permits (priority) o ADNR Permits to appropriate water, temporary water use o EPA NPDES o USCG Section 9 Bridge Permit o USACE Section 10 Navigable Waters o ADFG Fish Habitat Protection Permits o Section 106 National Historic Preservation Act o Local Land Use Permits and Authorizations o Essential Fish Habitat Consultation o Alaska Coastal Management Plan Consistency Determination (NSB, MSB)	$2.5M	$400K
• Notice to Proceed Permits and Plans o Plans of Operation o Solid Waste, wastewater disposal management o Encroachment authorizations and easements o Reclamation plans o Hazardous waste management o Oil discharge prevention plans o Letter of Authorization (polar bear)	$2.5M	$500K
• Environmental Impact Statement (expedited)	$1M	$1M
• Environmental Field Programs to support EIS and Permits	$10M	$2.5M
• Stakeholder Engagement and Environmental Justice	$1.8M	$200K
• Monitoring and Mitigation	$2.5M	$500K
• Air Quality permits to operate	$1M	$1.5M
• BLM reimbursable	$1.25M	$250K
Total Estimate	$23.55M	$7.35M

In-State Stand Alone Pipeline - FY11 Budget Narrative

1. Completion of environmental and permitting for USACE and State and Federal right-of-way approvals.

Total Estimated Expenditures **$ 2,000,000**

- Project Management - AES will continue to support the State of Alaska's project team and be involved with State of Alaska and the U.S. Army Corps of Engineers (USACE) in supporting the third-party EIS consultant with the NEPA review.
- Permitting - AES continue with the development and coordination with the USACE, BLM and State Pipeline Coordinator on the three major permits filed in 2009 and will begin working on ten other key permits for submission in late 2010 so that processing and the negotiations for permit approvals and mitigation measures may be completed in time for sale of the In-State pipeline asset to a future pipeline company.
- Stakeholder Engagement - Prepare and implement a stakeholder engagement program to support project development. Includes stakeholder contact database, and issues information. Engagement with the local boroughs, their communities and residents, tribal governments, the USACE, USFWS, BLM, State of Alaska, Native Corporations are critical.
- Wetlands - Conduct wetlands field program in the northern and southern sections of the proposed In-State Pipeline Project corridor to complete verification of wetlands pre-mapped to prepare for submission of the Preliminary Jurisdictional Determination to the USACE for their approval of the Section 404 Jurisdictional Determination; complete vegetation and habitat analysis. Provide assistance to the EIS contractor as required.
- Stream Crossings - compile the fish and wildlife resource data necessary for permit applications and assessing potential project impacts under the NEPA process. All data collection needs will be adjusted as necessary in accordance with the outcome of the draft EIS and provide information for engineering design and routing.
- Cultural - Phase one cultural resource studies will examine a potential corridor sufficiently large so that a right-of-way can be refined to the best possible alignment to avoid or minimize impacts to cultural resources.
- Lake Studies – Lake studies and surveys will be conducted primarily on the North Slope to assess the potential for water availability for use during winter construction.
- Wildlife and Bird Surveys – As needed to support the EIS process, wildlife and bird (raptor) studies will be conducted during the 2010 field season.
- Air and Noise Analysis – Evaluate compressor station locations for air emission issues and determine the need for air monitoring and weather stations to develop information for ADEC permitting.

4738

- Pre-mapping - Prepare the wetlands pre-mapping information for route changes or alignments that have not been assessed such as the Gubik route, the Denali reroute, some of Minto Flats rerouted alignment, and so forth.

2. Engineering data acquisition for detailed engineering design of the project.

Total Estimated Expenditures: **$3,500,000**

- Gather detailed geotechnical data on major river crossings. The preferred river crossing method is assumed to be HDD (Horizontal Directional Drill). The assessment of the applicability of crossing rivers with HDD requires site specific geotechnical information. Additional field information on river approaches and total crossing length needs to be collected to verify use of HDD. This activity includes mapping and the drilling of geotechnical site investigation boreholes.

- Gather engineering field data. Pinch points such as Atigun Pass, Yukon River, and Denali Park require additional field verification of soils, available construction space and detailed routing to avoid conflicts with other facilities and to develop and verify conceptual design. Engineering field data is required to investigate and verify route geotechnical conditions and includes information on seasonal ground temperatures, geohazards and foundation conditions at project facilities (Gas Conditioning, Compressor Stations and NGL separation and storage). This information will be used to verify locations and develop conceptual designs to be included in final project documentation. This activity includes field mapping and the drilling of geotechnical site investigation boreholes with installation and monitoring of ground temperatures. Results will be analyzed and will be reported in a engineering report.

- Refine pipeline routing. The current pipeline routing is within a 2000 foot wide corridor. The actual centerline of the corridor has not been vetted and verified as the optimum route. Final route identification will be optimized for pipeline constructability, avoidance of environmentally sensitive areas, minimized TAPS, Highway and Railroad crossings, facilities location and optimized river crossings locations. These route adjustments will be made, if possible, within the 2000 foot wide corridor currently identified. Results of the engineering evaluation will be used to update the project GIS (Geographical Information System) and will be reported in a engineering report.

3. Refinement of Cost of Service estimates and Tariff modeling

Total Estimated Expenditures: **$750,000**

- Peer review engineering cost assessment of railbelt natural gas alternatives, and commercial assessment of options . There are a number of different project alternatives that have been proposed to alleviate the need for augmented for railbelt energy supply. They include two bullet line alternatives, two spur line alternatives, provision of propane from Prudhoe Bay to Fairbanks and other interior communities, LNG manufacturing on the North Slope to provide gas supply to Fairbanks and possibly other railbelt communities, and facilities to import LNG. Most of the analyses developed do not compare alternatives using similar assumptions for

CS FOR HOUSE BILL NO. 369(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY THE HOUSE RESOURCES COMMITTEE

Offered:
Referred:

Sponsor(s): REPRESENTATIVES CHENAULT, Ramras, Olson

A BILL

FOR AN ACT ENTITLED

"An Act relating to an in-state natural gas pipeline, the office of in-state gasline project manager, and the Joint In-State Gasline Development Team; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 38 is amended by adding new sections to read:

Chapter 34. In-State Natural Gas Pipeline.

Sec. 38.34.010. In-state gasline project manager. (a) The position of in-state gasline project manager is created in the Office of the Governor. The Office of the Governor shall provide administrative support for the position. The position shall continue until one year after commencement of commercial operation of the in-state natural gas pipeline.

(b) The governor shall appoint an individual to the position of in-state gasline project manager. The manager is in the exempt service under AS 39.25.110. The person serving as the in-state gasline project manager may be removed from the

position at the discretion of the governor, who shall appoint another person to the position.

(c) The in-state gasline project manager shall

(1) collaborate with other state agencies to perform planning and other work on the in-state natural gas pipeline project under this chapter;

(2) coordinate with government agencies and the private sector on issues involving construction, ownership, and operation of the in-state natural gas pipeline;

(3) prepare written monthly progress reports setting out the monthly expenditures of funds spent in the development of the in-state natural gas pipeline, including projections of future expenditures and efforts needed to develop the in-state natural gas pipeline, and submit each report to the legislature by the last day of the month immediately following the month covered in the report.

Sec. 38.34.020. Expedited review and action by state agencies. (a) A review conducted and action taken by a state agency relating to the in-state natural gas pipeline project under this chapter shall be expedited in a manner consistent with the timely completion of the project.

(b) Notwithstanding any contrary provision of law, a state agency may not include in any project certificate, right-of-way, permit, or other authorization issued to the licensee a term or condition that is not required by law if the in-state gasline project manager determines that the term or condition would prevent or impair, in any significant respect, the expeditious construction and operation or expansion of the in-state natural gas pipeline project.

(c) Unless required by law, a state agency may not add to, amend, or abrogate any certificate, right-of-way, permit, or other authorization issued to a licensee if the in-state gasline project manager determines that the action would prevent or impair, in any significant respect, the expeditious construction, operation, or expansion of the in-state natural gas pipeline project.

Sec. 38.34.030. Joint In-state Gasline Development Team. (a) The Joint In-state Gasline Development Team is established in the Office of the Governor. The development team consists of four members as follows:

(1) the commissioner of transportation and public facilities, or the commissioner's designee;

(2) the chief executive officer of the Alaska Railroad Corporation;

(3) the chief executive officer of the Alaska Natural Gas Development Authority; and

(4) the in-state gasline project manager.

(b) The chief executive officer of the Alaska Railroad Corporation is the chair of the development team.

(c) The development team may hire staff, enter into contracts, and exercise other powers necessary to carry out its functions.

Sec. 38.34.040. Duties of the development team. (a) The Joint In-state Gasline Development Team shall consider all aspects of the in-state natural gas pipeline project, including public or private construction of the pipeline, marketing of natural gas, a financing plan for pipeline construction, the purchase of natural gas from producers, maximizing hiring of residents in connection with the pipeline project, delivery and costs of natural gas to communities along the pipeline route, manufacturing opportunities for gas-to-liquids, plans for delivery and costs of liquefied natural gas or propane to Yukon river and coastal communities, and acquisition of natural gas market share sufficient to ensure the long-term feasibility of the in-state natural gas pipeline project.

(b) The development team shall ensure that construction is ready to begin on an in-state natural gas pipeline by July 1, 2011, and take actions necessary to enable natural gas to flow down the pipeline by 2015.

(c) The development team shall

(1) select a route for an in-state natural gas pipeline that runs from the North Slope to tidewater that, to the extent consistent with other requirements of this subsection,

(A) is the most economical;

(B) will provide natural gas to residents at a reasonable cost;

(C) uses state land and existing state highway and railroad rights-of-way to the maximum extent;

(D) uses existing highway and railroad bridges, gravel pits, equipment yards, and maintenance facilities, and other existing facilities and resources to the maximum extent;

(2) identify land or rights-of-way that must be obtained for construction and operation of the in-state natural gas pipeline and take action necessary to enable the Department of Transportation and Public Facilities to acquire those interests;

(3) prepare plans and designs necessary for construction of the in-state natural gas pipeline;

(4) identify all permits and licenses needed to construct the in-state natural gas pipeline and proceed with applications for those permits and licenses;

(5) prepare and update estimates of construction and other costs of pipeline construction;

(6) take any action necessary so that construction may begin on the in-state natural gas pipeline by July 1, 2011, and report to the legislature by that date.

Sec. 38.34.050. Cooperation and access to information. (a) Notwithstanding other laws, the Joint In-state Gasline Development Team may have access to information of a state entity, including confidential information, that may relate to the in-state natural gas pipeline or prove useful in planning, design, construction, or operation of the pipeline. Confidential information received by the development team shall be kept confidential.

(b) All state agencies and other entities shall cooperate with and, except for requests from the Alaska Gasline Inducement Act coordinator (AS 43.90.250), give priority to requests for information from the Joint In-state Gasline Development Team. The development team shall avoid duplicating studies, plans, and designs that have already been produced or otherwise obtained by other state entities.

Sec. 38.34.060. Conflicts of interest. If a member of the Joint In-state Gasline Development Team acquires, owns, or controls an interest, direct or indirect, in property, an organization, or a business that might be affected by the in-state natural gas pipeline project or other matter under consideration by the development team, the member shall immediately disclose the interest to the development team. The

disclosure is a matter of public record and shall be included in the minutes of the first meeting of the development team held after the disclosure.

Sec. 38.34.099. Definitions. In this chapter,

(1) "in-state natural gas pipeline" means a pipeline for transporting natural gas that runs from the North Slope to tidewater in the state;

(2) "North Slope" means that area of Alaska lying north of 68 degrees North latitude.

*** Sec. 2.** AS 39.25.110 is amended by adding a new paragraph to read:

(43) the in-state gasline project manager appointed under AS 38.34.010.

*** Sec. 3.** This Act takes effect immediately under AS 01.10.070(c).

Subject: HB 369

Please amend HB 369, version 26-LS1527\E in the following manner –this is to be a new work draft for the Committee:

1) Page 4, line 25 delete Sec 38.34.070
2) Page 6, line 25 delete Sec 38.34.090
3) Page 6, line 11 incorporate Sec 38.34.080 "Duties of the steering committee" into Page 3, line 11 "Duties of the development team".
   As we are doing away with the steering committee in Sec 38.34.070 we want to shift the responsibilities to the development team.
   Note that page 6, lines 21 thru 24 are no longer valid due to there no longer being a steering committee.

   We will be bring this new CS up at a 6 pm Resource Committee meeting on Wednesday evening 10 Mar 2010. It is expected that the Resource Committee will recess to a call of the chair at the end of its scheduled 1pm meeting.

   Please feel free to contact me with any question.

CS FOR HOUSE BILL NO. 369(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY THE HOUSE RESOURCES COMMITTEE

Offered:
Referred:

Sponsor(s): REPRESENTATIVES CHENAULT, Ramras, Olson

A BILL

FOR AN ACT ENTITLED

"An Act relating to an in-state natural gas pipeline, the office of in-state gasline project manager, the Joint In-State Gasline Development Team, and the In-State Gasline Steering Committee; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 38 is amended by adding new sections to read:

Chapter 34. In-State Natural Gas Pipeline.

Sec. 38.34.010. In-state gasline project manager. (a) The position of in-state gasline project manager is created in the Office of the Governor. The Office of the Governor shall provide administrative support for the position. The position shall continue until one year after commencement of commercial operation of the in-state natural gas pipeline.

(b) The governor shall appoint an individual to the position of in-state gasline project manager. The manager is in the exempt service under AS 39.25.110. The person serving as the in-state gasline project manager may be removed from the

position at the discretion of the governor, who shall appoint another person to the position.

(c) The in-state gasline project manager shall

(1) collaborate with other state agencies to perform planning and other work on the in-state natural gas pipeline project under this chapter;

(2) coordinate with government agencies and the private sector on issues involving construction, ownership, and operation of the in-state natural gas pipeline;

(3) prepare written monthly progress reports setting out the monthly expenditures of funds spent in the development of the in-state natural gas pipeline, including projections of future expenditures and efforts needed to develop the in-state natural gas pipeline, and submit each report to the legislature by the last day of the month immediately following the month covered in the report.

Sec. 38.34.020. Expedited review and action by state agencies. (a) A review conducted and action taken by a state agency relating to the in-state natural gas pipeline project under this chapter shall be expedited in a manner consistent with the timely completion of the project.

(b) Notwithstanding any contrary provision of law, a state agency may not include in any project certificate, right-of-way, permit, or other authorization issued to the licensee a term or condition that is not required by law if the in-state gasline project manager determines that the term or condition would prevent or impair, in any significant respect, the expeditious construction and operation or expansion of the in-state natural gas pipeline project.

(c) Unless required by law, a state agency may not add to, amend, or abrogate any certificate, right-of-way, permit, or other authorization issued to a licensee if the in-state gasline project manager determines that the action would prevent or impair, in any significant respect, the expeditious construction, operation, or expansion of the in-state natural gas pipeline project.

Sec. 38.34.030. Joint In-state Gasline Development Team. (a) The Joint In-state Gasline Development Team is established in the Office of the Governor. The team consists of four members as follows:

(1) the commissioner of transportation and public facilities, or the commissioner's designee;

(2) the chief executive officer of the Alaska Railroad Corporation;

(3) the chief executive officer of the Alaska Natural Gas Development Authority; and

(4) the in-state gasline project manager.

(b) The chief executive officer of the Alaska Railroad Corporation is the chair of the Joint In-state Gasline Development Team.

(c) The development team may hire staff, enter into contracts, and exercise other powers necessary to carry out its functions.

Sec. 38.34.040. Duties of the development team. (a) The Joint In-state Gasline Development Team shall ensure that construction is ready to begin on an in-state natural gas pipeline by July 1, 2011, and take actions necessary to enable natural gas to flow down the pipeline by 2015.

(b) The Joint In-state Gasline Development Team shall

(1) select a route for an in-state natural gas pipeline that runs from the North Slope to tidewater that, to the extent consistent with other requirements of this subsection,

(A) is the most economical;

(B) will provide natural gas to residents at a reasonable cost;

(C) uses state land and existing state highway and railroad rights-of-way to the maximum extent;

(D) uses existing highway and railroad bridges, gravel pits, equipment yards, and maintenance facilities, and other existing facilities and resources to the maximum extent;

(2) identify land or rights-of-way that must be obtained for construction and operation of the in-state natural gas pipeline and take action necessary to enable the Department of Transportation and Public Facilities to acquire those interests;

(3) prepare plans and designs necessary for construction of the in-state natural gas pipeline;

(4) identify all permits and licenses needed to construct the in-state natural gas pipeline and proceed with applications for those permits and licenses;

(5) prepare and update estimates of construction and other costs of pipeline construction;

(6) take any action necessary so that construction may begin on the in-state natural gas pipeline by July 1, 2011, and report to the legislature by that date.

Sec. 38.34.050. Cooperation and access to information. (a) Notwithstanding other laws, the Joint In-state Gasline Development Team may have access to information of a state entity, including confidential information, that may relate to the in-state natural gas pipeline or prove useful in planning, design, construction, or operation of the pipeline. Confidential information received by the development team shall be kept confidential.

(b) All state agencies and other entities shall cooperate with and, except for requests from the Alaska Gasline Inducement Act coordinator (AS 43.90.250), give priority to requests for information from the Joint In-state Gasline Development Team. The development team shall avoid duplicating studies, plans, and designs that have already been produced or otherwise obtained by other state entities.

Sec. 38.34.060. Conflicts of interest. If a member of the Joint In-state Gasline Development Team acquires, owns, or controls an interest, direct or indirect, in property, an organization, or a business that might be affected by the in-state natural gas pipeline project or other matter under consideration by the development team, the member shall immediately disclose the interest to the development team. The disclosure is a matter of public record and shall be included in the minutes of the first meeting of the development team held after the disclosure.

Sec. 38.34.070. In-state Gasline Steering Committee. (a) The In-state Gasline Steering Committee is created in the Office of the Governor to provide advice to the Joint In-state Gasline Development Team. The steering committee consists of the

(1) president of the senate, or the president's designee;

(2) speaker of the house of representatives, or the speaker's designee;

(3) commissioner of commerce, community, and economic

development, or the commissioner's designee;

(4) commissioner of labor and workforce development, or the commissioner's designee;

(5) chair of the Regulatory Commission of Alaska, or the chair's designee;

(6) executive director of the Alaska Permanent Fund Corporation;

(7) executive director of the Alaska Industrial Development and Export Authority;

(8) executive director of the Alaska Housing Finance Corporation;

(9) following individuals appointed by the Joint In-state Gasline Development Team:

(A) an individual with financial background;

(B) an individual with oil or natural gas pipeline experience;

(C) an individual who represents a corporation organized under 43 U.S.C. 1601 et seq. (Alaska Native Claims Settlement Act);

(D) an individual who represents a nonprofit corporation organized by a Native organization organized under federal law;

(E) an individual who represents an oil and gas trade association;

(F) an individual who represents a natural gas utility;

(G) an individual who represents an electric utility;

(H) an individual from the Office of the Federal Coordinator for Alaska Natural Gas Transportation Projects;

(I) an individual who represents the North Slope Borough;

(J) an individual who represents the Fairbanks North Star Borough;

(K) an individual who represents the Matanuska-Susitna Borough;

(L) an individual who represents the Municipality of Anchorage;

(M) an individual who represents the Kenai Peninsula

Borough;

(N) an individual who represents Delta Junction;

(O) an individual who represents Glennallen;

(P) an individual who represents Valdez;

(Q) an individual who represents the Denali Borough.

(b) The members appointed under (a)(9) of this section serve without compensation but are entitled to per diem and travel expenses authorized for boards and commissions under AS 39.20.180.

(c) The members of the steering committee shall select a chair and vice-chair from among the membership.

Sec. 38.34.080. Duties of the steering committee. (a) The In-state Gasline Steering Committee shall consider all aspects of the in-state natural gas pipeline project, including public or private construction of the pipeline, marketing of natural gas, a financing plan for pipeline construction, the purchase of natural gas from producers, maximizing hiring of residents in connection with the pipeline project, delivery and costs of natural gas to communities along the pipeline route, manufacturing opportunities for gas-to-liquids, plans for delivery and costs of liquefied natural gas or propane to Yukon river and coastal communities, and acquisition of natural gas market share sufficient to ensure the long-term feasibility of the in-state natural gas pipeline project.

(b) The Joint In-state Gasline Development Team may assign specific issues to the In-state Gasline Steering Committee for its consideration and recommendations.

(c) The In-state Gasline Steering Committee shall report its conclusions and recommendations to the Joint In-state Gasline Development Team.

Sec. 38.34.090. Conflicts of interest and ethics. (a) If a member of the In-state Gasline Steering Committee acquires, owns, or controls an interest, direct or indirect, in property, an organization, or business that might be affected by the in-state natural gas pipeline project or other matter under consideration by the steering committee, the member shall immediately disclose the interest to the steering committee. The disclosure is a matter of public record and shall be included in the minutes of the first meeting of the steering committee held after the disclosure.

(b) AS 39.52 does not apply to a member of the In-state Gasline Steering Committee appointed under AS 38.34.070(a)(9).

Sec. 38.34.099. Definitions. In this chapter,

(1) "in-state natural gas pipeline" means a pipeline for transporting natural gas that runs from the North Slope to tidewater in the state;

(2) "North Slope" means that area of Alaska lying north of 68 degrees North latitude.

*** Sec. 2.** AS 39.25.110 is amended by adding a new paragraph to read:

(43) the in-state gasline project manager appointed under AS 38.34.010.

*** Sec. 3.** This Act takes effect immediately under AS 01.10.070(c).

From: Debra Higgins
Sent: Monday, March 01, 2010 8:37 PM
To: Rep. Chris Tuck
Cc: Aurah Landau
Subject: Conceptual Amendment to HB 369

Representative Tuck,

There was a technical error in the handwritten conceptual amendments that I gave you a copy of today in the House Resources Committee hearing. In listening to the testimony at 2:44:38 to 2:45:19, conceptual amendment #4 which was offered and later withdrawn by Representative Seaton dealt with additional language on page 2, line 12, rather than page 3, line 18. While it is moot at this point, please disregard the copy I gave you. Rep. Seaton than offered conceptual amendment 5 which you have a copy of that was adopted.

To summarize the amendments to HB 369, on Friday, the 26th, amendments 1,2,3 and conceptual amendment 5 were adopted. Conceptual amendment 4 and 7 were withdrawn and conceptual amendment 6 failed. Today, amendment 8 was adopted.

A blank CS has been ordered for HB 369 incorporating the adopted amendments and should be available before the hearing on Monday, the 8th.

Thanks,

Debra Higgins

ANALYSIS: *(Attach a separate page if necessary)*

DOT&PF is a member of the Joint In-state Gasline Development Team and is tasked with determining status of current right-of way (ROW), expediting permits for use of the ROW and overseeing construction to insure compliance with federal and state permit requirements. It is anticipated DOT&PF will assist in determing the needs for and acquisition of additional ROW. An Engineer V position will serve as the technical expert for the Commissioner of DOT&PF, manage consultant activities and oversee regional staff who will be issuing permits and authorizations. An Environmental Impact Analysis Manager will oversee work done in the ROW to insure compliance with federal and state requirements, insure our processes provide for rapid permitting decisions and no delays in construction. An administrative assistant will assist with the day to day activities of the two professionals.

Prepared by: Mary Siroky, Legislative Liaison, Phone 465-4772
Division: Department of Transportation Date/Time 2/26/10 8:00 AM
Approved by: Frank Richards, Deputy Commissioner Date 2/26/2010
Department of Transportation and Public Facilities

(Revised 11/6/2009 OMB)

4770

ANALYSIS CONTINUATION

DOT&PF estimates 30% of the pipeline may not be economically or efficiently located within the designated state ROW. Of that 30% it is estimated that 30% must be acquired by acquisitions with appraisals, surveys, condemnation authority, etc resulting in between 60 to 125 miles of ROW to be identified, appraised, negotiated, etc. For this fiscal note DOT&PF assumed, as a ROW owner, it makes sense for the DOT&PF to coordinate the contracts for these services and estimates a cost of $2,000.0. This does not include acquisition costs. DOT&PF has assumed that DNR will require surveys and applications for use of material sites estimates consulting services to be $1,000.0. The department anticipates the ROW and material site aquistiation costs are capital costs and will not be needed in the final year of construction.

Additional contractual costs are for annual cores service costs ($5.0) and annual lease space costs ($42.1) for these staff as our Anchorage offices are already overcrowded. In FY2012, contractual costs increase by $2.5 for annual maintenance costs for copier, printer, fax machines.

Supplies costs in FY2011 include the office start up expenses and supplies. Ongoing costs are $10.0 annually.

DOT&PF will budget the leased office space in a separate RDU (Administration and Support), Component (Leased Facilities - 2892) for centralized lease payments to DOA.

ANALYSIS: *(Attach a separate page if necessary)*

The fiscal impact of HB 369 is indeterminate at this time. Please see attached analysis

Prepared by: Linda Perez, Director — Phone 465-3876
Division Administrative Services — Date/Time 3/1/10 12:15 PM
Approved by: Bob Swenson, Project Manager — Date 3/1/2010
Office of the Governor

(Revised 11/6/2009 OMB)

4772

In an attempt to meet the timeframe set out in HB 369 the in-state gas line project team has identified a number of critical work products, and a minimum staffing levels needed to direct the work. The cost associated with contractual services to perform the detailed pipeline engineering, facilities design, field work, and permitting to get the project ready to begin construction is more than $350 million dollars. However, the exact amount of funding needed cannot be determined without significant amount of additional engineering and estimation work. A class 4 cost of Transportation estimate is scheduled to be completed by the current in-state gasline work team by July 1, 2010. Additional major cost components necessary to allow construction initiation are not included in these estimates, and include the cost to purchase the pipe, and commitment to facilities construction. These later costs will likely be greater than $500 million dollars. Additionally, a realistically achievable timeline is attached to this document to provide context for the work needed prior to construction.

In the absence of peer reviewed estimates, an analogy can be drawn between the instate stand-alone project, and the AGIA and Denali pipeline efforts that are on-going and in preparation to achieve project sanction. The table below outlines the estimated costs published in the AGIA January report to legislators. This amount does not bring the project to construction readiness.

Estimated Project Spending Through FERC Certification (Thousands $)								
Fiscal Year	Pre-License	2009	2010	2011	2012	2013	2014	TOTAL
Total Annual	$2,527	$17,812	$126,498	$139,517	$137,128	$137,128	$137,128	
TC Alaska/EM	$2,527	$11,431	$68,833	$18,573	$13,713	$13,713	$68,950	
State of Alaska	$0	$6,381	$57,666	$120,944	$123,415	$123,415	$68,178	
Total Cumulative	$2,527	$20,339	$146,837	$286,354	$423,482	$560,610	$697,738	**$697,738**
TC Alaska/EM	$2,527	$13,958	$82,791	$101,363	$115,076	$128,789	$197,738	**$197,738**
State of Alaska	$0	$6,381	$64,047	$184,991	$308,406	$431,821	$500,000	**$500,000**

The funding requirements below outlines the increase staff needs to manage such a project and builds on and incorporates the funding requested in the FY 2011 Governor's Office operating budget. The details of the initial 6,500.0 funding request is also attached.

PERSONAL SERVICES: 1223.2 - increased to include 7 staff as follows:

Project Manager Rg 26
Engineering Manager Rg 26
Commercial Manager Rg 26
Permitting and Right of Way Manager Rg 26

(Personal Services - continued)

Legislative Liaison/Public Outreach Officer Rg 23
Finance/budget analyst Rg 22
Schedule Coordinator Rg 21

Current 6500.0 request includes 322.2 for personal services, fiscal note increases total personal services to 1,223.2. Following years include schedules merit increases for all but professional staff.

TRAVEL: 116.8 - increases project travel to accommodate Steering Committee meetings to include 3-day meetings in Anchorage each month for 4 months, 1-day Steering Committee meeting each month for remaining 8 months in FY11. FY 2012 includes project travel and Steering Committee meetings for four months. Fiscal note includes travel costs for the 16 committee members appointed under Sec. 38.34.070 (9) and assumes that for members identified in Sec 38.34.070 (1) thru (8) travel will be paid by individual's employing agencies. FY2013 thru FY2016 reflects project travel only.

CONTRACTUAL: Indeterminate

The level of engineering and environmental work necessary to sanction and begin construction on a gas line project of this magnitude is substantial. Determining minimum cost estimates that can be included in this fiscal note is not possible with the available time. The numbers included below should be viewed as minimums and are based on pipeline construction experience and initial costing work by the contractors currently on the project. These numbers are not final and will have a wide variance as work continues.

Pipeline Engineering:
A minimum of 41,666.6 each year for 3 years (total 125,000.0) for fast track engineering costs up to project sanction. This is a very rough estimate and does not include funding for equipment, facilities and pipe purchase, or any associated pre-construction costs materials costs.

Pipeline engineering services up to construction focus on the development of the construction plan, construction schedules, determination of long lead items a funding quality cost estimate and preparation of bid ready plans and specifications,. The design effort defines and optimizes pipeline routing, pipe material and ancillaries, balancing the cost and the need to acquire permits and ensure integrity throughout the design life.

(Contractual - continued)

Key activities include:

- Refined route topographical definition through survey, aerial photography, LiDAR and other data acquisition techniques
- Additional route geotechnical characterization through field investigations, borehole acquisition, trenching and fault identification
- Refining waterway crossing designs though field reconnaissance of crossings, flow characterization, scour analysis, bank and approaches evaluation
- Pipeline design including product hydraulics analysis, coupled gas-subsurface interaction analysis, geohazards evaluation, pipe and coatings material selection, welding specifications
- Civil material source (gravel, select fill) identification and quantity/quality evaluation, site opening and operations plan, site restoration plan
- Construction logistics including facilities requirements for ports/airports/roads, new access roads, trucking requirements, laydown yards
- Construction plan including construction camp design, alignment ROW design, construction roads (ice/snow/gravel), pipe laying productivity, special design areas (e.g. Atigun Pass)
- Post-construction activities planning including ROW restoration and revegetation, monitoring of alignment and construction completion, startup of pipeline

Environmental:
10,333.3 each year for 3 years (total 31,000.0) for environmental costs up to project sanction (see ASRC cost estimate attached)

Facilities engineering: Estimated greater than 200,000.0 but indeterminate at this time. The costs for this engineering effort will be available upon completion of current facilities work, estimated availability: May of 2010. Facilities engineering services leading to construction mirror pipeline procedures and focus on completion of the design of the project facilities. This includes planning to enable procurement lead time to start the module construction, evaluation of the module transport and completion on-site, and aiding the permitting process to ensure all facilities construction and planned operations are in full compliance with regulations and stipulations. Key activities include:

- Specifications of natural gas input streams and desired product streams. Key is the development of the process flow diagrams to enable this
- Site identification and site design preparation, including development of data needs to satisfy regulatory requirements (e.g. EPA)
- Identification of major process design elements, specification of design requirements for each process element
- Identification and qualification of potential vendors for major process design elements

(Contractual – continued)

- Process and Instrumentation diagram (P&ID) depicting interconnections of mechanical and electrical systems
- Preparation of facility building design including mechanical layouts
- Design of operational requirements including controls, HAZOP, safety requirements, fulfillment of regulations and stipulated requirements
- Preparation of design for development of a funding quality cost estimate
- Preparation of construction bid(s) for both module construction, and installation on-site
- Module logistics, including transportation safety and material handling requirements
- Alaskan installation construction plan including development of construction camp, construction personnel requirements, camp support and interface with pipeline construction requirements.

500.00 for FY2011, 2012 and 2013 for commercial analysis of downstream industrial opportunities; reduced to 200.0 for 2014 thru 2016.

100.0 for public outreach, information dissemination, printing, advertising, postage.

83.0 annual office lease space

RSAs: 1172.3 - for state agencies required participation:
500.0 for Joint Pipeline office (includes funds to F&G, DEC, etc. for state permitting activities FY2011 only

672.3 DNR Division of Mining, Land, and Water – FY2011 only (see fiscal note attached)

SUPPLIES: 29.0 increases FY2011 request to 29.0 for increased staff and fast-track activities.

EQUIPMENT: 84.3 one-time office set-up

Stand Alone Gas Pipeline Project

ASRC Energy Services
a subsidiary of Arctic Slope Regional Corporation

Memorandum

Date: February 25, 2010
To: Bob Swenson, Executive Director
Alaska In-State Gas Pipeline Project
From: Mike Sotak, Senior Project Manager
Subject: Rough Order of Magnitude Cost Estimate for In-State Gas Pipeline Environmental and Permitting Tasks

---

ASRC Energy Services (AES), contractor to the Alaska Department of Natural Resources (ADNR) for the In-State Gas Pipeline Project, has prepared the following rough order of magnitude (ROM) cost estimate for completing the necessary environmental and permitting tasks so that construction of the pipeline can begin eighteen (18) months from now. The ROM breaks down costs by task below:

Task Name	ROM Cost Estimate	
	Pipeline (includes Compressor Stations)	Gas Treatment Plant
• State of Alaska Right-of-Way Lease and Bureau of Land management Right-of-Way Grant Applications • U.S. Army Corps of Engineers Section 404 permit (wetlands)	$1M	$500K
• Pre-Construction Permits (priority) o ADNR Permits to appropriate water, temporary water use o EPA NPDES o USCG Section 9 Bridge Permit o USACE Section 10 Navigable Waters o ADFG Fish Habitat Protection Permits o Section 106 National Historic Preservation Act o Local Land Use Permits and Authorizations o Essential Fish Habitat Consultation o Alaska Coastal Management Plan Consistency Determination (NSB, MSB)	$2.5M	$400K
• Notice to Proceed Permits and Plans o Plans of Operation o Solid Waste, wastewater disposal management o Encroachment authorizations and easements o Reclamation plans o Hazardous waste management o Oil discharge prevention plans o Letter of Authorization (polar bear)	$2.5M	$500K
• Environmental Impact Statement (expedited)	$1M	$1M
• Environmental Field Programs to support EIS and Permits	$10M	$2.5M
• Stakeholder Engagement and Environmental Justice	$1.8M	$200K
• Monitoring and Mitigation	$2.5M	$500K
• Air Quality permits to operate	$1M	$1.5M
• BLM reimbursable	$1.25M	$250K
Total Estimate	$23.55M	$7.35M

In-State Stand Alone Pipeline - FY11 Budget Narrative

1. Completion of environmental and permitting for USACE and State and Federal right-of-way approvals.

Total Estimated Expenditures **$ 2,000,000**

- Project Management - AES will continue to support the State of Alaska's project team and be involved with State of Alaska and the U.S. Army Corps of Engineers (USACE) in supporting the third-party EIS consultant with the NEPA review.
- Permitting - AES continue with the development and coordination with the USACE, BLM and State Pipeline Coordinator on the three major permits filed in 2009 and will begin working on ten other key permits for submission in late 2010 so that processing and the negotiations for permit approvals and mitigation measures may be completed in time for sale of the In-State pipeline asset to a future pipeline company.
- Stakeholder Engagement - Prepare and implement a stakeholder engagement program to support project development. Includes stakeholder contact database, and issues information. Engagement with the local boroughs, their communities and residents, tribal governments, the USACE, USFWS, BLM, State of Alaska, Native Corporations are critical.
- Wetlands - Conduct wetlands field program in the northern and southern sections of the proposed In-State Pipeline Project corridor to complete verification of wetlands pre-mapped to prepare for submission of the Preliminary Jurisdictional Determination to the USACE for their approval of the Section 404 Jurisdictional Determination; complete vegetation and habitat analysis. Provide assistance to the EIS contractor as required.
- Stream Crossings - compile the fish and wildlife resource data necessary for permit applications and assessing potential project impacts under the NEPA process. All data collection needs will be adjusted as necessary in accordance with the outcome of the draft EIS and provide information for engineering design and routing.
- Cultural - Phase one cultural resource studies will examine a potential corridor sufficiently large so that a right-of-way can be refined to the best possible alignment to avoid or minimize impacts to cultural resources.
- Lake Studies – Lake studies and surveys will be conducted primarily on the North Slope to assess the potential for water availability for use during winter construction.
- Wildlife and Bird Surveys – As needed to support the EIS process, wildlife and bird (raptor) studies will be conducted during the 2010 field season.
- Air and Noise Analysis – Evaluate compressor station locations for air emission issues and determine the need for air monitoring and weather stations to develop information for ADEC permitting.

4779

- Pre-mapping - Prepare the wetlands pre-mapping information for route changes or alignments that have not been assessed such as the Gubik route, the Denali reroute, some of Minto Flats rerouted alignment, and so forth.

2. Engineering data acquisition for detailed engineering design of the project.

Total Estimated Expenditures: **$3,500,000**

- Gather detailed geotechnical data on major river crossings. The preferred river crossing method is assumed to be HDD (Horizontal Directional Drill). The assessment of the applicability of crossing rivers with HDD requires site specific geotechnical information. Additional field information on river approaches and total crossing length needs to be collected to verify use of HDD. This activity includes mapping and the drilling of geotechnical site investigation boreholes.

- Gather engineering field data. Pinch points such as Atigun Pass, Yukon River, and Denali Park require additional field verification of soils, available construction space and detailed routing to avoid conflicts with other facilities and to develop and verify conceptual design. Engineering field data is required to investigate and verify route geotechnical conditions and includes information on seasonal ground temperatures, geohazards and foundation conditions at project facilities (Gas Conditioning, Compressor Stations and NGL separation and storage). This information will be used to verify locations and develop conceptual designs to be included in final project documentation. This activity includes field mapping and the drilling of geotechnical site investigation boreholes with installation and monitoring of ground temperatures. Results will be analyzed and will be reported in a engineering report.

- Refine pipeline routing. The current pipeline routing is within a 2000 foot wide corridor. The actual centerline of the corridor has not been vetted and verified as the optimum route. Final route identification will be optimized for pipeline constructability, avoidance of environmentally sensitive areas, minimized TAPS, Highway and Railroad crossings, facilities location and optimized river crossings locations. These route adjustments will be made, if possible, within the 2000 foot wide corridor currently identified. Results of the engineering evaluation will be used to update the project GIS (Geographical Information System) and will be reported in a engineering report.

3. Refinement of Cost of Service estimates and Tariff modeling

Total Estimated Expenditures: **$750,000**

- Peer review engineering cost assessment of railbelt natural gas alternatives, and commercial assessment of options . There are a number of different project alternatives that have been proposed to alleviate the need for augmented for railbelt energy supply. They include two bullet line alternatives, two spur line alternatives, provision of propane from Prudhoe Bay to Fairbanks and other interior communities, LNG manufacturing on the North Slope to provide gas supply to Fairbanks and possibly other railbelt communities, and facilities to import LNG. Most of the analyses developed do not compare alternatives using similar assumptions for

input costs (e.g. steel prices, labor rates). Just as importantly, they do not make similar or consistent commercial assumptions. Peer review will assure that assumptions made by the various project proposals are consistent.

- Analyze the cost of Capital for in-state gas supply options, and Cost of Service Modeling. The commercial viability of all in-state gasline options depends on the cost of transportation. Because the contemplated scope of these projects would entail expenditures of several billion dollars, the transportation cost will be determined by the cost of capital – both the relative mix of debt and equity, and the cost of each. Assessment, for planning purposes, of the cost of capital for these small diameter pipelines is problematic and will be reviewed

- The cost-of-capital inputs need to be developed through scenario analysis. With the requested funds we will hire a financial advisor to help develop several realistic financing scenarios. Potential risks to the state's credit-rating, were the state to be called upon to take a major position in the project, will also be assessed. Some of the funds will be used for pipeline commercial expertise to develop realistic transportation contract scenarios and tariff modeling.

4. Prepare complete project documentation of In-State pipeline asset for consideration by private pipeline developer

Total Estimated Expenditures: **Budget Estimate; $250,000**

- Coordinate project team to include all, cost and design data, environmental, stakeholder, and permitting information for a 'data room' for prospective purchasers to review and evaluate. Be available to participate in presentations to the prospective purchasers and respond to technical questions that may be raised with regard to specific issues.

Alaska In-State Gas Pipeline Project.
February 24, 2010 - House Finance hearing on gas line funding requests
Robert Swenson, Project Manager

1. **What agencies have done with the money they spent in FY2010?**

Work that is completed to date:

- Route Alternative Analysis - Parks and Richardson Highway routes: Associated comparative pipeline cost estimates; Environmental Surveys
- Initial Project Description (for permitting)
- Commercial Group Scoping
- Initial Review of ENSTAR Capital Cost Estimate - Pipeline
- Major permits applied for: U.S. Army Corps of Engineers Section 404/10, State of Alaska Title 38 Right-of-Way, Bureau of Land Management Right-of-Way

Work currently underway:

- Updating pipeline cost estimates
- Developing cost of facilities
- Cost of transport analysis
- Preparing detailed project description
- Continued engineering support for EIS and ROW process
- Developing data package for economic analysis
- Facilities scenarios identified
- Commercial group market analysis
- Cost of transport analysis

2. **How much additional they have encumbered and for what?** $3,904,496

	Payroll & Expenditures 1/15/2010	Contract Commitments (Encumbrances)	Estimated Budget Jan-10	Estimated Budget Feb-10	Estimated Budget Mar-10	Estimated Budget Apr-10	Estimated Budget May-10	Estimated Budget Jun-10

SPEAKER OF THE HOUSE
SPONSOR STATEMENT

HOUSE BILL 369: *"An Act relating to an in-state natural gas pipeline, the office of in-state gasline project manager, the Joint In-State Gasline Development Team, and the In-State Gasline Steering Committee; and providing for an effective date."*

House Bill 369 was introduced as an effort to expedite the process for an in-state natural gas pipeline. The in-state gasline has been a topic of discussion in the Legislature and the Administration for a number of years. Currently, there are two separate state entities, the Alaska Natural Gas Development Authority and the in-state gasline coordinator, working on a project. House Bill 369 combines these two entities along with the Department of Transportation and Public Facilities and the Alaska Railroad Corporation to create a Joint In-state Gasline Development Team within the Office of the Governor. The Development Team is to ensure the in-state gasline is construction ready by July 1, 2011 with gas flowing by 2015. It is my hope the Development Team will be able to focus the state's efforts in putting a construction plan together and leverage the best ideas and data to get a gasline built.

The Department of Transportation and Public Facilities and the Alaska Railroad Corporation were included as members of the team due primarily to their having existing rights of way which could speed up any permitting process that may need to be undertaken. The Alaska Railroad Corporation also has bonding ability which could be an answer in financing a gasline.

The Development Team will cover all aspects of the line's development and are to select the most economically sound route that will deliver gas to Alaskans, plan permitting and construction by using existing rights of way and take any action necessary to get the project underway as soon as possible.

House bill 369 also creates an In-state Gasline Steering Committee to provide advice and recommendations to the development team. Their duties are spelled out within the legislation. Proposed members of the Steering Committee come from the private sector, municipalities, state agencies and the two presiding officers of the Legislature.

The bill provides for an expedited review and action process and the sharing of information that may already have been accumulated or completed. The bill also requires that state agencies or entities cooperate with and give priority to requests for information from the Development Team.

SECTIONAL ANALYSIS

HOUSE BILL 369: "An Act relating to an in-state natural gas pipeline, the office of in-state gasline project manager, the Joint In-State Gasline Development Team, and the In-State Gasline Steering Committee; and providing for an effective date."

Section 1: Adds a new chapter, Chapter 34: In-State natural Gas Pipeline, to AS 38, Public Land.

Sec. 38.34.010. In-state gasline project manager. (a) Creates the position of in-state gasline project manager within the governor's Office. This position will continue until one year after commercial operation of the in-state natural gas pipeline begins. (b) The Governor appoints an individual to the position of an in-state gasline manager and may be removed at the Governor's discretion. (c) Describes the duties of the in-state gasline project manager.

Sec. 38.34.020. Expedited review and action by state agencies. (a) States that any state agency conducting and taking action relating to the in-state gasline shall be expedited. (b) A state agency may not include in any project certificate, right of way, permit or other authorization issued to a licensee a term or condition that is not required by law if the in-state project manager determines the term or condition would prevent or impair the expeditious construction and operation or expansion of the in-state gasline. (c) A state agency may not, unless required by law, amend or abrogate any certificate, right of way, permit or other authorization issued to a licensee if the project manager determines the action would prevent or impair the expeditious construction and operation or expansion of the in-state gasline.

Sec. 38.34.030. Joint In-state Gasline Development Team. (a) Establishes the Joint In-state Gasline Development Team in the Governor's Office. The team consists of the commissioner of the Department of Transportation and Public Facilities or designee, the chief executive officer of the Alaska Railroad Corporation, the chief executive officer of the Alaska Natural Gas Development Authority and the in-state gasline project manager. (b) Names the Alaska Railroad's chief executive officer as chair. (c) Allows the Development Team to hire staff, enter into contracts and exercise other powers to carry out its functions.

Sec. 38.34.040. Duties of the Development Team. (a) Ensure construction for an in-state gasline is ready to commence by July 1, 2011 and to take any necessary actions to enable the flow of natural gas down the gasline by 2015. (b) (1) Shall select a route that runs from the

Representative.Mike.Chenault@legis.state.ak.us

North Slope to tidewater that is the most economical, will provide gas to the greatest number of residents at a reasonable cost, uses state land and existing state highway and railroad rights of way to the maximum extent, use existing highway and railroad bridges, gravel pits equipment yards and maintenance facilities and other existing facilities and resources to the maximum extent possible; (2) identify land or rights of way that must be obtained for construction and operation of the in-state gasline and take necessary action to enable DOT/PF to acquire those interests; (3) prepare plans and designs necessary for the construction of the in-state gasline; (4) identify all permits and applications needed to construct the in-state gasline and proceed with applications for those permits and licenses; (5) prepare and update estimates of construction and other costs of construction; and (6) take any necessary action so that construction of the in-state gasline may begin by July 1, 2011, and report to the legislature by that date.

Sec. 38.34.050. Cooperation and access to information. (a) States the Development Team may have access to a state entity's information to include confidential information that may relate to the in-state gasline or prove useful in planning, design, construction or operation of the gasline. Confidential information received by the Development Team shall be kept confidential. (b) All state agencies are to cooperate and give priority to requests for information from the Development Team. The Development Team is to avoid duplicating studies, plans, and designs that have already been produced or otherwise obtained by state entities.

Sec. 38.34.060. Conflicts of interest. If a member of the Development Team acquires, owns or controls a direct or indirect interest in property, an organization or business that might be affected by the in-state gasline project or other matters under consideration by the Development Team shall immediately disclose the interest to the Development Team. This disclosure is part of the public record and shall be included in the minutes of the first meeting of the Development Team held after the disclosure.

Sec. 38.34.070. In-state Gasline Steering Committee. (a) Creates the In-State Gasline Steering Committee within the Governor's Office in order to provide advice to the Development Team. Lists members of the Steering Committee. (b) Steering Committee members serve without compensation but are allowed to collect per diem and travel expenses authorized for boards and commissions under AS 39.20.180. (c) Steering Committee members will select a chair and vice-chair from among the membership.

Sec. 38.34.080. Duties of the Steering Committee. (a) Describes the various aspects of the in-state gasline project the Steering Committee will consider. (b) Gives the Development Team the authority to assign specific issues to the Steering Committee. (c) The Steering Committee is to report its conclusions and recommendations to the Development Team.

Sec. 38.34.090. Conflicts of interest. (a) If a member of the Steering Committee acquires, owns or controls a direct or indirect interest in property, an organization or business that might be affected by the in-state gasline project or other matters under consideration by the Steering Committee shall immediately disclose the interest to the Steering Committee. This disclosure is part of the public record and shall be included in the minutes of the first meeting of the Steering Committee held after the disclosure. (b) AS 39.52, Alaska Executive Branch Ethics Act, does not apply to a member of the Steering Committee.

Sec. 38.34.100. Definitions. Defines the in-state natural gas pipeline and the North Slope.

Section 2: Amends AS 39.25.120(c), Partially exempt service. Adds the in-state gasline project manager to the partially exempt service list.

Section 3: Immediate effective date.

Sec. 39.20.180. Transportation and per diem expenses for members of boards, commissions, etc. Except as otherwise provided by law, the provisions in this section relating to per diem and transportation govern exclusively with respect to a member of a state board, commission, committee, judicial council, or other similar body of persons of the state organized or established under the authority of law, but excluding any other state employee other than a legislator, who is otherwise entitled by law to receive from the state payments for expenses of transportation, and for reimbursement or for per diem in lieu of reimbursement for other expenses incident to duties as such member:

(1) for transportation, the member is entitled either to the use of state transportation requests, or to be reimbursed for expenses of transportation to the same extent, in the same manner, and under the same conditions as provided for state officials and employees by the provisions of AS 39.20.110 - 39.20.170;

(2) for reimbursement for other expenses, the member is entitled to a per diem allowance prescribed by the commissioner of administration under the regulatory authority set out in AS 39.20.160 for each day or portion of a day spent in actual meeting or on authorized official business incident to duties as a member.

Cross References -

For coverage of state board and commission members under the Worker's Compensation Act, see AS 23.30.242.

AG Opinions -

In order to recover an allowance for nonmeeting activity, an occupational licensing board member must be engaged in an activity within the scope of the applicable board's powers. November 6, 1984 Op. Att'y Gen.

An occupational licensing board member cannot receive a per diem allowance for conducting an activity that should be performed by division personnel; any activity approved must be specifically defined by statute as a board duty and should be an activity that cannot be accomplished within the confines of a board meeting. If the task can be performed during a meeting, then per diem should not be paid for time unnecessarily spent by a board member outside a board meeting. It is important, of course, for budgetary reasons, that board activity for which per diem compensation is sought be kept to a minimum. November 6, 1984 Op. Att'y Gen.

The Alaska Power Authority may reimburse a member only for (1) time spent in actual meeting or (2) time spent on authorized official business incident to his duties as a member. April 19, 1984 Op. Att'y Gen.

Decisions -

Sec. 39.25.120. Partially exempt service.

(a) Positions in the partially exempt service are included in the position classification plan established under this chapter and are compensated according to the pay plan under AS 39.27.011.

(b) A person holding a position in the partially exempt service is not required to complete an assessment and is not eligible for a hearing by the personnel board in case of dismissal, demotion, or suspension. Positions in the partially exempt service are specifically exempt from the rules established under AS 39.25.150(3) - (10), (12), (13), and (16).

(c) The following positions in the state service constitute the partially exempt service:

(1) deputy and assistant commissioners of the principal departments of the executive branch, including the assistant adjutant general of the Department of Military and Veterans' Affairs;

(2) the directors of the major divisions of the principal departments of the executive branch and the regional directors of the Department of Transportation and Public Facilities;

(3) attorney members of the staff of the Department of Law, of the public defender agency, and of the office of public advocacy in the Department of Administration;

(4) one private secretary for each head of a principal department in the executive branch;

(5) employees of councils, boards, or commissions established by statute in the Office of the Governor or the office of the lieutenant governor, unless a different classification is provided by statute;

(6) not more than two special assistants to the commissioner of each of the principal departments of the executive branch, but the number may be increased if the partially exempt service is extended under AS 39.25.130 to include the additional special assistants;

(7) the principal executive officer of the following boards, councils, or commissions:

(A) Alaska Public Broadcasting Commission;

(B) Professional Teaching Practices Commission;

(C) Parole Board;

(D) Board of Nursing;

(E) Real Estate Commission;

(F) Alaska Royalty Oil and Gas Development Advisory Board;

(G) Alaska State Council on the Arts;

(H) Alaska Police Standards Council;

(I) Alaska Commission on Aging;

(J) Alaska Mental Health Board;

(K) State Medical Board;

(L) Governor's Council on Disabilities and Special Education;

(M) Advisory Board on Alcoholism and Drug Abuse;

(N) Statewide Suicide Prevention Council;

(O) the State Board of Registration for Architect, Engineers, and Land Surveyors;

(8) Alaska Pioneers' Home and Alaska Veterans' Home managers;

(9) hearing examiners in the Department of Revenue;

(10) the comptroller in the division of treasury, Department of Revenue;

(11) airport managers in the Department of Transportation and Public Facilities employed at the Anchorage and Fairbanks International Airports;

(12) the deputy director of the division of insurance in the Department of Commerce, Community, and Economic Development;

(13) the executive director and staff of the Alaska Public Offices Commission;

(14) the rehabilitation administrator of the division of workers' compensation;

(15) guards employed by the Department of Public Safety for emergencies;

(16) marine pilot coordinator of the Board of Marine Pilots;

(17) guards employed by the Department of Corrections, other than in state correctional facilities, to carry out the responsibility of the commissioner of Corrections under AS 33.30.071(b);

(18) hearing officers and administrative law judges of the Regulatory Commission of Alaska;

(19) the compact administrator appointed under AS 33.36.130;

(20) the chief administrative law judge and administrative law judges of the office of administrative hearings.

Revisors Notes -

In 1992, under Sec. 6, ch. 13, SLA 1992, and AS 01.05.031, "Governor's Council on Disabilities and Special Education" was substituted for "Governor's Council for the Handicapped and Gifted."

Subsection (c) was reorganized in 1999 and 2002 to reflect the repeals and additions of various paragraphs.

In 2004, in paragraph (c)(12) of this section, "Department of Community and Economic Development" was changed to "Department of Commerce, Community, and Economic Development", in accordance with Sec. 3, ch. 47, SLA 2004.

Amendment Notes -

The 2001 amendment, effective July 4, 2001, added subparagraph (c)(7)(N).

The first 2002 amendment, effective August 16, 2002, repealed former paragraph (c)(17).

The second 2002 amendment, effective August 15, 2002, added paragraph (c)(19).

The first 2004 amendment, effective July 1, 2004, inserted "and Alaska Veterans' Home" in paragraph (c)(8), and made stylistic changes.

The second 2004 amendment, effective September 14, 2004, added paragraph (c)(7)(O).

The third 2004 amendment, effective July 1, 2005, added paragraph (c)(20).

The 2005 amendment, effective November 7, 2005, substituted "division of workers' compensation" for "Workers' Compensation Board" in paragraph (c)(14).

Decisions -

Cited in Sheffield v. Alaska Pub. Employees' Ass'n, 732 P.2d 1083 (Alaska 1987).

Sec. 39.25.130. Extension of partially exempt and classified services.

(a) The personnel board, upon written recommendation of the commissioner of administration, may extend the partially exempt service to include any position in the classified service that, in the judgment of the board,

(1) involves principal responsibility for the determination of policy;

(2) involves principal responsibility for the way in which policies are carried out; or

(3) involves responsibilities and duties of a type not susceptible to the ordinary recruiting and assessment procedures.

(b) Positions may not be included in the partially exempt service under this section if the inclusion is inconsistent with federal requirements for state agencies supported in whole or in part by federal funds.

(c) The personnel board, upon written recommendation of the commissioner of administration, may extend the classified service to include any position in the partially exempt service.

Chinese seen as potential Alaska natural gas customer

By BECKY BOHRER
The Associated Press
(02/14/10 18:29:57)

JUNEAU -- Alaska officials are looking to China and what some believe will be that country's strong demand for natural gas to help the state advance its long-held pipeline dreams. Gov. Sean Parnell has invited an official with China's National Energy Administration and others to visit Alaska, following up on a trade mission Lt. Gov. Craig Campbell helped lead to China in December. Campbell returned from that trip believing the rapidly developing communist nation, already a leading export market for such Alaska products as seafood, zinc and lead, could also become a major investor in or export market for Alaska natural gas or its byproducts.

The potential for Alaska is huge, said Harold Heinze, chief executive of the Alaska Natural Gas Development Authority, who was with Campbell on the trip. He sees several possibilities for the Chinese, from building a plant to convert ethane to pellets that would be used in manufacturing to signing on with a major natural gas pipeline project. Ethane is a component of North Slope natural gas that can be used for plastics.

"One thing you look for in a partner is, do they have money and do they have more money than you. And these guys have money," he said, adding: "They're major players in the world." Heinze's state agency was set up seven years ago to pursue a North Slope gas-export project.

In theory, if the interest and money are there, that could also spur progress on a pipeline that many Alaskans have long looked to for new jobs, reliable energy and as a source for more state revenue amid projections of slumping oil production.

But there are plenty of uncertainties, from permitting and pricing -- how gas holds up against other energy sources -- to what China's true long-term demands for gas will be over alternatives like coal, and the level of competition Alaska would face from other producers to meet the gas demand.

And there are the various pipeline options and plans -- including routing a pipe from the North Slope into Canada rather than to Valdez -- each with diehard constituencies and questions about their viability.

Estimates released last month by the companies working with the state to advance a major line put the project costs at $20 billion to $41 billion, depending on the route

One route, the cheaper option, estimated at $20 billion to $26 billion, would run from the harsh North Slope to Valdez, where gas would be superchilled into a liquid in a plant built for an additional cost, and then shipped elsewhere, possibly overseas.

The costlier option envisions a pipeline going from the North Slope to Canada, where gas could move on existing systems to North American markets.

But there have been numerous other proposals through the years to move North Slope gas, even a

bullet line to move some gas to Fairbanks and Southcentral Alaska for local use.

"The Chinese may, because they're interested in resources, they may be able to do things and invest in things that don't look economic in market terms," said James Jensen, a consultant in natural gas economics.

"In fact, if the Chinese said, 'Gee, if we could get this thing going and we could tie up a certain amount of American gas for our own use,' they might do something that I wouldn't think would be economic," he said. "But they might do it."

Officials with TransCanada Corp. of Calgary, Alberta, and Texas-based Exxon Mobil Corp., say the project is economically viable and hope to move by May toward an "open season," when they can court gas producers and try to secure commitments for shipping deals.

The companies, in a recent filing with federal regulators, estimated 35 trillion cubic feet of proven gas reserves on the North Slope.

A TransCanada spokeswoman declined comment on whether there'd been interest from China on the project, saying: "All discussions with individual customers are confidential."

A rival project by Britain's BP and Houston-based Conoco Phillips is also moving ahead.

Campbell said he's not advocating any specific project, but he'd like the Chinese officials to visit "earlier, rather than later." They've indicated a "huge demand," for natural gas, he said, and Alaska wants a market.

CS FOR HOUSE BILL NO. 414(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY THE HOUSE RESOURCES COMMITTEE

Offered:
Referred:

Sponsor(s): HOUSE RESOURCES COMMITTEE

A BILL

FOR AN ACT ENTITLED

"An Act relating to that part of the tax on oil and gas production that increases the rate of tax as the production tax value of oil or the BTU equivalent barrel of gas increases above $30, separating the determination of that rate between oil and gas, and making that rate distinct between oil and gas; relating to availability of a portion of the money received from the tax on oil and gas production for appropriation to the community revenue sharing fund; relating to the allocation of lease expenditures and adjustments to lease expenditures; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 29.60.850(b) is amended to read:

(b) Each fiscal year, the legislature may appropriate to the community revenue sharing fund an amount equal to 20 percent of the money received by the state during the previous calendar year under AS 43.55.011(g) **and (p)**. The amount may not exceed

(1) $60,000,000; or

(2) the amount that, when added to the fund balance on June 30 of the previous fiscal year, equals $180,000,000.

* **Sec. 2.** AS 43.55.011(e) is amended to read:

(e) There is levied on the producer of oil or gas a tax for all oil and gas produced each calendar year from each lease or property in the state, less any oil and gas the ownership or right to which is exempt from taxation or constitutes a landowner's royalty interest. Except as otherwise provided under (f), (j), (k), and (o) of this section, the tax is equal to the sum of

(1) the annual production tax value of the taxable oil and gas as calculated under AS 43.55.160(a)(1) multiplied by 25 percent; and

(2) the sum, over all months of the calendar year, of the tax amounts determined under

(A) subsection (g) of this section**; and**

(B) subsection (p) of this section.

* **Sec. 3.** AS 43.55.011(g) is amended to read:

(g) For each month of the calendar year for which the producer's average monthly production tax value under **AS 43.55.160(a)(2)(A) - (E) of a** [AS 43.55.160(a)(2) PER] BTU equivalent barrel of [THE] taxable oil and gas is more than $30, the amount of tax for purposes of **(e)(2)(A)** [(e)(2)] of this section is determined by multiplying the monthly production tax value of the taxable oil [AND GAS] produced during the month**, gas produced during the month from a lease or property in the Cook Inlet sedimentary basin, and gas produced during the month from a lease or property outside the Cook Inlet sedimentary basin and used in the state** by the tax rate calculated as follows:

(1) if the producer's average monthly production tax value **under AS 43.55.160(a)(2)(A) - (E) of a** [PER] BTU equivalent barrel of [THE] taxable oil and gas for the month is not more than $92.50, the tax rate is 0.4 percent multiplied by the number that represents the difference between **the producer's** [THAT] average monthly production tax value **under AS 43.55.160(a)(2)(A) - (E) of a** [PER] BTU equivalent barrel **of taxable oil and gas** and $30; or

(2) if the producer's average monthly production tax value **under AS 43.55.160(a)(2)(A) - (E) of a** [PER] BTU equivalent barrel of [THE] taxable oil and gas for the month is more than $92.50, the tax rate is the sum of 25 percent and the product of 0.1 percent multiplied by the number that represents the difference between the **producer's** average monthly production tax value **under AS 43.55.160(a)(2)(A) - (E) of a** [PER] BTU equivalent barrel **of taxable oil and gas** and $92.50, except that the sum determined under this paragraph may not exceed 50 percent.

*** Sec. 4.** AS 43.55.011 is amended by adding a new subsection to read:

(p) For each month of the calendar year for which the producer's average monthly production tax value under AS 43.55.160(a)(2)(F) and (G) of a BTU equivalent barrel of taxable gas is more than $30, the amount of tax on the production of gas for purposes of (e)(2)(B) of this section is determined by multiplying the monthly production tax value of the taxable gas produced during the month other than gas produced from a lease or property in the Cook Inlet sedimentary basin or gas produced outside the Cook Inlet sedimentary basin and used ~~in the state~~ by the tax rate calculated as follows:

(1) if the producer's average monthly production tax value under AS 43.55.160(a)(2)(F) and (G) of a BTU equivalent barrel of taxable gas for the month is not more than $92.50, the tax rate is 0.4 percent multiplied by the number that represents the difference between the producer's average monthly production tax value under AS 43.55.160(a)(2)(F) and (G) of a BTU equivalent barrel of gas and $30; or

(2) if the producer's average monthly production tax value under AS 43.55.160(a)(2)(F) and (G) of a BTU equivalent barrel of taxable gas for the month is more than $92.50, the tax rate is the sum of 25 percent and the product of 0.1 percent multiplied by the number that represents the difference between the producer's average monthly production tax value under AS 43.55.160(a)(2)(F) and (G) of a BTU equivalent barrel of gas and $92.50, except that the sum determined under this paragraph may not exceed 50 percent.

*** Sec. 5.** AS 43.55.020(a) is amended to read:

(a) For a calendar year, a producer subject to tax under AS 43.55.011(e) - (i) **and (p)** shall pay the tax as follows:

(1) an installment payment of the estimated tax levied by AS 43.55.011(e), net of any tax credits applied as allowed by law, is due for each month of the calendar year on the last day of the following month; except as otherwise provided under (2) of this subsection, the amount of the installment payment is the sum of the following amounts, less 1/12 of the tax credits that are allowed by law to be applied against the tax levied by AS 43.55.011(e) for the calendar year, but the amount of the installment payment may not be less than zero:

(A) for oil and gas produced from leases or properties in the state outside the Cook Inlet sedimentary basin but not subject to AS 43.55.011(o), other than leases or properties subject to AS 43.55.011(f), the greater of

(i) zero; or

(ii) **an amount equal to** the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production **applicable to the oil produced by the producer from those leases and properties** under AS 43.55.165 and 43.55.170 that are deductible for the leases or properties under AS 43.55.160, from the gross value at the point of production of the oil [AND GAS] produced from the leases or properties during the month for which the installment payment is calculated **added to the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(p) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production applicable to the gas produced by the producer from those leases and properties under AS 43.55.165 and 43.55.170 that are deductible for the leases or properties under AS 43.55.160 from the gross value at the point of production of the gas produced from the leases**

or properties during the month for which the installment payment is calculated;

(B) for oil and gas produced from leases or properties subject to AS 43.55.011(f), the greatest of

(i) zero;

(ii) zero percent, one percent, two percent, three percent, or four percent, as applicable, of the gross value at the point of production of the oil and gas produced from all leases or properties during the month for which the installment payment is calculated; or

(iii) **an amount equal to** the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production **applicable to the oil produced by the producer from those leases and properties** under AS 43.55.165 and 43.55.170 that are deductible for those leases or properties under AS 43.55.160, from the gross value at the point of production of the oil [AND GAS] produced from those leases or properties during the month for which the installment payment is calculated **added to the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(p) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production applicable to the gas produced by the producer from those leases and properties under AS 43.55.165 and 43.55.170 that are deductible for those leases or properties under AS 43.55.160 from the gross value at the point of production of the gas produced from those leases or properties during the month for which the installment payment is calculated**;

(C) for oil and gas produced from each lease or property subject to AS 43.55.011(j), (k), or (o), the greater of

(i) zero; or

(ii) **an amount equal to** the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production **applicable to the oil produced by the producer from those leases and properties** under AS 43.55.165 and 43.55.170 that are deductible under AS 43.55.160 for oil [OR GAS, RESPECTIVELY,] produced from the lease or property, from the gross value at the point of production of the oil [OR GAS, RESPECTIVELY,] produced from the lease or property during the month for which the installment payment is calculated **added to the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production applicable to the gas produced by the producer from the lease or property under AS 43.55.165 and 43.55.170 that are deductible under AS 43.55.160 for gas produced from the lease or property, from the gross value at the point of production of the gas produced from the lease or property during the month for which the installment payment is calculated**;

(2) an amount calculated under (1)(C) of this subsection for oil or gas produced **before 2022** from a lease or property subject to AS 43.55.011(j), (k), or (o) may not exceed the product obtained by carrying out the calculation set out in AS 43.55.011(j)(1) or (2) or 43.55.011(o), as applicable, for gas or set out in AS 43.55.011(k)(1) or (2), as applicable, for oil, but substituting in AS 43.55.011(j)(1)(A) or (2)(A) or 43.55.011(o), as applicable, the amount of taxable gas produced during the month for the amount of taxable gas produced during the calendar year and substituting in AS 43.55.011(k)(1)(A) or (2)(A), as applicable, the amount of taxable oil produced during the month for the amount of taxable oil produced during the calendar year;

(3) an installment payment of the estimated tax levied by AS 43.55.011(i) for each lease or property is due for each month of the calendar year

on the last day of the following month; the amount of the installment payment is the sum of

(A) the applicable tax rate for oil provided under AS 43.55.011(i), multiplied by the gross value at the point of production of the oil taxable under AS 43.55.011(i) and produced from the lease or property during the month; and

(B) the applicable tax rate for gas provided under AS 43.55.011(i), multiplied by the gross value at the point of production of the gas taxable under AS 43.55.011(i) and produced from the lease or property during the month;

(4) any amount of tax levied by AS 43.55.011(e) or (i), net of any credits applied as allowed by law, that exceeds the total of the amounts due as installment payments of estimated tax is due on March 31 of the year following the calendar year of production.

*** Sec. 6.** AS 43.55.020(d) is amended to read:

(d) In making settlement with the royalty owner for oil and gas that is taxable under AS 43.55.011, the producer may deduct the amount of the tax paid on taxable royalty oil and gas, or may deduct taxable royalty oil or gas equivalent in value at the time the tax becomes due to the amount of the tax paid. If the total deductions of installment payments of estimated tax for a calendar year exceed the actual tax for that calendar year, the producer shall, before April 1 of the following year, refund the excess to the royalty owner. Unless otherwise agreed between the producer and the royalty owner, the amount of the tax paid under AS 43.55.011(e) - (g) **and (p)** on taxable royalty oil and gas for a calendar year, other than oil and gas the ownership or right to which constitutes a landowner's royalty interest, is considered to be the gross value at the point of production of the taxable royalty oil and gas produced during the calendar year multiplied by a figure that is a quotient, in which

(1) the numerator is the producer's total tax liability under AS 43.55.011(e) - (g) **and (p)** for the calendar year of production; and

(2) the denominator is the total gross value at the point of production of the oil and gas taxable under AS 43.55.011(e) - (g) **and (p)** produced by the

producer from all leases and properties in the state during the calendar year.

*** Sec. 7.** AS 43.55.160(a) is amended to read:

(a) Except as provided in (b) of this section, for the purposes of

(1) AS 43.55.011(e), the annual production tax value of the taxable

(A) oil [AND GAS] produced during a calendar year from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the oil [AND GAS] taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil [AND GAS] produced by the producer from those leases or properties, as adjusted under AS 43.55.170; [THIS SUBPARAGRAPH DOES NOT APPLY TO GAS SUBJECT TO AS 43.55.011(o);]

(B) oil [AND GAS] produced during a calendar year from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the oil [AND GAS] taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil [AND GAS] produced by the producer from those leases or properties, as adjusted under AS 43.55.170; [THIS SUBPARAGRAPH DOES NOT APPLY TO GAS SUBJECT TO AS 43.55.011(o);]

(C) oil produced during a calendar year from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the oil taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(D) gas produced during a calendar year from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the

producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(E) gas produced during a calendar year from a lease or property outside the Cook Inlet sedimentary basin and used in the state is the gross value at the point of production of that gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to that gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(F) gas produced during a calendar year from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas used in the state;

(G) gas produced during a calendar year from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas used in the state;

(2) AS 43.55.011(g) **and (p)**, the monthly production tax value of the taxable

(A) oil [AND GAS] produced during a month from leases or properties in the state that include land north of 68 degrees North latitude is the

gross value at the point of production of the oil [AND GAS] taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil [AND GAS] produced by the producer from those leases or properties, as adjusted under AS 43.55.170; [THIS SUBPARAGRAPH DOES NOT APPLY TO GAS SUBJECT TO AS 43.55.011(o);]

(B) oil [AND GAS] produced during a month from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the oil [AND GAS] taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil [AND GAS] produced by the producer from those leases or properties, as adjusted under AS 43.55.170; [THIS SUBPARAGRAPH DOES NOT APPLY TO GAS SUBJECT TO AS 43.55.011(o);]

(C) oil produced during a month from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the oil taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(D) gas produced during a month from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(E) gas produced during a month from a lease or property outside the Cook Inlet sedimentary basin and used in the state is the gross value at the point of production of that gas taxable under AS 43.55.011(e) and

produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to that gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(F) gas produced during a month from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas used in the state;

(G) gas produced during a month from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas used in the state.

* **Sec. 8.** AS 43.55.165(h) is amended to read:

(h) The department shall adopt regulations that provide for reasonable methods of allocating costs between oil and gas, between gas subject to AS 43.55.011(o) and other gas, and between leases or properties in those circumstances where an allocation of costs is required to determine lease expenditures that are costs of exploring for, developing, or producing oil deposits or costs of exploring for, developing, or producing gas deposits, or that are costs of exploring for, developing, or producing oil or gas deposits located within different leases or properties. **When determining a reasonable method of allocating lease expenditures between the production of oil and the production of gas, the**

department shall consider allocating lease expenditures in proportion to the BTU equivalent barrels of oil produced and gas produced from each lease or property.

*** Sec. 9.** AS 43.55.170 is amended by adding a new subsection to read:

(d) The department shall adopt regulations that provide for reasonable methods of allocating the adjustments to a producer's lease expenditures in (a) of this section and the payments and credits described in (b) of this section between oil and gas, between gas subject to AS 43.55.011(o) and other gas, and between leases or properties in those circumstances where an allocation of costs is required to determine lease expenditures that are costs of exploring for, developing, or producing oil deposits, or costs of exploring for, developing, or producing gas deposits, or that are costs of exploring for, developing, or producing oil or gas deposits located within different leases or properties. When determining a reasonable method of allocating the adjustments to a producer's lease expenditures between the production of oil and the production of gas, the department shall consider allocating the adjustments in proportion to the lease expenditures allocated to the production of oil and the production of gas under regulations adopted by the department under AS 43.55.165(h).

*** Sec. 10.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: INSTALLMENT PAYMENTS OF TAX. A producer required to make an installment payment of tax under AS 43.55.020(a)(1) after December 31, 2009, and before the effective date of this Act, and that underpaid the amount due for the installment payment because of the retroactive application of secs. 2 - 4 and 7 of this Act, shall submit the amount of any underpayment on the date the first installment payment is due under AS 43.55.020(a)(1) after the effective date of this Act. Interest on the amount of an underpayment due because of the retroactive application of secs. 2 - 4 and 7 of this Act does not accrue until the day after the date the first installment payment is due under AS 43.55.020(a)(1) after the effective date of this Act.

*** Sec. 11.** The uncodified law of the State of Alaska is amended by adding a new section to read:

RETROACTIVITY. Sections 2 - 4 and 7 of this Act are retroactive to January 1, 2010.

* **Sec. 12.** This Act takes effect immediately under AS 01.10.070(c).

Re: HB 414 - Oil/Gas Crossover Price for Production Tax Dilution Effect

On Wednesday March 31 we made a presentation on HB 414, the bill that would separate oil and gas for calculating the production tax. Oil and gas are combined under current law. Currently oil is valued much higher than gas. If that relationship endured to that time of a major gas sale, the addition of gas onto oil activity could dilute oil value, which could reduce oil taxes by a significant amount.

We presented Department of Revenue figures from February 24, 2010 that displayed the magnitude of the annual tax losses. They were as follows:

$8/mmbtu gas / $75/bbl oil (market prices): $0.3 billion
$8/mmbtu gas/ $100/bbl oil (market prices): $1.1 billion
$8/mmbtu gas / $120/bbl oil (market prices):$2.0 billion

The question arose in the committee as to what the crossover points might be, the prices where the dilution effect would be zero. The other question was whether dilution would only occur when the market price of oil was more than 6 times the price of gas, the ratio of BTUs in a barrel of oil to an mmbtu (million BTUs) of gas.

First, the crossover would be determined by three other factors in addition to the market prices. First, it would depend on the relative volumes of oil and gas. Second, it would depend on the difference in transportation costs between oil and gas. Finally, it would also depend on the relative upstream capital and operating costs for oil and gas.

Using the Department of Revenue assumptions we calculated the crossover points. The assumptions were as follows:

Oil

Production of 500,000 bbls/day
Transportation cost deduction of $6.50/bbl
Upstream capital costs of $2 billion
Upstream operating costs of $2 billion

Gas

Production of 4.5 bcf/day
Transportation cost deduction of $4.50/mmbtu
Upstream capital costs of $200 million
Upstream operating costs of $200 million

We computed crossover points for the three oil prices and one gas price used in the above illustration:

Crossover Point where Dilution Effect is Zero

At $75/bbl oil market price	Gas crossover point = $11/mmbtu gas market price
At $100/bbl oil market price	Gas crossover point = $15/mmbtu gas market price
At $120/bbl oil market price	Gas crossover point = $18/mmbtu gas market price
At $8/mmbtu gas market price	Oil crossover point = $60/bbl oil market price

Monthly Oil and Natural Gas Price Analysis

Logsdon and Associates

April 2, 2010

4810

Average Monthly Closing Prices for U.S. Crude Oil and Natural Gas as Reported on the New York Mercantile Exchange (NYMEX)

- West Texas Intermediate (WTI) oil and Henry Hub Gas prices are quoted daily on the NYMEX. The near month contract tracks very closely with the spot price since the delivery of physical barrels of WTI oil and Henry Hub gas underwrite the futures contract.
- The spot price is assessed by survey of buyers and sellers of physical cargos or lots or tranches. The near month NYMEX contract is determined in a regulated transparent market.
- The following charts illustrate both volatility and trend of oil and natural gas prices over the last 16 years.
- The charts start in 1994 because that is the first year that the natural gas contract was offered on the NYMEX.
- The price of oil is stated in dollars per barrel. The price of gas is stated in millions of British thermal units (btu), a measure of energy content.

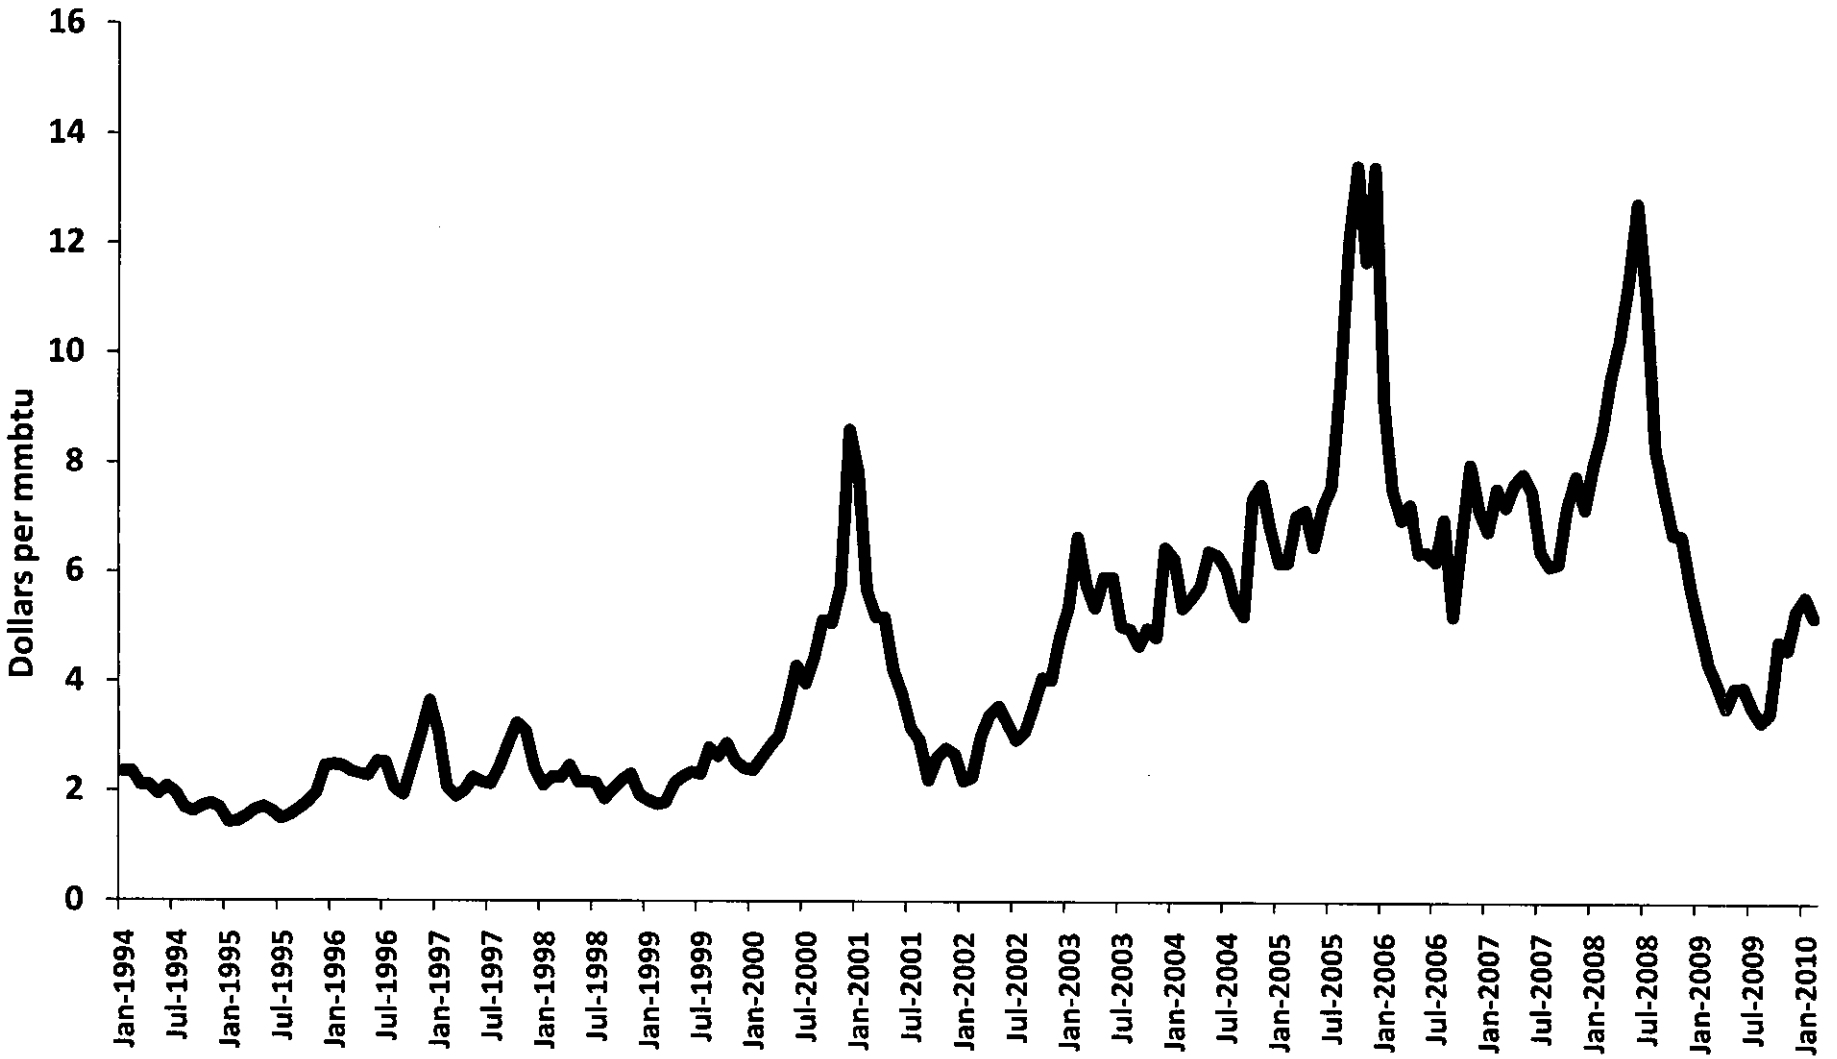
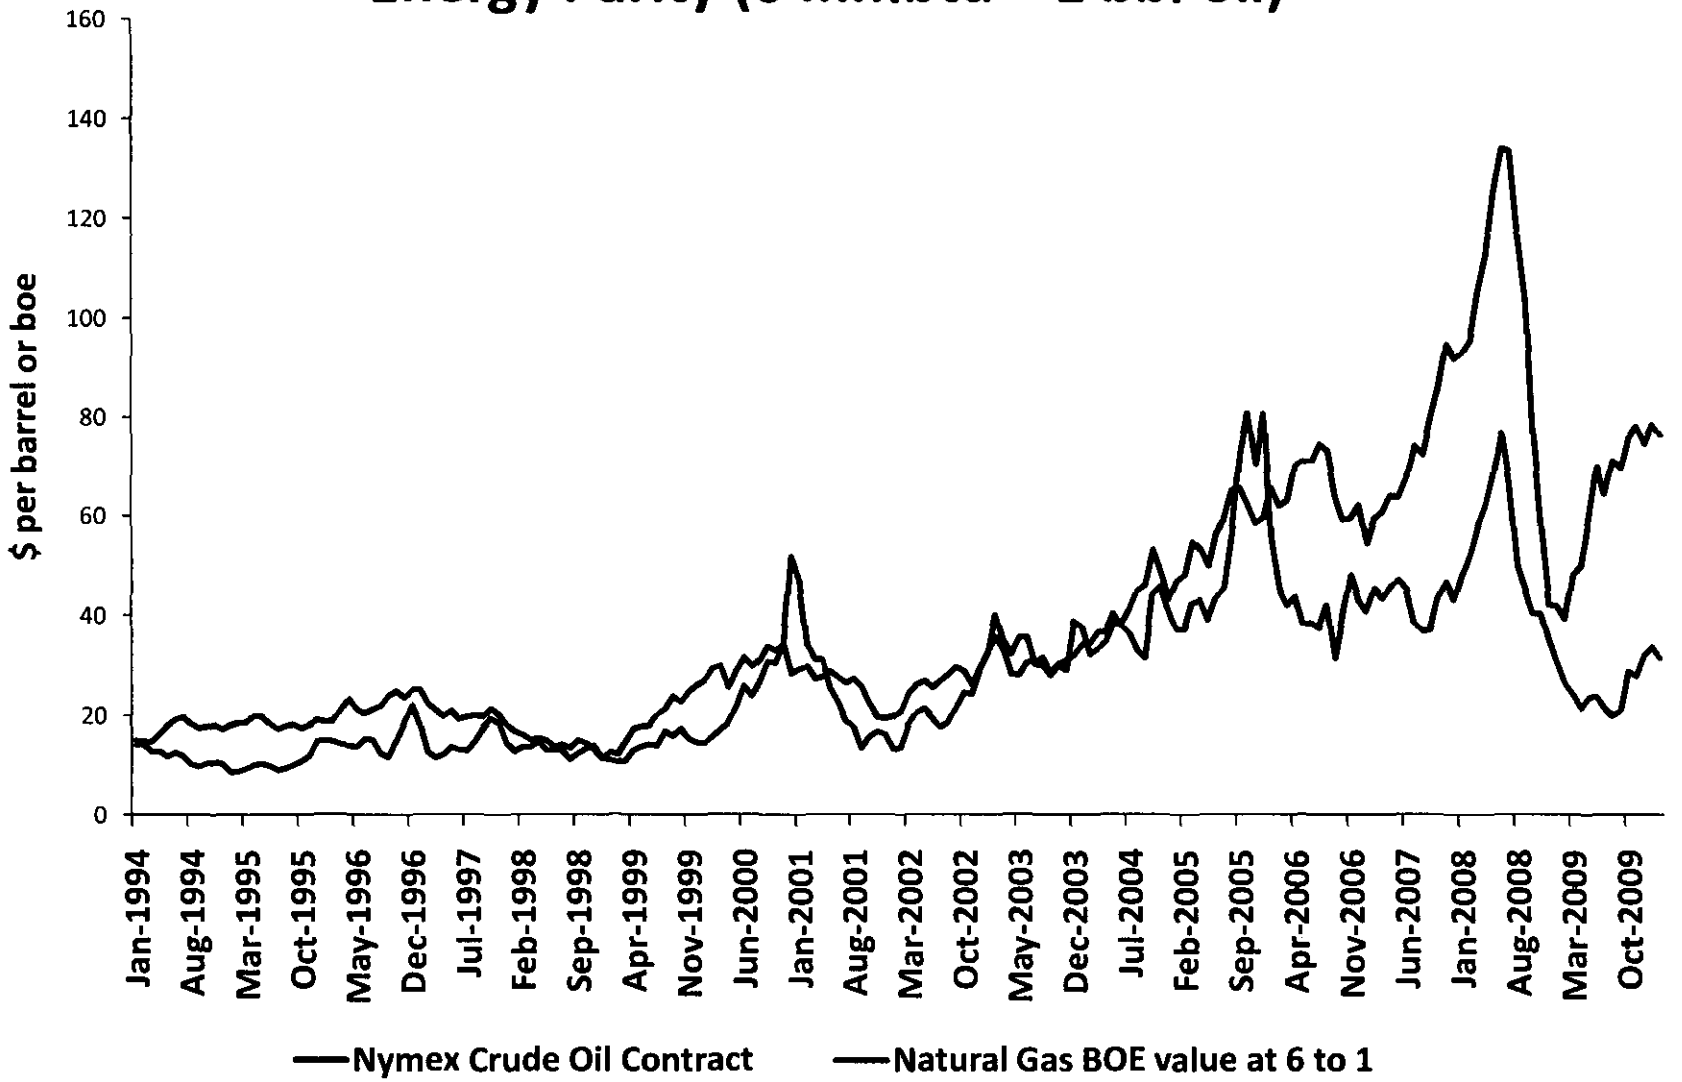
Henry Hub Nymex Natural Gas Futures
Jan 1994—Feb 2010 ($ per Million BTU)



Comparison of Oil and Gas on an Apples to Apples Basis

- The following chart makes an apples to apples comparison between the price of the two substances by converting the gas price to a barrel equivalent price based on the physical energy propertys of the two substances. There are six million btu's in a barrel of oil and gas prices are quoted per one million btu.
- What you see is that gas tends to be less valuable on a per btu basis.

Nymex Oil vs. Nymex Natural Gas if Gas Sold at Energy Parity (6 mmbtu = 1 bbl oil)



What is the historic number of btu's of gas needed to have the same value as a barrel of oil?

- The following chart makes this comparison.
- Clearly there have been some points in time when gas has sold at energy parity (6 to 1) or better with oil. This has not happened very often.
- The other thing to notice is that although there appears to be a partial correlation over time, the relationship between oil and gas prices is highly unstable from month to month.

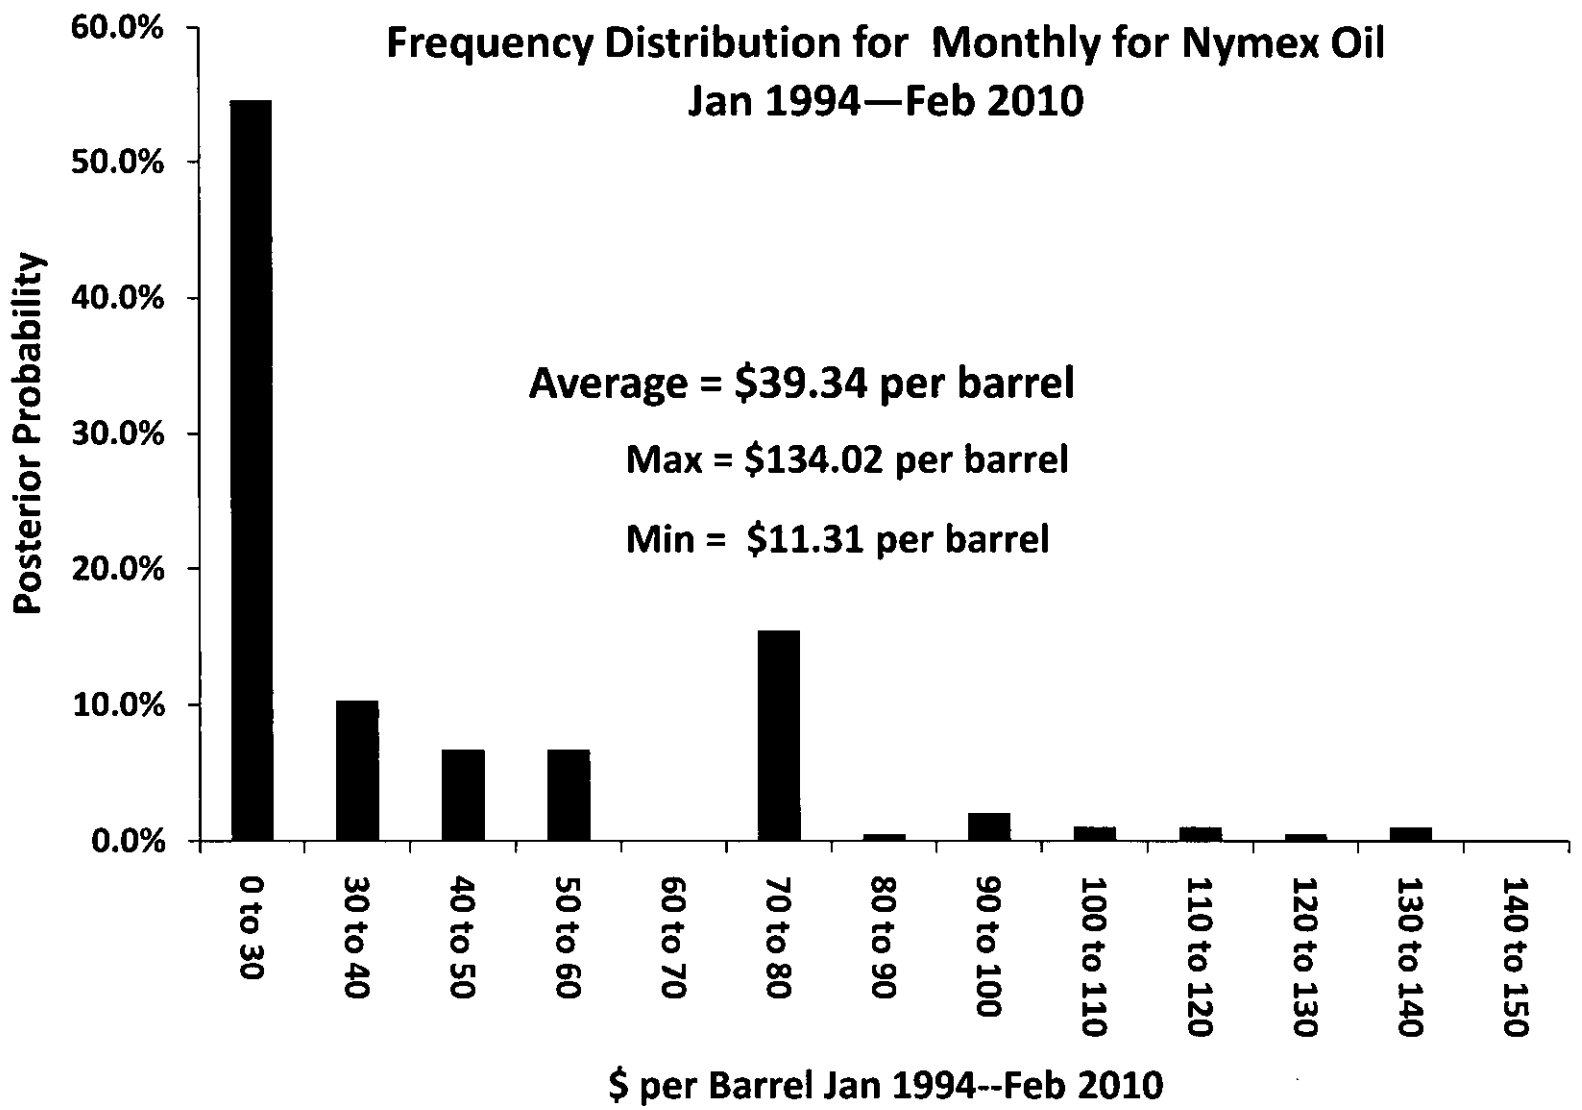
Looking at oil and gas prices using frequency distributions

- The following charts are based on the percent of time that oil or gas prices fell within certain intervals.
- This is essentially a historical probability view.
- Three time periods are examined, long term medium term and shortterm. Jan 1994—Feb 2010, Jan 2002—Feb 2010. and Jan 2004—Feb 2010.
- Look for spikes and bunching, what statisticians call modes and central tendencies.
- The charts on the next two pages clearly show that we are in an evolving oil pricing world. The oil price frequency distribution shown between Jan 1994 and Feb 2010 on on the next page, shows that between 1994 and 2010, 55% of the time the price of oil was $30/bbl or less. In the next chart, covering 2002 through 2010, oil prices were $30/bbl or less only 15% of the time.



Frequency Distribution for Monthly for Nymex Oil

A much more recent shorter term view

- The following chart shows the frequency distribution for oil prices from January 2004 through February 2010.
- Notice that for this most recent 6 year period that oil prices have traded in a pretty tight range between $70 and $80, 40% of the time.
- Connecting the spikes gives you a somewhat symetric shape. This suggests that at we are in a market that trends to a price in the $70 to $80 range.

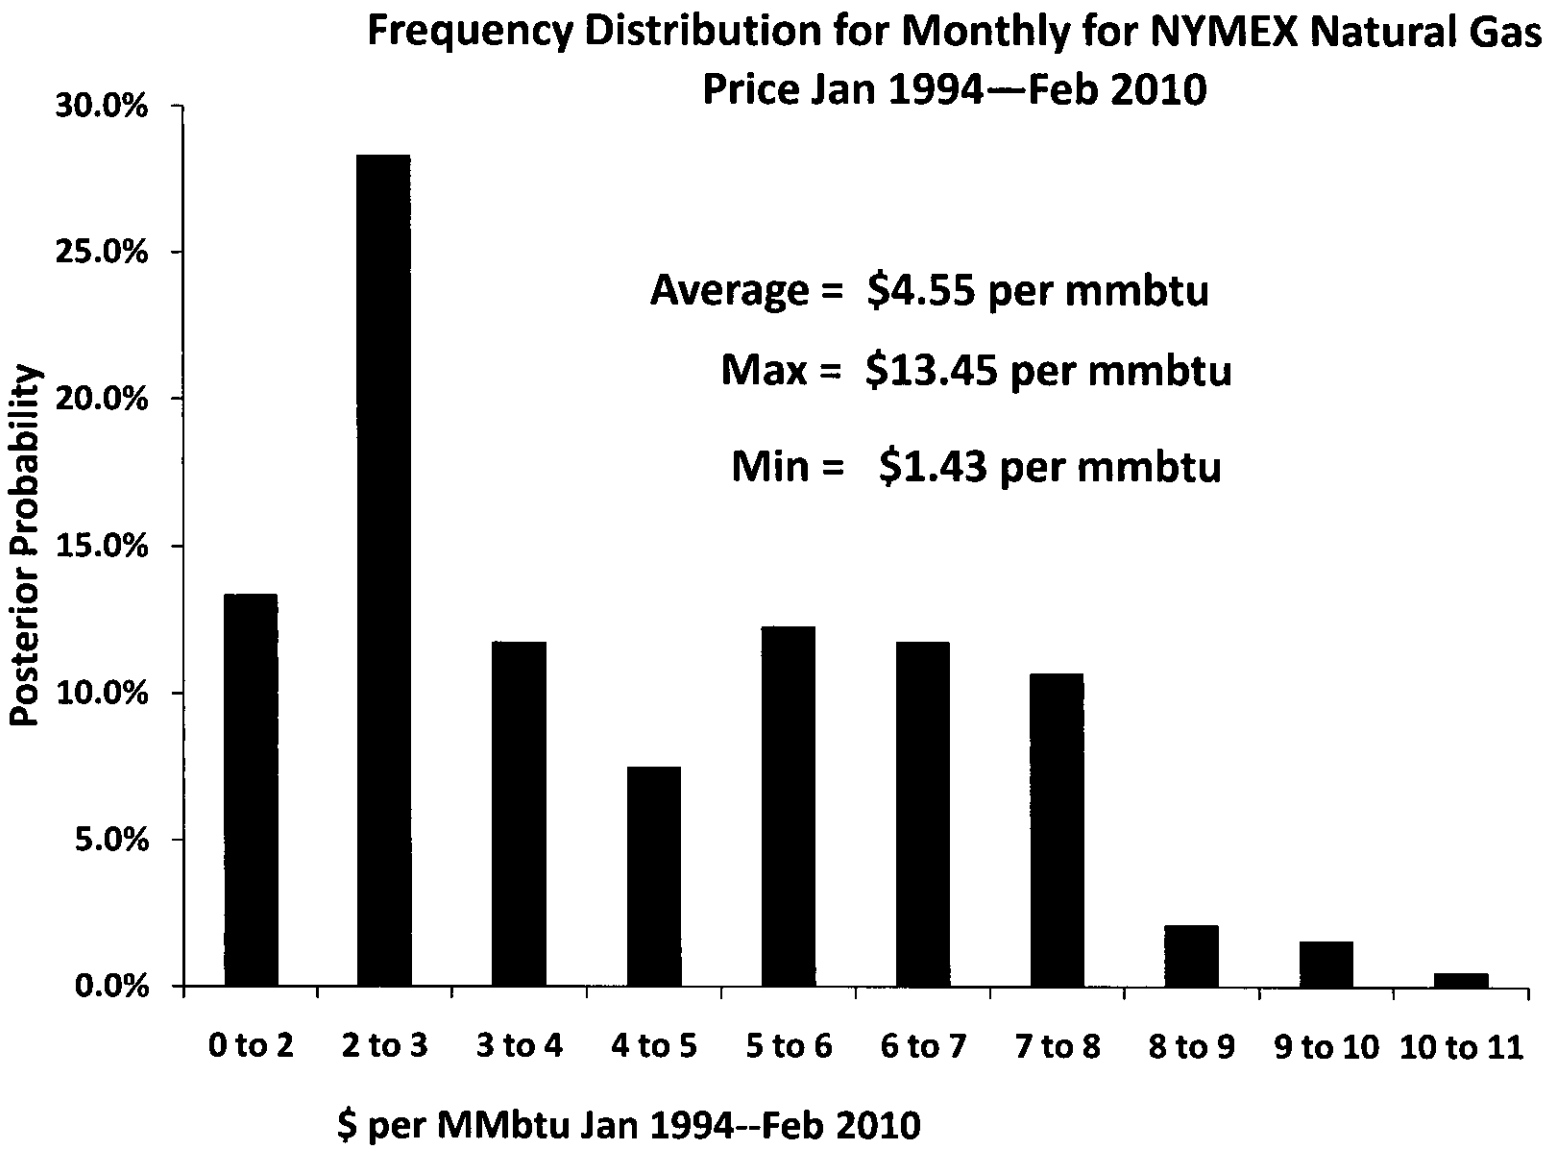
Gas Price Frequency Distributions

- Comparing the following three charts it can be seen that gas prices viewed over the longer time period of Jan 1994—Feb 2010 were most frequently in the $2-$3 range but relatively evenly distributed all the way up to $8 per mmbtu.
- Going to the distribution from Jan 2002 to Feb 2010 shows that dropping the earlier 8 years moves the distribution up to center around the $5 to $8 range.
- The final chart shows that distribution of gas prices from Jan 2004 to Feb 2010 where gas prices become more bunched in the region of $6 to $8 per mmbtu.
- The today's situation in the gas market with gas around $4 is consistent with the 16 year average ($4.55) rather than either the last 8 or 6 year averages of $6.38 and $7.01 respectively.



Frequency Distribution for Monthly for NYMEX Natural Gas Price Jan 1994—Feb 2010

HB 414:
The Separation of Oil from Gas for the Oil & Gas Production Tax

House Resources Committee
Logsdon & Associates
March 31, 2010

Premise of the Bill

- Under current law oil and gas are taxed together
- Oil is worth much more than gas
- The combining mechanism has the potential to materially reduces oil taxes even though oil operations are unaffected

Oil is Different than Gas

- Supply
  - Oil more geographically concentrated (fewer sellers: OPEC)
  - Oil supplies more depleted
  - Lower cost gas is more plentiful
- Demand
  - Oil has fewer substitutes
  - Gas has more substitutes
- Result: Oil is worth more than gas

BTU 9:1

West Coast ANS

- Market Price $80/bbl
- Less:
  - Shipping $2.07
  - TAPS $4.18
- Gross Value $73.75
- 6 mmbtu's / bbl
- $12.29 / mmbtu

North Slope Gas

- Market Price $6/mmbtu
- Less:
  - Tariff AK to AB $3.54
  - AB Hub $0.24
  - Tariff AB to L48 $0.85
- Gross Value $1.37/mmbtu
- On a straight BTU to BTU basis oil is worth nearly 9 X as much as gas

Some Things that have BTUs

- Oil
- Gas
- Coal
- Wood
- Asphalt
- Shoe Leather
- Rubber
- Coffee grounds
- Citrus rinds
- Corn cobs
- Dung

Mechanics of Current Tax

- 1) Oil gross value (market price less transport cost)
- 2) Gas gross value (market price less transport cost)
- 3) Oil + gas gross value gas = Combined gross value
- 4) Combined gross value – lease capital and operating costs = Combined oil & gas net value
- 5) Combined oil & gas net value / total oil & gas BOEs = p/BOE net value (see Slide # 7)
- 6) Progressivity factor (based on per BOE net value) plus 25% base rate = tax rate
- 7) Single tax rate applied to combined oil & gas net value

Barrel of Oil Equivalents (BOEs):
Putting Oil & Gas on an Apples / Apples Basis

- 4.5 billion cubic feet per day (bcf/d) of natural gas
- A cubic foot of North Slope gas will have about 1,100 BTUs
- Natural gas is measured in millions of BTUs (mmbtu)
- 4.5 billion cubic feet per day will have 4.95 million mmbtu's (4.5 X 1,100)
- A barrel of oil has about 6 mmbtu's
- 4.5 billion cubic feet per day will have the BTU equivalence of 825,000 barrels of oil (BOEs) (4,950,000 / 6)
- If there are 500,000 barrels of oil, total BOEs will total 500,000 + 825,000 = 1,325,000

Progressivity Mechanics

- "Trigger" = $30 net / BOE value
- "Slope" = 0.4%*
- Progressivity surcharge = (Net per BOE value - $30) X .004
- Example: if net value = $50
  - Base tax rate = 25%
  - Progressivity = ($50 – $30) X .004 = 8%
  - Total tax of 33% on net value

* Slope changes to 0.1% after $92.50 net per BOE value

  Upstream operating costs $200 million

4839

How can you be so sure about future prices?

- We cannot
- Different price relationships would produce different outcomes
- Since the potential for these outcomes exist, the current tax structure adds another level of risk to an already large amount of uncertainty
- At current price relationships there is a risk of undermining state finances

How HB 414 Bill Works

- Under the current law there is a base tax rate of 25%
  - Plus progressivity based on the combined oil & gas net value / BOE
- The bill removes progressivity on gas
- Progressivity on oil continues to be calculated just on oil net value / barrel
- Exclusion of gas in the progressivity calculation does not reduce oil taxes
- Senate CS – includes progressivity on gas

Issue: Cost Allocation

- Costs to produce oil and gas are truly joint costs
- Current approach (AS 43.55.165(h)): gives department authority to adopt regulations for allocating costs between oil and gas:
  - As recipients of confidential cost data they are in the best position to evaluate costs
  - A regulatory process allows more time
  - The regulatory process is public
- BOE Approach
  - The same costs that **produce** oil **produce** gas
  - Since **produced** together, costs are allocated based on amounts **produced**
  - BOE method: putting oil & gas on apples/apples basis in terms of relative **produced** volumes

Issue: Tax Neutrality on Current Activity

- Currently some producers produce both oil and gas
- If separate oil and gas for calculating progressivity:
  - Oil progressivity will be undiluted by gas
  - Oil progressivity will go up
  - Taxes will increase
- Not intent of bill to raise taxes on current activity
- Proposed progressivity structure in Senate CS
  - One progressivity on oil, Cook Inlet gas, and other in-state gas calculated together
  - A second progressivity on export gas calculated distinctly
  - Replicates current situation and prevents major gas sale from diluting oil progressivity

HB 414

"An Act relating to the tax on oil and gas production; and providing for an effective date."

The Bill is intended to separate oil and gas production into two separate substances for purposes of the oil and gas production tax ACES AS 43.55. Oil would be taxed at its net production value at a combined rate of 25% and a progressive surcharge as taxable value increases above $30 per barrel. Gas would be taxed at a flat rate of 25%

Sec. 1.

- **AS 43.55.011(e)(2)**
  - Adds language to the statute that specifically identifies that oil is subject to a progressive tax rate.
  - Section (e) defines a base tax rate of 25% and a progressivity surcharge defined in Section (g). Most importantly, the progressive rate surcharge only applies to oil.

Sec. 2.,.3., and 4.

- **Sec. 2. AS 43.55.011(g) and (g)(1) and (g)(2)**
- These sections of the bill change the progressive rate surcharge so that it applies only to oil by removing gas from the progressive rate calculation, leaving the gas rate at a flat 25%

- **Sec. 3. AS 43.55.011(j)**
  - This change ensures that the comparison between the old ELF tax for Cook Inlet gas and a tax on the net production value of gas uses the 25% with no progressive rate.

- **Sec. 4. AS 43.011(o)**
  - Same as Sec.3 for non-Cook Inlet gas used in-state.

Sec. 5., 6., and 7.

- **Sec. 5. AS43.55.020(a)(1)**
  - Gas progressivity is removed from the calculation of the monthly installment payments.
- **Sec.6. AS 43.55.160(a)(2)**
  - For progressivity, the calculation of the monthly production tax value is only made for oil.
- **Sec. 7. AS 43.55.160(c)**
- Calculating the monthly share of the producer's costs of transportation for the calendar year for deriving production tax value for progressivity is for only done for oil.
- **Sec. 8. Takes effect immediately**

CS for Senate Bill 305 (Version T)

HB 414 as introduced has the language of the original SB305.

The following changes have been made in the CS for Senate Bill 305:

Title has been tightened to focus scope:

"An Act relating to **that part of the tax on oil and gas production that increases the rate of tax as the production tax value of oil or the BTU equivalent barrel of gas increases above $30, separating the determination of that rate between oil and gas, and making that rate distinct between oil and gas**; relating to the availability of a portion of the money received from the tax on oil and gas production for appropriation to the community revenue fund; relating to the allocation of lease expenditures and adjustment of lease expenditures; and providing for an effective date"

Progressivity on Oil and Gas

No change to formula:

Progressivity rate =

(production tax value per BTU equivalent barrel - $30) X .004

As in current law:

BTU equivalent barrels for gas = mmbtu / 6

Production tax value per BTU equivalent barrel for gas =

production tax value / BTU equivalent barrels

Two Progressivity Calculations

- Oil / CI Gas / Other In-State Gas
  - Progressivity calculated together
  - Same as current activity
  - No tax increase on current kinds of activity

- Export Gas (Major Gas Sale Gas)
  - Calculated distinctly
  - Will not dilute oil progressivity

Two Progressivity "Buckets"

Requirement that BTU Equivalent Barrels be considered as a method for allocating lease costs between Oil and Gas

- AS 43.55.165(h) is amended to require the department to consider allocating lease expenditures between oil and gas production in proportion to BTU equivalent barrels produced op each substances.
- The Department of Revenue already has regulations that use the BTU Equivalent method for allocating joint productions.
- The BOE method is relatively straightforward, knowable, and relatively stable.
- The Department has the resources, time, and procedures for examining this issue and ultimately it would be their decision.

Applicability Date

- Retroactive to January 1, 2010 for administrative expediency for both department and taxpayers; they will not have to split the year with two systems
- Will not result in any change in tax

Sponsors Statement for HB 414 by the House Resource Committee

"An Act relating to the tax on oil and gas production; and providing for an effective date."

Currently there are companies doing business in Alaska that have both oil sales (from the North Slope) and gas sales (from Cook Inlet or elsewhere). The gas produced receives the same progressivity surcharge as the oil.

House Bill 414 by the House Resources Committee separates oil and natural gas for purposes of calculating the progressivity portion of the production tax under AS 43.55. Under this bill, the progressivity surcharge is calculated on oil only instead of on oil and gas combined. The progressivity surcharge remains unchanged at 0.4% per $1 of production tax value over $30 per barrel, then 0.1% per $1 of production tax value over $92.50. Under House Bill 414, natural gas will be taxed at 25% of production tax value with no progressivity surcharge.

Bill Section	Change	Notes
	"An Act relating to the tax on oil and gas production; and providing for an effective date."	The Bill is intended to separate oil and gas production into two separate substances for purposes of the oil and gas production tax ACES AS 43.55
Sec. 1.	**AS 43.55.011(e)(2)** Adds language that specifically identifies the production of oil for progressivity rate purposes	Section (e) defines a base tax rate of 25% and a progressivity surcharge defined in Section (g). Progressivity only applies to oil.
Sec. 2.	**AS 43.55.011(g)** The language referring to gas and its per BTU equivalent is removed to isolate the progressive rate tax calculation for oil. **AS 43.55.011(g)(1)** The language referring to gas and its per BTU equivalent is removed to apply the progressive rate calculation only to oil with a progressive rate of an additional 0.4% for each $/bbl above $30 up to $92.50 per barrel. **AS 43.55.011(g)(2)** The same changes are made in this subsection as in AS 43.55.011(g) (1) eliminating references to gas and per BTU equivalent to calculate the progressive rate for net production values greater than $92.50 at the rate of an additional 0.1%	This isolates the progressive tax rate calculation to apply to oil not gas. Since gas has been deleted from the calculation of the progressive rate, the rate on gas is set at 25% as set out in AS 43.55.011(e)(1)
Sec. 3.	**AS 43.55.011(j)** In comparing the lower of Sec. (e) tax and ELF tax for Cook Inlet production, progressivity does not apply for gas.	This change serves to make the comparison between the old ELF tax for gas and a tax on the net production value of gas multiplied by 25%

Bill Section	Change	Notes
Sec. 4.	**AS 43.011(o)** Same as Sec.3 for non-Cook Inlet gas used in-state.	This change serves to preserve the ELF limitation of the tax for gas developed outside the Cook Inlet before 2022 and used in State.
Sec. 5.	**AS43.55.020(a)(1)** The monthly installment payments for gas does not include a progressivity component	All other segregated leases or properties defined in statute only have a progressivity rate for oil
Sec. 6.	**AS 43.55.160(a)(2)** Monthly production tax values for deriving progressivity apply only to oil. (A) Applies only to North Slope oil (B) Applies only to Outside Cook inlet not North Slope Oil	
Sec. 7.	**AS 43.55.160(c)** Calculating the monthly share of the producers's costs of transportation for the calendar year for deriving production tax value for progressivity is for only oil.	
Sec. 8	**Takes effect immediately under AS 01.10.070(c)**	The bill takes effect after the governor's signature or the day after the expiration period on gubernatorial action.

Bill Language

This bill separates oil and natural gas for purposes of calculating the progressivity portion of the production tax under AS 43.55. Under this bill, the progressivity surcharge is calculated on oil only instead of on oil and gas combined. The progressivity surcharge remains unchanged at 0.4% per $1 of production tax value over $30 per barrel, then 0.1% per $1 of production tax value over $92.50. Under this bill, natural gas is always taxed at 25% of production tax value with no progressivity surcharge.

Currently some companies have both oil sales from the North Slope and gas sales from Cook Inlet and elsewhere, both of which are included in their progressivity calculations that are applied to oil. By removing gas from the progressivity calculation these companies will likely face a higher tax rate and therefore an increase in tax liability. This bill does not contain provisions to offset any increase in tax from removing gas from the progressivity calculation. (continued)

Prepared by: Dan Stickel, Petroleum Economist — Phone 907-465-3279

Administrative Services Division

(Revised 11/8/2009 OMB)

ANALYSIS CONTINUATION

Revenues
Removing gas from the progressivity calculation could potentially raise tax rates and increase tax for companies that currently produce both oil and gas (from Cook Inlet or elsewhere). The impact will vary from year to year, driven largely by oil and gas prices. Analysis of data from confidential tax returns yields estimates of what the revenue impact might have been in recent years. For CY 2008, removing gas from the progressivity calculation would have increased production tax revenue by about $140 million. For CY 2009, the production tax increase would have been about $20 million, and for CY 2010 the production tax increase would be about $50 million. At current prices (around $80 per barrel for North Slope oil, $7 per million cubic feet for Cook Inlet gas, $0.942 per million cubic feet for North Slope gas sold for in-state use) and assuming costs and production levels similar to 2009, removing gas from the progressivity calculation would cause an increase in tax liability of about $50-60 million per year. These estimates assume that costs are allocated on a British Thermal Unit (BTU) equivalency basis; other allocation methods would yield different estimates.

The revenue impact is presented as indeterminate because of the high degree of uncertainty regarding the impact of removing gas from the progressivity calculation, as well as the material impact of regulations yet to be developed for allocating costs between oil and gas.

Once major gas sales begin, applying progressivity to oil only is generally expected to result in higher state revenues than a combined tax. This effect occurs for two reasons: first, oil has historically commanded a price premium to natural gas on an energy equivalency basis; and second, transportation costs are lower in percentage terms for oil than for natural gas, resulting in a higher wellhead value. The revenue impact will be a function of numerous variables including oil and gas prices and production, lease expenditures, and the method chosen for allocating lease expenditures between oil and natural gas.

There are some scenarios under which the state could see a reduction in revenues from this bill. Without a progressivity surcharge on natural gas, this bill could reduce state revenue if the price relationship between oil and natural gas normalized (on an energy equivalency basis) at a time when natural gas was selling at a relatively high price. Also, since this bill will generally increase taxes on the major producers, it is possible that the tax change could be viewed as a disincentive to oil and gas exploration and development.

Expenditures
With the change in tax structure the Department will need to change its monthly reporting forms, annual tax returns, and databases. The contractual services costs for programming changes to the online tax information system and the monthly reporting system are estimated at $230,000. Aside from one-time costs, the provisions of this bill can be implemented using existing staff and resources.

Other Issues
This bill provides for an immediate effective date. Since the production tax is levied on an annual basis (payable in monthly installments), changing the tax calculations for only a portion of the tax year would create an additional burden with additional complexity for both the Department and the taxpayers for the 2010 tax year. Applying the tax change retroactive to January 1, 2010 would be preferred from a tax administration standpoint.

HB 414

Separating of Oil from Gas for the Oil & Gas Production Tax

This presentation was originally heard in Senate Finance on March 9, 2010 for Senate Bill 305, version 26-LS1577\R. The presentation was given by Logsdon & Associates and is accurate for HB 414, version 26-LS1592\A.

Premise of the Bill

- Under current law oil and gas are taxed together
- Oil is worth much more than gas
- The combining mechanism materially reduces oil taxes even though oil operations are unaffected

Oil is Different than Gas

- Oil more geographically concentrated (fewer sellers: OPEC)
- Oil supplies more depleted
- Gas is more plentiful
- Oil has fewer substitutes
- Gas has more substitutes

BTU 10:1

West Coast ANS

- Market Price $80/bbl
- Less:
  - Shipping $2.07
  - TAPS $4.18
- Gross Value $73.75

North Slope Gas

- Market Price $6/mmbtu
- Less:
  - Tariff AK to AB $3.54
  - AB Hub $0.24
  - Tariff AB to L48 $0.85
- Gross Value $1.37/mmbtu
- BOE Basis (X 5.5) = $7.54
- On a straight BTU to BTU basis oil is worth nearly 10 X as much as gas

Some Things that have BTUs

- Oil
- Gas
- Coal
- Wood
- Asphalt
- Shoe Leather
- Rubber
- Coffee grounds
- Citrus rinds
- Corn cobs
- Dung

Mechanics of Current Tax

- 1) Oil gross value (market price less transport cost)
- 2) Gas gross value (market price less transport cost)
- 3) Oil + gas gross value gas = Combined gross value
- 4) Combined gross value – lease capital and operating costs = Combined oil & gas net value
- 5) Combined oil & gas net value / total oil & gas BOEs = p/BOE net value (see Slide #6)
- 6) Progressivity factor (based on per BOE net value) plus 25% base rate = tax rate
- 7) Single tax rate applied to combined oil & gas net value

Barrel of Oil Equivalents (BOEs):
Putting Oil & Gas on an Apples / Apples Basis

- 4.5 billion cubic feet per day (bcf/d) of natural gas
- A cubic foot of North Slope gas will have about 1,100 BTUs
- Natural gas is measured in millions of BTUs (mmbtu)
- 4.5 billion cubic feet per day will have 4.95 million mmbtu's (4.5 X 1,100)
- A barrel of oil has about 5,500 BTUs
- 4.5 billion cubic feet per day will have the BTU equivalence of 900,000 barrels of oil (BOEs) (4,950,000 / 5.5)
- If there are 500,000 barrels of oil, total BOEs will total 500,000 + 900,000 = 1,400,000

Progressivity Mechanics

- "Trigger" = $30 net / BOE value
- "Slope" = 0.4%*
- Progressivity surcharge = (Net per BOE value - $30) X .004
- Example: if net value = $50
  - Base tax rate = 25%
  - Progressivity = ($50 – $30) X .004 = 8%
  - Total tax of 33% on net value

* Slope changes to 0.1% after $92.50 net per BOE value

How the Bill Works

- Under the current law there is a base tax rate of 25%
  - Plus progressivity based on the combined oil & gas net value / BOE
- The bill removes progressivity on gas
- Progressivity on oil continues to be calculated just on oil net value / barrel
- Exclusion of gas in the progressivity calculation does not reduce oil taxes

Senator Bert Stedman, Co-Chair
Senate Finance Committee
State Capitol, Room 516
Juneau, AK 99501

Re: Senate Bill 305

Dear Senator Stedman:

Please accept my apologies for being out of state and unable to return to Juneau in time for the Senate Finance Committee's hearing today on SB 305. I hope, though, that you and the Committee will receive this letter in time for your consideration of the Bill.

Our understanding of SB 305 is that it would determine the taxable net "production tax value" for oil under AS 43.55.160 of ACES separately from that for gas, so that the respective production-tax values would then be taxed separately as well. We further understand that the stimulus for this decoupling is concern that tax revenues under the present version of ACES could be materially reduced when major gas sales begin from the North Slope into a gas pipeline. Specifically, the concern is that the gross netback value for major North Slope gas sales into a pipeline may initially be significantly less on a BTU-equivalent barrel basis than the gross netback value per barrel for oil.

All other things being equal, such a development could indeed reduce state revenues under ACES. But not all other things will be equal. Major gas sales would also greatly increase the number of BTU-equivalent over which the deductible lease expenditures are spread, thereby significantly reducing the deductible cost per BTU-equivalent barrel. State revenues under ACES would decrease only if the reduction in gross netback value per Btu-equivalent barrel is greater than the offsetting reduction in deductible costs per Btu-equivalent barrel. State revenues could actually increase under the current version of ACES if the reduction in cost per barrel is greater than the reduction in netback per barrel.

Our concern with SB 305 as it now reads is that, in addressing this potential problem that may arise a decade from now, it would come into effect today and require allocation of costs between oil and gas long before the potential risk it addresses could begin to materialize. SB 305 does not change the present rule in AS 43.55.011(o) that North Slope gas sold for in-state consumption is taxed under a tax cap similar to the cap for Cook Inlet production. So the allocation of costs under SB 305 would only be for gas that is already capped under AS 43.55.011(o) or any small sales that don't qualify under section .011(o). Allocation threatens to make a mountain out of a molehill because the change in gas taxes due to cost allocation during the coming decade will be tiny relative to the tax when major gas sales begin, but the Department of Revenue will have to apply the allocation rules with strictest rigor lest it create a bad precedent for the major gas sales.

We understand that the impetus for enacting SB 305 this session is to avoid locking in the risk under the present law that major North Slope gas sales could materially reduce the overall tax under ACES. But we see a straightforward way to achieve that without all the problems and disputes that will arise by allocating costs to gas now. The solution is to add a Bill Section that defers the effective date for Sections 1 – 7 of SB 305 to the start of major gas sale deliveries from the North Slope into a gas pipeline for shipment. The Bill Section making such a deferral would be on the books as of the tax lock-in date and would thus be part of "the gas production tax in effect at the start of the first binding open season held under this chapter " for purposes of AS 43.90.320 — especially if the Committee adopts a letter of intent (or adds a statement of intent as a section of SB 305 itself) that specifically declares the deferred-effective-date provision to be part of the "tax in effect" as of that date for lock-in purposes. In other words, the substance in SB 305 could be locked in as of this year for AGIA purposes without triggering prematurely all the disputes and difficulties over allocating costs to gas before production for major North Slope gas sales begins.

Finally, whether or not you adopt our suggestion of deferring the effective date for decoupling, we would also ask that you not follow the pattern used during the ACES debate, where significant matters were left to the determination of the Department of Revenue. SB 305 currently uses the term "applicable to" to describe the allocation of lease expenditures between oil and gas. Such a broad term does not provide the industry or the Department of Revenue enough guidance of the legislative intent. There are instances already in use and available in the tax arena to model an allocation between oil and gas. For instance, ACES uses "BTU equivalent barrels" as a method to determine gas production in oil-equivalent terms in AS 43.55.024(c), the phase-out of the small-producer tax credit. Or, if you prefer, the allocation could be done on a basis of relative volumes as determined for the "extraction factor" in AS 43.55.072(f) for the oil and gas corporate income tax. The point is, no matter what cost allocation is performed for decoupling, you should make your choice clear in the Bill because that will clarify the obligation that taxpayers are held to, reducing latitude for argument about what compliance requires and making it easier for the Department of Revenue to enforce.

Thank you for your consideration of these comments.

Sincerely,

BP Exploration (Alaska) Inc.

COMMENTS ON SB305

Senate Finance Committee

March 12, 2010

Topics

- Revenue Projections Under SB305 and Status Quo
- Cost Allocation
- Technical Issues Regarding SB305

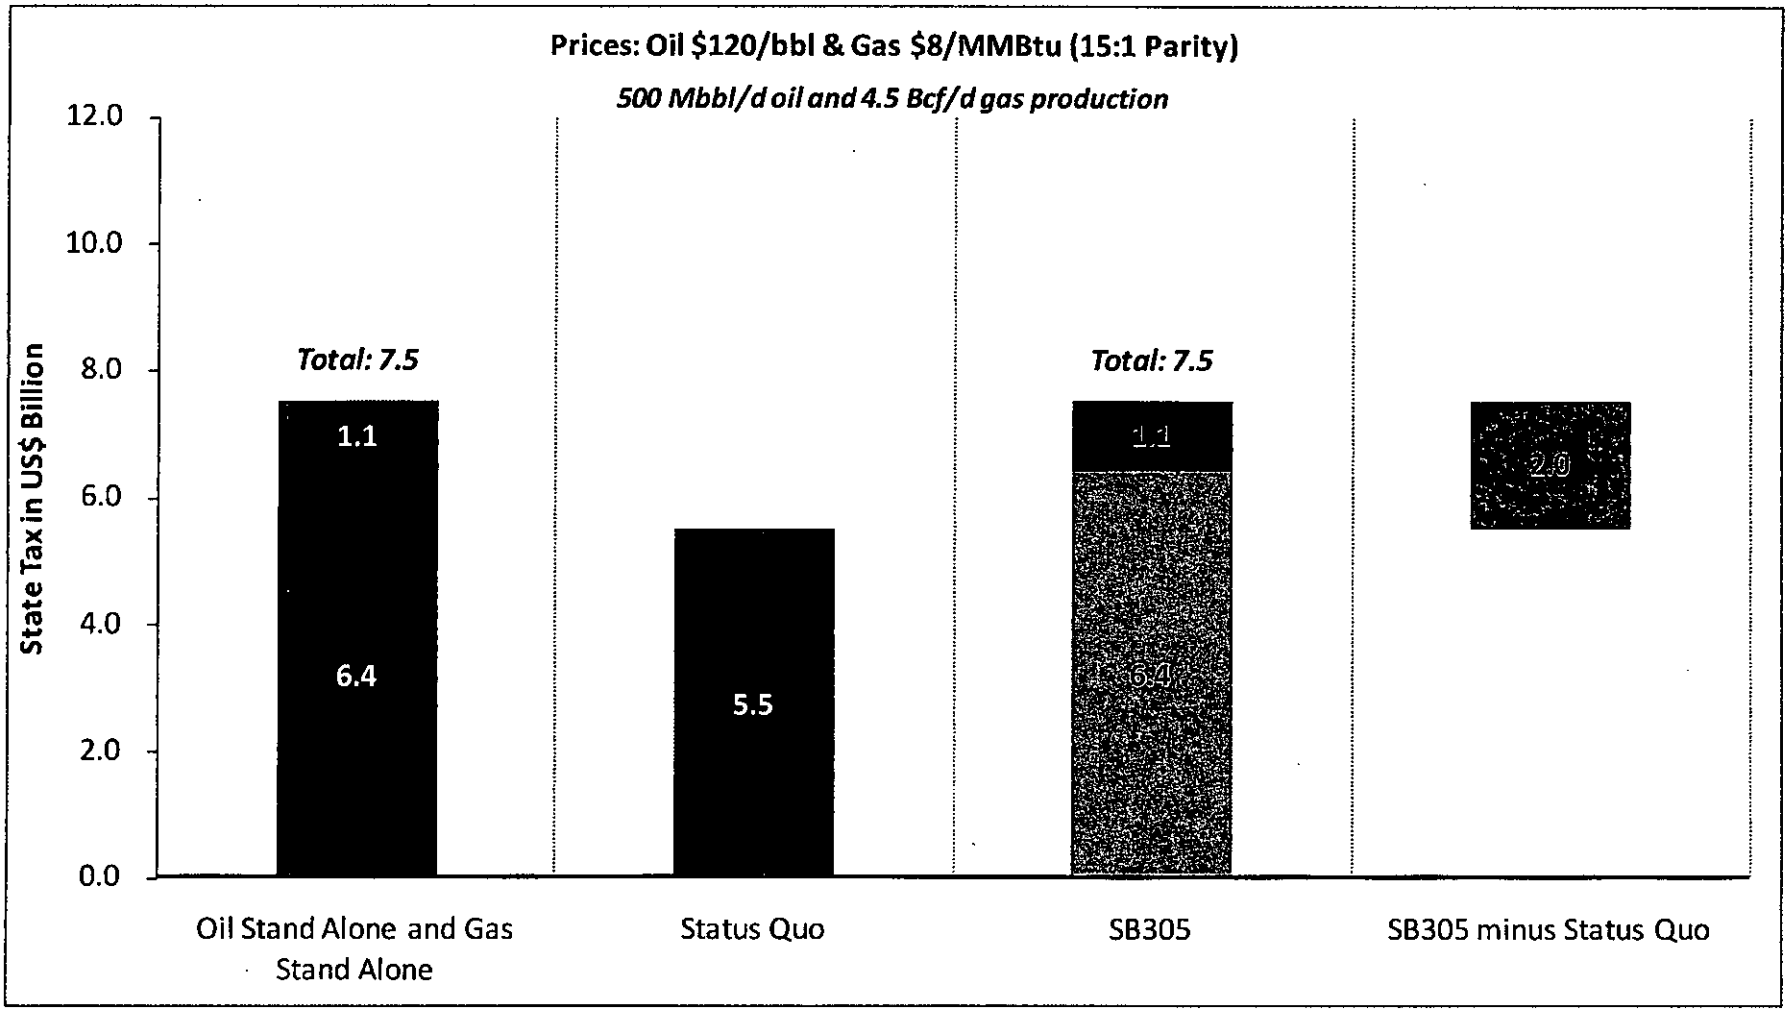
Revenue Projections Under SB305

- Using the Single Year "Income Statement" Model assumptions from previous DOR presentations
  - How does SB305 compare to the Status Quo at different oil to gas price parities?

"Income Statement" Model Assumptions

- Consistent with DOR presentation to Senate Finance Committee on February 24, 2010
- Production
  - Oil: 500,000 bbl/d
  - Gas: 4.5 Bcf/d
- BOE conversion
  6 Mcf = 1 BOE
- Costs allocation
  - Total Opex: $2,200,000,000
  - Total Capex: $2,200,000,000
  - Costs split 90%/10% for oil / gas
- Transportation
  - Oil: $6.5/bbl
  - Gas: $4.5/MMBtu

At high parity, SB305 > Status Quo

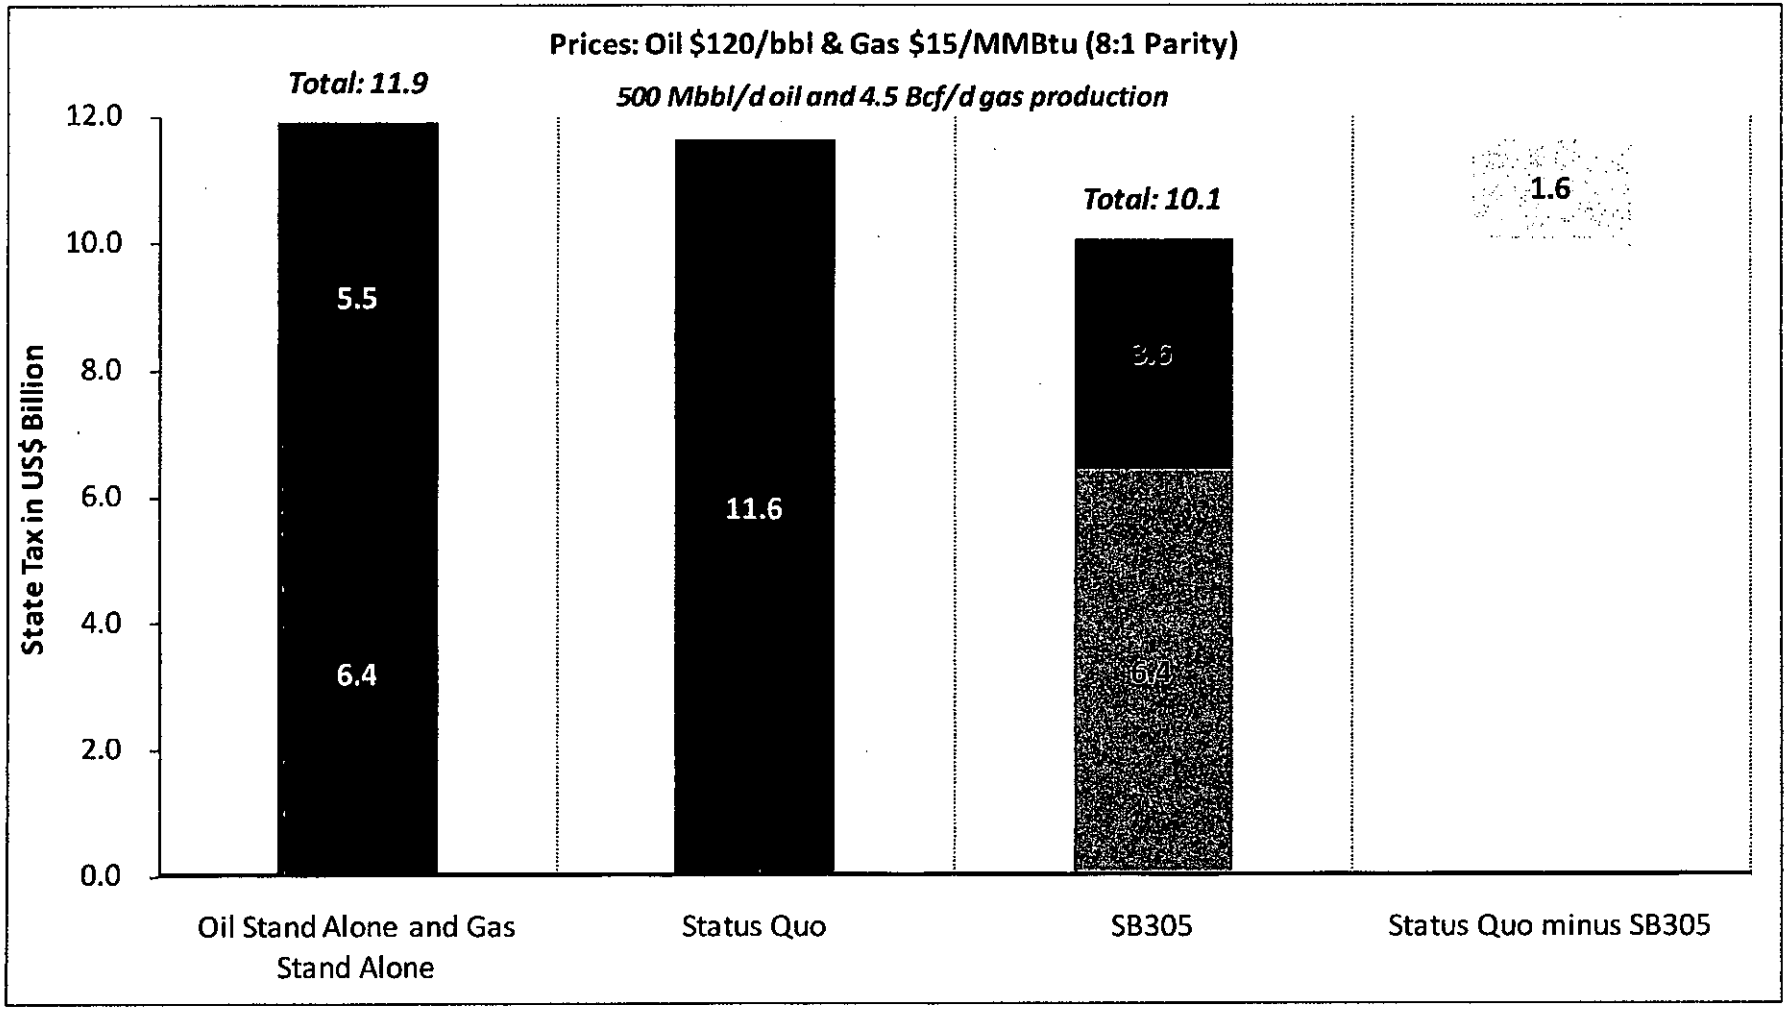


DOR

Note: Same as Commissioner presentation to Senate Finance Committee on February 24, 2010

3/12/2010

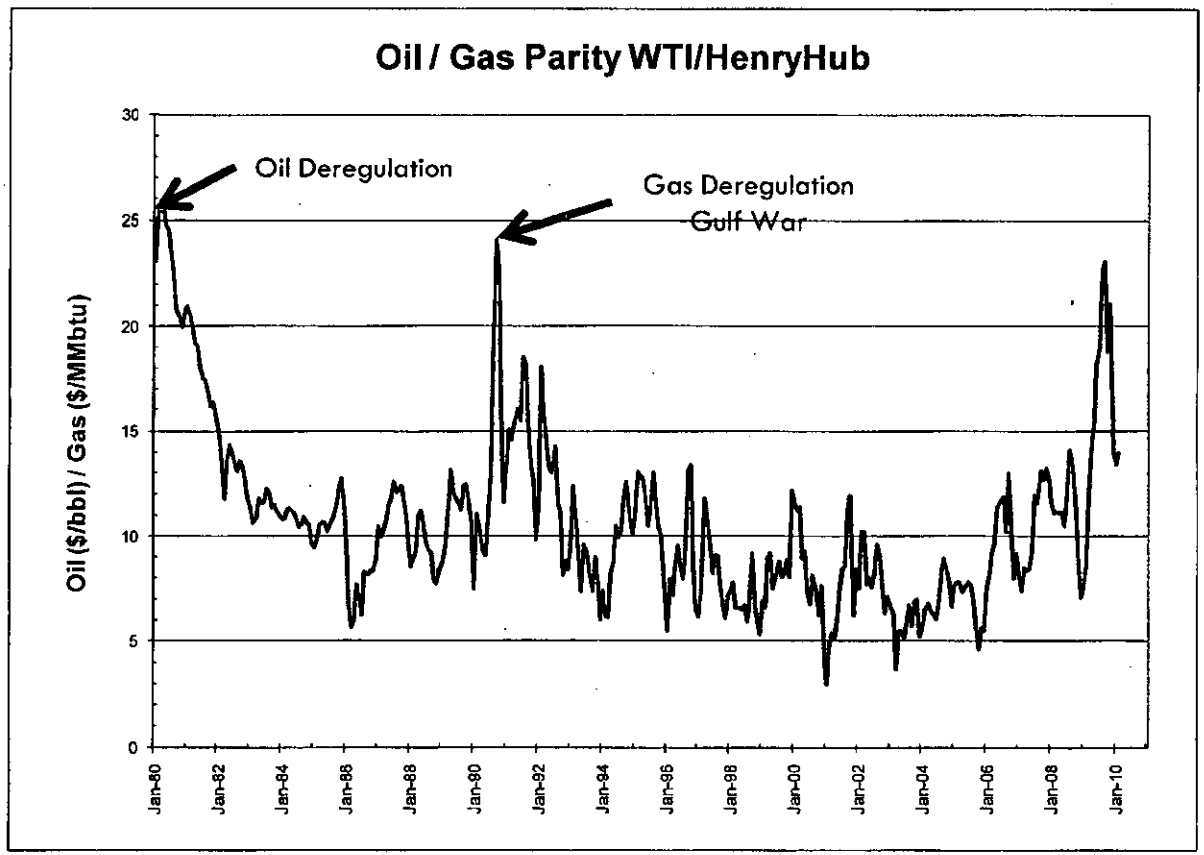
At lower parity, SB305 < Status Quo



Observations

- SB305 can lead to higher or lower state revenue compared to the status quo, depending on oil price and gas parity.
- SB305 provides for a lower state share compared to the status quo when upside profits and gas prices are relatively high (no gas progressivity).
- SB305 imposes a higher tax burden compared to the status quo when gas prices are relatively low.

The Oil/Gas Price Parity Guess....



....Where will it be in 2020 – 2045?

Topics

- Revenue Projections Under SB305 and Status Quo
- Cost Allocation
- Technical Issues Regarding SB305

Cost Allocation Issues

- With a separate oil and gas tax system, how costs are allocated between oil and gas has a significant impact on overall taxes owed
- Because oil and gas are generally produced together, it is not easy or straight forward to determine the costs "applicable to the gas [or oil] produced"
- The cost allocation method could result in uncertainty, disputes, and delays
- Cost allocation should be specified in the statute, and is a very important policy decision

Different Cost Allocation Options

- Detailed item by item attribution methods
- Formula or Rule based attribution methods

Item by Item Attribution Methods

- Used elsewhere in the world
- Generally self certified by the producers, checked by the regulator
- Historically attribution differences have led to a considerable number of disputes especially where there is significant difference in oil and gas tax rates (as we would have under SB305)
  - producer versus government
  - producer versus producer
    - Different producers are affected differently, so to the extent that producers have any discretion in how costs are allocated, it could result in disputes between working interest owners and delay investment decisions

Formula or Rule Based Methods

- May not accurately reflect the "true" purpose of the cost
- Examples include attributing costs based on
  - Proportion of Production (BOE)
  - Proportion of Sales (e.g. Gross Value at Point of Production)
  - Proportion of Reserves
  - Rule of dominant use - either gas or oil
  - Deemed oil unless item is 100% gas related
  - Combination of any of the above

Impact of Cost Allocation Choices

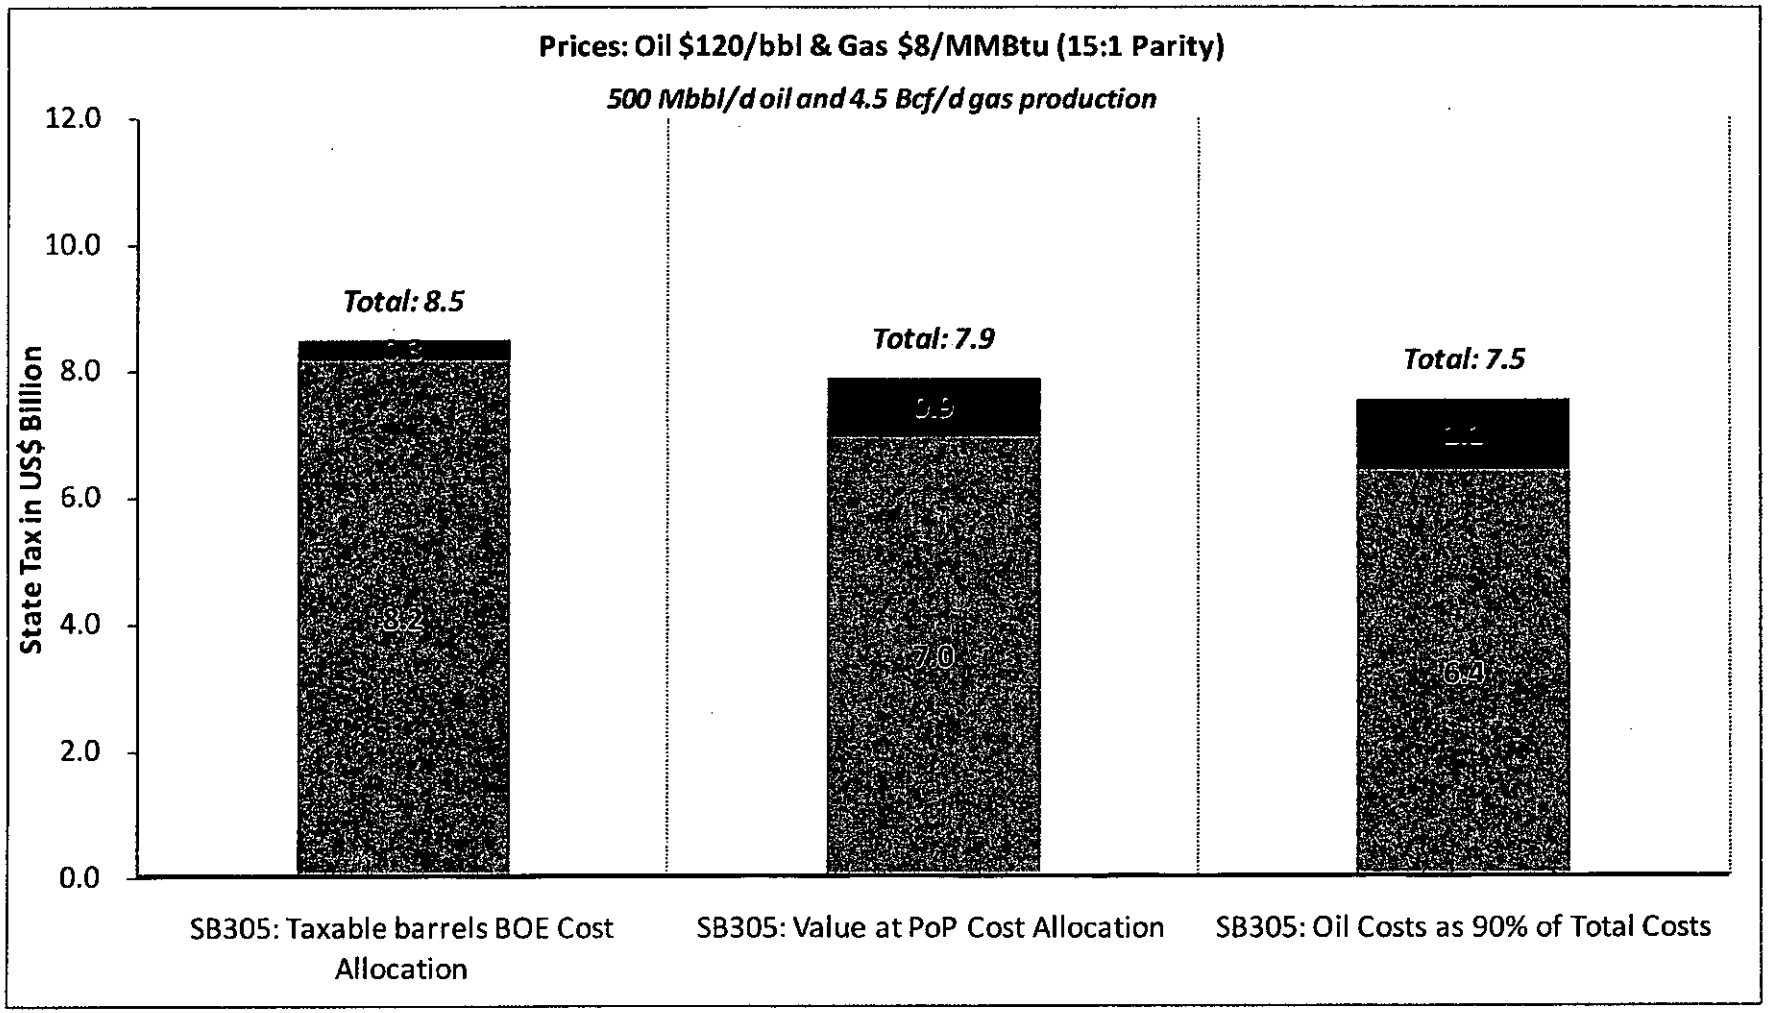
- SB305 requires the allocation of costs to oil or to gas, but does not describe the allocation method or guiding principles:
  - Actual allocation of individual costs would be highly impractical and would require significant auditing resources.

- To examine the potential economic impact of the allocation method, we compared three cost allocation possibilities:
  1. Costs allocated based on relative BOE production
  2. Costs allocated based on relative gross value at Point of Production (PoP)
  3. Assumed "actual" cost split of 90/10 between oil and gas

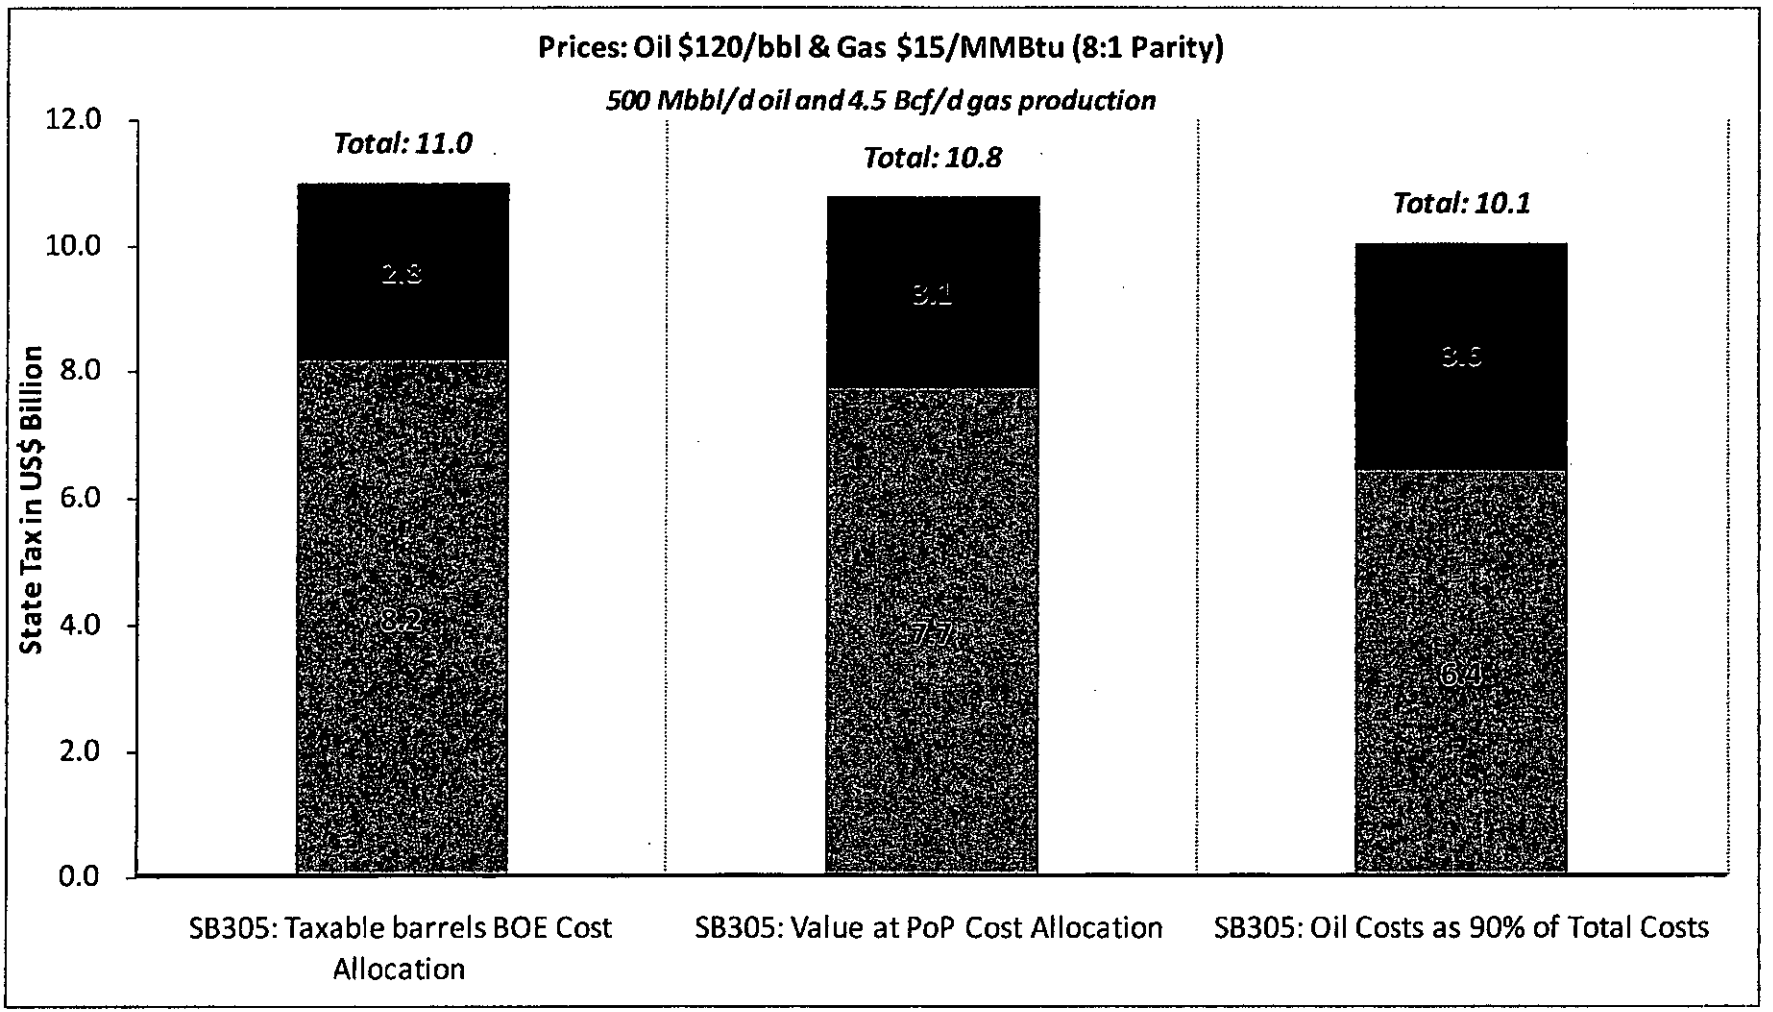
Cost Allocation Examples

	Oil	Gas	Total
Production (MMboe)	183	274	457
Gross Value at PoP (US$MM) – $120 and 15:1	20,714	5,749	26,463
Gross Value at PoP (US$MM) – $120 and 8:1	20,714	17,246	37,960
Split Based on BOE (%)	40%	60%	100%
Cost Allocation (US$MM)	1,760	2,640	4,400
Split Based on Gross Value at PoP (%) – 15:1	78%	22%	100%
Cost Allocation (US$MM)	3,444	956	4,400
Split Based on Gross Value at PoP (%) – 8:1	55%	45%	100%
Cost Allocation (US$MM)	2,401	1,999	4,400
Split Based on assumed "Actual" (%)	90%	10%	100%
Cost Allocation (US$MM)	3,960	440	4,400

Impact of Allocation Method on SB305 Revenue - Oil $120/bbl and 15 Parity ($8/MMBtu)



Impact of Allocation Method on SB305 Revenue - Oil $120/bbl and 8 Parity ($15/MMBtu)



Topics

- Revenue Projections Under SB305 and Status Quo
- Cost Allocation
- Initial Technical Issues Regarding SB305

SB305 Technical Issue

- Inconsistent treatment of negative production tax values - Current Monthly Installment Section .020 requires the tax estimates of NS, CI and other state areas to each be at least zero. SB305 lost this requirement when it deleted "greater of (i) zero...". Lack of this provision means a negative value in one region can reduce the estimated monthly tax values in other regions resulting in a lower total estimated monthly production tax value than provided under current law.

SB305 Technical Issue

- Timing of Adjustments under AS 43.55.170 (reimbursements) - SB305 revises Section 160(a)(1) and (2) to reference Lease Expenditures as adjusted under AS 43.55.170. Unclear if the adjustment is to occur before or after the allocation process. If after, then department needs authority and direction to allocate the Section .170 adjustments between oil and gas lease expenditures.

Conclusions

- Separating oil and gas taxes is not a panacea, and can raise new and different risks to state revenues compared to the status quo
- With uncertainties in the oil and gas markets and wildly fluctuating price forecasts, the tax system needs to be responsive to a wide range of potential price scenarios
- To achieve the state's objectives the tax system must balance the desire for revenue with creating an attractive investment climate for a gasline

The End

House Concurrent Resolution 10
Sponsor Statement

"Urging the Governor to file an action to restrain the United States Department of the Interior, National Park Service, from intruding on the sovereign right of the state to exercise jurisdiction over navigable water and submerged land and urging the Governor to allocate sufficient resources to the Department of Law, the Department of Natural Resources, and the Department of Fish and Game to defend the state's right to manage the public use of its navigable water."

The State of Alaska owns and has the right to manage submerged land and navigable water in the state, unless Congress has specifically limited the state's authority. However, due to federal action, Alaska is quickly losing one if its most valuable assets and Alaskans are losing the ability to access these resources.

Starting in 1996, the United States Department of the Interior, National Park Service, began regulating public use of Alaska's navigable waterways. In the past 12 years, despite the state's continued protest and efforts to administratively address this problem, Alaskans' right to access and use Alaskan land has been eroded.

House Concurrent Resolution 10 reaffirms our sovereignty and asks for the governor to file suit to protect our citizens from this inappropriate preemption of our state's rights. We must take action now to ensure that our right to manage our resources, as guaranteed by Alaska's Constitution, and both federal and state law, is protected.

February 13, 2009

Richard Svobodny
Acting Attorney General
State of Alaska
Department of Law
P.O. Box 110300
Juneau, Alaska 99811-0300

Dear Mr. Svobodny:

In 1996, over the strong objections of the State of Alaska and others, the National Park Service adopted regulations which improperly extended its management and enforcement authorities over state owned navigable waters within units of the National Park System. While the agency has been fairly restrained in its enforcement of the regulations, there have been a growing number of encounters between National Park Service rangers and the public. It is our understanding that one citation has been issued and commercial operators have been required to get permits to operate on the Yukon River within the Yukon Charley Rivers National Preserve, even though they do not use the upland areas of the preserve.

The regulations at 36 CFR §1.2(a)(3) state that National Park Service regulations apply to waters located within the boundaries of the National Park System, including navigable waters, "without regard to ownership of submerged lands, tidelands or lowlands." This is contrary to ANILCA Section 103(c) which clearly states that only public lands are included as a portion of a conservation system unit and that state or private lands are not subject to the regulations applicable solely to public lands within such units. As defined by ANILCA, public lands do not include State owned lands, including the submerged lands beneath navigable waters.

In publishing its rulemaking the Park Service classified Section 103(c) as a "minor technical provision." To the contrary, addition of this section was a key revision included in the concurrent resolution that led to the final passage of ANILCA. Section 103(c)

clearly indicates that Congress recognized that the authority of the State to regulate its lands and waters was not to be superseded by federal agency regulations.

Since adoption of the regulations the State of Alaska, through your office and the ANILCA Program, has worked to find an administrative solution to this issue. While the National Park Service generally does not dispute state ownership of submerged lands underlying navigable waters, it maintains that the NPS Organic Act and other general statutory authorities grant it the necessary authority to regulate activities on navigable waters.

In view of the National Park Service position, it appears that there can be no administrative solution to this issue. Therefore, under the authority granted by AS 41.37.240, the Citizens' Advisory Commission on Federal Areas respectfully requests the Department of Law bring suit against the National Park Service and ask the court to set aside these regulations.

We should note that Senator Bunde and Senator Therriault have introduced Senate Concurrent Resolution (SCR) No. 3 which urges the Governor to file suit challenging these regulations. The Commission fully concurs with that resolution.

We believe that this action is in the best interest of the State and is necessary to protect the State's authorities over its lands and waters. The Commission is committed to providing any help and support it can in this matter. Please contact us if we can be of assistance.

Sincerely,

Rick Schikora
Chairman

Navigability Program

- PAAD Notice regarding Director's Chuitna Report, Chuitna Field Trip Report
  - Director's Chuitna Report (04/04/08)
  - Chuitna Field Trip Report (09/08/08)

The mission of the Division of Land's Navigability Project is to protect the public rights associated with navigable and public waters, and to ensure that the state's title to lands beneath navigable waters is protected. The Alaska State Constitution provides for free access and common use of public and navigable waters by any citizen of the United States or resident of the State of Alaska. State ownership of the beds of navigable waters is an inherent attribute of state sovereignty protected by the United States Constitution.

The Division's Navigability Project will enable the State of Alaska to assert ownership of lands beneath navigable waters. This is important for two reasons: first, the public will be ensured access to these state lands; and second, if these lands are already owned by the State of Alaska, they shouldn't be counted against Alaska's statehood land entitlement or conveyed by the Federal Government to non-state ownership.

Policies and Proceduces on Ownership and Management of Navigable and Public Waters

June 18,1996 State ownership of the beds of navigable waters is an inherent attribute of state sovereignty protected by the United States Constitution. Utah v. United States, 482 U.S. 193 (1987). Under the doctrine, all states enter the Union on an equal footing with respect to sovereign rights and powers, title to the beds of navigable waters in Alaska vested in the newly formed State of Alaska in 1959. In addition, under the Alaska Constitution and the public trust doctrine, all waters in the state are held and managed by the state in trust for the use of the people, regardless of navigability and ownership of the submerged lands under the Equal Footing Doctrine.

The purpose of this paper is to describe the State of Alaska's policies and procedures for identifying and protecting the state's title to the beds of navigable waters. In addition, this paper outlines the legal and policy considerations which guide the ownership and management of submerged lands and public waters.

I. IDENTIFYING AND PROTECTING STATE TITLE TO THE BEDS OF NAVIGABLE WATERS

Identification and management of the beds of navigable waters is an important policy of the State of Alaska. In 1980, the state established a comprehensive navigability program to respond to federal land conveyances and land management activities under the Alaska Statehood act, the Alaska Native Claims Settlement Act (ANCSA), and the Alaska National Interest Lands Conservation Act (ANILCA). Pursuant to the provisions of those acts, the federal government has issued navigability determinations for thousands of lakes, rivers, and streams throughout the state in an effort to determine whether the state or federal government owns the submerged lands. Navigability determinations are also made prior to many state land disposals to insure that adequate public use easements are reserved.

The basic purpose of the state's program is to protect the public rights associated with navigable waters, including, in particular, the state's title to the submerged lands. Because state and native land selections and federal conservation units blanket the state, navigability questions have arisen for rivers, lakes, and

streams throughout Alaska. The navigability of many of those waterbodies has a lready been established. There are hundreds of others, however, where navigability is not yet determined.

To help resolve these navigability disputes, a major goal of the state's navigability program is to identify the proper criteria for determining title navigability in Alaska and to gather sufficient information about the uses and physical characteristics of individual waterbodies so that accurate navigability determinations can be made as disputes arise. Other important aspects of the program include monitoring federal land conveyance and management programs to identify particular navigability disputes, seeking cooperative resolution of navigability problems through negotiations and legislation, and preparing for statewide navigability litigation.

Return to Table of Contents

RIPARIAN RIGHTS AND STATUTE OF LIMITATIONS

Disputes over ownership of submerged lands in Alaska have arisen under a variety of circumstances. The principal source of the disputes in Alaska is the survey and acreage accounting system used by the federal government for conveying land to the state and native corporations.

The standard procedures for surveying and conveying federal land are found in the Manual of Instructions for the Survey of the Public Lands of the United States, generally known as the BLM Manual of Surveying Instructions. Under those procedures, consistently used in every public land state except Alaska, only uplands are surveyed and conveyed in fulfillment of acreage entitlements, not submerged lands. The survey rules require that all lakes 50 acres or larger, and rivers and streams three chains (198 feet) in width or wider, regardless of navigability, be meandered and segregated (excluded) from the surveyed public lands. Only the surveyed uplands are conveyed. The acreage of meandered rivers, lakes, and streams is not included in computing the amount of land involved in the conveyance.

In Alaska, however, the federal government had not consistently followed these survey rules. Until 1983, the federal government treated submerged lands the same as uplands. All bodies of water that were considered non-navigable by the federal government, regardless of size, were surveyed as though they were uplands and the acreage of submerged lands was charged against the total acreage entitlement.

Because of these conveyance procedures, the navigability of waterbodies in Alaska has been an issue of contention since the enactment of the Alaska Statehood Act and ANCSA. In addition to the problems caused by a lack of information about many waterbodies, the situation was exacerbated by the narrow definition of navigability used by the federal government. Hundreds of rivers, lakes, and streams considered navigable by the state were determined non-navigable by the federal government.

In 1983, following years of negotiations, lawsuits and legislative attempts to solve the navigability problems created by the unusual survey and conveyance procedures in Alaska, the State of Alaska, the United States Department of the Interior and the Alaska Federation of Natives (AFN) agreed that the standard rules of survey should be followed for land conveyances in Alaska. The effect of that decision was to treat Alaska surveys and land conveyances like federal land surveys and conveyances in other states. The recipients of conveyances from the federal government are charged only for the amount of public land that is calculated by the survey, which does not include the areas of meandered rivers, lakes and streams.

