[1] FY 2010 data projected using Callan 2009 capital market assumptions and May 2009 asset allocation resolution, resulting in an 7.70% median expected total return. Inflation based on actual through September 2009.

[2] FY 2011 projected using Callan 2009 capital market assumptions and May 2009 asset allocation resolution, resulting in an 8.28% expected total return, and 2.75% inflation.

[3] The permanent fund dividend payment is recorded as a liability at fiscal year end, and is paid out the following month.

[4] Beginning in FY 2009, and applied retroactively, Department of Law opinion required an allocation of unrealized gains and losses to the unreserved assets of the Fund.

8. State Endowment Funds

This section compares important attributes of six endowment funds. The University of Alaska endowment is included in this comparison because it is one of Alaska's public endowment funds that uses the annual distribution calculation method typical of the vast majority of endowments in the United States and Canada.[1]

The fiduciary for each of these endowment funds has the responsibility for establishing an asset-allocation policy for the fund. Figure 8-1 on the next page compares the asset-allocation policies for these endowments.

Under the standards adopted by the Governmental Accounting Standards Board (GASB), public funds calculate and report their income by recognizing changes in the value of securities as income, or losses, as they occur at the end of each trading day. They do this regardless of whether the securities are actually sold and the income, or losses, are taken or realized. All six of these endowments report annual income on this basis. However, as reflected in Figure 8-2 on the next page, four of them use other measures of annual income for determining their distributions. These include the Alaska Permanent Fund and the Mental Health Trust Fund, both administered by the Alaska Permanent Fund Corporation, the Public School Trust and the Alaska Children's Trust.

In determining the amount of income available for distribution each year for the two funds managed by the Alaska Permanent Fund Corporation, gains or losses on individual investments are not recognized until the investment is sold. For calculating distributable income for the Public School Trust and the Alaska Children's Trust, only interest earned and dividends received are treated as income. Gains and losses in the value of individual investments are never recognized as income. By law, those gains and losses remain with the principal of the fund. Figure 8-3 explains how distributable income for each of the endowments is determined.

[1] The predominant practice, making annual distributions of 4% to 5% of the market value of the endowment, developed following a 1968 Ford Foundation study. See The Ford Foundation Managing Educational Endowments (New York, New York; 1968).

	Financial Reporting of Income	Distributable Income
Alaska Permanent Fund	GASB (recognize gains and losses based on change in market value)	Interest earnings + dividends paid + gains and losses on investments actually sold
Mental Health Trust	GASB (recognize gains and losses based on change in market value)	Interest earnings + dividends paid + gains and losses on investments actually sold
Public School Trust	GASB (recognize gains and losses based on change in market value)	Interest earnings + dividends paid; gains and losses on value of securities are never income, they become part of principal
Alaska Children's Trust	GASB (recognize gains and losses based on change in market value)	Interest earnings + dividends paid; gains and losses on value of securities are never income, they become part of principal
Power Cost Equalization Endowment	GASB (recognize gains and losses based on change in market value)	GASB (recognize gains and losses based on change in market value)
University of Alaska Endowment	GASB (recognize gains and losses based on change in market value)	GASB (recognize gains and losses based on change in market value)

Figure 8-3. Distributable Income Determination—State Endowment Funds

Alaska Permanent Fund

The annual distribution for the Permanent Fund Dividend follows the formula in AS 37.13.140-.150, which specifies that 10.5% of the past five years' total realized income shall be paid out as dividends but also sets the limitation that the annual distribution may never exceed 50% of the balance in the fund's Realized Earning Account (REA). The 50% limitation has never been triggered.

Mental Health Trust

The Mental Health Trust Board adopted a policy, beginning in FY 2001, to distribute 3.5% a year of the market value of the fund's total assets. The distribution rate had been 3% for FY 1996-1998 and 3.25% for FY 1999-2000. Because of recent declines in market value, the board is exploring a redefinition of "principal" so that losses in market value would be proportionally allocated to the principal account and the earnings account rather than assigning the entire value of any losses to the earning account.

Public School Trust

The annual distribution is 4.75% of a five-year moving average of the fund's principal market value so long as that amount does not exceed the interest and dividend earnings available in the earnings account. The trust has accumulated a sizable earnings account balance, providing a cushion for the fund to maintain its annual distributions in a sustained bear market.

Alaska Children's Trust

The annual distribution is 4.75% of a five-year moving average of the fund principal's market value so long as that amount does not exceed the interest and dividend earnings available in the earnings account. The trust has accumulated a sizable earnings account balance, providing a cushion for the fund to maintain its annual distributions in a sustained bear market.

Power Cost Equalization Endowment

The annual distribution is 7% of the fund's market value. For the initial transition years, state statute specifies that the fund shall use the market value on February 1 for the subsequent fiscal year's distribution. Thereafter, the fund is to distribute each year 7% of the monthly average market value for a specified 36-month period.

University of Alaska Endowment

The annual distribution is 5% of a 5-year moving average of the market value of the fund.

Figure 8-4. Inflation-Proofing Procedures—State Endowment Funds

Alaska Permanent Fund

An annual appropriation is needed to inflation proof the principal of the Permanent Fund (but not the accumulated earnings) pursuant to AS 37.13.145. The legislative appropriation requires a transfer from the Realized Earnings Account to the fund's principal an amount equal to the calculated U.S. Consumer Price Index's effect on the value of the principal, comprised of oil and gas royalty contributions and legislative appropriations. The Alaska Permanent Fund Corporation's Trustees have proposed a constitutional amendment that would inflation proof the entire fund—the principal and accumulated earnings—by limiting the annual distribution of earnings to 5% of a five-year moving average of the market value of the fund.

Mental Health Trust

The Mental Health Trust Authority has adopted two policies to inflation proof the fund. First, it limits distributions to 3.5% of the fund's market value. (The authority's ultimate goal, after further building up the principal, is to distribute 5% of the fund's market value each year, which would still allow enough retained earnings to inflation proof the fund.) Second, the authority also has adopted a policy transferring money from the reserve account to the principal whenever the reserve exceeds four times the annual income distribution, to help build up the fund's principal.

Public School Trust

The asset-allocation policy is such that—when combined with the requirement that the fund's capital gains and losses remain part of the principal—the retained capital gains are adequate to inflation proof the fund.

Alaska Children's Trust

The asset-allocation policy is such that—when combined with the requirement that the fund's capital gains and losses remain part of the principal—the retained capital gains are adequate to inflation proof the fund.

Power Cost Equalization Endowment

The legislature, in selecting a 7% distribution policy, expressly elected not to inflation proof this fund, but rather to distribute all, or almost all, of its anticipated annual earnings.

University of Alaska Endowment

The university's distribution policy of 5% of the moving five-year average of the fund's market value should allow for retained earnings to inflation proof the fund.

9. Public Corporations & University of Alaska

Public Corporations

The state has established the following public corporations to carry out certain public policies:

- Alaska Housing Finance Corporation (AHFC)
- Alaska Industrial Development and Export Authority (AIDEA)
- Alaska Energy Authority (AEA)
- Alaska Student Loan Corporation (ASLC)
- Alaska Municipal Bond Bank Authority (AMBBA)
- Alaska Aerospace Development Corporation (AADC)
- Alaska Railroad Corporation (ARC)

These seven corporations and the University of Alaska are components of state government whose activities are accounted for in the state's Comprehensive Annual Financial Report separately from the activities of primary state government. Information in this section is provided by these corporations.

Four of these corporations pay some portion of their income as an annual "dividend" to the state. They include the Alaska Housing Finance Corporation, Alaska Industrial Development Authority, Alaska Student Loan Corporation and Alaska Municipal Bond Bank Authority.

The members of the AIDEA Board of Directors also serve as Board of Directors of AEA, though AIDEA and AEA continue to exist as separate legal entities. AEA has no employees, and AEA contracts to have AIDEA employees administer AEA programs. Other corporations have their own staffs and boards. While neither the sale of bonds nor the expenditure of bond proceeds by these corporations are subject to the state's Executive Budget Act, expenditures for the day-to-day administration of all of these corporations except the Alaska Railroad are subject to the Executive Budget Act.

The Alaska Commission on Postsecondary Education (ACPE) administers the ASLC programs. The ASLC has no employees, and the executive director of the ACPE serves as the executive officer of the ASLC.

The six figures that follow in this section summarize the activities of these corporations.

1280

Figure 9-1. Public Corporations—Missions. What does the corporation do and how does it do it?

Alaska Housing Finance Corporation

Using proceeds from the sale of bonds backed by its corporate assets, AHFC purchases home mortgages from Alaska banks. Income from payments on these mortgages repays bond holders and adds to the corporation's income, thereby enabling the corporation, since FY 1991, to pay an annual dividend and/or return of capital to the state. In addition to ensuring that Alaskans, especially Alaskans of low and moderate income and those in remote and underdeveloped areas of the state, have adequate housing at reasonable cost, the corporation administers federally and state funded multi-residential, senior and low-income housing, residential energy and home weatherization programs. In recent years, the legislature has authorized AHFC to finance the construction of schools, University of Alaska housing and other capital projects identified by the legislature.

Alaska Industrial Development and Export Authority

By lending money, guaranteeing loans or becoming an owner, AIDEA makes financing available for industrial, export and other business enterprises in Alaska. The corporation earns money from interest on its loans, investments, leases and operations of its properties. The corporation has paid an annual dividend to the state since FY 1997.

Alaska Energy Authority

AEA provides loans to utilities, communities and individuals to pay for the purchase or upgrade of equipment and for bulk fuel purchases. Additionally, the agency administers the Power Cost Equalization program, subsidizing rural electric costs with the Power Cost Equalization Endowment. AEA also receives federal and state money to provide technical advice and assistance in energy planning, emergency response management, energy infrastructure construction and conservation in rural Alaska. AEA owns and, under contractual agreements, operates and maintains state-owned power projects, such as Bradley Lake and the Alaska Intertie.

Alaska Student Loan Corporation

The Alaska Student Loan Corporation uses proceeds from bond sales to finance education loans made by the Alaska Commission on Postsecondary Education. Loan repayments satisfy bond obligations and enhance the corporation's capital asset base. Alaska statutes authorize the board of directors to annually declare a return to the state of a portion of its net income. The board has declared return of capital payments for each year beginning in FY 2001 through FY 2007. Alaska statutes also authorize the corporation to issue bonds for the purpose of financing projects of the state. Those bonds in aggregate may not exceed $280 million.

Alaska Municipal Bond Bank Authority

The Bond Bank loans money to Alaska municipalities for capital improvement projects. The bank's larger capital base, its reserve funds and its credit rating enable it to sell bonds at lower interest rates than the municipalities could obtain on their own. The Bond Bank earns interest on the money it holds in reserve and has returned a dividend to the state every year since 1977.

Alaska Aerospace Development Corporation

The corporation operates and maintains a commercial spaceport in Kodiak, Alaska and provides commercial rocket vehicle launch support services. It promotes space-related business, research, education and economic growth in the State of Alaska.

Alaska Railroad Corporation

The corporation operates freight and passenger rail services between Seward and Fairbanks, including a spur line to Whittier. In addition, the corporation generates revenues from real estate it owns.

Figure 9-2. Public Corporations—State Capitalization. How did the state capitalize the corporation?

Alaska Housing Finance Corporation

The legislature appropriated $739.9 million in cash and $292.5 million in mortgages held by the General Fund to the corporation between 1976 and 1984. The payments on those mortgages and additional mortgages purchased with the cash have helped build the corporation's asset base and allow it to return some capital to the state each year. In 1993, AHFC received an additional $27.7 million in cash and $9.3 million in equity when the legislature merged the Alaska State Housing Authority with this corporation.

Alaska Industrial Development and Export Authority

Between 1981 and 1991, the State of Alaska transferred various loan portfolios worth $297.1 million and $69.2 million in cash to this corporation.

Alaska Energy Authority

The legislature established the AEA in 1976 to finance and operate power projects. This corporation has also administered rural energy programs at various times, including the present. As a result of legislatively mandated reorganizations, capital has moved into and out of the corporation. At the end of FY 2001, this corporation reported contributed capital of $963.5 million.

Alaska Student Loan Corporation

In FY 1988, the state transferred $260 million of existing student loans to this corporation. Additional appropriations of cash between FY 1988 and FY 1992 totaled $46.7 million.

Alaska Municipal Bond Bank Authority

Between 1976 and 1986, the legislature appropriated $18.6 million to the Bond Bank to be used for backing bond issues. In addition, the legislature gave the Bond Bank $2.5 million in 1981 to fund a direct loan by a municipality. The municipality repaid the loan and the Bond Bank retained the appropriation.

Alaska Aerospace Development Corporation

Since 1993, the state has contributed $10.9 million from the Science and Technology Endowment.

Alaska Railroad Corporation

The state bought the railroad from the federal government in 1985. The purchase price of $22.7 million was recorded as the state's capitalization.

Figure 9-3. Public Corporations—Financial Facts, FY 2009 ($ million) [1]

	Total Assets	Assets Less Liabilities Book Value	Unrestricted Net Assets	FY 2009 Operating Budget	Total Positions [2]

Alaska Aerospace Development Corporation[2]	19.7	(5.0)	(3.9)
Alaska Railroad Corporation [3]	177.9	3.3	12.6

[1] The Alaska Industrial Development and Export Authority and Alaska Energy Authority report financial data on a fiscal year basis. Revenue, operating income and net income in the table are from audited June 30, 2009 financial statements.

[2] The Alaska Aerospace Development Corporation financial data include depreciation of $5.9 million and are based on audited June 30, 2009 financial statements.

[3] The Alaska Railroad reports financial data on a calendar year basis. Revenue and Operating Income shown in this table are for CY 2008.

Figure 9-5. Public Corporations—Dividends to the State. How, if at all, does the corporation pay dividends to the state?

Alaska Housing Finance Corporation

The Twenty-Third Legislature, in 2003, enacted SCSHB 256 (the "2003 Act") which added language to the Alaska Statutes to modify and incorporate the Transfer Plan. As approved and signed into law by the Governor, the Transfer Plan calls for annual transfers as follows: FY 2005, $103 million; FY 2006, $103 million; FY 2007, the lesser of 95% net income or $103 million; FY 2008, the lesser of 85% net income or $103 million; FY 2009 and thereafter, the lesser of 75% of the corporation's net income or $103 million.

Alaska Industrial Development and Export Authority

By statute, AIDEA must make available to the state each year not less than 25% and not more than 50% of its total net income for a base year, defined as the year two years prior to the dividend year. The dividend is further limited to no more than the total amount of its unrestricted net income in the base year (AS 44.88.088). Net income is defined in the statutes.

Alaska Energy Authority

AEA does not pay a dividend or return capital to the state on a regular basis. However, in FY 2000 this corporation returned $55.6 million of contributed capital to the Railbelt Energy Fund and the General Fund.

Alaska Student Loan Corporation

This corporation, at the discretion of its board of directors, may make available to the state a return of contributed capital or dividend for any base year in which the net income of the corporation is $2 million or more. A base year is defined as the year two years before the payment year. If the board authorizes a payment, it must be between 10% and 35% of net income for the base year (AS 14.42.295). The corporation may also issue bonds in an aggregate amount not to exceed $280 million, for the purpose of financing projects of the state as those projects may be identified by law (AS 14.42.220).

Alaska Municipal Bond Bank Authority

By statute, the Bond Bank annually returns earnings or income of its reserve fund, in excess of expenses, to the state.

Alaska Aerospace Development Corporation

AADC does not pay a dividend or return capital to the state.

Alaska Railroad Corporation

The corporation does not pay a cash dividend to the General Fund.

Revenue. A-1

Glossary of Terms

Constitutional Budget Reserve Fund (CBRF)

Created by voters in 1990, the Constitutional Budget Reserve Fund receives proceeds from settlements of oil, gas, and mining tax and royalty disputes. The legislature may, with a three-quarters majority vote in each chamber, withdraw money from the fund.

Federal Revenue

Revenue appropriated from the federal government to the state with restrictions on how the money can be used. Highway and airport construction funds, Medicaid and education funding cannot be used for other purposes. In addition to restricting how the money is spent, the federal government often requires states to put up matching funds to qualify for the federal funding.

General Fund Revenue

General Fund Revenue has different meanings in different contexts. In the state's official financial reports, General Fund Revenue is used to designate the sum of General Purpose Unrestricted Revenue, General Fund sub-account revenue, program receipts and federal dollars spent through the General Fund. In budget-writing context, General Fund revenue has a definition similar to General Purpose Unrestricted Revenue.

Permanent Fund GASB (or Market) Income

Under standards adopted by the Governmental Accounting Standards Board (GASB), the Permanent Fund's income—and that of any other government fund—is the difference between the purchase price of the investments and their market value at a given point in time, plus any dividends, interest or rent earned on those investments. Under GASB standards, the Permanent Fund does not have to sell the investment to count the gain or loss as it changes value. It is called "marking to market," that is, measuring the value of the fund's investments by the current market price. This can produce a much different picture than Permanent Fund statutory income, which does not reflect fluctuating investment values until the assets are sold.

Permanent Fund Statutory Income

Permanent Fund statutory income is the sum of realized gains and losses of all Permanent Fund investment transactions during the year, plus interest, dividends and rents earned by the fund. The Permanent Fund Dividend is based on statutory income. Though the legislature may appropriate the earnings for any purpose it chooses, the historical practice has been to restrict the use of realized income to dividends and inflation proofing, and then either leave the excess in the Realized Earnings Account or transfer it to the principal of the Permanent Fund.

Restricted Program Receipts

Revenue that is earmarked in state statute or by contract for specific purposes and is usually appropriated back to the program that generated the revenue. Examples include University of Alaska tuition payments, marine highway receipts, payments to various revolving loan funds and public corporation receipts. Some of this revenue is actually dedicated as a consequence of the provisions of Article 18, Section 11 of the Alaska Constitution. The remainder, while statutorily earmarked, may be appropriated to purposes other than those reflected in statute if the legislature so chooses.

Restricted Revenue

Restricted revenue represents revenue that is restricted by the constitution, state or federal law, trust or debt restrictions, or by customary practice. The legislature can at any time remove restrictions that are solely imposed by either Alaska statute or customary practice. Program receipts, revenues allocated to sub-accounts of the General Fund, and General Fund revenues customarily shared with other entities are all considered restricted revenues for the purposes of this report.

General Purpose Unrestricted Revenue

Revenue not restricted by the constitution, state or federal law, trust or debt restrictions or customary practice. Most legislative and public debate over the budget each year centers on this category of revenue. In deriving this figure from General Fund revenues, we have excluded General Fund sub-account revenue, as well as customarily restricted revenues such as shared taxes and marine highway receipts.

$100	9,117	8,364	7,593

[1]Fiscal year averages incorporate actual prices for the first four months of FY 2010. .

*In addition to price and production, revenue estimates under ACES depend on levels of spending by petroleum producers and explorers. Spending plans may change as companies occasionally revise their investment strategies. The above estimates also do not consider how company investment decisions would change with a change in oil prices.

(1) In FY 2008, the Department of Revenue made a change in the method by which it accounts for future revenues, as well as historical and future production and oil prices, from a cash basis to an accrual basis. This method change will better align fiscal year revenues with the state's financial reports and other publications. As a result, slight modifications have been made to historical production values and oil prices to accommodate this change.

(2) Data from Platt's Oilgram Price Report, Wood McKenzie and Alaska Department of Revenue's prevailing value and tax return data. Historical real and nominal crude oil and natural gas prices can be found on the Tax Division's web site at: www.tax.alaska.gov/sourcesbook/OilGasPrices.pdf.

(3) Adjustment to "nominal" dollars is required to prepare the crude oil and natural gas price forecasts. Callan Associates Inc.'s inflation rate of 2.75% was used for FY 2011 and beyond.

(4) Adjustment to "real 2010" dollars is useful to compare prices across time excluding inflation. These prices data are adjusted to real 2010 dollars based on inflation rates provided by the U.S. Department of Labor, Bureau of Labor Statistics. The data series used is the Consumer Price Index for all Urban Consumers (CPI-U) which can be found at: www.bls.gov/cpi/home.htm.

(1) In FY 2008, the Department of Revenue made a change in the method by which it accounts for future revenues, as well as historical and future production and oil prices, from a cash basis to an accrual basis. This method change will better align fiscal year revenues with the state's financial reports and other publications. As a result, slight modifications have been made to historical production values and oil prices to accommodate this change.

[1] In FY 2008, the Department of Revenue made a change in the method by which it accounts for future revenues, as well as historical and future production and oil prices, from a cash basis to an accrual basis. This method change will better align fiscal year revenues with the state's financial reports and other publications. As a result, slight modifications have been made to historical production values and oil prices to accommodate this change.

[2] A summary of historical ELFs can be found on the Tax Division's web site at www.tax.alaska.gov/sourcesbook/ELFs.pdf.

Under the ELF production tax system, the tax rate for oil depended on the age of the field and the Economic Limit Factor (ELF). The ELF was calculated based on total daily oil production and average daily per well production from each producing field. The statutory production tax rate on oil was 12.25% of its value at the point of production for the first five years of field production and 15% thereafter. There was a minimum tax of 80 cents per taxable barrel. The effective tax rate was calculated by multiplying the statutory tax rate, even if it was the minimum 80 cents per barrel, times the ELF. The ELF formula resulted in lower effective tax rates for smaller, low-production fields and higher tax rates for larger, highly productive fields. There was a unique combination of total daily field production and average daily per well production.

In January 2005, the department aggregated seven fields in the Prudhoe Bay Unit. The decision to aggregate focused on, among other things, the increasing interdependence found in the engineering and operation of the fields.

Revenue Sources Book

Alaska Department of Revenue – Tax Division

FALL 2009

In accordance with AS 37.07.060 (b)(4), the Revenue Sources Book is compiled biannually by the Alaska Department of Revenue to assist the governor in formulating a proposed comprehensive financial plan for presentation to the Alaska State Legislature. Within the publication are shown prior year actuals, revised current year estimates and future year projections.

Anticipated state income is projected through the use of a number of data sources:

(1) Econometric models developed by the Department of Revenue to forecast unrestricted non-petroleum revenues;

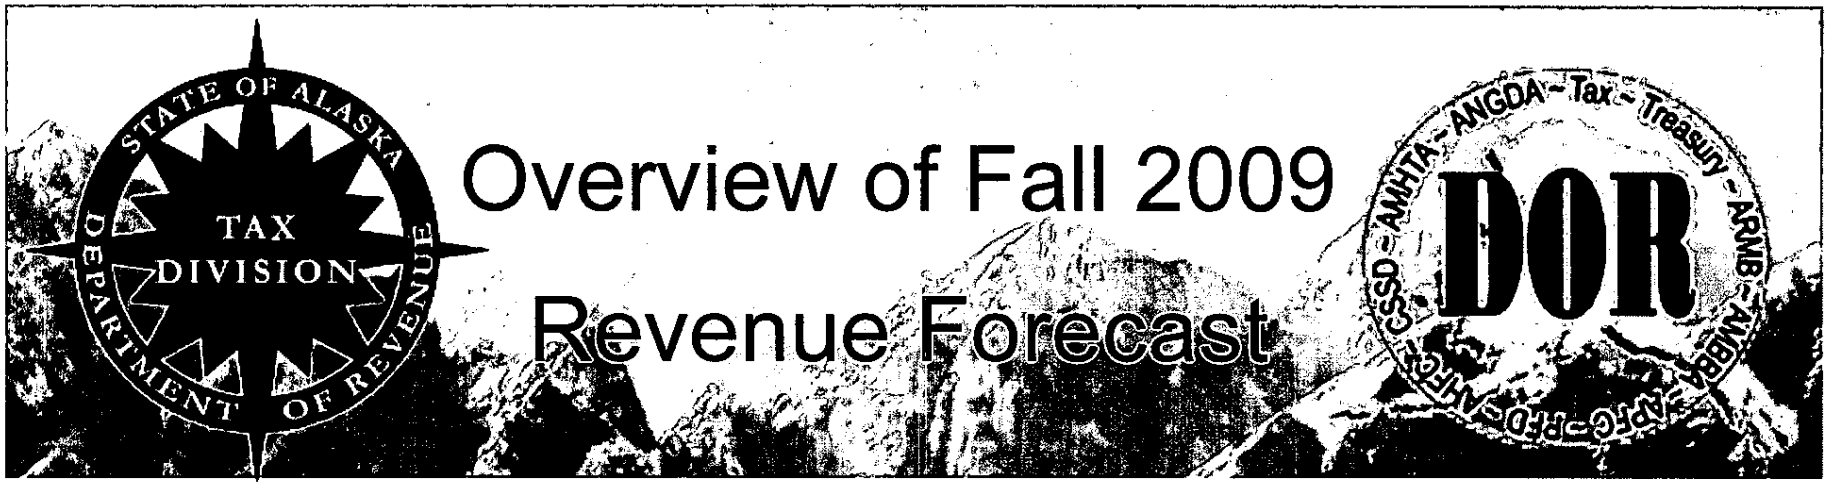
(2) A petroleum revenue model created by the department's Tax Division;

(3) Estimates from individual state agencies.

We thank the various state agencies for their cooperation in computing anticipated revenues for publication in this Fall 2009 Revenue Sources Book.

The Department of Revenue complies with Title II of the Americans With Disabilities Act of 1990. This publication is available in alternative communication formats upon request. Please contact the division's representative at 907-465-3692 or 907-465-3678 (TDD) to make necessary arrangements.

This publication, required by law (AS 37.07.060), was printed in Juneau, Alaska at a cost of about $13 per copy.



Presentation to the Senate Finance Committee January 26, 2010 Alaska Department of Revenue

Outline for Presentation

- **Fall 2009 Revenue Forecast for FY2010 and 2011**
  - Total Revenue
  - Unrestricted Revenue
  - Non-Oil Revenue
- **10-Year Revenue and Spending Projection**
- **How Production Tax Is Calculated**
  - FY 2009 Production tax Calculated
  - Impact of Oil Price Volatility
  - FY 2010 & 2011 Production Tax Projected
- **Components of Production Tax Forecast**
  - Oil Production Forecast
  - Oil Price Forecast
  - Lease Expenditures Forecast / Oil Company Spending

Source: OMB

- FY09 represents actuals rather than forecast.
- FY10 surplus/shortfall calculation adds $22.1 in reappropriations and carry over to total available revenue.
- FY11 surplus calculation subtracts $400 from surplus for Governor's Performance Scholarship Fund and $13.1 deposit to Public Education Fund for FY12. CBR balance assumes that all available surplus is deposited to CBR main fund.

Appropriations projections do not represent a commitment by the Administration to propose spending at a particular level in FY11 or any future year. The 10 year forecast shows that unanticipated shortfalls during the period could be filled primarily through the use of reserve funds. However, other options could be used in whole, or in part. The plan will be revisited as conditions warrant.

How Production Tax Is Calculated

FY 09 Production Tax Calculated

	Per Barrel	Barrels	Value
Avg ANS Oil Price ($/bbl) & Daily Production (bbls)	$68.34	692,127	$47,299,959
Annual Production (bbl)			
Total Annual Production/Value	**$68.34**	**252,626,355**	**$17,264,485,101**
Royalty and Federal barrels		(34,187,360)	($2,336,364,182)
Taxable barrels		**218,438,995**	**$14,928,120,918**
Downstream (Transportation) Costs ($/bbl)			
ANS Marine Transportation	($2.05)		
TAPS Tariff	($4.59)		
Other	$0.16		
Total Transportation Costs	**($6.48)**	**218,438,995**	**($1,415,484,688)**
Lease Expenditures			
Deductible Operating Expenditures	($9.39)		($2,050,000,000)
Deductible Capital Expenditures	($8.01)		($1,750,000,000)
Total Lease Expenditures	**($17.40)**	**218,438,995**	**($3,800,000,000)**
Production Tax Value (PTV)	**$44.46**	**218,438,995**	**$9,712,636,231**
Production Tax			
Base Tax (25%*PTV)			$2,428,159,058
Progressive Tax Rate = ($44.46-$30) * 0.4% = **5.8%**			
Progressive Tax = (5.8% * PTV)			$561,928,014
Total Tax Due before credits			**$2,990,087,072**
Credits Applied Against Taxes			($350,000,000)
Total Tax after credits			**$2,640,087,072**

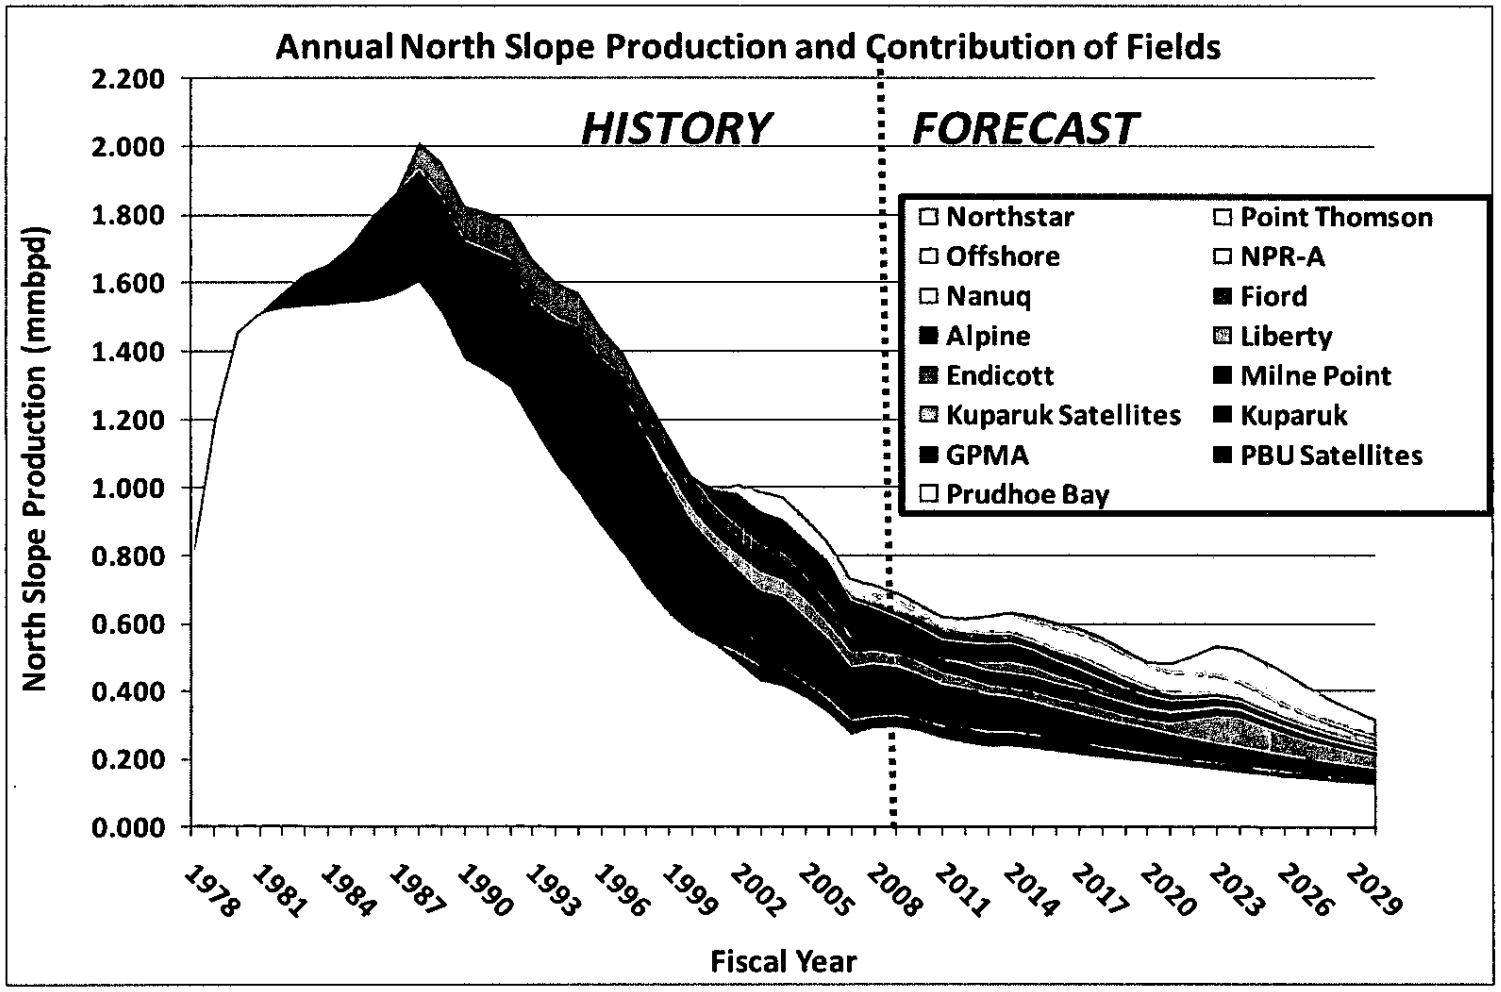
Components of Production Tax Calculation

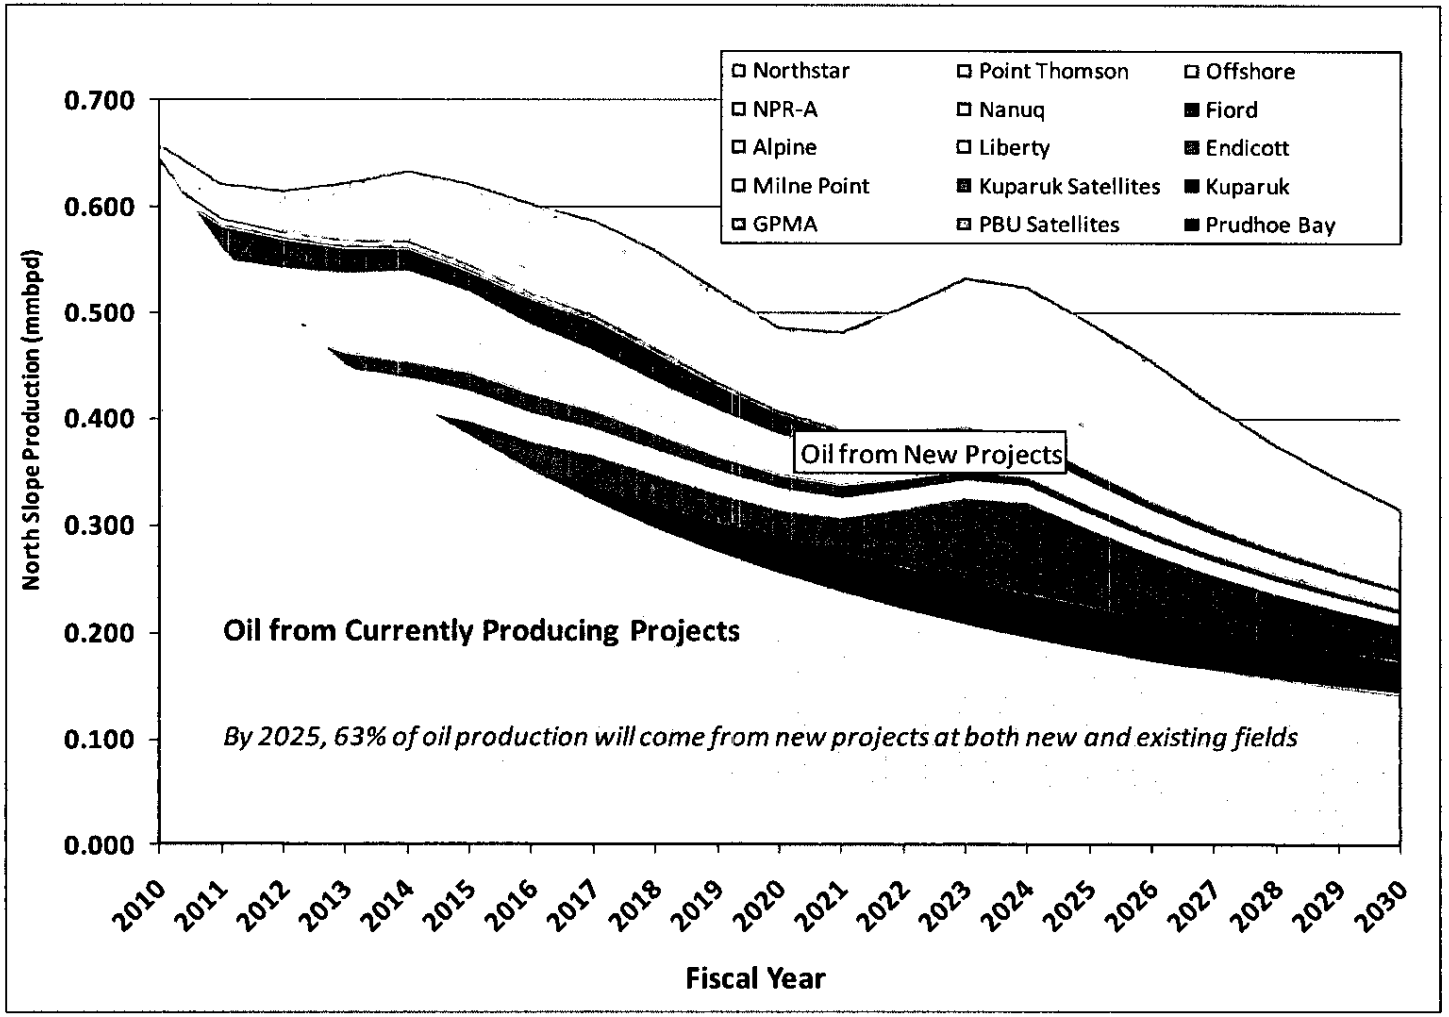
Fall 2009 Oil Production Forecast

ANS Production, History & Forecast



Source: Fall 2009 Revenue Sources Book

Forecasted ANS Production FY 2010 - 2030



Source: Fall 2009 Revenue Sources Book

Production Decline

- **FY 1988: production peak → 2.01 mmbpd.**
- **FY 2009: production → 0.693 mmbpd, a 66% decline since peak.**
- **FY 1988 to date: production decline rate → 4.9% per year, on average.**
- **Over the last 10 years: production decline rate → 4.8% per year, on average.**
- **Forecast production decline rate → 3.6% per year, on average, through FY 2030.**

Fall 2009 Oil Price Forecast

Price Forecast Methodology

- **FY 2010- 2012: Average of participant forecasts from Price Forecasting Session**
- **24 Participants from DOR, DNR, DOL, OMB, University, Legislative Finance and outside participants**
- **Presentations: supply, demand, world economy, outside expert forecasts, etc.**
- **Due to economic uncertainty, session focused on near-term prices**
- **Beyond FY 2012: Constant real price, 2.75% inflation**

Price Forecasts as of October 2009

Fall 2009
Lease Expenditure
Forecast
(Oil Company Spending)

Lease Expenditures (Costs)

- **FY 2007 – FY 2009 lease expenditures based on unaudited company reported expenditure estimates submitted on production tax monthly forms and annual returns**
- **FY 2010 – FY 2011 lease expenditure forecasts were compiled from company submitted information**
- **Under ACES, DOR requests expenditure forecast estimates and other documentation from oil companies**
- **Operating expenditures are expected to remain steady but increase on a per-barrel basis as production declines.**
- **Capital expenditures are expected to increase in FY 2010 and FY 2011.**
- **New field development driving increased investment.**

January 15, 2010

Notes:

(1) Permanent Fund earnings are excluded from reported revenue because the entire balance of the earnings reserve account is available for appropriation. Permanent Fund earnings and balance information is reported on page 2 of the fiscal summary.

(2) The Fall 2009 oil forecast for FY10 is 0.668 mbd at $66.93 per barrel; the FY11 forecast is 0.631 mbd at $76.35/bbl. Source: Revenue Sources Book, Fall 2009.

(3) Carryforward is money that was appropriated in a prior year that is made available for spending in FY10 via multiyear appropriations or reappropriations. FY11 carryforward will be unknown until the close of FY10.

(4) In an effort to present the budget in a more meaningful and accurate way, many sources of funds were recategorized from "other" funds to general funds beginning in FY11. This summary presents both FY10 and FY11 budgets in the revised fund categories in order to make comparisons across years valid.

(5) Duplicated authorizations are in the budget twice, such as when funds flow in and out of a holding account or one agency pays another for services provided.

(6) From an accounting perspective, unduplicated authorization (line 26) is the best measure of capital spending. However, adding duplicated fund sources provides a valuable measure of "money on the street" because it includes projects funded with bond proceeds and other duplicated fund sources.

STATE OF ALASKA

OFFICE OF THE GOVERNOR

OFFICE OF MANAGEMENT AND BUDGET

SEAN PARNELL, GOVERNOR

P.O. BOX 110020
JUNEAU, ALASKA 99811-0020
TELEPHONE: (907) 465-4660

January 28, 2010

The Honorable Lyman Hoffman
Co-Chair, Senate Finance Committee
Alaska State Legislature
State Capitol, Room 518
Juneau, AK 99801-1182

The Honorable Bert Stedman
Co-Chair, Senate Finance Committee
Alaska State Legislature
State Capitol, Room 516
Juneau, AK 99801-1182

Dear Senate Finance Committee Co-Chairs:

Thank you for the opportunity to present highlights of the Governor's budget before the Senate Finance committee yesterday. I remain available to further discuss the details that will ensure our efforts direct resources effectively to position Alaska's economy for growth and Alaska's families for opportunity.

The committee requested a break down of our $276 million request for FY11 debt service. The detail for your review is enclosed in the debt summary dated January 14, 2009, and can also be found on the OMB website at *omb.alaska.gov*.

Sincerely,

Karen J. Rehfeld
Director

Notes

Total School Debt Reimbursement in FY2010 is $100,045.3 and FY2011 is $106,258.5 for an increase of $6,312.2.
General Fund portion of School Debt Reimbursement increased by $1.8M over FY2010 due to a decrease in estimated Cigarette Tax collections (School Fund) from $23.0M in FY2010 to $21.2M in FY2011.

*Public Safety Crime Lab - $75.75M cost equates to debt service of $1.6 in FY11, approx. $5.5M/yr for 20 yrs

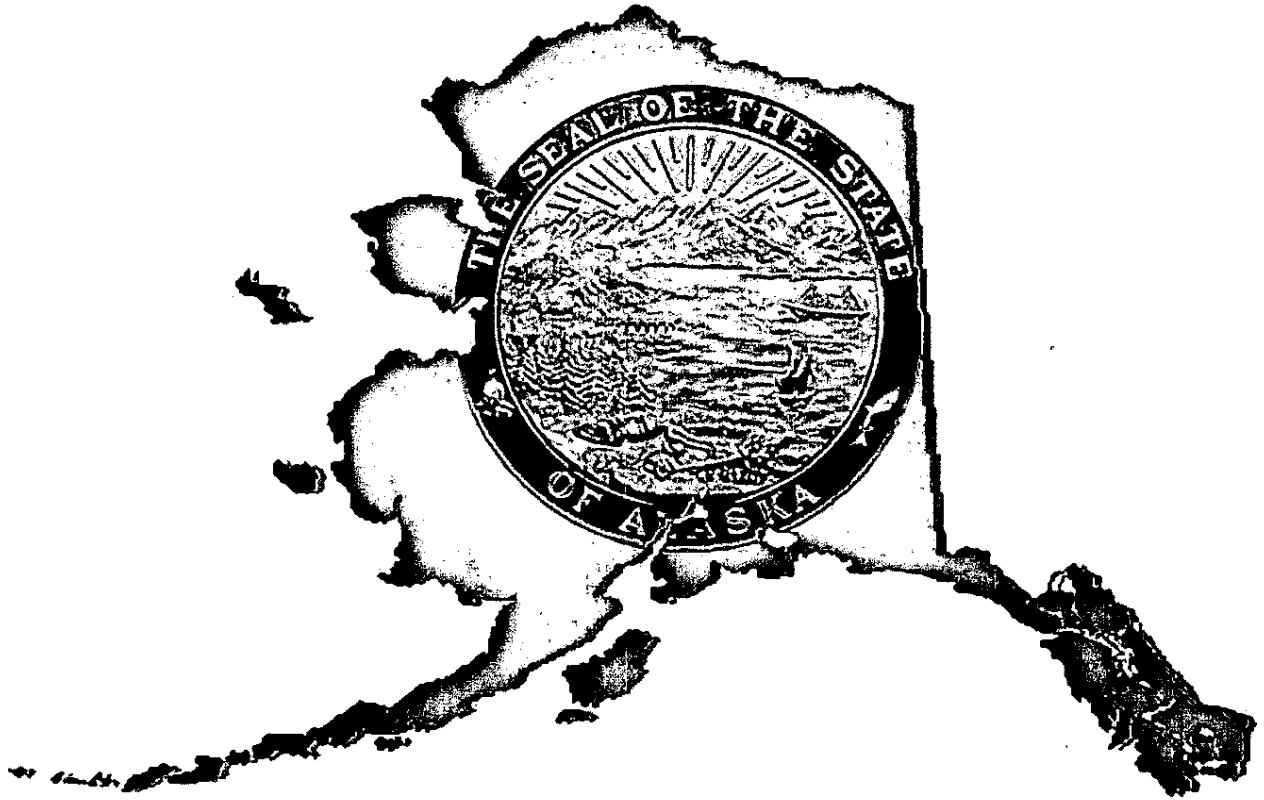
** UAF Life Sciences Building - $88.875M cost equates to debt service of $2.7M in FY11, approx. $6.7M/yr for 20 yrs

***General Obligation Bonds- (Series 2010A) - $150.1M cost equates to debt service of $5.0M in FY11, approx. $13.0M/yr

In addition to the items listed above, State corporations such as AHFC (including Northern Tobacco Securitization Corporation bonds) and AIDEA also issue and pay for debt for corporate purposes.

FY2011 Budget Overview

Senate Finance Committee



Office of Management and Budget

January 27, 2010

Budget Guidance

The mission

The FY2011 budget supports Governor Parnell's number one mission:

"Position Alaska's economy for growth and Alaska's families for opportunity."

Budget Guidelines

How do we get there?

- Focus on the priorities mandated by Alaska's constitution- Education, Public Safety, and Resource Development
- Maintain budget discipline by limiting agency growth
- Focus on results for Alaskans
- Take a long-term view

FY2011 Budget Summary

FY2011 Fiscal Summary	Recast General Funds	Recast Other Funds	Recast Federal Funds	Total
Oil Price $76.35				
Unrestricted GF	$5,236.6			$5,236.6
Other Revenue moved to GF	$759.6			$759.6
Corporate Dividends	$59.5			$59.5
Federal and Other State Funds		$501.3	$2,780.6	$3,281.9

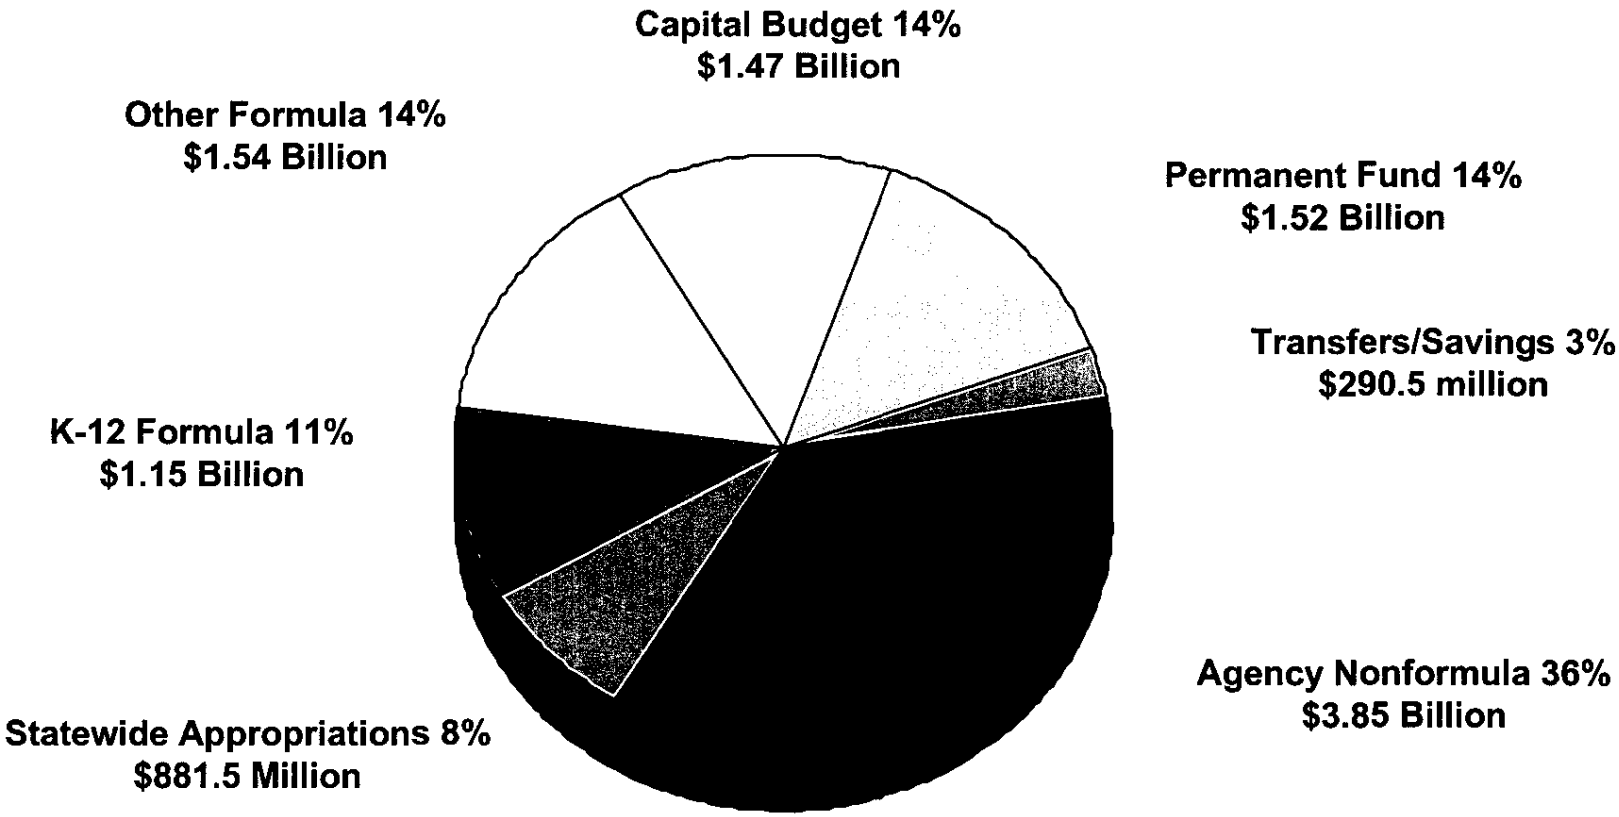
Balance	**$93.1**			**$93.1**
Permanent Fund	$1,523.0			$1,523.0
Total FY2011 Authorization with Permanent Fund	**$7,485.6**	**$501.3**	**$2,780.7**	**$10,767.6**

FY2011 Expenditures by Category

Proposed Spending Plan



Total Funds = $10,767.5 million

Revenue Forecast Revised Upward

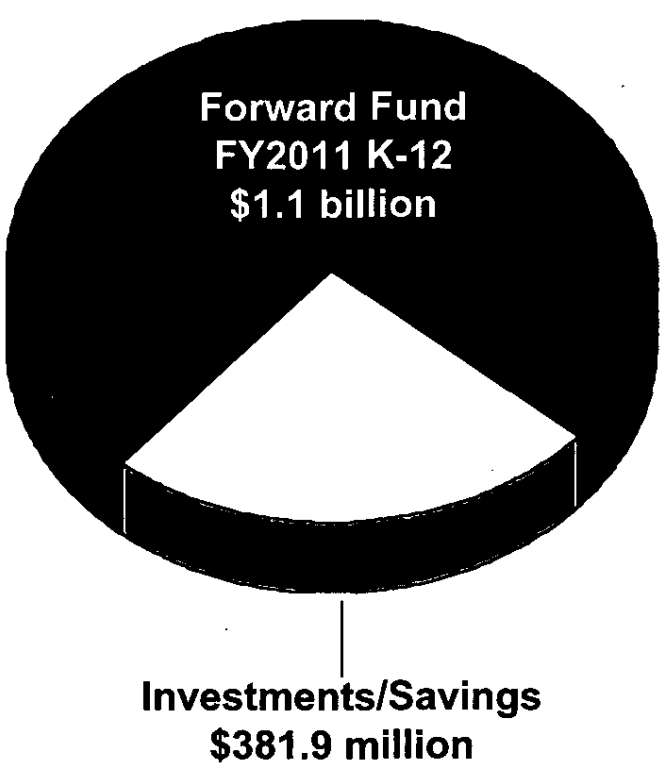
Revised Revenue Forecast Creates Opportunity

	Forecast version		
FY2010	Spring 2009	Fall 2009	Difference
ANS West Coast Oil Price (Per Barrel)	$58.29	$66.93	$8.64
Production (mmbbl./day)	0.655	0.659	.004
FY2010 GF Unrestricted Revenue ($millions)	$3,210.7	$4,777.0	$1,566.3
FY2011			
ANS West Coast Oil Price (Per Barrel)	$67.67	$76.35	$8.68
Production (mmbbl./day)	0.634	0.623	-0.011
FY2011 GF Unrestricted Revenue ($millions)	$3,876.0	$5,236.6	$1,360.6

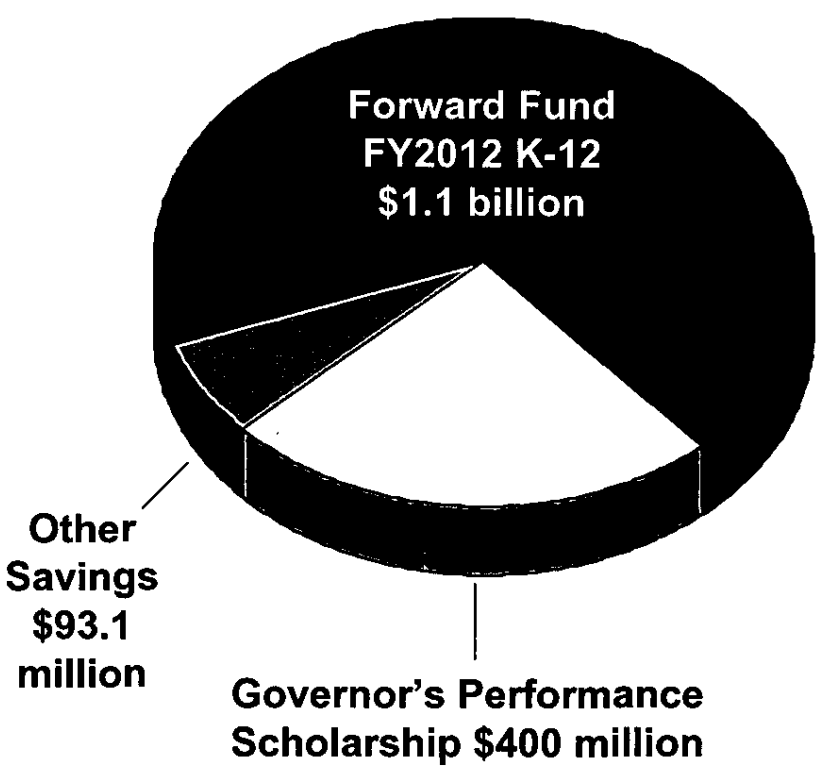
Save/Invest the Projected Surplus

Proposal forward funds K-12 education and saves for Alaska's future

FY2010 Surplus



FY2011 Surplus



FY2011 Results-Based Budgeting

Utilizing the state's performance framework to measure results for Alaskans

- Agency Missions
  - Consistent with statutory authority
- Core Services
  - Activities to accomplish the mission
  - End Results – planned goals and achievements
  - Strategies and Targets – planned actions and targets to measure success
  - Status and Analysis of Results – How are we doing and what does the data show?
- System Changes
  - Align agency and state priorities
  - Identify department priority programs and key performance indicators
  - Distribution of current budget capacity (FY2010) by priorities
  - Key performance indicators to reflect progress toward desired results
  - Link proposed budget changes with desired results System Changes
- Legislative Review
  - Part of the annual review and approval of the budget
  - Process outlined in AS 37.07.014
  - Promote results-based government and method to measure results for each agency

Long-Range Fiscal Plan

Resource Development, Spending Discipline, and Saving for the Future

- Guiding Principles
  - Responsibly develop Alaska's natural resources – oil, gas, and other natural resources such as mineral, mining, fishing, tourism
  - Restrain spending – focus on essential services, results for Alaskans, promote economic growth and fiscal stability
  - Save for the future – build reserves, forward fund when appropriate, preserve and grow the permanent fund

- Assumptions
  - 3% annual growth rate in beginning in FY2012
  - Inflation at 2.75%
  - Population Growth at 1% annually
  - Requires state service delivery to become more efficient over the 10-year period

- Major Challenges
  - Formula program increases – Education and Medicaid
  - Infrastructure development
  - Unfunded Liability of Retirement Systems

- Planning Tool
  - The long-range fiscal plan is a tool for policy and budget development
  - Does not represent a funding commitment by the Administration or the Legislature in the future

FY2011 Fund Code Project

Transition to new fund categories will take time and patience

- **Three Key Changes to Budget Process**
  - Reappropriations and Carry Forward
  - Fund Transfers
  - General Fund and Designated General Funds
- **FY2011 Revenues and Expenditures**
  - Aligned with Legislative Finance on the numbers
  - Minor differences in fund transfers
- **Implementation Timelines**
  - Updates to OMB's budget system ongoing
  - Enacted budget is the target
  - Sooner if possible

January 15, 2010

Notes:

(1) Permanent Fund earnings are excluded from reported revenue because the entire balance of the earnings reserve account is available for appropriation. Permanent Fund earnings and balance information is reported on page 2 of the fiscal summary.

(2) The Fall 2009 oil forecast for FY10 is 0.688 mbd at $66.93 per barrel; the FY11 forecast is 0.631 mbd at $76.35/bbl. Source: Revenue Sources Book, Fall 2009.

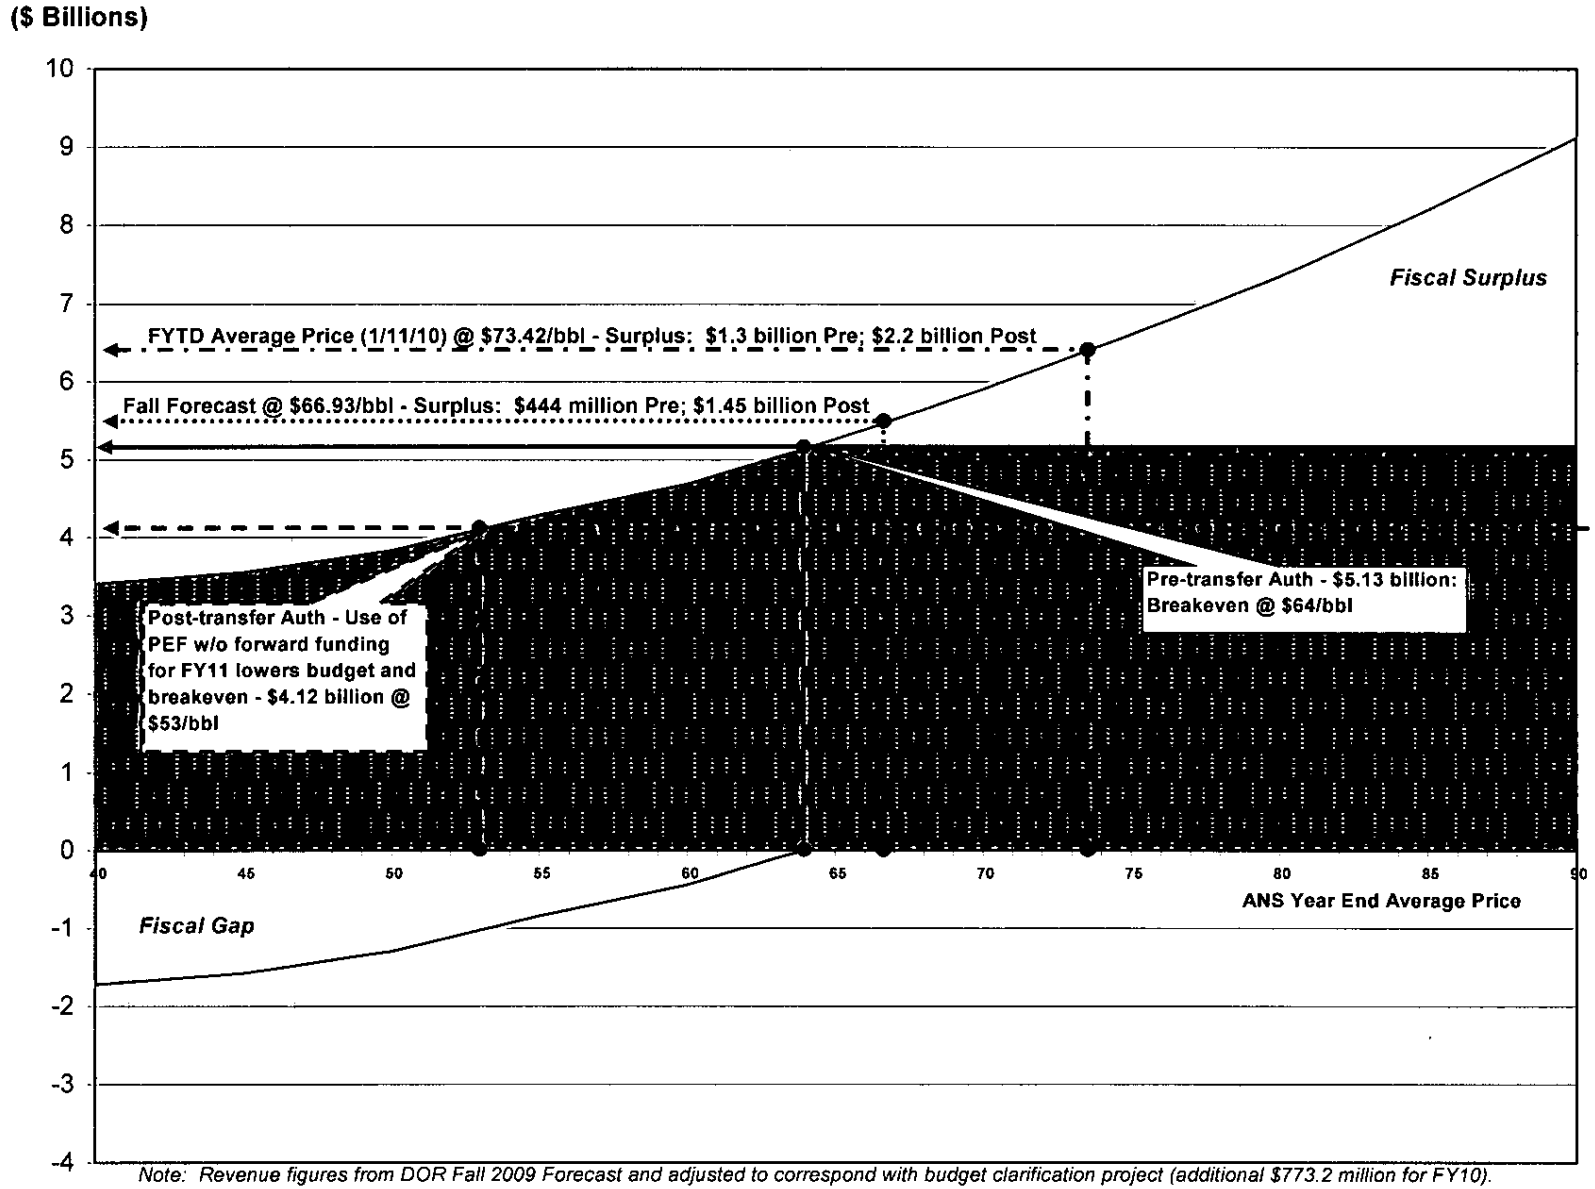
(3) Carryforward is money that was appropriated in a prior year that is made available for spending in FY10 via multiyear appropriations or reappropriations. FY11 carryforward will be unknown until the close of FY10.

(4) In an effort to present the budget in a more meaningful and accurate way, many sources of funds were recategorized from "other" funds to general funds beginning in FY11. This summary presents both FY10 and FY11 budgets in the revised fund categories in order to make comparisons across years valid.

(5) Duplicated authorizations are in the budget twice, such as when funds flow in and out of a holding account or one agency pays another for services provided.

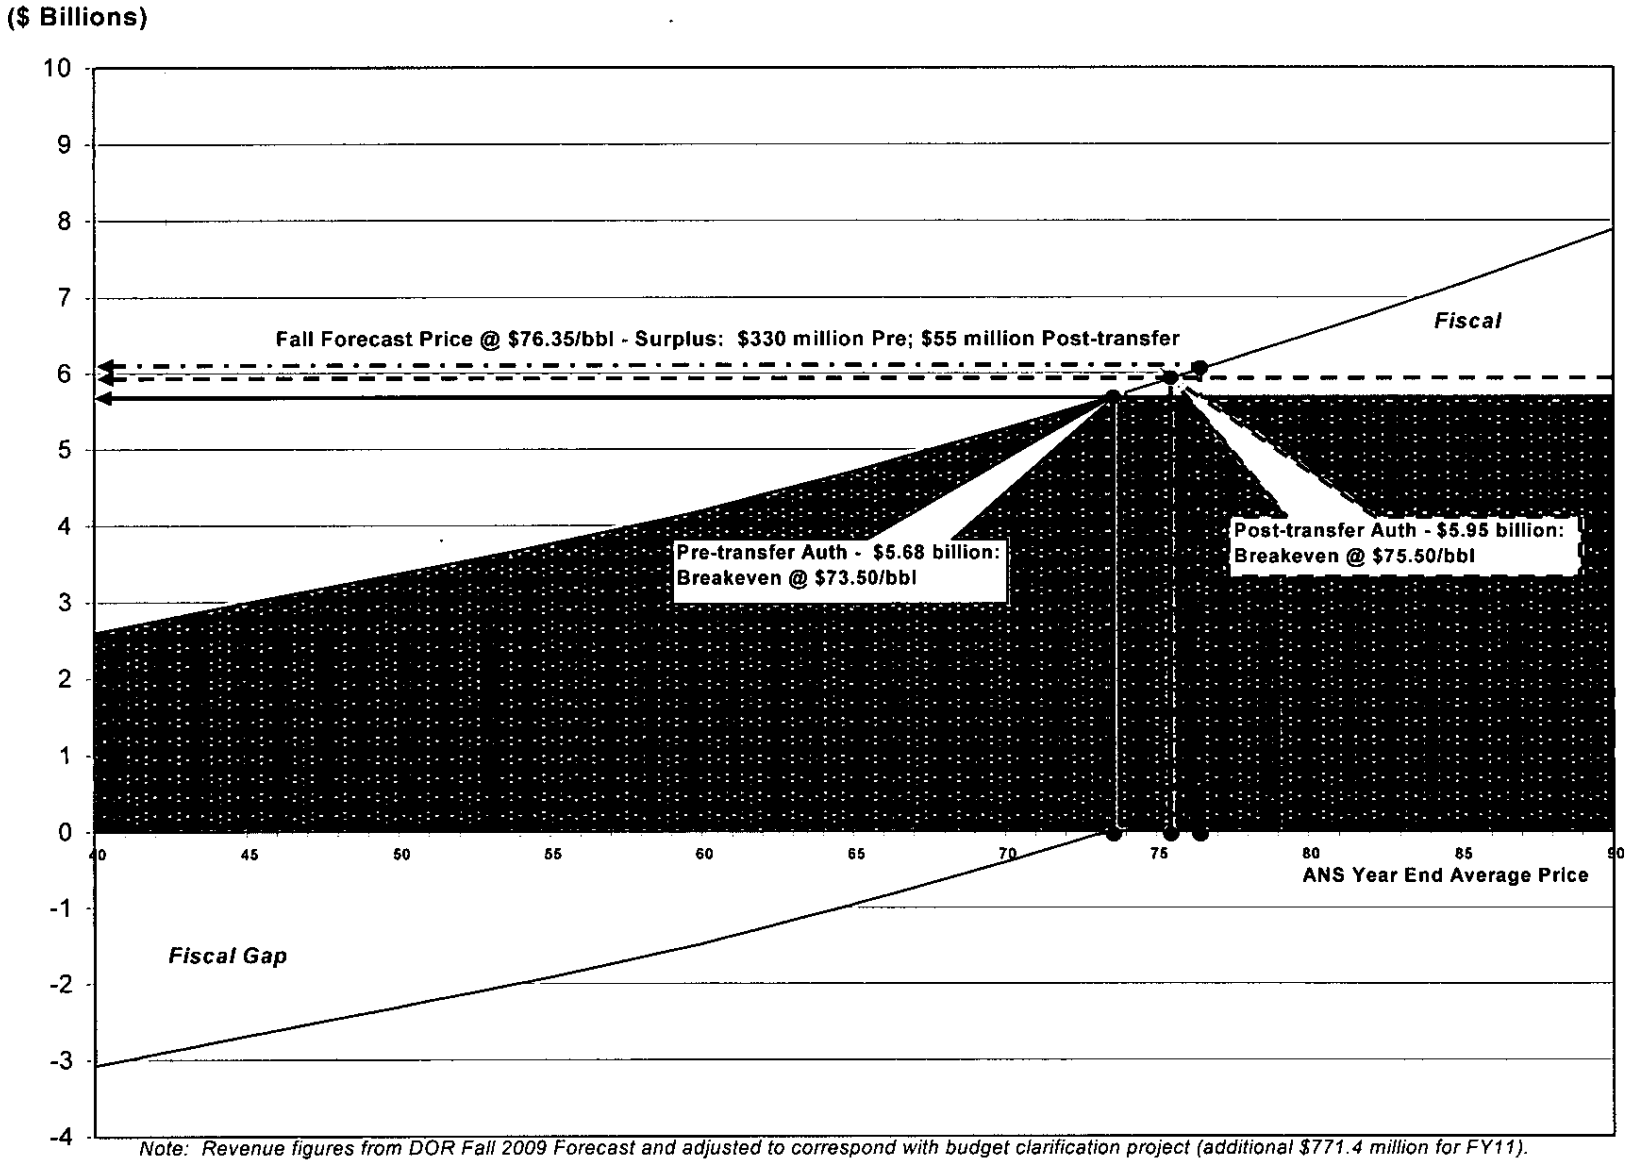
(6) From an accounting perspective, unduplicated authorization (line 28) is the best measure of capital spending. However, adding duplicated fund sources provides a valuable measure of "money on the street" because it includes projects funded with bond proceeds and other duplicated fund sources.

FY10 General Fund Revenue - Fiscal Sensitivity



Note: Revenue figures from DOR Fall 2009 Forecast and adjusted to correspond with budget clarification project (additional $773.2 million for FY10). Figures include sources not directly affected by oil prices. Lease expenditures estimated at $16/bbl ($4.5 billion total).

FY11 General Fund Revenue - Fiscal Sensitivity

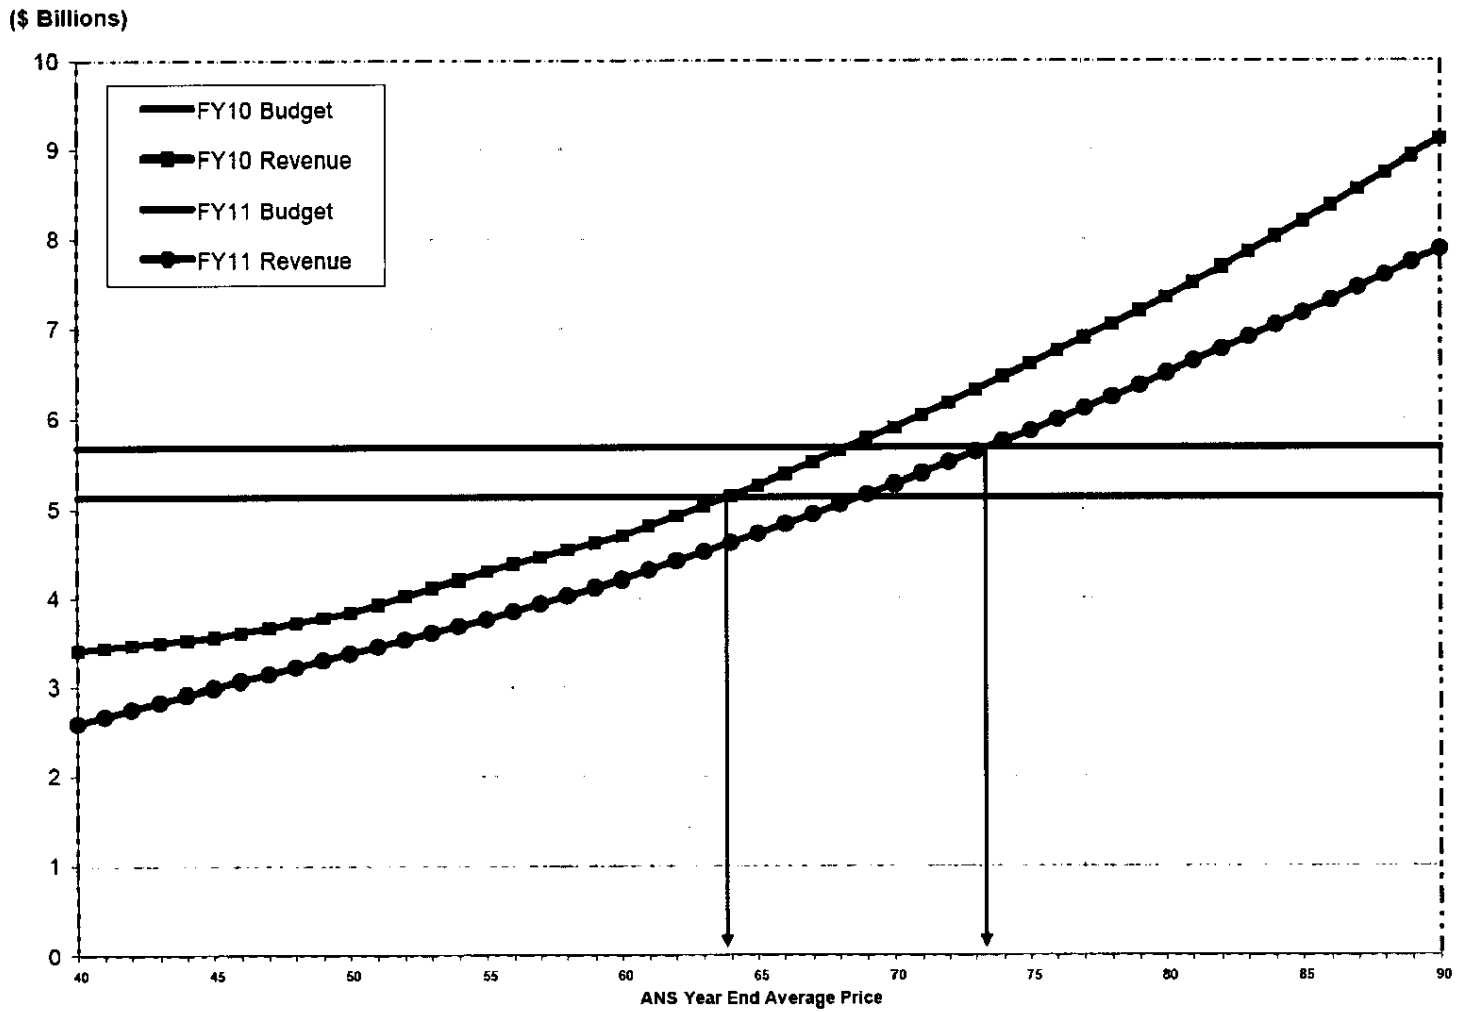


Note: Revenue figures from DOR Fall 2009 Forecast and adjusted to correspond with budget clarification project (additional $771.4 million for FY11). Figures include sources not directly affected by oil prices. Lease expenditures estimated at $19/bbl ($5 billion total).

Key Points

- A $1 change in oil price produces a $100 million change in revenue—movement along a revenue curve
- Declining oil production is a double whammy—shifts the revenue curve downward
    1. Less oil
    2. Less profit

FY10/11 General Fund - Fiscal Sensitivity Overlay



Note: Revenue figures from DOR Fall 2009 Forecast and adjusted to correspond with budget clarification project. Figures include sources not directly affected by oil prices. Budget Authorization corresponds with "Pre-transfer" authorization on Fiscal Summary.

10-Year Revenue and Spending

Assumes Fall 2009 Revenue and 3% budget escalation from FY11

Source: OMB

- FY09 represents actuals rather than forecast.
- FY10 surplus/shortfall calculation adds $22.1 in reappropriations and carry over to total available revenue.
- FY11 surplus calculation subtracts $400 from surplus for Governor's Performance Scholarship Fund and $13.1 deposit to Public Education Fund for FY12. CBR balance assumes that all available surplus is deposited to CBR main fund.

Appropriations projections do not represent a commitment by the Administration to propose spending at a particular level in FY11 or any future year. The 10 year forecast shows that unanticipated shortfalls during the period could be filled primarily through the use of reserve funds. However, other options could be used in whole, or in part. The plan will be revisited as conditions warrant.

Notes:

January 15, 2010

(1) Permanent Fund earnings are excluded from reported revenue because the entire balance of the earnings reserve account is available for appropriation. Permanent Fund earnings and balance information is reported on page 2 of the fiscal summary.

(2) The Fall 2009 oil forecast for FY10 is 0.646 mbd at $66.93 per barrel; the FY11 forecast is 0.631 mbd at $76.35/bbl. Source: Revenue Sources Book, Fall 2009.

(3) Carryforward is money that was appropriated in a prior year that is made available for spending in FY10 via multiyear appropriations or reappropriations. FY11 carryforward will be unknown until the close of FY10.

(4) In an effort to present the budget in a more meaningful and accurate way, many sources of funds were recategorized from "other" funds to general funds beginning in FY11. This summary presents both FY10 and FY11 budgets in the revised fund categories in order to make comparisons across years valid.

(5) Duplicated authorizations are in the budget twice, such as when funds flow in and out of a holding account or one agency pays another for services provided.

(6) From an accounting perspective, unduplicated authorization (line 26) is the best measure of capital spending. However, adding duplicated fund sources provides a valuable measure of "money on the street" because it includes projects funded with bond proceeds and other duplicated fund sources.

Presented to SFC 020609 by DOR

General Fund

The General Fund means something different to accountants and budgeters. For accountants, it is comprised of the State's primary operating fund (11100 in the State accounting system) and the accounts and funds which have been created by law which also report to the overall General Fund (11000 in the accounting system). These are treated as subfunds of the General Fund and are accounted for as individual funds for accounting purposes, but they are included in the General Fund for annual financial reporting purposes. The following lists those funds and accounts.

- **Adak Airport Operations Fund (Fund 11181)** – PL 101-510 – The Alaska Department of Transportation and Public Facilities and the United States Department of Defense entered into a cooperative agreement under which the State will undertake operation and maintenance of a portion of the former Naval Air Facility known as the Adak Airport. In accordance with the agreement, the Navy paid the State $10,000,000 to operate and maintain the airport. ***SWEPT? NO***
- **Alaska Capital Income Fund (Fund 11185)** – AS 37.05.545 – Administered by the Department of Revenue. This fund consists of money deposited to the fund from income earned on money awarded in or received as a result of State v. Amerada Hess and of appropriations to the fund. Money may be appropriated from this fund for any public purpose, including covering annual debt service and reserves for debt service on bonds authorized by state law. ***SWEPT? YES FY 2008 = $233,141,102***
- **Alaska Children's Trust Fund (Fund 34050)** – AS 37.14.200 – Administered by the Department of Health and Social Services and the Alaska Children's Trust Board established in the Office of the Governor. The income from this endowment is used to provide a continuing source of revenue for grants to community-based programs for the prevention of child abuse and neglect. ***SWEPT? NO***
- **Alaska Debt Retirement Fund (Fund 11138)** – AS 37.15.011 – The fund consists of all money appropriated to it. The fund was established to help meet the General Fund debt obligations of the State and its political subdivisions, to fund lease-purchases, and to finance capital projects with money remaining after debt obligations are paid. ***SWEPT? YES FY 2008 = $8,994,418***
- **Alaska Gasline Inducement Act Reimbursement (Fund 11188)** – AS 43.90.400 – Administered by the Office of the Governor. This fund consists of money appropriated to it by the legislature for reimbursing a percentage of qualified expenditures as authorized under AS 43.90.110. These state matching contributions serve as an inducement to aid in the construction of a natural gas pipeline. ***SWEPT? NO***
- **Alaska Historical Commission Receipts Account (Fund 11111)** – AS 41.35.380 – Administered by the Department of Natural Resources. Consists of all monetary gifts, grants, bequests, royalties, and other income received by the Alaska Historical Commission and is used for commission projects. ***SWEPT? YES FY 2008 = $67,460***
- **Alaska Marine Highway System Fund (Fund 12135)** – AS 19.65.060 – Administered by the Department of Transportation and Public Facilities, Alaska Marine Highway System. Gross revenues of the Alaska Marine Highway System are deposited into the fund. The fund also consists of legislative appropriations of amounts necessary to provide stable services to the public, after consideration of gross revenue. ***SWEPT?YES FY 2008 = $7,376,320***
- **Alaska Marine Highway System Vessel Replacement Fund (Fund 11137)** – AS 37.05.550 – Managed by the Department of Revenue. The fund consists of money appropriated to it by the legislature. The legislature may appropriate money from the fund for refurbishment of existing state ferry vessels, acquisition of additional state ferry vessels, or replacement of retired or outmoded state ferry vessels. ***SWEPT? YES FY 2008 = $60,000,000***
- **Alaska Technical and Vocational Education Program Fund (Fund 11166)** – AS 23.15.830 – Administered by the Department of Labor and Workforce Development. The fund consists of amounts collected under AS 23.15.835. The legislature may appropriate the annual estimated balance in the fund to the Alaska Workforce Investment Board to implement AS 23.15.820 – 23.15.850. The legislature may appropriate the lapsing balance of the fund to the Unemployment Compensation Fund established in AS 23.20.130. ***SWEPT? YES FY 2008 = $1,302,182***
- **Alaska Transportation Infrastructure Bank (Fund 21653)** – Section 350 of the National Highway System Designation Act of 1995 Federal Law – Managed by the Department of Transportation and Public Facilities. This fund was established as a pilot program with the U.S. Department of Transportation to increase

infrastructure investment in the private sector. The fund has the ability to make loans and provide other forms of credit assistance to public and private entities to carry out highway construction and transit capital projects. ***SWEPT? NO***

- **Alaska Veterans' Memorial Endowment (Fund 36010)** – AS 37.14.700(a) – Administered by the Department of Military and Veterans' Affairs. The fund is used to maintain and develop veteran or military memorials. The fund consists of appropriations to the fund, donations to the fund, and income earned on investments of fund assets. ***SWEPT? NO***

- **Alcohol and Other Drug Abuse Treatment and Prevention Fund (Fund 11178)** – AS 43.60.050 – Administered by the Department of Health and Social Services. The fund is used to establish and maintain programs for the prevention and treatment of alcoholism, drug abuse, and misuse of hazardous volatile materials and substances by inhalant abusers under AS 47.37.030. ***SWEPT? YES FY 2008 = $5,066,154***

- **Anatomical Gift Awareness Fund (Fund 11183)** – AS 13.50.160(a) – Administered by the Department of Administration. This fund was established to promote gifts under AS 13.50 the Health Care Decisions Act and to administer the donation program established under AS 13.50.130. The fund consists of donations and fees collected to support the Donor Registry Program. ***SWEPT? NO***

- **Art in Public Places Fund (Fund 11124)** – AS 44.27.060 – Administered by the Alaska State Council on the Arts. This fund consists of one percent of the construction cost of buildings exempt from AS 35.27. The money is used to commission or purchase art for public state-owned or leased buildings or facilities. ***SWEPT? NO***

- **Assistive Technology Loan Guarantee Fund (Fund 11154)** – AS 23.15.125 – Administered by the Department of Labor and Workforce Development, Division of Vocational Rehabilitation (DVR). The fund consists of money appropriated to it. DVR may solicit and accept available public and private money for distribution from the fund. Money in the fund may be used to guarantee 90 percent of the principal amount of a loan or to subsidize the interest rate of a loan guaranteed by DVR for appropriate assistive technology. ***SWEPT? NO***

- **Budget Reserve Fund (Fund 11115)** – AS 37.05.540 – Administered by the Department of Revenue. This fund consists of appropriations to the fund. Money received by the State that is subject to the appropriation limit under AS 37.05.540(b) and that exceeds that limit may be appropriated to the budget reserve fund. ***SWEPT? YES FY 2008 = $1,000,000,000***

- **Building Safety Account (Fund 11177)** – AS 44.31.025 – Administered by the Department of Labor and Workforce Development. The collection of fees associated with building inspection and the issuance of certificates of fitness will be deposited in the Building Safety Account. The legislature may appropriate money from the account for necessary costs incurred by the Department of Labor and Workforce Development in the administration of AS 18.60.180 – 18.60.395, 18.60.800 – 18.60.620 and AS 18.62 relating to building safety and certificates of fitness. ***SWEPT? YES FY 2008 = $128,080***

- **Commercial Passenger Vessel Environmental Compliance Fund (Fund 11174)** – AS 46.03.482 – Administered by the Department of Environmental Conservation. Sources of income for this fund include: (1) money received by the department in payment of fees under AS 46.03.480; (2) money received as a result of a violation; (3) money appropriated to the fund by the legislature; (4) earnings on the fund. The legislature may make appropriations from this fund to the department to pay for the department's operational costs necessary to prepare reports that assess the information received by the department for the cruise ship seasons of 2000, 2001, 2002, and 2003 and for the department's operational costs necessary to carry out activities under AS 46.03.460 – 46.03.490 relating to commercial passenger vessels. ***SWEPT? YES FY 2008 = $6,210,770***

- **Community Revenue Sharing Fund (Fund 11200)** – AS 29.60.850 - Administered by the Department of Commerce, Community and Economic Development. The Fund provides community revenue sharing payments to municipalities, reserves, and communities for any public purpose. The fund consists of appropriations. Income earned on money in the fund may be appropriated to the fund. The legislature may appropriate 20 percent of the money received by the State during the previous calendar year under AS 43.55.011(g). ***SWEPT? NO***

- **Constitutional Budget Reserve Fund (Fund 33041)** – Alaska Constitution, Article IX, Section 17; AS 37.13 – Administered by the Department of Revenue. All money received by the State as a result of the termination of administrative proceedings or litigation in a state or federal court involving mineral lease bonuses, rentals, royalties, royalty sale proceeds, federal mineral revenue sharing payments or bonuses, or involving taxes imposed on mineral income, production, or property are deposited in the fund, except for the share of those proceeds that are deposited into the Alaska Permanent Fund. ***SWEPT? NO, RECIPIENT OF SWEEP***

- **Disaster Relief Fund (Fund 12120)** – AS 26.23.300 – Administered by the Office of the Governor and the Department of Military and Veterans Affairs. This fund provides resources to alleviate the effects of disasters wherever and whenever they may occur in the State. ***SWEPT? NO***

- **Donated Commodity Fee Fund (Fund 11120)** – USC 7 CFR, Part 250 – Administered by the Department of Education and Early Development. This fund consists of monies from federal agencies and recipients of goods. It is intended to cover the cost of the distribution of federal surplus food to schools, childcare institutions, nonprofit camps for children, charitable institutions for minors, nutrition programs for the elderly, and assistance to needy persons. ***SWEPT? NO***

- **Educational Facilities Maintenance and Construction Fund (Fund 11142)** – AS 37.05.560 – Administered by the Department of Education and Early Development. Money in the fund may be appropriated to finance the design, construction, and maintenance of public school facilities and for maintenance of the University of Alaska facilities. ***SWEPT? YES FY 2008 = $45***

- **Election Fund (Fund 11179)** – Federal H.R. 3295, "The Help America Vote Act" – Administered by the Office of the Lieutenant Governor, Division of Elections. Funds will be used for election administration improvements, for replacement of voting equipment, to improve accessibility for individuals with disabilities, and to provide alternative language accessibility. ***SWEPT? NO***

- **Employment Assistance and Training Program Account (Fund 11134)** – AS 23.15.625 – Administered by the Department of Labor and Workforce Development. The account consists of amounts collected under the provision of AS 23.15.630. The annual estimated balance in the account may be appropriated by the legislature to the department to implement AS 23.15.620 – 23.15.660. The legislature may appropriate the lapsing balance of the account to the Unemployment Compensation Fund established in AS 23.20.130. ***SWEPT? YES FY 2008 = $4,550,795***

- **Exxon Valdez Oil Spill Unincorporated Rural Community Grant Fund (Fund 11161)** – AS 44.33.115 – Administered by the Department of Commerce, Community, and Economic Development. The department may use the fund to make grants to unincorporated rural communities in the area affected by the Exxon Valdez oil spill for capital projects for purposes of restoring, replacing, or enhancing subsistence resources or services or other services damaged or lost as a result of the Exxon Valdez oil spill. ***SWEPT? NO***

- **FHWA - Airspace Leases Fund (Fund 11126)** – Section 156 of the Surface Transportation and Uniform Relocation Assistance Act of 1987 requires that the State shall charge fair market value for the sale, use, or lease rentals of right-of-way airspace and that the federal share of these net incomes be used by the State for highway projects. This fund accounts for those revenues. The revenues are available for appropriation by the legislature for highway projects. ***SWEPT? YES FY 2008 = $19,049***

- **FICA Administration Fund (Fund 11110)** – AS 39.30.050 – Administered by the Department of Administration. The fund consists of the pro rata share of expenses incurred in the administration of 39.30.010 – 39.30.080 and collected from participating political subdivisions and from the State. ***SWEPT? NO***

- **Fisheries Disaster Fund (Fund 11180)** – PL 108-7, SEC 2, Division N, Title V – Fisheries Disasters, Sec. 501(a) – Administered by the Office of the Governor. $35,000,000 shall be made available as a direct lump sum payment to the State of Alaska to make payments to persons or entities that have experienced significant economic hardship. Funds in Alaska shall be used to provide personal assistance; assistance for small businesses including fishermen, fish processors, and related business serving the fishing industry; assistance for local borough governments adversely affected by reductions in fish landing fees and other fishing-related revenue; and product development and marketing. ***SWEPT? NO***

- **Fuel Emergency Fund (Fund 11125)** – AS 26.23.400 – Administered by the Office of the Governor. This fund is used when the governor determines that a shortage of fuel is sufficiently severe to justify state assistance to make grants to a city or borough, or to a village or unincorporated community to purchase emergency supplies of fuel. ***SWEPT? NO***

- **Fund for the Improvement of School Performance (Fund 11145)** – AS 14.03.125 – Administered by the Department of Education and Early Development. It is used to make grants to a district located in the State for the purpose of improving school performance. ***SWEPT? NO***

- **Major Maintenance Grant Fund (Fund 11144)** – AS 14.11.007 – Administered by the Department of Education and Early Development. The fund is used to make grants for the cost of school major maintenance. ***SWEPT? NO***

- **Memorial Education Revolving Loan Fund (Fund 21611)** – AS 14.43.255 – Administered by the Department of Education and Early Development. The fund was created to pay tribute to the memory of

Alaskans who, by example of their lives, or by their distinguished contribution and service to the State, their community, or their profession, exemplified the best that is the challenge of "The Great Land." The funds shall be used to provide education loans to students selected under AS 14.43.250-325. ***SWEPT? NO***

- **Municipal Capital Project Matching Grant Fund (Fund 11146)** – AS 37.06.010 – Administered by the Department of Commerce, Community, and Economic Development. The money in the fund is held by the department in custody for each municipality. Each fiscal year the department allocates individual grants for each municipality. ***SWEPT? YES FY 2008 = $129,112***

- **Municipal Harbor Facility Grant Fund (Fund 11187)** – AS 29.60.800 – Administered by the Department of Transportation and Public Facilities. The money appropriated to the fund may be expended by the department for municipal harbor grants. ***SWEPT? NO***

- **Oil and Gas Tax Credit Fund (Fund 11189)** – AS 43.55.028 – Administered by the Department of Revenue. The purpose of this fund is to purchase certain transferable tax credit certificates issued under AS 43.55.023 and certain production tax credit certificates issued under AS 43.55.025. The fund consists of money appropriated to it, including any appropriation of the percentage provided under (c) of this section of all revenue from taxes levied by AS 43.55.011 that is not required to be deposited in the constitutional budget reserve fund established in art. IX, sec. 17 (a), Constitution of the State of Alaska; and earnings on the fund. ***SWEPT? NO***

- **Oil and Hazardous Substance Release Prevention and Response (Fund 11128 rollup; Fund 11122 prevention; Fund 11129 response)** – AS 46.08.010 – Administered by the Department of Environmental Conservation. This fund is composed of two accounts: (1) the prevention account and (2) the response account. The fund consists of appropriations by the legislature of money from private donors, money recovered from parties responsible for cleanup of oil or a hazardous substance, and fines, penalties, or damages recovered under Chapter 46. This money is for the containment and cleanup of oil or a hazardous substance; monitoring, assessing, investigating, and evaluating the release or threatened release of oil or a hazardous substance; and recovery of the cost to the State of the containment and cleanup of oil or a hazardous substance. ***SWEPT? NO FOR FUND 11129; YES FOR FUND 11122 FY 2008 = $13,676,743***

- **Oil and Hazardous Substance Release Prevention Mitigation Account (Fund 11139)** – AS 46.08.020(b) – Administered by the Department of Environmental Conservation. This account consists of money received from other state sources, from federal or other sources, or from a private donor; money recovered or otherwise received from parties responsible for the containment and cleanup of oil or a hazardous substance; and fines, penalties, or damages recovered under AS 46.08.005–46.08.080. The legislature may appropriate the amount received in this account (during the preceding calendar year) to the prevention account in the Oil and Hazardous Substance Release Prevention and Response Fund. ***SWEPT? YES FY 2008 = $8,053,827***

- **Oil and Hazardous Substance Release Response Mitigation Account (Fund 11153)** – AS 46.08.025(b) – Administered by the Department of Environmental Conservation. This account consists of money received from other state sources, from federal or other sources, or from a private donor; money recovered or otherwise received from parties responsible for the containment and cleanup of oil or a hazardous substance at a specific site for which the State expended money from the former oil and hazardous substance release response fund before October 2, 1994, or for which the State expended money from the response account. The legislature may appropriate the amount received in this account (during the preceding calendar year) to the response account in the Oil and Hazardous Substance Release Prevention and Response Fund. ***SWEPT? YES FY 2008 = $195,086***

- **Permanent Fund Dividend Fund (Fund 33020)** – AS 43.23.045 – Administered by the Department of Revenue. This fund consists of 50 percent of the income earned by the Alaska Permanent Fund during the fiscal year ending on June 30 that is paid out to eligible Alaska residents. ***SWEPT? NO***

- **Public Education Fund (Fund 11184)** – AS 14.17.300 – Administered by the Department of Education and Early Development. This account may be expended only in aid of public schools and for centralized correspondence study programs under Chapter 17 – Financing of Public Schools, and for transportation of pupils under AS 14.09.010. ***SWEPT? NO***

- **Railbelt Energy Fund (Fund 11123)** – AS 37.05.520 – Managed by the Department of Revenue. The legislature may appropriate money from the fund for programs, projects, and other expenditures to assist in meeting Railbelt energy needs, including projects for retrofitting state-owned buildings and facilities for energy conservation. ***SWEPT? YES FY 2008 = $90,858,733***

- **Randolph-Sheppard Small Business Fund (Fund 11118)** – AS 23.15.130, 20 USC 107-107(f) – Administered by the Department of Labor and Workforce Development. This fund consists of receipts from

vending facilities on federal properties and is used to aid only blind licensees in operating vending machine facilities. ***SWEPT? NO***

- **Real Estate Surety Fund (Fund 11121)** – AS 08.88.450 – Administered by the Department of Commerce, Community, and Economic Development. This fund is composed of payments made by real estate licensees under AS 08.88.455 and filing fees under AS 08.88.460, income earned on investment of the money in the fund, and money deposited in the fund under AS 08.88.450(c). Amounts in the fund may be appropriated for claims against the fund, for hearing and legal expenses directly related to fund operations and claims, and real estate educational purposes. ***SWEPT? NO***

- **School Construction Grant Fund (Fund 11143)** – AS 14.11.005 – Administered by the Department of Education and Early Development. The fund shall be used to make grants for the costs of school construction. Legislative appropriations for school construction shall be deposited in the fund and the proceeds from the sale of general obligation bonds for school construction may be deposited in the fund. ***SWEPT? NO***

- **School Trust Land Sales (Fund 11162)** – Established per attorney general memo regarding Public School Trust Litigation. Used to separately account for the sales of 21 parcels of public school trust land, the status of which is in litigation. ***SWEPT? NO***

- **Senior Care Fund (Fund 11182)** – Chapter 3, SLA 2004 amended the uncodified law of the State of Alaska by creating the Senior Care Fund to be used by the Department of Health and Social Services. The fund is used to pay for the costs incurred for the provision of senior services under the senior care program. The department shall provide cash assistance and prescription drug benefits as far as practicable under appropriations provided by law. ***SWEPT? YES FY 2008 = $260,515***

- **State Insurance Catastrophe Reserve Account (Fund 11133)** – AS 37.05.289 – Administered by the Department of Administration. Assets of the account may be used to obtain insurance, to establish reserves for the self-insurance program, and to satisfy claims or judgments arising under the program. ***SWEPT? NO***

- **State Land Disposal Income Fund (Fund 11164)** – AS 38.04.022(a) – Administered by the Department of Natural Resources. The fund consists of revenue from the state land disposal program. ***SWEPT? YES FY 2008 = $0***

- **State Land Reforestation Fund (Fund 12130)** – AS 41.17.300 – Administered by the Department of Natural Resources. The money in the state land reforestation fund may be used only for the reforestation of state land, including site preparation; seed and seedling acquisition and cultivation; planting and other reforestation measures; timber stand improvement; and the development of materials and techniques for the reforestation of state land. ***SWEPT? YES FY 2008 = $194***

- **Storage Tank Assistance Fund (Fund 11136)** – AS 46.03.410 – Administered by the Department of Environmental Conservation. The fund consists of money appropriated to it by the legislature. The receipts of the fund may be used for certain costs as defined in AS 46.03.410(a) relating to underground petroleum storage tank systems and for grants and loans. ***SWEPT? NO***

- **Surplus Property Revolving Fund (Fund 11112)** – AS 37.05.500(a)(2), AS 44.68.130 – Administered by the Department of Administration. This fund is to account for revenues from the users or purchasers of excess federal property that the State has acquired and is used to pay the administrative expenses incurred in managing this property. ***SWEPT? NO***

- **Tobacco Use Education and Cessation Fund (Fund 11175)** – AS 37.05.580 – Administered by the Department of Health and Social Services. This fund consists of 20 percent of the annual revenue derived from the settlement of State of Alaska v. Philip Morris, Incorporated, et al, No. 1JU-97-915 CI (Alaska Super. 1997). The purpose of this fund is to provide a source to finance the comprehensive smoking education, tobacco use prevention, and tobacco control program authorized by AS 44.29.020(a)(15). ***SWEPT? YES FY 2008 = $10,497,239***

- **TAPS Rebate Fund (Fund 11163)** – Federal PL 101-380, sec. 8102(a)(B)(I) – The federal government has rebated the pro rata share of the federal TAPS (Trans-Alaska Pipeline Liability Fund) to the State of Alaska for its contributions as an owner of oil. The funds are to be used for the remediation of above-ground storage tanks. ***SWEPT? NO***

- **Training and Building Fund (Fund 12121)** – AS 23.20.130(d) – Administered by the Department of Labor and Workforce Development. This fund consists of interest and penalties for failure to file timely reports and pay contributions to the Unemployment Compensation Fund. It may be used for the administration of the Employment Security Act when federal funds are not available and for the acquisition of land and buildings for the purpose of providing office space for the department. ***SWEPT? NO***

- **Unincorporated Community Capital Project Matching Grant Fund (Fund 11147)** – AS 37.06.020 – Administered by the Department of Commerce, Community, and Economic Development. This fund was created for unincorporated communities to acquire or improve an asset with an anticipated life exceeding one year and includes land acquisition, construction, repair or structural improvement of a facility, engineering and design for a facility, and acquisition or repair of equipment. ***SWEPT? YES FY 2008 = $47,438***
- **Vocational Rehabilitation Small Business Enterprise Revolving Fund (Fund 11116)** – AS 23.15.130 – Administered by the Department of Labor and Workforce Development, Division of Vocational Rehabilitation. This fund consists of receipts from the net proceeds of vending facilities on public property. The annual estimated receipts of the fund may be used by the legislature to make appropriations to the department to aid licensees in operating vending machine facilities. ***SWEPT? YES FY 2008 = $87,524***
- **Workers' Compensation Benefits Guaranty Fund (Fund 11186)** – AS 23.30.082 – Administered by the Department of Labor and Workforce Development. This fund is composed of civil penalty payments made by employers under AS 23.30.080, income earned on investment of the money in the fund, money deposited in the fund, and appropriations to the fund. The fund may be appropriated for claims against the fund, for expenses directly related to fund operations and claims, and for legal expenses. ***SWEPT? YES FY 2008 = $765,453***
- **Workers' Safety and Compensation Administration Account (Fund 11173)** – AS 23.05.067 – Administered by the Department of Labor and Workforce Development. This fund is used to account for the annual service fees collected from employers for the administrative expenses of the State for workers' safety programs under AS 18.60 and the workers' compensation program under AS 23.30. ***SWEPT? YES FY 2008 = $13,797,650***

MEMORANDUM

STATE OF ALASKA
DEPARTMENT OF REVENUE
Treasury Division

To: Patrick Galvin
Commissioner

Date: June 15, 2009

From: Gary M. Bader
Chief Investment Officer

Telephone: 907-465-4399

Subject: Asset Allocation Recommendations for FY 2010

Attached are my recommended asset allocations for investment funds under the stewardship and control of the Commissioner of Revenue for fiscal year 2010. Asset allocations represent the investment strategy designed to achieve the objectives of a fund while taking into account the desired expected investment return, volatility, cash flows, liquidity, and investment income of the fund. Given the objective of the fund or account, and given a set of capital market assumptions about the likely risk, return, yield, correlation, and liquidity attributes of asset classes, an appropriate asset allocation is selected. Following is a general explanation of the process used to develop our recommendations and the rationale behind them.

As you are aware, each year, the asset allocation process begins with Callan Associates, the state's investment consultant, providing staff with financial assumptions for numerous asset classes. The assumptions include: investment returns, standard deviations, and correlations for the various assets.

Usually, the Callan assumptions do not change much from year to year. However, because of the extraordinary losses and volatility in financial markets in 2008, Callan's 2009 equity return projections are generally higher than 2008. They also have lower standard deviations (risk) than 2008. For example, the 2008 Equity - Broad Market expected return was 9.00% with a 16.90% standard deviation. For 2009, the return projection changed to higher 9.48% with a lower standard deviation of 16.40%.

While the changes in expected returns for equity are mostly higher in Callan's 2009 assumptions, return projections for some fixed income strategies have barely changed. For example, the 2008 return assumption for Bonds - Aggregate was 5.25%, in 2009 it is 5.24%.

After we receive the Callan assumptions, they are then entered into an optimizer program. The resulting output is an "efficient frontier" of different asset mixes that are expected to have the highest expected rate of return for a given level of risk. Before an

asset allocation is determined, the objectives of a fund must be considered. For example, in the case of funds where the objective is to invest the proceeds of bond sales pending drawdown, the strategy is to minimize the probability of investment loss. Usually, the year to year changes in the efficient frontier are small because the changes in input assumptions are small. This year is different.

Because recent Callan equity assumptions suggest that higher equity returns can be earned with lower risk, the resulting efficient frontier drives the allocation away from equities when attempting to target last year's return target. Selling equities after a large market decline places us in a position of selling equities low after we bought them high. Generally, for funds that have domestic equity allocations in 2009, except for the Children's Trust, I have focused on efficient frontiers with the same risk as last year while holding the domestic equity allocation approximately the same. The Children's Trust is set at the same target return as last year in order to reduce risk.

Historically the goals for funds such as the GeFonsi, and Constitutional Budget Reserve main account have focused on minimizing the probability of loss in one year. My recommendation continues that practice. For accounts that own equities, we used the Conservative Aggregate Fixed Income Asset Class instead of the Aggregate Bonds Asset Class. The Conservative Aggregate is a combination of 90% Barclay's Aggregate and 10% Treasuries.

Many of the funds the Department manages have such high liquidity requirements that it is necessary to invest entirely in short term fixed income. For your convenience, we have not written a separate explanation for each one of these funds, but we have attached an approval sheet which shows the current policy and the proposed policy. The short term fixed income class is expected to yield 3.03%. Following is a list of those funds.

AY03 - Retiree Health Insurance Fund (to be paid down)
AY05 - International Airport Repair and Replacement Fund
AY07 - Alaska Children's Trust Fund - Income Account
AY09 - Public School Trust Fund - Income Account
AY14 - 1999A AIA AMT Construction Fund
AY18 - 1999C AMT Construction Fund
AY20 - 1999B Non-AMT Construction Fund
AY25 - SBS Cash Transition Fund
AY28 - Investment Loss Trust Fund
AY2A - 2002 B Non-AMT Construction Fund
AY2B - 2002A AMT Construction Fund
AY2E - 2002 Series Reserve Account
AY2G - Permanent Fund Dividend Holding Account
AY2M - Accelerated Alaska Transportation
AY2N - Education and Museum Facility
AY2O - Transportation Project

AY2P - 2003A AMT Construction Fund
AY2Q - 2008 Transportation Project GO Bonds
AY2R - 2003B Non-AMT Construction Fund
AY2U - 2003 Series Reserve Account
AY2W - Alaska Sport Fish Hatchery Fund
AY2Z - Alaska Energy Authority Renewable Energy Grand Fund
AY9V - Alaska Sport Fish
AY9W - 2006A AMT Construction Fund
AY9X - 2006B Non-AMT Construction Fund
AY9Y - 2006 Series Variable Rate

For the rest of the department of Revenue funds, we have also attached a short narrative explaining the reasoning for the asset allocation recommendation. Your approval of each asset allocation is requested.

cc: Jerry Burnett, Deputy Commissioner

GeFONSI

Rationale

The General Fund constitutes the largest element of the GeFONSI. Much of the money in the fund has been appropriated and a material loss could affect the state's ability to fulfill its obligations. Treasury expects much of the money in the pool to be spent in less than one year. Accordingly, the allocation should allow minimal exposure to principal loss. Equities are not recommended for the GeFONSI.

Over the past year the U.S. economy has been anemic. Recently, fiscal and monetary policy has been directed at stimulating the economy. With 10 year treasuries currently yielding less than 3.8%, the potential gains from further decline in interest rates appears limited. It is therefore recommended that the asset allocation of the GeFONSI be weighted toward fixed income securities with a maturity of five years or less. Accordingly, as done last year, the asset allocation was constrained to restrict investments in the Broad Market Fixed Income Pool.

Effective July 1, 2009 Treasury's recommended asset allocation for the GeFONSI is 43% Short-term Fixed Income and 57% Intermediate-term Fixed Income investments. The allocation is estimated to provide an expected return of 3.60% with a probability of a loss over a one-year period of 2.52%.

AY19: FY 2010 Proposed CBRF Investment Guidelines
Main Account

Investment Topic	Current Policy	Proposed Policy
Risk Tolerance	Moderate – Fixed Income	No change
Investment Objective	Moderate exposure of principal loss in return for higher expected longer-term returns. Limited current income requirement. Moderate inflation protection needed. Increasing liquidity requirement.	No change

Constitutional Budget Reserve Fund

Rationale

The investment policies for the Constitutional Budget Reserve Fund (CBRF) have changed over the years as the balance and the expected uses of the CBRF have changed. Though the price of oil is currently hovering around the $70 per barrel level, declining production and the inconsistency of future prices is still a concern. The CBRF is the state's "savings account" and as such is responsible for covering fluctuations in the general fund.

Intermediate term financial planning by the administration and the legislature is highly dependent upon a reasonably predictable CBRF balance.

With the 10 year treasury currently yielding 3.79%, and the 3 month Tbill yielding 0.17%, it is recommended that the asset allocation of the CBRF favor fixed income securities with a maturity of five years or less. Accordingly, the asset allocation was constrained to restrict Broad Market Fixed Income Investment Pool to no more than 20% of the fund. In addition to controlling the risk associated with investment in longer term fixed assets, the transaction costs associated with moving investments from one pool to another will be minimized.

The recommended asset allocation has a 1 year expected total return of 4.18% with a probability of 8% that the account will experience a negative return for the year.

AY10: FY 2010 Proposed CBRF Subaccount Investment Guidelines

Investment Topic	Current Policy	Proposed Policy
Risk Tolerance	High (Required by statute)	No change
Investment Objective	High exposure of principal to loss in return for higher expected longer-term returns. Limited current income requirement. Limited inflation protection needed. Moderate liquidity requirement.	No change
Time Horizon	Moderately Long	No change

The approved policy for the Constitutional Budget Reserve Fund subaccount is effective July 1, 2009.

Approved

6/30/09
Date

Constitutional Budget Reserve Fund (Sub-Account)

Rationale

The legislature directed that "in establishing or modifying the investment policy for the sub-account in the constitutional budget reserve fund, the commissioner of revenue shall assume that those funds will not be needed for at least five years." To comply with the legislative directive, the asset allocation of the sub-account is targeted at the same 10.78% projected risk as last year. The one year probability of a negative return is 23.26%

The asset allocation was constrained to asset classes where a public equity market existed to provide liquidity. Asset classes such as real estate and private equity were avoided due to the possibility investments in those assets frequently require an investment horizon greater than five years.

The recommended asset allocation for the Constitutional Budget Reserve Sub-Account is 35% conservative agg fixed income, 44% domestic equity, 20% international equity, and 1% LEI+ Mandate. This asset mix has a one year expected rate of return of 7.87%. There is a 5.12% chance that over a five year period the fund will have a negative return.

Investment Policies Pertaining to certain Treasury's Investment Options

A. Short-term Fixed Income Pool Investments - Investment Policy

Treasury invests the funds in this pool in a broad range of short-term fixed income investments. Under the Prudent Investor Rule, Treasury constructs the pool's portfolio with a low risk tolerance. Individual fixed rate securities will be limited to 14 months to maturity or expected average life upon purchase for amortizing securities. Floating rate securities will be limited to three years to maturity or three years average life upon purchase for amortizing securities. These constraints apply to trade date, except for securities brought at new issue, for which settlement date applies. Investments include instruments with a long-term credit rating of at least "A3" or equivalent and instruments with a short-term credit rating of at least "P1" or equivalent.. Investments for this pool are limited to:

- Money market investments comprising:
  - Repurchase agreements collateralized only by U.S. Treasury obligations, including bills, notes, and bonds, and only when the collateral carries a market value equal to or greater than 102% of the amount of the repurchase agreements, and only when the custodial bank appointed by Treasury will take custody of the collateral;
  - Commercial paper rated at least Prime-1 by Moody's Investor Services, Inc. and A-1 by Standard and Poor's Corporation; and
  - Negotiable certificates of deposit and bankers acceptances; provided that an issuing bank must have total assets in excess of $5 billion.
  - United States Treasury obligations including bills, notes, bonds, and other debt obligation issued by the United States Treasury, and backed by the full faith and credit of the U.S. Government.
  - Institutional money market funds rated Aaa by Moody's Investors Service and AAA by Standard & Poors ratings group which comply with SEC Rules governing such funds.
- Other full faith and credit obligations of the U.S. Government.
- Securities issued or guaranteed by agencies and instrumentalities of the U.S. Government, but not explicitly backed by the full faith and credit of the U.S. Government.
- Obligations of foreign governments, sovereign states, supranational entities, and their instrumentalities denominated in U.S. dollars.
- Corporate debt securities comprising:
  - Corporate debt issued in the U.S. capital market by U.S. companies;
  - Euro-dollar debt (that is, U.S. dollar-denominated securities issued outside the U.S. capital markets by U.S. companies or by foreign issuers); and
  - Yankee debt (that is, U.S. dollar denominated obligations issued in the U.S. capital market by foreign issuers).
- Asset-Backed Securities.

- Agency and non-agency mortgage-backed securities backed by loans secured by residential, multifamily and commercial properties including, but not limited to pass-throughs, collateralized mortgage obligations (CMO's), project loans, construction loans, and adjustable rate mortgages.

  Asset-backed and non-agency mortgage securities must be rated A3 or equivalent. The A3 or equivalent rating is defined as the median rating of the following three rating agencies: Standard & Poor's Corporation, Moody's and Fitch. Asset-backed and non-agency mortgage securities may be purchased if only rated by one of these agencies if they are rated AAA.

Investment in this pool is ideal for fund participants needing to invest part or all of their money with the following characteristics:

Risk Tolerance	Low. The daily investment results reflect daily changes in the market value of the pool's investments. It is possible to have a loss on a single day based on the changes in market value of the pool's assets.
Investment Objectives	Minimizing exposure of principal to loss is very important.
Current Income	Daily earnings credit. The earnings of the pool include interest and changes in the market value of the investments held in the pool. There is no distinction between current income and capital gains.
Inflation Protection	Little need for significant long-term inflation protection. The pool should earn a positive real rate over the near-term but could earn less than inflation over time while meeting its other objectives.
Liquidity	Need for significant liquidity. The pool can accommodate major withdrawals and contributions (exceeding $50,000,000) in the normal operating environment. The Pool can accommodate much larger withdrawals with very little advance notice.
Time Horizon	Very short to short time horizons. The short time horizon effectively limits the risk taken in this pool.

Treasury's performance benchmark for the Short-term Fixed Income Investment Pool is:

100% Three-Month U.S. Treasury Bill - the market measure for risk-free, extremely liquid investments.

B. Intermediate-term Fixed Income Pool Investments - Investment Policy

Treasury invests the funds in this pool in a broad range of intermediate-term fixed income investments. Under the Prudent Investor Rule, Treasury constructs the pool's portfolio with a moderately high risk tolerance. Investments include instruments with a long-term credit rating of at least "Baa3" or equivalent and instruments with a short-term credit rating of at least "P1" or equivalent. Investments for this pool are limited to:

- Money market investments comprising:
  - Repurchase agreements collateralized only by U.S. Treasury obligations, including bills, notes, and bonds, and only when the collateral carries a market value equal to or greater than 102% of the amount of the repurchase agreements, and only when the custodial bank appointed by Treasury will take custody of the collateral;
  - Commercial paper rated at least Prime-1 by Moody's Investor Services, Inc. and A-1 by Standard and Poor's Corporation; and
  - Negotiable certificates of deposit and bankers acceptances; provided that an issuing bank must have total assets in excess of $5 billion.
- United States Treasury obligations including bills, notes, bonds, and other debt obligation issued by the United States Treasury, and backed by the full faith and credit of the U.S. Government.
- Other full faith and credit obligations of the U.S. Government.
- Securities issued or guaranteed by agencies and instrumentalities of the U.S. Government, but not explicitly backed by the full faith and credit of the U.S. Government.
- Obligations of foreign governments, sovereign states, supranational entities, and their instrumentalities denominated in U.S. dollars.
- Investment grade corporate debt securities comprising:
  - Corporate debt issued in the U.S. capital market by U.S. companies;
  - Euro-dollar debt (that is, U.S. dollar-denominated securities issued outside the U.S. capital markets by U.S. companies or by foreign issuers); and
  - Yankee debt (that is, U.S. dollar denominated obligations issued in the U.S. capital market by foreign issuers).
- Investment grade Asset-Backed Securities.
- Agency and investment grade non-agency mortgage-backed securities backed by loans secured by residential, multifamily and commercial properties including, but not limited to pass-throughs, collateralized mortgage obligations (CMO's), project loans, construction loans, and adjustable rate mortgages.

Asset-backed and non-agency mortgage securities must be rated investment grade. The investment grade rating is defined as the median rating of the following three rating agencies: Standard & Poor's Corporation, Moody's and Fitch. Asset-backed and non-agency mortgage securities may be purchased if only rated by one of these agencies if they are rated AAA.

- Total return swaps referenced to components or sub-components of fixed income indices. To mitigate interest rate risk, the proceeds may not be invested in securities with a maturity beyond 90 days, unless invested in the Department of Revenue internally-managed Short-Term Fixed Income Pool.

Investment in this pool is ideal for fund participants needing to invest part or all of their money with the following characteristics:

Risk Tolerance	Moderately high. The daily investment results reflect daily changes in the market value of the pool's investments. Losses are likely over the short-term based on the changes in market value of the pool's assets.
Investment Objectives	Willing to assume an average amount of market risk, volatility and principal loss to achieve higher returns.
Current Income	Daily earning credit. The earnings of the pool include interest and changes in the market value of the investments held in the pool. There is no distinction between current income and capital gains.
Inflation Protection	Moderate need for long-term inflation protection. The pool should earn a positive real rate over an intermediate time horizon while meeting its other objectives.
Liquidity	Need for moderate liquidity. The pool can accommodate withdrawals and contributions (exceeding $5,000,000) in the normal operating environment. The pool can accommodate much larger withdrawals, $50,000,000 or more, with very little advance notice.
Time Horizon	Intermediate time horizon. The intermediate time horizon allows a more aggressive investment policy with higher expected returns than the Short-term Pool.

Treasury's performance benchmark for the Intermediate-term Investment Pool is:

100% Merrill Lynch 1-5 year Government Bond Index.

C. Broad Market Fixed Income Pool Investments - Investment Policy

Treasury invests the funds in this pool in a broad range of fixed income investments. Under the Prudent Investor Rule, Treasury constructs the pool's portfolio with a high risk tolerance. Investments include instruments with a long-term credit rating of at least Baa3 or equivalent and instruments with a short-term credit rating of at least P1 or equivalent. Investments for this pool are limited to:

- Money market investments comprising:
  - Repurchase agreements collateralized only by U.S. Treasury obligations, including bills, notes, and bonds, and only when the collateral carries a market value equal to or greater than 102% of the amount of the repurchase agreements, and only when the custodial bank appointed by retirement funds will take custody of the collateral;
  - Commercial paper rated at least Prime-1 by Moody's Investor Services, Inc. and A-1 by Standard and Poor's Corporation; and
  - Negotiable certificates of deposit and bankers acceptances; provided that an issuing bank must have total assets in excess of $5 billion.
- United States Treasury obligations including bills, notes, bonds, and other debt obligations issued by the United States Treasury, and backed by the full faith and credit of the U.S. Government.
- Other full faith and credit obligations of the U.S. Government.
- Securities issued or guaranteed by agencies and instrumentalities of the U.S. Government, but not explicitly backed by the full faith and credit of the U.S. Government.
- Securities issued or guaranteed by municipalities in the United States.
- Obligations of foreign governments, sovereign states, supranational entities, and their instrumentalities denominated in U.S. dollars.
- Investment grade corporate debt securities comprising:
  - Corporate debt issued in the U.S. capital markets by U.S. companies;
  - Euro-dollar debt (that is, U.S. dollar-denominated securities issued outside the U.S. capital markets by U.S. companies or by foreign issuers); and
  - Yankee debt (that is, U.S. dollar denominated obligations issued in the U.S. capital markets by foreign issuers).
- Asset-backed Securities (ABS)
- Agency and investment grade non-agency mortgage-backed securities backed by loans secured by residential, multifamily and commercial properties including, but not limited to pass-throughs, collateralized mortgage obligations (CMO's), project loans, construction loans, and adjustable rate mortgages.

  Asset-backed and non-agency mortgage securities must be rated investment grade. The investment grade rating is defined as the median rating of the following three rating agencies: Standard & Poor's

Corporation, Moody's and Fitch. Asset-backed and non-agency mortgage securities may be purchased if only rated by one of these agencies if they are rated AAA.

- Total return swaps referenced to components or sub-components of fixed income indices. To mitigate interest rate risk, the proceeds may not be invested in securities with a maturity beyond 90 days, unless invested in the Department of Revenue internally-managed Short-Term Fixed Income Pool.

Investment in this pool is ideal for fund participants needing to invest part or all of their money with the following characteristics:

Risk Tolerance	High. The daily investment results reflect daily changes in the market value of the pool's investments. Losses are likely over the intermediate-term based on the changes in market value of the pool's assets.
Investment Objectives	Willing to risk significant short-term volatility and principal loss for the possibility of large gains in the long-term.
Current Income	Daily earnings credit. The earnings of the pool include interest and changes in the market value of the investments held in the pool. There is no distinction between current income and capital gains.
Inflation Protection	Moderate need for long-term inflation protection. The pool should earn a positive real rate over an intermediate time horizon while meeting its other objectives.
Liquidity	Need for moderate liquidity. The pool can accommodate withdrawals and contributions (exceeding $5,000,000) in the normal operating environment. The Broad Market Fixed Income Pool can accommodate much larger withdrawals, $25,000,000 or more, with advance notice.
Time Horizon	Moderately long to long time horizon. The long time horizon allows a more aggressive investment policy with higher expected returns than the Intermediate-term Pool.

Effective April 1, 2000, Treasury's performance benchmark for the Broad Market Fixed Income Investment Pool is:

100% Lehman Brothers Aggregate Bond Index.

D. Treasury Fixed Income Pool - Investment Policy

Treasury may invest the funds in this pool in a broad range of fixed income investments, but typically the portfolio will consist of U.S. Treasury notes. Under the Prudent Investor Rule, Treasury constructs the pool's portfolio with a moderately high interest rate risk tolerance and a low credit risk tolerance. Investments include instruments with a long-term credit rating of at least "Baa3" or equivalent and instruments with a short-term credit rating of at least "P1" or equivalent. The interest rate risk for this pool, as measured by duration, will generally be close (± 20%) to that of the Barclays Capital U.S. Treasury Index. Investments shall be limited to the following:

- Money market investments comprising:
  - Repurchase agreements collateralized only by U.S. Treasury obligations, including bills, notes, and bonds, and only when the collateral carries a market value equal to or greater than 102% of the amount of the repurchase agreements, and only when the custodial bank appointed by Treasury will take custody of the collateral;
  - Commercial paper rated at least Prime-1 by Moody's Investor Services, Inc. and A-1 by Standard and Poor's Corporation; and
  - Negotiable certificates of deposit and bankers acceptances; provided that an issuing bank must have total assets in excess of $5 billion.
- United States Treasury obligations including bills, notes, bonds, and other debt obligations issued by the United States Treasury, and backed by the full faith and credit of the U.S. Government.
- Other full faith and credit obligations of the U.S. Government.
- Securities issued or guaranteed by agencies and instrumentalities of the U.S. Government, but not explicitly backed by the full faith and credit of the U.S. Government.
- Securities issued or guaranteed by municipalities in the United States.
- Obligations of foreign governments, sovereign states, supranational entities, and their instrumentalities denominated in U.S. dollars.
- Investment grade corporate debt securities comprising:
  - Corporate debt issued in the U.S. capital market by U.S. companies;
  - Euro-dollar debt (that is, U.S. dollar-denominated securities issued outside the U.S. capital markets by U.S. companies or by foreign issuers); and
  - Yankee debt (that is, U.S. dollar denominated obligations issued in the U.S. capital market by foreign issuers).
- Asset-backed securities.

- Agency and investment grade non-agency mortgage-backed securities backed by loans secured by residential, multifamily and commercial properties including, but not limited to pass-throughs, collateralized mortgage obligations (CMO's), project loans, construction loans, and adjustable rate mortgages.

- Total return swaps referenced to components or sub-components of fixed income indices. To mitigate interest rate risk, the proceeds may not be invested in securities with a maturity beyond 90 days, unless invested in the Department of Revenue internally-managed Short-Term Fixed Income Pool.

- Investments in fixed income securities shall be placed solely in U.S. dollar denominated debt instruments.

- No more than 10% of the portfolio's assets may be invested in securities not explicitly backed by the United States Treasury or by full faith and credit of the U.S. Government.

- Corporate, asset-backed and non-agency mortgage securities must be rated investment grade. The investment grade rating is defined as the median rating of the following three rating agencies: Standard & Poor's Corporation, Moody's and Fitch. Asset-backed and non-agency mortgage securities may be purchased if only rated by one of these agencies if they are rated AAA. Corporate bonds may be purchased if rated by two of these agencies. Recognizing that ratings and relative asset worth may change, the manager shall liquidate invested securities with care and prudence when the credit rating of a security falls below the minimum standards set in these guidelines or when the relative market value of that investment type exceeds the levels of holdings permitted in these guidelines. The manager is required to notify the chief investment officer to discuss the situation and the proposed liquidation strategy if it is not prudent simply to liquidate immediately.

- The manager may not invest more than 5% of the portfolio's assets in BBB+ to BBB- rated debt by Standard and Poor's Corporation or the equivalents by Moody's or Fitch.

- Internal cross trades are permitted at prevailing market levels, in accordance with Department of Labor's Prohibited Transaction Exemption 95-66.

E. International Equity Investment Pool - Investment Policy

The capital market assumptions of the international equity allocation are based on the expected return volatility and correlation assumptions of the EAFE Stock Index. Treasury invests the money in an actively managed portfolio to achieve higher returns and lower volatility than the Index.

Investment in this pool is ideal for funds needing to invest part or all of their money with the following characteristics:

Risk Tolerance	High. Losses are likely over the intermediate-term based on the changes in market value of the portfolio's underlying assets.
Investment Objectives	Willing to risk significant short-term volatility and principal loss for the possibility of large gains in the long-term.
Current Income	Not a particularly high priority. The total earnings of the International Equity Investment Pool are calculated daily and are credited to participants on a monthly basis. The total earnings of the portfolio include dividends and net appreciation. In calculating anticipated return, there is no distinction between current income and net appreciation. However, the ability to separately account for net appreciation is required for any trust that may invest in this pool.
Inflation Protection	High need for long-term inflation protection. The international equity investments should earn a positive real rate of return over a long time horizon while meeting its other objectives.
Liquidity	Very limited liquidity required. The International Equity Investment Pool can accommodate withdrawals and contributions (exceeding $1,000,000) only with advance notice.
Time Horizon	Long. This time horizon allows a more aggressive investment policy with higher expected returns than any of the fixed income options.

Treasury's performance benchmark for the common trusts is:

100% Morgan Stanley Capital International Europe, Australia and Far East Stock Index. (EAFE)

F. World Common Trust Funds

1. State Street Global Advisors Passive Bond Market Index Common Trust Fund

The Passive Bond Market Index Common Trust Fund became available to fund participants in March 2003 and is an efficient investment option for fund participants requiring a broad market fixed income option. Money is invested in a passively managed index fund that includes other, non-State institutional investors. When investing in this Trust, the State does not own the individual securities, but instead, much like an investment in a mutual fund, it owns shares of the Trust.

Investment Policy

Treasury invests money in State Street's Passive Bond Market Index Common Trust Fund. According to the State Street Global Advisors, the objective is to match the total return of the Lehman Aggregate Index while minimizing tracking error. Consequently, the risk characteristics of the Common Trust Fund approximates the risk of the fixed income market.

Investment in this option is ideal for funds needing to invest part or all of their money with the following characteristics:

Risk Tolerance	High. The daily investment results reflect daily changes in the market value of the common trust investments. Losses are likely over the intermediate-term based on the changes in market value of the common trust assets.
Investment Objectives	Willing to risk significant short-term volatility and principal loss for the possibility of large gains in the long-term.
Current Income	The total earnings of the common trust are calculated daily and included in the daily unit price. Earnings are recorded on a monthly basis. The total earnings of the common trust include dividends and net appreciation. In calculating anticipated return, there is no distinction between current income and net appreciation.
Inflation Protection	Moderate need for long-term inflation protection. The common trust should earn a positive real rate over an intermediate time horizon while meeting its other objectives.
Liquidity	Substantial liquidity available. The common trust can accommodate large withdrawals because of the size of common trust itself.
Time Horizon	Moderately long to long time horizon. The long time horizon allows a more aggressive investment policy with higher

expected returns than the other fixed income options.

Treasury's performance benchmark for the common trust is:

100 % Lehman Brothers Aggregate Bond Index.

2. State Street Global Advisors Russell 3000 Broad Market Index Common Trust Fund

State Street's Russell 3000 Trust Fund became available to fund participants in May 2000 and is an efficient investment option for fund participants requiring a domestic equity option for fund participants that do not have high liquidity needs and that can take high residual or equity risk in exchange for higher expected returns over time.. Money is invested in a passively managed index fund that includes other, non-State institutional investors. When investing in this Trust, the State does not own the individual securities, but instead, much like an investment in a mutual fund, it owns shares of the Trust.

Investment Policy

Treasury invests money in State Street's Russell 3000 Stock Index Common Trust Fund. According to the Frank Russell Company, this index represents approximately 98% of the investable U.S. equity market. Consequently, the risk characteristics of the Trust approximates the risk of the broad U.S. equity market.

Investment in this option is ideal for funds needing to invest part or all of their money with the following characteristics:

Risk Tolerance	High. Losses are likely over the intermediate-term based on the changes in market value of the common trust's assets.
Investment Objectives	Willing to risk significant short-term volatility and principal loss for the possibility of large gains in the long-term.
Current Income	Not a particularly high priority. The total earnings of the common trust are calculated daily and included in the daily unit price. Earnings are recorded on a monthly basis. The total earnings of the common trust include dividends and net appreciation. In calculating anticipated return, there is no distinction between current income and net appreciation. However, the ability to separately account for net appreciation

	is required for any trust that may invest in the common trust.
Inflation Protection	High need for long-term inflation protection. The common trust should earn a positive real rate of return over a long time horizon while meeting its other objectives.
Liquidity	Limited liquidity required. The common trust can accommodate withdrawals and contributions (exceeding $5,000,000) in the normal operating environment. The common trust can accommodate much larger withdrawals, $25,000,000 or more, with advance notice.
Time Horizon	Long. This time horizon allows a more aggressive investment policy with higher expected returns than any of the fixed income options.

Treasury's performance benchmark for the common trust is:

100% Russell 3000 Stock Index.

3. State Street Global Advisors MSCI EAFE Index Common Trust Fund

State Street's MSCI EAFE Index is an efficient investment option for fund participants requiring an international equity option for fund participants that do not have high liquidity needs and that can take high residual or equity risk in exchange for higher expected returns over time. Money is invested in a passively managed index fund that includes other, non-State institutional investors. When investing in this Trust, the State does not own the individual securities, but instead, much like an investment in a mutual fund, it owns shares of the Trust.

Investment Policy

Investment in this option is ideal for funds needing to invest part or all of their money with the following characteristics:

Risk Tolerance	High. Losses are likely over the intermediate-term based on the changes in market value of the portfolio's underlying assets.
Investment Objectives	Willing to risk significant short-term volatility and principal loss for the possibility of large gains in the long-term.
Current Income	Not a particularly high priority. The total earnings of the International Equity Investment Pool are calculated daily and

	are credited to participants on a monthly basis. The total earnings of the portfolio include dividends and net appreciation. In calculating anticipated return, there is no distinction between current income and net appreciation. However, the ability to separately account for net appreciation is required for any trust that may invest in this pool.
Inflation Protection	High need for long-term inflation protection. The international equity investments should earn a positive real rate of return over a long time horizon while meeting its other objectives.
Liquidity	Very limited liquidity required.
Time Horizon	Long. This time horizon allows a more aggressive investment policy with higher expected returns than any of the fixed income options.

Treasury's performance benchmark for the common trusts is:

100% Morgan Stanley Capital International Europe, Australia and Far East Stock Index. (EAFE)

About the Alaska Railroad

A Presentation to the Alaska Senate Finance Committee

February 3, 2010

AlaskaRailroad.com

ARRC Guiding Principles

Alaska Railroad Mission

Safety... Service... Profitability

Alaska Railroad Vision

Building a great Railroad across the Greatland.

An important element in fulfilling this vision is ARRC's success since 1996 in qualifying for federal funding...an entitlement afforded by the railroad's public status and its passenger service mission. As a result, ARRC has been able to greatly accelerate long overdue mainline maintenance and upgrades.

ARRC Core Values

- Integrity
- Service
- Excellence

ARRC Operating Style

- Safe
- Secure
- Customer responsive
- Financially solid
- Environmentally sound
- Employee friendly corporation

"We must provide a stable, reliable foundation that can be counted on to enhance the future economic growth of the state and the municipalities we support," Pat Gamble, President and CEO.

Alaska Railroad Quick Facts

Purchase Price (January 5, 1985)

Paid to federal government	$ 22.3 million
Start-up costs & contributed capital	$ 11.9 million
Total Investment-State of Alaska	$ 34.2 million

Organization (following State purchase)

- Independent corporation owned by State
- Managed by a seven-member board of directors. Position qualifications are spelled out in law, members appointed by the Governor.
- Mandated to be self-sustaining, responsible for all its own financial and legal obligations

Financial Statistics* (Jan. 1 - Dec. 31, 2009)

Total Assets	$ 863 million
Total 2009 revenues	$ 169.5 million
Total 2009 expenses	$ 155.9 million
2009 net income	$ 13.6 million
2010 net income forecast	$ 8.4 million

Operating Data

Miles of main line	467
Miles of branch line	54
Miles of yards and sidings	130
Total miles of track	651
Freight cars (owned & leased)	1,160
Passenger cars	47
Locomotives	51

Operating Statistics (Jan. 1 - Dec. 31, 2009)

Passenger ridership	470,180 passengers
Freight tonnage	5.36 million tons

Employees (as of January 2009)

Number of year-round employees	657
Average years of service	12.3
Average age	46
Male	541
Female	116

Unions (as of January 2009)

Most ARRC employees are members in 1 of 5 unions:

United Transportation Union	125
Transportation Communication Union	41
International Association of Machinists	63
American Federation of Govt. Employees	254
American Train Dispatchers Association	8

Benefits

- Corporation provides a defined benefit pension plan
- Corporation provides health and life insurance
- Corporation provides retiree medical benefits

* *Financial Statistics are unaudited.*
ARRC audits are normally completed by March 31

Different from Other State Agencies

The Alaska Railroad Corporation Act of 1984 established an independent state-owned corporation that is governed by a seven-member board of directors appointed by the Governor. The President and CEO of the corporation reports to the board. Although ARRC is not covered under the State's Executive Budget Act, the state government ensures oversight of ARRC's operation and management practices through the following controls:

- The ARRC Board of Directors is responsible for initiating both a financial and a performance audit each year conducted by independent auditors and management companies. The annual performance audit is conducted by a recognized railroad management expert to ensure that ARRC is being managed and operated effectively and efficiently.
- The Legislative Budget and Audit Committee can review ARRC's operation, management and financial practices.
- ARRC must file an oversight report with the Legislature and Governor before it undertakes certain expansion, reduction, or diversification of services.
- Legislative approval is required for certain corporate actions, such as sale or transfer of the Railroad's entire interest in land, or leasing land for longer than 55 years.
- ARRC's procurement procedures are required to be substantially equivalent to state procurement requirements.
- ARRC employees and directors are subject to the Executive Branch Code of Ethics.
- ARRC's spill prevention and response plans are filed and regulated by the State and ARRC is required by state law to show sufficient financial responsibility to respond to spills.
- Bond authorizations must be approved by the Legislature.
- ARRC is required by law to submit an annual report with audited financial statements
- ARRC is required by law to adopt a long-range capital improvement plan each year and shall share that plan with the Governor and Legislature.
- ARRC is defined as an interstate commerce carrier by the Federal Alaska Railroad Transfer Act of 1982 (ARTA).

Alaska's Railroad

- Contributes to health care, business services, and retail payrolls
- Principal transport for heavy and/or bulk interior commodities down to tidewater
- Major mover of hazardous, heavy and/or bulk materials from tidewater headed for the North Slope
- Major mover of jet fuel to Anchorage International Airport.
- Viable passenger alternative to long-distance driving
- Supports the U.S. military with the transport of equipment to and from the "DOD Strategic Port" of Anchorage
- Potential to reduce pressure on State road system … commuting
- Potential to significantly contribute to the Alaska Natural Gas Pipeline

Creates 3,000 jobs and $150 million in payroll across the State

Source: "Economic Significance of Alaska Railroad", December 2004, ISER report, University of Alaska

Safety

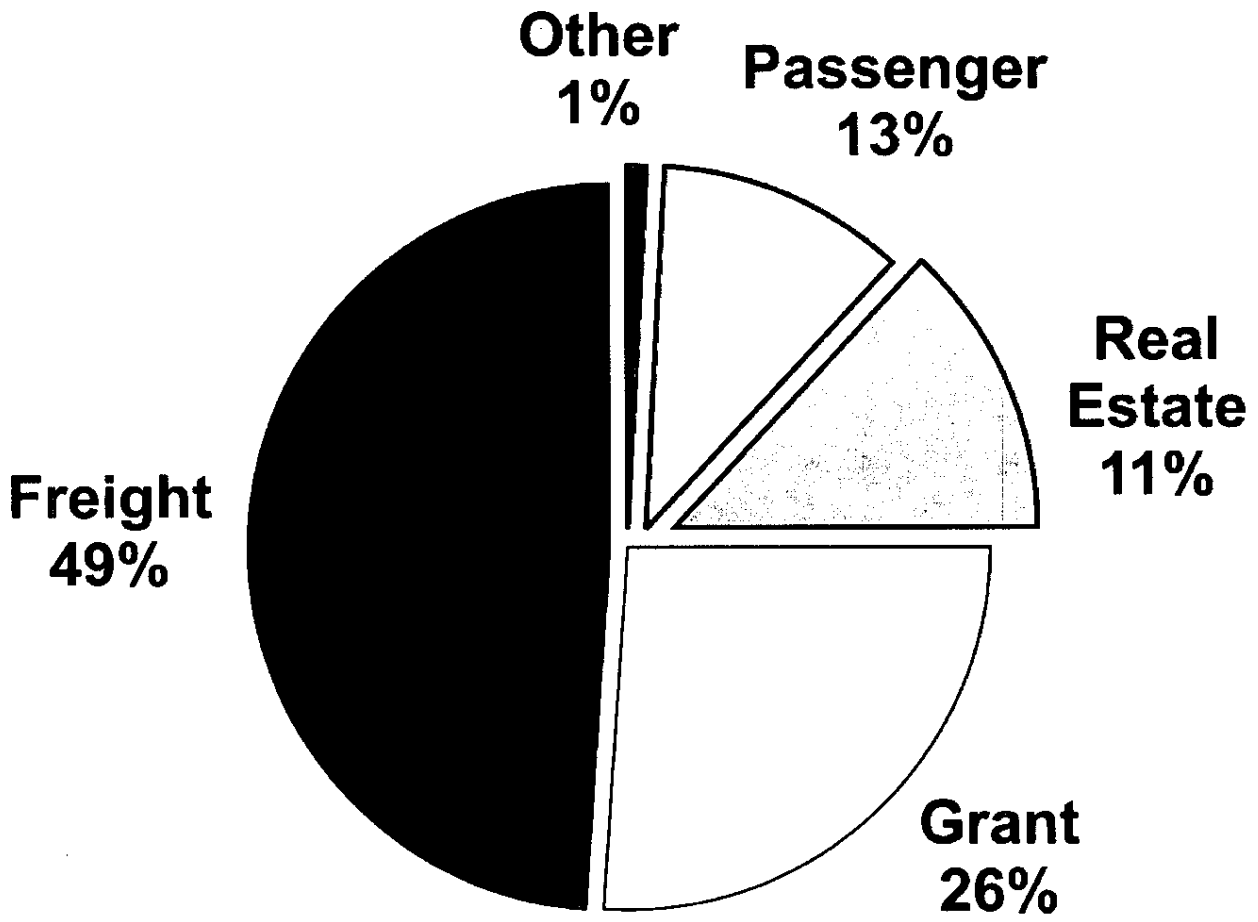
- All time record low number of injuries
- 22% reduction in lost days over 2008
- 48% reduction in medical claim dollars
- Completed first full year of new hearing conservation program
- Upgraded shop fall protection equipment

Security

- **Funding:** $700,000 + from FTA and Coast Guard
  - Special Agents
  - Fencing
  - Explosives Detection
- **Enhancements:**

  More than 44 cameras installed between Seward and Fairbanks
- **Inspections / Exercises:**
  - Seward cruise ship, coal, freight docks – no write-ups
  - Whittier barge dock – no write-ups
  - ARRC, TSA, USCG joint exercises during passenger season, Northern Edge (ALCOM)

2009 Sources of Revenue



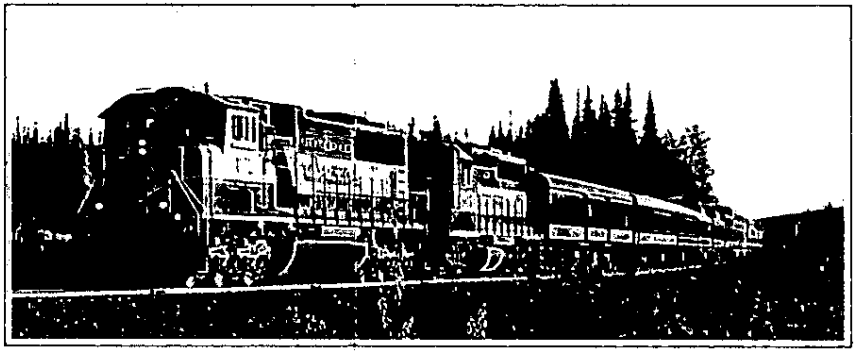
Freight and Passenger Service

Freight Service in 2009:

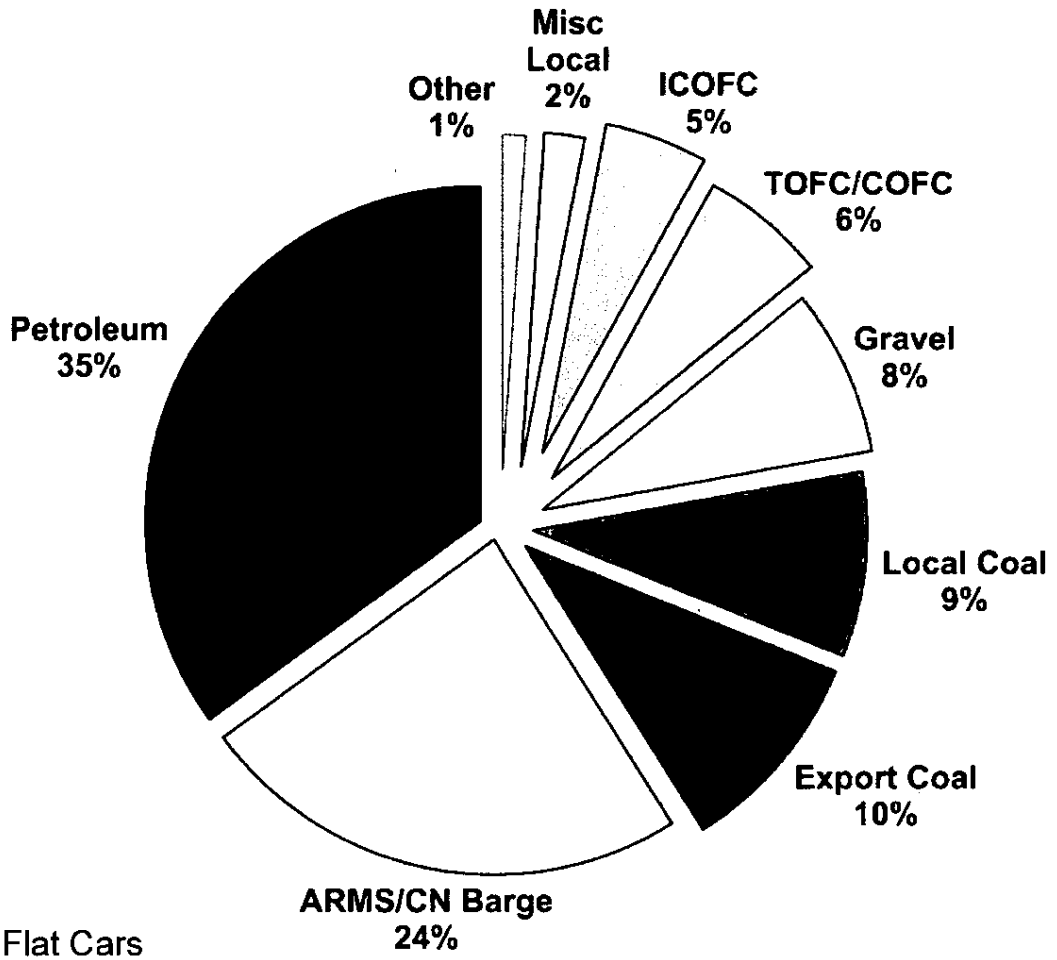
- 5.36 million tons moved

Passenger Service in 2009:

- 470,180 passengers moved
- Award Winning Service



2009 Freight Revenue Mix

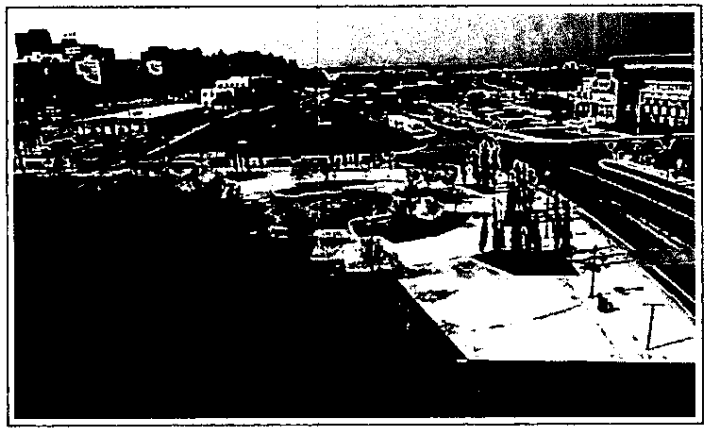


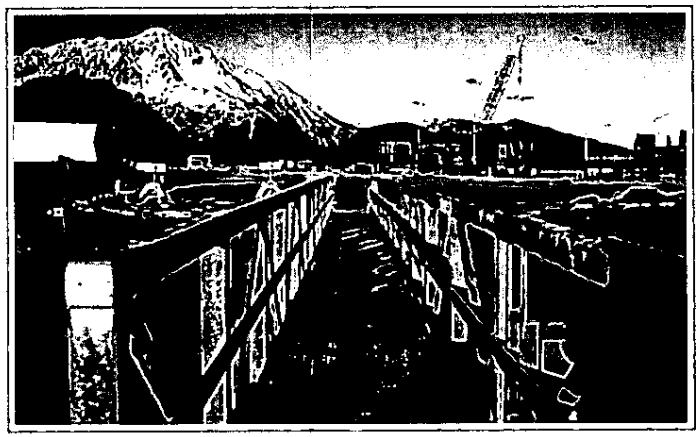
TOFC: Trailers on Flat Cars

COFC: Containers on Flat Cars

Real Estate

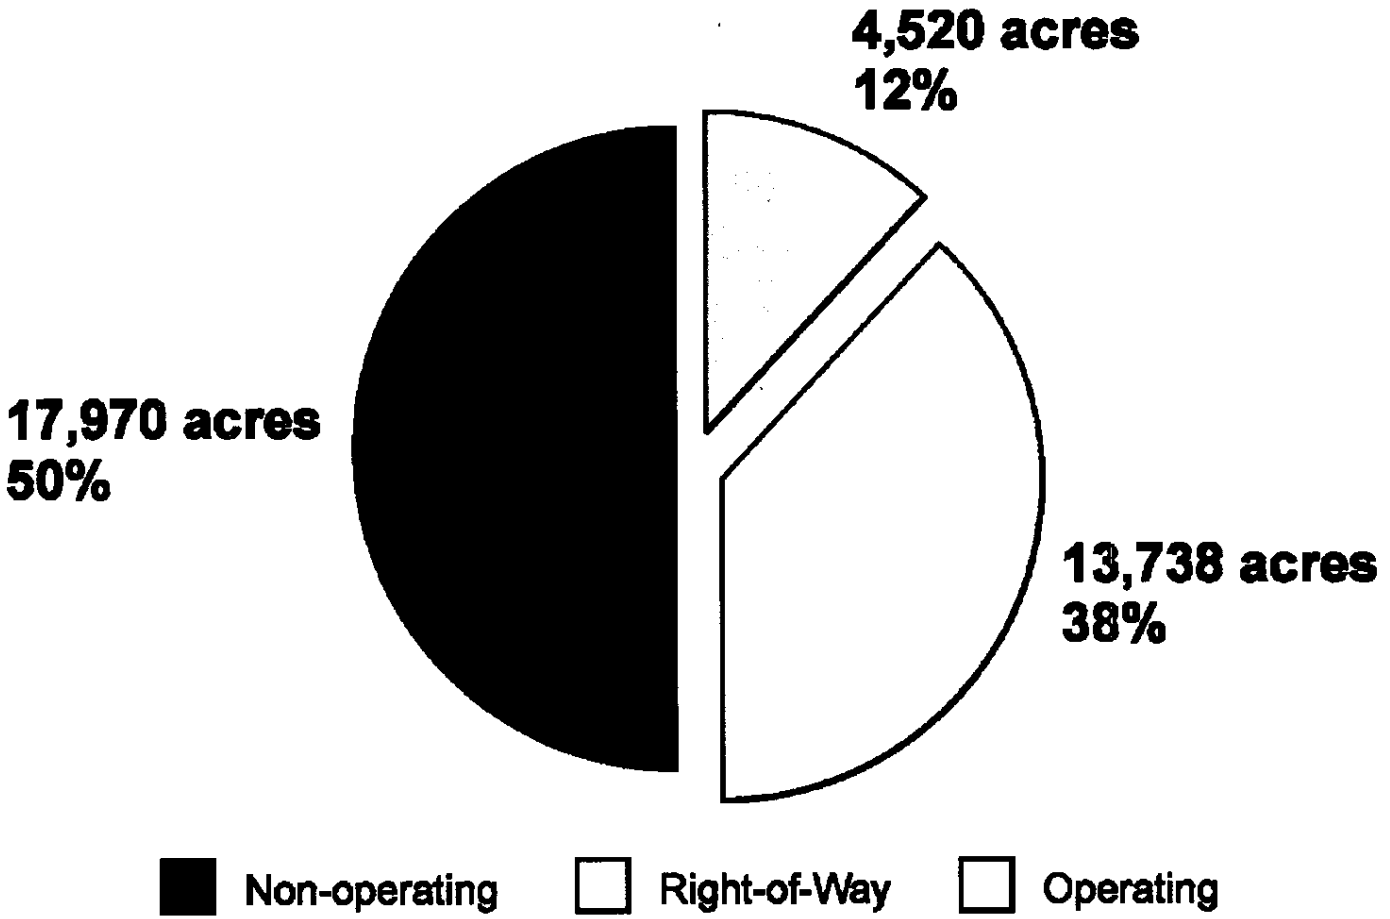
- Property Development
- Leases and Permits
- Dockage and Wharfage
- Facilities Maintenance and Management





Clockwise from bottom left: New depot in Fairbanks; Ship Creek basin includes highly valuable leasable land; upland from the Seward freight dock is being developed

Distribution of Land By Category



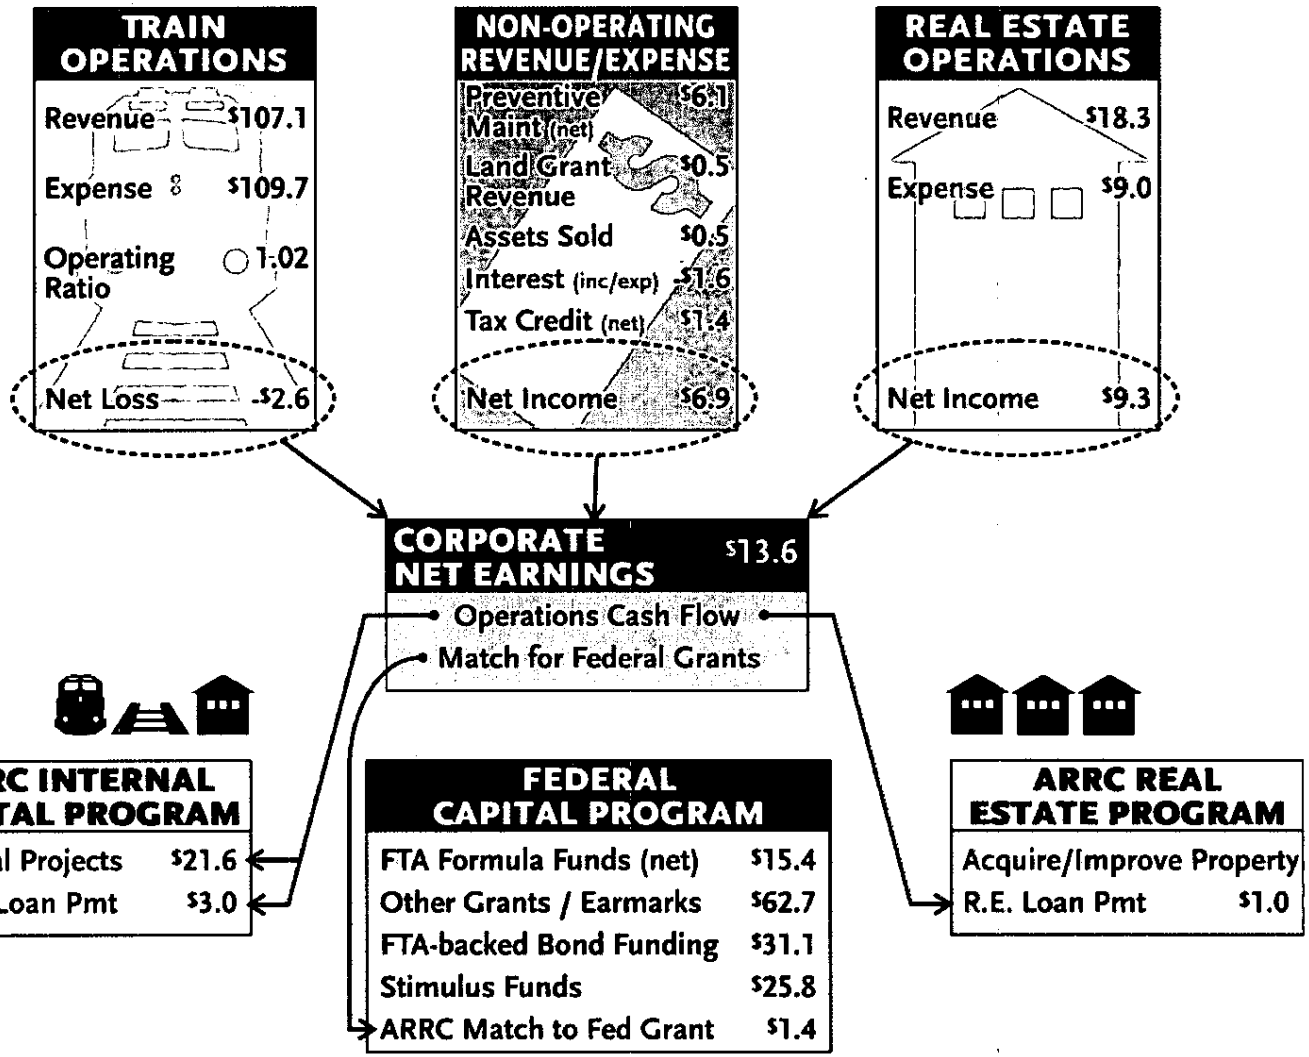
2009 Budget Background

- Unsettled environment coming off of 2008
  - Record high fuel costs experienced in 2008
  - Volume drop by largest customer (Flint Hills Resources)
- Expectation: 2009 corporate net earnings budgeted at $16.8 million
  - Flint Hills seen as stabilizing
  - Continued passenger growth – new bi-level dome cars available for service
  - Moderation of diesel prices
  - Impact of position eliminations / expense reductions in place

Personnel Impacts

- Total position reductions 2007-2009 reached nearly 200
  - 41 % full time managers
  - 35% full time labor
  - 24% seasonal
- Pink Slips - 56
- Management: 8 positions were AVPs or Directors
- Management Pay Freeze: extended into 2010
- Major departmental reorganization

ARRC Fund Flow Model: 2009 Data



Freight Revenue

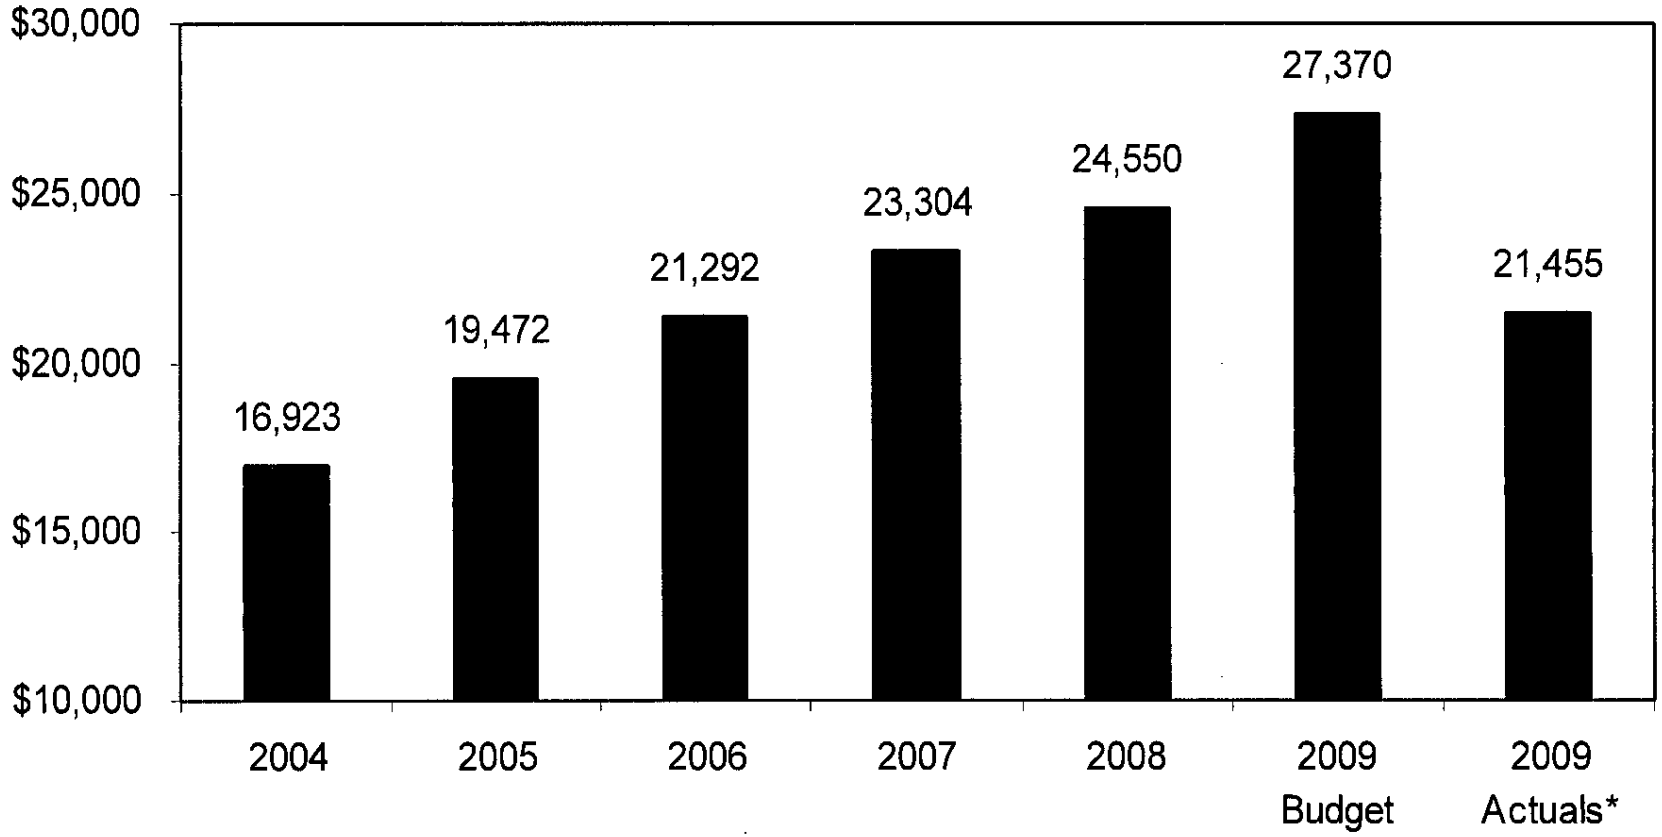
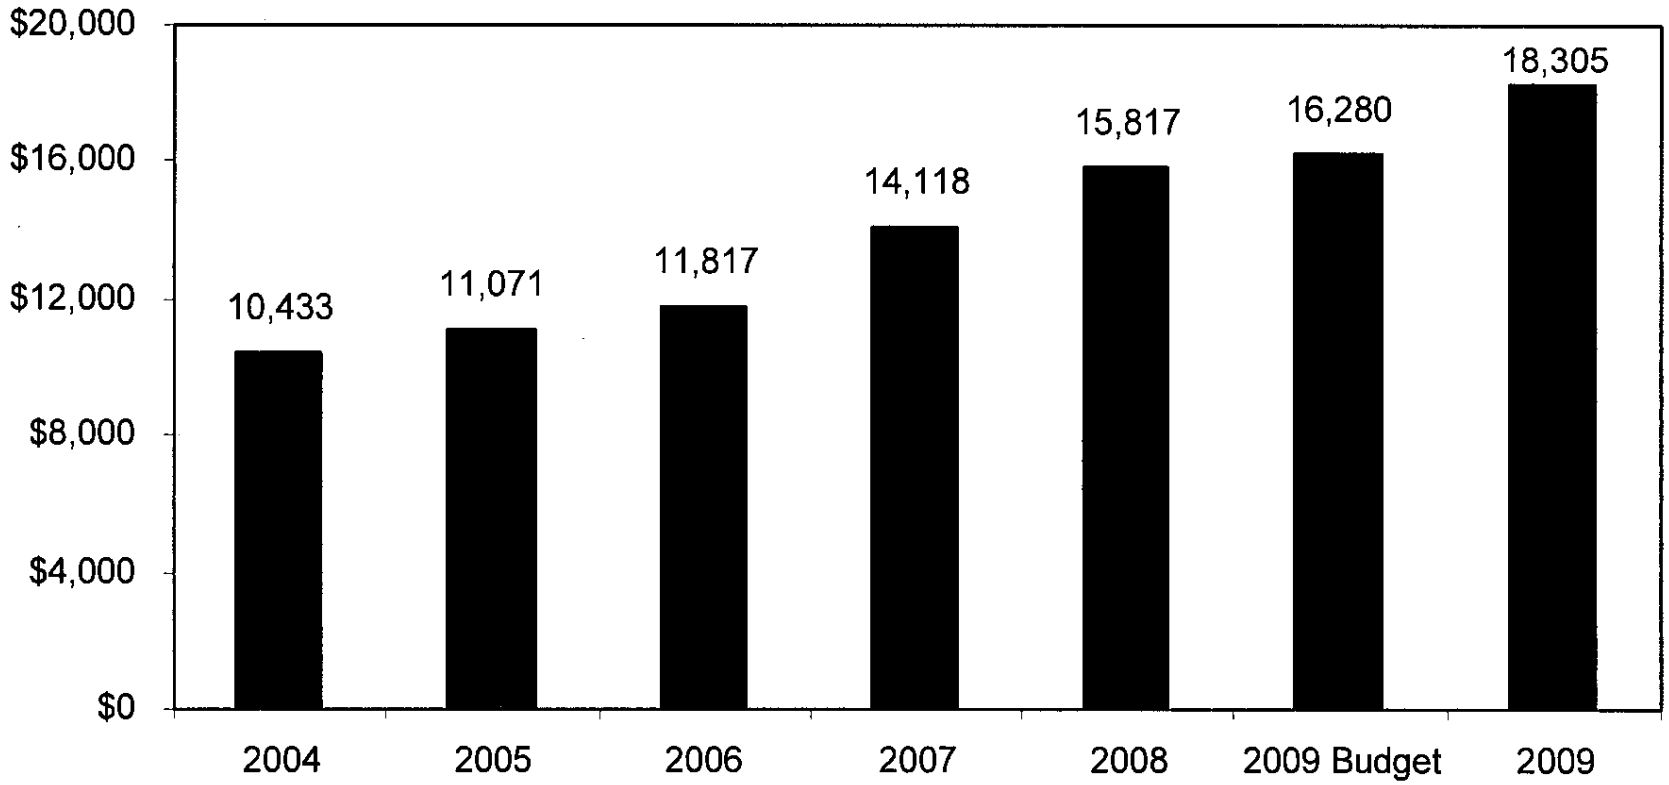
Passenger Revenue
(in thousands)



*Unaudited.

Real Estate Revenue

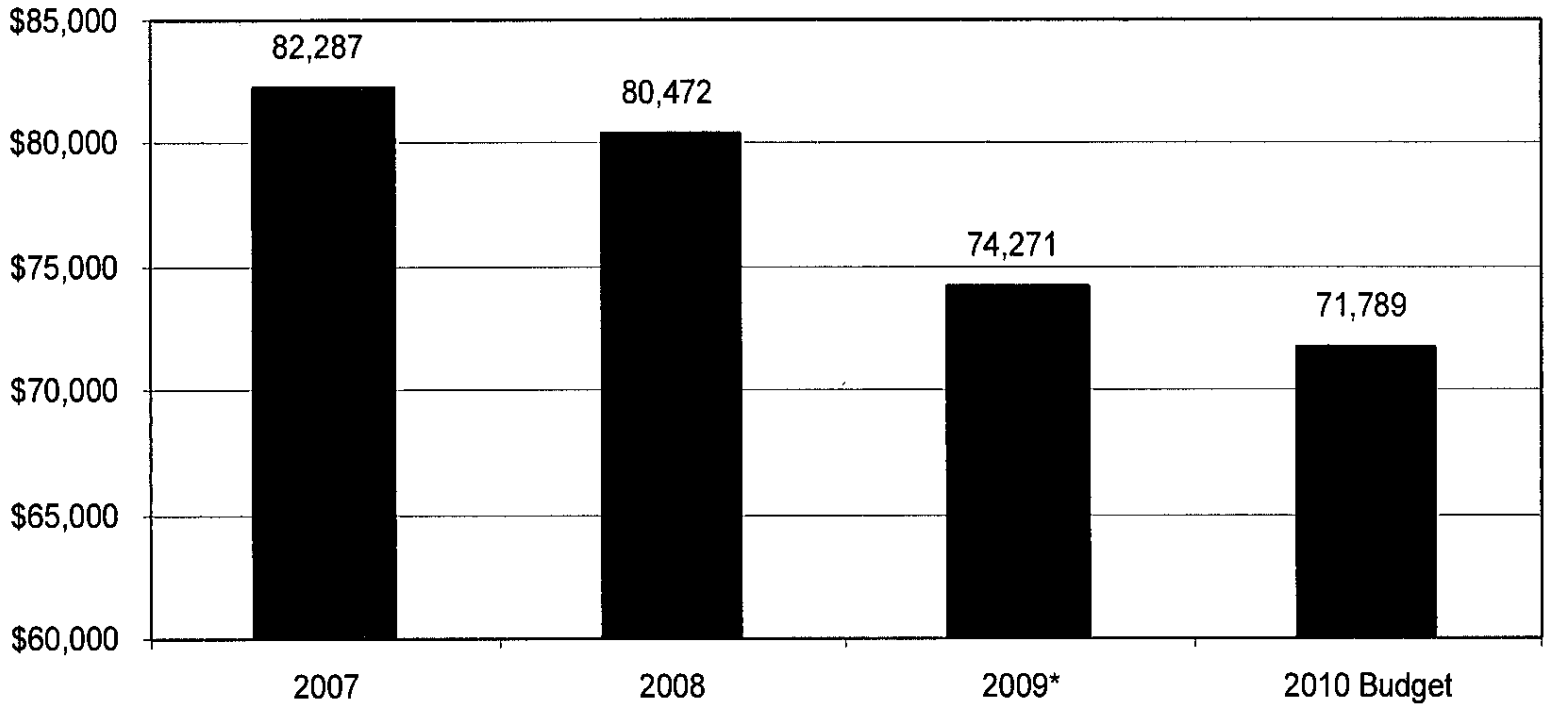
(in thousands)



*Unaudited.

Controllable Expenses: Reduced by $8 million over last two years

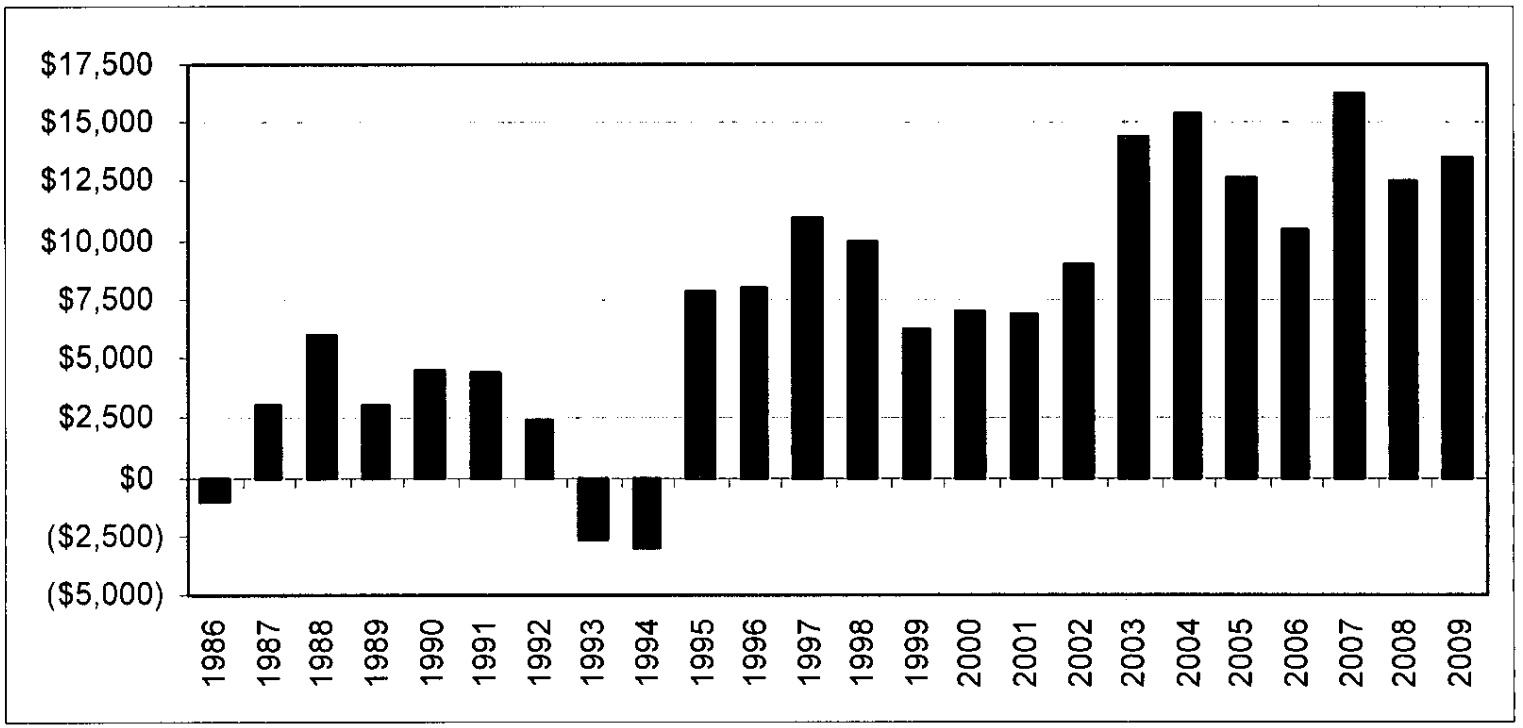
(in thousands)



* Unaudited.

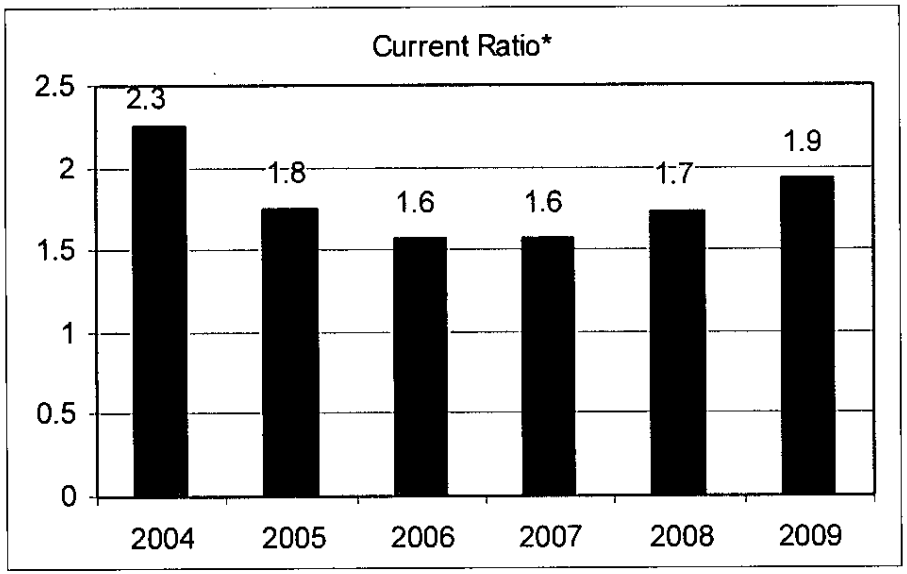
Expenses included in this graph include those over which management has an ability in the short run to impact expense levels. Examples of items excluded are fuel, barge expense, benefit costs, depreciation, etc.

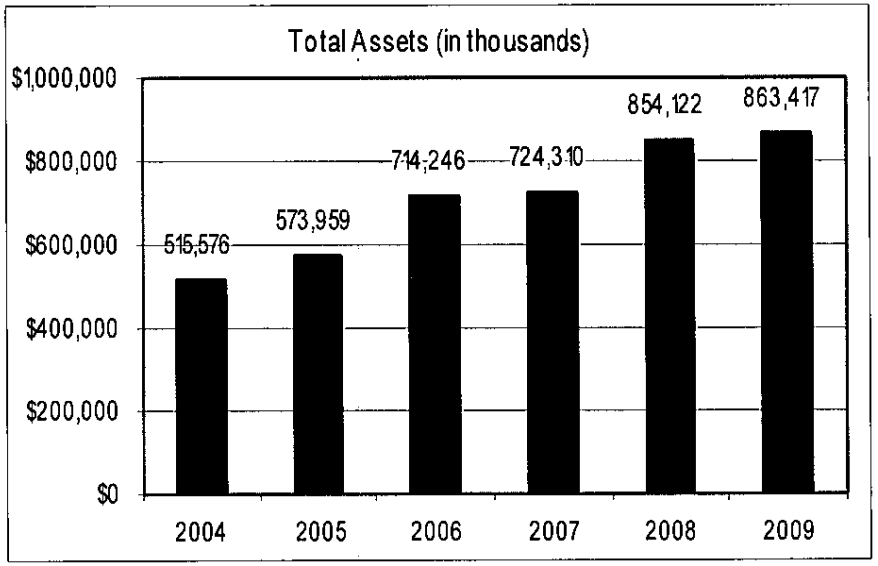
Net Income



- 1999 & 2000 net income was adjusted by grant revenue/expense recovery related to a Winter Storm disaster
- Unaudited 2009 net income of $13.6 million

Balance Sheet Highlights





Current ratio is calculated by dividing current assets by current liabilities. The ratio is a measurement of an entity's liquidity and ability to meet current obligations.

Conservative capital structure: At year-end 2009, ARRC's recourse debt is $27 million, with a debt to capital ratio of 23%, reflecting relatively modest use of debt instruments.

Significant cash flow generated: ARRC generated $31.2 million in cash flow from activities. Uses of funds include ARRC internal capital projects, debt repayment, grant match requirements, and funding the post-retirement medical trust fund.

2010 Preview

- Tough year on the horizon
- Uncertainty abounds in freight
  - Flint Hills continues decline
    - Planning to move less than half of 2003 volume
  - Lawsuit threatening viability of export coal
- Passenger planned to drop again
  - Decrease in cruise ships, continued soft national economy
- Continued expense reductions in effort to offset revenue declines
- Operating: Net Income budget of $8.4 million
- Capital: All funding sources total $43.1 million

Building a Great Railroad

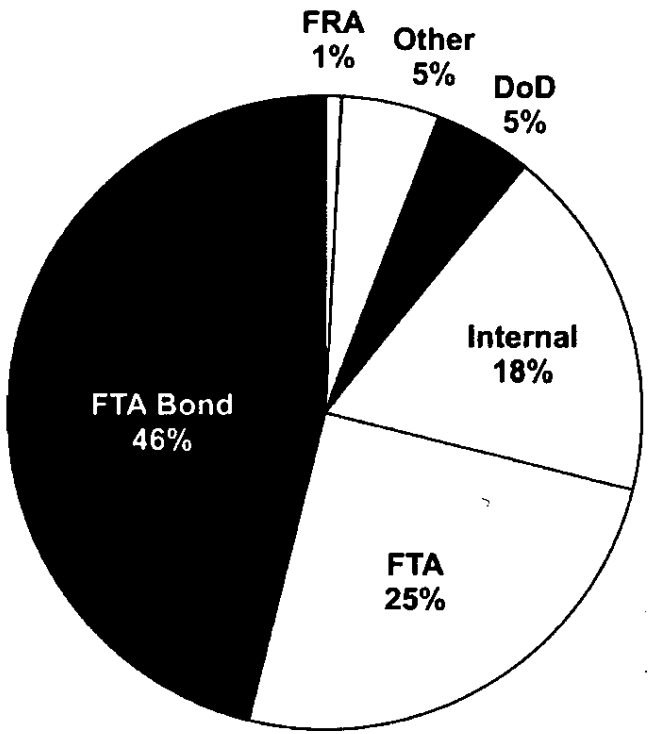
Capital Investment
(2010-2014) Five-Year Plan

- Total Federal Grants Expenditure
  $167 million
- Total ARRC Capital Expenditure
  $109 million

Note: Federal Funds appropriated to the Alaska Railroad do not affect federal funding for other state transportation projects. ARRC matches federal dollars from corporate net earnings.

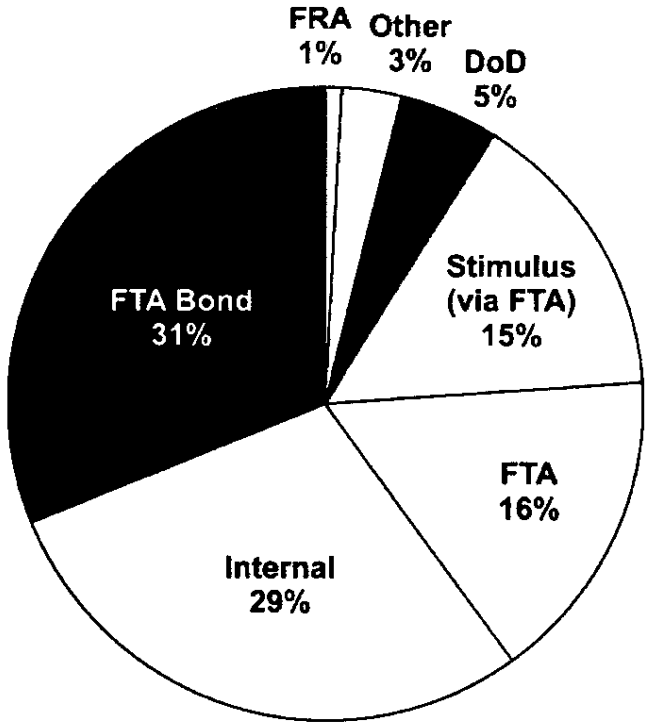
Capital Spending by Fund Source

2008



2008 Total: $92.1 million

2009



2009 Total: $77.3 million

Capital Funding Sources

- ARRC Internal Funding
- DOT/Federal Railroad Administration
  - Alaska Railroad Track Rehabilitation funds
  - Department of Defense Allocations
- DOT/Federal Transit Administration
  - Formula Funds; Grants
  - 9-20% ARRC Match Required
- DOT/FHWA
- Federal funds allocated to ARRC do not routinely affect federal funding for other state transportation projects
- ARRC federal match is *not* from State of Alaska general fund or gas tax...match is solely from ARRC earnings.
- ARRC does not receive operating funds or reimbursements from the State Budget.

Employee Retirement Benefits

- Pension Plan
- Post Retirement Medical Program

ARRC Corporate Pension Plan

Benefit	Provision
Employee Contribution	9% of earnings – Pre-tax
Vesting	Five Years of Vesting Service
Normal Retirement Age	Age 62 – although no reduction for retiring at age 58
Early Retirement	Age 55– benefit reduced by ½% per month or 6% per year for every year less than age 58
Benefit Formula	2% X Final Average Salary (any 3 consecutive years) X Years of Service; 2.5% for years over 10 and after 1/1/06

ARRC Corporate Pension Plan

Benefit	Provision
Annual Cost of Living Increase	Lesser of 50% of CPI or 6%
Disability Benefits	40% of monthly salary (must be vested to be eligible)
Joint & Survivor Annuity	**50% Benefit** – retiree benefit reduced by 10%; spouse receives 50% of that amount **100% Benefit** – retiree benefit reduced by 20%; spouse receives 100% of that amount

Plan Funding
Employee Contributions

- Employees are required to contribute 9% of earnings (excludes overtime).
- Employee contributions are credited with interest at 4.5% (compounded annually).
- Employees may request a refund of contributions and interest in lieu of a retirement benefit.

Plan Funding
Employer Contributions

- Section 11 of the Plan Document
- Provides that the ARRC will make contributions to the Fund as it determines, with the advice of its actuary, to maintain the Plan on an actuarially sound basis
- The Fund is for the exclusive benefit of Plan Participants. No portion shall be diverted to or become the property of the ARRC prior to paying all liabilities with respect to Participants
- ARRC's funding policy is to contribute an amount each year equal to the Annual Required Contribution (ARC)

Pension Plan Administration

- ARRC Pension and Represented 401(k) Committee
  - Two Union Members
  - Three Management Representatives
- Retirement Specialist in Human Resources

Participant Services

- Pre-retirement Planning Seminars
- On-line access to pension fund balances, and estimates of pension benefits
- Summary Plan Description
- Annual Pension Report
- Annual Participant Statements, including projected pension benefits

Post-Retirement Medical

- ARRC Labor Contracts (5 union contracts) provide that retirees can purchase ARRC medical insurance by paying 60% of the monthly premium.
- Non-represented employees are eligible for retiree medical coverage under ARRC policy
- Eligible retirees must be:
  - 62 or older under the ARRC Pension Plan (represented)
  - 58 or older under the ARRC Pension Plan (non-represented)
  - With the Civil Service Retirement System
  - On disability retirement

Post-Retirement Medical

- Retirees who don't meet the criteria above can participate by paying 100% of the premium
- Certain surviving annuitants and family members can continue their participation following the death of the retiree on the same cost sharing basis
- Surviving dependent children of an ARRC pension plan participant are eligible to participate on the same cost sharing basis, without the requirement that there be a pension plan recipient

Post Retirement Medical

- Deductible: $500
- Co-insurance: $80/20 up to $1,500
- Includes prescription drug benefit
- Does not include audio, vision and dental coverage
- Medical Plan for retiree is identical to the plan for active ARRC employees

ARRC Contributions

- In addition to the premium contributions, ARRC makes annual contributions to the Post Retirement Medical Trust based on the recommendations of the actuary. The 2009 contribution was $5.2 million.

2009 Status of Benefit Trust Funds

- Defined benefit pension trust fund totaled $75.0 million
  - Up $14.0 million from year end 2008
- Retiree medical trust fund totaled $25.8 million
  - Up $9.0 million from year end 2008
- Considerable recovery from the down-market impact

Dear Senators Stedman and Hoffman:

Thank you for providing Pat Gamble, Alaska Railroad President and CEO, and Bill O'Leary, Alaska Railroad Vice President Finance, with the opportunity to update the Senate Finance Committee about Railroad finances, business issues any other topics of interest on February 3, 2010.

There were questions relating to fuel transportation and Alaska Railroad fuel use that we promised to get back to committee members on once we gathered the data. Attached are a couple of charts that I hope provides the information requested. If we need to provide further information or clarification on the issues please let me know. My direct line is 265-2498.

Please share this information with other members of the Senate Finance Committee.

Best regards,

Wendy Lindskoog
Vice President Corporate Affairs

MEMORANDUM

Date: December 31, 2009
Anchorage, Alaska

To: Deven Mitchell
State of Alaska
Department of Revenue
Staff to State Bond Committee
Division of Treasury

From: Wendy Richerson, Controller

Subject: Public Debt Book

As requested the following is the Alaska Railroad Corporation's debt as of June 30, 2009.

State and State Agency Debt by Type at 6/30/09							
$(millions)							
State Agency Debt							
			Principal		Interest to		Total Debt Service
			Outstanding		Maturity		to Maturity
	Alaska Railroad	$	196	$	64	$	260

E. Alaska Railroad Corporation

Legislation signed into law during 1984 established the Alaska Railroad Corporation as a public corporation of the State to manage the Alaska Railroad upon its acquisition from the Federal Government until its possible transfer to private ownership. The corporation has the power to issue bonds if such issuance is approved by law. Bonds issued by the corporation would not bear the full faith and credit of the State. The Railroad is not authorized to issue State moral obligation bonds.

By Chapter 77, SLA 1994, the Alaska Railroad is authorized to issue revenue bonds in the principal amount of $55 million for the construction and acquisition of the Alaska Discovery Center for the Ship Creek Project in Anchorage. To date, no bonds have been issued.

Chapter 71, SLA 2003 authorized Alaska Railroad to issue up to $17 billion in revenue bonds to finance the construction of a natural gas pipeline and related facilities, subject to an agreement with a third party to pay the debt service and other costs of the bonds. To date, no bonds have been issued.

Chapter 46, SLA 2004 authorized the Alaska Railroad to issue up to $500 million in revenue bonds, subject to an agreement with a third party to pay the debt service and other related bond costs, to finance the cost of extending its rail line to Fort Greely, Alaska. To date, no bonds have been issued.

Chapter 28, SLA 2006 authorized the Alaska Railroad to issue up to $165 million in revenue bonds to finance rail transportation projects that qualify for federal financial participation and associated costs. On August 22, 2006, the Alaska Railroad issued $76.4 million in revenue bonds. On August 29, 2007, the Alaska Railroad issued the remaining $88.6 million in revenue bonds.

Chapter 65, SLA 2007 authorized the Alaska Railroad to issue up to $2.9 billion in revenue bonds to finance all or a portion of the Kenai gasification project and Port MacKenzie rail spur project, subject to an agreement with a third party to pay the debt service and other costs of the bonds. To date, no bonds have been issued.

If you have any questions, please contact me at 907-265-2513.

Airport System Advantages

Regulatory:

- Progressive Clearance
- Intl to Intl Cargo Transfers
- USDOT awarded Cargo Transfer Flexibility in '96
  - On-line transfers
  - Commingling foreign domestic Foreign-domestic, and foreign-foreign transfers
- Expanded Cargo Transfer '03
  - Expands transfer authority for foreign carriers with revenue relationship w/U.S. carrier

Location & Cost:

- Air cargo center for Asia
  - Part of the Asia Airport System
  - Growing Asian Market and Base for Chinese Freighters
- One Revenue System
- Diverse revenue sources keep airlines rates competitive
- Long-term commitments
- System capacity for growth
  - Infrastructure
  - Alternatives

AIAS Response

Remain Competitive:

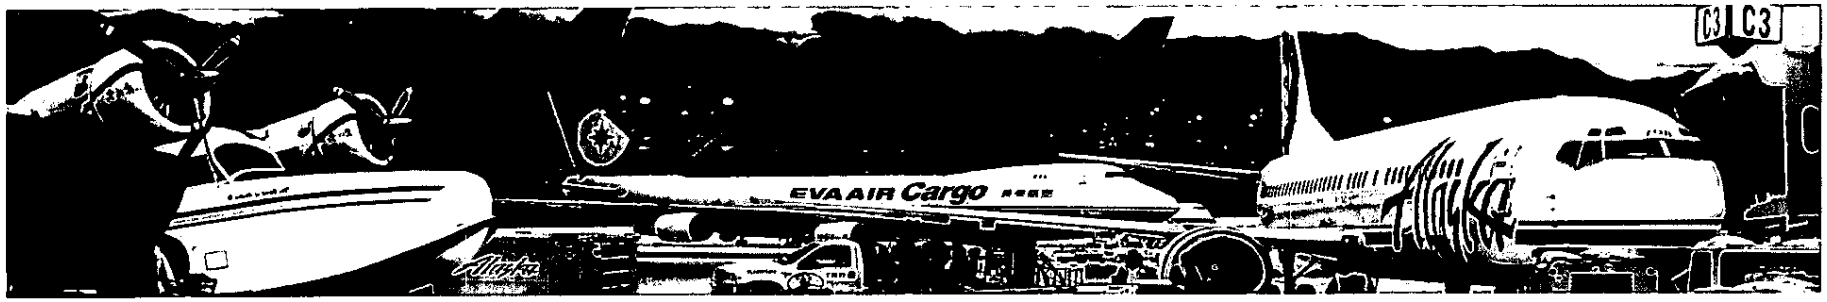
- Proactively Controlled & Reduced Operating Costs Early
- Scaled-back capital projects $400+ Million
- Reduced Airport Debt and Maintaining Stability
- Reduced Rates & Fees for 2009

Assess Competition:

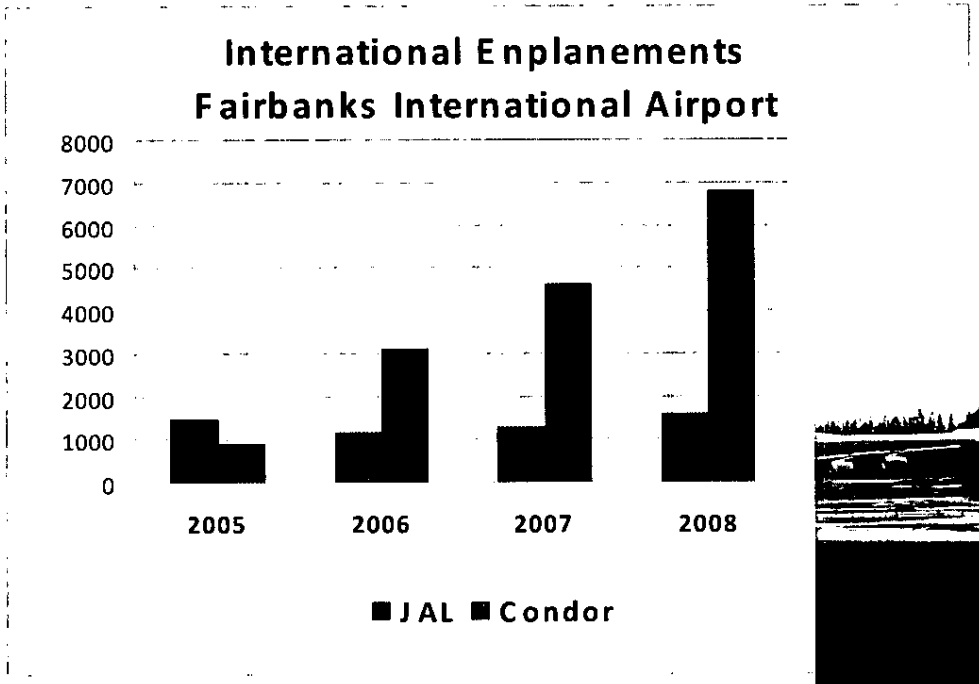
- Conducted 3rd Party Cargo Analysis of Asian Market Trends
- Negotiated operating agreement in partnership with airlines
- Utilizing revenue to reduce debt and hold down rates
- Favorable regulations – Cargo Transfer Authority

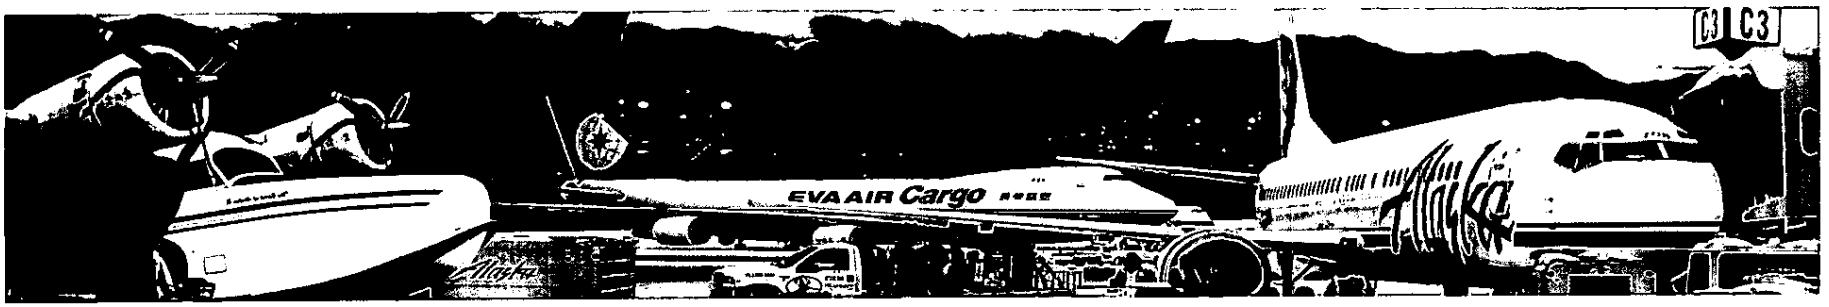
Results: Airlines Commit to New Operating Agreement

- New airport operating agreement last year after 3 year holdover, adding 6 air carriers over past, committed to funding airport costs for next 5 years.
- Business model approach – more equitable pay for what you use, partnership, project accountability, manage as a system, and ensure competitiveness
- Strong show of support for the AIAS



Fairbanks Airport: Increasing Winter Passengers and Cargo Flights



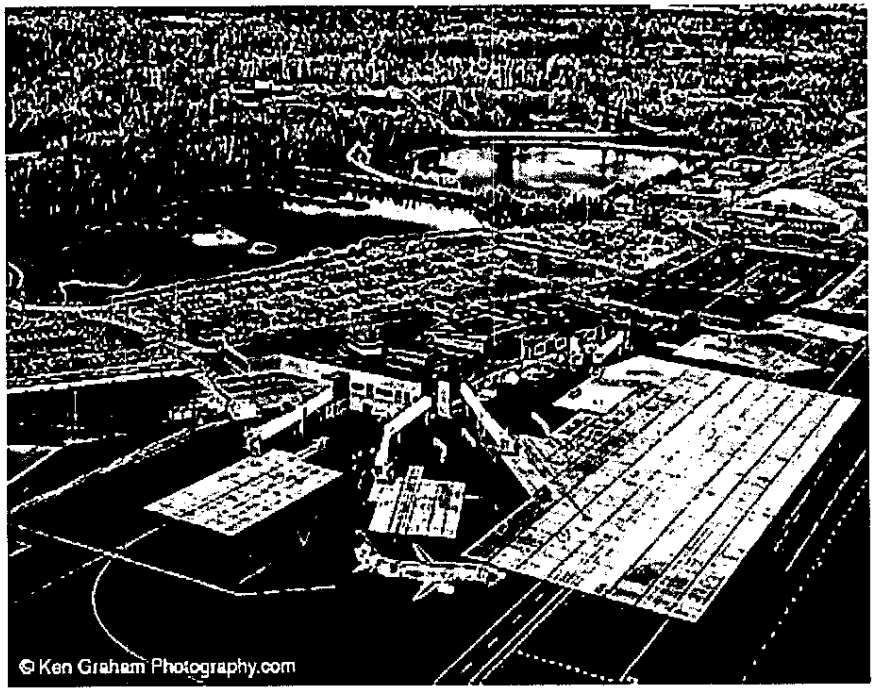


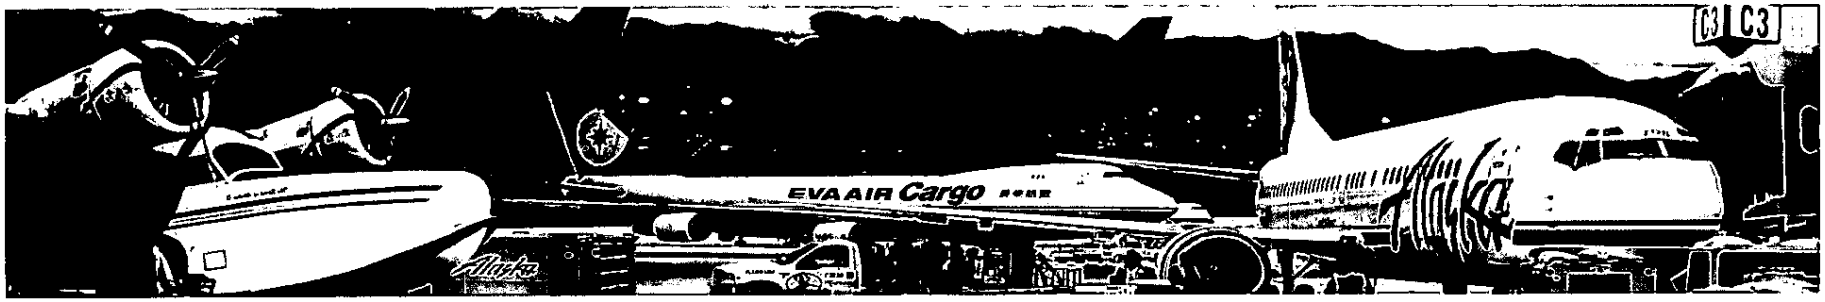
Fairbanks Terminal & Construction

On-Schedule

Under Budget!

