1/28/09 OVERVIEW: ALASKA MENTAL HEALTH TRUST AUTHORITY

<target><bill></bill><subject>1-28-09 OVERVIEW ALASKA MENTAL HEALTH TRUST AUTHORITY</subject><comm>SFIN26</comm></target>

The TRUST
The Alaska Mental Health Trust Authority

FACT SHEET

The Trust

The Alaska Mental Health Trust Authority is a state corporation that administers the Alaska Mental Health Trust, a perpetual trust managed on behalf of Trust beneficiaries. The Trust operates much like a private foundation, using its resources to ensure that Alaska has a comprehensive integrated mental health program to provide treatment and services for Trust beneficiaries. The Trust works with the Alaska Department of Health and Social Services to coordinate planning for this program, makes recommendations to the governor and Legislature regarding funding of the program, and advocates for funding and policies that support the systems serving Trust beneficiaries.

Trust Beneficiaries

Trust beneficiaries include:

- people with mental illness,
- people with developmental disabilities,
- people with chronic alcoholism and
- people with Alzheimer's disease and related disorders.

Trust History

Prior to statehood, there were limited services available in the Territory of Alaska for individuals who experienced mental illness or developmental disabilities. Instead, these individuals were sent by the federal government to live in an institution in Oregon. During Alaska's transition to a state, Congress passed the Alaska Mental Health Enabling Act of 1956 to help bring these individuals home. This act transferred the responsibility for providing mental health services from the federal government to the Territory of Alaska and ultimately the State of Alaska, by creating the Alaska Mental Health Trust. To fund The Trust, the state selected one million prime acres of land that would be managed to generate income to pay for a comprehensive integrated mental health program.

Though the Alaska Legislature held a fiduciary responsibility to manage the land on behalf of Alaskans with mental disabilities, it did not do so. Instead, by 1982, only about 35 percent of the land remained in state ownership. The majority of the land had been transferred to individuals or municipalities, or designated by the Legislature as forests, parks or wildlife areas.

In 1982, Vern Weiss filed a lawsuit on behalf of his son, who required mental health services that were not available in Alaska. Other beneficiary groups joined *Weiss v State of Alaska* in a class action suit. The case was ruled on in 1984 by the State Supreme Court, which ordered that the original trust be restored. Ten years later, in 1994, a final settlement reconstructed The Trust with 500,000 acres of original Trust land, 500,000 acres of replacement land and $200 million in cash.

Trust Governance

The Trust settlement established an independent Board of Trustees appointed by the governor and confirmed by the Legislature. The appointments are for five-year, staggered terms. Current Trustees are:

- Dr. William Doolittle, Chair
- Laraine Derr, Vice Chair
- Paula Easley, Secretary/Treasurer
- Tom Hawkins
- Larry Norene
- Timothy Schuerch

Trust Advisors

The Trust works closely with several advocacy boards that represent Trust beneficiaries:

- **Advisory Board on Alcoholism and Drug Abuse**

  - http://www.hss.state/ak.us/suicideprevetion

Trust Assets

The Trust employs the expertise of several organizations to manage its cash and non-cash assets. The Alaska Permanent Fund Corporation and the Alaska Department of Revenue Treasury Division manage The Trust's cash assets. The Trust Land Office, a separate unit within the Alaska Department of Natural Resources, manages the land and other non-cash assets on behalf of The Trust.

Trust Funding

The majority of The Trust's annual operating and capital budgets is spent in two areas:

- Trust Focus Areas -- based on recommendations from the focus area workgroups.
- Programs initiated by The Trust's advisory boards through the annual Request for Recommendation process.

These expenditures along with other state funds comprise the Separate Mental Health Budget Bill and must be approved by the Legislature.

A small portion of The Trust's annual operating budget is available for grants to non-profits, providers, tribal entities, governmental agencies and other organizations that serve Trust beneficiaries. Grant funds are spent at the discretion of the Board of Trustees or Trust staff.

Trust Focus Areas

Currently The Trust is focusing on five program areas that address issues with significant impact on Trust beneficiaries:

1. **Bring the Kids Home** – bringing home to Alaska those children who experience severe emotional disturbances and are being treated in out-of-state psychiatric institutions, and increasing treatment, services statewide so they remain in Alaska;
2. **Affordable Appropriate Housing** – increasing a continuum of housing options for Trust beneficiaries;
3. **Disability Justice** – reducing the involvement and recidivism of Trust beneficiaries in the criminal justice system;
4. **Beneficiary Projects Initiative** – supporting grassroots, peer-to-peer programs for Trust beneficiaries;
5. **Workforce Development** – creating an available and competent workforce for Trust beneficiary service providers.

Key Issues Impacting Alaska Mental Health Trust Beneficiaries

The Trust
The Alaska Mental Health Trust Authority

Key to Scorecard Status Symbols

	AK vs. US % variation		Trend		Definition	Status
If	Less than 15%	and	Getting better	then	Satisfactory	▲
If	Less than 15%	and	Getting worse or flat	then	Uncertain	⇔
If	Greater than 15% to the positive	and	Getting better or flat	then	Satisfactory	▲
If	Greater than 15% to the positive	and	Getting worse	then	Uncertain	⇔
If	Greater than 15% to the negative	and	Getting better	then	Uncertain	⇔
If	Greater than 15% to the negative	and	Getting worse or flat	then	Needs Improvement	▼
If	An unacceptably large rate to the negative	then	Trend becomes irrelevant	then	Needs Improvement	▼

Charts showing trend data can be found in the Drilldown Information by Key Population Indicator.

Scorecard indicator #8 on teen depression is labeled with a "down" arrow because even though a clear trend cannot be determined, the Comprehensive Integrated Mental Health Program Executive Committee finds it unacceptable that more than 20 percent of Alaska teens experience depression.

Advisory Board on Alcoholism and Drug Abuse

Prevention & Treatment work! Recovery happens!

http://www.hss.state.ak.us/abada
Toll free **(888) 464-8920**
In Juneau (907) **465-8920**

The Advisory Board on Alcoholism and Drug Abuse (ABADA) is a statutorily authorized Governor's advisory board charged with assisting in planning and offering oversight of Alaska's behavioral health system. Through our mandate, we work to support a comprehensive, effective and accountable behavioral health system of prevention and treatment of substance abuse for Alaskans. Our members' vision is of all Alaskans living healthy, productive lives. The shared plan to achieve that vision is on our web site at www.hss.state.ak.us/abada.

Advocacy priorities

ABADA supports:

- a comprehensive and effective behavioral health service system;
- effective evidence-based prevention programs that target young people and families to help reduce the tendency and/or predisposition to becoming an alcoholic or addict;
- effective evidence-based treatment programs that work in the community and in detention facilities to guide alcoholics and addicts in changing their thinking and subsequently their behavior as it relates to addiction;
- reducing stigma about substance abuse disorder.

The American Medical Association has determined that addiction is a disease, like diabetes or heart disease. And, like other diseases, recovery from addiction is possible. ABADA supports programs that help individuals with addiction disorders realize their potential in recovery.

Evidence shows that incarcerated individuals with addiction disorders are less likely to reoffend if they receive treatment services while in prison and during the transition back into their communities. Evidence-based treatment programs are proven to decrease recidivism when an individual is treated closer to his/her family and community. ABADA supports partnering with the Alaska Department of Corrections to implement programs for supportive housing, employment and social/emotional skill development during the transition after incarceration.

The social and economic costs of substance abuse are shared by all Alaskans. Public safety, health care and public assistance are all impacted by substance abuse. However, funding for prevention and treatment of behavioral health programs that treat substance abuse has not kept pace with community need.

Some facts about substance abuse in Alaska

In 2003, the total cost of substance dependence in was estimated to be $738 million.*

- $367 million from productivity losses
- $154 million from criminal justice and protective services
- $178 million from health care
- $35 millions from traffic crashes
- $4 million from public assistance

Approximately 17,400 offenses and 1,190 incarcerations were attributed to alcohol and other drug abuse in Alaska's prisons. It is estimated that alcohol and other drug abuse plays a role in 85% to 95% of all incarcerations in the state.*

Alcohol and other drug abuse is a primary contributor to child abuse in Alaska. A 1999 study found that parents were three times more likely to abuse their children and four times more likely to neglect their children if the parents were substance abusers.*

About half of all U.S. fatal traffic crashes are caused by alcohol use. In Alaska in 2002, 32% of the 78 deaths from traffic crashes were attributed to alcohol.*

* *Economic Costs of Alcohol and Other Drug Abuse in Alaska, 2005 – McDowell Group, Inc.*

The Alaska Mental Health Board (AMHB) is statutorily charged with assisting in planning and offering oversight and evaluation of Alaska's behavioral health system. AMHB also provides advocacy for Alaskans affected by mental illness. Our vision is for all Alaskans to live healthy, productive lives.

Advocacy priorities

AMHB supports:

- Promoting evidence-based recovery models and treatment services for people with mental illness – including children, veterans and the elderly – in both rural and urban communities and in detention facilities;
- Treating children with emotional disorders at home in their own communities;
- Innovative housing for people with mental illness;
- Defining behavioral health needs of aging Alaska citizens;
- Reducing the stigma associated with mental illness.
- Promoting workforce development for both providers in the behavioral health field and beneficiaries in all fields.

AMHB supports evidence-based services such as tele-psychiatry and on-call emergency service teams to support rural community service needs. Making acute care services available in rural areas promotes quality treatment as close to home as possible while also reducing the costs associated with transporting people in crisis to Anchorage.

Too many Alaskans with serious mental illnesses end up in a corrections facility. The AMHB advocates for effective community-based programs available to serve individuals with serious mental illnesses so that they are less likely to offend, or to re-offend when released into the community.

With the Alaska Mental Health Trust Authority (Trust) and others, we continue to support the need for community-based care for children who experience severe emotional disorders. The Bring the Kids Home initiative has dramatically reduced the number of children in out-of-state treatment — we support maintaining the services to keep our children in Alaska.

We continue to support developing innovative housing for individuals experiencing mental illness, including consumer-run programs.

Alaska's senior population is growing rapidly. AMHB is working closely with the Alaska Commission on Aging and other partners to better define the behavioral health needs and resources for this group. Alaska and other states are finding that depression and substance abuse within the senior population are very serious problems that require specialized services.

Some facts about mental health in Alaska

The Division of Juvenile Justice reported that in a one-day count, 40% of the youth in their custody or care have a mental health diagnosis.

According to a one-day snapshot study conducted for the Department of Corrections in 2007, 42% of those in the corrections system experience a mental health disorder. "Among those identified, findings indicate that Trust beneficiaries spend more time in custody than other inmates, are more likely to recidivate post-release, and more than ¼ do not get reconnected with community-based mental health service providers upon release," the study said.

Alaska has the highest percentage of veterans in the nation (17% of all adults). The Veterans Administration reports that one in three veterans returning from Afghanistan and Iraq face behavioral health problems. Post traumatic stress disorders (PTSD), depression, substance abuse and traumatic brain injuries are very real problems for Alaska's veterans. The only four VA Centers are located on the road system, making it difficult for veterans in rural areas to access care. Alaskan veterans with severe mental health problems are sent to the Lower 48 for treatment.

Governor's Council on Disabilities and Special Education

Creating Change That Improves the Lives of People with Disabilities
And Students Receiving Special Education Services

The more than 87,000 children and adults in Alaska with developmental disabilities are as varied as any group of people. They go to school or work; have families and friends; nurture hopes and dreams; fulfill expectations and potential. These individuals and their families, like all of us, want to determine their own lifestyles and be valued, participating members of their communities.

Alaska is a better place than it used to be for people with developmental disabilities. We have more accessible, affordable housing, and better transportation and family support systems. But we also have long waiting lists for available services. And in many communities, services aren't available at all.

Large gaps exist between adults with developmental disabilities and other adults in employment, education, income and other important standards of living. Many public buildings still aren't accessible. Lack of affordable health care is also a major barrier to independent living.

For students with disabilities, getting an appropriate education is challenging. Education issues rank second in the number of complaints with the Disability Law Center. Successful transitions throughout the educational process are inconsistent statewide. Very few Alaskans with developmental disabilities receive any post-secondary education, which limits their employment options and opportunities for career advancement.

Rather than creating separate boards to comply with the requirements of the Developmental Disabilities Assistance and Bill of Rights Act and the Individuals with Disabilities Education Act, the Alaska Legislature established the Governor's Council on Disabilities and Special Education. The Council serves as the:

- State Council on Developmental Disabilities
- Special Education Advisory Panel
- Interagency Coordinating Council on Infants and Toddlers with Disabilities
- Beneficiary Board of the Alaska Mental Health Trust Authority
- Governing Board of the Special Education Service Agency (SESA)

The Council is a 28-member Governor-appointed body made up of people with disabilities, parents, and representatives of principal state agencies and private providers. We use planning, evaluation, capacity building, and advocacy to create change. We analyze trends and study population characteristics. To influence attitudes we conduct public awareness campaigns. We strive to coordinate services through interagency working groups. We develop coalitions to bring about change through legislation and regulation. We also provide information to assist individuals and families to access services and advocate to policymakers on their own behalf.

Our Major Areas of Focus

- **Community Participation**: We seek to make certain people with disabilities have access to fully participate in all aspects of their community by increasing their knowledge regarding consumer rights and responsibilities, self-determination, self-advocacy and

systems navigation. This promotes communication between people with disabilities and their policymakers.

- **Education:** Alaska students should have educational experiences that allow them to reach their goals, and achieve their hopes and dreams. We work to ensure students with disabilities succeed at a rate as closely as possible to that of the general population. We also work to ensure that youth graduating from high school are equipped with skills to successfully participate in adult life.

- **Transportation:** We believe everyone should be able to get where they want to go when they want to get there. Only a few Alaska communities have public transportation. In other communities, what transportation that is available is uncoordinated and unnecessarily expensive. We work to improve statewide availability and accessibility of adequate transportation.

- **Health Care**: Everyone should have the opportunity to be healthy and benefit from the full range of needed health care services. As more people receive services, more attention needs to be given to assuring their health and safety. We work to promote the recruiting and retaining of high quality staff; exterminating wait lists; and giving more attention to people with complex needs, as well as those in remote areas of the state.

- **Housing**: We believe Alaskans who experience disabilities should be able to secure accessible, affordable and integrated housing in their communities. We work to increase the availability of accessible housing options for people with disabilities.

- **Self-Determination**: People should have control, choice, and flexibility in the services and supports they receive. We strive to ensure every individual is a valued, participating member of their community by helping them learn how to gain more control over their own supports and services. In this way, they learn and practice skills that enhance their abilities for self-determination.

- **Employment**: It is our goal that every Alaska is able to get and keep employment consistent with his or her interests, abilities, and needs. We work to develop strategies to significantly increase career opportunities for people with disabilities.

The Governor's Council on Disabilities and Special Education is one of several boards/commissions that the Alaska Mental Health Trust Authority (The Trust) represents.

The Alaska Commission on Aging

Alaska's Seniors – a Resource and a Responsibility

907-465-3250 www.alaskaaging.org

Alaska's senior population is the second most rapidly growing senior population in the nation. We experienced more than a 100% increase in the 60 and older population from 1990 to 2006, with the number of older Alaskans now growing by over five percent per year. By 2030, seniors age 60 and older will comprise 17% of Alaska's population – the same proportion as Florida's age 65+ population today.

Older Alaskans provide enormous benefits to the state, their communities, and their families. Contributing over $1.5 billion a year to the Alaskan economy (from retirement income and health care payments), seniors comprise one of the state's most basic economic "industries" – and one with many positive features, such as stability; local spending, triggering the economic multiplier effect; support of a diverse job mix year-round; an environmentally benign profile; non-enclave character where spending is distributed throughout the state); and creation of economies of scale in the provision of goods and services, especially in health care.

In addition to their economic assets, older Alaskans also contribute to their communities through high levels of volunteering, and they frequently serve as unpaid caregivers for children, other seniors, and younger adults with disabilities. The leadership and historical knowledge elders provide to our state is priceless and irreplaceable.

As the number of older Alaskans increases, the network of services for seniors must be strengthened and its capacity significantly expanded. This includes the information and referral resources upon which seniors rely to find the programs and services they need. Most seniors do not use any services – but when the need arises, they wish to have those services available and accessible.

Alaska Commission on Aging

The Alaska Commission on Aging (ACoA), formerly known as the Older Alaskans Commission, has been in existence since 1982. Its mission is to ensure dignity and independence for Alaska's seniors and to assist them, through planning, advocacy, education, and inter-agency coordination, to lead useful and meaningful lives.

What are the major challenges?

Alaska's senior population is expected to more than double by 2030, and the number of those age 85+ (the age group most likely to be affected by Alzheimer's Disease and Related Disorders – ADRD) will more than triple. There are an estimated 5,000 older Alaskans with ADRD today. While 80% of care for individuals with ADRD is provided at home, it is essential for families to be able to rely on an effective support system comprised of government, non-profit agencies, churches, businesses, and volunteers.

According to a 2005 senior survey conducted by the ACoA, financial security was the top concern of older Alaskans, followed closely by accessible, affordable health care. The survey provided an early alert to the growing problem of access to primary care for seniors on Medicare, with more and more physicians declining to serve patients enrolled in this program (they cite very low reimbursement rates). Other important concerns identified by the survey included the need for appropriate housing, fears of inadequate funding of senior services, a growing demand for senior transportation, and a perception that government and political leaders in Alaska should be more responsive to senior issues.

State- and municipally-funded programs (for example, the Senior Benefits program, the senior municipal property tax exemption, and senior grant services) are an important part of the economic and supportive resources of many senior households. However, they by no means constitute an adequate safety net for seniors. Only about one in five older Alaskans receives Medicaid services. The remaining 80%, often of very modest income, can have great difficulty obtaining the supportive services they may need. Even those with the requisite low income are deemed ineligible for Medicaid waiver services if their primary diagnosis is ADRD. Available funds for senior grant services have increased only marginally over the past decade, while the number of seniors has grown by over five percent per year.

How has the Commission addressed these challenges?

The Alaska Commission on Aging has undertaken a number of activities related to planning, advocacy, public awareness, and inter-agency coordination to address these challenges.

The State Plan for Senior Services, FY 2008 – FY 2011, approved by the U.S. Administration on Aging in June 2007, provides a broad vision of the status and needs of Alaskan seniors and offers an extensive set of goals, objectives and strategies chosen to move this vision forward among the state's aging network and other relevant agencies. Developed with the

assistance and ongoing support of multiple agency partners, the State Plan was intended to actively guide their work for the next four years, leveraged by the synergy of annual implementation meetings in which partners share ideas and report on their plan-related activities.

In 2006, the ACoA formed the Alaska Aging Advocacy Network (AAAN), a group of about 125 individuals (seniors and senior advocates) with an interest in joining the ACoA in advocating for legislation of particular interest to Alaska seniors. In 2007, the efforts of the AAAN assisted the Commission and other advocates in successfully obtaining a Senior Benefits program and several other bills benefiting seniors.

Each year, the Commission develops a list of advocacy priorities, which it posts on its website. One of the ACoA's top priority issues, a substantial operating budget increment for senior grant services (and an accompanying capital budget item for facility upgrades for senior grant providers), remains the focal point of the Commission's advocacy work in 2008.

Each year, the ACoA holds a series of senior legislative teleconferences during session, giving seniors at host sites across the state the opportunity to learn about and discuss a wide range of bills that may potentially impact them.

In 2007, the Commission and other partner agencies published a Report on the Economic Well-Being of Alaska Seniors, a long-awaited description of the economic status of older Alaskans and the variety of State programs available to them.

The ACoA engages in a variety of public awareness campaigns ranging from an Older Americans Month celebration each May featuring posters carrying messages about healthy aging, to participation in The Trust's "You KNOW Me..." campaign and the recent launching of the Healthy Body, Healthy Brain Campaign aimed at educating seniors and baby boomers about the links between healthy lifestyles (physical activity, healthy eating, socializing, and mental challenges) and a lower risk of developing ADRD.

The Commission's popular website is frequently updated with new features and news stories of interest to older Alaskans.

The Alaska Mental Health Trust Authority

The Alaska Commission on Aging is one of several boards/commissions that represent beneficiaries of the Alaska Mental Health Trust Authority (The Trust). Trust beneficiaries include people with mental illness, those with developmental disabilities, people with chronic alcoholism, and people with Alzheimer's disease and related disorders.

Prior to statehood, there were limited services available in the Territory of Alaska for individuals who experienced mental illness or developmental disabilities. Instead, these individuals were sent by the federal government to live in an institution in Oregon. During Alaska's transition to statehood, Congress passed the Alaska Mental Health Enabling Act of 1956 to help bring these individuals home. This act transferred the responsibility for providing mental health services from the federal government to the Territory of Alaska and ultimately the State of Alaska by creating the Alaska Mental Health Trust. To fund The Trust, the state selected one million prime acres of land that would be managed to generate income that would pay for a comprehensive integrated mental health program.

Though the state legislature held a fiduciary responsibility to manage the land on behalf of Alaskans with disabilities, it did not do so. Instead, by 1982 , only about 35 percent of the land remained in State ownership. The majority of the land had been transferred to individuals or municipalities, or designated by the legislature as forests, parks, or wildlife areas.

In 1982, Vern Weiss filed a lawsuit on behalf of his son, who required mental health services that were not available in Alaska. Other beneficiary groups joined Weiss v. State of Alaska in a class action suit. The case was decided in 1984 by the Alaska Supreme Court, which ordered that the original trust be restored. Ten years later, in 1994, a final settlement reconstructed The Trust with 500,000 acres of original Trust land, 500,000 acres of replacement land, and $200 million.

The settlement established an independent Board of Trustees who are appointed by the governor and confirmed by the legislature for five-year, staggered terms. The Trustees are responsible for oversight of The Trust's investments and land and non-cash assets. The investments are managed by the Alaska Permanent Fund Corporation, and the land and non-cash assets are managed under a contract with the Trust Land Office, a separate unit within the Alaska Department of Natural Resources.

The Trust works with the Alaska Department of Health and Social Services to coordinate planning for a comprehensive mental health program, makes recommendations to fund the program, and advocates for funding and policies that support the systems serving Trust beneficiaries.

alaska brain injury network

Every 15 seconds someone sustains a traumatic brain injury (TBI) in the U.S.

Thirty years ago, only half of all people with brain injury survived; now 78% survive. This means that many individuals now live with significant disability requiring a full range of services.

Every year the Alaska Department of Health & Social Services reports about 800 traumatic brain injury (TBI) cases resulting in hospitalization or fatality. There is an estimated 3000 emergency department visits. The TBI rate in rural Alaska is one of the highest in the nation.

It is estimated that at least 10,000 Alaskans are living with brain injury today. This number accumulates each year. Brain Injury can be a life-long disability.

The goal for every brain injury survivor is the best possible recovery for a fulfilling and productive life. Achieving that goal requires full range of services close to home.

The Alaska Brain Injury Network, Inc. (ABIN) is a non-profit organization dedicated to Alaskans whose lives have been changed by brain injury.

ABIN's Board of Directors represent all regions of Alaska and the extended brain injury community – survivors, family members, service providers, health educators, researchers and those who write laws and policy.

ABIN works with Department of Health and Social Services, the Alaska Mental Health Trust Authority, and partner boards to advocate for policy changes, programs, and facilities to better serve Alaskans with disability due to brain injury.

ABIN connects survivors and family members with others. Please contact us to learn about brain injury programs in your region.

What you can do...

- **Support FY10 TBI Budget items:**

  "Care Coordination with specialty in brain injury"

  Department of Health and Social Services,
  Senior and Disability Services

  $50.0 (General Fund/Mental Health)
  Matching funds $150.0 MHTAAR
  Visit www.alaskabraininjury.net to learn more.

- **Be aware of the fiscal and social burden of brain injury to the state**
- **Recognize emerging populations i.e. military and the elderly.**
- **Join Alaska Brain Matters online forum to meet and learn from Alaskans who have been affected by TBI.**

10 Year TBI State Plan Priorities

Visit www.alaskabraininjury.net to read the full report

Brain Injury Waiver – Develop TBI Waiver and/or improve the current Medicaid waiver system to accommodate the services needed by brain injury survivors: neuropsychological assessment; cognitive and functional therapy; case management; counseling, home modifications; transportation; and respite care.

In-state rehab facility – many Alaskans are left in a hospital setting because there is no post-acute rehabilitation option in Alaska. Others are sent out of State. Research shows outcomes improve with quality and timely rehabilitation.

Implement full continuum of TBI Services: I & R, Care Coordination, Acute and Post-Acute Rehab, Educational and related supports, Vocational Training and Rehabilitation, Long-term Care and Community Supports.

Continue TBI System Development: Public Awareness, Prevention and Advocacy; Outreach and Identification; Training and Workforce Development; and Statewide Planning and Coordination.

alaska brain injury network
www.alaskabraininjury.net
3745 Community Park Loop, Ste 140
Anchorage, AK 99508
(907) 274-2824

Alaska Brain Injury Network, Inc. mission is to educate, plan, coordinate, and advocate for a comprehensive service delivery system for Alaskans with traumatic brain injury and their families.

You KNOW us ...

The Public Health Burden of Brain Injury (prevalence)

5.3 million Brain Injuries

5 million persistent Mental Illness
4 million Alzheimer's
3 million Stroke
2 million Epilepsy
900,000 HIV/AIDS
500,000 Cerebral Palsy
400,000 Spinal Cord Injury

Brain injury prevalence is higher than most other disabilities.

Research shows outcomes after brain injury improve with quality TBI services at the right time.

The Financial Burden of Brain Injury

- Cost of care for a severe TBI survivor can range from $600,000 and $1,875,000.
- Direct medical costs and indirect costs of TBI such as lost productivity totaled an estimated $60 billion in the United States in 2000. *(Centers for Disease Control and Prevention)*
- Every dollar used for brain injury rehabilitation saves up to $35 in future medical costs. (Rhode Island Brain Injury Association)

Prevention is the <u>only</u> cure for Brain Injury

- The three leading causes of brain injury in Alaska are:
  1) falls 2) motor vehicles crashes and 3) assaults
  (ATV and Snowmachine accidents combined are a close fourth)
- One-third of all TBIs recorded in the Alaska Trauma Registry were alcohol related.
- The use of safety belts is the single most effective measure to prevent traumatic brain injuries.
- Using a helmet increases your chance of surviving a motorcycle crash by 37 percent. (*National Highway Traffic Safety Administration)*
- Bicycle helmets are 85-88 percent effective in mitigating head and brain injuries. Every dollar spent on a bike helmet saves $40 in direct medical costs and other costs to society. *(National Highway Traffic Safety Administration)*
- 14-20 percent of returning service members return from Iraq and Afghanistan with a TBI. Elmendorf Hospital recognizes the need for a Mild TBI clinic in Alaska. In the past year, 1400 soldiers have visited the local mild TBI clinic. *(KTUU News, 8/27/08)*

Traumatic Brain Injury is a beneficiary group in the Alaska Mental Health Trust Authority "You Know Me" Anti-Stigma and Treatment Works Campaign.

Alaska Statewide Suicide Prevention Council

[Alaska Statute 44.29.300-390]

The Statewide Suicide Prevention Council is the state planning and coordinating agency for issues surrounding suicide and suicide prevention. The powers, duties and responsibilities of the Council are to act in the advisory capacity to the Governor and the legislature with respect to what actions can and should be taken to:

- ✓ Improve health and wellness throughout the state by reducing suicide and its effect on individuals, families, and communities;
- ✓ Broaden the public's awareness of suicide and the risk factors related to suicide;
- ✓ Enhance suicide prevention services and programs throughout the state;
- ✓ Develop healthy communities through comprehensive, collaborative, community-based approaches;
- ✓ Develop and implement a statewide suicide prevention plan; and
- ✓ Strengthen existing and build new partnerships between public and private entities that will advance suicide prevention efforts in the state.

Our beneficiaries are families, friends, and neighbors –

They are Alaskans in our schools, churches and workplaces. They deserve the quality of care and level of service that will allow them to live as independently as possible. Healthy people are Alaska's most important natural resource.

Services make a difference –

An individual who receives appropriate services can live a fuller, more dignified life. We have made great strides in understanding the challenges facing Trust beneficiaries and how to better help them. Adequate services allow beneficiaries to become more self-sufficient, improving the quality of life for them, their families and communities.

Investment produces dividends –

Wisely investing resources today in early intervention and prevention helps people build healthy lives and decreases the prospect of more costly services in the future. Individuals, families, communities, and the state reap the dividends.

What are some major challenges?

Funding for prevention and treatment has not kept pace with community need. Increasing reliance on Medicaid funds to be eligible for treatment excludes all but the very needy. Reaching out to families, returning veterans, older Alaskans, and others with moderate needs is critical to decreasing high costs, both financially and in addictions that take more effort to treat.

The Alaska Mental Health Trust Authority

The Alaska Statewide Suicide Prevention Council is one of several boards/commissions that represent beneficiaries of the Alaska Mental Health Trust Authority (The Trust). Trust beneficiaries include people with mental illness, people with developmental disabilities, people with chronic alcoholism, and people with Alzheimer's disease and related disorders.

Prior to statehood, there were limited services available in the Territory of Alaska for individuals who experienced mental illness or developmental disabilities. Instead, these individuals were sent by the federal government to live in an institution in Oregon. During Alaska's transition to a state, Congress passed the Alaska Mental Health Enabling Act of 1956 to help bring these individuals home. This act transferred the responsibility for providing mental health services from the federal government to the Territory of Alaska and ultimately the State of Alaska, by creating the Alaska Mental Health Trust. To fund The Trust, the state selected one million prime acres of land that would be managed to generate income that would pay for a comprehensive integrated mental health program.

Though the state legislature held a fiduciary responsibility to mange the land on behalf of Alaskans with disabilities, it did not do so. Instead, by 1982, only about 35 percent of the land remained in state ownership. The majority of the land had been transferred to individuals or municipalities, or designated by the legislature as forests, parks or wildlife areas.

In 1982, Vern Weiss filed a lawsuit on behalf of his son, who required mental health services that were not available in Alaska. Other beneficiary groups joined *Weiss v State of Alaska* in a class action suit. The case was ruled on in 1984 by the State Supreme Court, which ordered that the original trust be restored. Ten years later, in 1994, a final settlement reconstructed The Trust with 500,000 acres of original Trust land, 500,000 acres of replacement land and $200 million.

The settlement established an independent Board of Trustees who are appointed by the governor and confirmed by the legislature for five-year, staggered terms. The Trustees are responsible for oversight of The Trust's investments and land and non-cash assets. The investments are managed by the Alaska Permanent Fund Corporation, and the land and non-cash assets are managed under a contract with the Trust Land Office, a separate unit within the Alaska Department of Natural Resources.

The Trust works with the Alaska Department of Health and Social Services to coordinate planning for a comprehensive mental health program, makes recommendations to fund the program and advocates for funding and policies that support the systems serving Trust beneficiaries.

Alaska Scorecard, December 2008 | www.hss.state.ak.us/dph/healthplanning/scorecard/

Health: Suicide

1. Suicide rate per 100,000. Alaska rate is almost twice the national rate. (2005)[1]

2. Non-fatal suicide attempts per 100,000. Rate of non-fatal attempts requiring hospitalization for at least 24 hours. AK ranks no. 2 in the U.S. (2006)[2]

Health: Substance Abuse

3. Alcohol-induced deaths per 100,000. Includes fatalities from alcoholic psychoses, alcohol dependence syndrome, non-dependent abuse of alcohol, alcohol-induced chronic liver disease and cirrhosis, and alcohol poisoning. (2006)[1]

4. Adults who engage in heavy drinking. Percent of adults who reported heavy drinking in past 30 days (2 or more drinks daily for men and 1 or more daily for women). AK ranks no. 8 in the U.S. (2007)[3]

5. Adults who engage in binge drinking. Percent who reported drinking 5 or more drinks on one occasion in past 30 days. AK ranks no. 6 in the U.S. (2007)[3]

6. Illicit drug users. % population age 12 and older who report using illicit drugs, including marijuana/hashish, cocaine (including crack), heroin, hallucinogens, inhalants, or prescription-type psychotherapeutics used non-medically. Alaska ranks no. 2 in the U.S. (2006)[4]

Health: Mental Health

7. Days of poor mental health in past month (adults). Mean number of reports of poor mental health. (2007)[3]

8. Teens who experienced depression during past year. Percent of high school students who felt so sad or hopeless almost every day for two weeks or more in a row that they stopped doing some usual activities during past 12 months. (2007)[5]

Health: Access

9. Population without health insurance. Percent of Alaskans without health insurance for entire year. (2007)[6]

Safety: Protection

10. Children abused and neglected. Rate of child abuse and neglect per 1,000 children ages 0-17. AK rate is number 6 in U.S. (2006).[7]

11. Injuries to elders due to falls — rate per 100,000. Non-fatal injuries, ages 65+, hospitalized 24 hours or more. (2005)[2]

12. Rate of non-fatal traumatic brain injury per 100,000. Hospitalized 24 hours or more. (2005)[2]

Safety: Justice

13. Percent of incarcerated adults with mental illness or mental disabilities. (2006)[8]

14. Statewide criminal recidivism rates for incarcerated adults with mental illness or mental disabilities. Rate of re-entry into ADOC for a new crime occurring within one year of initial date of discharge. (2006)[8]

15. Percent of arrests involving alcohol or substance abuse. Arrest offenses with Division of AK State Troopers or Wildlife Troopers that were flagged as being related to alcohol and/or drugs. This data does not include municipalities. (2007)[9]

Living with Dignity: Housing

16. Rate of chronic homelessness per 100,000 population. AHFC Point-in-Time Survey. (2007)[10]

Living with Dignity: Education

17. High school graduation rate. Percent graduating public schools with a regular diploma. (2007)[11]

18. Percent of youth who received special education who are employed and/or enrolled in post-secondary education one year after leaving school. (2007)[12]

Economic Security

19. Percent of minimum wage income needed for average 2-bedroom housing in Alaska. "Affordable" housing defined as 30% of one's income. (2007)[13]

20. Average annual unemployment rate. Rate represents the number unemployed as a percent of the labor force. (2007)[14]

21. Percent of SSI recipients with blindness or disabilities who are working. (2007)[15]

FY07 Year in Review

As we assess the many things we accomplished at the Alaska Mental Health Trust (The Trust) during fiscal year 2007, there is clear evidence that we have continued to improve and refine our efforts because we are reaping more targeted results for Trust beneficiaries than ever. We attribute this success to the many collaborative relationships we are engaged in and the strategic thinking that evolves from these relationships. We have found this formula to be very successful and it will continue to guide us through the coming year. Thus, the theme for this annual report is "*committed partners + strategic thinking = results for Trust beneficiaries.*"

At the center of our success are our relationships with hundreds of committed partners, including local, state and federal agencies, our advisory groups, non-profits, service providers, philanthropic organizations and private sector leaders. Working with these partners has reinforced the old adage that "two heads are smarter than one," because together we have developed strategic, well-thought-out programs that are helping make a difference in the lives of Trust beneficiaries.

Like any organization, we work to learn from the past so that we are continuously improving and innovating. Over the years we have discovered that we are most successful when we focus our efforts like a laser beam on a few critical issues rather than scattering our funding across diverse program areas. From this knowledge evolved the concept of "focus areas," in which we concentrate funding and other resources on a few specific issues in an effort to substantially improve services and delivery systems across the state, and ultimately improve the lives of Trust beneficiaries. Currently The Trust is working on five focus areas that address issues with significant impact on Trust beneficiaries:

1. Bring the Kids Home – bringing home to Alaska children who are being treated in out-of-state psychiatric institutions and increasing treatment services statewide;
2. Affordable Appropriate Housing – increasing the availability of a continuum of housing options for Trust beneficiaries;
3. Justice for Persons with Disabilities – reducing the involvement and recidivism of Trust beneficiaries in the criminal justice system;
4. Trust Beneficiary Projects Initiative – supporting grassroots, consumer-driven programs and small, one-time projects that improve the lives of beneficiaries; and
5. Workforce Development – creating an available and competent workforce for Trust beneficiary service providers.

In each focus area we have partnered with agencies and organizations that can bring the most influence to the table or that are essential in helping us navigate through the current landscape of services and support available for beneficiaries. In many instances we have directly engaged beneficiaries or their family members – after all, who can better speak about these issues – to get guidance and feedback. From all these discussions we have fashioned specific performance measures that help us gauge how we are doing and whether we are turning the curve when it comes to improving the lives of beneficiaries. This annual report will address each of these focus areas and describe how we are making a difference.

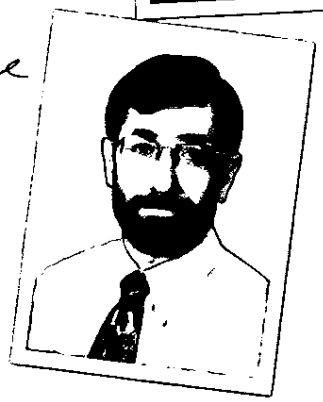
All of this effort takes funding, of course, and fortunately The Trust had a highly successful financial year in FY07. Investments with the Alaska Permanent Fund increased approximately 14 percent over the previous year. As a result approximately $26 million was available to support programs of direct benefit to Trust beneficiaries in FY07. We expect to fund at a similar level in FY08 and in FY09. The full details of our financial performance are included later in this report.

The Trustees take their fiduciary responsibilities at The Trust very seriously. Trustees are also conscious of the need to develop Trust policies and programs that adequately and appropriately reflect the needs of beneficiaries, especially as state and federal funding tightens and philanthropic support is spread more thinly. We are committed to a prudent investment plan that will result in sustained growth over time and stability for the work of The Trust. At the beginning of FY08, The Trustees hired Harry Noah as the new executive director for the Trust Land Office and he has been tasked with seeking new ways to take advantage of the investment opportunities created by our land and non-cash assets.

We urge you to read through this annual report to see the progress we made in FY07 using our formula for success, and what lies ahead for FY08 as we continue to collaborate with our partners for the betterment of our beneficiaries.

William Doolittle, M.D.
Chair

Jeffrey L. Jessee
Chief Executive Officer



Bring the Kids Home Focus Area

The **Bring the Kids Home Focus Area** is a model example of how committed partners, strategic thinking and measurable outcomes provide results for Trust beneficiaries.

THE PROBLEM OR COMMUNITY NEED:

The events that led to formation of the Bring the Kids Home Focus Area began building in the late 1990s when the number of Alaska children being sent at state expense for treatment in out-of-state psychiatric institutions began rising dramatically. The situation was devastating to the children and their families, and it was expensive for the state.

By 2005, the state was paying almost $40 million for out-of-state care for more than 700 Alaskan children with severe emotional disturbances. That same year the Department of Health and Social Services and The Trust partnered to bring home the kids who were being treated in out-of-state psychiatric institutions. We also began building a continuum of services from in-home supports to foster and group homes, which are needed in order to curtail the practice in the future. By improving the treatment delivery system, we hope to improve the lives of these youth and their families, and control the state's cost for children's mental health care.

COMMITTED PARTNERSHIPS:

The Bring the Kids Home Focus Area is one of the most complicated efforts The Trust has undertaken because it involves so many players, including representatives from the Department of Health and Social Services, the Denali Commission, behavioral health providers, Trust partner boards, a parent advocacy group, individual parents, Alaska Housing Finance Corporation and The Trust. Plus, this initiative requires service system redesign, capital infrastructure development and workforce development, each of which can involve complex and protracted solutions.

STRATEGIC THINKING:

The initial planning and funding efforts focused on the following:

- ensuring that each child is treated at the appropriate level of care as close to home as possible,
- building appropriate treatment facilities in state,
- increasing the capacity and core competencies of in-state providers so they can provide services that meet the needs of kids with severe emotional disturbances,
- ensuring youth and their parents are supported as they navigate the system of care, and
- involving parents and youth in the entire process so they are part of the solution.

From the outset, the partners in the initiative agreed that this process would be data-driven and success would be gauged by significant changes in areas directly impacting the children, namely treatment location, length of stay, recidivism, functional improvements, and service satisfaction. In addition, we began tracking increases in service capacity and shifts in funding from out of state to more in state. Our goal is to achieve significant improvements in all these areas by fiscal year 2012.

RESULTS FOR BENEFICIARIES:

After two years of intense work, our data-driven effort is showing signs of impacting the problem and changing service delivery for this group of children. Some key indicators are:

- The number of youth admitted to out-of-state residential treatment facilities has dropped 39.3 percent, from 489 when this focus area launched in FY05 to 297 at the close of FY07.
- With the infusion of capital funding from the State and The Trust's partners, service capacity – the number of beds available in state – has increased from 668 in FY05 when the initiative launched to 804 in FY07. Another 349 beds are expected to be added by the close of FY09, bringing total capacity to 1,153 for a 72.6 percent increase over FY05.

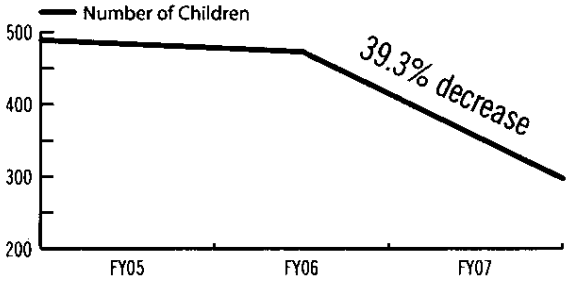
In order to bring the kids home, Alaska needed to increase the number of in-state services.

Construction began in late FY07 to increase capacity at the ARCH residential treatment facility in Eagle River.

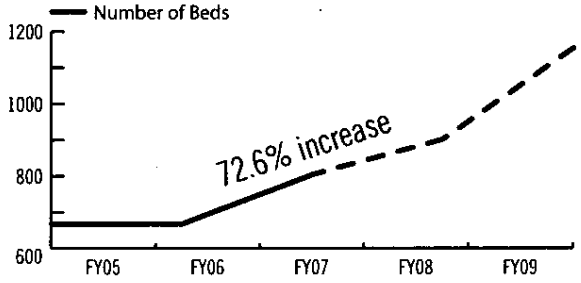
The ARCH is increasing its beds from 16 to 24 for children experiencing severe emotional disturbances.

New residential treatment facilities and group homes are also underway or operating in Fairbanks, Juneau, Mat-Su Valley and Dillingham.

CHILDREN IN OUT-OF-STATE RESIDENTIAL TREATMENT FACILITIES



RESIDENTIAL TREATMENT CAPACITY IN ALASKA



AHEAD FOR '08:

Our initial efforts in FY06 and FY07 focused heavily on increasing in-state residential treatment capacity in order to bring home the kids who were being treated in out-of-state psychiatric facilities. In FY07 we began to shift our focus to early intervention programs. These are primarily home and community-based programs involving families, schools and day care centers. This effort will receive greater attention in FY08 and FY09 in an attempt to help children experiencing severe emotional disturbances get assistance early in their lives. Our goal is to prevent these kids from advancing to residential treatment.

Capacity building remains an issue, however, and several capital projects are on the horizon in FY08 that will help increase capacity and improve the state's service delivery system. For example, in early FY08 bids were being accepted to build a 44-bed facility in Eklutna, which is expected to be complete sometime in FY09. Plus, construction began in late FY07, expanding the ARCH residential treatment facility in Eagle River from 16 to 24 beds. This project is expected to be complete by late FY08.

While great strides were made in FY07 and are ahead for FY08, creating a sensible and sustainable program that keeps Alaska's children home and controls out-of-state spending will take years of continuous effort.

Affordable Appropriate Housing Focus Area

The goal of The Trust's Affordable Appropriate Housing Focus Area is to increase the availability of a continuum of housing options that are best suited to Trust beneficiary needs, and that will improve or sustain their quality of life.

THE PROBLEM OR COMMUNITY NEED:

Statistics from around the state are conclusive: many Alaskans of all ages do not have a place to truly call home. What is most disturbing to The Trust is that the statewide housing shortage disproportionately affects Trust beneficiaries. Having safe, decent, affordable, accessible and appropriate housing is often the key for beneficiaries in maintaining a healthy lifestyle.

The high incidence of homelessness among Trust beneficiaries can be linked to challenges associated with disabling conditions, lack of opportunities for economic advancement, the need for supportive living situations, or accommodations required to meet special needs. Increasingly, the cost of providing these supportive services, such as treatment, crisis intervention, job counseling or life-skills training, is too expensive for mainstream landlords and challenging even for skilled social service providers.

RurAL CAP celebrated 10 years of offering supportive housing to Alaskans.

Housing advocates across the state support the Alaska Housing Trust.

Kenai Peninsula Housing Initiatives completed Crestview, supported housing in Soldotna.

Valley Residential Services operates several supported housing units in Mat-Su.

COMMITTED PARTNERS:

A steering committee was formed in 2006 to examine possible ways to increase the number of affordable housing units in Alaska and how to maintain them securely over time. Among the models examined was creation of a housing trust. The committee included representatives from the governor's office, The Trust, Alaska Housing Finance Corporation, Alaska Department of Health and Social Services, several regional tribal housing authorities, U.S. Department of Housing and Urban Development, U.S. Department of Agriculture Rural Development, Wells Fargo Bank, Rasmuson Foundation, social service providers, and homebuilders.

STRATEGIC THINKING:

Based on the success of housing trusts in more than 30 states, The Trust and its partners agreed to create the Alaska Housing Trust. A housing trust is a pot of non-federal funds devoted to housing activities for individuals and families with greater housing needs. It allows flexibility in spending and the opportunity to be innovative and entrepreneurial in solving housing problems.

By creating a housing trust, Alaska can increase the number of affordable units available for rent and help maintain them securely over time. Funding from a housing trust can serve as the glue to meld federal resources and social service funding, and can subsidize areas of supported housing projects that are not covered by traditional funding streams. With assistance from a housing trust, these units are more affordable and secure for tenants because additional support services and subsidies are built into the overall project costs. These service-enriched units are also attractive to developers and landlords because they create mechanisms for tenants to afford their rents, become reliable, long-term residents, and receive assistance with skills training and crisis management.

RESULTS FOR TRUST BENEFICIARIES:

In tandem with our efforts to create a housing trust, this focus area also funded several programs in FY07 that provide or promote stable housing for Trust beneficiaries. For instance, The Trust, the Denali Commission, the Rasmuson Foundation and The Foraker Group partnered to create a predevelopment program that offers technical assistance to housing and social service agencies interested in expanding or retaining their existing portfolio of special needs housing units. The Trust also collaborated with the Division of Behavioral Health's Supported Housing Office in developing a supported housing business plan for small housing developers that takes into account the cost of providing support to Trust beneficiaries. Additionally, in FY07, The Trust helped fund rental subsidies at Bridge Home, a transitional living facility which provided stable housing to about 40 individuals who had been cycling through hospital emergency rooms and psychiatric facilities.

During the 2007 legislative session, Gov. Sarah Palin issued an Administrative Order maintaining and expanding the Alaska Council on the Homeless, which was formed in 2004 to address homelessness in Alaska. The governor also included directions to develop a framework for the housing trust and legislation that will enact it. This legislation has been drafted and is ready for release once the Council, AHFC, the Alaska Housing Trust steering committee and the state administration determine the best mechanism to move the legislation ahead.

In recognition that the Alaska Housing Trust is moving forward, The Trust allocated $1 million in FY07 to support the housing trust and the Rasmuson Foundation granted a matching $1 million. In addition, the Alaska Housing Trust Coalition formed in FY07 in support of the Alaska Housing Trust and has nearly 70 members, including representatives from United Way organizations across the state, the Municipality of Anchorage, social service providers, private housing developers and the Alaska Chapter of AARP.

AHEAD FOR '08:

As a first step in administering the $2 million in pilot funds contributed in FY07 to support the housing trust, AHFC, the Municipality of Anchorage and The Trust combined application processes for AHFC's FY08 capital projects. This improved procedure gives applicants access to state and local funding, plus the housing trust pilot money, in a single competitive bid, demonstrating how the housing trust model streamlines the funding process.

Already several communities have begun examining how the Alaska Housing Trust may assist in meeting their need for housing for special populations, including plans for a pilot project in Anchorage to support the chronic homeless, and coordination of services in Juneau and Fairbanks to ensure seasonal housing demands are met.

WORK HOURS NEEDED TO PAY RENT

Area	Work hours per week at minimum wage needed to afford 1 bedroom	Work hours per week at minimum wage needed to afford 2 bedroom	Work hours per week at minimum wage needed to afford 3 bedroom	Work hours per week at minimum wage needed to afford 4 bedroom

Disability Justice Focus Area

THE PROBLEM OR COMMUNITY NEED:

A 1997 study showed that 37 percent of persons under the supervision of the Department of Corrections had a mental illness and most also had a co-occurring substance abuse disorder for either drugs or alcohol. By 2006 the statistics had not improved and a large number of Trust beneficiaries continued to be incarcerated, spurring The Trust to form the Disability Justice Focus Area. This focus area has two primary goals: (1) reduce the involvement and recidivism of Trust beneficiaries in the criminal justice system and (2) increase the criminal justice system's ability to effectively accommodate the needs of victims and offenders who are Trust beneficiaries.

Trust beneficiaries are at increased risk of involvement with the criminal justice system both as defendants and as victims. Each year, hundreds of Trust beneficiaries, who have committed no crime, are incarcerated for their safety because appropriate service alternatives are not available. Thousands more are arrested, prosecuted and incarcerated for status offenses resulting from behaviors associated with the symptoms of their mental disorders.

COMMITTED PARTNERS:

Several strong partnerships were formed to address this issue with The Trust, including the Alaska Court System, the departments of Corrections, Health and Social Services, Law, and Public Safety, the University of Alaska, local governments, law enforcement, and behavioral health treatment providers.

STRATEGIC THINKING:

The partners quickly identified cross system communication, early identification of beneficiaries when they enter the criminal justice system, and training as the key components needed to assist Alaska's criminal justice and health and social service systems in preventing the inappropriate or avoidable arrest, prosecution, and incarceration of Trust beneficiaries.

RESULTS FOR BENEFICIARIES:

In FY07, The Trust and its partners focused on two key areas: training criminal justice personnel to be more familiar with beneficiaries and their needs, and discharge planning for beneficiaries exiting the corrections system and re-entering Alaska's communities as a strategy to reduce recidivism among beneficiaries.

The Alaska Court System, the Alaska Bar Association, the Public Defender Agency and The Trust partnered to develop and implement a six-part Continuing Legal Education (CLE) series entitled "Managing Cases Involving Persons with Mental Disorders." The curriculum assists judges, lawyers and other professionals in understanding and more effectively handling legal cases involving Trust beneficiaries. There were 450 participants in the CLE series, of which 262 worked in the legal field. The training sessions were videotaped and are available for those who were unable to attend or for new lawyers entering the field who are unfamiliar with mental health disorders and law.

The departments of Corrections and Health and Social Services, behavioral health treatment providers and other stakeholders from around the state developed and implemented a discharge planning program for beneficiaries who leave corrections and re-integrate into Alaska's communities. It is based on a national best-practice model called Assess, Plan, Identify, Coordinate (APIC). The program was operational in the fourth quarter of FY07 in Anchorage, Fairbanks, Juneau and Palmer.

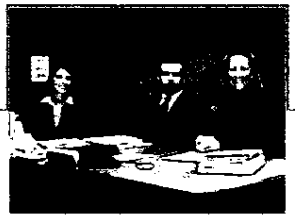
AHEAD FOR '08:

Goals for FY08 include release of a comprehensive, four-year, retrospective analysis of beneficiaries who entered, were served within, and were released from the Department of Corrections. This data will assist the Disability Justice Focus Area partners to strategically plan and develop effective programs that will divert and reduce the number of Trust beneficiaries who are incarcerated. The Trust has also committed funds in FY08 for additional training on disorders experienced by beneficiaries and intervention techniques for law enforcement officers in Anchorage and Fairbanks. Planning will begin for introduction of additional therapeutic courts in Southeast Alaska.

Finally, The Trust plans to develop, in partnership with the departments of Corrections and Health and Social Services, local governments and stakeholders, an enhanced continuum of detoxification and treatment services in several locations that will reduce the inappropriate and avoidable incarceration of beneficiaries under Alaska's protective custody laws.

District Court Judge Stephanie Rhoades presides over the Anchorage Mental Health Court.

Law enforcement and correctional officers completed Trust funded Crisis Intervention Team training.



Prosecutors are key team members of therapeutic courts in Anchorage, Fairbanks, Palmer, Bethel, Juneau and Ketchikan.

District Court Judge Greg Heath presides over the Palmer Mental Health Court.

Beneficiary Projects Initiative Focus Area

What better way to demonstrate The Trust's commitment to improving the lives and circumstances of Trust beneficiaries than putting funds directly into beneficiaries' hands for beneficiary-directed projects they conceive and operate.

THE PROBLEM OR COMMUNITY NEED:

Involving consumers in defining and mapping out their recovery is a well-known treatment tactic and may forestall the need for more intensive traditional service. While plenty of beneficiaries and their family members have keen interest in developing consumer-driven services, not all have the expertise or training to organize, manage and sustain the programs they envision.

In FY07, the Beneficiary Projects Initiative Focus Area committed about $1.3 million for Trust beneficiaries to develop grassroots projects that focus on peer-to-peer support. This means beneficiaries are helping each other find and maintain their individual path to recovery and wellness. The Trust also funded a $1.2 million mini-grant program for projects that provide Trust beneficiaries with a broad range of equipment and services essential to directly improving their quality of life and increasing independent functioning. In addition, The Trust allocated $250,000 for The Trust's Small Projects program, which provided small amounts of one-time funding for more than 30 beneficiary-directed projects in FY07.

COMMITTED PARTNERS:

The most significant partners in this focus area are the beneficiary grantees, of which there has been 25 since the program began in 2006, including 15 who received funding in FY07. They all have committed to delivering safe, effective services and running stable, well-managed organizations. They are succeeding because of the help they receive from a host of committed partners, including The Trust's advisory boards, federal agencies such as SAMHSA, state agencies such as the Division of Behavioral Health, Native organizations such as First Alaskans Institute, major foundations such as the Rasmuson Foundation, and national and state technical assistance providers.

STRATEGIC THINKING:

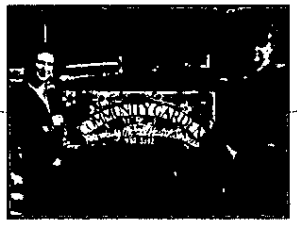
Among the goals for this focus area are providing grantees with seed money and technical assistance so their projects get off the ground, operate smoothly and are sustainable. The program is administered through a contract with The Foraker Group where staff can answer basic operating questions, help develop business plans, or assist beneficiaries in getting a program started and running effectively.

RESULTS FOR BENEFICIARIES:

Some of the services initiated by Trust beneficiaries include peer-support services, clubhouses and drop-in centers, community outreach, and illness self-management in communities that range from Nenana to Ketchikan. By funding these projects, The Trust has helped increase the capacity of the state's mental health treatment delivery system for beneficiary-directed services. But more importantly, these projects and services are improving beneficiaries' lives by creating a sense of empowerment and promoting recovery among both the beneficiary providers and the recipients. In 2007, more than 1,600 Trust beneficiaries received both direct and indirect services through the Beneficiary Projects Initiative Focus Area, nearly all of which were provided by fellow beneficiaries and/or family members.

AHEAD IN '08:

In FY08 an "incubator" program will assist beneficiaries in developing their project ideas more thoroughly. Overall initiative capacity building will take two distinct forms. First, through leadership training, we want to grow the expertise of individual beneficiaries who are already serving; and, second, we will recruit other skilled individuals who have interest in serving their communities. Finally, an evaluation of the initiative will be conducted to provide focus area guidance and establish appropriate performance measures.



The Trust funded the Petersburg Community Garden as a small project.

The annual Key Campaign raises awareness about developmental disabilities.

Beneficiaries developed peer-support services, club houses and drop-in centers.

Young self-advocates give back to their community by participating in a tree-planting program.

Workforce Development Focus Area

THE PROBLEM OR COMMUNITY NEED:

Having an available and competent workforce are enormous challenges for all Trust beneficiary service providers. A shortage of health care workers in Alaska has been at a near-crisis level for many years, yet the health services industry is the fastest growing sector of Alaska's economy, employing more than 7 percent of the state's workforce, according to a 2007 study commissioned by The Trust. Much of the reason for this worker shortage lies in Alaska's remoteness, harsh climate, rural isolation, low population density, high cost of living and scarce training resources. Exacerbating this already difficult situation is a burgeoning demand now for increased health services for the state's steadily growing and aging population, some of whom are among The Trust's beneficiaries. The Workforce Development Focus Area is aimed specifically at increasing the available pool of qualified employees in Alaska who serve Trust beneficiaries and keeping that workforce adequately trained.

COMMITTED PARTNERSHIPS:

More than 20 partners worked in FY07 to develop strategies that will address the goals set out by this focus area. These partners included service providers, the departments of Health and Social Services and Labor and Workforce Development, non-profit and faith-based organizations, and educational institutions such as the University of Alaska system, including the campuses in Anchorage, Fairbanks and Sitka.

STRATEGIC THINKING:

After studying data around the workforce issues it became clear that there are many dimensions to the problem and that multiple strategies are needed to reduce the problems. We have developed strategies around recruitment, retention and training issues to accomplish our goal of having a competent workforce to serve Trust beneficiaries. The strategies address a diverse array of problems including adequate pay and benefits, affordable housing, access to training and professional development, and competent supervision.

RESULTS FOR BENEFICIARIES:

The Trust partnered with the University of Alaska to conduct a state-wide vacancy study in 2007 to assess the number and length of time positions have been open in a broad array of physical and behavioral health organizations. The results were staggering, especially among the occupations that serve Trust beneficiaries. The vacancy study shows the most severe shortages in the behavioral health field were for occupations that fell under the category of human services worker, with both extremely high vacancy numbers and high vacancy rates. Overall, all behavioral health occupation vacancies were high – around 29 percent of all estimated vacancies – and ranked higher than any other occupational group. This means organizations that serve beneficiaries are understaffed, which results in delayed treatment or no services available to some people, resulting in negative impacts to individuals, families and communities.

AHEAD FOR '08:

Because the Workforce Development Focus Area is the newest of The Trust's focus areas, most of the work was just being planned in 2007 so many of the strategies are expected to gain traction or launch in FY08. A new Trust Training Cooperative formed in 2007 will address training needs in the field, helping to tie together and maximize available on-the-job training and necessary continuing education for the workforce. Additionally, new recruitment and retention strategies are beginning or expanding in FY08 in a wide variety of venues. For instance, a demonstration project for a new Student Loan Repayment Program for behavioral health professionals is expected to commence in 2008 that will serve as a recruitment and retention tool.

REGIONAL VACANCY RATES

Occupational Group	Regions (Study Sample – n = 476)

The 2007 Alaska Health Workforce Vacancy Study was conducted by the Alaska Center for Rural Health – Alaska's AHEC, at the University of Alaska, Anchorage. The study was funded by The Trust and by the Office of Associate VP for Health, University of Alaska Anchorage, through the Centers for Disease Control and Prevention. The full report may be downloaded at http://nursing.uaa.alaska.edu/acrh/.

Trust Fund Experiences Record Growth in FY07

Due to strong investment markets throughout the 2007 fiscal year, the cash assets of the Alaska Mental Health Trust Authority reached a record high balance. Investments with the Alaska Permanent Fund (APFC) increased 13.8 percent, rising from $385,366,600 at the end of FY06 to $438,513,700 at the end of FY07.

Income from these investments was $62,448,000 for FY07 and $36,046,700 for FY06. Statutory net income determined by APFC (which does not include unrealized gains) was $31,756,200 for FY07 and $39,733,300 for FY06. Statutory net income increases the Budget Reserve and can be used to fund the mental health budget, while unrealized net income can only be applied to inflation proof our Principal investment.

The Budget Reserve is set at 400 percent of the annual payout, to allow for disbursements during market downturns without eroding Trust Principal. The Budget Reserve investment is split between the Alaska Permanent Fund and the Treasury Division of the Alaska Department of Revenue.

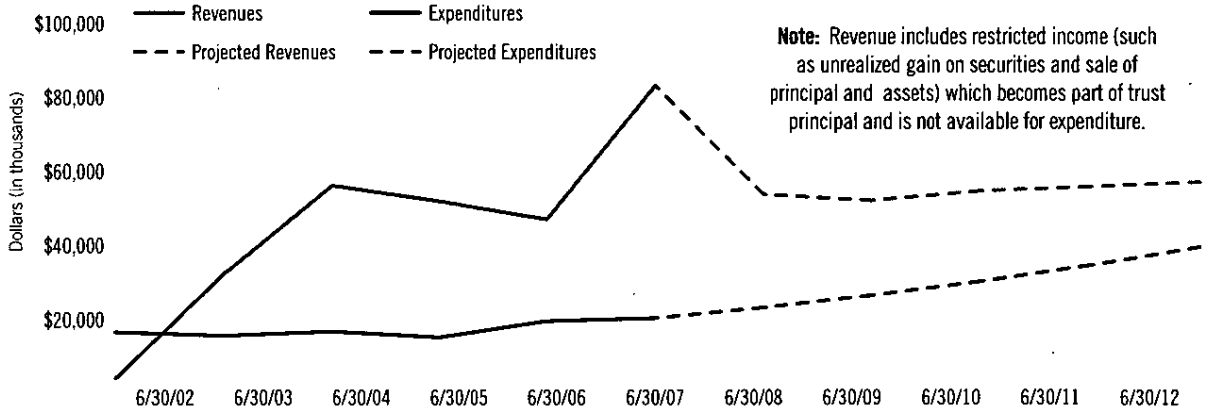
The Treasury Division Budget Reserve investments were reallocated during FY07 according to the recommendation of financial consultants Callan Associates, Inc. Due to this change, combined with strong investment performance, the earnings on this portion of the Budget Reserve soared tenfold from $445,740 in FY06 to $4,586,200 in FY07.

The Trust's payout rate, which is used to calculate the disbursement (or payout) for the mental health budget, was increased at the end of FY06 from 3.75 percent to 4.0 percent beginning with the FY07 budget. This rate is applied to the balance in the Trust Fund (Principal and Budget Reserve) at the end of a fiscal year to calculate the payout for the subsequent year.

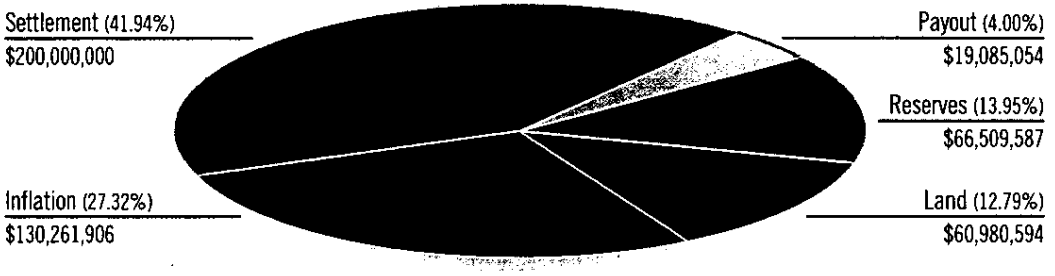
The following financial performance from FY07 is available for funding in FY08:

- Disbursement (payout) rate of 4.0 percent, for a payout of $19,085,054. This represents an increase of 14.8 percent over FY06.
- Resource management revenue allocated as income was $3,428,312.
- Interest on the Income Account at Treasury Division was $1,620,108.
- Lapsed funds from prior fiscal years were $2,770,922.
- Total funding available for FY08 is $26,904,396. This is a 17 percent increase from FY07 availability of $23,032,672.

REVENUES AND EXPENDITURES



TRUST CASH ASSETS AT END OF FY07



Trust Land Office Generated $8.1 Million

Revenue-generating uses of Trust land include land leasing and sales; commercial timber sales; mineral exploration and production; coal, oil and gas exploration and development; sand, gravel and rock sales; and other general land uses.

The Trust Land Office (TLO) is a small 11-person unit in the Department of Natural Resources that manages approximately one million acres of land and non-cash assets throughout Alaska on behalf of the beneficiaries of the Alaska Mental Health Trust. Gross revenue in FY07 totaled about $8.1 million, of which about $3.3 million was Spendable Income and about $4.7 million was Principal revenue.

Revenue-generating uses of Trust land include land leasing and sales; commercial timber sales; mineral exploration and production; coal, oil and gas exploration and development; sand, gravel and rock sales; and other general land uses. Rents, fees and 15 percent of timber revenue from Trust land uses are considered "Spendable Income' and are available to The Trust for use in the following fiscal year. Land Sale revenue, hydrocarbon and mineral royalties, and 85 percent of timber revenue are considered "Principal" and are deposited in The Trust corpus, which is held and managed by the Alaska Permanent Fund Corporation.

[illegible]:

- Completed subdivision and re-plat of The Trust's Juneau waterfront parcel known as The Subport, and sold a parcel adjacent to Centennial Hall to the City and Borough of Juneau for $2.93 million.
- Fairbanks Gold Mining Inc. paid The Trust a royalty of more than $700,000 for its 2006 calendar year production from its mine located on Trust land north of Fairbanks.
- Sold 67 parcels in The Trust's annual land sale for a value of $2.17 million.
- Responded quickly to approve an authorization for the expedited recovery of spilled fuel from a DC-4 that crashed on Trust land near Nenana carrying 3,000 gallons of heating oil.
- Worked with the Department of Natural Resources to establish a new replacement land list, and prioritized conveyances of the lands owed to The Trust under the Settlement Agreement for lands that were originally conveyed to The Trust in error or had other encumbrances that significantly affected the land.
- After a 10-year hiatus, the Board of Land Management began adjudication of the remaining Mental Health Enabling Act selections as part of the agreement to close out The Trust's federal entitlement.
- Talon Gold began mineral exploration on Trust land near Livengood. Early results from that program continue to provide encouraging news for the precious metals prospect.
- Worked with various communities throughout Alaska on issues affecting management of Trust lands.

[illegible]:

The TLO will begin long-term planning for Trust timber lands, commercial real estate and resort properties. In addition, the office will strive to build or rebuild relationships with local communities or individuals that live or work near lands managed by The Trust.