The use of these survey procedures has eliminated many of the problems associated with the federal land conveyance programs in Alaska. Submerged lands are no longer being conveyed to fulfill acreage entitlements. With the exception of lakes smaller than 50 acres and streams narrower than 198 feet, navigability determinations are no longer being made prior to federal land conveyances. Determinations of ownership of submerged lands can be put off until a natural resource use or conflict requires resolution, such as issuance of an oil and gas lease, mining claim, or a gravel sale.

Through the joint efforts of the State of Alaska, AFN, and the Department of the Interior, the 1983 decision to use the standard survey procedures for land conveyances in Alaska was legislatively approved in August 1988 when the United States Congress passed legislation (94 Stat. 2430) amending Section 901 of the Alaska National Interest Lands Conservation Act, codified at 43 U.S.C. 1631. The 1988 amendment, sometimes referred to as the Alaska Submerged Lands Act, requires that the standard rules of survey in the BLM Manual of Surveying Instructions be used for all federal surveys under the Alaska Statehood Act and ANCSA. The 1988 amendment also repealed the Section 901 statute of limitations that would have required the state to file a lawsuit within a very short period of time in order to preserve its title to the beds of

navigable waters conveyed to native corporations by the federal government as a result of erroneous navigability determinations, poor maps, surveys or whatever. Even with this legislation, a major problem concerning navigability decisions made by the federal government under the old system remains unresolved. At issue are the hundreds of erroneous non-navigability decisions and the resulting submerged land conveyances made to ANCSA corporations in previous years. In addition, to comply with the meandering requirements of the BLM Survey Manual, the federal government is still required to make navigability determinations for lakes smaller than 50 acres and rivers or streams narrower than 198 feet in width to determine if these waters must be meandered.

Return to Table of Contents

NAVIGABILITY CRITERIA

The greatest hurdle to overcome in the state's efforts to identify and manage navigable waters has been the long- standing differences of opinion between the State of Alaska and the United States regarding the application of the test for determining title navigability. Navigability is a question of fact, not a simple legal formula. Variations in waterbody use that result from different physical characteristics and transportation methods and needs must be taken into account. There are many legal precedents for determining navigability in other states based upon the particular facts presented in those cases. In Alaska, though, we are just beginning to get the final court decisions that are necessary to provide legal guidance for accurate navigability determinations.

The physical characteristics and uses of a waterbody used by the state for asserting navigability, commonly referred to as navigability "criteria", are based upon legal principles that have been established by the federal courts. These criteria are applied to rivers, lakes, and streams throughout the state and take into account Alaska's geography, economy, customary modes of water-based transportation, and the particular physical characteristics of the waterbody under consideration.

The federal test for determining navigability was established over a hundred years ago. In the landmark decision of The Daniel Ball, 77 U.S. (19 Wall.) 557, 563, (1870), the Supreme Court declared:

Those rivers must be regarded as public navigable rivers in law which are navigable in fact. And they are navigable in fact when they are used, or are susceptible of being used, in their ordinary condition, as highways of commerce, over which trade and travel are or may be conducted in the customary modes of trade and travel on water.

Although The Daniel Ball test is accepted as the correct standard for determining navigability, there has been a lot of disagreement over application of many of the terms and phrases used in The Daniel Ball test to the specific uses of Alaska's lakes, rivers and streams. The State of Alaska uses the following interpretation of that test as the basis for its navigability program.

The Waterbody Must Be Usable As a Highway For the Transportation of People or Goods. Interpreting the requirements that navigable waterbodies be used or usable as "highways of commerce", the courts have ruled that the central theme of title navigability is that the waterbody be capable of use as a highway which people can use for transporting goods or for travel. Neither the types of goods being transported nor the purpose of the travel are important in determining navigability. Transportation on water associated with recognized commercial activities in Alaska, such as mining, timber harvesting, and trapping is, evidence of navigability. The use of waterbodies for transportation in connection with natural resources exploration or development, government land management, management of fish and game resources, or scientific research is also evidence of navigability. Travel by local residents or visitors for the purpose of hunting, fishing, and trapping, or as a means of access to an area can be used to establish navigability. The same holds for recreational transportation, including personal travel and professionally guided trips.

Waters Which Are Capable of Being Used For Transporting Persons and Goods, Although Not Actually Used, Are Navigable. It is not necessary that a waterbody be actually used for transportation to be found navigable. It is enough that it is susceptible, or physically capable, of being used. Whether a waterbody is susceptible of use for transportation depends upon the physical characteristics of the water course such as length, width, depth, and, for a river, current and gradient. If those physical characteristics demonstrate that a waterbody could be used for the transportation of persons or goods, it is legally navigable.

The susceptibility element of title navigability is very important for the identification of navigable waterbodies in Alaska. Because of Alaska's sparse population and lack of development, there are hundreds

of remote rivers, lakes, and streams where there is little or no evidence of actual use. Because of their physical characteristics, however, many of these remote waterbodies could be used for transporting people or goods if there was a need. Under these circumstances, they are considered legally navigable.

Transportation Must Be Conducted In the Customary Modes of Trade and Travel On Water. A finding of navigability does not require use or capability of use by any particular mode of transportation, only that the mode be customary. The courts have held that customary modes of transportation on water include all recognized types and methods of water carriage. Unusual or freak contrivances adapted for use only on a particular stream are excluded. Customary modes of trade and travel on water in Alaska include, but are not limited to, barges, scows, tunnel boats, flat-bottom boats, poling boats, river boats, boats propelled by jet units, inflatable boats, and canoes. In places suitable for harvesting timber, the flotation of logs is considered a customary mode of transportation.

The mode of travel must also be primarily waterborne. Boats which may be taken for short, overland portages qualify. The courts have ruled that the use of a lake for takeoffs and landings by floatplanes is insufficient, in and of itself, to establish navigability.

Without expressly rejecting the claim, at least two court decisions in Alaska have suggested that winter travel on the surface of a frozen river or lake is probably not evidence of navigability. The rivers involved in the two adjudicated cases were both found navigable based upon summer use by boats, however, and it appears likely that most waterbodies in Alaska that are used as highways in winter can also be travelled by at least small boats in the summer. Because of this, the state need not rely upon winter travel to support navigability.

Waters Must Be Navigable In Their Natural and Ordinary Condition. A waterbody which can be used for transportation only because of substantial man-made improvements to the condition of the watercourse is not navigable for title purposes. However, if transportation does or could occur on the waterbody even without the improvements and the improvements would only make transportation easier or faster or possible for larger boats (e.g., dredging), it is still considered navigable for title purposes.

The presence of physical obstructions to navigation (rapids, falls, log-jams, etc.) does not render a waterway non- navigable if the obstruction can be navigated despite the difficulties or if the obstruction can be avoided by other means, such as portaging, lining, or poling. A waterbody is also navigable even if seasonal fluctuations do not allow it to be navigated at all times of the year. However, a waterbody which is only navigable at infrequent and unpredictable periods of high water is not normally considered navigable. The fact that a waterbody may be frozen for several months of the year does not render it non-navigable if it is navigable in its unfrozen condition.

Title Navigability Is Determined As Of The Date Of Statehood. To be considered navigable for title purposes, the waterbody must have been navigable in 1959 (when Alaska became a state). This element of the navigability test focuses on the physical characteristics of the waterbody and whether those characteristics have changed significantly since statehood. Most waterbodies have not physically changed enough since statehood to alter their navigability. Assuming there have been no significant changes in the physical characteristics of the waterbody, a waterbody that is navigable today would be considered legally navigable in 1959 as well. Exceptions might include the creation, by natural or man-made causes after statehood, of a totally new lake, river, or canal now used for navigation. Such a waterbody would not be considered navigable for title purposes. Conversely, a waterbody which was navigable in 1959 but, because of natural or man-made physical changes, is no longer navigable in fact would still be considered navigable for title purposes.

NAVIGABILITY CRITERIA DISPUTES

Because of differing legal interpretations of court navigability decisions, several aspects of the criteria used by the state to determine navigability have been disputed by the federal government. As a direct result of these criteria disputes, many waterbodies considered navigable by the state have been determined non-navigable by the federal government.

The major criteria dispute has been over the type or purpose of the transportation required to establish navigability. The federal government has asserted that a waterway must be used, or capable of use, for transporting commerce to be considered navigable. Other, "noncommercial" transportation uses are not

considered sufficient to establish navigability. In this context, the federal government has claimed that the only relevant "commercial" transportation is the distribution of goods for sale or barter, or the transportation for hire of people or things. The federal government has admitted that professionally guided transportation on Alaska's rivers, lakes and streams constitutes commerce, but nevertheless has argued that the waters are not being used as a navigable "highway" when recreation is involved, but rather more as an amusement park. The federal government has therefore claimed that waters used only for commercial recreation are legally nonnavigable even though they may be navigable in fact.

Through the work of the state's navigability program, this definition has been repeatedly rejected by the courts, most recently in the Gulkana River case. Alaska v. United States, 662 F.Supp.455 (D.Alaska 1987), affirmed sub nom. Alaska v. Ahtna, Inc., 891 F.2d 1401 (9th Cir. 1989). Applying the correct definition of navigability, many of the submerged lands that the federal government attempted to convey to ANCSA corporations should have been recognized as belonging to the state. The state appealed many conveyances to protect its title. As occurred in the Kandik-Nation Rivers appeal, Appeal of Doyon, 86 I.D. 692 (ANCAB 1979), Alaska Native Corporations also found it necessary to challenge erroneous federal determinations of non-navigability to insure they would not be deprived of any portion of their entitlement by being charged for submerged land owned by the state.

The federal government has also argued that aluminum boats, boats propelled by jet units, inflatable boats, and canoes are not customary modes of travel for the purpose of determining navigability in Alaska. As a result, many waterbodies navigated by these types of watercraft have been found legally non-navigable by the federal government. The claim is that these boats represent post-statehood technological advances, are too small to be considered "commercial", or that most "commercial" use of the watercraft developed after statehood.

Another navigability dispute involves remote, isolated lakes. The federal government has found many of these lakes legally non-navigable, even though they are physically capable of being navigated. The federal government's contention is that a navigable connection to another area is necessary to make travel on a remote lake worthwhile. Otherwise, the federal government views the lack of development in the area around the isolated lake as an indication that the lake will never be used for commercial transportation.

To resolve these navigability criteria disputes, the state has actively pursued a limited number of court cases challenging particular findings of non-navigability by the federal government. With the sole exception of floatplanes, the courts have agreed with the navigability criteria presented by the State of Alaska and have rejected the limitations suggested by the federal government. These cases include:

Gulkana River. In this case, both in the U.S. District Court and on appeal to the U.S. Court of Appeals, the federal courts rejected the federal government's restrictive interpretation of the phrase " highway of commerce" in the title navigability test. The federal district court stated that to demonstrate navigability, it is only necessary to show that the waterbody is physically capable of "the most basic form of commercial use: the transportation of people or goods." Because the Gulkana River can be used for the transportation of people or goods, the Gulkana River was found navigable. Alaska v. United States, 662 F.Supp.455 (D.Alaska 1987). On appeal, the court of appeals affirmed the district court's finding of navigability. Alaska v. Ahtna, Inc., 892 F.2d 1401 (9th Cir. 1989). The court of appeals found that the modern use of the Gulkana River for guided hunting, fishing, and sightseeing trips is a commercial use and, since the physical characteristics of the river have not significantly changed since 1959, provides conclusive evidence that the river was susceptible of commercial use at statehood. The court also found that modern inflatable rafts can be used to establish navigability. In April 1990, the United States Supreme court denied a request by Ahtna, Inc. to reconsider and overturn the court of appeals decision. The Gulkana River precedent is now binding on all future navigability determinations in Alaska.

Kandik and Nation Rivers. In this administrative appeal, the State of Alaska and Doyon Limited, an ANCSA regional corporation, successfully established that the use or susceptibility of use of a river or stream by an 18-24 foot wooden riverboat capable of carrying at least 1,000 pounds of gear or supplies is sufficient to establish navigability. Based upon the use of these types of boats for the transportation of goods and supplies by fur trappers, as well as extensive historic and contemporary canoe use, the court found the Kandik and Nation rivers, in Interior Alaska, navigable. Appeal of Doyon, 86 I.D.692 (ANCAB 1979).

Alagnak River. In this federal district court case, the Alagnak River, the Nonvianuk River, Kukaklek Lake and Nonvianuk Lake were all found navigable. These interconnected waterbodies are located in the Bristol Bay region of Alaska, south of Lake Iliamna. Their primary transportation use is for commercially guided hunting, fishing, and sightseeing and for government research and management. They also serve as a means of access for local residents to their homes and to the surrounding areas for subsistence hunting and

fishing. After several years of litigation, the federal government conceded that these rivers and lakes are navigable. Alaska v. United States, No. 82-201 (D.Alaska Feb. 2, 1985).

Matanuska River. The recommended decision in this administrative appeal agreed with the State of Alaska's position that post-statehood commercial river rafting operations are sufficient to establish navigability. Based upon that type of use, the administrative law judge who heard the case recommended that the Matanuska River, in Southcentral Alaska, be found navigable. The Secretary of Interior, over the state's objections, assumed jurisdiction over the case and stayed implementation of the recommended decision. No action has been taken in the case since that time. Appeal of Alaska, No. 82-1133 (IBLA Rec. Decision Aug. 18, 1983)

Slopbucket Lake. The state claimed that the extensive use of floatplanes on Slopbucket Lake, a twenty acre lake adjacent to Lake Iliamna, was sufficient to establish navigability. The federal courts rejected this view. The courts reasoned that floatplanes do not use the lake as a navigable highway; they just take off and land there. Alaska v. United States, 754 F.2d 851 (9th Cir.) cert denied, 106 S. Ct. 333 (1985).

Return to Table of Contents

IDENTIFICATION OF NAVIGABLE WATERS

Even if the criteria for determining navigability in Alaska were totally agreed upon, it still would be difficult to prepare a complete list of all of the navigable lakes, rivers, and streams in the state. Much of Alaska has not yet been surveyed and many maps are inaccurate and out-of-date. It is an immense and complex task simply to identify and locate all of the thousands of named and unnamed lakes, rivers, and streams in the state which might be considered navigable. Furthermore, once a potentially navigable lake, river, or stream has been identified, detailed information about its size and uses is necessary for an accurate navigability determination. Because of Alaska's undeveloped and remote character, gathering navigability information is both time consuming and expensive. Finally, administrative navigability determinations made by the state or the federal government are always subject to legal challenge, since only the courts can authoritatively determine title to submerged lands.

Despite these difficulties, both the state and the federal government are frequently called upon to issue navigability determinations. Although the requirement that BLM adhere to the meandering requirements of the BLM Survey Manual has eliminated the need for navigability determinations on the larger rivers, lakes, and streams, which must now be meandered regardless of navigability, navigability determinations are still required for the smaller rivers, lakes, and streams to determine if they are to be meandered at the time of survey. Because of this, some navigability determinations are still made for nearly every federal land conveyance under ANCSA or the Alaska Statehood Act. The management plan for nearly every federal Conservation System Unit (CSU) also addresses the navigability issue.

Federal navigability determinations are reviewed by the state to insure that available information sources were used and interpreted correctly. Where the federal government determines non-navigable a waterbody which is considered navigable by the state, the state may provide the government with supplemental information about the uses and characteristics of the waterbody to obtain a redetermination of navigability. Under some circumstances the state needs to make its own navigability determinations, such as for a oil and gas lease sale, land disposal, material sale, mining claim, or another use of state land or resources requiring a determination of ownership of submerged lands within the affected area.

For large, undeveloped regions of Alaska there may be little or no accurate waterbody use or physical characteristics information available for making navigability determinations. When information is lacking, and it must make a navigability determination, the state is forced to rely solely upon the physical characteristics shown on maps and aerial photographs. In these cases, the state identifies as navigable all streams depicted on the U.S.G.S. maps with double lines (generally at least 70 feet wide) and having an average gradient over the length of the stream of no more than 50 feet per mile. With rare exceptions, the state's experience has been that streams of this type are deep enough and wide enough to be navigable by boats carrying persons or goods and must, therefore, be considered legally navigable. Streams depicted with single lines, although narrower in width, may also be listed as potentially navigable if they have gradients of substantially less than 50 feet per mile and are at least 10 miles.

If there is no public use or physical characteristics information readily available for lakes, those lakes which are shown on maps and aerial photographs as having a navigable water connection with other navigable waters, or which are accessible by short overland portages, are considered navigable regardless of the size

of the lake. These lakes are part of a system of interconnected navigable waters. If a lake is totally isolated, it will be included on the state's navigability maps if it is at least 1 1/2 miles long. That length insures that the lake can be used as a "highway". Future judicial decisions interpreting the "highway" requirement for isolated lakes could shorten or lengthen this 1 1/2 mile "rule of thumb."

The state recognizes that, under some circumstances, lakes smaller than 1 1/2 miles long can be and are used as navigable highways. In those cases, when known, these smaller lakes are also depicted on the state's navigability map. Moreover, as a matter of administrative policy and convenience only, the state may sometimes make an exception to the 1 1/2 mile standard in the extremely wet regions of the state, including some areas in the Yukon- Kuskokwim Delta, Yukon Flats, and on the North Slope. In these areas, an isolated lake might need to be 2-3 miles long to be included on the state's navigability maps. Although smaller lakes in these areas are capable of being used for transportation and should be found navigable by the courts, the state has decided to concentrate its limited resources in protecting the larger waterbodies first.

Return to Table of Contents

NAVIGABLE WATERS WITHIN PRE-STATEHOOD FEDERAL WITHDRAWALS

Although disputes over which waters in Alaska are navigable are the most frequent cause of submerged land ownership disputes, there is another major legal issue which poses a threat to Alaska's sovereign claim to the beds of navigable waters. Even where navigability is conceded, the federal government often contends that title to the submerged lands did not vest in the state if the area was withdrawn or reserved by the federal government on the date of statehood. Within native conveyance areas, the federal government has used this claim of "reserved submerged lands" to justify its attempts to convey the beds of navigable waters in fulfillment of the native entitlements. Within state selections, the federal government has used the same claim to charge the acreage of submerged lands against the state's entitlement.

The state strongly disagrees with this federal claim and has actively pursued a number of court challenges to resolve the issue. In addition to numerous appeals from federal decisions to convey or charge for the beds of navigable waters, the state was actively involved as a friend of the court in one case before the United States Supreme Court and continues to be involved in another Supreme Court case which presents this issue. The pending case is United States v. Alaska, U.S. Supreme Court 84 Original (filed June, 1979).

On June 8, 1987 the Court issued its decision in Utah v. United States, No. 85-1772 (filed Oct. 14, 1986). In this case the federal government, in 1976, issued oil and gas leases for land underlying Utah Lake, a navigable waterbody located in Utah. The suit sought a declaratory judgement that Utah, rather than the United States, holds the lands under navigable waters in the territories in trust for future states, and, absent a prior conveyance by the federal government to third parties, a state acquires title to such land upon entering the Union on an "equal footing" with the original 13 states.

The Supreme Court held that title did pass to the state upon Utah's admission to the Union. They held that there is a strong presumption against finding congressional intent to defeat a state's title, and, that in light of the longstanding policy of the federal government's holding land under navigable waters for the ultimate benefit of future state absent exceptional circumstances, an intent to defeat a state's equal footing entitlement could not be inferred from the mere act of the reservation itself. The United States would not merely be required to establish that Congress clearly intended to include land under navigable waters within the federal reservation, but would additionally have to establish that Congress affirmatively intended to defeat the future state's title to such land.

This decision has significant ramifications within Alaska, since over 95 million acres - more than 25% of the total area of the state - was enclosed within various federal withdrawals and reservations at the time Alaska became a state.

Return to Table of Contents

NAVIGABLE WATERS WITHIN ANILCA CONSERVATION SYSTEM UNITS

On December 2, 1980, the Alaska National Interest Lands Conservation Act became law. This act created or added 104.3 million acres to various federal conservation system units. Because these "withdrawals" occurred after the date of statehood, there is no disagreement between the state and federal governments that navigable waters within the various CSU's are owned by the state. However, there is some

disagreement on the amount of authority the federal land managers may have to regulate these state owned submerged lands.

The U.S. Constitution gives Congress certain limited powers to control uses on state owned submerged land. These are known as the Property Clause, Navigational Servitude and the Commerce Clause. The extent of these powers involves complex legal questions. However, even assuming that Congress has the power to regulate state-owned submerged lands in Alaska, the United States Supreme Court has ruled that Congress may choose not to exercise that power, thus leaving regulation totally up to the state. Escanaba Co. v. Chicago, 107 U.S. (17 Otto.) 678 (1883). Whether Congress has done that can only be determined by examining the federal laws passed by Congress dealing with Alaska lands. Another possibility is that the state and federal governments have concurrent jurisdiction, sharing the authority to regulate submerged lands.

In ANILCA, Congress did not take away the state's power to regulate state-owned submerged lands within federal CSU's in Alaska. Numerous provisions in ANILCA recognize and respect the state's authority over state-owned land. In some cases, however, Congress may have attempted to give the federal land managers some concurrent authority to regulate navigable waters within CSU's.

The state, where possible, cooperates with rather than confronts the federal land managers. This cooperation often takes the form of a memorandum of understanding that discusses management issues and how they will be resolved. Differences do occur, however, over issues such as column management and restrictions on mining.

II. LEGAL AND POLICY GUIDELINES GOVERNING MANAGEMENT OF SUBMERGED LANDS AND PUBLIC WATERS

PUBLIC TRUST DOCTRINE

The state has special duties and management constraints with respect to state-owned land underlying navigable waters. These special duties and management constraints arise from the Alaska Constitution. The Alaska Constitution contains numerous provisions embracing the principles commonly known as the public trust doctrine. The public trust doctrine is remarkable both for its age and for its vigor. Rooted in the customs of the seafaring Greeks and Romans, it has evolved to become one of the most effective safeguards of public rights. Basically, the trust reflects an understanding of the ancient concept that navigable waters, their beds and their banks, should be enjoyed by all the people because they are too important to be reserved for private use.

In America, the concept of public rights to public waters was recognized since the early days of the Massachusetts Bay Colony where the great Pond Ordinance of 1641 guaranteed the right to fish and fowl in ponds greater than 10 acres, along with the freedom to pass through private property to do so.

By 1821, American courts were pronouncing the law of public trust as we know it today. This does not mean that no water-related development can take place. The public trust doctrine permits states to improve waterways by constructing ports, docks and wharves, thus furthering the purposes of the trust. Generally speaking, the people's trust rights may be alienated only in ways that further overall trust uses, and in relatively small parcels.

Illinois Central Railroad Company v. Illinois, 146 U.S. 387,452 (1982), involved a grant by the State of Illinois of one thousand acres of the bed of Lake Michigan, constituting the entire harbor of the City of Chicago, to the Illinois Central Railroad. The U.S. Supreme Court held that the grant was revocable, that the state held the land in trust for the public, and that it was powerless to relinquish its rights as trustee.

The court went on to say that land underlying navigable waters is much more than a simple property right.

[I]t is a title different in character from that which the state holds in lands intended for sale. It is different from the title which the United States holds in the public lands which are open to preemption and sale. It is a title held in trust for the people of the state that they may enjoy the navigation of the waters, carry on commerce over them, and have liberty of fishing therein freed from the obstruction or interference of private parties... The trust devolving upon the state for the public, and which can only be discharged by the

management and control of property in which the public has an interest, cannot be relinquished by a transfer of the property.

In the 19th century the purposes of the trust were generally described as "commerce, navigation and fishery." This was logical because the major waterways were essential highways of commerce. But as other values became increasingly important, courts began to recognize recreation and environmental protection among the purposes for which the trust exists. As a California court said in 1971, "with our ever increasing leisure time...and the ever increasing need for recreational areas it is extremely important that the public need not be denied use of recreational water...the rule is that a navigable stream may be used by the public for boating, swimming, fishing, hunting and all recreational purposes." People ex rel. Baker v. Mack, 19 Cal. App. 3d 1040, 1044 (1971).

The Alaska constitution provides protections similar to the public trust doctrine protections that cannot be disregarded by the legislature or overruled by the courts. Article VIII, Sec. 3 provides; "Wherever occurring in their natural state, fish, wildlife and waters are reserved to the people for common use." After reviewing the public trust doctrine in Owsichek v. State, Guide Licensing, 763 P.2d 488 (Alaska 1988), the Alaska Supreme Court explained that "the common use clause was intended to engraft in our constitution certain trust principles guaranteeing access to the fish, wildlife and water resources of the state."

In CWC Fisheries, Inc. v. Bunker, 755 P2.d 1115 (Alaska 1988), the Alaska Supreme Court applied the public trust doctrine to tidelands, holding that, even after conveyance, the title remains subject to continuing public easements for purposes of navigation, commerce and fishery.

The 1985 Alaska legislature recognized the constitution application of public trust doctrine principles in Alaska. In an Act relating to the public or navigable waters of the state, the legislature found that "the people of the state have a constitutional right to free access to the navigable or public waters of the state" and that the state "holds and controls all navigable or public waters in trust for the use of the people of the state". 85 SLA Ch. 82. In the same act, the legislature ruled that submerged lands are "subject to the rights of the people of the state to use and have access to the water for recreational purposes or any other public purpose for which the water is used or capable of being used consistent with the public trust."

Courts in other states over the years have defined in somewhat different ways the public uses that are permitted and protected by the public trust as it applies to submerged lands. In reviewing these other cases, it can clearly be seen that through time an ever expanding definition of the public uses protected by the public trust doctrine is being adopted. The California Supreme Court recently held that:

Although early cases had expressed the scope of the public's right in (lands subject to the public trust) as encompassing navigation, commerce and fishing, the permissible range of public uses is far broader, including the right to hunt, bathe or swim, and the right to preserve the (public trust) lands in their natural state as ecological units for scientific study. City of Berkeley v. Superior Court of Alameda, 606 P.2d 362, 365 (Cal. 1980)

It is clear under the Alaska Constitution that the State of Alaska has the responsibilities of a trustee with respect to management of land underlying navigable waters. Moreover, the Alaska legislature has adopted a broad view of the public uses protected or permitted by the public trust. Accordingly, the Alaska Attorney General's Office has determined that, until the Alaska Supreme Court rules on the question, the state should assume that a broad definition of public rights protected by the Alaska Constitution and the public trust doctrine applies in Alaska, similar to the one adopted by the California Supreme Court. 1982 Atty. Gen. Op. No. 3 (June 10, 1982).

Return to Table of Contents

PUBLIC WATERS

It is not only the beds of navigable waters in Alaska that are reserved in public ownership for public use. Under article VIII, Section 3 of the Alaska Constitution, all waters occurring in their natural state are reserved to the people for common use. Article VIII, Section 14 of the Alaska Constitution also provides for the broadest possible access to and use of state waters by the general public.

Section 14. Access to Navigable Waters. Free access to the navigable or public waters of the state, as defined by the legislature, shall not be denied any citizen of the United States or resident of the state, except that the legislature may by general law regulate and limit such access for other beneficial uses or

public purposes.

Pursuant to this grant of authority, the Alaska State Legislature, in AS 38.05.365(12), defined "navigable waters" as follows:

"navigable waters" means any water of the state forming a river, stream, lake, pond, slough, creek, bay, sound, estuary, inlet, strait, passage, canal sea or ocean, or any other body of water or waterway within the territorial limits of the state or subject to its jurisdiction, that is navigable in fact for any useful public purpose, including but not limited to water suitable for commercial navigation, floating of logs, landing and takeoff of aircraft, and public boating, trapping, hunting waterfowl and aquatic animals, fishing, or other public recreational purposes.

This definition of navigable waters does not define state ownership of submerged land in Alaska. The definition of navigability for ownership purposes was discussed earlier in this paper. This definition, however, does define what types of waterbodies in Alaska are available for public use under the Alaska statutes.

The Alaska State Legislature has broadly construed the constitutional protections for public use of the waters of the state. In an Act (85 SLA chap. 82, codified as AS 38.05.128) relating to the navigable or public waters of the state, the state legislature found:

(a)The people of the state have a constitutional right to free access to the navigable or public waters of the state.

(b) Subject to the federal navigational servitude, the state has full power and control of all of the navigable or public waters of the state, both meandered and unmeandered, and it holds and controls all navigable or public waters in trust for the use of the people of the state.

(c) Ownership of land bordering navigable or public waters does not grant an exclusive right to the use of the water and any rights of title to the land below the ordinary high water mark are subject to the rights of the people of the state to use and have access to the water for recreational purposes or any other public purposes for which the water is used or capable of being used consistent with the public trust.

(d) This Act may not be construed to affect or abridge valid existing rights or create any right or privilege of the public to cross or enter private land.

AS 38.05.128 provides:

OBSTRUCTIONS TO NAVIGABLE WATER

(a) A person may not obstruct or interfere with the free passage or use by a person of any navigable water unless the obstruction or interference is:

(1) authorized by a federal agency and a state agency; (2) authorized under a federal or state law or permit; (3) exempt under 33 U.S.C. 1344(f) (Clean Water Act); (4) caused by the normal operation of freight barging that is otherwise consistent with law; or (5) authorized by the commissioner after reasonable public notice.

(b) An unauthorized obstruction or interference is a public nuisance and is subject to abatement. The cost of abatement shall be borne by the violator and is in addition to any penalty imposed by the court.

(c) This section may not be construed to affect or abridge valid existing rights.

(d) Free passage or use of any navigable water includes the right to use land below the ordinary high water mark to the extent reasonably necessary to use the navigable water consistent with the public trust.

(e) Free passage or use of any navigable water includes the right to enter adjacent land above the ordinary high water mark as necessary to portage around obstacles or obstructions to travel on the water, provided:

(1) entry is made without injury or damage to the land; (2) entry is made in the least obtrusive manner possible; (3) there is no reasonable alternative available to avoid the use of the adjacent land above the

ordinary high water mark; and (4) the navigable water is reentered immediately below the obstacle or obstruction at the nearest point where it is safe to do so.

(f) A violation of (a) of this section is a class B misdemeanor.

Thus, under the Alaska Constitution and this statute, any surface waters capable of use by the public defined in AS 38.05.365(12) are available to the public, irrespective of streambed ownership. Further, such public use is not considered a taking and is not subject to inverse condemnation action. Private ownership is subject to the public rights that are protected by the public trust.

In two Montana Supreme Court cases involving the nature of public rights where the submerged lands are privately owned, the court rules that public portaging, anchoring, and other uses incidental to the use of the water are allowed. The court also found that if travel on the water or streambed is obstructed, the public is allowed to use the adjacent private land to portage around the barrier in the least intrusive way possible, avoiding damage to the property holder's rights. However, the public does not have the right to enter into or trespass across private property in order to enjoy the recreational use of state-owned waters. The State of Alaska agrees with this ruling and believes a similar ruling would be made by our state courts.

Return to Table of Contents

BOUNDARIES OF NAVIGABLE WATERS

The state is often asked where public ownership of water bodies ends and private ownership begins. There are two types of water body boundaries to address: 1) non-tidal water boundaries and 2) tidal water boundaries. Non-tidal boundaries are boundaries of lakes, rivers, and streams. Tidal boundaries are the boundaries along any body of water which is influenced by the rise and fall of the tides.

1. Non-tidal Water Boundaries The boundary between public and private ownership is the "Ordinary High Water Mark" which is defined in 11 AAC 53.900(23) as being - The mark along the bank or shore up to which the presence and action of the non-tidal water are so common and usual, and so long continued in all ordinary years, as to leave a natural line impressed on the bank or shore and indicated by erosion, shelving, vegetation, or other distinctive physical characteristics. Also see the Alaska State Supreme Court definition in Department of Natural Resources v. Pankrantz 538 P.2d 984, 988-89 (Alaska 1975). The ordinary high water line can usually be observed by the laymen simply by noting the vegetation line or well defined stream banks.

2. Tidal Water Boundaries The boundary between tidal water bodies and private/public owned uplands is the Mean High Water Line. Mean high water line as defined by 11 AAC 53.900(15) is: The tidal datum plane of the average of all the high tides, as would be established by the National Geodetic Survey, at any place subject to tidal influence.

This line is not readily observable because it is a line of known elevation which intersects the land surface. The mean high water line can be a considerable distance below the vegetation line because extreme high water will denude the beach above the line of mean high water. The only way that the location of mean high water line can be accurately determined is by differential leveling from known bench marks or by operating a tide gauge for a sufficient period of time to determine the mean high water elevation. The line of mean high water line can be approximated by time coordinated observations of the daily predictions for high and low waters, predicted by NOAA, as they relate to the published mean high water elevation. This method can be highly unreliable because small errors in the predictions or observations can transform into large errors in the horizontal location; this is especially true in areas where the beach gradient is very flat.

It is important to note that in some areas, such as Prince William Sound, the mean high water line boundary is considerably higher than the current mean high water line because the boundary became fixed at the 1964 pre-quake location. In this instance the boundary between state-owned tidelands and the uplands would be established at an elevation which equals the sum of the mean high water elevation plus the published amount of uplift or, in some cases, submergence.

Return to Table of Contents

CONCLUSION

This paper describes the state's policies and procedures for managing and protecting state submerged lands

and public waters. As further legal and practical developments occur in this area, these policies and procedures will be reexamined by the state and, if necessary, appropriate changes will be made.

Re: State of Alaska's Comments on the Proposed Rule at 60 Federal Register 62233 (December 5, 1995)

Dear Ms. Finnerty:

The State of Alaska has reviewed the proposed rule published December 5, 1995, at 60 Fed. Reg. 62233. These comments represent the consolidated views of various state agencies and replace the overview of comments previously provided to Solicitor Leshy.

The proposed rule would revise portions of the National Park Service's (NPS) general regulations, as well as certain provisions governing National Park System units in Alaska. Primarily at issue is whether NPS should extend regulatory jurisdiction over all navigable waters within park boundaries, regardless of ownership of the submerged lands. The proposed rule is not a simple "clarification" of prior law as the NPS has attempted to portray. The regulations would substantively and inappropriately extend NPS jurisdiction.

The State opposes the proposed rule and urges that it be withdrawn for the following reasons:

- The Federal Register notice fails to adequately address potential effects of this rulemaking in light of the draft NPS subsistence policy and management in Alaska and the State of Alaska v. Babbitt case.

- The federal government has no authority to regulate waters within the boundaries of conservation system units where Alaska owns the submerged lands.

03-C32LH

printed on recycled paper by C.D.

4912

- The proposed rule is premature given that the Alaska National Interest Lands Conservation Act's definition of "public lands" is still in question.

- The NPS has failed to show other authority, e.g. the Commerce Clause, for its proposed action.

- Proposed definitional changes are inconsistent with existing law.

For these reasons, the NPS does not have the authority to extend its regulatory jurisdiction to all navigable waters within park boundaries, regardless of ownership of the submerged lands. These and other issues are documented in greater detail in the attachment, which should be considered part of the State's formal comments.

If NPS has concerns about particular activities occurring on navigable waters within park boundaries in Alaska, the State encourages NPS to discuss these concerns with the appropriate state representatives. We believe that many issues of particular concern to NPS can be resolved through ongoing cooperative efforts.

Thank you for your consideration of this letter and the attachment.

Very truly yours,

Bruce Botelho
Attorney General

State of Alaska's Comments on the Proposed Rule at 60 Fed. Reg. 62233, December 5, 1995:

A. The Federal Register notice fails to adequately address potential effects of this rulemaking in light of the draft NPS subsistence policy and management in Alaska and the State of Alaska v. Babbitt case.

At the present time, an extensive statewide review of subsistence management and policy is underway within NPS. In fact, NPS has requested public review and comment until May 1, 1996 on its "Draft Review of Subsistence Law and National Park Service Regulations." In light of this ongoing internal review, the State believes the present rulemaking is premature and recommends that this rulemaking be postponed in order to consider the outcome of the subsistence program review. Remaining comments are provided without the benefit of this information.

B. The proposed rule is more than a "clarification" of prior law; it substantively extends NPS jurisdiction.

In the Federal Register notice, NPS states that the proposed rulemaking is designed to "clarify" that existing NPS regulations apply on navigable waters within National Park System units regardless of ownership of the submerged lands, and that the proposed rule does not create new or additional regulatory controls.

NPS claims this "clarification" of previous regulatory intent was made necessary by a seal hunting case in Glacier Bay National Park. United States v. Greg Brown. NPS states the seal hunting case made it aware that 36 C.F.R. § 1.2(b) "inadvertently incorporated language that seems ambiguous and could preclude park regulation of 'non-federally owned . . . waters.'" However, the proposed rule does not "clarify" existing regulations; it substantively extends NPS jurisdiction to areas not previously regulated.

Despite NPS' representations, 36 C.F.R. § 1.2(b) is not ambiguous. It clearly states that NPS regulations do not apply on non-federally owned waters.[1] The only exception

---

1 Section 1.2(b) states:

> Except for regulations containing provisions that are specifically applicable, regardless of land ownership, on lands and waters within a park area that are under the legislative jurisdiction of the United States, the regulations contained in parts 1 through 5 and part 7 of this chapter do not apply on non-federally owned

to this rule is for non-federally owned lands and waters under the legislative jurisdiction of the United States. For areas under the legislative jurisdiction of the United States, NPS regulations apply only when the regulations are made specifically applicable regardless of land ownership. 36 C.F.R. § 1.2(b). There is no dispute that state owned lands and waters within Glacier Bay National Park, and most every other park system unit in Alaska, are not within the legislative jurisdiction of the United States.

Other NPS regulations reaffirm the unambiguous language and intention of 36 C.F.R. § 1.2(b). For example, the regulations applying to park units in Alaska state: "The regulations contained in this part 13 are applicable only on federally owned lands within the boundaries of any park area. . . ." 36 C.F.R. § 13.2(e).[2] See also 36 C.F.R. § 13.1(p) (defining "public lands" to mean lands in Alaska "which are federally owned lands"); 36 C.F.R. § 13.65(a) (humpback whale protection regulations, expressly stating they are an exception to §§ 1.2(b) and 13.2(e) and therefore apply on all navigable waters within Glacier Bay National Park).

Indeed, in the Glacier Bay seal hunting case, the United States openly acknowledged the express limitation in 36 C.F.R. § 1.2(b) on its regulatory jurisdiction. See United States v. Brown, No. 94-30019, United States' brief to the Ninth Circuit Court of Appeals at 5-6, 9 (submitted May 12, 1994) (conceding that, for NPS general regulations to be enforceable against Mr. Brown, 36 C.F.R. § 1.2(b) requires that the United States prove either legislative jurisdiction over Glacier Bay National Park or ownership of the submerged lands in question). Thus, in dismissing the Brown prosecution, the United States recognized the unambiguous language of its regulations. The United States conceded it does not have legislative jurisdiction over Glacier Bay National Park, see id. at 5, and decided not to attempt to prove ownership of the submerged lands in that case.

Contrary to NPS' assertion in the Federal Register, both the language and intent of its 1983 and 1987 regulatory revisions were that NPS regulations did not apply to non-federally owned lands and waters, unless those lands and waters were under the legislative jurisdiction of the United States. See 48 Fed. Reg. 30252 at 30261, 30275 (June 30, 1983) (regulations do not apply to state owned inholdings within national park boundaries unless those areas are under the legislative jurisdiction of the United States).

The regulatory revision in 1987 simply "clarified" that state owned lands would

---

lands and waters . . . within the boundaries of a park area.

2 For the reasons discussed in these comments, the State opposes the proposed deletion of this statement in 36 C.F.R. § 13.2(e).

be treated like privately owned lands, and NPS regulations would not apply as a matter of course to either private or state lands and waters within park boundaries. See 52 Fed. Reg. 12037 (April 14, 1987) (proposing to clarify that NPS regulations only would apply to state owned lands and waters within park boundaries if those areas were under the legislative jurisdiction of the United States); 52 Fed. Reg. 35238, 35239 (Sept. 18, 1987) (certain NPS regulations apply to non-federally owned lands and waters within park boundaries only if those areas are under the legislative jurisdiction of the United States).

For these reasons, it is at best misleading for NPS to characterize the proposed rule as a "clarification" and not a substantive extension of regulatory jurisdiction. The proposed action substantially extends NPS jurisdiction to areas not previously covered by its regulations. The exclusion of state owned lands and waters from prior and existing regulations was not "inadvertent" but by express design. By not acknowledging these facts in its December 5, 1995 Federal Register notice, NPS significantly understates the effect of its proposed rule.

C. The federal government has no authority to regulate waters within the boundaries of conservation system units where Alaska owns the submerged lands.

On the substance of NPS' proposed action, the State disagrees that NPS has authority to extend its regulatory jurisdiction to all waters within park system boundaries, including navigable waters, and without regard to ownership of submerged lands.

The State has consistently objected to previous attempts by NPS to grant itself such extraterritorial authority in proposed rulemaking, e.g., Alaska's comments dated Nov. 1, 1991 (regarding proposed rule published Aug. 5, 1991). We reiterate our objections to NPS' efforts to extend regulatory jurisdiction to lands and waters lawfully owned and managed by the State.[3]

The proposed extension of NPS authority appears to be particularly dramatic in Alaska. Numerous navigable waterways run through the exterior boundaries of nearly all of the thirteen multi-million acre park units in the state. These waterways are often used for transportation and for many other activities. Under the proposed rule, NPS would apparently

---

3 Under the constitutional doctrine of equal footing and confirmed by the Submerged Lands Act of May 22, 1953, the Alaska Statehood Act of July 7, 1958, and the Alaska Constitution, the State of Alaska owns and therefore is responsible for the management of all water columns, shorelands, tidelands, and submerged lands, including the resources located within or on such lands and waters.

intend to regulate these activities. For example, under the proposed rule, NPS might require an NPS Commercial Use Permit for the commercial barging and ferry service interests currently operating on the navigable Yukon River as it passes through the Yukon-Charley Rivers Preserve, despite the fact that the State presently manages water uses, access and activities on those waters. Such an assertion of general jurisdiction is not permitted by the Alaska National Interest Lands Conservation Act (ANILCA) or other applicable law.

One of Congress' primary purposes in enacting ANILCA was to preserve vast quantities of lands and waters in Alaska. 16 U.S.C. § 3101. Congress implemented this purpose in part by creating "conservation system units" (CSUs). By definition, CSUs include any unit in Alaska of the National Park System. 16 U.S.C. § 3102(4).

However, not all lands within Glacier Bay National Park or other national park units in Alaska are included as part of the CSU. ANILCA section 103(c) states in relevant part:

> Only those lands within the boundaries of any conservation system unit which are public lands (as such term is defined in this Act) shall be deemed to be included as a portion of such unit.
>
> 16 U.S.C. § 3103(c).[4]

Similarly, in coastal areas, ANILCA section 103(a) excludes lands seaward of the mean high tide line from the boundaries of areas added by ANILCA to the National Park System. 16 U.S.C. § 3103(a).

ANILCA Section 103(c) further provides that those lands not included within the conservation system unit are not subject to federal regulation:

> No lands which, before, on, or after the date of enactment of this Act, are conveyed to the State, to any Native Corporation, or to any private party shall be subject to the regulations applicable solely to public lands within such units.
>
> 16 U.S.C. § 3103(c).

---

4 The legislative history of ANILCA § 103(c) makes clear Congress' intent to exclude lands which are not owned by the U.S. from conservation system unit regulations. The history specifies that "only public lands (and not State or private lands) are to be subject to the conservation system unit regulations applying to public lands." 126 Cong. Rec. S15129-32 (daily ed. Dec. 1, 1980) (statement of Sen. Stevens).

Legislative history establishes that Congress took this action fully aware of Kleppe v. New Mexico, 426 U.S. 529 (1976) and its progeny, which might arguably support extension of federal regulatory control over non-federally owned lands.[5] Congress directly and knowingly limited federal regulatory authority to "public lands" within conservation system units and specifically exempted inholdings from regulation. 16 U.S.C. § 3103(c). NPS recognized this fact in promulgating 36 C.F.R. § 13.2(e). See 46 Fed. Reg. 31836, 31843 (June 17, 1981) (ANILCA §§ 103(c) and 906(o) restrict the applicability of NPS regulations to federally owned lands within park boundaries; therefore, 36 C.F.R. § 13.2(e) applies only to federally owned lands).

In the case of parks in Alaska, any submerged lands underlying navigable waters within park boundaries are "inholdings" belonging to the State of Alaska. See Submerged Lands Act of 1953, 43 U.S.C. § 1311(a); Utah Div. of State Lands v. United States, 482 U.S. 193 (1987). Federal regulation does not apply to these waters.[6] The NPS therefore does not have authority to regulate navigable waters within park boundaries regardless of ownership.

If identical regulations addressing both state and federally owned lands or waters are particularly desirable in certain instances or for certain issues, the State encourages NPS to discuss these with the appropriate state regulatory entity. Through a cooperative effort, the goal of consistent regulation of especially significant issues can be lawfully achieved. Without State consent and cooperation, however, NPS may not extend its regulatory jurisdiction as proposed.

D. The proposed rule is premature given that the definition of "public lands," over which ANILCA permits some federal regulation, is still in question.

As noted earlier, the Federal Register notice does not address the proposed rule's potential effect on the implementation of ANILCA's Title VIII subsistence priority, and the State requests that NPS address the rule's implications for subsistence management and

---

5 The State does not concede this authority. While there is case law in the Eighth Circuit that appears to support this contention, the question of extra-territorial regulation is not yet resolved. In any event, NPS does not purport to rely on Congress' Property Clause power to justify this proposed action.

6 The fact that ANILCA (and existing NPS regulations) specifically exclude state lands and waters from NPS general jurisdiction is also reflected in the General Management Plans adopted for park units in Alaska.

policy.[7]

ANILCA specifically limits federal regulatory authority in conservation system units to "public lands." Accordingly, federal jurisdiction depends on whether the waters in question constitute "public lands" as defined in ANILCA.

Although the State asserts the definition of "public lands" does not include any navigable waters where the state owns the submerged lands, this question is currently unresolved. The Alaska Supreme Court's decision in Totemoff v. State, as well as Judge Hall's dissent from the Ninth Circuit opinion in State of Alaska v. Babbitt (also commonly known as the "Katie John" case), conclude that navigable waters are not "public lands" under ANILCA. See Totemoff v. State, 905 P.2d 954 (Alaska 1995); State of Alaska v. Babbitt, ___ F.3d ___, 1995 WL 749795 (9th Cir., Dec. 19, 1995). This issue is presently before the U.S. Supreme Court on a petition for certiorari. Accordingly, the NPS should withdraw these regulations until they can be reassessed in light of the Babbitt litigation once it has been finalized.

E. The NPS has failed to show other authority for its proposed action.

NPS asserts that Congress' Commerce Clause power provides authority for NPS' regulation of non-federally owned lands and waters within park boundaries. However, NPS fails to explain where it derives its Commerce Clause power, and how its power is co-extensive with Congress' Commerce Clause powers.

Moreover, even assuming NPS has some authority to regulate pursuant to the Commerce Clause, the United States Supreme Court has confirmed that the Commerce Clause power is not unlimited. See United States v. Lopez, ___ U.S. ___, 115 S. Ct. 1624 (1995). To rely on this power, NPS must satisfy traditional Commerce Clause analysis, including a showing as to how the regulated activities "substantially affect" interstate commerce. Id. at 1629-30.

NPS' Federal Register notice makes no effort to undertake a Commerce Clause analysis, and the state does not agree that the Commerce Clause permits the proposed action. Cf. State of Alaska v. Babbitt, ___ F.3d ___, 1995 WL 749795 (9th Cir., Dec. 19, 1995) (majority opinion concludes that Congress did not intend to exercise its Commerce Clause authority to regulate subsistence fishing in Alaska's navigable waters; dissenting opinion

---

7 Along this line, we note that the proposed revision to 36 C.F.R. § 13.2(c) deletes Sitka National Historical Park from the list of park units where subsistence activities are prohibited. This change is not addressed by NPS in its notice.

concludes that subsistence fishing in navigable waters does not "substantially affect" interstate commerce).[8]

Nor does NPS otherwise justify its authority to extend general regulatory jurisdiction over non-federally owned waters within park boundaries. NPS cites to 16 U.S.C. § 1a-2(h); however, the authority set forth therein is limited. That section permits NPS to promulgate and enforce regulations concerning boating and related activities; it does not provide general jurisdiction over non-federally owned waters within park boundaries. Likewise, the fact that NPS may enforce Coast Guard regulations on navigable waters within park boundaries does not provide authority over navigable waters for other purposes.

As examples of its asserted authority, NPS cites park-specific regulations that have applied on navigable waters within certain parks. However, these limited instances do not justify this proposed rule. In the case of Glacier Bay National Park, the State cooperated with the National Marine Fisheries Service and NPS in the adoption of regulations deemed necessary to protect whales. These special whale regulations were identified as an exception to NPS' general regulatory authority. See 13 C.F.R. §13.65(a), (b)(2). This example does not imply that NPS has jurisdiction to enact other regulations applying to waters owned by the State.

F. Proposed definitional changes are inconsistent with existing law.

Though the State's objections to NPS' proposed definitional changes should be clear from the preceding comments, we address the following comments specifically to NPS' proposed definitional revisions.

NPS' proposed revision of "boundary" at 36 C.F.R. § 1.4 would broadly include "the limits of lands or waters administered by the National Park Service" as "published or posted by the National Park Service." This definition grants to NPS the ability to define "boundaries" essentially as it chooses, on a case-by-case basis.

This definition is not permissible under ANILCA. ANILCA Section 103 directs that the conservation system units created by ANILCA shall have specific and defined boundaries. 16 U.S.C. § 3103 (a), (b), (c). Pursuant to the mandate in ANILCA § 103(b),

---

8 In any case, even if the proposed action could be justified under a Commerce Clause analysis, the Submerged Lands Act expressly limits that authority as it applies to this situation. See 43 U.S.C. § 1311(a) (confirming state title and ownership of lands beneath the navigable waters within the states, as well as the natural resources within those lands and waters, and providing states rights to manage those lands and natural resources).

NPS published in 1992 a legal description of the external boundaries of national park units established or expanded by ANILCA. 57 Fed. Reg. 45166 (Sept. 30, 1992).

As a result of these authorities, the proposed definition of "boundary" would conflict with the determined boundaries of park units and with ANILCA's defined areas of NPS authority. NPS is not free to ignore these existing legal boundaries, nor may it grant itself authority to amend park boundaries simply by posting a notice of intent. Accordingly, NPS may not broadly revise "boundary" as proposed.[9]

The proposed revision to 36 C.F.R. § 13.2(e), including the revised definition of "federally owned lands," likewise is not permitted by ANILCA. Under ANILCA, "federally owned lands" include lands, title to which is in the Untied States. 16 U.S.C. § 3102. Thus, State and privately owned lands cannot be defined as "federally owned lands," as they apparently would be under the proposed rule. ANILCA prohibits this definitional change, as well as NPS' attempt to extend its jurisdiction to state owned lands and waters.

G. No notice of the proposed rule was provided to the State despite ongoing meetings with NPS regarding Glacier Bay National Park.

To promote cooperation between state and federal resource managers, Alaska agency representatives participate in quarterly meetings with the NPS field director to discuss issues involving park units in Alaska. In addition, state representatives and commercial fishing interests have embarked upon good faith discussions with NPS to resolve potential conflicts arising from activities on state waters adjacent to Glacier Bay. In fact, on December 5, 1995, the day this proposed rule was published in the Federal Register, the Superintendent of Glacier Bay National Park met with state representatives, fishermen, special interest groups and others to seek cooperative resolution of problems related to activities on waters adjacent to the park.

The State is troubled that, despite these ongoing meetings, NPS provided no notice of the proposed extension of NPS regulations over all navigable waters within park boundaries, regardless of ownership, especially since the seal hunting case in Glacier Bay inspired the proposed rulemaking.

To avoid compromising the effectiveness of these ongoing cooperative efforts,

---

9 Similarly, NPS may not use such a broadened definition of "boundary" to assert general jurisdiction over state-owned lands and waters administered by NPS pursuant to a cooperative agreement. NPS and the State have entered into several cooperative agreements which grant NPS some limited administrative authority over state lands or waters. We do not contemplate that these agreements can be construed to permit broader federal authority over these areas.

the State urges the NPS field office to alert us of pending rulemakings in the future and to promote discussion of the issues involved.

Conclusion

The State disagrees that NPS has authority to extend its regulatory jurisdiction to all navigable waters within park boundaries regardless of ownership of the submerged lands. Consistent with the above discussion, the state requests that NPS withdraw the proposed rule.

Rep. Mike Hawker
Alaska State Legislature
Juneau, AK

Dear Rep. Hawker,

I am in full support of HCR 10 opposing federal interference in the management and enjoyment of state lands and navigable waterways. Once again we must defend Alaska and her sovereign inalienable rights against federal control.

I am proud to see the leadership you and have taken on this issue. I wish to remind others of the solemn oath taken by all Legislators, and the Governor herself, in the promise to protect and defend the Constitution of the State of Alaska.

The sovereign entity of Alaska is at the heart of this issue and there should be no opposition to the full and complete defense of it. Time is of the essence in order to rid our state of this cancer.

In my opinion, an elected official who would not employ whatever legal means necessary to correct this gross error, is in violation of the oath of office.

Very Truly Yours,

Raymond Hickel

RE: House Concurrent Resolution 10

I request that House Concurrent Resolution 10, regarding navigable waters, be scheduled for a hearing in the House Resources Committee at your earliest convenience. HCR 10 reaffirms our sovereign right to manage state resources and calls on the Governor to take action to protect that right.

I have attached a Sponsor Statement, copy of the bill, and background materials. I would like to request a teleconference offnet for John Sturgeon (Anchorage – 230-0072) and for Tina Cunning, Subsistence & Federal Issues Coordinator, Department of Fish & Game (267-2248).

Please feel free to contact me if you need any additional information. You can also call Juli Lucky at 465-6587. Thank you.

HJR7 - Endorsing ANWR Leasing

"Urging the United States Congress to pass legislation to open the coastal plain of the Arctic National Wildlife Refuge to oil and gas exploration, development, and production."

Status: PREFILE RELEASED >> (H) RES : 2009-01-22

House Joint Resolution 7 urges the United States Congress to pass legislation to open the coastal plain of the Arctic National Wildlife Refuge to oil and gas exploration and production.

ANWR remains a key component of our nation's effort to achieve energy independence. Combining environmentally responsible oil production with renewable energy sources like wind, solar and hydro will reduce and could someday even eliminate our dependence on crude oil from nations that are hostile to the United States.

New directional drilling technology will protect the delicate arctic ecosystem and shrink the size of the development footprint. Someday it may even be possible to drill outside the 1002 area.

All the reasons for opening ANWR are still valid. Failing to even address the issue only slows down America's effort to gain true energy security in the future.

Opening ANWR is more important for America's economy and national security than ever. HJR 7 expresses the Alaska Legislature's desire to see the 1002 area open as soon as possible and respectfully asks congress to pass legislation permitting oil and gas exploration and development to go forward.

111th CONGRESS

1st Session

H. R. 49

To direct the Secretary of the Interior to establish and implement a competitive oil and gas leasing program that will result in an environmentally sound program for the exploration, development, and production of the oil and gas resources of the Coastal Plain of Alaska, and for other purposes.

IN THE HOUSE OF REPRESENTATIVES

January 6, 2009

Mr. YOUNG of Alaska introduced the following bill; which was referred to the Committee on Natural Resources, and in addition to the Committees on Energy and Commerce and Science and Technology, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned

A BILL

To direct the Secretary of the Interior to establish and implement a competitive oil and gas leasing program that will result in an environmentally sound program for the exploration, development, and production of the oil and gas resources of the Coastal Plain of Alaska, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the `American Energy Independence and Price Reduction Act'.

SEC. 2. DEFINITIONS.

In this Act:

(1) COASTAL PLAIN- The term `Coastal Plain' means that area described in appendix I to part 37 of title 50, Code of Federal Regulations.

(2) SECRETARY- The term `Secretary', except as otherwise provided, means the Secretary of the Interior or the Secretary's designee.

SEC. 3. LEASING PROGRAM FOR LANDS WITHIN THE COASTAL PLAIN.

(a) In General- The Secretary shall take such actions as are necessary--

(1) to establish and implement, in accordance with this Act and acting through the Director of the Bureau of Land Management in consultation with the Director of the United States Fish and Wildlife Service, a competitive oil and gas le[+]ng program that will result in an environmentally sound program for the exploration, development, and production of th FEEDBACK gas resources of the Coastal Plain; and

(2) to administer the provisions of this Act through regulations, lease terms, conditions, restrictions, prohibitions, stipulations, and other provisions that ensure the oil and gas exploration, development, and production activities on the Coastal Plain will result in no significant adverse effect on fish and wildlife, their habitat, subsistence resources, and the environment, including, in furtherance of this goal, by requiring the application of the best commercially available technology for oil and gas exploration, development, and production to all exploration, development, and production operations under this Act in a manner that ensures the receipt of fair market value by the public for the mineral resources to be leased.

(b) Repeal-

(1) REPEAL- Section 1003 of the Alaska National Interest Lands Conservation Act of 1980 (16 U.S.C. 3143) is repealed.

(2) CONFORMING AMENDMENT- The table of contents in section 1 of such Act is amended by striking the item relating to section 1003.

(c) Compliance With Requirements Under Certain Other Laws-

(1) COMPATIBILITY- For purposes of the National Wildlife Refuge System Administration Act of 1966 (16 U.S.C. 668dd et seq.), the oil and gas leasing program and activities authorized by this section in the Coastal Plain are deemed to be compatible with the purposes for which the Arctic National Wildlife Refuge was established, and no further findings or decisions are required to implement this determination.

(2) ADEQUACY OF THE DEPARTMENT OF THE INTERIOR'S LEGISLATIVE ENVIRONMENTAL IMPACT STATEMENT- The `Final Legislative Environmental Impact Statement' (April 1987) on the Coastal Plain prepared pursuant to section 1002 of the Alaska National Interest Lands Conservation Act of 1980 (16 U.S.C. 3142) and section 102(2)(C) of the National

Environmental Policy Act of 1969 (42 U.S.C. 4332(2)(C)) is deemed to satisfy the requirements under the National Environmental Policy Act of 1969 that apply with respect to prelease activities, including actions authorized to be taken by the Secretary to develop and promulgate the regulations for the establishment of a leasing program authorized by this Act before the conduct of the first lease sale.

(3) COMPLIANCE WITH NEPA FOR OTHER ACTIONS- Before conducting the first lease sale under this Act, the Secretary shall prepare an environmental impact statement under the National Environmental Policy Act of 1969 with respect to the actions authorized by this Act that are not referred to in paragraph (2). Notwithstanding any other law, the Secretary is not required to identify nonleasing alternative courses of action or to analyze the environmental effects of such courses of action. The Secretary shall only identify a preferred action for such leasing and a single leasing alternative, and analyze the environmental effects and potential mitigation measures for those two alternatives. The identification of the preferred action and related analysis for the first lease sale under this Act shall be completed within 18 months after the date of enactment of this Act. The Secretary shall only consider public comments that specifically address the Secretary's preferred action and that are filed within 20 days after publication of an environmental analysis. Notwithstanding any other law, compliance with this paragraph is deemed to satisfy all requirements for the analysis and consideration of the environmental effects of proposed leasing under this Act.

(d) Relationship to State and Local Authority- Nothing in this Act shall be considered to expand or limit State and local regulatory authority.

(e) Special Areas-

(1) IN GENERAL- The Secretary, after consultation with the State of Alaska, the city of Kaktovik, and the North Slope Borough, may designate up to a total of 45,000 acres of the Coastal Plain as a Special Area if the Secretary determines that the Special Area is of such unique character and interest so as to require special management and regulatory protection. The Secretary shall designate as such a Special Area the Sadlerochit Spring area, comprising approximately 4,000 acres.

(2) MANAGEMENT- Each such Special Area shall be managed so as to protect and preserve the area's unique and diverse character including its fish, wildlife, and subsistence resource values.

(3) EXCLUSION FROM LEASING OR SURFACE OCCUPANCY- The Secretary may exclude any Special Area from leasing. If the Secretary leases a Special Area, or any part thereof, for purposes of oil and gas exploration, development, production, and related activities, there shall be no surface occupancy of the lands comprising the Special Area.

(4) DIRECTIONAL DRILLING- Notwithstanding the other provisions of this subsection, the Secretary may lease all or a portion of a Special Area under terms that permit the use of horizontal drilling technology from sites on leases located outside the Special Area.

(f) Limitation on Closed Areas- The Secretary's sole authority to close lands within the Coastal Plain to oil and gas leasing and to exploration, development, and production is that set forth in this Act.

(g) Regulations-

(1) IN GENERAL- The Secretary shall prescribe such regulations as may be necessary to carry out this Act, including rules and regulations relating to protection of the fish and wildlife, their habitat, subsistence resources, and environment of the Coastal Plain, by no later than 15 months after the date of enactment of this Act.

(2) REVISION OF REGULATIONS- The Secretary shall periodically review and, if appropriate, revise the rules and regulations issued under subsection (a) to reflect any significant biological, environmental, or engineering data that come to the Secretary's attention.

SEC. 4. LEASE SALES.

(a) In General- Lands may be leased pursuant to this Act to any person qualified to obtain a lease for deposits of oil and gas under the Mineral Leasing Act (30 U.S.C. 181 et seq.).

(b) Procedures- The Secretary shall, by regulation, establish procedures for--

(1) receipt and consideration of sealed nominations for any area in the Coastal Plain for inclusion in, or exclusion (as provided in subsection (c)) from, a lease sale;

(2) the holding of lease sales after such nomination process; and

(3) public notice of and comment on designation of areas to be included in, or excluded from, a lease sale.

(c) Lease Sale Bids- Bidding for leases under this Act shall be by sealed competitive cash bonus bids.

(d) Acreage Minimum in First Sale- In the first lease sale under this Act, the Secretary shall offer for lease those tracts the Secretary considers to have the greatest potential for the discovery of hydrocarbons, taking into consideration nominations received pursuant to subsection (b)(1), but in no case less than 200,000 acres.

(e) Timing of Lease Sales- The Secretary shall--

(1) conduct the first lease sale under this Act within 22 months after the date of the enactment of this Act;

(2) evaluate the bids in such sale and issue leases resulting from such sale, within 90 days after the date of the completion of such sale; and

(3) conduct additional sales so long as sufficient interest in development exists to warrant, in the Secretary's judgment, the conduct of such sales.

SEC. 5. GRANT OF LEASES BY THE SECRETARY.

(a) In General- The Secretary may grant to the highest responsible qualified bidder in a lease sale conducted pursuant to section 4 any lands to be leased on the Coastal Plain upon payment by the lessee of such bonus as may be accepted by the Secretary.

(b) Subsequent Transfers- No lease issued under this Act may be sold, exchanged, assigned, sublet, or otherwise transferred except with the approval of the Secretary. Prior to any such approval the Secretary shall consult with, and give due consideration to the views of, the Attorney General.

SEC. 6. LEASE TERMS AND CONDITIONS.

(a) In General- An oil or gas lease issued pursuant to this Act shall--

(1) provide for the payment of a royalty of not less than 12 1/2 percent in amount or value of the production removed or sold from the lease, as determined by the Secretary under the regulations applicable to other Federal oil and gas leases;

(2) provide that the Secretary may close, on a seasonal basis, portions of the Coastal Plain to exploratory drilling activities as necessary to protect caribou calving areas and other species of fish and wildlife;

(3) require that the lessee of lands within the Coastal Plain shall be fully responsible and liable for the reclamation of lands within the Coastal Plain and any other Federal lands that are adversely affected in connection with exploration, development, production, or transportation activities conducted under the lease and within the Coastal Plain by the lessee or by any of the subcontractors or agents of the lessee;

(4) provide that the lessee may not delegate or convey, by contract or otherwise, the reclamation responsibility and liability to another person without the express written approval of the Secretary;

(5) provide that the standard of reclamation for lands required to be reclaimed under this Act shall be, as nearly as practicable, a condition capable of supporting the uses which the lands were capable of supporting prior to any exploration, development, or production activities, or upon application by the lessee, to a higher or better use as approved by the Secretary;

(6) contain terms and conditions relating to protection of fish and wildlife, their habitat, subsistence resources, and the environment as required pursuant to section 3(a)(2);

(7) provide that the lessee, its agents, and its contractors use best efforts to provide a fair share, as determined by the level of obligation previously agreed to in the 1974 agreement implementing section 29 of the Federal Agreement and Grant of Right of Way for the Operation of the Trans-Alaska Pipeline, of employment and contracting for Alaska Natives and Alaska Native Corporations from throughout the State;

(8) prohibit the export of oil produced under the lease; and

(9) contain such other provisions as the Secretary determines necessary to ensure compliance with the provisions of this Act and the regulations issued under this Act.

(b) Project Labor Agreements- The Secretary, as a term and condition of each lease under this Act and in recognizing the Government's proprietary interest in labor stability and in the ability of construction labor and management to meet the particular needs and conditions of projects to be developed under the leases issued pursuant to this Act and the special concerns of the parties to such leases, shall require that the lessee and its agents and contractors negotiate to obtain a project labor agreement for the employment of laborers and mechanics on production, maintenance, and construction under the lease.

SEC. 7. COASTAL PLAIN ENVIRONMENTAL PROTECTION.

(a) No Significant Adverse Effect Standard To Govern Authorized Coastal Plain Activities- The Secretary shall, consistent with the requirements of section 3, administer the provisions of this Act through regulations, lease terms, conditions, restrictions, prohibitions, stipulations, and other provisions that--

(1) ensure the oil and gas exploration, development, and production activities on the Coastal Plain will result in no significant adverse effect on fish and wildlife, their habitat, and the environment;

(2) require the application of the best commercially available technology for oil and gas exploration, development, and production on all new exploration, development, and production operations; and

(3) ensure that the maximum amount of surface acreage covered by production and support facilities, including airstrips and any areas covered by gravel berms or piers for support of pipelines, does not exceed 2,000 acres on the Coastal Plain.

(b) Site-Specific Assessment and Mitigation- The Secretary shall also require, with respect to any proposed drilling and related activities, that--

(1) a site-specific analysis be made of the probable effects, if any, that the drilling or related activities will have on fish and wildlife, their habitat, subsistence resources, and the environment;

(2) a plan be implemented to avoid, minimize, and mitigate (in that order and to the extent practicable) any significant adverse effect identified under paragraph (1); and

(3) the development of the plan shall occur after consultation with the agency or agencies having jurisdiction over matters mitigated by the plan.

(c) Regulations To Protect Coastal Plain Fish and Wildlife Resources, Subsistence Users, and the Environment- Before implementing the leasing program authorized by this Act, the Secretary shall prepare and promulgate regulations, lease terms, conditions, restrictions, prohibitions, stipulations, and other measures designed to ensure that the activities undertaken on the Coastal Plain under this Act are conducted in a manner consistent with the purposes and environmental requirements of this Act.

(d) Compliance With Federal and State Environmental Laws and Other Requirements- The proposed regulations, lease terms, conditions, restrictions, prohibitions, and stipulations for the leasing program under this Act shall require compliance with all applicable provisions of Federal and State environmental law, and shall also require the following:

(1) Standards at least as effective as the safety and environmental mitigation measures set forth in items 1 through 29 at pages 167 through 169 of the `Final Legislative Environmental Impact Statement' (April 1987) on the Coastal Plain.

(2) Seasonal limitations on exploration, development, and related activities, where necessary, to avoid significant adverse effects during periods of concentrated fish and wildlife breeding, denning, nesting, spawning, and migration.

(3) That exploration activities, except for surface geological studies, be limited to the period between approximately November 1 and May 1 each year and that exploration activities shall be supported, if necessary, by ice roads, winter trails with adequate snow cover, ice pads, ice airstrips, and air transport methods, except that such exploration activities may occur at other times if the Secretary finds that such exploration will have no significant adverse effect on the fish and wildlife, their habitat, and the environment of the Coastal Plain.

(4) Design safety and construction standards for all pipelines and any access and service roads, that--

(A) minimize, to the maximum extent possible, adverse effects upon the passage of migratory species such as caribou; and

(B) minimize adverse effects upon the flow of surface water by requiring the use of culverts, bridges, and other structural devices.

(5) Prohibitions on general public access and use on all pipeline access and service roads.

(6) Stringent reclamation and rehabilitation requirements, consistent with the standards set forth in this Act, requiring the removal from the Coastal Plain of all oil and gas development and production facilities, structures, and equipment upon completion of oil and gas production operations, except that the Secretary may exempt from the requirements of this paragraph those facilities, structures, or equipment that the Secretary determines would assist in the management of the Arctic National Wildlife Refuge and that are donated to the United States for that purpose.

(7) Appropriate prohibitions or restrictions on access by all modes of transportation.

(8) Appropriate prohibitions or restrictions on sand and gravel extraction.

(9) Consolidation of facility siting.

(10) Appropriate prohibitions or restrictions on use of explosives.

(11) Avoidance, to the extent practicable, of springs, streams, and river system; the protection of natural surface drainage patterns, wetlands, and riparian habitats; and the regulation of methods or techniques for developing or transporting adequate supplies of water for exploratory drilling.

(12) Avoidance or minimization of air traffic-related disturbance to fish and wildlife.

(13) Treatment and disposal of hazardous and toxic wastes, solid wastes, reserve pit fluids, drilling muds and cuttings, and domestic wastewater, including an annual waste management report, a hazardous materials tracking system, and a prohibition on chlorinated solvents, in accordance with applicable Federal and State environmental law.

(14) Fuel storage and oil spill contingency planning.

(15) Research, monitoring, and reporting requirements.

(16) Field crew environmental briefings.

(17) Avoidance of significant adverse effects upon subsistence hunting, fishing, and trapping by subsistence users.

(18) Compliance with applicable air and water quality standards.

(19) Appropriate seasonal and safety zone designations around well sites, within which subsistence hunting and trapping shall be limited.

(20) Reasonable stipulations for protection of cultural and archeological resources.

(21) All other protective environmental stipulations, restrictions, terms, and conditions deemed necessary by the Secretary.

(e) Considerations- In preparing and promulgating regulations, lease terms, conditions, restrictions, prohibitions, and stipulations under this section, the Secretary shall consider the following:

(1) The stipulations and conditions that govern the National Petroleum Reserve-Alaska leasing program, as set forth in the 1999 Northeast National Petroleum Reserve-Alaska Final Integrated Activity Plan/Environmental Impact Statement.

(2) The environmental protection standards that governed the initial Coastal Plain seismic exploration program under parts 37.31 to 37.33 of title 50, Code of Federal Regulations.

(3) The land use stipulations for exploratory drilling on the KIC-ASRC private lands that are set forth in Appendix 2 of the August 9, 1983, agreement between Arctic Slope Regional Corporation and the United States.

(f) Facility Consolidation Planning-

(1) IN GENERAL- The Secretary shall, after providing for public notice and comment, prepare and update periodically a plan to govern, guide, and direct the siting and construction of facilities for the exploration, development, production, and transportation of Coastal Plain oil and gas resources.

(2) OBJECTIVES- The plan shall have the following objectives:

(A) Avoiding unnecessary duplication of facilities and activities.

(B) Encouraging consolidation of common facilities and activities.

(C) Locating or confining facilities and activities to areas that will minimize impact on fish and wildlife, their habitat, and the environment.

(D) Utilizing existing facilities wherever practicable.

(E) Enhancing compatibility between wildlife values and development activities.

(g) Access to Public Lands- The Secretary shall--

(1) manage public lands in the Coastal Plain subject to subsections (a) and (b) of section 811 of the Alaska National Interest Lands Conservation Act (16 U.S.C. 3121); and

(2) ensure that local residents shall have reasonable access to public lands in the Coastal Plain for traditional uses.

SEC. 8. EXPEDITED JUDICIAL REVIEW.

(a) Filing of Complaint-

(1) DEADLINE- Subject to paragraph (2), any complaint seeking judicial review of any provision of this Act or any action of the Secretary under this Act shall be filed--

(A) except as provided in subparagraph (B), within the 90-day period beginning on the date of the action being challenged; or

(B) in the case of a complaint based solely on grounds arising after such period, within 90 days after the complainant knew or reasonably should have known of the grounds for the complaint.

(2) VENUE- Any complaint seeking judicial review of any provision of this Act or any action of the Secretary under this Act may be filed only in the United States Court of Appeals for the District of Columbia.

(3) LIMITATION ON SCOPE OF CERTAIN REVIEW- Judicial review of a Secretarial decision to conduct a lease sale under this Act, including the environmental analysis thereof, shall be limited to whether the Secretary has complied with the terms of this Act and shall be based upon the administrative record of that decision. The Secretary's identification of a preferred course of action to enable leasing to proceed and the Secretary's analysis of environmental effects under this Act shall be presumed to be correct unless shown otherwise by clear and convincing evidence to the contrary.

(b) Limitation on Other Review- Actions of the Secretary with respect to which review could have been obtained under this section shall not be subject to judicial review in any civil or criminal proceeding for enforcement.

SEC. 9. FEDERAL AND STATE DISTRIBUTION OF REVENUES.

(a) In General- Notwithstanding any other provision of law, of the amount of adjusted bonus, rental, and royalty revenues from Federal oil and gas leasing and operations authorized under this Act--

(1) 50 percent shall be paid to the State of Alaska; and

(2) except as provided in section 12(d), the balance shall be transferred to the ANWR Alternative Energy Trust Fund established by this Act.

(b) Payments to Alaska- Payments to the State of Alaska under this section shall be made semiannually.

SEC. 10. RIGHTS-OF-WAY ACROSS THE COASTAL PLAIN.

(a) In General- The Secretary shall issue rights-of-way and easements across the Coastal Plain for the transportation of oil and gas--

(1) except as provided in paragraph (2), under section 28 of the Mineral Leasing Act (30 U.S.C. 185), without regard to title XI of the Alaska National Interest Lands Conservation Act (30 U.S.C. 3161 et seq.); and

(2) under title XI of the Alaska National Interest Lands Conservation Act (30 U.S.C. 3161 et seq.), for access authorized by sections 1110 and 1111 of that Act (16 U.S.C. 3170 and 3171).

(b) Terms and Conditions- The Secretary shall include in any right-of-way or easement issued under subsection (a) such terms and conditions as may be necessary to ensure that transportation of oil and gas does not result in a significant adverse effect on the fish and wildlife, subsistence resources, their habitat, and the environment of the Coastal Plain, including requirements that facilities be sited or designed so as to avoid unnecessary duplication of roads and pipelines.

(c) Regulations- The Secretary shall include in regulations under section 3(g) provisions granting rights-of-way and easements described in subsection (a) of this section.

SEC. 11. CONVEYANCE.

In order to maximize Federal revenues by removing clouds on title to lands and clarifying land ownership patterns within the Coastal Plain, the Secretary, notwithstanding the provisions of section 1302(h)(2) of the Alaska National Interest Lands Conservation Act (16 U.S.C. 3192(h)(2)), shall convey--

(1) to the Kaktovik Inupiat Corporation the surface estate of the lands described in paragraph 1 of Public Land Order 6959, to the extent necessary to fulfill the Corporation's entitlement under sections 12 and 14 of the Alaska Native Claims Settlement Act (43 U.S.C. 1611 and 1613) in accordance with the terms and conditions of the Agreement between the Department of the Interior, the United States Fish and Wildlife Service, the Bureau of Land Management, and the Kaktovik Inupiat Corporation effective January 22, 1993; and

(2) to the Arctic Slope Regional Corporation the remaining subsurface estate to which it is entitled pursuant to the August 9, 1983, agreement between the Arctic Slope Regional Corporation and the United States of America.

SEC. 12. LOCAL GOVERNMENT IMPACT AID AND COMMUNITY SERVICE ASSISTANCE.

(a) Financial Assistance Authorized-

(1) IN GENERAL- The Secretary may use amounts available from the Coastal Plain Local Government Impact Aid Assistance Fund established by subsection (d) to provide timely financial assistance to entities that are eligible under paragraph (2) and that are directly impacted by the exploration for or production of oil and gas on the Coastal Plain under this Act.

(2) ELIGIBLE ENTITIES- The North Slope Borough, the City of Kaktovik, and any other borough, municipal subdivision, village, or other community in the State of Alaska that is directly impacted by exploration for, or the production of, oil or gas on the Coastal Plain under this Act, as determined by the Secretary, shall be eligible for financial assistance under this section.

(b) Use of Assistance- Financial assistance under this section may be used only for--

(1) planning for mitigation of the potential effects of oil and gas exploration and development on environmental, social, cultural, recreational, and subsistence values;

(2) implementing mitigation plans and maintaining mitigation projects;

(3) developing, carrying out, and maintaining projects and programs that provide new or expanded public facilities and services to address needs and problems associated with such effects, including fire-fighting, police, water, waste treatment, medivac, and medical services; and

(4) establishment of a coordination office, by the North Slope Borough, in the City of Kaktovik, which shall--

(A) coordinate with and advise developers on local conditions, impact, and history of the areas utilized for development; and

(B) provide to the Committee on Resources of the House of Representatives and the Committee on Energy and Natural Resources of the Senate an annual report on the status of coordination between developers and the communities affected by development.

(c) Application-

(1) IN GENERAL- Any community that is eligible for assistance under this section may submit an application for such assistance to the Secretary, in such form and under such procedures as the Secretary may prescribe by regulation.

(2) NORTH SLOPE BOROUGH COMMUNITIES- A community located in the North Slope Borough may apply for assistance under this section either directly to the Secretary or through the North Slope Borough.

(3) APPLICATION ASSISTANCE- The Secretary shall work closely with and assist the North Slope Borough and other communities eligible for assistance under this section in developing and submitting applications for assistance under this section.

(d) Establishment of Fund-

(1) IN GENERAL- There is established in the Treasury the Coastal Plain Local Government Impact Aid Assistance Fund.

(2) USE- Amounts in the fund may be used only for providing financial assistance under this section.

(3) DEPOSITS- Subject to paragraph (4), there shall be deposited into the fund amounts received by the United States as revenues derived from rents, bonuses, and royalties from Federal leases and lease sales authorized under this Act.

(4) LIMITATION ON DEPOSITS- The total amount in the fund may not exceed $11,000,000.

(5) INVESTMENT OF BALANCES- The Secretary of the Treasury shall invest amounts in the fund in interest bearing government securities.

(e) Authorization of Appropriations- To provide financial assistance under this section there is authorized to be appropriated to the Secretary from the Coastal Plain Local Government Impact Aid Assistance Fund $5,000,000 for each fiscal year.

SEC. 13. ANWR ALTERNATIVE ENERGY TRUST FUND.

(a) Establishment of Trust Fund- There is established in the Treasury of the United States a trust fund to be known as the `ANWR Alternative Energy Trust Fund', consisting of such amounts as may be transferred to the ANWR Alternative Energy Trust Fund as provided in section 9.

(b) Expenditures From ANWR Alternative Energy Trust Fund-

(1) IN GENERAL- Amounts in the ANWR Alternative Energy Trust Fund shall be available without further appropriation to carry out specified provisions of the Energy Policy Act of 2005 (Public Law 109-58; in this section referred to as `EPAct2005') and the Energy Independence and Security Act of 2007 (Public Law 110-140; in this section referred to as `EISAct2007'), as follows:

EPAct2005:	
Section 210	1.5 percent
Section 242	1.0 percent
Section 369	2.0 percent
Section 401	6.0 percent
Section 812	6.0 percent
Section 931	19.0 percent
Section 942	1.5 percent
Section 962	3.0 percent
Section 968	1.5 percent
Section 1704	6.0 percent
EISAct2007:	
Section 207	15.0 percent
Section 607	1.5 percent
Title VI, Subtitle B	3.0 percent
Title VI, Subtitle C	1.5 percent
Section 641	9.0 percent
Title VII, Subtitle A	15.0 percent
Section 1112	1.5 percent
Section 1304	6.0 percent.

(2) APPORTIONMENT OF EXCESS AMOUNT- Notwithstanding paragraph (1), any amounts allocated under paragraph (1) that are in excess of the amounts authorized in the applicable cited section or subtitle of EPAct2005 and EISAct2007 shall be reallocated to the remaining sections and subtitles cited in paragraph (1), up to the amounts otherwise authorized by law to carry out such sections and subtitles, in proportion to the amounts authorized by law to be appropriated for such other sections and subtitles.

Re: HJR7, Urging the U.S. Congress to open the Coastal Plain of ANWR to oil and gas exploration, development, and production

Dear Representative Johnson and Representative Neuman:

On behalf of the Resource Development Council for Alaska, Inc., (RDC), I am writing in support of HJR7, which urges Congress to open the Coastal Plain of ANWR to oil and gas exploration, development, and production.

RDC is a statewide, non-profit, membership-funded organization founded in 1975. The RDC membership is comprised of individuals and companies from Alaska's oil and gas, mining, timber, tourism, and fisheries industries, as well as Alaska Native corporations, local communities, organized labor, and industry support firms. RDC's purpose is to link these diverse interests together to encourage a strong, diversified private sector in Alaska and expand the state's economic base through the responsible development of our natural resources.

The 1002 Area of ANWR is considered the nation's most promising onshore oil and gas prospect, and there is strong support across Alaska for environmentally-responsible development of the oil and gas resources beneath the Coastal Plain. Such development could play a large role in Alaska's future prosperity, create hundreds of thousands of jobs across America, and reduce our reliance on foreign oil.

We encourage the Committee to vote in favor of this resolution. Thank you for your consideration.

Sincerely,

Jason Brune
Executive Director

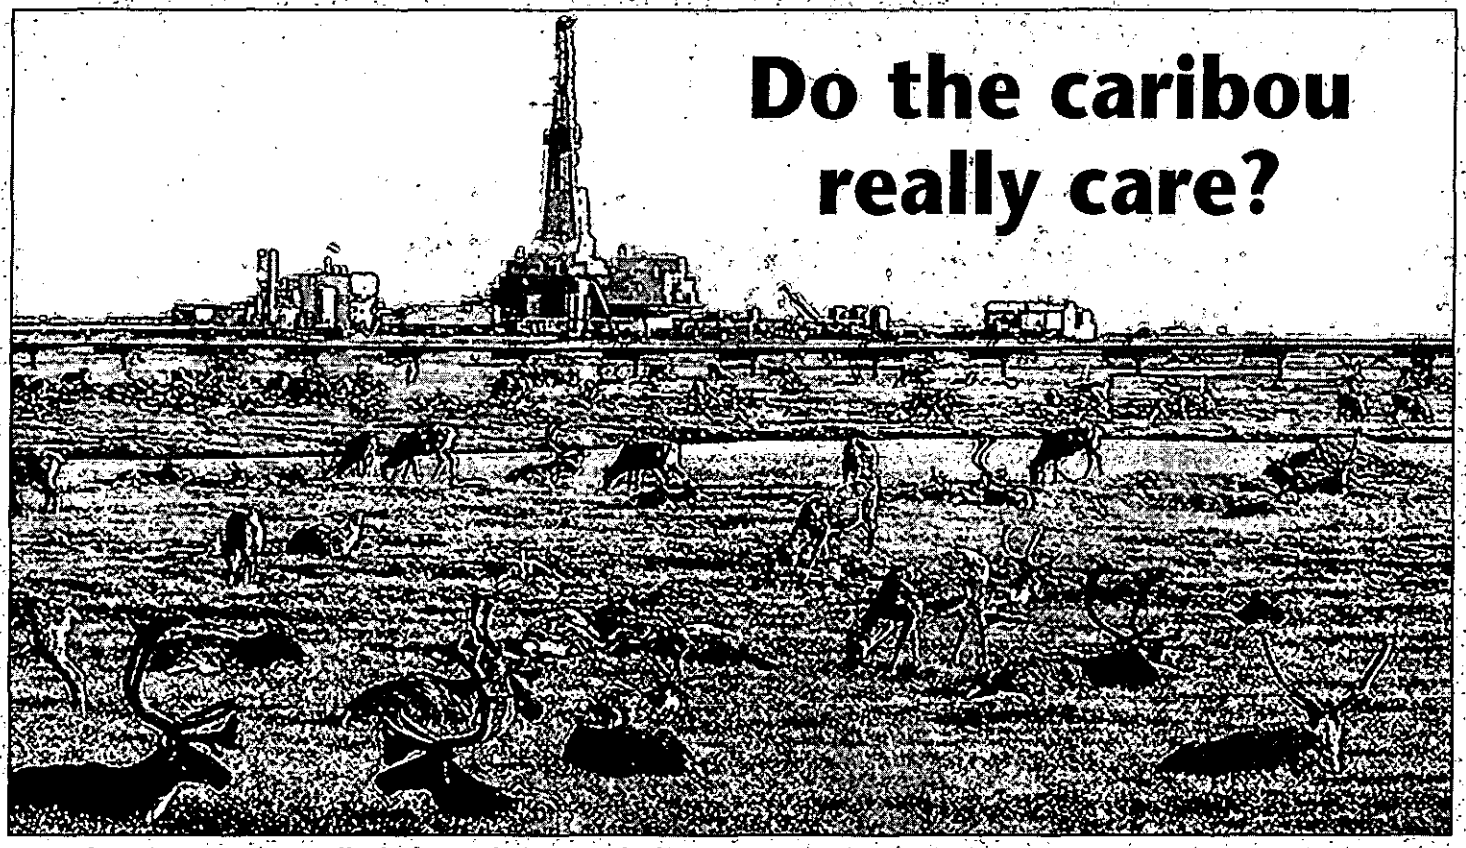
ANWR
INFORMATION BRIEF



Do the caribou really care?

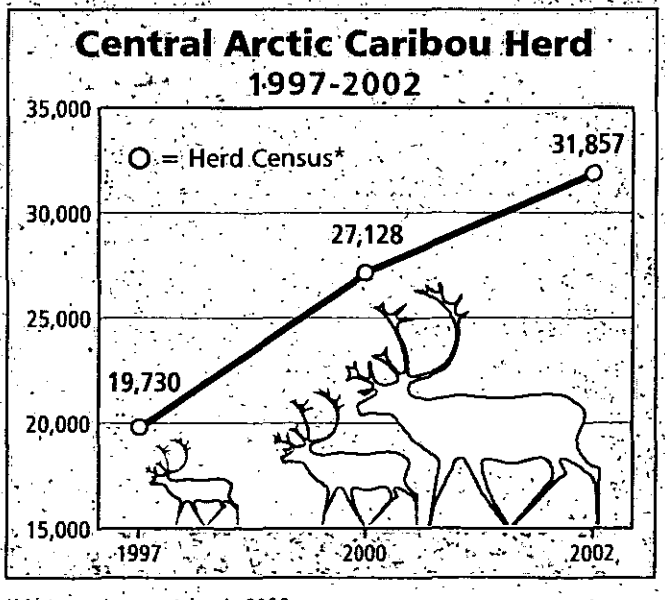
Central Arctic Herd near Prudhoe Bay on Alaska's North Slope.

Are caribou affected by oil development on the North Slope? It would appear not, based on the growing population of herds that use land in the existing oil fields in northern Alaska. The population of the Central Arctic caribou herd, which migrates north each summer into the oil fields near Prudhoe Bay, has been growing about 8.5 percent per year. Alaska Dept. of Fish and Game biologists counted 31,857 caribou in aerial surveys of this herd in July 2002. In July 2000, fish and game biologists counted 27,128. In 1997, the count was 19,730.

Caribou herd populations rise and fall with natural cycles, but one explanation biologists have for the increasing population of the Central Arctic Herd is good calf production and survival, and high survival of adults.

Pregnant caribou cows in the Central Arctic herd bear their calves on lands within or near operating oil fields. Some calves are born within a few hundred meters of oil field roads.

The Alaska Dept. of Fish and Game findings are backed by the Argonne National Laboratory. Argonne found no evidence that oil development harmed the Central Arctic Herd in the lab's work on the Environmental Impact Statement for an extension of the Trans-Alaska Pipeline System federal right-of-way.

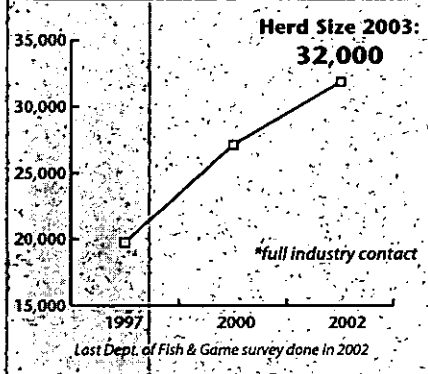


*Most recent survey taken in 2002

Arctic caribou herds

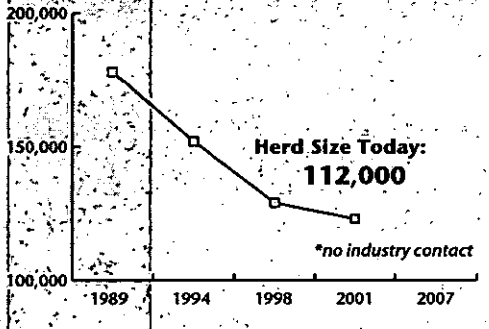
Caribou herds rise and fall in natural cycles, and it is interesting that while populations have been rising in the Central Arctic Herd (see chart) which use lands in the North Slope oilfields, populations have been declining in the Porcupine Herd (see chart) which do not use lands where there is oil and gas development. The fact is, caribou populations rise and fall with availability of good foraging ground, and influence from predators NOT from contact with the industry. The environmentalist myth about caribou Armageddon caused by the oil industry's presence simply is a lie.. It is interesting to note that in 6 out of the last 10 years the Porcupine Herd did not use the ANWR Coastal Plain as their main calving ground.

Central Arctic Herd*



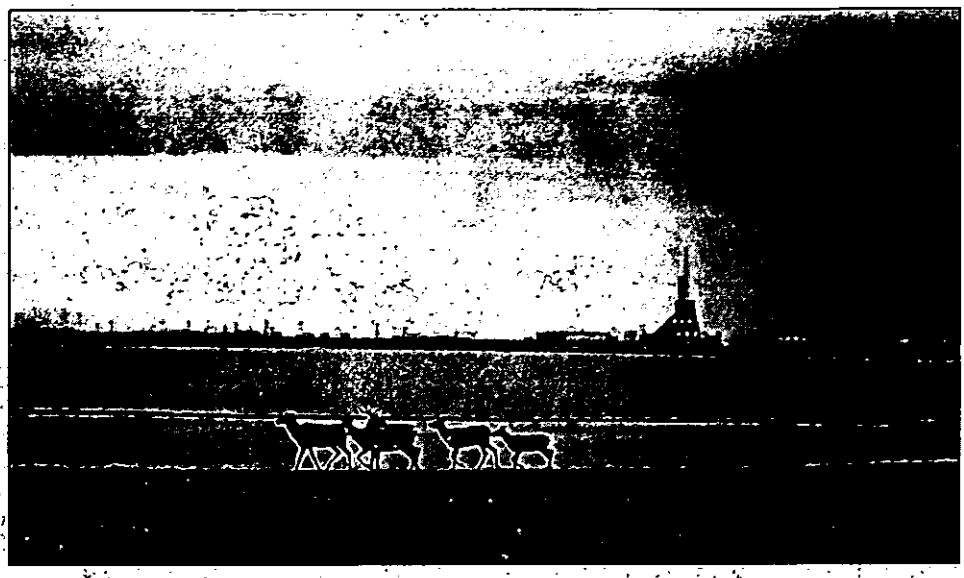
Last Dept. of Fish & Game survey done in 2002

Porcupine Herd*



Central Arctic, Porcupine caribou mingle

There is now evidence that caribou mix between all of the North Slope caribou herds, the Porcupine, Central Arctic and Western Arctic herds. Using analysis of DNA, researchers from the University of Alaska, Texas A&M University and the U.S. Dept. of Agriculture found that caribou in the three herds are genetically related. This reflects migration of animals between the herds over many generations.



The truth on Arctic Caribou

- Caribou use of the 1002 Area of ANWR varies dramatically from year to year. In 1995, 92% of the Porcupine Caribou Herd used this area to calve. In 2006, none did so.
- In some years, the Porcupine Herd calves only in Canada.
- Choice of calving area depends on snow melt and early growth of forage plants.
- Caribou live a boom and bust cycle, due to predation, weather, and overhunting.
- During the summer, caribou frequently use oil field roads and gravel pads as insect relief habitat: they stand on the elevated gravel pads because fewer mosquitoes and flies harass them there.
- North slope oil facilities are specifically designed to allow caribou migration with elevated pipes to allow caribou to freely walk underneath and unlimited use of service roads.
- With 30 years of contact with oil development to go by, the industry has shown that caribou and oil fields can successfully co-exist. The Central Arctic Herd, which calves in the vicinity of the Prudhoe Bay, Kuparuk, and Milne Point oil fields, has increased 900% from an estimated 3,000 animals in the early 1970s to 32,000 in 2002.

ANWR Facts:

- Refuge totals 19.6 million acres.
- 8 million acres is classified as designated Wilderness;
- Coastal Plain, 1.5 million acres, set aside by Congress for study of oil potential;
- Only a small percentage, .01%, of Coastal plain, about 2,000 acres, would be allowed to be used for oil development.

The coastal plain is not a pristine wilderness:

- About 40 guide outfits offer hunting and recreation services in the coastal plain;
- A community, Kaktovik, exists in the Coastal Plain; Military installations operate on the Plain now and in the past.

ANWR
INFORMATION BRIEF

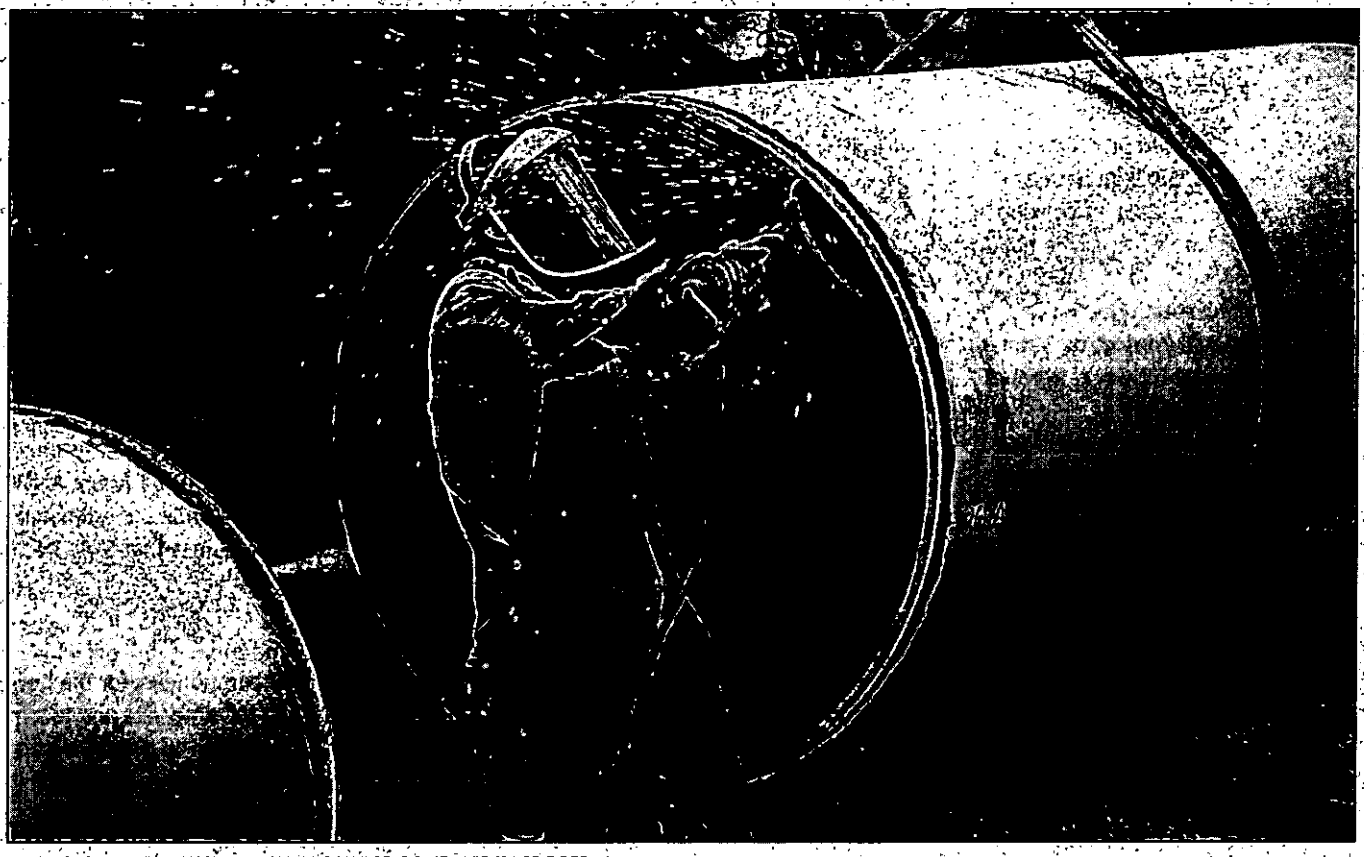

PHOTO Courtesy ALYESKA PIPELINE SERVICE CO./DAVID PREDEGER

ANWR could create 736,000 jobs

Development of oil reserves in the Coastal Plain of the Arctic National Wildlife Refuge could create as many as 736,000 new U.S. jobs, according to an economic analysis by Wharton Econometrics Forecasting Associates. (WEFA)

Supplying equipment and services needed to develop the expected oil discoveries on ANWR's coastal plain means jobs for workers in every single US state. Geologists think ANWR's coastal plain has the best potential of any unexplored U.S. region for major new oil discoveries, on the scale of the Prudhoe Bay oil field, also on Alaska's North Slope.

Where the jobs are:

WEFA calculates the breakdown of types of employment

Category	Jobs
Manufacturing	128,000
Mining (incl. oil)	84,000
Trade	225,000
Services	145,000
Construction	135,000
FIRE*	19,000
Total	**736,000**

** Finance, Insurance, Real Estate*

Source: Wharton Econometric Forecasting Associates

An example of potential benefits is seen in the $22.5 billion spent between 1980 and 1994 for construction of production modules for Alaska's existing North Slope oil fields.

Seventy eight percent of this $22.5 billion was spent outside of Alaska. Among the states, California received more than $3.2 billion; Texas received more than $6.8 billion; Washington received $1.7 billion; Minnesota received almost $84 million.

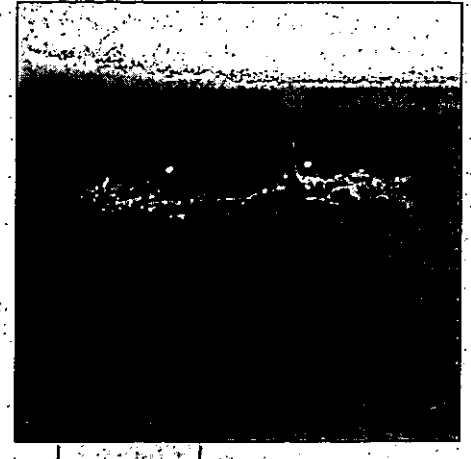
This money was spent for salaries, materials, design, engineering and construction services. To date an estimated $51billion has been spent to develop Alaska's oil. ANWR will create more jobs and money that stay in America!

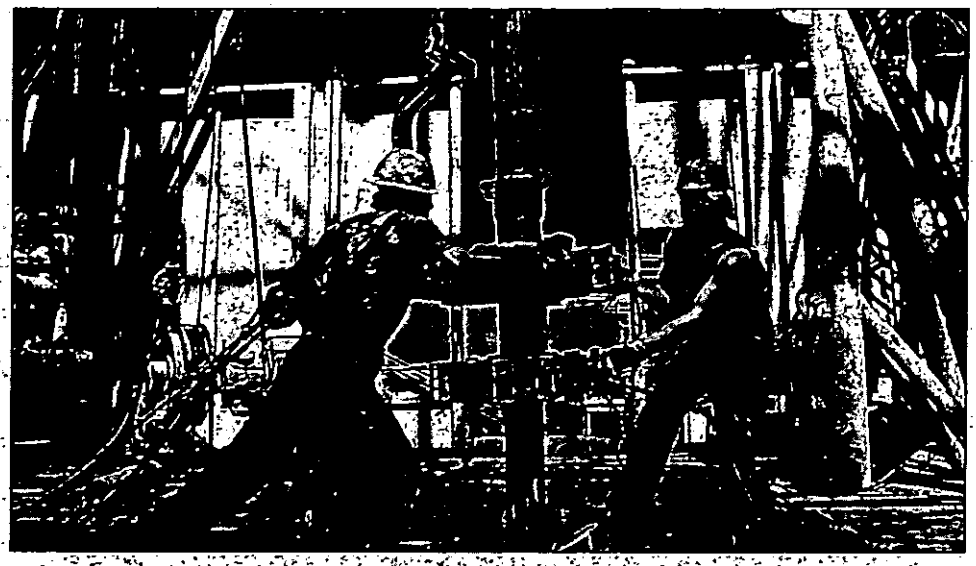
ANWR = jobs and income for America

The employment effect of ANWR is created not only by direct new investment in oil and gas drilling but also the widespread economic stimulus created by a larger domestic US oil supply and fewer barrels of imported oil. The national debt is decreased and the nation has fewer unemployed workers and greater revenues to spend. The mean average estimate of ANWR oil is about 9.25 billion barrels of oil, resulting in new production peaking at about 1.9 million barrels daily. The national macroeconomic effect of this amount of production is an increase in the nation's annual Gross National Product by $90 billion (based on the current world average price of oil @$13.0 a barrel).

Unions and Business support opening ANWR. Over 10,000 vendors have done business with Alaska's North Slope oil industry since operations began. This has affected over 1.5 million jobs nationwide! For this reason the International Brotherhood of Teamsters and other organized labor groups, the National Association of Counties, the National Grange, and the US Chamber of Commerce actively support responsible oil exploration of ANWR's coastal plain. The Energy Stewardship Alliance with over 90 participating organizations support opening the Coastal Plain of ANWR.

A job kept in America is better than a job sent abroad. A dollar kept in America is better than a dollar spent abroad. ANWR keeps the jobs and money home IN AMERICA!



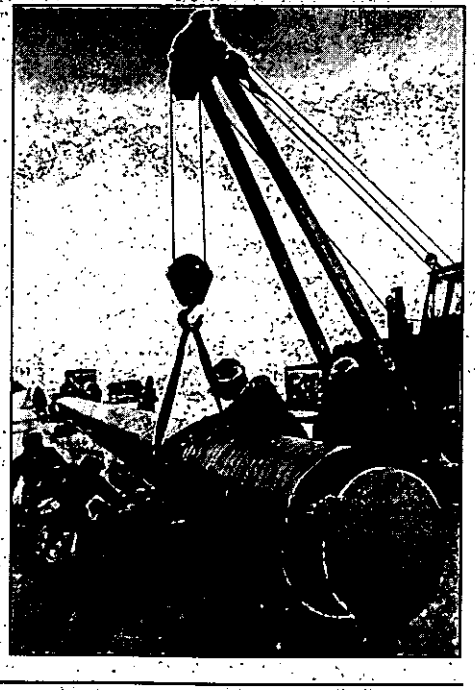


ANWR Jobs and Investment in America

Since operations started in Prudhoe Bay over $50 billion has been spent on construction and production. Over three-quarters of that $50 billion was spent outside Alaska. Jobs such as manufacturing piping, designing and constructing production modules, building super tankers, ecological field research, oil field maintenance work such as wire-lining and rig camp operations have been created. With future ANWR Coastal Plain development states such as New York, Texas, and California are estimated to benefit with more job creation than Alaska will. That's jobs and incomes that STAY IN AMERICA and don't get exported abroad.

Within 22 months of opening the Coastal Plain of ANWR, lease sales will bring in over $2 billion in revenue to the Native land holders and State Government. This will be followed by 8 years of design manufacturing and construction of components for the new fields coming from businesses in all 50 states. That means solid full time jobs and income for hundreds of thousands of people across America. Once the field is in operation, oil tax revenue will flow to the State and Federal government and steady incomes to thousands who work to continue maintaining field operations.

All of this revenue, income and work stays in America!



ANWR Facts:

- Refuge totals 19.6 million acres.
- 8 million acres designated Wilderness;
- Coastal Plain, 1.5 million acres, set aside by Congress for study of oil potential;
- Only 2,000 acres; .01%, of the Coastal Plain could be used for oil development.

The coastal plain is not a pristine wilderness:

- A community, Kaktovik, exists in the Coastal Plain; Military installations operate on the Plain now and in the past.

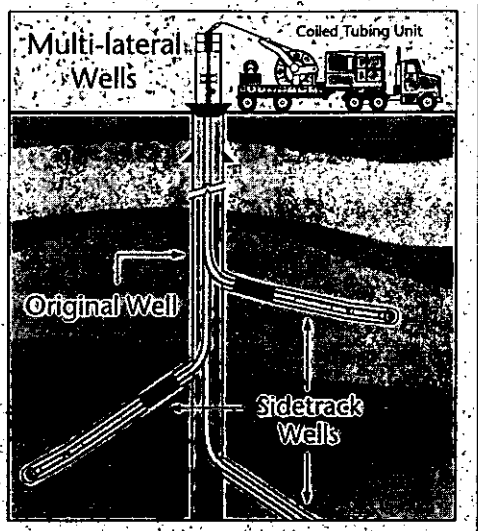
ANWR
INFORMATION BRIEF



Multi-lateral oil wells

An exciting new technology pioneered on the North Slope involved "multi-lateral" wells, or several new wells drilled underground from the vertical hole of a single well. This conserves resources used on the surface, since one wellhead could service many underground sources.

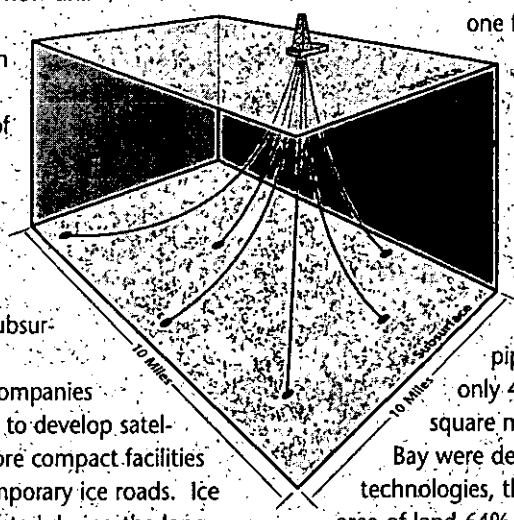
3-D seismic

New seismic technologies, aided by the powerful computers available today, more precisely and efficiently pinpoint promising oil and gas prospects. "Three-dimensional" seismology, is a new technique, involving conducting geophysical seismic surveys on a grid rather than in parallel "two dimensional" lines. The increased efficiency from 3D maps allows seismic crews to spend less time on the ground, and to more precisely pinpoint oil deposits. The result is that fewer exploration wells have to be drilled.

Using 3D technology will allow scientists to create more accurate maps to access the great oil and gas potential locked up beneath ANWR.

Technology allows industry to lessen "footprint" on land.

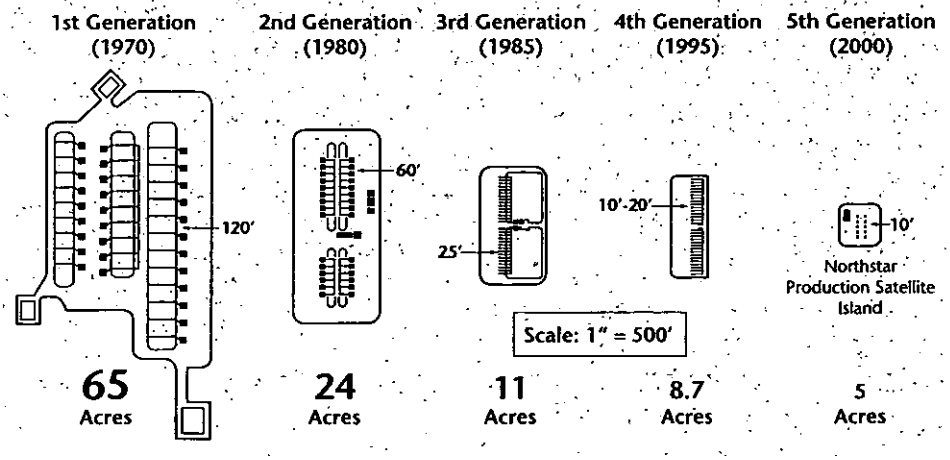
Industry now has technology to reduce the amount of land impacted by new oil development. North Slope drillers can now drill directional wells that reach out ten miles from the surface location of the rig. That means one production pad on the surface can access over 200 square miles of subsurface.



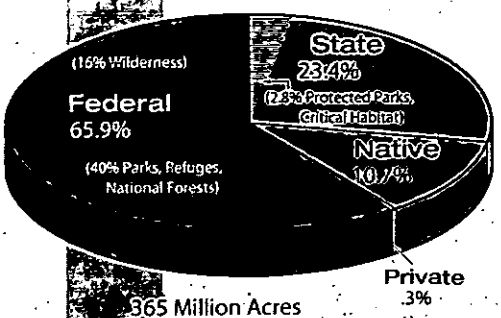
Alaskan oil companies have also learned to develop satellite fields with more compact facilities connected by temporary ice roads. Ice roads are constructed during the long winter, equipment is moved, and in the spring the roads melt away with minimal impact to the tundra. The reducing industry footprint on land is most noticeable with the reduction of drill pad sizes. The best example of drill pad size reduction is the Northstar offshore oil field west of ANWR which is being produced from only one five acre island.

Future oil development to be used in ANWR will continue the trend toward smaller satellite micro pads. It is interesting to note that in the giant Prudhoe Bay field all roads, drill pads, and pipeline routes take up only 4% of the field's 250 square miles. In fact, if Prudhoe Bay were developed with today's technologies, the field would utilize an area of land 64% smaller. Any ANWR development will be limited to 2,000 acres and yet it is expected that only 1,600 acres will be used due to compact modern oil technologies.

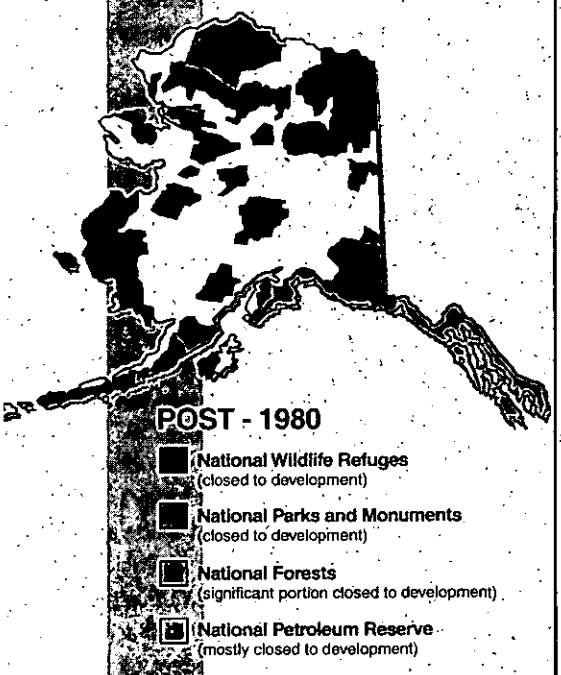
The Evolution of a Drillsite: 1970 to Present



EXPLORATION

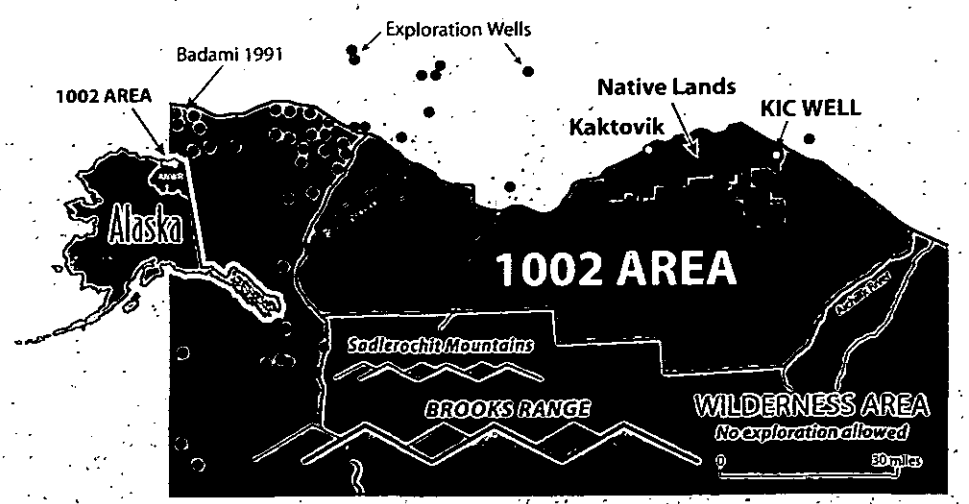


Half of Alaska's lands are protected. 58 million acres have been given formal wilderness designation, a restriction that prevents any development and virtually all human use.



Alaska's Parkland Overkill

The federal government currently owns about 235 million of Alaska's 365 million acres, about 65% of the state. That's bigger than the entire state of Texas. It's larger than Washington, Oregon and California combined. 58 million of these acres are designated as official wilderness, which accounts for 56% of the nation's total. About 40% of Alaska's land is in some sort of protected status, including wilderness land. Alaska has the largest state park system in the country. The notion that Alaska is somehow short on wild places is simply wrong. If Alaska's wilderness lands were made into a state it would be the 11th largest in the nation.



You can't find oil where there is none. "1002" is where the oil's at!

"Section 1002" of The Alaska National Interest Lands Conservation Act (ANILCA) passed by Congress in 1980, **specifically sets aside 1.5 million acres of the northern tier of ANWR for investigation of its oil and gas potential.** This 1.5 million acres, or the "1002 area", was chosen because it contains significant geologic evidence for major oil and gas deposits. Indeed, extensive USGS geologic studies on the area in 1998 confirm this assumption. The high potential 1002 area is well constrained geographically and geologically. The southern boundary of the 1002 area is the northern edge of the Sadlerochit Mountains, part of the vast Brooks Range which stretches across northern Alaska. Because of the heat and pressure generated in creating these rocks, the mountainous regions to the South are not prospective for oil or gas.

The 1.5 million acre 1002 area is the only part of ANWR that has any oil and gas potential.

ANWR Coastal Plain Oil =

>60% recovery rates not 37%
>$120 per barrel not $25
17 billion barrels, not 10 billion.

The 1998 USGS report on the ANWR Coastal Plain oil resources estimated between 6 to 16 billion barrels of oil with a mean average of 10 billion barrels. The report is based on two premises:

A technical recovery rate of only 37%
an economic recovery rate based on a $25 barrel of oil.

Today Arctic oil field technical recovery rates now exceed 60%. Using this figure for the amount of technically recoverable oil changes the average mean to...

17 BILLION BARRELS.

At current (>$120 per barrel), and reasonably forecast oil prices, ALL of this potential 17 billion barrels are economically recoverable.

Actual picture of ANWR Coastal Plain. Development restricted to 2,000 acres; less than .01% of ANWR.

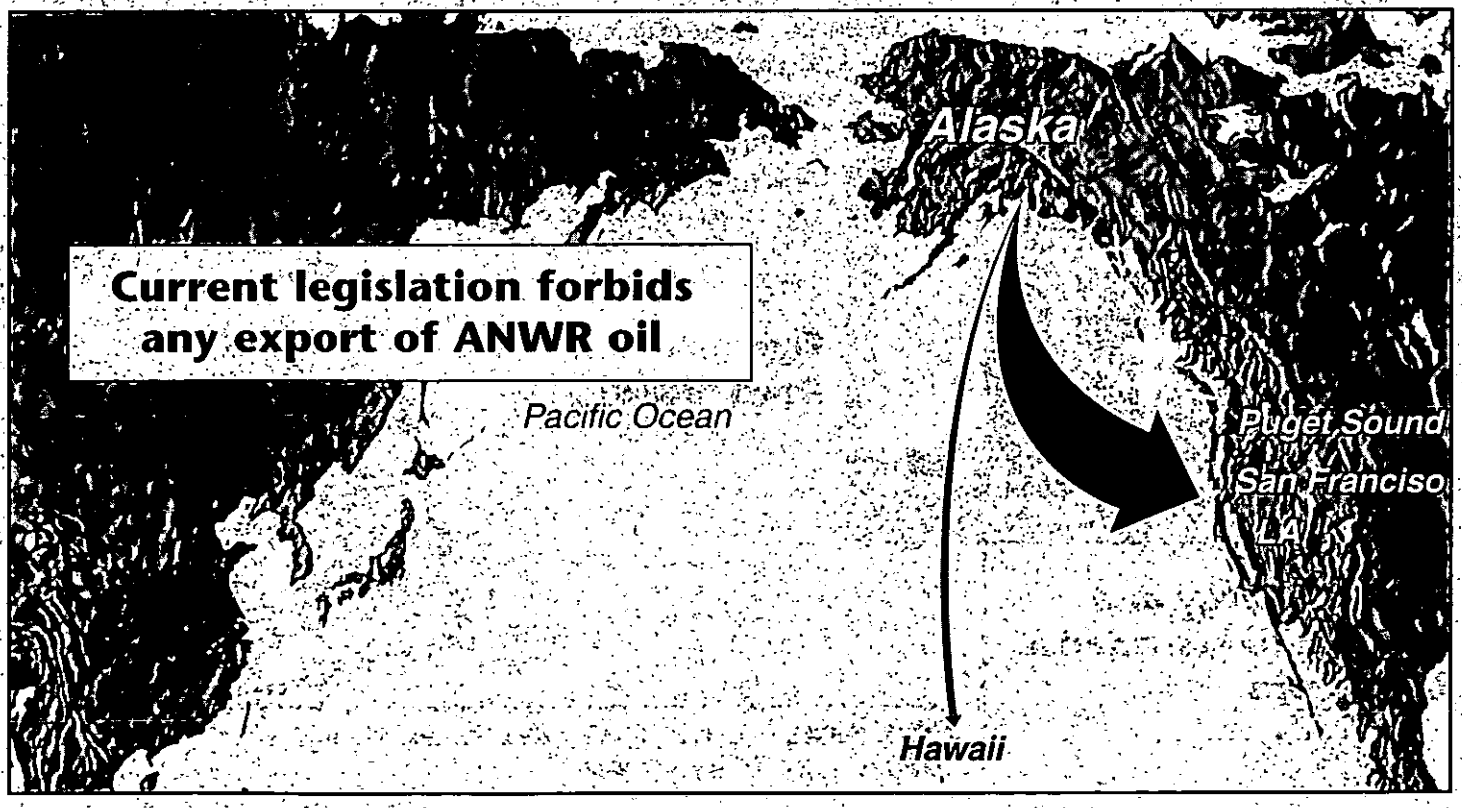
ANWR
INFORMATION BRIEF

ALASKAN OIL POWERS AMERICA
ALASKA EXPORTS NO OIL ABROAD

The Facts: 100% of Alaskan oil is kept in America. This has been the case for all but 4 years of the 3 decades of Alaskan oil production. Between 1996-1999 up to 5.5% of North Slope oil could be exported to Asian countries. These exports were overwhelmingly supported by the US Congress and by the Clinton Administration to offset an oil glut in California at the time. In June 2000 Alaskan oil again ceased to be exported, and 100% of Alaskan production has stayed in America.

The jobs, the revenue, and the oil from Alaska's North Slope Production ALL STAY IN AMERICA.

Here is the breakdown of where Alaskan oil goes: 50% goes to California refineries near San Francisco and Los Angeles; 42% goes to Puget Sound refineries; and 8% goes to Hawaii. A fractional amount stays in Alaska. Today Alaskan oil provides America with 12% of its domestic oil needs. To put that in perspective, the 1973 oil crisis was caused by only a 3% drop in supply. ***At peak production Alaskan oil supplied America with 25% of its needs and with the opening of a small portion of the Coastal Plain of ANWR it could do so again.*** That's a big decrease in reliance of imports from abroad. America needs Alaskan oil. Opening the Coastal Plain of ANWR to oil exploration will ensure that America gets Alaskan oil.



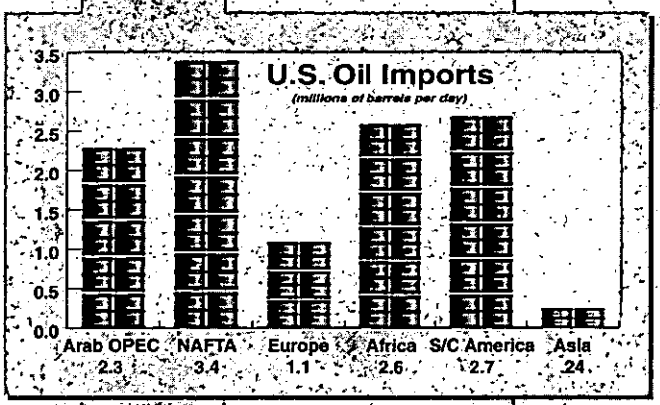
ANWR and the balance of trade

Exploration and development of oil and gas reserves of the Coastal Plain of the Arctic National Wildlife Refuge enhances the economy in other ways than job-creation.

The importation of crude oil and refined products now cost the nation over $650 billion annually and is the largest single commodity in the US Trade deficit. ANWR could add up to 1.5 million barrels of oil a day to our supply saving us up to $195,000,000 every single day or over $71 billion annually (@$130 per barrel).

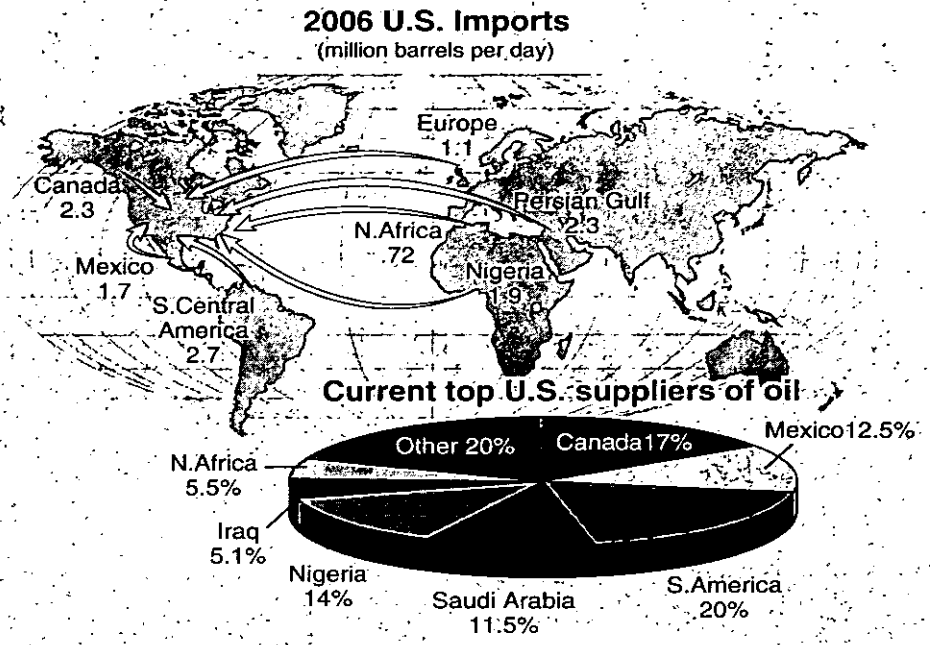
More imports of foreign oil are needed as our demand increases and the current domestic supply falls. ANWR represents the best geologic bet in North America to find oil and stem this decline.

Developing ANWR would keep jobs, and control of our energy supply here at home. Developing ANWR would mean over 30 years of production saving TRILLIONS of dollars from going overseas. Developing ANWR would mean economic, social and security benefits for the nation, all things lost when we buy from abroad.



ANWR = Energy and Economic independence for America

Where does your oil come from?



The U.S. spends $500 billion annually for imported oil and that doesn't include the costs to defend those resourses.

The real figures are much higher than you think. If you include refined oil products in 2007 the U.S. will directly spend over $650 billion on imported petroleum! That's $650 billion out the door. Just think of how many jobs and services we could have with that money. However the cost is even greater still. Think of the price we are paying in lives of our service men and women to defend our sources of oil. Then think of the cost to maintain that defense. Studies of the actual cost of imported oil and the defense of that oil runs over $200 a barrel and the cost of our oil is really more than $1 trillion. Yet is that anything compared to the lives we lose abroad to defend our foreign oil?

Oil from the Coastal Plain of ANWR could replace 50 years of Saudi Oil and save our economy billions of dollars a year. Think of that next time you fill up at the pump.

Fight back!
Open ANWR!

ARCTIC POWER

ANWR
INFORMATION BRIEF

Inupiaq children on the North Slope will share the benefits if ANWR's oil is developed.

A lot of us support ANWR development

We're the Inupiaq people of the North Slope, and despite what you may have been told, a lot of us support responsible oil and gas development in the coastal plain of the Arctic National Wildlife Refuge.

About 6,500 of us live in small communities on the Arctic Slope.

We've watched the petroleum industry operate in the Prudhoe Bay area for more than 30 years, and if the companies discover oil in ANWR's coastal plain, we think they'll develop it with care for the environment.

We hope to be partners with the industry, in fact. Arctic Slope Regional Corporation, our Native regional corporation for the Arctic in which we're all shareholders, owns subsurface rights in 94,000 acres of ANWR's coastal plain. If the rest of the plain is opened our lands can be explored too (federal law prohibits us from developing our lands until Congress approves exploration on the rest of the coastal plain.)

Our neighbors to the south talk sour grapes, however. Gwich'in Indians who live south of ANWR say they oppose development on our lands. But is that because they were unlucky when oil companies didn't find oil on their lands, after they leased them?

The fact is that oil development has brought many benefits to the people of northern Alaska. Living conditions were difficult in our villages before the oil companies came. We didn't have much in the way of schools or basic public services.

But thanks to the industrial tax base created by the oil fields, our local government is able to offer many excellent public services. Thanks to oil development on the North Slope, we have opportunities we couldn't have dreamed of 30 years ago.

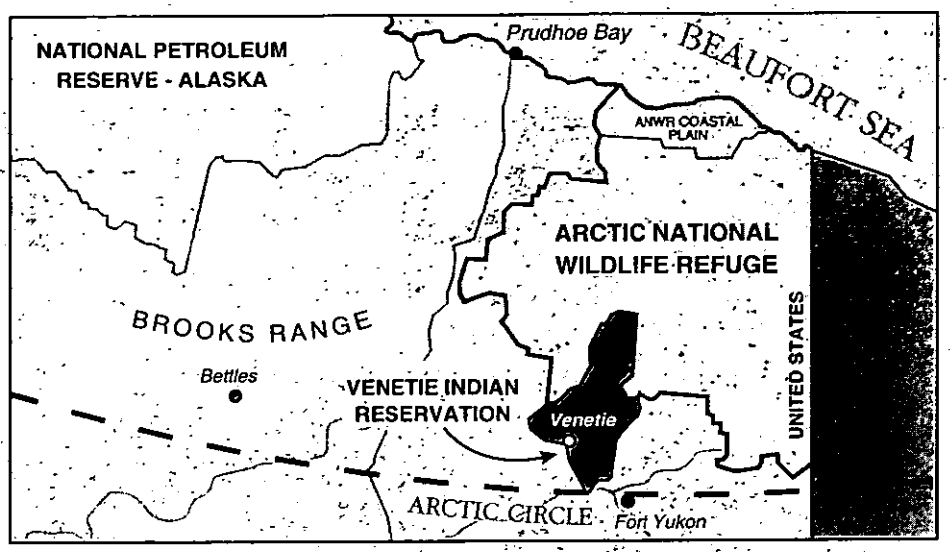
But development of ANWR's coastal plain is important for the country, not just for us. America is going to need that oil, sooner than we think.

So don't let some people claim to speak for all Alaska Natives. If you want to know our opinions, come and ask us. We want ANWR developed responsibly, and we know it can be.

"The Borough supports the lifting of all restrictions on energy and other economic development of North Slope lands owned by the Arctic Slope Regional Corporations and village corporations, especially the 92,160 acres near our village of Kaktovik. We are puzzled by a federal policy that closes our land off to development while opening our seas to oil exploration and drilling. Depriving us of this development threatens to make us supplicants once again, begging for federal largesse to provide our people with the basic amenities taken for granted by a majority of the peoples of the rest of the country...

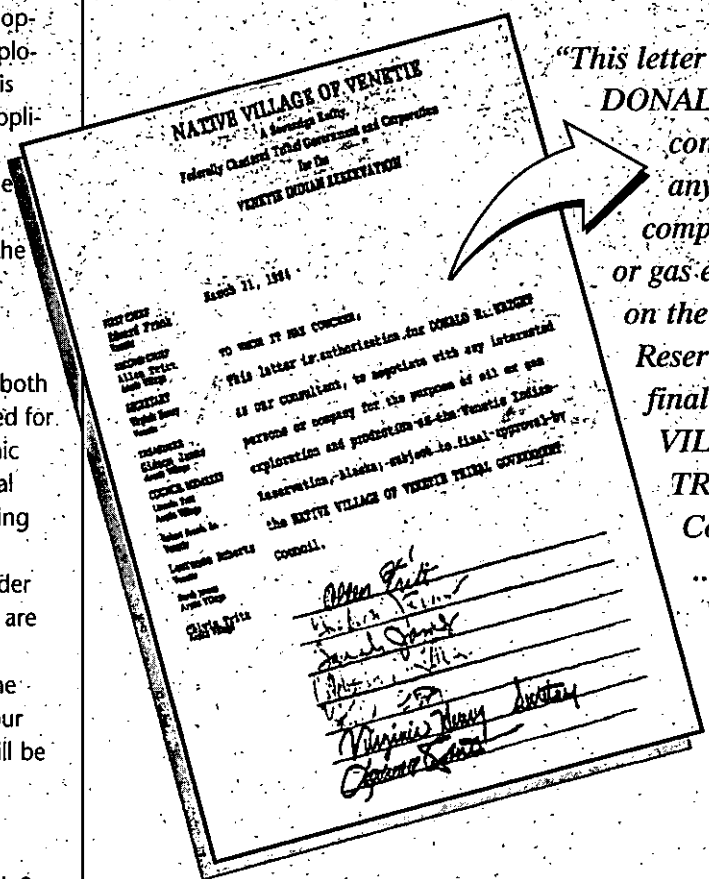
...Development of the Plains of ANWR is a sensible, viable solution to both the nation's energy needs and our need for continued jobs to protect our economic base. We feel this is an achievable goal with the North Slope Borough exercising its regulatory, permitting and zoning authority to advance development under strong environmental safeguards. We are not asking for the impossible or the improbable. We are only asking for the ability to use our land to provide for our residents. The result of our success will be of benefit not only to us but to all Americans."

Former Mayor George Ahmaogak Sr.
North Slope Borough



The biggest antagonists to safe, environmentally responsible development of the ANWR Arctic Coastal Plain have been the Gwich'in Indians of the Yukon Basin. They live over 150 miles away from the Arctic Coastal Plain, and yet wish to control oil drilling on land that is not theirs. Yet did you know that the Gwich'in leased their own land to oil companies 3 times. Only after unsuccessful attempts to find oil did they turn to try and prevent their neighbors from doing the same. The Mayor of the entire North Slope of Alaska calls this ***"SOUR GRAPES"***.

The Venetie Tribal Gov. offered 1,799,927 acres for Oil and Gas lease.



NATIVE VILLAGE OF VENETIE
A Sovereign Entity
Federally Chartered Tribal Government and Corporation
for the
VENETIE INDIAN RESERVATION

March 21, 1994

TO WHOM IT MAY CONCERN,

THIS letter is authorization for DONALD R. WRIGHT as our consultant, to negotiate with any interested persons or company for the purpose of oil or gas exploration and production on the Venetie Indian Reservation, Alaska; subject to final approval by the NATIVE VILLAGE OF VENETIE TRIBAL GOVERNMENT Council.

Edward Frank, Chief
Ellen Frost, Secretary
Clarence Roberts, Council
Chris Fritz, Council

"This letter is authorization for DONALD R. WRIGHT as our consultant, to negotiate with any interested persons or company for the purpose of oil or gas exploration and production on the Venetie Indian Reservation, Alaska; subject to final approval by the NATIVE VILLAGE OF VENETIE TRIBAL GOVERNMENT Council...

...The Native Village of Venetie Tribal Government hereby gives formal notice of intention to offer lands for competitive oil and gas lease."

Unlike the Inupiaq, the Gwich'in included little provision for protection of the environment or caribou in their leases.

This excludes royalties, foreign purchases, and payments that could not be allocated to a single state.

ANWR Resource Estimates

The debate over oil and gas development in the Arctic National Wildlife Refuge (ANWR) is about as hot as it's ever been, thanks to soaring fuel prices, domestic energy shortfalls and political support in the nation's Oval Office. At the core of many arguments — pro and con — are results of the 1998 U.S. Geological Survey (USGS) study on ANWR's petroleum potential.

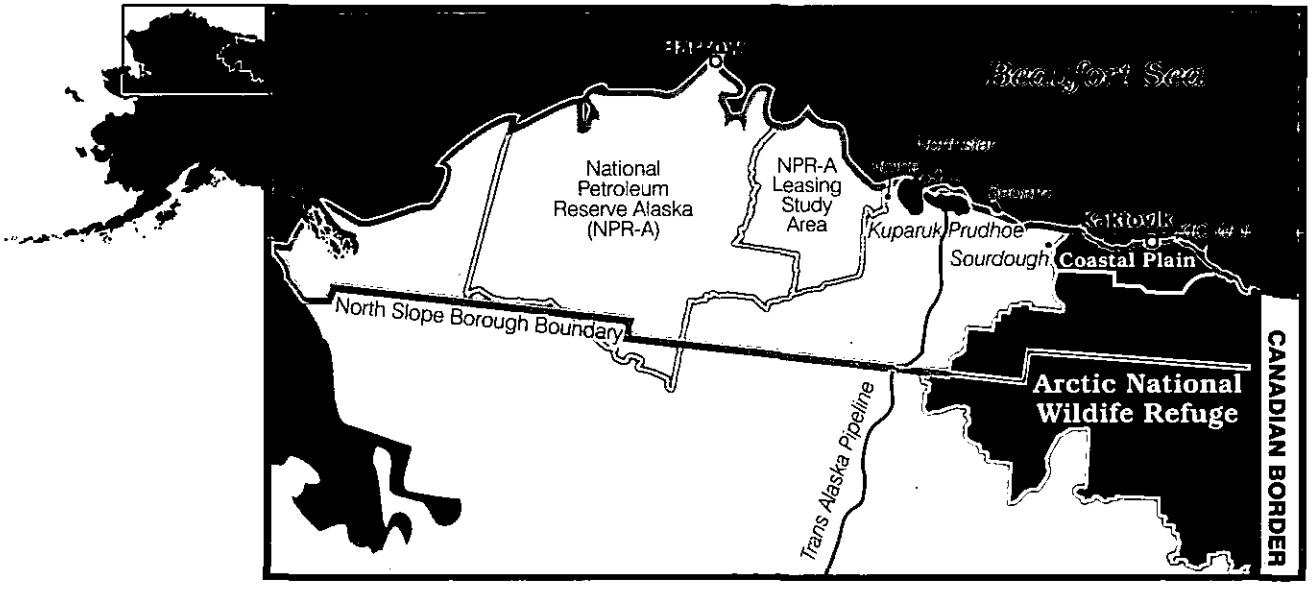
1998 USGS study concludes that ANWR contains recoverable resource volumes of 5.7 to 16 billion barrels of crude oil, with a mean of 10.4 billion barrels. This is the range cited by industry.

Pro-Development Resource Estimates: *Defensible and Desirable*

The USGS report is thorough, presenting estimates that use a number of alternative resource concepts. Industry is often accused of distorting ANWR's potential by focusing on the highest of these estimates. Not true. Numbers cited by advocates of ANWR drilling accurately characterize the USGS study conclusion — that ANWR contains undiscovered resource volumes of 5.7 to 16 billion barrels of crude oil, with an expected value of 10.4 billion barrels. Moreover, the USGS standard practice does not include any prospective effects of future technological change. One could argue, therefore, that USGS numbers are more likely to be conservative estimates of the true recovery potential of ANWR. On the flip side, several other numbers are cited by various opponents of development. Many are simply incorrect. An example is the 3.2 billion barrel estimate often attributed to the 1998 USGS study. This may have originated with the 1987 BLM EIS, or it may be based on a misinterpretation of data presented in the 1998 USGS report. In either case it is wrong.

Estimates are for the entire 1002 area, which includes federal and private lands. This geographical coverage is relevant, since none of the private lands within ANWR can be developed without opening federal lands.

Recovery from Prudhoe Bay was initially estimated at about 35%, but new technology applied since that time has progressed steadily, and recovery is now expected to exceed 60%.



Arctic Power • 1049 West 5th Avenue • Anchorage, Alaska 99501 • (907) 274-2697 • Fax (907) 274-2706 • http://www.anwr.org

Estimated Recoverable Resources: *Understated and Justified*

The table below presents the key resource estimates presented by USGS in its 1998 assessment. These estimates are for the entire Coastal Plain, including both federal property (1002 area) and private lands (Native owned). This geographical coverage is relevant, since none of the private lands within ANWR can be developed without opening federal lands. Within this area, USGS estimates that there are between 15.6 and 42.3 billion barrels of oil in place, with a mean of 27.8 billion barrels. From this, USGS derives the 5.7-to-16.0 billion barrel range as being recoverable using the technology of the mid-1990s. Anti-development groups often criticize use of *technically* recoverable resource numbers, rather than the narrower concept of *economically* recoverable resources. But a closer look confirms that use of the technically recoverable numbers does not overstate the resource base. As seen in this Table, at extremely low price levels ($12 on the West Coast), the commercially developable resources are only a small portion of the technically recoverable resource (0-11%). However, at a more realistic price of $24, the commercially developable portion of the resource approaches 90%, and at $30, all of the technically recoverable resource is commercially viable.

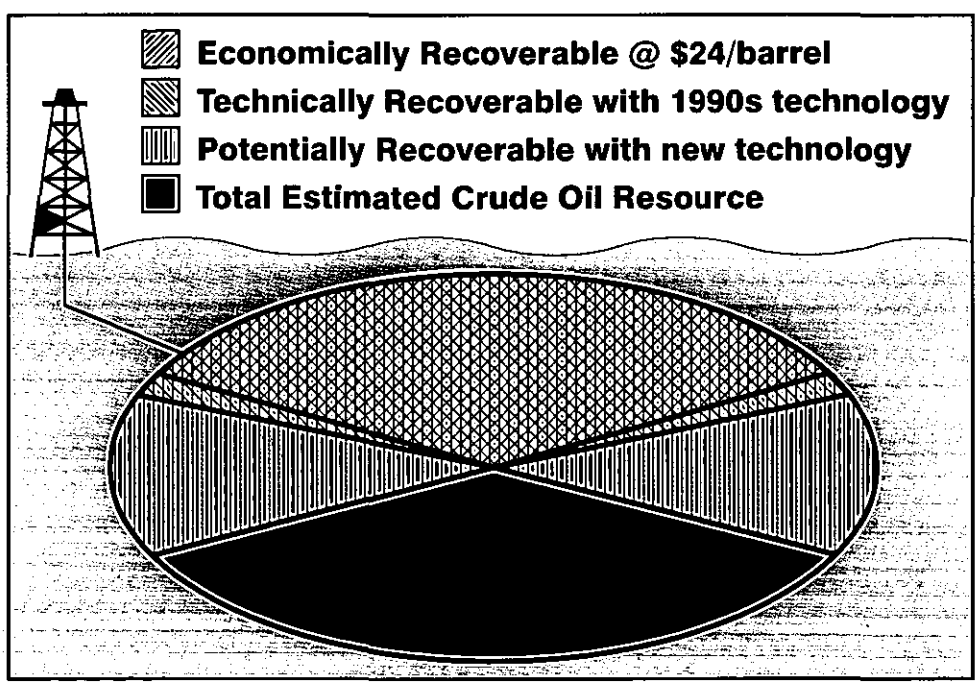
ANWR 1002 Area Crude Oil Resource Estimates

(in billion barrels)

Estimate Range Probability	**95%**	**Mean**	**5%**
In-Place Resources	15.577	27.778	42.319
Technically Recoverable	5.724	10.36	15.955
Technically Recoverable as % of In-Place	37%	37%	38%
Economically Recoverable as a % of Technically Recoverable			
@ $12/barrel West Coast	0%	5%	11%
@ $18/barrel West Coast	48%	61%	71%
@ $24/barrell West Coast	87%	88%	91%

The Technology Factor: *Considerable and Real*

Technically recoverable volumes cited in the USGS assessment are very conservative. Remember that USGS estimates assume only current technology. In this case, the agency assumes only about 37% of the oil in place can eventually be recovered. Estimated recovery from Prudhoe Bay was initially estimated to be about 35%, but the application of new technology since that time has progressed steadily, and recovery is now expected to exceed 65%. Similar experience with ANWR could raise eventual recovery well beyond the USGS estimate. For example, 65% recovery would imply a range of 10 to 27 billion barrels, with a mean of 18 billion barrels.



The footprint of ANWR oil in comparison to equal amounts of energy.

February 11, 2009
Bill Version: 26-LS0403\A

House Joint Resolution 18
Sponsor Statement

House Joint Resolution 18 urges the United States Congress to reject any legislation seeking a wilderness designation for the 1002 Area of the Arctic National Wildlife Refuge.

Legislation has been introduced in Congress to do just that. The 1002 Area could be the largest untapped onshore oil prospect in the United States and that makes it both a national refuge and a strategic resource. The two are not incompatible.

Congress deliberately set aside the 1002 Area for future oil and gas exploration. Lawmakers at the time understood the day may come when those reserves will be needed to fuel the economy and reduce the flow of imported oil into America.

Alaska needs new jobs to grow its economy and new revenue to fund basic services like education, public safety and transportation infrastructure. America needs a stable, safe and secure supply of energy to help the economy get back on its feet. ANWR can do all of that without harming the fragile arctic environment.

Locking up a two thousand acre area that makes up less than one percent of the refuge and holds an estimated 10,400,000,000 barrels of oil does not make sense for America's economy and national security.

HJR 18 has been referred to the House Resources Committee. For more information, contact Representative Millett at (907) 465-3879.

HJR 18

111th CONGRESS

1st Session

H. R. 39

To preserve the Arctic coastal plain of the Arctic National Wildlife Refuge, Alaska, as wilderness in recognition of its extraordinary natural ecosystems and for the permanent good of present and future generations of Americans.

IN THE HOUSE OF REPRESENTATIVES

January 6, 2009

Mr. MARKEY of Massachusetts introduced the following bill; which was referred to the Committee on Natural Resources

A BILL

To preserve the Arctic coastal plain of the Arctic National Wildlife Refuge, Alaska, as wilderness in recognition of its extraordinary natural ecosystems and for the permanent good of present and future generations of Americans.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the `Udall-Eisenhower Arctic Wilderness Act'.

SEC. 2. FINDINGS AND STATEMENT OF POLICY.

(a) Findings- The Congress finds the following:

(1) Americans cherish the continued existence of expansive, unspoiled wilderness ecosystems and wildlife found on their public lands, and feel a strong moral responsibility to protect this wilderness heritage as an enduring resource to bequeath undisturbed to future generations of Americans.

(2) It is widely believed by ecologists, wildlife scientists, public land specialists, and other experts that the wilderness ecosystem centered around and dependent upon the Arctic coastal plain of the Arctic National Wildlife Refuge, Alaska, represents the very epitome of a primeval wilderness ecosystem and constitutes the greatest wilderness area and diversity of wildlife habitats of its kind in the United States.

(3) President Dwight D. Eisenhower initiated protection of the wilderness values of the Arctic coastal plain in 1960 w[+] FEEDBACK set aside 8,900,000 acres establishing the Arctic National Wildlife Refuge expressly `for the purpose of preserving unique wildlife, wilderness and recreational values'.

(4) In 1980, when the Congress acted to strengthen the protective management of the Eisenhower-designated area with the enactment of the Alaska National Interest Lands Conservation Act (Public Law 96-487), Representative Morris K. Udall led the effort to more than double the size of the Arctic National Wildlife Refuge and extend statutory wilderness protection to most of the original area.

(5) Before the enactment of the Alaska National Interest Lands Conservation Act, the House of Representatives twice passed legislation that would have protected the entire Eisenhower-designated area as wilderness, including the Arctic coastal plain.

(6) A majority of Americans have supported and continue to support preserving and protecting the Arctic National Wildlife Refuge, including the Arctic coastal plain, from any industrial development and consider oil and gas exploration and development in particular to be incompatible with the purposes for which this incomparable wilderness ecosystem has been set aside.

(7) When the Arctic National Wildlife Refuge was established in 1980 by paragraph (2) of section 303 of the Alaska National Interest Lands Conservation Act (Public Law 96-487; 94 Stat. 2390; 16 U.S.C. 668dd note), subparagraph (B)(iii) of such paragraph specifically stated that one of the purposes for which the Arctic National Wildlife Refuge is established and managed would be to provide the opportunity for continued subsistence uses by local residents, and, therefore, the lands designated as wilderness within the Refuge, including the area designated by this Act, are and will continue to be managed consistent with such subparagraph.

(8) Canada has taken action to preserve those portions of the wilderness ecosystem of the Arctic that exist on its side of the international border and provides strong legal protection for the habitat of the Porcupine River caribou herd that migrates annually through both countries to calve on the Arctic coastal plain.

(9) The extension of full wilderness protection for the Arctic coastal plain within the Arctic National Wildlife Refuge will still leave most of the North Slope of Alaska available for the development of energy resources, which will allow Alaska to continue to contribute significantly to meeting the energy needs of the United States without despoiling the unique Arctic coastal plain of the Arctic National Wildlife Refuge.

(b) Statement of Policy- The Congress hereby declares that it is the policy of the United States--

(1) to honor the decades of bipartisan efforts that have increasingly protected the great wilderness ecosystem of the Arctic coastal plain;

(2) to sustain this natural treasure for the current generation of Americans; and

(3) to do everything possible to protect and preserve this magnificent natural ecosystem so that it may be bequeathed in its unspoiled natural condition to future generations of Americans.

SEC. 3. DESIGNATION OF ADDITIONAL WILDERNESS, ARCTIC NATIONAL WILDLIFE REFUGE, ALASKA.

(a) Inclusion of Arctic Coastal Plain- In furtherance of the Wilderness Act (16 U.S.C. 1131 et seq.), an area within the Arctic National Wildlife Refuge in the State of Alaska comprising approximately 1,559,538 acres, as generally depicted on a map entitled `Arctic National Wildlife Refuge--1002 Area Alternative E--Wilderness Designation' and dated October 28, 1991, is hereby designated as wilderness and, therefore, as a component of the National Wilderness Preservation System. The map referred to in this subsection shall be available for inspection in the offices of the Secretary of the Interior.

(b) Administration- The Secretary of the Interior shall administer the area designated as wilderness by subsection (a) in accordance with the Wilderness Act as part of the wilderness area already in existence within the Arctic National Wildlife Refuge as of the date of the enactment of this Act.

S 231 IS

HJR 18

111th CONGRESS

1st Session

S. 231

To designate a portion of the Arctic National Wildlife Refuge as wilderness.

IN THE SENATE OF THE UNITED STATES

January 14, 2009

Mr. LIEBERMAN (for himself, Mrs. MURRAY, Ms. STABENOW, Mr. WHITEHOUSE, Mr. LEAHY, Mr. CARDIN, Mr. SCHUMER, Mr. KOHL, Mr. FEINGOLD, Mr. KENNEDY, Mr. DURBIN, Mr. DODD, Mrs. BOXER, Ms. CANTWELL, Mr. WYDEN, Mr. REED, Mrs. FEINSTEIN, Mr. SANDERS, Mr. UDALL of New Mexico, Mr. UDALL of Colorado, Mr. HARKIN, Mr. LAUTENBERG, Mr. KERRY, Ms. KLOBUCHAR, and Mr. MENENDEZ) introduced the following bill; which was read twice and referred to the Committee on Environment and Public Works

A BILL

To designate a portion of the Arctic National Wildlife Refuge as wilderness.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. DESIGNATION OF PORTION OF ARCTIC NATIONAL WILDLIFE REFUGE AS WILDERNESS.

Section 4 of the National Wildlife Refuge System Administration Act of 1966 (16 U.S.C. 668dd) is amended by adding at the end the following:

`(p) Designation of Certain Land as Wilderness- Notwithstanding any other provision of this Act, a portion of the Arctic National Wildlife Refuge in Alaska comprising approximately 1,559,538 acres, as generally depicted on a map entitled `Arctic National Wildlife Refuge--1002 Area. Alternative E--Wilderness Designation, October 28, 1991' and available for inspection in the offices of the Secretary, is designated as a component of the National Wilderness Preservation System under the Wilderness Act (16 U.S.C. 1131 et seq.).'.

Representative Charisse Millett
Alaska State Legislature
State Capitol Building
Room 412
Juneau, AK 99801-1182

Dear Representative Millet:

I am writing to extend my sincerest appreciation for your leadership on HJR 18, urging the United States Congress to keep the Arctic National Wildlife Refuge open for future oil and gas development.

As you may know, Arctic Slope Regional Corporation owns subsurface title to 92,000 acres inside the Coastal Plain of ANWR, and our sister village corporation, Kaktovik Iñupiat Corporation (KIC), owns the surface title to the same acreage.

ASRC in partnership with KIC have worked this issue for over two decades. We have an up close and personal interest in this debate because potential development or Wilderness designation will have a direct impact on the residents of Kaktovik and those of the North Slope.

I am extending ASRC's assistance in providing your office with additional information on this important matter. Please do not hesitate to contact me directly. Thank you, again, for your leadership on the ANWR issue.

Regards,
ARCTIC SLOPE REGIONAL CORPORATION

Re: HJR18, Urging the U.S. Congress to refrain from passing legislation that designates lands in Area 1002 of ANWR as Wilderness

Dear Representative Johnson and Representative Neuman:

On behalf of the Resource Development Council for Alaska, Inc., (RDC), I am writing in support of HJR18, which urges Congress to refrain from passing legislation that designates the 1002 Area of ANWR as Wilderness.

RDC is a statewide, non-profit, membership-funded organization founded in 1975. The RDC membership is comprised of individuals and companies from Alaska's oil and gas, mining, timber, tourism, and fisheries industries, as well as Alaska Native corporations, local communities, organized labor, and industry support firms. RDC's purpose is to link these diverse interests together to encourage a strong, diversified private sector in Alaska and expand the state's economic base through the responsible development of our natural resources.

A Wilderness designation would preclude future action by Congress to provide for environmentally responsible exploration and production of oil and gas resources in ANWR. Federal Wilderness should not be expanded to include the 1002 Area, given the Coastal Plain is considered the nation's most promising onshore oil and gas prospect.

We encourage the Committee to vote in favor of this resolution. Thank you for your consideration.

Sincerely,

Jason Brune

SPONSOR STATEMENT

HOUSE JOINT RESOLUTION 19

House Joint Resolution 19 recognizes the 20th anniversary of the Exxon Valdez oil spill and supports continuation of the practice of dual tug escorts for loaded oil tankers traversing Prince William Sound.

Currently, Trans-Alaska Pipeline System oil tankers in Prince William Sound are required to have two tug escorts when carrying oil. This is in accordance with the Oil Spill Prevention Act of 1990, a federal mandate. This act does not require tug escorts for double hull tankers, however. At the present time, all but two tankers engaged in the TAPS trade are double-hulled ships.

The regulations keeping the escort system in place for all tankers—including double-hulled tankers—are embodied in the oil spill contingency plans filed by oil shippers with the Alaska Department of Environmental Conservation. While the shippers say they do not envision changes in the escort system in the immediate future, these plans are as a matter of fact subject to review and amendment by the shippers at any time.

The current escort system is a vital component in preventing catastrophic oil spills in Prince William Sound and in responding when oil spills occur. It should be retained to assure the continued protection of Alaska's fisheries resources, both commercial and recreational, along with traditional subsistence uses, tourism, and the many other uses of the natural resources of Prince William Sound and the adjacent Gulf of Alaska. While HJR19 carries no legal force, it will educate Alaskans, spark debate, and put the Alaska Legislature on record as supporting the continued operation of the world-class escort system in Prince William Sound.###

CITY OF SEWARD, ALASKA
RESOLUTION 2005-14

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF SEWARD, ALASKA IN SUPPORT OF MAINTAINING A STRONG AND RELIABLE ESCORT FLEET AND PRESERVING THE PRACTICE OF REQUIRING TWO ESCORTS, AS CURRENTLY PRACTICED, FOR ALL LADEN CRUDE OIL TANKERS TRANSITING PRINCE WILLIAM SOUND

WHEREAS, the composition of Trans Alaska Pipeline System trade tankers is moving towards a fleet of double-hulled tankers as required by the Oil Pollution Act of 1990; and

WHEREAS, the current Prince William Sound escort system safeguards against oil spills caused by navigational errors, severe weather and human or organizational errors; and

WHEREAS, the current Prince William Sound escort system provides the capability and resources of immediate, on-scene response of two escort vessels; and

WHEREAS, laden double hull tankers, including those with redundant systems, are currently voluntarily escorted in a two-tug escort configuration; and

WHEREAS, since the implementation of the current escort system, there have been no major oil spills and potential accidents have been reduced to near misses; and

WHEREAS, it is imprudent to reduce proven prevention programs based solely on improvements in vessel engineering and design; and

WHEREAS, a large oil spill in Prince William Sound would adversely affect the commercial fisheries, tourism industry and economies of coastal communities in south central Alaska and cause major environmental damage.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF SEWARD, ALASKA, that:

Section 1. The Seward city council supports the continued operation of the Prince William Sound escort system in the configuration as described in the 2001 Vessel Escort and Response Plan for all laden crude oil tankers transiting Prince William Sound.

Section 2. This resolution shall take affect immediately upon its adoption.

PASSED AND APPROVED by the City Council of the city of Seward, Alaska, this 14th day of March, 2005.

THE CITY OF SEWARD, ALASKA

March 11, 2009

Representative Craig Johnson, Co-Chairman
Representative Mark Neuman, Co-Chairman
House Resources Committee
Alaska State Legislature
State Capitol (Mail stop 3100)
Juneau AK 99811

Dear Chairman Johnson and Committee members,

United Fishermen of Alaska supports HJR 19, calling for an escort of at least two vessels accompanying loaded oil tankers in Prince William Sound, whether single-hulled or double-hulled. While the use of double hulled tankers offers some level of protection, the risk that oil tanker traffic brings against the value of Alaska's fisheries calls for the highest level of preventive protection that can be attained. With Alaska's coastal weather, tidal currents, and natural navigational hazards, the presence of a second escort vessel is required in order to safely control a large tanker vessel should a loss of power occur, to avoid a repeat of a preventable disaster.

UFA represents 37 Alaska commercial fishing organizations from fisheries throughout the state and its offshore waters, altogether representing more than half of U.S. domestic seafood production. We ask for your support of HJR 19 to best help prevent another tragedy to Alaska's fisheries.

Sincerely,

Mark Vinsel
Executive Director

State Capitol, Room 434
Juneau, Alaska 99801-1182

Re: Support for Senate Joint Res. 11 and House Joint Res. 19

Dear Senator Stevens and Representative Austerman:

This letter is to express deep appreciation and strong support for your introduction of Senate Joint Resolution No. 11 and House Joint Resolution No. 19 respectively resolving --

> "that the Alaska State Legislature supports the continued practice in Prince William Sound of accompanying each loaded oil tanker, whether single-hulled or double-hulled, with at least two escort vessels."

Your resolutions will help ensure that the marine safety system for loaded oil tankers traveling from the Marine Oil Terminal in Valdez, Alaska through Prince William Sound is *not weakened* by reducing the current practice of using dual escort tugs to accompany such tankers. The continued practice of dual escorts is crucial to protecting people, communities, livelihoods, the economy, fish and wildlife and other natural resources of the Prince William Sound and other portions of the Gulf of Alaska within the Exxon Valdez oil spill region from another devastating oil spill.

As one of numerous communities in the oil spill region, the village of Old Harbor, for which the Old Harbor Native Corporation is the village corporation authorized by the Alaska Native Claims Settlement Act, witnessed and experienced, and continues to experience, the aftermath of the 1989 oil spill. President George H. W. Bush called that spill "the worst marine environmental disaster this Nation has ever experienced." Clearly, such a disaster should never be permitted to happen again.

Fortunately, because of the actions of the U.S. Congress, federal agencies, the State of Alaska, the citizens' panel authorized by Congress to help oversee the operations at the terminus of the Trans-Alaska Pipeline and oil transport through Prince William Sound, and to their credit, industry itself, the current marine safety system at Valdez is viewed by most to be among the safest in the world. The employment of dual escorts is a critical core safety component of that system.

We all learned the hard way that regardless of tanker technology . . . human error, equipment failure, weather, obstacles in the water such as icebergs, and other factors can contribute to the creation of catastrophic results. The 1989 oil spill resulted in enormous disruption and harm to the lives and livelihoods of people living in the region, including people in our village, to the fishing industry, to tourism, to subsistence resources and to the marine, intertidal and terrestrial shoreline environment.

Considering the huge social, environmental, economic and cultural impacts and costs of the Exxon Valdez oil spill, it would be a "penny-wise and pound-foolish" to diminish the current protections in place. We are concerned particularly about any effort by industry or others to reduce protections in place now by calling for a "risk assessment" of the marine safety system at the Port of Valdez and Prince William Sound. We believe as you appear to believe by virtue of your resolutions, and as most Alaskans do, that our state and the nation have already gone through a risk assessment in 1989 . . . the Exxon Valdez oil spill.

To weaken the current system that is working so well would be indefensible. Given that that system is the best insurance policy the public and industry could devise, we hope the oil industry will concur with the intent of your resolutions. Anyone who attempts to weaken the current system would be placing the entire region in serious jeopardy once again. Therefore, we urge you to be steadfast in keeping your resolutions strong and in doing so to protect the natural resources, communities, and the economy of the entire region.

On behalf of the shareholders of our village corporation, thank you for your leadership and the wisdom and judgment of those who join you in seeking passage of Senate Joint Resolution 11 and House Joint Resolution 19. We strongly support your efforts to obtain passage by the Alaska State Legislature of these resolutions.

Best regards.

Sincerely,

RESOLUTION NUMBER 03-09-01

A RESOLUTION OF THE KODIAK CHAMBER OF COMMERCE SUPPORTING SENATE JOINT RESOLUTION 11 AND HOUSE JOINT RESOLUTION 19 REQUIRING OIL TANKER VESSELS BE ACCOMPANIED BY TWO VESSEL ESCORTS

WHEREAS, the Kodiak Chamber of Commerce is dedicated to Kodiak's future; and.

WHEREAS, lessons from the past are helpful in planning for the future; and

WHEREAS, in 1989 the Kodiak community was traumatized by the Exxon Valdez Oil Spill; and

WHEREAS, since 1989 the practice of requiring a two vessel escort for tankers in Prince William Sound has contributed to no other oil spills in Prince William Sound; and

WHEREAS, in Senate Joint Resolution 11 and House Joint Resolution 19, the Alaska Legislature has an opportunity to inform the appropriate officials and companies that the practice of requiring a two vessel escort for tankers should continue; and

WHEREAS, the Kodiak community should not be subjected to another oil spill.

NOW, THEREFORE, BE IT RESOLVED the Kodiak Chamber of Commerce encourages the Alaska Legislature to pass SJR 11 or HJR 19.

Passed and approved by the Board of Directors of the Kodiak Chamber of Commerce this 6th day of March 2009.

Signed this 6th day of March 2009.

Secretary to the Board

Sec. 46.04.030. Oil discharge prevention and contingency plans.
[Extracted from Alaska Statutes]

(a) A person may not cause or permit the operation of an oil terminal facility in the state unless an oil discharge prevention and contingency plan for the facility has been approved by the department and the person is in compliance with the plan.

(b) A person may not cause or permit the operation of a pipeline or an exploration or production facility in the state unless an oil discharge prevention and contingency plan for the pipeline or facility has been approved by the department and the person is in compliance with the plan.

(c) Except as provided in (n) of this section, a person may not operate a tank vessel or an oil barge within the waters of the state, or cause or permit the transfer of oil to or from a tank vessel or an oil barge, unless an oil discharge prevention and contingency plan for the tank vessel or oil barge has been approved by the department and the person is in compliance with the plan.

(d) Upon approval of a contingency plan, the department shall issue to the plan holder a certificate stating that the contingency plan has been approved by the department. The certificate must include the name of the facility, pipeline, tank vessel, or oil barge for which it is issued, the effective date of the contingency plan, and the date by which the contingency plan must be submitted for renewal. A contingency plan must be submitted for renewal every five years.

(e) The department may attach reasonable terms and conditions to its approval or modification of a contingency plan that the department determines are necessary to ensure that the applicant for a contingency plan has access to sufficient resources to protect environmentally sensitive areas and to contain, clean up, and mitigate potential oil discharges from the facility or vessel as provided in (k) of this section, and to ensure that the applicant complies with the contingency plan. If a contingency plan submitted to the department for approval relies on the services of an oil spill primary response action contractor, the department may not approve the contingency plan unless the primary response action contractor is registered and approved under AS 46.04.035. The contingency plan must provide for the use by the applicant of the best technology that was available at the time the contingency plan was submitted or renewed. The department shall identify the prevention and response technologies that are subject to a best available technology determination. The department may find that any technology meeting the response planning standards in (k) of this section or a prevention performance standard established under AS 46.04.070 is the best available technology. The department may prepare findings and maintain a list of those technologies that are considered the best available. The department may require an applicant or holder of an approved contingency plan to take steps necessary to demonstrate the applicant's or holder's ability to carry out the contingency plan, including

(1) periodic training;

(2) response team exercises; and

(3) verifying access to inventories of equipment, supplies, and personnel identified as available in the approved contingency plan.

(f) Upon request of a plan holder or on the department's own initiative, the department, after notice and opportunity for hearing, may modify its approval of a

contingency plan if the department determines that a change has occurred in the operation of a facility or vessel necessitating an amended or supplemented plan, or the operator's discharge experience demonstrates a necessity for modification. The department, after notice and opportunity for hearing, may revoke its approval of a contingency plan if the department determines that

(1) approval was obtained by fraud or misrepresentation;

(2) the operator does not have access to the quality or quantity of resources identified in the plan;

(3) a term or condition of approval or modification has been violated; or

(4) the person is not in compliance with the contingency plan and the deficiency materially affects the plan holder's response capability.

Oil Pollution Act of 1990

January 2007

FACT SHEET

Overview

The federal Oil Pollution Act of 1990 (OPA 90) addresses oil spill prevention, response, and liability and compensation should spills occur. OPA 90 is one of two guiding documents under which Prince William Sound Regional Citizens' Advisory Council operates.

Creation of the Oil Pollution Act of 1990 was fueled by the *Exxon Valdez* oil spill of March 24, 1989, in which 11 million gallons of Alaskan crude oil leaked into Prince William Sound waters when the tanker grounded. It soon became apparent that response resources, especially federal funds, were lacking, and that required compensation to those affected was not enough under federal law. One of the most important results of the oil spill was the enactment of OPA 90, which addressed both of these deficiencies.

OPA 90 amended the Clean Water Act and addressed the wide range of problems associated with preventing, responding to, and paying for oil pollution incidents in navigable waters of the United States. The act significantly increased federal oversight of maritime oil transportation, while providing greater environmental safeguards.

OPA 90 also required Alyeska Pipeline Service Co. to establish and fund a citizens' advisory group. Prince William Sound Regional Citizens' Advisory Council (PWSRCAC) is certified as the program for Prince William Sound. Cook Inlet Regional Citizens' Advisory Council was established for Alaska's Cook Inlet region. Many people involved in the establishment of the Prince William Sound council also actively promoted citizen involvement provisions in OPA 90.

These oversight groups are designed to promote partnership and cooperation among local citizens, industry, and government, and to provide citizen oversight of environmental compliance by oil terminals and tankers.