- Opened May 7, 2009
- Public Private Airline Partnership
- Authorized $96.2M
- Cost $92.3M





Anchorage Airport A & B Concourses

On-Schedule and Under Budget!

- Opened for Business on November 2, 2009
- Passenger/Baggage screening centralized
- A&B concourses 352,000 ft2 renovation

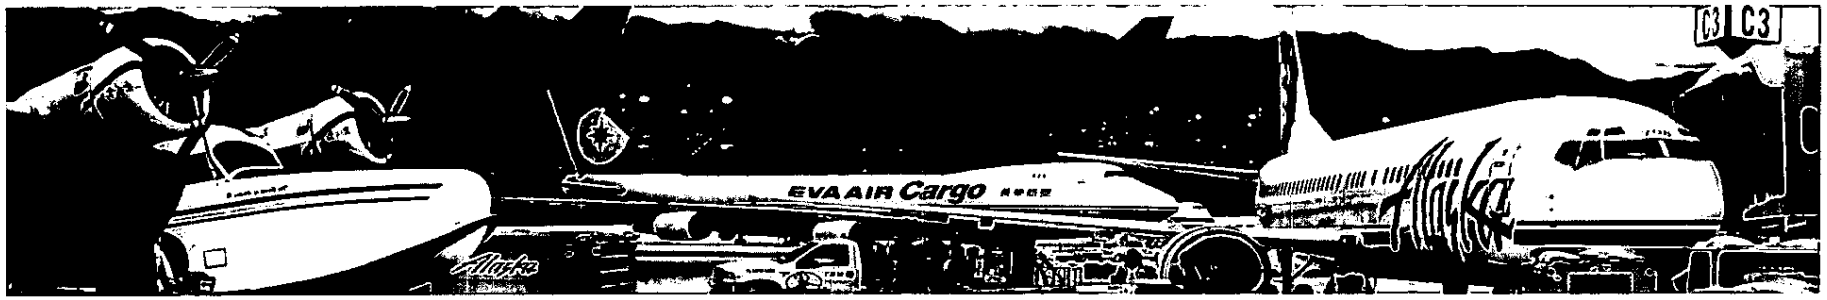
Successes & Bright Spots

- +3 new International cargo carriers to system recently: World Airlines, Great Wall, and Quantas
- 1st Incentive program approved by signatory airlines to increase Asian passenger flights to Alaska. China Airlines now provides 4 wkly flights between Anchorage & Taipei.
- Japan Airlines operated 17 charters from Japan to Alaska this past tourist season (added 3 flights over 2008)
- Recognized as a "Top Performer" in Concession Sales!



Marketing Team

- In discussion with European Intl. operator for year-round service, and with 3 domestic passenger airlines.
- All new marketing materials, translations, and website
- Partnerships with area Convention & Visitor Bureau's, Economic Development Corporation, tenants and leaseholders.
- Represented at International Cargo Conferences and Trade Shows Hong Kong & Beijing for 1st time since 2004

AIAS Marketing Team: "We believe in partnerships, cooperation, and a team approach"

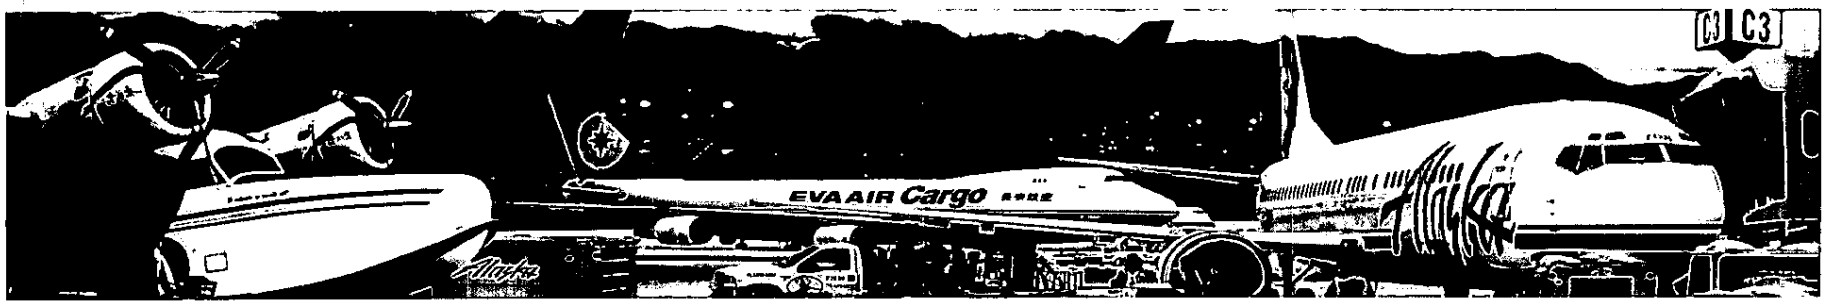
Summary of FY'09 and FY'10 so far…

FY'09 from prior year

- Landings -13%
- Cargo/Pax CMGTW -23%
- Enplanements -4%
- Fuel Uplift -28%

FY'10 from prior year

- Landings -10%
- Cargo/Pax CMGTW -11%
- Enplanements -12%
- Fuel Uplift -7%
- *On the road to recovery and major improvements!*



Our Future Plans

1. Maintain Competitive Rates & Fees
2. Grow and diversify revenue sources
3. Modest CIP growth to meet the current needs
4. Utilize our new Marketing Team approach of working together in partnership: with airlines, tenants, other airports, and businesses to continue our successes
5. Kulis ANG Planning & Utilization
6. Runway 7R Extension

I. Types of Alaska Public Debt

The State has liability or potential exposure for repayment of principal and interest nine categories. In descending order of the State's liability, the types of obligations are:

- State Debt
- State Supported Debt
- State Guaranteed Debt
- State Moral Obligation Debt
- State and University Revenue Debt
- State Agency Debt
- State Agency Collateralized or Insured Debt
- Municipal Debt
- Industrial Development Bonds

On the following pages, each type of State obligation is briefly discussed and defined. Table 1.1 summarizes Alaska's $9.3 billion of public debt by type.

In Section II, Alaska issuers of public debt are described, and detailed statistical tables are provided for each issuer.

A. State Debt

State Debt includes revenue anticipation notes (RAN's) and general obligation bonds (GOB's). The full faith, credit and resources of the State are pledged to the payment of principal and interest on this debt. If future State revenues are insufficient to make the required principal and interest payments to bondholders and noteholders, the State is legally required by its contract with bondholders and noteholders to raise taxes in order to meet these obligations.

1. Revenue Anticipation Notes (RAN's)

Short-term State borrowing in anticipation of revenues is permitted under AS 43.08.010. RAN's may be issued and renewed from time to time, but all such notes, renewals and interest thereon shall be paid from revenues by the end of the fiscal year following the year in which the notes were issued. The full faith, credit, resources, and taxing power of the State are pledged to the payment of RAN's and interest thereon. To further secure such payment, and if necessary to effect advantageous borrowing to the State, collateral may also be pledged.

There are no State RAN's issued or outstanding at June 30, 2009.

2. General Obligation Bonds (GOB's)

The State Constitution provides that GOB's must be authorized by law and ratified by the voters. Generally, the Constitution permits authorization of GOB's only for capital improvements. The legal provisions regarding GOB's are contained in Section 8, Article IX of the Alaska Constitution and AS 37.15, the State Bonding Act. The amount and timing of a bond sale must be approved by the State Bond Committee. There is no statutory limit on the amount of State GOB's that may be authorized. $151,639,941 in authorized GOB's remain unissued at June 30, 2009.

The State has issued GOB's 51 times since statehood, raising almost $2.2 billion. In addition, the State assumed the outstanding debt of the Territory of Alaska as GOB's of the State. In 1959, the Territorial debt was $2.9 million. As of June 30, 2009, the State had $502.8 million in GOB's outstanding.

In April 2003 the State Bond Committee sold State of Alaska GOB's Series A $359.1 million and Series B $102.8 million. The Series B bonds are eligible for federal reimbursement of debt service. Accordingly, in

addition to the general obligation pledge of the State of Alaska, this portion of the bonds also have a pledge of the Federal Highway Administration receipts of the State.

The interest cost on State bond issues is determined by several factors, the major factor being the general level of interest rates in the economy. However, the credit rating assigned to an issuer and the investor perception of credit worthiness are also important factors. The State's credit rating improved from Baa1/A in 1973 to Aa2/AA+/AA in 2009. A significant factor behind the credit rating is the value and extended life of the State's oil-based revenues combined with significant reserve positions and slow steady economic growth.

B. State Supported Debt

State Supported Debt is debt for which the ultimate source of payment is, or may include, appropriations from the State's General Fund. The debt does not have the full faith and credit of the State pledged to it but, it may have the full faith and credit of another public issuer, as in the case of municipal school debt.

State Supported Debt is not considered debt under the Alaska Constitution because the State's payments on the debt obligations, even if they are the subject of a contractual commitment, are subject to annual legislative appropriation. As a result, voter approval of such debt is not required.

State Supported Debt includes lease-purchase financing obligations (structured as certificates of participation (COP's)), the share of municipal G.O. bonds issued for school construction which is reimbursable by the State, the portion of university or municipal G.O. bonds issued for certain capital projects which is reimbursable by the State, and Capital Leases the State has entered for the Atwood Office Building and Parking Garage with AHFC and the Anchorage Jail with the Municipality of Anchorage. Additionally, in January 2009 the State entered into a lease supporting $244.3 million of bonds issued to fund the Goose Creek Correctional Center.

Historically, State Supported Debt has been authorized by voter referendum as in the case of municipal school debt, by law as in the case of the University, by legislative resolution pursuant to AS 37.05.280 (now repealed) as in the case of ASHA, and by action of the State Bond Committee as in the case of some COP's.

In 1986, legislation increased legislative control over lease-financing. Chapter 106, SLA 1986, effective January 1, 1988, requires approval by law of any executive branch lease-financing agreements with annual lease payments exceeding $1 million. Chapter 73, SLA 1992, effective September 14, 1992, adds the requirement of approval by law of leases with total lease payments exceeding $10 million. Chapter 75, SLA 1994, effective June 7, 1994, generally requires prior legislative approval of all lease-purchase agreements, other than the refinancing of outstanding balances on existing lease purchase agreements and certain University of Alaska transactions.

At June 30, 2009, State Supported Debt was $1,349.8 million as shown in Table 1.1.

C. State Guaranteed Debt

In the 1982 general election, voters approved an amendment to Article IX, Section 8 of the Alaska Constitution that permits the State to guarantee unconditionally as a general obligation of the State, the payment of principal and interest on revenue bonds issued by AHFC for the purpose of purchasing mortgage loans made for residences of qualifying veterans. This is the only purpose for which State Guaranteed Bonds may be issued. Because the bonds are general obligations of the State, they must be authorized by law, ratified by the voters, and approved by the State Bond Committee. In five elections from 1982 through 2002 voters approved propositions authorizing $2.7 billion of State Guaranteed Bonds for veterans' mortgages.

These bonds are known to investors as "double-barreled" because there are two distinct forms of security behind the bonds. Their first lien is on the revenue stream generated by payments on the mortgage loans made from bond sale proceeds. Additional security to bondholders is provided by the general obligation pledge of the State to make the required debt service payments in the event that revenues are insufficient. In recognition of the creditworthiness of the veterans' bonds, they have been rated AAA; higher than the State G.O. bonds.

The constitutional amendment permitting the State general obligation pledge on veterans' mortgage bonds was necessary only to gain tax-exempt status for the bonds. The Mortgage Subsidy Bond Tax Act passed by Congress in 1980 restricted the ability of states or public corporations to sell tax-exempt housing bonds above specified ceilings unless they were also general obligations of the issuing state and the proceeds were used for housing loans for veterans. After the 1980 legislation and before the 1982 constitutional amendment, AHFC had been issuing more expensive taxable bonds for veterans' as well as non-veterans' loans.

Because of the strong support behind the bonds, independent of the State's general obligation pledge, this debt is not counted by the rating agencies as general obligation debt. However, if problems in meeting debt service on veterans' bonds were to arise, the bonds would be treated as general obligation debt for credit rating purposes.

At June 30, 2009, State Guaranteed Debt was $383.9 million, as shown on Table 1.1.

D. State Moral Obligation Debt

This type of debt consists of bonds issued by State agencies which are secured, in part, by a reserve fund to which is attached a discretionary replenishment provision. Such a reserve fund is typically called a capital reserve fund. The discretionary replenishment provision typically reads:

> The chairman of the authority (or corporation) shall annually, no later than January 1, certify in writing to the Governor and the Legislature the amount, if any, required to restore the capital reserve fund to the capital reserve fund requirement. The Legislature may appropriate to the authority (or corporation) the amount certified by the chairman of the authority (or corporation). Nothing in this section creates a debt or liability of the state.

A capital reserve fund is generally equal in size to the maximum amount of debt service required in any year. Alaska's discretionary replenishment provision means that if the reserve fund should fall below its required level, the State Legislature may, but is not legally required to, appropriate funds sufficient to restore the capital reserve fund to its required level. The most likely reason that such a reserve fund would fall short of the required level is if agency revenues were insufficient to meet a given debt service payment and the reserve fund had to be used to make the payment.

The authority to issue moral obligation bonds is contained in the enabling legislation of Alaska Aerospace Development Corporation, Alaska Housing Finance Corporation, Alaska Industrial Development and Export Authority, Alaska Student Loan Corporation, Alaska Municipal Bond Bank, and Alaska Energy Authority. Such authority is not granted to the other State agencies.

At June 30, 2009, State Moral Obligation Debt was $1,250.0 million, as shown in Table 1.1.

E. State Revenue and University Debt

This type of debt Issued by the State on behalf of the Sportfish Program and the Alaska International Airport System or by the University is secured only by revenues derived from the issuing enterprise. Revenue Debt is not a general obligation of the State or the University and does not require voter approval. Such debt is authorized by law and issued by the University or by the State Bond Committee. This type of debt includes International Airports Revenue Bonds, Sport Fish Revenue Bonds, various University Revenue Bonds and Notes, and Toll Facilities Revenue Bonds.

At June 30, 2009, State Revenue and University Debt was $767.5 million, as shown on Table 1.1.

F. State Agency Debt

State Agency Debt is secured by revenues generated from the use of bond proceeds or the assets of the agency issuing the bonds. The debt is not a general obligation of the State nor does the State provide security for the debt in any other manner, i.e., by appropriations, guarantees, or moral obligation pledges. The State has, however, appropriated funds to subsidize the interest rate to the borrower in the case of much of the AHFC debt listed as State Agency Debt in Table 1.1.

Nevertheless, if default threatened on any such State Agency Debt, there is some possibility the State would provide relief. The ties between these agencies and the State -- such as their statutory origin and authority, subjection to the executive budget act and State contracting procedures, cabinet membership on boards, legislative approval of bond issuance, and, most fundamentally, achievement of their missions as a political goal of the State -- may mean that the State has or will take responsibility for such debt even though it has no legal liability. A default on any State Agency Debt would probably affect ratings and interest costs on all State and State Agency and certain municipal debt.

The exception to the expectation of State response in the event of a default is the Tobacco Settlement Asset Backed Bonds issued by the Northern Tobacco Securitization Corporation. These bonds were deliberately structured without any implication of State support to divest the State of a portion of its position with the settlement. Investors in these bonds have received a commensurately higher yield than for other types of State Agency Debt.

At June 30, 2009, State Agency Debt was $744.4 million, as shown on Table 1.1.

G. State Agency Collateralized or Insured Debt

As security for this type of debt, the State agency pledges mortgage loans or other securities which may be 100% insured or guaranteed by another party of superior credit standing. This upgrades the credit rating on the debt and lowers the interest cost. It also makes very remote any likelihood of the State having to assume responsibility for the debt. The details of such debt are explained in the section on AHFC.

At June 30, 2009, State Agency Collateralized or Insured Debt was $2,698.0 million, as shown on Table 1.1.

H. Municipal Debt

Political subdivisions within the State of Alaska are termed "municipalities." The five categories of municipality are home rule city, general law city, home rule borough, general law borough, and unified municipality.

Alaska municipalities had 2.4 billion in general obligation bonds outstanding at June 30, 2009. Alaska municipalities' general obligation debt has increased several hundred million over the last five years, but still remains below its peak of $2.67 billion reached in 1986.

In addition to general obligation debt that is supported by local taxes, cities and boroughs may issue debt that is supported by the revenues generated by the project financed through the issuance of debt. At June 30, 2009, approximately $874.4 million in municipal revenue bonds was outstanding. These revenue bonds accounted for 26.5% of all local debt outstanding in Alaska.

I. Industrial Development Bonds (IDB's)

The City of Valdez, Alaska issued approximately $1.7 billion of Industrial Development Bonds (IDB's), from 1976 - 1986, to finance construction of the Trans Alaska Pipeline System. These bonds, repaid solely by revenues from major oil companies, are not obligations of the State of Alaska or the City of Valdez. These Industrial Development Bonds are not included in the amounts of Alaska public debt in this publication.

TABLE 1.1 (Continued)
State and State Agency Debt by Type at 6/30/09

NOTES
1. University debt owed to AHFC is double counted in detail, but eliminated from Total Alaska Public Debt
* Reimbursable school G.O. debt is included in "state supported debt"
Capital Leases are included in State Agency Collateralized or Insured Debt
State Reimbursement of Capital Projects is included in University and Municipal Debt
Sources: 2009 annual reports and financial statements of AHFC, AMBBA, AIDEA, AEA, U of A, AKRR, and directly from agencies.

II. Issuers of Alaska Public Debt

In Section I, the nine types of Alaska public debt are described. In this section, the issuers of Alaska public debt are described. Issuers include the State, State Agencies and University, and Municipalities.

At June 30, 2009, total public debt of Alaska issuers stood at $9.3 billion, as follows:

	$ (millions)
State of Alaska Revenue and GO Debt	1,142.3
State Supported Debt	1,349.8
State Agencies and University Debt	5,204.3
Municipalities Debt	3,298.0
Less duplicate reporting *	(1,658.7)
Total Alaska Public Debt	$ 9,335.7

* $410.4 million of Alaska Municipal Bond Bank debt issued to purchase municipal debt, $920.7 million State reimbursable debt, and $327.7 million in capital leases.

A. State of Alaska

State debt includes general obligation bonds, International Airport System revenue bonds, sport fish revenue bonds, toll facility revenue bonds, and revenue anticipation notes.

1. General Obligation Debt

Tables 2.1-2.5 below summarize the State's general obligation debt issued and outstanding.

2. Lease-Purchase Financing

a. General

Lease-purchase financing involves the issuance, by a lessor, of debt which is secured by the lease payments from the lessee (State) and by the leased facilities.

Lease-purchase obligations and capital leases may provide for the acquisition of the property by the lessee by the end of the lease. Alternatively, the term of the lease, the lease payments, or purchase option price are such that the lessee (State) is considered the owner of the property for accounting, credit, or federal tax purposes from the outset of the lease. As a result, the interest portion of the lease payments is treated as tax-exempt interest income under the federal income tax.

A lease-purchase financing obligation may take the form of either revenue bonds or certificates of participation. In cases where the State is the lessee, the fact that the lease payments are subject to annual appropriations precludes the obligations from being considered State debt under the Constitution and thus requiring voter approval. However, because the debt obligation is paid from the State's General Fund, these obligations are counted by the rating agencies in measuring the State's debt burden.

b. Certificates of Participation (COP's)

Certificates of participation in rent (COP's) are similar to lease revenue bonds. The certificates represent fractional interests or shares in lease payments from lessees, in this case the State, and are sold to finance construction or purchase of the leased facilities. The issuer can be a private developer, public agency, or other party acting as lessor. It can be the State itself, utilizing a trustee to hold title to the property and serve as lessor.

COP's are payable solely from the annual lease payments made by the State. These payments are subject to legislative appropriation. Therefore, COP's are not considered State debt and are not subject to voter approval.

c. Capital Leases

The State is a lessee in four facilities that qualify as capital leases and have associated lease financing, the Atwood Building and parking garage financed by general obligation bonds of the Alaska Housing Finance Corporation, the Anchorage Jail financed by lease revenue bonds of the Municipality of Anchorage, and the Goose Creek Correctional Facility financed by lease revenue bonds of the Matanuska Susitna Borough. In these financings, legislation authorized the leases to be pledged as security. The State may acquire the Atwood

Building at the term of the lease, the State will own the Goose Creek Correctional Facility at the term of the lease, and the State will pay the full cost of the constructing the Anchorage Jail. Accordingly, the financings qualify as lease-purchase from an accounting, credit, or federal tax standpoint. In other state facility leases, the leases do not qualify as lease-purchases, and are called operating leases.

The following Table 2.6 summarizes issued and outstanding COPs.

International Airport System Revenue Bonds

Bonds have been issued to finance improvements to the State's two international airports and are secured by a first lien on gross revenues derived from airport operations. The Commissioner of Transportation and Public Facilities is required by each bond resolution to fix and collect fees, charges, and rentals for the use of facilities of the International Airports sufficient each year to provide adjusted net revenues at least equal to 125 percent of debt service requirements during that year. Table 2.8 indicates that over the past ten fiscal years, adjusted net revenues have exceeded the amount required to pay debt service. In 2009, the State entered into a new rate and fee agreements with air carriers using the airports. The rents and fees calculated according to the agreements are airline terminal building rental rates, landing fees, international terminal docking fees, passenger loading bridge fees, and charges relating to federal inspection services. The agreements also establish procedures for review and adjustment of airline rents and fees for each fiscal year to ensure that revenues are sufficient to meet operations and maintenance expenses, debt service requirements of the revenue bonds and other funding requirements established by the resolution authorizing issuance of the revenue bonds.

The Alaska International Airport System bonds carry ratings of Aa3 by Moody's and AA- by Fitch Ratings.

The following Tables 2.7 and 2.8 provide additional information on the Airport Revenue Bonds.

3. Revenue Anticipation Notes (RAN's)

There have been no RAN's issued.

4. Toll Facilities' Revenue Bonds

Legislation enacted in 1984 authorizes the issuance of State revenue bonds for toll bridges, tunnels, highways, roads, crossings, and causeways. Under AS 37.15.610, the maximum amount of toll facilities bonds that may be issued is $500 million. No bonds have been issued. Legislative approval of bonds to be issued and an appropriation of bond proceeds are required before any project proceeds.

Section 5 of Chapter 165, SLA 1988 mandates the construction of the Copper River highway as a toll facility subject to the availability of certain federal funds. The possible use of revenue bonds to finance all or part of the project has not been determined or approved by the Legislature.

B. State Agencies (Alphabetically)

1. Alaska Aerospace Development Corporation

The Alaska Aerospace Development Corporation was created in 1991 as a public corporation of the State. It is located for administrative purposes within the Department of Commerce and Economic Development and affiliated with the University of Alaska but with a separate and independent legal existence. The purpose of the Corporation is to allow the State to take a lead role in the exploration and development of space, to enhance human and economic development, to provide a unified direction for space-related economic growth, education, tourism, research development, and improve the entrepreneurial atmosphere in the State.

The Corporation may issue moral obligation bonds and otherwise incur indebtedness in order to pay the cost of a project or projects to construct or improve launch facilities or other space and aerospace projects or in order to provide money for the Corporation's purposes. Original bond issues in excess of $1,000,000 each calendar year must have legislative approval. In addition, legislative approval is required if the annual debt service on all outstanding bonds issued and bonds proposed to be issued exceeds $1,000,000 in a fiscal year. The Corporation has not issued any bonds.

2. Alaska Energy Authority

The Alaska Energy Authority (AEA) was created by the Alaska State Legislature in 1976 to finance, construct, and operate power production and transmission facilities. In May of 1993, the Alaska Legislature passed a bill which set in motion a fundamental change in the State's role in energy programs and oversight of State owned power projects.

In May of 1993, Governor Hickel signed legislation that substantially revised the duties and responsibilities of the independent corporate entity that was AEA and created a new Division of Energy within the Department of Community and Regional Affairs. Effective August 18, 1993, this new division took on the Authority's rural programs and planning as well as the responsibility and management for a number of small electrical and waste heat recovery systems located throughout Alaska. The Board of the Alaska Industrial Development and Export Authority (AIDEA) also became the Board of AEA and the ability to have employees was eliminated. AEA continues to exist as a public corporation responsible for, among other things, its outstanding bonds, but its ability to construct and acquire projects was eliminated.

From 1993 through mid-1999 AEA existed for the purpose of owning and operating power production and transmission facilities with original costs in excess of $1 billion. AEA's assets currently include the Bradley Lake and Larsen Bay hydroelectric projects and the Alaska Intertie. The Four Dam Pool hydroelectric facilities (Swan Lake, Tyee Lake, Terror Lake and Solomon Gulch) were sold in January 2002.

Pursuant to legislation effective July 1, 1999, rural energy programs previously administered by the former Department of Community and Regional Affairs, Division of Energy, were transferred to AEA for administration as part of a larger reorganization of state agencies. Five general energy programs, including the rural energy programs originally part of AEA prior to the 1993 reorganization, comprising more than twenty smaller programs were moved to AEA.

a. Debt Issued and Outstanding

Legislation that became effective in August, 1981 established an Energy Program for Alaska administered by AEA. Under the Energy Program, AEA was able to acquire or construct power projects with money appropriated by the Legislature to the Power Development Fund. Debt issued under the Energy Program was secured by power sales contracts which provided that each project constructed under the program bears charges to service the debt based on its pro-rata share of the construction costs of all projects of the program.

AEA issued short-term debt in the amount of $200 million to finance construction of three hydroelectric projects known as the Four Dam Pool Hydroelectric Projects under the Energy Program for Alaska. In 1984, a State appropriation was enacted to the Department of Commerce and Economic Development for a loan to AEA to refinance the short-term debt. A loan agreement eventually totaling $192,847,000 was executed on September 27, 1984 to meet the following maturities of the short-term debt:

In 1982, AEA assumed $44,858,858 of debt payable to the Rural Electrification Association (REA) in connection with the Solomon Gulch hydroelectric project, the fourth dam in the Four Dam Pool. At the same time that AEA assumed the REA debt, it deposited an amount with a trustee sufficient to defease the debt.

Legislation enacted into law in 1985 exempted Four Dam Pool wholesale power rates from provisions of the Energy Program for Alaska that tie rates to total debt issued under the program. As a result, power sales agreements effective October 28, 1985 were signed that provided the means for AEA to repay the State loans.

A new loan agreement for $187,480,249 effective concurrently with the power sales agreements was executed providing for repayment of State loans at approximately 6 percent interest with a 45-year term. On September 22, 1986, the State lent AEA an additional $1 million under the loan agreement to reimburse local communities for their costs in negotiating the power sales agreements. The loan was secured by the hydroelectric facilities of the Pool and any AEA revenues from power sales from the facilities.

In January 2002, pursuant to legislation enacted in 2000 and 2001, the Four Dam Pool projects were sold to The Four Dam Pool Power Agency, a joint action agency. At the time of sale the Agency's membership was composed solely of the utilities that purchase power from the Four Dam Pool projects. Under the terms of the Sale, the Agency was assigned all of AEA's interest and assumed all of AEA's obligations in the Four Dam Pool projects and the Power Sales agreement. As part of the transaction, the remaining balance of debt owed to the State was forgiven.

On November 20, 1985, $267,500,000 of AEA bonds were issued to provide interim financing for a fifth project under the Energy Program for Alaska, the Bradley Lake hydroelectric project. The bonds were general obligations of the Authority and were secured by bank letters of credit and a capital reserve fund. The bonds were retired in fiscal year 1991.

Power Revenue Bonds, First and Second Series, were issued in September, 1989 and August, 1990, respectively. They were used to refund AEA's Variable Rate Demand Bonds for the long term financing of the construction costs of the Bradley Lake Hydroelectric Project.

On April 6, 1999 AEA issued $59,485,000 of Power Revenue Refunding Bonds, Third Series, for the purpose of refunding $59,110,000 of the First Series Bonds. The refunded First Series Bonds were called on July 1, 1999.

On April 13, 1999, AEA issued $30,640,000 of Power Revenue Refunding Bonds, Fifth Series, for the purpose of refunding $28,910,000 of the First Series Bonds. The refunded First Series Bonds were called on July 1, 1999.

On April 4, 2000, AEA issued $47,710,000 of Power Revenue Refunding Bonds, Fourth Series, for the purpose of refunding $46,235,000 of the Second Series Bonds. The refunded Second Series Bonds were called on July 1, 2000.

The bonds related to the Bradley Lake project are general obligations of AEA and have a capital reserve fund backed by the moral obligation of the State of Alaska. The project and all of the revenues derived by AEA from the operation of the Bradley Lake Project and all moneys, securities and funds (except the excess earnings fund), including a capital reserve fund, held or set aside are pledged and assigned to secure the payment of principal, redemption premium, if any, and interest on the Bradley Lake bonds. AEA has covenanted to notify the State Legislature of any failure to maintain the capital reserve fund at its required level. The bonds are further secured by bond insurance. AEA collects from each power purchaser a percentage share of annual project costs. A portion of the outstanding Bradley Lake bonds mature annually each July 1 through the year 2021 with interest rates ranging from 5.0% to 6.25% there are also capital appreciation bonds outstanding.

In 1991, a power sales agreement was signed between AEA and the City of Larsen Bay. Bonds totaling $855,000 were issued to provide funds to complete the financing and construction of an earth filled dam to generate power for Larsen Bay. The bonds were secured by a letter of credit. In June 2002, all remaining outstanding bonds were defeased and the bonds were called on October 1, 2002.

In May 1992, AEA issued $56,890,000 of tax-exempt bonds that allowed the City and Borough of Sitka (Sitka) to refinance its 1979 municipal bonds, resulting in significant debt service savings to Sitka. In November 1997, AEA issued $22,080,000 of tax-exempt bonds to advance refund and defease $20,145,000 of the Series 1992 bonds (collectively with the Series 1992 bonds, the Sitka Bonds). As of June 30, 2009, the outstanding balance was $37,455,000.

The Sitka Bonds are special obligations of AEA secured under a trust indenture by and between AEA and US Bank Trust National Association as trustee and are payable solely from the sources provided under the trust indenture. They are equally and ratably secured by a pledge and assignment of the municipal revenue bonds of Sitka held by AEA under the trust indenture, the obligation of Sitka to make payments under its loan agreement with the AEA and the money and securities held under the trust indenture, including a capital reserve fund. AEA has covenanted to notify the State Legislature of any failure to maintain the capital reserve fund at its required level. The bonds are further secured by bond insurance.

The Sitka bonds do not constitute an indebtedness or other liability of the State, including AEA, and do not directly, indirectly or contingently obligate the State, including AEA, or any political subdivision thereof to levy any form of taxation for the payment of the bonds. Neither the full faith and credit nor the taxing power of the State, including AEA, or Sitka is pledged for the payment of the Sitka Bonds.

At June 30, 2009, AEA's outstanding debt was $151.1 million, as shown below in Table 2.9.

3. Alaska Housing Finance Corporation

The Alaska Housing Finance Corporation (AHFC) is a public corporation administratively located within the Department of Revenue but with a separate and independent legal existence. AHFC was chartered in 1971 to provide financing for low and moderate income housing and housing located in remote, underdeveloped, or blighted areas of the State. Effective July 1, 1992, the Alaska State Housing Authority (ASHA) was abolished and the duties assigned to it were transferred to the Alaska Housing Finance Corporation. Assets transferred to AHFC totaled $94.2 million. Liabilities transferred were $82.8 million, of which $61 million represented bonds and notes payable.

Since 1980, when AHFC's powers were expanded by removing borrower income restrictions, the Corporation has emerged as a major supplier of mortgage funds in the State, in addition to being the largest issuer of debt (taxable and tax-exempt). Table 3.0 indicates the amounts of AHFC borrowing since 1973.

Source: Alaska Housing Finance Corporation
Includes AHFC sponsored conduit and subsidiary issued debt but not public

The bonds issued by AHFC are secured by the general obligation pledge of the Corporation and mortgages purchased with bond proceeds or, in the case of collateralized debt, by mortgage-backed securities as more fully explained below. AHFC subsidiary issued debt is not secured by the general obligation of the corporation but rather by pledged receipts paid to the state under the Master Settlement Agreement.

Additional security features on various AHFC debt obligations may include federal or private mortgage insurance on individual mortgage loans, mortgage pool insurance, bank loan facility or letter of credit arrangements in the event mortgage prepayments are less than anticipated by the bond redemption schedule, bond insurance, and the full faith and credit guarantee of the State on veterans' mortgage bonds.

a. Federal Tax-Exemption and Ceilings

The Federal Tax Reform Act of 1984 established a ceiling of $302.5 million, in the case of Alaska, for annual issuance of qualified veterans' mortgage bonds on a tax-exempt basis. The Act also makes more restrictive the definition of those who qualify as veterans.

Since 1980, when the Mortgage Subsidy Bond Tax Act was enacted, Alaska also had been subject to a $200 million annual ceiling on tax-exemption for qualified mortgage revenue bonds (AHFC Home Mortgage Bonds,

also known as AHFC's first-time home-buyer bonds). AHFC's allocation and usage of PAB is presented in Table 5.4.

b. Bond Authorization

AS 18.56.110(g) which took effect in FY 1982 placed a statutory ceiling on AHFC annual bond issuance for the first time. The annual issuance amount currently authorized is $1,500 million.

c. Security for Debt

Included in the above amounts are State Guaranteed veterans' bonds which were authorized by law and the voters in the following amounts (in millions):

Authorization Calendar Year	Authorized	Issued as of June 30, 2009
1982	400.0	400.0
1983	500.0	500.0
1984	700.0	700.0
1986	600.0	600.0
2002	500.0	404.9
Total:	3,200.0	2,605.4

As of June 30, 2009, $95.1 million of state guaranteed bonds remain unissued.

d. Debt Issued and Outstanding

Table 3.1 summarizes AHFC debt issued and outstanding by type of debt.

e. Collateralized and Insured Bonds

Collateralized bonds, which incorporate the guarantees of the Federal Home Loan Mortgage Corporation (FHLMC), the Federal National Mortgage Association (FNMA), and the Government National Mortgage Association (GNMA), should relieve concern about potential contingent liability to the State for that portion of AHFC indebtedness represented by such bonds. This is particularly reassuring in the case of State Guaranteed bonds (veterans' mortgage program) for which the full faith and credit of the State has been pledged.

The underlying conventional mortgages of AHFC's collateralized bonds issued during part or prior to July 1993 were exchanged for mortgage-backed certificates through FHLMC, FNMA or GNMA. The certificates, and the mortgage payments thereon, are pledged to the bond trustee as security for the bonds. FHLMC, FNMA, and GNMA guarantee that the certificate holder, in this case the bond trustee and thus the bondholders, will receive the principal and interest when due. As of September 1, 1004 all FNMA mortgage-backed certificates were redeemed and replaced by the underlying pooled mortgage loans.

Collateralized bonds lower the cost of funds to AHFC. Collateralized bonds issued after July 1993 are structured to achieve "Triple A" ratings on the basis of the pledged whole loan collateral. Table 3.2 lists collateralized obligations.

Total AHFC Collateralized Debt		$ 3,176,864				$ 2,036,615

During 1985, FNMA decided that it would enter into additional agreements for purchase of AHFC mortgages only if FNMA would have recourse against AHFC for foreclosed properties. With recourse, AHFC's obligation is to buy back the mortgage loans on the foreclosed properties.

Even with recourse to AHFC, the FNMA guarantee still provides an extra layer of insulation for the State from any obligation on AHFC collateralized debt. In the case of collateralized veterans' bonds, the State's guarantee would not be called upon in the event of default on the bonds prior to a default by FNMA on its guarantee. With respect to any other type of collateralized bond, the State has no obligation to step in should AHFC's assets be insufficient to satisfy any recourse. As of September 1, 2004 all FNMA mortgage-backed certificates were redeemed and replaced by the underlying pooled mortgage loans.

AHFC has always been responsible for foreclosure losses on any mortgages supporting GNMA certificates. However, such losses are minimized by the fact that GNMA only guarantees certificates representing pools of mortgages which are FHA insured or VA guaranteed. With the exception of certain mortgage loans, FHLMC does not have recourse against AHFC for losses on foreclosure.

Some bonds of AHFC are subject to bond guaranty insurance. The bond guarantor assures the holder of the debt that interest and principal will be repaid. The effect of the bond guarantee is to provide security in addition to specifically pledged collateral and the pledge of AHFC unrestricted resources.

f. Mortgage Reorigination

Mortgage reorigination included in a bond indenture permits AHFC to use payments and prepayments on mortgage loans securing the bond issue to purchase new mortgage loans only to the extent the payments and prepayments are in excess of debt service requirements. The recycling of mortgage loans is also limited by the 10-year rule. Ordinarily, these excess revenues would be used to retire bonds. Reorigination gives AHFC the option of making new loans or retiring bonds.

In conjunction with this provision, the maturity of the bond issue is extended beyond the maturity of the mortgage loans. This allows additional mortgages to be added to the bond issue, which then extends the average mortgage maturities to more closely coincide with bond maturities.

The benefit of mortgage reorigination is that it provides continued access to a pool of funds at a known tax-exempt interest rate. It serves as a hedge against a rise in interest rates or a loss of federal tax-exemption on future bond issues.

In the case of Veterans' Mortgage Program Bonds, which are guaranteed by the State of Alaska, the bond indentures require AHFC to suspend reorigination for a calendar year if it receives written notification from the State Bond Committee prior to January 1 that reorigination would impair the ability of the Committee to sell State general obligation bonds on advantageous terms or risk a rating reduction on such bonds.

The Public Housing Division (formerly Alaska State Housing Authority (ASHA))

In 1992, under Ch. 4, FSSLA 1992, effective July 1, 1992, the Alaska State Housing Authority was abolished and the duties assigned were transferred to the Alaska Housing Finance Corporation. The Alaska State Housing Authority (ASHA), a public corporation of the State, was created in 1949 and authorized to: construct, operate, and manage low and moderate income housing projects; finance rental housing projects; engage in urban renewal programs; and construct and acquire public buildings for lease to the State.

a. Security for Bonds

ASHA had issued bonds which were secured by revenues from the projects financed, by ASHA's general assets, or by pledges of federal grants typically from the U.S. Department of Housing and Urban Development (HUD) for rent supplements on housing projects. The bonds are not general obligations of the State. ASHA was not authorized to issue bonds backed by a capital reserve fund which had the State's moral obligation attached.

b. Bond Authorization

ASHA financing of public building projects for lease to the State required approval by law pursuant to AS 18.55.100(d) which became effective September 4, 1986. Approval by law was not required for other types of ASHA projects or for bond issuance per se.

c. Housing Debt

ASHA had issued debt to finance low and moderate income rental housing. This debt was not considered to be State Supported Debt because the revenue pledged to retire the bonds did not rely on State appropriations.

ASHA's primary responsibility was to provide low income housing to eligible residents throughout the state. ASHA owned and operated subsidized housing programs sponsored by HUD such as Conventional Low Rent, Section 8 New Construction, Turnkey III Remote Housing, Mutual Help, Section 8 Additional Assistance, Section 8 Vouchers, and Section 8 Existing Housing.

d. Collateralized Bond

ASHA had issued FHA Insured Mortgage Revenue Bonds to provide loans to private developers for construction of multi-family rental housing. These were tax-exempt Qualified Private Activity Bonds by virtue of the projects reserving certain percentages of their units for low income tenants.

The FHA Insured Mortgage Revenue Bonds were not general obligations of ASHA but were backed solely by the mortgage payments from the borrower and FHA insurance in the event of the borrower's default. FHA absorbed losses on foreclosure.

The developers of the projects, financed by all but the 1982 and 1983 Series A Bonds, defaulted on their obligations under the mortgage loans by failing to fully pay principal and interest on the due date. The bond trustee applied for and received FHA insurance benefits. The insurance proceeds and bond reserves have been used to defease the bonds secured by the defaulted loans.

The following Table 3.4 summarizes all AHFC outstanding debt.

TABLE 3.4

4. Alaska Industrial Development and Export Authority

The Alaska Industrial Development and Export Authority (AIDEA) is a public corporation administratively located in the Department of Commerce, Community and Economic Development but with separate and independent legal existence. Created in 1967, AIDEA promotes economic development within the State by:

- providing loans for industrial and commercial projects;
- owning and operating certain types of infrastructure facilities; and
- guaranteeing business loans and loans for export transactions.

Until 1990, AIDEA was able to and did issue bonds secured by a capital reserve fund with a State moral obligation. AIDEA currently has the ability to issue bonds with a State moral obligation on a capital reserve fund only if the bonds are issued to finance a power transmission intertie and are legislatively approved. AIDEA may issue bonds with reserve funds, but they will not have the moral obligation of the State of Alaska. AIDEA has no general obligation bonds with a capital reserve fund requirement outstanding. The Authority has covenanted that it will not incur any General Obligation indebtedness that will cause future estimated net income (as defined in the Amended and Restated Revolving Fund Bond Resolution) to be less than 150 percent

of the General Obligation Annual Debt Service requirements in each year and to take no action to cause its Unrestricted Surplus to be less than the lesser of $200 million or the amount of General Obligation Indebtedness outstanding and in no event less than $100 million. The full faith and credit of the Authority's Revolving Fund secures the bonds currently outstanding under the resolution.

During 1988, reductions in the cash flow from AIDEA's loan portfolio reduced projected debt service coverage below 150 percent. The reduced cash flow stemmed from loan delinquencies, modifications, and foreclosures associated with Alaska's economic recession. In response to the declining debt service coverage, AIDEA defeased $78,295,000 of its Economic Development Bonds and Consolidated Bonds by deposit of $91,269,000 of U.S. Treasury securities purchased with AIDEA's general assets into an irrevocable trust. None of the defeased bonds remain outstanding.

During 1994, AIDEA defeased $23,840,000 of its tax-exempt Umbrella Bonds and its Taxable Umbrella Bonds, in order to improve its projected debt service coverage. None of the bonds chosen for the defeasance would have been eligible for refunding. None of the defeased bonds remain outstanding. AIDEA's underlying ratings on its bonds are A1 by Moody's (Moody's upgraded AIDEA's rating in December 2006 from A2) and AA- by Standard & Poor's (S&P upgraded AIDEA's rating in May 2008 from A-). All of AIDEA's outstanding Revolving Fund bonds are insured or secured by a direct pay letter of credit and had AAA ratings when they were sold.

AIDEA currently offers seven programs as follows:

i. Tax-Exempt Loan Participation Program

The Tax-Exempt Loan Participation Program can provide up to $20 million for financing economic development projects. This program in the past was previously referred to as the "tax-exempt umbrella bond program" because many small projects financed under this program were grouped together when AIDEA issued bonds under an "umbrella". The bonds are tax-exempt by virtue of provisions in the federal tax code.

AIDEA does not directly loan money. Proceeds of the bonds or authority funds are used to purchase up to 90 percent of an eligible loan from financial institutions. The Tax-Exempt Loan Participation Program combines the previous Economic Development and Consolidated Bond Programs that were separate and which financed participations under and over $1,000,000, respectively. No Tax-Exempt Bonds that funded loan participation purchases are outstanding.

ii. Taxable Loan Participation Program

In response to escalating federal restrictions on tax-exempt bonds, AIDEA implemented a taxable loan participation program. The program uses bonds or AIDEA funds to purchase loan participations. The provisions of the program are the same as for the Tax-Exempt Loan Participation Program except for the deletion of restrictions related to federal tax-exemption. This program was previously called the Taxable Umbrella Bond Program. The only bonds that have been issued under this program were issued in 1987 in the amount of $14,540,000; the remaining amounts outstanding were defeased in 1994. None of the defeased bonds remain outstanding.

iii. Conduit Revenue Bond Program

Under the Conduit Revenue Bond program, AIDEA acts as a conduit in the sale and issuance of bonds', the bonds may be tax-exempt or taxable. The bonds are generally secured by the project, the private borrower and/or the project's revenue stream.

AIDEA does not participate financially in the Conduit Revenue Bond projects nor are the Authority's assets or credit pledged as security for the bonds. Bonds issued under this program are not obligations of the Authority or the State. They are obligations of the private borrower or project only. Furthermore, the State's moral obligation does not stand behind these bonds.

Historically, the program was utilized primarily by financial institutions in conjunction with loans to private borrowers; those bonds generally are sold by private placement to the financial institution originating the loan rather than by public sale. The original demand for the program arose partially from lenders wanting the tax exemption on interest income; the Tax Reform Act of 1986 eliminated the deductibility of bank interest expense allocable to holding of tax-exempt obligations and greatly reduced demand for the program from financial institutions. Recently, the program is being used to provide funds for IRC 501(c)(3) financings.

Most bonds under this program were tax-exempt by virtue of the small issue exemption and, more recently, are for qualified 501(c)(3) projects. A few have been exempt facility bonds. The exempt facility bonds and 501(c)(3) bonds are generally sold via public sale.

From inception to June 30, 2009, AIDEA has issued Revenue Bonds for 309 projects totaling $1.14 billion. The Authority has legislative authorization to issue revenue bonds to finance power transmission interties to be owned by electric utilities in a collective amount not to exceed $185.0 million.

iv. Development Finance Program

Alaska statutes authorize AIDEA to finance development projects that it intends to own and operate. The types of facilities the Authority may own or operate include those for use in manufacturing, natural resource extraction, transportation of products or materials, and infrastructure for tourism destination facilities.

Bonds for projects to be owned or operated by AIDEA may be secured by the project, project revenues, specific assets of AIDEA's economic development account, or AIDEA's general assets. They can be general obligations or revenue bonds of the Authority.

Legislation enacted in 1985 authorized this program and authorized a bond sale of up to $175.0 million to provide financing for the DeLong Mountain Transportation Project. The Project consists of a road and port owned and operated by AIDEA to facilitate the development of the Red Dog and other mines in Northwest Alaska. In 1987, $103.3 million of such bonds were issued, the remaining amount outstanding was redeemed in 1997.

The Legislature has enacted legislation authorizing the Authority to finance, design and construct or reconstruct additional Economic Development projects:

(a) The Legislature authorized the issuance of up to $25.0 million of bonds for the reconstruction of a public use ore terminal in Skagway, Alaska. A $25.0 million bond issue was delivered in December 1990. All remaining outstanding bonds were called in April 2002.

(b) The Legislature authorized the issuance of up to $10.0 million of bonds for improvements to the City of Unalaska Marine Center. The project was completed in late 1991. Bonds totaling $7.0 million were issued in December 1991 to finance the project. In May 2000 the City of Unalaska paid all remaining financial obligations related to the project, including providing for the retirement of all outstanding bonds and, in accordance with the terms of the agreement, the project was transferred to the City.

(c) The Legislature authorized the issuance of up to $85.0 million of bonds to finance the acquisition, design and construction of aircraft maintenance and air cargo/air transport support facilities located at the Anchorage International Airport. Construction of an aircraft maintenance facility began in August of 1992 and was completed in 1995. Bonds were issued in September, 1992 in the amount of $28.0 million.

In June 2002, the Authority issued $20,475,000 of refunding bonds for the purposes of refunding and defeasing the remaining outstanding bonds. The refunded bonds were called in July 2002.

(d) AIDEA has $55.0 million of remaining authorization (from the original $85.0 million authorization discussed above) to issue bonds to finance the acquisition, design, and construction of aircraft

maintenance/air cargo/air transport support facilities located at the Ted Stevens Anchorage International Airport.

(e) The 1990 Legislature authorized AIDEA to issue up to $85.0 million of bonds to assist in the financing of a coal fired power plant near Healy, Alaska. On July 18, 1996, $85.0 million of Variable Rate Revolving Fund Bonds were issued to finance a portion of the Healy Clean Coal Project. In May 1998, $85.0 million of bonds were issued to refund the variable rate revolving fund bonds. The bonds were defeased in March 2008 and retired in April 2008.

(f) The 1993 Legislature enacted legislation authorizing the Authority to issue bonds not to exceed $50.0 million for a facility to be constructed in Anchorage for the offloading, processing, storage and transloading of seafood. The Authority purchased the Alaska Seafood International Project in September 1999 and sold the facility in 2005. No bond issuance is anticipated.

(g) The 1993 Legislature also enacted legislation authorizing the Authority to issue bonds not to exceed $50.0 million for a bulk commodity loading and shipping terminal to be located at Point MacKenzie and owned by AIDEA. The 1996 Legislature modified this legislation to require that the facility be located within Cook Inlet.

(h) The 1995 Legislature authorized the Authority to issue up to $20.0 million of bonds to finance the acquisition, design and construction of the Kodiak rocket launch complex and tracking station and the Fairbanks satellite ground station space park. The Authority does not currently anticipate that it will participate in financing the projects.

(i) The 1996 Legislature authorized the Authority to issue up to $85.0 million of bonds to finance the expansion, improvement and modification of the existing DeLong Mountain Transportation Project port facilities owned by the Authority. In 1997 the Authority issued $150.0 million of Revolving Fund Bonds which included $70.0 million for that purpose and $80.0 million for the purpose of redeeming the 1987 DeLong Mountain Transportation Project Revenue Bonds. In February 2007, the Authority issued $113,095,000 of refunding bonds for the purpose of refunding and defeasing, along with Authority funds, the remaining outstanding bonds. The defeased bonds were called in April 2007. In May 2008 the Authority issued $107,385,000 of variable rate Revolving Fund Refunding Bonds for the purpose of refunding $107,385,000 of Series 2007 A&B Revolving Fund Refunding Bonds and pay costs of issuance. The refunded bonds were redeemed in May 2008. At June 30, 2009 bonds totaling $101.3 million were outstanding, with no State moral obligation attached.

(j) The 1996 Legislature authorized the issuance of up to $100.0 million of bonds for the acquisition of the Snettisham hydroelectric project from the Alaska Power Administration. On August 19, 1998 AIDEA issued $100 million of tax-exempt revenue bonds to finance the acquisition of the project. There is no State moral obligation attached. In December 1999 the Authority defeased $6,865,000 of the bonds using funds on hand ($5,975,000 of the defeased bonds were outstanding at June 30, 2009). At June 30, 2009 $80.9 million (excluding the defeased bonds) were outstanding.

(k) The 1998 Legislature authorized the issuance of bonds (or other financing) up to: a) $80.0 million to finance the expansion, improvement, and modification of the existing Red Dog Project port facilities and to finance the construction of new related facilities to be owned by AIDEA; b) $30.0 million to finance the improvement and expansion of the Nome port facilities to be owned by AIDEA; and c) $15.0 million to finance phase one construction and improvement of the proposed Hatcher Pass Ski Resort located in the Matanuska-Susitna Borough; in 2006 this authorization was modified and increased to $25 million to finance the development of Hatcher Pass.

(l) The 2004 Legislature authorized the issuance of up to $20.0 million of bonds to finance the acquisition, development, improvement and construction of port and related facilities on Lynn Canal in Southeast Alaska, to be owned by the Authority.

v. Business and Export Assistance Program

The Business and Export Assistance Program (Guarantee Program) was authorized by the 1998 Legislature by merging the Business Assistance Program and the Export Assistance Program, authorized in 1988 and 1987, respectively. AIDEA's goal under the Guarantee Program is to encourage projects that help diversify Alaska's economy and provide or retain jobs for Alaskans. The Guarantee Program provides a guarantee up to 80% of the principal balance, not to exceed $1 million, to the financial institution who made the loan. The guarantee also covers accrued interest on loans.

vi. Rural Development Initiative Fund Loan Program (RDIF)

The RDIF is a loan program designed to create job opportunities in rural Alaska by providing small businesses with capital that may not be available through conventional markets. This program provides loans for working capital, equipment, construction, or other commercial purposes. To be eligible for a loan under this program, the business must be Alaskan-owned and located in a community with a population of 5,000 or less that is not connected by road or rail to Anchorage or Fairbanks, or with a population of 2,000 or less that is connected by road or rail to Anchorage or Fairbanks. The Department on Commerce, Community and Economic Development, Division of Investment, administers the program for AIDEA.

vi. Small Business Economic Development Revolving Loan Fund Program

AIDEA's Small Business Economic Development Revolving Loan Fund Program provides financing to eligible applicants under the United States Economic Development Administration Long-Term Economic Deterioration program and the Sudden and Severe Economic Dislocation program. The Small Business Economic Development Revolving Loan Fund was created to receive loan fund grants from the United States Economic Development Administration. The Department of Commerce, Community and Economic Development, Division of Investments, administers the program for AIDEA.

a. Bond Authorization

AS 44.88.095 places a statutory ceiling of $400 million per twelve month period on AIDEA bond issuances. Effective July 1, 2007 AS 44.88.095(g) requires legislative approval prior to the issuance of bonds, except refunding and conduit revenue bonds.

b. Debt Issued and Outstanding

AIDEA has issued $1.18 billion of bonds with $192.2 million outstanding as shown in Tables 3.5—3.6.

C. Alaska Medical Facility Authority

The Alaska Medical Facility Authority is a public authority administratively located in the Department of Revenue with separate and independent legal existence. The Authority was created by the Legislature in 1978 to finance construction and improvements to medical facilities in the State. They are secured by lease payments on medical facilities mortgaged to the Authority. Bonds of the Authority do not require approval by law.

The authority issued two bonds. The first was $12.0 million First Mortgage Hospital Revenue Bonds, Series 1979 issued for improvements to Fairbanks Memorial Hospital. The bonds were rated Baa1/BBB-. The second issue of $2.1 million Alaska Medical Facility Authority Revenue Bond Series 1983 financed the

purchase of Careage North by the Greater Fairbanks Community Hospital Foundation. The bonds were privately placed with the seller and not rated.

The Series 1983 bonds were redeemed on June 22, 1989. The Series 1979 bonds were redeemed on March 1, 1990. The Authority has no bonds currently outstanding.

D. Alaska Municipal Bond Bank

The Alaska Municipal Bond Bank (Bond Bank) was created as a public corporation by the State in 1975 for the purpose of lending money to Alaska's governmental units for their capital projects. The Bond Bank is empowered to issue bonds, the proceeds of which are used to purchase bonds, notes or certificates of participation of State municipalities. Most of the Bond Bank bonds maintain a Capital Reserve Fund with the State's moral obligation attached. As of June 30, 2009 the total principal amount of outstanding bonds and notes of the Bond Bank was $587,222,416. Of this total amount outstanding, $516,555,000 represents general obligation bonds, $59,705,000 represents revenue bonds, and $10,962,416 represents notes issued under the Coastal Energy Loan Program. General obligation and revenue bonds are serviced by the Bond Bank and are secured, in part, by past State appropriations to the Bond Bank, certain revenue streams of the municipality borrowing the proceeds, and additional moneys of the Bond Bank placed in a statutory capital reserve fund. The Bond Bank is covenanted to notify the State legislature of any failure to maintain the capital reserve fund at their required levels. The State legislature may appropriate funds to the Bond Bank to restore capital reserve funds to required amounts. (See "Moral Obligation Debt"). The Coastal Energy Loan Program notes do not have a claim on any capital reserve funds of the Bond Bank and are payable solely from the payments of the municipalities participating in the Program.

a. Advantages to Municipalities

The advantages to Alaska's municipalities of using the Bond Bank are several. Interest rates are lower because of the additional security achieved through the structure of the Bond Bank as well as the diversification of risk achieved by pooling municipal bond issues through the Bond Bank. The Bond Bank's general obligation program is currently rated AA- by Fitch Ratings (the Fitch Rating was initiated in FY 2009) and A1 by Moody's Investor Service; while the revenue program is rated A by Standard and Poor's and A by Fitch Ratings. These are higher ratings than most of Alaska's municipalities can achieve independently. The Bond Bank, carrying the name of the State of Alaska and being a more frequent issuer, is better known than many of Alaska's smaller units of government. This enhances the marketability of the bonds to investors nationally.

b. Municipal Debt Purchased

The Bond Bank has assisted 41 of Alaska's municipalities obtain financing for capital projects. These communities are geographically distributed throughout Alaska and represent virtually all sectors of the State's economy.

Does not include reserve obligations

c. Security for Bonds

Municipal general obligation bonds are usually issued to finance facilities that do not generate revenue, such as schools, roads, public safety and municipal buildings. They are issued with the approval of the municipal voters and are secured by the full faith and credit of the municipality. Municipalities within the State of Alaska have no taxing limitations for debt service requirements.

The Bond Bank's historical mainstream program was created in 1976 by its General Bond Resolution that authorized the issuance of Bond Bank general obligation bonds to purchase general obligation bond issues of municipalities. A total of 84 general obligation bond series have been issued in order to secure funds to purchase $930.2 million in municipal debt.

In Fiscal Year 2006 a new General Bond Resolution was approved authorizing the issuance of Bond Bank general obligation bonds to purchase loans for both general obligation and revenue bond issues of municipalities. This ability to combine revenue and general obligation loans has increased operational efficiency for the Bond Bank and the economic benefits to communities. As of June 30, 2009 a total of 13 bond issues have been issued using the 2005 General Bond Resolution for a total amount of $308.1 million.

Bonds issued by the Bond Bank to purchase municipal general obligation bonds are secured by:

- Full faith and credit or revenue pledge of each respective community with no taxing limitation for the general bonded debt issued to the Bond Bank.
- The pooled debt service reserve fund founded per the bond resolution. The reserve fund generally is funded to the tax allowed maximum based on the Bond Bank bonds.
- The statutory Bond Bank reserve fund monies available and not pledged to bond issues, which may be used to restore the debt service reserve fund in the event of default.
- The statutory right of the Bond Bank, in the event of default, to demand and receive from a State agency any funds held by that agency which are payable to the defaulting municipality.
- The moral obligation of the State of Alaska to maintain the debt service reserves at their required levels.

c. Bond Authorization

The Bond Bank may not issue in excess of $75 million in revenue bonds during any fiscal year without legislative approval.

AS 44.85.180(c) was enacted in 1975, limiting Bond Bank bonds outstanding at any time to $150 million. This statute was amended in 1983, 1984, 2003, and 2006 to raise the limit to $200 million, $300 million, 500 million, and $750 million respectively. Total Bond Bank bonds and notes outstanding as of June 30, 2009, were $587.2 million. Thus, the limit on additional bond issuance at that time was $162.8 million.

d. Bonds Issued and Outstanding

The types of Bond Bank Bonds issued and outstanding are summarized in Table 3.8.

TABLE 3.8
Alaska Municipal Bond Bank
Summary of Bonds Types Issued and Outstanding
$ (thousands)

Type	Amount Issued	Outstanding at 6/30/09
General Obligation Bonds	$ 1,030,070	$ 516,555
Revenue Bonds	174,805	59,705
Coastal Energy Bonds	21,348	-
Coastal Energy Loan Fund	20,525	10,962
	$ 1,246,748	$ 587,222

The Coastal Energy Reserve and Loan Bonds are not general obligations of the Bond Bank and are payable only from bond payments received from the underlying communities. These bonds do not have the State's moral obligation attached.

A complete listing of debt issued by the Bond Bank and outstanding is found in Table 3.9.

E. Alaska Railroad Corporation

Legislation signed into law during 1984 established the Alaska Railroad Corporation as a public corporation of the State to manage the Alaska Railroad upon its acquisition from the Federal Government until its possible transfer to private ownership. The corporation is administratively placed within the Department of Commerce and Economic Development. The corporation has the power to issue bonds if such issuance is approved by law. Bonds issued by the corporation would not bear the full faith and credit of the State. The Railroad is not authorized to issue State moral obligation bonds.

By Chapter 77, SLA 1994, the Railroad is authorized to issue revenue bonds in the principal amount of $55.0 million for the construction and acquisition of the Alaska Discovery Center for the Ship Creek Project in Anchorage.

Chapter 71, SLA 2003 authorized the ARRC to issue up to $17 billion in revenue bonds to finance the construction of a natural gas pipeline and related facilities, subject to an agreement with a third party to pay the debt service and other costs of the bonds. To date, no bonds have been issued.

Chapter 46, SLA 2004 authorized the ARRC to issue up to $500 million in revenue bonds, subject to an agreement with a third party to pay the debt service, and other related bond costs, to finance the cost of extending its rail line to Fort Greely, Alaska. To date, no bonds have been issued.

Chapter 28, SLA 2006 authorized the ARRC to issue up to $165 million in revenue bonds to finance rail transportation projects that qualify for federal financial participation. On August 22, 2006, the Alaska Railroad issued $76.4 million in revenue bonds. On August 29, 2007, the Alaska Railroad issued the remaining $88.6 million in revenue bonds.

Chapter 65, SLA 2007 authorized the Alaska Railroad to issue up to $2.9 billion in revenue bonds to finance all or a portion of the Kenai gasification project and Port MacKenzie rail spur project, subject to an agreement with a third party to pay the debt service and other costs of the bonds. To date, no bonds have been issued.

F. Alaska Student Loan Corporation

Chapter 92, SLA 1987 created the Alaska Student Loan Corporation (ASLC), a public corporation administratively lodged in the Department of Education and Early Development but with a separate and independent legal existence. The Corporation's purpose is to lower costs for Alaskans pursuing education and training at a postsecondary level and for other qualified individuals attending postsecondary institutions in the State, through the financing of education loans. The security for the bonds consists of education loans and other assets of the Corporation. The bonds issued by ASLC carry the State's moral obligation as security. The bonds are not general obligations of the State or the Corporation.

Bonds issued by the ASLC are tax-exempt and generally subject to the Private Activity Bond (PAB) ceiling established by the Tax Reform Act of 1986.

Total bonds outstanding as of June 30, 2009 were $552.6 million as shown in Table 4.0. The Education Loan Revenue Bonds are not insured. Senior series Education Loan Revenue Bonds are rated AAA by both Fitch and Standard & Poor's. Subordinate Series Education Loan Revenue Bonds ($15.0 million) are rated A by both Fitch and Standard & Poor's. The 2004 Capital Project Revenue Bonds are insured by National Public Finance and have a Baa1 rating from Moody's and an A rating from Standard & Poor's. The 2005 Capital Project Revenue Bonds are insured by Assured Guaranty Municipal (formerly FSA, pending approval) and have a AA rating from Fitch and a AAA rating from Standard & Poor's.

G. University of Alaska

In addition to the State issuing general obligation bonds to finance University related projects, the University issues notes and bonds for specific University purposes, some of which are secured by project revenues or University general revenues. Facilities that have been financed include Anchorage, Juneau and Fairbanks student centers student housing units, research facilities, student recreation centers, or utility system. Capital assets, net of debt amounted to $705.4 million at June 30, 2009.

The University issued Housing System Bonds for housing and food service facility needs during the 1960's and early 1970's. Between 1960 and 1991, University of Alaska Heating Corporation issued bonds secured by lease payments made by the University from general fund appropriations. All of these bonds have been either repaid over time or defeased through issuance of University of Alaska General Revenue Bonds.

General Revenue Bonds Series G, H, J, K, L, M, N, and O are secured by a pledge of unrestricted current fund revenues generated from tuition, fees, recovery of indirect costs, sales and services to educational departments, miscellaneous receipts and auxiliaries. University general revenue bond debt is not a general obligation of the State nor does the State provide security for the debt in any other manner, i.e., by appropriations, guarantees, or moral obligation pledges.

Standard & Poor first assigned a credit rating of AA- to the University revenue bonds in November of 1992. In December 1993, Moody's assigned a rating of A1. In June 1997, both rating agencies affirmed the earlier ratings and added "stable outlook" to those ratings. As of June 30, 2009 the University had achieved credit ratings of AA3 with a stable outlook from Moody's Investors Service and AA- with a stable outlook from Standard & Poor's. These ratings are lower than the State's General Obligation Bonds due to the lesser security of University general revenues, a relatively small unrestricted endowment in relation to its operating budget, and the University's heavy dependence upon State appropriation. The funded trustee-held debt service reserve

requirement for general revenue bonds is approximately one half of peak annual debt service. Installment Contracts and Notes Payable have no such requirement.

Total debt issued by the University and outstanding is summarized on Table 4.1.

H. Municipal Debt

1. General Obligation Bonds

Alaskan municipalities had approximately $2.424 billion in general obligation debt outstanding at the end of June, 2009. While there has been an increase of roughly $300 million in Alaska municipalities' general obligation debt over the last five years, the current amounts remain below the peak of $2.673 billion in 1986.

High levels of State appropriations for municipal capital projects beginning in FY 1981 depressed municipal bond issuance for most purposes. However, liberalization in FY 1978 of State reimbursement of municipal school debt to 80 percent or higher from a previous 50 percent greatly stimulated issuance for school construction. The other major element of municipal G.O. debt has been the capital construction program of the North Slope Borough. More recently several municipal school debt reimbursement authorizations at the 60-70% level, including a current authorization due to expire in FY 2011, have again stimulated borrowing at the local level.

When State reimbursement is netted out of municipal school debt, it becomes apparent that many Alaska municipalities have substantial debt capacity.

The following Table 4.2 summarizes municipal debt outstanding.

TABLE 4.2

2. General Obligation Debt Ratios

Table 4.3 present ratios of municipal debt to population and to the estimated full value of taxable property in Alaska. Alaska's sparse population leads to higher debt ratios than might be found in other states. The presence of enormous oil and gas property values in certain municipalities has been a significant contributed to higher debt capacity.

3. Revenue Bonds

In addition to General Obligation Debt that is supported by local taxes, cities and boroughs may issue debt that is supported by the revenues generated by the project financed through the issuance of debt. At the end of June, 2009, approximately $874.4 million in revenue bonds were outstanding, as shown on Tables 4.5 and 4.6.

In FY 2009, revenue bonds accounted for approximately 26.5% of all local debt outstanding in Alaska. Some major municipal borrowers in Alaska have no revenue debt at all. Such borrowers include the Fairbanks North Star Borough, Kenai Peninsula Borough and North Slope Borough. In these boroughs, one reason for the lack of revenue debt may be the presence of oil and gas property. That is, substituting G.O bonds for revenue bonds transfers much of the debt burden that would otherwise fall on local users to the State. This is because the State also taxes oil and gas property but allows a credit against tax liabilities for taxes paid to municipalities. Thus municipal property taxes on oil and gas property directly reduce the State payment.

4. Municipal School Debt Reimbursement

Under a program enacted in 1970 (Alaska Statutes 14.11.100), the State will reimburse Alaskan municipalities for up to 60, 70, 80, 90, or 100 percent of the debt service on prequalified municipal G.O. debt issued for school construction. As of June 30, 2009, $1,309.5 million in eligible debt was outstanding. Approximately $920.6 million of the municipal G.O. school debt outstanding may be fully paid by the State through the program.

Although the statute provides that the State will reimburse school districts for a percentage of construction costs, the actual funding for the program is dependent on annual legislative appropriations. The State is not obligated to appropriate the full amount of the entitled under statute nor contractually obligated to consider doing so. When amounts are insufficient, available funds are allocated pro rata among the eligible school districts. This does not jeopardize the security of the debt, because the full faith, credit and taxing power of the issuing community is behind it. The program has been funded at the percent of entitlement shown in Table 4.7.

Moody's Investor Service and Standard & Poor's Corporation treat reimbursement of local school debt in different ways. Neither agency "double counts" the debt liability associated with the reimbursement, either at the local level or the state level. At the local level, Moody's does not deduct any portion of the local school debt payable by the State of Alaska. There are three primary reasons for this decision. First, according to Moody's, there is considerable lag time between the debt service payment dates and the actual reimbursement by the State of Alaska (while this may have been true in earlier years, the current reimbursements happen within weeks of the debt service disbursement); second, and much more important, since the debt service reimbursements are subject to appropriation, there are many instances across the country where reimbursement of local debt has been reduced and eliminated (Massachusetts is cited as a state that has altered such arrangements); and third, as a policy matter, it would not be consistent with the way the agency handles similar debt in other states and would thus harm the comparability of State debt ratios. For these reasons, the State's responsibility for this reimbursement does not appear in the Moody's calculation of the State's overall debt load.

At the same time, Moody's does footnote local debt issues with a statement that the State of Alaska will reimburse localities for a large portion of debt service payments for local school debt. In addition, while no credit for the reimbursement is given to localities in computing local debt loads, Moody's analysts do recognize that in general, greater debt capacity does exist at the local level as a result of the reimbursement, and that less debt capacity exists at the State level for similar reasons.

When computing the size of local school debt, S&P does deduct the portion of such debt that is paid by the State for local school debt service. Thus, S&P arrives at a "net debt" liability for the local unit. At the same time, the rating agency assigns to the State the total proportionate amount of local school debt that is outstanding and serviced by the State's reimbursement of such debt from State appropriations.

Full funding of currently outstanding bonds eligible for participation in the school debt reimbursement program for FY10 has been estimated at $99.3 million, and this amount has been appropriated.

5. Property Tax Limits

Two municipalities that have large oil and gas property values, the North Slope Borough and Valdez, may be subject to limitations on the amount of full value that can be taxed. A municipality may choose to levy property

taxes for its operating budget under one of two methods. Under AS 29.45.080(b), total property tax revenues may not exceed the equivalent of $1,500 per capita.

Under AS 29.45.080(c), the total property value that can be taxed is limited to the municipality's population multiplied by 225 percent of the average statewide per capita full value. Although AS 29.45.090(a) limits municipal property tax rates to 3 percent or less (30 mills), AS 29.45.100 provides that taxes may be levied without limitation as to rate or amount to pay debt service.

III. Supplementary Information

A. State Debt Capacity

The ratio of debt service to revenue has been used as a guideline for determining Alaska's debt capacity. This guideline has been utilized as the State's oil revenues have elevated the debt capacity of the State. Using the more traditional ratios of state credit analysis – net tax-supported debt per capita, net tax supported debt as a percentage of personal income, and total net tax supported debt, few states have more favorable ratios than the State (when considering only State of Alaska G.O. bonds, University of Alaska bonds which are State supported, State reimbursement of municipal school debt, and lease payments on lease-purchase financing). However, when including all Alaska's governmental unit's debt, the State has ratios higher than the national averages.

Oil revenues generated in Alaska have been very large in per capita terms. Thus, the debt they support has also been very large in per capita terms. Compared with other states, higher levels per capita in Alaska have been expected due to the small population base, its greater geographic dispersion, and its higher price levels.

Besides boosting debt levels, petroleum revenues have elevated personal income levels as a result of State spending of the revenues and have significantly increased taxable property values as a result of petroleum development. Oil and gas taxable property represented approximately 23 percent of total taxable property in the State as of January 1, 2009.

As petroleum revenues recede with declines in Prudhoe production, the measure of the State's debt capacity will shift from a percentage of revenue figure to a measure more closely allied to the traditional debt ratios. Yet, because of small population and large geography, governmental units in Alaska will, on average, continue to carry more debt than in other states. For this reason, the burden of debt service in relation to revenue will continue to be important.

1. Debt Capacity as Measured by Revenues

The State's debt may be measured by comparing the associated debt service to unrestricted revenues. The State's historical policy was that annual debt service should not exceed 5 percent of annual unrestricted revenues. This target was at times exceeded due to fluctuations in the price of petroleum. The State's debt capacity is dynamic and is reduced to compensate for expectations of reduction to unrestricted revenue due to low petroleum prices. The state released a revenue sources book semi annually which is used as the basis for forecasting future years' revenue and the associated debt capacity that those revenues support.

Table 4.9 shows past ratios of State general obligation debt service to unrestricted revenue. From 1985 to 1989, the ratio exceeded 5%. In recent years, debt service has included, for determining debt capacity, debt service on State general obligation bonds, University of Alaska bonds that are State supported, State reimbursement of municipal school debt, and lease payments on lease-purchase financing. Inclusion of the above items brings all debt paid from the State's General Fund within the measure of debt burden generally used by the rating

agencies. State policy has attempted to maintain this more inclusive ratio in the range of 5% to 8% as seen in Table 5.1.

Tables 4.8 and 4.9 provide historical and projected payments for all debt service paid from the General Fund.

As shown on Table 5.0, debt service on State G.O. and State Supported debt plus school debt reimbursement payments are projected to be approximately 1.9% of revenues in FY 2010.

Table 5.1 presents the ratio of State G.O.'s to full value of taxable property since 1974. The ratio has declined from 6.0% in 1974 to .6% in 2009. As a measure of debt capacity, debt to full value is of minor significance in Alaska due to the existence of a State petroleum property tax.

B. Public Pension Systems Liabilities

The State administers two major retirement systems -- the Public Employees' Retirement System (for State employees and employees of political subdivisions who elect to join the system) and the Teachers' Retirement System (for teachers and school administrators). The difference between the present value of projected accrued benefits for employees who are covered by the pension system and the market value of the particular pension system's assets is the amount of the State's unfunded liability. An unfunded pension liability generally is not treated by the rating agencies or investors as debt unless it is judged to constitute a significant burden on the State. However, pension fund liabilities are a long-term obligation of the State.

The financial status of each of the State's public pension systems since FY 2003 is shown in Table 5.2. Actuarial results for FY 2009 will be available in June of 2010.

TABLE 5.2

Funding Excess (Unfunded Liability) for Accrued Benefits	$ (1,723)	$ (2,084)	$ (2,278)	$ (2,540)	$ (2,765)	$ (2,682)
Funding Ratio	68.2%	64.3%	62.8%	60.9%	61.5%	64.8%

Source: June 30, 2009 State of Alasa PERS and TRS valuation report

The Public Employees' Retirement System's actuarial accrued liabilities are funded at 69.5 percent and the Teachers' System's actuarial accrued liabilities funded at 64.8 percent. It is important to note that these funding levels include accrued benefit costs. Unfunded pension liabilities are generally not considered to be a contingent liability until the funding ratio drops below 60 percent.

C. Credit Ratings of State

The State of Alaska's general obligation bond rating was re-established in 2003 with the issuance of the 2003 Series A and B bonds. The State received AA ratings from the three national bond credit rating agencies. Both Fitch Ratings and Standard and Poor's AA ratings have a stable outlook assigned to them, while Moody's Aa2 rating is currently stable, it had a negative outlook assigned to it from August 2002 until December 2004 when it was revised to stable. On March 27, 2008 Standard & Poor's increased their credit rating on the State to AA+ with a stable outlook.

Following is the State of Alaska's credit rating history, shown on Table 5.3.

TABLE 5.3
State of Alaska Credit Rating History
ratings as of date shown

Moody's Investor Service		Standard and Poor's Corp.		Fitch Investors Service

June 13, 1980	Aa	August 5, 1992	AA		
November 26, 1998 forward	Aa2	March 27, 2008 forward	AA+		

D. Private Activity Bond Ceiling

The Tax Reform Act of 1986 established a ceiling on annual issuance of Qualified Private Activity Bonds (PAB's), effective August 15, 1986, at the level of $250 million for the remainder of 1986 and for 1987, and $150 million thereafter. Effective in calendar year 2001 the PAB cap became subject to annual adjustment and has been increased each year since. In calendar year 2009 the cap was $273.3 million. The PAB ceiling encompasses qualified mortgage revenue bonds, student loan bonds some of the types of tax-exempt debt issued by AIDEA and AEA, and certain other types of tax-exempt bonds to promote industrial development.

The responsibility for allocating Alaska's annual ceiling was assigned to the State Bond Committee by State law, beginning in 1987. Allocation carry-forwards expire after three calendar years. Table 5.4 summarizes the allocation, use and carry-forwards of the PAB ceiling over the past five years.

E. State Bond Committee

AS 37.15 includes the State's Bonding Act and creates the State Bond Committee (SBC). The members of the SBC are the Commissioner of Commerce, Community and Economic Development (who serves as chairman), the Commissioner of Revenue (who serves as secretary), and the Commissioner of Administration.

The duties of the State Bond Committee include adopting resolutions and preparing documents necessary for the issuance, sale, and delivery of State bonds. The State Bond Committee must fix the principal amount, denomination, date maturities, place of payment, terms, rights of redemption if any, form, condition and covenants of the bonds; fix the date of sale and the form of the notice of sale; and provide the notice of sale of State debt.

Additionally, the State Bond Committee manages and administers the State debt policy including requests for appropriations to the debt retirement fund, the repayment of State debt and related administrative matters.

Staff support for the State Bond Committee is provided by the Treasury Division of the Department of Revenue.

This publication was released by the Department of Revenue.

Alaska Public Debt Book – Table 4.5 and Alaska Municipal Bond Bank Annual Reports

Investment Grade Rating Categories

- Bond ratings for the majority of municipal bonds are in the investment grade categories

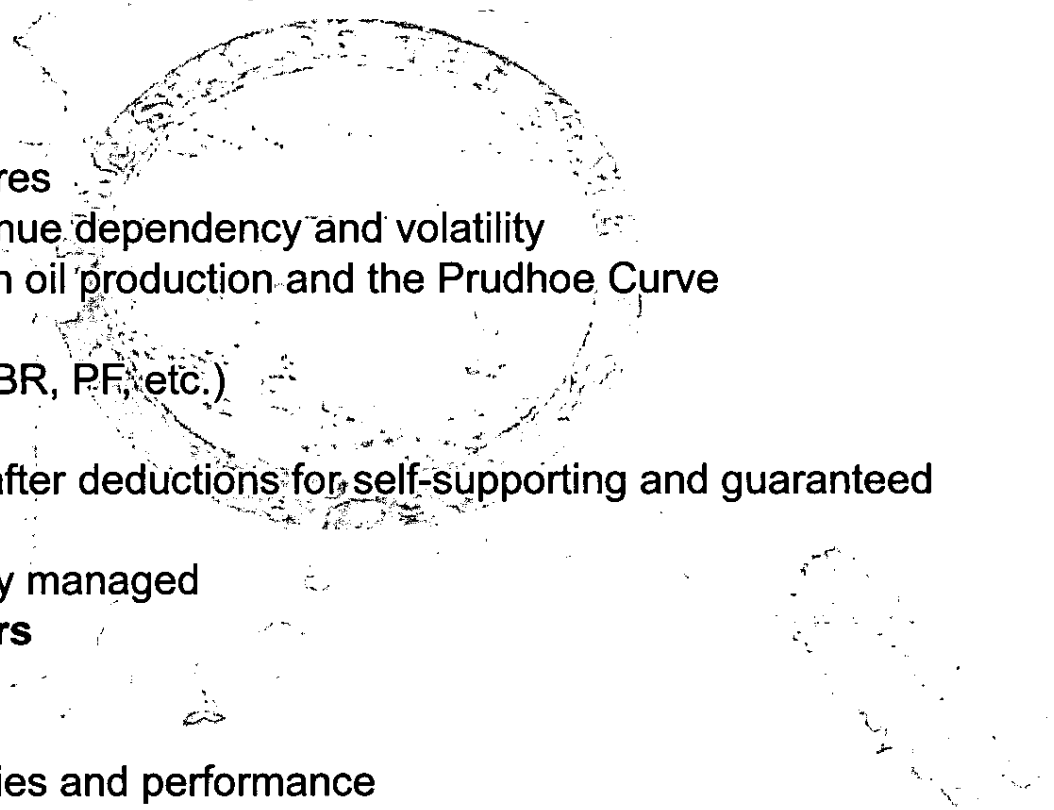
Investment Grade Rating Symbols for the Three Major Rating Agencies

	Moody's	Standard & Poor's	Fitch
Prime Grade	Aaa	AAA	AAA
High Grade	Aa1	AA+	AA+
	Aa2	AA	AA
	Aa3	AA-	AA-
Upper Medium High Grade	A1	A+	A+
	A2	A	A
	A3	A-	A-
Medium Grade	Baa1	BBB+	BBB+
	Baa2	BBB	BBB
	Baa3	BBB-	BBB-

- State of Alaska's General Obligation bonds are rated Aa2/AA/AA+
- Certificates of participation or subject to appropriation debt is rated Aa3/AA-/AA
- 13 states have at least one AAA credit rating
- 5 states have at least one A Credit rating
- California lowest rated at A/Baa1/BBB

Rating Factors for Alaska's General Obligation Bonds

- **Economic Base**
  - Dependent on natural resource industries
    - non-renewable oil extraction industries
    - renewable resources fishing and timber
  - Tourism
  - Military bases
- **Financial Analysis**
  - Trend in expenditures
  - Oil generated revenue dependency and volatility
  - Projected decline in oil production and the Prudhoe Curve
  - Gas Line
  - Reserves (CBR, SBR, PF, etc.)
- **Debt Analysis**
  - Very low net debt after deductions for self-supporting and guaranteed debts
  - Debt conservatively managed
- **Administrative Factors**
  - Forecasting ability
  - Reserve policies
  - Investment strategies and performance
  - Services provided



Alaska's State Supported Debt

Recovery Act Opportunities

- Build America Bonds
- Recovery Zone Economic Development Bonds
- Recovery Zone Facility Bonds
- Qualified School Construction Bonds
- Other allocations smaller than statewide in nature

Build America Bonds

- Alternative structure for financings that otherwise qualify as tax-exempt
- Sell taxable bonds and receive 35% subsidy from Federal Government on interest expense
- Beneficial on yields for maturities beyond 8-12 years depending upon market
- On 20 year loan has lowered interest rate by 50 to 100 basis points depending on market

Recovery Zone Bonds

- Recovery Zone Economic Development Bonds
  - Identical to BABs but a boosted 45% subsidy
  - $90 million allocation to Alaska
- Recovery Zone Facility Bonds
  - Provide opportunity for municipalities to offer tax exemption to businesses investing in their communities.
  - $135 million allocated to Alaska

Recovery Zone Allocations

Qualified School Construction Bonds

- Investor receives a tax credit as a fixed percentage of the purchase.
- Theoretically could have zero interest expense, but recent issues required supplemental coupon of 1.5%
- State's allocation is $29,784,000 for both 2009 and 2010
- Must be a k-12 school capital project

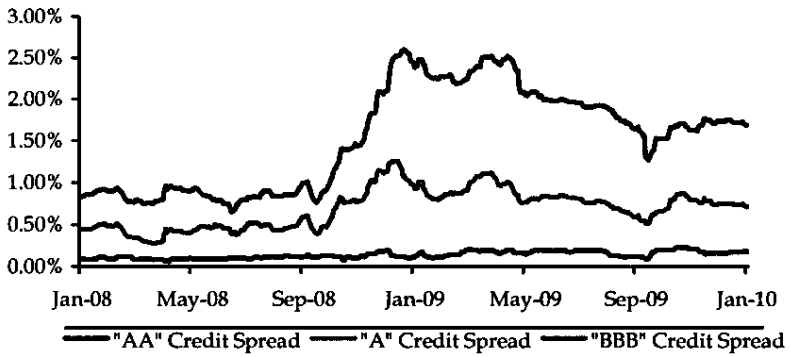
Market Update

Municipal Market Update

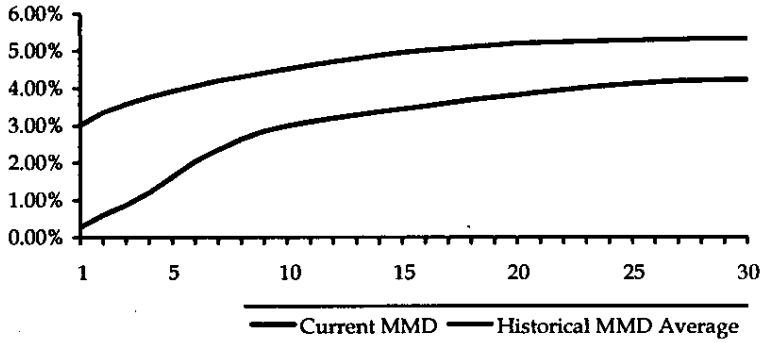
Commentary

- Total issuance for 2009 was $407 billion, with fixed rate bonds accounting for $360.7 billion (89%)
- Taxable issuance was $84.1 billion in 2009; BABs account for $64.2 billion of taxable issuance
- Insurance penetration fell to 8.7% in 2009
- Credit spreads have been shrinking since credit crisis, but have widened slightly recently
- Yield curve historically steep and fixed rates remain near historic lows
- Retail showing less appetite with such low rates

Credit Spreads

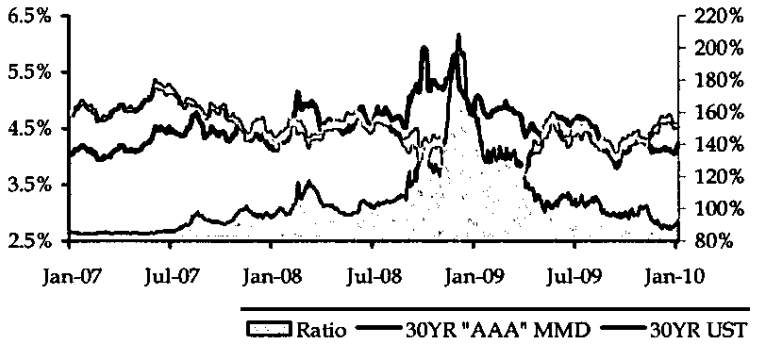


Yield Curve Historically Steep



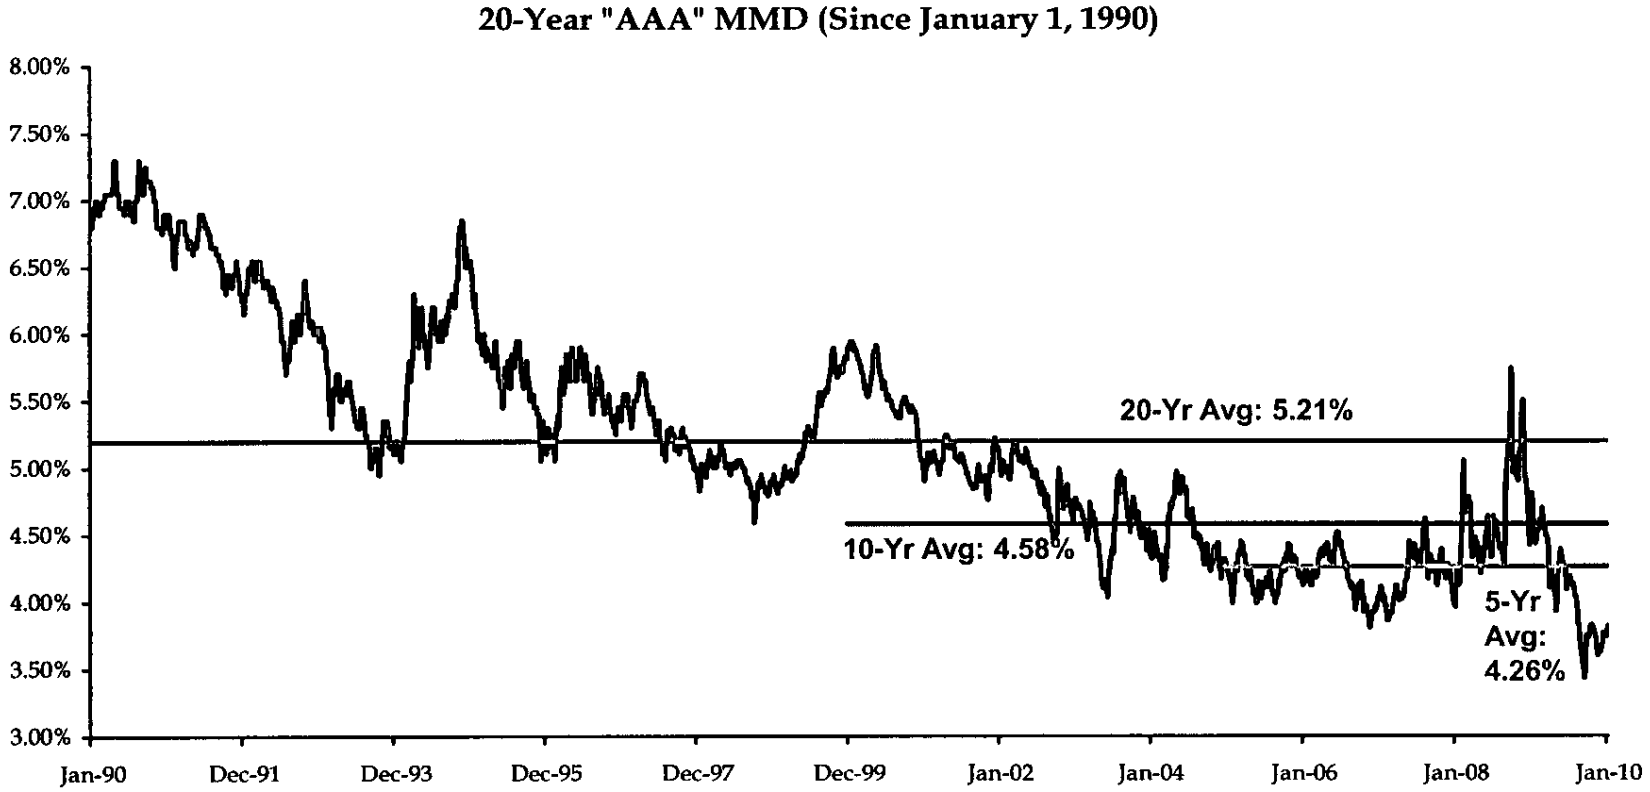
Rates as of January 28, 2010.

Tax-Exempt / Taxable Ratios



Market Update
Fixed Rate Bonds

In current market, it is difficult to argue against fixed rate bonds (particularly with BABs)

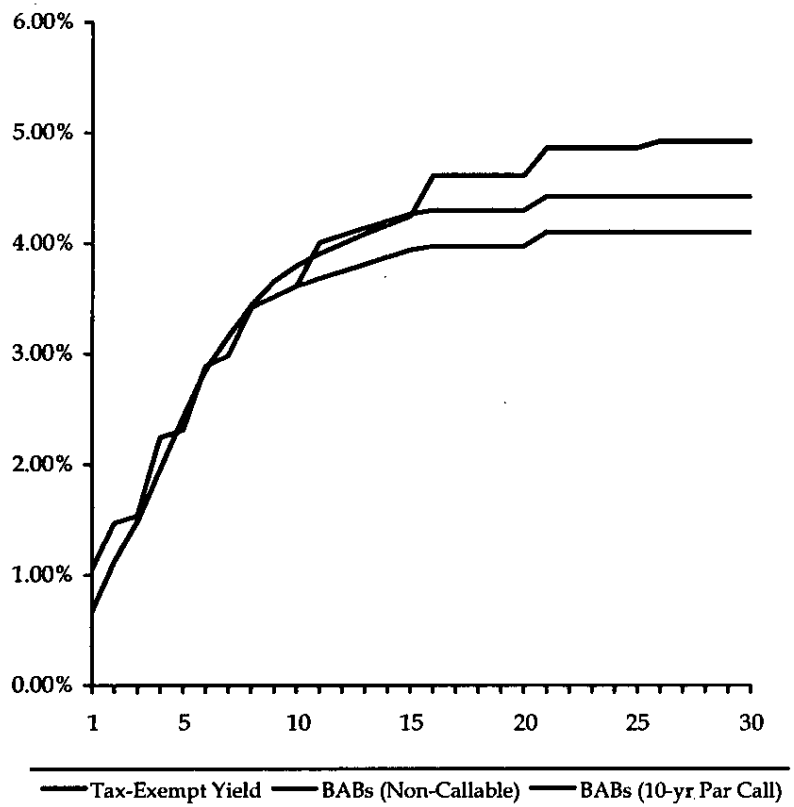


20 Year "AAA" MMD has been lower than today only 1.73% of the time since January 1, 1990. This does not include the BABs benefit

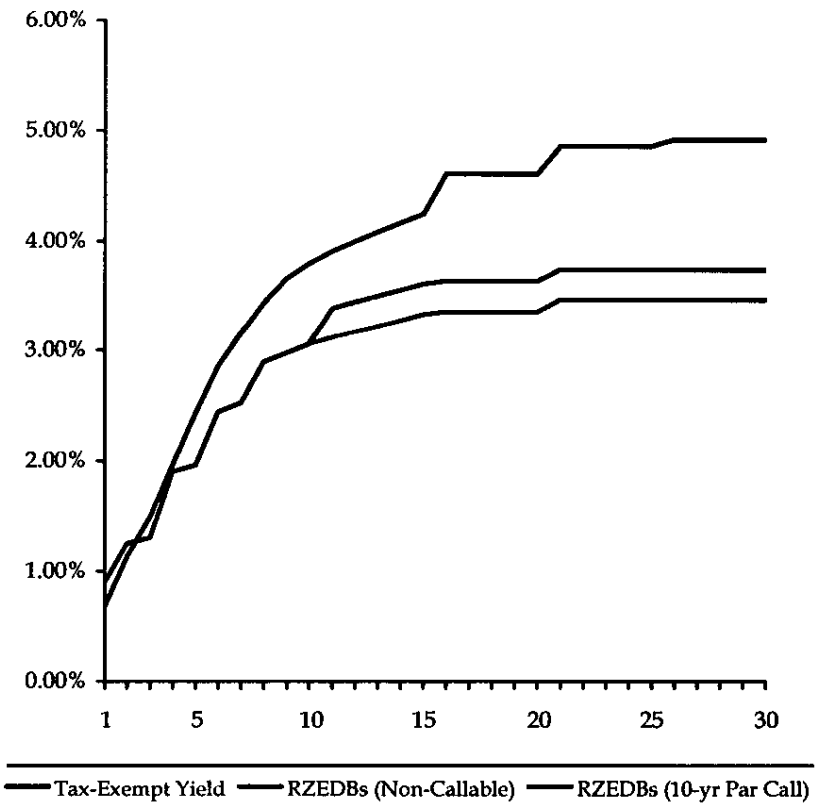
Alaska Municipal Bond Bank

Indicative BABs and RZEDBs Yield Curves

BABs Yield Analysis*



RZEDBs Yield Analysis**



* *BABs yields are net of the 35% federal interest subsidy.*
** *RZEDBs yields are net of the 45% federal interest subsidy.*
Note: Rates preliminary and subject to change; as of January 28, 2010.

Current Cost of Capital

	20 years annual cost				20 year total cost			
	3.50%	4.20%	5.50%	6%	3.50%	4.20%	5.50%	6%
[redacted] Total Financing								
50,000,000	3,607,525	3,778,000	4,118,950	4,374,663	72,150,500	75,560,000	82,379,000	87,493,250
100,000,000	7,215,050	7,556,000	8,237,900	8,749,325	144,301,000	151,120,000	164,758,000	174,986,500
150,000,000	10,822,575	11,334,000	12,356,850	13,123,988	216,451,500	226,680,000	247,137,000	262,479,750

Summary

- Conservative use of State Debt
- Capacity to consider Additional Borrowing
- Estimate $1 to $2 billion in Capacity at Current Credit Rating
- Current structuring opportunities in ARRA
- Lower absolute interest rates than at any point in the last 20 years

STATE OF ALASKA

OFFICE OF THE GOVERNOR

OFFICE OF MANAGEMENT AND BUDGET

SEAN PARNELL, GOVERNOR

P.O. BOX 110020
JUNEAU, ALASKA 99811-0020
TELEPHONE: (907) 465-4660
FAX: (907) 465-3640

January 28, 2010

The Honorable Lyman Hoffman
Co-Chair, Senate Finance Committee
Alaska State Legislature
State Capitol, Room 518
Juneau, AK 99801-1182

The Honorable Bert Stedman
Co-Chair, Senate Finance Committee
Alaska State Legislature
State Capitol, Room 516
Juneau, AK 99801-1182

Dear Senate Finance Committee Co-Chairs:

Thank you for the opportunity to present highlights of the Governor's budget before the Senate Finance committee yesterday. I remain available to further discuss the details that will ensure our efforts direct resources effectively to position Alaska's economy for growth and Alaska's families for opportunity.

The committee requested a break down of our $276 million request for FY11 debt service. The detail for your review is enclosed in the debt summary dated January 14, 2009, and can also be found on the OMB website at *omb.alaska.gov*.

Sincerely,

Karen J. Rehfeld
Director

Notes

Total School Debt Reimbursement in FY2010 is $100,045.3 and FY2011 is $106,258.5 for an increase of $6,312.2.
General Fund portion of School Debt Reimbursement increased by $1.8M over FY2010 due to a decrease in estimated Cigarette Tax collections (School Fund) from $23.0M in FY2010 to $21.2M in FY2011.

*Public Safety Crime Lab - $75.75M cost equates to debt service of $1.6 in FY11, approx. $5.5M/yr for 20 yrs

** UAF Life Sciences Building - $88.875M cost equates to debt service of $2.7M in FY11, approx. $6.7M/yr for 20 yrs

***General Obligation Bonds- (Series 2010A) - $150.1M cost equates to debt service of $5.0M in FY11, approx. $13.0M/yr

In addition to the items listed above, State corporations such as AHFC (including Northern Tobacco Securitization Corporation bonds) and AIDEA also issue and pay for debt for corporate purposes.

Callability of State's Outstanding General Obligation Bonds

2003 A

- $359,130,000 issuance dated April 1, 2003
- Callable at par on August 1, 2013
- At that time there will be $191,410,000 outstanding after making the 8/1/2013 payment

2003 B

- $102,805,000 issuance dated April 1, 2003 are amortized over 10 years
- No callable maturities
- These are GO Bonds that are paid with federal highway receipts

2009 A

- $165,000,000 issuance dated April 14, 2009
- Callable at par on August 1, 2019
- At that time there will be $99,565,000 outstanding after making the 8/1/2019 payment
- $150,000,000 authority remaining in this $315 million proposition (HB 314)
- Department currently plans to issue remaining bonds before the end of 2010

MEMORANDUM February 4, 2010

SUBJECT: State debt instruments (Work Order No. 26-LS1425)

TO: Senator Bert Stedman
Co-Chair of the Senate Finance Committee
Attn: Darwin Peterson

FROM: Tamara Brandt Cook
Director TBC

You have asked me to find and provide you with a copy of statutes that authorize a state entity to issue certificates of participation or bonds, other than general obligation bonds that are subject to voter approval. You are also interested in provisions of temporary law authorizing the acquisition of those types of state debt. As a preliminary matter, note that state debt is addressed in art. IX of the state constitution:

> **SECTION 8. State Debt.** No state debt shall be contracted unless authorized by law for capital improvements or unless authorized by law for housing loans for veterans, and ratified by a majority of the qualified voters of the State who vote on the question. The State may, as provided by law and without ratification, contract debt for the purpose of repelling invasion, suppressing insurrection, defending the State in war, meeting natural disasters, or redeeming indebtedness outstanding at the time this constitution becomes effective.
>
> **SECTION 10. Interim Borrowing.** The State and its political subdivisions may borrow money to meet appropriations for any fiscal year in anticipation of the collection of the revenues for that year, but all debt so contracted shall be paid before the end of the next fiscal year.
>
> **SECTION. 11. Exceptions.** The restrictions on contracting debt do not apply to debt incurred through the issuance of revenue bonds by a public enterprise or public corporation of the State or a political subdivision, when the only security is the revenues of the enterprise or corporation. The restrictions do not apply to indebtedness to be paid from special assessments on the benefited property, nor do they apply to refunding indebtedness of the State or its political subdivisions.

It is under section 8 that general obligation bonds of the state are issued. These are only for capital improvements or veterans housing loans and must be approved by the voters. The state pledges its "full faith and credit" or revenue raising power to the repayment of general obligation bonds. Under section 10 the state may acquire short-term debt by issuing revenue anticipation notes. Section 11 grants the state and its public corporations the power to issue revenue bonds. These are secured only by the revenue of the enterprise funded by the bonds or by the revenue of the corporation. The section also allows debts to be paid from special assessments on property benefited and debts to refund other indebtedness. Lastly, the court has upheld state debt acquired through the issuance of certificates of participation in lease-financing arrangements where the security is limited to the leased property and the lease-purchase agreement contains a nonappropriation clause--the state is not obligated to make the lease payments if no money is appropriated for the purpose. The court has concluded that these arrangements do not create long-term obligations that bind future generations or legislatures because the legislature is free to decide not to make appropriations for lease payments and let the state default. (Carr-Gottstein Properties v. State, 899 P.2d 546 (Alaska 1995))

This is what I have found in response to your request *(emphasis added)*:

CERTIFICATES OF PARTICIPATION

(I) Sec. 29.47.480. Accrued actuarial liabilities of retirement systems. (a) A municipality, or two or more municipalities jointly, may enter into a lease or other contractual agreement with a trustee, or the Alaska Municipal Bond Bank Authority or a subsidiary of the authority, a subsidiary of the Alaska Housing Finance Corporation, the state bond committee, or the Alaska Pension Obligation Bond Corporation in connection with the *issuance of obligations by a state entity* to prepay all or a portion of each participating municipality's share of the accrued actuarial liabilities of retirement systems. Obligations issued for purposes described in this subsection must be secured and payable as provided in the agreement or under an authorizing ordinance. The agreement or ordinance may provide for reserves and for protective covenants.

. . . . .

(d) For purposes of this section, "obligations" means bonds, notes, commercial paper, *certificates of participation*, or other contractual obligations.

(II) Sec. 36.30.085. Lease-purchase agreements. (a) To perform its duties and statutory functions, the department, the Board of Regents of the University of Alaska, the legislative council, or the supreme court *may enter into lease-purchase agreements* for real property. The department, the Board of Regents, the legislative council, or the supreme court may enter into a lease-purchase agreement only if the department, the Board of Regents, the legislative council, or the supreme court is the lessee under the agreement.

. . . . .

(c) A lease-purchase agreement

(1) may not provide for a period of occupancy under the full term of the lease-purchase agreement that is greater than 40 years;

(2) must provide that lease payments made by the department, the Board of Regents, the legislative council, or the supreme court *are subject to annual appropriation.*

. . . . .

(e) The department, the Board of Regents, the legislative council, or the supreme court may not enter into a lease-purchase agreement to acquire or improve real property unless the agreement *has been approved by the legislature by law.*

. . . . .

(g) In this section,

. . . . .

(2) "lease-purchase agreement" *includes a lease-financing agreement.*

Sec. 36.30.990. Definitions. In this chapter, unless the context in which a term is used clearly requires a different meaning or a different definition is prescribed for a particular provision,

. . . . .

(14) "lease-financing agreement" means a lease-purchase agreement that secures or is related to financing instruments of the lessor, including revenue bonds or certificates *of participation*;

. . . . .

(III) Sec. 44.85.080. Powers of bond bank authority. The bond bank authority may

. . . . .

(20) by regulation, create a new entity or new entities for the purpose of issuing negotiable or nonnegotiable revenue bonds, notes, or *certificates of participation* to finance a self-insurance program for municipalities or municipal joint insurance arrangements organized under AS 21.76 or to provide assistance to governmental employers under AS 44.85.085(a); the powers, duties, and membership of the new entity or entities shall be limited to the powers, duties, and membership of the authority and stated in the regulation; the new entity or entities shall each be a public corporation and an instrumentality of the state with the same legal existence and continuing succession as the bond bank authority; and

. . . . .

BONDS

(I) <u>The Alaska Aerospace Development Corporation</u>

Sec. 14.40.891. Issuance of bonds, notes, and refunding bonds. (a) Except as provided in (b) of this section, *the corporation may issue bonds* in its discretion for any of its corporate purposes and may issue refunding bonds for the purpose of paying or retiring bonds previously issued by it.

(b) The corporation may not, without prior legislative approval, issue bonds, other than refunding bonds,

(1) in a total amount in excess of $1,000,000 each calendar year; or

(2) if the annual debt service on all outstanding bonds issued and proposed to be issued exceeds $1,000,000 in a fiscal year.

(II) The Alaska Student Loan Corporation

Sec. 14.42.220. Bonds of the corporation. (a) The corporation may borrow money and *may issue bonds*, on which the principal and interest are payable from its income and receipts or other assets or a designated part or parts of them. The corporation may use the proceeds of its bonds for any purposes that the corporation considers appropriate, including providing money to

(1) make or purchase education loans;

(2) finance programs identified in AS 14.42.210;

(3) finance projects of the state as those projects may be identified by law; and

(4) pay for any other purpose or program of the corporation that is authorized in AS 14.42.100 - 14.42.310.

. . . . .

(g) The corporation may not issue bonds to finance projects under (a)(3) of this section in an aggregate amount that exceeds $280,000,000.

(III) Alaska Medical Facility Authority

Sec. 18.26.080. Bonds of the authority; court jurisdiction. (a) The authority may borrow money and *may issue bonds* for it, payable from the revenue derived by it from its interest in any one or more medical facilities or from its income and receipts or other assets generally, or a designated part of them. The issuance of revenue bonds is governed by the provisions of this chapter and is not subject to the prior approval of the voters of the state. Revenue bonds, whether coupon or fully registered, are negotiable instruments for all purposes of the Uniform Commercial Code.

. . . . .

Sec. 18.26.260. Issuance and guarantee of Alaska Medical Facility Authority bonds.

. . . . .

(b) If the commissioner of revenue and the board jointly determine that a medical facility is unable to use traditional private or public financial institutions to refinance mortgage loans and that it is in the public interest to make refinancing available,

(1) the authority may provide financial assistance and purchase mortgage loans made to the medical facility and *may issue bonds or bond anticipation notes* under this chapter to provide money for the purchase of the mortgage loans or to provide the financial assistance; and

(2) the commissioner of revenue may disburse to the medical facilities special bond guarantee account money appropriated to the commissioner for the account which the commissioner determines to be necessary to guarantee bonds or bond anticipation notes issued under (1) of this subsection.

. . . . .

(IV) Alaska Housing Finance Corporation

Sec. 18.55.140. Issuance of bonds, notes, and refunding bonds. The corporation *may issue bonds* and notes from time to time in its discretion for a purpose authorized by this

chapter and *may issue refunding bonds* for the purpose of paying or retiring bonds previously issued under this chapter.

Sec. 18.56.110. Bonds and notes. (a) The corporation, by resolution, *may issue bonds and bond anticipation notes* in order to provide funds to carry out and effectuate its purposes.

. . . . . .

Sec. 18.56.790. Bonds for senior housing. (a) Under the procedures of this chapter, the corporation *may issue bonds* in a total amount not exceeding $30,000,000 to fund senior housing loans made under AS 18.56.700 - 18.56.799.

(e) In this section, "bond" has the meaning given in AS 18.56.390.

(V) Knik Arm Bridge and Toll Authority

Sec. 19.75.211. Bonds of the authority. (a) Notwithstanding any other provision of law, the authority may borrow money and *issue and refund bonds* on which the principal and interest are paid out of and secured by the gross revenue derived by the authority from the ownership, use, and operation of its toll facilities, including money derived from the fees, rents, tolls, rates, charges, and other revenue of the authority under this chapter and any other revenue or money that the legislature may appropriate, except a state tax or license. Before issuing bonds for the Knik Arm bridge, the authority shall submit to the state bond committee a description of the bond issue and a preliminary prospectus, offering circular, or official statement relating to the bond issue. Bonds may not be issued unless the state bond committee finds, based upon the information submitted by the authority under this section and other information that is reasonably available to the committee, that the Knik Arm bridge revenue and other revenue available to the authority can be reasonably expected to be adequate for payment of the principal of and interest on the bonds to be issued and that issuance of the bonds by the authority would not be expected to adversely affect the ability of the state or its political subdivisions to market bonds.

. . . . . .

(c) The authority may issue bonds in an aggregate amount not to exceed $500,000,000, plus the cost of issuance.

. . . . . .

(VI) Adak Reuse Authority

Sec. 30.17.210. Bonds of the authority. (a) Subject to the provisions of AS 30.17.200, the authority may borrow money and may issue revenue bonds, including bonds on which the principal and interest are payable

(1) exclusively from the income and receipts or other money derived from the project financed with the proceeds of the bonds;

(2) exclusively from the income and receipts or other money derived from designated projects whether or not they are financed in whole or in part with the proceeds of the bonds; or

(3) from the income and receipts or assets generally, or a designated part or parts of them, of the authority or of any other person.

(b) Bonds issued under this chapter shall be authorized by resolution of the authority, and shall be dated and shall mature as the resolution may provide, except that a bond may not mature more than 40 years from the date of its issuance. The bonds shall bear interest at the rate or rates, be in the denominations, be in the form, either coupon or registered, carry the registration privileges, be executed in the manner, be payable in the medium of payment, at the place or places, and be subject to the terms of redemption that the resolution or a subsequent resolution may provide.

(c) Bonds issued under this chapter, regardless of form or character, shall be negotiable instruments for the purposes of the Uniform Commercial Code.

(d) Bonds issued under this chapter may be sold at public or private sale in the manner, for the price or prices, and at the time or times that the authority may determine.

(e) The superior court shall have jurisdiction to hear and determine suits, actions, or proceedings relating to the authority, including suits, actions, or proceedings brought to foreclose or otherwise enforce a mortgage, pledge, assignment, or security interest or brought by or for the benefit or security of a holder of its bonds or by a trustee for or other representative of the holders.

(f) Before issuing bonds for a project under this chapter, the authority shall submit to the state bond committee a description of the bond issue and an independent economic feasibility analysis of the project and expected revenue. This information may be contained in a preliminary prospectus, offering circular, or official statement relating to the bond issue. Bonds may not be issued under this chapter unless the state bond committee finds, based upon the information submitted by the authority under this subsection and other information that is reasonably available to the committee, that the project revenue can be reasonably expected to be adequate for payment of the principal and interest on the bonds to be issued if the bonds are to be secured by project revenue alone, and in any event that issuance of the bonds by the authority would not be expected to adversely affect the ability of the state or its political subdivisions to market bonds.

(VII) Clean Water Bonds, International Revenue Airport Bonds, Toll Facilities Revenue Bonds, Sport Fishing Facility Revenue Bonds, Pension Obligation Bonds
See AS 37.15.010 - AS 37.16.900.

(VIII) Alaska Railroad Corporation
Sec. 42.40.285. Legislative approval required. Unless the legislature approves the action by law, the corporation may not

(1) exchange, donate, sell, or otherwise convey its entire interest in land;

(2) issue bonds;

(3) extend railroad lines; this paragraph does not apply to a spur, industrial, team, switching, or side track;

(4) lease land for a period in excess of 55 years unless the corporation reserves the right to terminate the lease if the land is needed for railroad purposes;

(5) apply for or accept a grant of federal land within a municipality; before approving an action under this paragraph, the legislature must determine that the federal land is required for essential railroad purposes; this paragraph does not apply to the application for or acceptance of a grant of federal land associated with

(A) the Anchorage-Wasilla line change project on Elmendorf Air Force Base and Fort Richardson;

(B) the Fairbanks intermodal rail yard expansion project;

(C) a conveyance of rail properties of the Alaska Railroad under the original Alaska Railroad Transfer Act of 1982 as set out in Title VI, P.L. 97-468; in this subparagraph, "rail properties of the Alaska Railroad" has the meaning given in 45 U.S.C. 1202(10).

Sec. 42.40.570. Kenai gasification project. (a) The corporation may participate in a project consisting of the acquisition, construction, improvement, maintenance, equipping, and operation of real and personal property, including facilities and equipment for the transportation of coal from Healy to the northern Kenai Peninsula, and facilities and equipment for coal gasification and electrical power generation adjacent to the Agrium fertilizer plants in the northern Kenai Peninsula.

(b) The corporation may participate in a project consisting of the acquisition, construction, improvement, maintenance, equipping, and operation of real and personal property, including facilities and equipment, for the transportation of coal by rail from Healy to Port MacKenzie and thereafter by barge to the northern Kenai Peninsula.

(c) The corporation may finance all or a portion of the projects described in (a) and (b) of this section through the issuance of its bonds.

Sec. 42.40.600. General provisions. (a) Upon receiving legislative approval under AS 42.40.285 the corporation may issue bonds by resolution to provide money to carry out its purposes.

(b) Bonds may be issued in one or more series and shall, as provided by the resolution of the board,

(1) be dated;

(2) bear fixed or variable interest at a specified rate or rates per year or within a maximum rate;

(3) be in a specified denomination;

(4) be in a coupon or registered form;

(5) carry conversion or registration provisions;

(6) have a specified rank or priority;

(7) be executed in the specified manner and form;

(8) be payable as specified from the sources, in the medium of payment, and place or places inside or outside the state;

(9) be subject to authentication by a trustee or fiscal agent; and

(10) be subject to terms of redemption with or without premium.

(c) Bonds may be sold in the manner, on the terms, and at the price the board determines. Notes shall mature at the time or times determined by the board. Except for bond anticipation notes, notes, or other obligations, bonds shall mature at the time, not exceeding 50 years from their date, determined by the board.

(IX) Alaska Energy Authority

Sec. 44.83.100. Bonds of the authority. (a) The authority may borrow money and *may issue bonds,* including but not limited to bonds on which the principal and interest are payable (1) exclusively from the income and receipts or other money derived from the

project financed with the proceeds of the bonds; (2) exclusively from the income and receipts or other money derived from designated projects whether or not they are financed in whole or in part with the proceeds of the bonds; (3) from its income and receipts or other assets generally, or a designated part or parts of them; or (4) from one or more revenue-producing contracts including a contract providing for the security of the bonds made by the authority with any person. The authority may issue bonds to pay, fund, or refund the principal of, or interest or redemption premiums on, bonds issued by it, whether or not the bonds or interest to be funded or refunded have become due.

. . . . . .

(X) Alaska Industrial Development and Export Authority

Sec. 44.88.090. Bonds of the authority. (a) The authority may borrow money and *may issue bonds*, including but not limited to bonds on which the principal and interest are payable

(1) exclusively from the income and receipts or other money derived from the project or development project financed with the proceeds of the bonds or derived from the exporter or exporting transaction financed, guaranteed, or insured with the proceeds of the bonds;

(2) exclusively from the income and receipts or other money derived from designated projects or development projects or other sources whether or not they are financed, insured, or guaranteed in whole or in part with the proceeds of the bonds; or

(3) from its income and receipts or other assets generally, or a designated part or parts of them.

. . . . . .

Sec. 44.88.095. Bonding limitations. (a) The authority may not issue bonds in a 12-month period in an amount that exceeds $400,000,000.

. . . . . .

TEMPORARY LAW RELATED TO BONDS

Enclosed are copies of temporary law related to bonds. I have searched only back as far as the Eighteenth Legislature.

Gas Issues & Alaska's Fiscal Design

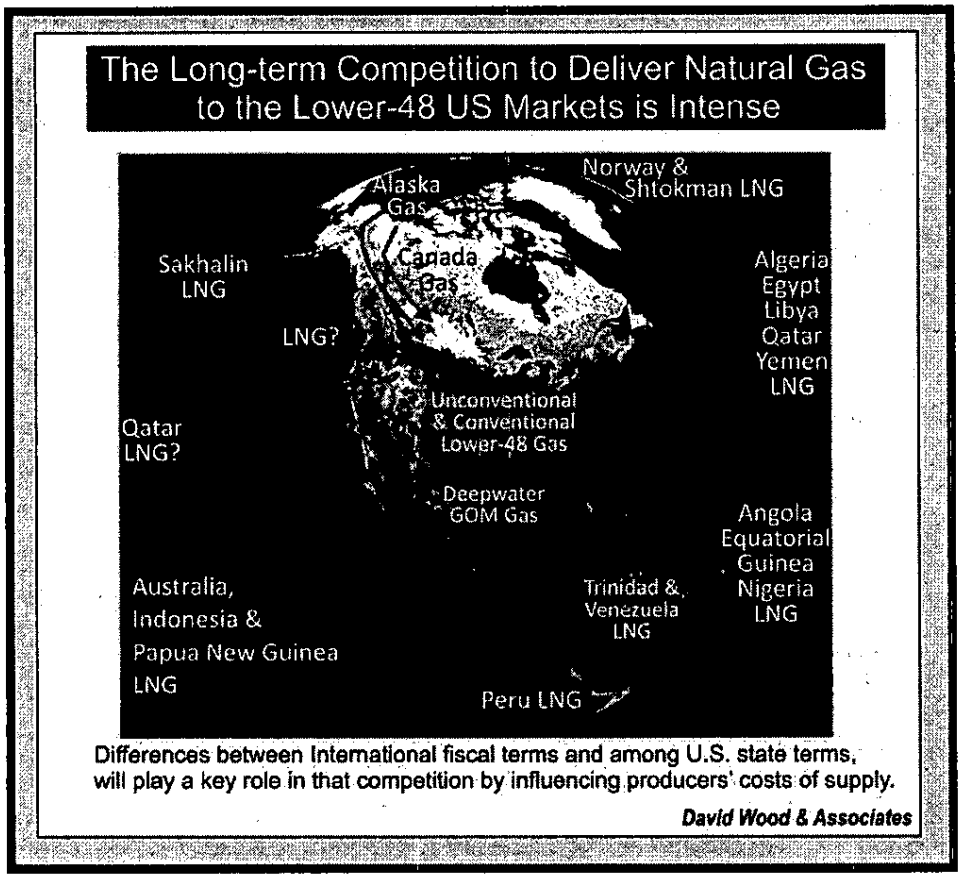
Presentation Structure

This presentation focuses the key issues pertaining to natural gas in Alaska in the context of establishing a long-term and enduring fiscal design.

- What are the issues for Alaska's fiscal regime when applied to gas?
- What are the fiscal designs applied by other countries?
- What are the risks and opportunities for international gas suppliers?
- Alaska's Prevailing Fiscal design
- Complications of combined oil and gas progressivity tax (CPT)
- Multi-year and multi-scenario fiscal performance cash flow models
- Conclusions and recommendations

What are the issues for Alaska's fiscal regime when applied to gas?

Alaska is One of Several Potential Long-term Suppliers of Natural Gas to Lower-48 U.S.

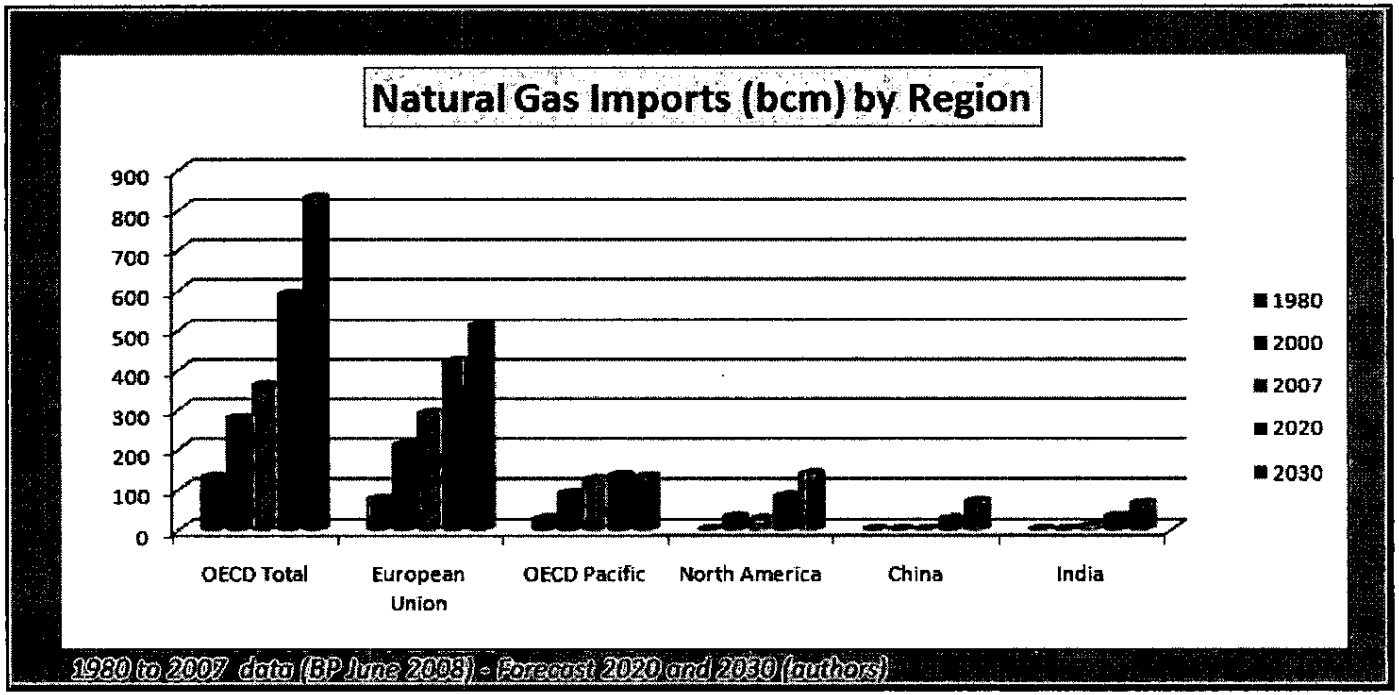


Fiscal terms are one of several factors that influence the delivered price of gas into a market and it is important to understand differences among competing sources.

The differences usually go far beyond a simple percentage sovereign take comparison.

International Gas Markets are Growing - Competition for Gas is Increasing

How key global gas import markets compare and are forecast to grow in absolute terms (bcm = billions cubic metres; 35.3 bcf = 1 bcm).



Michael Economides & David Wood , Journal of Natural Gas Science & Engineering, May 2009

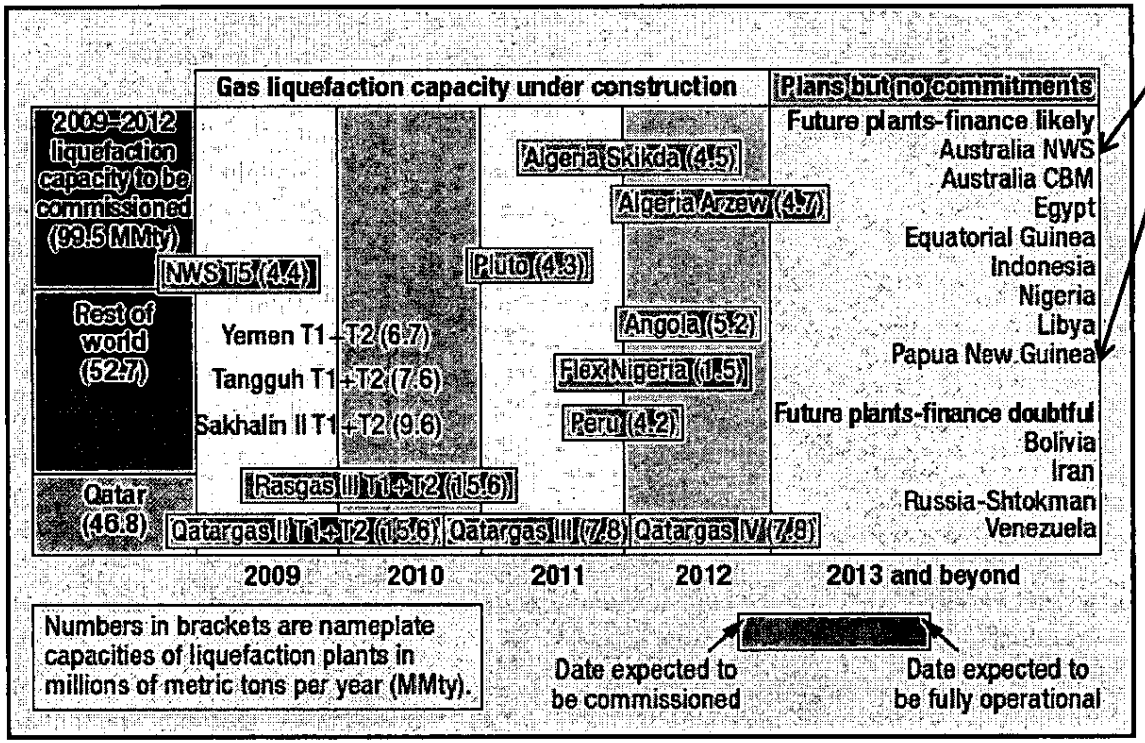
Worldwide New Gas Liquefaction Developments to 2013 and Beyond

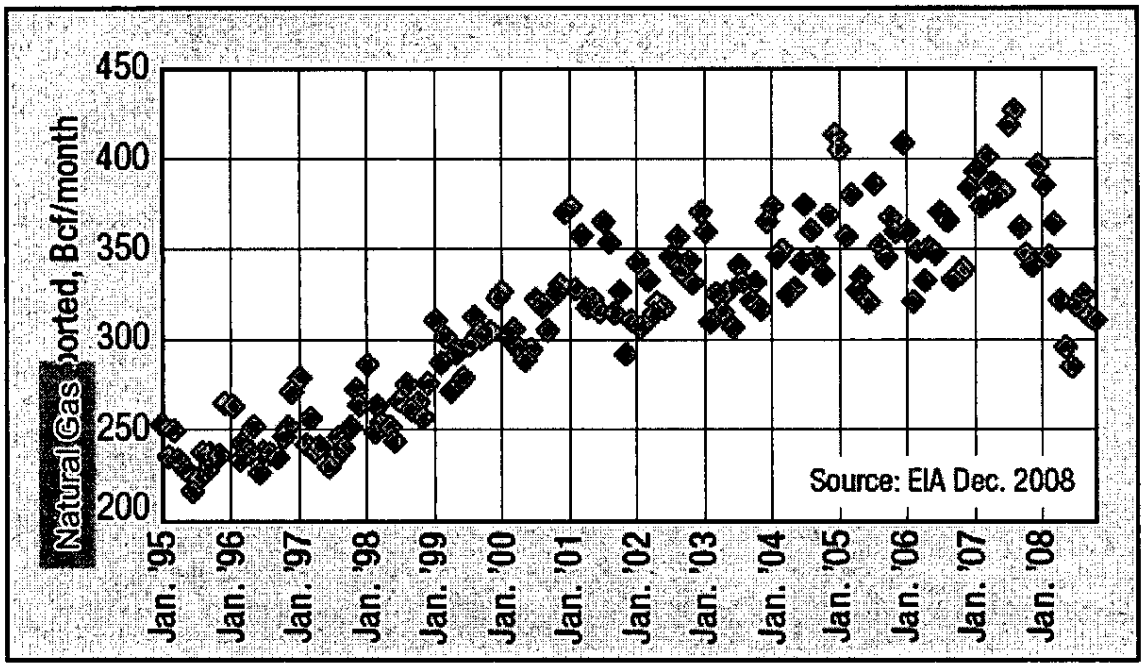
Large new capacity of LNG coming into the market with new plants under construction. Big commitments for new plants in Australasia made progress in 2009.



From David Wood *"Uncertain supply and demand outlook for LNG."* **World Oil** (February 2009)

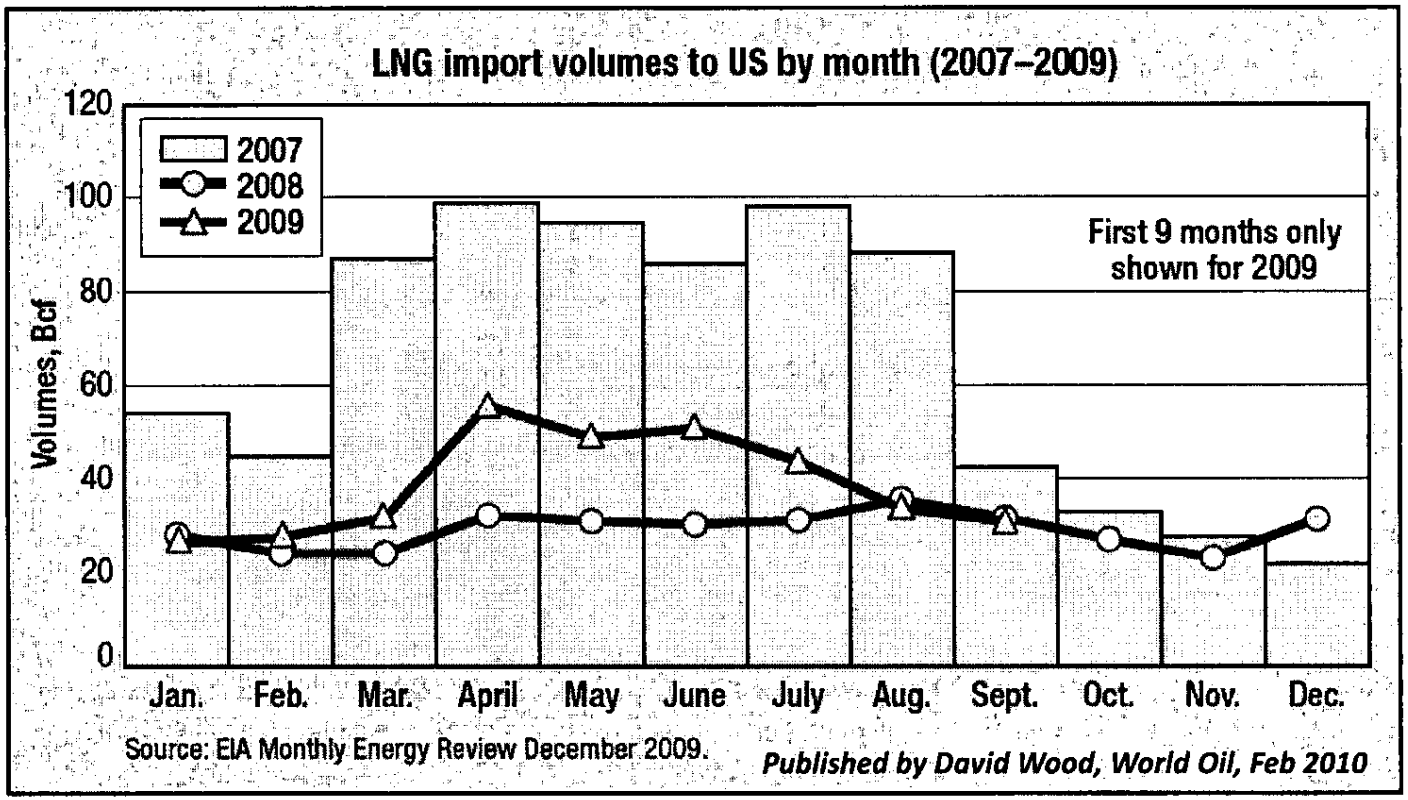
Gas Imports to U.S. Decline in 2008 For First Time in More than a Decade

Greater Lower-48 gas production in 2008, particularly shale gas, led to a reduction in US gas imports which has persisted. Alaska gas will be competing with shale gas for lower-48 which has a different resource and cost base and fiscal structure.

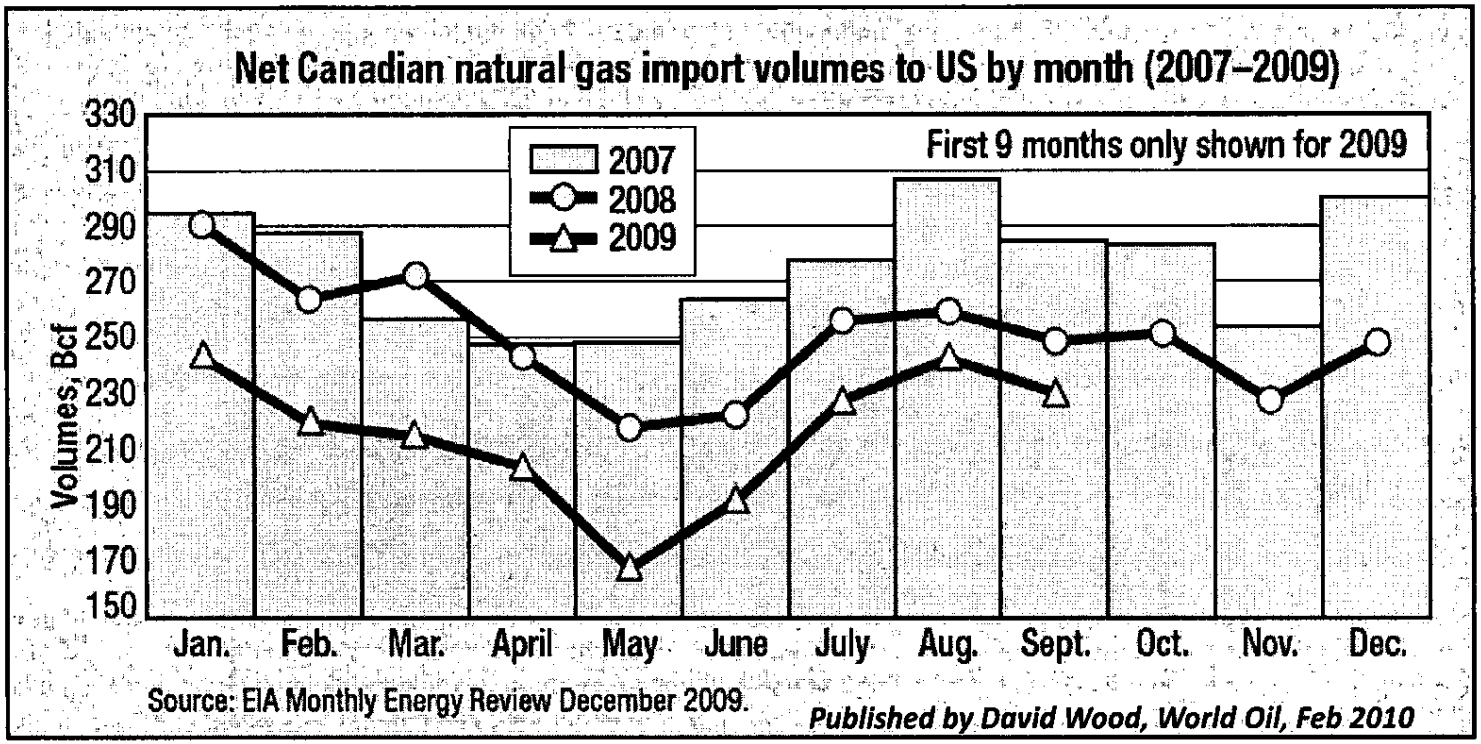


From David Wood *"Uncertain supply and demand outlook for LNG."* **World Oil** (February 2009)

LNG Imports to U.S. are Down
Is that Permanent? Shale Gas Effect?

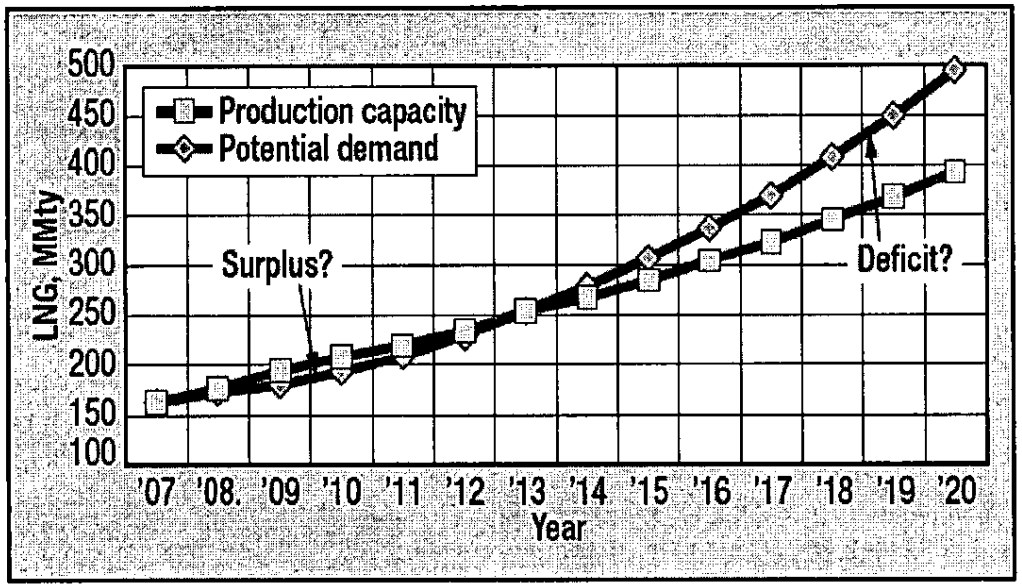


Canadian Gas Imports to U.S. are Down
Is that Permanent? Shale Gas Effect?



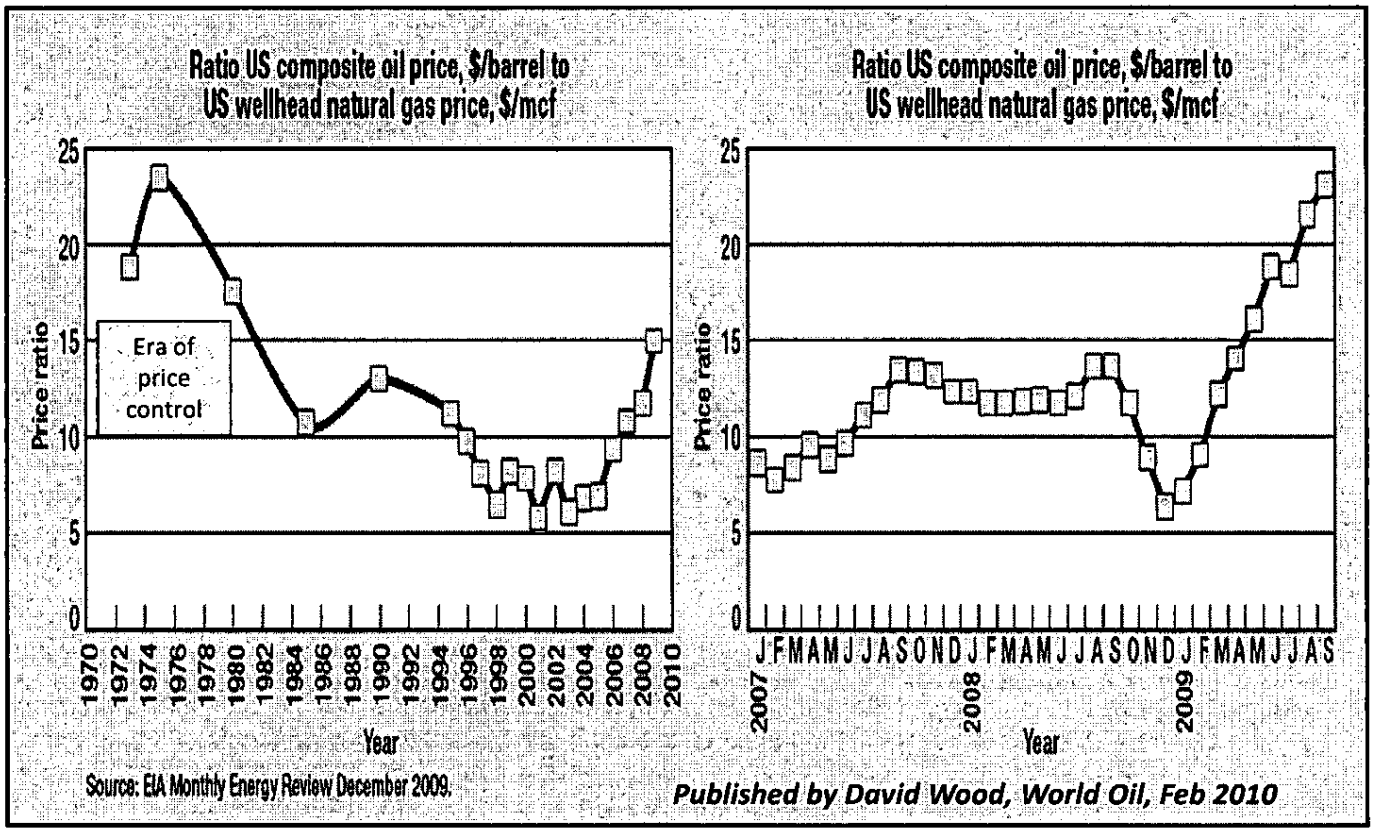
Global LNG Supply Demand Forecast to 2020

Natural gas surplus due to economic downturn and development of competing supplies is leading to over-supply and lower prices forecast to last perhaps to 2012 for internationally traded LNG. This surplus may itself fuel supply shortfalls globally beyond 2013 and higher prices 2015 to 2020.



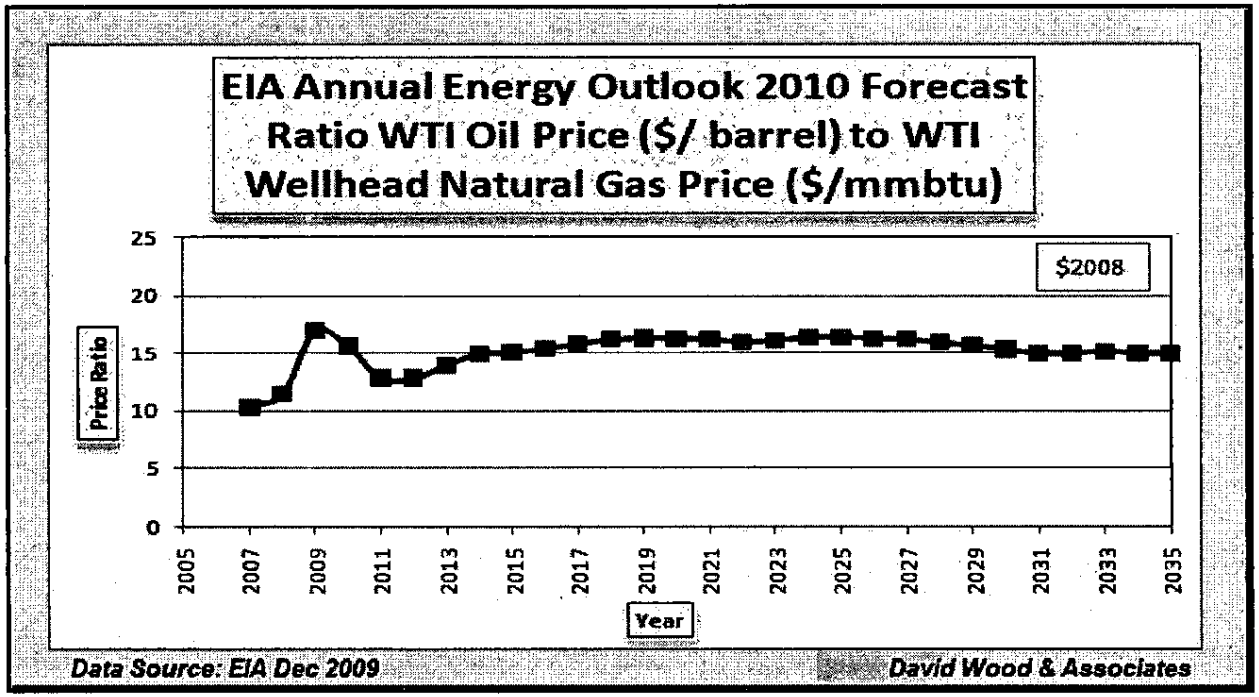
From David Wood *"Uncertain supply and demand outlook for LNG."* **World Oil** (February 2009).

U.S. Oil to Gas Price Ratio
What Range Should Fiscal Designs Consider?



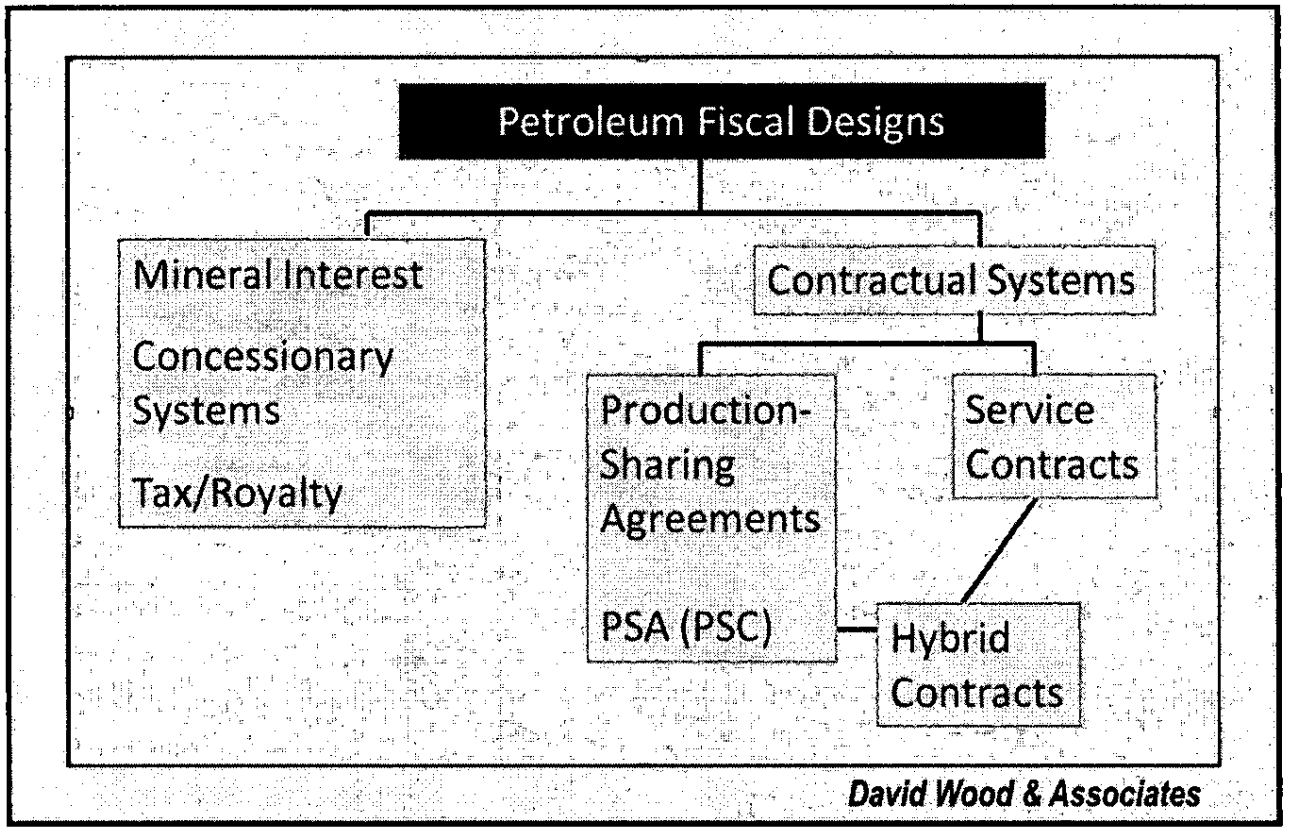
Latest U.S. Government Forecast Shows High Oil to Gas Price Ratios Through to 2035

Fiscal designs should be stable under a wide range of oil: gas price ratios (e.g. stress test them with ratios of 2 to 30).

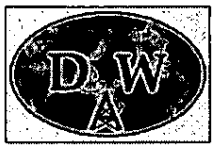


What are the fiscal designs applied by other countries? and what are the risks and opportunities?

Summary of International Upstream Oil & Gas Fiscal Designs



Norway:
Fiscal Terms Summary



Norway operates a mineral interest system. There are no bonuses or royalties and the fiscal take comes from *progressive* instruments.

- Royalty 0% and no bonuses but marginal tax burden is some 78%
- Corporate Tax (CT) 28% of taxable income
- No ring fences with CT base established at the company Level.
- Special tax rate 50% with investment uplift of 7.5% for 4 years deducted from CT base. Uplift shelters marginal fields.
- Tax of CO_2 emissions at 0.79 NOK (~10 US cents)/ m^3 CO_2
- Gas taxed on bases of actual realised prices.
- Strict rules applied concerning prices of gas transfer between affiliates.
- Stated fiscal strategy is *that the tax system should act as a sleeping partner providing producers with technical control and ensuring that any investment decision that is commercially viable before tax should remain viable after tax.*
- This system secures high fiscal takes for the government (close to 80%), but has still attracted large and small international investors.
- State is actively involved as an equity participant through its NOC (Statoil).

Papua New Guinea (PNG): Fiscal Terms Summary

Papua New Guinea (PNG) operates a mineral interest system. It has relaxed fiscal terms since 1990's as fields under development have declined. Upsurge in interest in large LNG projects led to legislative changes offering progressivity and stability.

- Royalty 2%
- Income tax (IT) 30% for gas (50% for oil)
- Additional Profits Tax (APT) 7.5% after 17.5% post-IT IRR reached for project and 10% after 20% post-IT IRR reached for project.
- State equity participation 22.5% (2% of which goes to landowners)
- Partial carry for the state
- Past exploration costs recoverable through 20-year carry-forwards
- Marginal field incentives: e.g. accelerated depreciation
- ExxonMobil (41.6%) and partners completing FEED studies and a final investment decision for PNG LNG is expected in 2010
- Long-term gas buyers in China and Japan now secured.

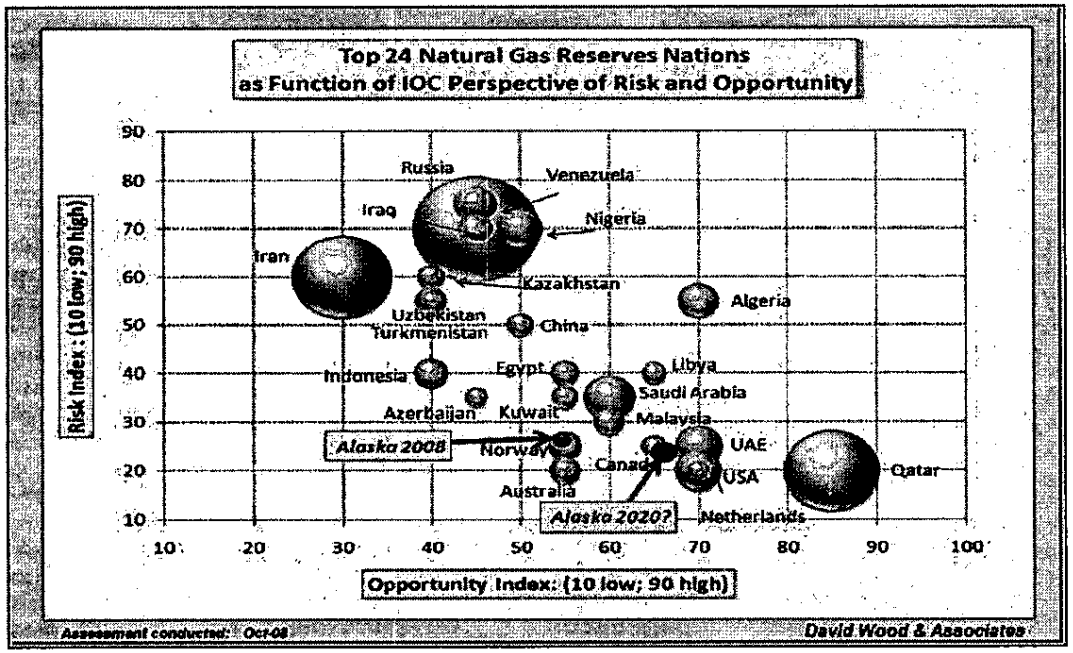
Australia:
Gas Fiscal Terms Summary

Australia operates a mineral interest system. Its fiscal take is above 70% and comparable to that of Alaska, but it is much more successful at securing investment and buyers for its high cost isolated gas resources.

- Australia has progressively shifted from traditional volume based royalty arrangements to the more progressive petroleum resource rent tax (PRRT)
- PRRT is levied at a rate of 40% of a project's taxable profit.
- PRRT payments are deductible for company income tax rate of 30%.
- PRRT is only payable once project cash flow basis achieves a rate of return of 5% over the long term bond rate on the development investments and 15% rate of return over the long term bond rate on exploration or risk capital investment. [This limit and cost uplift prevent PRRT becoming regressive]
- Explorations costs are uplifted at 15% (other costs uplifted at 5%) above long-term bond rate to partially compensate for time-value issues as there is a long lead time from discovery to positive cash flow.
- IOC majors committed in excess of $20 bn investment in LNG projects in 2009.
- Long-term gas buyers in China and Japan now secured.

Alaska Gas Compared on International Scale of Risk versus Opportunity

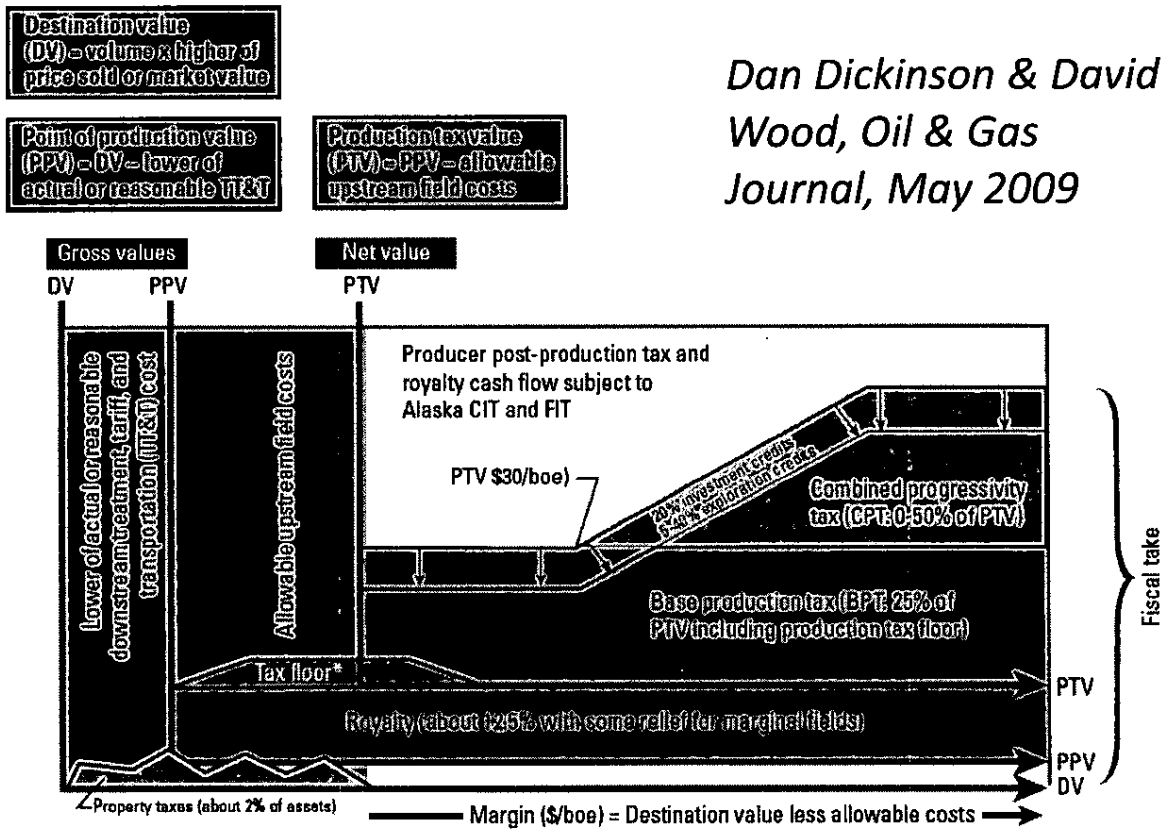
The diameters of the bubbles are proportional to proved natural gas reserve holdings as reported by BP Statistical Review (June 2008).



Alaska marked on the framework from David Wood *"Global perspectives required for risk, opportunity analyses."* **Oil & Gas Journal** (9Feb, 2009).

Alaska's Prevailing Fiscal design

Schematic of Alaska's Prevailing Oil & Gas Fiscal Design



Dan Dickinson & David Wood, Oil & Gas Journal, May 2009

Regressive & Progressive Elements of Alaska's Prevailing Oil & Gas Fiscal Design

Regressive fiscal elements	Progressive fiscal elements
• Property taxes are levied on assets in theupstream orTT&T services and shared between the state and local governments • Royalty is levied at point of production value (PPV) • *Tax floor refers to a production floor levied at 0-4% of PPV in place of BPT when that floor value is higher than the BPT value	• Production taxes (BPT and CPT) are taxes paid on net value or margin • Progressivity component of production tax (CPT) commences at PTV of $30/boe • Alaska corporate income tax (CIT) of 9.4% is levied on producer's worldwide income apportioned to Alaska. CIT is deductible from federal income tax (FIT)

Dan Dickinson & David Wood, Oil & Gas Journal, May 2009

Key Regressive Elements in Alaska's Prevailing Fiscal Design

There are three elements that make Alaska's prevailing fiscal design regressive.

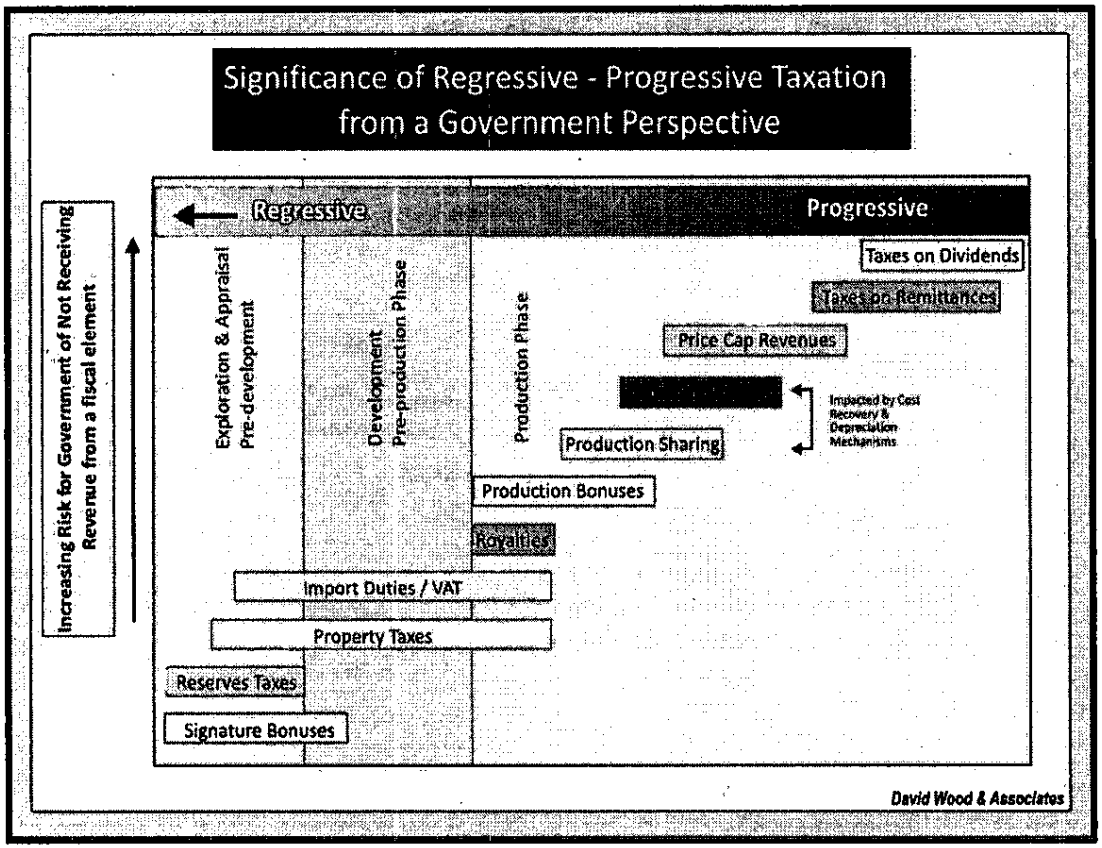
- Royalty
- Property Taxes
- Production Tax Floor

These regressive elements are partially offset by:

- Investment credits (exploration and development)
- Production taxes (levied after deduction of all allowable costs)
- Progressivity tax (only levied on high value streams)

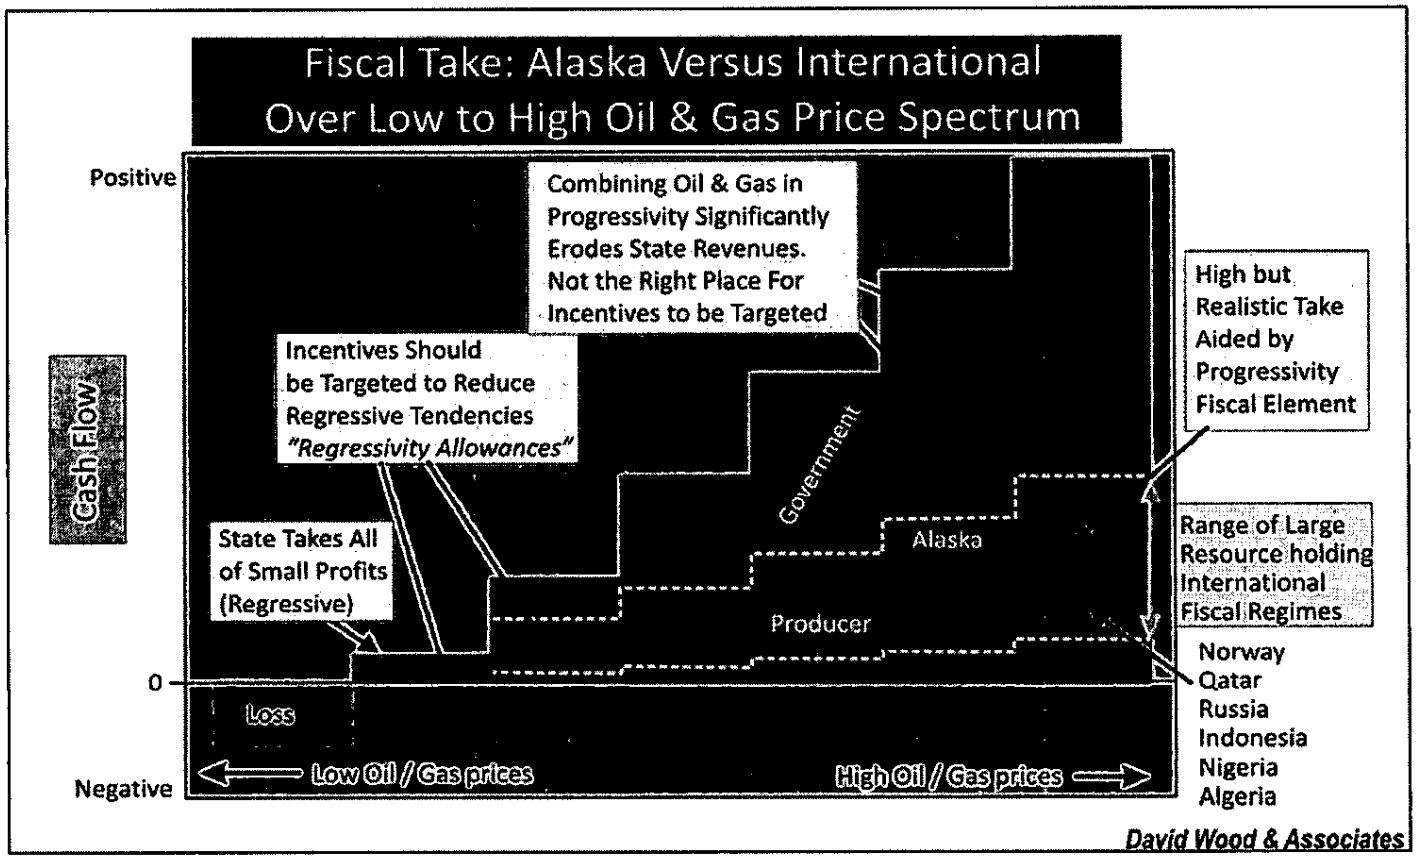
Other allowances / credits for producers should be considered to offset impacts of regressive elements coupled with tougher progressivity terms.

Progressive & Flexible Fiscal Designs Help to Promote Investment



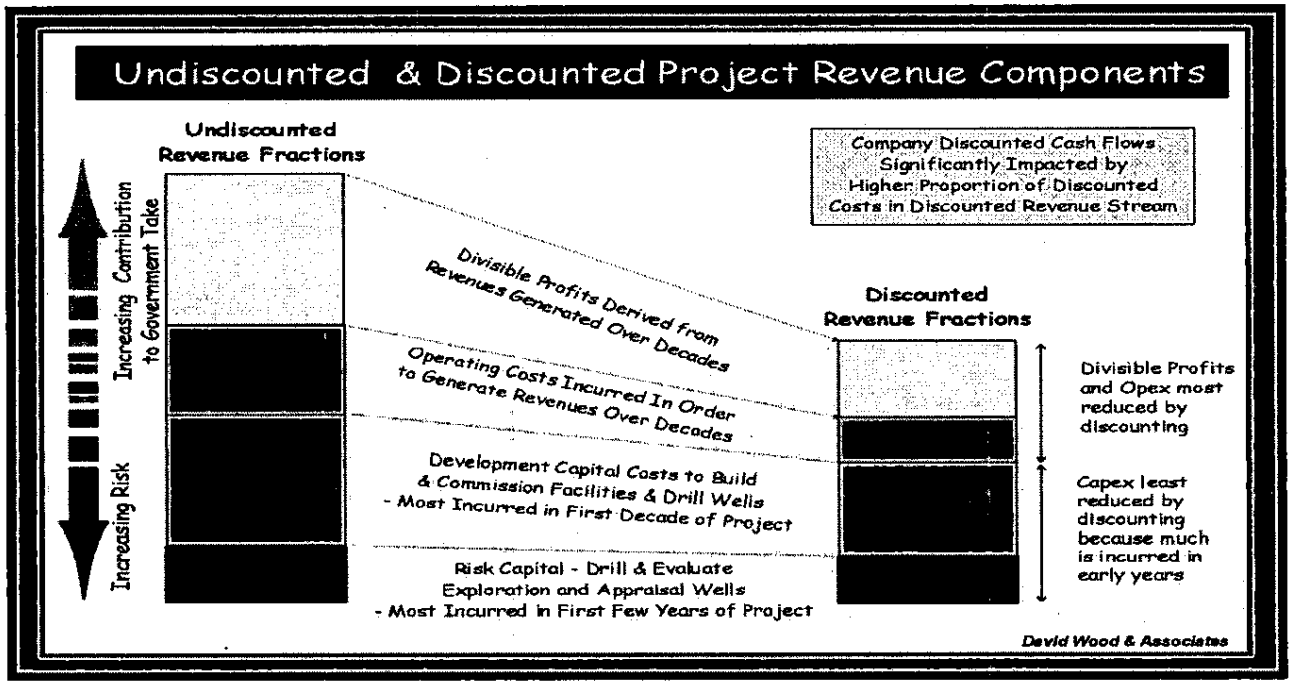
The stronger the commitment made by governments to promote a commercially attractive environment, the more likely investors are to commit investments without guarantees of fiscal stability.

Progressivity Should Work Well For Alaska: It's the Regressive Elements that Need Relief



High Discount Rates Suggest Higher Government Take of Revenues

It is appropriate for governments to use lower discount rates than producers. However, high discount rates impact *long-term* divisible profits and operating costs more than upfront capital costs so diminish producer take.



Complications of combined oil and gas progressivity tax (CPT)

Problems with Alaska's Current Progressivity Tax from the Natural Gas Perspective

The models of a wide range of gas field sizes suggest three issues associated with calculating production tax values using a combined oil and gas (boe) revenue stream.

- Large gas production volumes contributing low value to high value oil production can dilute the PTV/boe and progressivity of the combined stream.
- The PTV / boe threshold (i.e., trigger point) at which progressivity tax becomes initially payable are set too high for natural gas.
- Tying the production tax floor to PPV can lead to regressive consequences for gas producers in high cost / low value conditions.

Impact of Natural Gas on Combined Oil & Gas Production Tax

Analysis has identified that three factors are relevant to the dilution effects under prevailing production tax paid by an existing oil- only case with the addition of gas production (and vice versa – i.e. oil added to a gas-only case). These factors are:

1. Magnitude of value differential between oil and gas streams (high oil value minus low gas value, or high gas value minus low oil value);

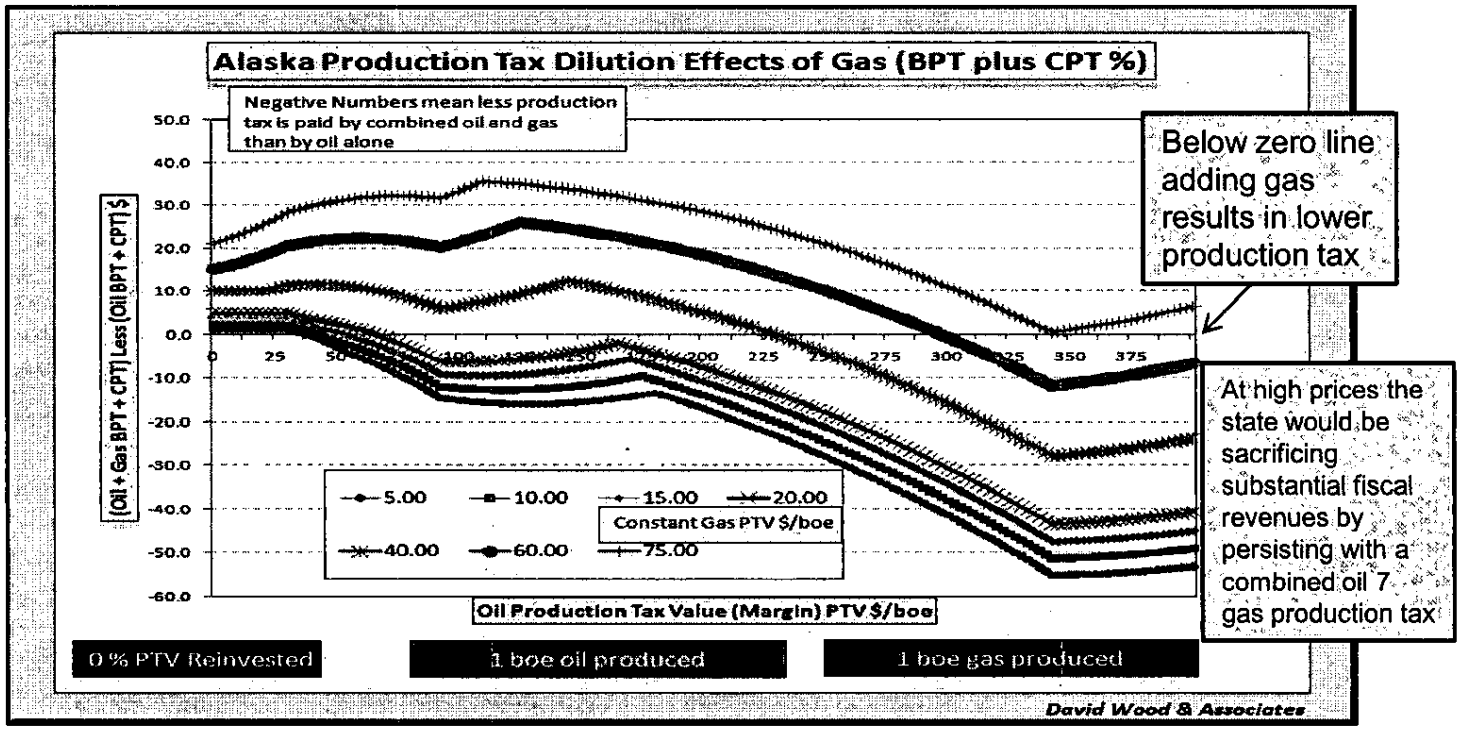
2. Relative volumes of oil and gas produced contributing to combined production tax boe stream.

3. Amount of PTV reinvested, which depending on the PTVs of each stream can have a significant impact

An Excel computer model has been developed to test these three factors.

Natural Gas Dilution Effects on Combined Oil & Gas Production Tax

The trends are non-linear with slope changes because of the changing gradients of the production tax progressivity mechanism (i.e. 0.4/boe to 0.1/boe) and the threshold values at which those changes occur.



DOR High-level Model Adjusted To Calculate Oil & Gas Combined as BOE

The Department of Revenue (DOR) model presented on 22 Feb 2010 has been reviewed and tested for functionality . With a few minor corrections and modifications to this model can be made to calculate 1 boe rather than 1 barrel by adding inputs for:

	One BOE Comparison of Current to Modified				
14.17	Natural Gas Destination Price $/mmbtu	6	Oil:Gas Price (Parity X:1)		
	Modifications - $ Per Barrel				Oil:Gas Parity Fraction Macro DW
0.5	Fraction of Natural Gas to Oil in boe production			generic mmbtu/boe:	6
24.0	Gas Transport Cost $/boe				
	Item	Current $/boe	Modified $/boe	Difference $/boe	
85	**Base Case Oil Price**				
	Determining the per barrel taxable value at the point of production				
85	Boe Destination Price (Oil:Gas Mix)	$85.00	$85.00	$0.00	Destination prices for crude and gas
7	Less Transportation Cost (oil:gas mix)	$15.50	$15.50	$0.00	For oil = TAPS tariff plus shipping
	Gross Value at Point of Production	$69.50	$69.50	$0.00	
0.125	Royalty	$8.69	$8.69	$0.00	By lease with 12.5% most common
16.26	Less Upstream Costs	$16.26	$16.26	$0.00	Opex plus Capex
	Production Tax Value (PTV)	$44.55	$44.55	$0.00	
	Taxable Barrels (1-royalty %)	0.875	0.875	$0.00	
	PTV / taxable bbl	**$50.92**	**$50.92**	$0.00	Gross Up Production

Modifications Made to DOR Model to Calculate BOE

- (A) Oil: Gas Price Parity (Cell C3) and used that to calculate a gas price ($ mmbtu) (cell A3)
- (B) Gas: Oil fraction per boe of production (cell A5)
- (C) Gas transportation cost (Cell A6)
- (D) The defined 6 mmbtu per boe from ACES (Cell F5)

These inputs are then used to recalculate:

- A boe destination price in cells C10 and D10 (rather than just oil price in DOR version)
- A boe transportation cost in cells C11 and D11 (rather than just oil price in DOR version)

Note: By setting A = 6 and B=0 the rest of the workbook calculates as it was presented by DOR (with corrections mentioned above). I have not reformatted the sheet but left it as per DOR's layout.

Case Combinations Evaluated with Modified DOR High-level Model

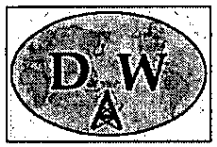
Variables		
Oil Price $/barrel	Oil: Gas Price Parity (X:1)	Fraction Gas: Oil (0 to 1)
20	2	0.0
40	4	0.1
60	6	0.2
80	8	0.3
100	10	0.4
120	12	0.5
140	14	0.6
160	16	0.7
180	18	0.8
200	20	0.9
300	30	1.0
Base Case		
85	6	0.5

In this modified form the workbook can be used to model the impacts of oil and gas streams of various proportions and price parities using DOR's high-level Alaska tax methodology.

The input data for the three key variables used can be varied by changing the values in the new table located in cell range C46:E60, which can be set to a user's preference.

A macro then evaluates and records selected outputs for all oil and gas scenarios.

Macro Calculates Large Number of Price Parity and Gas Fraction Cases Rapidly

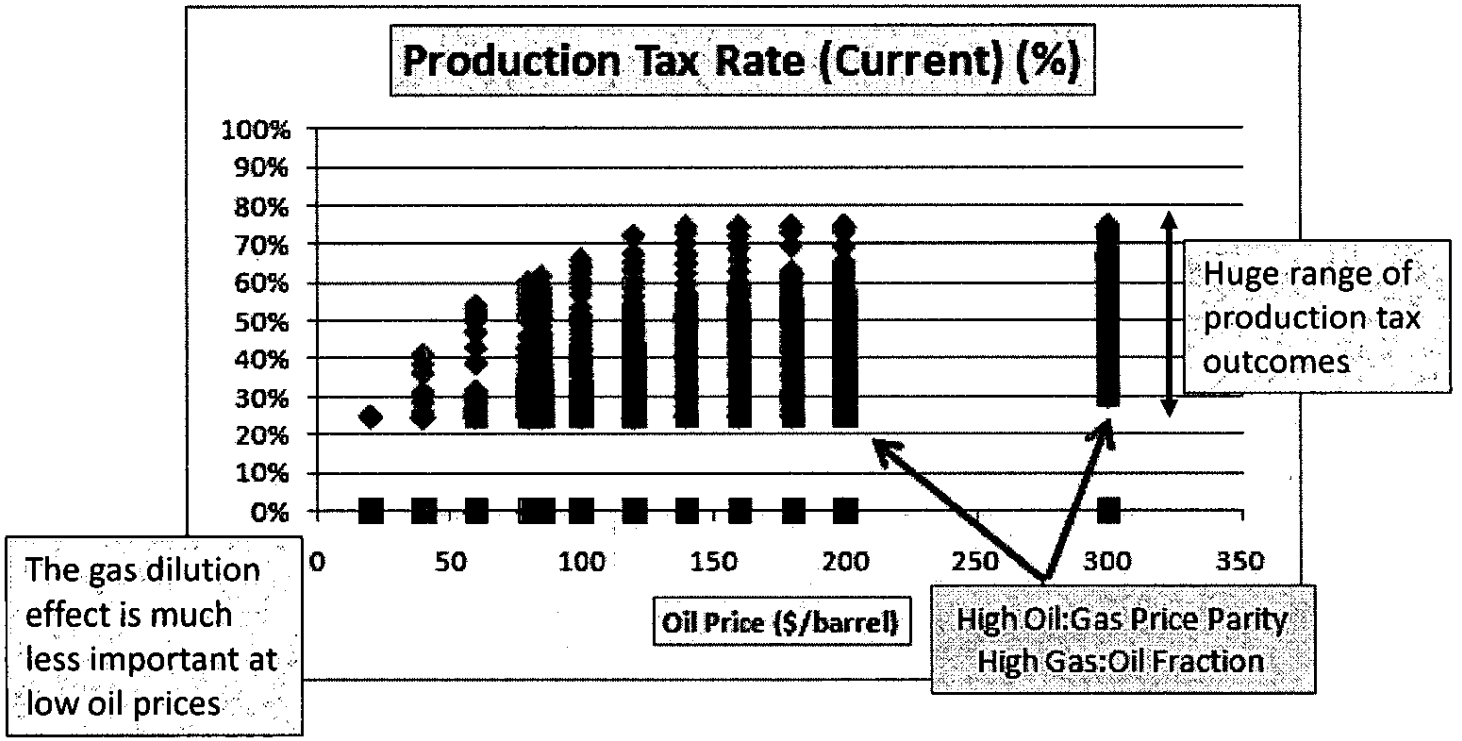


For the 12 X 12 X 12 input matrix the macro calculates 1728 values for each output variable recorded (more than 20000 values for 12 variables recorded). The macro places the recorded data into a table for analysis.

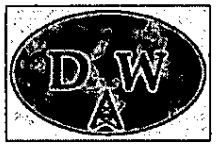
- For current and modified terms the macro records:
  - Production Tax Rate % from cell C25 on sheet Calc
  - Production Tax Value $/boe from cell C29 on sheet Calc
  - Producer's Take Rate from cell C42 on sheet Calc
  - Producer's Total Value $/boe from cell C37 on sheet Calc
  - State Take Rate % from cell C39 on sheet Calc
  - State Total Value $/boe from cell C33 on sheet Calc

Production Tax Rate Analysis for 1728
Macro Scenarios for Combining Oil and Gas

The red squares are the cases in which oil:gas price parity is >10 and gas:oil fraction of production mix is >0.5 on a boe basis.



Conclusions from Combined Oil & Gas Production Tax Model

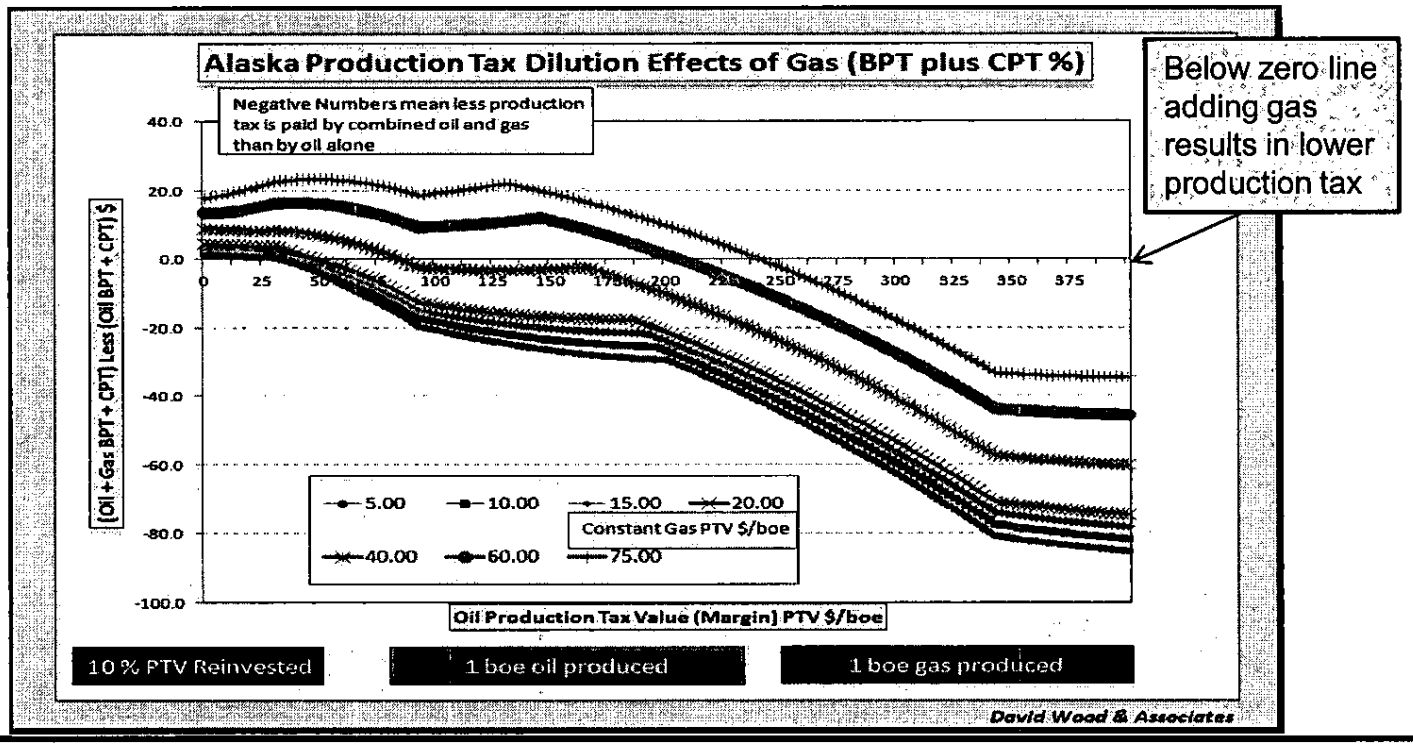


For the 12 X 12 X 12 input matrix the macro calculates 1728 values for each output variable recorded (more than 20000 values for 12 variables recorded). The macro places the recorded data into a table for analysis.

- It would be more stable to calculate Alaska's oil and gas production taxes separately and avoid boe complications particularly as oil : gas price ratio is unpredictable
- The dilution effect of gas should not be treated as a fiscal incentive as it is unpredictable in its impact
- Significant fiscal benefits of occasional price spikes on high production tax for gas or oil could be lost by persisting with a boe basis or combined calculation of the production tax value.

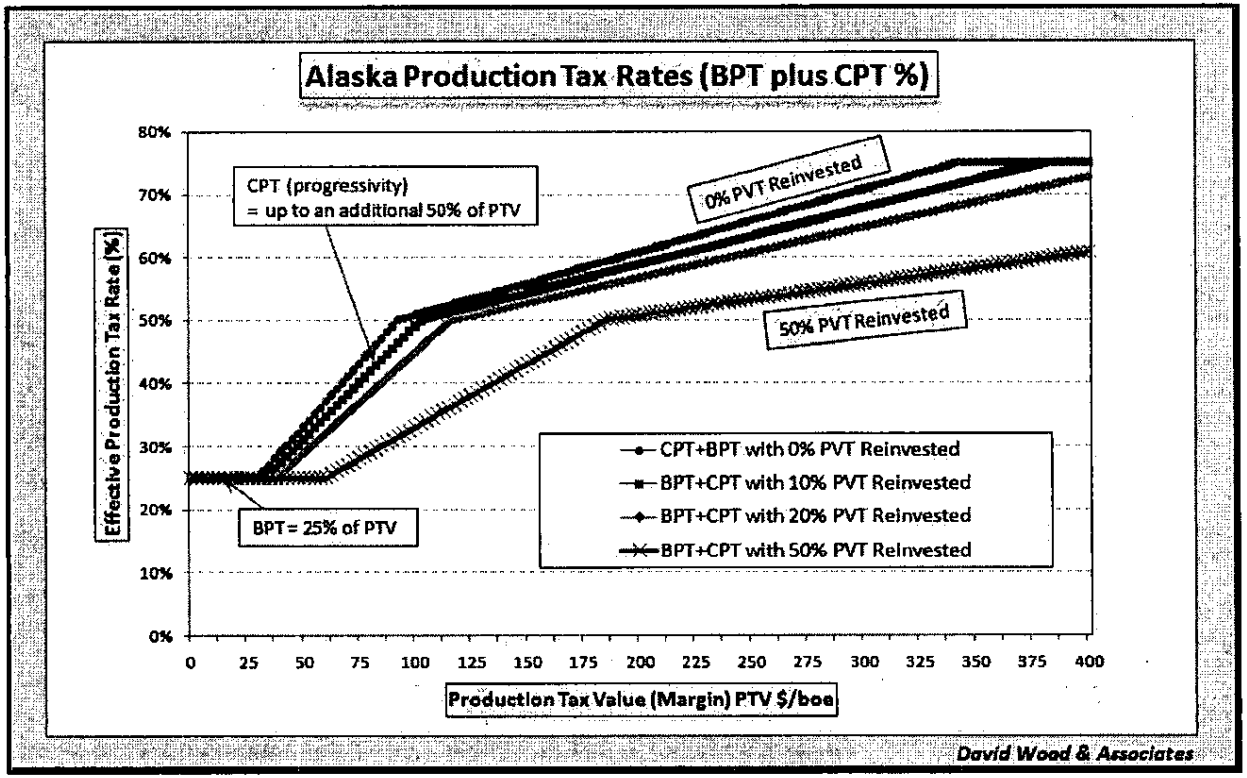
Natural Gas Production Tax Dilution Effects Impacted by Reinvestment

If some of the PTV is reinvested the reduction in production tax paid is significantly greater. This graph shows the impact of 10% reinvestment. [Model results presented in January 2009].



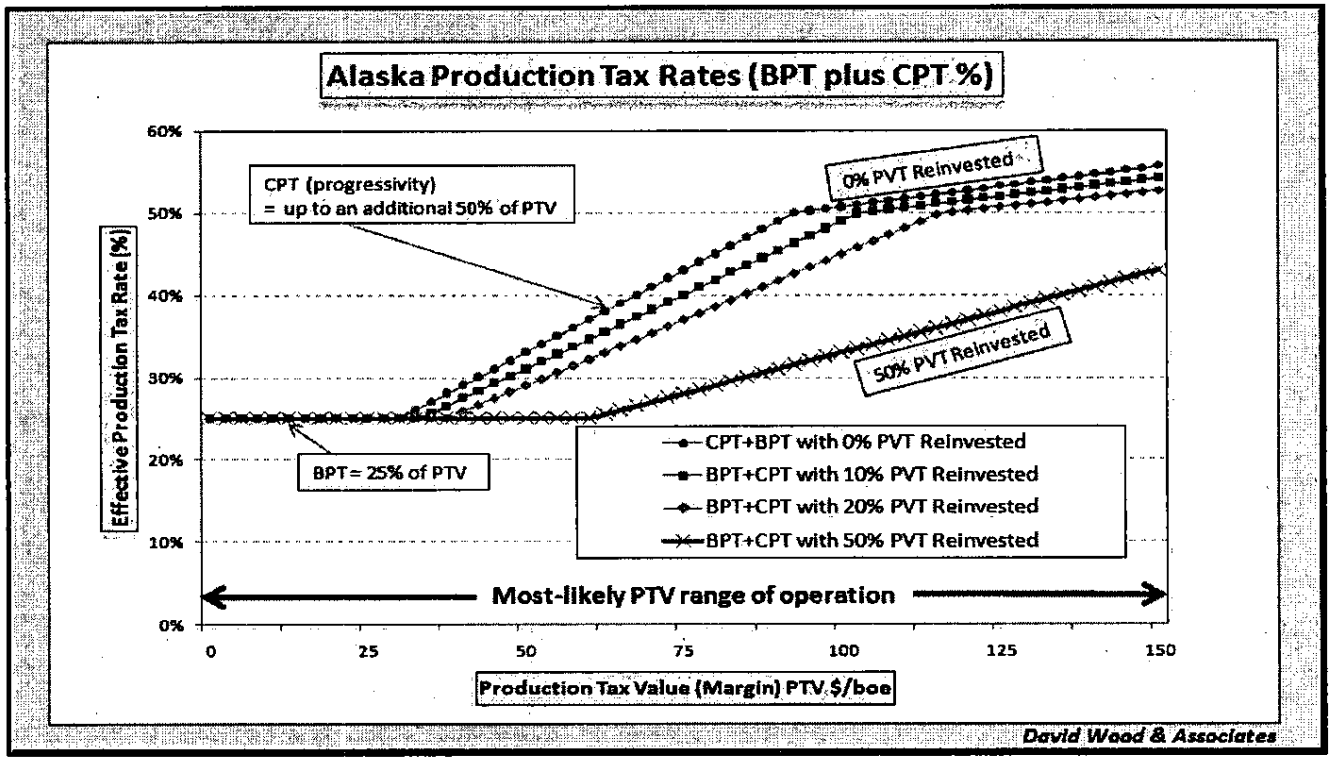
Natural Gas Production Tax Dilution Different Reinvestment Scenarios

The impact of several reinvestment scenarios – 0% , 10%, 20% and 50% of PTV - on production tax rates are illustrated in this graphic.



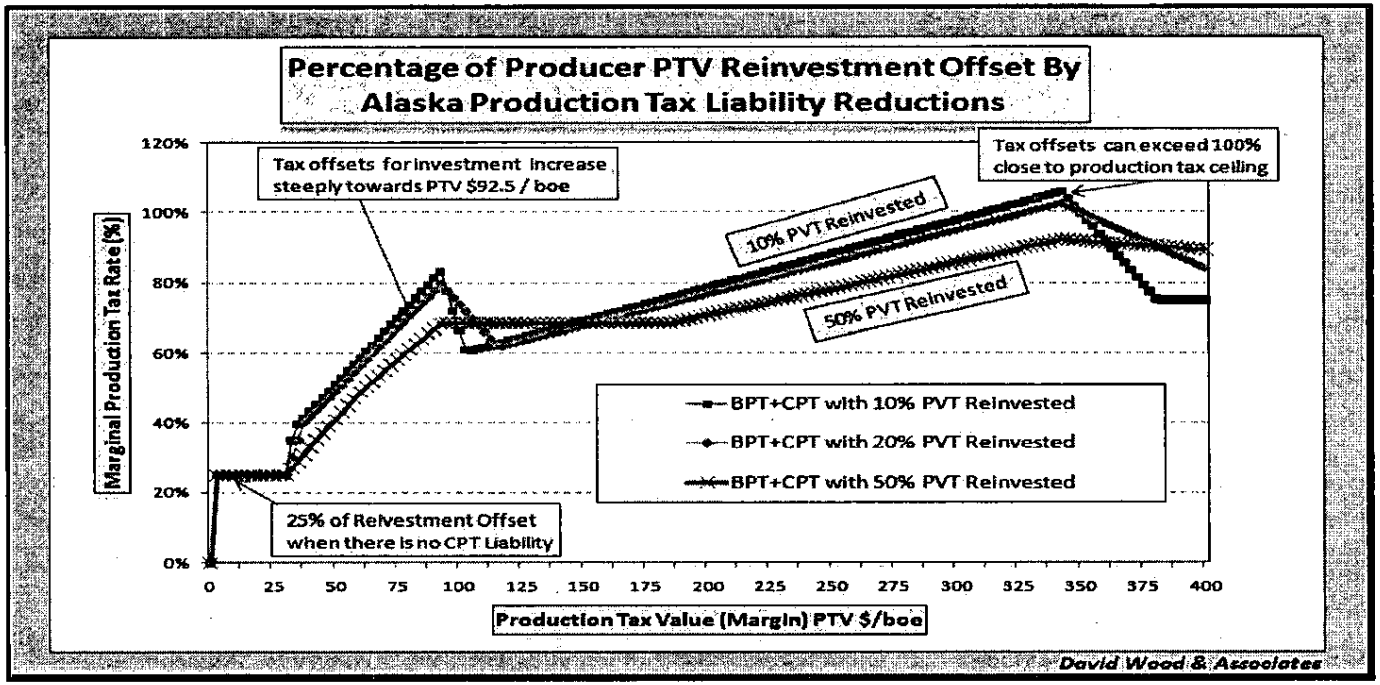
Reinvestment Scenarios For PTV Range $30/boe to $150/boe

For example production tax rate can be reduced from 49% to 42% at PTV $90/boe by reinvesting 20% of the PTV.

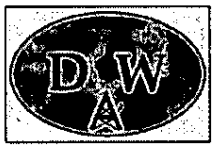


Marginal Production Tax Rates Seen by a Producer for Reinvestment Dollars

The vertical axis shows the percentage tax reduction associated with the incremental re-investment (or the marginal tax rate offset by the producer by its reinvestment). Note the peak around PTV$90/boe and values above 100% at PTV $350/boe plus multiple crossover points.



Implications of Combined Oil & Gas Production Tax Analysis



The analysis suggests that the prevailing production tax system has the following complications to address:

1. It is difficult to predict (from tax authority & producer perspectives) and relationships between oil and gas tax liabilities are non-linear;

2. The magnitude of the combined production tax impact caused by adding a gas production stream varies with relative oil and gas PTVs, oil and gas volumes and percentage of PTV re-invested;

3. Without detailed analysis (and speculative forecasting of oil and gas prices and boe contributions) Alaska's production tax outcomes can be counterintuitive (e.g. higher prices can lead to lower tax revenues collected by the State in some scenarios).

Alternative Drivers of Gas Progressivity Tax Evaluated by Fiscal Model

Ten different mechanisms are evaluated. No.1 represents the status quo evaluating gas progressivity as a combined revenue stream with oil (boe) were reviewed in December 2008 report to legislature.

1. CPT: 2008 Rules (combined PTV/boe)
2. GPT / OPT: separates gas and oil on PTV/boe scale ← The easiest first step
3. GPT /OPT: progressivity applied to only 33% of gas PTV
4. GPT: Gas PTV (based on Gas PTV / mmbtu)
5. GPT: R-Factor (cumulative PPV less royalty/cumulative gas costs)
6. GPT: IRR (Investor's Rate of Return of cumulative PTV)
7. GPT: Cumulative gas reserves produced
8. GPT: Annual gas production volumes
9. GPT: Cumulative gas PTV
10. GPT: Mechanism #9 plus allowances to counter regressive elements

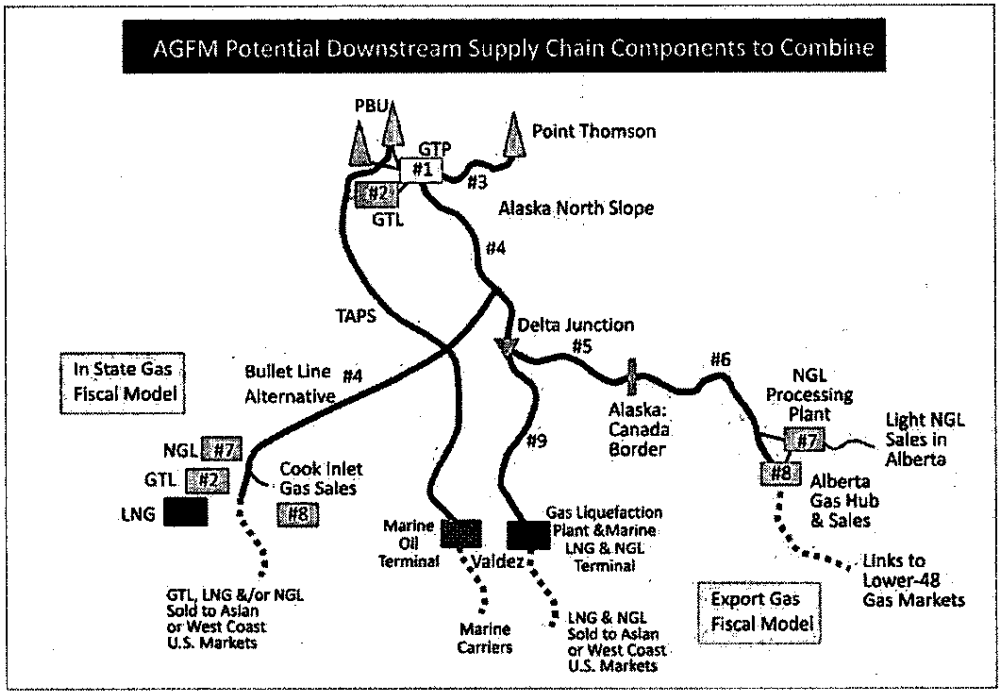
AGFM Now Extended to Evaluate In-state Gas Scenarios

The ten components are selected by entering "1" and de-selected by entering "0" on AGFMs dashboard.



Components "1", "2", "4", "7", "8" and "10" can be reconfigured to model gas export routes or to model In-State "Bullet Line" gas supply to Cook Inlet with optional NGL, GTL and / or LNG plants placed there for exports.