Key projects will include:

- Planning for development of the Juneau Waterfront Property (formerly titled the Juneau Subport);
- Researching potential timber land exchanges in Southeast Alaska with the U. S. Forest Service;
- Developing a long-term property and land management program for use by TLO staff;
- Resolving a back log of land use issues;
- Developing a preliminary feasibility study for monitoring resort quality properties;
- Offering for sale potential subdivision lots; and
- Continuing to offer oil, gas and mineral properties for lease.

Trust land along Juneau's waterfront is being redeveloped.

Typical timberland owned by The Trust in Southeast Alaska.

Saw logs waiting to be processed at Silver Bay Mill in Wrangell.

Yellow cedar dimensional lumber waiting for shipment in Wrangell.

An Overview of 2008

Last year we reported that we have developed a formula for achieving our goal of improving the lives and circumstances of Trust beneficiaries. We defined the formula as *"committed partners + strategic planning = results for Trust beneficiaries."* Throughout FY2008, we continued to rely on this formula to guide our work on behalf of Trust beneficiaries. As a result, our theme for this annual report is *"continuing our formula for success,"* which reflects our ongoing commitment to serve as a catalyst for change in the systems that serve Trust beneficiaries.

We urge you to read through this report to learn how we are collaborating with our many partners to ensure and improve the comprehensive integrated mental health program in Alaska. We hope that by reading this report you will have a better understanding of how the issues we address affect virtually all Alaskans.

WHAT IS THE TRUST

The Alaska Mental Health Trust Authority is a state corporation that manages the Mental Health Trust, which was established at statehood. Our goal is to serve as a catalyst for change and improvement in Alaska's mental health continuum of care. We do not provide individual services; instead we operate much like a private foundation, using our resources to fund projects and activities that promote system change, including capacity building, demonstration projects, funding partnerships, technical assistance, and other activities that will improve the lives and circumstances of Trust beneficiaries.

TRUST BENEFICIARIES

Our beneficiaries are a diverse group. They include people with mental illness, developmental disabilities, chronic alcoholism, and Alzheimer's disease and related dementia. They live throughout Alaska and range from newborns to the oldest members of our communities. You probably know someone who is represented by The Trust; it could be a family member, a neighbor, a coworker or even yourself. As a result, the issues addressed by The Trust touch nearly every Alaskan, either directly or indirectly.

HOW WE FUND PROGRAMS

The amount Trustees have available to spend each year includes a portion of the earnings from our cash and non-cash assets. Because of favorable market conditions in recent years our investments have done well. As a result, Trustees have disbursed about $25 million per year to support programs of direct benefit to Trust beneficiaries. The economic downturn in FY2009, however, indicates The Trust will have a smaller funding stream available in FY2010.

FOCUS OF TRUST FUNDING

Most of The Trust's annual operating and capital budgets are spent on five focus areas that address issues with significant impact on Trust beneficiaries. These focus areas are:

1. Bring the Kids Home – bringing home to Alaska children who are being treated in out-of-state residential psychiatric institutions and increasing early detection, intervention and treatment services for these children statewide;
2. Affordable Appropriate Housing – increasing the availability of a continuum of housing options for Trust beneficiaries to reduce homelessness and improve their quality of life;
3. Disability Justice – reducing the involvement and recidivism of Trust beneficiaries in the criminal justice system;
4. Trust Beneficiary Projects Initiative – supporting grassroots, consumer-driven programs and small, one-time projects that improve the lives of beneficiaries; and
5. Workforce Development – creating an available and competent workforce for Trust beneficiary service providers.

OUR PARTNERS

In many instances, we directly engage beneficiaries and family members for guidance and feedback. We also depend on input regarding funding and policy recommendations from several advisory boards that serve as a link between The Trust and our beneficiaries, their families, caregivers and legal guardians. In addition, we rely on participation and collaboration from a number of state agencies, community partners and stakeholders to help reform and improve the systems that serve Trust beneficiaries.

The Trustees and Trust staff are committed to working with Governor Palin, the Legislature and our many partners to continue applying our formula for achieving the systemic change needed to make long-term improvements in the lives and circumstances of Trust beneficiaries.

William Doolittle, M.D.
Chair

Jeffrey L. Jessee
Chief Executive Officer

Keeping Beneficiaries Out of Corrections

The Disability Justice Focus Area aims to reduce the involvement and recidivism of Trust beneficiaries in the criminal justice system and increase the system's ability to effectively accommodate the needs of victims and offenders who are Trust beneficiaries.

Study of Trust Beneficiaries in the Department of Corrections — More than 40 percent of Alaska inmates have a mental illness or a cognitive impairment, according to a study commissioned by The Trust and the Alaska Department of Corrections, in coordination with the Department of Health and Social Services. The 2008 study revealed that inmates identified as Trust beneficiaries are more likely to return to prison, return sooner and spend more time in custody than other inmates. The four-year study also revealed that Trust beneficiaries who receive community health services upon release from prison have a lower rate of recidivism. The Trust and its partners are using the study results to promote increased funding for correctional and community-based treatment, improve integration among the systems serving Trust beneficiaries, and provide better links with community health care services to help ease the burden of care on Alaska's criminal justice system.

Alaska District Court Judge Greg Heath presides over the Palmer Mental Health Court.

Therapeutic Court System Studies — Evaluations of the Anchorage and Palmer Mental Health Courts in FY2008 demonstrated that the courts save public funds, reduce crime, and better meet the needs of defendants with significant mental disabilities than the traditional criminal justice approach. The courts are a collaborative effort between The Trust, Alaska Court System, the departments of Administration-Public Defender Agency, Corrections, Health and Social Services, Law, and Public Safety; local law enforcement and community treatment providers.

According to the 2008 study of beneficiaries in the Department of Corrections, Trust beneficiaries are part of a "revolving door" system of justice that is expensive, does not serve the interests of public safety, and does not benefit the defendants. The retention and program completion rates at Anchorage and Palmer compare favorably with therapeutic courts nationally. As a result, other communities are being assessed for expansion of mental health and substance abuse courts statewide.

Fairbanks Enhanced Detox Facility — A $4.6 million, 16-bed detox treatment facility aimed at reducing the inappropriate and avoidable incarceration of beneficiaries under Alaska's protective custody laws opened in January 2009 in Fairbanks. Construction of the Gateway to Recovery – Fairbanks Community Enhanced Detox Center began in FY2008 after several years of planning by a coalition of community providers, including Fairbanks Memorial Hospital, Tanana Chiefs Conference, Fairbanks Community Behavioral Health Center, and the Fairbanks Native Association, which also operates the facility. The new center increases detoxification capacity in Fairbanks by 60 percent. The new facility is located on Trust land and received major financial support from the Department of Health and Social Services; the Department of Commerce, Community and Economic Development; Rasmuson Foundation; Greater Fairbanks Community Hospital Foundation; The Trust; Doyon Ltd.; Tanana Chiefs Conference and private donors.

Overall Distribution of Trust Beneficiaries in Custody of the Alaska Department of Corrections

Incarcerations	FY 2003	FY 2004	FY 2005	FY 2006
Total Incarcerations	36,597	39,067	39,260	37,165
Trust Beneficiary Incarcerations	14,996	16,570	16,309	15,175
Trust Beneficiary Percent	41.0%	42.4%	41.5%	40.8%
Unique Offenders	17,258	18,246	17,998	17,220
Unique Trust Beneficiaries	5,820	6,267	6,265	6,071

Providing Affordable, Supportive Housing

The Appropriate Affordable Housing Focus Area is directed at expanding the availability of supportive housing for Trust beneficiaries. Safe, affordable, secure housing is critical for all Trust beneficiaries to be successful in their communities. Yet, finding permanent, appropriate housing is a problem for all our beneficiary groups. The problem is compounded by the fact that Trust beneficiaries typically need more than just a roof over their heads. They often need housing that also provides training and support services such as budgeting, financial management, social-skills training, problem solving and assistance with cognitive or behavioral issues to help them become stable, dependable tenants. The Appropriate Affordable Housing Focus Area workgroup has developed and is piloting several innovative, flexible strategies to address the housing needs of Trust beneficiaries.

Special Needs Housing Grant Program Expanded — The Special Needs Housing Grants or SNHG (pronounced snug) program is a long-time partnership between Alaska Housing Finance Corporation and The Trust that provides capital funds for supported housing for Trust beneficiaries. The program was expanded in FY2008 to provide more operations assistance and more flexible funding so the units are affordable and have increased outreach and assistance for residents. This innovation represents important first steps to retooling the special needs housing systems in our state. The program is managed and funded by AHFC, with additional funding from The Trust and the Department of Health and Social Services. Competitive grants are available to non-profit service providers and housing developers for planning and construction activities and may provide for group, supportive and transitional housing.

Housing Trust Pilot Projects — The Rasmuson Foundation and The Trust each committed $1 million in FY2008 for supportive housing pilot projects in Southcentral Alaska. The projects replicate the approach used in 35 other states that have implemented housing trusts. Housing trusts are a tool that states and communities use to increase the outreach and social services available to housing developments. As a result, these housing developments offer long-term support for individuals with special needs and preserve the community's investment.

Restructured Housing in Fairbanks — The Trust and the Department of Health and Social Services were instrumental in assisting Fairbanks Community Behavioral Health Center in restructuring its housing programs, allowing the center to reopen 24 previously closed units for individuals with serious mental illness.

Bridge Home Reduces Institutionalization — The Trust's main program in the housing focus area, the Bridge Home, is aimed at reducing the number of beneficiaries cycling through the Alaska Department of Corrections and Alaska Psychiatric Institute. In a four-year analysis of program participants, there was a significant reduction in the number of admissions to these facilities and a reduction in the costs related to these visits. This program will be expanding in FY2009 to include more beneficiaries with histories of cycling through the system.

Left: Residents in a supportive housing program in Anchorage helped landscape the area around their home.

Bridge Home Supportive Housing Results*

	Prior to Program	During Program	Reduction in Use
Alaska Psychiatric Institute Admits	79	49	38%
Days in Alaska Psychiatric Institute	1,707	1,167	32%
Department of Corrections Admits	51	27	48%
Days in Department of Corrections	2,124	674	68%

*Number of residents = 47

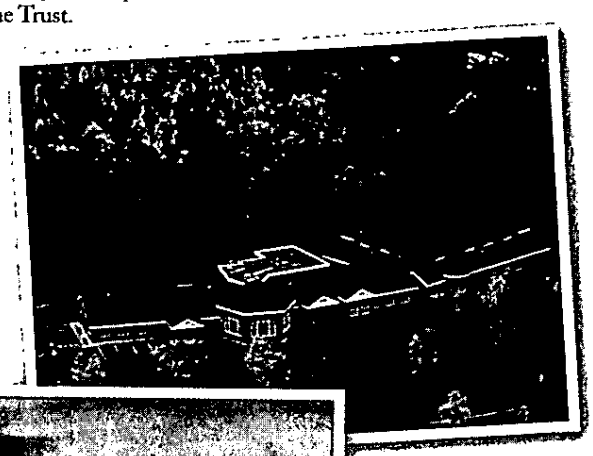
Reforming Mental Health Care for Children

The Bring the Kids Home Focus Area is reforming Alaska's mental health care for children and adolescents by increasing community-based services, providing early detection and intervention, and coordinating with families and schools to promote healthy learning environments. Bring the Kids Home began in 2005 as an initiative to return children with severe emotional disturbances from out-of-state residential facilities to treatment in Alaska and to keep additional children from moving into out-of-state care. Funded by The Trust and the Department of Health and Social Services, this initiative is a good example of how The Trust uses its resources to affect systemic change on behalf of Trust beneficiaries. Besides improving recovery at the lowest level of appropriate care, the State expects to benefit from this initiative by gaining better control of the future cost for children's mental health care.

Out-of-State Placements Dropped 59 Percent — The number of children admitted into out-of-state psychiatric treatment facilities dropped 32 percent, from 297 in FY2007 to 202 in FY2008. That is an overall 59 percent decline from the 489 kids who were admitted into out-of-state residential programs when the initiative began in 2005.

In-State Capacity Increased — In order for children in out-of-state treatment facilities to come home, there must be treatment available in Alaska. Planning and construction of new facilities take time and have not caught up with the need, but there were some small increases in FY2008 and at least one facility has opened in FY2009. The Boys & Girls Homes of Alaska in FY2008 opened a residential center in Fairbanks with a capacity of 130 kids. A five-bed group home opened in Dillingham in FY2008, with financial support from the Denali Commission, the Department of Health and Social Services and The Trust. In December 2008, the Volunteers of America-Alaska opened its expanded 24-bed adolescent residential center in Anchorage, increasing its capacity in FY2009 by 50 percent.

Individualized Services Increased — Developing in-state capacity for children with severe emotional disturbances is only a partial solution. The rest of the answer lies in preventing the need for residential care by providing youth the services and supports they need to stay at home. This requires investments in early intervention for children and families to keep problems from becoming severe. The Individualized Services program provides assistance to children and their families specifically geared to each child that will keep them safe, stable and at home. Services range from transportation to attend after-school activities to crisis intervention; and from family therapy to medication management. Without these services, many recipients would be destined for residential treatment, which would separate them from their families and home communities and cost more. The program is funded by the Department of Health and Social Services and The Trust.

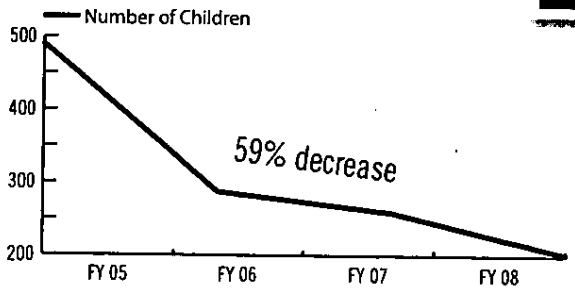


Top: Construction of new treatment facilities in Alaska is helping bring home those youth being treated out of state.

Left: Volunteers of America-Alaska increased capacity in their Anchorage residential facility by 50 percent.

Bottom: Early detection and intervention programs help children get help sooner and in their home communities.

Children Admitted into Out-of-State Residential Treatment Facilities



Bring the Kids Home Initiative

Offering the Wind Beneath Their Wings

The Beneficiary Projects Initiative Focus Area supports and funds grassroots, beneficiary-driven, peer-to-peer programs and small, one-time projects that improve the lives of Trust beneficiaries. In FY2008, The Trust authorized $1.25 million for this focus area, which is the only focus area that puts funds directly into the hands of beneficiaries to help them map out their recovery and long-term wellbeing. During the year, nine projects were funded that focused on everything from peer-to-peer support services and activities to early intervention programs, education, advocacy and outreach.

Technical Assistance — A panel of experts in the non-profit field is available to assist beneficiary groups in getting their programs developed, funded and running smoothly. The panel provided technical assistance in FY2008 to 23 beneficiary-led projects regarding organizational development, project implementation, business planning and board development. The panel is funded by The Trust and coordinated by The Foraker Group.

Alaska Peer Support Consortium — A network of 20 beneficiary-run programs organized into the Alaska Peer Support Consortium to advocate for beneficiaries, share information and provide training opportunities for peer-to-peer support services. The group is proving to be a critical partner to policymakers for developing peer-to-peer support services.

Beneficiaries Participate in Public Process — Partners in Policymaking is a Trust-funded program that provides training to Trust beneficiaries about how to participate in policymaking at various levels of government. The program is a collaboration with the Governor's Council on Disabilities and Special Education and the University of Alaska Center for Human Development. Program graduates have been successful in securing funds for peer-operated support services, serving on Beneficiary Projects Initiative grantee boards and participating in public advisory boards and commissions.

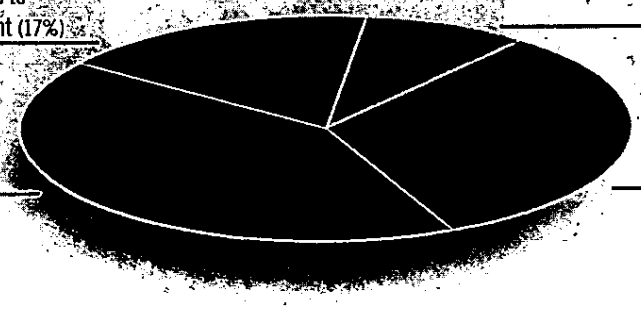
Left: Peer-run clubhouses offer participants life-skills training such as cooking.

Bottom: Beneficiaries produced costumes for an Anchorage poetry jam as part of their recovery.

Beneficiary Programs Initiative FY2008 Grants

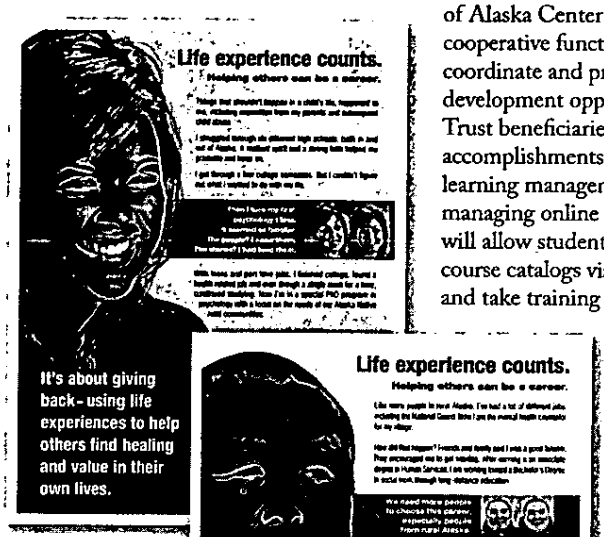


Recruiting, Retaining and Educating Workers

The overarching goal of the Workforce Development Focus Area is for service providers across the state to have access to a capable, culturally competent workforce that supports Trust beneficiaries, their families and communities. The focus area workgroup has identified three objectives to help make this happen: workforce recruitment, retention, and training and education. FY2008 was the first year of implementation in this focus area. During the year, more than 20 activities and programs were launched that targeted from entry-level personnel to paraprofessionals and professionals in a wide variety of beneficiary-related jobs across the state.

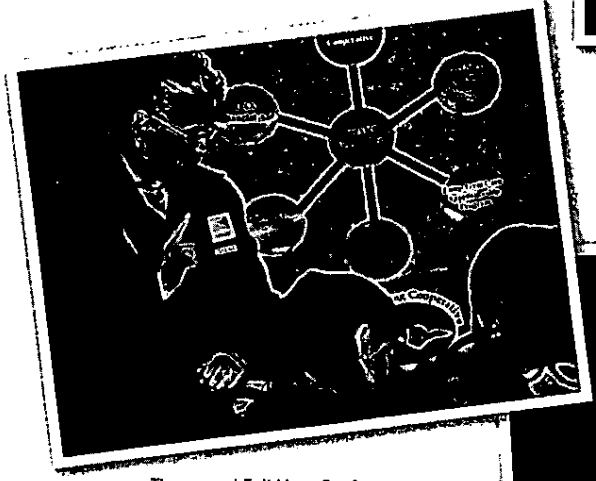
Student Loan Repayment Program — Under this incentive program, workers are being recruited into jobs in the behavioral health field that have been identified as having high vacancy rates in communities across the state. Professionals who graduated from an accredited college or university with a master's degree or higher are eligible for loan repayment in exchange for working in Alaska for two years. The program structure was developed in FY2008; five eligible job sites were selected for FY2008 and an additional five for FY2009.

Trust Training Cooperative — Many service providers lack access to education and training for employees who serve Trust beneficiaries, especially at small agencies and agencies in rural areas. To help ease this problem, The Trust in FY2008 funded the Trust Training Cooperative, which is coordinated by and housed at the University of Alaska Center for Human Development. The cooperative functions as a clearinghouse to identify, coordinate and provide training, education and career development opportunities for the workforce that serves Trust beneficiaries. One of the cooperative's major accomplishments in 2008 was purchasing and piloting a learning management system for delivering, tracking and managing online training. When fully implemented, it will allow students to manage their training records, view course catalogs via the Internet, and register for, pay for and take training online.



"Life Experience Counts" Marketing Campaign — A television and print campaign was launched in FY2008 targeting Alaska Natives and individuals living in rural Alaska where there is a high percentage of vacancies in jobs serving Trust beneficiaries. The campaign ran in media outlets across the state with the slogan "Life Experience Counts" and featured the professional stories of two Alaska Natives. The ads encouraged individuals to use their experiences as caregivers as building blocks for jobs in the direct service field.

Above: TV and print ads encouraged people to turn their life experiences into job skills, helping and caring for Trust beneficiaries.



The annual Full Lives Conference provides motivational, educational and networking opportunities for direct service staff.

A loan repayment program is offering to repay student loans in exchange for working in behavioral health jobs in high vacancy areas of the state.

Trust Land Office Generated $11.8 Million

The Trust Land Office (TLO) is a 12-person unit in the Department of Natural Resources that manages approximately one million acres of land and other non-cash assets throughout Alaska on behalf of the Alaska Mental Health Trust. Gross revenues on these assets totaled about $11.8 million in FY2008, of which about $2.7 million was Spendable Income and about $9.1 million was Principal revenue.

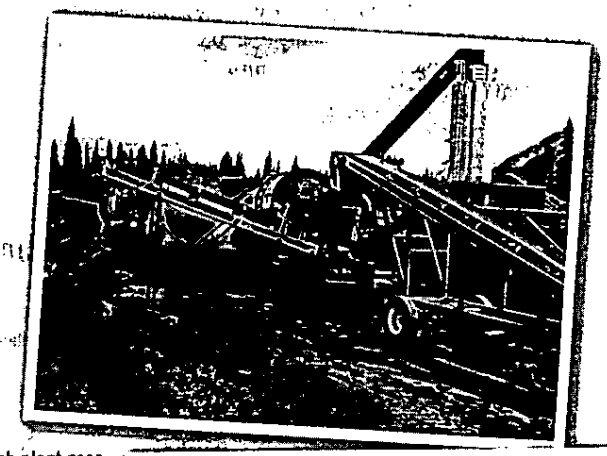
Revenue-generating uses of Trust land include land leasing and sales; commercial timber sales; mineral exploration and production; coal, oil and gas exploration and development; sand, gravel and rock sales; and other general land uses. Rents, fees and 15 percent of timber revenue from Trust land uses are considered "Spendable Income" and are available to The Trust for use in the following fiscal year. Land Sale revenue, hydrocarbon and mineral royalties, and 85 percent of timber revenue are considered "Principal" and are deposited in The Trust corpus, which is held and managed by the Alaska Permanent Fund Corporation.

Highlights of FY2008 — The TLO completed a number of projects in FY2008 that resulted in increased revenue and helped build or strengthen relationships with individuals, communities and agencies that interact with the TLO. These included:

- Completed demolition and cleanup on Trust-owned waterfront property in Juneau, setting the stage for future development of the area.
- Received a royalty of more than $1.4 million from Fairbanks Gold Mining Inc. for 2008 production from its mine on Trust land north of Fairbanks. FGMI also paid $4.2 million for land assets involved in the mining operation.
- Sold 55 parcels in The Trust's annual land sale for $2.2 million.
- Signed a ground lease between The Trust and Fairbanks Behavioral Health Center for land on which a new enhanced detox center was built in FY2008.
- Sent the final Federal Entitlement close-out agreement to the Bureau of Land Management for review.
- Hired staff in Ketchikan and Petersburg, where large blocks of Trust land impact the local community.

Future Focus — The TLO, in conjunction with The Trust's Resource Management Committee, will continue developing long-term plans for its natural resource portfolio and working with local communities and individuals to increase public awareness of Trust lands and other non-cash assets and our mission. Key projects will include:

- Continued planning for the development of Juneau waterfront property;
- Exploring commercial real estate opportunities, specifically in the Anchorage University-Medical District and resort properties;
- Pursuing development of new mining projects on Trust lands;
- Developing a plan for future land sale programs;
- Developing large-block land management programs at Icy Cape and Haines;
- Seeking new business opportunities such as wind power or biomass development.



Top: This asphalt batch plant near Cantwell used aggregate from a quarry on Trust land to repair a section of the Parks Highway.

Right: The Trust has received more than $4 million in revenue over the past three years from timber harvested on Trust land near Leask Lake in Southeast Alaska.

Trust property adjacent to South Point Higgins Beach is being purchased by Ketchikan Gateway Borough. The property is highly valued by Ketchikan residents for its recreation and beach access.

Sluggish Economy Slows Trust Fund Growth

Due to the economic slowdown during the 2008 fiscal year, the cash assets of the Alaska Mental Health Trust decreased 7.2 percent from the record-high balance of the prior year. Our investments managed by the Alaska Permanent Fund Corporation (APFC) declined from $438,513,700 at the close of FY2007 to $406,981,200 at the end of FY2008.

These investments experienced a $15,575,000 loss for FY2008 compared to earnings of $62,448,000 for FY2007. Statutory net income determined by APFC (which does not include unrealized gains or losses) was $33,912,300 for FY2008 and $39,733,300 for FY2007. Statutory net income increases the Budget Reserve and can be used to fund the mental health budget, while unrealized net income can only be applied to inflation proof our Principal investment.

The reserve investments managed on behalf of The Trust by the Treasury Division of the Department of Revenue were also impacted by the economic uncertainty of 2008. The loss on this account was $1,914,200 in FY2008, compared to earnings of $4,586,200 in FY2007.

The Trust's payout rate, which is used to calculate the disbursement (or payout) for the mental health budget, was increased at the end of FY2007 from 4 percent to 4.25 percent beginning with the FY2008 budget. The following financial performance from FY2008 is available for funding in FY2009:

- Disbursement (payout) rate of 4.25 percent, for a payout of $19,102,185.
- Resource management revenue allocated as income was $2,579,683.
- Interest on the Income Account at Treasury Division was $1,846,172.
- Lapsed funds from prior fiscal years were $4,356,596.
- Total funding available for FY2009 is $27,884,636. This is a 3.6 percent increase from FY2008 availability of $26,904,396.

Since the end of FY2008, the financial slowdown has become a full-blown recession with the investments market falling sharply. In the first quarter of FY2009, we experienced more than a 25 percent reduction in our total asset value. Based on this trend, we are expecting FY2010 available income to fund the budget to be substantially less than FY2009.

The Trust
The Alaska Mental Health Trust Authority

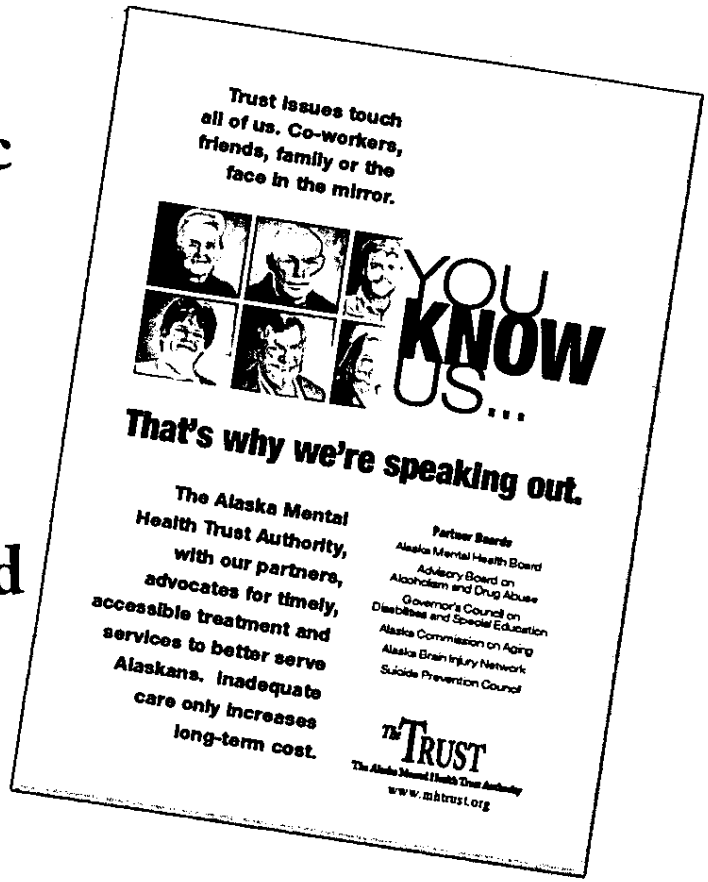
Joint FY2010 Legislative Priorities

- Reauthorize adult dental Medicaid services
- Establish regular and periodic schedule of rate reviews for home and community-based services
- Fund 10-year plan to reduce homelessness
- Fund community-coordinated transportation systems



Priorities shared by The Trust and its advisors: Alaska Mental Health Board, Advisory Board on Alcoholism and Drug Abuse, Governor's Council on Disabilities and Special Education, Alaska Commission on Aging

The TRUST
The Alaska Mental Health Trust Authority

Formula for Success

- **Identify a problem or community need**
- **Collaborate with governmental agencies, advisory groups, non profits, service providers, philanthropic organizations and private sector**
- **Develop strategic, sharply focused solutions**
- **Make lasting system improvements for Trust beneficiaries**

committed partners + strategic thinking = results for Trust beneficiaries

The TRUST
The Alaska Mental Health Trust Authority

Five Focus Areas

- **Bring the Kids Home**
- **Affordable, Appropriate Housing**
- **Disability Justice**
- **Workforce Development**
- **Beneficiary Projects Initiative**

Bring the Kids Home

- **Problem or community need**
  - FY06: a total of 743 Alaskan children with severe emotional disturbances received service in out-of-state residential psychiatric treatment centers
    - separated from families, communities
    - length of stay varies from several months to multiple years
  - FY06: $40 million for out-of-state Medicaid care
- **Committed partners**
  - DHSS, Denali Commission, Trust partner boards, Alaska Native health providers, other service providers, parents, advocacy groups, AHFC
- **Strategic thinking**
  - Each child treated at appropriate level of care as close to home as possible
    - Build appropriate treatment facilities in Alaska
    - Increase capacity/core competence for outpatient services
    - Provide family supports
    - Involve parents and youth in the solutions

The Trust
The Alaska Mental Health Trust Authority

Projected BTKH Reinvestment

FY05-FY08 = Actual Expenditures *FY09 – FY13 = Projected Expenditures*

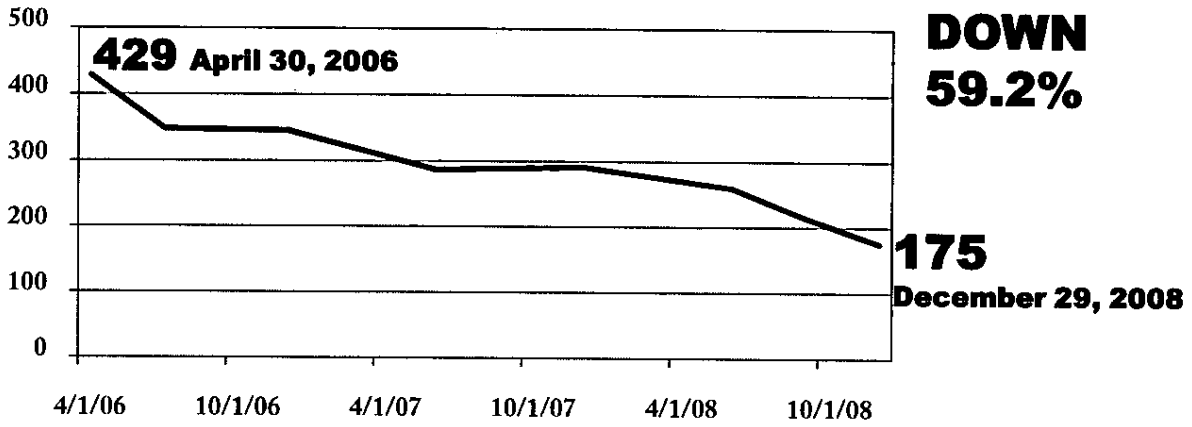
Results for Beneficiaries

Youth Out-of-State Census



- Census of youth in out-of-state residential psychiatric treatment facilities DROPPED 59.2% from 429 on 4/30/06 to 175 on 12/29/08
- IN STATE services continue to increase. During FY08:
  - 300+ youth received INDIVIDUALIZED SERVICES
  - 500+ youth received services via new COMMUNITY behavioral health capacity
  - 150+ RESIDENTIAL BEDS were added

The Trust
The Alaska Mental Health Trust Authority

Ahead in FY2010

Transition into BTKH Base Budget:	MHTAAR	GF/MH	Total
• Individualized services		$ 800.0	$ 800.0
• Behavioral Health Technical Assistance	$ 100.0	$ 225.0	$ 325.0
Build capacity within BTKH Base Funding:			
• Community BH capacity development	$ 250.0	$ 2,000.0	$ 2,250.0
• Crisis Bed Stabilization	$ 150.0		$ 150.0
• Tribal/rural system development	$ 400.0	$ 400.0	$ 800.0
• Transitional-aged youth	$ 200.0	$ 300.0	$ 500.0
• Early childhood mental health	$ 255.0	$ 200.0	$ 455.0
• School based services	$ 300.0		$ 300.0
• Foster parent/parent services	$ 75.0		$ 75.0
• Strong family voice	$ 25.0	$ 25.0	$ 50.0
BTKH Capital Funding:			
• Matching for Denali Commission funds		$ 2,316.8	$ 2,316.8

Funding in thousands of dollars

The Alaska Mental Health Trust Authority

Affordable, Appropriate Housing

- **Problem or community need**
  - **3,500 Alaskans homeless on any given night**
    - **1,600 are in families with children**
    - **4,000 + and growing are number of people on rental assistance waitlist**
    - **Wait time on the list can be 2 years or longer**
  - **Lack of housing disproportionately affects Trust beneficiaries**
    - **challenges associated with disabling conditions**
    - **lack of opportunities for economic advancement**
    - **need for supportive living situations**
    - **physical accommodations required to meet special needs**
    - **need assistance locating and maintaining independent apartment units**

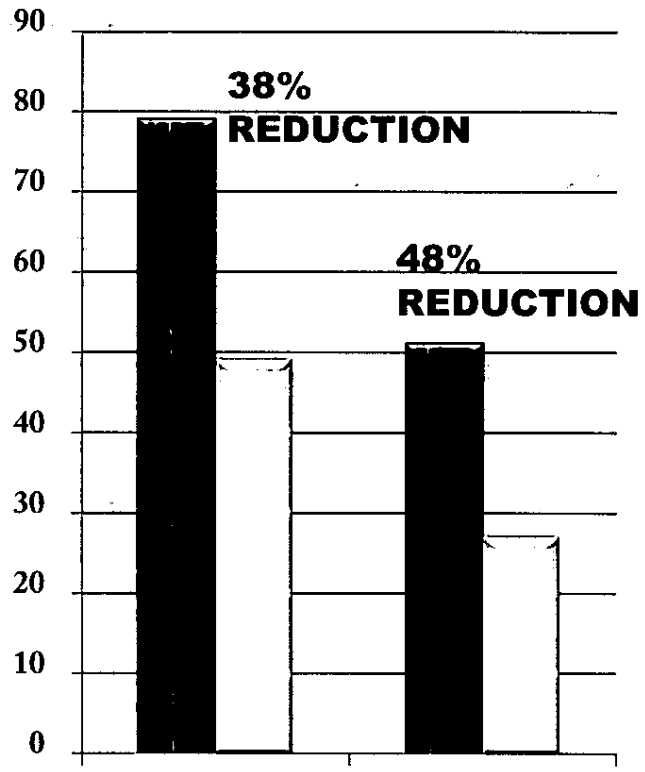
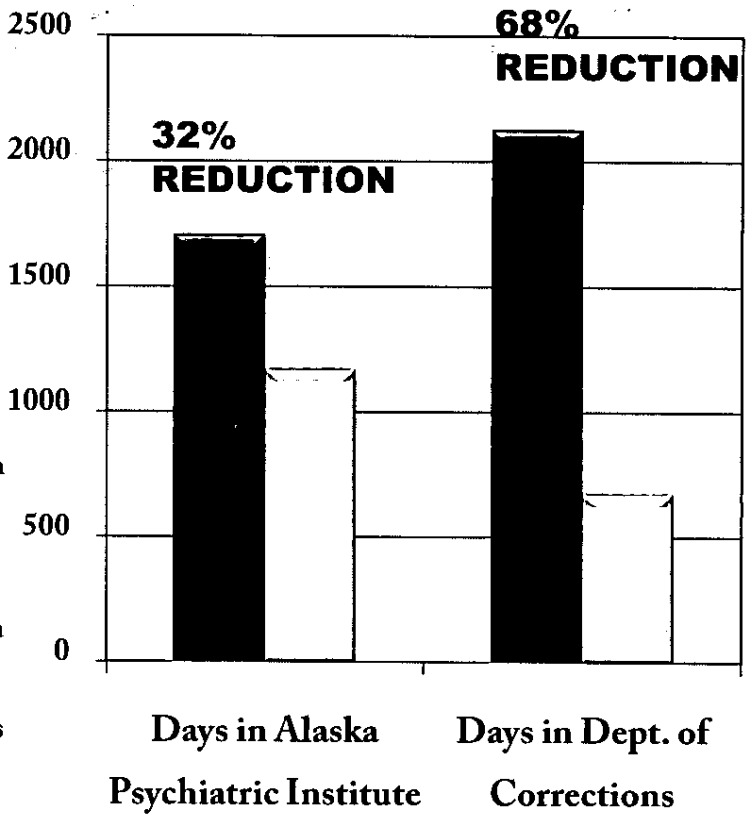
Reductions in institutionalization and incarceration



Prior to Program

During Program

•N = 47 participants



The Trust
The Alaska Mental Health Trust Authority

A Proven Model

- Each $1 spent leverages $7 in other funds
- 600 housing trusts operating in more than 30 states using these components
- Investment in permanent, affordable housing
- Include supportive services and skills training
  - case management
  - access to treatment
  - crisis intervention
  - financial literacy
  - home maintenance/upkeep
  - tenant education and responsibilities
  - job counseling and building work routines
  - transportation
  - money management
  - nutrition
  - life-skills training

Results for Beneficiaries

- Reduces public funding for other services
  - public safety
  - courts
  - jails
- Promotes strong families and community stability
- Children more successful in school
- Seniors and persons with disabilities can live independently with dignity
- Encourages partnerships between Alaska's social service and business sectors
- Helps keep Alaska's housing construction industry strong

Ahead in FY2010

- **Policy - Governor's Council on the Homeless**
  - interagency collaboration
  - creating and overseeing 10-year homeless plan and budget recommendations
  - adapting programs to replicate successful homeless programs
- **Budget - $10 million in Governor's capital budget to begin implementing 10-year plan**
  - The Trust, AHFC, GF/MH and other sources
  - National Housing Trust funds possible in FY2010
- **Projects - Working on implementation of more responsive projects**
  - AHFC grants in FY08 and FY09 Special Needs Grant rounds
  - Trust/DHSS Bridge Home pilot project
  - Trust/Rasmuson Foundation pilot projects - $2 million
  - Office of Public Advocacy intensive needs housing project

Disability Justice

- **Problem or community need**
  - at least 42% of those incarcerated in DOC are Trust beneficiaries
  - incarcerated beneficiaries
    - have more difficulty adjusting to incarceration
    - are more likely to be victimized by other prisoners
    - spend a disproportionate amount of time in custody
  - hundreds of beneficiaries incarcerated for "safety" because services not available
- **Committed partners**
  - Alaska Court System
  - Dept. of Law
  - Dept. of Public Safety
  - Local governments
  - Dept. of Corrections
  - Public Defender Agency
  - University of Alaska
  - Local law enforcement
  - Dept. of Health & Social Services
  - Community treatment providers

The Alaska Mental Health Trust Authority

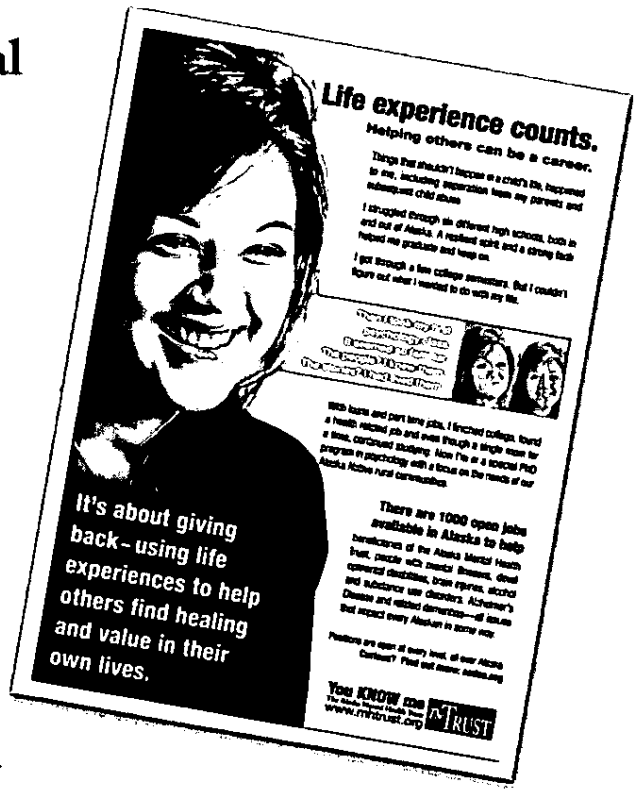
Workforce Development

- Problem or community need
  - shortage of health care workers in Alaska at a near-crisis level
  - health services industry fastest growing sector of Alaska's economy, more than 7% of workforce
  - burgeoning demand for increased health services for the state's steadily growing and aging population, some are Trust beneficiaries
  - need to increase pool of qualified employees in Alaska who serve Trust beneficiaries and keep adequately trained
- Committed partnerships
  - more than 20 partners
    - service providers, Dept. of Health and Social Services, Dept. Labor and Workforce Development, non-profit and faith-based organizations, University of Alaska system
- Strategic thinking
  - key focus areas
    - recruitment,
    - retention
    - training

Results for Beneficiaries

- 990 professionals/providers across Alaska received training and education on behavioral health related topics through the Trust Training Cooperative
- 1,194 providers trained by the Geriatric Education and Training Center on issues regarding Alzheimer's and related disorders
- 1,550 people received behavioral health training through the University of Alaska, a 13% increase in enrollment in beneficiary related degree programs
- 958 professionals across the state received training through the Training and Technical Assistance for Providers program, increasing the number of professionals trained to respond to cases of disability related abuses



The TRUST
The Alaska Mental Health Trust Authority

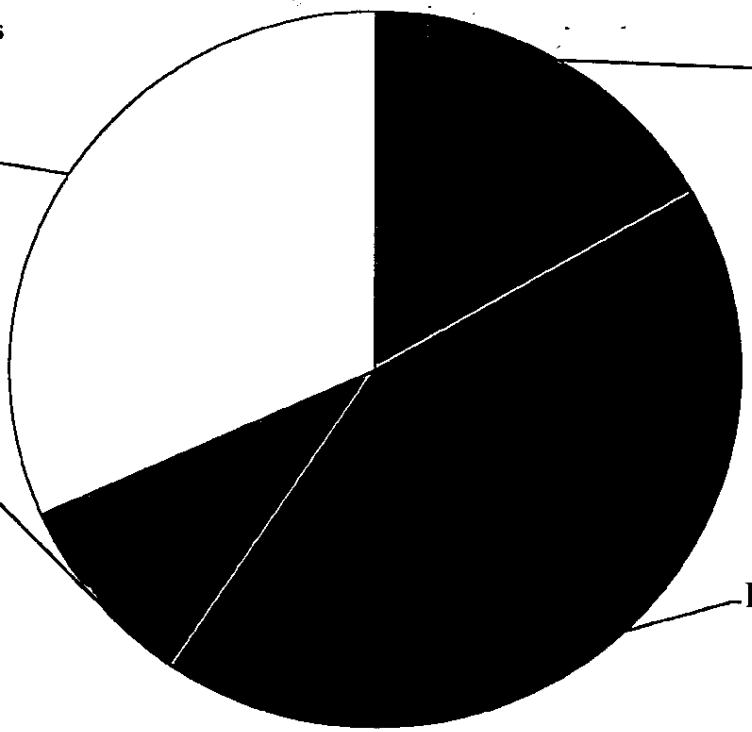
Ahead in FY2010

- Support student loan repayment strategies for health professionals
- Support increments for University of Alaska health programs
- Researching a psychiatric residency program in Alaska
- Finalizing plans for a PhD psychologist internship program in Alaska

Trust Beneficiary Projects Initiative

- **Community need:**
  - consumers active in defining and delivering recovery support
  - beneficiaries/families desire consumer-driven services yet need expertise and training
  - peer services, benefit of lower cost, prevention
- **Partners:**
  - 27 beneficiary grantees since 2006
  - Alaska Peer Support Consortium
  - Division of Behavioral Health, Rasmuson Foundation, Division of Vocational Rehabilitation, UAA-Center for Human Development
  - Partner Boards - Advisory Board on Alcohol and Drug Abuse, Alaska Mental Health Board, Governors Council on Disabilities and Special Education
- **Strategic thinking:**
  - Provide funding and technical assistance for beneficiary group projects
    - safe, sustainable and effective
  - Mini grants to improve beneficiaries' quality of life
  - Small projects grants for small, beneficiary-directed projects
    - $250,000 annually

FY08 Beneficiary Projects Grants



27 grantees serving
- people with mental illness
- people with developmental disabilities
- people with chronic alcoholism

The Trust
The Alaska Mental Health Trust Authority

Results for Beneficiaries

- 27 beneficiary grantees since 2006
- Promotes recovery and stability
- Provides sense of empowerment
- Wide range of beneficiary-run programs
  - peer-support services
  - clubhouses
  - drop-in centers
  - community outreach
  - illness self-management
- In communities from Fairbanks to Sitka

Overview

The Tax Division administers the following programs. The programs generate a significant portion of General Fund revenue used for funding state government and programs throughout Alaska.

Programs Administered by the Tax Division

Oil and Gas Taxes
- Conservation Surcharge
- Corporate Income
- Production
- Property

Excise Taxes
- Commercial Passenger Vessel
- Alcoholic Beverages
- Mining License
- Motor Fuel
- Tire Fee
- Tobacco
- Vehicle Rental

Other Taxes
- Electric Cooperative
- Estate
- Large Passenger Vessel Gambling Tax
- Regulatory Cost Charges
- Telephone Cooperative

Corporate Income Tax
(Other than oil and gas)

Fisheries Taxes
- Dive Fishery Management
- Fisheries Business
- Fishery Resource Landing
- Salmon Enhancement
- Seafood Development
- Seafood Marketing

Other Programs
- Gaming
- Revenue Sources Reporting
- Salmon Price Reporting
- Unclaimed Property

Retrospect

Fiscal year 2008 was a busy and challenging year for the Tax Division on many fronts. The division met many demands during the fiscal year; most notable were implementation of oil and gas production tax legislation enacted from both 2006 and 2007 special sessions and use of technologies to streamline operations.

Oil and gas production revenue. As a result of high oil prices and new oil and gas production tax legislation (see below) enacted in 2007, oil and gas production tax revenues increased significantly in FY 2008, setting a record high of $6.8 billion in general fund collections. In comparison, oil and gas production tax revenue was $2.3 billion and $1.2 billion in FY 2007 and FY 2006, respectively.

Oil and gas production tax legislation. The Legislature passed two major pieces of legislation that revamped the oil and gas production tax structure. In August 2006, the Legislature passed legislation (Petroleum Profits Tax – PPT) that made sweeping changes to the oil and gas production tax structure; changing the tax structure from a production to profits-based tax. In November 2007, the Legislature passed legislation (Alaska's Clear and Equitable Share – ACES) that revised the PPT tax structure to increase tax rates and expand credit provisions.

The division met challenges associated with the implementation of these two major pieces of legislation in a very short period by

- holding extensive public workshops and hearings to develop and promulgate regulations
- implementing several regulations
- developing monthly reporting forms
- developing a tax return form to conform to new reporting requirements
- developing a web site to accommodate online tax payments/ tax filings
- developing new account structures to separately account for revenues collected under PPT and ACES
- preparing and accounting for a true-up payment under ACES in March 2008
- hiring and training auditors and staff
- responding to numerous legislative and public information requests

Large Passenger Vessel (LPV) Gambling Tax. Ballot initiative measure 2, passed in the August 2006 primary election, authorized a tax on gambling activities on large passenger vessels (such as cruise ships). First year returns for the LPV gambling tax (for calendar year 2007 gambling activities) were due April 15, 2008. The Tax Division successfully implemented the LPV gambling tax by

- implementing regulations
- developing a tax return form
- developing a web site to accommodate online tax payments/ tax filings
- developing new revenue accounting codes
- hiring and training staff
- responding to numerous legislative and public information requests

Imaging. The division expanded imaging from corporate income tax to other tax programs. The division initiated imaging in late FY 2006 and began with imaging corporate income tax files. After completing imaging corporate income tax files – the largest volume of files maintained by the division - in FY 2007, the division expanded imaging to fisheries business and excise tax files in FY 2008. The division anticipates that files for all other tax programs will be imaged in FY 2009. Current period returns and documents are imaged on an ongoing basis. Imaging has streamlined operations, increased staff productivity, enhanced customer service and freed up space needed for staff and operations.

Online technology. The division implemented its Online Tax Information System (OTIS) - an online portal for taxpayers to pay taxes, file returns and view account information online. Taxpayers can pay taxes for any tax type through OTIS. The division implemented its first OTIS return form with the implementation of an online Commercial Passenger Vessel return. An online LPV gambling tax return followed. The division plans to implement online filing for tire fee, vehicle rental and alcoholic beverages tax returns in FY 2009.

Online permitting and licensing – The division initiated efforts to increase online licensing and permitting for fisheries business and gaming through OPAL (Online Permit and License) which was implemented in 2007. The fisheries business unit changed its annual application notification process for 2008 licenses by mailing a postcard rather than a paper application booklet. The postcard encouraged applicants to apply online and directed them to the OPAL web site. Staff encouraged applicants to apply online when corresponding with them via telephone and email. The percentage of online fisheries business license applications increased from 17% in 2007 to 44% in 2008. Online gaming permit applications increased from 27% in 2007 to 36% in 2008. Applications filed through OPAL are processed more efficiently because the online applications are available immediately and free of data entry errors, and information is complete (OPAL edits required data fields before an application can be submitted online).

Internet cigarette tax compliance – The Tobacco Audit group assessed individuals who purchased cigarettes over the internet without paying cigarette taxes and obtaining a required license. In FY 2008, the Tax Division collected $465,143 in cigarette taxes, penalties and interest as a result of the compliance project.

Mining license tax compliance – The Excise Audit Group conducted a mining tax compliance project by identifying and contacting non-filers. Staff evaluated Department of Natural Resources data against internal data to identify non-filers and educated taxpayers, the Alaska Miner's Association and CPAs in Alaska to educate them on Alaska's mining tax statutes and regulations.

Investigations enhanced – The Tax Division's investigations staff obtained special commissions with the Department of Public Safety and entered an information sharing agreement with U.S. Customs. These efforts will improve the effectiveness of tax investigations. The Investigations Unit implemented a fraud tip hotline for Alaskans to report fraudulent activity.

2008 Legislation

HB 321 (Ch 8 SLA 08) – Salmon Product Development Tax Credit. This legislation extends the salmon product development tax credit program by three years. The legislation extended the ending date for placing specified property in service to qualify for the credit from December 31, 2008 to December 31, 2011. Credits may only be claimed against fisheries business tax liabilities attributable to salmon processing only. This legislation expanded the list of qualified property to include conveyors used for producing value-added salmon products and requires that the Department of Revenue develop and implement procedures for determining if investments qualify for the salmon product development tax credit.

The Alaska Legislature amended the oil and gas production tax with passage of ACES legislation in a special session ended November 2007.

SB 256 (Ch 11 SLA 08) – Commercial Passenger Vessel (CPV) Tax Sharing. This bill authorizes the department to share CPV taxes in FY 2008 from taxes collected in calendar year 2007. The CPV tax program took effect in 2007, and this bill allows for sharing taxes on a calendar year basis rather than fiscal year basis, as is the case with all other taxes subject to sharing.

SB 59 (Ch 20 SLA 08) – Gaming: Broadcasts/Cabbage Classics/ Prizes. This legislation authorizes broadcasting for dog mushers' contests, charitable raffles and lotteries (in addition to fish derbies and classics that were previously authorized for broadcasting). The legislation recognizes the cabbage classic at the Giant Cabbage Weigh-off at the Alaska State Fair in Palmer operated by the Palmer Rotary Club as an authorized gaming activity. The legislation also raised the maximum award of non-bingo prizes that a permittee may award each year in self-conducted (without an operator) gaming activity raises the maximum award of prizes that may be awarded each year from $1 million to $2 million. The legislation took effect July 18, 2008.

HB 61 (Ch 48 SLA 08) – Tax Credit for Contributions to Vocational Education. This legislation expanded the education credit program, authorizing tax credits for contributions to vocational education courses and programs in public secondary schools (grades 7 through 12) and state-operated vocational technical education and training schools. Credits may be claimed against the following taxes: insurance premiums; corporate income; oil and gas production; oil and gas property; mining license; fisheries business; and fishery resource landing. Under this legislation, contributions for vocational education are combined with contributions for postsecondary education for determining the education credit. The maximum annual credit of $150,000 did not change. This legislation took effect January 1, 2009.

SB 230 (Ch 63 SLA 08) – Transferable Film Tax Credits. This legislation authorizes tax credits for qualified film production expenditures incurred in Alaska. Credits may be applied against corporate income tax liabilities. Credits range from 30% to 44% of qualified expenditures. Tax credits may be sold, transferred, exchanged, or conveyed and must be used within three years after being granted by the Alaska Department of Commerce, Community and Economic Development (DCCED). The maximum of credits claimed by all taxpayers over the life of the credit program may not exceed $100 million. The film credit program takes effect after regulations are adopted by DCCED.

HB 4001 (Ch 1 4SSLA 08) – Aviation Fuel Tax Sharing. This legislation appropriates funds necessary to share aviation fuel tax revenues for fiscal year 2009. Due to the suspension of all motor fuel tax as enacted under SB 4002 (see below), aviation fuel tax collections for fiscal year 2009 will be significantly reduced. Aviation fuel tax sharing is based on the amount of taxes collected. This legislation compensates communities for the amount of aviation fuel taxes that would have been collected and shared under AS 43.40.010(e) had the aviation fuel tax not been suspended.

SB 4002 (Ch 2 4SSLA 08) - Motor Fuel Tax Suspension. This legislation suspended motor fuel taxes on all fuel types effective September 1, 2008 through August 31, 2009 and requires motor fuel taxpayers to submit monthly reports of all fuel sales during the period of suspension. This legislation authorizes the Department of Revenue to assess a penalty of up to $5,000 against persons who fail to file a monthly report.

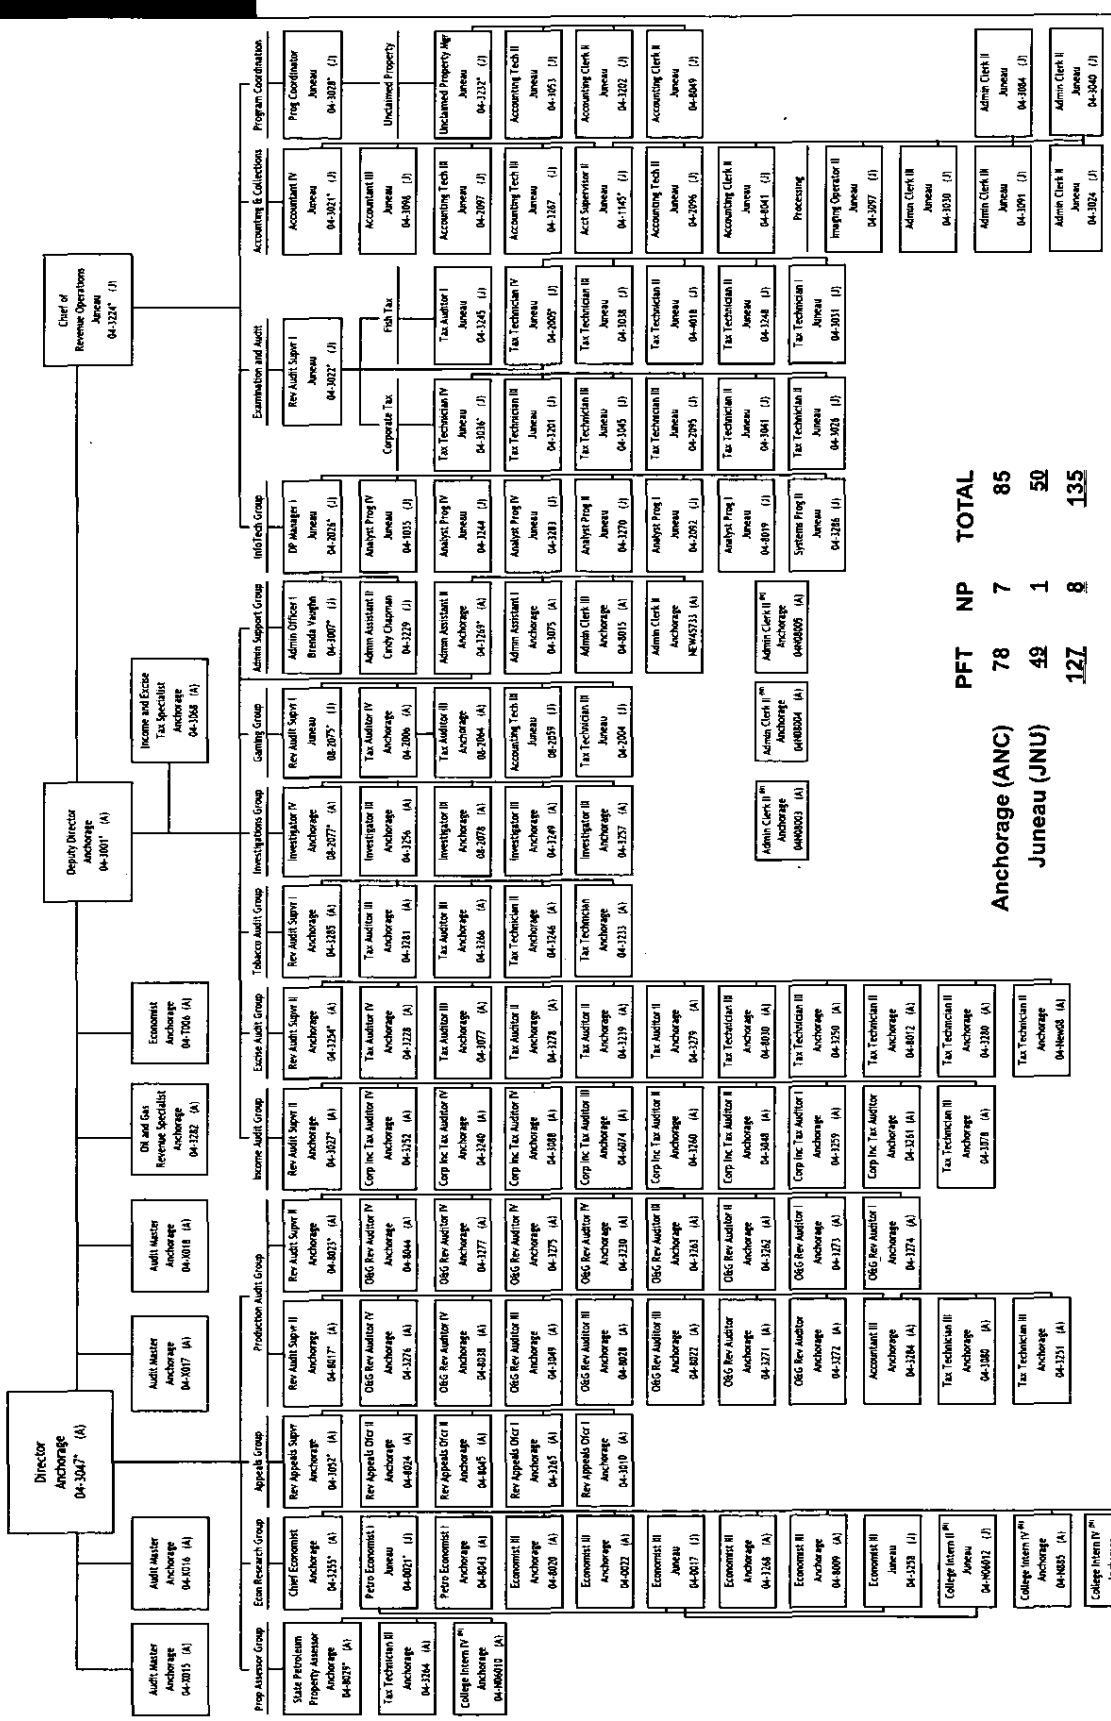
Organization Chart
As of May, 13, 2008



Division Functions

During fiscal year 2008, the Tax Division was staffed by 127 full-time and 8 non-permanent or college intern positions; and maintained offices in Juneau and Anchorage. The division's FY 2008 operating budget was $12.8 million.

The division is organized according to the functional groups of Accounting and Collections, Appeals, three Audit Units, Economic Research, Fisheries Tax Examination and Audit, Gaming, Investigations, Oil and Gas Property Tax and support groups; Administrative Support and Information Technology.

Operations

Overview
Operations receives and processes all tax returns and payments, except oil and gas production and property tax returns which are processed in Anchorage. Operations is comprised of Accounting and Collections, Data Entry and Processing, and FisheriesTax Examination and Audit.

Operations accounts for oil and gas settlement payments received by the state in conjunction with provisions for the Constitutional Budget Reserve Fund.

The Tax Division's FY 2008 operating budget was $12.8 million.

Accounting and Collections
Accounting and Collections processes payments and reconciles Tax Accounting System (TAS) revenues to the state's accounting system (AKSAS). The unit collects delinquent tax accounts, takes enforcement actions such as filing liens and levying assets, PFDs and wages. This unit also approves clearances from state agencies that are making final payment on state contracts.

Accounting and Collections distributes taxes and fees to municipalities in accordance with statutory requirements and periodically issues warrants to communities for the statutory portion of tax collected. The amount shared is based upon where the tax or fee is derived. In FY 2008, Accounting and Collections distributed $37,726,534 to 122 Alaska communities. The following taxes and fees are subject to sharing:

- Aviation Motor Fuel
- Commercial Passenger Vessel
- Electric Cooperative
- Fisheries Business
- Fishery Resource Landing
- Telephone Cooperative
- Alcoholic Beverage License

Taxes collected for fisheries business and resource landing activities in an unorganized borough are shared with municipalities through an allocation program administered by the Department of Commerce Community and Economic Development (DCCED). The Tax Division transmits funds to DCCED each year for allocation. For FY 2008, the division transmitted $3,023,518 for additional sharing.

The division publishes an annual shared tax report which summarizes the amounts shared with each community. The annual report is available online at www.tax.alaska.gov.

The Accounting and Collections unit summarizes and reports financial data, and provides financial oversight and control of agency accounting functions.

The unit data enters tax return information into the division's databases – TAS (Tax Accounting System) and DEE (Data Entry and Examination). More than 30,000 returns are processed annually through this unit, distributed to the appropriate examination unit and ultimately imaged or archived.

The Gaming group publishes an annual report that is available at www.tax.alaska.gov.

Appeals
The Appeals unit conducts informal conferences on protested assessments, issues informal conference decisions, and represents the division in formal hearings before the Office of Administrative Hearings. In addition, Appeals provides assistance for all programs and tax types administered by the division.

Audit and Examination
The audit groups are the division's core technical and analytical resource that provide support for many functions in the division. Audit drafts and implements regulations, conducts special projects and provides support to Appeals.

The audit and examination function consists of the following groups.

- **Corporate Income –** examines and audits corporate net income tax returns, including oil and gas corporate income tax returns.

The group's examination section receives and examines corporation, partnership and other informational returns and assists with updating corporate tax return forms to reflect changes in federal and Alaska tax laws.

The unit conducts compliance activities such as securing returns from businesses and individuals required to file tax returns, comparing internal data with information from external agencies (IRS and Alaska Department of Commerce, Community and Economic Development) to identify potential taxpayers, and following up on compliance leads from internal and external sources.

- **Excise Taxes -** Licenses mining operations, alcholic beverage manufacturers and distributors, tobacco manufacturers and distributors, and motor fuel qualified dealers. The unit examines and audits returns for the following tax types: alcoholic beverages, commercial passenger vessel, large passenger vessel gambling, mining license, motor fuel, tire fee, tobacco and vehicle rental.

- **Fisheries Taxes**
The Fisheries Tax unit examines and audits returns for the following tax types: fisheries business, fishery resource landing, salmon enhancement, seafood development, dive fishery management, and Alaska seafood marketing assessments.

The unit also licenses fisheries businesses that process or export fisheries resources from the state. As part of the licensing function, the unit accounts for cash prepayments and other forms of security submitted by processors to secure payment of their fisheries business tax liabilities.

The unit also administers the fish processor surety bonding program as surety against future claims from employees and fishermen.

- **Oil & Gas Production Tax -** The Production Tax unit is responsible for issuing exploration and other oil and gas tax credit incentive certificates and processing refund requests for eligible tax credit certificates. The unit examines and audits oil and gas production tax returns and tax credit certificates. The unit collects oil and gas sales data used in audits, economic analyses and the department's prevailing value, and collects oil and gas lease expenditure and cost information used in audit and economic analyses. The unit also issues Advisory Bulletins on oil and gas matters and regulatory

interpretations, and assists in development and drafting of regulations.

Economic Research
Economic Research is responsible for monitoring and forecasting state revenues.

Economic Research monitors state and national economic conditions, national and international oil markets, and conducts research needed to anticipate economic and business trends that affect state tax revenue. The unit works with other state agencies to compile information for the Revenue Sources Book, an annual publication that contains historical and forecasted revenue information to assist the governor and legislature in developing the state's budget; the book is available at www.tax.alaska.gov.

The Economic Research group also provides monthly updates on the state's cash flow and a comparison to the amounts projected in the Revenue Sources Book to provide the most up-to-date information.