Subject: Tanker saves in PWS

Here's the list of tanker saves in PWS that Chris Jones put together last fall. Joel is working to make sure all incidents are captured. Do either of you remember any other incidents?

1. July 10, 2001- *Chevron Mississippi* nearly collides with the F/V *Orion* due to communication failure in the Valdez Narrows.

2. Oct 10 2002- *Kenai* is outbound near Schooner rocks in Hinchinbrook Entrance, suffers propulsion trouble, tanker master calls for tug assistance, then shuts down engines.

3. November 10, 1995- *Kenai* suffers near grounding at Middle Rock in the Valdez Narrows after the vessel strayed out of the shipping lanes and came to within ½ ship length of grounding.

4. October 20, 1992- *Kenai* experiences propulsion trouble and drifts to within 100 yards of Middle Rock before tug saves tanker and brings back on course.

5. March 4, 1992- *Exxon North Slope* suffers propulsion problem, upon entering the Sound is escorted to Knowles Head anchorage.

6. September 20, 1989- *BP Atigun Pass* loses power near Bligh Reef, escort vessel holds tanker in shipping lanes until power is regained.

7. July 31st 1989- *Mobil Arctic* suffered gyrocompass failure, requested help from escort vessel because fog had caused master to lose his bearings.

SPONSOR STATEMENT

HOUSE JOINT RESOLUTION 21

House Joint Resolution 21 requests the North Pacific Fishery Management Council (NPFMC) to cease consideration of an amendment package that would require a Pacific cod endorsement for a license limitation program (LLP) license holder to participate in the Pacific cod fixed gear fisheries in the Gulf of Alaska. It also supports the continuation of the existing LLP program for groundfish in the Gulf of Alaska, and supports a policy of broad participation in the harvest of marine resources in the Gulf of Alaska.

The NPFMC is the federal regulatory body that oversees management of the federal fisheries off the coast of Alaska, in the area from 3 to 200 miles from shore. The NPFMC is currently considering regulatory action that would create and require Pacific cod "endorsements" on Gulf of Alaska fixed gear license limitation program (LLP) licenses in order to harvest the Pacific cod resource. (In this proposed action, "fixed gear" includes pot and longline gear types.) These endorsements would be placed on only those LLPs that have been used in a specific range of recent years. LLPs without Pacific cod endorsements could not be used to fish for Pacific cod. This action renders those LLPs functionally useless and valueless to their owners and increases the barriers for re-entry or new entrance into the Pacific cod fisheries. Of the LLPs that would be impacted by this action, more than 60% are estimated to be owned by Alaska residents.

Pacific cod is among the most important of the fishery resources harvested in federal waters in the Gulf of Alaska. Pacific cod is harvested by four different gear types, and on vessels ranging in size from very small (<30 feet) to relatively large (>100 feet). The greatest number of vessels harvesting Pacific cod in the Gulf of Alaska use pot, longline or jig gear, and the vast majority of these vessels are ≤60 feet in length. This is the core of the coastal Alaska resident fleet in the Gulf of Alaska. Pacific cod are also harvested using trawl gear.

The creation and requirement of Pacific cod endorsements for participation in federal Pacific cod fisheries in the Gulf of Alaska would create significant barriers for new entrants to Alaska's commercial fisheries, and for re-entrance by fishermen who did not participate in a specific range of qualifying years. It would also impact a group of recent fishery entrants who made their fishery investments *after* the qualifying years. Impacted individuals would include young Alaskans and enterprising crewmen looking to advance into ownership positions in the industry.

This action is also likely to lead to consolidation of the fishing fleet and concentration of LLP ownership in fewer hands. Expected results of this action would include consolidation of the Gulf of Alaska Pacific cod fixed gear fleet, fewer crew jobs, less demand for support sector services in Alaska's coastal communities, and increased costs of entry into Gulf of Alaska fisheries.

In absence of a biological concern for resource sustainability, it is important to maintain fisheries with relatively low entry barriers to encourage and allow the entrance of the next generation of fishermen into Alaska's fisheries. While HJR21 carries no legal force, it put the Alaska Legislature on record as supporting a policy of broad participation in Gulf of Alaska groundfish fisheries.

North Pacific Fishery Management Council, December 2008
C-2(a) Gulf of Alaska Fixed Gear Recency Motion

The Council directed staff to develop an analysis based upon the following purpose and need statement, components, and options for initial public review. Final action is scheduled for April 2009.

C-2(a) Gulf of Alaska Fixed Gear Recency

Western GOA and Central GOA Pacific cod fisheries are subject to intense competition, particularly during the A season, when fish are aggregated and of highest value. Competition among fixed gear participants in the Western GOA and Central GOA Pacific cod fisheries has increased for a variety of reasons, including increased market value of Pacific cod products, a declining ABC/TAC, increased participation by harvesters displaced from other fisheries and introduction of capital that has been accrued from participation in rationalized fisheries. Additionally, fishery policies have created incentives that encourage non-traditional efficiency improvements for the less than 60 ft LOA vessel class. The possible future entry of latent effort and disproportionate vessel efficiency would have detrimental effects on LLP holders that have exhibited participation in, and dependence on, the fixed gear Pacific cod fisheries. Many fixed gear vessel owners have made significant investments, have long catch histories, and are dependent on the Western GOA and Central GOA Pacific cod resources. These long-term participants need protection from those who have little or no recent history and who have the ability to increase their participation in the Pacific cod fisheries. At the same time, retaining Federal waters opportunities for small community quota eligible (CQE) communities dependent on access to a range of fishery resources and expanding opportunities in Federal waters for small capacity jig operations is valued to promote community protections at a level that imposes minimal impact on historic catch shares of recent participants.

The intent of the proposed amendment is to prevent the future entry or re-entry of latent fixed gear groundfish fishing capacity that has not been utilized in recent years into the Pacific cod fisheries, and to preserve the traditional vessel operational efficiencies within the fisheries. This requires prompt action to promote stability in the fixed gear sectors of the GOA Pacific cod fisheries, and is expected to be implemented concurrently with the division of GOA Pacific cod among sectors which is currently under consideration. However, this action cannot address continued growth in the waters managed by the State of Alaska.

ALTERNATIVE 1.

No Action. No changes would be made to the current License Limitation Program.

ALTERNATIVE 2.

Add non-severable gear-specific Pacific cod endorsements to fixed gear licenses. Pacific cod endorsements would limit entry into the directed Pacific cod fisheries in Federal waters in the Western and Central Gulf of Alaska.

Component 1— Areas included

Western Gulf
Central Gulf (current LLP endorsement includes West Yakutat)

- Different options may be applied to each management area.

Component 2— Identify and define sectors

4984

The sector definitions for awarding Pacific cod endorsements may be different from those used for the GOA Pacific cod sector split action. The purpose of sector definitions in this action is to allow the Council to select different catch thresholds for the different gear types, operation types, and vessel lengths. Individual licenses may qualify for any combination of a jig, hook-and-line, and pot endorsement if the license meets the respective threshold(s) for the appropriate gear type, operation type, and vessel length.

- Hook-and-line CP
  Option: Hook-and-line CP ≥125
  Hook-and-line CP <125
- Hook-and-line CV
  Option: Hook-and-line ≥60
  Hook-and-line <60
- Pot CP
- Pot CV
  Option: Pot CV ≥60
  Pot CV <60
- Jig
  Exempt vessels using jig gear from the LLP requirement (including the Pacific cod endorsement requirement) that use a maximum of 5 jigging machines, 5 lines, and 30 hooks per line or one line of 150 hooks.

Option: Exempt vessels participating with fixed gear in the Western GOA B season directed Pacific cod fishery from the Pacific cod endorsement requirement.
Suboption: Exempt vessels using pot gear only.

Component 3 – Qualifying years

Option 1: 2000-2006
Option 2: 2002-2006
Option 3: Add the qualifying period January 1, 2007 through:
Suboption 1: June 4, 2008
Suboption 2: December 8, 2008

- Either of these suboptions will be selected in addition to one of the qualifying periods in Option 1 or Option 2.

  Suboption 3: If an LLP license qualifies only when the supplemental range of years in Suboption 1 or Suboption 2 is included, any Pacific cod endorsements granted to licenses under these suboptions would be extinguished upon transfer of the LLP license to another vessel or owner.

- If a GOA hook-and-line catcher processor LLP license holder was a voluntary non-participant in the Freezer Longliner Coalition informal PSC co-op efforts of 2006, 2007, or 2008, and does not qualify under Component 3, Options 1, 2, or 3, the LLP would not be extinguished. If Pacific cod endorsements are a result of this action in the GOA hook-and-line CP sector, the LLP would receive a Pacific cod endorsement.

4985

Component 4 – Catch thresholds

Thresholds shall be based on legally retained catch in the aggregate during all of the qualifying years in the Federal and parallel fisheries (excluding IFQ catch). Separate and distinct thresholds may be determined for each defined sector.

Option 1: All directed Pacific cod 1, 3, or 5 landings (resulting in a Pacific cod endorsement)
Option 2: All directed Pacific Cod 5, 10, 25, or 100 mt (resulting in a Pacific cod endorsement)

Option: Hardship provision. A GOA fixed gear LLP holder who had 5 or more Pacific cod landings in 1999, but had a vessel on which the LLP was used sink in 1999 or 2000, shall be credited with qualifying history so as to obtain a Pacific cod endorsement.

Directed Pacific cod catch is defined as landings made when the directed Pacific cod fisheries are open. For purposes of catch accounting, licenses are credited with deliveries or processing activity recorded up to 7 days after the directed season closes.

Component 5 – Stacked license provisions

Where there are multiple LLPs registered to a single vessel, also known as 'stacking' of LLPs, groundfish harvest history will be fully credited to all stacked licenses, each carrying its own qualifying endorsements and designations.

Component 6 – Capacity/efficiency limits to CV and CP fixed gear LLPs

Add a width restriction (efficiency restriction) on each CV and CP fixed gear LLP license that is eligible to access Pacific cod under this action. The width restriction would be 1 ft of width for each 3 ft of length, and is based on the LOA of the vessel assigned to the license on December 8, 2008. The licenses that are assigned to vessels on December 8, 2008 that exceed the width restriction will be grandfathered at their present LOA. For vessels under construction on December 8, 2008, the width restriction for the license shall be equal to the vessel width upon completion. Vessels would be required to report width measurements to RAM.

Option: Add a simple gross tonnage maximum to licenses.

Component 7 – CQE community resident exemption

CQE community residents currently holding latent, non-qualifying, LLP permits shall retain their LLP and area endorsement(s) and be exempt from the Pacific cod endorsement requirement. A hook-and-line or pot gear endorsement shall be made through (a) a one-time designation at the time the endorsement is issued or (b) designated at the time the first Pacific cod landing is made based on the gear type used. The CQE community resident's LLP, shall not be leased, and can only be transferred to an individual who has lived continuously in the permit holder's CQE community for 24 consecutive months prior to the transfer and who intends to remain a resident of the community. Residency shall be affirmed annually upon renewal. If a CQE community LLP holder with a restricted transfer LLP is no longer a resident of the CQE community or dies without a designated qualified LLP community beneficiary, the community CQE shall designate a qualified individual in the CQE community to hold the restricted transfer LLP.

4986

Option: Restrict exemption to LLPs with a MLOA endorsement less than 60 feet.

Additional information requested

- Additional information on the number of identical stacked licenses that meet the catch thresholds (Component 5).
- Additional information on possible approaches to identifying a maximum length to width ratio or maximum simple gross tonnage for purposes of adding a capacity endorsement to licenses (Component 6).

MEMORANDUM

To: Representative Craig Johnson, Co-Chair
Representative Mark Neuman, Co-Chair
House Resources Committee

From: Representative Alan Austerman

Date: February 27, 2009

RE: House Joint Resolution 21—Request for Hearing

House Joint Resolution 21 is a resolution requesting the North Pacific Fishery Management Council to cease consideration of an amendment package that would require a Pacific cod endorsement for a license limitation program license holder to participate in the Pacific cod fisheries in the Gulf of Alaska.

Pending referral by House Fisheries Committee, I am requesting a hearing for HJR 21 at your earliest convenience. Attached you will find a copy of HJR21. I have also provided my sponsor summary, and the relevant motion from the North Pacific Fishery Management Council (December 2008). Please note that the proposed action that this resolution addresses is scheduled for action at an NPFMC meeting that begins March 30. Time is therefore important in the consideration of this resolution.

I will provide additional backup as it becomes available. Please let Erin Harrington of my staff know if there is anything else we can provide. Thank you for your consideration.

Fishery Management Plan for Groundfish
of the GOA Management Area
to

ADD PACIFIC COD ENDORSEMENTS TO WESTERN AND CENTRAL GOA FIXED GEAR LLP LICENSES

Prepared by staff of the
North Pacific Fishery Management Council
605 W. 4th Avenue, #306
Anchorage Alaska 99501

March 3, 2009

DEFINITIONS AND ASSUMPTIONS FOR THE GOA PACIFIC COD ENDORSEMENT FMP AMENDMENT ANALYSIS

The following list provides definitions for a list of selected words or phrases used in the analysis:

- An **LLP license** is held by a person, and not by a vessel. NOAA Fisheries requires license owners to assign a vessel to the license before it can be used in a fishery subject to the LLP. Licenses may be transferred to a different vessel or owner once per calendar year (Jan 1- Dec 31). The LLP license must be physically on board the vessel when it is engaged in activities authorized by the license.
- **Area Endorsements** – Each license carries one or more area endorsements authorizing entry into fisheries in those management areas (Bering Sea, Aleutian Islands, Western GOA, Central GOA, and Southeast). For purposes of the LLP, the Central GOA area endorsement also allows vessels to fish in West Yakutat.
- **Gear Designation**- Each license carries a non-trawl and/or trawl gear designation which authorizes the license to fish using the designated gear type.
- **Landing** – For purposes of this analysis, a catcher vessel landing includes any LLP groundfish species landed during one calendar day. State waters and IFQ catch is not counted toward qualifying catch. Catcher vessel harvests are based upon ADFG Fish tickets. A catcher processor landing includes any groundfish landed during a one week interval, because catcher processor landings are based upon Blend and Catch Accounting data and are only specific to a week ending date.
- **MLOA designation** – Each license carries a maximum length overall (LOA) designation, limiting the length of the vessel that may use the license.
- **Non-severability** – The endorsements and designations on a license are non-severable and only transfer with the license.
- **Non-Trawl** – A license was assigned a non-trawl designation if fixed gear was used to harvest groundfish from a qualifying fishery during the period beginning January 1, 1988 through June 17, 1995 (§679(k)(3)(iv)(D)).
- **Operation-type designation** – Each license carries a designation for either catcher processor or catcher vessel operation. A catcher processor may choose to operate as a catcher vessel, delivering its catch shoreside or to a floating processor.
- **Trawl/non-trawl** – A license was assigned both a trawl and non-trawl gear designation if both gear types were used to harvest groundfish by the qualifying vessel during the period beginning January 1, 1988 through June 17, 1995 (§679(k)(3)(iv)(B)).
- **Trawl** – A license was assigned a trawl gear designation if trawl gear was used to harvest groundfish from by the qualifying vessel during the period beginning January 1, 1988 through June 17, 1995 (§679(k)(3)(iv)(C)).

4995

EXECUTIVE SUMMARY

This EA/RIR/IRFA examines the environmental, economic, and socioeconomic aspects of the proposed action to revise the groundfish License Limitation Program (LLP). The proposed action would add Pacific cod endorsements to Western and Central GOA fixed gear licenses. Licenses would be required carry a Pacific cod endorsement, in addition to the appropriate area endorsement, to participate in the directed Pacific cod fisheries in the Western and Central GOA. The action would result in an amendment to the GOA Fisheries Management Plan (FMP).

Competition among fixed gear participants in the Western and Central GOA Pacific cod fisheries has intensified in recent years, and long-term participants are concerned about the potential for latent fixed gear licenses to re-enter the fisheries. The proposed amendment would address this concern by limiting entry to the Pacific cod fishery to fixed gear licenses that have participated in recent years and qualify for a Pacific cod endorsement. This action may enhance stability in the GOA Pacific cod fisheries, reduce competition among fixed gear participants, and protect historic catch shares of participants. In the absence of this action, future entry of latent effort into the Western and Central GOA Pacific cod fisheries could further intensify competition among fixed gear participants and erode catch shares of long-term participants.

To address these concerns, the Council adopted the following problem statement:

GOA Fixed Gear Recency Purpose and Need Statement

Western GOA and Central GOA Pacific cod fisheries are subject to intense competition, particularly during the A season, when fish are aggregated and of highest value. Competition among fixed gear participants in the Western GOA and Central GOA Pacific cod fisheries has increased for a variety of reasons, including increased market value of Pacific cod products, a declining ABC/TAC, increased participation by harvesters displaced from other fisheries and introduction of capital that has been accrued from participation in rationalized fisheries. Additionally, fishery policies have created incentives that encourage non-traditional efficiency improvements for the less than 60 ft LOA vessel class. The possible future entry of latent effort and disproportionate vessel efficiency would have detrimental effects on LLP holders that have exhibited participation in, and dependence on, the fixed gear Pacific cod fisheries. Many fixed gear vessel owners have made significant investments, have long catch histories, and are dependent on the Western GOA and Central GOA Pacific cod resources. These long-term participants need protection from those who have little or no recent history and who have the ability to increase their participation in the Pacific cod fisheries. At the same time, retaining Federal waters opportunities for small community quota eligible (CQE) communities dependent on access to a range of fishery resources and expanding opportunities in Federal waters for small capacity jig operations is valued to promote community protections at a level that imposes minimal impact on historic catch shares of recent participants.

The intent of the proposed amendment is to prevent the future entry or re-entry of latent fixed gear groundfish fishing capacity that has not been utilized in recent years into the Pacific cod fisheries, and to preserve the traditional vessel operational efficiencies within the fisheries. This requires prompt action to promote stability in the fixed gear sectors of the GOA Pacific cod fisheries, and is expected to be implemented concurrently with the division of GOA Pacific cod among sectors which is currently under consideration. However, this action cannot address continued growth in the waters managed by the State of Alaska.

Alternatives, Components, and Options

There are two alternatives currently under consideration:

Alternative 1 (no action) would not make any changes to the current License Limitation Program.

Alternative 2 would add Pacific cod endorsements to fixed gear licenses, which would limit entry into the directed Pacific cod fisheries in Federal waters in the Western and Central GOA. Alternative 2 includes the following Components and Options:

Component 1— Management areas included

Western GOA
Central GOA (current LLP endorsement includes West Yakutat)

- Different options may be applied to each management area.

Component 2— Identify and define sectors

The sector definitions for awarding Pacific cod endorsements may be different from those used for the GOA Pacific cod sector split action. The purpose of sector definitions in this action is to allow the Council to select different catch thresholds for the different gear types, operation types, and vessel lengths. Individual licenses may qualify for any combination of a jig, hook-and-line, and pot endorsement if the license meets the respective threshold(s) for the appropriate gear type, operation type, and vessel length.

- Hook-and-line CP
  Option: Hook-and-line CP ≥125
  Hook-and-line CP <125
- Hook-and-line CV
  Option: Hook-and-line ≥60
  Hook-and-line <60
- Pot CP
- Pot CV
  Option: Pot CV ≥60
  Pot CV <60
- Jig
  Exempt vessels using jig gear from the LLP requirement (including the Pacific cod endorsement requirement) that use a maximum of 5 jigging machines, 5 lines, and 30 hooks per line or one line of 150 hooks.

Option: Exempt vessels participating with fixed gear in the Western GOA B season directed Pacific cod fishery from the Pacific cod endorsement requirement.
Suboption: Exempt vessels using pot gear only.

Component 3 – Qualifying years

Option 1: 2000-2006
Option 2: 2002-2006
Option 3: Add the qualifying period January 1, 2007 through:
Suboption 1: June 4, 2008
Suboption 2: December 8, 2008

- Either of these suboptions will be selected in addition to one of the qualifying periods in Option 1 or Option 2.

Suboption 3: If an LLP license qualifies only when the supplemental range of years in Suboption 1 or Suboption 2 is included, any Pacific cod endorsements granted to licenses under these suboptions would be extinguished upon transfer of the LLP license to another vessel or owner.

- If a GOA hook-and-line catcher processor LLP license holder was a voluntary non-participant in the Freezer Longliner Coalition informal PSC co-op efforts of 2006, 2007, or 2008, and does not qualify under Component 3, Options 1, 2, or 3, the LLP would not be extinguished. If Pacific cod endorsements are a result of this action in the GOA hook-and-line CP sector, the LLP would receive a Pacific cod endorsement.

Component 4 – Catch thresholds

Thresholds shall be based on legally retained catch in the aggregate during all of the qualifying years in the Federal and parallel fisheries (excluding IFQ catch). Separate and distinct thresholds may be determined for each defined sector.

Option 1: All directed Pacific cod 1, 3, or 5 landings (resulting in a Pacific cod endorsement)
Option 2: All directed Pacific Cod 5, 10, 25, or 100 mt (resulting in a Pacific cod endorsement)

Option: Hardship provision. A GOA fixed gear LLP holder who had 5 or more Pacific cod landings in 1999, but had a vessel on which the LLP was used sink in 1999 or 2000, shall be credited with qualifying history so as to obtain a Pacific cod endorsement.

Directed Pacific cod catch is defined as landings made when the directed Pacific cod fisheries are open. For purposes of catch accounting, licenses are credited with deliveries or processing activity recorded up to 7 days after the directed season closes.

Component 5 – Stacked license provisions

Where there are multiple LLPs registered to a single vessel, also known as 'stacking' of LLPs, groundfish harvest history will be fully credited to all stacked licenses, each carrying its own qualifying endorsements and designations.

Component 6 – Capacity/efficiency limits to CV and CP fixed gear LLPs

Add a width restriction (efficiency restriction) to each CV and CP fixed gear LLP license that is eligible to access Pacific cod under this action. The width restriction would be 1 ft of width for each 3 ft of length, and is based on the LOA of the vessel assigned to the license on December 8, 2008. The licenses that are assigned to vessels on December 8, 2008 that exceed the width restriction will be grandfathered at their present LOA. For vessels under construction on December 8, 2008, the width restriction for the license shall be equal to the vessel width upon completion. Vessels would be required to report width measurements to RAM.

Option: Add a simple gross tonnage maximum to licenses.

Component 7 – CQE community resident exemption

CQE community residents currently holding latent, non-qualifying, LLP permits shall retain their LLP and area endorsement(s) and be exempt from the Pacific cod endorsement requirement. A hook-and-line

or pot gear endorsement shall be made through (a) a one-time designation at the time the endorsement is issued or (b) designated at the time the first Pacific cod landing is made based on the gear type used. The CQE community resident's LLP shall not be leased, and can only be transferred to an individual who has lived continuously in the permit holder's CQE community for 24 consecutive months prior to the transfer and who intends to remain a resident of the community. Residency shall be affirmed annually upon renewal. If a CQE community LLP holder with a restricted transfer LLP is no longer a resident of the CQE community or dies without a designated qualified LLP community beneficiary, the community CQE shall designate a qualified individual in the CQE community to hold the restricted transfer LLP.

Option: Restrict the exemption to LLPs with a MLOA designation of less than 60 feet.

Expected Effects of the Alternatives

This section provides an overview of the expected effects of the proposed action to add Pacific cod endorsements to Western and Central GOA fixed gear groundfish licenses. The tables show the number of fixed gear groundfish licenses that will be eligible to participate in the directed Pacific cod fisheries in Western and Central GOA under the various components and options. The EA/RIR/IRFA for the proposed action includes a discussion of the potential economic and socioeconomic effects which may occur as a result of the proposed action. In that document, effects on harvesters, processors, and communities are analyzed, followed by a description of the cumulative effects of the proposed amendment and other recent actions, and an analysis of the net benefits to the Nation.

Alternative 1 – No Action

Under the no action alternative, Pacific cod endorsements would not be added to Western and Central GOA fixed gear groundfish licenses. As a result, there would be no reduction in the number of fixed gear groundfish licenses eligible to participate in the directed Pacific cod fisheries in the Western and Central GOA. If this alternative is selected, fixed gear licenses that have not participated in the Western and Central GOA Pacific cod fisheries in recent years could enter the fisheries in the future and dilute revenues, increase costs, or both, for licenses with recent participation in the fisheries. Increased participation may result in negative economic impacts to current participants in the fisheries. The number of licenses that might enter the fisheries in the absence of this action is unknown, and depends on future market conditions, the size of Pacific cod TACs, opportunities to participate in other fisheries, the future regulatory environment, and operating costs in the fisheries. Consequently, this analysis does not provide a quantitative estimate of the potential economic impacts of the no action alternative.

Current number of fixed gear groundfish licenses

The number of fixed gear licenses with Western and Central GOA endorsements is reported by operation type and maximum length overall (MLOA) in Table 3-22. The table also indicates the number of licenses that have other area endorsements in addition to a Western or Central GOA endorsement. There are 883 fixed gear catcher vessel licenses with Central GOA endorsements and 264 fixed gear catcher vessel licenses with Western GOA endorsements. Most of these licenses may only be used on vessels less than 60 feet LOA. Fewer than 25% of catcher vessel licenses with Central GOA endorsements also have BSAI or Western GOA endorsements. In contrast, more than half of catcher vessel licenses with Western GOA endorsements also have BSAI or Central GOA endorsements. There are 49 Central GOA and 31 Western GOA CP licenses, and the majority of these licenses also carry BSAI endorsements. Only a small number of catcher processor licenses are restricted for use on vessels less than 60 feet LOA. This is

the universe of fixed gear licenses that would continue to have access to the directed Pacific cod fisheries in the Western and Central GOA in the absence of the proposed amendment.

Table E-1 Number of GOA fixed gear LLP licenses with each area endorsement, operation type, MLOA, and gear designation.

	Number of endorsements		Licenses that also have an endorsement (or designation) for:					
	All licenses	Licenses with MLOA <60 feet	Central Gulf	Western Gulf	Aleutian Islands	Bering Sea	Southeast Outside	Trawl
Central Gulf CV	883	702	--	175	61	159	178	114
Central Gulf CP	49	5	--	27	41	45	5	8
Western Gulf CV	264	154	175	--	62	157	42	78
Western Gulf CP	31	1	27	--	30	31	3	4

Source: NMFS RAM groundfish license file, December 2008.

Alternative 2 – Add Pacific cod endorsements to licenses

This section describes the impacts of the proposed action on the universe of fixed gear licenses that are currently eligible to participate in the directed Pacific cod fisheries in Federal waters of the Western and Central GOA. The proposed action would add Pacific cod endorsements to fixed gear licenses. Licenses would be required carry a Pacific cod endorsement, in addition to the appropriate area endorsement, to participate in the directed Pacific cod fisheries in Federal waters of the Western and Central GOA. The action would result in an amendment to the GOA Fisheries Management Plan (FMP).

The tables in this section show the number of fixed gear licenses that meet the various landings and catch thresholds during 2000-2006 and 2002-2006, and also show the additional number of licenses that would qualify if landings during 2007 through either June 4, 2008 or December 8, 2008 are included in addition to landings during 2000-2006 or 2002-2006. Under Component 3, there is a provision that states that one of the qualifying periods included in the suboptions under Option 3 will be selected in addition to either 2000-2006 (Option 1) or 2002-2006 (Option 2). If Suboption 3 is also selected, any license that qualifies for a Pacific cod endorsement only when catch during the supplemental years in Option 3 are included would receive a nontransferable Pacific cod endorsement. The endorsement would be extinguished if the license is transferred to another vessel or owner.

Catcher vessel licenses

The number of fixed gear catcher vessel licenses that meet each landings and catch threshold is reported in Table E-2. The number of licenses that would qualify for a Pacific cod endorsement depends upon the catch definition, landings or catch threshold, and qualification period selected. There are currently 264 Western GOA fixed gear CV licenses, and 54 to 110 of these licenses would qualify for a Pacific cod endorsement. There are 883 Central GOA fixed gear CV licenses, and 110 to 306 of these licenses would qualify for a Pacific cod endorsement. If landings during 2007 through June 4, 2008 or December 8, 2008 are included in addition to landings during one of the qualifying periods under Options 1 or 2, approximately 10% to 15% more CV licenses meet the one landing threshold (see Table 3-23).

The number of licenses that meet each landings and catch threshold based on catch made while using a specific gear type is reported in Table E-3. It is important to note that the gear type columns are not mutually exclusive. Licenses may have qualified landings using more than one fixed gear type, and as a

result, the number of licenses in the columns in Table E-3 may sum to more than the number of qualifying licenses in Table E-2. In the absence of specific gear type endorsements (i.e., pot, hook-and-line, or jig endorsements), these licenses could continue to fish in the directed Pacific cod fisheries using any fixed gear type. The Council could choose different catch or landings thresholds for different gear types and MLOA size class to account for differences in catch history among licenses in each sector. There are additional tables in Chapter 3 of this document that report the number of licenses in each gear type and MLOA size class that meet the various landings and catch thresholds.

Under the current set of landings and catch thresholds, the number of gear-specific Pacific cod endorsements that would be added to fixed gear catcher vessel licenses includes:

Central GOA

- 68 to 202 hook-and-line endorsements
- 42 to 124 pot endorsements
- 0 to 24 jig endorsements

Western GOA

- 0 to 14 hook-and-line endorsements
- 54 to 96 pot endorsements
- 0 to 12 jig endorsements

Catcher processor licenses

The number of catcher processor licenses that meet the various landings and catch thresholds is reported in Table E-4. There are 31 Western GOA catcher processor licenses, and 19 to 24 licenses meet the 1 landing threshold during the qualifying periods in Options 1 through 3, and would qualify for a Pacific cod endorsement. The majority of Western GOA licenses that have catch history during the various qualifying periods also meet the highest catch threshold (100 mt) and landings threshold (5 landings). Three licenses qualified only when catch through December 2008 was included. There are 49 Central GOA licenses, and 12 to 21 licenses meet the 1 landing threshold during the qualifying periods in Options 1 through 3 and would qualify for a Pacific cod endorsement. In general, a smaller proportion of Central GOA CP licenses that meet the one landing threshold also meet the highest catch and landings thresholds. There were 7 licenses that qualified only when catch (at the 1 landing threshold) through December 2008 was included.

The number of catcher processor licenses that would qualify for gear-specific Pacific cod endorsements includes:

Western GOA

- 14 to 22 hook-and-line catcher processor endorsements
- Up to 5 pot catcher processor endorsements
- 3 licenses have both hook-and-line and pot landings

Central GOA

- 7 to 18 hook-and-line catcher processor endorsements
- Up to 4 pot catcher processor endorsements
- 1 license has both hook-and-line and pot landings

Table E-4 Number of fixed gear catcher processor licenses qualifying under various landings and catch thresholds based on catch in the Western and Central GOA directed Pacific cod fisheries.

Licenses that only Qualify when 2007 and 2008 Catch History is Included

Under Component 3, Suboption 3 states that if an LLP license qualifies for a Pacific cod endorsement only when the supplemental range of years (Jan 1, 2007 through Jun 4, 2008 or Dec 8, 2008) in Suboption 1 or Suboption 2 of Component 3 are included, any Pacific cod endorsement granted to a license would be extinguished upon transfer of the LLP license to another vessel or owner. Those participants who entered the fishery in 2007 and 2008 would receive a Pacific cod endorsement under Suboption 1 or Suboption 2, and could continue to participate in the fishery. **It is important to note that Suboption 3 currently states that the Pacific cod endorsement would not be transferable to another vessel or owner.**

Designating licenses that qualify under Suboption 1 or Suboption 2 as non-transferable to another vessel or owner could have several effects. First, it would maintain the existing fleet of vessels in the Pacific cod fishery that are currently assigned to licenses that qualify based on 2007 or 2008 catch history. For

example, a high capacity 58 ft LOA vessel could not later be assigned to a license to replace a lower capacity boat that is currently assigned to a license. However, it would also prevent a license holder from replacing a vessel for safety or other considerations. If a boat sinks or otherwise becomes inoperable, the Council may wish to specify vessel replacement provisions for these licenses. If the Council wishes to choose Suboption 3, but to allow the owner to transfer the license to another vessel, **Suboption 3 could be revised so that a license cannot be transferred to another owner, but can be transferred to another vessel.** This would allow license holders to replace the vessel assigned to the license with a different vessel.

There are up to 37 additional Central GOA CV licenses that qualify at the 1 landing threshold when catch from 2000 through Dec 8, 2008 is credited to licenses; 32 of these licenses have an MLOA of <60 ft, and 19 have an MLOA of 58 or 59 ft. There are 17 Western GOA CV licenses that qualify at the 1 landing threshold only when catch history through Dec 8, 2008 is included; 10 licenses have an MLOA of <60 ft, and 7 licenses have an MLOA of 58 or 59 ft.

There are also additional CP licenses that qualify for a Pacific cod endorsement at the 1 landing threshold when catch through Dec 8, 2008 is credited to licenses. Three additional Western GOA licenses and 7 additional Central GOA licenses meet the 1 landing threshold. Most of these licenses have hook-and-line CP landings, and would qualify for a hook-and-line Pacific cod endorsement. There is a comparison of annual participation and revenues in the GOA Pacific cod fisheries and other Alaska fisheries by CV and CP licenses that only qualify when 2007 and 2008 catch is included and licenses that qualify based on 2000-2006 catch in Section 3.6.2 of the EA/RIR/IRFA for the proposed action.

Exemptions from the Pacific cod endorsement requirement

The Council is considering several exemptions from the Pacific cod endorsement requirement, or from the catch thresholds. These exemptions would (1) allow certain types of vessels to participate in the GOA directed Pacific cod fisheries without a Pacific cod endorsement, and (2) exempt some licenses from the catch thresholds, allowing these licenses to qualify for a Pacific cod endorsement even if they do not have qualifying catch. In determining which exemptions will be selected, the Council may wish to consider balancing the objective of creating opportunities for new entry with the need to protect long-term participants from an influx of additional effort into the fisheries. The exemptions currently under consideration include:

- An exemption from the Pacific cod endorsement requirement for vessels using jig gear that use a maximum of 5 jigging machines, 5 lines, and 30 hooks per line or one line of 1ine of 150 hooks.

- An exemption from the Pacific cod endorsement requirement for vessels participating with fixed gear in the Western GOA B season directed Pacific cod fishery. A suboption would exempt only vessels using pot gear.

- An exemption from the catch thresholds for CP licenses that voluntarily stood down from the GOA Pacific cod fisheries during 2006, 2007, or 2008 as part of the informal hook-and-line CP halibut PSC cooperative.

- An exemption from the catch thresholds for licenses held by residents of CQE communities. A suboption would only exempt licenses with an MLOA designation of less than 60 ft.

Each of the proposed exemptions is discussed in Chapter 3 of this document. Additional tables report the number of licenses that would be eligible for the halibut PSC co-op exemption and the CQE exemption.

Potential Range of Outcomes from this Action

Based on the existing set of options, there is a range of possible outcomes from this action:

1. Status quo: No Pacific cod endorsements are added to Western and Central GOA fisheries. All existing fixed gear licenses are eligible to access the directed Pacific cod fisheries.
2. Pacific cod endorsements are added to fixed gear licenses to limit entry to the directed Pacific cod fisheries in the Western and Central GOA.
3. Gear-specific (pot, hook-and-line, and jig) Pacific cod endorsements are added to fixed gear licenses to limit entry to the Western and Central GOA directed Pacific cod fisheries, and to limit access to the proposed Pacific cod sector allocations.

Interactions with Pacific Cod Sector Allocations

In refining the alternatives and options for analysis, the Council may wish to consider interactions between the proposed action to add Pacific cod endorsements to fixed gear licenses and the proposed GOA Pacific cod sector allocations. A comparison of the components and options currently under consideration for the two actions is found Table E-5. The Council is considering options to add Pacific cod endorsements to fixed gear licenses to limit entry into the directed Pacific cod fisheries in the Western and Central GOA. Pacific cod endorsements could also restrict licenses to using the fixed gear type (e.g., pot, hook-and-line, or jig) specified on the endorsement. The gear endorsements could limit access to the Pacific cod sector allocations to ensure that vessels that contributed catch history to the sector allocations have access to those allocations.

Both actions include provisions to increase entry level opportunities in the GOA Pacific cod fisheries. The proposed exemption from the LLP requirement for vessels using jig gear, in tandem with the proposal to provide the jig sector an Pacific cod allocation of more than the sector's historic catch, will provide a substantial increase in opportunity for current as well as new participants in this sector. In addition, the potential for a stairstep increase in the jig allocation, if it is fully harvested, would provide for growth in the jig sector.

Table E-5 A comparison of the components and options included in the proposed GOA Pacific cod sector allocation and GOA fixed gear recency actions.

COMPARISON OF GULF OF ALASKA ACTIONS		
ACTION	**GOA Pacific Cod Sector Allocations**	**GOA Fixed Gear LLP Recency**
PURPOSE OF ACTION	Allocate Western and Central Gulf Pacific cod TACs to the various sectors	Add Pacific cod endorsements to licenses to limit entry to directed Pacific cod fisheries in WG and CG
MANAGEMENT AREAS	Western and Central Gulf of Alaska	Western and Central Gulf of Alaska (CG endorsement also includes West Yakutat)
SECTORS	(1) Hook-and-line CVs Option: Hook-and-line CVs <60 and ?60 Option: Hook-and-line CVs <50 and ?50 (CGOA) (2) Hook-and-line CPs Option: Hook-and-line CPs <125 and ?125 (3) Pot CVs Option: Pot CVs <60 and ?60 (4) Pot CPs (5) Jig (6) Trawl CVs (7) Trawl CPs Option: Combined <60 ft trawl and pot CV (WG only)	(1) Hook-and-line CVs Option: Hook-and-line CVs <60 and ?60 (2) Hook-and-line CPs Option: Hook-and-line CPs <125 and ?125 (3) Pot CVs Option: Pot CVs <60 and ?60 (4) Pot CPs (5) Jig
QUALIFYING CATCH	Retained catch of Pacific cod from parallel and Federal waters State waters catch is excluded	Retained catch from the directed Pacific cod fisheries in parallel and Federal waters State waters and IFQ catch is excluded
QUALIFYING YEARS	(1) 1995-2005: best 5 or 7 years (2) 2000-2006: best 3 or 5 years (3) 2002-2007: best 3 or 5 years (4) 2002-2008: best 3 or 5 years	(1) 2000-2006 (2) 2002-2006 (3) Include 2007-June 4, 2008 or 2007-Dec 8, 2008 in addition to one of the above qualifying periods
LANDINGS THRESHOLDS	None	(1) 1, 3, or 5 landings during qualifying years (2) 5, 10, 25, or 100 mt during qualifying years
JIG	1%, 3%, 5%, or 7% allocation Step up provision (1%) if allocation is 90% harvested during a given year Step down provision if allocation is not 90% harvested during 3 consecutive years, but allocation will not drop below its initial level	(1) Exempt jig vessels from any LLP requirement (2) Exempt jig vessels from Pacific cod endorsement requirement
OTHER COMPONENTS	Options to allocate hook-and-line halibut PSC to CVs and CPs Options to cap mothership processing shares	Option to exempt licenses held by CQE residents from the landings thresholds Option to exempt vessels using fixed gear (Suboption: pot gear only) from the Pacific cod endorsement requirement in the WGOA during the B season.

5008

1.0 INTRODUCTION

The groundfish fisheries in the Exclusive Economic Zone (3 to 200 miles offshore) of the Gulf of Alaska (GOA) are managed under the GOA Fisheries Management Plan (FMP), developed by the North Pacific Fishery Management Council under the Magnuson-Stevens Fishery Conservation and Management Act. The GOA FMP was approved by the Secretary of Commerce and became effective in 1978.

This document is an Environmental Assessment/Regulatory Impact Review/Initial Regulatory Flexibility Analysis (EA/RIR/IRFA) for the proposed action to add Pacific cod endorsements to fixed gear LLP licenses to limit entry to the Western and Central GOA directed Pacific cod fisheries. This action would result in an amendment to the GOA FMP. Under the proposed action, a fixed gear license would receive a Pacific cod endorsement if it meets the minimum landings or catch (mt) threshold during a specific qualifying period.

An Environmental Assessment (EA) is required by the National Environmental Policy Act of 1969 (NEPA) to determine whether the proposed action will result in a significant impact on the human environment. If the action is determined not to be significant based on an analysis of the relevant considerations, the EA and finding of no significant impact (FONSI) would be the final environmental documents required by NEPA. An Environmental Impact Statement (EIS) must be prepared for major Federal actions significantly affecting the human environment.

The purpose of the EA is to analyze the environmental impacts of the proposed Federal action to remove latent fixed gear licenses from the Western and Central GOA. The human environment is defined by the Council on Environmental Quality as the natural and physical environment and the relationships of people with that environment (40 CFR 1508.14). This means that economic or social effects are not intended by themselves to require preparation of an EA. However, when an EA is prepared and socio-economic and natural or physical environmental impacts are interrelated, the EA must discuss all of these impacts on the quality of the human environment. NEPA requires a description of the purpose and need for the proposed action as well as a description of alternatives which may address the problem. This information is included in **Chapter 1** of this document. **Chapter 2** contains a description of the affected human environment and information on the impacts of the alternatives on that environment, specifically addressing potential impacts on endangered species and marine mammals and cumulative effects.

Executive Order 12866 (E.O. 12866) requires preparation of a Regulatory Impact Review (RIR) to assess the social and economic costs and benefits of available regulatory alternatives, in order to determine whether a proposed regulatory action is economically significant as defined by the order. This analysis is included in **Chapter 3. Chapter 4** addresses the requirements of other applicable laws, including the Magnuson Stevens Act, Marine Mammal Protection Act, and Regulatory Flexibility Act (RFA). The RFA requires an analysis of potential adverse economic impacts to small entities that would be directly regulated by the proposed action. The references and literature cited are in **Chapter 5**, the list of preparers is in **Chapter 6**, and the list of agencies and individuals consulted is in **Chapter 7**.

1.1 Purpose and Need for the Action

1.1.1 Background

Management of the GOA groundfish fisheries has become increasingly complex as a result of Steller sea lion protection measures, increased participation by vessels displaced from other fisheries, and bycatch reduction requirements under the Magnuson-Stevens Act (MSA). These factors have made achieving the

goals set by the National Standards in the MSA difficult, and have had significant adverse social and economic impacts on harvesters, processors, crew, and communities that depend on the GOA fisheries. In 1999, the Council began developing a package of measures to rationalize the GOA groundfish fisheries. At its April 2003 meeting, the Council adopted a motion defining preliminary alternatives for rationalizing the GOA groundfish fisheries. During 2003 through 2006, the Council worked to develop and refine these alternatives. However, in December 2006, the Council elected to delay further consideration of the comprehensive rationalization program. Instead, the Council decided to proceed with the more discrete issues of allocating the Pacific cod resource to the various gear sectors and limiting future entry to the GOA groundfish fisheries by extinguishing latent License Limitation Program (LLP) groundfish licenses. In April 2008, the Council took final action to remove latent trawl licenses from the BSAI and GOA. The Council began reviewing options to remove latent fixed gear licenses from the GOA fisheries in 2007.

In October 2007, the Council adopted a problem statement, outlined draft components and options, and directed staff to prepare an EA/RIR/IRFA for a proposed amendment to revise the LLP. The Council's motion included options to either remove latent licenses from the Western and Central GOA groundfish fisheries or add Pacific cod endorsements to licenses in order to limit entry into the directed Pacific cod fisheries. The Council reviewed a draft initial EA/RIR/IRFA at its December 2008 meeting in Anchorage, and decided to retain the options to add Pacific cod endorsements to licenses, and remove the options to extinguish latent licenses. The Council recommended that the document be released for public review. Final action is scheduled for the April 2009 meeting.

1.1.2 Purpose and Need Statement

The LLP limits access to the groundfish and crab fisheries in the Bering Sea, Aleutian Islands, and GOA.[1] In the mid to late 1990s, the Council developed the LLP to address capacity concerns and take a first step toward rationalization of the groundfish fisheries under its management. Fishing under the program began in 2000. Competition among fixed gear participants in the Western and Central GOA Pacific cod fisheries has intensified in recent years, and long-term participants are concerned about the potential for latent fixed gear licenses to re-enter the fisheries. The proposed amendment would address this concern by adding gear-specific Pacific cod endorsements to fixed gear licenses that have recent landings in the Western GOA and Central GOA directed Pacific cod fisheries.

The sectors potentially affected by the proposed amendment include fixed gear catcher vessel and catcher processor groundfish LLP license holders with Western and Central GOA[2] area endorsements. The action would add Pacific cod endorsements to fixed gear licenses that meet the minimum landings or catch (mt) threshold. Fixed gear licenses would be required to carry a Pacific cod endorsement, in addition to the appropriate area endorsement, to participate in the directed Pacific cod fisheries in Federal waters in the Western and Central GOA.

The rationale for this action is concern over the impacts that future entry of latent effort may have on current LLP permit holders that participate in the Western and Central GOA Pacific cod fisheries. Latent effort, for the purpose of the proposed action, is comprised of valid LLPs that have not been utilized in the directed Pacific cod fisheries during recent years. Recent participation has been defined by the Council to be participation in the Western or Central GOA directed Pacific cod fisheries using fixed gear during a specified time period (2000-2006, 2002-2006, 2000-2008, or 2002-2008). The proposed action would add Pacific cod endorsements to Western and Central GOA fixed gear LLP licenses that meet minimum landings thresholds during a specific qualifying period. This action may enhance stability in the GOA Pacific cod fisheries, reduce competition among fixed gear participants, and protect historic

[1] Amendment 39 to the BSAI groundfish plan and Amendment 41 to the groundfish plan for the GOA established the LLP. The primary rules governing the LLP are contained in 50 CFR 679.4(k).
[2]Note that under LLP area designations, the Central GOA subarea includes West Yakutat.

catch shares of participants. If entry to the Pacific cod fisheries is not limited by a Pacific cod endorsement requirement, future entry of latent effort into the Western and Central GOA Pacific cod fisheries could further intensify competition among fixed gear participants and erode catch shares of long-term participants.

To address these concerns, the Council adopted the following problem statement:

GOA Fixed Gear Recency Purpose and Need Statement

Western GOA and Central GOA Pacific cod fisheries are subject to intense competition, particularly during the A season, when fish are aggregated and of highest value. Competition among fixed gear participants in the Western GOA and Central GOA Pacific cod fisheries has increased for a variety of reasons, including increased market value of Pacific cod products, a declining ABC/TAC, increased participation by harvesters displaced from other fisheries, and introduction of capital that has been accrued from participation in rationalized fisheries. Additionally, fishery policies have created incentives that encourage non-traditional efficiency improvements for the less than 60 ft LOA vessel class. The possible future entry of latent effort and disproportionate vessel efficiency would have detrimental effects on LLP holders that have exhibited participation in, and dependence on, the fixed gear Pacific cod fisheries. Many fixed gear vessel owners have made significant investments, have long catch histories, and are dependent on the Western GOA and Central GOA Pacific cod resources. These long-term participants need protection from those who have little or no recent history and who have the ability to increase their participation in the Pacific cod fisheries. At the same time, retaining Federal waters opportunities for small community quota eligible (CQE) communities dependent on access to a range of fishery resources and expanding opportunities in Federal waters for small capacity jig operations is valued to promote community protections at a level that imposes minimal impact on historic catch shares of recent participants.

The intent of the proposed amendment is to prevent the future entry or re-entry of latent fixed gear groundfish fishing capacity that has not been utilized in recent years into the Pacific cod fisheries, and to preserve the traditional vessel operational efficiencies within the fisheries. This requires prompt action to promote stability in the fixed gear sectors of the GOA Pacific cod fisheries, and is expected to be implemented concurrently with the division of GOA Pacific cod among sectors which is currently under consideration. However, this action cannot address continued growth in the waters managed by the State of Alaska.

Limiting entry to the fisheries with a Pacific cod endorsement requirement may prevent future gross revenues from Pacific cod harvests in the respective management areas from being diluted by future increases in fishing effort by latent licenses. Those LLP holders exhibiting dependence and participation in the fixed gear Pacific cod fisheries, (i.e., those meeting the selected threshold criteria), would be protected from possible future increases in effort and dilution of their gross revenue share. However, this action may not result in increased production efficiencies to licenses that would generally be expected from a comprehensive rationalization program. Following implementation of the amendment, each qualified LLP holder will still have an incentive to expand their fishing effort and maximize their respective share of the gross revenues in the open access GOA Pacific cod fisheries. The action will not necessarily result in an 'optimum' harvesting capacity in any of the sectors or management areas. The Council is considering a range of potential catch and landings thresholds, qualification periods, and catch definitions. The number of Pacific cod endorsements that would be added to fixed gear licenses under any of these options was not based on a predetermined optimum capacity for the fixed gear fleet. The action would revise the LLP by removing latent effort from the directed Pacific cod fisheries, and is a more modest approach to revolving participation issues than a fully rationalized fixed gear Pacific cod fishery.

1.2 Alternatives

This section identifies the alternatives and options under consideration for the proposed action. **Alternative 1** (no action) would not make any changes to the current License Limitation Program. **Alternative 2** would add Pacific cod endorsements to fixed gear licenses that would limit entry into the directed Pacific cod fisheries in Federal waters in the Western and Central GOA.

ALTERNATIVE 1.

No Action. No changes would be made to the current License Limitation Program.

ALTERNATIVE 2.

Add non-severable gear-specific Pacific cod endorsements to fixed gear licenses. Pacific cod endorsements would limit entry into the directed Pacific cod fisheries in the Western and Central GOA.

Component 1— Areas included

Western GOA
Central GOA (current LLP endorsement includes West Yakutat)

- Different options may be applied to each management area.

Component 2— Identify and define sectors

The sector definitions for awarding Pacific cod endorsements may be different from those used for the GOA Pacific cod sector split action. The purpose of sector definitions in this action is to allow the Council to select different catch thresholds for the different gear types, operation types, and vessel lengths. Individual licenses may qualify for any combination of a jig, hook-and-line, and pot endorsement if the license meets the respective threshold(s) for the appropriate gear type, operation type, and vessel length.

- Hook-and-line CP
  Option: Hook-and-line CP ≥125
  Hook-and-line CP <125
- Hook-and-line CV
  Option: Hook-and-line ≥60
  Hook-and-line <60
- Pot CP
- Pot CV
  Option: Pot CV ≥60
  Pot CV <60
- Jig
  Exempt vessels using jig gear from the LLP requirement (including the Pacific cod endorsement requirement) that use a maximum of 5 jigging machines, 5 lines, and 30 hooks per line or one line of 150 hooks.

Option: Exempt vessels participating with fixed gear in the Western GOA B season directed Pacific cod fishery from the Pacific cod endorsement requirement.
Suboption: Exempt vessels using pot gear only.

Component 3 – Qualifying years

Option 1: 2000-2006
Option 2: 2002-2006
Option 3: Add the qualifying period January 1, 2007 through:
Suboption 1: June 4, 2008
Suboption 2: December 8, 2008

- Either of these suboptions will be selected in addition to one of the qualifying periods in Option 1 or Option 2.

Suboption 3: If an LLP license qualifies only when the supplemental range of years in Suboption 1 or Suboption 2 is included, any Pacific cod endorsements granted to licenses under these suboptions would be extinguished upon transfer of the LLP license to another vessel or owner.

- If a GOA hook-and-line catcher processor LLP license holder was a voluntary non-participant in the Freezer Longliner Coalition informal PSC co-op efforts of 2006, 2007, or 2008, and does not qualify under Component 3, Options 1, 2, or 3, the LLP would not be extinguished. If Pacific cod endorsements are a result of this action in the GOA hook-and-line CP sector, the LLP would receive a Pacific cod endorsement.

Component 4 – Catch thresholds

Thresholds shall be based on legally retained catch in the aggregate during all of the qualifying years in the Federal and parallel fisheries (excluding IFQ catch). Separate and distinct thresholds may be determined for each defined sector.

Option 1: All directed Pacific cod 1, 3, or 5 landings (resulting in a Pacific cod endorsement)
Option 2: All directed Pacific Cod 5, 10, 25, or 100 mt (resulting in a Pacific cod endorsement)

Option: Hardship provision. A GOA fixed gear LLP holder who had 5 or more Pacific cod landings in 1999, but had a vessel on which the LLP was used sink in 1999 or 2000, shall be credited with qualifying history so as to obtain a Pacific cod endorsement.

Directed Pacific cod catch is defined as landings made when the directed Pacific cod fisheries are open. For purposes of catch accounting, licenses are credited with deliveries or processing activity recorded up to 7 days after the directed season closes.

Component 5 – Stacked license provisions

Where there are multiple LLPs registered to a single vessel, also known as 'stacking' of LLPs, groundfish harvest history will be fully credited to all stacked licenses, each carrying its own qualifying endorsements and designations.

Component 6 – Capacity/efficiency limits to CV and CP fixed gear LLPs

Add a width restriction (efficiency restriction) on each CV and CP fixed gear LLP license that is eligible to access Pacific cod under this action. The width restriction would be 1 ft of width for each 3 ft of length, and is based on the LOA of the vessel assigned to the license on December 8, 2008. The licenses that are assigned to vessels on December 8, 2008 that exceed the width restriction will be grandfathered at

their present LOA. For vessels under construction on December 8, 2008, the width restriction for the license shall be equal to the vessel width upon completion. Vessels would be required to report width measurements to RAM.

Option: Add a simple gross tonnage maximum to licenses.

Component 7 – CQE community resident exemption

CQE community residents currently holding latent, non-qualifying, LLP permits shall retain their LLP and area endorsement(s) and be exempt from the Pacific cod endorsement requirement. A hook-and-line or pot gear endorsement shall be made through (a) a one-time designation at the time the endorsement is issued or (b) designated at the time the first Pacific cod landing is made based on the gear type used. The CQE community resident's LLP shall not be leased, and can only be transferred to an individual who has lived continuously in the permit holder's CQE community for 24 consecutive months prior to the transfer and who intends to remain a resident of the community. Residency shall be affirmed annually upon renewal. If a CQE community LLP holder with a restricted transfer LLP is no longer a resident of the CQE community or dies without a designated qualified LLP community beneficiary, the community CQE shall designate a qualified individual in the CQE community to hold the restricted transfer LLP.

Option: Restrict exemption to LLPs with a MLOA endorsement less than 60 feet.

Options considered but rejected:

At its June 2008 meeting, the Council removed options from the motion that would have precluded vessels from participating in both the trawl and fixed gear sectors during a given year, or would have required vessels to make a one time election to participate in either the trawl or fixed gear sectors. The Council reviewed data which showed that approximately 10 to 15 vessels use both trawl and fixed gear in the Pacific cod fisheries (most operating in the Western GOA) on an annual basis. Restricting vessels to using only one gear type during a given year would impact the annual fishing operations of this group of vessels. In addition, when the trawl recency action is limited, only a small number of licenses will hold dual gear designations. This information is included in this document (see Section 3.3.2.14, Table 3-47).

At its December 2008 meeting, the Council removed options that would have extinguished Western GOA and Central GOA area endorsements from fixed gear licenses that did not meet catch thresholds based on all groundfish landings. Instead, the proposed action will add Pacific cod endorsements to licenses that have recent catch history in the directed Pacific cod fisheries in the Western and Central GOA. The Council also removed an option that would have exempted vessels less than 60 ft LOA and under a specified capacity limit from the LLP requirement or from the Pacific cod endorsement requirement. The majority of WGOA and CGOA CV licenses have an MLOA of less than 60 ft, and exempting these licenses from the action would substantially limit the scope of the action. Instead of the less than 60 ft exemption, the Council has included a provision to exempt all vessels using jig gear from the LLP requirement in the GOA. The intent of the jig exemption is to provide entry-level opportunities into the fisheries. In addition, the Council added an exemption for fixed gear licenses held by residents of CQE communities. Under the CQE exemption, the licenses held by residents of CQE communities would receive a Pacific cod endorsement even if they do not meet the selected catch thresholds. There is an option to limit this exemption to licenses with an MLOA of less than 60 ft. The Council also removed options to use 2000-2005 or 2002-2005 as qualifying periods under Component 4, and added an option to include more recent catch history (through December 8, 2008). Under Component 5, the Council removed an option to divide catch history among licenses that were stacked on a vessel at the time of landing. This option was removed because it has the potential to complicate implementation of the

action. Licenses may be stacked on a vessel for operational reasons. For example, 2 or more licenses may be stacked on a vessel to obtain additional area, gear, or other endorsements.

1.3 Consistency with the Problem Statement

The alternatives under consideration are consistent with the problem statement. The problem identified is that fixed gear participants who have made significant, long-term investments, have extensive catch histories, and are highly dependent on the Western and Central GOA Pacific cod fisheries need protection from the potential increase in competition that may be caused by the entry re-entry of latent licenses into the fisheries. If latent fixed gear licenses remain eligible for entry or re-entry into the Western and Central GOA Pacific cod fisheries, future participation levels may increase, intensifying competition for the Western and Central GOA Pacific cod TACs.

Under the no action alternative (Alternative 1), latent fixed gear licenses with Western or Central GOA endorsements will continue to have the potential to enter the directed Western and Central GOA Pacific cod fisheries. If this alternative is selected, any of the currently existing fixed gear licenses could enter the Western and Central GOA Pacific cod fisheries in the future and dilute revenues, increase costs, or both, for licenses that have participated in the fisheries during recent years. Increased participation may result in negative economic impacts to current participants in the fisheries. If Pacific cod endorsements are not added to fixed gear licenses, licenses with no recent catch history in the GOA Pacific cod fisheries could enter the fisheries and erode the catch shares of recent participants. Finally, if gear-specific Pacific cod endorsements are not added to licenses, and Pacific cod sector allocations are implemented, participants in each of the fixed gear sectors will be vulnerable to an influx of effort into those sectors. If effort increases substantially in a particular sector, the erosion of catch shares resulting from latent licenses re-entering the fisheries will be exacerbated, because each sector's catch will be constrained by its allocation.

Alternative 2 includes options to add gear-specific Pacific cod endorsements to fixed gear licenses. Pacific cod endorsements would limit entry into the directed Pacific cod fisheries in Federal waters of the Western and Central GOA. This action would reduce fixed gear capacity in the GOA Pacific cod fisheries to include only licenses that have recent catch history in the fisheries. Those LLP holders exhibiting dependence and participation in the fixed gear Pacific cod fisheries, (i.e., those meeting the selected threshold criteria), would be protected from possible future increases in effort and dilution of their gross revenue share.

2.0 ENVIRONMENTAL ASSESSMENT

The purpose of this environmental assessment (EA) is to analyze the environmental impacts of the proposed action to add Pacific cod endorsements to fixed gear LLP licenses to limit entry to the Western and Central GOA directed Pacific cod fisheries. An EA is intended to provide sufficient evidence of whether or not the environmental impacts of the action are significant (40 CFR 1508.9).

The purpose and need statement for this action and a description of the alternatives and options are included in Chapter 1. This chapter analyzes the alternatives for their effects on the biological, physical, and human environment. Each section discusses the environment that would be affected by the alternatives and then describes the impacts of the alternatives. The following components of the environment are discussed: the Pacific cod fishery, other groundfish fisheries, incidental and prohibited species catch, seabirds and marine mammals, benthic habitat, essential fish habitat, ecosystem effects, economic impacts and management considerations, and cumulative effects.

The criteria listed in Table 2-1 are used to evaluate the significance of impacts. If significant impacts are likely to occur, preparation of an Environmental Impact Statement (EIS) is required. Although economic and socioeconomic impacts must be evaluated, such impacts by themselves are not sufficient to require the preparation of an EIS (see 40 CFR 1508.14).

Table 2-1 Criteria Used to Evaluate the Alternatives.

Component	Criteria
Fish species	An effect is considered to be significant if it can be reasonably expected to jeopardize the sustainability of the species or species group.
Habitat	An effect is considered to be significant if it exceeds a threshold of more than minimal and not temporary disturbance to habitat.
Seabirds and marine mammals	An effect is considered to be significant if it can be reasonably expected to alter the population trend outside the range of natural variation.
Ecosystem	An effect is considered to be significant if it produces population-level impacts for marine species, or changes community- or ecosystem-level attributes beyond the range of natural variability for the ecosystem.

2.1 GOA Groundfish Fisheries

2.1.1 GOA Environment

The action area includes the Western and Central GOA. The documents listed below contain information about the fishery management areas, fisheries, marine resources, ecosystem, social, and economic elements of the GOA groundfish fisheries.

Alaska Groundfish Harvest Specifications Final Environmental Impact Statement (NMFS 2007a). This EIS provides decision makers and the public an evaluation of the environmental, social, and economic effects of alternative harvest strategies for the Federally-managed groundfish fisheries in the GOA and the Bering Sea and Aleutian Islands management areas. The EIS examines alternative harvest strategies that comply with Federal regulations, the GOA FMP, and the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act). These strategies are applied to the best available scientific information to derive the total allowable catch estimates for the groundfish fisheries. The EIS evaluates the effects of different alternatives on target species, non-specified species, forage species, prohibited

species, marine mammals, seabirds, essential fish habitat, ecosystem relationships, and economic aspects of the GOA fisheries.

Stock Assessment and Fishery Evaluation (SAFE) Report for the Groundfish Resources of the GOA (NPFMC 2007). Annual SAFE reports review recent research and provide estimates of the biomass of each species and other biological parameters. The SAFE report includes the acceptable biological catch (ABC) specifications used by NMFS in the annual harvest specifications. The SAFE report also summarizes available information on the GOA ecosystem and the economic condition of the groundfish fisheries off Alaska. This document is available from: http://www.afsc.noaa.gov/refm/stocks/assessments.htm.

2.1.2 Pacific Cod

Pacific cod (*Gadus macrocephalus)* is the primary groundfish species targeted by the fixed gear sectors in the Western and Central GOA. Pacific cod is widely distributed in the GOA and occurs at depths from shoreline to 500 m (Thompson et al. 2006). Pacific cod are moderately fast growing, and females reach 50% maturity at approximately 5.8 years old. Spawning occurs during January through April in the GOA. Pacific cod are demersal and concentrate on the shelf edge and upper slope at depths of 100-250 m in the winter, and move to shallower waters (<100 m) in the summer.

The Pacific cod resource is managed under three discrete TACs in the GOA: the Western GOA TAC, the Central GOA TAC, and the Eastern GOA TAC. In addition, the GOA Pacific cod TACs are divided between the A season (60%) and B season (40%), and are apportioned to the inshore processing component (90%) and offshore component (10%). Historically, the majority of the GOA Pacific cod catch has come from the Central and Western GOA management subareas. Final 2008 harvest specifications apportioned 57% of the GOA catch to the Central GOA (28,426 mt), 39% to the Western GOA (19,449 mt), and 5% to the Eastern GOA (2,394 mt).

Table 2-2 summarizes levels of acceptable biological catch (ABC), total allowable catch (TAC), and actual catch of Pacific cod in the Federal and State waters fisheries in the GOA from 1985 to 2007. From 1989 to 1996, the Federal TAC was set at 100% of the acceptable biological catch (ABC). The Federal TAC has been set below the ABC since 1997 to accommodate the State waters Pacific cod fishery. Total catch in the Federal and State Pacific cod fisheries averaged 87% of the ABC from 1997 to 2007. Most of the unharvested Federal TAC during recent years has been the result of low harvests during the B season. In addition, 25% of the Western and Central GOA Pacific cod ABC is allocated to the State waters fisheries, and the State Guideline Harvest Levels (GHLs) have not been fully harvested during recent years. In 2006 and 2007, only 70% and 74% of the GOA ABC was harvested.

Effects of the proposed action depend to some extent on current and future abundance of the Pacific cod stock. Model projections indicate that the Pacific cod stock is not overfished. However, the ABC is projected to decline over the next several years due to below average recruitment levels during a series of recent years. A comprehensive description of recent survey data and biomass projections is available in the groundfish SAFE report (NMFS 2008a).

Table 2-2 Total catch in the Federal and State GOA Pacific cod fisheries, total allowable catch (TAC) for the Federal fishery, and acceptable biological catch (ABC), 1985-2007.

Year	Federal catch	Federal TAC	Percentage of TAC harvested	State catch	Total catch	ABC	Percentage of ABC harvested
1985	14,428	60,000	24.0	n/a	14,428	n/a	n/a

Effects of the Alternatives

Current management of the GOA Pacific cod fisheries was analyzed in detail in the Groundfish PSEIS (NOAA 2004a). This analysis is updated annually during the harvest specifications process for the groundfish fisheries (NMFS 2006a). These analyses concluded that the Pacific cod stock is currently being managed at a sustainable level and that the probability of overfishing occurring is low. The status quo management of Pacific cod is not expected to have a significant impact on the long-term sustainability of the GOA Pacific cod stock.

The proposed action would add Pacific cod endorsements to fixed gear LLP licenses to limit entry to the Western and Central GOA directed Pacific cod fisheries. Participants with recent fishing history would receive a Pacific cod endorsement and would continue to have access to the fishery. Alternative 2 would not change the proportion of the TAC harvested by the various fixed gear sectors. In effect, Alternative 2 maintains the status quo division of catch among the fixed gear sectors by stabilizing participation within each sector. The proposed action would not change the annual harvest specifications process, which sets TACs at appropriate levels to prevent the stock from being overfished. As a result, the proposed action is not expected have a significant effect on the sustainability of the Pacific cod stock.

2.1.3 Other Groundfish Fisheries

The fixed gear sectors primarily participate in the directed Pacific cod fisheries in the GOA and catch other groundfish species incidentally while targeting cod. More than 98% of groundfish catch by vessels using fixed gear is comprised of Pacific cod, excluding IFQ halibut and sablefish catch. Vessels participating in the IFQ fisheries are not required to hold LLP licenses, and these fisheries will not be discussed further in this EA. Other species retained by vessels using fixed gear include skates, rockfish, pollock, and octopus. The proposed action is not expected to result in significant changes in catch levels of other groundfish species. Overall levels of fishing effort by each gear sector, and the timing and location of fishing activities, are not expected to change under the proposed action.

2.2 Halibut Prohibited Species Catch

Halibut prohibited species catch allowances are currently allocated separately to the GOA trawl and hook-and-line sectors, according to the guidelines outlined in 50 CFR 679.21(d). Halibut PSC allowances are not apportioned by management subarea within the GOA. The 2008 PSC allowances for the GOA Pacific cod trawl and hook-and-line fisheries are shown in Table 2-3. The pot and jig sectors are exempt from halibut PSC limits. The GOA-wide halibut PSC mortality allowance is 2000 mt for the trawl sector and 300 mt for the hook-and-line sector (including 10 mt set aside for the demersal shelf rockfish fishery).

The hook-and-line allowance is divided into three seasons: January 1 to June 10 (the A season for Pacific cod), June 10 to September 1, and September 1 to December 31 (the B season for Pacific cod). The trawl allowance is divided not only seasonally, but also between the shallow-water species complex (including the pollock, Pacific cod, shallow-water flatfish, flathead sole, Atka mackerel, skates, and the "other species" directed fisheries) and the deep-water species complex (all other fisheries, which includes Pacific Ocean perch, northern rockfish, pelagic shelf rockfish, and deep-water flatfish). Halibut bycatch during the directed Pacific cod fishery is counted against the shallow-water trawl halibut PSC apportionment. This apportionment is divided into four seasons: January 20 to April 1, April 1 to July 1, July 1 to September 1, and September 1 to October 1. In addition, a separate apportionment that is not divided between the shallow-water and deep-water complexes is available for use from October 1 to December 31. Unused seasonal halibut PSC apportionments are rolled over to the following season. Halibut PSC limits often determine season closure dates for the trawl sector, and to a lesser extent, for the hook-and-line sector.

Table 2-3 Halibut prohibited species catch seasonal allowances in the GOA, 2008

Trawl		Hook-and-line

Source: NMFS 2008-2009 harvest specifications for the groundfish fisheries in the GOA.

Halibut PSC usage in the GOA Pacific cod target fisheries during 1995-2008 is summarized in Table 2-4. The table reports PSC by catcher vessels and catcher processors in each harvest sector. The pot sector is not subject to PSC limits in the GOA, and halibut PSC by pot vessels is reported for informational purposes only. Prohibited species catch limits for halibut apply to the hook-and-line and trawl sectors

and constrain bycatch levels. Inseason managers monitor halibut PSC in the Pacific cod fisheries and close the directed fisheries if halibut PSC limits are reached. After such a closure, the directed fisheries are typically reopened when the next seasonal apportionment of halibut PSC becomes available.

It is important to note that these halibut PSC estimates are based on the best available data, and some sectors have relatively low levels of observer coverage. The trawl and hook-and-line CP fleets in the GOA have relatively high observer coverage rates, and majority of the halibut PSC mortality amounts are estimated based on observer estimates from on board these vessels. Most trawl CV catch in the Central GOA is by vessels in the 30% observed fleet (60 to 125 ft LOA), and most trawl CV catch in the Western GOA is by the unobserved <60 ft LOA fleet. The hook-and-line CV fleet has a very low observer coverage level. In recent years, only 2 to 4 hook-and-line catcher vessels have carried observers for any portion of the Pacific cod season in the GOA.

2.3 Marine Mammals

Marine mammals occur in diverse habitats in the GOA, and include both resident and migratory species. Species that occur in the GOA are listed below (NOAA 2004b). The Groundfish PSEIS (NOAA 2004a) provides descriptions of the range, habitat, diet, abundance, and population status for these marine mammals. Annual stock assessment reports prepared by the National Marine Mammal Laboratory provide population estimates, population trends, and estimates of potential biological removals (Angliss and Outlaw 2007).

NMFS Managed Species
Pinnipeds: Steller sea lion (Western U.S., Eastern U.S.), Northern fur seal (Eastern Pacific), Harbor seal (Southeast Alaska, GOA, Bering Sea), Spotted seal (Alaska), Bearded seal (Alaska), Ringed seal (Alaska), Ribbon seal (Alaska).

Cetaceans: Beluga Whale (Beaufort Sea, Eastern Chukchi Sea, Eastern Bering Sea, Bristol Bay, Cook Inlet), Killer whale (Eastern North Pacific Northern Resident, Eastern North Pacific transient), Pacific White-sided dolphin (North Pacific), Harbor porpoise (Southeast Alaska, GOA), Dall's porpoise (Alaska), Sperm whale (North Pacific), Baird's beaked whale (Alaska), Cuvier's beaked whale (Alaska), Stejneger's beaked whale (Alaska), Gray whale (Eastern North Pacific), Humpback whale (Western North Pacific, Central North Pacific), Fin whale (Northeast Pacific), Minke whale (Alaska), North Pacific right whale (North Pacific)

USFWS Managed Species
Northern sea otter (Southeast Alaska, Southcentral Alaska, Southwest Alaska), Pacific walrus (Alaska)

Direct and indirect interactions between marine mammals and the groundfish fisheries result from temporal and spatial overlap between commercial fishing activities and marine mammal occurrence. Direct interactions include injury or mortality due to entanglement in fishing gear. Indirect interactions include overlap in the size and species of groundfish important both to the fisheries and to marine mammals as prey. The GOA Pacific cod target fisheries are classified as Category III fisheries under the Marine Mammal Protection Act. Category III fisheries are unlikely to cause mortality or serious injury to more than 1% of the marine mammal's potential biological removal level, calculated on an annual basis (50 CFR 229.2). Taking of marine mammals is monitored by the North Pacific observer program.

Marine mammals listed under the Endangered Species Act (ESA) that may be present in the GOA are listed in Table 2-5. All of these species are managed by NMFS, with the exception of Northern Sea Otter, which is managed by U.S. Fish and Wildlife Service. A Biological Opinion evaluating impacts of the groundfish fisheries on the endangered species managed by NMFS was completed in November 2000 (NMFS 2000). The western population segment of Steller sea lions was the only ESA-listed species identified as likely to be adversely affected by the groundfish fisheries. A new Section 7 consultation was initiated in 2006. NMFS is also currently consulting with USFWS on the distinct southwest Alaska population of northern sea otters.

Table 2-5 ESA-listed marine mammal species that occur in the GOA.

Common Name	Scientific Name	ESA Status
Steller Sea Lion (Western Population)	*Eumetopias jubatus*	Endangered
Steller Sea Lion (Eastern Population)	*Eumetopias jubatus*	Threatened
Blue Whale	*Balaenoptera musculus*	Endangered
Fin Whale	*Balaenoptera physalus*	Endangered
Humpback Whale	*Megaptera novaeangliae*	Endangered
Right Whale	*Balaena glacialis*	Endangered
Sei Whale	*Balaenoptera borealis*	Endangered
Sperm Whale	*Physeter macrocephalus*	Endangered
Northern Sea Otter	*Enhydra lutris*	Threatened

A Biological Opinion addressing Steller sea lion management issues was completed in 2001 (NMFS 2001b), and found that the under the new suite of protection measures, the GOA groundfish fisheries were unlikely to jeopardize the continued existence of the western population of Stellar sea lions or adversely modify critical habitat. Protection measures include area-specific closures around rookeries and haulouts and seasonal divisions of TACs to disperse fishing effort throughout the year. The Pacific cod fishing season was divided into two periods: 60% of the TAC was allocated to the A season (Jan. 1 – June 10) and 40% to the B season (June 10 – Dec. 31). The objective was to limit the total amount of cod harvested in the first half of the year. Pacific cod is one of the four most important prey items of Steller sea lions and is especially important to sea lions during winter (Sinclair and Zeppelin 2002).

Since 2000, the western population of Steller sea lions has been increasing. However, the 2004 count (38,988 animals) was still 7.4% lower than the 1996 count and 32.6% lower than the 1990 count. In the GOA, the 2004 count (9,005 animals) was 12.6% higher than the 2000 count (7,995 animals), but was 45.1% lower than the 1990 count. Annual counts at haulouts and rookeries represent a minimum population estimate and are not corrected to account for animals that were at sea during the surveys (Angliss and Outlaw 2007). The minimum estimate of incidental mortality due to commercial fishing activities in all waters off Alaska is 24.2 sea lions per year, which is slightly more than 10% of the allowable level (234 animals) of removal for this stock (Angliss and Outlaw 2007). No incidental mortalities of Steller sea lions caused by the fixed gear sectors in the GOA were observed during 2000-2005.

Effects of the Alternatives

Impacts of the GOA fixed gear Pacific cod fishery on Steller sea lions were analyzed in the Programmatic SEIS (NOAA 2004a) and in the 2001 Biological Opinion. Current management practices were found to have no adverse impacts on marine mammals, including Steller sea lions. As a result, the status quo alternative is not expected to have a significant impact on Steller sea lions or other marine mammals.

The proposed action would add Pacific cod endorsements to fixed gear licenses, limiting entry to the directed Pacific cod fisheries in the Western and Central GOA to vessels with recent participation in the fisheries. The timing, location, and overall level of fishing effort in the GOA Pacific cod and other groundfish fisheries is not expected to change, and there will be no changes in the harvest specifications process. Annual mortality of Steller sea lions is not expected to change under the proposed action, because fishing effort by the various gear sectors will remain similar to the status quo. Sector allocations will continue to be divided into seasonal apportionments to disperse fishing effort throughout the year.

2.4 Seabirds

Various species of seabirds occur in the GOA, including resident species, migratory species that nest in Alaska, and migratory species that only occur in Alaska outside of the breeding season. The most numerous seabirds in Alaska are northern fulmars, storm petrels, kittiwakes, murres, auklets, and puffins. There are 38 species of seabirds that breed in Alaska. A list of species is provided below.[3] Eight species breed only in Alaska and in Siberia. Populations of five other species are concentrated in Alaska but range throughout the North Pacific region. Marine waters off Alaska provide critical feeding grounds for these species as well as others that do not breed in Alaska but migrate to Alaska during summer, and for other species that breed in Canada or Eurasia and overwinter in Alaska. A detailed analysis of the effects of commercial fisheries on seabirds appears in the Alaska Groundfish Fisheries Programmatic Supplemental Environmental Impact Statement (NMFS 2004). The Groundfish PSEIS also provides descriptions of the range, habitat, diet, abundance, and population status for these seabirds.

Species nesting in Alaska

Tubenoses-Albatrosses and relatives: Northern Fulmar, Fork-tailed Storm-petrel, Leach's Storm-petrel
Kittiwakes and terns: Black-legged Kittiwake, Red-legged Kittiwake, Arctic Tern, Aleutian Tern
Pelicans and cormorants: Double-crested Cormorant, Brandt's Cormorant, Pelagic Cormorant, Red-faced Cormorant
Jaegers and gulls: Pomarine Jaeger, Parasitic Jaeger, Bonaparte's Gull, Mew Gull, Herring Gull, Glaucous-winged Gull, Glaucous Gull, Sabine's Gull
Auks: Common Murre, Thick-billed Murre, Black Guillemot, Pigeon Guillemot, Marbled Murrelet, Kittlitz's Murrelet, Ancient Murrelet, Cassin's Auklet, Parakeet Auklet, Least Auklet, Wiskered Auklet, Crested Auklet, Rhinoceros Auklet, Tufted Puffin, Horned Puffin

Species that visit Alaska waters

Tubenoses: Short-tailed Albatross, Black-footed Albatross, Laysan Albatross, Sooty Shearwater, Short-tailed Shearwater
Gulls: Ross's Gull, Ivory Gull

The Northern Fulmar accounts for the majority of incidental seabird take in the groundfish fisheries, and is one of the most abundant species breeding in Alaska. The hook-and-line sector causes most of this take. Three ESA-listed species occur in waters off Alaska (see Table 2-6), and Kittlitz's Murrelet is a candidate species for listing under the ESA. The U.S. Fish and Wildlife Service (USFWS) has primary responsibility for managing seabirds, and has evaluated effects of the BSAI and GOA FMPs and the harvest specifications process on currently listed species in two Biological Opinions (USFWS 2003a and 2003b). Both Biological Opinions concluded that the groundfish fisheries, including the GOA Pacific cod fishery, are unlikely to jeopardize populations of listed species or adversely modify or destroy critical habitat for listed species.

Table 2-6 ESA-listed and candidate seabird species that occur in the management area.

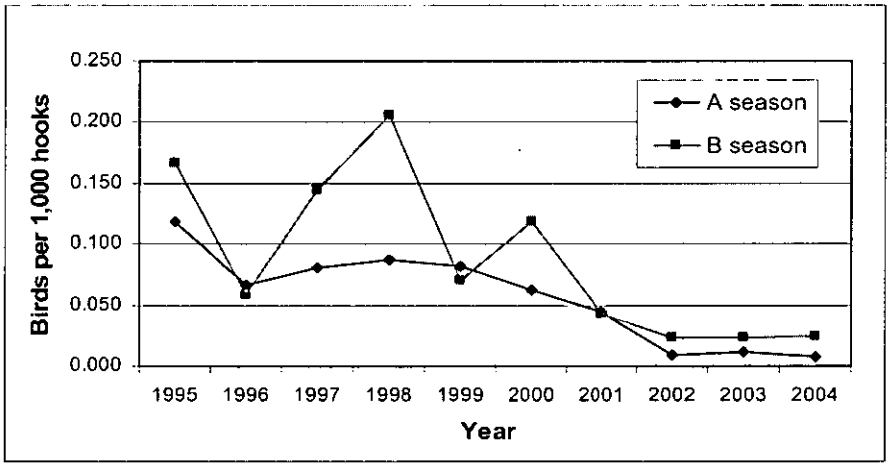
Common Name	*Scientific Name*	ESA Status
Short-tailed Albatross	*Phoebaotria albatrus*	Endangered
Steller's Eider	*Polysticta stelleri*	Threatened
Spectacled Eider	*Somateria fishcheri*	Threatened
Kittlitz's Murrelet	*Brachyramphus brevirostris*	Candidate

[3]Source: (USFWS web site Seabirds. Species in Alaska. Accessed at http://alaska.fws.gov/mbsp/mbm/seabirds/species.htm on August 31, 2007).

The fixed gear Pacific cod fisheries in the GOA have direct and indirect impacts on seabirds. Seabird take is the primary direct effect of fishing operations. Seabirds are taken in the hook-and-line Pacific cod fisheries in two ways. While hooks are being set, seabirds attracted to the bait may become entangled in fishing lines. Seabirds are also caught directly on baited hooks. Hook-and-line and trawl gear accounts for the majority of the seabird take in the groundfish fisheries.

Indirect effects of fishing on seabirds include impacts to food sources. The fixed gear fisheries may reduce the biomass of prey species available to seabird populations. Fishing gear may disturb benthic habitat used by seabirds that forage on the seafloor and reduce available prey. Bottom trawl gear is the primary source of benthic habitat disturbance in the groundfish fisheries. Fishing activities may also create feeding opportunities for seabirds, for example when catcher processors discard offal.

Hook-and-line gear accounts for the majority of seabird take in the North Pacific groundfish fisheries. Depending on which estimates are used, hook-and-line gear accounts for either 65% or 94% of seabird bycatch in the BSAI and GOA combined (Fitzgerald et al. 2006). Seabird bycatch by the GOA hook-and-line fisheries consists of 46% fulmars, 34% albatrosses, 12% gull species, 5% unidentified seabirds, 2% shearwater species, and less than 1% of 'all other' species (Fitzgerald et al. 2006). Most bycatch of Black-footed Albatross in waters off Alaska occurs in the GOA hook-and-line fisheries. From 2000 to 2004, an estimated 88 Black-footed Albatross were taken annually in the GOA hook-and-line fisheries. Total seabird bycatch in the GOA hook-and-line fisheries peaked in 1996 at 1,649 birds, and decreased to 156 birds in 2004, despite an increase in fishing effort. The incidental catch rate in the GOA decreased from an annual average of 0.021 birds per 1,000 hooks from 1993 to 2004 to 0.01 birds per 1,000 hooks from 2000-2004.



Source: AFSC. Data include BSAI and GOA hook-and-line CP fisheries.

Figure 2-1 Seabird bycatch rates by hook-and-line catcher processors during the Pacific cod A and B seasons, 1995-2004.

Figure 2-1 compares seabird bycatch rates per 1,000 hooks by the hook-and-line catcher processor fleet during the A and B seasons from 1995 to 2004, and includes data from both the BSAI and GOA. Seabird bycatch by hook-and-line catcher processors is higher during the B season than during the A season, but bycatch rates have been reduced substantially since 2001 as a result of widespread use of seabird avoidance techniques such as paired streamer lines. The average bycatch rate for hook-and-line catcher processors from 2002 through 2004 was 0.018 birds per 1,000 hooks (Figure 2-1), a substantial reduction from previous years.

Due to different sampling procedures on trawl vessels, two sets of estimates are calculated for seabird bycatch. Average annual take by trawl vessels in the GOA from 1993 to 2004 was either 63 birds or 97 birds (Fitzgerald et al. 2006). Northern Fulmars comprised the majority of bycatch by trawl vessels during this period. Seabird bycatch by the groundfish pot sector has historically been very low. Average annual bycatch in the GOA pot sector from 1993–2004 was 55 seabirds, less than 1% of the average annual seabird bycatch in the groundfish fisheries.

Effects of the Alternatives

The Groundfish PSEIS (NMFS 2004a) concluded that the current GOA groundfish fisheries are not adversely impacting ESA-listed seabird species. Biological Opinions by the USFWS (2003a and 2003b) concluded that the groundfish fisheries in the GOA are unlikely to jeopardize populations of listed species or adversely modify or destroy critical habitat for listed species. Based on current estimates of seabird bycatch, the status quo alternative is not likely to have a significant impact on seabird populations.

The proposed action would add Pacific cod endorsements to fixed gear LLP licenses to limit entry to the Western and Central GOA directed Pacific cod fisheries. Overall levels of fishing effort by each gear sector, and the timing and location of fishing activities are not expected to change. The proposed action will not modify the management practices analyzed in previous Biological Opinions (USFWS 2003a and 2003b), is not likely to cause additional adverse effects to ESA-listed species, and is not likely to increase incidental takes of listed species. Consequently, the proposed action is not likely to have a significant impact on seabird populations.

2.5 Essential Fish Habitat

Essential fish habitat (EFH) is defined as those areas necessary to fish for spawning, breeding, feeding, or growth to maturity. Section 303(a)(7) of the Magnuson-Stevens Act requires all FMPs to describe and identify Essential Fish Habitat (EFH). In addition, FMPs must minimize to the extent practicable adverse effects of fishing on EFH and identify other actions to conserve and enhance EFH. Maps and descriptions of EFH for the GOA groundfish species are available in the Environmental Impact Statement for Essential Fish Habitat Identification and Conservation in Alaska (NMFS 2004). This document also describes the importance of benthic habitat to different groundfish species and the impacts of different types of fishing gear on benthic habitat. Benthic habitat is potentially impacted by fishing practices that contact the seafloor. The analysis concludes that there are long term effects of fishing on benthic habitat features off Alaska and acknowledges that considerable scientific uncertainty remains regarding the consequences of those effects on the sustained productivity of managed species. Based on the best available scientific information, the EIS concludes that there are no indications that current fishing activities are altering the capacity of EFH to support health populations of managed species over the long term. The analysis concludes that no Council-managed fishing activities have more than a minimally adverse effect on EFH, which is the regulatory standard requiring action to minimize adverse effects under the MSA. The Council elected to adopt a variety of new measures to conserve EFH, which were implemented in 2006.

Effects of the Alternatives

The effects of the GOA Pacific cod fixed gear fisheries on benthic habitat and EFH were analyzed in the EFH EIS (NMFS 2005e). In the Pacific cod hook-and-line fishery, anchors, groundline, ganglions, and hooks potentially contact the seafloor. The Pacific cod pot fishery has a very small footprint (an estimated 0.17 square mile footprint for the GOA and BSAI combined). The jig fishery has no direct contact with the seafloor, although contact may occur incidentally. Year-round area closures protect

sensitive benthic habitat. Current fishing practices have minimal or temporary effects on benthic habitat and essential fish habitat. These effects are likely to continue under Alternative 1, and are not considered to be significant. Under the proposed action, the location, timing, and overall level of fishing effort by the various fixed gear sectors will remain essentially the same as under Alternative 1. As a result, impacts on benthic and essential fish habitat under this alternative are not expected to be significant.

2.6 Ecosystem Considerations

Ecosystems consist of communities of organisms interacting with their physical environment. Within marine ecosystems, competition, predation, and environmental disturbance cause natural variation in recruitment, survivorship, and growth of fish stocks. Human activities, including commercial fishing, can also influence the structure and function of marine ecosystems. Fishing may change predator-prey relationships and community structure, introduce foreign species, affect trophic diversity, alter genetic diversity, alter habitat, and damage benthic habitats.

The GOA Pacific cod fishery potentially impacts the GOA ecosystem by relieving predation pressure on shared prey species (i.e., species which are prey for both Pacific cod and other species), reducing prey availability for predators of Pacific cod, altering habitat, imposing bycatch mortality, or by ghost fishing caused by lost fishing gear. Ecosystem considerations for the GOA groundfish fisheries are summarized annually in the GOA Stock Assessment and Fishery Evaluation (SAFE) report (NPFMC 2005). These considerations are summarized according to the ecosystem effects on the groundfish fisheries as well as the potential fishery effects on the ecosystem.

Effects of the Alternatives

An evaluation of the effects of the GOA fixed gear groundfish fisheries on the ecosystem is conducted annually in the Ecosystem Assessment section of the Stock Assessment and Fishery Evaluation report (NMFS 2006b) and in the Harvest Specifications SAFE report (NMFS 2006c). These analyses conclude that the current GOA fixed gear groundfish fisheries do not produce population-level impacts to marine species or change ecosystem-level attributes beyond the range of natural variation. Consequently, Alternative 1 is not expected to have a significant impact on the ecosystem.

Alternative 2 will not change the overall level of Pacific cod or groundfish harvest from the status quo. The level of fishing effort by each fixed gear sector, and the location and timing of fishing activities is not expected to change. As a result, Alternative 2 is not likely to have a significant impact on the ecosystem.

2.7 Economic Impacts

A detailed description of the economic and socioeconomic components of the GOA fixed gear groundfish fisheries and an analysis of the effects of the proposed action may be found in the Regulatory Impact Review (Chapter 3 of this document).

2.8 Cumulative Effects

Analysis of the potential cumulative effects of a proposed action and its alternatives is a requirement of NEPA. Cumulative effects result from the incremental impact of the proposed action in addition to past, present, and reasonably foreseeable future actions. The Alaska Groundfish Fisheries PSEIS (NOAA 2004a) assesses the potential direct and indirect effects of groundfish FMP policy alternatives in

combination with other factors that affect physical, biological and socioeconomic components of the BSAI and GOA environment.

Beyond the cumulative impacts analysis documented in the Groundfish PSEIS, no additional past, present, or reasonably foreseeable cumulative negative impacts on the natural and physical environment (including fish stocks, essential fish habitat, ESA-listed species, marine mammals, seabirds, or marine ecosystems), fishing communities, fishing safety or consumers have been identified that would occur as a result of the proposed action. The proposed action, in combination with other actions, may have additional economic effects on the fixed gear sectors that participate in the GOA Pacific cod fisheries. In recent years, several regulatory changes implemented to protect Steller sea lions have had economic effects on participants in the GOA Pacific cod fisheries. The cumulative impacts from recent management actions are one of the driving forces behind industry support for the proposed amendment. Other fisheries in the region are subject to increasingly restrictive management measures. The GOA Pacific cod fisheries are among the few open access fisheries remaining. Participants that depend on these fisheries are concerned that changes in other fisheries will result in increased numbers of displaced vessels entering the GOA Pacific cod fisheries. Recent actions include:

- the IFQ halibut and sablefish fisheries
- AFA rationalization of the BSAI pollock fishery
- Amendment 67 to the BSAI groundfish management plan that established LLP endorsements specifically for fixed gear Pacific cod fishery participants
- BSAI crab rationalization
- GOA Rockfish Pilot Program – initially approved for two years but recently extended under reauthorization of the Magnuson-Stevens Act
- GOA and BSAI trawl LLP recency

Several reasonably foreseeable future actions are expected to have additional social and economic effects on these sectors, including the GOA Pacific cod sector allocations and revisions to the GOA Pacific cod sideboards. These social and economic effects are addressed in the Regulatory Impact Review (RIR), found in Chapter 3 of this document.

3.0 REGULATORY IMPACT REVIEW

This chapter provides information on the economic and socioeconomic impacts of the alternatives, as required by Executive Order (E.O.) 12866 (58 FR 51735; October 4, 1993). This chapter includes a description of the GOA Pacific cod fisheries, an analysis of the potential effects of the proposed action on the fisheries, identification of the individuals or groups that may be affected by the action, and a discussion of the nature of those impacts (quantifying the economic impacts where possible) and potential tradeoffs.

The requirements for all regulatory actions specified in E.O. 12866 are summarized in the following Statement from the order:

> *In deciding whether and how to regulate, agencies should assess all costs and benefits of available regulatory alternatives, including the alternative of not regulating. Costs and benefits shall be understood to include both quantifiable measures (to the fullest extent that these can be usefully estimated) and qualitative measures of costs and benefits that are difficult to quantify, but nevertheless essential to consider. Further, in choosing among alternative regulatory approaches, agencies should select those approaches that maximize net benefits (including potential economic, environment, public health and safety, and other advantages; distributive impacts; and equity), unless a statute requires another regulatory approach.*

E.O. 12866 requires that the Office of Management and Budget review proposed regulatory programs that are considered to be significant. A significant regulatory action is one that is likely to:

(1) Have an annual effect on the economy of $100 million or more, or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities;

(2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or

(4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in this Executive Order.

3.1 The Limited License Program (LLP)

The Limited License Program (LLP) limits access to the Federal groundfish and crab fisheries in the BSAI and GOA.[4] In the mid to late 1990s, the Council developed the LLP to address capacity concerns and take a first step toward rationalization of the groundfish fisheries under its management. Fishing under the program began in 2000. The LLP requirement does not apply to Pacific halibut or lingcod, which are not considered groundfish under the Federal Fisheries Management Plans (FMPs). In addition, some Federal groundfish fisheries are not subject to the LLP requirement. In Federal regulations, License Limitation groundfish includes target species and the 'other species' category, specified annually pursuant to 679.20(a)(2).

The LLP established criteria for the issuance of licenses to persons based on the fishing history of vessels. This discussion briefly summarizes the primary provisions applicable to the fixed gear participants. The LLP defined a general qualification period (GQP) and an endorsement qualification period (EQP) both of which must have been satisfied for a management subarea for a vessel owner to receive a license. Vessels that met requirements for more than one subarea endorsement were issued a single, non-severable LLP license with multiple area endorsements. Qualification criteria differ across areas and subareas, and include a variety of exceptions meant to address specific circumstances in the different areas.

Table 3-1 shows the primary GQP and EQP requirements applicable to trawl vessels in the various BSAI and GOA subareas. In general, the endorsements and EQP catch requirements apply to a single subarea. However, the Central GOA endorsement and EQP catch requirements treat the Central GOA area and West Yakutat district as a single LLP endorsement area. Catch in either the Central GOA or West Yakutat qualified a vessel for a Central GOA endorsement, and this endorsement allows a vessel to fish in both the Central GOA and West Yakutat. EQP requirements differ across the different endorsement areas.[5]

Table 3-1 General LLP license issuance criteria.

Management area	General Qualification Period (GQP) (Jan. 1, 1988 – June 27, 1992)	Endorsement area	Vessel length and operation	Endorsement Qualification Period (EQP) (Jan. 1, 1992 - June 17, 1995)
Bering Sea and Aleutian Islands	One landing	Bering Sea	All vessels	One landing
		Aleutian Islands	All vessels	One landing
GOA	One landing	Western GOA	CVs ≥ 125 ft and CPs ≥ 60 ft	One landing in at least two calendar years
			CVs < 125 ft and CPs < 60 ft	One landing
		Central GOA	All vessels, ≥ 60 ft	One landing in at least two calendar years
			All vessels < 60 ft	One landing

[4] Amendment 39 to the BSAI groundfish plan and Amendment 41 to the groundfish plan for the GOA established the LLP. The primary rules governing the LLP are contained in 50 CFR 679.4(k).

[5] Notably, persons fishing only inside 3 nm (i.e., in State waters only) were eligible for an LLP license based on their State waters participation. However, persons that never acquired a Federal fisheries permit (FFP), required for participation in fisheries in Federal waters, were issued LLPs that are not transferable from the originating vessel.

In addition to the different area endorsements, LLP licenses also carry a designation for operation type (catcher processor or catcher vessel), gear (trawl or fixed gear), and maximum vessel length (MLOA). LLP licenses were issued catcher processor designations if groundfish were processed on the vessel during the period from January 1, 1994 through June 17, 1995 or the last calendar year of the EQP. It is important to recognize that licenses of either operation type (catcher vessel or catcher processor) authorize participation as a catcher vessel. As a result, removing inactive catcher vessel licenses will not prevent entry of catcher processor licenses into the catcher vessel sector.[6] Each license carries a gear designation (trawl or fixed gear) based on the gear used on the vessel during the period from January 1, 1988 through June 17, 1995. If a vessel used both trawl and fixed gear during the qualifying period, its license received both gear designations.

Primary LLP License Endorsements and Designations

Area endorsements – Each license carries one or more LLP area endorsements authorizing entry to fisheries in those LLP areas (BS, AI, CG, WG, or SEO).

Operation-type designations – Each license carries a designation for either catcher processor operation or catcher vessel operation. A catcher processor may choose to operate as a catcher vessel, delivering its catch to shore or to a mothership.

Gear designation – Each license carries a gear designation, trawl and/or fixed gear, authorizing its entry in fisheries for the designated gear.

MLOA designation – Each license carries a maximum LOA designation, limiting the length of the vessel that can use the license.

Non-severability – The endorsements and designations of a license are non-severable and only transfer with the license.

Finally, each license carries an MLOA endorsement. The MLOA of the vessel assigned to the license cannot exceed the MLOA endorsements on that license. For vessels 125 feet or greater in length on June 24, 1992, the MLOA endorsement is equal to the vessel length. For vessels less than 125 feet in length on that date, the MLOA endorsement is the lesser of 1.2 times the LOA or 125 feet. If a vessel was under reconstruction on June 24, 1995, the basis for determining the MLOA is the vessel's length on completion of the reconstruction. In addition, vessels under 60 feet on June 17, 1995 (or under construction on that date with a reconstructed LOA under 60 feet) cannot have an MLOA greater than 60 feet; vessels under 125 feet on June 17, 1995 (or under construction on that date with a reconstructed LOA under 125 feet) cannot have an MLOA greater than 125 feet; and vessels under construction on that date with a reconstructed LOA over 125 feet will have an MLOA equal to the vessel's reconstructed length.

3.1.1 Exemptions from the LLP requirement

Generally, vessels participating in the groundfish fisheries in Federal waters in the BSAI or GOA are required to have an LLP license with the applicable area endorsement, gear designation (trawl or fixed gear), and operation type designation (catcher processor or catcher vessel), and cannot exceed the allowed MLOA. There are several exemptions from the LLP requirement, including:

(1) Vessels fishing exclusively in parallel or State waters fisheries
(2) Vessels less than 26 feet LOA in the GOA and less than 32 feet LOA in the BSAI
(3) Vessels less than 60 ft LOA using jig gear in the BSAI directed groundfish fisheries, subject to gear restrictions (maximum of 5 jig machines, one line per machine, and 15 hooks per line)

[6] This transition could occur one of two ways. First, catcher processor licenses can be voluntarily (and irreversibly) converted to a catcher vessel license. In addition, a catcher processor may choose to deliver its catch to shore or to a mothership.

(4) Vessels participating in the IFQ halibut and sablefish fisheries. Vessels fishing IFQ may also retain groundfish bycatch without a license. This provision was included in the LLP to minimize discards, and is consistent with National Standard 9 of the Magnuson-Stevens Act.

3.1.2 Pacific cod endorsements

Participation in the directed fisheries for Pacific cod in the Bering Sea and Aleutian Islands with pot or hook-and-line gear requires a gear-specific Pacific cod endorsement, in addition to an LLP license with the appropriate gear designation and area endorsements. These endorsements were created under Amendment 67 to the BSAI FMP and became effective on January 1, 2003. Pacific cod endorsements are not required to participate in the BSAI fisheries using trawl and jig gear. Four endorsements were created under Amendment 67: hook-and-line catcher vessel, pot catcher vessel, hook-and-line catcher processor, and pot catcher processor. The program used a vessel basis for determining qualification, because the LLP had not been implemented during the qualification periods. Vessels were required to meet various catch thresholds to qualify for the different endorsements. Qualification criteria for endorsements are summarized in Table 3-2. Vessels using jig gear could qualify for either a hook-and-line catcher vessel or pot catcher vessel endorsement based on their combined jig and hook-and-line catch or jig and pot catch, respectively.

Table 3-2 Qualification criteria for BSAI Pacific cod LLP endorsements.

Operation type	Gear type used for harvests	Pacific cod harvest threshold	Pacific cod endorsement
Catcher vessel	Hook-and-line or jig	7.5 mt in one year from 1995 to 1999	Hook-and-line catcher vessel
	Pot or jig	100,000 pounds (45 mt) in each of any two years from 1995 to 1999	Pot catcher vessel
Catcher processor	Hook-and-line or jig	270 mt in any one year from 1996 to 1999	Hook-and-line catcher processor
	Pot	300,000 pounds (136 mt) in each of any two years from 1995 to 1998	Pot catcher processor

Under Amendment 67, vessels with multiple licenses were only allowed to qualify for BSAI Pacific cod endorsements on a single license, in order to avoid increasing the capacity for additional entry into the fishery. However, individual licenses could qualify for more than one gear endorsement, although they could not qualify for more than one operation type endorsement within each gear type. For example, a license can carry a pot catcher vessel or pot catcher processor endorsement, but not both. However, a pot catcher processor endorsement allows that vessel to fish as either a catcher processor or catcher vessel. It should be noted that one groundfish license currently has 3 BSAI Pacific cod endorsements. This license has both a catcher vessel and catcher processor endorsement for pot gear. These endorsements still have interim status and are being adjudicated by RAM. Once the adjudication process is completed, licenses will have a maximum of two BSAI Pacific cod endorsements, one for each gear type.

Qualification thresholds for BSAI Pacific cod endorsements were based on retained catch from the directed Pacific cod fishery and excluded catch used for personal bait. Any vessel under 60 feet was exempt from the endorsement requirements. The action also contained a provision to address unavoidable circumstances. Although the action only limited entry to the Pacific cod fishery, the Bering Sea and Aleutian Islands catcher processor capacity reduction act (which was part of the Consolidated Appropriations Act of 2005) extended the scope of the endorsements for catcher processors to several other species, specifically Atka mackerel, flathead sole, Pacific Ocean perch, rock sole, Greenland turbot, and yellowfin sole.

Key BSAI Pacific cod LLP endorsement provisions under Amendment 67:

- Vessels with multiple LLP licenses only received Pacific cod endorsements on a single license, but individual licenses were eligible to qualify for up to 2 gear/operation type endorsements (pot and hook-and-line CV or CP)
- Jig catch could be combined with either pot or hook-and-line catch to qualify for a pot or hook-and-line endorsement
- Catcher vessels less than 60 feet LOA are exempt from the BSAI Pacific cod endorsement requirement
- Vessels exempt from the LLP and vessels catching Pacific cod for personal use bait are not required to hold a Pacific cod endorsement

3.2 The GOA Pacific cod fishery

3.2.1 Management of the fishery

This section describes current management of the GOA Pacific cod fishery, and highlights important regulatory changes in management of the GOA Pacific cod fishery during 1992 through 2008. These regulatory changes are summarized in
Table 3-3. Separate area TACs are identified for Pacific cod in the Western GOA, Central GOA, and Eastern GOA management subareas. Final 2008 harvest specifications apportioned 57% of the GOA TAC to the Central GOA (28,426 mt), 39% to the Western GOA (19,449 mt), and 5% to the Eastern GOA (2,394 mt). The total allowable catch (TAC) and percentage of TAC harvested in the Pacific cod fisheries in the Western and Central GOA are summarized in Table 3-3.

The GOA Pacific cod TACs are not divided among gear types, but are apportioned to the inshore and offshore processing sectors, with 90% allocated to the inshore component and 10% to the offshore component. The inshore/offshore apportionments were established in 1992 under GOA Amendment 20. Catcher processors and motherships participating in the directed Pacific cod fisheries must make an annual election to participate in either the inshore or offshore component. The inshore component is comprised of shore plants, stationary floating processors, and vessels less than 125 feet in length that process less than 126 metric tons (round weight) per week of pollock and Pacific cod in the aggregate. In addition, the TACs are apportioned seasonally, with 60% allocated to the A season and 40% to the B season. The A and B seasons were implemented in 2001 as a Steller sea lion protection measure. The A season begins on January 1 for fixed gear vessels, and on January 20 for trawl vessels. This delayed start for the trawl season was implemented in 1993 under Amendments 19/24. The intent of the delayed start of the trawl season was to reduce Chinook salmon and halibut bycatch in the BSAI. In the following year, the BSAI Pacific cod TAC was allocated among the gear and operation types based on catch history. As a result, the different fixed and trawl gear season opening dates did not impact the ability of the sectors to maintain their historic shares of the BSAI TAC.

In the GOA, the A season ends on June 10, but NMFS usually closes the season much earlier when the directed fishing allowance has been harvested. The B season begins on September 1 for all gear types, and ends Nov 1 for trawl vessels and December 31 for fixed gear vessels. NMFS inseason managers monitor catch in the fisheries and time the closure of the directed fisheries to allow full harvest of the TAC. To meet that goal, the closure must be timed to leave only enough of the TAC to support incidental catch of Pacific cod in other fisheries during the remainder of the season. Managers attempt to time the A season closure to leave a sufficient portion of the A season TAC for incidental catch by other directed fisheries. Incidental catch continues to accrue to the A season TAC until the A season ends on June 10. Any A season overage or incidental catch between the end of the A season (June 10) and the beginning of the B season (September 1) counts against the B season TAC.

Table 3-3 Regulatory changes impacting management of the GOA Pacific cod fishery, 1992 – 2008.

1992	GOA Amendment 20 established 90% inshore & 10% offshore processing sector apportionments. Catcher processors and motherships <125 ft LOA may elect annually to participate in the inshore sector. Inshore vessels are limited to processing <126 mt of pollock and Pacific cod (in the aggregate) per week. Later amendments extended these apportionments.
1993	BSAI/GOA Amendment 19/24 established Jan 20 start date for trawl gear in both the BSAI and GOA. Intent was to reduce halibut and Chinook salmon bycatch.
1994	BSAI Amendment 24. Established BSAI Pacific cod sector allocations. Later amendments (Am 46, Am 68, Am 77, Am 85) modified these allocations. Allocations to trawl, pot, and hook-and-line sectors were based on catch history. The allocation to the jig sector was higher than historic catch, with the intent of increasing entry level opportunities in the fishery.
1995	BSAI/GOA Amendment 23/28 established a moratorium on new vessel entry to the groundfish fisheries. A moratorium permit was issued to any vessel that made a legal landing during a specified qualification period.
1997	The Alaska Board of Fish established the GOA State waters Pacific cod fishery with initial GHLs of 15% of WGOA ABC and 15% of CGOA ABC.
1998	BSAI/GOA Amendment 49/49. Increased Retention/Increased Utilization regulations require 100% retention of pollock and Pacific cod beginning in 1998, and shallow water flatfish beginning in 2003, while the directed fisheries for these species are open. When the directed fisheries are closed, all catch up to the maximum retainable amount (MRA) must be retained.
1998	The American Fisheries Act was implemented, and AFA-permitted CPs were prohibited from participating in the GOA groundfish fisheries.
2000	Sideboards that limit the GOA groundfish catch of 95 non-exempt AFA CVs were established. 16 AFA CVs were exempted from the sideboard, because they are <125 ft LOA, have annual BSAI pollock landings of <5,100 mt, and made at least 40 landings of GOA groundfish from 1995-1997.
2000	BSAI/GOA Amendment 60/58. Groundfish LLP implemented. Vessels must hold a groundfish LLP with the appropriate gear (trawl or fixed gear), area (WG or CG), and operation type (CV or CP) endorsement to participate in the WGOA or CGOA groundfish fisheries in Federal waters. No LLP license is required to participate in the parallel waters fisheries.
2001	The WGOA and CGOA Pacific cod TACs were apportioned seasonally under the Steller sea lion management measures. 60% of each TAC is apportioned to the A season (Jan 1- June 10) and 40% is apportioned to the B season (Sept 1 - Dec 31). Incidental catch between the A and B seasons accrues to the B season TAC.
2006	GOA Pacific cod crab sideboards were implemented that limit the catch of 85 non-AFA vessels that qualified for initial allocations of C. opilio under the BSAI crab rationalization program (recent Council revisions exempt 3 vessels).
2007	Amendment 80 sideboards implemented – limit groundfish catch of Am 80 trawl CPs in the GOA. Pacific cod sideboards are 2.2% of the Western GOA TAC and 4.0% of the Central GOA TAC.
2008	BSAI/GOA Amendment 92/82. Trawl recency- final action taken by the Council in April 2008. When implemented, will reduce number of trawl CV licenses to 96 Central GOA license (from 176) and 77 WGOA licenses (from 160). Will reduce the number of CP licenses to 20 Central GOA and 19 Western GOA licenses from 27 and 26, respectively.

Incidental catch when the directed groundfish fisheries are closed is limited to a Maximum Retainable Amount (MRA). The MRA limits the amount of non-directed species catch that may be retained to a percent of directed species catch. For Pacific cod, the MRA with respect to all directed species, with the exception of arrowtooth flounder, is 20%. The MRA for Pacific cod in the directed arrowtooth flounder

fishery in the GOA is 5%. When Pacific cod is not open for directed fishing, a vessel must retain Pacific cod up to the amount of the MRA.[7] There is no MRA for Pacific cod for catcher vessels participating in the Rockfish Pilot Program. Catcher vessels participating in the Rockfish Pilot Program receive an allocation of 2.09% of the Central GOA TAC. The MRA for Pacific cod is 4% for catcher processors participating in the Rockfish Pilot Program. Any Pacific cod caught in excess of the MRA must be discarded. Under the Improved Retention/Improved Utilization regulations, all Pacific cod catch must be retained when the fisheries are open for directed fishing, and all catch up to the MRA must be retained when the fisheries are closed to direct fishing.

The directed fisheries for Pacific cod in State waters (0 nm to 3 nm) are open concurrently with the directed fisheries in Federal waters (3 to 200 nm). These fisheries in State waters (referred to as the 'parallel fisheries') are prosecuted under the same rules as the Federal fisheries, with catch counted against the Federal TAC. In addition, beginning in 1997 the State of Alaska has undertaken its own Pacific cod fisheries inside of 3 nm (referred to as the 'State waters fisheries'), which is allocated a portion of the Federal ABC.

3.2.2 Catch history

In both the Western and Central GOA, total catch as a percentage of the Federal TAC has generally declined since the Pacific cod TAC was seasonally apportioned in 2001, although nearly 98% of the Central GOA TAC was harvested in 2008 (Table 3-4). In the Western GOA, less than 80% of the TAC was harvested during 2005 through 2008. The inshore and offshore TACs, and the A and B season apportionments, have not been utilized equally in the management areas. Inshore TACs have typically been fully harvested in the Central GOA, but in the Western GOA, only 68% to 77% of the inshore TAC was harvested during 2006-2008 (see Table 3-5).

Table 3-4 Total catch of Pacific cod in the Federal Pacific cod fisheries in the Western and Central GOA.

	Western Gulf			Central Gulf		
Year	Total catch	Federal TAC	Percent of TAC harvested	Total catch	Federal TAC	Percent of TAC harvested
1995	22,516	20,100	112.0%	45,465	45,650	99.6%

During recent years, a substantial proportion of the offshore TACs in both management areas have not been harvested. Inseason management has opened the offshore TACs concurrently with the inshore TACs, but has closed the offshore TACs when the BSAI Pacific cod A season fisheries have ended, to

[7] Pacific cod catch is also retained in the halibut and sablefish IFQ program. Vessels fishing IFQ are required to retain Pacific cod up to the MRA, except if Pacific cod is on prohibited retention (PSC) status

prevent the BSAI catcher processor fleet from directed fishing on the GOA offshore Pacific cod TACs. The reason for these closures is that the offshore TACs are relatively small and cannot support directed fishing by a large portion of the BSAI catcher processor fleet. In 2003, the offshore seasons were open to this fleet, and the Western GOA offshore A season TAC was overharvested (220%; see Table 3-6).

Table 3-5 Pacific cod catch and percent of the TAC harvested in the inshore and offshore sectors

Source: NMFS Catch Accounting (2003-2008) and Blend databases (2001-2002).

The A and B season TACs are not utilized equally (see Table 3-6). The A season TAC, which is harvested when Pacific cod are aggregated and roe peaks, is typically fully harvested. During recent years, A season catches have met or exceeded A season TACs in both the Western and Central GOA. Incidental catch between the A and B seasons is substantial, particularly by the inshore sector in the Central GOA. Incidental catch made between the A and B season counts against the B season TAC. During recent years, B season TACs have not been fully harvested. During some years, the trawl and hook-and-line B seasons have ended before the TAC is fully harvested, when halibut PSC limits have been reached. During 2005 through 2007, the hook-and-line, pot, and jig gear B seasons remained open until December 31, but inclement weather conditions, high operating costs, and difficulty finding fish limited B season harvests, particularly in the Western GOA.

3.2.3 Season lengths

Short A season lengths are another indication that the GOA Pacific cod fisheries are fully subscribed. During recent years, the A season has closed approximately one month after the trawl gear opening on January 20 (see Table 3-7). In 2004, 2005, and 2008, the Central GOA inshore A seasons closed just 11 days, 7 days, and 8 days, respectively, after the trawl season opened on January 20.

2009					27-Jan	TAC		

During some years, the B season has closed to hook-and-line and trawl gear before the TAC has been fully harvested. Halibut PSC limits closed all of the GOA hook-and-line B seasons and the Central GOA inshore trawl B season before the TACs were fully harvested during 3 of the past 8 years (see Table 3-8). The Western GOA inshore trawl season closed 6 of the past 8 years and the offshore trawl seasons closed 4 of the past 8 years due to halibut PSC limits. Both the trawl and hook-and-line sectors have worked with NMFS to better manage their B season halibut bycatch. The hook-and-line CP sector has been working with NMFS since 2006 to voluntarily manage B season halibut PSC through an informal halibut PSC cooperative (described in Section 3.5.6). Beginning in 2006, the trawl sector has extended its B season by working closely with NMFS inseason management to control halibut bycatch with a series of short openings during the B season. Table 3-8 shows the final B season closure date, but does not show the multiple, short trawl season openings during 2006 through 2008. This approach has been successful in limiting halibut PSC and allowing the trawl season to stay open longer, and has increased Central GOA B season catches. In 2008, the Central GOA inshore B season Pacific cod fishery closed when the TAC was fully harvested on October 3.

3.2.4 Participation by fixed gear vessels and licenses

Pacific cod is the primary groundfish species targeted by the fixed gear sectors in the Western and Central GOA. During 2000 through 2008, Pacific cod comprised approximately 98% of retained groundfish harvests by vessels using fixed gear in the Western and Central GOA, excluding the IFQ halibut and sablefish fisheries. The number of vessels participating in a fishery is one measure of effort, although it does not capture variables such as the capacity of the fleet. Table 3-9 reports the number of fixed gear vessels that participated in the directed Pacific cod fisheries during 2000-2008 in the Western and Central GOA, excluding vessels that only had incidental catch of Pacific cod in the IFQ fisheries. There have been notable increases in participation in the directed Pacific cod fisheries in the GOA during the past several years, particularly in 2007 and 2008. For example, in both the Western and Central GOA, participation by pot and hook-and-line catcher vessels <50 ft LOA and 50-60 ft LOA increased in 2007 and 2008. In the Central GOA, the number of ≥60 ft pot CVs participating in the directed Pacific cod fisheries increased during the past several years, after several years of low participation in 2002 through 2004. Pot CV and CP participation peaked in the GOA 2000, when the start of the BSAI *C. opilio* fishery was delayed due to ice. In the Western GOA, pot CV participation by vessels ≥60 ft LOA declined somewhat during the past several years. In 2006, sideboards went into effect that limit Pacific cod harvests by recipients of initial allocations of BSAI *C. opilio* crab quota. These sideboard provisions limit participation by some pot vessels that historically fished in the GOA. Specifically, the sideboards prohibit 137 vessels from directed fishing for GOA Pacific cod, and limit Pacific cod harvests by 82 additional vessels to a sideboard limit. In addition to these sideboarded vessels, 36[8] fixed gear groundfish LLP licenses are subject to the Pacific cod sideboards, and 11 licenses are prohibited from directed

[8] The Council took final action in October 2008 to exempt 3 vessels and 3 licenses from the sideboards. Previously, 85 vessels and 39 fixed gear groundfish LLP licenses were subject to the sideboards.

fishing for Pacific cod in the GOA. Participation by hook-and-line CPs has fluctuated during 2000 through 2008. There was an increase in participation by the <125 ft hook-and-line CP sector in the Western GOA in the past several years. Finally, participation by jig vessels has also fluctuated over the years. Most of the jig participants fished in parallel waters and do not hold fixed gear licenses. The jig sector's participation in the GOA Pacific cod fisheries is discussed in detail in Section 3.5.4.

Table 3-9 Number of fixed gear vessels participating in the directed Pacific cod fisheries, excluding IFQ participants, from 2000 to 2008.

Table 3-10 reports the number of unique vessels in each sector that participated in the directed Pacific cod fisheries during 2000 through 2008. These unique vessel counts may be compared with the number of vessels that participated annually during 2000-2008 for some perspective on the frequency of new entrants into each sector. For example, there were 89 pot CVs <60 ft LOA that participated in the directed Pacific cod fishery during 2000-2008, and 55 of those vessels fished during 2000, indicating that 34 additional vessels have entered the <60 ft LOA pot sector since 2000. Participation in the jig sector has been even more variable. During 2000-2008, 84 different vessels fished using jig gear in the Central GOA, but the maximum number of participants in any one year was 30 vessels. Similarly, 248 hook-and-line vessels <60 ft LOA had catch in the Central GOA directed Pacific cod fisheries during 2000-2008, but only 60 to 143 vessels have fished during a given year, indicating that a large number of vessels participate during some, but not all years.

The annual catch (mt) per vessel within each sector in the GOA directed Pacific cod fisheries is reported in Table 3-11. In general, hook-and-line and pot CPs and ≥60 ft LOA pot CVs have the highest annual catch per vessel. Jig vessels have the lowest annual catch per vessel (less than 10 mt per vessel). Annual catches per vessel within each sector depend on a number of variables, including Pacific cod TACs, conditions in the Pacific cod fishery, the number of vessels participating in the fishery, weather conditions, the timing of halibut PSC closures, and conditions in other fisheries. These variables make it difficult to describe trends in annual catch per vessel. For example, annual catches by hook-and-line vessels have varied, and do not show a clear trend. During some years, halibut PSC closures have limited hook-and-line catches during the B season. Conversely, during some years, the trawl B season has closed early due to halibut PSC limits, and the fixed gear sectors have had the opportunity to catch more of the TAC. Annual catches per vessel have declined in several sectors. For example, in the Central GOA, annual catches by ≥60 ft pot CVs declined from 220 mt per vessel in 2005 to 123 mt per vessel in 2008, and catches by 50-60 ft pot CVs declined by nearly half, from 178 mt in 2005 to 93 mt in 2008. In the Western GOA, annual catches by ≥60 ft pot CVs declined from 237 mt per vessel in 2005 to 111 mt per vessel in 2008.

Trends in the numbers of Western and Central GOA fixed gear CV licenses participating in the directed Pacific cod fisheries are reported in Table 3-12. In 2000 the number of fixed gear licenses participating in the Central and Western GOA was particularly high, because of the late start of the *C. opilio* season described earlier. In the Central GOA, the number of licenses participating in the directed Pacific cod fishery dropped to 99 licenses in 2003, climbed to 118 licenses in 2006, then increased substantially to 154 licenses in 2007 and 157 licenses in 2008. In the Western GOA, fixed gear CV license participation in the directed Pacific cod fishery ranged from 33 to 64 licenses during 2000 through 2008. In 2008, 55

Western GOA CV licenses participated in the fishery. Table 3-12 also breaks down license participation into the different gear groups. In the Western GOA, pot CV license participation fluctuates on an annual basis, and there has not been a clear trend in participation. Hook-and-line CV participation increased to 7 licenses in 2008. In the Central GOA, hook-and-line license participation increased to 100 licenses in 2008, and pot participation increased to 60 licenses in 2007 and 56 licenses in 2008. Catch (mt) per license in both sectors decreased in 2008. Catch per license for Central GOA pot CVs was only 97 mt in 2008; pot CV catches had not dropped below 100 mt per license since 2002.

Table 3-12 Number of fixed gear CV licenses and catch (mt) per license from 2000 to 2008 in the directed Pacific cod fisheries. Excludes IFQ participants.

* License counts do not necessarily correspond to vessel counts in Table 3-9. The CV license counts may include vessels operating with stacked licenses (i.e., 2 or more licenses assigned to a single vessel). In Table 3-9, vessel counts may include vessels participating in the parallel waters fisheries without an LLP license. Licenses may have used more than one gear type.

Trends in the numbers of Western and Central GOA fixed gear CP licenses participating in the directed cod fisheries are reported in Table 3-13. In both the Western and Central GOA, the number of CP licenses participating with hook-and-line gear increased in 2006, 2007, 2008, to levels higher than previous years. Pot CP participation has remained fairly stable, with 1 to 2 licenses participating in each management area in each year. Catch (mt) per hook-and-line CP license in both management areas was substantially lower in 2005 through 2008 than during previous years. Halibut PSC closures in 2005 (for the BSAI hook-and-line CP fleet only) and 2008 (for all hook-and-line vessels) resulted in shortened B seasons. Participation was also higher in 2006 through 2008. There were not sufficient numbers of CP licenses participating with pot gear in most years to report catch per license.

Table 3-13 Number of fixed gear CP licenses and catch (mt) per license from 2000 to 2008 in the directed Pacific cod fisheries. Excludes IFQ participants.

3.2.5 Revenues in the GOA Pacific cod fisheries

Ex-vessel prices in the GOA Pacific cod fisheries increased substantially during 2007 (Table 3-14). Ex-vessel prices for fixed gear landings averaged $0.494 per pound in 2007, an increase of $0.10 per pound since 2006. Ex-vessel prices for trawl landings also averaged $0.487 in 2007, an increase of $0.12 per pound since 2006. Gross revenues for all catcher vessel landings of GOA Pacific cod totaled $34.4 million in 2007, a 27% increase from 2006 revenues (Table 3-15). Participants in the 2008 GOA Pacific cod fisheries reported prices of up to $0.68 per pound, including bonuses. CFEC price and gross revenues data for 2008 are not yet available. In 2009, poor market conditions worldwide resulted in price declines. Participants have reported that ex-vessel prices during the 2009 A season ranged from $.30 to $.33 in the GOA. Extensive information on economic conditions in the GOA Pacific cod fisheries can be found in the Economic SAFE Report (Hiatt et al., 2008).

Table 3-14 Ex-vessel prices (dollars) per pound in the GOA Pacific cod fisheries

Year	Fixed gear	Trawl gear
2001	$0.299	$0.258
2002	$0.287	$0.234
2003	$0.304	$0.282
2004	$0.267	$0.251
2005	$0.297	$0.269
2006	$0.396	$0.369
2007	$0.494	$0.487

First wholesale prices for Pacific cod products increased substantially in 2006 and 2007 (Table 3-16). The all products price is a weighted average of the prices for all products produced from Pacific cod. Table 3-17 shows the product mix from Pacific cod harvested in the GOA, and includes production by both at-sea processors and shorebased plants. Catcher processors produce mostly eastern and western cut headed and gutted products and several ancillary products. Shorebased processors produce fillets and headed and gutted products, along with a wide variety of ancillary products. Headed and gutted fish comprised the majority of products for at-sea processors, while fillets made up a larger fraction of the product mix for shoreside processors (Hiatt et al., 2007).

Gross revenues by catcher vessels that used fixed gear in the directed Pacific cod fisheries in the Central or Western GOA are summarized in Table 3-18. Revenues are reported based on the sector that a vessel participated in during a given year in the Central or Western GOA directed Pacific cod fisheries. Table 3-18 also shows each sector's economic dependence on the GOA Pacific cod fisheries relative to its dependent on other Alaska fisheries. Pot vessels that did not qualify for BSAI crab allocations were highly dependent on GOA Pacific cod (19.7% of revenues), as well as the State GOA Pacific cod fisheries (11.5%) and IFQ halibut (25.1%). Crab-qualified pot CVs earned 14.6% of revenues from GOA Pacific cod during 2001-2007, and 65.3% of revenues from crab. Hook-and-line CVs earned 8.4% from GOA Pacific cod and 58% from halibut IFQ. Finally, jig vessels earned only 6.5% from the GOA Pacific cod fisheries, but also earned an additional 19.3% of revenues from the State GOA Pacific cod fisheries, and 43.3% of revenues from salmon.

First wholesale revenues for catcher processors that participated in the GOA Pacific cod fisheries are summarized in Table 3-19. The table shows that the GOA Pacific cod fisheries are a relatively small proportion of total production by trawl catcher processors. Trawl catcher processors mostly catch GOA Pacific cod incidentally while participating in other directed fisheries, and revenues from GOA Pacific cod comprised only 1.5% of first wholesale revenues during 2001-2007. Revenues for hook-and-line catcher processors were mainly from the BSAI Pacific cod fishery during 2001-2007 (77.5%). GOA Pacific cod and sablefish comprised 8.9% and 8.2% of first wholesale revenues for hook-and-line catcher processors during 2001-2007. Relatively few pot catcher processors participate in the GOA and BSAI Pacific cod fisheries. During 2001-2007, those pot CPs that participated in the GOA Pacific cod fisheries earned the majority of first wholesale revenues from the GOA Pacific cod fisheries (58.4%), and the remainder of revenues from the BSAI Pacific cod fishery.

Table 3-20 reports annual gross revenues per fixed gear CV license. Annual revenues per CV license have generally increased in both GOA management areas as the price of Pacific cod has increased. The tables also report revenues that licenses earned in the Western GOA or Central GOA Pacific cod fisheries as a percentage of revenues from all Alaska commercial fisheries, including groundfish, halibut, shellfish, salmon, and herring. Revenues from the GOA directed Pacific cod fisheries have remained a fairly consistent percentage of total annual revenues by these licenses in Alaska fisheries. Fixed gear CV licenses that participated in the directed Pacific cod fisheries in the Western GOA earned 11% to 22% of annual fisheries revenues from Pacific cod. Central GOA licenses earned 14% to 18% of annual fisheries revenues from the directed Pacific cod fishery. Table 3-20 also reports annual gross revenues per fixed gear CV license based on the gear type used in the directed Pacific cod fishery. Licenses that used pot gear had the highest annual revenues per license of the fixed gear CV sectors (2007 revenues: $149,305 in the CGOA and $108,295 in the WGOA). These figures only include revenues from the directed Pacific cod fishery in that management area. In 2007, licenses with hook-and-line catch earned approximately $85,000 per license in the CGOA and $34,000 per license in the Western GOA directed Pacific cod fisheries. Licenses with jig catch generally had annual revenues of less than $5,000 per license in the directed cod fisheries.

Table 3-21 reports annual wholesale revenues per fixed gear CP license. Annual revenues per CP license in the directed Pacific cod fisheries have generally declined over time in the Western GOA, although they increased in 2007 with higher Pacific cod prices. Annual revenues per CP license that used hook-and-line gear in the Western GOA directed Pacific cod fishery during 2000-2007 ranged from $215,000 per license in 2005 to more than $900,000 per license in 2002. In the Central GOA, revenues per hook-and-line CP license have ranged from just over $100,000 per license to nearly $500,000 per license in 2007. In both management areas, revenues from the GOA directed Pacific cod fisheries have ranged from 5% to more than 20% of total annual wholesale revenues by CP licenses in all Alaska fisheries (including groundfish and halibut and sablefish IFQ, but not including salmon or shellfish).

Table 3-18 Percentage of gross revenues from GOA Pacific cod and other fisheries by catcher vessels that participated in the GOA directed Pacific cod fisheries, averaged from 2001-2007.

Sector	Fishery	Vessels	Tons	Revenues	Percent of revenues
Hook-and-line CV	**GOA Pacific Cod**	**132**	**5,564**	**$4,422,751**	**8.4%**
	State GOA Pacific Cod	24	1,006	$815,727	1.5%

3.3 Analysis of the Alternatives, Components, and Options

This section provides an overview of the expected effects of the proposed action to add Pacific cod endorsements to Western and Central GOA fixed gear groundfish licenses. The tables show the number of fixed gear groundfish licenses that will be eligible to participate in the directed Pacific cod fisheries in Western and Central GOA under the various components and option. Following this overview is a discussion of the potential economic and socioeconomic effects which may occur as a result of the proposed action. Finally, effects on harvesters, processors, and communities are analyzed, followed by a description of the cumulative effects of the proposed amendment and other recent actions, and an analysis of the net benefits to the Nation.

3.3.1 Alternative 1 – No Action

Under the no action alternative, Pacific cod endorsements would not be added to Western and Central GOA fixed gear groundfish licenses. As a result, there would be no reduction in the number of fixed gear groundfish licenses eligible to participate in the directed Pacific cod fisheries in the Western and Central GOA. If this alternative is selected, fixed gear licenses that have not participated in the Western and Central GOA Pacific cod fisheries in recent years could enter the fisheries in the future and dilute revenues, increase costs, or both, for licenses with recent participation in the fisheries. Increased participation may result in negative economic impacts to current participants in the fisheries. The number

of licenses that might enter the fisheries in the absence of this action is unknown, and depends on future market conditions, the size of Pacific cod TACs, opportunities to participate in other fisheries, the future regulatory environment, and operating costs in the fisheries. Consequently, this analysis does not provide a quantitative estimate of the potential economic impacts of the no action alternative.

Current number of fixed gear groundfish licenses

The number of fixed gear licenses with Western and Central GOA endorsements is reported by operation type and maximum length overall (MLOA) in Table 3-22. The table also indicates the number of licenses that have other area endorsements in addition to a Western or Central GOA endorsement. There are 883 fixed gear catcher vessel licenses with Central GOA endorsements and 264 fixed gear catcher vessel licenses with Western GOA endorsements. Most of these licenses may only be used on vessels less than 60 feet LOA. Fewer than 25% of catcher vessel licenses with Central GOA endorsements also have BSAI or Western GOA endorsements. In contrast, more than half of catcher vessel licenses with Western GOA endorsements also have BSAI or Central GOA endorsements. There are 49 Central GOA and 31 Western GOA CP licenses, and the majority of these licenses also carry BSAI endorsements. Only a small number of catcher processor licenses are restricted for use on vessels less than 60 feet LOA. This is the universe of fixed gear licenses that would continue to have access to the directed Pacific cod fisheries in the Western and Central GOA in the absence of the proposed amendment.

Table 3-22 Number of GOA fixed gear LLP licenses with each area endorsement, operation type, MLOA, and gear designation.

	Number of endorsements		Licenses that also have an endorsement (or designation) for:					
	All licenses	Licenses with MLOA <60 feet	Central Gulf	Western Gulf	Aleutian Islands	Bering Sea	Southeast Outside	Trawl
Central Gulf CV	883	702	--	175	61	159	178	114
Central Gulf CP	49	5	--	27	41	45	5	8
Western Gulf CV	264	154	175	--	62	157	42	78
Western Gulf CP	31	1	27	--	30	31	3	4

Source: NMFS RAM groundfish license file, December 2008.

3.3.2 Alternative 2 – Add Pacific cod endorsements to licenses

This section describes the impacts of the proposed action on the universe of fixed gear licenses that are currently eligible to participate in the directed Pacific cod fisheries in Federal waters of the Western and Central GOA. The proposed action would add Pacific cod endorsements to fixed gear licenses. Licenses would be required carry a Pacific cod endorsement, in addition to the appropriate area endorsement, to participate in the directed Pacific cod fisheries in Federal waters of the Western and Central GOA. The action would result in an amendment to the GOA Fisheries Management Plan (FMP).

The tables in this section show the number of fixed gear licenses that meet the various landings and catch thresholds during 2000-2006 and 2002-2006, and also show the additional number of licenses that would qualify if landings during 2007 through either June 4, 2008 or December 8, 2008 are included in addition to landings during 2000-2006 or 2002-2006. Under Component 3 (see below), there is a provision that states that one of the qualifying periods included in the suboptions under Option 3 will be selected in addition to either 2000-2006 (Option 1) or 2002-2006 (Option 2). If Suboption 3 is also selected, any license that qualifies for a Pacific cod endorsement only when catch during the supplemental years in

Option 3 are included would receive a nontransferable Pacific cod endorsement. The endorsement would be extinguished if the license is transferred to another vessel or owner.

Component 3

Option 1: 2000-2006
Option 2: 2002-2006
Option 3: Add the qualifying period January 1, 2007 through:
Suboption 1: June 4, 2008
Suboption 2: December 8, 2008

- Either of these suboptions will be selected in addition to one of the qualifying periods in Option 1 or Option 2.

Suboption 3: If an LLP license qualifies only when the supplemental range of years in Suboption 1 or Suboption 2 is included, any Pacific cod endorsements granted to licenses under these suboptions would be extinguished upon transfer of the LLP license to another vessel or owner.

Licenses will be credited with retained catch from the directed Pacific cod fisheries in the Federal and parallel waters fisheries. Landings must be made with fixed gear (pot, hook-and-line, or jig) in the endorsement area. Catch in the IFQ and State waters fisheries is excluded. Note that licenses with Central GOA endorsements are also credited with landings in the West Yakutat management area, because under the LLP, the Central GOA endorsement authorizes licenses to fish in Federal waters of West Yakutat. Each table shows the number of licenses that would qualify under the 2 options in

Component 4:

Option 1 – All directed Pacific Cod 1, 3, 5 landings (resulting in a Pcod endorsement)
Option 2 – All directed Pacific Cod 5, 10, 25, 100 mt (resulting in a Pcod endorsement)

Licenses that meet a landings threshold of 1, 3, or 5 landings or a catch threshold of 5, 10, 25, 100 mt in the respective management area would receive a Pacific cod endorsement. Directed Pacific cod catch is defined as landings made when the directed Pacific cod fisheries are open. Licenses are credited with landings made up to 7 days after the directed season closes in order to allow time for deliveries to be made or processing activity to be reported.

3.3.2.1 Catcher vessel licenses

The number of fixed gear catcher vessel licenses that meet each landings and catch threshold is reported in Table 3-23. The number of licenses that would qualify for a Pacific cod endorsement depends upon the catch definition, landings or catch threshold, and qualification period selected. There are currently 264 Western GOA fixed gear licenses, and 54 to 110 of these licenses would qualify for a Pacific cod endorsement. There are 883 Central GOA fixed gear licenses, and 110 to 306 of these licenses would qualify for a Pacific cod endorsement. If Pacific cod endorsements are added to licenses, the number of fixed gear catcher vessel licenses eligible to participate in the directed Pacific cod fishery would be reduced to 20% to 42% of current capacity in the Western GOA and 12% to 35% of current capacity in the Central GOA.

The number of qualifying Central GOA licenses varies substantially, and depends on the range of qualifying years used to determine catch history. If 2000-2001 catch history is included, approximately 30 to 60 additional Central GOA licenses meet the 1 landing threshold. The qualification period makes somewhat less of a difference for Western GOA licenses. In general, most Western GOA licenses with fishing history during 2000-2006 were also active during 2002-2006. Most Western and Central GOA licenses that have 3 or 5 landings also meet the 5 mt or 10 mt catch thresholds. However, only about 50%

to 65% of the licenses that meet the 1 landing threshold during a given qualifying period meet the 100 mt threshold during the same time period.

If landings during 2007 through June 4, 2008 or December 8, 2008 are included in addition to landings during one of the qualifying periods under Options 1 or 2, approximately 10% to 20% more CV licenses meet the one landing threshold (see Table 3-23). For example, 306 Central GOA licenses have at least one directed Pacific cod landing during 2000 through December 8, 2008, compared to only 269 during 2000-2006. Similarly, 110 Western GOA CV licenses have at least one directed Pacific cod landing during 2000-2008, compared to only 93 licenses during 2000-2006. Under Option 3, Suboption 3 would make the Pacific cod endorsement nontransferable if a license only qualified for a Pacific cod endorsement when one of the 2007-2008 qualifying periods is included. Any Pacific cod endorsement that is granted to a license under Option 3 could, under Suboption 3, be extinguished upon transfer of the license to another vessel or owner.

Catcher Vessel Licenses by Gear Type Used

The number of licenses that meet each landings and catch threshold based on catch made while using a specific gear type is reported in Table 3-24. It is important to note that the gear type columns are not mutually exclusive. Licenses may have qualified landings using more than one fixed gear type, and as a result, the number of licenses in the columns in Table 3-24 may sum to more than the number of qualifying licenses in Table 3-23. In the absence of specific fixed gear type endorsements (i.e., pot, hook-and-line, or jig endorsements), these licenses could continue to fish in the directed Pacific cod fisheries using any fixed gear type.

Each table shows the number of licenses meeting each threshold based on catch in the directed Pacific cod fisheries using a specific gear type. Under the proposed action, licenses would be required to carry Pacific cod endorsements, in addition to the appropriate area endorsements, to participate in the directed Pacific cod fisheries in Federal waters of the GOA. Pacific cod endorsements could also have a specific gear designation, similar to the BSAI Pacific cod endorsements created under Amendment 67. Pacific cod endorsements would limit the number of licenses eligible to participate in the directed Pacific cod fisheries in the Western and Central GOA. However, vessels without LLP licenses, and licenses without Pacific cod endorsements, could continue to participate in the directed Pacific cod fisheries in parallel waters. Licenses would qualify for Pacific cod endorsements based on catch in the directed Pacific cod fisheries in Federal and parallel waters. Under the current options being considered, incidental catch of Pacific cod outside of the directed season would not count toward the landings and catch thresholds.

Under the current landings and catch thresholds, the number of gear-specific Pacific cod endorsements that would be added to fixed gear catcher vessel licenses includes:

Central GOA

- 68 to 202 hook-and-line endorsements
- 42 to 124 pot endorsements
- 0 to 24 jig endorsements

Western GOA

- 0 to 14 hook-and-line endorsements
- 54 to 96 pot endorsements
- 0 to 12 jig endorsements

The number of gear-specific Pacific cod endorsements that could be added to licenses under the different options (shown in Table 3-24) may be compared with the number of licenses participating on an annual basis using each gear type (see Table 3-12). In the Western GOA, up to 59 licenses per year have participated using pot gear, and as many as 96 licenses would qualify for pot endorsements at the 1 landing threshold during 2000 through Dec 8, 2008. As many as 7 hook-and-line vessels and 6 jig vessels have participated in the Western GOA directed Pacific cod fishery per year, and up to 14 hook-and-line and 12 jig endorsements could be added to licenses. In the Central GOA, up to 109 licenses participated using hook-and-line gear per year, and up to 202 licenses qualify for hook-and-line endorsements. A maximum of 85 licenses used pot gear in one year, and up to 124 licenses qualify for pot endorsements. Finally, up to 8 Central GOA licenses have jig landings in one year and up to 24 licenses would qualify for a jig endorsement.

The Council could choose different catch or landings thresholds for different gear types and MLOA designations to account for differences in catch history among licenses in each sector. In Component 4, options for defining the catcher vessel sectors include:

- Hook-and-line CV
  Option: Hook-and-line CV ≥60
  Hook-and-line CV <60
- Pot CV
  Option: Pot CV ≥60
  Pot CV <60
- Jig

In past actions, the Council has selected different qualifying thresholds for vessels based on gear, operation type, and vessel length. For example, the qualification criteria used to establish BSAI Pacific cod endorsements under Amendment 67 are shown in Table 3-2. In the BSAI, vessels with pot history needed 100,000 lbs (45 mt) of catch in each of 2 years during 1995-1999 to qualify for a pot catcher vessel endorsement, and vessels with hook-and-line history needed 7.5 mt of catch in any one year during 1995-1999 to qualify for a hook-and-line catcher vessel endorsement.

In determining the criteria that licenses will need to meet to qualify for GOA Pacific cod endorsements, the Council could take into consideration the differences in catch history among the gear types. For example, approximately 65% to 75% of Western GOA licenses that have at least one directed Pacific cod landing using pot gear also meet the highest (100 mt) catch threshold. Under most options, more than 50% of Central GOA licenses with at least 1 pot or hook-and-line landing in the directed Pacific cod fishery in the Central GOA meet the 100 mt threshold. However, in the Western GOA, no licenses with hook-and-line catch history in the directed Pacific cod fishery meet the 100 mt threshold during any of the qualification periods. Similarly, most licenses with jig history have less than 10 mt of Pacific cod catch during all of the qualifying periods.

Some catcher vessel licenses have catch history using more than one fixed gear type. Under the current set of options being considered by the Council, these licenses could potentially qualify for more than one gear-specific Pacific cod endorsement. Note that under Amendment 67, licenses could qualify for up to 2 BSAI Pacific cod endorsements (pot and hook-and-line CP or CV). If licenses are allowed to qualify for more than one Western or Central GOA Pacific cod endorsement, the endorsements could be made non-severable to prevent license holders from selling their Pacific cod endorsements, which could result in an expansion of the fleet. Allowing individual licenses to hold more than one gear endorsement would give those licenses the flexibility to use different fixed gear types during a given fishing year or over a series of years.

Below is a summary of the number of licenses that meet the minimum catch threshold of 1 landing of directed Pacific cod during **2000-2006 or 2000-Dec 8, 2008** using more than one fixed gear type:

Central GOA

- 18 or 30 licenses have both pot and hook-and-line landings
- 10 or 12 licenses have both hook-and-line and jig landings
- 3 licenses have both pot and jig landings
- 1 license has pot, hook-and-line, and jig landings

Western GOA

- 2 or 5 licenses have both pot and hook-and-line landings
- 1 license has both hook-and-line and jig landings
- 4 or 7 licenses have both pot and jig landings
- 1 license has pot, hook-and-line, and jig landings

Catcher Vessel Licenses by Gear Type Used and MLOA

Table 3-25 reports the number of licenses that meet the landings and catch thresholds while using a specific gear type, reported by the MLOA designation on the license. This table provides an estimate of the number of licenses that would be eligible to fish the catcher vessel Pacific cod sector allocations, if separate allocations are established for vessels of different lengths (e.g. vessels <60 ft LOA and ≥60 ft LOA). However, it should be noted that the number of licenses shown in each size category in Table 3-25 is based on the MLOA designation on the license, and is not based on the length of the vessel assigned to the license. In some cases, the MLOA designation on the license is larger than the LOA of the vessel assigned to that license. Also, note that some vessels have multiple (i.e., stacked) licenses, and the number of licenses in each length category may be greater than the number of vessels in that length category with recent participation in the fisheries. These estimates provide some perspective on how the catcher vessel sectors could be divided by vessel length for the purpose of establishing Pacific cod sector allocations. For example, dividing the pot catcher vessel sector at 60 feet LOA results in a fairly even distribution of licenses that could potentially fish the <60 ft LOA and ≥60 feet LOA allocations. In contrast, the hook-and-line sector is mostly comprised of licenses with an MLOA of <60 feet, and few active licenses are ≥60 feet MLOA. Hook-and-line vessels ≥60 feet LOA have historically taken a relatively small proportion of the Pacific cod catch in the Western GOA (less than 1%) and Central GOA (1 to 2%). Dividing the hook-and-line catcher vessel allocation at 50 feet LOA would result in a more even distribution of licenses eligible to fish those allocations

.

The tables also show the number of additional licenses that would qualify in each gear and MLOA class if catch during 2007 through June 4, 2008 or December 8, 2008 is included in addition to catch during one of the qualifying periods in Options 1 or 2. In the Central GOA, the majority of additional licenses that qualify are 50-60 ft MLOA and have pot history (6 or 10 additional licenses with 1 landing) or hook-and-line history (17 or 22 additional licenses with 1 landing). Similarly, in the Western GOA, the majority of additional licenses that qualify have an MLOA of 50-60 ft and have pot history (8 additional licenses with 1 landing).

Licenses that only qualify when 2007 and 2008 catch history is included

Under Component 3, Suboption 3 states that if an LLP license qualifies for a Pacific cod endorsement only when the supplemental range of years (Jan 1, 2007 through Jun 4, 2008 or Dec 8, 2008) in Suboption 1 or Suboption 2 of Component 3 are included, any Pacific cod endorsement granted to a license would be extinguished upon transfer of the LLP license to another vessel or owner. The rationale for including Suboption 3 is that licenses that only have recent (2007 and 2008) history in the Western or Central GOA Pacific cod fisheries may have made these landings specifically for the purpose of qualifying for a Pacific cod endorsement. Those participants who entered the fishery in 2007 and 2008 would receive a Pacific cod endorsement under Suboption 1 or Suboption 2, and could continue to participate in the fishery. **It is important to note that Suboption 3 currently states that the Pacific cod endorsement would not be transferable to another vessel or owner.**

Designating licenses that qualify under Suboption 1 or Suboption 2 as non-transferable to another vessel or owner could have several effects. First, it would maintain the existing fleet of vessels in the Pacific cod fishery that are currently assigned to licenses that qualify based on 2007 or 2008 catch history. For example, a high capacity 58 ft LOA vessel could not later be assigned to a license to replace a lower capacity boat that is currently assigned to a license. However, it would also prevent a license holder from replacing a vessel for safety or other considerations. If a boat sinks or otherwise becomes inoperable, the Council may wish to specify vessel replacement provisions for these licenses. If the Council wishes to choose Suboption 3, but to allow the owner to transfer the license to another vessel, **Suboption 3 could be revised so that a license cannot be transferred to another owner, but can be transferred to another vessel.** This would allow license holders to replace the vessel assigned to the license with a different vessel. Suboption 3 would also preclude a license holder who receives a Pacific cod endorsement based on 2007 or 2008 history from opportunistically selling the license with the endorsement to another person. The intent of including 2007 and 2008 history is to allow those participants who have only recently entered the fishery to be able to continue to participate in the fishery. It is not intended to allow recent entrants to qualify for an endorsement in order to sell the license with the endorsement to another person.

Table 3-26 provides a summary of the CV licenses that qualify at the 1 landing threshold only when catch history from 2007 through December 8, 2008 is included. Approximately half of the additional CV licenses that qualify have an MLOA of 58 or 59 ft. There are 37 Central GOA CV licenses that qualify at the 1 landing threshold; 32 of these licenses have an MLOA of <60 ft, and 19 have an MLOA of 58 or 59 ft. Three of the 37 licenses are currently assigned to 'Super 8' vessels greater than 100 gross tons. The licenses are mostly held by Alaska residents (25 of the 37 licenses, including 10 held by Kodiak residents). There are 17 Western GOA CV licenses that qualify at the 1 landing threshold only when 2007 and 2008 catch history is included; 10 licenses have an MLOA of <60 ft, and 7 licenses have an MLOA of 58 or 59 ft (including 1 'Super 8' vessel that is greater than 100 gross tons). The licenses are also mostly held by Alaska residents (7 of 10 licenses). Four Western GOA and 4 Central GOA CV licenses that qualify are stacked on two vessels (2 licenses per vessel). If these licenses are transferable, the stacked licenses could be assigned to different vessels or sold to different persons in the future, which would result in an increase in the size of the fleet eligible to participate in the Western and Central GOA Pacific cod fishery.

There are also additional CP licenses that qualify for a Pacific cod endorsement at the 1 landing threshold when catch through Dec 8, 2008 is credited to licenses. Three additional Western GOA licenses and 7 additional Central GOA licenses meet the 1 landing threshold. Most of these licenses have hook-and-line CP landings, and would qualify for a hook-and-line Pacific cod endorsement. There is a comparison of annual participation and revenues in the GOA Pacific cod fisheries and other Alaska fisheries by CV and

CP licenses that only qualify when 2007 and 2008 catch is included and licenses that qualify based on 2000-2006 catch in Section 3.4.1.2.

3.3.2.2 Catcher processor licenses

The number of catcher processor licenses that meet the various landings and catch thresholds is reported in Table 3-27. For the purpose of this analysis, catcher processor licenses were credited with both catcher processor and catcher vessel landings. The same rule was used for the trawl recency action. Catch Accounting data was used to determine the number of landings and retained catch (mt) by catcher processors. The Council elected to use Catch Accounting data rather than Weekly Production Reports for the GOA Pacific cod sector allocations to catcher processors. Catch Accounting data was used in this analysis to be consistent with the sector split analysis, but the Council could choose to use Weekly Production Reports instead. For the purpose of determining whether licenses meet the recency criteria, Catch Accounting data and Weekly Production Reports should produce similar results. One advantage of using Catch Accounting data to generate the estimates in this analysis is that landings by all vessels are stored in a single database, making it easier to ensure that catcher processors are credited for any landings made as catcher vessels.

The Council elected to exclude IFQ catch from qualifying catch for the purpose of determining recent participation in the groundfish fisheries. However, the Catch Accounting and Weekly Production Report databases have not historically tracked IFQ catch in a consistent manner. NMFS staff suggested excluding all halibut and sablefish targeted catch as a proxy for identifying IFQ catch. This approach may exclude some qualified groundfish catch, particularly directed Pacific cod catch, when Pacific cod comprised more than 20%, but less than 50% of a vessel's catch while it was targeting halibut or sablefish. Directed fishing is defined as any fishing activity that results in the retention of greater than the maximum retainable amount (MRA) for that species (679.2). For this reason, these trips were identified and groundfish and directed cod catch was credited to licenses.

There are 31 Western GOA catcher processor licenses, and between 19 and 24 licenses meet the 1 landing threshold during the qualifying periods in Options 1 through 3, and would qualify for a Pacific cod endorsement. The majority of Western GOA licenses that have catch history during the various qualifying periods also meet the highest catch threshold (100 mt) and landings threshold (5 landings). Three licenses qualified only when catch through December 2008 was included. There are 49 Central GOA licenses, and 12 to 21 licenses meet the 1 landing threshold during the qualifying periods in Options 1 through 3 and would qualify for a Pacific cod endorsement. In general, a smaller proportion of Central GOA CP licenses that meet the one landing threshold also meet the highest catch and landings thresholds. There were 7 licenses that qualified only when catch (at the 1 landing threshold) through December 2008 was included.

The number of catcher processor licenses that would qualify for gear-specific Pacific cod endorsements includes:

Western GOA

- 13 to 22 hook-and-line catcher processor endorsements
- Up to 5 pot catcher processor endorsements
- 3 licenses have both hook-and-line and pot landings during 2000-Dec 8, 2008

Central GOA

- 7 to 18 hook-and-line catcher processor endorsements
- Up to 4 pot catcher processor endorsements
- 1 license has both hook-and-line and pot landings during 2000-2006 and 2000-Dec 8, 2008

The number of gear-specific Pacific cod endorsements that could be added to CP licenses under the different options (shown in Table 3-27) may be compared to the number of CP licenses participating on

3.3.2.2 Catcher processor licenses

The number of catcher processor licenses that meet the various landings and catch thresholds is reported in Table 3-27. For the purpose of this analysis, catcher processor licenses were credited with both catcher processor and catcher vessel landings. The same rule was used for the trawl recency action. Catch Accounting data was used to determine the number of landings and retained catch (mt) by catcher processors. The Council elected to use Catch Accounting data rather than Weekly Production Reports for the GOA Pacific cod sector allocations to catcher processors. Catch Accounting data was used in this analysis to be consistent with the sector split analysis, but the Council could choose to use Weekly Production Reports instead. For the purpose of determining whether licenses meet the recency criteria, Catch Accounting data and Weekly Production Reports should produce similar results. One advantage of using Catch Accounting data to generate the estimates in this analysis is that landings by all vessels are stored in a single database, making it easier to ensure that catcher processors are credited for any landings made as catcher vessels.

The Council elected to exclude IFQ catch from qualifying catch for the purpose of determining recent participation in the groundfish fisheries. However, the Catch Accounting and Weekly Production Report databases have not historically tracked IFQ catch in a consistent manner. NMFS staff suggested excluding all halibut and sablefish targeted catch as a proxy for identifying IFQ catch. This approach may exclude some qualified groundfish catch, particularly directed Pacific cod catch, when Pacific cod comprised more than 20%, but less than 50% of a vessel's catch while it was targeting halibut or sablefish. Directed fishing is defined as any fishing activity that results in the retention of greater than the maximum retainable amount (MRA) for that species (679.2). For this reason, these trips were identified and groundfish and directed cod catch was credited to licenses.

There are 31 Western GOA catcher processor licenses, and between 19 and 24 licenses meet the 1 landing threshold during the qualifying periods in Options 1 through 3, and would qualify for a Pacific cod endorsement. The majority of Western GOA licenses that have catch history during the various qualifying periods also meet the highest catch threshold (100 mt) and landings threshold (5 landings). Three licenses qualified only when catch through December 2008 was included. There are 49 Central GOA licenses, and 12 to 21 licenses meet the 1 landing threshold during the qualifying periods in Options 1 through 3 and would qualify for a Pacific cod endorsement. In general, a smaller proportion of Central GOA CP licenses that meet the one landing threshold also meet the highest catch and landings thresholds. There were 7 licenses that qualified only when catch (at the 1 landing threshold) through December 2008 was included.

The number of catcher processor licenses that would qualify for gear-specific Pacific cod endorsements includes:

Western GOA

- 13 to 22 hook-and-line catcher processor endorsements
- Up to 5 pot catcher processor endorsements
- 3 licenses have both hook-and-line and pot landings during 2000-Dec 8, 2008

Central GOA

- 7 to 18 hook-and-line catcher processor endorsements
- Up to 4 pot catcher processor endorsements
- 1 license has both hook-and-line and pot landings during 2000-2006 and 2000-Dec 8, 2008

The number of gear-specific Pacific cod endorsements that could be added to CP licenses under the different options (shown in Table 3-27) may be compared to the number of CP licenses participating on

an annual basis using each gear type (see Table 3-13). In the Western GOA, 4 to 12 hook-and-line CPs participated in the fishery during 2000-2008; up to 24 CP licenses could receive a hook-and-line Pacific cod endorsement. In the Central GOA, 1 to 9 hook-and-line CPs participated in the fishery during 2000-2008, and as many as 14 CP licenses could receive a hook-and-line Pacific cod endorsement. As many as 5 Western GOA and 4 Central GOA CP licenses qualify for a pot Pacific cod endorsements. Typically, fewer than 3 pot CPs participate in the directed Pacific cod fishery in either management area in a given year.

Note: Gear type columns are not mutually exclusive, because some licenses have catch history using more than one gear type. The number of licenses in the gear columns may sum to more than the total number of licenses qualifying.

Table 3-28 shows the number of hook-and-line catcher processor licenses in each length class that qualify under the various catch thresholds. Vessel length (of the vessel currently assigned to each license) rather than the MLOA on the license was used in this table, because there is currently one fixed gear GOA catcher processor license with an MLOA of ≥125 feet that is assigned to a vessel <125 feet in length. If Pacific cod sector allocations for hook-and-line catcher processors are established based on vessel length, Pacific cod endorsements could specify the maximum vessel length allowed (in addition to the MLOA on the license). This provision would cap the number of hook-and-line catcher processors in each size class that could fish the proposed Pacific cod sector allocations. In the absence of this provision, licenses with an MLOA of ≥125 feet that are currently assigned to vessels <125 feet in length could be transferred to a larger vessel, resulting in an increase in the number of vessels fishing the ≥125 feet LOA hook-and-line catcher processor allocation. There are 7 to 13 Western GOA licenses on <125 ft vessels and 7 to 9 licenses on ≥125 ft vessels that have at least 1 directed cod landing during the different qualification periods. There are as many as 11 Central GOA licenses on <125 ft vessels and as many as 7 licenses on ≥125 ft vessels that have at least 1 directed cod landing during the different qualification periods.

Table 3-28 Number of hook-and-line catcher processor licenses qualifying at various landings and catch thresholds based on catch in the directed Pacific cod fisheries in the Western and Central GOA, reported by the MLOA on the license.

3.3.2.3 Licenses subject to crab sideboards

In developing the BSAI crab rationalization program, the Council imposed sideboards on the GOA groundfish fisheries. Pot vessels generally participate in only the crab and Pacific cod fisheries. As a result, the only perceived increase in opportunity arising from the crab rationalization program was thought to be in the Pacific cod fisheries in the GOA that are prosecuted in January, when the Bering Sea *C. opilio* fishery is typically prosecuted. Only recipients of initial allocations[9] in the Bering Sea *C. opilio* fishery are subject to the sideboards. The sideboards limit these vessels and licenses to their historic share of retained catch of GOA Pacific cod and other GOA groundfish during 1996-2000, excluding catch of fixed gear sablefish. Vessels that have limited history in the GOA groundfish fisheries – less than 50 mt of catch during 1996 to 2000 – are prohibited from directed fishing for Pacific cod in the GOA. Vessels that landed less than 100,000 pounds of Bering Sea *C. opilio* and more than 500 mt of Pacific cod in the GOA from 1996 to 2000 are exempt from the sideboards.

These sideboard provisions limit participation by some vessels that historically fished in the GOA. Specifically, the sideboards prohibit 137 vessels from directed fishing for GOA Pacific cod, and limit Pacific cod harvests by 82 additional vessels to a sideboard limit. In addition to these sideboarded vessels, 36[10] fixed gear groundfish LLP licenses are subject to the Pacific cod sideboards, and 11 licenses are prohibited from directed fishing for Pacific cod in the GOA. The purpose of this discussion is to provide an estimate of the number of licenses that may qualify for a Pacific cod endorsement in each gear group, but are subject to the GOA Pacific cod sideboards for BSAI crab qualified vessels. These licenses may receive a gear-specific Pacific cod endorsement, but their participation in the GOA Pacific cod fisheries will be limited by the crab sideboards.

Of the 36 sideboarded licenses, 6 are CP licenses and 30 are CV licenses (see Table 3-29). The 6 CP licenses include 4 Central GOA and 4 Western GOA endorsed licenses. The 30 CV licenses include 20 Central GOA and 14 Western GOA endorsed licenses. All but one of the sideboarded CV licenses has an MLOA of ≥60 ft. The sideboard amounts are calculated as a percentage of the Western and Central GOA inshore and offshore Pacific cod TACs (see Table 3-30). If GOA Pacific cod sector allocations are established, and supersede the current inshore/offshore processing sector allocations, the GOA inshore and offshore crab sideboards will likely need to be recalculated into a combined sideboard amount.

Table 3-29 Number of licenses subject to crab sideboards or prohibited from directed fishing for Pacific cod

	P. Cod Prohibited			P. Cod Sideboarded		
Operation Type	Number of licenses	Number WG endorsed	Number CG endorsed	Number of licenses	Number WG endorsed	Number CG endorsed
Catcher Vessel	11	8	6	30	14	20
Catcher Processor	0	0	0	6	4	4

Source: RAM LLP license file, October 2008. Does not include 3 licenses recently exempted from the sideboards in Oct 2008.

[9] Since allocations in the program are based on catch history associated with a license, the sideboard is constructed to limit catch using the license. This is done by sideboarding any vessel the catch of which led to a share allocation and any vessel named on the license that arose from the catch history of the vessel that led to that allocation.

[10] The Council took final action in October 2008 to exempt 3 vessels and 3 licenses from the sideboards. Previously, 85 vessels and 39 fixed gear groundfish LLP licenses were subject to the sideboards.

Table 3-30 Crab sideboards for the Western and Central GOA Pacific cod fisheries.

Management Area	TAC	Percent of TAC
Western Gulf	Inshore	9.02%
	Offshore	20.46%
Central Gulf	Inshore	3.83%
	Offshore	20.74%

Source: NMFS Harvest Specifications.

All of the crab sideboarded Western GOA CV licenses that have directed Pacific cod landings during the potential qualifying periods have MLOA designations of ≥60 ft, and all of these licenses have only pot landings. Table 3-25 shows the number of Western GOA CV licenses with MLOA designations of ≥60 ft that qualify using pot gear during 3 of the proposed qualifying periods: 18 to 19 licenses at the 100 mt directed cod threshold, and 22 to 27 licenses at the 1 landing threshold. Of these licenses, 11 licenses that qualify at the 100 mt threshold are subject to the crab sideboards, and 13 licenses with 1 landing are sideboarded. The sideboarded Central GOA CV licenses that have qualified landings have pot or hook-and-line landings. Table 3-25 also shows the number of Central GOA CV licenses with MLOA designation of ≥60 ft that qualify with pot gear during the 3 periods shown: 30 to 33 licenses at the 100 mt directed cod threshold and 48 to 51 licenses at the 1 landing threshold. Of these licenses, 14 licenses qualifying at 100 mt are sideboarded, and 16 licenses with 1 landing are sideboarded. In addition, 1 sideboarded Central GOA license with an MLOA greater than 60 ft has at least one qualified hook-and-line landing. Finally, either 2 or 3 (depending on the threshold) of the ≥60 ft MLOA Western GOA CV licenses that have qualified pot landings are prohibited from participating in the GOA directed Pacific cod fisheries, and one ≥60 ft MLOA Central GOA license with qualified pot landings cannot participate in the directed Pacific cod fisheries.

In sum, 16 of the 93 to 110 Western GOA CV licenses that have at least one directed Pacific cod landing during the various qualifying periods are subject to the crab sideboards (13 licenses) or prohibited from directed fishing for Pacific cod (3 licenses), and all of these licenses have an MLOA designation of ≥60 ft. A total of 18 of the 269 to 306 Central GOA licenses that have at least one landing are subject to the crab sideboards (17 licenses) or are prohibited from directed fishing for Pacific cod (1 license). Six of the crab sideboarded licenses are CP licenses; none of the Pacific cod-prohibited licenses are CP licenses. Four of these sideboarded CP licenses have a Western GOA endorsement and at least 3 of these licenses have at least one directed Pacific cod landing in the Western GOA during 2000-2006 or 2000-Dec 8, 2008. Four licenses have a Central GOA endorsement, and at least 3 of these licenses have at least one directed Pacific cod landing in the Central GOA during 2000-2006 or 2000-Dec 8, 2008

3.3.2.4 Years included in catch history

The Limited License Program was implemented in 2000, and during the first two years of the program persons participating in the GOA groundfish fisheries were required to hold LLP licenses, but RAM did not require a vessel to be formally assigned to each license. Consequently, the official record of license use is incomplete during 2000-2001. For the purposes of this analysis, catch during 2000-2001 was assigned to both the original qualifying vessel and current vessel in cases where the license was transferred to a different vessel during this period. The rationale for this approach was that both vessels that held the license may have had catch history during this time. Double counting catch on these licenses during 2000-2001 may have resulted in more licenses appearing to meet the catch thresholds. For this reason, the Council should consider the data presented in the tables to be an estimate of the actual number of qualifying licenses.

If the qualification period includes 2000-2001, NMFS may need to rely on alternative forms of documentation, such as individual affidavits or private contracts, to document catch history on licenses that were transferred during this period. Use of these forms of documentation is also likely to make the action more difficult to implement. Excluding 2000 and 2001 from the qualification period would simplify implementation of the action. Beginning in 2002, licenses were required to be formally assigned to a vessel in order to participate in LLP fisheries, and a complete record of license transfers exists. The transfer data was used to assign catch from each vessel to all licenses assigned to the vessel from 2002 to the present. Table 3-31 summarizes the number of licenses that have been transferred from the original qualifying vessel.

Table 3-31 Number of GOA fixed gear licenses no longer assigned to the original qualifying vessel.

Area endorsement	Operation designation	Number of licenses	Number of licenses not on original vessel
Central Gulf	Catcher vessel	883	236
	Catcher processor	49	10
Western Gulf	Catcher vessel	264	87
	Catcher processor	31	7

Source: RAM groundfish LLP license file, December 2008

3.3.2.5 Definition of qualifying catch

Qualifying catch includes retained catch from the directed Pacific cod fisheries in parallel and Federal waters. Qualifying catch does not include incidental catch of groundfish from the IFQ fisheries or State waters fishery catch. The IFQ halibut and sablefish fisheries are exempt from the LLP requirement. Incidental catch of LLP groundfish species in the IFQ fisheries may be retained without a groundfish license. This exemption was included in the LLP to minimize discards, and is consistent with National Standard 9 of the Magnuson-Stevens Act.

Catch thresholds are currently based on retained catch. Retained catch is likely a better indicator of dependence than total catch, because discards provide no direct return. Also, retained catch can be estimated more precisely, because discards by catcher vessels are typically extrapolated from observer estimates of at-sea discards. Currently, these definitions of qualifying catch do not exclude catch used for meal production. Data provided in the draft preliminary review EA/RIR/IRFA for the GOA Pacific cod sector allocations indicated that catcher processors in the GOA did not produce meal from Pacific cod during 1995-2006, and typically less than 1% of Pacific cod harvests by catcher vessels are used for meal production. The Council has excluded catch destined for meal production from some allocation programs based on the rationale that meal is a relatively low value product and its inclusion could disadvantage some small catcher processors that do not have meal production capacity. This was not an issue in the GOA, and the Council elected to include catch destined for meal production as qualifying catch for the purposes of the proposed GOA Pacific cod sector allocations and this action.

Exemptions from the proposed action

The Council is considering several exemptions from the proposed action. These exemptions would (1) allow certain types of vessels to participate in the directed Pacific cod fisheries without a Pacific cod endorsement, and (2) exempt some licenses from the catch thresholds, allowing these licenses to qualify for a Pacific cod endorsement even if they do not have qualifying catch. In determining which exemptions will be selected, the Council may wish to consider balancing the objective of creating

opportunities for new entry with the need to protect long-term participants from an influx of additional effort into the fisheries. The exemptions currently under consideration include:

- An exemption from the Pacific cod endorsement requirement for vessels using jig gear that use a maximum of 5 jigging machines, 5 lines, and 30 hooks per line or one line of 1ine of 150 hooks.