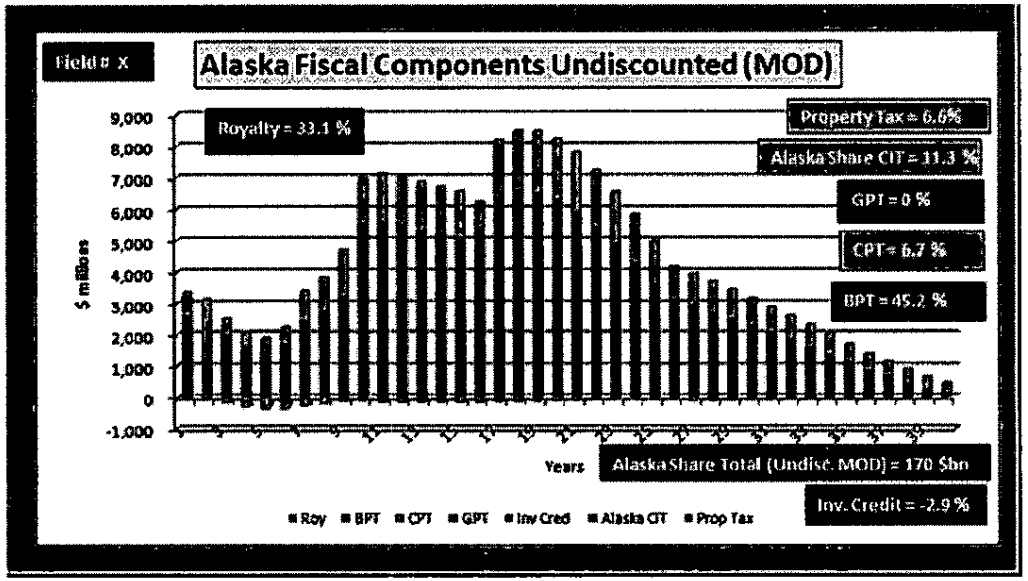
Note the graph shown highlights the start of supply chain, its expansion, gas plus NGL capacities and the multi-year tariff calculated.

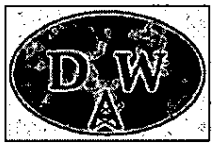
Contributions of Each Fiscal Element to Alaska's Take for Total North Slope (#11 -#14)

The relative contributions to Alaska's fiscal take for price scenario 1 and an ***Pipeline*** supply chain for the ***proved gas reserves*** combination of ***North Slope fields*** shows that gas production would ramp-up in stages, but proven reserves would not fill expanded capacity for more than 3 years.



There are many factors that can be varied in such combination scenarios. For example timing of each field coming on stream and capacity and timing of the gas supply chain infrastructure.

Alaska North Slope Production & Reserves are Dominated by Three Corporations



For fiscal analysis it is important to be able to model the expected fiscal returns from specific corporations. AGFM facilitates this by enabling percentage fractions of individual fields to be combined in a user definition area on sheet Fields.

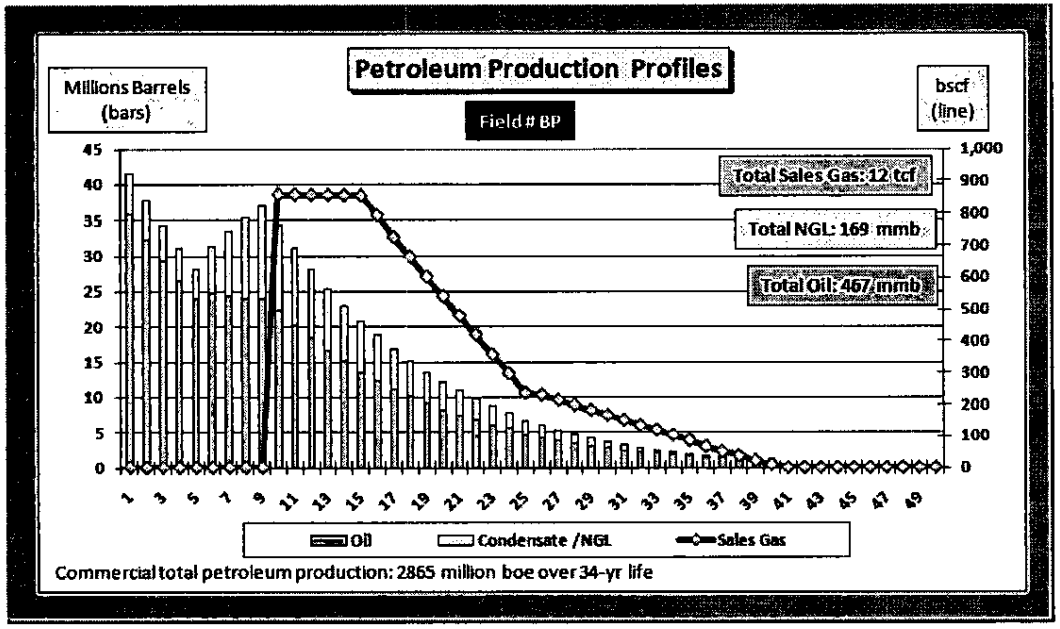
Company Holdings of Major North Slope Fields				
1	2	3	Field	
36.40%	26.36%	36.08%	Prudhoe Bay	Field#11
52.88%	29.19%	2.82%	Point Thomson	Field#12
0.98%	39.03%	55.04%	Kuparuk	Field#13
Exxon Mobil	BP	ConocoPhillips		

Three North Slope fields contain most of North Slope proved gas reserves.

By applying the corporate working interests to those fields a profile for each company can be approximated.

Alaska North Slope Production Profiles Forecast by AGFM for BP

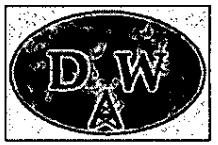
AGFM can be set up to apply corporate interests to the field data to approximate the position of a specific corporation. In this case combining "BP's interests" in Fields #11, #12 and #13 the major North Slope Analogues. [Note input assumptions are based on public domain data. In evaluating appropriate fiscal designs in the absence of data assumptions will be necessary]



These corporate profiles can be analysed in a similar way by AGFM to individual fields.

These forecasts are dependent on the assumptions and input made for the individual fields and supply chains, but are useful for indicative fiscal design evaluations.

Hypothetical Field Cases Evaluated

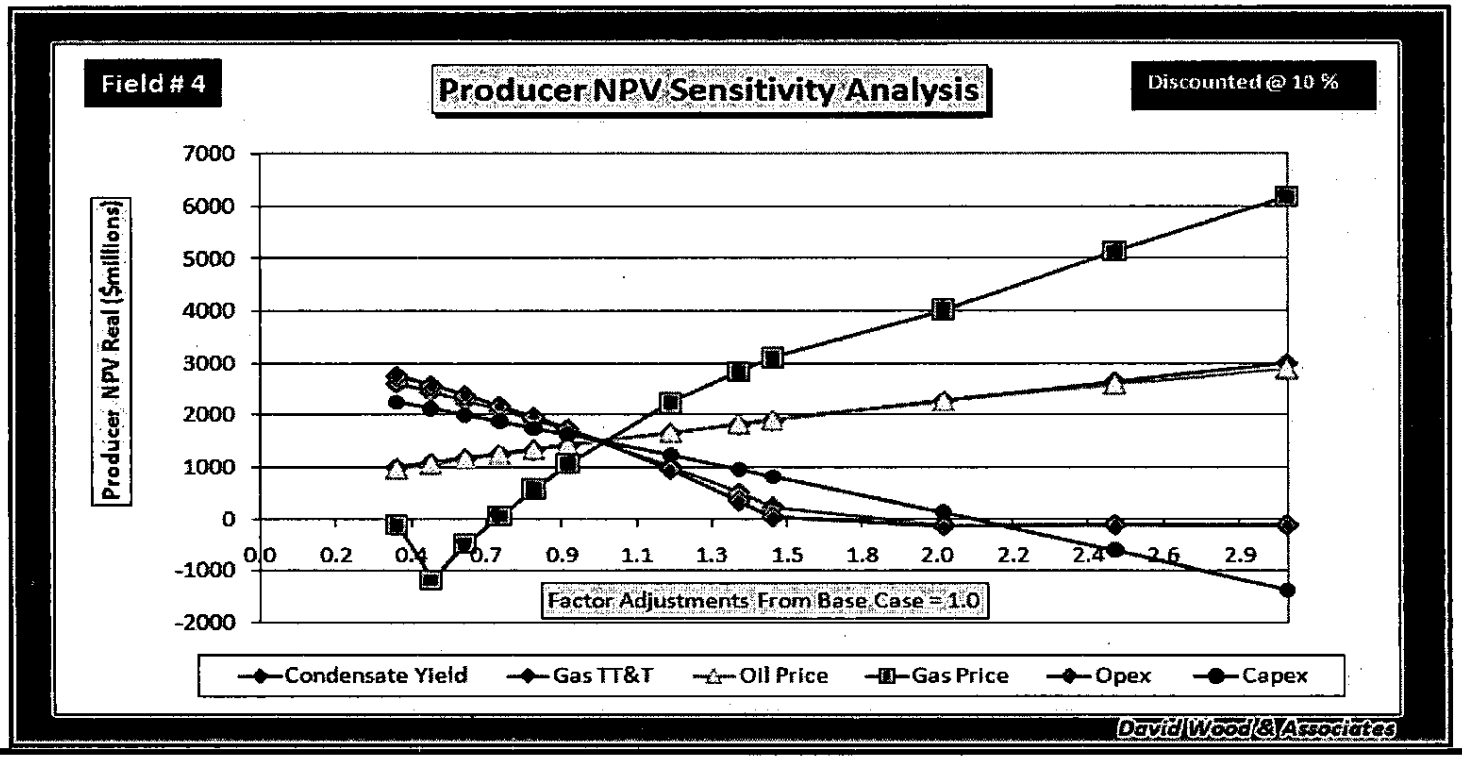


Five non-associated natural gas fields and five oil fields with associated gas were constructed to use with a multi-year fiscal model built in Excel.

- The natural gas fields (#1 to #5) range in reserve size from 500 bcf to 10tcf.
- The oil fields (#6 to #10) vary in reserve size from 28 mmb (with 20 bcf of associated gas) to 500 mmb (with 690 bcf of associated gas).
- The fields display a wide range of production and cost profiles.
- Base cases for each model field tested with wide ranging sensitivity cases.
- Base case assumptions applied: Year 0 gas price: $7.5 / mmbtu; Year 0 oil price: $80 / barrel; nominal inflation 2% / year. The model allows these and the sensitivities to be changed easily and quickly.

Sensitivity of Alaska Gas Field to Project & Market Variables

Economic performance of a gas field development from a producer's perspective for a large gas field under the prevailing Alaska fiscal system.



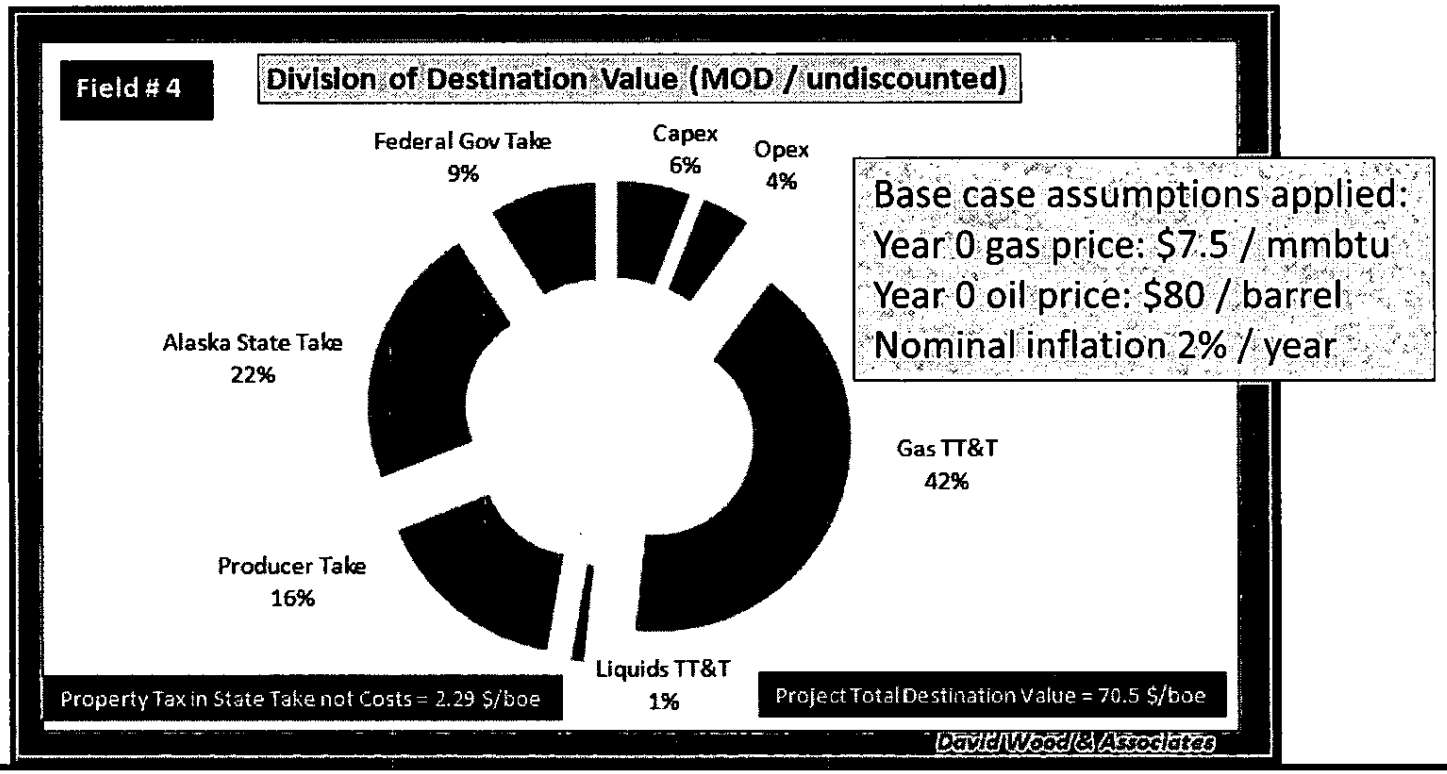
Base Case Hypothetical Field Models Reveal High-level Implications for Government Take

Government take includes Alaska state take and federal government take. The models apply the prevailing Alaska fiscal design and some base case assumptions.

- For stand-alone oil fields (with associated gas):
  - Government take of destination value (gross) is about 60%
  - Government take of destination value less costs (net) is about 75%
- For stand-alone natural gas fields (non-associated gas with NGLs):
  - Government take of destination value (gross) is about 30%
  - Government take of destination value less costs (net) is about 67%
- Exact percentages vary with field sizes, prices and costs.
- Large producers with portfolios of legacy fields under the current system aggregate oil and gas and can see reduced government take.

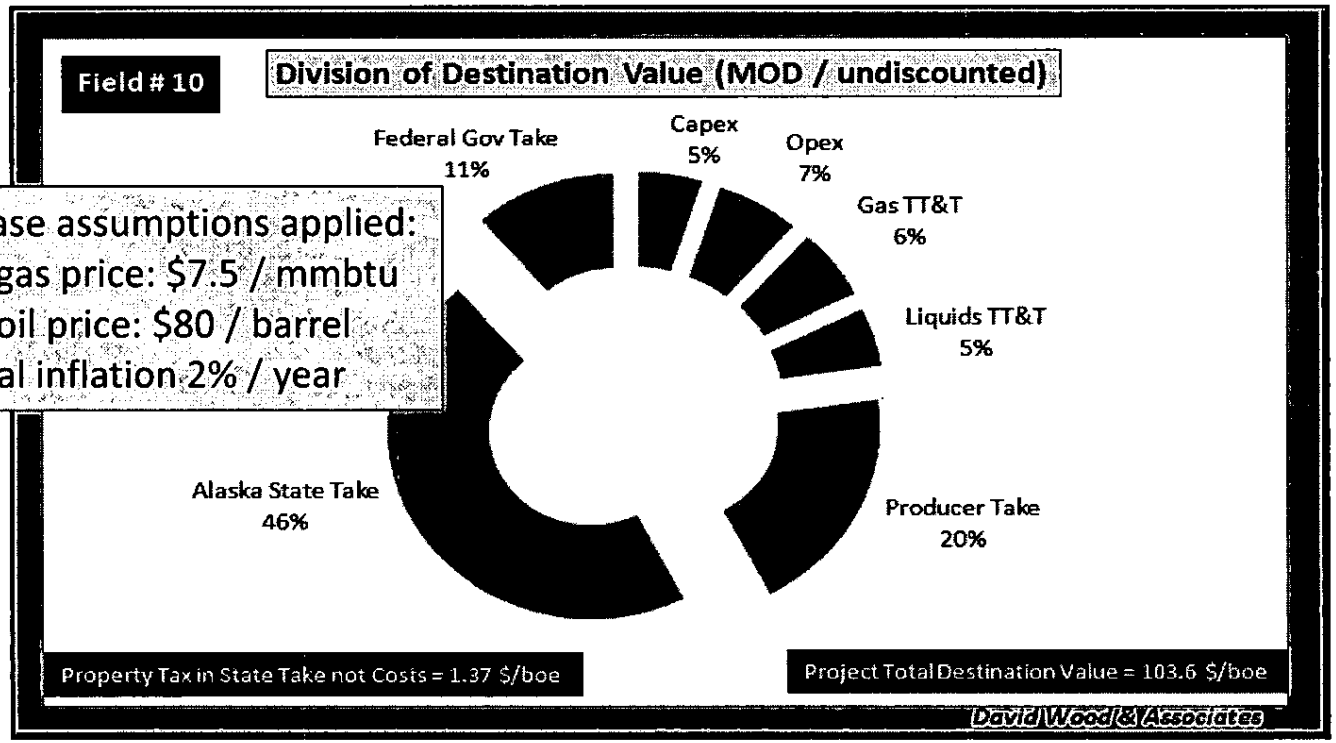
Large Gas Field: Division of Destination Value

For gas fields of various size (5 tcf shown here) gas TT&T takes the largest share of destination value. Alaska takes some 22% of destination value.



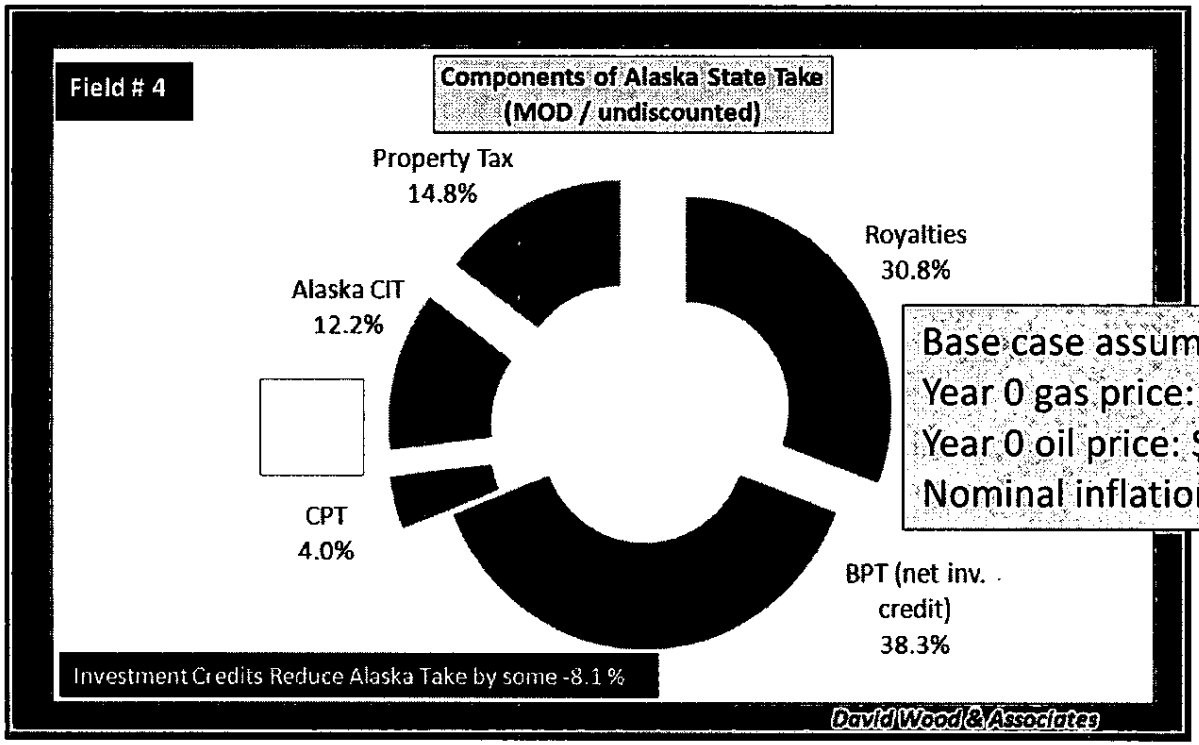
Large Oil Field: Division of Destination Value

For oil fields of various size (500 mmb shown here) costs are less significant than for gas. Alaska takes some 46% of destination value.



Components of Alaska State Take for Large Gas Field

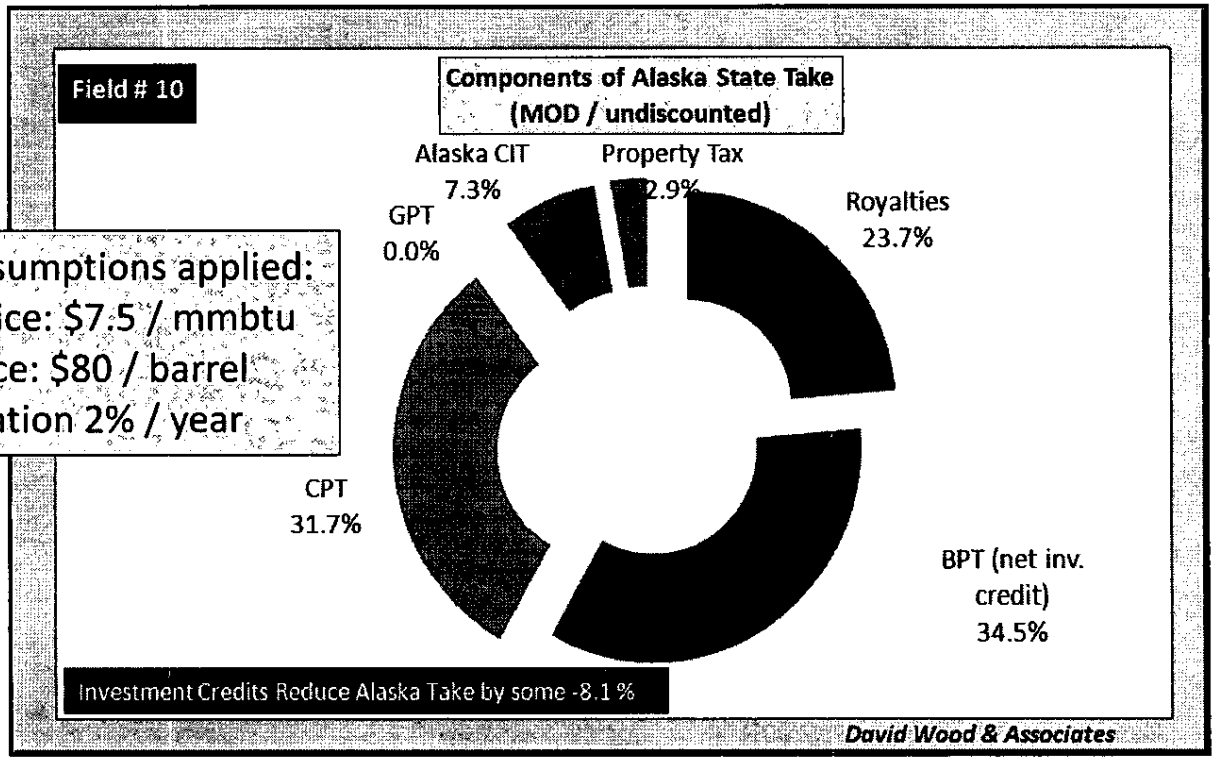
Royalties and basic production tax account for two-thirds of Alaska state take for this 5 tcf field. Base case price and cost assumptions applied.



Base case assumptions applied:
Year 0 gas price: $7.5 / mmbtu
Year 0 oil price: $80 / barrel
Nominal inflation 2% / year

Components of Alaska State Take for Large Oil Field

Basic production tax and combined progressivity tax account for two-thirds of Alaska state take for this 500 mmb oil field.



Conclusions & Recommendations

Approaches to Fiscal Design that Can Improve Performance & Credibility

The following are selected recommendations for Alaska from my December 2008 report for the Legislature:

- Develop a clear statement of fiscal strategy and objectives
- Focus on a simple, flexible and progressive fiscal design
- Some level of fiscal stability important to secure investment
- Such designs could be more effective than contractual guarantees
- *Drive progressivity fiscal elements for gas with gas PTV (not boe)*
- Consider return on investment drivers for progressivity taxes
- Combine progressivity tax with allowances to offset regressive elements
- Aim to clarify and optimize fiscal revenue streams from NGLs
- Consider state equity involvement in strategic infrastructure projects
- Promote cost disclosure and control with some fiscal incentives
- Apply time constraints to new leases to develop resources

Presentation to the Senate Finance Committee February 16, 2010 Alaska Department of Revenue

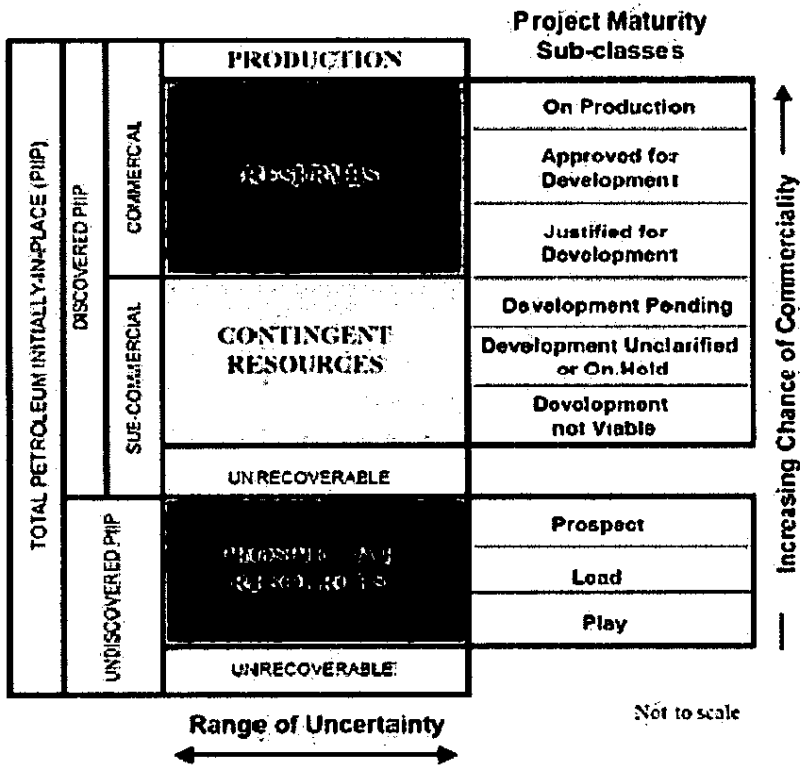
Jennifer Duval
Petroleum Economist

Frank Molli, P.E.
President, Molli Computer Services Inc.

Outline for Presentation

- **What do we forecast and why?**
- **Factors that affect forecast**
- **Review of Alaska North Slope production profiles**
- **Fall 2009 forecast methodology**
  - **Decline Curve Analysis**
  - **Demonstration**

What Do We Forecast? Reserves vs. Resources



http://www.spe.org/spe-site/spe/spe/industry/reserves/

Three Categories of Forecasted Production

1) Currently Producing- Includes base production and enhanced recovery production from investment in rate enhancing activities (perforations, stimulations, well workovers, gas and water injection support).
2) Currently under Development- New projects that are currently funded or awaiting project sanction in near future.

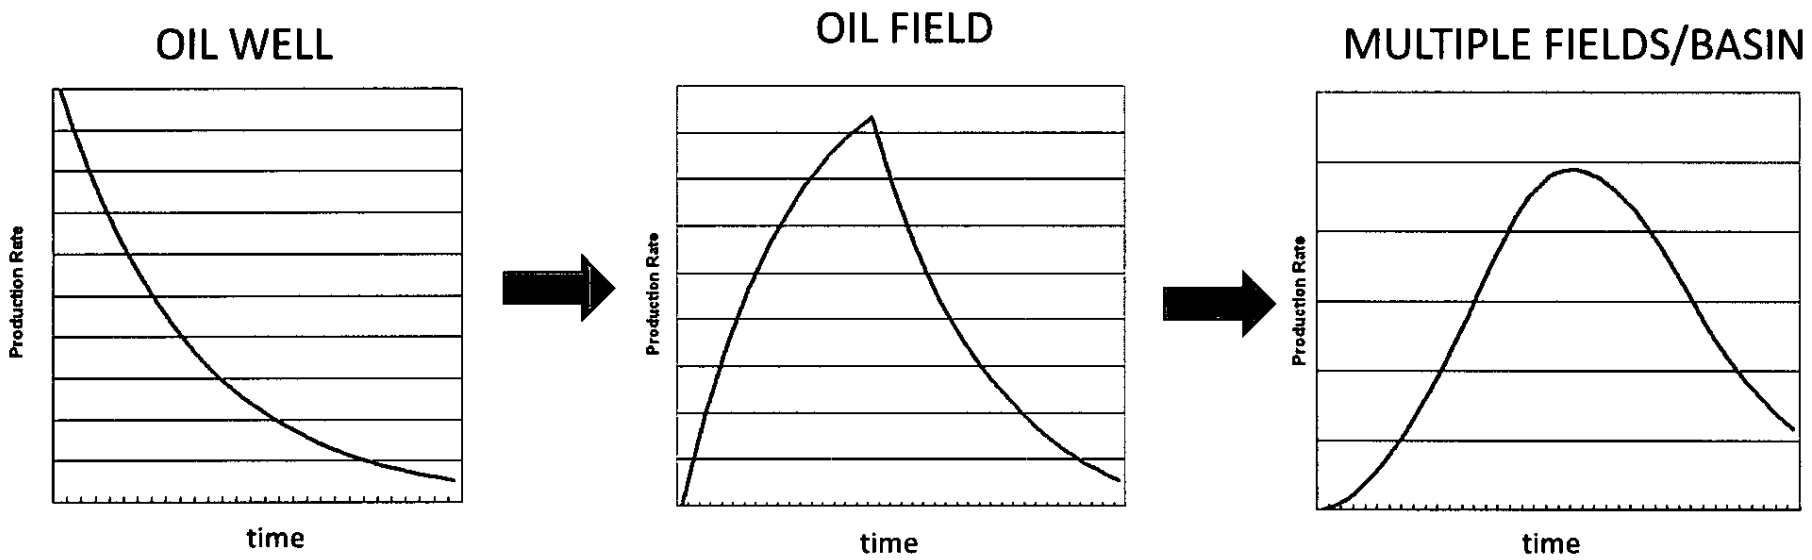
Three Categories of Forecasted Production

3) <u>Currently Under Evaluation</u>- Includes technically viable projects in the "pencil sharpening" stage where engineering, cost, risk and reward are being actively evaluated. Unfunded but are considered to have a high chance of being brought to fruition.

Factors That Affect Production Forecasting

1. **GEOLOGY**
   - Rock type and formation characteristics
   - Depth, thickness, pressure
   - Oil & gas characteristics (oil gravity, viscosity, water content, etc.)
2. **DEVELOPMENT PLAN**
   - Well density and development rate
   - Well bore size and completion technique
   - Artificial lift and enhanced oil recovery
   - Facilities & surface operations
3. **COMMERCIAL**
   - Project economics
   - Oil price and market conditions
   - Government Policy: access, regulation, taxation
4. **PRODUCTION PROFILE**
   - History, stage of depletion
   - Use production profile to extrapolate trends
5. **TIMING!**

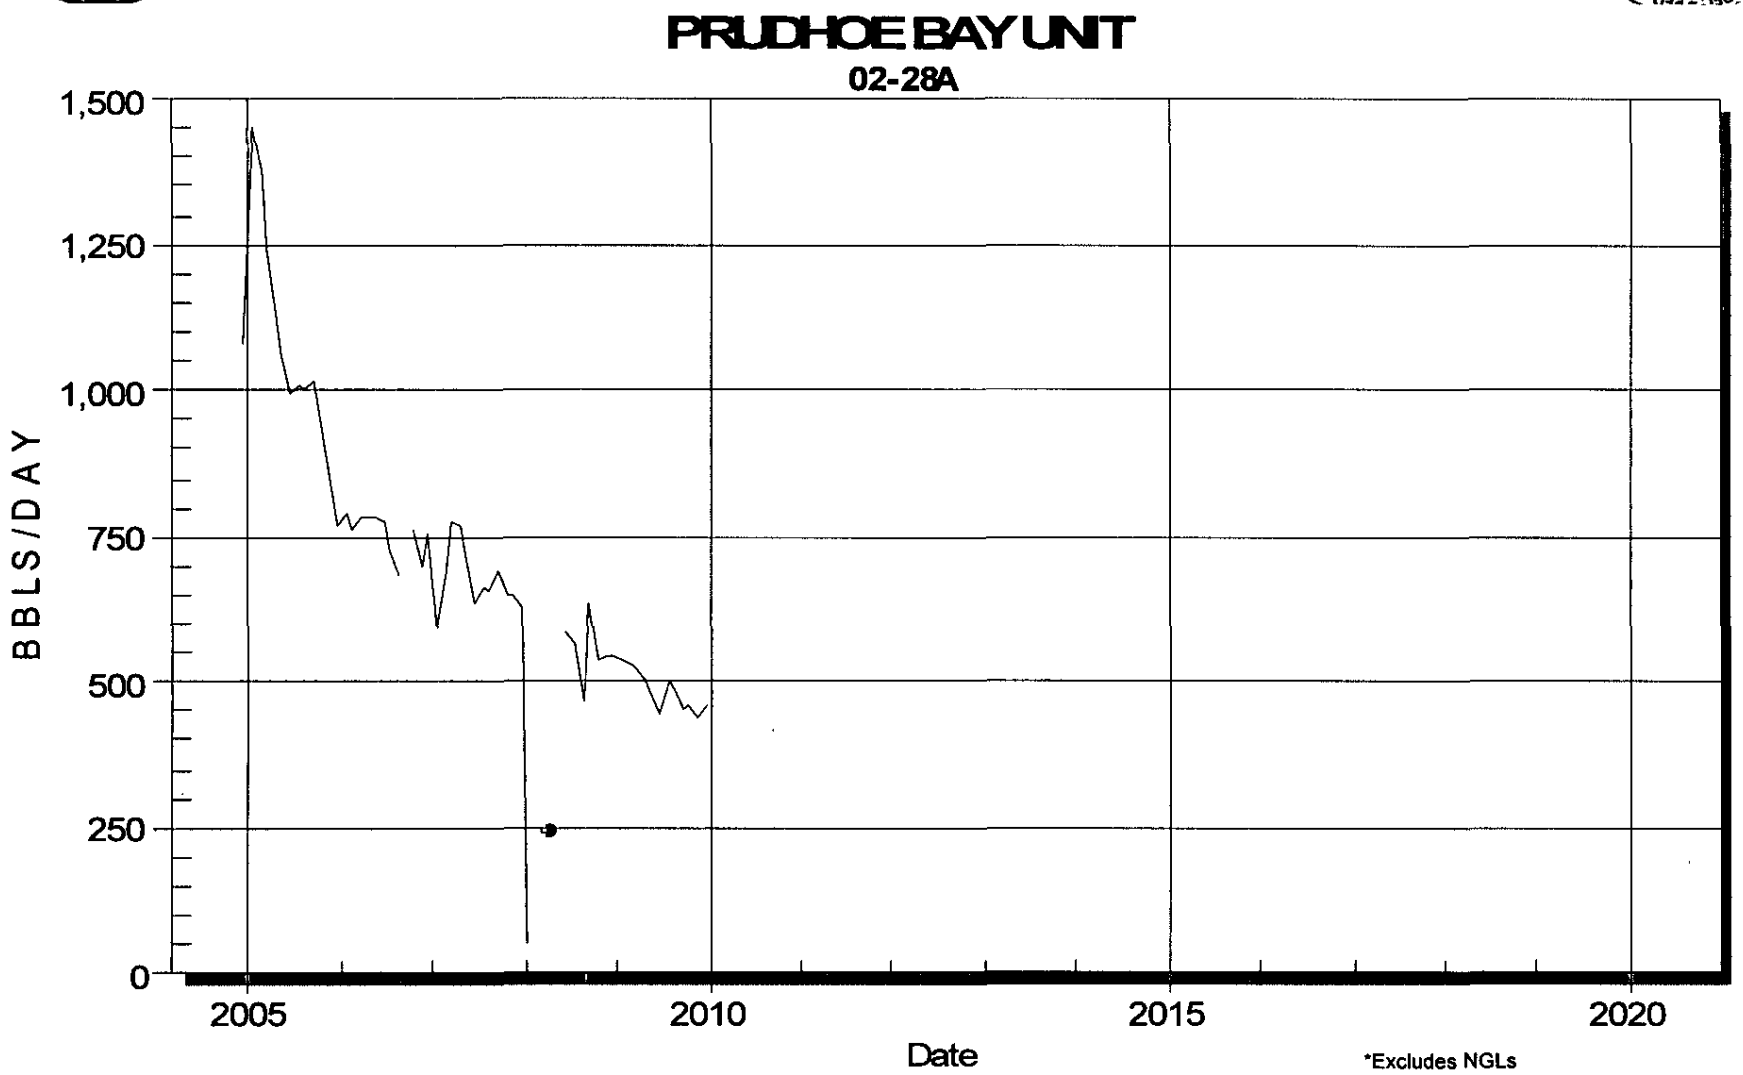
Typical Production Profile



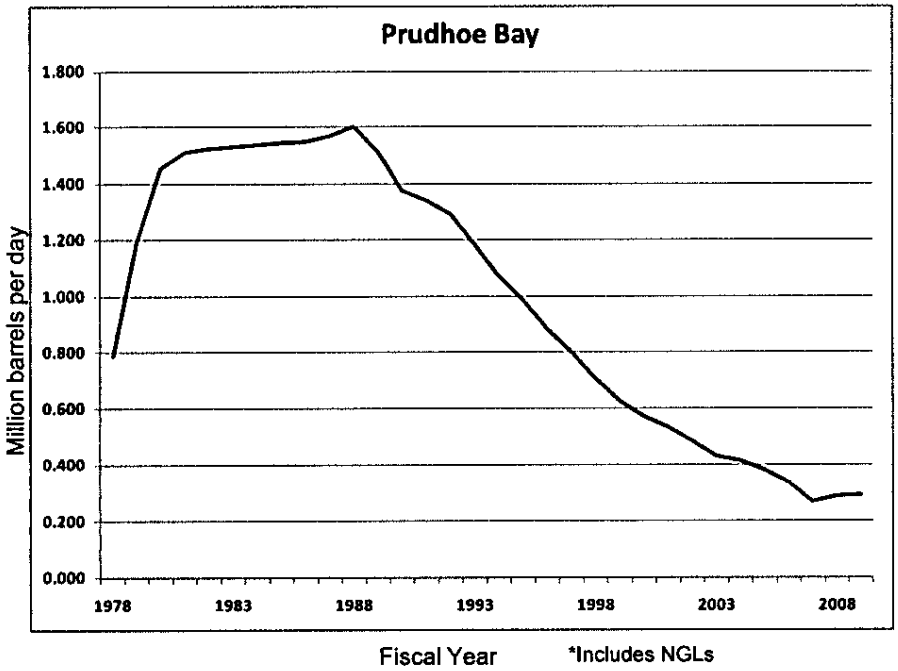
Production increases at first, reaches a peak, then declines. The decline rate typically levels off in later years.

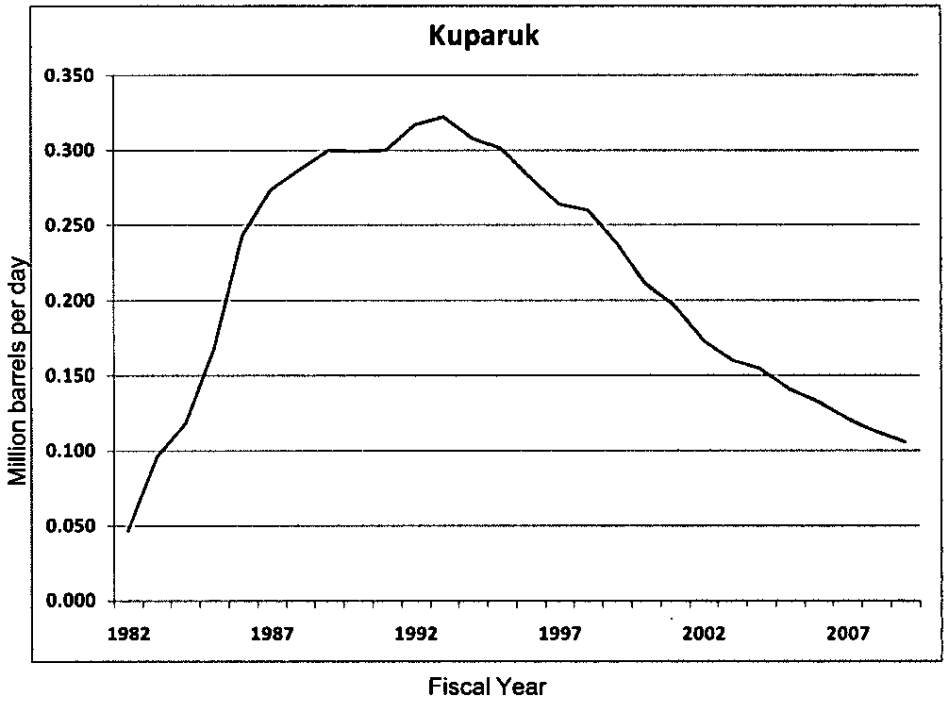
The field's geology, operator's development plan, and commercial factors, all influence the shape of the curve.

Production Profile of a Prudhoe Well

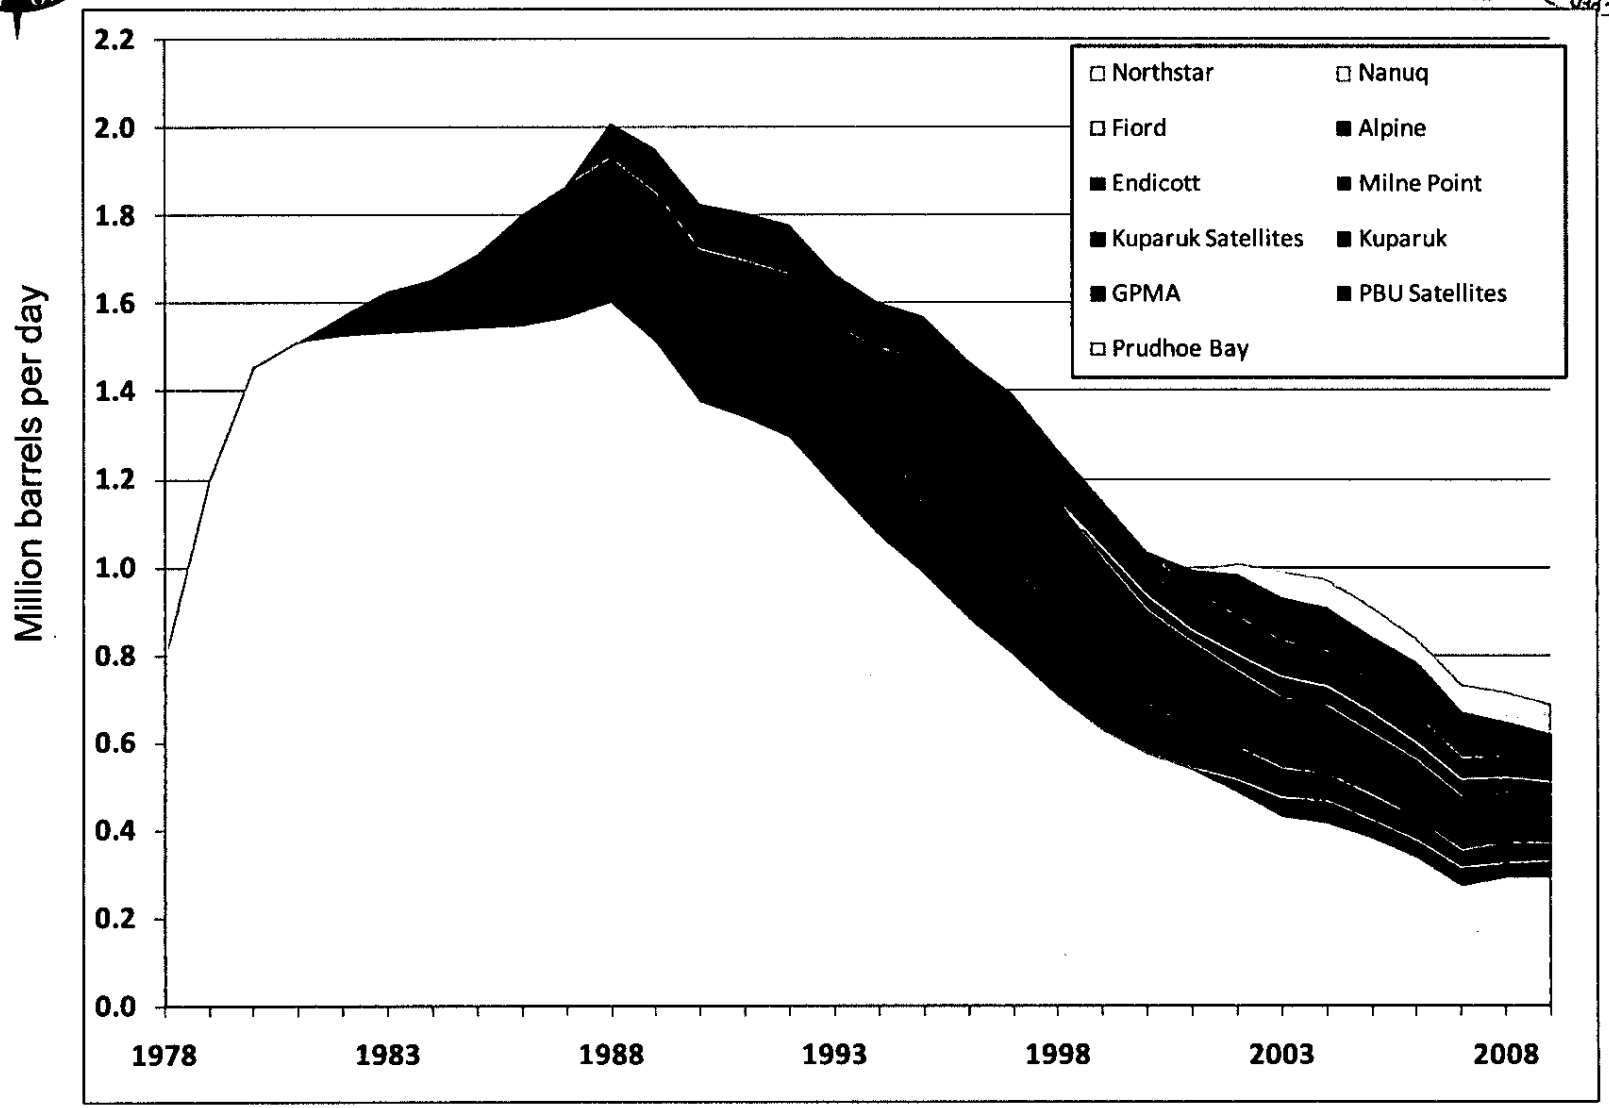


Production Profile at Field Level: Prudhoe & Kuparuk





Alaska North Slope History



*Includes NGLs

North Slope Production Decline

FY 1988: production peak → 2.01 million barrels per day (bpd).

FY 2009: production → 693,000 bpd, a 66% decline since peak.

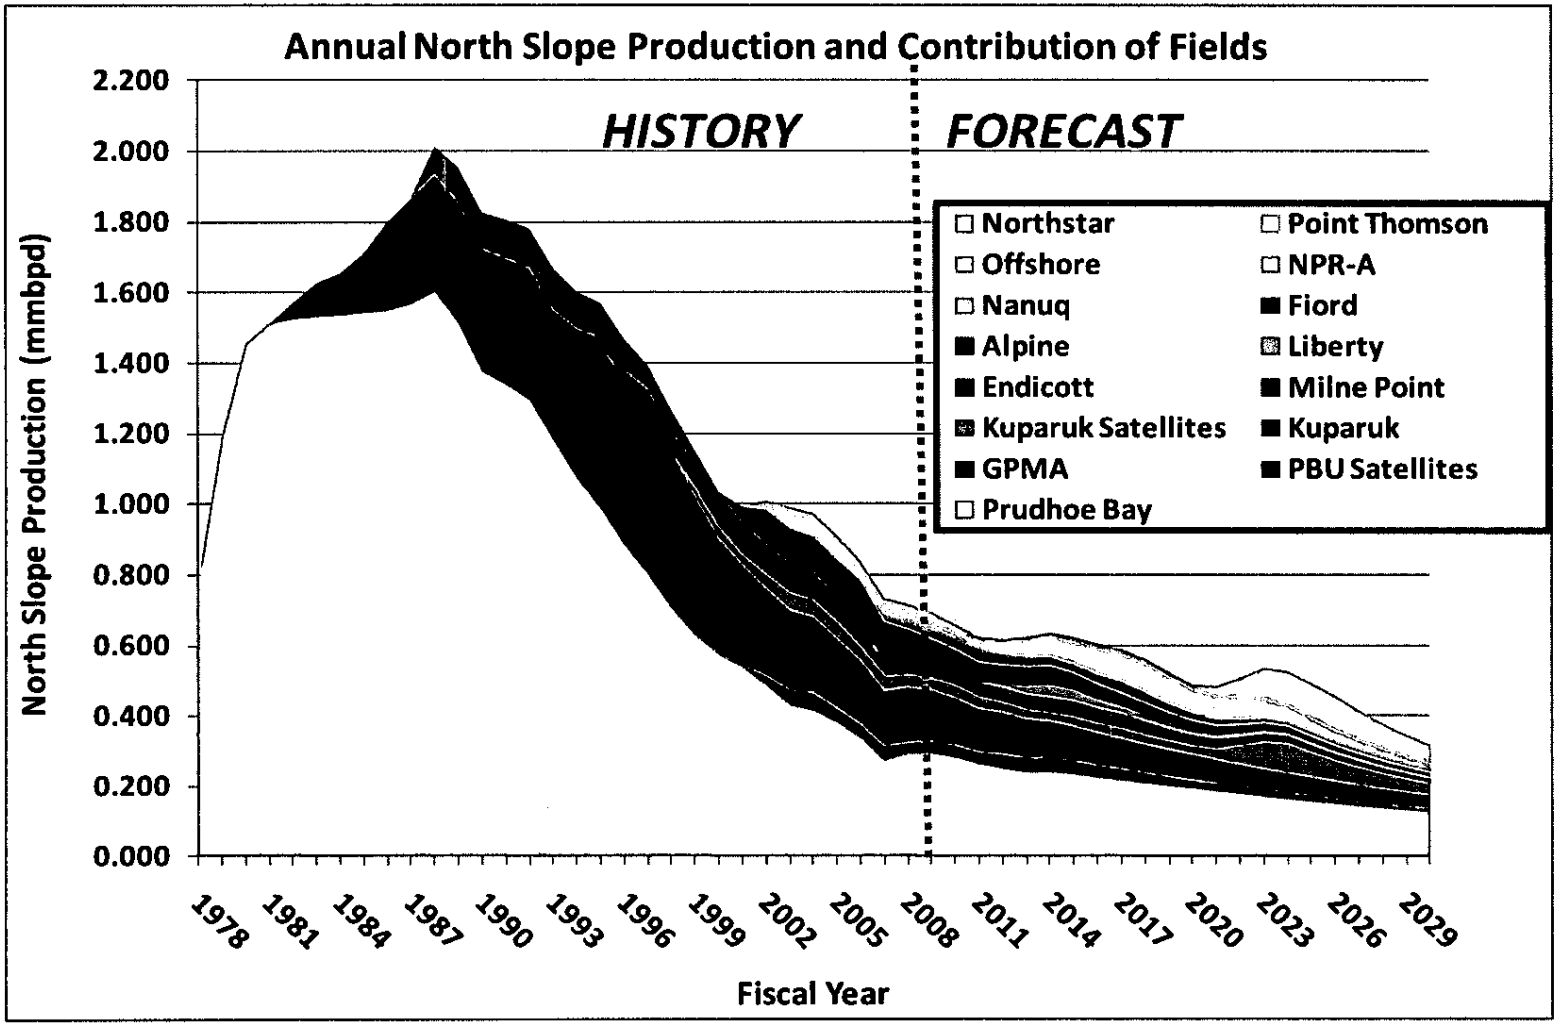
FY 1988 to date: production decline rate → 4.9% per year, on average.

Over the last 10 years, production decline rate = 4.8% per year, on average.

***Excluding 2007, 4.0% decline on average**

We expect the decline rate to flatten out to 3.6% per year, on average, through FY 2030.

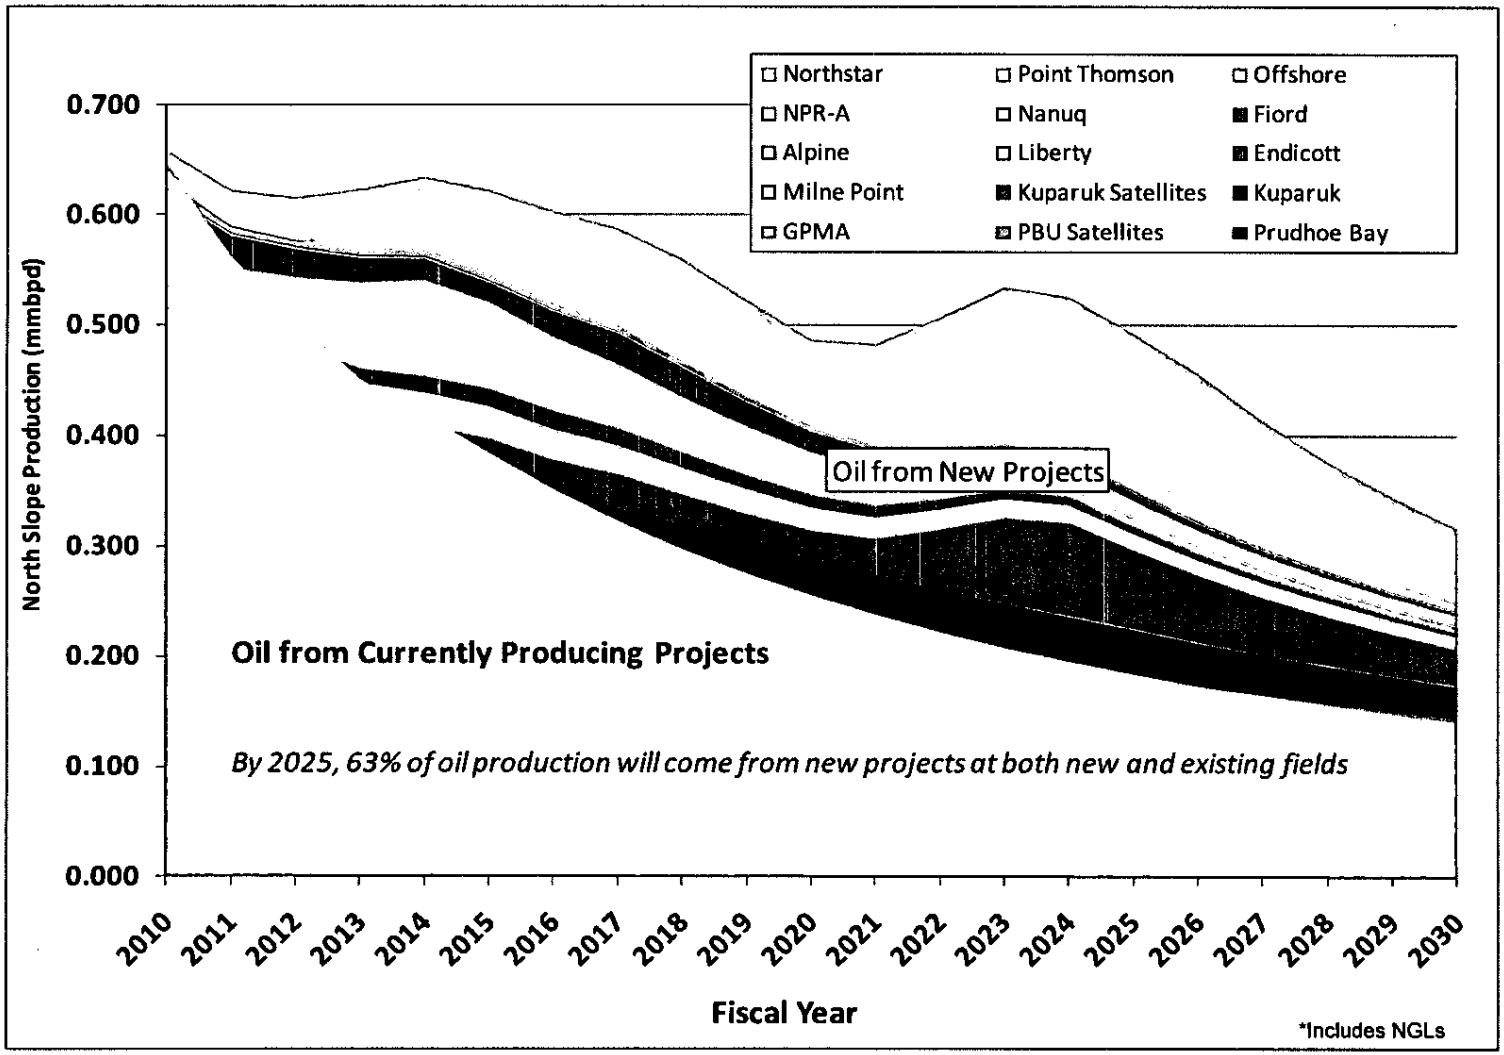
ANS Production History & Forecast



*Includes NGLs

Source: Fall 2009 Revenue Sources Book

Forecasted ANS Production FY 2010 - 2030



Source: Fall 2009 Revenue Sources Book

Timing is Important!

DOR's FY 2010 forecasted total NS production:

Spring 1989- <u>104,000 bpd</u>

Spring 1994- <u>583,000 bpd</u>

Fall 2009- <u>659,000 bpd</u>

Plans of Development and discussions with the operators help us forecast the timing.

***However, operators are not bound to what they provide to us. Budgets can change; partners may not approve projects.**

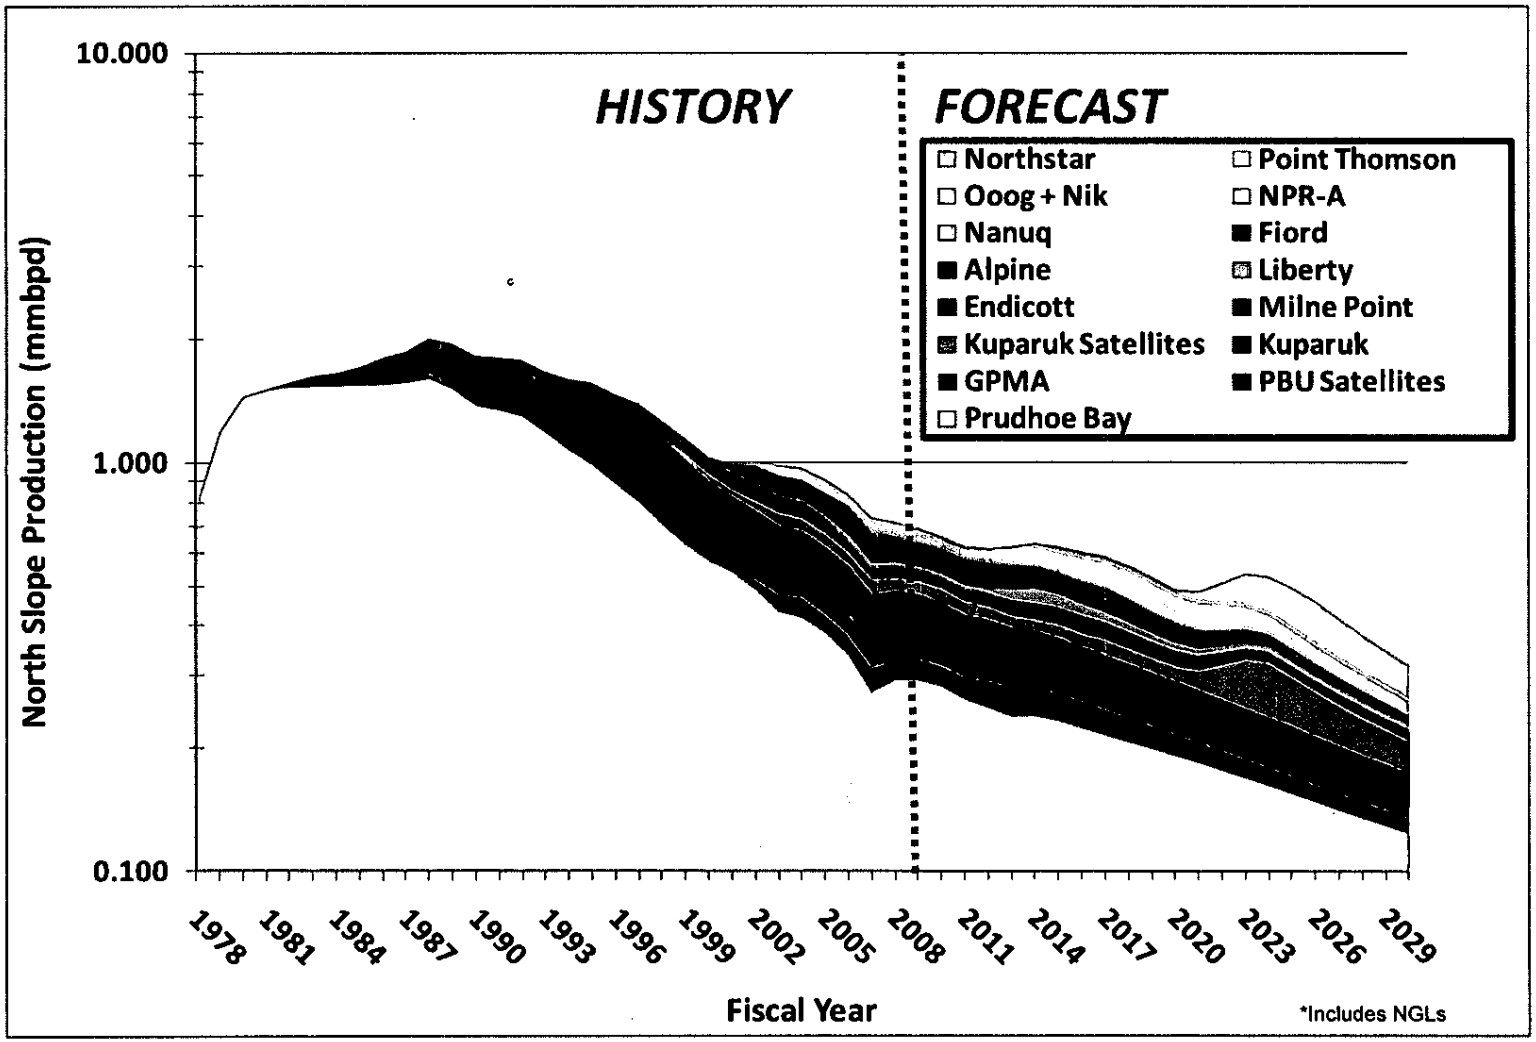
Fall 2009 Forecast: Log Scale



Conclusion

- Production forecasting requires consideration of each project's geology, development plans, commerciality, production profiles, decline curves and timing.

- Department uses extensive well and field specific data acquired from producers, AOGCC, and DNR

- Forecast is a roll up of fields that have been discovered that are currently producing, under development, and under evaluation.

UI Claimants are defined as a count of individuals that formerly worked for employers classified in the industry sector of note, who collected at least one (1) week of Unemployment Insurance durring the given year. This includes both In-state as well as Inter-state claimants, and no individual is counted twice within one year. All Industries totals may not equal the sum of individual industries as Unclassified claimants are not included in the Industry breakouts.

Unemployment Rates, Seasonally Adjusted

	12/09	11/09	12/08
Alaska	8.8%	8.4%	6.8%
U.S.	10.0%	10.0%	7.4%

Sources for graph and tables: Alaska Department of Labor and Workforce Development, Research and Analysis Section; and U.S. Bureau of Labor Statistics

Alaska's December seasonally adjusted unemployment rate was 8.8 percent. November's preliminary rate was revised down three-tenths of a percentage point to 8.4 percent.

The comparable national unemployment rate for December was 10.0 percent.

That marks the 12th month Alaska's rate has remained below the nation's. The last time that happened was in the early 1980s when the U.S. was in the midst of a very deep recession and Alaska was in the middle of an economic boom.

All the state's regions saw higher over-the-year unemployment rates in December. In Southeast, the rates were higher because of employment losses in leisure and hospitality, construction and retail. In the Gulf Coast, it was losses in the oil, and leisure and hospitality industries. In the Northern region, declines in the oil industry took their toll. In the Interior and Anchorage/Mat-Su regions, a long list of industries contributed to higher unemployment.

Another factor contributing to the rising jobless rate is the growth in the number of job seekers. Because Alaska's relative employment picture remains better than most of the nation's, fewer Alaskans are leaving the state looking for employment prospects elsewhere in the country and more job seekers are coming north looking for employment opportunities.

In December, over-the-month and over-the-year wage and salary employment were down. The seasonal losses in December are typical, led by seasonal losses in seafood processing, construction, and leisure and hospitality.

December marks the ninth month in a row of over-the-year employment losses. As 2009 progressed, the number of industries with employment losses grew. By December only educational and health services – more specifically health care and social assistance – and government remained positive.

P = Preliminary. As more information becomes available, data are revised every month for the previous month and again at the end of every calendar year.

Note: The official definition of unemployment excludes anyone who has not made an active attempt to find work in the four-week period up to and including the week that includes the 12th of the reference month. Many individuals in rural Alaska do not meet the definition because they have not conducted an active job search due to the scarcity of employment opportunities.

[1] Unemployment rates that are not seasonally adjusted should not be compared with those that are.

[2] Because of the creation of new boroughs, this borough or census area has been changed or no longer exists. Data for the new Skagway Borough and Hoonah-Angoon Census Area will be available in 2010. Data for the other new boroughs and census areas will be available in 2011. Until then, data will continue to be published for the old areas.

P = Preliminary. As more information becomes available, data are revised every month for the previous month and again at the end of every calendar year.

Note: The official definition of unemployment excludes anyone who has not made an active attempt to find work in the four-week period up to and including the week that includes the 12th of the reference month. Many individuals in rural Alaska do not meet the definition because they have not conducted an active job search due to the scarcity of employment opportunities.

[1] Unemployment rates that are not seasonally adjusted should not be compared with those that are.

[2] Because of the creation of new boroughs, this borough or census area has been changed or no longer exists. Data for the new Skagway Borough and Hoonah-Angoon Census Area will be available in 2010. Data for the other new boroughs and census areas will be available in 2011. Until then, data will continue to be published for the old areas.

Presentation to the
Senate Finance Committee
February 16, 2010
Alaska Department of Revenue

Outline for Presentation

- **Netback Calculations**
- **Tariff History: 1978 to Present**
  - Challenges
  - Settlements
  - TSM
  - Opinion 502
- **Tariff Calculation & Drivers**
  - T Put
  - COS Components
- **Going Forward**

Production Tax and Royalty Calculation Based on Wellhead Value

- State oil and gas leases and production tax statutes calculate royalty and tax based on wellhead value
- Oil is primarily sold at west coast refineries
- Wellhead value is calculated through a net-back process that allows for deduction of transportation costs to point of sale

Transportation Costs

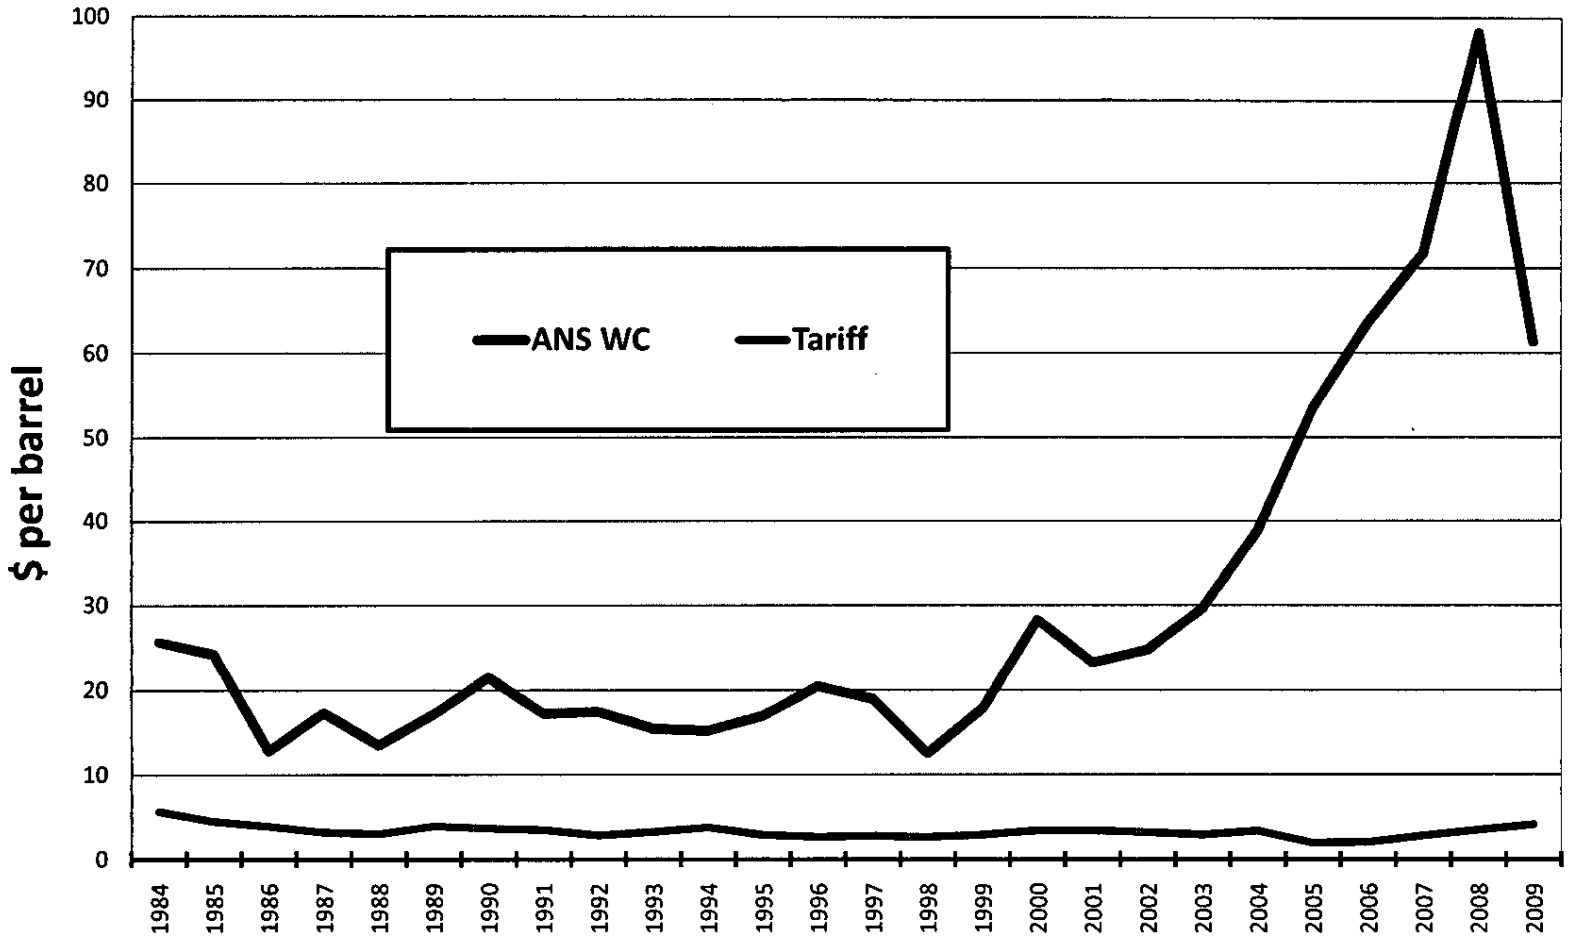
- Two primary transportation costs
  - pipeline tariffs
  - marine (tanker) costs
- Pipeline tariffs are set by state and federal regulators
- Intrastate rates set by Regulatory Commission of Alaska (RCA)
- Interstate rates set by Federal Energy Regulatory Commission (FERC)

ANS Netback Price

Estimated February 2010

West Coast Price	**$74.50**
Less	
Marine Costs	2.05
TAPS Tariff	4.10
Feeder Pipeline	.35
ANS Wellhead Price	**$68.00**

TAPS Tariff vs Crude Oil Price



Initial TAPS Tariff

- TAPS began shipping oil in 1977
- Initial tariffs filed by TAPS Carriers charged over $6.00 per barrel
- Filed rates go into effect subject to refund until litigation completed

Initial TAPS Tariff Litigation

- State protested initial tariffs in 1977
  - FERC
  - APUC (RCA predecessor)
- In 1985 with no end to litigation in sight

  State and TAPS Carriers negotiated tariff settlement

TAPS Settlement Agreement (TSA)

- Formulaic method to calculate annual rates
- Annual true-up based on actual costs
- Settlement formula set rate ceiling
- State would not protest charged rate unless
  - higher than those derived from the TSM methodology
  - imprudent costs or otherwise inconsistent with the law

Other TSA Provisions

- Binds only State and TAPS Carriers
- Third party shippers free to challenge settlement rates anytime
- State could audit annual filings
- Could be terminated January 1, 2009
- Otherwise expire at the end of 2011

TAPS Intrastate Rate Protest

December 1996 Tesoro Alaska filed protest of the 1997 TAPS intrastate rates

2002 RCA issued Order 151 ruling

- 1997-2000 annual rates were not just and reasonable
- Established lower intrastate rate
- Ordered refunds

Interstate Rate Protests

- 2005 the State protested Carriers' interstate rates for unlawful discrimination
- Argued difference between the interstate and intrastate rates violated TSA and Interstate Commerce Act prohibitions
- Anadarko then protested 2005 rates as not "just and reasonable"
- State and Anadarko protested 2006, 2007 and 2008 TSA based annual rates when filed on same grounds

FERC Decision and Opinion 502

May 2007 the FERC ALJ issued an initial decision finding the TAPS 2005 and 2006 interstate rates were not just and reasonable

June 2008 FERC issued Opinion 502 affirming ALJ on all issues

- Ordered carriers to file new 2005 and 2006 rates based on current FERC regulatory formula (154-B methodology)
- Ordered refunds based on refiled rates
- Refunds for 2005-06 result in additional $600 million to State for adjusted production tax and royalty liabilities

2007– 2008 TAPS Rate Protests

- FERC ordered TAPS Carriers to recalculate and refile 2007 and 2008 annual rates based on Opinion 502 methodology
- Refunds for 2007-2008 result in additional $200 million to State for adjusted production tax and royalty liabilities

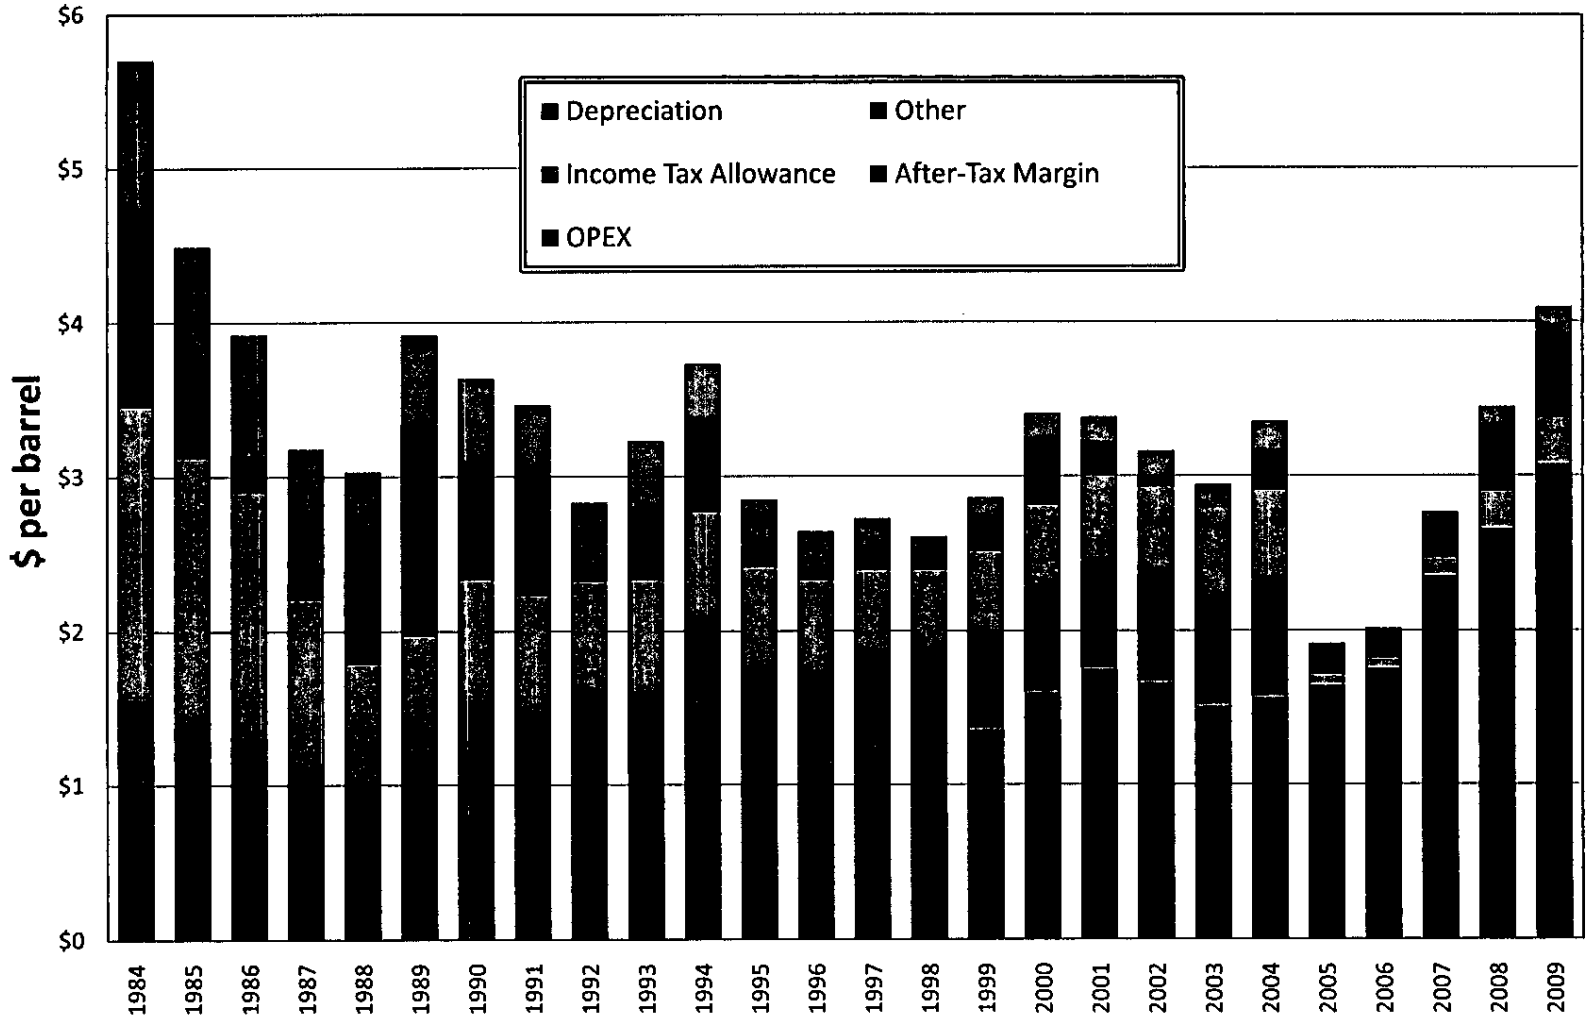
TAPS Settlement Terminated Effective January 1, 2009

- TSA allowed early termination before the December 31, 2011 expiration date
- State terminated settlement

Post-Settlement Rate Protests

- TAPS Carriers filed new intrastate rates at end of 2008 -early 2009
- TAPS Carriers filed new interstate rates in second half of 2009
- State and Anadarko protested those rate filings and new rate hearing is set at the FERC for October 2010

Components of TAPS Tariff



17

Cost of Service Components

Operating Expenses

+ Return **OF** Rate Base

+ Return **ON** Rate Base

+ AFUDC Amortization*

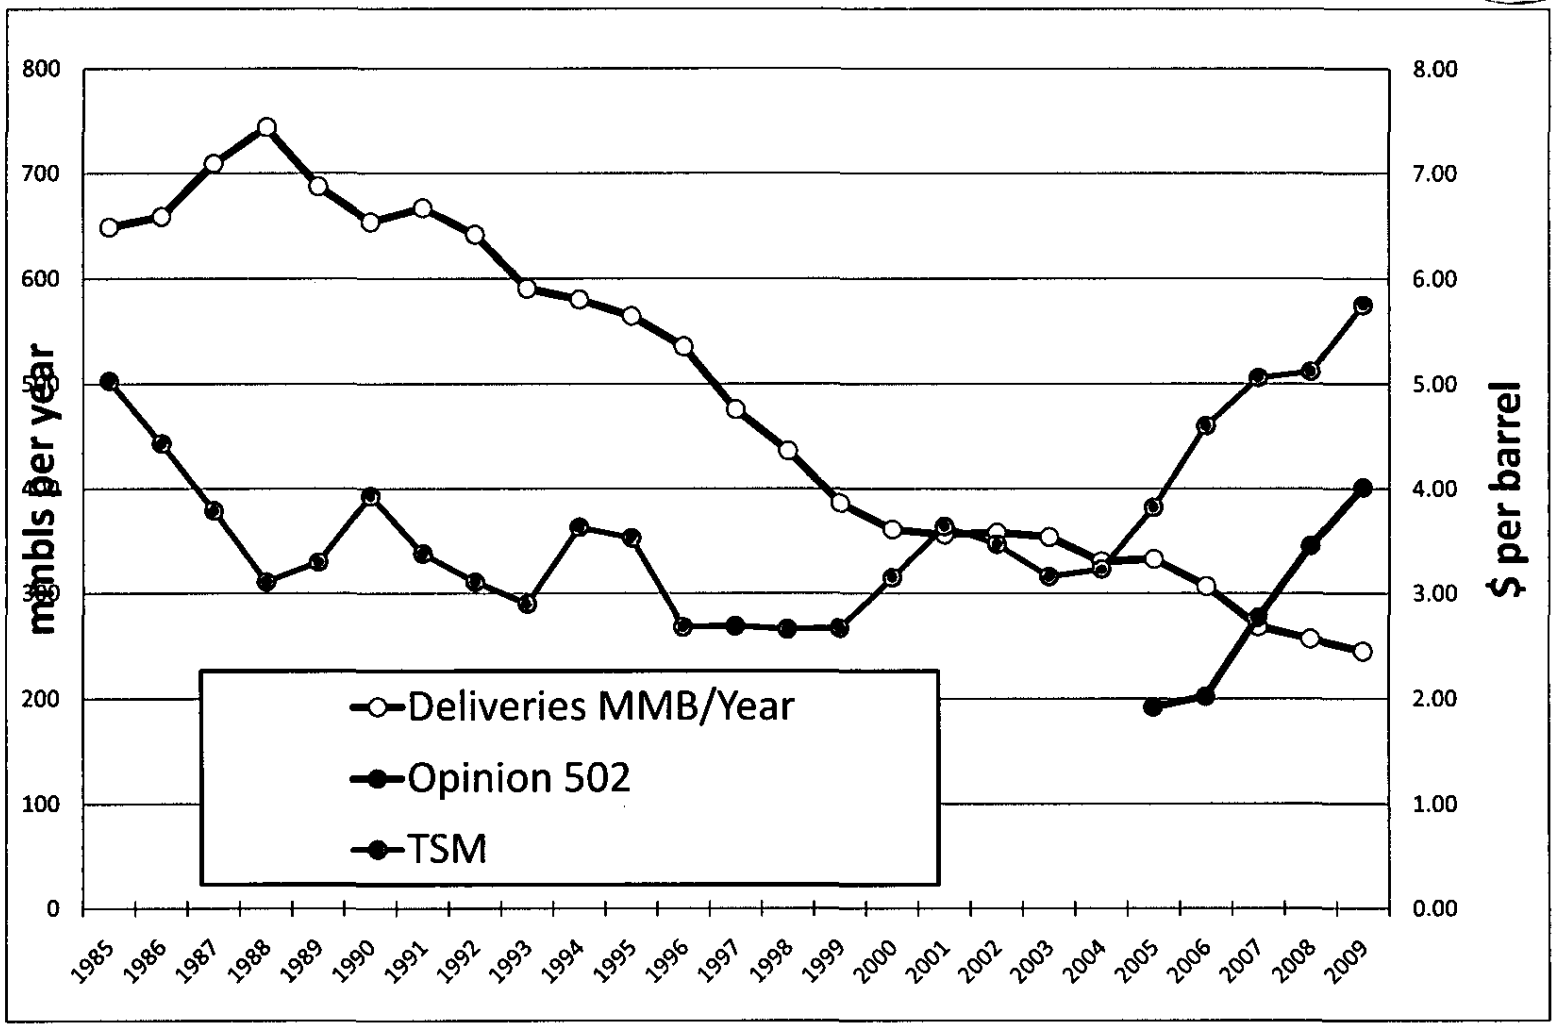
+ Income Tax Allowance

= COST OF SERVICE or

Total Revenue Requirement

*Allowance for Funds Used During Construction

TAPS Throughput and Tariff



Importance of Throughput

$$\text{Tariff} = \frac{\text{Total Revenue Requirement}}{\text{Throughput}}$$

Tariff increases if

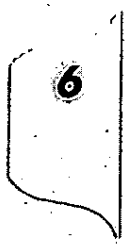
- Costs increase
- Throughput declines
- Combination of both

Throughput Required to Maintain 2010 Tariff Level

	Million Barrels Per Year			Thousands
	Forecast	Level Tariff	Diff	Per Day
2011	225	229	4	12
2012	226	231	5	13
2013	228	232	4	11
2014	228	234	6	16
2015	223	235	13	35
2016	217	237	20	54
2017	208	238	29	81
2018	197	239	42	115
2019	183	240	56	154

Tariff Going Forward

- Uniform rate
- Filed rate of $4.10
- No settlement agreement
- No access to data other than filings
- Stacked rate filings and protests
- FERC hearing October 2010
- Unresolved issues



6

1736

PRODUCTION TAX LEASE EXPENDITURE REGULATIONS

Senate Finance Committee February 17, 2010

OVERVIEW

ACES passed 12/20/2007.

Regulatory Process governed by AS 44.62 – APA

DOR worked with the Department of Law in order to ensure the legality, constitutionality, and consistency with other regulations

All of our regulations are reviewed by the Department of Law as required. (AS 44.62.060)

Public Workshops

DOR shared outline of approach and then held "public workshops" to gain public input at early regulation design stage.

Significant changes were made as a result of comments received during workshops. If big changes on important issues, then additional workshops held.

Workshops were also teleconferenced.

APA – 30-Day Formal Notice

After Workshops, proposed regulation is put out for a minimum 30 day public comment under AS 44.62.190.

1) Published in a newspaper
2) furnished to every person who has filed for a request of proposed action ("Interested Parties")
3) Furnished to Dept. of Law
4) Provided to all incumbent State of Alaska legislators, committee chairs, and to the Legislative Affairs Agency.

APA – Notice of Proposed Action

The agency shall give each interested person an opportunity to present statements, arguments, or contention in writing, with or without opportunity to present them orally (AS 44.62.210(a))

Agency "shall consider all factual, substantive, and other relevant matter presented to it before adopting, amending, or repealing a regulation. (AS 44.62.210(b))

APA- Final Step

After considering public comment, regulation is either adopted, or put out for another public notice. Once regulation has been adopted:

- Regulation is put in final form
- Final review by Department of Law
- Submitted to Lt. Governor for review and signature
- Regulation effective 30 days after filing by Lieutenant Governor.

What remains?

46 of the approximate 70 production tax regulations we anticipate writing or revising have been adopted and signed into law by the Lt. Governor. Of those remaining, 17 relate to transportation and AGIA issues, 4 relate to facility sharing and BTU heating value.

Public Hearing for facility sharing and Btu heating value has been held and the written comment period has also been closed. The department is currently evaluating comments received.

Transportation and AGIA related Regulations distributed for public comment February 9, 2010

Unplanned Production Interruption regulations – Second workshop to be scheduled this spring.

Statutory Directions on Allowable Costs

AS 43.55.165(a)(1)(B) provides that, "[a] producer's lease expenditures for a calendar year are costs that meet the following three requirements:

(i) The costs must be incurred upstream of the point of production of oil and gas
(ii) The costs must be ordinary and necessary costs of exploring for, developing, or producing, as applicable, oil or gas deposits; and
(iii) The costs must be direct costs of exploring for, developing, or producing, as applicable, oil or gas deposits"

Statutory Directions on Allowable Costs

AS 43.55.165(b) further delineates lease expenditures as including:

(i) Direct cost of an asset even if it is capitalized for accounting or IRS purposes

(ii) Payments of property, sales, use, motor fuel, and excise taxes

(iii) Activity where the costs incurred do not are not on or near the oil and gas lease

Statutory Directions on Allowable Costs

- AS 43.55.165(b)(3) and (i) authorize the department to use as guidance:

(1) Typical industry practices and standards under operating agreements in effect before December 5, 2005 among multiple owners;

(2) DNR standards used to determine allowable costs under net profit leases

(3) Incorporation of concepts, regulations and guidance issued under IRS Code 482 for income and deduction allocation among taxpayers.

Lease Expenditure Regulations

- 15 AAC 55.250 - provides standards for the types of activities and purposes for which costs will be allowed, other than overhead.

- 15 AAC 55.260 - defines the direct charges that will be allowed as lease expenditures for the activities and purposes described in 15 AAC 55.250.

Lease Expenditure Regulations (Cont.)

- Types of activities and purposes allowed under 15 AAC 55.250:
  - Exploration costs, including mobilization of a drilling rig, crew costs, drilling, processing & interpreting data, and completion, abandonment, or suspension costs
  - Development & production costs, including designing, constructing, operating, or maintaining an oil or gas production facility or equipment
  - Support activities, such as camps, roads, bridges and similar transportation, communications systems, medical, security, and emergency facilities.

Lease Expenditure Regulations (Cont.)

- Direct costs under 15 AAC 55.260 for activities described in 15 AAC 55.250:
  - On-site labor
  - Technical labor whether on-site or remote location
  - Third-party contractor costs
  - Stand-by costs for a drilling rig
  - Property taxes and payments in lieu-of
  - Regulatory and permitting costs
  - Transportation costs of fluids used for reservoir maintenance and recovery.

State Regulations vs. IRS Rules

We align with the IRS Code in several instances:

- The Department uses IRS Code 263(c) to determine whether a cost is a qualified capital expenditure under AS 43.55.023(l).
- "Ordinary and necessary" costs defined by IRS code 162
- Incorporation of concepts, regulations and guidance issued under IRS Code 482 for income and deduction allocation among taxpayers.

We are directed to disregard the IRS code rules in some instances:

- We allow the deduction of a direct cost of an asset even if it is capitalized for IRS purposes .

Comments from Industry

"[W]e applaud the iterative process the Department has followed in developing these regulations and others in which it has offered its preliminary thoughts up for public comment (including industry's and has then used that feedback to revise and improve its drafts, which it then offered for further public comment. This consultative or collaborative public process is both prudent and wise. But because this takes more time than rule-making by simple fiat, it is important to recognize the more difficult path the Department has chosen for developing the ACES regulations has resulted in improvements to the earliest drafts that justify the greater time and effort that have been required. There is an old quip about never having enough time to do something right, but always time to do it over. Here the Department has avoided falling into this quip, which is no small feat and deserves recognition. "

Marilyn Crockett, Executive Director, AOGA, November 19, 2009

Comments from Industry

"Without clear regulatory guidance from the Department, AS43.55.170 may be interpreted in a manner which artificially inflates the costs associated with facility sharing in the state; and acts as a disincentive to future third-party facility access agreements.

....

Thanks to this collaborative effort and the Department's hard work, the proposed regulation largely addresses the concerns Pioneer has expressed over the past year, and in doing so, removes barriers to future facility sharing opportunities in the state."

Patrick Foley, Manager, Pioneer Natural Resources Alaska November 19, 2009

Conclusion

Tax Division's Regulations Process has ensured maximum meaningful input from industry and public.

When final public comment period begins, involved parties have had opportunity to critique proposed regulations and Division has had opportunity to fully understand how the regulations will impact industry and been able to address ambiguity and problems.

Industry input and dialogue with the Department has never been greater than in the implementation of the AS 43.55 regulations.

2/24/10 OIL & GAS PRODUCTION TAX (FILE 2)

<target><bill></bill><subject>2-24-10 OIL and GAS PRODUCTION TAX (FILE 2)</subject><comm>SFIN26</comm></target>

(2) net profit share payments under 15 AAC 55.260(a)(2).

(b) An allowance for overhead expenses is not a qualified capital expenditure.

(c) This section applies to expenditures incurred on or after {*the first day of the first month that begins on or after the effective date of these regulation changes*}. (Eff. 2/27/2010, Register 193)

Authority: AS 43.05.080 AS 43.55.110 AS 43.55.165

15 AAC 55.800(a) is amended to read:

(a) The following provisions apply retroactively to April 1, 2006, to oil and gas produced after March 31, 2006:

(1) 15 AAC 55.192;

(2) 15 AAC 55.205;

(3) 15 AAC 55.215;

(4) 15 AAC 55.223;

(5) **15 AAC 55.245;**

(6) 15 AAC 55.270, except 15 AAC 55.270(a)(2)(C) and (e), which apply retroactively to July 1, 2007;

15 AAC 55.275 (7) ~~15 AAC 275~~ - 15 AAC 55.315;

(8) [15 AAC 55.245 - 15 AAC 55.315;

(6)] 15 AAC 55.330 – 15 AAC 55.340;

(9) [(7)] 15 AAC 55.345 – 15 AAC 55.355;

(10) [(8)] 15 AAC 55.370 - 15 AAC 55.380;

7

(11) [(9)] 15 AAC 55.410;

(12) [(10)] 15 AAC 55.420;

(13) [(11)] 15 AAC 55.430;

(14) [(12)] 15 AAC 55.440;

(15) [(13)] 15 AAC 55.510;

(16) [(14)] 15 AAC 55.810;

(17) [(15)] 15 AAC 55.850;

(18) 15 AAC 55.900(a)(21) - (26) and (b)(21) - (25) [(16) 15 AAC 55.900(a)(21) - (22) AND (b)(21) - (24)].

15 AAC 55.800 is amended by adding a new subsection to read:

(i) The provisions of 15 AAC 55.250 and 15 AAC 55.260 apply retroactively to April 1, 2006, with respect to costs incurred before July 1, 2007, and otherwise apply retroactively to July 1, 2007. (Eff. 5/3/2007, Register 182; am 10/21/2009, Register 192; am 2/27/2010, Register 193)

Authority: AS 43.05.080 Sec. 37, ch. 2, TSSLA 2006 Sec. 72, ch. 1, SSSLA 2007
AS 43.55.110

15 AAC 55.900(a) is amended by adding new paragraphs to read:

(23) "oil or gas development operations" means the physical operations conducted in the field to

(A) drill and complete wells to produce oil or gas or to support oil or gas

production, including installation of a drill pad or structure; or

(B) install oil or gas production equipment or facilities;

(24) "oil or gas exploration operations" means the physical operations conducted in the field to

(A) drill and obtain subsurface information from an exploration well, including installation of a drill pad or structure; or

(B) explore for oil or gas using geological or geophysical exploration techniques;

(25) "oil or gas production facility or equipment"

(A) means a facility or equipment other than a well that is used in oil or gas production operations and that handles produced fluids upstream of the point of production or fluids injected in a reservoir for reservoir pressure maintenance, repressuring, or enhanced recovery purposes;

(B) does not include a refinery, crude oil topping plant, or other manufacturing facility; for purposes of this subparagraph, "manufacturing facility" does not include a gas processing plant;

(26) "oil or gas production operations"

(A) means the physical operations conducted in the field to

(i) lift oil or gas to the surface;

(ii) gather, separate, treat, and store on the surface well fluids upstream of the point of production; in this sub-subparagraph, "treat" does not include performing gas treatment as defined in AS 43.55.900;

(iii) perform gas processing upstream of the point of production;

(iv) meter oil or gas upstream of the point of production; and

(v) inject fluids in the reservoir from which the oil or gas is being produced, for reservoir pressure maintenance, repressuring, or enhanced recovery purposes;

(B) does not include compression of gas for the purpose of gas treatment as defined in AS 43.55.900 or of transporting gas to a market.

15 AAC 55.900(b) is amended by adding a new paragraph to read:

(25) "other land" means, with respect to costs of exploration, land the right to explore for oil or gas deposits within which, or the right to drill a stratigraphic test well on which, has been granted by license or permit by the property owner to the producer or explorer that incurs, or on behalf of whom is incurred, the costs of that exploration.

15 AAC 55 is amended by adding a new section to read:

15 AAC 55.250. Standards for lease expenditures other than overhead. (a) Unless the department has approved or required use of an operating agreement under AS 43.55.165(c) or (d), as those provisions read on June 30, 2007, costs incurred before July 1, 2007, other than an allowance for overhead expenses under 15 AAC 55.270, are ordinary and necessary costs upstream of the point of production of oil and gas and direct costs of exploring for, developing, or producing oil or gas deposits, under AS 43.55.165(a), as that provision read on June 30, 2007, only if they are

(1) direct charges under 15 AAC 55.260 incurred for an activity or purpose described in (c) of this section; and

(2) not excluded under AS 43.55.165(e), as that provision read on June 30, 2007, or under AS 43.55.165(e)(6) and (19), as amended and enacted by sec. 60, ch. 1, SSSLA 2007, to the extent made retroactive to April 1, 2006, by sec. 74(b), ch. 1, SSSLA 2007.

(b) Costs incurred after June 30, 2007, satisfy the requirements established in AS 43.55.165(a)(1)(B), as enacted by sec. 58, ch. 1, SSSLA 2007, only if they are

(1) direct charges under 15 AAC 55.260 incurred for an activity or purpose described in (c) of this section; and

(2) not excluded under AS 43.55.165(e), as amended by sec. 60, ch. 1, SSSLA 2007.

(c) The activities or purposes referred to in (a) and (b) of this section are

(1) conducting a geological or geophysical survey to explore for oil or gas;

(2) performing a geological, geophysical, geotechnical, or geochemical

examination or investigation specific to a reservoir to support development of that reservoir;

(3) processing or interpreting data acquired from an activity described in (1) or (2) of this subsection to support oil or gas exploration, development, or production operations;

(4) designing, surveying, preparing, constructing, operating, or maintaining a drill site for an exploration well or a well to produce oil or gas or to support oil or gas production;

(5) transporting, mobilizing, or demobilizing a rig, coil tubing unit, or similar equipment, or associated supplies, to and on a drill site to drill or perform downhole operations described in (6) - (8) of this subsection on a well described in (4) of this subsection; demobilization does not include transportation out of the state;

(6) designing, drilling, testing, logging, completing, operating, maintaining, repairing, or suspending a well described in (4) of this subsection;

(7) plugging and abandoning an exploration well, but excluding restoration of the drill site;

(8) plugging a well described in (4) of this subsection, or a portion of the well, for the purpose of redrilling;

(9) designing, constructing, acquiring, transporting, installing, operating, repairing, or maintaining an oil or gas production facility or equipment;

(10) designing, constructing, acquiring, transporting, installing, operating, repairing, or maintaining a communications system for communications between the site of oil or gas exploration, development, or production operations, and the operator's headquarters in the state, and that are necessary for the operations;

(11) designing, constructing, acquiring, transporting, installing, operating, repairing, or maintaining a field automation system solely dedicated to and specific to a unit or a lease or property and necessary for oil or gas production operations of the unit or the lease or property;

(12) preparing and submitting an application, data, or report necessary to obtain or maintain a governmental permit or similar governmental approval for oil or gas exploration, development, or production operations, or for a facility, equipment, or infrastructure described in (16) of this subsection;

(13) performing an archaeological, geophysical, or environmental survey or preparing an environmental impact statement required by law or otherwise required by a government agency, or required by an oil and gas lease, for oil or gas exploration, development, or production operations, or for a facility, equipment, or infrastructure described in (16) of this subsection, or otherwise complying with environmental requirements imposed by law or oil and gas lease for those operations, or for that facility, equipment, or infrastructure;

(14) performing one or more of the following activities with respect to an oil or hazardous substance cleanup contingency plan, fire response plan, or disaster recovery plan required for safe operation or by law or oil and gas lease, for oil or gas exploration, development, or production operations, or for a facility, equipment, or infrastructure described in (16) of this subsection:

(A) preparing and maintaining the plan;

(B) training personnel or performing practice drills, monitoring, or inspection under the plan;

(C) obtaining and maintaining equipment and supplies required under the plan to be routinely kept on hand;

(15) monitoring and maintaining the safety of personnel located at the site, or in the vicinity, of oil or gas exploration, development, or production operations;

(16) designing, constructing, acquiring, transporting, installing, operating, repairing, or maintaining a facility, equipment, or infrastructure that is located in the vicinity of and is used to support oil or gas exploration, development, or production operations; that facility, equipment, or infrastructure

(A) includes

(i) camps;

(ii) operations centers;

(iii) laboratories;

(iv) staging pads, roads, bridges, docks, helipads, landing areas, and similar transportation structures;

(v) medical facilities;

(vi) emergency response facilities;

(vii) storage facilities;

(viii) security facilities;

(ix) repair and maintenance shops; and

(x) vehicles;

(B) does not include refineries, topping plants, or other manufacturing facilities.

(d) A cost incurred jointly for both an activity or purpose described in (c) of this section and an activity or purpose not described in (c) of this section must be allocated between the activity or purpose described in (c) of this section and the other activity or purpose using a reasonable allocation methodology.

(e) Costs incurred before July 1, 2007, that satisfy the requirements of (a)(1) and (2) of this section are not a producer's or explorer's lease expenditures under AS 43.55.165(a), as that provision read on June 30, 2007, unless the costs are costs, incurred by the producer after March 31, 2006, of exploring for, developing, or producing oil or gas deposits located within the producer's leases or properties in the state or, in the case of land in which the producer or explorer does not own a working interest, are costs, incurred by the producer or explorer after March 31, 2006, of exploring for oil or gas deposits located within other land in the state.

(f) Costs incurred after June 30, 2007, that satisfy the requirements of (b)(1) and (2) of this section are not a producer's or explorer's lease expenditures under AS 43.55.165(a), as repealed and reenacted by sec. 58, ch. 1, SSSLA 2007, unless the costs also satisfy the requirements of AS 43.55.165(a)(1)(A), as enacted by sec. 58, ch. 1, SSSLA 2007.

(g) For purposes of this section, "designing" is limited to activities specific to an identifiable well, facility, item of equipment, or system, and does not include activities of more general applicability or that would ordinarily be considered research and development. (Eff. 2/27/2010 Register 193)

AS 43.55.110 AS 43.55.165

15 AAC 55 is amended by adding a new section to read:

15 AAC 55.250. Standards for lease expenditures other than overhead. (a) Unless the department has approved or required use of an operating agreement under AS 43.55.165(c) or (d), as those provisions read on June 30, 2007, costs incurred before July 1, 2007, other than an allowance for overhead expenses under 15 AAC 55.270, are ordinary and necessary costs upstream of the point of production of oil and gas and direct costs of exploring for, developing, or producing oil or gas deposits, under AS 43.55.165(a), as that provision read on June 30, 2007, only if they are

(1) direct charges under 15 AAC 55.260 incurred for an activity or purpose described in (c) of this section; and

(2) not excluded under AS 43.55.165(e), as that provision read on June 30, 2007, or under AS 43.55.165(e)(6) and (19), as amended and enacted by sec. 60, ch. 1, SSSLA 2007, to the extent made retroactive to April 1, 2006, by sec. 74(b), ch. 1, SSSLA 2007.

(b) Costs incurred after June 30, 2007, satisfy the requirements established in AS 43.55.165(a)(1)(B), as enacted by sec. 58, ch. 1, SSSLA 2007, only if they are

(1) direct charges under 15 AAC 55.260 incurred for an activity or purpose described in (c) of this section; and

(2) not excluded under AS 43.55.165(e), as amended by sec. 60, ch. 1, SSSLA 2007.

(c) The activities or purposes referred to in (a) and (b) of this section are

(1) conducting a geological or geophysical survey to explore for oil or gas;

(2) performing a geological, geophysical, geotechnical, or geochemical

examination or investigation specific to a reservoir to support development of that reservoir;

(3) processing or interpreting data acquired from an activity described in (1) or (2) of this subsection to support oil or gas exploration, development, or production operations;

(4) designing, surveying, preparing, constructing, operating, or maintaining a drill site for an exploration well or a well to produce oil or gas or to support oil or gas production;

(5) transporting, mobilizing, or demobilizing a rig, coil tubing unit, or similar equipment, or associated supplies, to and on a drill site to drill or perform downhole operations described in (6) - (8) of this subsection on a well described in (4) of this subsection; demobilization does not include transportation out of the state;

(6) designing, drilling, testing, logging, completing; operating, maintaining, repairing, or suspending a well described in (4) of this subsection;

(7) plugging and abandoning an exploration well, but excluding restoration of the drill site;

(8) plugging a well described in (4) of this subsection, or a portion of the well, for the purpose of redrilling;

(9) designing, constructing, acquiring, transporting, installing, operating, repairing, or maintaining an oil or gas production facility or equipment;

(10) designing, constructing, acquiring, transporting, installing, operating, repairing, or maintaining a communications system for communications between the site of oil or gas exploration, development, or production operations, and the operator's headquarters in the state, and that are necessary for the operations;

(11) designing, constructing, acquiring, transporting, installing, operating, repairing, or maintaining a field automation system solely dedicated to and specific to a unit or a lease or property and necessary for oil or gas production operations of the unit or the lease or property;

(12) preparing and submitting an application, data, or report necessary to obtain or maintain a governmental permit or similar governmental approval for oil or gas exploration, development, or production operations, or for a facility, equipment, or infrastructure described in (16) of this subsection;

(13) performing an archaeological, geophysical, or environmental survey or preparing an environmental impact statement required by law or otherwise required by a government agency, or required by an oil and gas lease, for oil or gas exploration, development, or production operations, or for a facility, equipment, or infrastructure described in (16) of this subsection, or otherwise complying with environmental requirements imposed by law or oil and gas lease for those operations, or for that facility, equipment, or infrastructure;

(14) performing one or more of the following activities with respect to an oil or hazardous substance cleanup contingency plan, fire response plan, or disaster recovery plan required for safe operation or by law or oil and gas lease, for oil or gas exploration, development, or production operations, or for a facility, equipment, or infrastructure described in (16) of this subsection:

(A) preparing and maintaining the plan;

(B) training personnel or performing practice drills, monitoring, or inspection under the plan;

15 AAC 55 is amended by adding a new section to read:

15 AAC 55.260. Direct charges. (a) Except as limited by (d) and (e) of this section, direct charges for purposes of 15 AAC 55.250(a) and (b) are

(1) costs paid to real property owners to acquire surface rights in real property located in the vicinity of oil or gas exploration, development or production operations, and used in support of those operations;

(2) net profit shares required to be paid to the state under leases issued under AS 38.05.180(f)(3)(B), (D), or (E) and paid after June 30, 2007;

(3) labor costs, not including work on tax, legal, purchasing, or accounting matters, or matters involving a dispute before a government agency, in the form of salaries and wages of

(A) employees of the operator, when those employees are directly employed in or in support of oil or gas exploration, development, or production operations, and

(i) on the site or in the vicinity of those operations;

(ii) in transit to or from the site or vicinity of those operations;

(iii) on a site of a system described in 15 AAC 55.250(c)(10) or (11) if assigned to and working on that system; or

(iv) on the site of the construction, transportation, repair, or maintenance of a facility, a system, equipment, or infrastructure described in 15 AAC 55.250(c)(9) - (11) or (16) if assigned to and working on that construction, transportation, repair, or maintenance; or

(B) any of the following employees of the operator, while those employees are assigned to a specific lease or property or unit that is the subject of oil or gas exploration, development, or production, and only as to that portion of the salaries and wages attributable to the time actually devoted to that exploration, development, or production, as supported by an approved timesheet or other time writing document:

(i) technical employees having special and specific engineering, geological, or other technical skills, including engineers, geologists, geophysicists, environmental specialists, and other technical personnel whose primary function with respect to that exploration, development, or production is the handling of specific problems or operating conditions involving the oil or gas exploration, development, or production operations or the support of those operations;

(ii) employees engaged in developing field automation systems dedicated to and specific to a unit or a lease or property and necessary for oil or gas production operations of the unit or the lease or property;

(iii) employees engaged in developing computer applications specific to a unit or a lease or property and necessary for oil or gas development or production operations of the unit or the lease or property;

(4) costs of employee training that directly relates to the job duties for the employees described in (3) of this subsection; the costs of professional memberships, dues, or periodicals, or of education or training in pursuit of an academic degree or professional credential, are not direct charges;

(5) expenditures or contributions made under assessments imposed by governmental authority that are applicable to the operator's labor costs described in (3) of this subsection; as to workers' compensation, if the operator self-insures, it may treat as an expenditure or contribution under this paragraph the charge that is regularly recorded as an accrual in the operator's general ledger as representing the fair and reasonable cost of the self-insurance;

(6) reasonable expenses incurred or reimbursed by the employer of those employees described in (3) of this subsection for travel by those employees to or from the site or vicinity of oil or gas exploration, development, or production operations, and for associated living quarters and meals; a reasonable per diem allowance, if paid by the employer in place of reimbursement of actual expenses, may be substituted for actual expenses for living quarters and meals;

(7) the employer's share of contributions to established plans for employee group life, disability, or medical insurance, pension, retirement, stock purchase, thrift, bonus, or other similar benefit plans, applicable to the operator's labor costs described in (3) of this subsection, if

(A) the plans are available on a regular basis to all employees of the operator who are directly working in oil or gas exploration, development, or production operations, other than employees excluded from a plan's coverage because of participation under a collective bargaining agreement; and

(B) the amount of the employer's share of contributions does not exceed the following percentage, as applicable, of the costs under (3) of this subsection incurred for employees covered by the plans:

(i) 32 percent for calendar year 2006;

(ii) 33 percent for calendar year 2007;

(iii) 36 percent for calendar year 2008;

(iv) 35 percent for calendar year 2009;

(v) 30 percent for a calendar year after 2009;

(8) the employer's share of contributions to established plans for employee group life, disability, or medical insurance, pension, retirement, stock purchase, thrift, bonus, or other similar benefit plans, applicable to the operator's labor costs described in (3) of this subsection, and available to employees under a collective bargaining agreement;

(9) costs to purchase or transport a facility, equipment, materials, or supplies used in oil or gas exploration, development, or production operations;

(10) costs to purchase or transport a facility, a system, equipment, or infrastructure described in 15 AAC 55.250(c)(10), (11), or (16), or to purchase or transport equipment, materials, or supplies used in a facility, a system, equipment, or infrastructure described in 15 AAC 55.250(c)(10), (11), or (16);

(11) costs paid to a third party for contract services, utilities, or use of a facility equipment, or infrastructure provided by the third party and used in oil or gas exploration, development, or production operations, or used in support of those operations, or for use of a system described in 15 AAC 55.250(c)(10) or (11) provided by the third party; for purposes of this paragraph,

(A) contract services

(i) do not include work in tax, legal, or accounting matters, or

matters involving a dispute before a government agency;

(ii) are limited to services the labor costs of which, under (3) of this subsection, would be allowable as direct charges if the operator's employees performed the services;

(B) support facilities, equipment, and infrastructure are limited to the categories described in 15 AAC 55.250(c)(16);

(12) costs charged to a unit or other joint operation for use in its oil or gas exploration, development, or production operations of a facility or equipment that

(A) is wholly or partly owned by a producer or explorer with an interest in the unit or other joint operation; and

(B) is not, and has not previously been, wholly or partly owned or acquired by or on behalf of the unit or other joint operation;

(13) a premium paid to a third-party insurer for insurance covering oil or gas exploration, development, or production operations;

(14) standby costs paid to a third party drilling rig contractor, and incurred

(A) while rig operations are deferred, suspended, or curtailed by reason of force majeure or another cause beyond the reasonable control of the operator; or

(B) to secure a rig for drilling if the rig is actually used for the operation for which it was secured;

(15) payments of property taxes, sales or use taxes, motor fuel taxes, or excise taxes if incurred with respect to the sale, acquisition, ownership, or use of a good, service, or property, the cost of which is a lease expenditure under AS 43.55.165, or would be a lease

expenditure if incurred during the period for which the payment is made;

(16) payments in lieu of property taxes, sales or use taxes, motor fuel taxes, or excise taxes that would otherwise be incurred with respect to the sale, acquisition, ownership, or use of goods, services, or property, the cost of which is a lease expenditure under AS 43.55.165, or would be a lease expenditure if incurred during the period for which the payment is made;

(17) a regulatory cost charge under AS 31.05.093;

(18) a fee charged by a government agency for a regulatory license, permit, or similar regulatory approval required for oil or gas exploration, development, or production operations, or for a facility, equipment, or infrastructure described in 15 AAC 55.250(c)(16);

(19) costs to transport to the injection site, oil, gas, or other fluid recovered from a well and injected for reservoir pressure maintenance, repressuring, or enhanced recovery purposes, and costs paid to a third party producer to purchase that oil, gas, or other fluid from the producer;

(20) if a producer owns a refinery or crude oil topping plant that is located on or near the premises of the producer's lease or property in the state and that processes the producer's oil produced from that lease or property into a product that the producer uses in the operation of the lease or property in drilling for or producing oil or gas, the amount calculated by subtracting from the fair market value of the product used the prevailing value of the oil that is processed; for purposes of this paragraph,

(A) the amount of the oil that is processed equals the number of barrels of the product into which the oil is processed;

(B) the prevailing value of the oil that is processed in a field topping plant

in the Alaska North Slope area is the gross value at the point of production of that oil as determined under 15 AAC 55.163(b);

(21) costs paid to a third party to acquire geological or geophysical data used in oil or gas exploration, development, or production operations.

(b) For purposes of this section, an employee's salary or wages for a given period of time includes the cost in salary or wages for the employee's earned or compensatory time off attributable to the employee's work during that time period.

(c) In the absence of evidence to the contrary, and for purposes of AS 43.55.165(e)(12), the department will accept a charge under (a)(12) of this section as being not more than fair market value if the charge does not exceed the cost calculated on the basis of the net book value of the equipment or facility multiplied by the number of hours, days, miles, or throughput volumes for which the equipment or facility is used in the oil or gas exploration, development, or production operations, divided by the number of hours, days, miles, or throughput volumes, as applicable, of estimated remaining useful life of the equipment or facility, or calculated using another method approved by the department. For purposes of this subsection, "net book value" means the dollar amount the owner of an asset records in its financial statements, consistent with generally accepted accounting principles, as the historical cost of the asset, excluding capitalized interest and net of accumulated depreciation or amortization, if the historical cost does not exceed the fair market value of the asset at the time it was acquired by the owner.

(d) Except for a cost described in (a)(2), (13), or (19) of this section, a cost that relates to the exploration, development, or production of oil or gas deposits that are subject to a unit operating agreement or other agreement that provides for an operator to conduct the oil or gas

exploration, development, or production on behalf of itself and other producers or explorers is not a direct charge under this section if the cost is not (1) incurred in the first instance by the operator on behalf of the producers or explorers under the agreement; (2) actually billed to the producers or explorers under the agreement; and (3) paid, as to the producer's or explorer's share, by the producer or explorer to whom that share is billed. For purposes of this subsection, an agreement includes an instrument or arrangement among the parties to the agreement that modifies a party's rights or obligations under the agreement.

(e) A fee or other consideration paid to, or for the benefit of, a producer in connection with the use of a facility in which that producer has an ownership interest is not a direct charge under this section to the extent that the fee or other consideration

(1) compensates that producer for the deferral or loss of that producer's oil or gas production resulting from the payer's use of the facility; or

(2) reimburses that producer for its additional tax liability resulting from the receipt of fees or other consideration in connection with the payer's use of the facility.

(f) Direct charges under this section are net of any credits, refunds, reimbursements, purchase discounts, and cost recoveries, unless the credit, refund, reimbursement, or cost recovery is accounted for as an adjustment to lease expenditures under AS 43.55.170. For purposes of this subsection, "credits" do not include tax credits.

(g) For purposes of this section, "operator" means, in the case of

(1) a producer or explorer carrying out oil or gas exploration, development, or production on behalf of itself, that producer or explorer;

(2) a unit operating agreement or other agreement that provides for an operator to

carry out oil or gas exploration, development, or production on behalf of itself and other producers or explorers, the producer or explorer acting as operator under that agreement. (Eff. 2/27/2010 Register 193)

Authority: AS 43.05.080 AS 43.55.160 AS 43.55.170
AS 43.55.110 AS 43.55.165

15 AAC 55.270(a) is amended to read:

15 AAC 55.270. Overhead before {*the first day of the first month that begins on or after the effective date of these regulation changes*}. (a) This subsection applies only to determining allowable overhead expenses under AS 43.55.165(a) and (b), **as those provisions read on June 30, 2007, and under AS 43.55.165(a), as repealed and reenacted by sec. 58, ch. 1, SSSLA 2007**. For purposes of AS 43.55.165(b)(1)(C), **as that provision read on June 30, 2007, and AS 43.55.165(a)(2), as repealed and reenacted by sec. 58, ch. 1, SSSLA 2007**, a reasonable allowance for a producer's or explorer's overhead expenses directly related to exploring for, developing, **or** [AND] producing oil or gas deposits located within a lease or property or other land in the state is the sum of

(1) three percent of the producer's or explorer's non-overhead lease expenditures that are qualified capital expenditures; and

(2) nine percent of the producer's or explorer's non-overhead lease expenditures that are not

(A) qualified capital expenditures; [OR]

(B) payments of or in lieu of taxes; **or**

(C) net profit share payments under 15 AAC 55.260(a)(2).

15 AAC 55.270 is amended by adding new subsections to read:

(e) The provisions of (a)(2)(C) of this section apply to expenditures incurred after June 30, 2007.

(f) This section applies to expenditures incurred before *{the first day of the first month that begins on or after the effective date of these regulation changes}*. (Eff. 5/3/2007, Register 182; am 2/27/2010 Register 193)

15 AAC 55.800 is amended by adding a new subsection to read:

(i) The provisions of 15 AAC 55.250 and 15 AAC 55.260 apply retroactively to April 1, 2006, with respect to costs incurred before July 1, 2007, and otherwise apply retroactively to July 1, 2007. (Eff. 5/3/2007, Register 182; am 10/21/2009, Register 192; am 2/27/2010, Register 193)

Authority: AS 43.05.080 Sec. 37, ch. 2, TSSLA 2006 Sec. 72, ch. 1, SSSLA 2007
AS 43.55.110

15 AAC 55.900(a) is amended by adding new paragraphs to read:

(23) "oil or gas development operations" means the physical operations conducted in the field to

(A) drill and complete wells to produce oil or gas or to support oil or gas

production, including installation of a drill pad or structure; or

(B) install oil or gas production equipment or facilities;

(24) "oil or gas exploration operations" means the physical operations conducted in the field to

(A) drill and obtain subsurface information from an exploration well, including installation of a drill pad or structure; or

(B) explore for oil or gas using geological or geophysical exploration techniques;

(25) "oil or gas production facility or equipment"

(A) means a facility or equipment other than a well that is used in oil or gas production operations and that handles produced fluids upstream of the point of production or fluids injected in a reservoir for reservoir pressure maintenance, repressuring, or enhanced recovery purposes;

(B) does not include a refinery, crude oil topping plant, or other manufacturing facility; for purposes of this subparagraph, "manufacturing facility" does not include a gas processing plant;

(26) "oil or gas production operations"

(A) means the physical operations conducted in the field to

(i) lift oil or gas to the surface;

(ii) gather, separate, treat, and store on the surface well fluids upstream of the point of production; in this sub-subparagraph, "treat" does not include performing gas treatment as defined in AS 43.55.900;

(iii) perform gas processing upstream of the point of production;

(iv) meter oil or gas upstream of the point of production; and

(v) inject fluids in the reservoir from which the oil or gas is being produced, for reservoir pressure maintenance, repressuring, or enhanced recovery purposes;

(B) does not include compression of gas for the purpose of gas treatment as defined in AS 43.55.900 or of transporting gas to a market.

15 AAC 55.900(b) is amended by adding a new paragraph to read:

(25) "other land" means, with respect to costs of exploration, land the right to explore for oil or gas deposits within which, or the right to drill a stratigraphic test well on which, has been granted by license or permit by the property owner to the producer or explorer that incurs, or on behalf of whom is incurred, the costs of that exploration.

Oil Company Upstream Capital Spending

This Memorandum is an update to a previous note dated October 3, 2007 on this same matter. Additional data on Capital Expenditures and Acquisitions has been incorporated below and supplemented with further analysis.

BACKGROUND

Like any corporation, oil companies are by definition in business to make a profit. Taxes and other forms of government take govern the amount of profits that a government deems it appropriate for an oil company to make. With all things being equal (which they rarely are), oil companies would preferentially invest in areas with the lowest overall government take (whether achieved through taxation or otherwise); however, this is not the real world calculus.

When prospectivity (the likelihood of making a discovery) and materiality (the expected size of such a discovery) are added to the investment decision criteria, oil companies quite often end up investing in countries with relatively high or above average levels of government take. They do so because they believe (and often realize) that notwithstanding the high government take investments in those countries will generate absolute levels of profit unachievable in countries with lower levels of take. Thus, countries that offer extraordinary potential (like Angola, Russia, Kazakhstan, Libya and Iraq) are able to command a greater share of the total pie while, at the other extreme, areas which have extremely favorable tax regimes (like Ireland and Morocco) still do not attract significant industry interest.

The number of locales in the world that offer the larger oil companies the needed level of materiality to invest are increasingly limited in number. ExxonMobil, BP, Chevron and ConocoPhillips for example, together produce over 12 million barrels of oil equivalent per day – to simply replace their production they need to add to their reserves a Kuparuk size accumulation every 8 to 9 months!

Thus, the investment decisions of oil companies are governed by a number of factors. These include both the unit level of profitability available (a reflection of the overall level of government take), and the size of the investment opportunity.

CAPITAL SPENDING COMPARISON

The oil companies have compared Alaska's fiscal regime mainly to other lower 48 US fiscal regimes; however, such a comparison would only be valid for a small portion of their overall capital spending over the past few decades. Indeed, typically over 70% of the E&P capital spending of companies such as ExxonMobil, BP, Chevron and ConocoPhillips are outside the US.

As the oil companies continue to assert, the fiscal regime in the Gulf of Mexico (GOM) is more favorable than ACES. But given that, why do the companies predominately invest outside

the US in countries with fiscal regimes far less contractor friendly than Alaska? Indeed, why not spend all of their capital in the Gulf of Mexico? Reasons include:

- Scale: there are not enough opportunities in the GOM for companies of this scale to increase production, "book barrels" and maintain high reserves replacement ratios; and
- Diversification: best practice portfolio management strategies typically promote investments in various locations, i.e. avoid "putting all the eggs in the same basket".

As a result, a number of the countries that have been the recipients of significant capital spending have fiscal regimes that are seen as less favorable (and in some cases much less favorable) than in the lower 48 US. In fact, countries such as Indonesia, Norway, Angola and Iraq typically have average and marginal tax rates/government takes above those in place in Alaska, regardless of price.

It is thus misleading simply to compare Alaska's terms with those available in the Gulf of Mexico or other US jurisdictions. Given the amount of investment capital being spent by the large oil companies each year, Alaska is presently not competing with the GOM for funds; it is competing with these other, mostly high cost (from a government take perspective) international opportunities.

The following table illustrates the upstream capital spending of ExxonMobil, BP, Chevron, and ConocoPhillips from 2002 through 2009.

	US$ Millions	2009*	2008	2007	2006	2005	2004	2003	2002
Exxon-Mobil	US	3,585	3,334	2,212	2,486	2,142	1,922	2,125	2,357
	International	17,119	16,400	13,512	13,745	12,328	9,793	9,863	8,037
	US Share (%)	17%	17%	14%	15%	15%	16%	18%	23%
	TOTAL	20,704	19,734	15,724	16,231	14,470	11,715	11,988	10,394
BP	US	6,169	10,359	5,096	4,605	3,870	4,096	4,097	4,303
	International	8,727	11,868	9,111	8,513	6,367	7,097	11,273	5,396
	US Share (%)	41%	47%	36%	35%	38%	37%	27%	44%
	TOTAL	14,896	22,227	14,207	13,118	10,237	11,193	15,370	9,699
Chevron	US	3,261	5,516	4,558	4,123	2,450	1,820	1,641	1,888
	International	13,848	11,944	10,980	8,696	5,939	4,501	4,034	4,395
	US Share (%)	19%	32%	29%	32%	29%	29%	29%	30%
	TOTAL	17,109	17,460	15,538	12,819	8,389	6,321	5,675	6,283
Conoco-Phillips	Alaska	832	1,414	666	820	746	645	570	706
	US (Continental)	2,668	3,836	3,122	2,008	891	669	848	499
	International	5,959	11,206	6,147	6,685	5,047	3,935	3,090	2,071
	Alaska Share (%)	9%	9%	7%	9%	11%	12%	13%	22%
	US Share (%)	37%	32%	38%	30%	24%	25%	31%	37%
	TOTAL	9,459	16,456	9,935	9,513	6,684	5,249	4,508	3,276
TOTAL	US	16,515	24,459	15,654	14,042	10,099	9,152	9,281	9,753
	International	45,653	51,418	39,750	37,639	29,681	25,326	28,260	19,899
	US Share (%)	27%	32%	28%	27%	25%	27%	25%	33%
	TOTAL	62,168	75,877	55,404	51,681	39,780	34,478	37,541	29,652

*Source: Company annual reports and press releases. - *2009 figures for ConocoPhillips are budget, not actual. Note: the scope of the activities included under Upstream Capital Spending varies from company to company, with ExxonMobil reporting Capital and Exploration Expenditures, BP reporting Capital Expenditure and Acquisitions, Chevron reporting Capital and Exploratory Expenditures and ConocoPhillips reporting Capital Expenditures and Investment.*

It is very clear from the above data that these companies invest more of their E&P budget outside the US than in the US, with overall only 27% percent of their upstream investment directed to US projects in 2009. Over the period from 2002 to 2009, the share of the US in these companies' total investment has dropped from 33% to 27%. Annual fluctuations in capital spending are often influenced by major acquisitions, such as Chevron's merger with Unocal in 2005 and ConocoPhillips' merger with Burlington Resources in 2006. In 2009, the total upstream capital spending outside the US represented over US$45 billion, while the US share represented over US$16 billion dollars.

Out of these four companies, ExxonMobil is the company which allocates the most significant portion of its budget to international investment, with over 80% of capital spending outside the US in 2009.

BP on the other hand has the highest percentage of its upstream capital spending in the US, representing over 40% in 2008 and 2009. This split is in part the result of BP's investments in US shale gas, such as the acquisition of Chesapeake's interests in the Arkoma Basin Woodford and Fayetteville Shale plays in 2008 for over US$3.6 billion.

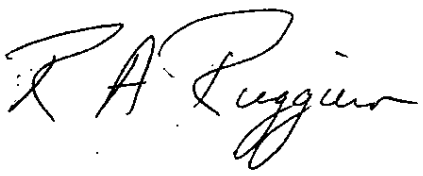
Chevron's US upstream investments have dropped from 32% to 19% from 2008 to 2009. Chevron's international focus is expected to remain strong in 2010 as reflected by its international upstream budget of US$13.2 billion out of a total upstream budget of US$17.3 billion, with major projects in Western Australia, GOM, Brazil, Nigeria, Angola, Thailand, China, and Canada.

ConocoPhillips' share of US spending significantly fluctuated since 2002, with a recent increase to 37% of its total upstream budget. The share of Alaska, out of total upstream budget, has dropped from 22% in 2002 to 9% in 2006 and remained below 10% since then.

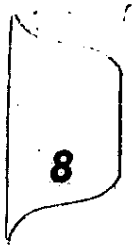
At the macro level there is no discernable change in investment patterns as Alaska moved from ELF to PPT to ACES. The continued investment by the large companies in high government take countries reflects the fact that, in deciding where to invest, government take is one of the factors considered but is demonstrably not, in and of itself, the controlling or deciding factor. In addition, it would be misleading to only compare the fiscal regime in Alaska with regimes in the lower 48 US, or other low government take regimes, as given strategic, investment community and growth drivers the large companies have and will continue to invest in high government take regimes which offer similar resource development opportunities.

Very truly yours,

GAFFNEY, CLINE & ASSOCIATES, INC.



Rich Ruggiero



8

OPERATING AND CAPITAL LEASE EXPENDITURES

Senate Finance Committee

February 17, 2010

Alaska State Department of Revenue

Lease Expenditure Agenda

- Lease Expenditure Sources
- Total North Slope Lease Expenditures
- Standard Deduction Provision
- $0.30/barrel Capital Expenditure Exemption
- Trends in North Slope Spending

Lease Expenditure Information Sources

- Capital expenditure Information
- Monthly expenditure estimates
- Annual expenditure information, 2006 – 2009
- Future expenditure projections from North Slope operators
- Manual processing of all expenditure information

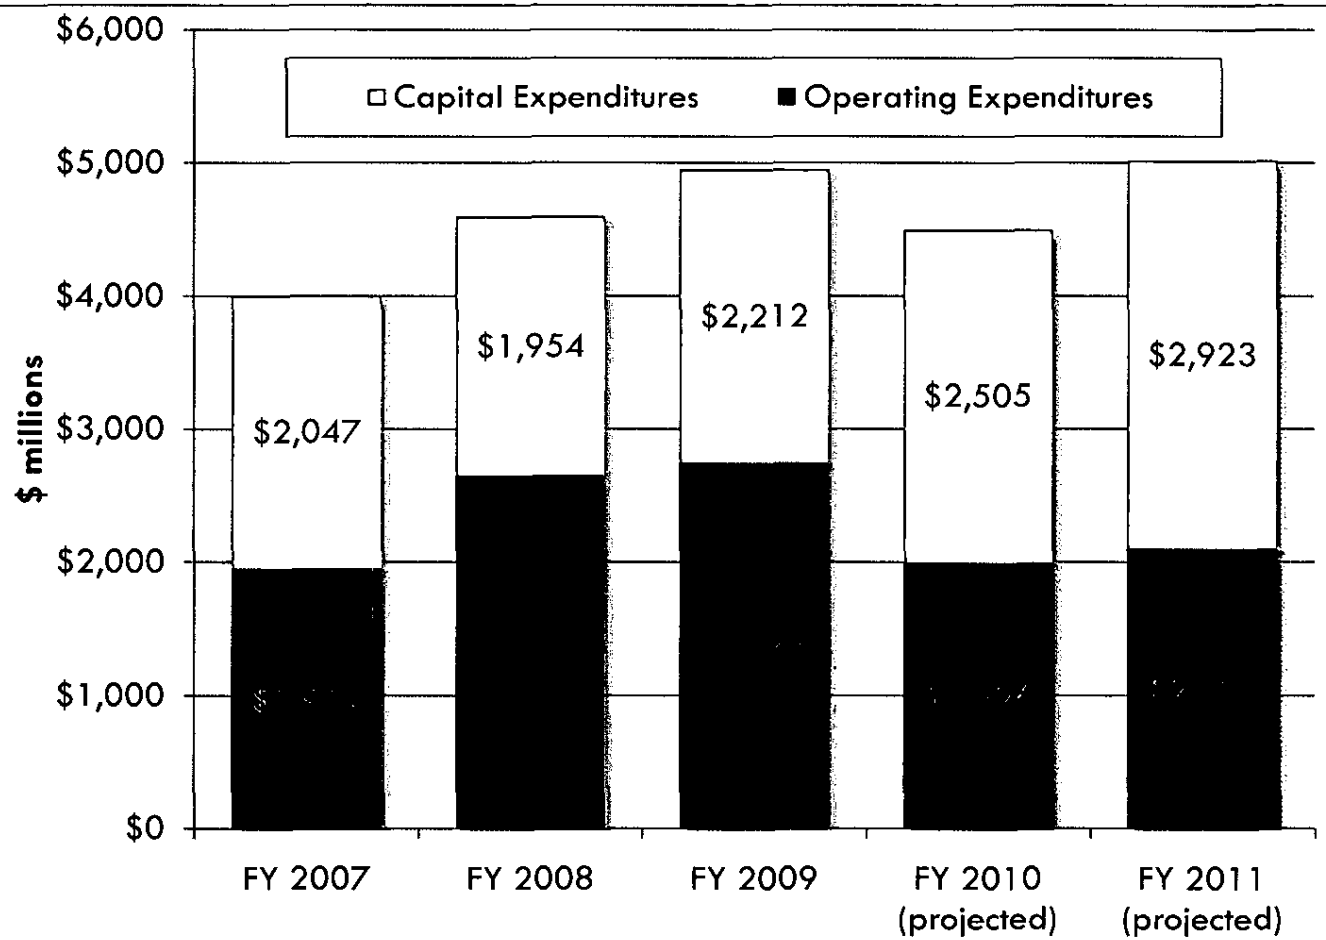
Lease Expenditure Information Sources

- Capital expenditure Information
  - Dating back to April 2001
  - Received from applications for Transition Investment Expenditure (TIE) credits
- Monthly expenditure estimates
  - Beginning May 2008
  - Not audited - Expenditures represent estimates only

Lease Expenditure Information Sources (Continued)

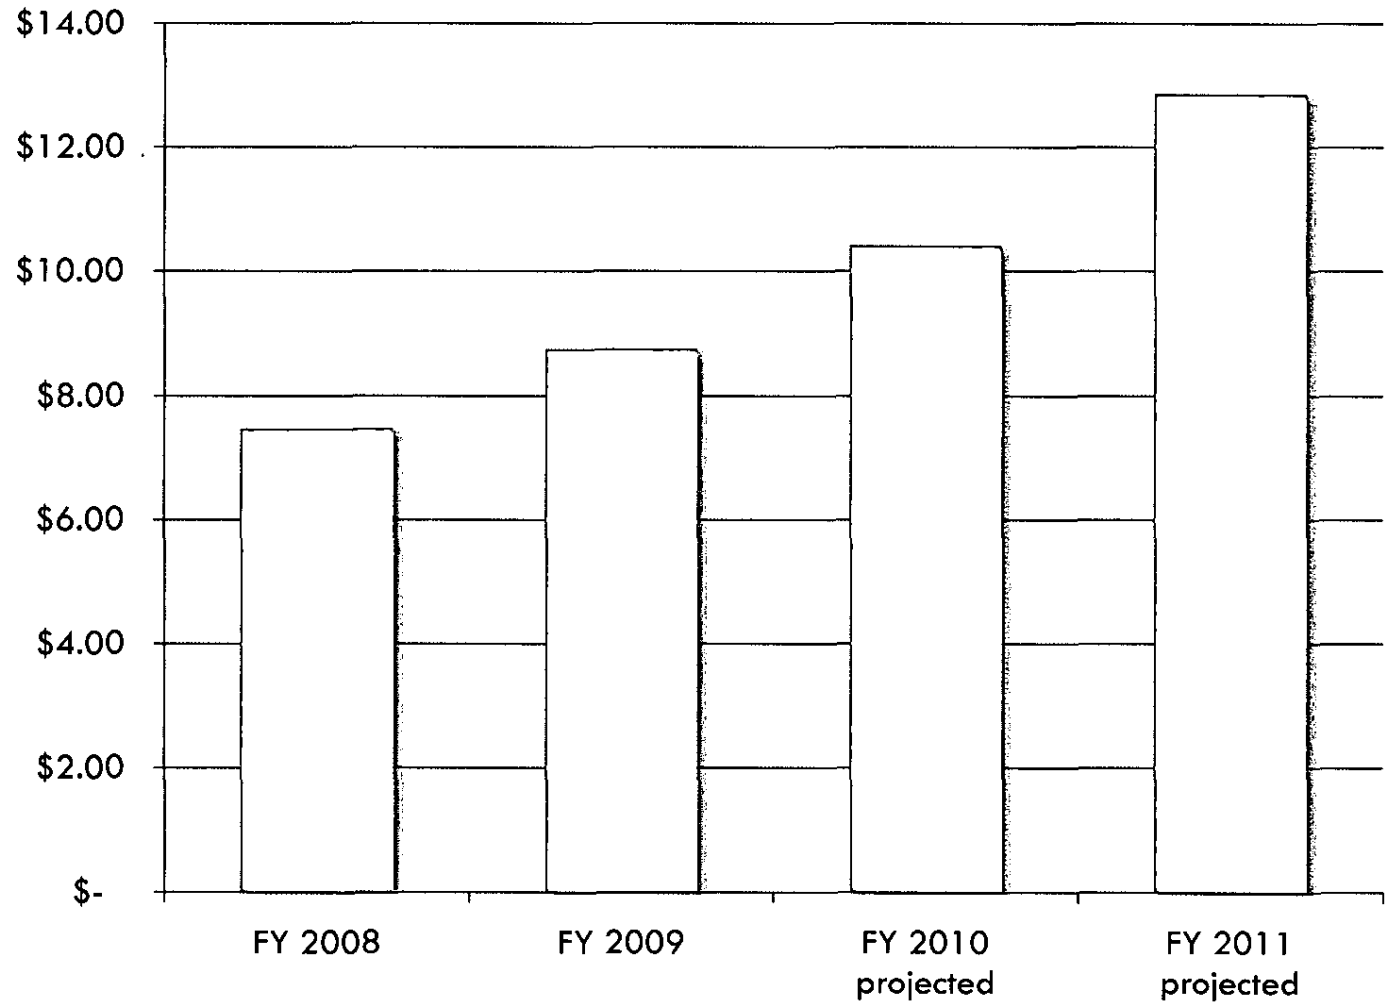
- Annual expenditure information, 2006 – 2009
  - Auditable production tax returns, due March 31 of each year
  - First filing March 31, 2007 (first under PPT)
  - Second filing March 31, 2008 (first under ACES)
  - Third filing March 31, 2009 (second under ACES)
  - Calendar year 2009 filings due March 31, 2010 – in process of developing a standardized tax return
- Future expenditure projections from North Slope operators
  - Requested of operators in spring and fall of each year
  - Request 5 years projections
  - Limited to communications with Working Interest Owners
  - Some categorization of expenditures, depending on operator and property
- Manual processing of all expenditure information

North Slope Operating and Capital Expenditures, Reported and Projected

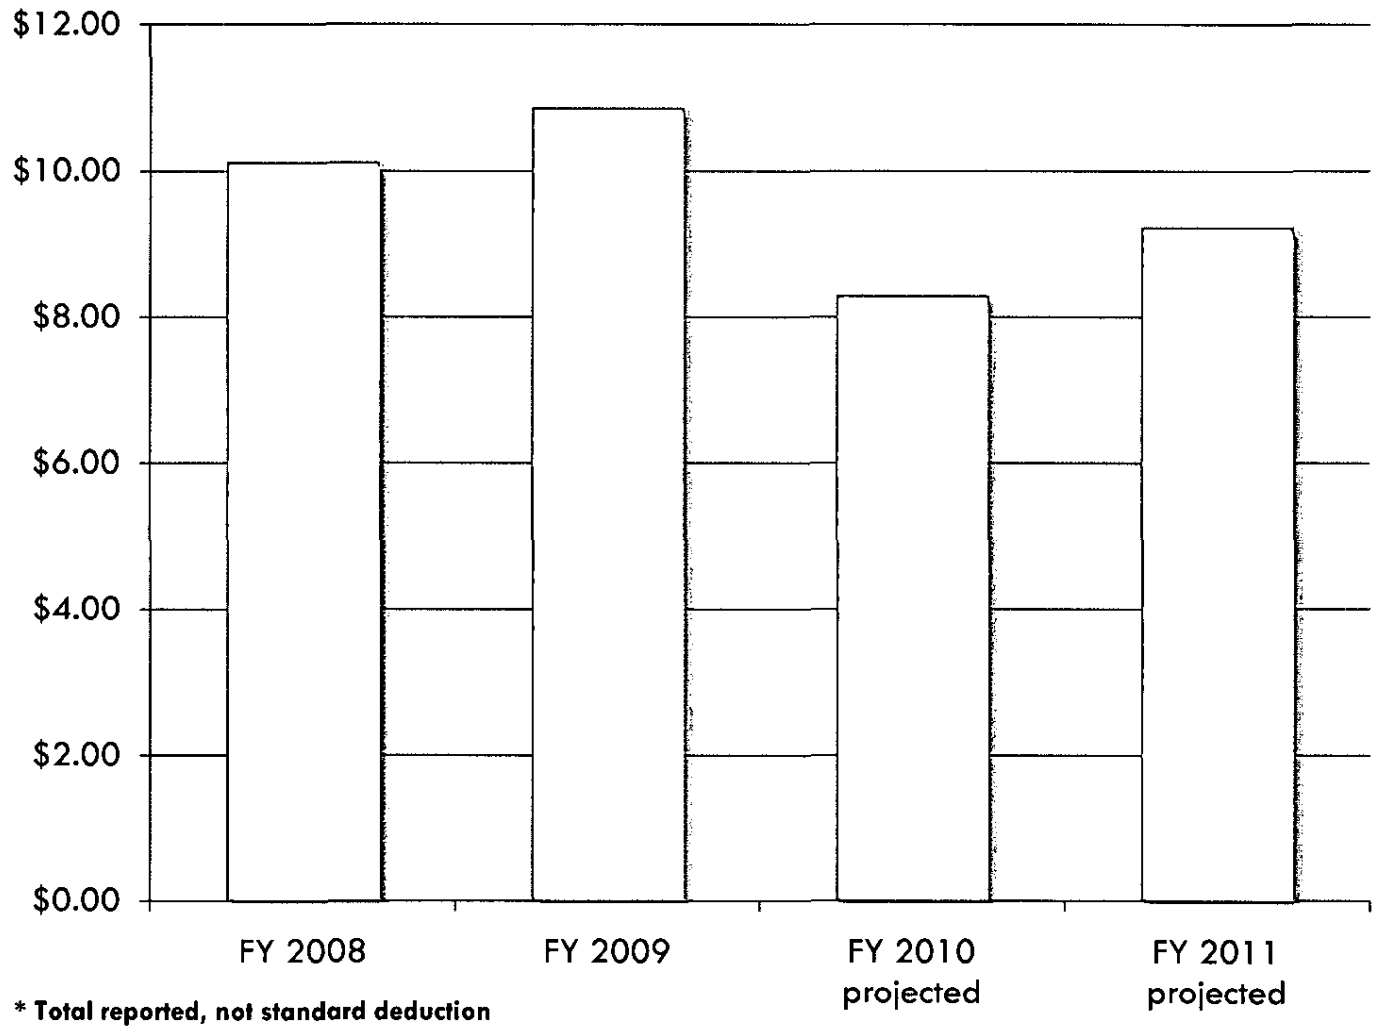


NOTE: Operating expenditures includes total reported costs, not standard deduction; FY 2007 estimated based on incomplete reporting

Capital Expenditures per Barrel, Total North Slope

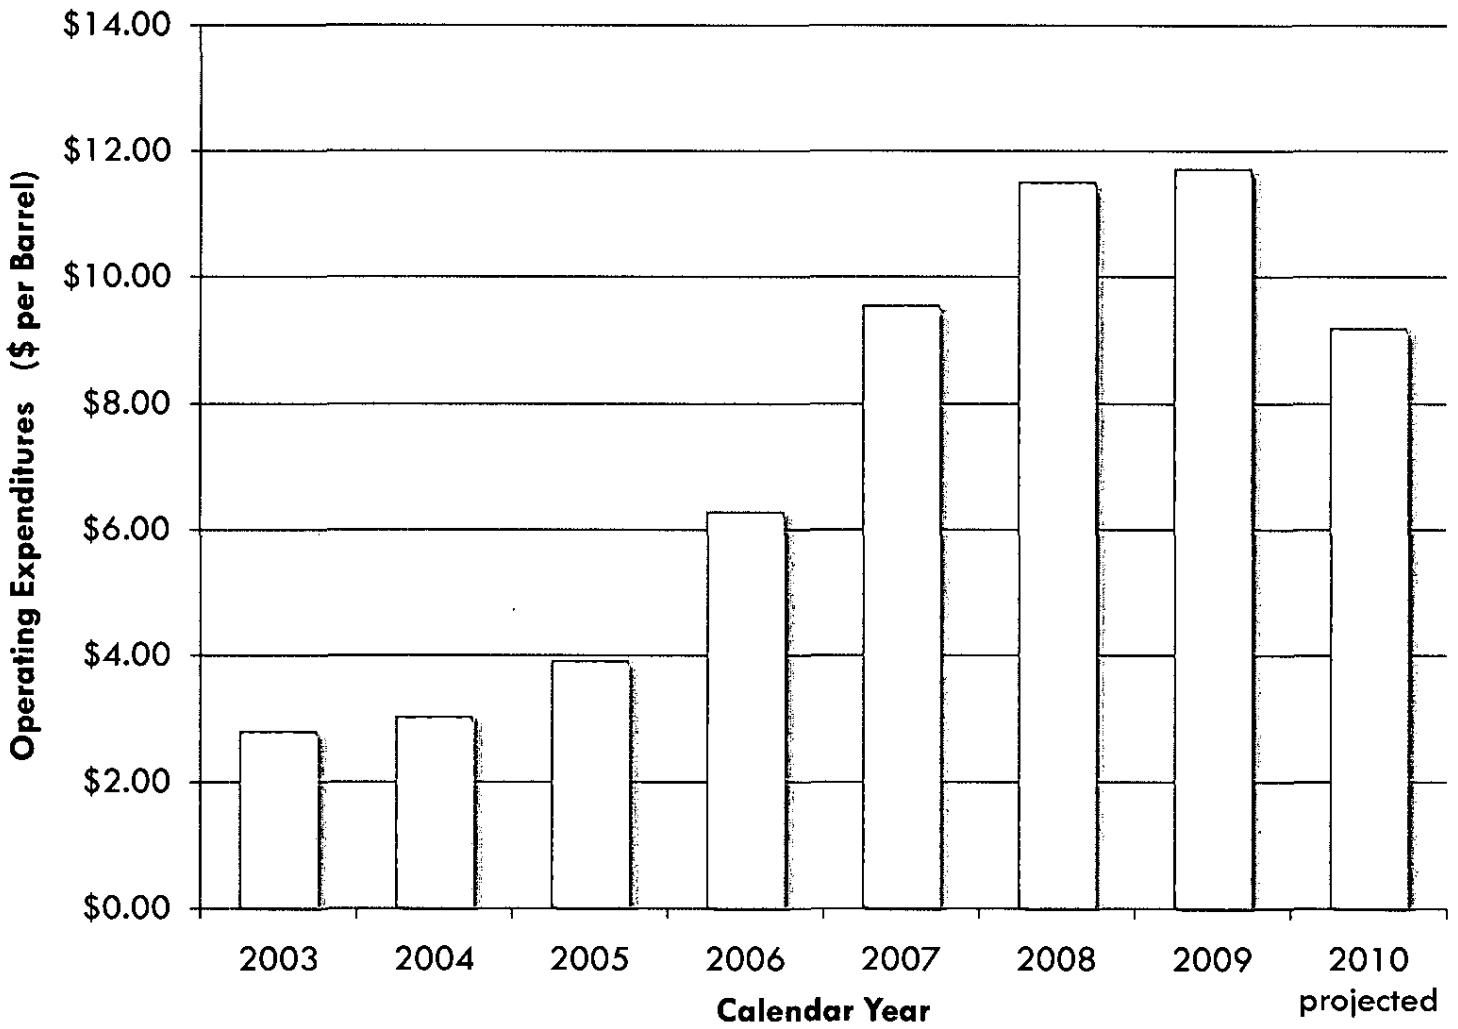


Operating Expenditures per Barrel, Total North Slope *



*** Total reported, not standard deduction**

Prudhoe Bay Operating Expenditures per Barrel, as Reported and Forecast



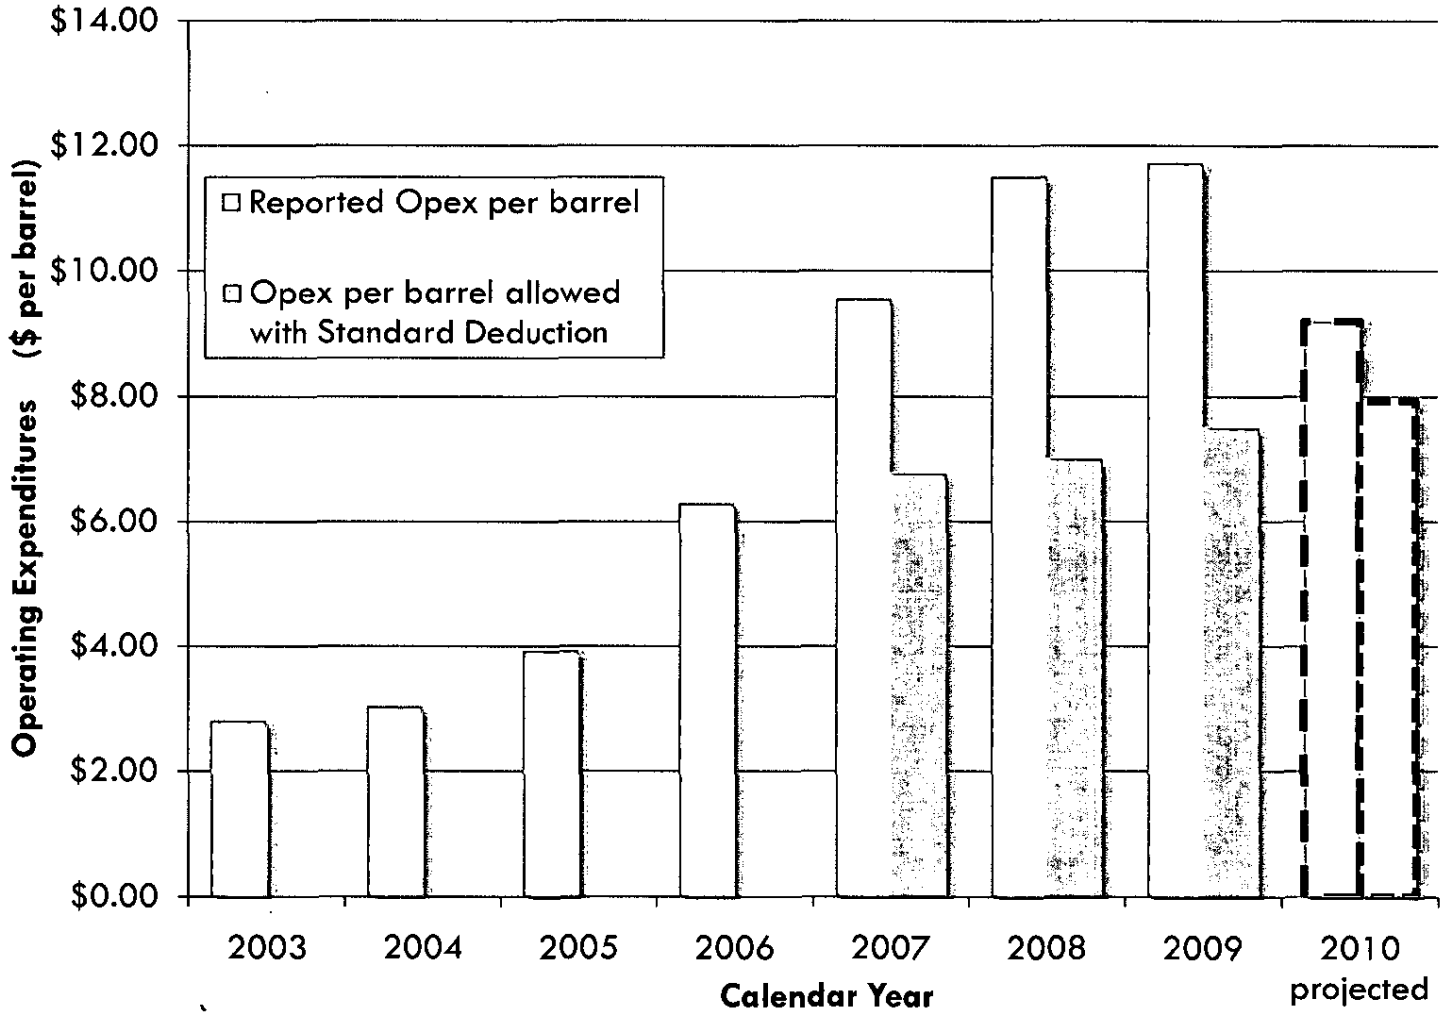
Alaska Department of Revenue

2/17/2010

"Standard Deduction" Provision at AS 43.55.165(j)

- "Standard Deduction" refers to limitation on Operating Expenditures for Prudhoe and Kuparuk units
- Set at CY 2006 expenditure levels, with 3% inflation each year
- Sunset end of CY 2009

Prudhoe Bay Opex per Barrel, as Reported and with Standard Deduction



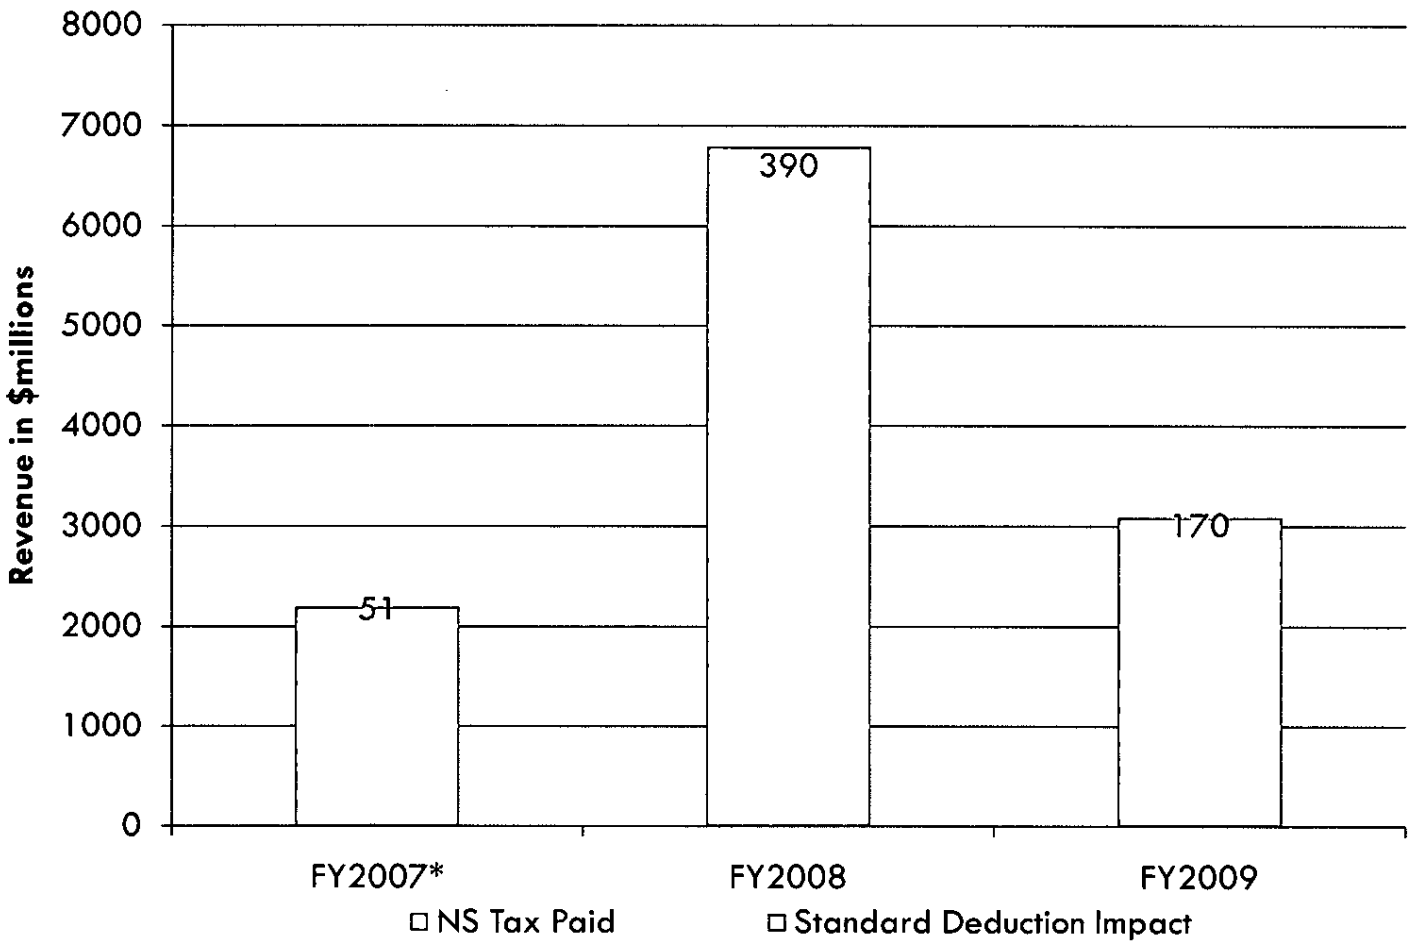
Alaska Department of Revenue

2/17/2010

Impact of Standard Deduction

- Held operating expenditures fairly level for 3 years
- Expenditures more predictable for forecasting
- Difference between standard deduction and total reported costs greater at Prudhoe Bay unit than Kuparuk unit
- Impact on state revenues more significant as oil prices increase

Increase to State Revenue from Standard Deduction Provision

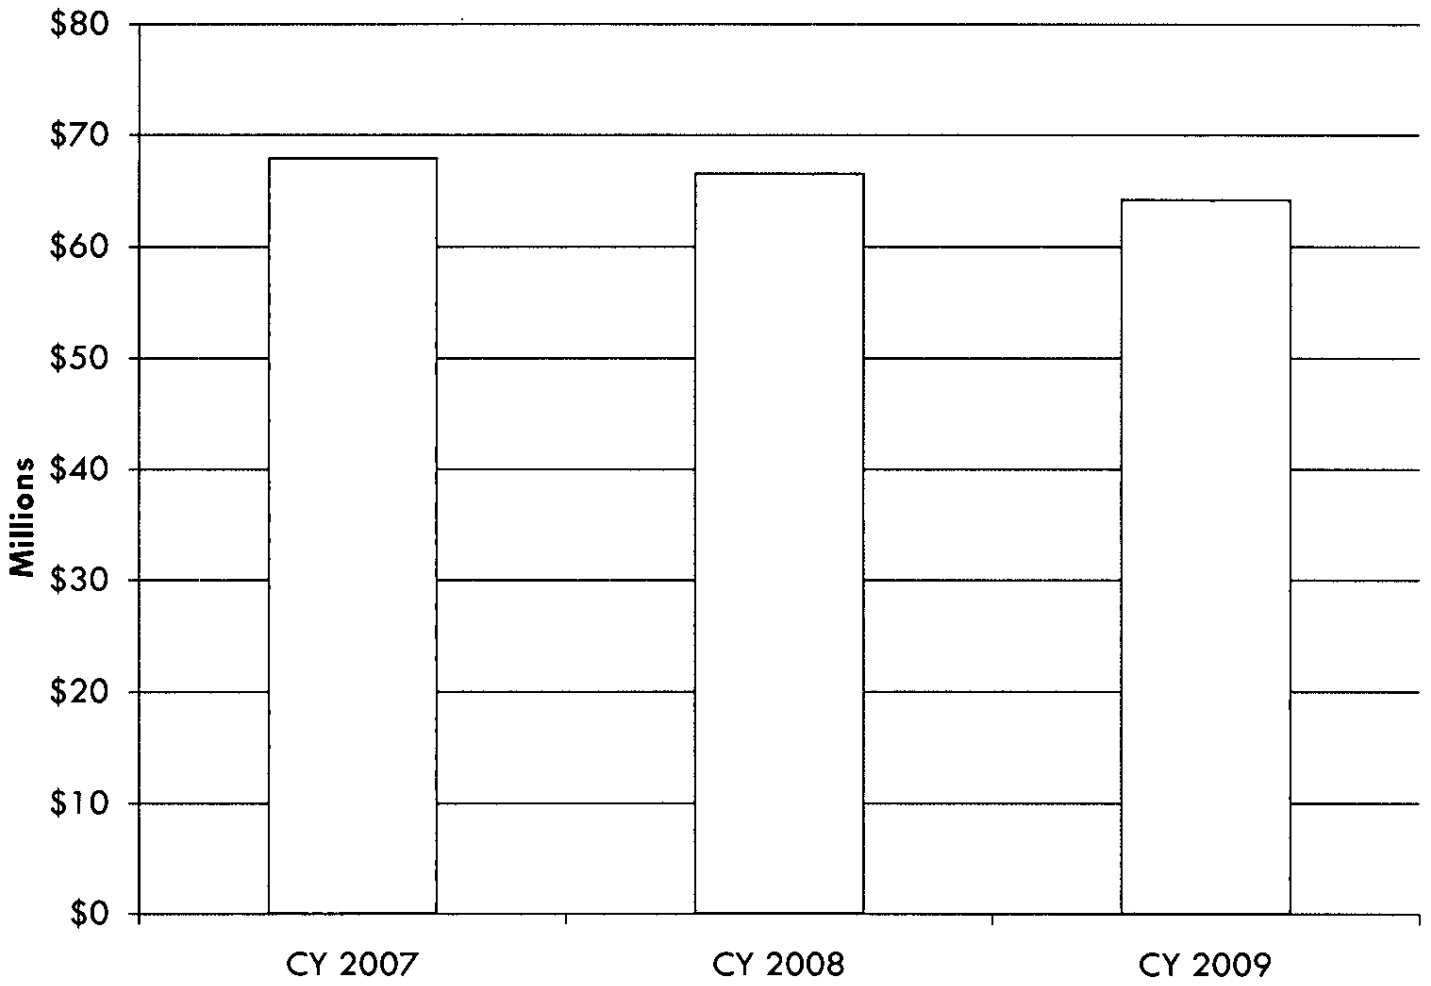


*Standard Deduction in place for half of FY 2007.

Capital Exemption of $0.30 per barrel at AS 43.55.165(e)(18)

- AS 43.55.165(e)(18) exempts $0.30 per barrel
  - Initially intended to address costs of maintaining and upgrading pipelines and facilities
  - Applies to all barrels produced, regardless of property
- Impact of Capital Exemption
  - Reduced reported capital expenditures by close to $70 million per year
  - Expenditure forecasts indicate maintenance and upgrade of several hundred million
  - Maintenance and upgrade expenditures could be amortized over 10-20 years
- AS 43.55.165(e)(19) addresses **unplanned** maintenance
  Some reporting of unplanned maintenance expenditures by companies

$0.30/bbl Capital Expense Exemption



Lease Expenditure Information "Mixed Bag"

- Is lease expenditure categorization required ?
  - Monthly information forms - NOT REQUIRED
  - Annual production tax returns - NOT REQUIRED
  - Future expenditure projection from North Slope operators - NOT REQUIRED

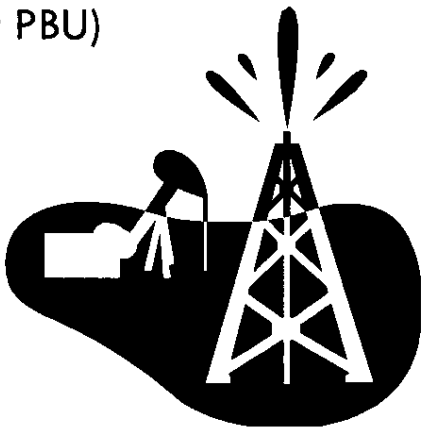
However...

Lease Expenditure "Mixed Bag" (Cont.)

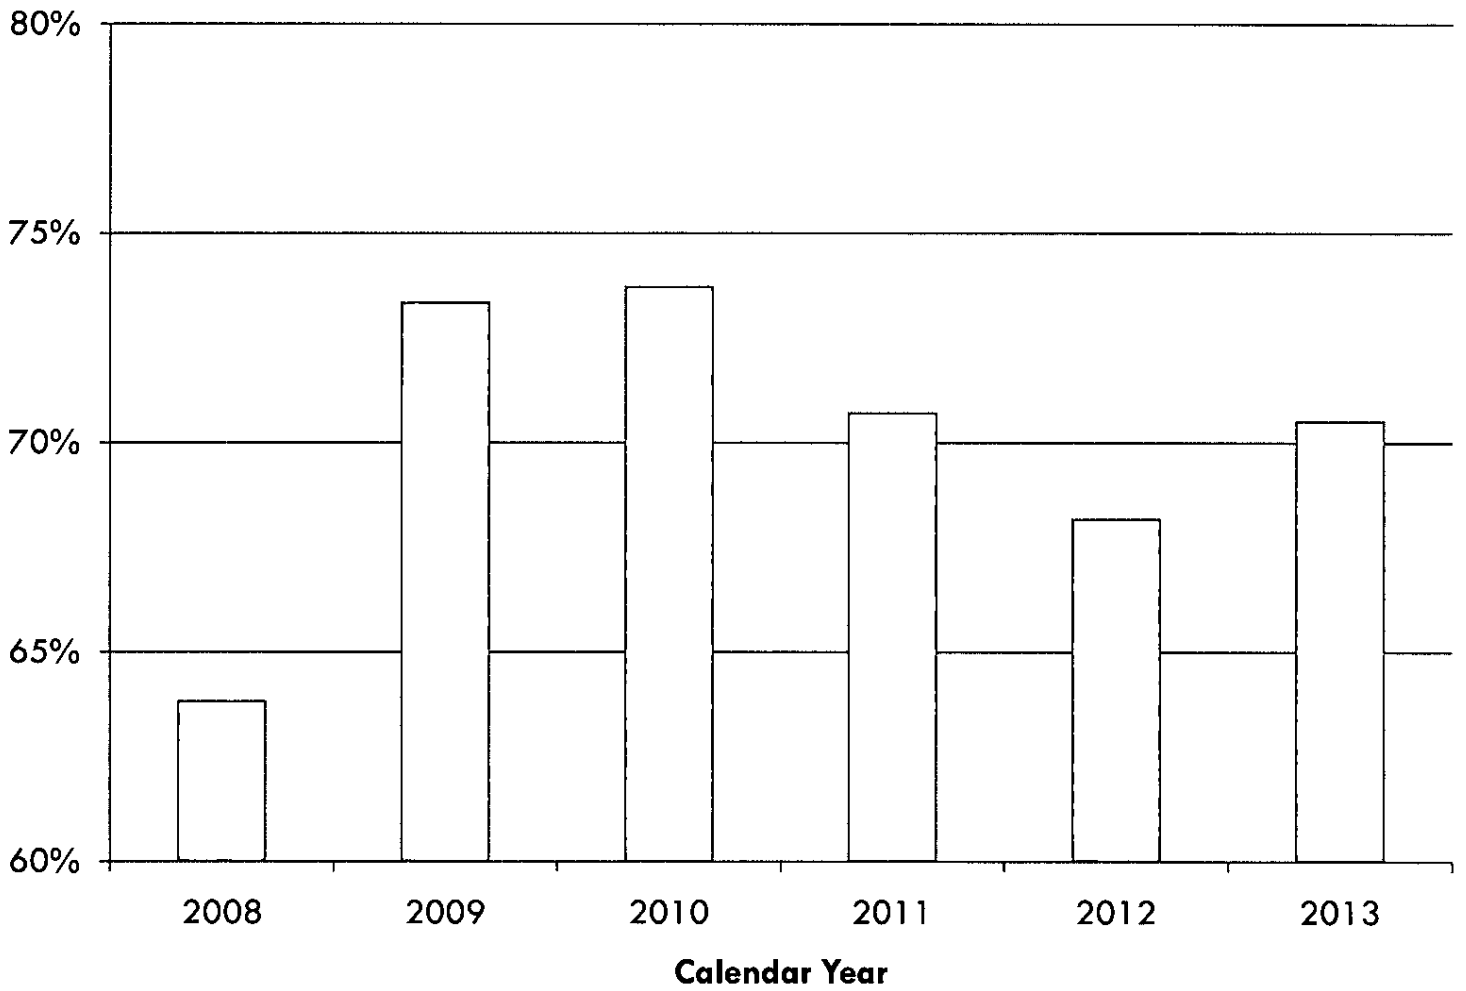
- SOME operators provide categorization in very broad categories on SOME properties
- Examples of Categories
  - Expense workovers
  - Major Repairs
  - Seismic Acquisition and Testing
  - Major Accident Review
  - Facility Integrity
  - Wellwork

Composition of North Slope Capital Expenditures

- Based on review of company confidential cost information, capital expenditures are placed into two categories:
  - "Resource or Development-related"
    - Drilling & Wellwork
    - Enhanced Oil Recovery Projects
    - Seismic
    - Facilities at New Fields (e.g. PT Thomson, WRD at PBU)
  - Other Capital Expenditures
    - Major Repairs and Work on Existing Facilities
    - Corrosion-Related Expenditures
    - Safety Upgrades



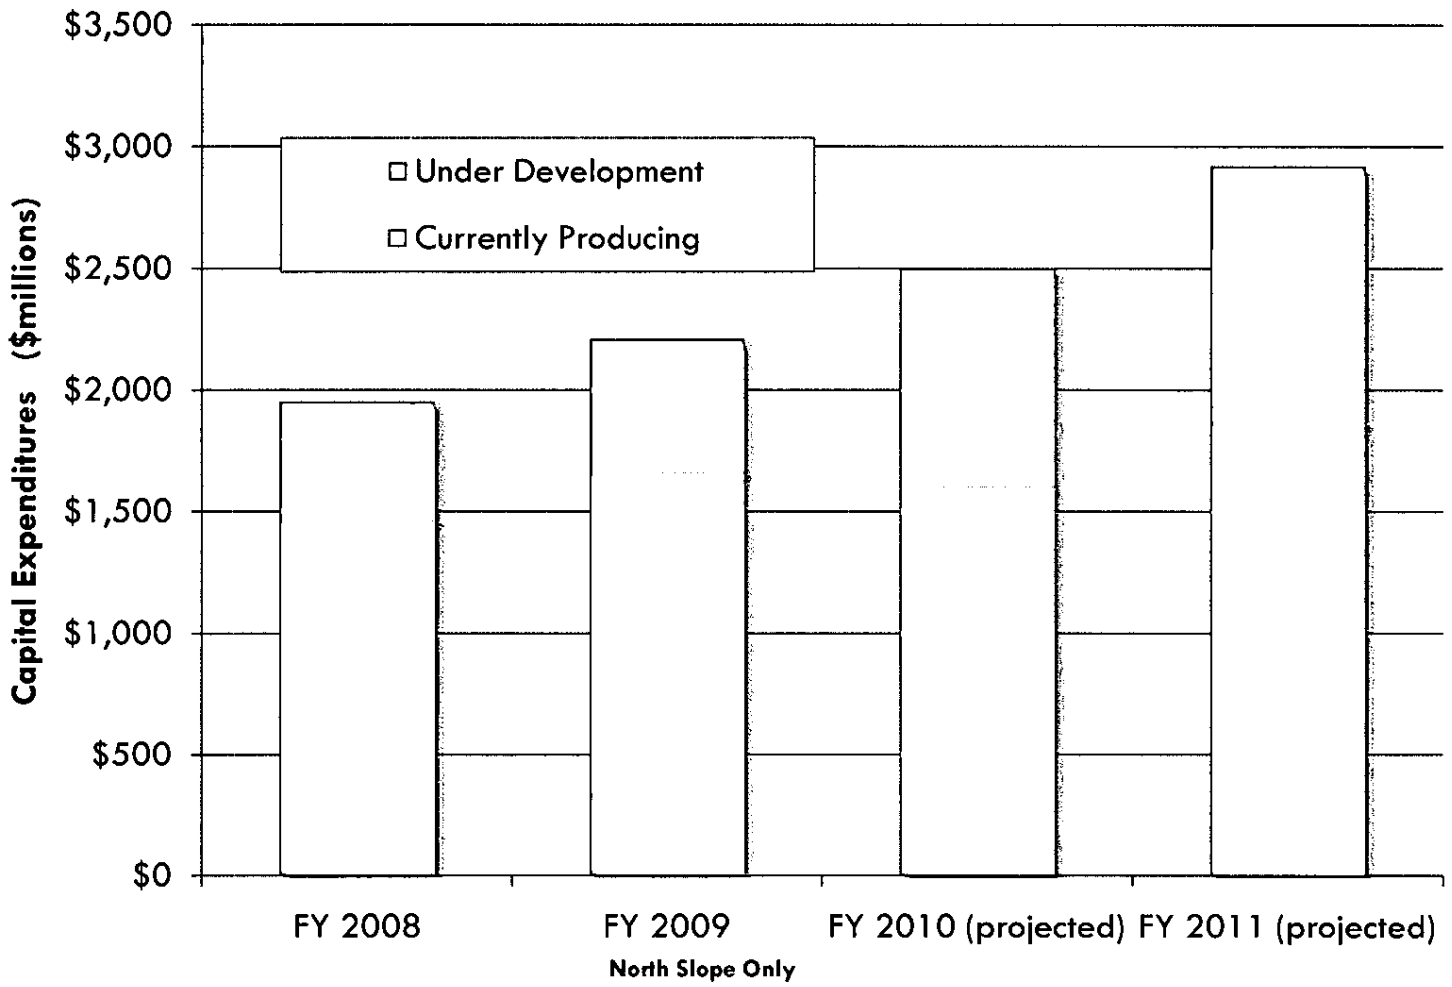
Share of Planned North Slope capital Expenditures for "Resource and Development" Related Costs



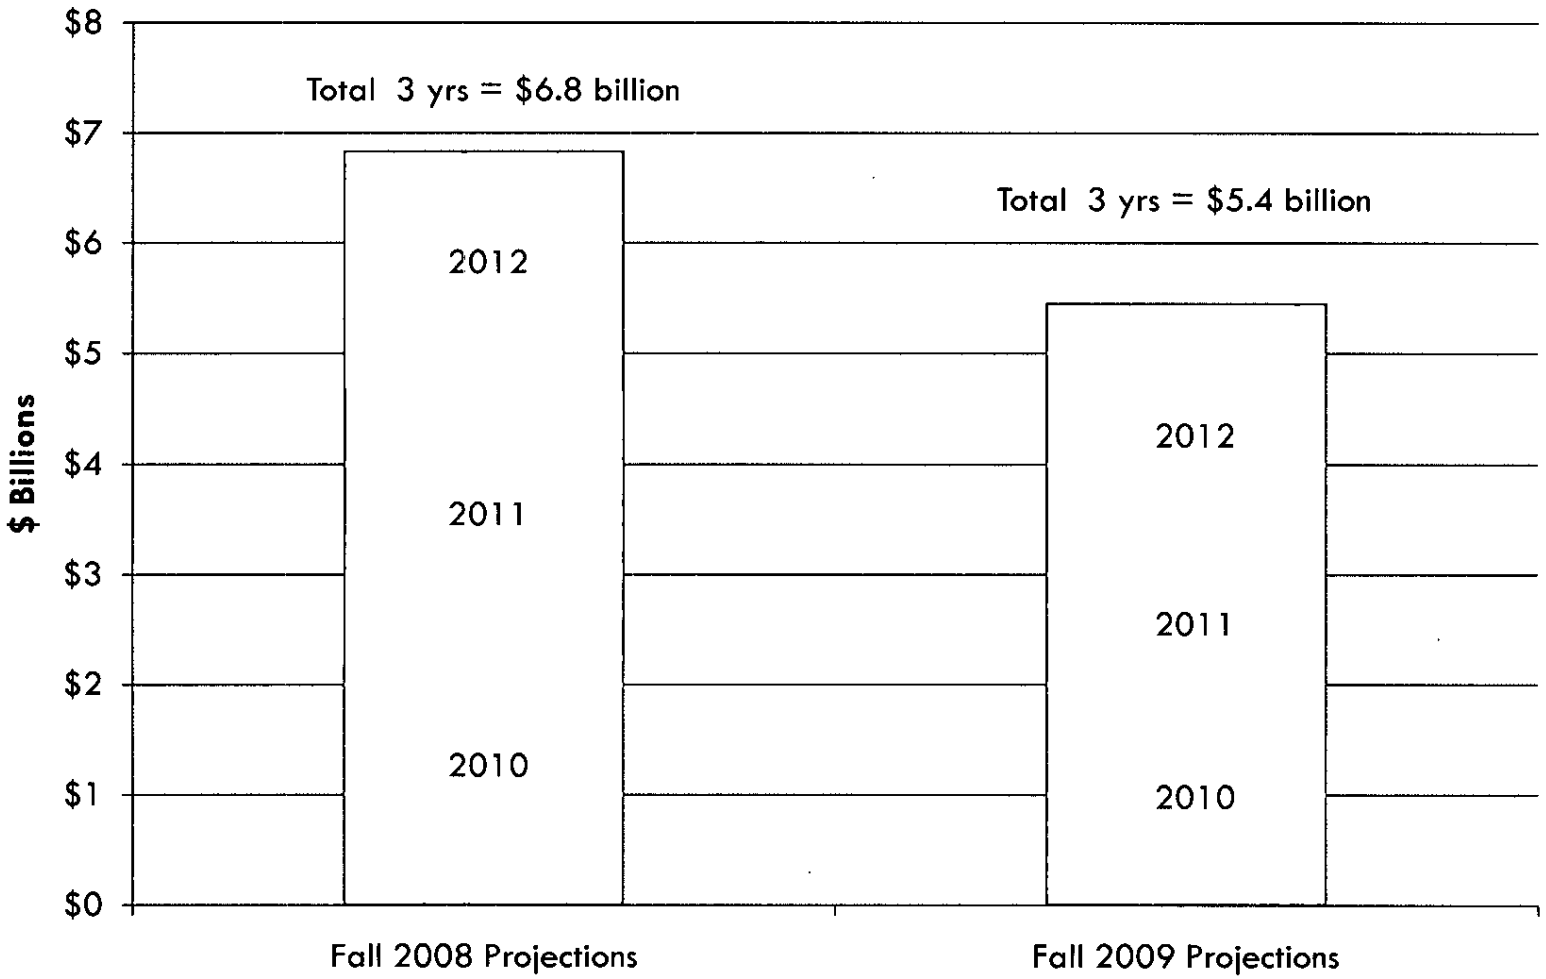
Spending Trends

- Company projections of expenditures changing
- Fall 2008 projected increased expenditures in most units
- Fall 2009 projected divergence in plans
  - Currently producing units – projected lower expenditures
  - Developing units – projected higher expenditures

Capital Expenditures by Type of Property

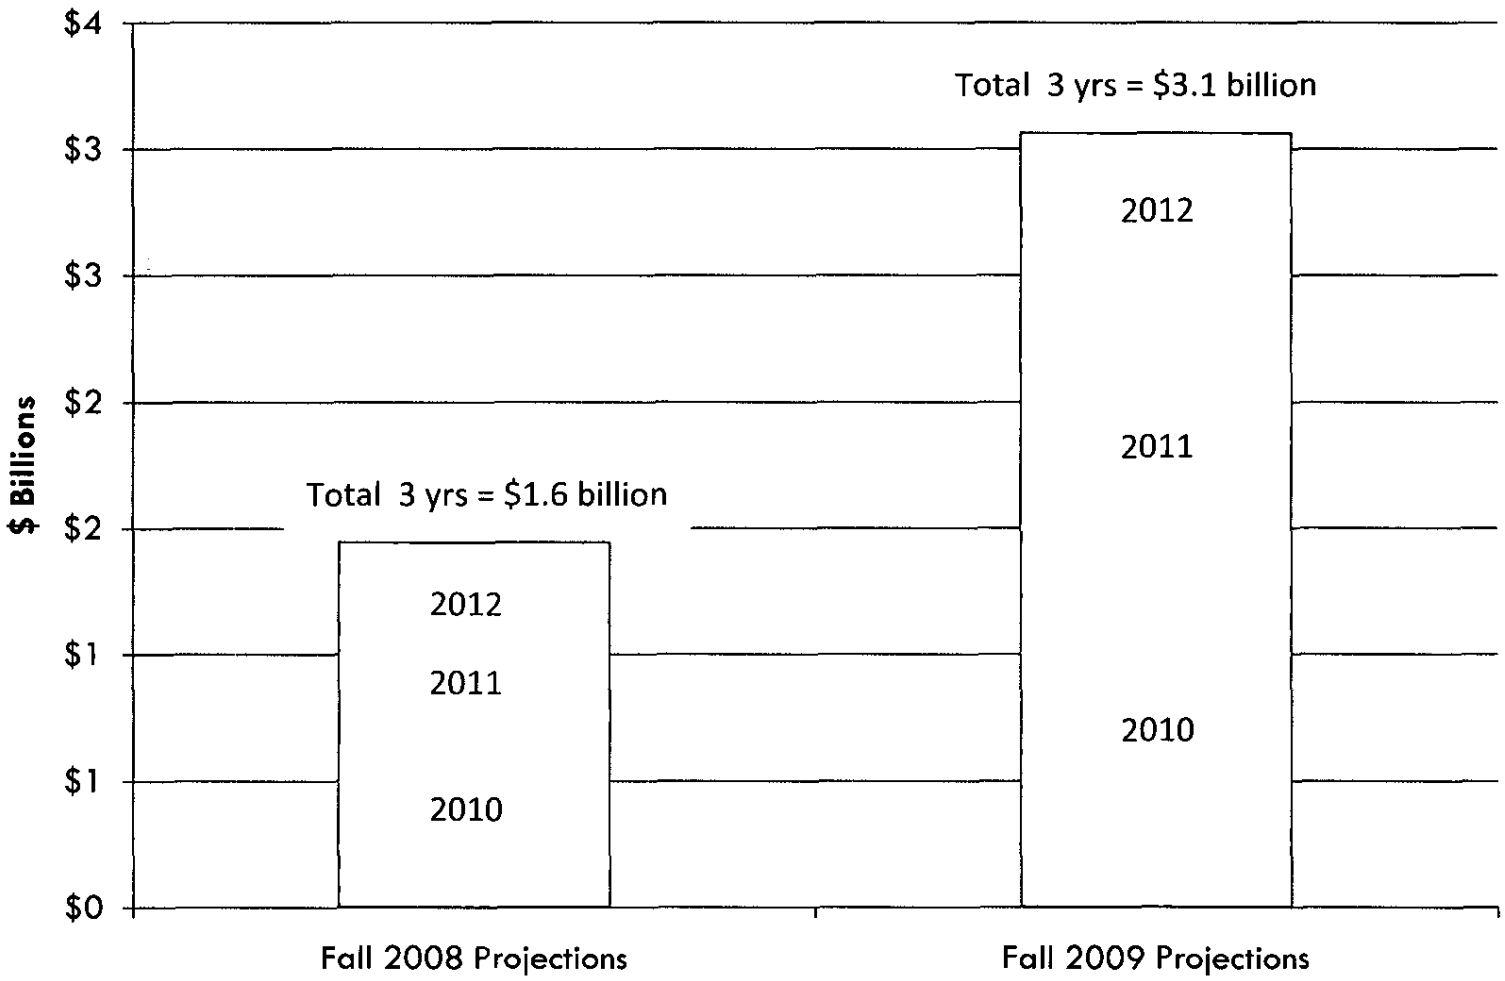


Capital Expenditure on Currently Producing Properties



Note: Excludes Coville River, Oooguruk, Nikiatchuq and PT Thomson

Capital Expenditures of Developing Properties



Recent Trends in North Slope Costs

- DOR has limited data to work with in analyzing historic cost trends.
- Limited comparison of expenditures for 3 years before and after PPT
- Capital Expenditures at Prudhoe Bay
  - Maintenance and corrosion repair expenses are **not** the key driver behind the growth in capital expenditures.
  - Majority of the increase in capital expenditures is due to drilling, seismic and projects (such as development of the Western Region of Prudhoe Bay).
- Operating Expenditures at Prudhoe Bay
  - Major Repairs were a small part of total operating expenditures pre-PPT&ACES and is still a relatively small part of total lifting costs.
  - Wellwork expenditures are the primary driver behind the rise in Operating Expenditures.