The Economic Research group publishes average Alaska North Slope crude oil and natural gas price information. The price information, known as "prevailing value," is one of the key variables used to determine tax liability from oil and gas production. The group provides daily and weekly updates on prices, with a comparison of the recent data to that forecast in the Revenue Sources Book.

The Economic Research group prepares and presents to the legislature fiscal notes projecting the costs and revenues from proposed legislation that would affect the state fiscal system.

The Economics Research group responds to requests from the legislature, administration, taxpayers and the public on a host of issues. The group also serves as an interface for the state with the media on issues related to state revenue and oil production.

Gaming
Gaming issues annual permits to not-for-profit organizations to conduct gaming activities and licenses operators to conduct gaming activities on behalf of permittees. Gaming also issues licenses to pull-tab manufacturers and distributors.

Gaming processes reports and monitors financial compliance of permittees, operators, and distributors. The unit conducts compliance audits to ensure gaming activities are conducted within the scope of gaming laws.

The unit publishes an annual report that includes more detailed information and descriptions of the program. The report is available at www.tax.alaska.gov.

Information Technology
The Information Technology Unit maintains databases and provides technical computer support to the division. The unit also maintains online applications, the division's websites, imaging systems, and provides assistance in forms publishing.

The unit researches, coordinates, develops and implements technical upgrades that enhance customer service to Alaska's taxpayers.

Investigations
The Investigations unit focuses on gaming and tobacco tax investigations by conducting field inspections. The group investigates and inspects gaming operations and

The Economic Research group publishes a Revenue Sources Book that is available at www.tax.state.ak.us.

The Investigations group investigates and inspects gaming operations and tobacco distributors and retailers.

tobacco distributors and retailers. The unit investigates leads for all tax programs administered by the division.

Oil & Gas Property Tax
Oil and Gas Property Tax conducts appraisals on all oil and gas related property in the state of Alaska. It also performs compliance and collection functions and processes oil and gas property tax returns.

Additionally, the division or municipalities may initiate audits. Audits and appraisals conducted by the unit are typically highly specialized valuations. The municipalities share in some of the unit's duties under a Memorandum of Agreement (MOA). Engineering and appraisal experts assist under contract as needed.

Unclaimed Property

Transferred to Treasury Division effective July, 1, 2008

Unclaimed Property receives and accounts for personal property that is abandoned by persons who live in or had nexus with Alaska. Properties are presumed abandoned after a period of time of no activity. Abandoned properties, mostly in the form of funds from bank accounts, uncashed checks, and stocks and bonds, are required to be reported and remitted to Unclaimed Property annually.

Unclaimed Property processes claims submitted by owners who learn they have unclaimed property held by the state. Staff verify the owner's identity and remit funds or property to owners upon verification. Unclaimed Property is affiliated with a national website, www.missingmoney.com, that lists unclaimed property information by owner name for properties held by Alaska and other states.

Alcoholic Beverages Tax AS 43.60

Description
Alaska levies a tax on alcoholic beverages sold in Alaska. The tax is collected primarily from wholesalers and distributors of alcoholic beverages.

Rates

Product	Rate Per Gallon
Liquor (more than 21% alcohol)	$12.80
Wine (21% alcohol or less)	$2.50
Beer (Malt Beverages and Cider)	$1.07
Beer (Small Breweries)	$0.35

Returns
Taxpayers file returns and pay tax monthly. The returns and payment are due by the last day of the month following the month of sale.

Exemptions
Sales to facilities operated by one of the uniformed services of the United States are exempt.

Fifty percent of taxes on alcoholic beverages is available to fund alcohol and drug abuse treatment programs.

Disposition of Revenue
The division deposits all alcoholic beverage tax revenue into the General Fund. The Department of Administration separately accounts for 50 percent of the tax collected and deposits it into the Alcohol and Other Drug Abuse Treatment and Prevention Fund.

History
The alcoholic beverage tax dates back to **1933** when the Legislature enacted a tax on beer and wine at a rate of 5¢ per gallon. Taxpayers filed alcoholic beverage tax returns monthly.

In **1937**, the territorial legislature enacted a tax on liquor at a rate of 50¢ per gallon. At the same time, the rate for wine increased to 15¢ per gallon.

Since **1937**, the legislature has made minor changes to the alcoholic beverage tax statutes. In addition, between 1937 and 1983, the legislature increased Alaska's tax rates to correspond with rate changes made by other states.

2002 – The legislature significantly increased the tax rates on all three alcoholic beverages effective October 1, 2002. However, this legislation allows breweries meeting the qualifications of 26 U.S.C. 5051(a)(2) (small breweries) to pay tax at the lower rate of 35 cents per gallon on the first 60,000 barrels of beer (malt beverages) sold in Alaska. At the same time, the legislature created the Alcohol and Other Drug Abuse Treatment and Prevention Fund and directed that 50 percent of the alcoholic beverage tax be deposited into this fund for alcohol and drug abuse treatment programs.

Between 1937 and 2002, alcoholic beverage tax rates have changed as follows.

Liquor	Per Gallon
1937	$.50
1941	$1.00
1945	$1.60
1946	$2.00
1947	$3.00
1957	$3.50
1961	$4.00
1983	$5.60
2002	$12.80

Wine	Per Gallon
1933	$.05
1937	$.15
1947	$.25
1957	$.50
1961	$.60
1983	$.85
2002	$2.50

Beer (Malt Beverages)	Per Gallon
1933	$.05
1947	$.10
1957	$.25
1983	$.35
2002	$1.07

Beer (Small Breweries)	Per Gallon
2002	$.35

Commercial Passenger Vessel (CPV) Excise Tax AS 43.52.200 – 295

Description
Alaska imposes an excise tax on travel on commercial passenger vessels, typically cruise ships that have 250 or more berths and provide overnight accommodations in the state's marine waters. Passengers traveling on qualified commercial passenger vessels are liable for the tax.

Rate
The commercial passenger vessel excise tax rate is $46 per passenger per voyage.

Returns
Cruise ship companies and commercial passenger vessel owners file returns and pay taxes monthly. The due date is the last day of the month following the month in which voyages ended.

The first full year of CPV excise tax collections was in FY 2008. Total tax collections were $44.5 million.

Exemptions
The CPV excise tax does not apply to passengers on board a commercial passenger vessel that does not anchor or moor in state marine waters with the intent to allow passengers to disembark.

Disposition of Revenue
The division deposits all proceeds from the CPV excise tax into the Commercial Vessel Passenger Tax (CVP) Account in the general fund. Subject to appropriation by the legislature from this account, the division distributes $5 per passenger to each of the first five ports of call in Alaska unless the port of call imposes a tax on travel on commercial passenger vessels engaged in activities involving overnight accommodations. If the port of call is a city located within a borough, the division distributes $2.50 to the city and $2.50 to the borough. Each port of call receiving funds shall use the funds in a manner calculated to improve port and harbor facilities and other services to properly provide for vessel or watercraft visits and to enhance the safety and efficiency of interstate and foreign commerce.

The division transfers 25% of the revenue deposited in the CVP Tax Account into a Regional Cruise Ship Impact (RCSI) Fund, a sub-account of the CVP Tax Account. Subject to appropriation and regulations adopted by the Department of Revenue, the division distributes funds from the RCSI Fund to municipalities and other governmental entities within the Prince William Sound Region, Southeast Alaska, or any other distinctive region impacted by cruise ship related tourism activities but not entitled to receive funds under port of call provisions above. Funds distributed from the RCSI Fund shall be used to provide services and infrastructure directly related to passenger vessel or watercraft visits or to enhance the safety and efficiency of interstate and foreign commerce related to vessel or watercraft activities.

History
2006 - The CPV excise tax was enacted by 2006 Primary Election Ballot Measure No. 2. The measure was approved by voters at the primary election of August 26, 2006. The results of the election were certified September 18, 2006 and the initiative's provisions became effective December 17, 2006.

Corporate Income Tax AS 43.20

Description
Alaska levies a corporate income tax on Alaska taxable income.

For purposes of computing taxable income, Alaska like many states, adopts the federal Internal Revenue Code (IRC) by reference, unless excepted to or modified by specific Alaska statutes.

For a corporation doing business only in Alaska, its taxable income is federal taxable income with certain Alaska modifications.

A corporation that does business both inside and outside Alaska apportions income to Alaska using a formula. The formula apportions a percentage of the corporation's total income to Alaska. The Alaska percentage or "apportionment factor" is an average of three fractions based upon property, payroll and sales, inside and outside the state.

When a corporation is part of a group of corporations that operate as a unit in the conduct a single business, the separate corporations are treated as divisions of a single corporation. The taxpayer must apportion to Alaska a percentage of the combined incomes of all of the corporations in the "unitary" or "combined" group.

For unitary groups that are not oil and gas companies, Alaska adopts "water's edge combination". The combined group includes only those corporations with significant U.S. activity.

Oil and gas companies combine on a worldwide basis. Also, oil companies use a "modified" apportionment formula of property, sales and extraction. The extraction factor is the production of oil and gas in Alaska divided by production everywhere.

Corporate income is taxed at graduated rates running from 1 percent to 9.4 percent.

Rate
Alaska taxes corporate income at graduated rates ranging from 1 percent to 9.4 percent.

Credits
Under Alaska's blanket adoption of the IRC, taxpayers can claim all federal incentive credits. Federal credits that refund other federal taxes are not allowed. Multistate taxpayers apportion their total federal incentive credits. Alaska specific credits include:

Education - Taxpayers that contribute to vocational education programs or accredited Alaska universities or colleges for educational purposes may claim a tax credit for 50 percent of the first $100,000 and 100 percent of the next $100,000 of contributions. The maximum credit is $150,000 for each tax year.

Minerals Exploration Incentive - Taxpayers may claim a credit for 100 percent of eligible costs of exploration activities related to determining existence, location, extent, or quality of a locatable mineral or coal deposit. An approved exploration incentive credit may not exceed $20 million and must be applied within 15 tax years after the credit is approved. Application of the credit is limited to the lesser of 50 percent of the mining license tax liability or 50 percent of the corporate tax liability.

Oil and Gas Exploration Incentive – Taxpayers may take a credit for up to 50 percent on state land (or 25 percent on non state lands) of eligible oil and gas exploration costs. An approved oil and gas exploration incentive credit may not exceed $5 million per project and is limited to $30 million

per taxpayer. Taxpayers may apply the credit against 100 percent of corporation net income taxes due.

Gas Exploration and Development Tax Credit – Taxpayers may take a corporate income credit for 10 percent of qualifying expenditures incurred in exploration and development of natural gas reserves in Alaska, except for the North Slope.

Exemptions

Generally, Alaska follows the IRC when determining an entities taxable status.

Alaska adopts the flow-through federal provisions that exempt S-Corporations from tax.

Federally, S-Corporations are treated as partnerships and S-Corporation shareholders report their proportionate share of the corporation's earnings.

Alaska treats Limited Liability Companies (LLCs) as partnerships if they file as partnerships federally. Electric and telephone cooperatives pay tax under AS 10.25 and are exempt from the corporate income tax.

Returns and Payments

Corporations file returns annually, with the return due three and one-half months after the close of the tax year, one month after the federal tax return is due. Alaska honors the federal filing extensions.

Corporations must make quarterly estimated payments and the total tax is due two and one-half months from the end of the tax year. There are no extensions to pay the tax. Estimated payments of more than $100,000 and payments accompanying a return greater than $150,000 must be made online through the Tax Online Payment System (TOPS) or by wire transfer.

Disposition of Revenue

The Division deposits most corporate net income tax collections into the General Fund. For oil and gas corporations only, the Division deposits collections from audit assessments into the Constitutional Budget Reserve Fund.

History

1949 - The territorial legislature enacts the Alaska Net Income Tax Act. It is 10 percent of the federal income tax liability on income earned in Alaska. The tax applies to individuals and corporations.

1959 - Alaska adopts the Uniform Division of Income for Tax Purposes Act (UDITPA) within AS 43.20. This is a model statute that developed by the states to address concerns of the U.S. Congress that collectively, the states were taxing more than 100% of the earnings of multistate corporations. UDITPA requires multistate corporations to apportion a percentage of their total income to the state by the apportionment formula of property payroll and sales. The standard UDITPA formula apportions 100% of the corporation's income among the states where the taxpayer does business, no more, no less.

1970 - Alaska enacts the Multistate Tax Compact in AS 43.19, and becomes one of the early members of the Multistate Tax Commission. The Compact incorporates the standard three-factor apportionment formula of UDITPA. A main purpose of the Compact and the Commission is to promote the enactment of UDITPA, and the uniform application of UDITPA apportionment formula by the states. Uniform application of UDITPA promotes the full reporting of income by taxpayers and avoids the taxation of the same income by more than one state.

A voter initiative passed in August 2006 subjects cruise ship operators to the Alaska corporate income tax.

1975 - The legislature repeals the original tax and makes major revisions. Alaska enacts its own tax rates rather than basing the tax on the federal tax liability. Alaska adopts the federal Internal Revenue Code by reference, unless excepted to, or modified by other Alaska statutes. The tax rate was 5.4% of Alaska taxable income with a surtax of 4 percent based on federal surtax exemptions. For 1975, the surtax exemption was $50,000.

1978 - The legislature finds that the standard three-factor apportionment formula does not fairly reflect Alaska income for oil and gas corporations. Alaska enacts AS 43.21 and requires oil and gas companies to calculate Alaska taxable income using separate accounting. The oil and gas companies challenge AS 43.21.

1980 - The legislature repeals the parts of AS 43.20 that impose the individual income tax and retains the exemption for S-Corporations.

1981 - In an effort to stem the growing amount of disputed oil and gas income taxes and related litigation, the legislature seeks a compromise tax method. The legislature repeals separate accounting under AS 43.21, and enacts AS 43.20.072, the current "modified" apportionment formula for oil and gas corporations. The modified formula drops the payroll factor and adds the "extraction factor". The legislature also enacts the current graduated tax rate structure with a maximum rate of 9.4%.

1987 - The legislature enacts the Alaska Education Credit.

1991 - The legislature enacts water's edge apportionment with AS 43.20.073. AS 43.20.073 does not apply to oil and gas taxpayers, who continue to report on a worldwide basis.

1998 - The Department of Revenue wins the OSG Bulkships case. The Alaska Supreme Court holds that AS 43.20 does not adopt Internal Revenue Code Section 883 by reference. Federally, Sec. 883 exempts from tax foreign corporations that operate ships and aircraft, and avoids double taxation. The Court says that formulary apportionment in AS 43.19 also avoids double taxation and therefore AS 43.19 is an exception to Sec. 883. During the next session, the legislature specifically adopts Sec. 883 and grants explicit tax exemption to the foreign corporations operating cargo ships, cruise ships, and aircraft in Alaska.

2006 - A voter initiative that subjects cruise ship operators to Alaska corporate income tax passed in August 2006. Prior to the initiative, cruise ship operators were exempt from taxation through the department's adoption of Internal Revenue Code Section 883.

2008 – The legislature amended education credit provisions to include cash contributions accepted for secondary level vocational courses and programs by a school district in Alaska and by a state-operated vocational technical education and training school.

The legislature authorized tax credits for qualified film production expenditures incurred in Alaska. Tax credits may be sold, transferred, exchanged, or conveyed and must be used within three years after being granted by the Alaska Department of Commerce, Community and Economic Development (DCCED). The maximum of credits claimed by all taxpayers over the life of the credit program may not exceed $100 million.

Note: Amounts reflect tax liabilities reported on the taxpayer original returns. Liabilities may differ from amounts remitted by the taxpayer during the fiscal year due to timing differences resulting from estimated tax payments, credits and final payment of taxes reported.

Dive Fishery Management Assessment AS 43.76.150

Description
The dive fishery management assessment is an elective assessment on the value of fisheries resources taken using dive gear. The assessment only applies to designated management areas and species, and is assessed at a rate elected by a vote of permit holders.

Rate
Southeast Alaska region commercial dive fishermen elected the following rates for the Southeast Alaska administrative area (Management Area A):

Geoduck	7%
Sea Cucumber	5%
Sea Urchin	7%

Returns
Buyers file returns and pay tax quarterly. The due date is the last day of the month following the calendar quarter of purchase.

Buyers file returns for bonus payments made to fishermen after the close of the fishing season. Returns for these payments are due with additional taxes by the last day of the month following the payment.

Fishermen selling to unlicensed buyers or exporting from the region file returns and pay taxes annually. The due date is March 31 following the year of sale or export.

The dive fishery management assessment is current imposed in Southeast Alaska only.

Disposition of Revenue
The division deposits all revenue derived from the dive fishery management assessment into the General Fund.

Under AS 43.76.200, the legislature may appropriate dive fishery management assessment revenue to the Department of Fish and Game for the purpose of funding the regional dive fishery development association.

History
1997 - The legislature enacted the dive fishery management assessment statute effective June 1997.

1999 - The Southeast Regional Dive Fishery Association elected a dive fishery management assessment on geoducks, sea cucumbers and sea urchins harvested in the Southeast Alaska administrative area (Management Area A). The assessment, effective April 1999, set rates of 5 percent for geoduck and sea cucumber and 7 percent for sea urchin.

2004 – The legislature authorized three additional rates: 2 percent, 4 percent and 6 percent. Geoduck fishermen subsequently elected to increase the geoduck assessment to 7 percent as of November 1, 2004.

2005 - The legislature authorized an annual filing due date of March 31 for dive fishermen who export or sell to unlicensed buyers, effective January 1, 2005.

Electric Cooperative Tax AS 10.25.555

Description
Alaska levies an electric cooperative tax on kilowatt-hours furnished by qualified electric cooperatives recognized under AS 10.25.

Rate
The electric cooperative tax is based on a rate per kilowatt hour (kWh) and on the length of time the cooperative has furnished electricity to consumers as follows.

Length	Rate Per kWh
Less than 5 years	.25 mill
5 years or longer	.5 mill
	(1 mill = .1¢)

Electric cooperatives pay the electric cooperative tax in lieu of corporate net income tax.

Returns
Electric cooperatives file calendar year returns that are due with payment before March 1 of the following year.

Exemptions
All qualified electric cooperatives are subject to the cooperative tax. Cooperatives pay the electric cooperative tax in lieu of corporate net income tax.

Disposition of Revenue
The division deposits all revenue derived from electric cooperative taxes into the General Fund.

Electric cooperative taxes sourced from within municipalities are shared 100 percent to respective municipalities less the amount expended by the state in their collection.

The state retains electric cooperative taxes sourced from outside of municipalities.

History
1959 – The legislature enacted the electric cooperative tax as part of the "Electric and Telephone Cooperative Act" which was adopted to promote cooperatives around the state. The due date for filing electric cooperative tax returns was April 1 of the following year.

1960 – The legislature changed the due date for paying taxes to March 1.

1980 – The legislature changed the tax base for calculating the electric cooperative tax from gross revenue to kilowatt-hours. The legislature adopted the current mill rates.

FY 2008 Statistics

Tax Collections	$2,093,229
Number of Returns	18
Number of Taxpayers	18
Program Cost	$1,514
Staffing (full time equivalent)	<0.1

Note: Program Costs reflect the cost of the program. The amount retained by the state after sharing (Table 2) represents prior year costs and unshared tax collected in the current year outside an organized borough or incorporated city.

The Estate tax was phased out by federal law – it no longer applies to estates of decedents whose date of death is January 1, 2005 or later.

Estate Tax
AS 43.31

Description
Alaska levies an estate tax on the transfer of an estate upon death.

Rate
The Alaska estate tax is the amount of state credit allowed on the estate's federal tax return.

Returns
State returns are required only for estates of decedents whose date of death was before January 1, 2005, and the estate has a federal filing requirement. Estates of decedents whose date of death is January 1, 2005 or later are not required to file a report.

Estate returns and tax payments are due 15 months from the decedent's date of death.

The tax payment due date may be extended in one-year increments, not to exceed 5 years. Interest accrues on the amount of tax due during the extension period. The return filing due date may be extended for up to 15 years.

Exemptions
Estates under $1.5 million were generally exempt from paying estate taxes prior to 2005, taking into consideration the estate tax credit (formerly the unified credit) allowed under the Internal Revenue Code.

Disposition of Revenue
The division deposits all revenue derived from estate taxes into the General Fund.

History
1919 - The territorial legislature adopted a tax on inheritances and transfers of property from estates. Tax rates varied from 1 percent to 17.5 percent of the property's value.

1970 - The Alaska legislature enacted the current estate tax statutes. Estate tax statutes tie to the state credit allowed under Internal Revenue Code estate tax laws.

1991 - Interest on delinquent tax subject to compound interest under AS 43.05.225. Beginning FY 2003, the state estate tax will phase out as a consequence of changes in federal law.

2001 – The federal Economic Growth and Tax Relief Reconciliation Act enacted. As a consequence of the federal act, the state tax credit was phased out gradually over a four-year period. The state tax credit no longer applies to estates of decedents whose date of death is January 1, 2005 or later. However, the division may continue to collect tax from estates for years prior to January 1, 2005, as a result of returns filed, audits, or other enforcement activities.

Fisheries Business Tax AS 43.75

Description
Alaska levies a fisheries business tax (also known as the "raw fish tax") on fisheries businesses and persons who process fisheries resources in or export unprocessed fisheries resources from Alaska. The tax is based on the price paid to commercial fishermen for the raw resource or fair market value when there is no arms length transaction prior to processing or export. The division collects fisheries business taxes from processors and persons who export unprocessed fishery resources from Alaska.

Rate
Fisheries business tax rates are based on the location and type of processing activity and whether a fishery resource is classified as "established" or "developing" by the Alaska Department of Fish and Game. Rates are as follows:

Processing Activity

Established	Rate
Floating	5%
Salmon Cannery	4.5%
Shore-based	3%

Developing	Rate
Floating	3%
Shore-based	1%

Returns
Fisheries businesses file calendar year returns that are due with payment on March 31 of the following year.

After filing the calendar year return, taxpayers file returns to report post-season, bonus payments made to fishermen. Returns for these payments are due with additional taxes by the last day of the month following the month of bonus payments.

Exemptions
Commercial fishermen who process and freeze fish on board to maintain its quality before sale to a licensed processor are exempt.

Credits
Education - Taxpayers that contribute to vocational education programs or accredited Alaska universities or colleges for educational purposes may claim a tax credit for 50 percent of the first $100,000 and 100 percent of the next $100,000 of contributions. The maximum credit is $150,000 for each tax year.

Scholarship Contributions - Taxpayers that contribute to the A.W. "Winn" Brindle memorial scholarship account may claim a tax credit for the amount of contribution not to exceed 5 percent of their tax liability.

Salmon Product Development Credit - Taxpayers are allowed tax credits against the fisheries business tax on salmon for expenditures promoting the development of salmon products. The credit on salmon for expenditures promoting the development of salmon products was extended to December 31, 2011.

Disposition of Revenue
The division deposits all revenue derived from the fisheries business tax into the General Fund. The legislature may appropriate revenue from the tax for revenue sharing as follows:

The Fisheries Business Tax is Alaska's oldest tax, enacted in 1949.

The first fisheries business tax was enacted in 1899 by the U.S. Congress.

Processing Activity Inside Municipality

The division shares 50 percent of tax collected with the incorporated city or organized borough in which the processing took place. If an incorporated city is within an organized borough, the division divides the (50 percent) shareable amount equally between the incorporated city and the organized borough.

Processing Activity Outside Municipality

The division shares 50 percent of tax collected from processing activities outside an incorporated city or an organized borough through an allocation program administered by the Department of Commerce, Community and Economic Development.

History

1899 – the U.S. Congress adopted a "salmon case" tax to fund fisheries-related activities in pre-territorial Alaska. The Organic Act passed in 1912 established an organized territorial government in Alaska. In 1913, the First Territorial Legislature adopted the "salmon pack" tax which applied to salmon canneries based on canned salmon (7¢ per case); and the "cold storage" tax which applied to other fisheries and was based on business receipts. Between 1913 and 1949, the legislature amended the tax several times by changing tax rates and expanding the tax base to include different fisheries.

1949 – The territorial legislature restructured the fisheries business tax to be based on value of the fisheries rather than volumes (case or business receipts). The new "raw fish" tax applied to salmon (4 percent), crab and clams (2 percent), and other fishery products (1 percent) processed in canneries.

1951 – The territorial legislature enacted a fishery business license requirement with a $25 license fee, a tax on floating processors at 4 percent of value and increased the tax rate for salmon canneries to 6 percent.

1962 – The legislature adopted provisions for sharing taxes (10 percent) and requiring calendar year returns for all businesses.

1967 – The tax rate on salmon canneries was amended to 3 percent and provisions were adopted requiring security for a fishery business license under certain conditions.

1979 – The legislature adopted the modern tax structure with different tax rates for established and developing species, as well as increasing the shared tax percentage to 20 percent.

1981 – The shared tax percentage was increased to 50 percent.

1986 – The legislature authorized a fisheries business tax credit of up to 50 percent of fisheries business taxes for capital expenditures associated with constructing and improving shore-side processing operations. The tax credit program was effective for 1987 through 1989 with a carryforward provision through 1991. Taxpayers claimed approximately $47.5 million of credits under this program. The legislature also enacted the A.W. "Winn" Brindle scholarship credit allowing a credit of up to 5 percent of fisheries business taxes due.

1987 – The legislature enacted the Alaska education tax credit program allowing a tax credit on educational contributions of up to $100,000 against fisheries business taxes due.

The Alaska Legislature extended the Salmon Product Development credit in 2008 to end in December 2011.

1990 – The legislature enacted provisions for a civil penalty for processing without a license. The division may progressively assess penalties in increments of up to $5,000 for each infraction to a maximum of $25,000 for the fifth and subsequent assessments. The legislature also enacted a provision that authorized sharing of 50 percent of taxes sourced from processing activities in the unorganized borough, effective July 1992.

1991 – The legislature restructured the Alaska education credit and increased the maximum amount to $150,000.

1995 – The legislature reduced the amount of surety bonding for small processors from $10,000 to $2,000.

2001 – The legislature modified the tax payment security requirements necessary to obtain a fisheries business tax license. The legislature expanded the existing requirement for a whole-salmon exporter to include any exporter of any unprocessed fisheries resource. Under the legislation, exporters of unprocessed fish can obtain a fisheries business license by posting a $50,000 surety bond and paying their taxes monthly.

2002 – The legislature authorized credits of up to 50 percent for contributions of not more than $100,000 and 75 percent of the next $100,000 in contributions made to the Alaska Veterans' Memorial Endowment Fund. The tax credit expired July 1, 2003.

2003 - The legislature authorized a Salmon Product Development/ Utilization Credit that allows tax credits against fisheries business taxes for expenditures promoting the value added processing of salmon products and the utilization of salmon waste in Alaska. The amount of the tax credit cannot exceed 50 percent of the taxpayer's fisheries business liability for processing of salmon during the tax year.

Effective June 11, 2003 and retroactive to January 1, 2003, the legislation sunsetted on December 31, 2005. Unused credits earned may be carried forward for three years.

2003 – Legislation allowed for monthly payment of the fisheries taxes in lieu of existing forms of security or prepayment as a prerequisite to being licensed. Fisheries businesses that elect the monthly payment option must post a $50,000 bond or have $100,000 equity in real property in the state. The provisions of this legislation took effect September 8, 2003.

2004 – Legislation authorized a new Direct Marketing Fisheries Business License and tax structure set at the shore based rate of 1 percent of the value of developing fish species and 3 percent of the value of established fish species. The provisions of this legislation took effect January 1, 2005.

2005 – Effective May 18, 2005, the legislature modified the surety and tax payment requirements for obtaining a fisheries business license. The legislature reduced the amount of surety bonding for small primary fish buyers from $10,000 to $2,000. The legislation added as a condition for obtaining a fisheries business license full payment of delinquent: taxes under AS 43, seafood marketing assessments, employment security contributions, OSHA penalties, and local fishery sales taxes.

2006 – The legislature extended the Salmon Product Development Credit for expenditures made through December 31, 2008. The Salmon Utilization Credit was not extended.

2008 – The legislature amended education credit provisions to include cash contributions accepted for secondary level vocational courses and programs by a school district in Alaska and by a state-operated vocational technical education and training school.

The legislature enacted legislation to extend the salmon product development tax credit program by three years. The legislation extended the ending date for placing specified property in service to qualify for the credit from December 31, 2008 to December 31, 2011. This legislation expanded the list of qualified property to include conveyors used for producing value-added salmon products and requires that the Department of Revenue develop and implement procedures for determining if investments qualify for the salmon product development tax credit.

Fishery Resource Landing Tax
AS 43.77

Fishery resource landing tax revenues are primarily derived from fish processed in the Bering Sea and landed in Unalaska.

Description
Alaska levies a fishery resource landing tax on fishery resources processed outside and first landed in Alaska, based on the unprocessed value of the resource. The unprocessed value is determined by multiplying a statewide average price per pound (derived from Alaska Department of Fish and Game data) by the unprocessed weight.

Alaska collects the fishery resource landing tax primarily from factory trawlers and floating processors that process fishery resources outside of the state's 3-mile limit and bring their products into Alaska for transshipment.

Rate
Tax rates are based on whether the resource is classified as "established" or "developing" by the Alaska Department of Fish and Game. Tax rates are:

Classification	Rate
Established	3%
Developing	1%

Returns
Taxpayers file returns and pay tax on a calendar year basis with a due date of March 31 of the following year. Taxpayers are required to make quarterly estimated tax payments that are due on the last day of each calendar quarter.

The division grants an automatic extension to file the landing return if it does not provide statewide average prices to taxpayers at least 30 days prior to the due date. If the extension applies, the due date is the last day of the month following the month in which the division issues statewide average prices.

Exemptions
Unprocessed fishery resources landed in the state are exempt from the fishery resource landing tax, although they may be subject to the fisheries business tax.

Credits
Education - Taxpayers that contribute to vocational education programs or accredited Alaska universities or colleges for educational purposes may claim a tax credit for 50 percent of the first $100,000 and 100 percent of the next $100,000 of contributions. The maximum credit is $150,000 for each tax year.

Scholarship Contributions - Taxpayers that contribute to the A.W. "Winn" Brindle memorial scholarship account may claim a tax credit for the amount of contributions not to exceed 5 percent of their tax liability.

CDQ - Taxpayers that harvest a fishery resource under a community development quota (CDQ) may claim a credit of up to 45.45 percent of fishery resource landing taxes for contributions to Alaska nonprofit corporations that are dedicated to fisheries industry-related expenditures.

Other Taxes - Taxpayers that paid taxes on fishery resources to another jurisdiction may claim a credit against the fishery resource landing tax. The credit, equal to the amount of taxes paid in the other jurisdiction, may not exceed the fishery resource landing tax.

Disposition of Revenue
The division deposits all revenue from the fishery resource landing tax into the General Fund. The legislature may appropriate revenue from the tax for revenue sharing as described below.

Fishery resource landing tax revenues are shared with municipalities for taxes attributable to landings within a municipality.

Landings Inside Municipality
The division shares 50 percent of taxes from landings within a municipality with the respective municipalities in which landings occurred. If a municipality is within a borough, the division divides the (50 percent) shareable amount between the municipality and borough.

Landings Outside Municipality
The division shares 50 percent of the taxes from landings outside a municipality (unorganized borough) through an allocation program administered by the Alaska Department of Commerce, Community and Economic Development.

History
1993 – The legislature enacted the fishery resource landing tax effective January 1994. The rate was 3.3 percent of the unprocessed value of the resource. The Department of Revenue adopted regulations regarding administration of the tax, effective April 1994.

1994 – The American Factory Trawler Association (AFTA) filed litigation challenging the constitutionality of the landing tax.

1995 – The Alaska Supreme Court rejected AFTA's request based on AFTA's failure to exhaust administrative remedies with the Department of Revenue.

1996 – The landing tax was restructured to mirror the fisheries business tax program. The legislature revised the tax rate to 3 percent for established species and 1 percent for developing species. The 0.3 percent portion of the previous 3.3 percent tax rate was incorporated into seafood marketing assessment statutes (AS 16.51). The legislature also amended the landing tax statutes to provide for tax credits for education and A.W. "Winn" Brindle scholarship contributions. All changes were retroactive to January 1994, the inception date of the landing tax.

1997 – AFTA dismissed its challenge to the landing tax and in June the state issued a formal hearing decision upholding the constitutionality of the tax. Shared tax amounts from calendar year 1994 and 1995 returns, previously held in escrow, were released to municipalities.

1999 – The American Fisheries Act (P.L. 105-277) required a fishery cooperative to execute a contract with each cooperative member that obligated the member to make a payment to the state for pollock harvested in the Alaska pollock fishery that is not landed in Alaska. AS 43.77.015 required that those payments be treated as if they were landing taxes.

2001 – The legislature amended landing tax statutes to require quarterly payment of estimated fishery resource landing taxes, effective calendar year 2002.

2002 – The legislature authorized credits of up to 50 percent for contributions of not more than $100,000 and 75 percent of the next $100,000 in contributions made to the Alaska Veterans' Memorial Endowment Fund. The tax credit expired July 1, 2003.

2008 – The legislature amended education credit provisions to include cash contributions accepted for secondary level vocational courses and programs by a school district in Alaska and by a state-operated vocational technical education and training school.

FY 2008 Statistics

Tax Collections	$13,661,758

Program Cost	$171,475
Staffing (full time equivalent)	1.7

Municipalities and qualified nonprofits may conduct certain gaming activities that benefit nonprofits in Alaska.

Gaming
AS 05.15

Description
Under Alaska law, municipalities and qualified nonprofit organizations may conduct certain gaming activities. The purpose of these activities is to derive public benefit in the form of money for nonprofits and revenues for the state.

To ensure that the appropriate level of public benefit is being derived, the division performs the following: 1) issues permits to nonprofits; 2) licenses all operators, and pull-tab distributors and manufacturers; 3) collects fees and taxes; 4) audits various permittees and licensees; 5) inspects gaming locations; and 6) investigates complaints. The division also provides educational and orientation information to the public and to prospective permittees and licensees.

Rate
Annual permit and license fees for games of chance and contests of skill are as follows.

Permits
- $20 if an applicant did not have a permit during the preceding year
- $20 if an applicant had gaming gross receipts of less than $20,000 during the preceding year
- $50 if an applicant had gaming gross receipts of $20,000 or more but not exceeding $100,000 during the preceding year
- $100 if an applicant had gaming gross receipts exceeding $100,000 during the preceding year

Licenses
- $500 for an operator license
- $1,000 for a pull-tab distributor license
- $2,500 for a pull-tab manufacturer license

Reports
The division requires the following reports:
- Municipalities and qualified organizations file quarterly reports that are due the 45th day following each calendar quarter in which the permittee had gross receipts of $50,000 or more.
- Permittees file annual reports on a calendar year basis, accompanied with payment of the additional fee, if required under AS 05.15.020(b), by March 15th of the following year. Under this statute, if the gross receipts for the activities were $20,000 or more, an additional fee of 1 percent of the net proceeds received during the preceding year is due.
- Operators and multiple-beneficiary permittees file quarterly reports that are due on the last business day of the month following each calendar quarter. Annual reports for the calendar year are due no later than February 28 of the following year. (See below for explanation of the multiple-beneficiary permit.)
- Operators are required to submit a report to permittees monthly. The report must include a daily summary of activity conducted under the permit and an accounting of gross receipts, expenses and net proceeds for the month.
- Pull-tab manufacturers must report by the last business day of the month on each series of pull-tabs distributed in the preceding month.
- Distributors must collect a tax of 3 percent of an amount equal to the gross receipts less prices awarded on each series of pull-tabs distributed. Distributors must report by the last business day of each month, each pull-tab series distributed in the preceding month and pay the taxes collected.

Exemptions
There are no exemptions that apply to gaming.

Disposition of Revenue
The division deposits permit and license fees, net proceeds fees and pull-tab taxes into the General Fund.

History
1960 – The legislature legalized gaming and gives oversight for all gaming activities to the Department of Revenue.

1984 – The Department authorized pull-tabs.

1988 – The legislature legalized operators. Pull-tabs legalized by statute, and prize limits are increased.

1989 – Under Administrative Order, gaming functions transferred to the Department of Commerce, Community and Economic Development.

1993 - Under Administrative Order, gaming functions transferred to the Department of Revenue.

HB 168 significantly changed various aspects of the statutes governing charitable gaming in Alaska. Third-party vendors were brought under statutory control which allow permittees to contract with them directly to sell pull-tabs and the Department was authorized to issue Multiple-Beneficiary Permits (MBP). MBPs enable two to six permittees to conduct gaming activities jointly. Minimum payments increased from 15 percent to 30 percent of adjusted gross income for pull-tab games and require a minimum of 10 percent of adjusted gross income for all other activities.

1995 - The legislature legalized cruise ship gambling activities in Alaska waters during the 1995 season. The gaming statutes required that cruise ships pay a fee to game in Alaska, and this generated more than $500,000 in State revenue during the 1995 season. This law expired after 1995. Additionally, the legislature eliminated Monte Carlo nights.

1996 – The legislature authorized three new gaming activities – "Sled Dog Race Classic," "Deep Freeze Classic" and "Snow Machine Classic." The legislature also created the McGrath Kuskokwim River Ice Classic and the Creamer's Field Goose Classic. The legislature prohibited the donation of net proceeds from pull-tabs and bingo activities to registered lobbyists and certain political organizations.

2001 - The legislature added the Bristol Bay Native Corporation Education Foundation to the list of qualified organizations allowed to conduct "salmon classic" games of chance, effective January 1, 2002.

The Alaska Supreme Court in Botehlo v. Griffin, 25 P3d at 693 ruled that "Alaska's gaming laws create the effective equivalent of a charitable trust" by requiring a portion of the money spent on gaming to benefit the public generally.

2002 - Effective January 1, 2003, the legislature added the Boys and Girls Club of the Kenai Peninsula to the list of qualified organizations allowed to conduct "mercury classic" games of chance.

2003 – Effective January 1, 2005, the legislature allows a permittee that conducts a contest of skill and awards more than $500,000 in prizes to the participants in that contest of skill, to exclude $500,000 in prizes awarded to those participants from the $1,000,000 maximum prize limitation.

2004 - The legislature authorized the Department of Revenue to issue permits for animal classic games, providing the animal classic was in existence prior to November 1, 2002, effective July 25, 2004.

2005 – The legislature authorized the Department of Revenue to issue permits for two new games of chance – "Calcutta pools" (related to amateur and professional sporting events) and a "crane classic" (the best guess of the time of arrival of the first Sandhill Crane to a particular place), effective September 5, 2005.

2008 – The legislature authorized broadcasting for dog mushers' contests, charitable raffles and lotteries (in addition to fish derbies and classics that were previously authorized for broadcasting). The legislation recognizes the cabbage classic at the Giant Cabbage Weigh-off at the Alaska State Fair in Palmer operated by the Palmer Rotary Club as an authorized gaming activity. The legislation also raised the maximum award of non-bingo prizes that a permittee may award each year in self-conducted (without an operator) gaming activity from $1 million to $2 million. The legislation took effect July 18, 2008.

Large Passenger Vessel (LPV) Gambling Tax AS 05.16

The first full year of LPV gambling tax collections was in FY 2008. Total tax collections were about $6.8 million.

Description
Alaska imposes a tax on adjusted gross income of gambling activities aboard large passenger vessels in the state. Gambling activities include the use of playing cards, dice, roulette wheels, coin-operated instruments or machines; or other objects or instruments used for gaming or gambling, and any other gambling activities aboard large passenger vessels in Alaska. The tax is imposed on the operator of gaming or gambling activities.

Rate
The large passenger vessel gambling tax rate is 33% of adjusted gross income. Adjusted gross income means gross income less prizes awarded and federal and municipal taxes paid or owed on the income.

Returns
Operators of gaming and gambling activities on large passenger vessels file calendar year returns that are due April 15 of the following year.

Exemptions
There are no exemptions for the LPV gambling tax.

Disposition of Revenue
The division deposits all proceeds from the LPV gambling tax into the commercial vessel passenger tax (CVP) account in the general fund.

History
The LPV gambling tax was enacted by 2006 Primary Election Ballot Measure No. 2. The measure was approved by voters at the primary election of August 26, 2006. The results of the election were certified September 18, 2006 and the initiative's provisions became effective December 17, 2006.

Mining License Tax
AS 43.65

Description
Alaska levies a mining license tax on mining net income and royalties received in connection with mining properties and activities in Alaska. The Tax Division collects mining license taxes primarily from businesses engaged in coal and hard rock mining.

Mining Net Income	Rate
$0 - 40,000	No Tax
$40,001 - $50,000	$1,200 plus 3% over $40,000
$50,001 - $100,000	$1,500 plus 5% over $50,000
Over $100,000	$4,000 plus 7% over $100,000

The mining license tax structure adopted in 1955 is still in place today.

Returns
Mining licensees file annual returns based on the mining business' fiscal year. Calendar year returns and payment of tax are due April 30; fiscal year returns and payment are due before the first day of the fifth month after the close of the fiscal year.

Exemptions
Except for sand and gravel operations, new mining operations are exempt from the mining license tax for a period of 3½ years after production begins.

Credits
Education - Taxpayers that contribute to vocational education programs or accredited Alaska universities or colleges for educational purposes may claim a tax credit for 50 percent of the first $100,000 and 100 percent of the next $100,000 of contributions. The maximum credit is $150,000 for each tax year.

Minerals Exploration Incentive - Taxpayers may claim a credit for eligible costs of exploration activities related to determining existence, location, extent, or quality of a locatable mineral or coal deposit. An approved exploration incentive credit may not exceed $20 million and must be applied within 15 tax years after the credit is approved. Application of the credit is limited to the lesser of 50 percent of the person's mining license tax liability related to the mining operation for which eligible mining costs were incurred or 50 percent of the person's total mining license tax liability for all mining operations.

Disposition of Revenue
The division deposits revenue from the mining license tax into the General Fund. Payments received after a tax assessment are deposited into the Constitutional Budget Reserve Fund (CBRF).

History
The mining license tax dates back to 1913 and the legislature restructured it several times over the years. The original mining license tax, enacted in 1913, imposed a 0.5 percent tax on mining net income of more than $5,000. There was no tax on net income less than $5,000.

1915 – The territorial legislature increased the tax rate to 1 percent. The tax-free net income base remained at $5,000.

1927 – The tax-free net income base was increased to $10,000 and a three-tier tax rate structure was adopted with rates ranging from 1 percent to 1.75 percent for net income of more than $1 million.

1935 – The territorial legislature restructured the tax to an eight-tier tax structure with rates ranging from 0.75 percent to 4 percent for net income of more than $1 million. The legislature decreased tax-free net income to $5,000.

1937 – The tax-free net income base was eliminated and all net income was subject to tax. A nine-tier tax structure was adopted with tax rates ranging from 0.75 percent to 8 percent for net income of more than $1 million.

1947 – The mining license tax was restructured by reinstating a tax-free net income base of $1,000 and restructuring the tax rates to a five-tier structure with rates ranging from 4 percent to 8 percent for net income of more than $100,000.

1951 – The legislature authorized a 3½ year exemption for new mining operations. This exemption does not apply to sand and gravel mining operations.

1953 – The tax-free net income base was increased to $10,000 and rates changed to range from 3 percent to 7 percent for net income of more than $100,000.

1955 – The rate structure as it exists today was adopted.

1987 – The Alaska education tax credit program was enacted allowing for a tax credit up to $100,000.

1991 – The Alaska education credit was restructured and the maximum amount was increased to $150,000.

1995 – The legislature authorized the minerals exploration incentive credit. The credit is limited to $20 million and taxpayers may apply the credit against 50 percent of mining license liabilities over a 15-year period.

2002 – The legislature authorized credits of up to 50 percent for contributions of not more than $100,000 and 75 percent of the next $100,000 in contributions made to the Alaska Veterans' Memorial Endowment Fund. The tax credit expired July 1, 2003.

2008 – The legislature amended education credit provisions to include cash contributions accepted for secondary level vocational courses and programs by a school district in Alaska and by a state-operated vocational technical education and training school.

FY 2008 Statistics

Tax Collections (all General Fund)	$54,408,228
Number of Returns	841
Number of Taxpayers	374
Program Cost	$501,450
Staffing (full time equivalent)	5.1

The motor fuel tax dates back to 1945 when the legislature imposed a tax of 1¢ per gallon on all motor fuel.

Motor Fuel Tax
AS 43.40

Description
Alaska levies a motor fuel tax on motor fuel sold, transferred or used within Alaska. The division collects motor fuel taxes primarily from wholesalers and distributors that hold "qualified dealer" licenses issued by the division.

Rates

Fuel Type	Rate per Gallon
Highway	8¢
Marine	5¢
Aviation Gasoline	4.7¢
Jet Fuel	3.2¢

Returns
Taxpayers file returns and make payment monthly. There are four separate returns: diesel, gasoline, aviation and gasohol.

The due date is the last day of the month following the month of sale or taxable use. Taxpayers may deduct 1 percent of the tax due, limited to a maximum of $100 per return, as a timely filing credit.

Refunds
Consumers may claim a refund for the full tax rate if the consumer used the fuel for exempt purposes; or for the difference between the tax rate and 2¢ per gallon if the consumer used the fuel off-highway.

Resellers, usually retailers, may claim a refund for the full tax if the reseller paid the tax, and then sold the fuel for exempt use and did not collect the tax.

Exemptions
In addition to sales between qualified dealers, the following sales and use are exempt from motor fuel tax:
- Heating
- Federal, state and local government agencies
- Foreign flights (jet fuel)
- Exports
- Power plants/utilities
- Charitable institutions
- Bunker fuel (residual fuel oil or #6 fuel oil)

Disposition of Revenue
The division deposits revenue derived from motor fuel taxes into the General Fund. Revenue from each category of fuel is accounted for separately in the division's tax accounting system. For example, proceeds from tax on motor fuel used in boats and watercraft are deposited in a special watercraft fuel tax account and proceeds from tax on motor fuel used in highway vehicles are deposited in a special highway fuel tax account within the General Fund.

The division shares with the respective municipalities 60 percent of taxes attributable to aviation fuel sales at municipally owned or operated airports. All other proceeds of the taxes on aviation fuel are deposited into a special aviation fuel tax account.

History
The motor fuel tax dates back to 1945 when the legislature imposed a tax of 1¢ per gallon on all motor fuel. Over time, the legislature enacted separate tax rates for each of the fuel categories as they exist today. Motor fuel tax rates have changed as follows.

Highway	Rate Per Gallon
1945	1¢
1947	2¢
1955	5¢
1960	7¢
1961	8¢
1964	7¢
1970	8¢

Gasohol	Rate Per Gallon
1997	8¢ / 2¢

(2¢ November through February where required)

Marine	Rate Per Gallon
1945	1¢
1947	2¢
1955	5¢
1957	2¢
1960	3¢
1971	4¢
1977	5¢

Aviation Gasoline	Rate Per Gallon
1945	1¢
1947	2¢
1955	3¢
1968	4¢
1994	4.7¢

Jet Fuel	Rate Per Gallon
1957	1.5¢
1968	2.5¢
1994	3.2¢

1994 – The legislature enacted a tax decrease for bunker fuel. The tax rate decreases from 5¢ to 1¢ per gallon on bunker fuel sales exceeding 4.1 million gallons. The tax decrease expired on June 30, 1998.

1997 – The legislature repealed the gasohol exemption. The legislature enacted a provision that reduces the tax on gasohol from 8¢ to 2¢ per gallon in areas and at times when the use of gasohol is required. However, gasohol has not been required since the winter of 2002-2003 and gasohol is currently taxed at the full tax rate of 8¢.

Legislation was also passed that fully exempted gasohol blended with at least 10 percent alcohol derived from wood or seafood waste. This legislation expired on June 30, 2004.

The legislature expanded the foreign flight exemption to include flights originating from foreign countries in addition to the existing exemption for flights with a foreign destination. This legislation included a permanent exemption for bunker fuel (residual fuel oil known as #6 fuel oil) which nullified the 1994 bunker fuel tax rate reduction.

1998 - The legislature authorized taxpayers to take a "bad debt" credit for sales deemed to be worthless and for sales to persons who file bankruptcy.

2003 – The legislature enacted legislation that made it easier for the state to issue motor fuel excise tax refunds for credit card purchases made by federal, state and local government agencies.

2004 – The provision that exempted gasohol blended with at least 10 percent alcohol derived from wood or

seafood waste from the motor fuel tax expired on June 30, 2004. Currently all gasohol is taxed at the rate of 8 cents per gallon.

2008 – In special session, the legislature suspended the motor fuel tax on all fuel types effective September 1, 2008 through August 31, 2009. Motor fuel distributors are required to file monthly reports of all fuel sales during the period of suspension.

The Oil and gas conservation surcharge revenues fund a hazardous substance release emergency fund.

Oil and Gas Conservation Surcharge AS 43.55

Description

The Conservation Surcharge on Oil applies to all oil production within Alaska. The surcharge is a per barrel tax on oil production intended to fund the oil and hazardous substance release prevention account of the oil and hazardous substance release prevention and response fund. The Oil and Gas Production Tax (AS 43.55) and Conservation Surcharge on Oil are severance taxes.

Rate

The surcharge is comprised of two components: 1) a $.04/bbl charge on all oil production excluding public royalty barrels and 2) an additional $.01/bbl charge on all oil production whenever the balance in the state oil and hazardous substance release prevention and response fund falls below $50 million. The balance of the fund was less than $50 million for all of FY 2007 so that the surcharge was $.04/bbl for the entire fiscal year.

History

1989 - Following the grounding of the Exxon Valdez, this tax was enacted in order to provide a hazardous substance release emergency fund. A $.05/bbl hazardous release surcharge is imposed on oil production until the newly created hazardous substance release fund achieves a balance of $50 million.

1994 - The hazardous release surcharge is modified to the so-called "split nickel" with an ongoing charge of $.03/bbl and an additional charge of $.02/bbl whenever the hazardous substance release fund balance falls below $50 million.

2006 - Ongoing "split nickel" charge increased from $.03 to $.04 per barrel and the additional charge was decreased from $.02 to $.01 per barrel.

** The Conservation Surcharge on oil is reported on the same return and by the same taxpayers as is Alaska's other production tax, Oil and Gas Production Tax (AS 43.55). The Division has not segregated program cost and staffing related to each individual tax. The division reports the total production tax cost and staffing in the discussion of Oil and Gas Production Tax.*

Oil and Gas Production Tax
AS 43.55

Description

Alaska levies a tax on oil and gas production income derived from production activities in the state.

The legislature amended oil and gas production tax statutes in a special session that ended November 2007 that culminated in the passage of the Alaska Clear and Equitable Share (ACES).

Like the PPT legislation enacted in 2006, the ACES tax is levied on the net value of oil and gas production. The ACES system continues to authorize credits for capital expenditures, exploration costs, prior year investments and small producer incentives, as the PPT did, but there were some amendments to the rate and timing of these credits, and enhancements to certain credits to further encourage investments in Alaska.

The ACES tax also subjects legacy fields Prudhoe Bay and Kuparuk to a standard deduction for operating expenditures. The standard deduction amount is based on 2006 operating expenditures reported by respective companies with a 3% per year inflation component. The standard deduction provision will sunset at the end of calendar year 2009, unless the legislature votes to extend it.

In regard to administrative changes, the ACES legislation requires more thorough reporting from companies. Companies will be required to report volumes and expenditures used to calculate their estimated monthly installments. On March 31st of each year, companies will submit an annual tax return that will "true-up" any tax liabilities or overpayments made throughout the year. Twice yearly, companies will be required to provide the Department of Revenue with their best estimates of future oil production and lease expenditures. These reporting requirements will greatly enhance the department's ability to forecast expenditures and revenues from oil and gas production.

Among other administrative changes, ACES provides for audit masters who are exempt from the state classified pay scale, and specifies that auditors have six years to complete production tax audits. The department expects that these two provisions will enable the state to be more thorough in its review of company-reported expenditures.

The majority of the ACES tax is retroactive to July 1, 2007, although some provisions are retroactive to the implementation of the PPT (April 1, 2006). Work on regulations began December 2007 and the first ACES monthly estimated payments were filed at the end of February 2008. The first annual filing and "true-up" of five months difference between PPT and ACES tax rates from July 1, 2007 through December 31, 2007 were due March 31, 2008.

The legislature passed ACES legislation in a November 2007 Special Session.

Rate

The base tax rate under ACES is 25% (it was 22.5% under PPT) and the progressive surcharge tax rate under ACES is 0.4% for every dollar the net profit per barrel exceeds $30 (it was 0.25% on profits exceeding $40 per barrel under PPT). For production tax values greater than $92.50, the progressivity rate changes to 0.1% for every additional dollar of profit & on a barrel of oil.

In 2006, the filing requirement for the oil and gas production tax changed from monthly to calendar year. Taxpayers still make monthly estimated payments.

Returns

Oil and gas taxpayers file calendar year returns that are due with payment on March 31 of the following year. Taxpayers are required to make monthly estimated payments, based on activities of the prior month, due the last day of the following month.

Exemptions

The tax on oil is levied on all production except for public (government) royalty production. The tax on gas is levied on all production except for public (government) royalty production and gas used in production operations including enhanced recovery, or flared for safety purposes.

Credits

Education - Taxpayers that contribute to vocational education programs or accredited Alaska universities or colleges for educational purposes may claim a tax credit for 50 percent of the first $100,000 and 100 percent of the next $100,000 of contributions. The maximum credit is $150,000 for each tax year.

Disposition of Revenue

All revenue derived from the Oil and Gas Production Tax is deposited in the General Fund except that payments received as a consequence of an assessment or litigation are deposited in the Constitutional Budget Reserve Fund (CBRF).

History

1955 – The legislature enacts an oil and gas production tax of 1 percent of production value.

1967 – A 1 percent disaster production tax is enacted to provide relief after the Fairbanks flood.

1968 – The legislature increases oil and gas production tax from 1 percent to 3 percent of production value.

1970 – The legislature repeals the disaster oil and gas production tax. The legislature changes the oil production tax to a graduated tax with rates of 3 percent on the first 300 barrels per day per well, 5 percent on the next 700 barrels per day per well, 6 percent on the next 1500 barrels per day and 8 percent on production exceeding 2500 barrels per day per well.

1972 – The legislature establishes a minimum oil production tax based on "cents per barrel" equivalent to percent of value tax on oil with wellhead value of $2.65 per barrel.

1973 – The legislature revises the "stairstep" rate schedule to lower production levels. The legislature indexes the cents per barrel minimum to the wholesale price index for crude oil published by the US Bureau of Labor Statistics.

1977 – The legislature raises the nominal gas production tax rate to 10 percent. The legislature raises the nominal oil production tax rate to 12.25 percent and adopts the oil and gas economic limit factors.

1981 – As part of legislation that repealed the separate accounting oil and gas corporation income tax, the nominal tax rate on oil produced prior to 1981 was raised to 15 percent and fields coming into production after 1981 are taxed at 12.25 percent for five years after which the rate increases to 15 percent. The oil economic limit factor is now subject to a rounding rule so that if the calculated factor is greater than or equal to 0.7 during the first 10 years of production, the factor is set to 1.0.

The Alaska Legislature amended the oil and gas production tax with passage of ACES legislation in a special session ended November 2007.

1989 – The legislature changes the economic limit factor for oil production taxes to include a field size factor in the formula, fixes the production at the economic limit (not rebuttable) at 300 barrels per well per day, and drops the rounding rule. The legislature fixes production at the economic limit for gas production at 3000 mcf per well per day.

2002 – The legislature authorized credits of up to 50 percent for contributions of not more than $100,000 and 75 percent of the next $100,000 in contributions made to the Alaska Veterans' Memorial Endowment Fund. The tax credit expired July 1, 2003.

2003 – To encourage drilling for oil and gas within the state, AS 43.55.025 provided a new tax credit for exploration costs. The minimum credit is 20 percent and the maximum 40 percent for qualified expenditures.
2005 - Prudhoe Bay area oil fields are aggregated for purposes of calculating the economic limit factor, effective February 1, 2005.

2005 – To expand the exploration credit enacted the previous year, the deadline was extended until July 1, 2010 for qualifying work south of the Brooks Range (i.e. non-North Slope). New rules also changed the 3 mile and 25 mile rules for the Cook Inlet allowing closer distances between potential exploration targets and existing wells and production units.

2005 – The legislature amended royalty received by the state on gas production by directing the commissioner of the Department of Natural Resources to accept the transfer price of gas as established by the Regulatory Commission of Alaska under certain conditions. The legislation also extended and amended the requirements applicable to the credit that may be claimed for certain oil and gas exploration expenses incurred in Cook Inlet against oil and gas production (severance) taxes. This legislation also amended the credit against those taxes for certain exploration expenditures from leases or properties in the state. The legislation was signed in to law July 21, 2005 with an immediate effective date.

2006 – The legislature passed sweeping legislation in a special session that ended in August 2006 that established an income based tax (Petroleum Profits Tax - PPT); established new tax rates on oil and gas production; repealed the Economic Limit Factor (volume based tax), and provided credits for certain qualifying expenditures and taxpayers.

2007 – The legislature amended PPT legislation in a special session that ended November 2007 that culminated in the passage of the Alaska Clear and Equitable Share (ACES). Like the PPT legislation enacted in 2006, the ACES tax is levied on the net value of oil and gas production. The base tax rate under ACES is 25% (it was 22.5% under PPT) and the progressive surcharge tax rate under ACES is 0.4% for every dollar the net profit per barrel exceeds $30 (it was 0.25% on profits exceeding $40 per barrel under PPT). For production tax values greater than $92.50, the progressivity rate changes to 0.1% for every additional dollar of profit on a barrel of oil.

2008 – The legislature amended education credit provisions to include cash contributions accepted for secondary level vocational courses and programs by a school district in Alaska and by a state-operated vocational technical education and training school.

Oil and Gas Property Taxes (Exploration, Production and Pipeline Transportation Properties) AS 43.56

Oil or gas pipeline transportation systems owned and operated by a public utility are exempt from property tax.

Description
Alaska levies an oil and gas property tax on the value of taxable exploration, production and pipeline transportation property in the state. The division has established procedures for the three distinct classes of property.

- **Exploration Property** – valued on the estimated price which the property would bring in an open market and under the then prevailing market conditions in a sale between a willing seller and a willing buyer, both conversant with the property and with prevailing general price levels.
- **Production Property** – valued on the basis of replacement cost of similar new property, less depreciation based on the economic life of the proven reserves.
- **Pipeline Transportation Property** – generally valued on its economic value relative to the reserves feeding into the pipeline.

Rate
The state tax rate is 20 mills, or 2%, of the assessed value.

Returns
Taxpayers file annual returns reporting taxable property as of January 1 of the assessment year. Returns are due on or before January 15. Payment is due on or before June 30.

Exemptions
Oil and gas reserves, oil or gas leases, and the lease or rights to explore or produce oil or gas are exempt, as are intangible drilling and exploration expenditures. Certain aircraft, motor vehicles, communication facilities, and buildings may be exempt even though they are associated with oil or gas exploration, production, or pipeline transportation. Oil or gas pipeline transportation systems owned and operated by a public utility are exempt.

Credits
Municipal property taxes paid. Taxpayers receive a credit against state oil and gas property tax for property taxes paid to municipalities on taxable property. The credit is limited to the amount of state tax otherwise due.

Oil or Gas Property Education Credit. - Taxpayers that contribute to vocational education programs or accredited Alaska universities or colleges for educational purposes may claim a tax credit for 50 percent of the first $100,000 and 100 percent of the next $100,000 of contributions. The maximum credit is $150,000 for each tax year.

Disposition of Revenue
The division deposits revenue from oil and gas property taxes into the General Fund. Payments received after a tax assessment are deposited into the Constitutional Budget Reserve Fund (CBRF).

History
The legislature enacted this tax in 1973 during the first special session of the eighth legislature. The state assists local governments by assessing property subject to the tax, insuring uniform treatment of all taxable property.

2008 – The legislature amended education credit provisions to include cash contributions accepted for secondary level vocational courses and programs by a school district in Alaska and by a state-operated vocational technical education and training school.

The Alaska legislature enacted the RCC program in 1992 to fund the cost of regulating utilities.

Regulatory Cost Charges Utilities AS 42.05.254(e) Pipeline AS 42.06.286(c)

Description

Alaska levies regulatory cost charges (RCC) on regulated utilities. The charges fund the Regulatory Commission of Alaska (RCA) that regulates utilities and pipeline carriers in Alaska. Regulated utilities collect charges from consumers, and remit the collections to the Tax Division.

Rate

Rates are available on the Alaska Regulatory Commission's web site at https://rca.alaska.gov/RCAWeb/RCALibrary/FormsLibrary.aspx. Select the RCC Quarterly Report Form for calendar year of interest to obtain rates for that period.

Returns

Quarterly returns and payment of RCCs are due on the 30th day following the calendar quarter. Utilities and carriers are required to file a copy of the return with RCA.

Exemptions

Utilities not regulated by RCA are exempt from the RCC program.

Disposition of Revenue

The division deposits all revenue derived from the RCC program into the General Fund. The legislature may make appropriations from the General Fund to fund RCA based on regulatory cost charges collected.

History

1992 – The Alaska legislature enacted the RCC program to fund RCA's costs of regulating utilities. The RCC legislation provided for a sunset date of December 1994. Rates went into effect through regulations, which became effective November 1992.

1994 – In the fall of 1994, RCA promulgated regulations which established RCC rates for FY 1995 on an annualized basis. The regulations took effect December 1994.

1995 – The legislature reauthorized the RCC program that became effective June 1995. In October 1995, RCA adopted regulations to reestablish quarterly payments.

1999 – The legislature authorized separate RCC rates for each regulated utility and changed the methodology for calculating rates.

2007 – Alaska Regulatory Commission implemented online report filing through their web site. RCA assumed responsibility for processing returns and collecting data; the division continues to collect revenue as required by statute.

Salmon Enhancement Tax AS 43.76

Description

The salmon enhancement tax is an elective tax levied on salmon sold in or exported from established aquaculture regions in Alaska.

Fishermen pay salmon enhancement taxes to licensed buyers at the time of sale, or to the division for salmon sold to unlicensed buyers or exported from the region. Buyers remit taxes collected from fishermen to the division.

The salmon enhancement tax is an elective tax levied on salmon sold in or exported from established aquaculture regions.

Rate

Commercial fishermen elected tax rates for the following regional aquaculture associations:

Region	Rate	Effective
Southern Southeast	3%	1981
Northern Southeast	3%	1981
Cook Inlet	2%	1981
Prince William Sound	2%	1985
Kodiak	2%	1988
Chignik	2%	1991

Returns

Buyers file returns and pay tax monthly. The due date is the last day of the month following the month of purchase.

Buyers file returns for bonus payments made to fishermen after the close of the fishing season. Returns for these payments are due with additional taxes by the last day of the month following the payment.

Fishermen selling to unlicensed buyers or exporting from the region file returns and pay taxes annually. The due date is March 31 following the year of sale or export.

Exemptions

Salmon harvested under a special harvest area permit (typically, salmon harvested on behalf of salmon hatcheries) is exempt from the salmon enhancement tax.

Disposition of Revenue

The division deposits all salmon enhancement tax revenue into the General Fund.

Under AS 43.76.025(c), the legislature may appropriate salmon enhancement tax revenue to provide financing for qualified regional aquaculture associations.

History

The legislature adopted the Salmon Enhancement Act in 1980. The Act authorized a 2 percent or 3 percent tax, upon election by commercial fishermen within established aquaculture regions, on salmon transferred to buyers in Alaska. Commercial fishermen in Southern and Northern Southeast aquaculture regions elected a 3 percent tax and Cook Inlet region elected a 2 percent tax.

1981 – The legislature amended the Act to subject salmon exported from Alaska to the tax.

1985 – Commercial fishermen in the Prince William Sound aquaculture region elected a 2 percent tax.

1988 – Commercial fishermen in the Kodiak aquaculture region elected a 2 percent tax.

1989 – The legislature amended statutes to allow for a 1 percent tax

1991 – Commercial fishermen in the Chignik aquaculture region elected a 2 percent tax.

2004 – The legislature authorized additional salmon enhancement tax rates, subject to permit holder elections held by qualified regional associations. In addition to the current 1 percent, 2 percent or 3 percent options, 10 additional options were made available, ranging from 4 percent to 30 percent. This legislation clarified who must pay the Salmon Enhancement Tax. When a buyer does not withhold the tax, fishermen must pay the tax with an annual return. The legislation took effect January 1, 2005.

FY 2008 Statistics

Seafood Development Tax AS 43.76.350

Description
The seafood development tax is an elective tax levied on certain fishery resources using specific gear types sold in or exported from designated seafood development regions. Fishermen pay seafood development taxes to licensed buyers at the time of sale or to the division for resources sold to unlicensed buyers or exported from Alaska. Buyers remit taxes collected from fishermen to the division.

Rate
Commercial fishermen harvesting salmon by drift gillnet elected tax rates for the following development regions:

Region	Rate	Effective
Prince William Sound	1%	2005
Bristol Bay	1%	2006

Returns
Buyers file returns and pay tax monthly. The due date is the last day of the month following the month of purchase. Buyers file returns for bonus payments made to fishermen after the close of the fishing season. Returns for these payments are due with additional taxes by the last day of the month following the bonus payment. Fishermen selling to unlicensed buyers or exporting from Alaska file returns and pay taxes annually. The due date is March 31 following the year of sale or export.

The seafood development tax is an elective tax levied on certain fishery resources using specific gear types.

Exemptions
Resources harvested under special harvest area permit (typically, salmon harvested on behalf of salmon hatcheries) is exempt from the seafood development tax.

Disposition of Revenue
The Division deposits all seafood development tax revenue into the General Fund. Under AS 43.76.380(d), the legislature may appropriate seafood development tax revenue to provide financing for qualified regional seafood development associations.

History
2004 – The legislature adopted the Seafood Development Tax Act. The Act authorized a tax of between ½ and 2 percent, upon election by commercial fishermen harvesting within designated regions, on fishery resources transferred to buyers in or exported from Alaska.

2005 – Commercial salmon drift gillnet fishermen in the Prince William Sound seafood development region elected a 1% tax.