- An exemption from the Pacific cod endorsement requirement for vessels participating with fixed gear in the Western GOA B season directed Pacific cod fishery. A suboption would exempt only vessels using pot gear.
- An exemption from the catch thresholds for CP licenses that voluntarily stood down from the GOA Pacific cod fisheries during 2006, 2007, or 2008 as part of the informal hook-and-line CP halibut PSC cooperative.

- An exemption from the catch thresholds for licenses held by residents of CQE communities. A suboption would only exempt licenses with an MLOA designation of less than 60 ft. This exemption is discussed in Section 3.5.12.

3.3.2.6 Exemptions for jig vessels

The proposed action includes an exemption for all vessels using jig gear from any Pacific cod endorsement requirement, subject to gear restrictions (5 jigging machines, 5 lines, and 30 hooks per line or one line of 150 hooks). These gear restrictions are consistent with the gear allowed in the GOA State waters Pacific cod jig fisheries. The purpose of the jig exemption is to ensure that there are adequate entry level opportunities for small vessels in the GOA Pacific cod fisheries. In the BSAI, vessels <60 ft LOA using a maximum of 5 jig machines, one line per jig machine, and 15 hooks per line may participate in the directed groundfish fisheries in Federal waters of the BSAI without an LLP license.

The Council initially discussed the possibility of limiting the jig exemption to vessels less than 58 feet LOA, and asked staff to bring back additional information on the number of vessels using jig gear in the Federal fisheries that hold LLP licenses. Table 3-32 shows the number of vessels using jig gear that have retained catch of Pacific cod from the Federal and parallel waters fisheries in the Western and Central GOA during 2000-2007, and the number of these vessels that hold an LLP license. The majority of vessels using jig gear during 2000-2007 did not hold an LLP license and were only eligible to fish in parallel waters. Also, most vessels that used jig gear are less than 58 feet LOA. Based on this information, and the limitations imposed by the proposed gear restrictions, the Council decided to exempt vessels of any length using jig gear from the Pacific cod endorsement requirement.

The Council also requested additional information on LLP licenses that have recent jig landings. Most jig landings are on licenses with an MLOA of less than 58 feet (Table 3-33). However, some licenses with larger MLOAs have groundfish and directed Pacific cod catch using jig gear. Table 3-32 reports the number of vessels participating in the fisheries in each length (LOA) class, and Table 3-33 reports the number of licenses with jig history based on the MLOA on the license. Note that there may be some differences between the number of vessels and licenses in each length class reported in the two tables. The MLOA may be greater than the actual length of the vessel assigned to the license. As a result, some licenses with an MLOA of ≥58 ft may be assigned to vessels <58 ft LOA.

Some licenses may have sufficient jig landings of directed Pacific cod to qualify for a Pacific cod endorsement. The Council indicated during its deliberations that its intent was to allow these licenses to qualify for a Pacific cod endorsement based on jig landings. These licenses could participate in the

fishery using jig gear and would not be restricted to the gear limits that apply to licenses that do not have a Pacific cod endorsement. Several licenses that could qualify for a Western or Central GOA Pacific cod endorsement based on jig landings also have pot or hook-and-line landings, and could potentially qualify for a pot or hook-and-line Pacific cod endorsement based on catch using these gear types.

5068

The number of vessels using jig gear in the parallel and Federal fisheries in the GOA during a given year has been relatively small. However, if vessels less than 58 feet in length using jig gear were exempted from the LLP requirement, new vessels could potentially enter the jig fishery and fish in Federal waters without a license. This outcome may be desirable if the Council perceives a need to provide new entry level opportunities in the fisheries. The proposed exemption from the LLP requirement for vessels using jig gear, in tandem with the proposal to provide the jig sector an Pacific cod allocation of more than the sector's historic catch, will provide a substantial increase in opportunity for current as well as new participants in this sector. In addition, the potential for a stairstep increase in the jig allocation if the allocation is fully harvested would provide for growth in the jig sector. The data indicate that a large number of vessels that use jig gear and hold LLP licenses participate in the State waters Pacific cod fisheries, but not in the parallel and Federal waters fisheries. This suggests that LLP licenses may not be the most important factor limiting jig participation in the Federal fisheries. The timing of the Pacific cod A and B seasons may limit these vessels from participating in the parallel and Federal fisheries in the GOA. If Pacific cod sector allocations are implemented, jig vessels could potentially fish later in the A season, or possibly year-round in State and Federal waters, if the State and Federal jig allocations are jointly managed.

3.3.2.7 Exemption during Western GOA B season

In Component 2, the Council is considering an option to exempt vessels using fixed gear from the Pacific cod endorsement requirement during the Western GOA Pacific cod B season. Under a suboption, only vessels using pot gear would be exempted. Vessels would be required to hold a Western GOA fixed gear CV or CP license to participate in the fishery, but would not be required to have a Pacific cod endorsement on the license. The rationale for this exemption is that the Western GOA B season TAC has not been fully harvested since 2001, when Steller sea lion management measures were implemented and the TAC was seasonally apportioned between the A season (60%) and B season (40%). The intent of the exemption is to increase fishing opportunities during the B season and to increase the likelihood of fully harvesting the TAC. The proportion of the Western GOA B season inshore TAC and offshore TAC that was harvested during 2003 through 2008 is reported in Table 3-34. During most years, less than 50% of the B season TAC was harvested, although when A season overages are accounted for (e.g., more than 100% of the inshore TAC A season was harvested in 2003 through 2006), the amount of unharvested B season TAC is reduced.

Source: NMFS catch reports.

During recent years, the Western GOA B season has remained open to all fixed gear vessels until the end of the calendar year, with the exception of years when the hook-and-line season was closed because the hook-and-line sector reached its halibut PSC limit (see Table 3-35). Typically, the majority of B season effort in the Western GOA Pacific cod fishery occurs in September and October. Table 3-36 shows the

amount of inshore and offshore Pacific cod TAC remaining on Sept 1 during 2003 through 2008, including any remaining A season TAC that was rolled over to the B season TAC, and excluding any A season overages that were subtracted from the B season TAC. Most B season harvests have occurred prior to Nov 1, although during most years, some vessels have continued to fish until the end of the calendar year. Table 3-37 reports inshore and offshore harvests by fixed gear vessels during the B season in the Western GOA from 2003-2008. The table shows that the majority of Western GOA B season harvests have been by catcher vessels that used pot gear. Catches and participation are highest during September and decrease in later months. If the Council chooses the minimum threshold of 1 directed Pacific cod landing during 2000 through Dec 8, 2008, 110 Western GOA CV licenses and 24 Western GOA CP licenses would qualify for a Pacific cod endorsement. The proposed B season exemption would apply to the estimated 154 Western GOA CV licenses and 7 Western GOA CP licenses that do not qualify for a Pacific cod endorsement. These licenses would be eligible to fish in the Western GOA directed Pacific cod fishery under the proposed exemption, either using any fixed gear type or using pot gear only.

Increased effort during the B season by vessels that do not hold Pacific cod endorsed licenses is not perceived to have the potential to erode B season catch shares of participants that hold endorsed licenses, because the Western GOA B season TAC has not been fully utilized in recent years. However, if vessels using hook-and-line gear that do not have a Pacific cod endorsement are allowed to participate in the B season, an increase in hook-and-line participation would likely result in an increase in the amount of halibut PSC, and could potentially result in the halibut PSC limit being reached earlier in the B season. The hook-and-line halibut PSC limit applies to the entire GOA management area, and an increase in hook-and-line effort in the Western GOA during the B season could have a direct impact on hook-and-line participants in the entire GOA. There is a suboption to apply the Western GOA B season exemption to vessels using pot gear only. Under this suboption, there would be increased opportunity for vessel participation using pot gear. Pot vessels are not subject to halibut PSC limits, and an increase in Western

5071

GOA B season pot vessel effort is not likely to have a direct impact on participants in other GOA management areas.

3.3.2.8 Exemption for participants in informal halibut PSC cooperative

In Component 3, there is an option to exempt hook-and-line catcher processors that voluntarily stood down from the GOA Pacific cod fisheries as part of the informal halibut PSC cooperative in 2006, 2007, or 2008 from the catch or landings thresholds. The rationale for this exemption is that these licenses did not have directed Pacific cod landings during these years because they voluntarily stood down from the GOA Pacific cod fishery so that other hook-and-line vessels had the opportunity to participate in the fishery. Most of the freezer longliner fleet fishes for Pacific cod in the BSAI, then moves into the GOA after the BSAI Pacific cod seasons close. In 2005, the BSAI freezer longliner fleet did not fish in the GOA during the B season, because NMFS inseason management was concerned that there was not sufficient halibut PSC to support this fleet. As a result, in 2006, 2007, and 2008 the freezer longliners set up an informal 'PSC co-op' with NMFS inseason management during the B season. Under this arrangement, the third seasonal apportionment of halibut PSC was informally divided between catcher processors and catcher vessels. The freezer longliners then further divided the catcher processor PSC among vessels fishing the B season.

There are 28 hook-and-line catcher processor licenses that participated in the informal PSC cooperative during 2006, 2007, or 2008, and 26 of these licenses voluntarily stood down from fishing in the GOA during at least one of these years. The 26 licenses include 22 Central GOA endorsed vessels and 16 Western GOA endorsed licenses. The exemption would allow any of these 26 catcher processor licenses that do not meet the landings thresholds in the directed Pacific cod fishery to qualify for a Pacific cod endorsement. If endorsements specify a gear type and operation type, these licenses would receive a hook-and-line CP endorsement.

Table 3-38 Number of fixed gear CP licenses that would qualify for a Pacific cod endorsement under the exemption for participants in the informal halibut PSC cooperative during 2006 through 2008, because they do not meet the landings or catch thresholds during the qualifying periods.

Depending on the landings or catch (mt) threshold selected, there are 10 to 17 Central GOA endorsed licenses and up to 4 Western GOA endorsed licenses that would receive Pacific cod endorsements as a result of this exemption (see Table 3-38). The actual number of licenses that qualify under the exemption depends on the landings or catch threshold selected by the Council. In the absence of the exemption, these vessels would not qualify for a Pacific cod endorsement. If the GOA Pacific cod TACs are allocated to the sectors, these vessels would be eligible to fish off the hook-and-line CP allocation. The exemption would effectively increase the number of vessels that are eligible to fish off the hook-and-line CP allocation, and participation by these vessels would not directly impact other sectors. If the GOA Pacific cod TACs are not allocated to the sectors, the hook-and-line CPs that are exempted would compete with vessels in all sectors for access to the Western GOA and Central GOA TACs. As a result, in the absence of Pacific cod sector allocations, the exemption could have direct impacts on catch of vessels in other sectors.

3.3.2.9 Other exemptions

The Council considered, but rejected, an option to exempt vessels that are both under 60 ft and under a capacity limit (to be determined by the Council) from the Pacific cod endorsement requirement. Currently, vessels <26 ft LOA are exempt from the LLP requirement in the GOA. The Council has proposed expanding opportunities for small, entry-level vessels by exempting all vessels using jig gear from the LLP requirement in the GOA. The exemption for vessels using jig gear is currently a provision in the motion. In the BSAI, vessels <60 ft LOA using pot or hook-and-line gear are exempt from the BSAI Pacific cod endorsement requirement. The <60 ft LOA fixed gear fleet in the BSAI has historically been very small, and under Amendment 85, this sector received an allocation of 2% of the BSAI Pacific cod TAC. However, during recent years the number of vessels fishing in the <60 ft pot and hook-and-line sector has doubled, from 25 vessels in 2004 to 50 vessels in 2007.

The <60 ft LOA fixed gear fleet is relatively large in the GOA, and in recent years has harvested nearly 40% of the Western GOA and more than 40% of the Central GOA Pacific cod catch (Fig 3-1). The majority of fixed gear licenses with Western and Central GOA endorsements have MLOA designations of less than 60 ft. Exempting all vessels <60 ft MLOA from the Pacific cod endorsement requirement would mean that any of the estimated 456 to 488 CGOA and 74 to 84 WGOA fixed gear CV licenses with <60 ft MLOAs that do not have any qualified landings during 2000-2006 or 2000- Dec 8, 2008 could enter the GOA Pacific cod fisheries (Table 3-39). If sector allocations are implemented, these vessels would fish off the <60 ft LOA Pacific cod sector allocations to fixed gear vessels. Entry into the fisheries by these latent licenses would result in a substantial influx of effort into these sectors.

One concern that was expressed in public testimony is that smaller vessels may be less likely to meet the landings and catch thresholds. Table 3-39 and Table 3-40 report the number of licenses that meet the various landings and catch thresholds, summarized by the MLOA designation on each license. Overall, Central GOA licenses with MLOA designations of less than 50 feet were more likely to have at least one directed Pacific cod landing than licenses with larger MLOA designations. In the Western GOA, no licenses with MLOA designations of less than 50 ft meet the highest catch threshold (100 mt). In the Central GOA, 51 to 57 licenses with MLOA designations of less than 50 ft meet the 100 mt threshold.

If total catch (mt) rather than number of landings is used to determine which licenses meet the qualification thresholds for retaining Central and Western GOA endorsements, or for receiving a Pacific cod endorsement, the Council may wish to consider setting lower catch thresholds for licenses with small MLOAs. Such an approach may be desirable if these licenses have actively participated in the fisheries during the qualifying period, but were less likely to meet the higher catch thresholds. This approach may also be appropriate if opportunities in the parallel and State waters fisheries are perceived to be inadequate. Participants wishing to enter fisheries in Federal waters would need to purchase an LLP

license, and the availability of licenses allowing for that entry is critical. In developing this action, the Council will need to balance the interests of those wishing to limit entry to the fixed gear groundfish fisheries against the interests of creating adequate opportunities for potential future entrants.

3.3.2.10 Hardship provision

In past actions, the Council has adopted hardship provisions to make exceptions from participation requirements when unavoidable circumstances have precluded vessels from participating in a fishery. The proposed action would require licenses to have directed Pacific cod landings during the years following implementation of the LLP in order to qualify for a Pacific cod endorsement. Fishing under the LLP began in 2000. In some cases, the vessel that made the qualifying catch that gave rise to a license, and was originally assigned to the license, sank prior to or shortly after implementation of the LLP. The Council recognized that under these circumstances, a license may not have qualifying catch during the required time period. As a result, there is a hardship provision in Component 4 that would allow a license to qualify for a Pacific cod endorsement if the license had 5 or more Pacific cod landings in 1999, but was assigned to a vessel that sank in 1999 or 2000. These licenses will be credited with catch history during 1999 in order to qualify for a Pacific cod endorsement.

According to the U.S. Coast Guard vessel losses database, there were 50 commercial fishing vessels that sank during 1999 or 2000 off Alaska. Additional vessels that hold fixed gear licenses may have sunk in other regions, but are not accounted for here. Out of the 50 vessels that sank in 1999 or 2000, at least 5 vessels were original qualifying vessels on a Western or Central GOA fixed gear license. At least 3 of the 5 vessels had at least 5 fixed gear landings in the directed Pacific cod fishery in 1999 in the Central GOA. The licenses that were assigned to these vessels were not later reassigned to another vessel, and do not qualify based on catch made after 1999.

In sum, the proposed hardship provision would allow 3 licenses that have not participated in the GOA Pacific cod fisheries since 1999 to qualify for a Pacific cod endorsement. All three of the licenses would qualify in the Central GOA, and have at least 5 Pacific cod landings in 1999. If the vessels assigned to these licenses did not sink, these vessels might have participated in the Pacific cod fisheries in 2000, and qualified for a Pacific cod endorsement. Although these licenses have not participated in the fishery for a long period of time, the Council is considering options to establish a qualifying period that extends back to either 2000 or 2002. If the Council chooses a qualifying period that starts in 2000, there will likely be some licenses that qualify based on landings during 2000, and do not have landings in more recent years, similar to the licenses that would qualify under the hardship provision.

3.3.2.11 Component 5: Stacked licenses

The Council addressed the issue of 'stacked' licenses (i.e., more than one license assigned to a single vessel) during the trawl recency action. Licenses are stacked for several reasons, most often to increase the number of areas that a vessel can fish by adding area endorsements. A vessel may also hold multiple

LLPs to increase the number of gear or operation type endorsements it holds or to gain access to a fishery that requires a species and gear-specific endorsement, such as the BSAI fixed gear Pacific cod fishery. Stacking licenses is necessary because endorsements are not severable under the current LLP. If a vessel wishes to expand its operations into a new area or fishery and does not have the necessary endorsements on its current license, it needs to obtain another license with the appropriate area endorsement.

The Council considered several approaches to crediting catch to stacked licenses for the trawl recency action. Based on staff analysis and its own deliberations, the Council adopted a provision in Component 5 that credits catch to both licenses if they were stacked on a single vessel at the time the landing was made. The rationale for this approach is that both licenses were being used at the time of landing. Currently, groundfish catch is not assigned to a specific license. When vessels report catch on Fish Tickets or Weekly Production Reports, they are not required to report the LLP license that was assigned to the vessel at the time of landing. This data gap is problematic, because if a vessel holds multiple LLPs with duplicate area endorsements, and the vessel makes a landing in that area, there are no clear rules regarding which license is credited with that catch. Apportioning history among 2 or more stacked licenses would require the Council to develop detailed rules describing how catch should be apportioned, which could complicate and possibly delay implementation of the action. The landings threshold selected for the trawl recency action was low (2 landings), and it was not clear that apportioning landings among stacked licenses would have a sufficient impact on the number of qualifying licenses to justify complicating the action by creating specific rules for stacked licenses.

The proposed action differs in several respects from the trawl recency action. The current set of options under consideration include relatively minimal landings thresholds (1, 3, or 5 landings), but there are also tonnage thresholds (5, 10, 25, or 100 mt) that could potentially be selected. If the Council chooses a minimal landings threshold, double counting catch history is unlikely to result in many stacked licenses qualifying that would not qualify if catch were apportioned among stacked licenses. However, if the Council chooses more substantial catch thresholds, some stacked licenses would likely benefit from double counting of catch. Also, the Council is considering options to gear-specific Pacific cod endorsements to licenses. If vessels with stacked licenses are eligible to qualify for duplicate fixed gear Pacific cod endorsements on stacked licenses, they could potentially lease or sell the duplicate license and the fleet's capacity would increase.

In Amendment 67, a vessel with stacked licenses could only qualify for a Pacific cod endorsement on a single license. This provision was included to avoid increasing the capacity for additional entry into the fishery. In the absence of a provision that limits vessels with stacked licenses from qualifying for duplicate Pacific cod endorsements, vessels with duplicate endorsements could potentially sell those licenses to other vessels, resulting in an overall increase in effort in the Western and Central GOA Pacific cod fixed gear fisheries.

There are currently 18 stacked Western GOA catcher vessel licenses (assigned to 9 vessels, each with 2 licenses) and 98 stacked Central GOA catcher vessel licenses (assigned to 47 vessels; 43 vessels have 2 licenses, and 4 vessels have 3 licenses; Table 3-41). These totals only include fixed gear licenses that are currently stacked with other fixed gear licenses that have duplicate Western and/or Central GOA area endorsements. There is also one Central GOA catcher processor license that is currently stacked with a Central GOA catcher vessel license. There are no fixed gear catcher processor licenses with Western or Central GOA endorsements currently stacked with other catcher processor licenses, and agency records indicate that no GOA fixed gear CP licenses have been stacked in the past. Of the currently stacked licenses, 8 Western GOA licenses and 47 Central GOA licenses have at least one qualified fixed gear landing during 2000-2006. These currently stacked licenses, in addition to licenses that were stacked in the past, are potentially the universe of licenses at issue if the Council chooses to develop rules to apportion landings among stacked licenses.

Table 3-41 Number of currently stacked fixed gear catcher vessel licenses with Western and/or Central GOA area endorsements.

Area endorsement	Number of stacked licenses	Number of stacked licenses with at least one qualified fixed gear landing during 2000-2006
Central GOA	98	47[1]
Western GOA	18	8[2]

Source: ADFG Fish Tickets and RAM groundfish LLP license file, December 2008
1 Licenses are stacked on 23 vessels. 22 vessels have 2 licenses, and 1 vessel has 3 licenses
2 Licenses are stacked on 4 vessels, each with 2 licenses

In past actions (e.g., Amendment 80), the Council has apportioned catch history among stacked licenses for the purpose of making allocations. Allocations were calculated by splitting catch evenly among all licenses held by a vessel at the time of landing. There are several complications that could arise if the Council chooses to apportion catch history among licenses for the proposed action. For example, if a vessel has two stacked licenses, and catch is split evenly between the two licenses, it is possible that neither license would meet the qualification threshold selected by the Council. The Council could include a provision that would give the license owner(s) the opportunity to choose which license would be credited with landings so that one of the stacked licenses could qualify. In the absence of an agreement among license owners, catch history could be split evenly. If a catcher processor license is stacked with a catcher vessel license, and there are different qualification criteria for these operation types, the license owners could potentially choose to split history between the two licenses so that both licenses qualified.

Table 3-42 Number of qualifying CV licenses when catch is fully credited to all licenses, and when catch is divided among stacked licenses.

In sum, the Council's current motion for the proposed action credits catch to both licenses if they were stacked on a single vessel at the time the landing was made, and all of the license tables in this document

5077

fully credit all catch to stacked CV licenses. Table 3-42 shows the results of dividing catch history evenly among stacked CV licenses. These results may be compared to those in Table 3-42 to see the number of licenses that do not qualify when catch history is divided among stacked licenses. Few Western GOA fixed gear licenses are stacked, and Table 3-42 shows that in most cases, the same number of licenses qualify when stacked history is split among licenses. In contrast, a large number of active Central GOA licenses are stacked, and splitting catch history reduces the total number of licenses that qualify under each of the options. For example, at the 1 landing threshold, 269 Central GOA licenses qualify during 2000-2006 when catch is split among stacked licenses, compared with 268 licenses when history is split among stacked licenses. At the 100 mt threshold for directed Pacific cod, 151 Central GOA licenses qualify when catch history is fully credited to all stacked licenses, and only 139 licenses qualify when history is divided among stacked licenses. Dividing catch history makes more of a difference when the qualifying period extends to June 4, 2008. For example, 297 Central GOA licenses qualify at the 1 landing threshold when landings are fully credited to stacked licenses. Only 289 Central GOA licenses qualify when catch history is divided among stacked licenses.

If the Council wishes to treat stacked licenses in a different way, there are a number of questions that would need to be addressed, including:

(1) What is the definition of a stacked license? Currently, staff assumes that licenses are stacked, for the purpose of the proposed action, if 2 or more licenses assigned to a single vessel at any point in time all have: (a) fixed gear designations, and (b) at least one duplicate area endorsement (Western GOA or Central GOA). Stacked licenses may have different operation type designations, i.e. one license could have a catcher vessel designation and the other license a catcher processor designation. Stacked licenses may have additional area endorsements (AI, BS, SE), a trawl designation, and BSAI Pacific cod endorsements that do not duplicate each other.

(2) What are the rules for apportioning catch among stacked licenses? Catch could simply be split evenly among stacked licenses (as the default rule), or license owners could be given the option to agree upon another method for apportioning catch. These rules would not only apply to licenses that are stacked at the time this action is implemented, they would also apply retroactively (to 2000 or 2002, depending upon the qualification period selected) to any fixed gear licenses that were stacked at any point in time. If license owners are given the opportunity to choose how catch will be apportioned, implementation of the action would likely be delayed. Even if a default rule is used, and catch is split evenly among stacked licenses, apportioning catch would complicate implementation of the action.

(3) How would the Council address ownership issues? Stacked licenses may be held by different persons, and the vessel assigned to those licenses may be owned by another person. Stacked licenses may not be connected in any way except through the vessel assigned to those licenses. License owners may enter into temporary partnerships to combine the endorsements and designations on their licenses and maximize their opportunities to participate in the fisheries. If the Council simply splits catch history evenly among stacked licenses for the purpose of the proposed action, it could avoid the complications that could arise if multiple license owners were allowed to choose which license is credited with catch history.

3.3.2.12 Component 6: Capacity endorsement

The Council asked that staff explore ways in which vessel capacity limits could be used in addition to vessel length to restrict participation in certain sectors. The problem identified is that new, high capacity 58 ft LOA vessels are being built and are entering the GOA Pacific cod fisheries, and existing 58 ft LOA vessels are being rebuilt with expanded capacity. Most of these high capacity 58 ft LOA vessels are relatively recent entrants to the GOA Pacific cod fishery. The GOA State waters Pacific cod fisheries

limit the proportion of the GHL that may be harvested by vessels >58 ft LOA (see Table 3-5). This creates an incentive for 58 ft LOA vessels to maximize their hold capacity. In addition, vessels <60 ft LOA are not required to participate in the Federal observer program. For these reasons, the incentive exists for additional vessels in this class to enter the GOA Pacific cod fisheries. If the catcher vessel allocations are split at 60 feet, this may leave smaller, lower capacity vessels vulnerable to an influx of effort by high capacity, <60 ft LOA vessels.

Table 3-43 shows the number and catch history of 58 to 59 ft LOA vessels ≥100 gross tons and <100 gross tons in the Western and Central GOA Pacific cod fisheries during 2001-2008. Prior to 2008, there were only 1 or 2 pot or hook-and-line vessels that exceed 100 gross tons participating in the Western and Central GOA Pacific cod fisheries, and catch data for these vessels cannot be reported due to confidentiality restrictions. In 2008, there was an increase in effort by 58 to 59 ft LOA vessels in these sectors, and their catch is reported in the table.

Table 3-43 Catch by 58 to 59 ft LOA vessels less than 100 gross tons and greater than 100 gross tons in the Western and Central GOA.

Source: ADFG Fish Tickets (2003-2007) and NMFS Catch Accounting (2008).

There are several sources of data on vessel measurements. Vessels that obtain Federal fisheries permits (FFPs) are required to submit accurate measurements of the vessel's length overall (LOA)[11] in feet, registered length in feet, and gross tonnage. However, these measurements are self-reported, and no documentation is required to verify the measurements. Vessels that obtain CFEC permits are also required to submit length and tonnage measurements, but these measurements are also self-reported. The U.S. Coast Guard (USCG) maintains a vessel database with length, breadth, depth, and gross and net tonnage measurements. When vessels initially register with the USCG, they are required to submit documentation to verify these measurements.

These existing data sources are incomplete and, in many cases, inconsistent. For example, there were 1,473 unique vessels that participated in the GOA Pacific cod fisheries during 1995 through 2007

[11] The LOA of a vessel is defined as the centerline longitudinal distance, rounded to the nearest foot, measured between: (a) the outside foremost part of the vessel visible above the waterline, including bulwarks, but excluding bowsprits and similar fittings or attachments, and (b) the outside aftermost part of the vessel visible above the waterline including bulwarks, but excluding rudders, outboard motor brackets, and similar fittings or attachments (see http://alaskafisheries.noaa.gov/ram/FFPAPP.pdf).

(excluding vessels that participated exclusively in the State waters fisheries). Of these 1,473 vessels, nearly half of the CFEC, NMFS, and USCG gross tonnage measurements differ. These inconsistencies are a clear indication that a consistent method for measuring gross tonnage needs to be identified, and that existing data sources need to be updated and verified if capacity is going to be used to limit entry to sectors.

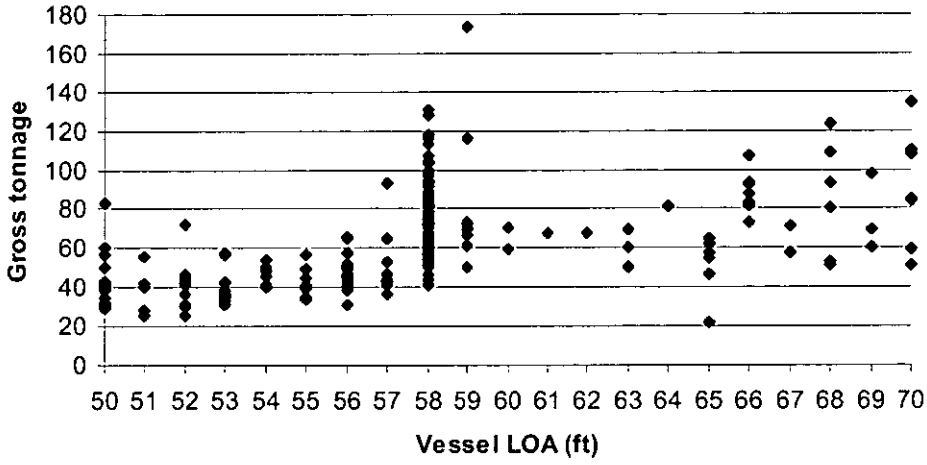

Figure 3-2 Gross tonnage of catcher vessels 50-70 ft LOA that participated in the GOA Pacific cod fisheries during 1995-2007.
Source: Vessel length overall is from NMFS; Gross tonnage is from USCG vessel database.

Figure 3-2 shows a plot of vessel length overall versus gross tonnage (using LOA from the NMFS database and gross tonnage from the USCG database), and includes all vessels 50 to 70 ft LOA that participated in the GOA Pacific cod fisheries during 1995 through 2007. In general, there is a linear relationship between vessel length and gross tonnage. There is a substantial spike in gross tonnage for vessels 58 ft and 59 ft LOA. The 58 ft LOA vessels range up to 129 tons.

Under Component 6, a width restriction would be added to each CV and CP fixed gear LLP license that is eligible to access Pacific cod under this action. The width restriction would be 1 ft of width for each 3 ft of length, and is based on the LOA of the vessel assigned to the license on December 8, 2008. The licenses that are assigned to vessels on December 8, 2008 that exceed the width restriction will be grandfathered at their present LOA. For vessels under construction on December 8, 2008, the width restriction for the license shall be equal to the vessel width upon completion. Vessels would be required to report width measurements to RAM. There is also an option under Component 6 to add a simple gross tonnage maximum to licenses, rather than a width restriction. Simple gross tonnage for vessels with ship-shaped and cylindrical hulls is calculated as the product of 0.67 times the length overall, width, and depth of the vessel (46 CFR Subpart E).

Vessels would be required to report these measurement(s) to RAM, and RAM would add the width or simple gross tonnage endorsement to each license. A license could not be assigned to a vessel that exceeds the width or simple gross tonnage limit, in addition to the MLOA, on the license. This would prevent new, high capacity 58 ft LOA vessels from entering the GOA groundfish fisheries, and would also prevent existing vessels from being rebuilt beyond a specified capacity, unless the vessel obtains an LLP with a sufficiently large width or simple gross tonnage endorsement.

One problem with basing the width or simple gross tonnage restriction on the LOA of the vessel assigned to the license is that not all licenses are assigned to a vessel. RAM does not require a vessel assignment to each license. One possible solution is to base the width restriction on the MLOA on the license, because every license has an MLOA endorsement, even if no vessel is currently assigned to the license. Another potential solution is to base the width restriction on the measurements of the current vessel for licenses assigned to a vessel as of December 8, 2008, and on the LOA of the original qualifying vessel for licenses not assigned to a vessel as of this date. The simple gross tonnage calculation would require both width and depth measurements, in addition to LOA. **The Council may wish to specify how a simple gross tonnage endorsement would be assigned to licenses that were not assigned to a vessel as of December 8, 2008.**

The rationale for basing the width restriction on the LOA rather than on the MLOA is that it is a more conservative method of calculating the width restriction. The MLOA designation is 1.2 times the length of the original qualifying vessel for vessels <60 ft LOA, up to 60 ft; and 1.2 times the length of the original vessel for vessels 60 to 125 ft LOA, up to 125 ft. For vessels 125 feet or greater in length, the MLOA designation is equal to the vessel length. If the width restriction is calculated based on the MLOA rather than the LOA of the vessel assigned to the licenses, the width endorsement on the license would be larger for vessels <125 ft LOA. This may be desirable if the Council perceives a need to provide some flexibility in the width of the vessel assigned to a license. The combination of the MLOA designation and width restriction on each license may make it more difficult for licenses to be sold or transferred to another vessel. Providing some cushion in the width restriction, similar to that provided the MLOA restriction, may make it more feasible for a license to be sold or transferred.

NMFS is preparing a discussion paper that will be provided to the Council at the April 2009 meeting and that addresses two aspects of the capacity endorsement issue:

(1) Providing a regulatory definition of width and depth
(2) Discussing enforcement issues

The intent of the paper is to discuss aspects of the practicability of adding a capacity endorsement to fixed gear groundfish licenses. Specifically, NMFS enforcement has several concerns regarding enforceability of the capacity limit and potential safety considerations.

3.3.2.13 Component 7: CQE exemption

There are 21 communities eligible under the Community Quota Entity (CQE) Program located in the Western and Central GOA management areas, including West Yakutat.[12] Under the LLP, the Central GOA endorsement area also authorizes vessels to fish in the West Yakutat management area, and communities located in this area are also included in this discussion. To be eligible under the program, a community must have fewer than 1,500 residents, lack direct road access, have direct access to saltwater, and have historic participation in the halibut and sablefish fisheries. These communities were identified under Amendment 66 to the GOA FMP and are eligible to purchase catcher vessel halibut and sablefish Quota Share (QS) on the open market. Table 3-44 lists the CQE communities located in Southwest and Southcentral Alaska, and shows the 2000 U.S. Census population in each community and the number of Western and Central GOA fixed gear licenses held by residents of these communities. Note that only 11 of the 21 eligible communities in Table 3-44 have formed the non-profit entity (i.e., CQE) necessary to participate in the program and purchase quota share.

[12]An additional 21 communities located in Southeast Alaska (Area 2C) are eligible under the CQE Program.

Table 3-44 Community Quota Entity (CQE) eligible communities in Southwest and Southcentral Alaska, and the number of fixed gear LLP licenses held by community residents.

Source: Population from 2000 U.S. Census. Residency information is based on the license holder's address information reported in the RAM groundfish LLP license file in December 2008, and does not necessarily indicate that an individual license holder meets the definition of an eligible CQE resident.
*Eligible communities that have formed CQEs.

Currently, residents in 14 of the 21 CQE communities own a total of 54 licenses with Western GOA endorsements and 74 licenses with Central GOA endorsements. It is important to note that residency information is based on the license holder's address information reported in the RAM groundfish LLP license file in December 2008, and does not necessarily indicate that an individual license holder meets the definition of an eligible CQE resident. Table 3-45 shows the number of licenses in each community that had at least one fixed gear landing of directed Pacific cod during 2000-2006 or 2000 through December 8, 2008. Residents of King Cove and Sand Point hold most (52) of the Western GOA licenses, and the majority (>65%) of these licenses had at least one landing during both time periods. Residents of two other communities in Southwest Alaska, Perryville and Chignik Lagoon, own the other 2 Western GOA licenses. One license (owned by the Chignik Lagoon resident) was active in the Western GOA fixed gear fisheries.

The majority of Central GOA licenses held by residents of CQE communities are owned by residents of Sand Point (16 licenses), Seldovia (10 licenses), Ouzinkie (10 licenses), Old Harbor (9 licenses), and Port Lions (8 licenses). However, only 1 of 16 Central GOA licenses held by Sand Point residents had at least one directed Pacific cod landing during 2000-2006 or 2000-2008. Overall, only 3 of 30 Central GOA licenses held by residents of Southwest Alaska CQE communities had at least one directed Pacific landing in the Central GOA during 2000-2006 or 2000-2008, whereas either 16 or 17 of 43 Central GOA licenses held by residents of Southcentral Alaska CQE communities had at least one directed Pacific cod landing during the same time periods, respectively. In sum, residents of 3 CQE communities currently hold Western GOA licenses that have recent directed Pacific cod landings, and residents of 8 CQE communities hold Central GOA licenses with recent directed Pacific cod landings.

Table 3-45 Number of licenses held by residents of eligible CQE communities that have at least 1 landing of directed Pacific cod.

Source: ADFG Fish Tickets (2000-2007), NMFS Catch Accounting (2008) and RAM groundfish license file, December 2008.

The Council has the option, in Component 7, to exempt licenses held by residents of CQE communities from being required to meet the selected catch or landings thresholds in order to qualify for a Pacific cod endorsement. The intent of this exemption is to help minimize potential adverse economic impacts of this action on these small, remote, fishing communities, and to ensure that community residents who currently hold licenses continue to have access to the Pacific cod fishery. Component 7 states that licenses **currently** held by CQE residents are exempt from the landings thresholds. **The Council should provide a specific date when a license must be held by a CQE resident in order to qualify for the exemption.** If Component 7 is selected, licenses held by residents of CQE communities that do not qualify for a Pacific cod endorsement under the general criteria would instead receive a hook-and-line or pot gear endorsement through either (a) a one-time designation at the time the endorsement is issued, or (b) a designation at the time the first Pacific cod landing is made based on the gear type used. **If the license receives an endorsement through a one-time designation, the Council may wish to clarify whether the license holder would have the option to choose either a pot or hook-and-line endorsement. The alternative is to assign a gear endorsement to licenses that qualify under the exemption.**

There are currently 54 Western GOA and 74 Central GOA licenses held by residents of GOA CQE communities. Most of these licenses have an MLOA designation of <60 ft (53 Western GOA licenses and 69 Central GOA licenses). There is an option to apply the proposed exemption only to licenses with an MLOA designation of <60 ft. Depending on the catch or landings threshold selected by the Council, some licenses may qualify for a Pacific cod endorsement without the exemption. If the 1 landing threshold is selected, as many as 36 Western GOA licenses held by CQE residents would qualify for a Pacific cod endorsement based on directed cod landings, and up to 18 Western GOA licenses would qualify under the CQE exemption (Table 3-46). In the Central GOA, as many as 20 licenses held by CQE residents meet the 1 landing threshold (including 3 of the 5 CGOA ≥60 ft MLOA licenses), and up to 54 licenses would qualify for a Pacific cod endorsement under the CQE exemption. If a higher landings threshold or if one of the catch thresholds is selected, the CQE exemption would allow additional licenses to receive a Pacific cod endorsement. Table 3-46 shows the number of Western GOA and Central GOA licenses held by CQE residents that qualify under the various thresholds. The majority of the licenses that do not have GOA directed Pacific cod landings have landings in other fisheries during 2000 through 2006. In Appendix A, Table A-2 reports the participation and average annual revenues of licenses held by CQE community residents in the GOA Pacific cod fishery and in other Alaska fisheries.

Table 3-46 Catcher vessel licenses currently held by residents of CQE communities that meet the landings and catch (mt) thresholds identified in Component 4.

Administrative issues

Staff from NMFS RAM division expressed a number of concerns regarding administration of the CQE exemption. Component 7 currently states that licenses that receive a Pacific cod endorsement as a result of the CQE exemption would be subject to several restrictions that do not apply to licenses that qualify for a Pacific cod endorsement by meeting the selected catch threshold:

(1) A license that receives a Pacific cod endorsement as a result of the CQE exemption cannot be leased.

(2) A license that receives a Pacific cod endorsement as a result of the CQE exemption can only be transferred to an individual who has lived continuously in the permit holder's CQE community for 24 consecutive months prior to the transfer and who intends to remain a resident of the community. Residency of license holders would be affirmed annually.

(3) If a license holder with a restricted transfer LLP is no longer a resident of the CQE community or dies without a designated qualified LLP community beneficiary, the CQE will designate a qualified individual in the CQE community to hold the restricted transfer LLP.

Prohibiting licenses from being leased is not practicable, because there is no regulatory definition of leasing for LLP licenses. A license must be carried on board the vessel to which the license is assigned while the vessel is participating in fisheries subject to the LLP requirement, but there is no owner on board requirement. If the vessel owner or skipper is not the owner of the LLP license assigned to the vessel, there is not a clear definition of what constitutes a leasing agreement.

The residency restrictions would be complicated to administer in several respects. NMFS could require license holders to submit an affidavit affirming their residency on an annual basis, but there are no immediate consequences to not submitting the affidavit. For example, if a license holder moves out of a CQE community and does not submit the annual affidavit affirming their residency, RAM would first have to notify the individual that the failure to submit the affidavit will result in RAM revoking the Pacific cod endorsement. Once the license holder is notified, the holder would have 60 days to file an appeal. If the LLP holder does not appeal, RAM would revoke the Pacific cod endorsement and re-issue the license without it. If the LLP holder appeals, then the Office of Administrative Appeals (OAA) would review the case and the LLP holder would continue to hold the endorsement until OAA made a final decision. OAA has no time frame for resolving appeals. The license would have interim status during the appeals process, and the license holder would be eligible to participate in the fisheries using the license and Pacific cod endorsement.

It should be noted that the requirement under Component 7 that the license can only be transferred to an individual who has lived continuously in the permit holder's CQE community for 24 consecutive months prior to the transfer may ensure that benefits flow to residents of small communities. This requirement may be difficult to meet in some small communities, as many of those communities do not have year-round economies, effectively requiring residents to live outside of the community for a period or season, even if their principal home is in the community. In addition, as communities attempt to provide fishing opportunities as an incentive for residents to return to the community, this requirement would preclude a person from taking advantage of this opportunity until the individual had lived in the community for 24 continuous months.

Note also that this requirement differs from the existing CQE Program requirement that a 'resident' is defined as 1) a U.S. citizen and 2) someone who has maintained a domicile in the community for 12 consecutive months preceding the time when the assertion of residency is made (and who is not claiming residency in any other community). The common legal definition of domicile is the residence where a person has a permanent home to which they intend to return whenever they are absent; every person has only a single domicile at any time. Thus, the criteria for residency in the existing CQE Program do not appear to require that a person must have 'lived continuously' in the community for 12 months; rather, residency is based on having the principal home in the community, and the intent to return to that home[13] Should Component 7 be selected, the Council may wish to consider revising the requirement that a license be transferred to a person who has lived continuously in the community so that it mirrors the residency requirement in the existing CQE Program.

Possible alternative approaches to Component 7

One approach that would minimize the administrative burden on NMFS, while still providing a direct benefit to current residents of CQE communities, is to modify Component 7 so that licenses held by residents of CQE communities as of a specific date are exempt from the landings thresholds, based on a one-time application for the exemption. License holders would not be required to remain residents of the CQE community in order to retain the Pacific cod endorsement. Under this approach, NMFS would not be required to track the residency of license holders who receive the exemption. Requiring NMFS to track the residency of license holders in perpetuity significantly complicates administration of the exemption.

[13]While this definition still inhibits a young person from returning home and immediately fishing CQE quota until they have established a principal residence for 12 months, it does not appear to require an individual to have lived continuously at that residence during that time period.

This approach may provide a direct benefit to the *individuals* who receive an endorsement. However, in the long term it would provide less benefit to the community if license holders leave the community. (This possibility is what motivated the overall approach to the CQE Program, in that the community (CQE) holds the fishing privileges (i.e., halibut and sablefish QS) such that the benefits of the QS remain in the community regardless of whether individual residents relocate.) In order to preclude license holders who receive an endorsement as a result of the exemption from opportunistically selling the license to another individual, these licenses could be designated non-transferable. If the license is sold to another owner, the Pacific cod endorsement would be removed. This restriction would give the original license holder the option to access the directed Pacific cod fisheries in the future, but would not allow the holder to sell that option to another person. Eventually, however, if designated non-transferable, all of these licenses would be extinguished.

License holders would have to affirm their residency at the time of application to RAM for a Pacific cod endorsement. An eligible community resident could be defined, for purposes of this exemption, as any individual who (1) is a citizen of the United States, (2) has maintained a domicile in one of the 21 CQE eligible communities located in Southwest or Southcentral Alaska for a specified period of time immediately preceding the time when the assertion of residence is made, and who is not claiming residency in another community, state, territory, or country. This is similar to the definition of residency used in the IFQ program. For the purposes of that program, a person needs to have maintained a domicile in the community for 12 consecutive months to qualify as a resident.

A second alternative approach that has been proposed in AP and Council deliberations is to give each CQE a specific number of fixed gear licenses. For example, CQE communities in the Central GOA management area would receive a limited number of licenses with a Central GOA endorsement, a fixed gear designation, an MLOA of 60 ft, and a pot and/or hook-and-line Pacific cod endorsement. The licenses would be held by the CQEs and used by community residents, similar to the existing CQE Program structure. The license could be made non-transferable to prevent the CQE from selling the license.

The regulations that allow CQEs to hold and lease quota share are already in place under GOA Amendment 66, and could be modified to fit this approach. Currently, the CQE takes on the burden of finding a community resident who is willing to lease the shares under contract, and both the CQE and the resident must certify that the lessee is a resident on the transfer application to NMFS (i.e., lease of IFQ from the CQE to the resident). Providing inaccurate information is considered fraud under Federal law. While there is no regulatory definition of leasing for LLP licenses, and no requirement for a transfer application, if the Council opts to give each CQE a specific number of fixed gear licenses, the Council could establish that a condition of the CQE receiving the license is attesting that the individuals that will use the license to fish are residents of the community the CQE represents. The additional administrative burden of this approach on NMFS is minimal, because NMFS only requires the CQE attest to individuals' residency, but would not need to require individuals to submit proof of residency in order to use the CQE license. Regardless of the overall approach, the Council may want to consider mirroring any residency requirements to the existing CQE Program.

There are a number of benefits and drawbacks to giving CQE communities fixed gear licenses. The main benefit is that it would provide opportunities for new entrants, who reside in the community, to participate in the directed Pacific cod fishery. Only 14 of the 21 Southcentral and Southwest Alaska CQE communities currently have residents who hold fixed gear licenses, and not all of these communities have residents who will qualify for a Pacific cod endorsement. Providing licenses to each CQE would give residents in each community the opportunity to access the Pacific cod fishery. One possible drawback is that many CQE communities currently have active participants in the GOA Pacific cod fisheries who will

likely qualify for Pacific cod endorsements and do not need the exemption. Giving additional licenses to the CQE to lease to community residents could increase competition for access to the local fishery if participation increases. Also, there are currently no regulations that prevent CQEs from purchasing groundfish licenses. Finally, the Council may wish to consider whether each CQE should receive the same number of licenses, or if the number of licenses should be proportional to the population in the community.

3.3.2.14 Restrictions on movement between fixed and trawl gear sectors

The Council has considered several options to preclude licenses from using more than one gear type in the GOA groundfish fisheries. The intent of these options is to protect vessels that use a particular gear and operation type from an influx of vessels that have historically used another gear or operation type. Specific endorsements or designations added to fixed gear licenses could prohibit cross over among sectors.

The Council considered, but rejected, options that would have limited licenses to using either fixed or trawl gear in the GOA groundfish fisheries. The options would have precluded catcher vessel licenses with both fixed and trawl gear designations from participating in both sectors. These licenses would be required to make either an annual election or a one-time election to participate in the trawl or fixed gear fisheries. Currently, there are 114 Central GOA licenses and 78 Western GOA licenses with dual gear designations (Table 3-47). However, once the trawl recency action has been implemented, only 63 Central GOA and 54 Western GOA licenses will have dual gear designations. Of these licenses, 30 Central GOA and 40 Western GOA licenses have at least one directed Pacific cod landing with fixed gear during 2000-2008 and could qualify for a Pacific cod endorsement under the proposed action. However, some of these licenses will lose their Central or Western GOA trawl area endorsements under the trawl recency action.

Table 3-47 Fishing activity by catcher vessel licenses that have both fixed and trawl gear designations.

	Number of licenses with fixed and trawl gear designations (number qualifying under trawl recency)	Number of licenses with at least 1 directed Pcod landing during 2000-2008 (number from 2000-2006)	Number of licenses with at least 1 directed Pcod landing during 2000-2008 that also qualify under trawl recency (number qualifying from 2000-2006)		Number of licenses that used fixed and trawl gear during the same year in the same management area
			<60 ft MLOA	≥60 ft MLOA	
Central Gulf	114 (63)	30 (25)	5 (5)	12 (9)	4-6 licenses per year during 2000-2008
Western Gulf	78 (54)	40 (38)	32 (32)	3 (2)	10-15 licenses per year during 2000-2008

Source: ADFG Fish Tickets (2000-2007), NMFS Catch Accounting (2008) and RAM groundfish license file, December 2008.

Table 3-47 shows that 17 Central GOA licenses with dual gear designations both have at least one directed Pacific cod landing during 2000 through December 8, 2008 and qualify under the trawl recency action, and 35 Western GOA licenses meet both these criteria. The majority of the Central GOA licenses that meet these criteria have MLOA designations of ≥60 ft (12 of 17 licenses); the majority of Western GOA licenses with dual gear designations and catch history have MLOA designations of <60 ft (32 of 35 licenses). Most of these licenses used both pot and trawl gear, although several used hook-and-line and

trawl gear. Within a given year, there were typically 4 to 6 Central GOA licenses and 10 to 15 Western GOA licenses that used both fixed and trawl gear to harvest Pacific cod during the same year.

The catch data indicate that a number of these vessels use both gear types during a given fishing year on a regular basis, and that this harvest strategy is part of the annual fishing operations of these vessels. This is a particularly common practice in the Western GOA, where there are a number of vessels that regularly fish for Pacific cod with both trawl and pot gear during the same year. A typical pattern is for vessels to fish with pot gear when the fixed gear season opens on January 1 and to switch to trawl gear on January 20 when the trawl season opens. This strategy also allows these vessels to have a longer B season. The Pacific cod B season often closes to trawl gear in early October when the final trawl halibut PSC apportionment has been used. Vessels then switch back to pot gear and continue fishing late into the year. In recent years, the GOA Pacific cod B seasons have remained open to vessels using fixed gear until December 31.

3.4 Expected effects of the alternatives

3.4.1 Effects on harvesters

Under the no action alternative, there would be no reduction in the number of fixed gear licenses eligible to participate in the directed Pacific cod fisheries in the Western and Central GOA. If this alternative is selected, any of the currently existing fixed gear licenses could enter the Western and Central GOA Pacific cod fisheries in the future and dilute revenues, increase costs, or both, for licenses that have participated in the fisheries during recent years. Increased participation may result in negative economic impacts to current participants in the fisheries. If Pacific cod endorsements are not added to fixed gear licenses, licenses with no recent catch history in the GOA Pacific cod fisheries could enter the fisheries and erode the catch of recent participants. Finally, if gear-specific Pacific cod endorsements are not added to licenses, and Pacific cod sector allocations are implemented, participants in each of the fixed gear sectors will be vulnerable to an influx of effort into those sectors. If effort increases substantially in a particular sector, the erosion of catch resulting from latent licenses re-entering the fisheries will be exacerbated. The number of licenses that enter the Pacific cod fisheries in the absence of this action is unknown, and the specific effect of that entry depends on future market conditions, the size of Pacific cod TACs, opportunities to participate in other fisheries, the future regulatory environment, and operating costs in the fisheries. Consequently, this analysis does not provide a quantitative estimate of the potential economic impacts of the no action alternative.

If the Council chooses the minimum landings threshold of 1 directed Pacific cod landing, this action would result in any recent (as defined by the qualifying period selected) participants in the fisheries receiving a Pacific cod endorsement. The primary effect of this action on the harvesting sector would be to limit the potential for future entry of latent licenses into the GOA Pacific cod fisheries. If the Council chooses a higher landings threshold, this action has the potential to exclude some recent participants who do not have sufficient landings to meet the threshold from continuing to participate in the directed Pacific cod fisheries in the GOA.

This action would reduce fixed gear capacity in the GOA Pacific cod fisheries to include only licenses that meet the catch history threshold in the fisheries. Extinguishing latent licenses may prevent future revenues from Pacific cod harvests in the respective management areas from being diluted by future increases in fishing effort by latent licenses. Those LLP holders exhibiting dependence and participation in the fixed gear Pacific cod fisheries, (i.e., those meeting the selected threshold criteria), would be protected from possible future increases in effort and dilution of their gross revenue share. However, this action may not result in increased production efficiencies to licenses that would generally be expected

from a comprehensive rationalization program. Following implementation of the amendment, each qualified LLP holder will still have an incentive to expand their fishing effort and maximize their respective share of the gross revenues in the GOA Pacific cod fisheries. The action will not necessarily result in an 'optimum' harvesting capacity in any of the sectors or management areas. The Council is considering a range of potential catch and landings thresholds, qualification periods, and catch definitions. The number of gear-specific Pacific cod endorsements that will be added to licenses under any of these options was not based on a predetermined optimum capacity for the pot, hook-and-line, and jig gear Pacific cod fleet. The action is a more modest approach to revolving participation issues than a fully rationalized fixed gear Pacific cod fishery.

Pacific cod is the primary species targeted by the fixed gear sectors. Increases in Pacific cod prices in recent years have the potential to attract re-entry of latent effort into the fisheries. In the absence of this action, latent LLP licenses would not necessarily re-enter the fisheries in the future. The re-entry of these latent licenses would depend on future market conditions, conditions in the fisheries, the future regulatory environment, and opportunities to participate in other fisheries. The proposed action is not likely to result in any immediate reduction of effort. Therefore, the short term effects on efficiency should be negligible. In the longer term, the proposed action has the potential to limit overcrowding in the GOA Pacific cod fisheries. However, in the absence of this action, the number of latent licenses that would have re-entered the fixed gear Pacific cod fisheries is not known. Therefore, the economic effects of the proposed action cannot be precisely quantified.

The action would potentially reduce the number of fixed gear catcher vessel licenses eligible to participate in the directed Pacific cod fisheries to 20% to 42% of the current number in the Western GOA and 12% to 35% of the current number in the Central GOA. The number of catcher processor licenses would be reduced to 52% to 77% of the current number in the Western GOA and 22% to 43% in the Central GOA. If catch history during 2007 through June 4, 2008 or December 8, 2008 is included, additional licenses would qualify for Pacific cod endorsements. The action would cap the number of participants in the directed Pacific cod fisheries at the number of available licenses, and new entrants will have to purchase an existing license.

Prices of licenses

Reducing the pool of licenses eligible to access the directed Pacific cod fisheries has the potential to increase the prices of remaining licenses. The price of a license may depend on the combination of area, gear (trawl and/or fixed gear), and species endorsements, and the MLOA on the license. It also may depend on whether the license has recent catch history. Anecdotal reports have indicated that Central GOA fixed gear licenses with an MLOA of <60 ft, and without catch history, sell for approximately $3,000 to $5,000. Licenses with an MLOA of 50 ft or less are valued on the lower end of this range, and licenses with an MLOA of 58 ft to 60 ft may be valued at the higher end of this range. Licenses with either a Central GOA or Western GOA area endorsement (but not a BS or AI endorsement), an MLOA of less than 60 ft, and recent catch history may be valued at $20,000 to $25,000. Licenses with both Central and Western GOA endorsements are likely more valuable.

3.4.1.1 Licenses with no qualified GOA fixed gear landings

The proposed action would limit access to the GOA Pacific cod fisheries, but would not limit participation in other fisheries by vessels that hold licenses with other area endorsements or gear designations. Table 3-48 provides an overview of the fishing activities of Western and Central GOA fixed gear licenses that do not qualify under any of the landings or catch thresholds. For this purpose of the table, non-qualified licenses were defined as licenses that do not meet the minimum recency threshold of one directed Pacific cod landing in the endorsement area during 2000 through 2006. Most non-

qualified catcher vessel licenses have catch in other fisheries in Alaska. This other catch includes fixed gear landings of groundfish in areas other than the LLP endorsement area, and any trawl catch, IFQ catch, State waters groundfish catch, and non-groundfish catch (e.g., salmon, shellfish, and herring). Out of 883 Central GOA catcher vessel licenses, there are 614 licenses with no directed Pacific cod landings, and 500 of these licenses had landings in other fisheries during 2000-2006. Of 264 Western GOA catcher vessel licenses, there are 171 licenses with no WGOA directed Pacific cod landings, and 127 of these licenses had landings in other fisheries during 2000-2006. Notably, there are very few licenses that had no commercial landings in Alaska fisheries during 2000-2006. Only 114 Central GOA catcher vessel licenses and 27 Western GOA catcher vessel licenses did not have landings in any commercial fishery in Alaska during 2000-2006.

Similarly, Table 3-48 shows that most catcher processor licenses that did not have qualified landings during 2000-2006 are active participants in other groundfish fisheries in Alaska, including the BSAI fixed gear fisheries and the BSAI and GOA trawl fisheries. There are 10 catcher processor licenses with Western GOA endorsements that have no WGOA directed Pacific cod landings, and 8 of these licenses had landings in other Alaska fisheries. There are 35 catcher processor licenses with Central GOA endorsements that have no CGOA directed Pacific cod landings, and 33 of these licenses had landings in other Alaska fisheries.

Table 3-48 Summary of fishing activity of licenses with at least one directed Pacific cod landing and licenses with no qualified landings.

	Number of licenses with at least one directed Pacific cod landing in the endorsement area during 2000-2006			Catch history of licenses with no directed Pacific cod landings during 2000-2006	
	Number of licenses	At least one directed Pcod landing	No directed Pcod landings	At least one non-qualified landing in another fishery	No landings in any fishery
Central Gulf CV	883	269	614	500	114
Central Gulf CP	49	14	35	33	2
Western Gulf CV	264	93	171	144	27
Western Gulf CP	31	21	10	8	2

Note: Non-qualified landings include fixed gear landings in management areas other than the endorsement area, and trawl, State waters, IFQ, and other fisheries.

3.4.1.2 Gross revenues from GOA Pacific cod and other fisheries

Catcher Vessel Licenses

Many fixed gear licenses with GOA endorsements were active in other Alaska commercial fisheries in addition to the GOA fixed gear Pacific cod fisheries. Groundfish licenses may have up to five area endorsements (Bering Sea, Aleutian Islands, Western GOA, Central GOA, and Southeast Outside), two gear designations (trawl and fixed gear), and two BSAI Pacific cod endorsements, and these endorsements and designations allow licenses to participate in a suite of groundfish fisheries. In addition, many license owners hold halibut and sablefish IFQ, BSAI crab quota, and other permits that allow them to participate in other fisheries in Alaska.

Gross revenues data indicate that the majority of fixed gear catcher vessel and catcher processor licenses that did not have any qualified fixed gear landings during the proposed qualifying periods elected to participate in other Alaska fisheries during this period. Table 3-49 reports the number of licenses that had at least one directed Pacific cod landing in the Western or Central GOA during 2000-2006 (top line, left

hand column) and did not have one directed Pacific cod landing in the Western or Central GOA during 2000-2006 (top line, right hand column). The table also reports the number of licenses that participated in other fisheries in Alaska, based on the activity of the vessel(s) assigned to the license during 2000 through 2006. The table reports total revenues to licenses that participated in each fishery and average annual revenues per license across all fisheries from 2000 through 2006. Note that 'licenses', per se, are not participating in each of the fisheries; the analysis is based on the fishing activities of the vessel(s) assigned to each license. Table 3-49 provides an indication of the level of participation by active and inactive fixed gear licenses in the various fisheries.

Several fisheries overlap temporally with the Western and Central GOA Pacific cod fisheries. Requiring licenses to have a Pacific cod endorsement to enter the directed Pacific cod fisheries in the GOA would not impact the status quo fishing operations of these licenses. The intent of the action is to give licenses that have recent participation in the Pacific cod fisheries the endorsement, so that those licenses continue to have access to the fisheries. However, licenses that do not qualify for a Pacific cod endorsement would not have the opportunity to enter these fisheries in the future. Allowing these licenses to have the option to access the directed Pacific cod fisheries in the Western and Central GOA in the future should be balanced against the interests of current participants, who may have made long-term investments in the fisheries and historic catch shares in the GOA Pacific cod fisheries.

Most catcher vessel licenses that did not have directed Pacific cod landings in the Western or Central GOA during the proposed qualifying periods were active in other Alaska commercial fisheries. Out of 264 Western GOA licenses, there are 171 licenses that did not have any qualified landings during 2000-2006. However, 144 of the 171 licenses had landings in other Alaska fisheries. Western GOA licenses that did not have directed Pacific cod landings, but were active in other fisheries, had revenues mainly from the IFQ halibut (35.4%) and sablefish (21.4%) fisheries, and the BSAI trawl fisheries (31.1%). Less than 1% of revenues were from GOA Federal (0.8%) or State waters (0.3%) fixed gear fisheries. In contrast, most Western GOA licenses that had at least one fixed gear groundfish landing during 2000-2006 also participated in the State waters Pacific cod fisheries (72 of 93 licenses), and many licenses had landings in the Central GOA fixed gear Federal fisheries (20 licenses). The majority of active Western GOA licenses also had shellfish, salmon, and IFQ halibut landings. Gross revenues for licenses with qualified Western GOA landings were from IFQ halibut landings (29.5%), shellfish (33.4%), and salmon (19.9%). Notably, GOA trawl groundfish fisheries comprised 18.8% of revenues for licenses with at least one qualified landing, and landings from the Western GOA directed Pacific cod fishery comprised only 11.0% of gross revenues.

Of 883 Central GOA licenses, 614 licenses did not have at least one directed Pacific cod landing during 2000-2006; 500 of these non-qualified licenses had landings in other Alaska fisheries. Similar to non-qualified Western GOA licenses, the majority of revenues by these licenses were from IFQ halibut (35.0%) and sablefish (21.3%), and the BSAI trawl fisheries (13.6%). Only a small proportion of revenues by these licenses were from the fixed gear groundfish fisheries in the Western GOA (0.7%) or from the GOA State waters Pacific cod fisheries (1.4%). Most Central GOA licenses that made at least one directed Pacific cod landing during 2000-2006 also participated in the halibut IFQ fisheries (226 of 269 licenses). These licenses also fished for salmon (164 licenses), IFQ sablefish (141 licenses), State GOA Pacific cod (140 licenses), and shellfish (123 licenses). Revenues by active licenses were from halibut IFQ landings (45.1%), followed shellfish (10.3%). Directed Pacific cod landings from the Central GOA comprised 10.0% of gross revenues by Central GOA licenses with at least one qualified landing during 2000-2006.

When comparing annual gross revenues per license, the most apparent difference between catcher vessel licenses with directed Pacific cod landings and licenses without qualified landings is that they are participating in a different suite of fisheries. Western GOA CV licenses with at least one qualified

landing during 2000-2006 had annual gross revenues of $274,608 per license. In contrast, Western GOA CV licenses without qualified landings had substantially higher revenues, averaging $622,658 per license. Western GOA licenses without qualified cod landings but that were active in the BSAI trawl fisheries had on average over $1 million in gross revenues per year in that fishery during 2000-2006. There was not a large difference between annual gross revenues for Central GOA CV licenses with qualified fixed gear landings ($319,458) and without qualified landings ($353,067). However, there was again a sharp contrast in gross earnings in the BSAI trawl fisheries. Non-qualified licenses had more than twice ($725,929) the revenues that qualified licenses earned ($305,379) in the BSAI trawl fisheries, indicating that non-qualifying licenses are making a choice to participate in the BSAI trawl fisheries rather than the GOA Pacific cod fisheries.

Western and Central GOA CV licenses that did not have at least one directed Pacific cod landing during 2000-2006, and would only qualify for a Pacific cod endorsement if catch during 2007 and 2008 is included, have different participation patterns in the fisheries. Table 3-50 compares 2007 participation, catch, and revenues data, and 2008 participation and catch data (revenues data were not available for 2008), for licenses with at least one landing during 2000-2006 and licenses that only had a landing in 2007 or 2008. The table shows the number of licenses that participated in the Central GOA or Western GOA Pacific cod fisheries in 2007 and 2008, participation by those licenses in other Alaska fisheries, and catch and revenues by those licenses in each fishery. Central GOA licenses that only have directed Pacific cod landings during 2007 earned only 7% of revenues from the Central GOA Pacific cod fishery in 2007, compared with 17% for vessels that had a landing during 2000-2006. In contrast, Western GOA licenses that first entered the directed Pacific cod fishery in 2007 earned 22% of revenues from that fishery, compared to 10% for vessels that had landings during 2000-2006. Revenues for the 2008 fisheries were not available. Catch data for 2008 shows that Western and Central GOA licenses that have qualified landings during 2000-2006 harvested more Pacific cod per license in each management area than licenses that only qualify based on 2007-2008 landings.

During 2000-2007, the majority of first wholesale revenues for catcher processor licenses with fixed gear landings in the GOA fisheries were from the BSAI fixed gear fisheries (Table 3-51). Revenues from Western GOA directed Pacific cod (5.5%) and Central GOA directed Pacific cod (2.7%) were a small proportion of total revenues for licenses that have qualifying catch in the respective management areas. Nearly all catcher processor licenses that did not have directed Pacific cod landings during 2000-2006 were active in other fisheries in Alaska. The majority of revenues for these licenses were from the BSAI trawl and BSAI fixed gear fisheries and GOA trawl fisheries. Only 2 Western GOA and 2 Central GOA CP licenses did not have any landings in any commercial fisheries in Alaska during 2000 through 2006.

Annual revenues by fixed gear CP licenses that had qualified Western GOA landings during 2000-2006 ($3.45 million) were substantially greater than licenses without qualified landings ($1.57 million). Central GOA CP licenses with and without qualified landings during 2000-2006 had approximately $2.4 million in wholesale revenues per year. The 21 Western GOA CP licenses that made at least one directed Pacific cod landing during 2000-2006 had average annual revenues of $189,041 in that fishery during 2000-2006. The 14 Central GOA CP licenses with at least one landing during 2000-2006 had average annual revenues of $62,902 in that fishery during 2000-2006. The majority of CP licenses that did not have qualified Pacific cod landings during 2000-2006 were active in other fisheries (33 of 35 non-qualified CGOA licenses; 6 of 10 nonqualified WGOA licenses). Western GOA CP licenses that did not have qualified GOA fixed gear landings participated in the BSAI and/or GOA trawl fisheries during 2000-2006. Central GOA CP licenses that did not have qualified GOA landings participated in the BSAI fixed gear and the IFQ halibut and sablefish fisheries.

Table 3-49 Participation, average annual revenues per licenses, and total revenues in Alaska fisheries during 2000-2006 by fixed gear CV licenses with at least 1 directed Pacific cod landing during 2000-2006 and with no GOA directed Pacific cod landings during 2000-2006.

Western and Central GOA CP licenses that did not have at least one directed Pacific cod landing during 2000-2006, and would only qualify for a Pacific cod endorsement if catch during 2007 and 2008 is included, have different participation patterns in the fisheries. Table 3-52 compares 2007 participation, catch, and revenues data, and 2008 participation and catch data (revenues data were not available for 2008), for licenses with at least one landing during 2000-2006 and licenses that only had a landing in 2007 or 2008. The table shows the number of licenses that participated in the Central GOA or Western GOA Pacific cod fisheries in 2007 and 2008, participation by those licenses in other Alaska fisheries, and catch and revenues by those licenses in each fishery. Central GOA licenses that only have directed Pacific cod landings during 2007 earned only 10.5% of revenues from the Central GOA Pacific cod fishery in 2007, compared with 23.0% for vessels that had a landing during 2000-2006. Western GOA revenues for licenses that first entered the fishery in 2007 cannot be reported due to confidentiality. Catch data for 2008 shows that Western GOA licenses that have qualified landings during 2000-2006 harvested

5096

substantially more Pacific cod per license in each management area than licenses that only qualify based on 2007-2008 landings.

3.4.2 Effects on processors

Pacific cod landings by fixed gear LLP license holders in the Western and Central GOA are primarily delivered to shoreside processors in Kodiak, King Cove, Sand Point, and Dutch Harbor. During some years, there have been deliveries to at-sea processors operating offshore. The proposed action is not expected to directly impact the distribution of landings among shoreside processing communities or at-sea processors. The proposed action, in tandem with the recent trawl recency action, may stabilize the number of participants in the fixed gear and trawl gear fisheries in the GOA. The proposed Pacific cod sector allocations also have the potential to stabilize the distribution of catch between catcher vessels and catcher processors, as well as stabilize the distribution of catch among gear types. Catcher vessels could continue to deliver to shoreside or at-sea processors, and this action would not directly impact that choice.

3.4.3 Effects on management, monitoring, and enforcement

Implementation of the proposed action will require NOAA Fisheries to process and adjudicate the qualifying and non-qualifying licenses, and add Pacific cod endorsements to licenses that meet the qualification criteria. Also, it will be necessary for NOAA Fisheries to make changes to databases used to administer and record license information.

Pacific cod is the primary target fishery of fixed gear vessels in the GOA; Pacific cod comprises more than 98% of retained catch by fixed gear vessels in the GOA, excluding halibut and sablefish IFQ catch. The Pacific cod endorsement would limit participation in the directed Pacific cod fisheries, and it is possible that some participants that do not have a Pacific cod endorsement may use retained incidental catch to supplement their catch revenue in less lucrative target fisheries. However, aside from the IFQ fisheries, fixed gear catch in other target fisheries is relatively low. When the directed Pacific cod season is closed, vessels targeting other species are only allowed to retain incidentally harvested Pacific cod up to the MRA (20%). It is unlikely that many vessels will prosecute other fixed gear fisheries only as a means of accessing incidental catch of Pacific cod. Currently, a relatively small number of fixed gear vessels target other groundfish species in the GOA, and some of these vessels likely already have LLP licenses and would qualify for fixed gear Pacific cod endorsements. Requiring fixed gear LLP licenses to have Pacific cod endorsements would further reduce the number of open access fisheries available to the fixed gear sectors. However, vessels that do not have an LLP license with a fixed gear Pacific cod endorsement could continue to harvest Pacific cod in the parallel and State waters fisheries.

3.4.4 Effects on communities

Impacts of the proposed action on communities are difficult to assess, because licenses may be freely bought and sold by residents of any state or community. Licenses are held by individuals, not communities, and individual license holders may sell or lease licenses to residents of other communities. In-depth profiles of GOA fishing communities may be found in Community Profiles for North Pacific Fisheries (NMFS 2005). This document includes profiles of 136 fishing communities in Alaska. The profiles provide demographic information on each community, and describe the history, geography, and local economy of each community. In addition, they provide detailed descriptions of each community's involvement in the North Pacific fisheries, including data on the number and type of fishing permits held by residents, and participation by those permit holders in the different fisheries. Finally, each profile

provides information on subsistence and sport fishing activities in each community. The profiles may be found at: http://www.afsc.noaa.gov/REFM/Socioeconomics/Projects/CPU.php

The State of Alaska's Community Information Summaries, which are compiled by the Alaska Department of Commerce, Community, and Economic Development (DCCED), include information on community location, population, taxes, climate, history, culture, demographics, utilities, schools, health care, economy, and transportation. The summaries may be found at: http://www.commerce.State.ak.us/dca/commdb/CF_CIS.htm

The number of catcher vessel licenses that meet the 1 directed Pacific cod landing threshold during 2000 through 2006 and 2000 through December 8, 2008 is reported by the current residency of license holders in Table 3-53. Alaska residents hold the greatest number of Western and Central GOA fixed gear licenses. Licenses owned by Alaska residents are more likely to have 1 landing during 2000-2006 or 2000-2008 than licenses owned by residents of other states. Nearly half of Western GOA licenses held by Alaska residents had at least one directed Pacific cod landing (42% to 46%), slightly more than licenses owned by residents of other states. Between 35% and 40% of Central GOA licenses that are held by Alaska residents had directed Pacific cod landings. Most Central GOA licenses that had directed Pacific cod landings during 2000 through Dec 2008 are held by Alaska residents (240 of 306 active licenses). The majority of Western GOA licenses with directed Pacific cod landings during 2000 through Dec 2008 are also held by Alaska residents (71 of 110 licenses), and 33 active licenses are held by residents of Washington.

Table 3-53 Number of CV licenses with 1 directed Pacific cod landing during 2000-2006 or 2000-Dec 8, 2008 by license owner's residence.

Source: ADFG Fish Tickets (2000-2007), NMFS Catch Accounting (2008), and RAM groundfish license file, December 2008

The number of catcher processor licenses that meet the 1 directed Pacific cod landing threshold during 2000 through 2006 or 2000 through December 8, 2008 is reported by the residency of license holders in Table 3-54. Out of 49 Central GOA CP licenses, 12 are held by residents of Alaska and 37 are held by residents of other states. A substantially higher percentage of licenses held by Alaska residents and residents of other states meet the 1 landing threshold during 2000-2008 than during 2000-2006. Out of 31 Western GOA CP licenses, 3 are held by Alaska residents, and all 3 of these licenses have at least one groundfish landing during 2000-2008. The other 28 licenses are held by residents of other states, and 21

of these licenses have at least one landing during 2000-2008. No CP licenses are held by residents of CQE communities. Additional information on homeport locations of CPs that participate in the GOA Pacific cod fisheries, ownership of CPs by CDQ groups, and contributions of CPs to local tax revenues may be found in the draft initial EA/RIR/IRFA for the GOA Pacific cod sector allocations (NPFMC, 2008).

Table 3-54 Number of CP licenses with 1 directed Pacific cod landing during 2000-2006 or 2000-Dec 8, 2008 by license owner's residence.

Source: NMFS Catch Accounting and RAM groundfish license file, December 2008. *Western GOA licenses held by Alaska residents from Juneau (1), Petersburg (1), and Seward (1). Central GOA licenses held by Alaska residents from Anchorage (1), Juneau (1), Kenai (1), Kodiak (4), Petersburg (3), Seward (1), and Sitka (1).

Overall, the majority of Central GOA licenses that have at least 1 directed Pacific cod landing during 2000-2006 or 2000-Dec 8, 2008 are held by residents of Kodiak, Homer/Anchor Point, Cordova, and Anchorage (Table 3-55). Central GOA licenses held by residents of Kodiak Island communities and Homer area communities (including Anchor Point, Homer, and Nikolaevsk) were among the most likely to have landings. Licenses held by residents of Southeast Alaska communities were among the least likely to have landings in the fisheries. Sitka and Petersburg residents each hold more than 30 Central GOA licenses. None of the 34 licenses held by Sitka residents and only 2 of 32 licenses held by Petersburg residents had at least directed Pacific cod landing during 2000-2006 or 2000-2008. Western GOA licenses that have been active in the fisheries and are held by Alaska residents are primarily owned by residents of Sand Point, King Cove, and Kodiak. Western GOA licenses held by residents of Southcentral and Southeast Alaska were less likely to have directed Pacific cod landings in the Western GOA fisheries. For example, no Western GOA licenses held by Sitka residents (7 licenses) and only 2 of 14 licenses held by Homer residents had directed Pacific cod landings in the Western GOA.

Finally, a summary of the number of catcher vessel owners from Alaska communities that have participated in the fixed gear fisheries in the GOA is included in Appendix A. Table A-1 reports the number of catcher vessel owners who have participated in the Federal waters, parallel waters, and State waters Pacific cod fisheries using fixed gear during 1995-2006, by community of residence. Note that this table includes landings from the Western GOA, Central GOA, and West Yakutat, because the LLP authorizes licenses with Central GOA endorsements to fish in Federal waters of West Yakutat. The tables also report gross revenues from the fisheries, and the percentage of total revenues from all Alaska fisheries comprised by the GOA Pacific cod fisheries in each community. This provides a measure of the relative economic importance of the GOA Pacific cod fisheries to these communities.

Table 3-55. Number of catcher vessel licenses with at least one directed Pacific cod landing in the endorsement area during 2000-2006 or 2000-Dec 8, 2008, reported by license owner's community of residence (Alaska communities only).

3.4.5 Parallel waters issues

Parallel waters catch by vessels without LLP licenses

If Pacific cod endorsements are added to Western and Central GOA fixed gear licenses, these endorsements would limit entry to the directed Pacific cod fisheries in each management area. Specific gear designations included on these endorsements would limit the number of licenses eligible to participate in each sector. Several tables in this document provide estimates of the number of licenses that could receive Pacific cod gear and operation type endorsements. If Pacific cod sector allocations are implemented, these licenses would be eligible to fish off the respective gear and operation type allocations. However, there are several gaps in the limited entry provisions of the LLP that would allow vessels to fish off sector allocations without an LLP license or Pacific cod endorsement.

First, vessels are not required to hold an LLP license to fish in the parallel waters fisheries. Although the LLP limits entry into the groundfish fisheries in Federal waters, vessels can fish in parallel waters without an LLP license. If sector allocations are implemented, vessels without LLP licenses, and licenses without Pacific cod endorsements, could be restricted from fishing in Federal waters during the directed Pacific cod fisheries, but could continue to fish in the parallel waters fisheries. In years when fish are concentrated in inside waters, or when conditions in other fisheries are unfavorable, participation by vessels without LLP licenses may increase in the parallel waters fisheries. In the GOA, the presence of a local fleet that can readily access the parallel waters fisheries makes it more likely that during certain years, vessels without LLP licenses will fish for Pacific cod in parallel waters.

During recent years, vessels without LLP licenses have harvested a relatively small proportion of the catch in each management area. Table 3-56 shows the average number of vessels without LLPs that fished for Pacific cod during the parallel waters seasons in 2002-2007, retained catch, and the average percentage of catch within each sector by these vessels. These numbers are an estimate, and are intended to provide the Council with some perspective on the extent of participation in the Pacific cod fisheries by vessels without LLP licenses.

The table also provides some insight into the level of participation within each sector by vessels without licenses. If Pacific cod sector allocations are implemented, and Pacific cod endorsements are added to fixed gear licenses, vessels without licenses, or without Pacific cod endorsements on their licenses, will continue to be eligible to fish in the parallel waters. Most hook-and-line catcher vessels that do not have LLPs and that have retained catch of Pacific cod from the parallel waters fisheries were participating in the IFQ fisheries at the time they made these Pacific cod landings. Under the LLP, vessels participating in the IFQ fisheries that do not have LLP licenses are allowed to retain incidental catch of Pacific cod. This provision in the LLP is consistent with National Standard 9 of the Magnuson-Stevens Act, and was intended to reduce the waste that occurs when discards of groundfish are required. In the Central GOA, an average of 63 hook-and-line vessels per year during 2002-2007 that did not have LLP licenses had at least one landing of Pacific cod, but catch by these vessels amounted to only 2% of the catch by hook-and-line catcher vessels in the Central GOA. Overall, vessels without LLP licenses harvest a small proportion of the retained catch of Pacific cod in the Central GOA (2%) and Western GOA (5%). The majority of this catch was by pot vessels fishing without LLPs in the Western and Central GOA. Hook-and-line vessels without LLPs harvested 11% of the Western GOA hook-and-line catch during 2002-2007, but hook-and-line catcher vessels typically catch less than 1% of the Western GOA catch. The majority of the jig catch in each management area is harvested by vessels without LLP licenses, but these vessels generally harvest less than 1% of the Western and Central GOA catch.

Table 3-56 Average number of vessels fishing in the parallel waters fisheries without an LLP license, retained catch (mt), and percent of retained catch of Pacific cod within each sector by vessels without LLPs during 2002-2007.

		HAL CV		Jig CV		Pot CV		Trawl CV		All sectors
	Year	Vessels	Catch	Vessels	Catch	Vessels	Catch	Vessels	Catch	Catch
Central GOA	2002-2007 average	63	106	15	45	5	211	1	*	362

Western GOA	2002-2007 average	11%	64%	9%	*	5%

Source: ADFG Fish Tickets and RAM groundfish license file, October 2008. *Withheld due to confidentiality.
Notes: Excludes State waters fisheries. Includes IFQ fisheries, because IFQ participants may retain groundfish without an LLP (and are required to retain Pacific cod up to the MRA).

Catcher processors acting as catcher vessels

Pacific cod endorsements could restrict vessels to using a specific gear type in the directed Pacific cod fisheries, but may not prevent catcher processors from fishing off catcher vessel allocations. Historically, few catcher processors in the GOA have acted as catcher vessels, but sector allocations could potentially create an incentive for catcher processors to opportunistically fish as catcher vessels. If this activity becomes more common than it has in the past, it could potentially erode the catch shares of vessels that can only act as catcher vessels and who contributed history to the catcher vessel allocations.

Under previous amendments (e.g., Amendment 85), catch is counted against allocations based on vessel activity. If a vessel catches and processes its own catch, that catch is deducted from the catcher processor allocation. If a vessel delivers its catch shoreside or to a mothership, that catch is deducted from the catcher vessel allocation. If the Council perceives that catcher processors may opportunistically fish off catcher vessel Pacific cod allocations in the GOA, it could modify the catch accounting system for the sector allocations. Instead of accounting for catch based on mode of operation, NOAA fisheries could account for catch based on the mode of operation on a vessel's Pacific cod endorsement. Currently, the Catch Accounting system does not track catch by LLP licenses. Modifying the Catch Accounting system to track licenses and license endorsements would require substantial programming effort. However, given the small number of catcher processor licenses which would likely qualify for a Pacific cod endorsement in the Western or Central GOA, this modification to the Catch Accounting system may be practicable. Licenses may only be transferred once per year. The Catch Accounting system would link catch by each vessel holding a Pacific cod catcher processor endorsement to the appropriate sector allocation account. In this way, vessels holding Pacific cod catcher processor endorsements could only fish off the catcher processor allocations, regardless of their mode of operation. Revisions to the Catch Accounting system could be minimized by continuing to base other aspects of the Catch Accounting system (e.g., estimates of bycatch, discards, and PSC) on the mode of operation of the vessel.

The Council is currently considering options in the proposed GOA Pacific cod sector allocation action to preclude vessels from opportunistically fishing off both the catcher processor and catcher vessel sector allocations in the GOA Pacific cod fisheries. Those options are included in Component 2 of the sector allocation motion:

Option: Restrict vessels from participating in the GOA Pacific cod fishery using more than one operation type.

Suboption 1: Restrict CP licenses to the operation type on their license (licenses with a catcher processor designation could only fish off the catcher processor sector allocation).

Suboption 2: Add a CV/CP Pacific cod endorsement to both trawl and non-trawl CP licenses that have operated as catcher vessels during the qualifying period. These CP/CV licenses will elect to participate as either a CP or CV in the GOA Pacific cod fishery either:

(i) annually
(ii) as a permanent, one-time election

Finally, it is important to note that the State of Alaska does not legally recognize the distinction between Federal allocations to catcher vessels and catcher processors using the same gear type to harvest fish in the same management area. For example, the BSAI Pacific cod fishery is allocated by gear type and processing sector. The State recognizes allocations by gear type, but does not recognize the separate pot and hook-and-line CP and CV allocations.[14] If the directed fishery for one of the pot or hook-and-line sectors is open in Federal waters, any vessel using that gear type and meeting any applicable vessel length restrictions is eligible to participate in the parallel waters fishery. In 2008, pot catcher processors continued to fish in the Aleutian Islands parallel waters fishery even after the Amendment 85 pot CP allocation had been fully harvested, because the adjacent Federal waters fishery was still open to pot catcher vessels. In the same way, catcher vessels may fish in the parallel waters fishery even if it is only open to catcher processors in adjacent Federal waters.

The Council is currently considering two options to address these parallel waters issues in the GOA Pacific cod sector allocations motion. Those options are in Component 10 of the sector allocation motion. Option 2 is essentially the same approach that the Council is currently considering for the BSAI Pacific cod fixed gear parallel waters fishery, but also includes vessels using trawl gear:

Option 1. Aleutian Islands sablefish model (parallel fishery catch cap)

Option 2. Limiting access to the parallel zone for Federal fishery participants
Require any pot and longline vessel with an LLP or an FFP to have a Pacific cod endorsement and the appropriate area endorsement to participate in the Western GOA or Central GOA Pacific cod parallel water fishery. Require any trawl vessel with an LLP or an FFP to have the appropriate gear and area endorsement to participate in the Western GOA or Central GOA Pacific cod parallel water fishery.

i. Suboption: In addition, require the above Federally licensed vessels that fish in the parallel waters to adhere to Federal seasonal closures of the Western/Central GOA corresponding to the sector in which the vessel operates.

[14] State v. Grunert, 139 P.2d 1226 (Alaska 2006); Grunert v. State, 109 P.2d 924 (Alaska 2005). In the 2005 case, the Alaska Supreme Court ruled that the Board of Fisheries could not allocate within a single fishery. 109 P.2d at 931-32. In the 2006 case, the Court held that 'fisheries' could only be distinguished by differences in the gear that is actually used to harvest the fish. 139 P.2d at 1235-39.

ii. Suboption: In the Western/Central GOA, vessels can only surrender and/or reactivate their FFP:
    a. Once per calendar year
    b. Once every eighteen months
    c. Once every two years

iii. Suboption: FFP cannot be surrendered during the 3 year term of the permit.

The Council and NOAA fisheries have broad authority over vessels that hold Federal permits and licenses. Vessels that hold Federal fisheries permits or LLP licenses may be subject to Federal groundfish regulations, even while fishing in State waters adjacent to the GOA or BSAI. For example, vessels that hold FFPs are subject to Federal recordkeeping and reporting, observer, and VMS requirements while fishing in Federal, parallel, or State waters fisheries. In 2006, sideboards were implemented that limit harvests of GOA Pacific cod by vessels that received initial allocations of *C. opilio* crab quota. The sideboard regulations were written such that vessels cannot circumvent sideboard closures by fishing in parallel waters fisheries. Vessels that hold *either* an FFP or an LLP are subject to the sideboards while participating in any groundfish fishery in the parallel waters fisheries in the GOA (680.22). The Council is currently considering options to extend the LLP and Pacific cod endorsement requirement to the BSAI Pacific cod parallel waters fishery for CPs only, and to require CPs to surrender Federal permits and licenses if they choose to fish in the BSAI Pacific cod parallel waters fishery. The Council is scheduled to take final action on the proposed regulatory amendment in June 2009.

3.4.6 Harvest cooperative formation

Long term allocations of the Western and Central GOA Pacific cod TACs to the sectors and provisions that limit entry to the directed Pacific cod fisheries may provide opportunities for the formation of harvest cooperatives. Individual sectors may be more likely to form cooperatives if all eligible participants are easily identified through a restrictive license limitation program, and if separate allocations are made to each sector. Pacific cod endorsements on fixed gear licenses would limit entry to the directed Pacific cod fisheries in Federal waters, but would not restrict vessels without LLP licenses, or without Pacific cod endorsements on licenses, from participating in the directed Pacific cod fisheries in the parallel waters fisheries. NOAA Fisheries does not currently have a mechanism to allocate catch history to cooperatives in the GOA Pacific cod fisheries. All vessel owners within a sector would need to voluntarily join a cooperative and abide by its bylaws, or additional regulations would need to be implemented to provide NOAA fisheries with the necessary authority to allocate Pacific cod to individual cooperatives.

In the GOA Pacific cod fisheries, the hook-and-line catcher processor sector may be the sector that is most likely to form a harvest cooperative. Most of the freezer longliner fleet fishes for Pacific cod in the BSAI, then moves into the GOA after the BSAI Pacific cod seasons close. In 2005, the BSAI freezer longliner fleet did not fish in the GOA during the B season, because NMFS inseason management was concerned that there was not sufficient halibut PSC to support this fleet. As a result, in 2006, 2007, and 2008 the freezer longliners set up an informal 'PSC co-op' with NMFS inseason management during the B season. Under this arrangement, the third seasonal apportionment of halibut PSC was informally divided between catcher processors and catcher vessels. The freezer longliners then further divided the catcher processor PSC among vessels fishing the B season. This informal cooperation in sharing PSC suggests that this sector has the potential to establish a formal harvest cooperative.

The freezer longliner fleet is relatively small, and the proposed action could potentially limit the number of participants in this sector by adding gear-specific Pacific cod endorsements to fixed gear licenses. There are currently 53 fixed gear catcher processor licenses with Central and/or Western GOA area

endorsements; 49 of these licenses have Central GOA endorsements and 31 licenses have Western GOA endorsements. A total of 16 to 22 Western GOA licenses and 10 to 18 Central GOA licenses have at least one hook-and-line landing in the directed Pacific cod fisheries during the different qualifying periods, and could potentially qualify for Pacific cod hook-and-line catcher processor endorsements. If the landings or catch thresholds are set higher, even fewer licenses would qualify for Pacific cod endorsements. If Pacific cod sector allocations are established, total catch by hook-and-line catcher processors would be capped by the allocations. If vessels in this sector form a harvest cooperative subsequent to the implementation of sector allocations, this sector could potentially take advantage of increased production efficiencies of fishing cooperatively, but would not be able to increase the sector's overall harvest shares of the Western and Central GOA TACs. However, if vessels fish the catcher processor allocations cooperatively, some vessels in this fleet could opportunistically act as catcher vessels and fish off the hook-and-line catcher vessel allocations. Again, if the Council perceives this to be a potential problem, NOAA fisheries could account for catch based on the operation type on a license's Pacific cod endorsement, rather than based the vessel's activity.

3.4.7 Interactions with other recent or proposed actions

A number of past actions have limited effort by individual vessels or sectors in the BSAI and GOA groundfish and crab fisheries. The halibut and sablefish IFQ program, BSAI crab rationalization program, Amendment 67 (BSAI Pacific cod fixed gear endorsements), and Amendments 64 and 85 (BSAI Pacific cod sector allocations) limit entry to some fisheries and sectors. For example, the halibut and sablefish IFQ program and BSAI crab rationalization program provide exclusive allocations to fixed gear vessels and limit entry by holders of latent licenses excluded from those programs. In effect, these programs foreclose certain fisheries to new entry. Holders of latent licenses who wish to reenter the fisheries have access to fewer fisheries.

Rationalization programs may expose participants in remaining open access fisheries to increased effort by these displaced participants. In addition, such programs can result in increased effort in open access fisheries by recipients of exclusive allocations. Sideboards are often imposed on participants in rationalized programs to prevent these spillover effects. For example, in developing the BSAI crab rationalization program, the Council imposed sideboards on the GOA fisheries. Pot vessels generally participate in only the crab and Pacific cod fisheries. As a result, the only perceived increase in opportunity arising from the crab rationalization program was thought to be in the Pacific cod fisheries in the GOA that are prosecuted in January, when the Bering Sea *C. opilio* fishery is typically prosecuted. Only recipients of initial allocations[15] in the Bering Sea *C. opilio* fishery are subject to the sideboards. There are 82 sideboarded vessels and 37 sideboarded groundfish licenses. The sideboards limit these vessels and licenses to their historic share of retained catch of GOA Pacific cod and other GOA groundfish during 1996-2000, excluding catch of fixed gear sablefish. Vessels that have limited history in the GOA groundfish fisheries – less than 50 mt of catch during 1996 to 2000 – are prohibited from directed fishing for Pacific cod in the GOA. Vessels that landed less than 100,000 pounds of Bering Sea *C. opilio* and more than 500 mt of Pacific cod in the GOA from 1996 to 2000 are exempt from the sideboards. No sideboards were specified under the halibut and sablefish IFQ program, as the potential for spillover effects from these fisheries was considered to be limited.

The proposed GOA Pacific cod sector allocations would limit effort by each sector in the fisheries by capping the percentage of the Western and Central GOA TACs available to each sector. Increased effort in one sector, via the re-entry of latent effort into the fisheries, would reduce catch (and revenues) for

[15] Since allocations in the program are based on catch history associated with a license, the sideboard is constructed to limit catch using the license. This is done by sideboarding any vessel the catch of which led to a share allocation and any vessel named on the license that arose from the catch history of the vessel that led to that allocation.

other participants in that sector. The adverse impacts of the entry of latent effort are often exacerbated for sectors with substantial latent capacity. For example, the majority of fixed gear catcher vessel licenses with Western or Central GOA endorsements do not have any recent (2000-2006 or 2000-2008) landings in the directed Pacific cod fisheries in the GOA. Re-entry of these licenses into the fisheries has the potential to intensify competition for the TACs. If Pacific cod sector allocations are accompanied by provisions that limit entry into the directed Pacific cod fisheries, for example by adding Pacific cod endorsements to fixed gear licenses, the fixed gear sectors would be protected from potential re-entry of latent fixed gear licenses into the directed Pacific cod fisheries. However, new provisions that limit access to the GOA Pacific cod fisheries would also reduce the number of open access fisheries. The remaining open access fisheries would be even more vulnerable to increased competition as displaced participants enter these fisheries.

3.4.8 Net benefits to the Nation

Overall, this action is likely to have a limited effect on net benefits realized by the Nation. Under the status quo (Alternative 1), all existing fixed gear licenses would continue to have access to the directed Pacific cod fisheries in Federal waters of the GOA. Licenses not currently active in the fisheries would have the potential to enter the Pacific cod fisheries at some future time, increasing overall effort in the fisheries. This increase in effort could contribute to losses of production efficiency. Costs could rise slightly if participants perceive a need to increase effort to secure their historic catch shares. The increase in effort could contribute to more aggressive fishing and processing practices, both of which contribute to lower quality and less value added production. The extent of these potential effects is very difficult to predict and depends on several factors, including future TAC levels, market conditions, and operating costs.

Under the proposed action (Alternative 2), Pacific cod endorsements would be added to fixed gear groundfish licenses that have recent catch history in the Western or Central GOA directed Pacific cod fisheries. As a result, licenses that do not receive a Pacific cod endorsement would not be eligible to enter the Western or Central GOA Pacific cod fisheries in the future, removing the potential for an influx of effort into the fisheries. Preventing these licenses from entering the Pacific cod fisheries in the future could contribute to production efficiency if a substantial increase in effort by latent licenses were to occur in the absence of this action. Limiting effort in the fisheries could contribute to slowing down the fisheries, although if TACs continue to decline and market conditions for Pacific cod continue to improve, the pace of the fisheries is unlikely to slow down.

Minor changes in consumer surplus could accompany any change in production outputs. Specifically, changes in product outputs and quality could have effects on consumers. The difference in consumer surplus across the alternatives is likely to be quite small. The status quo, which would maintain the existing number of licenses eligible to enter the Pacific cod fisheries, would have the lowest consumer surplus, as it would not change the conditions for entry into the fisheries. In addition, the change in U.S. consumer surplus is likely to be diluted, since much of the production from these fisheries is exported for overseas secondary processing and consumption. As a result, some portion of any consumer surplus benefit resulting from the proposed action is unlikely to be realized as a U.S. benefit.

Implementation of the action alternative would require NOAA fisheries to process and adjudicate the qualifying and non-qualifying licenses. The license limitation file administered by NOAA fisheries will need to be updated to reflect the changes to existing licenses. Also, NOAA fisheries will need to update and make changes to databases used to store license information in order to track Pacific cod endorsements that have non-transferable status. These costs would not be incurred under the no action alternative. The addition of gear-specific Pacific cod endorsements to fixed gear licenses will introduce new administrative costs for NOAA fisheries, and possibly create new enforcement costs.

The main economic benefit from the proposed action is that it will prevent the future entry of latent fixed gear LLP licenses into the Western and Central GOA directed Pacific cod fisheries, and will primarily benefit LLP license owners who are economically dependent on the GOA Pacific cod fisheries. The action may have modest distributional effects among persons eligible to enter licenses into the directed Pacific cod fisheries that are subject to the LLP.

4.0 INITIAL REGULATORY FLEXIBILITY ANALYSIS (IRFA)

4.1 Introduction

The Regulatory Flexibility Act (RFA), first enacted in 1980, and codified at 5 U.S.C. 600-611, was designed to place the burden on the government to review all regulations to ensure that, while accomplishing their intended purposes, they do not unduly inhibit the ability of small entities to compete. The RFA recognizes that the size of a business, unit of government, or nonprofit organization frequently has a bearing on its ability to comply with a Federal regulation. Major goals of the RFA are: 1) to increase agency awareness and understanding of the impact of their regulations on small business; 2) to require that agencies communicate and explain their findings to the public; and 3) to encourage agencies to use flexibility and to provide regulatory relief to small entities.

The RFA emphasizes predicting significant adverse impacts on small entities as a group distinct from other entities and on the consideration of alternatives that may minimize the impacts, while still achieving the Stated objective of the action. When an agency publishes a proposed rule, it must either, (1)"certify" that the action will not have a significant adverse effect on a substantial number of small entities, and support such a certification declaration with a "factual basis", demonstrating this outcome, or, (2) if such a certification cannot be supported by a factual basis, prepare and make available for public review an Initial Regulatory Flexibility Analysis (IRFA) that describes the impact of the proposed rule on small entities.

Based upon a preliminary evaluation of the proposed program alternatives, it appears that "certification" would not be appropriate. Therefore, this IRFA has been prepared. Analytical requirements for the IRFA are described below in more detail.

The IRFA must contain:

1. A description of the reasons why action by the agency is being considered;
2. A succinct Statement of the objectives of, and the legal basis for, the proposed rule;
3. A description of, and where feasible, an estimate of the number of small entities to which the proposed rule will apply (including a profile of the industry divided into industry segments, if appropriate);
4. A description of the projected reporting, record keeping, and other compliance requirements of the proposed rule, including an estimate of the classes of small entities that will be subject to the requirement and the type of professional skills necessary for preparation of the report or record;
5. An identification, to the extent practicable, of all relevant Federal rules that may duplicate, overlap, or conflict with the proposed rule;
6. A description of any significant alternatives to the proposed rule that accomplish the Stated objectives of the Magnuson-Stevens Act and any other applicable statutes, and that would minimize any significant adverse economic impact of the proposed rule on small entities. Consistent with the Stated objectives of applicable statutes, the analysis shall discuss significant alternatives, such as:

a. The establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities;
b. The clarification, consolidation or simplification of compliance and reporting requirements under the rule for such small entities;
c. The use of performance rather than design standards;
d. An exemption from coverage of the rule, or any part thereof, for such small entities.

The "universe" of entities to be considered in an IRFA generally includes only those small entities that can reasonably be expected to be directly regulated by the proposed action. If the effects of the rule fall primarily on a distinct segment of the industry, or portion thereof (e.g., user group, gear type, geographic area), that segment would be considered the universe for purposes of this analysis.

In preparing an IRFA, an agency may provide either a quantifiable or numerical description of the effects of a proposed rule (and alternatives to the proposed rule), or more general descriptive Statements if quantification is not practicable or reliable.

4.2 Definition of a Small Entity

The RFA recognizes and defines three kinds of small entities: 1) small businesses; 2) small non-profit organizations; and 3) and small government jurisdictions.

Small businesses: Section 601(3) of the RFA defines a "small business" as having the same meaning as a "small business concern," which is defined under Section 3 of the Small Business Act. A "small business" or "small business concern" includes any firm that is independently owned and operated and not dominate in its field of operation. The U.S. Small Business Administration (SBA) has further defined a "small business concern" as one "organized for profit, with a place of business located in the United States, and which operates primarily within the United States, or which makes a significant contribution to the U.S. economy through payment of taxes or use of American products, materials, or labor. A small business concern may be in the legal form of an individual proprietorship, partnership, limited liability company, corporation, joint venture, association, trust, or cooperative, except that where the form is a joint venture there can be no more than 49% participation by foreign business entities in the joint venture."

The SBA has established size criteria for all major industry sectors in the U.S., including fish harvesting and fish processing businesses. A business "involved in fish harvesting" is a small business if it is independently owned and operated and not dominant in its field of operation (including its affiliates), and if it has combined annual receipts not in excess of $4.0 million for all its affiliated operations worldwide. A seafood processor is a small business if it is independently owned and operated, not dominant in its field of operation (including its affiliates) and employs 500 or fewer persons, on a full-time, part-time, temporary, or other basis, at all its affiliated operations worldwide. A business involved in both the harvesting and processing of seafood products is a small business if it meets the $4.0 million criterion for fish harvesting operations. A wholesale business servicing the fishing industry is a small business if it employs 100 or fewer persons on a full-time, part-time, temporary, or other basis, at all its affiliated operations worldwide.

The SBA has established "principles of affiliation" to determine whether a business concern is "independently owned and operated." In general, business concerns are affiliates of each other when one concern controls or has the power to control the other or a third party controls or has the power to control both. The SBA considers factors such as ownership, management, previous relationships with or ties to another concern, and contractual relationships, in determining whether affiliation exists. Individuals or

firms that have identical or substantially identical business or economic interests, such as family members, persons with common investments, or firms that are economically dependent through contractual or other relationships, are treated as one party, with such interests aggregated when measuring the size of the concern in question. The SBA counts the receipts or employees of the concern whose size is at issue and those of all its domestic and foreign affiliates, regardless of whether the affiliates are organized for profit, in determining the concern's size. However, business concerns owned and controlled by Indian Tribes, Alaska Regional or Village Corporations organized pursuant to the Alaska Native Claims Settlement Act (43 U.S.C. 1601), Native Hawaiian Organizations, or Community Development Corporations authorized by 42 U.S.C. 9805 are not considered affiliates of such entities, or with other concerns owned by these entities, solely because of their common ownership.

Affiliation may be based on stock ownership when: (1) A person is an affiliate of a concern if the person owns or controls, or has the power to control 50% or more of its voting stock, or a block of stock which affords control because it is large compared to other outstanding blocks of stock, or (2) If two or more persons each owns, controls or have the power to control less than 50% of the voting stock of a concern, with minority holdings that are equal or approximately equal in size, but the aggregate of these minority holdings is large as compared with any other stock holding, each such person is presumed to be an affiliate of the concern.

Affiliation may be based on common management or joint venture arrangements. Affiliation arises where one or more officers, directors, or general partners control the board of directors and/or the management of another concern. Parties to a joint venture also may be affiliates. A contractor and subcontractor are treated as joint venturers if the ostensible subcontractor will perform primary and vital requirements of a contract or if the prime contractor is unusually reliant upon the ostensible subcontractor. All requirements of the contract are considered in reviewing such relationship, including contract management, technical responsibilities, and the percentage of subcontracted work.

Small organizations: The RFA defines "small organizations" as any nonprofit enterprise that is independently owned and operated and is not dominant in its field.

Small governmental jurisdictions: The RFA defines small governmental jurisdictions as governments of cities, counties, towns, townships, villages, school districts, or special districts with populations of fewer than 50,000.

4.3 Reason for considering the proposed action

The Council developed a purpose and need statement defining the reasons for considering the proposed action (see Chapter 1). The Western and Central GOA Pacific cod fisheries subject to the Limited License Program are currently managed as a limited access race for fish. There are substantial numbers of latent fixed gear licenses with Western and Central GOA endorsements. Participants who have made significant long-term investments, have extensive catch histories, and are highly dependent on the GOA Pacific cod fisheries subject to the LLP need protection from the re-entry of latent effort into the fisheries. Adding Pacific cod endorsements to licenses in order to limit access to the directed Pacific cod fisheries in the GOA would prevent new entrants into the fisheries from impinging on historic levels of catch by recent participants in the fisheries.

4.4 Objectives of, and the legal basis for, the proposed action

The objective of the proposed action is to add Pacific cod endorsements to fixed gear licenses with recent catch history in order to limit entry to the Western and Central GOA Pacific cod fisheries to those

participants with recent catch history. The problem statement notes that many fixed gear vessel owners have made significant investments, have long catch histories, and are dependent on WGOA and CGOA Pacific cod resources. The proposed amendment may increase stability in the GOA fixed gear fisheries.

The legal basis for this action is the Magnuson-Stevens Fishery Conservation and Management Act (MSA). One of the stated purposes of the MSA is to promote domestic commercial fishing under sound conservation and management principles and to achieve and maintain the optimum yield from each fishery.

4.5 Number and description of affected small entities

The proposed action directly regulates persons who hold fixed gear groundfish LLP licenses with Western or Central GOA area endorsements. Licenses without recent participation in the Western or Central GOA Pacific cod fisheries will no longer be eligible to participate in the directed Pacific cod fisheries in Federal waters of the GOA. There are 972 fixed gear catcher vessels licenses subject to the proposed action; 883 of these licenses have Central GOA endorsements and 264 licenses have Western GOA endorsements (175 licenses have both area endorsements). The contact licensee information on each license was used to determine ownership affiliation. Based on this information, there are 909 entities that own these catcher vessel licenses, and 20 of these are large entities based on 2007 gross revenues. There are 53 fixed gear catcher processor licenses subject to the proposed action, including 49 licenses with Central GOA endorsements and 31 licenses with Western GOA endorsements (27 licenses have both area endorsements). These licenses are owned by 47 entities, 28 of which are large entities based on 2007 first wholesale revenues. In sum, the proposed action would directly impact 889 small entities that own fixed gear catcher vessel licenses with Western and/or Central GOA area endorsements, and 19 small entities that own fixed gear catcher processor licenses with Western and/or Central GOA area endorsements. It is likely that additional licenses are affiliated through partnerships with other entities, and would be considered large entities for the purpose of this action, but in the absence of complete ownership information, these affiliations cannot be determined.

4.6 Recordkeeping and reporting

Implementation of the proposed action to add Pacific cod endorsements to licenses would not change the overall reporting structure and record keeping requirements for vessels in the GOA groundfish fisheries. Currently, NOAA fisheries does not require vessel owners to report the LLP license used while participating in the groundfish fisheries subject to the LLP. This action would not add any new reporting requirements for vessels.

4.7 Relevant Federal rules that may duplicate, overlap, or conflict with the proposed action

There do not appear to be any Federal rules that duplicate, overlap, or conflict with the proposed action.

4.8 Description of significant alternatives to the proposed action

The Council is currently considering two alternatives for this action. Under **Alternative 1**, no Pacific cod endorsements would be added to Western or Central GOA fixed gear LLP licenses. Under **Alternative 2**, fixed gear LLP licenses with Western and Central GOA endorsements that meet minimum catch thresholds would receive a Pacific cod endorsement. The proposed action could potentially apply different catch thresholds to licenses, depending on the operation type or size of the vessel. Options to

exclude jig vessels from the LLP requirement or from the Pacific cod endorsement requirement would be advantageous to jig vessels, which are among the smallest entities participating in the fisheries.

5.0 CONSISTENCY WITH OTHER APPLICABLE LAWS

5.1 Consistency with National Standards

Below are the ten National Standards in the Magnuson-Stevens Act (Act), and a brief discussion of the consistency of the proposed alternatives with those National Standards.

National Standard 1 – Conservation and management measures shall prevent overfishing while achieving, on a continuing basis, the optimum yield from each fishery.

In terms of achieving 'optimum yield' from the fishery, the Act defines 'optimum', with respect to yield from the fishery, as the amount of fish which:

(A) Will provide the greatest overall benefit to the Nation, particularly with respect to food production and recreational opportunities, and taking into account the protection of marine ecosystems;
(B) Is prescribed as such on the basis of the maximum sustainable yield from the fishery, as reduced by any relevant economic, social, or ecological factor; and,
(C) In the case of an overfished fishery, provides for rebuilding to a level consistent with producing the maximum sustainable yield in such fishery.

The GOA groundfish fisheries will continue to be managed under the current harvest specifications process. Groundfish stocks in the GOA are not currently in danger of being overfished and are considered stable. Overall levels of groundfish catch by the fixed gear sectors in the GOA are not likely to be affected by the proposed action. The proposed action would add Pacific cod endorsements to fixed gear licenses with Western or Central GOA endorsements if the licenses have landings during recent years. Recent participants in the fisheries would continue to have access to the directed Pacific cod fisheries subject to the LLP. The distribution of catch among sectors or participants and the overall net benefits to the Nation are not expected to change to an identifiable degree.

National Standard 2 – Conservation and management measures shall be based upon the best scientific information available.

This analysis is based on the most current, comprehensive data available, recognizing that some information (such as operation costs) is unavailable.

National Standard 3- To the extent practicable, an individual stock of fish shall be managed as a unit throughout its range, and interrelated stocks of fish shall be managed as a unit or in close coordination.

The Western and Central GOA groundfish TACs are established on an annual basis during the harvest specifications process. NOAA fisheries conducts annual GOA stock assessments for the groundfish species and makes acceptable biological catch recommendations to the Council. The Council sets the groundfish TACs based on the most recent stock assessment and survey information. Separate quotas for each groundfish species in the GOA would continue to be monitored inseason by NMFS.

National Standard 4 – Conservation and management measures shall not discriminate between residents of different states. If it becomes necessary to allocate or assign fishing privileges among various U.S. fishermen, such allocation shall be (A) fair and equitable to all such fishermen, (B) reasonably calculated to promote conservation, and (C) carried out in such a manner that no particular individual, corporation, or other entity acquires an excessive share of such privileges.
Residency within a specific state is not a criterion for receiving a Pacific cod endorsement. Licenses which meet minimum landings thresholds will remain eligible to participate in the Western and Central GOA Pacific cod fisheries, and exceptions to these eligibility standards will not be made for individual persons or entities based on residency in a specific state.

National Standard 5 – Conservation and management measures shall, where practicable, consider efficiency in the utilization of fishery resources, except that no such measure shall have economic allocation as its sole purpose.

The wording of this standard was changed in the 1996 Magnuson-Stevens Act authorization, to 'consider' rather than 'promote' efficiency. Efficiency in this context refers to economic efficiency, and the reason for the change is to de-emphasize the importance of economics relative to other considerations (Senate Report of the Committee on Commerce, Science, and Transportation on S. 39, the Sustainable Fisheries Act, 1996). The analysis presents information on economic considerations, but does not emphasize this standard over other considerations.

National Standard 6 – Conservation and management measures shall take into account and allow for variations among, and contingencies in, fisheries, fishery resources, and catches.

Adding Pacific cod endorsements to groundfish licenses in order to limit access to the directed Pacific cod fisheries in the Western and Central GOA is unlikely to reduce the ability of recent participants to increase effort in response to changes in fishing and market conditions. Overall harvest levels by the fixed gear sectors would not be constrained by the proposed action. In the event of lower Pacific cod quotas in the BSAI or changes in other fisheries, this action would protect the relative harvest levels of those license holders that have recently participated in the fisheries and are dependent on the GOA Pacific cod resource. In addition, provisions to exclude the jig sector from the Pacific cod endorsement requirement may increase future opportunities for participation and total catch by this sector.

National Standard 7 – Conservation and management measures shall, where practicable, minimize costs and avoid unnecessary duplication.

The alternatives under consideration appear to be consistent with this standard.

National Standard 8 – Conservation and management measures shall, consistent with the conservation requirements of this Act (including the prevention of overfishing and rebuilding of overfished stocks), take into account the importance of fishery resources to fishing communities in order to (A) provide for the sustained participation of such communities, and (B) to the extent practicable, minimize adverse economic impacts on such communities.

The RIR presents information on the impact of the proposed action on licenses held by residents of Alaska and other states, and provides detailed information on the number of qualifying licenses from Alaska communities. This action does not appear to have a disproportionate effect on residents of a particular state or on specific fishing communities. The RIR discusses the number of licenses held by residents of coastal fishing communities, including Community Quota Entity (CQE) communities that could qualify to for a Pacific cod endorsement. The analysis also discusses the relative importance of the Pacific cod fishery in comparison to other commercial fisheries to these communities.

In Component 7, the Council has the option to exempt licenses held by residents of CQE communities from the catch thresholds proposed by the action. These licenses would receive a Pacific cod endorsement even if they do not have recent landings in the fishery. The intent of this exemption is to help minimize any adverse economic impacts of this action on these small, remote communities, and to ensure that community residents who currently hold licenses continue to have access to the Pacific cod fishery.

Major ports in Alaska that process groundfish catch from the Western and Central GOA include Kodiak, Sand Point, King Cove, Homer, and Dutch Harbor, and the proposed action would not directly impact communities with processing facilities. Additionally, the greater Seattle, Washington metropolitan area is home to many catcher and catcher processor vessels operating in the fixed gear fisheries, as well as cold storage, transshipping, and secondary processing facilities. Information on these communities is available in the Steller Sea Lion SEIS (NMFS 2001b), the Draft Programmatic SEIS (NMFS 2001a), and the crab rationalization EIS (NPFMC 2004). Detailed information on Kodiak, Akutan, Dutch Harbor, and King Cove is available in the Comprehensive Baseline Commercial Fishing Community Profiles Final Report (EDAW 2005).

National Standard 9 – Conservation and management measures shall, to the extent practicable, (A) minimize bycatch, and (B) to the extent bycatch cannot be avoided, minimize the mortality of such bycatch.

The EA (Chapter 2) presents information on bycatch of prohibited species by the fixed gear sectors in the GOA Pacific cod fishery. This action, in combination with the proposed Pacific cod sector allocations, is not expected to change the overall amount or rate of PSC by the fixed gear sectors.

National Standard 10 – Conservation and management measures shall, to the extent practicable, promote the safety of human life at sea.

This action, in combination with the proposed Pacific cod sector allocations, may reduce the race for fish by limiting entry to the fixed gear sectors.

5.2 MSA Section 303(a)(9) – Fisheries Impact Statement

The Magnuson Stevens Act requires that any management measure submitted by the Council take into account potential impacts on participants in the fisheries subject to the proposed action, as well as participants in other fisheries. The impacts of alternatives on participants in the harvesting and processing sectors are discussed in Chapter 3. The proposed action is unlikely to affect the historic distribution of catch among sectors. License holders with minimal levels of catch during recent years will continue to have access to the directed Pacific cod fisheries. As a result, this action is unlikely to have a substantial effect on the number of participants or overall level of effort in the GOA Pacific cod fishery or other GOA groundfish fisheries prosecuted by the fixed gear sectors. Pacific cod seasons will likely continue to be short, particularly during the A season, and any new participants will need to forgo participation in other fisheries. Consequently, no impacts to participants in other fisheries are anticipated.

5.3 Marine Mammal Protection Act

The Marine Mammal Protection Act (MMPA) of 1992 (16 U.S.C. 1361 *et seq.*) vests the Department of Commerce with authority to manage marine mammal populations. The Department of the Interior, USFWS, has management authority for all other marine mammal species in Alaska, including sea otter, walrus, and polar bear. The MMPA recognizes that certain species and populations of marine mammals

are or may be in danger of depletion due to human activities, and that marine mammals are resources of international significance and should be protected using best management practices.
The primary management objectives of the MMPA are to maintain the health and stability of the marine ecosystem and to maintain sustainable populations of marine mammals within the carrying capacity of the habitat. The MMPA is intended to work in concert with the provisions of the Endangered Species Act. The Secretary of Commerce is required to give full consideration to all factors regarding regulations applicable to the take of marine mammals, including the conservation, development, and utilization of marine resources, and the economic and technological feasibility of implementing the regulations. Impacts of commercial fishing activities on marine mammal populations must be analyzed in an EA or EIS, and the Council or NMFS may be requested to consider measures to mitigate adverse impacts. Under the proposed action, no changes in the temporal or spatial distribution of harvests or overall level of fishing effort are anticipated. Consequently, no additional impacts to marine mammal populations are expected to result from the proposed action.

5.4 Coastal Zone Management Act

Implementation of either of the alternatives would be conducted in a manner consistent with the Alaska Coastal Management Program and Section 30(c)(1) of the Coastal Zone Management Act of 1972 and its implementing regulations.

House Resources Committee

3-18-09

Thank you chairman members of the Commite.
My name is Ilia Kuzmin I represent K-Bay Fisheries Association.
Long time cod participant in the Gulf of Alaska Specifically in Central Gulf but, based out of Homer We have to end this race for fish due to Safety as number I priority.
We oppose House Joint Resolution # 21 as it is not produtive for the legislature to insert themselves into complex fishery management issues.
In HJR 21 there are misrepresentations and incorrect assertions, such as consolidation of vessels, reduction of participants elemination of crew jobs.
So, we ask the Commite to let the Council do it's job to complete this process of LLP Recency.
With the current final action that the Council is considering there will still be anywhere from 110 to 306 pemits that will qualify It is totally false because with the LLP recency Action that the Council will take will actually save crew jobs, protect long time local Alaska fisherman that have been dependent on P-cod fishery, protect small boat owner/operators from being pushed out of the fishery by bigger 58 Footers, that have just recently started fishing and are taking a bigger chunk of the TAC.

We do not support HJR 21 and urge you to let the Council process work as it is intended to do.

Sincerely,
Ilia Kuzmin

Public Comment of Shawn Dochtermann on HJR 21 re P.Cod Endorsements

Wednesday, March 18, 2009

Chairmen Johnson & Neuman and House Resource Members,

I'm Shawn Dochtermann, a second-generation commercial fisherman from Kodiak with over 30 years of fishing experience under my knife belt. I'm here representing my interests in Gulf of Alaska fisheries, today — even though I'm frequently a public advocate for many Alaskan fishermen, their families and coastal communities.

I'm here in support of HJR 21, for many reasons.

First I'd like to review a brief history of fisheries rationalization regimes:

- Fifty years ago, we became a state, and forced fisheries processors to start sharing profits of the resources that were being extracted from our state.
- Fast forward to the early seventies, Limited Entry was introduced as state fishery law. **There was only one catch: in order to harvest the fish, the permit holder had to actually put his boots on and go down and work on the boat, go fishing, catch the fish and then deliver them for processing. It was an owner-on-board fishery**, and the crews got paid well.
- In 1995 the halibut and sablefish federal fisheries management program (FMP) was changed from open access to Individual Fish Quotas, a.k.a. IFQs, DAPs, LAPs, or 'Catch Shares'. The NPFMC gave quotas to vessel owners and the program created a superior right so they would never have to step foot on boat again if they so chose. **This is what you would call an absentee owner model.**

  For the record, approximately 15,000 halibut crewmen and skippers lost their jobs in one day. But at least when quotas are sold or the initial recipient expires from the fishery (my father will be 100 years old, I'll bet!) the IFQ has to be fished by the quota holder. That's what one would call fair – as compared to the newer privatization schemes. And the quotas were awarded only to fishermen as suppliers, not given to processors as buyers: who might dominate price setting.
- Next (BS) pollock was privatized in 1998 with the direct help of Ted Stevens and Trevor McCabe. **Now foreign owned companies that own processors and vessels are granted exclusive rights to catch and process pollock in the BS.** This greatly degraded Alaska's sovereign abilities to control its own resources.
- Lastly, in 2005 came Bering Sea Aleutian Island Crab Rationalization (CR) or CRAB RATZ. With a name like that one would know there's real "devils in the details", as over 1,000 crab crewmen were disenfranchised by Ted Stevens' Rider on a must-pass federal appropriations bill. **This gifted over 1 Billion Dollars in**

IFQ rights to about 100 individuals and corporations.

The processing rights were given to 7 major processing companies. Japanese trading companies own 40-50% of the processing rights, while Trident Seafoods has over 25% of processing and a large amount of IFQs. **All of the IFQs were given to the quota holders forever; consequently there is no program to get fishing privileges back into the hands of active fishermen.**

Crewmen in the Bering Sea are now getting paid at unfair and inequitable compensation rates due to high rent seekers taking exorbitant lease fees off the top. The average Bering Sea crabber now makes from 50-70% less than he did pre-rationalization. Now BS crab IFQ holders (who by majority live out of state) can play golf in Hawaii during the crab season — and collect a paycheck from Alaskan crab that was harvested without having to even own a boat or gear — by skimming 70% of the gross proceeds right off the top, before the boat it is fished on leaves the dock.

The next generation (myself included) is now sitting at this table and we've had enough of **fishery access removal** by the factions of fisheries lobbyists you will hear from today. If you're not born into a fishing family, it will take millions of dollars invested just to go catch some fish.

We fought Ben Stevens and his thuggery and stopped SB113 in this same building in 2005/6, and we won. Governor Palin was elected and she put the kibosh on the rush into GOA groundfish rationalization. **But now the NPFMC is trying to get GOA groundfish rationalization through by other means to suit the trawlers' need of getting quota ownership and securing the high value bycatch — incidental species now targeted that should by the standards of the Magnuson Stevens Act and related fisheries laws be brought to a halt.** The gear groups that fish the dirtiest should be penalized for excessive bycatch, not awarded allocations as a prize for lobbying efforts and campaign financing.

In summary, removing the latent LLPs from the GOA groundfish permit holders will leave state waters as the dumping ground for new entrants. Why shouldn't federal waters have a place for active fishermen as new entrants to transition into, for all of its fisheries? Where is the problem of too many fishing vessels? There is no great influx of vessels coming into the GOA Pacific cod fishery in the last 5-10 years. It's not financially viable for that many vessels to stay in the fishery, in any case — especially with the huge recent drop in ex-vessel cod prices. So, many vessels are now fishing only to secure rights to a catch history in case a rationalization management or privatization scheme gets imposed.

I'll be headed out jigging in state waters this week. But with these low prices, it looks like I'll be fishing first for my sanity and second to try to make an income. But there are no guarantees, it's fishing. I should be able to have access to the fisheries that are right outside of my doorstep, and the next generation should have that opportunity as well. **Fishing rights need to remain with those who go out on the boats.**

Removing these LLPs from the fixed-gear fishermen will simply **take rights from active and future fishermen and give exclusive rights to a investor-only faction who do not fish.**

The North Pacific Fishery Management Council presides over the federal waters off of one state only: Alaska. And the Council and State conduct joint Board of Fish and other coordinated efforts. Yet some have argued that you should not concern yourself with advising the Council on behalf of the People of Alaska whom you represent. Nothing could be further from the truth. It is both the right and duty of this Legislature to keep watch over these economic and social issues. In fact, it is inherent in our State's birthright and Constitution.

I urge the House Resources Committee to move HJR21a to the floor and ask all of the members here today to speak with the state senator representing their district to move this Resolution forward to the NPFMC.

As always, I appreciate the time you've taken to listen to my comments.

Respectfully,

Shawn C Dochtermann

COMMENTS ON HJR 21 FOR THE HOUSE RESOURCES COMMITTEE

March 18, 2009

I would like to submit written comments in regard to HJR 21. I am in opposition to this Resolution and would like to refer you to my written comments submitted to the Fisheries Committee last week. Following are additional thoughts and comments.

The Resolution has created a significant amount of confusion with regard to the Pacific cod limited entry recency provision being contemplated at the North Pacific Fishery Management Council (Council). It states that this action would facilitate federal takeover of Alaska's fisheries and that the license which would be issued is rationalization or a step toward rationalization. Both of these statements are inaccurate.

First, it is important to note that of the 11 voting members of the Council, a majority of six are Alaskan whose names are submitted to the Secretary of Commerce by the Governor of Alaska. This ensures that Alaska will be able to create and shape policy as it moves through the Council process. The leader of the state team is the Commissioner of ADF&G. There is only one federal voting member of the Council. The other four seats are from Washington and Oregon. I provide this information to assure the members of the Resources Committee that a federal takeover of fisheries in Alaska cannot occur without the State of Alaska in agreement and that is not about to happen.

In regard to the "rationalization" statements in the Resolution, this is very problematic to me. The definition of rationalization typically describes some sort of catch sharing program, either with cooperatives or individual fishing quotas. In fact, in the past two administrations with Governor Knowles and Governor Murkowski, the Council actively worked on rationalizing fisheries. Under the watch of Governor Knowles, the Council passed the crab rationalization program, which for the first time in history in the United States required harvesters to deliver 90% of their crab to specific processors. Under the Murkowski administration, for which Representative Austerman was fishery advisor, the rockfish pilot program emerged, as well as active movement toward individual catch quotas for Pacific cod in the Gulf of Alaska. It is important to note that within less than a week after Governor Palin was inaugurated in early December of 2006, the North Pacific Council, at the request of the governor and Commissioner Lloyd, took rationalization of Gulf of Alaska Pacific cod off the table and moved to a sector split discussion and then a recent landing requirement.

This is a limited entry discussion, not rationalization and I believe this important distinction has been lost in the rhetoric.

Since 1999, the Gulf of Alaska Pacific cod management has been under consideration at the North Pacific Council and at each step of the way, Alaska has led the policy on management options. Nothing has changed. Finally, after long years of dealing with this, the Council is poised to take final action in two weeks to address a significant problem. That problem is that there are a

significant number of groundfish limited entry permits that have never had a directed landing of Pacific cod – up to 600 in the Central Gulf alone. If someone has not purchased a permit or fished a permit for Pacific cod in the last nine years, I don't believe they've demonstrated a dependence on this resource. There are many others who are actively engaged in the fishery and they need protection from those who would enter this fully subscribed fishery. That protection is vital, particularly in light of the fact that those entities most likely to purchase unused permits and aggressively begin harvesting Pacific cod are those with significant funding sources, primarily out of Washington and Oregon.

Another issue for your consideration is that the state waters fishery, which is 25% of the overall catch limit, is not under any kind of license restriction, and action being contemplated by the Council would also not limit any efforts in the jig fishery. This is important for those entry level and small boat owners.

Before taking action to approve this Resolution, please read the recently released 129-page analysis that clearly identifies the problem being addressed, as well as potential solutions being considered. This process has been complete and measured, with the issue being addressed at many meetings over the last ten years. Remember, the State of Alaska is always shaping fish policy at the Council and this action is good fish policy. Many of us have worked closely with the governor's office and ADF&G to help create the proposal being considered for final action next month in Anchorage.

Thank you for reviewing my comments.

COMMENTS ON HJR 21- March 2009

In reviewing HJR 21, I have concerns regarding the resolution that I would like to address. These concerns are divided into three categories in the hope to more efficiently articulate my thoughts. My proposal to the North Pacific Council can be found at the end of this document.

History of the Issue and Some Facts

In regard to HJR 21, I wonder how many members of the Legislature or staff have bothered to read the 80-page analysis or reviewed the problem statement or the history of this issue. In 1999, the Council, at the request of industry, began working on a comprehensive program that would provide individual fishing quotas for the Pacific cod fishery participants in the Gulf of Alaska. By April of 2003, the Council was prepared to begin discussions on a preliminary alternative for defining the program. The full analytical process began and for three years, hearings were held.

In 2006, shortly after a change in administration, the State of Alaska successfully removed the IFQ alternatives from the discussion and instead began to look at stabilizing the Pacific cod fishery by revising the limited entry licenses that are in place for groundfish and for creating sector allocations. The recency proposal was to provide for a specific endorsement to fish in the directed Pacific cod fishery and participation in that directed fishery would be necessary in order to receive the endorsement. It is important to note that when the original groundfish licenses were initially distributed that any landing of any type of groundfish qualified a person to receive the license. The proposal now is to simply provide a directed Pacific cod endorsement for those who have actually fished Pacific cod in the last nine or ten years.

The North Pacific Council has been dealing with the Pacific cod issue since 1999 and final action on this item is scheduled for April of this year. There has been plenty of time for people to provide comments and recommendations in the last ten years. Many Alaskan fishermen who are dependent on this fishery support the Council moving forward and providing some stability in this fishery.

Agency Authority for Fishery Management

For the state waters fisheries including salmon and herring, the authority to manage lies with the Alaska Board of Fisheries, with limited entry proposals being addressed by the Commercial Fisheries Entry Commission. For the federal fisheries, the North Pacific Fishery Management Council is tasked with recommending to the Secretary of Commerce various management and allocation decisions, as well as limiting access to the resource. Each of these bodies has a process for their decision-making, which includes proposals, analysis, hearings, and appeals. In regard to the North Pacific Fishery Management Council, the governor of the State of Alaska is represented by the ADF&G Commissioner or designee and there are five other Alaskans on the Council.

When the United States Congress or Alaska Legislature intervene in the management of fishery issues, problems are inevitable. Many times elected officials have been lobbied on an issue by a segment of the industry focused on achieving a specific goal, and they approach a friendly elected face to promote that idea. It is often the case that the information presented is lacking or even misleading and very little time is spent on attempting to understand the issue.

Specific Concerns Regarding the Resolution

The resolution is specific to limited entry, but the WHEREAS statements mix limited entry with individual fishing quotas which results in a confusing and misleading document.

Some observations regarding specific sections are shown below:

Page 2, line 6:

The action in question is only for the federal waters and inside three miles, which are state waters, no limited entry exists. This is confusing.

Page 2, line 12:

The North Pacific Council under the leadership of the State of Alaska, in fact, reversed course in 2006 and is now only focused on the limited entry aspects of the fishery. This is not considered "rationalization" and should not be confused with an IFQ or cooperative fishery.

Page 2, line 16:

Limited entry is not known as "rationalization".

Page 2, line 18:

The action being considered is not "rationalization" and other limited entry programs such as salmon and herring have not demonstrated significant job losses or consolidation, rather they have served to stabilize the industry.

Page 2, line 20:

The action being considered will not have negative impacts on businesses in coastal Alaska. Again, the action will not promote consolidation or job loss.

Page 2, line 22:

Active participation in a fishery is considered by some to be owner on board, while others consider it to be a vessel owner who hires a qualified skipper and crew to run their vessel. The tradition in the Pacific cod fishery in the Gulf is for some owner on board and some hired skipper situations. This will not change in the limited entry action being considered.

Page 2, line 25:

This statement does not appear to be factual.

Page 2, line 27:

All limited entry fisheries have some entry costs. The cost for entering the Pacific cod fishery will be substantially less than that for many salmon or herring fisheries in the state. This statement seems to say that all fisheries should revert to open access. Most salmon or herring permit holders would not agree.

Page 3, lines 15 - 29:
It is difficult to agree that all groundfish fixed gear licenses without a cod endorsement would be valueless. If you have never fished for Pacific cod and don't get an endorsement to fish Pacific cod in the directed fishery, you have lost nothing.

Page 4, line 2:
A limited entry program is not a natural progression towards "rationalization".

Page 4, lines 4 - 12:
The number of participants will not decline under one of the Council's alternatives. Instead it will simply grant an endorsement to participate in the directed Pacific cod fishery for those who already are or have even made one landing since 2000. No jobs will be lost or demand reduced for shore side support or services.

Proposal for the North Pacific Fishery Management Council
The proposal that I have been promoting for some time is that if anyone has demonstrated dependence in the last ten years by either purchasing a license or making even one landing, they would receive a fully transferable Pacific cod endorsement. This seems very generous and would not shut anyone out of the fishery. If you haven't made even one landing in ten years, you aren't dependent on the fishery.

In speaking with Council staff, there are about 900 groundfish licenses in the Central Gulf and around 300 in the Western Gulf for fixed gear. If the Council chose to award Pacific cod endorsements for those vessel owners who have made at least one landing in the last ten years, regardless of poundage, this would result in around 300 licenses in the Central Gulf and 150 in the Western Gulf. This action would provide stability for the fleet that is dependent on the fishery, demonstrated by their actual participation

The Council action would not preclude halibut IFQ harvesters from retaining cod taken incidentally, nor would it limit in any way the jig fishery. Of course, the state waters fishery has no license restrictions.

House Fisheries Special Committee
State Capitol, Room 416
Juneau, AK 99801-1182

Re: HJR 21 "Requesting the North Pacific Fishery Management Council to cease consideration of an amendment package that would require a Pacific cod endorsement for a license limitation program license holder to participate in the Pacific cod fisheries in the Gulf of Alaska"

Dear Representative Edgmon,

We respectfully submit the following comments in opposition to HJR 21 (i.e., "Requesting the North Pacific Fishery Management Council to cease consideration of an amendment package that would require a Pacific cod endorsement for a license limitation program license holder to participate in the Pacific cod fisheries in the Gulf of Alaska").

I. Introductory Comments

HJR 21 addresses a proposed regulatory action that is under consideration by the North Pacific Fishery Management Council ("NPFMC" or "Council"). The proposed regulatory action is intended to add gear-specific (i.e., pot, hook-and-line, and jig) Pacific cod "Endorsements" to fixed gear licenses for the purpose of limiting entry to the directed Pacific cod fisheries in Federal waters of the Western Gulf of Alaska (WGOA) and the Central Gulf of Alaska (CGOA). Briefly, licenses that meet the selected catch threshold (1, 3, or 5 landings, or 5 mt, 10 mt, 25 mt, or 100 mt of directed Pacific cod catch) using pot, hook-and-line, or jig gear would receive gear-specific Pacific cod "Endorsements". The NPFMC has the flexibility to select different catch thresholds for vessels within the array of gear (i.e., pot, hook and line, etc.), operation type (i.e., catcher vessel, catcher processor, etc.) and vessel length sectors that are included in this proposed action.

It is important to note that the proposed action to implement Gulf of Alaska (GOA) fixed gear P. cod Endorsements provides needed stability for the Alaska resident fleets that participate in the WGOA and CGOA fixed gear P. cod fisheries, and incorporates several tools to ensure ample opportunities for new participation and entry-level participation in these fisheries. The proposed Endorsements action seeks to arrest an ongoing and continued deterioration of, and to provide necessary protection for, the social, cultural and economic characteristics of WGOA and CGOA communities, and those fishing businesses, vessels, vessel owners, operators, crews, support businesses, etc. that are so important to Kodiak and

other Alaska coastal communities, and that depend on stability and growth in the CGOA fixed gear P. cod fishery. The proposed GOA fixed gear P. cod Endorsements action adopts a fleet management protocol that is very similar to that which is instituted in the State of Alaska Limited Entry system; that is, the proposed Endorsements action creates licenses that have a similar purpose and function, for example, as the Limited Entry Licenses that are created by the State of Alaska in the Kodiak salmon, herring and tanner crab fisheries.

In addition to comments that directly address our opposition to HJR 21, we have included a brief compilation of relevant and recent documentary resources that define and explain the complexity of the proposed GOA Fixed Gear P. cod Endorsements action, and the serious and significant attention that has been invested in such proposed action.

II. Comments on HJR 21

We respectfully request that the House Fisheries Special Committee (House Fisheries Committee) take no action on HJR 21.

We respectfully request that the House Fisheries Committee please understand that a regulatory process has been underway for a long period of time to develop a proposed action for GOA fixed gear P. cod Endorsements. We respectfully request the House Fisheries Committee to please understand that many of the Alaskan communities, fishing businesses, vessels, vessel owners, operators, crews, support businesses, etc. that depend on the GOA fixed gear p. cod fishery would be detrimentally impacted by the adoption of HJR 21. We fear that the individuals, businesses and coastal communities who are in need of the proposed Endorsements action may be harmed by any legislative insertion into this process that may be caused by HJR 21. HJR 21 seeks to insert the Alaska Legislature into a regulatory process that is governed by a federally established entity that has developed the proposed initiative for GOA fixed gear P. cod Endorsements. However, HJR 21 falls far short of providing an accurate, thorough, complete and comprehensive consideration and understanding of the issues that are associated with the proposed Endorsements action. We fear that a significant risk exists to the individuals, businesses and coastal communities who are impacted by the proposed Endorsements action if the Alaska Legislature does not guarantee a significant investment of their time and attention to fully and completely understand the significant complexity, considerations, ramifications and details of the statutory, regulatory, social, cultural, economic and statistical considerations and analysis that have heretofore already been invested in the Endorsements initiative.

To be clear, we respect and support the authority, interests and prerogatives of the Alaska Legislature, on behalf of the State of Alaska, its resources and its citizens, to convey official expressions and resolutions of interest, intent and policy for the purpose of addressing

specific resource management initiatives that may otherwise lie within the official jurisdiction of a resource management entity that is officially established apart from the jurisdiction of the State of Alaska. However, the action that is proposed in HJR 21 is misdirected, unproductive and unreasonable, and leads to no practical or beneficial result whatsoever. And the accuracy, efficacy, manner of expression and foundation of the provisions therein contained are in large part hyperbole, malapropos, uninformed and inaccurate. HJR 21 suggests action that would significantly disadvantage and harm Alaska-resident harvesters and Alaskan coastal communities, and, instead, permit the continuing erosion of Alaskan interests in the GOA fixed gear P. cod fishery that is caused by non-Alaskan interests, and other interests that are otherwise enriched by favorable management programs in other fisheries.

Please bear in mind that the consideration of the proposed action for GOA fixed gear P. cod Endorsements is given by federal statute to a federally established entity (i.e., the NPFMC) in which the State of Alaska has statutorily been provided with significant official standing, involvement, influence and participation. The State of Alaska has reasonably sufficient and experienced professional resources with which to engage, and which have, in fact, reasonably engaged, in the development of the proposed Endorsements action. The State of Alaska has significant and ample opportunity to consider, balance, judge and advocate the details and impacts, and the policy and other considerations, that are associated with the proposed Endorsements action.

Importantly, the proposed Endorsements action that is referenced in HJR 21 has been under development for several years, and is scheduled for final action during the April, 2009, NPFMC meeting. The proposed action is very important to the stability, survival and future growth of the traditional and customary social, cultural, economic and business framework of Kodiak and other Alaska coastal communities. In fact, aggressive action to address the problems, challenges and threats to such stability, survival and future growth, such as are addressed in the proposed GOA Endorsements action, should have been taken and implemented many years ago.

We respectfully request that the House Fisheries Special Committee, the House Resources Committee and the Alaska Legislature please do not insert themselves in the proposed GOA fixed gear P. cod Endorsements initiative, especially in the manner that is expressed in HJR 21. We respectfully request that the House Fisheries Committee take no action on HJR 21.

III. Brief Compilation of Relevant and Recent Documentary Resources

A. Analysis (Public Review Draft EA/RIR/IRFA; March 3, 2009)

"PUBLIC REVIEW DRAFT; ENVIRONMENTAL ASSESSMENT/REGULATORY IMPACT REVIEW/INITIAL REGULATORY FLEXIBILITY ANALYSIS for a Proposed Amendment to the Fishery Management Plan for Groundfish of the GOA Management Area to ADD PACIFIC COD ENDORSEMENTS TO WESTERN AND CENTRAL GOA FIXED GEAR LLP LICENSES; March 3, 2009" (129 pages)
<http://www.fakr.noaa.gov/npfmc/current_issues/pcod/fixedgearrecency309.pdf>

The above referenced document is commonly referred to as an "Analysis", and illustrates the most recent version of the analytical review of those conservation, management, community, statutory, regulatory, policy and other issues that the Council has determined to be included in such Analysis, in response to significant and diverse public testimony, agency comment (including from NOAA General Counsel, National Marine Fisheries Service Sustainable Fisheries Division and Enforcement Division personnel or "NMFS", Alaska Department of Fish & Game or "ADF&G", United States Coast Guard or "USCG", etc.), conformity with federal statutory and regulatory requirements (i.e., NEPA, etc.), etc.

Please see Chapter 1.1 ("Purpose and Need for the Action"; page 21), and the associated "GOA Fixed Gear Recency Purpose and Need Statement" (page 23).

Please also see that the subject Analysis identifies the most recent array of "Alternatives and Options" that are under consideration by the NPFMC for the proposed regulatory action (please see Chapter "1.2 Alternatives"; page 24).

B. December 2008 NPFMC Newsletter Article (see page 7) "GOA Fixed Gear LLP Pacific cod Endorsements"
<http://www.fakr.noaa.gov/npfmc/newsletters/news1208.pdf>

This NPFMC December 2008 newsletter article provides the public with a brief summary of the status, elements, direction and expectations for NPFMC action on the proposed GOA fixed gear P. cod Endorsements action that is the subject of HJR 21.

Thank you for your consideration of our comments on HJR 21.

Sincerely,

Jeffrey R. Stephan

March 18, 2009

Representative Craig Johnson, Co-Chair, House Resources Committee Representative Mark Neuman, Co-Chair, House Resources Committee Members, House Resources Committee

Dear Co-Chair Johnson, Co-Chair Neuman, and members of the House Resources Committee,

We respectfully submit the attached testimony in opposition to HJR 21 <UFMAStephanTestimonyHJR21_030909.pdf>.

Please note that this testimony is the same testimony that we submitted to the House Fisheries Special Committee for their March 10 hearing on HJR 21.

HJR 21 will result in negative outcomes for Alaska's coastal communities, harvesters, captains, crews and support businesses that support the Gulf of Alaska pacific cod fishery.

The declarations that are offered in HJR 21 are largely misleading, inexact and faulty, and do not accurately portray the underlying circumstances or anticipated outcomes that form the basis of the action by the North Pacific Fishery Management Council that HJR 21 seeks to obstruct.

We support the initiative by the North Pacific Fishery Management Council to adopt and implement "Endorsements" in the Gulf Of Alaska Pacific Cod fixed gear fisheries; we object to the initiative that is promoted by HJR 21 to encourage the Alaska State Legislature to interfere with this initiative, and, especially, when this requested interference is based on rationale that is absent the thought, discourse and study that should otherwise be invested in issues that carry significant economic, social and cultural consequences.

Please consider our testimony during the House Resources Committee hearing on HJR 21 that is scheduled for today, March 18.

We respectfully request the House Resources Committee to either not pass HJR 21, or to otherwise hold HJR 21 in committee.

Thank you.

Sincerely,

Jeff Stephan

3/17/09 pm

My name is DJ Vinberg and I have fished in the Kodiak area for 40 years. I am a 3rd generation fisherman and own and operate the same boat as my father before me.

I am opposed to HJR21. Morally I agree with the open fishing concept, but I live and fish in a real world and have felt the impact of rationalization for 14 years. The race for history is on. Pandora's Box is open and those of us with a long history in the Kodiak area are not protected.

With relatively no restrictions, our cod fishing is rapidly becoming a derby-style fishery, not unlike Halibut fishing of the past. A Cod season used to last 3-4 months; this year it was 26 days and preseason estimates were 75-100 more participants. Boats came from the West Coast due to the depressed Dungy economy. A large proportion were long liners from the peninsula and most disturbing to me were the larger boats from out West who have crab IFQ's (made their deal with the devil) who now are free to participate in any open fishery at no risk to their already "banked" crab money.

The Cod fishery represents 50% of my yearly income. In 2009 the length of time for fishing the Federal Cod season was reduced to 26 days and the State Cod season to 14 days. This has put me survival mode. If left unchecked, our cod fishery will be over capitalized with emphasis on quantity and not quality caught in a 30 day period. This will allow for a more depressed price and more risky fishing, as a day missed due to weather is a missed opportunity with the clock ticking.

I personally feel that there should be more restrictions on access to our cod fishery and definitely some qualifying years set in place. The +800 LLP permits in the Central Gulf is a joke and does nothing to protect me, or boats like me, who live in Kodiak and are totally committed to the fishery. My options are limited to Kodiak – I am too small to chase cod out West, and my business is in jeopardy if my piece of "The Cod Pie" continues to shrink.

Some hard choices have to be made. You can't privatize big chunks of our Alaskan fisheries, thus protecting those participants, and leave the rest of us who are not so lucky totally exposed.

While I appreciate the opportunity to express my concerns about the future of my livelihood, I am also concerned about the Alaska Legislature's ability to undermine The North Pacific Fisheries Management Council. I think you should be concerned about our fisheries and knowledgeable about our situation, but at the same time be respectful of those whose sole responsibility is to make fishery management decisions. If you do not trust them, why should I?

Donald J. Vinberg

F/V Family Pride

To: House Fishery Committee
Re: House Joint Resolution # 21
Date: March 9, 2009

My name is Julie Bonney and I live in Kodiak. I represent fishermen that have License Limitation Permits (LLPs) that are endorsed for fixed gear in the GOA. Some of these fishermen will not receive a Pacific cod endorsement while other will if the North Pacific Fishery Management Council (Council or NPFMC) implements the recency action. Overall these fishermen realize that the Council must manage the fishery resource for sustainability, management easy and economics of the fishery. We do not support House Joint Resolution 21.

The resolution pits Alaskans against Alaskans both individually as well as individuals within communities. Those Alaskan's that are historically dependent on the Federal Pacific cod fishery against those Alaskan's that have not participated in the fishery. Basically this resolution puts the Alaska Legislators squarely in the middle of fish allocation decisions. However, you have not been involved in the lengthy Council public process over the last two years to understand the debate. The resolution is poorly written, contains many inaccuracies and totally misrepresents what the Council recency action hopes to accomplish.

The reality is that the recency amendment package tries to balance protecting historically dependent license holders yet create entry level opportunities for new participants at a modest level. Below is a set of questions and responses that will help you understand whether this action is good for Alaska and compares this action with the State of Alaska limited entry system that is in place for many state fisheries.

Who wins and looses based on the recency threshold of one landing for the time period 2000 to 2006?

1) The recency action will increase Alaska ownership for those licenses that receive a P cod endorsement in the overall license pool (see table 1 attached), assumes recency threshold of 2000 to 2006.
For the WGOA, there are presently 264 endorsed licenses, 58% of these licenses are held by Alaskans and 42% are held by non-Alaskans. If the recency P cod endorsement amendment package moves forward then Alaska ownership will increase by 11% to 69% and non-Alaska ownership will decrease by 11% to 31%.

   For the CGOA, there are presently 883 CGOA endorsed licenses, 69% are held by Alaskans and 31% are held by non-Alaskans. If the recency P cod endorsement amendment package moves forward with one landing 2000 to 2006 then Alaska ownership will increase by 11% to 80% and non-Alaska ownership will decrease by 11% to 20%.

2) The recency action will not disproportionately disadvantage small boat vessels (see table 2 attached), assumes recency threshold of 2000 to 2006.

   For the WGOA there are presently 154 licenses for the vessels less than 60 foot and 110 licenses for vessels 60 feet or greater, 58% versus 42% respectively. After recency the number of licenses with P cod endorsements would be approximately 76 licenses for less than 60 feet and 23 licenses for 60 feet and greater, 77% and 23% respectively. The pool of licenses will increase by 19% for the less than 60 foot vessel class.

   For the CGOA there are presently 702 licenses for the vessels less than 60 foot and 181 licenses for vessels 60 feet or greater, 80% versus 20% respectively. After recency the number of licenses with P cod endorsements would be approximately 240 licenses for less than 60 feet and 59 licenses for 60 feet and

greater, 80% and 20% respectively. The pool of licenses available for the less than 60 foot vessel class will not change.

3) The recency action will remove a large portion of the Catcher processor licenses endorsed for the Western and Central GOA. Removing Catcher Processors will reduce competition with the Catcher Vessel sector for the available quota. Catcher Processors compete with the Catcher vessel sector if they are less than 125 ft and process less than 126 MT per week for the available Pacific cod quota. In the CGOA CP licenses that could participate in the Pacific cod fisheries would be reduced by 80% and in the WGOA by 48% if one landing from 2000 to 2006 is the recency threshold.

Why are there so many licenses available in the GOA?
The Limited License Program (LLP) limits access to the Federal groundfish in the GOA. Fishing under the program began in 2000. The LLP defined a general qualification period (GQP) and an endorsement qualification period (EQP) both of which must have been satisfied. The GQP period is from Jan 1988 – June 27, 1992 requiring one landing of any groundfish and the EQP requiring one landing for < 60 ft vessels and one landing in at least two calendar years from Jan 1, 1992 to June 17, 1995 for vessels equal to or greater than 60 feet. Vessels that landed two to three groundfish, which could be taken incidentally in other fisheries, qualified a vessel for a license. This was a minimal threshold that created a large number of licenses and gave license holders the opportunity to invest and participate in the groundfish fisheries. The action now being considered by the North Pacific Fishery Management Council examines whether LLP holders actually took advance of the opportunity. The recency action is considering minimal thresholds for a period of up to 2000 to 2008, a nine year period.

Presently, there are more LLP licenses available than the fishery can support. National Marine Fisheries Service (NMFS) has stated that if all LLPs participated in the Pacific cod fishery that they would have no choice but to close the fishery since it would be unmanageable.

How does this action compare to the limited entry system in place for State fisheries?
The state of Alaska limited entry system that is in place for many state fisheries such as salmon and herring is no different than the license limitation system in place for federal fisheries for the Gulf of Alaska. In either case license holders' race for the available common quota; quota is not allocated to individuals.

In the first stage of the state limited entry system, a fishery is limited by adopting a "maximum number" of permits and issuing those permits to the highest ranking applicants under a hardship ranking ("point") system. By law and court decision, the maximum number for a fishery should be no less than the highest participation level in any one of the four years immediately prior to the qualification date.

In the second stage of limited entry, the law directs the Commercial Fisheries Entry Commission (commission or CFEC) to determine an "optimum number" for the fishery. The optimum number should represent a reasonable balance of three general standards specified in the law (see AS 16.43.290). The three standards include economic, resource conservation, and management concerns.

The federal action is much less restrictive then state limited entry system since the qualification period for the federal action at a minimum is five years (2002 – 2006) and at a maximum is nine years (2000 to 2008) compared to four years for the state system. In other words, state limited entry is more restrictive with regards to recent participation than what is being considered for the federal action.

How many licenses will remain after a recency action? (See table 4)
The number of licenses that will be endorsed for Pacific cod would be appropriately 200% of the average number of licenses that has participated in the fishery from 2000 to 2008 if the threshold time period of 2000 to 2006 was adopted.

Jig sector entry level opportunity?
The NPFMC is considering exempting jig gear from any LLP requirements or Pacific cod endorsements. In addition the Council is considering allocating this sector a non-historical share of the Pacific cod federal quota in the sector split amendment package. Typically Jig gear cannot compete with the other sectors during the winter months and typically jig gear harvests less than 1% of the available federal quota. The sector split amendment is contemplating allocating 5% of the federal TAC to these participants. Most jig gear operations do not have an LLP but instead participate inside the state parallel zone of 0 to 3 miles. With the exemption vessels would have access to fishing grounds from 0 to 200 miles and up to 5% of the federal quota.

For Alaskan's this opportunity is much more viable then leaving a bunch of licenses in the fixed gear sectors available for any US citizen to access. Jig gear is really only viable for Alaskan residents since the fishery is not efficient enough for non-residents. Weather impacts the fishery and trip ex-vessel values are usually less than $2,500 per trip. It only makes sense for residences that live in Alaskan coastal communities. Additionally, cod jigging is a good supplemental income for many fishing operations in the winter and spring months. If the Council stops action on the recency action then the jig sector opportunities would most likely be stopped since this is part of the trade off for the overall action of recency and sector splits.

How can fishermen enter the Pacific cod fishery?
There are many methods to access the Pacific cod resource in the GOA besides receiving a Pacific cod endorsement for an LLP. These options included:

1) Fish in the parallel fishing zone without a cod endorsed LLP.
2) Participate in the State of Alaska Pacific cod fisheries which have been allocated 25% of the federal Acceptable Biological Catch limit.
3) Buy a LLP with an endorsement from another license holder.
4) Participate in the newly created Jig fishery (if both the recency and sector split actions move forward).
5) Participate in the WGOA B season which would allow an LLP holder to participate (no P cod endorsement required).

Why protect License holders?
According to Alaska statue "Economically healthy fishery" is defined in AS 16.43.990(2) as follows:
(2) "Economically healthy fishery" means a fishery that yields a sufficient rate of economic return to the fishermen participating in it to provide for, among other things, the following:
(A) Maintenance of vessels and gear in satisfactory and safe operating condition;
And
(B) Ability and opportunity to improve vessels, gear and fishing techniques, including, when permissible, experimentation with new vessels, new gear, and new techniques.

Allowing excessive entry will not provide for an economically healthy fishery. Data in the Council analysis for gross revenues data indicate that the majority of fixed gear catcher vessel and catcher processor licenses that did not have any qualified fixed gear landing during the proposed qualifying period elected to participate in other Alaska fisheries during this period.

Out of 264 Western GOA licenses, there are 171 licenses that did not have any qualified landings during 2000-2006. However, 144 of the 171 licenses had landings in other Alaska fisheries. Western GOA licenses that did not have directed Pacific cod landings, but were active in other fisheries, had revenues mainly from the IFQ halibut (35.4%) and sablefish (21.4%) fisheries, and the BSAI trawl fisheries (31.1%). Less than 1% of revenues were from GOA Federal (0.8%) or State waters (0.3%) fixed gear fisheries. In contrast, most Western GOA licenses that had at least one fixed gear groundfish landing during 2000-2006 also participated in the State waters Pacific cod fisheries (72 of 93 licenses), and many licenses had landings in the Central GOA fixed gear Federal fisheries (20 licenses). The majority of active Western GOA licenses also had shellfish, salmon, and IFQ halibut landings. Gross revenues for licenses with qualified Western GOA landings were from IFQ halibut landings (29.5%), shellfish (33.4%), and salmon (19.9%). Notably, GOA trawl groundfish fisheries comprised 18.8% of revenues for licenses with at least one qualified landing, and landings from the Western GOA directed Pacific cod fishery comprised only 11.0% of gross revenues.

Of 883 Central GOA licenses, 614 licenses did not have at least one directed Pacific cod landing during 2000-2006; 500 of these non-qualified licenses had landings in other Alaska fisheries. Similar to nonqualified Western GOA licenses, the majority of revenues by these licenses were from IFQ halibut (35.0%) and sablefish (21.3%), and the BSAI trawl fisheries (13.6%). Only a small proportion of revenues by these licenses were from the fixed gear groundfish fisheries in the Western GOA (0.7%) or from the GOA State waters Pacific cod fisheries (1.4%). Most Central GOA licenses that made at least one directed Pacific cod landing during 2000-2006 also participated in the halibut IFQ fisheries (226 of 269 licenses). These licenses also fished for salmon (164 licenses), IFQ sablefish (141 licenses), State GOA Pacific cod (140 licenses), and shellfish (123 licenses). Revenues by active licenses were from halibut IFQ landings (45.1%), followed shellfish (10.3%). Directed Pacific cod landings from the Central GOA comprised 10.0% of gross revenues by Central GOA licenses with at least one qualified landing during 2000-2006.

When comparing annual gross revenues per license, the most apparent difference between catcher vessel licenses with directed Pacific cod landings and licenses without qualified landings is that they are participating in a different suite of fisheries. Western GOA CV licenses with at least one qualified CV landing during 2000-2006 had annual gross revenues of $274,608 per license. In contrast, Western GOA CV licenses without qualified landings had substantially higher revenues, averaging $622,658 per license. There was not a large difference between annual gross revenues for Central GOA CV licenses with qualified fixed gear landings ($319,458) and without qualified landings ($353,067). Many of the fisheries that non-qualified licenses participate in are difficult for Pacific cod dependent license holders to enter. Entry for the following fisheries -- IFQ sablefish, IFQ halibut, IFQ BSAI crab, AFA pollock and state limited entry fisheries such as salmon and herring – all would come at a substantial cost to gain access for participation. Allowing other non-dependent LLPS to enter the GOA Pacific cod fishery seems with limited costs seems wholly unfair to these economically depend fixed gear participation.

In conclusion my member fishermen do not support HJR #21. We believe the appropriate forum to advocate for fish allocations and management of fisheries resources is at the respective fishery management bodies – the Alaska Board of Fisheries and the North Pacific Fishery Management Council. Please feel free to contact me if you have questions regarding the fixed gear recency amendment package.

Sincerely,

Julie Bonney
Tel: 907-486-3033
e-mail: jbonney@gci.net

The data below is extracted from the most recent fixed gear recency analysis by the North Pacific Fishery Management Council and can be found on the web at:
http://www.fakr.noaa.gov/npfmc/current_issues/pcod/fixedgearrecency309.pdf.

Table 1. Comparison of residency of Catcher Vessel LLPs – Alaskan versus Non-Alaskans – All licenses versus licenses that would receive a Pacific cod endorsement with a directed Pacific cod landing for 2000 to 2006

	Total # of Fixed gear LLPs		Fixed gear LLPs w 1 landing	
WGOA	WG endorse	Percentage	1 landing	Percentage
Alaska	153	58%	64	69%
Oregon	8	3%	1	1%
Washington	92	35%	26	28%
Other States	11	4%	2	2%
Non-Alaskan TOT	111	42%	29	31%
Grand Total	264	100%	93	100%

	Total # of Fixed gear LLPs		Fixed gear LLPs w 1 landing	
CGOA	CGOA endorse	Percentage	1 landing	Percentage
Alaska	607	69%	215	80%
Oregon	48	5%	11	4%
Washington	183	21%	21	8%
Other States	45	5%	22	8%
Non-Alaskan TOT	276	31%	54	20%
Grand Total	883	100%	269	100%

Table 2. Comparison of < 60 foot and > = 60 foot Catcher Vessel LLPs All licenses versus licenses that would receive a Pacific cod endorsement with a directed P cod landing for 2000 to 2006.

WGOA	<60 ft	>=60 ft	Total
Hook-n-line	6	1	7
Jig	9	0	9
Pot	61	22	83
Total	76	23	99
% w/ 1 landing	77%	23%	100%
All licenses	154	110	264
% all licenses	58%	42%	100%

CGOA	<60 ft	>=60 ft	Total
Hook-n-line	159	10	169
Jig	18	1	19
Pot	63	48	111
Total	240	59	299
% w/ 1 landing	80%	20%	100%
All licenses	702	181	883
% all licenses	80%	20%	100%

Note: the number of endorsements for licenses is higher when compared to table 1 since some licenses qualify for multiple gear endorsements, 6 licenses in the WGOA and 30 licenses in the CGOA.

Table 3. Catcher Processors licenses endorsed for WGOA / CGOA and status after 2000- 2006 threshold requirement.

Category	WGOA	CGOA
W/ one landing	16	10
All licenses	31	49
% licenses w/ P cod	52%	20%
% reduction	48%	80%

Table 4. Average # of LLPS participating from 2000 to 2008 compared to potential LLPs with one landing from 2000 to 2006 that would qualify for a Pacific cod endorsement.

Area	Ave # LLP (00 - 08)	LLP w/1 land	Percentage
WGOA	46	93	203%
CGOA	134	269	201%

Alaska State Legislature

Please enter into the record my testimony to the HOUSE RESOURCES committee name

committee on HJR 21 bill/subject., dated 3/17/2009.

I HAVE FISHED PACIFIC COD SINCE 1986. I WAS BORN IN KODIAK AND STILL LIVE HERE, MY CREW LIVES IN KODIAK.

THE COD SEASON LASTED FOR MONTHS, NOW IT LAST FOR DAYS. SOMETHING HAS TO BE DONE TO SLOW IT DOWN. THERE ARE TOO MANY BOATS, IT IS ALMOST A FEEDING FRENZY.

I LOOK TO YOU PEOPLE TO SLOW IT DOWN SO MY CREW + I CAN STILL MAKE A LIVING FISHING COD.

Juneau, AK 99802

March 10, 2009

To: Representative Alan Austerman

Subject: HJR 21 - A resolution requesting North Pacific Fishery Management Council to cease considering an amendment that package that would require a Pacific cod endorsement for a license limitation to participate in the Pacific Cod Fisheries in the Gulf of Alaska.

Dear Mr. Austerman:

The Haida Corporation Board of Directors supports HJR 21 that you have co-sponsored. We are deeply concerned that the Current North Pacific Fishery Management Council actions to reduce the existing federal ground fish licenses for the fixed gear and trawl gear, in combination with the proposed sector split is not in the best interest of Alaska nor it's fishing communities.

Our communities in the fishing industry of Alaska depend solely on the resources surrounding our coastal communities. Our community and other communities as well, continually lose access to our local fisheries. The results are the same no matter what label is applied to this issue, at some point in the future, ALL our federal Gulf Fisheries Waters would be owned by outside interests. This would not benefit our own fisheries.

We would like to urge the Alaska Legislature to pass this resolution, thus making a strong statement to the North Pacific Fishery Management Council the that this amendment is not good for Alaska and it's communities and should not be made. The North Pacific Fishery Management Council needs to heed the guidance in HJR 21 and drop all consideration regarding the LLP amendment package.

We thank you for your time and consideration in this important issue.

Sincerely,

Lisa Lang
President
Haida Corporation

To: House Fisheries Committee
Re: House Joint Resolution 21

Dear Committee Members:

I have lived in Alaska since Territorial days, 40 years of it here in Kodiak. I've fished Alaska waters for more than 50 years. I've also been involved in fish politics and am familiar with the process of fish management conducted by the Alaska Fish Board and the North Pacific Fisheries Management Council (NPFMC).

Based on that I am opposed to HJR 21 and urge you to stop progress of the measure in the legislature.

I have two main reasons to oppose HJR 21.

1) It pits one group of Alaska fishermen against another group of Alaska fishermen.

2) It does that by injecting the legislature into the middle of fishery allocation issues that are best left to the NPFMC and the Fish Board.

The resolution seeks to stop the North Pacific Fishery Management Council's (NPFMC) consideration of a recency amendment package regarding the Pacific cod fishery in the Gulf of Alaska.

The NPFMC's recency amendment package, is designed to protect those fishermen who have historically fished Pacific cod, while establishing a clear path for future entrants into the fisheries. The package is a result of the long process of public testimony, scientific input and many months of deliberation.

The package does not take anything away from anyone that has participated in the fixed gear Pacific cod fishery. Yet it allows new entrants to the fishery. The package is necessary because it prevents people from taking a fishery away from those who have traditionally fished—those who have made it possible to even have a successful cod fishery for the new-comers to enter.

I thank you for taking my concerns into consideration. I trust that you will uphold the integrity of the resource management systems in place to take politics out of decisions that are best made by biologists and fish managers at the Council and Fish Board level.

Sincerely,

Alvin R. Burch

To: Representative Alan Austerman

Subject: HJR 21 – A Resolution requesting the North Pacific Fishery Management Council to cease consideration of an amendment package that would require a Pacific cod endorsement for a license limitation program to participate in the Pacific cod fisheries in the Gulf of Alaska.

Dear Representative: Austerman,

Shaan-Seet Inc. strongly supports House Joint Resolution #21 that you have co-sponsored.

We are deeply concerned that current North Pacific Fishery Management Council action to reduce existing federal groundfish licenses for both fixed gear and trawl gear, combined with a proposed sector split is not good for our coastal communities and not good for Alaska.

The life blood of our community and many other communities in the Gulf of Alaska depend upon access to the marine resources that lie on our doorsteps. Our communities are continually losing access to local fisheries and it doesn't matter whether you call this rationalization or something else – the result is the same. If we continue down this same path at some point in the future all our federal waters Gulf fisheries could be fully owned by Outside interests.

We encourage the Alaska Legislature to pass this resolution and thereby make a strong statement to the North Pacific Fishery Management Council that this amendment package is not good for Alaska communities and should be scrapped. The Council should heed the guidance in HJR 21 and cease considering the LLP recency amendment package. Any attempt to address similar issues in the future should also address as a primary goal how the fishing economies of Gulf of Alaska Communities can be maintained or strengthened as a result of the amendment package.

We thank you for your concern and effort on this very important matter.

Sincerely,

James H. Carle

March 9. 2009

Dear Legislators:

I am writing in support of House Joint Resolution #21and I support the Gulf of Alaska Coastal Communities Coalition concerns that the current North Pacific Fishery Management Council action to reduce existing federal groundfish licenses for both fixed gear and trawl gear, combined with a proposed sector split, will significantly and adversely affect Alaska's coastal communities, and have a negative ripple effect throughout Alaska.

The viability of Alaska coastal communities depends upon access to marine resources. These communities are under a constant barrage of regulatory modifications that continually cause local fishermen to lose access to local fisheries. Whether this is rationalization or reallocation – the result is the same. As this continues then in the near future much of the FCZ in the Gulf of Alaska fisheries will be held by outside interests as our local communities lie dormant.

I encourage you to support this resolution and thereby make a strong statement to the North Pacific Fishery Management Council that this amendment package be rejected as it will have a significant adverse affect on our local communities. The NPFMC should heed the guidance in HJR 21 and cease consideration of an amendment package that requires a Pacific cod endorsement for a license limitation program license holder to participate in the Pacific cod fisheries in the Gulf of Alaska. Further efforts to address similar issues should recognize the socio-economies of Alaska's fishing communities and take actions that will maintain and strengthen community sustainability as a result of the proposed amendment process

Thank you for your concern and effort on this very important matter.

Sincerely,

Patricia Phillips

To: House Fisheries Committee
Re: House Joint Resolution 21

Dear Committee Members:

The Alaska Whitefish Trawlers Association urges you to NOT SUPPORT HJR21. AWTA represents approximately 40 trawl vessels that fish out of Kodiak.

The resolution seeks to stop the North Pacific Fishery Management Council's (NPFMC) consideration of a recency amendment package regarding the Pacific cod fishery in the Gulf of Alaska.

The NPFMC's recency amendment package, seeks to protect those fishermen who have historically fished Pacific cod, while establishing a clear path for future entrants into the fisheries. At the same time it allows new interests to the fishery. It protects the interests of those who took all the risks and financial commitments to develop and set the foundations of Kodiak's cod fisheries.

Another big consideration regarding HJR 21, is that it puts the legislature in the position of regulating and making decisions on fisheries that are most appropriately handled by the North Pacific Fisheries Management Council and by the Alaska Board of Fish.

The resolution puts the Legislature smack-dab-in-the-middle of fish allocation issues that will pit Alaskans against other Alaskans. That is not an appropriate place for legislators, nor is it appropriate to manage fish allocation issues by legislative resolution. It sets a bad precedent that will leave Alaska's fishermen and Alaska's fish resource the worse for it.

Thank you for your consideration in this matter. Thank you in advance for stopping this travesty of fisheries management from moving forward.