The End

PRODUCTION TAX CREDITS

Senate Finance Committee

2/18/2010

Alaska State Department of Revenue

Overview

- **Types of Tax Credits**
- Credits Applied Against Tax Liability
- Transferable Tax Credit Certificates
- Cash Refunds History
- Tax Credit Analysis

Types of Credits

Credits which may be taken against oil and gas production taxes include:

- Capital Expenditure Credits
- Exploration Credits
- Net Operating Loss ("NOL") Carry Forward Credits
- Transitional Investment Expenditure ("TIE") Credit
- Small Producer Credits

Types of Credits

Capital Expenditure Credits (AS 43.55.023(a)(1))

- 20% of qualified capital expenditures (QCE)
- QCE include drilling, construction of facilities, new equipment, etc.
- Same expenditures may also qualify for NOL Carry Forward Credit
- Same expenditures do ***not*** qualify for additional EIC credit
- Must be spread over 2 years
- Credits may be cashed or transferred

Types of Credits

Exploration Credits

- Two Main Types
  - 43.55.023(a)(2) Capital Credit for Exploration Activity (20%)
  - 43.55.025 Exploration Incentive Credits ("EIC") (30%-40%)

Types of Credits

43.55.023(a)(2)**Capital Credit for Exploration Activity**

- **20%** of qualifying expenditures
- Qualifying expenditures related to geologic and geophysical exploration, or in connection with an exploration well
- Must be spread across 2 years
- Same expenditures may also qualify for NOL Carry Forward Credits
- Credits may be cashed or transferred

Types of Credits

Exploration Credits

- Two Main Types
  - 43.55.023(a)(2) Capital Credit for Exploration Activity (20%)
  - 43.55.025 Exploration Incentive Credits ("EIC") (30%-40%)

Types of Credits

43.55.025 **Exploration Incentive Credits**

- **30% - 40%** of qualified expenditures depending on well location and proximity to existing wells and unit boundaries
- Qualified expenditures include certain expenses associated with seismic and geophysical exploration work, and exploration well drilling
- Same expenditures may also qualify for NOL Carry Forward Credit
- Same expenditures do ***not*** qualify for Capital Expenditure Credit
- To receive credit, taxpayer must provide certain well data to DNR
- Expires 2016
- Credits may be cashed or transferred

Types of Credits

NOL Carry Forward Credit - 43.55.023(b)

- **25%** of net operating loss
  - Applied against tax liability in following year
- Credit based on adjusted lease expenditures which include both operating and capital expenses
- Same capital expenditures may also qualify for exploration credit under 43.55.023(a)(2)
- Credits may be cashed or transferred

Types of Credits

Transitional Investment Expenditure (TIE) Credits - 43.55.023(i)

- Credit equals 20% of qualifying capital expenditures:
  - incurred between March 31, 2001 and April 1, 2006, and
  - not exceeding 10% of the capital expenditures incurred between March 31, 2006 and January 1, 2008.
- Revised under Aces to cover only producer or explorer not having production prior to January 1, 2008
- Credits are ***not*** transferable and may ***not*** be carried forward beyond 2013
- Same capital expenditures may ***not*** qualify for exploration credit under 43.55.025

Types of Credits

Small Producer Credit - 43.55.024(a)

- Available for companies producing less than 50,000 bbl/day of oil BTU-equivalent
- Credit is up to $6 million against tax liability
- Production must be from wells outside of Cook Inlet and North Slope
- Expires 2016 or 9 years after first commercial oil or gas production if before May 1, 2016
- Credits may ***not*** be cashed or transferred or carried forward

Types of Credits

Small Producer Credit - 43.55.024(c)

- Available for companies producing not more than 100,000 bbl/day of oil BTU-equivalent
- Credit ranges between $12 million and $0 depending upon level of production.
- Credit can only be applied against tax liability
- Production not restricted by region
- Expires 2016 or 9 years after first commercial oil or gas production if before May 1, 2016
- Credits may ***not*** be cashed or transferred or carried forward

- Cash Refunds History
- Tax Credit Analysis

Credits Applied Against Tax Liability

Credits may be claimed in up to two ways:

(1) All Credits may be applied against tax liability

- .023(a) credits split over two years
- NOL , TIE, Small Producer and .025 credits all in current year

(2) Some Credits may be converted into a transferable Tax Credit Certificate

- .023(a), NOL, and .025 Credits are convertible
- .023(a) and NOL Tax Credit Certificates must be applied over two years
- .025 Tax Credit Certificates can be used in single year

Credits Applied Against Tax Liability

Tax Credits Earned by Producers, by Tax Year*

Credit Type	2006	2007	2008	Total
Capital Expenditure Credit	204	282	342	828
TIE Credit	98	145	0	243
Small Producer Credit	27	38	21	86
Exploration Incentive Credits	2	105	12	119
TOTAL	**331**	**569**	**376**	**1,276**

* Does not include explorers without current production

Credits Applied Against Tax Liability

Tax Credits Applied by Producers Against Tax Liability, by Tax Year

Credit Type	2006	2007	2008	Total
Capital Expenditure Credit	195	194	243	632
TIE Credits	98	145	0	243
Small Producer Credits	27	38	21	86
Exploration Incentive Credits	2	92	17	112
TOTAL	**322**	**469**	**282**	**1,073**

Transferable Tax Credit Certificates

Capital Credit Tax Certificates

- Number issued since 2006- 211 transferable credit certificates
- Capital Credits issued by type:
  - .023 (a)(1) Qualified Capital Exp- $228.9 M
  - .023 (a)(2) Exploration/G&G- $64.9M
  - .023 (b) NOL- $340.1M

Transferable Tax Credit Certificates

Exploration Tax Credits .025

Exploration Tax Credit Certificates

- Number of Applications- 59
- Gross Expenditures claimed- $945.2 M
- Number Issued- 36 for $185.2 M
- Applications in progress- 23 representing Gross Expenditures of$439.9 M requesting $148.3 M in credits

Transferable Tax Credit Certificates
Exploration Tax Credits AS 43.55.025

Cash Refunds History

Cash Refunds Governed by AS 43.55.028:

- To cash must be usable against tax liability
- Must show subsequent (24 months) QCEs or lease bids equal to cash sought
- Have a zero tax owed in current and past years
- Have no more than 50,000 BOE/d

Cash Refunds History

Tax Credits Purchased

By fiscal year ($M)

□ 2007	54.6
□ 2008	54.1
□ 2009	193.1
□ 2010 (thru 2/12)	98.4
TOTAL	400.2

Cash Refunds History

Oil & Gas Tax Credit Fund

Appropriations -	$ 469 M
Tax Credit Purchases (TC Fund)	(321) M
Tax Credit Purchases (GF)	(79) M
Interest Earned	21 M
Balance	$ 90

Tax Credit Analysis

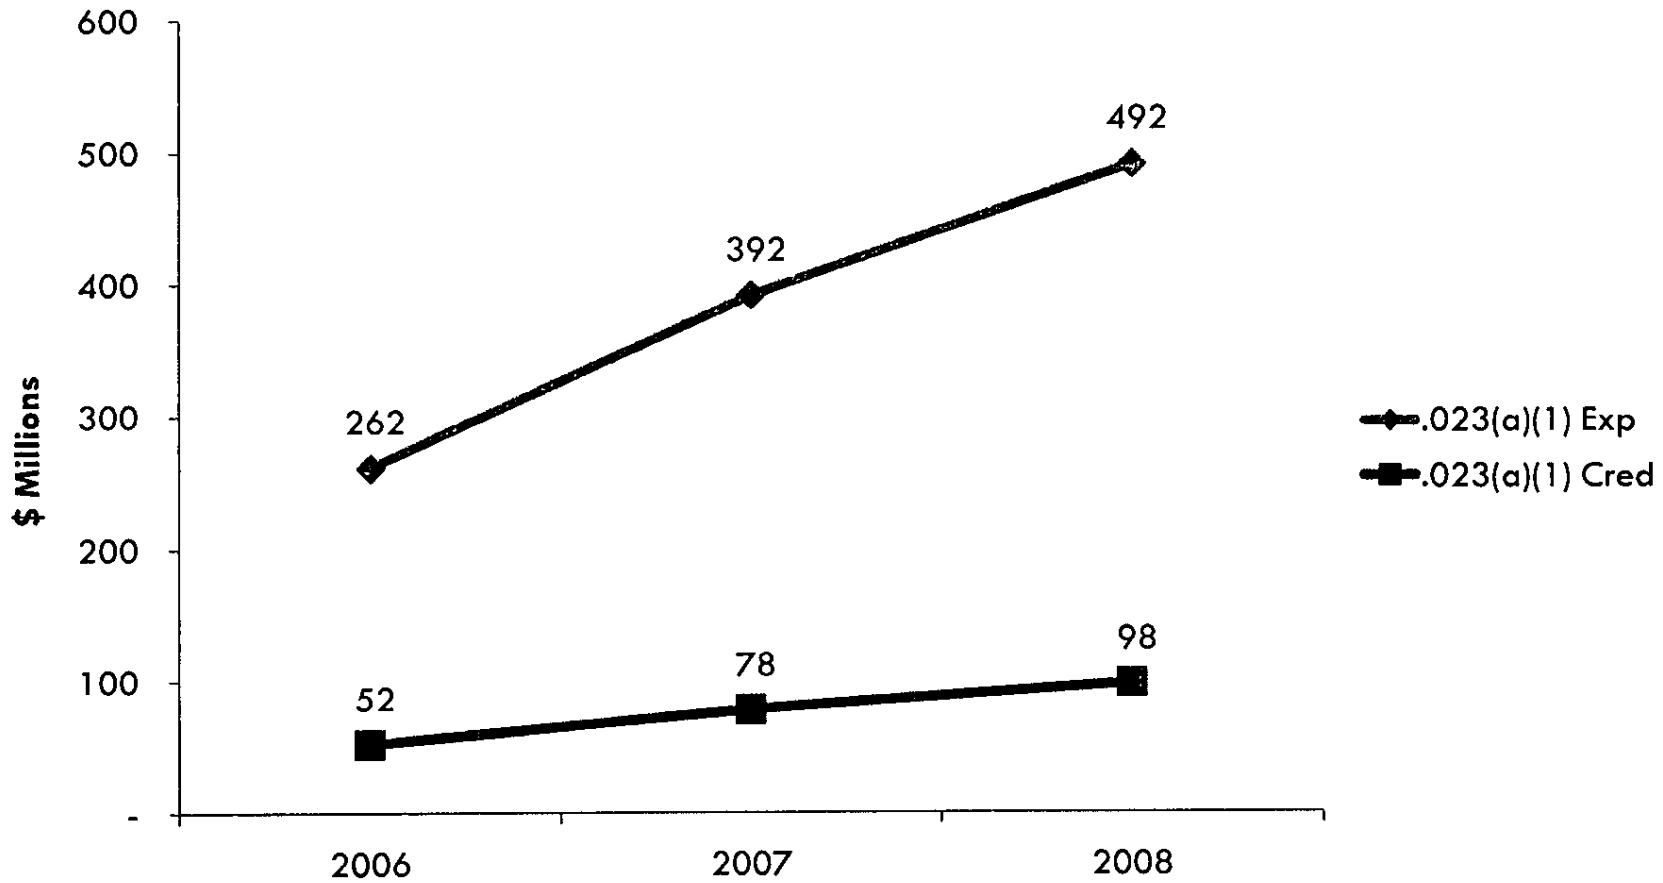
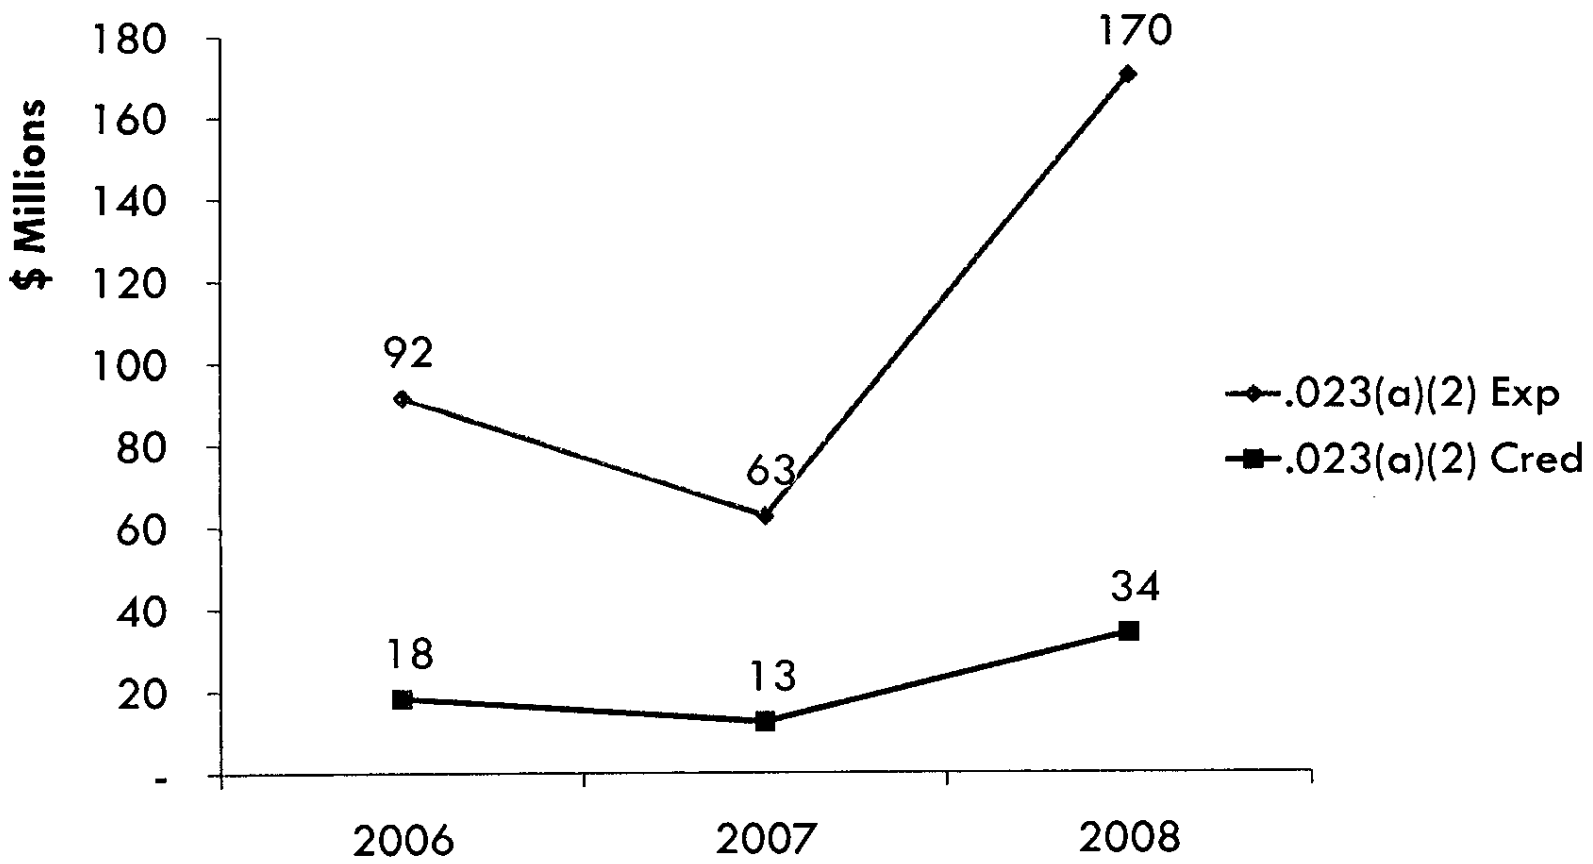
Capital Credit Certificates under .023(a)(1)



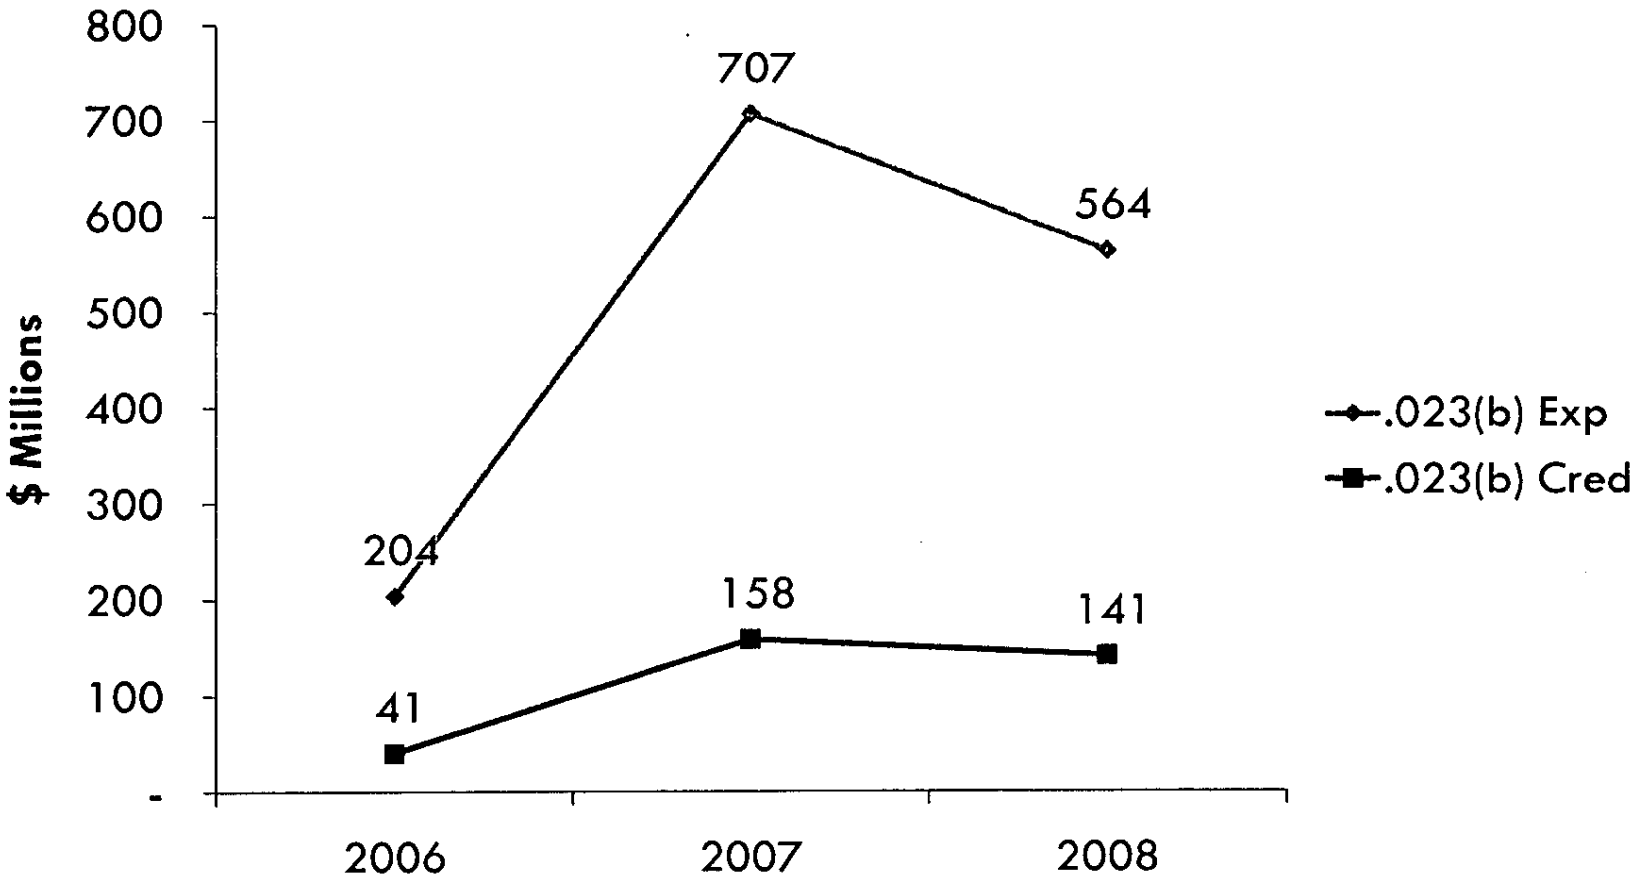
Tax Credit Analysis

Capital Credit Certificates Under .023(a)(2)



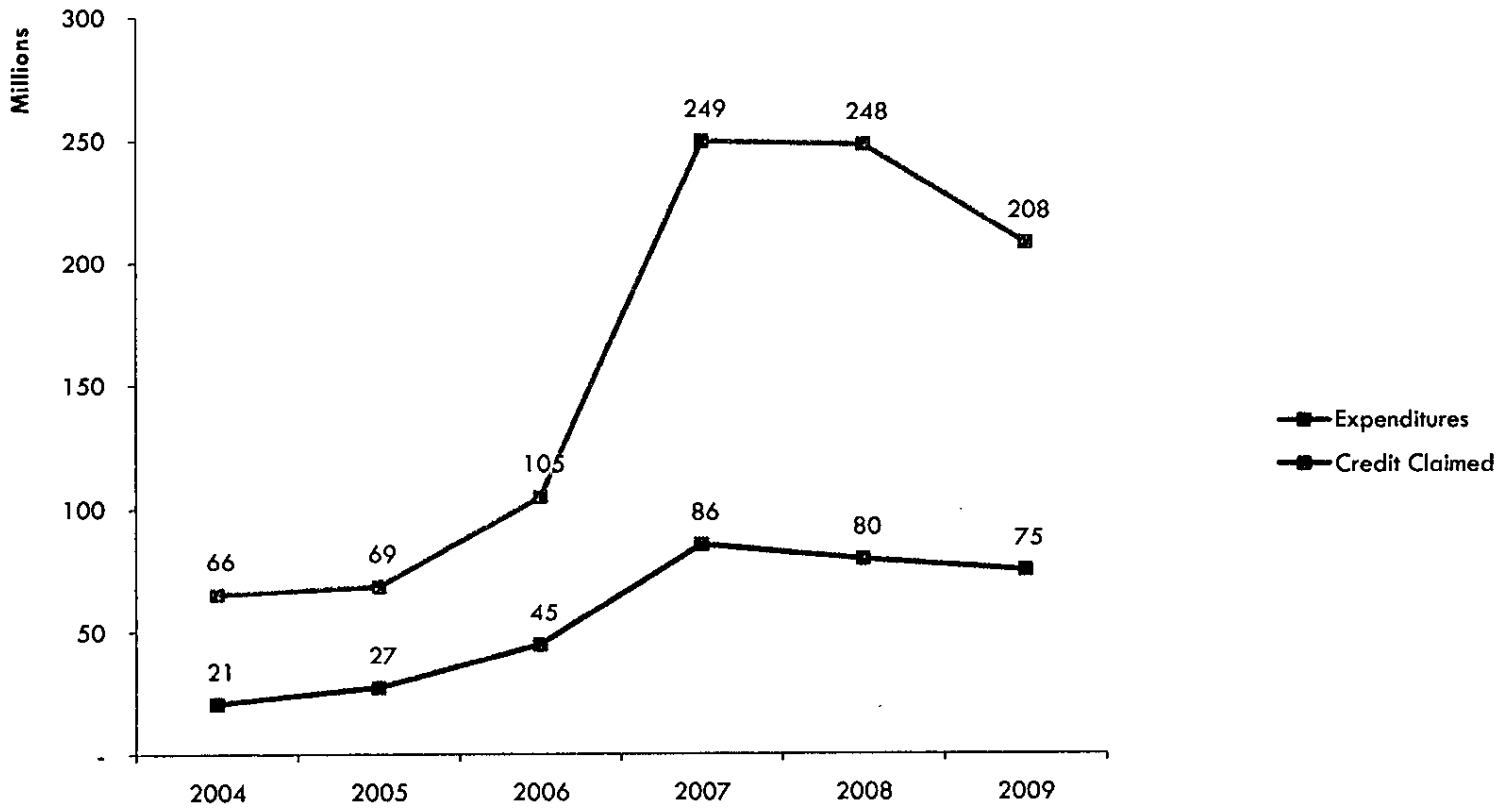
Tax Credit Analysis

Expenditures vs. NOL Credit Certificates



Tax Credit Analysis

Expenditures vs. .025 Exploration Credit Applications



Conclusions

- Legacy NS Fields- Increase in Producers' Capital expenditures from 2006-2008 but plateau in Capital deductions from 2007-2008
- Non-Legacy NS fields and Cook Inlet- Steady Increase in Capital expenditures
- Since 2007- Exploration Credit Applications have more than doubled
- Increased .023(a)(2) and NOL credits in 2007 and 2008 also suggest increased Exploration activity

How Credits Are Used

13

- Two Examples
  - New Entrant
    - $200 million exploration project
    - No Current Production
  - Incumbent Producer
    - $200 million new development project

Credit Example 1: New Entrant

- A new entrant with no current production pursues an exploration project requiring $200 million in investment
- Company receives a 20% - 40% investment credit (depending on location), worth $40 - $80 million
- Company also receives an additional 25% credit for its "tax loss" or "net operating loss (NOL)", worth up to $50 million

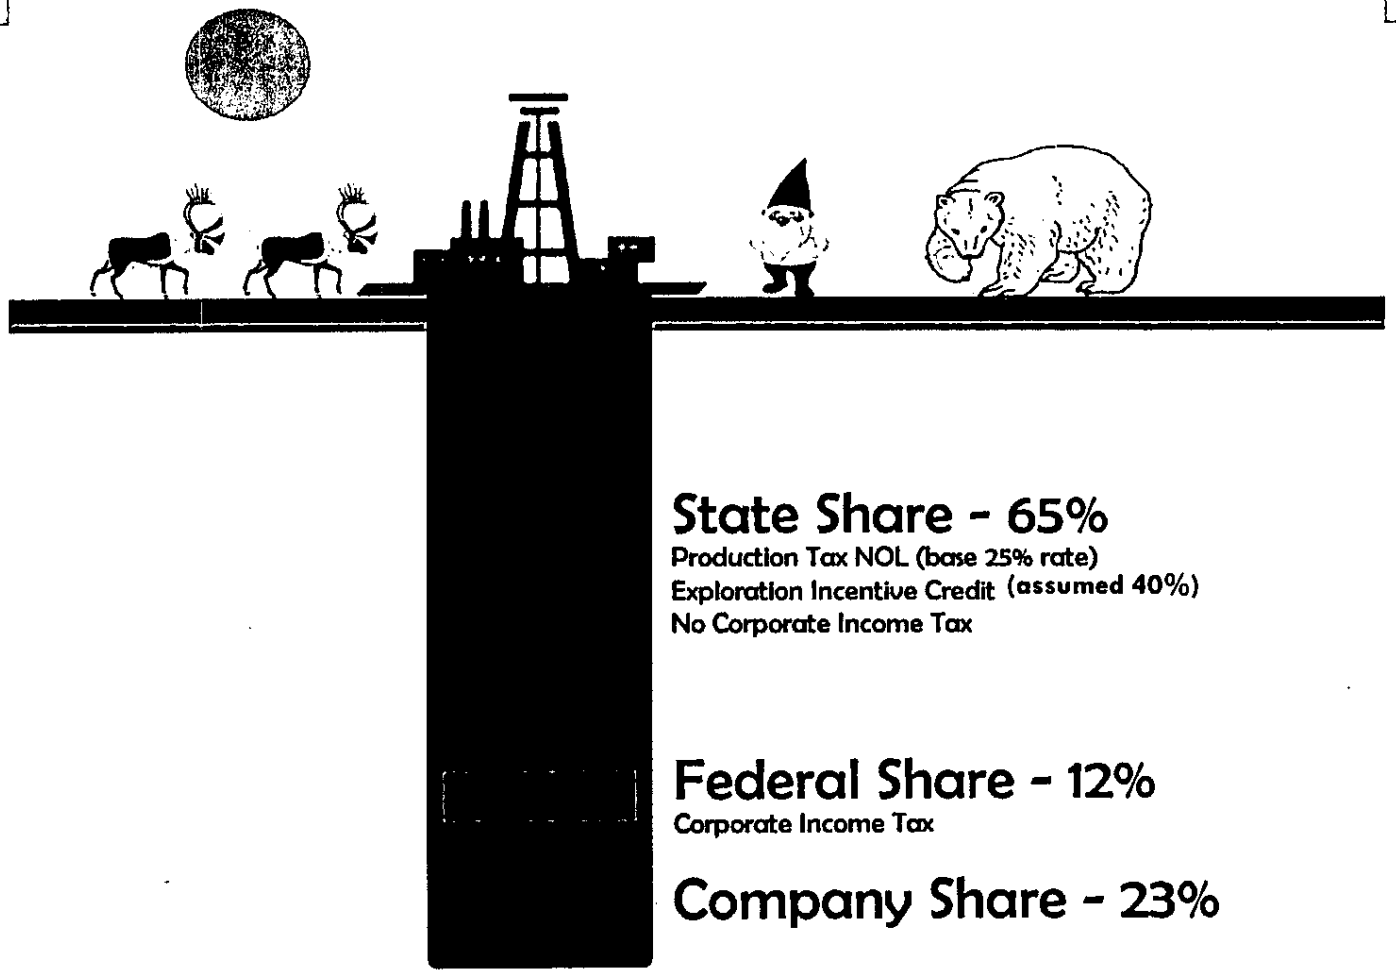
Credit Example 1: New Entrant (*cont.*)

- The total credits of $90 - $130 million, can be:
  - Directly recouped (cash) from the state
  - Transferred to a person that does pays tax, so that the Transferee pays $90 - $130 million less in tax
- Either way, State pays $90 - $130 million for the exploration; company pays $70 - $110 million.
- If the exploration effort fails, the state never recoups this money.

  The state bears the risk for failure as does the new entrant

Exploration Dry Hole – New Entrant

16



State Share - 65%

Production Tax NOL (base 25% rate)
Exploration Incentive Credit (assumed 40%)
No Corporate Income Tax

Federal Share - 12%

Corporate Income Tax

Company Share - 23%

*This graphic assumes a producer has federal corporate income tax liability to offset but no state corporate income tax; and does not have other production tax liability to offset.

Alaska Department of Revenue

Credit Example 2: Incumbent Producer

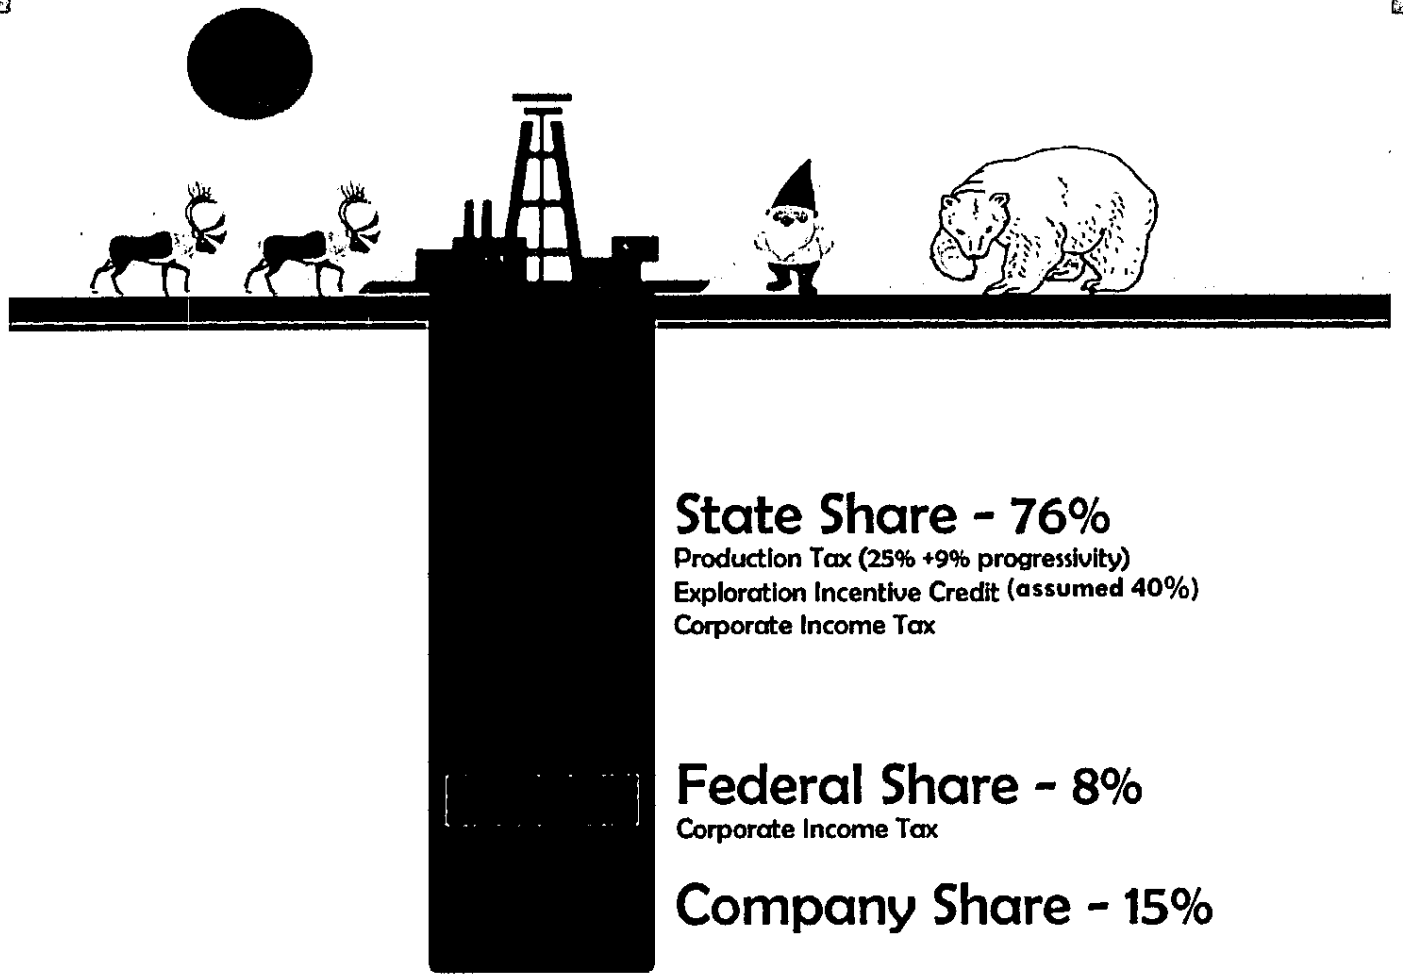
- Incumbent with current production pursues a development requiring $200 million investment
- Company receives a 20% capital investment credit, worth $40 million
- By reducing their Production Tax Value (PTV), the company reduces their taxes due by the total capital expense multiplied by the tax rate:
  - $200 million * 25%, worth $50 million; plus
  - $200 million * progressivity surcharge rate (which is reduced due to the drop in PTV)

Credit Example 2: Incumbent Producer (*cont.*)

- Deductions and credits total more than 45% of the $200 million, greater than $90 million
- State pays more than $90 million of the new development's capital cost; true investment cost for the incumbent is less than $110 million
- If the development fails, the state never recoups this money

The state bears the risk for failure as does the incumbent investor

Unsuccessful Development Project – Existing Producer



State Share - 76%
Production Tax (25% +9% progressivity)
Exploration Incentive Credit (assumed 40%)
Corporate Income Tax

Federal Share - 8%
Corporate Income Tax

Company Share - 15%

*This graphic assumes a producer has state and federal corporate income tax liability to offset; and has production tax liability to offset with $70 wellhead value and $18 / barrel costs.

Alaska Department of Revenue

Overall Sharing of Oil Revenue and Profit

TAX PAYMENT PENALTIES

Senate Finance Committee

February 19, 2010

Alaska State Department of Revenue

Presentation Overview

- Tax penalty provisions with general application
- Compromise and settlement
- Provisions that apply to production tax

Overview-Tax Penalties and Interest

Alaska Statutes 43.05

- General application to Title 43 except as provided in specific tax chapters
- Covers returns, agreements on liability, compromise of tax or penalty, assessment, interest on underpayments and refunds
- Production tax has some specific provisions on interest and penalties, discussed below
- Disputes over tax assessments, including penalties, are first heard through informal conference at DOR
- Appeal is to Office of Administrative Hearings – confidential until final administrative decision AS 43.05.470 (may be subject to protective order)

Penalties

AS 43.05.220: civil penalties

- Failure to file or pay: 5% for each 30 days up to 25%

  -Penalties won't be imposed if taxpayer shows that failure to file or pay is due to reasonable cause and not wilful neglect.

  -Regulations apply administrative and judicial interpretations of IRC 6651 15 AAC 05.200 (reasonable cause for delay)

- Negligence or intentional disregard: 5% of deficiency

  -Includes substantial deviation from statutes in reporting income or claiming deductions, exaggerated deductions, failure to keep adequate records, or failure to justify understatement of income. 15 AAC 05.220

- Fraud: greater of 50% of deficiency or $500

  -Requires clear and convincing evidence that tax liability was understated as attempt to evade tax. 15 AAC 05.230

- Penalties are cumulative

Penalties - Criminal

- AS 43.05.290: criminal penalties
- Wilful attempted tax evasion, failure to collect, or truthfully account for and pay tax: class C felony
- Wilful failure to pay, make return, keep records: class A misdemeanor
- Wilfully making and subscribing, or assisting in making, a false return (perjury): felonies, up to $25k and 3 years imprisonment
- Wilfully delivery or disclosure of a false return: class A misdemeanor
- Wilful failure to obtain a required license: misdemeanor, up to $2000 fine, 6 months imprisonment

Compromise and Settlement

- AS 43.05.070 – If in opinion of DOR there is doubt over liability or collectibility of tax or penalty, DOR, with approval of Attorney General, may compromise tax or penalty
- Agreements are final absent fraud, malfeasance or misrepresentation of material fact
- Confidential under AS 43.05.230

Production tax penalties: failure to provide information

- AS 43.55.030-Filing of statements
  - Annual report due March 31 whether or not tax payment due
  - Statement: description of lease or property, producer name, gross amount of oil or gas production, gross value at point of production, purchaser and price information, qualified capital expenditures, lease expenditures and payments or credits from facility sharing
  - Department adopted standards in regulation for delinquent reports
  - Penalty maximum $1,000 a day
  - Regulation 15 AAC 55.840 covers notice and penalty amount
- In addition to other penalties

15 AAC 55.840 (b)-Penalties AS 43.55.030

- (b) If, 30 days after a report required to be filed under AS 43.55.030 is due, the department has not notified the person required to file the report ... the department will not assess ... a penalty .... that begins earlier than a date specified in a written notice to the person, except in case of the person's fraud or willful concealment. ...[T]he department will specify a date that is at least 10 days after the date of the department's delivery of the notice .... Nothing in this subsection affects the person's obligation to file a complete and accurate report.

Production tax penalties: failure to provide information

AS 43.55.040:

- DOR may require person engaged in production, purchaser or royalty owner to provide information necessary to compute the tax
- If person fails to provide information, DOR may assess a penalty, under standards determined by DOR of not more than $1,000 a day for each day the person fails to file *after notice by the department.* 15 AAC 55.840
- In addition to any penalties under AS 43.05.220 or 43.05.290

15 AAC 55.840(c) –Penalties 43.55.040

- (c) If a person fails to file a report, statement, or other document required to be filed under AS 43.55.040, the department will provide written notice of the failure to the person and will specify in the notice a date beginning on which the person will be liable for a penalty under AS 43.55.040(7) if the person does not remedy the failure before that date.... If, 30 days after the date specified, the department has not assessed a penalty or otherwise notified the person in writing that the person has failed to remedy the failure before the date specified, the department will not assess a penalty under AS 43.55.040 (7) for the failure, except in case of the person's fraud or willful concealment.
- Nothing in this subsection limits the department's right to require the additional or more complete and accurate filing of a report, statement, or other document.

Penalties 43.55.030 and .040

To determine amount of penalty, DOR will consider:

- Willful or knowing nature of act or omission
- Importance of required information and effect on ability of DOR to proceed in absence of information
- Benefits to person in failure to file
- History of noncompliance by person
- Need to deter future noncompliance by that person and others
- Effort made by person to correct noncompliance
- 15 AAC 55.840(d)

Summary

- Penalties are imposed for failure to comply with reporting provisions of production tax
- In addition to penalties under 43.05.220 and .290
- DOR has implemented clear and balanced regulations for taxpayers

Oil and Gas Tax Credits Overview and Forecast

Oil and Gas Production Tax Statutes contained in Title 43, Chapter 55 authorize several types of credits to be applied against the state's production tax. Among these are credits for capital expenditures (AS 43.55.023(a)), carried-forward annual losses (AS 43.55.023(b)), and exploration expenditures (AS 43.55.025). These are the primary credit programs applicable under the state oil and gas production tax, and are the focus of this report.

Credits may be redeemed in two ways: (1) they may be converted into transferable tax credit certificates and transferred or sold, either to another production taxpayer, or to the state treasury or (2) they may be claimed and applied against a production tax liability on a taxpayer's annual tax filing. For purposes of this report, we assume that companies with tax liabilities will apply their credits against their tax liabilities whenever possible and that companies with no tax liabilities will seek to sell their credits to the state, rather than hold them for future use or sale to third parties.

Exploration tax credits were first available in 2003, and have been expanded in the years since. Prior to revisions to the production tax law in 2007, exploration tax credits could only be redeemed by using them against a tax liability or by selling them to another tax payer. Credits under this program have always been audited by the DOR prior to the issuance of a certificate.

The production tax revisions passed in 2006 created the authority for credits for capital expenditures and net loss carry forwards to be claimed beginning in April 2006, and these credit provisions were further amended by the legislation effective July 1, 2007. The DOR Tax division issues transferable certificates for these two classes of credits after completion of a due diligence review.

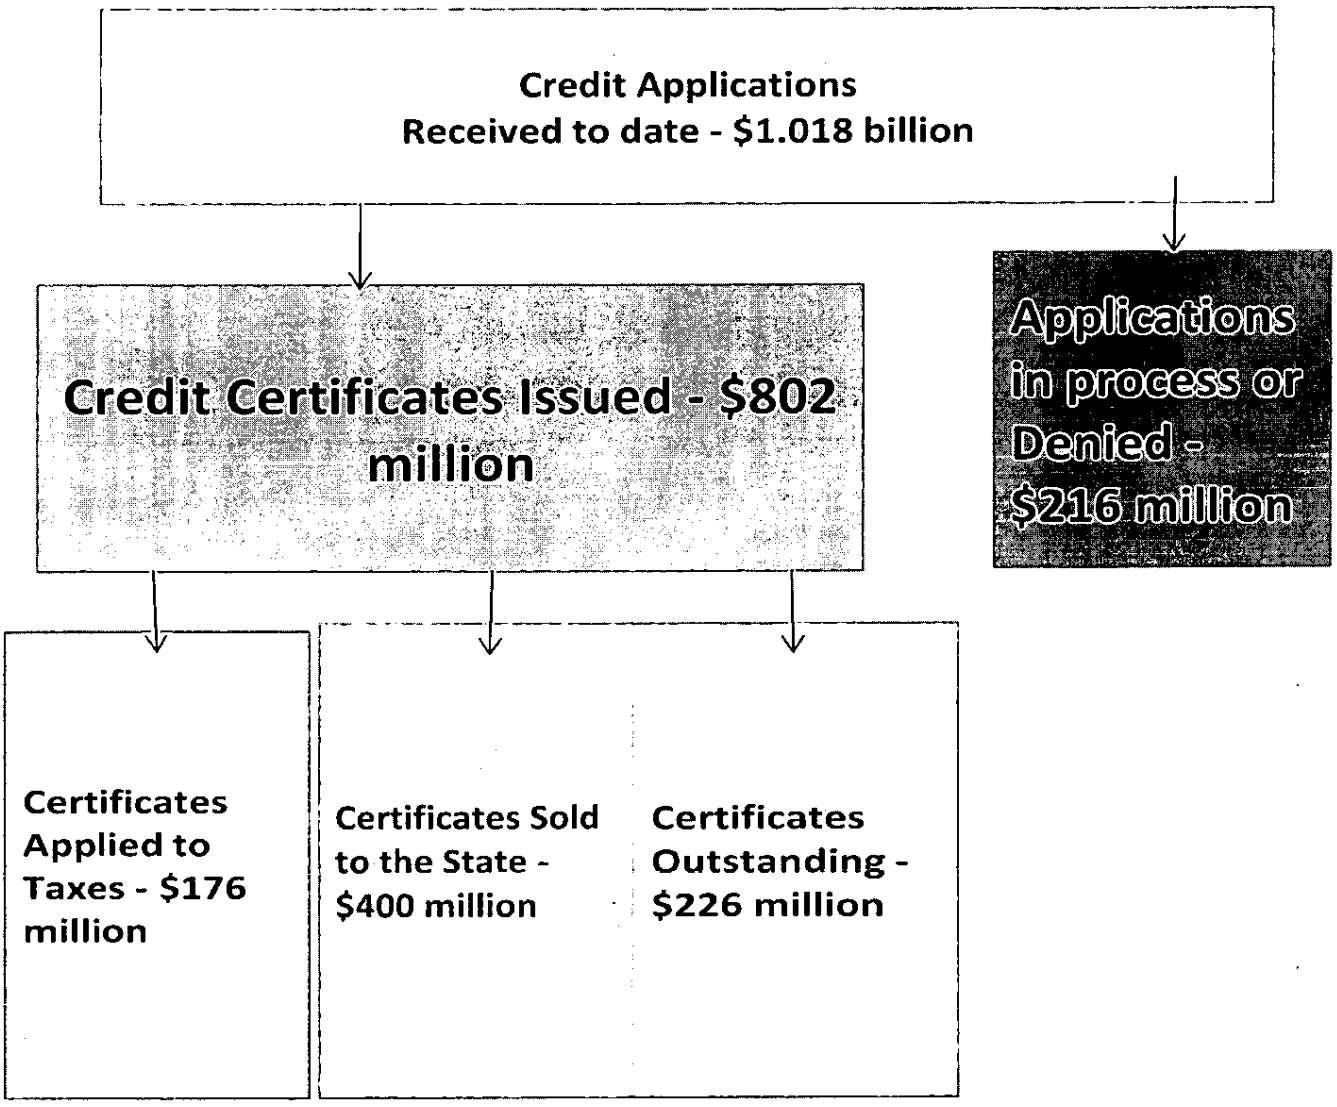
History of Tax Credit Certificates Authorization and Use

Figure 1 on the following page shows the dollar amount of all applications for transferable tax credit certificates received from the credit program's inception to date, as well as dollar value of certificates issued, redeemed and outstanding. In total, companies sought $1.018 billion in credit certificates since the program began in 2003. The applications are split, with $334 million in exploration credits and $684 million capital/net loss carry forward credits. Taxpayers are increasing their use of these credit programs as shown in the credit history table below: For FY 2010, we expect to receive additional requests for credit certificates related to capital expenditures and carried-forward annual losses when annual returns for calendar year 2009 are filed on March 31, 2010.

Amount of Transferable Tax Credit Certificates Sought under AS 43.55.023 and .025

FY 2005 - $21 million
FY 2006 - $27 million
FY 2007 - $151 million
FY 2008 - $326 million
FY 2009 - $320 million
FY 2010 - $172 million (as of February 2010)

Figure 1: Oil and Gas Tax Credits and Certificates to Date



Department of Revenue, Tax Division
February 22, 2010

As can also be seen in Figure 1, $802 million in credit certificates have been issued since the credit program began in 2003; of these, $176 million have been applied to tax liabilities, either directly or through transfers to other companies, $400 million have been sold to the state, and $226 million are still outstanding. In addition to this, there are $216 million in credit applications either in process or denied; it is estimated that about $148 million of these will ultimately be redeemed. From this information, we can determine that the total amount of outstanding certificates and yet-to-be processed applications is just over $374 million.

Figure 2 below shows the payment history for production tax credits certificates that have been sold to the state, along with the appropriations that authorized those payments, either through the Oil and Gas Tax Credit Fund, authorized at AS 43.55.028 or through appropriations prior to the creation of the fund.

Figure 2: Appropriations and Payments Made for Oil and Gas Tax Credits Certificates

Appropriation	CH 6, SLA 2007	54,646,593
Payment	FY 2007 Refunds	(54,646,593)
Appropriation	CH 28 SLA 2007	25,000,000
Appropriation	CH 11, SLA 2008	125,000,000
Earnings		39,116
Payment	FY 2008 Refunds	(54,143,421)

Appropriation	CH12, SLA 2009	(415,000,000)
Appropriation	CH12, SLA 2009	180,000,000
Earnings		2,715,382
Payment		(98,444,018)
Oil and Gas Tax Credit Fund Balance		90,236,508

History of Credits Applied Against Tax Liabilities

In addition to the exploration tax credits under AS 43.55.025 and the capital expenditure credits under AS 43.55.023 (a)(1) & (2), the production tax statutes under the 2006 and 2007 amendments, allowed producers to take against the production tax liability, the transitional investment expenditures (TIE) credits authorized under AS43.55.023(i) and the small producer credits under AS 43.55.024.

Transitional Investment Expenditures (TIE) Credits

The 2006 tax amendments authorized taxpayers to take a 20% credit on allowable qualifying capital expenditures incurred between March 31, 2001 and April 1 2006 with the credit not exceeding 10% of qualified capital expenditures incurred between March 31, 2006 and January 1, 2008. The 2007 amendments revised the credit to cover only producers or explorers not having production prior to January 1, 2008. The TIE credits are not transferable and may not be carried forward beyond 2013.

Small Producer Credits

There are 2 types of small producer credits allowable under the production tax statutes in AS 43.55.024. Under section (a) of the statute, companies producing less than 50,000 barrel per day of oil BTU equivalent may take a credit of up to $6 million against a production tax liability. The credit is allowed for production from wells outside of Cook Inlet and North Slope and can be taken annually; however, the credit may not be converted to transferable cash certificates for cash or transfer, and may not be carried forward. This credit expires in 2016.

The small producer credit under section (d) of AS 43.55.024, is available for companies producing not more than 100,000 barrel per day of oil BTU equivalent and ranges from $12 million to $0 depending on the level of production. Production is not restricted by region. The credit is not cashable or transferable and can only be applied against a production tax liability. This credit expires in 2016.

Credits Applied Against Production Tax Filings

Companies filing production tax annual returns claimed earned production tax credits of $331 million in FY07, $569 million in FY08 and $376 million in FY09, a total of $1.276 billion over the 3 year period. Of these amounts, the producers used these credits to offset their production tax liabilities by $322 million in FY07, $469 million in FY08 and $282 million in FY09 a total of $1.073 billion. Under the 2006 amendments, companies could apply tax credits earned for qualifying capital expenditures in the year that the expenditures were incurred. The 2007 amendments changed the statute to allow only 50% of the credit to be applied against the production tax liability in the year earned, thus the amount of credit earned increasingly exceeded the credits applied against tax liabilities in FY08 and FY09. At the end of FY09, there remains a balance of $203 million of unused credits to be applied against tax liabilities in future years. This is illustrated on Figure 3 below. Figure 4 shows the type of credits applied against production tax liabilities. The amounts reported on the tax filings are subject to audit and may change upon adjustment.

Figure 3: Credits earned versus Credits applied against tax liabilities

Objective

- Provide brief background on the evolution of hydrocarbon fiscal regimes

- Compare government take under Alaska Tax to other sample international regimes and to the US

- Percentage Government take:

$$\frac{\textit{Royalty + Gov. Share of Production + Taxes}}{\textit{Field Revenue – Capex – Opex}}$$

Reviewing Fiscal Comparisons

GCA
Gaffney, Cline & Associates

- **It is critical to understand the basis upon which any fiscal comparison is being made.**

- **Some "results" can be misused if not placed in context for which they were intended.**

- **Need to know what they do and do not represent:**
  - Full cycle including Exploration?
  - From point of development investment decision?
  - Remaining life?
  - High price or low price scenario? .....etc.

©2006 Baker Hughes Incorporated. All Rights Reserved

Fiscal Take Also Depends.....

GCA
Gaffney, Cline & Associates

- **....On where you were and when!**
  - In the early 1980's, prices were escalating, but the places to invest were limited.
    - The UK had a 90+% government take and investment activity level was high.
  - By the late 1990's prices had remained low for most of the decade and upwards of 70 countries were holding license rounds in search of 'revenues'.
    - The UK had eliminated all taxes but Corporate Income Tax in an attempt to attract investors.
- **Simple tables and charts of comparison are limited in their ability to explain why regimes change or the need for fiscal regime changes.**

Creating "Best" Fiscal Systems

GCA
Gaffney, Cline & Associates

- **Countries continually assess their internal needs and their world-wide competitive position to set hydrocarbon fiscal terms.**
  - Attract Investment
  - Generate revenue for the treasury
  - Create jobs, increase local skill base

- **There are roughly as many systems in place as there are countries with petroleum legislation.**
  - Many areas of similarity
  - Many areas of difference
  - Different 'vintages' can be active at the same time

Industry "Take" Assessments

GCA
Gaffney, Cline & Associates

- **The many studies that attempt to "rank" regimes are typically based on:**
  - Marginal Government Take
  - Average Government Take
  - Total Government Take
  - Risk
  - Stability

- **While informative in the right context, the aspects of fiscal regimes that these studies do not cover or rank can at times be more important.**

©2004 Baker Hughes Incorporated. All Rights Reserved.

What these studies tend to Ignore

GCA
Gaffney, Cline & Associates

- Signature bonuses
- Time Value
- Investment Credits
- Ringfencing
- Tax credits
- Booking Reserves
- Lifting Rights
- Domestic Obligations
- Different oil/gas rates
- Lease rentals
- Limits on cost recovery
- Exclusions
- Cross crediting
- Timing of Take
- Allowable costs
- Uplifts

Many of the above can have a significant financial impact and if included might generate a different ranking outcome.

©2010 Gaffney, Cline & Associates. All Rights Reserved

New Players Today – the International National Oil Companies

- **National Oil Companies (NOCs) are investing internationally**
  - The focus of their expansion includes Middle East, Former Soviet Union, Africa and Latin America
  - For example, China-Africa trade: $4 billion in 1995, $40 billion in 2005, expected to be over $100 billion in 2010
- **INOCs are changing the competitive landscape**
  - Different (lower?) investment criteria
  - Different drivers
  - Government to government deals
    - China and India to cooperate on energy acquisitions
    - Emergence of the BRIC *(Brazil, Russia, India, China)* alliance

©2007 Gaffney, Cline & Associates Incorporated. All Rights Reserved

Then there are the Hidden Drivers

GCA
Gaffney, Cline & Associates

- **"Punished by Reward"**
  - Compensation packages drive decision making
  - Good deals are sometimes passed up to do deals that score more bonus points
  - These are usually not obvious nor acknowledged

- **Examples of executives' performance targets:**
  - Maintaining reserve replacement/growth
  - Reducing cost per barrel
  - Increasing market share

©2004 Gaffney, Cline & Associates Incorporated. All Rights Reserved

Agenda

GCA
Gaffney, Cline & Associates

1. Historical Perspective

2. Impact of Key Components

3. International benchmark

Time Value of Money

GCA
Gaffney, Cline & Associates

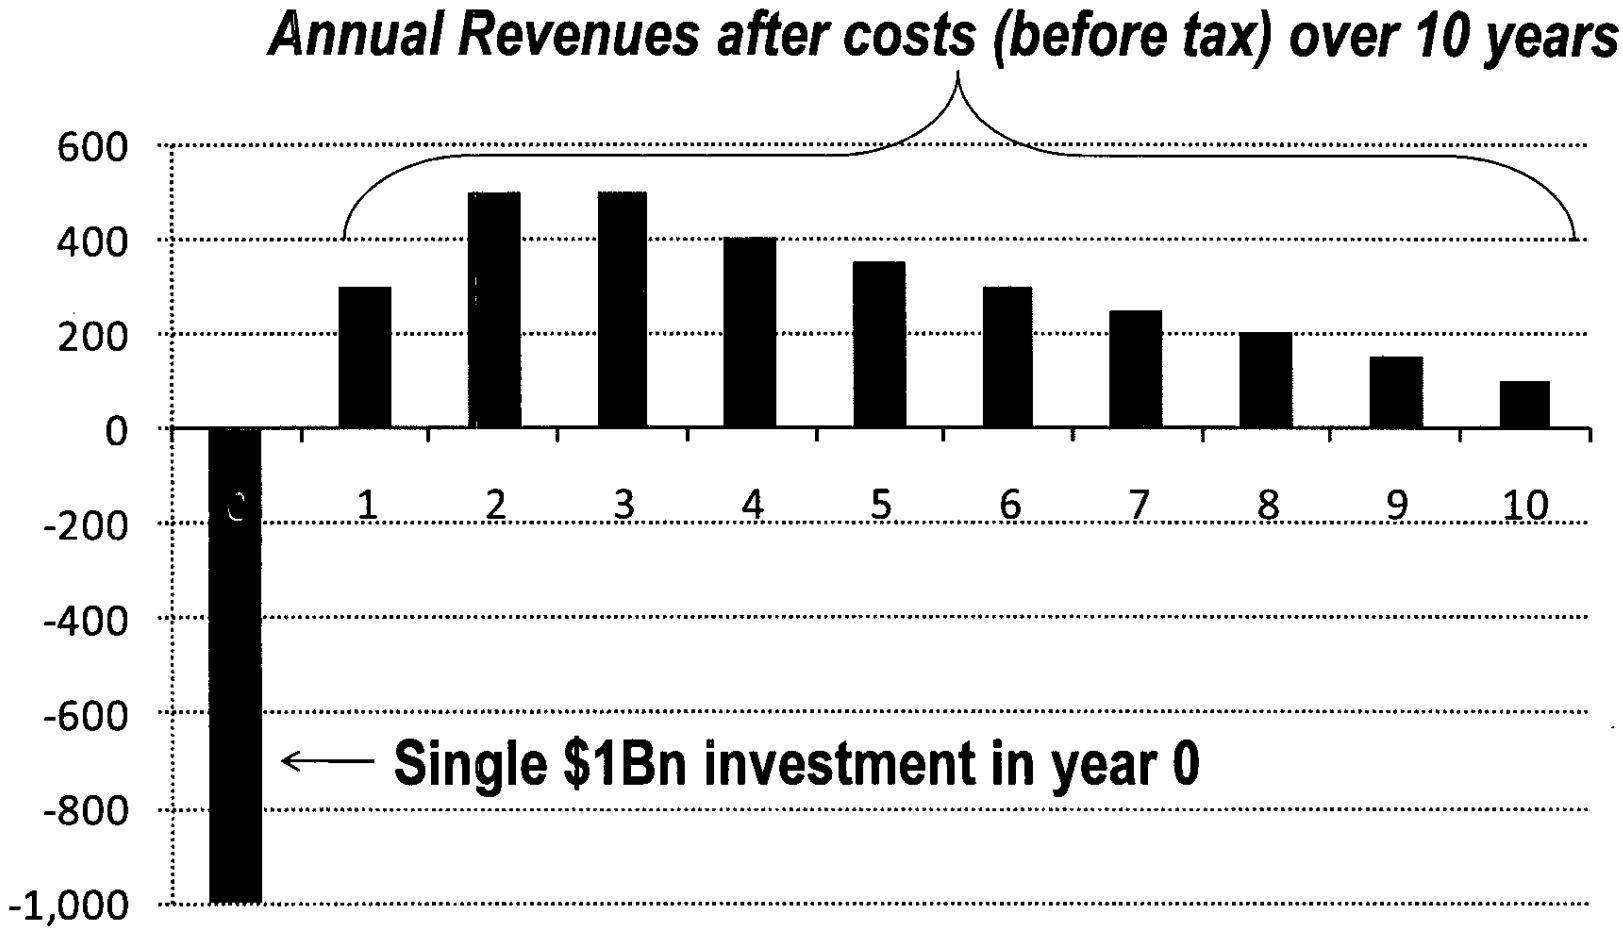
- Most fiscal regime comparisons do not adequately compare the time value of benefits in one regime versus another.

- Alaska is very generous to investors in that it allows all eligible costs to be deducted immediately from revenue (and even receive cash back) plus provides capital and exploration credits for the same expenses.

©2007 Baker Hughes Incorporated. All Rights Reserved.

Simplified Field Model

GCA
Gaffney, Cline & Associates



Note: This is not intended to represent any Alaska asset

©2008 Baker Hughes Incorporated. All Rights Reserved

Scenarios

GCA
Gaffney, Cline & Associates

- **Range of depreciation from other regimes**
  - Straight line 3 year, 5 year and 10 year
  - Compared to immediate write off, such as Alaska allows
- **Single tax rates**
  - To illustrate the time value effect
  - Not looking to highlight other nuances in one regime versus another
- **Investment credits, such as Alaska allows**

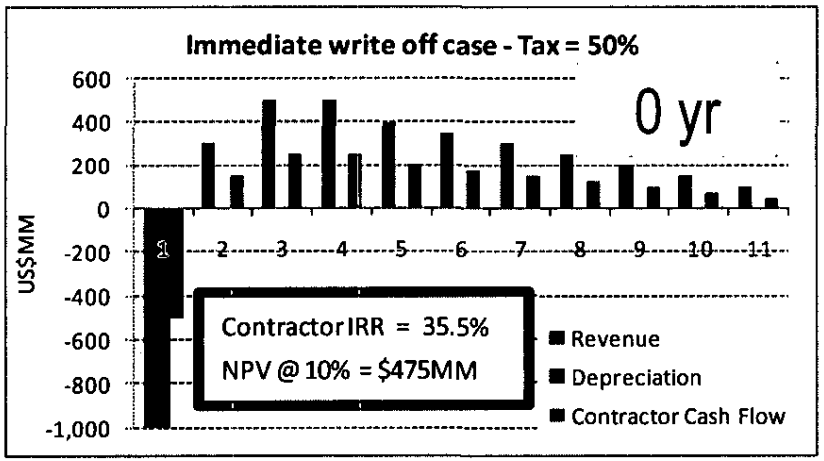
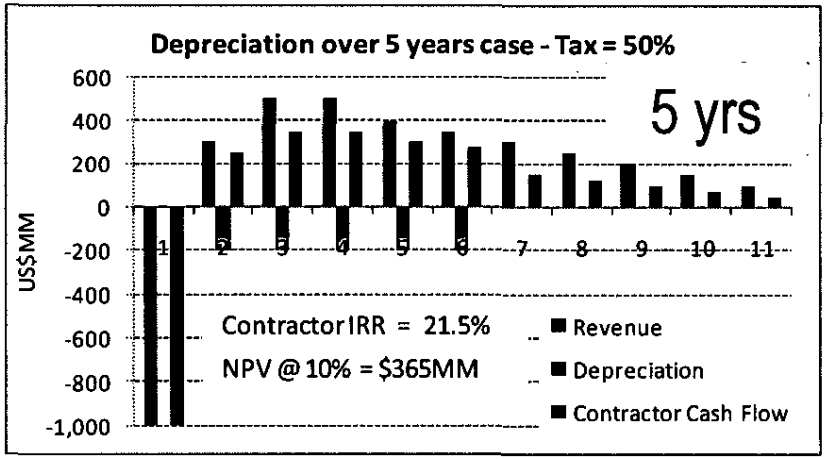
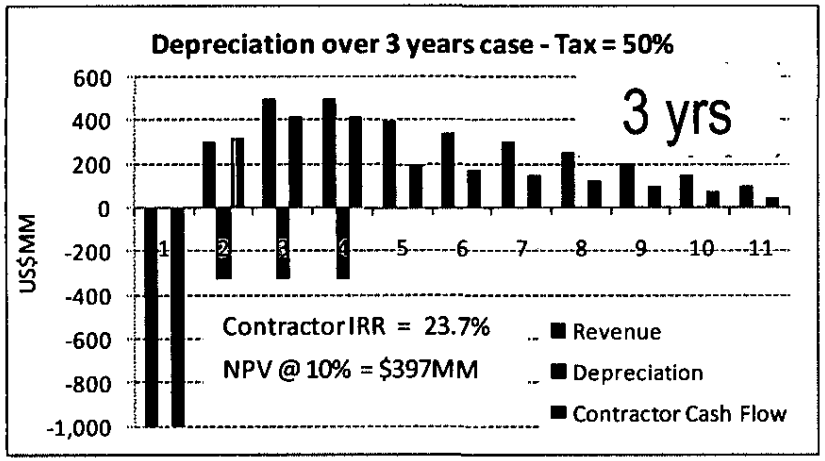
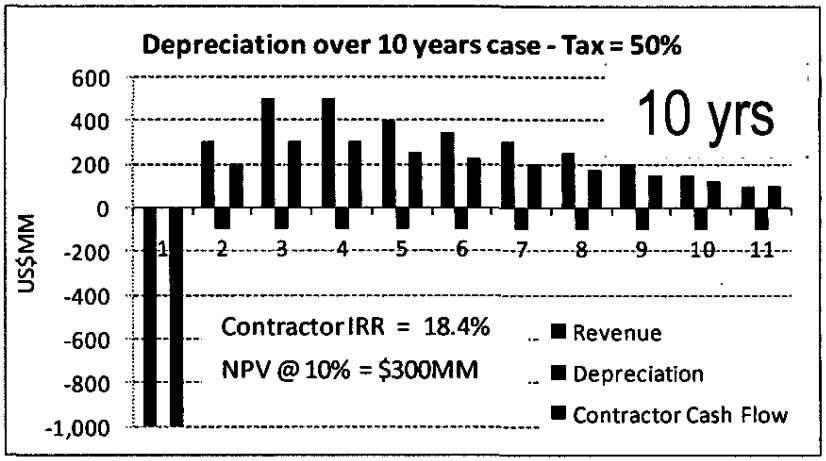
Impact of Depreciation on Investors' Internal Rate of Return (IRR) and Net Present Value (NPV)









Note: Cashed Out Net Operating Losses (NOLs)

©2009 Baker Rights Incorporated. All Rights Reserved.

Tax Impact of Depreciation

GCA
Gaffney, Cline & Associates

Depreciation	Tax Rate	Producer IRR	NPV_{10} (US$MM)
Immediate write off	**50%**	**35.5%**	**475**
3 years	50%	23.7%	397
5 years	50%	21.5%	365
10 years	50%	18.4%	300
Immediate = 3 yrs	**58%**	**35.5%**	**~397**
Immediate = 5 yrs	**62%**	**35.5%**	**~365**
Immediate = 10 yrs	**69%**	**35.5%**	**~300**

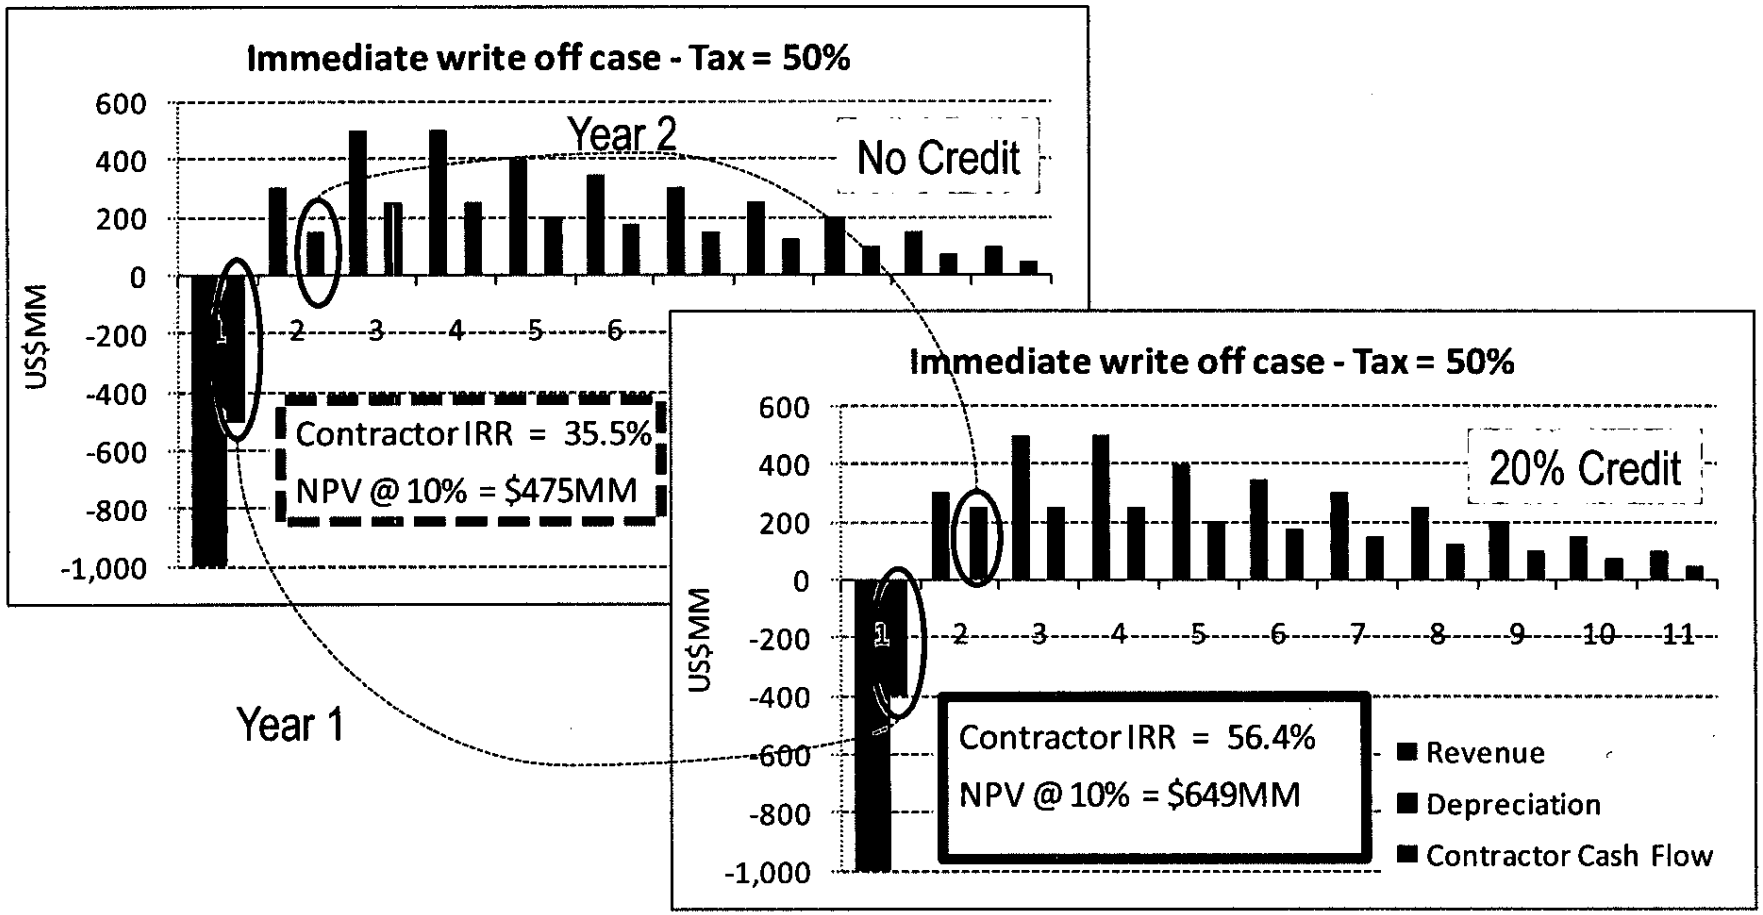
- **The economic impact of immediate write off is significant**

- **For a same tax rate of 50%, the longer the depreciation, the lower the producer IRR and the lower the producer NPV**

Note: The IRR of the immediate write off case is not impacted by the tax rate as any increase is balanced by a proportional cashed out NOL

©2007 Baker Hughes Incorporated. All Rights Reserved

Impact of 20% investment credits over 2 years



©2009 Gaffney, Cline & Associates Inc. All Rights Reserved

Investment Credits Impact

Depreciation	Tax Rate	Investment Credits	NPV_{10} Match (US$MM)
Immediate write off	**50%**	**0%**	**475**
Immediate write off	**50%**	**20%**	**649**
Immediate write off	76%	20%	**~397**
3 years	50%	0%	397
Immediate write off	80%	20%	**~365**
5 years	50%	0%	365
Immediate write off	87%	20%	**~300**
10 years	50%	0%	300

- **A fiscal regime with a combination of immediate write off and investment credits can compete favorably on select financial metrics with regimes with lower Government Takes**

©2008 Baker Hughes Incorporated. All Rights Reserved

Ringfencing

- **Fiscal regime comparative studies tend to use single type fields or stand alone existing fields.**
- **Most contracts or licenses in the world are 'ringfenced'.**
  - Implication: The same producer, in the same country, can have a highly profitable project but be unable to offset or deduct losses from another project.
  - One of the biggest surges of activity in the UK offshore occurred when the ringfence around PRT (their special petroleum tax) was removed.

©2007 Gaffney, Cline & Associates Incorporated. All Rights Reserved

Why Ringfencing Matters

GCA
Gaffney, Cline & Associates

- **Some might evaluate the economics of Alaska's heavy oil opportunities as a stand alone projects**
  - Market price lower than NS crude based on quality
  - Higher development and operating costs
  - Ignores fact that project is connected (fiscally) to existing operations

©2009 Baker Hughes Incorporated. All Rights Reserved.

Simple Ringfence Example

GCA
Gaffney, Cline & Associates

- **Assume existing NS oil project**
  - Production 650,000 bpd
  - Market oil price $70/bbl
  - Transportation costs of $7/bbl
  - Upstream costs $18/bbl (50% opex, 50% capex)

- **Potential NS heavy oil project**
  - Production 250,000 bpd
  - Market oil price 90% of NS oil price (quality)
  - Transportation costs of $7/bbl
  - Upstream costs twice as high as oil project $36/bbl

©GCA Gaffney, Cline & Associates Limited. All Rights Reserved

Heavy Oil and Alaska Tax

GCA
Gaffney, Cline & Associates

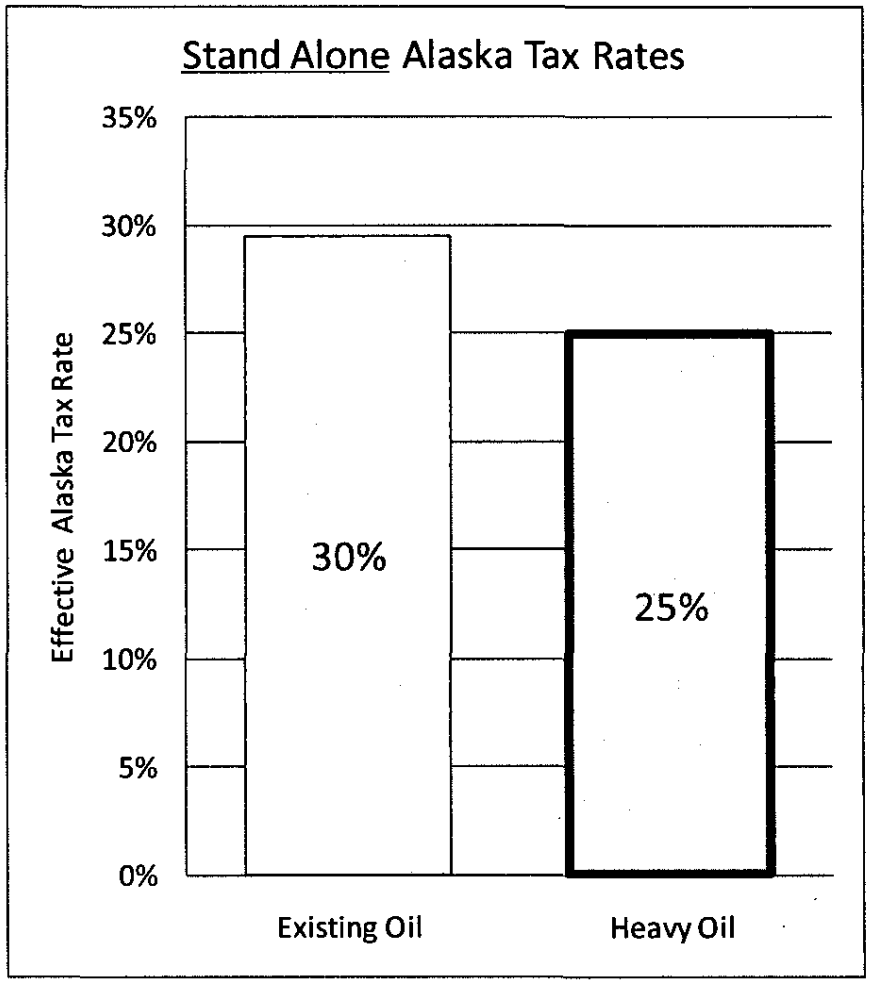
- **The following charts present one year 'snapshot' views of the Alaska tax in two cases:**
  - Project ringfence
  - North Slope-wide ringfence as allowed under Production Tax Law

- **This illustrates the State available assistance for Heavy Oil developments**

©2007 Baker Hughes Incorporated. All Rights Reserved.

Stand Alone - Project Ringfence

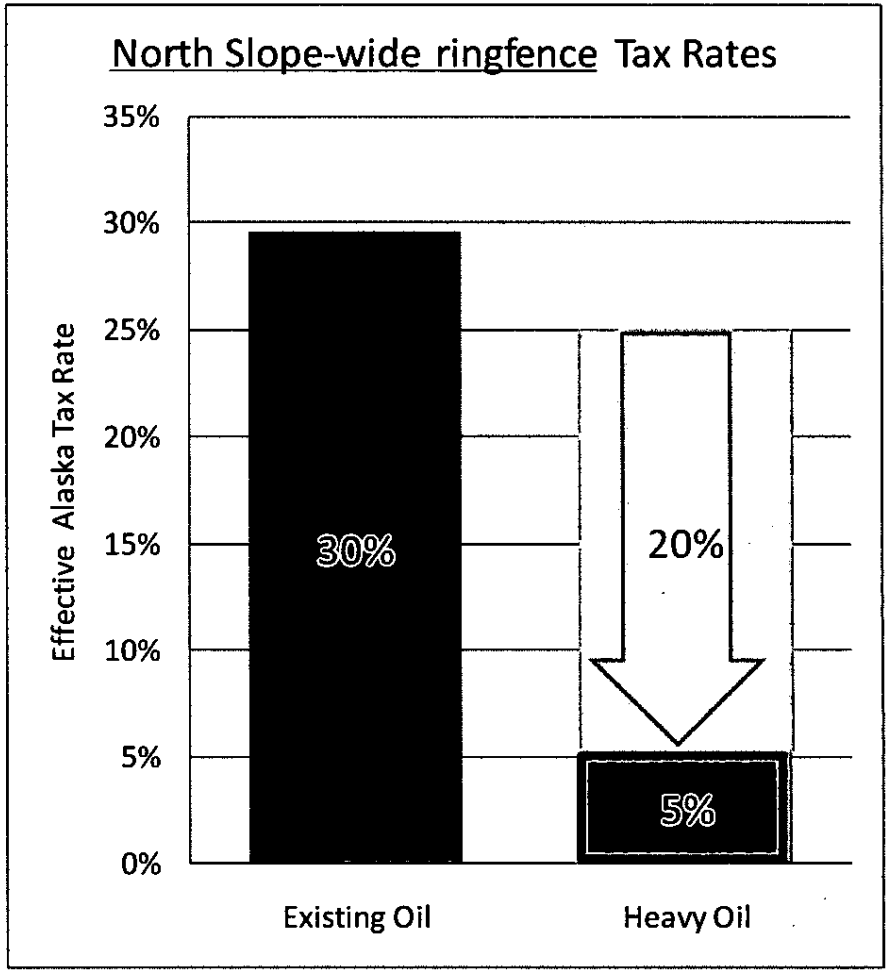
- If ringfenced as separate projects, as in many fiscal regimes, existing oil tax rate would be 30% and heavy oil would be 25%
- However, reality is this needs to be viewed as a blended portfolio



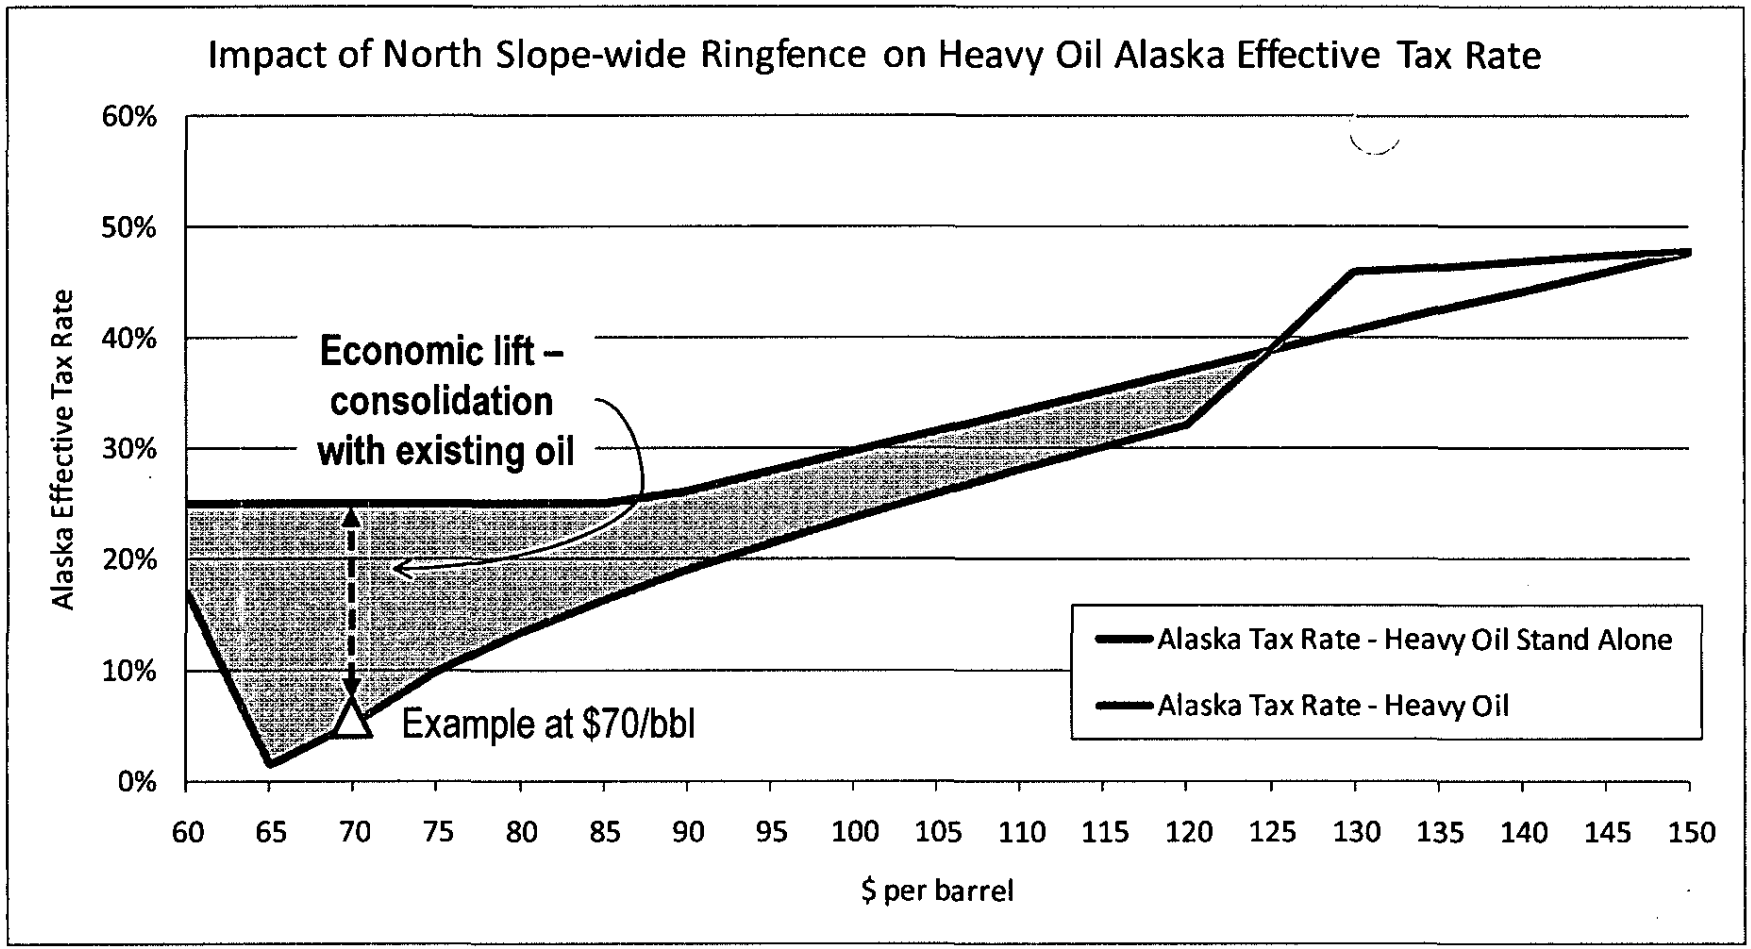
Oil Price - ANS West Coast : $70/bbl

North Slope-wide Ringfence

- If the Producer adds the heavy oil project to its portfolio, the heavy oil project will effectively be taxed at 5% instead of 25%
- The effective tax on heavy oil varies across a range of oil prices



Heavy Oil Effective Tax Rates



Agenda

GCA
Gaffney, Cline & Associates

1. Historical Perspective

2. Impact of Key Components

3. International benchmark

Observations

- **Bearing in mind the limitations of any benchmarking exercise, we observe the following:**
  - These results are in the same range as the ones provided by various industry players and consultants.
  - The total Government Take in Alaska appears to be competitive with most hydrocarbon prolific areas.
  - The Government Take in the recent Iraq contracts, which have attracted significant international competition (including from Industry players present in Alaska) is the highest.

Government Take Studies

GCA
Gaffney, Cline & Associates

- **To make a valid comparison of Alaska's fiscal system requires knowing the basis on which on comparisons are being made:**
  - IRR or rate of return?
  - NPV? Undiscounted? What discount rate?
  - Marginal take at the absolute worse 'spot' in the fiscal regime or averaged across a range of expected outcomes?
  - Single fields or portfolios?
  - High rate oil developments versus extended plateau gas developments?
- **What is it you are being shown?**

©2004 Baker Hughes Incorporated. All Rights Reserved

Vintage

GCA
Gaffney, Cline & Associates

- **Many countries have producers operating under a number of different vintage agreements.**
  - Most of the older agreements are specific to the field(s) being produced. A comparison to these would be misleading and unfair.
  - Even if older agreements provide opportunity for new exploration, the new projects may be ringfenced.
  - New investors can't receive the terms of the older agreements.
- **When the oil companies offer their comparison, what vintage agreement are they using?**

OECD vs. Non-OECD

GCA
Gaffney, Cline & Associates

- **One would think that a non-OECD environment would carry higher risk – and therefore need a greater reward**
  - Non-OECD countries control the vast majority of all hydrocarbons
  - Non-OECD countries also average very high total Government Take
  - Yet, major producers continue to include high take non-OECD countries as part of their portfolio
    - Recent Iraq deals

OECD: Organization for Economic Co-operation and Development

Which Gulf of Mexico (GOM)?

GCA
Gaffney, Cline & Associates

- **Really three different GOMs with different economics and different government terms**
  - Shallow water, paid for platforms, producing fields from relatively low depths, low operating cost structure and relatively inexpensive transportation to market.
  - Recent deep water developments, new state-of-the-art platforms, producing from deep horizons, challenging technology, high cost to drill, high cost to operate, long distance to market.
  - Recent ultra deep drilling from the shallow water shelf, middle range costs, close to shore and market.
- **Old 12.5% federal royalty vs. new 18.75% federal royalty**

©2007 Gaffney, Cline & Associates Incorporated. All Rights Reserved

At what oil price?

GCA
Gaffney, Cline & Associates

- **Relatively low prices**
  - Progressive systems take the minimum
  - Regressive systems take a larger bite
  - Comparison studies of the progressive Alaska tax regime would cast Alaska in a better light
- **Very high prices**
  - Progressive systems take a big bite
  - Regressive systems look favorable
  - Comparison studies of Alaska would cast Alaska in a worse light
- **Best comparisons use a number of prices across a reasonable range so that the workings of the fiscal system can be adequately assessed.**

©2009 Gaffney, Cline & Associates Inc. All Rights Reserved

Does it include all Government Take?

GCA
Gaffney, Cline & Associates

- **Bonuses**
  - Even though these can vary from lease to lease, are they included?
  - Recent $1Bn bonuses paid in Angola
  - Sizeable bonuses paid in other regimes as well
- **Domestic Market Obligation**
  - Has the requirement to provide a portion of the oil and gas to the local market at a discount been taken into account?
- **Government Partner**
  - Has the government participation been included, even if it is as a full paying equity partner?

©GCA Blue Heights Incorporated. All Rights Reserved

Available Investment Capital

GCA
Gaffney, Cline & Associates

- **Producer spending can be put in three categories:**
  - Mandatory – loss of license if they don't
  - Should – monetary penalties / loss of production if they don't
  - Discretionary
- **2008 was a big Industry spend year. Now oil prices have fallen and global economy is in a recession. How much of the lack of new discretionary spending in Alaska is because the 'tax is too high' versus significant spending being directed to the top two categories above?**

©2009 Baker Insights Incorporated. All Rights Reserved

Wrap Up

GCA
Gaffney, Cline & Associates

- Understand what comparative studies are and are not before you draw conclusions.
- Many important factors such as timing, ringfencing, signature bonuses are often left out.
- Do not underestimate the value of immediate write off and capital credits in balancing differences between Alaska and other regimes that may lack these, but have lower government take.
- Alaska's government take is competitive with most hydrocarbon prolific areas.

©2009 Gaffney, Cline & Associates Incorporated. All Rights Reserved.

TESTIMONY OF THE

ALASKA OIL AND GAS ASSOCIATION

TO THE SENATE FINANCE COMMITTEE

ABOUT THE FAILINGS OF THE

"ACES" PRODUCTION TAX

February 23, 2010

Mr. Chairman and Members of the Committee:

My name is Marilyn Crockett and I am the Executive Director of the Alaska Oil and Gas Association ("AOGA"). AOGA is the trade association for the oil and gas industry in Alaska. Our 14 members account for the majority of oil and gas exploration, development, production, transportation, refining and marketing activities in the state. The testimony I am about to present has been prepared and approved without dissent by the members of the AOGA Tax Committee.

First of all, we apologize to the Committee for the fact that our testimony today cannot be a detailed or comprehensive review of the many problems, issues and failings of ACES. Instead, it is only an overview, a snapshot from 50,000 feet if you will, of what's wrong or going wrong with this tax. And we can offer at this time only a handful of specific examples to illustrate these problems — not because the examples are few, but because we were simply unable before this hearing to compile the many more examples that we could otherwise have presented. Also, during your hearings last week you were given information that was either inaccurate, incomplete or misleading, and we would like to use part of our time with you today to set the record straight on a number of those points.

ACES was proposed and enacted with two primary goals: One, to raise the amount of production taxes from what the State would have received under either the old ELF-based tax or the "Petroleum Production Tax" – also known as the "PPT" – that replaced the ELF. And two, to attract new capital investment for oil and gas exploration, development and production on the massive scale that is needed to mitigate the decline in production rates as the resource is depleted. These goals seem fundamentally inconsistent with one another. How can the tax be raised for the industry and at the same time have the tax attract greater industry investment here?

ACES' answer was to take the tax deduction and tax credits for new capital investments that PPT first created, modify the credits to make them less attractive, and substantially increase the amount of production taxes on the oil and gas industry. There are numerous technical problems in ACES that need to be fixed, and many others that

tax rate would be worth 30¢, and the 20% tax credit would be 12¢, making a total tax benefit of only 42 cents. This difference between a 42¢ tax benefit and a 70¢ one may not sound like very much, but if the hypothetical project being evaluated costs $100 million, it means $28 million would be drained out of its economic performance as perceived by the investment decision-maker, simply because of this lack of clarity in the tax. Put in these terms, one can begin to appreciate how the go/no-go decision for such an investment could be affected by a lack of clarity in ACES.

And the key point here is: this adverse impact on the investment decision will occur even if the Department of Revenue, after audit, would have ultimately found 100¢ of that dollar to be completely justified and proper. In other words, the tax benefit actually allowed would turn out to be 70¢ for that dollar, but only 42¢ of that benefit was taken into account by the decision-maker at the time of the investment decision. This is a terrible dilution or waste of the incentive for investing that ACES is designed to give.

There are clarity issues with the ACES statutes themselves, but as I mentioned, the regulations that the Department of Revenue has adopted and is in the process of adopting are compounding and re-compounding the uncertainty and lack of clarity. Attached to the written copies of this testimony is an attachment illustrating the kinds of uncertainty being created unnecessarily by the Department. I will not take the Committee's time to read that attachment now, but I invite you to peruse it at your leisure.

Bad as it is, that example is only the tip of the iceberg in terms of what is going wrong with the ACES regulations. There are many, many more examples that we could offer. The written comments and testimony submitted to the Department by AOGA and by individual companies about the issues and problems with the draft and final regulations run to nearly 200 pages — just on the subject of deductible lease expenditures. That total does not include what we told the Department about its tax-credit regulations. And, as Deputy Commissioner Marcia Davis acknowledged to this Committee last week, we expect to have a lot of comments about the transportation-cost regulations that the Department is proposing to adopt, especially since the Department is dispensing with the public workshop process and going straight to the public hearing for actually adopting them.

One final problem with the ACES regulations that I would draw to your attention is the fact that the Department of Revenue has totally failed to address the question of how the non-operating working-interest owners in a unit or other oil and gas property are supposed to comply with all these requirements. Each month the non-operating owners are required by ACES to report and pay estimated taxes, and on March 31 of the following year they have to "true up" those estimates to the actual results for the year. All that they have available when these reports and payments come due are the billings that they receive from the operator for their respective shares of the unit's costs. Even though the non-operating interests can and do audit the operator's billings to them, their audits are done for several years of billings at a time, and the billing periods in question for those

We are not suggesting, however, that the Department should rely blindly on the non-operators to audit the operator's billings. As Ronald Reagan famously said about dealing with the Soviet Union during the Cold War, "Trust, but verify." In the case of ACES, "verify" for the Department would mean auditing the automated system of accounts that each operator has for recording its expenditures as operator and billing out those costs to the non-operating participants. Particular cost codes within such a system of accounts could be identified by this audit as disallowed kinds of cost, and by giving notice to the operator and all the non-operating interests that those cost codes are disallowed, the Department would ensure that all the participants in a unit or property would be on the same page with respect to cost codes that are allowed and billable under their operating agreement but disallowed for ACES purposes. The Department's audits of individual companies could then be simplified to verifying that nothing in the disallowed cost codes was deducted by any of them in their respective ACES tax returns, thereby conserving audit resources while ensuring consistency among taxpayers.

At the same time the Department could "verify" the ongoing integrity of each automated system of accounts by periodically confirming, first, that the software for that system has not been changed since the Department's last audit of that system, or if changed, has not been changed incorrectly for ACES purposes. And if there has been an incorrect change, the Department would identify the resulting new cost codes that are disallowed and put all taxpayers in that unit or field on notice of those changes to the list of disallowed cost codes.

The Department of Revenue could actually do all these things without having to change any of the substance of what it intends to allow or disallow as lease expenditures in its new regulations. But, to do so, the Department — instead of using the regulations to define what is or is not allowed — needs to adopt its concepts of allowed and disallowed costs as audit standards that it will then apply and enforce in its audits of automated systems of accounts and software, as well as in its audits of any claimed lease expenditures for costs that a company may incur in house that are not billable to others under the applicable operating agreement.

We have proposed this alternative approach to the Department in each round of public workshops and hearings on the lease-expenditures regulations. And in each new draft that came out after a workshop or hearing, including the regulation that has just been adopted, this superior alternative was rejected. We do not know why. But if the Department of Revenue will not adopt this superior approach voluntarily for administering ACES, then perhaps one alternative solution to fix ACES would be to rewrite the tax statutes so the Department has no choice but to use this clearer and more efficient approach.

This is very different from the picture that the Department of Revenue pointed for the Committee last week. In fact, they even showed a slide quoting from a letter I wrote. In the interest of time, I won't read the entire quote, but this the heart of it:

in those projects. This is completely and fundamentally wrong.

The only tax credits that the State is actually spending money for are the ones that the Oil and Gas Tax Credit Fund buys from explorers and small producers that do not have enough production to incur ACES tax liability that they could apply their credits against. This expenditure is incurred because the State has made the policy choice to do this in order to attract more independent explorers and small producers to Alaska. And, for the record, let me say AOGA supports this goal: Having more companies exploring and producing here is good for our industry, as well as Alaska.

But the overall tax deductions and credits under ACES do not inherently share this special attribute of the subset of tax credits that the Tax Credit Fund actually buys. Think about it for a second. Suppose it were true that each dollar of tax benefit from a deduction or tax credit is literally an expenditure or investment by the State. What would this imply? Well, in order to be true, it would mean the State is legally entitled that dollar instead of the producer — the State, in other words, literally owns that dollar and is making an expenditure or investment to the extent it lets the producer have any part of it.

Applying this principle in other contexts would mean the State owns the value of the next fish that a commercial fishing boat catches, that it owns the room charge that a guest pays to stay at the Baranof tonight, and that it owns the sales proceeds for the next car that a dealership sells. And consistent with this, the State would be "spending" billions and billions of dollars to the extent it lets the fishers keep any of the value of their catch, lets hotels keep any of their guests' room charges, and lets car dealers keep any of the proceeds from their car sales. This certainly would take the expression "owner state" to an extraordinary degree of literalness, but it is not what we have in this country as our legal and economic system.

Some might object to what I've just said, arguing that the State actually is the owner of the oil and gas since it is the owner of the land from which the resource is produced. Such an objection breaks down, however, at two levels. First, ACES applies to oil and gas produced from land that the State does not own, such as Native corporation land and federal lands within Alaska's legal boundaries. For these non-state lands, the very premise for the objection is lacking. Second, and more fundamentally, it ignores the fact, although the State owns the land, it has sold the exclusive right to explore for, develop and produce oil and gas from that land. The State sold this right in each of its oil and gas lease sales, and it has been paid more than $2.1 billion in bonus bids through 2007 for selling this right. Paragraph 37 in the Form DL-1 leases that represent virtually all of the main Prudhoe Bay and Kuparuk fields states, "the rights vested in Lessee by this lease shall constitute an interest in real property in said land." In other words, what the lessees have paid for is not a license, but actual ownership.

Thus, when a producer produces oil or gas from a state lease, it owns all of its share of that oil or gas as it comes out of the ground. In fact, when the State takes its royalty in value instead of in kind as physical oil or gas, the physical oil or gas attributable to

field drilling like this has a rate of return of over 100 percent. Without getting side-tracked about the assumptions needed to mathematically allow rates of return to be that high, our reply is that, if in-field drilling is highly profitable, why did the number of these in-field wells decrease from 166 wells in 2007 to 153 in 2008 and 147 last year? Putting rhetoric or political posturing aside, this is the fact of the matter. And since we have been critical of the Department of Revenue, we should acknowledge at this point that the Department has disclosed this decline in its public ACES materials, although its numbers mistakenly include exploration wells.

The decline in in-field drilling is confirmed by public statements of the two major operators on the North Slope, ConocoPhillips and BP. For instance, John Mingé of BP told the Meet Alaska Conference last month that his company's "total drilled footage" for in-field wells "will be more than 50% lower in 2010 vs. 2007" when the figure was nearly one million feet drilled. He added that BP had "[r]educed our rig count from 10 to 7 from January last year." And I would point out that each drilling rig represents about a quarter of a million man-hours of work a year, or about 119 full-time equivalent jobs at 2100 hours of work per year. At that same Meet Alaska Conference Larry Archibald, the senior vice president of exploration and business development for the corporate parent in ConocoPhillips' organization, noted that industry in the last five years added about 450 million barrel-of-oil-equivalents to reserves for existing Alaska fields, but "Only 35 million since ACES".

The news is also bad for exploration wells. ConocoPhillips has been the leading explorer in Alaska for the last decade and more, focusing especially on the National Petroleum Reserve – Alaska, or NPR-A for short. But Helene Harding, who is now interim president of ConocoPhillips Alaska Inc., warned the Resource Development Council on November 18 last year that the number of North Slope exploration wells had declined from 11 in 2007, to nine in 2008 and eight in 2009, with the figure for 2010 expected to be even lower. More recently, Mr. Archibald in his remarks last month at Meet Alaska said ConocoPhillips will not be drilling any exploration wells in NPR-A this year, nor was he aware of any other company planning to do so this year. He noted that "Significant potential remains in North Slope Giants" but "Giant fields have worst fiscal terms" under ACES. Perhaps more ominous is the fact that Mr. Archibald told the conference that ConocoPhillips in 2009 had relinquished some 880,000 acres of leases that it had in NPR-A.

Now, lest we be accused of being misleading in this testimony to you, let us be absolutely clear: We do not claim that every single one of these signs of deterioration in the situation here has been solely the result of ACES. But ACES has necessarily been an economic factor within the overall circumstances surrounding each one of them. For some it may only have been a contributing factor, while for others it may have been decisive. It is even possible that ACES might not have been a material factor at all, although we would expect these to be very few in number. Be that as it may in particular situations, the point we wish to make is that these facts, taken as a whole, do provide a clear

Third, there are clear, but ominous signs that ACES is not succeeding in attracting as much new investment as it is supposed to do. This impending failure is reflected in the decline in drilling, both for exploration wells as well as development wells within existing fields. It is reflected in the relinquishment of huge amounts of exploration acreage. It is reflected in the declining amounts being invested for new projects and development.

In its public presentations about ACES and the future, ConocoPhillips — using DNR's production forecasts and extrapolating from published data by the Department of Revenue about industry expenditures — has identified a need for more than $40 billion dollars of new investments for "core fields" to make it through the next decade and reach the promised land, where Alaska has a Gas Pipeline, where the technological challenges are overcome to produce the billions of barrels of heavy oil that are already discovered and known to exist, and where the dream for half a century or more of production from the North Slope is fulfilled. Alaska is blessed simply to have the possibility of such a future. But, to help this future become a reality, the State must correct the present-day problems and obstacles being created artificially by its fiscal regime.

Thank you, Mr. Chairman, for allowing us this opportunity to testify to your Committee today.

an approved timesheet or other time writing documents:

(i) technical employees having special and specific engineering, geological, or other technical skills, including engineers, geologists, geophysicists, environmental specialists, and other technical personnel whose primary function with respect to that exploration, development, or production is the handling of specific problems or operating conditions involving the oil or gas exploration, development, or production operations or the support of those operations;

(ii) employees engaged in developing field automation systems dedicated to an specific to a unit or a lease or property and necessary for oil or gas production operations of the unit or the lease or property;

(iii) employees engaged in developing computer applications specific to a unit or a lease or property and necessary for oil or gas development or production operations of the unit or the lease or property;

...

(11) costs paid to a third party for contract services, utilities, or use of a facility equipment, or infrastructure provided by the third party and used in oil or gas exploration, development, or production operations, or used in support of those operations, or for use of a system described in 15 AAC 55.-250(c)(10) or (11) provided by the third party; for purposes of this paragraph,

(A) contract services

(i) do not include work in tax, legal, or accounting matters, or matters involving a dispute before a government agency;

(ii) are limited to services the labor costs of which, under (3) of this subsection, would be allowable as direct charges if the operator's employees performed the services[.]

Simply reading this regulation should speak for itself about how hard it is just to make sense of what it's saying. But even after one does read it a few times and finally figures out what it means, there are three hidden ways in which it fails to be clear.

First, subparagraph (a)(3)(A) requires an operator's own non-technical employees to be "directly employed in or in support of oil or gas exploration, development, or production operations" in order for their labor costs to be allowed as lease expenditures. But there is no definition or other indication about what "directly" means in the context of being "directly employed in ... oil or gas ... operations[.]" Since the entire regulation is defining what the "direct costs" are of oil and gas operations, the lack of any definition of "directly" within this regulation makes its logic circular. In addition, there is no objective standard for determining whether an employee is even "employed" at all "in support of [such] operations" — be it "directly" or otherwise.

happens even if the regulation is correctly applied and an employer's contributions turns out to exceed the specified percentages.

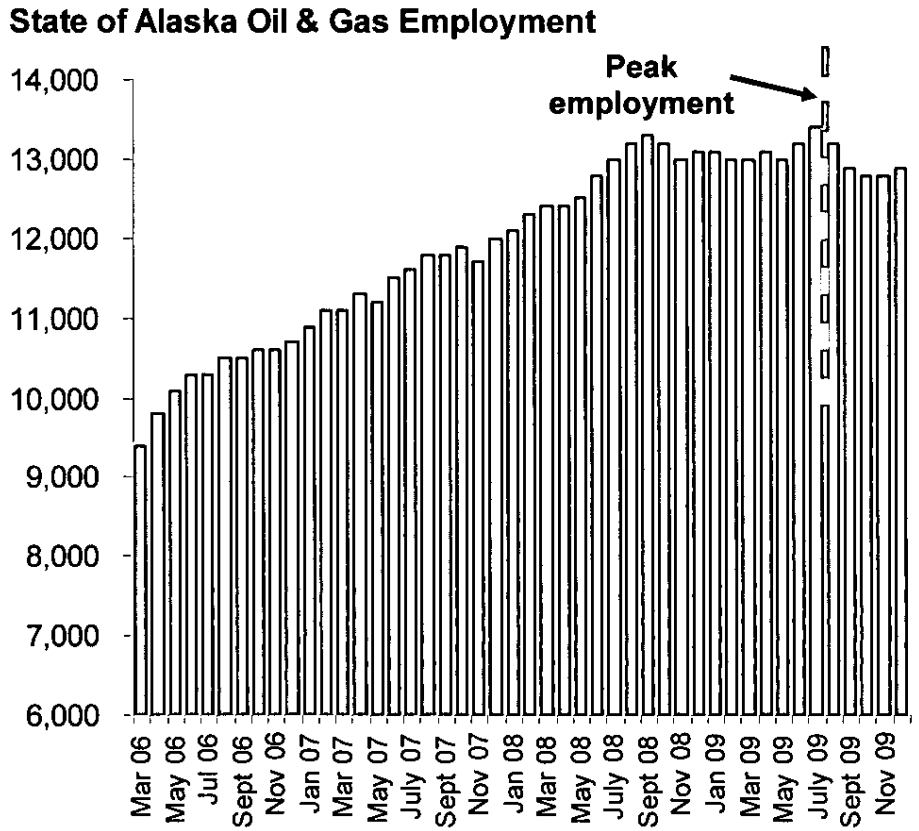
Oil & Gas Employment

- Data since July-09 indicate downward trend in oil and gas jobs
- Employment levels driven primarily by maintenance and inspection activity
- Alaska state unemployment rising in oil and gas support sector
- Leading indicators: Kuparuk camp usage down 20%



Rise in employment began in 2006

Source: Alaska Dept of Labor employment data

ACES Impacting Projects

- Recent project activity
  - Oooguruk – pre-ACES, royalty relief
  - Nikaitchuq – royalty relief
  - Liberty – not subject to ACES
- Over $2 Billion in projects deferred since ACES
  - Prudhoe I-Pad and Gas Partial Processing (GPP)
  - West Sak 1N and 1P
  - ULSD topping plant *(opportunity foregone)*

Project deferrals impact industry and state revenue

PROGRESSIVITY
PROFITABILITY
PARITY
GAS

Senate Finance Committee

February 24, 2010

Alaska State Department of Revenue

Agenda

- How Does the Production Tax Calculation Change when Gas is Produced?
- Brief historical background on the philosophy behind the current system
- How does "Parity" affect the production tax calculation?
- What is being potentially "locked in" with the AGIA open season?
- Forecasting oil and gas prices 2020 to 2030
- Policy Issues Associated with the Gas Tax

Basic Oil Tax Calculation

	Oil	
ANS Price	$75.00	$/bbl
Daily Production	500,000	Bbl/d
Annual Production	182,500,000	bbl
Total Annual Gross Sales Value	**$13,687,500,000**	
Marine and TAPS Tariff on Oil	($6.50)	$/bbl
Gas Pipeline and Gas Treatment Plant		
Transportation Costs	**($1,186,250,000.00)**	
Value at Point Of Production	**$12,501,250,000**	
Royalty and Federal	($1,562,656,250.00)	
Taxable Point of Production Value	$10,938,593,750	
Lease Expenditures		
Opex	($2,000,000,000)	
Capex	($2,000,000,000)	
Total Lease Expenditures	**($4,000,000,000)**	
Production Tax Value (PTV)	**$6,938,593,750**	
PTV on BOE basis	**$43.45**	
Base Tax (25%*PTV)	$1,734,648,438	
Progressive Tax Rate	5.38%	
Progressive Tax	$373,326,216	
Total Tax Due before credits	$2,107,974,654	
Credits Applied Against Taxes	($400,000,000)	
Total Tax after credits	**$1,707,974,654**	

Now What if We Added 4.5 Bcf of Gas Production?

Was This Expected When ACES was Crafted?

- Same Dynamic for Gas that creates Uplift for Heavy Oil and Marginal Field Development
- Intended to be a positive incentive for Producers to commit to the gasline project

THE HISTORICAL PERSPECTIVE

SENATE FINANCE COMMITTEE

NOVEMBER 9, 2007

1997

Goals for Fiscal Design

8

- **Based on [hearing dialog] we see the State trying to achieve the following in this special session:**
  1. Fields with larger **profitability** should be paying more taxes
  2. Encourage investment in existing units
     - Reinvestment in producing assets
     - Investment in new developments
       - Conventional
       - Unconventional (i.e. heavy oil)
       - Gas
  3. Encourage new investment outside legacy units
     - Level playing field for incumbents and new entrants
  4. Durability
     - Don't want to be back 'fixing' things
  5. Build on prior tax dialogue

Nov 2007

The Fiscal Design Challenge

- **At the same time the State must address "The Take"**
  - (Goal 1) Capture the State's equitable share when margins are very high
  - (Goal 4) Include a form of progressive structure to adapt to the inevitable changes in the three main variables of the business:
    - Price
    - Production
    - Cost
- **...as well as "The Give Back"**
  - (Goal 2) Encouragement to reinvest profits for more development inside legacy units

Goal 3: Encourage New Investment

10

NOV 2007

- **The [now current] legislation appears to provide the right incentives to encourage investment in new fields**
  - Investment credits
  - Net Operating Loss credits
    - Aid to new entrants with no existing tax base
  - Net based system that by design lowers the applicable production tax rate for fields with higher cost structure
    - More distant from core infrastructure
    - Heavy Oil
    - Gas
- **Beyond the individual project, the State and industry benefit from new developments as they provide additional barrels down TAPS thus extending the productive life of existing reservoirs**

What was expected (in 2007)?

11

- Highly likely that any new oil or gas development will cost more per barrel to find, develop and operate than current NS production

- Therefore, the addition of any new hydrocarbons to an existing portfolio will result in production taxes payable on the whole being less than the sum of the production taxes payable on the individual parts
  - Not just a gas/oil issue
  - Also an oil/oil issue, particularly a heavy oil/oil issue

- The more aggressive the progressivity the greater the impact on the effective rate or stand alone rate, and the greater the impact of oil-gas price parity

12

How Parity Affects Tax Calculation

2002

	Oil	Gas	Combined
ANS Price	$75.00 $/bbl	$8.00 $/mmbtu

Gas Tax Policy Issues

- What cash flow does the state expect from the gasline?
- What price risk is the state willing to accept?
- Is the state willing to accept the risk of periods where the oil + gas tax revenue is less than oil tax alone?
- What is the cash flow sharing and risk sharing between the Producers and the State?

2010

Issues Surrounding Gas Tax Discussion At this Time

2c

- Entering two open seasons for the gas pipeline
  - Likely to result in Producers continuing to claim changes in the fiscal system are necessary
- Full commitments to ship gas (i.e. project sanction) not expected until 2014
- Stakeholders will continue to discuss:
  - Necessary Producer cash flow from gas development,
  - Relative risks borne by the Producers and the State,
  - Amount of Fiscal Predictability the Producers need

21	What is being potentially "locked in" with the AGIA open season?

What kind of shipping commitments qualify shippers for AGIA Tax and Royalty Inducements?

For gas to qualify for the tax and royalty inducements, "producer-shippers" and "shippers buying from producers" must meet this requirement under AS 43.90.300:

"Must commit to acquire firm transportation capacity in the first binding open season"

Proposed Regulations 15 AAC 90.200 - 230

Definition of Key Terms

- **Precedent Agreement (PA):** Establishes general terms of transportation service the conditions under which shipper will be obligated to acquire transportation capacity on the project (via TSA). Also specifies when the shipper and transporter are relieved of those obligations (i.e. conditions).

- **Transportation Services Agreement (TSA):** Entered when conditions of the PA are met; shipper is then unconditionally obligated to pay for transportation and the transporter to construct the project.

Proposed Regulations 15 AAC 90.200 - 230

Qualifications for AGIA Inducements

"Must commit to acquire firm transportation capacity in the first binding open season" means:**

1. Submit a bid for firm transportation capacity during the initial open season;
2. Execute a Precedent Agreement (PA) w/in 180 days of close of initial open season;
3. Execute Transportation Services Agreement (TSA) w/in 5 years of open season, or two years following FERC Certification, whichever is later; **and**
4. File with the DOR-DNR Commissioners:
   - Copies of documents listed above; and
   - Copy of rolled-in rate agreements governing pipeline expansions

**Summary only – does not include all terms
Proposed Regulations 15 AAC 90.200 - 230

The Gas Production Tax Exemption

25

- Annual exemption from "gas production tax"
- Value Equal to:

[redacted] **minus** Gas production tax under law at open season

- Good for 10 years following start of gas sales
- Applies only to volume of gas identified in the Commissioners' determination of qualification or voucher.

Proposed Regulations 15 AAC 90.200 - 230

Identifying "gas production tax"

26

- Current Production Tax is calculated on combined oil and gas production, with combined oil and gas lease expenditures, so we need to attribute a "gas production tax" value.
- Under proposed 15 AAC 90.220, to attribute "gas production tax", we use the ratio of the gross value of AGIA gas at the point of production divided by the combined gross value of the oil and all gas at the point of production. This ratio is multiplied by the combined oil and all gas production tax liability.

Proposed Regulations 15 AAC 90.200 - 230

2017

Gas Tax Exemption Mathematics

Assuming all the gas is shipped via capacity that qualifies for the AGIA inducement…

$$\frac{\$5,748,750,000}{\$26,462,500,000} = 21.7\%$$

$5,522,375,740 X 21.7% =

Close Approx. $1,199,688,523

Production Tax Attributed to Gas under proposed 15 AAC 90.220

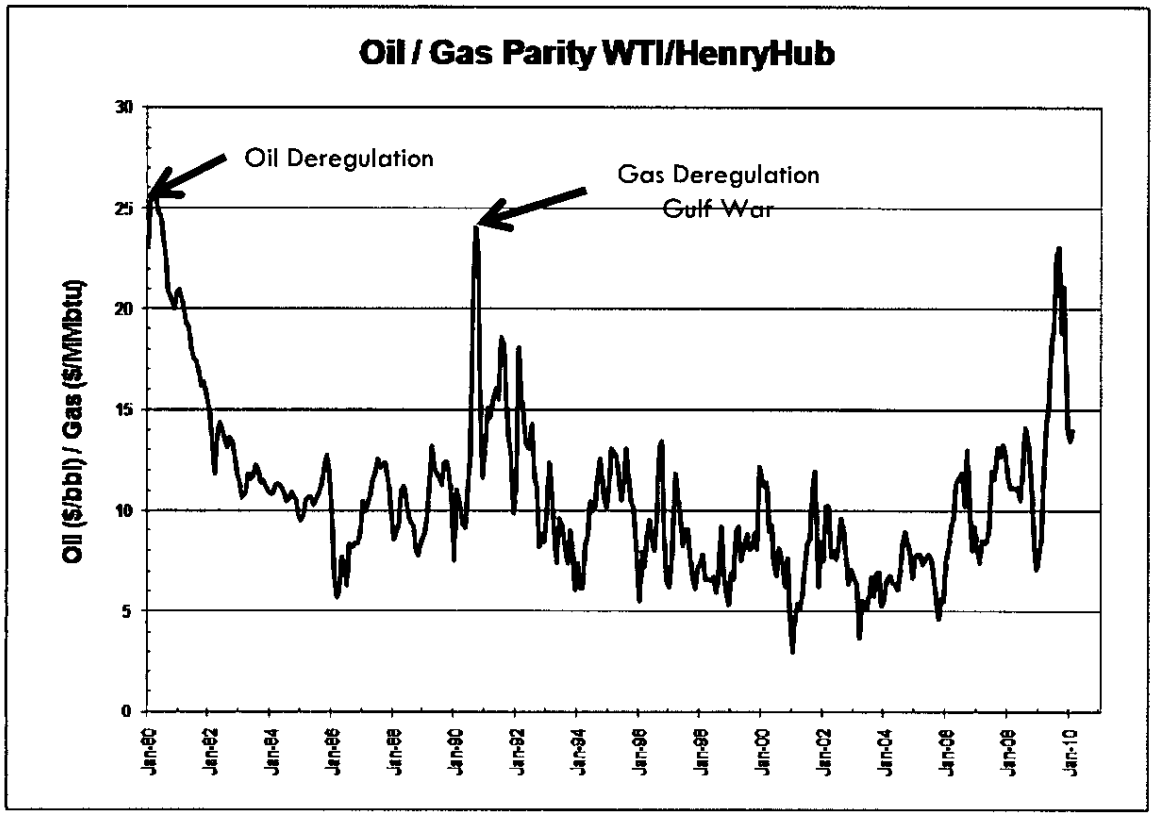
Given that Example – What is the AGIA Tax Exemption?

1. Calculate Gas Production Tax under system in place in the Year of Production:
   - Assume the Gas Production Tax then is = $1.5B
2. Calculate Gas Production Tax under system in effect on May 1, 2010:
   - Previous slide shows gas tax attribution of: $1.2B
3. The taxpayer can claim an exemption for the difference:
   - AGIA Gas Tax Exemption = $300M

33

Oil and Gas Price Expectations and Forecasting Challenges

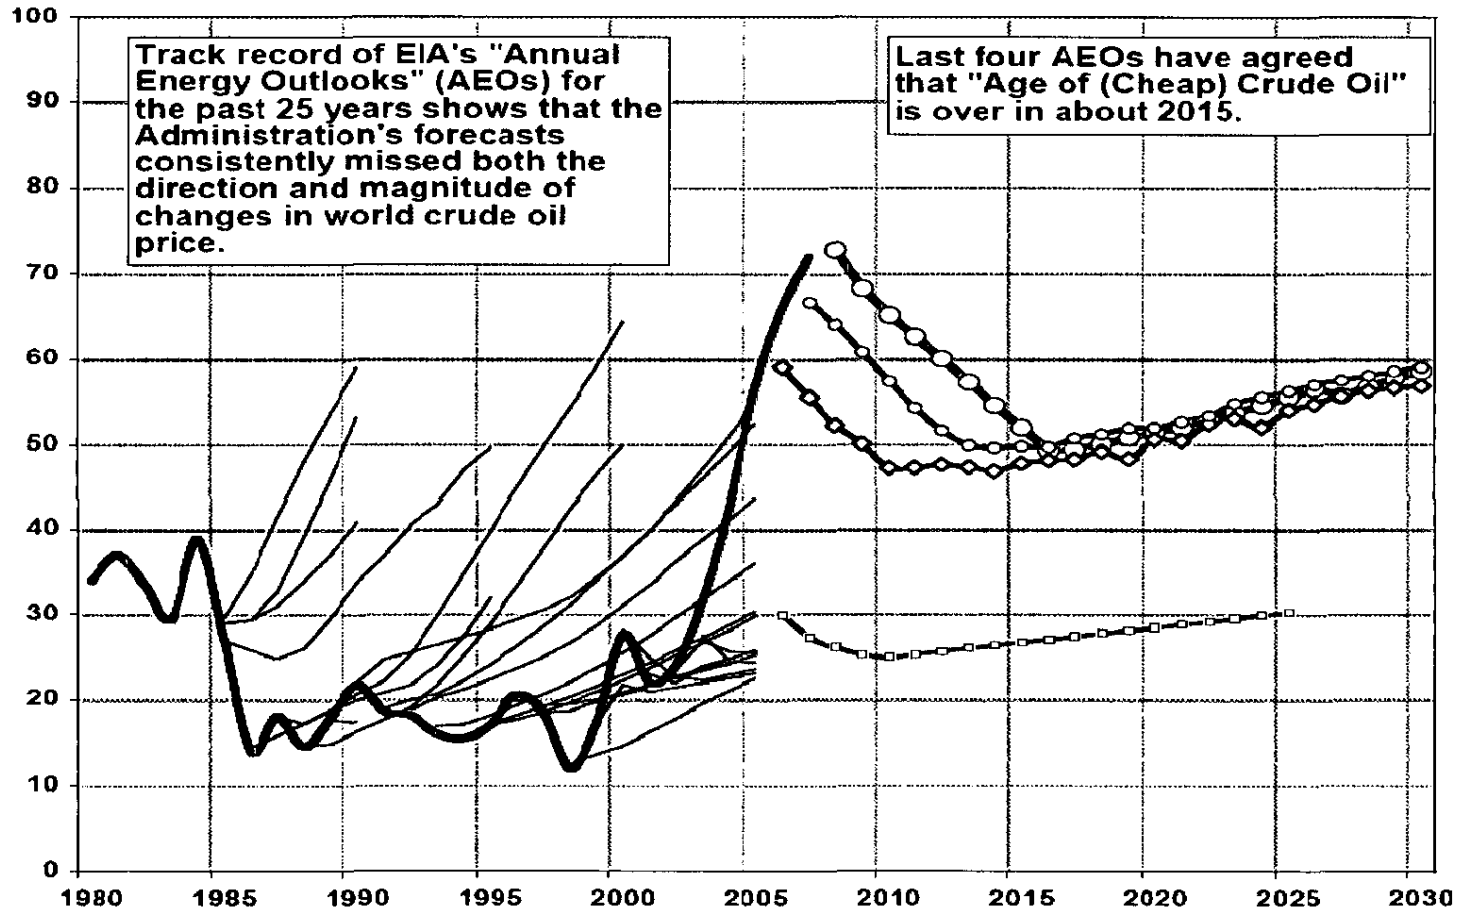
The Oil/Gas Price Parity….



….Has Been Higher than Expected….

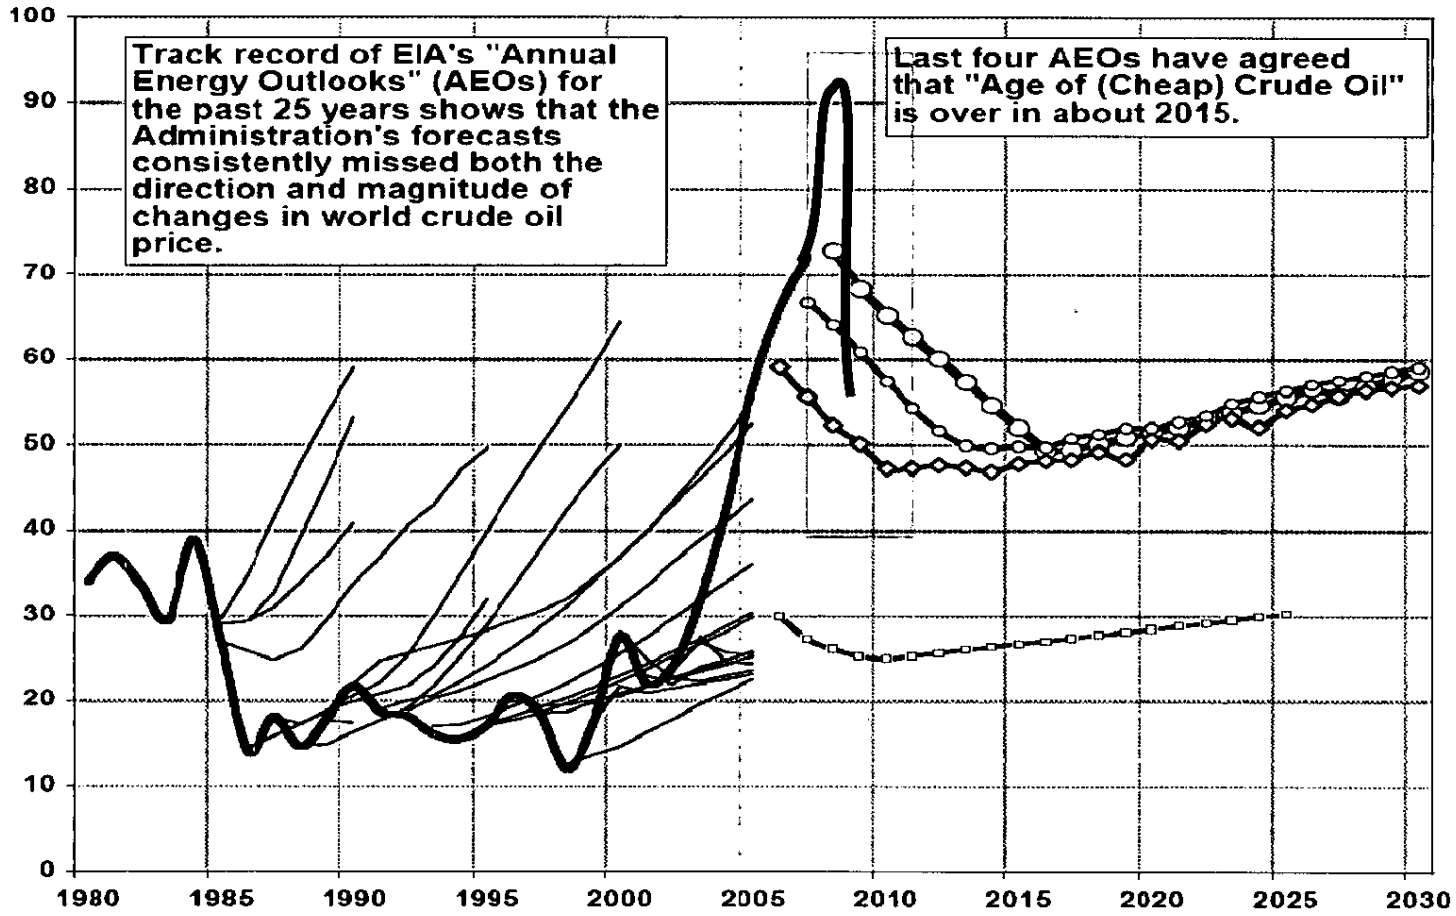
EIA Forecasting Is Widely Quoted But Usually Not Even Close

35



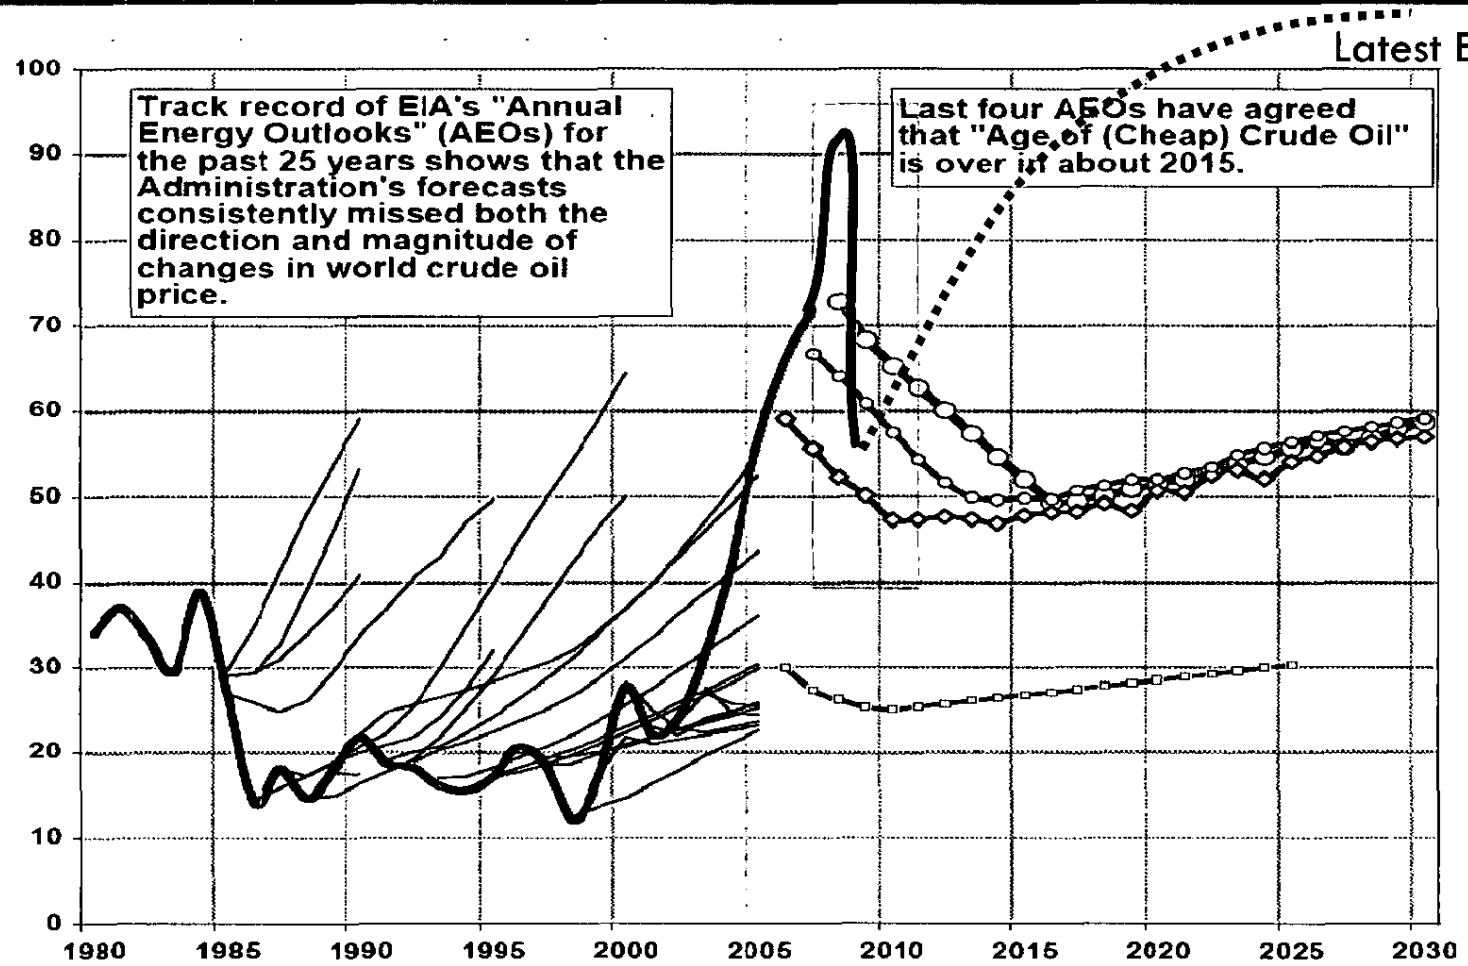
Source: US DOE Energy Information Administration Mar 2008

EIA Forecasting Not Even Close



Source: US DOE Energy Information Administration Mar 2008

EIA Forecasting Not Even Close



Source: US DOE Energy Information Administration Mar 2008

In the past 5 years, We've gone from an expected major gas shortfall...

- 2005
  - US to suffer significant gas shortage predicted by 2010 to 2012
  - About 5-8 bcfd of new imports projected to be needed
- 2006
  - Over a dozen new LNG projects sanctioned
  - 48 proposed NA regasification facilities
- 2007
  - Gas prices strengthening, gas rig count up
- 2008
  - Spot LNG cargos selling for > $24/MMBtu
  - US Henry Hub > $14/MMBtu

...to awash in gas!

39

- 2009
  - Unconventional gas exceeding all predictions
  - Storage overflowing due to warm winter
  - Global economic slowdown, demand way off
  - Gas trading at lowest parity to oil since deregulation of the US gas industry

- 2020 to 2030 ???
  - If past is an indicator, very hard to predict what will happen with any accuracy
  - Need an approach that adapts to any number of possible future states.

40

Policy Issues Associate with the Gas Tax

Gas Tax Policy Options By 2014

41

- Leave the Current System
  - Accept the gas price risk as an incentive for Producer participation in the gasline
- Eliminate the Risk of Oil+Gas Tax < Oil Tax
  - Set a minimum tax equal to the tax that would have been paid for the oil alone
- Reduce the Oil Tax Reducing Effect of Price Parity
  - Establish a "collar" around the parity ratio, if the collar ratio is exceeded the equivalence of oil to gas is adjusted
- Separate or Ringfence gas production for State production tax purposes
  - Need to develop a way to allocate costs between oil and gas that does not require an army of auditors
  - Changes the current cash flow balance between the State and Producers

The End

17

Oil and Gas in Alaska's Production Tax

Dan E. Dickinson CPA

Senate Finance Committee

February 24, 2010

Why are we going through all these numbers?

Questions:

Is this system stable or robust and likely to be viable over a wide range of conditions (including a good environment for a gas project)?

Are the cross subsidies clear and rational?

How will the state react if there are large drops in tax revenue? To whom will it look for revenue?

Two ways of measuring the issue:

How much does gas "drag down" or "compensate" oil progressivity?

How much will tax revenues fall because a gas project is added?

From Dec 10 2008 Presentation to LB&A

	Oil Only	Incremental Gas	Combined
Daily Vol	0.7 mmbbls/day	4.2 bcf/day	
days per year	365	365	
Annual Volume	255.5 mmbbls/yr	1533 bcf/yr

Looking Forward: Combined Progressivity Tax (CPT)

Gas exported from state and oil taxed at same rate – both part of combined progressivity calculation.

- Prices swings in one can effect tax on the other
- Gas converted to oil on Btu basis (roughly 6:1)
- Progressivity triggered by $30 boe PTV

	1 mcf	1 Boe Gas	Oil
Subject to progressivity June 2008	0.25	1.50	81.25
$30 no Progressivity zone	5.00	30.00	30.00
Upstream Costs ?	2.71	16.26	16.26
Downstream costs	4.73	28.38	6.27

Sources: Oil data from Spring 2008 RSB, Upstream Gas Cost is oil data on boe basis, Gas Downstream cost is Black & Veatch Estimate from Appendix G Alaska Gasline Determination. Oil price from DOR website. Gas Price from St Louis Fed Reserve website

Response to Mr. Dickinson

Gaffney, Cline & Associates

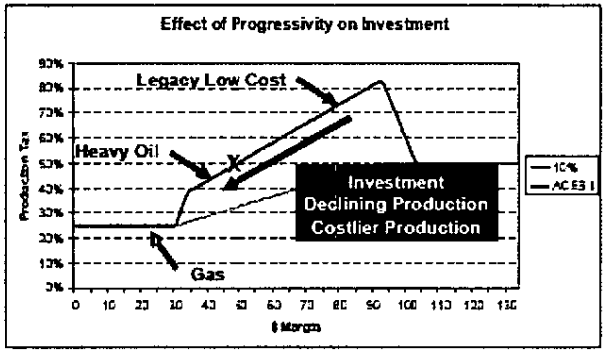
DAN E. DICKINSON CPA

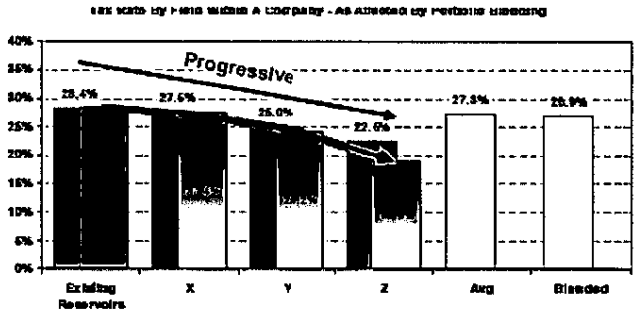
- The basic elements were introduced in the 2006 tax changes.
- Focus was on oil.
- Gas was "on hold" waiting for the release of the "Stranded Gas Development Act" contract (May 2006)

Gaffney Cline Slide:

Cross Subsidies and "Less Tax"

- **The cross subsidy issue caused by progressivity was also discussed at great length and it was shown how under certain circumstances the "effective" rate of tax on a higher cost / lower profitability development (such as gas or heavy oil) could be lower than the base rate**





- **It was also noted that any evaluation involved many commercial and economic parameters that would need to be evaluated across a range of expected values**

Gaffney, Cline & Associates

Gaffney, Cline & Associates

02 February 2009

Gaffney Cline Slide:

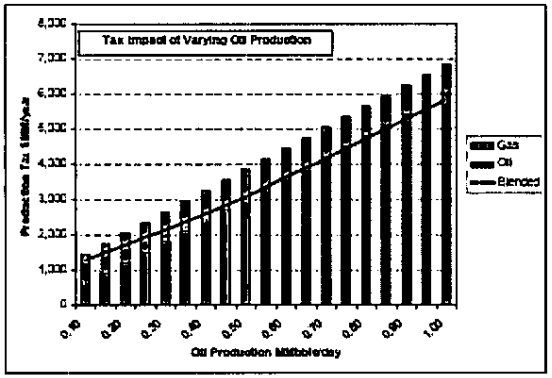
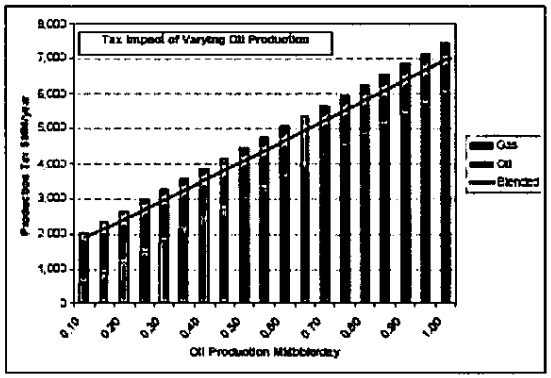
Impact of Varying both Oil/Gas Production and Price Ratios

- Gas at 4.2 bcf/d and Oil at $80/bbl
- Left prices 13:1 and on the right prices 10:1





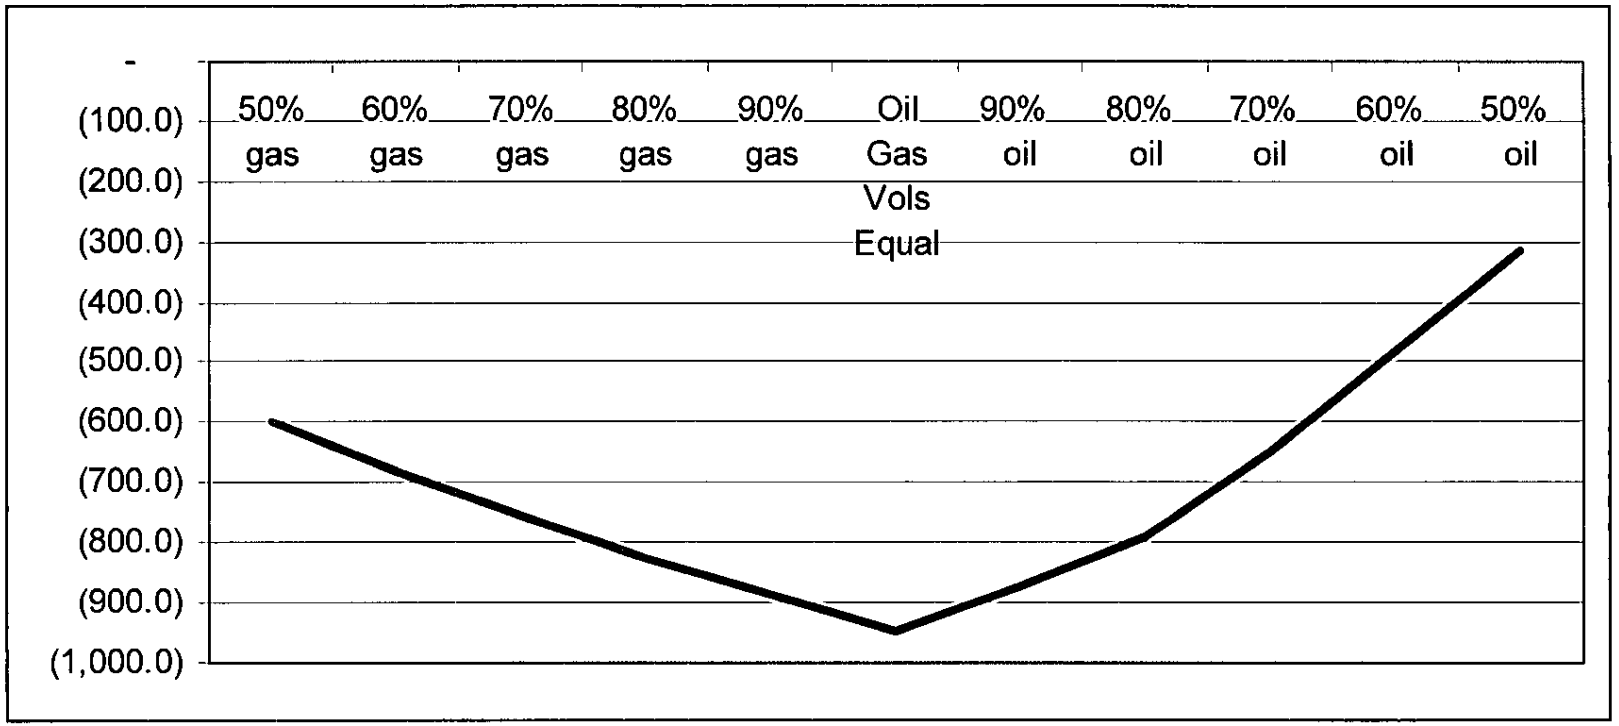
- At 10:1, the issue of pay less overall taxes goes away. At the long-range expectation of prices at 8:1, paying "less" taxes is a non-issue

Gaffney, Cline & Associates

02 February 2009

Effects of Volume

- Size of effect is directly related to gas:oil volumes (at a given price)



Note: Difference between stand alone oil tax + stand alone gas tax and combined tax

Source: HH and ANS are January 2010, Gas transportation low end of TC range from Feb 7 presentation, oil trans from Fall 2009 RSB

Gaffney Cline Slide with questions:

Summary

- **A range of possible outcomes "caused" by ACES' structure was identified, reviewed and built into the final design of ACES to provide incentives to both existing SOA producers as well as new entrants**
  - Are these well targeted incentives?
- **When evaluating ACES and a possible gas line reasonable results are obtained when real world input values are used**
  - "Reasonable results" include material potential tax revenue losses from a gas line
- **Nobody has brought forth expected, sustainable scenarios to show that ACES needs to be modified**

Gaffney, Cline & Associates

02 February 2009

Solutions

How can this be fixed?

1. Change AS 43.55 before the open season
2. When revenues are actually impacted, add a recoupment factor outside of AS 43.55 - for example in Income Tax or in a new section.

Note: Existing "AGIA" law AS 43.90.320 (d):

In this section "gas production tax" means the tax levied on the production of gas under AS 43.55

"Locking down" current production taxes under AS 43.55 is not prohibiting any additional "revenue enhancements" in relation to a gas project.

2.24.2010

Dan E. Dickinson, CPA, CMA

Dan E. Dickinson is a certified public accountant in private practice in Anchorage. He also holds the certified management accountant designation.

He has been providing analysis to the legislature on various tax and oil and gas and issues since 2007, including during the 2007 special session that passed the "ACES" reforms.

For much of 2007 he staffed the Municipality of Anchorage's Property Tax Relief Task Force. He also served on the Municipality's Budget Advisory Commission from 2007 through 2009.

In 2006 he worked for the Murkowski administration during the many attempts -- including special sessions -- which final resulted in a net profits tax or "PPT" replacing Alaska's gross production tax based on the economic limit factor (ELF).

From 1999 through 2006 Dan worked in the Alaska Department of Revenue (ADOR). He was first appointed director of Oil and Gas Audit by Governor Knowles, and then director of Tax. He continued as director of Tax in the Murkowski administration, and in that role he signed the controversial 2005 "ELF aggregation order" for Prudhoe Bay. During his last year with the ADOR, a position was created to he could focus on state efforts to monetize North Slope gas through a Stranded Gas Development Act contract. That effort did not meet with success.

In the eighties and nineties he was involved as a consultant and expert witness in a number of oil and gas royalty and tax cases both outside and here in Alaska. A 29-year resident of Anchorage, Dan was a presenter at the Conference of Alaskans convened by Gov. Murkowski in Fairbanks in 2004. He has served on the boards of several not-for profits as treasurer. He holds a BA in lunar geology from Brown University.

Gas Issues & Alaska's Fiscal Design

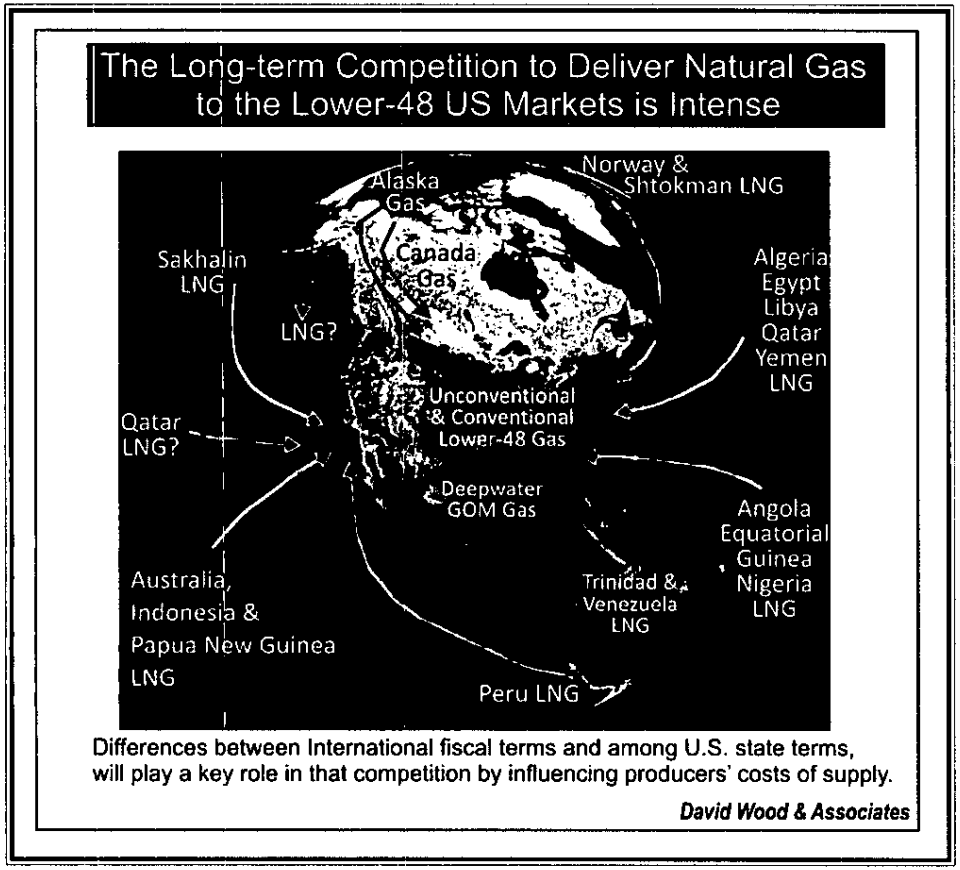
Presentation Structure

This presentation focuses the key issues pertaining to natural gas in Alaska in the context of establishing a long-term and enduring fiscal design.

- What are the issues for Alaska's fiscal regime when applied to gas?
- What are the fiscal designs applied by other countries?
- What are the risks and opportunities for international gas suppliers?
- Alaska's Prevailing Fiscal design
- Complications of combined oil and gas progressivity tax (CPT)
- Multi-year and multi-scenario fiscal performance cash flow models
- Conclusions and recommendations

What are the issues for Alaska's fiscal regime when applied to gas?

Alaska is One of Several Potential Long-term Suppliers of Natural Gas to Lower-48 U.S.

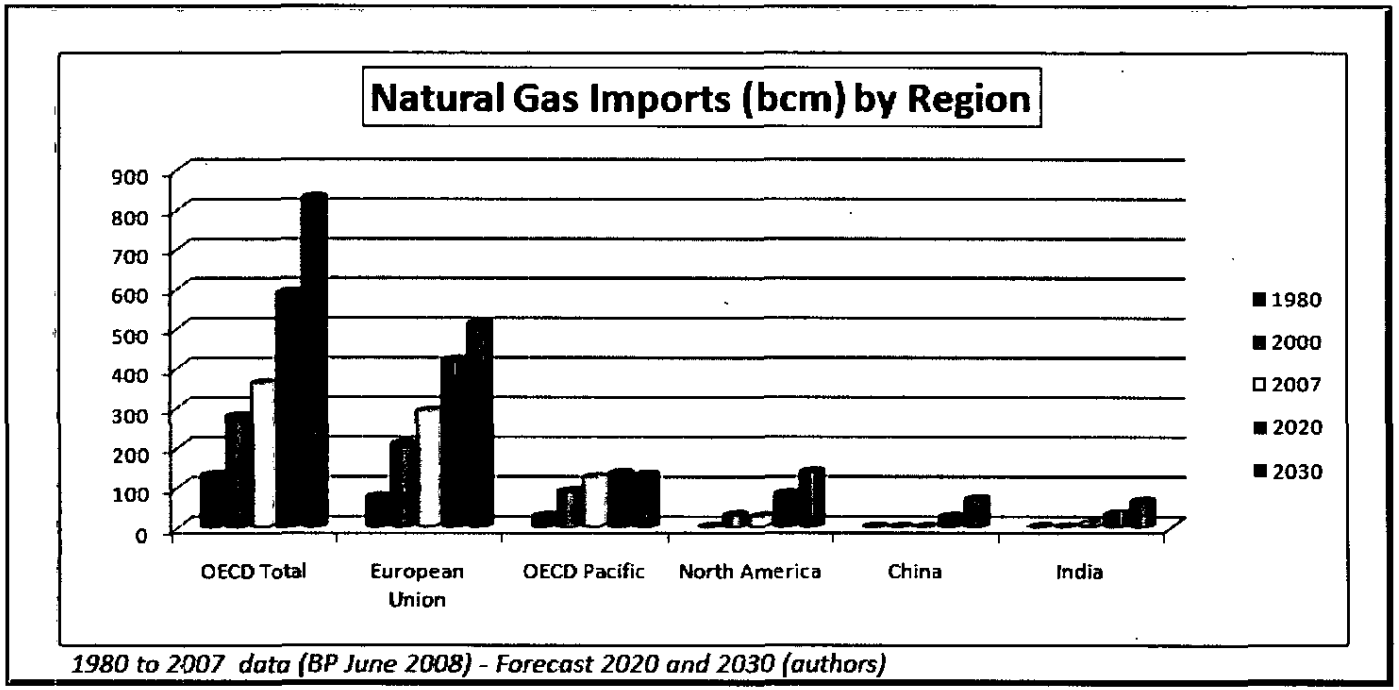


Fiscal terms are one of several factors that influence the delivered price of gas into a market and it is important to understand differences among competing sources.

The differences usually go far beyond a simple percentage sovereign take comparison.

International Gas Markets are Growing - Competition for Gas is Increasing

How key global gas import markets compare and are forecast to grow in absolute terms (bcm = billions cubic metres; 35.3 bcf = 1 bcm).



1980 to 2007 data (BP June 2008) - Forecast 2020 and 2030 (authors)

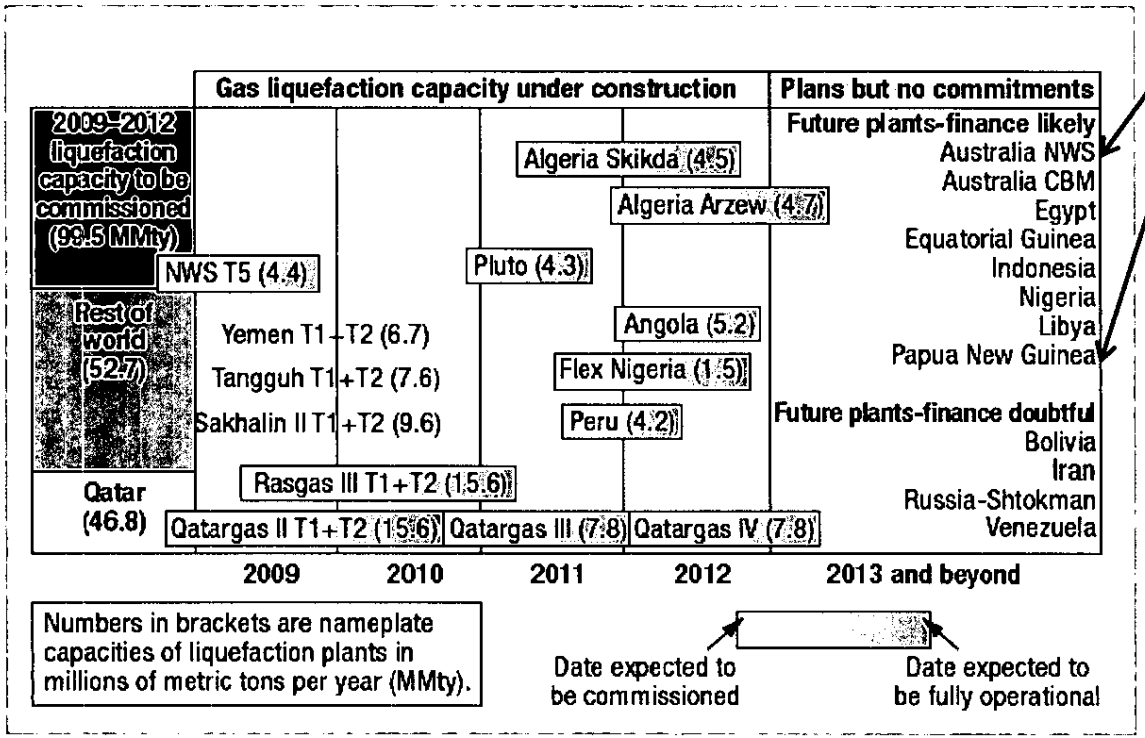
Worldwide New Gas Liquefaction Developments to 2013 and Beyond

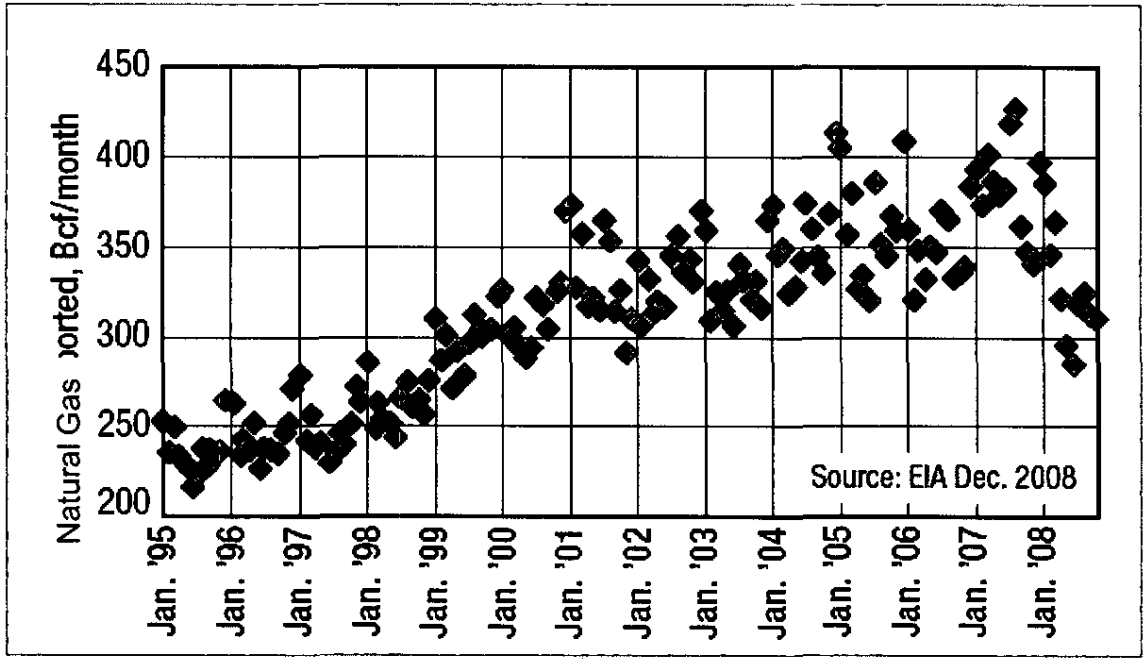
Large new capacity of LNG coming into the market with new plants under construction. Big commitments for new plants in Australasia made progress in 2009.



From David Wood *"Uncertain supply and demand outlook for LNG."* **World Oil** (February 2009)

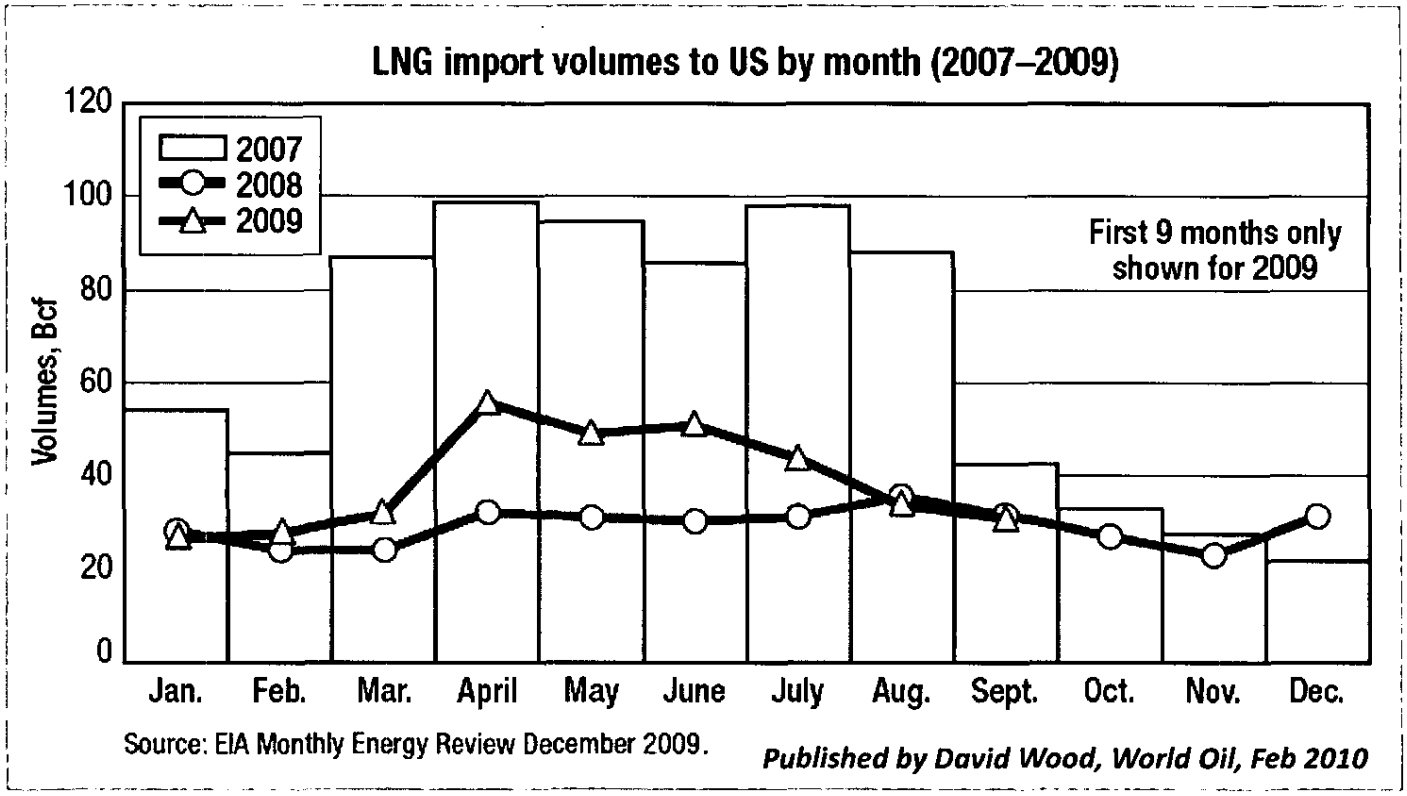
Gas Imports to U.S. Decline in 2008 For First Time in More than a Decade

Greater Lower-48 gas production in 2008, particularly shale gas, led to a reduction in US gas imports which has persisted. Alaska gas will be competing with shale gas for lower-48 which has a different resource and cost base and fiscal structure.

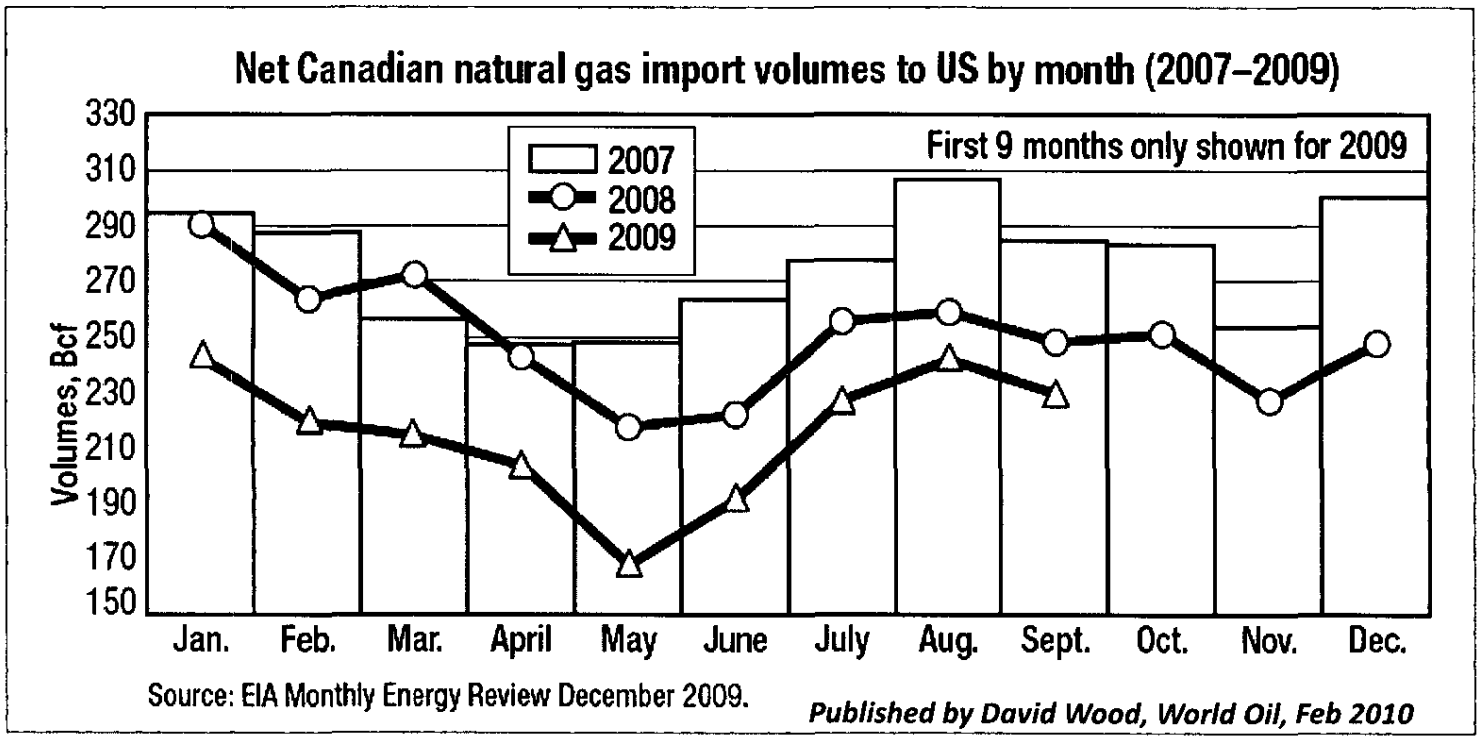


From David Wood *"Uncertain supply and demand outlook for LNG."* **World Oil** (February 2009)

LNG Imports to U.S. are Down
Is that Permanent? Shale Gas Effect?

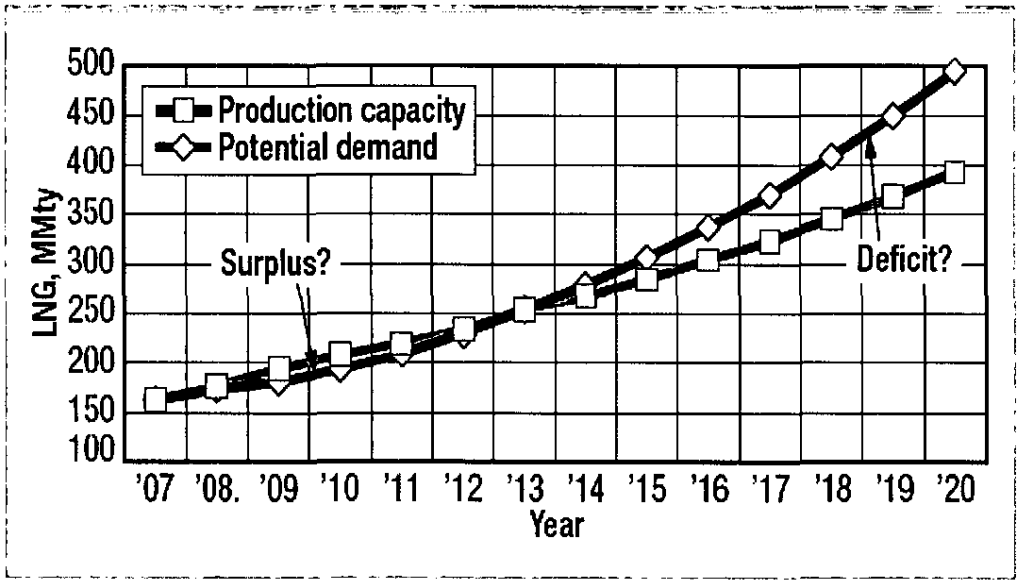


Canadian Gas Imports to U.S. are Down
Is that Permanent? Shale Gas Effect?



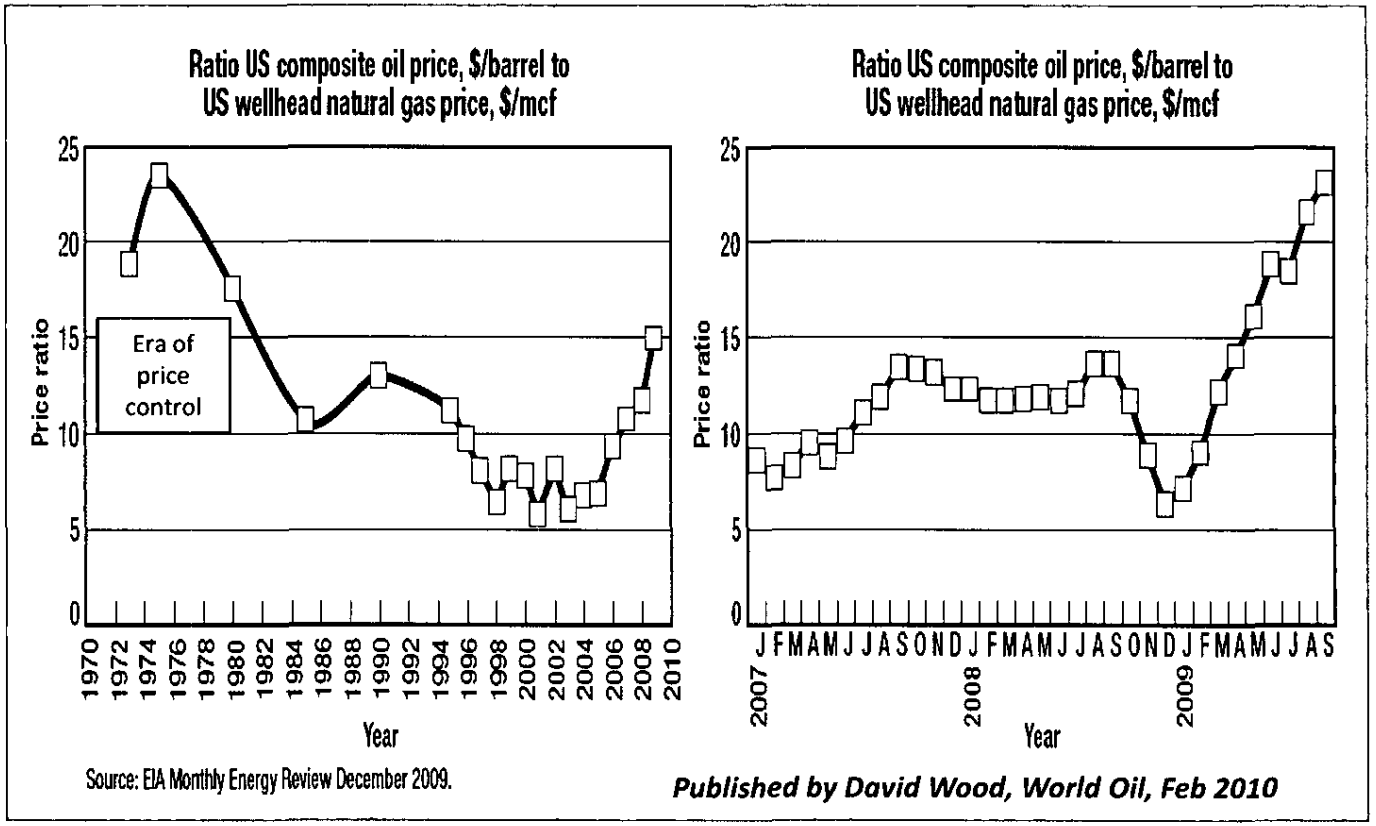
Global LNG Supply Demand Forecast to 2020

Natural gas surplus due to economic downturn and development of competing supplies is leading to over-supply and lower prices forecast to last perhaps to 2012 for internationally traded LNG. This surplus may itself fuel supply shortfalls globally beyond 2013 and higher prices 2015 to 2020.



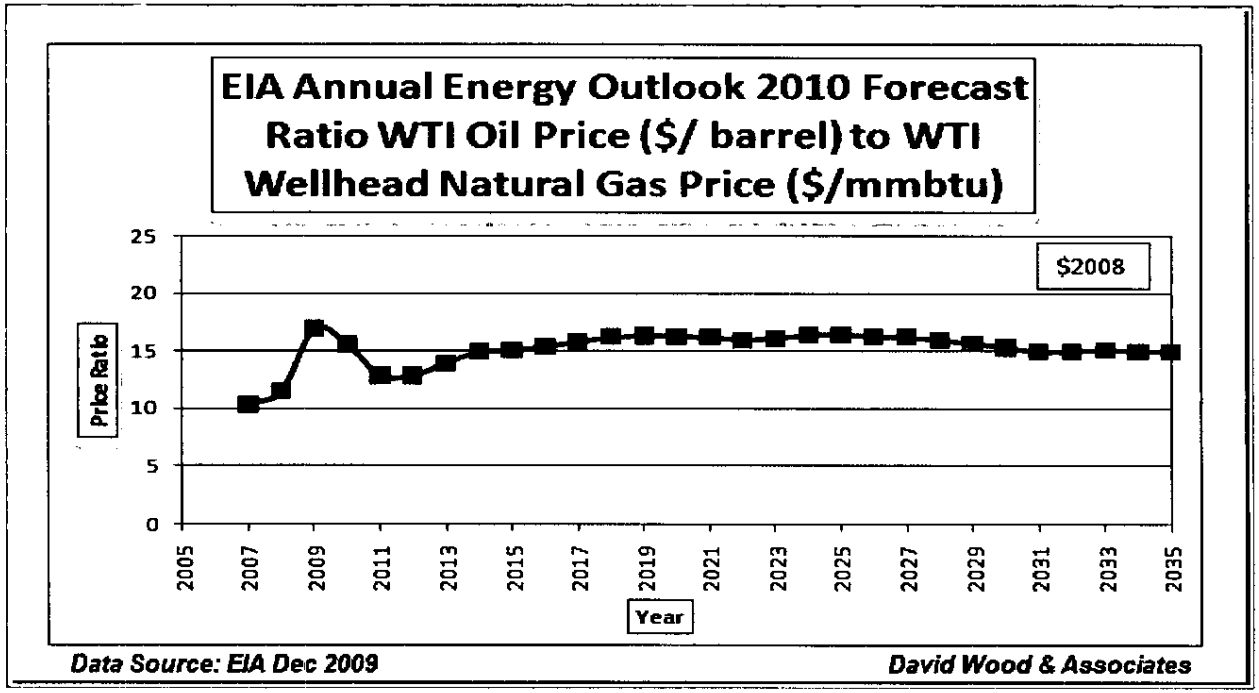
From David Wood *"Uncertain supply and demand outlook for LNG."* **World Oil** (February 2009).

U.S. Oil to Gas Price Ratio
What Range Should Fiscal Designs Consider?



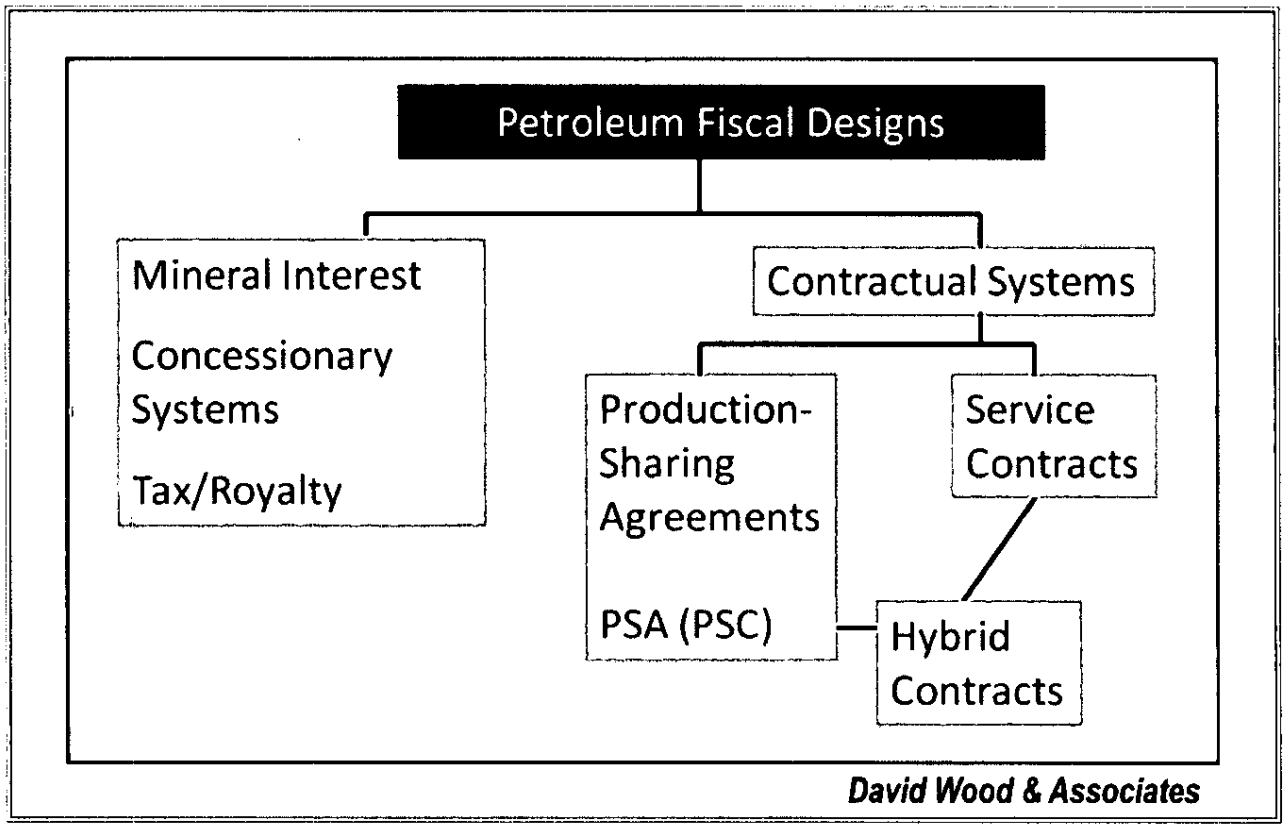
Latest U.S. Government Forecast Shows High Oil to Gas Price Ratios Through to 2035

Fiscal designs should be stable under a wide range of oil: gas price ratios (e.g. stress test them with ratios of 2 to 30).



What are the fiscal designs applied by other countries? and what are the risks and opportunities?

Summary of International Upstream Oil & Gas Fiscal Designs



Norway:
Fiscal Terms Summary

Norway operates a mineral interest system. There are no bonuses or royalties and the fiscal take comes from *progressive* instruments.

- Royalty 0% and no bonuses but marginal tax burden is some 78%
- Corporate Tax (CT) 28% of taxable income
- No ring fences with CT base established at the company Level.
- Special tax rate 50% with investment uplift of 7.5% for 4 years deducted from CT base. Uplift shelters marginal fields.
- Tax of CO_2 emissions at 0.79 NOK (~10 US cents)/ m^3 CO_2
- Gas taxed on bases of actual realised prices.
- Strict rules applied concerning prices of gas transfer between affiliates.
- Stated fiscal strategy is *that the tax system should act as a sleeping partner providing producers with technical control and ensuring that any investment decision that is commercially viable before tax should remain viable after tax.*
- This system secures high fiscal takes for the government (close to 80%), but has still attracted large and small international investors.
- State is actively involved as an equity participant through its NOC (Statoil).

Papua New Guinea (PNG): Fiscal Terms Summary

Papua New Guinea (PNG) operates a mineral interest system. It has relaxed fiscal terms since 1990's as fields under development have declined. Upsurge in interest in large LNG projects led to legislative changes offering progressivity and stability.

- Royalty 2%
- Income tax (IT) 30% for gas (50% for oil)
- Additional Profits Tax (APT) 7.5% after 17.5% post-IT IRR reached for project and 10% after 20% post-IT IRR reached for project.
- State equity participation 22.5% (2% of which goes to landowners)
- Partial carry for the state
- Past exploration costs recoverable through 20-year carry-forwards
- Marginal field incentives: e.g. accelerated depreciation
- ExxonMobil (41.6%) and partners completing FEED studies and a final investment decision for PNG LNG is expected in 2010
- Long-term gas buyers in China and Japan now secured.

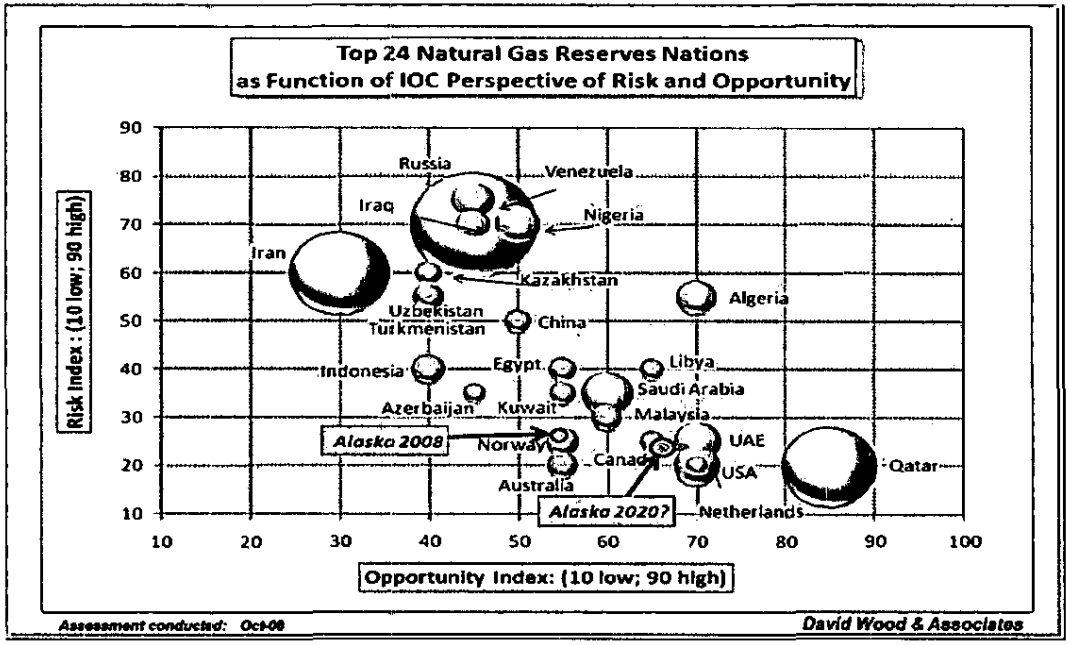
Australia:
Gas Fiscal Terms Summary

Australia operates a mineral interest system. Its fiscal take is above 70% and comparable to that of Alaska, but it is much more successful at securing investment and buyers for its high cost isolated gas resources.

- Australia has progressively shifted from traditional volume based royalty arrangements to the more progressive petroleum resource rent tax (PRRT)
- PRRT is levied at a rate of 40% of a project's taxable profit.
- PRRT payments are deductible for company income tax rate of 30%.
- PRRT is only payable once project cash flow basis achieves a rate of return of 5% over the long term bond rate on the development investments and 15% rate of return over the long term bond rate on exploration or risk capital investment. [This limit and cost uplift prevent PRRT becoming regressive]
- Explorations costs are uplifted at 15% (other costs uplifted at 5%) above long-term bond rate to partially compensate for time-value issues as there is a long lead time from discovery to positive cash flow.
- IOC majors committed in excess of $20 bn investment in LNG projects in 2009.
- Long-term gas buyers in China and Japan now secured.

Alaska Gas Compared on International Scale of Risk versus Opportunity

The diameters of the bubbles are proportional to proved natural gas reserve holdings as reported by BP Statistical Review (June 2008).



Alaska marked on the framework from David Wood *"Global perspectives required for risk, opportunity analyses."* **Oil & Gas Journal** (9Feb, 2009).

Regressive & Progressive Elements of Alaska's Prevailing Oil & Gas Fiscal Design

Regressive fiscal elements	Progressive fiscal elements
• Property taxes are levied on assets in theupstream orTT&T services and shared between the state and local governments • Royalty is levied at point of production value (PPV) • *Tax floor refers to a production floor levied at 0-4% of PPV in place of BPT when that floor value is higher than the BPT value	• Production taxes (BPT and CPT) are taxes paid on net value or margin • Progressivity component of production tax (CPT) commences at PTV of $30/boe • Alaska corporate income tax (CIT) of 9.4% is levied on producer's worldwide income apportioned to Alaska. CIT is deductible from federal income tax (FIT)

Dan Dickinson & David Wood, Oil & Gas Journal, May 2009

Key Regressive Elements in Alaska's Prevailing Fiscal Design

There are three elements that make Alaska's prevailing fiscal design regressive.

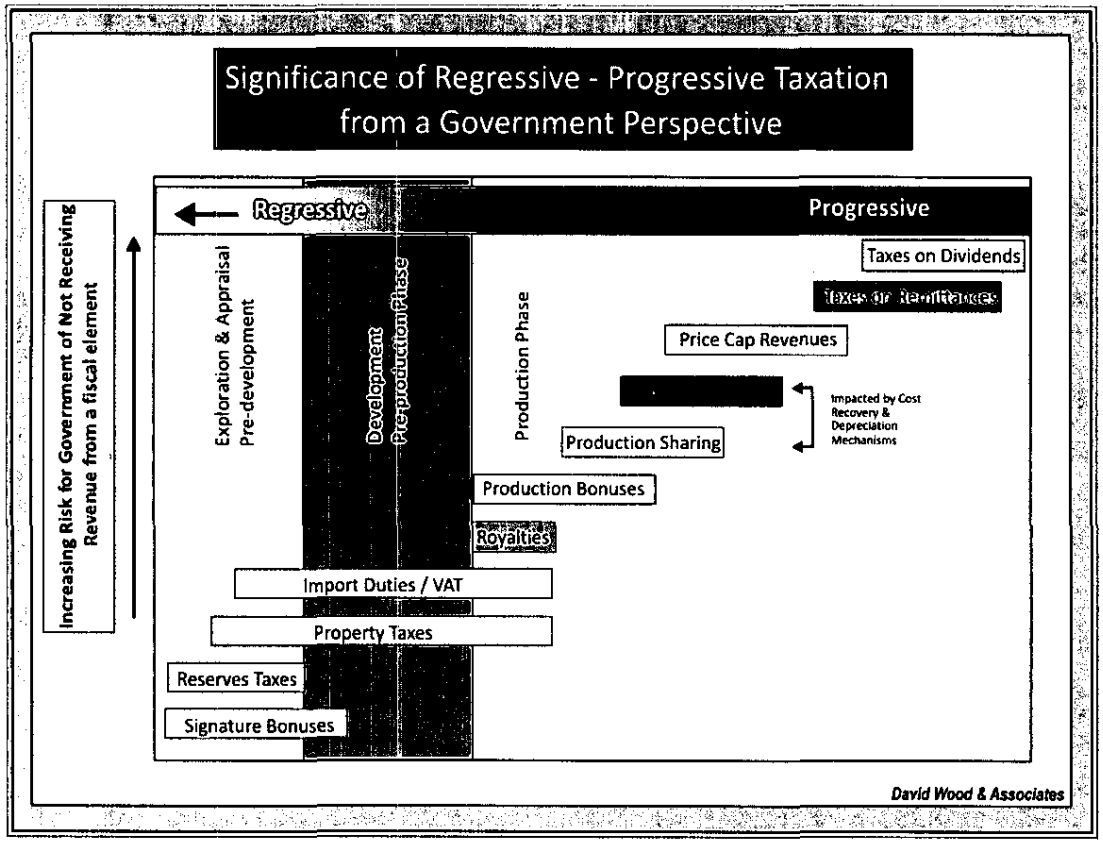
- Royalty
- Property Taxes
- Production Tax Floor

These regressive elements are partially offset by:

- Investment credits (exploration and development)
- Production taxes (levied after deduction of all allowable costs)
- Progressivity tax (only levied on high value streams)

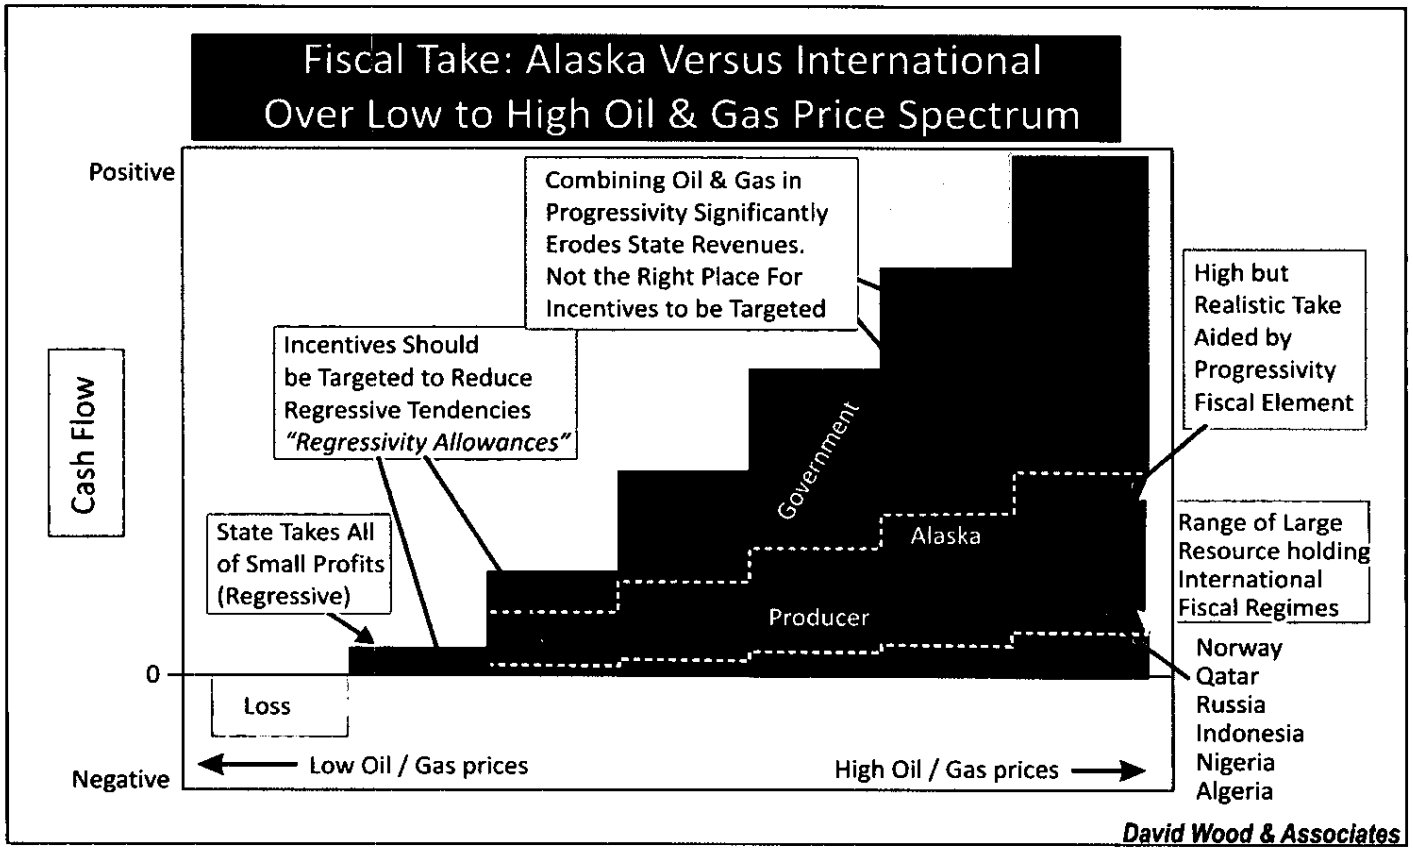
Other allowances / credits for producers should be considered to offset impacts of regressive elements coupled with tougher progressivity terms.

Progressive & Flexible Fiscal Designs Help to Promote Investment



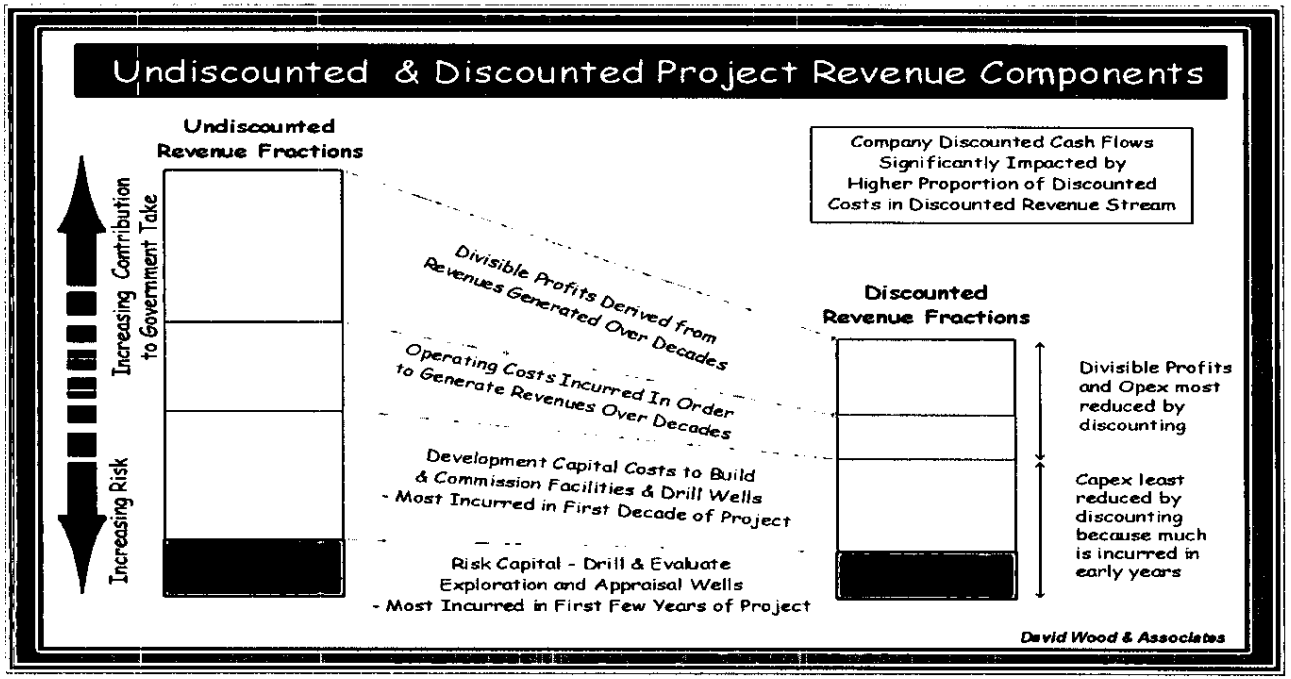
The stronger the commitment made by governments to promote a commercially attractive environment, the more likely investors are to commit investments without guarantees of fiscal stability.

Progressivity Should Work Well For Alaska: It's the Regressive Elements that Need Relief



High Discount Rates Suggest Higher Government Take of Revenues

It is appropriate for governments to use lower discount rates than producers. However, high discount rates impact *long-term* divisible profits and operating costs more than upfront capital costs so diminish producer take.



Complications of combined oil and gas progressivity tax (CPT)

Problems with Alaska's Current Progressivity Tax from the Natural Gas Perspective

The models of a wide range of gas field sizes suggest three issues associated with calculating production tax values using a combined oil and gas (boe) revenue stream.

- Large gas production volumes contributing low value to high value oil production can dilute the PTV/boe and progressivity of the combined stream.
- The PTV / boe threshold (i.e., trigger point) at which progressivity tax becomes initially payable are set too high for natural gas.
- Tying the production tax floor to PPV can lead to regressive consequences for gas producers in high cost / low value conditions.

Impact of Natural Gas on Combined Oil & Gas Production Tax

Analysis has identified that three factors are relevant to the dilution effects under prevailing production tax paid by an existing oil- only case with the addition of gas production (and vice versa – i.e. oil added to a gas-only case). These factors are:

1. Magnitude of value differential between oil and gas streams (high oil value minus low gas value, or high gas value minus low oil value);

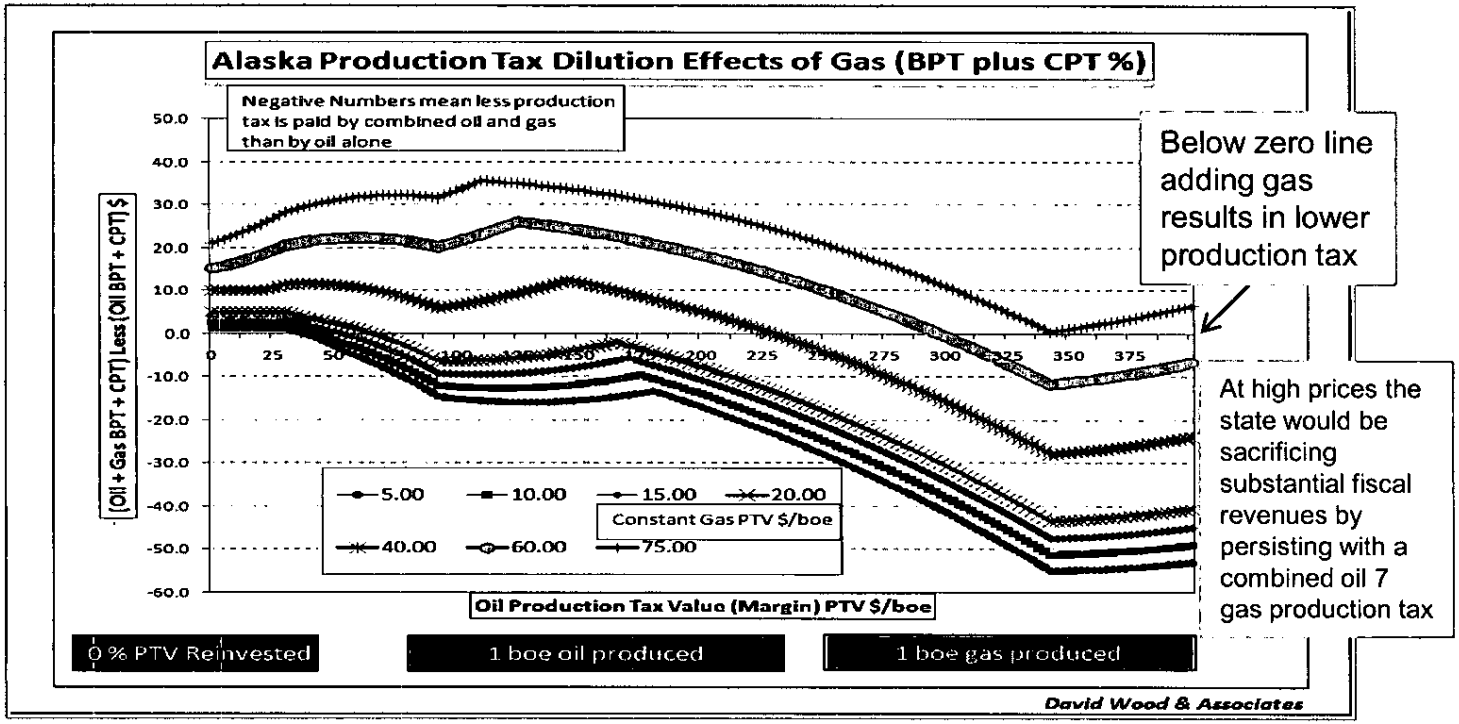
2. Relative volumes of oil and gas produced contributing to combined production tax boe stream.

3. Amount of PTV reinvested, which depending on the PTVs of each stream can have a significant impact

An Excel computer model has been developed to test these three factors.

Natural Gas Dilution Effects on Combined Oil & Gas Production Tax

The trends are non-linear with slope changes because of the changing gradients of the production tax progressivity mechanism (i.e. 0.4/boe to 0.1/boe) and the threshold values at which those changes occur.



DOR High-level Model Adjusted To Calculate Oil & Gas Combined as BOE

The Department of Revenue (DOR) model presented on 22 Feb 2010 has been reviewed and tested for functionality . With a few minor corrections and modifications to this model can be made to calculate 1 boe rather than 1 barrel by adding inputs for:

	One BOE Comparison of Current to Modified				
14.17	Natural Gas Destination Price $/mmbtu	6	Oil:Gas Price (Parity X:1)		
	Modifications - $ Per Barrel				Oil:Gas Parity Fraction Macro DW
0.5	Fraction of Natural Gas to Oil in boe production			generic mmbtu/boe:	6
24.0	Gas Transport Cost $/boe				
	Item	Current $/boe	Modified $/boe	Difference $/boe	
85	Base Case Oil Price				
	Determining the per barrel taxable value at the point of production				
85	Boe Destination Price (Oil:Gas Mix)	$85.00	$85.00	$0.00	Destination prices for crude and gas
7	Less Transportation Cost (oil:gas mix)	$15.50	$15.50	$0.00	For oil = TAPS tariff plus shipping
	Gross Value at Point of Production	$69.50	$69.50	$0.00	
0.125	Royalty	$8.69	$8.69	$0.00	By lease with 12.5% most common
16.26	Less Upstream Costs	$16.26	$16.26	$0.00	Opex plus Capex
	Production Tax Value (PTV)	$44.55	$44.55	$0.00	
	Taxable Barrels (1-royalty %)	0.875	0.875	$0.00	
	PTV / taxable bbl	$50.92	$50.92	$0.00	Gross Up Production

Modifications Made to DOR Model to Calculate BOE

- (A) Oil: Gas Price Parity (Cell C3) and used that to calculate a gas price ($ mmbtu) (cell A3)
- (B) Gas: Oil fraction per boe of production (cell A5)
- (C) Gas transportation cost (Cell A6)
- (D) The defined 6 mmbtu per boe from ACES (Cell F5)

These inputs are then used to recalculate:

- A boe destination price in cells C10 and D10 (rather than just oil price in DOR version)
- A boe transportation cost in cells C11 and D11 (rather than just oil price in DOR version)

Note: By setting A = 6 and B=0 the rest of the workbook calculates as it was presented by DOR (with corrections mentioned above). I have not reformatted the sheet but left it as per DOR's layout.

Case Combinations Evaluated with Modified DOR High-level Model

Variables		
Oil Price $/barrel	Oil: Gas Price Parity (X:1)	Fraction Gas: Oil (0 to 1)
20	2	0.0
40	4	0.1
60	6	0.2
80	8	0.3
100	10	0.4
120	12	0.5
140	14	0.6
160	16	0.7
180	18	0.8
200	20	0.9
300	30	1.0
Base Case		
85	6	0.5

In this modified form the workbook can be used to model the impacts of oil and gas streams of various proportions and price parities using DOR's high-level Alaska tax methodology.

The input data for the three key variables used can be varied by changing the values in the new table located in cell range C46:E60, which can be set to a user's preference.

A macro then evaluates and records selected outputs for all oil and gas scenarios.

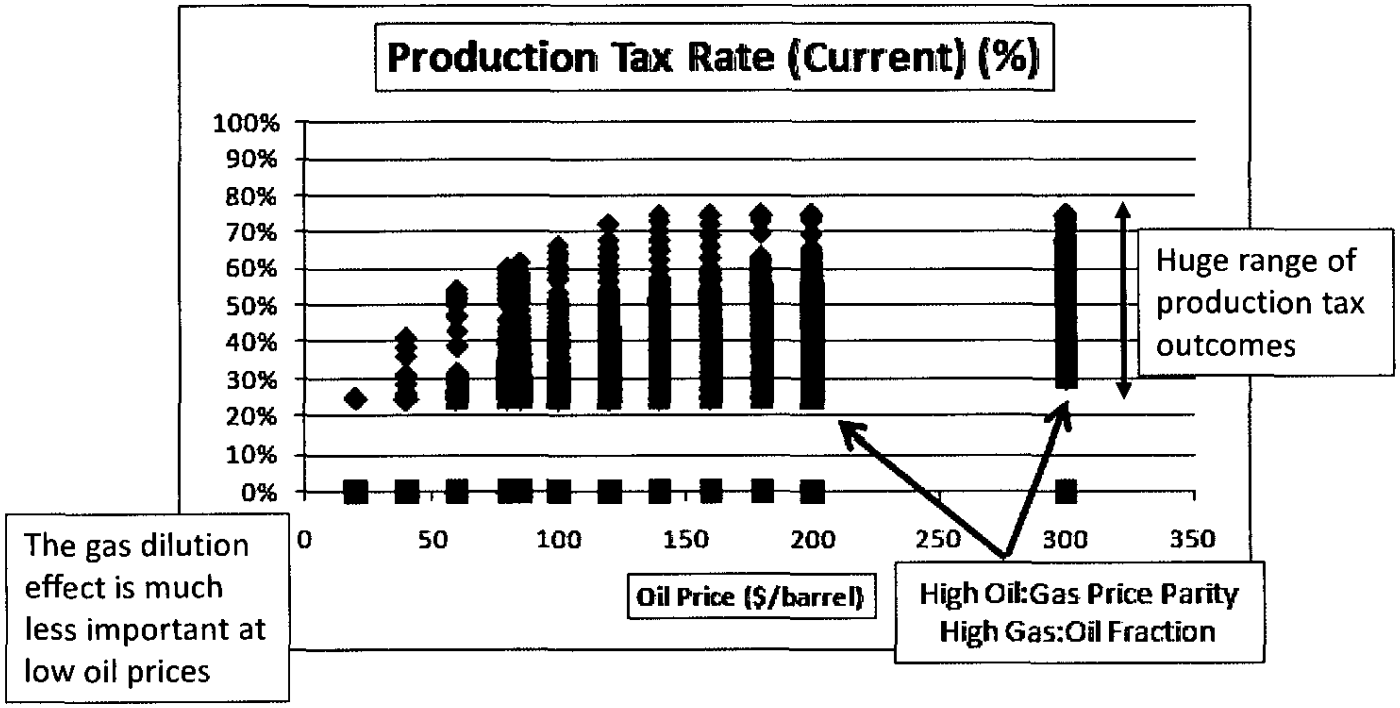
Macro Calculates Large Number of Price Parity and Gas Fraction Cases Rapidly

For the 12 X 12 X 12 input matrix the macro calculates 1728 values for each output variable recorded (more than 20000 values for 12 variables recorded). The macro places the recorded data into a table for analysis.

- For current and modified terms the macro records:
  - Production Tax Rate % from cell C25 on sheet Calc
  - Production Tax Value $/boe from cell C29 on sheet Calc
  - Producer's Take Rate from cell C42 on sheet Calc
  - Producer's Total Value $/boe from cell C37 on sheet Calc
  - State Take Rate % from cell C39 on sheet Calc
  - State Total Value $/boe from cell C33 on sheet Calc

Production Tax Rate Analysis for 1728 Macro Scenarios for Combining Oil and Gas

The red squares are the cases in which oil:gas price parity is >10 and gas:oil fraction of production mix is >0.5 on a boe basis.



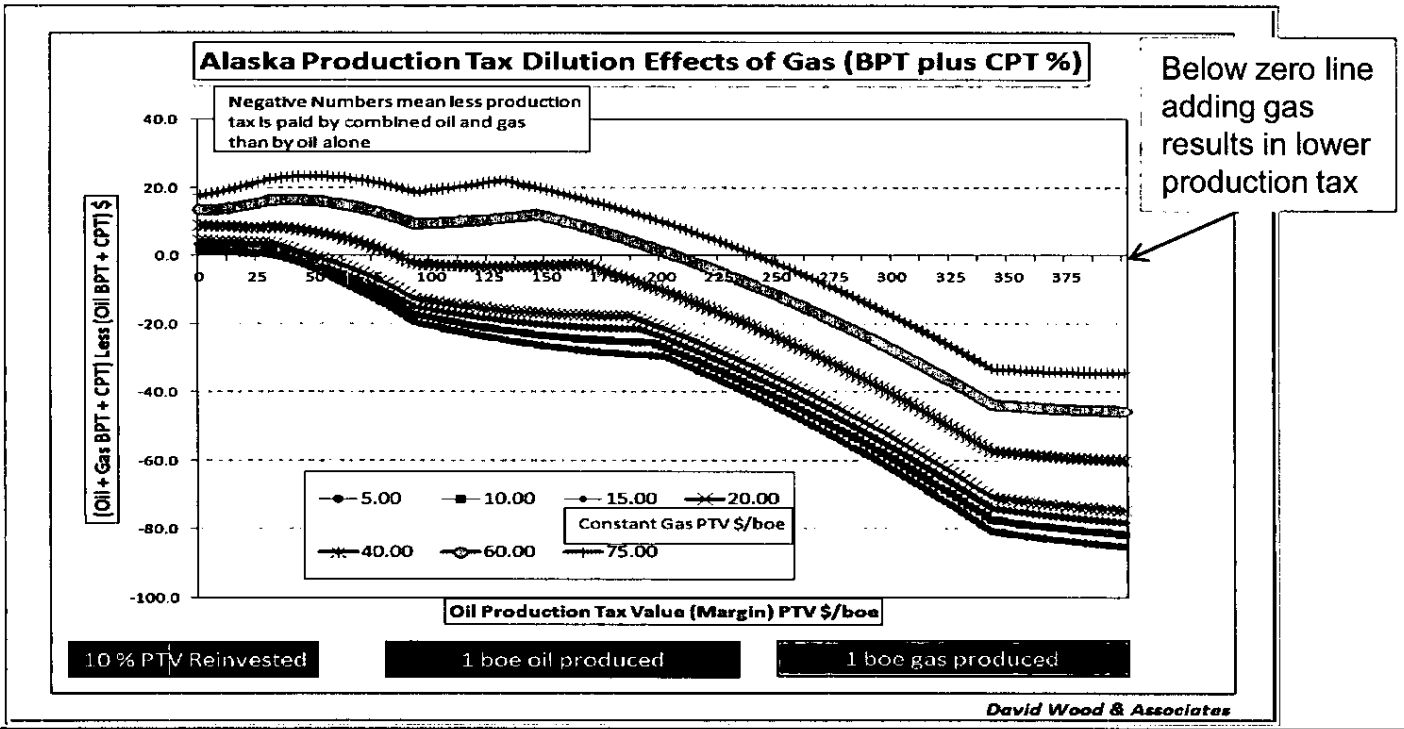
Conclusions from Combined Oil & Gas Production Tax Model

For the 12 X 12 X 12 input matrix the macro calculates 1728 values for each output variable recorded (more than 20000 values for 12 variables recorded). The macro places the recorded data into a table for analysis.

- It would be more stable to calculate Alaska's oil and gas production taxes separately and avoid boe complications particularly as oil : gas price ratio is unpredictable
- The dilution effect of gas should not be treated as a fiscal incentive as it is unpredictable in its impact
- Significant fiscal benefits of occasional price spikes on high production tax for gas or oil could be lost by persisting with a boe basis or combined calculation of the production tax value.