2006 - Commercial salmon drift gillnet fishermen in the Bristol Bay seafood development region elected a 1% tax.

The seafood marketing assessment is levied on seafood processed or first landed in Alaska. Assessments fund the Alaska Seafood Marketing Institute.

Seafood Marketing Assessment AS 16.51.120

Description
Alaska levies a seafood marketing assessment on seafood processed or first landed in Alaska. The state also levies the assessment on unprocessed fisheries products exported from Alaska. The Tax division collects the assessment from fisheries processors and fishermen who export fish out of Alaska.

Rate
The seafood marketing assessment is 0.5 percent of the value of seafood products exported from, processed or first landed in Alaska.

Returns
Taxpayers file calendar year returns with payment by April 1 of the following year. Taxpayers file monthly returns for postseason (bonus) payments made to fishermen after the filing of the calendar year return. Returns for these payments are due with additional assessments by the last day of the month following the bonus payments.

Exemptions
Processors and fishermen who produce less than $50,000 of seafood products during a calendar year are exempt from the assessment.

Disposition of Revenue
The division deposits all seafood marketing assessments into the General Fund. The legislature may appropriate funds to the Alaska Seafood Marketing Institute.

History
1981 - The legislature enacted an elective seafood marketing assessment of 0.1 percent, 0.2 percent or 0.3 percent (elected by large processors in Alaska). In 1981, processors elected a 0.3 percent assessment to take effect in calendar year 1982.

1996 - The legislature amended seafood marketing assessment statutes to include fishery resources landed in Alaska. The legislation was retroactive to January 1994. Prior to FY 96, revenue collected from the 0.3 percent portion of the original 3.3 percent landing tax rate was accounted for in a separate account designated as (landing tax) seafood marketing assessments.

2004 - The legislation directed ASMI to hold elections and determine whether to retain the assessment and a second election to determine whether to increase the assessment from 0.3 percent to 0.5 percent. Elections were held as prescribed by law. The vote retained the Seafood Marketing assessment, increased the Seafood Marketing rate to 0.5 percent and eliminated the Salmon Marketing Tax effective January 1, 2005.

FY 2008 Statistics

Telephone cooperatives pay the telephone cooperative tax in lieu of corporate net income tax.

Telephone Cooperative Tax AS 10.25.550

Description
Alaska levies a telephone cooperative tax on gross revenue of qualified telephone cooperatives under AS 10.25. The Tax Division collects taxes from cooperatives.

Rate
The telephone cooperative tax rate is based on revenue and the length of time in which the cooperative has furnished telephone service to consumers as follows:

Length	Percent of Revenue
Less than 5 years	1%
5 years or longer	2%

Returns
Telephone cooperatives file calendar year returns that are due with payment before March 1 of the following year.

Exemptions
All qualified telephone cooperatives are subject to the cooperative tax.

Cooperatives pay the telephone cooperative tax in lieu of corporate net income tax.

Disposition of Revenue
The division deposits revenue from the telephone cooperative tax into the General Fund.

Telephone cooperative taxes sourced from within municipalities are shared 100 percent to respective municipalities less the amount expended by the state for collection of taxes.

The state retains telephone cooperative taxes sourced from outside of municipalities.

History
1959 – The legislature enacted the telephone cooperative tax as part of the "Electric and Telephone Cooperative Act" to promote cooperatives around the state. The due date for filing telephone cooperative tax returns was April 1 of the following year.

1960 – The legislature changed the due date for filing returns to March 1.

FY 2008 Statistics

Note: Program Costs reflect the cost of the program. The amount retained by the state after sharing (Table 2) represents these costs and unshared tax collected outside an organized borough or incorporated city.

Tire Fee
AS 43.98.025

Description
Alaska imposes a tire fee on all new tires sold in Alaska. An additional tire fee is imposed on the sale of tires with metal studs weighing more than 1.1 grams each (heavy studs). The additional tire fee also applies to the installation of heavy studs in new or used tires. The division collects tire fees primarily from tire dealerships.

Rate
A $2.50 tire fee applies to each new tire. An additional $5 fee applies to each studded tire ($7.50 total tire fee for new studded tires).

Returns
Taxpayers are required to file returns and remit fees quarterly. Returns and payment are due 30 days following the calendar quarter in which the new tires were sold or studs were installed.

Taxpayers may retain 5 percent of the amount collected, limited to a maximum of $900 per quarter, to cover expenses associated with collecting and remitting fees.

Exemptions
The following tires and services are exempt if the purchaser provides the tire seller with a certificate of use:
- Tires and services sold to federal, state or local government agencies for official use.
- Tires for resale.

The $2.50 tire fee does not apply to used tires and certain replacements of defective tires.

Disposition of Revenue
The division deposits all revenue from the tire fee into the General Fund.

History
2003 - The legislature enacted the tire fee, effective 9/26/2003.

Alaska imposes a tire fee on all new tires sold in Alaska.

Program Cost	$113,247
Staffing (full-time equivalent)	1.1

Tobacco Tax
AS 43.50

Description

Alaska levies a tax on cigarettes and other tobacco products. The cigarette tax is levied on cigarettes imported into the state for sale or personal consumption. The tobacco products tax is levied on other tobacco products (other than cigarettes) imported into the state for sale. The division collects tobacco taxes primarily from licensed wholesalers, distributors and retailers.

Rates

Cigarettes – See rates table below. The cigarette tax must be paid through purchase of cigarette tax stamps. A stamp must be affixed to the bottom of every pack of cigarettes imported into the state for sale or personal consumption.

Nonparticipating Manufacturer Equity Tax – An additional tax of 12.5 mills (25 cents per pack of 20 cigarettes is levied on each cigarette imported or acquired from a manufacturer that did not sign the tobacco Master Settlement Agreement. All revenue collected from this tax is deposited in the General Fund.

Other Tobacco Products – The tax rate on Other Tobacco Products, which includes tobacco products other than cigarettes such as cigars and chewing tobacco, is 75 percent of the wholesale price. The wholesale price is the established price at which a manufacturer sells tobacco products to a distributor. The division may adjust the wholesale price upon which tax was calculated if the wholesale price was not established in an arms-length transaction.

Legislation passed during a special legislative session in June 2004 increased the cigarette tax rate to 90 mills (9 cents) per cigarette on July 1, 2006 and 100 mills (10 cents) per cigarette on July 1, 2007. In addition, as of January 1, 2005, there is an additional tax of $.25 per pack of 20 cigarettes on cigarette brands that are manufactured by manufacturers that did not sign the tobacco Master Settlement Agreement (NPM cigarettes). There was no increase in the other tobacco products tax rate.

Tobacco tax revenues have increased significantly due to recent rate increases.

Returns

Taxpayers must pay the cigarette tax by purchasing cigarette tax stamps. The other tobacco products tax is paid at the time a tax return is filed. Tax returns are required to be filed on a monthly basis and are due the last day of the month following the month that cigarette tax stamps were purchased or other tobacco products were imported into the state for sale.

Cigarette Tax Rates

July 1, 2007	Per cigarette		Per 20
Base Rate (School Fund)	38 mills	$0.038	$0.76
Additional Tax (General Fund)	62 mills	0.062	1.24
Total	**100 mills**	**$0.10**	**$2.00**

8.9% of tax revenues from cigarettes are deposited into a Tobacco Use Education and Cessation Fund.

Taxpayers that purchase cigarette tax stamps are entitled to a stamp discount of 3 percent on the first $1,000,000 and 2 percent on the second $1,000,000 of cigarette tax stamps purchased in a calendar year. The total stamp discount in each calendar year may not exceed $50,000. Taxpayers who import other tobacco products for sale may deduct 0.4 percent of the other tobacco products tax due to cover expenses of accounting and filing returns. There is no limit on this deduction.

Exemptions

Sales to authorized military personnel by a military exchange, commissary, or ship store; and sales by an Indian reservation business located within an Indian reservation to members of the reservation are not subject to the tax.

Disposition of Revenue

Cigarette Taxes – Revenue from the base rate is deposited in the School Fund. Revenue from the additional tax is initially deposited into the General Fund. Of the amount deposited in the General Fund, 8.9 percent of revenue is deposited into the Tobacco Use Education and Cessation Fund, a subfund of the General Fund.

The division deposits all cigarette and tobacco products license fees into the School Fund, to be used for the rehabilitation, construction, repair and associated insurance costs of state school facilities.

History

The tobacco tax dates to 1949 when the legislature enacted a tax of 3 cents per pack on cigarettes and 2 cents per ounce on tobacco. There were no exemptions provided in the tax legislation.

1951 – The legislature increased the cigarette tax to 5 cents per pack.

1955 – The legislature eliminated the tobacco products tax and, although the cigarette tax rate remained at 5 cents, the legislature converted the rate to a mill rate per cigarette (2.5 mills per cigarette). The legislature enacted a 1 percent deduction provision to cover accounting expenses. The legislature also created the School Fund and directed all proceeds from the cigarette tax be deposited in this fund.

1961 – The legislature increased the cigarette tax to 4 mills per cigarette (8 cents per pack). The legislature dedicated revenue from the additional 3 cents to the General Fund.

1977 – The legislature exempted military sales from the cigarette tax.

1983 – The Department of Revenue adopted regulations exempting sales of cigarettes by Indian Reservation businesses to members of the reservation.

1985 – The legislature increased the cigarette tax to 8 mills per cigarette (16 cents per pack).

1988 – The legislature enacted the tobacco products tax imposing a tax of 25 percent of the product wholesale price. The legislature authorized taxpayers to deduct 1 percent of the tax to cover accounting expenses.

1989 – The legislature increased the cigarette tax rate to 14.5 mills (29 cents per pack of 20).

1997 – Effective October 1, 1997, the legislature increased the cigarette tax rate to 50 mills or $1

per pack of 20; and the tobacco products tax rate was increased to 75 percent of wholesale price. The legislature reduced the deduction percentage to cover accounting expenses from 1 percent to 0.4 percent.

1999 – Effective June 3, 1999, Alaska became a signatory to the nationwide tobacco Master Settlement Agreement (MSA). The MSA is an agreement between 46 states, including the State of Alaska, and certain cigarette manufacturers which have voluntarily agreed to reimburse states for costs associated with cigarette smoking. The Agreement applies only to "participating manufacturers" (those manufacturers who have agreed to participate in the settlement).

The Agreement includes language to prevent "nonparticipating manufacturers" (those manufacturers who have not agreed to participate in the settlement) from deriving short-term profits and from becoming judgment-proof before liability arises. This language requires every nonparticipating manufacturer to place funds in an escrow account for each cigarette sold in the state. Per the agreement, the state is responsible to obtain data to determine the amount required to be placed in an escrow account by each nonparticipating manufacturer.

In the last of a series of tax increase enacted in 2004, the tax rate on cigarettes increased from $1.80 to $2.00 effective July 1, 2007.

2001 – Effective July 1, 2001, the Department of Revenue gained new tools to enforce the nationwide Master Settlement Agreement signed by the major cigarette producers and states. It allows the department to share information with other states and entities that may aid in the enforcement of the agreement. It also prohibits tobacco products licensees from importing and selling cigarettes in Alaska made by nonparticipating manufacturers that fail to comply with the agreement.

2003 – The legislature required all cigarette manufacturers to certify to the division that they are either a signatory to the tobacco Master Settlement Agreement (MSA) or in compliance with Alaska Statute 45.53. The division is required to post on its website a list of the compliant cigarette manufacturers and their brands. Only those brands of cigarettes included in the list may be sold in Alaska.

2004 – Effective January 1, 2004, the cigarette tax must be paid through the use of cigarette tax stamps. An Alaska cigarette tax stamp must be affixed to each cigarette pack prior to sale, distribution or consumption. Cigarettes found in the state that do not bear a cigarette tax stamp are contraband and subject to immediate seizure by the Department of Revenue or any other law enforcement agency in the state. Additionally, the sale of cigarettes at less than cost is prohibited.

During a special session in June 2004, the legislature passed legislation that:

- Increased the cigarette tax by 30 mills to 8 cents per cigarette or $1.60 per pack of 20 cigarettes, effective January 1, 2005.
- Levied an additional tax of 12.5 mills or 25 cents per pack of 20 cigarettes on cigarettes imported into the state for sale or personal consumption if the cigarettes were manufactured by a nonparticipating manufacturer (NPM). A nonparticipating manufacturer is a manufacturer that did not sign the tobacco Master Settlement Agreement. Revenue from the entire cigarette tax increase and the additional tax on NPM product is deposited in the General Fund.
- Required 8.9 percent of cigarette tax revenue deposited in the General Fund to be deposited into the Tobacco Use Education and

Cessation Fund, effective January 1, 2005. Amounts deposited in the fund may be appropriated by the legislature for tobacco use education and cessation programs.

- Increased the cigarette tax by 10 mills to 9 cents per cigarette or $1.80 per pack of 20 cigarettes, effective July 1, 2006. The revenue from this increase will be deposited in the General Fund.
- Increased the cigarette tax by 10 mills to 10 cents per cigarette or $2.00 per pack of 20 cigarettes, effective July 1, 2007. The revenue from this increase will be deposited in the General Fund.

Unclaimed Property
AS 34.45

Description

Property is considered unclaimed when a holder has no record of an owner or knows the name of an owner but does not have a correct address. Unclaimed property statutes apply only to intangible and personal property.

Unclaimed property is considered abandoned after it remains unclaimed for a period of time (dormancy period). Following the dormancy period, holders are required to report and remit unclaimed property to the state. Dormancy periods vary by type of property as prescribed by statutes.

Since 1981, Unclaimed Property has transferred several million dollars to the General Fund.

Before reporting property to the Tax Division, holders are required to make reasonable efforts in locating owners.

Unclaimed property is held in trust by the state until the property is claimed by its rightful owner.

Most unclaimed property is in the form of cash (checking and savings accounts), stocks and bonds (including dividends) and safe-deposit contents. Other property includes uncashed utility deposits, traveler checks and wages.

Each year, Unclaimed Property receives reports of thousands of names of persons who cannot be located by holders. The state lists owner names on a searchable database at www.missingmoney.com. If an owner finds their name a claim form is completed and upon verification, property is promptly returned to its rightful owner.

Unclaimed Property maintains an inventory of safe-deposit contents and other personal property submitted by holders under this program.

Following are abandonment periods for property commonly reported under the unclaimed property program.

Type of Property	Years
Safe deposit box contents	1
Utility deposits	1
Wages	1
Life insurance proceeds	2
Customer overpayments	3
Savings & checking accounts	5
Stocks and bonds	5
Travelers' checks	15

Reports

Holders are required to report and remit unclaimed property by November 1 each year. The reports include property that is deemed unclaimed as of June 30 each year.

Exemptions

The following properties are exempt from the unclaimed property program:

- Unused airline tickets
- Unemployment compensation overpayments
- Permanent Fund dividends after March 1990
- ANCSA (Native) corporation stocks

Disposition of Funds

All funds received through the unclaimed property program are deposited into the Unclaimed Property Trust account in the General Fund.

Because not all unclaimed property owners are located, amounts received from holders exceed refunds to owners. The Tax Division maintains a balance in the trust account and periodically transfers excess funds to the General Fund.

Since the program's inception, the division has transferred approximately $54.6 million to the General Fund.

History

1986 – the Alaska legislature adopted the Uniform Unclaimed Property Act which went into effect September 7, 1986. Stocks issued by corporations organized under ANCSA were exempted from unclaimed property statutes.

1988 – unused airline tickets were exempted retroactive to September 7, 1986.

1989 – overpaid contributions by employers to the unemployment compensation fund were exempted retroactive to September 7, 1986.

1992 – as part of the 1992 Budget Act (Ch 405 SLA 92), IEAD was ordered to privatize the unclaimed property program effective July 1, 1992. The program was not privatized because vendor proposals to a Request for Proposal issued by the Division exceeded the state's budgeted costs for administering the program. Also in 1992, permanent fund dividends were exempted effective April 1, 1992.

1996 – provisions for simultaneous report and remit were enacted and the aggregate reporting amount was increased to $100. Insurance companies were put on the same reporting cycle as all other holders. Maximum percentages were established for fee finders: 20% for property less than $500; and 10% for property $500 or more.

1997 – Unclaimed Property became part of the information superhighway. Information may be obtained via the internet at www.unclaimedproperty.alaska.gov or the National Association of Unclaimed Property Administrators (NAUPA) website at www.unclaimed.org.

2001 – Purchased an unclaimed property software program (UPMS).

2004 – Dormancy periods shortened based on 1995 version of the Uniform Unclaimed Property Act and added insurance demutualization language to AS 34.45.110 – 780.

2005 – Upgraded the unclaimed property software system to allow reports to be uploaded and claims to be imported from a website (UPS2K).

2006 – Unclaimed Property Program moved from Treasury to Tax Division on July 1, 2006.

2008 - Unclaimed Property Program moved from Tax Division to Treasury Division on July 1, 2008.

The Unclaimed Property program was transferred to the Treasury Division July 1, 2008.

FY 2008 Statistics

Program Cost	$419,478
Staffing *(full-time equivalent)*	4.2

The legislature may appropriate the balance in the vehicle rental tax account for tourism development and marketing.

Vehicle Rental Tax
AS 43.52

Description
Alaska levies an excise tax on fees and costs charged for the lease or rental of a passenger or recreational vehicle. The tax is levied on individuals renting vehicles and is collected by the rental/lease agency.

Rate

Vehicle Type	Rate (fees & costs)
Passenger	10%
Recreational	3%

Returns
Vehicle rental/lease agencies file tax returns and remit taxes quarterly. The returns and payments are due the last day of the month following the end of the calendar quarter in which the rental/lease agencies collected the tax.

Exemptions
Vehicle rental tax does not apply to:
- rentals or leases to federal, state, or local government agencies or employees on official business
- a lease or rental that contains a term exceeding 90 consecutive days or to the rental of taxicabs by taxicab drivers
- trucks rented by individuals for moving personal property and for vehicles provided to customers by automobile dealers as replacement transportation during warranty, recall or service contract repairs.

Disposition of Revenue
The division deposits all revenue from the vehicle rental tax into a special vehicle rental account in the General Fund. The legislature may appropriate the balance in the vehicle rental tax account for tourism development and marketing.

History
2003 – The legislature enacted the vehicle rental tax on August 20, 2003. The tax became effective January 1, 2004.

2004 – The legislature exempted the rental of taxicabs by taxicab drivers from the vehicle rental tax. Effective May 8, 2004 and retroactive to January 1, 2004, the division refunded any tax collected or remitted for taxi cab rentals between January 1 and May 8, 2004.

2006 – The legislature exempted trucks rented by individuals for moving personal property and for vehicles provided to customers by automobile dealers as replacement transportation during warranty, recall or service contract repairs, effective January 27, 2006.

FY 2008 Statistics	
Passenger vehicle rental	$8,050,884
Recreational vehicle rental	384,398
Penalties & interest	17,591
Total Tax Collections	**$8,452,873**

Number of Taxpayers	117
Program Cost	$133,586
Staffing (full time equivalent)	1.4

The Investigations Group is called upon to investigate potential violations of any of the tax types administered by the division.

Investigation Function

Description Investigative Function

The Investigations Group consists of a Chief Investigator and four Investigator III's. The focus of the Investigations Group is Cigarette / Tobacco Tax Investigations, and Gaming Regulatory Compliance. The Investigators frequently conduct both administrative and criminal cases related to other tax types including Motor Fuel, Vehicle Rental, Mining, and other Excise Taxes. The investigations are generally initiated by periodic field inspections, tips from the public, and referral from various law enforcement agencies.

Tobacco Investigations

The Investigations Group ensures that all cigarettes imported or sold in Alaska are properly stamped with the Alaska Tax Stamp in accordance of AS 43.50. The investigators seize unstamped or improperly stamped cigarettes and any other tobacco products designated as contraband within the provisions of Alaska statutes. At the time of the investigation, investigators determine potential violations of cigarette minimum pricing and shipping statutes. Most of the tobacco investigations are initiated by field inspections, complaints by citizens, referral from the Internet Tobacco Auditors, and from law enforcement referrals.

Gaming Investigations

The Investigations Group investigates potential gaming statute violations and law violations by licensed vendors, permitees, operators, and distributers. These investigations are generally initiated by routine inspections of premises where licensed activity is conducted, citizen complaints, and requests from Gaming Auditors.
During these inspections, the investigators educate the permitees, licensees, and the public about gaming laws and regulations.

Other Investigations

The Investigations Group provides investigative support to all groups with in the Tax Division and may be called upon to investigate any of the tax types administered by the division, frequently including tax fraud and other tax evasion related crimes.

FY 2008 Statistics

	Gaming	Tobacco	Other	Total
Inspections	106	530	27	663
Other Action	97	141	15	253
Total	**203**	**671**	**42**	**916**

Appeals conducts informal conferences and issues decisions in taxpayer appeals of assessments for all tax types

Appeals Function

Description

The Appeals Group consists of four appeals officers and a supervisor. The appeals officers and supervisor conduct informal conferences and issue informal conference decisions in taxpayer appeals of assessments for all tax types administered by the Department of Revenue along with charitable gaming appeals. Appeals officers work with Department of Law attorneys to resolve issues related to audit and compliance actions. Appeals officers also participate with Department of Law attorneys as a team to represent the Department of Revenue in formal hearings before the Office of Administrative Hearings and in settlement negotiations.

Appeals officers also work with the Department of Law attorneys in drafting statutes and regulations for the tax types administered by the Department of Revenue. For example, an appeals officer spent considerable time this year working with Department of Law attorneys drafting the PPT and ACES statutes and regulations. Appeals officers also advise audit staff regarding issues involved in active or past litigation.

Oil and gas production tax cases and corporate income tax cases are a priority due to the complexity of the issues and the amount of tax revenue involved. These cases require more resources to complete than the other tax types administered by the Department of Revenue.

FY 2008 Statistics

	Tax Periods*	Taxpayer Count
Beginning Inventory	159	87
Plus New Cases	368	115
Less Closed Cases	(326)	(134)
Ending Inventory	**201**	**68**

** Tax periods correspond to periodic tax return filing requirements of taxpayers. One taxpayer may have several tax periods in appeals at the same time.*

Audit Function

The income audit group is responsible for auditing corporate income taxes, including oil and gas corporate income tax returns.

The production audit group is responsible for auditing oil and gas production and property tax returns.

The excise audit group is responsible for auditing excise tax returns including alcoholic beverages, commercial passenger vessel, large passenger vessel, mining license, motor fuel, vehicle rental and tobacco taxes, and tire fees.

The gaming audit group is responsible for financial compliance of permittees, operators and distributors.

The fish audit group is responsible for auditing fisheries-related tax returns including fisheries business, fishery resource landing, salmon enhancement, seafood development taxes, and seafood marketing assessments.

The audit group includes income audit, production audit, excise audit, gaming audit and fish audit.

Appendix A
Historical Overview of Tax Programs

Tax Type	Legal Reference	First Enacted	Original Tax	Current Tax Structure	Latest Change
Alcoholic Beverages	AS 43.60	1933	Wine 5¢/gallon Beer 5¢/gallon	Per Gallon Liquor $12.80 Wine $2.50 Beer (Malt Beverage) and Cider $1.07 Beer (Small Breweries) $0.35	Effective 10/1/2002, tax rates increased for alcoholic beverages as referenced under current tax structure.
Commercial Passenger Vessel	AS 43.52	2006	$46/passenger	$46/passenger	2006 - voter initiative passed authorizing $46 tax
Conservation Surcharge on Oil	AS 43.55	1989	5¢/bbl	1¢/bbl increasing to 4¢/bbl when fund balance drops below $50m	2006 - rates changed to 1¢/bbl and 4¢/bbl.
Corporate Income	AS 43.20	1949	10% of federal income tax liability	1% to 9.4% of net income	2008 – The legislature expanded the education credit to include contributions for vocational education and authorized a credit for film productions in Alaska.
Dive Fishery Management Assessment	AS 43.76.150	1997	Voluntary tax of 1, 3, 5, or 7% of value	SE AK Mgmt Area A Geoduck = 7% Sea Cucumber = 5% Sea Urchin = 7%	2005 - The legislature authorized an annual filing due date of March 31 for dive fishermen who export or sell to unlicensed buyers, effective January 1, 2005.
Electric Cooperative	AS 10.25.555	1959	1% of gross revenue if operating < 5 years 2% of gross revenue if operating ≥ 5 years	1/4 mill ($.00025) per kWh if < 5 years; 1/2 mill ($.0005) per kWh if ≥ 5 years	1980 - tax base on kWh rather than gross revenue
Estate	AS 43.31	1919	(Inheritance Tax) Based on value of property	State tax credit on federal estate tax return	1991 - interest on delinquent tax subject to compound interest under AS 43.05.225. Beginning FY 2003, the state estate tax will phase out as a consequence of changes in federal law
Fisheries Business	AS 43.75	1913	7¢ per case of canned salmon; Other -- dollar amount based on revenue	Floating 5%[1] and 3%[2] of value Shore-based 3%[1] and 1%[2] of value Cannery 4.5% of value Direct Market 3%[1] and 1%[2] of value	2008 - The legislature expanded the education credit to include contributions for vocational education and extended the salmon product development tax credit program by 3 years.

[1] Established species [2]Developing species

Appendix A (Continued)

Tax Type	Legal Reference	First Enacted	Original Tax	Current Tax Structure	Latest Change
Fishery Resource Landing	AS 43.77	1993	3.3% of unprocessed value	3% of value[1] 1% of value[2]	2008 - The legislature expanded the education credit to include contributions for vocational education.
			[1] Established species [2]Developing species		
Gaming	AS 05.15	1960		$20 annual permit fee for new and renewal permittees. $50 renewal permit fee for permittees with $20,000 to $100,000 in gross receipts. $100 renewal permit fee for permittees with over $100,000 in gross receipts. $500 annual operator license fee. $1,000 annual distributor fee. $2,500 annual manufacturer license fee. 3% tax of an amount equal to the gross receipts less prizes awarded on each series of pull tabs distributed.	2008 – The legislature authorized broadcasting for dog mushers' contests, raffles and lotteries; and authorized the cabbage classic at the Alaska state fair.
Large Passenger Vessel Gambling	AS 05.16	2006	33% of adjusted gross income from gambling activities	33% of adjusted gross income from gambling activities	2006 - voter initiative passed authorizing gambling tax
Mining License	AS 43.65	1913	5% tax on mining net income of more than $5,000	On net income <$40,000 no tax. >$40,001 $1,200 plus 3% >$50,001 $1,500 plus 5% >$100,000 $4,000 plus 7%	2008 - The legislature expanded the education credit to include contributions for vocational education.
Motor Fuel	AS 43.40	1945	1¢ per gallon on all fuels	Highway - 8¢/gallon Marine - 5¢/gallon Aviation Gas- 4.7¢/gallon Jet Fuel - 3.2¢/gallon	2008 – Effective September 1, 2008 through August 31, 2009, motor fuel taxes on all fuel types are suspended.
Oil & Gas Property	AS 43.56	1973	20 mills on full and true value	20 mills on full and true value	2008 - The legislature expanded the education credit to include contributions for vocational education.
Oil & Gas Production	AS 43.55	1955	1% of production value	12.25% of production value during first five years of production, 15% thereafter	2008 - The legislature expanded the education credit to include contributions for vocational education.

Appendix A (Continued)

Tax Type	Legal Reference	First Enacted	Original Tax	Current Tax Structure	Latest Change
Regulatory Cost Charge	AS 42.05.253 (Utilities) AS 42.06.285 (Pipelines)	1992	Electric Utilities: $.000626/kWh Other Utilities: .653% gross revenue Pipelines: .653% gross revenue	Electric Utilities: $.000364/ kWh Other Utilities: .786% gross revenue Pipelines: .786% gross revenue	2006 - rates increased by regulation.
Salmon Enhancement	AS 43.76	1980	Voluntary tax of 1%, 2% or 3% of value as elected by fishermen in an aquaculture region	Southern Southeast 3% Northern Southeast 3% Cook Inlet 2% Pr. William Sound 2% Kodiak - 2% Chignik - 2%	2004 - SB 286 clarified the incidence of the tax; when selling to a buyer who does not withhold the tax, fishermen must now pay the tax on an annual return. Ten additional rates ranging from 4 to 30%
Seafood Development	AS 43.76.350	2005	0.5%-2%	Pr. William Sound 1% Bristol Bay 1%	2006 - Commercial salmon drift gillnet fishermen in the Bristol Bay seafood development region elected a 1% tax.
Seafood Marketing	AS 16.51.120	1981	Voluntary assessment of .1%, .2% or .3% of value as elected by processors	Rate set at 0.5% effective January 1, 2005.	2004 - SB 273 directed a member election of the Alaska Seafood Marketing Institute (ASMI). Fall election determined retention of Seafood Marketing Assessment and increased the rate to 0.5%.
Telephone Cooperative	AS 10.25.550	1959	1% of gross revenue if operating < 5 years; 2% of gross revenue if operating ≥ 5 years or longer	1% of gross revenue if operating < 5 years; 2% of gross revenue if operating ≥ 5 years or longer	1960 – The legislature changed the due date for filing returns to March 1.
Tire Fee	AS 43.98	2003	$2.50 per new tire for highway-use motor vehicles Additional $5 per tire with studs over 1.1 grams	$2.50 per new tire for highway-use motor vehicles Additional $5 per tire with studs over 1.1 grams	No changes since tire fee enacted in 2003.
Tobacco	AS 43.50	1949	Cigarettes - 3¢ per pack of 20; Tobacco - 2¢ per ounce	90 mills/cigarette ($1.80 per pack of 20) 75% of wholesale price	2004 - SB 1001 increases the tax to $1.60 per pack on Jan. 1, 2005, to $1.80 per pack on July 1, 2006, and to $2.00 on July 1, 2007. An additional tax of $.25 per pack is imposed on manufacturers that did not sign the Master Settlement Agreement.

Appendix A (Continued)

Tax Type	Legal Reference	First Enacted	Original Tax	Current Tax Structure	Latest Change
Vehicle Rental	AS 43.52	2004	10% on passenger vehicle rentals of 90 days or less 3% on recreational vehicle rentals of 90 days or less	10% on passenger vehicle rentals of 90 days or less 3% on recreational vehicle rentals of 90 days or less	2006 - exemptions for trucks for moving personal property and vehicles as replacement transportation.
Repealed Tax Programs					
Business License	AS 43.70	1949	$25 license fee plus .5% of gross receipts > $20,000 plus .25% of gross receipts > $50,000	Repealed	Tax repealed effective January 1, 1979. License program transferred to DCCED by Executive Order effective July 1, 1988.
Oil & Gas Conservation	AS 43.57	1955	5 mills per barrel of oil or 50,000 cubic feet of natural gas	Repealed	Tax repealed effective July 1, 1999.
Coin-operated Devices	AS 43.35	1941	12.5% of gross receipts on coin-operated machines	Repealed	Tax repealed effective January 1, 1999.
Individual Income	AS 43.20	1949	10% of federal income tax liability	Repealed	Tax repealed retroactive to 1979.
Salmon Marketing	AS 43.76	1993	1% of value of salmon	1% of value of salmon	Repealed effective January 1, 2005.
School	AS 43.45	1919	$5 tax on each male person	Repealed	Tax repealed retroactive to 1980.

STATE OF ALASKA

OFFICE OF THE GOVERNOR

OFFICE OF MANAGEMENT AND BUDGET

SARAH PALIN, GOVERNOR

P.O. BOX 110020
JUNEAU, ALASKA 99811-0020
TELEPHONE: (907) 465-4660
FAX: (907) 465-3008

February 26, 2009

The Honorable Lyman Hoffman
Co-Chair, Senate Finance Committee
Alaska State Legislature
State Capitol, Room 518
Juneau, AK 99801-1182

The Honorable Bert Stedman
Co-Chair, Senate Finance Committee
Alaska State Legislature
State Capitol, Room 516
Juneau, AK 99801-1182

Dear Co-Chairs Hoffman and Stedman:

The following is provided in response to questions from the committee during Johanna Bales' presentation on Friday, January 30, 2009, on the Commercial Passenger Vessel (CPV) excise tax and Large Passenger Vessel (LPV) gambling tax. The Departments of Law, Revenue, Transportation & Public Facilities, Administration, and the Office of Management & Budget, collaborated on the response to the committee's questions.

1. In the Governor's FY09 Capital Budget submission CPV tax money was not appropriated. At the time, the administration testified that it was the legislature's responsibility to appropriate the money. In addition, the Department of Law advised the legislature to fully appropriate the money because not doing so might open the state up for class action litigation by passengers. The legislature appropriated most of the money but the Governor vetoed $18.3 million. Given that these funds have restricted uses, there were ample funds available in the accounts, and the administration had encouraged the legislature to appropriate the funds, what was the rationale for the Governor's vetoes?

The Department of Law, Assistant Attorneys General Mike Ford and Chris Poag met with legislators and their staff last year to discuss questions they had about restrictions on the expenditure of CPV tax proceeds. They advised that not spending the money or holding these proceeds for a number of years could increase the chance of the cruise industry or its passengers filing suit. The advice was not meant to imply that all funds should be appropriated at one time to avoid potential litigation.

printed on recycled paper

The Governor carefully reviewed the FY2009 capital budget and vetoed all or a portion of nine projects funded with CPV tax revenues indicating they would be considered in a future budget.

2. There were several questions about what exactly was meant by the various veto categories: "Low Priority," "Consider in the Future," etc.

Enclosed is a copy of the governor's May 23, 2008, transmittal letter that outlines the various categories and their broad definition. Each project was reviewed and considered on its own merits.

3. This year, the Governor has proposed $39 mill in her FY10 Budget. Has the administration changed its position on who should propose spending this money? How did the administration come up with the projects that are proposed and the amount of spending proposed?

The Governor has proposed spending $39 million on direct CPV tax funded projects. Rather than implement a new process with additional administrative costs, we asked the Departments of Transportation & Public Facilities and Commerce, Community, and Economic Development for assistance. DOTPF gathered project information from their regional planning staff. They provided information that had been coordinated with local governments. The projects were reviewed and prioritized based on need and the cruise ship industry impact to the communities and the specific projects. DCCED assisted with the review of the projects. Previously vetoed projects were included in the review.

4. Is it the administration's position that the unappropriated balances ($32 million Regional Impact Fund/$20 million Commercial Vessel Passenger Tax Fund) are available for legislative priorities?

The available balances are expected to be $22 million and $44 million, respectively, based on the Department of Revenue's forecast of FY09 receipts still to come. We have, however, proposed FY10 capital projects of $39.2 million from the Commercial Vessel Passenger Tax Fund.

5. How is the money that is sitting in the Commercial Vessel Passenger Tax Account (CVPTA) invested? Is it generating additional revenue?

The CVPTA is part of the general fund: the amount collected is accounted for separately, but otherwise the money is in no way treated differently from any

other tax receipts. The unappropriated CVPTA money sweeps to the CBRF at the end of the fiscal year, but starting with FY2009, will be reverse swept back to the newly created subfunds. The CVPTA funds are invested in GEFONSI as part of the general fund and earnings are deposited in the unrestricted general fund. Forecast earnings are 4.07% annually: though from July 1, 2008 to December 31, 2008, a 5.29% return was realized.

6. Are there communities that are eligible for the $5 per port call revenue sharing who didn't apply for it? Are there communities that applied for the funds that were turned down? Does the administration have a process for notifying communities of their eligibility?

There is no application process to obtain funds under the "first 5 ports of call rule." DOR accumulates the data from the cruise ship tax returns and identifies all communities eligible to receive funds. All communities entitled to share under this provision received funds.

The Administration has not implemented an application process for communities to apply for funds under the Regional Cruise Ship Impact fund or the CVPTA funds.

7. In the FY09 Operating Budget, we included language that authorized the Department of Revenue to make revenue sharing payments for the calendar year 2008 cruise session. The FY08 budget language had limited payments to the first the fiscal year. Have the 2008 payments gone out as expected? Johanna testified that the checks are going out the week of January 26. Isn't there a way to get that money out to the communities more expeditiously or on a monthly basis?

Sharing of 2008 revenues happened in January 2009. Unless there is a provision for DOR to share monthly, it is not possible for Revenue to reconcile all receipts from a specific cruise ship season and make payment before mid to late December. Since there are sailings in October, final tax returns are not due until the end of November. Since returns can be mailed, DOR does not receive all returns until around the 7th of December. DOR then has to then reconcile returns to AKSAS to ensure payment was made, input all data regarding ports of call and then verify the numbers. This process takes a couple of weeks. The only way to speed up this process would be to require monthly sharing.

8. Senators Stedman and Elton also wanted to know if Juneau and Ketchikan qualify for funds from the regional cruise ship impact fund because their local passenger levies preclude them from receiving funds under the first 5 ports of call rule.

AS 43.52.230(c) prohibits distribution of the regional tourist impact funds to municipalities "entitled to receive funds based on port call visitation as allowed by (b) of this section." Juneau and Ketchikan are entitled to receive port of call funds under AS 43.52.230(b). Juneau and Ketchikan do not receive port of call funds to which they were entitled because they did not effectuate a repeal of their local passenger tax levies under AS 43.52.250. So, under AS 43.52.230(c), Juneau and Ketchikan are not eligible to receive regional tourist impact funds because they are entitled to receive port of call funds under AS 43.52.230(b).

This interpretation makes sense in light of the fact that if a city has their own passenger fee, they are in essence receiving money under a port of call scenario. That said, we believe that money remaining in the commercial vessel passenger tax account after the first 5 ports of call receive revenue sharing can be used to fund projects in these communities. Additionally, it bears noting that the guidelines contained under AS 43.52.230 do not create dedicated funds.

9. The CVPTA Fund is currently classified as designated (a subaccount of the GF). However, federal constitutional restrictions (Tonnage Clause, Commerce Clause) effectively dedicate these funds. Should we make a statutory change?

The Alaska Constitution allows for state funds to be dedicated as a requirement of federal law, however, the Department of Law does not think we are in a position to dedicate these tax proceeds without running afoul of the state constitution. So, Law is advising that these tax proceeds not be dedicated.

10. LPV Gambling Tax is unrestricted GF but by the initiative specifies that it be deposited into the CVPTA Fund. Is this an accounting or transparency issue for Department of Revenue? Should we fix/change this legislatively?

Unappropriated tax revenue received in FY2008 has been swept to the CBR. The Division of Finance is establishing subfunds so that with the customary reverse sweep language in each year's budget bill, any unappropriated funds will revert

back to the subfunds and be available for future appropriation. This will rectify the situation for FY2009 and future years.

Please contact me if you have additional questions.

Sincerely,

Karen J. Rehfeld
Director

Enclosure

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

May 23, 2008

The Honorable Lyda Green
President of the Senate
Alaska State Legislature
State Capitol, Room 111
Juneau, AK 99801-1182

Dear President Green:

On this date I signed with line item vetoes the following bill passed by the second regular session of the Twenty-Fifth Alaska State Legislature and am transmitting the engrossed and enrolled copies to the Lieutenant Governor's Office for permanent filing:

HCS CSSB 221(FIN) am H

"An Act making and amending appropriations, including capital appropriations, supplemental appropriations, and appropriations to capitalize funds; ratifying certain expenditures; and providing for an effective date."

Chapter No. 29, SLA 2008

The budget goals for this administration have been very clear: to slow the growth of government, live within our means, and save for the future. The capital budget presented for legislative consideration this past session was designed to meet these goals. I appreciate the careful consideration and support from the Legislature of this request.

Senate Bill 221 as passed by the Legislature contained operating and capital appropriations for Fiscal Year 2008 and FY2009, totaling $3.9 billion. The capital budget totals nearly $3.0 billion, including $1.2 billion in general funds. Through line-item vetoes, I have reduced the operating and capital appropriations in SB 221 by $268.2 million of which $152 million is general funds. Making these reductions now means

that this revenue will be available for additional savings and vital services for Alaskans in the future.

I appreciate the increased level of communication between my administration and the Legislature before, during, and following completion of the first 90-day session. I believe we share similar priorities for funding including basic government services for life, health, public safety, transportation, infrastructure development, and education. Alaska is blessed with the unique opportunity through this time of extraordinary revenue to invest in our communities and citizens and also be able to put a significant amount of surplus revenues into savings.

We conducted a comprehensive review of the operating and capital items included in SB 221. I asked our departments to look closely at items we included in our operating and capital budgets as well as legislative changes to the budget. I also instructed the Office of Management and Budget to contact each legislator and ask for a prioritized list of projects within each district and to ensure that we had complete backup for each project. We also contacted communities to confirm that we had correct information and understanding of the community priorities.

There are some broad areas that are important to note in the overall approach to the budget.

SB 256 Supplemental Capital Projects – We had very positive and productive meetings with legislators during the regular session to discuss specific projects that were inserted into the supplemental bill. As a result, there were 155 projects totaling $35.4 million that I recommended be moved from SB256 for consideration in the capital budget.

The SB 256 "moved" and some of the vetoed projects were included in SB 221 in sections 7, 10, and 13. In some cases the amount of the projects increased from what was originally requested in SB 256. There were 162 projects totaling $59.8 million. Of the 162 projects, 102 projects are funded entirely for a total of $45.8 million, 22 projects are reduced by $4.2 million, and 36 projects are vetoed for a total $5.4 million. Individual reasons for those reductions are noted on the enclosed spreadsheet.

SB 221 includes a number of legislative designated grants to schools and education organizations in support of operating programs, books, and materials at local schools. While I have let a number of these appropriations remain, I believe that this is not a fair way to address the needs of schools. All schools need supplies, books, laptops, and

ongoing repairs that are not typically funded through the state's major maintenance program.

The Anchorage School District implemented a process at the school building level to identify projects by priority and to have those projects approved by the Anchorage School Board. I appreciate the efforts of the district to develop a public process for these projects. However, I am concerned that these additions create an unfair advantage to some schools. The education funding formula is designed to create parity between school districts. Elected school boards are authorized to make funding decisions for schools within their districts. We also have a statewide school construction and major maintenance grant and debt reimbursement program to help districts pay for significant capital costs. I would encourage school districts to address their building needs through the state funding already provided and local community funding in the future.

Inclusion of operating funds to various organizations through the capital budget is also an area of concern. I have retained some of these grants, particularly where there are extraordinary circumstances or transitional funding needs. These appropriations should be considered as one-time to help the organization secure other operating funds for the future. Many of the appropriations that remain in the budget are also flagged with the caveat that these state funds are one-time and other funds should be sought for future costs. In many cases, I have vetoed funds for new programs or facilities that would require additional state funds in the future.

In reviewing the budget, I found that many of the requests included matching funds or the ability to leverage additional funds based on the state's contribution. The presence of matching funds was an important element of our decision to retain projects in the budget. A number of projects were reduced to demonstrate the state's commitment to be a partner in the project but to also encourage the recipient to seek other funds for the project.

The enclosed spreadsheet lists the projects I have vetoed including the appropriation cite, funding source, and the reason I have vetoed the appropriation. The reasons for veto fall into several categories:

1. Fund at reduced level

   There are many services where the state has some responsibility and has a proper role in providing some funding. Several projects that were reduced are also flagged as one-time items.

2. Lower priority for funding
   Projects that address life, health, safety, transportation, infrastructure, and education are funding priorities. Many projects included in the budget were reduced or vetoed because they were a lower funding priority.

3. Consider in future budget
   Many projects met the funding criteria and may be considered in a future budget.

4. Other funding options available
   There are numerous state programs and other sources of funding that make grants and other resources available. In some instances, it may be possible to perform the work within existing agency resources.

5. Legal concerns
   The Department of Law provides a review of all expenditures for compliance with state laws and regulations. Each appropriation must clearly be for services and programs that meet public funding requirements.

6. Duplicate funding
   Funding for some projects was included more than once in error.

7. Request reduced or withdrawn
   Recipients of funding or their legislative sponsors indicated that they no longer were requesting approval or could move forward with the project at a reduced amount.

8. Inadequate funding provided
   Some projects and programs were provided insufficient amounts of money in order to provide meaningful achievement.

9. Creation of new facilities and programs
   Given current funding shortfalls for existing programs and the ongoing need to address a backlog of deferred maintenance of public facilities, few projects for new facilities or programs were approved.

Our process for evaluating these projects attempted to review each appropriation based on a policy applied consistently and even-handedly. No one region, community, or legislative district was singled out at any time.

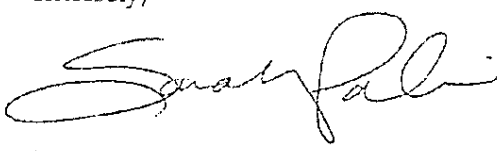
I have vetoed two appropriations from the Railbelt Energy Fund. These projects will be considered under the efforts of the Alaska Energy Authority on the unified plan to serve all the consumers in the region in a cost effective and efficient manner. The unified system plan will be a key component of the Statewide Energy Plan that will be completed later this year. It is premature to fund these distinct projects without the benefit of the unified plan.

Education is a top priority for legislators and this administration. Alaska's public schools will receive nearly $1 billion in FY2009. SB 221 contains $20.7 million in supplemental funds for energy relief grants to schools in addition to an increase of $112.5 million for changes approved in the public school funding formula under HB 273.

This budget focuses on the state's basic responsibilities, schools, public safety, and needed transportation improvements that are essential to getting Alaska's infrastructure ready for the state's economic future, especially the gas pipeline.

There is more work to be done. I am committed to working with the legislature to move Alaska forward.

Sincerely,



Sarah Palin
Governor

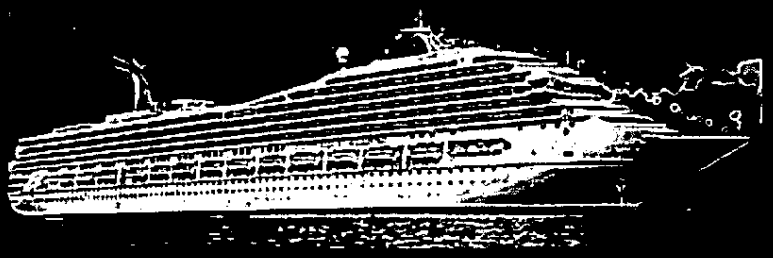
Commercial Passenger Vessel Excise Tax



Presented by
Johanna Bales
Deputy Director, Tax Division
Alaska Department of Revenue

Initiative Overview (Revenue Provisions)

Effective 12/17/2006

- Imposes a $46 commercial passenger vessel excise tax on large cruise ships (over 250 berths)
- Levies a tax at the rate of 33% of adjusted gross income on cruise ship gambling activities in state waters
- Subjects cruise ship companies to Alaska's corporate net income tax
- Assesses a $4 per passenger berth fee to cover the cost of state-employed marine engineers (Ocean Rangers) to observe health, safety and wastewater treatment and discharge operations

Initiative Overview (Other Provisions)

- Requires cruise ship operators to gather and report more information and get a new type of permit for sewage, graywater or other wastewater before discharging in state marine waters
- Authorizes citizen lawsuits against an owner or operator of a large cruise ship for an alleged violation of any permit condition
- Enables a person who provides information leading to enforcement of a law to receive 25 to 50 percent of fines imposed
- Imposes additional requirements on disclosures about on-ship promotions of shore-side businesses

CPV Revenues

- Commercial Passenger Vessel Excise Tax - $46 per person traveling on a vessel providing overnight accommodations in state marine waters.
- Ocean Ranger Fee - $4 per person
- Total cost per passenger - $50

Department of Revenue Responsibilities

- Administer & collect the corporate net income tax
- Administer & collect the 33% cruise ship gambling tax
- Administer & collect the $46 commercial passenger vessel excise tax (commonly referred to as the cruise ship "head tax")
- Account for and disburse proceeds of the tax as directed by the legislature
- Draft regulations for all tax types

Administer & collect the corporate net income tax

- Cruise ship owners are subject to the corporate income tax just like all other corporations in Alaska
- Money collected is deposited in general fund (no current estimate of revenues)
- First tax returns due April 15, 2008
- There is no revenue sharing to municipalities from this tax type
- Regulations effective October 2007

Administer & collect the 33% cruise ship gambling tax

- Regulations effective April 11, 2008
- Tax is imposed on adjusted gross income received from gambling activities conducted in state waters
- Adjusted gross income is gross gambling proceeds less prizes paid out and federal and municipal taxes imposed on the income
- Annual return with first returns due April 15, 2008
- Revenue deposited in Commercial Vessel Passenger Tax Account

Administer & collect the $46 commercial passenger vessel excise tax ("head tax")

- Levied on the cruise ship passenger per voyage
- Paid by cruise ship owner or operator
- Due by the end of the month following the month in which the voyage ended
- Due for each voyage lasting longer than 72 hours
- Must report the number of passengers at each Alaska port of call

Account for and disburse proceeds of the CVP tax as directed by the legislature

- Commercial passenger vessel excise tax is deposited into a sub account of the general fund as follows:
  - Commercial Vessel Passenger Tax Account – 75% of proceeds or $34.50 per person
  - Regional Cruise Ship Impact Fund – 25% of proceeds or $11.50 per person

Receipts from the Commercial Passenger Vessel Excise Tax

Account	2007 Cruise Ship Season Revenue[1]	2008 Cruise Ship Season Revenue[1]
Commercial Vessel Passenger Tax Account	$34,730,080	$35,066,559
Regional Cruise Ship Impact Fund	$11,576,694	$11,688,853
Total Receipts[2]	$46,306,774	$46,755,412

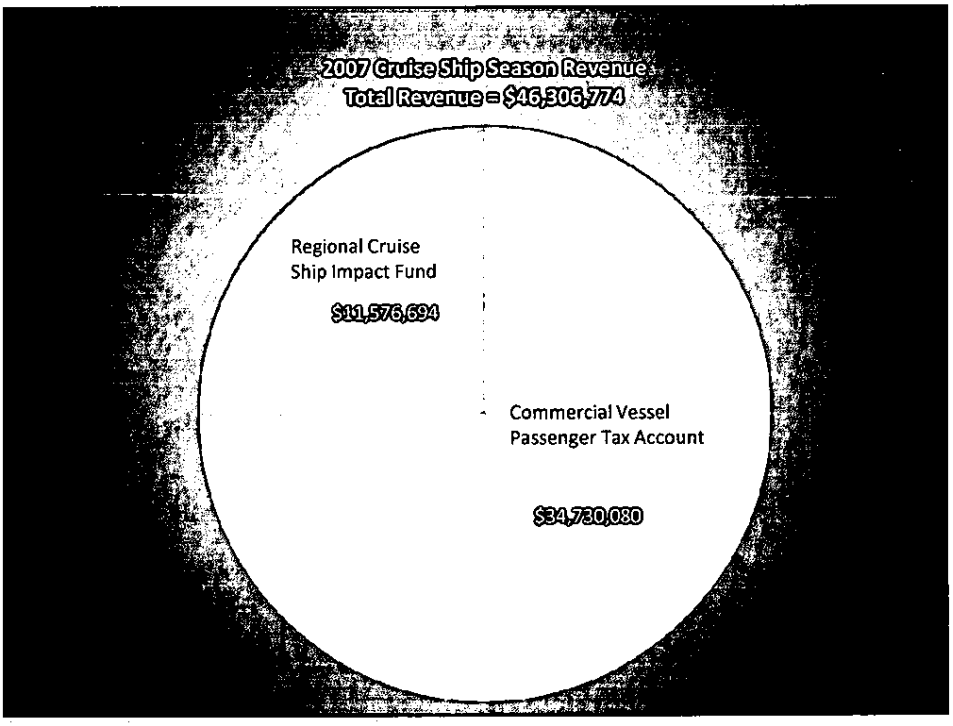
[1] 1,006,669 passengers in 2007; 1,016,422 passengers in 2008

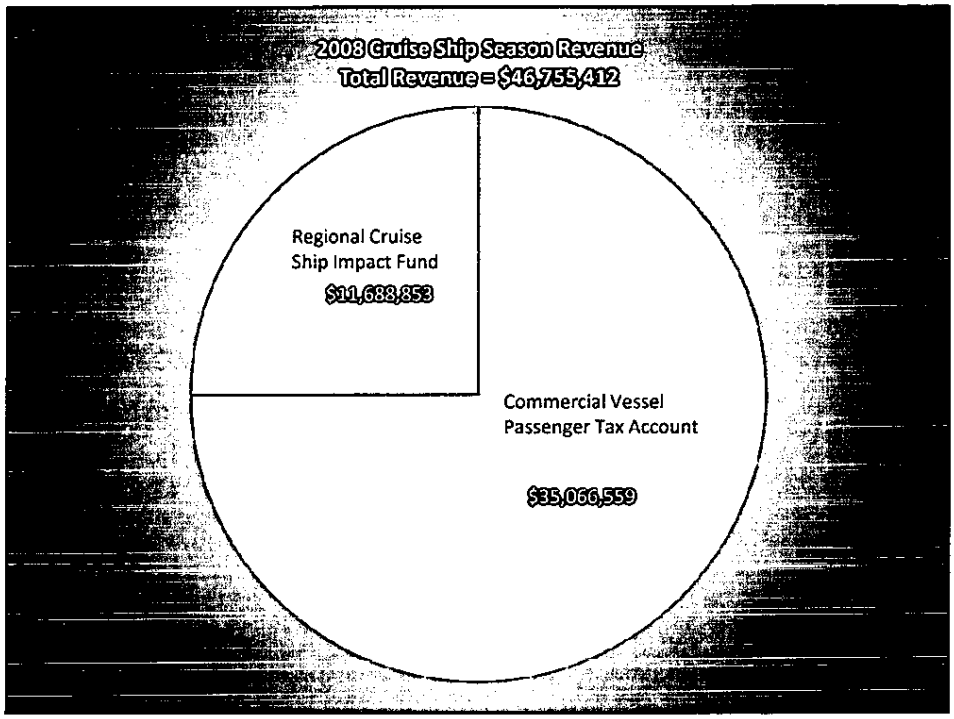
[2] Does not include gambling tax revenue

Total Revenue Collections by Month

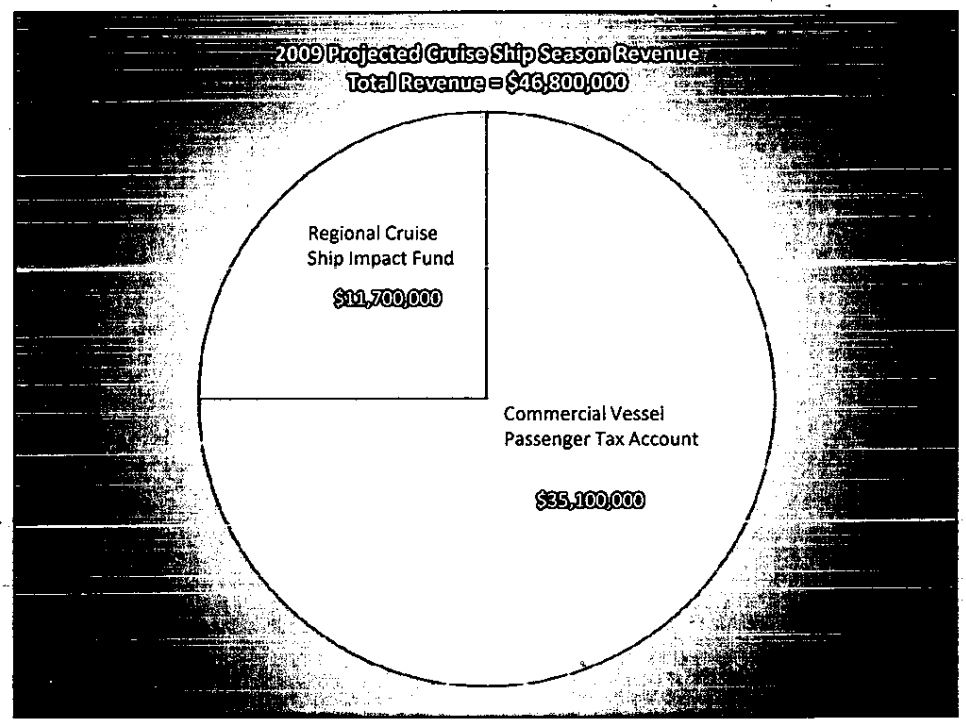
Month	2007 # of Passengers	Total Tax 2007	2008 # of Passengers	Total Tax 2008
May	106,865	$4,915,790	131,049	$6,028,254
June	238,708	10,980,568	228,478	$10,509,988
July	236,415	10,875,090	222,615	$10,240,290
August	233,830	10,756,180	260,395	$11,978,170
September[2]	190,851	8,779,146	173,885	$7,998,710
Total	1,006,669	$46,306,774	1,016,422	$46,755,412

[1] Includes October sailings

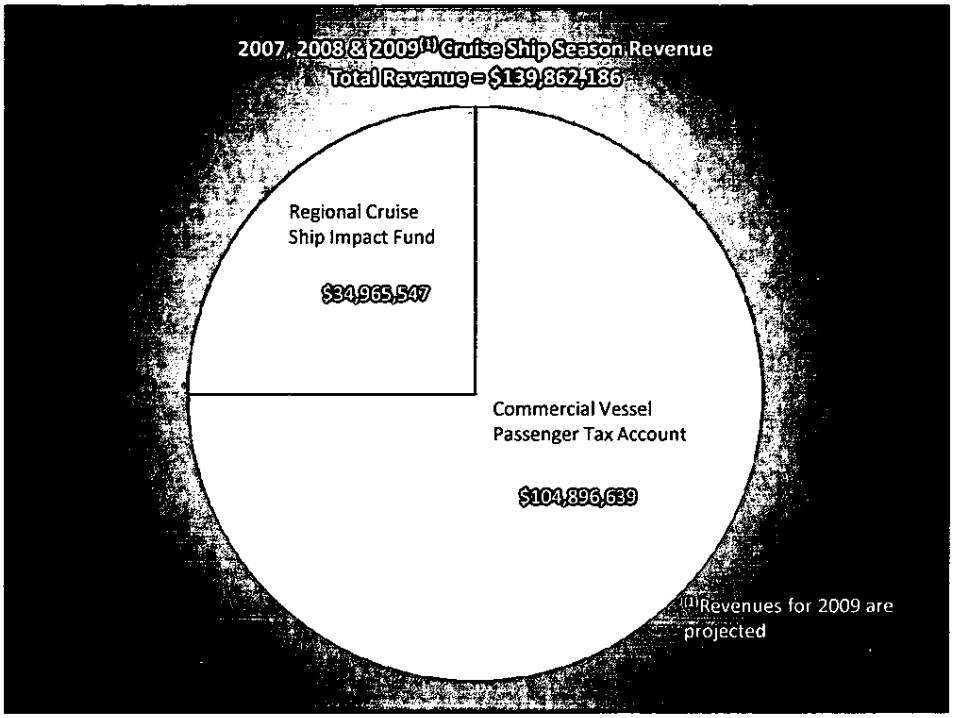




2008 Cruise Ship Season Revenue
Total Revenue = $46,755,412
Regional Cruise
Ship Impact Fund
$11,688,853
Commercial Vessel
Passenger Tax Account
$35,066,559



2009 Projected Cruise Ship Season Revenue
Total Revenue = $46,800,000
Regional Cruise
Ship Impact Fund
$11,700,000
Commercial Vessel
Passenger Tax Account
$35,100,000



Commercial Vessel Passenger Tax Account

(estimated amount available for appropriation = $34.8 million annually + cruise ship gambling tax proceeds)

- Revenue disbursed to communities under "first 5 ports of call" rule come from this account
- Gambling tax revenue deposited in this account
- Legislature may appropriate money from this fund "for state-owned port and harbor facilities, other services to properly provide for vessel or watercraft visit, to enhance the safety and efficiency of interstate and foreign commerce and such other lawful purposes"

First 5 Ports of Call

(estimated disbursement - $10 million annually)

- $5 per passenger shared with first 5 ports of call
- Port of Call
  - Must be a municipality or borough
  - Must be location where passengers embark or disembark (includes lightering of passengers)
  - Cannot have its own passenger tax
  - Boroughs not unified with a municipality may receive $2.50 per passenger
  - Cannot also receive funds from "Regional Cruise Ship Impact Fund."