Sincerely,

Alvin R. Burch
Executive Director
Alaska Whitefish Trawlers Association

March 9, 2009

Dear Governor Palin,

I am writing to express my support for HJR21 which formalizes the State of Alaska's opposition to LLP reduction. The NPFMC is once again putting working Alaskans out of work and reducing new opportunity to near impossible levels. I am a long term participant in the Pacific Cod fishery and own an LLP that will qualify under the proposed reduction. However, my history was earned by working through some very hard winters on my old boat which was only 38 feet long. I made a modest upgrade to a 48 foot boat in January of 2008, and this new boat came with an LLP that I thought would allow me to continue my long term participation. Under the Council's proposed alternatives, my new LLP will be rendered useless and I will either have to cease participation or be forced to purchase a new valid LLP which will undoubtedly be very expensive. Many of the recipients of these new valid LLPs are older boat owners who already received a huge advantage when they were given free halibut IFQs and/or free crab IFQs. It is frustrating for a younger fisherman like myself to have to continue to borrow and buy while these graying boat owners, who don't even have to pull their boots on anymore, continue to be given huge advantages by the Federal government.

The NPFMC has recently published the Agenda for the upcoming meetings beginning March 30th. They have now scheduled the LLP reduction for the first item on the agenda, and they have listed it as "final action". There is no doubt that this was done to preempt any action by the State on HJR21. Hopefully, HJR21 can pass through its Committee hearings by then but this is doubtful. Is there any way that you can persuade the Council to postpone action until HJR21 is properly heard? I employ two hardworking local crewmembers who both have families with small children, and we need to be able to participate in Winter cod fishing in our local waters to survive. Thank you for you consideration.

Respectfully Yours, Ryan Johnson

Subject: HJR 21 – A Resolution requesting the North Pacific Fishery Management Council to cease consideration of an amendment package that would require a Pacific cod endorsement for a license limitation program to participate in the Pacific cod fisheries in the Gulf of Alaska.

Dear Representatives: Auterman, Thomas, Ramras, Munoz, Millett, Edgmon, Seaton, Wilson, Harris, and Neuman,

The Organized Village of Kasaan strongly supports House Joint Resolution #21 that you have co-sponsored.

We are deeply concerned that current North Pacific Fishery Management Council action to reduce existing federal groundfish licenses for both fixed gear and trawl gear, combined with a proposed sector split is not good for our coastal communities and not good for Alaska.

a federally recognized

The life blood of our community and many other communities in the Gulf of Alaska depend upon access to the marine resources that lie on our doorsteps. Our communities are continually losing access to local fisheries and it doesn't matter whether you call this rationalization or something else – the result is the same. If we continue down this same path at some point in the future all our federal waters Gulf fisheries could be fully owned by Outside interests.

We encourage the Alaska Legislature to pass this resolution and thereby make a strong statement to the North Pacific Fisheries Management Council that this amendment package is not good for Alaska communities and should be scrapped. The Council should heed the guidance in HJR 21 and cease considering the LLP recent amendment package. Any attempt to address similar issues in the future should also address as a primary goal how the fishing economies of Gulf of Alaska Communities can be maintained or strengthened as a result of the amendment package.

We thank you for your concern and effort on this very important matter

Sincerely,

Richard J Peterson

RE: HJR 21 – A Resolution requesting the North Pacific Fishery Management Council to cease consideration of an amendment package that would require a Pacific cod endorsement for a license limitation program to participate in the Pacific cod fisheries in the Gulf of Alaska

Dear Representatives Austerman, Thomas, Ramrus, Munoz, Millett, Edmon, Seaton, Wilson, Harris and Neuman:

Ouzinkie Native Corporation strongly supports House Joint Resolution 21 that you have co-sponsored.

We are deeply concerned that current North Pacific Fishery Management Council action to reduce existing federal ground-fish licenses for both fixed gear and trawl gear, combined with a proposed sector split, is not good for our coastal communities and not good for Alaska.

The life blood of our community and many other communities in the Gulf of Alaska depend upon access to local fisheries and it does not matter whether you call this rationalization or something else – the result is the same. If we continue down this same path, at some point in the future all our federal waters Gulf fisheries could be fully owned by Outside interests.

We encourage the Alaska Legislature to pass this resolution and thereby make a strong statement to the North Pacific Fishery Management Council that this amendment package is not good for Alaska communities and should be scrapped. The Council should heed the guidance in HJR 21 and cease considering the LLP recency amendment package. Any attempt to address similar issues in the future should also address as a primary goal how the fishing economies of Gulf of Alaska Communities can be maintained or strengthened as a result of the amendment package.

We thank you for your concern and effort on this very important matter.

Best regards,

Michael G. O'Connor,
President & CEO

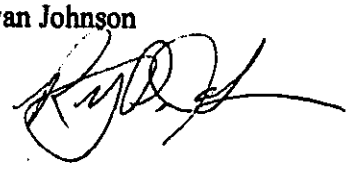
March 6, 2009

My name is Ryan Johnson, and I am a small boat fisherman from Kodiak. I am 36 years old and have fished out of Kodiak since 1993 and resided in Kodiak since 1997. Since 2001 I have participated in the Pacific Cod fishery using pots and longlines on board my very small 38 foot boat, the Cyclone. I currently own a Central Gulf LLP for the Cyclone that is valid for boats up to 46 feet in length, and all of my catch history has been with this LLP. In January of 2008 I purchased a new vessel, the Castle Cape, which is 48 feet long and came with another Central Gulf LLP that does not have any recent history. I've since learned that the NPFMC is attempting to revoke LLPs that don't have any history, which would effectively ban me from a fishery that I have participated in for seven years.

As a year-round resident and home-owner in Kodiak, I depend on several fisheries throughout the year to make my business plan work. Pot fishing for cod in the January and February seasons are crucial to my Winter survival and to the servicing of the debt that I have taken on with my fishing business. I have borrowed substantial sums over the years, not only for my vessels, but for my pots and gear such as haulers, launchers, bait-choppers etc. I employ local crewmembers who also live year-round in Kodiak and have families with small children. It is with great dismay as I watch the Council yet again run roughshod over the majority of Alaskan stakeholders for the good of only a few. Most of the beneficiaries of this action are large boatowners who are approaching or beyond retirement age, and who already received huge private quota allocations in the Halibut/ Sablefish IFQ Program and/or the Bering Sea Crab IFQ Program. If this action passes, the LLPs that are left will take on a much larger value, and I will be forced once again to take on more debt just to continue to participate.

I applaud the efforts of Representative Austerman and others to stand up for working Alaskans and oppose this harmful Council action.

Respectfully, Ryan Johnson



Rep. Alan Austerman

Subject: HJR 21

Honorable Representative Alan Austerman,

My name is Iver Holm and I am a lifelong resident of Kodiak. I am only 21 years old but have fished for many years crewing for salmon seine and set net as well as tanner crab, herring, halibut, and cod jigging. I am in the process of purchasing a 38' boat.

I strongly support HJR 21. My father has an LLP that I could use with my boat but it doesn't have recent history so the pending N.P.F.M.C action would render it useless for cod fishing. LLP's with history are priced so high that I wouldn't be able to afford one for many years, if ever. While I can jig for cod in the state waters season, being able to pot fish for cod in the earlier federal season may be necessary for my boat to be successful. It is clear that being able to switch fisheries based on market conditions and availability of fish is necessary to be successful in small boat fisheries.

I hope that HJR 21 receives support in the Senate and is heeded by the North Pacific Fisheries Management Council. Thank you for your efforts regarding these important issues.

Sincerely,

Iver Holm

Dear Representatives Austerman, Thomas, Ramras, Munoz, Millett, Edgmon, Seaton, Wilson, Harris, and Neuman:

Koniag Inc, strongly supports House Joint Resolution #21 that you have co-sponsored. We are deeply concerned that current North Pacific Fishery Management Council action toward reducing existing federal ground fish licenses for both fixed gear and trawl gear, combined with the proposed sector split is not good for our coastal communities and not good for Alaska.

As it was for generations of Alutiiq people before us, the life blood of our village and regional hub communities depend upon access to marine resources. Fisheries are the only economic engine in many coastal communities; the source of small business development and self reliance. The opportunity to participate in fisheries represents many things to Kodiak including thriving resident families and increasing regional infrastructure.

We encourage the Alaska Legislature to pass this resolution and thereby make a strong statement to the North Pacific Fishery Management Council that their present amendment package is not good for Alaska's communities.

Sincerely,

Charlie Powers, Vice President Corporate Affairs

Representative Alan Austerman
House of Representatives
Alaska State Legislature
120 4th Street Room 3
Juneau, Alaska 99801-1182

Dear Representative Austerman,

I strongly support HJR 21. I am a twenty three year old fisherman from the Kodiak village of Port Lions. I have been fishing since I was eleven years old, starting with my dad, Harry (Fuzzy) Nelson. I have seined salmon and herring, longlined halibut and cod, pot fished and trawled. Last year I purchased an LLP and fished it with my dad's boat, the F/V Anna Lisa. I bought a boat of my own last summer and have been fishing hard as crew to help me with my start up costs. Currently, I am a crewman on the F/V Elizabeth F with Capt Stormy Stutes. Fishing is a way of life for me, but I don't want to spend my life as crewman. I need to be able to grow. But each time a new regulation or rule is created that gives away the resources of the Gulf of Alaska to the big players, it diminishes the opportunity I need to make a life for myself. The LLP I bought will be extinguished if the NPFMC takes its planned action at the April meeting. It does not have specified recency to qualify it for continued use under the NPFMC's preferred alternatives. Each new regulation closing off opportunity for people like me helps kill communities like Port Lions, Ouzinkie, Larsen Bay, and Old Harbor. We are Alaska. We live here. We need opportunities to fish. We are not asking for the ownership rights to the North Pacific, we are asking for a right to earn a living in our communities and to contribute to the employment opportunities for our neighbors.

Thank you for HJR 21, perhaps you can help keep the big money interests from extinguishing Alaska's coastal citizens' right to earn a living from the resources right outside our front doors.

Sincerely,
Michael Nelson

Subject: HJR 21 – A Resolution requesting the North Pacific Fishery Management Council to cease consideration of an amendment package that would require a Pacific cod endorsement for a license limitation program to participate in the Pacific cod fisheries in the Gulf of Alaska.

Dear Representatives: Austerman, Thomas, Ramras, Munoz, Millett, Edgmon, Seaton, Wilson, Harris, and Neuman,

The Board of Directors of the Gulf of Alaska Coastal Communities Coalition (GOAC3) strongly supports House Joint Resolution #21 that you have co-sponsored.

For far too long the push toward rationalization of fisheries in the North Pacific has been made without consideration of the negative impacts on Gulf of Alaska fisheries-dependent communities. Although, Governor Palin has made it very clear that further rationalization in the Gulf of Alaska should not be pursued, it is evident that the LLP (license limitation program) fixed gear recency amendment package that is now before the North Pacific Fishery Management Council (NPFMC), combined with the recent trawl LLP reduction and the proposed "sector split" is a very real step on the path toward full rationalization without benefit of application of federally mandated community protections.

Gulf of Alaska coastal communities have continually lost access to fisheries resources as a direct result of regulatory action. Many of our communities, that have thrived for millennia, could conceivably become extinct as a result of the last 30 years of regulatory impacts.

We are concerned that pre-Statehood conditions have already returned to our adjacent federal waters. The potential for all federal fisheries in the Gulf of Alaska to be owned by Outside interests in the not-too-distant future is a "clear and present danger."

The Gulf of Alaska does not have benefit of a workable community quota program, such as the Western Alaska CDQ (community development quota) that would "anchor" a certain amount of fishing effort in Alaska. The CQE (community quota entity) program for the purchase of halibut and sablefish quota share in the Gulf has not had benefit of either initial issuance of quota or a fiscal note to enable the purchase of quota. Despite the efforts of many over the last several years, the sharp increase in the price of quota has made it infeasible for most Gulf communities to utilize the CQE program for their benefit. The GOAC3 is part of a group effort to work toward pursuing needed language changes and creative funding. But it is only one part of a progressive problem.

We encourage the Alaska Legislature to pass this resolution. We further encourage this Resolution to be a message to the North Pacific Fishery Management Council that the proposed amendment package is not good for Alaska communities and that any future amendments need to be considered within the context of whether the amendment harms or strengthens affected communities.

Thank you for your effort on behalf of this extremely important issue.

Sincerely,

Freddie Christiansen, Chairman
Gulf of Alaska Coastal Communities Coalition

Regarding HJR 21

I am writing to you today to object to you getting the legislature involved in pacific cod endorsements. We feel that the North Pacific Management Council has the back ground on this matter and that it is more appropriate for the legislature to focus on the problems that we are having with the pacific cod fishery that takes place in State Waters.

The way matters stand after this years fishery we are wondering if an action for limited entry in State waters isn't long over due and possibly would be closing the door with way too many participants already in the game.

As you probably realize Ken has been running the Point Omega out of Kodiak since it was new in 1970. It is 72' and we have been closed out of the very same p cod pot fishery we helped to develop here around Kodiak starting back in 1986. Most State water fisheries are geared toward the salmon fleet that has had State limited entry for years and has a vessel length of no more that 58'. Kodiak is the last place the Point Omega can actually fish the State water P cod fishery due to our size. We can't travel west and take part in any other area so with bigger boats that no longer do Bering Sea crab looking for places to fish we are getting a lot of help catching cod here during the State water fishery and some extra in the federal due in part to people trying to get a permit of some kind.

This action that the council has been working on does no more than to protect the resource and those of us who actually do depend on the cod fishery to be able to support a crew and our business here in our home port of Kodiak. If the legislature thinks they are doing the community a favor by jumping in on this issue that has been on the table for several years now I think they may be doing more harm than good. There may be, as always, some people in Kodiak that are not happy about the recency endorsement package, but I ask you, if you actually understand that there is entry level participation in the jig fishery as part of this package and any fixed gear vessel is able to fish in state waters during the federal fishery and any pot or jig vessel is able to participate in the state water fishery, and will be able to... endorsement or no endorsement.

The amount of fixed gear LLP's that are being discussed in this action is huge, mostly they were originated by p cod deliveries made during halibut and sablefish operations and most of these LLP's have never been dependent on the p cod fishery at all. In fact they haven't even tried to make a delivery even though we had several years where rationalization was a possibility. The threshold for catch criteria in Component 4 of the recency (endorsement) package hardly shows dependence if you are actually trying to make a living at cod fishing. Once again I would like to point out that there is no such endorsement being recommended for the jig fishery and that is open to all.
People don't seem to have a problem with the limited entry program for salmon or herring, if you want to fish it and you never did before you buy a permit, in this case you would find a permit with an endorsement for the right area. It makes sense to protect the resource by limiting the amount of effort. If you think about the salmon fishery and the herring fishery and compare what is being done here it is much the same. The resource is getting smaller and the ability to have over 800 permits targeting p cod in the CGOA would have negative impacts on the resource and on those of us who have been fishing here since this fishery was first a viable fixed gear fishery. If we continue to get the kind of big boat participation that is now coming around here since crab rationalization we will soon be unable to make enough money fishing cod to make it worth the effort. This action will still leave way more permits with P cod endorsements than there are people who fish on a yearly basis so there is still opportunity for people to get in as abundance dictates.

I didn't mean to write you a novel but we are some of your constituents and we feel that you are taking sides with out giving us a proper heads up or an opportunity to hear what kind of influences have brought you to this point.

We also take exception to your whereas the median age of fishermen is now 47 years old. Does this mean that, as we age, we are no longer considered as important and that we should roll up and die and let some other person take our place? Sounds like some kind of discrimination to me. We are trying to protect some traditional ways of life here in our coastal community, we live here and our kids live here and we run our business out of here, are you sure you know enough about what you are trying to stop to make this decision for us?

Please let the NPFMC do what they are supposed to and deal with this issue in a timely fashion before we all go broke. It isn't really feasible for us to slap on some jig gear and try to make a living here while you let other people who arrive with cash in hand from other rationalization programs and take over the p. cod pot fishery we have been dependent on for the last 23 years.

Sincerely,

Chris and Ken Holland

Re: HJR 21-Grounfish Fisheries Licenses

Representative Austerman:

Thank you for your sponsorship of HJR-21, a bill which may hold the key, to the future of many coastal communities and coastal fishermen. As you know, ground fish(Pacific Cod) is an important component of Coastal Alaska's diversified fishing fleets. Maintaining access to these fish stocks is essential to the very survival for many, "boots on deck" active fishermen, fishery support businesses, and local economies.

This bill makes a strong statement to the North Pacific Fishery Management Council(NPFMC) that the continuation on the road to more rationalized fisheries is not supported by the highest levels of the State of Alaska's government. Viable alternatives to LLP reduction already exist in the form of trip catch limits, tiered permits , exclusive registration, gear limitations, and fishing hours restrictions. None of which are currently being looked at as solutions by the council.

My family and I own/operate a small 45' combination vessel which is home ported in Kodiak. We employ between 6-8 resident crewmembers each year. Our primary fisheries have been halibut, dungeness/tanner crab, and ground fish. All of these fisheries are necessary for us to be solvent and provide year round employment.

I have personally been fishing Pacific Cod for twenty-two years(crewmember-4yrs., hired skipper-14 yrs., boat owner/operator-4yrs). LLP reduction/cod endorsements as written, would exclude us from future participation. Myself and many other active fishermen fall through the cracks in the federal plan.

Representative Alan Austerman
House of Representatives
Alaska State Legislators
120 4th Street Room 3
Juneau, Alaska 99801-1182

Dear Representative Austerman,

I am a nineteen year old, 3rd generation Alaskan fisherman. I grew up in Kodiak and have been going out on commercial fishing boats sine I was three and had the chance to go seining in Alitak with my dad. After graduating high school and attending a couple of semesters in college at UAA, I decided to come back home and fish the federal and state cod fisheries this year. In looking ahead into my future, I am interested in pursuing fishing opportunity in Kodiak and continuing my college career in the off seasons to explore direct marketing opportunity.

However, within this plan I am faced with the reality that opportunity for my generation is quickly diminishing. With the way things are looking, there may not be enough affordable entry level opportunity in enough fisheries to achieve my long term goal. The IFQ rights to fish halibut and sablefish are out of my range and I don't expect much to change there. Now there is an action at the NPFMC to further limit the number of licenses to fish for cod in federal waters. It seems this action is driven by the big industry players that made their mark in fishing under open access and now want to lock up the rights.

Where does this leave people like me? Without being able to answer what will happen to future generations that want to go fishing and live in Kodiak, the State should not support this action moving forward. It is not the job of federal managers to look out for the well being of coastal Alaskans, it is the State's. I have attended a few of these NPFMC meetings and found it all so complicated I did not know where to begin. I know that is true for most of my friends. They don't think the direction we are going in fishing is right but they, like me, don't really know what to do about it.

In reading through the resolution HJR 21, to cease the action to extinguish latent licenses and all the reasons why, I fully support the resolution. At this time we need to stand back and answer some of the basic questions, like the opportunity in the future for kids like me, before charging on ahead. I'm willing to go out on the water and work hard to make a living, but there needs to be a door left open to do it.

Sincerely,

Charlie Peterson

March 4, 2009

RE: HJR 21 Requesting the North Pacific Fishery Management Council to cease consideration of an amendment package that would require a Pacific cod endorsement for a license limitation program license holder to participate in the Pacific cod fisheries in the Gulf of Alaska.

My name is Chris Holland. My husband Ken and I own and operate the 72' F/V POINT OMEGA out of Kodiak and we have been fishing Pacific Cod with pots since 1986. Our entire income is from our fishing operations and we as well as our children and their children live and work out of Kodiak.

We have been spending our hard earned money for the last several years to attend the North Pacific Fisheries Council meetings and try to help keep our community and our fisheries here in this coastal town viable for serious fishermen who actually fish.

The NPFMC is very engaged in this and they are the body that handles fisheries, we don't understand why now you are trying to have the legislature step into an on going action and mess with it. Do you understand the make up of the fishing fleet in our coastal communities? Do you earn your entire living off of working on the sea? I don't know what your situation is but I would really appreciate it if you would let those of us who have been following this issue get some relief.

The P. Cod fishery in the Central Gulf of Alaska has many and varied participants and it has been a fairly stable part of our yearly fishing business plan. We are being impacted here by people who are coming with money from other rationalized programs (like the Bering Sea Crab and the AFA and the CDQ groups) and trying to add our fisheries into their business plan now that they can lease out their crab shares or have a co-op catch their pollock.

The action that you are discussing derailing here is intended rather like other programs that have been done in State fisheries. It is to protect the resource and to protect the people and businesses that have been dependent on this fishery.

Many of the people who may be talking to you about this being a good idea have no stake in this fishery at all. The action is also leaving alone an entry level jig fishery that has half the state water cod in the Kodiak area already and will be able to fish with out endorsements at all in both the federal and the state fisheries.

We would rather that you take on the State water fishery and institute a limited entry program that is fair in State waters than for you to mess up a federal program that

people like us who are sincerely dependent on the P. Cod pot fishery have been helping to craft.

Maybe if I put it in terms of State limited entry programs that people have been working with successfully for years, like salmon and herring you will see what I mean.

The amount of fixed gear LLP's that are being discussed in this action is huge, mostly they were originated by p cod deliveries made during halibut and sablefish operations and most of these LLP's have never been dependent on the p cod fishery at all. In fact they haven't even tried to make a delivery even though we had several years where rationalization was a possibility. The threshold for catch criteria in Component 4 of the recency (endorsement) package hardly shows dependence if you are actually trying to make a living at cod fishing. Once again I would like to point out that there is no such endorsement being recommended for the jig fishery and that it is open to all.
People don't seem to have a problem with the limited entry program for salmon or herring, if you want to fish it and you never did before you buy a permit, in this case you would find a permit with an endorsement for the right area. It makes sense to protect the resource by limiting the amount of effort. If you think about the salmon fishery and the herring fishery and compare what is being done here it is much the same. The resource is getting smaller and the ability to have over 800 permits targeting p cod in the CGOA would have negative impacts on the resource and on those of us who have been fishing here since this fishery was first a viable fixed gear fishery. If we continue to get the kind of big boat participation that is now coming around here since crab rationalization we will soon be unable to make enough money fishing cod to make it worth the effort. This action will still leave way more permits with P cod endorsements than there are people who fish on a yearly basis so there is still opportunity for people to get in as abundance dictates.

Please leave the North Pacific Fisheries Management Council to do what they do pretty well and let us get on with our fishing business and not spend all our time worrying about who is going to try and take it away from us next.

Sincerely,

Chris and Ken Holland

March 6, 2009

My name is Ryan Johnson, and I am a small boat fisherman from Kodiak. I am 36 years old and have fished out of Kodiak since 1993 and resided in Kodiak since 1997. Since 2001 I have participated in the Pacific Cod fishery using pots and longlines on board my very small 38 foot boat, the Cyclone. I currently own a Central Gulf LLP for the Cyclone that is valid for boats up to 46 feet in length, and all of my catch history has been with this LLP. In January of 2008 I purchased a new vessel, the Castle Cape, which is 48 feet long and came with another Central Gulf LLP that does not have any recent history. I've since learned that the NPFMC is attempting to revoke LLPs that don't have any history, which would effectively ban me from a fishery that I have participated in for seven years.

As a year-round resident and home-owner in Kodiak, I depend on several fisheries throughout the year to make my business plan work. Pot fishing for cod in the January and February seasons are crucial to my Winter survival and to the servicing of the debt that I have taken on with my fishing business. I have borrowed substantial sums over the years, not only for my vessels, but for my pots and gear such as haulers, launchers, bait-choppers etc. I employ local crewmembers who also live year-round in Kodiak and have families with small children. It is with great dismay as I watch the Council yet again run roughshod over the majority of Alaskan stakeholders for the good of only a few. Most of the beneficiaries of this action are large boatowners who are approaching or beyond retirement age, and who already received huge private quota allocations in the Halibut/ Sablefish IFQ Program and/or the Bering Sea Crab IFQ Program. If this action passes, the LLPs that are left will take on a much larger value, and I will be forced once again to take on more debt just to continue to participate.

I applaud the efforts of Representative Austerman and others to stand up for working Alaskans and oppose this harmful Council action.

Respectfully, Ryan Johnson

Subject: HJR 21- A resolution requesting the North Pacific Fishery Management Council to cease consideration of an amendment package that would require a Pacific cod endorsement for a license limitation program to participate in the Pacific cod fisheries in the Gulf of Alaska.

Dear Representatives: Austerman, Thomas, Ramras, Munoz, Milett, Edgmon, Seaton, Wilson, Harris, and Neuman,

The Larsen Bay Tribal Council strongly supports House Joint Resolution #21 that you have co- sponsored.

We are deeply concerned that current North Pacific Fishery Management Council action to reduce existing federal ground fish licenses for both fixed gear and trawl gear, combined with a proposed sector split is not good for our coastal communities and not good for Alaska.

The life blood of our community and many other communities in the Gulf of Alaska depend upon access to the marine resources that lie on our doorsteps. Our communities are continually losing access to local fisheries and it doesn't matter whether you call this rationalization or something else- the result is the same. If we continue down this same path at some point in the future all our federal waters Gulf fisheries could be fully owned by Outside interests.

Juneau, AK 99801

Re: HJR 21

Dear Representative Austerman:
United Cook Inlet Drift Association (UCIDA) represents some 585 Upper Cook Inlet salmon fishing families. Many of our members use their salmon fishing vessels in the spring and fall cod fishery in Cook Inlet and Kodiak areas. For many younger families and fishermen, this fishery is where they enter a career of professional commercial fishing. The current action before the North Pacific Fishery Management Council closes this fishery to new entrants and removes unused permits. It is essential that fisheries remain open for new, often younger fishermen to enter fisheries without the economic challenges of needing to purchase harvesting privileges, IFQ's or a limited entry permit. We fully support HJR 21.

Sincerely,

Roland Maw

Rep. Bryce Edgmon, Chairman
House Fisheries Special Committee
26th Alaska Legislature

Re: Support for HB-143

Dear Rep. Bryce Edgmon:

The Southeast Alaska Guides Organization (SEAGO) represents 26 sport fishing guides and lodges throughout Southeast Alaska with more than 100 active vessels. Information provided to ADF&G for reporting and analysis under this legislation is of great value and continuation of this program is beneficial to multiple user groups.

This program is one of the best tools that ADF&G has to identify who is involved in the charter/lodge industry and provides important data used to establish levels of harvest, effort, identification of clients, as well as species targeted. The money collected is used for issuing licenses and for sport fishing logbook data collection and reporting expenses.

Our members support extension of the current law with the fees at their levels as originally passed in 2004.

Sincerely,

Tom Ohaus, President

Re: Support of HJR 21

Dear Representatives: Austerman, Thomas, Ramras, Munoz, Millett, Edgmon, Seaton, Wilson, Harris, and Neuman:

This letter is being sent to you in support of HJR 21. A Resolution you have co-sponsored requesting that the North Pacific Fishery Management Council cease consideration of an amendment package that would require a Pacific cod endorsement for a license limitation program in order to participate in the Pacific cod fisheries in the Gulf of Alaska

We encourage the Alaska Legislature to pass this resolution, thereby making a strong statement to the North Pacific Fishery Management Council that this amendment package is not good for our Alaska communities and should be discarded.

Our communities are continually losing access to local fisheries that are responsible for our economic well-being. Since 1990 there has been a 35 percent decline in the number of commercial fishermen in the state. Rationalization has created significant barriers for new entrants in the commercial fisheries by increasing costs of access to fishing permits and individual transferable quotas.

This has a far-reaching effect and touches other businesses that provide goods and services to the commercial fishing industry and exist for the support of the industry.

We believe there must be a better approach to the issues than the reduction of individual rights of a person to fish the marine resources that lie at our doorstep. We hope that the North Pacific Fishery Management Council will heed the guidance in HJR 21 and cease the consideration for allocation of the GOA Pacific cod resource to the various gear sectors and, also cease the consideration for limiting future entry to the GOA groundfisheries by extinguishing latent LLP licenses.

Sincerely,

Zack Chichenoff
Mayor
Zack Chichenoff

Subject: HJR 21 – A resolution requesting the North Pacific Fishery Management Council to cease consideration of an amendment package that would require a Pacific cod endorsement for a license limitation program to participate in the Pacific cod fisheries in the Gulf of Alaska.

Dear Representatives: Austerman, Thomas, Ramras, Munoz, Millett, Edgmon, Seaton, Wilson, Harris, and Neuman,

The Chignik Lake Traditional Council strongly supports House Joint Resolution # 21 that you have co-sponsored.

We are deeply concerned that current North Pacific Fishery Management Council action to reduce existing federal groundfish licenses for both fixed gear and trawl gear, combined with a proposed sector split is not good for our coastal communities and not good for Alaska.

The life blood of our community and many communities in the Gulf of Alaska depend upon access to the marine resources that lie on our doorsteps. Our communities are continually losing access to local fisheries and it doesn't matter whether you call this rationalization or something else – the result is the same. If we continue down this same path at some point in the future all our federal waters Gulf fisheries could be owned by Outside interests.

We encourage the Alaska Legislature to pass this resolution and thereby make a strong statement to the North Pacific Fishery Management Council that this amendment package is not good for Alaska communities and should be scrapped. The Council should heed the guidance in HJR 21 and cease considering the LLP recency amendment package. Any attempt to address similar issues in the future should also address as a primary goal how the fishing economies of Gulf of Alaska Communities can be maintained or strengthened as a result of the amendment package.

We thank you for your concern and effort on this very important matter.

Sincerely,

John Lind
Chignik Lake Traditional Council President

CC:

The Honorable Sarah Palin, Governor, State of Alaska	907-465-2332
Denby Lloyd, Commissioner of Alaska Department of Fish and Game	907-465-2332
Cora Crome, Fisheries Policy Advisor, Office of the Governor	907-465-3532
John Moller, rural Advisor, Office of the Governor	907-465-3532

Sponsor Statement for
CSHJR 25 Urging Congress to Classify Hydroelectric Power as Renewable

One of the most readily available sources of renewable energy in Alaska is hydroelectric power. Alaska has a vast amount of high elevation lakes and run-of-the-river systems which have the potential, in many areas, to completely displace diesel generated power with little to no environmental impact. Hydroelectric power is so abundant in Alaska that most areas of the state can make use of it in some form or another.

With such a plentiful source of non-diesel generated power, it is unfortunate that the Federal Government does not have a working definition of renewable or alternative that includes hydroelectric power. This effectively cuts hydroelectric power projects off from many potential sources of federal funding, and therefore, hinders Alaska's efforts to displace diesel generated power.

CSHJR 25 asks Congress to develop a working definition of renewable and alternative which includes hydropower so that reliable renewable energy policy can be developed, and valuable projects receive adequate support.

I urge your support of CSHJR 25.

National Hydropower Association

"Assessment of Waterpower Potential and Development Needs" By the Numbers

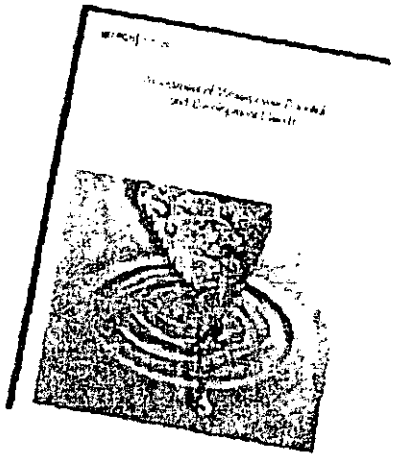
A quick look at the growth potential of hydropower by the year 2025, as detailed in the March 2007 report released by the Electric Power Research Institute.

GENERAL OVERVIEW

- **270,000 GWH** - existing hydropower generation in the United States (75 percent of U.S. renewable energy generation—the largest renewable source)
- **90,000 MW** - overall water potential available
- **23,000 MW** - potential capacity increase by 2025

BY 2025, CONVENTIONAL POTENTIAL

- **10,000 MW** - overall potential increase
  - **2,700 MW** - from new small and low-power conventional hydropower
  - **2,300 MW** - from capacity gains and efficiency improvements at existing hydropower facilities
  - **5,000 MW** - from new hydro at existing non-powered dams



Copies of the EPRI report are available at www.wpri.com. Search for report #1014762.

By 2025, NEW WATERPOWER TECHNOLOGY POTENTIAL

- **10,000 MW** - increase from ocean and wave energy devices
- **3,000 MW** - increase from new hydrokinetic technologies

The power of moving water

National Hydropower Association
1 Massachusetts Ave, Suite 850
Washington DC 20001
p: 202-682-1700 f: 202-682-9478
www.hydro.org

Hydropower is a domestic source of renewable, reliable, and affordable electricity. No other energy source offers so many advantages.

Domestic and Secure

Water from our rivers is a domestic resource that is not subject to disruptions from foreign suppliers, cost fluctuations, and transportation issues.

Efficient

Today's hydropower turbines are capable of converting more than 90% of available energy into electricity, which is more efficient than any other form of generation (the best fossil fuel power plant is only about 50% efficient).

Popular

Nationally, 93% of individuals believe hydropower is important or very important for meeting future electricity needs.

Source: 2002 public opinion poll by Bisconti Research Inc.

Renewable

Like wind, solar, and geothermal, hydropower's "fuel" is essentially infinite and is not depleted during the production of electricity. Hydropower facilities simply harness the natural energy of flowing and falling water to generate electricity.

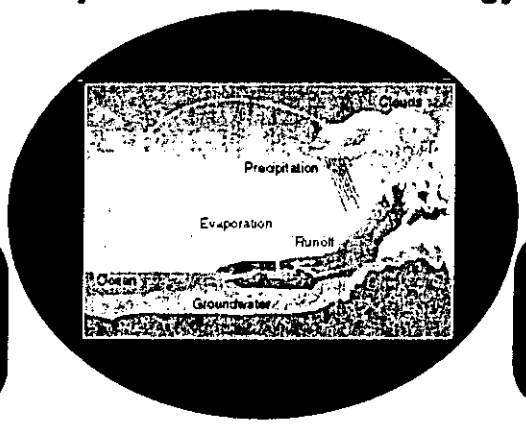
Clean

Hydropower uses water to generate electricity. It is climate-friendly and does not produce air pollution or create any toxic by-products.

HydroPOWER
the power of moving water

Clean power for a secure energy future

Any moving water has the potential to make power



Water used for power is returned to the water cycle

The hydrologic cycle

source: http://hydropower.inel.gov/hydrofacts/how_hydro_works.shtml

Reliable

Hydropower can go from zero power to maximum output rapidly and predictably. This makes hydropower exceptionally good at meeting changing demands for electricity and providing ancillary electrical services that maintain the balance between supply and demand.

Flexible

Hydropower has the unique ability to change output quickly. Its unique voltage control, load-following, and peaking capabilities are critical for electric grid stability. This ability also provides an efficient and cost-effective way to support the use of intermittent renewable sources of power such as wind and solar energy.

Non-power benefits

Hydropower projects do more than just produce electricity; they create wildlife conservation lands, provide stable habitat for many kinds of wildlife, support healthy fisheries, provide water supply, control floods, irrigate land for food production, and create recreational opportunities for millions of Americans.

US Senator Murkowski says higher taxes on oil, gas could backfire

Washington (Platts)--16Mar2009

US Senator Lisa Murkowski, ranking Republican on the Energy and Natural Resources Committee, said Monday that increasing taxes on the oil and gas industry would have the unintended consequence of driving natural gas producers and independent companies out of the country.

In his fiscal 2010 budget released last month, President Barack Obama called for excluding the petroleum industry from a manufacturer's tax credit, which might raise $31 billion in additional taxes from the industry.

"People get up in the morning to hate the oil industry," said Murkowski, speaking at Platts Energy Podium in Washington. Murkowski represents Alaska, which after Texas produces the most oil of any US state.

Still, if Congress approves the president's proposal to raise taxes on the industry, that could reduce production of gas and its use as a lower-carbon alternative to coal-fired electricity generation.

She said that the committee will likely not agree on a renewable energy standard, although she said she could support a low-carbon electricity standard which includes nuclear energy and hydroelectric generation.

"If your goal is reduction of emissions, why would you not want to recognize those existing resources that aren't contributing to carbon output?" she said.

Energy and Natural Resources Committee Chairman Jeff Bingaman of New Mexico, a Democrat, plans to offer a renewable energy standard that would require investor-owned utilities to draw 20% of their output from wind, solar and other renewables by 2021. His proposal does not classify hydropower as renewable energy.

Nonetheless, Murkowski said she is optimistic that she and Bingaman will agree on a range of issues that could pass their panel with broad bipartisan support, including increased federal authority over

- **True-up period**. A three-month true-up period is provided at the end of each year during which generators may obtain the required number of RECs or makeup any shortfall. During this period, purchases of RECs can be made from renewable-resource generators that have unsold RECs, or from generators that have RECs exceeding their requirement.

- **Credit banking**. Generators and renewable energy producers could be allowed to "bank" credits indefinitely. This will help to even out variations in output associated with natural resources, and provide generators with additional methods for ensuring that they are in full compliance.

- **Force majeure provision**. An extended true-up period could be provided to allow response time for extreme deviations in expected renewables generation resulting from events that are impossible to control, i.e., "act of God" situations such as a damaging hurricane. Such fluctuations should not affect the entire REC market, but may affect individual generators who have contracted for RECs from certain facilities.

TOP

Hydropower

It is necessary to exclude large hydropower from the RPS for several reasons. Though hydro brings public benefits in terms of avoiding the air emissions and wastes associated with conventional power plants, hydro is technologically mature, is fully commercialized (representing a significant share of the electricity market), and has limited development potential. Most importantly, including hydro in the RPS would create several intractable practical problems: (a) output from the large base of Canadian hydro projects could potentially be rerouted into the U.S. market and "flood" that market, depressing prices to levels too low to support non-hydro renewables; (b) the large year-to-year fluctuations in hydro output would make it difficult to meet a fixed standard each year and at the same time provide a predictable market for renewables; and (c) many hydro facilities have more than one use and have been built with the aid of large government subsidies. Therefore, it may be difficult to avoid cross-subsidizing irrigation, recreation, flood control, etc., through payments to hydro via the RPS. Including hydro projects under some size limit (no more than 30 MW) may help to keep in operation those projects that will have difficulty competing in the market (especially those with high environmental mitigation costs).

Encouraging a Diversity of Renewables

The RPS in its simplest form is a strategy for diversifying the electric supply with the lowest-cost renewable power available, as judged through market competition. Its primary purpose is not aimed directly at technology commercialization, though it will certainly encourage private investment in technology advancement. A diversity of renewable resources will be encouraged because generators and investors are likely to seek out the most cost-effective technologies and technology applications, thereby taking advantage of the most cost-effective applications of each resource (i.e., the low-cost end of the supply curve for each resource). Because the cost of many renewable technologies, e.g., wind, geothermal, landfill gas and some solid-fuel biomass and some solar thermal facilities, are in the same competitive range, the market is likely to result in a diversity of resources and technologies. The market can also be expected to seek out cost-effective niche applications of renewables, such as distributed applications of photovoltaics. Higher-cost technologies can be encouraged through commercialization programs (e.g., those funded by system benefits charges), which can work along side the RPS. Because the RPS creates a market for renewables, it will help to close the gap between the cost of pre-commercial technologies and the renewables-market price. As a result, technology commercialization program dollars can go farther as a result of the RPS.

Self-generation

Surplus renewables generation that is metered and sold at retail from customer-owned, grid-connected renewable facilities could be eligible for RECs. If a simple method is available to measure the power produced by these systems that is consumed on-site, that generation could also qualify for RECs. Though off-grid renewable self-generation applications could qualify for RECs, there are two reasons for not including them: (1) most off- grid self-generation applications are already competitive as compared to T&D line extensions; and (2) off-grid applications are not metered or sold at retail, and thus verification of production would be difficult. If policy-makers nevertheless want to encourage off-grid renewables, procedures could be developed to estimate production, though verification could entail high transactions costs.

Allocating RECs from Existing Facilities

An RPS policy creates a new, unanticipated source of income for existing renewable

AMENDMENT NO. Calendar No.

Purpose: To provide a renewable portfolio standard.

IN THE SENATE OF THE UNITED STATES—111th Cong., 1st Sess.

(no.)

(title)

Referred to the Committee on and
ordered to be printed

Ordered to lie on the table and to be printed

AMENDMENT intended to be proposed by

Viz:

At the appropriate place, add the following:

TITLE VIII—RENEWABLE PORTFOLIO STANDARD

SEC. 01. RENEWABLE PORTFOLIO STANDARD.

(a) IN GENERAL.—Title VI of the Public Utility Regulatory Policies Act of 1978 (16 U.S.C. 2601 et seq.) is amended by adding at the end the following:

"SEC. 610. FEDERAL RENEWABLE PORTFOLIO STANDARD.

"(a) DEFINITIONS.—In this section:

"(1) BASE QUANTITY OF ELECTRICITY.—

"(A) IN GENERAL.—The term 'base quantity of electricity' means the total quantity of electricity sold by an electric utility to electric consumers in a calendar year.

"(B) EXCLUSIONS.—The term 'base quantity of electricity' does not include—

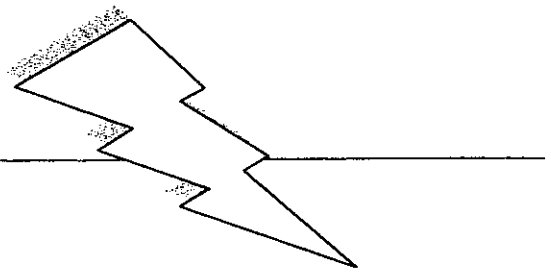
"(i) electricity generated by a hydroelectric facility (including a pumped storage facility but excluding incremental hydropower); or

"(ii) electricity generated through the incineration of municipal solid waste.

"(2) DISTRIBUTED GENERATION FACILITY.—The term 'distributed generation facility' means a facility at a customer site.

"(3) EXISTING RENEWABLE ENERGY.—Except as provided in paragraph (7)(B), the term 'existing renewable energy' means electric energy generated at a facility (including a distributed generation facility) placed in service prior to January 1, 2006, from solar, wind, or geothermal energy, ocean energy, biomass [(as defined in section 203(b) of the Energy Policy Act of 2005 (42 U.S.C. 15852(b)))], or landfill gas.

Southeast Conference Energy Program



Legislative Report – January 2009

Southeast Conference

P.O. Box 21989, 612 W. Willoughby Avenue, Suite B
Juneau Alaska 99802-1989
(907) 523-2310
Fax (907) 463-5670

Mike Korsmo: SEC Board President
Shelly Wright: SEC Executive Director
J.C. Conley: SEC Energy Committee Chair
Robert Venables: SEC Energy Coordinator

Executive Summary

Mission Statement

The mission of Southeast Conference is to undertake and support activities that promote strong economies, healthy communities, and a quality environment in Southeast Alaska.

Southeast Conference is a private membership organization that works to advance the collective interests of the people, communities, and businesses of Southeast Alaska. It is the Alaska Regional Development Organization (ARDOR), Federal Economic Development District (EDD), and USDA Resource Conservation and Development (RC&D) Council for the region.

Energy Committee Mission

Our vision for Southeast Alaska is to reduce, to the maximum extent possible, the use of diesel as a primary fuel source for the generation of electricity.

This will be accomplished through the utilization of the regions plentiful hydroelectric potential and the development of an interconnected transmission system to share these resources throughout the region.

ACCOMPLISHMENTS:

The Southeast Conference, working with its member communities and utilities, has been successful in developing regional plans and obtaining state and federal funds for many energy projects in the region. Our energy committee represents communities, organizations and utilities throughout the region. This is a 'working committee' dedicated to working together to solve the region's energy problems.

Plans and Organizational Work

- Completed an engineering/economic analysis of the entire Southeast Alaska Intertie Project (**Acres Report, 1998 and D. Hittle & Associates, 2003 & 2005**).
- Secured U.S. Congressional Authorization for SE Electrical Intertie System Plan (PL 106-511).
- Took a lead role in the formation of Kwaan Electric Transmission Intertie Cooperative (KWETICO), potential owner/operator of portions of the SE Intertie.
- Worked with AEA to develop the Southeast Alaska Energy Export Study (2007).
- Kake-Petersburg Transmission Intertie Study Update (due March 2009).

Current Utility Projects Underway

- Kasidaya Hydro Project near Haines/Skagway (Project operational, 2008).
- Juneau to Hoonah Intertie Segment (Project partially completed to Greens Creek).
- Swan-Tyee Intertie Segment (Project on schedule for completion October 2009).
- Kake-Petersburg Intertie Segment (Planning Study/Economic Analysis, update in progress, joint design/permitting project with AKDOT&PF and AEA).
- Reynolds Creek, Haida Corp. (partially funded, ready to construct this year).
- Prince of Wales Intertie (partially funded, ready to construct).
- Elfin Cove Utility Commission (in final design for hydroelectric facility).
- Gustavus Falls Creek Hydro (operational 2009, final phase ready to construct).

Southeast Conference Energy Program FY10

Funding Overview

To maintain its Energy program, Southeast Conference (SEC) is working to locate short-term funding and to identify long-term (and sustained) sources of income. The immediate goal is to secure funding for two years to maximize the effectiveness of the energy program and assist communities in their ongoing efforts to reduce energy costs and increase efficiencies.

Program Goals

- Reduce dependence on fossil fuels. This is critical in light of the recent volatility in oil prices.
- Bring affordable hydro power to communities where this is technically and economically feasible.
- Develop a regional electrical grid interconnecting Southeast communities and utilities with hydroelectric generation.
- Work with member communities and utilities to develop adequate energy infrastructure including alternative energy sources to meet current and future needs.
- Lower costs to rate payers and communities and increase economic development opportunities.

Priorities / Tasks

- Secure funding for permitting and design for Kake-Petersburg Intertie ($4.3 million).
- Work with IPEC and rural communities on solutions for their energy needs.
- Support Haida Corporation's efforts to advance the Reynolds Creek Hydro to completion.
- Begin working with federal and state funding agencies to construct the Kake-Petersburg Intertie.
- Facilitate efforts in Southeast to develop a regional Intertie and projects that increase hydro capacity.
- Work with member communities and utilities in their efforts to secure permits and funding for hydro and other alternative energy project development.
- Study alternative energy sources – biomass, hydrogen, wind, geo-thermal, tidal, and waste-to-energy.

Southeast Conference feels it is essential to develop and implement a regional energy plan for Southeast Alaska. We are working with the Alaska Energy Authority (AEA) and the Tlingit & Haida Energy Department to develop a regional energy plan and working with the communities to implement the opportunities that exist in their areas. Substantial and measurable progress has been made over the past couple of years, and it is important to keep the momentum of this program moving forward. The Southeast Conference Board of Directors has voted to maintain its energy coordinator position and its energy program as a core program within Southeast Conference and voted to support its staff in the pursuit of these goals. The position is currently being funded from reserves.

The following information is intended to demonstrate many areas where the State of Alaska can make an investment with significant impact and benefits to the region. These projects come from the communities and have been vetted through the public process. It is a work in progress and will be updated as more information comes to us from the communities.

Southeast Alaska Energy Projects with Estimated Funding Needs

Facilities and Infrastructure Construction Needs

- **Metlakatla Intertie to Ketchikan**: This is the southernmost leg of the SE Intertie system and is designed to transmit surplus hydroelectricity (approx. 8,500,000kW per year) to Ketchikan where the energy will be used to offset diesel generation (about 580,000 gallons). **CONSTRUCTION READY AT A PROJECT COST OF $7,652,000.**

- **POW Island Intertie**: AP&T proposes to construct a 48 mile line extension to the communities of Coffman Cove and Naukati Bay (both use 100% diesel generated power). This project will place these communities onto the POW grid which is supplied by hydroelectric power. This intertie will reduce fossil fuel consumption by 71,082 gallons per year and reduce the electrical rate by up to 60%. **CONSTRUCTION READY, PARTIALLY FUNDED, AP&T HAS REQUESTED $3,752,181 TO COMPLETE.**

- **Reynolds Creek Hydroelectric Power Project**: This 5 MW hydro facility is located 10 miles east of Hydaburg and is a joint venture between Haida Corporation and AP&T. The development of this resource is essential to meet the electrical needs of the POW Island as it grows and will prevent the use of supplemental diesel power. **CONSTRUCTION READY, PARTIALLY FUNDED, HAIDA POWER REQUESTING $13,720,000 TO COMPLETE.**

- **Gustavus Electric**: The Falls Creek Hydro Electric Project is an 800 kWh run-of-river hydroelectric facility which will provide electric power to the community of Gustavus. The project will displace existing diesel generation. Construction of the project is approximately 90% complete and will provide 90% of the community's electric needs. **FUNDING REQUESTED BY GUSTAVUS FOR COMPLETION, $750,000.**

- **Kake – Petersburg Intertie**: This is a high priority need in the region. Funding has been identified through HB 152 for final design and permitting. Detailed construction cost estimates will be available in March, but the project is estimated to cost between **$25-34 MILLION** and could be funded in phases. The AK DOT&PF has begun field work and is an active partner in the development of this project.

Capacity Development Projects: Final Design and Permitting

Ketchikan - Whitman Lake: The proposed Whitman Lake Hydroelectric Project is located approximately four miles east of Ketchikan, Alaska. KPU proposes to install 4.6 MW of hydropower generating capacity at the existing Whitman Lake Dam to provide an additional source of clean renewable energy to the city of Ketchikan and the Borough area including Saxman Village, while also enhancing the conversion of oil heat to electric heat and displacing expensive and nonrenewable diesel generation. Phases 1 & 2 are complete. **FUNDING FOR FINAL DESIGN IS REQUESTED BY KPU AT $1,300,000 (KPU MATCH, $320K).**

Sitka- Blue Lake Hydroelectric Project: This project will raise the height of the dam by 83 feet and expand the plant's capacity from 8MW to 18MW of capacity. Sitka has nearly maxed out available hydro resources. Multiple funding partners are expected to participate in order to bring this facility on line by 2015. The City and Borough of Sitka **REQUESTS FINANCIAL ASSISTANCE IN FY2010 OF $7,500,000.**

Hoonah Energy Needs: With the costs of the proposed Juneau to Hoonah intertie escalating to an estimated $40 million, Alaska Energy Authority (AEA) commissioned a conceptual study of the hydroelectric resources in the immediate area of Hoonah along with an analysis of the power plant needs that should be addressed concurrently. The findings are as follows:

- $4,061,317 Power Plant Replacement (2,600kW @ $1,562/kW)
- $4,558,500 Gartina Creek Hydroelectric Project (600kW)
- $3,946,500 Water Supply Creek Hydroelectric Project (600kW)
- $4,393,500 Elephant Falls Hydroelectric Project (600kW)

The development of any one of the three proposed hydro facilities would offset approx. 30% of Hoonah's projected annual demand. This would result in a savings of approx. 129,000 gallons of diesel fuel per year (saving approx. $380,000 using an est. fuel cost of $3.00/gallon). The development of any two of the three proposed hydroelectric facilities would offset about 50% of Hoonah's annual demand, with an approx. savings of $640K. No formal request has yet been made, **CAPITAL NEEDS ABOVE TOTAL, $16,959,817**. These projects will benefit the community significantly but will not meet all of Hoonah's energy needs. The Juneau to Hoonah Intertie Project is construction-ready and is still a long-term objective as part of the regional electrical grid network.

Elfin Cove Utility Commission: This hydroelectric power plant and associated infrastructure for access and connection will serve the community of Elfin Cove. Upon completion, the hydroelectric facility will include: a 1,000-foot long diversion conduit; a 1,300-foot long penstock to tidewater; and upgrades to the hydro power house. **FUNDING REQUEST BY ELFIN COVE FOR FINAL DESIGN AND FERC PERMITTING IS $395,200.**

Community Planning Efforts: Feasibility and Assessment

Petersburg – Ruth Lake: This Project would develop the hydro potential at Ruth Lake, with a total installed capacity of the powerhouse of 20 MW. The proposed Ruth Lake Hydroelectric Project would be interconnected to the existing transmission infrastructure currently owned and operated by the FDPPA. Ruth Lake would be a major addition to the energy resources to serve communities in an interconnected Southern Southeast Alaska grid. **PHASE 1 FUNDING REQUEST FROM THE CITY OF PETERSBURG FOR PRE-FEASIBILITY IS $160,000 AND PHASE 2 PERMITTING IS $2 MILLION.** Petersburg is providing matching funds of $540,000 for the two phases.

Metlakatla – Triangle Lake: This proposed 4MW hydroelectric project is located along the proposed transmission line intertie to Ketchikan. The Triangle Lake project will provide additional hydro power to Metlakatla and will offset diesel power generated in Ketchikan. **FUNDING REQUESTED BY METLAKATLA FOR FEASIBILITY ANALYSIS AND CONCEPTUAL DESIGN IS $500,000.**

Sitka – Takatz Lake: Sitka is engaged in a long range strategy to decrease its dependence on oil by developing its renewable energy resources, particularly the known hydroelectric resources on Baranof Island. This project is the study and investigation phase of developing Sitka's hydroelectric resources to determine the feasibility of developing the estimated 28MW Takatz Lake Hydroelectric Project. **THE ESTIMATED COST OF THIS STUDY AND INVESTIGATION OF THE HYDROELECTRIC POTENTIAL OF TAKATZ LAKE IS $2,000,000.**

This is a compilation of community projects that have gone through the public process. Most are part of the Southeast Intertie Plan authorized by Congress in 2001. More detailed information is available upon request. Other projects, such as Thayer Creek in Angoon will be added to this list as information becomes available.

MEMORANDUM

DATE: March 25, 2009

TO: Representative Neuman, Co-Chair House Resources Committee
Representative Johnson, Co-Chair House Resources Committee

FROM: Representative Thomas

RE: CSHJR 25 Urging Congress to Classify Hydroelectric Power as a Renewable and Alternative Energy Source

---

Please schedule CSHJR 25 Classifying Hydropower as a Renewable Energy Source for a hearing in the House Special Committee on Energy as soon as possible. CSHJR 25 points out the enormous potential that Alaska has for hydroelectric power, which is a clean, non-diesel source of energy, and asks Congress to develop a working definition of renewable and alternative that includes hydroelectric power. Currently, there is no blanket policy on hydroelectric power and it often is excluded or omitted from renewable energy legislation.

Please contact Kaci Schroeder Hotch, in my office if you have any questions.

Alaska State Legislature

Representative Anna Fairclough – House District 17

House Joint Resolution 26

"Urging the United States Congress to adequately fund land surveys in Alaska in order to issue patents to the State of Alaska and Alaska Native corporations."

House Joint Resolution 26 urges the United States Congress to adequately fund land surveys in Alaska in order to issue patents to the State of Alaska and Alaska Native Corporations. This is critical concern in Alaska because surveys and subsequent land patents issued to the State and Native Corporations are critical to the future use and development of land in Alaska.

At Statehood, Alaska was granted a land entitlement from the federal government of 103,350,000 acres. Alaska Natives, through the Alaska Native Claims Settlement Act (ANCSA), were granted a land entitlement from the federal government of over 45 million acres. In 2004, Congress passed the Alaska Land Transfer Acceleration Act (ALTAA) with the intent of largely completing state and ANCSA land entitlements by 2009.

The United States Bureau of Land Management (BLM) has aggressively and diligently worked to implement the ALTAA, however, despite BLM's efforts, considerable land conveyance work remains to be accomplished, particularly in the area of land survey. Land surveys are necessary to issue patents to the state and ANCSA Corporations, and are essential to determining with certainty what lands are owned by the state and ANCSA corporations. This certainty regarding boundaries and ownership is needed long term for land use and development.

Congress provided interim title to the state and ANCSA corporations by granting Tentative Approval (TA) to the State and Interim Conveyance (IC) to ANCSA Corporations, but with the understanding that the land would eventually be surveyed and patent issued. Under both the Statehood Act and ANCSA, the federal government is responsible for preparing these land surveys. As of December 31, 2008, over 66 million acres of land still awaits patent in Alaska, including more than 40 million acres of land that has been TA'd to the State and 14 million acres IC'd to ANCSA corporations, and over 12 million additional acres await conveyance.

This resolution asks the United States Congress to budget sufficient funds to BLM to ensure the timely completion of land surveys in Alaska in order that land promised to Alaska Natives and the State of Alaska can be patented. This is especially important with current federal budget constraints.

I urge your support on the passage of this legislation.

Fact Sheet

Title: Land Ownership In Alaska

Alaska Department of NATURAL RESOURCES
Division of Mining, Land & Water
March 2000

Current land ownership in Alaska can be traced back to three main events in the state's history.

- Russian traders arrived in Alaska in the mid-1700's and established small, scattered trading posts and settlements. Alaska Natives (the Eskimo, Indian, and Aleut peoples) continued as the primary "landowners" during this period of Russian occupation.

  On October 18, 1867, Russia sold Alaska to the United States government. As a result, the federal government owned the Alaska Territory, approximately 375 million acres (about one-fifth the size of the continental U.S.).

- Alaska became a state in 1959. The federal government granted the new state 28% ownership of its total area. Approximately 103,350,000 acres were selected under three types of grants: Community (400,000 acres), National Forest Community (400,000 acres), and General (102,550,000 acres). Additional territorial grants, for schools, university and mental health trust lands, totaling 1.2 million acres were confirmed with statehood. All grants combined gave the State of Alaska approximately 105 million acres.

- In 1971 Congress passed the Alaska Native Claims Settlement Act (ANSCA). This law granted 44 million acres and 1 billion dollars to village and native corporations created under the act. Generally, ANSCA gave Native selections priority over state land selections.

State Land

To date, the state has received patent to approximately 85% (90 million acres) of its total land selections. The state was permitted to select lands, from any federal land not already reserved for other uses, to provide:

1. Land and resources to support the state's economy for road construction, economic development, and building houses, schools, and other public and private facilities.
2. A reduction in federal control over state internal affairs by giving the state ownership and jurisdiction over its own land.

The state chose land to meet three specific needs - settlement, resources and recreation.

Settlement – The State of Alaska selected land to encourage development and settlement. Land for public facilities, road construction and other public needs were included. Once owned, the state transfers large tracts of land to local governments, and leases and disposes of land to the private sector. There are approximately 580,000 acres currently in the state's land disposal bank for eventual lease or sale.

Resources - The Alaskan economy is based on exploration for and the development of natural resources. Lands were selected for agriculture, forestry, commercial fisheries, mining potential, oil and gas development, and wildlife habitat.

Recreation – Lands for wildlife, back-country recreation, and varying degrees and types of developed recreation were chosen and reserved to provide a variety of experiences for Alaskans and the tourist industry.

Once land is selected, land planners develop state land use plans. Planners consider laws and policies set by the Governor and state legislature, the character of the land itself, recommendations made by resource experts and public input to determine the most appropriate management of currently owned or selected state land. Plans are developed for land in selected status in anticipation of its conveyance to the state.

Federal Land

The federal government is still the largest landowner in Alaska with 60% of the total area (222 million acres). This acreage includes national parks, wildlife refuges, national forests, military reservations and the North Slope National Petroleum Reserve. More than a dozen federal agencies manage federal lands in Alaska.

The majority of federally owned lands have been set aside for public use (approximately 80 million acres). These are designated as follows:

> The National Park Service and Fish and Wildlife Service manage about 119.3 acres (48.3 and 71.0 million acres respectively) for primary uses of resource protection and fish and wildlife conservation.
>
> The Forest Service and Bureau of Land Management manage about 97.7 million acres (19.8 and 77.9 million acres respectively) for multiple use purposes including timber production, fish and wildlife, recreation, water and mining. Management of these lands is based on priorities and compatibility among various uses.

The remaining federal land is designated for special purposes, such as military reservations, the National Petroleum Reserve and U.S. Postal Service lands.

Native Lands

Native lands are private lands. The Alaska Native Claims Settlement Act, passed by Congress in 1971, mandated the creation of regional and village Native corporations for the disbursement of the 44 million acres and payment of one billion dollars mandated to Native ownership.

Thirteen regional corporations were created for the distribution of ANSCA land and money. Twelve of those shared in selection of 16 million acres, the thirteenth corporation, based in Seattle, received a cash settlement only. 224 village corporations, of 25 or more residents, shared 26 million acres. The remaining acres, which include historical sites and existing native-owned lands, went into a land pool to provide land to small villages of less than 25 people.

Other Private Land

Land in private ownership (other than Native land) comprises less than one percent of the total land in Alaska. Much of the best land for development around Alaska's communities is, or will be, privately owned. Private land development meets people's needs by providing places to live, work, shop and recreate. It also provides a tax base for cities and communities to help support public services.

•Comments:

HJR 27 (26-LS0760\A) moved from House Resources Committee today with the following conceptual amendment.

On page 2, line 18: (two commas)
Insert "," after "penalties" and after "sanctions"

On page 2, line 25 (or wherever it fits in the last paragraph)

Delete "."

Insert "; and governors and legislative bodies of the other 49 states."

A final CS for HJR 27(RES) would be fine.

Thanks.

Debra

the Ninth Amendment to the Constitution of the United States reads, "The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people"; and

WHEREAS the United States Supreme Court has ruled in New York v. United States, 112 S.Ct. 2408 (1992), that the United States Congress may not simply commandeer the legislative and regulatory processes of the states; and

WHEREAS all states, including Alaska, find themselves regularly facing proposals from the United States Congress that weaken states' rights protected by the Tenth Amendment;

BE IT RESOLVED that the Alaska State Legislature hereby claims sovereignty for the state under the Tenth Amendment to the Constitution of the United States over all powers not otherwise enumerated and granted to the federal government by the Constitution of the United States; and be it

FURTHER RESOLVED that this resolution serves as Notice and Demand to the federal government, as our agent, to cease and desist, effective immediately, mandates that are beyond the scope of these constitutionally delegated powers; and be it

FURTHER RESOLVED that all compulsory federal legislation that directs states to comply under threat of civil or criminal penalties, or sanctions, or requires states to pass legislation or lose federal funding be prohibited or repealed.

COPIES of this resolution shall be sent to the Honorable Barack Obama, President of the United States; the Honorable Joseph R. Biden, Jr., Vice-President of the United States and President of the U.S. Senate; the Honorable Nancy Pelosi, Speaker of the U.S. House of Representatives; the Honorable Lisa Murkowski and the Honorable Mark Begich, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress; and all other members of the 111th United States Congress.

HJR 27 SPONSOR STATEMENT

HJR 27 re-asserts Alaska's rights as a sovereign. The resolution reminds the federal government that the 10th Amendment limits the scope of federal power to that specifically granted by the Constitution of the United States and no more. Each state possesses a vast array of rights that our Founders strove to make certain the federal government could not usurp, rights the federal government seems to increasingly have ignored or diminished.

This year several resolutions before the House refer to the abuse of federal powers and the consequences that abuse poses for Alaska including:

- HR 8 and SR 6 – Resolutions opposing the Transportation Security Administration's (TSA) proposal to require in-state general aviation to implement a Large Aircraft Security Plan, similar to that in effect for major Interstate and International airports and flights.
- HJR 17 – A Resolution opposing the "Blair Holt's Firearm Licensing and Record of Sale Act" which would violate Alaskans' 2nd Amendment right to keep and bear arms.
- SCR 3 – A Resolution Urging the Governor to take action against the US Department of the Interior for violating our right to manage our millions of acres of navigable waters and submerged lands.
- HB 186 – A bill exempting firearms manufactured and kept in Alaska from federal regulation.

The federal government's encroachment on state's rights doesn't stop there. According to the National Conference of State Legislatures, "the volume of federal legislation that preempts state authority has increased" and "pressure continues to mount for Congress and the White House to support federal usurpation of state authority in a variety of areas such as criminal law, tort reform, driver's license security and the environment."

Unfunded mandates in Medicare, Medicaid and Education spending, preemption of state absentee voting laws and product liability and consumer protection standards should be added to the list of over-reaching federal authority. As the 9th and 10th amendments to the United States Constitution anticipated, the states must forever retain the power and flexibility to craft innovative solutions to their own problems.

Often the broad manner in which laws are written in congress can most politely be described as overreaching and cavalier. One example that concerns Alaskans is a Congressional proposal that could turn into the confiscation of our firearms in violation of the 2nd Amendment. HJR 27 tells the feds to back off, that Alaska has the authority and right to determine how best to govern our state.

I would appreciate your support for this resolution.

NCSL NEWS

May 14, 2008

States Call on Congress to Stop Impeding State Authority

Regulatory Activism Undermines State-Federal Partnership

WASHINGTON – In testimony today before Congress, the National Conference of State Legislatures urged U.S. Representative Henry Waxman to move forward on legislation to protect states against federal pre-emption of their authority. State Representative David Clark, majority leader in the Utah House of Representatives and chairman of NCSL's Standing Committees, told members of the U.S. House Committee on Oversight and Government Reform that decisions of state legislatures should not be trumped by unelected federal bureaucrats.

Clark cited specific instances of pre-emption by the Food and Drug Administration as being especially troublesome. In several cases, federal agencies have developed regulations that have no basis in underlying federal law, he said.

"States have different ways of solving problems. The diversity found within our state laws helps refine our democratic system," Clark said in his testimony. "When those state policy decisions are overridden by Congress, the agencies or the Supreme Court, the results are significant to states."

The FDA, for example, appeared to have circumvented the legislative process to create product liability and consumer protection standards without input from state officials. Many states, including Utah, already have stringent product liability laws that meet specific needs.

In his testimony, Clark urged Waxman to create legislation creating a transparent and open regulatory process that

respects Congress and state and local governments. Committee members are reviewing draft legislation that supports state oversight of product safety regulation.

"The bill recognizes that some decisions, such as how to protect people from defective products, are best made by the state legislatures, not by the federal government," Clark said.

NCSL is the bipartisan organization that serves the legislators and staff of the states, commonwealths and territories. It provides research, technical assistance and opportunities for policymakers to exchange ideas on the most pressing state issues and is an effective and respected advocate for the interests of the states in the American federal system.

State Sovereignty Movement Quietly Growing

Written by Dave Nalle
Published February 05, 2009

You may not have heard much about it, but there's a quiet movement afoot to reassert state sovereignty in America and stop the uncontrolled expansion of federal government power. Almost half of the state legislatures are considering or have representatives preparing to introduce resolutions which reassert the principles of the 9th and 10th Amendments to the Constitution and the idea that federal power is strictly limited to specific areas detailed in the Constitution and that all other governmental authority rests with the states.

In the version of this bill being considered in Washington State, they appeal to the authority of James Madison in *The Federalist* who wrote:

> "The powers delegated to the federal government are few and defined. Those which are to remain in the state governments are numerous and indefinite. The former will be exercised principally on external objects, [such] as war, peace, negotiation, and foreign commerce. The powers reserved to the several states will extend to all the objects which, in the ordinary course of affairs, concern the lives, liberties, and properties of the people."

The founding fathers believed in a balance between state and federal power. This state sovereignty movement clearly arises from the belief that the balance of power has tilted too far and for too long in the direction of the federal government and that it's time to restore that lose balance.

The emergence of this movement is a hopeful sign of the people asserting their rights and the rights of the states and finally crying "enough" to runaway government. With the threat of increasingly out of control federal spending, some of these sovereignty bills may stand a fair chance of passage in the coming year.

There's a lot of excitement about these bills, but there are also a lot of misconceptions, with people claiming that some states have already declared sovereignty and that the movement is much farther along than it really is. Contrary to popular rumor, none of the states has actually enacted a sovereignty law yet. Some have come close. Oklahoma's bill passed their lower house overwhelmingly but stalled in the Senate last fall and is being held over for consideration in the new year.

Contrary to the fantasies of some extremists, these sovereignty bills are not the first step towards secession or splitting up the union, nor are they an effort to block collection of the income tax, appealing though that might be. For the most part, they are not so much political statements of independence as they are expressions of fiscal authority directed specifically at the growing cost of unfunded mandates being placed upon the states by the federal government. Despite the movement picking up steam as he came to office, the target of these bills is not President Obama, but rather the Democrat-dominated Congress whose plans for massive bailouts and expanded social programs are likely to come at an enormous cost to the states.

It has become increasingly common for Congress to pass legislation which dictates policy to the states, but which comes without adequate federal funding and the expectation that the cost of these programs, which the states had no real say in approving, will come out of state budgets. This has been a long-term problem with Medicaid and Medicare, but the unfunded mandate which stirred up the most ire recently was the *No Child Left Behind* program. More concern has been raised with the recent reauthorization and expansion of the SCHIP program which has a history of requiring more expenditure than is provided for in the federal budget.

The text of the bill proposed in Arizona makes the clearest statement of the intent to block unfunded mandates:

> "That this Resolution serves as notice and demand to the federal government, as our agent, to cease and desist, effective immediately, mandates that are beyond the scope of these constitutionally delegated powers."

and

> "That all compulsory federal legislation that directs states to comply under threat of civil or criminal penalties or sanctions or requires states to pass legislation or lose federal funding be prohibited or repealed."

What this movement is most similar to is the Nullification Crisis of 1832, when the State of South Carolina asserted that it had the right to nullify the authority of federal laws within its borders. In this case the states are not asserting anything as broad as the Doctrine of Nullification, but are merely reasserting the limits which the 10th Amendment places on federal authority, specifically as it applies to spending, the idea being that they don't have to pay for federal mandates if their legislators choose not to.

Not all of the bills fall within these limitations. Missouri's bill actually goes somewhat further and does assert the right for the state to negate federal law, specifically in reference to the proposed federal Freedom of Choice Act, which some fear would bar states from passing laws regulating abortion. New Hampshire's bill actually goes so far as to lay out a very strongly worded variant of the Doctrine of Nullification, which specifies acts by the federal government (many of them currently being proposed in Congress) which would effectively negate the Constitution and the authority of the federal government within their state. Hawaii's proposed sovereignty bill comes very close to being an actual act of secession, based on native tribal rights.

As things stand right now it looks like Oklahoma, Washington, Hawaii, Missouri, Arizona, New Hampshire, Georgia, California, Michigan and Montana will all definitely consider sovereignty bills this year. They may be joined by Arkansas, Colorado, Idaho, Indiana, Alaska, Kansas, Alabama, Nevada, Maine and Pennsylvania where legislators have pledged to introduce similar bills. Twenty states standing up to the federal government and demanding a return to constitutional principles is a great start, but it remains to be seen whether legislatures and governors are brave enough or angry enough to follow through. As the Obama administration and the Democratic Congress push for more expansion of federal power and spending that may help provide the motivation needed for the sovereignty movement to take off.

JUNEAUEMPIRE.COM

We can break the chains of government control

Tuesday, March 17, 2009
By Kevin Reeves | **Round Two**

"Live Free or Die"

- New Hampshire motto

"Conviction is worthless unless it is translated into conduct."

- Thomas Carlyle

His name was Sean Flaherty, a diminutive, dark-headed Irishman's son, and I had the severe misfortune to be seated next to him in algebra class at the beginning of my freshman year. The math was bad enough - I never had a head for the stuff - but what made the class intolerable was Flaherty's mouth.

It was the dominant part of his personality, and he couldn't help livening up the room with colorful invective. Unfortunately, most of it was directed at me. Barbs about my acne, gangly appearance, etc. elicited laughter from my gangly, acne-faced classmates, who tittered like girls because the puberty hormones hadn't yet kicked in. I hated taking it on the chin that way, but I was scared to death of fighting. So to spare my miserable hide, I just laughed nervously along with the other 40 children in the room.

Then, one day, in the middle of a boring lecture on numbers, it happened. The under-the-breath jibes, the infuriating grin, the quiet, mocking laughter all coalesced to produce a real-time example of Newton's Third Law. In other words, I snapped. It was just a quiet, little pop, actually, which no one noticed but me. But suddenly, irreversibly, it was better to get bloodied than to just silently take the abuse. Flaherty had finally pushed all the right buttons in sequence. I'd had enough.

"Don't ever say that to me again."

Silence dropped like a guillotine blade. Mr. Tayzak's numbers-laden monologue froze midstream. Everyone, and I mean everyone, stared at us.

With a dismissive smirk Flaherty loudly replied, "Yeah? And what'll you do?"

I never blinked. "I'll bust your head."

The surprise on his face was priceless. A shadow of fear flitted across his eyes and he faked a puny laugh, looked away, and never bothered me again. Mr. Tayzak smiled faintly and continued his lecture. And I discovered that self-respect felt real good.

I learned a valuable lesson that day: If you let people stomp you, they will.

The issue of state sovereignty has cannon-balled in the past three weeks. It is long overdue. Some 20 states have either drafted resolutions against federal interference or are in the process of doing so. Thankfully, Alaska's own House Resolution 9 "serves as Notice and Demand to the federal government, as our agent, to cease and desist, effective immediately, mandates that are beyond the scope of these constitutionally delegated powers ..."

Since the passage of the fiat money bailout, which blithely promises Americans that our "representatives" can spend us out of debt, more and more states are experiencing the first sluggish awakenings from a federally-induced hypnotic trance. The sparkly medallion swung back and forth before drooping eyelids, of course, is the so-called "funding" that a state gets if it grovels enough before the federal hierarchy. Unfortunately for the Washington, D.C., conglomerate, with a deficit in the trillions, a probable depression looming, current taxation nearly astronomical, multiplied millions out of work and American freedoms melting like snowflakes under a desert sun, many average folks have drawn a line in the sand.

The New Hampshire resolution was killed in the state house, apparently by those who either cannot comprehend or view with utter contempt the state motto. Happily, those same who voted against it will be remembered as federal lackeys and now face a constituency who've had a gutful of being legislatively bullied.

Yet, this movement is merely so much rhetoric unless it is coupled with decisive action. If H.R. 9 means anything - and it certainly should, given our own proud motto - then the people of Alaska have declared that we are taking a stand, finally, and that threats and intimidation from our self-described betters in Washington won't work anymore.

Freedom has grave responsibilities. We're about to find out if we're worthy enough to carry them, or if we are to shoulder the accusation from another era, spoken to another complacent people: "Crouch down and lick the hand that feeds you; May your chains rest lightly upon you, and may posterity forget that ye were our countrymen."

Sponsor Statement

House Joint Resolution No. 28

"Urging the President of the United States and the US Congress not to adopt any policy, rule or administrative action or enact legislation that would restrict energy exploration, development and production in federal and state waters around Alaska, the OCS within 50 miles of shore, and elsewhere in the continental US."

The Alaskan Outer Continental Shelf (OCS) is a potentially important source of future energy supply. Recent estimates of the potential resources in the OCS place the undiscovered reserves at 27 billion barrels of oil and 132 trillion CF of natural gas. Add this to the estimated 35,000 jobs that OCS development could potentially create and the economic benefits are clear.

Recent actions and statements from the President of the United States and his Administration have caused uncertainty among producers and regulators regarding the future of OCS development in Alaska and the continental United States. Considering the unprecedented escalation of gasoline and heating oil prices that were seen last year, as well as the current economic crisis America is facing today, now is not the time to restrict businesses that are creating jobs and generating revenue.

It is more important than ever that we work with the oil and gas industry and federal regulators to ensure that Alaska's pipeline continues to provide oil and gas to the nation and revenue to the state. To facilitate this, President Obama and his Administration need to avoid enacting regulations, rules or administrative actions that would hinder or ban OCS development.

HJR 28 urges President Obama, key members of his Administration and members of Congress to not adopt any policy, rule, administrative action or legislation that would restrict energy exploration, development and production in federal or state waters around Alaska, the OCS within 50 miles of shore or elsewhere in the continental United States. HJR 28 further urges the President and Congress to encourage and promote continued exploration, development and production of domestic oil and gas resources.

CS FOR HOUSE JOINT RESOLUTION NO. 33( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES OLSON, Chenault, Johnson, Gatto, Ramras, Neuman, Thomas, Hawker, Coghill, Muñoz, Wilson, Fairclough, Lynn, Millett

A RESOLUTION

Urging immediate action by the governor, the Alaska Congressional delegation, and state and federal agencies to assist in the restart of oil production in Cook Inlet that was affected by the eruption of Mt. Redoubt in a safe and responsible manner.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS a period of increased volcanic activity began at Mt. Redoubt in September 2008; and

WHEREAS the proximity of Mt. Redoubt to state population centers, airports, and oil production facilities makes the recent volcanic eruptions particularly threatening to Alaskans; and

WHEREAS the eruption cycle that began on March 22, 2009, resulted in massive snow and glacial melt in the Drift River Valley, leading to the flooding of the Drift River; and

WHEREAS the Drift River oil storage and transfer facility is located in the floodplain of the river and in the path of flooding caused by lahars; and

WHEREAS, in an effort to avert a potential oil discharge into Cook Inlet, the Drift River terminal was shut down, and the oil in its storage tanks was drawn down; and

WHEREAS, because of the complexity of crude oil production in Cook Inlet, the length of time production wells are shut down adversely affects the ability to return to normal production levels; and

WHEREAS the Drift River terminal, as a crucial waypoint in the delivery of oil produced from Cook Inlet platforms, is integral to the operation of the Trading Bay and Granite Point facilities, the Tesoro refinery in Nikiski, and future oil and gas development and production in the Cook Inlet; and

WHEREAS the shutdown of the Drift River facility disrupts oil production on Cook Inlet platforms and adversely affects the operation of oil and gas facilities throughout the Cook Inlet basin; and

WHEREAS the oil services industries on which these platforms and facilities depend have been forced to curtail production and lay off workers as a result of the closure of the Drift River terminal; and

WHEREAS a prolonged closure of the terminal threatens to cripple the regional economy, with a decline in oil and gas production, potential price increases, and layoffs in the oil and gas sector and the industries that support it;

BE IT RESOLVED that the Alaska State Legislature urges immediate action by the governor, the Alaska Congressional delegation, and state and federal agencies to assist in the restart of oil production in Cook Inlet that was affected by the eruption of Mt. Redoubt in a safe and responsible manner.

COPIES of this resolution shall be sent to the Honorable Barack Obama, President of the United States; the Honorable Joseph R. Biden, Jr., Vice-President of the United States and President of the U.S. Senate; the Honorable Ken Salazar, United States Secretary of the Interior; the Honorable Lisa P. Jackson, Administrator of the U.S. Environmental Protection Agency; Admiral Arthur E. Brooks, Commander, Seventeenth Coast Guard District; the Honorable Tom Irwin, Commissioner, Department of Natural Resources; the Honorable Larry Hartig, Commissioner, Department of Environmental Conservation; and the Honorable Lisa Murkowski and the Honorable Mark Begich, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress.

MEMORANDUM

TO: Representative Craig Johnson, Co-Chair
Representative Mark Neuman, Co-Chair
House Resources Committee

FROM: Rep. Kurt Olson

DATE: April 11, 2009

RE: House Joint Resolution 26-LS0896\R Hearing Request
HJR 33

Pending introduction and referral, I respectfully request a hearing on House Joint Resolution 26-LS0896\R at your earliest possible convenience.

The resolution urges immediate action by the governor, the Alaska Congressional delegation, and state and federal agencies to assist in the restart of oil production in Cook Inlet that was affected by the eruption of Mt. Redoubt.

The shut down of the Drift River oil storage and transfer facility after the eruption of Mt. Redoubt has adversely affected oil and gas production and development in the Cook Inlet basin. The closure threatens to cripple the regional economy with a decline in oil and gas production, potential price increases, and layoffs in the oil and gas sector and the industries that support it.

The economic welfare of the region depends on resumed production in the Cook Inlet, and I urge the appropriate parties to assist in the restart of production in the region.

Please contact my staff, Konrad Jackson, at 465-4954 with any questions regarding this legislation.

Email: Representative_Kurt_Olson@legis.state.ak.us

Sponsor Statement
HJR 26-LS0896\R (HJR-33)

Alaska's economy is largely dependent on oil and gas production in the Cook Inlet basin. Much of this production has been stopped, however, due to the recent volcanic activity at Mt. Redoubt. The production stoppage threatens to cripple the state economy with a decline in oil and gas production, potential price increases, and substantial layoffs.

The shutdown of the Drift River oil storage and transfer facility is a substantial blow to production and development in the region. The facility is a crucial waypoint in the delivery of oil produced from Cook Inlet platforms and is integral to the operation of the Trading Bay and Granite Point facilities, the Tesoro refinery in Nikiski, and future oil and gas development and production in the Inlet. Its closure not only affects platforms and facilities in the Cook Inlet basin, but the support industries on which they depend.

Because the economic implications of reduced production in the Cook Inlet have the potential to affect the state economy in such a profound way, I respectfully urge the appropriate parties to assist in the restart of production in the region.

I kindly ask for your favorable consideration of this legislation. If you have any questions or concerns, please do not hesitate to contact me or my staff.

Sectional Analysis of Senate Bill 243: 26-LS 1346\PS

Please note that a sectional analysis is not an authoritative interpretation of a bill. The bill itself is the best statement of its contents.

Section 1 amends AS 31.05.030 clarifying that the Alaska Oil and Gas Conservation Commission (AOGCC) has jurisdiction over the exploration and development of geothermal resources; except for the management of leases and units.

Section 2 amends the royalty rate for geothermal resources in AS 38.05.181(g) to reflect federal royalty rates; 1.75% of gross income during the first 10 years and 3.5% of gross income thereafter.

Section 3 adds a new section to AS 41.06 delineating jurisdiction over geothermal resources between the AOGCC and Department of Natural Resources (DNR).

Section 4 amends AS 41.06.010 to allow the AOGCC to investigate the waste of geothermal resources.

Section 5 repeals and reenacts AS 41.06.020 to set out the jurisdiction of the AOGCC over all land in the state and to allow for the suspension of the application of chapter 06 on federal land if similarly regulated by Federal government and clarifies the application of the chapter.

Section 6 amends AS 41.06.030(a) to clarify that a plan of development and operation for a geothermal resource must be filed with the AOGCC.

Section 7 amends AS 41.06.030(b) to clarify that unitization by DNR of a geothermal resource system under AS 41.06.030 when the geothermal resource system includes state land.

Section 8 amends AS 41.06.030(c) to conform to the changes made in section 7.

Section 9 amends AS 41.06.030 by inserting a new subsection (e) that allows the commissioner of DNR to adopt regulations necessary to implement the purposes and intent of chapter 6.

SENATOR LESIL MCGUIRE

Section 10 amends AS 41.06 by adding a new section 41.06.035 allowing the AOGCC to issue orders and impose requirements to prevent waste and protect correlative rights on any geothermal opeation. This section also allows the AOGCC to adopt regulations. ~~regulate the management of a geothermal resource~~.

Section 11 repeals and reenacts AS 41.06.040(a) governing the authority of the AOGCC to adopt regulations governing the safe development ~~management~~ of a geothermal resource.

Section 12 amends AS 41.06.040 (b) ~~by replacing the commissioner of DNR's authority governing the filing of a surety bond with the AOGCC.~~ to allow the AOGCC to require a geothermal operator to file a surety bond.

Section 13 amends AS 41.06.040(c) to require notification of the AOGCC rather than the DNR is geothermal exploration encounters hydrocarbons and other fissionable materials.

Section 14 amends AS 41.06.040(d) to replace the commissioner of DNR with the AOGCC for the purposes of authorizing inspection of a geothermal operation.

Section 15 repeals and reenacts AS 41.06.050 governing the AOGCC permitting process for geothermal exploration and development drilling.

Section 16 amends AS 41.06 by adding a new section 41.06.055 authorizing a regulatory cost charge for geothermal wells.

Section 17 repeals and reenacts AS 41.06.060 providing definitions for AS 41.06

Section 18 repeals AS 41.06.030(d) governing lease operations under an approved plan of development and AS 41.06.040(e) the exemption from AOGCC authority of geothermal resources.

Section 19 adds a new section to the uncodified law of the State of Alaska that applies the royalty rates established by section 2 to leases entered into or renewed after the effective date of the act and directs the commissioner of DNR to offer the royalty rates established by section 2 to an existing lessee.

Section 20 adds a new section to the uncodified law of the State of Alaska that governs the transition of authorities over geothermal resources established in this act.

ANALYSIS: *(Attach a separate page if necessary)*

Under AS 38.05.181(g) SB 243 reduces royalty on gross revenues from 10% under current lease conditions to 1.75% of the gross revenues derived from geothermal leases during the first 10 years of income generating production on state leased lands, with a 3.5% royalty rate thereafter. These royalty rates apply to a geothermal lease or the renewal of a geothermal lease entered into on or after the effective date of the Act.

Given the immature state of the geothermal industry in Alaska, the impact to royalty revenue is indeterminate. Although a reduced royalty rate will lead to less royalty collected for a given geothermal project, this reduced royalty rate may make geothermal projects on state lands more competitive. This bill will also transfer certain drilling inspection functions and other authorities to AOGCC. There will be no budget impact to DNR as a consequence of this transfer. Without SB 243 DNR must either hire or contract drilling engineers and inspectors to meet the potential demand of geothermal leasing.

Sec. 17 (d) defines those waters where the Division of Mining, Land and Water will continue to manage water rights in the state when the water is not a "geothermal resource."

ANALYSIS: *(Attach a separate page if necessary)*

Additional work for the Alaska Oil and Gas Conservation Commission (AOGCC) resulting from this bill could be managed by existing staff. The agency would need to provide training for Commissioners and staff on geothermal drilling and production practices, but the costs would be absorbed by the agency. Therefore, AOGCC submits a zero fiscal note.

Geothermal State Leasing

(Taken from www.geothermal.org)

Alaska

Legislative Reference: Alaska Administrative Code 41.06.40 – 41.06.60; Alaska Statutes - Alaska Public Lands Act, Section 38.910, Section 38.05.181 – 38.05.182

Agency Responsible for Leasing: Department of Natural Resources Division of Lands

Leasing: Leasing is by competitive bid in areas designated by the Commissioner of the Department of Natural Resources. On state land that has not been declared a competitive geothermal area or withdrawn from geothermal prospecting, the commissioner may issue a prospecting permit to the first qualified bidder. Upon discovery of geothermal resources in commercial quantities the permit maybe converted to a noncompetitive lease.

Lease Terms:

Primary: 10 years
Renewal: 5 years if engaged in drilling and thereafter for duration of commercial production
Rentals: $3.00 per acre per year
Royalties: 10 – 15 % of gross revenue derived for products, sale, or use of geothermal resources under the lease. Royalties may be taken in kind if in the best interest of the state.

Arizona

Legislative Reference: Legislative Reference Title 12 Natural Resources Article 22 Geothermal Resource R12-5-2201 to R12-5-2217

Agency Responsible for Leasing: State Land Department

Leasing: Leasing is by competitive bid

Lease Terms:

Primary: 10 years
Renewal: As long as production is maintained
Rentals: $1.00 per acre per year
Royalties: Not less than 12.5 % of the market value

California

Legislative Reference: California Public Resource Code 6901-6925.2

Agency Responsible for Leasing: State Lands Commission

Leasing: Leasing is by competitive bid in areas selected for lease by the commission. Prospecting permits are available and may be convertible to a lease upon discovery with such terms as specified in 6913.

Lease Terms:

Primary: 10 years
Renewal: Yes, for so long as geothermal resources are being or capable of being produced or utilized in commercial quantities
Rentals: $1.00 per acre per year escalating, or prospecting permit
Royalties: Not less than 10 % of gross revenue
Not less than 20 % of gross revenue of mineral products
The Commissioner may provide for a royalty of less than 10 % for direct heat applications.

Colorado

Legislative Reference: Colorado Statutes Title 36 Natural Resources 36-1-115 Development of oil, gas, or geothermal resources areas.
36-1-147 Geothermal Leases.

Agency Responsible for Leasing: State Board of Land Commissioners

Leasing: Leases issued by the State Board of Land Commissioners may be awarded as the result of negotiation or competitive bidding. 36-1-113 (2)

Lease Terms:

Primary: Set in lease
Renewal: For as long as production continues
Rentals: Set in lease
Royalties: Set in lease

Hawaii

Legislative Reference: Hawaii Administrative Rules Title 13 Department of Land and Natural Resources Subtitle 7 Water and Land Development Chapter 183 Rules on Leasing and Drilling Geothermal Resources

Agency Responsible for Leasing: Department of Land and Natural Resources
Leasing: Leases on state land shall be granted only on a competitive bid basis. Leasing on reserved land may be granted on a competitive bid basis by public auction or without auction to the occupier or to his assignee upon a vote of two-thirds of the Board members. Exploration permits are also available on any state or reserved land.

Lease Terms:
Primary: 10 years
Renewal: For up to a maximum of 65 years
Rentals: Set by Board
Royalties: Determined by the Board
Royalties on by-products not less than 5 %

Idaho

Legislative Reference: Idaho Statutes Title 47 Mines and Mining Chapter 16 Geothermal Resources 47-1601 to 47-1611 Administrative Code 20.03.15 to 20.03.120

Agency Responsible for Leasing: State Board of Land Commissioners

Leasing: Leasing is by competitive bid in areas designated by the Director of the Department of Lands as being in a Known Geothermal Resource Area (KGRA) or where there is competitive interest, i.e. two or more applications are received on the same day for the same site. Other areas are available on a noncompetitive basis.

Lease Terms:
Primary: 10 years
Renewal: The primary term can be extended if lessee is actively engaged in drilling once geothermal resources are proved or utilized in paying quantities. The lease shall be extended but in no event for more than 40 years. After the end of the primary term, the lessee has preferential right to renewal for a second 40 years.
Rentals: $1.00 per acre per year – first five years
$2.00 per acre per year – second five years
$3.00 per acre per year – thereafter
Royalties: 10 % of the amount of value of geothermal resource, 5 % of the associated byproducts.

Kansas

No leasing regulations for geothermal.

Montana

Legislative Reference: Montana Code Annotated 2001 77-4-101 to 77-4-109, 77-4-121 to 77-4-129; Administrative Rule of Montana 36.25.103 and 104; Subchapter 4 Geothermal Rules and Regulations 36.25.401 to 36.25.413

Agency Responsible for Leasing: Board of Land Commissioners

Leasing: All leasing is by competitive bid. If at the lease sale, no bid is made on the tract for which an application was made, the applicant may negotiate with the Board.

Lease Terms:

Primary: 10 years
Renewal: The lease will continue in effect beyond the primary ten years if the lessee is engaged in drilling for geothermal resources. The lease shall continue in force so long as geothermal resources in paying quantities are produced.
Rentals: $1.00 per acre per year
Royalty: 10 % of the gross revenue; minimum $2.00 per acre per year

Nebraska

Legislative Reference: Nebraska State Statutes Section 66-1101 to 66-1106

Nebraska has not developed any provisions for leasing of state lands for geothermal exploration and development. However, for minerals as well and oil and gas, leasing competition is by competitive auction.

Nevada

Legislative Reference: Nevada Revised Statutes 534A.010; 534A.050

No leasing regulations for geothermal development.
For leasing, see Lands, Contract Department.

New Mexico

Legislative Reference: New Mexico Annotated Code Title 19 Chapter 14-1; Title 19 Chapter 2-7; Title 19 Chapter 13-7 to 13-12

Agency Responsible for Leasing: New Mexico State Lands Office

Leasing: Leases are available on a non-competitive basis. However, the Commissioner of Public Lands may at his discretion reject any application and offer the tract or tracts at public auction. Lands classified as "known geothermal fields" are leased through public auction through either sealed or oral bidding procedure.

Lease Terms:

Primary: 5 years

Renewal: Primary term can be renewed for additional 5 years and thereafter so long as geothermal resources are being produced or utilized or are capable of being produced or utilized in commercial quantities.

Rentals: $1.00 per acre or fraction thereof per year. Escalates to $5.00 per acre per year after primary lease term.

Royalties: 10 % of the gross revenue from the sale or use of steam, brines or hot water, associated gases or other forms of heat or energy derived from production with a minimum of $2.00 per acre or fraction thereof per year.
A royalty of not less than 2 % nor more than 5 % of the gross revenue received for the sale of mineral products or chemical compounds recovered from geothermal fluids.
A royalty of 8 % of the net revenue for the operation of an energy producing plant on the leased land.
A royalty of not less than 2 % nor more than 10 % of the gross revenue received from the operation of the geothermal resource for recreational, space heating, or health purposes.

North Dakota

Legislative Reference: North Dakota Century Code Chapter 38-19

Agency Responsible for Leasing: The State Industrial Commissioner – Office of the State Geologist

Leasing: Leases are negotiated.

Oklahoma

Legislative Reference: Oklahoma Statutes Title 64 Public Lands

Agency Responsible for Leasing: The Land Office

Leasing: The Commissioners of the Land Office have not adopted specific rules and regulations relating to the leasing of school or other public lands for the purpose of geothermal exploration and development.

Oregon

Legislative Reference: Oregon Revised Statues (ORS) Chapters 522 and 273, Oregon Administrative Rules 141-075

Agency Responsible for Leasing: The Division of State Lands

Leasing: Leases are available on both competitive and non-competitive bases. Geothermal exploration permits are also available, but allow only for nonexclusive access to land for geothermal exploration.

Lease Terms:

Primary: 10 years

Renewal: 5 years extension if resource discovery has been made or is imminent. No lease shall exceed 50 years; lessee has right of first refusal in the event the Division decides to continue leasing.

Rentals: Years 1 – 3: $1.00 per acre
Year 4: $3.00 per acre
Years 5 – 10: $5.00 per acre
Renewal geothermal lease: $5.00 per acre

Royalties: A royalty of at least 10 % upon the production value of the geothermal resources produced under the lease and sold or utilized by the lessee. The production value shall be determined by the gross sale price paid by the plant or other purchaser for value.

Royalties on By-Products: 1 % of the gross sale price of de-mineralized water sold, exchanged or otherwise disposed of.

South Dakota

Legislative Reference: South Dakota Codified Laws Chapter 5-1-2, 5-1-7, 5-7-19 to 25

Agency Responsible for Leasing: Department of Schools and Public Lands

Leasing: Leasing is on a competitive basis by public auction; the commissioner retains the right to reject any or all bids.

Lease Terms:

Primary: 10 years

Renewal: So long as resources are produced from the leased lands
Rental: Not less than $1.00 per acre per year.
Royalty: Not less than 10 % of the gross value received from the sale of steam brines at the point of delivery to the purchaser.
A 5 % royalty of the gross revenue from sale of mineral products or chemical compounds recovered from geothermal fluid or chemical compounds.

Texas

Legislative Reference: Texas Natural Resources Code (TNRC) – Title 5 Chapter 141 and Chapter 51.192

Agency Responsible for Leasing: Railroad Commission, Commissioner of the General Land Office

Leasing: All leasing is by competitive bid.

Lease Terms:
Primary: Generally 3-5 years
Renewable: As long as actively pursuing development. Thereafter so long as productive.
Rentals: Established at the time of bid or negotiated thereafter.
Royalties: Established at the time of bid or negotiated thereafter.

Utah

Legislative Reference: Utah Code Section 73-22-1 to 73-22-9, and 59-12-02

Agency Responsible for Leasing: Utah School and Institutional Trust Lands Administration

Leasing: In known geothermal areas lands have been withdrawn and are available for sealed bid competitive leasing upon nomination by a potential lessee. Non-withdrawn lands are available from over-the-counter leasing.

Lease Terms:
Primary: 10 years
Renewable: Primary term extendable if spudding or drilling wells. The lease is extendable indefinitely so long as in production.
Rentals: $1.00 per acre per year escalates to $4.00 per acre per year after expiration of primary lease term.
Royalties: 10% on production or minimum of $4.00 per acre per year.

Washington

Legislative Reference: Revised Code of Washington Chapter 79.76, 79.12, 79.13, 79.01, 79.02, Washington Annotated Code 332-22

Agency Responsible for Leasing: Department of Natural Resources, Division of Lands

Leasing: Leasing may be by competitive bid or negotiation.

Lease Terms:

Primary: 10 years

Renewal: Up to 55 years subject to approval every 5 years upon approval of plan of Development.

Rentals: Years 1 to 5, not less than $1.25 per acre per year or $250, whichever is greater; years 6 to 10, not less than $2.00 per acre per year or $500, whichever is greater.

Royalties: 10 % of the gross proceeds received from the sale of such geothermal resources which are derived, generated or manufactured from the premises sufficient for commercial sales, and 10 % of the fair market value thereof of products utilized but not sold, and 10 % of the gross proceeds for all byproducts derived from the leasehold estate.

Wyoming

Wyoming has never adopted rules and regulations for geothermal leasing. General leasing provisions are found in Wyoming Statutes Title 36 Chapter 5 (36-5-101) Qualification of lessees; lease terms; rental.

SENATOR LESIL MCGUIRE

Annual Royalty Due Under the SB 243 for the Proposed Mt. Spur Geothermal Project

The following was prepared based on the numbers provided by ORMAT, Inc. to the Senate Resources Committee.

Assumptions:

1. 50 Megawatt Geothermal Project
2. 95% Capacity factor
3. $130 per Megawatt/Hour

At the 1.75% rate for the first 10 years:

- 50 MW x 8760 hrs/yr x 95% CF x $130 MW/hr x 1.75% = $946,627.50 annually

At the 3.5% rate (effective in perpetuity after the first 10 years):

- 50 MW x 8760 hrs/yr x 95% CF x $130 MW/hr x 3.5% = $1,893,255 annually

*It is important to note that if the Mt. Spur project is developed by a private entity as proposed, the corporation would also be subject to Alaska's corporate income tax.

Subject: SB243

Good afternoon Representative Johnson,

SB243 is floating around in the House right now. There is a portion on royalty rates and a portion transferring some authorities from DNR to AOGCC.

The AOGCC has no opinion on the royalty piece, but here are our thoughts on the portion of SB243 relating to transferring authority from DNR to AOGCC:

The bill transfers some, but not all authorities for regulating geothermal operations from the DNR to the AOGCC. The authorities transferred are the authority to regulate drilling and production operations, the authority to protect correlative rights, and the authority to prevent physical waste of the resource. The DNR retains all of its authorities as a landowner.

The authorities being transferred to AOGCC are consistent with regulatory authorities already held by the AOGCC for oil and gas operations.

The AOGCC already has in place the expertise to allow us to take on these authorities. Most importantly, we have experienced drilling engineers who know what to look for when approving a drilling or well work permit to ensure safety and good operational practices. And we have experienced field inspectors who know what safety equipment is needed and how to test that equipment to demonstrate that it operates properly.

Since we already have the appropriate staff in place, there will be no fiscal impact by making this transfer of authority. However, if this bill does not pass, it will likely cost the State money for the DNR to hire or contract the needed expertise I described above.

Also, this change in authority is consistent with the way geothermal operations are regulated in other states. The only states that have an agency other than their oil and gas regulatory agency overseeing geothermal are Idaho and Utah – which are not oil producing states.

One last comment: The AOGCC's costs are paid by the industry we regulate, through a regulatory cost charge. This bill recognizes that fact, and establishes that geothermal producers will participate in that cost charge, similarly to the way that oil and gas producers do. I.e., during exploration there is no charge; only once production commences are charges billed.

If you have any questions, please do not hesitate to send them my way.

Thanks.

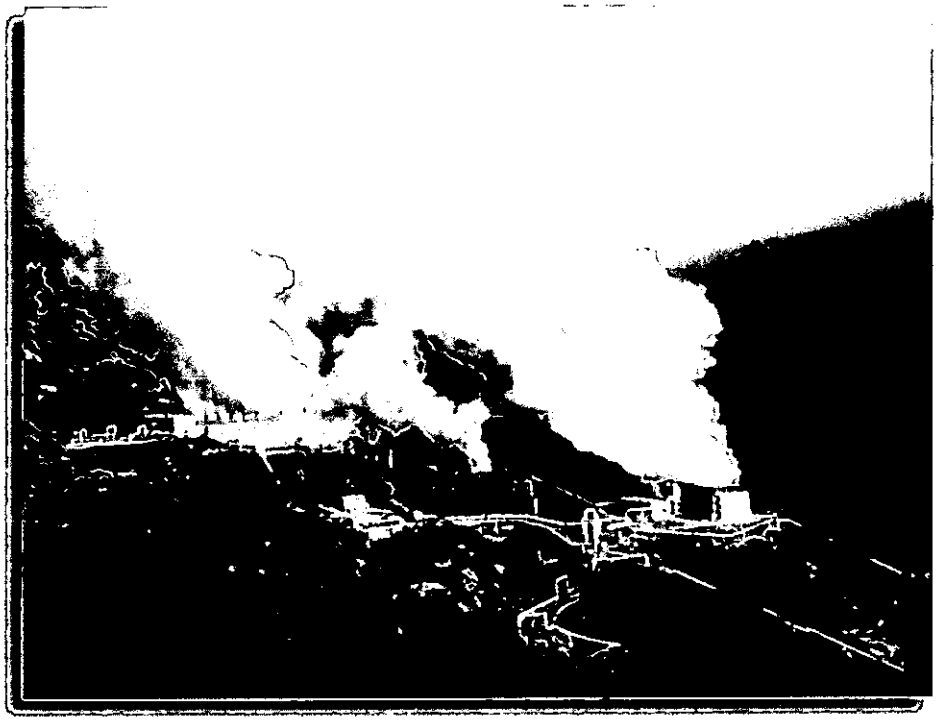
USGS
science for a changing world

Assessment of Moderate- and High-Temperature Geothermal Resources of the United States

Scientists with the U.S. Geological Survey (USGS) recently completed an assessment of our Nation's geothermal resources. Geothermal power plants are currently operating in six states: Alaska, California, Hawaii, Idaho, Nevada, and Utah. The assessment indicates that the electric power generation potential from identified geothermal systems is 9,057 Megawatts-electric (MWe), distributed over 13 states. The mean estimated power production potential from undiscovered geothermal resources is 30,033 MWe. Additionally, another estimated 517,800 MWe could be generated through implementation of technology for creating geothermal reservoirs in regions characterized by high temperature, but low permeability, rock formations.



Geothermal power plants at The Geysers in northern California. Currently, the United States has an installed and utilized power production capacity of more than 2,500 Megawatts-electric (MWe) from geothermal plants located in Alaska, California, Hawaii, Idaho, Nevada, and Utah. (USGS photograph by Julie Donnelly-Nolan.)

Introduction

The U.S. Geological Survey (USGS) has recently assessed the electric power generation potential of conventional geothermal resources in the United States. These resources are concentrated in the States of Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming, which contain all 241 identified moderate-temperature (90 to 150°C; 194 to 302°F) and high-temperature (greater than 150°C) geothermal systems located on private or accessible public lands. (Geothermal systems located on closed public lands, such as national parks, were not included in the assessment.) Electric-power potential was also determined for seven low-temperature (less than 90°C) systems in Alaska for which local conditions make electric power generation feasible. In addition, the assessment also includes a provisional estimate of the power generation potential from the application of unconventional, Enhanced Geothermal Systems (EGS) technology in Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming. This assessment benefited from cooperation and coordination with the Department of Energy (DOE); Bureau of Land Management (BLM); the University of Nevada, Reno; the University of Utah; Idaho National Laboratory; Lawrence Berkeley National Laboratory; state and local agencies; and the geothermal industry.

Identified Geothermal Systems

Currently, the United States has an installed and utilized power production capacity of more than 2,500 Megawatts-electric (MWe) from geothermal plants located in Alaska, California, Hawaii, Idaho, Nevada, and Utah. The nearly 15,000 Gigawatt-hours (GWh) of geothermal power generated in 2005 constituted 25% of domestic nonhydroelectric renewable electrical power generation. (Power generation of 1 MWe provides 8.77 GWh of electricity in 1 year.) The results of the new assessment for the power generation potential from identified geothermal systems yield a mean total of 9,057 MWe

U.S. Department of the Interior
U.S. Geological Survey

Fact Sheet 2008–3082
2008

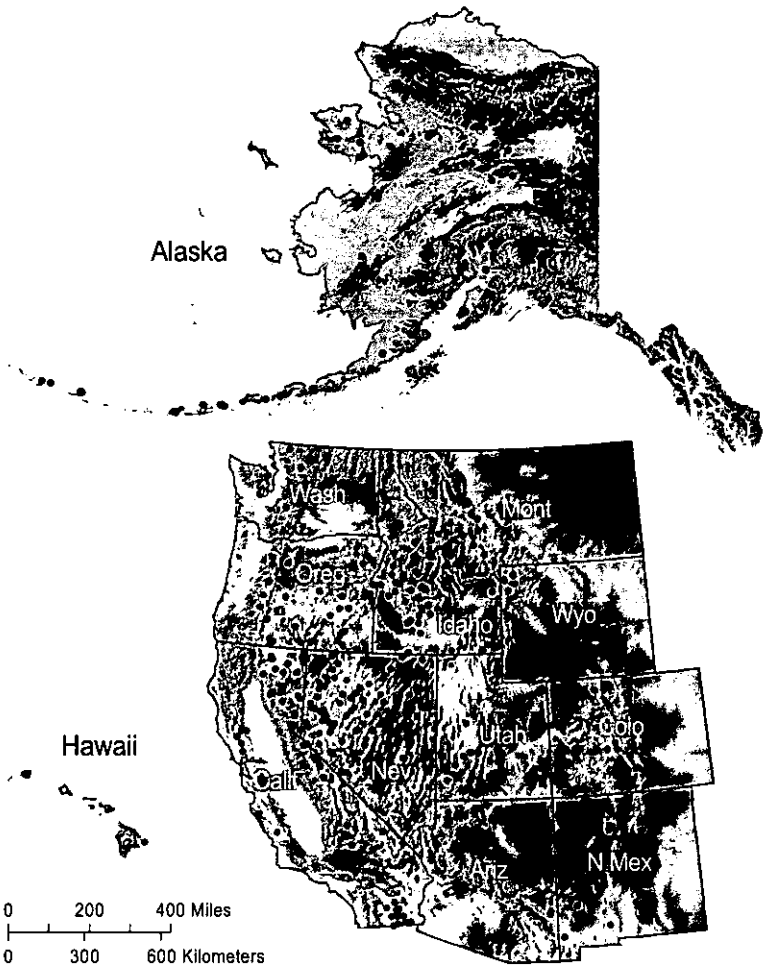

Figure 1. *Map showing the location of identified moderate-temperature and high-temperature geothermal systems in the United States. Each system is represented by a black dot.*

with a 95% probability of 3,675 MWe and a 5% probability of 16,457 MWe (table 1). The distribution of the individual systems across the study area is shown in figure 1. State totals were derived from summations of volumetric models for the thermal energy and electric generation potential of each individual geothermal system (Muffler, 1979; Williams and others, 2008). The results of the assessment indicate that full development of identified systems alone could expand geothermal power production by approximately 6,500 MWe and to seven additional states. The distribution of identified geothermal resources among the 13 states with identified geothermal resources is shown graphically in figure 2*A*. California, with large producing geothermal fields at The Geysers, the Salton Sea, and Coso, has 59.7% of the total resource, followed by Nevada with 15.4% and Alaska with 7.5%.

Undiscovered Geothermal Resources

Undiscovered geothermal resources were assessed for the same states in which the identified moderate- and high-temperature geothermal systems are located, based on a series of Geographic Information Systems (GIS) statistical models for the spatial correlation of

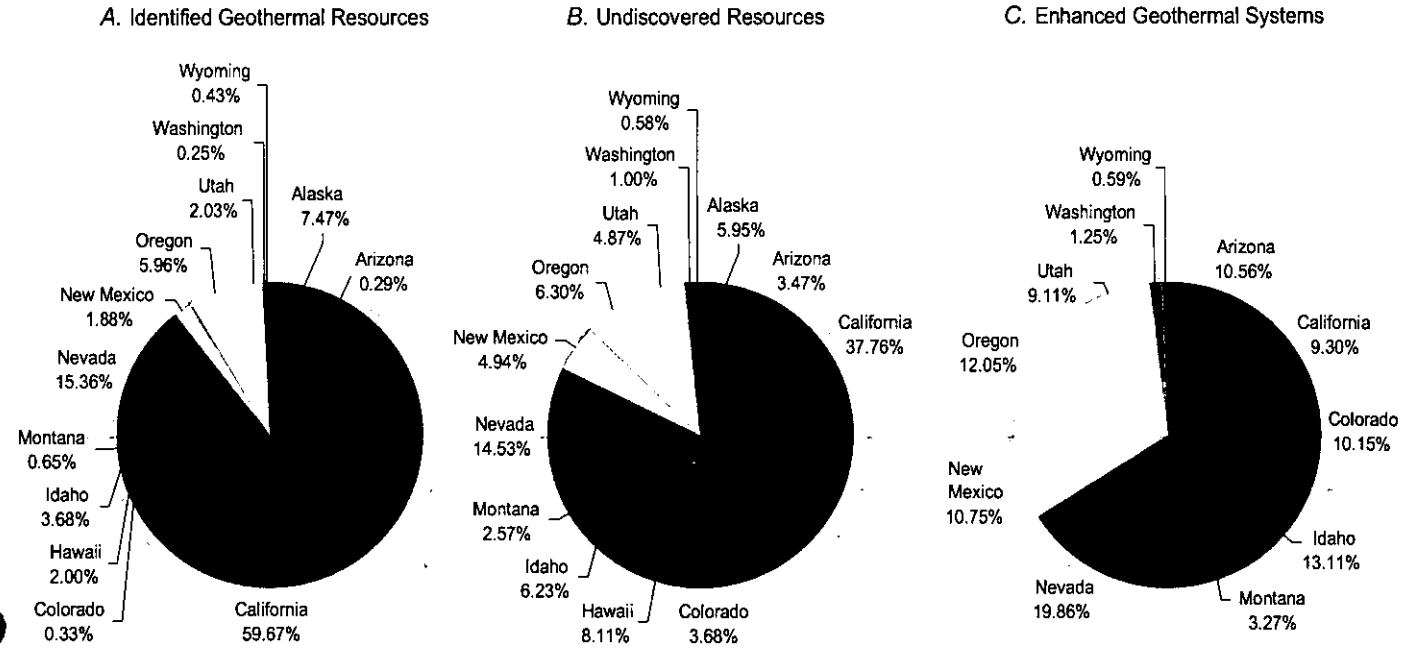

Figure 2. *Pie charts illustrating the distribution of (A) identified, (B) undiscovered and (C) Enhanced Geothermal Systems (EGS) resources (mean estimates) among the western states. Alaska and Hawaii were not included in the assessment of EGS resources because of a lack of information in those states.*

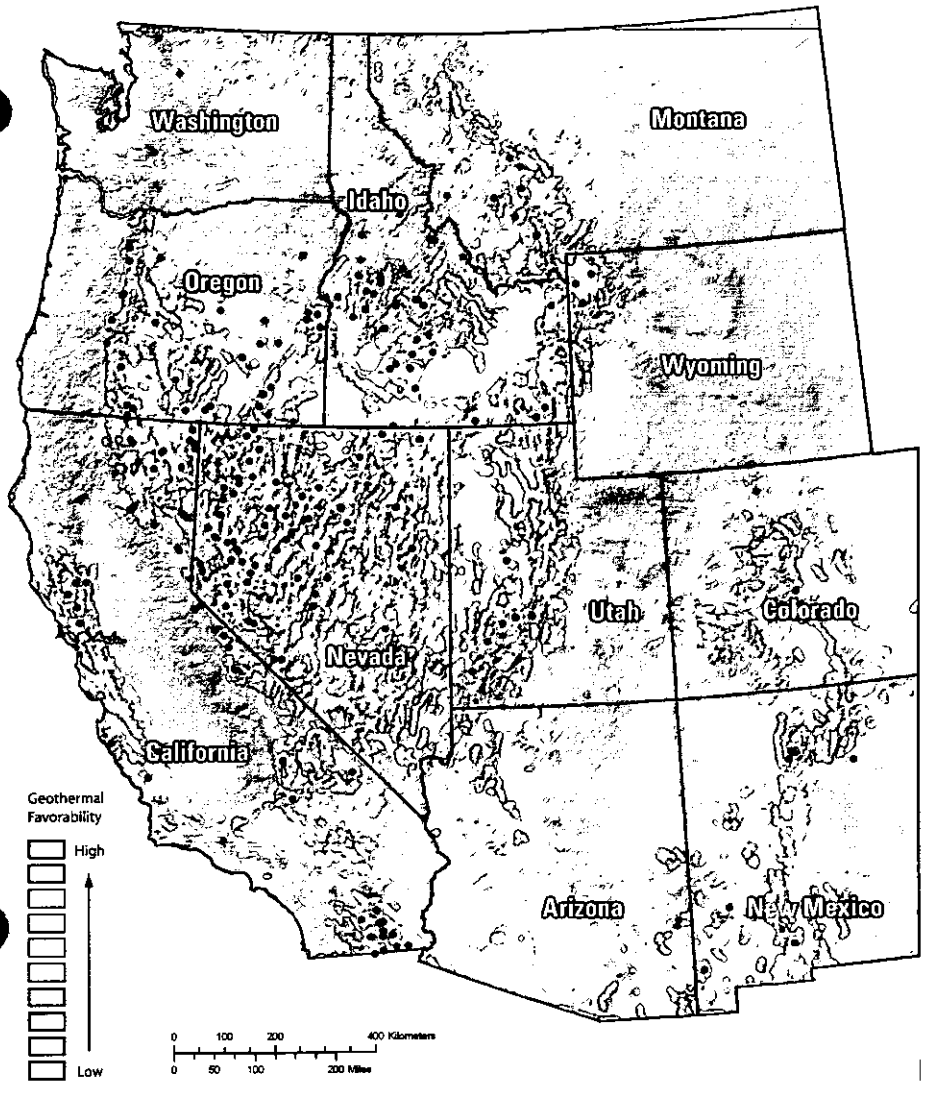

Figure 3. *Example map from one of a series of 28 spatial models showing the relative favorability of occurrence for geothermal resources in the western contiguous United States. The other models differ in details but show generally similar favorability patterns. Warmer colors equate with higher favorability. Identified geothermal systems are represented by black dots.*

geological factors that facilitate the formation of geothermal systems. The mean estimated power production potential from undiscovered resources located on private and accessible public lands is 30,033 MWe, with a 95% probability of 7,917 MWe and a 5% probability of 73,286 MWe. As illustrated in figure 2*B*, compared to the identified resources, a larger fraction of the undiscovered geothermal resources are located outside California. This reflects both the limited degree of exploration and development in States other than California and Nevada and the uniqueness of the vapor-dominated geothermal reservoir at The Geysers in northern California, which contributes approximately 1,000 MWe to the identified geothermal resource for the State but is unlikely to be matched by any equivalent occurrences on private or accessible public lands elsewhere in the United States. The undiscovered resources results indicate that additional exploration could add substantially to the total of identified geothermal resources and further expand geothermal power production. As indicated by the geothermal favorability map shown in figure 3, regions with significant geothermal potential but few identified geothermal systems include northeastern Nevada, western Utah, southern Idaho, eastern Oregon, and parts of New Mexico and Colorado.

Enhanced Geothermal Systems

Conventional geothermal resources depend on hydrothermal fluid circulation that arises only with the convergence of high temperatures—due either to magmatism or other tectonic processes that elevate temperature gradients in the Earth's crust—and permeability, typically fracture permeability produced as a result of active faulting (Duffield and Sass, 2003). Enhanced Geothermal Systems (EGS) are geothermal resources that require some form of engineering to develop the permeability necessary for the circulation of hot water or steam and the recovery of heat for electrical power generation. Because exploitation of EGS resources incorporates the augmentation or creation of permeability in place, the presence of elevated temperatures at drillable depths is the dominant factor controlling the quality of the resource.

Under the assumption of continued successful implementation of EGS technology, models for the extension of geothermal energy recovery techniques into regions of hot but low permeability crust yield an estimated mean electric power resource on private and accessible public land of 517,800 MWe (table 1), with a 95% probability of 345,100 MWe and a 5% probability of 727,900 MWe. This is approximately half of the current installed electric power generating capacity in the United States and an order of magnitude larger than the conventional geothermal resource. This estimate does not include Alaska and Hawaii, because there is not enough information to accurately estimate crustal temperatures in those States on a regional basis. With EGS technology at an early stage of development (DOE, 2008), the assessment results should be considered provisional.

The high crustal heat flow favorable for EGS development is more uniformly distributed across the western United States, and this is reflected in the distribution of the resource among the states, as shown in figure 2*C*. The EGS resource distribution, although large in total magnitude, is also relatively diffuse. In contrast to power production from conventional geothermal reservoirs, which is often concentrated at 10 to 20 MWe per km^2 of field area, the EGS resource outside of the high-temperature margins of

Table 1. Electric power generation potential in Megawatts-electric (MWe) from identified and undiscovered geothermal resources and Enhanced Geothermal Systems in the western United States.

[All electric power generation figures are calculated on a basis of 30 years of production. F95 represents a 95% chance of at least the amount tabulated; other fractiles are defined similarly. Fractiles are additive under the assumption of perfect positive correlation. N is the number of identified geothermal systems included in the estimate].

Wyoming	1	5	31	39	100	40	129	174	458	1,700	2,900	3,000	4,800
Total	248	3,675	8,356	9,057	16,457	7,917	23,739	30,033	73,286	345,100	507,000	517,800	727,900

identified geothermal systems averages approximately 0.5 MWe per km^2. However, continued advances in EGS technology, particularly with respect to creation of reservoirs at great depth and improved thermal energy recovery, could add substantially to the resource estimates (DOE, 2008).

EGS are not the only type of unconventional geothermal resource. Previous assessments (see for example, Muffler, 1979) indicated significant unconventional geothermal resource potential associated with fluids in deep sedimentary basins of the United States. These unconventional geothermal resources will be assessed in a future study.

Geothermal resources have the potential to play a much more significant role in our Nation's energy mix. This assessment of geothermal resources in the United States is only part of the USGS effort to help ensure our Nation's energy future.

SB 274

SENATOR FRED DYSON

March 23, 2010

To: Members of House Resources

From: Senator Fred Dyson

I am respectfully requesting to waive SB274, "An Act naming the state fish hatchery on the Elmendorf Air Force Base the William Jack Hernandez Sport Fish Hatchery" out of House Resources Committee.

Rep. Craig Johnson, Co-Chair

Rep. Mark Neuman, Co-Chair

SENATOR FRED DYSON

SPONSOR STATEMENT

SB 274 – William Jack Hernandez Sport Fish Hatchery

The purpose of this bill is to name the new state fish hatchery on Elmendorf Air Force Base, the William Jack Hernandez Sport Fish Hatchery. Hernandez pioneered the fish rearing and fish hatchery program at Ft. Richardson.

William Jack "Bill" Hernandez served his country valiantly during WWII, serving as a civilian contractor on Wake Island in the South Pacific, building fortifications for USMC personnel. Wake Island was attacked by the Japanese on Dec. 7, 1941, the same day as the Pearl Harbor attack, and a violent 16 day struggle ensued between the Marine regiment and an overwhelming enemy force. On December 23, 1941, Wake Island was captured and Mr. Hernandez was taken as a prisoner of war. He was a POW for three years before being released following surrender of the Japanese forces in 1945.

In 1947 Mr. Hernandez enlisted in the US Army, and in 1956 his unit was transferred to Fort Richardson where he became a Fish and Wildlife Conservation NCO. His orders were to rehabilitate the lakes and streams on post. As a result of Mr. Hernandez efforts, in 1957 the Secretary of the Army approved a cooperative agreement between the Army, the Alaska Territorial Department of Fish and Game, and the Fort Richardson power plant, allowing the plant's cooling pond to be used for rearing fish. Mr. Hernandez ran the fish rearing project, and annual production reached 12,000 rainbow trout, 100,000 Chinook salmon smolt, and 200,000 Coho salmon smolt.

In 1968 Mr. Hernandez retired from the US Army and received an Army Commendation Medal for his efforts. Shortly after retirement, Hernandez was hired by the Alaska Department of Fish and Game as a Fish Culturist at the Fire Lake Hatchery. In a few years he returned to Fort Richardson to manage the large scale fish hatchery constructed at the cooling pond. He also worked at the nearby Elmendorf fish hatchery. In 1983, after 26 years of dedicated service raising salmon and trout, Hernandez retired.

Sadly, Hernandez died of cancer in 2003. The Veterans of Foreign Wars Post 7665 honored him with a 21-gun salute. He was the epitome of Tom Brokaw's "Greatest Generation." Without his drive and dedication, the fish rearing project at Fort Richardson would have never gotten off the ground. His life's work made an enormous contribution to the sport and commercial fishing industry of the Cook Inlet region. Please honor William Jack "Bill" Hernandez by supporting this legislation.

SB 274 Notes

1. Director Charlie Swanton, ADF&G, Division of Sport Fish, states that he takes no official position with respect to naming a public facility. Swanton also states he has no objection to the proposed name (William Jack Hernandez) for the fish hatchery.

2. Director Swanton states the Division of Sport Fish has not received any additional recommendations for naming the fish hatchery, other than recommendations for naming it after William Jack Hernandez, and several former staff members have also recommended naming the new hatchery after Hernandez.

3. The new state fish hatchery will be completed May 2011.

4. Citizens (including current and former ADF&G employees) who strongly support this legislation and wish to testify via teleconference:

   Tom Namtvedt, 5640 Portage Drive, Wasilla, AK 99654 – (907)355-7403

December 24, 2009

Representative Wes Keller
600 E. Railroad Avenue
Wasilla AK, 99654

Dear Representative Keller:

I am a retired ADF&G fisheries biologist, commercial fisherman and one of your constituents. I and various active and retired ADF&G biologists are requesting your assistance with legislation to name the new Elmendorf fish hatchery after the man who pioneered the fish rearing and hatchery program at the Ft Richardson: William Jack (Bill) Hernandez (biography, photos, news clippings and draft bill attached). The Elmendorf hatchery is under construction and is scheduled to be completed in May of 2011. I have written Representative Dahlstrom and Senator Dyson, who represent Elmendorf AFB, to sponsor legislation to name the hatchery after Mr. Hernandez.

Mr. Hernandez was a remarkable man who was a Wake Island civilian POW during WWII, enlisted in the U.S. Army after liberation, and, in 1957, while a sergeant in the Army, started the fish rearing program at Ft. Richardson. He ran the fish rearing facility for 11 years, with annual production reaching 12,000 catchable-size rainbow trout, 100,000 Chinook smolt and 200,000 coho smolt. Bill retired from the Army in 1968, and I was appointed to be his successor at Ft Richardson. Bill left huge "shoes" to fill. There was no hatchery at the site then but rather the pond was segregated into three areas for rearing fish. Two old Quonset huts served as living quarters, warehouse, office and lab. Trout were stocked in lakes on military land as well as Anchorage area lakes. Salmon smolt were released into Ship Creek, and returning adult salmon contributed to the commercial and sport fishery. Bill often worked seven days a week, with limited assistance from ADF&G or Army personnel. Bill was not immune from other duties regularly assigned to NCOs, and he spent one night a week as duty NCO at HQ Co. Bill was a busy guy! After Army retirement, Bill worked another 15 years as a fish culturist for ADF&G at the Fire Lake Hatchery and the new hatcheries on Ft. Richardson and Elmendorf AFB.

Sadly, Bill died of cancer in 2003. Without his drive and dedication, the fish rearing project at Ft. Richardson would have never gotten off the ground and the hatchery there probably would have never been constructed. He made an enormous contribution to Anchorage sport fishermen and Cook Inlet commercial fishermen. Please honor William Jack (Bill) Hernandez by helping with this legislation.

Respectfully,

Tom Namtvedt

Representative Wes Keller

January 25, 2010

Mr. Tom Namtvedt
5640 Portage Drive
Wasilla, Alaska 99654

Dear Mr. Namtvedt:

Thank you for your letter regarding a recommendation to name the Fort Richardson Fish Hatchery after Mr. Hernandez. Based on the historical account, the concept of fish hatcheries in Southcentral Alaska must truly be attributed to his efforts.

I am joining you in suggesting to Representative Dahlstrom that she sponsor legislation to name the soon to be completed Elemdorf fish hatchery after William Jack (Bill) Hernandez. I will join her as a co-sponsor of that bill. I am asking her, as she serves as the Representative for Elemdorf Air Force Base.

Again, I would like to thank you for bring this information to my attention. It is important to honor those who throughout our history have done the work that makes Alaska what it is today. Obviously, Mr. Hernandez is one of those pioneers who should not be forgotten.

Sincerely:

Wes Keller
Representative
District 14

Not Paid For With State Funds

William Jack Hernandez

William Jack (Bill) Hernandez was born in Los Angeles, California on April 30, 1920 and died Aug. 31, 2003 in Wasilla. At the age of 21, Bill was employed by Morrison-Knudson Construction Co. building fortifications on Wake Island. After the attack on Pearl Harbor, he and other civilian contractor personnel were assigned to assist the Marine detachment defending the Wake Island. On Dec. 23, 1941, Wake Island was captured, and Bill was imprisoned in various POW camps in China. He survived an escape attempt, breaking his ankle while jumping from a train. He was subsequently recaptured, and this is described in several books on the battle of Wake Island, perhaps most notably "Jim's Journey: A Wake Island Civilian POW's Story" as well as a History Channel documentary: "Wake Island: Alamo of the Pacific."

After the war, Bill returned to California enlisting in the Army in 1947. He initially served as a foreign language interpreter, and his early military career took him to Korea and Europe. Bill honed his chess skills and became a Chess Master. At one point, Bill defeated Japan's top chess player. In 1956, his unit was transferred to Fort Richardson, where he became a Fish and Wildlife Conservation NCO. His orders were to rehabilitate the lakes and streams on post. In 1957, after several months of negotiating with the military and others, Bill received a letter from the Secretary of the Army approving a cooperative agreement between the Army, the Alaska Territorial Department of Fish and Game and the Fort Richardson power plant which allowed the plant's cooling pond to be utilized for rearing fish. Bill ran the fish rearing project, and annual production reached as high as 12,000 catchable-size rainbow trout, 100,000 Chinook smolt and 200,000 coho smolt. Bill retired from the Army in 1968 and received an Army Commendation Medal for his efforts: *"Through his perseverance, ingenuity, and scholarly research, he conceived and pioneered a process of rearing rainbow trout, silver salmon and king salmon from the fingerling stage to the migratory smolt, and in addition, accelerated the restocking of post and community lakes and streams.* ***By virtue of Sergeant Hernandez' diligent efforts coupled with his high sense of responsibility, the military conservation program in Alaska received successive official and recorded recognition by the State Legislature of Alaska and by the United States Senate.*** *His invaluable service to the military and civilian communities of Alaska earned him the worthy respect and admiration of all with whom he came in contact."*

Shortly after his Army retirement, Bill was hired by the Alaska Department of Fish and Game as a Fish Culturist at the Fire Lake Hatchery. He returned to Ft Richardson a few years later to manage the large scale hatchery constructed at the cooling pond. Bill also worked at the Elmendorf hatchery. In 1983, after 26 years of dedicated service raising salmon and trout, Bill retired again.

Bill then purchased a boat and fished commercially for seven seasons in Bristol Bay. When not fishing, Bill spent his time at his cabin on Lake Susitna and groomed snowmobile trails in the area. He was a member of the Wake Island Civilian Survivors Association, a Mason, and a Cooperative Weather Observer for NOAA. Though Bill never married, his many friends and dog Peggy were his Alaskan family. He was loved and respected by everyone who knew him.

Bill was buried in his native California, close to his twin sister Jewel with whom he shared a special bond. The Veterans of Foreign Wars Post 7665 honored him with a 21-gun salute. **Bill Hernandez was the epitome of Tom Brokaw's "Greatest Generation".**

hatchery

Continued from page 9

scooping up a few fish at a time in long-handled nets.

The nets are emptied into the tubs with a wild splashing that is stilled as the tranquilizer, called MC-222, takes effect. The drug tranquilizes voluntary muscle action without affecting the involuntary muscles, so a fish can breathe through its gills but cannot lift a fin to save its life.

Each fish is picked up by two hands. A gentle squeeze to the middle of the gut confirms the fish's status. Eggs will protrude from the underside of a ripe female. Males will squirt clear liquid or white milt.

Females with eggs are passed into a tub next to the doorway of a tent covering a length of the raceway. Males are transferred to a penned-off area at the far end of the raceway. Inside the Quonset-shaped tent two handlers work steadily.

One holds the fish upside down while the other picks up a metallic device shaped like a common garden hose nozzle. A brown hose trails off into the water and is attached to a large green cylinder of the same oxygen hospitals use. There is a trigger on the nozzle device and, at the end, a short, thick needle that looks as though it could fill a basketball. The needle is sharp, though, and a quick jab into the fish's body cavity just behind the dorsal fin produces no blood.

With a pull of the trigger, oxygen at low pressure flows into the fish, gently forcing out the bright orange eggs in a steady stream that spills into a round plastic tray. The eggs are checked to see if the color is normal and if there are any genetic mutations. Occasionally, bad eggs will be dark or green.

At one time eggs were harvested by squeezing the sides of the fish, a process that damaged the eggs and hurt the fish.

While one worker pours the eggs into a larger bucket, another tosses the rainbow into a penned-off section of the raceway inside the tent. The fish slips into the water like a limp torpedo and lies still for a minute or two, gills working in gulps. The constantly flowing water soon washes away the paralyzing drug. With little flicks of the tail and a few turns of the head, the fish rights itself and surges off into the distance.

Forty fish contribute 1,200 to 2,000 eggs apiece. The eggs are disinfected to kill germs from human contact and given to another worker for fertilization.

The process is quick. With the male fish held firmly in one hand, the handler squeezes a white stream of milt into the bucket. Unlike females, most males die after contributing to the genetic pool. It is the same in the wild. There is no natural reason for male fish to live another winter. Although winter water temperatures dip to as low as 34 degrees, virtually stopping all feeding and movement, the low oxygen content in the lakes would not support larger fish populations.

Elmendorf is able to function year-round as a hatchery because it receives from an Air Force generating plant a constant supply of 53-degree waste water that is piped half a mile to the hatchery. There it is mixed with Ship Creek water and brought to a stable temperature.

The temperatures are constantly monitored and alarms sound if there is a variance of more than a few degrees. Rainbows cannot live in water above 62 degrees without suffering from a killing form of stress. For salmon, the disaster brink is several degrees lower. Rainbows live in 42-degree water in the winter and 46-degree water in the spring when spawning.

Of the 19 fish hatcheries and rearing facilities in Alaska, Elmendorf is the only one that handles brood stock rainbow, the fish from which we get more fish. Other hatcheries trap wild salmon in streams and collect the eggs for rearing.

There are approximately 18,000 of the dark, fat trout in three raceways at Elmendorf, ranging in age from 1 to 4 years.

Watching thousands of them rolling in the water can arouse even the most casual fisherman, but catching these hand-fed beauties would be quite a trick.

An eight-foot-high chain link fence surrounds the property. Inside, eight large white plastic dishes create invisible barriers just inside the fence. Cross their line of fire and a shrieking alarm goes off outside the office and inside the newly constructed manager's house just a hundred yards away.

Casting a long line over the fence wouldn't work, either. A 20-foot mast of land separates the fence from the tanks. Reaching the ponds would be simple enough, but dragging a fighting trout overland and flipping it over the fence would be all but impossible.

There is more science than meets the eye inside the hatchery. Besides the electronically controlled warm water system, there is food that would captivate the most jaded readers of junk food wrappers.

Back in the 1940s, the early days of fisheries science, fish at hatcheries outside were fed chopped cattle guts. Seemed like a good idea at the time. It was a waste product, the fish ate it voraciously, and it appealed to people who thought all that came from cattle was good.

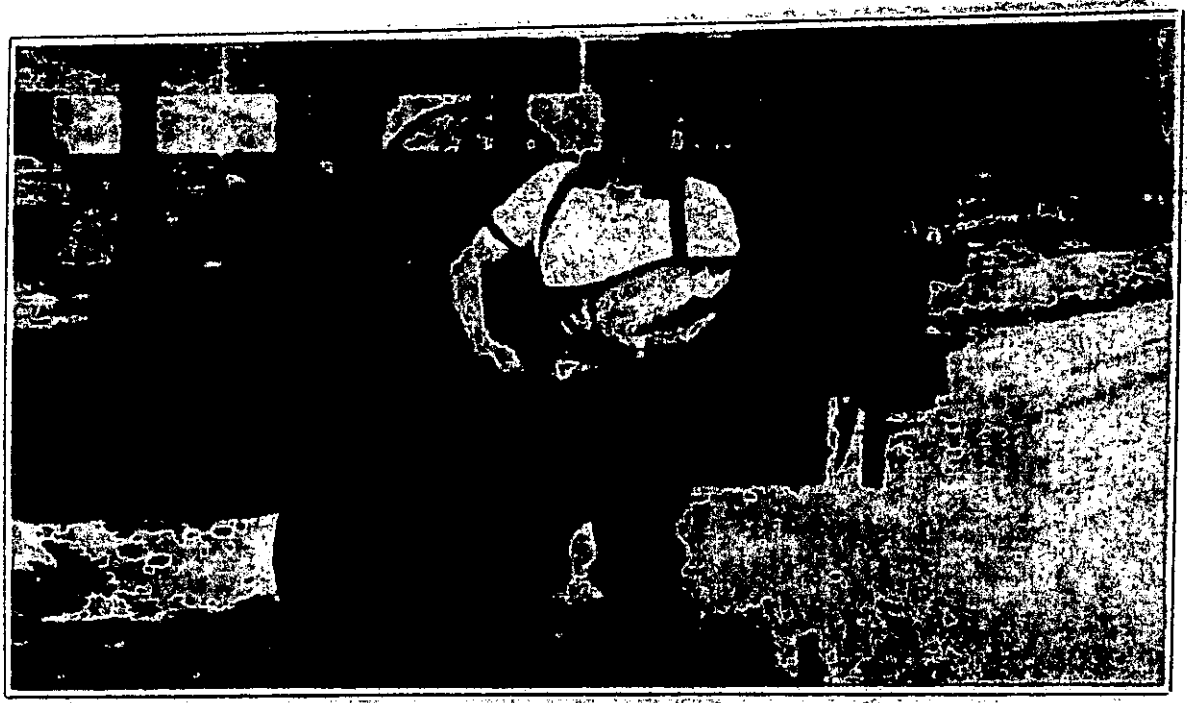
But the diet soon caused epidemic disease and many early hatcheries were closed.

Today, fish food is a science itself. Bagged in 50-pound sacks like dog food, the Oregon mash used at Elmendorf contains 22 ingredients ranging from fish meal to vitamins. An abundance of herring oil makes the pellets soft. Mature fish are fed at least once a day and consume, Hernandez says, about 1 percent of their total body weight daily. Young fish are fed more often, up to seven times a day. The Elmendorf hatchery uses 700 pounds of fish food daily in the peak spring season.

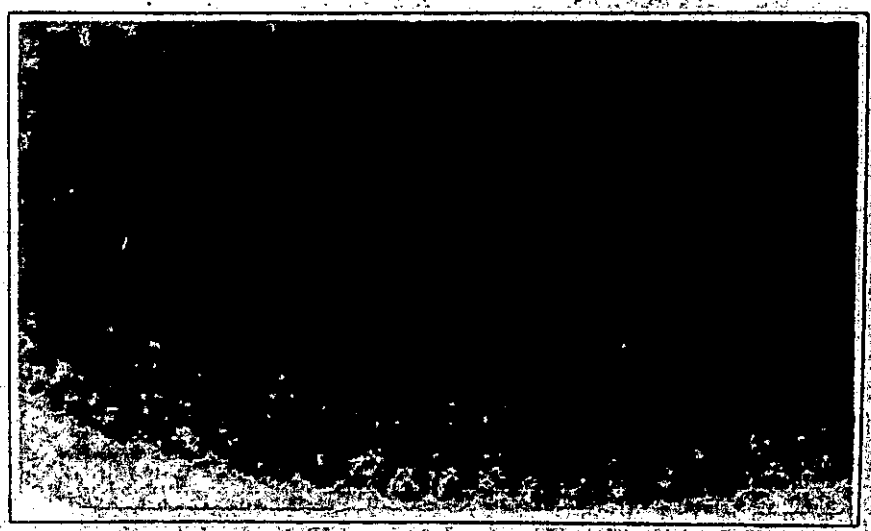
Although he had the opportunity to advance in the Department of Fish and Game hierarchy and the later bureaucracies that came to control the hatcheries in Alaska, Hernandez never pursued those career avenues. This summer, after working more than 25 years for others in the handling of fish, Hernandez will harvest fish on his own. With his 20-foot boat, the Hernandez I, he will head out into Bristol Bay in search of king salmon.

A home computer will help him keep track of catch rates, fish locations and landing patterns. But out on the rolling bay, Hernandez will use his own instinct, gleaned from years of experience, to catch fish.

Andrew Wiese is a reporter for The Daily News.



Bill Hernandez cradles the last fish he will handle at Fort Richardson. Now he plans to catch fish for himself.



This year the Elmendorf hatchery will produce 5 million rainbow trout eggs.

AIDEA Alaska Industrial Development and Export Authority

ALASKA ENERGY AUTHORITY

March 18, 2010

The Honorable Lyman Hoffman
The Honorable Bert Stedman
Co-Chairs, Senate Finance Committee
Alaska State Legislature
State Capitol Room 516
Juneau, Alaska 99801-1182

RE: SB 301, "An Act relating to the Power Project Fund"

Dear Senators Hoffman and Stedman:

On March 17, 2010, SB 301 (Companion Bill HB 411) passed the Senate Resources Committee and was referred to Senate Finance. This legislation is intended to allow the Alaska Energy Authority (AEA) to charge and collect fees relating to the Power Project Fund (PPF) and authorize AEA to sell and authorize the Alaska Industrial Development and Export Authority (AIDEA) to purchase loans of the PPF.

SB 301 allows AEA to charge and collect fees in administering the PPF, similar to the authority AEA has to charge and collect fees in administering the Bulk Fuel Revolving Loan Fund (BFRLF.) AEA charges an application fee and an origination fee for a loan of the BFRLF; AEA proposes to charge similar fees for a PPF loan application and loan.

SB 301 also authorizes AEA to sell and AIDEA to purchase certain loans from the PPF. The proposed sale of existing loans will recapitalize the PPF with approximately $20.6 million. To maximize the price paid to AEA for the sale of the loans, the bill includes provisions for AEA to repurchase from AIDEA loans which later default. This repurchase provision substantially reduces financial risk to AIDEA and allows AIDEA to purchase the loans without significant discount.

We respectfully request you to schedule SB 301 for hearing in Senate Finance, and we urge favorable action on this bill. A copy of the Memorandum of Understanding between AIDEA and AEA, fiscal notes and sectional analysis are attached. We will be happy to meet with you and other members of the committee to provide any other information you may require. Thank you for considering our request.

Sincerely,

ALASKA ENERGY AUTHORITY

Steve Haagenson
Executive Director

HB 411 and SB 301

An Act relating to the power project fund

Sectional Analysis

Section	Analysis
1	AS 42.45.010(a) is amended to allow proceeds from the sale of power project loans to be deposited into the power project fund (PPF).
2	AS 42.45.010(d) repeals and reenacts AEA authority to adopt regulations relating to the loan program by specifically allowing AEA to establish fees for applications and loan originations.
3	AS 42.45.010 is amended by adding new subsections – (k) to provide that fees collected will be deposited into the general fund. (l) provides authority to AEA to sell loans of the PPF with legislative approval, allows AEA to repurchase loans sold under this subsection which default, allows proceeds received to be deposited into the fund.
4	AS 44.88.080 is amended by adding new subsection (30) allowing AIDEA to purchase from AEA, as an investment of the revolving fund, PPF loans.
5	Uncodified law is amended by adding a new section providing for legislative approval for AEA to sell and AIDEA to purchase certain power project fund loans. This section references the 2/17/10 MOU between AIDEA and AEA that memorializes the proposed terms of the sale and purchase.
6	Provides for an immediate effective date

Prepared by AEA

Memorandum of Understanding

This Memorandum of Understanding ("MOU") is entered into this 17th day of February, 2010, between the Alaska Energy Authority ("AEA") and the Alaska Industrial Development and Export Authority ("AIDEA").

Recitals

A. The power project fund ("PPF") is established as a separate fund of AEA under AS 42.45.010(a).

B. AEA may make PPF loans for financing various activities related to the development of energy generation and transmission projects, bulk fuel storage facilities, waste energy, energy conservation, or alternative energy facilities, or may make loans to the bulk fuel revolving loan fund for the purposes described in AS 42.45.250(l).

C. The Renewable Energy Grant Fund was established under AS 42.45.045 to finance certain energy projects in Alaska, with an emphasis on feasible energy projects that provide a cost benefit to Alaska ratepayers, and projects that will serve areas in which the average cost of energy exceeds the average cost of energy in other areas of the state.

D. AEA makes PPF loans available to assist project developers meet their matching fund obligations under the Renewable Energy Fund Grant Recommendation Program. By doing so, AEA is able to leverage the funding available from each program to better promote the development of cost efficient, renewable energy projects for the benefit of Alaska ratepayers.

E. The PPF currently has less than $5,000,000 available for serving the purposes of the fund.

F. AEA desires to sell, and AIDEA desires to purchase, the outstanding PPF loans identified in the attached Exhibit A.

G. In this MOU, in order to maximize the amount AIDEA would be willing to pay for the PPF loans identified in Exhibit A and minimize financial risk to AIDEA from purchasing the PPF loans, AEA agrees to repurchase from AIDEA any outstanding loan if the borrower has a payment default after the sale.

H. The outstanding PPF loans identified in Exhibit A have a combined current balance as of February 9, 2010, of $24,700,452.23, and earn interest at annual rates that range from 0% to 6.16%.

I. AEA and AIDEA agree that the outstanding loans identified in Exhibit A have a projected present value as of the closing date (expected to be in July 2010) of approximately $20.6 million. This present value is the value of projected loan payments over the life of the outstanding loans, discounted at 6.02%, which was AIDEA's return on investments for the three year period ended September 30, 2009.

J. AEA and AIDEA agree that the sale and purchase of the outstanding PPF loans identified in Exhibit A at the present value of the loans will both adequately capitalize the Power Project Fund and provide a reasonable investment for the revolving fund of AIDEA.

K. The sale and purchase of the outstanding PPF loans identified in Exhibit A will require, among other things, the enactment of legislation approving the sale and purchase.

L. This MOU is intended to set forth the principal terms and conditions under which AEA would sell, and AIDEA would purchase, the outstanding PPF loans identified in Exhibit A. The parties intend that this MOU be incorporated into legislation to be submitted to the Alaska State Legislature authorizing the sale and purchase of the loans.

NOW, THEREFORE, in exchange for the mutual promises contained herein and for other consideration the receipt and adequacy of which is hereby acknowledged, the parties agree as follows:

1. AEA agrees to sell, and AIDEA agrees to purchase, the outstanding PPF loans identified in Exhibit A on the closing date, expected to be in July 2010, for a purchase price equal to the present value as of the closing date of all PPF loans identified in Exhibit A.

2. In this MOU, the "present value" of a PPF loan means the present value of all scheduled loan payments on the PPF loan over the entire remaining life of the PPF loan, using a discount rate of 6.02%.

3. Based upon the definition of "present value," AIDEA and AEA estimate that the purchase price of all PPF loans identified in Exhibit A on the closing date will be approximately $20.6 million.

4. AEA shall repurchase from AIDEA any outstanding PPF loan if the borrower defaults on payment after the sale. The repurchase price shall equal the present value of the loan determined on the date of the payment default by the borrower, less any payments received by AIDEA after the payment default date. AIDEA may exercise the right to have AEA repurchase a PPF loan by sending notice to AEA of the payment default.

AEA shall pay AIDEA within 30 days of the notice of payment default from unencumbered and uncommitted funds in the Power Project Fund. If the PPF has an inadequate amount of unencumbered and uncommitted funds to repurchase the PPF loan from AIDEA within 30 days of the notice of default, AEA shall make payments to AIDEA with unencumbered and uncommitted funds as they become available in the Power Project Fund (through repayments from other PPF loans or otherwise), with interest on the unpaid balance at the annual rate of four percent (4%) from the date 30 days after the notice of default. Nothing in this paragraph precludes AIDEA from rescinding a notice of default.

WHEREFORE the parties have executed this Agreement as of the date first written above.

ANALYSIS: *(Attach a separate page if necessary)*

This bill authorizes the Alaska Energy Authority (AEA) to charge and collect fees relating to the power project fund (PPF.) See AEA's fiscal note for details.

In addition to authorizing the collection of fees, this bill allows AEA to sell and the Alaska Industrial Development and Export Authority to make a one-time purchase of substantially all loans from the PPF loan portfolio.

STATE OF ALASKA
2010 LEGISLATIVE SESSION

BILL NO. SB 301

ANALYSIS CONTINUATION

AEA and AIDEA have developed a memorandum of understanding outlining the terms of the sale. AIDEA will purchase outstanding loans at a discount rate equivalent to 6.02%, its return on investments for the 3-year period ended September 30, 2009. To maximize the price paid, AEA agrees to repurchase from AIDEA loans which later default. Estimated sale proceeds are approximately $20.6 million. The closing date of the sale is anticipated to be in July 2010.

No additional operating costs are anticipated with this legislation.

ANALYSIS: *(Attach a separate page if necessary)*

This bill authorizes the Alaska Energy Authority (AEA) to charge and collect fees relating to the power project fund (PPF.) Currently, AEA only collects funds from applicants relating to the direct cost of analyzing the feasibility of a project. All fees would be deposited into the general fund; however, AEA will request an annual appropriation to have collected fees be deposited into the PPF. A similar annual appropriation is requested for fees collected from bulk fuel loans. ** Estimated fees are indeterminate until regulations are adopted; however, as a reference, AEA charges a $25 application fee and a .5% origination fee for loans from the Bulk Fuel Revolving Loan Fund.

In addition to authorizing the collection of fees, this bill allows AEA to sell and the Alaska Industrial Development

SPONSOR STATEMENT
CSSB 305(FIN) (title am)

SB 305 separates oil and natural gas for purposes of calculating the progressivity portion of the production tax under AS 43.55. Under this bill the progressivity surcharges for oil and Cook Inlet and in-state gas would be calculated together, but distinctly from export gas, instead of the current practice on all oil and gas combined. The progressivity structure itself would be unchanged, based on 0.4% of the production value that exceeds $30 per barrel for oil, and $30 per BTU barrel of oil equivalent for gas. The base tax rate is unchanged at 25% of production tax value.

Under current law the tax rate is based on the combined BTU value of oil and gas. However, oil and gas can have vastly different values on a BTU basis. Currently a BTU of oil is worth much more than a BTU of gas. Accordingly, once a major gas sale starts, overlaying the existing oil production, the BTU value of the combined oil and gas would be much lower than it was for oil alone. This has been referred to as the dilution effect and could cause a significant reduction in oil taxes as a result of a major gas sale. The existing tax structure, in conjunction with the inherent uncertainty of future oil and gas prices, exposes the state to significant financial risk were a major gas sale to occur. The structure also creates economic instability for entities looking to participate in the development and financing of a natural gas pipeline project in Alaska. SB 305 removes the dilution effect by having progressivity calculated distinctly for oil and gas. This will result in no reduction in oil taxes from a major gas sale.

As in current law, the bill gives the Department of Revenue the authority to adopt regulations to allocate costs between oil and gas, with the added instruction that a method based on relative BTU barrel of oil equivalents should be considered. That method was the one adopted by the department under the same authority for implementation of the current law.

Some producers currently produce Cook Inlet gas or other in-state gas along with North Slope oil. If all gas were separated from oil these producers would see an immediate tax increase. The bill is not intended to increase taxes on current activity. Having the progressivity for Cook Inlet gas and other in-state gas calculated together replicates the current situation, so these producers will see no tax increases. Only progressivity on export gas, like the gas from a major gas sale, would be calculated distinctly. This will prevent a major gas sale from diluting progressivity on oil.

Under the tax inducement provisions of the Alaska Gasline Inducement Act (AGIA), the tax structure in place at the time of the first binding open season (May 1, 2010), may be locked in for the first ten years of gas commercialization. Consequently, to the extent there is interest in decoupling our tax structure, it needs to be done before April 30, 2010.

MEMORANDUM March 30, 2010

SUBJECT: Sectional summary of CSSB 305(RIN), Draft Version "T" with comparison to Draft Version "P" (Work Order No. 26-LS1577\T and 26-LS1577\P)

TO: Senate Finance Committee

FROM: Donald M. Bullock Jr.
Legislative Counsel

Section 1. Amends AS 29.60.850(b) to reference the new separate progressive tax on gas as a source of money that may be appropriated to the community revenue sharing fund. The "community revenue sharing fund" was established in AS 29.60.850(a), "for the purpose of making community revenue sharing payments to municipalities, reserves, and communities for any public purpose." *There is no amendment to AS 29.60.850(b) in CSSB 305(FIN), Draft Version "P" because the progressive tax on oil in AS 43.55.011(g) continued and would continue to be a source for appropriation.*

Section 2. Amends AS 43.55.011(e) to make separate references to the monthly progressive taxes on oil and gas. The progressive tax on oil, gas produced in Cook Inlet, and gas produced elsewhere and used in the state is in AS 43.55.011(g). The progressive tax on other gas is in AS 43.55.011(p). *Section 1 of CSSB 305(FIN), Draft Version "P" amended AS 43.55.011(e)(2) to refer only to the progressive tax on oil.*

Section 3. Amends AS 43.55.011(g) to have the tax rate determined using the production tax values of oil and the production tax values on a BTU equivalent basis of gas produced in Cook Inlet and gas produced elsewhere and used in the state. Applies the tax rate only to that oil and gas production. Makes no change in the tax rates or the range of production tax values within which the two tax rates apply. *Section 2 in CSSB 305(FIN), Draft Version "P" determined the progressive rate only on the production tax value of oil and applied that rate only to oil.*

Section 4. Adds a new subsections, (p), to AS 43.55.011. Provides for a progressive tax applicable to gas production that is not included in AS 43.55.011(g) as amended in sec. 3 of the bill. Provides that the tax rate is applied to the production tax value of a BTU equivalent of gas. Uses the same tax rates and ranges of production tax values as AS 43.55.011(g) under current law. *The progressive tax on gas in new subsection AS 43.55.011(p) has no counterpart in CSSB 305(FIN), Draft Version "P."*

Section 5. Amends AS 43.55.020(a) to describe the determination of the amount of a monthly installment payment for production taxes when the progressive tax on oil, Cook Inlet gas, and other gas used in the state, and the progressive tax applicable to other gas are determined separately. *Section 6 of CSSB 305(FIN), Draft Version "P" amended AS 43.55.020(a)(1) by excluding gas from the determination of that part of the installment payment that was based on the progressive tax applicable only to oil.*

Section 6. Amends AS 43.55.020(d), relating to a settlement with the royalty owner, by adding references to the progressive tax on the gas to which AS 43.55.011(p) is applicable. *There is no similar provision in CSSB 305(FIN), Draft Version "P" because the reference to AS 43.55.011(g) was still applicable.*

Section 7. Amends AS 43.55.160(a), relating to the determination of the production tax value of oil and gas, by providing the means for determining the production tax value of oil and the production tax value of gas separately. Reorders the subparagraphs so that the subparagraphs related to the production tax value of gas produced outside of Cook Inlet and other gas not used in the state are at the end. *Section 7 in CSSB 305(FIN), Draft Version "P" also amended AS 43.55.160(a), but amended the subsection by removing references to gas when determining the production tax value of oil for purposes of the progressive tax on oil.*

Section 8. Amends AS 43.55.165(h), relating to the requirement that the Department of Revenue adopt regulations for allocating lease expenditures, by requiring that the Department of Revenue consider allocating lease expenditures in proportion to the BTU equivalent barrels of oil produced and gas produced from each lease or property. *Section 9 in CSSB 305(FIN), Draft Version "P" also amended AS 43.55.165(h) in the same manner.*

Section 9. Adds a new subsection, AS 43.55.170(d), which is similar to the amendment to AS 43.55.165(h) in sec. 8, but is applicable to allocating adjustments to lease expenditures. Directs the Department of Revenue to consider allocating adjustments based on the proportion of the BTU equivalents of oil and gas produced. *Section 10 in CSSB 305(FIN), Draft Version "P" also amended AS 43.55.170 by adding a new subsection in the same manner.*

Section 10. Requires a producer that underpays an installment payment after December 31, 2009 and before the effective date because of the retroactive application of the new progressive tax section to pay the amount of the underpayment on the date the first installment payment is due after the effective date of the Act. *There is no similar section in CSSB 305(FIN), Draft Version "P" because the changes in that version were applicable after the effective date of the Act.*

Section 11. Makes the progressive tax provisions of the bill - secs. 2 - 4 and 7 - retroactive to January 1, 2010. *There is no similar section in CSSB 305(FIN), Draft Version "P" because the changes in that version were applicable after the effective date of the Act.*

Section 12. Makes the Act take effect immediately. *The immediate effective date is the same as the immediate effective date in sec. 11 of CSSB 305(FIN), Draft Version "P."*

Bill sections in CSSB 305(FIN), Draft Version "P" that have no counterpart in CSSB 305(FIN), Draft Version "T"

Sec. 3 in CSSB 305(FIN), Draft Version "P", that amends AS 43.55.011(j) by adding a reference to AS 43.55.011(e)(1), rather and AS 43.55.011(e) because of the exclusion of the progressive tax on gas in that bill, has no counterpart in CSSB 305(FIN), Draft Version "T", which has a progressive tax on gas.

Sec. 4 in CSSB 305(FIN), Draft Version "P" that amends AS 43.55.011(o) by adding a reference to AS 43.55.011(e)(1), rather and AS 43.55.011(e) because of the exclusion of the progressive tax on gas in that bill, has no counterpart in CSSB 305(FIN), Draft Version "T", which has a progressive tax on gas.

Sec. 8 in CSSB 305(FIN), Draft Version "P" that amends AS 43.55.160(c) by removing a reference to gas for the purpose of determining the progressive tax rate on gas has no counterpart in CSSB 305(FIN), Draft Version "T", which has a progressive tax on gas.

Sec. 11 in CSSB 305(FIN), Draft Version "P" made the Act applicable after the effective date of the Act; CSSB 305(FIN), Draft Version "T" has no similar provision because of the retroactive effect of provisions in the bill.

STATE OF ALASKA
2010 LEGISLATIVE SESSION

BILL NO. CSSB 305(FIN)

ANALYSIS CONTINUATION

Under current law the tax rate is based on the combined BTU value of oil and gas. However, oil and gas can have vastly different values on a BTU basis. Currently a BTU of oil is worth much more than a BTU of gas. Accordingly, once a major gas sale would start up, overlaying the existing oil production, the BTU value of the combined oil and gas would be much lower than it was for oil alone. This could cause a significant reduction in oil taxes as a result of a major gas sale.

This structure, in conjunction with the inherent uncertainty of future oil and gas prices, exposes the state to significant financial risk were a major gas sale to occur. The structure also creates economic instability for entities looking to participate in the development and financing of a natural gas pipeline project in Alaska.

Under the tax inducement provisions of the Alaska Gasline Inducement Act (AGIA), the tax structure in place at the time of the first binding open season (May 1, 2010), may be locked in for the first ten years of gas commercialization. Consequently, to the extent there is interest in decoupling our tax structure, it needs to be done before April 30, 2010.

The bill removes the dilution effect by having progressivity calculated distinctly for oil and gas. This will result in no reduction in oil taxes from a major gas sale.

As in current law, the bill gives the Department of Revenue the authority to adopt regulations to allocate costs between oil and gas, with the added instruction that a method based on relative BTU barrel of oil equivalents should be considered. That method was the one adopted by the department under the same authority for implementation of the current law, for the same purposes as would be for the proposed law.

Some producers currently produce Cook Inlet gas or other in-state gas along with North Slope oil. If all gas were separated from oil these producers would see an immediate tax increase. The bill is not intended to increase taxes on current activity. Having the progressivity for Cook Inlet gas and other in-state gas calculated together replicates the current situation, so these producers will see no tax increases. Only progressivity on export gas, like the gas from a major gas sale, would be calculated distinctly. This will prevent a major gas sale from diluting progressivity on oil.

Expenditures
The Tax Division is in the process of developing a new, single, comprehensive, integrated tax management system for all tax types. The new system will incorporate tax programs and recent tax changes as necessary to improve the efficiency and accuracy of the Division's revenue collection efforts. There is a $300,000 request in the Governor's FY2011 Capital Budget to complete the agency's IT plan for submission and review by the Enterprise Investment Board. It is assumed that the tax structure changes contained in this bill will be addressed by this systemwide review and eventual restructuring project.

2 March 2010

Date: 2 March, 2010

Re: Answer to Question & Request Raised by Senator Thomas during My Testimony (25 February 2010) – Fiscal Years 2008 and 2009

The very pertinent and perceptive question asked earlier today by Senator Thomas sought information with respect to how might the gas dilution / cross subsidy effect identified in Alaska's current production tax rules have impacted the production taxes actually paid in recent periods had a gas line been in operation at the time?

In order to provide an indicative answer to this question I have taken the data for price, volume and costs (excluding Cook Inlet Gas) for fiscal years 2008 and 2009 (i.e. July 2007 to June 2008 and July 2008 to June 2009), which are available from the Alaska Department of Revenue (DOR), Fall 2008 and 2009 Revenues Sources Books (RSB), (Dec 2008and Dec 2009). These two periods encompass the wide range of oil prices that prevailed since the ACES rules were in place. The six tables attached (three for each fiscal period) to this document provide the necessary data and calculations to establish the impact of the cross subsidy effect.

Note that in this calculation the annual figures for production volumes and costs are distributed pro rata according to days / month across each month of the year. This assumption was necessary as DOR do not publish a monthly breakdown of the production tax calculation. This approximation is responsible for the small difference between the actual production tax paid and that calculated in the tables that follow. For fiscal year 2008 the calculated production tax shown in Table 1 is 2.7% higher than the actual production tax paid ($6867.3 million). For fiscal year 2009 the calculated production tax shown in Table 1 is 4.5% higher than the actual production tax paid ($3112.0 million). These slight differences are not considered significant in the context of the purpose of this analysis.

Fiscal Year 2008

Table 1 calculates the production tax for oil based on actual data showing the components of that calculation. As no gas is exported the calculations are based upon oil barrels only. This results in total production tax of **$ 7.462 billion** which is reduced by investment credits of $411.5 million to $ 7.050 billion. The calculation shown essentially reproduces the figures from the RSB (2.7% difference attributed to monthly pro rata production and cost allocations).

Table 2 assumes a 4.5 bcf/day gas line and calculates production tax for this hypothetical gas stream on a stand-alone basis (i.e. not combined with oil). The calculation uses the U.S. wellhead natural gas prices from the EIA's records for the months in question. There would be some small differentials between these prices and AECO prices in Alberta, but I believe they are close enough for the purpose. I have also assumed gas transportation costs of $4.5/mcf ($27/boe) and field costs (capital costs plus operating costs) of $400 million ($1.46/ boe) which are those used by Commissioner Galvin in the examples he provided from the DOR in his testimony of 24 February 2010. This data computes a total production tax of **$ 1.140 billion** to which no investment credits are applied.

By adding the computed production taxes in tables 1 and 2 the stand-alone oil and gas production tax for this FY 2008 (assuming 4.5 bcf /day) would be **$8.599 billion** (reduced to $8.187 billion by the deduction of $411.5 million investment credits).

Table 3 calculates the production tax by combining the revenue cost and volume streams from tables 1 and 2 to provide a combined oil and gas production tax calculation of **$6.776 billion** (reduced to $6.365 billion by the deduction of $411.5 million investment credits).

For this period the loss to the State in production tax revenue caused by the cross subsidy effect of combining oil and gas in the production tax calculation would have amounted to:

$6.776 billion less $8.599 billion = -$1.822 billion.

This calculation is in line with the figures of potential loss in fiscal revenue discussed during the testimonies.

Fiscal Year 2009

Table 4 calculates the production tax for oil based on actual data showing the components of that calculation. As no gas is exported the calculations are based upon oil barrels only. This results in total production tax of **$ 3.601 billion** which is reduced by investment credits of $350 million to $ 3.251 billion. The calculation shown essentially reproduces the figures from the RSB (4.5% difference attributed to monthly pro rata production and cost allocations).

Table 5 assumes a 4.5 bcf/day gas line and calculates production tax for this hypothetical gas stream on a stand-alone basis (i.e. not combined with oil). The calculation uses the U.S. wellhead natural gas prices from the EIA's records for the months in question. There would be some small differentials between these prices and AECO prices in Alberta, but I believe they are close enough for the purpose. I have also assumed gas transportation costs of $4.5/mcf ($27/boe) and field costs (capital costs plus operating costs) of $400 million ($1.46/ boe) which are those used by Commissioner Galvin in the examples he provided from the DOR in his testimony of 24 February 2010. This data computes a total production tax of **$ 0.583 billion** to which no investment credits are applied.

By adding the computed production taxes in tables 1 and 2 the stand-alone oil and gas production tax for this FY 2009 (assuming 4.5 bcf /day) would be **$4.185 billion** (reduced to $3.835 billion by the deduction of $350 million investment credits).

Table 6 calculates the production tax by combining the revenue cost and volume streams from tables 4 and 5 to provide a combined oil and gas production tax calculation of **$3.381 billion** (reduced to $3.031 billion by the deduction of $350 million investment credits).

For this period the loss to the State in production tax revenue caused by the cross subsidy effect of combining oil and gas in the production tax calculation would have amounted to:

$3.381 billion less $4.185 billion = -$0.804 billion.

This calculation indicates a lower potential loss in fiscal revenue for fiscal year 2009 compared to fiscal year 2008. This is due to the lower prices and value of oil and gas revenue streams in fiscal year 2009. However, $0.8 billion remains a substantial potential loss in a relative low price / value environment.

Sincerely,

David Wood

Senator Joe Paskvan

Alaska State Senate • District E • Fairbanks • Ft Wainwright

March 26, 2010

Representative Mark Neuman
State Capitol, Room 432
Juneau, AK 99801-1182

Dear ~~Representative~~ Mark Neuman,

You are likely aware of the discussions taking place in both chambers of the Alaska Legislature concerning decoupling and the legal implication that the first day of the open season has on Alaska's tax regime. Many have studied this topic and contributed much to the discussions. This letter is my attempt to respectfully convey my rationale for reaching the conclusion that decoupling is needed – and needed before May 1, the first day of the open season. I recognize that I am one legislator among sixty, but I feel that I would be remiss in my responsibilities if I did not share what I believe to be absolutely critical to our state's future. After reading, I invite you to contact me with any questions, comments or concerns regarding this important issue.

Following research into this matter, it is clear to me that the State of Alaska needs to separate its oil tax and its gas tax structures. This is necessary as the British thermal unit (BTU) equivalency benchmark currently in place is not relevant to the real world pricing of oil and gas. The 6:1 BTU benchmark was marginally acceptable when it applied to no gas production. Now that the ratio may actually apply to and be locked in under AGIA, Alaska needs to separate oil and gas taxation; to not do so would be dangerous to the State of Alaska's financial future.

Chart 1 (attached) depicts, from a historical view, the pricing deviation and the magnitude of the fluctuations from the BTU benchmark. The chart essentially shows the frequency of high oil pricing relative to gas pricing. If one looks at the chart while thinking about risk to the state under the currently linked tax structures, the chart shows that risk to the state exists about 95% of the time historically. The deviation from the benchmark means that the lower value gas is diluting the higher value oil under a combined tax structure. About 95% of the time, the risk is great for Alaska.

Recently, the ratio has been between 15:1 and 20:1, with occasional spikes even higher, such as August 2009, when a ratio greater than 20:1 existed. Today, too, the ratio is 20:1.

(907) 451-4347 Office • (907) 451-4348 Fax

The best and only evidence available to the State Legislature indicates that for the immediate and long term (i.e., 20 years) that the deviation from the BTU benchmark will not only continue, but that the magnitude of the deviation will also continue. US Department of Energy (DOE) oil and gas pricing forecasts for 2020 to 2030 show oil at $115 to $130 per barrel; natural gas pricing is shown in the range of $5.25 to $7.50 per mcf. See Chart 2 (attached, two pages).

If one were to try to place this forecasted ratio on the Department of Revenue's chart, a 15:1 to 18:1 ratio would be, literally, off the chart. That should indicate to the Legislature that the potential risk to Alaska is also off the chart. Also, the risk to the state is for 100% of the forecasted period of time.

Using a Department of Revenue (DOR) presentation, the magnitude to the risk is shown in dollars — actually in billions of dollars. See Chart 3 (attached). Using mid-range oil pricing (i.e., $120) and high gas pricing (i.e., $8), the loss of revenues to the state is about $2 billion per year. This risk is one that the state cannot afford to take. When one looks to the first two charts, the risk and magnitude of it is clear and Alaska is endangered.