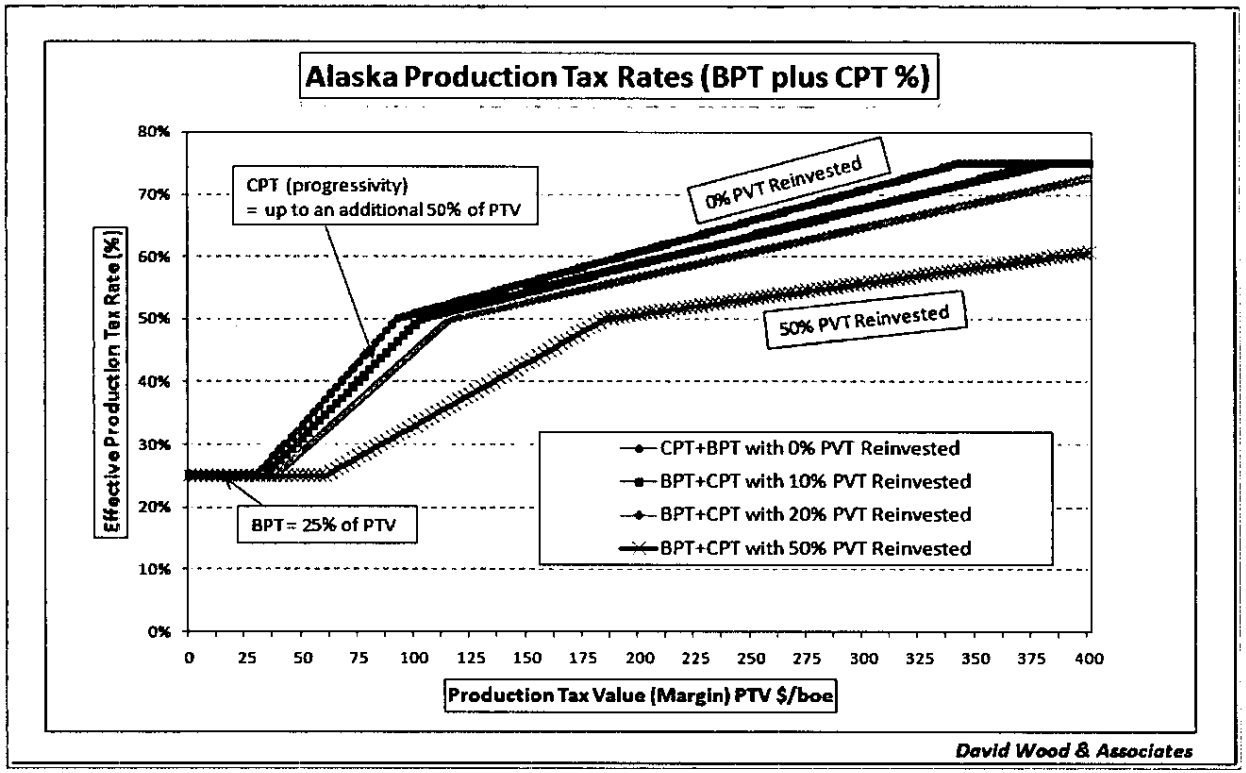
Natural Gas Production Tax Dilution Effects Impacted by Reinvestment

If some of the PTV is reinvested the reduction in production tax paid is significantly greater. This graph shows the impact of 10% reinvestment. [Model results presented in January 2009].



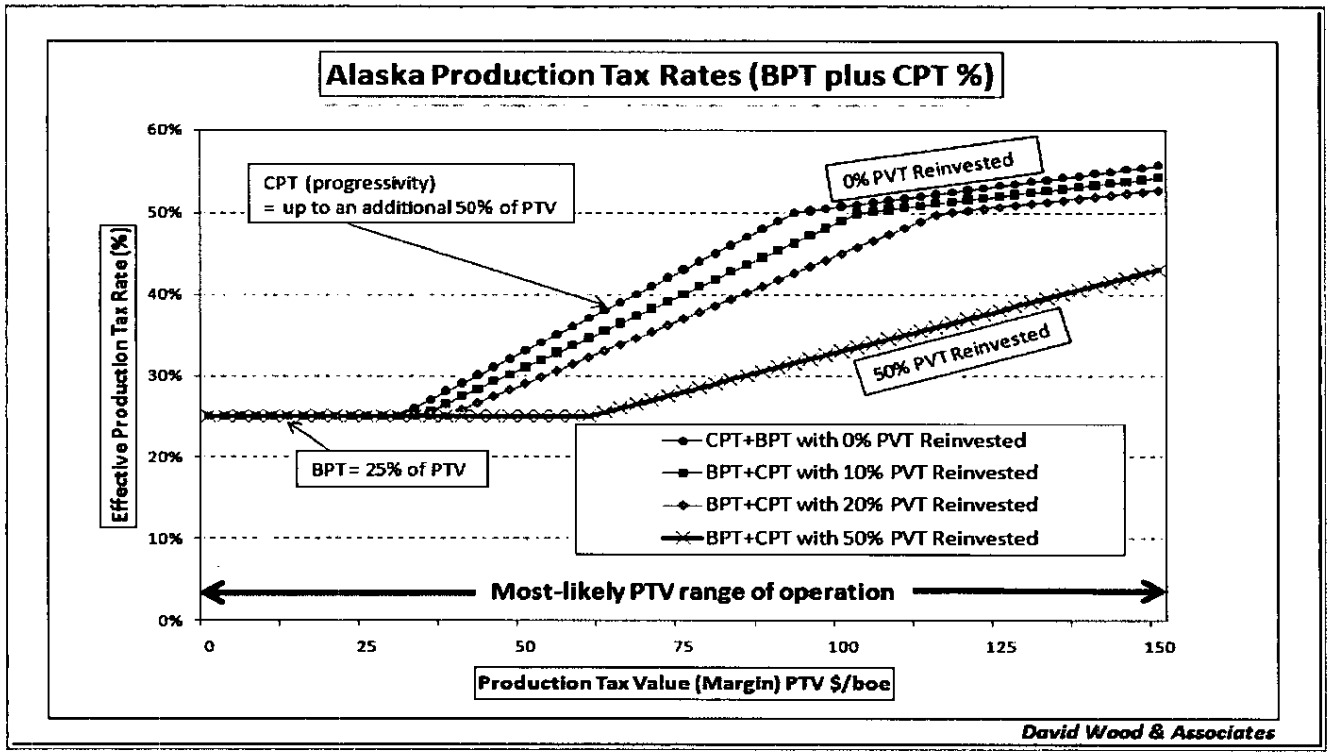
Natural Gas Production Tax Dilution Different Reinvestment Scenarios

The impact of several reinvestment scenarios – 0% , 10%, 20% and 50% of PTV - on production tax rates are illustrated in this graphic.



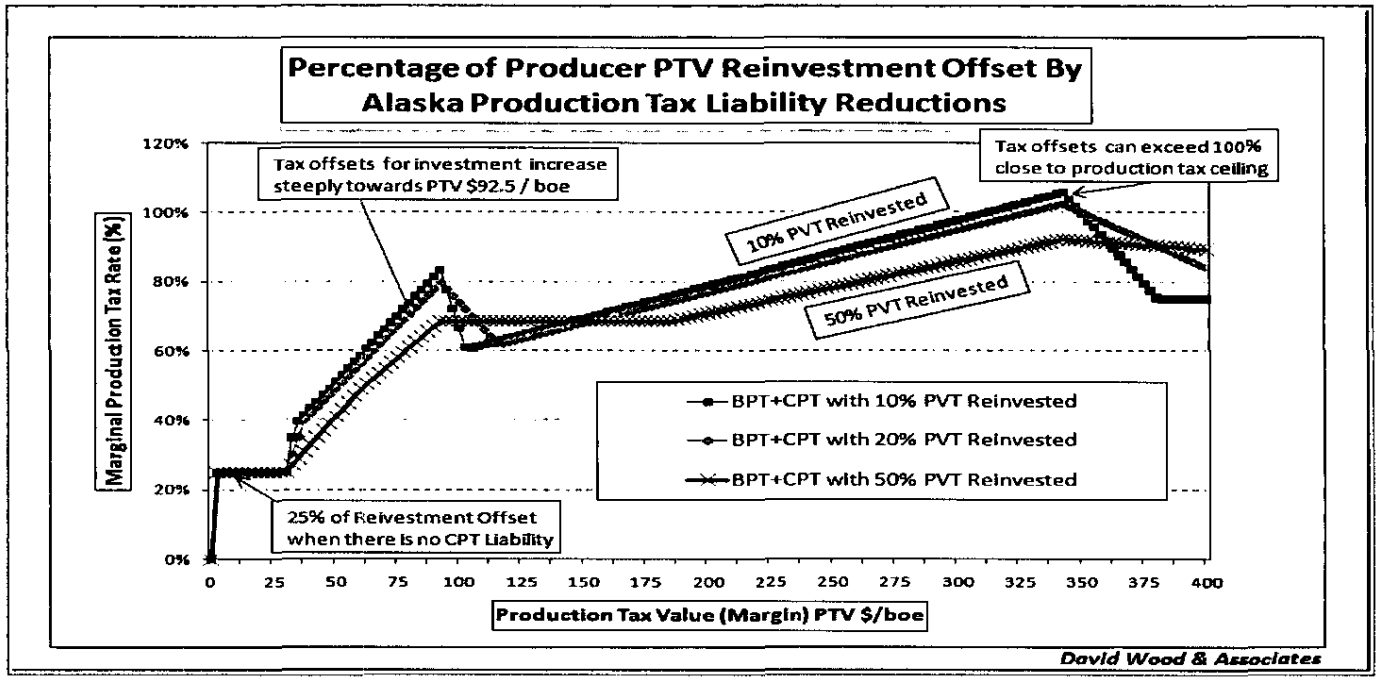
Reinvestment Scenarios For PTV Range $30/boe to $150/boe

For example production tax rate can be reduced from 49% to 42% at PTV $90/boe by reinvesting 20% of the PTV.



Marginal Production Tax Rates Seen by a Producer for Reinvestment Dollars

The vertical axis shows the percentage tax reduction associated with the incremental re-investment (or the marginal tax rate offset by the producer by its reinvestment). Note the peak around PTV$90/boe and values above 100% at PTV $350/boe plus multiple crossover points.



Implications of Combined Oil & Gas Production Tax Analysis

The analysis suggests that the prevailing production tax system has the following complications to address:

1. It is difficult to predict (from tax authority & producer perspectives) and relationships between oil and gas tax liabilities are non-linear;

2. The magnitude of combined production tax impact caused by adding a gas production stream varies with relative oil and gas PTVs, oil and gas volumes and percentage of PTV re-invested;

3. Without detailed analysis (and speculative forecasting of oil and gas prices and boe contributions) Alaska's production tax outcomes can be counterintuitive (e.g. higher prices can lead to lower tax revenues collected by the State in some scenarios).

Alternative Drivers of Gas Progressivity Tax Evaluated by Fiscal Model

Ten different mechanisms are evaluated. No.1 represents the status quo evaluating gas progressivity as a combined revenue stream with oil (boe) were reviewed in December 2008 report to legislature.

1. CPT: 2008 Rules (combined PTV/boe)
2. GPT / OPT: separates gas and oil on PTV/boe scale ← The easiest first step
3. GPT /OPT: progressivity applied to only 33% of gas PTV
4. GPT: Gas PTV (based on Gas PTV / mmbtu)
5. GPT: R-Factor (cumulative PPV less royalty/cumulative gas costs)
6. GPT: IRR (Investor's Rate of Return of cumulative PTV)
7. GPT: Cumulative gas reserves produced
8. GPT: Annual gas production volumes
9. GPT: Cumulative gas PTV
10. GPT: Mechanism #9 plus allowances to counter regressive elements

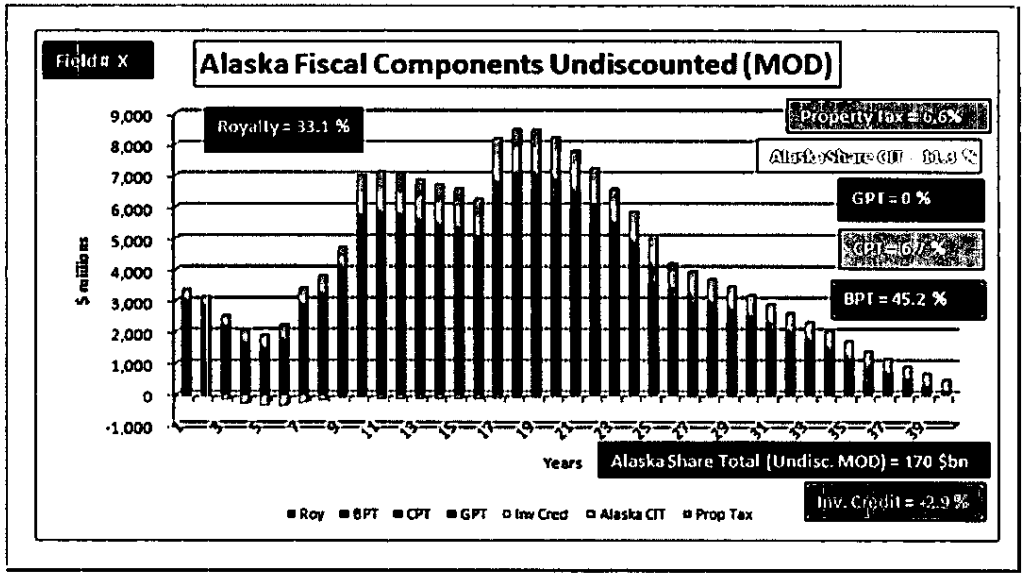
Note the graph shown highlights the start of supply chain, its expansion, gas plus NGL capacities and the multi-year tariff calculated.

Contributions of Each Fiscal Element to Alaska's Take for Total North Slope (#11 -#14)

The relative contributions to Alaska's fiscal take for price scenario 1 and an ***Pipeline*** supply chain for the ***proved gas reserves*** combination of ***North Slope fields*** shows that gas production would ramp-up in stages, but proven reserves would not fill expanded capacity for more than 3 years.



There are many factors that can be varied in such combination scenarios. For example timing of each field coming on stream and capacity and timing of the gas supply chain infrastructure.

Alaska North Slope Production & Reserves are Dominated by Three Corporations

For fiscal analysis it is important to be able to model the expected fiscal returns from specific corporations. AGFM facilitates this by enabling percentage fractions of individual fields to be combined in a user definition area on sheet Fields.

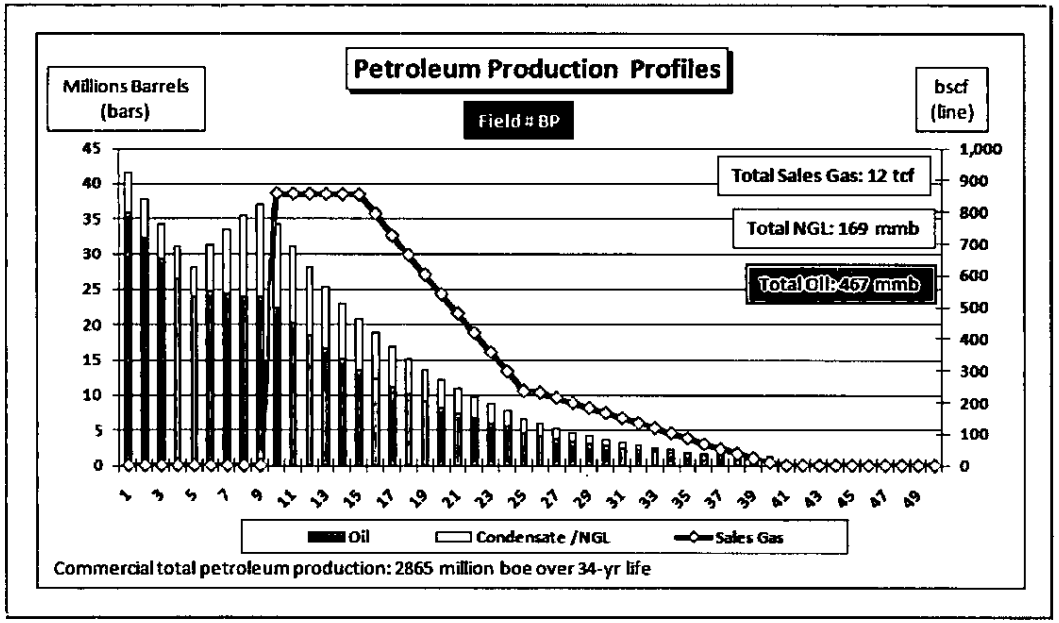
Company Holdings of Major North Slope Fields				
1	2	3	Field	
36.40%	26.36%	36.08%	Prudhoe Bay	Field#11
52.88%	29.19%	2.82%	Point Thomson	Field#12
0.98%	39.03%	55.04%	Kuparuk	Field#13
Exxon Mobil	BP	ConocoPhillips		

Three North Slope fields contain most of North Slope proved gas reserves.

By applying the corporate working interests to those fields a profile for each company can be approximated.

Alaska North Slope Production Profiles
Forecast by AGFM for BP

AGFM can be set up to apply corporate interests to the field data to approximate the position of a specific corporation. In this case combining "BP's interests" in Fields #11, #12 and #13 the major North Slope Analogues. [Note input assumptions are based on public domain data. In evaluating appropriate fiscal designs in the absence of data assumptions will be necessary]



These corporate profiles can be analysed in a similar way by AGFM to individual fields.

These forecasts are dependent on the assumptions and input made for the individual fields and supply chains, but are useful for indicative fiscal design evaluations.

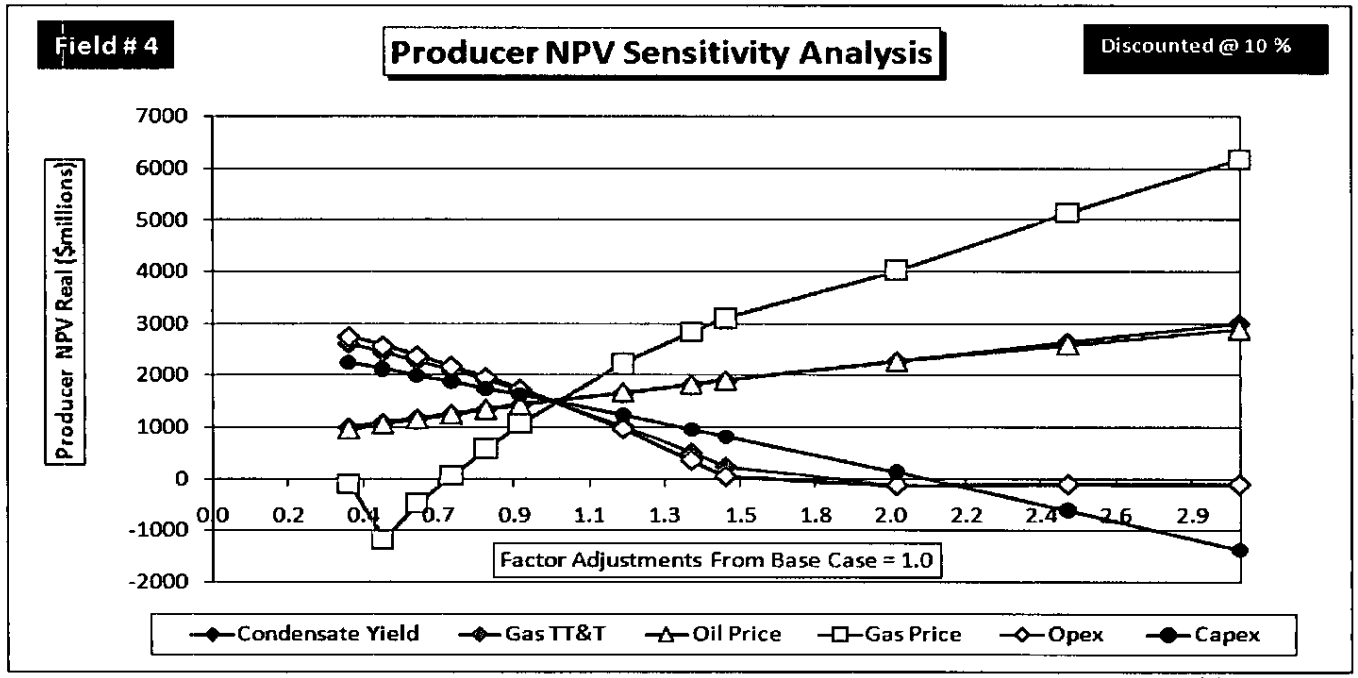
Hypothetical Field Cases Evaluated

Five non-associated natural gas fields and five oil fields with associated gas were constructed to use with a multi-year fiscal model built in Excel.

- The natural gas fields (#1 to #5) range in reserve size from 500 bcf to 10tcf.
- The oil fields (#6 to #10) vary in reserve size from 28 mmb (with 20 bcf of associated gas) to 500 mmb (with 690 bcf of associated gas).
- The fields display a wide range of production and cost profiles.
- Base cases for each model field tested with wide ranging sensitivity cases.
- Base case assumptions applied: Year 0 gas price: $7.5 / mmbtu; Year 0 oil price: $80 / barrel; nominal inflation 2% / year. The model allows these and the sensitivities to be changed easily and quickly.

Sensitivity of Alaska Gas Field to Project & Market Variables

Economic performance of a gas field development from a producer's perspective for a large gas field under the prevailing Alaska fiscal system.



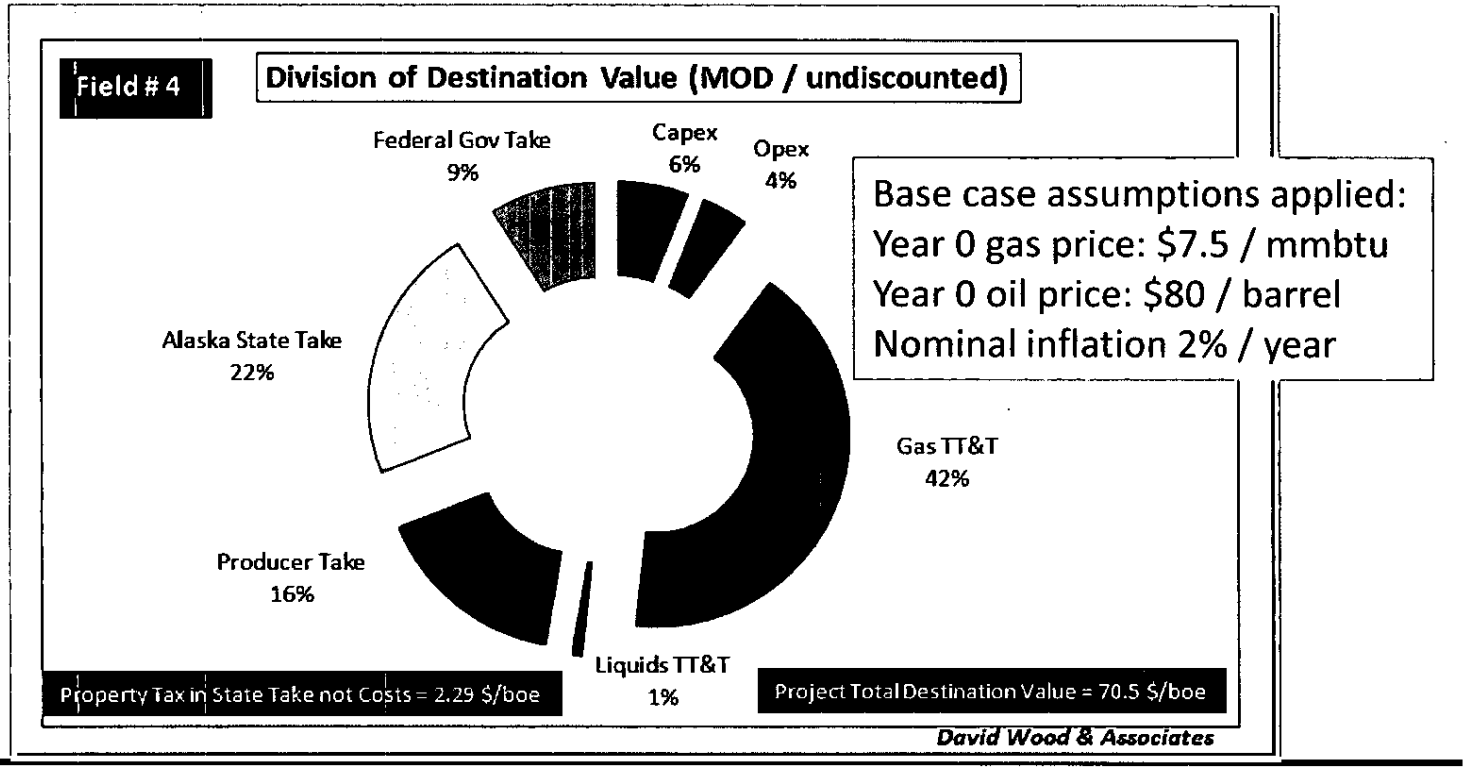
Base Case Hypothetical Field Models Reveal High-level Implications for Government Take

Government take includes Alaska state take and federal government take. The models apply the prevailing Alaska fiscal design and some base case assumptions.

- For stand-alone oil fields (with associated gas):
  - Government take of destination value (gross) is about 60%
  - Government take of destination value less costs (net) is about 75%
- For stand-alone natural gas fields (non-associated gas with NGLs):
  - Government take of destination value (gross) is about 30%
  - Government take of destination value less costs (net) is about 67%
- Exact percentages vary with field sizes, prices and costs.
- Large producers with portfolios of legacy fields under the current system aggregate oil and gas and can see reduced government take.

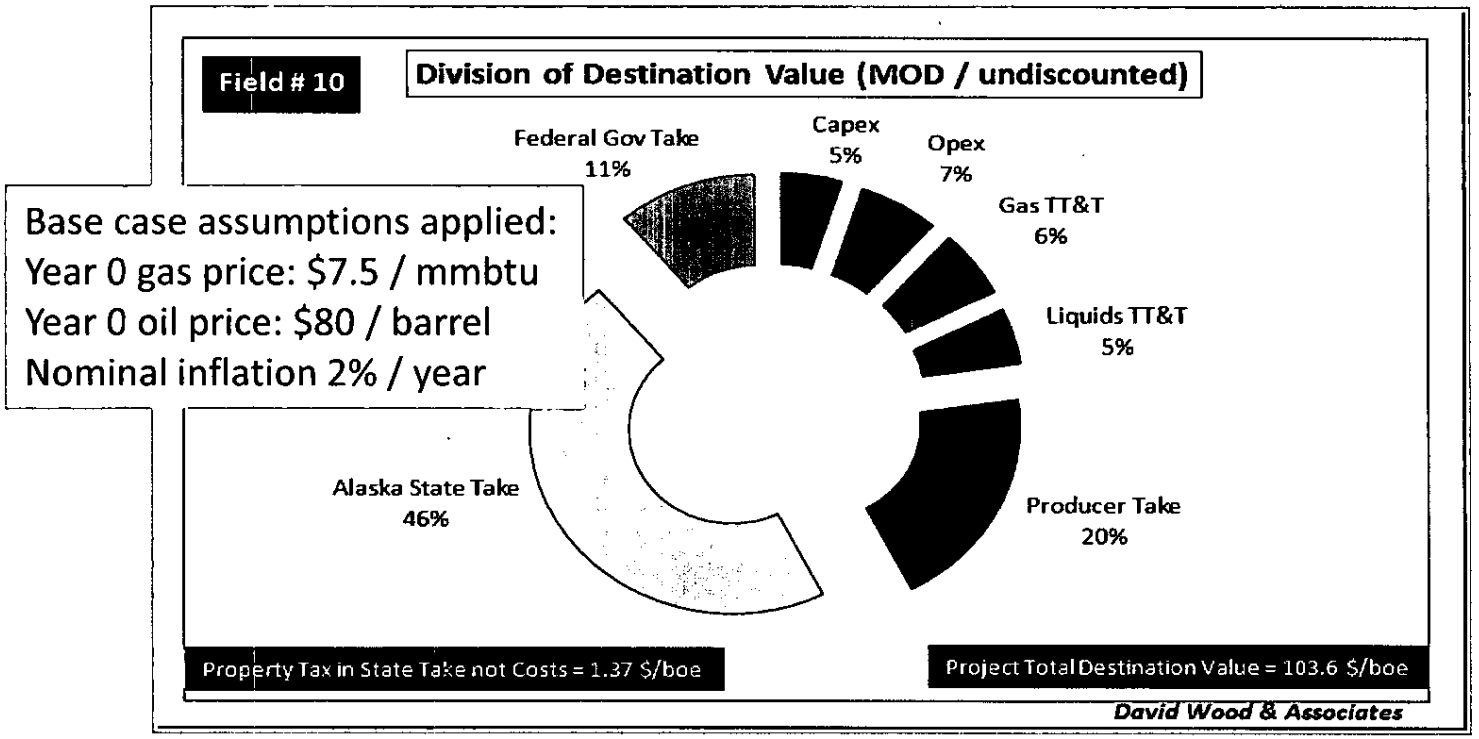
Large Gas Field: Division of Destination Value

For gas fields of various size (5 tcf shown here) gas TT&T takes the largest share of destination value. Alaska takes some 22% of destination value.



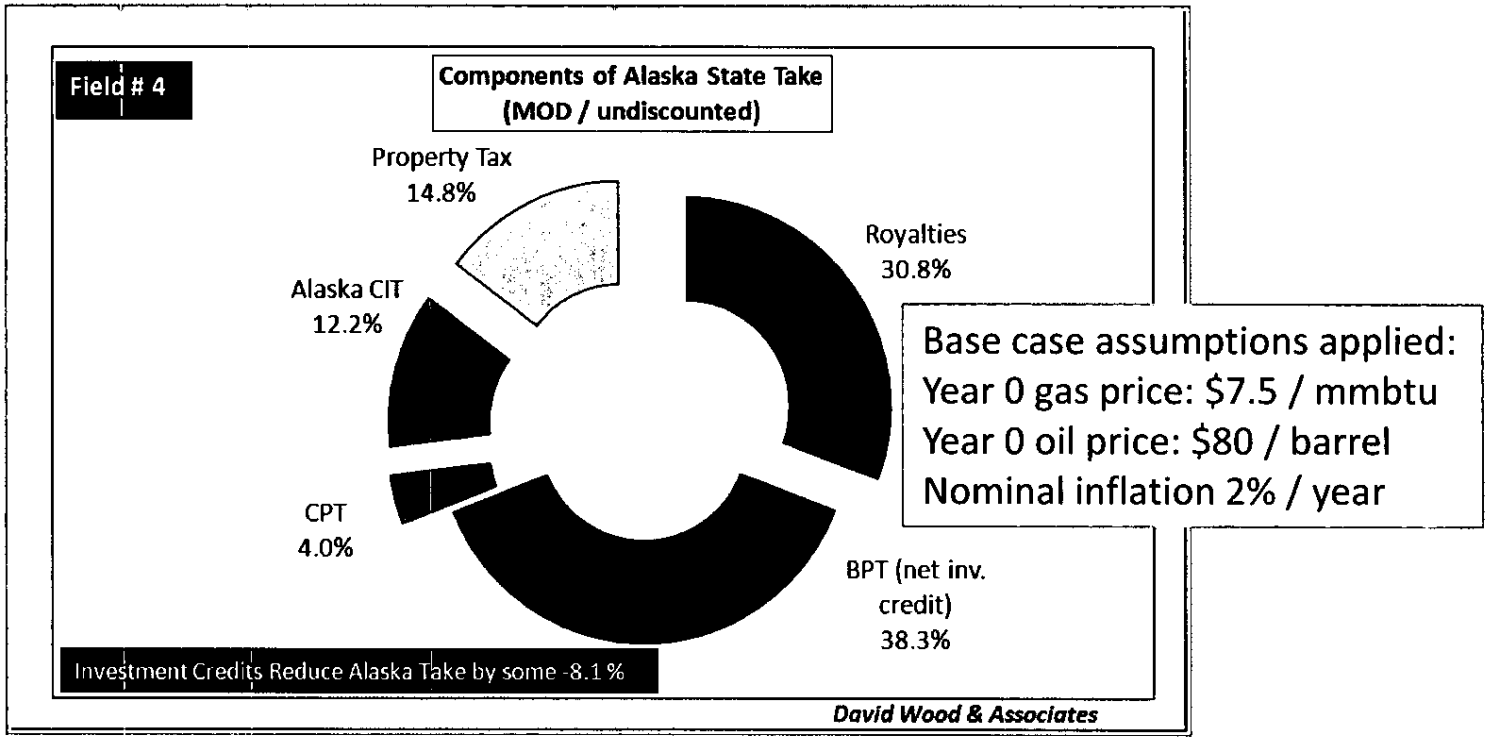
Large Oil Field: Division of Destination Value

For oil fields of various size (500 mmb shown here) costs are less significant than for gas. Alaska takes some 46% of destination value.



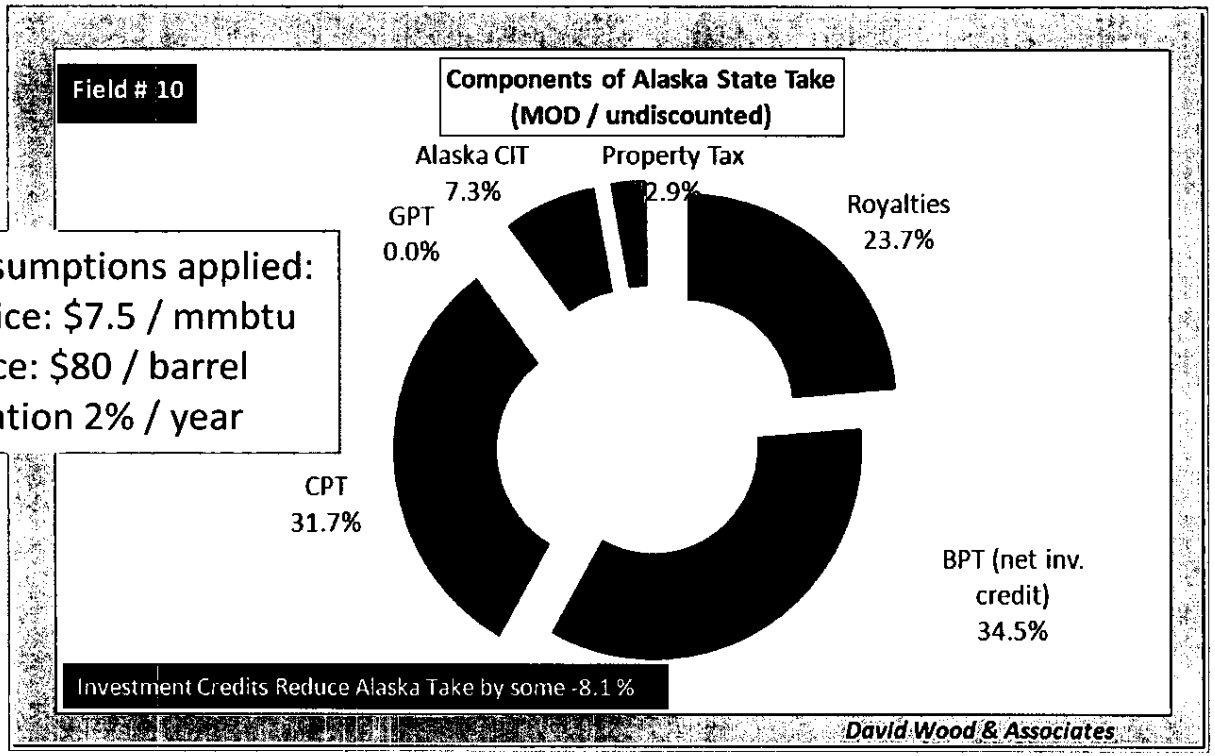
Components of Alaska State Take for Large Gas Field

Royalties and basic production tax account for two-thirds of Alaska state take for this 5 tcf field. Base case price and cost assumptions applied.



Components of Alaska State Take for Large Oil Field

Basic production tax and combined progressivity tax account for two-thirds of Alaska state take for this 500 mmb oil field.



Base case assumptions applied:
Year 0 gas price: $7.5 / mmbtu
Year 0 oil price: $80 / barrel
Nominal inflation 2% / year

Conclusions & Recommendations

Approaches to Fiscal Design that Can Improve Performance & Credibility

The following are selected recommendations for Alaska from my December 2008 report for the Legislature:

- Develop a clear statement of fiscal strategy and objectives
- Focus on a simple, flexible and progressive fiscal design
- Some level of fiscal stability important to secure investment
- Such designs could be more effective than contractual guarantees
- *Drive progressivity fiscal elements for gas with gas PTV (not boe)*
- Consider return on investment drivers for progressivity taxes
- Combine progressivity tax with allowances to offset regressive elements
- Aim to clarify and optimize fiscal revenue streams from NGLs
- Consider state equity involvement in strategic infrastructure projects
- Promote cost disclosure and control with some fiscal incentives
- Apply time constraints to new leases to develop resources

David Wood – Biography

Dr. David Wood has more than 30 years of international oil and gas experience spanning commercial, fiscal and technical functions within the exploration and production sector, holding senior corporate, strategic and operational management positions.

His industry experience includes working with government agencies, national oil companies, major and independent oil and gas operators in most continents, including long-term postings in the Middle East and South America. This has provided him with a broad insight to commercial and technical issues along international oil, gas and energy supply chains.

David now works as an independent international consultant and expert witness. He has published an extensive body of work on energy related topics including: performance modelling of fiscal terms, economic analysis, enterprise risk and portfolio simulation, LNG, GTL and gas supply, deepwater exploration and production techniques, corporate performance, portfolio and strategy management, mergers and acquisitions, negotiations & project management. He is actively involved in energy consulting, professional training, research and development programmes. He is a member of the Energy Institute (UK) and the Petroleum Exploration Society of Great Britain and associate editor of the Journal of Natural Gas Science & Engineering.

MEMORANDUM February 22, 2010

SUBJECT: Gas production tax limitation in AS 43.90.320
(Work Order No. 26-LS1526)

TO: Senator Tom Wagoner

FROM: Donald M. Bullock Jr.
Legislative Counsel

You asked to what extent is the state bound by the tax exemption in AS 43.90.320.[1] The exemption in that section is offered to producers that commit to acquire firm transportation capacity in the first binding open season of the gas pipeline project license under AS 43.90 (Alaska Gasline Inducement Act, "AGIA").

The exemption in AS 43.90.320 is statutory and not contractual. Under article IX, sec. 1 of the Alaska constitution, the state may not contract away its taxing authority except as otherwise provided in article IX. Article IX, sec. 4 authorizes the legislature to grant exemptions from tax "by law." The tax exemption in AS 43.90.320 is granted by law, but as a law, is subject to amendment or repeal by the legislature.[2]

---

[1] The amount of the exemption is described in AS 43.90.320(a), which reads as follows:

> (a) If a person qualified for a resource inducement under AS 43.90.300 agrees under (c) of this section, the person is entitled to *an annual exemption from the state's gas production tax in an amount equal to the difference between the amount of the person's gas production tax obligation calculated under the gas production tax in effect during that tax year and the amount of the person's gas production tax obligation calculated under the gas production tax in effect at the start of the first binding open season held under this chapter. If the difference is less than zero, the gas production tax exemption is zero.*

(Emphasis added.)

[2] As you are aware, the legislature has faced the issue of whether a contractual limitation on oil and gas production taxes is permissible under the state constitution. If such a contract were allowed under article IX, the legislature could not pass a law that impaired the obligations of that contract because of the prohibition in article 1, sec. 15. In

While a person offered the exemption may reasonably expect that the legislature would allow the exemption to continue during the specific 10-year period described in AS 43.90.320(b), the continuation of the exemption is subject to legislative discretion. A similar statutory tax incentive was offered in AS 43.55.011(b) (repealed, sec. 34, ch. 2, TSSLA 2006), in which new oil production was taxed at the rate of 12.25 percent of the gross value at the point of production for the first five years, and 15 percent thereafter. That tax incentive was in place from its enactment in 1981 until its repeal in 2006.

Although the exemption in AS 43.90.320 is offered to producers, a change in the law that reduces the value of the inducement may affect the license agreement with the AGIA licensee. The state and the AGIA licensee have a contract under which, in return for commitments and costs incurred by the licensee to develop the pipeline project, the state shares the costs and offers the services of the Alaska Gasline Inducement Act coordinator.[3] The royalty and tax exemption inducements are offered as incentives to commit to acquire firm transportation capacity in the pipeline project. If the legislature removes or reduces the inducements and the first binding open season fails to produce sufficient commitments for the project to move forward, the licensee may claim the state reduced the value of its exclusive license, contrary to article I, sec. 15 of the state constitution.

As a practical matter, the licensee's open season is expected to begin May 1, 2010, and the inducements are only offered during this first open season. If no firm commitments are received, the inducements expire. If firm commitments are received, the inducements take effect for the 10-year period described in AS 43.90.320(b), unless amended by law.

If I may be of further assistance, please advise.

DMB:ljw
10-118.ljw

AS 43.90.320, the state offers an exemption in the amount of any increase in gas production tax liability during the designated period.

[3] AS 43.90.110(a).

State Capital Building
Juneau, AK 99801-1182

Dear Senators Hoffman and Stedman,

Thank you for the opportunity for our department to testify before your committee on February 16, 2010, regarding oil industry employment, unemployment and resident hire. You requested we provide you with supporting data and supplemental information to our presentation to further clarify oil industry employment in Alaska. The information you requested is attached and includes:

Attachment A-1: Chart showing Alaska Oil, Other Private Sector and Government Employment Average Annual Wage and Salary Employment 1980-2010.

Attachment A-2: Data table providing supporting data for chart Alaska Oil, Other Private Sector and Government Employment Average Annual Wage and Salary Employment 1980-2010.

Attachment B-1: Chart showing Resident, Nonresident and Percent Nonresident Workers in Alaska Oil and Gas Industry 1988-2008.

Attachment B-2: Data table providing supporting data for chart showing Resident, Nonresident and Percent Nonresident Workers in Alaska Oil and Gas Industry 1988-2008.

Attachment C-1: Chart showing Total Workers by Quarter-Alaska Oil Industry 2003Q1 thru 2009Q3.

Attachment C-2: Data table providing supporting data for chart showing Total Workers by Quarter-Alaska Oil Industry 2003Q1 thru 2009Q3. Additional private sector and government worker counts are also provided.

Attachment D-1: Chart Comparing US and Alaska Monthly Oil Industry Employment January 2000 thru December 2009.

Attachment D-2: Data table providing supporting data for chart Comparing US and Alaska Monthly Oil Industry Employment January 2000 thru December 2009.

Attachment D-3: Correlation analysis of Alaska oil industry employment with US oil industry employment.

Attachment E-1: Alaska Oil Industry Percent Nonresident Workers 1993-2008. This chart was revised to be more easily reproduced in gray scale.

Attachment E-2: Supporting data for chart Alaska Oil Industry Percent Nonresident Workers 1993-2008. Additional information showing resident hire data for all private sector and all industries is also provided.

Attachment F-1: Data tables showing Alaska Oil Industry Percent Nonresident Workers by Employer 2008.

Attachment G-1: Data table providing Alaska Unemployment Insurance Claimants 2009 for all residents, nonresident, inter-state claimants and instate claimants, oil industry and all industries.

If you need further assistance, please contact Paula Scavera, Legislative Liaison at 465-2700.

Sincerely,

Clark Bishop

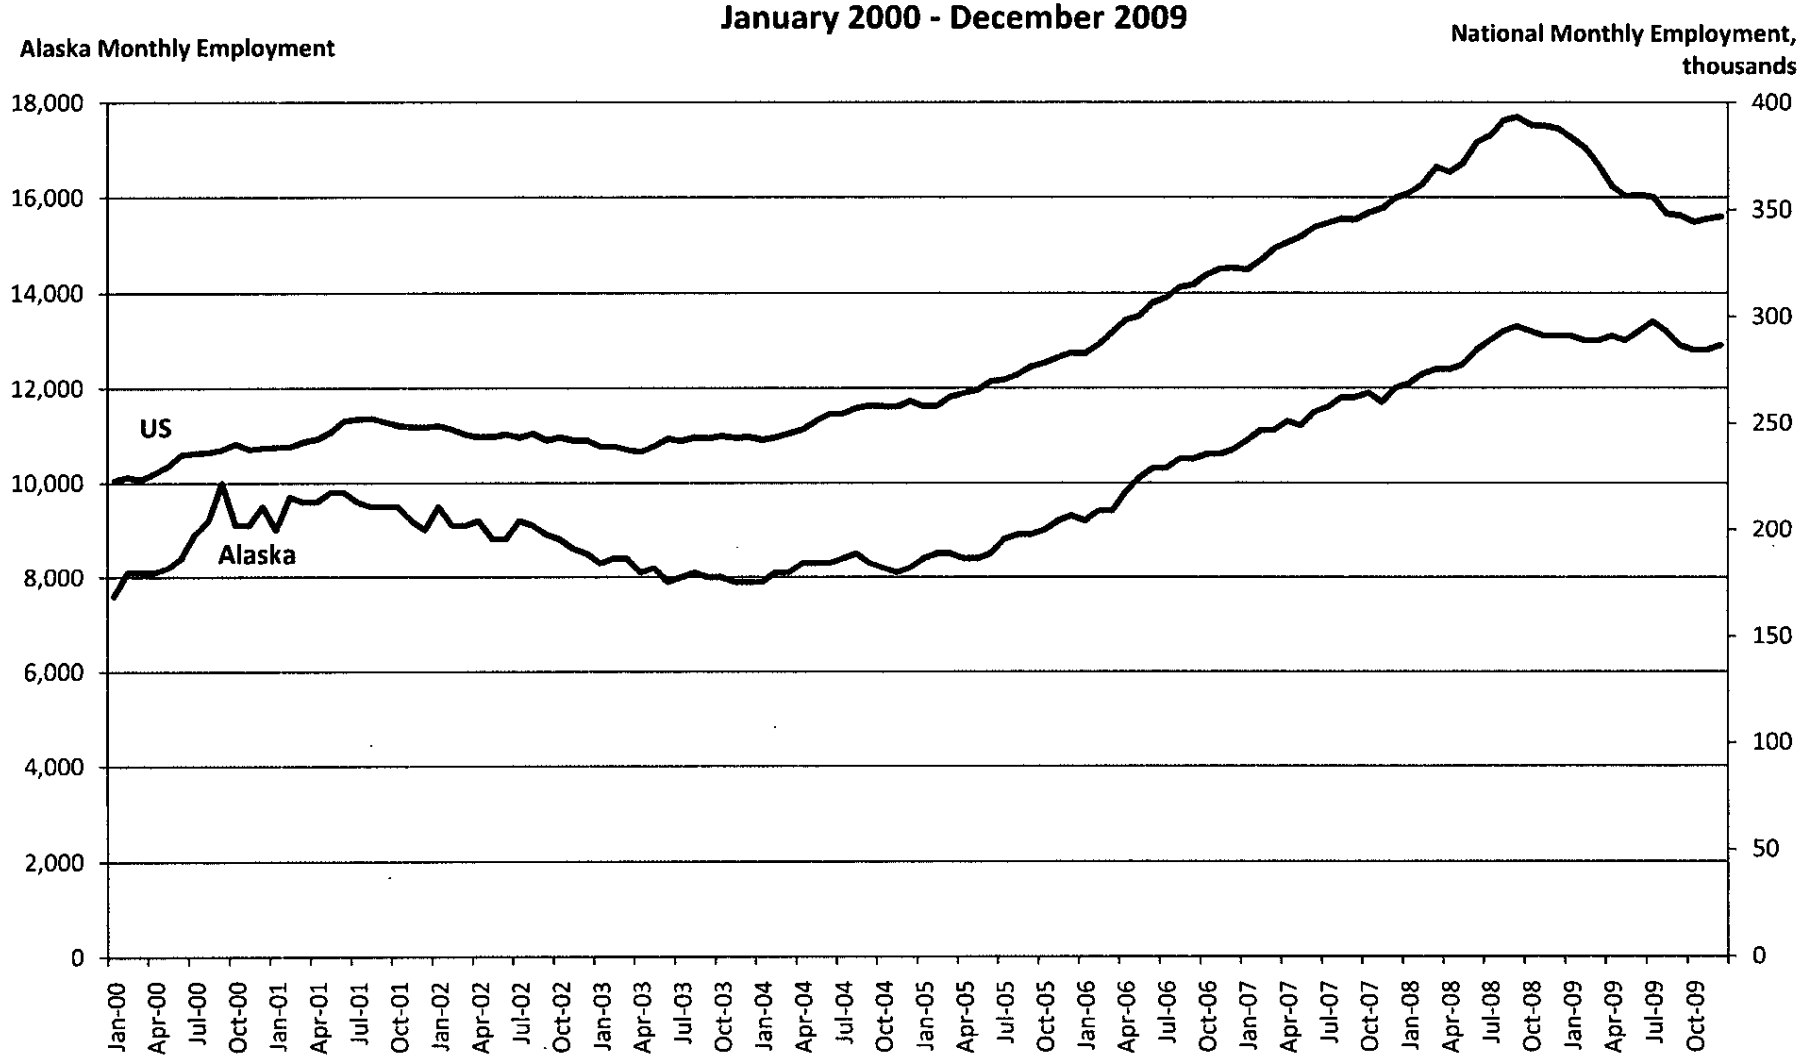
Attachment D-1

Comparing US and Alaska Monthly Oil Industry Employment*

January 2000 - December 2009



*Alaska monthly oil industry employment includes employment for NAICS industries 211, 213111 and 213112. Due to data constraints at the national level, US monthly oil industry employment includes employment for NAICS industries 211 and 213112 (excludes drilling employment). Since drilling is a relatively small percentage of national oil industry employment, the overall trend is the same and is considered an acceptable proxy for total national oil industry employment for this illustration.

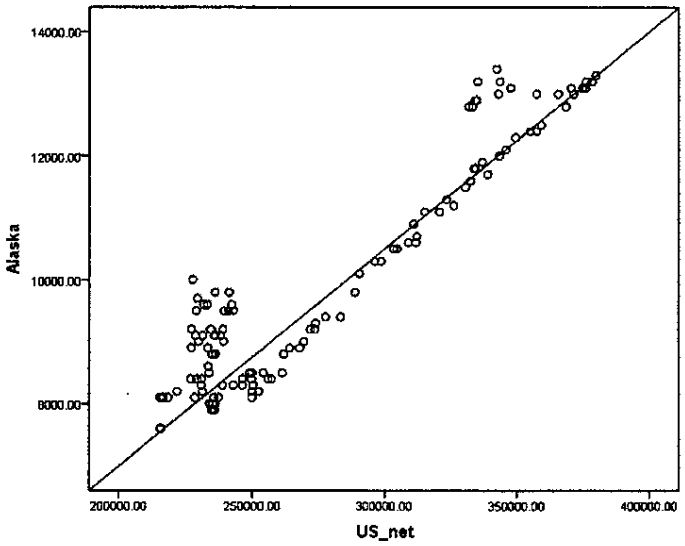
Attachment D-3

Alaska and US Oil Industry Employment Correlation Analysis

A Pearson correlation coefficient was calculated to determine the degree of correlation between Alaska and US oil and gas employment 2000 thru 2009. The correlation coefficient was calculated at 0.937. This indicates that Alaska and US oil and gas employment are very highly linearly dependent over time.



This scatterplot visually displays the high degree of linear dependence between Alaska and US oil and gas employment.

AS 23.20.110 allows for the release of information showing the number of resident and nonresident workers by firm for those Alaska employers who had 20 or more workers during the year. Due to confidentiality restrictions regarding the release of individual company employment data, each company's employment is expressed as a range as opposed to the exact number of employees. In addition, the percentage of total employees that were nonresidents is provided rather than the actual number of nonresident employees.

Residency is calculated by matching workers reported by Alaska employers with the two most recent Permanent Fund Dividend files (2008 and 2009). Workers shown include all workers employed at any time during the year with that employer. If a worker applied for a Permanent Fund Dividend in 2008 or 2009 , they are considered residents for purposes of this report. For complete methodological information, please see "Nonresidents Working in Alaska – 2008," available from the Alaska Department of Labor and Workforce Development, Research and Analysis Section at http://146.63.75.50/research/reshire/nonres.pdf.

Attachment G-1

Alaska Unemployment Insurance Claimants 2009

	Nonresident	Resident	Total
Total Alaska Oil Industry Claimants	575	2,269	2,844
In-State Claimants	164	2,167	2,331
Inter-State Claimants	411	102	513
Total Alaska Claimants	10,489	53,141	63,630
In-State Claimants	3,336	49,035	52,371
Inter-State Claimants	7,153	4,106	11,259

Note: Residency determined by match with 2008 and 2009 PFD file. Applicants for a 2008 or 2009 PFD are considered residents for purposes of this table.

Oil Industry UI Claimants are defined as a count of individuals that formerly worked for employers in NAICS 211, 213111 and 213112 and who collected at least one week of Unemployment Insurance during 2009. This includes both In-state as well as Inter-state claimants, and no individual is counted twice within one year. All Industries totals may not equal the sum of individual industries as unclassified claimants are not included in the industry breakouts.

Information provided by the Tax Division, Department of Revenue as follow-up to the Feb 16th presentation by Jennifer Duval and Frank Molli on Alaska's Oil & Gas Production Forecast. Copies of the attachment will also be added to your Oil & Tax Production Tax Review binders.

The follow-up information the committee asked the division to provide was:

- Slide #12 & #32 – Please provide a list of the development prospects that have been excluded from your forecast.
- Slide #13 - Please narrow your ANS production graph ("onion chart") to cover the 15 year timeframe from 2000 to 2015. Provide a table of the underlying numbers supporting this timeframe – annual production by field
- Legacy Field Contribution - Please provide a pie-chart that shows total oil production from currently producing projects broken out into 4 slices - Prudhoe, Kuparuk, Alpine and everything else. Provide separate charts for three years - 2000, 2010 and 2015 - so that we can see how the production shares have charged (or are projected to change) over the 15 year period (2000-2015). Please annotate each slice with total barrels produced (and what % each slice represents of the whole).
- Heavy Oil – Please provide a link to the 2008 Department of Energy report you referenced in your testimony that estimated Alaska's heavy oil deposits at 25-30 billion barrels with a current estimate recovery rate of 2-15%. The original report is not attached, but is available http://www.netl.doe.gov/publications/press/2008/08002-DOE_Releases_Alaska_Report.html.

Additional information provided by the Department of Revenue on O&G Production Tax Credits. This issue was discussed in committee on Feb 18th.

Oil and Gas Tax Credit Forecast

We project that approximately $340 million in credits would be taken directly against tax liabilities in FY 2010 and that credit offsets would raise to $390 million in FY 2011. We make the distinction between credit offsets and credit certificates only because their impact on state revenues is slightly different. Tax offsets directly reduce the amount of revenue received in the first instance by the state, while credit certificates, when subsequently purchased by the state require the state to allocate general funds for such purchases as part of the budget process. It is important to note that these projections, just like other oil and gas revenue projections are based on assumptions relating to oil prices, investment decisions, and availability of equipment and manpower to complete projects. As economic conditions change, companies continually modify their investment plans. Thus, as with every revenue projection related to oil and gas development, one should avoid assigning an undue amount of certainty to these forecasted numbers.

There are over 20 companies currently funding the development of oil and gas prospects in the state. These prospects may or may not lie within established unit boundaries, and they may or may not qualify for exploration incentive credits. One of the developments, the Oooguruk field, is now in production and another, the Nikaitchuq field, is in active development. As these and other fields come online, it becomes more difficult to project whether credits will be applied against a tax liability, or whether credit certificates will be sought.

Timing of State Payment for Tax Credits

As discussed earlier, AS 43.55.028 authorizes the state to purchase production tax credit certificates directly from companies that have earned them from oil and gas expenditures in the state. Subsections .028(e)(1) through (7) lay out additional requirements a company must meet in order to receive a payment from the state for these certificates. Among the requirements listed is a provision that companies seeking these payments spend, within 24 months of the application period, an amount equal to or exceeding the value of the payment sought. This and other requirements that must be satisfied prior to the payment for credit certificates impact the timing of the state's payment for those certificates.

Conclusions

As of February 20, 2010, the Oil and Gas Tax Credit Fund has a balance of $90 million. This represents appropriations for FY 2007, 2008, 2009 and 2010. The dollar value of requests received for tax credit certificates to date is $1.018 billion. Of this amount, approximately $226 million are outstanding and potentially subject to state purchase. Applications representing an estimated $148 million in tax credits are pending, but these will likely not be issued until FY 2011. For FY 2011, we estimate that an additional $200 million in tax credits will be earned, and available for state purchase. These three

estimates total $574 million in potential credits earned and available for state purchase through the end of FY 2011. We are not able to make any projections at this time as to when the state purchases of credits will occur, but based on history, it is likely that the timing of some of the credit purchases will be FY 2011 and beyond. Subject to audit, the information received on the annual tax filings through FY09, indicates that there is a balance of $203 million in tax credits available to be applied against future tax liabilities.

Note about this report: This report was prepared using incomplete data from several different sources specifically for this request. The DOR does not currently have a means to capture all the relevant historical and forecast credit data in a central database available to all groups that rely upon that data. Accordingly, any users of this information should be cautioned that this forecast is subject to change as data becomes available.

Re: Answer to Question & Request Raised by Senator Thomas during My Testimony Given Today (25 February 2010)

The very pertinent and perceptive question asked earlier today by Senator Thomas sought information with respect to how might the gas dilution / cross subsidy effect identified in Alaska's current production tax rules have impacted the production taxes actually paid in recent periods had a gas line had been in operation at the time?

In order to provide an indicative answer to this question I have taken the data for price, volume and costs (excluding Cook Inlet Gas) for fiscal year 2008 (i.e. July 2007 to June 2008), which is available from the Alaska Department of Revenue (DOR), Fall 2008 Revenues Sources Book (RSB), (Dec 2008). That period is selected because of the wide range of oil prices that prevailed and the fact that the ACES rules were in place. The three tables attached to this document provide the necessary data and calculations to establish the impact.

Table 1 calculates the production tax for oil based on actual data showing the components of that calculation. As no gas is exported the calculations are based upon oil barrels only. This results in total production tax of **$ 7.482 billion** which is reduced by investment credits of $411.5 million to $ 7.071 billion. The calculation shown essentially reproduces the figures from the RSB.

Table 2 assumes a 4.5 bcf/day gas line and calculates production tax for this hypothetical gas stream on a stand-alone basis (i.e. not combined with oil). The calculation uses the U.S. wellhead natural gas prices from the EIA's records for the months in question. There would be some small differentials between these prices and AECO prices in Alberta, but I believe they are close enough for the purpose. I have also assumed gas transportation costs of $4.5/mcf ($27/boe) and field costs (capital costs plus operating costs) of $400 million ($1.46/ boe) which are those used by Commissioner Galvin in the examples he provided from the DOR in his

testimony of 24 February 2010. This data computes a total production tax of **$ 1.140 billion** to which no investment credits are applied.

By adding the computed production taxes in tables 1 and 2 the stand-alone oil and gas production tax for this FY 2008 (assuming 4.5 bcf /day) would be **$8.622 billion** (reduced to $8.211 billion by the deduction of $411.5 million investment credits).

Table 3 calculates the production tax by combining the revenue cost and volume streams from table 2 to provide a combined oil and gas production tax calculation of **$6.795 billion** (reduced to $6.383 billion by the deduction of $411.5 million investment credits).

For this period the loss to the State in production tax revenue caused by the cross subsidy effect of combining oil and gas in the production tax calculation would have amounted to:

$6.795 billion less $8.622 billion = -$1.827 billion.

This calculation is in line with the figures of potential loss in fiscal revenue discussed during the testimonies.

Sincerely,

David Wood

March 8, 2010

The Honorable Bert Stedman
State Senate
Alaska State Capitol, Room 516
Juneau, Alaska 99801-1182

Dear Senator Stedman:

Thank you for the opportunity to present to the Senate Finance Committee on February 23, 2010, regarding the State of Alaska's oil tax structure.

Questions raised during the committee discussion are answered below with additional details provided in the referenced attachments.

Question 1: Does slide number 5, "North Slope Remaining Barrels," include heavy oil?

Response: Yes, the slide is the sum of the ANS production forecast from the Department of Revenue's (DOR) fall 2008 forecast for the years 2010-2050. DOR included production from the West Sak heavy oil reservoir in this forecast. Please see Attachment 1.

Question 2: Can you provide the inflation factors used to normalize North Slope expenditures on slide number 8?

Response: Cambridge Energy Resources Associates' (CERA) inflation factors were used to normalize the hyperinflation experienced by the oil industry in concurrence with oil price changes. These are the same inflation factors used by the Department of Revenue (DOR) in their presentation to the Senate Resources Committee on February 4, 2010. The DOR presentation and the table of inflation factors used by ConocoPhillips to adjust expenditures on slide number 8 are shown on Attachments 2 through 4.

Question 3: For slide number 9, "Extending Core Field Lives," show capital split between maintenance/repair/replace and development.

Response: Please see Attachment 5, a reformatted version of slide number 9 to a stacked bar chart that shows the increasing maintenance investment focused on extending the core fields' lives. This investment is represented by the increasing gray portion of the bars. The flat to decreasing red portion of the bars shows the investment in projects and drilling.

The next chart, Attachment 6, presents a break down of the gross capital investment in the core North Slope fields. The red portion of the bars indicates that capital investment in drilling and new projects has declined in recent years. The gray portion shows that capital investment in core field maintenance, repair and replacement activities has increased. These maintenance capital investments are necessary to prolong the lives of and mitigate production decline rates of the core fields.

Please don't hesitate to contact me if the Committee has further questions or requires additional information.

Sincerely,

Wendy D. King

Re: Answer to Question & Request Raised by Senator Thomas during My Testimony Given Today (25 February 2010)

The very pertinent and perceptive question asked earlier today by Senator Thomas sought information with respect to how might the gas dilution / cross subsidy effect identified in Alaska's current production tax rules have impacted the production taxes actually paid in recent periods had a gas line had been in operation at the time?

In order to provide an indicative answer to this question I have taken the data for price, volume and costs (excluding Cook Inlet Gas) for fiscal year 2008 (i.e. July 2007 to June 2008), which is available from the Alaska Department of Revenue (DOR), Fall 2008 Revenues Sources Book (RSB), (Dec 2008). That period is selected because of the wide range of oil prices that prevailed and the fact that the ACES rules were in place. The three tables attached to this document provide the necessary data and calculations to establish the impact.

Table 1 calculates the production tax for oil based on actual data showing the components of that calculation. As no gas is exported the calculations are based upon oil barrels only. This results in total production tax of **$ 7.482 billion** which is reduced by investment credits of $411.5 million to $ 7.071 billion. The calculation shown essentially reproduces the figures from the RSB.

Table 2 assumes a 4.5 bcf/day gas line and calculates production tax for this hypothetical gas stream on a stand-alone basis (i.e. not combined with oil). The calculation uses the U.S. wellhead natural gas prices from the EIA's records for the months in question. There would be some small differentials between these prices and AECO prices in Alberta, but I believe they are close enough for the purpose. I have also assumed gas transportation costs of $4.5/mcf ($27/boe) and field costs (capital costs plus operating costs) of $400 million ($1.46/ boe) which are those used by Commissioner Galvin in the examples he provided from the DOR in his

testimony of 24 February 2010. This data computes a total production tax of **$ 1.140 billion** to which no investment credits are applied.

By adding the computed production taxes in tables 1 and 2 the stand-alone oil and gas production tax for this FY 2008 (assuming 4.5 bcf /day) would be **$8.622 billion** (reduced to $8.211 billion by the deduction of $411.5 million investment credits).

Table 3 calculates the production tax by combining the revenue cost and volume streams from table 2 to provide a combined oil and gas production tax calculation of **$6.795 billion** (reduced to $6.383 billion by the deduction of $411.5 million investment credits).

For this period the loss to the State in production tax revenue caused by the cross subsidy effect of combining oil and gas in the production tax calculation would have amounted to:

$6.795 billion less $8.622 billion = -$1.827 billion.

This calculation is in line with the figures of potential loss in fiscal revenue discussed during the testimonies.

Sincerely,

David Wood

MEMORANDUM February 22, 2010

SUBJECT: Gas production tax limitation in AS 43.90.320
(Work Order No. 26-LS1526)

TO: Senator Tom Wagoner

FROM: Donald M. Bullock Jr.
Legislative Counsel

You asked to what extent is the state bound by the tax exemption in AS 43.90.320.[1] The exemption in that section is offered to producers that commit to acquire firm transportation capacity in the first binding open season of the gas pipeline project license under AS 43.90 (Alaska Gasline Inducement Act, "AGIA").

The exemption in AS 43.90.320 is statutory and not contractual. Under article IX, sec. 1 of the Alaska constitution, the state may not contract away its taxing authority except as otherwise provided in article IX. Article IX, sec. 4 authorizes the legislature to grant exemptions from tax "by law." The tax exemption in AS 43.90.320 is granted by law, but as a law, is subject to amendment or repeal by the legislature.[2]

---

[1] The amount of the exemption is described in AS 43.90.320(a), which reads as follows:

> (a) If a person qualified for a resource inducement under AS 43.90.300 agrees under (c) of this section, the person is entitled to *an annual exemption from the state's gas production tax in an amount equal to the difference between the amount of the person's gas production tax obligation calculated under the gas production tax in effect during that tax year and the amount of the person's gas production tax obligation calculated under the gas production tax in effect at the start of the first binding open season held under this chapter. If the difference is less than zero, the gas production tax exemption is zero.*

(Emphasis added.)

[2] As you are aware, the legislature has faced the issue of whether a contractual limitation on oil and gas production taxes is permissible under the state constitution. If such a contract were allowed under article IX, the legislature could not pass a law that impaired the obligations of that contract because of the prohibition in article 1, sec. 15. In

While a person offered the exemption may reasonably expect that the legislature would allow the exemption to continue during the specific 10-year period described in AS 43.90.320(b), the continuation of the exemption is subject to legislative discretion. A similar statutory tax incentive was offered in AS 43.55.011(b) (repealed, sec. 34, ch. 2, TSSLA 2006), in which new oil production was taxed at the rate of 12.25 percent of the gross value at the point of production for the first five years, and 15 percent thereafter. That tax incentive was in place from its enactment in 1981 until its repeal in 2006.

Although the exemption in AS 43.90.320 is offered to producers, a change in the law that reduces the value of the inducement may affect the license agreement with the AGIA licensee. The state and the AGIA licensee have a contract under which, in return for commitments and costs incurred by the licensee to develop the pipeline project, the state shares the costs and offers the services of the Alaska Gasline Inducement Act coordinator.[3] The royalty and tax exemption inducements are offered as incentives to commit to acquire firm transportation capacity in the pipeline project. If the legislature removes or reduces the inducements and the first binding open season fails to produce sufficient commitments for the project to move forward, the licensee may claim the state reduced the value of its exclusive license, contrary to article I, sec. 15 of the state constitution.

As a practical matter, the licensee's open season is expected to begin May 1, 2010, and the inducements are only offered during this first open season. If no firm commitments are received, the inducements expire. If firm commitments are received, the inducements take effect for the 10-year period described in AS 43.90.320(b), unless amended by law.

If I may be of further assistance, please advise.

DMB:ljw
10-118.ljw

AS 43.90.320, the state offers an exemption in the amount of any increase in gas production tax liability during the designated period.

4/16/10 PRESENTATION: AGIA REGULATIONS BY DEPARTMENT OF REVENUE

<target><bill></bill><subject>4-16-10 PRESENTATION AGIA REGULATIONS BY DEPARTMENT OF REVENUE</subject><comm>SFIN26</comm></target>

Proposed AGIA Royalty Regulations

Senate Finance Committee

April 16, 2010

Agenda

- Introduction and Overview
- Overarching valuation principles adopted by DNR
- Valuation concepts and approaches
- RIV/RIK switching issues and solution
- Value to producers

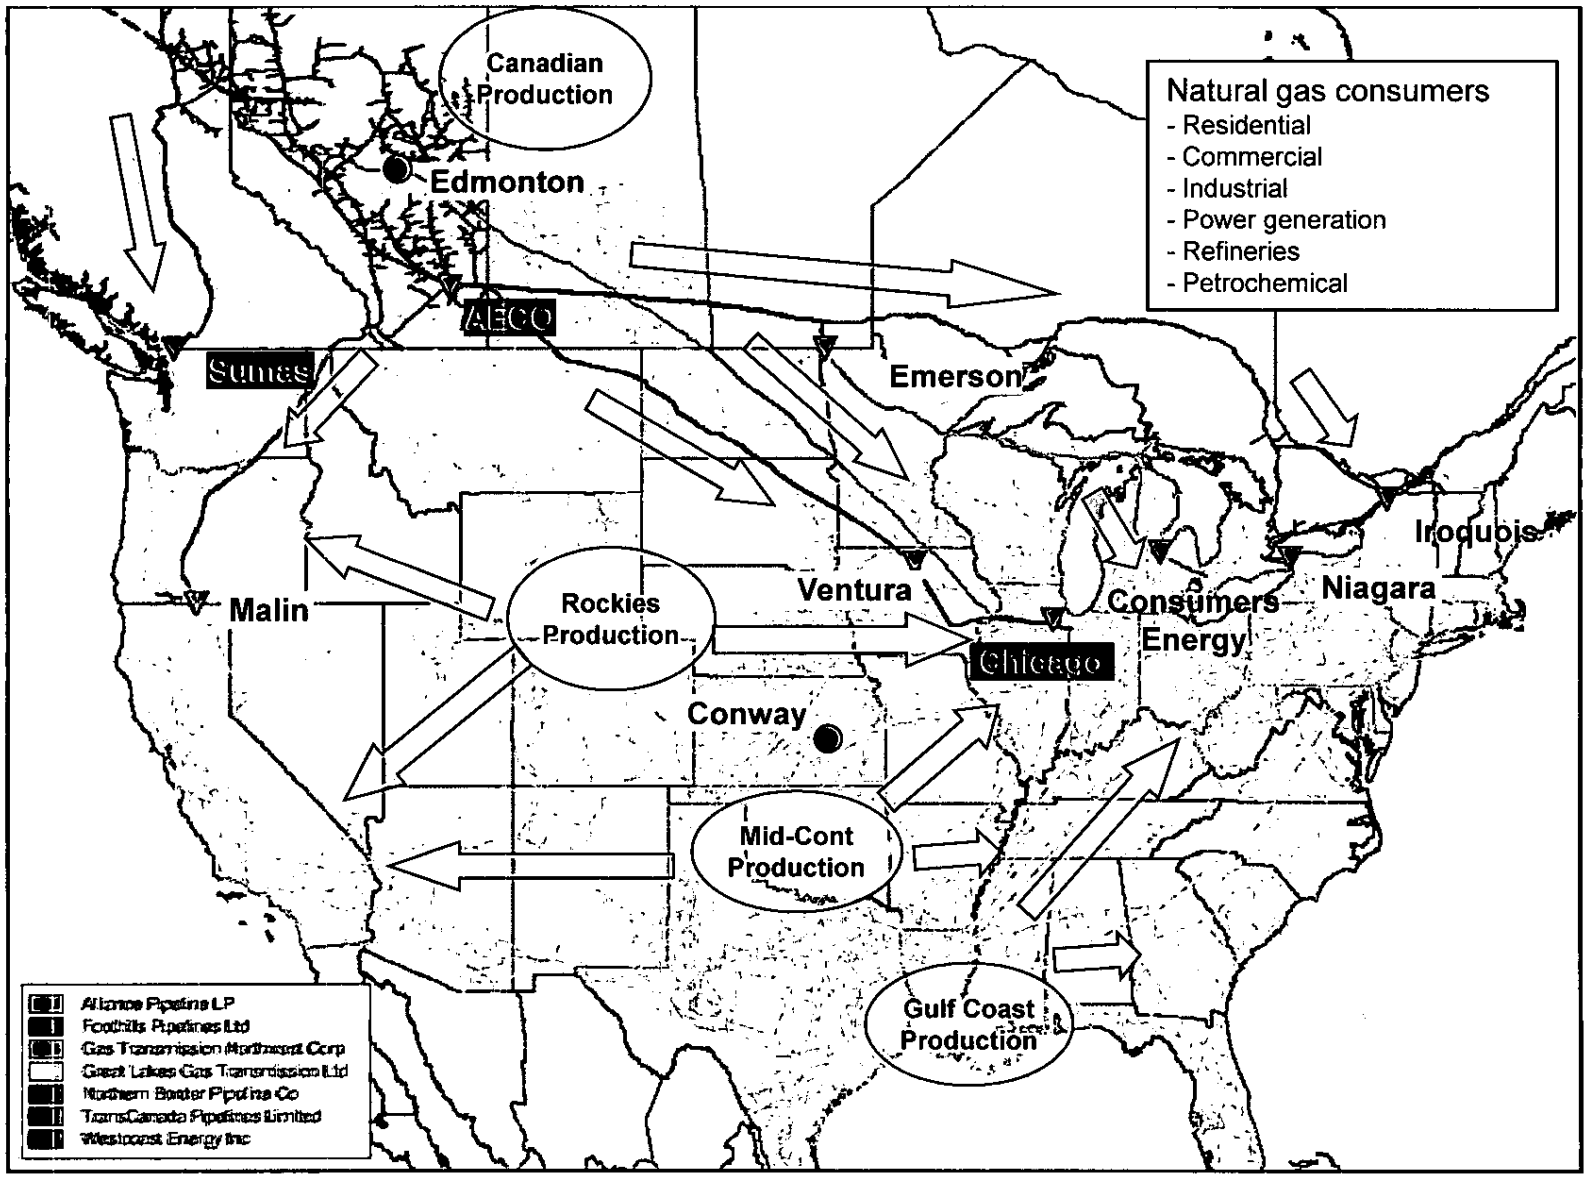
Overview of the AGIA Royalty Regulation

- Purpose of the regulation is to make offer to modify state lease contracts, consistent with requirements of the Alaska Gas Inducement Act (AGIA)
  - Establish method to determine "fair market value" (FMV) of the state's royalty share of gas production that increases clarity and predictability of royalty value
  - Establish terms under which the state will modify its ability to exercise current rights to switch between taking royalty in value (as money) or in kind (as gas), that reduces lessees exposure to stranded or insufficient transportation
  - Lessee who qualifies for royalty inducements can elect either (or both) Valuation or Royalty Switching provisions

Requirements in AGIA

- Valuation regulations must:
  - Minimize retroactive adjustments in royalty value
  - Establish FMV based on reliable trade publications
  - Allow reasonable and actual deductions for transportation and processing
  - Allow for reasonable share of unused capacity
  - Allow deductions under the 1980 settlement agreement

Dynamic North America Natural Gas Market



Overarching Principles

1. Reduce lessee uncertainty
2. Maintain state's full royalty value
3. Incorporate natural gas industry practices to the extent doing so is consistent with (1) and (2)

Overarching Principle: Reduce Uncertainty

- Eliminate "higher-of" lease valuation terms
- Establish value based on published prices
- Minimize or eliminate retroactive adjustments
- Allocate volumes *pro rata* to increase clarity of gas value and costs of transportation and processing

Overarching Principle: Full Value Under Lease

- "Full Value" without gross proceeds
  - Gas components are valued for residue gas, gas plant products, unprocessed gas, LNG
  - Published prices in destination markets establish value
  - Ability to update price publications, destination markets, location differentials
  - Valuation backstop "basket" ensures unrepresentative destination market published price doesn't distort reasonable value
  - No negative royalty
- *Pro rata* allocation of value and costs back to the lease establishes fair distribution and ensures full value

Overarching Principle: Incorporate Gas Industry Practices

- Use well established regulatory structure and methodology where practical to determine transportation costs (i.e. FERC)
- Incorporate use of published indices based on commercial practices
- Used elements of MMS regulations
  - Used as baseline; modified where necessary to reflect differences in circumstances of Alaska project
  - North Slope producers have extensive experience in complying with MMS gas regulations in Lower 48

Key Valuation Concepts and Approaches

1. Destination where gas is valued
2. Publishing value at destination
3. Backstop measure of FMV for residue gas
4. "Actual and reasonable" transportation and processing deductions
5. Appropriate deductions for unused capacity

How to Determine Destination

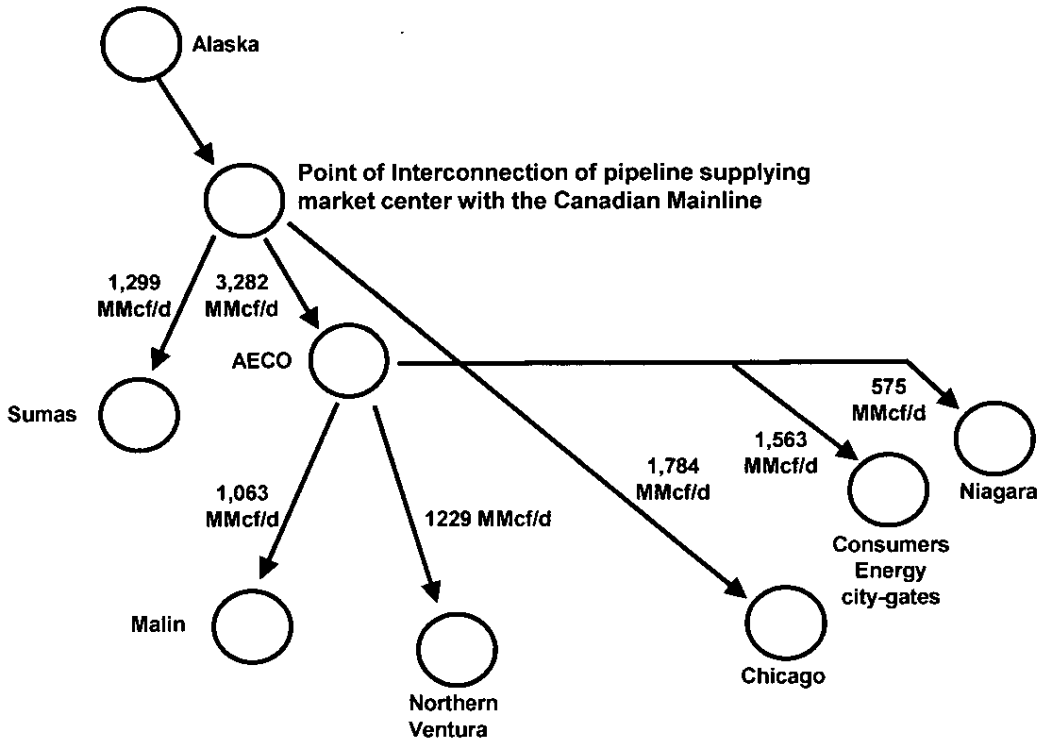
- A lessee's gas is valued for royalty at "Destination"
- A lessee's qualified gas is generally considered to be at "Destination" when it first:
    1. Enters a first destination market;
    2. Has been sold in an arm's length transaction; or
    3. Has been processed to extract residue gas and gas plant product
- "Destination values" are determined with reference to "first destination markets"
- First destination market is the first liquid market where ANS gas is physically transported to and bought, sold, processed, or regasified that has a reliable and widely available published price

Department to Publish Information Necessary to Determine Destination Value

- The department will publish on its website prior to the royalty reporting period:
  - The location of all First Destination Markets
  - The name of the source of the published price for residue gas, gas plant products at the First Destination Market
  - Appropriate location or quality differentials to establish FMV with reference to First Destination Market
  - Reasonable gas treatment, processing, or re-gasification cost allowances

Alternative Destination Value for Residue Gas

- Basket of published indices used to calculate a "backstop" fair market value to published index prices at destination markets
- Basket is relied upon only when the published price at a destination market is less than 95% of the basket price; i.e. a safety valve
- The alternative destination value protects the State from being locked in to a valuation rule that fails to reflect fair market value
- Pricing elements making up the basket determined by market liquidity criteria
- Basket reflects the volume weighted average of value received by the market



Actual and Reasonable Cost of Transportation and Processing - Non Arms Length Transactions

- Non-arm's length transportation cost allowance for Alaska and Canadian mainline is based on the terms proposed in the Open Season offer
  - If affiliated lessee negotiates a lower rate, then the transportation cost allowance will be based on this negotiated lower rate
- Other pipelines – Cost deductions calculated using FERC based cost of service methodology
- Generally follow MMS methodology to establish non-arm's length processing deductions

Deductions for Unused Transportation Capacity

- Unused capacity deductions were designed to balance the need to mitigate producers risk, but not expose the State to bearing unintended costs
- Deductions are allowed for Unused Capacity on Alaska and Canadian mainlines
- Unused Capacity = Allocated Capacity – Allocated Shipments
  - Allocated Capacity – Portion of firm transportation capacity acquired by lessee in first binding open season to transport production from state leases; measured with reference to actual state lease production
  - Allocated Shipments – greater of shipments of production from state leases or a pro-rata allocation of total shipments from all sources

RIK/RIV Switching Issue

- Under lease the State has the option of taking its royalty share of production either in kind (RIK) or in value (RIV). This option creates a risk for shippers.
  - If the State switches from RIV to RIK, shippers may have stranded capacity corresponding to the royalty volumes
  - If the State switches from RIK to RIV, shippers may not have sufficient capacity on a timely basis
  - Additionally, shippers' marketing arrangements need to be reconciled with the State's RIK/RIV election
- Given the substantial tariffs on the Alaska project, the potential exposure associated with the State's RIV/RIK option is significant

RIK/RIV Solution: "Capacity Follows the Gas"

- Switching from RIV to RIK:
  - State obligated to seek capacity corresponding to the State's RIK share (*"RIK Capacity"*) from the Producers via a pre-arranged deal
  - Released capacity will be acquired at original contract rates (state forgoes opportunity to get a better deal)
- Switching from RIK to RIV:
  - Capacity corresponding to the State's RIK share (*"RIK Capacity"*) reverts back from the State to the Producers at contract rates
- State requested and FERC approved a waiver to allow pre-arranged deals for FT capacity at contract rates, consistent with these terms
- Increase notice period for RIK/RIV switching
  - 120 days when between 100,000 & 200,000 MMbtu/d
  - 180 days when quantity is greater than 200,000 MMbtu/d

Value of Royalty Inducement to Producers

- The AGIA regulations provide value to producers while protecting State interests
- Some of the key provisions that provide value to producers include:
  - Valuation – moving away from "higher-of" provision
  - Transportation –
    - Adopting FERC-like approach for transportation deductions, rather than MMS-like approach
    - Allowing deductions for unused capacity
  - RIK/RIV switching – FERC waiver allows capacity transfer deal at contract rates

Aggressive Assumptions were Made to Establish Upper Bound of Value to Producers

- Recognize that the value of and need for these provisions may be lower depending on the facts of the project going forward:
  - Methane valuation – Assumed impact of moving away from "higher-of" provision is not offset by market basket concept
  - Transportation deduction for non-arm's length transactions – Assumed that alternative was MMS methodology
  - Unused capacity deduction – Assumed that no YTF gas is found
  - RIK-RIV switching - Assumed that entire royalty volume is switched from in-value to in-kind
- Very approximate estimates of the value to producers from provisions in the 1980 Royalty Settlement Agreement have also been shown here to provide a more complete picture of royalty value to producers

Estimated Value or Range of Value to Producers from Key Provisions in AGIA Regulations & 1980 RSA

ALASKA STATE LEGISLATURE

SENATOR BILL WIELECHOWSKI
SENATOR JOHNNY ELLIS
SENATOR JOE THOMAS
SENATOR KIM ELTON
SENATOR HOLLIS FRENCH

Sponsor Statement: CS for SB 1 (L&C)
Raising the Minimum Wage

Alaska's cost of living is one of the highest in the nation. The cost of food, housing, utilities, transportation and health care are far greater here than in most states. Despite this, Alaska has the lowest minimum wage on the west coast. Oregon, Washington, California and Hawaii all have higher minimum wages, as do twelve other states. In addition, in July 2009, the federal minimum wage will increase to $7.25, surpassing Alaska's rate of $7.15.

CS for SB 1 (L&C) will increase Alaska's minimum wage from $7.15/hour to one dollar above the federal minimum wage. If Alaska's minimum wage, last raised in 2003, were to have kept pace with the rate of inflation, it would be roughly $8.78/hour in 2010. This bill would raise our minimum wage in 2010 to $8.25/hour.

An estimated 22,254 Alaskans (7.4% of the workforce) earn less than $8.75/hour and would benefit from this legislation. Workers that earn the current Alaska minimum wage make roughly $14,872/year, which is little more than the federal poverty level for Alaska ($13,530). Twenty-five percent of those who earn just under $8/hour are parents. Many are the sole wage earners in their household.

Economic studies show that higher wages lead to greater productivity, lower recruiting and training costs, decreased absenteeism, and increased worker morale. Studies have not documented negative employment impacts (e.g., job loss) due to increases in the minimum wage.

As welfare reform forces more poor families to rely on their earnings from low-paying jobs, a minimum wage increase will help alleviate poverty and improve the standard of living for many Alaskans families. Please join us in supporting this critical legislation.

Senator Bill Wielechowski
Alaska State Capitol
Juneau, Alaska 99801

Re: SB 1 Raising Alaska's Minimum Wage

Dear Representative Wielechowski,

The Advisory Board on Alcoholism and Drug Abuse and Alaska Mental Health Board appreciate your recognition of the need for an increase to Alaska's minimum wage. While the proposed increase to minimum wage does not alleviate all the problems faced by Alaska's working poor, it would help low-wage workers better provide for their families. Many of these low-wage workers are people experiencing mental illness or in recovery from mental illness or addiction, so we support moving minimum wage closer to a meaningful wage.

Despite arguments that raising minimum wage endangers small businesses and the jobs they provide — or that minimum wage is only paid to entry-level positions from which workers quickly graduate to a higher wage — research by the Economic Policy Institute shows "no significant job loss associated with the 1996-1997 [federal] minimum wage increase." Instead, low-wage labor markets performed better after the minimum wage was increased.

Of low-wage workers, women and minority workers benefit most from an increase in minimum wage. Among low-income families with children, low-wage workers contribute over half of the family income — which means that raising the minimum wage will benefit the more than 19,000 Alaskan children living in poverty.

It is not just teenagers working for spending money who hold minimum wage jobs in Alaska. Parents, seniors trying to supplement their limited income, individuals experiencing disabilities, and students putting themselves through school are all represented in the low-wage labor market. Their work is a valuable part of our economy, and should be recognized as such. Thank you for your work, and please let us know if the Alaska Mental Health Board and Advisory Board on Alcoholism and Drug Abuse can assist in the effort to pass this important legislation.

Sincerely,

Debi Keith, Chair
AMHB

Alaska's Projected Minimum Wage in 2010
Compared with Other Western States' Minimum Wages
Which are Indexed to Inflation[1]

	Alaska	Washington	Oregon	Colorado
2009 minimum wage	$7.15	$8.55	$8.40	$7.28
2010 projected minimum wage	$7.15	$8.88	$8.72	$7.56
2010 wage under SB 1	$8.75	$8.88	$8.72	$7.56

1

Based on the Alaska Permanent Fund Corporation's forecasted inflation rate of 3.85%.

Raising the Minimum Wage: Senate Bill 1

Proposal:

Increase Alaska's minimum wage from $7.15/hour to one dollar above the federal minimum wage, effective January 1, 2010.

Background:

- Alaska's cost of living is one of the highest in the nation. The cost of food, housing, utilities, and health care are far greater than in other states.
- Despite this, 16 states have a higher minimum wage than Alaska, including California, Connecticut, Hawaii, Iowa, Illinois, Michigan, Oregon, Rhode Island, Vermont, and Washington. By July 2009, this number will increase to 39.
- Alaska's minimum wage was last raised in January 2003. Since then, the prices of fuel, medical care, and other goods in Alaska have skyrocketed.
- If Alaska's minimum wage were to keep pace with inflation, it would be $8.78/hour in 2010, when Senate Bill 1 would go into effect. Projected 2010 minimum wages are $8. 88 in Washington and $8.72 in Oregon. California is already at $8.00/hour.
- At least nine states adjust their minimum wage annually for inflation, including Arizona, Colorado, Florida, Missouri, Montana, Nevada, and Oregon.
- In 2009 the federal minimum wage will increase to $7.25, surpassing Alaska's.
- An estimated 22,254 Alaskans (or 7.4% of the workforce) earn less than $8.75/hour and would benefit from this legislation.
- Workers that earn the current Alaska minimum wage make roughly $14,872/year, little more than the federal poverty level for Alaska, which is $13,530. Twenty five percent of those who slightly less than $8/hour are parents. Many are the sole wage earners in their household.
- Economic studies have not found negative employment impacts (e.g., job loss) due to modest increases in the minimum wage, perhaps because higher wages lead to greater productivity, lower recruiting and training costs, decreased absenteeism, and increased worker morale.
- As welfare reform forces more poor families to rely on their earnings from low-paying jobs, a minimum wage increase can help alleviate poverty.

2009 Poverty Guidelines for Alaska	
Persons in family	**Poverty guideline**
1	$13,530
2	18,210
3	22,890
4	27,570
5	32,250
6	36,930
7	41,610
8	46,290
For families with more than 8 persons, add $4,680 for each additional person.	

The current Alaska minimum wage yields an annual income of $14,872. This is barely above the federal poverty level for a single person and is under the poverty level for a single parent with one child.

ALASKA DEPARTMENT OF LABOR
& WORKFORCE DEVELOPMENT

Jobs are Alaska's Future

April 1, 2008

TO ALL CONTRACTING AGENCIES:

At the Alaska Department of Labor and Workforce Development, our goal is putting Alaskans to work. This pamphlet is designed to help contractors awarded public construction contracts understand the most significant laws of the State of Alaska pertaining to prevailing wage and resident hire requirements.

The pamphlet identifies current prevailing wage rates and resident hire classifications for public construction contracts (any construction projects awarded by the State of Alaska or its political subdivisions, such as local governments and certain non-profit organizations).

Because these rates may change, this publication is printed in the spring and fall of every year, so please be sure you are using the appropriate rates. The rates published in this edition become effective April 1, 2008.

All projects with a final bid date of April 11, 2008, or later, must pay the prevailing wage rates contained in this pamphlet. As the law now provides, these rates will remain stable during the life of a contract or for 24 calendar months, whichever is shorter. **The date the prime contract is awarded is the date from which the 24 months will be counted**. Upon expiration of the initial 24-month period, the latest wage rates issued by the department shall become effective for a subsequent 24-month period or until the original contract is completed, whichever occurs first. This process shall be repeated until the original contract is completed.

The term "original" contract, as used herein, means the signed contract that resulted from the original bid and any amendments, including changes of work scope, additions, extensions, change orders, and other instruments agreed to by the parties that have not been subject to subsequent open bid procedures.

If a higher federal rate is required due to partial federal funding or other federal participation, the higher rate must be paid.

For additional copies of this pamphlet, contact the nearest office of the Division of Labor Standards and Safety, Wage and Hour office or visit the Internet site at:

http://labor.state.ak.us/lss/pamp600.htm

For questions regarding prevailing wage or resident hire requirements, please contact the nearest Wage and Hour office. These offices are listed on Page ix.

EXCERPTS FROM ALASKA LAW

Sec. 36.05.010. Wage rates on public construction.
A contractor or subcontractor who performs work on public construction in the state, as defined by AS 36.95.010, shall pay not less than the current prevailing rate of wages for work of a similar nature in the region in which the work is done. The current prevailing rate of wages is that contained in the latest determination of prevailing rate of wages issued by the Department of Labor and Workforce Development at least 10 days before the final date for submission of bids for the contract. The rate shall remain in effect for the life of the contract or for 24 calendar months, whichever is shorter. At the end of the initial 24-month period, if new wage determinations have been issued by the department, the latest wage determination shall become effective for the next 24-month period or until the contract is completed, whichever occurs first. This process shall be repeated until the contract is completed.

Sec. 36.05.040. Filing schedule of employees, wages paid, and other information.
All contractors or subcontractors who perform work on a public construction contract for the state or for a political subdivision of the state shall, before the Friday of every second week, file with the Department of Labor and Workforce Development a sworn affidavit for the previous reporting period, setting out in detail the number of persons employed, wages paid, job classification of each employee, hours worked each day and week, and other information on a form provided by the Department of Labor and Workforce Development.

Sec. 36.05.045. Notice of work and completion; withholding of payment.

(a) Before commencing work on a public construction contract, the person entering into the contract with a contracting agency shall designate a primary contractor for purposes of this section. Before work commences, the primary contractor shall file a notice of work with the Department of Labor and Workforce Development. The notice of work must list work to be performed under the public construction contract by each contractor who will perform any portion of work on the contract and the contract price being paid to each contractor. The primary contractor shall pay all filing fees for each contractor performing work on the contract, including a filing fee based on the contract price being paid for work performed by the primary contractor's employees. The filing fee payable shall be the sum of all fees calculated for each contractor. The filing fee shall be one percent of each contractor's contract price. The total filing fee payable by the primary contractor under this subsection may not exceed $5,000. There is no fee for a contract under which the total amount payable by the contracting agency is less than $25,000. In this subsection, "contractor" means an employer who is using employees to perform work on the public construction contract under the contract or a subcontract.

(b) Upon completion of all work on the public construction contract, the primary contractor shall file with the Department of Labor and Workforce Development a notice of completion together with payment of any additional filing fees owed due to increased contract amounts. Within 30 days after the department's receipt of the primary contractor's notice of completion, the department shall inform the contracting agency of the amount, if any, to be withheld from the final payment.

(c) A contracting agency

(1) may release final payment of a public construction contract to the extent that the agency has received verification from the Department of Labor and Workforce Development that

(A) the primary contractor has complied with (a) and (b) of this section;

(B) the Department of Labor and Workforce Development is not conducting an investigation under this title; and

(C) the Department of Labor and Workforce Development has not issued a notice of a violation of this chapter to the primary contractor or any other contractors working on the public construction contract; and

(2) shall withhold from the final payment an amount sufficient to pay the department's estimate of what may be needed to compensate the employees of any contractors under investigation on this construction contract, and any unpaid filing fees.

(d) The notice and filing fee required under (a) of this section may be filed after work has begun if
  (1) The public construction contract is for work undertaken in immediate response to an emergency; and
  (2) The notice and fees are filed not later than 14 days after the work has begun.
(e) A false statement made on a notice required by this section is punishable under AS 11.56.210.

Sec. 36.05.060. Penalty for violation of this chapter.
A contractor who violates this chapter is guilty of a misdemeanor and upon conviction is punishable by a fine of not less than $100 nor more than $1,000, or by imprisonment for not less than 10 days nor more than 90 days, or by both. Each day a violation exists constitutes a separate offense.

Sec. 36.05.070. Wage rates in specifications and contracts for public works.
(a) The advertised specifications for a public construction contract exceeding $2,000 to which the state or a political subdivision of the state is a party that requires or involves the employment of mechanics, laborers, or field surveyors shall contain a provision stating the minimum wages to be paid various classes of laborers, mechanics, or field surveyors and that the rate of wages shall be adjusted to the wage rate under AS 36.05.010.
(b) Repealed by §17 ch 142 SLA 1972.
(c) A contract for public works in the state or a political subdivision shall contain provisions that
  (1) the contractor or subcontractors of the contractor shall pay all employees unconditionally and not less than once a week;
  (2) wages may not be less than those stated in the advertised specifications, regardless of the contractual relationship between the contractor or subcontractors and laborers, mechanics, or field surveyors;
  (3) the scale of wages to be paid shall be posted by the contractor in a prominent and easily accessible place at the site of the work;
  (4) the state or a political subdivision shall withhold so much of the accrued payments as is necessary to pay to laborers, mechanics, or field surveyors employed by the contractor or subcontractors the difference between
    (A) the rates of wages required by the contract to be paid laborers, mechanics, or field surveyors on the work, and
    (B) the rates of wages in fact received by laborers, mechanics, or field surveyors.

Sec. 36.05.080. Failure to pay agreed wages.
Every contract within the scope of AS 36.05.070 shall contain a provision that if it is found that a laborer, mechanic, or field surveyor employed by the contractor or subcontractor has been or is being paid a rate of wages less than the rate of wages required by the contract to be paid, the state or its political subdivision may, by written notice to the contractor, terminate the contractor's right to proceed with the work or the part of the work for which there is a failure to pay the required wages and to prosecute the work to completion by contract or otherwise, and the contractor and the contractor's sureties are liable to the state or its political subdivision for excess costs for completing the work.

Sec. 36.05.090. Payment of wages from withheld payments and listing contractors who violate contracts.
(a) The state disbursing officer in the case of a state contract and the local fiscal officer in the case of a political subdivision contract shall pay directly to laborers, mechanics, or field surveyors from accrued payments withheld under the terms of the contract the wages due laborers, mechanics, or field surveyors under AS 36.05.070.
(b) The state disbursing officer or the local fiscal officer shall distribute to all departments of the state government and to all political subdivisions of the state a list giving the names of persons who have disregarded their obligations to employees. A person appearing on this list and a firm, corporation, partnership, or association in which the person has an interest may not work as a contractor or subcontractor on a public construction contract for the state or a political subdivision of the state until

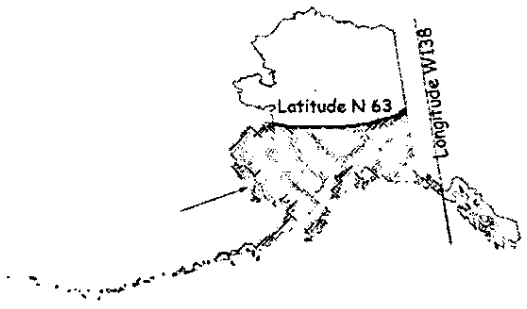
three years after the date of publication of the list. If the accrued payments withheld under the contract are insufficient to reimburse all the laborers, mechanics, or field surveyors with respect to whom there has been a failure to pay the wages required under AS 36.05.070, the laborers, mechanics, or field surveyors have the right of action or intervention or both against the contractor and the contractor's sureties conferred by law upon persons furnishing labor or materials, and in the proceedings it is not a defense that the laborers, mechanics, or field surveyors accepted or agreed to accept less than the required rate of wages or voluntarily made refunds.

Sec. 36.05.900. Definitions.
In this chapter, "contracting agency" means the state or a political subdivision of the state that has entered into a public construction contract with a contractor.

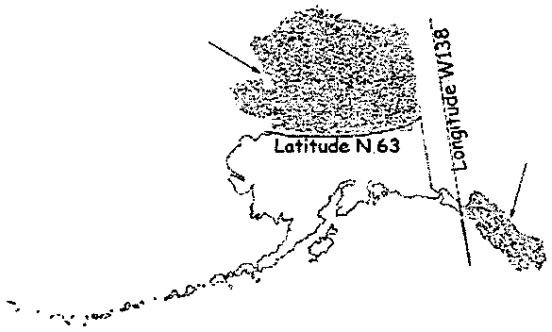
ADDITIONAL INFORMATION

LABORER CLASSIFICATION CLARIFICATION
The laborer rates categorized in class code S1201-S1206 apply in one area of Alaska; the area that is south of N63 latitude and west of W138 Longitude. The laborer rates categorized in class code N1201-N1206 apply in two areas of Alaska; the Alaska areas north of N63 latitude and east of W138 longitude. The following graphic representations should assist with clarifying the applicable wage rate categories:

S1201-
S1206



N1201-
N1206



ACCOMMODATIONS AND PER DIEM
The Alaska Department of Labor and Workforce Development has adopted a per diem requirement for blocklayers, bricklayers, carpenters, dredgemen, ironworkers, laborers, operative plasterers & cement masons, piledrivers, power equipment operators, surveyors, truck drivers/surveyors, and tunnel workers. This per diem rate creates an allowable alternative to providing board and lodging under the following conditions:

Employer-Provided Camp or Suitable Accommodations
Unless otherwise approved by the Commissioner, the employer shall ensure that a worker who is employed on a project that is 65 road miles or more from the U.S. Post Office in either Fairbanks, Juneau or Anchorage or is inaccessible by road in a 2-wheel drive vehicle and who is not a domiciled resident of the locality of the project shall receive meals and lodging. Lodging shall be in accordance with all applicable state and federal laws. In cases where the project site is not road accessible, but the employee can reasonably get to the project worksite from their permanent residence within one hour, the Commissioner may waive these requirements for that employee upon a written request from the employer.

The term "domiciled resident" means a person living within 65 road miles of the project, or in the case of a highway project, the mid-point of the project, for at least 12 consecutive months prior to the award of the project. However, if the employer or person provides sufficient evidence to convince the department that a person has established a permanent residence and an intent to remain indefinitely within the distance to be considered a "domiciled resident," the employer shall not be required to provide meals and lodging or pay per diem.

Where the employer provides or furnishes board, lodging or any other facility, the cost or amount thereof shall not be considered or included as part of the required prevailing wage basic hourly rate and cannot be applied to meet other fringe benefit requirements. The taxability of employer provided board and lodging shall be determined by the appropriate taxation enforcement authority.

Per Diem
Employers are encouraged to use commercial facilities and lodges; however, when such facilities are not available, per diem in lieu of meals and lodging must be paid at the basic rate of $75.00 per day, or part thereof, the worker is employed on the project. Per diem shall not be allowed on highway projects west of Livengood on the Elliott Highway, at Mile 0 of the Dalton Highway to the North Slope of Alaska, north of Mile 20 on the Taylor Highway, east of Chicken, Alaska, on the Top of the World Highway and south of Tetlin Junction to the Alaska-Canada border.

The above-listed standards for room and board and per diem only apply to the crafts as identified in Pamphlet 600, *Laborers' and Mechanics' Minimum Rates of Pay.* Other crafts working on public construction projects shall be provided room and board at remote sites based on the department's existing policy guidelines.

APPRENTICE HIRING REQUIREMENTS

On July 24, 2005, Administrative Order No. 226 established a 15 percent goal for hiring apprentices in certain job categories on highway, airport, harbor, dam, tunnel, utility or dredging projects awarded by the Alaska Department of Transportation and Public Facilities that exceed $2.5 million. This Order will apply to all projects in the referenced categories that are advertised after September 1, 2005. On these projects, the hours worked by apprentices will be compared to the hours worked by journeyman level workers to determine if the 15percent goal has been met. This on-the-job training goal is critical to ensure that the Alaska work force is prepared for the future. For additional details, contact the nearest Wage and Hour office at the address listed on Page ix of this publication. Administrative Order No. 226 may be viewed in its entirety on the Internet at http://www.gov.state.ak.us/admin-orders/226.html or call any Wage and Hour office to receive a faxed copy.

APPRENTICE RATES

Apprentice rates at less than the minimum prevailing rates may be paid to apprentices according to an apprentice program which has been registered and approved by the Commissioner of the Alaska Department of Labor and Workforce Development in writing, or according to a bona fide apprenticeship program registered with the Bureau of Apprenticeship and Training, U.S. Department of Labor. **Any employee listed on a payroll at an apprentice wage rate who is not registered as above shall be paid the journeyman prevailing minimum**

wage in that work classification. Wage rates are based on prevailing crew makeup practices in Alaska and apply to work performed regardless of either the quality of the work performed by the employee or the titles or classifications which may be assigned to individual employees.

FRINGE BENEFIT PLANS

Contractors/subcontractors may compensate fringe benefits to their employees in any one of three methods. The fringe benefits may be paid into a union trust fund, into an approved benefit plan, or paid directly on the paycheck as gross wages.

Where fringe benefits are paid into approved plans, funds, or programs including union trust funds, the payments must be contributed at least monthly. If contractors submit their own payroll forms and are paying fringe benefits into approved plans, funds, or programs, the employer's certification must include, in addition to those requirements of 8 AAC 30.020(c), a statement that fringe benefit payments have been or will be paid at least monthly. Contractors who pay fringe benefits to a plan must ensure the plan is one approved by the Internal Revenue Service and that the plan meets the requirements of 8 AAC 30.025 (eff. 3/2/08) in order for payments to be credited toward the prevailing wage obligation.

SPECIAL PREVAILING WAGE RATE DETERMINATION

Special prevailing wage rate determinations may be requested for special projects or a special worker classification if the work to be performed does not conform to traditional public construction for which a prevailing wage rate has been established under 8 AAC 30.050(a) of this section. Requests for special wage rate determinations must be in writing and filed with the Commissioner at least 30 days before the award of the contract. An applicant for a special wage rate determination shall have the responsibility to support the necessity for the special rate. An application for a special wage rate determination filed under this section must contain:

(1) a specification of the contract or project on which the special rates will apply and a description of the work to be performed;
(2) a brief narrative explaining why special wage rates are necessary;
(3) the job class or classes involved;
(4) the special wage rates the applicant is requesting, including survey or other relevant wage data to support the requested rates;
(5) the approximate number of employees who would be affected; and
(6) any other information which might be helpful in determining if special wage rates are appropriate.

Requests made pursuant to the above should be addressed to:

ALASKA HIRE EMPLOYMENT PREFERENCE

AS 36.10. By authority of A.S. 36.10.150 and 8 AAC 30.064, the Labor and Workforce Development Commissioner determined, upon an analysis of the most recent detailed employment and labor supply data available, the entire State of Alaska to be a Zone of Underemployment. A Zone of Underemployment requires that Alaska residents who are eligible under AS 36.10.140 be given a minimum of 90 percent employment preference on public works contracts throughout Alaska. This hiring preference applies on a project-by-project, craft-by-craft or occupational basis and must be met each workweek by each contractor/subcontractor.

*** The waiver process is outlined in 8 AAC 30.081, effective March 2, 2008. Please contact the nearest regional Wage and Hour Office listed below for additional details.**

The following classifications require a minimum of 90 percent Alaska resident hire preference:

Boilermakers	Equipment Operators	Millwrights	Surveyors
Bricklayers	Foreman and Supervisors	Painters	Truck Drivers
Carpenters	Insulation Workers	Piledriving Occupations	Tug Boat Workers
Cement Masons	Ironworkers	Plumbers and Pipefitters	Welders
Culinary Workers	Laborers	Roofers	
Electricians	Mechanics	Sheet Metal Workers	

This determination is effective July 1, 2007, and remains in effect until June 30, 2009. For additional information about the Alaska resident hire requirements, contact the nearest Wage and Hour office.

Please be advised that most public contracts are covered. Funding sources are unique for every project. The inclusion of federal funds does not necessarily remove a project from jurisdiction. If there is any uncertainty about whether the law applies to a particular project, the department requests that you contact the regional Wage and Hour office nearest you for a determination.

DEBARMENT LIST

AS 36.05.090(b) states that "the state disbursing officer or the local fiscal officer shall distribute to all departments of the state government and to all political subdivisions of the state a list giving the names of persons who have disregarded their obligations to employees."

A person appearing on the following debarment list and a firm, corporation, partnership, or association in which the person has an interest may not work as a contractor or subcontractor on a public construction contract for the state or a political subdivision of the state for three years from the date of debarment.

Company Name	Date of Debarment	Debarment Expires
Percy Frisby and Arctic Pacific Enterprises, LLC	September 18, 2007	September 18, 2010

STATE OF ALASKA

Department of Labor and Workforce Development

OFFICE OF THE COMMISSIONER

SARAH PALIN, GOVERNOR

P.O. BOX 111149
JUNEAU, ALASKA 99811-1149

PHONE: (907) 465-2700
FAX: (907) 465-2784

March 31, 2009

The Honorable Bert Stedman
The Honorable Lyman Hoffman
Co-Chairs, Senate Finance Committee
State Capitol
Juneau, AK 99801

Dear Senator Stedman and Senator Hoffman:

During the Senate Finance Committee hearing of Senate Bill 1 on March 27, 2009, there were questions about Davis-Bacon wage rates. Senator Huggins wanted to know what Davis-Bacon wage rates are and Senator Stedman had a specific question about the determination on Prince of Wales Island.

First, let me explain that there are state and federal prevailing wage rate determinations. The federal Davis-Bacon Act of 1931 (40 U.S.C. 276a) applies to federally funded construction projects and requires the payment of prevailing wage rates to laborers and mechanics working on such projects. There is a similar provision under Alaska law commonly referred to as the "Little Davis-Bacon Act" for public construction projects awarded through the state or a political subdivision of the state (see AS 36.05.010 - .110). One of the primary purposes of the legislation is to establish a level playing field for labor costs on public construction projects.

I have enclosed a copy of the *Laborer's and Mechanic's Minimum Rates of Pay*, effective September 1, 2008. This publication contains the prevailing wage determinations of the State of Alaska. The rates are divided into the Northern Region (North of N63 latitude) and the Southern Region (South of N63 latitude), but many rates are the same statewide. The newest version of this publication will be available soon and delivered to your office.

Also enclosed are copies of the latest published federal prevailing wage rate determinations for Alaska. There are determinations for residential, heavy dredging, building and heavy, and highway construction projects. Some of these determinations are statewide and some are for specific communities. It is noteworthy that the federal wage rate determination for highway work in communities on Prince of Wales Island and other Southeast Alaska communities (General Decision Number: AK20080003)

Printed on recycled paper by Alaska Litho, Inc.

contains significantly lower prevailing wage rates than the determinations for highway work in the rest of the state (General Decision Number: AK 20080002 & AK 20080006).

In contrast to the state, the federal government applies prevailing wage rates to federally-funded residential projects. The state prevailing wage law does not apply to residential projects, so residential wage rates, which are typically lower than rates paid on heavy, highway or commercial projects, are not included in the state's determination.

I hope this information is responsive to your questions. Please contact me if you have additional questions or concerns.

Sincerely,

Clark Bishop
Commissioner

POWER EQUIPMENT OPERATOR CLASSIFICATIONS

GROUP 1: Asphalt Roller; Back Filler; Barrier Machine (Zipper); Batch Plant Operator: Batch and Mixer over 200 yds.; Beltcrete with power pack and similar conveyors; Bending Machine; Boat Coxwains; Bulldozers; Cableways, Highlines and Cablecars; Cleaning Machine; Coating Machine; Concrete Hydro Blaster; Cranes-45 tons and under or 150 foot boom and under (including jib and attachments): (a) Shovels, Backhoes, Draglines, Clamshells; Gradalls-3 yards and under; (b) Hydralifts or Transporters, all track or truck type, (c) Derricks; Crushers; Deck Winches-Double Drum; Ditching or Trenching Machine (16 inch or over); Drilling Machines, core, cable, rotary and exploration; Finishing Machine Operator, concrete paving, Laser Screed, sidewalk, curb and gutter machine; Helicopters; Hover Craft, Flex Craft, Loadmaster, Air Cushion, All Terrain Vehicle, Rollagon, Bargecable, Nodwell Sno Cat; Hydro Ax: Feller Buncher and similar; Loaders: Forklifts with power boom and swing attachment, Overhead and front end, 2 1/2 yards through 5 yards, Loaders with forks or pipe clamps, Loaders, elevating belt type, Euclid and similar types; Mechanics, Bodyman; Micro Tunneling Machine; Mixers: Mobile type w/hoist combination; Motor Patrol Grader; Mucking Machines: Mole, Tunnel Drill, Horizontal/Directional Drill Operator, and/or Shield; Operator on Dredges; Piledriver Engineers, L. B. Foster, Puller or similar Paving Breaker; Power Plant, Turbine Operator, 200 k.w. and over (power plants or combination of power units over 300 k.w.); Sauerman-Bagley; Scrapers-through 40 yards; Service Oiler/Service Engineer; Sidebooms-under 45 tons; Shot Blast Machine; Spreaders, Blaw Knox, Cedarapids, Barber Greene, Slurry Machine; Sub-grader (Gurries, C.M.I. and C.M.I. Roto Mills and similar types); Tack tractor; Truck mounted Concrete Pumps, Conveyor, Creter; Water Kote Machine; Unlicensed off road hauler; Welder; Electrical Mechanic, Camp Maintenance Engineer

GROUP 1A: Cranes-over 45 tons or 150 foot (including jib and attachments): (a) Shovels, backhoes, draglines, clamshells-over 3 yards, (b) Tower cranes; Loaders over 5 yds.; Motor Patrol Grader, Dozer, Grade Tractor (finish: when finishing to final grade and/or to hubs, or for asphalt); Power Plants: 1000 k.w. and over; Quad; Screed; Sidebooms over 45 tons; Slip Form Paver C.M.I. and similar types; Scrapers over 40 yards; Camera/Tool/Video Operator (Slipline).

GROUP 2: Batch Plant Operators: Batch and Mixer 200 yds. per

hour and under; Boiler-fireman; Cement Hog and Concrete Pump Operator; Conveyors (except as listed in group 1); Hoist on steel erection; Towermobiles and Air Tuggers; Horizontal/Directional Drill Locator; Loaders, Elevating Grader, Dumor and similar; Locomotives: rod and geared engines; Mixers; Screening, Washing Plant; Sideboom (cradling rock drill regardless of size); Skidder; Trencing Machine under 16 inches.

GROUP 3: "A" Frame Trucks, Deck Winches: single power drum; Bombardier (tack or tow rig); Boring Machine; Brooms-power; Bump Cutter; Compressor; Farm tractor; Forklift, industrial type; Gin Truck or Winch Truck with poles when used for hoisting; Grade Checker and Stake Hopper; Hoist, Air Tuggers, Elevators; Loaders: (a) Elevating-Athey, Barber Green and similar types (b) Forklifts or Lumber Carrier (on construction job site) (c) Forklifts with Tower (d) Overhead and Front-end, under 2 1/2 yds. Locomotives:Dinkey (air, steam, gas and electric) Speeders; Mechanics (light duty); Mixers: Concrete Mixers and Batch 200 yds. per hour and under; Oil, Blower Distribution; Post Hole Diggers, mechanical; Pot Fireman (power agitated); Power Plant, Turbine Operator, under 300 k.w.; Pumps-water; Rig oiler/assistant engineer, over 45 ton, over 3 yards or over 150 foot boom; Roller-other than Plantmix; Saws, concrete; Straightening Machine; Tow Tractor

GROUP 4: Rig Oiler/Assistant Engineer (Advances to Group III if over 45 tons or 3 yards or 150 ft. boom); Swamper (on trenching machines or shovel type equipment); Spotter; Steam Cleaner

FOOTNOTE: Groups 1-4 receive 10% premium while performing tunnel or underground work. Rig Oiler/Assistant Engineer shall be required on cranes over 85 tons or over 100 feet of boom.

GROUP 5	$ 31.80	13.90

GROUP 1: Semi with Double Box Mixer; Dump Trucks (including rockbuggy and trucks with pups) over 40 yards up to and including 60 yards; Deltas, Commanders, Rollogans and similar equipment when pulling sleds, trailers or similar equipment; Boat Coxswain; Lowboys including attached trailers and jeeps, up to and including 12 axles; Ready-mix over 12 yards up to and including 15 yards); Water Wagon (250 Bbls and above); Tireman, Heavy Duty/Fueler

GROUP 1A: Dump Trucks (including Rockbuggy and Trucks with pups) over 60 yards up to and including 100 yards; Jeeps (driver under load)

GROUP 2: Turn-O-Wagon or DW-10 not self-loading; All Deltas, Commanders, Rollogans, and similar equipment; Mechanics; Dump Trucks (including Rockbuggy and Trucks with pups) over 20 yards up to and including 40 yards; Lowboys including attached trailers and jeeps up to and including 8 axles; Super vac truck/cacasco truck/heat stress truck; Ready-mix over 7 yards up to and including 12 yards;

GROUP 3: Dump Trucks (including Rockbuggy and Trucks with pups) over 10 yards up to and including 20 yards; batch trucks 8 yards and up; Oil distributor drivers; Partsman; Oil Distributor Drivers; Trucks/Jeeps (push or pull); Traffic Control Technician

GROUP 4: Buggymobile; Semi or Truck and trailer; Dumpster; Tireman (light duty); Dump Trucks (including Rockbuggy and Truck with pups) up to and including 10 yards; Track Truck Equipment; Stringing Truck; Grease Truck; Flat Beds, dual rear axle; Hyster Operators (handling bulk aggregate); Lumber Carrier; Water Wagon, semi; Water Truck, dual axle; Gin Pole Truck, Winch Truck, Wrecker, Truck Mounted "A" Frame manufactured rating over 5 tons; Bull Lifts and Fork Lifts with Power Boom and Swing attachments, over 5 tons; Front End Loader with Forks; Bus Operator over 30 passengers; All Terrain Vehicles; Boom Truck/Knuckle Truck over 5 tons; Foam Distributor Truck/dual axle; Hydro-seeders, dual axle; Vacuum Trucks, Truck Vacuum Sweepers; Loadmaster (air and water); Air Cushion or similar type vehicle; Fire Truck/Ambulance Driver; Combination Truck-fuel and grease; Compactor (when pulled by rubber tired equipment); Rigger (air/water/oilfield); Ready Mix, up to and including 7 yards;

GROUP 5: Gravel Spreader Box Operator on Truck; Flat Beds, single rear axle; Boom Truck/Knuckle Truck up to and including 5 tons; Pickups (Pilot Cars and all light duty vehicles); Water Wagon (Below 250 Bbls); Gin Pole Truck, Winch Truck, Wrecker, Truck Mounted "A" Frame, manufactured rating 5 tons and under; Bull Lifts and Fork Lifts (fork lifts with power broom and swing attachments up to and including 5 tons); Buffer Truck; Tack Truck; Farm type Rubber Tired Tractor (when material handling or pulling

wagons on a construction project); Foam Distributor, single axle; Hydro-Seeders, single axle; Team Drivers (horses, mules and similar equipment); Fuel Handler (station/bulk attendant); Batch Truck, up to and including 7 yards; Gear/Supply Truck; Bus Operator, Up to 30 Passengers; Rigger/Swamper

---

WELDERS - Receive rate prescribed for craft performing operation to which welding is incidental.

==========

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29 CFR 5.5 (a) (1) (ii)).

In the listing above, the "SU" designation means that rates listed under the identifier do not reflect collectively bargained wage and fringe benefit rates. Other designations indicate unions whose rates have been determined to be prevailing.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

* an existing published wage determination
* a survey underlying a wage determination
* a Wage and Hour Division letter setting forth a position on a wage determination matter
* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

POWER EQUIPMENT OPERATOR CLASSIFICATIONS

GROUP 1: Asphalt Roller; Back Filler; Barrier Machine (Zipper); Batch Plant Operator: Batch and Mixer over 200 yds.; Beltcrete with power pack and similar conveyors; Bending Machine; Boat Coxwains; Bulldozers; Cableways, Highlines and Cablecars; Cleaning Machine; Coating Machine; Concrete Hydro Blaster; Cranes-45 tons and under or 150 foot boom and under (including jib and attachments): (a) Shovels, Backhoes, Draglines, Clamshells; Gradalls-3 yards and under; (b) Hydralifts or Transporters, all track or truck type, (c) Derricks; Crushers; Deck Winches-Double Drum; Ditching or Trenching Machine (16 inch or over); Drilling Machines, core, cable, rotary and exploration; Finishing Machine Operator, concrete paving, Laser Screed, sidewalk, curb and gutter machine; Helicopters; Hover Craft, Flex Craft, Loadmaster, Air Cushion, All Terrain Vehicle, Rollagon, Bargecable, Nodwell Sno Cat; Hydro Ax: Feller Buncher and similar; Loaders: Forklifts with power boom and swing attachment, Overhead and front end, 2 1/2 yards through 5 yards, Loaders with forks or pipe clamps, Loaders, elevating belt type, Euclid and similar types; Mechanics, Bodyman; Micro Tunneling Machine; Mixers: Mobile type w/hoist combination; Motor Patrol Grader; Mucking Machines: Mole, Tunnel Drill, Horizontal/Directional Drill Operator, and/or Shield; Operator on Dredges; Piledriver Engineers, L. B. Foster, Puller or similar Paving Breaker; Power Plant, Turbine Operator, 200 k.w. and over (power plants or combination of power units over 300 k.w.); Sauerman-Bagley; Scrapers-through 40 yards; Service Oiler/Service Engineer; Sidebooms-under 45 tons; Shot Blast Machine; Spreaders, Blaw Knox, Cedarapids, Barber Greene, Slurry Machine; Sub-grader (Gurries, C.M.I. and C.M.I. Roto Mills and similar types); Tack tractor; Truck mounted Concrete Pumps, Conveyor, Creter; Water Kote Machine; Unlicensed off road hauler; Welder; Electrical Mechanic, Camp Maintenance Engineer

GROUP 1A: Cranes-over 45 tons or 150 foot (including jib and attachments): (a) Shovels, backhoes, draglines, clamshells-over 3 yards, (b) Tower cranes; Loaders over 5 yds.; Motor Patrol Grader, Dozer, Grade Tractor (finish: when finishing to final grade and/or to hubs, or for asphalt); Power Plants: 1000 k.w. and over; Quad; Screed; Sidebooms over 45 tons; Slip Form Paver C.M.I. and similar types; Scrapers over 40 yards; Camera/Tool/Video Operator (Slipline).

GROUP 2: Batch Plant Operators: Batch and Mixer 200 yds. per hour and under; Boiler-fireman; Cement Hog and Concrete Pump Operator; Conveyors (except as listed in group 1); Hoist on steel erection; Towermobiles and Air Tuggers; Horizontal/Directional Drill Locator; Loaders, Elevating Grader, Dumor and similar; Locomotives: rod and geared engines; Mixers; Screening, Washing Plant; Sideboom (cradling rock drill regardless of size); Skidder; Trencing Machine under 16 inches.

GROUP 3: "A" Frame Trucks, Deck Winches: single power drum; Bombardier (tack or tow rig); Boring Machine; Brooms-power; Bump Cutter; Compressor; Farm tractor; Forklift, industrial type; Gin Truck or Winch Truck with poles when used for hoisting; Grade Checker and Stake Hopper; Hoist, Air Tuggers, Elevators; Loaders: (a) Elevating-Athey, Barber Green and similar types (b) Forklifts or Lumber Carrier (on construction job site) (c) Forklifts with Tower (d) Overhead and Front-end, under 2 1/2 yds. Locomotives:Dinkey (air, steam, gas and electric) Speeders; Mechanics (light duty); Mixers: Concrete Mixers and Batch 200 yds. per hour and under; Oil, Blower Distribution; Post Hole Diggers, mechanical; Pot Fireman (power agitated); Power Plant, Turbine Operator, under 300 k.w.; Pumps-water; Rig oiler/assistant engineer, over 45 ton, over 3 yards or over 150 foot boom; Roller-other than Plantmix; Saws, concrete; Straightening Machine; Tow Tractor

GROUP 4: Rig Oiler/Assistant Engineer (Advances to Group III if over 45 tons or 3 yards or 150 ft. boom); Swamper (on trenching machines or shovel type equipment); Spotter; Steam Cleaner

FOOTNOTE: Groups 1-4 receive 10% premium while performing tunnel or underground work. Rig Oiler/Assistant Engineer shall be required on cranes over 85 tons or over 100 feet of boom.

WELDERS - Receive rate prescribed for craft performing operation to which welding is incidental.

==========

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29 CFR 5.5 (a) (1) (ii)).

In the listing above, the "SU" designation means that rates listed under the identifier do not reflect collectively bargained wage and fringe benefit rates. Other designations indicate unions whose rates have been determined to be prevailing.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can

be:

* an existing published wage determination
* a survey underlying a wage determination
* a Wage and Hour Division letter setting forth a position on a wage determination matter
* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

==========

END OF GENERAL DECISION

GENERAL DECISION: AK20080006 02/06/2009 AK6

Date: February 6, 2009
General Decision Number: AK20080006 02/06/2009

Superseded General Decision Number: AK20070006

State: Alaska

Construction Type: Highway

Counties: Aleutians East, Aleutians West, Anchorage, Bethel, Bristol Bay, Dillingham, Fairbanks North Star, Kenai Peninsula, Kodiak Island, Matanuska-Susitna, Nome, North Slope, Northwest Artic, Southeast Fairbanks, Valdez-Cordova, Wade Hampton and Yukon-Koyukuk Counties in Alaska.

POWER EQUIPMENT OPERATOR CLASSIFICATIONS

GROUP 1: Asphalt Roller; Back Filler; Barrier Machine (Zipper); Batch Plant Operator: Batch and Mixer over 200 yds.; Beltcrete with power pack and similar conveyors; Bending Machine; Boat Coxwains; Bulldozers; Cableways, Highlines and Cablecars; Cleaning Machine; Coating Machine; Concrete Hydro Blaster; Cranes-45 tons and under or 150 foot boom and under (including jib and attachments): (a) Shovels, Backhoes, Draglines, Clamshells; Gradalls-3 yards and under; (b) Hydralifts or Transporters, all track or truck type,(c) Derricks; Crushers; Deck Winches-Double Drum; Ditching or Trenching Machine (16 inch or over); Drilling Machines, core, cable, rotary and exploration; Finishing Machine Operator, concrete paving, Laser Screed, sidewalk, curb and gutter machine; Helicopters; Hover Craft, Flex Craft, Loadmaster, Air Cushion, All Terrain Vehicle, Rollagon, Bargecable, Nodwell Sno Cat; Hydro Ax: Feller Buncher and similar; Loaders: Forklifts with power

boom and swing attachment, Overhead and front end, 2 1/2 yards through 5 yards, Loaders with forks or pipe clamps, Loaders, elevating belt type, Euclid and similar types; Mechanics, Bodyman; Micro Tunneling Machine; Mixers: Mobile type w/hoist combination; Motor Patrol Grader; Mucking Machines: Mole, Tunnel Drill, Horizontal/Directional Drill Operator, and/or Shield; Operator on Dredges; Piledriver Engineers, L. B. Foster, Puller or similar Paving Breaker; Power Plant, Turbine Operator, 200 k.w. and over (power plants or combination of power units over 300 k.w.); Sauerman-Bagley; Scrapers-through 40 yards; Service Oiler/Service Engineer; Sidebooms-under 45 tons; Shot Blast Machine; Spreaders, Blaw Knox, Cedarapids, Barber Greene, Slurry Machine; Sub-grader (Gurries, C.M.I. and C.M.I. Roto Mills and similar types); Tack tractor; Truck mounted Concrete Pumps, Conveyor, Creter; Water Kote Machine; Unlicensed off road hauler; Welder; Electrical Mechanic, Camp Maintenance Engineer

GROUP 1A: Cranes-over 45 tons or 150 foot (including jib and attachments): (a) Shovels, backhoes, draglines, clamshells-over 3 yards, (b) Tower cranes; Loaders over 5 yds.; Motor Patrol Grader, Dozer, Grade Tractor (finish: when finishing to final grade and/or to hubs, or for asphalt); Power Plants: 1000 k.w. and over; Quad; Screed; Sidebooms over 45 tons; Slip Form Paver C.M.I. and similar types; Scrapers over 40 yards; Camera/Tool/Video Operator (Slipline).

GROUP 2: Batch Plant Operators: Batch and Mixer 200 yds. per hour and under; Boiler-fireman; Cement Hog and Concrete Pump Operator; Conveyors (except as listed in group 1); Hoist on steel erection; Towermobiles and Air Tuggers; Horizontal/Directional Drill Locator; Loaders, Elevating Grader, Dumor and similar; Locomotives: rod and geared engines; Mixers; Screening, Washing Plant; Sideboom (cradling rock drill regardless of size); Skidder; Trencing Machine under 16 inches.

GROUP 3: "A" Frame Trucks, Deck Winches: single power drum; Bombardier (tack or tow rig); Boring Machine; Brooms-power; Bump Cutter; Compressor; Farm tractor; Forklift, industrial type; Gin Truck or Winch Truck with poles when used for hoisting; Grade Checker and Stake Hopper; Hoist, Air Tuggers, Elevators; Loaders: (a) Elevating-Athey, Barber Green and similar types (b) Forklifts or Lumber Carrier (on construction job site) (c) Forklifts with Tower (d) Overhead and Front-end, under 2 1/2 yds. Locomotives:Dinkey (air, steam, gas and electric) Speeders; Mechanics (light duty); Mixers: Concrete Mixers and Batch 200 yds. per hour and under; Oil, Blower Distribution; Post Hole Diggers, mechanical; Pot Fireman (power agitated); Power Plant, Turbine Operator, under 300 k.w.; Pumps-water; Rig oiler/assistant engineer, over 45 ton, over 3 yards or over 150 foot boom; Roller-other than Plantmix; Saws, concrete; Straightening Machine; Tow Tractor

GROUP 4: Rig Oiler/Assistant Engineer (Advances to Group III if over 45 tons or 3 yards or 150 ft. boom); Swamper (on trenching machines or shovel type equipment); Spotter;

Steam Cleaner

FOOTNOTE: Groups 1-4 receive 10% premium while performing tunnel or underground work. Rig Oiler/Assistant Engineer shall be required on cranes over 85 tons or over 100 feet of boom.

LABORERS CLASSIFICATIONS

GROUP 1: Asphalt Workers (shovelman, plant crew); Brush

Cutters; Camp Maintenance Laborer; Carpenter Tenders; Choke Setters, Hook Tender, Rigger, Signalman; Concrete Laborer(curb and gutter, chute handler, grouting, curing, screeding); Crusher Plant Laborer; Demolition Laborer; Ditch Diggers; Dump Man; Environmental Laborer (asbestos (limited to nonmechanical systems), hazardous and toxic waste, oil spill); Fence Installer; Fire Watch Laborer; Flagman; Form Strippers; General Laborer; Guardrail Laborer, Bridge Rail Installers; Hydro-Seeder Nozzleman; Laborers (building); Landscape or Planter; Laying of Decorative Block (retaining walls, flowered decorative block 4 feet and below); Material Handlers; Pneumatic or Power Tools; Portable or Chemical Toilet Serviceman; Pump Man or Mixer Man; Railroad Track Laborer; Sandblast, Pot Tender; Saw Tenders; Scaffold Building and Erecting; Slurry Work; Stake Hopper; Steam Point or Water Jet Operator; Steam Cleaner Operator; Tank Cleaning; Utiliwalk, Utilidor Laborer and Conduit Installer; Watchman (construction projects); Window Cleaner

GROUP 2: Burning and Cutting Torch; Cement or Lime Dumper or Handler (sack or bulk); Choker Splicer; Chucktender (wagon, airtrack and hydraulic drills); Concrete Laborers (power buggy, concrete saws, pumpcrete nozzleman, vibratorman); Culvert Pipe Laborer; Cured in place Pipelayer; Environmental Laborer (marine work, oil spill skimmer operator, small boat operator); Foam Gun or Foam Machine Operator; Green Cutter (dam work); Gunnite Operator; Hod Carriers; Jackhammer or Pavement Breakers (more than 45 pounds);Laying of Decorative Block (retaining walls, flowered decorative block above 4 feet); Mason Tender and Mud Mixer (sewer work); Pilot Car; Plasterer, Bricklayer and Cement Finisher Tenders; Power Saw Operator; Railroad Switch Layout Laborer; Sandblaster; Sewer Caulkers; Sewer Plant Maintenance Man; Thermal Plastic Applicator; Timber Faller, chain saw operator, filer; Timberman

GROUP 3: Alarm Installer; Bit Grinder; Guardrail Machine Operator; High Rigger and tree topper; High Scaler; Multiplate; Slurry Seal Squeegee Man

GROUP 3A: Asphalt Raker, Asphalt Belly dump lay down; Drill Doctor (in the field); Drillers (including, but not limited to, wagon drills, air track drills; hydraulic drills); Powderman; Pioneer Drilling and Drilling Off Tugger (all type drills); Pipelayers

GROUP 3B: Grade checker (setting or transfering of grade marks, line and grade)

GROUP 4: Final Building Cleanup

TUNNELS, SHAFTS, AND RAISES CLASSIFICATIONS

GROUP 1: Brakeman; Muckers; Nippers; Topman and Bull Gang; Tunnel Track Laborer

GROUP 2: Burning and Cutting Torch; Concrete Laborers; Jackhammers; Nozzleman, Pumpcrete or Shotcrete.

GROUP 3: Miner; Retimberman

GROUP 3A: Asphalt Raker, Asphalt Belly dump lay down; Drill Doctor (in the field); Drillers (including, but not limited to, wagon drills, air track drills; hydraulic drills); Powderman; Pioneer Drilling and Drilling Off Tugger (all type drills); Pipelayers.

GROUP 3B: Grade checker (setting or transfering of grade marks, line and grade)

Tunnel shaft and raise rates only apply to workers regularly employed inside a tunnel portal or shaft collar.

GROUP 1A: Dump Trucks (including Rockbuggy and Trucks with pups) over 60 yards up to and including 100 yards; Jeeps (driver under load)

GROUP 2: Turn-O-Wagon or DW-10 not self-loading; All Deltas, Commanders, Rollogans, and similar equipment; Mechanics; Dump Trucks (including Rockbuggy and Trucks with pups) over 20 yards up to and including 40 yards; Lowboys including attached trailers and jeeps up to and including 8 axles; Super vac truck/cacasco truck/heat stress truck; Ready-mix over 7 yards up to and including 12 yards;

GROUP 3: Dump Trucks (including Rockbuggy and Trucks with pups) over 10 yards up to and including 20 yards; batch trucks 8 yards and up; Oil distributor drivers; Partsman; Oil Distributor Drivers; Trucks/Jeeps (push or pull); Traffic Control Technician

GROUP 4: Buggymobile; Semi or Truck and trailer; Dumpster; Tireman (light duty); Dump Trucks (including Rockbuggy and Truck with pups) up to and including 10 yards; Track Truck Equipment; Stringing Truck; Grease Truck; Flat Beds, dual rear axle; Hyster Operators (handling bulk aggregate); Lumber Carrier; Water Wagon, semi; Water Truck, dual axle; Gin Pole Truck, Winch Truck, Wrecker, Truck Mounted "A" Frame manufactured rating over 5 tons; Bull Lifts and Fork Lifts with Power Boom and Swing attachments, over 5 tons; Front End Loader with Forks; Bus Operator over 30 passengers; All Terrain Vehicles; Boom Truck/Knuckle Truck over 5 tons; Foam Distributor Truck/dual axle; Hydro-seeders, dual axle; Vacuum Trucks, Truck Vacuum Sweepers; Loadmaster (air and water); Air Cushion or similar type vehicle; Fire Truck/Ambulance Driver; Combination Truck-fuel and grease; Compactor (when pulled by rubber tired equipment); Rigger (air/water/oilfield); Ready Mix, up to and including 7 yards;

GROUP 5: Gravel Spreader Box Operator on Truck; Flat Beds, single rear axle; Boom Truck/Knuckle Truck up to and including 5 tons; Pickups (Pilot Cars and all light duty vehicles); Water Wagon (Below 250 Bbls); Gin Pole Truck, Winch Truck, Wrecker, Truck Mounted "A" Frame, manufactured rating 5 tons and under; Bull Lifts and Fork Lifts (fork lifts with power broom and swing attachments up to and including 5 tons); Buffer Truck; Tack Truck; Farm type Rubber Tired Tractor (when material handling or pulling wagons on a construction project); Foam Distributor, single axle; Hydro-Seeders, single axle; Team Drivers (horses, mules and similar equipment); Fuel Handler (station/bulk attendant); Batch Truck, up to and including 7 yards; Gear/Supply Truck; Bus Operator, Up to 30 Passengers; Rigger/Swamper

---

WELDERS - Receive rate prescribed for craft performing operation to which welding is incidental.

==========

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29 CFR 5.5 (a) (1) (ii)).

In the listing above, the "SU" designation means that rates listed under the identifier do not reflect collectively bargained wage and fringe benefit rates. Other designations indicate unions whose rates have been determined to be prevailing.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

* an existing published wage determination
* a survey underlying a wage determination
* a Wage and Hour Division letter setting forth a position on a wage determination matter
* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

POWER EQUIPMENT OPERATOR CLASSIFICATIONS

GROUP 1: Asphalt Roller; Back Filler; Barrier Machine (Zipper); Batch Plant Operator: Batch and Mixer over 200 yds.; Beltcrete with power pack and similar conveyors; Bending Machine; Boat Coxwains; Bulldozers; Cableways, Highlines and Cablecars; Cleaning Machine; Coating Machine; Concrete Hydro Blaster; Cranes-45 tons and under or 150 foot boom and under (including jib and attachments): (a) Shovels, Backhoes, Draglines, Clamshells; Gradalls-3 yards and under; (b) Hydralifts or Transporters, all track or truck type, (c) Derricks; Crushers; Deck Winches-Double Drum; Ditching or Trenching Machine (16 inch or over);

Drilling Machines, core, cable, rotary and exploration; Finishing Machine Operator, concrete paving, Laser Screed, sidewalk, curb and gutter machine; Helicopters; Hover Craft, Flex Craft, Loadmaster, Air Cushion, All Terrain Vehicle, Rollagon, Bargecable, Nodwell Sno Cat; Hydro Ax: Feller Buncher and similar; Loaders: Forklifts with power boom and swing attachment, Overhead and front end, 2 1/2 yards through 5 yards, Loaders with forks or pipe clamps, Loaders, elevating belt type, Euclid and similar types; Mechanics, Bodyman; Micro Tunneling Machine; Mixers: Mobile type w/hoist combination; Motor Patrol Grader; Mucking Machines: Mole, Tunnel Drill, Horizontal/Directional Drill Operator, and/or Shield; Operator on Dredges; Piledriver Engineers, L. B. Foster, Puller or similar Paving Breaker; Power Plant, Turbine Operator, 200 k.w. and over (power plants or combination of power units over 300 k.w.); Sauerman-Bagley; Scrapers-through 40 yards; Service Oiler/Service Engineer; Sidebooms-under 45 tons; Shot Blast Machine; Spreaders, Blaw Knox, Cedarapids, Barber Greene, Slurry Machine; Sub-grader (Gurries, C.M.I. and C.M.I. Roto Mills and similar types); Tack tractor; Truck mounted Concrete Pumps, Conveyor, Creter; Water Kote Machine; Unlicensed off road hauler; Welder; Electrical Mechanic, Camp Maintenance Engineer

GROUP 1A: Cranes-over 45 tons or 150 foot (including jib and attachments): (a) Shovels, backhoes, draglines, clamshells-over 3 yards, (b) Tower cranes; Loaders over 5 yds.; Motor Patrol Grader, Dozer, Grade Tractor (finish: when finishing to final grade and/or to hubs, or for asphalt); Power Plants: 1000 k.w. and over; Quad; Screed; Sidebooms over 45 tons; Slip Form Paver C.M.I. and similar types; Scrapers over 40 yards; Camera/Tool/Video Operator (Slipline).

GROUP 2: Batch Plant Operators: Batch and Mixer 200 yds. per hour and under; Boiler-fireman; Cement Hog and Concrete Pump Operator; Conveyors (except as listed in group 1); Hoist on steel erection; Towermobiles and Air Tuggers; Horizontal/Directional Drill Locator; Loaders, Elevating Grader, Dumor and similar; Locomotives: rod and geared engines; Mixers; Screening, Washing Plant; Sideboom (cradling rock drill regardless of size); Skidder; Trencing Machine under 16 inches.

GROUP 3: "A" Frame Trucks, Deck Winches: single power drum; Bombardier (tack or tow rig); Boring Machine; Brooms-power; Bump Cutter; Compressor; Farm tractor; Forklift, industrial type; Gin Truck or Winch Truck with poles when used for hoisting; Grade Checker and Stake Hopper; Hoist, Air Tuggers, Elevators; Loaders: (a) Elevating-Athey, Barber Green and similar types (b) Forklifts or Lumber Carrier (on construction job site) (c) Forklifts with Tower (d) Overhead and Front-end, under 2 1/2 yds. Locomotives:Dinkey (air, steam, gas and electric) Speeders; Mechanics (light duty); Mixers: Concrete Mixers and Batch 200 yds. per hour and under; Oil, Blower Distribution; Post Hole Diggers, mechanical; Pot Fireman (power agitated); Power Plant, Turbine Operator, under 300 k.w.; Pumps-water; Rig oiler/assistant engineer, over 45 ton, over 3 yards or over

150 foot boom; Roller-other than Plantmix; Saws, concrete; Straightening Machine; Tow Tractor

GROUP 4: Rig Oiler/Assistant Engineer (Advances to Group III if over 45 tons or 3 yards or 150 ft. boom); Swamper (on trenching machines or shovel type equipment); Spotter; Steam Cleaner

FOOTNOTE: Groups 1-4 receive 10% premium while performing tunnel or underground work. Rig Oiler/Assistant Engineer shall be required on cranes over 85 tons or over 100 feet of boom.

Flagman; Form Strippers; General Laborer; Guardrail Laborer, Bridge Rail Installers; Hydro-Seeder Nozzleman; Laborers (building); Landscape or Planter; Laying of Decorative Block (retaining walls, flowered decorative block 4 feet and below); Material Handlers; Pneumatic or Power Tools; Portable or Chemical Toilet Serviceman; Pump Man or Mixer Man; Railroad Track Laborer; Sandblast, Pot Tender; Saw Tenders; Scaffold Building and Erecting; Slurry Work; Stake Hopper; Steam Point or Water Jet Operator; Steam Cleaner Operator; Tank Cleaning; Utiliwalk, Utilidor Laborer and Conduit Installer; Watchman (construction projects); Window Cleaner

GROUP 2: Burning and Cutting Torch; Cement or Lime Dumper or Handler (sack or bulk); Choker Splicer; Chucktender (wagon, airtrack and hydraulic drills); Concrete Laborers (power buggy, concrete saws, pumpcrete nozzleman, vibratorman); Culvert Pipe Laborer; Cured in place Pipelayer; Environmental Laborer (marine work, oil spill skimmer operator, small boat operator); Foam Gun or Foam Machine Operator; Green Cutter (dam work); Gunnite Operator; Hod Carriers; Jackhammer or Pavement Breakers (more than 45 pounds);Laying of Decorative Block (retaining walls, flowered decorative block above 4 feet); Mason Tender and Mud Mixer (sewer work); Pilot Car; Plasterer, Bricklayer and Cement Finisher Tenders; Power Saw Operator; Railroad Switch Layout Laborer; Sandblaster; Sewer Caulkers; Sewer Plant Maintenance Man; Thermal Plastic Applicator; Timber Faller, chain saw operator, filer; Timberman

GROUP 3: Alarm Installer; Bit Grinder; Guardrail Machine Operator; High Rigger and tree topper; High Scaler; Multiplate; Slurry Seal Squeegee Man

GROUP 3A: Asphalt Raker, Asphalt Belly dump lay down; Drill Doctor (in the field); Drillers (including, but not limited to, wagon drills, air track drills; hydraulic drills); Powderman; Pioneer Drilling and Drilling Off Tugger (all type drills); Pipelayers

GROUP 3B: Grade checker (setting or transfering of grade marks, line and grade)

GROUP 4: Final Building Cleanup

TUNNELS, SHAFTS, AND RAISES CLASSIFICATIONS

GROUP 1: Brakeman; Muckers; Nippers; Topman and Bull Gang; Tunnel Track Laborer

GROUP 2: Burning and Cutting Torch; Concrete Laborers; Jackhammers; Nozzleman, Pumpcrete or Shotcrete.

GROUP 3: Miner; Retimberman

GROUP 3A: Asphalt Raker, Asphalt Belly dump lay down; Drill Doctor (in the field); Drillers (including, but not limited to, wagon drills, air track drills; hydraulic drills); Powderman; Pioneer Drilling and Drilling Off Tugger (all type drills); Pipelayers.

GROUP 3B: Grade checker (setting or transfering of grade marks, line and grade)

Tunnel shaft and raise rates only apply to workers regularly employed inside a tunnel portal or shaft collar.

	Rates	Fringes
TRUCK DRIVER		
Dump, Over 8 yards	$ 32.51	13.90

WELDERS - Receive rate prescribed for craft performing operation to which welding is incidental.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29 CFR 5.5 (a) (1) (ii)).

In the listing above, the "SU" designation means that rates listed under the identifier do not reflect collectively bargained wage and fringe benefit rates. Other designations indicate unions whose rates have been determined to be prevailing.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

* an existing published wage determination
* a survey underlying a wage determination
* a Wage and Hour Division letter setting forth a position on a wage determination matter
* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator

U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

LEGISLATIVE RESEARCH REPORT

JANUARY 30, 2009 REPORT NUMBER 09.113

ALASKA'S MINIMUM WAGE ADJUSTED FOR INFLATION

PREPARED FOR SENATOR BILL WIELECHOWSKI

BY ROGER WITHINGTON, LEGISLATIVE ANALYST

INFLATION-PROOFING THE MINIMUM WAGE 1

Figure 1: The Inflation Rate and the Inflation Adjusted Minimum Wage, 2004 through 2009, and Projected for 2010 3

HISTORY OF THE MINIMUM WAGE 4

Table 1: The Minimum Wage in Alaska and the Federal Minimum Wage 5

You asked for information regarding Alaska's minimum wage. Specifically, you wished to know what the minimum wage would be today if the minimum wage inflation-proofing provisions of HB 56, passed in 2002, had not been repealed in 2003. You also asked us to project what the minimum wage would be in 2010. Based on our calculations, had the minimum wage been adjusted for inflation each year since October 2003, the current minimum wage in Alaska would be $8.46 per hour and the projected minimum wage for 2010 would be $8.78 per hour.

INFLATION-PROOFING THE MINIMUM WAGE

As you may know, an inflation-proofing provision was added to the Alaska minimum wage law through the enactment of HB 56 in 2002, which also raised the minimum wage from $5.65 (which was 50 cents above the federal minimum wage) to $7.15 per hour. The bill, which took effect on January 1, 2003, also instructed the Department of Labor and Workforce Development (DOLWD) to calculate the first inflation-adjusted minimum wage rate by October 1, 2003, and each year thereafter. Because HB 199, which removed the inflation-adjustment provision, passed prior to October 1, 2003, the DOLWD was never required to calculate inflation-related minimum wage increases.

907-465-3908 (fax)

Alaska Legislature
Legislative Research Services
w3.legis.state.ak.us/laa/research/research.php

State Capitol
Juneau, AK 99801

The annual rate of inflation for each calendar year is not available until January of the following year. Since the inflation-proofing provisions of HB 56 required the minimum wage be adjusted by October 1st of each year, we adjusted the minimum wage using the previous two semi-annual Anchorage Consumer Price Index (CPI) figures.[1] Based on our calculations, if the minimum wage had been adjusted for inflation each year since October 2003, the current minimum wage would be $8.46 per hour.

You also asked us to project the minimum wage, using a forecasted inflation rate, for 2010. Using the projected rate of inflation used by the Alaska Permanent Fund Corporation (APFC) for 2009 of 3.85 percent, the inflation-adjusted minimum wage for 2010 would be approximately $8.78 per hour.[2] Please use caution when considering this figure. As you know, we are in a period of significant economic uncertainty, and as such, the AFPC's projected rate of inflation for 2009 is unlikely to reflect actual events.

In Figure 1 we provide the inflation rate and the inflation adjusted minimum wage for each year since 2003, as well as the projected inflation rate for 2010.

[1] The U.S. Department of Labor, Bureau of Labor Statistics (BLS) only calculates the consumer price index for Anchorage.

[2] According to Laura Achee, Director of Communications for the Alaska Permanent Fund Corporation (APFC), the methodology used by the APFC to calculate the rate of inflation can be found in AS 37.13.145(c). Ms. Achee can be contacted at 907-796-1522. We obtained the projected inflation rate from *http://www.apfc.org/_amiReportsArchive/2008_12_PROJ.pdf.*

Figure 1: The Inflation Rate and the Inflation-Adjusted Minimum Wage, 2004 through 2009, and Projected for 2010

	2004	2005	2006	2007	2008	2009	2010
Adjusted Minimum Wage	$7.30	$7.51	$7.70	$8.00	$8.15	$8.46	$8.78
Inflation Rate	2.11%	2.94%	2.40%	3.97%	1.85%	3.78%	3.85%

Notes: The 2003 minimum wage was $7.15. We used this figure to base all subsequent adjustments.
HB 56 required the Department of Labor and Workforce Development (DOLWD) to calculate an inflation adjusted minimum wage by October 1st of each year. This adjusted minimum wage would go into effect January 1st of the following calendar year. Because HB 199, which removed the inflation-adjustment provision, passed prior to October 1, 2003, the DOLWD did not calculate inflation-related minimum wage increases.
The Inflation rate is based on the Anchorage Consumer Price Index (CPI), which is the rate used to adjust the minimum wage. Since the annualized CPI rate for each year is not available until January of the following year, and because the minimum wage was to be adjusted by October 1st of each year, we used the CPI for the first half of one year and the second half of the previous year, divided by two to get the average, and then calculated the percentage difference from the year before. This is the rate we applied to the minimum wage in order to make the adjustment for inflation.
The figures for 2010 are projected.

Sources: Consumer Price Index information is from the Alaska Department of Labor and Workforce Development, *http://almis.labor.state.ak.us/?PAGEID=67&SUBID=198.*
Projected rate of inflation is from the Alaska Permanent Fund Corporation, *http://www.apfc.org/_amiReportsArchive/2008_12_PROJ.pdf.*

HISTORY OF THE MINIMUM WAGE

As you know, the federal Fair Labor Standards Act (FLSA), first passed by Congress in 1938, addresses many employment issues including overtime and the minimum wage. Congress set the first federal minimum wage at $0.25 per hour.[3] States could also set their own minimum wages, and in 1959 the first Alaska legislature established the Alaska minimum wage at $1.50 per hour—at that time, the federal minimum wage was $1.00 per hour.[4] As with the FLSA, Alaska law included several exemptions to coverage by the minimum wage requirement, including farmers, fishermen, domestic help, and public employees.[5]

In 1962, the Alaska legislature changed the statute so that the minimum wage in Alaska would be at least $0.50 per hour greater than the federal minimum wage, which at that time was $1.25 per hour.[6] In 1974, the Alaska legislature again addressed the issue of the minimum wage, and amended the statute to establish the minimum wage at "not less than 50 cents an hour greater than the prevailing Federal Minimum Wage Law or $2.60 an hour, whichever is greater."[7] In 1990, the legislature included a requirement that school bus drivers be paid a rate of not less than two times the minimum wage.[8] Table 1 shows the amount of the minimum wage in Alaska from 1959 to the present.

[4] Section 5, Chapter 171, SLA 1959.

[5] Section 2, Chapter 171, SLA 1959. According to the U. S. Department of Labor, "The 1938 Act was applicable generally to employees engaged in interstate commerce or in the production of goods for interstate commerce. The 1961 Amendments extended coverage primarily to employees in large retail and service enterprises as well as to local transit, construction, and gasoline service station employees. The 1966 Amendments extended coverage to State and local government employees of hospitals, nursing homes, and schools, and to laundries, dry cleaners, and large hotels, motels, restaurants, and farms. Subsequent amendments extended coverage to the remaining Federal, State, and local government employees who were not protected in 1966, to certain workers in retail and service trades previously exempted, and to certain domestic workers in private household employment."

[6] Section 4, Chapter 2, SLA 1962.

[7] Section 1, Chapter 41, SLA 1974.

[8] Sections 3 & 4, Chapter 12, SLA 1990.

Table 1: The Minimum Wage in Alaska and the Federal Minimum Wage		
Year	**Alaska**	**Federal**
1959-1962	$1.50	$1.00
1963-1967	$1.75	$1.25
1968-1974	$2.10	$1.60
1975-1978	$2.80	$2.30
1979	$3.40	$2.90
1980	$3.60	$3.10
1981-1990	$3.85	$3.35
1991	$4.30	$3.80
1992-1996	$4.75	$4.25
1997	$5.25	$4.75
1998-2002	$5.65	$5.15
2003-2006	$7.15	$5.15
2007	$7.15	$5.85
2008	$7.15	$6.55

Notes: Minimum wages are per hour.
The federal minimum wage provisions for covered, non-exempt employees are contained in the Fair Labor Standards Act (FLSA). The Fair Minimum Wage Act of 2007 included phased increases to the federal minimum wage. For work performed on or after July 24, 2009, the federal minimum wage will be $7.25 per hour. *http://www.dol.gov/dol/topic/wages/minimumwage.htm.*

National Employment Law Project

Delivering Economic Opportunity

Protect the Economic Security of Thousands of Alaska's Tipped Workers

February 13, 2009

Thousands of hard-working waiters and waitresses are counting on Alaska lawmakers to protect their economic security in the current minimum wage debate. Tipped workers like the waitress at your local diner are already struggling to get by, and a disproportionate number live in poverty. And this hard-working group of workers (overwhelmingly women) is currently seeing its pay drop as economically squeezed customers leave smaller tips. Moreover, economic studies show that, contrary to the restaurant industry's claims, guaranteeing a strong minimum wage for tipped workers is simply not a major factor, one way or the other, in the economic health of the industries that employ these workers.

1. **More than 5,900 working Alaskans already struggle to get by on the minimum wage and tips.**

   - Alaska has thousands of tipped workers – including at least 4,200 waiters and waitresses and 1,700 bartenders alone, according to the U.S. Bureau of Labor Statistics (BLS).[1] These workers represent nearly 2% of the state's workforce – more than the number of the state's elementary and middle school teachers combined.[2] And the total number of Alaskans who rely on tips to get by is likely higher, since this number does not include tipped workers in other occupations.

   - But the BLS employer survey reports that as of 2007 Alaska's waiters and waitresses earned just $9.67 an hour even after tips – about $2.50 more than the minimum wage at the time, but less than half of the average hourly wage in the state ($22.00).[3]

   - Over the course of a year, the average waiter or waitress earns $20,114 – just below the federal poverty line for a family of three in Alaska.[4] In reality, even a single adult Alaskan can have trouble making ends meet on less than $10 per hour, and more realistic calculations find that a one-parent, one-child family needs to earn closer to $38,000 annually (about $18.28 per hour) to get by in Anchorage – and closer to $44,000 in rural Alaska.[5]

2. **Tipped workers need a strong minimum wage because they can't count on tips.**

   - Tips are notoriously erratic – varying based on broader economic trends, and from season-to-season or even shift-to-shift. This is especially true now, as national reports show that economically struggling customers are leaving smaller tips.

   - Workers who rely on tips are open to sudden pay drops that prevent them from paying their bills and caring for their families.

   - States that, unlike Alaska, allow employers to pay tipped workers less than the minimum wage under complicated "tip credit" systems have found that they are vulnerable to abuse that results in many tipped workers being paid very low wages and not receiving all of their tips.

   - Rejecting this approach, Alaska has followed the approach of other western states including California, Minnesota, Montana, Nevada, Oregon, and Washington by requiring employers to pay tipped workers the full minimum wage in order to ensure workers like the waitress at the local diner receive a dependable base income that cushions them against economic hardship.

3. **Across the country, tipped workers are overwhelmingly working women, and a disproportionate share live in poverty.**

   - NELP's analysis of the Current Population Survey shows that 62% of tipped workers overall and 72% of waiters and waitresses are women. More than two-thirds of tipped workers are adults 21 and older, and 86% of waiters and waitresses are over 19.

   - Tipped workers like waiters and waitresses face triple the poverty rate of the workforce as a whole, with one in seven living in poverty (14.9%).

4. **Studies of states and cities that have high tipped worker minimum wages consistently show that the tipped worker minimum wage – like the minimum wage in general – is simply not a major factor, one way or the other, in the economic health of the industries that employ these workers.**

   - For example, a 2006 study the Fiscal Policy Institute found that the 10 states that had raised their minimum wages (and tipped worker minimum wages) between 1998 and 2003 had *faster* job growth in their small businesses than the 40 other states.[6]

   - In a 2006 study, Dartmouth economist Paul Wolfson found no evidence of job loss in the restaurant industries of 17 states and the District of Columbia that had raised their minimum wages and tipped worker minimum wages (the latter in 16 of those 18 jurisdictions).[7]

   - A University of California study of San Francisco's restaurant industry found no restaurant closures, job loss, or substantial price increases after the city raised the minimum wage for all workers – including tipped workers – by $1.75 an hour in 2004.[8]

   - Even the National Restaurant Association's own analysis of industry trends projects that Alaska will be one of the top five states in terms of restaurant job growth over the next decade —joining Nevada, another state that requires tipped workers be paid the full minimum wage ($6.85).[9]

Note: This exhibit shows how much more or less it would cost for a family of four to live in different cities while maintaining the same standard of living.
Source: Runzheimer International, Runzheimer's Living Cost Index, *February 2008*

show that it generally costs a little extra to live in Alaska – and in some cases more than just a little.

ACCRA index says Alaska cities cost more

Every quarter the ACCRA[5] Cost of Living Index provides comparisons of living costs for about 300 urban areas in the United States. ACCRA's focus is on professional and managerial households with incomes in the top 20 percent for the area and is often used by companies trying to equalize pay for their employees in different locations.

[5] The ACCRA Cost of Living Index was originally produced by the American Chamber of Commerce Researchers Association. It's now produced by The Council for Community and Economic Research, but the index's name hasn't been changed.

The data used in the ACCRA index are collected in each city by organizations that volunteer for the task. As a result, there is more room for error than in some surveys and ACCRA encourages users not to use the percentage differences produced by the index as exact measures.

The most recent ACCRA data include three Alaska cities – Anchorage, Fairbanks and Kodiak – and indicate that all three are at least 23 percent more expensive than the average city in the index. (See Exhibit 7.) Until recently, Juneau was regularly included in the index and was generally the most expensive of the Alaska cities studied.

The three Alaska cities are more expensive than average in every category – groceries, housing,

critics and those trying to understand what's behind changes to the overall CPI.

What's more, there's an especially wide range of dollar amounts that consumers spend on housing, making it more likely that a person's individual expenses will differ from the calculated average.

Some people have paid off their home loans and pay only property taxes and maintenance costs, neither of which are likely to change significantly with the vagaries of housing markets. Others spend very little on housing because they live with parents or other relatives. On the other end of the spectrum, new homeowners can pay large monthly mortgage payments and see increases far in excess of those represented by the CPI.

Where is inflation headed?

Whether inflation will stay low is impossible to predict with any certainty, but it appears unlikely. Most forecasts for U.S. inflation are generally higher, due to the current trends in both energy and food costs, and in three out of the first four months of 2008[3] the national CPI has been up at least 4 percent over the year.

Alaska Cities Generally More Expensive 7

Note: Index numbers represent a comparison to the average for all cities for which ACCRA volunteers collected data.

[1] The ACCRA Cost of Living Index was originally produced by the American Chamber of Commerce Researchers Association. It's now produced by The Council for Community and Economic Research. The focus of the index, which has been published since 1968, is on professional and managerial households with incomes in the top 20 percent for the area.

Source: ACCRA Cost of Living Index

The higher national inflation has been driven largely by rising energy and food prices, increases Anchorage is unlikely to escape. Consultants for the Alaska Permanent Fund Corporation, which uses the CPI to make sure the principal of the Permanent Fund keeps up with inflation, have forecasted a 2.8 percent U.S. inflation rate for the next five years.[4] Anchorage data for the first half of 2008 will be released in late July.

The CPI can't be used for geographic comparisons

The CPI gives the most authoritative answer to how much prices are rising over time in a particular location, but it is not designed to say whether one location is more expensive than another. Index numbers for the U.S. CPI are higher than they are for Anchorage, but that only means that prices have increased more nationally than they have for Anchorage since the 1982-1984 base period (when the index was set at 100).

Studies and surveys designed to compare the cost of living in different locations continue to

[3] The national CPI is produced every month. Monthly CPI data are also available for the nation's four Census regions (Northeast, Midwest, South and West) and for three major metropolitan areas. Data for 11 metropolitan areas are published every other month. Anchorage is in a group of 13 smaller metropolitan areas for which data are published every six months.

[4] The forecast comes from the investment consulting firm, Callan Associates.

State Minimum Wages

Updated December 17, 2008

State	Minimum Wage	Future Scheduled Increases
Alabama (F)	$6.55	$7.25 July 24, 2009
Alaska	$7.15	
Arizona	$6.90	*
Arkansas	$6.25	
California	$8.00	
Colorado	$7.02	*
Connecticut	$7.65	$8.00 Jan. 1, 2009; $8.25 Jan. 1, 2010
Delaware	$7.15	
District of Columbia	$7.55	$8.25 July 24, 2009
Florida	$6.79	*
Georgia (F)	$6.55	$7.25 July 24, 2009
Hawaii	$7.25	
Idaho (F)	$6.55	$7.25 July 24, 2009
Illinois	$7.75	$8.00 July 1, 2009; $8.25 July 1, 2010
Indiana (F)	$5.85	$6.55 July 24, 2008; $7.25 July 24, 2009
Iowa	$7.25	
Kansas	$6.55	$7.25 July 24, 2009
Kentucky (F)	$6.55	$7.25 July 24, 2009
Louisiana (F)	$6.55	$7.25 July 24, 2009
Maine	$7.25	$7.50 Oct. 1, 2009
Maryland	$6.55	$7.25 July 24, 2009
Massachusetts	$8.00	
Michigan	$7.40	
Minnesota	$6.15 (1)	
Mississippi (F)	$6.55	$7.25 July 24, 2009
Missouri	$6.65	*
Montana	$6.55	$7.25 July 24, 2009*
Nebraska	$6.55	$7.25 July 24, 2009
Nevada	$6.85 (2)/ $5.30 (3)	*
New Hampshire	$7.25	
New Jersey	$7.15	
New Mexico	$6.50	$7.50 Jan. 1, 2009
New York	$7.15	$7.25 July 24, 2009
North Carolina	$6.55	$7.25 July 24, 2009
North Dakota	$6.55	$7.25 July 24, 2009
Ohio	$7.00 (4)	
Oklahoma	$6.55	$7.25 July 24, 2009
Oregon	$7.95	*
Pennsylvania	$7.15	$7.25 July 24, 2009
Rhode Island	$7.40	
South Carolina (F)	$6.55	$7.25 July 24, 2009

South Dakota	$6.55	$7.25 July 24, 2009
Tennessee (F)	$6.55	$7.25 July 24, 2009
Texas	$6.55	$7.25 July 24, 2009
Utah (F)	$6.55	$7.25 July 24, 2009
Vermont	$7.68	*
Virginia (F)	$6.55	$7.25 July 24, 2009
Washington	$8.07	*
West Virginia	$7.25	
Wisconsin	$6.50	
Wyoming (F)	$6.55	$7.25 July 24, 2009

(F) - State does not have its own minimum wage laws, but adheres to federal minimum wage requirements.
* Future annual increases indexed to cost of living.
(1) Applies to employers with an annual sales volume of more than $625,000. The federal minimum wage applies to employers with annual sales of $625,000 or less.
(2) Without benefits. (3) With benefits.
(4) Applies to employers with an annual sales volume of $255,000 or more. The federal minimum wage applies to employers with annual sales less than $255,000.

Letter in Support of Increasing Minimum Wage

Name: Anthony Scenes Adams
Address:
533 price st. #2
Anch, Ak, 99508
Phone Number: (907) 764-1430

During the 2009 State Legislature, Senate Bill 1 is sponsored by Senators Bill WIELECHOWSKI, Johnny ELLIS, Joe THOMAS, and Bettye DAVIS. This very important Bill could increase Alaska's minimum hourly wage from it's current $7.15 to a potential $8.75 per hour. Once increased, the minimum wage will be adjusted annually (every year) according to a determined rate of inflation. I support this piece of legislation and would like the Senate sponsors, and other like-minded Senators, to vote for this increase. Here are my reasons why:

I believe that the minnimum wage as it is is well under enough to support and sustain the average americans lifestyle even with it at its minimums. I believe that america and the world is based on the workforce as its backbone and every american should be able to survive on a hard days work. even if unpractical, any step in that direction helps

Thank you for taking my thoughts into consideration. I am a registered voter. If you have any questions, please call me at the above number.

PSPA

PACIFIC SEAFOOD PROCESSORS ASSOCIATION
Est. 1914

March 25, 2009

Senator Bert Stedman, Co-chairman
Senator Lyman Hoffman, Co-chairman
Senate Finance Committee
Alaska Legislature
State Capitol
Juneau, AK 99801

RE: SB1 Alaska Minimum Wage

Dear Senators Stedman and Hoffman,

Pacific Seafood Processors Association (PSPA) and its member companies with processing plants in many Alaska communities are very concerned about proposed legislation to significantly raise Alaska's minimum wage and want to make sure legislators are aware of the economic impacts that such an increase, coming at this time, could have. This action could negatively impact not only the seafood processing industry and its workforce, but also fishermen, other businesses, communities, and state revenues that depend on a healthy, viable seafood industry.

PSPA is a trade association of seafood processing companies with operations in many locations throughout coastal Alaska, including Ketchikan, Sitka, Kodiak, Unalaska/Dutch Harbor, Valdez, Dillingham, Naknek, Pederson Point, Togiak, Port Moller, and King Cove. Our member companies purchase, process, and market millions of pounds of Alaska seafood every year. They provide thousands of direct and indirect jobs in Alaska, markets to fishermen, and millions of dollars in tax revenues to Alaska communities and the State.

A huge portion of the operating costs of the seafood processing industry is the cost of labor. While the starting wage for many entry level positions is minimum wage, most employees move up from that wage quickly. However, as a practical matter, a mandated pay hike at the entry level requires pay scales above that to move up accordingly. Much of the seafood workforce works many hours of overtime at 'time-and-a-half' pay, bringing their average hourly pay to considerably higher than their base wage. Additionally, companies often cover the high cost of transportation for employees to and from remote locations, as well as provide them with room and board. Many also provide health benefits and 401-K plans. Thus, while many entry level workers are nominally "minimum wage workers," their total compensation package is far better than simple wage tables might indicate.

While the effects of the current worldwide economic recession have been slower in manifesting themselves in Alaska than in many other areas, the seafood industry is now seeing that freight train coming right at it. Please see the attached article from Seafood.com entitled, "Another Shoe to Drop: Credit Woes in the Seafood Industry." As the article explains, even seafood companies with good access

222 Seward Street, Suite 200
Juneau, AK 99801
Phone (907) 586-6366
Fax (907) 586-4618
www.pspafish.net

to credit for their operations are finding that many of their customers – even major, long time customers of Alaska seafood – are having trouble getting credit. Additionally, insurance to protect against losses due to customers that default on their purchases is getting harder and harder to obtain. At the retail end, budget-conscious consumers are dining out less often and seeking lower-priced proteins than seafood for their meals in restaurants and at home. Seafood markets are tightening, profit margins are shrinking, and the ability of the seafood processing industry to absorb extra costs is evaporating. Given the economic climate, it is not realistic to think that extra costs can be passed along to the consumer.

The options and choices that would be available to seafood companies faced with a significant increase in labor costs under current circumstances are not good ones. They would have to consider actions such as spending less on supplies and services in local communities; postponing plant maintenance and upgrades; closing some plants that are already only marginally profitable; reducing or eliminating worker benefit packages; replacing some of their workforce with more mechanization; lowering prices paid to fishermen to obtain raw product; and reducing expenditures on the kinds of quality improvements and new product development that keeps Alaska seafood competitive in world markets. Seafood companies don't want to have to take *any* of those actions However, the current economic situation is an extraordinary one and an increase in labor costs right now would likely result in the need for some painful actions.

With the upcoming hike in the federal minimum wage, Alaska's seafood industry, like most other employers, will be absorbing a 10-cent hike in minimum wage this July, just as the industry enters the peak of the salmon season and the summer pollock season. With the large amount of overtime pay that workers earn in this industry, even the 10-cent hike will equate to millions of dollars in additional labor costs to the processing industry.

In the last few weeks economists have noted an increase in unemployment in Alaska and signs that Alaska will enter an economic recession this year. PSPA respectfully requests that the legislature carefully consider the potential short and long term ramifications of substantially increasing labor costs for Alaska businesses at this time of economic uncertainty. Our member companies very much appreciate and value their employees and want to be able to keep them well-employed. Under current economic conditions, they believe that that can best be achieved without another increase in minimum wage.

Please feel free to call on our association or member companies if you would like to discuss the concerns we have outlined.

Sincerely,

Mary McDowell

SEAFOOD NEWS.COM

Another Shoe to Drop: Credit woes in the Seafood Industry (editorial)

SEAFOOD.COM NEWS by John Sackton - March 18, 2009 - (editorial comment and analysis)

The first two days of the Boston Seafood Show were very upbeat - but I left the show at the end of the day yesterday feeling a little more somber.

The problem: The seafood industry is about the see much more fallout from the credit crunch.

On both coasts, and in Canada and Alaska, seafood producers are gearing up for a new season. That means they have to buy fish and shellfish, build up inventories, and then sell down those products over the course of the year.

In many fisheries, there are two or three players who - due their access to capital, strong balance sheets, or strong sales channels - are able to finance large amounts of product and take a position. Their activities stabilize prices and their financial resources set a foundation on which the rest of the industry operates - mostly as competitors - either forced to match their purchase prices, or able to bid product away (in smaller volumes) by paying higher prices or in some cases selling at lower prices, or sometimes doing both and just operating on much thinner margins.

My worry today, as I left the show, was how strongly these dominant buyers would show up this year, and if so, would they be financially strong enough. And if they show up, as I believe they will, what about the smaller companies operating on the thinner margins. Many will be at risk.

Here is the problem: over the past six months there has been a tremendous deleveraging of bank and insurance company exposure to credit risk. One of the major ways credit risk is handled in the seafood industry is through receivables insurance, and financial covenants from lenders like banks that limit the amount of exposure a seller has to particular customers.

Banks and insurers have been chopping these limits down as fast as they can - so that major national chains may not even qualify for credit insurance, or their receivables may not count towards maintaining the financial ratios that some companies are required to maintain.

Now word at the show is that some of the larger seafood companies may be being told by their banks that their credit lines are being marked down due to the lower amount of credit risk and receivable risk the lenders feel comfortable with.

All of a sudden a new fishing season is opening when most every company will want to be dealing on a cash basis: buy the product, turn it over for cash, buy more product. Few companies will take the risk to buy and hold - so it is an open question as to where price and market stability will come from. On an aggregate basis, there may be far less money available to finance the seafood buy than was available last year.

This is a recipe for more bankruptcies and consolidation in the industry. The company that can carry the cost of an item for 4 to 8 weeks will be stronger than the company that needs a cash turn in 7 days. In some cases, this is going to force companies out of business and lead to more consolidations.

The recent bankruptcy in Denmark of Hessleholt - a $120 million company with two processing plants and 160 employees - was clearly brought about by cutbacks in their customers' ability to get credit insurance. Their salmon plant, which produced 12,000 tons a year, was shut down less than two weeks before the entire company entered administration. This week, they elected to shut the entire company.

At the time, Managing director Claus Raabye said that the withdrawal of credit insurance from their customers was the primary reason. As the customers lost their credit insurance, the ability of Hesselholt to make sales got more and more restrictive, likely due to the fact that their own lenders required such coverage. Eventually the plant reached a tipping point where sales would not cover expenses.

In the UK, credit insurance coverage was pulled from Brakes - a broadline foodservice distributor who also owns a fresh fish distributor, M&J Seafoods. All of a sudden some companies could no longer sell to M&J except for cash.

In France, some fish is being left unsold on auctions due to the lack of buyers for the first time in many years, because buyers are pulling back their volumes to what they can sell for cash and a more limited pool of approved customers with credit insurance.

In the U.S., the potential fallout from this situation is very bleak. First, it will mean more bankruptcies and shut downs for seafood companies that are pushed over the brink when they cannot maintain the sales volumes needed to operate. They are squeezed when they can't get the credit to buy products, and they can't get the agreements to finance receivables. The result is a smaller and smaller pool of actual sales to cover operations.

Secondly, it will put severe pressure on prices. Some species, like lobster and cod, have already seen dramatic declines of up to 50% from their highs in the past year or two. Others are holding their price levels for now, but in some cases the new season production has not yet started - and that is when the pressure to turn product for cash will become stronger.

So the upbeat mood of the show - where many serious buyers want to buy seafood - has to be tempered with the reality that many won't have credit coverage to afford it, and companies who do sell will survive only by taking on more risk.

Some will undoubtedly not make it. They will experience a catastrophic loss from a customer bankruptcy that is not covered, or they will simply not be able to turn over enough sales to cover expenses. So I left the show with a knot in my stomach over the economic upheavals still to come.

NFIB
The Voice of Small Business®

Alaska

March 24, 2009

The Honorable Bill Wielechowski
Alaska State Senate
State Capitol Building
Juneau, Alaska 99801-1182

RE: Committee Substitute for Senate Bill 1 (L&C)

Dear Senator Wielechowski,

On behalf of the National Federation of Independent Business/Alaska, I wish to express our continued opposition to Senate Bill 1. The National Federation of Independent Business/Alaska is the largest small-business advocacy group in Alaska.

We appreciate that the CPI adjustment has been removed from SB 1. That does resolve one major objection to the original bill. However, increasing the Alaska minimum wage by $1.10 in this economic environment is not in the best interest of neither employees nor small businesses in Alaska. While NFIB/AK generally opposes any increase in the minimum wage, we do agree that it is appropriate to adjust the state minimum wage ($7.15/hr) to the same level as the federal minimum wage ($7.25/hr) beginning July 24, 2009.

The minimum wage is an entry-level wage and few remain at that level for an extended time. One study shows that most minimum wage jobs are not career jobs or are "tip eligible" positions. About two-thirds of minimum wage workers earned more than the minimum wage one year later. In the best longitudinal panel study of entry-level workers, only 14 percent earned less than $1.00 above the minimum eight years later.

Minimum wage increases hurt small businesses two ways - both direct and indirect. The literature indicates employment losses of 2 percent to 6 percent for each 10 percent increase in the minimum wage. Mandatory wage increases leave small business owners with fewer choices in how to compensate their employees. To cope with minimum wage increases, in addition to job cuts, small business owners reduce hours, leave jobs vacant, reduce wage increases, increase prices where feasible, and take hits in the bottom line.

Mandatory wage increases hurt not only small businesses, but their employees as well. Big corporations do not have to absorb the cost because most minimum-wage jobs are offered by small businesses. Government manipulation of the starting wage has failed

National Federation of Independent Business — ALASKA
P.O. Box 34761 • Juneau, AK 99803 • 907-723-6667 • denny.dewitt@nfib.org

as tool of social and/or economic justice. It has not been proven to reduce poverty or narrow the income gap and puts a stranglehold on Alaska's top job creators: small businesses. The overwhelming majority of economists continue to affirm the job-killing nature of mandatory wage increases. Mandatory minimum-wage increases end up reducing employment levels for those people with the lowest skills.

Sincerely yours,

Dennis L. DeWitt
Alaska State Lobbyist

ALASKA COALITION ON HOUSING & HOMELESSNESS

RECEIVED
MAR 19 2009

Dear Senator Stedman,

I am the chair of the Alaska Coalition on Housing and Homelessness, a state wide nonprofit whose mission is to work to develop strategies to alleviate homelessness and to increase the availability of affordable housing in Alaska. A step towards achieving affordable housing is paying a livable wage that values workers and helps them achieve independence and the dignity to support themselves and their families.

I would like to take a few moments of your time to remind you of a bill in the Senate, Senate Bill 1, "An Act increasing the minimum hourly wage; and providing for an effective date". This proposed legislation is sponsored by Senators Wielechowski, Ellis, Thomas, Davis, French, Paskvan and Menard is important to the working poor of Alaska.

At the current minimum wage, working full-time, the average Alaskan grosses $1,144. An average two bedroom in Anchorage is $1,013. This leaves little for food, transportation, insurance, childcare and other costs. Even with a subsidized rent, it still leaves Alaskan families scrimping to ensure that they and their children are adequately housed, fed and cared for.

Alaska's minimum wage is currently $7.15 per hour. Washington state's minimum wage is $8.55 and Oregon is $8.40. At this time, with rising costs, it is important to recognize that Alaskans deserve more than $7.15 per hour to meet their needs and the needs of their family. Senate Bill 1 would require that Alaskans receive $1 more than the federal minimum wage beginning January 2010. This is only a start in meeting the needs of low income and poor Alaskans and addressing the rising cost of living in Alaska. While we appreciate the intent of this bill and support passage of an increase in minimum wage in Alaska, we would also like to see a cost of living increase be considered such as in House Bill 125.

I have attached a resolution, endorsed by our membership, to support an increase of the minimum wage in Alaska. Thank you for your service and attention to this important issue.

Feel free to contact me at 907-743-5726 or suzi_p@awaic.org.

Sincerely,

Suzi Pearson
Chair

Alaska Coalition on Housing & Homelessness

Resolution #2009-1

WHEREAS, the Alaska Coalition on Housing & Homelessness is an organization dedicated to improving access to affordable housing for all Alaskans; and

WHEREAS, the Alaska Coalition on Housing and Homelessness recognizes that a living wage is necessary in order to improve access to and maintain affordable housing and that the current median cost of rent for a family in Anchorage is $1,013 according to the Alaska Department of Labor and Workforce Development, and

WHEREAS, according to the most recent figures available from the Alaska Department of Labor and Workforce Development, there are approximately 14,000 Alaskans earning the minimum wage; and

WHEREAS, the current minimum wage rate is $7.15/hour ($14,300/year [40 hours x 50 weeks]); and

WHEREAS, the current minimum wage rate is not sufficient to enable Alaska's working poor to obtain basic needs including affordable housing; and

WHEREAS, the current minimum wage rate adopted by the legislature in 2002, effective 2003, has remained unchanged since then, notwithstanding increases in the cost of living;

THEREFORE, BE IT RESOLVED THAT the Alaska Coalition on Housing and Homelessness supports an increase in the state's minimum wage rate and urges the Alaska State Legislature to adopt a minimum wage rate increase during the 2009 legislative session; and

BE IT FURTHER RESOLVED THAT the Alaska Coalition on Housing and Homelessness supports automatic indexing of the state's minimum wage rates so the wages of Alaska's working poor keep pace with the cost of living and urges the Alaska State Legislature to adopt automatic indexing during the 2009 legislative session.

ADOPTED THIS 18th DAY OF MARCH, 2009

ATTEST:

Suzi Pearson, Chair
Alaska Coalition on Housing and Homelessness

RECEIVED
MAR 2 6 2009

March 25, 2009

Honorable Senators Lyman Hoffman
and Bert Stedman
Co-Chairmen
Senate Finance Committee
State Capital, Juneau, Alaska 99801

Dear Senators Hoffman and Stedman:

I am writing on behalf of Trident Seafoods Corporation to provide the Finance Committee with information on how an increase in the minimum wage will impact the seafood processing industry in Alaska. Trident appreciates the opportunity to provide comment on the proposed increase.

As background, Trident is a seafood harvesting, marketing and processing company with operations throughout Alaska. Trident employs about 4,000 hourly workers at its processing facilities. Trident recruits at job fairs in Alaska and hires local residents in communities such as Kodiak, Ketchikan and Cordova. Local labor is not always available in the numbers necessary to conduct our operations, however, and some of our plants are located in remote locations, such as Akutan, where there is no resident workforce. As a consequence, many of our processing workers are hired from outside of Alaska.

Below is a list of Trident's processing facilities that operate in Alaska as well as the number of hourly Trident employees at each operation during peak production periods:

Shoreplants	Hourly Employees
Akutan	900
St. Paul	210
Sand Point	305
Kodiak	389
Ketchikan	386
Naknek	521
Cordova	430
Chignik	185
Petersburg	153
Floating Processors	
Alaska Packer	136
Aleutian Falcon	98
Arctic 5	9
Billikin	5
Bountiful	29
Independence	224
Pribilof	87
Total	**4,067**

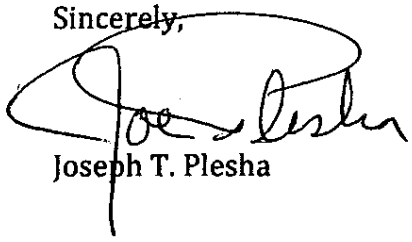
Many of Trident's hourly employees are paid more than the statutory minimum wage. When an employee is first hired he or she starts at the minimum wage. After six months the employee's hourly rate is increased by $0.15, increased $0.15 again after another six months, and increased an additional $0.20 after another six months; thus employees who have worked at Trident for a year and a half receive $0.50 above the minimum wage. The Federal minimum wage will increase to $7.25 this summer and so Trident will increase the hourly wage earned by starting employees to that level, and continue to increase wages for experienced employees as in the past. There are also often significant overtime opportunities and Trident, of course, provides housing, meals and transportation costs.

Trident would like members of the Committee to be aware that a $0.50 increase in the minimum wage rate will increase the company's costs by over $4,000,000. A $1.00 increase in the minimum wage rate would increase costs by $8,000,000. This increase is for Trident alone. Other seafood processing companies would be similarly impacted.

Alaska's seafood processing industry provides an important economic base for many coastal communities throughout the State. An increase in the statutory minimum wage rate will likely affect seafood processors more than any other sector of the State's economy. A large increase in costs will make it more difficult for the industry to reinvest in its operations as well as impact the price it is able to pay for

the fish delivered to its plants. We are grateful to the Committee for taking these issues into consideration as it moves forward with consideration of legislation to increase the State's minimum wage rate.

Sincerely,



Joseph T. Plesha

ROOM 514
JUNEAU, ALASKA 99801-1182

(907) 465-3707
FAX (907) 465-4821

CSSB 4 (CRA) – Coastal Management Programs

Version 26-LS0019/R, January, 2009
STAFF: Tim Benintendi, 465-4989

SPONSOR STATEMENT

In 2003, HB 191 instituted significant changes to the Alaska Coastal Management Program (ACMP). It unduly impacted local participation in development reviews and approvals affecting both state and federal actions in the coastal zone. Prior to 2003, the program was not felt to be significantly problematic. Currently, there are 28 management districts either approved, or under review for approval. For a list of current districts, see the Alaska Coastal Management Program website at (http://alaskacoast.state.ak.us/district/html/progressfinal.htm). To identify a community within a particular coastal district, see http://alaskacoast.state.ak.us/explore/communityindex.pdf .

The authority for a Consistency Review Process, used to implement the ACMP, is found at 11 AAC 110. This process reviews proposed development activities for conformity with state laws and regulations,, and district enforceable policies. 11 AAC 112 and 11 AAC 114 also apply. The governing statutes are AS 46.39 and AS 46.40. With the changes from 2003, regulations adopted by the Department of Natural Resources severely limited the ability of coastal districts to establish enforceable policies regarding the eventual effects of development on coastal resources and uses. So dramatic were the changes that the federal Office of Oceans and Coastal Resource Management formally reviewed state actions for compliance, and took two years to determine acceptance.

Since the 2003 changes, Alaska's coastal districts have dealt with controversy and delay by DNR where achieving suitable district management plans are concerned. Formerly, disputes over approval of district plans were resolved by the Coastal Policy Council. Disbanding the Council under HB 191 concentrated all decision-making power within DNR.

CSSB 4 (CRA) would establish the Alaska Coastal Policy Board within the Department of Natural Resources, and restore an authoritative role for local residents, one that was working acceptably prior to 2003. The new board would be much trimmer than the pre-2003 panel of seventeen members. Nine members would compose the new board, including five public members appointed by the governor. One of the five would be at-large from any of the coastal districts, and the others would be appointed from four defined regions: Northwest Alaska, Southwest Alaska, Upper Cook Inlet, and Southeast Alaska. Filling out the board membership

would be the commissioners of DEC, F&G, DNR, and CCED. DNR would continue to provide day-to-day management and support.

This bill would also reinstate locally-generated enforceable policies, streamline project reviews, provide Board approval of agency-generated regulations, provide for district management plan approvals, allow for receiving grants and other monies, and empower the Board with other authorities.

The primary thrust of CSSB 4 (CRA) is to return significant authority to local district residents by sharing power over the Alaska Coastal Management Program ,between them and the identified commissioners. Since 2003, all authority has rested solely with the Commissioner of the Department of Natural Resources.

SECTIONAL ANALYSIS

Senate Bill 4 – Coastal Management Programs

Version 26-LS0019/A, January, 2009

STAFF: Tim Benintendi, 465-4989

SECTION 1: Establishes the ALASKA COASTAL POLICY BOARD, composed of four coastal district members and the commissioners of DNR, F&G, and DEC. One co-chair will come from the district membership, and one co-chair from the commissioners. Also provides administrative guidelines.

SECTION 2: Allows but does not mandate that regulations approved by the Board may be adopted by DNR.

SECTION 3: Establishes powers for the Board, including taking reasonable action to carry out provisions of AS 46.39 (administration) and AS 46.40 (ACMP).

SECTION 4: Establishes the duties of the Board.

SECTION 5: Makes the Board subject to the Administrative Procedures Act, AS 46.39.900.

SECTION 6: Establishes authority for the Board to approve ACMP program changes and to evaluate the effectiveness of district plans.

SECTION 7: Adds "subsistence" to the list of values included in the ACMP objectives.

SECTION 8: Makes a conforming amendment requiring approval of ACMP regulations adopted by DNR, and exclusion of DEC from the ACMP. This provides that permits issued by DEC are automatically considered "consistent" with ACMP requirements.

SECTION 9: Retains DEC's authority for determining consistency of matters it regulates. It also requires public notice for DEC consistency findings for projects located on federal lands and waters when there are no DEC authorizations.

SECTION 10: Moves language deleted from AS 46.40.040(a) to a new section outlining the responsibilities of the Board. Subsection (d) clarifies that aspects of air and water discharges not covered by DEC laws or regulations may be reviewed for consistency with the statewide standards and district enforceable policies. DEC retains authority to determine a project's consistency with its laws.

SECTION 11: Establishes authority for the Board to approve coastal district plans that are required to be submitted every ten years, as well as outlining criteria for new coastal district management plans.

SECTION 12: Establishes authority for the Board to approve coastal district plans if it finds the plans meet the district plan criteria. It also establishes the Board's role in mediation of decisions on the approval of district plans.

SECTION 13: Outlines requirements for Board approval of district plans, and amends three criteria for approval of enforceable policies to clarify what policies may address.

SECTION 14: Clarifies the legislative intent of HB 191 (Chapter 24 SLA 03) to allow districts to establish enforceable policies for activities that may affect a coastal use or resource.

SECTIONS 15, 16, 17: Make conforming amendments regarding approval of ACMP regulations by the Board.

SECTION 18: Makes a conforming amendment regarding approval of ACMP regulations by the Board and replaces the term "subsequent review" with the commonly used term "elevation." This section also requires the concurrence of resource agencies for resolutions of elevations of a proposed consistency determination.

SECTION 19: Clarifies that the aspect of an activity covered by a general or nationwide permit is removed from the scope of an ACMP consistency review while allowing individual review of aspects of an activity not covered by the general or nationwide permit. It also eliminates the exemption of air and water quality permits from the coordinated ACMP review process.

SECTION 20: Makes a conforming amendment regarding Board approval of coastal district plans.

SECTION 21: Clarifies that the ACMP regulations shall address activities on federal waters, and that seismic surveys in federal Outer Continental Shelf waters are subject to ACMP reviews.

SECTION 22: Makes a conforming amendment regarding approval of ACMP regulations by the Board, including regulations listing which authorizations trigger a consistency review and the list of activities that are categorically or generally consistent (i.e., activities that do not require an individual ACMP review).

SECTION 23: This section exempts federal activities and federally-permitted activities from the 90-day review schedule. This exemption allows extension of reviews for projects with federal approvals which tend to be more complex reviews. It also requires suspension of the 90-day time frame when an applicant is required to provide additional information.

SECTION 24: Establishes the Board's role in reviewing a petition regarding non-implementation of a coastal district program.

SECTION 25, 27, 28: These sections make conforming amendments to Board action on a petition regarding non-implementation issues. Ties to SECTION 24.

SECTION 26: Provides that the Superior Courts have jurisdiction to enforce orders of the Board.

SECTION 29: Makes a confirming amendment to Board approval of district plans including areas meriting special attention.

SECTION 30: Makes a conforming amendment to the definition of "coastal zone" regarding the Board's role in approving coastal boundary changes.

SECTION 31: Makes a conforming amendment to the definition of "district coastal management plan" regarding the Board's role in approving district plans.

SECTION 32: Makes a conforming amendment to the definition of "enforceable policy" regarding the Board's role in approving policies included in district plans.

SECTION 33: Defines "Board."

SECTION 34: Repeals AS 46.40.096(i) because DEC authorizations are no longer removed from the consistency review process.

SECTIONAL ANALYSIS

CSSB 4 (CRA) Coastal Management Programs

Version 26-LS0019/ R, February 5, 2009

STAFF: Tim Benintendi, 465-4989

(Compared to SB 4)

Section 1: Establishes the ALASKA COASTAL POLICY BOARD, composed of five coastal district members and the commissioners of DNR, F&G, DEC, and COMMERCE. One co-chair will come from the district membership, and one co-chair from the commissioners. This board is smaller than the 17-member panel prior to the 2003 changes. Differences from SB 4 are: Added one district member, and added commissioner of CCED to Board.

Section 2: Clarifies that DNR coordinates all project consistency reviews for projects with only departmental permits or for projects that involve two or more other state resource agency permits. Not included in SB 4.

Section 3: Allows but does not mandate that regulations approved by the Board may be adopted by DNR. Same provision is in SB 4, Section 2.

Section 4: Establishes powers of the Board, including taking reasonable action to carry out provisions of AS 46.39 (administration) and AS 46.40 (ACMP). Same provision is in SB 4, Section 3.

Section 5: Provides for the Board to approve statewide ACMP standards and criteria, as developed by the department, for district plan approval.

Section 6: Defines "Board" in AS 46.39.900. Same provisions in SB 4, Section 5.

Section 7: Provides for approval of ACMP program changes by the Board. Same provisions in SB 4, Section 6.

Section 8: Adds "subsistence" to the list of values included in the ACMP objectives. Same provisions in SB 4, Section 7.

Section 9: Subsection (a) removes requirement for district enforceable policies to meet the statewide standards. Clarifies that district enforceable policies apply to all land and water issues subject to the plan. Removes requirement to describe proper and improper uses. Changes the term "areas meriting special attention" to "special management areas." Subsection (b) requires district enforceable policies to be clear and concise, either prescriptive (how to proceed toward goal) or performance-based (goal achievement by various methods), and stricter or more specific policy than state or federal laws. If stricter, support may include traditional, local knowledge. This section was not included in SB 4.

Section 10: Makes conforming changes for Board approval of ACMP regulations. Deletes language in AS 46.40.040(a)(2) – (5); moved to a new subsection (d). Compares to SB 4, Section 8, changing "areas of the coast that merit special attention," to "special management areas."

Section 11: Moves language deleted from Section 10, to a new section outlining responsibilities of the Board. Not included in SB 4.

Section 12: Makes conforming amendments to clarify that district plans must be approved by the Board. Not included in SB 4.

Section 13: Establishes the review and approval process for coastal district plans, including provisions for districts to work with DNR to resolve issues before the Board approves a plan. Allows districts to request mediation of the Board's decision. Not included in SB 4.

Section 14: Establishes criteria for Board approval of district plans and clarifies that district enforceable policies may not address matters pre-empted by state or federal laws. Rewritten from SB 4.

Section 15: Makes conforming changes for Board approval of ACMP regulations governing the consistency review and determination process. Same provision is in SB 4, Section 15.

Section 16: Changes the term "subsequent review" to the commonly used term "elevation" and clarifies that the three state resource agencies make the final decision on a project elevation. Modifies SB 4, Section 18, by allowing more autonomy for state resource agencies in preparing a consistency review and determination.

Section 17: Clarifies that aspects of an activity covered by a general or nationwide permit are excluded from a consistency review (rather than the entire activity). Same provision is in SB 4, Section 19.

Section 18: Makes conforming changes for Board approval of district enforceable policies. Same provision is in SB 4, Section 20.

Section 19: Allows for ACMP consistency reviews of projects inland of the coastal zone, if there would be direct and significant effects to coastal uses or resources. Clarifies that seismic survey activities in federal waters are subject to consistency reviews. Differences from SB 4, Section 21, are the inclusion of activities and impacts "inland from the coastal zone," in federal "waters," and "seismic survey activity" on the Outer Continental Shelf. DNR currently exempts this activity from review.

Section 20: Clarifies that categorically or generally consistent activities are for routine projects. From SB 4, Section 22 of this version, deletes a reference mandating Board approval.

Section 21: Exempts federal activities and federally-permitted projects from the 90-day consistency review time limit. Allows extension of the time limit for adjudication of coastal district permits. Differs from SB 4, Section 23 by adding language for a 30-day extension period for an affected coastal resource district to accommodate the adjudication process.

Section 22: Clarifies that the term "affected coastal resource district" includes districts with a publicly-reviewed draft plan or approved plan. Not included in SB 4.

Section 23: Requires an individual consistency review for each Outer Continental Shelf lease sale. Not included in SB 4. Would make each lease sale a separate consistency review.

Section 24: Gives the Board authority to act on a petition regarding non-implementation of a coastal district plan. Same provision is in SB 4, Section 24.

Sections 25, 27, 28: Make conforming amendments regarding Board action on a petition regarding non-implementation of a coastal district plan. Ties to Section 24. Same provisions are in SB 4, Sections 25, 27, 28.

Section 26: Provides that the Superior Courts have jurisdiction to enforce orders of the Board, as well as the department. Same provision is in SB 4, Section 26.

Section 29: Clarifies that a coastal resource service area (CRSA) may accept new matter submitted by a city or village into its coastal management plan. Not included in SB 4.

Section 30: Clarifies that municipalities are part of a CRSA unless they choose to be excluded. Not included in SB 4. There are currently no 3rd class boroughs in Alaska.

Section 31: Removes language about boroughs that do not exercise planning and zoning authority. Not included in SB 4.

Section 32: Makes a conforming amendment clarifying the board's role in coastal boundary changes. Same provision is in SB 4, Section 30.

Section 33, 34: Make conforming amendments regarding the Board's role in approving district plans and district enforceable policies. Same provisions are in SB 4, Sections 31, 32.

Section 35: Clarifies that the term "project" applies to federal activities and federally-permitted activities, including individual lease sales. Not included in SB 4.

Section 36: Adds new definitions for the terms "Board" and "special management areas." Definition of "special management areas" was not included in SB 4.

Section 37: Repeals the exemption for DEC permits from consistency reviews (eliminates DEC carve-out) (AS 46.40.040(b)–(c), not included in SB 4,

and AS 46.40.096(i)). Only this reference was included in SB 4.

Removes the requirement for re-submittal of district plans every 10 years (AS 46.40.050(a)). Not included in SB 4.

Removes the exemption of shallow gas projects from ACMP reviews (AS 46.40.205). Not included in SB 4.

Removes the definition for "areas meriting special attention" (AS 46.40.210(1)). Not included in SB 4.

ANALYSIS: *(Attach a separate page if necessary)*

SB 4 will have the following fiscal impact:

1. Travel - It is expected that the Coastal Policy Board (CPB) will need to meet at least four times annually to fulfill the obligations and provide the services outlined in SB 4. Travel (including air, hotel, and per diem) for appointed members, designated members, and state agency staff is included.
2. Contractual - In order to re-write the guiding regulations, DNR must secure contractual services for the promulgation and final Department of Law review of the regulations (FY 2011 only). In addition, contractual services for the CPB meetings must be procured, and will be an annual expense.
3. Supplies - The CPB meetings will require some level of supplies for ensuring the members have proper materials.

Natural Resources

(Revised 9/10/2008 OMB)

STATE OF ALASKA
2010 LEGISLATIVE SESSION

BILL NO. SB004

ANALYSIS CONTINUATION

4. Although not contemplated above as an additional expense, it is expected that coastal districts will choose to revise, amend, and seek approval for their coastal district plans. No funding is included in this fiscal note for Coastal District Plan revisions. DNR does not typically set aside any funding for plan revisions. With passage of HB 191 DNR distributed one-time federal grant award s to districts ($1,166,600) for coastal community improvements, and funds to support the efforts of Alaska Coastal Management Program (ACMP) ($909,700) and state agencies ($833,700) in the management and development of Alaska's coastal resources.

ANALYSIS: *(Attach a separate page if necessary)*

This legislation amends Alaska statutes related to the Alaska Coastal Management Program (ACMP). The bill requires that the Department of Environmental Conservation process its permits in accordance with the ACMP coastal consistency review procedures where permits are currently processed independent from those procedures. The fiscal note reflects the personnel and support costs of a new (Range 20) position to serve as DEC's ACMP Program Coordinator First-year costs include one-time equipment costs that are not reflected in subsequent years.

CS FOR SENATE BILL NO. 4( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): SENATOR OLSON

A BILL

FOR AN ACT ENTITLED

"An Act relating to the Alaska coastal management program; establishing the Alaska Coastal Policy Board; and providing for an effective date by repealing the effective date for the repeal of certain provisions relating to the Alaska coastal management program."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 46.39 is amended by adding a new section to article 1 to read:

Sec. 46.39.005. Alaska Coastal Policy Board. (a) The Alaska Coastal Policy Board is created in the Department of Natural Resources. The board consists of

(1) five public members appointed by the governor, including one at-large member from any coastal district; one public member shall be appointed from each of the following regions:

(A) northwest Alaska, including, generally, the area of the North Slope Borough and the Northwest Arctic Borough; and the Bering Strait area, including, generally, the area of the Bering Strait regional educational

New Text Underlined *[DELETED TEXT BRACKETED]*

L
2335

attendance area;

(B) southwest Alaska, including, generally, the area within the Lower Yukon, Lower Kuskokwim, and Southwest regional educational attendance areas and the Lake and Peninsula and Bristol Bay Boroughs; and the Kodiak-Aleutians area, including the Kodiak Island and area of the Aleutians East Boroughs and the area of the Aleutian, Adak, and Pribilof regional educational attendance areas;

(C) Upper Cook Inlet area, including the Municipality of Anchorage and the Matanuska-Susitna Borough; the Lower Cook Inlet area, including, generally, the Kenai Peninsula Borough; and the Prince William Sound area, including, generally, the area east of the Kenai Peninsula Borough to 141 West longitude; and

(D) Southeast Alaska, generally the area east of 141 West longitude;

(2) each of the following:

(A) the commissioner of environmental conservation;

(B) the commissioner of fish and game;

(C) the commissioner of natural resources; and

(D) the commissioner of commerce, community, and economic development.

(b) Each public member appointed by the governor under (a)(1) of this section serves a term of two years and until a successor is appointed and qualified. A public member may be reappointed.

(c) The board shall designate co-chairs, one of whom shall be selected from among the public members appointed under (a)(1) of this section and one from among the members designated in (a)(2) of this section.

(d) The governor shall appoint a permanent alternate for each member of the board. If a member of the board is unable to attend, the member shall advise the alternate, who may attend and act in the place of the member. The alternate for a commissioner serving under (a)(2) of this section shall be a deputy commissioner or the director of a division in the commissioner's department. The names of alternates

shall be filed with the board.

(e) Three public members and two designated members of the board constitute a quorum, but the board may delegate to one or more of its members the power to hold hearings. All decisions of the board shall be by a majority vote of the members present and voting.

(f) Members of the board or their alternates are entitled to per diem and travel expenses authorized by law for members of boards and commissions.

(g) Administrative support for the board shall be provided by the division in the department responsible for coastal and ocean management. The director of the division in the department responsible for coastal and ocean management, under direction of the co-chair designated by the board from the individuals listed in (a)(2) of this section, may contract with or employ persons as necessary to assist the board in carrying out the board's duties and responsibilities.