Revenue Sharing

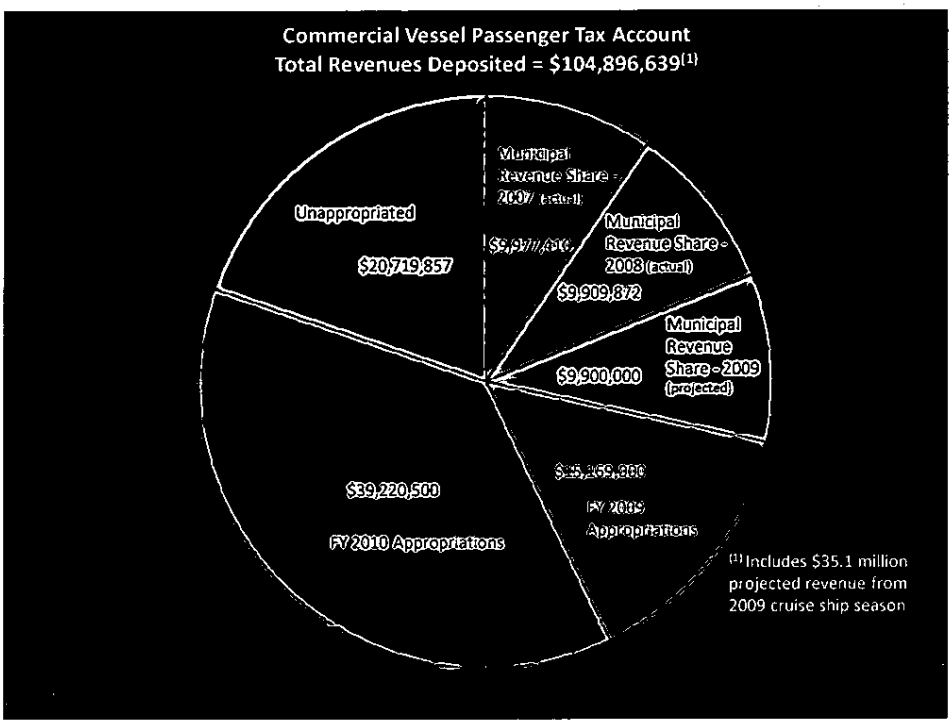
- Commercial Vessel Passenger Tax Account
  - First 5 ports of call
    - Legislature appropriated amount needed for community revenue sharing from 2007 cruise ship season – 2 disbursements made to communities (December 2007 & June 2008)
    - Legislature appropriate amount needed for community revenue sharing from 2008 cruise ship season – 1 disbursement made to communities (January 2009)

Municipal Revenue Sharing
(first 5 ports of call)

City/Borough	2007 Revenue Shared	2008 Revenue Shared
Haines	$114,220.00	$215,410.00
Hoonah	550,025.00	359,155.00
Homer	-0-	2,897.50
Ketchikan Borough	2,244,585.00	2,326,147.50
Kenai Peninsula Borough	383,652.50	348,645.00
Kodiak, City of	5,102.50	24,777.50
Kodiak, Borough	5,102.50	24,777.50
Seward	383,652.50	345,747.50
Sitka, City and Borough	1,128,995.00	1,359,030.00
Skagway	4,057,265.00	3,862,970.00
Valdez	-0-	28,355.00
Whittier	1,104,810.00	1,001,985.00
Wrangell	-0-	9,975.00
Total Disbursements	$9,977,410.00	$9,909,872.50

CPV Tax Account

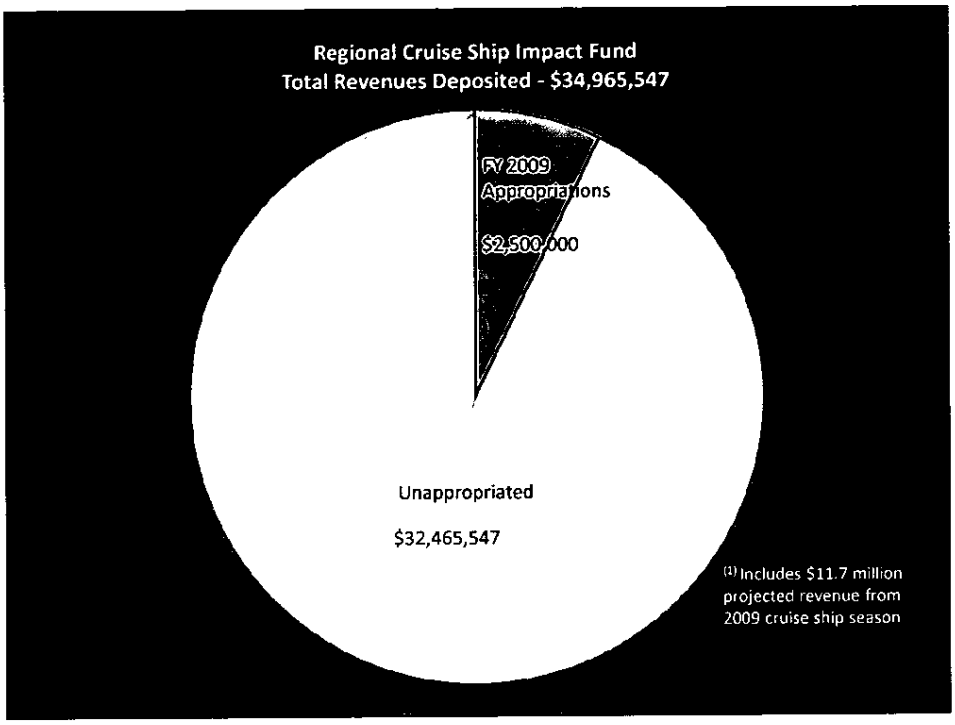
- Commercial Vessel Passenger Tax Account
  - Remaining revenue (after sharing with first 5 ports of call) is ***not*** shared with communities
  - Funds can be used to "for state-owned port and harbor facilities, other services to properly provide for vessel or watercraft visit, to enhance the safety and efficiency of interstate and foreign commerce and such other lawful purposes"
  - Funds can be used for state projects in specific communities
  - Appropriation is required by the Legislature



Regional Cruise Ship Impact Fund

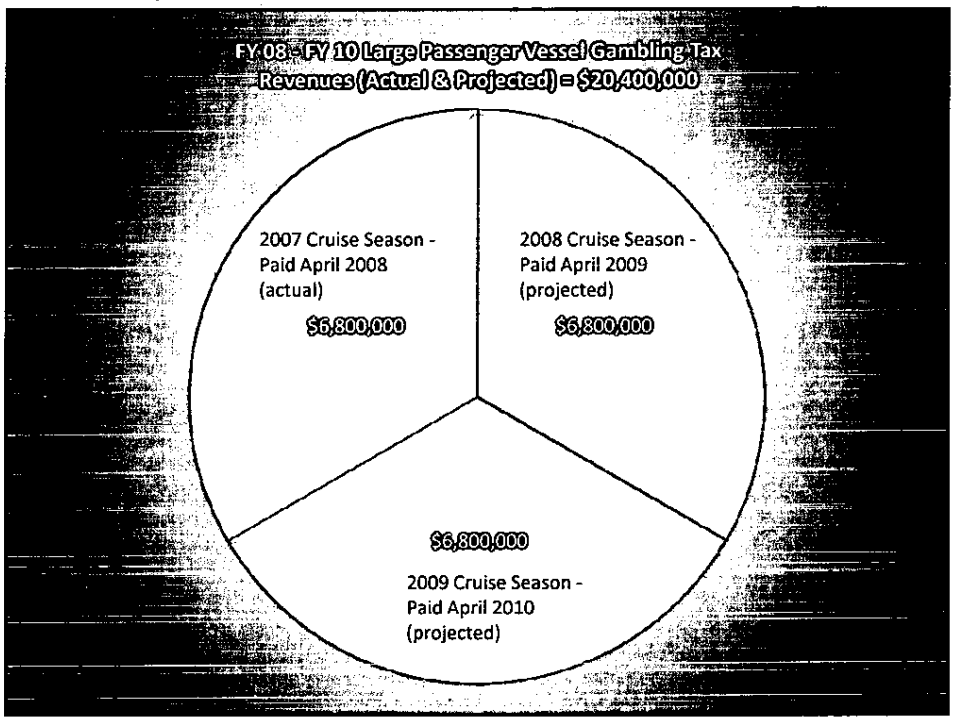
(estimated amount available for appropriation - $11.6 million annually)

- Disbursements from this fund must be appropriated by Legislature
- Funds can only go to municipalities and other governmental entities "impacted" by cruise ship activity
- Funds cannot go to communities receiving revenue under "first 5 ports of call" rule

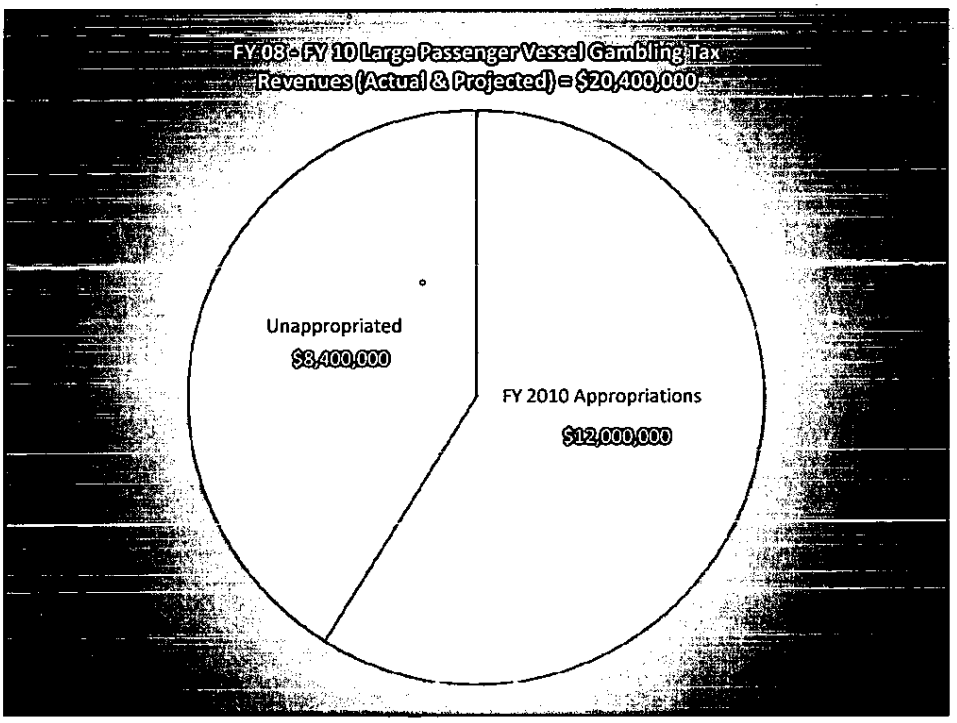


Large Passenger Vessel Gambling Tax

- First returns were filed April 15, 2008
- Actual revenue for calendar year 2007 was $6.8 million
- Revenue deposited in Commercial Vessel Passenger Tax Account
- No constitutional restrictions on how this money can be spent



FY 08 - FY 10 Large Passenger Vessel Gambling Tax
Revenues (Actual & Projected) = $20,400,000
2007 Cruise Season - Paid April 2008 (actual)
$6,800,000
2008 Cruise Season - Paid April 2009 (projected)
$6,800,000
$6,800,000
2009 Cruise Season - Paid April 2010 (projected)



FY 08 - FY 10 Large Passenger Vessel Gambling Tax
Revenues (Actual & Projected) = $20,400,000
Unappropriated
$8,400,000
FY 2010 Appropriations
$12,000,000

OFFICE OF MANAGEMENT AND BUDGET

SARAH PALIN, GOVERNOR

P.O. BOX 110020
JUNEAU, ALASKA 99811-0020
TELEPHONE: (907) 465-4660
FAX: (907) 465-3008

March 10, 2009

The Honorable Lyman Hoffman
Co-Chair, Senate Finance Committee
Alaska State Legislature
State Capitol, Room 518
Juneau, AK 99801-1182

The Honorable Bert Stedman
Co-Chair, Senate Finance Committee
Alaska State Legislature
State Capitol, Room 516
Juneau, AK 99801-1182

Dear Co-Chairs Hoffman and Stedman:

Since my February 26 letter to you on the Commercial Passenger Vessel (CPV) excise tax and the Large Passenger Vessel (LPV) gambling tax, I have received updated information from the Departments of Administration and Revenue.

The updated projections result in a CPV tax unobligated balance available for appropriation by the end of FY2009 of $39,225,557.54, not the $44 million I had stated in my letter. Our FY2010 capital budget requests appropriations from the CPV tax of $39,220,500, which if all were funded, would leave a balance at the end of FY2009 of $5,057.54.

The Regional Cruise Ship Impact Fund unobligated balance available for appropriation by the end of FY2009 is now expected to be $23,393,902, not the $22 million stated in my February 26 letter.

Additionally, the Department of Revenue forecasts FY2010 collections of the CPV tax to be $46.9 million. Approximately $10 million of the FY2010 CPV tax will go towards the first five ports of call funding distribution and approximately $11.7 million of the CPV tax will be deposited into the Regional Cruise Ship Impact Fund. That leaves an estimated FY2010 CPV tax balance for appropriation of $25.2 million.

Please note that these amounts are projections for both the remainder of FY2009 and FY2010. The FY2009 amounts are still fluid because a portion of the FY2009 revenue is dependent on this upcoming cruise ship season. Given the current economic climate of the country and recent indications that Alaska

01 A32LH

printed on recycled paper

tourism may be significantly reduced this spring and summer, we need to recognize that these projections may be adjusted downward.

Please contact me if you have additional questions.

Sincerely,

Karen J. Rehfeld
Director

2/5/09 REVENUE FORECAST: PAT GALVIN, COMMISSIONER DEPARTMENT OF REVENUE

<target><bill></bill><subject>2-5-09 REVENUE FORECAST PAT GALVIN, COMMISSIONER, DEPARTMENT OF REVENUE</subject><comm>SFIN26</comm></target>

TITLE: Response to Questions about FY 09 Investment Revenue Forecast

PREPARED BY: Department of Revenue, Tax Division

PURPOSE:

To respond to questions from Senate Finance about the FY 2009 investment revenue forecast presented to the committee on February 5, 2009. The committee requested a listing of the components of the investment revenue forecast and the fiscal year - to - date actual and estimate for the remainder of the year for each component. This information was requested using actuals as of December 31, 2008 and as of January 31, 2009.

DATA SOURCES: Department of Revenue, Tax and Treasury Divisions
Alaska Permanent Fund Corporation
Alaska State Accounting System

ASSUMPTIONS: Forecast assumptions based on tax laws in place as of January 1, 2009.
Revenue forecasts for January-June and February-June are based on the best information available as of January 2009 and February 2009, respectively.

FY 2009 investment forecasts include actual data through Dec 31, 2008 and Jan 31, 2009 and projections for the remainder of FY 2009.

DISCLAIMER: Due to continued financial market volatility, forecasts shown are subject to review and adjustment.
Actuals and forecasts as of January 31, 2009 are preliminary and unofficial.

Response to Questions about FY 2009 Investment Revenue Forecast

Detail for FY 2009 Investment Earnings Estimates - All Amounts in $ Millions

Prepared Feb 19, 2009 by Alaska Department of Revenue

FY 2009 Forecast - Based on actuals through Dec 31, 2008

	Actual through 12-31-08	Forecast through 06-30-09	Total FY 09

Restricted vs. Unrestricted Revenues

- **All revenue is classified as either "Restricted" or "Unrestricted"**
- **All amounts in the presentation are Unrestricted Revenue only.**
- **Restricted = Use of this revenue is restricted by constitution, state or federal law, trust or debt restrictions, or customary practice.**
- **Unrestricted = Revenue available for general appropriation. This is the amount typically discussed in budget context.**

Sources of Unrestricted Revenue

- **Oil – Property tax, Corporate Income Tax, Production Tax (ACES), Royalties.**
  - ***Oil will make up 87% of unrestricted revenue in FY 2009***
- **Investment Earnings – On General Fund**
- **Other Non-Oil – Taxes, Charges for Services, Fines and Forfeitures, Licenses and Permits, Rents and Royalties, Miscellaneous**

Conclusions

- Record level oil price volatility
- Price forecast in "ballpark" when issued
  - *Reduced for interim forecast*
- Minimum production level changes from previous forecast
- Lower prices likely to impact future costs and possibly investment

Historical Production and Price Changes as of Fall 2008

Change in Revenue Forecasting from "cash basis" to "accrual" accounting

- Timing Issue: Production, prices, and revenue received in July for June production changed from June to July
- Necessary due to significant monthly variation in oil revenues
- Shift in fiscal year affected historical production and price, not revenue
- Greater accuracy in reporting
- Alignment with state financial documents

Mechanics of Sweep
Notes for Senate Finance Meeting 2/6/08

Good morning. For the record, my name is Kim Garnero and I serve as the director of finance in the department of administration.

We were invited here this morning to explain some of the nitty-gritty of the sweep process. This is an esoteric topic, truly understood by only a few individuals in the Division of Finance and your Division of Legislative Audit. The sweep calculation is something that we spend substantial quality time on with the auditors every year to ensure it is correct.

If you have questions as I go through the presentation, we will be happy to answer them.

To understand sweep, we must first understand the general fund from an accountant's perspective. It is not the same as general fund from a budgeter's standpoint, because funds are not the same as funding sources.

The fund structure of the State of Alaska is determined by Generally Accepted Accounting Principles, and it is clearly reflected in the audited financial statements contained in the Comprehensive Annual Financial Report. A copy of this document was delivered to your office at the beginning of session, and it is available online.

For accountants, the overall general fund is fund 11-thousand in AKSAS, the statewide accounting system. It is comprised of all the subfunds, most of which were established by the legislature and whose names you would recognize, as well as the lower level, primary general fund designated as 11-thousand-100 in the accounting system. This primary general fund is still very large, and it accounts for themajority of the financial activity of the state of Alaska. Most funding sources that you appropriate are revenue streams into this general fund, including federal funds, program receipts, and receipt-supported services.

So now that we have the accountant's definition of general fund, what is sweep? It is the annual transfer of available balance in the general fund to the Constitutional Budget Reserve Fund (or CBR) to repay amounts previously borrowed or drawn. The reverse sweep is an appropriated transfer that restores the balances of the subfunds

We do the sweep as the last step in preparing the Comprehensive Annual Financial Report, so it is actually done in early December, but the available balance is calculated as of June 30 of the previous fiscal year.

Sweep is required under the Alaska Constitution to repay previous borrowing every year with the general fund available balance. Under the terms of the Constitution, anything spent from the CBR must be repaid by the GF. Reverse sweep, on the other hand, is a legislative appropriation from the CBR, and it adds to the repayment requirement.

Now we're at the nitty-gritty. The "available for appropriation" calculation is the key to sweep. We start with the potential universe of all funds rolling up to the overall general fund of 11-thousand. Within this universe, only available balances are swept. First, we set aside encumbered amounts and amounts for continuing and specific appropriations of the subsequent year. Then we use one of two criteria for determining which subfunds are excluded from the sweep requirement:

1. if it meets the definition of "available for appropriation" as determined by the Supreme Court of Alaska; or
2. if it is legally restricted to a specific purpose by an outside entity.

If a subfund meets either of these criteria, the available balance is not swept. Obviously, the balance in the primary general fund 11-thousand-100 is available for sweep, and in years of reverse sweep appropriation language, this is the only amount retained in the subsequent fiscal year as repayment of CBR borrowing.

That's the theory. Now, I'd like to take you next to the Available Balance in the CBR spreadsheet from our website so you can see sweep in action.

This spreadsheet starts with the available balance of the CBR at the beginning of the fiscal year. Then you'll notice that from FY 2002 – 2005, borrowing occurred during the fiscal year to address cash flow needs of the general fund. This borrowing was authorized by appropriation language and follows a process established in an inter-agency MOU.

In FY 2002 and 2003, there was net cash flow borrowing at June 30th. In FY 2004 and 2005, we were able to repay the cash flow borrowing by June 30th.

The additional (deficit borrowing) or repayment is the based on the available balance calculation in the primary general fund 11-thousand-100. You'll see that in FY 2002-2005, more borrowing was required to bring a negative available balance in the general fund up to zero.

In FY 2006 the general fund available balance was appropriated to the Public Education Fund, and in FY 2007, it was appropriated to the Alaska Capital Income Fund, both of which are subfunds of the general fund.

FY 2008, the general fund actually had an available balance to repay previous CBR borrowing, and $582 million was transferred for this purpose.

The next two rows show the subfund sweep, and reverse sweep in the subsequent fiscal year, so you can track them across the page.

{Designated fund balance is the oil and gas production tax revenues budgeted in the next year.

There is an annual direct appropriation from the CBR to Treasury to pay management fees.}

Dropping down two roes, you'll see the new revenues less expenditures is the net operating income for the CBR.

The next row reflects appropriated transfers from the general fund to the CBR which repay borrowing.

So, you can see the ending available balance of the CBR increased about $5 billion during FY 2008. This was the result of $3 billion appropriated to the CBR, $1 billion net sweep and reverse sweep; $582 million additional general fund repayment, and the operating income of $416 million.

The last handout in your packet is a description of each subfund of the general fund, indicating whether or not it is swept, and if so, how much was swept for FY 2008.

A few subfunds I'd like to draw your attention to. First, the CBR itself is a subfund of the general fund. It is obviously not swept to repay itself. Next, the Budget Reserve Fund established in statute is a sweepable subfund. So is the Alaska Capital Income Fund. Any fund which is established with language along the lines of "may be appropriated for X" is sweepable, because if it can be appropriated that, it can be appropriated for anything.

What statutory language meets the Supreme Court definition to exclude from sweep? Language that establishes the fund as spendable without further appropriation. Some examples here are the Public Education Fund and Permanent Fund Dividend Fund.

That concludes the presentation. We'd be happy to answer any questions you may have on this topic. Thank you for your time.

Note: Amounts are not known until year end.

Mechanics of Sweep

What?
"Sweep" is the term used to describe the annual transfer of available balances in the General Fund (including its subfunds) to the Constitutional Budget Reserve Fund (CBR).

"Reverse sweep" describes the appropriated transfers back from the CBR to the subfunds of the General Fund from where they came.

Who?
Division of Finance calculates the available balances for transfer as the final step in completing the Comprehensive Annual Financial Report (CAFR).

When?
The calculations are finalized following all audit adjustments to the CAFR in early December. The sweep amounts are calculated ***as of June 30*** of the prior fiscal year. The reverse sweep transfers the subfund amounts back ***as of July 1*** of the current fiscal year.

Why?
Article IX, section 17(d) of the Alaska Constitution requires that all appropriations from the CBR be repaid with General Fund available for appropriation at the end of each succeeding fiscal year.

How?
Calculating "available for appropriation" is the key to sweep. The potential universe includes all funds under the general fund 11000 (fund 11100 and all subfunds).[1]

Within this universe, only ***available balances*** are swept. Encumbered amounts and amounts for continuing and specific appropriations of the subsequent year are set aside by reserving them before calculating the available balance amount. Finally either of the following two criteria are used to determine which subfunds of the General Fund are swept:

1. Whether it meets the meaning of the term "general fund available for appropriation" as determined by an evaluation of the examples used in the Supreme Court of Alaska Case Nos. S-6294, S-6304, May 27, 1994.

2. Whether it is legally restricted to a specific purpose by an outside entity, such as federal law.

---

[1] All funds under 11000 are swept to repay the CBR as of June 30. All those except 11100 are restored as of July 1 by the reverse sweep. After reverse sweep, only the available balance from 11100 remains in the CBR to repay previous borrowing.

Kim Garnero, Director of Finance, 465-3435

General Fund

The General Fund means something different to accountants and budgeters. For accountants, it is comprised of the State's primary operating fund (11100 in the State accounting system) and the accounts and funds which have been created by law which also report to the overall General Fund (11000 in the accounting system). These are treated as subfunds of the General Fund and are accounted for as individual funds for accounting purposes, but they are included in the General Fund for annual financial reporting purposes. The following lists those funds and accounts.

- **Adak Airport Operations Fund (Fund 11181)** – PL 101-510 – The Alaska Department of Transportation and Public Facilities and the United States Department of Defense entered into a cooperative agreement under which the State will undertake operation and maintenance of a portion of the former Naval Air Facility known as the Adak Airport. In accordance with the agreement, the Navy paid the State $10,000,000 to operate and maintain the airport. ***SWEPT? NO***
- **Alaska Capital Income Fund (Fund 11185)** – AS 37.05.545 – Administered by the Department of Revenue. This fund consists of money deposited to the fund from income earned on money awarded in or received as a result of State v. Amerada Hess and of appropriations to the fund. Money may be appropriated from this fund for any public purpose, including covering annual debt service and reserves for debt service on bonds authorized by state law. ***SWEPT? YES FY 2008 = $233,141,102***
- **Alaska Children's Trust Fund (Fund 34050)** – AS 37.14.200 – Administered by the Department of Health and Social Services and the Alaska Children's Trust Board established in the Office of the Governor. The income from this endowment is used to provide a continuing source of revenue for grants to community-based programs for the prevention of child abuse and neglect. ***SWEPT? NO***
- **Alaska Debt Retirement Fund (Fund 11138)** – AS 37.15.011 – The fund consists of all money appropriated to it. The fund was established to help meet the General Fund debt obligations of the State and its political subdivisions, to fund lease-purchases, and to finance capital projects with money remaining after debt obligations are paid. ***SWEPT? YES FY 2008 = $8,994,418***
- **Alaska Gasline Inducement Act Reimbursement (Fund 11188)** – AS 43.90.400 – Administered by the Office of the Governor. This fund consists of money appropriated to it by the legislature for reimbursing a percentage of qualified expenditures as authorized under AS 43.90.110. These state matching contributions serve as an inducement to aid in the construction of a natural gas pipeline. ***SWEPT? NO***
- **Alaska Historical Commission Receipts Account (Fund 11111)** – AS 41.35.380 – Administered by the Department of Natural Resources. Consists of all monetary gifts, grants, bequests, royalties, and other income received by the Alaska Historical Commission and is used for commission projects. ***SWEPT? YES FY 2008 = $67,460***
- **Alaska Marine Highway System Fund (Fund 12135)** – AS 19.65.060 – Administered by the Department of Transportation and Public Facilities, Alaska Marine Highway System. Gross revenues of the Alaska Marine Highway System are deposited into the fund. The fund also consists of legislative appropriations of amounts necessary to provide stable services to the public, after consideration of gross revenue. ***SWEPT?YES FY 2008 = $7,376,320***
- **Alaska Marine Highway System Vessel Replacement Fund (Fund 11137)** – AS 37.05.550 – Managed by the Department of Revenue. The fund consists of money appropriated to it by the legislature. The legislature may appropriate money from the fund for refurbishment of existing state ferry vessels, acquisition of additional state ferry vessels, or replacement of retired or outmoded state ferry vessels. ***SWEPT? YES FY 2008 = $60,000,000***
- **Alaska Technical and Vocational Education Program Fund (Fund 11166)** – AS 23.15.830 – Administered by the Department of Labor and Workforce Development. The fund consists of amounts collected under AS 23.15.835. The legislature may appropriate the annual estimated balance in the fund to the Alaska Workforce Investment Board to implement AS 23.15.820 – 23.15.850. The legislature may appropriate the lapsing balance of the fund to the Unemployment Compensation Fund established in AS 23.20.130. ***SWEPT? YES FY 2008 = $1,302,182***
- **Alaska Transportation Infrastructure Bank (Fund 21653)** – Section 350 of the National Highway System Designation Act of 1995 Federal Law – Managed by the Department of Transportation and Public Facilities.

This fund was established as a pilot program with the U.S. Department of Transportation to increase infrastructure investment in the private sector. The fund has the ability to make loans and provide other forms of credit assistance to public and private entities to carry out highway construction and transit capital projects. ***SWEPT? NO***

- **Alaska Veterans' Memorial Endowment (Fund 36010)** – AS 37.14.700(a) – Administered by the Department of Military and Veterans' Affairs. The fund is used to maintain and develop veteran or military memorials. The fund consists of appropriations to the fund, donations to the fund, and income earned on investments of fund assets. ***SWEPT? NO***

- **Alcohol and Other Drug Abuse Treatment and Prevention Fund (Fund 11178)** – AS 43.60.050 – Administered by the Department of Health and Social Services. The fund is used to establish and maintain programs for the prevention and treatment of alcoholism, drug abuse, and misuse of hazardous volatile materials and substances by inhalant abusers under AS 47.37.030. ***SWEPT? YES FY 2008 = $5,066,154***

- **Anatomical Gift Awareness Fund (Fund 11183)** – AS 13.50.160(a) – Administered by the Department of Administration. This fund was established to promote gifts under AS 13.50 the Health Care Decisions Act and to administer the donation program established under AS 13.50.130. The fund consists of donations and fees collected to support the Donor Registry Program. ***SWEPT? NO***

- **Art in Public Places Fund (Fund 11124)** – AS 44.27.060 – Administered by the Alaska State Council on the Arts. This fund consists of one percent of the construction cost of buildings exempt from AS 35.27. The money is used to commission or purchase art for public state-owned or leased buildings or facilities. ***SWEPT? NO***

- **Assistive Technology Loan Guarantee Fund (Fund 11154)** – AS 23.15.125 – Administered by the Department of Labor and Workforce Development, Division of Vocational Rehabilitation (DVR). The fund consists of money appropriated to it. DVR may solicit and accept available public and private money for distribution from the fund. Money in the fund may be used to guarantee 90 percent of the principal amount of a loan or to subsidize the interest rate of a loan guaranteed by DVR for appropriate assistive technology. ***SWEPT? NO***

- **Budget Reserve Fund (Fund 11115)** – AS 37.05.540 – Administered by the Department of Revenue. This fund consists of appropriations to the fund. Money received by the State that is subject to the appropriation limit under AS 37.05.540(b) and that exceeds that limit may be appropriated to the budget reserve fund. ***SWEPT? YES FY 2008 = $1,000,000,000***

- **Building Safety Account (Fund 11177)** – AS 44.31.025 – Administered by the Department of Labor and Workforce Development. The collection of fees associated with building inspection and the issuance of certificates of fitness will be deposited in the Building Safety Account. The legislature may appropriate money from the account for necessary costs incurred by the Department of Labor and Workforce Development in the administration of AS 18.60.180 – 18.60.395, 18.60.800 – 18.60.620 and AS 18.62 relating to building safety and certificates of fitness. ***SWEPT? YES FY 2008 = $128,080***

- **Commercial Passenger Vessel Environmental Compliance Fund (Fund 11174)** – AS 46.03.482 – Administered by the Department of Environmental Conservation. Sources of income for this fund include: (1) money received by the department in payment of fees under AS 46.03.480; (2) money received as a result of a violation; (3) money appropriated to the fund by the legislature; (4) earnings on the fund. The legislature may make appropriations from this fund to the department to pay for the department's operational costs necessary to prepare reports that assess the information received by the department for the cruise ship seasons of 2000, 2001, 2002, and 2003 and for the department's operational costs necessary to carry out activities under AS 46.03.460 – 46.03.490 relating to commercial passenger vessels. ***SWEPT? YES FY 2008 = $6,210,770***

- **Community Revenue Sharing Fund (Fund 11200)** – AS 29.60.850 - Administered by the Department of Commerce, Community and Economic Development. The Fund provides community revenue sharing payments to municipalities, reserves, and communities for any public purpose. The fund consists of appropriations. Income earned on money in the fund may be appropriated to the fund. The legislature may appropriate 20 percent of the money received by the State during the previous calendar year under AS 43.55.011(g). ***SWEPT? NO***

- **Constitutional Budget Reserve Fund (Fund 33041)** – Alaska Constitution, Article IX, Section 17; AS 37.13 – Administered by the Department of Revenue. All money received by the State as a result of the termination of administrative proceedings or litigation in a state or federal court involving mineral lease bonuses, rentals, royalties, royalty sale proceeds, federal mineral revenue sharing payments or bonuses, or involving taxes imposed on mineral income, production, or property are deposited in the fund, except for the share of those proceeds that are deposited into the Alaska Permanent Fund. ***SWEPT? NO, RECIPIENT OF SWEEP***

- **Disaster Relief Fund (Fund 12120)** – AS 26.23.300 – Administered by the Office of the Governor and the Department of Military and Veterans Affairs. This fund provides resources to alleviate the effects of disasters wherever and whenever they may occur in the State. ***SWEPT? NO***

- **Donated Commodity Fee Fund (Fund 11120)** – USC 7 CFR, Part 250 – Administered by the Department of Education and Early Development. This fund consists of monies from federal agencies and recipients of goods. It is intended to cover the cost of the distribution of federal surplus food to schools, childcare institutions, nonprofit camps for children, charitable institutions for minors, nutrition programs for the elderly, and assistance to needy persons. ***SWEPT? NO***

- **Educational Facilities Maintenance and Construction Fund (Fund 11142)** – AS 37.05.560 – Administered by the Department of Education and Early Development. Money in the fund may be appropriated to finance the design, construction, and maintenance of public school facilities and for maintenance of the University of Alaska facilities. ***SWEPT? YES FY 2008 = $45***

- **Election Fund (Fund 11179)** – Federal H.R. 3295, "The Help America Vote Act" – Administered by the Office of the Lieutenant Governor, Division of Elections. Funds will be used for election administration improvements, for replacement of voting equipment, to improve accessibility for individuals with disabilities, and to provide alternative language accessibility. ***SWEPT? NO***

- **Employment Assistance and Training Program Account (Fund 11134)** – AS 23.15.625 – Administered by the Department of Labor and Workforce Development. The account consists of amounts collected under the provision of AS 23.15.630. The annual estimated balance in the account may be appropriated by the legislature to the department to implement AS 23.15.620 – 23.15.660. The legislature may appropriate the lapsing balance of the account to the Unemployment Compensation Fund established in AS 23.20.130. ***SWEPT? YES FY 2008 = $4,550,795***

- **Exxon Valdez Oil Spill Unincorporated Rural Community Grant Fund (Fund 11161)** – AS 44.33.115 – Administered by the Department of Commerce, Community, and Economic Development. The department may use the fund to make grants to unincorporated rural communities in the area affected by the Exxon Valdez oil spill for capital projects for purposes of restoring, replacing, or enhancing subsistence resources or services or other services damaged or lost as a result of the Exxon Valdez oil spill. ***SWEPT? NO***

- **FHWA - Airspace Leases Fund (Fund 11126)** – Section 156 of the Surface Transportation and Uniform Relocation Assistance Act of 1987 requires that the State shall charge fair market value for the sale, use, or lease rentals of right-of-way airspace and that the federal share of these net incomes be used by the State for highway projects. This fund accounts for those revenues. The revenues are available for appropriation by the legislature for highway projects. ***SWEPT? YES FY 2008 = $19,049***

- **FICA Administration Fund (Fund 11110)** – AS 39.30.050 – Administered by the Department of Administration. The fund consists of the pro rata share of expenses incurred in the administration of 39.30.010 – 39.30.080 and collected from participating political subdivisions and from the State. ***SWEPT? NO***

- **Fisheries Disaster Fund (Fund 11180)** – PL 108-7, SEC 2, Division N, Title V – Fisheries Disasters, Sec. 501(a) – Administered by the Office of the Governor. $35,000,000 shall be made available as a direct lump sum payment to the State of Alaska to make payments to persons or entities that have experienced significant economic hardship. Funds in Alaska shall be used to provide personal assistance; assistance for small businesses including fishermen, fish processors, and related business serving the fishing industry; assistance for local borough governments adversely affected by reductions in fish landing fees and other fishing-related revenue; and product development and marketing. ***SWEPT? NO***

- **Fuel Emergency Fund (Fund 11125)** – AS 26.23.400 – Administered by the Office of the Governor. This fund is used when the governor determines that a shortage of fuel is sufficiently severe to justify state assistance to make grants to a city or borough, or to a village or unincorporated community to purchase emergency supplies of fuel. ***SWEPT? NO***

- **Fund for the Improvement of School Performance (Fund 11145)** – AS 14.03.125 – Administered by the Department of Education and Early Development. It is used to make grants to a district located in the State for the purpose of improving school performance. ***SWEPT? NO***

- **Major Maintenance Grant Fund (Fund 11144)** – AS 14.11.007 – Administered by the Department of Education and Early Development. The fund is used to make grants for the cost of school major maintenance. ***SWEPT? NO***

- **Memorial Education Revolving Loan Fund (Fund 21611)** – AS 14.43.255 – Administered by the Department of Education and Early Development. The fund was created to pay tribute to the memory of Alaskans who, by

example of their lives, or by their distinguished contribution and service to the State, their community, or their profession, exemplified the best that is the challenge of "The Great Land." The funds shall be used to provide education loans to students selected under AS 14.43.250-325. ***SWEPT? NO***

- **Municipal Capital Project Matching Grant Fund (Fund 11146)** – AS 37.06.010 – Administered by the Department of Commerce, Community, and Economic Development. The money in the fund is held by the department in custody for each municipality. Each fiscal year the department allocates individual grants for each municipality. ***SWEPT? YES FY 2008 = $129,112***

- **Municipal Harbor Facility Grant Fund (Fund 11187)** – AS 29.60.800 – Administered by the Department of Transportation and Public Facilities. The money appropriated to the fund may be expended by the department for municipal harbor grants. ***SWEPT? NO***

- **Oil and Gas Tax Credit Fund (Fund 11189)** – AS 43.55.028 – Administered by the Department of Revenue. The purpose of this fund is to purchase certain transferable tax credit certificates issued under AS 43.55.023 and certain production tax credit certificates issued under AS 43.55.025. The fund consists of money appropriated to it, including any appropriation of the percentage provided under (c) of this section of all revenue from taxes levied by AS 43.55.011 that is not required to be deposited in the constitutional budget reserve fund established in art. IX, sec. 17 (a), Constitution of the State of Alaska; and earnings on the fund. ***SWEPT? NO***

- **Oil and Hazardous Substance Release Prevention and Response (Fund 11128 rollup; Fund 11122 prevention; Fund 11129 response)** – AS 46.08.010 – Administered by the Department of Environmental Conservation. This fund is composed of two accounts: (1) the prevention account and (2) the response account. The fund consists of appropriations by the legislature of money from private donors, money recovered from parties responsible for cleanup of oil or a hazardous substance, and fines, penalties, or damages recovered under Chapter 46. This money is for the containment and cleanup of oil or a hazardous substance; monitoring, assessing, investigating, and evaluating the release or threatened release of oil or a hazardous substance; and recovery of the cost to the State of the containment and cleanup of oil or a hazardous substance. ***SWEPT? NO FOR FUND 11129; YES FOR FUND 11122 FY 2008 = $13,676,743***

- **Oil and Hazardous Substance Release Prevention Mitigation Account (Fund 11139)** – AS 46.08.020(b) – Administered by the Department of Environmental Conservation. This account consists of money received from other state sources, from federal or other sources, or from a private donor; money recovered or otherwise received from parties responsible for the containment and cleanup of oil or a hazardous substance; and fines, penalties, or damages recovered under AS 46.08.005–46.08.080. The legislature may appropriate the amount received in this account (during the preceding calendar year) to the prevention account in the Oil and Hazardous Substance Release Prevention and Response Fund. ***SWEPT? YES FY 2008 = $8,053,827***

- **Oil and Hazardous Substance Release Response Mitigation Account (Fund 11153)** – AS 46.08.025(b) – Administered by the Department of Environmental Conservation. This account consists of money received from other state sources, from federal or other sources, or from a private donor; money recovered or otherwise received from parties responsible for the containment and cleanup of oil or a hazardous substance at a specific site for which the State expended money from the former oil and hazardous substance release response fund before October 2, 1994, or for which the State expended money from the response account. The legislature may appropriate the amount received in this account (during the preceding calendar year) to the response account in the Oil and Hazardous Substance Release Prevention and Response Fund. ***SWEPT? YES FY 2008 = $195,086***

- **Permanent Fund Dividend Fund (Fund 33020)** – AS 43.23.045 – Administered by the Department of Revenue. This fund consists of 50 percent of the income earned by the Alaska Permanent Fund during the fiscal year ending on June 30 that is paid out to eligible Alaska residents. ***SWEPT? NO***

- **Public Education Fund (Fund 11184)** – AS 14.17.300 – Administered by the Department of Education and Early Development. This account may be expended only in aid of public schools and for centralized correspondence study programs under Chapter 17 – Financing of Public Schools, and for transportation of pupils under AS 14.09.010. ***SWEPT? NO***

- **Railbelt Energy Fund (Fund 11123)** – AS 37.05.520 – Managed by the Department of Revenue. The legislature may appropriate money from the fund for programs, projects, and other expenditures to assist in meeting Railbelt energy needs, including projects for retrofitting state-owned buildings and facilities for energy conservation. ***SWEPT? YES FY 2008 = $90,858,733***

- **Randolph-Sheppard Small Business Fund (Fund 11118)** – AS 23.15.130, 20 USC 107-107(f) – Administered by the Department of Labor and Workforce Development. This fund consists of receipts from

vending facilities on federal properties and is used to aid only blind licensees in operating vending machine facilities. ***SWEPT? NO***

- **Real Estate Surety Fund (Fund 11121)** – AS 08.88.450 – Administered by the Department of Commerce, Community, and Economic Development. This fund is composed of payments made by real estate licensees under AS 08.88.455 and filing fees under AS 08.88.460, income earned on investment of the money in the fund, and money deposited in the fund under AS 08.88.450(c). Amounts in the fund may be appropriated for claims against the fund, for hearing and legal expenses directly related to fund operations and claims, and real estate educational purposes. ***SWEPT? NO***

- **School Construction Grant Fund (Fund 11143)** – AS 14.11.005 – Administered by the Department of Education and Early Development. The fund shall be used to make grants for the costs of school construction. Legislative appropriations for school construction shall be deposited in the fund and the proceeds from the sale of general obligation bonds for school construction may be deposited in the fund. ***SWEPT? NO***

- **School Trust Land Sales (Fund 11162)** – Established per attorney general memo regarding Public School Trust Litigation. Used to separately account for the sales of 21 parcels of public school trust land, the status of which is in litigation. ***SWEPT? NO***

- **Senior Care Fund (Fund 11182)** – Chapter 3, SLA 2004 amended the uncodified law of the State of Alaska by creating the Senior Care Fund to be used by the Department of Health and Social Services. The fund is used to pay for the costs incurred for the provision of senior services under the senior care program. The department shall provide cash assistance and prescription drug benefits as far as practicable under appropriations provided by law. ***SWEPT? YES FY 2008 = $260,515***

- **State Insurance Catastrophe Reserve Account (Fund 11133)** – AS 37.05.289 – Administered by the Department of Administration. Assets of the account may be used to obtain insurance, to establish reserves for the self-insurance program, and to satisfy claims or judgments arising under the program. ***SWEPT? NO***

- **State Land Disposal Income Fund (Fund 11164)** – AS 38.04.022(a) – Administered by the Department of Natural Resources. The fund consists of revenue from the state land disposal program. ***SWEPT? YES FY 2008 = $0***

- **State Land Reforestation Fund (Fund 12130)** – AS 41.17.300 – Administered by the Department of Natural Resources. The money in the state land reforestation fund may be used only for the reforestation of state land, including site preparation; seed and seedling acquisition and cultivation; planting and other reforestation measures; timber stand improvement; and the development of materials and techniques for the reforestation of state land. ***SWEPT? YES FY 2008 = $194***

- **Storage Tank Assistance Fund (Fund 11136)** – AS 46.03.410 – Administered by the Department of Environmental Conservation. The fund consists of money appropriated to it by the legislature. The receipts of the fund may be used for certain costs as defined in AS 46.03.410(a) relating to underground petroleum storage tank systems and for grants and loans. ***SWEPT? NO***

- **Surplus Property Revolving Fund (Fund 11112)** – AS 37.05.500(a)(2), AS 44.68.130 – Administered by the Department of Administration. This fund is to account for revenues from the users or purchasers of excess federal property that the State has acquired and is used to pay the administrative expenses incurred in managing this property. ***SWEPT? NO***

- **Tobacco Use Education and Cessation Fund (Fund 11175)** – AS 37.05.580 – Administered by the Department of Health and Social Services. This fund consists of 20 percent of the annual revenue derived from the settlement of State of Alaska v. Philip Morris, Incorporated, et al, No. 1JU-97-915 CI (Alaska Super. 1997). The purpose of this fund is to provide a source to finance the comprehensive smoking education, tobacco use prevention, and tobacco control program authorized by AS 44.29.020(a)(15). ***SWEPT? YES FY 2008 = $10,497,239***

- **TAPS Rebate Fund (Fund 11163)** – Federal PL 101-380, sec. 8102(a)(B)(I) – The federal government has rebated the pro rata share of the federal TAPS (Trans-Alaska Pipeline Liability Fund) to the State of Alaska for its contributions as an owner of oil. The funds are to be used for the remediation of above-ground storage tanks. ***SWEPT? NO***

- **Training and Building Fund (Fund 12121)** – AS 23.20.130(d) – Administered by the Department of Labor and Workforce Development. This fund consists of interest and penalties for failure to file timely reports and pay contributions to the Unemployment Compensation Fund. It may be used for the administration of the Employment Security Act when federal funds are not available and for the acquisition of land and buildings for the purpose of providing office space for the department. ***SWEPT? NO***

- **Unincorporated Community Capital Project Matching Grant Fund (Fund 11147)** – AS 37.06.020 – Administered by the Department of Commerce, Community, and Economic Development. This fund was created for unincorporated communities to acquire or improve an asset with an anticipated life exceeding one year and includes land acquisition, construction, repair or structural improvement of a facility, engineering and design for a facility, and acquisition or repair of equipment. ***SWEPT? YES FY 2008 = $47,438***
- **Vocational Rehabilitation Small Business Enterprise Revolving Fund (Fund 11116)** – AS 23.15.130 – Administered by the Department of Labor and Workforce Development, Division of Vocational Rehabilitation. This fund consists of receipts from the net proceeds of vending facilities on public property. The annual estimated receipts of the fund may be used by the legislature to make appropriations to the department to aid licensees in operating vending machine facilities. ***SWEPT? YES FY 2008 = $87,524***
- **Workers' Compensation Benefits Guaranty Fund (Fund 11186)** – AS 23.30.082 – Administered by the Department of Labor and Workforce Development. This fund is composed of civil penalty payments made by employers under AS 23.30.080, income earned on investment of the money in the fund, money deposited in the fund, and appropriations to the fund. The fund may be appropriated for claims against the fund, for expenses directly related to fund operations and claims, and for legal expenses. ***SWEPT? YES FY 2008 = $765,453***
- **Workers' Safety and Compensation Administration Account (Fund 11173)** – AS 23.05.067 – Administered by the Department of Labor and Workforce Development. This fund is used to account for the annual service fees collected from employers for the administrative expenses of the State for workers' safety programs under AS 18.60 and the workers' compensation program under AS 23.30. ***SWEPT? YES FY 2008 = $13,797,650***

2/10/10 CALLAN ECONOMIC & MARKET OUTLOOK

<target><bill></bill><subject>2-10-10 CALLAN ECONOMIC and MARKET OUTLOOK</subject><comm>SFIN26</comm></target>

Alaska Senate Finance Committee
Market & Economic Review
2009 Capital Market Projections
APFC Performance

February 2009

Michael J. O'Leary CFA
Executive Vice President
Prepared 2-03-09

Fourth quarter overview

- Terrible market environment for all major asset classes
- Credit markets froze around the world
- Extraordinary governmental policy actions initiated quickly but not as rapidly as many had hoped
- Flight to quality resulted in sharp declines in short-term government rates and increases in "risk" premiums.
- Commodity prices fell sharply as expectations regarding the length and depth of economic slowdown mounted
- U.S. dollar strengthened significantly hurting profits for multinationals, unhedged international investors and returns on international investments for U.S. based investors.

Second Half of 2008: Startling

- Fannie Mae and Freddie Mac placed into conservatorship.
- Lehman Brothers declared bankruptcy.
- AIG rescued by government.
- Merrill Lynch sold to Bank of America.
- Morgan Stanley and Goldman Sachs convert to bank holding companies, vol placing themselves under the regulatory oversight of the Fed.
- Washington Mutual seized by regulators, assets sold to JP Morgan.
- $750 billion rescue plan passed.
- Money market funds "break the buck" for the first time.
- Oil drops by $100/barrel, commodity prices cool.
- Wachovia bought by Wells Fargo.
- U.S. and other sovereign governments make direct investments in banks.
- Nowhere to hide - virtually all asset classes except nominal Treasury bonds suffer steep declines.
- Housing market remains locked in a death spiral.
- Global economies follow the U.S. into deep recession.

Exhibit 1: 2008 Timeline

Mar	16	J.P. Morgan acquires Bear Stearns
July	11	Oil rises past $147 per barrel
Sept	7	U.S. Government takes over Fannie Mae and Freddie Mac
	15-20	Lehman Brothers files for Chapter 11 bankruptcy protection; Merrill Lynch sells itself to Bank of America; Reserve Primary Fund breaks the buck; U.S. Government bails out AIG; U.S. Treasury Secretary Henry Paulson proposes $700 billion TARP program
	21	Goldman Sachs and Morgan Stanley convert to bank holding companies
	25	Washington Mutual seized by FDIC and sold to J.P. Morgan Chase
Oct	3	Bush signs modified TARP plan into law
	7	The U.S. Federal Reserve announces Commercial Paper Funding Facility
	12	European leaders announces a recapitalization plan for Europe's banks
	27	U.S. government announces recapitalization of major U.S. banks
Nov	4	United States elects Barack Obama
	10	Government of China announces $586 billion stimulus package
	23	U.S. government rescues Citigroup
	25	Fed announces a $500 billion program to buy the direct obligations of housing-related GSEs
Dec	15	Bernard Madoff fraud discovery
	16	Fed cuts target interest rate to between zero to 0.25%
	19	U.S. government sends $17.4 billion lifeline to U.S. automakers
	26	Oil dips below $35, down more than $112 from its July peak

Investment Credit Spreads over Treasury Instruments

Potential Implications of Financial Crisis

- **Structure of U.S. financial system is changed permanently.**
  - End of traditional investment banks.
  - Consolidation of financial institutions into large, highly regulated commercial banks.
  - More government oversight and regulation.
  - Lower leverage and ultimately lower risk in financial system.
  - Tighter credit conditions for foreseeable future.

- **U.S deficit and overall federal debt will expand dramatically.**
  - Trillion dollar plus deficits likely in near term.
  - Risk of devaluation of U.S. dollar elevated.
  - Long-term risk of higher real interest rates and crowding out of private borrowing.

- **U.S. consumer is being forced to delever.**
  - Loss of wealth in housing and equities will change behavior.
  - Less spending and consumption.
  - Postponed retirements, second jobs, will expand labor force.

- **Financial markets become smaller and less efficient.**
  - Fewer market makers with smaller balance sheets.
  - Derivative markets shrink due to increased regulation and tighter risk controls.
  - Lower leverage from Wall Street firms suggests lower profitability and lower compensation, pushing human capital away from finance into other areas.

U.S. Economic Growth by Sector

(Annual percent change)

	2007 Share of GDP	2002	2003	2004	2005	2006	2007	2008	Direction of Change
Real GDP	100%	1.6	2.5	3.6	2.9	2.8	2.0	1.2	Contracting now
Consumption	72%	2.7	2.8	3.6	3.0	3.0	2.8	0.3	Contracting now
Residential Investment	4%	4.8	8.4	10.8	6.3	-7.1	-17.8	-21.8	Falling Sharply
Bus. Fixed Investment	12%	-9.2	1.0	5.8	7.2	7.5	4.9	1.9	Surge halted abruptly
Federal Government	7%	7.0	6.8	4.2	1.2	2.3	1.6	5.7	Surging higher
State & Local Govt.	11%	3.1	0.2	-0.2	-0.1	1.3	2.3	1.2	Tax revenue in jeopardy
Exports	12%	-2.3	1.3	9.7	7.0	9.1	8.4	6.4	Reversing course
Imports	17%	3.4	4.1	11.3	5.9	6.0	2.2	-3.1	Oil Prices

- **Housing downturn reduced GDP growth by over 1.0% each year in 2007 and 2008 through direct effect on construction alone.**
- **Note: Imports are a negative number in the calculation of GDP.**

The Current Economic Environment

Worst Recession in the Post-War Era?

- **Largest global housing and credit bubble in history has burst.**
- **Households, businesses and governments face tight (or no access to) credit and massive wealth destruction.**
- **The U.S. economy entered recession in December 2007.**
  - Better than expected growth in the first half of 2008 was an illusion conjured by trade and the stimulus package.
- **Housing has been in recession for three years, subtracting at least a percentage point from GDP growth in both 2007 and 2008.**
  - Offset by strength in non-residential construction and the closing of the trade gap – each added back half a point of growth in 2007.
  - Housing market has another bad year in front of it.
- **Consumer confidence is deep in recession territory.**
  - Job market has turned sour, piling on to the woes from the housing and stock markets.
- **Rest of the world is going into severe recession, undermining exports.**
- **Economy is in a free-fall right now – recession may be long and deep.**
- **Lower oil prices offer some cushion.**
- **Fed is doing all it can; major fiscal stimulus is coming.**
- **Sustained upturn may have to wait until the second half of 2009.**

The Current Economic Environment

Slow going until 2010.

- **Optimistic outlook: government intervention stabilizes credit markets, fiscal stimulus kick-starts rapid upswing. Beware of inflation lurking in the wings.**
- **Pessimistic scenario: vicious downward spiral between the economy and credit markets worsens. Specter of deflation looms.**
- **Most likely scenario: severest declines in GDP will be recorded in fourth quarter of 2008 and first quarter of 2009. GDP resumes modest growth in the second half of 2009, as credit markets slowly unthaw and confidence returns.**
- **Impact of policy will take time.**
  - Monetary policy impact is famously "long and variable".
  - Substantial fiscal policy has prospects for quicker success, but infrastructure spending will take years, not months, to show up.
- **Policy is not cheap: fiscal 2008 deficit beat the 2004 record; 2009 deficit will more than double.**
- **Economy will feel like it is in recession well into 2010, when unemployment will peak, potentially reaching 10%.**
- **Equity markets tend to begin recovering before recession ends. Experience after major bear markets since WWII suggests strong performance in the subsequent period.**

The Current Economic Environment

Slow going until 2010.

- **The Fed cut rates 500 basis points in response to the financial turmoil that began unfolding in 2007.**
  - The Federal Funds Rate is now down to 0.25%.
  - The Fed is focused on stabilizing the financial system and kick-starting the economy. Deflation is a real problem once again; future inflationary pressures of Fed and Treasury actions are less of a concern.
- **Callan's outlook:**
  - Inflation will be contained and low interest rates will persist.
  - Historic nominal return averages may be hard to achieve over the long run, but...
  - Stocks will likely lead the economic recovery, and could generate above-trend results coming off the bottom. The timing is unclear.
  - Solvency rather than liquidity is the real problem that must be worked through in the capital markets – liquidity is emotion, solvency is hard numbers.
  - The dollar will likely remain down as the Fed focuses on fighting a recession, but U.S. Treasuries will continue to be valued as the safest store of value in a time of uncertainty.
- **Biggest challenge facing investors – determining when we might hit bottom in the slowdown, and how the capital markets will respond.**

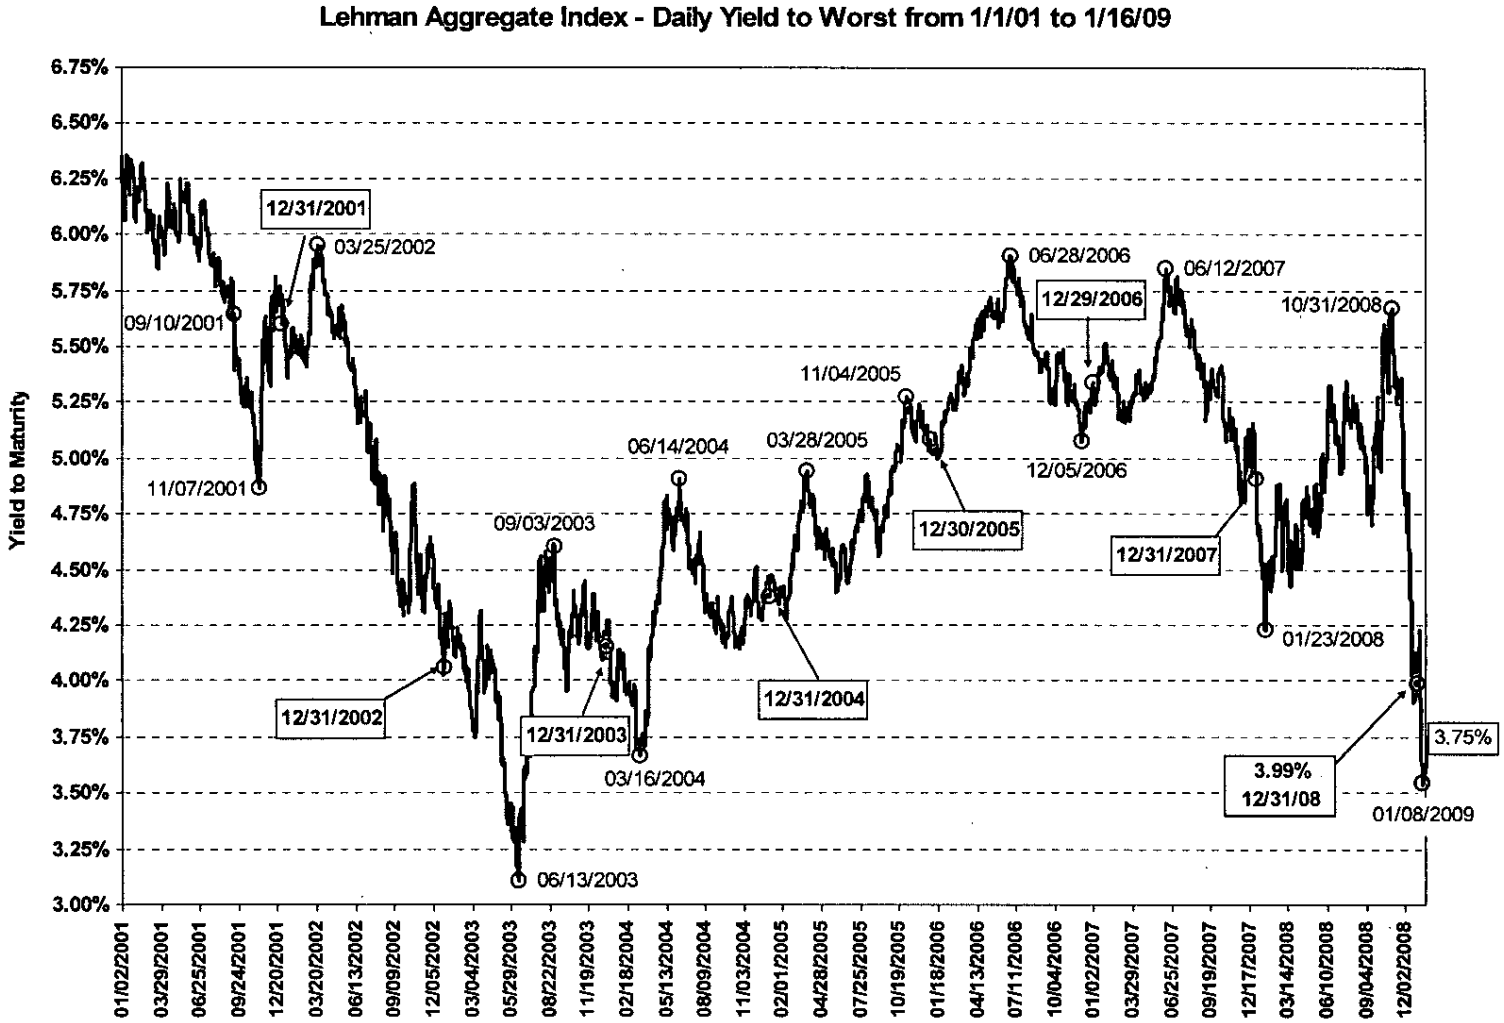
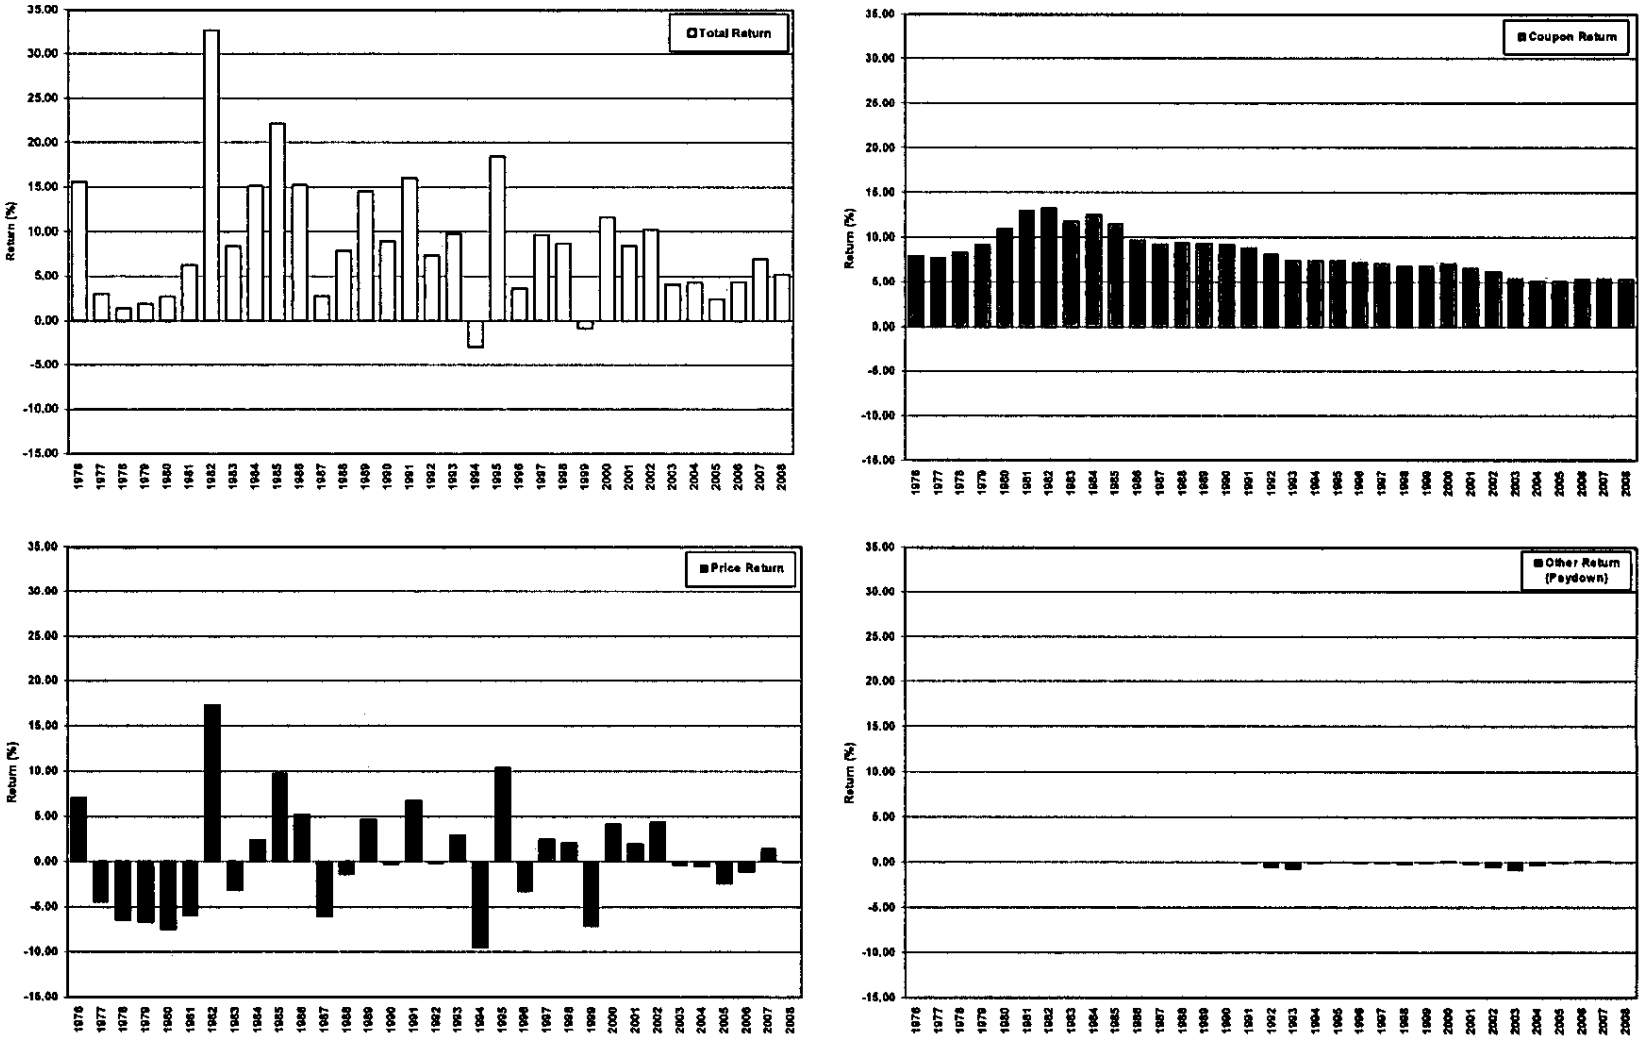
Current Yield is Exceptionally Low

Aggregate Masks Substantial Divergence in Sector Yields

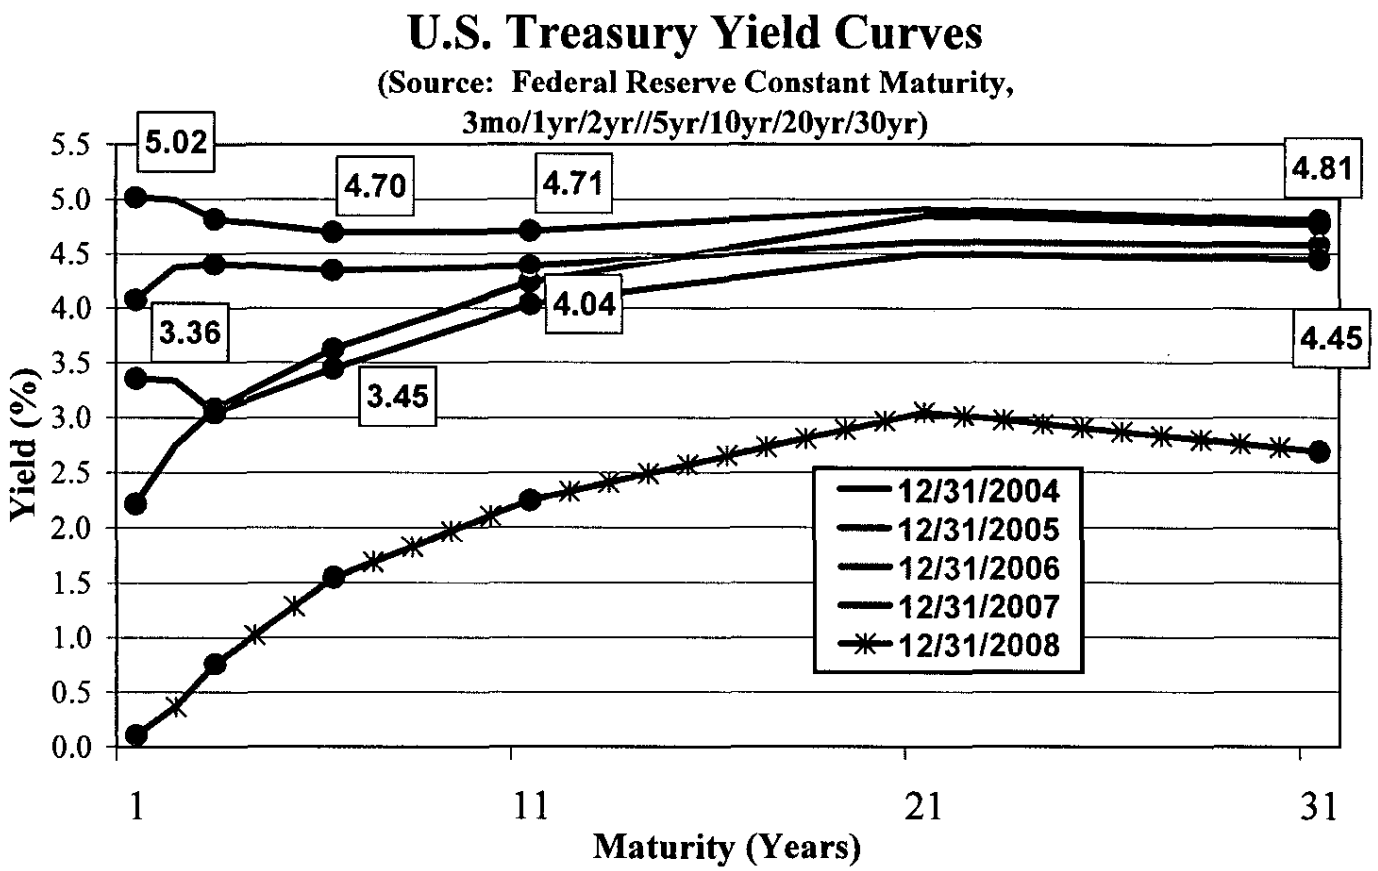


BC Aggregate Index - Annual Return Breakdown



Source: www.lehmanlive.com.

Does the Treasury Yield Curve Relate to Broad Market Opportunities?



Bond Market Opportunities

- We don't know when markets will react positively to the extraordinary governmental policy actions taken to restore liquidity to credit markets, but we are confident that they will.
- We believe that risk spreads (both credit and equity) have reached very attractive levels and patient investors will be handsomely rewarded from recent price levels.
- We do not expect credit spreads to return to the slim premiums of 2004 to early 2007.
- The extraordinarily low yield and duration on the Aggregate mask the extreme divergence between the component sectors of the index, and therefore the potential opportunities.
- Very large increase in specialized "distress" oriented fixed investing.

2009 Capital Market Expectations

- Major question - Did we go through a "game-changing" experience, or a somewhat extreme but within-the-bounds-of-expected bump in the long-term capital markets road?
- All asset classes repriced in the recent market dislocation. Value opportunities are emerging throughout the capital markets. General theme: this revaluation suggests better potential returns going forward, and a steeper capital market line.
- We held our inflation expectation at 2.75%. Inflation topped 5% in mid-2008 yet finished the year with a decline. A recession solved our inflation problem over the short term, and the reversal in oil prices played a large role. Inflation could easily resume, especially given the massive monetary and fiscal stimulus in the pipeline.
- Cash is projected to generate a slight positive real return (3.0%). We do not expect current low rates to persist over a five- to ten-year time horizon.

2009 Capital Market Expectations

- Bond returns held at 5.25%. Current measures of the broad market are very unusual. We expect Treasury rates to rise, but spreads will narrow and opportunities abound in the non-Treasury portion of the market.
- Project an upward sloping yield curve, with a risk premium for bonds over cash (2.25%).
- Building equity returns from long-term fundamentals gets us to about 9%: 3-4% real GDP growth, which means 5.75%-6.75% nominal earnings growth, 2% dividend yield, 0.5%-1.0% "buyback yield". Shorter term, these fundamentals may look weak, but equity looks cheap relative to longer-term valuations. Equity markets tend to perform well after substantial declines, and typically lead the economy out of recession. Broad U.S. equity expectations are increased 50 bps, from 9.0% to 9.5%. Non-U.S. equity returns are increased by a similar amount.
- Real estate return held at 7.6%; returns may not recover as quickly as liquid equity markets.
- Private equity return held at 12%, narrowing its premium over public equity markets.