To better understand the risk, and magnitude of that risk, a straightforward analysis of what $2 billion means is helpful. Cumulatively, the $2 billion represents 100% of the production tax (i.e., $1.1B) plus 100% of the state's royalty (i.e., $.7B) plus another $.2B cash from savings. This is also shown in a slightly different DOR slide which shows the $2B loss of revenues because of the linkage between oil and gas taxes producing negative combined revenues. See Chart 4 (attached). In other words, Alaska would get less revenue under the combined tax than if Alaska only collected oil revenues. This is an important reason why the linkage between oil and gas tax must be decoupled.

It is troubling to see DOR portraying the best information on 2020 – 2030 pricing (i.e., from the US DOE) as non-meaningful or, at best, as only a guess. In evaluating risk, the validity of information should only be questioned if more reliable or more credible information exists. Monetary figures are presented by DOR as if they are based upon a report or study or some other credible source. Possibly this omission of a source is done to argue that the risk portrayed in the non-fact-based slide is equal to the real risk based upon the reliable and credible information known. If so, this raises serious questions as to what standards, if any, are used by DOR in its presentations. If decisions are not based upon the best and only evidence, what is the standard which DOR does rely upon?

The reasons for the lack of logic may never be understood. Objectively, DOR can be viewed as rejecting the best and only evidence of pricing and relying upon the conjectural and speculative. This is apparently done to obstruct the decoupling of oil and gas tax structures.

Decoupling is the objectively reasonable method to avoid the risk to Alaska of losing, from both its royalty share and production tax, billions of dollars per year. It is objectively reasonable as it is based upon the best and only evidence from forecasted oil and gas pricing.

This letter addresses the financial risk to our state; it is, however, also appropriate to speak to the legal risk which has been mentioned by some. There are a number of legal opinions, including but not limited to the recent opinion of Attorney General Sullivan, which have touched upon the legal risk of acting now as compared to later. The only way that a definitive answer would be received, as to a later decoupling after May 1st, would be in the context of litigation against the State with the Alaska Supreme Court publishing a decision on a matter of first impression. We do not know, and cannot know, at this time the definitive answer as to what the Court's legal conclusion might be regarding a later decoupling. Therefore, it is prudent and wise in this context to act now when prompt action can be taken to avoid any legal risk in remedying the obvious financial risk to our state. Let me be clear, there is no legal risk by decoupling now.

I am not willing to bet the future of Alaska and risk losing billions per year based upon DOR's speculation, conjecture and non-fact based figures. The proper path to follow is to immediately decouple oil and gas taxation. This decoupling removes the risk to Alaska as it puts an end to the most perverse potential of Alaska giving away billions while our resource is exported. Decoupling secures Alaska's royalty share. Decoupling secures Alaska's receipt of production taxes.

Please do not hesitate to contact me directly if you have comments or questions.

Sincerely,

Senator Joe Paskvan

Re: HB 414 - Oil/Gas Crossover Price for Production Tax Dilution Effect

On Wednesday March 31 we made a presentation on HB 414, the bill that would separate oil and gas for calculating the production tax. Oil and gas are combined under current law. Currently oil is valued much higher than gas. If that relationship endured to that time of a major gas sale, the addition of gas onto oil activity could dilute oil value, which could reduce oil taxes by a significant amount.

We presented Department of Revenue figures from February 24, 2010 that displayed the magnitude of the annual tax losses. They were as follows:

$8/mmbtu gas / $75/bbl oil (market prices): $0.3 billion
$8/mmbtu gas/ $100/bbl oil (market prices): $1.1 billion
$8/mmbtu gas / $120/bbl oil (market prices): $2.0 billion

The question arose in the committee as to what the crossover points might be, the prices where the dilution effect would be zero. The other question was whether dilution would only occur when the market price of oil was more than 6 times the price of gas, the ratio of BTUs in a barrel of oil to an mmbtu (million BTUs) of gas.

First, the crossover would be determined by three other factors in addition to the market prices. First, it would depend on the relative volumes of oil and gas. Second, it would depend on the difference in transportation costs between oil and gas. Finally, it would also depend on the relative upstream capital and operating costs for oil and gas.

Using the Department of Revenue assumptions we calculated the crossover points. The assumptions were as follows:

Oil

Production of 500,000 bbls/day
Transportation cost deduction of $6.50/bbl
Upstream capital costs of $2 billion
Upstream operating costs of $2 billion

Gas

Production of 4.5 bcf/day
Transportation cost deduction of $4.50/mmbtu
Upstream capital costs of $200 million
Upstream operating costs of $200 million

We computed crossover points for the three oil prices and one gas price used in the above illustration:

Crossover Point where Dilution Effect is Zero

At $75/bbl oil market price	Gas crossover point = $11/mmbtu gas market price
At $100/bbl oil market price	Gas crossover point = $15/mmbtu gas market price
At $120/bbl oil market price	Gas crossover point = $18/mmbtu gas market price
At $8/mmbtu gas market price	Oil crossover point = $60/bbl oil market price

Monthly Oil and Natural Gas Price Analysis

Logsdon and Associates

April 2, 2010

Average Monthly Closing Prices for U.S. Crude Oil and Natural Gas as Reported on the New York Mercantile Exchange (NYMEX)

- West Texas Intermediate (WTI) oil and Henry Hub Gas prices are quoted daily on the NYMEX. The near month contract tracks very closely with the spot price since the delivery of physical barrels of WTI oil and Henry Hub gas underwrite the futures contract.
- The spot price is assessed by survey of buyers and sellers of physical cargos or lots or tranches. The near month NYMEX contract is determined in a regulated transparent market.
- The following charts illustrate both volatility and trend of oil and natural gas prices over the last 16 years.
- The charts start in 1994 because that is the first year that the natural gas contract was offered on the NYMEX.
- The price of oil is stated in dollars per barrel. The price of gas is stated in millions of British thermal units (btu), a measure of energy content.

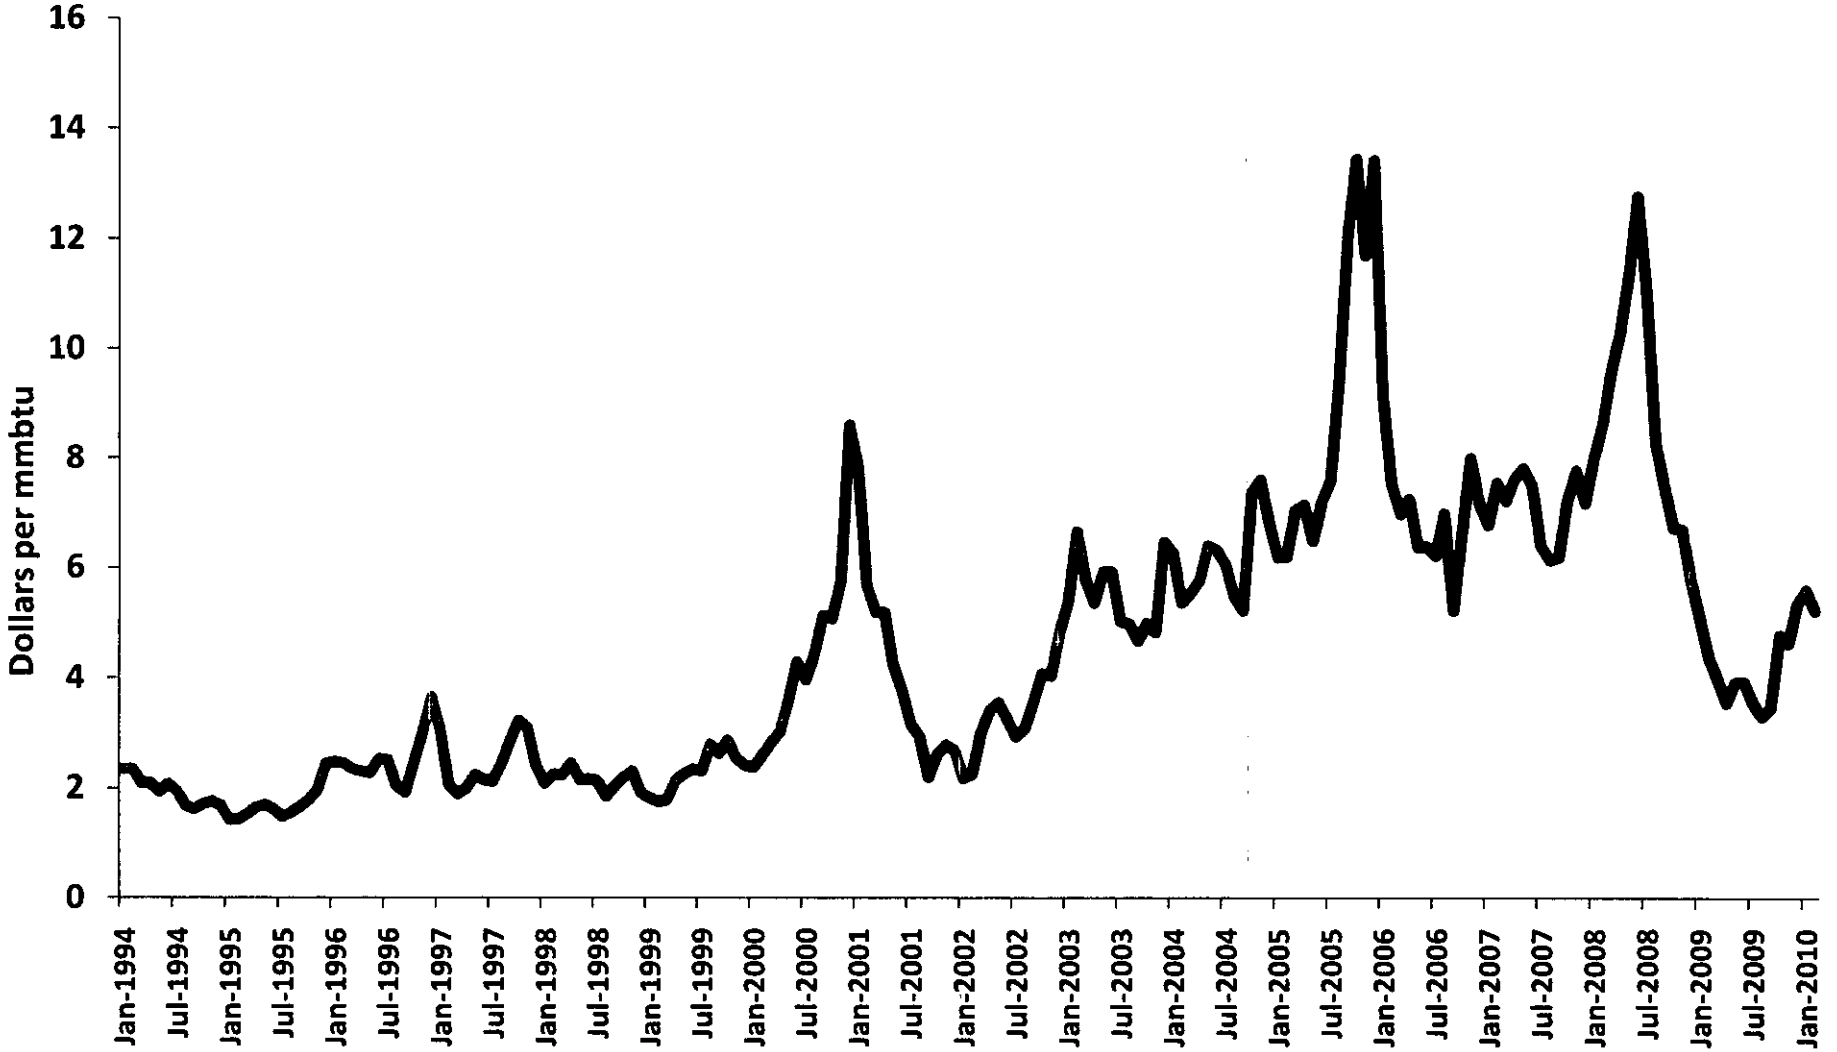
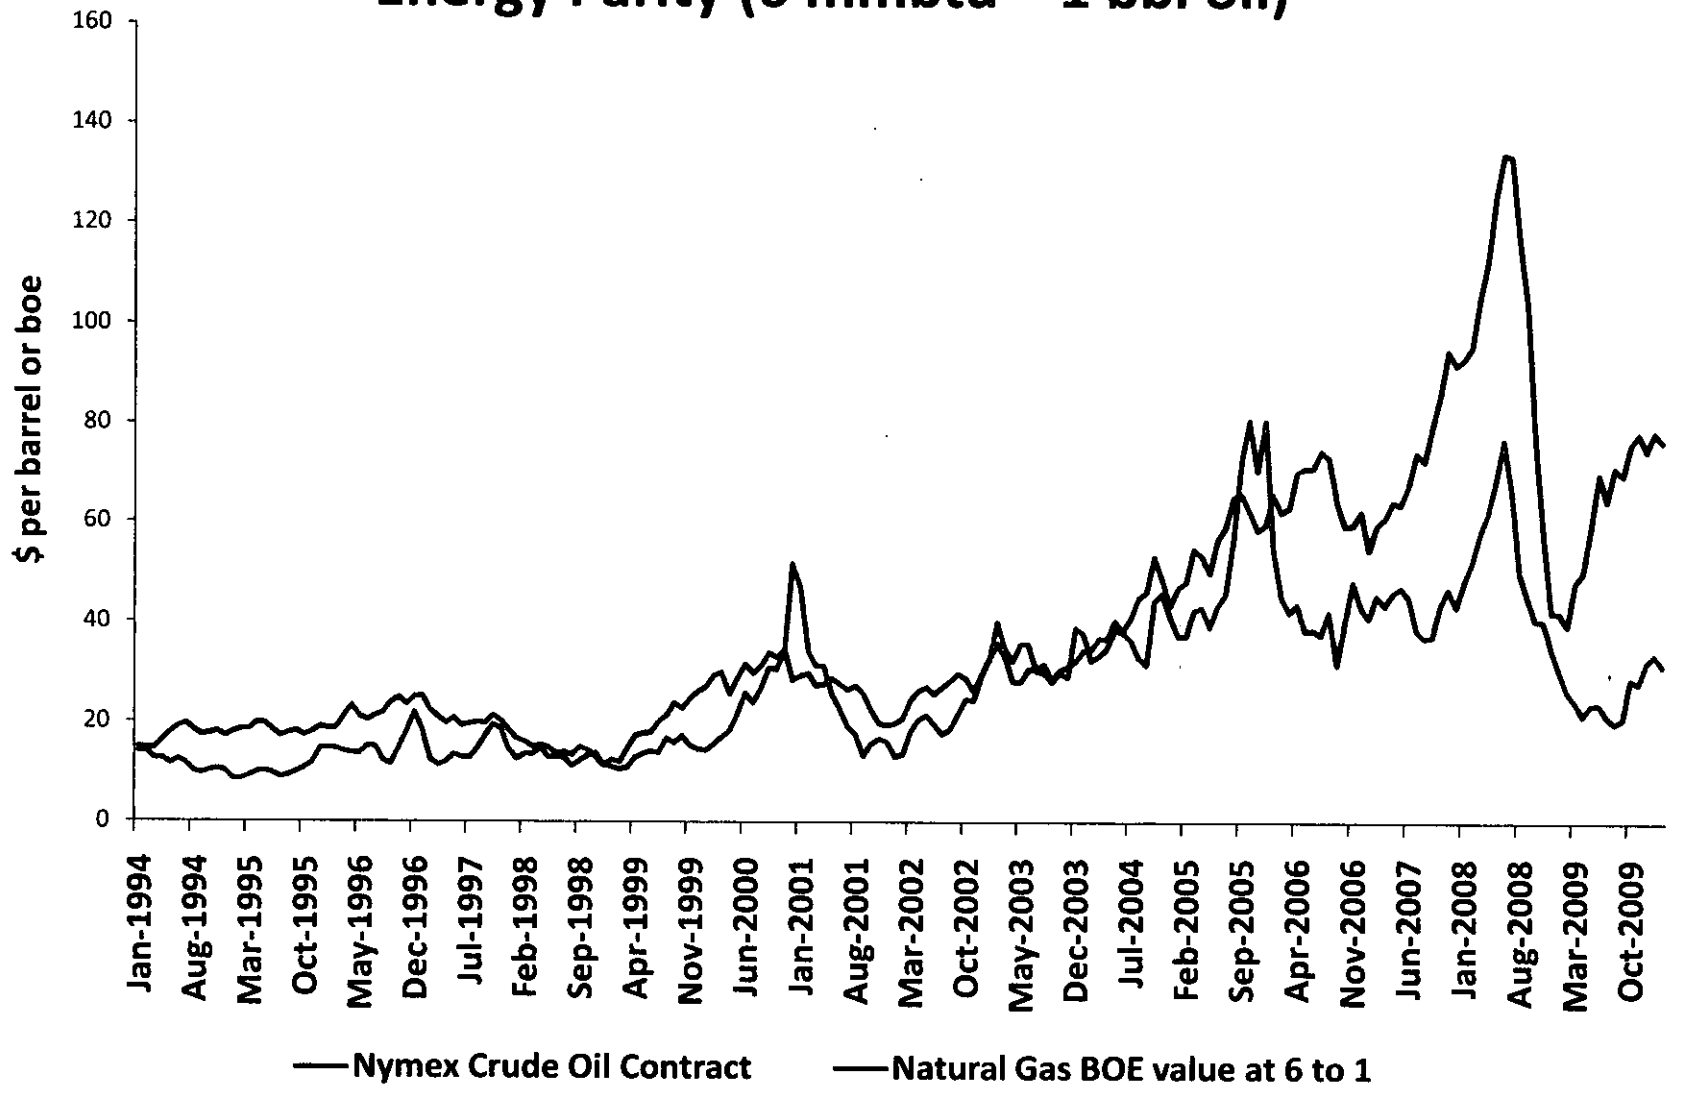
Henry Hub Nymex Natural Gas Futures
Jan 1994—Feb 2010 ($ per Million BTU)



Comparison of Oil and Gas on an Apples to Apples Basis

- The following chart makes an apples to apples comparison between the price of the two substances by converting the gas price to a barrel equivalent price based on the physical energy propertys of the two substances. There are six million btu's in a barrel of oil and gas prices are quoted per one million btu.
- What you see is that gas tends to be less valuable on a per btu basis.

Nymex Oil vs. Nymex Natural Gas if Gas Sold at Energy Parity (6 mmbtu = 1 bbl oil)



What is the historic number of btu's of gas needed to have the same value as a barrel of oil?

- The following chart makes this comparison.
- Clearly there have been some points in time when gas has sold at energy parity (6 to 1) or better with oil. This has not happened very often.
- The other thing to notice is that although there appears to be a partial correlation over time, the relationship between oil and gas prices is highly unstable from month to month.

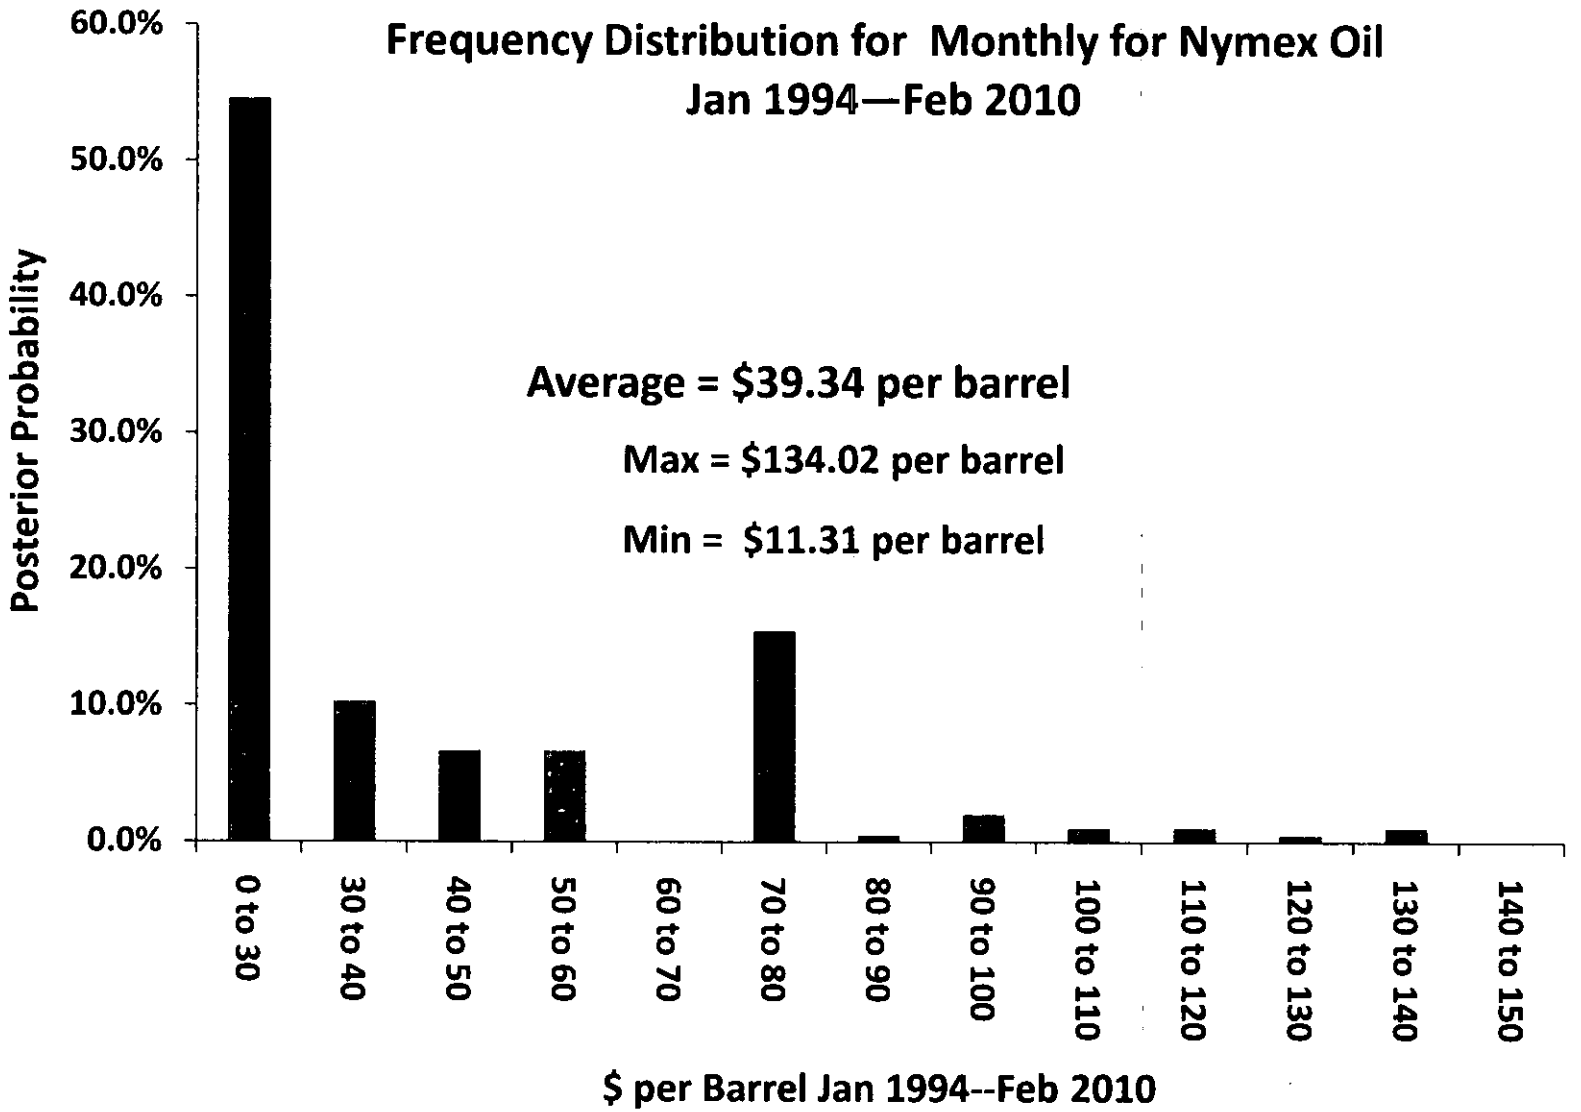
Looking at oil and gas prices using frequency distributions

- The following charts are based on the percent of time that oil or gas prices fell within certain intervals.
- This is essentially a historical probability view.
- Three time periods are examined, long term medium term and shortterm. Jan 1994—Feb 2010, Jan 2002—Feb 2010. and Jan 2004—Feb 2010.
- Look for spikes and bunching, what statisticians call modes and central tendencies.
- The charts on the next two pages clearly show that we are in an evolving oil pricing world. The oil price frequency distribution shown between Jan 1994 and Feb 2010 on on the next page, shows that between 1994 and 2010, 55% of the time the price of oil was $30/bbl or less. In the next chart, covering 2002 through 2010, oil prices were $30/bbl or less only 15% of the time.



Frequency Distribution for Monthly for Nymex Oil
Jan 1994—Feb 2010

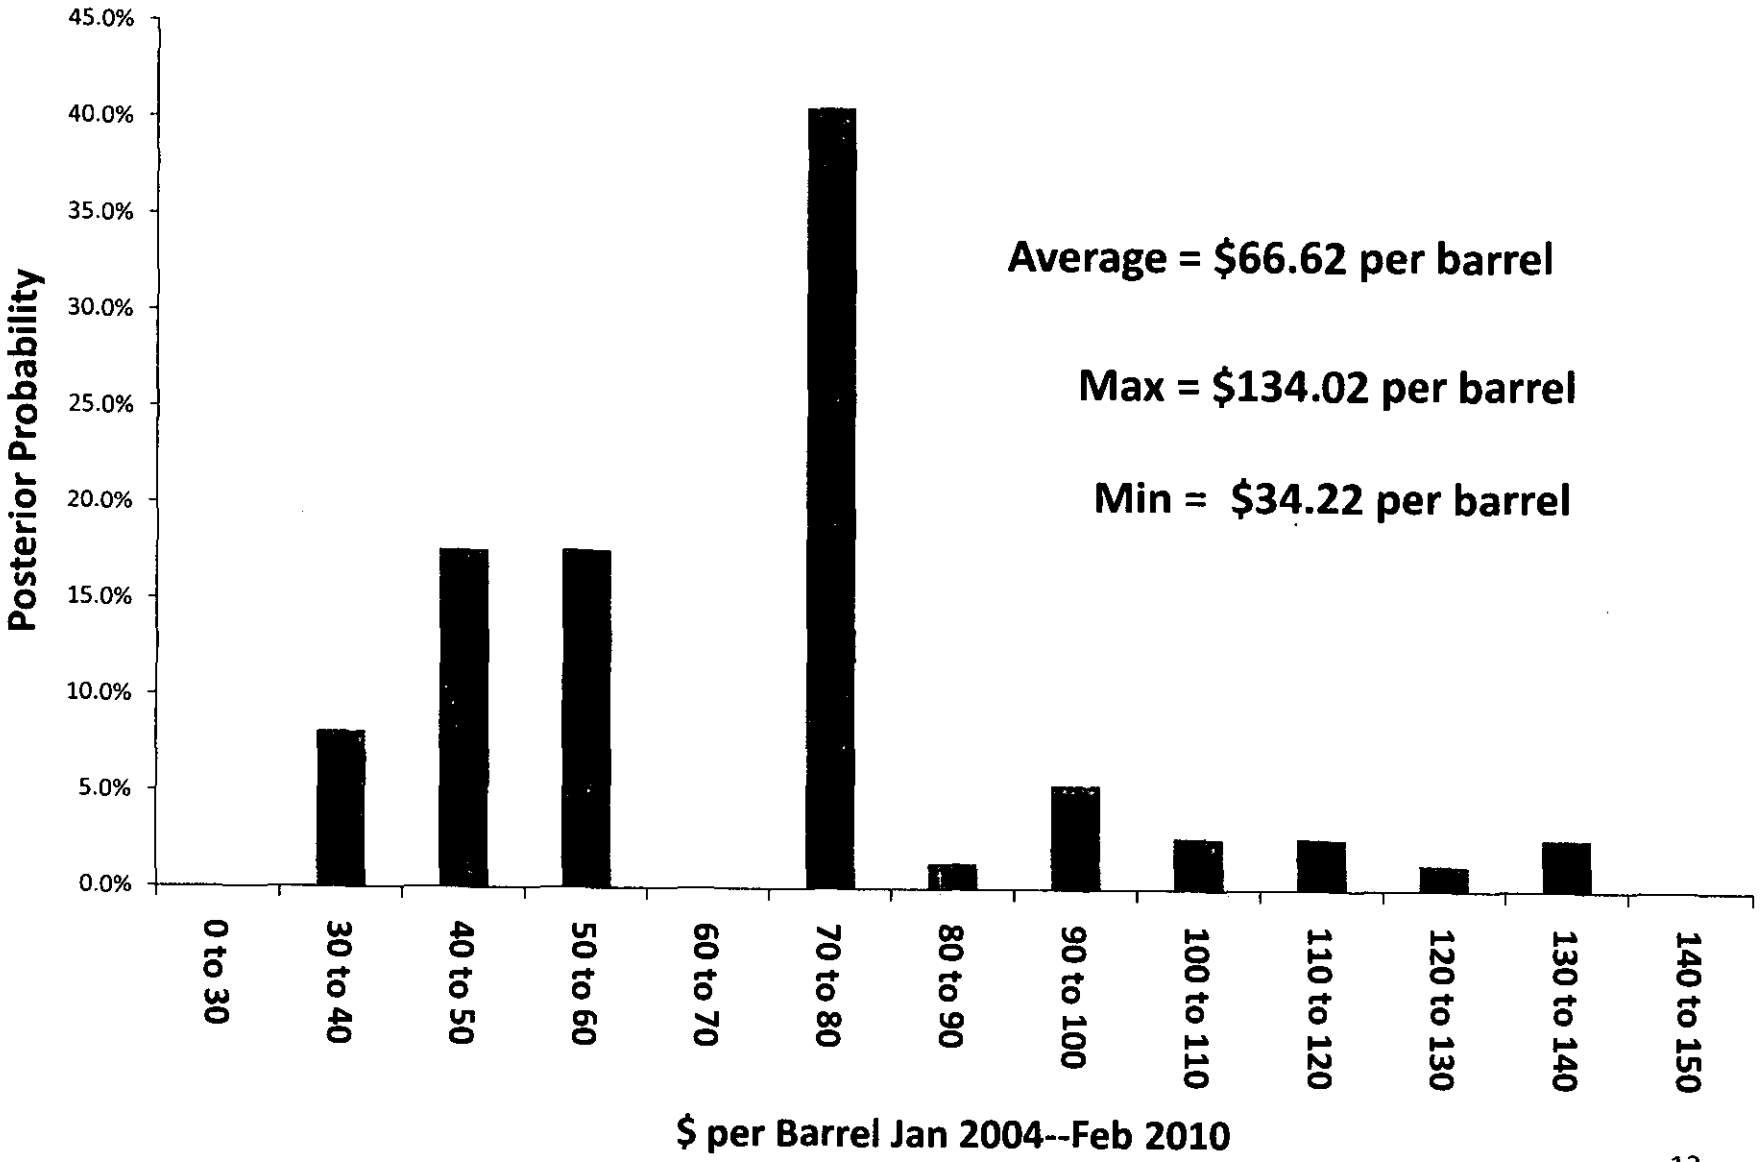
A much more recent shorter term view

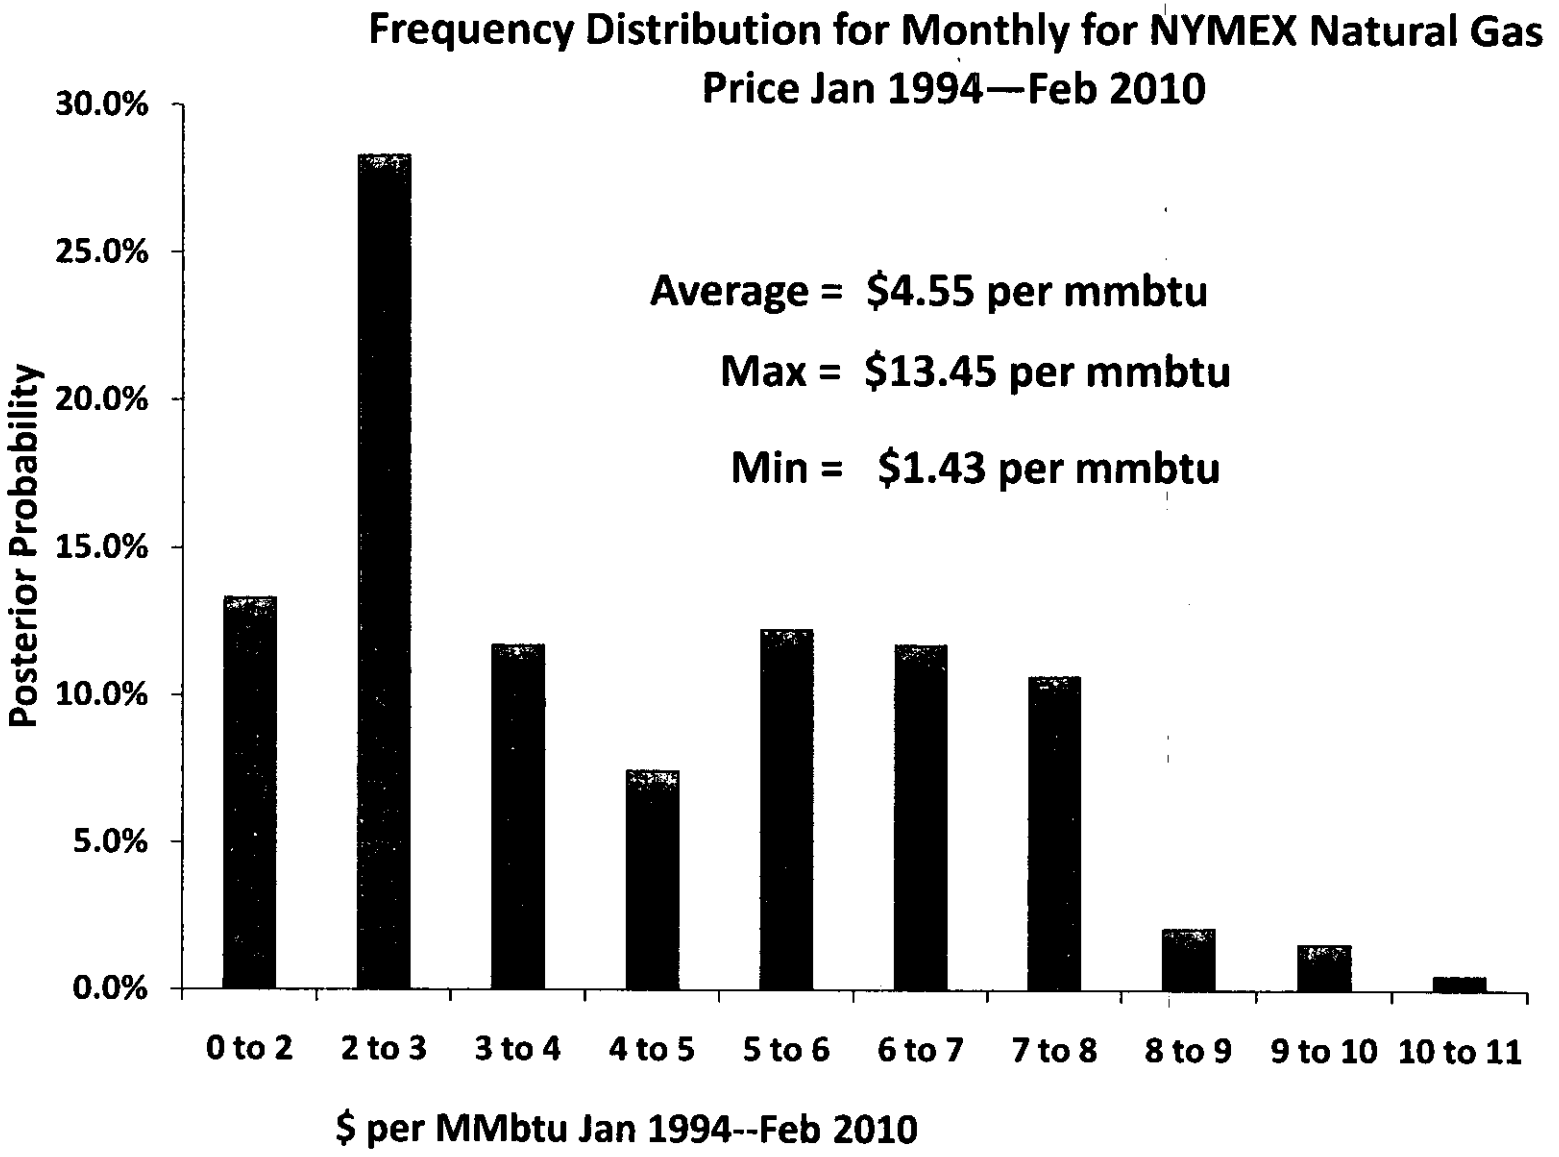
- The following chart shows the frequency distribution for oil prices from January 2004 through February 2010.
- Notice that for this most recent 6 year period that oil prices have traded in a pretty tight range between $70 and $80, 40% of the time.
- Connecting the spikes gives you a somewhat symetric shape. This suggests that at we are in a market that trends to a price in the $70 to $80 range.

Frequency Distribution for Monthly for Nymex Oil
Jan 2004—Feb 2010



Gas Price Frequency Distributions

- Comparing the following three charts it can be seen that gas prices viewed over the longer time period of Jan 1994—Feb 2010 were most frequently in the $2-$3 range but relatively evenly distributed all the way up to $8 per mmbtu.
- Going to the distribution from Jan 2002 to Feb 2010 shows that dropping the earlier 8 years moves the distribution up to center around the $5 to $8 range.
- The final chart shows that distribution of gas prices from Jan 2004 to Feb 2010 where gas prices become more bunched in the region of $6 to $8 per mmbtu.
- The today's situation in the gas market with gas around $4 is consistent with the 16 year average ($4.55) rather than either the last 8 or 6 year averages of $6.38 and $7.01 respectively.



Frequency Distribution for Monthly for NYMEX Natural Gas Price Jan 1994—Feb 2010

SB 305:
The Separation of Oil from Gas for the Oil & Gas Production Tax

House Resources Committee
Logsdon & Associates
April 7, 2010

5364

Premise of the Bill

- Under current law oil and gas are taxed together
- Oil is worth much more than gas
- The combining mechanism has the potential to materially reduces oil taxes even though oil operations are unaffected

Oil is Different than Gas

- Supply
  - Oil more geographically concentrated (fewer sellers: OPEC)
  - Oil supplies more depleted
  - Lower cost gas is more plentiful
- Demand
  - Oil has fewer substitutes
  - Gas has more substitutes
- Result: Oil is worth more than gas

BTU 9:1

West Coast ANS

- Market Price $80/bbl
- Less:
  - Shipping $2.07
  - TAPS $4.18
- Gross Value $73.75
- 6 mmbtu's / bbl
- $12.29 / mmbtu

North Slope Gas

- Market Price $6/mmbtu
- Less:
  - Tariff AK to AB $3.54
  - AB Hub $0.24
  - Tariff AB to L48 $0.85
- Gross Value $1.37/mmbtu
- On a straight BTU to BTU basis oil is worth nearly 9 X as much as gas

Some Things that have BTUs

- Oil
- Gas
- Coal
- Wood
- Asphalt
- Shoe Leather
- Rubber
- Coffee grounds
- Citrus rinds
- Corn cobs
- Dung

Mechanics of Current Tax

- 1) Oil gross value (market price less transport cost)
- 2) Gas gross value (market price less transport cost)
- 3) Oil + gas gross value gas = Combined gross value
- 4) Combined gross value – lease capital and operating costs = Combined oil & gas net value
- 5) Combined oil & gas net value / total oil & gas BOEs = p/BOE net value (see Slide # 7)
- 6) Progressivity factor (based on per BOE net value) plus 25% base rate = tax rate
- 7) Single tax rate applied to combined oil & gas net value

Barrel of Oil Equivalents (BOEs):
Putting Oil & Gas on an Apples / Apples Basis

- 4.5 billion cubic feet per day (bcf/d) of natural gas
- A cubic foot of North Slope gas will have about 1,100 BTUs
- Natural gas is measured in millions of BTUs (mmbtu)
- 4.5 billion cubic feet per day will have 4.95 million mmbtu's (4.5 X 1,100)
- A barrel of oil has about 6 mmbtu's
- 4.5 billion cubic feet per day will have the BTU equivalence of 825,000 barrels of oil (BOEs) (4,950,000 / 6)
- If there are 500,000 barrels of oil, total BOEs will total 500,000 + 825,000 = 1,325,000

Progressivity Mechanics

- "Trigger" = $30 net / BOE value
- "Slope" = 0.4%*
- Progressivity surcharge = (Net per BOE value - $30) X .004
- Example: if net value = $50
  - Base tax rate = 25%
  - Progressivity = ($50 – $30) X .004 = 8%
  - Total tax of 33% on net value

* Slope changes to 0.1% after $92.50 net per BOE value

DEPARTMENT OF REVENUE EXAMPLES TO SENATE FINANCE - FEBRUARY 24, 2010

Oil Price	Gas Price	Oil Alone Progressivity Factor	Oil & Gas Combined Progressivity Factor	Reduction in Progressivity Factor	Oil Alone Tax ($billions)	Gas Alone Tax ($billions)	Total Tax if Taxed Separately ($billions)	Combined Tax ($billions)	Annual Tax Reduction from Combining ($billions)
$75	$8.00	5.38%	0.00%	5.38%	$1.7	$1.1	$2.8	$2.5	$0.3
$100	$8.00	15.38%	3.59%	11.79%	$4.0	$1.1	$5.1	$4.0	$1.1
$120	$8.00	23.38%	6.79%	16.59%	$6.4	$1.1	$7.5	$5.5	$2.0

* Oil
  Production 500,000 bbls/day
  Transportation cost deduction $6.50/bbl
  Upstream capital costs $2 billion
  Upstream operating costs $2 billion
** Gas
  Production 4.5 bcf/day
  Transportation cost deduction $4.50/mmbtu
  Upstream capital costs $200 million
  Upstream operating costs $200 million

How can you be so sure about future prices?

- We cannot
- Different price relationships would produce different outcomes
- Since the potential for these outcomes exist, the current tax structure adds another level of risk to an already large amount of uncertainty
- At current price relationships there is a risk of undermining state finances

How SB 305 Works

No change to progressivity formula:

Progressivity on oil and gas:

Progressivity rate =
(production tax value per BOE - $30) X .004

Total tax rate = 25% base tax rate + progressivity rate

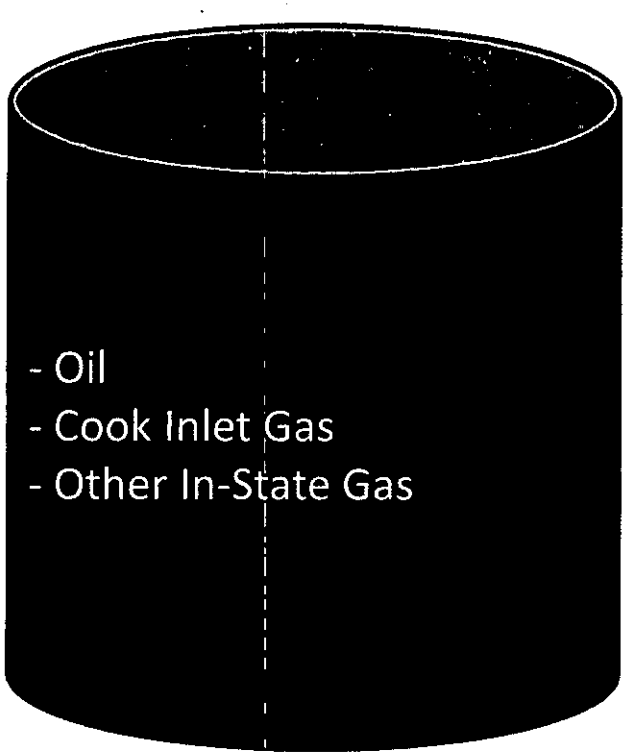
How Progressivity Operates Now

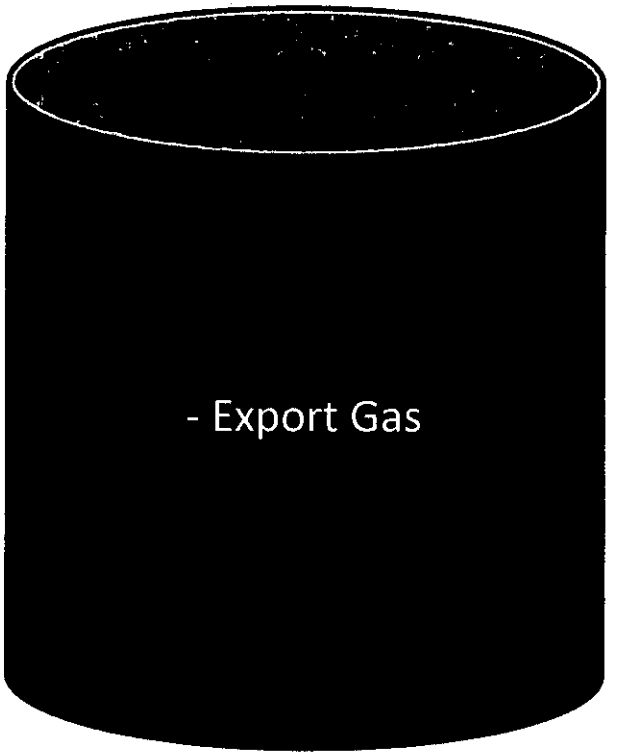
- Each company calculates one statewide progressivity rate based on all activity and the production tax value per BOE
- Company divides operations into 5 segments
  - 1) Cook Inlet oil
  - 2) Cook Inlet gas
  - 3) North Slope oil and gas except gas used in-state
  - 4) Non-North Slope / Non-Cook Inlet oil and gas except gas used in-state
  - 5) Non-Cook Inlet gas used in-state
- For each segment:
  - For each segment calculate tax liability based on total tax rate (base 25% rate plus statewide progressivity rate) and the segment's production tax value
  - For segments 1, 2, and 5 tax liability is lower of ELF or above

SB 305: Instead of One Statewide Progressivity Calculation: Two Progressivity Calculations

- FIRST: Oil / CI Gas / Other In-State Gas
  - Progressivity calculated together
  - Same as current activity
  - Same 5 segments treated as now
  - No tax increase on current activity
- SECOND: Export Gas (Major Gas Sale Gas)
  - Calculated distinctly: segment unto itself
  - Will not dilute oil progressivity

SB 305:
Two Progressivity "Buckets"





Issue: Cost Allocation

- Costs to produce oil and gas are truly joint costs
- Current approach (AS 43.55.165(h)): gives department authority to adopt regulations for allocating costs between oil and gas:
  - As recipients of confidential cost data they are in the best position to evaluate costs
  - A regulatory process allows more time
  - The regulatory process is public
- AS 43.55.165(h) is amended to require the department to consider allocating lease expenditures between oil and gas production in proportion to BTU barrel of oil equivalents (BOE) produced op each substances.

Cost Allocation: BTU Barrel of Oil Equivalent (BOE) Approach

- This is the approach DOR adopted to implement the existing statute for the same cost allocation purposes as this bill
- The same costs that **produce** oil **produce** gas
- Since **produced** together, costs are allocated based on amounts **produced**
- BOE method: putting oil & gas on apples/apples basis in terms of relative **produced** volumes

COMMENTS ON CSSB305 (FIN)

Issues Surrounding the Gas Tax Debate At this Time

- Entering two open seasons for the gas pipeline
  - Likely to result in Producers continuing to claim changes in the fiscal system are necessary
- Full commitments to ship gas (i.e. project sanction) not expected until 2014
- Stakeholders will continue to discuss:
  - Necessary Producer cash flow from gas development,
  - Relative risks/rewards borne/realized by the Producers and the State,
  - Amount of Fiscal Predictability the Producers need

Primary State Considerations Today

- Are the State's Interests protected going into the uncertainty of the next few years?
  - Achieve a gas pipeline project
  - Secure an appropriate share of revenue from oil and gas production
- Is the State's fiscal system attractive for a gas pipeline project?
- Is the potentially "locked-in" portion of the fiscal system set at an acceptable level for the state?

4 Modeling CSSB 305(FIN)

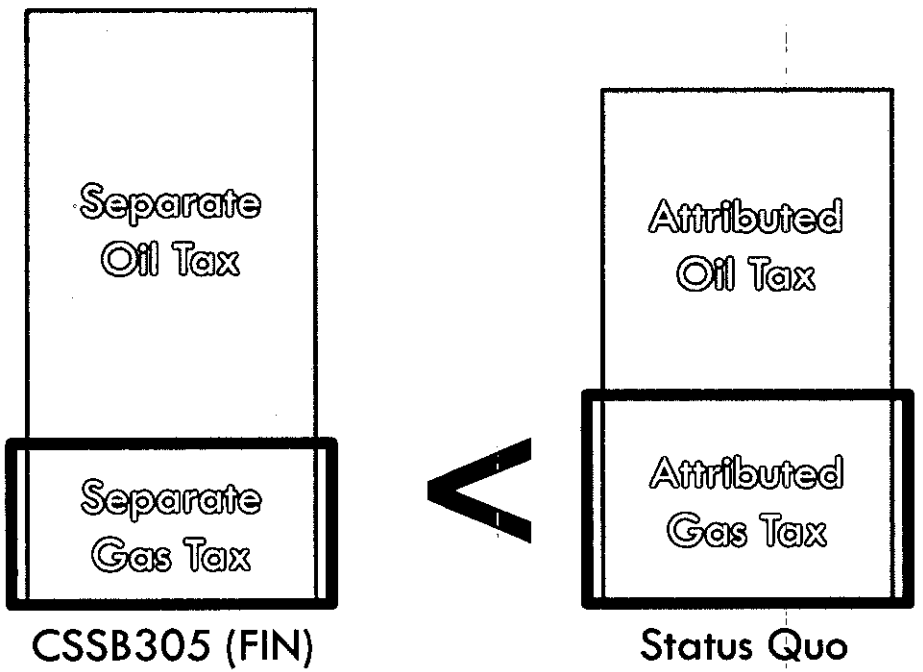
Oil Price Range 40 to 200 $/bbl

Gas Price Parity Range 6 to 26

Oil Production	500 Mbbl/d
Gas Production	4.5 Bcf/d
Total OPEX	$ 2.2 Billions
Total CAPEX	$ 2.2 Billions

In All of the Cases Run:
CSSB305 (FIN) Results in a Lower "Locked–in" Gas Tax Obligation

5

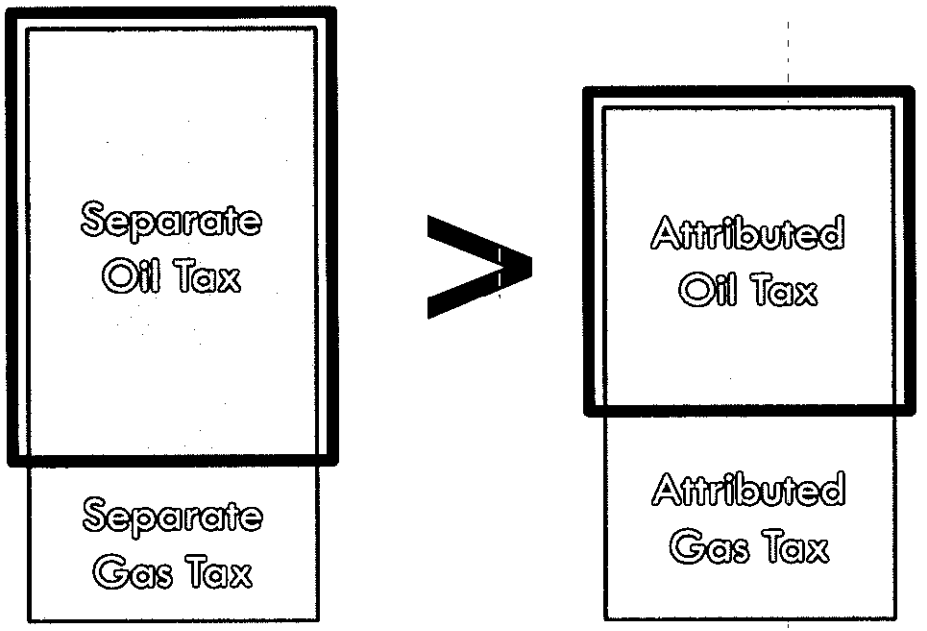


* Cost Allocation assumed to be on either a BTU barrel equivalent (BOE) basis or on a Point of Production (PoP) basis

market price
– Transportation

4/7/2010

In All of the Cases Run:
CSSB305 (FIN) Raises Oil Taxes

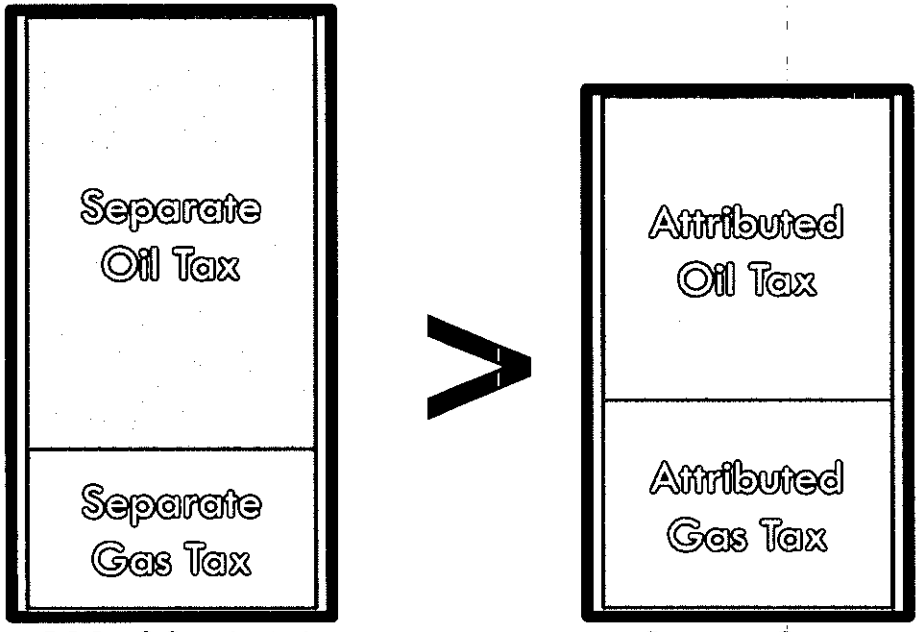


* Cost Allocation assumed to be on either a BTU barrel equivalent (BOE) basis or on a Point of Production (PoP) basis

4/7/2010

In over 90% of the Cases Run:
CSSB305 (FIN) Raises Overall Oil and Gas Taxes

7



* Cost Allocation assumed to be on either a BTU barrel equivalent (BOE) basis or on a Point of Production (PoP) basis

4/7/2010

Example Cases

State Production Tax Revenue

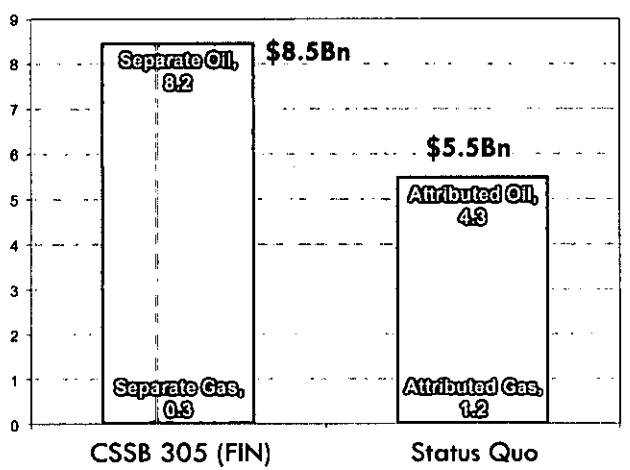
Oil: 500 Mbbl/d and Gas: 4.5 Bcf/d

Capex: $2.2Bn and Opex: $2.2Bn

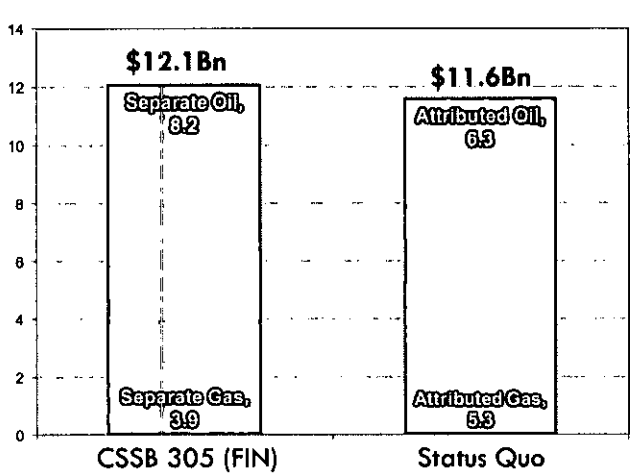
0

BOE

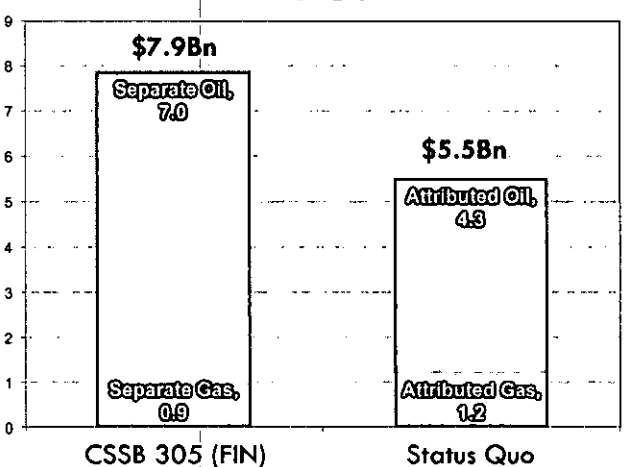
$120/$8 (15:1)

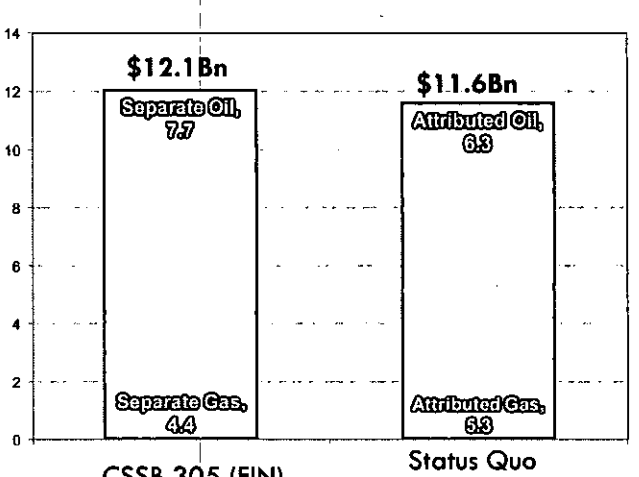


$120/$15 (8:1)



PoP





Observations

- CSSB305 (FIN) Increases Oil Taxes, and in almost all cases increases total Oil and Gas taxes
  - Provides a higher "starting point" for further discussions with Producers
  - However, it negatively affects projected gas pipeline economics
- CSSB305 (FIN) "Locks-In" a lower Gas Tax Ceiling
  - Enhances the value of the AGIA tax inducement
  - However, it reduces the State's flexibility in changing gas tax after the open season
- CSSB305 (FIN) could be passed after the open season without conflicting with the AGIA tax inducement
- Lack of a defined cost allocation method creates uncertainty about the actual tax obligation under CSSB305 (FIN)

CSSB 305 (FIN) MODELING RUNS

4/7/2010

Presentation Back-up Materials

Total Tax Take Comparison

- Model Assumptions:
  - One year snapshot
  - 4.5 Bcf/d and 500 Mbbl/d
  - Total Opex = $2.2 Bn and Total Capex = $2.2 Bn

- Ran multiple cases varying oil price from 40 to 200 $/bbl and gas price parity from 6 to 26
- Ran the above cases for each of BOE, PoP and Fixed cost allocation methodology

Total Tax CSSB305 (FIN) less Status Quo
BOE Cost Allocation

*Gas Tax under the Status Quo equals Attributed Gas Tax

4/07/2010

Gas Tax Comparison

- Model Assumptions:
  - One year snapshot
  - 4.5 Bcf/d and 200 Mbbl/d
  - Total Opex = $2.2 Bn and Total Capex = $2.2 Bn

- Ran multiple cases varying oil price from 40 to 200 $/bbl and gas price parity from 6 to 26
- Ran the above cases for each of BOE, PoP and Fixed cost allocation methodology

Gas Tax CSSB305 (FIN) less Status Quo*

Marilyn Crockett, Executive Director

TESTIMONY
OF THE
ALASKA OIL AND GAS ASSOCIATION
REGARDING CSSB 305(FIN) (TITLE AM)

PRESENTED TO THE
HOUSE RESOURCES COMMITTEE

April 7, 2010

Mr. Chairman and Members of the Committee:

My name is Marilyn Crockett and I am the Executive Director of the Alaska Oil and Gas Association (AOGA), the private, nonprofit trade association for the oil and gas industry in Alaska. Our 14 members account for the majority of oil and gas activities in the state. We appreciate the opportunity to share with you our deep concerns about Committee Substitute for Senate Bill 305, Finance, title amended — "SB 305" for short — which has passed the Senate and is now before you for consideration. The written testimony submitted for the record today has been approved by the AOGA Tax Committee, which can only approve testimony or public statements in AOGA's name about tax matters unless there is no dissent. We recognize, of course, that my oral testimony today will be included in the transcript for today's hearing.

We believe proposed legislation to revise a major tax like the production tax should be evaluated to see whether the change would improve the investment climate in Alaska, lead to more investment to help stem the annual oil production decline, simplify and add clarity to Alaska's complicated tax structure and whether it is it something that should be enacted now. AOGA's 14 member companies agree unanimously that SB 305 fails all of these tests and thus should not be enacted.

We have three main concerns with SB 305:

1) It is premature to establish decoupling at this time.

2) The justification for decoupling is flawed.

3) Determining an appropriate mechanism for cost allocations is complex and further analysis should be done to ensure a proper methodology is established.

SB 305 proposes to alter Alaska's current production tax structure by decoupling oil and gas so that progressivity will apply to them separately and so that revenues and costs will be separately determined, in order to avoid the potential for state revenue "dilution" when major gas sales are commingled with the oil stream. As a consequence of this decoupling, SB 305 proposes to have lease expenditures allocated between oil and gas.

Decoupling is Premature

Our first concern with proposed SB 305 is that it is premature to put decoupling into effect this year. The impetus to pass SB 305 this session appears to be driven by the AGIA provision that purports to provide gas tax fiscal certainty through a lock-in provision on May 1 to any company committing gas during the first open season. And that failure to address the dilution issue prior to that May 1 deadline might prohibit a future correction.

The apparent rush to address this issue will yield a "fix" that is not needed now and one that will result in further complexity to Alaska's already complex production tax system and will lead to adverse unintended tax and administrative consequences, further reducing an already shaky future investment climate—a potential result that neither the State of Alaska nor our industry can afford.

Potential changes to any tax regime need to be carefully considered and designed to ensure the desired objective of resource development is achieved. This is especially true for Alaska. Sufficient time should be given to examine the potential impacts and costs of SB 305 fully.

Flawed Justification for Decoupling

We are also concerned about the very idea of decoupling and the justification that is being offered for it. The $2 billion figure that is being circulated as the amount of production tax that the State would "lose" each year without decoupling is deeply flawed. Regarding the $2 billion figure, one must understand that there are three primary drivers that determine how much tax revenue the production tax generates. One is the netback value, the second is the amount of lease expenditures or deductible cost, and the third is the number of BTU equivalent barrels that are being produced. The difference between the first driver and the second is not only the value that is taxed, but when expressed on a BTU equivalent taxable barrel basis, it also determines whether progressivity applies, and if so, what the progressivity rate is.

The analysis for the $2 billion figure was based on generic deductible-cost data released by the Department of Revenue for the North Slope for 2008, and it also relied on oil production forecasts published by the State. The way these data were used in the analysis yields figures that are not likely to reflect actual circumstances in 2020 when a major gas pipeline is likely to begin operation. In particular, oil production in 2020 is likely to be significantly lower than the state estimate, which reflects an annual decline rate of only 2.7% during the current decade from FY 2010 to FY 2019. Historic annual decline rates for ANS oil have been 5.1% during the past 20 years and 6.6% during the last five.

This difference in decline rate means that, whatever the $2 billion analysis used as the figure for lease expenditures per barrel, the cost-per-barrel figure using these historic decline rates would be one-third to almost two-thirds higher. This means the analysis significantly overstated the taxable margin per barrel and overstated the tax rate to the extent it shows progressivity as applying. In addition, when

ANS gas production is added to the picture, it means the analysis understated the reduction in costs per BTU equivalent barrel because — with less oil production than the analysis assumed — the change in number of barrels to spread the costs over as a result of having the gas would be proportionally greater.

These distortions are inherent simply from the design of the analysis that produced the $2 billion figure, and do not depend on the particular numbers which that analysis used as the netback prices of gas and oil, or the deductible costs per barrel. Indeed, as stated in BP's March 12, 2010 letter to the Senate Finance Committee, it is possible in some situations that the State would actually receive more production tax without decoupling than with it. If, however, this Committee believes SB 305 needs to be passed this session, then the effective date of its key provisions, oil and gas decoupling and cost allocations, should be deferred until commercial production of Alaska North Slope gas commences.

Establishing Proper Cost Allocation Methodology is Complex

We are also very troubled over the potential cost allocations that SB 305 would require before major gas development. Under SB 305, taxpayers would be required — either immediately as the Bill now provides, or when commercial ANS gas production begins as we propose — to begin allocating costs between oil and gas. Developing a cost allocation methodology is a complex issue. Determining the proper methodology and understanding its potential impacts on the administration of and compliance with the underlying tax and on current and future investments are matters that should be fully evaluated and studied to ensure the concerns of all potentially affected taxpayers and the State can be adequately addressed.

The enactment of ACES was designed, in part, to incentivize investment and exploration of Alaska's resources. Requiring cost allocations prior to major gas development could undermine that objective. Currently, under AS 43.55.165(h), the Department of Revenue is authorized to develop, when needed, cost allocation methods to determine lease expenditures that are costs of exploring for, developing, or producing oil and gas deposits. If cost allocations are required prior to major gas development, how would costs associated for any lease or property (1) which contains both oil and gas, and (2) currently produces only oil (and possibly trace amounts of gas), be handled when the production of the oil provides information about the reservoir and its potential for major gas development? Would any of the costs be required to be allocated to gas, thereby raising the tax on current oil operations?

On the North Slope, there are producers with current oil production from one field that are also incurring gas related expenditures related to another field without gas production. How would those gas related expenditures be handled? Will the gas related expenditures be allowed for that producer against its oil related production income or only against future gas revenues from future gas production - revenues that producer may not have until many years in the future if at all?

Cost allocations prior to major gas development could also result in unintended consequences for explorers. Currently, an explorer who takes the risk and incurs the cost to explore in Alaska does so with the knowledge its expenses are deductible regardless of whether oil is discovered or gas. SB 305 is not clear and we are concerned that decoupling might be interpreted to mean that exploration expenditures will be deductible only for oil if oil is discovered, and only for gas if gas is discovered.

For an explorer with no production, or for one that only has oil production, discovering gas will mean there is nothing from which its exploration costs can be deducted for that discovery. As a result those costs will become "carried-forward annual loss" converted into a tax credit which can then either be used by that taxpayer in the next tax year or, if certain conditions are met, converted into a transferable tax credit certificate the taxpayer can then possibly sell to other taxpayers or to the state. Given the decoupling of oil and gas proposed by SB 305, the credit for the costs of a gas discovery could be limited so it could only be applied against tax on gas production. Since the tax on nearly all of today's gas production is capped under special rules, explorers who discover gas are likely to find it difficult, if not impossible, to find anyone with gas tax liability under decoupling who could use "carried-forward annual loss" credits from new gas discoveries. This needlessly penalizes explorers who are exploring for gas, as well as those who are exploring for oil but discover gas anyway.

The present tax without decoupling does not penalize explorers in this way, which is another reason why decoupling should be deferred until commercial ANS gas production begins. At that time there would be taxpayers with significant gas tax liability who would be in a position to use "carried-forward annual loss" credits from subsequent gas discoveries.

Entire Production Tax Structure Should Be Re-evaluated

It is important to reiterate AOGA's belief that the overall production tax structure in Alaska needs to re-examined carefully. As we have stated many times before, our primary concern is that the tax rates under the present production tax are already too high and place Alaska at a competitive disadvantage for oil industry investment. Based on the testimony you have heard this session and the Department of Revenue's own forecasts about expected future continuing decline in oil production and in projected industry investment, it is clear that a comprehensive evaluation and revision of the production tax needs to be undertaken if it is to achieve the objective of providing Alaska jobs, increasing Alaska production and maximizing State revenues.

Summary

In summary, then, it is premature to decouple gas from oil at this time. The concern that decoupling seeks to address will not arise until commercial ANS gas production begins. In addition, decoupling now will have unintended adverse consequences for current operations and explorers, particularly if they find gas instead of oil. Further, the case for any decoupling at all has not been adequately proven, and in any event, whatever negative effect there might be on production tax revenues without de-coupling seems likely to be substantially less than the $2 billion a year being claimed.

And finally, the production tax needs to be evaluated as a whole, both to see how well it works internally and how well it fits in with the other elements of Alaska's fiscal regime for oil and gas. We therefore ask this Committee to hold SB 305 in committee and let these matters be evaluated and addressed in a comprehensive fashion, instead of piecemeal as this Bill would do. Enacting SB 305 so it can be in place by May 1st and locked in for AGIA is premature. But if you feel you must enact it, then the effective date of its key provisions, oil and gas decoupling and cost allocations, should be deferred until commercial production of Alaska North Slope gas commences.

Thank you again for the opportunity to provide this testimony.

	decoupled tax rates		implied attributive tax rates

net value p/boe			$46.98
tax rate (base 25% rate plus progressivity)			0.3179
tax before credits			$5,962,375,740
credits			$440,000,000
tax			**$5,522,375,740**
DOR GAS TAX ALLOCATION METHODOLOGY (15 AAC 55.220)			
Proportion of Gross Value	0.78	0.22	
Atributed Gas Tax	$4,322,687,217	**$1,199,688,523**	

Attributed Gas Tax per DOR AGIA Regulations (15 AAC 55.220)

- AGIA tax inducement only applied to gas
- Since current tax is combined with oil it was necessary to ascribe that portion which is gas
- Regulation allocates tax based on relative gross value
  - Allocating tax is different than allocating costs
  - Gross value is a very material determinant of the differences in tax value between oil and gas

OIL AND GAS TAXES DECOUPLED

	oil alone	gas alone	total
price ($/bbl or $/mmbtu)	$120.00	$8.00	
transportation cost ($/bbl or $/mmbtu)	$6.50	$4.50	
gross value ($/bbl or $/mmbtu)	$113.50	$3.50	
volume (bbls/day or mcf/day)	500,000	4,500,000	
BTU barrel of oil equivalents (BOE's)	500,000	750,000	
annual BOE's	182,500,000	273,750,000	
total gross value	$20,713,750,000	$5,748,750,000	
non-royalty value	$18,124,531,250	$5,030,156,250	
costs (allocated by BOEs)	$1,760,000,000	$2,640,000,000	
net value	$16,364,531,250	$2,390,156,250	
net value p/boe	$102.48	$9.98	
tax rate (base 25% rate plus progressivity)	0.5399	0.25	
tax before credits	$8,835,437,796	$597,539,063	
credits	$176,000,000	$264,000,000	
tax	$8,659,437,796	**$333,539,063**	**$8,992,976,858**

Implication

- Alone
  - Gas net value p/boe = $9.98/boe
  - Gas net value p/mmbtu = $1.66/mmbtu
- Combined
  - Gas net value p/boe = $46.98/boe
  - Gas net value p/mmbtu = $7.83/mmbtu
- Result: under status quo gas with a value of $1.66 will be taxed as if it had a value of $7.83

Combining under Current Law

- Combining oil and gas dilutes the oil tax down
- It also "dilutes" the gas tax up
- Fiscal stability is only good if what is being stabilized is good
- Locking in a rate that may be too high negates the value of the AGIA inducement and may not be healthy for the project
- Underscores the problem of combining substances of vastly different values for taxation

Power of Status Quo

- Current dilution effect is clear
- Future discussions
  - Same producers who produce gas produce oil
  - Issue will move beyond gas
    - If the state becomes unhappy with gas taxes - can extract value from producers through oil tax increases
    - Oil taxation will predictably be part of discussion
- Status quo (whatever it is at the time) will inevitably become frame of reference for evaluation

SB 305:
Flowchart: 26-LS1577\WA.6

House Resources Committee
Logsdon & Associates
April 10, 2010

Mechanics of Tax (Current & SB 305)

- 1) Oil gross value (market price less transport cost)
- 2) Gas gross value (market price less transport cost)
- 3) Oil + gas gross value gas = total **gross value**
- 4) Total gross value – lease capital and operating costs = **Production tax (net) value**
- 5) Production tax value / total oil & gas BOEs = p/BOE production tax value
- 6) Total tax rate = 25% base rate + progressivity factor (based on p/BOE production tax value)
- 7) Total tax rate applied to production tax value

Progressivity Calculation (Current & SB 305)

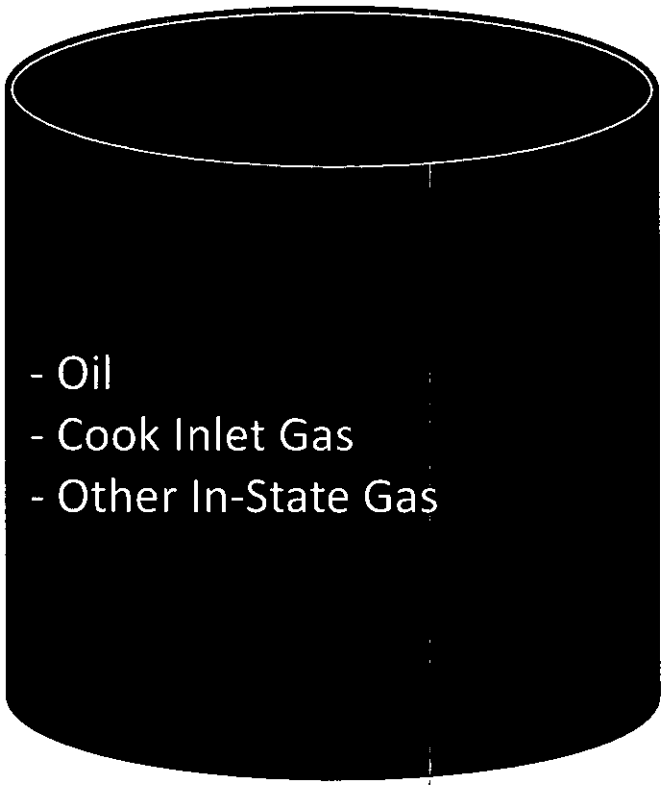
- "Trigger" = $30 p/BOE production tax value
- "Slope" = 0.4%*
- Progressivity surcharge = (P/BOE production tax value - $30) X .004
- Example: if production tax value = $50
  - Base tax rate = 25%
  - Progressivity = ($50 – $30) X .004 = 8%
  - Total tax of 33% on net value

* Slope changes to 0.1% after $92.50 net per BOE value

How Progressivity Operates Now

- Each company calculates one statewide progressivity rate based on all combined oil and gas activity
- Company divides operations into segments:
  - 1) Each Cook Inlet oil lease
  - 2) Each Cook Inlet gas lease
  - 3) North Slope oil and gas except gas used in-state
  - 4) Non-North Slope / Non-Cook Inlet oil and gas except gas used in-state
  - 5) Non-Cook Inlet gas used in-state
- For each segment:
  - For each segment calculate tax liability based on total tax rate (base 25% rate plus statewide progressivity rate) X the segment's production tax value
  - For segments 1, 2, and 5 tax liability is lower of ELF or above

Currently:
One Progressivity Bucket



SB 305: Instead of One Statewide Progressivity Calculation: Two Progressivity Calculations

- FIRST BUCKET: Oil / CI Gas / Other In-State Gas
  - Progressivity calculated together (no change to formula)
  - Same as current activity
  - Same 5 segments treated as now
  - No tax increase on current activity

- SECOND BUCKET: Export Gas (Major Gas Sale Gas)
  - Progressivity calculated distinctly (same formula based on export gas p/BOE production tax value)
  - Segment unto itself: Calculate tax liability based on total tax rate (base 25% rate plus export gas progressivity rate) X export gas production tax value
  - Will not dilute oil progressivity

SB 305:
Two Progressivity Buckets

(B) subsection (p) of this section."

Renumber the following bill sections accordingly.

Page 3, following line 18:

Insert new bill sections to read:

"* **Sec. 8.** AS 43.55.011(g), as amended by sec. 7 of this Act, is amended to read:

(g) For each month of the calendar year for which the producer's average monthly production tax value under **AS 43.55.160(a)(2)** [AS 43.55.160(a)(2)(A) - (E)] of a BTU equivalent barrel of taxable oil and gas is more than $30, the amount of tax for purposes of **(e)(2)** [(e)(2)(A)] of this section is determined by multiplying the monthly production tax value of the taxable oil **and gas** produced during the month [, GAS PRODUCED DURING THE MONTH FROM A LEASE OR PROPERTY IN THE COOK INLET SEDIMENTARY BASIN, AND GAS PRODUCED DURING THE MONTH FROM A LEASE OR PROPERTY OUTSIDE THE COOK INLET SEDIMENTARY BASIN AND USED IN THE STATE] by the tax rate calculated as follows:

(1) if the producer's average monthly production tax value [UNDER AS 43.55.160(a)(2)(A) - (E)] of a BTU equivalent barrel of taxable oil and gas for the

month is not more than $92.50, the tax rate is 0.4 percent multiplied by the number that represents the difference between the producer's average monthly production tax value [UNDER AS 43.55.160(a)(2)(A) - (E)] of a BTU equivalent barrel of taxable oil and gas and $30; or

(2) if the producer's average monthly production tax value [UNDER AS 43.55.160(a)(2)(A) - (E)] of a BTU equivalent barrel of taxable oil and gas for the month is more than $92.50, the tax rate is the sum of 25 percent and the product of 0.1 percent multiplied by the number that represents the difference between the producer's average monthly production tax value [UNDER AS 43.55.160(a)(2)(A) - (E)] of a BTU equivalent barrel of taxable oil and gas and $92.50, except that the sum determined under this paragraph may not exceed 50 percent.

*** Sec. 9.** AS 43.55.011(g), as amended by sec. 8 of this Act, is amended to read:

(g) For each month of the calendar year for which the producer's average monthly production tax value under **AS 43.55.160(a)(2)(A) - (E)** [AS 43.55.160(a)(2)] of a BTU equivalent barrel of taxable oil and gas is more than $30, the amount of tax for purposes of **(e)(2)(A)** [(e)(2)] of this section is determined by multiplying the monthly production tax value of the taxable oil [AND GAS] produced during the month**, gas produced during the month from a lease or property in the Cook Inlet sedimentary basin, and gas produced during the month from a lease or property outside the Cook Inlet sedimentary basin and used in the state** by the tax rate calculated as follows:

(1) if the producer's average monthly production tax value **under AS 43.55.160(a)(2)(A) - (E)** of a BTU equivalent barrel of taxable oil and gas for the month is not more than $92.50, the tax rate is 0.4 percent multiplied by the number that represents the difference between the producer's average monthly production tax value **under AS 43.55.160(a)(2)(A) - (E)** of a BTU equivalent barrel of taxable oil and gas and $30; or

(2) if the producer's average monthly production tax value **under AS 43.55.160(a)(2)(A) - (E)** of a BTU equivalent barrel of taxable oil and gas for the month is more than $92.50, the tax rate is the sum of 25 percent and the product of 0.1 percent multiplied by the number that represents the difference between the producer's

average monthly production tax value **under AS 43.55.160(a)(2)(A) - (E)** of a BTU equivalent barrel of taxable oil and gas and $92.50, except that the sum determined under this paragraph may not exceed 50 percent."

"* **Sec. 13.** AS 43.55.020(a), as amended by sec. 12 of this Act, is amended to read:

(a) For a calendar year, a producer subject to tax under AS 43.55.011(e) - (i) [AND (p)] shall pay the tax as follows:

(1) an installment payment of the estimated tax levied by AS 43.55.011(e), net of any tax credits applied as allowed by law, is due for each month of the calendar year on the last day of the following month; except as otherwise provided under (2) of this subsection, the amount of the installment payment is the sum of the following amounts, less 1/12 of the tax credits that are allowed by law to be applied against the tax levied by AS 43.55.011(e) for the calendar year, but the amount of the installment payment may not be less than zero:

(A) for oil and gas produced from leases or properties in the state outside the Cook Inlet sedimentary basin but not subject to AS 43.55.011(o), other than leases or properties subject to AS 43.55.011(f), the greater of

(i) zero; or

(ii) [AN AMOUNT EQUAL TO] the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production [APPLICABLE TO THE OIL PRODUCED BY THE PRODUCER FROM THOSE LEASES AND PROPERTIES] under AS 43.55.165 and 43.55.170 that are deductible for the leases or properties under AS 43.55.160 [,] from the gross value at the point of production of the oil **and gas** produced from the leases or properties

during the month for which the installment payment is calculated [ADDED TO THE SUM OF 25 PERCENT AND THE TAX RATE CALCULATED FOR THE MONTH UNDER AS 43.55.011(p) MULTIPLIED BY THE REMAINDER OBTAINED BY SUBTRACTING 1/12 OF THE PRODUCER'S ADJUSTED LEASE EXPENDITURES FOR THE CALENDAR YEAR OF PRODUCTION APPLICABLE TO THE GAS PRODUCED BY THE PRODUCER FROM THOSE LEASES AND PROPERTIES UNDER AS 43.55.165 AND 43.55.170 THAT ARE DEDUCTIBLE FOR THE LEASES OR PROPERTIES UNDER AS 43.55.160 FROM THE GROSS VALUE AT THE POINT OF PRODUCTION OF THE GAS PRODUCED FROM THE LEASES OR PROPERTIES DURING THE MONTH FOR WHICH THE INSTALLMENT PAYMENT IS CALCULATED];

(B) for oil and gas produced from leases or properties subject to AS 43.55.011(f), the greatest of

(i) zero;

(ii) zero percent, one percent, two percent, three percent, or four percent, as applicable, of the gross value at the point of production of the oil and gas produced from all leases or properties during the month for which the installment payment is calculated; or

(iii) [AN AMOUNT EQUAL TO] the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production [APPLICABLE TO THE OIL PRODUCED BY THE PRODUCER FROM THOSE LEASES AND PROPERTIES] under AS 43.55.165 and 43.55.170 that are deductible for those leases or properties under AS 43.55.160 [,] from the gross value at the point of production of the oil **and gas** produced from those leases or properties during the month for which the installment payment is calculated [ADDED TO THE SUM OF 25 PERCENT AND THE TAX RATE

CALCULATED FOR THE MONTH UNDER AS 43.55.011(p) MULTIPLIED BY THE REMAINDER OBTAINED BY SUBTRACTING 1/12 OF THE PRODUCER'S ADJUSTED LEASE EXPENDITURES FOR THE CALENDAR YEAR OF PRODUCTION APPLICABLE TO THE GAS PRODUCED BY THE PRODUCER FROM THOSE LEASES AND PROPERTIES UNDER AS 43.55.165 AND 43.55.170 THAT ARE DEDUCTIBLE FOR THOSE LEASES OR PROPERTIES UNDER AS 43.55.160 FROM THE GROSS VALUE AT THE POINT OF PRODUCTION OF THE GAS PRODUCED FROM THOSE LEASES OR PROPERTIES DURING THE MONTH FOR WHICH THE INSTALLMENT PAYMENT IS CALCULATED];

(C) for oil and gas produced from each lease or property subject to AS 43.55.011(j), (k), or (o), the greater of

(i) zero; or

(ii) [AN AMOUNT EQUAL TO] the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production [APPLICABLE TO THE OIL PRODUCED BY THE PRODUCER FROM THOSE LEASES AND PROPERTIES] under AS 43.55.165 and 43.55.170 that are deductible under AS 43.55.160 for oil **or gas, respectively,** produced from the lease or property [,] from the gross value at the point of production of the oil **or gas, respectively,** produced from the lease or property during the month for which the installment payment is calculated [ADDED TO THE SUM OF 25 PERCENT AND THE TAX RATE CALCULATED FOR THE MONTH UNDER AS 43.55.011(g) MULTIPLIED BY THE REMAINDER OBTAINED BY SUBTRACTING 1/12 OF THE PRODUCER'S ADJUSTED LEASE EXPENDITURES FOR THE CALENDAR YEAR OF PRODUCTION APPLICABLE TO THE

GAS PRODUCED BY THE PRODUCER FROM THE LEASE OR PROPERTY UNDER AS 43.55.165 AND 43.55.170 THAT ARE DEDUCTIBLE UNDER AS 43.55.160 FOR GAS PRODUCED FROM THE LEASE OR PROPERTY, FROM THE GROSS VALUE AT THE POINT OF PRODUCTION OF THE GAS PRODUCED FROM THE LEASE OR PROPERTY DURING THE MONTH FOR WHICH THE INSTALLMENT PAYMENT IS CALCULATED];

(2) an amount calculated under (1)(C) of this subsection for oil or gas produced **before 2022** from a lease or property subject to AS 43.55.011(j), (k), or (o) may not exceed the product obtained by carrying out the calculation set out in AS 43.55.011(j)(1) or (2) or 43.55.011(o), as applicable, for gas or set out in AS 43.55.011(k)(1) or (2), as applicable, for oil, but substituting in AS 43.55.011(j)(1)(A) or (2)(A) or 43.55.011(o), as applicable, the amount of taxable gas produced during the month for the amount of taxable gas produced during the calendar year and substituting in AS 43.55.011(k)(1)(A) or (2)(A), as applicable, the amount of taxable oil produced during the month for the amount of taxable oil produced during the calendar year;

(3) an installment payment of the estimated tax levied by AS 43.55.011(i) for each lease or property is due for each month of the calendar year on the last day of the following month; the amount of the installment payment is the sum of

(A) the applicable tax rate for oil provided under AS 43.55.011(i), multiplied by the gross value at the point of production of the oil taxable under AS 43.55.011(i) and produced from the lease or property during the month; and

(B) the applicable tax rate for gas provided under AS 43.55.011(i), multiplied by the gross value at the point of production of the gas taxable under AS 43.55.011(i) and produced from the lease or property during the month;

(4) any amount of tax levied by AS 43.55.011(e) or (i), net of any credits applied as allowed by law, that exceeds the total of the amounts due as

installment payments of estimated tax is due on March 31 of the year following the calendar year of production.

* **Sec. 14.** AS 43.55.020(a), as amended by sec. 13 of this Act, is amended to read:

(a) For a calendar year, a producer subject to tax under AS 43.55.011(e) - (i) **and (p)** shall pay the tax as follows:

(1) an installment payment of the estimated tax levied by AS 43.55.011(e), net of any tax credits applied as allowed by law, is due for each month of the calendar year on the last day of the following month; except as otherwise provided under (2) of this subsection, the amount of the installment payment is the sum of the following amounts, less 1/12 of the tax credits that are allowed by law to be applied against the tax levied by AS 43.55.011(e) for the calendar year, but the amount of the installment payment may not be less than zero:

(A) for oil and gas produced from leases or properties in the state outside the Cook Inlet sedimentary basin but not subject to AS 43.55.011(o), other than leases or properties subject to AS 43.55.011(f), the greater of

(i) zero; or

(ii) **an amount equal to** the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production **applicable to the oil produced by the producer from those leases and properties** under AS 43.55.165 and 43.55.170 that are deductible for the leases or properties under AS 43.55.160, from the gross value at the point of production of the oil [AND GAS] produced from the leases or properties during the month for which the installment payment is calculated **added to the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(p) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production applicable to the gas produced by the producer from those leases and**

properties under AS 43.55.165 and 43.55.170 that are deductible for the leases or properties under AS 43.55.160 from the gross value at the point of production of the gas produced from the leases or properties during the month for which the installment payment is calculated;

(B) for oil and gas produced from leases or properties subject to AS 43.55.011(f), the greatest of

(i) zero;

(ii) zero percent, one percent, two percent, three percent, or four percent, as applicable, of the gross value at the point of production of the oil and gas produced from all leases or properties during the month for which the installment payment is calculated; or

(iii) **an amount equal to** the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production **applicable to the oil produced by the producer from those leases and properties** under AS 43.55.165 and 43.55.170 that are deductible for those leases or properties under AS 43.55.160, from the gross value at the point of production of the oil [AND GAS] produced from those leases or properties during the month for which the installment payment is calculated **added to the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(p) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production applicable to the gas produced by the producer from those leases and properties under AS 43.55.165 and 43.55.170 that are deductible for those leases or properties under AS 43.55.160 from the gross value at the point of production of the gas produced from those leases or properties during the month for which the installment payment is calculated**;

(C) for oil and gas produced from each lease or property subject to AS 43.55.011(j), (k), or (o), the greater of

(i) zero; or

(ii) **an amount equal to** the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production **applicable to the oil produced by the producer from those leases and properties** under AS 43.55.165 and 43.55.170 that are deductible under AS 43.55.160 for oil [OR GAS, RESPECTIVELY,] produced from the lease or property, from the gross value at the point of production of the oil [OR GAS, RESPECTIVELY,] produced from the lease or property during the month for which the installment payment is calculated **added to the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production applicable to the gas produced by the producer from the lease or property under AS 43.55.165 and 43.55.170 that are deductible under AS 43.55.160 for gas produced from the lease or property, from the gross value at the point of production of the gas produced from the lease or property during the month for which the installment payment is calculated**;

(2) an amount calculated under (1)(C) of this subsection for oil or gas produced before 2022 from a lease or property subject to AS 43.55.011(j), (k), or (o) may not exceed the product obtained by carrying out the calculation set out in AS 43.55.011(j)(1) or (2) or 43.55.011(o), as applicable, for gas or set out in AS 43.55.011(k)(1) or (2), as applicable, for oil, but substituting in AS 43.55.011(j)(1)(A) or (2)(A) or 43.55.011(o), as applicable, the amount of taxable gas produced during the month for the amount of taxable gas produced during the calendar year and substituting in AS 43.55.011(k)(1)(A) or (2)(A), as applicable, the amount of taxable oil produced during the month for the amount of taxable oil

produced during the calendar year;

(3) an installment payment of the estimated tax levied by AS 43.55.011(i) for each lease or property is due for each month of the calendar year on the last day of the following month; the amount of the installment payment is the sum of

(A) the applicable tax rate for oil provided under AS 43.55.011(i), multiplied by the gross value at the point of production of the oil taxable under AS 43.55.011(i) and produced from the lease or property during the month; and

(B) the applicable tax rate for gas provided under AS 43.55.011(i), multiplied by the gross value at the point of production of the gas taxable under AS 43.55.011(i) and produced from the lease or property during the month;

(4) any amount of tax levied by AS 43.55.011(e) or (i), net of any credits applied as allowed by law, that exceeds the total of the amounts due as installment payments of estimated tax is due on March 31 of the year following the calendar year of production."

"* **Sec. 19.** AS 43.55.160(a), as amended by sec. 18 of this Act, is amended to read:

(a) Except as provided in (b) of this section, for the purposes of

(1) AS 43.55.011(e), the annual production tax value of the taxable

(A) oil **and gas** produced during a calendar year from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the oil **and gas** taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil **and gas** produced by the producer from those leases or properties, as adjusted under AS 43.55.170; **this subparagraph does not apply to gas subject to AS 43.55.011(o);**

(B) oil **and gas** produced during a calendar year from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the oil **and gas** taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil **and gas** produced by the producer from those leases or properties, as adjusted under AS 43.55.170; **this subparagraph does not apply to gas subject to AS 43.55.011(o);**

(C) oil produced during a calendar year from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the oil taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(D) gas produced during a calendar year from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures

under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(E) gas produced during a calendar year from a lease or property outside the Cook Inlet sedimentary basin and used in the state is the gross value at the point of production of that gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to that gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

[(F) GAS PRODUCED DURING A CALENDAR YEAR FROM LEASES OR PROPERTIES IN THE STATE THAT INCLUDE LAND NORTH OF 68 DEGREES NORTH LATITUDE IS THE GROSS VALUE AT THE POINT OF PRODUCTION OF THE GAS TAXABLE UNDER AS 43.55.011(e) AND PRODUCED BY THE PRODUCER FROM THOSE LEASES OR PROPERTIES, LESS THE PRODUCER'S LEASE EXPENDITURES UNDER AS 43.55.165 FOR THE CALENDAR YEAR APPLICABLE TO THE GAS PRODUCED BY THE PRODUCER FROM THOSE LEASES OR PROPERTIES, AS ADJUSTED UNDER AS 43.55.170; THIS SUBPARAGRAPH DOES NOT APPLY TO GAS USED IN THE STATE;

(G) GAS PRODUCED DURING A CALENDAR YEAR FROM LEASES OR PROPERTIES IN THE STATE OUTSIDE THE COOK INLET SEDIMENTARY BASIN, NO PART OF WHICH IS NORTH OF 68 DEGREES NORTH LATITUDE, IS THE GROSS VALUE AT THE POINT OF PRODUCTION OF THE GAS TAXABLE UNDER AS 43.55.011(e) AND PRODUCED BY THE PRODUCER FROM THOSE LEASES OR PROPERTIES, LESS THE PRODUCER'S LEASE EXPENDITURES UNDER AS 43.55.165 FOR THE CALENDAR YEAR APPLICABLE TO THE GAS PRODUCED BY THE PRODUCER FROM THOSE LEASES OR PROPERTIES, AS ADJUSTED UNDER AS 43.55.170; THIS SUBPARAGRAPH DOES NOT APPLY TO GAS USED IN THE STATE;]

(2) AS 43.55.011(g) [AND (p)], the monthly production tax value of the taxable

(A) oil **and gas** produced during a month from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the oil **and gas** taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil **and gas** produced by the producer from those leases or properties, as adjusted under AS 43.55.170; **this subparagraph does not apply to gas subject to AS 43.55.011(o);**

(B) oil **and gas** produced during a month from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the oil **and gas** taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil **and gas** produced by the producer from those leases or properties, as adjusted under AS 43.55.170; **this subparagraph does not apply to gas subject to AS 43.55.011(o);**

(C) oil produced during a month from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the oil taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(D) gas produced during a month from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(E) gas produced during a month from a lease or property outside the Cook Inlet sedimentary basin and used in the state is the gross value at the point of production of that gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to that gas produced by the producer from that lease or property, as adjusted under AS 43.55.170 [;

(F) GAS PRODUCED DURING A MONTH FROM LEASES OR PROPERTIES IN THE STATE THAT INCLUDE LAND NORTH OF 68 DEGREES NORTH LATITUDE IS THE GROSS VALUE AT THE POINT OF PRODUCTION OF THE GAS TAXABLE UNDER AS 43.55.011(e) AND PRODUCED BY THE PRODUCER FROM THOSE LEASES OR PROPERTIES, LESS 1/12 OF THE PRODUCER'S LEASE EXPENDITURES UNDER AS 43.55.165 FOR THE CALENDAR YEAR APPLICABLE TO THE GAS PRODUCED BY THE PRODUCER FROM THOSE LEASES OR PROPERTIES, AS ADJUSTED UNDER AS 43.55.170; THIS SUBPARAGRAPH DOES NOT APPLY TO GAS USED IN THE STATE;

(G) GAS PRODUCED DURING A MONTH FROM LEASES OR PROPERTIES IN THE STATE OUTSIDE THE COOK INLET SEDIMENTARY BASIN, NO PART OF WHICH IS NORTH OF 68 DEGREES NORTH LATITUDE, IS THE GROSS VALUE AT THE POINT OF PRODUCTION OF THE GAS TAXABLE UNDER AS 43.55.011(e) AND PRODUCED BY THE PRODUCER FROM THOSE LEASES OR PROPERTIES, LESS 1/12 OF THE PRODUCER'S LEASE EXPENDITURES UNDER AS 43.55.165 FOR THE CALENDAR YEAR APPLICABLE TO THE GAS PRODUCED BY THE PRODUCER FROM THOSE LEASES OR PROPERTIES, AS ADJUSTED UNDER AS 43.55.170; THIS SUBPARAGRAPH DOES NOT APPLY TO GAS USED IN THE STATE].

*** Sec. 20.** AS 43.55.160(a), as amended by sec. 19 of this Act, is amended to read:

(a) Except as provided in (b) of this section, for the purposes of

(1) AS 43.55.011(e), the annual production tax value of the taxable

(A) oil [AND GAS] produced during a calendar year from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the oil [AND GAS] taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil [AND GAS] produced by the producer from those leases or properties, as adjusted under AS 43.55.170; [THIS SUBPARAGRAPH DOES NOT APPLY TO GAS SUBJECT TO AS 43.55.011(o);]

(B) oil [AND GAS] produced during a calendar year from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the oil [AND GAS] taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil [AND GAS] produced by the producer from those leases or properties, as adjusted under AS 43.55.170; [THIS SUBPARAGRAPH DOES NOT APPLY TO GAS SUBJECT TO AS 43.55.011(o);]

(C) oil produced during a calendar year from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the oil taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(D) gas produced during a calendar year from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the

producer from that lease or property, as adjusted under AS 43.55.170;

(E) gas produced during a calendar year from a lease or property outside the Cook Inlet sedimentary basin and used in the state is the gross value at the point of production of that gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to that gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(F) gas produced during a calendar year from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas used in the state;

(G) gas produced during a calendar year from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas used in the state;

(2) AS 43.55.011(g) **and (p)**, the monthly production tax value of the taxable

(A) oil [AND GAS] produced during a month from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the oil [AND GAS] taxable under AS 43.55.011(e) and produced by the producer from those leases or properties,

less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil [AND GAS] produced by the producer from those leases or properties, as adjusted under AS 43.55.170; [THIS SUBPARAGRAPH DOES NOT APPLY TO GAS SUBJECT TO AS 43.55.011(o);]

(B) oil [AND GAS] produced during a month from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the oil [AND GAS] taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil [AND GAS] produced by the producer from those leases or properties, as adjusted under AS 43.55.170; [THIS SUBPARAGRAPH DOES NOT APPLY TO GAS SUBJECT TO AS 43.55.011(o);]

(C) oil produced during a month from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the oil taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(D) gas produced during a month from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(E) gas produced during a month from a lease or property outside the Cook Inlet sedimentary basin and used in the state is the gross value at the point of production of that gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year

applicable to that gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(F) gas produced during a month from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas used in the state;

(G) gas produced during a month from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas used in the state."

"* **Sec. 23.** AS 43.55.011(p) is repealed.

* **Sec. 24.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION; REGULATIONS; PAYMENT OF TAX; FILING OF REPORTS. If secs. 1, 4, 7, 10, 12, 15, and 18 of this Act take effect, the Department of Revenue shall adopt regulations providing for the payment of tax and the filing of reports required for the period in which secs. 1, 4, 7, 10, 12, 15, and 18 of this Act are in effect.

*** Sec. 25.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CONDITIONAL EFFECT OF SECS. 1, 2, 4, 5, 7, 8, 10, 12, 13, 15, 16, 18, 19, AND 23 OF THIS ACT; NOTICE. (a) Sections 1, 2, 4, 5, 7, 8, 10, 12, 13, 15, 16, 18, 19, and 23 of this Act take effect only if secs. 21 and 22 of this Act take effect before April 29, 2010.

(b) The commissioner of revenue shall notify the revisor of statutes of the date of the start of the first binding open season for the project licensed under AS 43.90 (Alaska Gasline Inducement Act).

*** Sec. 26.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CONDITIONAL EFFECT OF SECS. 3, 6, 9, 11, 14, 17, AND 20 OF THIS ACT; NOTICE. (a) Sections 3, 6, 9, 11, 14, 17, and 20 of this Act take effect only if more than 1,500,000,000 cubic feet of natural gas a day that is produced in the state is tendered for shipment through a natural gas pipeline project in the state to a market in Canada or the 48 contiguous states, or to a gas liquefaction facility in the state for shipment in a liquefied state by marine transportation to a market outside of the state.

(b) The commissioner of revenue shall notify the revisor of statutes of the date that natural gas was first tendered for shipment under the circumstances described in (a) of this section.

*** Sec. 27.** If secs. 1, 4, 7, 10, 12, 15, and 18 of this Act take effect, they take effect April 29, 2010.

*** Sec. 28.** If secs. 2, 5, 8, 13, 16, 19, and 23 of this Act take effect, they take effect on the first day immediately following the date on which the open season starts for the project licensed under AS 43.90.

*** Sec. 29.** If secs. 3, 6, 9, 11, 14, 17, and 20 take effect, they take effect on the first day of the month immediately following the date on which the condition in sec. 26(a) of this Act is met.

*** Sec. 30.** Except as provided in secs. 27 - 29 of this Act, this Act takes effect immediately under AS 01.10.070(c)."

HOUSE CS FOR CS FOR SENATE BILL NO. 305(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY THE HOUSE RESOURCES COMMITTEE

Offered:
Referred:

Sponsor(s): SENATE FINANCE COMMITTEE

A BILL

FOR AN ACT ENTITLED

"An Act relating to that part of the tax on the production of oil and gas that increases as the average production tax value of the oil and gas increases above $30; relating to payments of the oil and gas production tax; relating to availability of a portion of the money received from the tax on oil and gas production for appropriation to the community revenue sharing fund; relating to the allocation of lease expenditures and adjustments to lease expenditures; relating to the tax on the production of gas in effect at the start of the first binding open season held for the project licensed under the Alaska Gasline Inducement Act; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 29.60.850(b) is amended to read:

(b) Each fiscal year, the legislature may appropriate to the community revenue sharing fund an amount equal to 20 percent of the money received by the state during

the previous calendar year under AS 43.55.011(g) **and (p)**. The amount may not exceed

(1) $60,000,000; or

(2) the amount that, when added to the fund balance on June 30 of the previous fiscal year, equals $180,000,000.

*** Sec. 2.** AS 29.60.850(b), as amended by sec. 1 of this Act, is amended to read:

(b) Each fiscal year, the legislature may appropriate to the community revenue sharing fund an amount equal to 20 percent of the money received by the state during the previous calendar year under AS 43.55.011(g) [AND (p)]. The amount may not exceed

~~(1) $60,000,000; or~~

(2) the amount that, when added to the fund balance on June 30 of the previous fiscal year, equals $180,000,000.

*** Sec. 3.** AS 29.60.850(b), as amended by sec. 2 of this Act, is amended to read:

(b) Each fiscal year, the legislature may appropriate to the community revenue sharing fund an amount equal to 20 percent of the money received by the state during the previous calendar year under AS 43.55.011(g) **and (q)**. The amount may not exceed

(1) $60,000,000; or

(2) the amount that, when added to the fund balance on June 30 of the previous fiscal year, equals $180,000,000.

*** Sec. 4.** AS 43.55.011(e) is amended to read:

(e) There is levied on the producer of oil or gas a tax for all oil and gas produced each calendar year from each lease or property in the state, less any oil and gas the ownership or right to which is exempt from taxation or constitutes a landowner's royalty interest. Except as otherwise provided under (f), (j), (k), and (o) of this section, the tax is equal to the sum of

(1) the annual production tax value of the taxable oil and gas as calculated under AS 43.55.160(a)(1) multiplied by 25 percent; and

(2) the sum, over all months of the calendar year, of the tax amounts determined under

(A) subsection (g) of this section**; and**

(B) subsection (p) of this section.

*** Sec. 5.** AS 43.55.011(e), as amended by sec. 4 of this Act, is amended to read:

(e) There is levied on the producer of oil or gas a tax for all oil and gas produced each calendar year from each lease or property in the state, less any oil and gas the ownership or right to which is exempt from taxation or constitutes a landowner's royalty interest. Except as otherwise provided under (f), (j), (k), and (o) of this section, the tax is equal to the sum of

(1) the annual production tax value of the taxable oil and gas as calculated under AS 43.55.160(a)(1) multiplied by 25 percent; and

(2) the sum, over all months of the calendar year, of the tax amounts determined under

[(A) SUBSECTION] (g) of this section [; AND

(B) SUBSECTION (p) OF THIS SECTION].

*** Sec. 6.** AS 43.55.011(e) as amended by sec. 5 of this Act is amended to read:

(e) There is levied on the producer of oil or gas a tax for all oil and gas produced each calendar year from each lease or property in the state, less any oil and gas the ownership or right to which is exempt from taxation or constitutes a landowner's royalty interest. Except as otherwise provided under (f), (j), (k), and (o) of this section, the tax is equal to the sum of

(1) the annual production tax value of the taxable oil and gas as calculated under AS 43.55.160(a)(1) multiplied by 25 percent; and

(2) the sum, over all months of the calendar year, of the tax amounts determined under

(A) subsection (g) of this section**; and**

(B) subsection (q) of this section.

*** Sec. 7.** AS 43.55.011(g) is amended to read:

(g) For each month of the calendar year for which the producer's average monthly production tax value under **AS 43.55.160(a)(2)(A) - (E) of a** [AS 43.55.160(a)(2) PER] BTU equivalent barrel of [THE] taxable oil and gas is more than $30, the amount of tax for purposes of **(e)(2)(A)** [(e)(2)] of this section is

determined by multiplying the monthly production tax value of the taxable oil [AND GAS] produced during the month**, gas produced during the month from a lease or property in the Cook Inlet sedimentary basin, and gas produced during the month from a lease or property outside the Cook Inlet sedimentary basin and used in the state** by the tax rate calculated as follows:

(1) if the producer's average monthly production tax value **under AS 43.55.160(a)(2)(A) - (E) of a** [PER] BTU equivalent barrel of [THE] taxable oil and gas for the month is not more than $92.50, the tax rate is 0.4 percent multiplied by the number that represents the difference between **the producer's** [THAT] average monthly production tax value **under AS 43.55.160(a)(2)(A) - (E) of a** [PER] BTU equivalent barrel **of taxable oil and gas** and $30; or

(2) if the producer's average monthly production tax value **under AS 43.55.160(a)(2)(A) - (E) of a** [PER] BTU equivalent barrel of [THE] taxable oil and gas for the month is more than $92.50, the tax rate is the sum of 25 percent and the product of 0.1 percent multiplied by the number that represents the difference between the **producer's** average monthly production tax value **under AS 43.55.160(a)(2)(A) - (E) of a** [PER] BTU equivalent barrel **of taxable oil and gas** and $92.50, except that the sum determined under this paragraph may not exceed 50 percent.

* **Sec. 8.** AS 43.55.011(g), as amended by sec. 7 of this Act, is amended to read:

(g) For each month of the calendar year for which the producer's average monthly production tax value under **AS 43.55.160(a)(2)** [AS 43.55.160(a)(2)(A) - (E)] of a BTU equivalent barrel of taxable oil and gas is more than $30, the amount of tax for purposes of **(e)(2)** [(e)(2)(A)] of this section is determined by multiplying the monthly production tax value of the taxable oil **and gas** produced during the month [, GAS PRODUCED DURING THE MONTH FROM A LEASE OR PROPERTY IN THE COOK INLET SEDIMENTARY BASIN, AND GAS PRODUCED DURING THE MONTH FROM A LEASE OR PROPERTY OUTSIDE THE COOK INLET SEDIMENTARY BASIN AND USED IN THE STATE] by the tax rate calculated as follows:

(1) if the producer's average monthly production tax value [UNDER

AS 43.55.160(a)(2)(A) - (E)] of a BTU equivalent barrel of taxable oil and gas for the month is not more than $92.50, the tax rate is 0.4 percent multiplied by the number that represents the difference between the producer's average monthly production tax value [UNDER AS 43.55.160(a)(2)(A) - (E)] of a BTU equivalent barrel of taxable oil and gas and $30; or

(2) if the producer's average monthly production tax value [UNDER AS 43.55.160(a)(2)(A) - (E)] of a BTU equivalent barrel of taxable oil and gas for the month is more than $92.50, the tax rate is the sum of 25 percent and the product of 0.1 percent multiplied by the number that represents the difference between the producer's average monthly production tax value [UNDER AS 43.55.160(a)(2)(A) - (E)] of a BTU equivalent barrel of taxable oil and gas and $92.50, except that the sum determined under this paragraph may not exceed 50 percent.

*** Sec. 9.** AS 43.55.011(g), as amended by sec. 8 of this Act, is amended to read:

(g) For each month of the calendar year for which the producer's average monthly production tax value under **AS 43.55.160(a)(2)(A) - (E)** [AS 43.55.160(a)(2)] of a BTU equivalent barrel of taxable oil and gas is more than $30, the amount of tax for purposes of **(e)(2)(A)** [(e)(2)] of this section is determined by multiplying the monthly production tax value of the taxable oil [AND GAS] produced during the month**, gas produced during the month from a lease or property in the Cook Inlet sedimentary basin, and gas produced during the month from a lease or property outside the Cook Inlet sedimentary basin and used in the state** by the tax rate calculated as follows:

(1) if the producer's average monthly production tax value **under AS 43.55.160(a)(2)(A) - (E)** of a BTU equivalent barrel of taxable oil and gas for the month is not more than $92.50, the tax rate is 0.4 percent multiplied by the number that represents the difference between the producer's average monthly production tax value **under AS 43.55.160(a)(2)(A) - (E)** of a BTU equivalent barrel of taxable oil and gas and $30; or

(2) if the producer's average monthly production tax value **under AS 43.55.160(a)(2)(A) - (E)** of a BTU equivalent barrel of taxable oil and gas for the month is more than $92.50, the tax rate is the sum of 25 percent and the product of 0.1

percent multiplied by the number that represents the difference between the producer's average monthly production tax value **under AS 43.55.160(a)(2)(A) - (E)** of a BTU equivalent barrel of taxable oil and gas and $92.50, except that the sum determined under this paragraph may not exceed 50 percent.

*** Sec. 10.** AS 43.55.011 is amended by adding a new subsection to read:

(p) For each month of the calendar year for which the producer's average monthly production tax value under AS 43.55.160(a)(2)(F) and (G) of a BTU equivalent barrel of taxable gas is more than $30, the amount of tax on the production of gas for purposes of (e)(2)(B) of this section is determined by multiplying the monthly production tax value of the taxable gas produced during the month other than gas produced from a lease or property in the Cook Inlet sedimentary basin or gas produced outside the Cook Inlet sedimentary basin and used in the state by the tax rate calculated as follows:

(1) if the producer's average monthly production tax value under AS 43.55.160(a)(2)(F) and (G) of a BTU equivalent barrel of taxable gas for the month is not more than $92.50, the tax rate is 0.4 percent multiplied by the number that represents the difference between the producer's average monthly production tax value under AS 43.55.160(a)(2)(F) and (G) of a BTU equivalent barrel of gas and $30; or

(2) if the producer's average monthly production tax value under AS 43.55.160(a)(2)(F) and (G) of a BTU equivalent barrel of taxable gas for the month is more than $92.50, the tax rate is the sum of 25 percent and the product of 0.1 percent multiplied by the number that represents the difference between the producer's average monthly production tax value under AS 43.55.160(a)(2)(F) and (G) of a BTU equivalent barrel of gas and $92.50, except that the sum determined under this paragraph may not exceed 50 percent.

*** Sec. 11.** AS 43.55.011 is amended by adding a new subsection to read:

(q) For each month of the calendar year for which the producer's average monthly production tax value under AS 43.55.160(a)(2)(F) and (G) of a BTU equivalent barrel of taxable gas is more than $30, the amount of tax on the production of gas for purposes of (e)(2)(B) of this section is determined by multiplying the

monthly production tax value of the taxable gas produced during the month other than gas produced from a lease or property in the Cook Inlet sedimentary basin or gas produced outside the Cook Inlet sedimentary basin and used in the state by the tax rate calculated as follows:

(1) if the producer's average monthly production tax value under AS 43.55.160(a)(2)(F) and (G) of a BTU equivalent barrel of taxable gas for the month is not more than $92.50, the tax rate is 0.4 percent multiplied by the number that represents the difference between the producer's average monthly production tax value under AS 43.55.160(a)(2)(F) and (G) of a BTU equivalent barrel of gas and $30; or

(2) if the producer's average monthly production tax value under AS 43.55.160(a)(2)(F) and (G) of a BTU equivalent barrel of taxable gas for the month is more than $92.50, the tax rate is the sum of 25 percent and the product of 0.1 percent multiplied by the number that represents the difference between the producer's average monthly production tax value under AS 43.55.160(a)(2)(F) and (G) of a BTU equivalent barrel of gas and $92.50, except that the sum determined under this paragraph may not exceed 50 percent.

*** Sec. 12.** AS 43.55.020(a) is amended to read:

(a) For a calendar year, a producer subject to tax under AS 43.55.011(e) - (i) **and (p)** shall pay the tax as follows:

(1) an installment payment of the estimated tax levied by AS 43.55.011(e), net of any tax credits applied as allowed by law, is due for each month of the calendar year on the last day of the following month; except as otherwise provided under (2) of this subsection, the amount of the installment payment is the sum of the following amounts, less 1/12 of the tax credits that are allowed by law to be applied against the tax levied by AS 43.55.011(e) for the calendar year, but the amount of the installment payment may not be less than zero:

(A) for oil and gas produced from leases or properties in the state outside the Cook Inlet sedimentary basin but not subject to AS 43.55.011(o), other than leases or properties subject to AS 43.55.011(f), the greater of

(i) zero; or

(ii) **an amount equal to** the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production **applicable to the oil produced by the producer from those leases and properties** under AS 43.55.165 and 43.55.170 that are deductible for the leases or properties under AS 43.55.160, from the gross value at the point of production of the oil [AND GAS] produced from the leases or properties during the month for which the installment payment is calculated **added to the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(p) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production applicable to the gas produced by the producer from those leases and properties under AS 43.55.165 and 43.55.170 that are deductible for the leases or properties under AS 43.55.160 from the gross value at the point of production of the gas produced from the leases or properties during the month for which the installment payment is calculated**;

(B) for oil and gas produced from leases or properties subject to AS 43.55.011(f), the greatest of

(i) zero;

(ii) zero percent, one percent, two percent, three percent, or four percent, as applicable, of the gross value at the point of production of the oil and gas produced from all leases or properties during the month for which the installment payment is calculated; or

(iii) **an amount equal to** the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production **applicable to**

the oil produced by the producer from those leases and properties under AS 43.55.165 and 43.55.170 that are deductible for those leases or properties under AS 43.55.160, from the gross value at the point of production of the oil [AND GAS] produced from those leases or properties during the month for which the installment payment is calculated **added to the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(p) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production applicable to the gas produced by the producer from those leases and properties under AS 43.55.165 and 43.55.170 that are deductible for those leases or properties under AS 43.55.160 from the gross value at the point of production of the gas produced from those leases or properties during the month for which the installment payment is calculated**;

(C) for oil and gas produced from each lease or property subject to AS 43.55.011(j), (k), or (o), the greater of

(i) zero; or

(ii) **an amount equal to** the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production **applicable to the oil produced by the producer from those leases and properties** under AS 43.55.165 and 43.55.170 that are deductible under AS 43.55.160 for oil [OR GAS, RESPECTIVELY,] produced from the lease or property, from the gross value at the point of production of the oil [OR GAS, RESPECTIVELY,] produced from the lease or property during the month for which the installment payment is calculated **added to the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures**

for the calendar year of production applicable to the gas produced by the producer from the lease or property under AS 43.55.165 and 43.55.170 that are deductible under AS 43.55.160 for gas produced from the lease or property, from the gross value at the point of production of the gas produced from the lease or property during the month for which the installment payment is calculated;

(2) an amount calculated under (1)(C) of this subsection for oil or gas produced from a lease or property subject to AS 43.55.011(j), (k), or (o) may not exceed the product obtained by carrying out the calculation set out in AS 43.55.011(j)(1) or (2) or 43.55.011(o), as applicable, for gas or set out in AS 43.55.011(k)(1) or (2), as applicable, for oil, but substituting in AS 43.55.011(j)(1)(A) or (2)(A) or 43.55.011(o), as applicable, the amount of taxable gas produced during the month for the amount of taxable gas produced during the calendar year and substituting in AS 43.55.011(k)(1)(A) or (2)(A), as applicable, the amount of taxable oil produced during the month for the amount of taxable oil produced during the calendar year;

(3) an installment payment of the estimated tax levied by AS 43.55.011(i) for each lease or property is due for each month of the calendar year on the last day of the following month; the amount of the installment payment is the sum of

(A) the applicable tax rate for oil provided under AS 43.55.011(i), multiplied by the gross value at the point of production of the oil taxable under AS 43.55.011(i) and produced from the lease or property during the month; and

(B) the applicable tax rate for gas provided under AS 43.55.011(i), multiplied by the gross value at the point of production of the gas taxable under AS 43.55.011(i) and produced from the lease or property during the month;

(4) any amount of tax levied by AS 43.55.011(e) or (i), net of any credits applied as allowed by law, that exceeds the total of the amounts due as installment payments of estimated tax is due on March 31 of the year following the

calendar year of production.

*** Sec. 13.** AS 43.55.020(a), as amended by sec. 12 of this Act, is amended to read:

(a) For a calendar year, a producer subject to tax under AS 43.55.011(e) - (i) [AND (p)] shall pay the tax as follows:

(1) an installment payment of the estimated tax levied by AS 43.55.011(e), net of any tax credits applied as allowed by law, is due for each month of the calendar year on the last day of the following month; except as otherwise provided under (2) of this subsection, the amount of the installment payment is the sum of the following amounts, less 1/12 of the tax credits that are allowed by law to be applied against the tax levied by AS 43.55.011(e) for the calendar year, but the amount of the installment payment may not be less than zero:

(A) for oil and gas produced from leases or properties in the state outside the Cook Inlet sedimentary basin but not subject to AS 43.55.011(o), other than leases or properties subject to AS 43.55.011(f), the greater of

(i) zero; or

(ii) [AN AMOUNT EQUAL TO] the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production [APPLICABLE TO THE OIL PRODUCED BY THE PRODUCER FROM THOSE LEASES AND PROPERTIES] under AS 43.55.165 and 43.55.170 that are deductible for the leases or properties under AS 43.55.160 [,] from the gross value at the point of production of the oil **and gas** produced from the leases or properties during the month for which the installment payment is calculated [ADDED TO THE SUM OF 25 PERCENT AND THE TAX RATE CALCULATED FOR THE MONTH UNDER AS 43.55.011(p) MULTIPLIED BY THE REMAINDER OBTAINED BY SUBTRACTING 1/12 OF THE PRODUCER'S ADJUSTED LEASE EXPENDITURES FOR THE CALENDAR YEAR OF PRODUCTION

APPLICABLE TO THE GAS PRODUCED BY THE PRODUCER FROM THOSE LEASES AND PROPERTIES UNDER AS 43.55.165 AND 43.55.170 THAT ARE DEDUCTIBLE FOR THE LEASES OR PROPERTIES UNDER AS 43.55.160 FROM THE GROSS VALUE AT THE POINT OF PRODUCTION OF THE GAS PRODUCED FROM THE LEASES OR PROPERTIES DURING THE MONTH FOR WHICH THE INSTALLMENT PAYMENT IS CALCULATED];

(B) for oil and gas produced from leases or properties subject to AS 43.55.011(f), the greatest of

(i) zero;

(ii) ~~zero percent, one percent, two percent, three~~ percent, or four percent, as applicable, of the gross value at the point of production of the oil and gas produced from all leases or properties during the month for which the installment payment is calculated; or

(iii) [AN AMOUNT EQUAL TO] the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production [APPLICABLE TO THE OIL PRODUCED BY THE PRODUCER FROM THOSE LEASES AND PROPERTIES] under AS 43.55.165 and 43.55.170 that are deductible for those leases or properties under AS 43.55.160 [,] from the gross value at the point of production of the oil **and gas** produced from those leases or properties during the month for which the installment payment is calculated [ADDED TO THE SUM OF 25 PERCENT AND THE TAX RATE CALCULATED FOR THE MONTH UNDER AS 43.55.011(p) MULTIPLIED BY THE REMAINDER OBTAINED BY SUBTRACTING 1/12 OF THE PRODUCER'S ADJUSTED LEASE EXPENDITURES FOR THE CALENDAR YEAR OF PRODUCTION APPLICABLE TO THE GAS PRODUCED BY THE PRODUCER FROM THOSE LEASES AND PROPERTIES UNDER AS 43.55.165

AND 43.55.170 THAT ARE DEDUCTIBLE FOR THOSE LEASES OR PROPERTIES UNDER AS 43.55.160 FROM THE GROSS VALUE AT THE POINT OF PRODUCTION OF THE GAS PRODUCED FROM THOSE LEASES OR PROPERTIES DURING THE MONTH FOR WHICH THE INSTALLMENT PAYMENT IS CALCULATED];

(C) for oil and gas produced from each lease or property subject to AS 43.55.011(j), (k), or (o), the greater of

(i) zero; or

(ii) [AN AMOUNT EQUAL TO] the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production [APPLICABLE TO THE OIL PRODUCED BY THE PRODUCER FROM THOSE LEASES AND PROPERTIES] under AS 43.55.165 and 43.55.170 that are deductible under AS 43.55.160 for oil **or gas, respectively,** produced from the lease or property [,] from the gross value at the point of production of the oil **or gas, respectively,** produced from the lease or property during the month for which the installment payment is calculated [ADDED TO THE SUM OF 25 PERCENT AND THE TAX RATE CALCULATED FOR THE MONTH UNDER AS 43.55.011(g) MULTIPLIED BY THE REMAINDER OBTAINED BY SUBTRACTING 1/12 OF THE PRODUCER'S ADJUSTED LEASE EXPENDITURES FOR THE CALENDAR YEAR OF PRODUCTION APPLICABLE TO THE GAS PRODUCED BY THE PRODUCER FROM THE LEASE OR PROPERTY UNDER AS 43.55.165 AND 43.55.170 THAT ARE DEDUCTIBLE UNDER AS 43.55.160 FOR GAS PRODUCED FROM THE LEASE OR PROPERTY, FROM THE GROSS VALUE AT THE POINT OF PRODUCTION OF THE GAS PRODUCED FROM THE LEASE OR PROPERTY DURING THE MONTH FOR

WHICH THE INSTALLMENT PAYMENT IS CALCULATED];

(2) an amount calculated under (1)(C) of this subsection for oil or gas produced **before 2022** from a lease or property subject to AS 43.55.011(j), (k), or (o) may not exceed the product obtained by carrying out the calculation set out in AS 43.55.011(j)(1) or (2) or 43.55.011(o), as applicable, for gas or set out in AS 43.55.011(k)(1) or (2), as applicable, for oil, but substituting in AS 43.55.011(j)(1)(A) or (2)(A) or 43.55.011(o), as applicable, the amount of taxable gas produced during the month for the amount of taxable gas produced during the calendar year and substituting in AS 43.55.011(k)(1)(A) or (2)(A), as applicable, the amount of taxable oil produced during the month for the amount of taxable oil produced during the calendar year;

(3) an installment payment of the estimated tax levied by AS 43.55.011(i) for each lease or property is due for each month of the calendar year on the last day of the following month; the amount of the installment payment is the sum of

(A) the applicable tax rate for oil provided under AS 43.55.011(i), multiplied by the gross value at the point of production of the oil taxable under AS 43.55.011(i) and produced from the lease or property during the month; and

(B) the applicable tax rate for gas provided under AS 43.55.011(i), multiplied by the gross value at the point of production of the gas taxable under AS 43.55.011(i) and produced from the lease or property during the month;

(4) any amount of tax levied by AS 43.55.011(e) or (i), net of any credits applied as allowed by law, that exceeds the total of the amounts due as installment payments of estimated tax is due on March 31 of the year following the calendar year of production.

*** Sec. 14.** AS 43.55.020(a), as amended by sec. 13 of this Act, is amended to read:

(a) For a calendar year, a producer subject to tax under AS 43.55.011(e) - (i) **and (q)** shall pay the tax as follows:

(1) an installment payment of the estimated tax levied by

AS 43.55.011(e), net of any tax credits applied as allowed by law, is due for each month of the calendar year on the last day of the following month; except as otherwise provided under (2) of this subsection, the amount of the installment payment is the sum of the following amounts, less 1/12 of the tax credits that are allowed by law to be applied against the tax levied by AS 43.55.011(e) for the calendar year, but the amount of the installment payment may not be less than zero:

(A) for oil and gas produced from leases or properties in the state outside the Cook Inlet sedimentary basin but not subject to AS 43.55.011(o), other than leases or properties subject to AS 43.55.011(f), the greater of

(i) zero; or

(ii) **an amount equal to** the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production **applicable to the oil produced by the producer from those leases and properties** under AS 43.55.165 and 43.55.170 that are deductible for the leases or properties under AS 43.55.160, from the gross value at the point of production of the oil [AND GAS] produced from the leases or properties during the month for which the installment payment is calculated **added to the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production applicable to the gas produced by the producer from those leases and properties under AS 43.55.165 and 43.55.170 that are deductible for the leases or properties under AS 43.55.160 from the gross value at the point of production of the gas produced from the leases or properties during the month for which the installment payment is calculated**;

(B) for oil and gas produced from leases or properties subject

to AS 43.55.011(f), the greatest of

(i) zero;

(ii) zero percent, one percent, two percent, three percent, or four percent, as applicable, of the gross value at the point of production of the oil and gas produced from all leases or properties during the month for which the installment payment is calculated; or

(iii) **an amount equal to** the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production **applicable to the oil produced by the producer from those leases and properties** under AS 43.55.165 and 43.55.170 that are deductible for those leases or properties under AS 43.55.160, from the gross value at the point of production of the oil [AND GAS] produced from those leases or properties during the month for which the installment payment is calculated **added to the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(q) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production applicable to the gas produced by the producer from those leases and properties under AS 43.55.165 and 43.55.170 that are deductible for those leases or properties under AS 43.55.160 from the gross value at the point of production of the gas produced from those leases or properties during the month for which the installment payment is calculated**;

(C) for oil and gas produced from each lease or property subject to AS 43.55.011(j), (k), or (o), the greater of

(i) zero; or

(ii) **an amount equal to** the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted

lease expenditures for the calendar year of production **applicable to the oil produced by the producer from those leases and properties** under AS 43.55.165 and 43.55.170 that are deductible under AS 43.55.160 for oil [OR GAS, RESPECTIVELY,] produced from the lease or property, from the gross value at the point of production of the oil [OR GAS, RESPECTIVELY,] produced from the lease or property during the month for which the installment payment is calculated **added to the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production applicable to the gas produced by the producer from the lease or property under AS 43.55.165 and 43.55.170 that are deductible under AS 43.55.160 for gas produced from the lease or property, from the gross value at the point of production of the gas produced from the lease or property during the month for which the installment payment is calculated**;

(2) an amount calculated under (1)(C) of this subsection for oil or gas produced before 2022 from a lease or property subject to AS 43.55.011(j), (k), or (o) may not exceed the product obtained by carrying out the calculation set out in AS 43.55.011(j)(1) or (2) or 43.55.011(o), as applicable, for gas or set out in AS 43.55.011(k)(1) or (2), as applicable, for oil, but substituting in AS 43.55.011(j)(1)(A) or (2)(A) or 43.55.011(o), as applicable, the amount of taxable gas produced during the month for the amount of taxable gas produced during the calendar year and substituting in AS 43.55.011(k)(1)(A) or (2)(A), as applicable, the amount of taxable oil produced during the month for the amount of taxable oil produced during the calendar year;

(3) an installment payment of the estimated tax levied by AS 43.55.011(i) for each lease or property is due for each month of the calendar year on the last day of the following month; the amount of the installment payment is the sum of

(A) the applicable tax rate for oil provided under

AS 43.55.011(i), multiplied by the gross value at the point of production of the oil taxable under AS 43.55.011(i) and produced from the lease or property during the month; and

(B) the applicable tax rate for gas provided under AS 43.55.011(i), multiplied by the gross value at the point of production of the gas taxable under AS 43.55.011(i) and produced from the lease or property during the month;

(4) any amount of tax levied by AS 43.55.011(e) or (i), net of any credits applied as allowed by law, that exceeds the total of the amounts due as installment payments of estimated tax is due on March 31 of the year following the calendar year of production.

*** Sec. 15.** AS 43.55.020(d) is amended to read:

(d) In making settlement with the royalty owner for oil and gas that is taxable under AS 43.55.011, the producer may deduct the amount of the tax paid on taxable royalty oil and gas, or may deduct taxable royalty oil or gas equivalent in value at the time the tax becomes due to the amount of the tax paid. If the total deductions of installment payments of estimated tax for a calendar year exceed the actual tax for that calendar year, the producer shall, before April 1 of the following year, refund the excess to the royalty owner. Unless otherwise agreed between the producer and the royalty owner, the amount of the tax paid under AS 43.55.011(e) - (g) **and (p)** on taxable royalty oil and gas for a calendar year, other than oil and gas the ownership or right to which constitutes a landowner's royalty interest, is considered to be the gross value at the point of production of the taxable royalty oil and gas produced during the calendar year multiplied by a figure that is a quotient, in which

(1) the numerator is the producer's total tax liability under AS 43.55.011(e) - (g) **and (p)** for the calendar year of production; and

(2) the denominator is the total gross value at the point of production of the oil and gas taxable under AS 43.55.011(e) - (g) **and (p)** produced by the producer from all leases and properties in the state during the calendar year.

*** Sec. 16.** AS 43.55.020(d), as amended by sec. 15 of this Act, is amended to read:

(d) In making settlement with the royalty owner for oil and gas that is taxable

under AS 43.55.011, the producer may deduct the amount of the tax paid on taxable royalty oil and gas, or may deduct taxable royalty oil or gas equivalent in value at the time the tax becomes due to the amount of the tax paid. If the total deductions of installment payments of estimated tax for a calendar year exceed the actual tax for that calendar year, the producer shall, before April 1 of the following year, refund the excess to the royalty owner. Unless otherwise agreed between the producer and the royalty owner, the amount of the tax paid under AS 43.55.011(e) - (g) [AND (p)] on taxable royalty oil and gas for a calendar year, other than oil and gas the ownership or right to which constitutes a landowner's royalty interest, is considered to be the gross value at the point of production of the taxable royalty oil and gas produced during the calendar year multiplied by a figure that is a quotient, in which

(1) the numerator is the producer's total tax liability under AS 43.55.011(e) - (g) [AND (p)] for the calendar year of production; and

(2) the denominator is the total gross value at the point of production of the oil and gas taxable under AS 43.55.011(e) - (g) [AND (p)] produced by the producer from all leases and properties in the state during the calendar year.

*** Sec. 17.** AS 43.55.020(d), as amended by sec. 16 of this Act, is amended to read:

(d) In making settlement with the royalty owner for oil and gas that is taxable under AS 43.55.011, the producer may deduct the amount of the tax paid on taxable royalty oil and gas, or may deduct taxable royalty oil or gas equivalent in value at the time the tax becomes due to the amount of the tax paid. If the total deductions of installment payments of estimated tax for a calendar year exceed the actual tax for that calendar year, the producer shall, before April 1 of the following year, refund the excess to the royalty owner. Unless otherwise agreed between the producer and the royalty owner, the amount of the tax paid under AS 43.55.011(e) - (g) **and (q)** on taxable royalty oil and gas for a calendar year, other than oil and gas the ownership or right to which constitutes a landowner's royalty interest, is considered to be the gross value at the point of production of the taxable royalty oil and gas produced during the calendar year multiplied by a figure that is a quotient, in which

(1) the numerator is the producer's total tax liability under AS 43.55.011(e) - (g) **and (q)** for the calendar year of production; and

(2) the denominator is the total gross value at the point of production of the oil and gas taxable under AS 43.55.011(e) - (g) **and (q)** produced by the producer from all leases and properties in the state during the calendar year.

*** Sec. 18.** AS 43.55.160(a) is amended to read:

(a) Except as provided in (b) of this section, for the purposes of

(1) AS 43.55.011(e), the annual production tax value of the taxable

(A) oil [AND GAS] produced during a calendar year from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the oil [AND GAS] taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil [AND GAS] produced by the producer from those leases or properties, as adjusted under AS 43.55.170; [THIS SUBPARAGRAPH DOES NOT APPLY TO GAS SUBJECT TO AS 43.55.011(o);]

(B) oil [AND GAS] produced during a calendar year from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the oil [AND GAS] taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil [AND GAS] produced by the producer from those leases or properties, as adjusted under AS 43.55.170; [THIS SUBPARAGRAPH DOES NOT APPLY TO GAS SUBJECT TO AS 43.55.011(o);]

(C) oil produced during a calendar year from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the oil taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(D) gas produced during a calendar year from a lease or

property in the Cook Inlet sedimentary basin is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(E) gas produced during a calendar year from a lease or property outside the Cook Inlet sedimentary basin and used in the state is the gross value at the point of production of that gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to that gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(F) gas produced during a calendar year from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas used in the state;

(G) gas produced during a calendar year from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas used in the state;

(2) AS 43.55.011(g) **and (p)**, the monthly production tax value of the taxable

(A) oil [AND GAS] produced during a month from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the oil [AND GAS] taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil [AND GAS] produced by the producer from those leases or properties, as adjusted under AS 43.55.170; [THIS SUBPARAGRAPH DOES NOT APPLY TO GAS SUBJECT TO AS 43.55.011(o);]

(B) oil [AND GAS] produced during a month from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the oil [AND GAS] taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil [AND GAS] produced by the producer from those leases or properties, as adjusted under AS 43.55.170; [THIS SUBPARAGRAPH DOES NOT APPLY TO GAS SUBJECT TO AS 43.55.011(o);]

(C) oil produced during a month from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the oil taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(D) gas produced during a month from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(E) gas produced during a month from a lease or property

outside the Cook Inlet sedimentary basin and used in the state is the gross value at the point of production of that gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to that gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(F) gas produced during a month from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas used in the state;

(G) gas produced during a month from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas used in the state.

* **Sec. 19.** AS 43.55.160(a), as amended by sec. 18 of this Act, is amended to read:

(a) Except as provided in (b) of this section, for the purposes of

(1) AS 43.55.011(e), the annual production tax value of the taxable

(A) oil **and gas** produced during a calendar year from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the oil **and gas** taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year

applicable to the oil **and gas** produced by the producer from those leases or properties, as adjusted under AS 43.55.170; **this subparagraph does not apply to gas subject to AS 43.55.011(o);**

(B) oil **and gas** produced during a calendar year from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the oil **and gas** taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil **and gas** produced by the producer from those leases or properties, as adjusted under AS 43.55.170; **this subparagraph does not apply to gas subject to AS 43.55.011(o);**

(C) oil produced during a calendar year from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the oil taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(D) gas produced during a calendar year from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(E) gas produced during a calendar year from a lease or property outside the Cook Inlet sedimentary basin and used in the state is the gross value at the point of production of that gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to that gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

[(F) GAS PRODUCED DURING A CALENDAR YEAR FROM LEASES OR PROPERTIES IN THE STATE THAT INCLUDE LAND NORTH OF 68 DEGREES NORTH LATITUDE IS THE GROSS VALUE AT THE POINT OF PRODUCTION OF THE GAS TAXABLE UNDER AS 43.55.011(e) AND PRODUCED BY THE PRODUCER FROM THOSE LEASES OR PROPERTIES, LESS THE PRODUCER'S LEASE EXPENDITURES UNDER AS 43.55.165 FOR THE CALENDAR YEAR APPLICABLE TO THE GAS PRODUCED BY THE PRODUCER FROM THOSE LEASES OR PROPERTIES, AS ADJUSTED UNDER AS 43.55.170; THIS SUBPARAGRAPH DOES NOT APPLY TO GAS USED IN THE STATE;

(G) GAS PRODUCED DURING A CALENDAR YEAR FROM LEASES OR PROPERTIES IN THE STATE OUTSIDE THE COOK INLET SEDIMENTARY BASIN, NO PART OF WHICH IS NORTH OF 68 DEGREES NORTH LATITUDE, IS THE GROSS VALUE AT THE POINT OF PRODUCTION OF THE GAS TAXABLE UNDER AS 43.55.011(e) AND PRODUCED BY THE PRODUCER FROM THOSE LEASES OR PROPERTIES, LESS THE PRODUCER'S LEASE EXPENDITURES UNDER AS 43.55.165 FOR THE CALENDAR YEAR APPLICABLE TO THE GAS PRODUCED BY THE PRODUCER FROM THOSE LEASES OR PROPERTIES, AS ADJUSTED UNDER AS 43.55.170; THIS SUBPARAGRAPH DOES NOT APPLY TO GAS USED IN THE STATE;]

(2) AS 43.55.011(g) [AND (p)], the monthly production tax value of the taxable

(A) oil **and gas** produced during a month from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the oil **and gas** taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil **and gas** produced by the producer from those leases or properties, as adjusted under AS 43.55.170; **this subparagraph**

does not apply to gas subject to AS 43.55.011(o);

(B) oil **and gas** produced during a month from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the oil **and gas** taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil **and gas** produced by the producer from those leases or properties, as adjusted under AS 43.55.170; **this subparagraph does not apply to gas subject to AS 43.55.011(o);**

(C) oil produced during a month from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the oil taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(D) gas produced during a month from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(E) gas produced during a month from a lease or property outside the Cook Inlet sedimentary basin and used in the state is the gross value at the point of production of that gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to that gas produced by the producer from that lease or property, as adjusted under AS 43.55.170 [;

(F) GAS PRODUCED DURING A MONTH FROM LEASES OR PROPERTIES IN THE STATE THAT INCLUDE LAND NORTH OF 68

DEGREES NORTH LATITUDE IS THE GROSS VALUE AT THE POINT OF PRODUCTION OF THE GAS TAXABLE UNDER AS 43.55.011(e) AND PRODUCED BY THE PRODUCER FROM THOSE LEASES OR PROPERTIES, LESS 1/12 OF THE PRODUCER'S LEASE EXPENDITURES UNDER AS 43.55.165 FOR THE CALENDAR YEAR APPLICABLE TO THE GAS PRODUCED BY THE PRODUCER FROM THOSE LEASES OR PROPERTIES, AS ADJUSTED UNDER AS 43.55.170; THIS SUBPARAGRAPH DOES NOT APPLY TO GAS USED IN THE STATE;

(G) GAS PRODUCED DURING A MONTH FROM LEASES OR PROPERTIES IN THE STATE OUTSIDE THE COOK INLET SEDIMENTARY BASIN, NO PART OF WHICH IS NORTH OF 68 DEGREES NORTH LATITUDE, IS THE GROSS VALUE AT THE POINT OF PRODUCTION OF THE GAS TAXABLE UNDER AS 43.55.011(e) AND PRODUCED BY THE PRODUCER FROM THOSE LEASES OR PROPERTIES, LESS 1/12 OF THE PRODUCER'S LEASE EXPENDITURES UNDER AS 43.55.165 FOR THE CALENDAR YEAR APPLICABLE TO THE GAS PRODUCED BY THE PRODUCER FROM THOSE LEASES OR PROPERTIES, AS ADJUSTED UNDER AS 43.55.170; THIS SUBPARAGRAPH DOES NOT APPLY TO GAS USED IN THE STATE].

*** Sec. 20.** AS 43.55.160(a), as amended by sec. 19 of this Act, is amended to read:

(a) Except as provided in (b) of this section, for the purposes of

(1) AS 43.55.011(e), the annual production tax value of the taxable

(A) oil [AND GAS] produced during a calendar year from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the oil [AND GAS] taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil [AND GAS] produced by the producer from those leases or properties, as adjusted under AS 43.55.170; [THIS

SUBPARAGRAPH DOES NOT APPLY TO GAS SUBJECT TO AS 43.55.011(o);]

(B) oil [AND GAS] produced during a calendar year from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the oil [AND GAS] taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil [AND GAS] produced by the producer from those leases or properties, as adjusted under AS 43.55.170; [THIS SUBPARAGRAPH DOES NOT APPLY TO GAS SUBJECT TO AS 43.55.011(o);]

(C) oil produced during a calendar year from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the oil taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(D) gas produced during a calendar year from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(E) gas produced during a calendar year from a lease or property outside the Cook Inlet sedimentary basin and used in the state is the gross value at the point of production of that gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to that gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(F) gas produced during a calendar year from leases or

properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas used in the state;

(G) gas produced during a calendar year from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas used in the state;

(2) AS 43.55.011(g) **and (q)**, the monthly production tax value of the taxable

(A) oil [AND GAS] produced during a month from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the oil [AND GAS] taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil [AND GAS] produced by the producer from those leases or properties, as adjusted under AS 43.55.170; [THIS SUBPARAGRAPH DOES NOT APPLY TO GAS SUBJECT TO AS 43.55.011(o);]

(B) oil [AND GAS] produced during a month from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the oil [AND GAS] taxable under AS 43.55.011(e) and produced

by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil [AND GAS] produced by the producer from those leases or properties, as adjusted under AS 43.55.170; [THIS SUBPARAGRAPH DOES NOT APPLY TO GAS SUBJECT TO AS 43.55.011(o);]

(C) oil produced during a month from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the oil taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(D) gas produced during a month from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(E) gas produced during a month from a lease or property outside the Cook Inlet sedimentary basin and used in the state is the gross value at the point of production of that gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to that gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(F) gas produced during a month from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170;

this subparagraph does not apply to gas used in the state;

(G) gas produced during a month from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas used in the state.

*** Sec. 21.** AS 43.55.165(h) is amended to read:

(h) The department shall adopt regulations that provide for reasonable methods of allocating costs between oil and gas, between gas subject to AS 43.55.011(o) and other gas, and between leases or properties in those circumstances where an allocation of costs is required to determine lease expenditures that are costs of exploring for, developing, or producing oil deposits or costs of exploring for, developing, or producing gas deposits, or that are costs of exploring for, developing, or producing oil or gas deposits located within different leases or properties. **When determining a reasonable method of allocating lease expenditures between the production of oil and the production of gas, the department shall consider allocating lease expenditures in proportion to the BTU equivalent barrels of oil produced and gas produced from each lease or property.**

*** Sec. 22.** AS 43.55.170 is amended by adding a new subsection to read:

(d) The department shall adopt regulations that provide for reasonable methods of allocating the adjustments to a producer's lease expenditures in (a) of this section and the payments and credits described in (b) of this section between oil and gas, between gas subject to AS 43.55.011(o) and other gas, and between leases or properties in those circumstances where an allocation of costs is required to determine lease expenditures that are costs of exploring for, developing, or producing oil deposits, or costs of exploring for, developing, or producing gas deposits, or that are costs of exploring for, developing, or producing oil or gas deposits located within

different leases or properties. When determining a reasonable method of allocating the adjustments to a producer's lease expenditures between the production of oil and the production of gas, the department shall consider allocating the adjustments in proportion to the lease expenditures allocated to the production of oil and the production of gas under regulations adopted by the department under AS 43.55.165(h).

*** Sec. 23.** AS 43.55.011(p) is repealed.

*** Sec. 24.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION; REGULATIONS; PAYMENT OF TAX; FILING OF REPORTS. If secs. 1, 4, 7, 10, 12, 15, and 18 of this Act take effect, the Department of Revenue shall adopt regulations providing for the payment of tax and the filing of reports required for the period in which secs. 1, 4, 7, 10, 12, 15, and 18 of this Act are in effect.

*** Sec. 25.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CONDITIONAL EFFECT OF SECS. 1, 2, 4, 5, 7, 8, 10, 12, 13, 15, 16, 18, 19, AND 23 OF THIS ACT; NOTICE. (a) Sections 1, 2, 4, 5, 7, 8, 10, 12, 13, 15, 16, 18, 19, and 23 of this Act take effect only if secs. 21 and 22 of this Act take effect before April 29, 2010.

(b) The commissioner of revenue shall notify the revisor of statutes of the date of the start of the first binding open season for the project licensed under AS 43.90 (Alaska Gasline Inducement Act).

*** Sec. 26.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CONDITIONAL EFFECT OF SECS. 3, 6, 9, 11, 14, 17, AND 20 OF THIS ACT; NOTICE. (a) Sections 3, 6, 9, 11, 14, 17, and 20 of this Act take effect only if more than 1,500,000,000 cubic feet of natural gas a day that is produced in the state is tendered for shipment through a natural gas pipeline project in the state to a market in Canada or the 48 contiguous states, or to a gas liquefaction facility in the state for shipment in a liquefied state by marine transportation to a market outside of the state.

(b) The commissioner of revenue shall notify the revisor of statutes of the date that natural gas was first tendered for shipment under the circumstances described in (a) of this

section.

*** Sec. 27.** If secs. 1, 4, 7, 10, 12, 15, and 18 of this Act take effect, they take effect April 29, 2010.

*** Sec. 28.** If secs. 2, 5, 8, 13, 16, 19, and 23 of this Act take effect, they take effect on the first day immediately following the date on which the open season starts for the project licensed under AS 43.90.

*** Sec. 29.** If secs. 3, 6, 9, 11, 14, 17, and 20 take effect, they take effect on the first day of the month immediately following the date on which the condition in sec. 26(a) of this Act is met.

*** Sec. 30.** Except as provided in secs. 27 - 29 of this Act, this Act takes effect immediately under AS 01.10.070(c).

Explanation of Amendments to CSSB 305 v. W.A and M

in House Resources

Department of Revenue

April 13, 2010

Current Law:

SALES PROCEEDS

-Transportation costs

= Gross Value of Oil and Gas at Point of Production (GV at POP) .150

Calculated For Each Segment:

A. NS oil and gas
B. Mid Earth oil and gas
C. CI oil
D. CI gas
E. Gas used in state

Annual Production Tax Value (PTV) .160(a)(1)

GV_A at POP – LE_A= PTV_A
GV_B at POP – LE_B= PTV_B
GV_C at POP – LE_C= PTV_C
GV_D at POP – LE_D= PTV_D
GV_E at POP – LE_E= PTV_E

*Each PTV cannot be < 0
*Excess LEs in each segment get carried forward as NOL

Monthly Production Tax Value (PTV) .160(a)(2)

GV_A at POP – LE_A= PTV_A
GV_B at POP – LE_B= PTV_B
GV_C at POP – LE_C= PTV_C
GV_D at POP – LE_D= PTV_D
GV_E at POP – LE_E= PTV_E

* Each PTV cannot be < 0

Current Law:

Calculating the Progressivity Rate .011(g)

Monthly PTV .160(a)(2)

GV_A at POP – LE_A = PTV_A
GV_B at POP – LE_B = PTV_B
GV_C at POP – LE_C = PTV_C
GV_D at POP – LE_D = PTV_D
GV_E at POP – LE_E = PTV_E

Add together ➕ Total BOEs of all Oil and Gas in Segments A-E (per regulation) 〓 Average Monthly Production Tax Value

If Average Monthly Production Tax Value is > $30 then 0.4% progressivity tax rate for each $1 over $30

CSSB305 v. W.A
CSSB305 v. M

Amendment to (g) and (p): Weighted Average PTV Calculation

Segments

A. NS oil
B. Mid Earth oil
C. CI oil
D. CI gas
E. Gas used in state
F. NS Gas
G. Mid Earth gas

Annual PTV .160(a)(1)*

GV_A at POP – LE_A= PTV_A
GV_B at POP – LE_B= PTV_B
GV_C at POP – LE_C= PTV_C
GV_D at POP – LE_D= PTV_D
GV_E at POP – LE_E= PTV_E
GV_F at POP – LE_F= PTV_F
GV_G at POP – LE_G= PTV_G

*Each PTV cannot be < 0
* Excess LEs for each segment get carried forward as NOL

Monthly PTV .160(a)(2)*

GV_A at POP – LE_A= PTV_A
GV_B at POP – LE_B= PTV_B
GV_C at POP – LE_C= PTV_C
GV_D at POP – LE_D= PTV_D
GV_E at POP – LE_E= PTV_E
GV_F at POP – LE_F= PTV_F
GV_G at POP – LE_G= PTV_G

* Each PTV cannot be < 0

CSSB305 v. W.A
CSSB305 v. M

Amendment to (g) and (p) to ensure weighted average calculation

Calculating the Progressivity Rate .011(g)* and .011(p)*

Monthly PTV .160(a)(2)*

GV_A at POP – LE_A= PTV_A
GV_B at POP – LE_B= PTV_B
GV_C at POP – LE_C= PTV_C
GV_D at POP – LE_D= PTV_D
GV_E at POP – LE_E= PTV_E

Add together + Total BOEs of all Oil and Gas in Segments A-E = Average Monthly Production Tax Value .011(g)*

Monthly PTV .160(a)(2)*

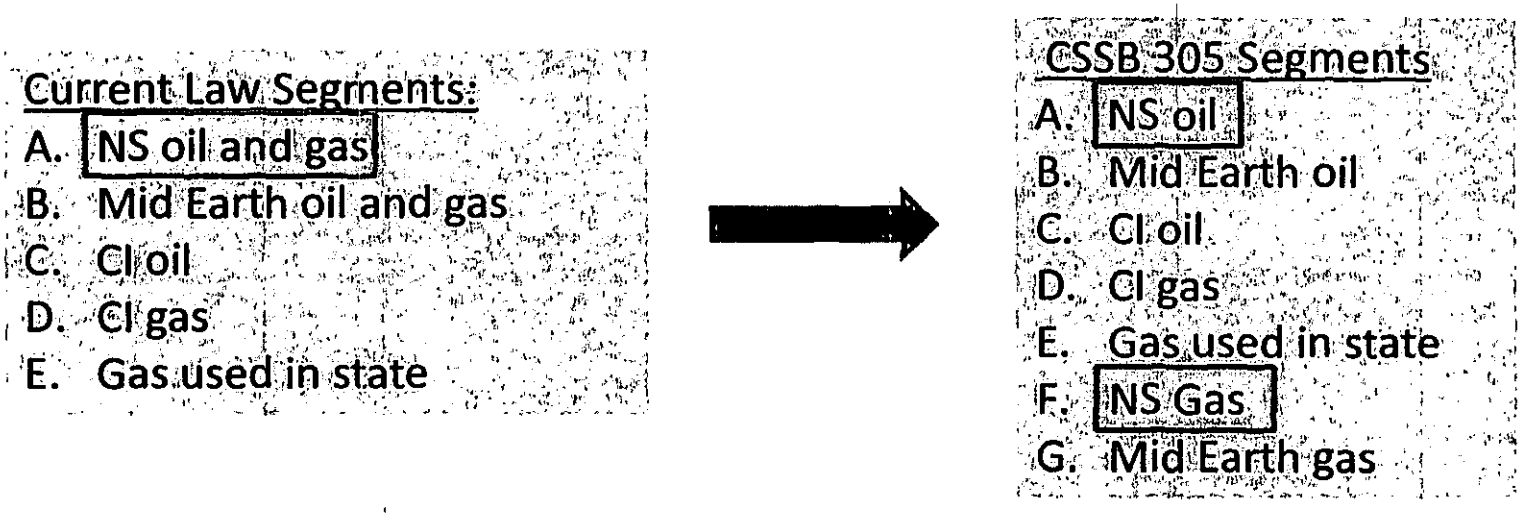
GV_F at POP – LE_F= PTV_F
GV_G at POP – LE_G= PTV_G

Add together + Total BOEs of all Oil and Gas in Segments F-G = Average Monthly Production Tax Value .011(p)*

If Average Monthly Production Tax Value is > $30 then 0.4% progressivity tax rate for each $1 over $30 under both (g) and (p)

Why Version M?

Lease Expenditures from NS properties that are not yet producing oil or gas, have very limited opportunity to offset the gross value of other existing NS production, and also can't be used to lower progressivity rate.

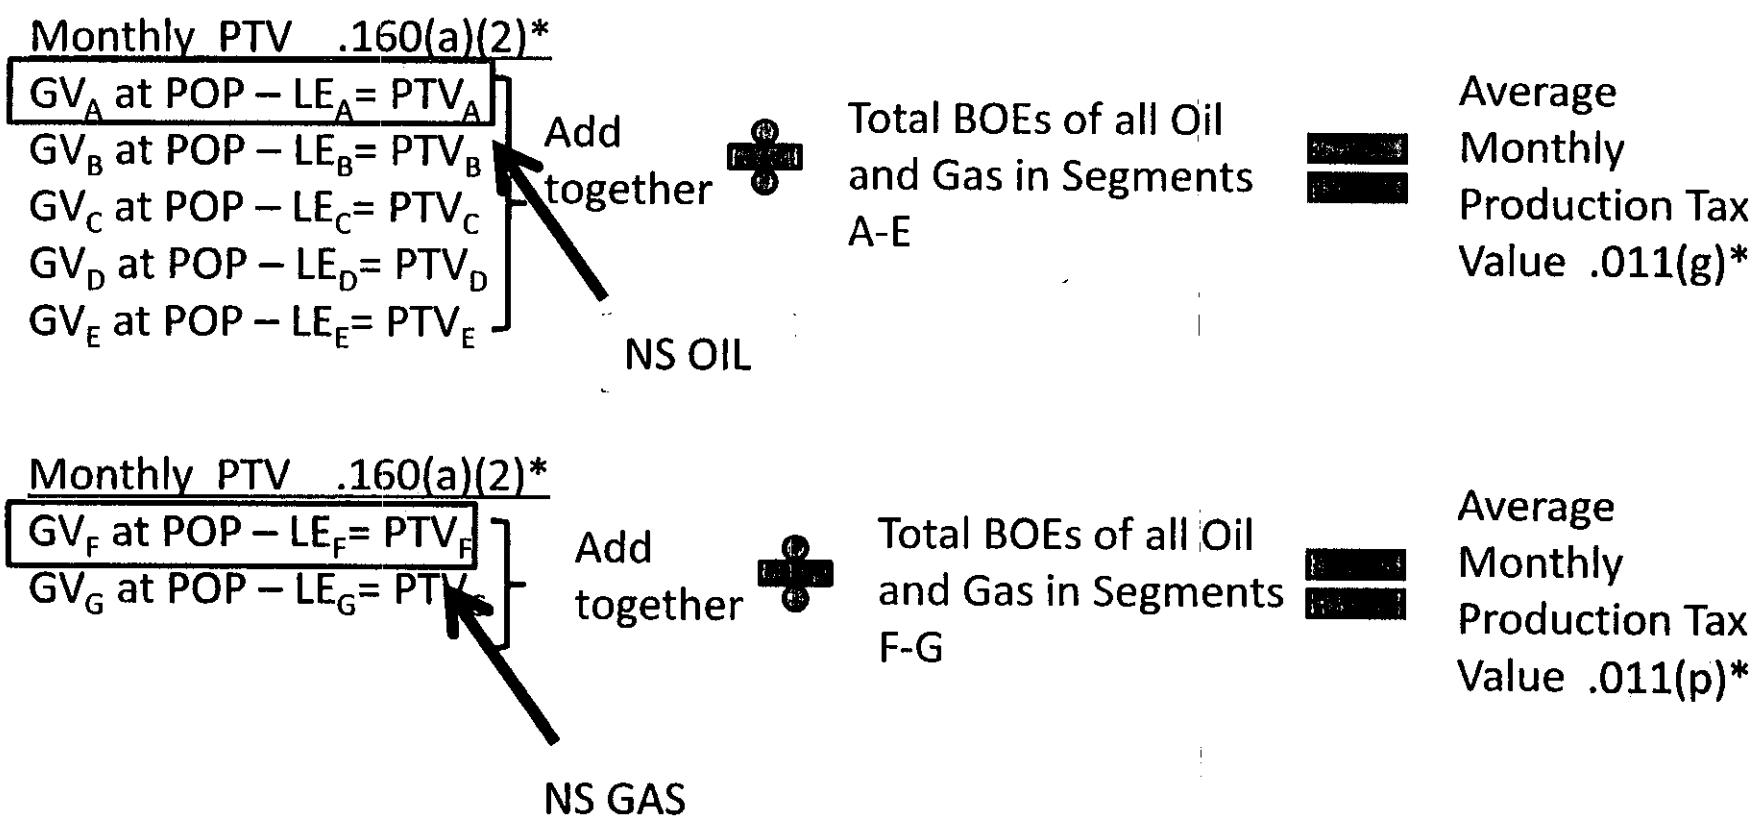


Remember: Lease Expenditures stay inside their Segment. If excess, they become NOLs and .

Version M protects the greater options to offset lease expenditures by moving back and forth between CSSB 305 segments and Current Law segments until big gas fields are developed.

Why Version M?

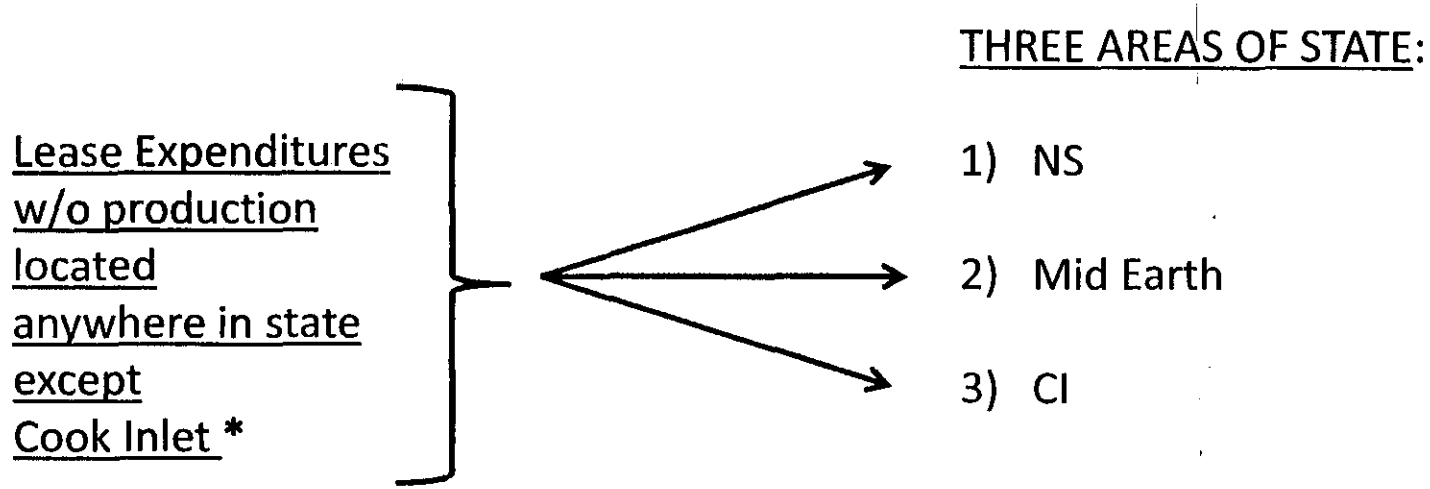
Lease Expenditures from NS properties that are not yet producing oil or gas, also can't be used to lower progressivity rate.



SOLUTION: Option 1

Amendment to .165(h) - Gross Value at POP Option

How to allocate Lease Expenditures to Other Production when no sustained production yet.



RULE: LEs are allocated to oil and gas produced among three areas of state in proportion to the Gross Value of oil and gas at POP in each Area.

* Lease expenditures for CI allocated on basis of regulations.

SOLUTION: Option 2

Amendment to .165(h) - BOE Option

How to allocate Lease Expenditures to Other Production when no sustained production yet

Lease Expenditures w/o production located anywhere in state except Cook Inlet*

THREE AREAS OF STATE:

1) NS
2) Mid Earth
3) CI

RULE: LEs are allocated to oil and gas produced among three areas of state in proportion to the volume of oil and gas in BOEs in each Area.

* Lease expenditures for CI allocated on basis of regulations.

Response to Request from Rep. Tuck

COMPARISON OF REVENUE FROM PPT (DE-COUPLED) VERSUS STATUS QUO

April 13, 2010

Alaska Department of Revenue

Description of the Analysis

- Compared the Overall State tax revenue generated by the status quo combined tax (ACES) versus the PPT tax system as if it had been de-coupled.
- Primary difference between the two:
  - PPT progressivity calculation kicks off at $40 profit per barrel, and has a slope of .25% per dollar; compared to status quo of a $30 kick off, and .4% slope;
  - PPT base tax rate was 22.5% compared to 25% status quo.