*** Sec. 2.** AS 46.39.010(a) is amended to read:

(a) The Department of Natural Resources shall render, on behalf of the state, all federal consistency determinations and certifications authorized by 16 U.S.C. 1456 (Sec. 307, Coastal Zone Management Act of 1972), and each conclusive state consistency determination when a project requires a permit, lease, or authorization **from the department or** from two or more state resource agencies.

*** Sec. 3.** AS 46.39.010(b) is amended to read:

(b) The department may adopt regulations **approved by the board** necessary to implement this chapter.

*** Sec. 4.** AS 46.39.030 is amended to read:

Sec. 46.39.030. Powers of the department and board. (a) The department may

(1) **with the approval of the board,** apply for and accept grants, contributions, and appropriations, including application for and acceptance of federal funds that may become available for coastal planning and management;

(2) contract for necessary services. [;]

(b) The board may

(1) [(3)] consult and cooperate with

(A) persons, organizations, and groups, public or private, interested in, affected by, or concerned with coastal area planning and management;

(B) agents and officials of the coastal resource districts of the state, and **with** [FEDERAL AND] state agencies concerned with or having jurisdiction over coastal planning and management;

(2) [(4)] take any reasonable action necessary to carry out the provisions of this chapter or AS 46.40.

*** Sec. 5.** AS 46.39.040 is amended to read:

Sec. 46.39.040. Duties of the board [DEPARTMENT]. In conformity with 16 U.S.C. 1451 - 1464 (Coastal Zone Management Act of 1972), as amended, the **board** [DEPARTMENT] shall

(1) **approve** [DEVELOP] statewide standards for the Alaska coastal management program [,] and criteria for the preparation and approval of district coastal management plans **developed by the department** in accordance with AS 46.40;

(2) establish continuing coordination among state agencies to facilitate the development and implementation of the Alaska coastal management program; in carrying out its duties under this paragraph, the department shall initiate an interagency program of comprehensive coastal resource planning for each geographic region of the state;

(3) **ensure** [ASSURE] continued provision of data and information to coastal resource districts to carry out their planning and management functions under the program.

*** Sec. 6.** AS 46.39.900 is amended to read:

Sec. 46.39.900. Definitions [DEFINITION]. In this chapter, unless the context requires otherwise,

(1) "board" means the Alaska Coastal Policy Board established in AS 46.39.005;

(2) "department" means the Department of Natural Resources.

*** Sec. 7.** AS 46.40.010 is amended to read:

Sec. 46.40.010. Development of Alaska coastal management program. (a) The **Alaska Coastal Policy Board** [DEPARTMENT] shall approve, in accordance with this chapter, **program changes to** the Alaska coastal management program.

(b) The **board** [DEPARTMENT] may approve the Alaska coastal management program for a portion or portions of the coastal area before approving the [COMPLETE] program **changes** under (a) of this section. Portions of the program approved under this subsection shall be incorporated into the Alaska coastal management program.

(c) The Alaska coastal management program shall be reviewed by the **board** [DEPARTMENT] and, when appropriate, revised to

(1) add newly approved district coastal management plans [,] or revisions and amendments to the Alaska coastal management program;

(2) integrate newly approved district coastal management plans [,] or revisions and amendments of district coastal management plans [,] with existing approved plans and with plans developed by state agencies;

(3) add new or revised state statutes, policies, regulations, or other appropriate material;

(4) **evaluate** [REVIEW] the effectiveness [OF IMPLEMENTATION] of district coastal management plans; and

(5) consider new information acquired by the state and coastal resource districts.

(d) All reviews and revisions shall be in accordance with the statewide standards and district plan criteria adopted under AS 46.40.040.

*** Sec. 8.** AS 46.40.020 is amended to read:

Sec. 46.40.020. Objectives. The Alaska coastal management program shall be consistent with the following objectives:

(1) the use, management, restoration, and enhancement of the overall quality of the coastal environment;

(2) the development of industrial or commercial enterprises that are consistent with the social, cultural, historic, economic, and environmental interests of the people of the state;

(3) the orderly, balanced utilization and protection of the resources of the coastal area consistent with sound conservation and sustained yield principles;

(4) the management of coastal land and water uses in such a manner that, generally, those uses **that** [WHICH] are economically or physically dependent on a coastal location are given higher priority when compared to uses **that** [WHICH] do not economically or physically require a coastal location;

(5) the protection and management of significant historic, cultural, natural, **subsistence,** and aesthetic values and natural systems or processes within the coastal area;

(6) the prevention of damage to or degradation of land and water reserved for their natural **and subsistence** values as a result of inconsistent land or water usages adjacent to that land;

(7) the recognition of the need for a continuing supply of energy to meet the requirements of the state and the contribution of a share of the state's resources to meet national energy needs; and

(8) the full and fair evaluation of all demands on the land and water in the coastal area.

* **Sec. 9.** AS 46.40.030 is amended to read:

Sec. 46.40.030. Development of district coastal management plans. (a) Coastal resource districts shall develop and adopt district coastal management plans in accordance with the provisions of this chapter. The plan adopted by a coastal resource district shall be based **on** [UPON] a municipality's existing comprehensive plan or a new comprehensive resource use plan or comprehensive statement of needs, policies, objectives, and standards governing the use of resources within the coastal area of the district. The plan must meet the [STATEWIDE STANDARDS AND] district plan criteria adopted under AS 46.40.040 and must include

(1) a delineation within the district of the boundaries of the coastal area subject to the district coastal management plan;

(2) a statement, list, or definition of the land and water uses and activities subject to the district coastal management plan;

(3) a statement of policies to be applied to **all** [THE] land and water

uses subject to the district coastal management plan **as well as policies that apply only to an area that merits special attention**; **and**

(4) [A DESCRIPTION OF THE USES AND ACTIVITIES THAT WILL BE CONSIDERED PROPER AND THE USES AND ACTIVITIES THAT WILL BE CONSIDERED IMPROPER WITH RESPECT TO THE LAND AND WATER WITHIN THE COASTAL AREA; AND

(5)] a designation of **an area that merits special attention under** [, AND THE POLICIES THAT WILL BE APPLIED TO THE USE OF AREAS WITHIN] the **district** coastal **management plan and enforceable policies that must be applicable within an area that merits special attention** [RESOURCE DISTRICT THAT MERIT SPECIAL ATTENTION].

(b) In developing enforceable policies in its coastal management plan under (a) of this section, a coastal resource district shall **ensure that the enforceable policies are**

(1) clear and concise as to the activities and persons affected by the policies and the requirements of the policies

(2) necessary given local conditions; and

(3) supported by evidence, including scientific or local knowledge, if the policies are more specific than state or federal statutes or regulations [MEET THE REQUIREMENTS OF AS 46.40.070 AND MAY NOT DUPLICATE, RESTATE, OR INCORPORATE BY REFERENCE STATUTES AND ADMINISTRATIVE REGULATIONS ADOPTED BY STATE OR FEDERAL AGENCIES].

*** Sec. 10.** AS 46.40.040(a) is amended to read:

(a) Except as provided in [(b) OF THIS SECTION AND] AS 41.17, the department shall**, by regulations approved by the board,**

(1) [BY REGULATION,] adopt under the provisions of AS 44.62 (Administrative Procedure Act) for the use of and application by coastal resource districts and state agencies for carrying out their responsibilities under this chapter, statewide standards and district coastal management plan criteria for

(A) identifying the boundaries of the coastal area subject to the

Alaska coastal management program;

(B) determining the land and water uses and activities subject to the Alaska coastal management program;

(C) developing policies applicable to the land and water uses subject to the Alaska coastal management program;

(D) developing regulations applicable to the land and water uses subject to the Alaska coastal management program;

(E) developing policies and procedures to determine whether specific proposals for the land and water uses or activities subject to the Alaska coastal management program shall be allowed;

(F) designating and developing policies for **areas that merit special attention** [THE USE OF AREAS OF THE COAST THAT MERIT SPECIAL ATTENTION]; and

(G) measuring the progress of a coastal resource district in meeting its responsibilities under this chapter;

[(2) DEVELOP AND MAINTAIN A PROGRAM OF TECHNICAL AND FINANCIAL ASSISTANCE TO AID COASTAL RESOURCE DISTRICTS IN THE DEVELOPMENT AND IMPLEMENTATION OF DISTRICT COASTAL MANAGEMENT PLANS;

(3) UNDERTAKE REVIEW AND APPROVAL OF DISTRICT COASTAL MANAGEMENT PLANS IN ACCORDANCE WITH THIS CHAPTER;

(4) INITIATE A PROCESS FOR IDENTIFYING AND MANAGING USES OF STATE CONCERN WITHIN SPECIFIC AREAS OF THE COAST;

(5) DEVELOP PROCEDURES OR GUIDELINES FOR CONSULTATION AND COORDINATION WITH FEDERAL AGENCIES MANAGING LAND OR CONDUCTING ACTIVITIES POTENTIALLY AFFECTING THE COASTAL AREA OF THE STATE;

(6) BY REGULATION,] establish a consistency review and determination or certification process that conforms to the requirements of AS 46.40.096.

* **Sec. 11.** AS 46.40.040 is amended by adding new subsections to read:

(d) Except as provided in AS 41.17, the board shall

(1) develop and maintain a program of technical and financial assistance to aid coastal resource districts in the development and implementation of district coastal management plans;

(2) undertake review of and, after public hearing, approve district coastal management plans in accordance with this chapter;

(3) initiate a process for identifying and managing uses of state concern within specific areas of the coast;

(4) develop procedures or guidelines for consultation and coordination with federal agencies managing land or conducting activities potentially affecting the coastal area of the state;

(e) Regulations adopted by the department under this section for district plan criteria may not require designation of areas as a precondition for the establishment of a coastal resource district enforceable policy.

*** Sec. 12.** AS 46.40.050(b) is amended to read:

(b) Within 30 months after certification of the organization of a new coastal resource district, the coastal resource district shall complete and submit to the **board** [DEPARTMENT] a proposed district coastal management plan. If, after receipt of a written request for extension from the coastal resource district, the **board** [DEPARTMENT] considers an extension proper, the **board** [DEPARTMENT] may grant an extension to a date that is within 54 months after certification of the results of the coastal resource district's organization. A request under this subsection must include the reasons for the extension.

*** Sec. 13.** AS 46.40.060 is repealed and reenacted to read:

Sec. 46.40.060. Review and approval. (a) A coastal resource district shall submit its district coastal management plan for review by the department. The division in the department responsible for coastal and ocean management shall attempt to reach a consensus with a coastal resource district concerning any changes required to comply with the district plan criteria approved by the department and the board.

(b) If a consensus between the division and the coastal resource district is reached, the division shall forward a recommendation to the commissioner, and the

commissioner shall submit the recommendation to the board.

(c) If a consensus between the division and the coastal resource district is not reached, the division shall forward a recommendation to the commissioner with an explanation of the reasons for its recommendation and, if applicable, offer recommended changes to the district coastal management plan that would meet the district plan criteria. The coastal resource district may request that the commissioner reconsider the division's recommendation before the commissioner submits the recommendation to the board.

(d) If, after receiving the commissioner's recommendation, the board finds that the district coastal management plan meets the provisions of this chapter and the district plan criteria adopted by the department, the board may approve the district coastal management plan or may approve portions of the district coastal management plan that meet those requirements.

(e) If the board finds that a district coastal management plan is not approvable or is approvable only in part under (d) of this section, the board shall direct the department to meet with officials of the coastal resource district to resolve differences. If requested by a coastal resource district, the board shall direct that deficiencies in the district coastal management plan submitted by the coastal resource district be resolved through mediation conducted by a neutral third party. During mediation, the board may call for one or more public hearings in the district.

(f) If, after mediation, the differences have not been resolved and mutually agreed to by the coastal resource district and the board, the board shall enter findings and, by order, may require

(1) that the district coastal management plan be amended to satisfy the provisions of this chapter or meet the statewide standards and district plan criteria approved by the board;

(2) that the district coastal management plan be revised to accommodate a use of state concern; or

(3) any other action be taken by the coastal resource district, as appropriate.

(g) An order of the board entered under (f) of this section is a final

administrative order that the coastal resource district may appeal to the superior court under AS 44.62 (Administrative Procedure Act). The attorney general, at the request of the board, may file an action in superior court to enforce an order issued under (f) of this section.

*** Sec. 14.** AS 46.40.070 is repealed and reenacted to read:

Sec. 46.40.070. Requirements for board review and approval. (a) The board shall approve a district coastal management plan submitted for review and approval if the

(1) district coastal management plan meets the requirements of this chapter and the district plan criteria adopted by the department; and

(2) enforceable policies of the district coastal management plan

(A) do not duplicate, restate, or incorporate by reference state or federal statutes or regulations;

(B) are not preempted by federal or state law; and

(C) do not arbitrarily or unreasonably restrict a use of state concern.

(b) In (a)(2)(B) of this section, an enforceable policy of the district coastal management plan is preempted by

(1) federal statutes or regulations when the United States Congress expressly declares that local law or regulation is preempted if the United States Congress demonstrates the intent to occupy the field exclusively or if there is an actual conflict between federal and local law or regulation;

(2) state law if it is prohibited by express legislative direction or direct conflict with a state statute or regulation, or where a local law or regulation substantially interferes with the effective functioning of a state statute or regulation or the underlying purposes of a state statute or regulation.

*** Sec. 15.** AS 46.40.096(a) is amended to read:

(a) The department shall, by regulation **approved by the board**, establish a consistency review and determination process that conforms to the requirements of this section.

*** Sec. 16.** AS 46.40.096(d) is amended to read:

(d) In preparing a consistency review and determination for a proposed project, the reviewing entity shall

(1) request consistency review comments for the proposed project from state resource agencies, affected coastal resource districts, and other interested parties as determined by regulation adopted by the department;

(2) prepare proposed consistency determinations;

(3) coordinate **elevations** [SUBSEQUENT REVIEWS] of proposed consistency determinations prepared under (2) of this subsection; **an elevation** [A SUBSEQUENT REVIEW] of a proposed consistency determination under this paragraph

(A) is limited to a review by **state resource agencies** [THE DEPARTMENT];

(B) may occur only if requested by

(i) the project applicant;

(ii) a state resource agency; or

(iii) an affected coastal resource district; and

(C) shall be completed by the **resource agencies** [DEPARTMENT] within 45 days after the initial request for subsequent review under this paragraph;

(4) render the final consistency determination and certification.

*** Sec. 17.** AS 46.40.096(g) is amended to read:

(g) The reviewing entity shall exclude from the consistency review and determination process for a project

(1) **an aspect of** an activity that

[(A)] is **specifically** authorized under a general or nationwide permit that has previously been determined to be consistent with the Alaska coastal management program; [OR

(B) IS SUBJECT TO AUTHORIZATION BY THE DEPARTMENT OF ENVIRONMENTAL CONSERVATION UNDER THE REQUIREMENTS DESCRIBED IN AS 46.40.040(b);]

(2) activities excluded from a consistency review under AS 41.17; and

(3) the issuance of an authorization or permit issued by the Alaska Oil and Gas Conservation Commission.

*** Sec. 18.** AS 46.40.096(k) is amended to read:

(k) Except as provided in (g) of this section, AS 41.17, [AS 46.40.040(b),] and AS 46.40.094, the scope of a consistency review of a project, once triggered under (j) of this section, is limited to activities that are located within the areas described in (*l*) of this section and that either are subject to a state resource agency permit, lease, authorization, approval, or certification or are the subject of a coastal resource district enforceable policy approved by the **board** [DEPARTMENT] under this chapter. The scope of a consistency review subject to 16 U.S.C. 1456 is determined under 16 U.S.C. 1456 and 15 C.F.R. Part 930.

*** Sec. 19.** AS 46.40.096(*l*) is amended to read:

(*l*) The regulations adopted under (a) of this section apply, as authorized by 16 U.S.C. 1456(c), to

(1) activities within the coastal zone; and

(2) activities on federal land, including the federal outer continental shelf, that would affect any land or water use or natural resource of the state's coastal zone; for purposes of this paragraph, those activities consist of any activity on the federal outer continental shelf**, including seismic survey activity,** and any activity on federal land that are within the geographic boundaries of the state's coastal zone notwithstanding the exclusion of federal land in 16 U.S.C. 1453(1).

*** Sec. 20.** AS 46.40.096(m) is amended to read:

(m) As part of the regulations adopted under (a) of this section, the department shall establish a list of permits, certifications, leases, approvals, and authorizations issued by a state resource or federal agency that will trigger a consistency review under (j) of this section. In addition, the department shall establish in regulation categories and descriptions of uses and activities that, for purposes of evaluating consistency with the Alaska coastal management program, are determined to be categorically consistent or generally consistent after the inclusion of standard alternative measures. These categories of uses and activities must be as broad as possible so as to minimize the number of **routine** projects that must undergo an

individualized consistency review under this section.

* **Sec. 21.** AS 46.40.096(o) is amended to read:

(o) The time limitations in (n) of this section

(1) do not apply to a consistency review involving

(A) the disposal of an interest in state land or resources**;**

(B) an activity proposed by a federal agency; or

(C) an activity permitted by a federal agency;

(2) are suspended

(A) from the time **a review schedule is modified in response to** [THE REVIEWING ENTITY DETERMINES THAT THE APPLICANT HAS NOT ADEQUATELY RESPONDED IN WRITING WITHIN 14 DAYS AFTER THE RECEIPT OF] a written request from the reviewing entity for additional information, until the time the reviewing entity determines that the applicant has provided an adequate written response;

(B) during a period of time requested by the applicant;

(C) during the period of time a consistency review is undergoing a subsequent review under (d)(3) of this section**;**

(D) for 30 days if requested by an affected coastal resource district exercising authority under AS 29 to accommodate the adjudication process of an authorization issued by a coastal resource district pending the results of the adjudication.

* **Sec. 22.** AS 46.40.096(q)(1) is amended to read:

(1) "affected coastal resource district" means a coastal resource district **with a publicly reviewed draft or approved plan** in which a project is proposed to be located or **that** [WHICH] may experience a direct and significant impact from a proposed project;

* **Sec. 23.** AS 46.40.096 is amended by adding new subsections to read:

(r) Notwithstanding any provision of this section, for federal agency activities defined in 15 C.F.R. 930.31, including Outer Continental Shelf lease sales and development projects, the department shall conduct a full consistency review and provide its consistency response with respect to proposed uses or activities involved in

the project regardless of whether an earlier consistency review for a similar project has been completed.

(s) Regulations adopted by the department under this section may not require that a draft permit be prepared before the initiation of the consistency review.

*** Sec. 24.** AS 46.40.100(b) is amended to read:

(b) A party that is authorized under (g) of this section may file a petition showing that a district coastal management plan is not being implemented. A petition filed under this subsection may not seek review of a proposed or final consistency determination regarding a specific project. On receipt of a petition, the **board** [DEPARTMENT], after giving public notice in the manner required by (f) of this section, shall convene a hearing to consider the matter. A hearing called under this subsection shall be held in accordance with regulations adopted under this chapter. After **the** hearing, the **board** [DEPARTMENT] may order that the coastal resource district or a state resource agency take any action with respect to future implementation of the district coastal management plan that the **board** [DEPARTMENT] considers necessary, except that the **board** [DEPARTMENT] may not order that the coastal resource district or a state agency take any action with respect to a proposed or final consistency determination that has been issued.

*** Sec. 25.** AS 46.40.100(c) is amended to read:

(c) In determining whether an approved district coastal management plan is being implemented by a coastal resource district that exercises zoning authority or controls on the use of resources within the coastal area or by a state resource agency, the **board** [DEPARTMENT] shall find in favor of the district or the state resource agency, unless the **board** [DEPARTMENT] finds a pattern of nonimplementation.

*** Sec. 26.** AS 46.40.100(e) is amended to read:

(e) The superior courts of the state have jurisdiction to enforce lawful orders of the **board and the** department under this chapter.

*** Sec. 27.** AS 46.40.100(f) is amended to read:

(f) Upon receipt of a petition under (b) of this section, the **board** [DEPARTMENT] shall give notice of the hearing at least 10 days before the scheduled date of the hearing. The notice must

(1) contain sufficient information in commonly understood terms to inform the public of the nature of the petition; and

(2) indicate the manner in which the public may comment on the petition.

* **Sec. 28.** AS 46.40.100(h) is amended to read:

(h) If the **board** [DEPARTMENT] finds a pattern of nonimplementation under (c) of this section, the **board** [DEPARTMENT] may order a coastal resource district or a state resource agency to take action with respect to future implementation of the district coastal management plan that the **board** [DEPARTMENT] considers necessary to implement the district coastal management plan. The **board's** [DEPARTMENT'S] determination under (c) of this section and any order issued under this subsection shall be considered a final administrative order for purposes of judicial review under AS 44.62.560.

* **Sec. 29.** AS 46.40.180(b) is amended to read:

(b) If a city or village within a coastal resource service area fails to approve a portion of the district coastal management plan prepared and submitted for approval under (a) of this section, the governing body shall advise the coastal resource service area board of its objections to the proposed plan and suggest alternative elements or components for inclusion in the district coastal management plan. New matter submitted by a city or village that meets the [STATEWIDE STANDARDS AND] district plan criteria adopted under this chapter **may** [SHALL] be accepted **by the district** and the district coastal management plan modified accordingly. If a city or village fails to provide objections and suggested alternatives within the time limits established in this section, the coastal resource service area board may adopt the district coastal management plan as initially offered.

* **Sec. 30.** AS 46.40.190(b) is amended to read:

(b) This chapter does not restrict or prohibit cooperative or joint administration of functions between a municipality and a coastal resource service area organized under the provisions of this chapter upon initiation of a mutual agreement for the purpose. [A CITY THAT ELECTS TO BE EXCLUDED FROM AN ADJACENT COASTAL RESOURCE SERVICE AREA UNDER (a) OF THIS

SECTION SHALL ENTER INTO A MUTUAL AGREEMENT FOR COOPERATIVE OR JOINT ADMINISTRATION OF FUNCTIONS WITH THE COASTAL RESOURCE SERVICE AREA BOARD FROM THE ADJACENT COASTAL RESOURCE SERVICE AREA.]

*** Sec. 31.** AS 46.40.210(2) is amended to read:

(2) "coastal resource district" means each of the following that contains a portion of the coastal area of the state:

(A) unified municipalities;

(B) organized boroughs of any class that exercise planning and zoning authority;

(C) home rule and first class cities of the unorganized borough [OR WITHIN BOROUGHS THAT DO NOT EXERCISE PLANNING AND ZONING AUTHORITY];

(D) second class cities of the unorganized borough [, OR WITHIN BOROUGHS THAT DO NOT EXERCISE PLANNING AND ZONING AUTHORITY,] that have established a planning commission, and that, in the opinion of the commissioner of commerce, community, and economic development, have the capability of preparing and implementing a comprehensive district coastal management plan under AS 46.40.030;

(E) coastal resource service areas established and organized under AS 29.03.020 and AS 46.40.110 - 46.40.180;

*** Sec. 32.** AS 46.40.210(4) is amended to read:

(4) "coastal zone" means the coastal water including land within and under that water, and adjacent shoreland, including the water within and under that shoreland, within the boundaries approved by the former Alaska Coastal Policy Council and by the United States Secretary of Commerce under 16 U.S.C. 1451 - 1465 (Coastal Zone Management Act of 1972, as amended); "coastal zone" includes areas added as a result of any boundary changes approved by the **board** [DEPARTMENT] and by the United States Secretary of Commerce under 16 U.S.C. 1451 - 1465; "coastal zone" does not include

(A) those lands excluded under 16 U.S.C. 1453(1); or

(B) areas deleted as a result of any boundary changes by the **board** [DEPARTMENT] in conformance with 16 U.S.C. 1451 - 1465;

* **Sec. 33.** AS 46.40.210(7) is amended to read:

(7) "district coastal management plan" means a plan developed by a coastal resource district, including enforceable policies of that plan, setting out policies and standards to guide public and private uses of land and water within that district and approved by the **board** [DEPARTMENT] as meeting the requirements of this chapter and the regulations adopted under this chapter;

* **Sec. 34.** AS 46.40.210(8) is amended to read:

(8) "enforceable policy" means a policy established by this chapter or approved by the **board** [DEPARTMENT] as a legally binding policy of the Alaska coastal management program applicable to public and private activities;

* **Sec. 35.** AS 46.40.210(9) is amended to read:

(9) "project" means all activities that will be part of a proposed development **and includes all federal agency activities as defined in 15 C.F.R. 930.31, including lease sales and development projects affecting a coastal use or resource, and proposed rules that alter uses of the coastal zone**;

* **Sec. 36.** AS 46.40.210 is amended by adding a new paragraph to read:

(13) "board" has the meaning given in AS 46.39.900;

* **Sec. 37.** AS 46.40.040(b), 46.40.040(c), 46.40.050(a), 46.40.096(i), and 46.40.205 are repealed.

* **Sec. 38.** Sections 1 - 13 and 18, ch. 31, SLA 2005, are repealed.

* **Sec. 39.** Section 22, ch. 31, SLA 2005, is repealed.

CS FOR SENATE BILL NO. 4( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): SENATOR OLSON

A BILL

FOR AN ACT ENTITLED

"An Act relating to the Alaska coastal management program; establishing the Alaska Coastal Policy Board; and providing for an effective date by repealing the effective date for the repeal of certain provisions relating to the Alaska coastal management program."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 46.39 is amended by adding a new section to article 1 to read:

Sec. 46.39.005. Alaska Coastal Policy Board. (a) The Alaska Coastal Policy Board is created in the Department of Natural Resources. The board consists of

(1) five public members appointed by the governor, including one at-large member from any coastal district; one public member shall be appointed from each of the following regions:

(A) northwest Alaska, including, generally, the area of the North Slope Borough and the Northwest Arctic Borough; and the Bering Strait area, including, generally, the area of the Bering Strait regional educational

attendance area;

(B) southwest Alaska, including, generally, the area within the Lower Yukon, Lower Kuskokwim, and Southwest regional educational attendance areas and the Lake and Peninsula and Bristol Bay Boroughs; and the Kodiak-Aleutians area, including the Kodiak Island and area of the Aleutians East Boroughs and the area of the Aleutian, Adak, and Pribilof regional educational attendance areas;

(C) Upper Cook Inlet area, including the Municipality of Anchorage and the Matanuska-Susitna Borough; the Lower Cook Inlet area, including, generally, the Kenai Peninsula Borough; and the Prince William Sound area, including, generally, the area east of the Kenai Peninsula Borough to 141 West longitude; and

(D) Southeast Alaska, generally the area east of 141 West longitude;

(2) each of the following:

(A) the commissioner of environmental conservation;

(B) the commissioner of fish and game;

(C) the commissioner of natural resources; and

(D) the commissioner of commerce, community, and economic development.

(b) Each public member appointed by the governor under (a)(1) of this section serves a term of two years and until a successor is appointed and qualified. A public member may be reappointed.

(c) The board shall designate co-chairs, one of whom shall be selected from among the public members appointed under (a)(1) of this section and one from among the members designated in (a)(2) of this section.

(d) The governor shall appoint a permanent alternate for each member of the board. If a member of the board is unable to attend, the member shall advise the alternate, who may attend and act in the place of the member. The alternate for a commissioner serving under (a)(2) of this section shall be a deputy commissioner or the director of a division in the commissioner's department. The names of alternates

shall be filed with the board.

(e) Three public members and two designated members of the board constitute a quorum, but the board may delegate to one or more of its members the power to hold hearings. All decisions of the board shall be by a majority vote of the members present and voting.

(f) Members of the board or their alternates are entitled to per diem and travel expenses authorized by law for members of boards and commissions.

(g) Administrative support for the board shall be provided by the division in the department responsible for coastal and ocean management. The director of the division in the department responsible for coastal and ocean management, under direction of the co-chair designated by the board from the individuals listed in (a)(2) of this section, may contract with or employ persons as necessary to assist the board in carrying out the board's duties and responsibilities.

*** Sec. 2.** AS 46.39.010(a) is amended to read:

(a) The Department of Natural Resources shall render, on behalf of the state, all federal consistency determinations and certifications authorized by 16 U.S.C. 1456 (Sec. 307, Coastal Zone Management Act of 1972), and each conclusive state consistency determination when a project requires a permit, lease, or authorization **from the department or** from two or more state resource agencies.

*** Sec. 3.** AS 46.39.010(b) is amended to read:

(b) The department may adopt regulations **approved by the board** necessary to implement this chapter.

*** Sec. 4.** AS 46.39.030 is amended to read:

Sec. 46.39.030. Powers of the department and board. (a) The department may

(1) **with the approval of the board,** apply for and accept grants, contributions, and appropriations, including application for and acceptance of federal funds that may become available for coastal planning and management;

(2) contract for necessary services, [;]

(b) The board may

(1) [(3)] consult and cooperate with

(A) persons, organizations, and groups, public or private, interested in, affected by, or concerned with coastal area planning and management;

(B) agents and officials of the coastal resource districts of the state, and **with** [FEDERAL AND] state agencies concerned with or having jurisdiction over coastal planning and management;

(2) [(4)] take any reasonable action necessary to carry out the provisions of this chapter or AS 46.40.

*** Sec. 5.** AS 46.39.040 is amended to read:

Sec. 46.39.040. Duties of the board [DEPARTMENT]. In conformity with 16 U.S.C. 1451 - 1464 (Coastal Zone Management Act of 1972), as amended, the **board** [DEPARTMENT] shall

(1) **approve** [DEVELOP] statewide standards for the Alaska coastal management program [,] and criteria for the preparation and approval of district coastal management plans **developed by the department** in accordance with AS 46.40;

(2) establish continuing coordination among state agencies to facilitate the development and implementation of the Alaska coastal management program; in carrying out its duties under this paragraph, the department shall initiate an interagency program of comprehensive coastal resource planning for each geographic region of the state;

(3) **ensure** [ASSURE] continued provision of data and information to coastal resource districts to carry out their planning and management functions under the program.

*** Sec. 6.** AS 46.39.900 is amended to read:

Sec. 46.39.900. Definitions [DEFINITION]. In this chapter, unless the context requires otherwise,

(1) "board" means the Alaska Coastal Policy Board established in AS 46.39.005;

(2) "department" means the Department of Natural Resources.

*** Sec. 7.** AS 46.40.010 is amended to read:

Sec. 46.40.010. Development of Alaska coastal management program. (a) The **Alaska Coastal Policy Board** [DEPARTMENT] shall approve, in accordance with this chapter, **program changes to** the Alaska coastal management program.

(b) The **board** [DEPARTMENT] may approve the Alaska coastal management program for a portion or portions of the coastal area before approving the [COMPLETE] program **changes** under (a) of this section. Portions of the program approved under this subsection shall be incorporated into the Alaska coastal management program.

(c) The Alaska coastal management program shall be reviewed by the **board** [DEPARTMENT] and, when appropriate, revised to

(1) add newly approved district coastal management plans [,] or revisions and amendments to the Alaska coastal management program;

(2) integrate newly approved district coastal management plans [,] or revisions and amendments of district coastal management plans [,] with existing approved plans and with plans developed by state agencies;

(3) add new or revised state statutes, policies, regulations, or other appropriate material;

(4) **evaluate** [REVIEW] the effectiveness [OF IMPLEMENTATION] of district coastal management plans; and

(5) consider new information acquired by the state and coastal resource districts.

(d) All reviews and revisions shall be in accordance with the statewide standards and district plan criteria adopted under AS 46.40.040.

*** Sec. 8.** AS 46.40.020 is amended to read:

Sec. 46.40.020. Objectives. The Alaska coastal management program shall be consistent with the following objectives:

(1) the use, management, restoration, and enhancement of the overall quality of the coastal environment;

(2) the development of industrial or commercial enterprises that are consistent with the social, cultural, historic, economic, and environmental interests of the people of the state;

(3) the orderly, balanced utilization and protection of the resources of the coastal area consistent with sound conservation and sustained yield principles;

(4) the management of coastal land and water uses in such a manner that, generally, those uses **that** [WHICH] are economically or physically dependent on a coastal location are given higher priority when compared to uses **that** [WHICH] do not economically or physically require a coastal location;

(5) the protection and management of significant historic, cultural, natural, **subsistence,** and aesthetic values and natural systems or processes within the coastal area;

(6) the prevention of damage to or degradation of land and water reserved for their natural **and subsistence** values as a result of inconsistent land or water usages adjacent to that land;

(7) the recognition of the need for a continuing supply of energy to meet the requirements of the state and the contribution of a share of the state's resources to meet national energy needs; and

(8) the full and fair evaluation of all demands on the land and water in the coastal area.

* **Sec. 9.** AS 46.40.030 is amended to read:

Sec. 46.40.030. Development of district coastal management plans. (a) Coastal resource districts shall develop and adopt district coastal management plans in accordance with the provisions of this chapter. The plan adopted by a coastal resource district shall be based **on** [UPON] a municipality's existing comprehensive plan or a new comprehensive resource use plan or comprehensive statement of needs, policies, objectives, and standards governing the use of resources within the coastal area of the district. The plan must meet the [STATEWIDE STANDARDS AND] district plan criteria adopted under AS 46.40.040 and must include

(1) a delineation within the district of the boundaries of the coastal area subject to the district coastal management plan;

(2) a statement, list, or definition of the land and water uses and activities subject to the district coastal management plan;

(3) a statement of policies to be applied to **all** [THE] land and water

uses subject to the district coastal management plan **as well as policies that apply only to an area that merits special attention**; **and**

(4) [A DESCRIPTION OF THE USES AND ACTIVITIES THAT WILL BE CONSIDERED PROPER AND THE USES AND ACTIVITIES THAT WILL BE CONSIDERED IMPROPER WITH RESPECT TO THE LAND AND WATER WITHIN THE COASTAL AREA; AND

(5)] a designation of **an area that merits special attention under** [, AND THE POLICIES THAT WILL BE APPLIED TO THE USE OF AREAS WITHIN] the **district** coastal **management plan and enforceable policies that must be applicable within an area that merits special attention** [RESOURCE DISTRICT THAT MERIT SPECIAL ATTENTION].

(b) In developing enforceable policies in its coastal management plan under (a) of this section, a coastal resource district shall **ensure that the enforceable policies are**

(1) clear and concise as to the activities and persons affected by the policies and the requirements of the policies

(2) necessary given local conditions; and

(3) supported by evidence, including scientific or local knowledge, if the policies are more specific than state or federal statutes or regulations [MEET THE REQUIREMENTS OF AS 46.40.070 AND MAY NOT DUPLICATE, RESTATE, OR INCORPORATE BY REFERENCE STATUTES AND ADMINISTRATIVE REGULATIONS ADOPTED BY STATE OR FEDERAL AGENCIES].

*** Sec. 10.** AS 46.40.040(a) is amended to read:

(a) Except as provided in [(b) OF THIS SECTION AND] AS 41.17, the department shall**, by regulations approved by the board,**

(1) [BY REGULATION,] adopt under the provisions of AS 44.62 (Administrative Procedure Act) for the use of and application by coastal resource districts and state agencies for carrying out their responsibilities under this chapter, statewide standards and district coastal management plan criteria for

(A) identifying the boundaries of the coastal area subject to the

Alaska coastal management program;

(B) determining the land and water uses and activities subject to the Alaska coastal management program;

(C) developing policies applicable to the land and water uses subject to the Alaska coastal management program;

(D) developing regulations applicable to the land and water uses subject to the Alaska coastal management program;

(E) developing policies and procedures to determine whether specific proposals for the land and water uses or activities subject to the Alaska coastal management program shall be allowed;

(F) designating and developing policies for **areas that merit special attention** [THE USE OF AREAS OF THE COAST THAT MERIT SPECIAL ATTENTION]; and

(G) measuring the progress of a coastal resource district in meeting its responsibilities under this chapter;

[(2) DEVELOP AND MAINTAIN A PROGRAM OF TECHNICAL AND FINANCIAL ASSISTANCE TO AID COASTAL RESOURCE DISTRICTS IN THE DEVELOPMENT AND IMPLEMENTATION OF DISTRICT COASTAL MANAGEMENT PLANS;

(3) UNDERTAKE REVIEW AND APPROVAL OF DISTRICT COASTAL MANAGEMENT PLANS IN ACCORDANCE WITH THIS CHAPTER;

(4) INITIATE A PROCESS FOR IDENTIFYING AND MANAGING USES OF STATE CONCERN WITHIN SPECIFIC AREAS OF THE COAST;

(5) DEVELOP PROCEDURES OR GUIDELINES FOR CONSULTATION AND COORDINATION WITH FEDERAL AGENCIES MANAGING LAND OR CONDUCTING ACTIVITIES POTENTIALLY AFFECTING THE COASTAL AREA OF THE STATE;

(6) BY REGULATION,] establish a consistency review and determination or certification process that conforms to the requirements of AS 46.40.096.

* **Sec. 11.** AS 46.40.040 is amended by adding new subsections to read:

(d) Except as provided in AS 41.17, the board shall

(1) develop and maintain a program of technical and financial assistance to aid coastal resource districts in the development and implementation of district coastal management plans;

(2) undertake review of and, after public hearing, approve district coastal management plans in accordance with this chapter;

(3) initiate a process for identifying and managing uses of state concern within specific areas of the coast;

(4) develop procedures or guidelines for consultation and coordination with federal agencies managing land or conducting activities potentially affecting the coastal area of the state;

(e) Regulations adopted by the department under this section for district plan criteria may not require designation of areas as a precondition for the establishment of a coastal resource district enforceable policy.

*** Sec. 12.** AS 46.40.050(b) is amended to read:

(b) Within 30 months after certification of the organization of a new coastal resource district, the coastal resource district shall complete and submit to the **board** [DEPARTMENT] a proposed district coastal management plan. If, after receipt of a written request for extension from the coastal resource district, the **board** [DEPARTMENT] considers an extension proper, the **board** [DEPARTMENT] may grant an extension to a date that is within 54 months after certification of the results of the coastal resource district's organization. A request under this subsection must include the reasons for the extension.

*** Sec. 13.** AS 46.40.060 is repealed and reenacted to read:

Sec. 46.40.060. Review and approval. (a) A coastal resource district shall submit its district coastal management plan for review by the department. The division in the department responsible for coastal and ocean management shall attempt to reach a consensus with a coastal resource district concerning any changes required to comply with the district plan criteria approved by the department and the board.

(b) If a consensus between the division and the coastal resource district is reached, the division shall forward a recommendation to the commissioner, and the

commissioner shall submit the recommendation to the board.

(c) If a consensus between the division and the coastal resource district is not reached, the division shall forward a recommendation to the commissioner with an explanation of the reasons for its recommendation and, if applicable, offer recommended changes to the district coastal management plan that would meet the district plan criteria. The coastal resource district may request that the commissioner reconsider the division's recommendation before the commissioner submits the recommendation to the board.

(d) If, after receiving the commissioner's recommendation, the board finds that the district coastal management plan meets the provisions of this chapter and the district plan criteria adopted by the department, the board may approve the district coastal management plan or may approve portions of the district coastal management plan that meet those requirements.

(e) If the board finds that a district coastal management plan is not approvable or is approvable only in part under (d) of this section, the board shall direct the department to meet with officials of the coastal resource district to resolve differences. If requested by a coastal resource district, the board shall direct that deficiencies in the district coastal management plan submitted by the coastal resource district be resolved through mediation conducted by a neutral third party. During mediation, the board may call for one or more public hearings in the district.

(f) If, after mediation, the differences have not been resolved and mutually agreed to by the coastal resource district and the board, the board shall enter findings and, by order, may require

(1) that the district coastal management plan be amended to satisfy the provisions of this chapter or meet the statewide standards and district plan criteria approved by the board;

(2) that the district coastal management plan be revised to accommodate a use of state concern; or

(3) any other action be taken by the coastal resource district, as appropriate.

(g) An order of the board entered under (f) of this section is a final

administrative order that the coastal resource district may appeal to the superior court under AS 44.62 (Administrative Procedure Act). The attorney general, at the request of the board, may file an action in superior court to enforce an order issued under (f) of this section.

* **Sec. 14.** AS 46.40.070 is repealed and reenacted to read:

Sec. 46.40.070. Requirements for board review and approval. (a) The board shall approve a district coastal management plan submitted for review and approval if the

(1) district coastal management plan meets the requirements of this chapter and the district plan criteria adopted by the department; and

(2) enforceable policies of the district coastal management plan

(A) do not duplicate, restate, or incorporate by reference state or federal statutes or regulations;

(B) are not preempted by federal or state law; and

(C) do not arbitrarily or unreasonably restrict a use of state concern.

(b) In (a)(2)(B) of this section, an enforceable policy of the district coastal management plan is preempted by

(1) federal statutes or regulations when the United States Congress expressly declares that local law or regulation is preempted if the United States Congress demonstrates the intent to occupy the field exclusively or if there is an actual conflict between federal and local law or regulation;

(2) state law if it is prohibited by express legislative direction or direct conflict with a state statute or regulation, or where a local law or regulation substantially interferes with the effective functioning of a state statute or regulation or the underlying purposes of a state statute or regulation.

* **Sec. 15.** AS 46.40.096(a) is amended to read:

(a) The department shall, by regulation **approved by the board**, establish a consistency review and determination process that conforms to the requirements of this section.

* **Sec. 16.** AS 46.40.096(d) is amended to read:

(d) In preparing a consistency review and determination for a proposed project, the reviewing entity shall

(1) request consistency review comments for the proposed project from state resource agencies, affected coastal resource districts, and other interested parties as determined by regulation adopted by the department;

(2) prepare proposed consistency determinations;

(3) coordinate **elevations** [SUBSEQUENT REVIEWS] of proposed consistency determinations prepared under (2) of this subsection; **an elevation** [A SUBSEQUENT REVIEW] of a proposed consistency determination under this paragraph

(A) is limited to a review by **state resource agencies** [THE DEPARTMENT];

(B) may occur only if requested by

(i) the project applicant;

(ii) a state resource agency; or

(iii) an affected coastal resource district; and

(C) shall be completed by the **resource agencies** [DEPARTMENT] within 45 days after the initial request for subsequent review under this paragraph;

(4) render the final consistency determination and certification.

*** Sec. 17.** AS 46.40.096(g) is amended to read:

(g) The reviewing entity shall exclude from the consistency review and determination process for a project

(1) **an aspect of** an activity that

[(A)] is **specifically** authorized under a general or nationwide permit that has previously been determined to be consistent with the Alaska coastal management program; [OR

(B) IS SUBJECT TO AUTHORIZATION BY THE DEPARTMENT OF ENVIRONMENTAL CONSERVATION UNDER THE REQUIREMENTS DESCRIBED IN AS 46.40.040(b);]

(2) activities excluded from a consistency review under AS 41.17; and

(3) the issuance of an authorization or permit issued by the Alaska Oil and Gas Conservation Commission.

*** Sec. 18.** AS 46.40.096(k) is amended to read:

(k) Except as provided in (g) of this section, AS 41.17, [AS 46.40.040(b),] and AS 46.40.094, the scope of a consistency review of a project, once triggered under (j) of this section, is limited to activities that are located within the areas described in (*l*) of this section and that either are subject to a state resource agency permit, lease, authorization, approval, or certification or are the subject of a coastal resource district enforceable policy approved by the **board** [DEPARTMENT] under this chapter. The scope of a consistency review subject to 16 U.S.C. 1456 is determined under 16 U.S.C. 1456 and 15 C.F.R. Part 930.

*** Sec. 19.** AS 46.40.096(*l*) is amended to read:

(*l*) The regulations adopted under (a) of this section apply, as authorized by 16 U.S.C. 1456(c), to

(1) activities within the coastal zone; and

(2) activities on federal land, including the federal outer continental shelf, that would affect any land or water use or natural resource of the state's coastal zone; for purposes of this paragraph, those activities consist of any activity on the federal outer continental shelf**, including seismic survey activity,** and any activity on federal land that are within the geographic boundaries of the state's coastal zone notwithstanding the exclusion of federal land in 16 U.S.C. 1453(1).

*** Sec. 20.** AS 46.40.096(m) is amended to read:

(m) As part of the regulations adopted under (a) of this section, the department shall establish a list of permits, certifications, leases, approvals, and authorizations issued by a state resource or federal agency that will trigger a consistency review under (j) of this section. In addition, the department shall establish in regulation categories and descriptions of uses and activities that, for purposes of evaluating consistency with the Alaska coastal management program, are determined to be categorically consistent or generally consistent after the inclusion of standard alternative measures. These categories of uses and activities must be as broad as possible so as to minimize the number of **routine** projects that must undergo an

individualized consistency review under this section.

* **Sec. 21.** AS 46.40.096(o) is amended to read:

(o) The time limitations in (n) of this section

(1) do not apply to a consistency review involving

(A) the disposal of an interest in state land or resources**;**

(B) an activity proposed by a federal agency; or

(C) an activity permitted by a federal agency;

(2) are suspended

(A) from the time **a review schedule is modified in response to** [THE REVIEWING ENTITY DETERMINES THAT THE APPLICANT HAS NOT ADEQUATELY RESPONDED IN WRITING WITHIN 14 DAYS AFTER THE RECEIPT OF] a written request from the reviewing entity for additional information, until the time the reviewing entity determines that the applicant has provided an adequate written response;

(B) during a period of time requested by the applicant;

(C) during the period of time a consistency review is undergoing a subsequent review under (d)(3) of this section**;**

(D) for 30 days if requested by an affected coastal resource district exercising authority under AS 29 to accommodate the adjudication process of an authorization issued by a coastal resource district pending the results of the adjudication.

* **Sec. 22.** AS 46.40.096(q)(1) is amended to read:

(1) "affected coastal resource district" means a coastal resource district **with a publicly reviewed draft or approved plan** in which a project is proposed to be located or **that** [WHICH] may experience a direct and significant impact from a proposed project;

* **Sec. 23.** AS 46.40.096 is amended by adding new subsections to read:

(r) Notwithstanding any provision of this section, for federal agency activities defined in 15 C.F.R. 930.31, including Outer Continental Shelf lease sales and development projects, the department shall conduct a full consistency review and provide its consistency response with respect to proposed uses or activities involved in

the project regardless of whether an earlier consistency review for a similar project has been completed.

(s) Regulations adopted by the department under this section may not require that a draft permit be prepared before the initiation of the consistency review.

*** Sec. 24.** AS 46.40.100(b) is amended to read:

(b) A party that is authorized under (g) of this section may file a petition showing that a district coastal management plan is not being implemented. A petition filed under this subsection may not seek review of a proposed or final consistency determination regarding a specific project. On receipt of a petition, the **board** [DEPARTMENT], after giving public notice in the manner required by (f) of this section, shall convene a hearing to consider the matter. A hearing called under this subsection shall be held in accordance with regulations adopted under this chapter. After **the** hearing, the **board** [DEPARTMENT] may order that the coastal resource district or a state resource agency take any action with respect to future implementation of the district coastal management plan that the **board** [DEPARTMENT] considers necessary, except that the **board** [DEPARTMENT] may not order that the coastal resource district or a state agency take any action with respect to a proposed or final consistency determination that has been issued.

*** Sec. 25.** AS 46.40.100(c) is amended to read:

(c) In determining whether an approved district coastal management plan is being implemented by a coastal resource district that exercises zoning authority or controls on the use of resources within the coastal area or by a state resource agency, the **board** [DEPARTMENT] shall find in favor of the district or the state resource agency, unless the **board** [DEPARTMENT] finds a pattern of nonimplementation.

*** Sec. 26.** AS 46.40.100(e) is amended to read:

(e) The superior courts of the state have jurisdiction to enforce lawful orders of the **board and the** department under this chapter.

*** Sec. 27.** AS 46.40.100(f) is amended to read:

(f) Upon receipt of a petition under (b) of this section, the **board** [DEPARTMENT] shall give notice of the hearing at least 10 days before the scheduled date of the hearing. The notice must

(1) contain sufficient information in commonly understood terms to inform the public of the nature of the petition; and

(2) indicate the manner in which the public may comment on the petition.

* **Sec. 28.** AS 46.40.100(h) is amended to read:

(h) If the **board** [DEPARTMENT] finds a pattern of nonimplementation under (c) of this section, the **board** [DEPARTMENT] may order a coastal resource district or a state resource agency to take action with respect to future implementation of the district coastal management plan that the **board** [DEPARTMENT] considers necessary to implement the district coastal management plan. The **board's** [DEPARTMENT'S] determination under (c) of this section and any order issued under this subsection shall be considered a final administrative order for purposes of judicial review under AS 44.62.560.

* **Sec. 29.** AS 46.40.180(b) is amended to read:

(b) If a city or village within a coastal resource service area fails to approve a portion of the district coastal management plan prepared and submitted for approval under (a) of this section, the governing body shall advise the coastal resource service area board of its objections to the proposed plan and suggest alternative elements or components for inclusion in the district coastal management plan. New matter submitted by a city or village that meets the [STATEWIDE STANDARDS AND] district plan criteria adopted under this chapter **may** [SHALL] be accepted **by the district** and the district coastal management plan modified accordingly. If a city or village fails to provide objections and suggested alternatives within the time limits established in this section, the coastal resource service area board may adopt the district coastal management plan as initially offered.

* **Sec. 30.** AS 46.40.190(b) is amended to read:

(b) This chapter does not restrict or prohibit cooperative or joint administration of functions between a municipality and a coastal resource service area organized under the provisions of this chapter upon initiation of a mutual agreement for the purpose. [A CITY THAT ELECTS TO BE EXCLUDED FROM AN ADJACENT COASTAL RESOURCE SERVICE AREA UNDER (a) OF THIS

SECTION SHALL ENTER INTO A MUTUAL AGREEMENT FOR COOPERATIVE OR JOINT ADMINISTRATION OF FUNCTIONS WITH THE COASTAL RESOURCE SERVICE AREA BOARD FROM THE ADJACENT COASTAL RESOURCE SERVICE AREA.]

* **Sec. 31.** AS 46.40.210(2) is amended to read:

(2) "coastal resource district" means each of the following that contains a portion of the coastal area of the state:

(A) unified municipalities;

(B) organized boroughs of any class that exercise planning and zoning authority;

(C) home rule and first class cities of the unorganized borough [OR WITHIN BOROUGHS THAT DO NOT EXERCISE PLANNING AND ZONING AUTHORITY];

(D) second class cities of the unorganized borough [, OR WITHIN BOROUGHS THAT DO NOT EXERCISE PLANNING AND ZONING AUTHORITY,] that have established a planning commission, and that, in the opinion of the commissioner of commerce, community, and economic development, have the capability of preparing and implementing a comprehensive district coastal management plan under AS 46.40.030;

(E) coastal resource service areas established and organized under AS 29.03.020 and AS 46.40.110 - 46.40.180;

* **Sec. 32.** AS 46.40.210(4) is amended to read:

(4) "coastal zone" means the coastal water including land within and under that water, and adjacent shoreland, including the water within and under that shoreland, within the boundaries approved by the former Alaska Coastal Policy Council and by the United States Secretary of Commerce under 16 U.S.C. 1451 - 1465 (Coastal Zone Management Act of 1972, as amended); "coastal zone" includes areas added as a result of any boundary changes approved by the **board** [DEPARTMENT] and by the United States Secretary of Commerce under 16 U.S.C. 1451 - 1465; "coastal zone" does not include

(A) those lands excluded under 16 U.S.C. 1453(1); or

(B) areas deleted as a result of any boundary changes by the **board** [DEPARTMENT] in conformance with 16 U.S.C. 1451 - 1465;

* **Sec. 33.** AS 46.40.210(7) is amended to read:

(7) "district coastal management plan" means a plan developed by a coastal resource district, including enforceable policies of that plan, setting out policies and standards to guide public and private uses of land and water within that district and approved by the **board** [DEPARTMENT] as meeting the requirements of this chapter and the regulations adopted under this chapter;

* **Sec. 34.** AS 46.40.210(8) is amended to read:

(8) "enforceable policy" means a policy established by this chapter or approved by the **board** [DEPARTMENT] as a legally binding policy of the Alaska coastal management program applicable to public and private activities;

* **Sec. 35.** AS 46.40.210(9) is amended to read:

(9) "project" means all activities that will be part of a proposed development **and includes all federal agency activities as defined in 15 C.F.R. 930.31, including lease sales and development projects affecting a coastal use or resource, and proposed rules that alter uses of the coastal zone**;

* **Sec. 36.** AS 46.40.210 is amended by adding a new paragraph to read:

(13) "board" has the meaning given in AS 46.39.900;

* **Sec. 37.** AS 46.40.040(b), 46.40.040(c), 46.40.050(a), 46.40.096(i), and 46.40.205 are repealed.

* **Sec. 38.** Sections 1 - 13 and 18, ch. 31, SLA 2005, are repealed.

* **Sec. 39.** Section 22, ch. 31, SLA 2005, is repealed.

Re: SB-4, Alaska Coastal Zone Management

Dear Senator Stedman and Senator Hoffman,

We have reviewed CSSB-4(FIN) Version S which proposes major changes to the Alaska Coastal Zone Management Program. The Finance CS makes some changes to SB-4 but the bill still contains other concerns that must be addressed before we can support it.

At the hearing on this bill yesterday you asked for specific concerns that we have with CSSB-4(FIN) Version S and these follow.

The Legislative Budget & Audit review of the program that is scheduled for this year should be allowed to proceed as directed in past legislation.

Section 1. Eliminate the Coastal Policy Board. The actions and attempted actions of this board have been a source of controversy for the ACMP. We are not aware of other states that have this type of board and there is no need for it in Alaska. In other states, and in Anchorage, the ACMP is incorporated into the municipal ordinances. All coastal municipalities could do the same. Eliminating the Board would correct many of the problems with the bill and would alleviate many of the concerns of both the State and industry. This board in not in the current program and should not be added.

If the Coastal Policy Board is not eliminated, it will be necessary to Balance the Board. The board should be balanced to have 1/3 from agencies, 1/3 from the districts and 1/3 from the regulated community. If there is a board, it is essential that the regulated community have a voice on the board. Without including the regulated community, this group that can create new jobs and economy for the state will not have the input necessary.

Section 2. Do not expand the items requiring consistency determination. Remove the phrase "from the department or" that was added by SB-4. This phrase would increase the number of permits, leases and authorizations that would require consistency determinations. The workload of each office in DNR, including DCOM, would be increased.

RE: The Alaska Coastal Management Program

Dear Senator Hoffman:

Thank you for your request that the Department of Natural Resources (DNR) respond to the identified issues associated with the changes proposed in Senate Bill 4 (SB 4) as they relate to the Alaska Coastal Management Program. Your request for a response was shared during the March 30, 2010 Senate Finance Committee hearing on Senate Bill 4 (SB 4) addressing the ACMP.

Attached to this letter is written testimony submitted on behalf of three departments – Law, Environmental Conservation, and Natural Resources. This written testimony highlights general concerns and issues with the committee substitute for SB 4. Although I recognize your desire to affect change to the ACMP through statutory revisions, the proposed changes within SB 4 will not help resolve concerns between local coastal districts, project proponents, and the State agencies, and as such DNR is unable to recommend specific changes to SB 4 that would achieve the balance needed to successfully implement the ACMP.

It is also important to note and recognize that, under AS 44.66.020, the ACMP is listed as a program subject to termination in 2011. Although the Legislative Budget and Audit Committee did not designate the ACMP for termination (AS 44.66.030), the continuation of the ACMP is subject to hearings in front of a committee of each house next year (AS 44.66.050). Pursuant to AS 44.66.050(b), and within the context of the committee hearing, it is the responsibility of the department to demonstrate a public need for the existence of the ACMP, and whether there are any changes that would increase the efficiency of administration or operation consistent with the public interest. At that time, it would be appropriate to discuss whether the department recommends statutory changes that would generally benefit the public interest. As well, under AS 44.66.050(e), and based on the hearings and committee findings and summary, the committee may introduce a bill providing for the reorganization or continuation of the ACMP. Given the existing ACMP review and evaluation process already established in statute and scheduled for next year, it would seem imprudent to pass

SB 4 this year affecting significant change to the ACMP before the legislatively designated committee process described in AS 44.66 has run its course.

If you have any additional questions, please do not hesitate to contact me.

Sincerely,

Randy Bates
Director

CS Sentate Bill 4 (26-LS0019\R)
Senate Finance Committee

Department of Natural Resources Testimony

The Department of Natural Resources (department) has serious and substantive concerns with the Committee Substitute (CS) for Senate Bill (SB) 4:

1. It creates a new oversight body, the Coastal Policy Board, and vests that body with the ability to approve enforceable policies that would override agency authority, effectively trumping the legislative establishment of laws relative to resource management and protection.

2. It would allow enforceable policies to be more restrictive, more stringent, and more prescriptive than existing state and federal laws by allowing the Coastal Policy Board to modify the standards and authority of the resource agencies, but without the science that may be required by State or federal law, and without the requirement that the district demonstrate the ability to enforce the chosen requirement.

3. It allows enforceable policies to address issues not otherwise addressed in resource agency authorities, including those issues the legislative body specifically chose not to address.

4. This bill changes the structure of the ACMP from one of local input to one of local control – it authorizes broad authority for coastal district enforceable policies to address and decide upon resource development projects.

5. It is a bill specific to the issues of one group of ACMP participants, but is not a bill that balances or represents the interests of other ACMP participants and stakeholders.

The department recognizes that there are significant differences of opinion on how much influence and input coastal districts have or should have regarding resource development and permitting decisions. The department believes that the voice, input, perspective, and influence of rural Alaska and the coastal communities are critical to our function and success as a department and a state – the ACMP is one of many programs that considers that voice, input, and perspective. We value that input, but do not believe that the input the State solicits should allow a coastal district to control, dictate, or otherwise replace the State's decision-making process on those issues that are so important to the State and its collective residents.

The following are proposed coastal district enforceable policies that could be approved by the Coastal Policy Board if SB 4 were to be enacted:

- "Subsistence is a priority over all other proposed activities"
- "No disturbance or take from the lead group of caribou during the annual migration"
- "No drill operations if there is any chance of an oil spill"
- "No net loss of habitat from proposed activities"

Within the context of a consistency review of a project, these enforceable policies are applied to the proposed project to determine compliance. If the reviewing entity – either the state or the coastal district – determines that the project does not comply with the enforceable policy, the project may be denied and NO State or federal permits may be issued for that project.

By allowing the coastal district to write an enforceable policy establishing the locally important issue as a priority to the exclusion of activities that may be in the best interest of the state, this bill would change the structure of the ACMP and would significantly change the authority and control a coastal district has over resource development projects that are important to the state and its collective residents.

In addition to the establishment of the Coastal Policy Board and the expansion of coastal district enforceable policies, the department has significant concerns with the following aspects of the CS for SB 4:

- Section 19 – expanding the inland reach of the ACMP and listing seismic surveys within the statute.
- Section 21 – amending certain timing requirements for conducting consistency reviews.
- Section 22 and 35 – amending certain definitions.
- Section 23 – requiring the duplication of consistency reviews after a final consistency determination has been issued for a given project.

The department also recognizes that other state departments have presented important testimony and significant concerns regarding the CS for SB 4.

It is important to recognize that the department's goal is to implement a coastal program that provides opportunity for important local input, that is streamlined and minimizes the administrative burden associated with a networked program, that is predictable in its requirements, that is meaningful to the participants, and that is appropriate and balanced in managing the coastal uses and resources of the coastal zone.

From the department's perspective, the CS for SB 4 does not accomplish these goals.

Thank you for the opportunity to provide this written testimony, and to present the department's perspective on this legislation.

Testimony of
Alaska Department of Environmental Conservation
Senate Bill 4
Senate Finance Committee
March 2010

SB 4 eliminates provisions referred to as the "DEC carve-out." In so doing, it raises serious concerns.

Background on the "DEC Carve-Out."

The DEC carve out is comprised of two provisions. The first is that the process DEC uses to develop and issue environmental permits is excluded from the Alaska Coastal Management Program consistency review and determination process. DEC permits are developed using the specific procedures set out in the permitting programs with their own timeframes, requirements for public notice and comment, rules regarding production of preliminary drafts, and requirements for collection of baseline data and appeal procedures.

The second provision of the DEC carve out is that environmental standard setting -- whether for water quality standards, ambient air quality standards, spill response planning standards, or standards for managing solid wastes – is reserved to the state. Moreover, issuance of a state environmental permit is sufficient to establish consistency with ACMP standards. Under current statutes, coastal districts may not develop their own standards.

Effects of SB 4.

With respect to the first provision, eliminating the DEC carve-out would mean that development of state permits would fall under ACMP procedures. This situation has occurred in the past and resulted in conflicts between environmental permit and ACMP procedures and presented significant problems with prescribed timeframes, duplicative appeal processes, and different rules for public notice and comment. DEC's permitting procedures are often circumscribed by federal law and cannot be modified without running afoul of federal program rules.

With respect to the other DEC carve-out provision, SB 4 allows the coastal districts to develop environmental standards as enforceable policies as long as they are more stringent than state standards. The state would no longer be the sole environmental standard-setting authority and standards may vary from one district to the next.

We note that the DEC standard setting process is exhaustive. State standards must often comply with federal guidance which, in turn, reflects extensive

compilation and rigorous peer-reviewed analysis of scientific data from around the nation and world. Development or amendment of a single standard is a long and careful process and can take years. State air and water standards must comply with federal law and are subject to approval of the U.S. Environmental Protection Agency after consultation with the U.S. Fish and Wildlife Service, National Marine Fisheries Service and Tribes. Good standards are protective of human health and resources without being overly-protective and needlessly burdensome on permittees whether for municipal sewage treatment plants or resource development industries. State standards are promulgated as regulations with the accompanying public process and right to appeal. Standards established by coastal districts, even while subject to coastal policy board approval would not be subject to the same level of effort and scrutiny as state water and air quality standards.

SEAN PARNELL, GOVERNOR

DEPARTMENT OF LAW

OFFICE OF THE ATTORNEY GENERAL

1031 WEST 4TH AVENUE, SUITE 200
ANCHORAGE, ALASKA 99501-1994
PHONE: (907)269-5100
FAX: (907)276-3697

March 30, 2010

The Honorable Lyman Hoffman
State Capital, Room 518
Juneau, AK 99801

The Honorable Bert Stedman
State Capital, Room 516
Juneau, AK 99801

Dear Senator Hoffman and Senator Stedman:

This letter describes the legal issues raised by Committee Substitute for Senate Bill 4, relating to the Alaska Coastal Management Program (ACMP).

A. Appointment of Coastal Policy Board Members

Section 1 of the bill states that the public members of the Coastal Policy Board would be appointed by the Governor. The board would be made up of nine members. Five members would be from the coastal districts divided by geographic area, and would be referred to as "public members." These public members would be appointed by the Governor from a list composed of at least three names from each coastal region. These names would be nominated and submitted by the coastal districts of each region. Such a list limits the Governor's appointment powers, and that limitation may create constitutional problems.

B. Board Approval of ACMP Regulations

Section 3 states that the Department of Natural Resources may adopt regulations approved by the Coastal Policy Board. The board would be made up of nine members, five of which are mentioned in Section A of this letter. The four remaining members, referred to as "designated members," would be from state personnel: the Commissioners of the Department of Environmental Conservation, Department of Fish and Game, Department of Natural Resources, and Department of Commerce, Community, and Economic Development. A quorum of three public members and two designated members would be required before a vote could be taken. All decisions of the board would be by a majority vote of the members present and voting.

The board would be responsible for approving ACMP regulations and for approving coastal district plans. As such, the board would also be responsible for approving the enforceable policies developed by coastal districts. This is a significant amount of work. Practically speaking. it may be very difficult for the board to assemble a quorum and to pass a vote (only a majority vote would pass; a tie would not) to accomplish the tasks assigned to the board by the bill. The Department of Law advises against requiring a board to approve regulations for these reasons.

C. Negotiations with Federal Authorities

Section 11 permits the Coastal Policy Board to develop procedures and guidelines for the consultation and coordination with federal agencies managing land or conducting activities potentially affecting the coastal area of the state. Negotiations with the federal government should not be conducted by the board; they should be conducted by the state. It is possible this provision would infringe on the Governor's executive powers and that these direct negotiations may be problematic from the standpoint of developing consistent state policies. This provision could be eliminated from Section 11 without otherwise undermining the purpose of the bill.

D. Standards for District Plan Review and Approval

Section 13 addresses district plan review and approval. It provides that once a plan is submitted to the Department of Natural Resources for review, the department must attempt to reach a "consensus" with the district concerning any changes to the plan. It is not clear what is meant by "consensus." Does this mean there must be full agreement? Or partial agreement? Or something in between? It would be helpful for this term to be defined by the legislature.

E. Lack of Language Providing for Transition Between the Current and Proposed Systems

The bill lacks transition language that would allow existing district plans and regulations to remain in effect while the Coastal Policy Board and the Department of Natural Resources work together to approve new district plans and create new regulations consistent with this bill. If existing district plans and regulations do not remain in effect, it is unclear how consistency reviews, of which there are hundreds, if not thousands, every year, would be conducted.

The bill also lacks transition language stating that the Department of Natural Resources must apply for federal approval of a revised ACMP and that the

bill would take effect only if federal approval is obtained. Prior to this bill becoming effective, federal approval must be obtained by the National Oceanic and Atmospheric Administration's Office of Ocean and Coastal Resource Management. These problems can easily be fixed by adding transition language, which the Department of Law could provide and/or help draft.

I hope that this legal summary is helpful. If I can provide additional information, please let me know.

Sincerely,

DANIEL S. SULLIVAN
ATTORNEY GENERAL

Jim Benintendi

SB 4 Alaska Coastal Management Program
Explanation of Proposed Changes to SB 4
April 11, 2010

Topic	Sec.	Changes in Proposed CS for SB 4
Board	1	**Change:** Allow Governor to appoint pubic members from each region <u>without nominations</u> from coastal districts. **Purpose:** This change would address concerns that districts have too much power in deciding who will be on board.
	4	**Change:** Remove provision for board consultation with federal agencies. **Purpose:** This change addresses concerns raised about board powers.
	4,10	**Change:** Address inconsistencies in bill regarding board's role in regulations. Clarify that the <u>board only approves regulations</u> proposed by DNR. **Purpose:** This change would fix problems identified by Legislative Legal that there are conflicting provisions regarding the board's role in approving regulations.
Inland of Coastal Zone	19	**Change:** Eliminate proposed change in AS 46.40.096(l)(1) that would allow ACMP reviews inland of the coastal zone. **Purpose**: This compromise responds to concerns raised by industry.
Enforceable Policies	14	**Change:** These changes adopt language in CSHB74(CRA) including a clarification that policies cannot conflict with state statutes or regulations. **Purpose:** While current language in SB 4 prohibits duplication of state or federal law, this addition would clarify the policies cannot conflict with state or federal laws.
	9	**Change:** These changes adopt language from CSHB74(CRA) by removing "prescriptive or performance based" from AS 46.40.030(b)(1) and removing "contemporary or traditional" from AS 46.40.030(b)(2). **Purpose:** This change responds to concerns raised by industry.
	11(e)	**Change:** Add a new subsection making it clear that the district plan criteria in regulations cannot require designation of areas as a precondition for the establishment of coastal district enforceable policies. **Purpose:** These requirements have been costly to coastal districts, have resulted in significant delays during some project reviews and added no benefits (This change would implement a provision in the DNR December 2008 draft regulations that would eliminate requirements for designated areas).
DEC Carve-Out	23(s)	**Change:** Add a new subsection AS 46.40.096(s) clarifying draft permits are not required to initiate an ACMP review, but permit applications would be required. **Purpose:** This change addresses a concern raised by AOGA about project delays by delaying start up of some ACMP reviews.

Special Management Areas	9, 10, 36, 37	**Change**: Delete new term "special management area" and return to existing statutory language "areas that merit special attention." Section 36 removes new definition, and section 37 deletes repeal of the existing definition. **Purpose**: This new term, included in DNR's December 2008 draft legislation, has been misinterpreted as adding a new requirement. Deleting the new term eliminates unnecessary confusion.
OCS	19	**Change:** Remove proposed words "and water" from AS 46.40.096(l). **Purpose:** This change removes unnecessary confusion and responds to concerns raised by industry. The addition of the words "and water" resulted in a misunderstanding that this bill would add a new provision to allow review of projects in the OCS. The ACMP has always allowed review of OCS projects.
Proposed Rules	35	**Change:** Language added to definition of "project" to allow review of proposed federal rules (regulations). **Purpose:** This addition allows the state to take advantage of a provision in the federal coastal zone management law to allow review of proposed rules that alter uses of the coastal zone (e.g., ESA regulations about endangered species)
Cooperative Administration	31	**Change:** Removes proposed changes to subsection AS 46.40.190(a) regarding cooperative administration. **Purpose:** The change incorporates an amendment to HB 174 that responds to a concern raised by a coastal district.
Repeal of ACMP	38, 39	**Change:** New sections repeal provisions in Ch. 31, SLA 2005 that repealed the coastal management program in 2011. **Purpose:** These new sections will avoid unnecessary action during the 2011 legislative session.

ANALYSIS: *(Attach a separate page if necessary)*

SB 4 will have the following fiscal impact:

1. Travel - It is expected that the Coastal Policy Board (CPB) will need to meet at least four times annually to fulfill the obligations and provide the services outlined in HB 74. Travel (including air, hotel, and per diem) for appointed members, designated members, and state agency staff is included.
2. Contractual - In order to re-write the guiding regulations, DNR must secure contractual services for the promulgation and final Department of Law review of the regulations (FY 2010 only). In addition, contractual services for the CPB meetings must be procured, and will be an annual expense.
3. Supplies - The CPB meetings will require some level of supplies for ensuring the members have proper materials.

Prepared by: Randy Bates, Director — Phone 465-8797
Division: Coastal and Ocean Management — Date/Time March 25, 2010
Approved by: Tom Irwin, Commissioner — Date March 25, 2010
Natural Resources

(Revised 9/10/2008 OMB)

ANALYSIS CONTINUATION

4. Although not contemplated above as an additional expense, it is expected that coastal districts will choose to revise, amend, and seek approval for their coastal district plans. No funding is included in this fiscal note for Coastal District Plan revisions. DNR does not typically set aside any funding for plan revisions.

SB 4: Coastal Zone Management

Comparison of Pre-2003 ACMP with Current Provisions and Proposed Changes

April 11, 2010

Topic	Pre-2003	Current Provisions	Proposed CS for SB 4
Location of Agency	Governor's Office	DNR	DNR
Board	17-member state-district board provided broad oversight of the ACMP, including project reviews.	DNR commissioner responsible for all ACMP decisions with no checks and balances.	9-member state-district board with limited authority to approve district plans, grant programs and program changes. Governor appoints all members without nominations. DNR responsible for project reviews.
Enforceable policies • General limitations	District programs must: • Not violate a state law or policy, • Adhere to adopted guidelines and standards, • Not unreasonably restrict a use of state concern.	DNR's regulations more stringent than the legislative intent. Statutes require that policies must: • Not duplicate state/federal laws, • Be prescriptive, • Only deal with matters not adequately addressed by laws, • Not unreasonably restrict a use of state concern.	Policies would be allowed to address impacts to any coastal resource or use if they do not: • Duplicate state/federal laws, • Address a matter preempted by state or federal law, • Conflict with state law, • Unreasonably restrict a use of state concern.
• Limitation of policies to certain statewide standards and designated areas	Designated areas not required. Impacts to coastal resources and uses on federal lands and waters were considered.	Policies limited to certain statewide standards and designated areas. Impacts to coastal resources and uses on federal lands cannot be considered. States' rights to review impacts are restricted.	Regulations would not be able to restrict policies to certain statewide standards or designated areas. Eliminating requirements for designated areas allows consideration of impacts to coastal resources & uses.
• State/federal authority	Potential for districts and agencies to have conflicting requirements.	Districts cannot override state, federal or legislative authority.	Districts cannot override state, federal or legislative authority.
Citizen Appeals	Allowed citizen lawsuits (pre-2003) and petitions (pre-2002).	Citizen lawsuits and petitions not allowed.	Citizen lawsuits and petitions not allowed.
Special Management Areas	Districts may establish "areas that merit special attention."	Districts may establish "special management areas."	Districts may establish "areas that merit special attention."
Repeal of ACMP	No provision for repeal	ACMP will be repealed July 2011.	No provision for automatic repeal.

Topic	Pre-2003	Current Provisions	Proposed CS for SB 4
Plan Amendments	No requirement to resubmit plans every 10 years.	Districts must resubmit plans every 10 years.	Districts may retain current plans. No 10-year requirement to submit plan.
DEC Participation	DEC participated in ACMP reviews, but some district policies addressed matters regulated by DEC. Some projects delayed because of a requirement for issuance of draft permits before start up of review.	Legislative intent not being implemented: DEC seldom participates in ACMP reviews, and DNR does not allow any air or water quality matters to be addressed during an ACMP review, even for matters not regulated by DEC.	DEC's permits would be included in the ACMP review, but DEC would have final say on matters it regulates. A new provision clarifies draft permits cannot be required before review start up.
Review Timelines	No 90-day limit. Projects with federal permits subject to 3-month and 6-month deadlines. Almost all reviews completed in 30-60 days.	Most reviews must be completed within 90-days regardless of whether there is adequate information to make the decision.	Projects with federal permits would be exempted from 90-day limit. Federal law requires notification why there is a delay at 3 months, and review must be completed in 6 months.
Inland Projects	Projects inland of the coastal zone reviewed only if direct and significant coastal impacts to coastal resources or uses.	Projects inland of the coastal zone cannot be reviewed for consistency with the ACMP.	Projects inland of the coastal zone cannot be reviewed for consistency with the ACMP.
	Federally-initiated activities inland of coastal zone reviewed only if there are coastal effects.	Federally-initiated activities inland of coastal zone reviewed only if there are coastal effects.	Federally-initiated activities inland of coastal zone reviewed only if there are coastal effects.
Outer Continental Shelf (OCS)	Activities in the OCS may be reviewed for consistency with the ACMP.	Activities in the OCS may be reviewed for consistency with the ACMP.	Activities in the OCS may be reviewed for consistency with the ACMP.
Activities on federal land & waters	Ability to influence activities that affect coastal resources and uses on federal lands & waters.	Impacts to certain resources & uses cannot be considered due to designated area requirements.	Ability to influence activities that affect coastal resources and uses on federal lands and waters.
Elevations (pre-decision appeals)	DEC, ADFG & DNR made decision by consensus.	DNR commissioner has sole authority to make decision.	DEC, ADFG & DNR decide review participant appeals by consensus.
Proposed Rules	Proposed federal regulations cannot be reviewed for consistency with the ACMP.	Proposed federal regulations cannot be reviewed for consistency with the ACMP.	Proposed federal regulations (e.g., ESA listings) can be reviewed for consistency with the ACMP.

Marilyn Crockett, Executive Director

March 30, 2010

To the Members of the Senate Finance Committee:

We are writing today to express our strong opposition to and grave concerns with SB 4. During this session, many legislators have expressed a desire to create a better environment for investment in Alaska. Make no mistake, AOGA's members believe that passage of SB 4 would achieve the exact opposite.

If passed, this legislation will have a chilling and negative impact on the oil and gas industry statewide, stifling exploration and development in the Cook Inlet and on the North Slope. We believe offshore exploration and future development would be stopped dead in its tracks. If passed, SB 4 will significantly reduce potential production, and could cost the state significant revenue, billions of dollars in needed industry investment and consequently thousands of jobs.

Because virtually all operations of the members of AOGA take place within, or adjacent to, Alaska's coastal zone, we have been actively engaged in development and implementation of provisions of the Alaska Coastal Management Act (ACMA) and the subsequent Alaska Coastal Management Program (ACMP) since the program's inception in 1977.

AOGA also has long been an advocate of and contributor to sound legislation and regulations which balance resource development with environmental protection. AOGA input to achieve these goals has included support of a timely, smooth functioning and predictable State permitting regime. Prior to the 2003 reforms, experience with the former ACMP demonstrated that it had become a complex, duplicative program with uncertain standards and open-ended review periods, creating an unworkable permitting process. We strongly supported the legislative initiative in 2003 which made major reforms to the ACMP that resulted in significant improvements in Alaska's permitting system.

Unfortunately, SB 4 not only eliminates all those permit streamlining reforms of 2003 but creates, if passed, a permitting regime that is again unpredictable and unworkable. We cannot overemphasize our concern that the impacts of SB 4 to responsible development in Alaska will be chilling; this legislation will be perceived as sending strong signals that Alaska is not open for business. This is at a time of declining oil production and the need to get a gas pipeline and other projects moving.

While we recognize the local concerns that this legislation tries to address, for the reasons we set forth below we do not believe that SB 4 is the right answer. The current permitting system provides a predictable and workable process with numerous opportunities for public input and local review. SB 4 would instead create a duplicative, untimely, and unworkable permitting system far worse than the pre-2003 ACMP.

For example, DEC technical permits are already routinely subject to public review and comment. Bringing hundreds of such DEC permits back into the ACMP for duplicative review under multiple undefined new local standards will add no additional value. It will instead create huge delays and inefficiency while undermining the statewide environmental standards the legislature has directed DEC to establish and enforce.

Our principal concerns and the likely impacts of SB 4 are discussed in more detail below. In summary, these are as follows:

- SB4 would create a new, far reaching, and duplicative ACMP process with unpredictable consequences and open ended timelines for permitting of projects in Alaska.

- State control and management of its lands, air and waters would be relinquished to a largely locally nominated Coastal Policy Board (Board) with extraordinary but standard-less regulatory powers. DNR's role in the ACMP and its constitutional authority over natural resources would be subordinated to the Board, as would the authority of other state resource agencies. The Board and its staff (which would be required to administer its extensive functions) would comprise a duplicative new bureaucracy to administer the ACMP on top of and in addition to the current DNR administration of the program. This would raise significant practical questions about how the system could work.

- Existing state and federal environmental standards would be supplanted by prescriptive or programmatic new local requirements. In effect, local standards would trump existing Federal and state environmental regulatory programs with respect to what permit applicants would have to comply with. The powers vested in the coastal districts and Board to draft and approve new enforceable policies in addition to existing state and federal requirements are without meaningful standards or limitation. These local enforceable standards would expressly no longer be subject to any statewide standards but nevertheless have the force of state law.

- Since the inception of ACMP, and as made explicit in the 2003 reforms, ADEC air, water and other standards in their regulatory and permitting programs were deemed to be the standards in those areas for consistency reviews. Those typically complex, technical permits and lengthy review processes were appropriately "carved out" of the ACMP review, thereby streamlining and shortening permitting time frames. Now under SB 4 consistency reviews and

permitting time frames would be significantly lengthened by inclusion of ADEC permits in consistency reviews.

- Schedule deadlines of the current ACMP would be eliminated for federally permitted projects and weakened for all reviews. This again threatens an indeterminate and open-ended schedule for ACMP reviews, especially in light of the exclusion of the DEC "Carve-out."

- The reach of the ACMP would be vastly but unpredictably expanded inland of the defined coastal zone. Any project anywhere in Alaska could be brought into ACMP's orbit, and a consistency review required, if it were believed to have impacts on a coastal use or resource. The threshold for such determinations appears to be very low given the overall provisions of SB 4.

- SB 4 presents very serious constitutional concerns including the standard-less delegation of legislative and administrative authority to the Board and coastal districts. The vast authority delegated would not only disregard state ACMP standards but create new enforceable local policies which go beyond existing state and federal law. Other serious questions include whether the process for appointments to the Board would improperly interfere with the constitutional power of the governor, and whether the Board's authority to disapprove DNR regulations would in effect comprise an unconstitutional "legislative veto." We strongly recommend that SB 4 be subject to legal review by the legislature and the Attorney General's Office prior to further legislative action to review these and other legal issues. SB 4 otherwise seems certain to give rise to not only permitting uncertainty and delay but extensive new litigation over project reviews on a case by case basis .

BACKGROUND

As you consider this legislation it is important to recall the historical problems with the ACMP that led to the passage of HB 191 in 2003.

In the late 1990's it became apparent to State regulatory agencies and the regulated community that the ACMP was broken both in terms of process and substantive scope. Among the problems, which are documented in Chapter 10 *Program Description for the Alaska Coastal Management Program* (DNR 2005), in testimony on HB 191, and in other documents, were:

- A complex program tiered upon a diverse federal and state permitting system;
- Lack of clarity on the applicability and scope of the ACMP review to a project;
- Lack of clarity and inconsistency on information requirements to support consistency reviews;
- Unpredictable and often lengthy time frames for consistency reviews due to numerous stop clocks and requests for information and interagency disagreements;
- Lack of clarity and inconsistent application of the standards that apply to the consistency review projects;

- Conflicts between permit regulatory conditions and ACMP standards and enforceable policies as a result of duplicative or overlapping requirements;
- Application of "homeless stipulations" to consistency determinations that have no statutory basis;
- Duplication of administrative and ACMP appeals processes;
- Abuse of the ACMP elevation/appeals processes to delay or stop projects.

A very important factor in the problems arising in the ACMP in the 1990's and early part of this decade is the significant evolution in federal and state environmental laws and regulations that occurred after the passage of the ACMA in 1978. Given a more complete and rigorous regulatory environment, much of the scope of consistency reviews, statewide standards and district enforceable policies had become redundant or duplicative. This also created the complexities in the program (characterized in testimony to the legislature in HB 191 hearings as an ACMP "maze" that could not be mapped out) because of the conflicting requirements between the ACMP and individual state and federal permitting programs.

The revisions to the program adopted by the Legislature in 2003 resolved these challenges and transformed the program into one that provides certainty for the State, local districts and the regulated community. The 2003 changes made the consistency review process more efficient and interactions with federal and state permitting programs more certain and consistent. These changes (1) established clear triggers for applicability of the ACMP; (2) identified the information necessary for a complete application and established deadlines for requesting additional information; (3) established the applicable standards for consistency review, removing duplication and subjectivity; and (4) established firm deadlines for completion of consistency reviews.

Unfortunately, SB 4 effectively eliminates the certainty put into place by the Legislature in 2003.

Elimination of the "DEC Carve-Out"

One of the most problematic provisions of SB 4 is elimination of the DEC Carve-out. This provision in existing law implements the original intent of the ACMP...that the air, land and water standards and permits administered by the State are inherently consistent with the ACMP and therefore the additional step of securing a consistency determination is not necessary or required. These standards were developed after years of technical evaluation, and they continue to evolve as science and experience help us better protect the environment, and most importantly, they are implemented through permit processes that are comprehensive and time-consuming, carrying with them statutory and regulatory requirements for extensive public comment. The time periods for these existing permit processes fall well outside of the ACMP review schedules. The ADEC carve-out in no way diminishes a coastal district's opportunity to comment and provide input on a specific ADEC and federal permit applications. ADEC and federal permits have public comment provisions associated with them and both ADEC and federal agencies routinely furnish copies of permit applications and/or draft permits to coastal districts, boroughs and municipalities.

Elimination of the Carve-out will result in consistency determinations on projects being held up until permits with long lead times are finalized, resulting in considerable delays in projects moving forward and a tremendous amount of uncertainty as to final approval for applicants to move forward.

The practical result of ADEC permits being part of the consistency review (the situation prior to passage of HB 191) was:

- ADEC permits had to be submitted with all other state and federal permit applications in order to initiate the consistency review. However, the ADEC permit applications (e.g. air permit, C-plan) are typically the most technical demanding applications requiring very mature engineering and project planning. Thus, the ACMP review schedule was entirely dictated by the applicant's progress on detailed engineering needed for the ADEC permit applications.
- ADEC permit applications, particularly those relating to air emissions and spill response, take significantly longer than most other federal and state permits to process. As a result all permit issuance was held up until ADEC had concluded its processing. This severely limited the flexibility of an applicant with respect to scheduling engineering and project construction and typically extended the project time frame with resultant cost increases.

The ADEC Carve-out in HB 191 eliminated the above problems. Let us provide you with a hypothetical example. Virtually every single oil and gas project in Alaska involves various state and federal permits. For example an ADEC air permit is required for new drill rigs and upgraded power equipment. To satisfy an air permit, often times, one year of ambient air quality data must be collected before the permit application can be submitted. While this data is being collected, other State and federal permit applications, including the ACMP consistency review, have to be submitted and processed. Because of the HB 191 changes, by the time the ADEC air permit is ready for issuance, the consistency review is complete and construction permits are ready to be issued. The project and permitting processes are therefore not delayed by the long lead time of the ADEC air permit, as the ADEC permitting process can occur simultaneously with other applications. However, there is still ample opportunity for public input to ADEC's air quality permit decision on projects and the overall quality of the airshed was still protected by the rigor of the ADEC regulations.

It is also important to realize that DEC issues hundreds of air, water, and contingency plan permits and approvals. These permits are already subject to public review and input. A requirement for such a permit does not even necessarily reflect a new "project "or "activity" in the coastal zone, as they apply to innumerable existing businesses, facilities and vessels. In addition, these are technical permits administered on a statewide basis, often under complex existing federal and state standards administered by ADEC. There is no need or added value to require ACMP review of such State environmental permits. Bringing these permits into ACMP review would simply create a vast and duplicative new work load for businesses and facilities throughout Alaska, as well as for the ACMP itself.

Offshore exploration would also be seriously impacted by removal of the ADEC Carve -out. For example, air permits are typically necessary for exploration operations, These are extremely technically complicated air permits – in fact, EPA has not issued a major source air

permit for the offshore in 10 years. As with this and the two dozen other permits necessary for exploration drilling, many permits are received just prior to activities commencing and the proposed open-ended ACMP review process will begin after EPA has completed its work. The impact of this would be to curtail or cancel programs by placing one additional and repetitive process in place.

Simply put, the ADEC Carve-out avoids duplication of process and effort, eliminates inconsistent and conflicting permitting results, and improves the efficiency of the consistency review process with no adverse impact to the environment. If the State is to have a clear and predictable permitting regime, this provision must be retained.

Finally, if the ADEC Carve-out were to go away each local district would need to resolve the technical issues ADEC's technical staff currently address. Unless considerable local funding of such a capability was to occur local districts could not realistically address the technical complexities they would face.

Creation of a Coastal Policy Board

We are very concerned about the proposed duties and extensive responsibilities that would be vested with the establishment of the Coastal Policy Board. SB 4 empowers the Board to approve all district programs and enforceable policies, changes to the coastal zone boundaries, statewide standards and changes to the program. The Department of Natural Resources (DNR) may still adopt regulations, but only after approval of the Board, which will result in endless back-and-forth as DNR attempts to mesh its requirements under the Administrative Procedure Act with Board approval. Ultimately, however, SB 4 gives the Board veto power over DNR's (and other state resource agency) legislatively mandated authorities.

Further, experience under the previous Coastal Policy Council demonstrates that insertion of a Board with this magnitude of duties into this process will result in considerable delays in program implementation because of the time required for action, given the infrequency of Board meetings, and the addition of another layer of approvals.

Predictability in timelines is eliminated

One of the most challenging aspects of any permitting program is the ability to rely on timelines for decision-making and the inherent risks to a project proponent for a timely decision based on predictable standards. This is especially true for operations in Alaska which often are faced with limited operating seasons where a delay in securing permits may result in multi-year delays in a project proceeding forward. In the offshore environment, the ACMP legislation threatens, even before it begins, any chance of operating during the brief 100-day open water period by placing control of the permitting process in jeopardy with contrasting regional 'open-ended' language and review timeframes that would run into the summer. Critically, SB 4 exempts activities proposed by a federal agency and activities permitted by a federal agency from the required deadlines for decisions. Virtually every project requires at least one federal permit, so the impact of this provision is dramatic. Further, oil and gas and other resource development activities are not the only activities that will be affected. Given the abundance of wetlands in Alaska's coastal zone, almost any

activity, from homebuilding to construction of public facilities, will require a permit from the federal Corps of Engineers and therefore will be subjected to this timeline uncertainty.

Performance based enforceable policies are allowed

SB 4 allows coastal districts to adopt performance-based enforceable policies. Applicants and districts are better served by clear and concise requirements based on sound science because it eliminates the potential for misinterpretation and disagreements between parties as to whether a particular action proposed by the applicant will meet the performance based policy. Further, this will be especially challenging for districts with minimal resources to administer their program because they typically do not have the in-house engineering and scientific expertise for every single type of development that may occur within their districts.

The coastal zone boundary will be expanded

SB 4 expands the reach of review of activities from not only the coastal zone but also to "inland of the coastal zone if the activities would cause direct and significant impacts to a coastal use or resource". During testimony at previous hearings on SB 4 we heard a coastal district representative state that it is their desire to weigh in on projects adjacent to their district even if it means "over the mountain". Such an expansion of the coastal zone boundary was never envisioned by the federal Coastal Zone Management Program or the ACMP. Any project proponent whose project lies inland of the coastal zone now faces the risk of a significant delay of the project; this is a major risk because SB 4 does not offer clear standards on the determination to include a project outside the coastal zone in a consistency review. This is contrary to both the intent of the federal CZMA and the ACMA. Furthermore, a quick review of the current, official ACMP Coastal Boundary Atlas shows that the coastal boundary already extends far inland (in some places over one hundred miles) along Alaska's coast from Southcentral to the North Slope.

Additionally, although over 81% percent of Alaskans support development in offshore areas, officials from several coastal communities and regions are officially opposed to such development. If the Legislature, through passage of the proposed changes to the Alaska Coastal Zone Management Program contained in SB 4, gives local districts the power to veto or delay projects or the ability to place more restrictive conditions on permits than federal and state agencies place on offshore activities, Alaskans will not see the promising OCS development opportunity materialize.

It is that simple – offshore exploration and development will not happen and Alaskans will not benefit from the thousands of jobs, billions of dollars in investments and 20-30 years of oil for the Trans-Alaska Pipeline System.

SUMMARY

To be successful and serve all entities in Alaska, any permitting program, and in particular the Alaska Coastal Management Program, as with any permitting program, must embody the following principles:

- Provide benefit for all Alaska residents
- Contain clear and concise requirements
- Be unambiguous and avoid opportunities for misinterpretation
- Provide predictable and firm timelines
- Provide predictability regarding applicable requirements and scope
- Avoid duplication of other state and federal permitting programs
- Contain clear limits so that district policies not require agencies to implement authorities that were not granted them by the legislature or that contradict agency regulations.
- Not allow special interests to derail development that otherwise meets all state and federal criteria.

SB 4 threatens each and every one of these principles.

We encourage you, in the strongest possible terms, to consider the direct negative impact this legislation will have on the ability of the State of Alaska to develop its resources for the benefit of all Alaskans. This legislation would severely hinder the ability for increased oil production on the North Slope and gas development in the Cook Inlet, at a time when both are desperately needed. Additionally, offshore development, often characterized as the "next Prudhoe Bay", will not occur. Alaska is at a crossroads. We cannot afford the lost jobs, the lost revenue and the lost investment that would result from SB 4.

Sincerely,

Marilyn Crockett

March 29, 2010

The Honorable Donald Olson
Alaska State Senator
Room 514, State Capitol
Juneau, AK 99801

The Honorable Reggie Joule
Alaska State Representative
Room 502, State Capitol
Juneau, AK 99801

Subject: Senate Bill 4 and House Bill 74 -- An Act relating to the Alaska Coastal Management Program; and establishing the Alaska Coastal Policy Board.

Dear Senator Olson and Representative Joule:

In the two years since I came to Alaska to head Shell's business, I have shared with you our enthusiasm and genuine optimism for the oil and gas potential we see in the Chukchi and Beaufort Seas. We at Shell firmly believe oil and gas exploration and development activities in the Alaska Arctic will create thousands of jobs for Alaskans, including the residents of the North Slope, and generate billions in revenues. These potential developments will result in oil production that could last for 30 to 40 years, thereby extending the life of the Trans Alaska Pipeline and facilitating new, as yet unknown opportunities for additional hydrocarbon production. Most importantly, Shell as well as other industry participants believe that history will repeat itself and that the success industry had 20 years ago, drilling 35 exploration wells in the Beaufort and Chukchi Seas, will once again be achieved. These activities will unquestionably be conducted with the most technologically advanced, environmentally sensitive methods.

To date, Shell and several other world-class offshore companies have invested several billions of dollars just for the opportunity to explore for those resources. Billions have been spent on leases, specialized drilling equipment, baseline science, litigation, permitting and program modifications, including significant expenditures to accommodate local concerns (discussed further below). Shell's planned exploration drilling activities in 2010 alone will cost in excess of $400 million, requiring more than 100 separate contracts, and as many as 700 people either employed or contracted. We see the real potential for the investment of billions more in future years.

However, all of the potential for future production, as well as all of the investments made to date by my company and others, are in jeopardy by the proposed ACMP legislation being advanced in Juneau. Offshore oil and gas exploration projects in Alaska already face significant challenges in becoming commercial developments, including economics, expansive permitting requirements, extremely high logistics costs, aggressive environmental group litigation, and international competition for investment dollars. Passage of HB 74 or SB 4 would only increase those challenges. I strongly encourage your careful consideration of the impacts and implications of this proposed ACMP legislation. I am available at your convenience to discuss further the concerns I have outlined below.

Key elements of the ACMP bills that threaten future investment in offshore oil and gas exploration and production activities include:

- ADEC Carve Out – Opens extremely technical federal and state air and water permits to contradictory local standards, unnecessarily restrictive requirements, costly last-minute modification and extended approval timelines.
- Delayed Consistency Reviews – Defers consistency reviews until after **ALL** federal and state permits/authorization are in hand and eliminates all established timelines, which will result in the loss of the short exploration season.
- Expanded Regulatory Authority – Empowers local districts to establish restrictions beyond those imposed by state and federal law.
- Conflicting Standards – Imposes no requirement that local permit standards be consistent with controlling state and federal standards, thereby leading to additional litigation, increased costs and project delays.
- Local Veto – Effectively establishes a local veto over development of the resources that belong to all the people of Alaska and the Nation.

For this year's open water season, Shell proposes to drill two exploration wells in the Beaufort and/or Chukchi Seas, collect shallow hazards information and conduct biological marine surveys. To gain approval for these activities, Shell must secure 37 federal, state and North Slope Borough permits or authorizations. To date, only two permits/approvals have been issued final – we are still waiting for 35 additional approvals! I can assure you it is not because Shell has delayed applying for these permits. Many of the federal agencies deliver what is called 'just-in-time' permits, permits received just prior to operations commencing. All but two of these permits are annual permits, and we have already begun preparing permit applications for 2011.

In addition, Shell has invested significant time, energy and financial resources to address local concerns. Regulatory requirements for permits sought to date require a project applicant to conduct numerous community meetings. Shell believes that local input and participation in the permitting and leasing processes provides valuable information to ensure safe and environmentally sensitive operations. Shell has participated in over **250 engagements since 2007** to explain our plans, identify issues of concern and modify our program to address those concerns. I must add that consultation is the bedrock for all of these permitting processes. There is substantial opportunity for comments from residents. In fact, Shell has modified its program as a result of certain comments from communities.

Permit delays and overly restrictive limits are the single greatest risk to Shell's Alaska offshore exploration program.

This ACMP legislation places control of offshore activities in the hands of the local districts at almost every juncture – with much open-ended language and timeframes, subject to wide interpretation. In effect, it hands veto power over all oil and gas development to a local district that is officially opposed to offshore drilling. Regulatory uncertainty created by the proposed ACMP changes creates a powerful disincentive for Arctic exploration and development.

As an example, blackout dates for migrating bowhead whale cows with calves described in the North Slope Borough's draft District Enforceable Policies of May 10 - July 1 and August 1 - October 15 in effect end any chance of operating during the short open- water season. These restrictions are not even considered by the National Marine Fisheries Service, the agency responsible for protecting bowhead whales, because they are not necessary or supported by science. One needs to remember that over $500 million in studies have been completed over the last three decades to support these initial exploration leases.

The requirement that all federal and state permits for exploration are final before beginning the ACMP process may effectively kill any attempt to drill an offshore well.

This bill allows districts, without the limitation of respecting the limits of state or federal law, to attach any stipulation they wish to offshore permits.

Once again, Shell is committed to working with local communities in the leasing and permitting processes and has a proven track record of taking steps necessary to address the concerns presented to us. The capital we have expended to date in pursuit of this project is an indication on our part of a desire to modify our program as a result of consultations that already exist in the permitting process. However, placing local districts in charge of whether permits are issued or lease sales are held places unprecedented control of projects that will have statewide and national impact into the hands of only a few individuals. Such an unprecedented transfer of power – from collective decision making to local control - would, have far-reaching impacts on Alaska and the nation.

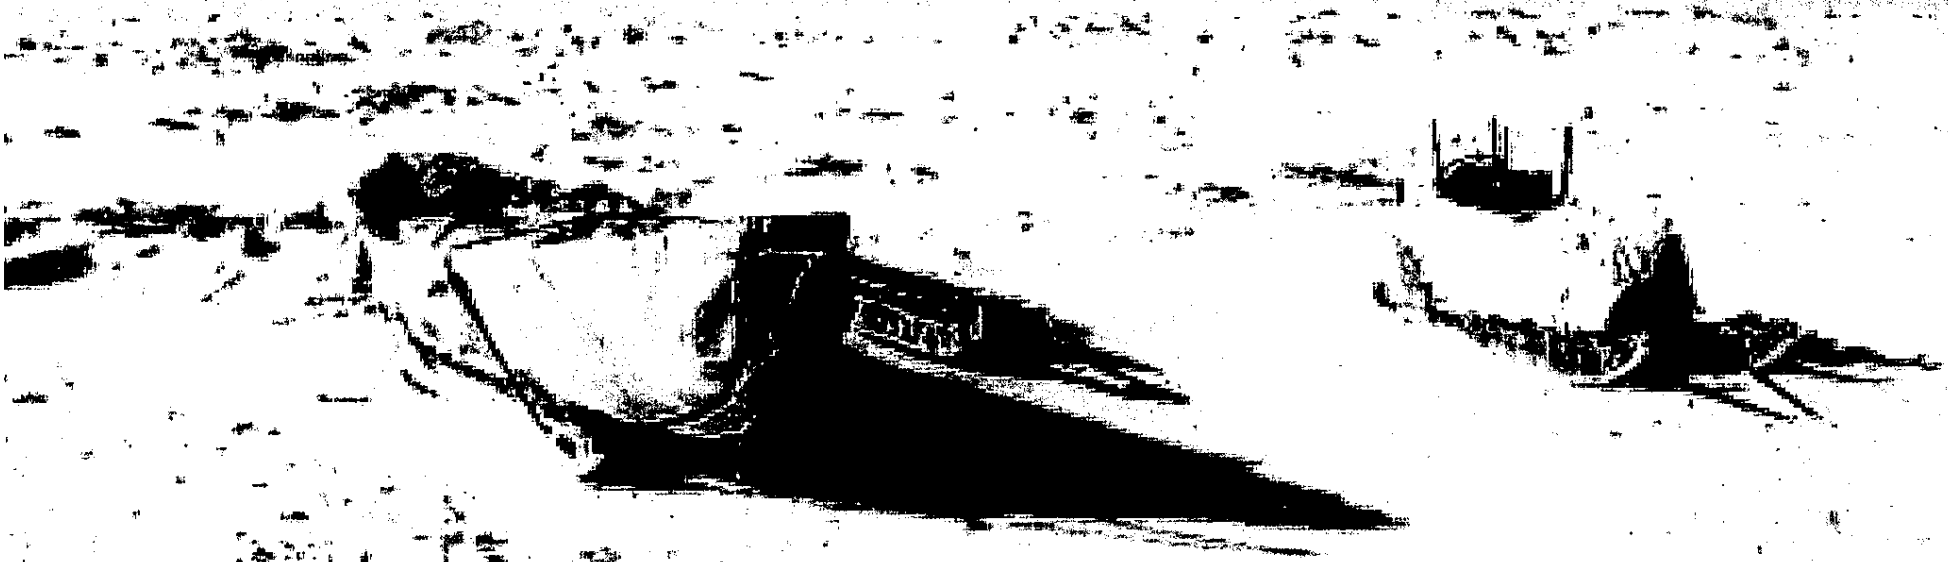
Alaskans want to see more exploration drilling and new oil for TAPS. The governor, legislature and citizenry are all looking for ways to provide an incentive and encourage companies to explore. And Shell is attempting to conduct just such a multi-year multi-well program with potentially huge benefits for Alaskans. Passage of HB 74 or SB 4 would tremendously compromise our ability to achieve those objectives and put Alaska's future financial stability at risk. I hope this provides you with the reasoning behind Shell's inability to support this legislation.

Sincerely,

Pete Slaiby
Vice President, Shell Alaska

2400

Senate Bill 4
Alaska Coastal Management Program
March 30, 2010



Edward S. Itta

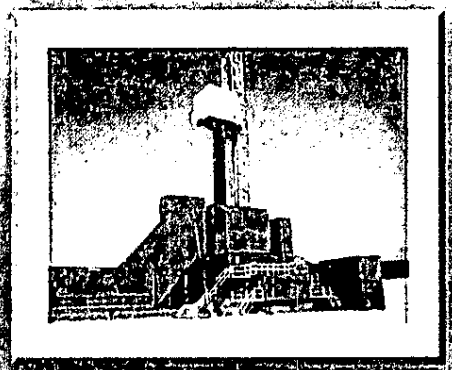
Mayor, North Slope Borough

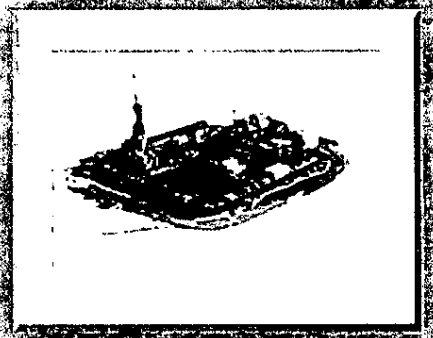
SB 4: North Slope Borough Testimony

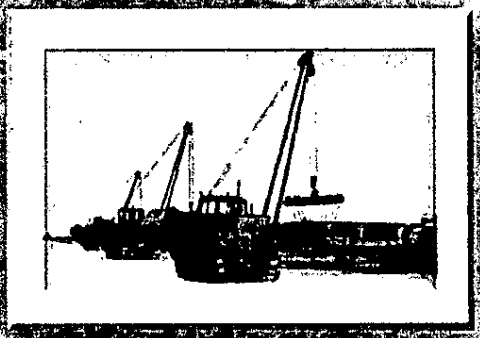
- Testimony will address the following topics:
  - Why the NSB supports this bill
  - How SB 4 does not stop development
  - How the ACMP is broken
  - Why the Legislature should care
  - How SB 4 promotes responsible development
  - Why a meaningful role for coastal districts makes sense for Alaska

Why the NSB Supports SB 4

- It restores meaningful participation
  - State agencies & coastal districts
- It brings air and water quality back into project review
- It restores state's rights







SB 4 Does Not Stop Development

- The ACMP has always promoted development
  - Coastal districts have not stopped projects through the ACMP
  - Before 2003, <1% of projects appealed
  - All of coastal development since 1977 has been approved under the ACMP
- SB 4 will not override legislative or agency authority
- SB 4 does not allow citizen or third-party lawsuits
  - Citizen lawsuits eliminated in 2003
  - Citizen petitions eliminated in 2002

The ACMP is Broken

- The ACMP has lost its value to review participants
  - Agencies and coastal districts have expressed frustration with the ACMP
- Few meaningful opportunities to resolve conflicts that arise at the local level
  - The ACMP used to be a tool to identity and resolve conflicts early in the process
  - Resolving conflicts early avoids lawsuits

SB 4: Legislative Intent

- **2003 Legislative intent is being ignored**
  - **DEC Carve-Out**
    - 2003 intent was to exclude only matters addressed by DEC laws
    - In practice, no air or water quality issues may be addressed during project reviews
  - **Enforceable policies**
    - DNR denied most policies proposed by local districts
    - Sample approvable policies requested by the Legislature are no longer allowable
  - **Regulations More Stringent**
    - DNR testified to the Legislature in 2008 that the regulations were "more stringent" than the Legislature intended
    - Since then, no changes have been made to the regulations

SB 4: Legislative Intent

- **Regulatory confusion**
  - HB 191 (2003) directed DNR to "avoid regulatory confusion"
  - 2004 regulations are costly and confusing
    - The designated area requirement delays reviews
      - Subsistence impacts can't be considered unless they are in a designated area
      - DNR disapproved most district proposed subsistence use areas
  - OCS project review process is not clear
    - DNR–DEC coordination procedures are confusing
    - There is no regulatory provision for public comment on the DEC finding (draft DEC findings are only "advisory")

2407

SB 4: Leadership Needed

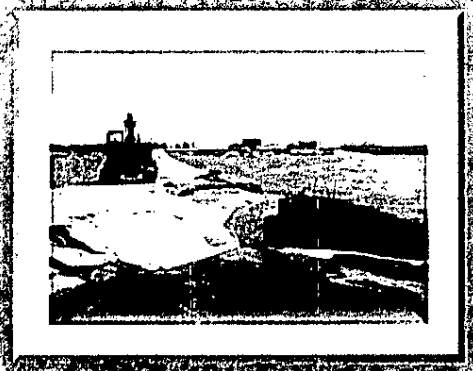
- **ACMP Re-evaluation**
  - Announced in February 2008
  - Not initiated until July 2008
  - Extensive multi-stakeholder involvement in 2008
  - Process abruptly ended after December 2008 with no explanation to participants
  - No way forward to resolve important issues
- **Legislation**
  - Leadership is needed to restore the ACMP's effectiveness

SB 4: Why Should You Care?

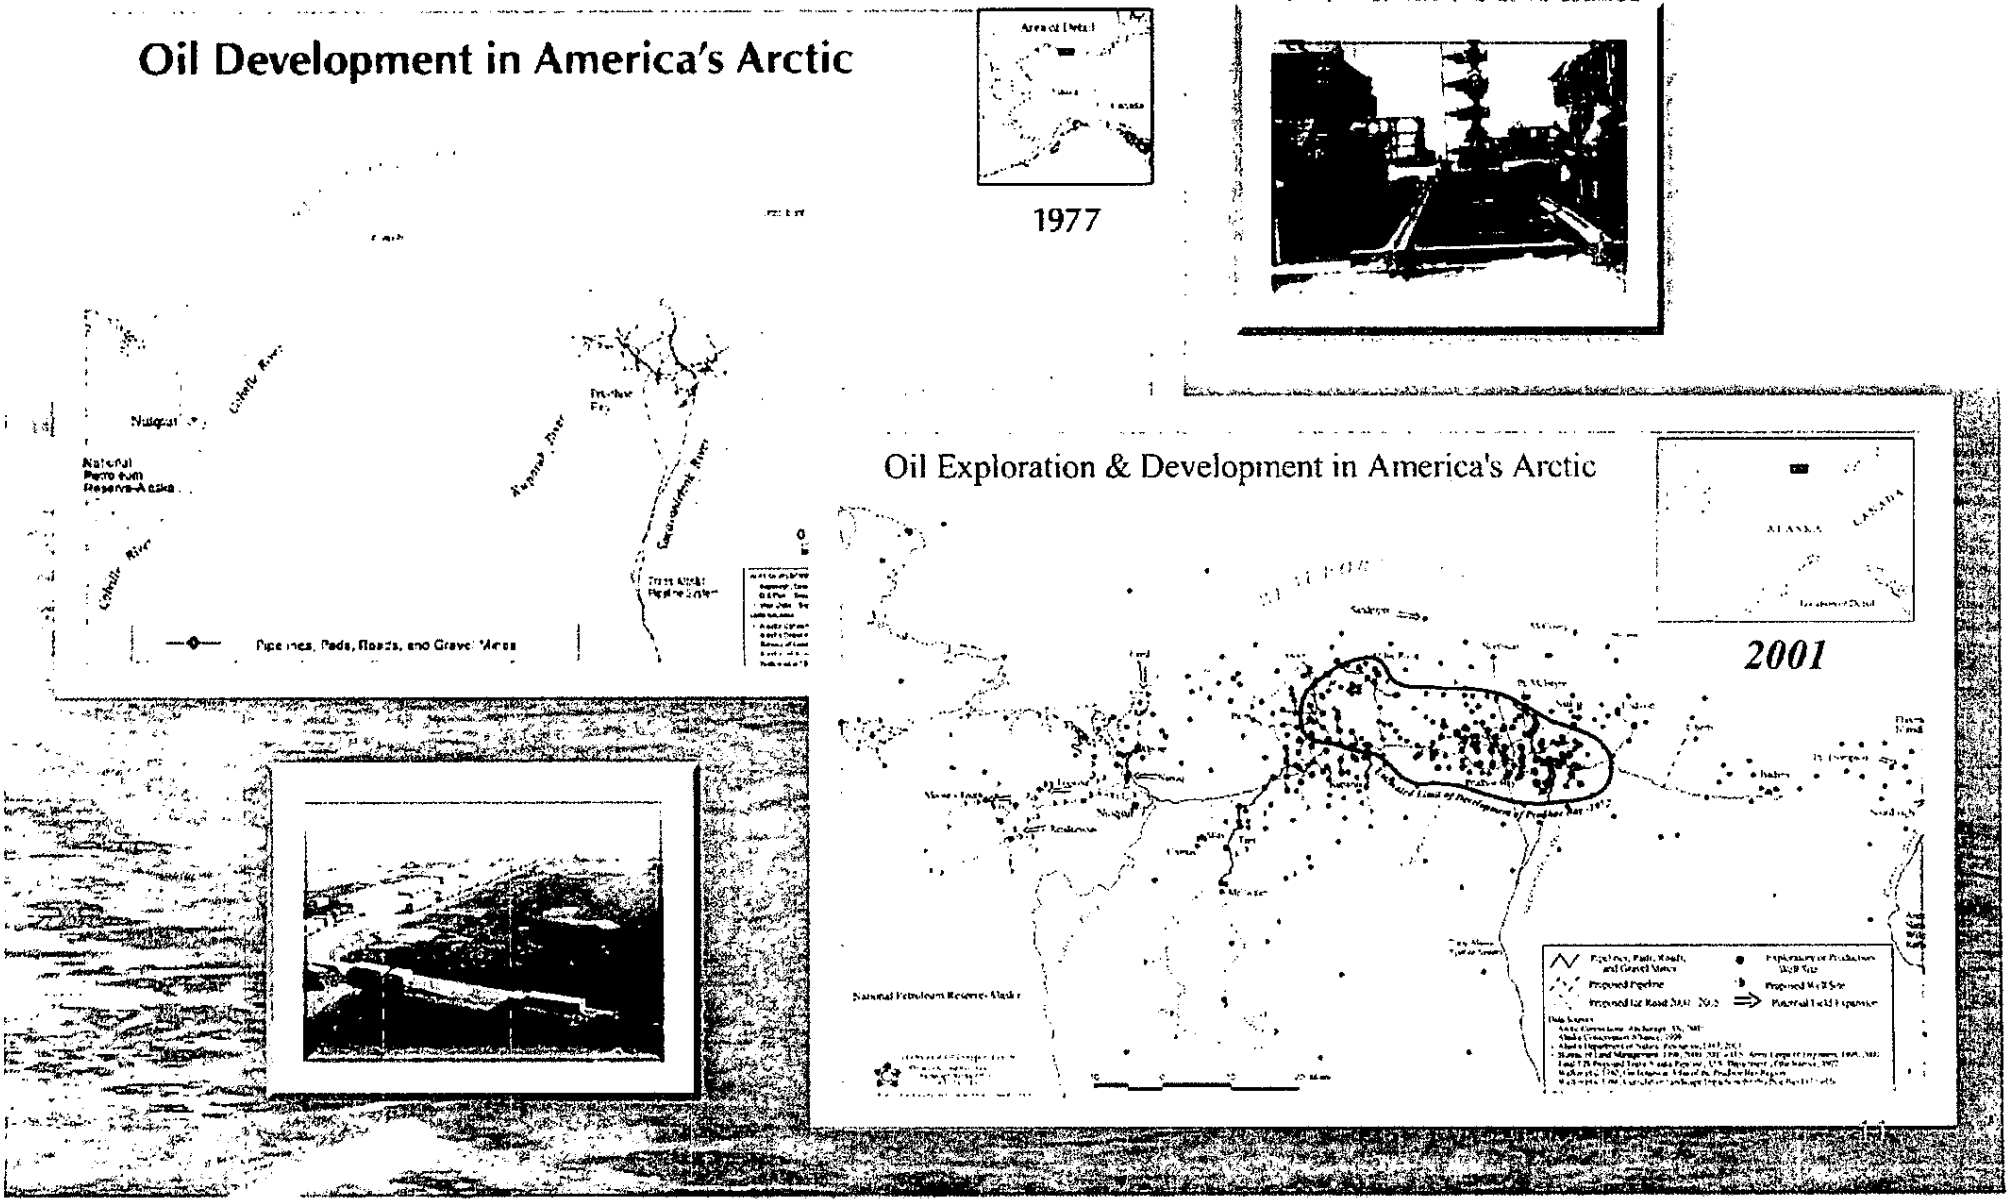
- **Effective Stakeholder Participation**
  - Promotes responsible development
  - Reduces delays during project reviews
  - Reduces lawsuits
  - Improves relations
    - Between state and federal agencies and local government
      - When a project does not require an EIS, the ACMP provides an efficient forum for agency coordination

SB 4: Why Should You Care?

- SB 4 will promote cooperation and approval of responsible development
- Congress requires states to have coastal programs in order to receive Coastal Impact Assistance Program (CIAP) funds
  - CIAP will bring $79.8 million to Alaska



25 Years of Growth Under ACMP



What SB 4 Does

- Restores meaningful participation
- Brings air and water quality back into project review
- Restores state's rights

Restoring Meaningful Participation

- **Coastal Policy Board**
  - Gives districts and agencies a seat at the table
  - Restore checks and balances
  - More streamlined than the Coastal Policy Council
    - Fewer members (9 rather than 17)
    - Limited responsibilities
      - Approve coastal district plans, grant programs & regulations
        - » DNR would approve regulations after board endorsement
    - The new board would not have any oversight over project "consistency reviews"

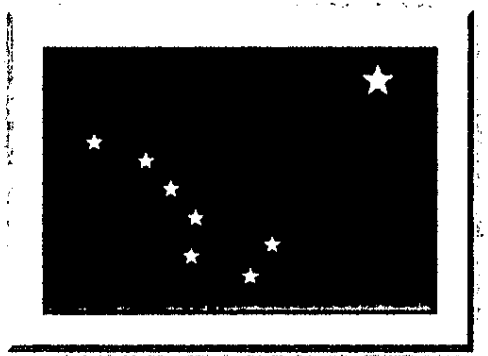
Restoring Meaningful Participation

- **District enforceable policies**
  - SB 4 would allow policies that:
    - Do not conflict with state or federal law
    - Address issues not preempted by state or federal law
    - Address a local concern

SB 4: Air and Water Quality

- **Eliminating the "DEC Carve-Out"**
  - Avoids confusion about scope of ACMP reviews
  - Reinstates public comments for OCS reviews
    - Currently because DEC has no permit for OCS waters, there is no opportunity for public involvement
  - Allows consideration of air and water quality impacts not addressed by DEC's laws
    - For example, oils spill plans do not address effects of spill
  - DNR's December 2008 draft statutes eliminate the DEC Carve-Out

SB 4: State's Rights



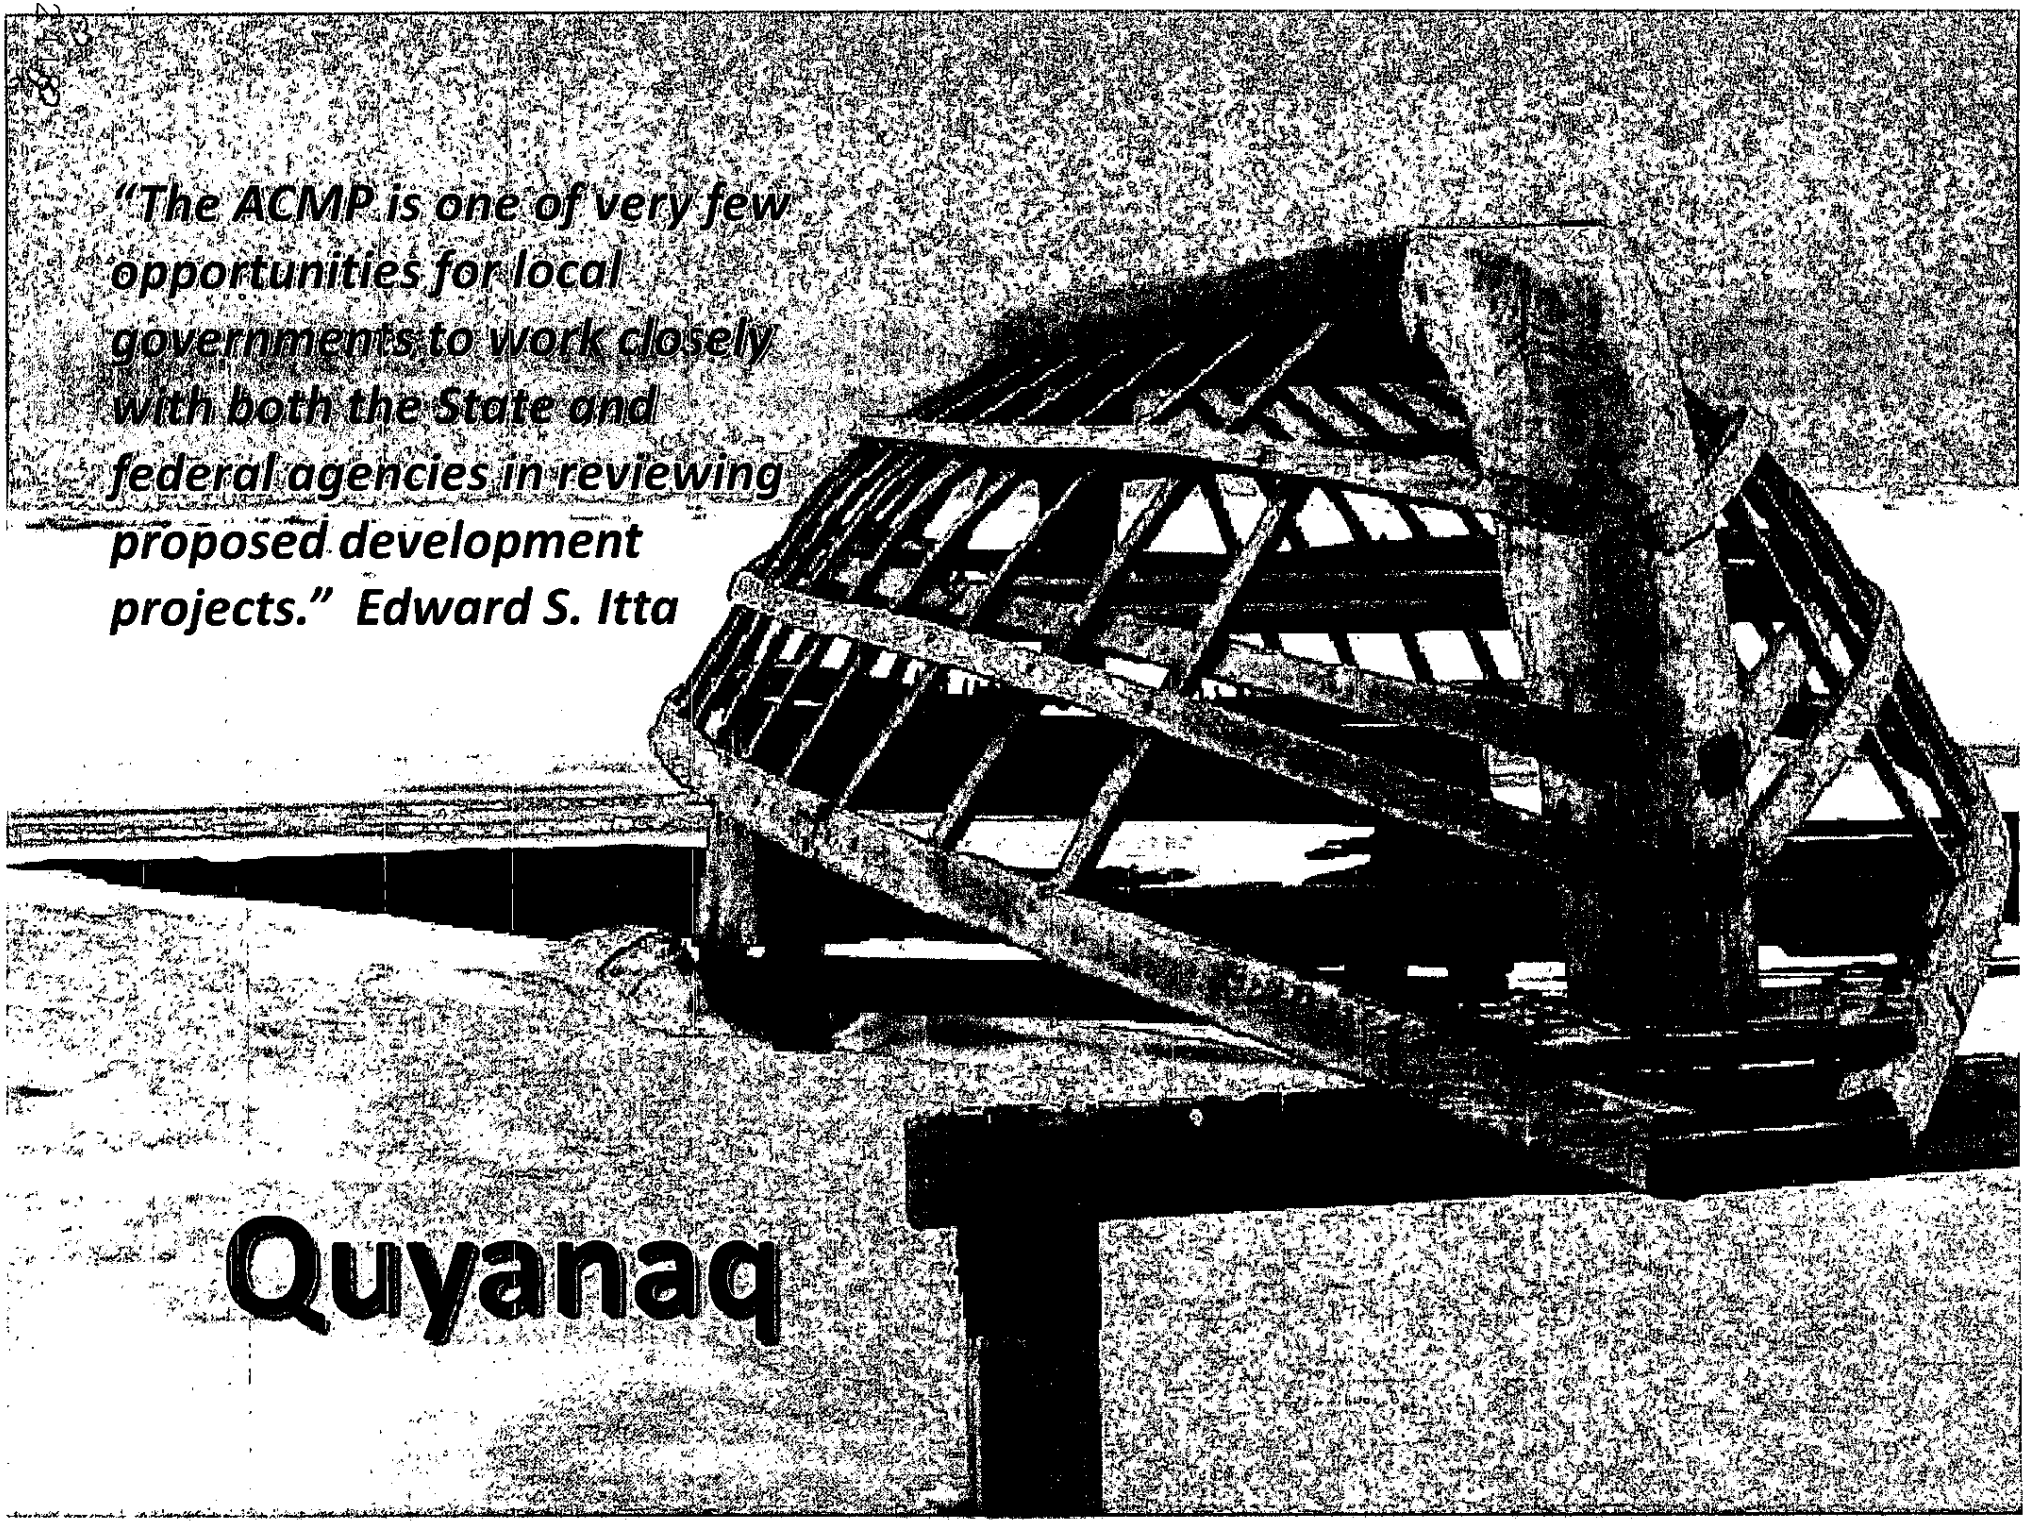
- SB 4 Restores State's Rights
  - 2003-2004 ACMP changes removed some rights provided by the Coastal Zone Management Act
  - SB 4 would:
    - Allow review of all projects that would have coastal impacts
    - Remove 90 day limit for reviews with federal permits
      - Most reviews would be completed in 30 or 50 days
    - Allow consideration of impacts to coastal resources on federal lands and waters
      - Designated area requirements limits the State's ability to influence decisions on federal lands and waters

Why a Meaningful Role for Coastal Districts Makes Sense for Alaska

- "One size fits all" does not work for Alaska
- Restoring the ability for districts to influence local projects is consistent with Alaska's position against federal intrusion
- Local communities know best what is works, and their expertise improves projects
- Most project impacts are felt at the local level
- Local involvement through enforceable policies improves project designs and reduces litigation

SB 4: Summary

- This bill should be passed because it:
  - Encourages coastal partnerships
  - Promotes responsible development
  - Restores states' rights
  - Reduces regulatory confusion



"The ACMP is one of very few opportunities for local governments to work closely with both the State and federal agencies in reviewing proposed development projects." Edward S. Itta
Quyanaq

Division of Coastal and Ocean Management

CZMA fund summary

State Fiscal Year 2008 (federal FY 2007)

Section 306- Program Implementation	Federal Funds	State Funds (match)	Total	Notes
Requires 1:1 Match				
DCOM Admin/Implementation of program	$769,500.00	$1,214,500.00	$1,983,999.00	DCOM overmatches federal funds to make up for coastal district match (see below)
Coastal Distnct Plan Development and Implementation	$710,000.00	$265,000.00	$975,000.00	DCOM meets the additional match requirements of $445,000.00
State Agency Implementation	$487,500.00	$487,500.00	$975,000.00	State agencies meet required 1.1 match
Total 306 Funds	**$1,967,000.00**	**$1,967,000.00**	**$3,933,999.00**	

Section 309 - Result in Program Change	Federal	State Funds (match)	Total	Notes
No Match Required				
DCOM Publications/Communications	$103,248.00	$0.00	$103,248.00	Outreach & Education
Compettive Grants	$272,000.00	$0.00	$272,000.00	Coastal districts and state agencies compete for funds to make a program change or implement a change to the ACMP.
Information Tech	$97,759.00	$0.00	$97,759.00	Business Information System for DNR
Coastal Nonpoint Source Pollution	$62,993.00	$0.00	$62,993.00	Sub-Awarded out to District(s)
Total 309 Funds	**$536,000.00**	**$0.00**	**$536,000.00**

CITY AND BOROUGH OF SITKA

RESOLUTION 2009-32

A RESOLUTION OF THE ASSEMBLY OF THE CITY AND BOROUGH OF SITKA, ALASKA, SUPPORTING LEGISLATION TO ENABLE ALASKA'S COASTAL COMMUNITIES TO MORE EFFECTIVELY PARTICIPATE IN THE ALASKA COASTAL MANAGEMENT PROGRAM (ACMP)

WHEREAS, the "streamlined ACMP process" which resulted from the passage of House Bill 191 in 2003, and its implementation by regulations and statutory amendments, forced the complete revision of all Alaska Coastal Management Plans in Alaska, including Sitka's; and

WHEREAS, as a result, Sitka lost more than half of its enforceable policies (the only section of coastal plans which had standing to be considered as part of the ACMP review process for permits and management decision-making affecting coastal communities), and those policies remaining were so restricted as to be virtually un-usable in coastal comments; and

WHEREAS, there has been an increasing, widespread effort to revise the ACMP to help coastal Alaskan communities regain a "seat at the table" in management decision making affecting Alaska's coastal zone, and reign in the Department of Natural Resources which is charged with managing the State's resources but now also makes all coastal management decisions on developing those same resources; and

WHEREAS, prior to the ACMP's revisions, the Sitka Coastal Management Program had been a model of effective coastal management, allowing the Sitka community to have due deference and protect local resources and activities while permitting responsible development; and

WHEREAS, House Bill 74 sponsored by Representative Joule and Senate Bill 4 sponsored by Senator Olson are being considered by the Alaska Legislature, and this legislation could help restore a meaningful role for coastal municipalities such as Sitka in the ACMP, including the following key provisions (among others):

- Establishes Alaska Coastal Policy Board with 5 public members representing coastal districts and 5 commissioners of resource agencies to make ACMP policy decisions.
- Establishes duties of the Board to approve ACMP standards and criteria for district plans.
- Adds subsistence to the list of resources included in the ACMP objectives.
- Restores local plan ability to write meaningful enforceable policies by enabling policies to be either prescriptive or performance-based, stricter or more specific than state or federal laws, and clarifies policies apply to all land and water uses subject to the plan.
- Eliminates the "DEC carve-out" exempting DEC permits from consistency reviews.
- Allows ACMP consistency reviews of projects inland of the coastal zone if there would be direct and significant impacts to coastal uses or resources;
- Permits meaningful local participation in the ACMP through expanded enforceable policies

addressing a wide range of coastal uses.

NOW, THEREFORE, BE IT RESOLVED that the Assembly of the City and Borough of Sitka, Alaska, supports the revision of the Alaska Coastal Management Program to restore these key provisions and permit the City and Borough of Sitka to better manage its coastal zone per the Alaska State Constitution's provision for maximum local self-government.

PASSED AND APPROVED by the Assembly of the City and Borough of Sitka, Alaska, on this twenty-fourth day of February, 2009.

_____
Scott McAdams, Mayor

ATTEST:

_____
Colleen Ingman, MMC
Municipal Clerk

February 18, 2009

MEMO TO: Administrator Jim Dinley
Mayor and Assembly

FROM: Marlene Campbell, Government Relations Director
(and Coastal Management Coordinator)

SUBJECT: Resolution Supporting Revisions to Alaska Coastal Management Program

Your approval or modification of proposed Resolution 2009-32 is requested to affirm CBS support for "legislation to enable Alaska's Coastal Communities To More Effectively Participate in the Alaska Coastal Management Program (ACMP)". There are several bills (HB 74, SB 4, and possibly others) being considered by the Legislature which could help rebuild the ACMP.

When House Bill 191 substantially changed the ACMP in 2003, all coastal plans had to be rewritten. Sitka lost more than half of its enforceable policies which must be considered in coastal consistency reviews and other proposals for projects within the City and Borough of Sitka. Sitka's Coastal Plan has been a model of effective coastal management since it was first approved in 1981. The Sitka Plan's 1989 major amendment was even more specific, with enforceable policies which permitted the City and Borough of Sitka and the Sitka community to have a "seat at the table" in management decision making on uses and activities in Sitka's coastal zone.

This local "due deference" has almost entirely been lost since the forced revision of Sitka's program approved in April, 2007. Other changes such as not permitting policies relating to air or water quality and removing the Department of Environmental Conservation (DEC) from the ACMP process have greatly reduced coastal communities' ability to comment. The movement of the Alaska Coastal Management Program from the Governor's office to the Department of Natural Resources Division of Coastal and Ocean Management has proved damaging to the former positive relationship the coastal communities enjoyed with the former Alaska Division of Governmental Coordination. DNR's mission as manager of the development and use of Alaska's natural resources is inconsistent with the protection and public use of those same resources for which the ACMP previously provided a balanced perspective.

The attached petition discusses some key issues which from Alaska's Coastal Management Program coordinators' perspectives would help restore some of the major losses of the ACMP and greatly improve Sitka's ability to comment on Coastal Management permits and activities. Sitka's program has since its inception supported active involvement in the ACMP, and the proposed legislation will permit Sitka to have "standing" to comment on ACMP issues which is now not possible for the most part. Since the specific bills addressing these issues could change, the resolution supports the key provisions rather than just certain bills.

If there are questions please contact Marlene Campbell at 747-1855 (campbell@cityofsitka.com e-mail).

CS Senate Bill 4 (CR&A)
Alaska Coastal Management Program (ACMP)
HIGHLIGHTS
January 26, 2009

Streamlines Project Reviews and District Plan Approvals

- Brings DEC permits back into the coordinated ACMP project review process
  - Eliminates need for a separate DEC review to determine ACMP consistency
  - Reduces confusion with current process about scope of ACMP review
- Promotes interagency cooperation and issue resolution
  - Encourages coordination of municipal Title 29 permitting with the ACMP process
    - Meaningful district policies will encourage local participation and resolution of issues during the state-coordinated ACMP review[1]
  - Reduces chances for conflicting permit conditions (federal, state and local permits)
  - Encourages early resolution of project issues
- Allows coastal districts to have performance-based enforceable policies[2]

Restores Checks and Balances

- Establishes streamlined Coastal Policy Board (CPB)
  - The 9-member CPB represents coastal districts, DNR, DEC, ADF&G, and DCCED[3]
  - Board provides guidance on 3 matters by approving:
    - 1) District coastal plans, 2) Grant programs, & 3) ACMP regulations
  - DNR retains day-to-day management of all ACMP matters
  - DNR retains responsibility for project consistency reviews
- Involves all 3 state resource agencies in project elevations (pre-decision appeals)
- Allows districts to keep their existing plan (no requirement to amend plan as in 2003 legislation)
- Encourages districts to resolve issues with DNR before their plan is reviewed by the CPB

Restores Traditional Role of Coastal Districts

- Allows districts to establish local enforceable policies that do not conflict with state or federal law or address matters preempted by state or federal agencies
- Restores intent of the ACMP
  - Original 1977 Alaska Coastal Management Act emphasized role of local coastal districts
  - The 2004 Murkowski Administration ACMP regulations conflicted with 2004 legislation by eliminating ability to establish district enforceable policies for matters not adequately addressed by state or federal law

Restores States' Rights

- Reinstates provisions eliminated by the 2003 legislation to assert state rights
  - Allows extension of the 90-day review limit for reviews with federal permits
  - Allows review of projects inland of the coastal zone if there are coastal effects
  - Allows for review of individual oil and gas lease sales in federal OCS waters

[1] Before the 2003 ACMP changes, less than 1% of projects were appealed.

[2] Performance-based policies are preferred by industry (rather than policies that prescribe a specific action)

[3] The former Coastal Policy Council was originally a 17-member body that had responsibility for project reviews.

Alaska Coastal Management Program

Program Goals and Objectives

The Alaska Coastal Management Program (ACMP) oversees the responsible development of coastal uses and resources, federal activities within the coastal zone, and activities on the Outer Continental Shelf.

ACMP Structure and Organization

The ACMP is a voluntary State program, authorized by the Coastal Zone Management Act of 1972, as amended. The Division of Coastal and Ocean Management (DCOM), within the Department of Natural Resources, is the lead agency for the ACMP. Several State departments and agencies participate in the implementation of the ACMP. In addition, several coastal municipalities and service areas (collectively known as coastal districts) voluntarily participate in the implementation of the ACMP. This structure and organization of State agencies and coastal districts provides for a networked implementation scheme designed to comprehensively manage coastal uses and resources.

The primary tool used to implement the ACMP is the consistency review process at 11 AAC 110. Through this process, proposed resource development activities are reviewed for consistency and compliance with the State's coastal management program which includes State laws, State standards, and district enforceable policies.

Value of ACMP

Having a federally-approved coastal management program allows the State the opportunity to:

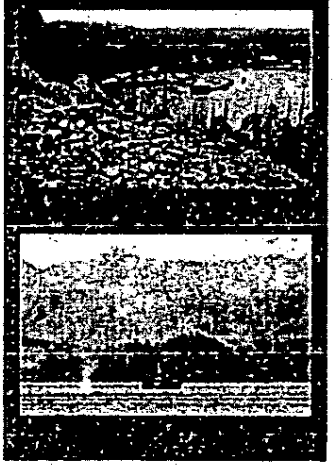
- Balance the need for economic investment and development in coastal areas with the need to protect and manage the uses and resources of coastal areas
- Act as the State's liaison to federal agencies (1) conducting/permitting activities within the State's coastal area and the Outer Continental Shelf; (2) involving federal laws/initiatives that effect development of the coastal zone, waters, uses or resources of the State
- Act as the department's lead on issues affecting or addressing the coastal waters affecting the State
- Apply State ACMP enforceable policies to federal agency activities
- Provide project applicants with a single point of contact for the State's review of resource development permit applications
- Incorporate coastal district input and knowledge for reasoned decisions

Key FY 2008 and FY 2009 Priorities and Needs

- Educate and train participants on implementation of ACMP
- Re-evaluate the ACMP Statutes (AS 46.39 and 40) and Regulations (11 AAC 110, 112, 114), so to strengthen the ACMP as a State program
- Implement the approved Coastal Impact Assistance Program (CIAP) and act as the liaison between the federal government and the State of Alaska

A Program of the Division of Coastal and Ocean Management

"The Alaska Coastal Management Program provides stewardship for Alaska's rich and diverse coastal resources to ensure a healthy and vibrant Alaskan coast that efficiently sustains long-term economic and environmental productivity."



ALASKA DEPARTMENT OF NATURAL RESOURCES · DIVISION OF COASTAL AND OCEAN MANAGEMENT ·

Alaska Coastal Management Program

Key 2008 Calendar Year Accomplishments

- In June 2008, DNR/DCOM initiated a series of workshops to review the current ACMP statutes (AS 46.39 and 46.40) and regulations (11 AAC 110, 112, and 114). The purpose of the re-evaluation is to strengthen the ACMP as a State program, that will benefit applicants and the public in the coordinating project reviews and that will enhance coastal district participation regarding activities occurring in the coastal area and on the outer continental shelf.

- DNR is currently revising the list of expedited consistency reviews using the ABC List. This revision was initiated to meet the legislative intent of identifying and broadening categories of activities subject to the expedited consistency review process. AS 46.40.096(m) SB 102 (2005) requires that DNR establish in regulation the state resource agency permits and federal permits that would trigger a consistency review. The ABC List categorizes development activities in the Coastal Zone according to expected levels of impact on uses and resources in the Zone. The last time the ABC List was substantively amended was in 1995. The current revision initiative will clarify the review process for certain resource development projects that are "de minimis" in nature or that are routine and can be made consistent with standard alternative measures. By updating the ABC List and developing new expedited consistency reviews for routine activities, DNR expects to reduce the workload for State agencies and coastal districts.

- In September 2008, the federal Minerals Management Service approved the State of Alaska Coastal Impact Assistance Program (CIAP) plan, making Alaska eligible to receive approximately $9.7 million in federal funds under the CIAP initiative. Due to an increase in OCS revenue off the coast of Alaska, the state's portion of CIAP funds will increase by more than $53 million in the next two fiscal years. DCOM is currently working on amending the CIAP plan to reflect Alaska's new allocation. A portion of the funds will go to 8 municipalities that are within 200 nautical miles of OCS development, and a portion will be offered to State agencies and the public through a competitive grant process.

- During the 2008 calendar year, nine more coastal district plans went into effect, bring the total of approved coastal district management plans to 25.

- During the 2008 calendar year, DCOM performed 262 coordinated or expedited consistency reviews, issued 415 No Additional Reviews and 29 Single Agency Reviews for resource development projects within the coastal zone.

RE: Proposed Senate Bill No. 4
An Act Relating to the Alaska Coastal Management Program (ACMP)
Establishment of the Alaska Coastal Policy Board
State Statutes AS 46.39 and AS 46.40

Dear Senator Olson:

ConocoPhillips Alaska, Inc. (CPAI) has prepared this formal response to proposed Senate Bill No. 4, an act relating to the Alaska Coastal Management Program (ACMP) and establishment of an Alaska Coastal Policy Board, and offers the following comments for your consideration.

Retention of the Current Program

CPAI has been, and remains, a supporter of the centralized ACMP process which resulted from the passage of House Bill (HB) 191 in 2003 and was later implemented by regulations and statutory amendments. In 2003, the Alaska Legislature concluded that "the Alaska coastal management program (ACMP) is intended to function with a minimum of delay and avoid regulatory confusion, costly litigation, and uncertainty regarding the feasibility of new investment." In addition, the legislature stated that statewide standards "be clear, and concise and provide the needed predictability as to the application, scope, and timing of the consistency review process of the program."

Proposed changes in Senate Bill (SB) No. 4 would allow districts to restrict selected activities within their coastal district; these activities will undoubtedly involve uses of state concern and/or may involve matters already adequately addressed by existing regulatory programs. Decision-making authority concerning the management and use of state resources vests with the State.

The current program's approach eliminates enforceable policies which may be conflicting between coastal districts, state, and federal agencies, and which could result in a loss of

conformity of district policies that currently exists in the ACMP program. The existing statewide standards provide clear and concise predictability to the ACMP process. Coastal districts are still afforded the ability to propose enforceable policies that conform to the district plan approval criteria and requirements outlined in 46.40.040 and 46.40.070; or those that are not duplicative, restate existing state or federal policies, and do not redefine, replace, or otherwise modify existing standards. From an applicant's perspective, the retention of the centralized ACMP will provide applicants with assurances of an efficient permitting process.

Elimination of the Alaska Department of Environmental Conservation (ADEC) Carve Out (AS 46.40.040 and 46.40.096)

CPAI believes the ADEC carve out should be retained in its present form and the carve out should not be eliminated from the ACMP program. CPAI believes there is significant misunderstanding by many stakeholders on this matter. Approvals for air, water, and C-Plan permits require public notice and public comment periods which allow for public input. The public notice and comment periods for these permits were not negatively affected by carving out the ADEC permits. Timelines associated with these approval processes are at least six months in duration, far longer than the existing 50- to 90-day ACMP coordination process. In addition, the timelines for public participation do not align with the intent or the process of the ACMP program which is one of thoughtful timely coordination and decision-making.

Eliminating the ADEC carve out will re-introduce conflicting regulatory mandates between ADEC and the ACMP process, and will delay the start of the consistency review process. Adequate public participation and opportunities for review by coastal districts is provided in the existing program. Adequate environmental protection is being provided by ADEC, regardless of whether or not their approvals are part of a consistency review process.

In closing, as we look at the substantial nature of the changes proposed in SB 4, we ask the question: Why? Since the passage of HB 191, have resource development projects been permitted by the state where a coastal district's input and concerns have not been accommodated? Is this change going to help motivate resource development projects in this state? We suggest that the current program is working as intended and changes are neither necessary nor desirable.

Sincerely,

Dale Summerlin

Roger D. (Dale) Summerlin

February 3, 2009

Honorable Senator Donny Olson
Capitol, Room 514
Juneau, Alaska 99811

Honorable Representative Reggie Joule
Capitol, Room 502
Juneau, Alaska 99801

Re: SB 4 and HB 74 Alaska Coastal Management Program

Dear Senator Olson and Representative Joule:

The Northwest Arctic Borough (NWAB) would like to thank you for the introduction of SB 4 and HB 74 on the Alaska Coastal Management Program (ACMP). On behalf of the Borough, I would like to address the substance of HB 74 because we understand the Senate Community and Regional Affairs Committee will consider adoption of the provisions of HB 74 into a senate committee substitute.

The NWAB supports the proposed legislation that would restore the ability of coastal districts to effectively participate in the program and establish meaningful policies under the ACMP; therefore providing valuable local input to development that happens in a very large and unique state. Another important provision in the bills would establish a board made of Alaskans to oversee the major aspects of ACMP as a publicly funded program. The proposed board would jointly represent state agencies and local coastal districts thereby restoring effective public engagement in the ACMP.

Currently, only the Alaska Department of Natural Resources (DNR) as a single agency makes all coastal management decisions. This has proved to be very one-sided and frustrating. For example, as you may know, during 2008 the NWAB attempted mediation with DNR to improve the decisions regarding our coastal management plan. Unfortunately, the mediation ended in an impasse with the majority of the proposed plan flat out denied. According to the

NORTHWEST ARCTIC BOROUGH

P.O. Box 1110

Kotzebue, Alaska 99752

(907) 442.2500 or (800) 478.1110

Fax: (907) 442.3740 or 2930

ACMP now, our only re-course for a fair review is again to go back to the DNR commissioner for re-consideration of a decision that has already been made by the commissioner and his staff. As you can see, the ability to obtain a third party review that involves the public is not possible under the current program, and the new provisions in this bill will help prevent such a future problematic situation and provide state staff the clear criteria and direction for approval of coastal district policies with involvement of the coastal policy board.

The NWAB also supports the addition of subsistence to the ACMP objectives in AS 46.40.020. Until changes made by the Murkowski Administration, the ACMP has been an effective tool balancing resource development and protection of our coastal resources that support healthy subsistence. It is very important that Alaskans have the ability to propose local policies that demonstrate the real life connection of people and communities to coastal areas and actually reflect the close relationship Alaskan residents have to this land, the coastal zones and our valuable subsistence way of life. For the NWAB, the ability to cooperatively work with developers and the state to address subsistence impacts is the primary reason for participating in the ACMP so that development honors our long-time and permanent Alaskans lifestyles.

We also support provisions in the bill that would bring activities covered by the Alaska Department of Environmental Conservation back into the ACMP consistency review process. Impacts to air and water quality also affect habitat and subsistence, and it makes sense to address these issues together in a consolidated format during a single consistency.

The NWAB encourages responsible development of our natural resources. We recognize the economic importance of development in providing new revenues to fund local public services and facilities, and to provide steady employment opportunities in rural areas. However, it is important that local coastal districts have a role in voicing valid concerns and potential impacts to subsistence and other coastal uses and resources - all to ensure that we are doing resource development the right way.

In closing, these bills restore a meaningful role for coastal districts to facilitate effective future development opportunities. I appreciate your interest in improving the ACMP, and I look

RE: **SB 4 Alaska Coastal Management Program**

Dear Senator Olson:

Thank you for pre-filing SB 4 about the Alaska Coastal Management Program (ACMP). I understand the Senate Community and Regional Affairs Committee will be considering adopting a committee substitute similar to the version of this bill in the House. The North Slope Borough (Borough) supports the committee substitute because it will restore meaningful local involvement in the ACMP, implement checks and balances and streamline project reviews.

The Borough appreciates the sections of the proposed committee substitute that clarify the ability of coastal districts to establish enforceable policies, especially the provisions in AS 46.40.030 and 070. While the 2003 legislative changes to the ACMP allowed coastal districts to establish policies for matters not adequately addressed by state or federal law, many of our proposed enforceable policies were denied on the basis that they addressed an agency's authority. We made an extra effort to focus our proposed policies on matters that were not addressed by existing laws, but still they were denied.

The committee substitute for SB 4 would restore checks and balances to the ACMP by establishing the Coastal Policy Board. This body would represent coastal districts and state agencies. It would be responsible for approving changes to ACMP regulations, amendments to coastal district programs and overall grant programs. This body is similar to the former Coastal Policy Council except that it has fewer members and it is not responsible for project consistency reviews. Restoring the responsibility for project elevations to the three state resource agencies will ensure these agencies have a seat at the table.

The Borough also supports the sections of the proposed committee substitute that streamline project reviews. The ACMP used to be an effective program that resolved issues among local, state and federal agencies, but changes to the program statutes and regulations reduced its effectiveness. Bringing the Alaska Department of Environmental Conservation back into the consistency review process will bring air and water quality issues back into ACMP project reviews. Likewise, allowing coastal districts to have meaningful policies will encourage their participation in the coordinated consistency review process. These changes will streamline project reviews because issues can be resolved early in the process by all parties. The changes will also encourage permitting agencies to ensure their permit stipulations are compatible and reasonable.

Again, the North Slope Borough thanks you for introducing SB 4, and I look forward to testifying on this bill as it moves through the committee process.

Sincerely,

Edward S. Itta

Dear Senator Olson:

The Resource Development Council is writing to you about SB4 regarding the Alaska Coastal Management Program. As you know, our membership is extremely diverse and includes local communities and boroughs, including the North Slope and Northwest Arctic Boroughs, all of Alaska's Regional Native Corporations, as well as all of Alaska's major oil and gas, mining, seafood processing, and cruiseship companies. We are proud of this diversity and together, we try to grow Alaska through responsible resource development

RDC recognizes the importance of local input as development projects navigate the permitting system. However, we understand that under the current system, many of those providing that input feel their concerns are being left unheard. Clearly, the perception amongst many is that the current Alaska Coastal Management Program is broken.

At the same time, RDC industry members need clear, timely, and streamlined permitting systems. Prior to the changes that occurred to the program in 2003, the program had open-ended timelines for decision making, contained requirements that were duplicative or overlapping of those of state and federal requirements, resulting in significant conflicts and misinterpretations, and extensive geographic reach of the coastal zone boundaries, oftentimes extending significantly inland. This lack of predictability and clarity clearly frustrated many, from districts to permittees, and likely precipitated the changes that occurred.

For each of the last three years, the RDC Board has met with the Bush Caucus and offered to try to facilitate an improved program that would be a win-win for all involved. We have extended the same offer to the North Slope Borough, Senator Begich, and others. We believe a compromise can be reached.

There is near unanimous agreement in the RDC membership that local input is imperative, but that it should not be allowed to trump state or federal processes, effectively giving veto power to the districts. There is a way to solve this problem. However, we do not believe that SB4 is the solution. We commit to working with you, key RDC stakeholders, and other legislators, now or during the interim, to develop a system that is a win-win for all entities.

Sincerely,

Jason Brune

Re: SB 4 Alaska Coastal Management Program

Dear Senators Hoffman and Stedman,

The City and Borough of Juneau (CBJ) supports the proposed changes to the Alaska Coastal Management Program (ACMP) in Senate Bill 4. The bill addresses the most serious problems in the ACMP which resulted from major changes to the program in 2003. Specifically, the bill would establish a Coastal Policy Board to provide local input in decision-making; the bill would restore the district role in the program by allowing greater flexibility to develop meaningful local policies; and the bill would bring the Department of Environmental Conservation (DEC) back into the review process.

Background. HB 191 approved by the Legislature in 2003, required revision of local coastal management programs to conform with new statutory and regulatory requirements. The legislature approved the bill with the assurance that districts would be able to retain local policies and a strong role in the program. This has not been the case. The Department of Natural Resources (DNR) has acknowledged that subsequent regulations were more restrictive than the legislature intended. As a result, districts across the state have lost 50-95 percent of their previously approved policies. The Juneau Coastal Management Program (JCMP) was reduced from 99 policies to 16. Twelve of these policies were approved only after a lengthy and costly mediation process with the state.

As an example, Juneau's policy requiring a 50-foot setback from catalogued salmon streams could not be accepted under the 2003 program changes. This policy has support from state and federal agencies, it is accepted by developers, and it is non-controversial. However, the policy cannot be approved in the revised ACMP because it addresses water quality issues covered by DEC, mapping requirements are too restrictive, and because various other hurdles in the program, including the "important habitat" designation, cannot be met.

The Juneau Assembly and Planning Commission decided to retain important coastal management policies in the city Land Use Code even though those policies were rejected by the state in the ACMP. As a result, local habitat policies are now reviewed through an entirely separate local process rather than through a coordinated process with the state. This adds significant time and expense to applicants, especially if the project description is modified through the course of the local review. Furthermore, it is contrary to one of the major goals of the ACMP, which is to streamline and coordinate review processes for development.

ACMP as a Management Tool. CBJ has formally participated in the ACMP since our local plan was first approved in 1986. We have used the program to develop our local waterfront areas and to expedite development on lower-value wetlands, in addition to protecting certain sensitive habitat areas. Specifically, the JCMP has established Special Waterfront Areas, which are areas set aside for development. These areas have lower habitat standards, and developments must be approved if basic requirements to minimize impacts have been met. The Special Waterfront Area designation has allowed CBJ to develop four major cruise ship ports, a seafood processing plant, the Alaska Marine Highway Ferry Terminal, and many harbors and marine cargo and transport facilities.

Similarly, the Juneau Wetlands Management Plan, a component of the JCMP, categorizes wetlands into high value and low value. JCMP polices on low value wetlands have much lower review standards to expedite development. These standards must be respected by the Corps of Engineers and other reviewing entities who might otherwise take a more restrictive approach to development.

These policies are very important to CBJ and allow local needs for development to be carried forth formally through the ACMP review process. CBJ has a vested interest in a strong local economy. The ACMP has never been used to slow or stop development, only to manage it in accordance with local needs. DNR has never been able to cite an example, anywhere in the state, of a halted or delayed project from ACMP. Quite simply, there is no justification for reducing or eliminating the district role in the program. There is every reason to restore it, in accordance with the Alaska State Constitution mandate for maximum local self-governance.

How SB 4 Helps Local Districts. SB 4 would allow coastal districts to establish local enforceable policies in the program as long as those policies are not pre-empted by state or federal law and do not interfere with an issue of state concern. It's important to note that with the pre-emption clause, local policies cannot override state or federal authority. Furthermore, all policies must have full scientific support for approval. The changes proposed in SB 4 promote active, meaningful local input, not local control.

The proposed Coastal Policy Board would approve local coastal management programs, approve ACMP regulations, and administer the ACMP grant program. Establishment of this board is critical for restoring balance in the program and a fair review of district policies. As described in the Background section, district plans were drastically reduced by the 2003 changes and DNR has been resistant toward an active district role in the program. The proposed nine-member board

would address this imbalance and bring local community representatives back into the decision-making process. The board would not override agency authority as the board would not conduct project reviews, district policies cannot pre-empt state or federal law, and lastly because the board would have full agency representation.

Restoring DEC's role in the ACMP is equally important to districts. Separating DEC and all air and water quality issues from ACMP reviews has resulted in a fragmented review process for applicants and has once again limited local district policies. CBJ lost many valuable enforceable policies in our local program simply because the policies indirectly addressed water quality. These included such minimum protections as Best Management Practices to control erosion. During one project review regarding gravel mining in a salmon stream, the project was approved through the full ACMP review process and then denied by DEC, which added significant time and expense for the applicant.

In closing, CBJ encourages the Senate Finance Committee and subsequent committees to move this bill forward. This legislation is critical for restoring a meaningful role for local communities in coastal management and resource development decisions. Thank you for the opportunity to comment.

Sincerely,

Rod Swope
City & Borough Manager

Re: CSSB-4(CRA), Changes to Alaska Coastal Zone Management

Dear Senators Hoffman and Stedman,

The mining industry has been involved in the Alaska Coastal Zone Management Program (ACMP) for many years. Several companies have raised concerns regarding CSSB-4(CRA) (referred to as SB-4 in this letter) and its companion bill in the House, HB-74. They agree that ACMP is not working well but they cannot support the changes being proposed. The bottom line is that this bill would create an administrative quagmire for the state permitting process and would create tremendous uncertainty for all permittees. The Alaska Miners Association opposes SB-4.

We have numerous concerns with SB-4 and the major ones are discussed below:

Section 1 establishes a Coastal Policy Board (CPB) (previously called the Coastal Policy Council) whereby the Coastal Districts would control selection of the majority of the members that would then have control over the Alaska Coastal Management Program. The CPB would have 5 public members and 4 state agency (DNR, DF&G, DEC, & DCEED) members. The governor would choose the public members but must select them from a list supplied by the Coastal Districts. The effect is that the districts would control the outcome of the selection process and would therefore control any decisions before the CPB. This is not good for management of coastal resources and is bad public policy.

Section 2 would require consistency determinations and certifications for every permit issued by any office within DNR. This would include items now on the "A,B,C List" that have been determined to be of minimal possible impact to coastal resources. The "A,B,C List" would no longer have any relevance and every activity that required a permit would require a consistency determination.

Section 3 would transfer ultimate authority over regulations from DNR to the CPB. The Coastal Policy Board (CPB) would be the ultimate decision making authority due to the requirement that the CPB must approve the regulations. This too is bad public policy to have an appointed board having control over the regulatory process.

Section 4 would transfer various powers from DNR to the Coastal Policy Board. These powers would include contracting for services and "taking any reasonable action necessary to carry out the provisions of Coastal Zone Management". This is extremely broad power and does not include the numerous checks, reviews and balances that are imposed on DNR. If the CPB decided DNR was not following or interpreting the policies the way they want, it would have the authority to make changes.

Section 5 defines the duties of the CPB and at the same time would make DNR effectively a staff agency for the CPB. DNR would be responsible for developing the coastal management plans but the CPB would have the authority to approve or reject those plans. The CPB would have authority to require coastal management plans that would extend to the off-shore continental shelf (OCS) or inland as far as they believed was "reasonable".

The combined impacts of Sections 1, 3, 4, 5, 6, and 7 would be to give authorities now held by DNR to the CPB. Again, the CPB is an appointed board not elected by the public, nor confirmed by the Legislature.

Section 9 specifies how the district coastal management plans and enforceable policies will be developed and because of the authorities given to the CPB, the CPB will be able to dictate all requirements. This would eliminate the requirement for district plans to meet a set of consistent statewide standards. This would eliminate certainty and be a nightmare for the regulated public, and eventually for the Administration and the Legislature due to the havoc it would create.

One of the several problems with ACMP before the passage of HB-191 in 2003 was that districts were allowed to create so-called "homeless stipulations". These were stipulations that were outside existing statue and regulation that could be added to a permit. SB-4 gives authorization for districts to go beyond state or federal law and this would again be allowing "homeless stipulations". In effect, this means that if the legislature will not pass a statute to require some action, the district would be able to do what the legislature would not approve and thereby go beyond state or federal law. In 2003, and for many years before that, this was a tremendous problem for permittees. Oftentimes due to project schedules and the approaching construction season, permittees could not take the time to challenge these homeless stipulations.

Section 10 would allow the CPB to define the boundaries of the coastal districts as far inland as they wished. Decisions over projects in Interior Alaska could be impacted by the Coastal Management Program and Coastal Districts. This would effectively give the coastal districts authority over any activity in the state. This would include permits for homesites, water wells, water rights, roads, culverts, roads, mines, gas lines, oil wells, etc. anywhere in the state. Rather than the Coastal Management Program applying to the "coastal" areas, the boundaries could, and likely would, be defined hundreds of miles up stream. This compares to some other states where coastal management programs are generally limited to the areas affected by salt water and tidal action.

Section 10 would also allow the coastal districts to designate "special management areas" that, based on Section 9, would have their own set of enforceable policies. These special management areas could be anywhere the districts wished.

One conclusion is that SB-4 would effectively negate "state law". State regulations would no longer be no consistent but could rather be different for Costal Districts. If a coastal district wanted something different from existing regulation, the district could require it and DNR would have to comply or be unable to act without legal challenge. In whatever the situation, if a coastal district wished to regulate something the legislature has not given DNR, the district could simply require it to be in the coastal management plan.

A second conclusion is that many of the items mentioned above would raise constitutional questions. Because the CPB has the authority to go beyond state law, the bill has the effect of delegating legislative law-making to a public-dominated board. Similarly, it removes interpretation of state regulations from the administrative branch — where the interpretations constitutionally belong — and gives this authority to the CPB. While some constitutional issues existed before passage of HB-191 in 2003 (specifically the homeless stipulations), SB-4 greatly magnifies and expands these legal problems.

A third conclusion is that the bill essentially does away with the concept of state interest. There are some decisions — whether and how a gasline should be constructed, expansion of the railroad, oil & gas development on state lands and waters, and oil & gas development in the OCS — that should be decided by the state, without being subject to veto by coastal districts. It is critical that local land-use issues and local concerns be taken into account by the permitting agencies, but some issues affect the entire state and must be determined on a state-wide basis. SB-4 essentially does away with this concept.

A final conclusion is that the changes proposed would create tremendous uncertainty for the regulated public. There is no way to escape a great deal of uncertainty if coastal districts were to be given the authorities contemplated in SB-4.

Thank you for the opportunity to address our concerns to you.

Sincerely,

Steven C. Borell, P.E.

Honorable Gary Stevens
Honorable Mike Chenault
Capitol Building
Juneau, AK 99801

Re: SB-4, Alaska Coastal Zone Management

Dear President Stevens and Speaker Chenault,

We have reviewed Work Draft S for CSSB-4, Alaska Coastal Zone Management and have the following comments. Work Draft S makes four beneficial changes to SB-4 that improve the bill However, the bill still contains other concerns that must be addressed before we can support it.

The beneficial changes in Work Draft S: 1) Allows the Governor to select the public members of the board without being limited to those persons on a list provided. 2) Removes the Board's independent ability to apply for money and make contracts. The Board must approve DNR's grants and contracts but cannot make such contracts itself. 3) Eliminates the language that says coastal districts can go inland. 4) Eliminates the definition of "special management area." 5) A new item expands the definition of "Project" to include agency rules and this is not beneficial.

However, other fundamental concerns remain and these include - The bill still gives the Coastal Policy Board (CPB) power to reject state law as found in statute and regulation by not approving its application to the coastal zone. The basic question is whether the state or the CPB interprets state laws and regulations. Do DEC and DNR interpret their regulations or does each coastal district do it? For example, does the entire state have one set of air and water quality standards, or does each district have the authority to write their own standards (by not approving any standards but the one writtne by the district)? The basic question is whether districts can include requierments not in state law. Such requirements were known as "homeless stipulations" prior to 2003 and were one of the major problems with ACMP at that time.

Although Work Draft S removes reference to how far the coastal districts can extend inland, it is does not answer the fundamental question of just how far inland the boundaries can go. In other states the distance inland is limited to the area affected by salt water or tidal action or to a specific elevation above mean high tide. Work Draft S does not clarify this inland extent.

Equally important is the new addition to the definition of the word "project" in Section 35 to include "proposed rules that alter uses of the coastal zone". Agency regulations are rules specifically intended to alter uses, including those in the coastal zone. This new definition would subject all regulations of DNR, DF&G, and DEC to a veto by each coastal district in the

state with respect to that area. Subjecting every regulation to approval by each coastal district would essentially end the concept of a state-wide government.

These issues are a sample of the various unworkable problems with the program, and with Draft S. Thank you for your consideration of our concerns.

Sincerely,

Steven C. Borell, P.E.

SB 4 Alaska Coastal Management Program

Section-by-Section Explanation of Proposed Changes to SB 4

April 11, 2010

Section 1 Changes to this section allow the governor to appoint coastal district board members without nominations from coastal districts (AS 46.39.005(a)(1)) and to appoint alternates without coastal district approval (AS 46.39.005(d)).

Section 4 The revised AS 46.39.030(b)(1) removes a provision for the board consultation with federal agencies.

A change to AS 46.39.030 clarifies the role of DNR and the board in developing and approving regulation changes.

Section 5 The word "ensure" replaces "assure" to make a grammatical correction.

Section 9 Changes to this section adopt changes made in CSHB74(CRA). The term "prescriptive and performance based" regarding enforceable policies is removed. The term "contemporary and traditional" is also removed.

The term "areas that merit special attention" replaces the term "special management areas" in several places in this section.

The word "on" replaces "upon" to make a grammatical correction.

Section 10 A change to AS 46.40.040(a) clarifies the role of the board in approving regulation changes.

The term "areas that merit special attention" replaces the term "special management areas."

Section 11 A new subsection (e) in AS 46.40.040 clarifies that regulations for district plan criteria cannot require designation of areas as a precondition for establishing district enforceable policies.

Section 14 The change to this section adds a new paragraph (2) to AS 46.40.070(b) that clarifies enforceable policies cannot conflict with state statute or regulations.

Section 19 The first change to this section removes the proposed provision to allow reviews inland of the coastal zone to AS 46.40.096(l)(1).

The second change removes the term "and water" from AS 46.40.096(l)(2).

Section 23 This change adds a new subsection (s) to 46.40.096 to clarify that draft permits cannot be required before start up of an ACMP consistency review.

Section 30 This change removes Section 30 from SB 4 to AS 46.40.190 regarding cooperative administration.

Section 31 The change to this section removes language in the existing definition "coastal resource district" in AS 46.40.210(2) regarding boroughs that do not exercise plan and zoning authority.

Section 35 The change to this section adds new language to the definition of project in AS 46.40.210(9) that allows ACMP reviews of proposed federal rules (regulations), including proposed rules regarding endangered species.

Section 36 This change would remove the proposed new definition for "special management areas."

Section 37 This change removes the repeal of the existing definition of "areas that merit special attention."

Section 38 This new section repeals provisions in Ch. 31, SLA 2005 that repealed the coastal management program in 2011.

Section 39 This new section repeals provisions in Ch. 31, SLA 2005 that repealed the coastal management program in 2011.

Senator Bettye Davis

SB 10 - Cancer Clinical Trials

"An Act requiring health care insurers to provide insurance coverage for medical care received by a patient during certain approved clinical trials designed to test and improve prevention, diagnosis, treatment, or palliation of cancer; directing the Department of Health and Social Services to provide Medicaid services to persons who participate in clinical trials; relating to experimental procedures under a state plan offered by the Comprehensive Health Insurance Association; and providing for an effective date."

SPONSOR STATEMENT

Clinical trials are research studies that test how well new medical approaches work in patients. Each study answers scientific questions and tries to find better ways to prevent, screen for, diagnose, or treat disease. Patients who take part in cancer clinical trials have an opportunity to contribute to the knowledge of, and progress against cancer. They also receive state-of-the art treatment from experts in the field. The National Cancer Institute, as part of the U.S. National Institutes of Health, reports 6,000 cancer trials in the United States any one time. They include trials in prevention, screening, diagnosis, treatment, quality-of-life, and genetic studies.

CSSB 10 removes important barriers to the participation of patients in cancer clinical trials in Alaska. It requires that applicable health care plans, including Medicaid, cover routine patient care costs for patients enrolled in all phases of clinical trials, including prevention, detection, treatment, and palliation (supportive care) of cancer. Currently Alaska health plans may exclude coverage for routine patient-care costs while a patient with cancer is enrolled in a clinical trial. Providers of health care plans often conclude that money is saved by excluding care while patients participate in clinical trials. But these patients, if not enrolled in clinical trials, will continue to receive conventional therapy at roughly the same or slightly increased costs in the short-run.

Over 2600 Alaskans are diagnosed with cancer each year. In FY 2007 an estimated 4,600 patients received cancer treatments through Alaska's Medicaid program at a cost of $21.5 million. The average payment per beneficiary was about $4,675. The federal government reimburses the state at about 50% of the total costs. Without in-state facilities and support of clinical trials participants in Alaska currently have to travel out of state, increasing the cost of non-emergency transportation which is about 3% of total Medicaid costs.

2450

COPY ON FILE

Studies have shown that only 2% to 3% of adult cancer patients and less than 0.5% Medicare patients enroll in clinical trials of the approximately 20% who are eligible -largely due to fear of denial of insurance. A recent study found only slight increase in treatment costs for adult clinical trial patients compared to nonparticipants, $35,418 versus $33,248 or about 6.5% increase in costs for clinical trial participants compared to nonparticipants. Even if enrollment was increased to the full 20%, it is unlikely that these numbers will significantly impact overall costs to health plans. See National Conference of State Legislatures, "Clinical Trials: What are States Doing? February, 2009 Update," www.ncsl.org/programs/health/clinicaltrials.htm.

Twenty-three or more states have passed legislation or instituted special agreements requiring health plans to pay the cost of routine medical care patients receive while participating in clinical trials. Passage of CSSB 10 will result in more successful outcomes in cancer treatments in Alaska, increase retention of patients in Alaska for their cancer care, and also, after full implementation, result in cost savings in the short and long term.

A description of "The Access to Cancer Clinical Trials Act of 2009" H.R. 716, 111th Congress 2009-2010, (Rep. Sue Myrick) per "The Hill's Congress Blog" January 30, 2009 sums up to a large extent what CSSB 10 is attempting to do:

"Clinical trials are so critical for patients and or medical research, yet many patients find that their health insurance won't cover the rest of their routine cancer treatment if they decide to enroll in clinical trials. We're not asking insurance companies to pay for clinical trials. This bill simply states that insurers must continue to pay for routine treatments — that they would be paying for regardless — if patients enroll in a clinical trial.

No patient should ever have to fear exploring all treatment options at the cost of losing coverage. We should be encouraging participation in clinical trials, not discouraging it by removing coverage for routine care. Were it not for patients who have enrolled in past trials, the medial advancements we've experienced toward finding a cure for cancer would not be possible."

This bill requires companies that offer health care insurance in Alaska cover routine patient care costs incurred by a patient enrolled in an approved clinical trial related to cancer. The coverage provided must include the costs of prevention, diagnosis, treatment, and palliative care of cancer. The health care insurer is required to provide coverage under this section only if the patient's treating physician determines that there is no clearly superior non-investigational treatment alternative; and available clinical or preclinical data provide a reasonable expectation that the treatment provided in the clinical trial will be at least as efficacious as any non-investigational alternative.

TESTIMONY OF D. LAWRENCE WICKERHAM, MD, ASSOCIATE CHAIRMAN OF THE NSABP, CONCERNING SB280

I am Dr. Lawrence Wickerham, the Associate Chairman of the National Surgical Adjuvant Breast and Bowel Project (NSABP), which is one of the National Cancer Institute's Cooperative Trials Groups.

The NSABP conducts large phase III studies that compare standard treatments with newer innovative therapies in patients with early stage breast or colorectal cancer. The group's mission is to improve the survival and quality of life of these patients. 2008 is the 50th anniversary of the NSABP and over those years we have entered over 130,000 individuals into our trials. Today we have 200 participating centers and 300 satellite centers located throughout the U.S., Canada, Puerto Rico, and Ireland, and we do have centers in Alaska.

Results of previous NSABP studies have had a major impact in improving the care of both breast and bowel cancer The results of our breast cancer studies have eliminated the use of true radical mastectomies, demonstrated that lumpectomy is an effective alternative, and we have shown that adjuvant treatment (treatment after surgery) can improve survival. Adjuvant therapy for breast cancer includes chemotherapy, hormonal therapy, and newer targeted treatments.

Figures from the American Cancer Society demonstrate that the mortality rate from breast cancer in the U.S. has declined for over a decade. This improvement is thought to be the result of screening mammograms to detect the disease and improvements in treatment. These improvements in care come primarily from clinical

trials like those conducted by the NSABP. The more patients that enter these studies, the more quickly we get results and the faster we can improve care. Unfortunately, for a variety of reasons, less than 5% of cancer patients choose to enter clinical trials. Cost is a major barrier.

Requiring health care insurers to cover the standard of care costs for individuals participating in cancer clinical trials would remove one significant barrier to increasing participation. Any research trial includes two general categories of costs: 1) research costs – expenses that the patient would not routinely incur if he or she was not a part of the trial (extra lab tests, x-rays, etc.), and 2) standard of care costs – expenses that would occur whether or not the patient entered the trial.

NSABP studies routinely identify the non-standard of care components. We provide the drug(s) being studied and typically provide additional non-federal funding to help defray the costs of trial participation, including the cost of non-standard of care items. The goal is to minimize any additional costs to the patient, improve trial participation and improve cancer care in general.

I and the NSABP strongly urge you to enact this bill so that cancer patients in Alaska can have improved access to state-of-the-art research studies like those available to patients in other states.

Thank you for listening to my testimony and I would be pleased to try to answer your questions.

Senate Bill 10 Testimony, February 18, 2009

Krista Rangitsch, RN, BSN, OCN, CCRC
7523 East 17th Avenue
Anchorage, AK 99504

My name is Krista Rangitsch and I am a Cancer Research Nurse at Providence Alaska Medical Center, however, I am not representing Providence. I am testifying on my own behalf.

First, I'd like to take this opportunity to thank the members of this committee for considering Senate Bill 10 and for allowing me to testify today.

From my perspective, when a clinical trial is recommended to a patient by their physician as the best treatment option, they are referred to our office. Part of my discussion about the study with the patient includes informing them that their insurance company may not cover some or all of the routine costs associated with treating their cancer while on the study. We strongly encourage all patients find out what their policy says about clinical trial coverage. This is the stage where, in my experience, we encounter the majority of barriers to patient enrollment to clinical trials.

Patients go through a lot emotionally and financially when being diagnosed with cancer – the last thing they should have to worry about is finding out if their insurance will cover a clinical trial that their physician thinks is in their best interest.

I've noticed that one of our ever-increasing reasons for patients not enrolling on a clinical trial is because of lack of or fear of lack of insurance coverage. There are many instances, where due to the severity of the cancer and the necessity to start treatment right away, there just isn't reasonable sufficient time to investigate if insurance will cover clinical trial expenses or the insurance company just takes too long to determine coverage.

In closing, if insurance companies were mandated to cover routine care costs associated with a clinical trial, I am confident that many more people would be able to participate in clinical trials, which in turn, would increase the likelihood of improved cancer treatments and maybe someday lead to a cure.

Thank you again for the opportunity and for supporting Senate Bill 10.

April 2, 2008

Testimony to Support SB280

To

Senate Labor & Commerce Committee,

I am a medical oncologist-hematologist practicing in Anchorage.
Hence I am involved in caring for many, many patients with cancer, which are oftentimes deadly.
As yet, many cancers do not have curative treatments. One of the options I offer to all my patients is to consider treatment under clinical trials- scientifically conducted studies by approved medical organizations to try & improve cancer care.

Unfortunately, due to Insurers denying coverage for routine medical care when patients enter clinical trials, patients very obviously & naturally, decline to participate in clinical trials.
In my opinion, this state of affairs is a major handicap for patients/ individuals in Alaska to receive State of Art Care for Cancer & related problems in Alaska.

Just to give you an example, Herceptin is now used in early breast cancer treatment as the women with breast cancer who participated proved its efficacy in a clinical trial. This trial included at least 2 women in Alaska.

I wholeheartedly support SB280 & sincerely hope your committee members will too for all of our sakes.

Sincerely,

Latha Subramanian MD, FACP

Attention!

This is being faxed to all local and national news sources!!!!!

Thank You A.P.A. and Govoner Sarah Palin

Hello,

I would like to tell you the story of a cancer patient that the state of Alaska is allowing to die. My name is William Stevens I have been diagnosed with Adenocarcinoma of the lung a 4.1cm tumor. I recently underwent lung surgery and now am in desperate need of chemo in order save my life. I have no medical insurance and applied to the state of Alaska adult public assistance office for medical help. They are refusing to give me aid even though I qualify financially. My oncologist Dr. Subramanian of anchorage only gives me a 15% chance of survival chemo is my only hope and I cant get it because the state has determined that I am not worthy of treatment. The State Of Alaska is committing Murder. I am sending you phone numbers of all Doctors and case workers if you choose to help me save my life for my self and my son you can check out my story.

Why would a convicted Murderer , child molester or inmate on death row get help from the state to save their life but they are killing me. Why is my life not worth saving?

Adult Public Assistance case # 05541992 last 4 of social 1350

Oncologist Dr. Subramanian 569-2627

Dr. Baker 276-2611 LLC "907" area code

Dr. Valdes 258-4430

Social Worker Sarah M. 264-1504

Thank you for any help you can give me I want to live.

William Stevens

POSITION PAPER ON HEALTH PLAN COVERAGE FOR PATIENT CARE COSTS IN CANCER CLINICAL TRIALS

Sponsored by the Denali Oncology Group, the Alaska State Affiliate of the American Society of Clinical Oncology

February 24, 2008

BACKGROUND:

1. Clinical trials for cancer patients provide state-of-the-art treatment for patients with life-threatening diseases. Cancer patients and their physicians typically look to clinical trials as an option when the investigational treatment offers as much or more benefit than standard treatment.
2. Currently, in Alaska, health plans can exclude coverage for routine patient care costs while a patient with cancer is enrolled on a clinical trial.
3. Since 2000, Medicare has provided coverage for beneficiaries for routine costs associated with cancer clinical trial enrollment.
4. Twenty-three states in the United States have passed legislation or instituted special agreements requiring health plans to pay the cost of routine medical care a patient receives while participating in a clinical trial.
5. Health plans mistakenly think that money is saved by excluding care while patients participate in clinical trials. However, if not enrolled on a clinical trial, these patients will continue to receive conventional therapy. Studies have shown that there are not differences in cost of care for patients enrolled on clinical trials compared with patients on conventional therapy.
6. Results of clinical trials lead to more rational use of cancer treatment and more successful outcomes, resulting in short-term and long-term cost savings.

PROPOSED LEGISLATION:

We propose that the Senate and House of the State of Alaska pass a bill requiring that all health care plans, including Medicaid, cover routine patient care costs for patients enrolled in all phases of clinical trials, including prevention, detection, treatment and palliation (supportive care) of cancer.

BENEFITS:

1. Passage of this bill will remove an important barrier to the participation of patients in cancer clinical trials. It will result in physicians more often recommending patient participation and in patients having greater desire to enroll in clinical trials.
2. Greater participation by Alaskans in cancer clinical trials will result in improved care of our patients in the short- and long-term, improved doctor-patient relationship, increased patient satisfaction with treatment, and increased retention of patients in Alaska for their cancer care.
3. Alaska will be in the forefront in making meaningful progress in providing care for cancer and other life threatening conditions.

CANCER CLINICAL TRIALS FAST FACTS
DENALI ONCOLOGY GROUP, October 28, 2007

Frequently Asked Questions (FAQ)

1. **What is a clinical trial?** A clinical trial is a scientific way of studying a new treatment for a specific disease that may be better and/or safer than existing treatments.
2. **Why are clinical trials necessary?** Without these studies, we can not determine whether a new treatment is safe, effective, and better than existing options.
3. **What types of cancer clinical trials exist?** Trials may be for prevention, early detection, diagnosis, or treatment of cancer. There are also trials for reducing symptoms and improving quality-of-life.
4. **Why would a cancer patient consider participating in a clinical trial?**
    a. Treatment given on the clinical trial offers the potential for better outcome (e.g. longer life or higher cure rate) than the standard treatment.
    b. Results of the trial will help improve treatment for future patients.
5. **Is it risky to be on a clinical trial?** There are risks with any type of cancer treatment. Side effects that occur in patients on a clinical trial are monitored very closely and described in paperwork that patients receive (i.e., consent form).
6. **Are clinical trials available in Alaska?** Yes, more than 50 cancer clinical trials are open in Alaska for patients to receive treatment in-state.
7. **Do doctors or patients gain financially from participating in clinical trials?** We only support the conduct of studies where there is no financial gain for patients or physicians. Support is provided by the sponsor of the study to help pay for costs associated with the trial, such as research personnel and regulatory requirements.

Myths

1. **"I may receive placebo."** Placebo is rarely used in cancer clinical trials because there is usually an acceptable standard treatment. However, if the standard is to offer no treatment, then the new treatment under investigation will be compared to no treatment (i.e., placebo). Patients will always be informed of the potential to receive placebo.
2. **"I will be a guinea pig."** Patients on clinical trials are treated with respect, receive informed consent, and have all questions answered. They have the right to withdraw from the study at any time without compromising their future care.
3. **"I'm not sick enough for a clinical trial."** Many trials are studying ways to prevent cancer in healthy people at risk for cancer. Other trials are studying ways to improve upon the most common types of treatment used when patients are first diagnosed with cancer.

Wisconsin	WIS. STAT. ANN. §§ 632.87 and 40.51			X[4]	X			X	X	X	X	X

Note: Because arrangements for the reimbursement of clinical trials for several states fall outside the scope of the State Cancer Legislative Database protocols, those states are not included herein. Michigan and New Jersey, for example, instituted special non-legislative agreements whereby insurers voluntarily cover routine medical care that is part of a clinical trial. According to the state employee benefits handbook, Ohio provides coverage for cancer treatment clinical trials to state employees who are enrolled in the state employee health benefit plan. In Georgia, a non-legislative agreement among a number of private health plans and state-based plans provides coverage for adults and children.

* Laws in Delaware, Maine, and North Carolina provide coverage of clinical trials for life threatening medical conditions and not specifically for the treatment of cancer.

[1] Indicated insurers are only obligated to provide coverage for covered patient costs that are directly associated with the clinical trial.

[2] Coverage requirement applies only to routine patient care costs related to cancer clinical trials having a therapeutic purpose, upon recommendation by a treating physician.

[3] In order to be eligible for coverage, clinical trials for the *prevention of cancer* must be a Phase III trial that involves a therapeutic intervention and is conducted at multiple institutions under the auspices of an independent peer-reviewed protocol approved by a specified Federal authority.

[4] Coverage requirement applies only to clinical trials that have a therapeutic intent.

[5] Coverage requirement applies only to routine patient care costs incurred in connection with clinical trials for the treatment of children's cancer.

[6] Applies only to Phase II or III prescription drug clinical trial programs.

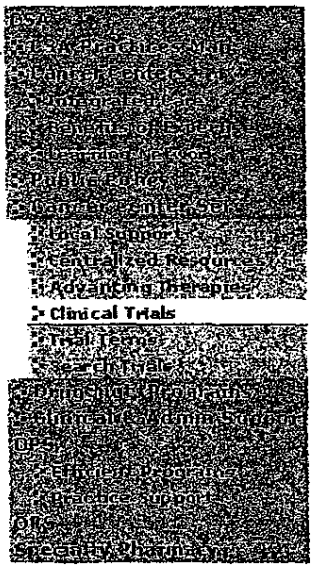
[7] Coverage for Phase I and Phase II clinical trials is decided on a case-by-case basis.

[8] Requires the state Department of Banking, Insurance, Securities, and Health Care Administration to issue regulations that specify the requirements for coverage of routine costs for patients who participate in approved cancer clinical trials conducted by specified providers. Coverage requirements are included in Regulation H-2001-04.

[9] Treatment in a Phase I clinical trial may be covered on a case-by-case basis.

4/9/09

Clinical Trial Information



The greater the number of people who participate in clinical trials, the faster emerging anticancer therapies can be brought to market. US Oncology accrued more than 32,000 cancer patients to clinical trials, and is bringing the search for new therapies directly into local communities across America.

Our research team members conduct more than 50 clinical trials each year. While we have complete Phase I-IV capabilities, the majority of our research is in Phase II and III development stages.

Our extensive clinical trial program, plus our provision of care for approximately 200,000 new cancer patients each year, provides us with a unique research platform. In sharing what we learn with one another, we can more readily advance the latest developments as they relate to investigational drugs, the reduction of side effects, and new methods of care.

If you are interested in contacting a US Oncology-affiliated physician to learn more about our clinical trial program, please click here.

Frequently Asked Questions About Clinical Trials

If you are a cancer patient or someone you know is a cancer patient, you may be interested in learning more about clinical trials. The information below offers a brief overview of the clinical trial process, with a look at key questions and terms.

What are Clinical Trials?
Clinical trials, or research studies, utilize patient volunteers to help investigate different ways to treat diseases - such as cancer. Clinical trials involve the use of investigational drugs (also known as study drugs) and drug delivery methods. Each study tries to answer specific scientific questions about different ways to prevent, diagnose, and treat whatever disease it is addressing.

Why are Clinical Trials Important?
Clinical trials contribute to the overall knowledge and progress made in developing therapies for diseases, such as cancer. These research studies are conducted to determine if a study drug or delivery method is safe and effective. Patients who agree to participate may possibly benefit from the research study, while receiving the best current standard treatment as well.

How are Clinical Trials Structured?
Clinical trials are structured into four phases:

- In *Phase I clinical trials*, researchers test a study drug in a small group of people (20 to 80) for the first time to evaluate its safety, determine a safe dosage range, and identify side effects.
- In *Phase II clinical trials*, the study drug is tested in a larger group of people (100 to 300) to measure its effectiveness and further evaluate its safety.
- In *Phase III clinical trials*, the study drug is tested in large groups of people (1,000 to 3,000) to confirm its effectiveness, monitor side effects, compare it to approved standard treatments, and collect information that will allow the study drug to be used safely.
- In *Phase IV clinical trials*, the drug is tested after it has been marketed to collect information about its effect in various populations and about any side effects associated with long-term use.

What Happens During a Clinical Trial?
In many trials, if the patient is eligible and agrees to participate through Informed Consent, the patient is randomized (by chance, like a coin toss) to either receive the current standard treatment, or the current standard treatment and the study drug regimen. If no standard treatment is available, a trial may compare the study drug to a placebo, which is similar to the study drug, but contains no active ingredient. During a trial, patients are treated and monitored by a team of health care professionals. This team will give the patient specific instructions about the trial, about more tests, and additional doctor's visits that might be required.

Throughout the clinical trial, you come first. If there is no improvement or you experience intolerable side effects, you and your physician can decide to discontinue trial participation and resume other

treatment options. Should you do so, your decision will be respected without any effect on future treatment plans.

Why Do Some Cancer Patients Choose to Participate in Clinical Trials?
Some cancer patients may participate because they are hoping for a possible cure and longer life or a way to feel better. Others find that the current standard therapies are not optimal for their cancer and wish to be among the first to participate in a research study and receive an investigational drug. Whatever the reason, participation could make a difference in a patient's future, as well as in the lives of future cancer patients.

How Do I Know If I Should Participate in a Clinical Trial?
The decision to participate in a clinical trial is one that only you can make, with the help of your physician and the people close to you. If you are interested in participating in a clinical trial, you will be informed of the clinical trial's potential benefits and drawbacks before making your decision. If the investigational drug is proven to be effective, you may be among the first to benefit. In addition, through your participation in a research study, you will also be helping future cancer patients.

Are There Risks Involved in Participating?
Because clinical trials are research studies, study drugs may not be better than current standard drugs or treatments. In addition, you may experience side effects that are worse than those of current standard drugs and treatments. Also, your health insurance company or managed care provider may not cover all of the patient care associated with a clinical trial. All of these factors should be discussed thoroughly with your physician and those close to you before deciding whether or not to participate in a clinical trial.

Where are the Trials Held?
Many clinical trials may be available right in your own community. Ask your physician for specific information or search the US Oncology clinical trial list to find a current US Oncology trial in your region.

How Do I Learn More About a Specific Clinical Trial?
Through a process called "Informed Consent," you will learn the key facts about a particular clinical trial before making a decision about participating. Your doctor will explain the purpose and requirements of the study, including any potential drawbacks and benefits. If you agree to take part in the trial, you will be asked to review and sign a form that outlines the study's details prior to participating.

How Do I Get More Information?
Consult your physician to find out whether or not there is a clinical trial that would be appropriate for your care. If you are a US Oncology patient, your physician has information on clinical trials that are being held throughout the company's national research network. Or you can search a list of all current US Oncology clinical trials for more specific information.
For more details on clinical trial research conducted by the US Oncology network, please click USON Research.

Clinical Trials: Questions and Answers

Key Points

- Clinical trials are research studies that test how well new medical approaches work in people (see Question 1).
- Every clinical trial has a protocol, which describes what will be done in the study, how it will be conducted, and why each part of the study is necessary (see Question 4).
- Informed consent is a process by which people learn the important facts about a clinical trial to help them decide whether to participate (see Question 6).
- Payment of patient care costs in clinical trials varies by health insurance plan and by study (see Question 11).

1. What are clinical trials, and why are they important?

   Clinical trials are research studies that test how well new medical approaches work in people. Each study answers scientific questions and tries to find better ways to prevent, screen for, diagnose, or treat a disease. People who take part in cancer clinical trials have an opportunity to contribute to knowledge of, and progress against, cancer. They also receive up-to-date care from experts.

2. What are the types of clinical trials?

   There are several types of clinical trials:

   - **Prevention trials** test new approaches, such as medications, vitamins, or other supplements, that doctors believe may lower the risk of developing a certain type of cancer. Most prevention trials are conducted with healthy people who have not had cancer. Some trials are conducted with people who have had cancer and want to prevent recurrence (return of cancer), or reduce the chance of developing a new type of cancer.

   - **Screening trials** study ways to detect cancer earlier. They are often conducted to determine whether finding cancer before it causes symptoms decreases the chance of dying from the disease. These trials involve people who do not have any symptoms of cancer.

   - **Diagnostic trials** study tests or procedures that could be used to identify cancer more accurately. Diagnostic trials usually include people who have signs or symptoms of cancer.

   - **Treatment trials** are conducted with people who have cancer. They are designed to answer specific questions about, and evaluate the effectiveness of, a new treatment or a new way of using a standard treatment. These trials test many types of treatments, such as new drugs, vaccines, new approaches to surgery or radiation therapy, or new combinations of treatments.

   - **Quality-of-life (also called supportive care) trials** explore ways to improve the comfort and quality of life of cancer patients and cancer survivors. These trials may study ways to help people who are experiencing nausea, vomiting, sleep disorders, depression, or other effects from cancer or its treatment.

   - **Genetics studies** are sometimes part of another cancer clinical trial. The genetics component of the trial may focus on how genetic makeup can affect detection, diagnosis, or response to cancer treatment.

     Population- and family-based genetic research studies differ from traditional cancer clinical trials. In these studies, researchers look at tissue or blood samples, generally from families or large groups of people, to find genetic changes that are associated with cancer. People who participate in genetics studies may or may not have cancer, depending on the study. The goal

of these studies is to help understand the role of genes in the development of cancer.

3. Who sponsors clinical trials?

Government agencies, such as the National Cancer Institute (NCI) and other parts of the National Institutes of Health (NIH), the Department of Defense, and the Department of Veterans Affairs, sponsor and conduct clinical trials. In addition, organizations or individuals, such as physicians, medical institutions, foundations, volunteer groups, and pharmaceutical companies, also sponsor clinical trials.

NCI sponsors a large number of clinical trials and has a number of programs designed to make clinical trials widely available in the United States. These programs include the following:

- The **Cancer Centers Program** provides support to research-oriented institutions, including those that have been designated as NCI Comprehensive or Clinical Cancer Centers for their scientific excellence. More information is available in the NCI fact sheet *The National Cancer Institute Cancer Centers Program*, which is available at http://www.cancer.gov/cancertopics/factsheet/NCI/cancer-centers on the Internet.

- The **Specialized Programs of Research Excellence (SPOREs)** bring together scientists and researchers to design and implement research programs that can improve prevention, detection, diagnosis, and treatment of specific types of cancer. More information about SPOREs is available at http://spores.nci.nih.gov/index.html on the Internet.

- The **Clinical Trials Cooperative Group Program** brings researchers, cancer centers, and doctors together into cooperative groups. These groups work with the NCI to identify important questions in cancer research, and design and conduct multisite clinical trials to answer these questions. Cooperative groups are located throughout the United States and in Canada and Europe. For more information, refer to the fact sheet *NCI's Clinical Trials Cooperative Group Program* at http://www.cancer.gov/cancertopics/factsheet/NCI/clinical-trials-cooperative-group on the Internet.

- The **Cancer Trials Support Unit (CTSU)** makes NCI-sponsored phase III treatment trials available to doctors and patients in the United States and Canada . Doctors who are not affiliated with an NCI-sponsored Clinical Trials Cooperative Group (see above) must complete an application process, which includes credential verification and site preparedness assessment, to become members of the CTSU's National Network of Investigators. CTSU members can enroll patients in clinical trials through the program's Web site, which is located at http://www.ctsu.org on the Internet. General information about the CTSU is also available on the program's Web site, or by calling 1–888–823–5923.

- The **Community Clinical Oncology Program (CCOP)** makes clinical trials available in a large number of communities across the United States. Local hospitals throughout the country affiliate with a cancer center or a cooperative group. This affiliation allows doctors to offer people participation in clinical trials more easily, so they do not have to travel long distances or leave their usual caregivers. The **Minority-Based Community Clinical Oncology Program** focuses on encouraging minority populations to participate in clinical trials. More information about the CCOP can be found in the NCI fact sheet *Community Clinical Oncology Program: Questions and Answers*, which is available at http://www.cancer.gov/cancertopics/factsheet/NCI/CCOP on the Internet.

- The **National Institutes of Health Clinical Center**, a research hospital located in Bethesda, Maryland, is part of the NIH. Trials at the Clinical Center are conducted by the components of the NIH, including the NCI. The NCI fact sheet *Cancer Clinical Trials at the National Institutes of Health Clinical Center: Questions and Answers* has more information about the Clinical Center. This fact sheet is available at http://www.cancer.gov/cancertopics/factsheet/NCI/clinical-center on the Internet.

4. How are participants protected?

Research with people is conducted according to strict scientific and ethical principles. Every clinical trial has a protocol, or action plan, which acts like a "recipe" for conducting the trial. The plan describes what will be done in the study, how it will be conducted, and why each part of the study is necessary. The same protocol is used by every doctor or research center taking part in the trial.

All clinical trials that are federally funded or that evaluate a new drug or medical device subject to Food and Drug Administration regulation must be reviewed and approved by an Institutional Review Board (IRB). Many institutions require that all clinical trials, regardless of funding, be reviewed and approved by a local IRB. The Board, which includes doctors, researchers, community leaders, and other members of the community, reviews the protocol to make sure the study is conducted fairly and participants are not likely to be harmed. The IRB also decides how often to review the trial once it has begun. Based on this information, the IRB decides whether the clinical trial should continue as initially planned and, if not, what changes should be made. An IRB can stop a clinical trial if the

researcher is not following the protocol or if the trial appears to be causing unexpected harm to the participants. An IRB can also stop a clinical trial if there is clear evidence that the new intervention is effective, in order to make it widely available.

NIH-supported clinical trials require data and safety monitoring. Some clinical trials, especially phase III clinical trials, use a Data and Safety Monitoring Board (DSMB). A DSMB is an independent committee made up of statisticians, physicians, and patient advocates. The DSMB ensures that the risks of participation are as small as possible, makes sure the data are complete, and stops a trial if safety concerns arise or when the trial's objectives have been met.

5. What are eligibility criteria, and why are they important?

Each study's protocol has guidelines for who can or cannot participate in the study. These guidelines, called eligibility criteria, describe characteristics that must be shared by all participants. The criteria differ from study to study. They may include age, gender, medical history, and current health status. Eligibility criteria for treatment studies often require that patients have a particular type and stage of cancer.

Enrolling participants with similar characteristics helps to ensure that the results of the trial will be due to what is under study and not other factors. In this way, eligibility criteria help researchers achieve accurate and meaningful results. These criteria also minimize the risk of a person's condition becoming worse by participating in the study.

6. What is informed consent?

Informed consent is a process by which people learn the important facts about a clinical trial to help them decide whether to participate. This information includes details about what is involved, such as the purpose of the study, the tests and other procedures used in the study, and the possible risks and benefits. In addition to talking with the doctor or nurse, people receive a written consent form explaining the study. People who agree to take part in the study are asked to sign the informed consent form. However, signing the form does not mean people must stay in the study. People can leave the study at any time—either before the study starts or at any time during the study or the follow-up period.

The informed consent process continues throughout the study. If new benefits, risks, or side effects are discovered during the study, the researchers must inform the participants. They may be asked to sign new consent forms if they want to stay in the study.

7. Where do clinical trials take place?

Clinical trials take place in doctors' offices, cancer centers, other medical centers, community hospitals and clinics, and veterans' and military hospitals in cities and towns across the United States and in other countries. Clinical trials may include participants at one or two highly specialized centers, or they may involve hundreds of locations at the same time.

8. How are clinical trials conducted?

Clinical trials are usually conducted in a series of steps, called phases. Treatment clinical trials listed in PDQ®, the NCI's comprehensive cancer information database, are always assigned a phase. However, screening, prevention, diagnostic, and quality-of-life studies do not always have a phase. Genetics clinical trials generally do not have a phase.

- **Phase I** trials are the first step in testing a new approach in people. In these studies, researchers evaluate what dose is safe, how a new agent should be given (by mouth, injected into a vein, or injected into the muscle), and how often. Researchers watch closely for any harmful side effects. Phase I trials usually enroll a small number of patients and take place at only a few locations. The dose of the new therapy or technique is increased a little at a time. The highest dose with an acceptable level of side effects is determined to be appropriate for further testing.

- **Phase II** trials study the safety and effectiveness of an agent or intervention, and evaluate how it affects the human body. Phase II studies usually focus on a particular type of cancer, and include fewer than 100 patients.

- **Phase III** trials compare a new agent or intervention (or new use of a standard one) with the current standard therapy. Participants are randomly assigned to the standard group or the new group, usually by computer. This method, called randomization, helps to avoid bias and ensures that human choices or other factors do not affect the study's results. In most cases, studies move into phase III testing only after they have shown promise in phases I and II. Phase III trials often include large numbers of people across the country.

- **Phase IV** trials are conducted to further evaluate the long-term safety and effectiveness of a

treatment. They usually take place after the treatment has been approved for standard use. Several hundred to several thousand people may take part in a phase IV study. These studies are less common than phase I, II, or III trials.

People who participate in a clinical trial work with a research team. Team members may include doctors, nurses, social workers, dietitians, and other health professionals. The health care team provides care, monitors participants' health, and offers specific instructions about the study. So that the trial results are as reliable as possible, it is important for participants to follow the research team's instructions. The instructions may include keeping logs or answering questionnaires. The research team may continue to contact participants after the trial ends.

9. What are some of the benefits of taking part in a clinical trial?

The benefits of participating in a clinical trial include the following:

- Participants have access to promising new approaches that are often not available outside the clinical trial setting.
- The approach being studied may be more effective than the standard approach.
- Participants receive regular and careful medical attention from a research team that includes doctors and other health professionals.
- Participants may be the first to benefit from the new method under study.
- Results from the study may help others in the future.

10. What are some of the possible risks associated with taking part in a clinical trial?

The possible risks of participating in a clinical trial include the following:

- New drugs or procedures under study are not always better than the standard care to which they are being compared.
- New treatments may have side effects or risks that doctors do not expect or that are worse than those resulting from standard care.
- Participants in randomized trials will not be able to choose the approach they receive.
- Health insurance and managed care providers may not cover all patient care costs in a study.
- Participants may be required to make more visits to the doctor than they would if they were not in the clinical trial.