The indexes used are as follows (left chart): S&P 500 Index: Standard & Poor's 500 Index, REITS: NAREIT Equity Reits Index, EAFE: MSCI EAFE, Oil: West Texas Intermediate Index, Bonds: Barclays Capital U.S. Aggregate Index, Homes: Median Sales Price of Existing Single-family homes, Gold: USD/troy oz. All returns are annualized (and total return where applicable), and represent the 20-year period ending 12/31/07. Average equity investor return is based on an analysis by Dalbar, Inc. which utilizes the net of aggregate mutual fund sales, redemptions and exchanges each month as a measure of investor behavior. *DALBAR returns are through 2007, next update due in 1Q09.

In the table to the right, a bear market is defined as a peak-to-trough decline in the S&P 500 Index (price only) of 20% or more. The bull run data reflect the market expansion from the bear market low to the subsequent market peak. All returns are S&P 500 Index returns, and do not include dividends.

**Most recent bull run is through market peak of 10/9/07.

Income year-to-date as of December 31, 2008

FY09 Statutory net income		
Interest, dividends, real estate & other income	$	518.1
Realized gains (losses) on the sale of invested assets		(1,465.0)
Less operating exp / Legis. Appropriations		(36.7)
Less AK Capital Inc. Fund committed realized earnings		-
Statutory net income (loss)	$	(983.6)

FY09 Accounting (GAAP) net income		
Statutory net income (loss)	$	(983.6)
Unrealized gains (losses) on invested assets		(6,523.9)
AK Capital Income Fund committed realized earnings		-
Accounting (GAAP) net income (loss)	$	(7,507.5)

Notes related to financial history and projections FY1977 - FY2019

[1] Appropriations include special general fund, realized earnings, and other miscellaneous appropriation transfers into principal.

[2] Dedicated State Revenues in current and future fiscal years is based on the Fall 2008 Department of Revenue forecast.

[3] Accounting net income is based on United States Generally Accepted Accounting Principles (GAAP). Statutory net income is accounting net income, exlcuding any unrealized gains and losses on investments.

[4] FY05 and forward, Amerada Hess, et al. settlement earnings are transferred to Alaska Capital Income Fund per AS 37.13.145(d).

[5] FY03 Senate Bill 100 transferred $354 million from realized earnings to principal. FY04 Senate Bill 283 defined that appropriation as pre-FY04 inflation proofing, so it was moved from appropriations to inflation proofing, along with the balance of $170 necessary to fully inflation proof the Fund. $15 million in settlement earnings remained in appropriations per AS 37.13.145(d).

[6] Current year returns are based actuals through December plus 6 months of Callan capital market assumptions (2008). A range of possible returns illustrates potential outcomes across various market scenarios.

[7] Future returns are based on 2008 Callan capital market assumptions and median expected returns (the mid case). Actual results will vary.

PERFORMANCE SUMMARY (preliminary as of December 31, 2008)	Current Month	Last 3 Months	Fiscal Y-T-D	Calendar Y-T-D	Last 12 Months	Last 3 Years	Last 5 Years

ALASKA PERMANENT FUND
FUND FINANCIAL HISTORY & PROJECTIONS
USER GUIDE

Reserved Fund Balance: The portion of the Fund that may not be spent. Contains all contributions into the Fund and all unrealized gains (losses) as of the date shown.

Fiscal Year (FY): The State of Alaska's fiscal year begins on July 1 of the previous calendar year and ends on June 30.

FY - Begin. Contrib. Balance: The sum of all historical contributions to the Fund's principal on the first day of the fiscal year. This includes constitutionally mandated mineral revenues, inflation proofing transfers from income and other appropriations to principal.

Appropriations: Legislative appropriations to principal for the fiscal year.

Dedicated State Revenues: Constitutionally and statutorily mandated mineral revenues for the fiscal year (currently 25% of the total mineral revenue received by the state).

Inflation Proofing: The inflation proofing transfer from realized earnings to principal for the fiscal year.

FY-End Balance Contributions: The sum of the first four columns at each June 30; fiscal year-end (sum of all dedicated state revenues, other appropriations into the Fund and all inflation proofing transfers).

Unrealized Gain (Loss) Net Change: The change in net unrealized gains (losses) over the previous fiscal year-end value.

Unrealized Gain (Loss) FY-End Balance: The balance of net unrealized gains (losses) on invested assets at the end of the fiscal year.

FY-End Reserved Balance: The sum of the FY-end balance of contributions and net unrealized gains (losses) at the end of the fiscal year. This value represents the protected assets at fiscal year-end.

Unreserved Fund Balance: Also referred to as realized earnings; this represents the portion of the Fund that may be appropriated (spent) by the Legislature.

Acct. Net Income: Income of the Fund as determined using Generally Accepted Accounting Principals, including net unrealized gains (losses).

Statutory Net Income: Income of the Fund as determined using Alaska State Statutes. Statutory net income is only the realized income of the Fund, (with minor adjustments) and is used in determining the annual dividend payment. Realized earnings consist primarily of interest, dividends, real estate income and net gains (losses) on the sale of invested assets. Realized income is reduced by the costs to manage the Fund assets, and other Fund related expenses.

Distributions of Statutory Net Income: The three columns below this heading represent all money appropriated (spent) by the Legislature from the Permanent Fund's earnings.

Dividends: The lump sum recorded for the annual Permanent Fund Dividend for the fiscal year and subsequently transferred to the Permanent Fund Dividend Division.

Inflation Proofing: The inflation proofing transfer made from realized earnings to principal for the fiscal year.

General Fund/Other: Earnings transferred to the State's General Fund and other incidental appropriations from the Fund.

Realized Earnings Net Change: The change in the realized earnings balance over the previous fiscal year-end value.

Realized Earnings FY-End Balance: The balance of realized earnings after accounting for fiscal year end distributions.

Total Fund FY-End Balance: The sum of the FY-End Reserved Fund Balance and the Realized Earnings FY-End Balance at the end of the fiscal year.

FY07 projections: The current fiscal year shows the possible realized and unrealized gains (losses) for the fiscal year based on the assumptions listed in the box to the bottom left of the projection table on the prior page. The median expectation is not the most likely, but rather the mid-point in the array of statistically likely outcomes. For more information see www.apfc.org or AS 37.13.140 and 37.13.145

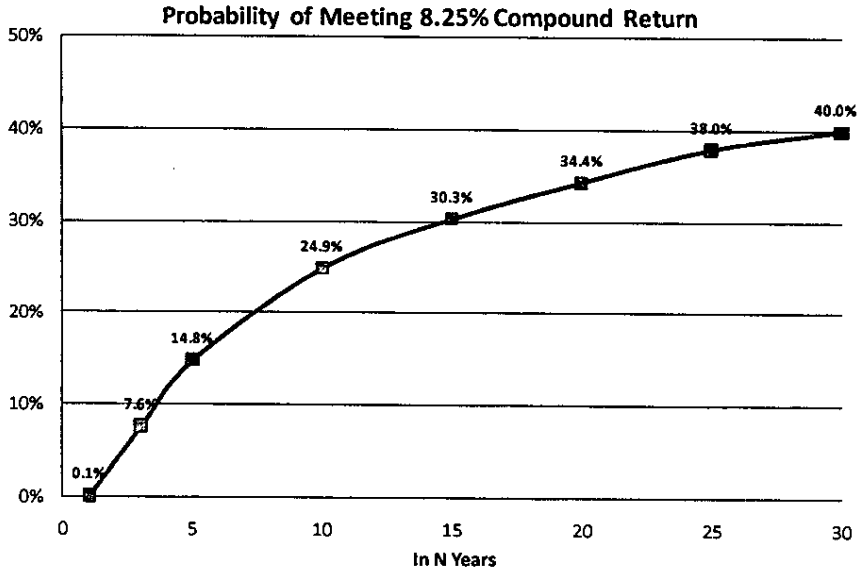
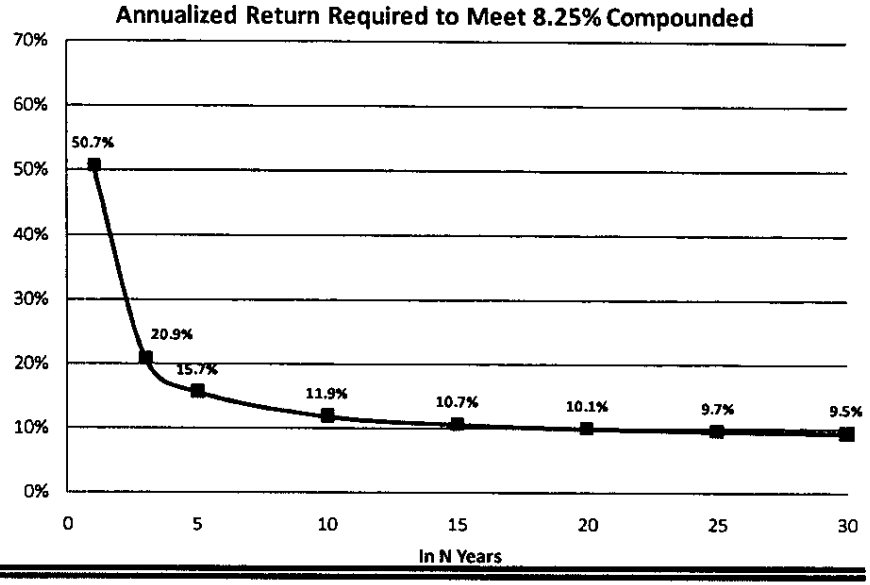
PERS Probability of Meeting 8.25% Compound Return

- Simulation Approach:
  - 2007 was the base year for the simulation. The tracking portfolio was increased at a compounded rate of 8.25% per annum for 31 years.
  - The PERS portfolio assumed the 2008 estimated loss of -22.24% and simulated returns for 30 years using the 2008 asset allocation and 2009 capital market assumptions.
  - Cash flows were not modeled.
  - PERS portfolio and tracking portfolio started at the same level in 2007.
- The upper graph is the probability of the PERS portfolio exceeding the 8.25% tracking portfolio in 1, 3, 5, 10,…, 30 years.
- The lower graph is the annualized return required to meet the 8.25% compounded return in 1, 3, 5, 10,…, 30 years.





Alaska Retirement Management Board

Comparative Analysis of the General Fund, CBRF, PERS and TRS retirement plans and APFC.

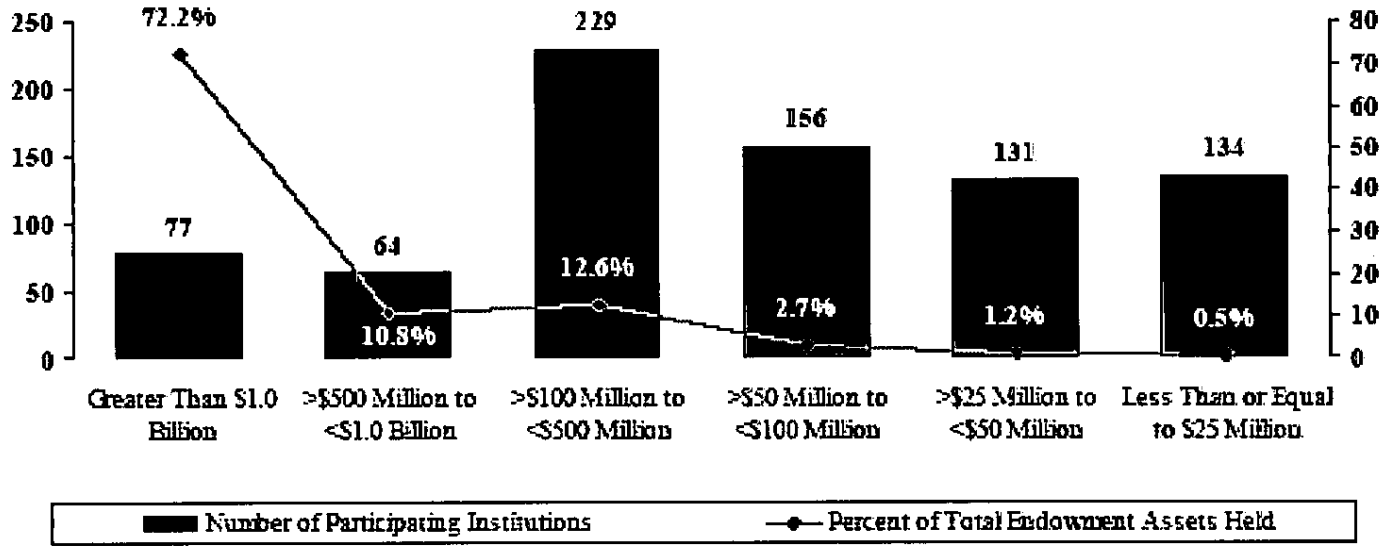
Callan Presentation, Slide #26 (Sen. Hoffman) Please provide more detail on the institutions within the "Greater Than $1 Billion" category. How many of the 774 surveyed are in that group?

Exhibit 8
Participants by Endowment Size and Percent of Total Assets Held



All data is taken from the 2008 NACUBO Study

The NACBUO Study Discloses Participating Institutions But Protects Some Information Such the Individual Asset Allocation Policies of Individual Institutions

The listing details the largest institutions participating in the study. In a separate document we have provided a listing of actual & target asset allocation by unidentified institution. That listing is not segmented by fund size.

All Institutions Listed by Fiscal Year 2008 Market Value of Endowment Assets with Percentage Change Between 2007 and 2008 Endowment Assets

Rank	Institution	State	2008 Endowment Funds ($000)	2007 Endowment Funds ($000)	*Percentage Change in Endowment (2008 - 2007)
1	Harvard University	MA	36,556,284	34,634,906	5.5%
2	Yale University	CT	22,869,700	22,530,200	1.5%
3	Stanford University	CA	17,200,000	17,164,836	0.2%

ARMB & APFC Policies Through Recent Years

Policy is adopted each fiscal year

Asset Class	ARMB 06-07	APFC 06-7	ARMB 07-08	APFC 07-08	ARMB 08-09	APFC 08-09	ARMB 09-10	APFC 09-10
Broad Domestic Equity	36	34	37	34	34	33	34	33
International Equity	16	19	16	20	20	20	20	20
Private Equity	7	4	7	4	7	6	7	6
Fixed Income	24	29	23	26	18	22	18	22
Real Estate	10	10	10	10	10	10	10	10
Absolute Return	4	4	4	4	6	6	6	6
Other-real	3	0	3	2	5	3	5	3
5-Year Expected Return	8.05	7.77	8.12	7.89	8.15	8.05	9.09	9.00
Volatility	12.27	11.62	12.52	11.54	12.85	12.30	13.23	12.82

Important notes

1. Composition of "other" category varies by fund
   - ARMB – farmland, energy, timber & TIPS
   - APFC - Infrastructure
2. Both funds include sub-sectors within fixed income
3. APFC actual allocation to Private Equity is much more recent and therefore underfunded relative to ARMB
4. Implementation (structure) approaches to public equity allocation vary by fund. Big difference is the use of "global" equity managers by APFC. We have apportioned global to domestic & international to help ease of comparison.
5. Neither Board has yet adopted a policy for the 2009-10 fiscal period. We simply applied new projections to the current policies.

Cumulative Wealth

	2006	2007	2008	2009	2010	2011	2012	2013
8.05% per year	100	108.05	116.75	126.15	136.3	147.27	159.13	171.94
7.77% per year	100	107.77	116.14	125.17	134.89	145.38	156.67	168.84
Act + ARM Proj	100	110.17	85.11	92.84	101.28	110.49	120.53	131.49

AGENDA

Wednesday, February 11, 2009 9:00 AM

Overview:
Retirement Trust Performance Review
Constitutional Budget Reserve Performance Review

Pat Galvin, Commissioner, Department of Revenue
Michael O'Leary, EVP, Callan Associates ole
Jerry Burnett, Deputy Commissioner, Division of Treasury, Revenue
Gary Bader, Chief Investment Officer, Treasury Division, Revenue
Mike Burns

Alaska Statutes
AS 37.10.430

Sec. 37.10.430. Management of the budget reserve fund.

(a) The Department of Revenue may transfer management responsibility over all or a portion of the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska) to the Alaska Permanent Fund Corporation.

(b) By March 15 of each year, the Department of Revenue shall, after consulting with the Alaska Permanent Fund Corporation, prepare a report setting out the balance in the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska) on January 1 and on December 31 of the previous calendar year. The report shall state the nominal, real, and realized return on the budget reserve fund compared to the nominal, real, and realized return on the permanent fund and the general fund during the previous calendar year.

(c) A special subaccount is established in the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska). Money in the subaccount shall be invested to yield higher returns than might be feasible to obtain with other money in the budget reserve fund. In establishing or modifying the investment policy for the subaccount in the constitutional budget reserve fund, the commissioner of revenue shall assume that those funds will not be needed for at least five years. Income earned on money in the subaccount shall be retained in the subaccount by the department.

Yupiit School District		42,442

* **Sec. 33.** CONSTITUTIONAL BUDGET RESERVE FUND. (a) The sum of $2,600,000,000 is appropriated from the general fund to the constitutional budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska) for repayment of amounts owed the constitutional budget reserve fund.

(b) It is the intent of the legislature that the Department of Revenue invest the assets of the constitutional budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska) in a manner maximizing the long-term earnings of the fund while meeting the minimum liquidity requirements of the state.

* **Sec. 34.** LAPSE. (a) The appropriations made by secs. 10, 13, 19(h), 22(b), 22(c), 26(b), and 26(c) of this Act are for capital projects and lapse under AS 37.25.020.

(b) The appropriations made by sec. 21 of this Act are for the capitalization of funds and do not lapse.

* **Sec. 35.** CONTINGENCY. (a) The appropriation made in sec. 21(d) of this Act is contingent on passage by the Twenty-Fifth Alaska State Legislature and enactment into law of a measure creating the community revenue sharing fund.

(b) The appropriations made in sec. 32 of this Act are contingent on passage by the Twenty-Fifth Alaska State Legislature and enactment into law of a version of SB 125.

* **Sec. 36.** Sections 1, 16 - 20, 21(a), 21(b), 21(d), and 34 of this Act take effect March 10, 2008.

* **Sec. 37.** Section 21(c) of this Act takes effect June 30, 2008.

* **Sec. 38.** Except as provided in secs. 36 and 37 of this Act, this Act takes effect April 13, 2008.

Alaska Permanent Fund Corporation
P. O. Box 115500 Juneau, AK 99801
Tel: (907) 796-1500 Fax: (907) 586-2057

Permanent Fund asset allocation
Comparison of target allocation and actual allocations

	Target allocation band	Actual Allocation	
		12/31/08	02/03/09
US Fixed Income	19% +/- 6%	26.91%[1]	26.67%[1]
US Equities	26% +/- 6%	23.79%	23.11%
Non-US Equities	13% +/- 3%	11.02%	10.53%
Global Equities	14% +/- 4%	12.08%	11.57%
Non-US Fixed Income	3% +/- 3%	3.93%	3.99%
Real Estate	10% +/- 3%	12.64%	13.09%[2]
Private Equity	6% +/- 5%	2.20%	2.13%
Absolute Return	6% +/- 3%	6.57%	7.58%
Infrastructure	3% +/- 3%	0.85%[1]	1.33%[1]

[1] Infrastructure is a new asset class for the Permanent Fund, and while commitments have been made, managers are still seeking out suitable properties for investment. In the interim, funds designated for infrastructure are currently held in US fixed income.

[2] APFC anticipates that write-downs in the value of some directly held properties will bring this asset allocation into compliance with its target band in the near future.

Follow-up Response To 2/11/09 Senate Finance Committee Question

2/12/09

Senate Finance Committee

2009 Stimulus Program
for Transportation
American Recovery & Reinvestment Act 2009

February 12, 2009

(1)

Presentation Outline

- Rules of the Funding
- How much funding is expected?
- Steps taken; steps needed
- How projects were identified and prioritized
- Anchorage and Fairbanks set-asides
- Impact to DOT&PF's work load

12

Why Important?

- Putting Alaskan's to work
- Reduces backlog of highway, aviation and transit (including ferry) needs
- Repairs aging infrastructure
- Jump starts gas line infrastructure needs

Rules of the Program

- Highway funds follow FHWA rules
- Transit funds follow FTA rules
- Aviation funds follow FAA rules
- Federal rules not relaxed
  - Must be in an approved STIP or TIP (not FAA)
  - Must be eligible for fund category
  - Must have begun as a federal project
    - NEPA (1-2 years)
    - ROW certification
    - Permits from all relevant authorities
  - Give emphasis to economically distressed regions

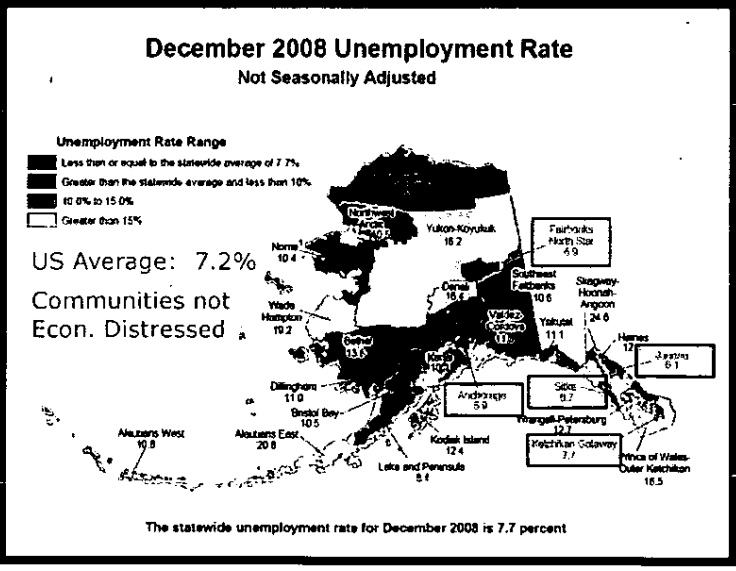
5

Economically Distressed

- H.R. 1 encourages projects in economically distressed areas
- 42 USC 3161 defines:
  - Unemployment rate > US rate + 1%
  - All areas of Alaska meet this definition, except:
    - Boroughs at: North Slope, Fairbanks, Anchorage, Juneau, Sitka and Ketchikan

6

DOL Unemployment Data



7

Use or Lose Provision

- Congress demands fast use of funds
- Use 50% of funds in 90 days (HR 1)
  - AMATS & FMATS to use in 75 days
- Funds not used will go to states who can use
- This means:
  - Must use >50% by ~May 15
  - Be ready to obligate further to capture funds other states lose

8

Maintenance of Effort

- 30 days from enactment: Governor to certify the state will maintain state funding scheduled for highways
  - Can not supplant stimulus funds for state funds to transportation
  - Certification must extend to Sep 2010 (SFY 09 – SFY 11)
- Non-certification will trigger loss of funds entirely

9.

Big Picture (H.R. 1)

$829 Billion Total

$46 Billion for Transportation

Alaska Receives:

$500+ Million Transportation for AK

16

How Much Funding to Alaska?

Type of Funds	House H.R. 1	Senate S. 1
Hwy & Bridges	$238.3 Million	$131.5 Million
--AMATS Hwy. Share	$22.4 M	$23.0 M
--FMATS Hwy. Share	$8.1 M	$5.1 M
--Enhancements	$7.4 M	--
--CMAQ Share	--	$5.2 M
--State & non-MPO Share	$187.0 M	$79.6 M
Transit	$74.3 Million	~$35.0 Million
--AMATS Share	$40.0 M	~$27.0 M
--Buses and related	$9.5 M	~$8.0 M
--Ferries and trains	$25.8 M	--
Use or Lose Rule	90 days; 18 months	6 months; 12 months

Funding breakdown subject to near daily adjustments and revisions.

11

How Much Funding?

Type of Funds	House H.R. 1	Senate S. 1
Aviation	Up to $231 M	Up to $84.7 M
FAA determines how much $ and priorities to state.		
Rural Aviation Program		
Number of Possible Projects	27	Same
Dollar value of Possible Projects	$271.3 M	Same
International Aviation Program		
Number of Possible Projects	12	Same
Dollar value of Possible Projects	$104.7 M	Same
Use or Lose Rule	90 days; 18 months	6 months; 12 months

Funding breakdown subject to near daily adjustments and revisions.

12

Steps Taken Already

- DOT&PF has been proactive
  - Identified universe of eligible projects that can meet criteria
  - Prioritized the list
  - STIP amendment (#18) released
  - Authorized work needed to get projects bid ready (bi-weekly meetings)
  - Prepared supplemental budget request

13

Further Steps Needed

- Complete designs, permits and other clearances on *fast list* projects by April (all modes)
- Highway and Transit Funding:
  - Take public comments on *fast list* STIP amendment #18; then final
  - Seek FTA and FHWA approval of STIP
  - Issue Federal Aid Agreements on *fast list* projects
  - Issue bid advertisements on *fast list*
- Aviation Funding: advised FAA of our list

14

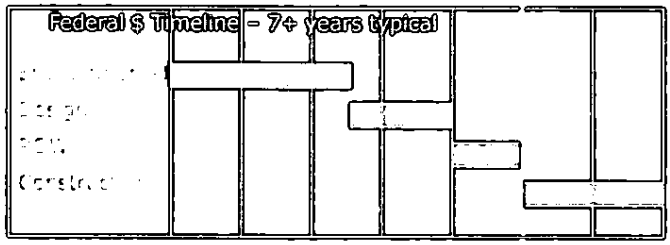
How were Projects Selected?

- Know the rules:
  - Eligibility
  - Rapid Timing expected
  - Economic distress criteria
  - Mandatory setasides in law
  - STIP, NEPA, permits not waived
- A small list of eligible projects met the criteria
  - No NEPA, no ROW purchase, and no long-lead projects could be considered
- Success requires laser-like focus on above
- Aviation: FAA decides projects to fund

15

Stimulus Funds Prerequisite

Stimulus Projects Must be Here



Implication: Virtually impossible for a new project to meet the stimulus timeline.

16

Criteria to Prioritize

(Highways)

- Mandatory set-asides
- Governor's Gas Line readiness announced projects
- Safety
- Economic Distress criterion
- Leverage other dollars
- Jobs created in 2009 season

- (FAA decides for Aviation Funds)

17

Fairbanks and Anchorage

- The two MPOs, AMATS and FMATS will select projects in their boundaries
  - Same rules apply
  - Each MPO amending their TIP to show stimulus projects
  - Focus, must be to projects that are soon bid-ready
  - $72.9 M sub-allocated to two MPOs (transit and highways in HR 1)

18

Why did DOT look to Existing Projects?

- Congressional rules quickly focused the universe of relevant projects to a very small list…
  - Already federally started
    - Meet eligibility rules
    - Many steps previously completed
  - Fast track: can be obligated in 90 days
    - Few projects meet this goal
  - Existing projects have strong support
    - Prior community and/or legislative actions

19

Summary of Work Funded (HR 1)

- 272 center line miles of roads resurfaced (+18 miles trails)
- 16 bridges replaced or repaired
  - 5 local class bridges
- 2 new ferries (partial)
- Ferry rehabilitation & two terminals
- Safety: passing lanes, lighting, roundabout
- Buses/vans in 8 communities
- Airports: 2 Internationals + up to 18 other (possible)

20

'Slow' List

- Q. Could projects be added and make the due date for the slow list?
- A. No.
  - Federal aid projects take 2-7 years
  - Even slow list projects must be in capital budget this year
    - Jul 2010 (SFY '11) is too late to obligate slow funding under Senate goal of Feb. 2010
    - Only practical slow projects are those still well along in a current design effort

21

New Projects Are Helped Too

- Q. How can new projects benefit from Stimulus?
- A. Every Stimulus project accomplishes work that would have been priority for 2010 STIP or AIP funds
  - HR 1: More than a typical year's worth of Highway and Aviation construction is being funded, opening up room for the next generation of projects

22

Adding Other Projects

- It's understood communities want other projects considered…
  - But, the rules are tight and fixed in law
  - Success means we focus limited resources on what can proceed
  - Time and resources diverted will harm outcome

Sub-Allocation

- Q. Can DOT&PF sub-allocate to communities and let them proceed?
- A. No. DOT&PF remains responsible and the federal rules (Highways and Aviation) are too complex for this to successfully occur.
  - FHWA concurs:
    http://www.fhwa.dot.gov/[illegible]
  - AMATS and FMATS projects mostly undertaken by DOT&PF
    - MPOs select projects; DOT&PF executes

Why Two STIPs underway?

- 2009 STIP year must be amended for Stimulus projects
  - Draft amendment to 2009 out now
- 2010 – 2013 STIP document requires a new effort:
  - Project nominations and scoring occurring now
  - Draft then Final STIP covering 4 years (May to August)
- Both efforts are legally required and both must be started at this time

25

Impact to DOT's Workload

(All modes)

- By May: Must obligate > $240 M in stimulus projects
- Jun - Aug '09: Must obligate > $450 M in regular federal-aid
- Oct – Aug '10: Must obligate $650 M in regular federal-aid + stimulus
- Bottom line: >50% increase in workload for next 18 months!
  - Work is now occurring on a sprint-like pace

Questions/Comments:

2/12/09

How Much Highway/Transit Funding?

Type of Funds	Senate S. A. 570 to H.R. 1
Hwy & Bridges	$132.4 Million
--AMATS Hwy. Share	$20.95 M
--FMATS Hwy. Share	$4.87 M
--CMAQ Share	$6.62 M
--State & non-MPO Hwy. Share	$99.98 M
Transit	~$35.0 Million
--AMATS Share	~$27.0 M
--Buses and related	~$8.0 M

STATE OF ALASKA

2/12/09

SARAH PALIN, GOVERNOR

DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES
OFFICE OF THE COMMISSIONER

3132 CHANNEL DRIVE
PO Box 112500
JUNEAU, ALASKA 99811-2500
FAX: (907) 586-8365
PHONE: (907) 465-3900

March 2, 2009

The Honorable Lyman Hoffman
Co-Chair, Senate Finance Committee
State Capitol, Room 516
Juneau, AK 99811

The Honorable Bert Stedman
Co-Chair, Senate Finance Committee
State Capitol, Room 518
Juneau, AK 99811

Dear Senator Hoffman and Senator Stedman:

The following are responses to questions asked during the Department of Transportation and Public Facilities (DOT&PF) presentation before Senate Finance on February 12, 2009.

Enclosure #1 contains excerpts from HR 1, The American Recovery and Reinvestment Act (ARRA). The Governor is required to certify that the state will maintain its efforts with regard to state funding for the types of projects funded by this act and that the funds will be used to create jobs and promote economic growth. Additionally the "chief executive" must certify the infrastructure investment has received the full review and vetting required by law and assures this is an appropriate investment of taxpayer dollars. Senator Thomas asked questions about how well local area unemployment rates capture local economic conditions, and the use of unemployment rates in determining economically distressed areas. Brynn Keith at the Department of Labor and Work Force Development provided the following information.

Local Area Unemployment Rates

As key indicators of local economic conditions, local area unemployment rates (which are never seasonally adjusted) reflect not only the normal seasonal patterns that tend to be repeated year after year, but also the hiring (and layoff) patterns of local firms as reflected in the employment status of local residents. Unemployment rate estimates are used by Federal and state agencies to determine the eligibility of an area for benefits, to determine the distribution of funds, for planning and budgetary purposes and to determine the need for local employment and training services and programs.

Unemployment rates are imperfect estimates of labor underutilization and are subject to both sampling and non-sampling error. Additionally, the official definition of unemployment (determined by the US Bureau of Labor Statistics) excludes anyone who has not made an active attempt to find work in the preceding four week period; rural residents may not meet the official definition of unemployed because they have not conducted an active job search. Yet, even though the unemployment rates for rural Alaska may be understated, the level shifts over time should capture the changes in local economic conditions.

Denali Commission Distressed Communities
Under a contractual agreement with the Denali Commission, DOLWD's Research and Analysis Section annually produces a list of distressed communities. Multiple criteria are used to determine the designation; proxy data are used to determine average income and labor market attachment. Given the detailed level of geography under consideration, official unemployment rates are not used in the calculation.

Senator Elton asked about the Indian Reservation Roads (IRR) Program in relation to the economic stimulus bill. Enclosure #2 provides information about Indian Reservations Roads and ARRA. The DOT&PF does not administer this program.

Frank Richards, Deputy Commissioner for Highways and Public Facilities, can be contacted at 465-3906 for additional information. Additional information on ARRA and transportation issues can be found at
http://www.fhwa.dot.gov/economicrecovery/index.htm

Sincerely,

Leo von Scheben, P.E., L.S., M.B.A.
Commissioner

General Provision - Department of Transportation

SEC. 1201. (a) MAINTENANCE OF EFFORT.-Not later than 30 days after the date of enactment of this Act, for each amount that is distributed to a State or agency thereof from an appropriation in this Act for a covered program, the Governor of the State shall certify to the Secretary of Transportation that the State will maintain its effort with regard to State funding for the types of projects that are funded by the appropriation. As part of this certification, the Governor shall submit to the Secretary of Transportation a statement identifying the amount of funds the State planned to expend from State sources as of the date of enactment of this Act during the period beginning on the date of enactment of this Act through September 30, 2010, for the types of projects that are funded by the appropriation.

(b) FAILURE To MAINTAIN EFFORT.-If a State is unable to maintain the level of effort certified pursuant to subsection (a), the State will be prohibited by the Secretary of Transportation from receiving additional limitation pursuant to the redistribution of the limitation on obligations for Federal-aid highway and highway safety construction programs that occurs after August 1 for fiscal year 2011.

Subtitle A-Transparency and Oversight Requirements

1511. CERTIFICATIONS. With respect to covered funds made available to State or local governments for infrastructure investments, the Governor, mayor, or other chief executive, as appropriate, shall certify that the infrastructure investment has received the full review and vetting required by law and that the chief executive accepts responsibility that the infrastructure investment is an appropriate use of taxpayer dollars. Such certification shall include a description of the investment, the estimated total cost, and the amount of covered funds to be used, and shall be posted on a website and linked to the website established by section 1526. A State or local agency may not receive infrastructure investment funding from funds made available in this Act unless this certification is made and posted.

Additional Funding Distribution and Assurance of Appropriate Use of Funds

SEC. 1607. (a) Certification By Governor.-Not later than 45 days after the date of enactment of this Act, for funds provided to any State or agency thereof, the Governor of the State shall certify that: (1) the State will request and use funds provided by this Act, and (2) the funds will be used to create jobs and promote economic growth.

(b) ACCEPTANCE BY STATE LEGISLATURE.-If funds' provided to any State in any division of this Act are not accepted for use by the Governor, then acceptance by the State legislature, by means of the adoption of a concurrent resolution, shall be sufficient to provide funding to such State.

(c) DISTRIBUTION.-After the adoption of a State legislature's concurrent resolution, funding to the State will be for distribution to local governments, councils of government, public entities, and public-private entities within the State either by formula or at the State's discretion.

Attachment #2

Indian Reservation Roads (IRR) Program
Recovery Act Provisions
02/09/09

House (H.R. 1) As passed by House of Representatives	Senate (S. 1) As reported by Appropriations Committee
• $300 million • Seek to maximize job creation and economic benefit • • Administered in accordance with Chapter 2 of Title 23. • Distributed to Tribes using FY 2008 distribution figures • No PM&O/PRAE funding identified for DOI/BIA. • FHWA overall administration and oversight funded from other funds designated for FHWA • Priority to projects able to award in 90 days, included in STIP or TIP, completed in 3 years, and located in economically distressed areas • Any unobligated funds by 08/01/2010 go to States able to obligate amounts • Lake Tahoe MPO takedown will likely apply • Mandatory reporting requirements apply	• $320 million • Seek to maximize job creation and economic benefit • Administered in accordance with Chapter 2 of Title 23. • No specific year identified for distribution • Up to 4% may be used by DOI/BIA for program management & oversight and project related administrative expenses. Portion may be provided to FLH for oversight of FHWA Tribes • FHWA overall administration and oversight funded from other funds designated for FHWA • Priority to capital investments and to projects that can be completed within 2 years of enactment • 1 year after enactment, can redistribute unobligated funds within IRR Program • Lake Tahoe MPO takedown on FLHP does not apply • Mandatory reporting requirements apply

Indian Reservation Roads (IRR) Program Q&As

PLANNING

1. Is the Indian Reservation Roads Program included in the Economic Recovery Bill?

Answer 1: The IRR Program is included in both H.R.1 passed by the House of Representatives and in the current legislation under consideration by the Senate. Final inclusion and figures will not be known until the measure is passed by Congress and signed by the President.

2. **What should Tribes be doing to ensure their projects are "ready to go" as part of the Economic Recovery Program?**

Answer 2: In order for an IRR eligible project to advance using the recovery funds, the project must be included on an FHWA approved IRR Transportation Improvement Program (IRRTIP) or Statewide Transportation Improvement Program (STIP). Therefore, we strongly encourage Tribes to review their current approved IRRTIP and reach out either to their BIA Regional Office or FHWA/Federal Land's IRR Coordinator to begin work **as soon as possible** if an update is required in order to place a new project on the IRRTIP. Please note that transit related projects should be coordinated with the relevant transit operating agency as well. Tribes should begin public involvement and determine conformity and other planning process steps that are required for the proposed projects so as to have the projects ready as soon as possible after the proposed bill is signed. For purposes of fiscal constraint, it is reasonable to assume a doubling of the Tribe's FY08 tribal share allocation of IRR Program funds for FY09.

3. Can economic recovery funds be used to replace IRR funds in the first year of the IRRTIP to allow that money to be used on other projects?

Answer 3: Yes, provided that the project on which the funds are to be used has not yet been obligated. In addition, the recovery funds can be used for a project previously scheduled for FY09 IRR Program funding as long as those FY09 IRR Program funds are then used for another eligible transportation project/activities within FY09. Because we are in the final year of SAFETEA-LU, it is imperative that minimal IRR Program funds be left unobligated at the end of FY09.

4. **Can FHWA/BIA adopt "Emergency" rules with regard to environmental processing to save time?**

Answer 4: No, FHWA cannot adopt emergency procedures. The emergency action procedures referred to in 23 CFR 771.131 only apply to emergency circumstances addressed in the Council on Environmental Quality (CEQ) regulations 40 CFR 1506.11.

5. What if FHWA or the States are challenged on the cumulative impacts of such a large investment package like this? Are we prepared to address this issue?

Answer 5: The recovery package provides funding for delivering the "ready-to-go" projects. The package itself cannot be challenged under NEPA, as it will be an Act of Congress. Individual projects are subject to legal provisions and can be challenged like any other project that is outside of the recovery package. "Ready-to-go" may have been advanced through environmental processes already or do not require any major environmental review. For these reasons, they are unlikely to be challengeable solely because they are part of a large investment package.

6. Are there any streamlining measures or waivers that can be granted when post-NEPA right-of-way acquisition has not been completed?

Answer 6: Yes. The regulations at 23 CFR 635.309 allow for a fund authorization to be issued while the State DOT continues to acquire the necessary right-of-way post-NEPA. This can be applied to IRR Projects as well. In those cases where the right-of-way acquisition may not be finalized the bid documents should clearly specify those parcels that may not be available along with estimated dates for possession. BIA and Tribes should consider the actual construction start date to determine when the property will actually be needed. For those parcels that have occupants of residences, businesses, farms or non-profit organizations who have not moved from the right-of-way, the bid proposal must include provisions to protect them from disturbance or inconvenience.

FUNDING

7. Will the economic recovery funds be 100% Federal share?

Answer 7: We will not know the response to this question until the Congress acts. However, current legislation indicates that the funds will be up to 100% Federal share.

8. Can Tribes use these funds for winter or other maintenance?

Answer 8: Yes, in accordance with 25CFR170 and SAFETEA-LU, tribes may use up to 25% of the Recovery funds they receive for maintenance activities.

9. If these are General Fund dollars, will Title 23 requirements apply?

Answer 9: Unless the Economic Recovery bill specifies otherwise, the projects funded under the bill will be required to follow all normal Title 23 and IRR Program funding requirements.

10. What will be the eligible activities for the Economic recovery funds?

Answer 10: Unless the Economic Recovery bill specifies otherwise, the list of eligible activities will be the same as those for the IRR Program. These are shown in 25 CFR 170.

11. What happens to Economic Recovery funds that have not been obligated by the due date?

Answer 11: We will not know the response to this question until the legislation is signed by the President. However, both the House and Senate versions contain language depicting how and when the funds will be redistributed. The Senate version does include language that would allow the funds to be redistributed within the IRR Program to Tribes with remaining eligible and ready projects.

12. Beyond advancing pure construction projects what other types of projects or operational considerations should Tribes be considering?

Answer 12: There is an opportunity to include operational, safety, and/or maintenance projects. Maintenance is included because thee funds will be administered per Chapter 2 of Title 23 and up to 25% of the funds that a Tribe receives can be used for maintenance purposes. Project examples include chip seal and dust suppression projects, traffic signal upgrades, traffic monitoring and weigh-in-motion equipment, dynamic message signs, road weather information systems, guardrail replacement, and traffic sign upgrades. Many operational investments require limited or no environmental review time, making them very attractive for quick deployment.

13. How will economic recovery funds be distributed and redistributed?

Answer 13: We will not know the answer to this until the Bill is signed by the President. At this time, the language included in both the House and Senate versions indicate that the funds will be administered in accordance with Chapter 2 of title 23. This means that the funds will be allocated by tribal share per the RNDF formula included in 25 CFR170. The House version indicates that FY08 numbers will be used. No specific year is referenced in the Senate version.

Exact procedures have not yet been developed for the redistribution of funds, but the Senate version specifically indicates that funds left unobligated 1 year after passage of the Act will be pulled back to FHWA and then redistributed to Tribes that have additional projects ready for award.

Project Authorization and Contracting

14. What design elements or standards can be waived or streamlined?

Answer 14: Unless the Economic Recovery bill specifies otherwise, the IRR projects funded under the bill will need to be developed and designed in accordance with 25 CFR170.

Project Management and Oversight

15. Are there specific actions that the BIA and Tribes should be considering related to tracking these economic recovery/recovery funded projects in case of audit?

Answer 15: In addition to the normal stewardship and oversight that is applied to the administration of projects, there will be very specific and detailed tracking requirements related to funding, projects, and employment on projects funded by the Economic recovery funds. The forms will be developed by FHWA/FLH for the IRR recovery funds and distributed to the Tribes and BIA after final passage of the legislation and determination of the required data and timeframes. It will be the responsibility of the Tribes and BIA to provide the required information to FHWA for inclusion in a report to Congress on these activities.

Subject: Meeting with Obama Administration-- Feb. 11

Yesterday I met with US DOT's Secretary LaHood along with 40 other state DOT Commissioners/Secretaries to discuss the impact of the Economic Stimulus package on our infrastructure and state economies. The meeting was scheduled at the request of COS Emmanuel who was unable to attend. The purpose of the meeting was for the administration to hear from the states the benefits and the challenges that we will experience from the Stimulus funding.

Secretary LaHood stressed the following points on the stimulus funding:

- # 1 goal of this bill is to put people to work
- President recognizes that infrastructure reconstruction will provide good paying jobs
- Bill will provide funds that will be distributed by existing modal formulas
- US DOT and state DOT's must follow law – "By the Book, No shortcuts and No Earmarks"
- UD DOT has formed TIGER team to get the funding to the states quickly, cut through the red tape
- White House has set up website to monitor job creation – Recovery.com
- President's message is to "get it done" by working together (fed's and state) quickly and provide for accountability and transparency

Secretary LaHood priorities for US DOT:

- Work with Congress to get Aviation re-authorization bill done this year
- Work with Congress on the Amtrack bill
- Start discussions immediately on the Highway re-authorization bill
- Building a Hi-speed rail system
- Find people to head the modal administrations
- Special emphasis in "Livable Communities"

Alaska was one of three states asked to highlight projects that would be funded using economic stimulus funds. I presented the benefits of the Dalton Highway projects and their direct impacts on the Natural Gas Pipe Line project. (My remarks are attached.)

States stressed to Secretary LaHood the urgent need to start work on the highway re-authorization bill. The projects funded by the stimulus will put Americans to work now but the future needs more certainty for companies to go out and buy new equipment and invest in their companies. Without a defined 6 year program people will be more conservative and not spend the funds that will help re-stabilize the country.

Copy on File

Many states said that they will award contracts within 90 days and expend all of the stimulus funds in 2009.

Session ended with commitment by LaHood that the US DOT will be a partner to assist with rapid expenditure of the funds

Frank T. Richards, P.E.
Deputy Commissioner
Alaska DOT&PF
3132 Channel Drive
PO Box 112500
Juneau, AK 99811-2500
(907) 465-3900

Oral comments presented by Frank Richards to US DOT Secretary LaHood, follow on next page:

Thank you COS Emmanuel and Secretary LaHood,

I am honored to represent the Alaska Department of Transportation and Public Facilities. Governor Sarah Palin sent me to tell you Alaska is ready to use the recovery and reinvestment funds for projects to put Alaskans to work and to help achieve the nation's energy independence priorities. Alaska used simple and straight forward criteria to select projects. We choose projects that are shovel ready, of national significance, provide work in economically distressed areas of the state and increase the safety of the roads Alaskan's drive on.

Alaska's highest priority projects support the Alaska Natural Gas Pipeline, the nation's largest civil works project that will deliver 4.5 billion cu. Ft. of natural gas to the nation's heartland. Alaska has almost 200 Trillion Cu. Ft of natural gas representing about 100 years of domestic energy demand.

Our goal is to ensure our highways and bridges are capable of handling the massive amount of heavy freight and pipe that will be hauled during gas line construction. We have 6 projects that meet this goal and can be obligated within Congress's aggressive 90-day timeline.

Our highest priority is a Dalton Highway Project to reconstruct 22 miles of this immensely important transportation corridor. Few Americans, and frankly not many Alaskans, have driven this road. The Dalton Highway is the only surface transportation link between interior Alaska and the oil and gas fields of Prudhoe Bay. The Dalton Highway's 414 miles traverse challenging terrain, underlain by ice rich permafrost in one of the least populated regions of the United States. This two-lane gravel road crosses the Arctic Circle and the Brooks Range before descending to the Prudhoe Bay oil and gas fields on the coastal plane. This road link is critical to the existing oil and gas developments that provide 18% of America's domestically produced crude oil. This project will raise the grade, widen the embankment, add shoulders, repair 5 bridges, install new culverts to protect fish habitat and provide a suitable driving surface.

Additional projects will provide jobs from Ketchikan in southeast Alaska to the small native villages of Kipnuk and Emmonak out on our west coast. We will be reconstructing 10 bridges, purchasing new transit buses and vans, upgrading pathways and waysides, and constructing 2 new ferries. Nearly 70% of Alaska's projects are in Economically Distressed areas, some with unemployment over 20%.

Thank you Mr. Secretary for allowing me to share our plans for use of the Economic Stimulus funding and how it benefits not only Alaskans but all of America.

2/12/09

DOT&PF&PF SURFACE TRANSPORTATION NEEDS LIST AND 2010-2013 STIP FACT SHEET

The State Transportation Improvement Program (STIP) is the federally required means by which states receive federal funds for surface transportation projects: roads, ferries, buses and trails.

A new STIP (2010-2013) must be in place by Oct. 1, 2009 to receive federal fiscal year 2010 federal funds. There are 3 important parts to this process:

1. Developing the "Needs List" of local projects nominated by communities
2. Evaluating and ranking the local projects using the "project scoring criteria"
3. Preparation and public notice on the draft STIP list identifying both local and state projects proposed for receipt of federal transportation funds

The "Needs List" is a state-maintained list of surface transportation (road, ferry, bus, trail) priorities including community-owned and maintained infrastructure. The "Needs List" is important, as it is the reservoir of surface transportation projects to be considered for the STIP and thus to be eligible for receipt of federal funds.

A new "Needs List" is being created as the current list is over 13 years old and

- Community priorities have changed reflecting changes in their community
- All the projects need to be re-ranked

Communities **do not need to re- nominate active projects** for them to remain on the "Needs List. An active project is one that has the design and environmental underway using the federal process.

Communities **must nominate new projects** to get them on the Needs List by March 2, 2009.

Forms and further information are available at http://dot.alaska.gov/stwdplng/cip_stip/index.shtml or follow the links from the DOT&PF home page www.dot.state.ak.us (left hand side under highlights is the link "Call for nomination and comments for 2010-2013 STIP)

Projects on the needs list are prioritized and ranked using Alaska specific "project scoring criteria". These criteria have been revised slightly and are available for comment through March 2nd by following the above links.

The STIP will go through an extensive public notice process including public meeting in May and June prior to federal review in Aug/Sept.

Communities having problems completing forms or understanding the process are encouraged to contact their regional planners at:

Central Region - Jennifer Witt (907-269-0520)
Northern Region - Jerry Rafson (907-451-5150)
Southeast Region - Andy Hughes (907-465-1776)

Prepared by DOT&PF&PF 2/2/09

STATE OF ALASKA

SARAH PALIN, GOVERNOR

DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES

OFFICE OF THE COMMISSIONER

3132 CHANNEL DRIVE
PO Box 112500
JUNEAU, ALASKA 99811-2500

FAX: (907) 586-8365
PHONE: (907) 465-3900

February 10, 2009

Dear Alaskan:

Alaska, as the rest of the nation, is facing serious economic upheaval. Recent economic forecasts by both the state Department of Labor and private firms predict that for the first time in 22 years Alaska will lose jobs in 2009. While the economists may quibble over the extent of the job loss, they do agree our economy is in for a contraction this year.

To address the situation, Congress is expected to adopt a significant economic stimulus package this month. The details are being hammered out in the nation's capital. We can reasonably expect that a significant portion of the final bill will include funding for "shovel ready" transportation projects. The Alaska Department of Transportation and Public Facilities and the transportation planning organizations in Anchorage and Fairbanks have a number of projects that meet the criteria and timeframes being discussed in the bill.

In recognition of the gravity of the economic challenges facing the nation and the need to act quickly to forestall more job losses, the time limits in the stimulus package are tight. At least half of the funding must be committed within 90 days of the bill's passage (under the House passed version of the stimulus package). To move ahead, however, the projects must be included in the Statewide Transportation Improvement Program or STIP, and put out for your review and comment. That's the purpose of this amendment #18 to the 2006-2009 STIP. In it, we propose to fund a number of previously designed projects and to accelerate the schedule of others in order to take advantage of the federal funding, and, of course, to make jobs available to Alaskan workers. (You will note in the draft STIP document that each proposed stimulus funded project is denoted with a Stimulus logo prepared for this effort.)

Time is critical to our ability to take full advantage of these time-limited funds. Your comments must be delivered to us no later than March 13, 2009.

Later this year, we will prepare a new STIP that will cover the period from 2010 to 2013 to take advantage of the funds anticipated from our normal flow of federal-aid for transportation expected in those four years.

This STIP amendment also includes updated project scope, schedule and cost estimate information for projects not part of the federal stimulus package. We are optimistic that the projects listed in the amended STIP will meet the essential transportation needs of Alaska for the coming years.

This amendment was developed in compliance with Title 23 - Section 135 and the State Planning Regulations. Projects that are in air quality non-attainment areas are in conformity with the State Implementation Plan for Air Quality.

The State's transportation system is vital to the economy of the state. The projects listed in this STIP amendment will continue to improve the transportation network for years to come and the combined list of regular and stimulus funded projects will help to mitigate the economic downturn we all face at this time. We look forward to your comments and appreciate your thoughts.

Sincerely,

Leo von Scheben, P.E., L.S., M.B.A.
Commissioner

Purpose of this STIP Amendment

This is Amendment 18 to the 2006-2009 Statewide Transportation Improvement Program or STIP. It is developed to address the funding we anticipate to receive from the currently-named *American Recovery and Reinvestment Act of 2009* that can be used for surface transportation projects in Alaska, as well as other project adjustments. After it is passed by Congress and signed by the President, the act will provide economic stimulus funding in a number of areas, including education and training, energy, infrastructure, health care and more. While transportation projects are often prominently cited in news reports about the bill, transportation-related funding, including surface transportation, transit, airports and railroads, make up only 5 to 6% of the total expenditures.

The details of this economic stimulus package are being developed in the Congress. A cornerstone of the bill is providing funding for "shovel ready" transportation projects, essentially projects that have completed or nearly completed design, have obtained the necessary rights-of-way and environmental permits, and are ready to go to construction. The Alaska Department of Transportation and Public Facilities and the transportation planning organizations in Anchorage and Fairbanks have a number of projects that meet the criteria being discussed, or are close to meeting them within the time frames outlined in the bill.

Since the stimulus bill is not yet final, we have prepared this STIP amendment that includes a sufficient number and dollar value of projects to cover both the highest expected funding amount, and some additional projects should the state receive extra funds under the "use it or lose it" provisions in the bill. This approach is necessary given the great degree of variability in the level of expected funding. It is anticipated that the bill will have been signed into law in the next few weeks, and thus the final STIP amendment will be adjusted to better reflect the actual funding levels contained in the pending law.

The time limits in the stimulus package are tight. At least half of the funding must be committed within a few months of the bill's passage. If the State is unable to sign contracts within that time, we lose the funds to other states that are able to commit them to projects immediately. To meet that challenge, this STIP amendment contains a small number of previously designed projects or accelerates the schedule of others in order to take advantage of the federal funding. They were selected from a pool of eligible projects after consideration of the following factors:

- Improves or enhances Safety
- Serves Economic Distress Area
- Benefits Gas Pipeline Logistics
- Leverages Other Funding
- Creates Jobs in 2009
- Mandatory Distribution set forth in the bill language

Despite the urgency of the economic conditions, the projects selected still must meet the requirements laid out in state and federal law, one of which is inclusion in the STIP and subject to public review and comment.

The purpose of the STIP is to inform Alaskans of decisions about the surface transportation programs and projects and the factors influencing those decisions. The STIP is not meant to serve as an accounting document. Rather, it is a snapshot of expected projects, their schedules and fund sources. Since both the nature of the projects and the funding is dynamic, and subject to many sources of change, the STIP is inherently fluid.

Projects in the STIP must conform to the Statewide Long-Range Transportation Policy Plan: *Let's Get Moving 2030.* The plan was recently updated to comply with new federal planning regulations implemented following the passage of SAFETEA-LU in 2005. SAFETEA-LU is the "Safe, Accountable, Flexible, Effective Transportation Equity Act: A Legacy for Users". It's the current five-year surface transportation authorization act Congress passed in August 2005, and runs through the end of the Federal fiscal year 2009. The plan is available on the DOT&PF website at www.dot.alaska.gov/2030.

The current STIP covers the four federal fiscal years 2006, 2007, 2008 and 2009 (the time period from October 2005 through September 2009). For clarity, this STIP amendment shows only the projects we expect to program using the funding in the *American Recovery and Reinvestment Act of 2009* and other 2009 amendments. All STIPs that are created after July 1, 2007, must cover four-year time periods. They must be updated at least every four years, but may – at the state's option – be updated more frequently. Subsequent amendments to the STIP, such as this one, do not need to show all four years.

The STIP covers only surface transportation projects including roads, ferries, transit, and trails. The Federal Aviation Administration provides funding for airport projects. A program of spending for airport projects, the Airport Improvement Program, is published separately. Ports and harbors projects are funded by the Corps of Engineers with State and local match funds, or solely with State and local funds. Neither aviation nor ports and harbors projects are included in the STIP.

The STIP is required by federal law (23 USC 135). It must be fiscally constrained to reflect reasonably expected funding. The projects listed in this STIP amendment are based on our best estimate of the funding that will become available with the passage of *American Recovery and Reinvestment Act of 2009.* Projects not immediately funded become part of our illustrative list of projects that would advance if funding becomes available. Should a project encounter delays and is not able to advance, or funding in the bill increases above what we have estimated; or if other states are unable to meet the "use it or lose it" provisions of the federal bill and more funding becomes available to us, we will select a project from the illustrative list in order to make maximum use of the funding.

Frequently, projects listed in the STIP are delayed from the schedule presented; some projects may take longer to develop than expected, or a project may incur unexpected costs. When there are delays beyond the federal fiscal year, the department advances other projects that may be ready so as not to lose the annual allocation of federal funds. Depending on the size of the project and the funding allocated to it, these changes may require amendment of the STIP. Smaller changes may require only an administrative modification.

The STIP is a financially constrained spending program. The department must estimate the total amount of transportation funding, by year and by category, from all anticipated sources for the four-year period, 2006 - 2009. The primary source of funds for surface transportation projects in Alaska is from the Federal Highway Administration. Other key sources of funding include the public transportation funds from the Federal Transit Administration and general funds appropriated by the Alaska Legislature

The estimate of available funding limits the projects placed in the STIP. Most of the funding available to the department is allocated within specific categories such as safety, National Highway System, surface transportation, transportation enhancements, air quality (CMAQ) and transit funding according to the federal funding programs. The *American Recovery and Reinvestment Act of 2009,* still being debated in Congress, is expected to allocate funds to the states using one or more of these categories. We, in turn, must consider these special categories, and their eligibility criteria in assigning funds to projects in Alaska.

Federal regulations (23 CFR 450.216) require that each state transportation agency develop a STIP for all areas of the state outside of metropolitan planning areas (MPOs). For metropolitan areas, the MPOs develop their own TIPs (Transportation Improvement Programs), which are approved by the Governor or her delegate and incorporated in total or by reference into the STIP. Additional requirements are placed on the nature and form of projects that are placed in the STIP. The final STIP is subject to approval by the Federal Highway Administration (FHWA) and Federal Transit Administration (FTA), both agencies of the US Department of Transportation.

The TIP for the Anchorage area, AMATS, can be found at:
http://home.muni.org/transplan/TIP.cfm

The TIP for the Fairbanks area, FMATS, can be found at:
http://dot.alaska.gov/nreg/planning/fmats/fmats_tip.shtml

Two STIPS

You may notice that there are two STIP reviews underway. In order to meet the tight timelines of the *American Recovery and Reinvestment Act of 2009,* this amendment to the 2006-2009 STIP is necessary. Because of the time restrictions, the stimulus projects in this amendment consist only of projects that are, or are close to being, bid-ready and thus able to meet the "shovel ready" requirement of Congress.

The Department still has the on-going responsibility to develop a program of projects for future years, and has begun development of the 2010 – 2013 STIP. A request for comments on the criteria for the 2010 - 2013 STIP, and a request for new project nominations was issued just before the New Year with comments and nominations due in early March. Projects will be developed for that effort based on the new criteria, and in light of projects we are able to complete through the *American Recovery and Reinvestment Act of 2009.* We will then offer that list of projects for public review in late spring or early summer this year.

Comments

Comments on this STIP amendment should be emailed to: dot.stip@alaska.gov no later than March 13, 2009. Questions about specific projects should be directed to the area planners in the region in which the project is located. Contact information is listed inside the front page.

Surface Transportation Funding Sources

Funding available to the state comes from several funding agencies, most notably the Federal Highway Administration and Federal Transit Administration. The state receives several categories of funding from each of these agencies. Each category has distinctive rules for project eligibility, match ratios, and other programming factors. The following descriptions address the most significant of these categories, called apportionments.

In the project tables we've identified tentative apportionment designations for each proposed project. These apportionment assignments are estimates and are subject to change. The following paragraphs describe the apportionment categories, eligible project types, apportionment code and the ratio of federal funds. The proportion not paid by federal funds is the state, local or third party match.

New apportionment designations

The following list includes four new apportionment designations for the funding anticipated from the American Recovery and Reinvestment Act of 2009: ESFX, ESWL, ESFG, and ESRT. We expect we will need to revise the codes once the act is finalized and implemented by the Federal agencies. That information will be added in the final amendment.

3PF (Third Party Funds) – Funding contributed by parties other than the State usually to provide required matching funds.

1934 (Transportation Improvement Earmarks) – Funds for transportation improvement projects specified in Section 1934 of SAFETEA-LU. Funds are available only for the projects specified in the legislation. The federal funds ratio is 90.97%.

AC (Advance Construction) – An innovative financing tool permitted under FHWA rules that, with approval of the FHWA, allows the state to begin a project using state funds prior to the availability of federal funds. This tool allows the state flexibility to use its resources to more efficiently schedule project start-ups.

ACC (Advance Construction Conversion) – Accounting tool to track the repayment of state funds used to begin a project prior to the availability of federal funds.

AC-T (Targeted Advance Construction) – An innovative financing tool permitted under FHWA rules that, with approval of the FHWA, allows the state to begin a project using state funds prior to the availability of federal funds. These funds typically are budgeted for ongoing or recurring projects.

ACC-T (Targeted Advance Construction Conversion) – An accounting tool used to track the repayment of state funds used for Targeted Advance Construction projects.

BIA (Bureau of Indian Affairs) – Funding provided through the Bureau of Indian Affairs for transportation planning, research, engineering, and construction of the highways, roads, and parkways, or of transit facilities serving federally-recognized Indian tribes. BIA projects are funded using IRR (Indian Reservation Roads) funds; see also: *IRR*

BR (Bridge) – These funds are available for deficient highway bridges eligible for replacement or rehabilitation and must be over waterways, other topographical barriers, other highways or railroads. They must also be significantly important and unsafe because of structural deficiencies, physical deterioration, or functional obsolescence. The federal funds ratio varies, typically 93.4% if spent on Interstate routes or 90.97% otherwise.

CM (Contributed Match) – Match funds contributed by parties other than the State.

CMAQ (Congestion Mitigation/Air Quality) – These funds are for projects that can be proven to reduce traffic congestion and/or improve air quality in federally designated non-attainment areas. Projects such as park and ride lots, transit bus replacement, vehicle inspection and maintenance program improvements, signal coordination, ride sharing, and paving for dust control qualify for these funds. The federal funds ratio varies and is either 90.97% or 100% depending upon the specific category of work.

DBP (Discretionary Bridge Program) – This is a nationwide competitive program for rehabilitation or replacement of bridges that cost more than $10 million. The bridges must be on a federal-aid highway. Alaska receives funds earmarked in this program. The federal funds ratio varies, typically 93.4% if spent on interstate routes or 90.97% otherwise.

E112 (Section 112 Earmarks) – In the Federal FY 2006 Tranportation Appropriations Act, Congress earmarked funds for projects in Alaska. These funds are not available for other projects. The federal share is 100%.

E115 (Section 115 Earmarks) – In the Federal FY 2004 Consolidated Appropriations Act, section 115 of Division F, dealing with Transportation Appropriations, Congress earmarked funds for projects in Alaska. These funds are not available for other projects. The federal share is 100%.

E117 (Section 117 Earmarks) – In the Federal FY 2005 Consolidated Appropriations Act, PL 108-447, section 117 of Division H, dealing with Transportation Appropriations, Congress earmarked funds for projects in Alaska. These funds are not available for other projects. The federal share is 100%

E330 (Section 330 Earmarks) – In the Federal FY 2003 Consolidated Appropriations Resolution, PL 108-7, section 330 of Division I, dealing with Transportation Appropriations, Congress earmarked funds for projects in Alaska. These funds are not available for other projects. The federal share is 100%

EMFX (Earmark Flexible) – Section 186 of the FFY 2006 federal appropriations bill changed the availability of several deductive and non-deductive earmarks for the Knik Arm and Gravina Island bridge projects, allowing the state to use them for any eligible purpose. The match ratio is determined by the type of project funded from this source.

ESFX (Economic Stimulus Flexible) – One-time funding made available to the states as part of the American Recovery and Reinvestment Act of 2009. Federal funding is anticipated to be 100%; strict time limits and other restrictions apply.

ESWL (Economic Stimulus Western Federal Lands) – One-time funding made available to the FHWA Western States Federal Lands program as part of the American Recovery and Reinvestment Act of 2009. These funds do not flow directly to Alaska; they are managed by the Western Federal Lands Highway Division in Washington State. Federal funding is anticipated to be 100%; strict time limits and other restrictions apply.

ER (Emergency Relief) – Special federal funding allocated to projects that repair damage caused by natural disasters and catastrophic failures. The federal funds ratio varies.

FBD (Ferry Boat Discretionary Funds) – Each year, the Federal Highway Administration receives applications from states for the nationwide allocation of Ferry Boat Discretionary funds. Projects must be for the construction or improvements to ferryboats or ferry terminal facilities on National Highway System routes. Funds are available only in the year approved. While a portion is setaside for Alaska (see FBDA below) Alaska may also apply for the nationwide funds. The federal funds ratio is 80%.

FBDA (Ferry Boat Discretionary Funds – Alaska set aside) – A portion of the Ferry Boat Discretionary funds, for the construction or improvements to ferryboats or ferry terminal facilities on National Highway System routes, is set aside for projects in Alaska. Funds are available only in the year approved. The federal funds ratio is 80%.

Federal Lands Highway Program – Other federal surface transportation funding programs, not generally allocated to the states, include the Park Roads and Parkways, Forest Highways, and Indian Reservation Roads. In addition, there is a competitive program called Public Lands Discretionary funding. Most of these programs are shown in the Federal Lands section of the STIP, however we do reflect them if used jointly with the state's highway projects. The federal funds ratio is 100%. The individual programs are described below:

- *Park Roads and Parkways* – planning, research, engineering, and construction of the highways, roads, and parkways, or of transit facilities within national parks.
- *FH (Forest Highways)* – planning, research, engineering, and construction of the highways, roads, and parkways, or of transit facilities within forestlands. These funds may be seen in conjunction with projects in the Tongass or Chugach National Forests.
- *IRR (Indian Reservation Roads)* – transportation planning, research, engineering, and construction of the highways, roads, and parkways, or of transit facilities serving federally-recognized Indian tribes.
- *PLD (Public Lands Discretionary Funds)* – This is a nationwide competitive program. Eligible projects are on roads that are in or adjacent to federal lands. Most of the projects will be found in the Alaska Highway System. The federal share is 100%.

GARV (GARVEE or *Grant Anticipation Revenue Vehicle)* – An innovative financing option that allows states to issue bonds to pay for Federal-aid transportation projects, which the state pledges to repay using future federal funds and state match.

HIPR (High Priority 1602) – In TEA-21 section 1602, Congress earmarked funds for over 1,800 projects in many states. Alaska received over $68 million for sixteen projects. These funds are not available for other projects. The federal share is 80%.

HPRL (High Priority 1702) – In SAFETEA-LU section 1702, Congress earmarked funds for over 5,000 projects nationwide. Generally, these funds are not available for other projects; although the funding for some projects may be loaned to other projects within the list. The federal share is 90.97%.