Example Cases

State Production Tax Revenue

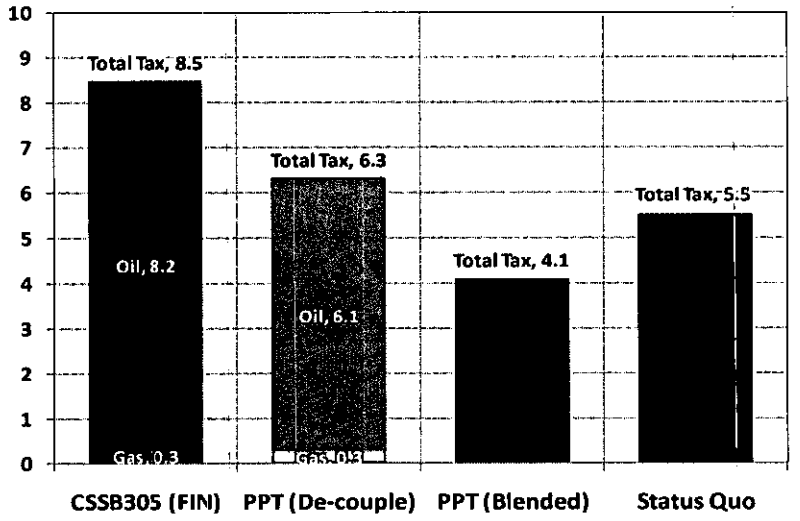
Oil: 500 Mbbl/d and Gas: 4.5 Bcf/d
Capex: $2.2Bn and Opex: $2.2Bn

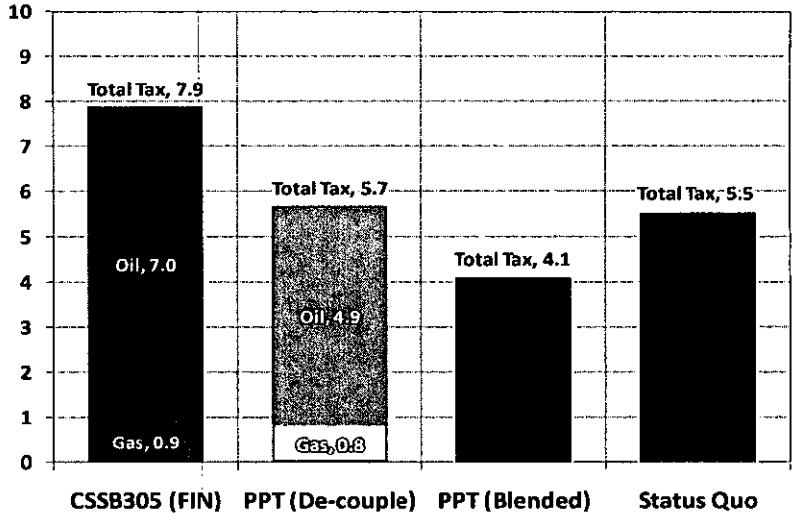
3

BOE

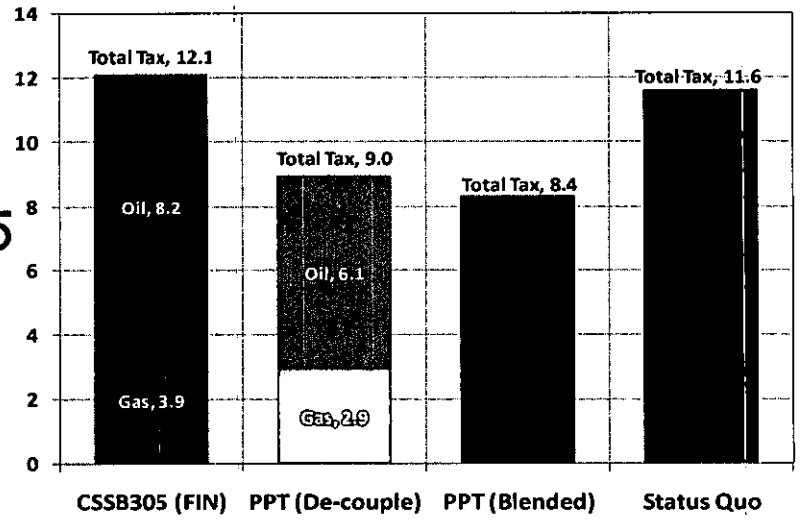
PoP

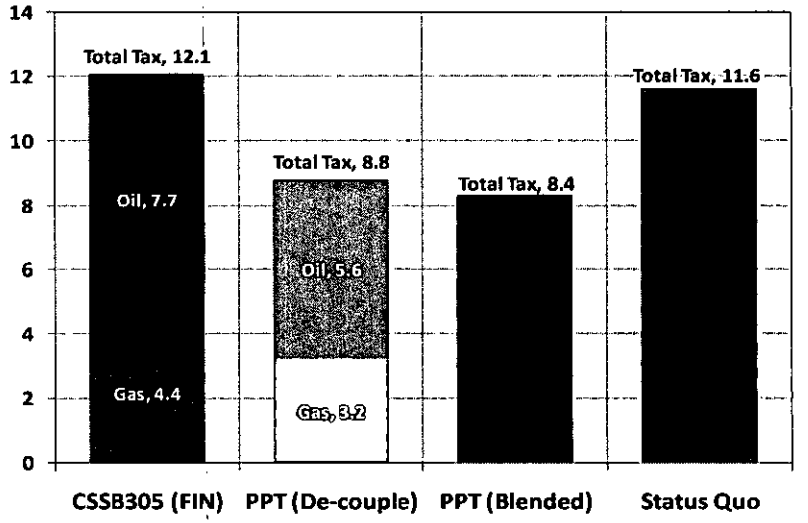
$120/$8 (15:1)





$120/$15 (8:1)





Total Tax Take Comparison

- Model Assumptions:
  - One year snapshot
  - 4.5 Bcf/d and either 500 Mbbl/d or 200 Mbbl/d
  - Total Opex = $2.2 Bn and Total Capex = $2.2 Bn

- Ran multiple cases varying oil price from 40 to 200 $/bbl and gas price parity from 6 to 26
- Ran the above cases for each of BOE, PoP and Fixed cost allocation methodology

Total Tax PPT ("de-coupled") less Status Quo

Cost Allocation: BOE Basis

5

Oil: 500 Mbbl/d and Gas: 4.5 Bcf/d
Capex: $2.2Bn and Opex: $2.2Bn

Gas Price Parity ↓

Oil Price ($/bbl) →

PPT > STATUS QUO

PPT = STATUS QUO

PPT < STATUS QUO

4/13/2010

Observations

- In many of the instances, the status quo combined tax would result in more overall tax revenue than PPT decoupled.
- Provides insight into the perception of the "appropriate" state share of oil and gas revenues once a major gas sale occurs.
- Results are an interesting reflection on whether the state is "losing" revenue under a combined tax system.

CSSB305 (FIN) COST ALLOCATION SENSITIVITY

April 13, 2010

Alaska Department of Revenue

Methodology

- Model Assumptions:
  - One year snapshot
  - 4.5 Bcf/d and 500 Mbbl/d
    - (additional sensitivity of 4.5 Bcf/d and 200 Mbbl/d)
  - Total Opex = $2.2 Bn and Total Capex = $2.2 Bn

- Ran multiple cases varying oil price from 40 to 200 $/bbl and gas price parity from 6 to 26
- Ran the above cases for each of BOE, PoP and calculated the difference

Total Tax CSSB305 (FIN)

PoP less BOE Cost Allocation

PoP > BOE PoP = BOE PoP < BOE

Explanation of Amendment WA.2 to CSSB 305(FIN) (title am)

This amendment repeals the 5% net profit tax cap on gas sold in-state for thirty days following the immediate effective date of the act. After thirty days the 5% in-state tax cap is reenacted.

The reason for the temporary repeal of the in-state cap is that if a producer bids North Slope gas at the initial season and the tax regime is challenged in federal court by buyers once gas flows because their price is higher based on the differential taxation given to Alaska use gas, I believe this would be a violation of the Commerce Clause of the US Constitution. I believe that they would propose the remedy of lowering the export tax rate to the same as the in-state use rate. I think there is a good probability that the federal court would order that proposed remedy instead of allowing the State to repeal the in-state rate at that time as cases are decided on the facts at time of suit not later remedies.

This could mean that the state revenue from the gasline would be almost nothing and would be fixed for the first 10 years of gas flow by the May 1 2010 'contract term' in AGIA if for the gas bid at the start of the first binding open season. Since almost no gas is being sold off the North Slope now, repeal of this provision would not increase anyone's current taxes on gas but would eliminate a huge potential future revenue decrease which is the intent of the bill.

BY Seaton

TO: CSSB305 v. M

Page 31, delete lines 19-22 and replace with:

"properties. **The department shall allocate lease expenditures between the production of oil and the production of gas in proportion to the gross values at the point of production of the oil and gas produced from each lease or property."**

5536

SB 305 CONCEPTUAL AMENDMENT

We believe the following language addresses the concerns raised by the producers regarding the ability to recognize costs as they are incurred. This can be added to AS 43.55.165(h) in Section 8 of the Current CS (Version W.A):

Costs incurred to explore for, develop or produce oil or gas either
(1) on a lease or property that include land north of 68 degrees North latitude and which did not produce commercial quantities of oil or gas in the calendar year in which the costs were occurred; or
(2) outside of a lease or property, but that include land north of 68 degrees North latitude , will be allocated between
(A) each lease or property producing gas subject to AS 43.55.011(o) that include land north of 68 degrees North latitude and
(B) all other producing leases or properties that include land north of 68 degrees North latitude.

Costs incurred to explore for, develop or produce oil or gas either
(1) on a lease or property outside the Cook Inlet Sedimentary Basin, no part of which is north of 68 degrees North latitude and which did not produce commercial quantities of oil or gas in the calendar year in which the costs were occurred; or
(2) outside of a lease or property, but outside the Cook Inlet Sedimentary Basin, no part of which is north of 68 degrees North latitude, will be allocated between
(A) each lease or property producing gas subject to AS 43.55.011(o) outside the Cook Inlet Sedimentary Basin, no part of which is north of 68 degrees North latitude and
(B) all other producing leases or properties that outside the Cook Inlet Sedimentary Basin, no part of which is north of 68 degrees North latitude.

Sponsor Statement

Senate Joint Resolution 3

It is the intent of SJR 3 to show appreciation for the change in National Park policy that now allows park users to carry the firearms they need for personal protection in National Parks.

Alaskans, who have in their state over 75% of the National Park system, understand how important it is to have personal protection when in the wilderness. This bill affirms that progress that has been made in allowing the carrying of firearms under the previous administration and encourages the new Obama administration to continue with the policy and add improvements by allowing open carry in addition as concealed carry.

Whether it is for bear protection, obtaining food in a survival situation, or signaling for assistance when needed, firearms have been on the hips and in the arms of Alaskans since the frontier was first explored. Now the unbroken wilderness and inherent dangers have been exacerbated with the conditioning of animals to lose their natural tendency of avoiding humans. With the Parks Service's steady line of visitors who have no real experience in the true wilderness, the need for protection is more prudent now than ever before.

SUPPORTERS CITE SAFETY, CRITICS SEE POLITICAL MOTIVES

Fight Rages Over Guns in Parks

By Dan Testa, 3-05-08

At the end of April, Interior Secretary Dirk Kempthorne will suggest new rules for carrying loaded guns in national parks that will likely relax the restrictions to bring them more in-line with state laws. In Montana, where gun restrictions are relatively few, carrying loaded weapons could be permitted in Glacier and Yellowstone national parks.

Both opponents and supporters of relaxing the ban agree on one thing: Permitting loaded weapons in national parks where they are currently restricted will alter the role these lands play in our national identity. Whether the proposed change is for safety reasons or a political move in an election year, depends on where you stand and whom you ask.

The Argument

At its heart, the question of loaded weapons in national parks comes down to differing conceptions of safety. For gun-rights advocates, relaxing the ban would increase the safety of national parks, allowing visitors to better defend themselves from aggressive people or animals. Guns are currently allowed in Glacier as long as they are unloaded and stored.

Gary Marbut, president of the Montana Shooting Sports Association, believes gun-free zones are inherently dangerous, and cites recent school shootings at Virginia Tech and Northern Illinois University as examples of places where law-abiding citizens could have defended themselves were they allowed to do so.

"Gun-free zones are broken social institutions," Marbut said, "and they need to be fixed anywhere they occur, including in national parks."

Opponents of relaxing the ban disagree that national parks, with respect to gun restrictions, are broken social institutions. And if it isn't broken, they say, don't fix it. Last week the Coalition of National Park Service Retirees protested any plans to reconsider gun regulations.

Pete Hart has worked as a ranger and superintendent in 17 national parks over 38 years, including stints at Glacier, and is now a member of the National Parks Conservation Association. He also carried a weapon in parks for 23 of those years, and echoes many retired park service employees who say national parks are safe, and introducing more weapons into the mix would create problems where none exist.

"The fact that people don't carry firearms in the backcountry is a good thing," Hart said. "I believe in the Second Amendment, but I believe the current regulations are working."

Supporters of changing regulations point out that loaded firearms are restricted on federal parkland, but not U.S. Forest Service or Bureau of Land Management property, representing selective enforcement of gun regulations. Opponents counter that people don't travel from across the country and around the world to visit BLM land like they do for Glacier Park, so the rules should be different considering the diversity of urban and international visitors. Part of national parks' appeal, Hart said, derives from "a certain feeling of tranquility and really firearms don't need to be a part of it."

Poaching could increase if visitors can carry loaded weapons. Whereas park rangers currently have probable cause to investigate a possible poacher if that person is carrying a loaded weapon in the park, that reason no longer holds up if the guns are allowed.

"There's nothing in this ruling that makes poaching legal," counters Andrew Arulanandam, director of public affairs for the National Rifle Association. "That's another baseless argument."

Crime in National Parks: By the Numbers

Gun-rights advocates point to the recent murder of a 24-year-old hiker in the mountains of north Georgia as an example of a victim in the backcountry who might have defended herself with a firearm. But despite such a high-profile example, the National Park Service says the crime statistics across its 390 park units are very low.

Out of 272 million visits, there were 116,588 reported offenses in national parks in 2006. Only 384 of those were violent

crimes – and that includes statistics reported by park police at urban parks like the Lincoln Memorial in Washington, D.C., and the Statue of Liberty in New York. That makes the probability of becoming a victim of a violent crime on national parkland one in 708,333. Out of roughly 1.3 billion visitors to national parks since 2002, two have been killed by animals.

In 2006 the national park system had 11 killings, 35 rapes or attempted rapes, 16 kidnappings, 261 aggravated assaults and 61 robberies. Out of the 11 killings: five were categorized as murders: two people were pushed off cliffs; one was a murder-suicide; one was a drunk driver crash; and two were bodies or remains found where the victim was killed elsewhere.

In Glacier Park, however, crime is virtually nonexistent. There have been 20 cases of poaching since 1997, and none in 2007. In that 10-year span there were 91 general weapons violations, 15 of which occurred last year. Glacier Park had two reports of rape last year, and no kidnappings, robberies or homicides. Glacier also had three reported assaults last year – one with a firearm and two bodily assault cases.

Parks, Guns and Politics

Kempthorne took up the issue of guns in national parks after receiving complaints, organized by Idaho Republican Sen. Mike Crapo, about current regulations from 50 U.S. senators: 41 Republicans and nine Democrats. Montana's Sens. Max Baucus and Jon Tester were among those nine. A prerequisite for holding elected office in most of the Rocky Mountain West, particularly if you're a Democrat, is an immaculate record of pro-gun rights positions, and it is an election year.

All of which has opponents of relaxing gun regulations charging that this is simply a wedge issue, designed by the NRA to get lawmakers on their side in the run-up to a momentous election.

"The NRA inserted a very contentious issue into this election year," said Bryan Faehner, legislative representative for the NPCA. "It's unfortunate that the NRA chose the national parks to flex their muscle."

"It didn't just happen because some senators spoke out," Faehner added. "It was a full-fledged campaign where the NRA covered all the pressure points in Washington, D.C., to make this happen."

But Marbut and Arulanandam say their groups have been pushing for a re-examination of gun regulations in parks for five years now, through two previous elections, and that the issue has finally risen to the top of the stack. The idea that the NRA is creating hoops for lawmakers to jump through, added Arulanandam, wildly overestimates the power of the gun lobby.

"Contrary to popular belief, the NRA does not control congressional schedules, nor do we make the rules of the land as they pertain to firearms," Arulanandam said. "That is just empty rhetoric from those who oppose this measure."

But both Faehner and Arulanandam think that when the Department of Interior releases its new draft regulations for public comment, they are likely to apply state gun laws to national parks.

"It's too premature to speculate," Arulanandam said. "We're cautiously optimistic." **[End of article]**

Comment By garyt, 3-05-08

If people are allowed to have guns in their possession there will be shootouts reminiscence of the OK corral. The gun-control crowd use the same argument every time and it is yet to happen. Why should we have to give up our constitutional rights to satisfy a few people who have no clue of the real world? Are you aware that the areas with the highest crime rates are those that have the strictest gun control laws? New York, Washington DC and San Francisco are some that come to mind. Everytime that you travel from Kalispell to Browning and you don't take apart your gun do you know are breaking the law? The gun-free zones are just inviting these criminals to make headlines.

Comment By Denny, 3-05-08

What is their argument for not allowing guns in the park? I always assumed it was to prevent poaching. I am an honest do-good citizen that contributes positive influence on my community. I have never in my life committed a crime past j-walking, and have never been involved in a firearms accident or offense. I have and hold a concealed carry permit for a pistol. I ask those who oppose the legalization of firearms in the parks this, "On what grounds do you deny my right to carry?" I desire to protect myself and my family. Bear-spray is not always 100% deterrant. I have utilized the modern techniqu of pistol shooting for around 20 years now and can pretty much guarantee that I could effectively eliminate a threat if it were to occur in a national park. Fear, government bureaucracy should not intrude with my right to self defense and the ability to maintain my own species. I'm sure legalizing guns in the park will not cause a spike in crime there, in fact it will if anything deter it, and with wildlife, I guarantee that the only shots that would ever be fired would be in complete self preseration. Thanks.

Comment By Wendy Weinbaum, 3-06-08

As a Jewess in the US, I want to remind everyone that America wasn't won with a registered gun. Nor are criminals stopped by talk, but rather by FIREARMS. That is why all REAL Americans put our 2nd Amendment FIRST!

Comment By Uncle Lar, 3-06-08

In 2006, criminal activity in our national parks included 11 killings, 35 rapes or attempted rapes, 61 robberies, 16 kidnappings and 261 aggravated assaults.
A tiny number, hardly significant, except to all the real people victimized by these crimes. Tell me again why I should surrender my only true means of self defense for your convenience. You want to catch poachers? Arrest them when they shoot.
And please explain if it's so safe why then do your rangers go armed?

Comment By Addicus Daily, 3-06-08

I carry a gun in the parks any way. I have for years. It is concealed and ready for bear or criminal. If you try to take it from me I may confuse you with a criminal.

Comment By Average American, 3-07-08

So let me get this right! The Second Amendment of the Constitution does not apply in National Parks? I did not know the government could abrogate my constitutional rights to effectively defend myself. I understand that Park Rangers may feel more comfortable if they are the only ones armed in the Parks, but they really need to "man up". People have a right to defend themselves. And what is this crap about "agressive people" don't you really mean "depraved criminals". Parks are often far from the police station and a 911 response. Enforcement authorities cannot be everywhere, and the graveyards of full of people who are evidence of that. Get a clue people- government cannot solve all your problems sometimes you have to be self reliant.

Comment By Walt, 3-07-08

As a both a current and retired law enforcement officer, I have authority to carry a concealed weapon under HR-218. I recently took an 11 State trip including going through Yellowstone, Jewel Caverns, Custer State Park and many other State and Federal Parks and properties. Carried my firearm with me to all locations for personal protection. At none of the sites was I asked if I was carrying a firearm. I assumed the philosophy of "don't ask, don't tell".
It would be my bet that many firearms are carried within these areas much like I did, without problems.
Those that are intent in misusing a firearm are those that don't care what the rules are anyway.

Comment By Gery, 3-08-08

I live near the Rocky Mtn. National Park. I am also a U.S. Forest Service volunteer. I carry concealed in both instances. Why? Wolves, grizzley bears, mountain lions and evil humanoids. The aforementioned three have fangs, claws, stealth and speed that I do not have and the fourth is ruthless, cunning and without consience (sp?). To do otherwise would make me stupid and a helpless victim. (Not sure I want to eat at Wendy's or visit an educational campus either.)

Curious that when interacting with outfitters, etc. while with the Forest Service they do not care much for Forest Service Rangers but loathe National Park Rangers. They find them uppity and overbearing like they have their own fiefdom and you the citizen are lucky they let you into their park.

Comment By Did they forget something?, 3-10-08

Glacier National Park had a ranger abducted from the entrance station. She was assaulted and raped before she could escape. We always carry in GNP and don't care about the rangers discovering. The ones you meet in the field are usually very young, still going to school. The rest are bureaucrats, sitting in the office, bitching about something. It's ok for them to carry, but not the public which owns the park?

Associated Press
Wednesday, December 31, 2008; A13

The Bush administration was sued yesterday over a new policy that would allow people to carry concealed, loaded guns in most national parks and wildlife refuges.

"The Bush administration's last-minute gift to the gun lobby, allowing concealed semiautomatic weapons in national parks, jeopardizes the safety of park visitors in violation of federal law," said Paul Helmke, president of the Brady Campaign to Prevent Gun Violence. "We should not be making it easier for dangerous people to carry concealed firearms in our parks."

The Brady Campaign sued the Interior Department and its secretary, Dirk Kempthorne, as well as the leaders of the U.S. Fish and Wildlife Service and the National Park Service, in U.S. District Court. The gun-control advocacy group wants a federal judge to issue an immediate injunction stopping the elimination of the 25-year-old federal rule that severely restricts loaded guns in national parks.

An Interior Department spokeswoman would not comment on the lawsuit, saying the department does not discuss pending litigation.

Interior overturned a regulation dating to the Reagan administration that has restricted loaded guns in parks and wildlife refuges. The previous regulation required that firearms be unloaded and placed somewhere that is not easily accessible, such as in a car trunk.

Under a rule to take effect in January, visitors will be able to carry a loaded gun into a park or wildlife refuge -- but only if the person has a permit for a concealed weapon and if the state where the park or refuge is located also allows concealed firearms.

The rules change would take effect before President-elect Barack Obama takes office in January. Overturning the rule would take months or even years if the Obama administration wanted to, since it would require the new administration to restart the lengthy rule-making process.

Re: RIN 0648-XT72 Proposed Critical Habitat Designation for Cook Inlet Beluga Whales

Thank you for the opportunity to comment on the above referenced proposed critical habitat designation. In general, the proposed critical habitat designation is far too broad and encompasses an area much larger than would seem to be necessary for protection of Cook Inlet Beluga whales.

First, it is worth commenting that the endangerment finding was flawed in the first place because indications are that the Beluga population in Cook Inlet is increasing. It is well documented that over harvest was the cause of the decline in population and recent curtailment of harvest has already reversed the trend. It would appear that existing marine related activity, such as shipping and energy development that utilize the proposed critical habitat area is not a significant factor in past decline of the population.

Having worked on the marine terminal in Anchorage for over 30 years as well as recreational boating and fishing in upper cook inlet, I have observed Beluga whales on many occasions. My observations is that the mouths and lower reaches of major rivers, such as the Little Susitna, Susitna and Beluga experience concentrations of Beluga whales, especially during salmon runs. The upper reaches of Turnagain Arm also attract significant numbers during times of hooligan and salmon migration. Otherwise, the whales seem to be fairly widely dispersed in the broader areas of the Inlet. If critical habitat designation is needed, it seems like it should be limited to such areas of high use and concentration. The fact that Belugas transit the larger parts of the Inlet does not justify critical habitat protection.

North Star Terminal & Stevedore Company operates at Anderson Dock in Anchorage, the Port of Anchorage, Port McKenzie, Rig Tenders Marine Terminal in Nikiski, and at both terminals in Homer. Critical habitat designation in the Port Mackenzie area and for the shipping lanes through upper Cook Inlet could be a serious impediment to all current and potential import and export opportunities. All of the necessary goods, commodities and supplies for over 70% of Alaska's population rely on these Ports to provide for the necessary shipment and handling of these necessities.

Alaskan's pay some of the highest energy costs in America. Development of our energy, mineral and other natural resources always has been, and will continue to be, vital to maintaining a healthy economy and good jobs for our citizens.. Hampering resource development and the flow of commerce in and around Cook Inlet will have far reaching

detrimental effects for most Alaskan's far and away many times more substantial in economic impact than estimated to date.

Cook Inlet is the most densely developed and heavily used region in Alaska with respect to resource development, human population and recreational activity. At the same time, it remains one of the biologically most productive regions in the State. Well developed management programs and diligent attention to environmental protection by industry have demonstrated that the marine environment and people can flourish in Cook Inlet. There is no reason the Beluga whales cannot recover and flourish again as well, without the harsh restrictions imposed by the proposed critical habitat designations.

In conclusion, no real Alaskan would approve of activities that truly endanger the Cook Inlet Beluga whales. Many, like me, have experienced the pleasure of watching these unique animals as part of our enjoyment of Cook Inlet. However, the proposal to place half of Cook Inlet in critical habitat designation will do nothing to protect the whales and has the potential to cripple future economic development in the region. I have 6 children and if Alaska's economy does not grow, they will be forced to leave to find gainful employment elsewhere. I want them to have the opportunity to enjoy Alaska's natural wonders as residents, not visitors.

Thank you for your consideration of my comments.

Sincerely,

Jeff Bentz
President
North Star Terminal & Stevedore Company LLC

Export Council of Alaska

February 12, 2010

Ms. Kaja Brix
Assistant Regional Administrator, Protected Resources
Alaska Region
National Marine Fisheries Service
P.O. Box 21668
Juneau, AK 99802-1668

ATTN: Ellen Sebastian

RIN 0648-AX50

Dear Ms. Brix:

The following comments are provided on behalf of the Export Council of Alaska (ECA) in response to the National Marine Fisheries Service (NMFS) proposed rule and request for comment regarding Endangered and Threatened Species; Designation of Critical Habitat for Cook Inlet Beluga Whale [Docket No. 090224232-91321-03] published in the Federal Register on December 2, 2009. The ECA is commenting on both the November 17, 2009, Draft Regulatory Impact review/Section 4(b)(2) Preparatory Assessment/Initial Regulatory Flexibility Act Analysis (RIR/4(b)(2)PA/IRFA) and the proposed rule.

The ECA is one of a nationwide network of export councils intended to foster the international competitiveness of the United States. Nationwide, export councils link together 1,500 leaders of business, government, and academia with the International Trade Administration of the U.S. Department of Commerce. Each member is appointed to a limited term by the Secretary of Commerce on behalf of the President. We serve as an advisory group and communications link between the exporting community and the U.S. Department of Commerce. In Alaska, we focus on expanding awareness of companies and individuals to opportunities in markets abroad and assist those firms engaged in exporting. Exports of liquefied natural gas, fish, minerals, and other items valued at hundreds of millions of dollars move through Cook Inlet and its ports every year. Many projects are proposed or under development in this area; some of these projects are directly related to exports, while others are infrastructure projects that are indirectly related to exports in that they improve the international competitiveness of Alaska and the United States. The designation of Cook Inlet beluga whale critical habitat should be tailored to have minimal or no impact on these exports.

Comments on Draft RIR/4(b)(2)PA/IRFA:

The Draft RIR/4(b)(2)PA/IRFA significantly undercounts the costs, and exaggerates the benefits, of the critical habitat designation and arbitrarily and capriciously concludes that the benefits of such designation exceed its costs. NMFS should revise this document to address the weaknesses described in the following paragraphs:

Significantly Undercounts the Costs:

The Draft RIR/4(b)(2)PA/IRFA significantly undercounts the costs of the critical habitat designation by failing to include the costs associated with several energy and transportation projects in the Cook Inlet region. These projects include the following:

Turnagain Arm Tidal Energy Generation Project: On November 17, 2009, the Turnagain Arm Tidal Energy Corporation filed an application with the Federal Energy Regulatory Commission (FERC) for a preliminary permit to study the feasibility of a tidal energy generation system on the Turnagain Arm of Cook Inlet. Section 7.7 of the Draft RIR/4(b)(2)PA/IRFA analyzed cost impacts of critical habitat designation for two other tidal energy projects, and should be revised to include the potential costs of critical habitat designation to the Turnagain Arm Tidal Energy Generation project as well.

Mt. Spurr Geothermal Power Plant: Section 7.7 of the Draft RIR/4(b)(2)PA/IRFA states that this project was reviewed, but it was not analyzed further because a decision to go forward with the plant has not been made. Table 6-28 of the Draft RIR/4(b)(2)PA/IRFA describes the status of the project as "pre-decisional, geothermal lease in place, no permits have been requested". Ormat Technologies, a company with a history of successfully developing geothermal projects in other countries, is the major lease holder for the Mt. Spurr geothermal development. It has a better record of success than any of the tidal energy companies whose projects were analyzed in the Draft RIR/4(b)(2)PA/IRFA. Power transmission lines for this project may need to cross Cook Inlet to reach Anchorage or the Kenai Peninsula. Ormat has identified the North Forelands Dock and Industrial Area as its logistics base for construction and operation of this project, which would result in an increase in vessel traffic through this area. This project is expected to have a total construction cost, including supporting infrastructure, of approximately $1 billion. Because this project is highly unlikely to jeopardize the existence of Cook Inlet beluga whales but may affect a small portion of the whales' habitat, project modification costs should be estimated. Section 7.7 should be revised to include the potential costs of critical habitat designation to the Mt. Spurr Geothermal Power Plant project as well.

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

Chakachamna Hydropower Plant: Section 6.4.7 of the Draft RIR/4(b)(2)PA/IRFA states that this project was reviewed, but determined to not have a connection with the critical habitat designation due to its inland location and lack of physical connection with Cook Inlet. However, the project description clearly describes the projects planned measures to protect salmon, which are designated as a primary constituent element (PCE) of the critical habitat. The project would discharge water flow from the facility into the MacArthur River near its confluence with Cook Inlet. The power transmission lines may need to cross the MacArthur River, and potentially Cook Inlet, to reach Anchorage or the Kenai Peninsula. Chakachamna Power has identified the North Forelands Dock and Industrial Area as its logistics base for construction and operation of this project, which would result in an increase in vessel traffic through this area. A preliminary permit application for this project was filed with FERC on December 10, 2009. This project is expected to have a total construction cost, including supporting infrastructure, of $1.75 billion. Because this project is highly unlikely to jeopardize the existence of Cook Inlet beluga whales but may affect a small portion of the whales' habitat, project modification costs should be estimated. Section 7.7 of the Draft RIR/4(b)(2)PA/IRFA should be revised to include the potential costs of critical habitat designation to the Chakachamna Hydropower Plant project.

North Forelands Dock and Industrial Area aggregate mining and export: The Tyonek Native Corporation is developing plans to mine and export high quality aggregate from its North Forelands Dock and Industrial Area using the existing adjacent pier, which would require modification (see www.tyonek.com/Presentations/tnc_wci08.pdf). This project would result in increased vessel traffic through this area. This project is expected to have a total construction cost of approximately $20 million. Because this project is highly unlikely to jeopardize the existence of Cook Inlet beluga whales but may affect a small portion of the whales' habitat, project modification costs should be estimated. Sections 6.4.2, 7-2 and 9-2-1.1 and Table 6-28 of the Draft RIR/4(b)(2)PA/IRFA should be revised to include the potential cost impacts of critical habitat designation to this project.

Beluga Coal to Liquids Plant: Alaska Natural Resources to Liquids recently completed a $1.5 million preliminary feasibility study with the help of the Alaska Industrial Development and Export Authority (see www.aidea.org/PDF%20files/BelugaCTLoverview9-20-06.pdf). Plans call for using coal from the Chuitna coal fields to produce 80,000 barrels per day of diesel and naphtha for U. S. West Coast markets in addition to jet fuel and petrochemical feedstocks. This fuel would be shipped out of the existing North Forelands Dock, which would require modification, and result in increased vessel traffic through this area. This project is expected to have a total construction cost, including supporting infrastructure, of approximately $12 billion. Because this project is highly unlikely to jeopardize the

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

existence of Cook Inlet beluga whales but may affect a small portion of the whales' habitat, project modification costs should be estimated. Sections 6.4.2, 7-2 and 9-2-1.1 and Table 6-28 of the Draft RIR/4(b)(2)PA/IRFA should be revised to include the potential cost impacts of critical habitat designation to this project.

Alaska natural gas pipeline projects: Multiple major natural gas pipeline projects are in various stages of development in Alaska, all of which would require the shipment of large quantities of materials through Cook Inlet to the Anchorage area for staging and shipment inland. Because these projects are highly unlikely to jeopardize the existence of Cook Inlet beluga whales but may affect a small portion of the whales' habitat, project modification costs should be estimated. Sections 6.4.2, 7-2 and 9-2-1.1 and Table 6-28 of the Draft RIR/4(b)(2)PA/IRFA should be revised to include the potential cost impacts of critical habitat designation to these projects

North Slope to Lower 48 through Canada: Public Law 108-324 authorized the development of this pipeline and $18B in federal loan guarantees to facilitate its construction. In 2009, the Senate Energy and Natural Resources Committee reported out legislation to increase the federal loan guarantee amount to $30 billion. Two projects are competing to build this pipeline: AGIA (TransCanada's $26 billion, 1,715 mile pipeline) and Denali (BP and Conoco Phillips' $32 billion, 1,500 mile pipeline). The Alaska Natural Gas Transportation Projects, Office of the Federal Coordinator is reviewing both projects, and both have initiated the FERC application process.

ANGDA spur pipeline to Cook Inlet: Alaska Natural Gas Development Project (ANGDA) is planning a $2 billion pipeline to divert a portion of the gas from the above pipeline project to Cook Inlet to replace dwindling local reserves and provide processed natural gas liquids for export from a to-be-developed facility through Cook Inlet. This pipeline would run from Delta, through Glennallen to a Beluga gas facility near Wasilla.

Enstar bullet pipeline: This $4B pipeline would connect Alaska North Slope gas fields through Fairbanks to the Beluga gas facility. This project is competing with the ANGDA spur line project above for both local consumption and liquid products export. Enstar is currently pursuing Alaska environmental permits for this project.

Port MacKenzie Projects: Sections 6.4.4, 7-4 and 9-2-1.1 and Table 6-28 of the Draft RIR/4(b)(2)PA/IRFA analyzed cost impacts of critical habitat designation for two port MacKenzie projects: Deep Draft Dock Expansion and Barge Dock Expansion. The port also plans to spend $18M to construct a ferry terminal for the service to Anchorage and Tyonek. On July 17, 2009, the Surface Transportation Board, a federal agency, published a Notice of Availability of Final Scope of Study for the Environmental

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

Impact Statement (EIS) for an extension from Port MacKenzie to the Alaska Railroad Corporation (ARRC) main line between Wasilla and north of Willow, Alaska. The purpose of this extension is to transport mined minerals to Port MacKenzie for export. The ARRC Port MacKenzie to Willow project is expected to cost $200M, with most of the required materials being shipped through Cook Inlet to Port MacKenzie. Both of these projects would significantly increase vessel traffic through Port MacKenzie, so they should be included in the above sections and table of the Draft RIR/4(b)(2)PA/IRFA. Because these projects are highly unlikely to jeopardize the existence of Cook Inlet beluga whales but may affect a small portion of the whales' habitat, project modification costs should be estimated.

Ferry service to Tyonek: Sections 6.4.3, 7.3, and 7.7 and Table 6-28 of the Draft RIR/4(b)(2)PA/IRFA describe the Cook Inlet ferry service as being planned only for service between Port MacKenzie and Anchorage. However, the Matanuska-Susitna Borough signed a memorandum of understanding with the Native Village of Tyonek in July, 2008, to provide ferry service between Tyonek and the Matanuska-Susitna valley. This was reported in Alaska News on July 16, 2008. Either the existing Ladd Landing or North Foreland waterfront sites would be used for this purpose and a suitable ferry landing would have to be constructed at either site. This project is expected to have a total construction cost of approximately $14 million. Because this project is highly unlikely to jeopardize the existence of Cook Inlet beluga whales but may affect a small portion of the whales' habitat, project modification costs should be estimated. The above sections and table of the Draft RIR/4(b)(2)PA/IRFA should be revised to include the potential costs of critical habitat designation to the Tyonek ferry landing development and the extended ferry service.

Road and bridge projects connecting West Cook Inlet settlements and projects: The Alaska Department of Transportation has designated rights of way for a system of roads to connect West Cook Inlet settlements and development sites. These road systems include bridges crossing several of the medium and high flow-accumulation rivers entering Cook Inlet identified in the proposed rule as supporting prey species for the Cook Inlet beluga whale (see http://www.fakr.noaa.gov/protectedresources/whales/beluga/management.htm#habitat). These projects would connect Anchorage to several of the West Cook Inlet energy projects described in this letter and the Draft RIR/4(b)(2)PA/IRFA. They are expected to have a total construction cost of approximately $200 million. Because these projects are highly unlikely to jeopardize the existence of Cook Inlet beluga whales but may affect a small portion of the whales' habitat, project modification costs should be estimated. Sections 6.4.3, 7-3 and 9-2-1.1 and Table 6-28 of the Draft RIR/4(b)(2)PA/IRFA should be revised to include the potential cost impacts of critical habitat designation to these projects.

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

Section 4.1.2 of the Draft RIR/4(b)(2)PA/IRFA describes how project modification costs are to be calculated in addition to federal agency consultation costs. However, in the Section 7 analysis of total potential costs of critical habitat designation, no project modification costs are included. In addition to the project modification costs for the projects described above, such costs should also be estimated for the other projects included in Section 7.

The Draft RIR/4(b)(2)PA/IRFA should be revised to expand the valuation of the anticipated costs to address the above concerns.

Exaggerates the Benefits:

The Draft RIR/4(b)(2)PA/IRFA exaggerates the benefits of the critical habitat designation by: (1) failing to adequately differentiate between the benefits that accrue from the designation of the Cook Inlet beluga whale as endangered and the benefits of the designation of the whale's critical habitat; (2) failing to account for the baseline requirements of the Endangered Species Act (ESA) that, without the designation of critical habitat, NMFS would be required to not take any action that would jeopardize the Cook Inlet beluga whale's existence due to inadequate stocks of prey fish species; and (3) attributing benefits to fishermen from such critical habitat designation while ignoring legal requirements other than the ESA for fisheries conservation and the increased consumption of fish by the resulting larger whale population.

Section 3.3.1 of the Draft RIR/4(b)(2)PA/IRFA states that "The baseline for the critical habitat designation analysis is the existing state of regulation that provides protection to the Cook Inlet beluga whales under the ESA, as well as under other federal, state, and local laws and guidelines, without the critical habitat designation...Absent a designation of CH, Section 7 of the ESA requires Federal agencies to consult with NMFS to ensure that any action authorized, funded, or carried out will not likely jeopardize the continued existence of any endangered or threatened species."

While Section 5.5 of the Draft RIR/4(b)(2)PA/IRFA states that "in all cases, the types of economic benefits associated with CHD are largely co-extensive with listing the Cook Inlet beluga whale as endangered", Section 5.2.1.1 proposes that the designation of critical habitat may sustain healthy stocks of Cook Inlet beluga whale prey fish and increase the consumptive value from fishing in and adjacent to such critical habitat. Sections 7.8, 7.9, and 7.10 of the Draft RIR/4(b)(2)PA/IRFA also presume an increase in fish stocks from critical habitat designation. These presumptions ignore the baseline requirements for NMFS and the Alaska Department of Natural Resources to maintain the reproductive capacity of such fish stocks through managing human harvesting of

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

these stocks and the increased consumption of such fish stocks by a larger Cook Inlet beluga whale population that NMFS expects to result from such critical habitat designation. Preserving designated critical habitat is more likely to help maintain such prey fish at current stock levels, not increase them, since such designation merely retains the status quo with respect to the condition of such habitat and does not require improving such habitat. On the other hand, to the extent to which the designation of critical habitat would increase the Cook Inlet beluga whale population above the baseline condition, the consumption of such fish stocks by such whale population would clearly increase, leaving fewer fish available for fishermen to catch. In summary, the net effect of critical habitat designation is more likely to be a reduction in the consumptive value from fishing in and adjacent to such critical habitat, and therefore would not be a benefit to fishermen.

Appendix A is titled "Nonuse Values of Critical Habitat for the Cook Inlet Beluga Whale". However, the analysis included in Appendix A discusses the nonuse value of both the critical habitat and protecting Cook Inlet beluga whales and most of the studies cited therein pertain to valuation of a species, not the critical habitat of such species. The protection of the species from extinction is a baseline requirement of the ESA without critical habitat designation. Therefore, it should be separated from the nonuse valuation of the protection of such species' critical habitat before comparing costs and benefits of critical habitat designation. As with calculating the costs of critical habitat designation, the calculation of the benefits of such designation must be limited to the incremental value provided by such designation over the baseline protections afforded by the ESA without such designation. Unfortunately, the statement on page A-4 that "Therefore, it is logical to conclude that in the absence of critical habitat the species would go extinct" and the analysis that follows fail to adequately separate out the protections that would provided to such habitat under the ESA under the baseline condition without designation of critical habitat.

In its discussion of the Kontoleon and Swanson (2003) study, Appendix A fails to show that the preference for preserving a species in its natural habitat versus in a reserve does not represent a valuation of a preference that a species remain in its natural habitat rather than being relocated to a reserve (i.e., a negative reaction to the unnatural condition of animal) and not a valuation of preserving the habitat itself. Therefore, the conclusion that the Kontoleon and Swanson (2003) study provides grounds for believing that some portion of the public's value for the Cook Inlet beluga whale is attributable specifically to critical habitat is premature, as the choice in this case does not involve preservation of the beluga whale in an unnatural habitat.

The literature cited in the Draft RIR/4(b)(2)PA/IRFA may represent the best available science on the subject of valuation of protecting endangered species and their critical

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

habitat, however, the analysis in this document of this scientific data clearly falls short of meeting the requirements of the ESA. The Draft RIR/4(b)(2)PA/IRFA should be revised to narrow the valuation of anticipated benefits to address the above concerns.

Arbitrarily and Capriciously Concludes that Benefits Exceed Costs:

Section 5 and Appendix A of the Draft RIR/4(b)(2)PA/IRFA describe several methods for calculating the value of several forms of benefits, but do not attempt to place a quantitative value on the benefits of Cook Inlet beluga whale critical habitat designation above the benefits of the baseline protection of the ESA without such designation. Similarly, the document also does not attempt to develop a qualitative measurement of such value or attempt to describe how such benefits were compared with the more easily calculated (although in this case, undercounted) costs of such designation. Instead, section 8 of the Draft RIR/4(b)(2)PA/IRFA in two short paragraphs simply states that the anticipated benefits would outweigh the anticipated costs and a net benefit to the nation would result. No support is provided for this statement. No basis is provided that would allow an outside disinterested expert to reach such a conclusion using the same information provided in the document. NMFS simply throws up its hands and says that a valuation of the benefits can't be done, yet it concludes that such benefits would exceed the expected costs. The lengthy separate discussions of the costs and benefits do not overcome the opaque, arbitrary and capricious manner in which the comparison of the two was made and in which the conclusion was reached. This is especially egregious when the agency undercounts the costs and exaggerates the benefits for the purposes of this comparison.

The Draft RIR/4(b)(2)PA/IRFA should be revised to include a detailed method of comparing quantitative and qualitative valuations of costs and benefits and an explanation of how such a comparison was made using costs and benefits information revised to address the inaccuracies described above. The resulting net cost or benefit conclusion should be supported in a manner that is repeatable by outside disinterested experts using the same data.

Comments on Proposed Rule (all page numbers reference the December 2, 2009 Federal Register Vol. 74, No. 230):

Page 63081, second column, second full paragraph, seventh sentence: Change the estimated economic impact range to account for the additional costs identified above.

Page 63084, Figure 1: Revise Figure 1 to include the proposed changes to Areas 1 and 2 described later in this letter.

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

Page 63087, second column, first full paragraph, second sentence: Change to read: 'The effects of prolonged harassment may also include the prolonged abandonment of habitat."

Rationale: To remove the potential for incorrectly interpreting the original sentence to mean that momentary incidents of harassment could result in the prolonged abandonment of habitat by the endangered species.

Page 63087, second column, physical or biological feature number 1: Insert before the semicolon at the end the following: ", except as excluded by the descriptions of Areas 1 and 2".

Rationale: To clarify that these features only apply to the waters included in Areas 1 and 2.

Page 63087, second column, physical or biological feature number 3: Change to read: "The absence of non-naturally occurring toxins or other agents of a type and amount that would kill or injure Cook Inlet beluga whales or cause the prolonged abandonment of their critical habitat areas;"

Rationale: These changes clarify that federal agencies are not required to eliminate naturally occurring irritants to Cook Inlet beluga whales and replace the vague standard of harm with effects-based language from physical or biological feature number 5.

Page 63087, second column, physical or biological feature number 4: Change to read: "The absence of prolonged impediments to unrestricted passage within or between the critical habitat areas; and".

Rationale: To remove the potential for incorrectly interpreting the original sentence to mean that the changes in direction by Cook Inlet beluga whales to avoid a vessel or structure in Cook Inlet does not necessarily equate to denial of unrestricted passage.

Page 63087, second column, physical or biological feature number 5: Change to read: "The absence of in-water noise at levels and durations resulting in the prolonged abandonment of critical habitat by Cook Inlet beluga whales."

Rationale: This discussion on page 63088 of the impacts of noise on beluga whales describes two thresholds: one for impulsive noises and one for continuous noise. The revised language recognizes the duration basis for the two noise thresholds and incorporates the same abandonment clarification that is included in the previous

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

paragraphs. Again, this removes the potential for incorrectly interpreting this sentence to mean that the temporary avoidance by Cook Inlet beluga whales of a vessel operating in Cook Inlet at a noise level below the stated thresholds, which the whales would detect by sound, does not equate to abandonment of critical habitat. Cook Inlet experiences significant natural in-water noise levels from the shifting of ice during winter tidal changes, yet beluga whales continue to inhabit the region. Noise limits for vessels and other human activities should be set at levels higher than this natural noise level.

Page 63087, third column, Area 1 description: Insert before the period at the end the following: ", excluding those waters within ½ mile of the Port MacKenzie dock complex (61.27 N, 149.92 W) and within ½ mile of the Anchorage marine terminal (61.22N, 149.91W)".

Rationale: Part 424.19 of title 50 of the Code of Federal Regulations authorizes the Secretary to exclude any portion of an area being considered for designation as critical habitat if benefits of such exclusion outweigh the benefits of specifying the area as part of the critical habitat, and such exclusion does not result in the extinction of the species. Four economically significant activities are planned for Port MacKenzie: (1) deep draft dock expansion, (2) barge dock expansion, (3) ferry service to Anchorage and Tyonek, and (4) extension of the Alaska Railroad to Port MacKenzie from the main line between Wasilla and north of Willow, Alaska. These marine terminals are the gateways to the bulk of Alaskan exports and imports. The expansion of the Port of Anchorage has already started, an initial beluga whale incidental take authorization from NMFS, and several measures are being taken to protect the whales. Additionally, ferry service between Port MacKenzie and Tyonek will serve Anchorage. While these projects are in different stages of development, combined, they are critical to the economic development of the Cook Inlet region and the mobility of its residents. The inclusion of these small areas within Area 1 would likely result in the imposition of significant limitations on the development and use of the above projects, resulting in economic harm to the region. While Cook Inlet beluga whales have been sighted in the vicinity of Port MacKenzie and the Port of Anchorage marine terminal, the areas to be excluded are miniscule in comparison to the remaining critical habitat and their exclusion would have no significant impact on the Cook Inlet beluga whale's critical habitat or its continued existence. Clearly, the benefits of excluding these small portions of Area 1 exceed the benefits of including them in the critical habitat designation.

Page 63087, third column, Area 2 description: Insert before the period at the end the following: ", excluding those waters within 2 miles of the Ladd Landing pier (61.13N, 151.10W), within 1 mile of the North Forelands Dock (61.04N, 151.16W), within 1 mile of the Upland Rock Quarry at Cottonwood Bay (59.64N, 153.63W), and within ½ mile of the Kenai LNG export terminal (60.68N, 151.40W)." Strike "and the mouth of the

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

Douglas River (59.04 N., 153.45 W)," and insert "and 60.00 N. latitude," or, alternatively, add to the excluded areas in the first sentence of this paragraph the following: "within 1 mile of the multimodal port site in Iniskin Bay (59.66N, 153.46W),".

Rationale: The rationale for these changes is similar to that described in the preceding proposed change. Ladd Landing may be used for the export of Chuitna coal and as a landing for the ferry service to Port MacKenzie and Anchorage (which would require modifications to these piers). The North Forelands Dock may be used to export locally mined aggregate and locally produced coal to liquids fuel and may be used as a landing for the ferry service to Port MacKenzie and Anchorage (any of which may require modifications to the pier). A multimodal port facility may be built in Iniskin Bay to enable shipment by water of materials extracted from the Pebble Mine. The Upland Rock Quarry waterfront in Cottonwood Bay requires filling and dredging to support extraction and export of excavated materials. The Kenai LNG export terminal provides important revenue and a significant source of employment to the Kenai area. Combined, these facilities are critical to the economic development of the Cook Inlet region. The inclusion of these small areas within Area 2 would likely result in the imposition of significant limitations on the development and use of the above projects, resulting in economic harm to the region. The Alaska Fisheries Science Center 2008 Supplemental Status Review and Extinction Assessment of Cook Inlet Belugas shows: (1) a small presence of 2-10 belugas within 2 miles of the Ladd Landing site only during the 1993-1997 period, (2) no presence of belugas within 1 mile of the North Forelands Dock between 1978 and 2008, (3) a small presence of 2-10 belugas within Iniskin Bay only during the 1993-1997 period, (4) no information on beluga presence in Cottonwood Bay, (5) a small presence of 3-10 belugas in the Kenai River only during the 1978-1979 period, and (6) the 95% population area boundary for Cook Inlet beluga whales as far back as 1978-1979 does not include either Iniskin Bay or Cottonwood Bay. Clearly, the benefits of excluding these portions of Area 2 exceed the benefits of including them in the critical habitat designation.

Page 63090, first column, second full paragraph, second sentence: Insert before the period at the end the following: ", which may include adjusting agency actions to protect Cook Inlet beluga whale habitat".

Rationale: To clarify that the baseline condition without critical habitat designation may still require Federal agencies to adjust their actions to protect Cook Inlet beluga whale habitat to prevent jeopardizing that species' existence.

Page 63090, first column, third full paragraph, sixth sentence: Insert "beyond those prohibited by the Clean Water Act and other federal, state or local laws or regulations" between "Cook Inlet" and the comma.

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

Rationale: To clarify that the pollution reduction benefit of critical habitat designation is limited to only that which exceeds pollution limits required by current laws and regulations.

Page 63090, second column, first full paragraph, first sentence: Insert "beyond that required by the ESA Section 7 jeopardy provision" between "derived from protection of critical habitat" and "),".

Rationale: To clarify that the increase in Cook Inlet beluga whale lives saved, longevity, health, productivity, etc. derived from critical habitat designation is limited to that which exceeds the baseline protections without critical habitat designation afforded by Section 7 of the ESA.

Page 63093, first column, first paragraph, first full sentence: Insert "geothermal and" between "FERC permits for" and "turbine".

Rationale: To include the potential for geothermal project transmission line interactions with Cook Inlet.

Page 63093, second column, first paragraph, first full sentence: Strike "destruction of adverse modification" and insert "destruction or adverse modification".

Rational: Correct typographical error.

Page 63094, third column, Area 1 description: Insert before the period at the end the following: ", excluding those waters within ½ mile of the Port MacKenzie dock complex (61.27N, 149.92W) and within ½ mile of the Anchorage marine terminal (61.22N, 149.91W)".

Rationale: Same as described for page 63087 change.

Page 63094, third column, Area 2 description: Insert before the period at the end the following: ", excluding those waters within 2 miles of the Ladd Landing pier (61.13N, 151.10W), within 1 mile of the North Forelands Dock (61.04N, 151.16W), within 1 mile of the Upland Rock Quarry at Cottonwood Bay (59.64N, 153.63W), and within ½ mile of the Kenai LNG export terminal (60.68N, 151.40W)." Strike "and the mouth of the Douglas River (59.04 N., 153.45 W)," and insert "and 60.00 N. latitude," or, alternatively, add to the excluded areas in the first sentence of this paragraph the following: "within 1 mile of the multimodal port site in Iniskin Bay (59.66N, 153.46W),".

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

Rationale: Same as described for page 63087 change.

Page 63095 map: Revise the map to include the proposed changes to Areas 1 and 2.

Page 63095, first column, primary constituent element number (1): Insert before the period at the end the following: ", except as excluded by the descriptions of Areas 1 and 2".

Rationale: Same as described on page 63087 for physical or biological feature number 1.

Page 63095, first column, primary constituent element number (3): Change to read: "The absence of non-naturally occurring toxins or other agents of a type and amount that would kill or injure Cook Inlet beluga whales or cause the prolonged abandonment of their critical habitat areas."

Rationale: Same as described on page 63087 for physical or biological feature number 3.

Page 63095, first column, primary constituent element number (4): Change to read: "The absence of prolonged impediments to unrestricted passage within or between the critical habitat areas.".

Rationale: Same as described on page 63087 for physical or biological feature number 4.

Page 63095, first column, primary constituent element number (5): Change to read: "The absence of in-water noise at levels and durations resulting in the prolonged abandonment of critical habitat by Cook Inlet beluga whales."

Rationale: Same as described on page 63087 for physical or biological feature number 5.

Conclusion

Due to the flaws in the Draft RIR/4(b)(2)PA/IRFA, its conclusion that there would be a net benefit to the Nation by designating critical habitat for Cook Inlet beluga whales is suspect. The Draft RIR/4(b)(2)PA/IRFA should be revised as described above and a new analysis of whether such critical habitat designation would result in a net cost or a net benefit should be performed. Should such an analysis result in a justified and repeatable conclusion that a net benefit would result, the above proposed changes to

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

the proposed rule should be included in that rule. Should such an analysis result in a justified and repeatable conclusion that a net cost would result, the ECA recommends that the proposed rule be revised to not designate critical habitat for the Cook Inlet beluga whale.

Respectfully yours,

Export Council of Alaska

Anthony B. Follett, Chairman

Juneau, AK 99801

Re: HJR 40 – Opposing Proposed Designation of Cook Inlet as Critical Habitat for Cook Inlet Beluga

Dear Representative Millett:

I support your resolution to oppose the proposed designation of 3,000 miles of the Cook Inlet as critical habitat for the Cook Inlet Beluga whale.

The Municipality of Anchorage (MOA) is committed to ensuring the long-term health and productivity of the Cook Inlet and to the conservation of its beluga population. Cook Inlet supports significant oil and gas production, fishing, mining and a year-round tourism industry to the benefit of all Alaskans. The Port of Anchorage is the essential conduit through which passes an astounding 85% of all goods entering the state, and 26% of the tonnage of U.S. international air freight moves through the city via Ted Stevens Anchorage International Airport.

Anchorage's strategic location continues to be vitally important to our nation's overall defense strategy. We are an excellent staging point for an array of military operations and equipment that is deployed – and redeployed – through our Port in support of our national strategic interests.

The proposed critical habitat designation adds nominal value to the protection of the Cook Inlet beluga. It is fundamentally vague, and because the Endangered Species Act already applies, the MOA is addressing the needs of the beluga responsibly, directly, and with best available science. The projections of economic costs associated with the proposed designation do not pass the red face test; the potential for new regulations, delayed development and increased costs will most certainly total more than the $575,000 that NMFS included along with its proposal.

Thank you for your work and for the opportunity to provide comments. Please contact my intergovernmental affairs director, Stacy Schubert, if she can be of assistance to you. She can be reached at 343-7112 or by email: schuberts@muni.org.

Sincerely,

Dan Sullivan

RE: House Joint Resolution No. 40 in Response to the National Marine Fisheries Service Proposed Beluga Whale Critical Habitat Designation of 3,000 Sq. Miles in the Cook Inlet, Alaska

Dear Representative Millett:

As a lifelong Alaskan, I support the adoption of the above referenced Resolution.

My primary source of income for myself and my family is reliant on oil and gas exploration and development in the Cook Inlet. The Cook Inlet is approaching a natural gas shortage. Current producible reserves of natural gas will not meet the south central demand by 2014. Virtually all state and federal experts, as well as industry representatives, agree that there are exist enough natural gas reserves in the Cook Inlet to meet the demand beyond 2040. These experts also agree that the majority of these reserves needed to meet the demand beyond 2014, lie in undeveloped fields that are either inaccessible by road and existing infrastructure, are located in deep-offshore reservoirs requiring a jack-up drilling rig and huge initial investments, or in areas closed to oil and gas exploration and development – such as the Kenai National Moose Range.

This looming shortage of natural gas and the difficulties associated in new exploration and development in the Cook Inlet is further exacerbated by unreasonable restrictions on state lands, such as the Susitna Flats State Game Refuge, the high cost / high risk nature of Alaska, the uncertain tax structure, the excessive bonding requirements, and the most onerous regulatory and environmental permitting process in the country. The excessive federal control of Alaska's resources makes the prospect of doing oil and gas business here less than inviting. The proposed designation of the entire Cook Inlet as critical habitat for the beluga whale creates an additional stigma towards future exploration and development that the residents of the Cook Inlet region and the State of Alaska simply cannot allow.

The NMFS asserts that the beluga whales are endangered and thus need protection and the establishment of this outrageous critical habitat designation. This assertion is erroneous, at best. The beluga population has been increasing since subsistence harvesting of the whale ended, and the population has experienced a steady growth since then. In fact, the juvenile whales cannot even be spotted by the air because of their grey color which is identical to the silty waters of the Cook Inlet. I can personally attest to this, as I have been a pilot since the late 1980's and have flown over the Cook Inlet hundreds of times.

The NMFS blatantly tries to make the public believe that the cost involved in "additional consultation" and other related federal regulations will only cost a total of $600,000 to the people of Alaska and the affected industries. This is absurd! In one exploration project alone, Escopeta's Kitchen Lights, this proposed designation has steered an initial investment of $50,000,000 away from the Cook Inlet. Should an oil and gas company desire to perform the costly proposition of drilling an offshore well in the Cook Inlet with this designation, they will have to budget millions of dollars in delays, legal fees and litigation, without any guarantee of drilling the first well.

The finding by the NMFS significantly undercounts the costs, and exaggerates the benefits, of the critical habitat designation and arbitrarily and capriciously concludes that the benefits of such designation exceed its costs. This finding does not pass the red-face test and the NMFS should be ashamed in even suggesting such a finding. Clearly, this action by the NMFS is backed by environmentalists who do not reside, and have probably not even visited the State of Alaska.

The State of Alaska has approximately 365 million acres of land. The federal government already controls over 222 million of those acres in parks, reserves, and other national interest lands – all of which are closed to oil and gas exploration and development. Of the remaining 143 million acres, 43 million acres are native or private lands. That only leaves the State of Alaska with about 100 million acres, much of that is mountains, glaciers and populated areas. Alaska cannot afford to have any more of its land and resources controlled by the federal government or the environmental obstructionists who have fostered this ridiculous critical habitat designation.

The Cook Inlet provides more the half of the states population with affordable natural gas for electricity and heat for their homes. The negative impact created by this designation creates an anti-development stigma that is contrary to the national energy policy and prejudices Alaska's ability to responsibly explore and develop its natural resources for the benefit of all Alaskans.

A final designation of the Cook Inlet as critical habitat will empower the environmental obstructionists in initiating frivolous litigation which will delay and even cancel the regions essential exploration and development activities. The federal government and the environmental community already have a strangle-hold on our state's oil and gas industry, a decision by the NMFS in finalizing such a preposterous designation will choke out the remaining oil and gas companies in the Cook Inlet and repel further investments. The State of Alaska cannot allow this to happen.

The proposed critical habitat designation of 3,000 square miles, which encompasses the entire Cook Inlet, is excessive and cannot all be considered "critical" by any stretch of the imagination. The beluga whales have coexisted with offshore oil and gas exploration and development for over 30 years, and there is no scientific or historic evidence that indicates oil and gas activities have had an impact to the whale population or its habitat. This designation will have an unwarranted negative impact on existing and future oil and gas activities.

The NMFS determination did not consider the cumulative negative impacts of this proposed critical habitat designation on the oil and gas industry, local communities, or other industries such as fishing, tourism, water and waste utilities, mining, and transportation.

Aside from the obvious negative impact to the oil and gas industry and its resultant effect on the local communities and their energy requirements, this proposed designation will have far-reaching negative impacts, both on their feasibility and their economics, for the following planned projects: Port of Anchorage expansions, Turnagain Arm tidal energy generation project, Mt. Spurr geothermal power plant, Chakachamna hydroelectric plant, Port MacKenzie projects, ferry service to Tyonek, North Forelands dock and industrial area aggregate mining and export, Beluga coal to liquids plant, and road and bridge projects connecting West Cook Inlet settlements and projects to Anchorage.

The proposed critical habitat designation exaggerates the benefits by: (1) failing to adequately differentiate between the benefits that accrue from the designation of the Cook Inlet beluga whale as endangered and the benefits of the designation of such whale's critical habitat; (2) failing to account for the baseline requirements of the Endangered Species Act that, absent the designation of critical habitat, NMFS would be required to not take any action that would jeopardize the Cook Inlet beluga whale's existence due to inadequate stocks of certain fish species; and (3) attributing benefits to the fishing industry and recreational and subsistence users from such critical habitat designation, while ignoring legal requirements other than the Endangered Species Act for fisheries conservation and the increased consumption of fish by the resulting larger whale population.

The baseline for the critical habitat designation analysis is in the existing regulations that provide protection to the Cook Inlet beluga whales under the Endangered Species Act, as well as under other federal, state, and local laws and guidelines, without any critical habitat designation. Absent a designation of critical habitat by the NMFS, the Endangered Species Act already requires all federal agencies to consult with NMFS to ensure that any action authorized, funded, or carried out would not jeopardize the continued existence of the beluga whale. Therefore, a proposed habitat designation, especially of the entire Cook Inlet, will not provide a higher level of protection than that already established under the Endangered Species Act."

The NMFS finding proposes that the designation of critical habitat may sustain healthy stocks of Cook Inlet beluga whale prey-fish and increase the consumptive value from fishing in and adjacent to such a critical habitat. This finding also presumes an overall increase in fish stocks solely from the critical habitat designation. These presumptions ignore the baseline requirements for the NMFS and the Alaska Department of Natural Resources to maintain the reproductive capacity of such fish stocks through managing human harvesting of these stocks and the increased consumption of such fish stocks by a larger Cook Inlet whale populations, which the NMFS erroneously expects to result simply from such critical habitat designation. Preserving designated critical habitat is more likely to help maintain such prey-fish at current stock levels, not increase them, since such designation merely retains the status-quo with respect to the condition of such habitat and does not require improving such habitat.

On the other hand, to the extent to which the designation of critical habitat would increase the Cook Inlet beluga whale population above the baseline condition, the consumption of such fish stocks by such whale populations would clearly increase.

In summary, the net effect of the critical habitat designation is more likely to be a reduction in the consumptive value from fishing in and adjacent to such critical habitat, and therefore would not be a benefit to fishermen, the commercial fishing industry, or the export of Alaska seafood products.

The finding by the NMFS describes several methods for calculating the value of several forms of benefits, but does not attempt to place a quantitative value on the benefits of Cook Inlet beluga whale critical habitat designation above the benefits of the baseline protection already afforded under the Endangered Species Act. Similarly, the finding also does not attempt to develop a qualitative measurement of such value or attempt to describe how such benefits were compared with the more easily calculated, albeit underestimated, costs of such a designation. Instead, the finding simply states, in brevity, that the anticipated benefits would outweigh the anticipated costs and a net benefit to the nation would result. No support is provided for this statement. No basis that would allow an outside disinterested expert to reach such a similar conclusion using the same information is provided in the finding.

The NMFS simply throws up its hands and says that a valuation of the benefits can't be done, yet it concludes that such benefits would exceed the expected costs. This is outrageous! A methodology such as this would not be allowed in an academic application, and should not be relied upon in such an important administrative application. The lengthy separate discussions of the costs and benefits do not overcome the vague, unscientific, illogical, arbitrary and capricious manner in which the comparison of the two was made, and in which the conclusion was reached. This is especially egregious when the NMFS undercounts the costs and exaggerates the benefits for the purposes of this biased comparison.

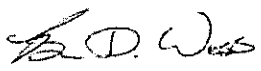
The proposed analysis of the effects of this critical habitat designation should include a detailed method of comparing quantitative and qualitative valuations of costs and benefits and an explanation of how such a comparison was made using costs and benefits information to eliminate the inaccuracies described above. The resulting net cost or benefit conclusion should be supported in a manner that is repeatable by an outside disinterested expert, using the same data.

The conclusion by the NMFS that there would be a net benefit to the Nation by designating critical habitat for Cook Inlet beluga whales is extremely suspect. Any proposed critical habitat designation should include a realistic and predictable analysis of whether such a designation would result in a net cost or a net benefit. Absent such, a designation of critical habitat must be rejected.

The overwhelming conclusion regarding the NMFS' proposed designation of 3,000 sq. miles of the Cook Inlet as critical habitat is that it is a finding that is not based on facts or repeatable scientific analysis. This proposed designation is nothing more than the attempts by the environmental community in manipulating a federal agency for their own special interests. It is in no way representative in what is best for the nation, the people of Alaska, or even the beluga whale itself. It is time for the environmentalists and special interest groups living outside Alaska to stay out of the state's business. The federal government needs to stop allowing itself to be manipulated by these groups.

In closing, I would just like to say that I have heard comments by Alaskan's in the past regarding Alaska succeeding from the United States. I have always considered such talk to be irrational. However, given the increased over-regulation of Alaska's resources, which are owned by the people of Alaska, I can see how this type of attitude exists. I am not sure, as a native Alaskan, how much more federal oppression of Alaska's resources the people of Alaska will stand for. Without the interference by the federal government and the environmental obstructionists, Alaska could be one of wealthiest countries in the world. I remember an instance in our own U.S. history where we were governed by those who did not share our views and values. It is my sincere hope that the federal government does not push Alaskans that far.

Respectfully submitted,



Debra Higgins

Subject: HJR 40 Beluga Whale Critical Habitat Designation -- Support

On behalf of the Transportation Institute and our member companies, I am writing to endorse HJR 40 concerning Cook Inlet beluga whale critical habitat. The Transportation Institute is a non-profit organization dedicated to maritime research, education, and promotion. The Institute member companies participate in all phases of the nation's deep-sea, foreign, and domestic shipping trades. All are of U.S. Registry—manned by American citizen-mariners, operating under the world's highest safety standards, and proudly flying the American flag. Several of these operators would be impacted by the critical habitat designation being considered by the National Oceanic and Atmospheric Administration.

Aside from the lack of scientific data supporting NOAA's decision making and the overall threat to potential economic development for Southcentral Alaska, I wish to confine our concerns of the issue at hand to certain transportation/logistics and national security impacts of the NOAA rulemaking. The Endangered Species Act (ESA) Section 4(b)(2) provides that "the Secretary shall designate critical habitat...on the basis of the best scientific data available and after taking into consideration the economic impact, impact to national security, and any other relevant impact of specifying any particular area as critical habitat." Accordingly, the potential impact of NOAA's designation of beluga whale critical habitat and remediation thereof will have a significant and direct impact on the economic and defense interests of Alaska and our nation. At the very least, NOAA should exclude the Port of Anchorage and the vessel traffic lane through Cook Inlet to the port from being impacted by this rulemaking.

Despite up to five transits a week through Cook Inlet and in every season, our members' ocean-going vessels have never had a single whale strike. They have maintained an unblemished record of safety and risk avoidance while managing the difficult transit through Cook Inlet and its challenging tidal action. Given their nearly fifty years of experience and dynamic improvements in technology, we have every reason to believe this admired safety record will continue. Furthermore, both Horizon and TOTE do not discharge ballast water in Cook Inlet and threaten these waters with the potential introduction of invasive species to create further imbalance to the beluga's marine environment.

The Port of Anchorage serves 80 percent of Alaska's population and 90 percent of the consumer goods of Alaska. The port is the major gateway for Alaska's water-borne commerce and a vital element of the regional economy. In terms of economic impact, the port generates more than $750 million each year. Much of this economic activity is related to the predictable and frequent service provided by the ocean-going vessels of Horizon Lines and TOTE. Maintaining their reliable schedules is critical to the just-in-time logistics service supporting South-central Alaska, the rail-belt Interior Alaska, and the critical energy sector of the North Slope. Having regular and dependable service through the population and transit hub of Anchorage affords Alaskan firms the ability to eliminate the need to warehouse most goods through distribution centers. Most containers and trailers are handled as intermodal cargo and proceed directly to their retail destinations from the ships. This saves Alaskans an estimated $70.2 million in annual warehouse and distribution costs. Moreover, the quality and freshness of goods, despite a 3-4 day ocean-going journey, is maintained. Thankfully, the days of brown lettuce and powdered milk are a distant memory for Alaskans served through the Port of Anchorage.

Undoubtedly, the threat of losing schedule integrity is of paramount importance for our vessel operators and the impact it would have on Alaska's citizens cannot be underestimated. It is conceivable for the critical habitat designation to require operational changes that will at best hamper, if not create uncompromising circumstances and unanticipated consequences causing insurmountable delays. The rigor of managing the tides, weather, silt, and ice in Cook Inlet while meeting scheduled arrival and departure times must not be further complicated. This is especially so since numerous studies conducted over many years show a distinct lack of any scientific evidence that human activity of any kind (beyond subsistence harvesting) has had any impact on the beluga whale population.

Aside from these economic impact concerns, Congress sought to assure an ESA designation did not endanger the defense requirements of our nation. It has been noted that the Port of Anchorage is one of only 19 Strategic Seaports –and the only one not in the Continental United States—as designated by the Military Surface Deployment and Distribution Command (SDDC). This selection is based upon Anchorage playing a critical role in the deployment of U.S. Armed Forces, including units based at Fort Richardson and other military installations in Alaska. An engineering analysis of the POA determined that its strategic value was based on its crucial "highway, water and rail access, cargo staging area and berthing capacity." According to Brig. Gen. Mark Scheid, SDDC's Deputy Commanding General/Director of Operations, units like the 172nd Stryker Brigade Combat Team, at Fort Wainwright, and an Airborne Brigade Combat Team, at Fort Richardson, require the ability to deploy by sea, as do units that may train in Alaska.

Furthermore, TOTE officials attest to the critical nature of their waterborne cargo service to Anchorage. TOTE's annual estimated load factor attributed to military-related supplies and equipment is a full 12 percent of their business.

A more subtle aspect of the defense-related role of the deep-sea vessels serving the Cook Inlet, including the U.S.-flag tankers serving Nikiski, is our military relies on a reserve pool of professional mariners to crew the vessels maintained by the federal Maritime Administration in the Ready Reserve Force which are broken out in times of conflict or crises. Among these are the skilled seafarers who work aboard Horizon Line and TOTE cargo ships and Seabulk tankers. Former Chairman of the Joint Chiefs of Staff, General Colin Powell stated in 1992 that, "I have come to appreciate first-hand why our merchant marine has long been called the nation's fourth arm of defense... The American seafarer provides an essential service to the well-being of the nation, as was demonstrated so clearly during operations Desert Shield and Desert Storm." In fact, civilian mariners are currently serving aboard MARAD managed vessels and on private U.S.-flag vessels contracted to support our government in defense and humanitarian efforts in Afghanistan and Haiti.

The military also relies on the vessels and logistical support of our private-sector merchant marine. Ironically, one of the first commercial vessels to be chartered to the military to supply our troops with vehicles and cargo during Operation Enduring Freedom/Iraqi Freedom was none other than a TOTE roll-on/roll-off (Ro-Ro) ship taken off the Anchorage run. The special design of the vessel enables most any vehicle to be driven aboard, making it an exceptional vessel for charter to the military. It can sail at a top speed of 24 knots and has a shallow draft --to reach ports that other vessels would find too dangerous.

It should be abundantly clear that the use of commercial U.S.-flag vessels having great military utility, along with their civilian officers and crew, are of significant importance to our military planners, logistics experts, and transporters in the event of a national emergency or global conflict. They rely on us, particularly when our allies are not willing or able to help. Threatening the viability of these firms and the crucial seagoing and logistical jobs they support is not in the nation's interest.

I trust I have shared, in brief, some of the economic and defense impact concerns the ESA critical habitat designation poses for Alaska and the United States. The economy of Alaska and the nation is in a precarious state and will suffer if unwarranted impositions are placed on the vessels serving Southcentral Alaska. Our organization endorses the effort Representative Millet has placed in HJR 40 and encourages the support of the Alaska State Legislature for its passage.

Subject: Support for HJR No. 40
I have reviewed the content of this State Legislative Resolution and am in agreement with its content and hereby express my support.
I have been involved with the Cook Inlet beluga whale issues for the past 9 years and belief that I have a good understanding of the situation.
The economic impact has been grossly mis-stated and a professionally done and more encompassing economic analysis is absolutely necessary. In addition the critical habitat designation has been done too broadly without any consideration for exclusion of certain areas.
I support the resolve-clauses as stated in the HJR 40

Sponsor Statement – HJR 40

"Opposing the proposed designation by the National Marine Fisheries Service of 3,000 square miles of upper Cook Inlet, the mid-inlet, all of the inlet's western shores, and Kachemak Bay as critical habitat for beluga whales."

House Joint Resolution 40 seeks to protect the economy of the entire Cook Inlet region from an unnecessary critical habitat designation for beluga whales. The designation would apply to 3,000 square miles of Cook Inlet. The National Marine Fisheries Service is considering the designation a way to protect Cook Inlet beluga whales.

NMFS scientists concluded years ago that an unsustainable harvest caused the decline in the beluga population. The beluga numbers are now increasing at the rate of four percent a year because a revised harvest management program was instituted in place in 2000.

All activities in and around Cook Inlet from the Port of Anchorage, to military operations, to sport and commercial fishing could be slapped with new restrictions if a critical habitat designation is issued.

I urge all my colleagues to join me, our congressional delegation and Governor Parnell in opposing the critical habitat designation.

CS FOR HOUSE JOINT RESOLUTION NO. 40( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES MILLETT, Neuman, Lynn, Johnson, Keller, Gatto

A RESOLUTION

Opposing the proposed designation by the National Marine Fisheries Service of 3,000 square miles of upper Cook Inlet, the mid-inlet, all of the inlet's western shores, and Kachemak Bay as critical habitat for beluga whales.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS the Endangered Species Act requires economic effects to be taken into account for critical habitat designations and areas may be excluded from critical habitat if it is determined that the benefit of such exclusion outweighs the benefit of specifying such areas as critical habitat; and

WHEREAS the National Marine Fisheries Service has proposed declaring 3,000 square miles of upper Cook Inlet, the mid-inlet, all of the inlet's western shores, and Kachemak Bay as critical habitat for beluga whales; and

WHEREAS scientists in the National Marine Fisheries Service have concluded that the sole reason for the population decline was the unsustainable subsistence harvest in the 1990s; and

WHEREAS a cooperative harvest management plan was put into place in 2000; and

WHEREAS scientists predicted signs of recovery of the beluga whale population would take five to seven years after a cooperative harvest management plan was instituted; and

WHEREAS, in 2005, the population of beluga whales was 278, and, in 2009, the population was 321, a four percent increase a year; and

WHEREAS the State of Alaska has given notice of its intent to sue challenging the Cook Inlet beluga whale Endangered Species Act listing; and

WHEREAS there is no evidence that human activity has harmed the beluga whale's environment, migration, or ecology; and

WHEREAS the National Marine Fisheries Service has stated that the additional regulatory oversight will cost only an additional $600,000 over the next decade; and

WHEREAS the cost estimate does not factor in the extra costs that existing and future operations may have to pay to meet unnecessary new regulatory burdens; and

WHEREAS a critical habitat designation in Cook Inlet may hurt community and economic development; and

WHEREAS permitting and construction projects may suffer costly delays, and economic development could be curtailed; and

WHEREAS the proposed Knik Arm Bridge, Port Mackenzie, tourism, and vessel traffic may be negatively affected; and

WHEREAS infrastructure development in Cook Inlet for resource development and energy projects could be threatened by critical habitat designations; and

WHEREAS the Port of Anchorage serves 85 percent of the population of the state and receives 90 percent of the goods coming into the state, and the port has already fully addressed the conservation needs of the Cook Inlet beluga whales relating to the whales' activity, based on the best scientific information available, working with the National Marine Fisheries Service and other experts; and

WHEREAS military deployments from the Port of Anchorage, military flight patterns, and military operations could be negatively affected or limited with no benefit to beluga whales; and

WHEREAS environmental lawsuits may add significant delays and millions of dollars to the cost of economic development projects in the Cook Inlet area; and

WHEREAS decades of safe and environmentally responsible oil and gas production, vessel transportation, community development, commercial, sport, and subsistence fishing, and other economic activity in Cook Inlet have taken place without harming Cook Inlet beluga whales; and

WHEREAS future oil and gas exploration, development, and production could be gravely affected by critical habitat designations; and

WHEREAS southcentral Alaska energy needs have been met predominantly through responsible oil and gas production in Cook Inlet for nearly 50 years while beluga whale populations thrived; and

WHEREAS there is no evidence that commercial or sport fishing is harming the beluga whale population; and

WHEREAS the commercial and sport fishing industries will be gravely threatened by a critical habitat designation because the beluga whale's primary food source is fish; and

WHEREAS lost development opportunities because of critical habitat designations could ultimately lead to lost revenue to the State of Alaska and to local governments; and

WHEREAS all three members of Alaska's congressional delegation and Governor Sean Parnell are opposed to the critical habitat designation; and

WHEREAS designation of such broad areas of municipal, commercial, and industrial interest, without any known or identifiable link between these activities and the conservation status of the Cook Inlet beluga whale is contrary to the public interest; and

WHEREAS the conservation benefits, which are entirely uncertain and speculative, are outweighed by the costs and impediments posed by designation of critical habitat in this instance in most, if not all, of the proposed designation area;

BE IT RESOLVED that the Alaska State Legislature opposes the proposed designation by the National Marine Fisheries Service of 3,000 square miles of upper Cook Inlet, the mid-inlet, all of the inlet's western shores, and Kachemak Bay as critical habitat for beluga whales; and be it

FURTHER RESOLVED that the State of Alaska requests a more robust economic analysis be completed by the National Marine Fisheries Service before finalizing any critical habitat designation.

COPIES of this resolution shall be sent to the Honorable Barack Obama, President of

the United States; the Honorable Joseph R. Biden, Jr., Vice-President of the United States and President of the U.S. Senate; the Honorable Nancy Pelosi, Speaker of the U.S. House of Representatives; the Honorable Gary F. Locke, United States Secretary of Commerce; Dr. Jane Lubchenko, Under Secretary of Commerce for Oceans and Atmosphere, United States Department of Commerce; Kaja Brix, Director, Protected Resources Division, Alaska Region, National Marine Fisheries Service, National Oceanic and Atmospheric Administration; the Honorable Dan Sullivan, Mayor of the Municipality of Anchorage; the Honorable John C. Combs, Mayor of the City of Palmer; the Honorable Verne E. Rupright, Mayor of the City of Wasilla; the Honorable Talis Colberg, Mayor of the Matanuska Susitna Borough; the Honorable James C. Hornaday, Mayor of the City of Homer; the Honorable Pat Porter, Mayor of the City of Kenai; the Honorable Peter A. Micciche, Mayor of the City of Soldotna; the Honorable Dave Carey, Mayor of the Kenai Peninsula Borough; and the Honorable Lisa Murkowski and the Honorable Mark Begich, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress.

26-LS1376\R
HOUSE JOINT RESOLUTION NO. 40
IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY-SIXTH LEGISLATURE - SECOND SESSION
BY REPRESENTATIVE MILLETT

Introduced: 1/27/10
Referred:

A RESOLUTION

Opposing the proposed designation by the National Marine Fisheries Service of 3,000 square miles of upper Cook Inlet, the mid-inlet, all of the inlet's western shores, and Kachemak Bay as critical habitat for beluga whales.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS the Endangered Species Act requires economic effects to be taken into account for critical habitat designations and areas may be excluded from critical habitat if it is determined that the benefit of such exclusion outweighs the benefit of specifying such areas as critical habitat; and

WHEREAS the National Marine Fisheries Service has proposed declaring 3,000 10 square miles of upper Cook Inlet, the mid-inlet, all of the inlet's western shores, and Kachemak Bay as critical habitat for beluga whales; and

WHEREAS scientists in the National Marine Fisheries Service have concluded that the sole reason for the population decline was the unsustainable subsistence harvest in the 1990s; and

WHEREAS a cooperative harvest management plan was put into place in 2000; and

WHEREAS scientists predicted signs of recovery of the beluga whale population would take five to seven years after a cooperative harvest management plan was instituted; and

WHEREAS, in 2005, the population of beluga whales was 278, and, in 2009, the population was 321, a four percent increase a year; and

WHEREAS the State of Alaska has given notice of its intent to sue challenging the Cook Inlet beluga whale Endangered Species Act listing; and

WHEREAS there is no evidence that human activity has harmed the beluga whale's environment, migration, or ecology; and

WHEREAS the National Marine Fisheries Service has stated that the additional regulatory oversight will cost only an additional $600,000 over the next decade; and

WHEREAS the cost estimate does not factor in the extra costs that existing and future operations may have to pay to meet unnecessary new regulatory burdens; and

WHEREAS a critical habitat designation in Cook Inlet may hurt community and economic development; and

WHEREAS permitting and construction projects may suffer costly delays, and economic development could be curtailed; and

WHEREAS the proposed Knik Arm Bridge, Port Mackenzie, tourism, and vessel traffic may be negatively affected; and

WHEREAS infrastructure development in Cook Inlet for resource development and energy projects could be threatened by critical habitat designations; and

WHEREAS the Port of Anchorage serves 85 percent of the state of Alaska with 90 percent of the goods to those areas, and the Port has already fully addressed the conservation needs of the Cook Inlet beluga whales relating to its activities based upon the best scientific information, working in tandem with the National Marine Fisheries Service and other experts; and

WHEREAS military deployments from the Port of Anchorage, military flight patterns, and military operations may be negatively affected or limited with no benefit to beluga whales; and

WHEREAS environmental lawsuits may add significant delays and millions of dollars to the cost of economic development projects in the Cook Inlet area; and

WHEREAS decades of safe and environmentally responsible oil and gas production, vessel transportation, community development, commercial, sport, and subsistence fishing, and other economic activity in Cook Inlet have taken place without harming Cook Inlet beluga whales; and

WHEREAS future oil and gas exploration, development, and production could be gravely affected by critical habitat designations; and

WHEREAS southcentral Alaska energy needs have been met predominantly through responsible oil and gas production in Cook Inlet for nearly 50 years while beluga whale populations thrived; and

~~WHEREAS THE MUNICIPALITY OF ANCHORAGE MAY HAVE TO SPEND A MINIMUM OF $400,000,000 TO MEET UNNECESSARY NEW WASTEWATER TREATMENT REQUIREMENTS THAT WOULD COME WITH A CRITICAL HABITAT DESIGNATION, CAUSING UTILITY BILLS FOR CUSTOMERS OF ANCHORAGE WATER AND WASTEWATER TO, AT A MINIMUM, TRIPLE; AND~~

WHEREAS there is no evidence that commercial or sport fishing is harming the beluga whale population; and

WHEREAS the commercial and sport fishing industries will be gravely threatened by a critical habitat designation because the beluga whale's primary food source is fish; and

WHEREAS lost development opportunities because of critical habitat designations could ultimately lead to lost revenue to the State of Alaska and to local governments; and

WHEREAS all three members of Alaska's congressional delegation and Governor Sean Parnell are opposed to the critical habitat designation; and

WHEREAS designation of such broad areas of municipal, commercial, and industrial interest, without any known or identifiable link between these activities and the conservation status of the Cook Inlet beluga whale is contrary to the public interest; and

WHEREAS the conservation benefits, which are entirely uncertain and speculative,

are outweighed by the costs and impediments posed by designation of critical habitat in this instance in most, if not all, of the proposed designation area;

BE IT RESOLVED that the Alaska State Legislature opposes the proposed designation by the National Marine Fisheries Service of 3,000 square miles of upper Cook Inlet, the mid-inlet, all of the inlet's western shores, and Kachemak Bay as critical habitat for beluga whales; and be it

FURTHER RESOLVED that the State of Alaska requests a more robust economic analysis be completed by the National Marine Fisheries Service before finalizing any critical habitat designation.

COPIES of this resolution shall be sent to the Honorable Barack Obama, President of the United States; the Honorable Joseph R. Biden, Jr., Vice-President of the United States and President of the U.S. Senate; the Honorable Nancy Pelosi, Speaker of the U.S. House of Representatives; the Honorable Gary F. Locke, United States Secretary of Commerce; Dr. Jane Lubchenko, Under Secretary of Commerce for Oceans and Atmosphere, United States Department of Commerce; Kaja Brix, Director, Protected Resources Division, Alaska Region, National Marine Fisheries Service, National Oceanic and Atmospheric Administration; the Honorable Dan Sullivan, Mayor of the Municipality of Anchorage; the Honorable John C. Combs, Mayor of the City of Palmer; the Honorable Verne E. Rupright, Mayor of the City of Wasilla; the Honorable Talis Colberg, Mayor of the Matanuska Susitna Borough; the Honorable James C. Hornaday, Mayor of the City of Homer; the Honorable Pat Porter, Mayor of the City of Kenai; the Honorable Peter A. Micciche, Mayor of the City of Soldotna; the Honorable Dave Carey, Mayor of the Kanai Peninsula Borough; and the Honorable Lisa Murkowski and the Honorable Mark Begich, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress.

111TH CONGRESS
2D SESSION

S. J. RES. 26

Disapproving a rule submitted by the Environmental Protection Agency relating to the endangerment finding and the cause or contribute findings for greenhouse gases under section 202(a) of the Clean Air Act.

IN THE SENATE OF THE UNITED STATES

JANUARY 21, 2010

Ms. MURKOWSKI (for herself, Mrs. LINCOLN, Mr. BARRASSO, Mr. NELSON of Nebraska, Mr. CHAMBLISS, Ms. LANDRIEU, Mr. THUNE, Mrs. HUTCHISON, Mr. GRAHAM, Mr. COBURN, Mr. VITTER, Mr. CORNYN, Mr. ISAKSON, Mr. GRASSLEY, Mr. ALEXANDER, Mr. BOND, Mr. INHOFE, Mr. BUNNING, Mr. CRAPO, Mr. BROWNBACK, Mr. ROBERTS, Mr. MCCONNELL, Mr. ENZI, Mr. MCCAIN, Mr. WICKER, Mr. LUGAR, Mr. CORKER, Mr. COCHRAN, Mr. KYL, Mr. BENNETT, Mr. RISCH, Mr. JOHANNS, Mr. SESSIONS, Mr. VOINOVICH, Mr. BURR, Mr. SHELBY, Mr. GREGG, Mr. HATCH, Mr. LEMIEUX, and Mr. DEMINT) introduced the following joint resolution; which was read twice and referred to the Committee on Environment and Public Works

---

JOINT RESOLUTION

Disapproving a rule submitted by the Environmental Protection Agency relating to the endangerment finding and the cause or contribute findings for greenhouse gases under section 202(a) of the Clean Air Act.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That Congress disapproves the rule submitted by the Environmental Protection Agency relating to the

endangerment finding and the cause or contribute findings for greenhouse gases under section 202(a) of the Clean Air Act (published at 74 Fed. Reg. 66496 (December 15, 2009)), and such rule shall have no force or effect.

Re: Clean Energy Jobs and American Power Act (S. 1733)

Dear Chairman Boxer and Ranking Member Inhofe,

The State of Alaska wishes to comment on the Clean Energy Jobs and American Power Act (S. 1733). This legislation, which aims to drastically modify U.S. fossil fuel consumption, stimulate greater use of renewable energy resources, and address the challenges of climate change adaptation, involves some of the most important issues facing the State of Alaska.

Alaska supports the transition to lower-carbon and renewable energy. However, as a major exporter of carbon-based energy, producing approximately 13 percent of the nation's oil supply and receiving more than 80 percent of its unrestricted general fund revenues directly from oil and gas operations, the State cannot ignore the potential economic consequences of a "cap-and-trade" system. We are currently preparing analyses that assess the possible impacts of this legislation on State revenues, the economic viability of our oil refineries, and future construction of an Alaska natural gas pipeline. The State fears this act may disadvantage domestic fossil fuel producers and shift production overseas, resulting in lost revenues and jobs while reducing our nation's energy security.

While climate change legislation could pose economic threats to our state, Alaska is also primed to help lead a clean energy economy. In the Alaska natural gas pipeline, the State of Alaska offers a promising low-carbon energy option, which could provide a vital bridge to other clean energy alternatives. Alaska also holds vast renewable energy potential, from hydropower, to biomass, wind, geothermal, solar, and ocean power.

In the area of adaptation, Alaska is already facing a host of serious developments related to climate change. This includes addressing the impacts to critical infrastructure associated with accelerated coastal erosion, increased storm effects, sea ice retreat, and permafrost melt. Efforts to protect and relocate Alaskan communities are already underway and the State values the partnerships we have formed with many federal agencies and other entities. More resources, however, are needed along with a designated federal agency lead to coordinate the federal efforts.

Coupled with climate change impacts are opportunities, including the potential for increased marine access to Arctic waters and the resources they contain. The United States is slowly waking to the fact it is an Arctic nation and the importance of the Arctic in general. It is imperative that this legislation not foreclose possible opportunities in the Arctic.

Enclosed you will find the State's analysis of provisions in S. 1733. This document identifies key priorities for Alaska and a number of areas for improvement. Some of the items the State advocates for in this bill include:

- **Adequate funding for climate change adaptation:** the State supports sufficient funding to address Alaska's pressing adaptation needs on various fronts, including protecting critical and valuable infrastructure.

- **Measures to preserve domestic refineries:** Alaska calls for provisions aimed to protect Alaska's refineries, which are essential to our economy and cold weather fuel needs, as well as uniquely vulnerable to increased costs posed by cap-and-trade legislation.

- **Fair allocations for Alaska:** the State is concerned that the Environmental Protection Agency (EPA) has underestimated emissions in Alaska, based on estimates provided to Senator Feingold by EPA. This could disadvantage the state as a whole in the distribution of allowances.

- **Avoidance of unfunded mandates:** Alaska opposes burdensome and unrealistic unfunded mandates that may be created through new climate change programs.

- **Respect for states' rights:** the State supports the protection of states' rights and notably recognition of the State of Alaska's role as primary trustee over fish and wildlife.

- **Exclusion of problematic broad policy statements:** Alaska opposes broad policy statements that open the door to stricter enforceable regulations and future litigation.

- **Emphasis on domestic production:** the State supports expanding access and incentives for responsible domestic onshore and offshore oil and gas exploration as part of a strategy for creating a secure energy future.

- **Promotion of the natural gas pipeline:** the State seeks to promote the Alaska natural gas pipeline as a clean and reliable fuel source which would provide significant economic benefits for the nation, consistent with the Alaska Natural Gas Pipeline Act of 2004 (P.L. 108-324, 118 Stat. 1220).

- **Carbon capture and sequestration incentives:** Alaska supports the commercial deployment of carbon capture and sequestration (CCS) technologies, and in particular, sequestration as a result of Enhanced Oil Recovery (EOR) projects.

- **Program flexibility:** The State believes that effective mitigation and adaptation programs must acknowledge regional differences. Alaska has particular concerns regarding the proposed natural resources adaptation framework.

- **Focus on monitoring and research:** Alaska supports collaborations among federal, State, and other partners in monitoring and research that will lead to better decisions in the management of land and marine resources.

- **Exclusive role of climate change legislation:** We believe climate change legislation should be the sole instrument for addressing climate change mitigation, not the strained use of existing statutes such as the Endangered Species Act or the Clean Air Act.

We appreciate the opportunity to share our views and hope the committee will give them its fullest consideration.

Sincerely,

Sean Parnell
Governor

State of Alaska Comments on Clean Energy Jobs and American Power Act (S. 1733)
Senator Boxer's Chairman's Mark

INTRODUCTORY NOTES:

This document describes the positions of the State of Alaska on notable elements of Senator Barbara Boxer's Chairman's Mark of the Clean Energy Jobs and American Power Act (S. 1733), which was introduced by Senators John Kerry and Barbara Boxer. The Alaska Departments of Environmental Conservation, Fish and Game, Law, Natural Resources, Revenue, Transportation and Public Facilities, and the Governor's Washington, DC office contributed to the analysis of this bill.

While particular design elements of "cap-and-trade" legislation, like S. 1733 and the American Clean Energy and Security Act of 2009 (H.R. 2454), raise broad concerns about the economic interests of Alaska, this document focuses instead on specific provisions of S. 1733. The State is currently preparing separate analyses of the possible impacts of this legislation on State revenues, the economic viability of Alaska's oil refineries, and future construction of an Alaska natural gas pipeline.

In many ways, Alaska is ground zero for obvious and costly climate change impacts. Alaska is currently experiencing coastal erosion, increased storm effects, sea ice retreat and permafrost melt. The villages of Shishmaref, Kivalina, and Newtok have already begun relocation plans and the U.S. Army Corps of Engineers has identified over 160 additional rural Alaskan communities threatened by erosion.

The effects of climate change are expected to occur most rapidly and be most pronounced at higher latitudes. Thus, no discussion about climate change is complete without recognition of the issues facing the Arctic. Surprisingly, in the 925-page bill, offered as a U.S. response to climate change, the word "Arctic" appears only once.

The State of Alaska strongly encourages that the following key components be incorporated in any climate change legislation:

- Mitigation and adaptation strategies that account for regional differences and avoid a "top-down" approach, likely to produce inflexible and inefficient policy;
- avoidance of broad policy statements that open the door to stricter enforceable regulations and future litigation;
- an effort to spare states from burdensome and unrealistic unfunded mandates;
- emphasis on climate change legislation as the sole instrument for addressing climate change mitigation, rather than the strained use of existing statutes, such as the Endangered Species Act or the Clean Air Act;
- incentives for a diverse spectrum of clean energy alternatives;
- respect for states' rights, and notably recognition of a state's role as primary trustee over fish and wildlife;
- a focus on studying the Arctic climate and environment;
- appropriate funding for adaptation efforts in Alaska where there is a pressing need to respond on numerous fronts, including the protection of critical infrastructure;
- aid for consumers burdened by climate change-related regulations;
- provisions aimed to protect Alaska's refineries, which are essential to our economy and cold weather fuel needs, as well as uniquely vulnerable to increased costs posed by cap-and-trade legislation; and
- promotion of Alaska's natural gas pipeline as a clean, reliable, long-term fuel source.

In the remainder of this document, the State considers how S. 1733 addresses these and other priorities important to Alaska.

STATE POSITIONS AND ANALYSIS OF S. 1733:

Section 1. Short Title; Table of Contents

Findings. (Sec. 2)

- Alaska Natural Gas Pipeline Projects. The State supports the addition of a finding, that the completion of the Alaska Natural Gas Transportation Projects is vital to the country to provide a clean fuel alternative to coal and petroleum as a bridge to power generation that does not involve the combustion of fossil fuels. This finding would be consistent with the Alaska Natural Gas Pipeline Act of 2004 (P.L. 108-324, 118 Stat. 1220).

- Arctic Impacts. The State supports the addition of a finding that the impacts of climate change are expected to occur first and be most severe in the Arctic and in the higher latitudes, creating unique adaptation needs in these areas.

Division A – Authorizations for Pollution Reduction, Transition, and Adaptation

Title I – Greenhouse Gas Reduction Programs

Subtitle A – Clean Transportation

Greenhouse Gas Reductions through Transportation Efficiency; Transportation Greenhouse Gas Emission Reduction Program Grants. (Sec. 112-113)

- Funding. The State fears Section 112 would create a substantial unfunded mandate and shift resources away from Alaska's transportation priorities. S. 1733 would amend Title VIII of the Clean Air Act to require the EPA Administrator, in consultation with the Alaska Department of Transportation and Public Facilities (DOT), to establish national greenhouse gas (GHG) emission reduction goals. States and metropolitan planning organizations (MPOs) would, in turn, be required to develop targets consistent with the national goals. The State would need to perform extensive data gathering and modeling, compute baseline emissions, and develop new strategies and programs to meet their goals. Section 113, which outlines a grant program for transportation GHG reduction, does not clearly provide funding to states for planning. If Alaska is unable to secure sufficient funding, it would be forced to divert resources from other programs, such as transit and road improvements, in order to absorb the new costs. The State supports a funding mechanism that will ensure adequate assistance to states working to comply with this new mandate.

- Adequate Time Frame. The State has concerns about the time requirements for data production and analysis. Adequate time is necessary to produce data on local conditions. Default national data does not accurately reflect Alaska's environmental conditions and emissions. The State believes this legislation should contain provisions ensuring states have sufficient time to collect and incorporate local data.

The State also supports inclusion of a statutory process to extend State target deadlines should federal agencies fail to meet deadlines or should there be legal changes to models or methodologies. New standardized models and methods adopted may differ from those used to establish the 2005 emissions reduction baseline. If this is the case, analysis would be necessary to properly compare new results with the 2005 baseline. If EPA and DOT lag in making this adjustment, it will shorten the timeframe states have to meet their deadlines.

Furthermore, the State fears the timeline for new regulations in this section is not realistic. Regulations must be proposed within 12 months and promulgated within 18 months of enactment. Preparing regulations and completing the public process for adopting the regulations can take months under ideal circumstances. If the regulation process is not completed on schedule, states and MPOs would be left with insufficient time to achieve emission reduction targets.

- Authority. The State also questions whether states possess the requisite authority to carry out their new duties under this section. State transportation programs generally do not operate transit, rail, or intercity bus systems, control land use, or regulate the amount of driving or method of vehicular propulsion. This authority is traditionally reserved for local government planning and zoning departments. Yet it will be impossible to meet ambitious emissions targets without regulating these activities. Furthermore, Section 112 holds MPOs to a lesser standard than states, though MPO emission plans are central to meeting state targets.

- Public Health. The State also has reservations about use of the term "public health," which has certain connotations within the Clean Air Act. A provision may be necessary to ensure the term does not invoke actions related to the Clean Air Act Section 109(b)(1), which directs EPA to set ambient air quality standards to "protect the public health" and allow for an adequate margin of safety. Recent EPA actions have shown an increased propensity for moving beyond the agency's traditional authority.

- Surface Transportation. The State believes the language of this section should be clarified to describe "surface" transportation-related greenhouse gas emissions reduction targets in all cases. Further, the term "surface transportation-related" should be defined to specifically exclude maritime (except ferries), rail, and off-road vehicles.

- Lead Planning/Modeling Agency. The State supports establishing the U.S. Department of Transportation, not the EPA, as the lead agency regarding the development of transportation planning and modeling tools. S. 1733 does this.

- Vehicle Miles Traveled. The State is concerned by provisions creating goals for reduced "vehicle miles traveled." Construction of the natural gas pipeline may create large short-term increases in vehicle miles traveled, but will generate benefits that far outweigh these increases. The State supports an exception for large construction projects promoting clean energy.

- Clean Air Act Incorporation. Section 112 also raises concern because of its incorporation into the Clean Air Act. The provision could subject planning and activities to burdensome Clean Air Act statutes and regulations.

Subtitle F – Energy Efficiency and Renewable Energy

Renewable Energy. (Sec. 161)

- Grants for Renewable Resource Programs. The State supports the nation's transition to increased reliance on renewable energy. Alaska possesses vast renewable energy potential, including hydro, biomass, wind, geothermal, solar, and ocean power. S. 1733 authorizes EPA grants for projects that increase the quantity of energy that a state uses from renewable resources, with priority to applicants in states with a binding Renewable Portfolio Standard. The State approves of the provision's goal.

  The State, however, has concerns about the definition of "qualified hydropower," used in Section 102. It appears hydropower can be considered "qualified" in two ways. First, incremental gains or capacity additions to projects in place before 1988 are considered qualified hydropower. Second, energy produced from capacity added after 1988 to a dam that was originally in place for reasons other than power generation qualifies. This narrow definition would exclude large portions of existing hydropower, making it difficult for Alaska to meet a Renewable Portfolio Standard and compete for grants under Section 161, despite having an abundance of hydropower. The definition would also leave out new hydro projects. The State supports the expansion of the definition of "qualified hydropower."

Energy Efficiency in Building Codes. (Sec. 163)

- National Building Codes. The State opposes setting national energy efficiency building codes. S. 1733 would create national codes for residential and commercial buildings, in order to meet national energy efficiency targets. The EPA Administrator would publish an annual report on energy efficiency building code adoption and compliance by states. Though penalties for noncompliance are not defined in S. 1733, Alaska opposes the existence of national standards in this area. A federally mandated, universal energy code is a poor fit for a state with Alaska's vast size and varied conditions.

Subtitle H – Clean Energy and Natural Resources

Clean Energy and Accelerated Emission Reduction Programs. (Sec. 181)

- Clean Energy Incentives. The State supports Section 181, which rewards companies that switch from power sources with higher emissions than the 2007 power sector average to cleaner fuels, including natural gas, and Section 182, which would establish a new federal grant program encouraging investment in advanced natural gas technologies.

Title III – Transition and Adaptation

Part 1 – Domestic Adaptation

Subpart A – National Climate Change Adaptation Program

National Climate Change Adaptation Program. (Sec. 341)

- Existing Programs. The State supports the inclusion of language to clarify that the proposed National Climate Change Adaptation Program (NCCAF) will not replace existing federal programs already providing state and local governments and tribes with funds for projects that will assist in adaptation. The NCCAF should be a supplemental source of funding that prioritizes meeting urgent needs.

Climate Services. (Sec. 342)

- Coordination. The State believes a lack of specificity in the bill's natural resources adaptation strategy could hamper coordination and produce a duplication of efforts. In this section, the Department of Commerce (NOAA) is tasked with developing a National Climate Service. Section 365 creates a Natural Resources Climate Change Adaptation Panel, chaired by the Council for Environmental Quality. Section 367 establishes a National Climate Change and Wildlife Science Center. These provisions leave ambiguity as to how the bodies will interact. At the State level, federal agencies have competed for leadership and funds in the climate change arena. The vagueness in these provisions could produce a similar dynamic.

Subpart B – Public Health and Climate Change

National Strategic Action Plan; Advisory Board. (Sec. 353-354)

- Public Health. The State supports the inclusion of a section dedicated to addressing public health. However, the bill calls for development of a Health Impact Assessment. The requirement that Health Impact Assessments be conducted by the federal government within the National Environmental Policy Act (NEPA) process has produced challenges in Alaska. Additionally, no funding mechanism is provided to develop these assessments or the strategic plan called for by the bill. The section also lacks a mandate for State or Native representation on the Advisory Board.

Subpart C – Climate Change Safeguards for Natural Resources Conservation

Natural Resources Climate Change Adaptation Plan; Natural Resources Climate Change Adaptation Strategy; Natural Resources Adaptation Science and Information. (Sec. 365-367)

- Mission of Panel. The State believes the purpose of the Natural Resources Climate Change Adaptation Panel should be expanded to address other forms of adaptation, such as infrastructure. As introduced, the bill lacks a strategy for coordinating federal policy on climate change effects outside of the natural resources area.

Federal Natural Resource Agency Adaptation Plans; State Natural Resources Adaptation Plans. (Sec. 368-369)

- Flexibility. The State fears the natural resource adaptation framework in S. 1733, like that in H.R. 2454, is too top-down driven for success. The bill calls for each federal agency to develop a natural resource adaptation plan, with which subsequently-formed state plans must be consistent. Climate impacts, however, differ regionally and locally, requiring maximum flexibility. Development of a national plan will hamstring local identification and prioritization of issues and associated strategies to address them, stifle innovation, and prevent the local "buy-in" vital to effective implementation. A national focus also impedes the development of regional strategies.

  States should be allowed to negotiate cooperative natural resource agreements with the federal government on a state-by-state basis with maximum flexibility. In the face of significant intrusion by the federal government on a state's authority to regulate fish and game, states may reasonably prefer departing from the national strategy. If a state does so, however, it will be penalized through denial of funding under programs in this subtitle and potentially other federal programs. The scenario is counterproductive and could be alleviated with greater flexibility.

- Competing Interests. The State fears efforts to assist species in adapting to climate change and ocean acidification will require controlling human activities to reduce other stressors on these species. Large new conservation units may be carved out and human activities in migration corridors could be substantially limited. The bill does not state how the adaptation strategy and planning called for is to be reconciled with human population growth, resource development, commercial, and other human activities. With this approach, other competing interests of importance to the people of Alaska will be marginalized.

National Resources Climate Change Adaptation Account. (Sec. 370)

- Other Statutes. The State believes the bill should specifically de-link existing statutes, such as the Endangered Species Act (ESA), from the climate change policy process. The State opposes use of the ESA as a vehicle for carrying out climate change policy. Section 370 provides for an expansion of ESA programs, which, without further guidance, could result in significant increases in listings that provide little benefit to those species. The bill should include language affirming that climate change legislation is the appropriate instrument for responding to climate change and that ESA should retain its traditional role of conserving species most at risk.

- Corps of Engineers. The State also believes this section should be modified to explicitly grant the U.S. Army Corps of Engineers the authority to use Natural Resources Climate Change Adaptation Account funding for coastal erosion reduction projects and infrastructure adaptation.

- Funding Allocation. The State appreciates that, of the funds made available to states in this account, a portion (six percent) is set aside for coastal agencies. Coastal states will have unique adaptation needs. To ensure adequate funding where climate change impacts are most severe, though, the State advocates for a separate allocation for Arctic adaptation efforts.

National Wildlife Habitat and Corridors Information Program. (Sec. 371)

- State's Role. The State fears this section undermines the State's role as primary trustee over fish and wildlife. The proposed National Fish and Wildlife Habitat and Corridors Information Program centers around developing Geographic Information System (GIS) databases and maps to support decision-making in this area. The State approves of this approach. The stated purpose of the effort, however, is to allow the Secretary of the Interior to recommend how the information developed "may be incorporated" into relevant State and federal plans that affect fish and wildlife including land management plans, and the State Comprehensive Wildlife Conservation Strategies. Further, the Secretary is granted authority to "ensure that relevant State and federal plans that affect fish and wildlife (1) prevent unnecessary habitat fragmentation and disruption of corridors; (2) promote the landscape connectivity necessary to allow wildlife to move as necessary to meet biological needs, adjust to shifts in habitat, and adapt to climate change; and (3) minimize the impacts of energy, development, water, transportation, and transmission projects and other activities expected to impact habitat and corridors." The State is leery of this expansion of federal authority. To be successful, adaptation efforts must respect the primary roles and authorities of State fish and wildlife agencies in managing fish and wildlife and be built on this precept.

- Landscape Conservation Planning Programs. The relationship of this program to existing landscape conservation planning programs (such as the Landscape Conservation Cooperatives) should also be clarified.

Subpart D – Additional Climate Change Adaptation Programs

Coastal and Great Lakes State Adaptation Program. (Sec. 384)

- Funding Formula. The State approves of this program's focus on coastal states. By factoring in the proportion of shoreline miles, the formula also acknowledges that a state's amount of coastline is an important consideration in assessing adaptation needs. Once again, however, the State feels the formula should account for the unique needs experienced in the Arctic and high latitudes.

Division B – Pollution Reduction and Investment

Title I – Reducing Global Warming Pollution

Subtitle A – Reducing Global Warming Pollution

Reducing Global Warming Pollution. (Sec. 101)

"International Offset Credits." (Clean Air Act [CAA] Sec. 744)

- International Offsets. The State supports the inclusion of international offsets (the ability for companies to reduce emissions outside the U.S. and have it count towards domestic reductions). Like H.R. 2454, S. 1733 allows international offsets, though the portion of overall offsets comprised by international offsets is smaller in S. 1733 than in H.R. 2454.

Definitions. (Sec. 102)

"Definitions." (CAA Sec. 700)

- Alaska Refineries. Alaskans are uniquely dependant on in-state refineries for their fuel needs. Alaska has limited fuel storage and is located thousands of miles from the nearest non-Alaskan refinery. The state's refineries are particularly vulnerable to increased costs because they are relatively simple on the Nelson Complexity Index, meaning they operate at lower levels of economic efficiency than more sophisticated refineries which can extract more refined product from a barrel of crude oil. If Alaska's refineries are disadvantaged to the point of closing, it would likely produce a wide range of negative consequences across the state. These may include higher costs associated with importing fuel by tanker and building storage tanks in addition to increased economic burdens on Alaska's rural communities.

  The Chairman's Mark includes provisions granting small business refiners additional time to comply with the Pollution Reduction and Investment program and distributes additional allowances to small business and medium refineries. These provisions could help Alaska's refineries, but may not be sufficient to protect them from substantial costs.

  The State would support an exemption for certain domestic refineries to prevent regional market failures and promote the interest of regional energy security. One way of achieving this is through modifications to the definition of "covered entities" in the Clean Air Act. First, the language in S. 1733 could be amended to match the corresponding language in H.R. 2454, requiring that a stationary source producing petroleum products do so in "interstate commerce" to be covered under CAA Section 700(13)(B). Second, CAA Section 700(1)(F) subsection (viii) for "petroleum refining" could be removed. These modifications would exempt refineries, like those in Alaska, that sell virtually all of their saleable product in-state.

- Embedded Emissions, Direct Emissions, and Fossil Fuel Based Carbon Dioxide. The State supports adding definitions for Embedded Emissions, Direct Emissions, and Fossil Fuel Based Carbon Dioxide to clarify that natural gas produced at the wellhead or flowing through a pipeline will not be burdened with the requirement of emission allowances for the carbon dioxide that may one day be produced when the natural gas is burned.

- Natural Gas Liquids. The State seeks clarification on this section, which differs from H.R. 2454 in its definition of natural gas liquids as being "ready for commercial sale or use." This change raises concern given the value natural gas liquids bring in a major gas sale scenario.

Disposition of Allowances for Global Warming Pollution Reduction Program. (Sec. 111)

- Fair Allocation of Allowances. The State is very concerned about the disposition of allowances for Alaska under a cap-and-trade regime. An EPA memo provided to Senator Feingold indicated that the agency drastically underestimated emissions in Alaska. The document gave the false impression that Alaska would be sufficiently accommodated through the provision of free allowances under H.R. 2454. EPA's estimates for capped emissions in 2012 appear to have been based exclusively on Alaska's electric generation, primarily electricity generated for retail electricity sales, leaving out all facilities that generate their own power, such as oil and gas fields and some military bases. As a result, EPA estimated the state's emissions at three million tons per year (MMt/yr). For the same year, the State's models estimated capped emissions at 24.2 MMt/yr. This inaccuracy could substantially disadvantage Alaska in the distribution of allowances.

- Emission Allowances for Alaska Natural Gas Transportation Projects. The State supports specific free emission allowances for the operation of Alaska Natural Gas Transportation Projects. The 1,700 mile Alaska Gas Pipeline will be a source of substantial CO2 emissions, estimated to be between 20-50 percent of total Alaskan capped emissions.

"Electricity Consumers." (CAA Sec. 772)

- Regulatory Commission Approval. This section describes an allocation process for allowances to electric utilities with a requirement that applicants first seek approval from the Regulatory Commission of Alaska. This requirement could create a costly unfunded mandate for the State as regulatory proceedings have become contentious and expensive.

- Hydropower Projects. See discussion for section 161.

"Home Heating Oil and Propane Consumers." (CAA Sec. 774)

- Heating Oil Allocation. CAA Section 774 addresses allocations to states based on domestic oil and propane consumption and, as written, is unfavorable to Alaska. Free allowances for heating oil and propane would be allocated to the states based on each state's relative share of total domestic heating oil and propane consumption. Alaska consumes a significant amount of oil due to heating degree days and the prevalence of heating oil use across the state. Heating oil and propane, however, appear to be weighted equally. Thus, states like California and Texas that may consume more propane for barbecue grills and hot tubs than Alaska consumes heating oil, would receive larger shares. The State believes heating oil and propane should be separated for allocation purposes.

"Exchange of State-Issued Allowances." (CAA Sec. 777)

- State-Issued Emission Allowances. Although Alaska is only an observer of the Western Climate Initiative (WCI), it supports WCI's position that the work of the states should be integrated into a new climate regime, rather than completely preempted. This bill would integrate state efforts by exchanging regional allowances for federal allowances.

"Commercial Deployment of Carbon Capture and Sequestration Technologies." (CAA Sec. 780)

- CCS in High-Cost Locations. The State supports the commercial deployment of carbon capture and sequestration (CCS) technologies, and in particular, sequestration as a result of Enhanced Oil Recovery (EOR) projects. CCS is afforded special treatment through the "bonus allowance value," which is essentially a subsidy when compared to the value of purchased or freely distributed allowances.

  The State supports EOR activities in Alaska, especially on the North Slope. This activity produces multiple benefits. Sequestration of CO2 in a known, well-defined hydrocarbon reservoir and trap is inherently safer than in those that are less defined. Furthermore, increased production due to EOR will lengthen oil field life. Since a gas pipeline from the North Slope is economically dependent on the oil field facilities, increasing oil field life improves the economics of a gas pipeline. Gas, as a fuel source, is more environmentally friendly than other carbon fuel sources.

  The costs of CCS on the North Slope may still be prohibitive, however, even with a boost from these allowances and incentives through carbon costs. Costs have been found to be significantly higher for CCS on the North Slope than the averages published for the Lower 48, primarily due to the North Slope's location and weather. The State supports inclusion of provisions that account for greater expenses in high-cost locations in order to make CCS economically feasible in these areas.

Ensuring Real Reductions in Industrial Emissions. (Sec. 141)

"Definitions; Eligible Industrial Sectors." (CAA Sec. 762, 763)

- Foreign Competition for Domestic Refineries. These sections protect certain manufacturing industries from "off-shoring" and foreign competition, but specifically exclude domestic refineries. The State believes domestic refineries should be protected as well.

Title II – Program Allocations

State and Local Investment in Energy Efficiency and Renewable Energy. (Sec. 202)

- Allocation Formula. The allocation method in this section unfairly disadvantages Alaska. While 30 percent of the allowances are granted to states on an equal basis, 30 percent is allocated based on population and another 40 percent is allocated based on state energy consumption as a share of total domestic consumption. By these standards, Alaska would receive fewer allowances than almost any other state. This proposal is unfair to Alaska because the state has more heating degree days and thus Alaskans use more energy on average than residents of other states, costs are highest in rural Alaska where incomes are typically lowest, and switching to other fuel sources is not possible or cost effective in most cases for rural Alaskans. The State would support an increased percentage distributed equally among states, measuring energy consumption per capita rather than as a share of total consumption, or allocating some allowances based on energy costs as a share of per capita income using Census data.

- Indian Tribes. In addition, the State supports Section 202, which provides for the distribution of allowances to Indian tribes, which may benefit some rural areas of Alaska.

Additional Issues:

Domestic Production. The State believes S. 1733 should be modified to expand access and incentives for responsible domestic onshore and offshore oil and gas exploration and production. The U.S. Department of Energy's recent forecast for growth in the energy sectors shows demand for fossil energy continuing to increase in the nation, and to remain above 80 percent of the total portfolio of energy supply through 2030 and beyond. Therefore, it is clear that fossil fuels will be needed as a bridging fuel in the coming decades, and access to domestic production, and specifically clean-burning natural gas, is imperative. Increased domestic production, carbon mitigation, expanded development of renewables, and long-term nuclear energy planning is the only viable path to a secure energy future.

OMB Funding Criteria. The State believes the Office of Management and Budget should be tasked with developing common criteria federal agencies can use to prioritize funding to state and local governments and tribes for infrastructure and other projects addressing climate change vulnerabilities. Existing funding criteria may not be appropriate for this purpose. For example, in sparsely populated but more vulnerable areas like western Alaska, federal assistance may be withheld despite great vulnerability if the primary criterion for funding is the number of people or the dollar value of infrastructure at risk.

EPA Limitation Provision. S. 1733 does not include important language related to the Environmental Protection Agency that appeared in H.R. 2454. The House bill contains language preventing the EPA from requiring performance standards on stationary sources under the federal cap. The State feels limitation language like that in the House bill should be included in S. 1733 and that EPA officials should not set climate change policy.

Adaptation Priorities. The State has identified the following as high priorities and areas of need with respect to adaptation:

- Changing Risks. The State supports collaboration between the states, federal agencies, and academia to challenge traditional assumptions on weather and climate. This effort should focus on data collection and analysis, forecasting models, hydrology, flood plains and inundation, coastal and riverine erosion, critical infrastructure, and related topics.

- Community Profile. The State believes the initial focus and study on adaptation should be on Alaskan coastal and riverine communities. These communities are currently threatened due to climate change and cannot relocate without extreme disruption and costs.

- Evacuation Routes. The State seeks federal assistance in identifying, designing, constructing, and maintaining all-weather evacuation routes from endangered communities to safe havens from approaching storms.

- Safe Havens. The State seeks federal assistance in selecting and equipping safe havens near the endangered communities, with full consideration of the hydrology, geology, and current and more accurate digital mapping. These safe havens should be outfitted with sufficient housing, water and fuel sources, and communications capabilities.

- Shoreline Protection and Stabilization. The State supports a program of shoreline protection and stabilization and considers such projects as the most effective means of protecting against the sudden onslaught of storms.

- Science, Analysis, and Informed Decisions. The State calls for creating and sustaining a program of coordinated, collaborative scientific examination and study of the Arctic climate and environment.

- Other Key Areas. Alaska's needs will also encompass other key areas such as consequences to natural resources, national security, infrastructure, emergency response capacity, etc., resulting from climate change impacts due to diminishing Arctic sea ice and from ocean acidification.

NFIB

The Voice of Small Business®

ALASKA

February 24, 2010

Representative Bill Stoltze
State Capitol Building
Juneau, Alaska 99801-1182

RE: House Joint Resolution 49

Representative Stoltze:

On behalf of the National Federation of Independent Business/Alaska (NFIB/AK), the state's leading small business advocacy organization, I am writing in support of House Joint Resolution 49 supporting U.S. Senator Murkowski's S.J. Res 26 disapproving the Environmental Protection Agency's (EPA) endangerment finding on greenhouse gases (GHGs) and implementation of climate regulations that would harm Alaska's economy.

On December 15, 2009, the EPA announced a final rule regarding the "Endangerment and Cause or Contribute Findings for GHGs under Section 202(a) of the Clean Air Act (CAA)". The rule finds that six greenhouse gases taken in combination endanger the public health and welfare. This effectively allows the EPA to continue to announce new emissions regulations on businesses and individuals under the CAA. NFIB/AK believes that the CAA is an inefficient and ineffective vehicle to address climate protection and that Congress solely should address GHG emissions. The CAA was designed to control air pollution by requiring individual stationary pollutant sources to institute emission control technologies.

Environmental regulations have been and continue to be a challenge for small businesses, as small entities are not major polluters and least able to sustain or even understand new restrictions. This regulation will create new burdens such as federal permitting requirements, restrictions on fuel choices and energy use, and expensive requirements for installation of new energy efficient equipment.

The EPA's Prevention of Significant Deterioration (PSD) Program is one such program that will impose major new costs on small business. The PSD permitting process itself is time consuming and expensive. The costs include legal, engineering and consulting fees, as well as permitting and administrative fees. Small entities that would now be subject to PSD program requirements include many restaurants, office and apartment buildings, hotels, malls, retail stores and warehouses, schools, hospitals, nursing facilities, churches, and small manufacturing plants. Unfortunately, hundreds of thousands of previously unregulated small entities would be regulated as a 'major' emitter.

National Federation of Independent Business – ALASKA
P. O. Box 34761•Juneau, AK 99803-4761•907 723 6667•www.NFIB.com

In addition to the PSD Program, NFIB/AK expects small businesses to be regulated under the Title V permitting program and the Hazardous Air Pollutant program. Adding more regulatory costs and administrative burdens would be a serious blow to already overburdened small business owners, who according to the January 2010 NFIB Small Business Economic Trends survey, are still suffering from weak sales and profits numbers.

Subjecting over a million new sources to the CAA's complex and expensive permitting process will not materially reduce the nation's greenhouse gases. NFIB/AK strongly supports the independent actions of business to become more energy efficient. According to NFIB's *2006 National Small Business Poll on Energy Consumption*, over the past three years, over 43 percent of America's small business owners have taken steps to reduce the amount of energy their businesses consume. Small business believes that the free market is best suited to develop new energy efficient technologies and renewable sources of fuel, and our nation's job creators stand ready to do so without the heavy hand of government mandates.

NFIB/AK strongly supports the Murkowski resolution of disapproval. We strongly support HJR 49 that puts the state of Alaska on record opposing this bureaucratic action by the EPA that would cause higher energy prices, higher food prices, lost jobs, and reduced production of domestic oil, natural gas and coal.

Sincerely yours,

Dennis L. DeWitt
Alaska State Director

CSSB 144 (FIN) – Musk Oxen Permits & Tags

Version 26-LS0666/E, March 22, 2010
STAFF: Tim Benintendi, 465-4989

SPONSOR STATEMENT and SECTIONAL ANALYSIS

SPONSOR STATEMENT:

There are four Game Management Units in which musk oxen are found in Alaska; Unit 18 (Nunivak and Nelson Islands), Units 22 and 23 (Seward Peninsula and Northwest), and Unit 26 (Northeast). The musk oxen population in Alaska is currently estimated to be 4,400 animals, and annually, between 325 and 350 animals are available for harvest.

The primary objective of SB 144 is to allow issuance of a second permit for a musk ox hunt in a second Game Management Unit or another hunt area within a unit, for resident hunters and subsistence hunters only; no out-of-state hunters qualify. If a harvester does not take an animal under the first permit, this would double the chance a hunter has to harvest the bag limit of one animal, either a bull or a cow. It would not allow for the taking of two animals.

Current statute provides for a limit of one musk ox permit for each hunter per calendar year. Musk oxen are the only game animals in the Arctic to which the one-permit restriction still applies. Under SB 144, the department could issue subsistence permits beyond a calendar year basis, to accommodate a season which straddles two calendar years (Example: a season which runs from August 1st to March 15th), because a "year" under this bill, is changed from a calendar year to a regulatory year, which is July 1st to June 30th.

Wildlife biologists and regulators within the Department of Fish and Game have determined that the health and size of the state's herd is well past the threshold for expanding opportunities for Alaskan hunters. State biologists

estimate that a minimal number of additional permits would be issued under the provisions of this bill, and perhaps 25 more animals would be harvested. If passed this legislative session, these new provisions would be in place for seasons beginning in August of this year.

SB 144 would authorize the Board of Game to reduce or eliminate subsistence tag and fee requirements at its discretion.

SB 144 carries a ZERO fiscal note, and has the support of the department. Support from the hunting community in Northwest Alaska includes the Northern and Southern Norton Sound Advisory Committees, and the Seward Peninsula Musk Ox Cooperators' Group. We have discovered no opposition to this bill.

SECTIONAL ANALYSIS:

SECTION 1: Amends AS 16.05.340(a)(16) to allow the Board of Game to reduce or eliminate the fee, as well as the tag requirements, for a musk oxen hunt, and makes it applicable to all or a portion of a game management unit. Applying this to an open season has been eliminated. The objective is to have the statute for musk oxen read the same as for other game.

SECTION 2: Amends AS 16.05.346(a) by providing that the department shall issue permits to take musk oxen once the Board of Game has reduced or eliminated requirements for a resident tag and fee. This statute is further amended by providing that a resident may not be charged a fee for an application for a musk oxen permit under these circumstances.

COMMITTEE SUBSTITUTE CHANGES:

The Senate Finance Committee Substitute addresses a drafting error. It inserts the word **"and"** between the words "tag" and "fee" in two places, one on page 1, line 15, and the second on page 2, line 8.

SUBJ: Request for Hearing – CSSB 144 (FIN)

I would like to request your consideration for scheduling a committee hearing for this bill, which would allow a second hunting permit for residents and subsistence hunters to take musk oxen. It would not apply to non-resident hunters.

Attached are: Both bill versions, a sponsor statement / sectional analysis, a ZERO fiscal note, and a poster on the status of musk oxen in Alaska. We have discovered no opposition to this bill.

The Committee Substitute made two single-word insertions, to address a drafting error.

If there are any questions, contact Tim Benintendi of my office at 465-4989. Thank you.

Current Status of Muskoxen in Alaska 1970-2009

Letty Hughes[1]*, Patricia Reynolds[2]*, Kimberlee Beckmen[1]*, Phillip Perry[1], Geoff Carroll[1], Steve Arthur[1]

[1]Alaska Dept. of Fish & Game, [2]US Fish & Wildlife Service, Arctic National Wildlife Refuge

Introduction

Muskoxen (*Ovibos moschatus*) were reintroduced to Alaska after disappearing in the late 1800s. The first establishment of muskoxen from Greenland to rural Alaska was Nunivak Island in 1936. The Nunivak population acted as a source of animals for future relocations on historic range between 1967-1981. The relocation of 300 animals created five populations throughout Alaska: Nunivak, Nelson Island, Northeastern, Northwestern, and Seward Peninsula (Figure 1). The successful establishment of muskoxen populations and current cooperative management efforts have resulted in range expansion, population growth and stability, along with hunting and viewing opportunities .

Recent Range Expansion

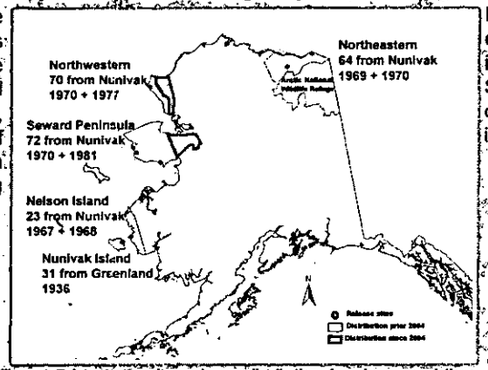

Figure 1. Reintroduction sites and group distribution of muskoxen populations

Population Growth

During the 74 years since 31 muskoxen were first established on Nunivak Island, populations have increased to over 4400 animals in Alaska (Table 2). The Seward Peninsula population is the state's largest, and continues to expand eastward (Figure 1) as the population increases (Figure 2).

Table 2. Current size of Alaska muskoxen populations

Population	Population Size	Date of Estimate	Status
Nunivak Island	567	Oct. 2009	•16% from 1947-1968 •Stable since 1970
Nelson Island	557	Jun. 2009	•22% from 1968-1981 •6% from 2004
Northeast	200-250[c]	Apr. 2008	•650 muskoxen by 1995 •Declined 60% 1996-2006 •Stable from 2006-2009
Northwest	324-424[a]	Jan. 2008	•8% from 1970-1998 •Stable from 1999-2008
Seward Peninsula	2688[b]	Mar. 2007	•14% from 1970-2000 •6% from 2000-2007
Total minimum Alaska population estimate	4486		[a] Wrangell 2006 [b] Gorn 2009 [c] Northern Canada, estimate unavailable

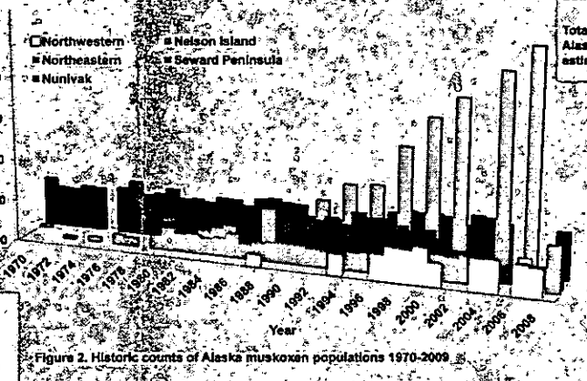

Figure 2. Historic counts of Alaska muskoxen populations 1970-2009

Harvest

Hunting of reintroduced muskoxen first occurred on Nunivak Island in 1975. Four of the five populations are open to harvest on an annual quota and permit basis (Table 1). In 2008, the Board of Game adopted regulations that allow Alaskans to harvest muskoxen on the Seward Peninsula with a registration permit (Gorn 2009). The new hunts were created from recommendations from local advisory committees and Seward Peninsula Muskox Cooperators, a stakeholder group established in 1994.

Table 1. Harvest of Muskoxen in Alaska

Population	Hunting Began	Average Annual harvest Pre-1998	Average Annual Harvest 1998-2008	Available Harvest 2009	Hunt Structure 2009	Sex of Harvest	Available Harvest as % of population 2009
Nunivak Island	1975	66	81	85	•Drawing •Registration	•Bulls 1975-1976 •Cows & Bulls 1979-present	15
Nelson Island	1981	23	23	42	•Registration	•Cows & Bulls	8
Northeastern	1990	9	6	0	No Open Season	•Closed to harvest in 2008	0
Northwestern	1999	No Hunt	<3	6	•Tier II drawing	•Bulls 1999-present	1
Seward Peninsula	1995	13	76	167	•Tier I Registration •Drawing •Federal Permit	•Bulls 1995-2000 •Cows & Bulls 2000-present	7* *will be < 7% in 2010-2011 pending census results

Future Management

The reintroduction of muskoxen to Alaska continues to be successful. Population growth and range expansion provides opportunities for consumptive and non-consumptive uses of muskoxen. Continued investigation of population parameters and health assessments along with public input will enhance future management of Alaska muskoxen.

Table 3. Mortality type in Northeastern population 2007-2009

Mortality Type	Adults	Calves	Total
Bear Predation	16	36	52
Disease	2	2	4
Vehicle collision	3	0	3
Other non-predation	4	10	14
Total	25	48	73

Mortality and Disease Surveillance

Seward Peninsula

- Predation relatively low compared to Northeastern
- Chlamydia present (Gorn 2009)
- Low in copper
- Negative for iron, zinc, selenium (Gorn 2009)
- Composition surveys show 30 yearlings:100 cows since 2002 (Gorn 2009)

Northeastern

- Predation a significant mortality factor (Table 3)
- Mortalities from drowning and stranding on sea ice
- Chlamydia present (Lenart 2009)
- Copper deficient (Lenart 2009)
- Low calf recruitment and low calf:cow ratios (Lenart 2007)

Wildlife Restoration

Your Purchases of hunting licenses and equipment support Wildlife Restoration funding.

RE: House Resource Committee Hearing Request for CSSB 177

This is a request for a House Resource committee hearing for CSSB 177, "An Act relating to an exception for professional fishing guide services in the Kenai River Special Management Area; relating to the licensing and regulation of sport fishing operators and sport fishing guides and licensing and registration of sport fishing vessels; and providing for an effective date."

The following documents will be sent in hard copy and electronically:

- Sponsor Statement
- Current version of the bill
- Letters & emails of support
- Fiscal Note
- Witness/Testimony:
    - Charlie Swanton, ADF&G Sport Fish Division
- Staff member assigned to the bill: Christine R. Marasigan, 465-6876

This bill would ensure the continuation of Alaska's sport fish guide licensing and reporting program, providing oversight over the sport fishing operators and guides. This bill would also provide a waiver for a mid-season replacement of a fishing guide within the Kenai River Special Management Area.

Please contact Christine if you have any questions regarding this legislation.

SPONSOR STATEMENT FOR CSSB 177

"An Act relating to an exception for professional fishing guide services in the Kenai river Special management Area; relating to the licensing and regulation of sport fishing operators an sport fishing guides and licensing and registration of sport fishing vessels; and providing for an effective date."

CSSB 177 will provide a waiver for a mid-season replacement of a fishing guide within the Kenai River Special Management Area and ensure the continuation of Alaska's sport fish guide licensing and reporting program for five years.

This waiver benefits sports fish operating guide businesses—particularly small guide operators who would have to turn away business if they had a sudden and unexpected loss of a guide mid-season because of injury, misconduct or some other unforeseen circumstance.

The licensing and reporting program has proven beneficial to both the sport fishing industry and resource managers. Legislation authorizing the program was passed in 2004 for a number of purposes. The Department of Fish & Game sought more comprehensive and credible information on guide numbers and guiding activities. The Department also wanted to create basic standards for sport fish business operators and guides, including minimum liability insurance coverage, first aid certification, and in some cases U.S. Coast Guard vessel licensing.

Passing SB 177 will provide relief for sport fish operating guides and permit the ADF&G to continue to foster high standards in Alaska's sport fishing industry by enabling the department to carry on collecting important data for management decisions to benefit both fisheries resources and their stakeholders.

SEAGO
SouthEast Alaska Guides Organization

April 3, 2009

Senator Kevin Meyer
Capitol Building Room 101
Juneau, AK 99801

Re: Support for SB-177

Dear Senator Meyer:

The Southeast Alaska Guides Organization (SEAGO) represents 26 sport fishing guides and lodges throughout Southeast Alaska with more than 100 active vessels. Information provided to ADF&G for reporting and analysis under this legislation is of great value and continuation of this program is beneficial to multiple user groups.

This program is one of the best tools that ADF&G has to identify who is involved in the charter/lodge industry and provides important data used to establish levels of harvest, effort, identification of clients, as well as species targeted. The money collected is used for issuing licenses and for sport fishing logbook data collection and reporting expenses.

Our members support extension of the current law with the fees at their levels as originally passed in 2004.

Sincerely,

John Blair, Executive Director

RE: SUPPORT SB 177
SENATE RESOURCES COMMITTEE

Dear Senator Meyer,

The Petersburg Charter Boat Association (PCBA) represents 17 individual charter and lodge businesses operating 22 active vessels in the sportfishing industry. We have been an active association since 1991.

The original legislation authorizing the guide license and logbook program has been an extremely valuable tool in aiding the Alaska Department of Fish and Game and the State of Alaska , in the collection of data necessary to identify not only who the charter industry is but how they interact with other user groups. This information is important for the management of Alaska's resources and resource users, both sport and commercial.

PCBA supported the original bill and we fully support SB 177 complete with the associated fees necessary to fund this ongoing program.

Sincerely,

Stan Malcom
President
Petersburg Charter Boat Association

KENAI RIVER SPORTFISHING
ASSOCIATION

April 3, 2009

Senator Kevin Meyer
Alaska State Capitol
Juneau, AK 99801

Re: SB 177

Dear Senator Kevin Meyer:

Kenai River Sportfishing Association (KRSA) is a 501(c) 3 charitable non-profit dedicated to fishery conservation on the Kenai River and in Alaska. Our programs focus on habitat conservation, fisheries management, research and education.

KRSA is in full support of SB 177, which would repeal the sunset of the sport fish guide licensing program through ADFG. We feel that the sport fish guide licensing program is an essential component of fisheries management that should continue without sunset. The program provides sport fish guides with minimum professional standards and gathers valuable information on the numbers of guides, clients, and harvest levels and patterns, which can be used in sound management of our recreational fisheries.

We support timely reporting requirements of log book information from guides, and the efforts of ADFG process such information into real-time data that then can be used in a timely manner by fisheries managers.

We would like to see implementation of an electronic based log book reporting system, which would remove the current bottleneck of having to enter the paper-based log book information into an electronic database management system. Access to and the ability to use data from the log books should mirror the timeframe of the weekly guide reporting requirements. Unfortunately at this time with the paper-based system that is not possible. This leaves fisheries managers in the position of having to use forecast or past trend data instead of real time data in their in-season decision making.

We support a fee structure that covers the full costs of the program, with the understanding that the goal of being able to provide real-time data from the

log books to fisheries managers is a priority for the department and gets implemented in a timely fashion.

In summary, KRSA supports the continuation of the sport fish guide licensing program as an essential component of responsible fisheries management. Thank you for the opportunity to provide comment on this issue.

Respectfully,

Dick Erkeneff, Board Chair
Kenai River Sportfishing Association

Resolution 2008-08 Kenai River Special Management Area Advisory Board

Presented 3-13-08

Provisions for Replacing a Guide In-season

This process addresses the in-season replacement of a fishing guide registered with Alaska State Parks to guide on the Kenai River in the current year and who has been issued a State Park Commercial Permit for the current year.

The justification for replacement can be either a major medical situation or an extenuating circumstance. The major medical option would be applicable in the case of incapacitating injury, extended illness or death of the fishing guide. The death of an immediate family member that necessitates the guide leaving the business may also be a valid reason to replace the guide. The extenuating circumstance requirement pertains to the termination of the guide's employment with the business owner.

ISSUE: The sudden and unexpected loss of a guide in-season could have serious effects on the business, as well as clients who have paid for these services. Current guide numbers are static and are expected to decline in future years. Due to this trend, it will become more difficult to find a qualified guide as an in-season replacement from among those who have graduated from the state required Kenai River Guide Academy.

The sport fishing business loss particularly among the small operators (t-3 fishing guides) could amount to a significant portion of their season's incomes. For the larger operator, the loss would be proportional to the total number of guides employed. The public would suffer as those who had booked and paid for a guided fishing trip, sometimes a year or more in advance, sometimes a once in a lifetime trip to Alaska and the Kenai Peninsula, would not be able to participate due to the loss of a guide due to one of the reasons cited above.

PROCESS: The person licensed by the State of Alaska as the Sport Fishing Business owner may apply for an in-season guide replacement. Said individual will petition the Kenai River Guide Advisory Board for a hearing. The designated application will be filled out and submitted to the KRSMA superintendent. The KRGAB chair will review the application and set a date for a meeting of the board. The chair can call a meeting at the earliest time a quorum can be present. The business owner applicant will be asked to attend.
The business owner applicant will need to explain the particulars circumstances relative to this petition and why it deserves consideration. The applicant can be asked questions by the board members.

The KRGAB will make a recommendation, in writing to the DNR Area Superintendent.

The following factors will impact the recommendation made by the KRGAB:

1. The business owner applicant will need to show that all options to secure a replacement guide have been exercised. This will include but is not limited to consideration of guides previously licensed with Parks as well as those students having completed the Guide Academy who have given permission to release their contact information. The first action is taken through Parks and the Kenai River Center. The second action is taken through the Kenai Peninsula College.

2. There can be no net gain in the number of guides the Sport Fishing Business has licensed. The replacement is for the remainder of the current year only.

3. The replacement guide will be required to meet all of the following requirements:
a. Must be 18 years of age.
b. Must be a United States citizen.
c. Have a current first aid certification.
d. Have a valid current United States Coast Guard license (when applicable).
e. Have a current Alaska sport fishing license.
f. Have a State of Alaska, ADF&G Sport Fish Guide License.
g. Have proof of current enrollment in an approved drug testing program.
h. Pay the Park Use Permit fee.
i. Sign the Alaska State Park Use Stipulations package.

4 The replacement guide will be required to complete the Orientation Course provided by the Alaska Department of Natural Resources at the Kenai River Center and pay any fees associated with this course. The guide must successfully pass the course; the course is offered on a pass/fail basis.

5 Should the replacement guide wish to guide in a subsequent, he/she will be required to graduate from the Kenai River Guide Academy, as well as meeting all local, state and federal Requirements.

Be it resolved that Resolution 2008-08 is approved and forwarded to the Commissioner of Natural Resources and the Director of the Division of Parks for Consideration for implementation in 2009.

ALASKA STATE LEGISLATURE

SENATOR JOE THOMAS

Senate Bill 195 – An Act relating to the repeal of the establishment of the Goldstream Public Use Area

Sponsor Statement

The Goldstream Public Use Area (GPUA) was created in 1990 by Senator Bettye Fahrenkamp and Representative Mike Davis in order to preserve the recreational opportunities, traditional uses and atmosphere of the local neighborhoods. The GPUA is set to sunset on July 1st, 2010 unless Senate Bill 195 is passed this session.

The GPUA encompasses a patchwork of nearly 2000 acres of state land bordered by Sheep Creek Road to the west, Goldstream Road to the north and the Steese Highway to the east. The GPUA is home to an ever-growing network of trails that connect users to the Chatanika River Valley, the White Mountains and the Fairbanks area, all from a central location close to Fairbanks' population base. The GPUA is passively managed by the state and the trails are maintained by volunteers at no cost to the taxpayers.

All uses are allowed in the area and the GPUA is utilized year round by a variety of outdoor enthusiasts and families.

The repeal of the GPUA's sunset clause is actively supported by the Alaska Outdoor Council, Alaska Dog Mushing Association, Alaska Miners Association, Nordic Ski Club of Fairbanks, Alaska Trapper's Association, Skijoring and Polk Association, Fairbanks Snow Travelers, Northern Area State Parks Advisory Board, Fairbanks North Star Borough Trails Advisory Board, Alaska Trails, Interior Trails Preservation Coalition, Interior Alaska Land Trust, Arctic Audubon Society, and the *Fairbanks Daily News-Miner.*

Additionally, over 100 individuals have written letters of support.

Senate Bill 195 receives broad support from the community and I urge you to support this important effort.

"This all makes for an ideal center for outdoor recreation, a sort of Central Park for the Goldstream neighborhoods. It deserves permanent designation."

Approved by: Tom Irwin, Commissioner
Natural Resources
Date: February 4, 2010

Brief facts on Senate Bill 195

The Goldstream Public Use Area was created in 1990 by Sen. Bettye Fahrenkamp and Rep. Mike Davis and is set to sunset on July 1st, 2010:

The GPA is a patchwork of nearly 2000 acres of state land between the Steese Hwy to the east, Sheep Creek Rd to the west and south of Goldstream Rd to the north.

There is an expanding network of trails that can connect you from the Steese Hwy to Minto Flats and the Richardson Hwy to the White Mountains.

The Tanana Railroad Trail is the main trail within the GPUS and is a future section of the 100 Mile Loop Trail. Also, a proposed connector to the Skyline trail system is also in the works. A substantial maze of smaller trails is also maintained by volunteers.

All uses are statutorily allowed in the area:

Sec. 41.23.150 (c) ...the commissioner shall allow uses within the Goldstream Public Use Area, including but not limited to horseback riding, hiking, mining, all terrain vehicle driving, bicycling, dog sledding, cross-country skiing, skijoring, snowmachining, camping, and other traditional public uses of fish and wildlife populations such as fishing, hunting, trapping, viewing, and photographing of moose, trumpeter swan and other waterfowl, otter, beaver, mink, muskrat, and fox.

Impact on the state:

The state passively manages the GPUA and there are no financial costs incurred by this area. Its trails are maintained by volunteers throughout the year.

SB 195 is supported by:

Alaska Outdoor Council, Alaska Trapper's Association, Alaska Dog Musher's Association, Alaska Mining Association, Nordic Ski Club of Fairbanks, Skijoring and Polk Association, Northern Area State Parks Advisory Board, Fairbanks North Star Borough Trails Advisory Board, Alaska Trails, Interior Trails Preservation Coalition, Fairbanks Snow Travelers, Interior Alaska Land Trust, Arctic Audubon Society, and the Fairbanks Daily News-Miner

print

A central park: Goldstream public use area needs permanent designation

12.25.09 - 11:31 pm

A letter to the editor dated Nov. 23, 1959, from Jim Todd offered a hopeful vision for the Goldstream Valley, which lies just beyond the hills that form the northern horizon in Fairbanks.

Todd appealed to the territory's Bureau of Public Roads, or, rather, the "Bureau of Parallel Ruts," to divert some of its "superhighway"-building enthusiasm into a real road for Goldstream, where dozens of farmers were struggling in the mud.

"We beg your assistance, dear editor. Next year when these spendthrifts start blowing their measly millions, help them 'blow' a few thousand into roads into Goldstream Valley. Alaska's returns will be a thousandfold," Todd wrote.

The roads came to be, but Todd's vision did not. As a result, much of the valley bottom remains undeveloped. For the past 20 years, the state-owned portions of the lowlands have been held in that undeveloped condition by the Goldstream Public Use Area, a popular, legislatively designated withdrawal. The withdrawal is about to expire, so the Legislature needs to reaffirm it — permanently this time.

It was an accident both of Fairbanks' economic history and the swampy nature of the Goldstream Valley bottom that the area remained undisturbed. By the mid-1960s, the roads that Todd wanted were built. Sheep Creek Road was a modern, if still-unpaved, thoroughfare. Goldstream and Ballaine roads weren't far behind. The farmers didn't follow, though. Instead, the roads mostly brought homeowning commuters. Today, the evening view from the valley divide — whether at Happy Gap on Sheep Creek Road or the top of the big hill on Ballaine — reveals a constellation of house lights on the slopes to the north.

The valley bottom itself, where some of the farmers of Todd's day worked, remains empty in many places. Some of the land was never homesteaded because it was too wet or frozen. But the farmers also were undercut by the increasingly efficient road, rail, air and ocean connections to the Lower 48, which allowed importation of cheaper fresh food. So, aside from some large mining pits, Goldstream is more wooded today than it was in the 1950s and early 1960s.

The residential homeowners who replaced the farmers, however, have put the lowlands to use. The acreage has become a favorite year-round recreation area. The old Tanana Valley Railroad bed, along which ties and spikes sometimes still can be seen, provides a backbone trail through the area. The railroad intersects with a few roads and other trails from the homesteading era. Here and there, the old roads are sinking into lakes that began decades ago as drainage ditches, but they still work as winter routes. Ponds, swamps and creeks of various sizes are scattered throughout the area, containing the relatively rich variety of wildlife and vegetation that such areas support.

This all makes for an ideal center for outdoor recreation, a sort of Central Park for the Goldstream neighborhoods. It deserves a permanent designation.

The Goldstream Public Use Area: Keeping the public-use designation will benefit Fairbanks

02.15.10 - 02:11 am

The variety of groups that want to continue the Goldstream Public Use Area tells quite a bit about the level of support for this long-standing recreation area that is in need of legislative reauthorization.

The Alaska Outdoor Council, the Nordic Ski Club of Fairbanks, the Alaska Miners Association, the Arctic Audubon Society and the Fairbanks North Star Borough trails advisory group all want the area continued in its current form.

The Legislature in 1990 set aside the 2,000-acre space for public recreation purposes, but that designation will expire in July unless the Legislature acts to renew it. The Senate on Friday passed a renewal measure by a vote of 15-0, with five members absent.

The area, in the vicinity of Ballaine Road along Goldstream Creek, is popular with a variety of user groups. It's largely swampy, making it good for berry picking in the fall. It's also used by hunters and, in winter, by snowmachiners and dog mushers.

The bill, Senate Bill 195, would repeal the sunset clause of the original measure, making the Goldstream Public Use Area a long-term fixture of Fairbanks. Few things are permanent, of course, and the Legislature could, after passage of this bill, change the purpose of the area if the need arose.

For now, however, the general sentiment is to keep the area as it is. More than 100 letters of support have been submitted on behalf of the bill.

The Senate's strong vote of support and the backing of a mix of user groups should make it easy for the House to pass the measure and for Gov. Sean Parnell to sign it into law.

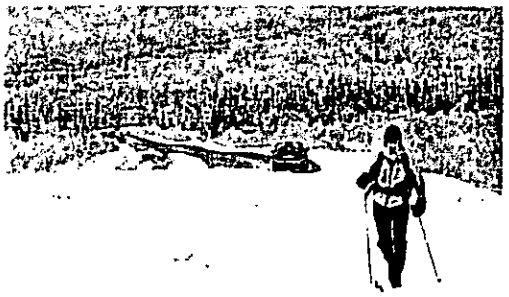
Groups work to preserve public use area in Goldstream Valley

by Tim Mowry / tmowry@newsminer.com
12.21.09 - 02:17 am



FAIRBANKS — For the past 10 years, Bonnie Borba has been able to run her sled dogs right out of her home on Snowhook Drive in the Goldstream Valley.

Her property, like many of her mushing neighbors, bumps right up next to the Goldstream Public Use Area, an almost-2,000-acre swamp along Goldstream Creek that transforms into a popular winter playground each winter for mushers, skiers, skijorers and snowmachiners in the Goldstream Valley.

"That's why we moved there," said Borba, a sprint musher. "Everybody on Snowhook Drive moved there for dog mushing purposes. We have access to the trails right from our house."

What Borba and others didn't know until recently is that there is a 20-year sunset clause on the Goldstream Public Use Area, which was created in 1990 by the Alaska Legislature as a result of a bill sponsored by Rep. Mike Davis and Sen. Bettye Fahrenkamp, both of Fairbanks. The area is set to lose its protected status this coming year.

"That'd be a real bummer if we lost it," Borba said. "I can't see anyone developing it. It's a swamp. Its best use is the uses it serves now."

Borba and her neighbors, along with several outdoor recreation groups, have sent letters to Sen. Joe Thomas, D-Fairbanks, asking him to keep the Goldstream Public Use Area the way it is in perpetuity. Thomas' district includes the Goldstream Valley.

Sen. Thomas agrees, which is why the second-year senator plans to introduce a bill this legislative session to drop the sunset clause and make the Goldstream Public Use Area permanent.

"The legislation will remove the sunset clause and the conversation will ensue from there," Thomas said. If somebody says, 'Well, that means in perpetuity' and we'll say, 'Yeah, that's what we want.' If people object, we work at it from there."

The public use area is a patchwork of land east and west of Ballaine Road along Goldstream Creek. The biggest chunk, and the one that gets the most use, extends east up Goldstream Valley from Ballaine Road. Over the years, an intricate trail network has been developed in the biggest portion of the area.

"Mushers, bicyclists, snowmachiners, skijorers, walkers, trappers, I've passed them all," Borba said.

The area is famous for its abundance of blueberries and attracts hordes of berry pickers in the summer.

Goldstream Valley resident Dick Bishop proposed the idea of a public use area to Rep. Mike Davis, his neighbor at the time, in the late 1980s as a way to preserve trail access on state land that was rapidly disappearing to residential development.

"My thought was that already for decades that area had been used by people for outdoor activities," Bishop said. "It seemed like it was important to the extent possible to get the remaining state lands which hadn't been put up for disposal in a category where those uses could continue."

The public use area concept has worked out fabulously, Bishop said. It's been a low-profile, high-use area with no bureaucracy involved. The area is maintained by users and the state hasn't been involved in any way except for its creation.

"There's been very few conflicts and very few problems," Bishop said. "It seems to me it's worked out real well."

It was Davis who reminded Bishop of the sunset clause last spring. Bishop in turn contacted Thomas' office.

Thomas in turn sent out a letter to multiple user groups soliciting support for the public use area, and his aide, Grier Hopkins, attended meetings with mushing, skijoring and snowmachine clubs, as well as outdoor and mining groups. So far, all Hopkins and Thomas have heard is support.

"We have not run into any opposition at all," Hopkins said, noting that even the Alaska Miners Association wrote a letter in support.

Peg Bowers, who lives a mile or so from the area, skis on the trails about twice a week during the winter.

"For me it's a place I can take my dog and let it run and I can ski at the same time," Bowers said shortly after a ski with her golden retriever, Andra, on Thursday.

Like many, Bowers knew about the Goldstream Public Use Area but she didn't know about the sunset clause. Hearing about it has spurred her to action. Bowers intends to write a letter to Thomas voicing her support for the public use area.

"I thought since it was a public use area it was going to be there forever," she said. "I'd be really sad to lose it. It's part of the joy of where we live."

With lots of support and no opposition, Thomas is hopeful his bill will make it

through the Legislature this session.

Senator Joe Thomas
Alaska State Legislature
1292 Sadler Way, Suite 308
Fairbanks, AK 99701

by FAX - 2 pp. total

Dear Senator Thomas:

Thank you for proposing legislation to give the Goldstream Public Use Area permanent legal status by eliminating the sunset provision from state law. I strongly support this action.

I was very involved in the original Goldstream Public Use Area (GPUA) proposal in the late 1980's. As a Goldstream Valley resident, I was well aware of the area's many values. My family and I were regular users of the trails and wild areas for dog mushing, snow machining, hunting, bird watching camping, berry picking, and just enjoying the varied landscapes and water bodies. Several of our friends have trapped there in the past.

I knew that the Valley trails had been used by mushers, hunters, trappers, miners and others going back to the early 1900's. The old Tanana Valley Railroad grade, dating from the early 1900's, was and is the central east-west Valley trail. Well known sprint dog mushers Rosie Losonsky, Pete Machione, and others trained in the Valley, and it's a popular area for today's sprint, distance and recreational mushers, i.e. "Sunday Tail Waggers".

The trails run through the valley, with numerous connecting trails leading out of the area in all directions, so that in winter one can start in Goldstream Valley and go to most all of the outlying areas around Fairbanks and even to distant parts of Alaska.

In the late 1980's there was increased interest in sales of private and public lands for residential developments even on very poor lands for such use, including the Goldstream Valley lowlands, which are extensively underlain with permafrost. Important main and connector trails as well as numerous ponds, swamps, parts of creeks and good wildlife habitat occurred on the several large parcels of State lands in the Valley lowlands. If those lands were disposed of, much of the trail access could be blocked and other outdoor recreation such as hunting, trapping, wildlife viewing, etc., could be denied by private land owners. Some restriction had already occurred as former homesteads were broken up and pieces sold. People built cabins and larger homes on poor lands, often with complications following due to the extensive permafrost.

If the State lands followed the same pattern of use, important outdoor uses could be lost or restricted, and a lot of people could be disadvantaged by having unknowingly bought and built on unstable, wet, thaw-prone ground.

The situation prompted me and others to propose that all the State lands be kept in public ownership, and open to all the uses which had occurred there for decades.

Representative Mike Davis agreed to introduce legislation to establish the Goldstream Public Use Area. Senator Betty Fahrenkamp took an interest in it. Senator Arlys Sturgelewski, Chairman of the Rules Committee, was convinced of its merits by a brief field-road trip near Session end. Support developed and opposition faded as legislators learned that the most valuable assets of the State lands were the trails and wildlife habitat and the continued opportunities for public use.

Since its establishment, the GPUA has remained pretty much as it was at the beginning as far as the lands, waters, habitats and trails, although some trails have been blocked by nearby private ownership. My impression is that outdoor uses have generally increased as more Fairbanks area residents have found the trails and other opportunities are really convenient and enjoyable. But public uses do not seem to have become congested, perhaps due to the many miles of trails and large undeveloped areas. To the best of my knowledge there have been no serious conflicts among the various uses, even though, mercifully, there are no formal rules or management dictates in place specific to the GPUA. There has been very little impact on ground cover, trail condition, or habitat from public uses. Users of the GPUA seem to take pretty good care of it.

In my opinion, the Goldstream Public Use Area has proven to be a great public outdoor asset and it has not been an impediment to various human uses and developments in Goldstream Valley.

Thank you again for preparing legislation to maintain the Goldstream Public Use Area. I will strongly encourage the Interior delegation to support it, the Legislature to pass it, and the Governor to sign it.

Sincerely,

Dick Bishop

P.S. Merry Christmas & Happy New Year!

Dear Alaska State Legislature,

My name is Orville Helms and I support the Goldstream Public Use Area.

I believe the access and opportunities to outdoor recreation of all types that are available because of the Goldstream Public Use Area are essential to maintaining a strong quality of life for me and our entire community. This Public Use Area is home to a wide variety of uses, including hunting, dog mushing, motorized and non-motorized access, skiing and skijoring, boating, berry picking, trapping and many others. This array of allowable uses gives every Fairbanks resident and family a place, close to town, where they can enjoy the Alaskan great outdoors.

The Goldstream Public Use Area encompasses an ever growing number of established trails that are utilized year round by user groups of all kinds. The loss of this open space, access to trails and beautiful scenery would be a major loss to every resident of Fairbanks, no matter their lifestyle.

Thank you and I urge you to join me in supporting the continued existence of this important piece of legislation.

Sincerely, Orville Helms

Dear Alaska State Legislature,

My name is Victoria Foote and I support the Goldstream Public Use Area.

I believe the access and opportunities to outdoor recreation of all types that are available because of the Goldstream Public Use Area are essential to maintaining a strong quality of life for me and our entire community. This Public Use Area is home to a wide variety of uses, including hunting, dog mushing, motorized and non-motorized access, skiing and skijoring, boating, berry picking, trapping and many others. This array of allowable uses gives every Fairbanks resident and family a place, close to town, where they can enjoy the Alaskan great outdoors.

This array of allowable uses gives every Fairbanks resident and family a place, close to town, where they can enjoy the Alaskan great outdoors.

The Goldstream Public Use Area encompasses an ever growing number of established trails that are utilized year round by user groups of all kinds. The loss of this open space, access to trails and beautiful scenery would be a major loss to every resident of Fairbanks, no matter their lifestyle. The Goldstream Public Use Area section in statute, 41.23, protects the subsurface resource interests in the area, guaranteeing potential development of our riches in the future.

Thank you and I urge you to join me in supporting the continued existence of this important piece of legislation.

Sincerely,

Kathryn Grace Arlen B.A., M.A.

Hello. I'm writing about the sunsetting of the provision to protect the Goldstream Public Use Area. As a frequent recreational user of the area, I really appreciate the tremendous opportunity we have to ski in the woods right outside our back door. Recreational opportunities like this are what make Fairbanks such a great place to live. I would like to encourage Sen. Thomas to work to extend the provision.

thanks,
elizabeth green markley

Hi Mr. Hopkins,

I'm emailing you to let you know I received word of the sunset on the provision that protects the Goldstream Valley Recreation area in 2010. My husband and I were recently able to purchase land in Goldstream area in the neighborhood where we have rented for a long time. The primary reason that we wanted to remain permanently in this neighborhood off of Line Drive was because we can skijor from our front door into Goldstream Valley and beyond. We can also commute to work on our bikes or skis. These things are precious to us--not having to drive our old car around in the winter in order to get out with our dogs. We spent much of last winter building a house on our property and have thoroughly enjoyed to be able to transition into a more permanent status here, next to all these great trails!

Please pass this on to Senator Thomas, in hopes that he will consider extending or making this protected area a permanent feature here in Goldstream Valley!

Laura Grage

Dear Alaska State Legislature,

Subject: Goldstream Public Use Area

Follow Up Flag: Follow up
Flag Status: Completed

Dear Senator Thomas:

We are writing to express our support for the continued protection of the Goldstream Public Use Area and to urge you to pursue legislation to extend and enhance the conservation status of these properties. We frequently use Goldstream Valley for recreation, skiing, running and biking on the many trails that lace the valley, picking berries in the wetlands, and occasionally even canoeing the creek. These trails, the uncluttered landscape, and the wildlife that lives in the valley add immensely to our quality of life, and to that of our neighbors! Unfortunately, changing land ownership has resulted in the closure of a number of important trails over the past several years, and residential construction is encroaching on the valley wetlands.

At a minimum, we'd like to see existing Goldstream Valley Recreation Area parcels protected indefinitely. We would also like to see the area enlarged and made more continuous, as opportunity permits. On the west side of Ballaine Road the recreation area parcels are scattered along the valley with much private land interspersed, although most of this boggy area remains undeveloped and would serve the public better in the future as a recreational sanctuary than as a rag tag assemblage of subdivisions and rental cabins.

It is my understanding that DNR has been reluctant to acquire additional land to add to the Recreation area, even to the extent that they turned down land offered to them by the Interior Alaska Land Trust. Furthermore, when we spoke to DNR staff at the in Fairbanks office, they were barely aware of the existence of the Goldstream Public Use Area...let alone that it was their department's job to manage it! We feel that adding to the Recreation Area is golden opportunity that won't last long.

The Goldstream Valley Public Use Area is a much loved and well used public resource that adds character and a lovely backdrop to the area, even for residents who do not actively recreate here. As a recreation area, it offers a huge benefit to a wide range of outdoor enthusiasts who access the trail system from their own neighborhoods. Again, the western portion is less protected than would be optimal. We urge you to look into ways to protect and enlarge this excellent playground for the future.

Thank you,

Jon Miller and Lou (Linda) Brown

Dear Mr. Hopkins,
I recently found out that the public use area in the Goldstream Valley may lose its protected status. We cannot let this happen! This area is an integral part of who we are as a community, providing recreational opportunities to those who may not otherwise have such opportunities. It has been a blessing for the past several years to be able to walk out my back door and skijor for miles through this area whenever I wanted to. I know there are hundreds of other mushers, skiiers, and other recreational users of these trails that feel as strongly as I do that we must keep this area protected.
Sincerely,
Jessica Guritz

Hello Grier,

Please forward my support for maintaining the Goldstream Recreaction Area to Senator Joe Thomas.

Having lived in this area for 30 years I have seen a lot of irresponsible and inappropriate development. This area is mostly a wetlands, drainage, and mining tailings subject to instability and permafrost. Traditional recreation is the best use of this area (multiple use trails, non-motorized access in the summer).

Senator Thomas is very reasonable and I trust he will work towards the highest level of permanent protection.

Thank you for your hard work on our behalf,

Barb O'Donnell

Subject: Goldstream Valley Public Use Area

Dear Senator Thomas,
I have lived next to and used the Goldstream Public Use Area for 30 years and learn that it's protection may end in 2010. I also understand you may be submitting legislation which would make this area protected permanently. I support this idea 100%. I wish it would have happened 20 years ago. The area is not suited for development, however for multi-use all-year recreation, it's perfect. It's a resource that needs protection in a permanent way, so I can't encourage you strongly enough to do this. Thank you very much. I know I speak for all my neighbors who have used this area for years as well. Best regards, John and Susanne Lyle

Dear Alaska State Legislature,

My name is Jon Underwood and I support the Goldstream Public Use Area.

I believe the access and opportunities to outdoor recreation of all types that are available because of the Goldstream Public Use Area are essential to maintaining a strong quality of life for me and our entire community. This Public Use Area is home to a wide variety of uses, including hunting, dog mushing, motorized and non-motorized access, skiing and skijoring, boating, berry picking, trapping and many others. This array of allowable uses gives every Fairbanks resident and family a place, close to town, where they can enjoy the Alaskan great outdoors.

The Goldstream Public Use Area encompasses an ever growing number of established trails that are utilized year round by user groups of all kinds. The loss of this open space, access to trails and beautiful scenery would be a major loss to every resident of Fairbanks, no matter their lifestyle.

Thank you and I urge you to join me in supporting the continued existence of this important piece of legislation.

Hello Grier,

I just got notice about the Goldstream Public Use Area being in danger of losing protected status in 2010. PLEASE help us protect this unique ecosystem that is already in danger due to global warming issues. The land IS NOT suitable for development of any kind. The protected status it holds today is the most beneficial for all peoples who may visit the area, and all animals that inhabit the land. I may be wrong, but I do believe this piece is part of the 100 mile trail system that is suppose to be dedicated to public use.

I was involved with a huge rezone project in the borough that occurred this fall. My farm borders state land that was rezoned into public usage. I rezoned my farm from general usage to Rural Ag 10 to
protect it from over building and loss of fragile habitat. I am sure
that the group that worked so hard on this rezone will be contacting you to urge that the land remain protected.

PS Congratulations to your dad and you for a successful campaign. My son and I went twice to the polls to make sure the right candidate was elected. This was the first time my son got to vote (as he just turned 18 this summer). At first he did not think the election was important enough to vote, then he listened to the candidates and knew he had to go vote...we voted together in the same booth and we celebrated together once the race was won!

pss I still remember you in class at Ryan Middle School...smile.
Seems you are doing very well in life.

Sincerely,
Sarah Drew

Hi, Grier-

Recently, someone forwarded a little article about the impending sunset of the Public Use Area designation for the Goldstream Valley's trail system. As a frequent, year-round user of these trails, both for bird watching and skijoring, I'm concerned that these trails might loose protection in 2010. I support any efforts that Sen. Thomas and his staff make to permanently designate these trails as a Public Use Area. Please let me know how I can help.

Sincerely,

Lauren Attanas

Hi Grier,

I am contacting you regarding the Goldstream Public use area. I use the area both East and West of Ballaine for hunting, berry picking, and skiing and ski jouring. It is Accessable to me via the new Sky Ridge Park on top of Ski Boot hill road. I live off of Grenac Road. One Idea that comes to mind is to sell the permant status as an adjoining plot of Rec. land to this new borough park.

Let me know what I can do to help preserve this area for recreation use.

Thanks,

Hi I just wanted to write that I strongly support the Goldstream Trails public area that is potentially losing its protection in 2010. Trails are one of the biggest community assets Fairbanks has. They distinguish this city from any other 100,000 person sprawl anywhere else. Trails increase property value of the houses around them, improve community health by facilitating exercise and improving air quality by allowing non-motorized travel.

Please protect this area!

Thank you,

Ben Abbott

Sen. Thomas:
I have used the Goldstream Public Use Area, as defined below, for running and snowshoeing for several years, and I would like it to continue to be available for such uses. Maybe someday I'll get out there skiing and/or berry-picking also. Please consider me a supporter of your bill to keep the area available for public recreation.

Thank you,
Jane Lanford

The Goldstream Public Use Area, a nearly two thousand acre patchwork of designated recreation land in the Goldstream Valley north of Fairbanks, is set to sunset on July 1, 2010. This means the recreation area which encompasses a number of heavily used trails, hunting areas and berry picking opportunities extending from Cash Creek to the Steese Highway will dissolve and be removed from state statute.
The Goldstream Public Use Area is used avidly by dog mushers, runners, snow machiners, skiiers, hunters of all types, berry pickers, bird watchers and trappers to name a few. Its close proximity to the population of Fairbanks allows our families and outdoor enthusiasts of all levels an easy opportunity to enjoy our great outdoors.
Senator Joe Thomas (D-Fairbanks) will be introducing a bill to remove this sunset date and have the Public Use Area remain in perpetuity during the upcoming legislative session starting January 19, 2010. Because of the quickly approaching sunset date, time is of the essence and Senator Thomas must move this bill through the entire legislature in just 90 days. The most effective way to show legislators from across the state the importance of keeping this public use area intact is to show its wide spread support by those that use it.
If you recreate in this area, know somebody who does, or you just enjoy all that the Goldstream Valley's open space has to offer, please contact Senator Thomas' office and ask how you can help. He will have form letters for you to sign on to, a list of supporters and groups to lend your name to and will work with you to make it as easy as possible. Contact his staff, Grier Hopkins at grier.hopkins@legis.state.ak.us or (907)456-8161 to find out how you can help protect this integral part of our Fairbanks lifestyle.

Please let me know what I can do to help extend the protection of this part of Goldstream Valley. My boyfriend and I own 90 acres adjacent to this part of Goldstream and we ski, skijor, winter bike, and berry pick all over the area. These trails are well used and very loved. On my way home today (a rare +30 December day in Fairbanks) there were all sorts of people parked at the main Ballaine road trailhead loading and unloading.

Tell me who to write to or call, and I'd be happy to do so.

Sincerely,
Sara Tabbert

Sen Joe Thomas,

I support the effort to extend or make permanent the current status of the Goldstream Public Use area. I live at 1039 Pika Road, uphill to the south of the area. I am a frequent winter user of the trail system in this area of Goldstream valley, east of Ballaine road. I would like to see the area maintain it's current status as a multi-use recreation area. It's too cold and the ground is mostly permafrost, so it's not good for any kind of housing or industrial development.

If any changes are made, I'd like to see restrictions on summertime use of 4 wheelers, which tear up the main trail in wet or boggy areas.