11. Who pays for the patient care costs associated with a clinical trial?

Health insurance and managed care providers often do not cover the patient care costs associated with a clinical trial. What they cover varies by health plan and by study. Some health plans do not cover clinical trials if they consider the approach being studied "experimental" or "investigational." However, if enough data show that the approach is safe and effective, a health plan may consider the approach "established" and cover some or all of the costs. Participants may have difficulty obtaining coverage for costs associated with prevention and screening clinical trials; health plans are currently less likely to have review processes in place for these studies. It may, therefore, be more difficult to get coverage for the costs associated with them. In many cases, it helps to have someone from the research team talk about coverage with representatives of the health plan.

Health plans may specify other criteria a trial must meet to be covered. The trial might have to be sponsored by a specified organization, be judged "medically necessary" by the health plan, not be significantly more expensive than treatments the health plan considers standard, or focus on types of cancer for which no standard treatments are available. In addition, the facility and medical staff might have to meet the plan's qualifications for conducting certain procedures, such as bone marrow transplants. More information about insurance coverage can be found on the NCI's *Clinical Trials and Insurance Coverage: A Resource Guide* Web page at http://www.cancer.gov/clinicaltrials/learning/insurance-coverage on the Internet.

Many states have passed legislation or developed policies requiring health plans to cover the costs of certain clinical trials. For more information, visit the NCI's Web site at http://www.cancer.gov/clinicaltrials/developments/laws-about-clinical-trial-costs on the Internet.

Federal programs that help pay the costs of care in a clinical trial include those listed below:

- Medicare reimburses patient care costs for its beneficiaries who participate in clinical trials designed to diagnose or treat cancer. Information about Medicare coverage of clinical trials is available at http://www.medicare.gov on the Internet, or by calling Medicare's toll-free number for beneficiaries at 1–800–633–4227 (1–800–MEDICARE). The toll-free number for the hearing impaired is 1–877–486–2048. Also, the NCI fact sheet *More Choices in Cancer Care: Information for Beneficiaries on Medicare Coverage of Cancer Clinical Trials* is available at http://www.cancer.gov/cancertopics/factsheet/support/medicare on the Internet.

- Beneficiaries of TRICARE, the Department of Defense's health program, can be reimbursed for the medical costs of participation in NCI-sponsored phase II and phase III cancer prevention

(including screening and early detection) and treatment trials. Additional information is available in the NCI fact sheet *TRICARE Beneficiaries Can Enter Clinical Trials for Cancer Prevention and Treatment Through a Department of Defense and National Cancer Institute Agreement.* This fact sheet can be found at http://www.cancer.gov/cancertopics/factsheet/NCI/TRICARE on the Internet.

- The Department of Veterans Affairs (VA) allows eligible veterans to participate in NCI-sponsored prevention, diagnosis, and treatment studies nationwide. All phases and types of NCI-sponsored trials are included. The NCI fact sheet *The NCI/VA Agreement on Clinical Trials: Questions and Answers* has more information. It is available at http://www.cancer.gov/cancertopics/factsheet/NCI/VA-clinical-trials on the Internet.

12. What are some questions people might ask their health care provider before entering a clinical trial?

It is important for people to ask questions before deciding to enter a clinical trial. Questions people might want to ask their doctor or nurse include the following:

The Study

- What is the purpose of the study?
- Why do the researchers think the approach being tested may be effective? Has it been tested before?
- Who is sponsoring the study?
- Who has reviewed and approved the study?
- What are the medical credentials and experience of the researchers and other study personnel?
- How are the study results and safety of participants being monitored?
- How long will the study last?
- How will the results be shared?

Possible Risks and Benefits

- What are the possible short-term benefits?
- What are the possible long-term benefits?
- What are the short-term risks, such as side effects?
- What are the possible long-term risks?
- What other treatment options are available?
- How do the possible risks and benefits of the trial compare with those of other options?

Participation and Care

- What kinds of treatment, medical tests, or procedures will the participants have during the study? How often will they receive the treatments, tests, or procedures?
- Will treatments, tests, or procedures be painful? If so, how can the pain be controlled?
- How do the tests in the study compare with what people might receive outside the study?
- Will participants be able to take their regular medications while in the clinical trial?
- Where will the participants receive their medical care? Will they be in a hospital? If so, for how long?
- Who will be in charge of the participants' care? Will they be able to see their own doctors?
- How long will participants need to stay in the study? Will there be follow-up visits after the study?

Personal Issues

- How could being in the study affect the participants' daily lives?
- What support is available for participants and their families?
- Can potential participants talk with people already enrolled in the study?

Cost Issues

- Will participants have to pay for any treatment, tests, or other charges? If so, what will the approximate charges be?
- What is health insurance likely to cover?
- Who can help answer questions from the insurance company or health plan?

13. What happens when a clinical trial is over?

After a clinical trial is completed, the researchers look carefully at the data collected during the trial before making decisions about the meaning of the findings and further testing. After a phase I or II trial, the researchers decide whether to move on to the next phase, or stop testing the agent or intervention because it was not safe or effective. When a phase III trial is completed, the researchers look at the data and decide whether the results have medical importance.

The results of clinical trials are often published in peer-reviewed, scientific journals. Peer review is a process by which experts review the report before it is published to make sure the analysis and conclusions are sound. If the results are particularly important, they may be featured by the media and discussed at scientific meetings and by patient advocacy groups before they are published. Once a new approach has been proven safe and effective in a clinical trial, it may become standard practice. (Standard practice is a currently accepted and widely used approach.)

The National Library of Medicine's Web site offers links to resources for finding the results of clinical trials. It includes information about published and unpublished results. This resource can be found at http://www.nlm.nih.gov/services/ctresults.html on the Internet.

14. Where can people find more information about clinical trials?

In addition to the resources described in Question 3, people interested in taking part in a clinical trial should talk with their health care provider. Information about cancer clinical trials is also available from the NCI's Cancer Information Service (CIS). Information specialists at the CIS use PDQ to identify and provide detailed information about specific ongoing clinical trials. PDQ includes all NCI-funded clinical trials and some studies conducted by independent investigators at hospitals and medical centers in the United States and Europe.

People also have the option of searching for clinical trials on their own. The clinical trials page of the NCI's Web site, located at http://www.cancer.gov/clinicaltrials/ on the Internet, provides information about clinical trials and links to PDQ. Another resource is the NIH's ClinicalTrials.gov Web site. ClinicalTrials.gov lists clinical trials sponsored by the NIH, other Federal agencies, and the pharmaceutical industry for a wide range of diseases, including cancer and other conditions. This site can be found at http://clinicaltrials.gov on the Internet.

The Access To Cancer Clinical Trials Act of 2009 (Rep. Sue Myrick)

January 30th, 2009

Clinical trials are so critical for patients and or medical research, yet many patients find that their health insurance won't cover the rest of their routine cancer treatment if they decide to enroll in clinical trials. We're not asking insurance companies to pay for clinical trials. This bill simply state that insurers must continue to pay for routine treatments — that they would be paying for regardless — if patients enroll in a clinical trial.

No patient should ever have to fear exploring all treatment options at the cost of losing coverage. We should be encouraging participation in clinical trials, not discouraging it by removing coverage for routine care. Were it not for patients who have enrolled in past trials, the medial advancements we've experienced toward finding a cure for cancer would not be possible.

Medicare Widens Drugs It Accepts for Cancer

By REED ABELSON and ANDREW POLLACK

Medicare, with little public debate, has expanded its coverage of drugs for cancer treatments not approved by the Food and Drug Administration.

Cancer doctors had clamored for the changes, saying that some of these treatments, known as off-label uses, were essential if patients were to receive the most up-to-date care. But for many such uses there is scant clinical evidence that the drugs are effective, despite costing as much as $10,000 a month. Because the drugs may represent a patient's last hope, though, doctors are often willing to try them.

The new Medicare rules are the latest twist in a protracted debate over federal spending on off-label drugs — drugs prescribed for uses other than those for which they have been specifically approved.

Proponents of the changes say such spending not only helps patients, but can also enhance medical understanding of which treatments work against various forms of cancer.

But opponents argue that the new approach may waste money and needlessly expose patients to the side effects of drugs that may not help them. They also raise the possibility of conflicts of interest, because the rules rely on reference guides that in some cases are linked to drug makers.

The new policy, which took effect in November, makes it much easier to get even questionable treatments paid for, critics of the changes say. Medicare is providing "carte blanche in treatment for cancers," said Steven Findlay, a health policy analyst for Consumers Union. He said overly expansive coverage encourages doctors to use patients as guinea pigs for unproved therapies.

Because Medicare officials canceled a cost analysis of the changes, it is hard to predict how much spending will increase beyond the $2.4 billion Medicare paid in 2007 for cancer drugs. But cancer doctors and other experts say the new policies, adopted in the final months of the Bush administration, seem almost certain to raise the federal drug bill, while making it more difficult for the new administration to rein in spending on unproven medical treatments.

Although President Obama has made a goal of controlling health care costs, a spokesman for the Obama administration declined to comment on the Medicare changes.

One of the many drugs whose use is likely to expand is the Eli Lilly product Gemzar, which costs $2,500 to $5,000 a month. The F.D.A. has approved it to treat only four types of cancer. But the new rules will virtually guarantee that Medicare will pay for its use for about a dozen other cancers, including advanced cervical cancer — even though the evidence supporting Gemzar for that use is "inconclusive," according to one of the reference guides Medicare will now be consulting.

In the case of Genentech's Avastin, one of the world's most expensive and widely used cancer drugs, Medicare

rejected in 2007 nearly all of the estimated $16 million in requests from doctors' offices to cover its off-label use for ovarian cancer, according to claims specialists who work with Medicare data but declined to be identified because of the controversy over the topic. Under the new rules, Avastin will be routinely covered for ovarian cancer — as will at least some other off-label uses, including for brain and kidney cancer.

It is unclear how much precedent Medicare's new rules might have on private insurers, which often follow the agency's lead on paying for drugs.

Medicare officials defend the new policies, saying they respond to cancer doctors' concerns that the agency has been too slow to recognize promising new off-label treatments. Dr. Steve Phurrough, who has overseen coverage for the agency since 2003, noted that a 1993 federal law gave Medicare specific authorization to cover some unapproved uses of cancer drugs.

"Congress wanted a lesser level of evidence," Dr. Phurrough said. The question of what is adequate evidence is "not a line in the sand," he said. "It's a broad stripe in the sand."

The American Society of Clinical Oncology, which represents cancer doctors, has hailed the new rules, saying they will ensure that the appropriate off-label uses are covered.

But some specialists say that being able to offer off-label drugs can also let physicians avoid hard discussions with patients about a grim prognosis.

"It makes it easier to give drug after drug," said Dr. Andrew Berchuck, director of gynecologic oncology at Duke University, "and keep the fantasy alive."

The new rules expand the number of reference guides — or compendiums — that Medicare relies on for determining which off-label uses of cancer drugs to cover. The writers and editors of these compendiums, who work completely outside the federal government, scan the medical literature and evaluate the evidence in making their recommendations.

In 1993, Congress had authorized three compendiums for Medicare, all published by not-for-profit organizations. But by 2007 two had stopped publishing, leaving Medicare with a single compendium. Having selected three additional guides last year, the agency plans to review its choice of guides every year.

Under the old rules, Medicare representatives were supposed to consult the compendiums but also use their own discretion in interpreting the guides' recommendations. The new rules essentially delegate the decision to guides Medicare has selected, even when there is little clinical evidence behind a particular recommendation. As long as at least one of them recommends a cancer treatment, Medicare is essentially obliged to pay for it — unless one of the other guides specifically advises against it.

And some of these new compendiums have close financial ties to the drug industry, according to the draft of a report Medicare commissioned last year after Congress raised questions about possible conflicts of interest. The draft was completed in October, with a final version to be released soon.

The draft criticizes the new rules for essentially taking most decisions about off-label cancer drugs out of Medicare's hands, even when the agency is aware of potential conflicts. The guide's recommendation, the report says, "becomes the final word."

For some experts, the bigger concern about using some cancer drugs off-label without adequate evidence is that they may not only be useless — they may cause dangerous side effects.

"We have very little faith that those indications that make it into the compendia are safe, let alone effective," said Dr. Allan M. Korn, the chief medical officer for the Blue Cross and Blue Shield Association, who added that Medicare should cover off-label drugs only if the results of their use are carefully tracked afterward. There is no such requirement in the new Medicare guidelines.

There have been three different top Medicare administrators since the off-label rule changes were set in motion a few years ago. The second of them, Leslie V. Norwalk, chose to select the compendiums through a streamlined and internal administrative process, instead of the more elaborate and public process that Medicare often uses for broad coverage decisions.

"I did not see it as a significant step in coverage," said Ms. Norwalk, who left Medicare in 2007.

Drug makers say they welcome the Medicare changes. A spokesman for the Pharmaceutical Research and Manufacturers of America, the industry's main trade group, said the new rules ensured "that cancer patients have access to the treatments they need."

Many oncologists say they needed greater flexibility in using cancer drugs because it can take months or years for a new use to be approved by the F.D.A. They cite the example of Celgene's drug thalidomide, now a mainstay treatment for multiple myeloma, which was prescribed only off-label for years before the F.D.A. formally approved it for that use.

And in the case of rare types of cancer, there may be so few potential patients that companies have little financial incentive to undergo the formal F.D.A. process for approving a drug for expanded use. Only two drugs have been approved by the F.D.A. for brain cancer, for example, and cancer doctors say they need the ability to try other drugs or other combinations of treatments.

"To arbitrarily stop after two drugs to me is ludicrous," especially for younger patients, said Dr. Virginia Stark-Vance, a solo practitioner in Dallas and Fort Worth. She said one of her brain cancer patients had been kept alive for 10 years by off-label use of irinotecan, a colon cancer drug that was the ninth drug the patient tried.

Medicare seems to have ignored some concerns raised by a group of outside researchers whom the agency had asked to survey a half-dozen compendiums, including the four that Medicare has now adopted. That report, completed in 2007, found that the six guides "cited very little of the available evidence," said Dr. Amy P. Abernethy, a Duke oncologist who led the study.

The study also found great variability among the guides, in terms of what uses were recommended — or discussed at all.

Despite her study's findings, Dr. Abernethy says she does not oppose Medicare's new rules.

"I think the addition of the new compendia this year is an important increase in the bandwidth," she said.

Critics say the agency also seems to have played down the potential financial conflicts of interests between the drug industry and the producers of the compendiums. The draft study that was completed in October notes that one of the new guides is published by the National Comprehensive Cancer Network, a group of 21 leading

cancer centers that routinely employs experts who have financial ties to the drug industry.

William T. McGivney, the network's chief executive, said each committee of reviewers had 20 to 30 members, which "diminishes the opportunity for dominance of one person's opinion," regardless of any ties to drug makers.

Then there is the American Hospital Formulary compendium, the one that Medicare was using before the November changes and will continue to consult. It has long been published by the nonprofit American Society of Health-System Pharmacists. But last year the society forged a financial relationship with a foundation linked to drug companies and some cancer doctors' private practices.

A drug company can apply to that foundation, the Foundation for Evidence-Based Medicine, and pay a $50,000 fee to have new uses of its drug reviewed by the compendium within 90 days. The foundation was started in 2007 by the Association of Community Cancer Centers, which represents oncology practices, and says it received about $200,000 in initial funding from drug makers.

Gerald K. McEvoy, the guide's editor in chief, said the application fee was meant to raise money to pay for additional researchers, to address previous criticism that the publication was too slow to vet new evidence. The foundation insulates the guide's staff from industry pressure, he said, and fewer than one-third of the reviews under the new arrangement have resulted in a positive recommendation in the compendium.

Medicare officials acknowledge that some of the potential conflicts need to be addressed. But they say they have confidence in the guides they have chosen. "We had significant conversations with all the companies," Dr. Phurrough said.

Paying for college

State stepping in as banks bail out of student loans

As the number of private lenders shrinks, Utah agency expects to help thousands of borrowers

By Brian Maffly
The Salt Lake Tribune
Salt Lake Tribune

Article Last Updated:08/15/2008 03:35:18 AM MDT

For the first time, the state of Utah has begun originating student loans, a shift that will ensure that any Utah college student who needs financial assistance can get it, although it will cost more.

The Utah Higher Education Assistance Authority (UHEAA), the agency that oversees financial aid to Utah students, is bracing for loan applications worth $100 million this academic year after big banks all but abandoned the federally guaranteed loan program.

Last fall, Congress cut what participating lenders could make on student loans at the same time money became more scarce. That created a double disincentive for financial institutions to lend to college students. With fewer lenders available, Utah students are expected to flock to UHEAA, agency director David Feitz told his board Thursday.

"We would rather have a full cadre of lenders, but that is unlikely to happen in the near future until Congress raises the yields," he said.

Adding to the pressure was a recent move by Congress to raise the maximum students can borrow by $2,000 (to $5,500 for freshman, $6,500 for sophomores and $7,500 for upperclassmen). Feitz estimated UHEAA will see applications worth one-fourth of the state's total student loan volume this coming year, but he won't know how much until students begin applying as they return to school.

"It could be $60 million, it could be $200 million," Feitz said of a development that represents a profound change in the way UHEAA conducts business.

UHEAA has access to $121 million to lend over the coming academic year.

The U.S. Department of Education promises to buy participating states' loans issued this year under the Federal Family and Education Loan program (FFELP). This would enable states to "recycle" the money back to students in the form of new loans. The UHEAA board voted unanimously Thursday to approve Utah's participation in the complex arrangement.

Feitz cautioned that the program, which runs only for one year, isn't a permanent solution to the liquidity mess that has caused "tremendous chaos" in the $50 billion system that subsidizes the popular Stafford and PLUS loan programs.

"Now we're calling on Congress and the departments of Treasury and Education to take additional action to further stabilize the student loan program for years to come," he said.

In recent months four banks - Wells Fargo, Zions, J.P. Morgan Chase and Key - pulled out of Utah's program, leaving only U.S. Bank. Fifteen credit unions, led by America First, still lend to students, but the banks' departure left a vacuum. Wells Fargo and Zions were the top lenders last year, accounting for more than half of the state's student loan volume.

Lenders also have become picky about which institutions they work with. One Utah school, Snow College, found itself with no lenders, so UHEAA last month began lending directly to students at the Ephraim school.

"Were in a pretty good place, a much better place than our sister agencies across the country," board chairman David Jordan said. "From the students' perspective, this will work. We will be able to help them without depleting our resources."

bmaffly@sltrib.com

Utah students can expect to pay more for college loans under steps taken by the Utah Higher Education Assistance Authority to preserve universal access to federally guaranteed loans.
But the news isn't all bad.

"I'm not aware of lenders offering better terms than what UHEAA is offering," said John Curl, the University of Utah's financial aid director. "We encourage students to research who they're going to get loans from and find the best terms they can get. They are going to have to pay more interest; that's unfortunate."

Congress last year cut the rate on some student loans from 6.8 to 6 percent. But in order to participate in an emergency federal bail-out measure, Utah slashed two rate reductions. Until now, students who had payments automatically drawn from their accounts received a 1.25-point reduction and another 2-point reduction after four years of timely payments. Losing these benefits adds $1,763 to the cost of servicing a $15,000 loan.

On Thursday, the UHEAA board suspended issuing consolidation loans to avoid tying up scarce capital needed to serve current students. Former students looking to simplify repayment plans have other options for consolidating their loans in the federal program.

But Utah students still get breaks on up-front costs of the most common loans, Stafford and PLUS. UHEAA continues to cover the 1 percent origination fee and 1 percent default fee, translating into a $100 subsidy on a $5,000 loan.

Financial aid
* **Students who are considering borrowing** for college for the upcoming school year should start researching their options now, said John Curl, financial aid director at the University of Utah.
* **Students should consult the financial aid office** at their school, check Web sites that serve as information clearinghouses, such as finaid.org, or www.uheaa.org, the Web site for the Utah Higher Education Assistance Authority.

The Boston Globe

A late try to salvage student loans

Patrick calls on pension board, colleges to invest in agency bonds

By Casey Ross, Globe Staff | August 7, 2008

Governor Deval Patrick has asked the state pension fund to invest $50 million and will ask Harvard University and other local colleges to invest millions more to provide student loans to thousands of families struggling to pay college tuition bills that are due in the coming weeks.

Patrick's 11th hour proposal, floated among key officials yesterday, would prop up the troubled 26-year-old Massachusetts Educational Financing Authority, which announced last week that it would be unable to provide student loans for this school year because of turmoil in the nation's credit markets.

The proposal would entail the investment funds buying portions of a $425 million bond sale that MEFA is planning this month. The agency would use the proceeds to finance student loans.

"We have 40,000 students and families who need help, and we're right up against it," Patrick said in an interview with the Globe last night. "This is a sound investment for the pension board and the endowments."

The governor and his aides, along with state lawmakers, have been brainstorming ways to restore student loan funds for the past week. MEFA had previously offered low-cost, fixed-rate loans, but now borrowers have to look to other lenders whose loans may carry higher rates and higher costs.

Yesterday, Patrick's top budget aide, Leslie Kirwan, asked the state pension board to consider buying $50 million of the upcoming MEFA bonds. Administration officials also hope the state investment would be seen as a show of confidence in the bond market and MEFA, spurring purchase by other investors that could finance more loans.

Patrick said he intends to call officials today from Harvard, Boston College, the University of Massachusetts, and the Massachusetts Institute of Technology, among other schools, about making similar investments in MEFA bonds.

The chairman of the state pension board, state Treasurer Timothy Cahill, was noncommittal about Patrick's request, but said the board would consider it.

The pension fund staff "will examine the options legally available to invest in any debt issuance set up by MEFA and report back to the trustees before any action is taken," Cahill said through a spokeswoman.

With $51.7 billion in assets, the pension fund invests monies for state employees and retirees. And while it is unusual for the fund to use anything other than financial returns as grounds for investment, the board has already committed funds to local projects that are intended to produce economic and social benefits within Massachusetts. The program was a major policy goal of Cahill, who got the pension board to adopt it in 2003.

Even without Cahill's commitment, Patrick has a strong start on getting the board to adopt his measure, as he appoints three of its nine members, one of whom is Kirwan.

Another board member, Robert Brousseau, reacted favorably to Patrick's request and said he did not hear strong objections from fellow board members at yesterday's meeting.

"I can't see anybody opposing it, but we have to see the parameters of the investment and what form it would take," said Brousseau, who represents teachers on the board.

Patrick said he is seeking swift consideration from the pension fund board because MEFA is planning to hold its bond sale within two weeks.

"We need action," he said. "If they need to call a special meeting to approve this, then I hope they will."

Meanwhile, representatives of the local colleges said the institutions will consider the investment.

"We're always more than happy to have discussions with the governor," said John Longbrake, a spokesman for Harvard University, the governor's alma mater. "We welcome the opportunity to learn more about the challenges MEFA is facing and to discuss ways to address them."

Robert Connolly, a spokesman for UMass President Jack Wilson, said: "This is an idea we're definitely willing to explore. We do see it as a potential win-win in terms of providing the university with a sound investment while helping families cope with their financial aid challenges."

Officials at the student lending agency, meanwhile, said Patrick's plan carries minimal risk to the investment funds because MEFA's bonds provide reliable returns. Executive Director Tom Graf said the default rate on the authority's loans is less than 1 percent. "This plan allows" the pension board "to make a stable investment that is especially warranted in this financial climate," he said.

The problems in the bond market, which started with the foreclosure crisis and spread to other credit markets, have imperiled student lenders across the country, prompting more than 50 agencies to stop making federal or private loans.

Graf said the size of the upcoming bond sale may change based on investor interest. If the sale is a success, he hopes the agency will then be able to offer loans with rates below 8.5 percent, which is the current charge for Federal Plus loans. Last year, the authority's private 20-year loan rate was 6.39 percent.

The agency made $400 million in private loans in the last school year, and another $110 million in federal student loans.

State Senator Brian A. Joyce, who authored a letter last week signed by other legislators urging Patrick to support MEFA, applauded the governor's actions. "This critically important to an awful lot of Massachusetts families," he said. "The governor can use his bully pulpit to ask for some assistance, and I wholeheartedly support what he's doing."

NATIONAL CONFERENCE of STATE LEGISLATURES
The Forum for America's Ideas

Clinical Trials: What are States Doing?
February 2009 Update

What is a Clinical Trial?

A clinical trial is a research study on human patients to test the safety and effectiveness of new treatments. These trials offer patients access to new and potentially life saving drugs and cures.

The dramatic progress made in treating childhood cancers in recent years, is attributable, in part, to clinical trials, because 60 percent of all children with cancer are enrolled in some kind of trial. A ten percent drop in breast cancer mortality for women under the age of 50 is said to be the result of clinical trials research conducted in the 1970's.

Who Enrolls in Clinical Trials?

Only two to three percent of eligible adult patients enroll in clinical trials. For cancer patients, clinical trials are often the last resort after exhausting all other approved means of treatment.
Only a small percentage (approximately 20%) of cancer patients are eligible to participate in a clinical trial and very few (approximately 3% of cancer patients and less than 0.5% of Medicare patients) currently enroll. Even if enrollment was increased to the full 20 percent, it is unlikely that these numbers will significantly impact overall costs to health plans;[1]

Insurance Coverage for Clinical Trials

Typically, when a patient enrolls in a clinical trial, the cost of tests, procedures, drugs and any research activity directly associated with the investigation, are covered by the group sponsoring the trial, such as a pharmaceutical company or the National Cancer Institute. However, because some health plans define clinical trials as "experimental" or "investigational," health insurance coverage may or may not include some or all of the costs of "routine patient care," such as the doctor visits, hospital stays, tests and x-rays, that a patient would normally receive whether or not they were enrolled in a trial.

A growing number of states have passed legislation or instituted special agreements requiring health plans to pay the cost of the routine medical care a patient receives as a participant in a clinical trial.

Advantages:

For cancer patients, properly designed and conducted clinical trials represent an important therapeutic option, as well as a critical means of advancing medical knowledge. Lack of insurance coverage is a barrier to patients who might otherwise participate. Sixty percent of patients in one survey cited fear of insurance denial as a major reason for not participating in clinical trials. And finally, a recent study found only a slight increase in treatment costs for adult clinical trial patients compared to nonparticipants--$35,418 versus $33,248.[2]

Some large HMOs have computed costs associated with patients in clinical trials. Kaiser Permanente discovered the cost of medical care for enrollees in clinical trials that haven't had bone marrow transplant were no higher than for patients who were not enrolled in a trial. The Kaiser report further states, "Kaiser has been participating in cancer clinical trials without substantial increases in the direct costs of medical care."[3]

Researchers at the Mayo Clinic found that patient care costs for those enrolled in clinical trials is only slightly more than for patients who received standard therapy protocols.[4]

The Institutes of Medicine has also found the following:
-The reimbursement costs are limited to the cost of "standard care" which would be covered if the patient were not enrolled in the trial;[1]

-Only a small percentage (approximately 20%) of cancer patients are eligible to participate in a clinical trial and very few (approximately 3% of cancer patients and less than 0.5% of Medicare patients) currently enroll. Even if enrollment was increased to the full 20 percent, it is unlikely that these numbers will significantly impact overall costs to health plans;[1]

-Through clinical trials, we will be able to identify ineffective treatments, which could save health plans money and will benefit the nation as a whole.[1]

Disadvantages:

Even though the same recent study found only a slight increase in treatment costs, the 6.5 percent increase between participants and

nonparticipants in clinical trials translated into an additional $16 million in 1999 spent on treatment costs for the 19,000 adult patients enrolled in National Cancer Institute-sponsored clinical trials.[2] These additional insurance costs, like other mandated benefits and services, may result in higher insurance premium rates, which are often cost-shifted onto workers in the form of higher deductibles and copayments.

For states without insurance mandates, it is possible that some physicians may enroll patients in clinical trials but not inform the patients' insurance companies, bypassing the reimbursement issue for the patient and potentially the physician.[5]

It may also be possible to encourage participation in clinical trials by working within networks of health care providers and industry, research facilities, patient groups, as well as major media outlets, without enacting a state wide insurance mandate.

Definitions of Phases:

A clinical trial study is conducted in four phases.

Phase I: Research is conducted on a small group of volunteers (20 to 80 people) for the first time to evaluate its safety, determine a safe dosage range and identify side effects.

Phase II: The experimental drug or treatment is given to or a procedure is performed on a larger group of people (100 to 300 individuals) to further measure its effectiveness and safety.

Phase III: Further research is conducted to confirm the effectiveness of the drug, treatment or procedure, monitor the side effects, compare commonly used treatments and collect information on safe use. Phase III trials are typically conducted on 1,000 to 3,000 individuals.

Phase IV: After the drug, treatment or medical procedure is marketed, investigators continue testing to determine the effects on various populations and whether there are side effects associated with long-term use.

Summary of State Laws as of December 2008

Table One provides a summary of the **23 states and District of Columbia** that have enacted laws regarding mandated coverage of clinical trials.

Table One
Clinical Trials Laws

State Year of Enactment Bill Number and/or Citation	Who is Required to Pay?	What Services or Benefits are Covered?	Other Key Criteria:
Arizona (2000) Senate Bill 1213 20-2328	Hospital or medical service corporations, benefit insurers, health care service organizations, disability insurers, group disability insurers and accountable health plans	Patient costs associated with participation in Phase I through IV cancer clinical trials.	Trail must be reviewed by an Institutions Review Board in AZ. Health professional must agree to accept reimbursement from insurer as payment in full. Only covers trial when no clearly superior nonivestigational treatment exists. Trail must be in AZ.

California (2000) Senate Bill 37	All California insurers, including Medicaid and other medical assistance programs.	Routine patient care costs associated with Phase I through IV cancer clinical trials.	May restrict coverage to services in CA.
Connecticut (2001) Senate Bill 325 Public Act 01-171	Private insurers, individual and group health plans	Routine patient care costs associated with cancer clinical trials.	Prevention trials are covered only in Phase III and only if involve therapeutic intervention. Insurer may require documentation of the likelihood of therapeutic benefit, informed consent, protocol information and/or summary of costs.
Delaware (2001) Senate Bill 181	Every group of blanket policy, including policies or contracts issued by health service corporations	Routine patient care costs for covered persons engaging in clinical trials for the treatment of life threatening diseases under specified conditions.	Trial must have therapeutic intent and enroll individuals diagnosed with the disease. Trial must not be designed exclusively to test toxicity or disease pathophysiology.
District of Columbia (2008) Bill 17-469 (D.C. Law 17-166)	All insurers in the District	Routine patient care costs for people in clinical trials undertaken for prevention, early detection, treatment, or monitoring of cancer and approved or funded in full or in part by one of the following: National Institutes of Health or one of its cooperative groups or centers, Centers for Disease Control and Prevention, Agency for Health Care Research and Quality, Centers for Medicare and Medicaid Services, U.S. Food and Drug Administration (FDA), U.S. Department of Defense, U.S. Department of Veterans Affairs, U.S. Department of Energy, nongovernmental research entity that has been awarded a National Cancer Institute support grant.	Routine patient care costs shall not include tests or measurements conducted primarily for the purpose of the clinical trial involved. services or products provided solely for data collection and analysis purposes. services or products customarily provided free of charge to trial participants by the research sponsors.
Georgia* (1998) 33-24-59.1	Insurers and the state health plan	Routine patient costs incurred in Phase II and III of prescription drug clinical trial programs for the treatment of children's cancer.	For the treatment of cancer that generally first manifests itself in children under the age of 19.
Illinois (1999) House Bill 1622 (amended 2004) Senate Bill 2339 Public Act No. 93-1000 20 ILCS 1405/56.3**	HMOs and individual/group insurance policies to offer coverage to the applicant or policyholder (2004 amendment: Plans may not be canceled or non renewed based on an individual's participation in a qualified clinical trial)	Routine patient care if the individual participates in an approved Phase II through IV cancer research trial.	Coverage benefit can have annual limit of $10,000. Trial must be conducted at multiple sites in state. Primary care MD must be involved in coordination of care. Researchers must submit results of trial for publication in nationally recognized scientific literature.
Louisiana (1999) RS 22:230.4	HMOs, PPOs, State Employee Benefits Program and other specified insurers	Patient costs incurred in Phase II through IV cancer clinical trials.	Only covers costs when no clearly superior, noninvestigational approach exists. Available data must support reasonable expectation that the treatment will be as effective as the noninvestigational alternative. Patient must sign an Institutional Review Board-approved consent form.
Maine (2000) 24-A-4310	Managed care organizations and private insurers	Routine patient care costs associated with clinical trial.	Participation must offer meaningful potential for significant clinical benefit. Referring physician must conclude that trial participation is appropriate.

Maryland*** (1998) Chap 146-15-827	Private insurers and other specified managed care organizations.	Patient costs for Phase I through IV cancer treatment, supportive care, early detection, and prevention trials. Phase II through IV for other life-threatening conditions, with Phase I considered on a case-by-case basis.	There is no clearly superior, nonivestigational alternative. The data provide a reasonable expectation that the treatment will be as least as effective as the alternative.
Massachusetts (2002) Chap 176A Sec 8X	All health plans issued or renewed after Jan. 1, 2003	Patient care services associated with all phases of qualified cancer clinical trials.	Insurers must provide payment for services that are consistent with the usual and customary standard of care provided under the trial's protocol and that would be covered if the patient did not participate in the trial.
Missouri (2002) 376.429 (2006)- Phase II SB 567 & 792	All health benefit plans operating in the state	Routine patient care costs as the result of Phase II, III or IV clinical trials for the prevention, early detection, or treatment of cancer.	There must be identical or superior nonivestigational treatment alternatives available before providing clinical trial treatment, and there must be a reasonable expectation that the trial will be superior to the alternatives. Requires coverage of FDA-approved drugs and devices even if they have not be approved for use in treatment of patient's particular condition.
New Hampshire (2000) 415:18	Private insurers and specified managed care plans	Medically necessary routine patient care costs incurred as a result of a treatment for Phase I through IV cancer clinical trial or trial for a life-threatening disease.	Coverage for Phases I or II decided on case-by-case basis. Coverage is required for services needed to administer drug or device under evaluation. Coverage is required for routine patient care associated with drugs or devices which are not subject of trial, as long as they have been approved by FDA.
Nevada (2003) (amended 2005) SB 29 NRS 695G.173	All health insurance insurers, medical service corporations, HMOs and managed care organizations	Patient costs associated with Phase I through IV cancer or chronic fatigue clinical trial	Healthcare facility and personnel must have experience and training to provide the treatment in a capable manner. There must be no medical treatment available which is considered a more appropriate alternative medical treatment than the medical treatment provided in the clinical trial. There must be a reasonable expectation based on clinical data that the medical treatment provided in the clinical trial or study will be at least as effective as any other medical treatment. Amendment revises type of medical treatment covered.
New Mexico (2002) (amended 2004 to delay repeal until July 1, 2009) 59A-22-43	A health insurer; a nonprofit health service provider; a HMO; a managed care organization; a provider service organization; or the state's medical assistance program.	Routine patient care costs incurred as a result of the patient's participation in a phase II, III or IV cancer clinical trial.	Must be undertaken for the purposes of the prevention of reoccurrence of cancer, early detection or treatment of cancer for which no equally or more effective standard cancer treatment exists. Must not be designed exclusively to test toxicity or disease pathophysiology and it has a therapeutic intent. Must be provided as part of a scientific study of a new therapy or intervention and is for the prevention of reoccurrence, early detection, treatment or palliation of cancer in humans and in which includes specific provisions of scientific study.
New Mexico	Private insurers,	Routine patient care costs incurred as result of	Effective through July 1, 2004.

(2001) 59A-22-43	specified managed care plans, and Medicaid and other state medical assistance programs	Phase I through IV cancer clinical trial.	Trial must have therapeutic intent. Reasonable expectation that investigational treatment will be at least as effective as standard treatment.
North Carolina (2001) ? 58-3-255	All health insurance plans and teachers' and state employees' comprehensive major medical plan.	Medically necessary costs of health care services associated with Phase II through IV of covered clinical trials.	Patients suffering from a life-threatening disease or chronic condition may designate a specialist who is capable of coordinating their health care needs.
Ohio (2008) ORC Ann. 1751.01 (2008)	All health benefit plans including those for public employees.	Medically necessary costs of health care services associated with any stage of clinical trial.	Trial must be approved by NIH or another group under HHS, FDA, DOD or VA. May exclude coverage for service or product that is part of the investigative trial, item or procedure used only for data collection for the trial, item not approved by FDA, and transportation, lodging and food related to travel for participation in the trial.
Rhode Island (1994, 1997) 94-S 2623B 97-S 1A am	Private insurers and specified managed care plans	Coverage for new cancer therapies if treatment is provided under Phase II through IV cancer clinical trial.	
Tennessee (2005) HB 837	All health benefit plans	Routine patient care costs related to Phase I through IV cancer clinical trial.	Treatment must involve drug that is exempt under federal regulations from a new drug application, or approved by: NIH, FDA in form of new drug application, DOD, or VA.
Vermont (2001) (amended 2005 to remove March 1, 2005 sunset provision) Chap 107 ? 4088b HB 6	All health insurance policies and health benefit plans, including Medicaid	Routine patient care costs incurred during the participation in a cancer clinical trial.	Providers and insurers required to participate in a cost analysis to determine impact of the program on health insurance premiums. Amended law allows for participation in trial outside of Vermont if patient notifies health benefit plan prior to participation, and no clinical trial is available at Vermont or New Hampshire cancer care providers.
Virginia (1999) ? 38.2-3418.8	Private insurers, specified managed care plans, and public employee health plans	Patient costs incurred during the participation in Phase II through IV cancer clinical trials. Coverage provided on a case-by-case basis for Phase I.	There must be no clearly superior, nonivestigational alternative. Data must provide a reasonable expectation that the treatment will be at least as effective as the alternative.
West Virginia (2003) ?9-2-12	Individual and group insurers, health service corporations, health care corporations, HMOs, public employees insurance agency, Medicaid and the children's health insurance program	Patient costs associated with the participation in Phase II through IV clinical trial for treatment of life-threatening condition or the prevention, early detection and treatment of cancer.	Facility and personnel providing the treatment are capable of doing so by virtue of their experience, training and volume of patients treated to maintain expertise. There must be no clearly superior, noninvestigational treatment alternative. Data provide a reasonable expectation that the treatment will be more effective than the noninvestigational treatment alternative.
Wisconsin AB 617 (2006) Act 194	Any health insurance plan offered by the state, any self-insured plans	Routine patient care costs incurred during the participation in all phases of a cancer clinical trial. No policy, plan, or contract may exclude coverage for the cost of any routine patient care that is administered to an insured in a cancer	Trial must meet all criteria: 1. The purpose is to test whether the intervention potentially improves the trial participant's health outcomes. 2. The treatment provided as part of the trial is given with the intention of

		clinical trial satisfying the criteria under par. (c) and that would be covered under the policy, plan, or contract if the insured were not enrolled in a cancer clinical trial.	improving the trial participant's health outcomes. 3. The trial has therapeutic intent and is not designed exclusively to test toxicity or disease pathophysiology. 4. The trial does one of the following: a. Tests how to administer a health care service, item, or drug for the treatment of cancer. b. Tests responses to a health care service, item, or drug for the treatment of cancer. c. Compares the effectiveness of health care services, items, or drugs for the treatment of cancer with that of other health care services, items, or drugs for the treatment of cancer. d. Studies new uses of health care services, items, or drugs for the treatment of cancer. 5. The trial is approved by one of the following: a. A National Institute of Health, or one of its cooperative groups or centers, under the federal department of health and human services; federal food and drug administration; federal department of defense; federal department of veterans affairs.
Wyoming SF 024 (2008 budget session)	All health insurance policies, contracts, and certificates providing coverage to any resident of this state.	Routine patient care for a person enrolled in a Phases II- IV clinical trial. Includes a medical service or treatment that is a benefit under a health plan that would be covered if the patient were receiving standard cancer treatment; or a drug provided to a patient during a cancer clinical trial, other than the drug that is the subject of the clinical trial, if the drug has been approved by the federal food and drug administration for use in treating the patient's particular condition.	Trial must also be approved by NIH, FDA, Dept. of Defense, or Dept. of Veterans Affairs. The medical treatment must be provided by a licensed health care provider operating within the scope of his/her license in a facility whose personnel has the experience and training necessary to provide the treatment in a competent manner. The clinical trial participant must have signed an informed consent document prior to starting the trial.

*In 2002, all major insurers in Georgia agreed to cover routine patient care costs associated with Phase I, II, III, or IV cancer clinical trials. Trials include those that involve a drug that is currently exempt under federal regulations from a new drug application or those that are approved by specified federal agencies or a local institutional review board. The agreement also provides for the coverage of cancer screens and examinations in accordance with the most recently published guidelines and recommendations established by any nationally recognized health care organization (see below).

**Illinois Executive Branch Administrative Code (20 ILCS 1405/1405-20) required the Department of Insurance to conduct an analysis and study of costs and benefits derived from the implementation of the coverage requirements for investigational cancer treatments. The study covered the years 2000 through 2002 and included an analysis of the effect of the coverage requirements on the cost of insurance and health care, the results of the treatments to patients, the mortality rate among cancer patients, any improvements in care of patients, and any improvements in the quality of life of patients.

***A 2003 Maryland law (S 128) repealed a reporting requirement for insurers, nonprofit health service plans, and HMOs to submit a report that described the trials covered during the previous year.

Sources: National Cancer Institute, Health Policy Tracking Service.

Summary of Other Actions

Table Two summarizes the special agreements some states have arranged with insurance companies to voluntarily provide coverage for

clinical trials.

Table Two
Special Agreements

State (Year Agreement Became Effective)	Who is Required to Pay?	What Services or Benefits are Covered?	Other Key Criteria:
Georgia (2002) Georgia Cancer Coalition	All major insurers	Routine patient care costs associated with Phase I through IV cancer clinical trials.	Trials include those that involve a drug that is currently exempt under federal regulations from a new drug application or those that are approved by specified federal agencies or a local institutional review board. Provides for the coverage of cancer screens and examinations in accordance with the most recently published guidelines and recommendations established by any nationally recognized health care organization.
Michigan (2002) Michigan Consensus Agreement	Private insurance plans, HMOs and Medicaid	Routine patient care costs associated with Phase II and III cancer clinical trials.	Coverage for Phase I trials is under consideration.
New Jersey (1999) New Jersey Consensus Agreement	All insurers	Routine patient care costs associated with all phases of cancer clinical trials.	
Ohio (1999) Ohio Med Plan	State employees on Ohio Med Plan	Routine patient care costs associated with Phase II and III cancer treatment clinical trials.	Preauthorization is required for clinical trial participation.

Federal Activity

In 2000, Medicare began covering beneficiaries patient care costs in clinical trials. While many state Medicaid programs have no legal requirements to cover clinical trials costs, many do cover all or some of the costs.

ASCO

American Society of Clinical Oncology

February 17, 2009

The Honorable Bettye Davis
Alaska State Senator
District K
Capitol Building Room 30
Juneau, AK 99801-1182

Dear Senator Davis:

The Denali Oncology Group and American Society of Clinical Oncology are pleased to offer support for your legislation to require insurance coverage for people who participate in clinical trials. Our organizations represent physicians specializing in cancer treatment and clinical research, and clinical research is a vital mission of our membership.

Clinical trials are critically important because they offer the promise of new cancer treatments. As you know from personal experience, they also provide an essential, state-of-the-art treatment option for current cancer patients. Therefore, insurance coverage of the routine patient care costs associated with clinical trials is vital for cancer patients.

For many people with cancer, participation in a clinical trial is often their best treatment option. Yet, as you know, many third-party payers take the position that routine patient care costs should be denied to anyone who enrolls in such trials. We believe such policy deprives beneficiaries of the value of their health insurance, wrongly restricts their treatment options, and inhibits medical progress against serious and life-threatening diseases. DOG and ASCO believe that insurers should cover all routine care costs for patients who are enrolled in cancer clinical trials. Your legislation is the key to making this happen.

DOG and ASCO applaud your leadership in pursuing legislation that provides this essential element of quality cancer care. We are eager to work with you to ensure passage. Please do not hesitate to contact Suanna Bruinooge, ASCO's Director of Research Policy, at 571-483-1613 or suanna.bruinooge@asco.org, or Dr. Mary Stewart at mstewartonc@yahoo.com or 907-279-3155.

Sincerely,

Joseph S. Bailes

American Society of Clinical Oncology
Statement In Support of Insurance Coverage for Clinical Trials

With more than 26,000 members worldwide, ASCO is the leading medical society for physicians involved in cancer treatment and research. Engagement in clinical research is a vital mission of ASCO members. Unfortunately, many cancer patients have limited curative treatment options and enrollment in a clinical trial may offer hope for a response to a new drug or other intervention. Oncologists want their patients to consider enrolling in clinical trials, not only because of potential treatment benefits for the individual patient but also because it is through these trials that general progress against cancer is achieved. Patients are usually eager to participate if given the opportunity. ASCO considers the opportunity to participate in cancer clinical trials as an essential element of quality cancer care.

Unfortunately, participation in clinical trials is significantly deterred by the prospect that insurance coverage may be withheld on the ground that treatment provided in trials is "experimental" or "investigational." This position has been effectively discarded by the federal Medicare program, as well as by the Department of Defense health care system, and by many states. ASCO strongly supports state and federal efforts to ensure that patients enrolled in clinical trials receive coverage for the routine health care costs that would be covered if they did not participate on a trial. It is a basic issue of fairness, and it will help ensure that we continue to improve treatment options for cancer patients and learn about this devastating group of diseases.

What is a Clinical Trial?

Clinical trials are research studies involving people. Clinical trials are designed to evaluate whether a new treatment is safe, effective, and better than the current standard of care. These interventions can include new drugs, new combinations of existing therapies, new approaches to radiation therapy or surgery, new methods of treatment, complementary or alternative therapies, and new prevention methods. Cancer clinical trials are designed to compare an investigational therapy with the standard treatment regimen being used at the time. Placebo-controlled clinical trials in cancer research are rare, but are used when there is no effective, standard treatment available.

Cancer clinical trials have led to scientific advances that have increased doctors' understanding of how and why tumors develop and grow. The knowledge gained has helped scientists and doctors develop new ideas on how

to slow, halt, and even prevent the development of the disease. Clinical trials are the most reliable route to definitive answers and are the only accepted scientific method to determine if a new treatment works better than the current standard of care.

Clinical trials undergo rigorous review prior to opening and involve regular oversight during and after a trial to protect the safety and rights of the participants involved. Each clinical trial follows a set of rules called a protocol. A protocol describes inclusion and exclusion criteria; the schedule of tests, procedures, medications, and doses; and the length of the study. While in a clinical trial, participants are seen regularly by the research staff to monitor their health and determine the safety and effectiveness of the treatment.

Precedents for Clinical Trials Coverage

For more than two decades, the cancer community has expressed its concerns about the negative impact of restrictions on coverage of clinical trials by third-party payers, both public and private. Such restrictions are harmful not only to individual patients but also to overall progress against cancer. In 1999, public authorities began to respond favorably to these arguments and to reform their coverage policies with respect to clinical trials.

Pursuant to a negotiated agreement between the National Cancer Institute (NCI) and the Department of Defense (DoD), the DoD's TRICARE health care plan commenced coverage of NCI-sponsored clinical trials in 1999. The original agreement, began as a pilot project, was made a permanent benefit in March 2008, accompanied by a DoD press release describing it as "a long successful project between the NCI and DoD."

In 2000, the Medicare program took a more expansive approach to clinical trial coverage. In an Executive Memorandum, President Clinton instructed Medicare officials to adopt a clinical trials policy covering not just cancer trials but all diseases and all phases. To implement the policy, the Centers for Medicare & Medicaid Services (then the Health Care Financing Administration) published a National Coverage Determination in September 2000.

State governments have also been active in ensuring coverage of clinical trials by private insurance plans under their control. Almost half of the states throughout the U.S. enjoy coverage of clinical trials, either through legislation

or through voluntary consensus agreements with insurers, and more are considering such requirements.

Impact of Policy Changes on Clinical Trial Participation

One of the nation's leading cooperative research groups, the Southwest Oncology Group (SWOG), has conducted studies that underscore the impact of the Medicare coverage policy on clinical trial participation among the elderly. In 1999, SWOG published a study finding significant under-representation of the elderly in cancer clinical trials.[1] The study found that, whereas 63% of cancer patients were Medicare eligible, seniors were only 25% of those patients participating in SWOG clinical trials during the period 1993-1996. Following the Medicare coverage policy in 2000, a second SWOG study found there was a significant increase in participation among Medicare beneficiaries, with seniors representing 38% of SWOG trial participants in the period 2001-2003.[2]

Cost of Clinical Trials Coverage

While there have been no definitive studies of the cost consequences of clinical trial coverage, there have been a series of articles finding that participation in clinical trials "did not result in substantial increases in the direct costs of medical care,"[3] that "[c]linical protocols may add relatively little to that cost,"[4] and that "additional costs of an open reimbursement policy for government-sponsored cancer clinical trials appear minimal."[5] And with almost eight years of experience with the 2000 Medicare coverage policy, there is no evidence of increased cost to the program.

Conclusion

In light of the experience described above, we heartily support efforts to ensure that health plans and all insurers provide coverage for the routine costs

Making a world of difference in cancer care

American Association for Cancer Research

Association of American Cancer Institutes

American Society of Clinical Oncology

December 1, 2008

Kevin J. Cullen, MD
Director, University of Maryland
Marlene and Stewart Greenebaum Cancer Center
22 South Greene Street
Baltimore, MD 21201

Dear Dr. Cullen:

This letter is written in follow-up to our recent discussions about Medicare coverage of routine patient care costs for beneficiaries participating in phase I cancer clinical trials. As the world's leading professional and scientific organizations representing oncology cancer care professionals, we write to affirm our position that phase 1 cancer clinical trials are the essential gateway for advancement of new cancer treatments—and a vital component of our cancer treatment armamentarium.

It is the view of the undersigned organizations that the current Medicare National Coverage Determination (NCD) (310.1) for Routine Costs in Clinical Trials explicitly includes coverage of phase I cancer clinical trials and that these trials should be covered.

Requirements for Medicare Coverage
The NCD lays out three basic requirements for Medicare coverage:

- The subject or purpose of the trial must be the evaluation of an item or service that falls within a Medicare benefit category (e.g., physicians' service, durable medical equipment, diagnostic test) and is not statutorily excluded from coverage (e.g., cosmetic surgery, hearing aids).
- The trial must not be designed exclusively to test toxicity or disease pathophysiology. It must have therapeutic intent.
- Trials of therapeutic interventions must enroll patients with diagnosed disease rather than healthy volunteers. Trials of diagnostic interventions may enroll healthy patients in order to have a proper control group.

The NCD also requires that clinical trials covered under the policy have seven "desirable characteristics."

1. The principal purpose of the trial is to test whether the intervention potentially improves the participants' health outcomes;
2. The trial is well-supported by available scientific and medical information or it is intended to clarify or establish the health outcomes of interventions already in common clinical use;

3. The trial does not unjustifiably duplicate existing studies;
4. The trial design is appropriate to answer the research question being asked in the trial;
5. The trial is sponsored by a credible organization or individual capable of executing the proposed trial successfully;
6. The trial is in compliance with Federal regulations relating to the protection of human subjects; and
7. All aspects of the trial are conducted according to the appropriate standards of scientific integrity.

The policy also states that certain trials "are presumed to meet these characteristics and are automatically qualified to receive Medicare coverage." Trials that are automatically deemed include:

1. Trials funded by NIH, CDC, AHRQ, CMS, DOD, and VA;
2. Trials supported by centers or cooperative groups that are funded by the NIH, CDC, AHRQ, CMS, DOD and VA;
3. Trials conducted under an investigational new drug application (IND) reviewed by the FDA; and
4. Drug trials that are exempt from having an IND under 21 CFR 312.2(b)(1) will be deemed automatically qualified until the qualifying criteria are developed and the certification process is in place. At that time the principal investigators of these trials must certify that the trials meet the qualifying criteria in order to maintain Medicare coverage of routine costs. This certification process will only affect the future status of the trial and will not be used to retroactively change the earlier deemed status."

Phase 1 Cancer Clinical Trials Have Therapeutic Intent

The National Cancer Institute's (NCI) Investigator Handbook is instructive as to the therapeutic intent of a Phase I trial. That handbook includes the following information about phase 1 cancer clinical trials (emphasis added):

> Phase 1 trials determine a safe dose for Phase 2 trials and define acute effects on normal tissues. In addition, these trials examine the agent's pharmacology and may reveal evidence of antitumor activity. **Therapeutic intent is always present in Phase 1 trials**; indeed, anticancer agents are not tested in patients unless preclinical activity studies have already demonstrated evidence of significant activity in laboratory models.[1]

The Food and Drug Administration (FDA) has also adopted a definition of phase 1 trials that is consistent with the NCI's definition. FDA states that phase 1 studies "are designed to determine the metabolic and pharmacologic actions of the drug in humans, the side effects associated with increasing doses, and, if possible, to **gain early evidence of effectiveness**." This early evidence of effectiveness is the grounding for therapeutic intent – both in the choice of oncologists and patients to enroll in the trial, and as one of the aims of the trial.

Although the scientific goals of a phase 1 trial are to determine the toxic effects, pharmacologic behavior, and recommended doses for future study of a new agent, there is always a strong preclinical

[1] Available on the NCI website at http://ctep.cancer.gov/handbook/index.html

rationale for bringing the drug into the clinic with the expectation of positive clinical outcomes for some patients.[2] In fact, Institutional Review Boards would not permit the administration of potentially toxic treatments to patients unless there was some reasonable prospect of antitumor effect.[3] It is also important to note that phase 1 oncology treatment trials are **never** done in healthy volunteers because of the potential toxicities associated with the treatments under investigation.

Additionally, many of the NCI phase 1 trials involve agents that are already approved for the treatment of one type of cancer and are being studied in a different type of cancer, or in combination with other treatments. As a result, we have some evidence of therapeutic effectiveness that provides solid grounding on which to base therapeutic intent. Indeed, an analysis of 12,000 individuals who participated in 460 NCI-funded phase 1 trials done in 2005 found that 10.6% of patients experienced an objective response. This number increased to 17.8% of patients when one drug included in the trial regimen was already FDA-approved.[4]

Furthermore, our growing knowledge of the molecular basis of cancer is allowing us to increasingly develop treatments that are targeted to particular molecular pathways and personalized to specific patient populations. These types of agents will provide a "high pretreatment probability of achieving both an objective response and more subjective clinical benefit" for the trial participants.[5]

To bring about these exciting new developments in cancer treatment, clinical trials participation is required. It is particularly important in the Medicare-aged population not only because of the increased incidence of cancer in the elderly and but also to develop our understanding of how treatments work in this population. Both the NCI and FDA definitions demonstrate that phase 1 oncology trials meet the requirements for Medicare coverage, including therapeutic intent, and should be covered.

Sincerely,

Coverage of Routine Patient Care Costs in Clinical Trials
Position Statement

Approved by the ASCO Board of Directors, March 2005

For people with serious or life-threatening illness, like cancer, completely satisfactory or curative treatment often is not available. Those patients are nevertheless able to receive state-of-the-art therapy through high-quality clinical trials, offering not only an important treatment option but an opportunity to advance medical knowledge.

Cancer patients face a number of obstacles to clinical trials enrollment. One of the barriers is the potential denial of third party payment for the routine patient care costs for those enrolled in clinical trials. Historically, payers have denied coverage for care provided in a clinical trial, arguing that such care is "experimental" and therefore not a covered benefit.

Current Clinical Trials Coverage

The American Society of Clinical Oncology (ASCO) and its partners in the patient advocacy community have sought, over the course of more than a decade, to reform clinical trials payment policy in public and private health plans. These efforts have resulted in reforms in Medicare payment policy and in enactment of legislation to ensure clinical trials coverage in more than 20 states.

In 2000, in response to Congressional pressure and cancer community advocacy, the Clinton Administration issued an Executive Memorandum setting a policy for coverage of the routine patient care costs for Medicare beneficiaries enrolled in clinical trials for all diseases.

In addition to action by Medicare, a number of states have enacted legislation that would ensure coverage of routine patient care costs in clinical trials (coverage ranges from cancer clinical trials only to trials for all diseases) by those health plans that are regulated by the state. Some of those states have adopted, either in statute or in implementing regulations, the coverage standards of the Medicare program. In several states without clinical trials coverage mandates, third party payers have entered into voluntary agreements to cover routine costs in clinical trials. States continue to engage in efforts to improve coverage in state plans.

ASCO Position

These federal, state, and private sector initiatives reflect widespread recognition of clinical trials coverage as a critical element of quality cancer care. However, not all of the initiatives meet the standards for coverage endorsed by ASCO, and a significant number of cancer patients remain beyond the reach of these reimbursement reforms. ASCO recommends that every cancer patient should have access to clinical trials under the criteria defined below.

Standards for Clinical Trials Coverage

The following ASCO standards should remain the standard for Medicare coverage and should serve as the model for state legislative initiatives, including provisions governing coverage under state-funded programs like Medicaid, as well as mandates for private insurance and managed care plans.

The cost of medical care provided when a patient with serious or life-threatening disease is entered on a Phase I, II, III, or IV (post-marketing) clinical trial – including hospital, physician, and other health care items and services as well as the cost of approved drugs for labeled or unlabeled uses which might be part of the regimen[1] – should not be denied coverage when all of the following are demonstrated:

- Treatment is provided with a therapeutic intent[2];
- Treatment is being provided pursuant to a clinical trial approved by one of the National Institutes of Health (NIH), an NIH cooperative group or an NIH center; the Food and Drug Administration (FDA) in the form of an investigational new drug (IND) or new device (IDE) exemption; the Department of Defense; the Department of Veterans Affairs; or a qualified non-governmental research entity as identified in National Cancer Institute guidelines or center support grants;
- The trial is conducted according to a written protocol, which includes the following elements: trial design and scientific justification, criteria for inclusion and exclusion, outcome measures, statistical analysis plan, conflicts and other ethical controls, and publication policy;
- The protocol has undergone scientific review by a group of independent and qualified experts;
- The clinical trial has been reviewed and approved by a qualified institutional review board (IRB);
- The facility and personnel providing the treatment are capable of doing so by virtue of their experience or training;
- There is no non-investigational therapy that is clearly superior to the protocol treatment; and
- The available clinical or preclinical data provide a reasonable expectation that the protocol treatment will be at least as efficacious as non-investigational therapy.[3]

Originally adopted February 1993
As amended June 1994 and March 2005

---

[1] Items and services required by the design of the trial should be covered, except those items or services normally paid for by other funding sources such as the cost of certain investigational drugs, the costs of any non-health services that might be required for a person to receive the treatment, and the costs of managing the research.

[2] Treatment with therapeutic intent may be aimed at improving patient outcome relative to either survival or quality of life.

[3] While these standards refer to clinical trials involving "treatment" or "therapy", the same principles would apply equally to trials of interventions to prevent, rather than treat, diseases.

4/8/09

The Costs of Routine Care Provided in a Clinical Trial are comparable to the Costs of Standard Therapy

The evidence from numerous studies has overwhelmingly shown that patient care in clinical trials costs approximately the same as care delivered in standard therapy. In some cases, because the third-party payer is not billed for the drug or treatment under investigation, the costs associated with care in a clinical trial can actually be less than the care delivered in standard therapy.

Several studies specifically focused on the costs of cancer clinical trials have recently been published in highly respected peer-reviewed publications.

- A pilot study conducted by the American Association of Cancer Institutes (AACI) showed that the total mean direct medical charges for patients enrolled in a clinical trial *were less than the charges for patients receiving standard therapy.*[1]
- A December, 2001 article similarly found that some clinical trials may actually result in *lower* patient care costs. In addition, in cases where trials resulted in modest increases in patient care costs, the authors concluded that these costs were justified by the benefits that clinical trials bring to all patients.[2]
- The Mayo Clinic has found that the cost of care for patients enrolled in clinical trials is often little more than for patients who received standard therapy.[3]
- Authors of a study conducted at Kaiser Permanente found that the cost of medical care for enrollees in clinical trials without bone marrow transplant were no higher than for patients who were not enrolled in a trial. Kaiser further states, "Kaiser has been participating in cancer clinical trials without substantial increases in the direct costs of medical care."[4]
- The most comprehensive study yet confirms that there are only slightly higher patient-care costs associated with treating patients in cancer clinical trials compared to treating similar patients outside of trials.[5]

Some esteemed hospitals and universities have also conducted cost analysis studies.

- A study at Memorial Sloan-Kettering Cancer Center in New York City showed that the overall average cost of treating clinical trial patients was 17% *less* than treating patients receiving standard care.[6]
- A study conducted at the Karmanos Cancer Center in Detroit showed that the 6-month costs for treating advanced lung cancer were an average $1400 less for patients enrolled in a clinical trial.[7]

The Institute of Medicine has also concluded that the cost impact of providing coverage for routine patient care costs is likely to be "quite small."[8] The IOM's reasoning included the following:

- The reimbursement costs are limited to the cost of "standard care" which would be covered if the patient were not enrolled in the trial;[8]
- Only a small percentage (approximately 20%) of cancer patients are eligible to participate in a clinical trial and very few (approximately 3% of cancer patients and less than 0.5% of Medicare patients) currently enroll. Even if enrollment was increased to the full 20 percent, it is unlikely that these numbers will significantly impact overall costs to health plans;[8]
- Through clinical trials, we will be able to identify ineffective treatments, which could save health plans money and will benefit the nation as a whole.[8]

Senator Bert Stedman
Alaska State Legislature
Rm. 516
Juneau, AK 99801-1182

PREMERA | BLUE CROSS BLUE SHIELD OF ALASKA

Jack C. McRae
Senior Vice President

Dear Senator Stedman:

On behalf of Premera Blue Cross Blue Shield of Alaska, I am writing to you, a member of the Senate Finance Committee, to express our concerns with SB 10 regarding coverage of routine patient care costs during a cancer clinical trial. We would like to work with you and members of the committee to suggest amendments to this bill.

We recognize the importance of cancer clinical trials in identifying effective and safe treatments that are based on evidence and research. To that effect, Premera already covers the routine costs for our members who are participating in phase 2 or 3 cancer clinical trials.

As drafted, SB 10 is a mandate requiring insurance companies to cover all phases of cancer clinical trials. Mandates have the net effect of increasing the cost of insurance, and we expect that SB 10 will increase the cost of insurance to Alaska consumers. However, if passed and implemented, this requirement would not apply to self-funded groups. Since self-funded groups are not regulated under state law, mandates such as this one, will primarily apply to insurance coverage offered to individual policyholders and small groups. As you are well aware, small groups are currently struggling to provide insurance for themselves and their employees, especially during these tough economic times. SB 10 will impact the most vulnerable segment of the insurance market by increasing the cost of their health insurance.

Our concerns with the bill are expanding this coverage to phase 1 and 4 trials for patient safety and treatment effectiveness reasons.

In a phase 1 trial, the drug or treatment is still being evaluated, and there is no reasonable expectation of a therapeutic benefit to the patient. Phase 1 trials may be considered close to basic research since they involve testing agents that are not known to have an effect on cancers in the human body. Basic dose mechanisms, drug toxicities, and safety aspects have yet to be validated. We are concerned with requiring coverage for phase 1 clinical trials, when the safety and efficacy of the proposed treatment have not been established.

At a phase 4 trial, we would cover the treatment if it is medically necessary. However, there may be other known medical treatments that are available for the patient that are more effective. And, we would like the flexibility to review and pay for these other medical treatments that may be more beneficial to our members.

Thank you for considering our concerns. If health insurance is mandated to cover routine care for members in phase 1 and 4 trials, healthcare costs will increase and add to the rising premiums borne mostly by small groups and individual policyholders. We offer our amendments to encourage participation by Alaska residents in cancer clinical trials to expand research and evidence based medicine, while at the same time balancing patient safety and the rising costs of healthcare insurance.

Sincerely,

Jack C. McRae

SB 280 Testimony 4/3/08

Jeanne E. Anderson, MD
Katmai Oncology Group, LLC
3851 Piper Street, Suite U340
Anchorage, AK 99508-4627

I am Jeanne Anderson, a Medical Oncologist in practice in Anchorage. On behalf of Alaska cancer physicians and patients, I thank the members of the Labor and Commerce Committee members for considering this bill. It is predicted that 2,650 Alaskans will be diagnosed with cancer in 2008. In the 1970's, only 50% of cancer patients lived 5 years after diagnosis. In 2008, 66% are predicted to survive 5 years. We all know that many Alaskans die of cancer every day and that improvements are desperately needed. The cancer physicians in Alaska are committed to providing the best care possible to our patients, to relieve suffering and reduce death from cancer. In caring for our patients, we often turn to clinical trial as providing the best treatment for our patients. A clinical trial is a formal, scientific way to test whether a new treatment is safe, effective, and superior to existing treatments. The physicians and hospitals in Alaska support clinical trials and there are over 50 trials open in this state for our cancer patients. However, only a small number of our patients enroll on these clinical trials, approximately 40 per year. There are many reasons why enrollment is low. These reasons include lack of knowledge or interest on the part of the patient or physician, lack of availability of an appropriate trial for the patient, and (relevant to this bill) lack of insurance coverage or fear by the patient they will lose coverage if enrolled on a study. Passage of this bill will clearly remove an important barrier to access of a clinical trial. It will result in Alaska physicians providing improved care for our patients, reducing the burden of cancer in our population, and facilitating patients to stay in Alaska for state-of-the-art care.

Honorable Joe Paskvan
chair, Senate Labor and Commerce Committee
Alaska State Senate
Capitol Room 7
Juneau, AK 99101-1082

RE: SB 10 – Insurance Coverage for Cancer Care Received During Approved Clinical Trials

Dear Senator Paskvan:

The Alaska State Medical Association (ASMA) represents physicians statewide and is primarily concerned with the health of all Alaskans.

Denali Oncology Group, who is the Alaska State Affiliate of the American Society of Clinical Oncology, sought introduction of SB 10 this year and SB 280 in the last Legislature. The Oncologists and Hematologists, the "Cancer Doctors", have sought this legislation to better serve those patients who face these life threatening cancers.

ASMA supports SB10 as it did SB 280 last year and urges you and all of the Labor and Commerce Committee members to support it as well.

It is my understanding that the "Cancer Doctors" will be providing you with testimony that contains significant information based on their expertise in caring for cancer patients.

Sincerely,

Thomas P. Vasileff

MEMORANDUM February 2, 2009

SUBJECT: Mandatory insurance for clinical trials for cancer, sectional summary (SB 10; Work Order No. 26-LS0073\A)

TO: Senator Bettye Davis
Attn: Thomas Obermeyer

FROM: Dennis C. Bailey DCB
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents.

Section 1. Requires health care insurers to cover approved clinical trials for cancer if there is no clearly superior noninvestigational treatment alternative, and available clinical or preclinical data provide a reasonable expectation that the treatment in the clinical trial will be at least as efficacious as any noninvestigational alternative; makes coverage for clinical trials subject to standard policy provisions that are applicable to other benefits; and defines covered clinical trials and patient costs.

Section 2. Requires the state health insurance plan provided by the Comprehensive Health Care Insurance Association to include clinical trials related to cancer in its minimum standard benefits.

Section 3. Requires the state Medicaid program to cover clinical trials related to cancer.

Section 4. Gives the Act a January 1, 2010, effective date.

Juneau, Alaska 99801-1182

RE: Senate Bill 10

Dear Senator Davis,

On behalf of the National Federation of Independent Business/Alaska, I wish to express our opposition to Senate Bill 10. The National Federation of Independent Business is the largest small-business advocacy group in Alaska.

Health-care costs have been the No. 1 issue facing small-business owners since 1986, and those concerns are growing, according to NFIB's members. As health-care costs go through the roof, small-business owners have very few choices when selecting insurance coverage for their employees. The tipping point is here, and small businesses are begging for solutions to rising health-care costs, lack of access and other issues.

For many small employers in Alaska insurance premiums for small groups or single coverage have increased by more than 82 percent since 2000, a jaw-dropping statistic. This is completely unsustainable over the long-term. Much of the increase is driven by the additions to coverage by state mandates

Unfortunately, SB10 mandates specified coverage of medical care coverage during specified clinical trials that may not fit employee's needs but for which small employers providing health insurance bear the cost. Increased mandates force employers to consider whether they can afford to continue coverage or are forced

National Federation of Independent Business — ALASKA
P.O. Box 34761 • Juneau, AK 99803 • 907-723-6667 • denny.dewitt@nfib.org

2505

COPY ON FILE

by increased prices to eliminate health insurance for their employees. Mandates prevent small employers from providing affordable insurance programs tailored to its specific work force.

SB 10 is discriminatory against small employers as the mandate applies to those who provide coverage regulated by state insurance statutes, but not programs offered by the state and other governmental entities or large employers who typically offer ERISA programs. Thus it creates a less fair business environment for small employers.

Sincerely yours,

Dennis L. DeWitt
Alaska State Director

Senate Health and Social Services Committee
Alaska State Capitol, Room 30
Juneau, AK 99801-1182

RE: SB 10 (Davis)--Support

Dear Chair Davis,

On behalf of the members of AARP in Alaska, we encourage you and your colleagues on the Senate Health and Social Services Committee to support SB 10, authored by you.

SB 10 would require insurance programs, including Medicaid, to provide coverage for cancer victims undergoing clinical trials just as they would if the individual was not in the trial.

Most of our significant advances in cancer treatment that have become standard procedures began as clinical trials.

It makes no sense not to offer health insurance coverage for procedures that may be still considered experimental but offer some hope for the cancer victim. We purchase insurance (or the State provides it through Medicaid) so that we can have help with the costs that accompany a threatening disease. SB 10 is one of those bills that AARP believes makes sense, especially to a cancer victim and his/her family.

AARP recommends an "AYE" vote on SB 10.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin

Senator Bettye Davis

SB 13 "An Act relating to eligibility requirements for medical assistance for certain children and pregnant women; and providing for an effective date."

Sponsor Statement

SB 13 increases and restores to original levels 12 years ago the qualifying income eligibility standard for the Denali KidCare Program to 200% of the Federal Poverty Line (FPL). Alaska as one of the nation's wealthiest states is only one of 5-7 states which funds its SCHIP program below 200% FPL. SB 13 makes health insurance accessible to an estimated 1277 more uninsured children and 225 pregnant women in Alaska. Denali KidCare is an "enhanced" reimbursement program with up to 70% matching funds (Alaska currently receives about 66%) under the federal government's State Children's Health Insurance Program (SCHIP), which was created in 1997. Congress reauthorized the SCHIP program for five years and President Obama just signed into law on February 4, 2009 with expanded coverage for 4 million more children.

Consider the following information from the Kaiser Commission on Medicaid and the Uninsured, January, 2009:

- 44 states, including D.C., cover children in families with incomes at 200% FPL or higher.
- 33 states cover children in families with income between 200% and 250% FPL.
- 19 states including D.C., cover children in families with income at 250% or higher. 10 of these states cover children in families with income at 300% FPL or higher.
- 35 states allow premiums or enrollment fees, and 24 states have co-payments for selected services in SCHIP programs on a sliding scale of FPL.
- 46 states do not require asset tests

Denali KidCare serves an estimated 7900 Alaska children and remains one of the least costly medical assistance programs in the state at about $1,700 per child with full coverage, including dental, which is about 20% of the cost of adult senior coverage.

Early intervention and preventative care under SB 13 will greatly increase Alaska children's health and yield substantial savings to the state and public and private sector hospital emergency rooms which must admit indigent and uninsured patients for non-emergency treatment. It is estimated that

uninsured children with a medical need are five times as likely not to have a regular doctor as insured children and four times more likely to use emergency rooms at a much higher cost.

There are still an estimated 18,000 uninsured children in Alaska, or about 9% of the children age 18 and under. Private health care coverage for children has declined over 30% in the last ten years, and the deepening recession is pulling more children and families into the uninsured ranks. The reauthorized SCHIP program and "Stimulus Package" should help, and Alaska should do its share and take advantage of available federal matching funds by insuring its low income children up to and including 200% FPL under SB 13.

Senator Bettye Davis

SB 13 "An Act relating to eligibility requirements for medical assistance for certain children and pregnant women; and providing for an effective date."

Repercussions of the unmet health needs of Alaska's uninsured children

---

- The number of uninsured children in Alaska is estimated to be about 18,000 or 9% of the population age 18 and under (Urban Institute and Kaiser Commission on Medicaid and the Uninsured).
- Over the last 10 years Alaska has seen a 31% decline in the number of children covered by private health insurance (Robert Wood Johnson Foundation).
- Nationally, more than 80% of uninsured children are from working families (Kaiser Commission on Medicaid and the Uninsured).
- Uninsured children have much higher health risks than do covered children. The receive less preventative care and are diagnosed at more advanced stages of illness (Kaiser, *supra*).
- Uninsured children are more likely to develop throat, eye, and ear infections, serious dental problems, and chronic conditions such as asthma and diabetes. They are more than five times as likely as insured children to have an unmet need for medical care and nine times more likely not to be examined by a regular doctor. They are also four times more likely to use emergency rooms which are much more costly than care in physicians' offices (*Pediatrics* 105, 113; "Care for Children," *New England Journal of Medicine*, 330).
- Almost 1/3 of uninsured children received no medical treatment during a 1-year period between 2002 and 2003 (*Health Affairs* 23, no. 5, September-October 2004).
- Uninsured children are 25% more likely to miss school than insured children (Children's Defense Fund, Minnesota). Continued illness affects school performance and, in the long run, workforce participation (Southern Institute on Children and Families). A National Institute of Medicine study indicates that lack of insurance results in lost national economic productivity of $65-$130 billion annually.

SB 13 "An Act relating to eligibility requirements for medical assistance for certain children and pregnant women; and providing for an effective date."

Background of SCHIP/Denali Kid Care

- SCHIP was created in 1997 to reduce the number of uninsured children by providing subsidized insurance to children of those parents who are too poor to afford insurance but make too much to receive Medicaid coverage. About 1/3 of all children in America get health services through Medicaid or the State Children's Health Insurance Program (SCHIP), which is administered in Alaska through the Denali KidCare Program.
- The Denali KidCare Program is 70% funded by the federal government up to the state's allocated funding level. After that, the reimbursement rate declines to slightly over 50%. In fiscal year 2006 the cost of Denali KidCare was $25.9 million, of which $18.2 million was paid by the federal government.
- Denali KidCare provides health insurance for children age 18 and pregnant women who meet income guidelines. There is no cost to eligible children, teens and pregnant women. However, youth who are 18 may be required to contribute a limited amount for some services.
- Roughly 7,600 children were covered by Denali KidCare as of December, 2006.
- The cost per child of Denali KidCare is about $1,700 annually, compared to over $12,000 for an elderly person who qualifies for federal aid.
- By comparison, private health insurance for a family of three, *e.g.*, a pregnant woman with two children, is estimated at $8,000-$17,000 annually. Unlike Denali KidCare, this insurance may require a $1,000 deductible, 20% co-pay, and no vision, dental or hearing benefits.
- Alaska remains one of the lowest eligibility rates in the nation. Forty-one states allow participation by families at or above 200% of the FPL. Seven have rates at or above 300% of the FPL. The US and state governments' rationale for higher eligibility for children's health insurance is that it will save huge sums in transfer costs and improve health in the future through early detection and care.

Why Coverage for Pregnant Women is Important In Alaska

- Alaska has one of the nation's highest documented pregnancy-associated mortality ratios – 58 per 100,000 live births during 1990-1999 (DHSS). National data indicate that women who receive no prenatal care are al increased risk of pregnancy-related death.
- Only 58% of women in Alaska receive adequate prenatal care, compared with 75% nationally.
- Mothers having late or no prenatal care are more likely to have low birth weight or pre-term infants and are at increased risk fro pregnancy-related mortality and complications of childbirth (DHSS).
- The average cost of hospital care for a premature baby was $75,000 in 2001, compared with $1,300 for a healthy, full-term infant. The March of Dimes Prenatal Data Center reports that premature babies cost about $13.1 billion annually.

ANALYSIS: *(Attach a separate page if necessary)*

This legislation increases the income level for covering children and pregnant women under Denali KidCare to 200% of the federal poverty guidelines, up from 175%. It restores eligibility levels to the levels used when the Denali KidCare (DKC) program was originally created.

Between October 2003 and July 2007, the upper income limit for these individuals was "frozen" at an amount equivalent to the 2003 federal poverty guideline (FPG). By April 2007, that income amount was calculated by the department to correspond to about 150% of the 2007 FPG. Senate Bill 27, implemented in summer 2007, made the upper income standard for children and certain pregnant and postpartum women equal to 175% of the

ANALYSIS CONTINUATION

prevailing federal poverty guideline (FPG) for Alaska, as published annually in the federal register, and effectively raised the income level from 150% to 175% FPG. However, children and pregnant women with incomes between 176% and 200% of the prevailing FPG did not regain eligibility.

Between 2003 and 2006, the number of enrolled children with household incomes between 151% and 200% FPG dropped by 2,553 and the number of enrolled pregnant women with incomes between 134% and 200% dropped by 436. This fiscal analysis assumes that the additional enrollment due to this bill will be equal to about half that number of people (estimated as 218 pregnant women and 1,277 children). The assumption is that most people affected by this bill will enroll by the end of SFY 2010 and that enrollment will resume normal growth (about 2% per year) thereafter.

Further assumptions are that participation, i.e. the proportion of enrollees that obtain services during the year, will not change with implementation of this bill and will remain the same throughout the projection period. First year costs are based on an estimate for the number of new enrollees times the average cost per enrollee for the affected eligibility subtypes in 2008. Medicaid children in the income range addressed by this bill tend to have lower Medicaid costs than those from families with lower incomes, and those lower costs are reflected in our estimates.

Costs projections incorporate 8.6% annual growth (Long Term Forecast of Medicaid Enrollment and Spending in Alaska: 2005-2025, DHSS, updated for 2006). That growth rate includes changes in population, enrollment, utilization, and medical-price inflation.

Fund source calculations are based on the relative proportion of costs for these eligibility types that were reimbursed at IHS, Title XIX, or Title XXI rates during 2008 and our best estimates for federal medical assistance percentages (FMAPs) between 2010 and 2015. Children affected by this legislation are included in the State Children's Health Insurance Program (SCHIP) so most of their Medicaid costs would normally be matched at the enhanced rate for Title XXI services. Fund projections assume sufficient SCHIP allocation to fully fund the additional children between 2010 and 2015;, however, the program is currently funded under a continuing resolution. Title XXI funding for the balance of SFY 2009 after March 30, 2009 and for SFY 2010 will not be established until Congress takes additional action to reauthorize and fund the SCHIP program.

Expenditures for the Behavioral Health Medicaid Services component were determined based on the component's share of expenses for the affected eligibility subtypes in 2008. Behavioral Health paid about a quarter of the costs for affected DKC children in 2008. No charges for services for DKC pregnant women were paid by this component in 2008.

ANALYSIS CONTINUATION

prevailing federal poverty guideline (FPG) for Alaska, as published annually in the federal register, and effectively raised the income level from 150% to 175% FPG. However, children and pregnant women with incomes between 176% and 200% of the prevailing FPG did not regain eligibility.

Between 2003 and 2006, the number of enrolled children with household incomes between 151% and 200% FPG dropped by 2,553 and the number of enrolled pregnant women with incomes between 134% and 200% dropped by 436. This fiscal analysis assumes that the additional enrollment due to this bill will be equal to about half that number of people (estimated as 218 pregnant women and 1,277 children). The assumption is that most people affected by this bill will enroll by the end of SFY 2010 and that enrollment will resume normal growth (about 2% per year) thereafter.

Further assumptions are that participation, i.e. the proportion of enrollees that obtain services during the year, will not change with implementation of this bill and will remain the same throughout the projection period. First year costs are based on an estimate for the number of new enrollees times the average cost per enrollee for the affected eligibility subtypes in 2008. Medicaid children in the income range addressed by this bill tend to have lower Medicaid costs than those from families with lower incomes, and those lower costs are reflected in our estimates.

Costs projections incorporate 8.6% annual growth (Long Term Forecast of Medicaid Enrollment and Spending in Alaska: 2005-2025, DHSS, updated for 2006). That growth rate includes changes in population, enrollment, utilization, and medical-price inflation.

Fund source calculations are based on the relative proportion of costs for these eligibility types that were reimbursed at IHS, Title XIX, or Title XXI rates during 2008 and our best estimates for federal medical assistance percentages (FMAPs) between 2010 and 2015. Children affected by this legislation are included in the State Children's Health Insurance Program (SCHIP) so most of their Medicaid costs would normally be matched at the enhanced rate for Title XXI services. Fund projections assume sufficient SCHIP allocation to fully fund the additional children between 2010 and 2015; however, the program is currently funded under a continuing resolution. Title XXI funding for the balance of SFY 2009 after March 30, 2009 and for SFY 2010 will not be established until Congress takes additional action to reauthorize and fund the SCHIP program.

Expenditures for the Health Care Services Medicaid component were determined based on that component's share of expenses for the affected eligibility subtypes in 2008. Health Care Services Medicaid paid 100% of the costs for DKC pregnant women and about three quarters of the costs for affected DKC children in 2008.

ANALYSIS: *(Attach a separate page if necessary)*

This legislation increases the income level for covering children and pregnant women under Denali KidCare to 200% of the federal poverty guidelines, up from 175%. It restores eligibility levels to the levels used when the Denali KidCare(DKC) program was originally created.

This fiscal note represents the additional administrative costs needed to support the increased eligibility determination workload resulting from more pregnant women and children applying for medical assistance, using the assumptions from the companion fiscal notes for the Division of Health Care Services and the Division of Behavioral Health.

Date 2/24/2009

FISCAL NOTE

STATE OF ALASKA

2009 LEGISLATIVE SESSION

BILL NO. SB 013

ANALYSIS CONTINUATION

The eligibility decision includes verifying information and determining whether a pregnant woman or child qualifies for DKC when they apply, acting on changes, and periodically re-examining a household's eligibility.

We assume that 218 pregnant women and 1,277 children will enroll in Medicaid if the qualifying income limit is revised to 200% FPG, and that implementation will begin July 1, 2009. We estimate two additional Eligibility Technician I (Range 13) positions will be needed to manage this additional work in FY2010.

Total Administrative Costs for ET I Positions:

Personal Services: Two Eligibility Technician I Range 13 at a cost of $134.4, including benefits, for 12 months.
Contractual: Annual cost for office space, phones, etc. will be $17.6.
Commodities: Annual cost for the office supplies will be $1.0.

Additional Cost of FY2010:
Equipment/Supply: A one time cost of $14.4 for desktop computer, software, printer, and work stations will be needed for the new positions.

Subject: SCHIP Cost Sharing Rules

Senator Davis,

We enjoyed listening to your Health and Social Services committee meeting on Monday. This memo is intended to answer the question posed about the SCHIP cost-sharing rules.

Alaska's SCHIP program is a Medicaid expansion program and therefore must comply with Medicaid's cost-sharing rules as specified under the Deficit Reduction Act of 2005. Under provisions of the Deficit Reduction Act of 2005 (DRA), states generally cannot impose cost sharing on children in families with income below 150 percent of the federal poverty guidelines except in certain circumstances. In addition, even at more moderate-income levels, federal rules exempt some special services from any cost sharing requirements.

Most children under the age of 18 are exempt from premiums and from cost-sharing on most services. However, the DRA rules allow states to require co-payments for prescription drugs and use of the emergency room for non-emergency care on all children in certain circumstances. The DRA also allows states to assess premiums and cost-sharing charges on some children in families with income above the poverty line. The total amount of premiums and cost-sharing charges cannot exceed a cap of five percent of family income, which is calculated on a monthly or quarterly basis at the option of the state.

Please see the following document by the Center on Budget and Policy Priorities for more detailed information about cost-sharing and premiums in Medicaid:
Cost-sharing and Premiums in Medicaid: What Rules Apply? February 28, 2007
http://www.cbpp.org/2-28-07health.pdf

In addition, you may also find the following document by the Congressional Research Service helpful. The table on page 5 compares service-related cost-sharing rules in traditional Medicaid, the DRA options and SCHIP.

http://assets.opencrs.com/rpts/RS22578_20070125.pdf

The following document by the Centers for Medicare and Medicaid Services (CMS) also summarizes these Medicaid requirements and you may find the "Important Links" on the bottom of page 2 helpful.
See the CMS document here:
http://www.cms.hhs.gov/DeficitReductionAct/Downloads/Costsharing.pdf

For more general information about cost sharing and SCHIP, please see the following CMS website:
http://www.cms.hhs.gov/MedicaidGenInfo/05_SCHIP%20Information.asp
(Scroll down to see the information under the heading "Cost Sharing.")

To create cost sharing requirements that differ from the Medicaid requirements, states can do so by submitting a waiver to and obtaining approval from the Centers for Medicare and Medicaid Services (CMS) or by creating a stand-alone SCHIP program.

If you have more specific or detailed questions regarding cost-sharing requirements under Alaska's SCHIP program, I would suggest that you contact CMS directly.

Best regards,
Jennifer Saunders

The Honorable Bert Stedman
Co-Chairman, Senate Finance Committee
State Capitol, Room 516
Juneau, AK 99801-1182

Dear Senators Stevens, Hoffman and Stedman:

As the Alaska Senate this week resumes committee work on Denali KidCare, I urge your support of proposals to increase the number of children and pregnant women eligible for health insurance under this valuable program. One of my first acts as U.S. Senator was to vote in favor of the Children's Health Insurance Program Reauthorization Act of 2009. The measure also was supported by Senator Lisa Murkowski and Congressman Don Young. Now that Congress has reauthorized and funded the Children's Health Insurance Program (CHIP) for the next five years, it is time to give more Alaska families the chance to qualify for basic health care.

The federal legislation authorizes states to offer coverage for families earning up to 300 percent of the federal poverty level (FPL), and some already do. It is troubling that Alaska – recognized in the early days of Denali KidCare as a national leader for its outreach and signup efforts – is now at only 175 percent of FPL and one of the strictest states in the nation for eligibility.

At a minimum, I urge you and your colleagues to restore Alaska's eligibility guidelines to 200 percent. As you know, that step would return Alaska to 2003 levels and immediately qualify an estimated 1,277 additional children and 218 more pregnant women for Denali KidCare. I and many other Alaskans would celebrate that improvement. However, merely restoring the program to where it was six years ago is not exactly a huge victory for Alaska's families. We can and should do better. I support efforts to increase eligibility levels beyond 200 percent of FPL, including the possibility of an effective but equitable co-pay provision for families that can afford to buy into the program. I applaud your Senate and House colleagues on both sides of the political aisle who are working to improve Alaska's program.

We know the need is great. According to the respected Kaiser Family Foundation, there are more than 21,000 children in Alaska without health insurance. Many are from hard-working families who make too much for regular Medicaid but not enough to afford a private health plan. This results in less preventive care, more sickness and more lost school days. Emergency room visits also increase – last-minute care that is often uncompensated and results in higher insurance premiums and medical costs for everyone.

As you deliberate, let me alleviate concerns about federal support. When President Obama signed the CHIP reauthorization bill earlier this month, he and Congress effectively joined forces to provide states with funding certainty (CHIP is now authorized through FFY2013). That continuity is especially important during these times of economic instability. If families do lose employer-provided health coverage or fall further behind in their efforts to afford private insurance, it is essential that Denali KidCare be available to cover basic health care needs. Coupled with the fact that the federal government is offering financial incentives to states that increase enrollment and will pay up to 70 percent of the total cost of the program (currently estimated at 66 percent in Alaska), this is frankly a very good deal.

Given action by Congress to reauthorize CHIP, the Legislature's obvious interest in this issue and Governor Palin's announced intent to support an expansion of Denali KidCare, it looks as if the stars are finally aligned.

Thank you for your work on this matter. Please feel free to contact me if I can be of assistance.

Sincerely,

Mark Begich
U.S. Senator

MEMORANDUM January 22, 2009

SUBJECT: Sectional Summary (SB 13; Work Order No. 26-LS0076\A)

TO: Senator Betty Davis
Attn: Tom Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Amends the medical assistance eligibility provisions for persons under 19 years of age and for pregnant women by increasing the household income limit from 175 to 200 percent of the federal poverty line.

Section 2. Increases the household income limit from 175 to 200 percent of the federal poverty line for requiring premiums and cost-sharing contributions from medical assistance recipients who are under 19 years of age.

Section 3. Provides for an immediate effective date.

THE 2009 HHS POVERTY GUIDELINES

One Version of the [U.S.] Federal Poverty Measure

[*Federal Register* notice, January 23, 2009 (PDF - 3 pages)]
[Prior Poverty Guidelines and *Federal Register* References Since 1982]
[Frequently Asked Questions (FAQs)]
[Further Resources on Poverty Measurement, Poverty Lines, and Their History]

There are two slightly different versions of the federal poverty measure:

- The poverty thresholds, and
- The poverty guidelines.

The **poverty thresholds** are the original version of the federal poverty measure. They are updated each year by the **Census Bureau** (although they were originally developed by Mollie Orshansky of the Social Security Administration). The thresholds are used mainly for **statistical** purposes — for instance, preparing estimates of the number of Americans in poverty each year. (In other words, all official poverty population figures are calculated using the poverty thresholds, not the guidelines.) Poverty thresholds since 1980 and weighted average poverty thresholds since 1959 are available on the Census Bureau's Web site. For an example of how the Census Bureau applies the thresholds to a family's income to determine its poverty status, see "How the Census Bureau Measures Poverty" on the Census Bureau's web site.

The **poverty guidelines** are the other version of the federal poverty measure. They are issued each year in the *Federal Register* by the **Department of Health and Human Services** (HHS). The guidelines are a simplification of the poverty thresholds for use for **administrative** purposes — for instance, determining financial eligibility for certain federal programs. The *Federal Register* notice with the 2009 poverty guidelines (PDF - 3 pages).

The poverty guidelines are sometimes loosely referred to as the "federal poverty level" (FPL), but that phrase is ambiguous and should be avoided, especially in situations (e.g., legislative or administrative) where precision is important.

Key differences between poverty thresholds and poverty guidelines are outlined in a table under Frequently Asked Questions (FAQs). See also the discussion of this topic on the Institute for Research on Poverty's web site.

Acknowledgments

The authors would like to extend our deep appreciation to the many Medicaid and SCHIP officials throughout the country who participated in this survey and so generously shared their time and expertise with us. We are grateful for their willingness to explain recent program developments -- from the broadest policy change to the most detailed program rule. Their important contribution to improving the health of children and families deserves recognition and our thanks. We also would like to thank our colleagues at the Center on Budget and Policy Priorities, particularly Matthew Broaddus, for their assistance and helpful suggestions as we prepared this report. We also appreciate the assistance of the Center for Children and Families at Georgetown University's Health Policy Institute.

Executive Summary

Medicaid and SCHIP have been instrumental in covering more low-income uninsured children over the last decade. While much progress has been made, nine million children remain uninsured. As SCHIP reauthorization approached in 2007, states were poised to move forward with efforts to cover more uninsured children. However, federal obstacles, including the Medicaid citizenship documentation requirements, the issuance of a CMS-directive on August 17th 2007 limiting state expansions, and the failure to reauthorize SCHIP have hampered progress. A temporary extension provided funds for SCHIP through March 31, 2009.

When states adopted their budgets for the fiscal year starting July 1, 2008, many were able to include funding for children's coverage expansions. Later, the severity of the unfolding fiscal crisis became clearer and state budget shortfalls are now expected to total $350 billion for the remainder of FY 2009 and through 2011. States face mounting pressure to cut Medicaid and SCHIP just as the need for coverage rises due to climbing unemployment and loss of health coverage. In the last downturn, some states implemented restrictive enrollment procedures and reported dramatic declines in children's enrollment as a result. States may soon feel pushed to take such steps. Key findings from the annual KCMU survey of state Medicaid and SCHIP policies for children and parents that were implemented or authorized between January 2008 and January 2009 in the 50 states and D.C. include:

- **States continued to make progress on improving access to health coverage, particularly for children, but several significant setbacks warn about impending problems.** One-third of states (19) increased access to health coverage, while ten states enacted at least one measure to restrict coverage. The most common restriction was imposing new or higher premiums in SCHIP, but two states also restricted eligibility. California increased the frequency of renewal, a change estimated to affect more than 260,000 children as well as large numbers of parents.

- **The economic crisis is widespread and serious healthcare cuts are looming, but the commitment to children is still strong.** States continued to enact eligibility expansions for children, and state officials in several of those states plan to go forward even though they are facing significant budget shortfalls. Federal constraints, such as the unresolved reauthorization of SCHIP and the August 17th directive, have caused some states to put expansions on hold temporarily. Others are using state funds to pay for coverage precluded by the directive.

- **Parent coverage is still more difficult to obtain than children's coverage.** The median income at which children qualify for coverage is 200 percent of the federal poverty line, but is much lower — 68 percent of the federal poverty line — for working parents. However, for unemployed parents, the median income eligibility for Medicaid is just 41 percent of the federal poverty line, $601 per month for a family of three in 2008. Jobless parents who need coverage may find that unemployment payments put them over the income limit for Medicaid.

- **Outreach budgets were increased in a number of states, however, some are beginning to report that these funds are being curtailed.** Outreach, including community-based application assistance, is critical in a recession, since newly eligible families may be unfamiliar with public programs. But in light of budget shortfalls, some states expressed skepticism for conducting aggressive outreach. About half the states are using technology to implement or develop online applications and to develop more efficient enrollment and renewal systems.

As the economic crisis deepens, states will be under major pressure to contain costs. This may lead them to take steps that not only reverse coverage gains, but intensify the hardships that many families are already facing as a result of losing their jobs and their health insurance. Congress is currently considering SCHIP reauthorization and an economic recovery package that would provide additional federal Medicaid matching funds. These would help states to maintain vital coverage for low-income families, support state efforts to enroll more eligible children, and make program improvements. Strengthening Medicaid and SCHIP in these ways is an essential precursor to the larger task of enacting broad health care reform.

I. Introduction

A commitment to providing health coverage for uninsured children has inspired nationwide efforts that began in earnest with enactment of the State Children's Health Insurance Program (SCHIP) in 1997. Like Medicaid, the chief source of health coverage for low-income families, SCHIP finances coverage through a partnership between the federal and state governments. State measures to expand eligibility and adopt streamlined enrollment procedures in Medicaid and SCHIP have strengthened both of these programs, and they have been instrumental in reducing the percentage of low-income uninsured children by one-third over the last decade.[1] Notably, the number of low-income uninsured parents increased over the same period, since eligibility levels and resources for addressing their health coverage needs do not approach those related to children.

While considerable progress has been made, nine million children in the United States remain uninsured, with nearly two-thirds of them eligible for Medicaid and SCHIP. In 2007, with relatively robust state budgets and the reauthorization of SCHIP at hand, across the country, states came forward to reaffirm their commitment to closing this gap. That year, state efforts to expand children's health coverage represented the most aggressive steps forward since the early years of SCHIP. Of the 20 states that expanded eligibility for children, 12 raised or authorized raising SCHIP income limits to 300 percent of the federal poverty line, more than doubling the number of states that previously had eligibility set at this level. States also made progress on adopting simplified enrollment and renewal procedures in both Medicaid and SCHIP, emphasizing strategies that reduce paperwork and jump-start enrollment.[2]

Despite this burst of activity, efforts to advance children's coverage met unanticipated federal obstacles. The Medicaid citizenship documentation requirement, enacted in 2006 as part of the Deficit Reduction Act, sent state simplification efforts backwards by requiring U.S. citizens applying for Medicaid to present original documents proving their citizenship and identity. States reported that this new rule ushered a deep decline in the enrollment of eligible U.S. citizens, especially children.

The expected reauthorization of SCHIP also encountered roadblocks. Congress passed two versions of legislation to reauthorize SCHIP and President Bush vetoed each of them. And, on August 17, 2007, as SCHIP reauthorization was proceeding, the Centers for Medicare and Medicaid Services (CMS) issued a directive that impeded states' ability to expand coverage.[3] The year ended with these problems unresolved, meaning states were without the infusion of funds they were anticipating, and the new tools to bolster outreach and enrollment did not materialize. A temporary extension provided funds for SCHIP through March 31, 2009.

When states adopted their budgets for the state fiscal year starting July 1, 2008, they were able to include funding for children's coverage expansions. Later, the economy began to show signs of trouble, but it was not until September 2008 that the breadth and depth of the unfolding fiscal crisis became clear as financial markets collapsed and unemployment started to rise sharply. States are now facing an extremely threatening fiscal situation, with state budget shortfalls expected to total $350 billion for the remainder of FY 2009 and through 2010 and 2011.[4]

So far, most states have managed to maintain existing eligibility levels and procedural improvements. For example, despite serious financial pressures, states that enacted earlier children's coverage expansions, such as Iowa and New York, have reiterated their intentions to go forward. But, there are warning signs that this will become more and more difficult.

As in past economic downturns, states will continue to struggle with the mounting pressure to cut health coverage programs just at the time that an increasing number of people need the vital services they provide. Many states have already implemented or announced major cuts to health programs, mainly in the area of provider rates and benefits, which have a significant impact on access and the quality of care. States that have not yet expanded are likely to be deterred from increasing coverage because of the dire economic environment.

Medicaid enrollment and spending growth peaked in 2002 at the same time state revenues dropped sharply. In response, states adopted an array of cost containment strategies to control spending growth. Then federal fiscal relief was made available to states through the Jobs and Growth Tax Relief Reconciliation Act of 2003, increasing the federal share of Medicaid costs, and lifting some of the burden states were carrying. The legislation restricted states from lowering Medicaid eligibility between September 2003 and June 2004, as a condition of receiving relief funds. Thus, no state retracted Medicaid eligibility during this time period. SCHIP eligibility also remained relatively constant, with only a few states cutting back.

However, because they were still grappling with budget shortfalls, nearly half the states put in place enrollment procedures that made it more difficult for children and parents to secure and retain health coverage between April 2003 and July 2004.[5] Some states reported dramatic declines in children's enrollment as a result of these budget-driven changes, and children who were most likely *eligible* for existing programs became uninsured. For example, in Texas, SCHIP enrollment dropped by more than 149,000 children (a 29 percent decline), in large measure, due to reducing continuous coverage from 12 months to six months. Washington state also repealed the guarantee of 12 months of coverage and required parents to renew their child's eligibility every six months as well as report changes in the interim. This, along with other procedural changes, led to a dramatic caseload reduction of more than 40,000 children. In Wisconsin's BadgerCare program, establishing more rigorous documentation requirements resulted in an enrollment decline of 13,000 children and parents in just the first four months of implementation. Several states also froze SCHIP enrollment. In addition to turning away children who qualified for coverage under SCHIP, this strategy adversely affected Medicaid-eligible children not subject to the freeze. Eligible applicants' path to coverage was limited when states stopped taking joint Medicaid/SCHIP applications or because families mistakenly interpreted news reports to mean that all coverage programs were closed to new applicants.[6]

Coming out of the last economic downturn, states worked to eliminate SCHIP enrollment freezes and reverse some of the enrollment barriers they had imposed. This enabled caseloads to recover somewhat. An important lesson learned, however, is that the problematic effects of changing administrative procedures can endure if such changes send conflicting messages to prospective and current program participants.

As this report goes to press, two major developments are within reach. Congress has taken up SCHIP reauthorization once again and is working towards passing a bill that will likely be one of the first pieces of legislation to be presented to the nation's new president, Barack Obama. Next will come a significant economic recovery package that will contain substantial state fiscal relief in the form of enhanced federal matching funds for Medicaid that will reduce the share of the costs states will have to contribute for the program. Passage of both these bills would provide needed relief, as well as the support to move forward on enrolling more eligible, uninsured children. These measures would also help reinforce the federal/state partnership that is fundamental to the viability of health coverage programs. Strengthening Medicaid and SCHIP by making sure they are in a position to provide coverage to more

low-income uninsured individuals, is also an essential precursor to the larger task of enacting broad health care reform.

II. About this Survey

This report presents the findings of a survey of eligibility rules, enrollment and renewal procedures, and cost-sharing practices in Medicaid and SCHIP for children and families that were implemented or authorized between January 2008 and January 2009 in the 50 states and the District of Columbia. These policies have a large influence on how effectively Medicaid and SCHIP can deliver health coverage to the eligible children, pregnant women and parents who rely on the vital services these programs provide. They are the driving forces behind efforts to reduce the number of low-income people who lack adequate insurance but cannot afford to pay for it on their own.

This study, the eighth annual survey conducted by the Center on Budget and Policy Priorities for the Kaiser Commission on Medicaid and the Uninsured, was carried out in the summer and early fall of 2008, through extensive telephone interviews with state Medicaid and SCHIP program administrators. Detailed follow-up interviews proceeded through the end of the year. The findings reflect policies and procedures in effect in the states in January 2009, as well as coverage expansions that were authorized, but were not implemented, by states during the survey period.

III. Key Survey Findings – Current Status of Coverage for Children and Parents

States continue to make progress on improving access to health coverage for low-income families. As of January 2009, income eligibility levels are as follows:

States provide health coverage for children and pregnant women under Medicaid or SCHIP as follows (Figures 1 & 2):

- 44 states, including DC, cover children in families with income at 200% FPL or higher. ($35,200 for a family of three in 2008).
- 33 states cover children in families with income between 200% and 250% FPL. (200%: $35,200 for a family of three in 2008; 250% FPL: $44,000 for a family of three in 2008).
- 19 states, including D.C., cover children in families with income at 250% FPL or higher. 10 of these states cover children in families with income at 300% FPL or higher. ($52,800 per year for a family of three in 2008).
- 40 states, including DC, cover pregnant women with income 185% FPL or higher. ($32,560 for a family of three in 2008).

Figure 1

Children's Eligibility for Medicaid/SCHIP by Income, January 2009

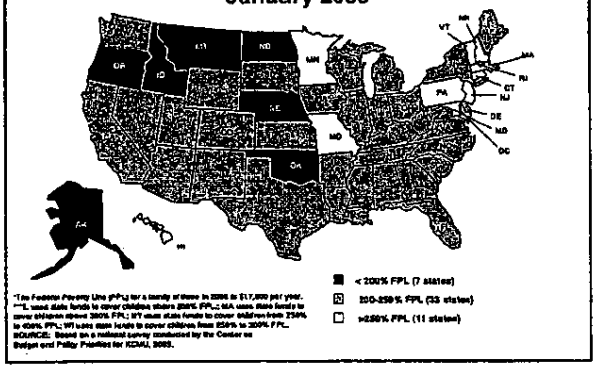

Figure 2

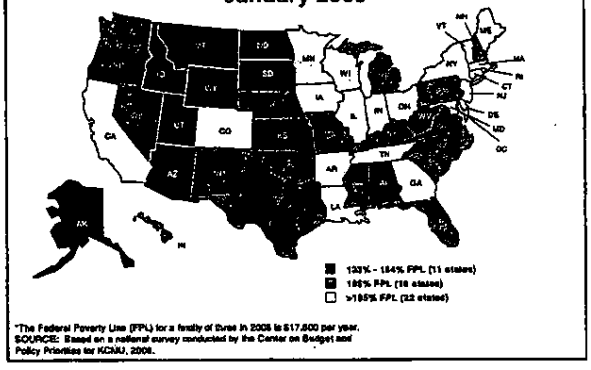
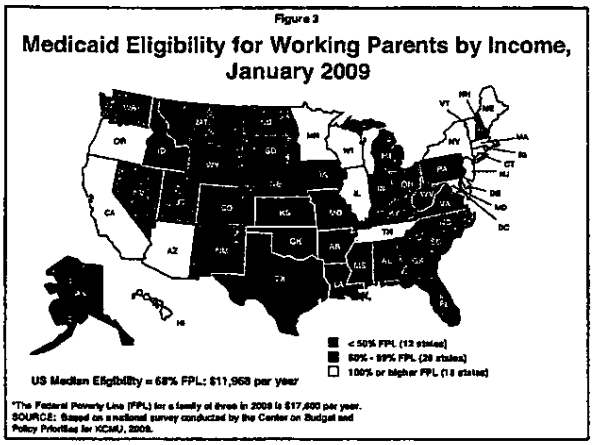
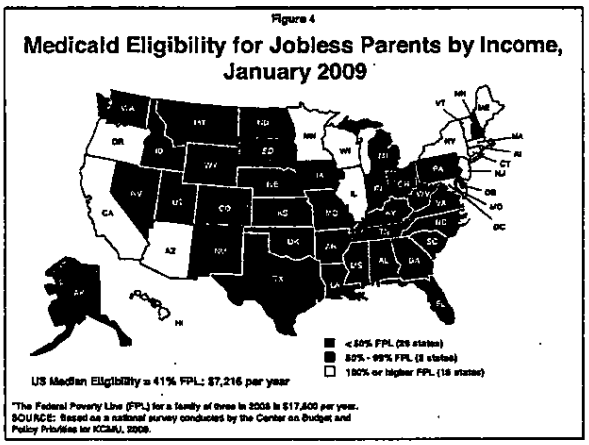
Medicaid Eligibility for Pregnant Women by Income, January 2009



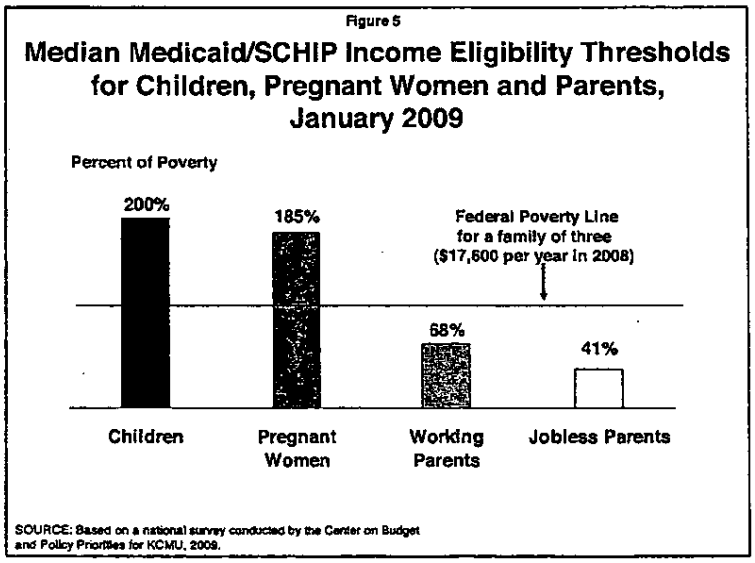
States provide health coverage for parents under Medicaid as follows (Figures 3 & 4):

- In 12 states, family income must be less than half the federal poverty line for a working parent to qualify for Medicaid ($8,700 per year for a family of three in 2008).
- In 29 states, family income must be less than half the federal poverty line for a jobless parent to qualify for Medicaid ($8,700 per year for a family of three in 2008).
- 18 states, including the District of Columbia, cover parents in families with income at 100 percent of the federal poverty line or higher ($17,600 per year for a family of three in 2008).
- In 28 states, a parent in a family of three, working full-time at the minimum wage, earning on average, $1,092 per month, cannot qualify for Medicaid.





It continues to be more difficult for a low-income parent to qualify for health coverage than for a child (Figure 5). The median income at which children qualify for Medicaid or SCHIP is 200 percent of the federal poverty line, but is much lower — 68 percent of the federal poverty line — for working parents. For jobless parents, the median income eligibility for Medicaid is just 41 percent of the federal poverty line, $601 per month for a family of three in 2008. In an economic downturn, this low income limit can take a serious toll on families. For many individuals who have lost their jobs and also their health insurance, COBRA coverage is likely to be prohibitively expensive or may not be available, and parents may turn to public programs for coverage. However, they may find that the unemployment compensation payments they receive put them over the income limit for Medicaid. (Since unemployment compensation is unearned income, "earnings disregards" that are designed to help working families qualify do not apply.) Jobless parents may eventually become eligible, but in the interim they are subject to health risks and financial exposure that can have deleterious consequences for themselves and their families.



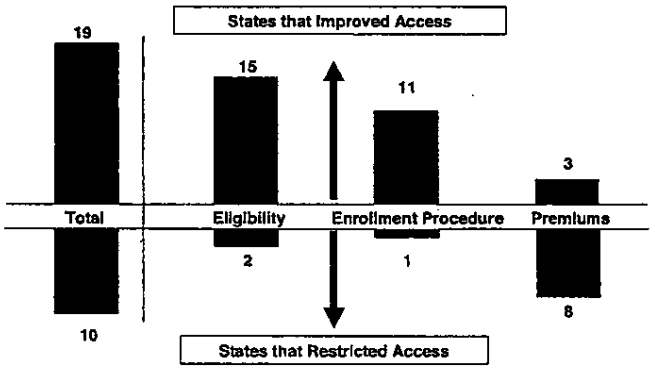
IV. Key Survey Findings – State Actions During 2008

Overall, states continued to make progress on improving access to health coverage, but a few setbacks warn about impending problems (Figure 6).

- **More than one-third of the states (19 states) took steps to increase access to health coverage for low-income children, pregnant women and parents.** Fifteen(15) states authorized or implemented coverage expansions *(CO, IA, IN, KS, LA, MD, MT, ND, NJ, NY, OK, OR, SC, TN, WI)*; 11 states reduced procedural barriers *(AZ, CO, IA, KY, LA, MD, MT, NV, OR, SC, UT)* and three states reduced financial barriers to Medicaid and SCHIP *(TN, WA, WI)*.

Figure 6

Number of States Taking Action Affecting Access to Health Care Coverage, Jan 08 – Jan 09



SOURCE: Based on a national survey conducted by the Center on Budget and Policy Priorities for KCMU, 2009.

- **Ten states (10 states) enacted at least one measure to restrict coverage.** The most common restriction was to increase financial barriers such as new or higher premiums in SCHIP programs. Eight states *(GA, LA, MN, MO, NJ, NV, PA, RI)* went in this direction. *Rhode Island* and *South Carolina* restricted eligibility, the former cutting income eligibility for parents, and the latter establishing a three-month waiting period in its new separate SCHIP program, during which children must remain uninsured before they can enroll. *California*, increased the frequency with which parents and children are required to renew coverage.

  The actions taken by *Rhode Island* and *California*, among the first states to feel the effects of the economic downturn, raise concerns about where other states could be headed if their fiscal pressures go unaddressed. The premium increases in *Rhode Island* are steep, coming at a time when families are likely to be financially strapped. Premiums of $45 per child per month are now required for children in families with incomes as low as 133 percent of the federal poverty line ($23,467 for a family of three in 2008), as compared to the previous starting point, 150 percent of the federal poverty line. Premiums for other children range from $86 per month to $114 per month, representing an increase of up to $29 per month for some.

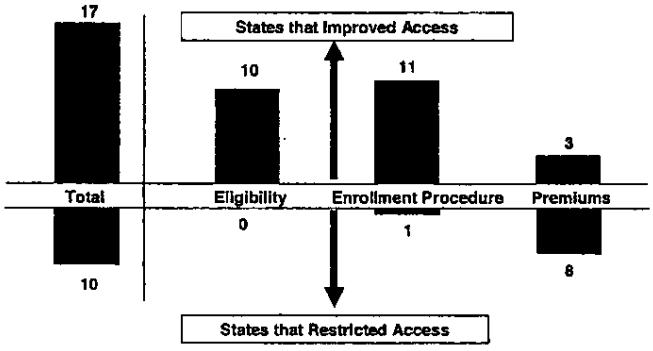
  California's retraction of 12-month continuous eligibility for children withdraws the guarantee of full-year coverage, which is critical for children with ongoing medical needs. In addition, the state will

now require children and parents on Medicaid to comply with a semi-annual reporting procedure that is likely to cause otherwise avoidable gaps in coverage for eligible families. It will also create unnecessary and costly administrative burdens, since eligible families dropped from the program are likely to reapply within a short period of time. These changes could result in more than 260,000 children losing coverage by 2011. A large number of parents would be affected as well.[7]

The economic crisis is widespread, and serious health care and other cuts are looming, but states are demonstrating a steadfast commitment to covering children (Figure 7). States continued to enact eligibility expansions for children, and state officials in several of those states, such as *Iowa* and *New York*, plan to go forward even though they are facing significant budget shortfalls. Federal constraints that have dampened states' ability to expand, such as the unresolved reauthorization of SCHIP and the August 17th directive, have caused several states to put expansions on hold or scale back temporarily. Others, such as *Wisconsin* and *New York*, are using state funds to pay for children whose coverage is precluded by the August 17th directive.

Figure 7

Number of States Taking Action Affecting Children's Access to Health Care Coverage, Jan 08 – Jan 09



SOURCE: Based on a national survey conducted by the Center on Budget and Policy Priorities for KCMU, 2009.

- **One-third of the states (17 states) increased access to coverage for children.** Ten (10) states implemented or authorized eligibility expansions for children. *Iowa* and *Montana* raised children's coverage (scheduled to begin later this year), to 300 percent of the federal poverty line and 250 percent of the federal poverty line, respectively; *Kansas* implemented a children's coverage expansion to 250 percent of the federal poverty line. If the August 17th directive remains in place, these states will be subject to the strict conditions it imposes. Eligibility increases were also implemented, but to more modest levels in *Colorado, North Dakota* and *South Carolina*. *New York* adopted the option to allow children leaving foster care upon reaching age 18 to keep their Medicaid coverage.

  Of the ten states that expanded coverage for children, four were implementing expansions that were authorized last year, but which had been held back by the August 17th directive or by the uncertainty surrounding SCHIP reauthorization. *Louisiana* and *Indiana* increased eligibility to 250 percent of the federal poverty line, rather than 300 percent. *Wisconsin* and *New York* chose to move forward with their full expansions, funding coverage over 250 percent of the federal poverty line with state funds only. *Illinois* has been funding its expansion using state dollars. Planned expansions in five additional states (*NC, OH, OK, WA,* and *WV*) remain stalled.

Iowa Children Get A Coverage Boost

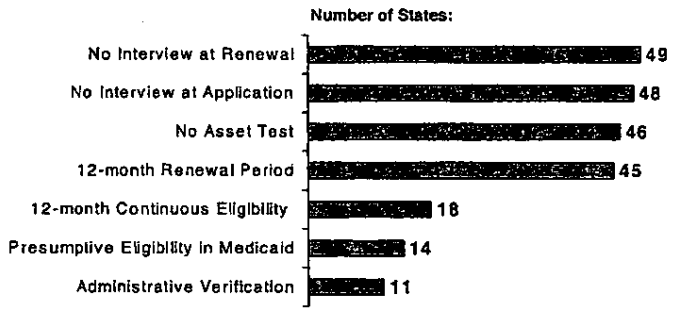
Buoyed by a groundswell of public support for covering children, Iowa Governor Chet Culver, along with state legislators, remain strong in their pledge to expand health insurance to more of the state's uninsured children. In the last legislative session, state legislators passed an expansion of hawk-i, the state's SCHIP program, to 300 percent of the federal poverty line, which will be implemented in July 2009, and cover an estimated 5,000 new children. Program improvements have already proceeded. The state now guarantees children a full 12 months of continuous coverage and is pursuing ways to ease premium payment policies. For example, families new to the program will not have to pay premiums for the first two months of enrollment. Outreach is expected to go forward as well, but may possibly be scaled back. Like many other states, Iowa is in a severe budget crunch, with an expected shortfall of more than $600 million in the coming year. Major spending cuts are being planned, but it appears that the children's coverage expansion will go forward. Senate Majority Leader, Mike Gronstal (D) stated recently, "We committed to providing access to affordable coverage to every kid in the state of Iowa. I'm not interested in backing up on that commitment."

* "Health Promises Persist: Iowa lawmakers reconcile health care goals, budget" The Hawkeye, January 15, 2009.

- **Eleven (11) states took steps to reduce procedural barriers to coverage for children (Figure 8).** *Arizona, Kentucky,* and *Utah* no longer require families to participate in face-to-face interviews to obtain health coverage for their children, and *Colorado* adopted "administrative verification and renewal," meaning the state no longer requires families to provide paper documentation of their income and eligibility workers use existing databases to verify the information families provide on the application. *Maryland, Montana, Louisiana, South Carolina* and *Utah* have revised their applications to allow parents to apply using the same simplified forms that are used for children, a change that benefits both children and parents. *Iowa, North Dakota* and *Oregon* now guarantee 12 months of continuous eligibility, considered to be one of the most effective tools for keeping children covered for as long as they qualify. One serious setback, the changes to the renewal procedures in *California,* was discussed earlier.

Figure 8

Simplifying Enrollment and Renewal: Strategies States are Using in Children's Health Coverage Programs, Jan 09



SOURCE: Based on a national survey conducted by the Center on Budget and Policy Priorities for KCMU, 2009.

States Explore the Use of Technology to Facilitate Enrollment

Emergence of Online Applications

About half the states reported that they are implementing, or are in the process of designing, on-line applications. Several of these states also report allowing the use of electronic signatures, so that a follow-up signature page does not have to be printed and mailed in. (Other states appear unsure about the permissibility of electronic signatures and point to the lack of clear federal guidance on this subject.) Some states at the forefront of using on-line applications also report that their applications currently interface with existing eligibility systems (or will in the future), so that information from the on-line application does not have to be re-entered by eligibility workers and an eligibility determination can move forward more rapidly.

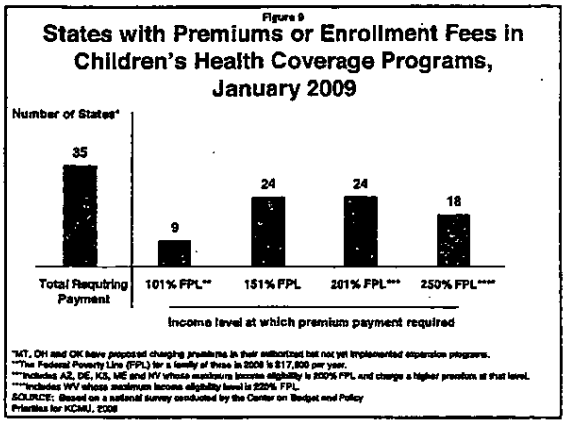
Database Usage

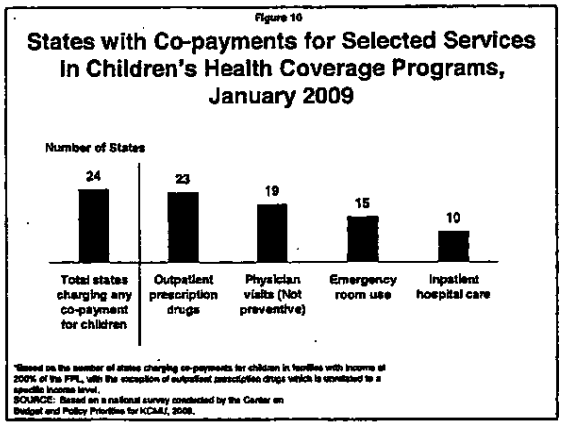
Eleven states (12 states at renewal) report using technology to streamline the enrollment and renewal process. States report conducting matches with existing databases to verify income and other information, as well as eliminating rules requiring families to submit pay stubs or other paper documentation. This procedure is referred to as "administrative verification and renewal." Many states also are conducting data matches with their Vital Records departments to help families comply with the Medicaid citizenship documentation requirement, however, the technological capacity to do this efficiently varies considerably. Finally, states are exploring the use of technology to target outreach, for example, by conducting data matches with existing databases to identify children and parents who are likely to qualify for health coverage but who are not enrolled. States report using matches with food stamp databases for this purpose, and have expressed interest in using state tax system databases.

- **Outreach budgets in a number of states were increased in 2008, however, some states are beginning to report that these funds are being curtailed.** Several states reported increases in outreach funding in 2008, sometimes associated with new expansions, but also for ongoing promotional activities and community-based application assistance. In recent follow-up interviews, some state officials indicated that their outreach budgets have now been cut; others expressed skepticism for conducting aggressive outreach in light of budget shortfalls. Still others said their outreach activities would go forward, with some indicating that activities would emphasize renewal assistance so that already enrolled children do not lose coverage.

- **A few states reduced financial barriers to children's coverage, eliminating or lowering premiums for some children, while other states increased premiums (Figure 9).** *Tennessee, Washington* and *Wisconsin* either reduced premiums or eliminated them for some children. *Georgia, Minnesota, Missouri, Nevada, New Jersey, Pennsylvania* and *Rhode Island* increased premiums for children, with two of these states showing significant increases. *Minnesota* premiums increased by up to $14 per month for some children. Premium increases in *Rhode Island*, discussed earlier, represented the most severe increases for children this year. New premiums implemented in *Louisiana*, apply to the state's new expansion group (children with incomes between 200 percent and 250 percent of the federal poverty line).

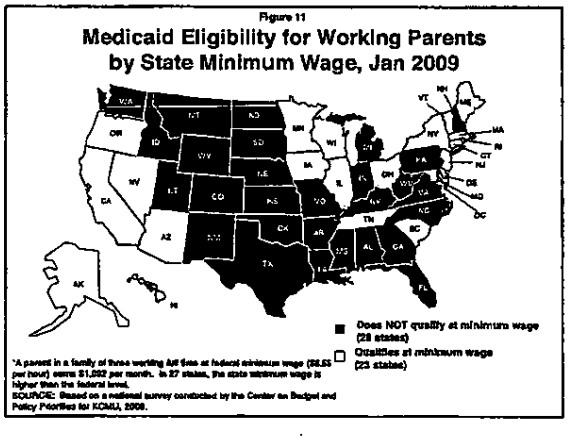
- **Co-payments for health services were adopted in one state and increased in two states (Figure 10).** Currently, 24 states charge co-payments for children's health services. *Wisconsin* adopted new co-payments, and *West Virginia* and *Utah* increased co-payments for prescription drug coverage. Only one state, *Montana* decreased co-payment amounts.

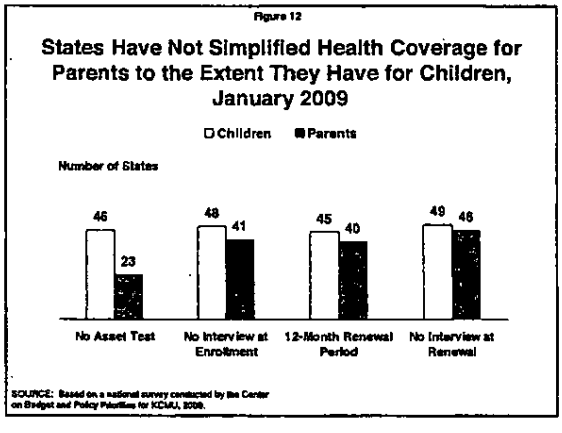




Low-income parents applying for Medicaid coverage continue to face substantially restricted income eligibility and access as compared to their children (Figure 11 and 12).

- **A few states took steps to boost coverage and simplify procedures for parents.** Three states — *New Jersey, Maryland,* and *Wisconsin* — implemented parent coverage expansions. Still, in 28 states, parents working full time at minimum wage cannot qualify for Medicaid. One state, *Rhode Island*, cut parent coverage. *Maryland* also stopped counting assets in determining eligibility for parents, a step that fewer than half the states have taken. Given the restrictive income eligibility levels for parents in most states, the majority of parents applying are not likely to have substantial bank accounts, multiple vehicles of significant value, or other resources that would disqualify them. The burdensome and intrusive paperwork associated with proving that one does not exceed the asset limit often deters eligible parents from completing the application process. Other measures were implemented to reduce procedural barriers for parents, including eliminating interviews and reducing the frequency of renewal (*AZ, MD, UT*), but these practices are still more prevalent in children's coverage programs.





Maryland Expands Medicaid Eligibility for Low-Income Parents

Access to health coverage increased measurably for thousands of low-income Maryland parents this year when an income eligibility expansion and a package of procedural improvements were implemented on July 1, 2008. The state boosted parent eligibility from about 30 percent of the federal poverty line to 116 percent. The state also eliminated the asset test and no longer requires parents to have a face-to-face interview at the Medicaid office. This streamlined the process for parents and also aligned procedures for parents and children to a greater extent so that they can apply using the same simplified application form. Since its implementation, 29,682 adults have enrolled as a result of the expansion.

To achieve this early success, a logical first step was to identify children already in Medicaid whose family income is below 116 percent of the federal poverty line and enroll the parents when they renew their child's coverage. Traditional outreach efforts including TV, print and radio publicity, as well as activities with the Baltimore Ravens football team, also have done much to inform families about the new coverage opportunity. In addition, the Medicaid and revenue agencies coordinated on a new initiative that used the tax system to identify 150,000 people who were potentially eligible. They were sent a letter from the state Comptroller inviting them to call a toll-free number for an application. Between December 1 and December 12, 2008, nearly 1,800 hotline callers were sent applications. Others obtained applications on-line and through other avenues.

Enrollment continues to increase and the recession is apparently a driving force: there were more approvals of parents in the expansion group during the first two weeks in December than there have been since it was implemented in July and state officials say they are seeing people who previously had secure jobs and are seeking help, perhaps for the first time. The budget is tight in Maryland, but in two rounds of cuts, the expansion has not been targeted.

*Conversations with Maryland State Officials, January 2009.

- **Income eligibility for pregnant women remained stable with nearly half the states covering pregnant women at 185 percent of the federal poverty line.** Two states, *Tennessee* and *Wisconsin*, increased eligibility for pregnant women to 250 percent and 300 percent of the federal poverty line respectively. *Oklahoma* and *Oregon* both adopted the option to use SCHIP funds to cover unborn children of pregnant women.

V. Discussion

Recession Jeopardizes States' Ability to Maintain and Advance Coverage for Low-Income Children and Parents

States have made substantial progress in reducing barriers to health coverage for low-income children and families. They continued to do so during the first half of 2008 by further expanding eligibility and streamlining enrollment and renewal procedures. Now, as the economic crisis deepens, states will be under major pressure to contain costs. This may lead them to take steps that would not only reverse critical coverage gains, but would intensify the hardships so many families are already facing as a result of losing their jobs and their health insurance. In the last economic downturn, federal fiscal relief was successful in helping states address budget shortfalls, avoid deeper Medicaid cuts, and preserve eligibility, which was a condition of receiving enhanced federal funds. However, to deal with tight budgets, many states made procedural changes to their programs which blocked eligible children and parents from obtaining coverage at a time when they could least afford health care on their own.

Easing Eligibility and Simplifying Procedures Are Especially Important During an Economic Downturn

Individuals who have lost health coverage due to unemployment need a smooth path to Medicaid and SCHIP.[8] Any period of time without insurance could cause ongoing medical conditions to escalate if it is not possible for families to find or pay for needed medication or other treatment on their own. Parents who are recently unemployed may find that the unemployment compensation payments they receive put them over the income limit for Medicaid. States can choose to disregard these payments or a portion of them in determining eligibility for jobless parents. States can eliminate their SCHIP waiting periods or at least ensure that a job-loss exemption is available. Minimizing documentation requirements and rescinding face-to-face interviews also are important since complicated, burdensome forms and procedures often discourage families from completing the process. Enrolling children for a full 12 months and simplifying renewal helps ensure beneficiaries remain covered for as long as they qualify. In addition to protecting children and families, taking such steps also saves administrative costs by reducing the workload on eligibility workers. Eligibility staff may have been cut at the same time application volume has increased.

Premium Payment Policies Matter

It also is important to ensure that unreasonable out-of-pocket costs do not keep eligible children from obtaining coverage and needed care. When a family has lost income or a job, it will be more difficult to keep up with premium payments on top of regular living expenses. Numerous studies show that premiums for low-income individuals can depress enrollment in health coverage programs.[9] Similarly, burdensome co-payments can be an obstacle to getting needed care or medication. Programs should also avoid imposing strict payment timeframes after which children are disenrolled from SCHIP, as well as lock-out periods that bar children from returning to SCHIP if the lack of a premium payment forces them to lose coverage.

Outreach Is Critical During Economic Downturns

In tight budget times, it may appear sensible to cut outreach funds as states seek ways to contain the costs associated with expanding caseloads. Conducting outreach may also seem counterintuitive when hiring freezes and lay-offs mean there are fewer eligibility workers to process a larger volume of applications. However, families that previously had stable jobs with health insurance are likely to have little or no experience navigating the public benefits system. They may not know where to turn for help when they become jobless, nor are they likely to know much about Medicaid and SCHIP or realize that they may qualify. Community-based organizations and institutions can play a vital role in alerting families to the availability of free or low-cost coverage and in assisting families with application procedures.

States are attempting to balance these competing pressures. For example, although New Mexico has had to make significant cuts to its Medicaid budget, the state will continue to reach out and enroll more uninsured children, a goal Governor Richardson has prioritized. A state Medicaid official explained that, while available funding will continue to be used for outreach, "the state does not have funds to do anything very aggressive or costly. It's difficult to justify spending on outreach when we're cutting elsewhere, however we will conduct some data matches to identify eligible but unenrolled children."[10] Given the demands that outreach generates and the limitations created by personnel cuts, adopting simplified procedures are more important that ever. Streamlining renewal, in particular, protects the investment in outreach since it guards against eligible children and parents losing coverage unnecessarily.

Federal Legislation May Provide Needed Help for States

Two major pieces of legislation are being considered in Congress as this report is being written. Both are critical to addressing the challenges states are facing as they report mounting deficits and also attempt to assist the growing demand for health coverage among families that are suffering the effects of the weakening economy. The first is reauthorization and extension of SCHIP legislation, which is currently operating with temporary funding through March 2009. This legislation would provide the additional funds to maintain coverage for children currently enrolled and cover additional uninsured children. It would also provide bonus payments designed to encourage states to enroll more eligible children under Medicaid.

The second piece of legislation is the economic recovery package. In this recession, with substantial state deficits, one form of assistance the federal government could provide is an increase in the federal share of financial assistance for the Medicaid program (FMAP). The amount of funding for the enhanced FMAP, the duration of the relief, the distribution of the funds across states, and the conditions or maintenance of effort requirements related to eligibility are critical issues in the design of a recovery package. In 2003, one of the conditions for states receiving an increased FMAP was that they were prohibited from reducing eligibility levels in order to qualify for this financial assistance. Congress could also consider requiring states to maintain enrollment procedures to qualify for federal assistance and additional provisions to extend temporary Medicaid coverage to individuals affected by the economic downturn.

The SCHIP reauthorization and economic recovery plan could provide an essential boost that would enable states to sustain the coverage gains they have achieved and give families hard-hit by the recession the confidence that assistance with health coverage will be available.

Senate Bill 24

"An Act naming the bridge over Hammer Slough on Nordic Drive in Petersburg the Louis Miller Bridge"

Senate Bill 24 would name a bridge in Petersburg in honor of Louis Miller. Mr. Miller was an early Alaskan pioneer who helped found and build the community of Petersburg.

Louis Miller came to Alaska as part of the Klondike Gold Rush. He arrived in Petersburg in 1901 and worked for town founder Peter Buschmann as a carpenter. Miller is credited with building some of Petersburg's first houses and serving as foreman for the construction of the community's Sons of Norway Hall. He operated a moorage and warehouse on the site of the present day bridge over Hammer Slough until his death in 1955. Senate Bill 24 would name this bridge in his honor.

Under current law (AS 35.40.015), the State of Alaska may name public works infrastructure through an act of the legislature. Senate Bill 24 would honor a historic figure in Petersburg's history and is supported by the City of Petersburg.

2/27/09

CITY OF PETERSBURG, ALASKA

RESOLUTION # 1877

Offered by: Jensen
Supported by: Sarff

A RESOLUTION REQUESTING PETERSBURG'S LEGISLATORS TO SPONSOR AN ACT DESIGNATING THE BRIDGE ACROSS HAMMER SLOUGH ON THE MITKOF HIGHWAY AS THE LOUIS MILLER MEMORIAL BRIDGE

WHEREAS, the Petersburg City Council received a letter dated June 20, 2008 from Leif O. Wikan asking the Council to acknowledge the contribution of two Petersburg pioneers for their dedication to the community by naming the downstream bridge across Hammer Slough the Rasmus Enge Bridge and the upstream bridge the Louis Miller Bridge, a copy of which is attached and made a part of this resolution by reference; and

WHEREAS, the Council has formally designated the downstream bridge across Hammer Slough as the Rasmus Enge Memorial Bridge by a motion passed and approved at a meeting held July 7, 2008; and

WHEREAS, the bridge upstream of Hammer Slough is a structure that is owned and maintained by the Alaska Department of Transportation and Public Facilities; and

WHEREAS, AS 35.30.040 provides authority for the Alaska Legislature to designate memorial public works by an Act sponsored by a member of the legislature.

NOW, THEREFORE, BE IT RESOLVED that the Petersburg City Council hereby petitions its state legislators to sponsor an Act amending AS 35.40 by adding a new section designating the bridge across Hammer Slough in the City of Petersburg on the Mitkof Highway as the Louis Miller Memorial Bridge.

PASSED and **APPROVED** by the City Council of the City of Petersburg, Alaska this 20nd day of October 2008.

SPONSOR STATEMENT

Senate Bill 25

"An Act naming the South Mitkof Island ferry terminal the Richard 'Dewey' Duvall Ferry Terminal."

Senate Bill 25 would name the South Mitkof Ferry Terminal in Petersburg in honor of Richard "Dewey" Duvall. Mr. Duvall was a proponent of marine transportation in Southeast Alaska, a founding board member of the Inter-Island Ferry Authority (IFA), and a longtime resident of Petersburg.

A strong advocate of marine transportation, Richard Duvall served his community for many years as an IFA Board Member and Petersburg city councilman. His tireless advocacy on behalf of the IFA is credited with helping the authority organize and expand routes across southern Southeast Alaska. Up until his passing, he was a recognized leader who sought to improve Alaska's quality of life through connecting communities. For over 10 years Richard played an important role in the leadership of the IFA and construction of its terminal at the southern end of Mitkof Island. Senate Bill 25 would name that terminal in his honor.

Under current law (AS 35.40.015), the State of Alaska may name public works infrastructure through an act of the legislature. Senate Bill 25 would honor a longtime resident of Petersburg who contributed a great deal to his community and Southeast Alaska. The bill is supported by the City of Petersburg.

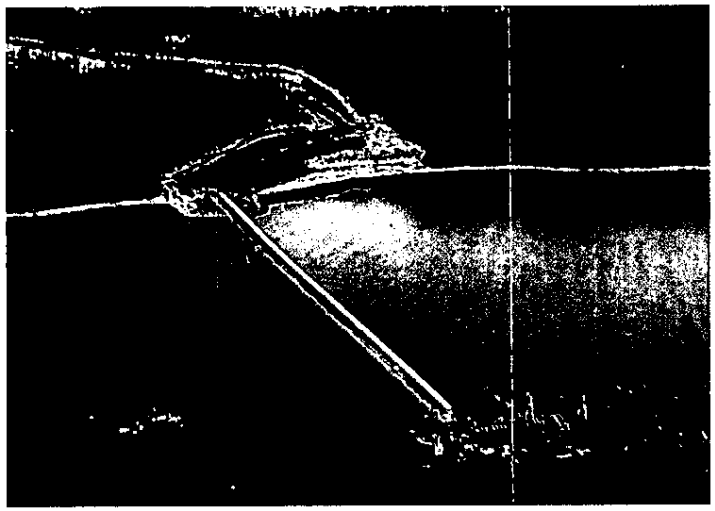
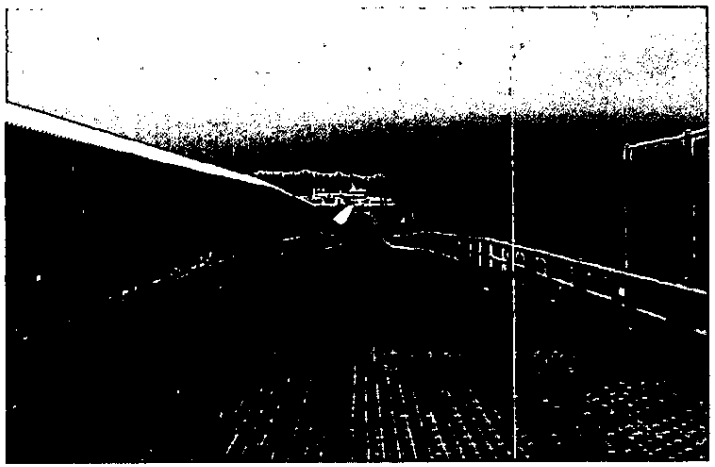
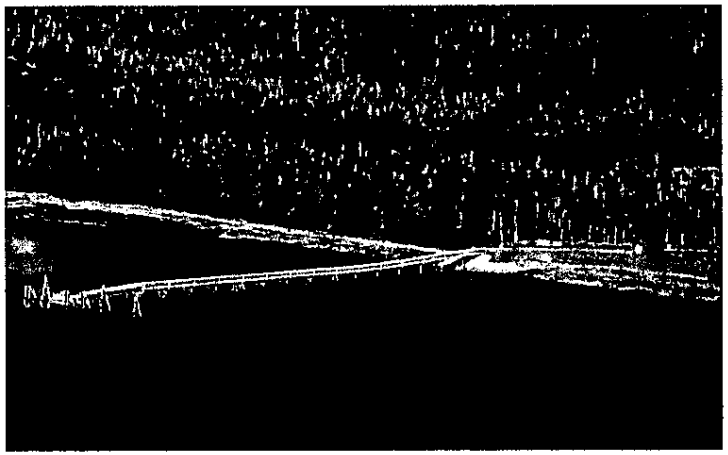
Proposed Richard "Dewey" Duvall Ferry Terminal
Petersburg, Alaska







2/27/09

CITY OF PETERSBURG, ALASKA

RESOLUTION # 1878

Offered by: Sarff
Supported by: Jensen

A RESOLUTION REQUESTING PETERSBURG'S LEGISLATORS TO SPONSOR AN ACT DESIGNATING THE SOUTH MITKOF ISLAND FERRY TERMINAL AS THE RICHARD "DEWEY" DUVALL MEMORIAL FERRY TERMINAL

WHEREAS, Richard "Dewey" Duvall, recently deceased, played important roles in the organization of the Inter-Island Ferry Authority, the construction of the South Mitkof Island Ferry Terminal and the paving of the Mitkof Highway from Blind Slough to the South Mitkof Island Ferry Terminal; and

WHEREAS, Richard "Dewey" Duvall served the community of Petersburg with distinction as a member of the Petersburg City Council for two terms, one term being a two year commitment from October, 1996 to October, 1998 and the most recent being a three year commitment from October, 2003 to October, 2006, and

WHEREAS, Dewey always understood the importance of water transportation needs of Southeast Alaska and was an avid promoter for the development and operation of the Inter-Island Ferry Authority (IFA). Dewey knew that the general health, security and welfare of the residents of Prince of Wales Island, Ketchikan, Wrangell and Petersburg, as well as the need to develop commerce and industry in this area, was dependant on increasing ferry transportatin services, and

WHEREAS, since the Inter-Island Ferry Authority's creation, by overwhelming voter support in October, 1997, no other individual from the Petersburg community has put more time and effort into making the IFA a success. Dewey was Petersburg's very first IFA Board Member, serving on the IFA Board from November 3, 1997 until April, 2006. For over 10 years, he witnessed first hand the enormous challenges and successes of the Authority. He grined with pride when the first Hollis-Ketchikan ferry run began in January, 2002 and he beamed with joy when the northern run into Petersburg began in May, 2006, and

WHEREAS, Dewey has now ended his service to the IFA, which included not only his past service as a Board Member, but most recently as the very first employed Agent for the Petersburg Terminal. Dewey has also ended his many years of service and dedication to the community of Petersburg and we believe the hard work should be acknowledged by naming the IFA Terminal on Mitkof Island in his honor, and

WHEREAS, the South Mitkof Highway Ferry Terminal is a facility that is owned and maintained by the Alaska Department of Transportation and Public Facilities; and

WHEREAS, AS 35.30.040 provides authority for the Alaska Legislature to designate memorial public works by an Act sponsored by a member of the legislature.

NOW, THEREFORE, BE IT RESOLVED that the Petersburg City Council hereby petitions its state legislators to sponsor an Act amending AS 35.40 by adding a new section designating the South Mitkof Island Ferry Terminal as the Richard "Dewey" Duvall Memorial Ferry Terminal.

PASSED and **APPROVED** by the City Council of the City of Petersburg, Alaska this 20nd day of October 2008.

SENATE MAJORITY LEADER
JOHNNY ELLIS

EXPLANATION OF CHANGES TO SENATE BILL 32

The Senate Health and Social Services Committee adopted a Committee Substitute for Senate Bill 32 that made the following changes to the bill as originally drafted:

1) Section 1 – page1 line 5 through page 2 line 18
    a. Moves the language into a new section of statute, AS 47.07.069. The original bill amended AS 47.07.070 and AS 47.07.074.
2) Section 1 – page 1 lines 5-11
    a. Adds personal care services and assisted living homes for needy and vulnerable adults to the services receiving the rate review process. As drafted, the bill only covered home and community based services provided through a Medicaid waiver.
3) Section 1 – page 2 lines 10-12
    a. Adds the home health agency inflation rate to the rate review process. The original based the rates solely on cost.
4) Sections 2 and 3 – page 2 line 19 through page 3 line 11
    a. Conforming language to amend statutes regarding assisted living homes for needy and vulnerable adults.
5) Sections 4 and 5 – Page 3 lines 12-27
    a. Creates a report to the Legislature detailing trends in rates based on the review process in the bill, and sunset that report in 2014.
6) Section 6 – page 3 line 28
    a. Calls for a two-year delayed effective date. The original bill had no effective date.

ANALYSIS: *(Attach a separate page if necessary)*

The proposed legislation amends AS 47.07 to add payment rate provisions for Medicaid providers of personal care services and home and community-based services. This legislation would require the Department to review rates annually and set rates considering periodic cost surveys and the Centers for Medicare and Medicaid Services' home health agency inflation rate. The effective date is July 1, 2011.

FISCAL NOTE

STATE OF ALASKA

BILL NO. CSSB 032 (FIN)

2009 LEGISLATIVE SESSION

ANALYSIS CONTINUATION

Under this legislation, the Department would periodically survey providers to obtain cost information. There are approximately 350 home and community-based service providers , including assisted living homes, and an additional 50 personal care providers. Beginning in FY2010, the Department would need to begin developing cost surveys and providing training and technical assistance to providers as they modify their accounting systems to be able to respond to the surveys. The department needs to be able to provide this assistance to providers, so there is clear understanding of the information needed and clear definitions of cost centers; otherwise, it is likely that providers will be unable to provide accurate survey responses.

The Department would also perform some review and inspection of survey information to ensure accuracy before using survey data to set rates. Staff positions would be necessary to oversee the surveys and conduct rate setting operations. The department requires one of these position to be a supervisory level auditor to supervise staff in carrying out, and ensuring the integrity and accuracy of the new processes required by statute.

The legislation would also require the Department to prepare an annual report on the medical assistance rate payments under the new rate setting methodology through FY2014. This report would be prepared by the new rate setting staff at no additional cost.

Assumption:

Annual Personal Services:
2 Internal Auditor III positions and 1 Internal Auditor IV in the Office of Rate Review for cost surveys and rate setting - $309.3

Annual Travel for audit staff to provide technical assistance and training to providers and receive training required by Government Auditing Standards - $5.0 per FTE

Annual Contractual:
Office space, phones, etc. - $12.8 per FTE

Annual Supplies - $0.6 per FTE

FISCAL NOTE

STATE OF ALASKA **BILL NO.** CSSB032(FIN)

2009 LEGISLATIVE SESSION

ANALYSIS CONTINUATION

This statute would affect appoximately 350 businesses who are providers of home and community based services (HCBS), including residential living services. These services are delivered under four Medicaid waivers: Adults with Disabilities, Children with Complex Medical Conditions, Mental Retardation/Developmental Disabilities, and Older Alaskans. Expenditures for these waivers in FY2008 were $141.5 million. This bill would also affect an estimated 52 businesses not included above that provide personal care services. Expenditures for personal care services in FY2008 were $72.3 million. Total costs in FY2008 that would be subject to the rates is $213.8 million.

HCBS and personal care providers currently have their rates or rate methodologies established in regulation. Since FY2004 all of those rates have been frozen (some longer), up until Y2009, when the legislature approved a 4-6% increase. This statute will require the Department to adjust Medicaid payment rates to HCBS and personal care providers to consider data from periodic cost surveys and the home health agency inflation rate.

ESTIMATED RATE ADJUSTMENT

This fiscal note assumes that rates are set under section 47.07.069(b)(3) applying the home health agency inflation rate (2.8%). FY2009 projected benefits of $219.7 million (FY2008 actual costs plus 2.8%) are the baseline used to calculate the incremental costs in the fiscal note. Annual inflation adjustments of 2.8%, beginning in FY 2012, increase benefit costs by $6.2 million the first year of implementation. By FY2015, costs increase $25.7.

The Department has no way of estimating the impact of considering the periodic cost survey data on rates set under this bill as it does not have reliable cost survey data from providers upon which to base such an estimate. Therefore, this fiscal note does not reflect any increased or decreased cost from factoring in the cost survey data.

FUND SOURCE

Costs are eligible for the federal medical assistance percentage which is projected to be 50% in FY2012 and beyond.

* -- The legislation would not require rates increases in FY2010 or FY2011; however, any rate increases funded in those years could reduce the amount of new expenditures required to implement the bill.

CS FOR SENATE BILL NO. 32(FIN)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY THE SENATE FINANCE COMMITTEE

Offered:
Referred:

Sponsor(s): SENATORS ELLIS, Davis, Paskvan, McGuire

A BILL

FOR AN ACT ENTITLED

"An Act relating to medical assistance payments for home and community-based services and provision of personal care services in a recipient's home; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 47.07 is amended by adding a new section to read:

Sec. 47.07.069. Payment rates for provision of personal care services in a recipient's home and for home and community-based services. (a) The department shall, by regulation, set rates of payment for provision of personal care services in a recipient's home under AS 47.07.030 and for home and community-based services under AS 47.07.045, in accordance with 42 U.S.C. 1396 (Title XIX, Social Security Act, Medical Assistance) and this section. A rate established under this section takes effect under AS 44.62 (Administrative Procedure Act) but not until approved in writing by the commissioner. The commissioner may delegate the performance of these functions.

(b) The department shall review the rates of payment established under of (a) of this section for a fiscal year. In reviewing the rates, the department shall, within the limit of appropriations made by the legislature for the department's programs under this chapter for that fiscal year, including anticipated available federal revenue for that fiscal year, set rates that consider

(1) periodic cost surveys, to be conducted by the department at least once every four years;

(2) audit and inspection results and reports; and

(3) the rate of inflation contained in the home health agency market basket data of the Centers for Medicare and Medicaid Services, United States Department of Health and Human Services.

(c) As a condition of obtaining payment under this section, a provider of personal care services in a recipient's home and a provider of home and community-based services, shall

(1) participate in periodic cost surveys as requested by the department; and

(2) allow

(A) the department reasonable access to the records of medical assistance recipients and providers; and

(B) audit and inspection of the records by state and federal agencies.

*** Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REPORT ON MEDICAL ASSISTANCE PAYMENT RATES. (a) The Department of Health and Social Services shall prepare and submit an annual report on medical assistance payment rates established under AS 47.07.069 to the governor that

(1) identifies trends in established rates of payment;

(2) explains how the department has complied with AS 47.07.069(b) in establishing the rates; and

(3) includes a cross reference to regulations adopted under AS 47.07.069 and the availability of the regulations.

(b) The department shall notify all legislators of the availability of the report prepared under (a) of this section and provide a copy of the report to the

(1) presiding officers of each house of the legislature;

(2) chairs of the senate and house finance committees; and

(3) chairs of the senate and house health and social service committees.

*** Sec. 3.** Section 2 of this Act is repealed June 30, 2014.

*** Sec. 4.** This Act takes effect July 1, 2011.

AGENET'S 2009 Legislative Priorities

The Association of Alaska's Providers of Services to Older Alaskans

Contact Information: Marianne Mills (463-6154) or Ken Duff (262-6331)

1. Support legislation, such as SB 32, which would put into statute a regular review of Home and Community-Based Medicaid Waiver rates similar to the process for institutions (hospitals, nursing homes).

- Services available to persons eligible for the Home and Community-Based (HCB) waiver program include meals, transportation, chore, respite, care coordination, adult day services, specialized medical supplies/equipment and home modifications.
- These services are provided for a fraction of the cost of institutionalized care to older Alaskans in their own homes and traditional communities.
- Investing in home and community-based care is the most cost effective way to provide long-term care while supporting local communities throughout the state.
- Regular rate reviews will provide parity with hospitals and nursing homes which have had a similar statute in place since 1999.
- Regular rate reviews will provide a good management tool for the Department of Health and Social Services to determine program costs, budget adequately, and create a 10-year fiscal plan.

2. Work with the legislature to adjust grant rates with a $2 million increment for Family Caregivers, Nutrition, Transportation & Support Services grants.

- Senior grants help pay for home and community-based services for senior citizens who are not eligible for the HCB Medicaid Waiver program, services such as meals, rides, adult day, chore, respite, care coordination, and health promotion.
- Investing in senior grants upfront save millions of dollars the State would otherwise pay for expensive institutional care (nursing homes). In Alaska, the cost of one month's stay in a nursing home is $10,000-$20,000 per senior (compare this to a package of grant services for only $61 to $83 per month).
- Alaska's long term care policy is aimed at allowing Older Alaskans to remain at home for as long as possible; these grants help them remain at home, saving the state money, and also support the unpaid work of their family caregivers, work which has been valued at $534 million in Alaska.
- In July 2009, a regional funding formula will shift senior grant monies out of seven (of nine) regions of the State, jeopardizing local communities from providing much-needed services; this shift will happen even though senior populations in all regions are still increasing and as the costs for food, fuel and workers increase.
- The proposed $2 million increase in senior grants will help ensure that all regions of the State receive adequate funding to continue senior grant services so that seniors may remain in their traditional communities.

Capitol Building
Juneau, Alaska 99801

March 2, 2009

Senators Stedman & Hoffman,

The Alzheimer's Disease Resource Agency of Alaska (ADRAA) formally requests your support of the CS for Senate Bill 32 which has just been referred to the Senate Finance Committee and is currently awaiting a hearing date. As you are aware, CSSB 32 would regulate rate review for medical assistance payments for home and community based (HCB) personal care services for providers working in personal and assisted living homes. Currently, no such review is regularly mandated for HCB or Assisted Living Care, although facility based providers such as nursing homes are reviewed regularly to keep up with the growing population served and accurate information regarding cost of care.

The Alzheimer's Resource of Alaska provides in home care services for individuals affected by Alzheimer's disease and related dementias and for frail elders. In FY08, we provided 57,452 hours of services statewide. The services provided include personal care, respite for family caregivers, and household chores such as meal preparation, snow shoveling, and chopping wood. It is the work of unpaid family caregivers as well as professional in home workers that allows elders to remain in their homes, and their communities rather than being placed in full time nursing care at great cost to the state.

ADRAA thanks the bill's sponsor and co-sponsors for their foresight on this issue and for their continued support of seniors across Alaska. We enthusiastically support SB 32 which would strengthen the existing infrastructure of home and community based services and would allow for the best possible outcome for both our clients and employees.

Sincerely,

Dulce Nobre
Executive Director

RE: **Support on behalf of constituents in Sitka, Yakutat, Hoonah, Kake, Angoon, Wrangell, and Ketchikan, for SB 32**, "An act relating to medical assistance payments for home and community-based services."

Center for Community is a non-profit organization that provides personal care and home and community based services throughout the services throughout South East Alaska: with clients and employees in nearly every community from Yakutat to Metlakatla. In these communities, we employ a total of 71 Southeast residents and serve 113 Southeast clients at the current time (not counting Juneau).

Senate Bill 32 will cure a long-standing problem in Alaska's Medicaid system for long term care of our seniors and other children and adults with disabilities of all kinds. SB 32 will finally ensure that the Legislature and the Administration regularly receive information about the true cost of providing care to Alaskans--at home--who are trying to avoid more expensive institutionalized long term care. SB 32 gives everyone the information necessary to make both short term budgetary and long term policy choices.

Thank you for your introduction of Senate Bill 32. If we can do anything to further legislative support for passage of SB 32, please call upon us.

Sincerely

Connie J. Sipe

SENATE MAJORITY LEADER
JOHNNY ELLIS

SPONSOR STATEMENT – SENATE BILL 32

AN ACT RELATING TO MEDICAL ASSISTANCE PAYMENTS FOR HOME- AND COMMUNITY-BASED SERVICES

Senate Bill 32 creates a mechanism for regular Medicaid rate review for providers of home- and community-based services to Alaska's elderly and developmentally disabled citizens. Institutional service providers receive regular reviews in order to bring rates in line with costs.

However, home and community-based services (HCBS) have been conclusively proven to lower overall long-term Medicaid costs. One recent study in the academic journal *Health Affairs* found that states with long-established high proportions of HCBS spending saw a 3% overall decrease in long-term care spending between 1995 and 2005 as opposed to a 14.5% increase in low-HCBS states. The study concluded:

> "*Justifications based on financial constraints can no longer be credibly offered as reasons for forcing such people [seniors and persons with developmental disabilities] into nursing homes and other institutions. HCBS programs may be one instance in which offering people greater choice also helps reduce costs.*"[1]

Over the last few years, however, rates for home- and community-based services have been frozen. During that time, not only have costs increased, the medical environment – including regulations, technology, and client expectations – has shifted dramatically. These shifts threaten the continued viability of the hundreds of HCBS providers, primarily private businesses that employ thousands of Alaskans in every region of the state.

Home and community based services are the key to helping our seniors and those living with developmental disabilities live their lives as productive members of our communities while controlling the growth of health care costs. Without the regular review process in Senate Bill 32, many providers will be forced out of business and HCBS services will be taken away from thousands of Alaskans across the state.

---

Testimony for CSSB 32 to Senate Finance
March 11, 2009

Good Morning. My name is Denise Daniello and I am the executive director of the Alaska Commission on Aging. I am here to testify in support of CSSB 32, a bill to allow for regular rate reviews of home- and community-based services for Medicaid-eligible persons similar to the process used by hospitals and nursing homes. We believe that this proposed legislation addresses the need for a fair and consistent process to maintain the systems of care for vulnerable Alaskans and promotes sounds fiscal planning for providers and the State.

The Governor's Council on Disabilities and Special Education, the Alaska Mental Health Board, Advisory Board on Alcoholism and Drug Abuse along with the Alaska Mental Health Trust Authority, the Suicide Prevention Council, the Alaska Brain Injury Network and the Alaska Commission on Aging have jointly identified the establishment of a regular ~~and periodic~~ schedule of rate reviews for home and community based services as one of our four legislative priorities for 2009. The provisions that address our legislative priority are included in SB 32 sponsored by Senator Ellis.

Alaska's most vulnerable populations depend heavily on a network of community nonprofit provider agencies. Before last year's rebasing for FY09, many home and community-based service providers had been over a decade without a rate review receiving the same level of reimbursement while their costs continued to climb along with demand for more services.

Home- and community-based services are an effective and efficient means of providing care for nearly 57,000 Alaskans who would otherwise need to be served by more costly institutions. Investment in the foundation of home- and community-based services is prudent to assure that services meet the needs of all vulnerable Alaskans to maintain their quality of life and to hold down the costs of higher level health care.

According to 2006 estimates provided by Senior and Disabilities Services, the average annual cost of a semi-private room in a nursing facility was $172,685 compared to $21,436 for the Medicaid waiver.

(It should also be kept in mind that as more individuals are able to receive home- and community-based services, fewer of them will need to enter much more costly institutions such as nursing homes. Thus it is quite possible that by adequately funding these critical pieces of the continuum of care may result in an ultimate cost savings for the State.)

Older Alaskans depend on home- and community-based services which help them to continue living in their home communities for as long as possible close to family, friends, and cultural tradition. For seniors, these services may include home-delivered meals, transportation, chore services, care coordination, assisted living homes, and other services. Thirty-six percent of the 3,498 individuals served by Medicaid waivers are older Alaskans – the majority of whom are elders in their 80's on the Older Alaskans waiver. (1,259)

This bill has broad support from a coalition of providers who have also signed on to our joint Trust and Advisory Boards' position paper. They include

- Alaska Association on Developmental Disabilities, serving 2,636 Alaskans
- AgeNet, serving 18,953 Alaskans
- Personal Care Attendant Providers' Association, serving 3,807 Alaskans
- Assisted Living Association of Alaska, serving 1,500 Alaskans
- Alaska Behavioral Health Association, serving 26,285 Alaskans

We thank you for your consideration of CSSB 32.

The Honorable Bettye Davis, Chair
Senate Health, Education and Social Services Committee
Alaska State Capitol, Room 30
Juneau, AK 99801-1182

RE: SB 32-Ellis--Support

Dear Chair Davis:

On behalf of the members of AARP in Alaska, we encourage you and your colleagues on the Senate Health and Social Services Committee to support SB 32, authored by your Committee colleague Senator Johnny Ellis and co-sponsored by you.

SB 32 would allow annual rate reviews of all home and community based services similar to the process for hospitals. Rates for HCBS services under Medicaid have remained the same for several years, discouraging needed providers from entering the field and forcing current providers to reduce their services and cut back on clients.

As we age, many of us would prefer to stay at home or with our families but sometimes we need extra help to do so. With the growing numbers of older people who need support to live on their own, private and public organizations now offer many different options to allow us to "age in place" in our homes and communities. These options form the continuum of home and community based services, ranging from meals on wheels to adult day care. In addition to meeting our personal preferences to remain home and in our communities, HCBS services are much less expensive than institutional care.

Younger persons with disabilities are also primary users of HCBS services to allow them to continue their education, work and participate as full citizens in their communities and with their families.

We cannot expect the providers of HCBS to continue to operate on rates often set years ago. It makes sense to review HCBS rates every year just as we do with hospitals.

AARP requests an "AYE" vote on SB 32.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-752-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin

United Way

The Honorable Senator Johnny Ellis
State Capitol
Juneau, Alaska 99801-1182

Dear Senator Ellis;

I am writing in support of SB 32 on behalf of the membership of the Alaska Behavioral Health Association. The issues of rates and the mechanism and frequency of adjusting those rates are the primary issue for our membership this year.

We support the effort to put into place rate setting mechanisms for the home and community based services and that this model will be applied to the other providers that contract with the State of Alaska to deliver services. It is difficult to manage a business that is focused on delivering health care services when the cost for reimbursement does not keep pace with inflation and cost of living. Fixed costs don't go away and agencies have been trying to meet their grant obligations while keeping the business solvent. Employers are not able to offer competitive wage and benefit packages because of insufficient reimbursement rates.

Please let me know what else our members can do to support your legislation.
Thank you.

In Health,

Steve Horn
Executive Director

Alaska Mental Health Board

Governor's Council on Disabilities and Special Education

Alaskan Seniors Living Longer Growing Stronger

from the Alaska Commission on Aging

The TRUST

The Alaska Mental Health Trust Authority

Establish a Regular and Periodic Schedule of Rate Reviews for Home and Community-Based Services

The Governor's Council on Disabilities and Special Education, Alaska Mental Health Board, Advisory Board on Alcoholism and Drug Abuse and the Alaska Commission on Aging, in collaboration with the Alaska Mental Health Trust Authority, the Alaska Brain Injury Network and the Alaska Suicide Council, have identified the establishment of a regular and periodic schedule of rate reviews for home and community based services one of their four legislative priorities for 2009. Regular and periodic rate reviews, for both Medicaid and grant-funded services, are imperative to maintaining the systems of care that serve Alaska's most vulnerable populations. The provisions for this legislation are in SB 32, sponsored by Senator Ellis.

- Before last year's rate rebasing for FY09, most home and community-based services providers had been over a decade without a rate review or increase. This resulted in an erosion of the system, as frozen rates resulted in a diminishing pool of resources – reducing the quality and availability of services.

- In FY07, home and community based services were provided to nearly 57,000 people who would have otherwise been served by costly institutional or nursing home care.

- In order for the Department of Health and Social Services (DHSS) and the State of Alaska to create and maintain a 10-year fiscal plan that adequately budgets for the costs of home and community-based services, a schedule of rate reviews is necessary.

- Our system of care for Alaskans with special needs is based on a network of non-profit providers. Without adequate funding, our providers cannot continue to provide quality services. Without our providers, we have no system of care.

Overview

Home and community-based services include a wide range of Medicaid and grant-funded services for Trust beneficiaries and other vulnerable Alaskans. Mental health care, infant learning, personal care attendant services, assisted living services, senior care, substance abuse counseling, and services for Alaskans with developmental disabilities are all examples of services provided at home or in our communities. These services maintain individuals' quality of life and reduce the need for more costly institutional, emergency and nursing home care.

For more that 10 years, providers have struggled to meet the demand for services while maintaining an acceptable quality of service because there has been no structure for reviewing the rates paid for those

ACCESS ALASKA

February 23, 2009

Senator Bettye Davis
Chair, Senate Health and Social Services Committee

Senator Johnny Ellis

Senator Hoffman, Co-Chair – Senate Finance Committee
Senator Stedman, Co-Chair – Senate Finance Committee
Senator Elton, member - Senate Finance Committee
Senator Huggins, member - Senate Finance Committee
Senator Olson, member - Senate Finance Committee
Senator Thomas, member - Senate Finance Committee

I am writing this letter in support of SB32, a bill which I believe will strengthen Home and Community Based (HCB) Providers like Access Alaska and many others. We HCB providers form the backbone of Alaska's long-term care system. We HCB providers are not only the current backbone, but given our cost-effectiveness and desirability – consumers want to age in place – we are the state's answer to the long-term care dilemma.

Like hospitals and nursing homes, we are businesses with actual costs – we pay rent or mortgages, insurance, and personnel. As these costs have grown while reimbursement rates stay flat, our ability to pay workers a living wage has decreased to the point that in many communities, direct service workers can earn more working at a fast food restaurant than they can helping to care for our elders. This has limited our ability to attract workers and in some cases is creating a crisis in the long-term care system.

This is but one example of the ravages of the current rate-setting regime.

In the larger view, it is important to keep in mind that a strong HCB provider system is critical to the state's ability to meet the coming wave of long-term care users. Policy groups from the National Conference of State Legislatures to the AARP have all recommended states rebalance their Medicaid spending in favor of HCB and take advantage of new waiver and partnership opportunities, in order to meet the growing demand for Medicaid long-term care services. In many cases, Alaska has not taken advantage of these opportunities.

Alaska has the envious position of being one of the top states in the nation in terms of balanced spending between institutional (nursing home) care and HCB care. However, the system has been strained to the point of breaking over the last several years, primarily because of the inattention to Medicaid reimbursement rates. Therefore, it makes sense that the state should do everything it can to strengthen the system.

I believe SB32 goes a long way toward doing just that. We greatly appreciate your leadership on this issue and stand ready to support its passage and implementation.

Sincerely,

Jim Beck

Senator John Ellis
Senator Bettye Davis
via email

Dear Senator Ellis and Senator Davis,

I am writing to support SB 32, which establishes periodic rate reviews for home and community-based services. Ensuring consistent rate increases for providers enables less expensive care for the elderly and develops a workforce aimed at the medical field.

As the second largest provider of in-home care services, we are intimately familiar with the associated challenges. The cost of doing business has increased while rates have been flat. Without entrepreneurial incentive, providing direct care may rest on the more expensive option; state-managed assisted living facilities and state-managed skilled nursing facilities

Workforce development for the medical field starts with our in-home care staff. Our Personal Care Assistants (PCA's) can receive certification and provide low level care for the elderly. Many family members and college-age PCA's get their first glimpse at the medical field.

Thank you for your support of SB 32. Please contact me with any questions. My direct line is extension 104 at (907) 336-3365.

Best regards,

Brian Richardson
Chief Executive Officer

of October 1, the registry contained 993
between the ages of 4 and 17. "I respectfully
your very best to provide the funding neces-
ate the Waitlist," Ellis continued, before ask-
e funding recommended by the governor's Ad

mensurate with the actual costs.

Ellis is hoping to change that with a bill he'll introduce in the next legislative session. The bill would evaluate reimbursement rates for home and community-based service providers annually.

"THE NUMBER ONE THING we want [the legislature] to do is establish a regular rate review process for how they pay us," says Gwendolyn Lee, executive director of The Arc of Anchorage. "The current system is not equitable."

Even if the waiting list were eradicated by sufficient funding from the state, Lee says, it would bring those people to a service provider system "that's weakened in its ability to deliver high quality services, and can't find the workers to meet the needs of the existing people."

At The Arc, which offers a large variety of services to those with developmental disabilities, under-funding has resulted in high turnover despite cost-cutting measures. "We have deferred maintenance; we have cut health insurance; we do not give raises; we ask people to do more," Lee says. "We are stretched; the rubber band is truly stretched."

Simply put, The Arc can only afford to hire workers at the lowest possible wages, making for high turnover and training costs. This means that the person with a disability has a constant revolving door of people coming and going from their life, each one having to learn the individual's critical issues, health issues, and personality nuances. "It's really depressing for the staff who are trying to deliver quality if they're constantly hiring and retraining people to do the very basics," Lee says.

There's a real danger to not addressing the financial concerns of home and community-based service providers, says Ellis. "If these community services no longer provide these services because they can't afford to, based on the poor reimbursement from the state and/or the feds under Medicaid, then there will be people without services in the community who will have to be institutionalized at greater public expense and more human tragedy."

"It all comes down to how we think about our fellow human beings," Lee says. "Do we have an attitude that the least of these is the most important, and everyone is entitled to fair access to basic community life?"

SIX YEARS AGO, THE STATE realized that the system for reimbursing service providers was flawed and froze the reimbursement rates while studying the issue. Last year, for the first time, the legislature granted an increase in rates, which varied according to the type of services provided. But there is still no mechanism in place for rates to keep up with inflation and cost of living increases.

To study the problem, the state hired an auditing firm, Myers and Stauffer, which attempted in one

commitment where our mouths

I expect that she will, I just hope

do enough to help those people t

the help the most."

—State Senator Jo

rates were as low as 9 percent, while only a couple gathered responses from over 50 percent of the pr the complexity of the audits.

Meanwhile, hospitals and nursing homes are re their costs based on an annual rate review, which i home and community-based developmental disabi ers are asking for. The difference between the two says, is that "frankly, hospitals and nursing homes lobbyists in Juneau. These community-based servi been joined together in a really organized group a really had effective lobbyists to get what they need.

"I'm going to put this bill in to the legislature, b difficult bill to get through, to do what the service want—regular rate review and adjustment. I've sai they need to create a coalition of people all over th and service providers and workers to say, 'we need thing that the hospitals and nursing homes have.' I the time has come."

IT'S NOT JUST GERALDO RIVERA that's put the on the issues the developmental disabilities commu Governor Palin did so herself when campaigning t president, telling families with special needs childr would find an ally in her, while she held her baby has Down syndrome.

"I understand that statement," Lee says. "As a p child with disabilities, it's easy to say 'I feel your pa stand your situation, I'll work to improve it.' It's eas done to really be an advocate. She is in a very diffe than a lot of our families that may not have the cir that she has. I think that every family that heard th is watching now. We are now anxious to work with that her legacy. It's an incredible opportunity for h to be willing to do it."

"This morning I heard Governor Palin say that tighten our belts," says Ann WingQuest, The Arc o director of public affairs. "We're beyond tightened frightens me when I hear her say that, because we weakened and so stretched. She did say that we're to look to the government to make us healthy; the our population is that their health care needs are n that they elected. It wasn't like they were smoking and becoming obese. These are genetic or birth de ever, and they need help."

Ellis is also looking to the governor to stand by campaigned on. "[Palin] got a lot of acclaim on the trail as an advocate for kids with disabilities, not ju Down syndrome, but kids with disabilities. Now it' live up to that, and I'm hoping and inviting the gov work with me to pare down the waiting list for DD to consider the bill on rate adjustment for DD pro other community-based service providers. So this real opportunity for Sarah Palin and myself and ot from both sides of the aisle to work together and p

ANALYSIS: *(Attach a separate page if necessary)*

This legislation would require the Department to set rates for Medicaid home and community-based services providers as it currently sets rates for facilities such as hospitals and nursing homes. This rate-setting process involves providers developing detailed cost reports that the Department would then audit and use the findings to develop cost-based rates. Additional resources in staffing and contracting would be needed by the Department to fulfill its rate-setting functions for this new group of providers.

FISCAL NOTE # 1

STATE OF ALASKA

2009 LEGISLATIVE SESSION

BILL NO. CSSB 32(HSS)

ANALYSIS CONTINUATION

Under this legislation, the Department would receive and audit cost reports from approximately 350 home and community-based service providers. The Department would contract with auditors to perform the audits. Additional staff positions would be necessary to oversee the work and conduct rate setting operations. The contract would begin in FY2011 to audit all providers; in subsequent years, half of the providers would be audited on a biennial schedule.

In addition, the Department anticipates that, beginning in FY2012, its volume of rate setting appeals would increase as a result of auditing these new providers and that additional funds would be needed to the existing rate-setting process. Additional funds would be needed to support rate-setting appeal work in the Department of Law.

Assumption:

Annual Personal Services:
3 Internal Auditor III positions in the Office of Rate Review for cost reporting - $249.8 (half year in FY2010)
2 Internal Auditor positions in the Office of Rate Review for appeals - $166.6 (beginning in FY2012)

Annual Travel for audit staff to provide technical assistance and training to providers and receive training required by Government Auditing Standards - $5.0 per FTE

Annual Contractual:
Contract to hire auditors for biennial audit of cost reports
FY20 11 - $3,560.0
Subsequent years - $1,780
RSA with Dept. of Law for appeals - $400.0 (beginning in FY2012)
Office space, phones, etc. - $12.8 per FTE

Annual Supplies - $0.6 per FTE

One-Time Equipment - $15.0 per FTE , year of initial hire

ANALYSIS: *(Attach a separate page if necessary)*

The proposed legislation would add home and community-based service providers to the Medicaid health facility rate setting statute, AS 47.07.070. This legislation would require the Department to use a similar rate methodology for establishing rates for home and community-based service providers.

Passage of this bill would likely require additional Medicaid benefits appropriations in the division of Senior and Disabilties of $8,680.7 in 2010 and a 2.8% annual increase to home and community based provider payments in the basic cost of services each subsequent year. Costs would increase to a projected $31,065.8 by 2015.

FISCAL NOTE # 2

STATE OF ALASKA

2009 LEGISLATIVE SESSION

BILL NO. CSSB 32(HSS)

ANALYSIS CONTINUATION

BACKGROUND

This statute would affect an estimated 356 businesses who are providers of home and community based services, including residential living services. These services are delivered under four Medicaid waivers: Adults with Disabilities, Children with Complex Medical Conditions, Mental Retardation/Developmental Disabilities, and Older Alaskans. The total expenditure for these waivers in 2008 was $141.5 million. Costs are projected to increase by $4.1 million in 2009 to $145.6 million, which is the baseline projection used for this fiscal note. By assuming the status quo, without changes in population or utilization, costs associated with rate increases can be isolated.

HCBS providers currently have their rates or rate methodologies established in regulation. Since 2004 all of those rates have been frozen (some longer), except for 2009, when the legislature approved a 4-6% increase. This statute will apply the current Medicaid law requiring that the Department use a rigorous, cost-based rate setting process for establishing Medicaid payment rates for health facilities to HCBS providers. There would be two types of additional costs incurred: costs for the rate adjustment and costs providers would incur to comply with new financial reporting requirements.

ESTIMATED RATE ADJUSTMENT

For the purpose of this fiscal note, it is assumed home and community based providers receive an annual inflation adjustment as facilities currently do under AS 47.07.070. The 2.8% is the inflation for Home Health Agencies as this is the closest provider category to the waiver service providers. The department does not have the detailed cost reports required to fully implement section 070 until 2012; however, the department has assumed it will make interim rate increases averaging 2.8% prior to that time. The 2.8% increase has been applied to the 2009 baseline starting in 2010 for an increase of $26,235.0 by 2015. Other impacts to the amount of additional reimbursement rates to providers are not possible to determine at this point in time.

ESTIMATED COSTS TO COMPLY WITH NEW FINANCIAL REQUIREMENTS

Many home and community based providers do not have the financial infrastructure to comply with the rigorous financial requirements of AS 47.07.070. Home and community based providers would have to invest substantial sums in accounting and report processes which in turn are passed on to the state through higher Medicaid payment rates. These costs are in addition to the costs for the rate adjustments. One-time costs include accounting system upgrades ($142.5) and purchase of specialized cost reporting software ($338.2). Ongoing annual costs include recordkeeper/accountant/contractor to obtain assistance with accounting efforts ($1,425.0); professional assistance in preparing cost reports and completing forms ($855.0); and annual independent audit ($1,543.8). Legal fees to challenge rate setting regulations ($300.0) would occur in 2010 & 2011 while legal fees for providers who appeal their rates ($1,007.0) would begin in 2012 once those rates are established. Total additional costs to comply with new financial requirements would be $4,604.5 in 2010, $4,123.8 in 2011, and $4,830.8 each year thereafter.

FUND SOURCE

Costs are eligible for the federal medical assistance percentage which is projected to be 50%.

SENATE MAJORITY LEADER
JOHNNY ELLIS

SPONSOR STATEMENT – SENATE BILL 33

"An Act creating a postsecondary scholarship grant program for Alaska residents based on high achievement and financial need."

The rising cost of education is changing the perception of affordability among our middle and high school students and their parents, as well as adults who are interested in continuing their education. For students approaching their high school graduation, the cost of a postsecondary education is the most important topic discussed by the student and the family. For nontraditional or continuing students, it can be the primary factor in the decision to further their education. It is unacceptable that Alaskans who show promise do not move on to higher learning simply because of the cost.

A 2007 report from the State Higher Education Executive Officers found that a $1,000 difference in the price of college may impact college enrollment for the most financially needy students by as much as nine percent. A 2007 Western Interstate Commission for Higher Education report determined that for every $160 in increased tuition, low income enrollments dropped by .5 percent in four year, public institutions and by 2.3 percent in the community colleges. Perhaps most alarming, a recent internal University survey found that the number two reason why students dropped out was due to financial reasons.

Alaska's high school graduation rates are among the lowest in the country. The National Center for Education Statistics reported that Alaska ranks 42nd in high school graduation rates at 60.7%. There is no doubt more students will be encouraged to graduate by providing the opportunity for postsecondary education. Action is desperately needed. SB 33 will establish the Alaska Achievers Incentive Program within the Alaska Commission on Postsecondary Education. This program will help reduce the costs of postsecondary education for those students who demonstrate academic success as well as financial need by so doing; this program will increase educational opportunities for more bright, hardworking, and capable Alaskans so they may be ready to fill Alaskan jobs.

I urge your support of SB33

ANALYSIS: *(Attach a separate page if necessary)*

Senate Bill 33 provides for a separate endowmment fund to be set up in the amount of $25 million to be managed by the Commissioner of Revenue. It is anticipated the fund will be managed with the asset allocation of 55% Broad Market Fixed Income Pool and 45% Domestic Equity Pool in order to achieve a five percent annual real rate of return over time. The costs include investment management fees, audit, accounting and custoody fees. These costs are projected based on median market returns based on Callan and Associates, capital market assumptions.

MEMORANDUM January 22, 2009

SUBJECT: Sectional Summary (SB 33; Work Order No. 26-LS0219\R)

TO: Senator Johnny Ellis
Attn: Nick Moe

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Provides a legislative intent section.

Section 2. Amends AS 14.43, Student Loan Program, to add the "Alaska Achievers' Incentive Scholarship Program" to defray the costs of attending a qualifying postsecondary institution for students who have a GPA of 3.0 or higher and who have an unmet financial need of not less than $4,000. Establishes a separate endowment fund consisting of appropriations, donations, and income earned to support the program.

Section 3. Provides for a transitional method of calculating the amount of available funds for the program established in section 2 for the first two years of operation of the program.

JMM:ljw
09-037.ljw

Explanation of changes for Senate Bill 33

The Senate Education Committee made two changes. The first was to include all institutions accredited by the U.S. Department of Education. The original language just included institutions accredited by the Council for Higher Education Accreditation. The change was wanted so that private vocational and technical schools would be included as well.

The second change was a lowered GPA requirement from 3.0 to 2.5 for eligibility. This means that in order for a student to be eligible for this scholarship, they must have at least received a 2.5 GPA in High School instead of a 3.0.

Alaska

PREPARATION

C+

2008 Grade

Change Over Time

Alaska's fairly low performance in educating its young population could limit the state's access to a competitive workforce and weaken its economy.

- Eighth graders perform fairly poorly in math, science, and reading.
- There is a 13% gap between whites and all minorities in the percentage of young adults with a high school credential.

PARTICIPATION

F

2008 Grade

Change Over Time

College opportunities for young and working-age adults are very poor.

- The percentage of working-age adults enrolled in higher education has declined by 39% since the early 1990s.
- Among young adults, 11% of Alaska Natives are enrolled in college, compared with 23% of whites.

REPORT CARD	
Preparation	C+
Participation	F
Affordability	F
Completion	F
Benefits	C+
Learning	I

AFFORDABILITY

F

2008 Grade

Change Over Time

Higher education has become less affordable for students and their families.

- Poor and working-class families must devote 37% of their income, even after aid, to pay for costs at public four-year colleges.
- Financial aid to low-income students is low. For every dollar in Pell Grant aid to students, the state spends only six cents.

BENEFITS

C+

2008 Grade

Change Over Time

Only a fair proportion of residents have a bachelor's degree, and this weakens the state economy.

- Eight percent of Alaska Natives have a bachelor's degree, compared with 32% of whites.
- If all racial/ethnic groups had the same educational attainment and earnings as whites, total annual personal income in the state would be about $2 billion higher.

COMPLETION

F

2008 Grade

Change Over Time

Despite some improvement, Alaska is one of the lowest-performing states in awarding certificates and degrees relative to the number of students enrolled.

- Twenty-two percent of college students complete a bachelor's degree within six years.
- Ten percent of Alaska Natives graduate within six years, compared with 25% of whites.

LEARNING

I

2008 Grade

Like all states, Alaska receives an "Incomplete" in Learning because there is not sufficient data to allow meaningful state-by-state comparisons.

WHAT DO THE ARROWS MEAN?

State has increased or remained stable on the key indicator in the category.

State has declined on the key indicator in the category.

Public Policy Analysis of Opportunity for Postsecondary Education

Number 188 www.postsecondary.org **February 2008**

College Participation Rates for Students from Low Income Families by State FY1993 to FY2006

The college participation rate for dependent students from low income families was 23.8 percent in 2005-06 (FY2006). Out of 8,389,184 4th to 9th graders in 1996-97 from low income families, 1,999,373 were enrolled in college with Pell Grants by 2005-06.

The FY2006 college participation rate of 23.8 percent was down from 25.4 percent in FY2005, down from 25.9 percent in FY2004 and below the peak of 27.6 percent in FY1999.

By comparison the college participation rate for 18 to 24 years olds without Pell Grants was 45.4 percent. This was up from 43.2 percent in FY2005 and 42.7 percent in FY2004.

In fact while the college participation rate for students from low income families has declined by 3.8 percentage points between FY1999 and FY2006, the college participation rate for 18 to 24 year olds without Pell Grants increased by 6.2 percentage points. The gap between these two rates was wider in FY2006 than it has been at anytime since these data were first reported in FY1993.

This analysis of college participation rates for students from low income families is an update and extension of our previous report in OPPORTUNITY in February 2007. This report adds FY2006 data, improves data quality for the four years from FY1998 through FY2001, and extends the comparison of college participation rates between Pell Grant recipients and students ages 18 to 24 years who are not Pell Grant recipients. The aggregate analysis for

AlaskAdvantage™ Education Grant

The AlaskAdvantage Education Grant program was created by the Alaska legislature to provide financial assistance to eligible Alaska students attending qualifying postsecondary educational institutions in Alaska. The program was specifically designed to set aside a portion of available grant funds as priority awards for applicants enrolled in qualifying workforce shortage programs, and for applicants demonstrating exceptional academic preparation for higher education (as documented by top quartile SAT or ACT scores).

The AlaskAdvantage Education Grant is a need-based program funded by the Alaska Student Loan Corporation, which provides the state match dollars required for participation in the federal LEAP program (Leverage Educational Assistance Partnership Program). Grant awards range from a minimum of $500 to a maximum of $2,000 per academic year for students who have qualifying unmet financial need.

All Alaska residents who complete the Free Application for Federal Student Aid (FAFSA) by April 15th of each year, and who list at least one qualifying Alaska institution of higher education, will be considered as having applied for the grant program. Qualifying applicants will be prioritized based on financial need. Students with the highest financial need will be awarded in order of need until funds are exhausted. All applicants must complete a new FAFSA each year.

Eligibility

- Alaska resident and U. S. citizen or permanent resident alien
- High school diploma or GED
- Admitted into an undergraduate degree or vocational certificate program at a qualifying institution in the state of Alaska
- Minimum half-time enrollment
- Unmet financial need in excess of $500
- Not have earned a baccalaureate degree
- Meet satisfactory academic progress standards
- Eligible for federal Title IV aid

How to Apply

Please note that receiving a grant award in one year does not guarantee that you will receive an award in subsequent years. In order to be considered eligible each year you must:

1. Complete a federal Free Application for Federal Student Aid (FAFSA) between January 1st and April 15th. FAFSAs submitted after the April 15th filing deadline will not be considered. You can complete the FAFSA on-line at www.fafsa.ed.gov.
2. If the Student Aid Report (SAR) generated from your FAFSA shows you meet the residency and financial need requirements, the Commission will notify you of your potential eligibility. Note that you may be required to submit supplemental information for the purpose of determining your award eligibility.
3. Your school will certify that you are admitted and otherwise eligible. Be sure to apply and enroll as early in the year as possible.
4. Each year, the Commission will process certified grant applications and notify your school if you have been awarded an AlaskAdvantage Education Grant.

2008/09 Qualifying Workforce Shortage Programs:

- Allied health sciences;
- Community or social service; and
- Teaching; and
- Process industries/natural resources extraction support

Proposed gas line projects face in-state labor shortfall

LABOR CRUNCH: State seeks to ramp up training as work force gets grayer.

By ELIZABETH BLUEMINK
ebluemink@adn.com

(03/29/10 22:34:58)

The Alaska labor force may be headed for a historic test: building a North Slope gas pipeline.

But it remains an open question how many of those thousands of high-paying jobs could be filled by state residents versus nonresidents.

Even if the long-sought gas line linking the Slope's vast gas deposits to Lower 48 markets is delayed for years, Alaska faces a labor crunch. Many workers in the state's major industries are nearing retirement age.

"We do know there's a gap," said Gerry Andrews, who runs the Alaska Department of Labor's gas-line job education and training initiative.

Under the proposed timeline for gas line construction, many of the skilled workers needed for such a project -- welders, truck drivers and engineers, to name a few -- will retire before it begins, economists say.

Even though no one has committed to build a gas line yet, the Labor Department is under a legal mandate to prepare Alaskans for jobs in construction and operation of the pipeline.

The mandate was set three years ago by the Palin administration when it signed the Alaska Gasline Inducement Act. But for years, some educators and in the state's construction industry had been beating the drum for better training opportunities.

"There's a grave concern about our work force," said Rick Rios, the Anchorage School District's coordinator of career and technical education.

RAISING STUDENTS

Rios is part of the statewide push to better prepare students for gas line jobs and reverse the aging of the state's work force. He said he's already seeing a few results. Three years ago, he said, the state funded one construction academy to provide hands-on training for high school students in Anchorage. Now, legislative funding has expanded construction academies to five school districts, with nearly 1,000 students signed up for classes this year.

Rios said the students he talks to are eager for work. "We had 20 seniors sign up for a (carpentry) institute over spring break -- an eight-day, intensive study," Rios said.

"They gave up their whole break for the 60 hours to be prepared for a job," he said.

Engineers are also in high demand for future pipeline work. Even now, the state is already facing a dire shortage of engineers, industry officials said last week.

An estimated 35 percent of the engineers in some disciplines in Alaska are nonresidents, according to the University of Alaska. Statewide, the university system is seeking to double the amount of its graduating engineers by 2014.

"That probably doesn't even touch what's needed," said Todd Bergman, a former state educator who now runs the Alaska Process Industry Careers Consortium, which assesses work force needs for the oil, gas and mining industries, among others.

TRAINING ADULTS

Unions in Alaska said they are trying to boost the number of the people they train despite the slow economy.

Charles Engblom, apprenticeship coordinator for the Ironworkers Local 751 in Anchorage, said his union has 70 fewer apprentices in Alaska than it might need for a gas line project, based on some rough numbers he received from the state over a year ago.

"We've got right about now 50 apprentices," he said.

He said he's gearing the program to "hopefully" handle the amount of apprentices needed for a pipeline project, but he

pointed out that for now, there aren't a lot of new jobs to put them in. "Last year was lean for us and this work season is similar to last year," he said.

MEETING THE MANDATE

Since Palin signed AGIA, the Labor Department has identified 113 occupations -- from pile-drivers to paramedics -- that would be needed for gas-line construction and operation.

Here are some other things the department has done relating to its gas-line mandate:

• Worked with other government officials, private industry, and unions to establish training academies for people interested in careers in construction and engineering.

• With the Alaska Department of Education, began designing a plan to streamline the state's career-training for kids and adults.

• Assisted with the creation of new apprenticeship programs, including electrical and drilling.

But the Labor Department is still lacking some key information to meet its mandate.

Just how many jobs are needed for a pipeline project? Previous estimates have ranged widely, from 4,500 to 9,000.

Two North Slope gas line proposals are now being pursued by pipeline companies. More recently, the state has begun talking about building a smaller-diameter gas line from the North Slope to the Railbelt to supply the region's energy needs.

In general, it doesn't matter if a long-sought pipeline ends in Canada or Alaska. Or, if the state first builds a smaller, in-state pipeline that ends somewhere in Southcentral. Any of the projects will require lots of people to dig dirt, weld pipe, cook camp food, and drive trucks. And a lot of people to operate and maintain the line for decades.

The state has asked the competing pipeline companies to submit their manpower needs for pipeline construction and operation for a line from the North Slope to Alberta, Canada or from the North Slope to Valdez.

The Labor Department expects to have that information by the middle of July, Andrews said.

From that, the Labor Department can crunch numbers to determine how many jobs of those jobs can be filled from the state's existing work force, Andrews said.

State and industry officials agree that gas line construction will bring nonresident workers to Alaska. But, they said, the work conditions will be different than the hectic 1970s construction of the trans-Alaska oil pipeline, when thousands of nonresidents moved to the state.

For several reasons, they say, the peak work force for building a gas line will probably be smaller than the 28,000 people required for the oil pipeline. Depending on how it is built, the gas line may not require bulldozing a new right-of-way. The gas line will also offer less jobs over its life span, too. Since the gas would be pressurized, there would be no need to build and maintain a series of pump stations along its path.

On the other hand, gas-line construction jobs will last longer than the trans-Alaska oil pipeline construction jobs, Andrews said.

"Instead of a two-year window, it will be spread over a longer period," he said.

"We will use less individuals building this at any one time, but more man days," he said.

Training for oil industry jobs

Training opportunities for gas-pipeline-related construction jobs and careers:

• Alaska Construction Academy: Training courses for high school and adults available in five Alaska school districts.

• King Career Center: Course work for Anchorage high school students to prepare them for various careers; for those eligible, on-the-job training and college credit.

• Alaska Works Partnership: Union-supported gateway to construction and pipeline-related apprenticeships.

• Alaska Vocational Technical Education Center: technical certificate programs for many job fields.

• Alaska Process Industry Careers Consortium: career guidance and school-based training to support oil, gas, mining, seafood processing and other major industries.

Fairbanks, AK 99775-5000

March 19, 2009

via e-mail nick_moe@legis.state.ak.us

Senator Johnny Ellis
State Capitol, Room 103
Juneau, AK 99801

Dear Senator Ellis,

The University of Alaska provides hundreds of robust programs at campuses across the state, with certificates and degrees geared to meet the current needs of Alaska – petroleum technicians, teachers, engineers, nurses, and more.

However, there is insufficient financial aid available to help these students achieve their goals. The current economy is widening that financial divide. Access to education is especially critical for Alaska's first generation and low-income college students. Unfortunately, Alaska is 51st among other states and the District of Columbia in college-bound rates of low-income youth (FY 1994 to FY2005).

This year the University has responded to this tremendous need by awarding $818K from its annual budget in grants to students. In addition the Alaska Student Loan Corporation and, through your advocacy, the State of Alaska has funded ACPE's program – the *AlaskaAdvantage* education grant with total funding of approximately $1.25 million. This is a good start; however for Alaska to reach the average needs-based grant expenditure of other states, nearly $7 million is required annually. Alaska must continue to invest in need-based financial aid programs.

The Alaska Achievers' Incentive Scholarship Program (SB33) was developed by the Coalition of Student Leaders at the University of Alaska. Enjoying the full support by both the students and administration of the university, this program would offer substantial need-based relief to eligible, high-achieving students. By directing funds to those students earning a 2.5 GPA or higher, this program will not only provide access to those with economic need, but it will also serve to shore up the future leadership of our state. If they graduate from the University of Alaska, they most always stay in Alaska.

If I can answer any questions or be of any further service, please contact me.
Thank you,

Mark R. Hamilton, President
University of Alaska System

AlaskAdvantage™ Programs
Alaska Commission on Postsecondary Education

May 7, 2008

Today the Alaska Commission on Postsecondary Education (ACPE) has released a report entitled *Making Alaska More Competitive by Preparing Citizens for College and Career*. The report contains Alaska's recent high school dropout rates related to ninth graders, as well as the percentage who successfully complete a collegiate program of study within 150 percent of the regular time to complete. These statistics show Alaska at the bottom in educational performance indicators in the nation. For every 50 ninth graders, 31 graduate from high school; 14 go to college; nine return for their sophomore year; and only three receive a degree within six years.

The report was written by Dr. Ron Phipps of the Institute for Higher Education Policy in Washington, D.C. In conjunction with the report's development, ACPE partnered with the National College Access Network to survey various stakeholders to better understand the postsecondary access and success climate in Alaska. The major findings of this research are: 1) a college-going culture does not exist in Alaska; and, 2) the relationship between Alaska's workforce needs and postsecondary education is not widely recognized.

Making Alaska More Competitive provides compelling evidence that improving access to and participation and success in postsecondary programs, both collegiate and vocational, is key to a strong future for Alaska and her citizens. It also outlines several recommendations and potential strategies for improving educational outcomes in Alaska, and helping students acquire the knowledge and ability to succeed in postsecondary education and in their careers.

FAIRBANKS NORTH STAR BOROUGH

RESOLUTION NO. 2009 - 03

A RESOLUTION SUPPORTING SENATE BILL 33 "AN ACT CREATING A POSTSECONDARY SCHOLARSHIP GRANT PROGRAM FOR ALASKA RESIDENTS BASED ON HIGH ACHIEVEMENTS AND FINANCIAL NEED" AND SUPPORTING THE EFFORTS OF THE "COALITION OF STUDENT LEADERS" AT THE UNIVERSITY OF ALASKA

WHEREAS, Senate Bill 33, sponsored by Senator Ellis, would establish the Alaska Achievers Incentive Scholarship Program (AAIP) to provide an additional source of financial assistance to defray the costs of attending a qualifying postsecondary institution for academically successful students who also demonstrate financial need and who wish to seek further education; and

WHEREAS, this same bill language has previously existed in the 25th Alaska State Legislative as HB 397 and HB 403 by Representative Guttenberg of the Interior Delegation; and

WHEREAS, the Coalition of Student Leaders (CSL) is a statewide organization of collegiate student governments, which advocates issues on behalf of over 30,000 students in the University of Alaska System; and

WHEREAS, the main advocacy efforts of CSL for 2009 center around the AAIP, which would provide a state-funded scholarship program with both merit and needs-based components to enhance access to the University of Alaska System; and

WHEREAS, this program is unique because it was designed, written, and advocated by students for students and has the support of the University of Alaska administration.

NOW THEREFORE BE IT RESOLVED that the Assembly of the Fairbanks North Star Borough supports AAIP and SB 33 and the efforts of the Coalition of Student Leaders.

BE IT FURTHER RESOLVED that the Assembly of the Fairbanks North Star Borough supports enhanced access to post-secondary education.

BE IT FURTHER RESOLVED that copies of this resolution shall be sent to the Honorable Governor Sarah Palin, and the Alaska State Legislature.

PASSED AND APPROVED THIS 12TH DAY OF FEBRUARY 2009.

PATRICK F. TAYLOR FOUNDATION

February 10, 2009

Juneau Legislative Information Office
The Honorable Johnny Ellis
State Capitol
Juneau, Alaska 99801-1182

VIA FAX

Dear Senator Ellis:

This letter serves as the *Patrick F. Taylor Foundation* official endorsement of Alaska's ***Achiever's Incentive Scholarship Program***, based on high achievement and financial need, ***Senate Bill No. 33***. This Bill is a first step in establishing a comprehensive scholarship program for Alaska young people to pursue a postsecondary education. There is no greater investment of the state financial resources then that of educating the young people who will be the future leaders of the great State of Alaska.

Senate Bill No. 33 should be enacted now, with the understanding that, like all legislation, that the Bill will be improved with further legislation over time to create a more comprehensive program, which will be open to all students who meet certain established criteria. The goal is to encourage all students to take a more rigorous curriculum in order to be adequately prepared to pursue their postsecondary education. The objective of preparing students is, not only to enroll, but to graduate in their chosen fields.

We, at the *Patrick F. Taylor Foundation*, are ready to assist you in the passage, implementation, and monitoring of this legislation at our own expense.

Please feel free to contact the *Patrick F. Taylor Foundation* if we can assist with this most important endeavor!

Sincerely,

James A. Caillier
Executive Director

February 9, 2009

Senate Committee on Education and Finance
Senator Ellis
State Capitol
Juneau, AK 99801

Dear Senator Ellis,

I am an international student at Kodiak College and the President of the student government here in Kodiak. I came to Kodiak as a high school student and decided I would like to go to college in the United States. By doing so, I agreed on paying for my tuition and other expenses. In order to do that, I had to get a student loan from my home country Germany.

I am one of many students here in Kodiak who have to struggle hard to stay a full time student and pay for tuition and other expenses like books, fees, etc. The tuition expenses are high (especially for out of state students) and many student cannot afford to take all the classes they would like to take. Many of those may not even finish their college degree they wanted to get because of their financial need.

Senate Bill 33 would not affect me personally because I am, as an international student, not FAFSA eligible but I know a great amount of people who would highly appreciate financial help through more scholarships and grants. I ask you to keep supporting this very important bill and hope that there will be more funding for students with financial need.

Sincerely,

Fabian Philipp

President of the Student Government at Kodiak College

RESOLUTION OF THE CITY AND BOROUGH OF JUNEAU, ALASKA

Serial No. 2462

A Resolution Expressing Assembly Support for Senate Bill 33 and House Bill 94, Creating a Postsecondary Scholarship Program for Alaska Residents Based on High Achievement and Financial Need, and Expressing Support for the Efforts of the "Coalition of Student Leaders" at the University of Alaska.

WHEREAS, House Bill 94 and Senate Bill 33 would establish the Alaska Achievers Incentive Scholarship Program (AAIP) to provide an additional source of financial assistance to defray the costs of attending a qualifying postsecondary institution for academically successful students who also demonstrate financial need; and

WHEREAS, the Coalition of Student Leaders (CSL) is a statewide organization of collegiate student governments, which advocates issues on behalf of over 30,000 students in the University of Alaska System; and

WHEREAS, the main advocacy efforts of CSL for 2009 center around the AAIP, which would provide a state-funded scholarship program with both merit and needs-based components to enhance access to the University of Alaska System; and

WHEREAS, this program is unique because it was designed, written, and advocated by students for students, and has the support of the University of Alaska administration.

NOW, THEREFORE, BE IT RESOLVED BY THE ASSEMBLY OF THE CITY AND BOROUGH OF JUNEAU, ALASKA:

Section 1. That the Assembly of the City and Borough of Juneau hereby expresses its support for AAIP, Senate Bill 33 and HB 94, and the efforts of the Coalition of Student Leaders.

Section 2. That the Assembly of the City and Borough supports enhanced access to postsecondary education.

Section 3. That copies of this resolution shall be sent to the Honorable Governor Sarah Palin, and the Alaska State Legislature.

Section 4. Effective Date. This resolution shall be effective immediately upon adoption.

Adopted this 23rd day of February, 2009.

CS FOR SENATE BILL NO. 33( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): SENATORS ELLIS, Paskvan, Thomas, McGuire, Stevens

A BILL

FOR AN ACT ENTITLED

"An Act relating to the AlaskaAdvantage Education Grant Program; and establishing loan forgiveness for eligible applicants."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.43.400 is amended to read:

Sec. 14.43.400. Purpose; creation. There is created the AlaskAdvantage education grant **and loan forgiveness** program to provide financial assistance to eligible students to enable them to attend, **to** [OR] continue their attendance at, **or to forgive loans made to them by the state for attendance at** postsecondary educational institutions. Funds designated by the corporation or appropriated for this program may be used as matching funds for the state's participation in the federal grant program under 20 U.S.C. 1070c - 1070c-4.

*** Sec. 2.** AS 14.43.405(a) is amended to read:

(a) The AlaskAdvantage education grant **and loan forgiveness** program created under AS 14.43.400 - 14.43.420 shall be administered by the executive

director of the commission.

*** Sec. 3.** AS 14.43.410(a) is amended to read:

(a) The funds for the **payment of grants from** AlaskAdvantage education grant **and loan forgiveness** program may be allocated to eligible students in accordance with the provisions of the federal grant program under 20 U.S.C. 1070c - 1070c-4 and regulations adopted under AS 14.43.105 and 14.43.405.