IM (Interstate Maintenance) – Funds used for resurfacing, restoration, rehabilitation and reconstruction of the Interstate Highway System. The state selects and prioritizes all IM projects for funding. The federal funds ratio is 93.4%

IRR (Indian Reservation Roads) – transportation planning, research, engineering, and construction of the highways, roads, and parkways, or of transit facilities serving federally-recognized Indian tribes.

NCPG (National Corridor Infrastructure Improvement Program) – Alaska received earmarked funds under this program in TEA-21. The program was revised by SAFETEA-LU into two separate programs; Coordinated Border Infrastructure Program and this one. The new program provides funding for construction of highway projects in corridors of national significance to promote economic growth and international or interregional trade. The federal funds ratio varies from 90.97% to 100% depending on the type of project and its location.

NHS (National Highway System) – A system of highways considered most important to interstate travel, national defense, connection with other modes of transportation, and are essential to international commerce. The system includes the current interstate highways and much of the old primary system. Federal law designated Alaska's system of NHS routes in December 1995. Currently, over 2,100 miles of highway and all the vessels of the Alaska Marine Highway System, including designated terminals, are eligible for NHS funding. The federal funds ratio is 93.4% if used on a section of interstate, or 90.97% if it is not.

OSF (Other State Funds) – Funding from non-federal state funds that have been appropriated.
PLD (Public Lands Discretionary Funds) – See Federal Lands Highway Program

PPP (Public-Private Partnership Financing) – Funds intended to be provided by a private entity in a partnership with a public entity (state, federal or local government) to support construction of a project, the funds to be repaid typically by the collection of tolls.

PLNG (State Planning) – These funds are designated for the mandatory planning tasks the department undertakes, including preparation of the Statewide Transportation Plan (SwTP) and State Transportation Improvement Program (STIP), statistical measurements of the transportation system (traffic volumes, pavement condition, accident locations, causes and severity, and physical characteristics of roads and highways), mapping, and management systems. The federal funds ratio is 80%.

PSF (Proposed State Funds) – Funding proposed from non-federal state funds that are not yet appropriated but are believed to be sufficiently likely that we have included them in a project's budget.

RES (Research) – These funds are designated for research tasks the department undertakes, including engineering and economic studies and applied research. The federal funds ratio is 80%.

RHE (Rail Hazard Elimination Program) – This purpose of this program is to reduce the number of fatalities and injuries at public highway-rail grade crossings through the elimination of hazards and/or the installation/upgrade of protective devices at crossings. This program funds the federal requirement that each state conduct and systematically maintain a survey of all highways to identify railroad crossings that may require separation, relocation, or protective devices, and establish and implement a schedule of projects for this purpose. The federal funds ratio is 90%.

RTP (Recreational Trails Program) – This funding category is intended to develop and maintain recreational trails and trail related facilities for both non-motorized and motorized recreational trail uses. This program is administered by the Department of Natural Resources. The federal funds ratio is 90.97%.

SA (Safety) – Safety projects include hazard elimination, railroad crossing, and railroad protective devices. In order to qualify, the project must be identified through the Highway Safety Improvement Program, which seeks to identify hazardous locations throughout the state based on accident histories. The federal funds ratio varies and is either 90% or 100% depending upon the specific category of work.

SA40 (Safety Sanction) – This special category of safety funds addresses highway hazard eliminations similar to *Safety (SA)* above, 100% federal. The funds are made available by a sanction or reduction to Alaska's Interstate Maintenance, National Highway System and Surface Transportation Program apportionments. Each year, 3% of these program funds are reallocated because Alaska does not have conforming laws addressing repeat DUI and open alcoholic containers on motorcycles.

SCBY (Scenic Byways) – This is a small category designated for planning, design and development of scenic byways programs on existing surface transportation routes. The funds Alaska receives under this program are based on successful competition with applicants nationwide. The federal funds ratio is 80%.

SM (State Match) – The State's share of project costs required to match federal program funds. Depending on the particular federal program requirements, the state's share of the costs, the state match required, will vary from as little as zero percent to as much as 50%. Most often the state's share will range from 9.03% to 20%.

SRTS (Safe Routes to School) – This new funding category created by SAFETEA-LU is intended to fund the planning, design, and construction of projects that will substantially

improve the ability of students to walk and bicycle to school. Between 10% and 30% of the funds must be allocated for non-infrastructure-related activities to encourage walking and bicycling to school. The federal funds ratio is 100%.

STP (Surface Transportation Program) – Flexible funding that may be used by the state and localities for projects on any Federal-aid highway, including the NHS, bridge projects on any public road, transit capital projects, and intracity and intercity bus terminals and facilities. Unlike other states, Alaska is allowed to use these funds on any public road in Alaska, regardless of classification. The federal funds ratio varies, typically 93.4% if spent on interstate routes or 90.97% otherwise.

STR (Transportation Research Program Earmark) – Earmark funds from the Environmental Research Program managed by FHWA. Congress has recently earmarked these funds for analyzing dust in Western Alaska villages.

TCSP (Transportation and Community and System Preservation) – A discretionary grant program that provides funds to states, MPOs, local and tribal governments for projects that address the relationships among transportation, community, and system preservation plans and practices and identify private sector-based initiatives to improve those relationships. The federal share is 90.97%.

TE (Transportation Enhancements) – These funds are for projects that go beyond routine highway projects to enhance the transportation experience, including projects such as bicycle and pedestrian facilities, landscaping, historic preservation, and the reduction of wildlife deaths caused by vehicles. The federal funds ratio is 90.97%. To be eligible for TE funding a project must relate to surface transportation and fall within one or more of twelve specific transportation enhancement activities defined by federal law.

URPL (Metropolitan Planning) – In Alaska, these funds can be used in any urban area within the state. Planning processes and special planning studies are eligible activities within this program. The federal funds ratio is 90.97%.

Public Transportation (Transit) funding sources (Federal Transit Administration)

The Federal Transit Administration (FTA) administers several public transportation grant programs that provide financial assistance to develop new transit systems and to improve, maintain, and operate existing systems. Like highway federal-aid programs, each public transportation program has different requirements intended to meet specific needs as determined by Congress. While some funds flow directly from FTA to designated recipients with the legal authority to receive and dispense federal funds, such as cities, towns, regional governments, or transit authorities, DOT&PF administers many of the grant programs in Alaska according to the specific requirements of each..

3037 (Job Access and Reverse Commute TEA-21) – This discretionary program funded new or expanded transportation projects for low-income individuals who may live in the city core and work in suburban locations, or work non-traditional work schedules. SAFETEA-LU

revised this program (see 5316) to allocate funds to the states on a formula basis instead of the discretionary program it was under TEA-21. The federal funds ratio for the remaining TEA-21 program funds is 50%.

3044 (Bus and bus-related projects) – Section 3044 of SAFETEA-LU earmarked funding for specific bus and bus-related projects and clean-fuel projects using section 5309 funding. These projects are now tracked using the 5309BU program designation.

5307 (Capital and Operating Funds for Urbanized Areas) – These funds are distributed to eligible urban areas according to a federally mandated formula based on population, population density, and level of public transportation service. The eligible transit operations in Alaska for this program are in Anchorage and Fairbanks. Urban areas with populations over 200,000 (Anchorage) receive funds directly from FTA and may use their funds for capital investments. Urban areas with populations under 200,000 (Fairbanks) may use the funds for both operations and capital projects. In each case the project selections are made by the MPO and are listed in its TIP.

5307RR (Urban Rail Setaside) – A portion of Section 5307 funds, *Capital and Operating Funds for Urbanized Areas* specifically set aside for railroad projects in Anchorage and Fairbanks.

5309 (Capital Program) – This program provides capital assistance for three primary activities:

- *(5309BU)* New and replacement buses and facilities
- *(5309FG)* Modernization of existing rail and ferry systems
- *(5309NS)* (New Starts) New fixed-guideway systems (including ferry systems)

Congress usually fully earmarks all available funding. In SAFETEA-LU Congress set aside a portion of the New Start funds for capital improvements on Alaska and Hawaii ferry systems (the two states split the set-aside). Congress also set aside a portion of the Capital Program New Starts funds for the Denali Commission for docks, waterfront development projects, and related transportation infrastructure. On occasion, a recipient agency will apply for section 5309 funds on behalf of transit agencies throughout the state and ask DOT&PF to administer these funds. When this happens, the funds are distributed through the annual Alaska Community Transportation Grant application process. The federal funds ratio is 80%.

5310 (Elderly and Persons with Disabilities Program) – This program funds transportation services to meet the special needs of the elderly and persons with disabilities. Funds are apportioned to the states based on the number of elderly and persons with disabilities in each state. Grants are available to nonprofit organizations for the purchase of vehicles, related equipment, and the purchase of rides. SAFETEA-LU listed Alaska as one of a select group of states to participate in a pilot program that would allow a portion of these funds to be used to cover operating costs (at a 50% match) of projects that meet the special needs of elderly individuals and individuals with disabilities. The federal funds ratio for the remainder of these funds is 90.97%.

5311 (Nonurbanized Area Formula Program) – This program provides funding to enhance public transportation in rural and small urban areas. It also assists in the maintenance,

development, improvement, and use of public transportation systems. A component of this program is the Rural Transit Assistance Program (RTAP), which provides training and technical assistance to transit operators. The federal funds ratio is 90.97% for capital projects and up to 56.86% for operating assistance. RTAP projects are 100% federally funded.

5316 (Job Access and Reverse Commute) – This program funds new or expanded transportation projects for low-income individuals who may live in the city core and work in suburban locations, or work non-traditional work schedules. Formula allocations are based on the number of low-income persons in the state and are apportioned to urban areas over 200,000 residents, urban areas under 200,000, and to the state for non-urban areas. SAFETEA-LU revised this program to allocate funds to the states on a formula basis instead of the discretionary program it was under TEA-21. The federal funds ratio is 50% for operating assistance and 80% for capital. The federal funds ratio for the remaining TEA-21 program funds is 50%.

5317 (New Freedom Program) – This new program created by SAFETEA-LU provides for service and facility improvement to address the transportation needs of persons with disabilities that go beyond those required by the Americans with Disabilities Act. This provides for both capital and operating costs. The federal funds ratio is 50% for operations and 80% for capital.

5320 (Alternative Transportation in Parks and Public Lands (ATPPL) Program) – This new discretionary program created by SAFETEA-LU funds capital and planning expenses for alternative transportation systems in national parks and public lands. The program is administered by the Federal Transit Administration (FTA), in partnership with the U.S. Department of the Interior (DOI) and the U.S. Department of Agriculture Forest Service (USFS). Projects in or in the vicinity of a national park, National Wildlife Refuge, BLM area, Bureau of Reclamation (BR) area, or National Forest System area are eligible for funding. The federal funds ratio varies.

ESFG (Economic Stimulus Fixed Guideway) – One-time funding made available to the states as part of the American Recovery and Reinvestment Act of 2009. These are funds for fixed guideway transit projects such as railroads, subways and streetcars. The federal definition includes use on ferry projects such as the Alaska Marine Highway. Federal funding is anticipated to be 100%; strict time limits and other restrictions apply.

ESRT (Economic Stimulus Rural Transit) – One-time funding made available to the states as part of the American Recovery and Reinvestment Act of 2009. These are funds for non-urbanized public transportation projects – projects outside of major metropolitan areas. Federal funding is anticipated to be 100%; strict time limits and other restrictions apply.

RRBOND (FTA Capital Grant Receipt Revenue Bonds) – Bonds issued by the Alaska Railroad to be repaid in part by future Federal Transit Administration sections 5307 and/or 5309 funds. Section 5307 funds are made available on a yearly basis to urbanized areas to finance capital and planning assistance for mass transportation; section 5309 funds are made available to finance new capital projects.

Federal highway funds may be used for some public transportation projects. These projects are selected using scoring criteria for public transportation (transit) projects in the CTP program. Public transportation projects funded in this manner are included in the STIP project detail in the Community Transportation Program project table. The federal funds ratio is 90.97%

Fiscal Summary - Programmed Funds

Programmed Funds (in thousands)	Acronym	Carryover	2009
Federal Highway Administration (FHWA) Funding[1]			
American Recovery and Reinvestment Act	ESFX		238,322.4
Bridge / Ferry Replacement	144M		0.0
Bridge Rehabilitation & Replacement Program	BR		30,344.0
Contributed Match	CM		451.5
Mandatory Congestion Mitigation & Air Quality	CMAQ		4,583.1
Section 115, FFY 2004 Federal Appropriations Earmark	E115		9,015.0
Section 117, FFY 2005 Federal Appropriations Earmark	E117		2,514.8
Section 330, FFY 2003 Federal Appropriations Earmark	E330		3,282.8
Earmark Flexible	EMFX		60,745.1
Emergency Relief	ER		0.0
Ferry Boat Discretionary	FBD		0.0
Ferry Boat Discretionary - Alaska Setaside	FBDA		27,574.1
Grant Anticipated Revenue Vehicle (GARVEE)	GARV		0.0
TEA-21 High Priority Projects	HIPR		100.0
SAFETEA-LU - High Priority Projects	HPRL		61,652.3
Interstate Maintenance	IM		44,487.7
National Corridor Planning & Border Development Program Earmarks	NCPD		1,000.0
National Highway System	NHS		52,722.0
Public Lands Discretionary	PLD		0.0
Planning	PLNG		3,496.8
Research	RES		1,189.8
Rail Hazard Elimination	RHE		841.5
Recreational Trails Program	RTP		919.4
Highway Safety Improvement Program	SA		7,860.3
Safety Sanction Funds	SA40		18,630.0
Scenic Byways	SCBY		400.0
SHAKWAK	SHAK		0.0
Safe Routes To Schools	SRTS		749.3
Surface Transportation Program & Other Flexible Funds[2]	STP		97,350.0
Surface Transportation Research Earmark	STR		0.0
Transportation Improvements	1934		3,941.3
Transportation Enhancements	TE		4,826.0
Metropolitan Planning	URPL		1,292.0
Federal Transit Administration (FTA) Funding			
American Recovery and Reinvestment Act (5309FG)	ESFG		31,800.0
American Recovery and Reinvestment Act (5311)	ESRT		11,479.0
Job Access and Reverse Commute - TEA-21	3037		99.1
Urbanized Area Formula Program Program Passenger Operations - Alaska Railroad	5307RR		25,531.1
Capital Program - Bus and Bus Facilities	5309BU		17,471.9
Capital Program - Fixed Guideways	5309FG		13,735.0
Capital Program - New Starts	5309NS		36,488.2
Elderly and Persons with Disabilities Program	5310		864.3
Nonurbanized Area Formula Program	5311		6,494.9
Job Access and Reverse Commute - SAFETEA-LU	5316		303.0
New Freedom Program	5317		146.3
Alternate Transportation In Parks and Federal Lands	5320		4,200.0
Alternate Transportation - RR In Parks and Federal Lands	5320RR		0.0
Other Funding			
Advance Construction	AC		155,546.8
Targeted Advance Construction	AC-T		32,738.2
Advance Construction Conversion (Payback)	ACC		-30,828.5
Targeted Advance Construction Conversion (Payback)	ACC-T		-33,748.9
Bureau of Indian Affairs	IRR		332.3
Other Available State Funds	OSF		50,751.9
State Match & Unforseseen Ineligible Funds	SM		56,720.0
Third Party Funds	3PF		14,917.4

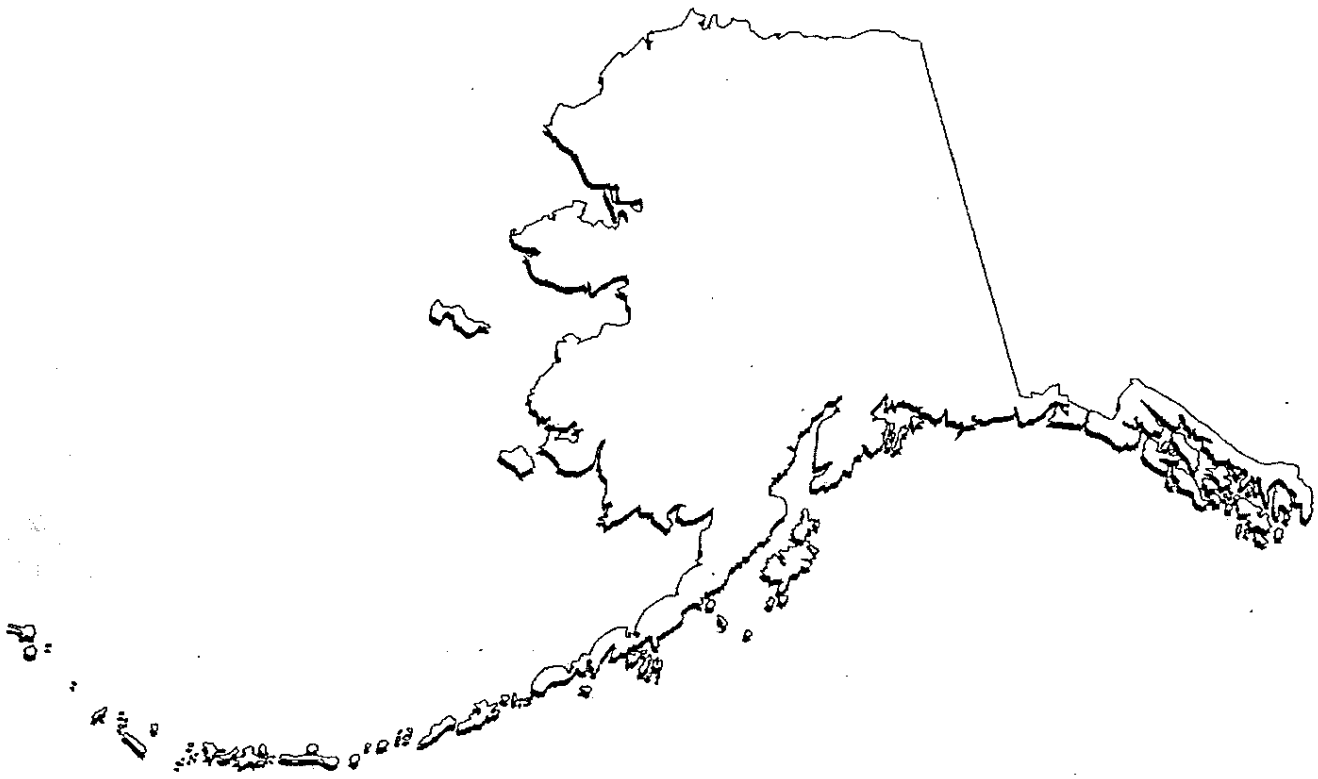
2/17/09 OVERVIEW: LEGISLATIVE FINANCE OVERVIEW OF GOVERNOR'S FY10 BUDGET

<target><bill></bill><subject>2-17-09 OVERVIEW LEGISLATIVE FINANCE OVERVIEW OF GOVERNOR'S FY10 BUDGET</subject><comm>SFIN26</comm></target>

The Fiscal Year 2010 Budget:

Legislative Fiscal Analyst's Overview of the Governor's Request



Legislative Finance Division

http://www.legfin.state.ak.us/

The Legislative Fiscal Analyst Office has a professional, non-partisan staff that provides general budget analysis for members of the legislature and specifically supports the Legislative Budget and Audit Committee and the House and Senate standing finance committees. Each fiscal analyst is assigned agency areas of responsibility. Duties of the office are to:

(1) analyze the budget and appropriation requests of each department, institution, bureau, board, commission or other agency of state government;
(2) analyze the revenue requirements of the state;
(3) provide the finance committees of the legislature with comprehensive budget review and fiscal analysis services;
(4) cooperate with the Office of Management and Budget in establishing a comprehensive system for state budgeting and financial management as set out in the Executive Budget Act (AS 37.07);
(5) complete studies and prepare reports, memoranda or other materials as directed by the Legislative Budget and Audit Committee;
(6) with the Governor's permission, designate the legislative fiscal analyst to serve ex officio on the Governor's budget review committee. [AS 24.20.231]

Legislative Finance Budget System. The system tracks budget transactions and provides comparative reports for committees and subcommittees. In addition, the system is used to produce the Governor's budget request books, the general appropriations bills, Conference Committee reports and a breakdown of the capital budget by House district.

Alaska Legislature 152

Introduction

As required by law, the Governor released her FY2010 budget proposal to the public and the legislature on December 15, 2008. The Legislative Finance Division prepared this Overview of the Governor's proposal and "subcommittee books" for each agency in accordance with AS 24.20.211-231.

Alaska's Fiscal Situation

For the first time in five years, State Senators and Representatives will begin a legislative session facing the prospect of a fiscal gap. Although the fiscal summary prepared at the end of the 2008 session anticipated a surplus of $350 million for FY09, an unprecedented drop in oil prices since then has turned a projected surplus into a projected $360 million deficit. And that projection is based on an average FY09 oil price of $78/barrel. If oil averages $40/barrel for the remainder of FY09, the deficit will be almost $2 billion—after paying $745 million as a resource rebate and depositing $1 billion into the Constitutional Budget Reserve Fund. (See the FY09 Sensitivity Chart on page 2.)

The FY2010 fiscal situation is equally sensitive to oil prices. The official Department of Revenue projection is that oil will average $74/barrel during FY2010. At that price, revenue will be sufficient to support the budget proposed by the Governor; as shown on line 46 of the fiscal summary on page 4, a pre-savings surplus of about $150 million is projected.

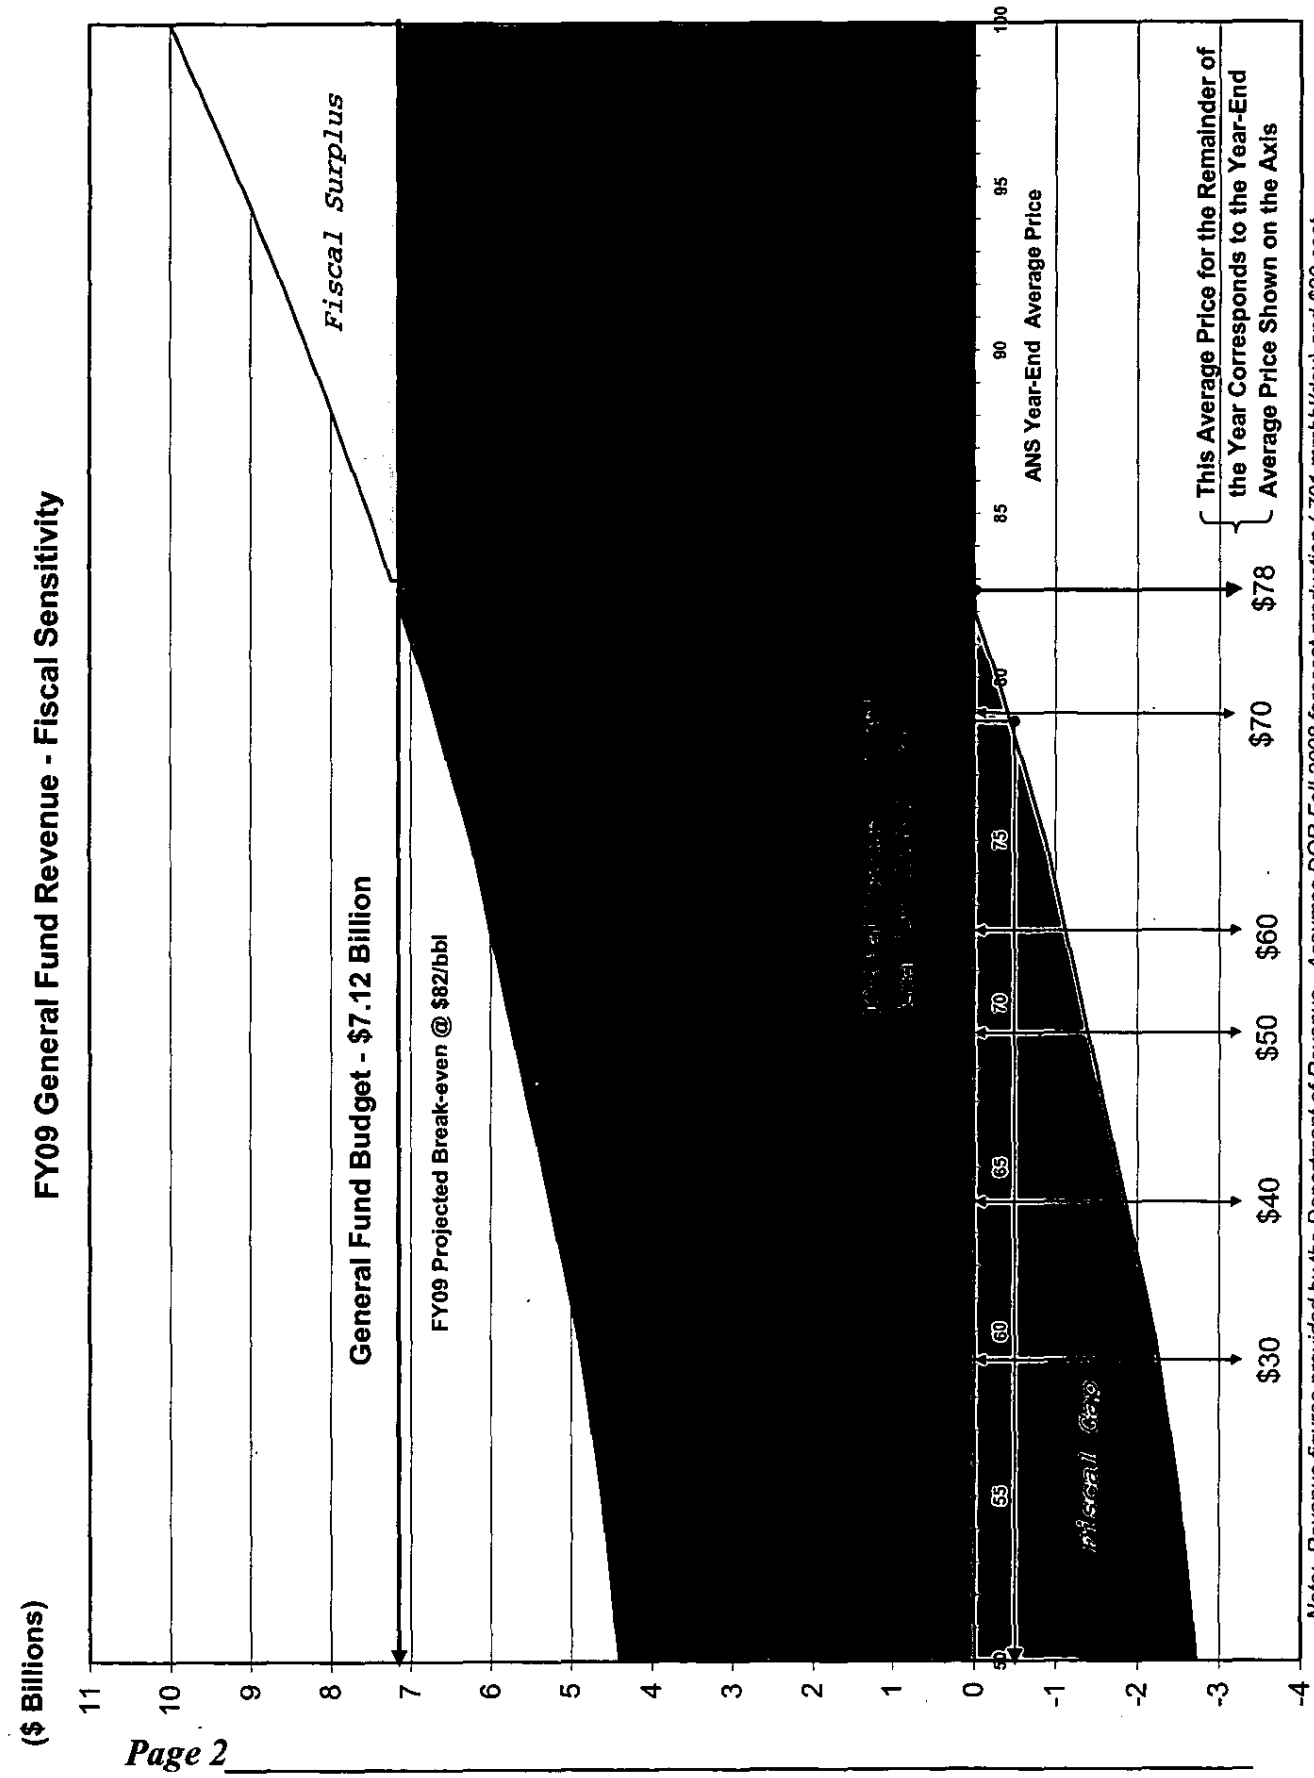
With oil now selling at less than $40/barrel, some legislators have questioned whether the official revenue forecast ($74/barrel oil) for FY2010 is a useful planning tool. Legislative Finance has used the official forecast for years, but finds a sensitivity chart to be a more useful tool than a specific dollar projection. The FY2010 Sensitivity Chart on page 3 shows how the surplus/deficit situation changes with oil prices (assuming adoption of the Governor's proposed spending level of $5.13 billion general funds):

- $74 oil (the official forecast) produces a surplus of $148 million;
- $73 oil produces a balanced budget;
- $55 oil produces a deficit of about $2 billion; and
- $35 to $40 oil produces a deficit of about $3.5 billion.[1]

In summary, Alaska may be challenged with unprecedented levels of deficits (or budget reductions) unless and until oil prices rebound significantly. The combined deficit for FY09 and FY2010 could reach $5 billion.

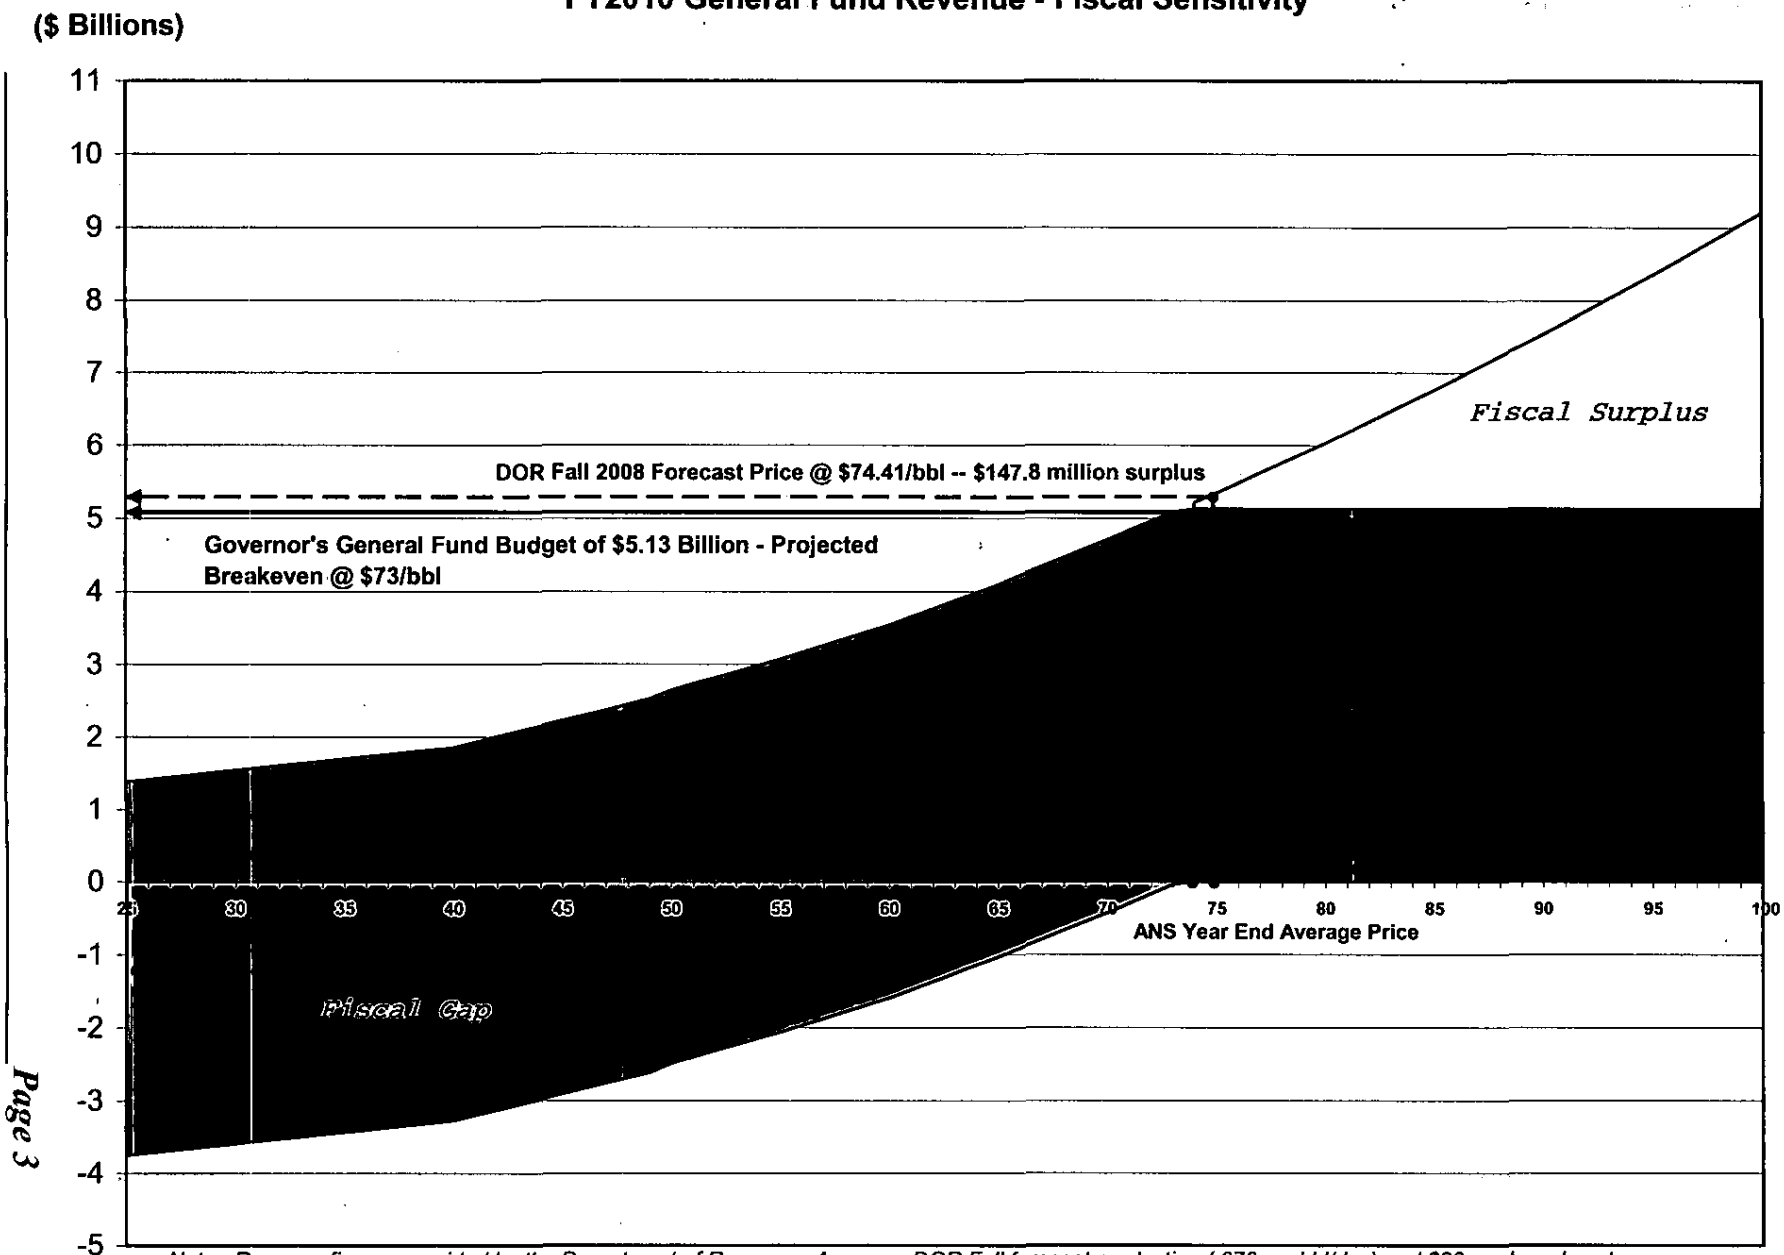
Perhaps the only good news related to oil prices is that historically high prices in recent years allowed Alaska to develop an unprecedented level of reserves. As an example of the massive savings effort in recent years, consider the status of the Constitutional Budget Reserve Fund (CBRF). Withdrawals from the CBRF have been used to fill budget gaps almost every year since 1991, and it took 15 years to accrue a general fund debt to the CBRF of $5.2 billion. The legislature repaid over $4.6 billion of that liability since oil prices began climbing. Even with

[1] The sensitivity charts are vast oversimplifications of revenue forecasting techniques. They show only average oil prices for the year, while revenue at any average price is affected significantly by month-to-month price volatility because of the progressive nature of the tax. Although the charts can easily misstate annual revenue by $100 million or more at any price point, they are useful as a guide to determining the surplus/deficit at various oil prices.



Note: Revenue figures provided by the Department of Revenue. Assumes DOR Fall 2008 forecast production (.701 mmbbl/day) and $20 cost estimates. Revenue figures include sources not directly affected by oil prices. Budget figures include operating, capital and savings.

FY2010 General Fund Revenue - Fiscal Sensitivity



Note: Revenue figures provided by the Department of Revenue. Assumes DOR Fall forecast production (.676 mmbbl/day) and $20 per barrel cost estimates. Revenue figures include sources not directly affected by oil prices. Budget figures include operating and capital.

January 15, 2009

Notes:

(1) The Fall 2008 revenue forecast for FY09 is 0.701 mmbd at $77.66 per barrel; the FY2010 forecast is 0.676 mmbd at $74.41/bbl.

(2) Carryforward is money that was appropriated in a prior year that is made available for spending in FY09 via multiyear appropriations or reappropriations.

(3) Corporate dividends include funds made available to the State by the boards of AHFC, AIDEA, and ASLC. Dividends retained by AHFC for debt service on state capital project bonds are excluded from the stated amount. Net dividends for FY09 and FY2010, respectively, are AHFC-$59.7 million and $65.5, AIDEA-$23.8 million and $22.7 million, and ASLC-$4.1 million and $0.0 million.

(4) Duplicated authorizations are in the budget twice, such as when funds flow in and out of a holding account or one agency pays another for services provided. Duplicated authorization also includes the expenditure of bond proceeds when debt service on bonds (which includes repayment of principal) will be reflected in future operating budgets.

(5) The state is responsible for future debt service payments on airport revenue bonds and GO bonds. Bond proceeds are included on line 36 and 37 and are deducted on line 40.

recent investment losses, the balance in this savings account exceeds $6 billion. The legislature has added to other savings accounts as well:

- $1 billion to the Statutory Budget Reserve Fund;
- $1.1 billion to the Public Education Fund; and
- $300 million to the AHFC Capital Corporation savings account.

Without these reserves, Alaska's FY2010 budget could resemble a list of catastrophic spending reductions. Alaska's more than $8 billion in reserves (excluding money held by the Permanent Fund) allows the state to take a studied approach to the fiscal situation—turning what could be a short-term crisis into a longer-term planning challenge.

The Governor's Response to the Fiscal Situation

This discussion focuses on what the Governor proposed in her budget, not on whether the Governor's budget shows too much or too little response to the fiscal situation. That topic will undoubtedly be fodder for legislative debate; this review is intended to give context to that debate by dividing the budget into four topics:

1. **Agency operating budgets** are perhaps the best description of the public perception of "the budget"—they include money for Medicaid, K-12 education and other grant programs as well as the money to operate all public agencies. Because they are often perceived as providing necessary public services, agency operating budgets are notoriously difficult to cut, even in response to declining revenue.
2. **Statewide operations** include some items that are sticky in the sense that they depend on prior commitments and are difficult to change in the short term. These items include debt service and retirement system costs. Other items—community revenue sharing and the resource rebate, for example—are designed to spend money only when money is available. This part of the budget can be more responsive to changes in revenue.
3. **Capital budgets** act as shock absorbers in many states; capital spending increases when revenue is available and decreases—in some cases to little more than the matching amount required to receive federal grants—when state revenue declines. In Alaska, capital spending is sometimes perceived as more desirable than operating spending because it "brings the money home" to the people that want infrastructure and economic development.
4. **Savings** is the portion of the budget that is most responsive to revenue spikes. That status does little to reduce controversy; "How much should be saved?" was certainly a topic when oil revenue spiked. Similarly, revenue declines are sure to lead to questions/debate: "Should we withdraw from savings or focus on cutting expenses?" "Which savings account should be the source of withdrawals?" "How long will savings last if we.....?".

The graph on page 6 breaks Alaska's general fund budgets into the four topics described above. There are a few patterns worth noting:

- Agency budgets grew rapidly during the revenue spikes in the early 1980s and 2005-2008, but were stable when revenue did not support growth.
- Statewide operations were a decreasing part of the budget as GO bonds were repaid by FY00. The recent increase is due primarily to the cost of retirement contributions, capital expense credits against oil and gas production taxes, and the FY09 resource rebate.

- Capital budgets jump during periods of surplus revenue and fade to little more than the minimum required for federal match when money is tight.
- Savings occur only during revenue spikes.

This review focuses on general funds, not because other funds are unimportant, but because the difference between unrestricted general fund spending and unrestricted general fund revenue defines the fiscal gap.[2]

1. **Agency operating budget** growth was $336 million (11%) from FY08 to FY09. The Governor's proposed increase from FY09 is less than one-third as large—$92 million (2.7%).

   - Most of the increase in agency operations can be categorized as "unavoidable".
     - $51 million is due to K-12 education formula changes that were specified in advance,
     - $31 million is associated with salary increases for state employees, and
     - $3 million is associated with a Governor's bill that reduced business license fees.

   The sum of these items may appear to imply that the Governor's budget contains few increases other than "unavoidable" items. But there were some items in FY09 agency operating budgets that are not repeated in the FY2010 request. These items understate the FY2010 increase by $43 million.

   - Funding for Power Cost Equalization was increased by $23 million for FY09 due to extraordinarily high fuel prices. The FY09 funding was a short-term fix and the issue is to be readdressed this session; it will be interesting to see the Governor's proposal for permanent changes to the program.
   - Funding for increased fuel and utility costs was $44 million in FY09, and is $24 million in FY2010. Given current fuel prices, the reduction is not out of line. It is, however, inconsistent with the official oil price forecast (see discussion of section 13 of the Governor's proposed language). At the official forecast, the fuel appropriation should be $7 million higher in order to match the schedule used in FY09.

   Beyond a few large items, attempting to classify increases as "unavoidable" or "discretionary" is not particularly productive; opinions will always vary. But reviewing recent budget growth can help put the FY2010 budget in perspective. The 2.7% increase in agency operations in FY2010 is the smallest in several years. Since FY05, agency operating costs have increased between ten and 15% annually.

2. **The statewide operating budget** proposed for FY2010 is $843 million less than the statewide operating budget for FY09. This decline does not indicate any significant change in policy direction; the decline is due to:

   - Elimination of the $1,200 per person one-time resource rebate—$745 million.

[2] State unduplicated funds should arguably be the focus of any multi-year budget analysis. That fund group is more comprehensive, more consistently defined and more informative than the general fund group. Finance Committee Co-chairs have indicated an interest in reviewing the budget reporting system in order to provide clearer, more meaningful information on state spending and revenue.

- A reduction in anticipated claims for oil and gas development credits—$100 million.
- Elimination of one-time capitalization of loan funds—$16 million ($11 million for fuel purchases and $5 million for improved safety electronics in private aircraft).

There is a $13 million increase in debt service, almost all of it associated with the sale of $315 million in general obligation bonds for FY09 capital projects and an increase in debt for correctional centers.

Retirement contributions offer substantial flexibility. Actuarial recommendations allow the state to reduce retirement contributions by about $160 million in FY2010. The Governor proposed no reduction of contributions. But there is more to this story:

- State retirement systems have an unfunded liability of several billion dollars. Although there is considerable flexibility in determining a repayment schedule, the liability must eventually be disposed of.
- The legislature has avoided actions that would have reduced state retirement contribution rates—essentially opting to pay down the unfunded liability when revenue was high.
- The fiscal situation has changed—the outlook is for deficits rather than surpluses.
- Maintaining savings balances offers a more flexible planning environment than can be achieved by paying down retirement system unfunded liability. In the current fiscal situation, the legislature may wish to reexamine its policy positions on "extra" retirement payments and on making changes (to actuarial methods) that could modify the shape of the long-term curve representing required retirement contributions.

3. **Capital budgets** are put together under a different concept than operating budgets. While operating budgets are incremental—meaning that each year there are increments (and more rarely, decrements) to a base budget that moves forward from one year to the next—capital budgets start over every year. Compared to operating budgets, capital budgets are often far more responsive to changes in revenue.

   The Governor's capital budget proposal is $114 million (20%) less than the FY09 capital budget adopted by the legislature. It is perhaps more useful/interesting to compare the FY2010 proposal with the FY09 proposal. In that regard, the FY2010 proposal is $194 million greater in general funds and $310 million greater in federal funds than the Governor's FY09 proposal. Other funds are down $416 million; the FY09 Governor's budget proposed spending $300 million in bond proceeds and $168 million from the capital income fund. Please see the capital budget discussion in this *Overview* for additional details.

4. **Savings** is the portion of the Governor's budget that most clearly exhibits a policy position. Saving for the future was one of the Governor's two major policy initiatives in FY09. She proposed making deposits to a transportation endowment, an energy fund, the Permanent Fund and the Public Education Fund. While few of these plans came to fruition, the legislature deposited nearly $1.2 billion to savings in FY09 (along with over $5 billion of FY08 revenue).

   As shown in the fiscal summary (line 47), the Governor's proposed budget spends $235 million from savings accounts. Given a pre-savings surplus of $148 million (line 46), withdrawing from savings accounts is a peculiar policy decision. After withdrawing from savings accounts, there is a projected FY2010 surplus of $383 million (line 59) that (absent an appropriation to the contrary) will be swept into the Constitutional Budget

Reserve Fund (CBRF) at year end. Effectively, the proposed budget transfers $235 million from other savings accounts to the CBRF.

- The proposed budget spends $238 million from the Alaska Housing Capital Corporation account---a savings account the legislature created with a $300 million general fund deposit in FY07. The Legislative Finance fiscal summary shows this item as a withdrawal from the savings account and a corresponding increase in general fund expenditures. The Governor shows the item as an expenditure of "other" funds rather than of general funds. Further, the expenditure is classified in the Governor's budget as a duplicated expenditure so it shows as a net zero item.

- Section 18(w) of the Governor's operating budget bill appropriates $1.062 billion from the general fund to the Public Education Fund (PEF) in FY2010. This amount is $9.5 million more than required to fund K-12 education in FY2010, so the fiscal summary shows a $9.5 million deposit to savings.

  But there has been an effort to forward fund K-12 education in recent years. The concept of forward funding is that the amount appropriated in a given year will be the amount required in the following year. In this regard, the Governor's $1.062 billion appropriation is $50 million short of forward funding the anticipated $1.112 billion cost of K-12 education in FY2011.

  Although the Governor's action leaves the Public Education Fund with a balance (nearly) sufficient to fund anticipated FY2011 K-12 expenditures, this is possible only because the balance of the Public Education Fund included a surplus that was intended to provide a cushion in case expenditures exceed expectations. While not technically a withdrawal from savings, the Governor's proposal reduces the PEF balance by $50 million compared to the forward funding concept adopted by the legislature.

- The Governor's budget also calls for spending $12 million of proceeds from the Cruise Ship Gambling Tax. The Governor classifies the revenue as "other" funds despite their inclusion (by the Department of Revenue) in the forecast of unrestricted general funds. To further complicate the matter, the FY2010 budget spends revenue from both FY09 and FY2010 ($6 million from each year). The Legislative Finance fiscal summary shows the use of gambling tax proceeds as a $6 million savings deposit in FY09 offset by a $6 million withdrawal in FY2010 (line 52).

Further Analysis

Although the fiscal summary provides a concise statement (and comparison) of projected revenue, appropriations and the size of the anticipated surplus or deficit, it has the limitation of being Alaska's budget-on-a-page. This *Overview* contains more detailed discussions of the proposed FY2010 budget:

- Agency summaries (operating budget on pages 11 & 12 and capital budget beginning on page 49) provide a quick comparison of the Governor's proposed budget with FY09 spending.
- Greater detail is available in the discussions of the operating budget (and subtopics) and the agency write-ups beginning on page 67.

Also, subcommittee members will want to review the detailed agency books available in the Finance Committee rooms.

THIS PAGE INTENTIONALLY LEFT BLANK

Operating Budget

The fiscal summary provides a "big picture" of the budget, including not only the operating budget, but also the capital budget, revenue, debt service, transfers and new legislation. This introduction to the operating budget focuses on how to put the Governor's operating request in perspective.

Budget comparisons across fiscal years are always difficult—there are so many adjustments required to get an "apples-to-apples" comparison that a complete discussion would push the limits of the term "overview." These details are better left to subcommittees. The agency discussions in this overview serve as a starting point for subcommittee discussion, and subcommittee books provide more detailed information.

Each subcommittee book compares the Governor's request to two scenarios: FY09 Management Plan and FY2010 Adjusted Base. The advantages and disadvantages of using each of the comparisons are discussed in the paragraphs below. The following table highlights items included throughout each stage of the budget.

		GF Only	Change from FY09 Mgt Plan	Change from FY2010 Adj Base
FY2009 Management Plan (GF Only)		**3,428,123.5**		
	One-Time Items removed	(142,788.3)		
	Transfers between Agencies (nets zero statewide)	-		
	FY2010 Contractual Salary and Health Increases	26,917.0		
	Misc Adjustments	50,408.6		
FY2010 Adjusted Base Budget (GF Only)		**3,362,660.8**	**(65,462.7)**	
	FY2010 Unrealizable Salary Fund Source Changes	3,886.6		
	FY2010 Governor's GF Increment/Decrements/Fund Changes	128,335.0		
FY2010 Governor's Request (GF Only)		**3,494,882.4**	**66,758.9**	**132,221.6**

FY09 Management Plan to the Governor's request: $66.8 million. Management Plan is the most accurate picture of the previous year's budget. It incorporates all appropriations that can be spent in FY09, including reappropriations and carryforward from multi-year appropriations, and reflects the latest estimates for open-ended language appropriations. Management Plan excludes supplemental appropriations (because they have not yet occurred) but any FY2010 supplemental appropriations that may occur are also excluded, so there is no distortion from this source.

However, the Governor's FY2010 budget does not include reappropriations and carryforward from multi-year appropriations, so comparing the FY09 Management Plan to the Governor's FY2010 request tends to understate spending in FY2010 relative to FY2009. The amount carried forward to FY09 was about $20 million.

One-time items are a far larger source of distortion. For example, a $23 million appropriation to Power Cost Equalization is included in the FY09 Management Plan, but it is not expected to be repeated in FY2010. The PCE appropriation makes the FY2010 budget $23 million lower than the FY09 budget.

FY2010 Adjusted Base to Governor's request: $132.2 million. The adjusted base attempts to reduce distortion in comparing budgets across fiscal years. It is the first FY2010 budget scenario and can be described as the "cost of doing the same functions in FY2010 as in FY09." The adjusted base is the starting point for subcommittee discussion of the Governor's request.

- It removes one-time appropriations, reappropriations, and carryforward of multi-year appropriations that were included in the FY09 Management Plan.
- It incorporates the FY2010 nondiscretionary increases that the legislature may accept or reject on a statewide basis. If the legislature rejects these nondiscretionary increases, such as contractual salary increases, the costs of these increases will have to be absorbed by the agencies.

The FY2010 Adjusted Base includes increases for the salary adjustments below:

- **Contractual Wage and Health Insurance Increases for Bargaining Units**—Negotiated agreements for covered employees for contractual salary increases (which vary by bargaining unit) and increased health insurance costs add $56.6 million statewide ($31.7 million GF, $5.6 million Federal Receipts and $19.3 million in Other Funds).

The **Governor's column** includes program increments and fund source changes that the legislature may wish to consider on an individual basis. Note that the concept of adjusted base is useful only for agency operating budgets. Savings deposits and statewide items—debt service, fund transfers, retirement contributions, etc.—are not budgeted on an incremental basis and are not reviewed by subcommittees.

The following summary tables make the comparisons discussed above. Note that Agency Summary reports include duplicated fund sources, while the fiscal summary removes these items from the operating portion of the budget. Also note that the adjusted base is set at the Governor's request for items other than agency operating budgets.

Please see the agency narratives for details on significant issues in each agency's budget.

In addition to summaries of agency budgets, the *Overview* contains discussions of fund source changes for increased salary costs (general funds replacing federal and "other" fund sources), position changes and details of debt obligations.

Position Comparison

The Governor's FY2010 operating budget request increases permanent full-time (PFT) positions by 45 from the FY09 Revised Management Plan. In addition, 70 PFTs were added during FY09 to the number authorized by the legislature, so the total increase from the FY09 authorized level is 115. Overall, the Governor's FY2010 statewide budget contains 24,496 total positions (full-time, part-time, and temporary).

AS 39.25 (State Personnel Act) establishes the system of personnel administration within the state and describes the governor's authority to create and appoint positions within the executive branch. Positions (i.e. Position Control Numbers – PCNs) do not necessarily equate to the number of actual employees. More than one person can fill a single PCN, and many PCNs are vacant.

Permanent Full-time Positions Only

Non-Duplicated State Funding

Traditionally, comparisons of the Governor's operating budget have been made using two "Agency Summary" reports—a report comparing *total funds* (includes all federal, general, and other funds) and a report comparing only *general funds.*

This Overview includes a third report comparing differences in *non-duplicated state funding.* Over the years, several fund sources have moved from the general funds (GF) group to the "other funds" group. Although transferring funding from GF to the "other fund" group does not affect total spending, it does make it more difficult to see the true level of overall state spending.

The *State Funds* report shows all non-duplicated funds except federal receipts. Duplicate counting occurs when money is appropriated more than once. For example, an appropriation of general funds may be used to capitalize the Debt Retirement fund, and money in the Debt Retirement Fund may then be appropriated to pay debt service. Appropriations from the Debt Retirement Fund are classified as "duplicated." Reports using this fund group will not match the appropriations bill because the appropriations bill includes duplicated appropriations.

Fund Source Changes for Salary Adjustments

The Governor's FY2010 budget includes increases for rising insurance costs and negotiated salary agreements. There is a two-step process for allocating these cost increases among the various fund sources that pay the salaries and benefits of state employees.

- **Step One: allocate costs in proportion to current funding.** This allocation of costs goes in the *adjusted base* column—meaning that the costs are considered unavoidable and that there will be a single decision to incorporate the costs in the FY2010 budget. If the Finance Committee Chair decide to incorporate the cost increases at a statewide level, subcommittees will not be discussing the associated increments.
- **Step Two: replace "unavailable" fund sources with general funds.** Fund change transactions that reallocate costs among fund sources appear in the *Governor* column—meaning that subcommittees will be discussing the requested fund changes on an agency-by-agency basis.

The Governor's request replaces $3.9 million of federal and "other" funds with general funds. There are several reasons a fund source may be replaced. Finance Subcommittees need to examine each agency's fund source changes to determine whether the changes are justified. The following discussion highlights issues around some of the fund source changes, followed by questions subcommittees may want to consider to help them make decisions.

Fund source changes for programs supported by revenue, fund balances, or grants.

- **Revenue.** Many programs are supported by revenue generated by the programs. For instance, fees for use of the state parks are used to support the parks. If salary costs increase, should fees be increased to cover these costs? Or, due to statutory or other considerations, is a fee increase desirable?
- **Funds and accounts with "low" balances.** Some examples are the Fish and Game Fund, Commercial Fisheries Entry Commission receipts, Agricultural Revolving Loan Fund and the Oil/Hazardous Release Prevention & Response Fund. These funds are (or have been) spending at an unsustainable rate.
- **Grants that don't increase when costs increase.** Many grants are a set amount that does not increase as costs increase. Other grants have limits on overhead costs.

Fund source examples for the **revenue, fund balances,** and **grants** issues:

1002 Fed Rcpts	1027 IntAirport	1109 Test Fish	1180 A/D T&P Fd
1014 Donat Comm	1052 Oil/Haz Fd	1141 RCA Rcpts	1189 SeniorCare
1016 CSSD Fed	1053 Invst Loss	1153 State Land	1194 F&G NonDed
1005 GF/Prgm	1054 STEP	1154 Shore Fish	1201 CFEC Rcpts
1018 EVOS Trust	1055 IA/OIL HAZ	1155 Timber Rcp	
1021 Agric RLF	1076 Marine Hwy	1156 Rcpt Svcs	
1024 Fish/Game	1092 MHTAAR	1157 Wrkrs Safe	

Questions subcommittees may want to ask agencies:

- Is there a possibility of collecting more revenue for the program/project?

- If a fund balance exists, is it possible (or desirable) to draw more from the fund?
- Should the program absorb the cost of the salary adjustments?
- Should the state use GF for this program?
- Should the state subsidize a program that has been self-sustaining?

Fund source changes for contractual services.

- **Statutorily Designated Program Receipts (SDPR) (1108)** consists of program receipts for projects initiated by a third party that are outside the scope of an agency's normal business.
  - If a third party is contracting with the state to do something outside the scope of the agency's normal business, should the contract reflect the full costs of doing the third party's work?
- **Interagency (I/A) Receipts (1007)** consists of amounts transferred between appropriations under contractual Reimbursable Services Agreements (RSAs). For example, the Department of Labor and Workforce Development (Labor) may contract with the Department of Administration (DOA) for human resources services. Because Labor is primarily funded with federal funds, federal funds are used to pay DOA (it shows in DOA's budget as I/A Receipts). When general funds replace I/A receipts in DOA's budget, the state pays for the federal government's fair share of the cost of providing human resources to Labor.
- **Highways Equipment Working Capital Fund (Hwy Capital) (1026)** are receipts from rental fees and surcharges to various departments for equipment rental, repair and supplies.

The following questions apply to SDPR, I/A, and HwyCapital:

- When the cost of doing business rises, should the agency receiving services pay for the increment with the appropriate fund source?
- Would it be preferable to appropriate GF to the recipient of services rather than the provider of services? An increment in the receiving agency makes the budget clearer.

Fund source changes for Capital Improvement Project (CIP) Receipts

- **CIP Receipts (1061)** consist of amounts transferred from capital projects to the operating budget for project operating costs. As a project's operating costs increase, are additional CIP receipts available?

Language Sections of the Governor's FY2010 Operating Budget

Section Deleted; appeared in FY09 Operating Budget

LEGISLATIVE INTENT. (a) It is the intent of the legislature that the amounts appropriated by this Act are the full amounts that will be appropriated for those purposes for the fiscal year ending June 30, 2009.

Legislative Fiscal Analyst Comment: *In recent years the legislature has taken steps to reduce the need for routine supplemental appropriations. The intent of this section was to emphasize that supplemental operating appropriations are designed to be limited to needs that are truly unanticipated.*

(b) It is the intent of the legislature that money appropriated from the general fund be expended conservatively. If an appropriation includes the unexpended and unobligated balance of program receipts collected in a prior fiscal year, it is the intent of the legislature that the program receipts be expended, as allowed, before the expenditure of other money appropriated from the general fund. It is the intent of the legislature that the office of management and budget and the Department of Administration assist the legislature in carrying out this intent.

Legislative Fiscal Analyst Comment: *The legislature may wish to discuss the impact of this section, in terms of both general fund savings and accounting headaches. The legislature may wish to consider revising the language to allow a limited amount of carryforward of program receipts in those programs in which carryforward acts as a cushion against fluctuations in receipts.*

Section Deleted; appeared in FY09 Operating Budget

COSTS OF JOB RECLASSIFICATIONS. The money appropriated in this Act includes the amount necessary to pay the costs of personal services due to reclassification of job classes during the fiscal year ending June 30, 2009.

Legislative Fiscal Analyst Comment: *This section was added by the legislature several years ago in response to agency requests for supplemental appropriations to cover the costs of reclassification of selected job classes that the legislature was not informed of in advance. The section clarifies that the cost of reclassifying positions is to be absorbed in an agency's existing budget.*

Section Deleted; appeared in FY09 Operating Budget

PERSONAL SERVICES TRANSFERS. It is the intent of the legislature that agencies restrict transfers to and from the personal services line. It is the intent of the legislature that the office of management and budget submit a report to the legislature on January 15, 2009, that describes and justifies all transfers to and from the personal services line by executive branch agencies during the first half of fiscal year 2009. It is the intent of the legislature that the office of management and budget submit a report to the legislature on August 1, 2009, that describes and justifies all transfers to and from the personal services line by executive branch agencies during the second half of fiscal year 2009.

* **Sec. 4.** ALASKA AEROSPACE DEVELOPMENT CORPORATION. Federal receipts and other corporate receipts of the Alaska Aerospace Development Corporation received during the

fiscal year ending June 30, 2010, that are in excess of the amount appropriated in sec. 1 of this Act are appropriated to the Alaska Aerospace Development Corporation for operations during the fiscal year ending June 30, 2010.

Legislative Fiscal Analyst Comment: *This section is intended to maximize the AADC's ability to attract launch activity by eliminating all questions regarding the corporation's ability to accept and spend receipts in a timely manner.*

Funding: The estimated impact of this section is zero. Historically, the appropriations to AADC in section 1 have been sufficient to avoid application of this section.

* **Sec. 5.** ALASKA PERMANENT FUND CORPORATION. (a) The amount authorized under AS 37.13.145(b) for transfer by the Alaska Permanent Fund Corporation on June 30, 2010, is appropriated from the earnings reserve account (AS 37.13.145(a)) to the dividend fund (AS 43.23.045(a)) for the payment of permanent fund dividends and administrative and associated costs for the fiscal year ending June 30, 2010.

Subsection a appropriates funds from the earnings reserve account to the dividend fund for payment of dividends and administrative and associated costs. Earnings in FY2010 (as calculated on the last day of the fiscal year) will be used to pay PFDs in FY2010 and associated costs throughout FY2010.

Funding: The projected amount of dividend transfer for FY2010 is $1,168 billion, including administrative and associated costs. Administrative and associated costs for FY2010 are reflected in section 1 of the budget. They include the cost of operating the PFD Division, hold-harmless provisions that affect people served by the Department of Health & Social Services and "cost recovery" programs in various departments.

(b) After money is transferred to the dividend fund under (a) of this section, the amount calculated under AS 37.13.145(c) to offset the effect of inflation on the principal of the Alaska permanent fund during fiscal year 2010 is appropriated from the earnings reserve account (AS 37.13.145(a)) to the principal of the Alaska permanent fund.

Subsection b is an "inflation proofing" provision, which transfers money from the Earnings Reserve Account to principal.

Funding: The projected amount of inflation proofing for FY2010 is $872 million.

(c) The amount required to be deposited under AS 37.13.010(a)(1) and (2) during fiscal year 2010 is appropriated to the principal of the Alaska permanent fund in satisfaction of that requirement.

Subsection c appropriates 25% of mineral lease rentals, royalties, royalty sales, etc. to the principal of the Permanent Fund as required by constitution or statute.

Funding: These deposits to the Permanent Fund do not appear in the bill summary or in Legislative Finance reports because the deposits are constitutionally dedicated rather than appropriated. The Permanent Fund projects that dedicated deposits will be $659 million during FY2010.

* **Sec. 6.** DEPARTMENT OF ADMINISTRATION. The amount necessary to fund the uses of the state insurance catastrophe reserve account described in AS 37.05.289(a) is appropriated from that account to the Department of Administration for those uses during the fiscal year ending June 30, 2010.

This section references the statute that allows up to $5 million to be swept from lapsing general fund appropriations for the catastrophe reserve account. It appropriates funds from the catastrophe reserve account to the Department of Administration to obtain insurance, establish reserves for the self-insurance program, and to satisfy claims or judgments arising under the program.

Legislative Fiscal Analyst Comment: *This section re-emphasizes the state's authority to expend funds from the state insurance catastrophe reserve account described in AS 37.05.289(a). The language may not be necessary, but it does no harm.*

Legislative Fiscal Analyst Comment: *The catastrophe reserve account sweeps lapsing general fund appropriations annually to maintain a balance not to exceed $5 million. If these funds were not available, two opportunities would remain for meeting catastrophic situations: 1) supplemental appropriations by the legislature; and 2) judgment legislation. Delays that could occur with legislative remedies would cause difficulty in situations that require immediate action.*

Funding: This provision has no FY2010 fiscal impact; it allows money appropriated elsewhere to be transferred/spent but does not increase total appropriations.

* **Sec. 7.** DEPARTMENT OF COMMERCE, COMMUNITY, AND ECONOMIC DEVELOPMENT. (a) The unexpended and unobligated balance of federal money apportioned to the state as national forest income that the Department of Commerce, Community, and Economic Development determines would lapse into the unrestricted portion of the general fund June 30, 2010, under AS 41.15.180(j) is appropriated as follows:

(1) up to $170,000 is appropriated to the Department of Transportation and Public Facilities, commissioner's office, for road maintenance in the unorganized borough, for the fiscal year ending June 30, 2010;

(2) the balance remaining after the appropriation made by (1) of this subsection is appropriated to home rule cities, first class cities, second class cities, a municipality organized under federal law, or regional educational attendance areas entitled to payment from the national forest income for the fiscal year ending June 30, 2010, to be allocated among the recipients of national forest income according to their pro rata share of the total amount distributed under AS 41.15.180(c) and (d) for the fiscal year ending June 30, 2010.

Subsection 1 appropriates $170,000 of National Forest Receipts to DOT&PF for road maintenance in the unorganized borough.

Subsection 2 appropriates any remaining balance to be paid as grants to local governments in the unorganized borough.