Sincerely,

Alexander Kaufman

I'd like to help protect the Goldstream Rec Area. I've lived in and recreated in the Goldstream area for more than a decade (ski, ski-joring, running, berry picking, biking, hunting, birding, and in the last year now commute on the winter trails).

Let me know how I can help support the initiative to preserve the area for recreational use.

Thanks, John

Please forward this to the appropriate authority, thank you.

I am in full support of extending the provision to protect the 2,000 acre Goldstream Public Use Area created in 1990. Fairbanks needs every square inch of recreational land it can provide for its citizens and this is a particularly useful area enjoyed by many in the Fairbanks North Star Borough.

Thank you for continuing this provision and serving the public good,

Sincerely,

John Gaedeke

Dear Alaska State Legislature,

My name is Timothy D. Mortensen and I support the Goldstream Public Use Area.

I believe the access and opportunities to outdoor recreation of all types that are available because of the Goldstream Public Use Area are essential to maintaining a strong quality of life for me and our entire community. This Public Use Area is home to a wide variety of uses, including hunting, dog mushing, motorized and non-motorized access, boating, berry picking, trapping and many others. This array of allowable uses gives every Fairbanks resident and family a place, close to town, where they can enjoy the Alaskan great outdoors.

The Goldstream Public Use Area encompasses an ever growing number of established trails that are utilized year round by user groups of all kinds. The loss of this open space, access to trails and beautiful scenery would be a major loss to every resident of Fairbanks, no matter their lifestyle.

Thank you and I urge you to join me in supporting the continued existence of this important piece of legislation.

Sincerely,

Timothy D. Mortensen

Subject: Goldstream Public Use Area

To Senator Joe Thomas,

I would like to express my support for this use area. It has gone unmanaged for many years which makes it a quality area to frequent. It does not need rules and regulations for it to function well. Hopefully, there is no economic value to it but is invaluable for quality recreation.

Sincerely,

Roxie Davis

Dear Alaska State Legislature,

My name is Carol Kaynor and I support the Goldstream Public Use Area. Please help us to protect this valuable resource.

The Goldstream Public Use Area is used for a host of summer and winter activities, including hunting, wildlife photography, motorized and non-motorized access, boating, berry picking, trapping, dog mushing, skijoring, snowmachining, and hiking. The area also provides important wildlife habitat. As most local Fairbanksans know, a pair of trumpeter swans often visits the pond next to Ballaine Road in the spring, and waterfowl are common all over the area. Moose browse on the willows, foxes hunt the ptarmigans. Blueberries grow rampant in the boggy fields north of the creek.

There is major community support for the public use area. A good example is the support shown to the Interior Alaska Land Trust several years ago when they endeavored to acquire the "Blueberry Preserves," a piece of property that lay in between two large blocks of state-owned land in the public use area. The land trust received a huge outpouring of community donations and in-kind support, enabling them to make that purchase.

As a dog musher and skijorer, access to protected trails is extremely important to me. When I moved to Snowhook Trail in 1996, I thought I had died and gone to heaven. Several friends and I bought property there specifically because the parcels bordered the Goldstream Public Use Area. My neighbors and I could run our sled dogs right from our yards, and we could access the extensive network of trails that wind through the public use area. I relocated to Snowhook from another area that had once had a beautiful but unprotected trail system, a trail system now crisscrossed with driveways.

My neighbor and running partner, Bonnie Borba, and I have spent many years maintaining about 10 miles of these trails in the public use area. We spend hours and hours brushing for safety and line of sight, removing stumps, and filling holes, as well as grooming after each snowfall. While grooming or running dogs, we've encountered dog mushers, skijorers, hikers, bicycle riders, four-wheelers, and snowmachiners. From personal experience, I can say that the portion of the public use area that we groom gets heavy and constant use in the winter. We know of many winter users who access the public use area not just from the pullout at Ballaine, but from the El Dorado Creek trail, Willow Run, and several other trails.

The Goldstream Public Use Area is an important and valuable asset to our community. Please support its continued existence.

Sincerely,

Carol Kaynor

Senator Joe Thomas
Alaska State Senate
Fairbanks, Alaska

Hi Joe,

We just want to weigh in on the Goldstream Recreation Area issue. As you know, we've been in this area since 1961 and have seen it evolve over the years. Although my wife and I were teaching in the Bush when Mike Travis was able to set the area aside as recreational, we were thankful that he was foresighted enough to do this. Now that it's coming up for renewal, Jennifer and I are heartily in support of your taking this issue seriously and pushing for a permanent recreational designation.

I couldn't count on all my fingers and toes ten times how much we and our friends from all over Fairbanks have used this area for recreation, whether for skiing or walking in winter or bird watching and walking in summer. I also included it on the Audubon birding and hiking map when I designed the map two years ago.

So, yes, we support your attempts to make this recreational area a permanent one for the Fairbanks North Star Borough. Go for it. Make it so, as Capt. Jacques Piccard said.

Sincerely,

Frank and Jennifer Keim

Subject: Goldstream Public Use Area

Dear Senator Thomas,
After reading the December 21, 2009 article in the Fairbanks Daily News-Miner, "Groups work to preserve public use area in Goldstream Valley," I decided to write you.
I live in Goldstream and use the trails in this public use area frequently. One thing that never ceases to amaze me about this trail network is that, despite the high traffic volume it sustains, it never seems to show the wear and tear of crowds. If someone is inconsiderate enough to litter, someone else who is a little more civic-minded seems to come along right behind them and clean it up. I've never had problems with vandalism, theft, or any other issue that tends to plague so many public-use areas in other places.
As a matter of fact, early this winter, a car had been abandoned at the pullout. After a few weeks, I became sick of looking at it. I contacted the Troopers who referred me to the Borough. The Borough referred me to Alaska DOT. I called a gentleman at DOT and left a voicemail describing the problem. That evening, as I went home, I saw that the car was gone. I was ecstatic that a response had come so quickly. I sent a grateful email to the gentleman at DOT.
A few days later, he called me to say that he was glad that the car was gone, but DOT hadn't done it.
I think that someone else who calls Goldstream home, who takes pride in our little piece of paradise, coincidentally got sick of looking at it the same day I did, towed it away, and ponied up the $60 to dump it legally.
This is only an anecdote, but it certainly lends credence to my idea that something as precious as this kind of a playground in our own back yards is worth taking care of, and it's obvious that the area is well-loved and well-stewarded by those who use it.
Goldstream is a wonderful community nestled into a great town, and much of the flavor of our community comes from the trail networks and the people who use them. Every morning, as I come into town and hit the crest of Ballaine and the flats stretch out in front of me, I think to myself how lucky I am to live in such a beautiful area. Every evening, as I come down the hill and pass the pullout for the Public Use Area, I think the same thing.
Your work to preserve this area for the use and enjoyment of everyone, in perpetuity, will be noted and appreciated by all who use this area. Even those who have never used the Public Use Area would surely miss it, once it's gone.
Thank you for reading this.
Sincerely,
Laurie Smith

Subject: Goldstream Public Use Area

Mr Hopkins:
I support Senator Thomas filing a bill to eliminate the "sunset clause" on the Goldstream Public Use Area. I am a 36-year resident of Goldstream Valley, and supported the initial legislation that was introduced by Representative Mike Davis. I have used the trails in the area since I moved here in 1974, and hunted and picked berries there. In fact, access to the trails and the rest of that area was one reason for my moving to Goldstream Valley. When I still had a dog team I probably used the trails at least 3 times a week for 17 years during the mushing season, and even now I'm out there at least once a week skiing, skijoring or just walking. I've watched as new houses have extended down into the valley from both the north and south sides, and have seen what happened to the trail system west of Ballaine Road where it used to be possible to access trails on both sides of Goldstream Creek. Although the mine has disrupted the original trails on the upper end, the miners have provided alternative access through their claims. However, this is voluntary on their part and I am sure that without the official designation for recreational use, we'd have lost a lot of the trail system to poorly planned development in the valley. This area supports a lot of recreational activity now, with virtually no infrastructure improvements. The only real change from 30 years ago is the Ballaine Road pullout, which has enhanced access to the area. So it seems to me that this has been a real benefit for the public at very little cost. I hope we can keep it that way.
Sincerely,

Richard Shideler

Subject: support of Goldstream Public Use Area-

Hello Grier,
This email is in support of a permanent status designation of the Goldstream Public Use Area: I have lived in the Goldstream Valley for over 21 years and know that the networks of trails have been extensively used over this period by myself along with many skiers, mushers, snow shoers, snowmachiners, bikers, runners, walkers, berry pickers, canoers, bird watchers, and more. I was just on the trails last week for an hour in the late afternoon, and at minus 20 I saw 4 pairs of walkers, 3 dog mushers, 3 snowmachiners, 1 skier with her dog and 2 runners- the area is very much a favorite public winter playground for people and their families. The Goldstream Public use area is a unique part of Fairbanks that many residents enjoy and want to keep a free access designation. Please use this email in any way you can to voice my support of this. This letter is also supported by Alaska's most legendary sprint sled dog racing Champion George Attla, who is living in the Goldstream Valley this winter while coaching a young person training a sprint team to race throughout the state. He also told me to mention that he feels Fairbanks is an exceptional community in its support of traditional winter sports, and why change a good thing. He told me to add his name with mine below.

Please contact me if you have any questions about this email.

Thank you for your time.

Kathy

This array of allowable uses gives every Fairbanks resident and family a place, close to town, where they can enjoy the Alaskan great outdoors.

The Goldstream Public Use Area encompasses an ever growing number of established trails that are utilized year round by user groups of all kinds. The loss of this open space, access to trails and beautiful scenery would be a major loss to every resident of Fairbanks, no matter their lifestyle.

Thank you and I urge you to join me in supporting the continued existence of this important piece of legislation.

Sincerely,

Davya Flaharty

Dear Senator Thomas,

I am writing you to support the preservation of public lands in the Goldstream Valley as open space. As an avid trail user in this area and the author of "Outside in the Interior", I have extensive knowledge of the trails here. These trails are all multi-use trails, that is, they are utilized by snowmachiners, cross-country skiers, skate skiers, skijourers, people walking and talking their dogs for walks, berry pickers, wildlife enthusiasts and bicyclers. There are 4 main subregions of the Goldstream Valley - Cache Creek, Ace Lake, West Goldstream and East Goldstream. The latter two are divided by Ballaine Road. Numerous trails are contained within each subregion and many other trails and trail systems are adjacent to these areas. The West Goldstream area has already undergone significant development which has lead to the outright loss of some trails and the reduction of others. Currently, the trail systems are intact enough that they are somewhat still linked. Please do what you can to protect these well used and loved trails and open areas. Further, improvements, such as a tunnel connecting the East and West areas under Ballaine, should be investigated. Protection of these areas will be a great gift to future Fairbanksians. Please feel free to contact me if you have any questions or if I can be of assistance in this endevour. Thank you.

Kyle Joly

Subject: Support for Goldstream Public Use Area

Dear Alaska State Legislature,

We are Bob and Joann Henszey, and we support the Goldstream Public Use Area.

In addition to the form letter below, we support the Goldstream Public Use Area as a valuable green space asset already in place for the public's enjoyment. As one of the founding supporters for the Chena Flats Greenbelt Project at the base of Chena Rigde in Fairbanks (www.chenaflats.org), we know how difficult it is to purchase green space from private ownership so a traditional common use area can continue to be enjoyed by the public in the midst of a rapidly developing community. Chena Flats would have been much easier if our local government had the foresight to set this area of wetland bogs aside in the first place like the Goldstream Public Use Area.

We believe the access and opportunities to outdoor recreation of all types that are available because of the Goldstream Public Use Area are essential to maintaining a strong quality of life for our family and our entire community. This Public Use Area is home to a wide variety of uses, including hunting, dog mushing, motorized and non-motorized access, skiing and skijoring, boating, berry picking, trapping and many others. This array of allowable uses gives every Fairbanks resident and family a place, close to town, where they can enjoy the Alaskan great outdoors.

The Goldstream Public Use Area encompasses an ever growing number of established trails that are utilized year round by user groups of all kinds. The loss of this open space, access to trails and beautiful scenery would be a major loss to every resident of Fairbanks, no matter their lifestyle.

Thank you, and we urge you to join us in supporting the continued existence of this important piece of legislation.

Sincerely,
Bob and Joann Henszey

Subject: Goldstream Public Use Area

Dear Alaska State Legislature,

My name is Karen Brewster and I am writing to express my support for the Goldstream Public Use Area in Fairbanks. I am a regular user of the trails in this area and believe it is critical that they remain open and available to full public access. Having this wide open undeveloped space and vast trail network in the heart of Fairbanks is a key part of what makes life in Fairbanks so wonderful. Studies have shown that living close to greenspace and having access to outdoor recreation opportunities create a better quality of life and make people happier and healthier.

I believe the access and opportunities to outdoor recreation of all types that are available because of the Goldstream Public Use Area are essential to maintaining a strong quality of life for me and our entire community. This Public Use Area is home to a wide variety of uses, including hunting, dog mushing, motorized and non-motorized access, skiing and skijoring, boating, berry picking, trapping and many others. This array of allowable uses gives every Fairbanks resident and family a place, close to town, where they can enjoy the Alaskan great outdoors.

The Goldstream Public Use Area encompasses an ever growing number of established trails that are utilized year round by user groups of all kinds. The loss of this open space, access to trails and beautiful scenery would be a major loss to every resident of Fairbanks, no matter their lifestyle. With the continued protection of this public use area, I would also like to see some minimal management to deal with conflicting uses and trail maintenance issues.

Thank you and I urge you to join me in supporting the continued existence of this important piece of legislation.

Sincerely,
Karen Brewster

Dear Alaska State Legislature,

My name is Doug Braddock and I support removing the sunset date for the Goldstream Public Use Area (GPUA). I live near the GPUA and am a regular user of the trails in the area.

The Fairbanks North Star Borough is in the process of taking over ownership and management of Bender Mountain Park, located to the south of the GPUA. The trail systems within Bender Mountain Park and the GPUA are complementary and allow for many great multiple-use recreational opportunities.

For the above reason, I would like to see the Goldstream Public Use Area remain in existence without the need to periodically remove a sunset date.

Thank you and I urge you to join me in supporting the continued existence of this important piece of legislation.

Sincerely,

Doug Braddock

There are enough subdivisions in the Fairbanks area with room for more buildings. This is Fairbanks, and we value the remoteness of our home. If we build on all the available land, it will no longer be Fairbanks. The corner of New Steese and the Mitchell Expressway already looks much like parts of Anchorage or towns in the lower 48. While I like the convenience, I liked the raw land better. Some good bike trails are under that asphalt.

Thank you and I urge you to join me in supporting the continued existence of this important piece of legislation.

Sincerely,

Don Logan

To Senator Joe Thomas, care of Grier Hopkins,

Dear Alaska State Legislature,

Our names are Aren and Jen Gunderson and we support the Goldstream Public Use Area.

We believe the access and opportunities to outdoor recreation of all types that are available because of the Goldstream Public Use Area are essential to maintaining a strong quality of life for us and our entire community. This Public Use Area is home to a wide variety of uses, including hunting, dog mushing, motorized and non-motorized access, skiing and skijoring, boating, berry picking, trapping and many others. This array of allowable uses gives every Fairbanks resident and family a place, close to town, where they can enjoy the Alaskan great outdoors.

The Goldstream Public Use Area encompasses an ever growing number of established trails that are utilized year round by user groups of all kinds. The loss of this open space, access to trails and beautiful scenery would be a major loss to every resident of Fairbanks, no matter their lifestyle. We use this trail system for skijoring and mushing our 5 dogs. We have introduced numerous individuals to skijoring and mushing on these trails and others in the Goldstream Valley. This trail system is unique in that it is so close to town and heavily used, yet maintained and regulated entirely by local residents through their mutual respect for the land and its users at no cost (that we am aware of) to the state or borough.

Thank you and we urge you to join us in supporting the continued existence of this important piece of legislation.

Sincerely,

Aren and Jen Gunderson

Dear Alaska State Legislature,

My name is _Katherine Beattie_ and I support the Goldstream Public Use Area.

I believe the access and opportunities to outdoor recreation of all types that are available because of the Goldstream Public Use Area are essential to maintaining a strong quality of life for me and our entire community. This Public Use Area is home to a wide variety of uses, including hunting, dog mushing, motorized and non-motorized access, skiing and skijoring, boating, berry picking, trapping and many others. This array of allowable uses gives every Fairbanks resident and family a place, close to town, where they can enjoy the Alaskan great outdoors.

The Goldstream Public Use Area encompasses an ever growing number of established trails that are utilized year round by user groups of all kinds. The loss of this open space, access to trails and beautiful scenery would be a major loss to every resident of Fairbanks, no matter their lifestyle.

Thank you and I urge you to join me in supporting the continued existence of this important piece of legislation.

Sincerely,

Katherine Beattie

Dear Alaska State Legislature,

My name is Carolyn Parker and I support the Goldstream Public Use Area. I have lived in the Goldstream Valley area for almost 40 years and have used the area north of Ballaine Road (as well as a lot of the area downstream of Ballaine Road, following Goldstream Creek all the way to S of Murphy Dome, for skiing, ski-joring, snowmaching, bird watching and berry picking. Most of us realize that most of this area is totally unfit for subdivision efforts due to the saturated and permafrost rich soils, but its use for berry picking, wildlife habitat, and all forms of winter recreation is invaluable for those of us who live in the area. It is a 'green belt' we would certainly hate of see lost.

The Goldstream Public Use Area encompasses an ever growing number of established trails that are utilized year round by user groups of all kinds. The loss of this open space, access to trails and beautiful scenery would be a major loss to every resident of Fairbanks, no matter their lifestyle.

Thank you and I urge you to join me in supporting the continued existence of this important piece of legislation.

Sincerely,

Carolyn Parker

To whom it may concern,

I live in the Goldstream valley and routinely use the trails on both the East and West side of Ballaine road. I support making the Goldstream Public Use Area into a permanent public use area.
The loss of these trails would mean needing to relocate, with a kennel of sled dogs it is imperative to be able to run from home.

Sincerely,
Melissa Rouge

Subject: Support for Goldstream Public Use Area

Please add my name as a supporter of making the Goldstream Public Use area protections permanent.

I'm the volunteer trails coordinator for the Alaska Dog Mushers Association in Fairbanks and help with issues concerning the 28 mile trail system located in and around Creamers Refuge between College Road and Farmers Loop Road.

These two trails systems, along with several others in the Fairbanks area, help make Fairbanks the mushing capital of the world and contribute significantly to the winter economy by supporting local businesses and bringing in out-of-town visitors.

As Fairbanks has grown, access to many trails has been lost due to new construction blocking unofficial trails. It's critical that key existing trails be protected from future encroachment. Fortunately, the Goldstream Public Use area is so wet that there are few alternative uses that are practical and continued multi-use recreational use is clearly the highest and best use.

Thanks.

Dear Alaska State Legislature

My name is Eleanor Viereck and I support the Goldstream Public Use Area. The large area is an incredibly valuable asset to dog mushers who need long trail systems for training and recreation. I have used this area for fifty years for berry picking, skiing, biking, bird watching, and field trips when I teach ethnobotany and ecology courses or take young people on nature quests. I drive over to Goldstream valley from my home in Pearl Creek Valley to get a good look at a sky without light pollution in the winter dark. The land values in Pearl Creek valley (adjacent to Goldstream Valley) are enhanced by the existence of our ski trails. And as an ecologist I feel strongly about the importance of this undisturbed area as a resource for our long-term well-being, and even for our survival.

Thank you,

Eleanor G. Viereck, Ph.D.

Subject: Goldstream Trails

Senator Thomas,

I strongly support the effort to convert the Goldstream Public Use Area to permanent status.

I live in Goldstream Valley, on Pine Wood Road (top of Pandora), several miles from these trails, and I regularly use them in the winter for dog mushing and skiing. I personally contribute to maintenance of the trails by grooming some of them in winter (for dog mushing) using snowmachine and iron drag. I also occasionally enter the area in late summer for berry-picking.

The Goldstream Public Use Area is very important to the character of the area. My experience is that yes, people are able to share these trails for all types of recreational activities, because of the generally cooperative attitude of the users. This type of non-regulated, cooperative use is the type of thing Alaskans often say they want. I strongly support making the public-use status of the area permanent.

Thank you for your efforts.

Greetings,

I live in Goldstream Valley and have been using the trails here for over 15 years. These trails are very popular and get regular use by a wide range of people and their pets and working animals from horses to dogs. I must admit I haven't seen cats on the trails yet. It's a prime blueberry picking area in the summertime. I see hikers and bow hunters in the Fall. Popular with mushers, skiers, skijorers, walkers, snowmachiners, and bicyclists in winter. I strongly support preserving this area for public use.

Thank you for your consideration.

Subject: Goldstream Public Use Area

Dear Mr. Hopkins,

I'm writing to support the bill to make the Goldstream Public Use Area on the outskirts of Fairbanks into a permanent public use area. I'm not a constituent, so I don't merit a real vote in the matter, but my son David Partee and daughter-in-law Carol Kaynor are, and they are directly affected, since they live close by. I had my first mushing lessons last March (at age 68, but better late than never!) on trails that start at their place and connect into trails in the Goldstream Public Use Area, and I appreciate what a wonderful area it is and how much use it gets by mushers, skijorers, hikers, photographers, blueberry-lovers, bird-watchers, ... It's a treasure, and should surely be preserved for future generations.

Sincerely,
Barbara Partee

Subject: Support for Goldstream Public Use Area

Please add my name as a supporter of making the Goldstream Public Use area protections permanent.

I'm the volunteer trails coordinator for the Alaska Dog Mushers Association in Fairbanks and help with issues concerning the 28 mile trail system located in and around Creamers Refuge between College Road and Farmers Loop Road.

These two trails systems, along with several others in the Fairbanks area, help make Fairbanks the mushing capital of the world and contribute significantly to the winter economy by supporting local businesses and bringing in out-of-town visitors.

As Fairbanks has grown, access to many trails has been lost due to new construction blocking unofficial trails. It's critical that key existing trails be protected from future encroachment. Fortunately, the Goldstream Public Use area is so wet that there are few alternative uses that are practical and continued multi-use recreational use is clearly the highest and best use.

Thanks.

December 16, 2009

Dear Alaska State Legislature,

The Alaska Dog Mushers Association supports the Goldstream Public Use Area.

We believe the access and opportunities to outdoor recreation of all types that are available because of the Goldstream Public Use Area are essential to maintaining a strong quality of life in our community. This Public Use Area is home to a wide variety of uses, including hunting, dog mushing, motorized and non-motorized access, skiing and skijoring, boating, berry picking, trapping and many others. This array of allowable uses gives every Fairbanks resident and family a place, close to town, where they can enjoy the Alaskan great outdoors.

The trails in the Goldstream Public Use Area are used extensively by mushers. Fairbanks is home to the best sled dog racing in the world and mushing brings millions of dollars to Fairbanks every year. Without access to trails like these, this would not be possible.

The Goldstream Public Use Area encompasses an ever growing number of established trails that are utilized year round by user groups of all kinds. The loss of this open space, access to trails and beautiful scenery would be a major loss to every resident of Fairbanks, no matter their lifestyle.

Thank you and I urge you to join us in supporting the continued existence of this important piece of legislation.

Senator Joe Thomas
1292 Sadler Way – Suite 308
Fairbanks, AK 99708

12/22/09

Dear Senator Thomas:

Please allow the Alaska Trappers Association to add their voice to those in support of the Goldstream Public Use Area (GPUA) and your proposed legislation which would preclude the "sunsetting" of the current law.

ATA is a statewide organization with several hundred members in the Fairbanks area. At the time of the original legislation establishing the GPUA, our group, along with many other outdoor users, supported Senator Fahrenkamp and Representative Davis in their efforts to protect this area. Our support for keeping the area insulated from development and open to a wide variety of outdoor activities has not diminished.

We feel that the multiple uses of this area, particularly when it comes to wildlife, is a model of cooperation. The trails system is important to untold local recreationists, including trappers. The area is heavily used for moose hunting (currently by bowhunting only) and has been the site of habitat improvement and enhancement projects by ADFG and ADNR.

We are grateful that trapping was one of the designated uses when the area was established. This use remains important. Having areas such as the GPUA in proximity to town is very helpful to new and younger trappers who cannot travel great distances.

We appreciate and support your efforts to rid the statute of the "sunset" clause.

Sincerely,

Randy Zarnke

Fairbanks, AK 99701

Dear Senator Thomas,

Thank you for having Grier attend the Legislative Briefing presented by the Citizen Advisory Board of the Northern Area State Parks on December 9th, 2009. The members of the Board appreciated the opportunity to share our pride in, and our hopes for, Alaska State Parks.

The goal of Alaska State Parks is to assure quality management of our park units. We have implemented a wide range of ways to provide quality service with the least cost to the state. Tools include privatization, partnerships, grants, volunteers, and user fees.

Unfortunately these tools haven't proven successful for the three popular sites in the Northern Area as well as the 66.5 million dollar Deferred Maintenance Back-log. We ask for your support in strengthening the park system for the use, enjoyment, and welfare of the people.

Thanks again for attending the briefing and supporting Alaska State Parks! We look forward to working with you on issues and opportunities facing our State Parks. Please feel free to contact us with any comments or questions. Thank you for your support of Alaska State Parks!

Respectfully,

Jamie Marschner, Chair
Northern Area Alaska State Parks Citizen Advisory Board

ALASKA TRAILS

December 17, 2009

Senator Joe Thomas,

RE: SUPPORT OF THE Goldstream Public Use Area

Sen. Thomas,

Alaska Trails greatly appreciates your efforts in helping to preserve the Goldstream Public Use Area. We hope the Legislature sees the wisdom in saving this very valuable resource in interior Alaska by keeping the public use area and eliminating the sunset clause.

The Goldstream Public Use Area has many points in its favor:

- It is used for a large variety of winter activities including snowmachining, mushing, Nordic skiing, ski-joring, running, walking, biking, and snowshoeing.
- Despite much of the public use area being boggy, it is still popular in summer and fall for berry picking, bird watching, and hunting.
- The main trail that traverses the public use area is integral to the 100-Mile Loop Trail, an important trail project of the Fairbanks North Star Borough.
- The area borders a parcel of land that the borough plans to turn into Skyline Ridge Park, a lightly managed park with an emphasis on trails. Trails already existing there connect to trails in the Goldstream Public Use Area.
- Winter tourism is growing in interior Alaska. A large component of that business is the easy availability of trails and the recreational opportunities they offer. Goldstream Valley offers one of the best wilderness trail experiences that can be had a few minutes from Fairbanks.
- Land in the public use area is mostly boggy. It is far more valuable as a public use area than it would ever be if it were developed.

Alaska Trails urges the Alaska State Legislature to support the Goldstream Public Use Area by continuing its existence without a sunset clause. This valuable resource needs to be protected.

INTERIOR TRAILS PRESERVATION

ITPC

Tuesday, December 15, 2009

Senator Joe Thomas,
1292 Sadler Way Ste 314
Fairbanks, AK 99701

Re: The Goldstream Public Use Area

Dear Sen. Thomas,

Thank you for taking up this very important issue. We strongly urge the state legislature to pass a law that would continue the Goldstream Public Use Area. This area is a highly popular and important part of winter recreation to interior Alaska for both residents and visitors. We were unaware of the sunset provision in the original law that created the public use area and were very concerned when we learned of it.

The nearly 2,000-acre PUA is heavily used by area residents and others. Goldstream Valley, of which this PUA is a critical part, is especially popular in the winter. The area has a network of trails used by mushers, snowmachiners, skijorers, winter bikers, skiers, runners, walkers, and snowshoers. The trails connect to other trails that lead to Fox, lower Goldstream Valley, El Dorado Creek Valley, O'Connor Creek Valley, and Skyline Ridge. The trails in the PUA can be accessed at several points including parking pullouts on Ballaine and Goldstream roads, Skyline Ridge trails, and subdivisions off Ballaine and Goldstream roads. This access and popularity make the PUA a very valuable resource.

Additionally, the main trails in the PUA make up a portion of the borough's 100-Mile Loop Trail, a trail concept that will connect existing trails to make a large circle around Fairbanks. The 100-Mile Loop Trail will greatly enhance the trail experience in Fairbanks. The trails through the Goldstream PUA are a critical part of that project. Trail connectivity is critical. Without it, trails can be unusable or even unsafe if trails must cross numerous roads. This is especially true for mushers, a significant portion of winter trail users here.

Yet another important aspect of the PUA, is its proximity to a planned borough park. The Fairbanks North Star Borough is working with the state Department of Natural Resources to assume ownership of a 400-acre parcel of land on Skyline Ridge that abuts the PUA. The borough intends to turn that parcel of land into a lightly managed park. The park and PUA would complement each other.

Much of the PUA is boggy during summer, yet it is still used by berry pickers, canoers,

ITPC
P.O. Box 74263, Fairbanks, AK 99707 Phone: (907) 458-7968

bird watchers, and hunters. The boggy land is ill-suited for development. However, experience has shown that with enough gravel people will build in all sorts of boggy land. That is why it is imperative that the PUA be protected. It is worth far more to the community as a public use area than if it were eventually sold and developed as sub-prime lots.

We ask that the PUA be continued without a sunset clause. We are confident that if given proper protections the Goldstream Public Use Area will be a valuable asset to the community for many years to come.

Sincerely,

Eric Troyer

BOARD RESOLUTION

RE: Removing sunset clause on the Goldstream Public Use Area designation

WHEREAS the legislation for the Goldstream Public Use Area (AS 41.23.140 - 41.23.170), a nearly two thousand acre patchwork of designated Alaska State land in the Goldstream Valley north of Fairbanks, is set to sunset on July 1, 2010, and

WHEREAS the Goldstream Public Use Area is used by dog mushers, runners, snow machiners, skiers, hunters, berry pickers, bird watchers, trappers and others for recreation, subsistence and other activities; and

WHEREAS the proximity of the Goldstream Public Use Area to the population of Fairbanks makes it especially valuable to families and outdoor enthusiasts of all levels; and

WHEREAS the Goldstream Public Use Area provides many other ecosystem services in its natural condition, including water filtering and storage capacity, wildlife habitat, and natural viewsheds; and

WHEREAS the Interior Alaska Land Trust owns 110 acres of conservation land adjacent to three parcels included in the Goldstream Public Use Area and has an interest in preserving the conservation values of the adjacent lands for its members and residents of the Fairbanks area; therefore

BE IT RESOLVED, that the Interior Alaska Land Trust supports legislation to remove the sunset clause from the legislation designating the Goldstream Public Use Area, and have that legislation stand until modified by vote of the legislature. The Interior Alaska Land Trust supports Senator Joe Thomas (D-Fairbanks) and any other legislators in their efforts to remove this sunset clause.

The Board of the Interior Alaska Land Trust unanimously voted to approve this resolution during a regularly scheduled monthly board meeting on 8 December 2009.

Re: Goldstream Public Use Area

Dear Members of the Alaska State Legislature:

The Goldstream Public Use Area, Alaska Statues 41.23.140-170, is an important asset to the Fairbanks North Star Borough community. Senator Joe Thomas is proposing a bill that would remove the "sunset" clause of July 1, 2010 from the Goldstream Public Use Area, AS 41.23.140, and preserving it in perpetuity. As recommended to me by the Borough Trails Advisory Commission and the Parks and Recreation Advisory Commission, I support this legislation.

For many years this area of approximately 2,000 acres has been used for a variety of summer and winter outdoor recreational activities. These activities range from motorized to non-motorized uses and include snow-machining, sled dog-mushing, skiing, skijoring, snowshoeing, hunting, hiking, trapping, berry picking, walking, and canoeing to name a few. With its proximity near a major urban area the Goldstream Public Use Area not only provides for these uses but also serves as a vital link to an ever expanding network of recreational trails, extending beyond the boundaries of the borough, and enjoyed by local and state-wide residents alike.

The outdoor recreational opportunities within the Goldstream Public Use Area provide significant economic and social value to the Borough, its residents, and visitors to our community. To lose this public use area would be a tremendous loss to our community. I urge your support of this important piece of legislation.

Sincerely,

Luke Hopkins, Mayor
Fairbanks North Star Borough

SB 208 requires the Department of Natural resources to complete a report by November 1, 2010 for the legislature dealing with potential measures to encourage the investment needed to bring on undeveloped and unproven gas resources in the Cook Inlet.

It is estimated that $200,000 will be required for an outside consultant and legal advice. If the study must be completed by November 1, 2010, DNR will evaluate whether an existing contract with an outside consultant can be modified to include this work. It will be a challenge to complete a thoughtful and comprehensive study in such a short period of time.

SENATOR BILL WIELECHOWSKI

April 7, 2009

Representative Mark Neuman, Co-Chair
Representative Craig Johnson, Co-Chair
House Resources Committee
State Capitol
Juneau, Alaska 99801

I am writing to respectfully request a hearing on CS for SJR 16, which expresses the support of the Alaska State Legislature for responsible development of the oil and gas resources in federal waters off of Alaska's coast. This resolution, which passed the Senate unanimously, also calls on the Congress to share revenues from offshore development with coastal energy-producing states to compensate them for developing and maintaining infrastructure in support offshore development.

Secretary of the Interior Ken Salazar will be holding a hearing in Anchorage on proposed outer continental shelf oil development off Alaska on April 14 and it would be advantageous to present him with this resolution at the hearing.

Thank you for your prompt consideration of this request.

Sincerely,

Senator Bill Wielechowski

SENATOR BILL WIELECHOWSKI

SJR 16:
Development of Offshore Oil and Gas Reserves

SJR 16 expresses support for responsible development of the oil and gas resources in federal waters off Alaska coast. It also urges Congress to provide Alaska with a fair share of federal revenue from oil and gas leasing and development in federal waters.

Under current law, Alaska receives little revenue from oil and gas leasing and development that occurs more than six miles off our coast. This contrasts with how other states, including Louisiana, Mississippi, Alabama and Texas, are treated. Under the 2006 Gulf of Mexico Energy Security Act, these states receive 37.5 percent of revenues from newly leased federal waters off their coasts. This new law is expected to direct more than $13 billion to Louisiana alone over the next three decades.

Alaska deserves to be treated in the same way as other states that contribute to our nation's energy security. Like other energy-producing states, Alaska bears the costs of infrastructure in support of offshore development, and our coastal resources and residents bear the impacts of offshore development. Alaskans deserves to share in the benefits of production, just as we do its costs.

The federal Minerals Management Service estimates that there could be as much as 55 billion barrels of technically recoverable oil and 280 trillion cubic feet of technically recoverable gas off Alaska's coast. Last year companies bid $2.6 billion for access to tracts in the Chukchi Sea. More than 1.4 million acres off Alaska's coast have already been leased by the federal government. The Chukchi Sea sale could result in the leasing of an additional 2.7 million acres, providing ongoing support for a robust oil and gas industry in Alaska.

As more lands off Alaska's coast are leased for offshore oil production, we need to ensure that Alaska gets its fair share of the benefits of that leasing and production. It's time Congress treated all coastal states equally and fairly. Please join me in supporting SJR 16.

Ted Stevens: Time to divvy up OCS

Alaska's senior U.S. senator, governor want state to get share of outer continental shelf oil and gas royalties

By KRISTEN NELSON
Petroleum News

The State of Alaska should share in royalties from outer continental shelf production on its borders, says U.S. Sen. Ted Stevens, R-Alaska, predicting that such sharing will take place as a condition of OCS production off Alaska.

The senator, in Juneau to give his annual update to the Legislature, told members of the press Feb. 19 that the bill passed in 2006 which allocated OCS monies to Gulf of Mexico states originally included Alaska.

"We had a provision in the bill as it went through and it was the people opposed to ANWR who took that out of there. They thought it was an incentive to drill in Alaska and would not let us enact it."

Stevens said North Slope residents oppose drilling "until they get a percentage of it — that's what we're facing right now."

Both the state and federal governments "have to wake up," Stevens said.

People on the North Slope are not going to put up with oil and gas drilling and the risk to their resources from a spill. "I don't think it's a great risk," Stevens said, but calling it a "potential risk to their resources."

Alaska is not included in OCS offshore royalty sharing, he said, "because of the opposition of the extreme environmental people."

Alaska has two-thirds of the outer continental shelf "and we don't get any money from any production that comes from the outer continental shelf."

"I predict there's not going to be any production until we get it. Both the state and the Native people oppose any real production until we get the same kind of share that others get from production off our shore," Stevens said.

Governor: time Alaska starts promoting OCS share

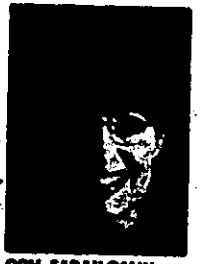
Alaska Gov. Sarah Palin agreed with Stevens on OCS royalty share.

"It's going to become much brighter on everyone's radar screen, I think, once Alaskans realize that these other coastal states do receive OCS revenue shares. Alaska doesn't; we're exempt from that," the governor told reporters Feb. 21.

She said she would like to see that changed and thinks it's time Alaska started pushing for that change, and anticipates that the state's congressional delegation would support that move.

Stevens helped the Gulf of Mexico states get a share of OCS royalties, Palin said, adding that she hopes delegations from those states would, in return, assist Alaska in getting royalties off its shores.

SEN. TED STEVENS



GOV. SARAH PALIN

Alaska's share $21.7 million

Alaska does earn royalties from production from federal lands onshore and from offshore lands adjacent to state waters.

Alaska was one of 34 states which earned a share of almost $2 billion during fiscal year 2007 as part of federal revenues collected by the Department of the Interior's Minerals Management Service, MMS said late last year.

Alaska's share, $21.7 million, represents its share of revenues collected from oil, gas and coal production.

MMS said for the majority of onshore federal lands, states receive 50 percent of the revenues while the other 50 percent goes to various funds of the U.S.

see **SHARE** *page 14*

continued from page 13

SHARE

Treasury, including the Reclamation Fund for water projects. Alaska receives a 90 percent share of revenues from onshore production as prescribed in the Alaska Statehood Act.

"In addition, Texas, Alabama, Louisiana and Mississippi with producing federal offshore tracts adjacent to state waters receive 27 percent of those mineral royalties," while remaining offshore revenues MMS collects go into various accounts of the U.S. Treasury, the majority into the general fund.

U.S. coastal waters are divided into three zones: from zero to three miles is state waters; in federal waters from three to six miles from shore, states get a 27 percent cut of royalties from production; there is no state cut beyond six miles, except for those Gulf Coast states receiving OCS royalties as a result of the 2006 federal legislation. ●

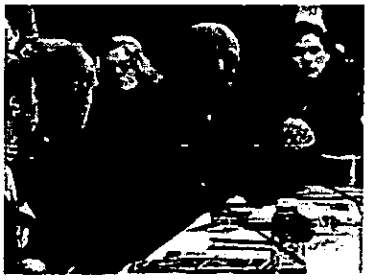
KTUU News Story

Shell Oil in the United States President John Hofmeister (Rich Jordan/KTUU-TV)

North Slope Borough Mayor Ed Itta (Rich Jordan/KTUU-TV)

University of Alaska Anchorage Chancellor Fran Ulmer (Rich Jordan/KTUU-TV)



Alaska AFL-CIO President Vince Beltrami (Rich Jordan/KTUU-TV)

by Steve Mac Donald
Tuesday, Feb. 19, 2008

ANCHORAGE, Alaska -- A unique conversation between 32 people took place Tuesday. Representatives from big oil, environmental groups, government and labor tied to the Alaska's oil industry gathered around a table to discuss the state's future.

The U.S. uses 10,000 gallons of oil a second every day and Shell Oil in the United States, which sponsored the summit, made that point very clear.

The company's president, John Hofmeister, is on a kind of goodwill tour around Alaska. He faced his fair share of questions from participants, many of which questioned him about finances.

North Slope Borough Mayor Ed Itta says the federal government isn't sharing revenues from off-shore lease sales with coastal communities like his.

"We believe it's reasonable and fair. While monetary gains is not the issue, of course, it's always nice to have revenues and continue to fund our government," he said. "We as a people are being asked to take a whole bunch of risk without any reward."

Perhaps the most compelling question posed at the roundtable had to do with jobs. Who, exactly, is going to retrieve all that oil and gas in the Beaufort and Chukchi Seas and on the North Slope?

"We've got about a 20,000 workers shortage so we have our work cut out for us just to even meet current demands," said Alaska Vocational Technical Centers director Fred Esposito.

With the possibility of a natural gas pipeline in Alaska's future, along

with potential oil developments in the Beaufort and Chukchi Seas, many at the table worry there won't be nearly enough Alaskans qualified to fill construction jobs those projects could bring.

"We tried to pass a local hire law a couple times, went to the Supreme Court, that didn't go very well," said University of Alaska Anchorage Chancellor Fran Ulmer.

Many at the meeting were concerned the jobs may go to workers Outside.

"The ultimate local hire is growing our own, training our own -- it's kind of a no brainer isn't it," Ulmer said.

Labor unions say they're trying to meet the demand through apprenticeship programs.

"The majority of work that needs to be trained for are the primary crafts -- welders, operators, pipe fitters, teamsters -- and we do that real well and we've got a 100 percent resident hire requirement in our apprenticeship program," said Alaska AFL-CIO President Vince Beltrami.

The state must take advantage of training programs such as this for what could be a potential job boon if and when these major projects become reality.

A new training facility planned for the Fairbanks area may help train Alaskans to qualify for jobs in the maturing energy field here.

The organizers of Tuesday's discussion was a Washington, D.C.-based group, the Congressional Quarterly, which says a White Paper will be produced summarizing the findings, results and conclusions.

Tax Relief and Health Care Act of 2006 (Enrolled as Agreed to or Passed by Both House and Senate)

Excerpt ...

SEC. 105. DISPOSITION OF QUALIFIED OUTER CONTINENTAL SHELF REVENUES FROM 181 AREA, 181 SOUTH AREA, AND 2002-2007 PLANNING AREAS OF GULF OF MEXICO.

(a) In General- Notwithstanding section 9 of the Outer Continental Shelf Lands Act (43 U.S.C. 1338) and subject to the other provisions of this section, for each applicable fiscal year, the Secretary of the Treasury shall deposit--

(1) 50 percent of qualified outer Continental Shelf revenues in the general fund of the Treasury; and

(2) 50 percent of qualified outer Continental Shelf revenues in a special account in the Treasury from which the Secretary shall disburse--

(A) 75 percent to Gulf producing States in accordance with subsection (b); and

(B) 25 percent to provide financial assistance to States in accordance with section 6 of the Land and Water Conservation Fund Act of 1965 (16 U.S.C. 460l-8), which shall be considered income to the Land and Water Conservation Fund for purposes of section 2 of that Act (16 U.S.C. 460l-5).

(b) Allocation Among Gulf Producing States and Coastal Political Subdivisions-

(1) ALLOCATION AMONG GULF PRODUCING STATES FOR FISCAL YEARS 2007 THROUGH 2016-

(A) IN GENERAL- Subject to subparagraph (B), effective for each of fiscal years 2007 through 2016, the amount made available under subsection (a)(2)(A) shall be allocated to each Gulf producing State in amounts (based on a formula established by the Secretary by regulation) that are inversely proportional to the respective distances between the point on the coastline of each Gulf producing State that is closest to the geographic center of the applicable leased tract and the geographic center of the leased tract.

(B) MINIMUM ALLOCATION- The amount allocated to a Gulf producing State each fiscal year under subparagraph (A) shall be at least 10 percent of the amounts available under subsection (a)(2)(A).

(2) ALLOCATION AMONG GULF PRODUCING STATES FOR FISCAL YEAR 2017 AND THEREAFTER-

(A) IN GENERAL- Subject to subparagraphs (B) and (C), effective for fiscal year 2017 and each fiscal year thereafter--

(i) the amount made available under subsection (a)(2)(A) from any lease entered into within the 181 Area or the 181 South Area shall be allocated to each Gulf producing State in amounts (based on a formula established by the Secretary by regulation) that are inversely proportional to the respective distances between the point on the coastline of each Gulf producing State that is closest to the geographic center of the applicable leased tract and the geographic center of the leased tract; and

(ii) the amount made available under subsection (a)(2)(A) from any lease entered into within the 2002-2007 planning area shall be allocated to each Gulf producing State in amounts that are inversely proportional to the respective distances between the point on the coastline of each Gulf producing State that is closest to the geographic center of each historical lease site and the geographic center of the historical lease site, as determined by the Secretary.

(B) MINIMUM ALLOCATION- The amount allocated to a Gulf producing State each fiscal year under subparagraph (A) shall be at least 10 percent of the amounts available under subsection (a)(2)(A).

(C) HISTORICAL LEASE SITES-

(i) IN GENERAL- Subject to clause (ii), for purposes of subparagraph (A)(ii), the historical lease sites in the 2002-2007 planning area shall include all leases entered into by the Secretary for an area in the Gulf of Mexico during the period beginning on October 1, 1982 (or an earlier date if practicable, as determined by the Secretary), and ending on December 31, 2015.

(ii) ADJUSTMENT- Effective January 1, 2022, and every 5 years thereafter, the ending date described in clause (i) shall be extended for an additional 5 calendar years.

(3) PAYMENTS TO COASTAL POLITICAL SUBDIVISIONS-

(A) IN GENERAL- The Secretary shall pay 20 percent of the allocable share of each Gulf producing State, as determined under paragraphs (1) and (2), to the coastal political subdivisions of the Gulf producing State.

(B) ALLOCATION- The amount paid by the Secretary to coastal political subdivisions shall be allocated to each coastal political subdivision in accordance with subparagraphs (B), (C), and (E) of section 31(b)(4) of the Outer Continental Shelf Lands Act (43 U.S.C. 1356a(b)(4)).

(c) Timing- The amounts required to be deposited under paragraph (2) of subsection (a) for the applicable fiscal year shall be made available in

accordance with that paragraph during the fiscal year immediately following the applicable fiscal year.

(d) Authorized Uses-

(1) IN GENERAL- Subject to paragraph (2), each Gulf producing State and coastal political subdivision shall use all amounts received under subsection (b) in accordance with all applicable Federal and State laws, only for 1 or more of the following purposes:

(A) Projects and activities for the purposes of coastal protection, including conservation, coastal restoration, hurricane protection, and infrastructure directly affected by coastal wetland losses.

(B) Mitigation of damage to fish, wildlife, or natural resources.

(C) Implementation of a federally-approved marine, coastal, or comprehensive conservation management plan.

(D) Mitigation of the impact of outer Continental Shelf activities through the funding of onshore infrastructure projects.

(E) Planning assistance and the administrative costs of complying with this section.

(2) LIMITATION- Not more than 3 percent of amounts received by a Gulf producing State or coastal political subdivision under subsection (b) may be used for the purposes described in paragraph (1)(E).

(e) Administration- Amounts made available under subsection (a)(2) shall--

(1) be made available, without further appropriation, in accordance with this section;

(2) remain available until expended; and

(3) be in addition to any amounts appropriated under--

(A) the Outer Continental Shelf Lands Act (43 U.S.C. 1331 et seq.);

(B) the Land and Water Conservation Fund Act of 1965 (16 U.S.C. 460l-4 et seq.); or

(C) any other provision of law.

(f) Limitations on Amount of Distributed Qualified Outer Continental Shelf Revenues-

(1) IN GENERAL- Subject to paragraph (2), the total amount of qualified outer Continental Shelf revenues made available under subsection (a)(2) shall not exceed $500,000,000 for each of fiscal years 2016 through 2055.

(2) EXPENDITURES- For the purpose of paragraph (1), for each of fiscal years 2016 through 2055, expenditures under subsection (a)(2) shall be net of receipts from that fiscal year from any area in the 181 Area in the Eastern Planning Area and the 181 South Area.

(3) PRO RATA REDUCTIONS- If paragraph (1) limits the amount of qualified outer Continental Shelf revenue that would be paid under subparagraphs (A) and (B) of subsection (a)(2)--

(A) the Secretary shall reduce the amount of qualified outer Continental Shelf revenue provided to each recipient on a pro rata basis; and

(B) any remainder of the qualified outer Continental Shelf revenues shall revert to the general fund of the Treasury.

Charlie Huggins
Senator

Sponsor Statement SJR 22

This resolution takes aim at lawsuits filed in the US District Court of Alaska, one by the United Cook Inlet Drift Association (UCIDA) and another by Herbert T. Jensen. The complaints by this commercial fishing group and an individual, calling for a return of federal management, are an affront to the State of Alaska. Please, do not forget, here in the afterglow of our yearlong celebration of 50 years of statehood, it was a colossal failure of federal salmon management that was a major driving force behind the statehood movement. Hopefully, no one wishes to return to such a regime.

UCIDA is an association of both resident and non-resident commercial fishers who participate in drift gillnet salmon fisheries in the inlet. Remarkably, they can keep, for their personal use, an unlimited number of fish from their commercial catch. Their goal is to have the state-managed personal use dip net fishery declared unconstitutional and be pre-empted by federal law. This resolution seeks a fair shake for Alaskans who fish, without commercial gear, with simple dip nets, to feed their families. It asks the governor to intervene in defense of our state's authority to manage its own fisheries in a responsible manner.

SJR 22 Explanation of changes

Changes since original introduction have been "housekeeping" type changes to clearly identify the lawsuits in question and to reflect post election changes of appointed officials to whom the resolution is directed.

UNITED STATES DEPARTMENT OF COMMERCE
National Oceanic and Atmospheric Administration
NATIONAL MARINE FISHERIES SERVICE
1315 East-West Highway
Silver Spring, Maryland 20910

THE DIRECTOR

James N. Butler, III
Gregory R. Gabriel, Jr.
Baldwin & Butler, LLC
125 North Willow Street
Kenai, Alaska 99611

Dear Mr. Butler and Mr. Gabriel:

Thank you for your "Petition for Emergency Rules Related to Salmon Management in Cook Inlet, Alaska" (Petition), dated June 12, 2008, and submitted to the Secretary of Commerce by the United Cook Inlet Drift Association and the Kenai Peninsula Fishermen's Association (Petitioners). We have reviewed and considered the Petition. The attached document constitutes the National Marine Fisheries Service's (NMFS's) response to the Petition.

For various reasons explained fully in the attached response, NMFS denies Petitioners' claims that challenge the consistency of certain State of Alaska (State) salmon regulations applicable within the Exclusive Economic Zone (EEZ) with the provisions of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act), the Fishery Management Plan for the Salmon Fisheries in the EEZ Off the Coast of Alaska (FMP), and other applicable Federal law. Before appealing such regulations to NMFS, the FMP requires persons challenging State salmon fishing regulations to first exhaust their remedies through the appropriate State procedures. The information provided in the Petition indicates that Petitioners have failed to exhaust their remedies with the State. Petitioners may resubmit these claims to NMFS after exhausting their remedies with the State in accordance with Chapter 9 of the FMP.

NMFS also declines to pursue Petitioners' request that NMFS preempt State management of salmon fisheries within the State waters of Upper Cook Inlet because the Magnuson-Stevens Act prevents NMFS from preempting a state's management authority within that state's waters if NMFS in unable to find that the fishery occurs predominantly within the EEZ. The catch data for salmon in the EEZ versus State waters clearly show that fishing for salmon governed by the FMP, on a broad scale as well as solely within the Cook Inlet Management Area, does not occur predominately within the EEZ.

See pg 11 of attached back-up doc.

THE ASSISTANT ADMINISTRATOR
FOR FISHERIES

Printed on Recycled Paper

Finally, the attached document provides the agency's position relative to a number of interpretations of several provisions of the Magnuson-Stevens Act and the scope of Federal authority to manage salmon fisheries under the provisions of the Magnuson-Stevens Act and the FMP that are included in the Petition.

Sincerely,

James W. Balsiger, Ph.D.
Acting Assistant Administrator for Fisheries

cc: Denby Lloyd, Commissioner, State of Alaska Department of Fish & Game

National Marine Fisheries Service's Response To
"Petition for Emergency Rules Related to Salmon Management in Cook Inlet, Alaska"
Dated June 12, 2008, and Submitted By the
United Cook Inlet Drift Association and the Kenai Peninsula Fishermen's Association

The United Cook Inlet Drift Association and the Kenai Peninsula Fishermen's Association ("Petitioners") submitted to the Secretary of Commerce ("Secretary") a document entitled "Petition for Emergency Rules Related to Salmon Management in Cook Inlet, Alaska" ("Petition"), dated June 12, 2008. The National Marine Fisheries Service ("NMFS") has reviewed and considered the Petition, and offers the following response.[1]

I. Categorization of Petitioners' claims

Petitioners make a number of claims in their Petition. In reviewing and considering the Petition, NMFS categorized Petitioners claims into three groups. The first group includes those claims that challenge the consistency of certain State of Alaska ("State") salmon regulations applicable within the U.S. Exclusive Economic Zone ("EEZ") with various provisions of the Fishery Management Plan for the Salmon Fisheries in the EEZ Off the Coast of Alaska ("FMP"), the Magnuson-Stevens Fishery Conservation and Management Act ("Magnuson-Stevens Act"), and other laws. The second group includes one claim that requests the Secretary[2] to preempt State management of salmon fisheries within State waters. The final group includes those claims that interpret provisions of the Magnuson-Stevens Act and NMFS's scope of authority under the Magnuson-Stevens Act and the FMP.[3]

NMFS has determined that the first group of claims challenging the consistency of certain State salmon regulations with the FMP, the Magnuson-Stevens Act and other applicable Federal law are appealable to NMFS under Chapter 9 of the FMP. These claims challenge the consistency of the State's regulations for (1) mandatory interim closures, (2) season opening and closing dates, and (3) escapement goals for salmon fisheries within the Cook Inlet Management Area. Petition

---

[1] Petitioners cite section 305(f) of the Magnuson-Stevens Act (16 U.S.C. 1855(f)), and its requirement that the Secretary file a response to a judicial action within 45 days of receipt, as providing the statutory timeline in which NMFS must respond to the Petition. Petitioners misconstrue section 305(f); section 305(f) applies to challenges filed in judicial courts of the United States and not to petitions for rulemaking submitted to NMFS under Chapter 9 of the FMP. Chapter 9.1 of the FMP does not set forth a timeframe by which the Secretary must respond to an appeal. Although Petitioners submitted the Petition to the Secretary in June 2008, NMFS was unaware of the existence of the Petition until January 2009. Therefore, although the time in which it took NMFS to issue this response is not typical, NMFS's response is not untimely under the FMP or the Magnuson-Stevens Act.

[2] The Secretary delegated fishery management authority under the Magnuson-Stevens Act to NMFS so the remainder of this response refers to NMFS.

[3] Chapter 9 is provided as an attachment to this response. The complete FMP is available on the North Pacific Fishery Management Council web page at: http://www.fakr.noaa.gov/npfmc/fmp/salmon/salmon.htm

at 31, 23, and 33, respectively. These claims challenge State regulations that have applicability within the EEZ. NMFS can supersede State regulations applicable within the EEZ if those regulations are found to be inconsistent with the FMP, Magnuson-Stevens Act, or other applicable Federal law. The State also has the authority to modify its regulations as it determines necessary. NMFS addresses these claims in section II of this response.

NMFS has determined that Petitioners' request for preemption of State management of salmon fisheries within State waters is not an appealable challenge under Chapter 9 of the FMP because it is not a challenge to Magnuson-Stevens Act and FMP consistency of State salmon regulations applicable within the EEZ. Instead, Petitioners are asking NMFS to extend Federal management authority into State waters. NMFS addresses Petitioners' request in section III of this response.

Finally, NMFS has determined that the remaining group of claims does not challenge Magnuson-Stevens Act and FMP consistency of State salmon regulations applicable within the EEZ, but instead presents Petitioners' interpretations of the Magnuson-Stevens Act and the scope of Federal authority to manage salmon fisheries under the provisions of the Magnuson-Stevens Act and the FMP. NMFS has determined that this group of claims is not appealable under Chapter 9 of the FMP. However, in order to provide Petitioners' with the agency's position relative to these interpretations, NMFS addresses Petitioners interpretations in section IV of this response.

II. NMFS's Determination Concerning Petitioners' Claims That Are Appealable Under the FMP

Chapter 9 of the FMP provides a process for review of State statutes or regulations by the Secretary and allows any member of the public to appeal a statute or regulation issued by the State for the salmon fisheries in the EEZ off the coast of Alaska. FMP at 46. NMFS considers appeals under Chapter 9 of the FMP to be petitions for rulemaking, as they are requests that NMFS take some regulatory action to supersede application of State salmon statutes or regulations in the EEZ. Chapter 9.1 of the FMP sets forth the general process NMFS will follow if an appeal challenges annual or perennial regulations issued by the State; Chapter 9.2 sets forth the general process NMFS will follow if an appeal challenges inseason management actions taken by the State.

Petitioners claim that the State's season opening and closing dates and regulatory interim closures, or "windows", should be superseded because they are inconsistent with the Magnuson-Stevens Act. Petition at 31-33. State regulations at 5 AAC 21.363(e) establish guidelines for when the Alaska Department of Fish and Game ("ADF&G") managers can open and close the commercial salmon fisheries, including salmon fisheries conducted within the EEZ, during the fishing season to provide for escapement and to allow fish to enter the Kenai and Kasiliof rivers on a predictable schedule for sport and personal use fisheries.

Petitioners claim that the fixed mandatory closures within a commercial fishing season and the season opening and closing dates are inconsistent with the Magnuson-Stevens Act because they (1) are arbitrary, capricious, and not based on the best available science or objective conservation and management criteria but are politically motivated; (2) have led to over-escapement and fail to meet optimum yield; (3) result in the reallocation of salmon stocks from the commercial fishery to the personal use fishery; (4) force participants to go to sea in conditions that jeopardize their safety in an attempt to remain economically viable; (5) result in lost yield for the commercial fishery which affects fishermen, processors, and communities; and (6) are not adaptive management measures per Magnuson-Stevens Act requirements. Petition, generally, at 20, 26-27, and 31-34. Further, Petitioners state that regulations are not in best interest of the Nation because they result in lost food production, reduced exports, and lower employment. Petition at 32.

Petitioners claim that the State of Alaska Board of Fisheries (Board) began implementing regulations that manage for the bottom of the yield curve by setting sustainable, rather than optimal, escapement goals which threaten economic viability of Upper Cook Inlet commercial fishing communities and are otherwise inconsistent with the Magnuson-Stevens Act. Petition at 33. Petitioners also claim that the State's escapement goals for the salmon fisheries managed under the FMP are not based on the best available science but based on political compromise. Petition at 34. Petitioners request that the Secretary provide guidance to the State and the Council that exploitation rates on most salmon stocks in Upper Cook Inlet are far below what is necessary to ensure optimum yield and provide the greatest benefit to the Nation. Petition at 34.

Although the mandatory closure window regulations have an inseason component and ADF&G has discretion within the regulations on when to implement the closure windows, Petitioners do not challenge any specific inseason management action. Based on NMFS's review of the Petition, NMFS concludes that Petitioners challenge the State's regulatory framework for the closure windows, which are perennial regulations, rather than a specific inseason closure. Therefore, NMFS has determined that the Petitioners challenge annual or perennial regulations issued by the State, and NMFS considered the Petition under Chapter 9.1 of the FMP.

As stated in Chapter 9.1 of the FMP, persons are required to exhaust their remedies with the State before appealing to NMFS. FMP at 46. The North Pacific Fishery Management Council (Council) and NMFS stated in the FMP at page 46 and in the preambles to the proposed and final rules for Amendment 3 to the FMP[4] that this requirement encourages persons with serious concerns to participate fully in the State procedures before seeking Secretarial intervention. According to the Petition at page 10, Petitioners are aware of the process contained in Chapter

[4] The proposed rule for Amendment 3 was published at 55 Fed. Reg. 28661, 28663 (July 12, 1990), and the final rule for Amendment 3 was published at 55 Fed. Reg. 47773, 47774 (November 15, 1990).

9.1 but argue that exhaustion of State remedies is inappropriate because the Board is the delegate of the Secretary, and any petition challenging a State salmon regulation must be brought under federal law given the federal statutes, Federal APA requirements, and Federal law applicable to the Secretary's decisions. Additionally, Petitioners argue that the Secretary is not subject to State jurisdiction regarding salmon fishery regulations. For reasons explained more fully in section IV of this response, NMFS disagrees with Petitioners' rationale for failing to exhaust State remedies prior to submitting this Petition to NMFS.[5]

Because of Petitioners' failure to exhaust their remedies with the State as required by Chapter 9.1 of the FMP, NMFS denies Petitioners' appeal of the State's mandatory window closures, season opening and closing dates, and escapement goal regulations for the salmon fisheries in Upper Cook Inlet. Petitioners may resubmit their appeal to NMFS after exhausting their remedies with the State in accordance with Chapter 9 of the FMP.

III. NMFS's Determination Concerning Petitioners' Request for Preemption of State Management of Salmon Fisheries Within State Waters

For the following reasons, NMFS declines to pursue Petitioners' request that the Secretary initiate preemption proceedings against State of Alaska management of salmon fisheries within State waters.

Petitioners make the following statements in their Petition: (1) "The commercial salmon fishery in Cook Inlet takes place in the EEZ"; (2) "Drift gillnet harvest of salmon in Cook Inlet occurs predominately in the EEZ of the US"; and (3) "A majority of the Cook Inlet drift gillnet fishery occurs in the EEZ." Petition at 13, 4, and 25, respectively. Petitioners further state that because "[r]ecently promulgated regulations by the [Board] and ADF&G will substantially and adversely affect the commercial fishery and EFH beginning in June 2008 because they attempt to reduce or eliminate historical commercial fishing interests in Cook Inlet by limiting the economic viability of processors and harvesters", the State's management is inconsistent with the FMP and the Magnuson-Stevens Act National Standards. Petition at 3-4. Based on these assertions, Petitioners ask NMFS to begin preemption proceedings for the Upper Cook Inlet salmon fishery under Magnuson-Stevens Act section 306(b) and 50 CFR 600.615. Petition at 3. For the reasons provided below, NMFS concludes that the salmon fishery governed by the FMP does not occur predominately within the EEZ. Because NMFS is unable to make one of the two required

[5] Section IV of the Petition is entitled "Statutory Authority for Petition." Petitioners cite to various provisions of the Magnuson-Stevens Act and the Administrative Procedure Act that they argue support their claim that the Secretary must consider the Petition. NMFS concludes that Petitioners have misconstrued a number of provisions in the Magnuson-Stevens Act as lending support for this claim. However, as explained in this response, NMFS freely recognizes the ability of persons, such as Petitioners, to appeal State regulations under Chapter 9 of the FMP, provided persons follow the procedure and requirements set forth in Chapter 9.

findings for preemption, NMFS declines to initiate preemption proceedings against the State and its management of salmon fisheries within State waters, and rejects Petitioners' request.

As explained more fully in section IV of this response, the Magnuson-Stevens Act explicitly recognizes a state's jurisdiction and its authority to manage its fishery resources within its waters. Furthermore, NMFS may not regulate fishing within a state's waters unless NMFS undertakes the process and makes the factual findings required by 16 U.S.C. 1856(b). This section states:

> If the Secretary finds, after notice and an opportunity for a hearing in accordance with section 554 of title 5, United States Code, that -
>
> (A) the fishing in a fishery, which is covered by a fishery management plan implemented under this Act, is engaged in predominately within the [EEZ] and beyond such zone; and
>
> (B) any State has taken any action, or omitted to take any action, the results of which will substantially and adversely affect the carrying out of such fishery management plan; the Secretary shall promptly notify such State and the appropriate Council of such finding and of his intention to regulate the applicable fishery within the boundaries of such State (other than its internal waters), pursuant to such fishery management plan and the regulations promulgated to implement such plan.

16 U.S.C. 1856(b). Thus, in order for NMFS to regulate fishing within State waters, NMFS must find that: (1) the fishing in a fishery that is covered by an FMP is predominately within the EEZ; **and** (2) a state has taken an action, or omitted to take any action, the results of which will "substantially and adversely affect" the carrying out of the FMP. The Magnuson-Stevens Act prevents NMFS from preempting a state's management authority within that state's waters if NMFS is unable to make both of the required findings. Regulations at 50 CFR 600.610(b)[6] provide some guidance on determining predominance as used in 16 U.S.C. 1856(b)(1)(A):

> Whether fishing is engaged in "predominately" within or beyond the EEZ will be determined after consideration of relevant factors, including but not limited to, the catch (based on numbers, value, or weight of fish caught, or other relevant factors) of fishing effort during the appropriate period, and in light of historical patterns of the distribution of catch or fishing effort for such stock or stocks of fish.

---

[6] 50 CFR 600.610(c) provides regulatory guidance on the phrase "substantially and adversely affect" the carrying out of an FMP: "Whether relevant effects are substantial will be determined after consideration of the magnitude of such actual or potential effects. Relevant to this determination are various factors, including but not limited to, the proportion of the fishery (stock or stocks of fish and fishing for such stocks) that is subject to the effects of a particular state's action or omission, the characteristics and status (including migratory patterns and biological condition) of the stock or stocks of fish in the fishery, and the similarity or dissimilarity between the goals, objectives, or policies of the state's action or omission and the management goals or objectives specified in the FMP for the fishery or between the state and Federal conservation and management measures of the fishery."

In considering Petitioners' request, NMFS examined commercial fisheries catch data for all five species of salmon governed by the FMP (see the attachment "The portion of commercial salmon catch harvested in the EEZ"). These commercial fisheries occur in the EEZ in the Southeast Alaska, Prince William Sound, Cook Inlet, and the Alaska Peninsula areas. The attachment includes commercial catch data from 1991 to 2008. This data represents all commercial fishing in these areas since implementation of Amendment 3 to the FMP and therefore provides a reasonable representation of the distribution of catch over time. The data shows that the commercial catch of all salmon species during this time period was slightly less than 4 percent of the total commercial catch from both the EEZ and State waters in these areas. The attachment does not include commercial catch of salmon within State waters but outside of these four areas. Therefore, if all catch statewide was included, the total portion harvested in the EEZ would be significantly smaller.

The attachment also provides catch data by species and by region for each year. The data show that even by region or by species, with the exception of chum salmon in Upper Cook Inlet, the catch predominately is from State waters. Based on these data, NMFS concludes that fishing in the salmon fishery governed by the FMP is not conducted predominately within the EEZ and beyond.

NMFS also examined salmon catch data from the EEZ and the State waters comprising the Cook Inlet Management Area.[7] These data show that the commercial catch of all FMP species of salmon from the EEZ within the Cook Inlet Management Area during this time period was about 31 percent of the total commercial catch of these salmon species from both the EEZ and State waters in the Cook Inlet Management Area. Even with these higher salmon catch levels in the EEZ within the Cook Inlet Management Area, NMFS concludes that fishing occurring in the EEZ is not greater than fishing occurring within State waters of that area and 31 percent of the total salmon catch that occurs within the EEZ of the Cook Inlet Management Area does not demonstrate "predominance" of salmon fishing within Federal waters.

The catch data for salmon in the EEZ versus State waters during this time period clearly show that fishing for salmon governed by the FMP, on a broad scale as well as solely within the Cook Inlet Management Area, is not conducted predominately within the EEZ. Therefore, in accordance with regulatory guidance as well as analysis of this data, NMFS has determined that the salmon fishery does not occur predominately within the EEZ. Because the Magnuson-Stevens Act prevents NMFS from preempting a state's management authority within that state's waters if NMFS in unable to make both of the required findings set forth in 16 U.S.C. 1856(b)

[7] The portion of total catch in the EEZ represents a maximum amount. As described in the attachment "The portion of commercial salmon catch harvested in the EEZ", ADF&G catch data is recorded by state statistical area which can include both State and EEZ waters in one statistical area. All catch in State statistical areas that have both EEZ and State waters were assumed to be EEZ catch; therefore, it is likely that more catch is attributed to the EEZ than actually occurred.

and because NMFS has determined that one of the findings cannot be made, NMFS declines to initiate preemption proceedings as requested by the Petitioners.[8]

IV. NMFS's Position Relative to Petitioners' Interpretations of the Magnuson-Stevens Act and the Scope of Federal Authority to Manage Salmon Fisheries Under the Provisions of the Magnuson-Stevens Act and the FMP

In the Petition, Petitioners interpret several provisions of the Magnuson-Stevens Act and the scope of Federal authority to manage salmon fisheries under the provisions of the Magnuson-Stevens Act and the FMP. These interpretations are summarized as follows:

1. The Magnuson-Stevens Act gives the Council and NMFS the authority to manage anadromous species throughout the species' migratory range, and that authority extends into state waters and "include beyond the fresh and estuarine waters of the State of Alaska." As such, the mandates of the Magnuson-Stevens Act apply to the State's salmon management regime in Upper Cook Inlet, and NMFS must examine State salmon regulations in light of the stated purposes of the Magnuson-Stevens Act, finding regulations that conflict with those purposes inconsistent with the Magnuson-Stevens Act. Petition, generally, and at 8, 13-14, 34.

2. Under the FMP, the Council and NMFS asserted their Magnuson-Stevens Act management authority over anadromous salmon species within State waters and delegated to the Board the responsibility for management of salmon in Alaska. Petition at 7, 8, 25.

3. As a result of this delegation to the Board, State regulations affecting salmon fisheries in Cook Inlet must comply with the provisions of the Magnuson-Stevens Act, and NMFS must repeal or amend those rules that are inconsistent with the Magnuson-Stevens Act. Petition, generally, and at 8.

4. Furthermore, as a result of this delegation, when the Board issues regulations, the Board is amending the FMP and NMFS has a duty to review and ensure that the Board's amendments to the FMP are consistent with the Magnuson-Stevens Act. Petition at 9, 21.

5. NMFS must take action to restore and protect essential fish habitat ("EFH") on the Kenai River and other essential fish habitats in the upper Cook Inlet basin.

---

[8] Petitioners also claim that preemption is warranted because the State's management regime has adverse effects on salmon EFH, and therefore substantially and adversely affects the carrying out of the FMP. NMFS did not address this claim in the preemption context because of its determination on the lack of predominance of salmon fishing in the EEZ. However, NMFS addresses Petitioners' EFH claims at pages 12 - 13 of this response.

6. The State's resident-only Personal Use fishery is inconsistent with the Magnuson-Stevens Act and NMFS must eliminate it.

7. NMFS must promulgate emergency regulations to supersede State regulations and manage Upper Cook Inlet salmon stocks.

The following provides NMFS's position relative to these interpretations.

Section 101(b)(1) of the Magnuson-Stevens Act (16 U.S.C. 1811(b)(1)) does not vest the agency with management responsibility and authority over anadromous species within State waters and the requirements of the Magnuson-Stevens Act do not apply to the State's management of salmon within the State waters of Upper Cook Inlet.

Under the Magnuson-Stevens Act, Congress vested NMFS, by and through the Secretary, with exclusive management authority over all fish and all Continental Shelf fishery resources within the EEZ. 16 U.S.C. 1811(a). Off the State of Alaska, the EEZ extends from 3 nautical miles seaward of the State's baseline to 200 nautical miles offshore. 16 U.S.C. § 1802(11). Congress also vested in NMFS management authority over all anadromous species throughout the migratory range of each species beyond the EEZ. 16 U.S.C. 1811(b)(1) (emphasis added).

Congress recognized that the exercise of federal jurisdiction must be balanced against the interest of the various coastal States to manage their own fisheries. The Magnuson-Stevens Act explicitly recognizes that "nothing in this Act shall be construed as extending or diminishing the jurisdiction or authority of any State within its boundaries [and] ... except as provided in subsection (b), the jurisdiction and authority of a State shall extend to any pocket of waters that is adjacent to the State and totally enclosed by lines delimiting the territorial sea of the United States . . . ." 16 U.S.C. § 1856(a)(1) & (2).[9]

NMFS has interpreted "beyond the EEZ" as used in 16 U.S.C. 1811(6)(1) to mean seaward of the EEZ, or those areas of the ocean that are more than 200 nautical miles from the baseline. NMFS does not interpret the phrase to include the territorial seas of the states, or those waters within 0 to 3 nautical miles from the State's baseline. NMFS's interpretation is consistent with the statutory language of 16 U.S.C. 1811(b)(1), which excludes the waters of foreign nations from the United States' jurisdiction over anadromous species and clearly indicates Congressional intent to extend authority over anadromous species that are seaward, and not landward, of the EEZ. NMFS's interpretation is also consistent with the statutory scheme set forth in the Magnuson-Stevens Act given 16 U.S.C. 1856, which explicitly recognizes a state's jurisdiction

[9] The Magnuson-Stevens Act also recognizes a state's authority to regulate a fishing vessel outside the boundaries of the state in certain circumstances. *See* 16 U.S.C. 1856(a)(3).

and authority to manage fishery resources within its boundaries, as explained above, and which contains no exception for anadromous species. Furthermore, NMFS's interpretation is consistent with the legislative history for 16 U.S.C. 1811 wherein Congress refers to the high seas and waters seaward of the EEZ when referring to "beyond the EEZ" in section 1811(b).[10] Therefore, 16 U.S.C. 1811(b)(1) of the Magnuson-Stevens Act does not vest NMFS with the authority to manage anadromous species within a state's territorial sea.

NMFS may regulate fishing for anadromous species within a state's waters only if NMFS has undertaken the process and made the required findings for preemption set forth in 16 U.S.C. 1856(b). Without preemption of State fishery management in accordance with 16 U.S.C. 1856(b) of the Magnuson-Stevens Act, the requirements of the Magnuson-Stevens Act do not apply to the State's management of fishery resources within its waters.

NMFS disagrees with Petitioners' interpretations that: (1) the Council and NMFS through the FMP preempted State management of salmon within State waters and then delegated to the Board the responsibility for management of salmon in Alaska; (2) State management of salmon fisheries within State waters must be consistent with the Magnuson-Stevens Act; and (3) Board regulations are amendments to the FMP.

The Council adopted the original FMP in 1978, and NMFS approved and implemented it in 1979. Among other things, the original FMP established the Council's and NMFS's authority over the salmon fisheries in the Federal waters off the coast of Alaska from 3 to 200 nautical miles offshore (the EEZ), but excluded that portion of the EEZ west of 175 degrees East longitude from the FMP. In 1990, NMFS approved and implemented Amendment 3 to the FMP. Among other things, Amendment 3 extended the jurisdiction of the FMP to the EEZ west of 175 degrees East longitude and deferred regulation of the sport and commercial salmon fisheries in the EEZ to the State, thereby removing the Council and NMFS from routine management of the salmon fisheries but maintaining Federal participation and oversight of, and final authority over salmon management within the EEZ.

The fishery management unit for the FMP is all waters of the EEZ off the coast of Alaska and the salmon and fisheries that occur there. FMP at chapter 2. Two management areas are established within the EEZ, the West Area and the East Area, with the border for the areas at the

[10] While there are several examples in the legislative history for the original Magnuson-Stevens Act that explain that "beyond the EEZ" as used in 16 U.S.C. 1811(b)(1) means the high seas seaward of the EEZ and not the territorial seas of the coastal states (see A LEGISLATIVE HISTORY OF THE FISHERY CONSERVATION AND MANAGEMENT ACT OF 1976, at 99, 144, and 274 (1976)), the following excerpt is particularly informative: "The assertion of exclusive authority over anadromous species of fish is meant to apply when such fish are found on the high seas beyond the U.S. [EEZ], but outside the jurisdiction of any other nation. It is anticipated that the United States will use this authority to ban any capture of anadromous species of fish on the high seas and regulate their taking in the [EEZ]. Furthermore, this assertion of authority is not intended to preempt coastal States' authority to manage anadromous species of fish within their boundaries." (Emphasis added.) Id., at 678.

longitude of Cape Suckling (143° 53' 36" West longitude). The West Area includes the EEZ in the Bering, Chukchi, and Beaufort Seas, as well as the EEZ in the North Pacific Ocean west of Cape Suckling. The FMP authorizes sport (or recreational) salmon fishing in the EEZ of the West Area. However, the FMP prohibits commercial salmon fishing in the EEZ of the West Area with the exception of three pockets of EEZ waters adjacent to three historical State commercial fishing areas: the Cook Inlet Area, the Prince William Sound Area, and the Alaska Peninsula Area.[11]

Through the FMP and implementing Federal regulations,[12] the Council and NMFS have asserted management authority over salmon fisheries within the EEZ of the West Area, and have deferred routine management of the salmon fisheries that occur within the EEZ of the West Area, including the three historical areas open to commercial fishing, to the State. FMP at 34, 35, 41. This deferral means that State management of salmon fishing within the EEZ of the West Area, including the three historical areas, must be consistent with the FMP, the Magnuson-Stevens Act, and other applicable Federal law. Although NMFS and the Council defer management of salmon fisheries within the West Area's EEZ to the State, the Council and NMFS have ultimate management authority over salmon fishing in the West Area's EEZ, including the three historical areas.

As to Petitioners' first assertion, NMFS disagrees that the Council and NMFS, through the FMP, have preempted the State's management authority over salmon within State waters and delegated Federal management responsibilities for salmon fishing within State and Federal waters to the Board. The FMP is clear that Federal management of salmon fisheries does not extend into State waters (0 to 3 nautical miles from the State's baseline). The FMP explicitly states that the FMP governs salmon fishing from 3 to 200 nautical miles off the coast of Alaska. FMP at i, 1, and 5. Furthermore, at no time have the Council and NMFS preempted the State's management of salmon fisheries within State waters.

Because NMFS has not preempted the State's management of salmon fisheries within State waters, NMFS has not delegated Federal management responsibilities for salmon fishing within State waters to the Board. Rather, the Council and NMFS asserted Federal management over salmon species solely within the EEZ and then extended to the State, through deferral, routine management of those EEZ salmon fisheries. Through the FMP, NMFS and the Council maintain Federal participation and oversight of State management in the EEZ to ensure consistency with the FMP, the Magnuson-Stevens Act, and other applicable law. Under the FMP's deferral of management authority to the State, the Council and NMFS are not frequently involved in the

[11] Appendix C of the FMP contains descriptions and geographic coordinates for these areas.

[12] See 50 CFR 679.3(f)(4): "Commercial fishing for salmon in the EEZ west of Cape Suckling is not allowed except in three net fisheries managed by the State of Alaska as described in Section 2.2.2 and Appendix C of the Salmon FMP. For State of Alaska regulations governing these fisheries, see 5 Alaska Administrative Code 09 (Alaska Peninsula), 5 Alaska Administrative Code 21 (Cook Inlet), and 5 Alaska Administrative Code 24 (Prince William Sound)."

State's routine management of the salmon fisheries within the EEZ. As described earlier in this response, the FMP provides persons with the opportunity to ask NMFS to review State regulations as they apply in the EEZ for consistency with the FMP, the Magnuson-Stevens Act, and other applicable law. The FMP also authorizes the Council and NMFS to implement regulations applicable in the EEZ in order for the salmon fisheries conducted within the EEZ to achieve the objectives of the FMP or to be consistent with the Magnuson-Stevens Act or other applicable law.

Finally, Petitioners' assert that State management of salmon fisheries within State waters must be consistent with the Magnuson-Stevens Act and that Board regulations are amendments to the FMP. These assertions appear to be based on the premise that the FMP extends Federal management authority over salmon fisheries into State waters. However, as explained above, NMFS has not preempted the State's authority to manage salmon fisheries within its waters. Therefore, there is no requirement that State management of salmon fisheries within State waters be consistent with the Magnuson-Stevens Act and no basis for concluding that Board regulations are amendments to the FMP. Furthermore, FMPs and amendments to them are specialized documents prepared by fishery management councils and approved by NMFS under provisions of the Magnuson-Stevens Act. The Magnuson-Stevens Act contains no provisions for entities other than the councils or NMFS to prepare or approve FMPs or FMP amendments. Therefore, NMFS disagrees with these assertions.

<u>The provisions of the Magnuson-Stevens Act do not apply to the State's resident-only Personal Use fishery and NMFS lacks authority to regulate or eliminate it</u>.

Petitioners make a number of claims that the personal use fishery is inconsistent with the Magnuson-Stevens Act and requests NMFS to eliminate the resident-only personal use net fishery because it discriminates against non-residents, harms the environment, harms the commercial salmon fishery, and substantially and adversely affects the carrying out of the FMP for salmon in the EEZ. Petition at 29-31. There are four personal use fisheries in Cook Inlet, a set gillnet fishery at the mouth of the Kasilof River, and three in-river dipnet fisheries on the Kasilof and Kenai rivers, and at Biglake (closed since 2001). No personal use fishing occurs in the EEZ. As discussed previously, NMFS has not preempted State management of salmon fisheries within State waters and the factual circumstances of the salmon fishery do not warrant initiation of preemption proceedings at this time. Therefore, NMFS lacks authority to regulate the State's personal use fishery conducted within State waters and the requirements of the Magnuson-Stevens Act do not apply to the personal use fishery.

Petitioners further claim that the Board regulations that manage the personal use fishery are amendments to the FMP that must meet the Magnuson-Stevens Act requirements, including a social impact assessment, and be supported by a NEPA analysis. Petition at 21. Board actions to

manage salmon fisheries in State waters are not FMP amendments as discussed above, and therefore the Board is not required to conduct analyses that are required for amendments to the Federal FMP.

NMFS lacks the authority to take action to restore and protect essential fish habitat ("EFH") on the Kenai River and other EFH in the upper Cook Inlet basin.

Petitioners request that NMFS take action to restore and protect EFH on the Kenai River and other EFH in the Upper Cook Inlet basin. Petitioners claim that the purpose of the Magnuson-Stevens Act is to promote EFH, that salmon management regulations promulgated by the Board must be reviewed for consistency with the purpose of protecting EFH, and that any State regulations that negatively impact EFH must be preempted by the Secretary. Petition at 15.

The FMP identifies the Kenai River and all known salmon in-river habitat as salmon EFH.[13] The Magnuson-Stevens Act does not require the Secretary to review each State salmon management action for consistency with an FMP's EFH provisions. The Magnuson-Stevens Act establishes specific but limited requirements for EFH. Each FMP must describe and identify EFH for the fishery, minimize to the extent practicable adverse effects on EFH caused by fishing, and identify other actions to encourage the conservation and enhancement of EFH. 16 U.S.C. 1853(a)(7). With regard to State agency actions, the Magnuson-Stevens Act provides that if the Secretary receives information that an action authorized, funded, or undertaken by a state or federal agency would adversely affect any EFH, then the Secretary shall recommend measures to the applicable agency to conserve EFH. The Magnuson-Stevens Act contains no other requirements or authority for NMFS to engage in a review of State management programs regarding effects to EFH, and there is no exception to the process and factual findings required by 16 U.S.C. 1856(b) that permits NMFS to preempt State management actions.

The Magnuson-Stevens Act states that "Each Council shall comment on and make recommendations to the Secretary and any Federal or State agency concerning any such activity that, in the view of the Council, is likely to substantially affect the habitat, including essential fish habitat, of an anadromous fishery resource under its authority." 16 U.S.C. 1855(b)(3)(B). The Council has not determined that any State actions trigger this requirement and has not commented on or made recommendations to the State for salmon EFH. The Council is beginning a 5-year review of the FMP's EFH provisions per the requirement at 50 CFR 600.815(a)(10) that "a review and revision of EFH components" be completed every 5 years, and EFH provisions be revised or amended, as warranted, based on available information. This review will include an analysis of whether there have been changes to the available information

[13] The EFH amendments to the FMP are available at the NMFS Alaska Region web page at: http://www.fakr.noaa.gov/analyses/salmon/amds_7_8.pdf

regarding fishing and non-fishing activities affecting essential fish habitat since the EFH FEIS analysis. Through this process, the Council may determine that the activities identified in the Petition, or any other fishing activities occurring in State waters or in the EEZ, substantially affect salmon EFH and may make recommendations accordingly to the State. NMFS encourages Petitioners to become involved in the Council 5-year review process[14]. If NMFS or the Council determines that measures are necessary to protect salmon EFH in the EEZ, NMFS will follow the established process whereby the Council develops and analyzes alternatives in a public process and makes a recommendation to the Secretary.

Additionally, as discussed in the FMP, during EFH consultations between NMFS and other agencies, NMFS strives to provide reasonable and scientifically-based recommendations that account for restrictions imposed under various state and federal laws by agencies with appropriate regulatory jurisdiction. FMP Appendix E at 83. Moreover, the coordination and consultation required by the Magnuson-Stevens Act do not supersede the regulations, rights, interests, or jurisdictions of other federal or state agencies. 16 U.S.C. 1855(b). Further NMFS's EFH conservation recommendations are not binding. FMP Appendix E at 84.

Petitioners also claim that the substantial and adverse effects of the personal use net fishery were not fully explained in the EFH FEIS, raising the question of whether a supplemental EIS must be prepared prior to the start of the 2008 personal use net fishery. Petition at 24. Petitioners also claim that although the adverse impacts to EFH were known at the time of the EIS, the impacts are not addressed. Petition at 24. NMFS disagrees. The EFH FEIS does analyze the impacts to in-river salmon EFH, including the impacts of the personal use fisheries. The EFH FEIS discusses drift, set, troll, recreational, and personal use salmon fisheries. EFH FEIS at 3-148 through 3-150. Appendix B of the EFH FEIS also contains a comprehensive, peer-reviewed analysis of fishing effects on EFH and detailed results for each managed species. For each non-fishing activity, known and potential adverse impacts to EFH are described in Appendix G of the EFH FEIS. The descriptions explain the mechanisms or processes that may cause the adverse effects and how these may affect habitat function. The EFH analysis concluded that no fisheries managed under the Council FMPs cause more than minimal and temporary adverse effects on EFH. At this time, NMFS does not intend to prepare a supplemental EIS to analyze the impacts to in-river salmon EFH. After the 5-year review, the Council and NMFS may decide to prepare a supplemental EIS if the 5-year review reveals that significant new circumstances or information exist relevant to environmental concerns and bearing on the proposed action or its impacts. 40 CFR 1502.9(c)(1).

[14] More information about the 5-year review is available at the Council web site: http://www.fakr.noaa.gov/npfmc/default.htm.

NMFS declines to promulgate emergency regulations to supersede State regulations and manage Upper Cook Inlet salmon stocks.

Petitioners request NMFS to promulgate emergency regulations to supersede State regulations and manage Upper Cook Inlet salmon stocks. Specifically, Petitioners' request NMFS to issue an emergency rule that: (1) removes mandatory closures and season opening and closing dates from the salmon management plans for Upper Cook Inlet, (2) establishes one optimum escapement goal range for all species in Upper Cook Inlet, (3) protects salmon habitat/EFH, (4) eliminates the resident-only personal use net fishery, and (5) enacts measures necessary to ensure harvest opportunity on those stocks. Petition, at 31-32 and 34-36.

To the extent Petitioners' request is asking NMFS to impose emergency regulations that would have applicability within State waters, NMFS declines Petitioners' request for the reasons already provided in this response concerning preemption of State management of salmon fisheries within State waters. Furthermore, to the extent Petitioners' request is asking NMFS to impose emergency regulations that would have applicability within the EEZ and would supercede State management measures applicable in the EEZ, NMFS declines to take emergency action under 16 U.S.C. 1855(c) of the Magnuson-Stevens Act at this time. According to NMFS policy guidelines, the use of emergency actions should be limited to extremely urgent, special circumstances where substantial harm to or disruption of the resources, fishery, or community would be caused in the time it would take to follow standard rulemaking procedures.[15] For reasons provided earlier in this response, NMFS has concluded that Petitioners have not provided information that indicates that substantial harm would occur in the EEZ due to State salmon management measures applicable in the EEZ.

If NMFS were to determine that measures are necessary to supersede State management measures applicable in the EEZ, then NMFS would follow the standard procedures for notice and comment rulemaking, including conducting the required analysis under the National Environmental Policy Act, the Regulatory Flexibility Act, and Executive Order 12866. Applicable Federal law establishes processes for assessment and responsive implementation of appropriate management measures if warranted, and NMFS cannot truncate this process without good cause.

[15] 62 FR 44422, August 21, 1997.

Attachment: The portion of commercial salmon catch harvested in the EEZ

To determine whether the commercial salmon fisheries occur predominantly in the U.S. Exclusive Economic Zone (EEZ), NMFS examined commercial salmon catch data for all five species of salmon governed by the FMP. These commercial fisheries occur in the EEZ in the Southeast Alaska, Prince William Sound, Cook Inlet, and the Alaska Peninsula areas. This attachment includes commercial catch data provided by the Alaska Department of Fish and Game (ADF&G) for each area from 1991 to 2008. The period from 1991 to 2008 represents fishing under the current FMP and provides a reasonable representation of the distribution of catch over time.

To estimate the portion of catch harvested in the EEZ, catches in the statistical areas that include the EEZ were tabulated and compared to the total catch for that management area. ADF&G catch data is recorded by statistical areas which can include both State and EEZ waters in one statistical area. All catch in statistical areas that have both EEZ and State waters were assumed to be EEZ catch; therefore it is likely that these tables attribute more catch to the EEZ than actually occurred. Thus, the portion of total catch estimated to have been harvested in the EEZ represents a maximum amount.

Table 1 shows that the commercial catch of all salmon species during this time period was slightly less than 4 percent of the total commercial catch from both the EEZ and State waters in these areas. Note that this table does not include commercial catch in state waters in all other areas. If all catch statewide was included, the total portion harvested in the EEZ would be significantly smaller because the EEZ waters in all other areas are closed to salmon fishing.

Table 1: Commercial salmon catch data and estimated percentage of total catch from the EEZ in the areas where salmon fisheries occur in the EEZ; Alaska Peninsula, Cook Inlet, Southeast Alaska, and Prince William Sound/Copper River.

	EEZ catch	Total catch	EEZ as % of total
AK Peninsula	30,295,085	244,662,687	12.38%
Cook Inlet	32,810,061	105,486,193	31.10%
SEAK	2,926,919	1,118,674,467	0.26%
PWS Copper River	18,113,825	681,134,615	2.66%
Total	84,145,890	2,149,957,962	3.91%

ALASKA STATE LEGISLATURE

Bill Stoltze
State Representative
House District 16

Charlie Huggins
State Senator
Senate District H

Huggins, Stoltze Introduce Resolution to Protect Alaska's Personal Use Dip Net Fisheries

(JUNEAU, April 9, 2009) – Senator Charlie Huggins (R-Mat-Su) and Representative Bill Stoltze (R-Chugiak/Mat-Su) today announced that they are introducing companion resolutions requesting Governor Sarah Palin's administration to join the federal government in opposing a lawsuit filed by a Cook Inlet commercial fishing group challenging salmon management in the inlet. Senate Joint Resolution 22, sponsored by Senator Huggins and co-sponsored by Senators Johnny Ellis (D-Anchorage), Bill Wielechowski (D-Anchorage) and Linda Menard (R-Wasilla), was introduced this morning. Representative Stoltze plans to introduce a companion resolution in the House of Representatives tomorrow.

"With this resolution, we're trying to get a fair shake for Alaskans who fish to feed their families and asking the governor to defend the state's authority to manage our fisheries in a responsible manner," said Senator Huggins. "If this lawsuit is successful, it could pre-empt state management and be detrimental to Alaskans' access to our salmon resources."

The lawsuit was filed last year by the United Cook Inlet Drift Association (UCIDA) against the U.S. Department of Commerce opposing the current management of salmon fisheries in Cook Inlet. UCIDA is an association of both resident and non-resident commercial fishermen who participate in drift gillnet salmon fisheries in the inlet. Senate Joint Resolution 22 would express the Senate's objection to the association's effort to have state-managed personal use dip net fisheries declared unconstitutional and therefore pre-empted by federal law.

"It is appalling that this Alaska resident-only salmon fishery is under assault by special interests, said Representative Stoltze. "Dipnetting is a great part of Alaska - a true family tradition."

The resolutions request Governor Palin "to direct the attorney general to oppose this lawsuit", and, "in cooperation with the legislature, to re-examine the inordinate and potentially unfair, unethical, and disproportionate influence of the commercial fisheries industries on fisheries management in Alaska."

SJR 22 has been referred to the Resources Committee and the Judiciary Committee. The House version will be referred to committees tomorrow.

For more information, contact Senator Huggins or Sharon Long at 907-465-3878, or Representative Stoltze or Ben Mulligan at 907-465-4958.

Governor Parnell
Senate President Stevens
House Speaker Chenault

Gentlemen:

Prior to moving SJR 22 to the floor for a vote, there are a couple of points I would like to put forward as counsel for the parties named in the resolution.

First of all, Mr. Jensen is a decorated Vietnam veteran, sixth generation Alaskan, Alaska Native, and federally recognized subsistence user in addition to being a commercial fisherman. Mr. Jensen, fought and was wounded serving our country, protecting the rights we all enjoy as United States citizens. This includes the right to have grievances resolved in federal court, and the right to appeal any adverse lower court decision.

Likewise, UCIDA is an organization duly formed and recognized under our form of government, with the recognized right to petition the government, seek redress in federal court, and to appeal any adverse lower court decisions.

Presently, the State of Alaska is a party in the Jensen case. The proposed resolution does nothing to encourage further involvement in a case that the State of Alaska is fully engaged in already.

The true impact of such a resolution demonstrates to individuals around the state, who have the audacity to take up an issue that is unpopular with urban legislators, that those legislators will abuse their position of trust and civic responsibility to foment negative sentiment statewide against you as an individual. The intended consequence of such legislation is to silence those who would seek to have the boundaries of government proscribed by our judicial

system – a system that rose out of the American Revolution and upon which our country was built.

Regarding the UCIDA cases, UCIDA as an organization lawfully petitioned the federal government under the federal Administrative Procedure Act. When the federal government failed to even acknowledge receipt of UCIDA's petition for an unreasonable amount of time, UCIDA filed suit seeking a declaration that it was denied due process and equal protection of the law for failing to respond to UCIDA's petition. It is unlikely that the State of Alaska has standing to intervene against UCIDA regarding constitutional claims against the Secretary of Commerce for failing to respond to UCIDA's petition within a reasonable time.

UCIDA's second case challenges aspects of National Marine Fisheries denial of UCIDA's petition under the Administrative Procedure Act. The Alaska Department of Law was provided courtesy copies of the pleadings in this case and likely have legal reasons for not intervening at this time. Again, the proposed resolution is unlikely to influence the executive branch in this case, the real consequence is the chilling effect this legislation will have on those who seek to petition the government and ultimately seek redress against an unresponsive government.

The government works for us. Presumably, the government will act in a responsible manner. One of the real consequences of our form of government, is that the strong and influential act in a manner that affects the small and the weak. The right to petition and seek redress is a built in check on majority rule – one that our forefathers recognized as indispensible to true democracy. A read of the sponsors' press release reveals this legislation for what it really is, an attempt to bully an individual and an organization lawfully seeking redress into dropping their lawsuits.

The sponsors label commercial fishing interests as having inordinate, unfair, unethical and disproportionate influence on fisheries management. These labels are decidedly unhelpful and further foment negative sentiment against the parties to the litigation by seeking to paint all commercial fishermen with the same brush.

At the same time, we see the prime sponsor of SJR 22 on the House side has introduced HB 266 to prioritize personal use dipnetting. An examination of campaign contributions demonstrates where the real influence comes from regarding fisheries management. HB 266 will

have negative impacts on the fishing industry in the State of Alaska, discouraging investment, reducing the number of jobs available, and reducing taxable income to the State and those communities that share in that revenue. The social impacts of personal use dipnetting should be considered and dealt with before creating a priority in this fishery that will negatively affect coastal communities in Cook Inlet and Prince William Sound. This bill will likely lead to further litigation, and will galvanize the commercial fishing industry in a way that SJR 22 did not.

At this time I am urging the Alaska Legislature, on behalf of my clients, to respect their rights to petition and redressability and oppose SJR 22. Furthermore, the legislature should find that HB 266 is not in the best interest of the State of Alaska and oppose that bill as well.

Sincerely,

BALDWIN & BUTLER, LLC

To: Rep. Bryce Edgmon
Subject: Support SJR22 and HB266

Dear Representative Bryce,

I was born and raised here in Alaska and my brothers and I grew up hunting, trapping and fishing with our parents. Chitna dip netting of sockeye and Chinook salmon has been a stable source of quality food of our family. We are now on our third generation of family members now dipping to provide salmon to our parents and grandparents. Occasionally we get only a few but we are usually the diehard shore based dippers that usually get our limit if not one trip maybe a second. The trip is a family affair and the salmon are better than anything you can buy at a store. I understand the commercial aspect of the fishery as well but many of these fishermen are not even from our state and precedence lies with subsistence priority first before commercial fisheries, subsistence means food for local peoples and in this state means all residents. Chitna is not an easy place to fish and it is not for everyone because of the difficult river and weather. I typically do not sport fish because if I catch a fish I am going to eat it. I do not understand totally the reason why this fishery got changed to a personal use fishery but you should be thinking of the families this resource is providing for -the everyday working man.

Please support SJR22 and HB266.

Representative Bill Stoltze, February 5,2010

Please let me say thank you to all in the Legislature that are involved with SJR 22 and HB 266. I am glad to see that you are helping to ensure that Alaskan residents would have some priority when it comes to our resources, in times of shortages.

As you all must be aware, there are over 90,000 Alaskan residents that benefit from personal use fishing in our great state. Whether it is done in Chitina, The Kenai/Kasilof or even China poot, Alaskans from through out the state put fish into their freezers because of dipnetting.

I have to admit I am somewhat biased since I started SCADA a number of years ago. What keeps me working on keeping dipnetting from getting cut back is the feedback I get from mostly elderly Alaskan residents. Let me explain. Whenever I am quoted in the newspaper or go on talk radio, concerning dipnetting, I start to receive cold phone calls, usually that night.

It turns out that a lot of our elderly really depend on fish from personal use and these phone calls are a lot of "thank you's" for standing up and fighting to keep personal use in play. I have been amazed at the amount of seniors that have looked up my last name in the phone book to call and tell me that they appreciate my efforts and really depend on these fish. That is what keeps me going.

My hat is off to all of you that support Alaskan residents.

Thank You again,

Ken Federico, SCADA, [redacted]

Dear Ms. Long,

Please let Sen. Huggins know that we are in full support of SJR 22; for too long the commercial fishing industry has dominated boards and councils regarding fisheries management. It past time that a more equitable balance be established on these boards and councils and we believe SJR 22 to be a first step in that direction.

Sincerely,
Charles E. and Alice J. Collins

Subject: support for SJR 22

support for SJR 22:

Dear Ms Long: Please be aware that I support SJR 22. The imbalance in the representation of our fisheries decision making councils and boards is a major causeof the creation of rules that are benefitting a small number of commercial fisherman in a disproportional manner. There finally is a study out that reflects the huge value of sport caught fish. The recreational fishery not only benefits local Alaskans directly by putting food in their freezers, but the financial benefit from tourist dollars is widely spread through the economy by the huge variety of the many small businesses that support this industry.

I think specifically the failures of the North Pacific Fisheries Management council to create a reasonable allocation of halibut resources between private and commercial sector is a result of a ridiculously biased council and somewhat biased staff and legal advisors. If there were to be a balance on that council, they might actually have produce a reasonable solution instead of the 15 years of failed efforts and legally flawed rules.

Thank you for your efforts in protecting the public interest in its resources,

Sponsor Statement SJR 22

This resolution takes aim at lawsuits filed in the US District Court of Alaska, one by the United Cook Inlet Drift Association (UCIDA) and another by Herbert T. Jensen. The complaints by this commercial fishing group and an individual, calling for a return of federal management is an affront to the State of Alaska. Please, do not forget, here in our 50th year as a state, it was a colossal failure of federal salmon management that was a major driving force behind the statehood movement. I would hope no one wishes to return to such a regime.

UCIDA is an association of both resident and non-resident commercial fishers who participate in drift gillnet salmon fisheries in the inlet. Remarkably, these fishers can keep, for their personal use, an unlimited number of fish from their commercial catch. Their goal is to have the state-managed personal use dip net fishery declared unconstitutional and be pre-empted by federal law. This resolution seeks a fair shake for Alaskans who fish, without commercial gear, with simple dip nets, to feed their families. It asks the governor to intervene in defense of our state's authority to manage its own fisheries in a responsible manner.

Senate District H

Huggins, Stoltze Introduce Resolution to Protect Alaska's Personal Use Dip Net Fisheries

(JUNEAU, April 9, 2009) – Senator Charlie Huggins (R-Mat-Su) and Representative Bill Stoltze (R-Chugiak/Mat-Su) today announced that they are introducing companion resolutions requesting Governor Sarah Palin's administration to join the federal government in opposing a lawsuit filed by a Cook Inlet commercial fishing group challenging salmon management in the inlet. Senate Joint Resolution 22, sponsored by Senator Huggins and co-sponsored by Senators Johnny Ellis (D-Anchorage), Bill Wielechowski (D-Anchorage) and Linda Menard (R-Wasilla), was introduced this morning. Representative Stoltze plans to introduce a companion resolution in the House of Representatives tomorrow.

"With this resolution, we're trying to get a fair shake for Alaskans who fish to feed their families and asking the governor to defend the state's authority to manage our fisheries in a responsible manner," said Senator Huggins. "If this lawsuit is successful, it could pre-empt state management and be detrimental to Alaskans' access to our salmon resources."

The lawsuit was filed last year by the United Cook Inlet Drift Association (UCIDA) against the U.S. Department of Commerce opposing the current management of salmon fisheries in Cook Inlet. UCIDA is an association of both resident and non-resident commercial fishermen who participate in drift gillnet salmon fisheries in the inlet. Senate Joint Resolution 22 would express the Senate's objection to the association's effort to have state-managed personal use dip net fisheries declared unconstitutional and therefore pre-empted by federal law.

"It is appalling that this Alaska resident-only salmon fishery is under assault by special interests, said Representative Stoltze. "Dipnetting is a great part of Alaska - a true family tradition."

The resolutions request Governor Palin "to direct the attorney general to oppose this lawsuit", and, "in cooperation with the legislature, to re-examine the inordinate and potentially unfair, unethical, and disproportionate influence of the commercial fisheries industries on fisheries management in Alaska."

SJR 22 has been referred to the Resources Committee and the Judiciary Committee. The House version will be referred to committees tomorrow.

For more information, contact Senator Huggins or Sharon Long at 907-465-3878, or Representative Stoltze or Ben Mulligan at 907-465-4958.

UNITED STATES DEPARTMENT OF COMMERCE
National Oceanic and Atmospheric Administration
NATIONAL MARINE FISHERIES SERVICE
1315 East-West Highway
Silver Spring, Maryland 20910

THE DIRECTOR

James N. Butler, III
Gregory R. Gabriel, Jr.
Baldwin & Butler, LLC
125 North Willow Street
Kenai, Alaska 99611

Dear Mr. Butler and Mr. Gabriel:

Thank you for your "Petition for Emergency Rules Related to Salmon Management in Cook Inlet, Alaska" (Petition), dated June 12, 2008, and submitted to the Secretary of Commerce by the United Cook Inlet Drift Association and the Kenai Peninsula Fishermen's Association (Petitioners). We have reviewed and considered the Petition. The attached document constitutes the National Marine Fisheries Service's (NMFS's) response to the Petition.

For various reasons explained fully in the attached response, NMFS denies Petitioners' claims that challenge the consistency of certain State of Alaska (State) salmon regulations applicable within the Exclusive Economic Zone (EEZ) with the provisions of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act), the Fishery Management Plan for the Salmon Fisheries in the EEZ Off the Coast of Alaska (FMP), and other applicable Federal law. Before appealing such regulations to NMFS, the FMP requires persons challenging State salmon fishing regulations to first exhaust their remedies through the appropriate State procedures. The information provided in the Petition indicates that Petitioners have failed to exhaust their remedies with the State. Petitioners may resubmit these claims to NMFS after exhausting their remedies with the State in accordance with Chapter 9 of the FMP.

NMFS also declines to pursue Petitioners' request that NMFS preempt State management of salmon fisheries within the State waters of Upper Cook Inlet because the Magnuson-Stevens Act prevents NMFS from preempting a state's management authority within that state's waters if NMFS in unable to find that the fishery occurs predominantly within the EEZ. The catch data for salmon in the EEZ versus State waters clearly show that fishing for salmon governed by the FMP, on a broad scale as well as solely within the Cook Inlet Management Area, does not occur predominately within the EEZ.

THE ASSISTANT ADMINISTRATOR
FOR FISHERIES

Printed on Recycled Paper

Finally, the attached document provides the agency's position relative to a number of interpretations of several provisions of the Magnuson-Stevens Act and the scope of Federal authority to manage salmon fisheries under the provisions of the Magnuson-Stevens Act and the FMP that are included in the Petition.

Sincerely,

James W. Balsiger, Ph.D.
Acting Assistant Administrator for Fisheries

SENATOR DENNIS EGAN

Senate Joint Resolution 27 – National Seafood Marketing

Senate Joint Resolution (SJR) 27 communicates to the Obama Administration, the Alaska Congressional Delegation, and Congress the Legislature's support for using a portion of federal revenues generated from duties on imported seafood and fish products for marketing American seafood—including that harvested in Alaska.

Since the 1990s, over eighty percent of the fish consumed annually by American families is the product of foreign countries. And every year the governments of many of these countries bankroll multi-million-dollar campaigns to market their seafood to Americans.

While the Alaska seafood industry as well as the state of Alaska contribute millions in funding for marketing purposes, the amounts are not adequate to finance the vigorous, consistent, and innovative promotion that our products require in the face of foreign competition.

Meanwhile, each year hundreds of millions of dollars are derived from duties on these imported fish and fish products that so aggressively compete with American seafood. Yet only an insignificant fraction of this revenue has ever been employed to promote domestically produced seafood.

SJR 27 endorses putting a portion of these revenues to work in developing and maintaining the robust domestic markets that healthy, sustainable Alaskan seafood deserves. The resolution urges Congress to pass legislation dedicating such funding for the effective domestic marketing of American seafood. It asks the Alaska Delegation in Congress to work together with representatives from other seafood producing states to accomplish these goals.

Creation of a
National Seafood Marketing Coalition

Executive Summary

U.S. seafood producers have common interests. These common interests are often overshadowed by a variety of conflicts, such as access and allocation. U.S. seafood producers can set aside conflicts in order to focus on areas of common interest.

U.S. seafood producers need parity with other U.S. food producers. The bottom line is that U.S. seafood producers are food producers and struggle with the same issues as other U.S. food producers. However, seafood producers are not included in many of the USDA programs which currently benefit farmers. For example, seafood producers do not receive specific funding for domestic marketing and product development which leaves us behind foreign competitors. Additionally, "wild caught" seafood producers cannot participate in the USDA Farm Service Agency's Loan Program due to the agency's definition of "fish."

These two examples, *marketing and affordable working capital,* address areas which are critical to the survival and success of the U.S. seafood industry. In order to affect positive change for U.S. seafood producers, we need to begin to think strategically. Below is an outline of those strategic steps.

Strategic Steps to Success:

1) Create a Coalition
2) Define the issue
3) Build support
4) Identify potential legislative vehicles
5) Wait for the correct timing

Step 1 – Create a Coalition: The formation of a *National Seafood Marketing Coalition* (Coalition) creates a forum on which to build grass roots support and effect the changes necessary in the industry. The creation of the Coalition is vital to the health of our industry and the survival of our coastal communities.

Step 2 – Define the issue: The first issue adopted by the Coalition could be the establishment of a National Seafood Marketing Fund which targets revenues from import duties on fish and fish products as an annual funding source. Other issues may be adopted by the Coalition in the future; however, beginning with one single issue allows the Coalition to focus on building its relationships and support around that issue.

A focused single issue and message with broad support is essential to achieving success. Marketing is an issue which will help all sectors of the industry by bringing higher demand and value to U.S. seafood products.

Step 3 – Build support: Grassroots support is the single most powerful influence on our Congressional Delegates. The Coalition must build support at the local, regional and national levels to create an unshakeable foundation of support for its issues. To do this, Coalition members must rally organizations, businesses, communities, and states with interest in the seafood industry, to support Coalition issues in Congress.

Step 4 – Identify potential vehicles: The next strategic step for success is to identify potential legislative vehicles on which to attach the Coalition's issue. A potential vehicle could be President Obama's Jobs Bill, mentioned in his State of the Union Address.

Step 5 – Wait for the correct timing: The political timing must be correct in order to accomplish our goal.

We must form a strong, supportive Coalition and be strategically smart. Remember, we have legitimate value in our goal; a healthy U.S. seafood industry is good for the economy and good for the country.

National Seafood Marketing Coalition

Proposal to Create a National Seafood Marketing Fund

DRAFT-DRAFT-DRAFT

Need

American seafood products are increasingly forced to compete with imported seafood and many other sources of protein in the domestic marketplace. Consequently, United States fishermen and seafood producers struggle to maintain a healthy business profile. Ex-vessel prices are too low to sustain many domestic fisheries. Fishing jobs are being lost and fishery dependant communities are in decline. It is in the interest of the U.S. to maintain a strong domestic seafood industry.

Concept

Develop national legislation directing a portion of the import duties collected on fish and fish products be dedicated to a National Seafood Marketing Fund (NSMF). The NSMF would market domestic seafood which directly competes with foreign imported seafood. Secondly, the legislation would establish nine (9) Regional Seafood Marketing Boards to receive, manage and direct these dedicated funds.

Factual Background

Seafood imports generate two sources of revenue for the U.S. treasury. First, approximately $300 million dollars annually ($282 million in 2008) is generated through duties and tariffs on imported fish and fish products. Second, as much as $400 million dollars may be generated annually from the antidumping/countervailing duties (AD/CVD) on imported fish and fish products.

The first source of revenue, money collected from import duties on fish and fish products, are funds for the U.S. Department of Agriculture (USDA) and the U.S. treasury. Annually, 30% of these funds are transferred from USDA to the U.S. Department of Commerce (USDC) National Marine Fisheries Service's *Promote and Develop Fisheries Products* (P&D) account. NMFS further allocates a majority of the P&D account to Operations, Research and Facilities (ORF). The remaining portion funds the Saltonstall-Kennedy (S-K) program, which traditionally has few or no proposals to *"promote and develop fisheries products."* To date, it has been difficult to find the disposition of the

remaining funds retained within the USDA. A breakdown of the appropriation of these funds for fiscal years 2007 & 2008 is listed below:

Revenue from Import Duties on Fish & Fish Products (millions)

Year	Total Duties in USDA	P&D Account	Remaining in USDA	P&D Account Breakdown	
				ORF	SK
FY07	**$ 276.05**	$ 82.82	$ 193.23	$ 79.00	$ 3.82
% of Total Duties	**100%**	30%	70%	29%	1%
FY08	**$ 281.98**	$ 84.59	$ 197.39	$ 77.00	$ 7.59
% of Total Duties	**100%**	30%	70%	27%	3%

The 1956 S-K Act was amended in 1983 to require that 60% of the P&D, or approximately $50M, be used to fund the S-K program annually. Further, it is interesting to note that the amount of funds used for the S-K program since 1983 has never met this minimum of 60%; the average for this period is 11.8% (including promotional and marketing funds).

From FY1978 to FY2008, import duties on fish and fish products have grown from $43.3M to $282M. However, funds available for the S-K program have shrunk from $13M to $7.6M. The average for this period is $7.3M.

The second source of revenue, the antidumping/countervailing duties (AD/CVD), is not currently allocated for any use by domestic seafood producers, although domestic seafood producers are dramatically affected by imported products often subsidized by foreign governments. AD/CVD funds collected from imported seafood have been difficult to definitively identify; however, it is believed to be as much as $400M annually.

Funding Source

This proposal suggests an annual funding mechanism for the National Seafood Marketing Fund by utilizing equal portions of the revenue from import duties on fish and fish products and the revenue from AD/CVD. The portion of revenue from import duties on fish and fish products should be equal to the congressional intent of 60% of the P&D account (approximately $50M annually) which would then be matched with an equal amount from the AD/CVD.

To be clear, the import duties on fish and fish products targeted for this proposal are the 70% remaining in USDA, not the 30% transferred to NMFS for ORF and S-K.

Structure of Regional Seafood Marketing Boards

1. Nine (9) Regional Seafood Marketing Boards (Boards) would be established in order to include all U.S. seafood producers which would include mariculture and aquaculture. Eight (8) Boards would geographically parallel the 8 Regional Fishery Management Councils authorized by the Magnuson-Stevens Act. The 9th Board would represent inland domestic seafood production. Marketing activities of each Board would be directed toward seafood caught or products produced in each region.

2. Establish a statutorily "fixed" annual funding mechanism using an equal portion of the import duties on fish and fish products and the AD/CVD. The total amount appropriated annually would be divided into thirds:

- One-third distributed equally to all 9 regional Boards.
- One-third distributed based on the comparative regional value of seafood produced in the most recently reported year.
- One-third distributed based on the comparative regional volume of seafood (metric tons) produced in the most recently reported year.

3. The Boards should be limited in scope to promotion and marketing, including new product development, of seafood harvested and/or produced in each region (e.g. no imported products). "Promotion and marketing, including new product development" should be defined broadly enabling Boards to respond quickly to market needs.

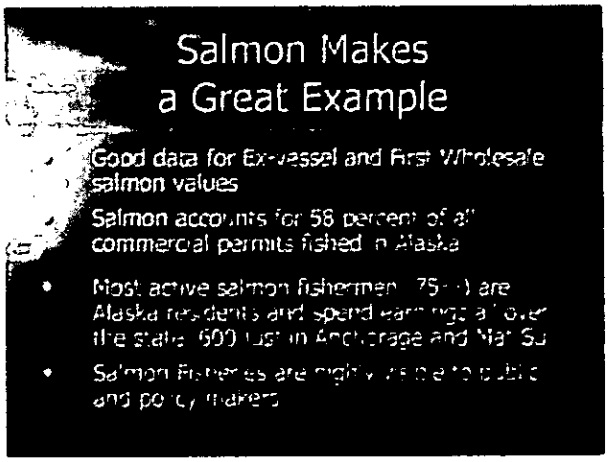
4. Boards serve as the regional "umbrella funding" entity. The Boards' activities should be limited to the awarding of grants and the distribution of funds through a Request for Proposal process. Boards would not manage marketing programs. Existing marketing or development entities, such as the Wild American Shrimp, Inc., Louisiana Seafood Promotion and Marketing Board, Maine Lobster Promotion Council, Alaska Seafood Marketing Institute, or the California Salmon Council could also apply to the Boards for funding to support their programs.

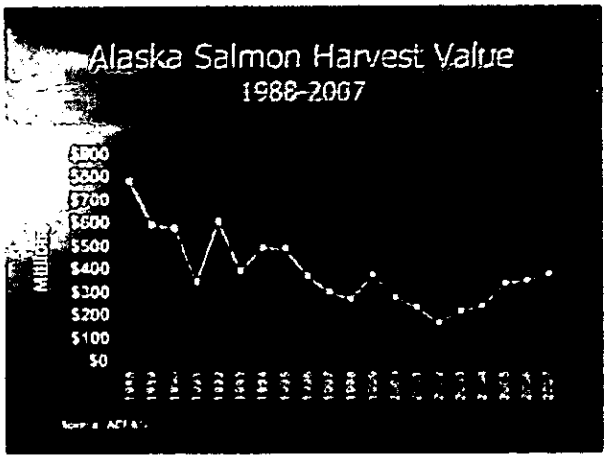
In addition, the Boards, as regional "umbrella" entities, should be encouraged to also focus on smaller (niche) marketing initiatives by requiring Boards to distribute a specific portion of their annual funding to "small businesses" as defined by the Small Business Administration.

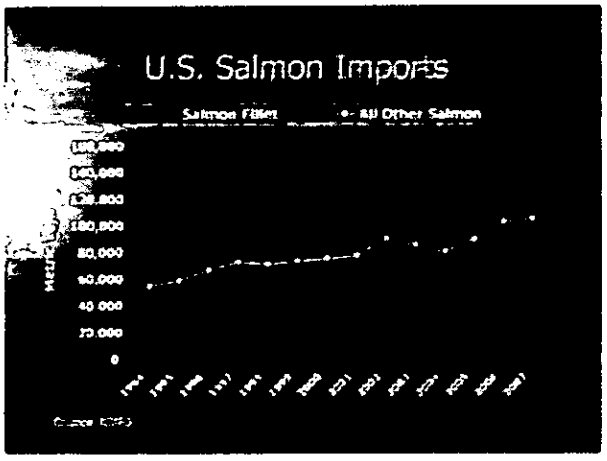
Boards can spend no more than 10% of their annual funding for administration and operational expenses.

5. Cooperation between Boards should be encouraged by requiring the Board chairmen to meet semi-annually to discuss common species, marketing projects and issues of concern. Semi-annual meetings could also include representatives from various existing seafood marketing organizations as well.

Why Marketing?
An Example from the Alaska Salmon Industry







In 1991, the Alaska salmon industry suffered from a huge influx of imported farmed salmon in consumer-friendly forms.

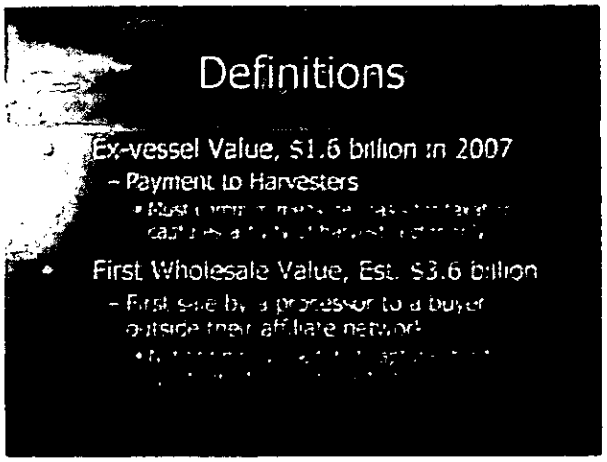
From 1991 to 2002, the value of Alaska salmon continued to drop as the import of farmed salmon continued to rise.

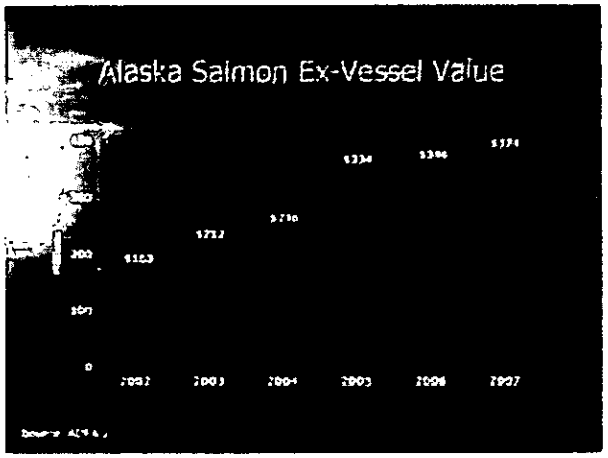
As the demand for Alaska salmon fell, so did the funds used to market Alaska salmon through the Alaska Seafood Marketing Institute (ASMI). ASMI is funded based on a percent tax on the industry.

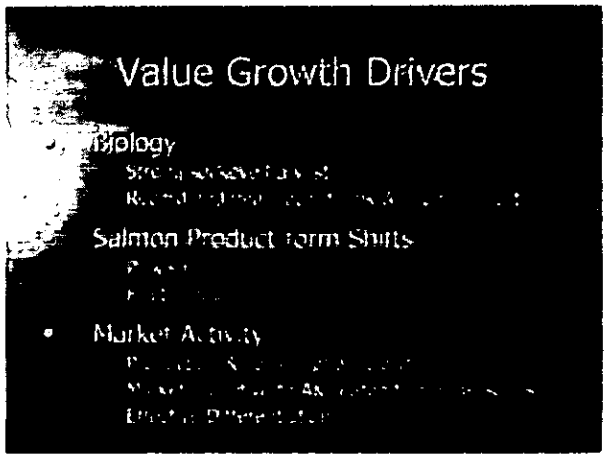
As the value of the fishery declined, the marketing funds desperately needed to pull the industry out of the tail-spin were also declining, furthering the downward trend.

During this time, approximately two-thirds of the fishermen and processing companies went out of business across Alaska.

In 2002, the Alaska salmon industry hit the lowest point of profitability in history.







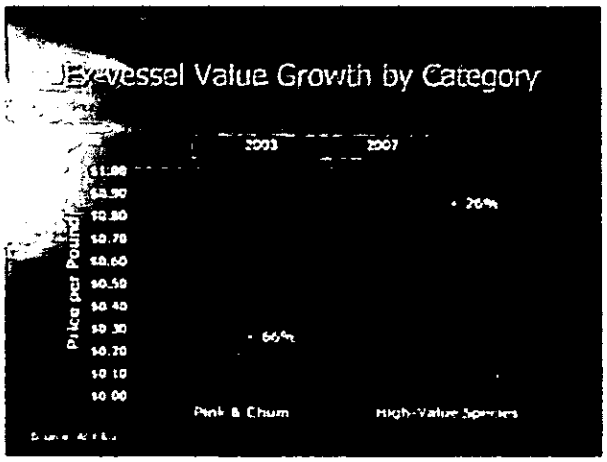
Also in 2002, Governor Frank Murkowski and his Salmon Cabinet designed and implemented the Alaska Salmon Revitalization Plan, funded with approximately $40 million, plus an equal amount of matching funds from private industry.

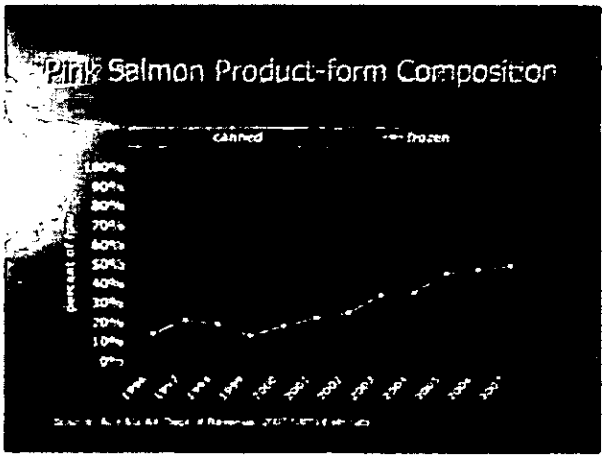
At this same time, Senator Ted Stevens created the Alaska Fisheries Marketing Board (AFMB) out of frustration in trying to meet the intent of Congress to use 60% of the Promote & Develop Fisheries Account funds to "promote and develop fisheries products." AFMB is considered a pilot project to the current proposed National Seafood Marketing Fund.

The AFMB was funded with $36 million between 2002 and 2007.

The combination of these funds, over $116 million, was used for marketing, product development and infrastructure with an emphasis on the failing salmon industry.

The positive results of these investments are significant.





Impacts of Product-form Shift

- Sustains demand growth for frozen in emerging markets
- Reduced chronic surplus of canned salmon, restoring balance of supply and demand
- Full utilization of harvestable surpluses

Results of Investments in Marketing:

--Increased quality on vessels and in processing plants.

--Increased the number of new product forms, such as fillets, portions, and consumer-ready products.

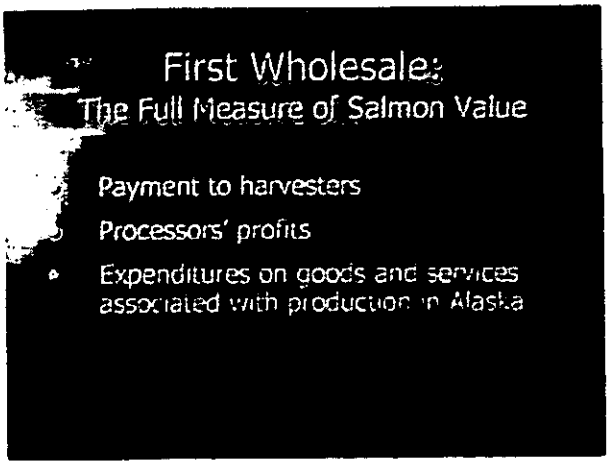
--Decreased the number of old product forms, such as canned and headed-and-gutted salmon.

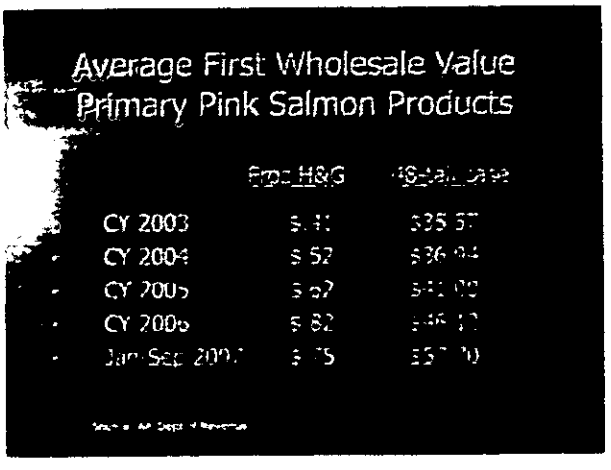
--Changed from focusing on the primary processing industry to the secondary processing industry.

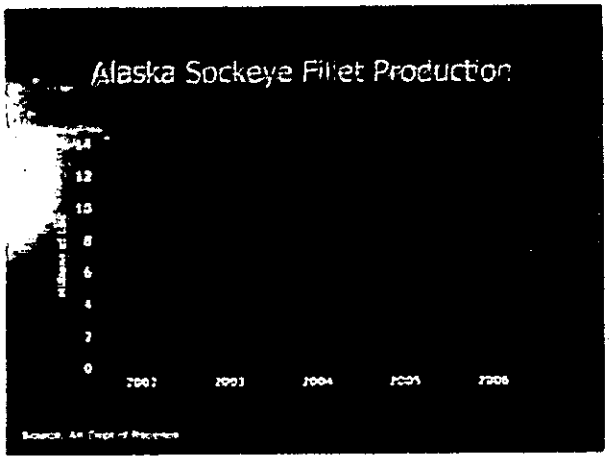
--Changed from focusing on the salmon market to focusing on the food market.

--Changed from a commodity-driven market to a consumer-driven market.

--Brought fishermen, processors, wholesalers and government agencies to the table to determine what was needed as market conditions were dynamically changing.







As a result of the investments in marketing (quality, product development, infrastructure and advertisement), the value of Alaska salmon began to rise almost immediately.

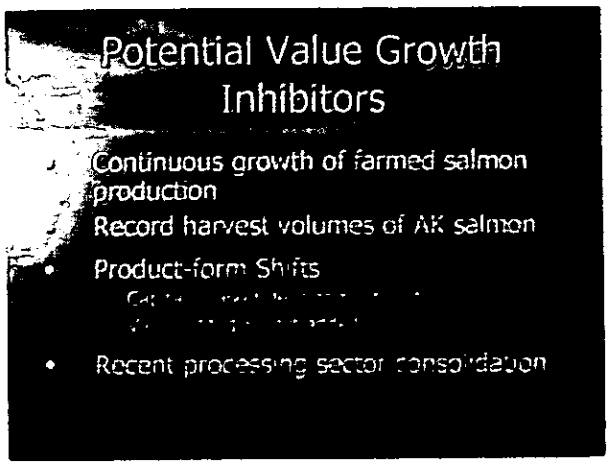
From 2002 to 2007, the ex-vessel values increased from $163 million to $374 million, an increase of 130%.

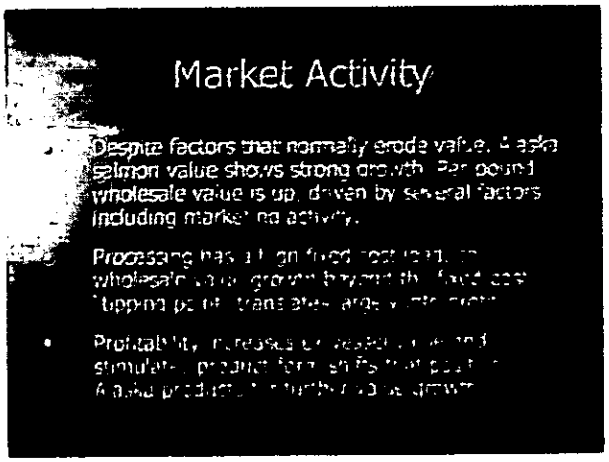
The first wholesale value of salmon increased from approximately $550 million to $850 million.

The price of canned pink salmon rose from $35.57 to $57.70 per case.

The amount of sockeye fillets produced continued to rise from approximately 2 millions pounds to almost 14 million pounds.

Many of the costs for processors are fixed. Therefore, as profitability began to rise, the percentage of profits that could be shared with fishermen also rose. The price paid to fishermen, as a percentage of the first wholesale value, increased from 29% to 40%.

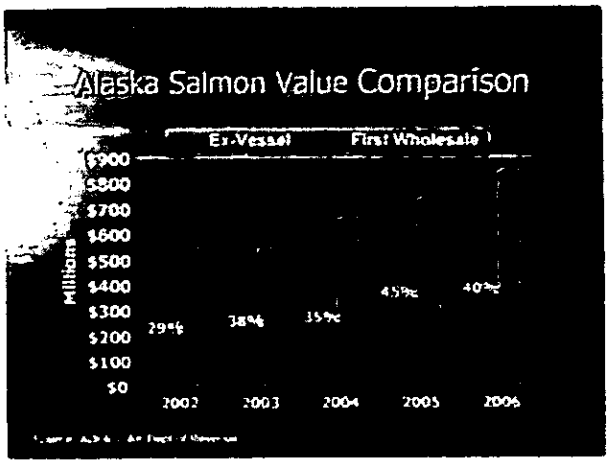


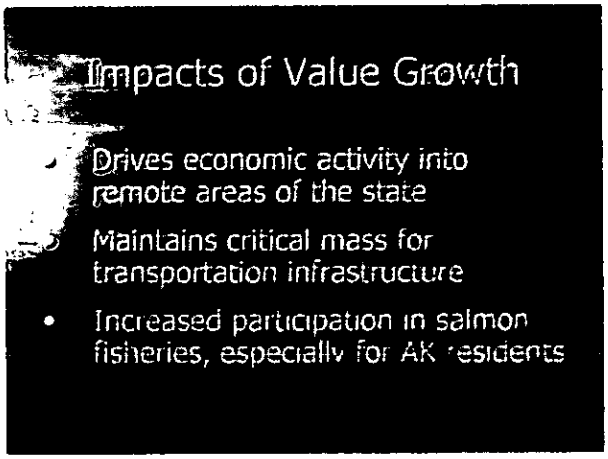


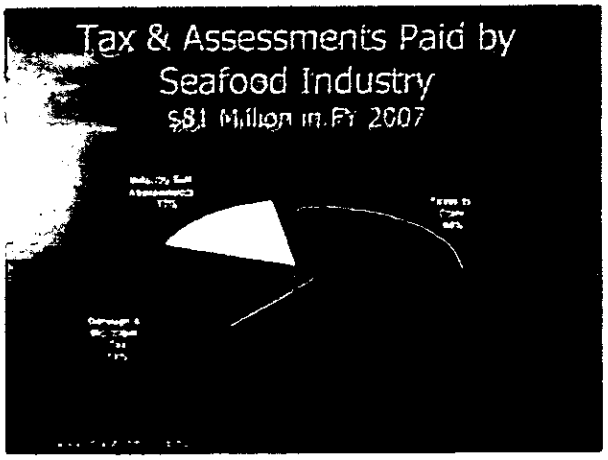
The rise in value of Alaska salmon continued even in the face of increased production of farmed salmon, record harvests of Alaska salmon, increased competition from other sources of seafood, and increased marketing efforts from foreign countries. For example, Norwegian salmon companies have budgeted $15 million for marketing in the U.S. for 2010.

The Alaska Seafood Marketing Institute (ASMI) continues to receive funding for marketing from taxes assessed on the industry. ASMI's budget from assessments is between $5 million and $10 million per year to market ***all*** Alaska Seafood. These assessments allow ASMI to leverage a variety of grants.

Since 2007, the influx of $116 million in marketing funds is no longer available. However, the ex-vessel value of salmon continues to rise. In 2008, ex-vessel values of Alaska salmon rose to $452 million, an increase of 177% over 2002 ex-vessel values.





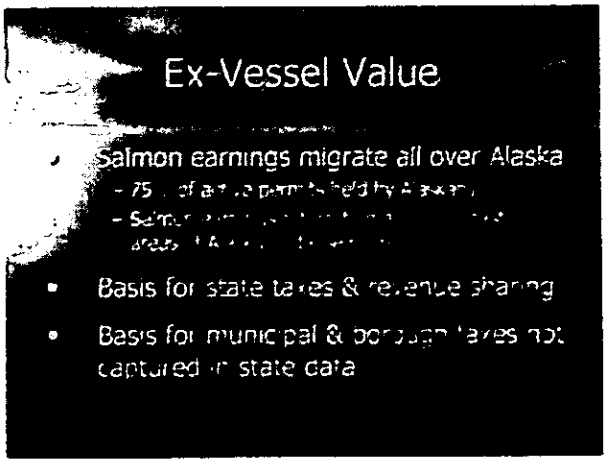


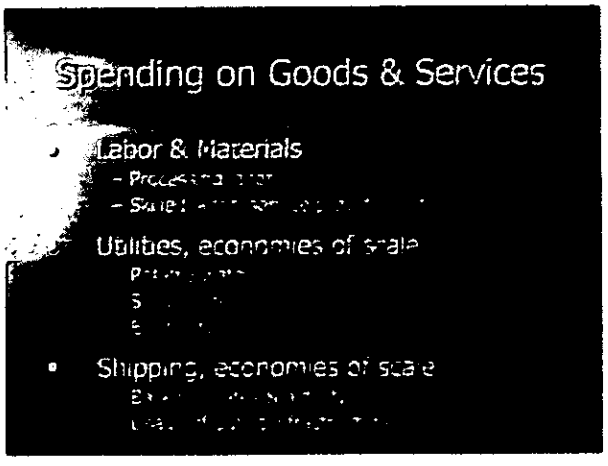
These marketing investments in the Alaska salmon industry were pure economic development.

As the value of the industry increased, economic activity also increased from rural areas of Alaska to urban centers, and even extending to other states which support the industry.

For example, as the industry began to be profitable again, upgrades were made in both the processing and harvesting sectors. Airlines invested in additional cargo capacity as more fillets and high quality salmon were shipped by air. Freight and trucking companies invested in upgrades as distribution lines changed.

Quality improvements and product development meant investments in equipment and machinery (i.e. ice machines, flash freezers and fillet machines) purchased through supply companies all over the country.





As the salmon industry increased in value, the tax revenue from the industry also increased. Salmon industry taxes support the continued marketing of Alaska seafood, the enhancement of the industry, state activities and municipal activities, such as schools and harbors.

This chain of economic impact continues to trickle down and is seen on local, regional, state and federal levels.

The investment in marketing Alaska salmon is a success story; it is also an example of what marketing can do for any product and the value of aggressive and continued marketing support, such as a *National Seafood Marketing Fund*.

*Note: Slides are excerpts from the McDowell Group's presentations to the Alaska Fisheries Marketing Board (Jan. 21, 2008) titled, "Alaska Salmon Industry: Value Growth Drivers, Secondary Impacts" & to the Alaska Seafood Marketing Institute (Feb. 21, 2008) titled "Value of the Alaska Fishing Industry to the State of Alaska".

CRS Report for Congress
Received through the CRS Web

Saltonstall-Kennedy Fishery Funding

Eugene H. Buck
Specialist in Natural Resources Policy
Resources, Science, and Industry Division

Summary

The Saltonstall-Kennedy Act established a fund that, among other things, has supported fishery research and development projects, with funding awarded annually on a competitive basis. Recent congressional "earmarks" have preempted the competitive process for awarding funding for industry projects. This report will be updated as this issue evolves.

The Saltonstall-Kennedy (S-K) Act, as amended (15 U.S.C. §713c-3), established a fund (known as the S-K Fund) that the Secretary of Commerce uses to finance projects and cooperative agreements for fishery research and development. Under this authority, projects or cooperative agreements are selected annually on a competitive basis to assist NOAA Fisheries (previously known as the National Marine Fisheries Service) in addressing concerns related to U.S. commercial and recreational fisheries. The S-K Fund is capitalized through annual transfers under a permanent appropriation to the Secretary of Commerce of 30% of the gross receipts collected by the Secretary of Agriculture under the customs laws on imports of fish and fish products.[1]

The objective of the S-K program is to address the needs of fishing communities in providing economic benefits for rebuilding and maintaining sustainable fisheries, and in dealing with the impacts of conservation and management measures.[2] The S-K program has become very important in addressing issues of immediate concern to the commercial fishing industry, by producing many new gear innovations, markets, and management options. Issues addressed have included fish harvesting, seafood quality improvements, domestic and foreign market development, efficiency and productivity improvements, and the costs/profitability of potential fishing industry investments.[3]

---

[1] Because of progressive reductions and eliminations of tariffs on edible fisheries products, most of these customs duties come from non-edible products, such as pearls, coral jewelry, etc.

[3] U.S. General Accounting Office, *Uses of Saltonstall/Kennedy Fisheries Development Funds*, (continued...)

Customs receipts have increased substantially during the life of this program, with almost $80 million currently being transferred annually to the Secretary of Commerce. **Table 1** summarizes program funding. In 1980, Congress enacted formal program authority to fund fishing industry development projects and expanded this authority in 1983, establishing a minimum percentage of S-K funds to be used to provide financial assistance to projects. The balance of S-K funds were to be used by the Secretary of Commerce for a national program of fisheries research and development to address aspects of U.S. fisheries not adequately addressed by funded industry projects. Beginning in FY1979, increasing amounts of S-K dollars have been transferred to the Department of Commerce's National Oceanic and Atmospheric Administration's (NOAA's) *Operations, Research, and Facilities* (ORF) account, reducing the funds and percentage of funds available for fishing industry projects and the national program. Since FY1982, the S-K program has never allocated the minimum amount (50% after FY1980 and 60% after FY1983) specified by law for industry projects. For example, in FY2002, slightly more than $79.1 million in customs duty receipts were transferred to the Department of Commerce from the Department of Agriculture. Of this amount, P.L. 107-77 transferred $68 million to NOAA's ORF account "for necessary expenses of activities authorized by law for the National Oceanic and Atmospheric Administration."[4] A total of slightly more than $11.1 million (14.1% of the customs receipts transferred to the Department of Commerce) remained for commercial fishing industry projects, the national program of fisheries research and development, and S-K program administration.

In FY2004 appropriations (P.L. 108-199, 118 Stat. 73, §208 of "General Provisions — Department of Commerce"), congressional earmarks designated funds for specific activities outside the regular competitive award process, and the competitive program was cancelled for FY2004.[5] A similar situation occurred in FY2003. Regardless of the merits of the activities funded through the congressional earmarks, some elements of the commercial fishing industry have expressed frustration when the competitive process is circumvented and projects are funded outside a competitive selection process.[6]

Since the S-K program requires no periodic reauthorization, no recent congressional oversight hearings have been held to review the department's rationale for allocating S-K funds between industry projects and agency base funding; how specific project areas to be funded are selected; how this program is administered and at what cost; how the results of funded projects are reviewed, disseminated, and used; and to what extent the program continues to meet its statutory objectives. Additional questions include whether the S-K

[4] 115 Stat. 774-775.

[5] In several earlier instances, congressional "soft" earmarks were specified in report language associated with annual appropriations. Although such language is not legally binding, NOAA followed the direction in making funds available noncompetitively for various specific projects. Examples include the Interstate Shellfish Sanitation Conference for an education program on naturally occurring *Vibrio vulnificus* in shellfish and the Alaska Fisheries Development Foundation for a report entitled *An Ocean of Answers*.

[6] Discussions among commercial fishermen on the internet discussion group "Fishfolk" fishfolk@mitvma.mit.edu on Mar. 22-25, 2004.

program might be considered a continuing subsidy for the commercial fishing industry, whether the funding of industry projects continues to be useful, how the utility of the S-K program authority may have changed over time, and whether critical research might be done by industry if it were not funded by the S-K program.

Criticism of S-K program management generally comes from elements of the commercial fishing industry. Some critics of S-K Fund management question whether the administration of both regulation and research within the same agency raises questions about objectivity; they suggest that researchers might be hesitant to criticize the agency for its regulatory actions because they might lose access to future or continued project funding. Others suggest that the selection (i.e., restriction) of what types of projects will be funded also may administratively "earmark" funds, such as occurred in FY2003 when about half of all industry project funding ($5 million of an anticipated $10.3 million) was identified for direction to Atlantic salmon aquaculture development. Others suggest that the narrow agency identification of projects that would be funded in FY2003 actually prompted the subsequent congressional earmarks to specify projects that are to be funded.

The following chronology presents the development of this program. Key references are identified in footnotes by links to where they may be viewed, with care taken to select those resources that may be least transient. Full citations are not provided to these footnoted documents because of the lengthy organizations and titles for them.

Chronology

07/01/1954 — President Eisenhower signs the Saltonstall-Kennedy Act (68 Stat. 376; 15 U.S.C. §713c-3) into law.

06/15/1961 — Senate Commerce Subcommittee on Merchant Marine and Fisheries holds a hearing on fishery research and rehabilitation amendments to the S-K Act.[7]

10/01/1978 — NOAA's National Marine Fisheries Service (NMFS) begins receiving S-K dollars as annual budgetary transfers to NOAA's *Operations, Research, and Facilities* account.

12/22/1980 — Section 210 of the American Fisheries Promotion Act (P.L. 96-561) amends the S-K Act to require that not less than 50% of each fiscal year's funds be used to provide financial assistance for projects.

01/06/1983 — Section 423 of P.L. 97-424 amends the S-K Act to require that not less than 60% of each fiscal year's funds be used to provide financial assistance for projects.

---

[7] U.S. Congress, Senate, Committee on Commerce, Subcommittee on Merchant Marine and Fisheries, *Fishery Research and Rehabilitation (Amendments to Saltonstall-Kennedy Act)*, 87th Congress, 1st session, hearing on S. 1230 on June 15, 1961 (Washington, DC: GPO, 1961), 103 p.

08/30/1985 — The General Accounting Office (GAO) releases a report on the *Uses of Saltonstall/Kennedy Fisheries Development Funds* (GAO/RCED0-85-145), reviewing both NMFS in-house activities and competitive industry projects supported by S-K dollars. GAO examines the adequacy of the project selection process, project monitoring procedures, and the dissemination of project results. GAO presents views on the benefits of this program to the U.S. commercial fishing industry but makes no recommendations.[8]

11/14/1986 — The enactment of §209 of P.L. 99-659 creates the Fisheries Promotional Fund, to be capitalized with S-K funds.[9]

05/14/2002 — NOAA Fisheries announces the FY2003 S-K Program, allocating $5 million of an anticipated $10.3 million for Atlantic salmon aquaculture development.[10]

02/20/2003 — President Bush signs P.L. 108-7, wherein §209 (Division B; General Provisions — Department of Commerce) appropriates $10 million in S-K dollars for the Alaska Fisheries Marketing Board for FY2003.[11]

06/30/2003 — NOAA Fisheries announces the FY2004 S-K Program, suggesting that about $4 million would be available for projects.[12]

08/01/2003 — NOAA Fisheries publishes its 2003 S-K Report to Congress.[13]

01/23/2004 — President Bush signs P.L. 108-199, wherein §208 (Division B; General Provisions — Department of Commerce)[14] appropriates $17 million in S-K dollars for various specified fisheries programs for FY2004;[15] a "soft" earmark (H.Rept. 108-221, p. 89) identifies an additional $250,000 for the Gulf and South Atlantic Fisheries Foundation to continue a *Vibrio* education program.

03/19/2004 — NOAA Fisheries announces that the FY2004 competitive S-K Program is being canceled due to insufficient funding and all

2004	265,747	79,724	62,000	0	17,250	474	22%

[a].Except for FY2004, this column does not include the "soft" earmarks as previously discussed.

[aa].This amount includes funds for industry projects, the national program, and NMFS/NOAA Fisheries expenses for administering the industry projects. In FY2003, these administrative expenses were estimated at $500,000.

Alaska Seafood Marketing Institute

Resolution 2009-01

A RESOLUTION OF THE ALASKA SEAFOOD MARKETING INSTITUTE SUPPORTING FEDERAL FUNDING FOR UNITED STATES PRODUCED SEAFOOD

WHEREAS, the State of Alaska in conjunction with the fishing industry created the Alaska Seafood Marketing Institute (ASMI) to market and promote Alaska seafood; and

WHEREAS, ASMI has worked for 28 years to champion the "Alaska Brand" and to identify Alaska seafood as wild and sustainable; and

WHEREAS, effective marketing of Alaska's seafood requires a constant, consistent and long term marketing presence, especially in times of oversupply and new competition; and

WHEREAS, the Alaska seafood industry has "self assessed" fishery production to pay for ASMI's promotional activities; and

WHEREAS, despite the money raised from the Alaska Seafood Industry, ASMI's promotional activities are often limited and underfunded; and,

WHEREAS, in times of economic collapse or fishery oversupply, the industry is least able to increase marketing assessments; and

WHEREAS, the Federal Government collects approximately $280 million dollars annually through customs laws regulating the importation of fishery products, many of which compete with Alaska's fishery products; and

WHEREAS, funds collected from the importation of fishery products are not available for the domestic marketing of American seafood; and

WHEREAS, using fishery product import revenues to market American seafood will preserve American fishing and seafood processing jobs, U.S. processing capacity and ensure availability of domestic seafood for the American Consumer;

THEREFORE BE IT RESOLVED, that the Alaska Seafood Marketing Institute strongly supports the use of a portion of federally generated fishery product import revenues for the domestic marketing of Alaska seafood; and

Alaska Seafood Marketing Institute ▲ 311 North Franklin Street, Suite 200 ▲ Juneau, AK 99801-1147
Phone 907/465-5560 800/478-2903 ▲ Fax 907/465-5572 ▲ www.AlaskaSeafood.org ▲ info@AlaskaSeafood.org

THEREFORE BE IT FURTHER RESOLVED, that the Alaska Seafood Marketing Institute's support for the use of a portion of federally generated fishery product import revenues for the domestic marketing of Alaska seafood be communicated to Governor Sean Parnell, the Alaska Legislature, Senators Lisa Murkowski and Mark Begich, Representative Don Young and to the United Fishermen of Alaska.

TITLE 15--COMMERCE AND TRADE

CHAPTER 15--ECONOMIC RECOVERY

SUBCHAPTER I--GENERALLY

Sec. 713c-3. Promotion of the free flow of domestically produced fishery products

(a) Definitions

As used in this section--

(1) The term ``person'' means--

(A) any individual who is a citizen or national of the United States or a citizen of the Northern Mariana Islands;

(B) any fishery development foundation or other private nonprofit corporation located in Alaska; and

(C) any corporation, partnership, association, or other entity (including, but not limited to, any fishery development foundation or other private nonprofit corporation not located in Alaska), nonprofit or otherwise, if such entity is a citizen of the United States within the meaning of section 50501 of title 46 and for purposes of applying such section 50501 with respect to this section--

(i) the term ``State'' as used therein includes any State referred to in paragraph (3),

(ii) citizens of the United States must own not less than 75 percent of the interest in the entity or, in the case of a nonprofit entity, exercise control in the entity that is determined by the Secretary to be the equivalent of such ownership, and

(iii) nationals of the United States and citizens of the Northern Mariana Islands shall be treated as citizens of the United States in meeting the ownership and control requirements referred to in clause (ii).

(2) The term ``Secretary'' means the Secretary of Commerce.

(3) The term ``State'' means any State, the District of Columbia, the Commonwealth of Puerto Rico, American Samoa, the Virgin Islands of the United States, Guam, the Northern Mariana Islands, and any other Commonwealth, territory, or possession of the United States.

(4) The term ``United States fishery'' means any fishery, including any tuna fishery, that is, or may be, engaged in by citizens or nationals of the United States or citizens of the Northern Mariana Islands.

(5) The term ``citizen of the Northern Mariana Islands'' means--

(A) an individual who qualifies as such under section 8 of the Schedule on Transitional Matters attached to the Constitution of the Northern Mariana Islands; or

(B) a corporation, partnership, association, or other entity organized or existing under the laws of the Northern Mariana Islands, not less than 75 percent of the interest in which is owned by individuals referred to in subparagraph (A) or citizens or nationals of the United States, in cases in which ``owned'' is used in the same sense as in section 50501 of title 46.

(b) Transfer of funds

(1) The Secretary of Agriculture shall transfer to the Secretary each fiscal year, beginning with the fiscal year commencing July 1, 1954, and ending on June 30, 1957, from moneys made available to carry out the provisions of section 612c of title 7, an amount equal to 30 per centum of the gross receipts from duties collected under the customs laws on fishery products (including fish, shellfish, mollusks, crustacea, aquatic plants and animals, and any products thereof, including processed and manufactured products), which shall be maintained in a separate fund only for--

(A) use by the Secretary--

(i) to provide financial assistance for the purpose of carrying out fisheries research and development projects approved under subsection (c) of this section,\1\

\1\ So in original. The comma probably should be a semicolon.

(ii) to implement the national fisheries research and development program provided for under subsection (d) of this section;

(iii) to implement the Northwest Atlantic Ocean Fisheries Reinvestment Program established under section 1863 of title 16; and

(iv) to fund the Federal share of a fishing capacity reduction program established under section 1861a of title 16; and

(B) the provision of moneys, subject to paragraph (2), to carry out the purposes of the Fisheries Promotion Fund established under

[[Page 834]]

section 208(a) \2\ of the Fish and Seafood Promotion Act of 1986 [16 U.S.C. 4008(a)].

\2\ So in original. Probably should be section ``209(a)''.

(2) There are transferred from the fund established under paragraph (1) to the Fisheries Promotion Fund referred to in paragraph (1)(B) $750,000 in fiscal year 1987, $3,000,000 in each of fiscal years 1988 and 1989, and $2,000,000 in each of fiscal years 1990 and 1991.

(c) Fisheries research and development projects

(1) The Secretary shall make grants from the fund established under subsection (b) of this section to assist persons in carrying out research and development projects addressed to any aspect of United States fisheries, including, but not limited to, harvesting, processing, marketing, and associated infrastructures.

(2) The Secretary shall--

(A) at least once each fiscal year, receive, during a 60-day period specified by him, applications for grants under this subsection;

(B) prescribe the form and manner in which applications for grants under this subsection must be made, including, but not limited to, the specification of the information which must accompany applications to ensure that the proposed projects comply with Federal law and can be evaluated in accordance with paragraph (3)(B); and

(C) approve or disapprove each such application before the close of the 120th day after the last day of the 60-day period (specified under subparagraph (a)) in which the application was received.

(3) No application for a grant under this subsection may be approved unless the Secretary--

(A) is satisfied that the applicant has the requisite technical and financial capability to carry out the project; and

(B) evaluates the proposed project as to--

(i) soundness of design,

(ii) the possibilities of securing productive results,

(iii) minimization of duplication with other fisheries research and development projects,

(iv) the organization and management of the project,

(v) methods proposed for monitoring and evaluating the success or failure of the project, and

(vi) such other criteria as the Secretary may require.

(4) Each grant made under this subsection shall be subject to such terms and conditions as the Secretary may require to protect the interests of the United States, including, but not limited to, the following:

(A) The recipient of the grant must keep such records as the Secretary shall require as being necessary or appropriate for disclosing the use made of grant funds and shall allow the Secretary and the Comptroller General of the United States, or any of their authorized representatives, access to such records for purposes of audit and examination.

(B) The amount of a grant may not be less than 50 percent of the estimated cost of the project.

(C) The recipient of the grant must submit to the Secretary periodic project status reports.

(5)(A) If the cost of a project will be shared by the grant recipient, the Secretary shall accept, as a part or all of that share, the value of in-kind contributions made by the recipient, or made available to, and applied by, the recipient, with respect to the project.

(B) For purposes of subparagraph (A), in-kind contributions may be in the form of, but are not limited to, personal services rendered in carrying out functions related to, and permission to use real or personal property owned by others (for which consideration is not required) in carrying out the project. The Secretary shall establish (i)

the training, experience, and other qualifications which shall be required in order for services to be considered as in-kind contributions; and (ii) the standards under which the Secretary will determine the value of in-kind contributions for purposes of subparagraph (A).

(C) Any valuation determination made by the Secretary for purposes of this paragraph shall be conclusive.

(d) National fisheries research and development program

(1) The Secretary shall carry out a national program of research and development addressed to such aspects of United States fisheries (including, but not limited to, harvesting, processing, marketing, and associated infrastructures) if not adequately covered by proj- ects assisted under subsection (c) of this section, as the Secretary deems appropriate.

(2) The Secretary shall, after consultation with appropriate representatives of the fishing industry, submit to the Committee on Commerce, Science, and Transportation of the Senate and the Committee on Merchant Marine and Fisheries of the House of Representatives, an annual report, that must be submitted not later than 60 days before the close of each fiscal year, containing--

(A) the fisheries development goals and funding priorities under paragraph (1) for the next fiscal year;

(B) a description of all pending projects assisted under subsection (c) of this section or carried out under paragraph (1), in addition to--

(i) a list of those applications approved and those disapproved under subsection (c) of this section, and the total amount of grants made, for the current fiscal year, and

(ii) a statement of the extent to which available funds were not obligated or expended by the Secretary for grants under subsection (c) of this section during the current fiscal year; and

(C) an assessment of each project assisted under subsection (c) of this section or carried out under paragraph (1) that was completed in the preceding fiscal year regarding the extent to which (i) the objectives of the project were attained, and (ii) the project contributed to fishery development.

(e) Allocation of fund moneys

(1) Notwithstanding any other provision of law, all moneys in the fund shall be used exclu

[[Page 835]]

sively for the purpose of promoting United States fisheries in accordance with the provisions of this section, and no such moneys shall be transferred from the fund for any other purpose. With respect to any fiscal year, all moneys in the fund, including the sum of all unexpended moneys carried over into that fiscal year and all moneys transferred to the fund under subsection (b) of this section or any other provision of law with respect to that fiscal year, shall be allocated as follows:

(A) the Secretary shall use no less than 60 per centum of such moneys to make direct industry assistance grants to develop the United States fisheries and to expand domestic and foreign markets for United States fishery products pursuant to subsection (c) of

this section; and

(B) the Secretary shall use the balance of the moneys in the fund to finance those activities of the National Marine Fisheries Service which are directly related to development of the United States fisheries pursuant to subsection (d) of this section.

(2) The Secretary shall, consistent with the number of meritorious applications received with respect to any fiscal year, obligate or expend all of the moneys in the fund described in paragraph (1). Any such moneys which are not expended in a given fiscal year shall remain available for expenditure in accordance with this section without fiscal year limitation, except that the Secretary shall not obligate such moneys at a rate less than that necessary to prevent the balance of moneys in the fund from exceeding $3,000,000 at the end of any fiscal year.

(Aug. 11, 1939, ch. 696, Sec. 2, 53 Stat. 1412; July 1, 1954, ch. 447, 68 Stat. 376; Aug. 8, 1956, ch. 1036, Sec. 12(b), 70 Stat. 1124; Pub. L. 89-348, Sec. 1(13), Nov. 8, 1965, 79 Stat. 1311; Pub. Codification

``Section 50501 of title 46'' substituted for ``section 2 of the Shipping Act, 1916 (46 U.S.C. 802)'' in subsec. (a)(1)(C) and (5)(B) and ``such section 50501'' substituted for ``such section 2'' in subsec. (a)(1)(C) on authority of Pub. L. 109-304, Sec. 18(c), Oct. 6, 2006, 120 Stat. 1709, section 8(b) of which enacted parts A and B of subtitle V of Title 46, Shipping.

Amendments

1996--Subsec. (b)(1)(A)(iii). Pub. L. 104-208 made technical amendment to reference in original act which appears in text as reference to section 1863 of title 16.

Subsec. (b)(1)(A)(iv). Pub. L. 104-297 added cl. (iv).

Pub. L. 104-208 made technical amendment to reference in original act which appears in text as reference to section 1861a of title 16.

1992--Subsec. (b)(1)(A). Pub. L. 102-567 struck out ``and'' at end of cl. (i) and added cl. (iii).

1990--Subsec. (b)(2). Pub. L. 101-627 substituted ``each of fiscal years 1990 and 1991'' for ``fiscal year 1990''.

1986--Subsec. (b). Pub. L. 99-659 designated existing provisions as introductory provisions and subpar. (A) of par. (1) and added pars. (1)(B) and (2).

1983--Subsec. (e). Pub. L. 97-424 amended subsec. (e) generally, which formerly had provided:

``(1) With respect to any fiscal year, not less than 50 percent of--

``(A) the moneys transferred to the fund under subsection (b) of this section or any other provision of law with respect to that fiscal year; and

``(B) such existing fund moneys carried over into that fiscal year;

shall be used by the Secretary during that fiscal year to provide financial assistance for projects under subsection (c) of this section; and the remainder of such moneys in the fund shall be used to implement the national fisheries research and development program established under subsection (d) of this section during that fiscal year.

``(2) Moneys accruing to the fund established under subsection (b) of this section for any fiscal year and not expended with respect to that year shall remain available for expenditure under this section without fiscal year limitation.''

1980--Subsec. (a). Pub. L. 96-561, Sec. 210(2), (3), added subsec. (a) and redesignated former subsec. (a) as (b).

Subsec. (b). Pub. L. 96-561, Sec. 210(1), (2), (4), redesignated subsec. (a) as (b), substituted ``transfer to the Secretary'' for ``transfer to the Secretary of Commerce'', ``only for use by the Secretary'' for ``and used by the Secretary of Commerce'', and provision directing that the fund be used to provide financial assistance for carrying out fisheries research and development projects and to implement the national fisheries research and development program for provision directing that the fund be used to promote free flow of domestically produced fisheries products by conducting a fishery educational service and fishery technological, biological, and related research programs, to acquire, construct, or maintain vessels and other facilities necessary for conducting research, to develop and increase markets for fishery products of domestic origin, and to conduct any biological, technological, or other research pertaining to American fisheries, and struck out former subsec. (b) which authorized any agency or wholly owned government corporation of the United States to transfer to the Secretary of Commerce any vessels or equipment excess to its needs.

Subsec. (c). Pub. L. 96-561, Sec. 210(1), (5), added subsec. (c) and struck out former subsec. (c) which directed the Secretary of Commerce to cooperate with other Federal, State, and local agencies for promotion of free flow of domestically produced fishery products and provided for the appointment of an advisory committee of the American fisheries industry to advise the Secretary in formulation of policy, rules, and regulations.

Subsec. (d). Pub. L. 96-561, Sec. 210(1), (5), added subsec. (d) and struck out former subsec. (d) which authorized the Secretary of Commerce to retransfer any funds available under this section, not to exceed $1,500,000, to the Secretary of Agriculture to be used for the purposes specified in section 713c-2 of this title.

Subsec. (e). Pub. L. 96-561, Sec. 210(1), (5), added subsec. (e) and struck out former subsec. (e) which provided that the special fund created for use of the Secretary of Commerce under subsec. (a) of this section and the annual accruals thereto be available for each year until expended by the Secretary.

1965--Subsec. (f). Pub. L. 89-348 repealed subsec. (f) which required an annual report to the appropriate committees of Congress on the use of the separate fund.

1956--Subsec. (e). Act Aug. 8, 1956, struck out provisions which limited expenditures to not more than $3,000,000 in any fiscal year, restricted the balance of the fund to not more than $5,000,000 at the end of any fiscal year, and required the Secretary of the Interior to retransfer funds in excess of the $5,000,000 to the Secretary of Agriculture.

1954--Act July 1, 1954, amended section generally, to encourage the distribution of fishery products.

Effective Date of 1996 Amendment

Section 101(a) [title II, Sec. 211(b)] of div. A of Pub. L. 104-208 provided that the amendment made by that section is effective 15 days after Oct. 11, 1996.

[[Page 836]]

Effective Date of 1983 Amendment

Section 423(b) of Pub. L. 97-424 provided that: ``The amendment made by subsection (a) of this section [amending this section] shall take effect on October 1, 1983.''

Short Title

Section 2 of act Aug. 11, 1939, which enacted this section, is popularly known as the ``Saltonstall-Kennedy Act''.

Termination of Reporting Requirements

For termination, effective May 15, 2000, of provisions in subsec. (d)(2) of this section relating to submitting annual report to Congress, see section 3003 of Pub. L. 104-66, as amended, set out as a note under section 1113 of Title 31, Money and Finance, and page 50 of House Document No. 103-7.

Abolition of House Committee on Merchant Marine and Fisheries

Committee on Merchant Marine and Fisheries of House of Representatives abolished and its jurisdiction transferred by House Resolution No. 6, One Hundred Fourth Congress, Jan. 4, 1995. Committee on Merchant Marine and Fisheries of House of Representatives treated as referring to Committee on Resources of House of Representatives in case of provisions relating to fisheries, wildlife, international fishing agreements, marine affairs (including coastal zone management) except for measures relating to oil and other pollution of navigable waters, or oceanography by section 1(b)(3) of Pub. L. 104-14, set out as a note preceding section 21 of Title 2, The Congress.

Transfer of Functions

Functions of all officers, agencies, and employees of Department of Agriculture transferred, with certain exceptions, to Secretary of Agriculture by Reorg. Plan No. 2 of 1953, Sec. 1, eff. June 4, 1953, 18 F.R. 3219, 67 Stat. 633, set out in the Appendix to Title 5, Government Organization and Employees.

Continuation of Authorization for Transfer of Funds

Section 12(a) of act Aug. 8, 1956, provided that: ``The authorization for the transfer of certain funds from the Secretary of Agriculture to the Secretary of the Interior and their maintenance in a separate fund as contained in section 2(a) of the Act of August 11,

1939, as amended July 1, 1954 (68 Stat. 376), [now subsec. (b) of this section], shall be continued for the year ending June 30, 1957, and each year thereafter.''

Termination of Advisory Committees

Advisory committees in existence on Jan. 5, 1973, to terminate not later than the expiration of the 2-year period following Jan. 5, 1973, unless, in the case of a committee established by the President or an officer of the Federal Government, such committee is renewed by appropriate action prior to the expiration of such 2-year period, or in the case of a committee established by the Congress, its duration is otherwise provided by law. See section 14 of Pub. L. 92-463, Oct. 6, 1972, 86 Stat. 776, set out in the Appendix to Title 5, Government Organization and Employees.

SENATOR DENNIS EGAN

MEMORANDUM

TO: Representative Mark Neuman, Resources Committee Co-Chair
Representative Craig Johnson, Resources Committee Co-Chair
FROM: Senator Dennis Egan
SUBJECT: SJR27 Hearing Request
DATE: 3/17/2010

I respectfully request a hearing on Senate Joint Resolution, "Urging the federal government to provide funding for domestic seafood marketing and promotional activities."

Senate Joint Resolution 27 urges Congress to fund marketing of domestic seafood. SJR 27 will assign a portion of the taxes collected on imported fish to marketing American seafood to Americans.

Thank you for considering a hearing on SJR27. Please feel free to contact me if you have any questions.

Sincerely,

Sen. Dennis Egan

SENATOR DENNIS EGAN

Senate Joint Resolution 27 – National Seafood Marketing

Senate Joint Resolution (SJR) 27 communicates to the Obama Administration, the Alaska Congressional Delegation, and Congress the Legislature's support for using a portion of federal revenues generated from duties on imported seafood and fish products for marketing American seafood—including that harvested in Alaska.

Since the 1990s, over eighty percent of the fish consumed annually by American families is the product of foreign countries. And every year the governments of many of these countries bankroll multi-million-dollar campaigns to market their seafood to Americans.

While the Alaska seafood industry as well as the state of Alaska contribute millions in funding for marketing purposes, the amounts are not adequate to finance the vigorous, consistent, and innovative promotion that our products require in the face of foreign competition.

Meanwhile, each year hundreds of millions of dollars are derived from duties on these imported fish and fish products that so aggressively compete with American seafood. Yet only an insignificant fraction of this revenue has ever been employed to promote domestically produced seafood.

SJR 27 endorses putting a portion of these revenues to work in developing and maintaining the robust domestic markets that healthy, sustainable Alaskan seafood deserves. The resolution urges Congress to pass legislation dedicating such funding for the effective domestic marketing of American seafood. It asks the Alaska Delegation in Congress to work together with representatives from other seafood producing states to accomplish these goals.