*** Sec. 4.** AS 14.43.410 is amended by adding a new subsection to read:

(c) The commission shall annually distribute not less than $10,000,000 or, if available funding from appropriations and other sources is less than that amount, the full amount available in grants and loan forgiveness awards on behalf of eligible students under AS 14.43.415. Payments shall be made directly to the postsecondary or lending institution if feasible.

*** Sec. 5.** AS 14.43.415(b) is repealed and reenacted to read:

(b) The commission shall give an applicant eligible under (a) or (e) of this section priority for a grant or loan forgiveness award if that applicant

(1) is, or is about to be, enrolled in a postsecondary education program that prepares the applicant for employment in an occupation or profession for which there is a severe shortage of trained individuals in the state;

(2) has completed a postsecondary education program within the four years preceding an application for loan forgiveness and is employed in the state in an occupation or profession for which there is a severe shortage of trained individuals in this state; or

(3) has achieved a cumulative grade point average at the postsecondary institution at which the student is or was enrolled of 3.0 or above on a 4.0 grade point scale, with a higher priority for students who achieved a cumulative grade point average of 3.5 or above.

*** Sec. 6.** AS 14.43.415 is amended by adding new subsections to read:

(d) In addition to the priorities required under (b) of this section, the commission may give an applicant priority for a grant award if that applicant has participated in a secondary education program of study that can be demonstrated to the commission to be a predictor for success at the postsecondary education level for a

program of study described in (b)(1) of this section.

(e) A portion of a loan made by the state in an amount that is equal to the amount of a grant for which a student was or would have been eligible under (a) of this section shall be forgiven by the state for a person who

(1) is a resident of the state;

(2) has completed within the four years preceding the application for loan forgiveness a postsecondary education program that is eligible to participate in federal financial aid programs under 20 U.S.C. 1070 - 1099c-2, as amended, and that is located in the state; and

(3) has an outstanding balance on the loan and has not defaulted on the loan repayments.

(f) Forgiveness under (e) of this section is subject to appropriation by the legislature. Money obtained from the sale of bonds by the corporation under AS 14.42.220 may not be appropriated for the forgiveness of loans.

(g) In this section,

(1) "occupation or profession" means a job for which specific postsecondary certification is a prerequisite for entry-level placement;

(2) "severe shortage" means a current or recurring job vacancy rate of 15 percent or greater, as determined by the Department of Labor and Workforce Development or by another workforce data source determined reliable by the commission.

*** Sec. 7.** AS 14.43.420(a) is amended to read:

(a) A grant **or loan forgiveness** made under AS 14.43.400 - 14.43.420 may not be in an amount less than **$1,000** [$500] nor more than **$5,000** [$2,000] for each school year.

*** Sec. 8.** AS 14.43.420(c) is amended to read:

(c) A student may receive not more than a total of **$20,000** [$8,000] in grants **or loan forgiveness** awarded under AS 14.43.400 - 14.43.420.

*** Sec. 9.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REVISOR'S INSTRUCTION. The revisor of statutes is instructed to change the

heading of art. 8 of AS 14.43 from "AlaskAdvantage Education Grant Program" to "AlaskAdvantage Education Grant and Loan Forgiveness Program."

Sponsor Statement

SB 35 **"An Act extending the termination date of the Statewide Suicide Prevention Council; and providing for an effective date."**

SB 35 extends the termination date of the Statewide Suicide Prevention Council to June 30, 2013. Suicide is a very serious public health concern in Alaska, particularly among young males and the Alaska native population. Extension of the Statewide Suicide Prevention Council is important in curtailing this avoidable loss of life. The mission of the Statewide Suicide Prevention Council is to advise the governor and the legislature on issues relating to suicide. In collaboration with communities, faith-based organizations, and public-private entities, the Council works to improve the health and wellness of Alaskans by reducing suicide and its effect on individuals and communities.

The Executive Summary of the July, 2005 study by the Alaska Injury Prevention Center funded by Alaska Mental Health Trust Authority "Alaska Suicide Hospitalizations, 2001-2002," reported that in 2002 32,000 people took their own lives in the United States, and 20 times that number sought treatment for self-inflicted injuries. Alaska had the highest age-adjusted suicide rate of all the states in 2002 at 21.12 per 100,000 population, which is nearly twice that of the U.S. rate of 10.99 per 100,000. An average of 125 people die from suicide each year in Alaska, making it the number one cause of death for Alaskans under the age of 50 years (if unintentional injuries are examined individually instead of in groups).

Hospitalizations for suicide per the above study make a compelling case for the prevention of suicide and new insights into this dramatic public health problem. Over $4 million in hospital costs alone is spent in public funds each year to care for suicide attempts. This did not include physicians' and specialists' costs. While the toll on society and family members by suicide may be incalculable, significant numbers were revealed:

- The average age for the patients was 30 years.
- The average length of each hospital stay was 4 days, with a range of 1 to 366.
- The average cost per case was $8,986.
- Over 75% of the hospital costs were paid through public funding sources.
- 15% of hospital costs had to be written-off for patients' inability to pay.

2620

The unabated high rate of suicide in Alaska demands continued attention and effort and earnestly urges, if not compels, the extension of the Statewide Suicide Prevention Council. A subsequent study to the above by the Alaska Injury Prevention Center from 9/1/03-8/31/06 found 426 suicides in Alaska during this 36-month period, with the continuing rate of suicide at over 21/100,000. Males outnumbered females 4 to 1. The age-group 20-29 had both the greatest number of suicides and the highest rate per 100,000 population. Alaska Natives had a significantly higher average rate of suicide than the non-Native population (51.4/100,000 compared to 16.9/100,000). The leading cause of death was firearms with toxicology reports in 1/3 of the cases. Alcohol was found in 44% of the toxicology tests and marijuana was found in 15%.

MEMORANDUM March 2, 2009

SUBJECT: Sectional summary of CSSB 35(HSS), relating to the Statewide Suicide Prevention Council (Work Order No. 26-LS0229\E)

TO: Senator Bettye Davis
Chair of the Senate Health and Social Services Committee
Attn: Thomas Obermeyer

FROM: Alpheus Bullard TLAB
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Adds a member to the Statewide Suicide Prevention Council (Council), and changes the composition of the Council.

Section 2. Provides that legislative members of the Council are nonvoting members.

Section 3. Clarifies that the Council's presiding officer, and other officers that the Council may consider necessary, are elected by a majority of the Council's voting membership.

Section 4. Establishes that seven voting members of the Council constitute a forum.

Section 5. Extends the termination date of the Council to 2013.

Section 6. Provides an effective date.

EXECUTIVE SUMMARY

INTRODUCTION

In 2002, nearly 32,000 people took their own lives in the United States, and estimates indicate that 20 times that number sought treatment for self-inflicted injuries. Alaska had the highest age adjusted suicide rate of all the states in 2002 at 21.12, which is nearly double the U.S. rate of 10.99 per 100,000 population. An average of 125 people die from suicide each year in Alaska, making it the number one cause of death for Alaskans under the age of 50 years (if unintentional injuries are examined individually instead of grouped). The epidemiology for suicide deaths is very different from the epidemiology for suicidal acts that result in hospitalization. This analysis looks at the epidemiology and costs associated with hospitalizations for self inflicted injuries.

RESULTS

Using data supplied by the Alaska Trauma Registry (ATR) and funding from the Alaska Mental Health Trust, the Alaska Injury Prevention Center (AIPC) conducted a thorough analysis of the 1,223 hospitalized suicide attempts in Alaska for 2001 and 2002. The epidemiology and hospital costs associated with this injury group are reported below.

A few of the interesting facts revealed by this study for Alaska's suicide attempts:

- ✓ The average age for the patients was 30 years.
- ✓ The average length of each hospital stay was 4 days, with a range of 1 to 366.
- ✓ The average hospital costs per year were $5,508,363.
- ✓ The average cost per case was $8,986.
- ✓ Over 75% of the hospital costs were paid through public funding sources.

More than $4 million in "public funds" is spent each year to care for suicide attempts, and those are just the documented hospital costs. Physician's fees and other specialist's fees are usually not included in the hospital costs. Also not included in hospital costs are self-inflicted injuries that result in death or long-term disabilities. These suicidal acts take a huge toll on individuals and families and are very difficult to quantify.

CONCLUSIONS

The *Alaska Suicide Hospitalizations* analysis makes a compelling case for the prevention of suicide, and gives new insights into this dramatic public health problem. Hospitals must accept the loss of at least 15% of the costs due to the patients' inability to pay.

Executive Summary

Goals

There were two goals for the study: (1) to do an in-depth demographic analysis of the suicides in Alaska for three years from September 1, 2003 through August 31, 2006 and (2) to conduct interviews with key informants for as many suicide cases as possible. This report is divided into two sections, Section 1 addressing the epidemiological data and Section 2 addressing the data derived from the interviews.

Purpose

The purpose of the data gathering, reporting, and analysis was to better understand the etiology and antecedents of suicide among Alaskans, in order to identify potential points of intervention and strategies to reduce the rate of suicide.

Methods

Death certificates attributed to suicides occurring in Alaska between September 1, 2003 and August 31, 2006 were reviewed retrospectively. Information from the Alaska State Medical Examiner, State Troopers, and other law enforcement agencies was collated and reviewed for each suicide death. A cadre of Native and non-Native interviewers was trained in how to use the interview protocol and how to conduct follow-back interviews with survivors of the decedents. All information was entered into a secure database. All efforts to protect confidentiality were in accordance with the Institutional Review Board requirements of the Alaska Native Medical Center, the University of Alaska – Anchorage, and the National Institutes of Health (Certificate of Confidentiality).

Results

There were 426 suicides during the 36 month study period. The average annual suicide rate for the three year study period was 21.4/100,000 (U.S. Census, 2005 estimated population). Males out-numbered females 4 to 1. The age-group of 20 to 29 had both the greatest number of suicides and the highest rate per 100,000 population. Alaska Natives had a significantly higher average rate of suicide than the non-Native population (51.4/100,000 compared to 16.9/100,000). The leading mechanism of death was firearms, accounting for 63% of the suicides. The use of handguns was more prevalent in the non-Native population whereas long guns were used more often by Alaska Natives. The EMS region with the greatest number of Native suicides was Region 4, which includes Bethel and the Yukon-Kuskokwim Delta. Region 2, which includes the Northwest Arctic census area had the highest overall rate of suicide deaths. Follow-back interviews were conducted with 71 informants for 56 of the suicide decedents. Reported alcohol/drug use was the same for Urban as for Rural Native decedents. The same alcohol/drug use pattern was seen for Urban and for Rural non-Native decedents. Toxicology results were received for 33% of all the suicide cases. Alcohol was found in 44% of the toxicology tests and THC (marijuana) was found in 15%.

Conclusion

This study adds volumes of information to our existing knowledge of suicide in Alaska. More in-depth studies are already in progress, which will continue to add to our knowledge base while bringing in additional resources for prevention and treatment. The report also highlights the need for better death data collection, to quantify alcohol and drug involvement and other contributing factors.

Our Mission

The Statewide Suicide Prevention Council advises the governor and legislature on issues relating to suicide. In collaboration with communities, faith-based organizations, and public-private entities, the Council works to improve the health and wellness of Alaskans by reducing suicide and its effect on individuals and communities.

ALASKA STATE SENATE

SPONSOR STATEMENT SENATE BILL 45

By the passage of this legislation, a new Veterans' Cemetery would be created in Fairbanks to serve those members of the military wishing to be buried in this specially designated cemetery. The United States standards for creating veterans' cemeteries suggests that designated cemeteries be established within 75 miles of any populated area to honor deceased military personnel. At this time, Fairbanks is home to a significant military population but does not have a designated Veterans' Cemetery.

The Veterans' Cemetery fund would be established as a sub account of the general fund to be used to support programs benefiting Alaska veterans. The fund would receive deposits through appropriation and by proceeds from the purchase of special veterans' license plates. The balance of the fund could be used for the construction, operation and maintenance of a Veterans' Cemetery.

Veterans' employment preferences are currently established in AS 39.25.150 however they are somewhat difficult to understand. The existing statute is rewritten for clarification and does not change the preferences already established. The employment preferences as rewritten are similar to most other United States and do not breach collective bargaining agreements within the State of Alaska.

We urge your support in this legislation regarding honor and benefits for Alaska's military veterans.

ANALYSIS: *(Attach a separate page if necessary)*

This bill establishes establishes an Alaska cemetery fund.

Our estimate for the amount of special request plates commemorating Alaska veterans is based on 2 year history of special veterans plates purchased per DOA/Division of Motor Vehicles. DMVA estimates that 100 sets of plates will be purchased annually at $100/set.

Operations and maintenance of the Veteran's cemetery includes contracted services for maintenance, utilities, communications, supplies and materials is estimated at $250,000 per year beginning in FY2012. Out years reflect additional receipts from sale of special license plates.

ANALYSIS: *(Attach a separate page if necessary)*

This bill authorizes the department to establish and maintain veterans cemeteries, and establish an Alaska cemetery fund. The Department estimates the amount of special request plates commemorating Alaska veterans, based on a 2 year history of special veterans plates purchased per DOA/Division of Motor Vehicles, to be 100 sets of plates will be purchased annually at $100/set, or approximately $10.0 available to deposited in the fund.

The department's cost estimates of a veterans' cemetery include both capital and operating costs for a proposed cemetery in the Interior Region of Alaska that have been under discussion.

See next page -

Prepared by: McHugh Pierre, Legislative Liaison/Communications Director — Phone 465-4402
Division: National Guard Military Headquarters/Office of the Commissioner — Date/Time 2/23/09 @ 2:00 pm
Approved by: Commissioner Craig Campbell — Date 2/23/2009
Department of Military and Veterans Affairs

ANALYSIS CONTINUATION

Note: Costs and implementation dates below are based on a best case scenario of capital funding being available this next fiscal year. However, if funding is not available in FY2010 then all dates of implementation, i.e. capital and operating, will subsequently be pushed out further into the future.

Operating Estimates:
After construction is completed, the department estimates $250.0 for the state's share of annual operating costs, with the possibility of leveraging additional federal funds for operations and maintenance. The second year of operations reflects a fund source change of $10.0 from general funds to the new veteran's cemetery fund to reflect estimated receipts from fund for operational costs.

Capital Estimates:
Capital expenditures include costs of site feasibility/testing, design and planning of the project, and land transfer processing, estimated at $750.0 general fund match; and actual construction costs of $5 million in federal receipts. The construction costs do not include the cost of the land as proponents of the Interior cemetery are anticipating land donation.

Design goals include offering the most efficient and effective space utilization in all spects of the design concept.

Donated land will be processed by the Dept of Natural Resources at an estimated cost of $23.0. DMVA is committed to assisting DNR by covering this transfer cost.

The 750.0 GFM in FY2010 is requested for site planning, architectural and design work. This funding availability is required to reflect the state's commitment to future operations and to leverage the $5 million in federal funds for construction. For discussion purposes, the $750.0 GFM is reflected as one lump sum in the fiscal note; however, the funding could be spread across three years, but would result in a delay in the ability to leverage the federal funding for construction.

The state has the unique opportunity to leverage federal funding reimbursement in the future to offset operating costs, and $5 million in constructions costs, contingent upon the state's commitment to ongoing operations and maintenance of the facility. With state funding support, federal funds may be available for community support of the facility as well.

FAIRBANKS NORTH STAR BOROUGH

RESOLUTION NO. 2009 - 08

A RESOLUTION SUPPORTING THE CREATION OF A STATE VETERANS' CEMETERY

WHEREAS, according to the Department of Veterans Affairs there are over 9,400 veterans living in the Fairbanks area; and

WHEREAS, according to the 2000 Census Alaska has the highest percentage of veterans per capita than any other state; and

WHEREAS, Interior Alaska veterans deserve access to a military cemetery that honors their service; and

WHEREAS, the nearest cemetery to Fairbanks is Fort Richardson National Cemetery located 350 miles away; and

WHEREAS, a State Veterans' Cemetery in the Interior would better serve the needs of veterans and their families, and provide a place that is centrally located in the Interior for soldiers to be laid to rest with full military funeral honors; and

WHEREAS, funding to establish and maintain a state veterans' cemetery could be made available through the U.S. Department of Veterans Affairs, State Cemetery Grants Program, and through money set aside from special license plates purchases and gifts designated to a special account; and

NOW, THEREFORE, BE IT RESOLVED that the Assembly of the Fairbanks North Star Borough supports the creation of a State Veterans' Cemetery in the Interior.

BE IT FURTHER RESOLVED that copies of this resolution shall be sent to the Honorable Governor Sarah Palin and the Alaska Interior Delegation.

PASSED AND APPROVED THIS 12th DAY OF MARCH 2009.

MEMORANDUM February 3, 2009

SUBJECT: Veterans, former prisoners of war, and members of the national guard (SB 45)

TO: Senator Charlie Huggins
Attn: Sharon

FROM: Dan Wayne
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1 would allow the legislature to appropriate, to the Alaska veterans' cemetery fund, fees from the sale of special request motor vehicle license plates that commemorate Alaska veterans.

Sec. 2 adds certain gifts, donations and grants related to establishing and maintaining Alaska veterans' cemeteries to the list, under AS 37.05.146(c), of programs for which receipts are accounted for separately. (Receipts from programs on this list are not appropriated from the unrestricted general fund).

Sec. 3 creates a special account in the general fund called the Alaska veterans' cemetery fund., from which amounts may be appropriated for building and operating Alaska veterans' cemeteries.

Sec. 4 adds a requirement that state personnel rules must provide for the grant of employment preference rights to members of the national guard under AS 39.25.159, a statute under which veterans, former prisoners of war and members of the national guard already receive preference when they apply for a position, either in the form of extra points being added to their numerical rating (when assessments using numerical ratings are used in hiring), or, when hiring is based on assessments that are not based on numerical ratings, a guarantee that they will be considered for the position.

Sec. 5 and 6 amend AS 39.25.159, a statute with the catch line "employment preference for veterans and former prisoners of war," by combining repetitious language from subsections (a) and (c) and moving it to a new subsection, and changing "preference," in subsections (a) and (c), to the more explicit "employment preference as a matter of form."

Sec. 7 defines "member of the national guard" under AS 39.25.159.

Sec. 8 adds two new subsections to AS 39.25.159. Subsection (e) consolidates and restores language that the bill, as noted above, removes from AS 39.25.159(c) and (d). Subsection (f) limits the applicability of subsections (a), (c), and (e) so that they may not be interpreted to amend the terms of a collective bargaining agreement.

Sec. 9 adds language permitting the department of military and veterans affairs to establish and maintain Alaska veterans' cemeteries, allowing the department to raise funds for that purpose, and listing administrative duties and options of the department, including the duty, or in some instances the option, to adopt regulations.

If I may be of further assistance, please advise.

Bill to Establish Veterans' Cemetery in Interior Moves Out of Senate State Affairs Committee

JUNEAU – Legislation under which the State of Alaska would authorize the establishment and maintenance of a veterans' cemetery to serve the Interior and northern Alaska was approved by the Senate State Affairs committee.

SB 45, Sponsored by Sen. Charlie Huggins, R-Wasilla, and Sen. Gene Therriault, R-North Pole, gives the Department of Military and Veterans' Affairs the authority to establish veterans' cemeteries and to set up a fund to provide for maintenance of the cemeteries. The bill also allows the Legislature to appropriate income from the sale of veterans' commemorative license plates to the cemetery fund and clarifies veterans' hiring preferences in state statutes.

"In addition to clarifying veterans' hire preferences, SB 45 sets up a mechanism to create and fund a veterans' cemetery in the Interior to complement the national cemeteries in Sitka and at Ft. Richardson," Huggins said. "This is an appropriate use of the revenues generated by the sale of special veterans' license plates, and a good way for us to express our appreciation for the service of these veterans."

"It is estimated there are about 100,000 veterans in Alaska, including roughly 11,000 in the Interior," Therriault said. "We should be prepared to honor them as they deserve for their sacrifices made in defense of our nation. I appreciate the quick action by the State Affairs committee to move the bill forward."

SB 45 has next been referred to the Senate Labor and Commerce committee.

###

JOINT LEGISLATIVE ISSUES FOR 2009 SESSION

The American Legion, Veterans of Foreign Warsand Disabled American Veterans

Support Statements

1. ***State Veterans' Service Officers Grant***: For over 50 years, Alaska service organizations have been assisting our state veterans with much needed assistance in receiving state and federal benefits to which they are entitled. Each year, through the assisted representation of these State Service Officers, our veterans have received over 25 million dollars in federal benefits. VA statistics have shown that veterans representing themselves receive some $7,000 less in annual benefits than those represented by a State Service Officer. This coming year, we are budgeted the same grant amount as last year, $651,000, which is part of the Governor's budget under the Department of Military and Veterans Affairs. These dollars will provide salaries and travel for the Joint Venture for the coming year. Our Service Officers cover the entire state, working closely with our members, the Alaska Department of Labor and the Department of Veterans Affairs, providing services to our State's veterans. This coming year will be exceptionally important as we provide for our returning Gulf veterans, assisting them with the complex laws and paperwork necessary to receive all of the benefits to which they are entitled. ***Therefore, we ask the full support of our Legislature in approving the Governor's budget proposed grant of $651,000.***

2. ***Property Tax exemption***: Currently, veterans rated by the Department of Veterans Affairs at 50% or more disabled and senior citizens 65 and older receive a tax exemption on the first $150.000.00 of their annual property tax. Our concern is the loss of this exemption. This could be devastating to both the seniors and veterans who, in many cases, receive the lowest of incomes, with many living on fixed incomes and concerned about loosing there existing home mortgages. ***Therefore, we request the tax exemption for the Disabled Veterans and Seniors remains***.

3. ***Flag Amendment:*** The flag amendment is an issue unresolved. Over 80% of Americans polled believe that our flag should be protected by amending our Constitution. We do not expect this issue to go unresolved forever; however, should it pass the United States Congress to constitutionally protect our flag, we request that Alaska be the first State to ratify the amendment to the Constitution. ***Therefore, we ask our Legislature that, if Congress passes the amendment, our Alaska Legislature be the first to ratify that amendment.***

4. ***State Veterans Cemetery:*** If the issue of establishing a State Veterans Cemetery comes before legislature we request the legislature to consider supporting such legislation.

Senate State Affairs Committee
Alaska State Capitol, Room 9
Juneau, AK 99801-1182

RE: SB45 (Therriault and Huggins)--Support

Dear Chair Menard:

On behalf of the AARP members of Alaska, we urge you and your colleagues on the Senate State Affairs Committee to support SB 45, authored by Senators Gene Therriault and Charlie Huggins.

SB 45 would establish a fund for the maintenance of and development of future veterans' cemeteries in Alaska. As you know, the only veterans' cemeteries are in Anchorage and Sitka yet the Fairbanks area alone has over 11,000 veterans, many of whom are AARP members. Certainly veterans and their families would like to have a cemetery closer to where they live.

Burial in a veterans' cemetery is one of the last honors we can offer our fellow citizens who have served in the Armed Forces. We think it is a well-deserved tribute to these men and women who served our country. It is a proper thank-you to the veterans and their families.

Undoubtedly there may be some costs associated with a new cemetery. SB 45 does provide some provisions for partial funding although additional funding might be required. Our veterans didn't weigh the costs when they joined the armed services. Surely we can bear the costs of this final thank-you to them.

SB 45 also has provisions for state employment preferences. AARP has no official position on this.

AARP recommends an "AYE" vote on SB 45.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin

Subject: Support for SB 45

Dear Senator Huggins:

The Alaska Commission on Aging (ACoA) encourages support for SB 45 sponsored by you and Senator Therriault to establish, maintain, and develop the Alaska veterans' cemetery fund.

Although Alaskan veterans come from all areas of the state, the only designated veteran cemeteries in Alaska are located in Anchorage and Sitka. We believe that veterans and their families would appreciate having a cemetery closer to where they live. Burial in a veterans' cemetery is a well-deserved honor and tribute to those who have served our country and their families.

Partial funding for this program would come from the sales of special request plates commemorating Alaska veterans, according to estimates provided by the bill's fiscal note, and additional funding may be required. Nevertheless, persons who joined the armed forces did not allow the personal costs of their service to dissuade their decision to serve and protect our nation.

ACoA supports SB 45 and believes that establishment of a veterans' cemetery is our responsibility and obligation to honor veterans through this final gesture of gratitude. Please feel free to contact Denise Daniello, ACoA's executive director (465-4879), should you have any questions regarding our position. Thank you for your consideration.

Sincerely,

Sharon Howerton-Clark
Chair, Alaska Commission on Aging

February 20, 2009

The Honorable Sarah Palin
Governor
State of Alaska
P.O. Box 110001
Juneau, AK 99811

Dear Governor Palin:

I write to underscore the request of a Fairbanks veteran to urge your support and action to advance an Alaska State Veterans Cemetery, likely to be located in Alaska's Interior. During my Veterans Town Hall meeting in Fairbanks earlier this week, veteran Morgan Solomon asked that I approach you about this issue. His request, in firm and colorful language, received the overwhelming support of the more than 40 veterans in attendance, and my support as well.

As you know, at issue is a federal program which provides support to states to establish veterans' cemeteries. I commend you for including $250,000 in your original Fiscal 2010 capital budget submission for initial architecture and engineering for this cause. But I was disappointed that you eliminated it in your revised budget as part of your overall budget cutting exercise. Meanwhile, I understand the Alaska Department of Military and Veterans Affairs can submit a grant pre-application to the U.S. Department of Veterans Affairs for construction of the cemetery, but has not yet done so.

The VA estimates that 1,500 veterans will die in the next 10 years in the Fairbanks area. A Veterans Cemetery in the Interior is broadly supported by Alaska's veterans community and would serve as a relatively affordable yet highly visible way to demonstrate our respect to the men and women who have served and sacrificed so much for our state and nation.

As a member of the U.S. Senate Committee on Veterans Affairs, I am pleased to work with you and your departments on this vital issue and to ensure that a pre-application is well received by the VA when it is submitted.

Thank you for your attention to this matter.

Sincerely,

Mark Begich
U.S. Senator

Sponsor Statement
SB 50
IDITAROD FINISHER LICENSE PLATES

By passage of this legislation, a new provision is added for special issue license plates to honor those who have shown the dedication, perseverance and exemplary athletic ability that finishing the Iditarod Trail Sled Dog Race requires.

Design work for the new plate must be approved by the Department of Administration. It's anticipated that the Iditarod Trail Committee and the Iditarod Official Finishers Club will be advisors and participants in the design. The finishers will be able to purchase these exclusive specialty plates by providing specific proof of participation and completion of the race. The race finisher must have an automobile registered in the state of Alaska on which the plates would be displayed.

I request your support for this new category of specialty license plates honoring mushers who have endured the challenges and shown the courage and ability to complete what is affectionately known as the "last great race," the Iditarod Trail Sled Dog Race.

SUBJECT: Sectional Summary - SB 50 (Work Order No. 26-LS0319\A)

TO: Senator Charlie Huggins
Chair of the Senate Rules Committee

FROM: Gerald P. Luckhaupt
Legislative Counsel

You have requested a sectional summary of the above-described bill. As a preliminary matter, please note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill - the bill itself is the best statement of its contents.

Section 1. Authorizes the Department of Administration to issue special request Iditarod race finisher license plates.

Section 2. Sets the fee for the special request Iditarod race finisher license plates authorized in section 1.

Senate Works on Bill to Provide Special Iditarod Finisher License Plates

(JUNEAU) – With the start of this year's Iditarod Trail Sled Dog Race just a few days away, Alaska's legislators are considering a bill that would create special license plates for people who are official finishers of the Iditarod.

"I am proud that the district I represent is home to the start of the 'last great race'," said Senator Charlie Huggins (R-Mat-Su), sponsor of the legislation. "It is fitting that we honor the more than 600 hearty souls who have finished this grueling competition which is so synonymous with our state."

Senate Bill 50 would allow Iditarod finishers, upon proving that they have finished the race, to get a special "Iditarod finisher" license plate for $50. Presently, there are specialty plates for National Guard members, military veterans, Purple Heart recipients and custom collector vehicles.

SB 50 was passed out of the Senate State Affairs Committee Tuesday, and will be considered next by the Finance Committee. "I am pleased the bill is before us now, during Iditarod season; it adds to the celebration of the start of the 37th running of this great competition," said Senator Huggins. "A lot of folks who have run the race have expressed enthusiasm about getting one of these license plates, which highlights the pride Alaskans have for the Iditarod and the state as a whole."

For more information, contact Senator Huggins or Sharon Long at 907-465-3878.

SB 57

<target><bill>SB 57</bill><subject>SB
57</subject><comm>SFIN26</comm></target>

ALASKA STATE LEGISLATURE

SENATOR JOE THOMAS

Sectional Analysis
SB 57

Section 1

Subsection (c) states that charter schools with fewer than 150 students will have their student count adjusted by the same per-student rate as neighborhood schools with 400 students.

Under the school size factor statute, AS 14.17.450(a), the per-student rate of adjustment for 400-student neighborhood schools is 1.18, which means their student enrollment is multiplied by 1.18 to determine their "adjusted student count." The adjusted student count is the basis for the calculation of state funding provided to school districts.

Subsection (d) is an exception to subsection (c) for charter schools that are either in their first year of operation or had more than 150 students the previous year. It grants these charter schools a one-year hold-harmless period, during which they will receive 95% of the per-student rate of neighborhood schools with 150 students.

Under the school size factor statute, the per-student rate of adjustment for 150-student neighborhood schools is 1.45, and 95% of that rate is 1.38. Charter schools in the hold-harmless year will have their enrollment multiplied by 1.38 to determine their adjusted student count.

Subsection (d) requires charter schools that are in the hold-harmless year to submit a plan for the following year to their local school board. The plan must describe what will happen the following year if the school again has fewer than 150 students and no longer qualifies for the hold-harmless provision.

Subsection (e) defines the term "student rate." The student rate is the base plus the multiplier under AS 14.17.450(a) divided by the student count.

Section 2:

This is a technical amendment creating the exception from the existing requirement that charter schools have at least 150 students to have their own adjusted student count calculation. Without this amendment, the Department of Education would continue to calculate school funding as if the students at charter schools under 150 attended the largest school in their district.

ANALYSIS: *(Attach a separate page if necessary)*

This bill would increase funding for those charter schools with an Average Daily Membership [ADM] under 150 through the school size adjustment mechanism.

There are two methods to determine eligibility:

1) If the charter school is under 150 ADM, then the ADM count will be multiplied by 1.18.

OR

2) If the charter school has an ADM of 120 but less than 150 and in the 1st year of operation; or had an ADM count of 150 in the prior year but fell below in the current fiscal year, then the ADM count will be multiplied by 1.38.

The GF appropriation capitalizes on the Public Education Fund [PEF].

ANALYSIS: *(Attach a separate page if necessary)*

This bill would increase funding for charter and alternative schools.

Alternative schools with an Average Daily Membership [ADM] of 175 or greater will adjust through the school size table independently.

If the alternative school has an ADM of 120 but less than 175 and in the 1st year of operation; or had an ADM count of 175+ in the prior year but fell below 175 in the current fiscal year, then the ADM count will be multiplied by 1.33.

If the charter school is under 150 ADM, then the ADM count will be multiplied by 1.18.

Otherwise if the charter school has an ADM of 120 but less than 150 and in the 1st year of operation; or had an ADM count of 150+ in the prior year but fell below in the current fiscal year, then the ADM count will be multiplied by 1.38.

MATANUSKA-SUSITNA BOROUGH SCHOOL DISTRICT
RESOLUTION NO. 09-002

A RESOLUTION OF THE MATANUSKA-SUSITNA BOROUGH SCHOOL BOARD IN SUPPORT OF SENATE BILL NO. 57 "AN ACT RELATING TO CHARTER SCHOOL FUNDING."

WHEREAS, the Matanuska-Susitna Borough School Board invites support of Senate Bill No. 57 "An Act Relating To Charter School Funding"; and

WHEREAS, charter schools give opportunities outside of the traditional public schools for innovative programs to be implemented; and

WHEREAS, charter schools gain momentum and interest from a broader larger audience as a program is developed in the initial year of operation; and

WHEREAS, charter schools like all schools have fluctuations in enrollment and losing program gravity because of a slight drop in enrollment below 150 students for one year could have a longer term detrimental impact on the school; and

WHEREAS, a school that is not recognized as a school site for funding purposes receives a reduced financial allocation; and

WHEREAS, being recognized as a school site gives economic relief by bringing a greater dollar amount to the school allowing for more comprehensive and adequate funding; and

WHEREAS, this Bill offers the initial year of operation for a charter school as an opportunity to build community support and student numbers and ultimately strengthens the quality of the program and the potential for program and student accomplishment; and

WHERAS, encouragement is offered to add language to this Bill to lower the enrollment for alternative school's recognition as a school site from 200 students to 175 as a measure to support an alternative school's need for a smaller learning community.

THEREFORE BE IT RESOLVED that the Matanuska-Susitna Borough School Board supports Senate Bill No. 57 "An Act Relating to Charter School Funding."

ADOPTED by the Matanuska-Susitna Borough School Board this 18th day of February, 2009.

Jim Colver, Board President

George Troxel, Superintendent

ATTEST:

Stacy Escobedo, Board Secretary

AMENDMENT 1

OFFERED IN THE SENATE BY SENATOR Huggins

TO: SB 57

Page 1, line 1, following "**charter**":

Insert "**and alternative**"

Page 2, following line 6:

Insert a new subsection to read:

"(e) If an alternative school has a student count of more than 120 but less than 175 for the current year and is in the first year of operation, or had a student count of 175 or more in the previous year of operation, the adjusted student count for the school shall be calculated by multiplying the student count by 95 percent of the student rate for a school that has a student count of 175."

Reletter the following subsection accordingly.

Page 2, line 7:

Delete "(c) and (d)"

Insert "(c) - (e)"

Page 2, line 10:

Delete "AS 14.17.905(b)"

Insert "AS 14.17.905"

Page 2, following line 10:

Insert new material to read:

"**Sec. 14.17.905. Facilities constituting a school.** (a) For purposes of this chapter, the determination of the number of schools in a district is subject to the following:

(1) a community with an ADM of at least 10, but not more than 100, shall be counted as one school;

(2) a community with an ADM of at least 101, but not more than 425, shall be counted as

(A) one elementary school, which includes those students in grades kindergarten through six; and

(B) one secondary school, which includes students in grades seven through 12;

(3) in a community with an ADM of greater than 425, each facility that is administered as a separate school shall be counted as one school, except that each alternative school with an ADM of less than **175** [200] shall be counted as a part of the school in the district with the highest ADM."

ANALYSIS: *(Attach a separate page if necessary)*

This bill would increase funding for charter and alternative schools.

Alternative schools with an Average Daily Membership [ADM] of 175 or greater will adjust through the school size table independently.
If the alternative school has an ADM of 120 but less than 175 and in the 1st year of operation; or had an ADM count of 175+ in the prior year but fell below 175 in the current fiscal year, then the ADM count will be multiplied by 1.33.

If the charter school is under 150 ADM, then the ADM count will be multiplied by 1.18.
Otherwise if the charter school has an ADM of 120 but less than 150 and in the 1st year of operation; or had an ADM count of 150+ in the prior year but fell below in the current fiscal year, then the ADM count will be multiplied by 1.38.

The GF appropriation capitalizes on the Public Education Fund [PEF].

Senator Joe Thomas
State Capitol, Room 510
Juneau, AK 99801-1182

Dear ~~Senator~~ Joe Thomas:

Thank you for introducing SB 57, this bill directly aligns with Doyon, Limited's mission statement, which includes promoting the economic and social well-being of our shareholders and future shareholders. The Effie Kokrine Charter School is important to the Alaska Native community in the interior. With almost 25% of our 17,500 shareholders residing in the Fairbanks community we believe that a culturally sensitive school is essential to the well-being of our shareholders.

Therefore, on behalf of our shareholders, Doyon, Limited supports SB 57.

Thank you again and please let me know if we can do anything else to help. I can be reached at (907) 459-2000 or by e-mail at phillipsn@doyon.com.

Sincerely,

Norman L. Phillips, Jr.

March 26, 2009

To the honorable members of the House Finance Committee:

Thank you for the opportunity to speak to you on the federal stimulus funding. My name is Cheryl Keepers, and I am here today in my role of staff to the FNSB Early Childhood Development Commission.

I urge you to accept the stimulus dollars, especially those that could benefit our youngest citizens. Science confirms what our grandmothers told us - that the early years in a child's life are critical in the physical, emotional, cognitive and social development of that individual.

While Alaska has many different programs that serve families with young children, there is no early education system. The one-time stimulus dollars would be well used to lay some of the foundation for such a system.

Examples are many, but in the interest of time I'll mention two:

One way to move a system forward would be to pilot the child care Quality Rating and Improvement System developed for Alaska, as recently released by the Department of Health & Social Services.

Another step toward creating that foundation would be to support the work of Best Beginnings, a private-public partnership. They have requested $400,000 in the Department of Education & Early Development for early literacy and for early childhood coalitions in local communities to increase collaboration, local decision-making, and efficient use of resources, with the long term goal of developing of a statewide system of early learning.

We should not miss this opportunity to use short-term stimulus funding to move forward on Alaska's needs for young children and their families.

A final note: yesterday we heard that the Senate may be considering using stimulus funds for the child care assistance rate increase. While this increase is sorely needed, it should be funded with state general fund dollars, as reflected in the budget adopted by the House.

Thank you for your consideration,

Cheryl Keepers

ALASKA STATE LEGISLATURE

Please enter into the record my testimony to the House Rules Committee
Committee Name

Committee on HB 199A Dated 3/26/09
Bill / Subject

My name is Ann Riley Millard. I live in Eagle, AK where I am the part-time site administrator at Eagle Community School. Because Eagle Community School is a small school in a rural community, we struggle to get the instructional materials we need and have no opportunity to address areas that are costing us the most money. I am requesting that the State of Alaska accept the money from the American Recovery and Reinvestment Act of 2009, especially the $20,699,000 which will be appropriated for the Department of Education and Early Development.

Following are a few suggestions for ways to use that money which would create jobs and reduce our expenses at Eagle School.

① Over the last 7 years, our average KW usage per month has been [redacted] 7161.6 KW and our average expenditure per month has been $4081.79. If we could get an energy rater to look at our building and suggest ways to reduce this cost and then retrofit our building to produce electricity using alternatives to the diesel generator, it would create jobs and save money.

② We need a part-time librarian to catalog the books that have been donated or purchased with Scholastic Book Club bonus points.

③ We need more money for instructional aides and to upgrade our computers.

SIGNED: Ann Riley Millard
Testifier

myself
Representing

POB 124, Eagle, AK 99738 907-547-2321
Address / Phone Number

④ We have deferred maintenance on our plumbing system that needs to be addressed. I have other suggestions but since I have run out of time, I will end my testimony. Thank you for your attention.

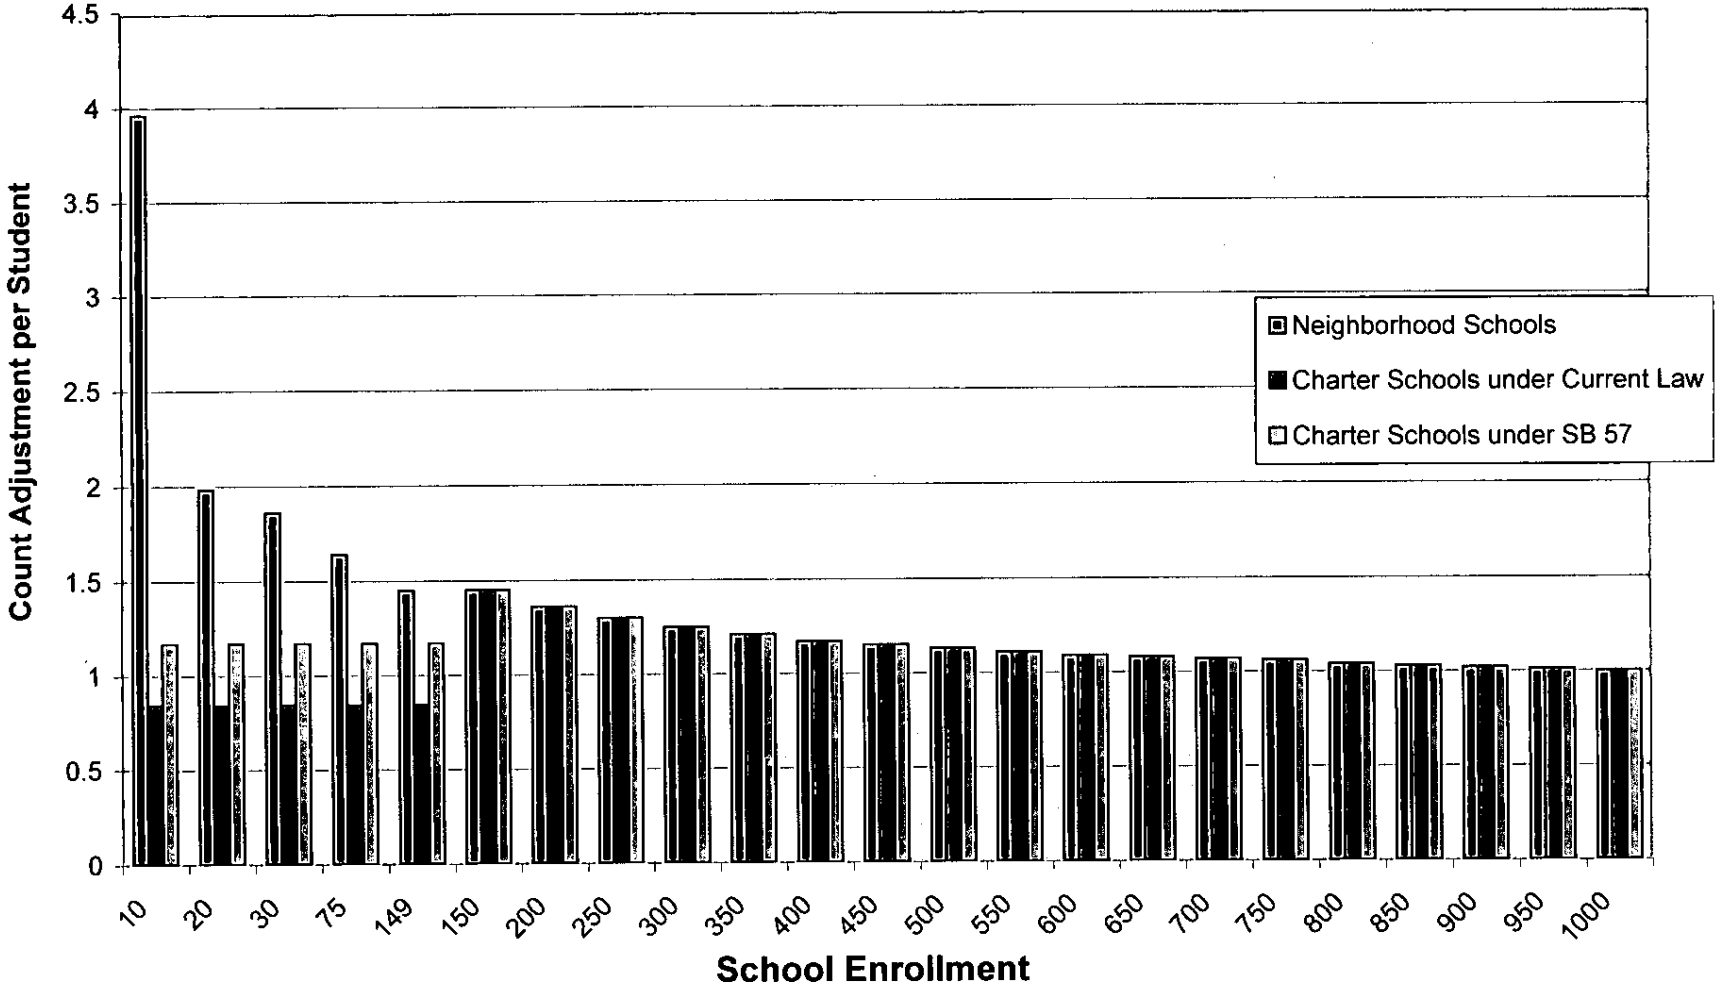
Adjusted Student Count for Charter Schools vs. Neighborhood Schools

The adjusted student count of each school is the basis of state funding. The number of students enrolled in a school is increased or decreased according to the formula in AS 14.17.450, to determine the school's adjusted student count. That adjusted student count is then multiplied by the district cost factor, the special needs factor and, finally, by the base student allocation to determine the amount of funding.



* This chart assumes that a charter school with fewer than 150 students has a student count adjustment of .84 under current law, because it is located in a district that contains a school with over 750 students, such as Anchorage, Fairbanks, Mat-Su or Juneau. A charter school in a community such as Kenai, Bethel, Ketchikan or Nome would have a student count adjustment of .92 or .97.

2/27/09
Senator Joe Thomas

Statutes That Determine Adjusted Student Count

Sec. 14.17.905. Facilities constituting a school.

(a) For purposes of this chapter, the determination of the number of schools in a district is subject to the following:

(1) a community with an ADM of at least 10, but not more than 100, shall be counted as one school;

(2) a community with an ADM of at least 101, but not more than 425, shall be counted as

(A) one elementary school, which includes those students in grades kindergarten through six; and

(B) one secondary school, which includes students in grades seven through 12;

(3) in a community with an ADM of greater than 425, each facility that is administered as a separate school shall be counted as one school, except that each alternative school with an ADM of less than 200 shall be counted as a part of the school in the district with the highest ADM.

(b) Notwithstanding (a)(3) of this section, a charter school shall be counted as a separate school if the charter school has an ADM of at least 150 students.

Sec. 14.17.450. School size factor.

(a) For purposes of calculating a school's ADM to determine state aid, the ADM of each school in a district shall be computed by applying the following formula:

If the student count In a school is			**The adjusted student count is**					
At least		**But less than**	**Base**		**Multiplier**			**The number of Students in excess of**
10	-	20	39.6

TONGASS SCHOOL OF ARTS AND SCIENCES RESOLUTION

Urging the Governor of Alaska and the Alaska State Legislature to pass Senate Bill 57, "An Act relating to charter school funding."

BE IT RESOLVED BY THE ACADEMIC POLICY COMMITTEE OF THE TONGASS SCHOOL OF ARTS AND SCIENCES:

WHEREAS the Constitution of the State of Alaska and other laws and policies of the State require educational opportunities for all children; and
WHEREAS Charter schools are public schools that provide valuable education options to Alaska families; and
WHEREAS Charter schools increase learning opportunities and encourage parent and community involvement in our schools; and
WHEREAS the current state funding system limits communities' ability to create and sustain these innovative programs; and
WHEREAS current state law results in charter schools receiving 30% to 45% less state funding than neighborhood schools of their same size; and
WHEREAS Senate Bill 57 funds charter schools with fewer than 150 students at a per-child rate closer to that of average, urban elementary schools; and
WHEREAS Senate Bill 57 solves the funding problem in an equitable, fiscally responsible manner; and
WHEREAS Senate Bill 57 will support our schools and districts as they carry out the legislature's intent in creating the charter school law;
BE IT RESOLVED that the Tongass School of Arts and Sciences Academic Policy Committee supports the passage of Senate Bill 57; and
BE IT FURTHER RESOLVED the Tongass School of Arts and Sciences Academic Policy Committee urges the Governor of Alaska and the Alaska State Legislature to pass Senate Bill 57, "An Act relating to charter school funding."
COPIES of this resolution shall be sent to the Honorable Sara Palin, Governor of Alaska; the Honorable Gary Stevens, Senate President; the Honorable Mike Chenault, House Speaker; the Honorable Senators Hoffman and Stedman, Senate Finance Committee Co-Chairs; the Honorable Senators Ellis, Elton, Huggins, Olson, and Thomas, Senate Finance Committee Members; the Honorable Kyle Johansen, Representative, House District 1; and members of the Ketchikan Gateway Borough School Board.

Subject: Fwd: Thank you for Senate Bill 57

Dear Members of the Senate Education Committee: My wife and I are forwarding a copy of this email that we sent to Senator Kim Elton earlier this week. We are sending this to you so that you can see how much we appreciate his co-sponsorship of Senate Bill 57, and so that you will know that we are grateful to you for considering this bill. Thank you for the support you've provided charter schools in the past; we hope you will support this effort to assist Alaska's small charter schools, which currently operate under an inequitable and unsustainable funding scheme. We look forward to the discussion about the bill at your Thursday meeting.

Sincerely,

Tony and Linda Newman

> **Subject: Thank you for Senate Bill 57**
>
> Senator Elton: Every year for the past several we've written to you to ask for your help in trying to fund Alaska's small charter schools, including Juneau's, in a more equitable way. We're extremely pleased and excited to be able to write to you tonight and thank you for taking leadership on this issue right away this session, by cosponsoring Senate Bill 57.
>
> If this bill successfully makes it through the legislative process and passes into law this year it will provide relief to the Juneau Community Charter School just in the nick of time. We know that we've said in my prior letters to you that the situation is already urgent, but this year, for the first year in the seven years that we've been involved as parents of JCCS students, we are operating at a budget deficit and drawing down the school's savings. We probably have less than two years of funding left at the rate we're depleting the savings. The Charter School simply can't operate indefinitely on the unfair funding formula that leaves charter schools funded at a per-student rate that is significantly lower than other similar-sized schools in the district. We've all but resigned ourselves to the fact that our kids' school will likely need to close in a year or two because it will simply run out of money. (Believe us, we've exhausted ourselves trying to fundraise out of this mess.)
>
> The importance of this bill for all of Juneau's kids is demonstrated by the fact that the Juneau School District has made more equitable small charter school funding one of its legislative priorities this year, and has resolved to support us in our efforts to correct the current funding inequity. We've just reviewed the bill and have exchanged a few emails with our fellow Charter School parents, and we are in agreement that the approach outlined

through this bill may be the best one yet. This bill makes it possible for small schools to operate, but still maintains the legislature's intent to encourage the formation of larger schools.

In our prior-year emails and letters to you on this issue we've taken much time and space to tell you about our kids and how much they--our whole family--gain from our participation in Juneau's Charter School. All of those things remain true. Our kids are learning so much and so well, but best of all, the Charter School has become an important part of all our lives because of the community that's grown around it.

Let us know what you would like us to do to assist you in securing passage of this bill this year.

Sincerely,

Tony and Linda Newman

Subject: Support for our school

Dear Senator Elton,

My name is Jodi Scolamiero. My husband David and I have our 1st grade son at Juneau Community Charter School (JCCS) this year and hope to have our 2nd son start there next year.

First, we would like to thank you for all your past support for our wonderful school.
We are thrilled to have the opportunity to send our children to a school such as JCCS. Without an option such as JCCS we fear our child would not be thriving as he has this past year. Due to his personality and learning style we have determined that the type of education JCCS offers is best suited for our children in that the school is smaller, therefore giving a more secure atmosphere. With the class size remaining the same as the district average, children are able to experience learning in smaller groups as well as giving a multi-grade class situation where each child can benefit from student mentoring as well as being a student mentor.

Next, I would like to add to the collective voice asking for your further support for the upcoming bill SB 57 giving smaller Charter schools the same funding as larger neighborhood schools. Without this increase in funding we fear our beloved school will not survive more than a couple of more years. The JCCS is a valuable addition to Juneau's wonderful elementary educational system. The school has proven itself academically with students ranking high on standardized testing scores, and also in that there is a high success rate for students transitioning back into the neighborhood school setting.

SB 57 would not only benefit our existing Charter school but give opportunity for more schools such as JCCS to establish and thrive. This would give parents even more choices when choosing what setting would be best for their individual children. In my opinion giving each child the type of education that works best for him or her is in essence ensuring our future as well as theirs.

Thank you so much for your time and support,
Jodi Scolamiero

Senator Elton,

I quick word in support of the funding formula equalization bill. I am a charter school parent. We do school jobs to save our school money to make our program happen. My wife and I perform janitorial service and recess duty to save cost. Its not that we mind doing these jobs but we would like to be able to spend our volunteer efforts on jobs that would directle lead to improving oue children's educational experience. AS it is the Juneau charter school is an educational success meeting core standards and for all social classes. Please help us help our kids.

Dana,
Thanks for taking my call just now. I am sorry I am unable to testify tomorrow as I had planned due to participation in a conference call with the new Secretary of Education, Arne Duncan. I would appreciate it if you could distribute these comments to the Senate Education Committee members tomorrow.

Dear Senate Education Committee:

The Anchorage School Board does not have a position on SB 57 specifically, but we strongly support our charter schools. We have much concern on the "draconian" funding situation for a charter school that does not make the 151 student count through the count period, particularly in the first year of operation. Many of our charter schools have struggled with this issue and the funding problems that ensue.

The Anchorage School District would like to work with your committee on this important issue. Last year, I suggested that maybe a working group could work on this issue over this session and into the summer. If that was ever possible, I would like to ask that the ASD participate. We have participated on many groups over the years and have some good suggestions on how to resolve funding and facility issues for charter schools. We believe that the public school choices, including charters, are important for parents and students.

I appreciate your commitment to education and the opportunity to provide input.
Carol Comeau, Superintendent
Anchorage School District

Subject: supporter of SB 57

Donny,
I want to thank you any your fellow Senators for supporting Charter Schools in Alaska. We have actively worked for the past several years to provide a more permanent "fix" to the funding dilemma that we face due to the typical charter school enrollment and the current method of funding. We believe that great strides have been taken with SB 57.

Our school here in Nome has an enrollment of 44 which is capped due to space constraints at the current facility. We are paired with the largest school in our district causing concerns each year of whether we still can continue to provide the Nome community with optional educational opportunities. We have a proven program and a waiting list each year.

We work hand in hand with our district, many times providing a venue to try new methods that can later be implemented into the larger district.
Providing a more equitable funding formula for charter schools only furthers the endless opportunities that our Alaskan education system can provide all Alaskan children especially in the future.

Thank you again for your continued support. The community of Nome appreciates this most important work for our children.

Subject: Senate Bill 57

To: The Senate Education Committee

Dear Senators,
First of all, I would like to thank each of you for your past support to increase charter school funding. Secondly, I would like to ask the Education Committee to, please, support SB 57 making it possible for charter schools of 150 or less to receive funding based on the same per student rate as larger schools. Our school, Juneau Community Charter School, offers an educational program that isn't available elsewhere in the school district. Although the overall school size is small, class size is no smaller than elsewhere in the school district. JCCS is able to support *every* child's attitude and enthusiasm towards learning, provides highly enriched curriculum while developing strong thinking skills while implementing increased parental involvement, multi-age classes, trips into the community, teacher autonomy, more opportunities for parent/teacher interaction than if he attended a larger neighborhood school. JCCS is a good "fit" for the needs of my child and family specifically because the curriculum is individualized to challenge each child at their skill level, in all domains, while supporting positive self esteem, diversity, and community involvement.

JCCS has proven itself educationally. Its students perform well on standardized tests and do well when they transition back into the neighborhood school settings. The Juneau school district supports this bill and has included increased charter school funding in its list of legislative priorities as well.

Education isn't one size fits all. It's important for families to have choice. Different settings are a better fit for some children and their families than others. All children should be allowed the opportunity to learn and succeed in a way that reaches their own unique learning style. We value our school, how it impacts our family, and the community of families (which includes staff and volunteers) that make it happen and strongly feel our children should not be penalized by inadequate funding. Currently, the funding situation is so inadequate that our school will have to close within 2-3 years.

Please, support our students and schools by authorizing same per student rate as larger schools receive. If we as parents felt the local neighborhood schools were the best fit for meeting the individual needs of our children, they would be attending those schools now and receiving the funds we are asking for now. But that is not the case, please, support our children now where they are excelling.

Thank you for your consideration and support,
Jeri Kohlin

Subject: In support of SB 57

Dear Senators,

We are writing to thank you for your past support for charter schools. Your support is critical to providing educational options for the next generation of Alaskans.

We are also writing to express our support of SB 57. Should this bill pass it would allow smaller school districts across the state to offer charter school options to the families they serve. This is important for many reasons, but foremost is the fact that not all students thrive in a traditional academic setting.

To this, we speak from experience. Our son Ezra has excelled at the Juneau Community Charter School because of the arts integrated curriculum and small overall school size. In this environment his social confidence has steadily grown allowing him to experience successes he did not have in a larger school setting.

I hope that you too will support SB 57, thus providing educational options for the future of Alaska.

Thank you,

Annie & Jon Geselle

Subject: Support for SB57

Dear Senators and Staff,

Thank you for taking a moment out of your busy schedules to read this email.

I am writing to request your full support of SB57-An Act Relating to Charter School Funding.

As you are well aware; education is not a one size fits all. It is important for families to have a choice and different settings are a better fit for different children and their families. By creating more equitable funding it helps ensure small charter schools will continue to exist. Small Charter Schools are constantly trying to reach out to families with diverse needs for their children; whether it is a smaller overall school size so children don't feel "lost" in the crowd or children that have special learning needs. Small Charter Schools have the ability to help more children that are in danger of falling through the cracks, *if* they are properly funded. In my humble opinion this also helps relieve the stress larger schools may feel from trying to help children in need while maintaining the needs of the general school populous.

Full funding for ALL our children and schools should be every Alaskans priority; we owe it to our children and their future.
Thank you for your time and your service to our State.

Sincerely,

Diane Cathcart (Juneau Community Charter School 4/5/6 Class parent)

Subject: SB 57 - Charter school funding

January 27, 2009

Dear Senator Elton,

I am writing to express my support for SB57. I believe legislation like this will provide more equitable funding for small charter schools. I like SB 57 because it is comprehensive and effectively addresses the very different needs of different types of small charter schools and their host school districts.

I currently have two children attending the Juneau Community Charter School. My eleven year old son has attended the charter school for all 6 years of his education and my youngest son is in first grade.

I believe Charter schools are an important way to provide for school choice in Alaska and support parent involvement in education. We are very happy that the Juneau Community Charter School exists to provide a small school environment (a total of 66 children in the school) and involve parents in the school in meaningful ways. I want my children to be educated in a small environment and want to be involved in their education. We like the multi-age classrooms, the daily interaction between children of different ages, and the whole child view of education.

Since home schooling is not an option for our family due to employment obligations we are happy to have a charter school available to address many of our needs. My older son was born with a serious congenital heart defect that has required many open heart surgeries and has had special physical needs. We have greatly appreciated him being able to attend a small school where his needs are known and met within the regular classroom.

I believe Charter Schools have an important place in Alaska's education system. I hope that through your efforts, solutions to the challenges faced especially by small charter schools can be addressed. The current funding situation means it is very difficult for a charter school with under 150 students to operate. Alaska is a state of small numbers and we need legislation that will allow charter schools of all sizes to thrive. Without this legislation our charter school may have to close in the next 2-3 years. SB57 will make a big difference and allow small charter schools to survive in Alaska and offer valuable educational alternatives throughout the state.

Please support more equitable funding of charter schools to allow educational options around the state. Thanks very much for your attention to this important issue.

Sincerely,

Jeannie Monk
Juneau Community Charter school parent

Dear Senate Education Committee Members: Senator Elton, Senator Davis, Senator Huggins, Senator Stevens and Senator Olson,

Attached is a letter in support of SB 57. Please share your support with other Senators and House Members to help pass this bill.

Thank you very much for your support.

Beth Rivest

January 26, 2009

Dear Senator Elton, Senator Davis, Senator Olson, Senator Huggins and Senator Stevens; members of the Senate Education Committee:

I am writing in support of Senate Bill 57. It is a well written piece of legislation that would help small charter schools continue to serve students all across Alaska. These students' schools are in need of more equitable funding to support salaries and supplies. I am grateful you support charter schools as an option for parents to meet their child's needs.

I have three children in the Juneau School District public school system. I chose to enroll in the lottery when my eldest child was in the first grade. Luckily she got in the charter school and since the second grade it has been a wonderful educational and social environment for her and her siblings.

While I attended Arizona State University as a college student, I took almost every math class offered. I have always loved math and the sciences. The methods used to teach math at the charter school are rigorous, build solid understandings of number patterns and such strong flexibility in solving problems that I sincerely wished I had had the opportunity to be exposed to and to learn math in such a progressive, skill-building, visual way. It is exciting to see students experience this type of meaningful math.

I attended public school throughout my life and I loved school, however I believe my children are far more comfortable and intensely involved in their projects while also thoroughly enjoying attending school. They are being given an exceptional chance to become all they can. The projects that incorporate writing, research, art, social studies/science and teambuilding are solid methods of fun and learning. The parents of these students become involved as well and work hard to support this small charter school.

The Juneau Community Charter School is in need of financial support. Parents contribute by supporting teachers in the classroom, helping teachers prep for the week to come, we work around the school facility to build shelves, clean and make it work efficiently. Parents also work very hard to fundraise to meet the financial commitments it takes to run the charter school. It is sorely underfunded at present.

The charter school has been part of the Juneau School District, serving a wide array of students for over ten years. It sets high standards and builds leadership, competence and love of our environment in such a compassionate manner.

To be very honest, if it were not for the charter school, I know I would begin a small child-care business and home school my children.

It has been stated, from President Obama to our Governor's State of the State, that education is one of the top legislative priorities. I sincerely hope that funding small

charter schools, through creative use of resources, educate children in a way that many children need, to become successful is also a priority within your committee.

In Alaska, small charter schools are funded dramatically lower per student compared to district counterparts. This bill recognizes charter schools as important options and is an attempt to balance educational funding per student at a reasonable percentage.

Please continue your support and know that small charter schools are doing important works on behalf of students all across Alaska, in particular here in Juneau. Please know that besides the many, many parents and educators who believe in the success of small charter schools and its' students high achievement, test scores and critical thinking skills we have no lobbying force to help other Senators or House members understand this issue. Please I ask each of you to help by sharing your support for SB 57.

Thank you for your work on behalf of Senate Bill 57.

Sincerely,

Beth Rivest, wife of a hard-working, small business owner; loving and caring parent of three wonderful children; and a member of the Juneau Community.

Subject: Supporting Charter Schools

Dear Mr. Elton,

I'm a parent at Juneau Community Charter School. I'm writing to you to express my hope that the Charter School funding bill be passed.

If this bill is passed, it would mean a lot to the Charter School families. One major improvement would be the benefit of having buses for the children. Currently, all families drive the children to Charter School. Driving downtown twice a day to Charter School adds many miles to our car and uses a lot gasoline; both have an impact on the environment. In this time of economic and environmental crisis, a small thing like buses would make a great change!

Safety would also be improved if the Charter School received bus service. Students who live downtown can walk to school, but with snow covered sidewalks, they have to walk on the street, which presents a safety hazard. Parking is very limited at the Charter School, making drop off and picks up potentially dangerous. Parents have to find a parking spot that allows space for a car, yet not get hit. Children have to use extra caution when crossing the street, and as is common with young children, they sometimes don't look before they leap.

Thank you for your time in reading this, Sen. Elton. The families at Juneau Community Charter School are eager to see the Charter School funding bill passed.

Regards,

January 28, 2009

Dear Senators,

This letter is in regards to Senate Bill 57 which will have its first hearing in front of the Senate Education Committee on Thursday January 29th. The bill addresses funding for small (charter) schools.

I support this bill because it will benefit the Juneau Community Charter School. My son is currently enrolled at JCCS. I believe that ALL students can be the most successful in school when they are in an environment that best fits their educational and social needs. This is the case for my son, and daughter, and as parents my husband and I try to find our children's best "fit" educationally. I hope to enroll by daughter as a 7th grader next year at JCCS. If Bill 57 is passed, this may be more possible.

With the funds that Bill 57 would provide, JCCS could be more accessible (in terms of growth) and serve a greater number of Juneau families. A community is more enriched when families have as many educational choices as possible for their children. Students are more successful when they are in an environment where they feel safe and are motivated and interested in their own education. No child is alike, and providing Juneau's students with a choice of educational environments addresses the educational needs of all our children. Juneau Community Charter School plays a vital roll in the school district in meeting these needs.

The Juneau Community Charter School APC members (made up of parent volunteers), other JCCS families, and teachers, have put in many hours of research and work in coming up with a plan of how JCCS can offer additional classrooms and serve a greater number of families. Bill 57 will support these efforts. Please give your support for this bill. Thank-you for your time.

Sincerely,
Sarah Hopkins

To: Sen. Kim Elton
Subject: Please Support Charter School Legislation

Dear Chairman Elton:

I understand that you will be considering a bill this week to correct the funding inequities that hamper small charter schools in Alaska. I heartily encourage you to pass this bill. My husband and I have been so happy with our sons' charter school experiences, both in Homer (Fireweed Academy), and in Juneau, at the Juneau Community Charter School. Although these schools are different in many ways, they are wonderful examples of how the charter school law can enable our public school system to reach students in ways the traditional programs may not. I have learned that "one size" does not fit all in education, and our children benefit from choices in program. When those choices can be made available to all, regardless of income or test scores, then our state is truly doing them a service.

Treating small programs as if they have the economies of scale of the largest schools in the state has always been an unfortunate glich in the current law (although there are some who see it as a deterrent to the explosion of small schools). The proposed bill will correct that problem, and enable our students to continue to share in the promise of the charter school system. In fact, in our case in Juneau, it will enable us to achieve even more diversity than we already enjoy, by making it possible to hire employees who can serve students with special needs and to provide bus service to children who need it.

I know times are tough. I hope you will see that this bill is worth the investment.

Thank you for your consideration.

Sincerely,

Elise Nacht Boyer

ASSOCIATION OF ALASKA SCHOOL BOARDS

ADVOCATES FOR ALASKA'S YOUTH

Position Statement on SB 57
Charter School Funding

In 1995, AASB supported the creation of charter schools in statute. Over the years, school boards have subsidized and otherwise assisted local charter schools in providing Alaska families with a viable choice in public education.

AASB encourages the Legislature to amend AS 14.17.450 as outlined in SB 57 to establish a more equitable means of funding charter schools.

School boards find themselves caught between local citizen initiatives to create choices within public schools and an inadequate funding stream in statutes that require supplemental funding from local districts.

To: Sen. Joe Thomas
Subject: Support for SB 57

Dear Senator Thomas,

I teach at Anvil City Science Academy in Nome. I hope that you will consider the following points in order to help SB 57 pass this stage with the Finance Committee in order that it may be heard by all and voted upon.

Respectfully,
Lisa Leeper
Teacher, Anvil City Science Academy

- Charter schools are public schools that provide valuable education options to Alaska families.
- The existing school funding law results in charter schools that enroll fewer than 150 students receiving 30% to 45% less state funding than neighborhood schools of their same size.
- Inequitable funding limits communities' ability to create and sustain these schools.
- There is a dramatic decrease in funding ($500,000 - $700,000 loss) when a charter school's enrollment drops from 150 students to 149, which creates a financial crisis for both the school and its host district.
- Senate Bill 57 solves the funding problem in an equitable, fiscally responsible manner.
- SB 57 funds charter schools with fewer than 150 students at the same per-student rate as neighborhood schools with 400 students.
- SB 57 contains a one-year, hold-harmless provision for charter schools that are either in their first year of operation or had more than 150 students the previous year, reducing the financial damage to their district.
- SB 57 will allow school districts to carry out the intent of the legislature in creating the charter school law, by increasing quality education options available to Alaska families.
- SB 57 is supported by the Alaska Association of School Boards, and superintendents and parents of charter school students from across the state. The bill has been co-sponsored by Senators Thomas, Stevens, Elton, and Davis.

ACSA Parents and Supporters,

Dear Senate Finance Committee members:

Below are talking points given to me by an excellent teacher and administrator of Nome's Anvil City Science Academy (ACSA); however, I would like to add that having been a part of ACSA since its inception that it has provided exceptional instruction for our students, it has led the way in many areas now adopted by the other parts of the Nome Public School system.

Also, ACSA has done this with less money then the other parts of the school system. With a leaking roof, windows blowing in during storms, help from parents and an excellent staff ACSA has maintained quality in its education. This shows what a local team can do, students, parents, teachers and staff. We would like to have the legislature jion this sucessful concept and pass SB57.

Thanks,

Hank Irelan
Nome, Alaska

PS. After fours years of ACSA my Freshman son at Nome Beltz High School (cross my fingers that it continues) has made streight A's for the first semester. Plese help continue this legacy for future studetns of Nome.

Here are some talking points for any e-mails, phone calls, or letters.

- Charter schools are public schools that provide valuable education options to Alaska families.
- The existing school funding law results in charter schools that enroll fewer than 150 students receiving 30% to 45% less state funding than neighborhood schools of their same size.
- Inequitable funding limits communities' ability to create and sustain these schools.
- Charter schools may have fewer than 150 students because:
    - Community factors result in a an unexpected and temporary dip below 150
    - A new school may have difficulty reaching 150 in its first year

  - The targeted student population the school is designed to help is not sufficiently large (e.g., at-risk middle schoolers)
  - A charter school with more than 150 would have an adverse impact on the community's neighborhood schools
  - A small school size is critical to the success of the program.

- There is a dramatic decrease in funding ($500,000 - $700,000 loss) when a charter school's enrollment drops from 150 students to 149, which creates a financial crisis for both the school and its host district.
- Senate Bill 57 solves the funding problem in an equitable, fiscally responsible manner.
- SB 57 funds charter schools with fewer than 150 students at the same per-student rate as neighborhood schools with 400 students.
- SB 57 contains a one-year, hold-harmless provision for charter schools that are either in their first year of operation or had more than 150 students the previous year, reducing the financial damage to their district.
- SB 57 will allow school districts to carry out the intent of the legislature in creating the charter school law, by increasing quality education options available to Alaska families.
- SB 57 is supported by the Alaska Association of School Boards, and superintendents and parents of charter school students from across the state. The bill has been co-sponsored by Senators Thomas, Stevens, Elton, and Davis.

Subject: SB 57

Dear Senators,

I would like to thank all of you in your past support of for schools in Alaska, especially those that are small in numbers and therefore needing more support when it comes to funding issues. I am requesting your support for the passage of SB 57.

Charter Schools allow parents, community members, and teachers to be in charge of developing unique educational programs and to be involved in decision making for school policies. As a parent of three Charter School children and two more that will soon be in Charter schools, it means a lot to me to be involved in school policies and the operations of our school. Our educational process is very flexible, which provides for the needs of our children and parents alike.

The Anvil City Science Academy has been in operation for eleven years now, it was created by parents, teachers, and many community members who were interested in a family oriented school characterized by high academic standards and a well-rounded curriculum, with an emphasis in science and math. The Science Academy serves 5th through 8th grade students who come to the school with a wide variety of backgrounds, learning styles, experiences, and needs. We are able to address the individual differences and learning styles, and creativity we see an increase in learning and creativety for all students. Our students at this time are involved in a salmon habitate restoration project grant from the Department of the Interior, and are working with Charlie Lean of Norton Sound Economic Development Company ,because of this project the Academy students were nominated and won the "Spirit of Youth" award in the catagory of Science . Another project that is noteworthy is the
Artist in Schools project in which students are interviewing Nome residents in preparation for writing a play about the last 50 years in Nome.

Anvil City Science Academy has 44 students, with two and half certified teachers, no support personnel. This gives the school the needed flexibility to provide opportunities to the studetns to go beyond the traditional classroom walls in order to utilize community and environmental resources. In addition, in a small community such as Nome, a program like ACSA cann't reach a student count of 150 students, without having an adverse affect on the other public schools in the district. Therefore, a smaller program like ACSA is beneficial to the community by providing an alternative education program, while minimizing the possible impact on other schools.

Respectfully submitted,

Vickie Erickson

Subject: Supporter of SB 57

Senate Finance Committee:

I am a parent of a current charter school student in Nome, Anvil City Science Academy as well as a graduate of the program who is now thriving at Mt Edgecumbe High School.

I have been an avid supporter of Charter Schools in Alaska because they offer alternative educational models. What does this mean to Alaskan children? Options!

Charter schools across the state have demonstrated their worth: Test score achievement, community involvement, unique educational projects, and an optional educational model targeted directly to the student.
Unfortunately, the method of funding charter schools with enrollment under 150 needs to revised. After many years of working with the State to recognize this imperfection in the funding formula, at last SB 57 appears to address a permanent fix to this funding penalty.

By nature not all regions in Alaska can meet an enrollment quota of 150+ in a charter school without creating an adverse affect on the local communities schools. Anvil City Science Academy is an excellent example of this regional dilemma. Our charter school is capped at 44 students by the district. This unfortunately creates a waiting list of students wishing to participate in our program that cannot be accommodated.

SB 57 will provide the necessary language to allow charter schools under 150 to continue what they do best, educate. It will provide relief to the annual threat of funding shortages charter schools under 150 face.
Please help create the necessary momentum to make SB 57 law.

Thank you for putting Alaskan children first!

Sincerely,

Dana Handeland
Anvil City Science Academy, APC

To: Sen. Bert Stedman
Subject: SB 57

Dear Senator Stedman,

I am a parent of a child that attends the Juneau Community Charter School (JCCS). I have been on the JCCS Fundraising Committee since my daughter started kindergarten three years ago. The Fundraising Committees challenge for the past couple of years has been to try to find fundraisers that bring in money, but don't require families to work a part-time job to do it. That in itself is a difficult task with all of the different types of fundraising that occurs in Juneau. The Juneau community as a whole is continually asked to support various organizations through numerous fundraising events. JCCS families are already selling raffle tickets and fundraising for extracurricular activities.

JCCS's draft five year budget analysis is showing that in a couple of years our school will be faced with a yearly operational deficit that could reach up to $30,000. To try to raise that amount of money year after year to keep the school operating is a daunting task (and as the Fundraising Coordinator, quite stressful). This is a public school. We want to fundraise for school trips, special programs and extra school supplies like the other public schools. Please support SB 57.

Respectfully,
Alison Cooney

The Role of the "Adjusted Student Count" in School Funding

The adjusted student count of each school is the root of state funding for school districts. The number of students enrolled in a school is increased or decreased according to the formula in AS 14.17.450, to determine the school's adjusted student count. That adjusted student count is then multiplied by the district cost factor, the special needs factor and, finally, by the base student allocation, to determine the amount of funding.

Student Count		***Becomes***					**Adjusted Student Count**	***Equals***	**Student Rate** Neighborhood	vs. Charter
At least	**But less than**	**Base**	**plus**	**(Multiplier**	**times**	**Students in Excess of Column 1)**				
10 students to 20 students		39.6	+	0			10 students = 39.6 adjusted student count	=	3.96 /student	.84 /student
							19 students = 39.6 adjusted student count	=	2.08 /student	.84 /student
20 students to 30 students		39.6	+	(1.62	x	students over 20)	20 students = 39.6 adjusted student count	=	1.98 /student	.84 /student
							29 students = 54.18 adjusted student count	=	1.87 /student	.84 /student
30 students to 75 students		55.8	+	(1.49	x	students over 30)	30 students = 55.8 adjusted student count	=	1.86 /student	.84 /student
							74 students = 121.36 adjusted student count	=	1.64 /student	.84 /student
75 students to 150 students		122.85	+	(1.27	x	students over 75)	75 students = 122.85 adjusted student count	=	1.64 /student	.84 /student
							149 students = 216.83 adjusted student count	=	1.46 /student	.84 /student
150 students to 250 students		218.1	+	(1.08	x	students over 150)	150 students = 218.1 adjusted student count	=	1.45 /student	1.45 /student
							249 students = 325.02 adjusted student count	=	1.31 /student	1.31 /student
250 students to 400 students		326.1	+	(0.97	x	students over 250)	250 students = 326.1 adjusted student count	=	1.30 /student	1.30 /student
							399 students = 470.63 adjusted student count	=	1.18 /student	1.18 /student
400 students to 750 students		471.6	+	(0.92	x	students over 400)	400 students = 471.6 adjusted student count	=	1.18 /student	1.18 /student
							749 students = 792.68 adjusted student count	=	1.06 /student	1.06 /student
750 or more students		793.6	+	(0.84	x	students over 750).	750 students = 793.6 adjusted student count	=	1.06 /student	1.06 /student
							1,000 students = 1003.6 adjusted student count	=	1.00 /student	1.00 /student

Example Adjusted Student Count Calculations

Student Count
(school enrollment)

Adjusted Student Count

	Base	**plus**	**Multiplier**	**times**	**Students in Excess of bottom of the bracket**		
100 students in neighborhood school	122.85	+	1.27 multiplier	X	100 – 75 = 25	1.27 X 25 = 31.75	122.85 + 31.75 = **154.6**
*100 students in Anc/Fbnks/Jun/ charter school	No base	+	.84 multiplier for district's largest school	X	all 100 students	*.84 X 100 = 84*	*0 + 84 = 84*

**Charter schools with enrollments under 150 students do not go through the adjusted student count formula as individual schools. Instead, their students are added to the enrollment of the largest school in their district. Therefore, the adjusted student count of these charter schools is based on just the "multiplier" for additional students at large schools.*

SPONSOR STATEMENT
CS for SENATE BILL NO. 63(JUD)

IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY–SIXTH LEGISLATURE—SECOND SESSION

This bill amends and improves Alaska's trust provisions which permit a settlor to form an irrevocable trust, be a discretionary beneficiary of the trust and, if the trust has a spendthrift clause, protect the trust assets from the settlor's creditors. Alaska was the first state to enact this type of trust law. Since enactment in 1997, numerous other states have enacted similar statutes. At present, twelve states allow this type of trust.

This bill improves Alaska's trust provisions so that Alaska's statute remains competitive with those of other states. As a result, both residents, and nonresidents of Alaska who choose to form this type of trust in Alaska, will benefit from these improved provisions.

The bill upgrades Alaska's statute by adopting the following provisions which have been adopted in other states:

- A creditor must establish by clear and convincing evidence that a transfer was made with an intent to defraud a creditor. (This standard has been adopted by nine of the other twelve states);
- Distributions can be made under the discretion of a trustee pursuant to a standard, as well as with absolute discretion;
- The settlor may be reimbursed for income taxes attributable to the trust;
- The settlor can retain the power to replace a trustee/advisor with a non-related, non-subordinate party.

MEMORANDUM March 23, 2010

SUBJECT: Sectional summary of CSSB 63( ), a bill relating to transfer restrictions on trust interests (Work Order No. 26-LS0317\P)

TO: Senator Lesil McGuire
Attn: Esther Cha

FROM: Theresa Bannister
Legislative Counsel

You have requested a sectional summary of the above-described bill. As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents.

Section 1. Amends the subsection that establishes four situations when a creditor can satisfy a claim out of a beneficiary's interest in a trust when the trust contains a transfer restriction. In the first situation, this bill requires that the creditor establish the intent to defraud by clear and convincing evidence. In the second situation, which is based on the settlor's (the creator of the trust) right to revoke or terminate the trust, deletes a current exclusion from the meaning of "revoke or terminate" because the exclusion does not fit within the concept of revocation or termination.

Section 2. Adds a new provision to the section that allows a person who creates a trust (settlor) to restrict the transfer of a beneficiary's interest before payment to the beneficiary. States that the transfer restriction is allowed even if the settlor has any of the three listed rights: (1) to appoint a trustee, a trust protector, or an advisor for the trust; (2) to remove a trustee or trust protector and appoint certain replacements; or (3) remove an advisor and appoint a replacement.

Section 3. Adds a new provision to the section that allows a person who creates a trust (settlor) to prohibit the transfer of a beneficiary's interest before payment to the beneficiary (the beneficiary can be the settlor). States that the transfer restriction operates even if two situations exist: (1) the beneficiary has the right to receive a distribution made in a person's discretion; or (2) the settlor, under specific conditions, potentially will receive or actually receives income or principal to pay income taxes due on the income of the trust.

If I may be of further assistance, please advise.

Summary of Changes
Between CS SB 63(STA) and CS SB 63(JUD)

This document is an identification of the changes between W.O. 26-LS0317\S and W.O. 26-LS0317\C.

Section 1 deletes language involving discretionary distributions on page 2, lines 5-7 because it conflicts with the concept of that section which involves a settlor's right to revoke or terminate all or part of the trust. This discretionary language has been placed in subsection (n)(1) established in Section 3 of Version P.

Section 1 also removes subsections (3)(E) and (3)(F) on page 3, lines 1-14 in version S and makes conforming changes to page 2, line 8.

The language in (b)(3)(E) allowing a settlor to receive certain discretionary distributions made by a trustee conflicts with the concept of subsection (b)(3) regarding mandatory distributions of income or principal. Therefore, the discretionary language has been moved and established to new subsection (n)(1) in Section 3 of version P.

Language in subsection (b)(3)(F) involves discretionary distributions for the payment of taxes again conflicting with the concepts in (b)(3) involving mandatory distributions of income or principal. This discretionary authority for the payment of taxes has been moved to new subsection (n)(2).

Section 2 No change

SENATOR LESIL MCGUIRE

What is a Trust?

A Trust is a legal arrangement (basically a contract) where one person (called a trustee) holds property for the benefit of other persons (called beneficiaries). There are many different types of trusts.

The personal trust is the most common form of trust, created for non-business reasons for the benefit and protection of individuals. The trustee in a personal trust acts in accordance with the law and the instructions set forth in the governing instrument by the person who created the trust (called Grantor or Settlor). The primary responsibilities of the trustee are to manage and protect the assets in the trust for the best interest of the beneficiaries. The management and protection responsibilities include proper investment of assets, collection of income, maintenance of accurate books and records, filing of tax returns and other reports, and the payment of income and trust property to the beneficiaries in accordance with the terms of the trust.

Trusts are used throughout the United States to accomplish many different objectives such as;

- Protecting interest of minors
- Preserve assets for the family
- Accomplish the desires of the family
- Improve quality of life by allowing use of trust assets by beneficiaries
- Provide asset protection
- Reduce and in some cases eliminate gift, estate and income taxes

A self-settled trust is a trust where the grantor is also a beneficiary with other family members. This allows the assets in the trust to appreciate in value and the trust assets will not be in the Grantors taxable estate for federal estate tax purposes. The IRS has recently issued a private letter ruling acknowledging that these trusts can accomplish this objective.

From the information we have received from Alaska estate planning attorneys over ten thousand Alaskans have taken advantage of Alaska's favorable trust laws, non-residents of Alaska have also used Alaska's trust laws to accomplish their family financial goals.

What is a Trust?

Capital Budget

The Capital Budget is a plan for the distribution of AHFC's financial resources for items that have an anticipated life exceeding one year and the cost exceeds $25,000. Unlike the Operating Budget which lapses at the end of one year, capital budget appropriations lapse only if funds remain after the project is completed and/or if funds are lapsed administratively or legislatively, usually after five years.

AHFC Capital Improvement Projects (CIP) reflect the needs of the Corporation and the pursuit of its mission through the Goals and Objectives of the Corporation's Strategic Plan. The Corporate departments have reviewed their prior year Capital budgets to determine if there are any unfinished projects/programs that are on-going, need additional funds to be completed, or should be extended.

This Capital Budget was developed by AHFC staff and recommended for inclusion in the Governor's budget submission to the Legislature. Each project/program has been reviewed and prioritized by the AHFC Executive Office and presented to its Board of Directors for approval. The Board will vote on a resolution November 20, 2008 to approve this budget and instruct the Executive Director to submit this budget to the Governor's Office of Management and Budget (OMB) through the Department of Revenue.

FY2010 Capital Budget Project Request

Capital Budget Bill

1. Housing Loan Program/Teacher/Health Prof. Housing - $8,000,000 11
2. Supplemental Housing Development Program - $10,000,000 17
3. Weatherization Program - $2,000,000 23
4. Senior Citizens Housing Development Program - $7,500,000 35
5. Fire Protection Systems Phase I - $3,450,000 39
6. Security Systems Replacement/Upgrades - $750,000 41
7. Building Systems Replacement Program - $2,500,000 43
8. HUD Federal HOME Program - $4,050,000 45
9. HUD Capital Fund Program (CFP) - $3,200,000 49
10. Federal and Other Competitive Grants - $4,500,000 51
11. Competitive Grants for Public Housing - $1,000,000 53

18. Statewide ADA Improvements - $500,000 69
19. Birch Park II (B Building) Reconstruction - $1,440,000 71

Mental Health Bill

1. Homeless Assistance Program - $10,000,000 75
2. Beneficiary & Special Needs Housing - $1,750,000 79
3. Home Modification Program - $1,050,000 81
4. Emergency Assistance Grants - $200,000 83

Program Synopsis

1. **Housing Loan Program - Teacher/Health/Public Safety Housing - $8,000,000** Corporate (AHFC) funds to supplement the Corporation's popular housing programs. These funds will allow AHFC to continue current programs and expand business opportunities with new Teacher Housing program(s) and Health Professionals Housing Program(s). It may also provide funds to support a statewide housing conference.

2. **Supplemental Housing Development Program - $10,000,000** Corporate (AHFC) funds to supplement Federal (HUD) funds to construct decent, safe and sanitary housing through regional housing authorities established under AS 18.55.996. Funds are used to cover housing development costs related to water distribution, sewer hookups, electrical distribution systems, road construction to project site, site development, and energy efficiency improvements. State laws limit the use of these funds to 20% of the HUD's total development cost per unit. These funds are prohibited from being used for administrative or other costs of the housing authority.

3. **Weatherization Program - $2,000,000** Federal U. S. Department of Energy (DOE) funds to assist low- and moderate- income families attain decent, safe and affordable housing through the weatherization and rehabilitation of existing homes. Weatherization provides for fire safety through furnace and electrical repairs, education, chimney and woodstove repairs, and egress windows (installed during bedroom window replacements).

4. **Senior Citizens Housing Development Program - $7,500,000** Corporate (AHFC) funds for the development of senior citizen housing. Competitively awarded grants are provided for the purchase of building sites, site preparation, materials, construction, and rehabilitation of existing housing. Organizations qualified to apply include municipalities and public or private nonprofit corporations. Additional components include smaller grants (up to $25,000) for nonprofit senior organizations to pay for preparation of plans and project feasibility studies, appraisals, site preparation and other pre-development activities.

5. **Fire Protection System Repairs-Phase I - $3,450,000** Corporate (AHFC) funds to flush, evaluate and repair fire sprinkler and alarm systems in multi-family and senior/disabled public housing statewide based on a fire system engineer's equipment survey of sprinkler systems conducted this year.

6. **Security and Main Entry Door Access Systems - $750,000** Corporate (AHFC) funds to be used to upgrade existing security and door access systems to senior/disabled and multi-family public housing. The project includes replacement of security and door access systems that are outdated and no longer supported by manufacturers for replacement parts and software.

7. **Building System Replacement Program - $2,500,000** Corporate (AHFC) funds to address major roof replacement at Chugach View senior/disabled housing in Anchorage; replace sidewalks, retaining walls, stairs and overhead walkways at Cedar Park in Juneau; paint siding for Mountain View senior/disabled housing in Juneau.

8. **HUD Federal HOME Program - $3,300,000** Federal (HUD) and **$750,000** Corporate (AHFC) matching funds for the HOME Investment Partnership Program. The purpose of the HOME program is to expand the supply of affordable, low- and moderate- income housing and to strengthen the State's ability to design and implement strategies to achieve an adequate supply of safe, energy-efficient, and affordable housing. The Municipality of Anchorage has their own separate HOME program.

9. **HUD Capital Fund Program (CFP) - $3,200,000** Federal (HUD) grant that provides Public Housing Authorities with funds each year to help renovate and modernize public housing units. The annual CFP fund, including Replacement Housing Factor (RHF) funds, was approximately $2.7 million this fiscal year. The current request is intended to cover the spending authority only, required for the amount of funds anticipated next year, including any other incentives that may be available as a high performing Public Housing Authority.

10. **Federal and Other Competitive Grants - $3,000,000** Federal (HUD, USDA, DOE), or other private funds, and **$1,500,000** Corporate (AHFC) matching for available housing grants. Nationwide, grants are made available annually by the federal government or private institutions or foundations that target the housing needs of low-income families, special needs groups, senior citizens, the mentally ill, disabled, the homeless, and others. In cases where grants require a match, AHFC funds will be used to the extent necessary. Grant funds received are often passed through to local nonprofit organizations, municipalities, and other organizations that deliver housing-related services.

11. **Competitive Grants for Public Housing - $750,000** Federal (HUD), other private funds, and **$250,000** Corporate (AHFC) matching funds for available housing grants for public housing facilities and residents. Annually, HUD makes available grants that target the needs of public housing facilities and residents in areas such as crime and substance abuse prevention and economic self-sufficiency. When required, AHFC will provide the needed match. Some of the funds received will be passed through to local nonprofit organizations that deliver services.

12. **Energy Efficiency Monitoring Research - $2,000,000** Corporate (AHFC) funds for a designated grant to Cold Climate Housing Research Center to conduct housing construction research, analysis, and information dissemination among the housing industry and the public. Data gathering and analysis is being continually related to energy efficiency technology for homes constructed in northern building and market conditions.

13. **State Energy Program (SEP) Special Projects – $150,000** Federal (DOE) and **$50,000** Corporate (AHFC) matching funds for State Energy Program (SEP) special projects such as building technologies; codes and standards; wind and power technologies; renewable energy for remote areas or transportation technologies.

14. **Statewide Project Improvements - $3,000,000** Corporate (AHFC) funds to provide repairs and improvements to AHFC public housing throughout the state. This project allows AHFC to keep pace with routine repair and replacement of existing building components such as smaller roofs, sidewalks, and common areas identified in the annual Physical Needs Assessments (PNAs) from each Asset Management Project (AMP).

15. **Loussac Manor Redevelopment: Phase III - $8,492,400** Corporate (AHFC) funds to replace low rent housing based on a professional site assessment that included cost estimates recommending phased replacement of the existing structures as the most cost effective method to address the 40+ year old family housing structures. The Loussac Manor redevelopment configuration will be based on recommendations from a consulting firm commissioned to review the existing Loussac Manor complex and Anchorage area (positioning). The study will be used to determine the optimal usage for the Loussac site in keeping with the recently approved Moving to Work (MTW) program. This phase is expected to address replacement of the core public housing units identified by the repositioning study as the most critical units needed.

16. **Denali Commission Projects – $5,000,000** Federal funds to administer the Commission's housing programs. These funds will allow AHFC to administer current programs designated for rural areas of Alaska. The Denali Commission's goal is to provide decent, affordable housing for seniors and teachers in rural Alaska. Lack of housing has forced seniors to relocate to other communities where appropriate housing with necessary support is available. Lack of decent rural housing for teachers has been cited by school administrators as one of the factors that contribute to the inability to attract and maintain a stable teaching corps. The United States Congress has responded to this issue by setting aside funding through the Denali Commission for these purposes.

17. **Statewide Energy Improvements – $5,000,000** Corporate (AHFC) funds to address energy upgrades recommended by HUD mandated energy audits for Public Housing statewide. The funds will be used to address tasks recommended by the audits to reduce energy consumption. The funds will also be used to replace aging heating, ventilation, and lighting systems, fixtures or components with energy efficient products as they reach the end of their useful life.

18. **Statewide ADA Housing - $500,000** Corporate (AHFC) funds to address accessibility upgrades identified by a HUD Fair Housing Inspection dated September 2006. The

upgrades are to be made over a five-year period to comply with ADA and Section 504 requirements of a Voluntary Compliance Agreement (VCA) recently negotiated with HUD.

19. **Birch Park II B Building Reconstruction - $640,000** Federal and **$800,000** Corporate (AHFC) funds to reconstruct the four-plex structure in Fairbanks with four 2-bedroom units. Construction of the new structure will match the adjacent buildings in the same complex, comply with current codes, and employ the same energy efficient 2 X 8 wall construction and durable commercial grade interior and exterior finishes. The building was previously destroyed by fire.

***Mental Health Bill ***

1. **Homeless Assistance Program - $6,000,000** Corporate (AHFC), **$500,000** General Fund/Mental Health, **$500,000** Mental Health Trust Authority (MHTAAR) **$1,000,000** Statutory Designated (SD), and **$2,000,000** Federal fund authority to grant to local communities/agencies to help develop programs to support programs designed to reduce homelessness by providing services that prevent housing displacement and assist the homeless to transition back to permanent housing. All funds will be combined and administered as one program by AHFC.

2. **Beneficiary & Special Needs Housing - $1,750,000** Corporate (AHFC) funds for a continuing program to serve populations with special housing needs. The program provides funds to Alaskan nonprofit service providers to increase housing opportunities for Mental Health Trust beneficiaries and other special needs populations throughout the state. The funds may be used for housing development and/or services designed to achieve long-term residential stability.

3. **Home Modification Program** - $250,000 Corporate (AHFC), **$500,000** General Fund/Mental Health, and **$300,000** Mental Health Trust Authority (MHTAAR) funds to provide housing modifications to persons experiencing a disability, allowing them to remain in their homes and reduce the potential cost of providing supported housing. The program also provides funding to develop special needs housing.

4. **Emergency Assistance Grants for Mental Health Trust Beneficiaries - $200,000** Mental Health Trust Authority (MHTAAR) funds for grants to support beneficiaries of the Alaska Mental Health Trust Authority to prevent loss of housing that might occur due to unforeseen events such as institutionalization. It will allow beneficiaries to maintain homeownership or long-term rental stability by providing gap or short-term assistance. Assistance may be provided for any event like a structural or major appliance breakdown that may go beyond the financial reach of the homeowner, or life event that may threaten the ability of the beneficiary to make a mortgage or rent payment. Funding under this program is intended to supplement, not supplant, existing resources available for home modifications, weatherization, or rehabilitation programs.

1. Housing Loan Program -Teacher/Health/Public Safety Housing

Reference Number:	**#37918**
Historical Category:	**Housing / Social Services**
Location:	**Statewide**
Election District:	**Statewide**
Project Type:	**Transitional**
Estimated Project Dates:	**7/01/2009 - 6/30/2014**
FY2010 Request:	**$8,000,000 Corporate Receipts**
FY2010 Funding:	**$_____ Corporate Receipts**

The purpose of this program is to provide gap funding to increase homeownership and/rental units throughout the state. This program is designed to help retain desirable professionals in high-cost areas. To date, 172 units have been developed for teacher housing under this program.

The projected outcomes are:

- Increasing home ownership;
- Adding 62 units for Teacher, Health Professionals , or Public Safety housing;
- Increasing affordability for housing purchases by low to moderate income families;
- Lowering interest rates on AHFC mortgage programs to attract loan volume and generate net income; and
- Participate in a statewide housing conference.

Housing Loan Program/Teacher/Health/Public Safety Housing - Corporate (AHFC) funds to supplement the Corporation's popular housing programs through gap funding. These funds will allow AHFC to continue current programs and expand business opportunities with programs such as the Teacher Housing Program(s), Health Professionals Housing Program(s), and Public Safety Housing Program(s).

Funding History:

FY2009	$8,000,000	Corporate Receipts
FY2008	$6,800,000	Corporate Receipts
FY2007	$5,000,000	Corporate Receipts
FY2006	$4,000,000	Corporate Receipts
FY2005	$1,768,500	Corporate Receipts
FY2005	$ 81,500	ASLC Bond Proceeds

FY2005	$ 150,000	AHFC Bond Proceeds
FY2004	$2,150,000	Corporate Receipts

Program Description:
The primary focus of this program has been to provide a source of grant funds that will help pay for the development of decent, safe, and affordable rental housing for teacher, health professionals, and public safety officials. This program has and will continue to generate additional loan volume for AHFC.

Attracting and maintaining a pool of qualified teachers, health professionals, and public safety professionals in rural Alaska is a goal of the State of Alaska. In order to achieve this, housing must be available, affordable, and of a quality that encourages these professionals to locate or stay in rural settings. These programs were developed to respond to the need for additional housing for professionals and their families by providing grants to fill the funding gap for various housing projects. Funding is made available through a competitive process for new construction, rehabilitation, acquisition of rental or lease/purchase housing.

The Corporation, based on loan demand, interest rate fluctuations, and market conditions, may change rate reductions and certain eligibility criteria.

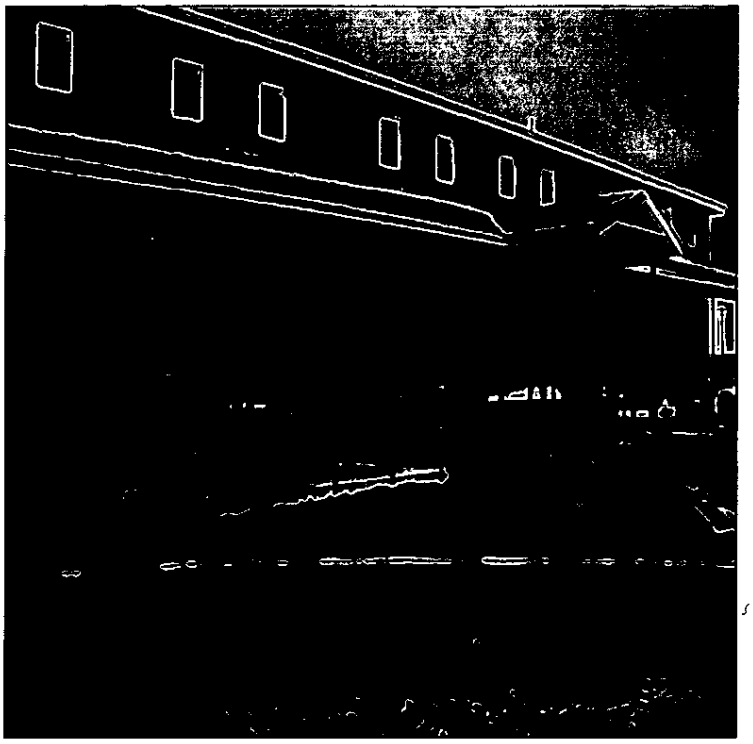
The Corporation may contribute funds toward sponsoring a statewide housing conference to bring together all aspects of the housing industry. AHFC expects other entities and agencies to also contribute toward this event.

FY 2004 Projects:

Savoonga

Savoonga Teacher Housing Project - The Bering Strait School District constructed four (4) units of teacher rental housing on the southwest Alaska island of Savoonga. The project's total cost was approximately $607,000. AHFC's Teacher Housing and Health Professional Grant Program provided $440,000.The remaining $167,000 cost of the project was funded with a loan from the school district capital project fund.

Kotzebue



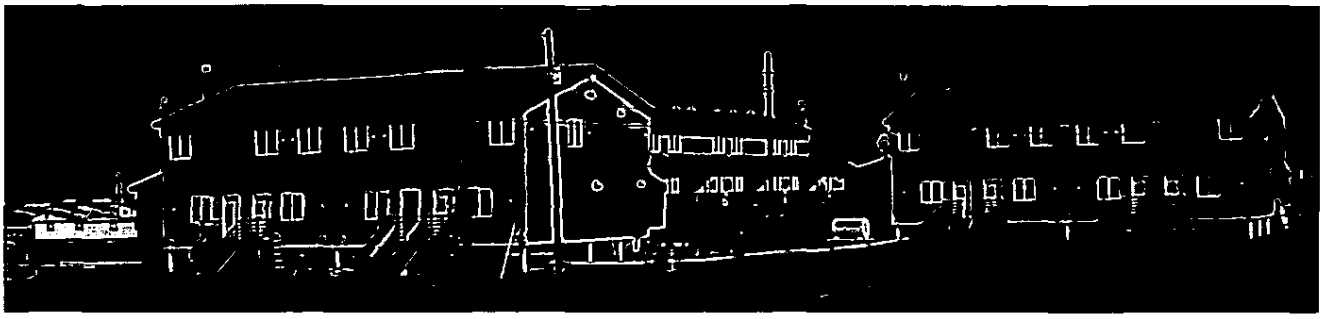
Kotzebue Teacher Housing Project - Northwest Arctic Borough School District built 18 units of housing for ownership by teachers and health professionals in the community of Kotzebue. The project's total cost is $6.2 million. AHFC's Teacher Housing and Health Professional Grant Program provided $1.7 million to the project. AHFC single-family mortgage loans were used to finance the remaining $4.5 million cost of the project for each of the 18 units.

FY 2006 Project:

Sand Point

Sand Point Teacher Housing Project - The Aleutian Housing Authority constructed eight (8) units of teacher, health professional, and public safety rental housing in the community of Sand Point. The project's total cost was approximately $2,881,705. AHFC's Teacher Housing and Health Professional Grant Program provided $1.7 million. The remaining cost of the project was funded with a loan from AHFC, a grant from the Denali Commission and the school district capital project fund. The project was completed September, 2007.

Hooper Bay



Hooper Bay Teacher Housing Project - The Lower Kuskokwim School District built 16 units of teacher housing to partially replace the units destroyed in the 2006 fire in Hooper Bay. Since the project was approved before the fire, materials and crew that were on the way to Hooper Bay and Scammon Bay were prioritized for Hooper Bay. The project's total cost was $5.9 million. AHFC's Teacher Housing and Health Professional Grant Program provided $1.3 million to the project. The remainder of the cost was provided by the school district and a grant from the Denali Commission. The project was completed in January, 2007.

FY 2005 Projects:	
Lower Kuskokwim School District (Eek, Goodnews Bay, Kwilliginok)	$1,384,000
Bering Strait School District (St. Michael)	$592,670
FY 2006 Projects:	
Lower Yukon School District (Hooper Bay, Scammon Bay)	$ 1,967,172
Yukon Koyukuk School District (Hughes, Huslia, Nulato)	$516,933
FY 2007 Projects:	
Akiachak Native Community (Akiachak)	$20,000
Aleutian Housing Authority (Nelson Lagoon, Sand Point)	$1,894,202
Bering Straits School District (Brevig Mission, Unalakleet)	$1,265,748
City of Atka (Atka)	$452,056
Northwest Arctic Borough (Buckland, Deering)	$82,095
Yukon Flats School District (Fort Yukon)	$16,420
Yukon Kuskokwim Health Corporation (Hooper Bay)	$1,222,141
Yupit School District (Akiachak, Akiak)	$180,733
FY 2008 Projects:	
Akiachak Native Community (Akiachak)	$933,227
Aleutian Housing Authority (False Pass, King Cove)	$1,013,037
Bering Strait School District (Shaktolik, White Mountain)	$433,976
City of Tanana (Tanana)	$231,357

FY 2009 Projects:

Alaska Gateway School District (Northway)	2 Units
Bering Strait School District (Savoonga, Koyuk)	5 Units
City of Tanana	1 Unit
City of Wrangell	3 Units
Kenai Peninsula Borough School District (Tyonek)	3 Units
Lower Kuskokwim School District (Kipnuk)	8 Units
Northwest Region School District (Selawik, Shungnak)	14 Units
Pribilof Island School District (St. Paul)	11 Units
Southwest Region School District (Togiak, Manakotak)	12 Units
Yukon-Koyukuk School District (Ruby, Manley Hot Springs)	3 Units

2. Supplemental Housing Development Program

Reference Number:	**#6323**
Historical Category:	**Housing / Social Services**
Location:	**Statewide**
Election District:	**Statewide**
Project Type:	**Construction**
Estimated Project Dates:	**7/01/2009 - 6/30/2014**
FY2010 Request:	**$10,000,000 Corporate Receipts**
FY2010 Funding:	**$_____ Corporate Receipts**

The purpose of the program is to supplement federal housing funds provided to Regional Housing Authorities to ensure safe, decent, affordable housing throughout Alaska.

The projected outcomes are:
- Construction of affordable homes in up to 20 urban and rural communities;
- Build on-site water and sewer facilities;
- Provide energy-efficient design features in homes;
- Construct roads to project sites;
- Provide electrical distribution systems;
- Retrofit homes to provide a safe, healthy, workable home; and
- Provide clients with new safe, energy efficient, comfortable housing.

Supplemental Housing Development Program - Corporate (AHFC) funds to supplement Federal (HUD) funds to construct decent, safe and sanitary housing through regional housing authorities established under AS 18.55.996. Funds are used to cover housing development costs related to water distribution, sewer hookups, electrical distribution systems, and road construction to project site, site development, and energy efficiency improvements. State laws limit the use of these funds to 20% of the HUD's total development cost per unit. These funds are prohibited from being used for administrative or other costs of the housing authority.

Funding History:

FY2009	$8,000,000	Corporate Receipts
FY2008	$6,000,000	Corporate Receipts
FY2007	$6,000,000	Corporate Receipts
FY2006	$4,300,000	Corporate Receipts
FY2005	$4,300,000	Corporate Receipts

FY2004	$4,300,000	Corporate Receipts
FY2003	$4,300,000	Corporate Receipts
FY2002	$4,500,000	Corporate Receipts
FY2001	$3,900,000	Corporate Receipts
FY2000	$3,868,000	Corporate Receipts
FY1999	$4,000,000	Corporate Receipts
FY1998	$6,000,000	Corporate Receipts
FY1997	$7,000,000	Corporate Receipts
FY1996	$10,000,000	Corporate Receipts

Program Description:
AHFC is limited by state statute to contributing 20% of HUD's Total Development Cost (TDC) of a project. Funds are used for on-site water and sewer facilities, roads to project sites, electrical distribution systems, and energy-efficient design features in homes constructed by the Regional Housing Authorities. HUD regulations prohibit the use of development funds for construction of access roads, electrical distribution systems, and certain other infrastructure costs.

Since its inception, the state has appropriated more than $100 million to augment over $500 million in HUD funds and $50 million in Public Health Services funds to build a total over 9,000 houses in over 250 communities.

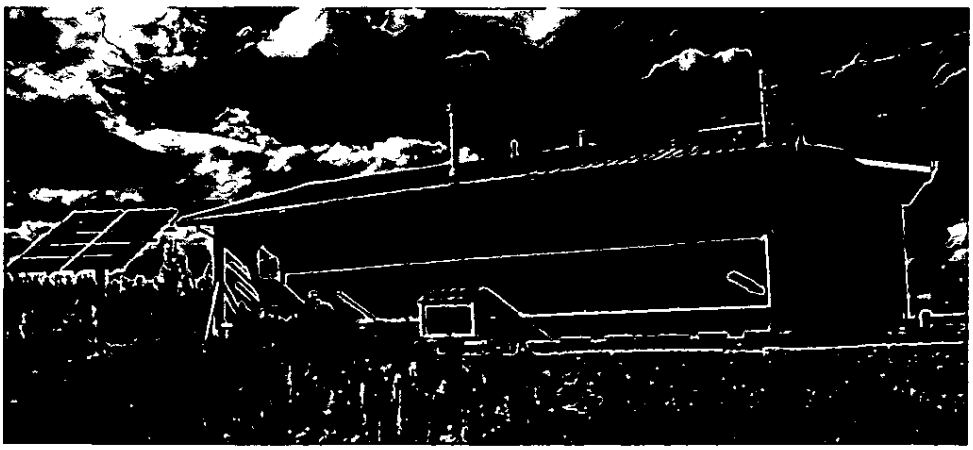
The Supplemental program has been working with the Association of Village Council Presidents (AVCP) this year to provide funds to help rebuild Hooper Bay after fires destroyed much of the village. AHFC has also been working with Cook Inlet Housing Authority on the Creekside development in Anchorage and with the Interior Regional Housing Authority in their pursuit of safe, energy efficient housing in the geographically largest region in the state. Each of the housing authorities deal with extreme building conditions and work, despite escalating fuel prices which drive the cost of construction to new all-time highs.

- Interior Regional Housing Authority put together a trip this summer on the upper Yukon River and invited the Rasmussen Foundation, Denali Commission and the Mental Health Trust Authority to see if they could work in partnership with all the agencies. The trip provided each organization with a new respect for the workers and a much better understanding of how each house built makes a tremendous difference in the lives of the families.

The Shungnak house (left) uses a different foundation system than what you would find in other areas of Alaska due to deep ground freezing. The houses use super insulated walls and floors to keep the residents warm throughout the winter. The arctic entry way provides a place for boots, coats and the family freezer which operates more efficiently in a cool space. The arctic entry way is important in keeping heat loss to a minimum.

These houses were barged to the Village of White Mountain then trucked to the site. The concrete "beams" allowed for easy crane lifting to place the house on its pad. AHFC supports "force account" building practices and is involved through Builder Education funds through ABSN. Force account requires local labor and generally means "stick built" on-site projects.

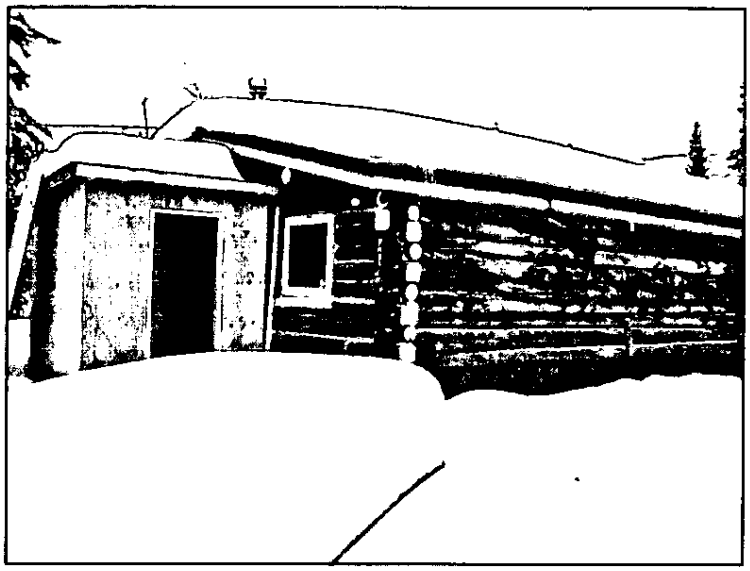
This is part of the Fairbanks Interior Regional Housing Authority low income housing neighborhood development project in Fairbanks. The project was one of the largest neighborhood developments that IRHA has ever participated in.



This house is in Fort Yukon and is using the solar panel (to the left of the house) to help share the energy load for five to six months of the year. The house is a "pilot project" and information on the success will be shared throughout the region.

This is a typical work crew in rural Alaska. Steve Ginnis (Director, IRHA- far right) is standing with the crew for projects in Bettles/Evansville. The young woman in the black tee-shirt was working to help support herself while attending college in Fairbanks.

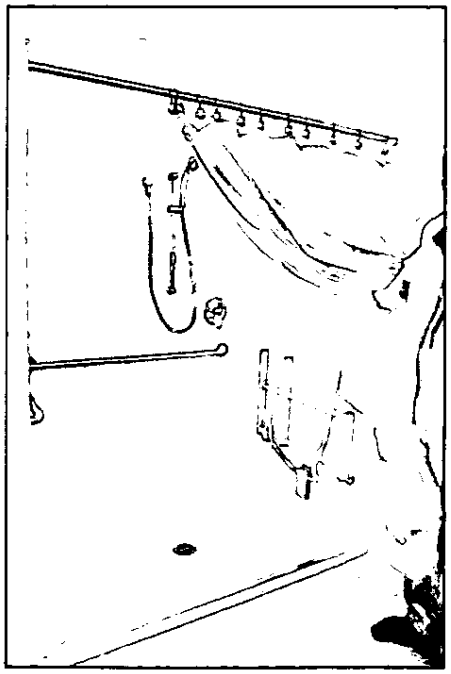
This zero lot is located in the Mendenhall Valley in Juneau, Alaska. The structure is utilizing a new ventilation system designed by a University of Alaska professor to ventilate the structure using less energy while maintaining healthy indoor air quality. The Cold Climate Housing Research Center in Fairbanks is monitoring the project as part of their partnership with AHFC.



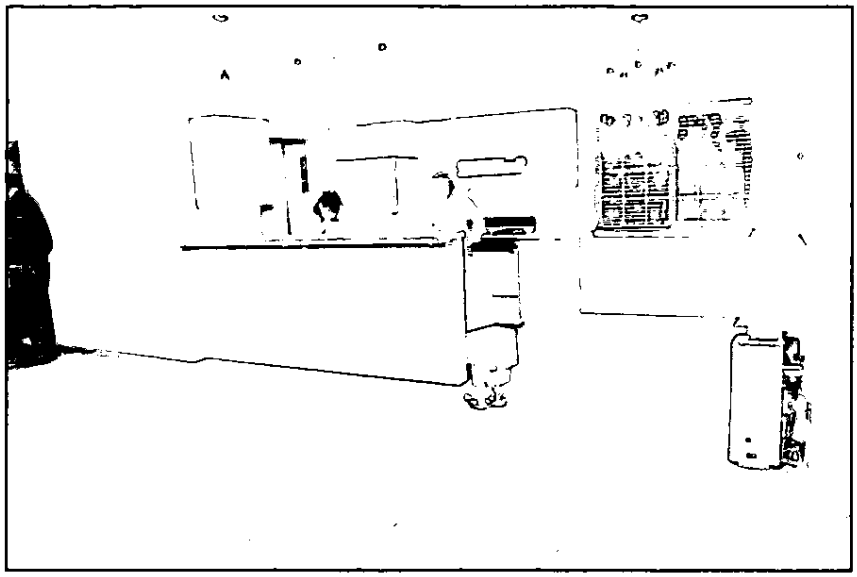
This log structure in Hughes, Alaska has undergone a whole house retrofit. New windows, new arctic entry way, newly insulated crawlspace, new Toyostove, new wood stove and the cabin was re-lamped with compact fluorescent bulbs which have all reduced the energy load for the home owner.

This is a great example of building for the client and climate. Each unit has a storage room built on the north side of the house which also accommodates the boiler room. The storage units are accessible from the outside and include basic shelving. These units are in Kasaan.

This is the front of the handicapped accessible unit. The houses are energy-efficient designs using passive ventilation and a combination of Toyostove and wood heat.



The bathroom is designed to accommodate elders or someone using a wheel chair. Although the flooring looks like hardwood, it's a laminate with a "commercial" rating. These houses are built in an energy efficient, low maintenance, easy-to-keep way. The goal is to keep the houses cheap to heat and maintain which means sustainable building.



Kasaan - Single family unit interior living/dining room area. Floor material is commercial grade vinyl flooring - Toyostove - Kitchen designed for handicapped accessibility.

Ketchikan project - Several multifamily units built by Tlingit Haida Regional Housing Authority in conjunction with Ketchikan Indian Community. The project site has been challenging but the project is on schedule. The units are also using the green building practices utilizing local materials, recycling, "building tight and ventilating right". This project is an excellent example of working together with many agencies and dealing with difficult building sites.

3. Weatherization Program

Reference Number:	**#6332**
Historical Category:	**Housing / Social Services**
Location:	**Statewide**
Election District:	**Statewide**
Project Type:	**Renovation and Remodeling**
Estimated Project Dates:	**7/01/2009 - 6/30/2014**
FY2010 Request:	**$2,000,000 Federal Receipts**
FY2010 Funding:	**$_____ Federal Receipts**

The purpose of the program is to provide cost-effective energy improvements to homes of low-income families.

The projected outcomes are:
- Reduce household operating costs of the client;
- Improve resident health and safety;
- Improve durability and longevity of housing stock;
- Replacement of unsafe heating systems;
- Install smoke detectors in homes;
- Install carbon monoxide detectors in homes.

Weatherization Program - Federal U. S. Department of Energy (DOE) and Corporate (AHFC) funds to assist low- and moderate- income families attain decent, safe, and affordable housing through the weatherization and rehabilitation of existing homes. Weatherization provides for fire safety through furnace and electrical repairs, education, chimney and woodstove repairs, and egress windows (installed during bedroom window replacements).

Funding History:

FY2009	$2,000,000	Federal Receipts	FY2009	$60,000,000	General Fund
FY2008	$300,000,000	General Fund - Supplemental

* *Stripper Funds*

Program Description:
The Weatherization program utilizes US DOE, Corporate funds, and State General funds to assist families to attain decent, safe, efficient, and affordable housing through the weatherization and rehabilitation of existing homes. Much of the older housing stock cannot maintain a minimally comfortable indoor temperature. The "traditional" Weatherization program annually served approximately 625 households and approximately 1,700 individuals. Program clients are mainly elderly, disabled, or families with small children. Most of the families receiving services are the working poor and are not receiving Public Assistance. With the extreme rise (up to and over 30% in the past five years) in cost of materials and shipping to Alaska, the dollar invested does not stretch nearly as far. Increased funding has allowed priority measures to be implemented in homes, as well as, to expand service to a greater number of eligible participants.

Weatherization improves occupant health and safety through the replacement of unsafe heating systems and installation of carbon monoxide detectors. Carbon monoxide problems are resolved, fire safety threats alleviated, egress windows installed, handrails and steps repaired, and moisture and mold problems abated. Client health improves as toxins and asthma triggers are removed and ventilation issues are addressed. Technology has developed concurrently with the program and provides the foundation for improved approaches to new construction for arctic conditions.

Benefits of weatherization:

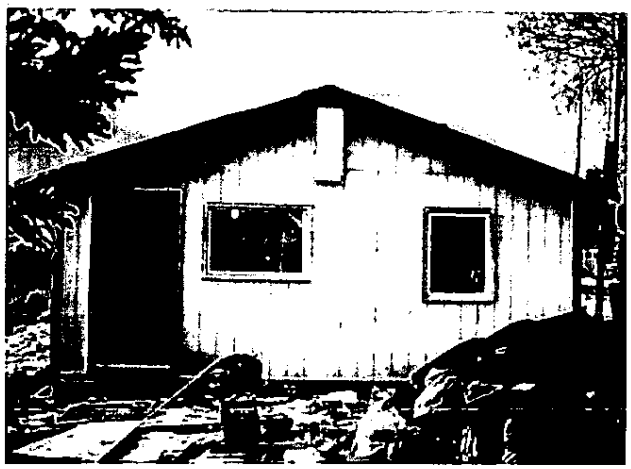
- Reduces overall fuel use / saves client's dollars;
- Helps keep people in their existing homes, reducing the need for public housing;
- Improves existing housing stock reducing, the need for more public housing;
- Materials purchased from local Alaskan vendors;
- Contractors and crew are hired locally and receive training (wages spent locally);
- Savings from fuel costs reinvested in local economy;
- Extensive client education on long-term operations and maintenance (O&M) required to maintain houses;
- Weatherization techniques improve building stock by addressing critical durability issues;
- Health and safety of residents dramatically improved in many cases due to mitigation of problems in the home, i.e., rot, mildew; and helps in eliminating ice dams; and
- Egress windows, smoke alarms, and CO detectors are installed to protect families from fire and carbon monoxide poisoning.

AHFC's ability to properly diagnose and correct problems in existing housing stock through the Weatherization program helps provide a safe, clean environment to clients improving the overall quality of life to pursue a better life for their families .

Regional Funding Allocation

Northern	10.55%
Western	10.57%
Southwestern	7.29%
Interior	6.59%
Fairbanks	14.40%
Southcentral (not Anchorage)	13.09%
Anchorage	26.47%
Southeast (not Juneau)	6.26%
Juneau City and Borough	4.78%

Before **After**



In a national study conducted by the United States Department of Energy's Oak Ridge National Laboratory, the weatherization programs were proven effective in saving both costs and energy on a national and local level. In 1989, this study showed the Weatherization program's annual average energy savings for all fuels was 18.2%. In the updated 1996 study, improvements in the program had increased the average energy savings to over 23%.

The study also surveyed the occupants of the weatherized dwellings to allow them to report on draft reduction, comfort level, safety, and their own health-based incidents of illness due to temperature and air quality within the home. On every rating scale, the occupants reported significant and positive change between the before and after periods, while the control group reported no change.

For every dollar invested, the Weatherization program returns $1.39 in energy-related benefits. In overall benefits (including health and safety and other non-energy benefits), the Weatherization program's cost effectiveness was found to return $2.40 for every dollar invested in the program.

Determining Savings and Diagnostics

In 1996, Alaska weatherization crews began training for and using a computerized energy audit called AkWarm, which requires all conservation measures to have a savings-to-investment ratio of at least one. Extensive diagnostic procedures are also used to determine what measures will provide the greatest savings at the lowest possible costs. Heating systems are diagnosed and system efficiencies are increased an average of 5% to 10%. Blower doors are used to find and reduce air leakage which is one of the largest causes of heat loss in a building. Although no formal study has been funded for the weatherization program, reports from rural communities often place energy savings at 40% to 60 % per household.

Increased Cost of Doing Business/Rise in Fuel Costs

This year, both the price of materials and freight has risen sharply in all areas of Alaska. In rural Alaska, the cost to provide services are approximately 30% higher than last year (AVCP Housing Authority estimates this figure to be as high as 37%). At the same time, many of these remote communities report heating fuels to be between three to five dollars a gallon and rising. The Department of Health and Social Services is currently updating a survey of ten select communities (including both urban and rural) to determine the overall increase in fuel costs over the last year and are finding that the average increase is 30 percent.

Waiting List

Wait lists have increased significantly since the change in income guidelines and influx of funding. The wait lists are expected to triple to approximately 1,200 in urban road connected towns and approximately 2,500 in rural areas. With the over 30% rise in the cost of service, the number of homes that AHFC can serve and the measures that can be applied to those homes is becoming significantly reduced. According to the 2005 Alaska Housing Needs Assessment, there are approximately 33,000 low-income households in need of weatherization services.

Homelessness and Affordability

Other benefits to Alaska include the fact that weatherization is helping many low income clients to stay in their homes, reducing homelessness, and providing affordable housing opportunities. Over 80% of weatherized units are owner-occupied. The median cost of a home today in the Anchorage area is $252,000 which is outside the reach of any low-income person. It is estimated that the average family pays approximately 3.5% of their income in energy-related costs, while the low-income family spends 14%. With the cost of heating fuel continuing to skyrocket, the energy burden on low-income families will continue to threaten their ability to stay in these homes. A director of weatherization in the Fairbanks area estimated that weatherization has prevented at least 20 families from losing their homes each year. A heating system breakdown at -20 degrees F, occurring to a family living from paycheck to paycheck, has

the potential impact to force that family to move out of the house. Weatherization is the only program available in Alaska that repairs and replaces heating systems for low income families. It is the last resort for many families.

Health and Safety

In addition, weatherization works hand-in-hand with local fire officials to reduce significant safety hazards. Carbon monoxide and smoke detectors are placed in houses where appropriate. Mold and moisture are reduced or eliminated. Long-term durability improvements are made, reducing the need for new housing units and saving current housing stock. The intensive client education that accompanies weatherization helps the client to more fully understand the operation and maintenance of their own home for years to come.

Jobs and Skills

Weatherization hires and trains locally in every community where work is being done. The advanced level of retrofit training that is given to each employee stays in these communities and often carries into other building projects ensuring overall energy efficiency in community buildings as well as other housing projects. The building sciences have been advanced significantly by the technology developed and used in the weatherization program, ensuring more efficient, durable, and safer buildings overall. Professional skills spread into the private sector improving new housing stock. *More than **140** Alaskans are employed in the program this year.*

Individual and Community Benefits

Weatherization works very well in Alaska and has proven community as well as individual benefits. For the individual, serious risks to health are reduced and eliminated including: carbon monoxide, mold, rot, frozen pipes, and heating system failure. Much needed household funds are diverted from making payments on critical heating fuel to food, medical, and other household needs. Almost all weatherization households contain a priority one client; 27% elderly, 36% disabled, and 39% with children under the age of six.

For the community, long-term durability improvements on the housing stock are made, reducing the need for new housing units and providing affordable shelter to low-income clients. Job creation provides important cash flow and skills development. Professional skills extend into the private sector improving new housing stock. Local suppliers provide materials for the program. The dollars stay in the state and in the communities where weatherization is being implemented.

Recent Program Changes

With special funding received in FY2008 and 2009, changes were made to increase the median income guidelines from 60% to 100%, and the per-unit limits were adjusted for urban and rural areas. AHFC is working with the new (Regional Housing Authorities) and existing partners to provide training necessary to meet program goals. An ambitious effort is underway to train local crews so that they can be deployed by the spring of 2009. This will dramatically increase the number of units weatherized by the fall of 2009. State and Federal funds are distributed based on federal formulas used by the Weatherization program for 20+ years and are based on

population, income, cost of fuel and heating degree days.

Ramping up to provide the level of services requires extensive training for housing authority crews. That training is underway and significant advances in production will occur in 2009. For the existing providers, the challenge is: hiring and training additional staff, huge demand in client intake, assessing additional homes, and ordering tools, equipment and materials to deploy the program immediately.

In addition, the **Home Energy Rating Rebate Program** was reinstated to provide rebates to owner-occupied homes, either newly constructed or purchased homes that achieve Five Star Plus, or for making energy efficiency improvements to existing homes using energy ratings dated on or after April 5, 2008 statewide.

The rebate amounts are determined by the step increases achieved between the as-is energy rating and post-improvement energy rating. A final rating of a One-Star-plus (1★+) or greater must be achieved for existing homes to qualify for a rebate. This is a one-time rebate for any one family or home for improvements to existing homes and actual expenses for improvements are verified with receipts, and one time rebate for construction of, or purchase of a newly construction Five-Star-Plus home. For improvements to existing homes the maximum rebate amounts:

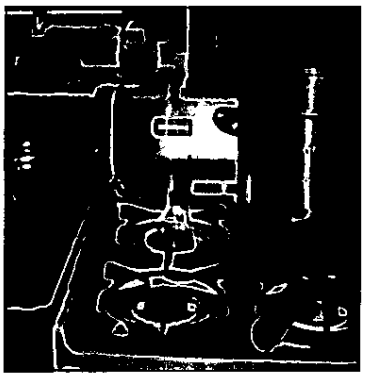
One Step	Up to $4,000
Two Steps	Up to $5,500
Three Steps	Up to $7,000
Four Steps	Up to $8,500
Five Steps	Up to $10,000

For the newly constructed Five-Star-Plus (5★+) rebate of $7,500, owner/builders or purchasers must meet AHFC financing requirements to participate. The financing requirements consist of recorded copies of the PUR-101 and PUR-102 or Certification of Occupancy from an approved local government, i.e., borough, city, etc.; contractor license with residential endorsement, and homeowner must also provide a Five-Star-Plus energy rating and proof of ownership; statutory warranty deed or deed transfer.

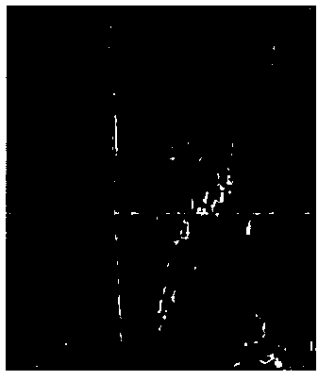
Weatherization Images from Around the State

Ice damming can cause leaks that can damage a home's interior. Warm, moist interior air leaks into cold attic space, condenses into ice, which then leaks back into the home. Weatherization mitigates these problems. Advanced air-sealing, properly applied roofing, and attic insulation can correct these conditions.

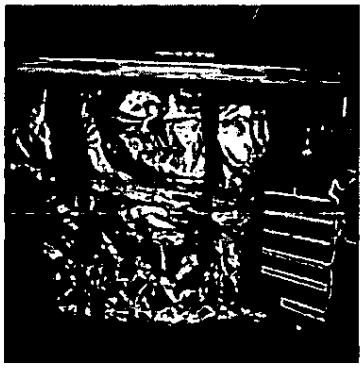
All homes are tested for air leakage, ventilation rates, pressure imbalances, and more. All combustion appliances (water heaters, heating systems, etc.) are tested for efficiency, whether they operate properly, and levels of carbon monoxide (CO). All homes receive CO and smoke detectors. Here a crew supervisor in Galena sets up the blower door to test a house.

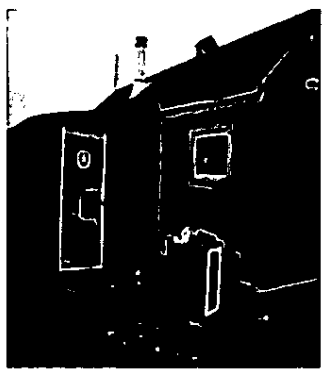


Mold problems are alleviated and conditions that cause mold are eliminated. Weatherization helps to remove conditions that cause illness and disease particularly in children and seniors.



Undesirable humidity sources are addressed through weatherization. Ground cloths help control moisture and microbes that are released from crawl space soil into the home. By insulating and using ground vapor barriers, heat loss is reduced, moisture is controlled, and mold problems are eliminated. At right, the crawl space under the house gets a ground cloth.





Additional funding sources complement weatherization funds and can provide additional benefits, such as access ramps for disabled seniors. One weatherization agency worked closely with World Changers this year to provide services that are more complex to eligible parties.

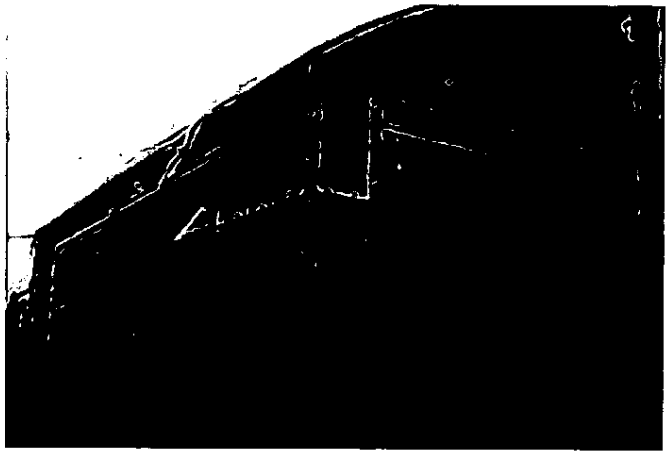
For more information, please contact Mimi Burbage, AHFC Weatherization Program, 4300 Boniface Pky. Anchorage AK 99502, 800-478-2432 or Mburbage@ahfc.state.ak.us

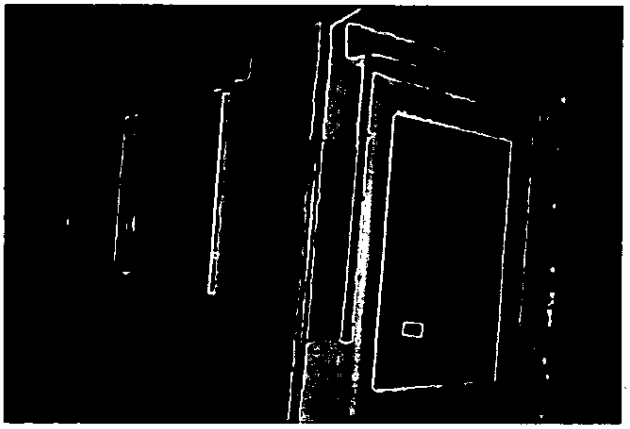
ALASKA HOUSING FINANCE CORPORATION
WEATHERIZATION SUCCESS STORIES
SEPTEMBER 2007

In this RurAl CAP project, a local trained laborer installs fiberglass insulation to an un-insulated floor in Hooper Bay. A layer of Tyvek air barrier will be installed to the bottom of the joists to keep the wind from penetrating the floor system. Foam board will then be added underneath for additional insulation. When completed, the insulation in the floor of this small house (12' x 16') is estimated to cost about $900 installed and according to AKWarm should give an annual savings for the homeowner of about $605 in fuel costs. Stove oil costs more than $5 per gallon at this time and is expected to increase again by this fall. Overall energy savings for this house is projected to be about $1,400 a year.

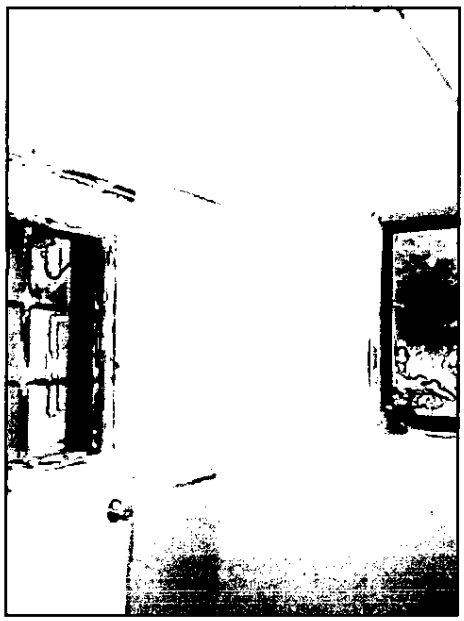
****

This mobile home on the Kenai Peninsula had seen much better days, but it still houses a client with several children that are often sick. Obvious huge heat loss occurred due to missing windows and huge cracks in the walls. Often the weatherization work extends the life of the house by many years and helps provide some of the only truly affordable housing on the market for the lowest income families. (Alaska CDC)





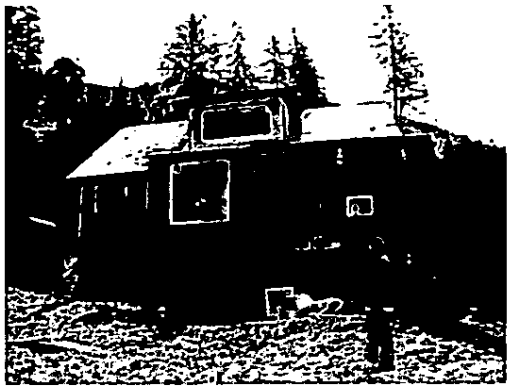
This is a small home in the MatSu Valley. This unheated entry area was added to the home's living space, but the owner was financially unable to complete the work. The addition of drywall not only preserves the insulation, but eliminates massive heat loss with air sealing alone, and greatly improves the interior air quality by eliminating exposure to loose insulation fibers. The home is heated with a space heater, which now uses less fuel and does a much better job with comfort with the reduced drafts. (Alaska CDC)



****

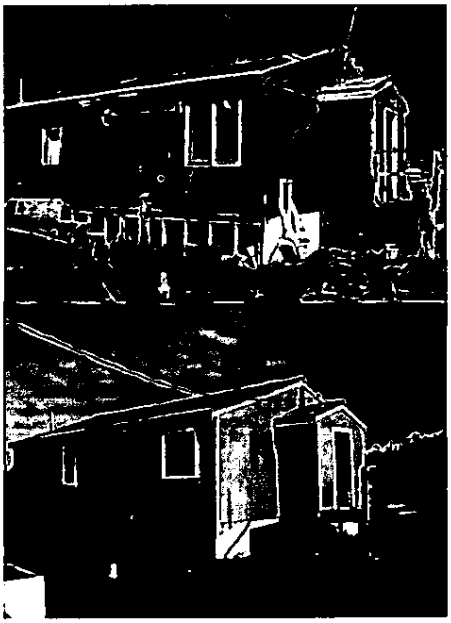
This small log home in Butte suffered high amounts of moisture, which is very easy to see in the winter (frost under eaves), because they were heating with an un-vented natural gas space heater. Because they have no chimney, these heaters produce toxic gases including carbon monoxide and massive amounts of moisture that go directly into the living space. Unfortunately they are still sold in Alaska, and because they are cheap, they are found in many low-income homes where they must be replaced.

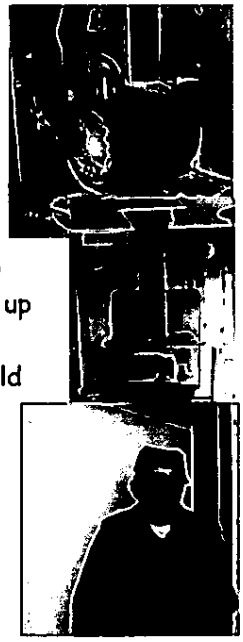
The frost shows where moist air leaks out at the eaves and the icicles show that air leakage into the roof structure melts snow on the roof. Air sealing was addressed during the weatherization process but the icicles will continue at least somewhat because the structure was built as a "hot roof" with no ventilation from eave to ridge. (Alaska CDC)



This house was weatherized and rehabilitated for a priority client in Wrangell. Alaska CDC worked with Tlingit Haida Housing on a joint venture to bring this house back into a healthy, safe, efficient state for this homeowner. Often, the more limited resources of the weatherization program are used to provide advanced technical training to local crews and to focus on those measures which will truly target energy consumption in the home, while other programs take care of structural and health and safety needs.

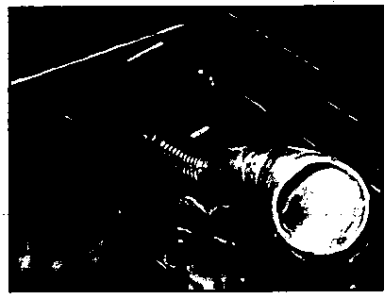
****





This Tanana Chiefs Conference project was completed in Ft. Yukon on a home owned by one of the elders. Weatherization work included air-sealing, insulating the floor, installing new windows and doors. His old barrel stove (like the one pictured) was replaced by a new energy efficient wood stove. The client said he puts two blocks of wood in his stove at night and he wakes up in the morning to a nice warm house, a big change from his previous woodstove. Simon an 83 year old elder was able to help with some of the weatherization work; he enjoys keeping busy. He was very happy with the work that made his house truly livable once again.

****



This bath fan was only vented into an attic space, causing moisture issues in the attic and condensation in the pipe that dripped down into the bathroom. There was also hot air leakage around the bath fan and poor insulation. Weatherization fixed these issues, saving money, and making the bathroom much more comfortable. (Alaska CDC)

4. Senior Citizen's Housing Development Fund (SCHDF)

Reference Number:	**#6334**
Historical Category:	**Housing / Social Services**
Location:	**Statewide**
Election District:	**Statewide**
Project Type:	**Transitional**
Estimated Project Dates:	**7/01/2009 - 6/30/2014**
FY2010 Request:	**$7,500,000 Corporate Receipts**
FY2010 Funding:	**$_____ Corporate Receipts**

The purpose of the program is to provide funds for the development of senior citizen housing. This program has funded 1,099 units to date.

The projected outcomes are:
To fund six development projects or about 90 units, modifications for accessibility for 40 units, and four predevelopment grants for activities such as:

- Purchase of building sites;
- Site preparation;
- Purchase of building materials;
- Construction;
- Rehabilitation, including accessibility modifications;
- Preparation of plans and specifications;
- Project feasibility studies;
- Appraisals; and
- Other pre-development activities.

Senior Citizens Housing Development Program - Corporate (AHFC) funds for grants to municipalities and public or private non-profit corporations, in conjunction with other agencies, for the development of senior citizen housing. Funds can be used for: the purchase of building sites, site preparation, materials, construction, and rehabilitation of existing housing. Organizations qualified to apply include municipalities and public or private nonprofit corporations. Additional components include smaller grants (up to $25,000) for nonprofit senior organizations to pay for preparation of plans and project feasibility studies, appraisals, site preparation and other pre-development activities.

Funding History:

FY2009	$6,000,000	Corporate Receipts
FY2008	$4,500,000	Corporate Receipts
FY2007	$3,000,000	Corporate Receipts
FY2006	$2,000,000	Corporate Receipts
FY2005	$2,000,000	Corporate Receipts
FY2004	$2,000,000	Corporate Receipts
FY2003	$1,375,200	Corporate Receipts
FY2003	$600,000	AHFC Capital Bonds
FY2002	$1,472,200	Corporate Receipts
FY2001	$2,253,500	Corporate Receipts
FY2000	$0	Program Not Funded; however:
FY2000	$278,000	Talkeetna Senior Housing funded with Corporate Receipts
FY1999	$2,050,000	Corporate Receipts
FY1998	$0	Program Not Funded; however:
FY1998	$248,000	Elders Services, Inc. funded with Corporate Receipts
FY1998	$281,700	Homer Seniors funded with Corporate Receipts
FY1998	$625,000	North Pole Seniors, Inc. funded with Corporate Receipts
FY1998	$675,000	Palmer Seniors funded with Corporate Receipts
FY1997	$1,750,000	Corporate Receipts
FY1996	$750,000	Corporate Receipts

Project Description:

These funds are used to support the development of housing for the fastest growing segment of the Alaskan population: persons 60 years of age and older. The 2000 Census showed that Alaska has the second highest growth rate of senior population in the U.S. Only Nevada has a higher growth rate. The number of seniors in Alaska is projected to increase 117% from 2005-2030 (79,430 people). This program targets the housing needs of both low-income and middle-income seniors, as well as, assisting homeowners improve accessibility in their homes insuring safety and the ability to stay in their residence.

This request is based on the estimated demand for senior housing during the application cycle for the SCHDF program, home modification, and senior pre-development grants. Program funds are used only to fund the development "gap", i.e., the amount necessary to make the project financially feasible or the difference between all other funding sources which can be expected to be contributed (including loan funds) and the cost to develop the project.

Any remaining unused funds will be made available under the next funding cycle. Requested funds are to be used to support senior housing with gap funds for acquisition, rehabilitation, accessibility modifications, and/or new construction of senior housing and pre-development grants.

Awards are made on a competitive basis contingent upon Legislative approval.

FY2007 Development Awards:

Wasilla - Birches II	-	28 units - $281,000 Award - TDC $4.5 mil.
Palmer - Chugach Estates	-	31 units - $849,000 Award - TDC $7.3 mil.
Anchor Point	-	4 units - $497,000 Award - TDC $1.2 mil.
Sitka - Monastary St.	-	24 units - $352,288 Award - Rehab Cost $1.3 mil.
Homer - Pioneer Vista II	-	9 units - $519,399 Award - TDC $2.2 mil.

FY2008 Pre-Development ($150,000) Requests:

Kodiak	- 12 units
Sitka	- 10 units
Anchorage	- 10 units

FY2008 Market Study ($50,000) Requests:

Ketchikan	- 22 units
Togiak	- 6 units
Cooper Landing	- 6 units
Seward	- 14 units
Ninilchik	- 8 units
Fairbanks	- 40 units
Haines	- 13 units
Willow-Meadow Lakes-Houston	- 18 units

FY2008 Development Awards:

Cooper Landing - Ravens View Housing	- 6 units	- $729,143	Award - TDC $1.9 mil.
Ninilchik - Tovarish Manor II	- 6 units	- $396,716	Award - TDC $1.54 mil.
Meadow Lakes - Birch Creek Villas	- 8 units	- $613,800	Award - TDC $2.22 mil.
Willow - Willow Parkway	- 6 units	- $705,650	Award - TDC $1.92 mil.
Fairbanks - Raven Landing	- 20 units	- $1,118,356	Award - TDC $4.33 mil.

FY2009 Applicant Requests:

Anchor Point	- 2 units
Homer	- 4 units
Ketchikan	- 10 units
Soldotna	- 6 units
Anchorage	- 59 units
Houston	- 8 units
Togiak	- 6 units

5. Fire Protection Systems Phase I

Reference Number:	**#47066**
Historical Category:	**Development**
Location:	**Statewide**
Election District:	**Statewide**
Project Type:	**Construction**
Estimated Project Dates:	**7/01/2009 - 6/30/2014**
FY2010 Request:	**$3,450,000 Corporate Receipts**
FY2010 Funding:	**$_____ Corporate Receipts**

The purpose of this project is to flush, evaluate and make life/safety code repairs to public housing fire protection systems throughout the state.

The projected outcome is to:
- Reduction in maintenance costs;
- Increased useful life of structure; and
- Increased safety of tenants.

Fire Protection Systems - Phase I utilizes Corporate (AHFC) funds to flush, evaluate and repair fire sprinkler and alarm systems in multi-family and senior/disabled public housing statewide based on a fire system engineer's equipment survey of fire protection systems conducted this year.

Funding History:
This is a new project.

Program Description:
This request will provide funding to flush, evaluate and make life/safety code repairs to public housing fire protection systems throughout the state.

AHFC recently completed a contract with a professional fire safety engineering firm to survey all fire safety systems in AHFC public housing throughout the state. The purpose of the survey was to identify the location, type, age, and condition of the systems. During the survey process, fire protection systems were identified that require upgrades to comply with current fire safety codes, additional evaluation to determine proper function, and components that have exceeded their useful life. This is an initial request to address the most immediate deficiencies identified by the survey as immediate life/safety issues.

This page intentionally left blank.

6. Security Systems Replacement/Upgrades

Reference Number:	**#47068**	
Historical Category:	**Development**	
Location:	**Statewide**	
Election District:	**Statewide**	
Project Type:	**Construction**	
Estimated Project Dates:	**7/01/2009 - 6/30/2014**	
FY2010 Request:	**$750,000**	**Corporate Receipts**
FY2010 Funding:	**$_____**	**Corporate Receipts**

The purpose of this project is upgrade existing security and door access systems to senior/disabled and multi-family public housing complexes.

The projected outcome is to:
- Increase security for residents;
- Reduce theft and vandalism;
- Reduce maintenance and custodial cost; and
- Increase useful life of structure.

Security and Main Entry Door Access Systems utilizes Corporate (AHFC) funds to be used to upgrade existing security and door access systems to senior/disabled and multi-family public housing. The project includes replacement of security and door access systems that are outdated and no longer supported by manufacturers for replacement parts and software.

Funding History:
This is a new project.

Program Description:
This request will provide funding to continue the upgrades for security and main entry door access systems for AHFC senior/disabled and low-income multi-family housing.

A recent survey was conducted to identify the location, configuration and current condition of door access and security systems in senior/disabled and low-income multi-family housing in Anchorage, Fairbanks and Juneau.

Many of the systems were found to be outdated with analog type cameras, recorders, card readers and software components that are no longer supported by the various manufacturers of systems compatible with currently available equipment.

Systems have already been upgraded and standardized in the Anchorage area. This funding is intended to upgrade and standardize systems for Fairbanks and Juneau to use the same digital technology already in place in the Anchorage properties. Standardization will consolidate purchasing and maintenance of system components.

7. Building System Replacement Program

Reference Number:	**#47069**
Historical Category:	**Development**
Location:	**Statewide**
Election District:	**Statewide**
Project Type:	**Construction**
Estimated Project Dates:	**7/01/2009 - 6/30/2014**
FY2010 Request:	**$2,500,000 Corporate Receipts**
FY2010 Funding:	**$_____ Corporate Receipts**

The purpose of this project is to address specific major repair and/or replacement items identified in a five-year review.

The projected outcome is to:
- Reduce maintenance costs,
- Increase the useful life of structure, and
- Increase safety for tenants.

Building System Replacement Program utilizes Corporate (AHFC) funds to address major roof replacement at Chugach View senior/disabled housing in Anchorage; replace sidewalks, retaining walls, stairs and overhead walkways at Cedar Park in Juneau; paint siding for Mountain View senior/disabled housing in Juneau.

Funding History:
This is a new project.

Program Description:
This program is designed to address specific major repair or replacement items identified in a five-year look-ahead review of each rental site. It is intended to address repair or replacement of components with a known life span that can be scheduled for repair or replacement before deferred maintenance results in additional damage or untimely failure that would result in additional cost.

The items identified under this fund request are the roof replacement for Chugach View senior/disabled housing in Anchorage; replacement of sidewalks, retaining walls, stairs and overhead walkways at Cedar Park in Juneau; paint siding for Mountain View senior/disabled housing in Juneau.

This page intentionally left blank.

8. HUD Federal HOME Grant Program

Reference Number:	**#6347**
Historical Category:	**Housing / Social Services**
Location:	**Statewide**
Election District:	**Statewide**
Project Type:	**Renewal and Replacement**
Estimated Project Dates:	**7/01/2009 - 6/30/2014**
FY2010 Request:	**$750,000 Corporate Receipts**
	$3,300,000 Federal Receipts
FY2010 Funding:	**$_____ Corporate Receipts**
	$_____ Federal Receipts

The purpose of this program is to expand the supply of affordable, low- and moderate- income housing and to strengthen the ability of the state to design and implement strategies to achieve an adequate supply of safe, energy-efficient, and affordable housing. This program has funded 44 rental projects containing 818 units and rehabilitated 373 low-income homes. It has assisted another 315 low-income households to purchase homes.

The projected outcomes are:

- Develop affordable rental housing by funding the development gap for four rental projects or about 50 units;
- Weatherize 42 homes;
- Assist 35 home buyers to achieve home ownership for lower-income families by providing down payment and closing cost assistance;
- Preserve low-income homes through a moderate rehabilitation;
- Assist Community and Housing Development (CHDO) with developing affordable housing by funding a portion of their operating costs; and
- Fund other housing needs as specified in the (HCD) plan and as authorized by HUD under 24 CFR Part 92.

HUD Federal HOME Program - utilizes Federal (HUD) funds with Corporate matching (AHFC) funds for the HOME Investment Partnership Program. The purpose of the HOME program is to expand the supply of affordable, low- and moderate- income housing and to strengthen the state's ability to design and implement strategies to achieve an adequate supply of safe, energy-efficient, and affordable housing. The Municipality of Anchorage has their own separate HOME

program.

FY1996	$3,000,000	Federal Receipts	FY1996	$750,000	Corporate Receipts

Program Description:

These funds are used to support the development of affordable housing for lower-income families. Funding is provided to fund:

1) The development gap for affordable rental housing projects, i.e., the difference between project cost and all other sources of funds which are expected to be contributed to the project, including any loan funds that the project's cash flow can support;
2) The cost of moderate rehabilitation to homes owned and occupied by lower-income families;
3) A portion of the costs associated with the purchase of a modest home by lower-income families;
4) A portion of the operating costs of Community Housing Development organizations that are developing affordable housing for lower-income families;
5) Other housing needs as specified in the HCD plan and as authorized by HUD under 24 CFR Part 92.

This request is based on the block grant amount to be received from HUD and the required 25% matching funds to be provided by AHFC, plus program income accumulated by the program to be used, as mandated by HUD, as additional federal HOME program funds.

9. HUD Capital Fund Program

Reference Number:	**#6342**
Historical Category:	**Housing / Social Services**
Location:	**Statewide**
Election District:	**Statewide**
Project Type:	**Renewal and Replacement**
Estimated Project Dates:	**7/01/2009 - 6/30/2014**
FY2010 Request:	**$3,200,000 Federal Receipts**
FY2010 Funding:	**$_____ Federal Receipts**

The purpose of this program is to renovate and modernize the public housing rental units statewide.

The projected outcomes are:
- Modernize public housing rental units;
- Training for staff;
- Training for residents; and/or
- Computer hardware & software upgrades.

HUD Capital Fund Program (CFP) - Federal (HUD) grant that provides Public Housing Authorities (PHA) with funds each year to help renovate and modernize public housing units. The annual CFP fund, including Replacement Housing Factor (RHF) funds, was approximately $2.7 million this fiscal year. The current request is intended to cover the spending authority only, required for the amount of funds anticipated next year, including any other incentives that may be available as a high performing Public Housing Authority.

Funding History:

FY2009	$3,200,000	Federal Receipts	
FY2008	$3,500,000	Federal Receipts	
FY2007	$1,248,200	Federal Receipts

FY1998	$3,100,000	Federal Receipts	

FY1997	$3,521,600	Federal Receipts
FY1996	$4,326,000	Federal Receipts

Program Description:
The federal government, through the U.S. Department of Housing and Urban Development (HUD), provides Public Housing Authorities with money each year to help renovate and modernize their public housing through the Capital Fund Program. To access this money, each PHA, with the active involvement of residents and local government officials, must develop a comprehensive (five-year) plan detailing modernization needs within the PHA's housing inventory and establishing a timetable for meeting those needs. The dollar amount of the annual grant is established by a formula using the number, configuration, and size of the PHA's low rent units. The annual grant also provides funds for administrative expenses, tenant-education projects, drug-elimination/safety projects, and management improvements.

Projects funded by this year's request include: renovation or replacement of Bethel units in Bethel; renovation or replacement of Birch Park I and Birch Park II units in Fairbanks.

Also included are funds to provide operation and management improvements, such as PHA staff training; residents' training; training for low-income businesses; and upgrades to the information system and area-wide network enhancements at low rent developments.

10. Federal and Other Competitive Grants

Reference Number:	**#6348**
Historical Category:	**Housing / Social Services**
Location:	**Statewide**
Election District:	**Statewide**
Project Type:	**Health and Safety**
Estimated Project Dates:	**7/01/2009 - 6/30/2014**
FY2010 Request:	**$1,500,000 Corporate Receipts**
	$3,000,000 Federal Receipts
FY2010 Funding:	**$_____ Corporate Receipts**
	$_____ Federal Receipts

The purpose of this program is to allow AHFC to apply for HUD, other federal agency, and private foundation grants that target the housing needs and supportive services of low-income and special needs groups such as: senior citizens, the mentally, physically, or developmentally disabled, or the homeless. AHFC will also apply for energy-related grants as they relate to housing. When required, AHFC will provide the needed matching funds. Some of the funds received will be passed through to local non-profit sub-grantee organizations that deliver housing and/or services.

The projected outcomes are to successfully compete and fund the matching portion of the following grant programs:

- HUD Supportive Housing;
- Housing Opportunities for Persons With AIDS (HOPWA);
- USDA Housing Preservation Grant Program;
- Grant Match Program; and
- HUD Technical Assistance Program.

Federal and Other Competitive Grants - utilizes federal (HUD) and Corporate match (AHFC) grant funds. AHFC will apply for grants that target the housing needs of low income and special needs groups such as: senior citizens, the mentally ill, disabled or the homeless. AHFC will also apply for energy-related grants as they relate to housing. When required, AHFC will provide the needed matching funds. Some of the grant funds received will be passed through to local non-profit sub-grantee organizations that deliver housing and/or services.

AHFC will make application, as appropriate, to private institutions or foundations to study and/or address such issues as housing delivery systems, safe and viable neighborhoods, homelessness

and aging in place. When required, AHFC will provide matching funds to non-federal grants that target the housing needs of low-income and special needs groups such as senior citizens, the mentally, physically, or developmentally disabled, or homeless.

Program Description:

This program also allows AHFC to apply for and receive federal, state and other grants that target the housing needs and supportive services of low-income and special needs groups such as mentally ill, homeless or disabled persons. Numerous federal and private foundations incorporate a matching cash contribution requirement in their competitive grant programs. The AHFC grant match program has been vital to attracting outside funding into Alaska to meet the housing needs of these special populations.

Most of the federal funds received, as well as the Corporate match funds are customarily passed through to local non-profit or municipal sub-grantee agencies who deliver the housing and related supportive services. Examples of programs with match components include HUD Supportive Housing, Housing Opportunities for Persons With AIDS (HOPWA), and the USDA Housing Preservation Grant Program.

11. Competitive Grants for Public Housing

Reference Number:	**#6350**	
Historical Category:	**Housing / Social Services**	
Location:	**Statewide**	
Election District:	**Statewide**	
Project Type:	**Health and Safety**	
Estimated Project Dates:	**7/01/2009 - 6/30/2014**	
FY2010 Request:	**$250,000**	**Corporate Receipts**
	$750,000	**Federal Receipts**
FY2010 Funding:	**$_____**	**Corporate Receipts**
	$_____	**Federal Receipts**

The purpose of this program is to allow AHFC to apply for HUD, other federal agency, and private foundation grants that target the housing needs of low-income and special needs groups such as: senior citizens, the mentally ill, disabled, or the homeless who are eligible for public and/or assisted housing. AHFC will also apply for grants to prevent crime and substance abuse in public housing and assist public housing families attain economic self-sufficiency. When required, AHFC will provide the needed match.

The projected outcomes are:

- Match requirements for federal grants such as:
  - Drug Elimination Program;
  - Family Self-Sufficiency (FSS) Coordinator and case workers;
  - Senior Services Coordinator; or
  - Resident Opportunities and Supportive Services (ROSS) grant.

Competitive Grants for Public Housing - utilizes federal (HUD) and Corporate match (AHFC) grant funds. AHFC will apply for HUD grants that target the housing needs of low-income and special needs groups such as: senior citizens, the mentally ill, disabled, or the homeless. AHFC will also apply for grants to prevent crime and substance abuse in public housing and assist public housing families in attaining economic self-sufficiency. When required, AHFC will provide the needed match. Some of the funds received will be passed through to local non-profit sub-grantee organizations that deliver housing and/or services.

Funding History:

FY2009	$750,000	Federal Receipts
FY2009	$250,000	Corporate Receipts

FY2008	$750,000	Federal Receipts
FY2008	$250,000	Corporate Receipts
FY2007	$750,000	Federal Receipts
FY2007	$250,000	Corporate Receipts
FY2006	$750,000	Federal Receipts
FY2006	$250,000	Corporate Receipts
FY2005	$750,000	Federal Receipts
FY2005	$250,000	Corporate Receipts
FY2004	$750,000	Federal Receipts
FY2004	$250,000	Corporate Receipts
FY2003	$750,000	Federal Receipts
FY2003	$250,000	Corporate Receipts
FY2002	$750,000	Federal Receipts
FY2002	$250,000	Corporate Receipts
FY2001	$750,000	Federal Receipts
FY2001	$250,000	Corporate Receipts
FY2000	$750,000	Federal Receipts
FY2000	$250,000	Corporate Receipts
FY1999	$750,000	Federal Receipts
FY1999	$250,000	Corporate Receipts
FY1998	$2,000,000	Federal Receipts
FY1998	$250,000	Corporate Receipts

Program Description:
AHFC will apply for grants and utilize those grant funds to target services to families and persons who are eligible for public and/or assisted housing. Grant funds within this category may be used to prevent and reduce crime and substance abuse in public housing and to aid PHD-assisted families to attain economic self-sufficiency. This program also helps implement welfare reform efforts of the state. When required as a condition of funding, AHFC may provide the needed match. Examples of previous grantors include the Robert Wood Johnson Foundation, the Department of Education, U.S. Dept. of Housing and Urban Development and the U.S. Dept. of Health and Human Services.

This project also enables AHFC to receive additional housing assistance from HUD in the form of Section 8 vouchers. Some of the funds received may be passed through to local non-profits of government agencies to deliver the appropriate services throughout the state.

12. Energy Efficiency Monitoring Research

Reference Number:	**#6351**
Historical Category:	**Housing / Social Services**
Location:	**Statewide**
Election District:	**Statewide**
Project Type:	**Health and Safety**
Estimated Project Dates:	**7/01/2009 - 6/30/2014**
FY2010 Request:	**$2,000,000 Corporate Receipts**
FY2010 Funding:	**$_____ Corporate Receipts**

The purpose of this project is to conduct research, analysis, information dissemination, and interchange among members of the industry, as well as, between the industry and the public.

The projected outcomes are:

- Conduct research, analysis, information dissemination and interchange among members of the industry, and between the industry and the public;
- Gather data and perform analysis of geographically diverse area energy-efficient designs for homes; and
- Monitoring homes for energy usage, comfort levels, durability, occupant health, and economic benefits of efficiency features.

Energy Efficiency Monitoring Research - utilizes Corporate (AHFC) funds for a designated grant to Cold Climate Housing Research Center to conduct housing construction research, analysis, and information dissemination among the housing industry and the public. Data gathering and analysis is being continually related to energy efficiency technology for homes constructed in northern building and market conditions.

Funding History:

FY2009	$1,000,000	Corporate Receipts
FY2008	$1,000,000	Corporate Receipts
FY2007	$500,000	Corporate Receipts
FY2006	$500,000	Corporate Receipts
FY2005	$500,000	Corporate Receipts
FY2004	$500,000	Corporate Receipts
FY2003	$300,000	Corporate Receipts
FY2002	$300,000	Corporate Receipts
FY2001	$450,000	Corporate Receipts

FY2001	$500,000	Federal Receipts
FY2000	$0	Corporate Receipts – requested but not funded.

Program Description:
This program funds monitoring and testing of energy efficiency designs, products, and construction technology tests in areas where little is being done in the Alaskan arena. Considering the diverse building conditions and requirements across the state, the homebuilding industry has indicated they would like to see research and testing of energy efficiency designs in different regions in the state.

AHFC is required by state law to purchase homes that meet minimum energy efficiency standards. The Corporation has established and funded incentive programs for increased energy efficiency in homes. Currently, Corporate arbitrage dollars are used to offer reduced interest rates on homes that meet or exceed energy rating criteria. Yet, little information is currently available about the cost benefits to the homeowner over time from these programs or how effective certain energy efficiency designs have been across Alaska's climate regions.

Funds requested here would be to conduct research, analysis, and information dissemination and interchange among members of the industry, as well as, between the industry and the public.

The following will be provided through the Cold Climate Housing Research Center: Data gathering, as well as, analysis of energy efficient designs for homes. Alaska has a wide range of climates and temperatures, with everything from coastal rain forests to arctic tundra. Energy efficiency designs and technologies for homes need to address conditions in each of these regions across the state.

Homes with different energy efficiency designs would be monitored for energy usage, comfort levels, durability, occupant health, and economic benefit of efficiency features. Different regions of Alaska would be monitored along with different energy efficiency designs.

Activities should have a high level of effectiveness and success based on three reasons:

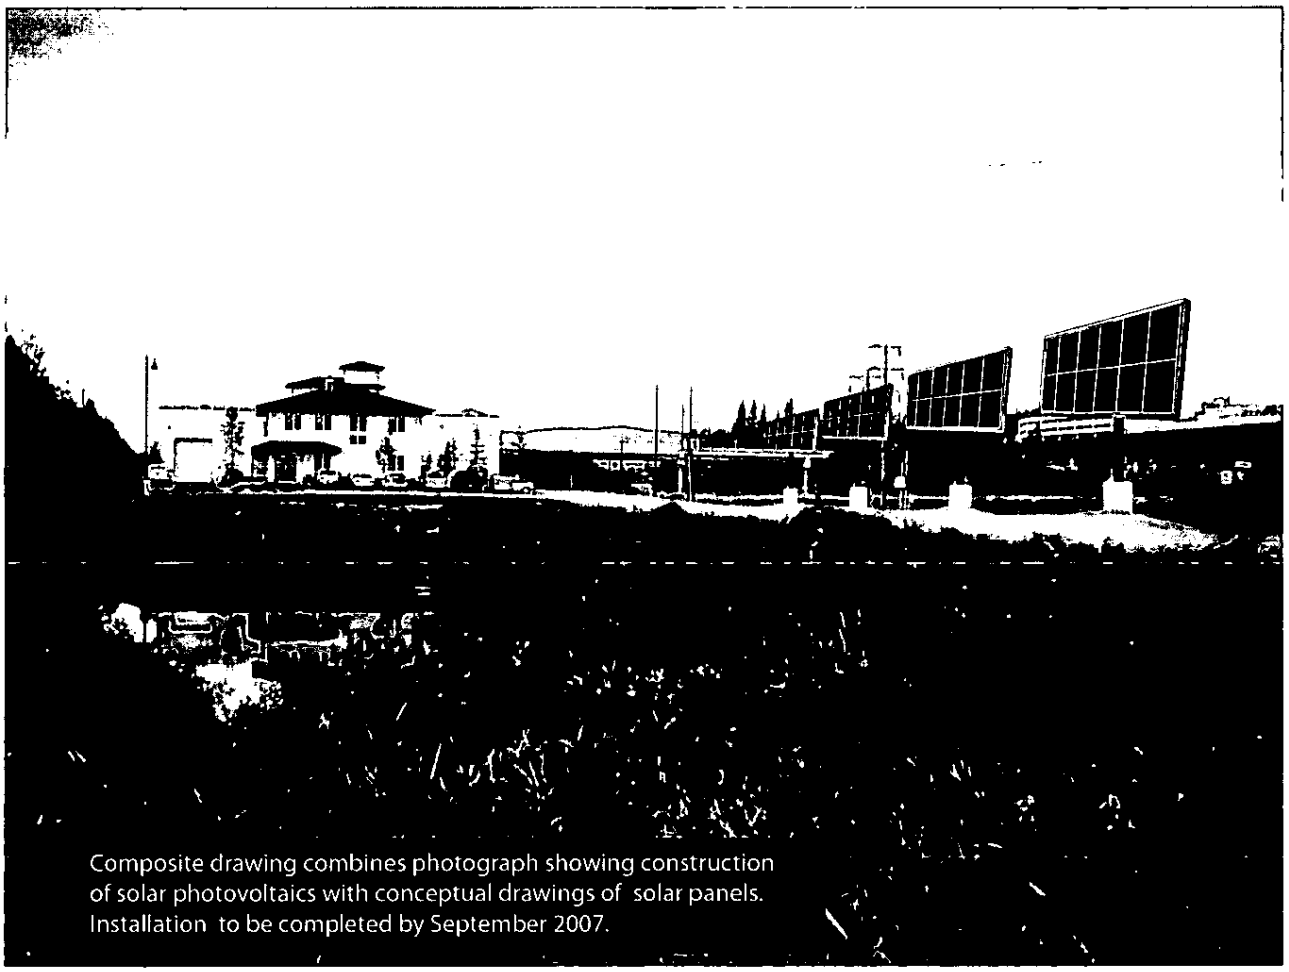
1. **Programs and projects will be results oriented.** Home building is a practical activity. Monitoring research and analysis should seek workable answers to real problems of home building and to real ways to improve homes across Alaska. Future trends and developing technologies need to be considered, with an emphasis on the impact that such trends and technologies will have on the way the homes are actually built.

2. **Contact with the real world of home building needs to exist by having some ties to the state home building industry.** In addition to a statewide association, local home building associations exist in Anchorage, the Kenai Peninsula, Ketchikan, Juneau, Interior Alaska, Mat-Su, and Kodiak. These associations could provide a grassroots network of cooperating

builders. When research is launched, builders would be expected to provide direction on specific questions, technologies, designs, and to cooperate in studies and field tests.

3. **Research & analysis flow directly into the building industry and the public.** Monitoring results would be expected to help link the research and product development communities with the practitioners who put methods into practice and products into use. The involvement of the building industry is intended to increase builder's confidence in the findings. All results and analysis would be publicized and disseminated throughout the housing industry, creating a favorable climate for the adoption of desirable changes.

Hybrid Micro Energy Project (HMEP)



Composite drawing combines photograph showing construction of solar photovoltaics with conceptual drawings of solar panels. Installation to be completed by September 2007.

The Cold Climate Housing Research Center (CCHRC) in collaboration with British Petroleum (BP), the State of Alaska, Fairbanks North Star Borough, Siemens, GW Scientific, Remote Power Incorporated, the University of Alaska Fairbanks, EEInternet, the Cooperative Extension Service and the Golden Valley Electric Association on a two-year demonstration project that

tests and monitors a hybrid system composed of solar photo voltaic, solar thermal, wind and a biomass Combined Heat and Power (CHP) unit. The Hybrid Micro Energy Project (HMEP) has been designed for the high-latitude challenge of minimal solar energy during the long winter when energy demand is greatest and bountiful solar energy when demand is less.

During the cold months of the year, the hybrid system utilizes the biomass CHP unit as well as demonstrates the potential of wind to augment heat and power needs. The HMEP project, funded primarily by BP, the Fairbanks North Star Borough, and the State of Alaska, is based at CCHRC's Cold Climate Building and Infrastructure Research and Testing Facility (RTF) in Fairbanks, Alaska. CCHRC is a 501c(3) corporation founded by members of the Alaskan homebuilding industry. The RTF is CCHRC's research and testing facility which is, in itself, a set of research and demonstration projects with over 600 sensors monitoring each component in the building from the foundation to the roof. Project deliverables include: ongoing web-based performance reports, final report, PowerPoint presentation, an education course on renewable energy systems and at least one public meeting to present the demonstrations and results of the project.

Hybrid micro-power systems are particularly suited for Alaska's rural communities as an economical and sustainable supplement to diesel for producing electricity and heat. A hybrid micro-power system designed for rural Alaska that is simple to install and easy to maintain has worldwide potential. Every step AHFC takes puts us further down the road toward sustainable communities.

13. State Energy Program (SEP) Special Projects

Reference Number:	**#32526**	
Historical Category:	**Housing / Social Services**	
Location:	**Statewide**	
Election District:	**Statewide**	
Project Type:	**Health and Safety**	
Estimated Project Dates:	**7/01/2009 - 6/30/2014**	
FY2010 Request:	**$50,000**	**Corporate Receipts**
	$150,000	**Federal Receipts**
FY2010 Funding:	**$_____**	**Corporate Receipts**
	$_____	**Federal Receipts**

The purpose of this program is to allow the State to participate in special project grants offered by the federal Department of Energy to promote energy related technologies and research.

The projected outcomes are advancements in:
- Building technologies;
- Codes and standards;
- Wind and power technologies;
- Renewable energy for remote areas; and/or
- Transportation technologies.

State Energy Program (SEP) Special Projects - utilizes federal Department of Energy (DOE) and Corporate match funds for State Energy Program (SEP) special projects such as: building technologies, Codes and Standards, Wind and Power technologies, renewable energy for remote areas, or transportation technologies.

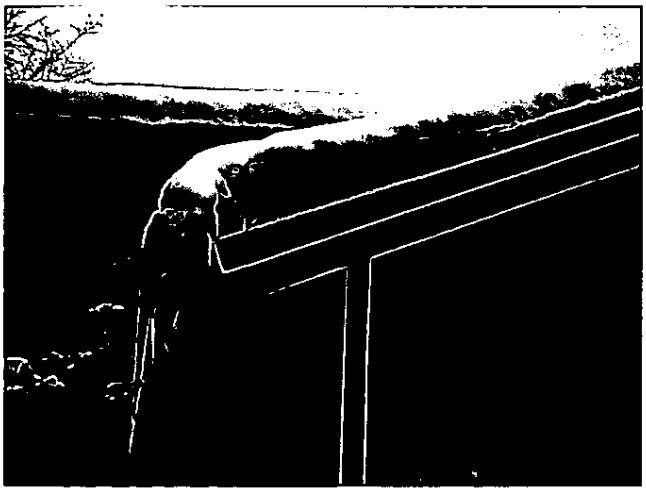
Funding History:

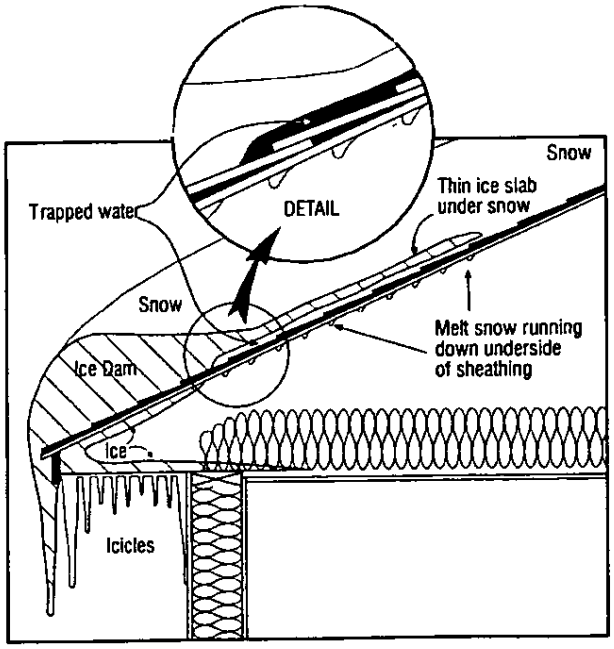
FY2009	$150,000	Federal Receipts	FY2009	$30,000	Corporate Receipts
FY2008	$360,000	Federal Receipts	FY2008	$30,000	Corporate Receipts
FY2007	$300,000	Federal Receipts	FY2007	$30,000	Corporate Receipts
FY2006	$300,000	Federal Receipts	FY2006	$30,000	Corporate Receipts
FY2005	$483,000	Federal Receipts	FY2005	$50,000	Corporate Receipts
FY2004	$423,500	Federal Receipts	FY2004	$50,000	Corporate Receipts
FY2003	$150,000	Federal Receipts	FY2003	$30,000	Corporate Receipts
FY2002	$150,000	Federal Receipts	FY2002	$30,000	Corporate Receipts

FY2001 $150,000 Federal Receipts FY2001 $30,000 Corporate Receipts
Prior funding for this program has been included in past operating budgets under Revised Program (RPL) process.

Program Description:
The DOE provides competitive grants to State Energy Programs for specific activities including: building technologies, Codes and Standards, Wind and Power technologies, renewable energy for remote areas, or transportation technologies. DOE solicitations for these special projects occur typically in January or February. Awards are made in June. AHFC has been successful in obtaining special projects awards for wind monitoring, codes and standards, and seafood processing audit program. Approximately $14 million is made available annually for these types of grants to all states on a competitive basis.

This program will help promote the conservation of energy and reduce the rate of growth of energy demand. The program will also help reduce dependence on imported oil through the development and implementation of a comprehensive State Energy Program (SEP) and the provision of federal financial and technical assistance to states in support of such programs. The program is funded through the DOE, and requires a 20%-50% state match, most of which is provided through the agencies receiving funding from AHFC. Funds will be used by AHFC to promote education for consumers, Realtors, Builders, and other housing professionals in the energy efficient arena. In FY 2007, over 2,500 people attended education opportunities offered through this program.





14. Statewide Project Improvements

Reference Number:	**#40068**	
Historical Category:	**Housing / Social Services**	
Location:	**Statewide**	
Election District:	**Statewide**	
Project Type:	**Renewal and Replacement**	
Estimated Project Dates:	**7/01/2009 - 6/30/2014**	
FY2010 Request:	**$3,000,000**	**Corporate Receipts**
FY2010 Funding:	**$_____**	**Corporate Receipts**

The purpose of this project is to provide funding to address known and unknown conditions in AHFC's housing stock.

The projected outcomes are advancements in:
- Providing amenities not programmed;
- Enhancing operations;
- Providing funding for emergency repairs, i.e., roof replacements, fire alarm systems, etc.;
- Allowing quick response to code changes and life safety issues; and
- Allowing quick response to unforeseen conditions.

Statewide Project Improvements - utilizes Corporate (AHFC) funds to provide repairs, deferred maintenance, and improvements to AHFC-owned properties throughout the state. This project will allow AHFC to keep pace with the deterioration of existing components of the rental properties such as roofs, sidewalks, and common areas. It will enhance operations, allow quick response to ordinance and code changes. The primary function of this fund is to address those major or extraordinary work items identified annually through the Physical Needs Assessments (PNA) by the public housing maintenance staff and Asset Supervisors.

Funding History:

FY2009	$2,500,000	Corporate Receipts
FY2008	$2,000,000	Corporate Receipts
FY2007	$2,000,000	Corporate Receipts
FY2006	$150,000	Corporate Receipts

Program Description:
Statewide Project Improvements is an on-going yearly request to address items identified annually by Physical Needs Assessments (PNAs) that make AHFC properties safer and more

convenient for AHFC residents. In the past, this fund has also been used for emergency roof replacement in Fairbanks, installation of security systems in our senior/disabled housing in Anchorage, replacement of an emergency generator for senior/disabled housing in Ketchikan, emergency replacement of boilers in a senior/disabled facility in Juneau and slope stabilization at a family housing complex in Juneau. Additionally, this funding has been used to respond quickly to fire or flood damage where the cost of repairs is under the Corporation's insurance deductible. Projected future uses also include sidewalk replacement, installation of storage sheds, covered parking at senior facilities, increased parking lot lighting, and installation of additional security systems at other public housing facilities where needed.

In addition, the routine maintenance funding received from the federal government is not keeping pace with the deterioration of existing items. It is important that AHFC have the funding to maintain the units in a viable condition and avoid future deferred maintenance.

Funding this request will result in the enhancement of AHFC rental units throughout the state; increasing their rent-ability and lowering their maintenance costs.

15. Loussac Manor Redevelopment - Phase III

Reference Number:	**#43076**
Historical Category:	**Housing / Social Services**
Location:	**Anchorage Downtown/Rogers Park**
Election District:	**23**
Project Type:	**Renewal and Replacement**
Estimated Project Dates:	**7/01/2009 - 6/30/2014**
FY2010 Request:	**$8,492,400 Corporate Receipts**
FY2010 Funding:	**$_____ Corporate Receipts**

The purpose of this project is to begin the third phase of renovation which will replace all structures under a phased plan that would utilize existing foundations.

The projected outcomes are to:

- Replace old housing stock that has exceeded its useful life span;
- Reduce operating and maintenance costs;
- Reduce energy expenditures through increased energy efficiency;
- Improve tenant comfort and safety;
- Reduce liability associated with life safety issues;
- Increase rent-ability of units; and
- Protect existing structures.

Loussac Manor Redevelopment - Phase III - utilizes Corporate (AHFC) funds to replace low rent housing based on a professional site assessment that included cost estimates recommending phased replacement of the existing structures as the most cost effective method to address the 40+ year old family housing structures. The Loussac Manor redevelopment configuration will be based on recommendations from a consulting firm commissioned to review the existing Loussac Manor complex and Anchorage area (positioning). The study will be used to determine the optimal usage for the Loussac site in keeping with the recently approved Moving to Work (MTW) program. This phase is expected to address replacement of the core public housing units identified by the repositioning study as the most critical units needed.

Funding History:

FY2009	$2,336,000	Corporate Receipts
FY2008	$2,336,000	Corporate Receipts

Program Description:

Loussac Manor Housing Complex is located between A and C Streets in Anchorage, Alaska. The complex was constructed in 1965 and consists of 21 multifamily residential buildings, a child care center, a community building and a maintenance shop (constructed in 1999). Residential buildings consist of one to five units in each building and units are configured as two to five bedrooms.

An initial site assessment was conducted in 2001 by USKH and was updated in 2006 by DEAN Design. The updated site assessment and cost estimates concluded the buildings were no longer economically feasible to renovate and the cost to replace the structures would be substantially the same as the cost of renovation. After review and analysis of the updated site assessment, and AHFC concurrence with the findings, a shift in strategy was required from "renovate" to "replace" the buildings within HUD modernization guidelines.

This request will fund redevelopment by replacing the structures, based on recommendations by the consultant, of the most efficient and cost effective configuration for the housing complex and area where it is located.

The redevelopment will be based on the recommendations of a consultant commissioned to conduct a repositioning study of the Anchorage area in general and the Loussac Manor in particular. The repositioning study is a follow-up to the HUD mandated Asset Management model now used by the AHFC Public Housing, as well as in keeping with the recently approved Moving to Work (MTW) program that allows AHFC more flexibility in delivering public housing and related services. This funding request would replace structures under a phased plan that will utilize the optimal mix of public housing determined by the repositioning study to be the most efficient and cost effective use of public housing resources. Redevelopment of this project is consistent with expectations for the MTW program.

The original Loussac Manor housing complex has exceeded its useful life expectancy and is not economical to maintain. Failure to fund this request will result in continued high maintenance costs, excessive energy usage, continued deterioration of the complex and increased risk to the health and safety of the tenant population.

16. Denali Commission Projects

Reference Number:	**#41531**
Historical Category:	**Housing / Social Services**
Location:	**Statewide**
Election District:	**99**
Project Type:	**Health and Safety**
Estimated Project Dates:	**7/01/2009 - 6/30/2014**
FY2010 Request:	**$5,000,000 Federal Receipts**
FY2010 Funding:	**$_____ Federal Receipts**

The purpose of this project is to administer the Denali Commission's housing programs primarily to rural Alaska.

The projected outcomes are to:
- Increase the production of additional housing for teachers in rural Alaska by 30 units; and
- Increase the production of additional housing for rural elders in Alaska by 37 units.

The Denali Commission Projects - utilize federal funds to administer the Commission's housing programs. These funds will allow AHFC to administer current programs designated for rural areas of Alaska. The Denali Commission's goal is to provide decent, affordable housing for seniors and teachers in rural Alaska. Lack of housing has forced seniors to relocate to other communities where appropriate housing with necessary support is available. Lack of decent rural housing for teachers has been cited by school administrators as one of the factors that contribute to the inability to attract and maintain a stable teaching corps. The United States Congress has responded to this issue by setting aside funding through the Denali Commission for these purposes.

Funding History:

FY2009	$7,000,000	Federal Receipts
FY2008	$10,000,000	Federal Receipts
FY2007	$17,000,000	Federal Receipts

Note: FY2006 was funded with Federal Receipts through a Revised Program Legislation (RPL) in the Federal and Competitive Grants program for $20,000,000.

Program Description:
Attracting and maintaining a pool of qualified teachers in rural Alaska is a goal of the State of Alaska. In order to achieve this, housing for teachers must be available, affordable and of a

quality that encourages these professionals to locate in rural settings. These funds will also be used to support the development of housing for the fastest growing segment of the Alaskan population; persons 55 years of age and older. A statewide needs assessment done in 2006 showed that there is $1 billion of senior housing needed to address the growth in the senior population through 2030. The population of seniors (over 60) is projected to increase 117% by 2030, or approximately 80,000 people.

Elder Supportive Housing Program - Projects will be part of a statewide strategy for elder supportive housing needs. In the spring of 2006, the Alaska Senior Housing Needs Assessment will be completed under this program. Funds will be allocated on a competitive basis. Many elders require medical attention that necessitates them to either live in hub communities so they can be close to hospitals, or to travel out of their home regions to larger, unfamiliar cities. The housing projects planned under this program will allow elders to remain in their home communities and home regions as long as possible by greatly enhancing elder access to necessary medical treatment, monitoring and supervised follow-up. To date, 24 elder housing units have been completed and 125 are under construction.

Teacher Housing Program - In accordance with the 2005 Denali Commission Teacher Housing Strategy, AHFC will partner with the Denali Commission to provide newly constructed teacher housing units and repair existing housing stock for teacher housing. The Commission's Teacher Housing strategy places an emphasis on:

- A repair/renovation option to improve existing teacher housing stock; (50% Cost share)
- A priority for new construction in communities prioritized by level of need: (Cost share determined by AHFC underwriting process).

Since 2004, the Denali Commission Teacher Housing Program has funded the development of 164 rental units of housing in 35 rural Alaska communities.

17. Statewide Energy Improvements

Reference Number:	**#45388**
Historical Category:	**Health and Social Services**
Location:	**Statewide**
Election District:	**Statewide**
Project Type:	**Renovation and Remodeling**
Estimated Project Dates:	**7/01/2009 - 6/30/2014**
FY2010 Request:	**$5,000,000 Corporate Receipts**
FY2010 Funding:	**$_____ Corporate Receipts**

The purpose of this project is to implement some of the energy efficiency findings developed during the energy audit process throughout the state.

The projected outcome is to:
- Implement energy efficiency findings;
- Lower energy costs

Statewide Energy Improvements - utilizes Corporate (AHFC) funds to address specific recommendations suggested in the required energy audits performed throughout the state. Energy audits are conducted at regular intervals as required by HUD to monitor the energy efficiency of public housing. The audits identify specific improvements that can be made to the housing to reduce energy consumption. This request is to address specific recommendations by energy audits this past year.

Funding History:

FY2009	$500,000	Corporate Receipts

Program Description:

This request will provide funding to implement some of the energy efficiency findings developed during the energy audit process throughout the state.

AHFC conducts energy audits of their existing properties every five years as required by HUD. During the audit process, areas of energy savings are identified, quantified and recommendations made to address the deficiencies. This is the first of a yearly request to implement the most advantageous of the currently identified energy savings recommendations by addressing the recommendations with the shortest payback potential.

Implementation of these identified tasks will lower energy costs to both the tenant and to AHFC, while providing comfortable housing for families and elderly residents. Additionally, once implemented, many of the recommendations are maintenance friendly and require little upkeep, freeing maintenance personnel for other tasks. Implementing these tasks will also allow AHFC to remain in compliance with HUD mandates to reduce energy usage.

18. Statewide ADA Improvements

Reference Number:	**#45389**
Historical Category:	**Health and Social Services**
Location:	**Statewide**
Election District:	**Statewide**
Project Type:	**Renovation and Remodeling**
Estimated Project Dates:	**7/01/2009 - 6/30/2014**
FY2010 Request:	**$500,000 Corporate Receipts**
FY2010 Funding:	**$_____ Corporate Receipts**

The purpose of this project is to address recommendations suggested in the recent ADA audit.

The projected outcome is to:

- Be in compliance with HUD Voluntary Compliance Agreement;
- Be in compliance with Americans with Disabilities Act;
- Be in compliance with Section 504 of the Fair Housing Act;
- Address recommendations suggested in the recent ADA audit;
- Maintain federal funding by complying with HUD;
- Increase comfort of tenants; and
- Increase unit rentability.

Statewide ADA improvements - utilizes Corporate (AHFC) funds to address accessibility upgrades identified by a HUD Fair Housing Inspection dated September 2006. The upgrades are to be made over a five-year period to comply with ADA and Section 504 requirements of a Voluntary Compliance Agreement (VCA) recently negotiated with HUD.

Funding History:

FY2009 $500,000 Corporate Receipts

Program Description:

This request will provide funding to continue the upgrades for accessibility to the AHFC Family Investment Centers, dwelling units, and common areas for family and senior/disabled housing to comply with the HUD Voluntary Compliance Agreement (VCA).

AHFC was subjected to an inspection by HUD in September 2006 for accessibility for individuals with disabilities. A report dated October 2006 was received by AHFC on September 27, 2007, which details compliance issues at six specific residential

properties chosen randomly in Anchorage and Fairbanks and their respective Family Investment Centers.

The report details requirements to upgrade parking spaces, sidewalks, wheelchair ramps, kitchens, bathrooms, entry doors and appliances in AHFC offices, common areas, and dwelling units.

A Voluntary Compliance Agreement (VCA) has been negotiated with HUD to address the accessibility issues over the course of a five-year program where AHFC is expected to upgrade a minimum number of units to satisfy the terms of the VCA with HUD.

Implementation of these accessibility upgrades will increase accessibility for individuals with disabilities, allow for aging in place for seniors and allow AHFC to comply with all applicable federal regulations. Implementing these tasks will also allow AHFC to remain in compliance with HUD mandates to maintain accessibility.

If AHFC does not move forward on this program, HUD may impose sanctions for non-compliance with HUD and federal accessibility guidelines and the VCA.

19. Birch Park II (B Building) Reconstruction

Reference Number:	**#47070**	
Historical Category:	**Development**	
Location:	**Fairbanks**	
Election District:	**Fairbanks**	
Project Type:	**Construction**	
Estimated Project Dates:	**7/01/2009 - 6/30/2014**	
FY2010 Request:	**$800,000**	**Corporate Receipts**
	$640,000	**Federal Receipts**
FY2010 Funding:	**$_____**	**Corporate Receipts**
	$_____	**Federal Receipts**

The purpose of this project is to replace the four-plex structure in Fairbanks, previously destroyed by fire.

The projected outcome is to:
- Restore four units to the low-rent housing market in Fairbanks; and
- To create a two-bedroom wait-list for AHFC-owned Public Housing.

Birch Park II B Building Reconstruction utilizes federal and Corporate (AHFC) funds to reconstruct the 4-plex structure in Fairbanks with four 2-bedroom units. Construction of the new structure will match the adjacent buildings in the same complex, comply with current codes, and employ the same energy efficient 2 X 8 wall construction and durable commercial grade interior and exterior finishes. The.building was previously destroyed by fire.

Funding History:
This is a new project.

Program Description:
Birch Park - Building B was a townhouse style four-plex building in Fairbanks that was destroyed by fire. Insurance proceeds were not sufficient to rebuild the structure due to the follow expenses incurred subsequent to the fire:

- The deductible gap;
- Costs to secure the structure;
- Costs to demolish the debris;

- Costs to provide for a design that would comply with current building codes adopted by the City of Fairbanks; and
- The unprecedented escalation in building costs.

The funds requested will be combined with the insurance proceeds currently in the Fairbanks Asset Management Program (AMP) reserves (Federal Receipts), to reconstruct the four-plex structure with four two-bedroom townhouse units on the remaining foundation.

The new structure will be designed to match the existing housing units/adjacent buildings with energy efficient 2 X 8 wall construction, current code compliance and commercial grade interior and exterior finishes for maximum durability.

The two-bedroom configuration will provide for a previously unavailable two-bedroom waiting list. This will allow greater flexibility in providing housing for smaller families, which will enable AHFC to reduce vacancy rates where smaller families could not previously be housed in available three-bedroom or larger units.

Mental Health Bill

1. Homeless Assistance Program
(Mental Health Bill)

Reference Number:	**#45390**	
Historical Category:	**Housing / Social Services**	
Location:	**Statewide**	
Election District:	**Statewide**	
Project Type:	**Transitional**	
Estimated Project Dates:	**7/01/2009 - 6/30/2014**	
FY2010 Request:	**$6,000,000**	**Corporate Receipts**
	$500,000	**MHTAAR**
	$500,000	**General Funds/Mental Health**
	$1,000,000	**Statutory Designated**
	$2,000,000	**Federal Receipts**
FY2010 Funding:	**$_____**	**Corporate Receipts**
	$_____	**MHTAAR**
	$_____	**General Funds/Mental Health**
	$_____	**Statutory Designated**
	$_____	**Federal Receipts**

The purpose of this program is to support programs that address homelessness by providing assistance to families in imminent danger of becoming homeless, or those who are currently homeless.

The projected outcomes are to:
- Prevent near homeless individuals and families from becoming homeless; and/or
- Provide homeless individuals and families assistance to obtain safe, sanitary shelter.

Homeless Assistance Program - utilizes Corporate (AHFC) funds, Mental Health Trust Authority Receipts (MHTAAR), State General Funds/Mental Health (GF/MH), Statutory Designated (SD), and federal funds for grants to local communities/agencies to help develop programs to support programs designed to reduce homelessness by providing services that prevent housing displacement and assist the homeless to transition back to permanent housing. Corporate funds will be leveraged with the other funds. All funds will be combined and administered as one program by AHFC.

Funding History:

FY2009	$3,500,000	Corporate Receipts
FY2009	$2,500,000	Statutory Designated Receipts
FY2009	$1,500,000	Mental Health Trust Fund Receipts (MHTAAR)

FY2000	$250,000	Corporate Receipts
FY2000	$200,000	Mental Health Trust Fund Receipts (MHTAAR)
FY1999	$250,000	Corporate Receipts
FY1998	$250,000	Corporate Receipts
FY1997	$250,000	Corporate Receipts
FY1996	$250,000	Corporate Receipts (funded under the former Emergency Housing Assistance Program).

Program Description:

Established in 1993, this program enables thousands of homeless and/or near homeless families to obtain or retain safe and sanitary shelter each year. Demand for this program has steadily increased as federal and municipal sources have diminished.

The Homeless Assistance Program (HAP) provides grants to assist nonprofit organizations, local governments, and regional housing authorities in addressing the emergency needs of homeless and near-homeless Alaskans. During the previous two competitive rounds, the total amount of Homeless Assistance Program (HAP) grant requests received by AHFC has averaged $2.5 million annually. This program has become increasingly important as funds for grants such as homeless assistance from municipal grants and federal Emergency Housing Assistance continues to shrink.

The most recent grantees have utilized HAP funds to expand shelter facilities, develop supportive transitional housing, provide case management, and rental assistance services. For Fiscal Year 2010, AHFC is requesting authorization for expenditure of $6,000,000 in Corporate Receipts which will be matched by $500,000 in funds from the Alaska Mental Health Trust Authority Receipts (MHTAAR) and $500,000 from General Funds/Mental Health (GF/MH), $2,000,000 Federal receipts, and $1,000,000 Statutorily Designated receipts. All funds will be combined and administered as one program by AHFC. A portion of these funds may be used to support the planning and coordination efforts of the Alaska Coalition on Housing and Homelessness.

AHFC is requesting authorization for expenditure of Corporate Receipts which will be matched by other funds. All funds will be combined and administered as one program by AHFC.

FY2009- Applications Received Totaling $2.57 million

Program Categories are (T) Temporary Housing and Placement; and (H) Homeless Prevention

	Name of Applicant	Community	Request
1	AWAIC	Anchorage	$143,782 (T)

2. Beneficiary and Special Needs Housing
(Mental Health Bill)

Reference Number:	**#6360**
Historical Category:	**Housing / Social Services**
Location:	**Statewide**
Election District:	**Statewide**
Project Type:	**Health and Safety**
Estimated Project Dates:	**7/01/2009 - 6/30/2014**
FY2010 Request:	**$1,750,000 Corporate Receipts**
FY2010 Funding:	**$_____ Corporate Receipts**

The purpose of this program is to provide funds for Alaskan nonprofit service providers and housing developers to increase housing opportunities to Alaska Mental Health Trust beneficiaries and other special needs populations throughout Alaska. This program has developed 118 units since FY2000. In FY2008, 18 units were funded for persons with severe mental illness and developmental disabilities.

The projected outcomes are:
- Add 16 congregate housing units for people with mental illness, developmental disabilities;
- Reduced recidivism amongst clients spending time in institutions;
- Supportive housing, including assisted living, for people with mental, physical, or developmental disabilities, or multiple disorders; and
- Transitional housing with support services for newly recovering alcoholics and addicts.

Beneficiary & Special Needs Housing - Corporate (AHFC) funds for a continuing program to serve populations with special housing needs. The program provides funds to Alaskan nonprofit service providers to increase housing opportunities for Alaska Mental Health Trust beneficiaries and other special needs populations throughout the state. The funds may be used for housing development and/or services designed to achieve long-term residential stability.

Funding History:

FY2009	$1,750,000	Corporate Receipts
FY2008	$1,750,000	Corporate Receipts
FY2007	$1,750,000	Corporate Receipts

FY2006	$1,200,000	General Funds/Mental Health
FY2005	$1,200,000	Corporate Receipts
FY2004	$1,200,000	Corporate Receipts
FY2003	$1,500,000	Corporate Receipts
FY2002	$1,500,000	Corporate Receipts
FY2001	$1,500,000	Corporate Receipts
FY2000	$1,700,000	Corporate Receipts

Prior to FY2000, this program was part of Department of Health and Social Service's (DHSS) Beneficiary and Special Needs Housing Program:

FY1999	$1,200,000	Corporate Receipts
FY1998	$1,200,000	Corporate Receipts
FY1997	$1,500,000	Corporate Receipts
FY1996	$1,200,000	Corporate Receipts

Program Description:
This program provides funds to Alaskan nonprofit service providers and housing developers to increase housing opportunities to Alaska Mental Health Trust beneficiaries and other special needs populations throughout Alaska. These funds will continue to assist in developing community-based supportive housing.

The demand for special needs housing remains critical. The Mental Health Trust Authority has made housing one of its five focus areas for funding. The Alaska Independent Living Council and other special needs advocacy groups have identified supportive housing as a top priority in their statewide planning efforts. The target populations consist of mental health beneficiaries and other special needs groups like severely emotionally disturbed children.

To optimize leveraging of these funds with other federal grant and tax credit programs and to expedite the release of funding to nonprofit housing developers, AHFC will administer these housing development funds. This will also administratively streamline housing development projects, which also intend to borrow money from AHFC. Typically, most special needs housing in Alaska is financed by AHFC.

Examples of special needs housing includes, but are not limited to:

- Congregate housing for people with mental illness or developmental disabilities;
- Supportive housing, including assisted living, for people with mental illness, developmental disabilities, or multiple disorders; and
- Transitional housing with support services for newly recovering alcoholics and addicts.

3. Home Modification Program (Mental Health Bill)

Reference Number:	**#33671**	
Historical Category:	**Housing / Social Services**	
Location:	**Statewide**	
Election District:	**Statewide**	
Project Type:	**Health and Safety**	
Estimated Project Dates:	**7/01/2009 - 6/30/2014**	
FY2010 Request:	**$250,000**	**Corporate Receipts**
	$300,000	**MHTAAR Receipts**
	$500,000	**GF/Mental Health**
FY2010 Funding:	**$_____**	**Corporate Receipts**
	$_____	**MHTAAR Receipts**
	$_____	**GF/Mental Health**

The purpose of this program is to provide housing modifications to persons experiencing a disability, allowing them to remain in their homes and potentially reduce the cost of providing supported housing.

The projected outcomes are:

- Allow persons experiencing a disability to remain in their homes;
- Reduce the potential cost of providing supported housing; and
- Provide funding to develop special needs housing.

Home Modification Program – Corporate (AHFC) and Mental Health Trust Authority (MHTAAR) funds to provide housing modifications to persons experiencing a disability, allowing them to remain in their homes and reduce the potential cost of providing supported housing. The program also provides funding to develop special needs housing.

Funding History:
This program was previously funded to the Department of Health and Social Services (DHSS).

Program Description:
This capital project provides housing modifications to persons experiencing a disability, allowing them to remain in their homes and potentially reducing the cost of providing supported housing. This project increases the accessibility of current housing so that Trust beneficiaries and other special needs populations can move into or remain in their own homes. Home modifications are available to people wherever they reside, regardless of whether they own or rent and with whom

they live. Typical kinds of assistance provided are accessibility modifications or additions (e.g., widening doorways, remodeling bathrooms or kitchens, installing entrance ramps, adding bathrooms or bedrooms) and related equipment.

Grantees will coordinate their efforts with the Alaska Housing Finance Corporation (AHFC) weatherization program and similar tribal and municipal programs to supply essential repairs or upgrades to building structures (e.g., heating, plumbing, and/or electrical systems, roofs, weatherproofing, energy efficiency improvements). Funds will not be available to duplicate down payment, mortgage buy-down, or building repair and weatherization programs currently operated by AHFC. This program is supported in the Comprehensive Integrated Mental Health Plan - Moving Forward.

This project supports independent living and assists individuals to remain in the comfort of their own home for a longer period of time, thus reducing the need for costly institutionalization.

The end result to which this project contributes is, "Improve and enhance the quality of life for Alaskans with serious behavioral health problems."

4. Emergency Assistance Grants for Mental Health Trust Beneficiaries (Mental Health Bill)

Reference Number:	**#43318**
Historical Category:	**Housing / Social Services**
Location:	**Statewide**
Election District:	**Statewide**
Project Type:	**Health and Safety**
Estimated Project Dates:	**7/01/2009 - 6/30/2014**
FY2010 Request:	**$200,000 MHTAAR**
FY2010 Funding:	**$_____ MHTAAR**

The purpose of this program is to support beneficiaries in maintaining homeownership or long-term rental stability by providing gap or short-term assistance.

The projected outcomes are:

- To provide assistance for structural or major appliance breakdowns that may go beyond the financial reach of the homeowner, or life event that may threaten the ability of the beneficiary to make a mortgage or rent payment.
- To provide "gap" or "short-term assistance" for Mental Health Trust Authority (MHTA) beneficiaries.
- To supplement, not supplant, existing resources available for home modifications, weatherization or rehabilitation programs.