Legislative Fiscal Analyst Comment: *National Forest receipts consist of national forest income received by DCCED for the portion of national forests located within the unorganized borough. By law, 75 percent of the income is allocated to public schools and 25 percent for maintenance of public roads in the unorganized borough.*

Legislative Fiscal Analyst Comment: *AS 41.15.180(j) states that the amount in the national forest receipts fund remaining at the end of the fiscal year lapses into the general fund and shall be used for school and road maintenance in the affected areas of the unorganized borough for which direct distribution has not been made. The amount appropriated in subsection 1 ($170.0) has not changed for several years.*

Legislative Fiscal Analyst Comment: *Subsection 2 appears to change the intended purpose of lapsing receipts. Under AS 41.15.180(j) lapsing money must be spent in areas*

that do not receive money under AS 41.15.180(c) and (d). Subsection 2 takes money that would otherwise be spent in unorganized areas and appropriates it to local governments.

(b) An amount equal to the salmon enhancement tax collected under AS 43.76.010 - 43.76.028 in calendar year 2008 and deposited in the general fund under AS 43.76.025(c) is appropriated from the general fund to the Department of Commerce, Community, and Economic Development for payment in fiscal year 2010 to qualified regional associations operating within a region designated under AS 16.10.375.

Funding: These "pass through" amounts are excluded from Legislative Finance reports on the operating bill.

(c) An amount equal to the seafood development tax collected under AS 43.76.350 - 43.76.399 in calendar year 2008 and deposited in the general fund under AS 43.76.380(d) is appropriated from the general fund to the Department of Commerce, Community, and Economic Development for payment in fiscal year 2010 to qualified regional seafood development associations.

Funding: These "pass through" amounts are excluded from Legislative Finance reports on the operating bill.

(d) If the amount necessary to pay power cost equalization program costs without proration from the power cost equalization and rural electric capitalization fund (AS 42.45.100) exceeds the amount appropriated in sec. 1 of this Act, the amount necessary to pay those costs is appropriated from the power cost equalization and rural electric capitalization fund (AS 42.45.100) to the Department of Commerce, Community, and Economic Development, Alaska Energy Authority, power cost equalization allocation, for the fiscal year ending June 30, 2010.

NEW SUBSECTION: Subsection d makes the appropriation from the power cost equalization (PCE) fund to the PCE open-ended; if program costs exceed the amount appropriated in section 1, Subsection d authorizes additional transfers up to the amount required to fully fund PCE.

Funding: The estimated impact of this section is zero.

Legislative Fiscal Analyst Comment: *Subsection d addresses the (fairly common) problem of a shortage in the PCE program despite the availability of money in the PCE fund. However, it goes beyond addressing that situation when combined with the language in section 18(c), which is an open-ended appropriation that ensures the PCE formula is fully funded.*

Section Deleted; appeared in FY09 Operating Budget

DEPARTMENT OF EDUCATION AND EARLY DEVELOPMENT. The sum of $4,800,000 is appropriated from the general fund to the Department of Education and Early Development for the school incentive program for the fiscal year ending June 30, 2009.

Legislative Fiscal Analyst Comment: *The legislature decided not to extend the pilot program.*

* **Sec. 8.** DEPARTMENT OF LABOR AND WORKFORCE DEVELOPMENT. (a) If the amount necessary to pay benefit payments from the fishermen's fund (AS 23.35.060) exceeds the amounts appropriated in sec. 1 of this Act, the additional amount necessary to pay those benefit payments is appropriated from that fund to the Department of Labor and Workforce Development, fishermen's fund allocation, for the fiscal year ending June 30, 2010.

This section allows benefit payments to exceed the amount appropriated in section 1, ensuring that expenditure authorization will be sufficient to pay benefits required by law.

Funding: The estimated impact of this section is zero.

(b) If the amount necessary to pay benefit payments from the second injury fund (AS 23.30.040(a)) exceeds the amount appropriated in sec. 1 of this Act, the amount necessary to make those benefit payments is appropriated from the second injury fund to the Department of Labor and Workforce Development, second injury fund allocation, for the fiscal year ending June 30, 2010.

This section allows benefit payments to exceed the amount appropriated in section 1, ensuring that expenditure authorization will be sufficient to pay benefits required by law.

Funding: The estimated impact of this section is zero.

(c) If the amount necessary to pay benefit payments from the workers' compensation benefits guaranty fund (AS 23.30.082) exceeds the amount appropriated in sec. 1 of this Act, the additional amount necessary to pay those benefit payments is appropriated from that fund to the Department of Labor and Workforce Development, workers' compensation benefits guaranty fund allocation, for the fiscal year ending June 30, 2010.

This section allows benefit payments to exceed the amount appropriated in section 1, ensuring that expenditure authorization will be sufficient to pay benefits required by law.

Funding: The estimated impact of this section is zero.

* **Sec. 9.** DEPARTMENT OF MILITARY AND VETERANS' AFFAIRS. Five percent of the market value of the average ending balances in the Alaska veterans' memorial endowment fund (AS 37.14.700) for the fiscal years ending June 30, 2007, June 30, 2008, and June 30, 2009, is appropriated from the Alaska veterans' memorial endowment fund to the Department of Military and Veterans' Affairs for the purposes specified in AS 37.14.730(b) for the fiscal year ending June 30, 2010.

Funding: Endowment payout is expected to be about $12,500. Proceeds may be used for maintenance, repair and construction of monuments to the military.

* **Sec. 10.** DEPARTMENT OF NATURAL RESOURCES. Federal receipts received for fire suppression during the fiscal year ending June 30, 2010, are appropriated to the Department of Natural Resources for fire suppression activities for the fiscal year ending June 30, 2010.

This section appropriates an open-ended amount of federal receipts received for fire suppression to the Department of Natural Resources.

Funding: A $2 million federal receipts estimate for fire suppression has been used for several years.

Section (b) Deleted; appeared in FY09 Operating Budget

The sum of $523,000 is appropriated from the general fund to the Department of Natural Resources for the petroleum systems integrity office for the fiscal year ending June 30, 2009.

Legislative Fiscal Analyst Comment: *The Governor's FY2010 budget includes this item in section 1.*

* **Sec. 11.** DEPARTMENT OF PUBLIC SAFETY. (a) The sum of $1,393,200 is appropriated from the general fund to the Department of Public Safety, division of Alaska state troopers, narcotics task force, for drug and alcohol enforcement efforts during the fiscal year ending June

30, 2010.

Subsection a appropriates $1.4 million in general funds for drug and alcohol enforcement efforts.

(b) If the amount of federal receipts received by the Department of Public Safety from the justice assistance grant program during the fiscal year ending June 30, 2010, for drug and alcohol enforcement efforts exceeds $1,289,100, the appropriation in (a) of this section is reduced by the amount by which the federal receipts exceed $1,289,100.

Subsection b is contingency language that requires a dollar-for-dollar reduction of the previous subsection's general funds if DPS receives over $1.3 million in federal grants for drug and alcohol enforcement efforts.

Legislative Fiscal Analyst Comment: *The FY09 operating budget included similar language. DPS received $1,560,940 of federal funds for this purpose—resulting in a reduction of $271,840.*

Funding: Because the amount of federal funds for FY2010 is unknown, Legislative Finance is estimating the cost of the section to be the full $1.4 million in general funds.

(c) The sum of $1,270,000 is appropriated from the general fund to the Department of Public Safety, division of Alaska state troopers, special projects, for rural alcohol interdiction efforts during the fiscal year ending June 30, 2010.

Subsection c appropriates $1.3 million in general funds for rural alcohol interdiction efforts.

(d) If federal receipts are received by the Department of Public Safety for the rural alcohol interdiction program during the fiscal year ending June 30, 2010, the appropriation in (c) of this section is reduced by the amount of the federal receipts.

Subsection d is contingency language that requires a dollar-for-dollar reduction of the previous subsection's general funds if DPS receives over $1.3 million in federal grants for drug and alcohol enforcement efforts.

Legislative Fiscal Analyst Comment: *The FY09 operating budget included similar language. DPS received $715.5 of federal funds for this purpose—resulting in an equal reduction of general funds.*

Funding: Because the amount of federal funds for FY2010 is unknown, Legislative Finance is estimating the cost of the section to be the full $1.3 million in general funds.

* **Sec. 12.** DEPARTMENT OF REVENUE. (a) The minimum amount of program receipts received during the fiscal year ending June 30, 2010, by the child support services agency that is required to secure the federal funding appropriated from those program receipts for the child support enforcement program in sec. 1 of this Act is appropriated to the Department of Revenue, child support services agency, for the fiscal year ending June 30, 2010.

Subsection a permits an unspecified amount of program receipts collected by the Child Support Services Division (CSSD) to be spent to capture the federal receipts appropriated in section 1.

Legislative Fiscal Analyst Comment: *The Federal Deficit Reduction Act of 2005 changed the way states could use money earned from federal incentives. In the past, state child support programs could use federal incentive receipts as part of the required 34%*

match to federal receipts; this practice reduced the amount of state funds needed to maximize the federal receipts. Effective in federal fiscal year 2008, federal rules prohibit using federal incentive receipts as matching funds for federal receipts from the child support program. As a result, the division requested $1.9 million of general funds in section 1. This section is unlikely to have any effect. The section could be deleted, but it does no harm.

Funding: The estimated impact of this section is zero.

(b) Program receipts collected as cost recovery for paternity testing administered by the child support services agency, as required under AS 25.27.040 and 25.27.165, and as collected under AS 25.20.050(f), are appropriated to the Department of Revenue, child support services agency, for the fiscal year ending June 30, 2010.

Subsection b appropriates (to CSSD) receipts collected to recover the costs of paternity testing.

Funding: The Department estimates that paternity testing will generate $47,000 in program receipts.

*** Sec. 13.** OFFICE OF THE GOVERNOR. (a) If the 2010 fiscal year-to-date average price of Alaska North Slope crude oil exceeds $35 a barrel on August 1, 2009, the amount of money corresponding to the 2010 fiscal year-to-date average price, rounded to the nearest dollar, as set out in the table in (b) of this section is appropriated from the general fund to the Office of the Governor for distribution to state agencies to offset increased fuel and utility costs.

(b) The following table shall be used in determining the appropriation amount in (a) of this section:

2010 FISCAL YEAR-TO-DATE AVERAGE PRICE OF ALASKA NORTH SLOPE CRUDE OIL	AMOUNT
$60 or more	$24,000,000
59	23,500,000
58	23,000,000
57	22,000,000
56	21,000,000
55	20,000,000
54	19,000,000
53	18,000,000
52	17,000,000
51	16,000,000
50	15,000,000
49	14,000,000

48	13,000,000
47	12,000,000
46	11,000,000
45	10,000,000
44	9,000,000
43	8,000,000
42	7,000,000
41	6,000,000
40	5,000,000
39	4,000,000
38	3,000,000
37	2,000,000
36	1,000,000
35	0

(c) It is the intent of the legislature that a payment under (a) of this section be used to offset the effects of higher fuel and utility costs for the fiscal year ending June 30, 2010.

(d) The governor shall allocate amounts appropriated in (a) of this section as follows:

(1) to the Department of Transportation and Public Facilities, 65 percent of the total plus or minus 10 percent;

(2) to the University of Alaska, eight percent of the total plus or minus three percent;

(3) to the Department of Health and Social Services and the Department of Corrections, not more than five percent each of the total amount appropriated;

(4) to any other state agency, not more than four percent of the total amount appropriated;

(5) the aggregate amount allocated may not exceed 100 percent of the appropriation.

Subsection a appropriates up to $24 million—depending on the year-to-date average price of crude oil on August 1, 2009. This funding is to be distributed to agencies to offset increased fuel and utility costs.

Subsection b indicates, based on the price of oil, how much funding is appropriated in subsection a.

Subsection c states legislative intent that the funding is to offset fuel and utility cost increases.

Subsection d provides guidelines for allocating the money among agencies.

Funding: OMB included a $24 million appropriation for fuel in its budget transmittal.

Legislative Fiscal Analyst Comment: *Similar trigger mechanisms appear to have*

functioned as designed—providing funding for fuel during the past few years without permitting high fuel costs to become part of the base budget—and the legislature may wish to continue the concept. Note, however, that the above schedule is inconsistent with the official oil price forecast; the schedule shows oil prices up to $60 while the official oil forecast is $74. In theory, the schedule should extend beyond the forecast price. Extending the schedule to the official forecast would add $7 million to the estimate of the appropriation. Extending the schedule beyond the forecast price adds nothing to the estimated appropriation, but it would cover the contingency of higher-than-anticipated oil prices.

Subsection Deleted; appeared in FY09 Operating Budget

(e) The sum of $3,670,800 is appropriated from the general fund to the Office of the Governor, division of elections, for costs associated with conducting the statewide primary and general elections for the fiscal year ending June 30, 2009.

Subsection e appropriates general funds to cover the costs of 2008 statewide elections.

Legislative Fiscal Analyst Comment: *This one-time funding for elections was removed from the FY2010 base.*

* **Sec. 14.** UNIVERSITY OF ALASKA. The amount of the fees collected under AS 28.10.421(d) during the fiscal year ending June 30, 2009, for the issuance of special request university plates, less the cost of issuing the license plates, is appropriated from the general fund to the University of Alaska for support of alumni programs at the campuses of the university for the fiscal year ending June 30, 2010.

Funding: The University expects to receive about $2,000 under this section.

* **Sec. 15.** BOND CLAIMS. The amount received in settlement of a claim against a bond guaranteeing the reclamation of state, federal, or private land, including the plugging or repair of a well is appropriated to the agency secured by the bond for the fiscal year ending June 30, 2010, for the purpose of reclaiming the state, federal, or private land affected by a use covered by the bond.

This section is standard language that appropriates claims against bonds for land reclamation to the agencies that will direct the reclamation.

Funding: The Department of Natural Resources estimates the impact of this section to be $25,000.

* **Sec. 16.** GAS PIPELINE DEVELOPMENT. The following amounts are appropriated to the named department and components from the following sources in the amounts stated for work associated with development of a natural gas pipeline for the fiscal year ending June 30, 2010:

DEPARTMENT AND COMPONENT	SOURCE	APPROPRIATION AMOUNT
(1) Fish and Game		
Habitat and restoration	Interagency receipts	$180,000
(2) Labor and Workforce Development		
(A) Labor market information	General fund	145,000
(B) Business services	General fund	585,000
(C) Alaska Workforce		
Investment Board	General fund	130,000
(3) Law		
Oil, gas, and mining	General fund	1,250,000
(4) Natural Resources		
(A) Oil and gas development	General fund	391,700
(B) Pipeline coordinator	Statutory designated	
	Program receipts	2,500,000
(5) Revenue		
Natural gas commercialization	General fund	771,000

NEW SECTION: This section appropriates funding to multiple departments for development work associated with the natural gas pipeline.

Legislative Fiscal Analyst Comment: *In FY09, the legislature consolidated oil and gas development funding requests in the Office of the Governor, with direction to distribute the one-time funding of $7.3 million GF to the departments of Labor and Workforce Development, Natural Resources, Law, and Revenue as needed for work associated with the Natural Gas Pipeline. Consolidation was intended to increase flexibility and track how much was being appropriated for gasline work. OMB did not take advantage of the flexibility provided, and consolidation in section 16 has the advantage of correctly identifying each appropriation with an agency.*

* **Sec. 17.** FEDERAL AND OTHER PROGRAM RECEIPTS. (a) Federal receipts, designated program receipts as defined in AS 37.05.146(b)(3), information services fund program receipts as described in AS 44.21.045(h), Exxon Valdez oil spill trust receipts described in AS 37.05.146(b)(4), receipts of the Alaska Housing Finance Corporation, receipts of the Alaska marine highway system fund described in AS 19.65.060(a), receipts of the University of Alaska as described in AS 37.05.146(b)(2), and receipts of the Alaska Fire Standards Council described in AS 37.05.146(b)(5) that are received during the fiscal year ending June 30, 2010, and that

exceed the amounts appropriated by this Act, are appropriated conditioned on compliance with the program review provisions of AS 37.07.080(h).

(b) If federal or other program receipts as defined in AS 37.05.146 and in AS 44.21.045(b) that are received during the fiscal year ending June 30, 2010, exceed the amounts appropriated by this Act, the appropriations from state funds for the affected program shall be reduced by the excess if the reductions are consistent with applicable federal statutes.

(c) If federal or other program receipts as defined in AS 37.05.146 and in AS 44.21.045(b) that are received during the fiscal year ending June 30, 2010, fall short of the amounts appropriated by this Act, the affected appropriation is reduced by the amount of the shortfall in receipts.

Subsection a provides open-ended appropriations of the types of receipts listed. Although the appropriations are conditioned on review by the Legislative Budget and Audit Committee, the Governor can increase authorization for listed fund sources without the approval of the Committee.

NEW FUND SOURCE LISTED: Receipts of the University of Alaska is a FY2010 addition to the list of funds that can be increased upon LB&A committee review. There is no indication of the reason for the addition.

Subsection b is standard language that permits state authorization to be reduced if unanticipated money is received for projects funded by general funds. There is no formal process for tracking potential reductions.

Subsection c is standard language that automatically limits authorization of federal and other receipts to the amount actually received.

Funding: Although requests for approval to spend additional receipts will almost certainly be received, there is no way to determine where the increases will be, how much they will be, or what fund sources would be appropriate. Legislative Finance reports place no dollar value on appropriations made in this section.

* **Sec. 18.** FUND TRANSFERS. (a) The following amounts are appropriated to the Alaska debt retirement fund (AS 37.15.011):

(1) the sum of $118,670,100 from the general fund;

(2) the sum of $12,007,700 from federal receipts for state-guaranteed transportation revenue anticipation bonds, series 2003B;

(3) the sum of $2,837,400 from the investment earnings on the bond proceeds deposited in the capital project funds for the series 2003A general obligation bonds;

(4) the sum of $877,400 from the investment earnings on the bond proceeds deposited in the capital project fund for the state guaranteed transportation revenue anticipation bonds, series 2003B;

(5) the sum of $26,000 from the investment loss trust fund (AS 37.14.300);

(6) if the debt retirement fund balance is insufficient to pay the debt service obligations on the State of Alaska general obligation bonds, series 2003A and 2009A, the amount necessary is appropriated from the general fund.

Subsection a is summarized below:

Capitalization of the Debt Retirement Fund

Subsec	Fund Source	FY2010 Debt Service	Details
1	General Funds	118,670.1	Non-specific capitalization
2	Federal Receipts	12,007.7	Federal receipts to pay series 2003B GO Bonds
3	Capital Project Fund	2,837.4	Investment earnings receipts to pay series 2003A GO Bonds
4	Capital Project Fund	877.4	Investment earnings receipts to pay series 2003B GO Bonds
5	ILTF	26.0	Non-specific capitalization
6	General Funds	.0	Contingency funding for GO Bonds
	TOTAL DEPOSITS	**$134,418.6**	

New Subsection a (6) is an open-ended appropriation that appears to be intended to ensure that there is sufficient money to pay GO bond debt service.

Legislative Fiscal Analyst Comment: *The provision makes sense on the surface, given that the series 2009 bonds have not yet been sold, so the amount of debt service is unknown. However, because the various appropriations to the fund are not tied to specific debt service payments, the effect is that any shortage in the fund could be attributed to debt service on GO bonds. The weakness of this funding method is that it allows the amount of general fund capitalization to be understated. This situation could be avoided by specifying what type of debt service each appropriation to the fund is intended for, but that approach runs the risk of underfunding debt service. The legislature may prefer to simply deposit enough money to the debt retirement fund to leave a margin of safety.*

(b) The sum of $20,892,700 from the power cost equalization endowment fund (AS 42.45.070) is appropriated to the power cost equalization and rural electric capitalization fund (AS 42.45.100).

Subsection b capitalizes the PCE Fund with seven percent of the average value of the PCE Endowment ($20.9 million).

(c) The amount necessary, estimated to be $10,379,300, is appropriated from the general fund to the power cost equalization and rural electric capitalization fund (AS 42.45.100) for payment of power cost equalization for the fiscal year ending June 30, 2010.

Subsection c capitalizes the PCE Fund with $10.4 million in general funds. When combined with the appropriation in (b) this appropriation provides the $32.2 million needed to fully fund the PCE program appropriations made in section 1.

Legislative Fiscal Analyst Comment: *The appropriation in (c) is open-ended. This appropriation, in combination with section 7(d), ensures full funding of the PCE formula. The PCE program is up for review this session; section 18(c) will provide full funding under any changes made to the formula.*

(d) The federal funds received by the state under 42 U.S.C. 6506a(l) or former 42 U.S.C. 6508 not appropriated for grants under AS 37.05.530(d) are appropriated as follows:

(1) to the principal of the Alaska permanent fund and the public school trust fund (AS 37.14.110), according to AS 37.05.530(g)(1) and 37.05.530(g)(2); and

(2) to the principal of the Alaska permanent fund, the public school trust fund (AS 37.14.110), and the power cost equalization and rural electric capitalization fund (AS 42.45.100), according to AS 37.05.530(g)(3).

Subsection d (per AS 37.05.530(g)) appropriates the lapsing balance of NPR-A grants. No lapsing balance is anticipated.

Funding: The estimated fiscal impact of this section is zero.

(e) An amount calculated under AS 43.55.028(c), not to exceed $300,000,000 is appropriated from the general fund to the oil and gas tax credit fund (AS 43.55.028(a)).

Legislative Fiscal Analyst Comment: The amount appropriated to this fund—which is used to purchase transferable tax credit certificates and production tax certificates—in FY09 was $400 million. The legislature may wish to ask the Department of Revenue to describe cash flows into and out of the fund.

(f) The following amounts of revenue collected during the fiscal year ending June 30, 2010, are appropriated to the fish and game fund (AS 16.05.100):

(1) receipts from the sale of crewmember fishing licenses (AS 16.05.480(a)) that are not deposited into the fishermen's fund under AS 23.35.060;

(2) range fees collected at shooting ranges operated by the Department of Fish and Game (AS 16.05.050(a)(15));

(3) fees collected at boating and angling access sites described in AS 16.05.050(a)(6) and managed by the Department of Natural Resources, division of parks and outdoor recreation, under a cooperative agreement;

(4) receipts from the sale of waterfowl conservation stamp limited edition prints (AS 16.05.826(a));

(5) fees collected for sanctuary access permits (AS 16.05.050(a)(15)).

Subsection f appropriates revenue generated by the named licenses and fees into the Fish and Game Fund. Appropriations from this revenue source use the Fish and Game Nondedicated Receipts fund code (1194) to differentiate these appropriations (which are essentially GF appropriations) from the dedicated portion of the Fish and Game Fund.

Funding: The estimated fiscal impact of this subsection is $2.3 million.

(g) The following amounts are appropriated to the oil and hazardous substance release prevention account (AS 46.08.010(a)(1)) in the oil and hazardous substance release prevention and response fund (AS 46.08.010) from the sources indicated:

(1) the balance of the oil and hazardous substance release prevention mitigation account (AS 46.08.020(b)) in the general fund on July 1, 2009, not otherwise appropriated by this Act;

(2) the amount collected for the fiscal year ending June 30, 2009, estimated to be $11,100,000, from the surcharge levied under AS 43.55.300.

Subsection g is standard language appropriating (to the Oil and Hazardous Substance Release Prevention Account) the balance of the Release Prevention Mitigation Account and the FY09 collections from the 4 cent per barrel surcharge on oil produced in the state. Amendments effective April 1, 2006 changed the per barrel surcharge from $0.03 to $0.04.

(h) The following amounts are appropriated to the oil and hazardous substance release response account (AS 46.08.010(a)(2)) in the oil and hazardous substance release prevention and response fund (AS 46.08.010) from the following sources:

(1) the balance of the oil and hazardous substance release response mitigation account (AS 46.08.025(b)) in the general fund on July 1, 2009, not otherwise appropriated by this Act;

(2) the amount collected for the fiscal year ending June 30, 2009, from the surcharge levied under AS 43.55.201;

Subsection h is standard language appropriating (to the Oil and Hazardous Substance Release Response Account) the balance of the Release Response Mitigation Account and the FY09 collections from the $0.01 cent per barrel surcharge on oil produced in the state. Amendments effective April 1, 2006 changed the per barrel surcharge from $0.02 to $0.01.

Funding: Based on a five-year average, the projected balance of the response mitigation account that will be transferred under this section is approximately $600,000. The surcharge collected under paragraph (2) became effective when the balance of the Response Account dropped below $50 million. The drop in the balance is due to a Department of Law request for $8.8 million to investigate two oil spills which occurred in 2006 from transit pipelines operated by BP in Prudhoe Bay oil field.

Legislative Fiscal Analyst Comment: *Based on the current balance and annual collections of $2.3 million from the one cent surcharge, the surcharge may be in effect for a few more years.*

(i) The portions of the fees listed in this subsection that are collected during the fiscal year ending June 30, 2010, are appropriated to the Alaska children's trust (AS 37.14.200):

(1) fees collected under AS 18.50.225, less the cost of supplies, for the issuance of birth certificates;

(2) fees collected under AS 18.50.272, less the cost of supplies, for the issuance of heirloom marriage certificates;

(3) fees collected under AS 28.10.421(d) for the issuance of special request Alaska children's trust license plates, less the cost of issuing the license plates.

Subsection i appropriates (to the Alaska Children's Trust) net receipts collected during FY2010 from sales of heirloom birth certificates, heirloom marriage certificates and Trust license plates.

The Alaska Children's Trust was created by Chapter 19, SLA 88. The legislature appropriated $6 million from the investment loss trust fund to the principal of the trust in Chapter 123, SLA 96. The trust was established to provide a continuing source of revenue for grants to community-based programs for the prevention of child abuse and neglect.

Funding: *OMB projects $39.5 net proceeds from the sale of certificates/plates.*

(j) The loan origination fees collected by the Alaska Commission on Postsecondary Education for the fiscal year ending June 30, 2010, are appropriated to the origination fee account (AS 14.43.120(u)) within the education loan fund (AS 14.42.210) of the Alaska Student Loan Corporation for the purposes specified in AS 14.43.120(u).

Subsection j appropriates origination fees charged on student loans to the origination fee account within the student loan fund. The fees are intended to offset loan losses due to death, disability, bankruptcy and default.

Funding: The amount of the loan origination fee is capped by regulation at 5% and set annually by the corporation. For FY2010, the Alaska Commission on Postsecondary Education has indicated that the maximum fee of 5% will be set. It is currently set at 3%. Because the appropriation earmarks money within a fund, there is no impact on state expenditures.

(k) The amount of federal receipts received for disaster relief during the fiscal year ending June 30, 2010, is appropriated to the disaster relief fund (AS 26.23.300).

Subsection k is standard language appropriating federal receipts for disaster relief to the Disaster Relief Fund. The Governor needs no specific appropriations to spend money in the Disaster Relief Fund; money can be spent upon declaration of a disaster.

Funding: A $9 million estimate for federal disaster relief receipts has been used for several years.

(l) The sum of $7,500,000 is appropriated from the general fund to the disaster relief fund (AS 26.23.300).

Subsection l capitalizes the Disaster Relief Fund with $7.5 million of general funds. FY09 capitalization was $16 million.

(m) The balance of the mine reclamation trust fund income account (AS 37.14.800(a)) on June 30, 2009, and money deposited in that account during the fiscal year ending June 30, 2010, is appropriated to the mine reclamation trust fund operating account (AS 37.14.800(a)) for the fiscal year ending June 30, 2010. The amount necessary for the purposes specified in AS 37.14.820 for the fiscal year ending June 30, 2010, is appropriated from the mine reclamation trust fund operating account (AS 37.14.800(a)) to the Department of Natural Resources.

Subsection m authorizes an internal transfer of funds from the income account to the operating account, where it is available to DNR to spend without further appropriation.

Funding: The agency estimates the amount needed for mine reclamation expenditures is about $75,000.

(n) The sum of $6,000,000 is appropriated to the Alaska clean water fund (AS 46.03.032) for the Alaska clean water loan program from the following sources:

Alaska clean water fund revenue bond receipts	$1,000,000
Federal receipts	5,000,000

(o) The sum of $7,660,000 is appropriated to the Alaska drinking water fund (AS 46.03.036) for the Alaska drinking water loan program from the following sources:

Alaska drinking water fund revenue bond receipts	$1,660,000
Federal receipts	6,000,000

Subsections n and o provide money to develop sewer and water systems in Alaska communities through revolving loan programs. The state typically issues short-term

bonds that are repaid with earnings from the loan programs, and uses the bond proceeds to match federal money.

(p) The amount of municipal bond bank receipts determined under AS 44.85.270(h) to be available for transfer by the Alaska Municipal Bond Bank Authority for the fiscal year ending June 30, 2009, is appropriated to the Alaska municipal bond bank authority reserve fund (AS 44.85.270(a)).

Subsection p appropriates earnings of the Bond Bank to its earnings reserve fund.

Funding: *Earnings for FY09 were $250,000 and a similar amount is expected in FY2010.*

(q) The bulk fuel revolving loan fund fees established under AS 42.45.250(j) and collected under AS 42.45.250(k) from July 1, 2008, through June 30, 2009, estimated to be $45,000, are appropriated from the general fund to the bulk fuel revolving loan fund (AS 42.45.250).

Subsection q attempts to appropriate fee revenues to the bulk fuel revolving loan fund.

Legislative Fiscal Analyst Recommendation: *If the legislature chooses to capitalize the loan fund, the subsection should begin with "An amount equal to..." in order to clarify that this is an appropriation of FY2010 general funds. The effective date of the section is July 1, 2009, which means that the specified FY09 collections will no longer be accessible. The associated budget transaction uses FY2010 general funds to capitalize the loan fund.*

(r) The sum of $8,400,000 is appropriated from the Alaska sport fishing enterprise account (AS 16.05.130(e)) in the fish and game fund (AS 16.05.100) to the Alaska fish and game revenue bond redemption fund (AS 37.15.770).

Subsection r transfers the amount collected under the surcharge on sport fish licenses (created by SB 147 (Ch 94, SLA 2005)) from the sport fish enterprise account, where the revenue is deposited, to the bond redemption fund. The transfer is for payment of debt service on bonds authorized for hatchery construction. As both funds are subfunds of the Fish and Game Fund, this section has no fiscal impact; it is an attempt to preempt legal issues associated the fisheries revenue bonds.

(s) An amount equal to the federal receipts deposited in the Alaska sport fishing enterprise account (AS 16.05.130(e)), not to exceed $1,584,200, as reimbursement for the federally allowable portion of the principal balance payment on the sport fishing revenue bonds series 2006 is appropriated from the Alaska sport fishing enterprise account (AS 16.05.130(e)) to the fish and game fund (AS 16.05.100).

Subsection s clarifies that the Department chooses to use $1.58 million of current federal funding as reimbursement. They may use federal operating receipts as reimbursement for a portion of debt service payments on the "Sportfish Bonds" issued in 2006 (see Section 23(u)).

Legislative Fiscal Analyst Comment: *The Department's action increases flexibility in the use of existing federal receipts by placing federal money in the sport fishing enterprise account. Once there, the money can be used for sport fishing facilities intended to directly benefit license purchasers.*

Funding: The section simply transfers funds between accounts within the Fish and Game Fund; there is no direct fiscal impact.

NEW SUBSECTION

(t) The sum of $459,200 is appropriated from the permanent fund dividend (PFD) appropriation in lieu of dividends to criminals account within the dividend fund (AS 43.23.045(a)) to the crime victim compensation fund (AS 18.67.162).

NEW SUBSECTION

(u) An amount received under AS 18.67.162, during the fiscal year ending June 30, 2010, is appropriated from the applicable fund source to the crime victim compensation fund (AS 18.67.162).

Subsection t capitalizes the Crime Victim Compensation Fund with $459.2 of "PFD in lieu of Dividends to Criminals" receipts.

Subsection u capitalizes the Crime Victim Compensation Fund with "money from donations, recoveries of or reimbursements for awards made from the fund, income from the fund, and other program receipts."

Legislative Fiscal Analyst Comment: *Chapter 112 SLA 2008 added language to the effect that money appropriated to the fund "may include donations, recoveries of or reimbursements for awards made by the fund, income from the fund, and other program receipts." The fund source cited in subsection t is not mentioned in AS 18.67.182, but lack of mention does not preclude the legislature from appropriating PFD criminal funds for this purpose.*

(v) An amount equal to 20 percent of the revenue collected under AS 43.55.011(g), not to exceed $60,000,000, is appropriated from the general fund to the community revenue sharing fund (AS 29.60.850).

Subsection v appropriates 20% of receipts from the progressive portion of the oil and gas production tax, to a limit of $60 million, for revenue sharing.

Legislative Fiscal Analyst Comment: *The revenue sharing fund was established with an FY08 supplemental appropriation of $180 million. Per AS 29.60.850, 1/3 of the FY08 year end balance ($60 million) was distributed to communities in FY09. The amount distributed was replaced by $60 million of FY09 revenue from the progressive portion of the oil and gas production tax. The FY2010 distribution to communities will be $60 million (1/3 of the FY09 year end balance). As long as oil prices are high enough to generate more than $60 million from the progressive production tax, the cycle of $60 million annual deposits/distribution will continue. At prices less than about $60/barrel, the progressive tax generates no revenue and annual distributions will decline. If there is no progressive tax revenue in FY2010, the year end fund balance will be $120 million and the amount available for distribution in FY2011 will be $40 million. If there is no progressive tax revenue in FY2011, the year end fund balance will be $80 million and the amount available for distribution in FY2012 will be $27 million. If the fund balance falls below $60 million (as it would in FY2012 if oil remains below about $60/barrel) there would be no distribution in FY2013.*

Funding: The full $60 million potential amount of the appropriation is included in all Legislative Finance and OMB reports.

(w) The sum of $1,062,127,700 is appropriated from the general fund to the public education fund (AS 14.17.300).

Subsection w appropriates $1.062 billion to the Public Education Fund (PEF).

***Legislative Fiscal Analyst Comment**: The legislature began making deposits to the PEF in FY06, with the expectation of making continued deposits until reaching the goal of a balance sufficient to fund K-12 education one year in advance. The goal was reached last year, and FY2010 education was "forward funded". The concept of forward funding is that the amount appropriated in a given year will be the amount required in the following year. In this regard, the Governor's $1.062 billion appropriation is $50 million short of forward funding the anticipated $1.112 billion cost of K-12 education in FY2011.*

Although the Governor's proposal leaves the Public Education Fund with a balance (nearly) sufficient to fund anticipated FY2011 K-12 expenditures, this is possible only because the balance of the Public Education Fund included a surplus that was intended to provide a cushion in case expenditures exceed expectations. While not technically a withdrawal from savings, the Governor's proposal reduces the PEF balance by $50 million compared to the forward funding concept adopted by the legislature.

Section Deleted; appeared in FY09 Operating Budget

The sum of $5,000,000 is appropriated from the general fund to the information services fund (AS 44.21.045(a)).

***Legislative Fiscal Analyst Comment**: The Information Services Fund is capitalized in the capital appropriations bill.*

Section Deleted; appeared in FY09 Operating Budget

The sum of $19,099,558 is appropriated from the Alaska capital income fund (AS 37.05.565) to the school construction grant fund (AS 14.11.005).

***Legislative Fiscal Analyst Comment:** The fund is not capitalized in the Governor's budget proposal.*

Section Deleted; appeared in FY09 Operating Budget

The sum of $80,702,477 is appropriated from the Alaska capital income fund (AS 37.05.565) to the major maintenance grant fund (AS 14.11.007).

***Legislative Fiscal Analyst Comment:** The fund is capitalized in the capital appropriations bill.*

*** Sec. 19.** RETAINED FEES AND BANKCARD SERVICE FEES. (a) The amount retained to compensate the collector or trustee of fees, licenses, taxes, or other money belonging to the state during the fiscal year ending June 30, 2010, is appropriated for that purpose to the agency authorized by law to generate the revenue. In this subsection, "collector or trustee" includes vendors retained by the state on a contingency fee basis.

Subsection a allows the state to compensate vendors that collect fees on behalf of the state. The provision originally addressed Fish and Game fishing, hunting and trapping license sales in which the vendor retained a portion of the sale. It also applies to several programs in the Department of Administration, Department of Natural Resources and Trial Courts.

Funding: These fees do not appear in the bill summary or in Legislative Finance reports on the grounds that the state has no effective control over the money.

(b) The amount retained to compensate the provider of bankcard or credit card services to the state during the fiscal year ending June 30, 2010, is appropriated for that purpose to each agency of the executive, legislative, and judicial branches that accepts payment by bankcard or credit card for licenses, permits, goods, and services provided by that agency on behalf of the

state, from the funds and accounts in which the payments received by the state are deposited.

Subsection b allows credit card service providers to retain fees charged for using a credit card.

Funding: These fees do not appear in the bill summary or in Legislative Finance reports on the grounds that the state has no effective control over the money.

(c) The amount retained to compensate the provider of bankcard or credit card services to the state during the fiscal year ending June 30, 2010, is appropriated for that purpose to the Department of Law for accepting payment of restitution in accordance with AS 12.55.051 by bankcard or credit card, from the funds and accounts in which the restitution payments received by the Department of Law are deposited.

Subsection c allows credit card service providers to retain fees charged for using a credit card for *payment of restitution.*

Funding: These fees do not appear in the bill summary or in Legislative Finance reports on the grounds that the state has no effective control over the money.

*** Sec. 20.** RETIREMENT SYSTEM FUNDING. (a) The sum of $206,300,000 is appropriated from the general fund to the Department of Administration for deposit in the defined benefit plan account in the teachers' retirement system as an additional state contribution for the fiscal year ending June 30, 2010, under AS 14.25.085.

(b) The sum of $241,600,000 is appropriated from the general fund to the Department of Administration for deposit in the defined benefit plan account in the public employees' retirement system as an additional state contribution for the fiscal year ending June 30, 2010, under AS 39.35.280.

Legislative Fiscal Analyst Comment: *During the past five years, Alaska's retirement systems accrued a multi-billion dollar unfunded liability due to a combination of investment losses, escalating health care costs, modification of actuarial assumptions and capped contribution rates. Beginning in FY08, the state began making direct contributions to retirement systems in order to stabilize employer contribution rates while repaying that unfunded liability. Actuarial rates for both TRS and PERS declined for FY2010, which means that required contributions decline as well. As shown below, the appropriations in subsections a and b contribute about $135 million "extra" to PERS and about $23 million extra to TRS. With the decline in state revenue, the legislature may wish to consider reducing extra contributions to retirement systems.*

Direct Payments to Retirement Systems ($ millions)

Retirement System	Fiscal Year	Estimated Salary Base	Actuarial Rate	Employer Share	State Share	Direct Payments	Amount Appropriated	Suplus Direct Payment
PERS	FY09	$ 1,813	35.22%	22.00%	13.22%	$ 239.7	$ 241.6	$ 1.9
	FY2010	$ 1,886	27.65%	22.00%	5.65%	$ 106.5	$ 241.6	$ 135.1
TRS	FY09	$ 652	44.17%	12.56%	31.61%	$ 206.2	$ 206.3	$ 0.1
	FY2010	$ 678	39.53%	12.56%	26.97%	$ 182.9	$ 206.3	$ 23.4
Joint	FY09	$ 2,465	79.39%	34.56%	44.83%	$ 445.9	$ 447.9	$ 2.0
	FY2010	$ 2,564	67.18%	34.56%	32.62%	$ 289.5	$ 447.9	$ 158.4

(c) The sum of $1,722,500 is appropriated from the general fund to the Department of Military and Veterans' Affairs for deposit in the defined benefit plan account in the Alaska National Guard and Alaska Naval Militia retirement system for the purpose of funding the Alaska National Guard and Alaska Naval Militia retirement system under AS 26.05.226.

Legislative Fiscal Analyst Comment: *A $10 million FY08 supplemental appropriation to the retirement fund was intended to payoff the unfunded liability of the system. The appropriation in subsection c may not be necessary; except for recent investment losses, the system has little unfunded liability.*

(d) The sum of $1,550,000 is appropriated from the general fund to the Department of Administration for deposit in the defined benefit plan account in the judicial retirement system for the purpose of funding the judicial retirement system under AS 22.25.046.

Legislative Fiscal Analyst Comment: *A $49 million FY08 supplemental appropriation to the retirement fund was intended to payoff the unfunded liability of the system. The appropriation in subsection d may not be necessary; except for recent investment losses, the system has little unfunded liability. Repayment of the unfunded liability reduced the actuarial rate that applies to the retirement system, permitting a reduction in the contribution rate paid by the Court System. FY2010 decrements totaling $3.5 million are reflected in the Court's budget request in section 1.*

* **Sec. 21.** SALARY AND BENEFIT ADJUSTMENTS. (a) The operating budget appropriations made in sec. 1 of this Act include amounts for salary and benefit adjustments for public officials, officers, and employees of the executive branch, Alaska Court System employees, employees of the legislature, and legislators and to implement the terms for the fiscal year ending June 30, 2010, of the following ongoing collective bargaining agreements:

(1) Alaska Public Employees Association, for the confidential unit;

(2) Alaska State Employees Association, for the general government unit;

(3) Alaska Public Employees Association, for the supervisory unit;

(4) Alaska Vocational Technical Center Teachers' Association – National Education Association, for the employees of the Alaska Vocational Technical Center;

(5) Public Safety Employees Association, representing the regularly Commissioned public safety officers unit.

(b) The operating budget appropriations made to the University of Alaska in this Act include amounts for salary and benefit adjustments for the fiscal year ending June 30, 2010, for university employees who are not members of a collective bargaining unit and for implementing the monetary terms of the collective bargaining agreements including the terms of the agreement providing for the health benefit plan for university employees represented by the following entities:

(1) Alaska Higher Education Crafts and Trades Employees;

(2) University of Alaska Federation of Teachers;

(3) United Academics;

(4) United Academics-Adjuncts.

(c) If a collective bargaining agreement listed in (b) of this section is not ratified by the

membership of the respective collecting bargaining unit, the appropriations made by this Act that are applicable to that collective bargaining unit's agreement are reduced proportionately by the amount for that collective bargaining agreement, and the corresponding funding source amounts are reduced accordingly.

Legislative Fiscal Analyst Comment: *"collecting" should be replaced with "collective" on the second line.*

Funding: This section appropriates no money; it specifies that various salary adjustments are funded with money appropriated in section 1.

*** Sec. 22.** SHARED TAXES AND FEES. (a) The amount necessary to refund to local governments their share of taxes and fees collected in the listed fiscal years under the following programs is appropriated to the Department of Revenue from the general fund for payment to local governments in fiscal year 2010:

REVENUE SOURCE	FISCAL YEAR COLLECTED
Commercial passenger vessel excise tax (AS 43.52.230(a))	2009
Fisheries business tax (AS 43.75)	2009
Fishery resource landing tax (AS 43.77)	2009
Aviation fuel tax (AS 43.40.010)	2010
Electric and telephone cooperative tax (AS 10.25.570)	2010
Liquor license fee (AS 04.11)	2010

Funding: These "pass through" amounts are excluded from Legislative Finance reports on the operating bill.

(b) The amount necessary, estimated to be $55,000, to pay to municipalities that amount of aviation fuel tax proceeds to which the municipalities would have been entitled under AS 43.40.010(e) for aviation fuel taxes that would have been due under AS 43.40.410 during the fiscal year ending June 30, 2010, but were not collected during a suspension from July 1, 2009 through August 31, 2009, of motor fuel taxes imposed under AS 43.40.010 is appropriated from the general fund to the Department of Revenue for the fiscal year ending June 30, 2010, for payment to municipalities of the amounts to which the municipalities would have been entitled to under AS 43.40.010(e) had the motor fuel tax not been suspended.

NEW SUBSECTION: Subsection b appropriates money to offset the loss of aviation fuel tax receipts that (if collected by the state) would have been distributed to municipalities under subsection a. The tax is suspended until August 31, 2009.

(c) It is the intent of the legislature that the payments to local governments set out in (a) and (b) of this section may be assigned by a local government to another state agency.

Subsection c is intended to allow a municipality to assign a payment under subsection a to a state agency. For example, the City of Homer might receive Fisheries Business tax payments under subsection a, but owe the Department of Administration contributions for PERS. Homer could assign the payment to DOA, thus avoiding cash flow from the state

to the city and back to the state.

* **Sec. 23.** STATE DEBT AND OTHER OBLIGATIONS. (a) The amount required to pay interest on any revenue anticipation notes issued by the commissioner of revenue under AS 43.08 during the fiscal year ending June 30, 2010, is appropriated from the general fund to the Department of Revenue for payment of the interest on those notes.

Subsection a appropriates general funds to pay interest on any revenue anticipation notes that may be issued during the year.

Legislative Fiscal Analyst Comment: *No notes are expected to be issued.*

(b) The amount required to be paid by the state for principal and interest on all issued and outstanding state-guaranteed bonds is appropriated from the general fund to the Alaska Housing Finance Corporation for the fiscal year ending June 30, 2010, for payment of principal and interest on those bonds.

Subsection b appropriate general funds to pay principal and interest on state-guaranteed bonds (veterans mortgage bonds) if the revenue stream from the mortgage loans is insufficient to make those payments. The only purpose of the state general obligation pledge is to gain tax-exempt status for the bonds. Because the bonds are general obligations of the state, they must be authorized by law, ratified by the voters, and approved by the State Bond Committee.

Funding: The revenue stream from mortgage loans is expected to be sufficient to cover bond payments, so the expected fiscal impact of this subsection is zero. However, a potential general fund obligation exists.

(c) The sum of $30,455,300 is appropriated to the state bond committee from the Alaska debt retirement fund (AS 37.15.011) for payment of debt service, accrued interest, and trustee fees on outstanding State of Alaska general obligation bonds, series 2003A, for the fiscal year ending June 30, 2010.

(d) The sum of $14,200 is appropriated to the state bond committee from State of Alaska general obligation bonds, series 2003A bond issue premium, interest earnings, and accrued interest held in the debt service fund of the series 2003A bonds for the fiscal year ending June 30, 2010, for payment of debt service, accrued interest, and trustee fees on outstanding State of Alaska general obligation bonds, series 2003A.

Subsections c and d appropriates $30.5 million from the debt retirement fund and $14,200 from bond premiums and interest, respectively, to pay debt service on series 2003A general obligation bonds. The bonds were authorized by the voters in 2002 for construction of schools and university facilities.

(e) The sum of $11,275,000 is appropriated to the state bond committee from the Alaska debt retirement fund (AS 37.15.011) for payment of debt service, accrued interest, and trustee fees on outstanding State of Alaska general obligation bonds, series 2009A, for the fiscal year ending June 30, 2010.

Subsection e appropriates $11.3 million from the debt retirement fund to pay debt service on series 2009A general obligation bonds. The bonds were authorized by voters in 2009 for road and harbor construction/renovation.

(f) If the amount necessary to pay the debt service obligations on the outstanding State of Alaska general obligation bonds, series 2003A and 2009A, exceed the amounts appropriated in (c), (d), or (e) of this section, the additional amount necessary is appropriated from the Alaska debt retirement fund (AS 37.15.011) for payment of those obligations for the fiscal year ending

June 30, 2010.

NEW SUBSECTION f ensures full payment of debt service on GO bonds.

(g) The sum of $12,885,100 is appropriated to the state bond committee from the Alaska debt retirement fund (AS 37.15.011) for payment of debt service, accrued interest, and trustee fees on outstanding state-guaranteed transportation revenue anticipation bonds, series 2003B, for the fiscal year ending June 30, 2010.

(h) The sum of $1,300 is appropriated to the state bond committee from state-guaranteed transportation revenue anticipation bonds, series 2003B bond issue premium, interest earnings, and accrued interest held in the debt service fund of the series 2003B bonds for the fiscal year ending June 30, 2010, for payment of debt service and trustee fees on outstanding state-guaranteed transportation revenue anticipation bonds, series 2003B.

Subsections g and h appropriate $12.9 million from the debt retirement fund and $1,300 from bond premiums and interest, respectively, to pay debt service on series 2003B state guaranteed transportation revenue anticipation bonds. The bonds were authorized by voters in 2002 for road and harbor construction/renovation.

Legislative Fiscal Analyst Comment: *Although these bonds were issued with a GO pledge by the state, they are more appropriately referred to as GARVEE bonds. The majority of the debt service is paid using eligible federal-aid highway formula funding coupled with a state matching component.*

(i) The sum of $50,028,700 is appropriated to the state bond committee for the fiscal year ending June 30, 2010, for payment of debt service and trustee fees on outstanding international airports revenue bonds from the following sources in the amounts stated:

SOURCE	AMOUNT
International Airports Revenue Fund (AS 37.15.430)	$46,828,700
Passenger facility charge	3,200,000

Subsection i appropriates funding for payment of debt service and fees on outstanding international airport revenue bonds.

(j) The sum of $1,005,000 is appropriated from interest earnings of the Alaska clean water fund (AS 46.03.032) to the Alaska clean water fund revenue bond redemption fund (AS 37.15.565) for payment of principal and interest, redemption premium, and trustee fees, if any, on bonds issued by the state bond committee under AS 37.15.560 during the fiscal year ending June 30, 2010.

(k) The sum of $1,670,000 is appropriated from interest earnings of the Alaska drinking water fund (AS 46.03.036) to the Alaska drinking water fund revenue bond redemption fund (AS 37.15.565) for payment of principal and interest, redemption premium, and trustee fees, if any, on bonds issued by the state bond committee under AS 37.15.560 during the fiscal year ending June 30, 2010.

Subsections j and k appropriate the interest earnings of the clean water and drinking water funds to their respective bond redemption funds. Both funds are capitalized annually with federal receipts for drinking and clean water bond receipts (see sections 18(n) and (o)). The federal receipts require a state match. Federal restrictions on the loan funds, however, limit their use to making loans and paying debt service. This section takes advantage of the ability to use the funds to pay debt service. Issuing short-term bonds (secured by the assets of the loan fund) allows the "restricted" earnings of the

funds to be used to pay off the bonds. Essentially, the earnings of the funds are used as match.

(l) The sum of $8,036,300 is appropriated from the Alaska debt retirement fund (AS 37.15.011) to the state bond committee for the fiscal year ending June 30, 2010, for trustee fees and lease payments relating to certificates of participation issued for real property.

Subsection l appropriates funds from the debt retirement fund to the state bond committee for payment of trustee fees and lease payments related to state-issued certificates of participation. Certificates of participation (COPs) are sold by the state to finance construction or purchase of state facilities. COPs represent fractional interest in the ownership of the lease payments that are paid over time by the state. Eventually, the state owns the facility outright.

(m) The sum of $3,467,100 is appropriated from the general fund to the Department of Administration for the fiscal year ending June 30, 2010, for payment of obligations to the Alaska Housing Finance Corporation for the Robert B. Atwood Building in Anchorage.

Subsection m appropriates $3.5 million for obligations associated with the Atwood Building. AHFC purchased the Robert B. Atwood Building for approximately $39 million in cash and then issued revenue bonds secured by the building itself and lease payments from the state. The state will own the building at the end of the lease.

(n) The sum of $25,968,100 is appropriated from the general fund to the Department of Administration for the fiscal year ending June 30, 2010, for payment of obligations and fees for the following facilities:

FACILITY	ALLOCATION
(1) Anchorage Jail	$5,103,900
(2) Spring Creek Correctional Center	2,102,400
(3) Goose Creek Correctional Center	17,810,000
(4) Yukon-Kuskokwim Correctional Center	951,800

Subsection n appropriates $5.1 million to pay lease costs for the Anchorage Jail. Anchorage issued municipal bonds to pay for the construction of the Anchorage Jail, which the state leases.

Legislative Fiscal Analyst Comment: *In common language, the contract with the Municipality of Anchorage is a lease, but terms of the contract are such that Governmental Accounting Standards Board's (GASB) rule #34 classifies it as a Capital Lease. This means that a default on lease payments could affect the state's credit rating. Because of the potential impact on credit rating, the obligation is categorized as debt.*

Legislative Fiscal Analyst Comment: *Chapter 160, SLA 2004 (SB 65) authorized lease-purchase agreements for the Spring Creek Correctional Center (SCCC) expansion, the Yukon-Kuskokwim Correctional Center (YKCC) expansion, and the Goose Creek Correctional Center construction. Upon renovation, the state will pay the debt service and utilize the facilities (a capital lease arrangement). SCCC is a $22 million project with projected FY2010 debt service of $2.1 million (25 year term @ 5.25%). YKCC is a $12.5 million project with projected FY2010 debt service of $952,000 (25 year term @ 5.25%).*

The latest construction cost estimates for the 1,536 bed Point McKenzie jail project, named Goose Creek Correctional Center, range from $257 to $259 million. The 25-year state lease is capped in statute at $11,600 per bed, and annual debt service is limited to $17.8 million. In order to remain within these financing parameters, bond rates would have needed to be about 4.75%. The administration proposed putting up $20 million as "gap" funding so that only $240 million would need to be raised through bond proceeds. The bonds were finally issued in that amount on December 22nd, 2008 at 5.95%. At this rate and term, annual debt service is expected to be in the $17.6 million range ($200 thousand less than the amount requested for FY2010).

(o) The sum of $3,303,500 is appropriated from the general fund to the Department of Administration for the fiscal year ending June 30, 2010, for payment of obligations to the Alaska Housing Finance Corporation for the Linny Pacillo Parking Garage in Anchorage.

***Subsection o** appropriates $3.3 million for obligations associated with the Linny Pacillo parking garage. The obligation is a lease purchase similar to the obligation for the Robert B. Atwood Building.*

(p) The sum of $98,937,100 is appropriated to the Department of Education and Early Development for state aid for costs of school construction under AS 14.11.100 from the following sources:

Alaska debt retirement fund (AS 37.15.011)	$75,937,100
School fund (AS 43.50.140)	23,000,000

Subsection p appropriates funds for municipal school debt reimbursement. AS 14.11.100 authorizes the state to reimburse municipalities for selected bonds issued for school construction (from 60-90% of principal and interest depending on the authorization). The amount of this appropriation is the projected need for full reimbursement.

(q) The sum of $5,548,923 is appropriated from the general fund to the following agencies for the fiscal year ending June 30, 2010, for payment of debt service on outstanding debt authorized by AS 14.40.257, AS 29.60.700, and AS 42.45.065, respectively, for the following projects:

AGENCY AND PROJECT	APPROPRIATION AMOUNT
(1) University of Alaska	$1,412,615
- Anchorage Community and Technical College Center Juneau Readiness Center/UAS Joint Facility	
(2) Department of Transportation and Public Facilities	
(A) Nome (port facility addition and renovation)	127,500
(B) Matanuska-Susitna Borough (deep water port and road upgrade)	755,120
(C) Aleutians East Borough/False Pass (small boat harbor)	101,840

AGENCY AND PROJECT (Cont.)	APPROPRIATION AMOUNT (Cont.)
(D) Lake and Peninsula Borough/Chignik (dock project)	117,844
(E) City of Fairbanks (fire headquarters station replacement)	872,115
(F) City of Valdez (harbor renovations)	225,743
(G) Aleutians Ease Borough/Akutan (small boat harbor)	303,948
(H) Fairbanks North Star Borough (Eielson AFB Schools, major maintenance and upgrades)	337,343
Department of Transportation and Public Facilities Subtotal	2,841,453
(3) Alaska Energy Authority	
(A) Kodiak Electric Association (Nyman combined cycle cogeneration plant)	943,676
(B) Copper Valley Electric Association (cogeneration projects)	351,179
Alaska Energy Authority subtotal	1,294,855

Subsection q appropriates $5.5 million to various state agencies for reimbursement to municipalities and public entities for debt service on projects authorized in Ch. 115, SLA 2002 (HB 528). This level of reimbursement is lower than that enacted for FY09 ($8.0 million). The level of reimbursement is discretionary.

(r) The sum of $8,900,000 is appropriated from the Alaska fish and game revenue bond redemption fund (AS 37.15.770) to the state bond committee for payment of debt service, accrued interest, and trustee fees on outstanding sport fish hatchery revenue bonds. It is the intent of the legislature that the sum of $3,600,000 of the appropriation made by this subsection be used for early redemption of the bonds.

Subsection r appropriates the majority of the surcharge levied on sport fish licenses authorized under Ch 94, SLA 2005—and transferred to the bond redemption fund in Section 18(r) of this bill—for payment of debt service on bonds issued for sport fish hatchery development. The appropriation exceeds the debt service due on the bonds, allowing the bonds to be paid off ahead of schedule.

* **Sec. 24.** CONSTITUTIONAL BUDGET RESERVE FUND. (a) Deposits in the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska) for fiscal year 2009 that are made from subfunds and accounts other than the operating general fund (state accounting system fund number 11100) by operation of art. IX, sec. 17(d), Constitution of the State of Alaska, to repay appropriations from the budget reserve fund are appropriated from the budget reserve fund to the subfunds and accounts from which those funds were transferred.

Subsection a is "sweep reversal language." The Constitution requires that year-end general fund balances be used to repay withdrawals from the CBRF. All general fund subaccounts are "swept" into the CBRF; this provision reverses that action.

(b) Unrestricted interest earned on investment of the general fund balances for the fiscal year ending June 30, 2010, is appropriated to the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska). The appropriation made by this subsection is intended to compensate the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska) for any lost earnings caused by use of the fund's balance to permit expenditure of operating and capital appropriations in the fiscal year ending June 30, 2010, in anticipation of receiving unrestricted general fund revenue. The amount appropriated by this subsection may not exceed an amount equal to the earnings lost by the budget reserve fund as the result of the use of money from the budget reserve fund to permit expenditure of operating and capital appropriations in the fiscal year ending June 30, 2010, in anticipation of receiving unrestricted general fund revenue.

Subsection b appropriates general fund earnings to the CBRF as compensation for earnings lost by the CBRF as a result of draws to meet the Treasury's cash flow requirements.

(c) The sum of $1,673,000 is appropriated from the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska) to the Department of Revenue, treasury division, for operating costs related to management of the budget reserve fund for the fiscal year ending June 30, 2010.

Subsection c appropriates $1.7 million from the budget reserve fund to the Department of Revenue, Treasury Division, for investment management fees for FY2010.

(d) The appropriations made by (a) and (c) of this section are made under art. IX, sec. 17(c), Constitution of the State of Alaska.

Subsection d stipulates that appropriations made from the CBRF must be approved by at least three-quarters of the members of each house of the legislature.

Legislative Fiscal Analyst Comment: *The bill contains no language appropriating funds from the CBRF to cover any shortfall in unrestricted revenue.*

* **Sec. 25.** NONLAPSE OF APPROPRIATIONS. The appropriations made by secs. 5, 18, 20, 23(j), and 23(k) of this Act are for the capitalization of funds and do not lapse.

* **Sec. 26.** RETROACTIVITY. Those portions of the appropriations made in sec. 1 of this Act that appropriate either the unexpended and unobligated balance of specific fiscal year 2009 program receipts or the unexpended and unobligated balance on June 30, 2009, of a specified account are retroactive to June 30, 2009, solely for the purpose of carrying forward a prior fiscal year balance.

* **Sec. 27.** Section 26 of this Act takes effect June 30, 2009.

* **Sec. 28.** Except as provided in sec. 27 of this Act, this Act takes effect July 1, 2009.

Debt Summary Table

THIS PAGE INTENTIONALLY LEFT BLANK

Capital Budget

The Governor has proposed capital projects of $1.9 billion and a total capital budget of $2.02 billion for FY2010.[3] The budget includes $535 million in general funds, $1.1 billion in federal funds, and $380 million of other state funds.[4] Compared with the budget proposed last year (on 12/15/2007), it is $194 million greater in general funds, $310 million greater in federal funds, but down $416 million in other state funds for a $88 million net increase over the Governor's FY09 proposal.

Funding

General Funds

General funds are up $194 million over the Governor's FY09 proposal. This amount includes money from a savings account set aside by the legislature in FY07. The legislature placed $300 million of general funds in a sub-corporation of AHFC, with the intent that the money be used for future capital projects. The Governor proposes using $238.4 million of the $300 million (plus approximately $45 million of earnings) available.

Other State Funds

The large drop in other state funds is attributable to:

- The inclusion of much more bond funding in FY09. A total of $300 million of general obligation and Alaska Student Loan bonds were proposed. This year, only airport bonds ($24.3 million) are included as a bond fund source.
- A substantial reduction in expenditures from the Alaska Capital Income Fund. Last year's appropriation level was supported by infusions of cash into the fund.[5] The fund was essentially drained in FY09 and the FY2010 budget contains roughly the amount of income expected in FY2010 (approximately $28 million).

The Governor's FY2010 proposal includes over $39 million in cruise-ship-related projects funded from the Commercial Passenger Vessel Tax Fund. Last year the legislature appropriated $25 million from this fund, of which $10 million was vetoed by the Governor.

Federal Funds

Federal receipt authority is up over $300 million. Much of this is attributable to two projects:

- DNR's $58 million Coastal Impact Assistance Program and
- the University's $100 million Arctic Research Vessel.

The remaining increase is in the DOT&PF Airport Improvement and Surface Transportation programs. Due to the very complex environment for federal funding (see *Issues* later in this section), the DOT&PF capital budget appears to include some "extra" projects. This is not an uncommon strategy by DOT&PF; it provides the flexibility to manage federal programs so as to best capture available federal funding. Once a new federal transportation authorization bill is

[3] The total budget includes fund transfer appropriations which, as duplicated appropriations, do not actually put more "money on the street." The Capital Budget Summary table on page 62 reflects this best. The report differs from the depiction on the Fiscal Summary, in which all duplicate funds are removed.

[4] The Fiscal Summary shows FY2010 GF spending of $555 million. That figure includes a $20 million placeholder for FY2010 supplemental projects which is excluded here.

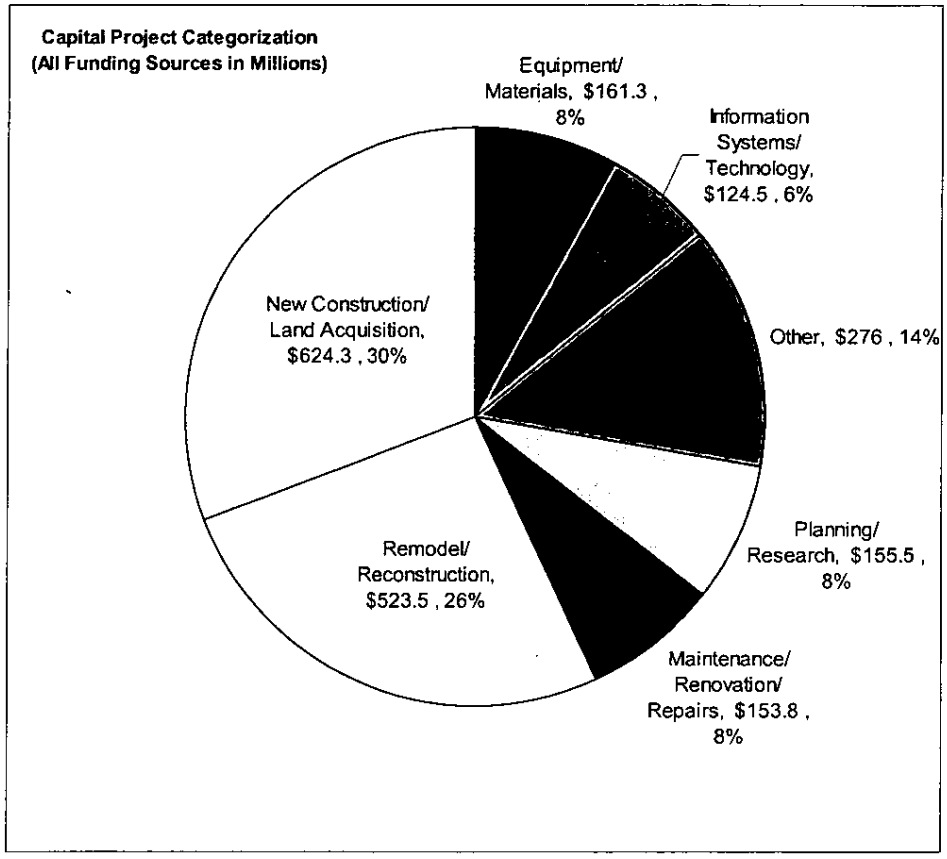
[5] In FY07, a general fund sweep provision caused over $140 million to be swept into the fund. In FY08, over $50 million of corporate dividends was placed into the fund.

passed and plans for economic stimulus are revealed, the direction of future federal funding will be clearer.

Budget Composition

The pie chart below provides a categorical breakdown of the proposed capital spending plan.[6] Further project details may be addressed in the individual agency narratives.

Figure 1



Construction

Construction projects—both new and remodel—comprise over 56% of the Governor's proposed capital budget. New construction involves adding infrastructure to the state's capital stock, and includes both new roads and new square footage. Reconstruction involves modifying or changing the function of existing roads or space. The Surface Transportation Program and the Airport Improvement Program within DOT&PF make up the majority of the construction budget at $602 million. Other significant construction projects are in the Village Safe Water and Waste Water Program and the Municipal Water Sewer Matching Grants Program at $110 million. Large, stand-alone *state funded* construction appropriations include:

- $20 million (AHCC Funds) - Goose Creek Correctional Center gap funding
- $20 million (AHCC Funds) - AVTEC 3rd Avenue Dorm Replacement

[6] Please see the last page of this section for the methodology of the project categorization.

- $12 million (AHCC Funds) - AVTEC Heavy Equipment and Diesel Shop
- $15 million (University Receipts) – UAF Energy Technology Building
- $20.6 million (University Receipts) – UAF Life Sciences Facility
- $50 million (GF) – Federal Aid Highway/ Aviation State Match
- $10.8 million (GF) – School Major Maintenance Projects

Maintenance/Renovation/Repairs

This category includes deferred/scheduled maintenance or repair projects for agency facilities, state parks, harbors, highways, bridges, rural airports, aircraft and vessels. The category accounts for 8% of the total capital budget. Notable projects include:

- $32 million (GF) – School Major Maintenance Projects
- $9.8 million (GF) – AMHS Vessel/Terminal Overhaul
- $18 million (Federal) – AMHS Mainline Ferry Refurbishment
- $11.4 million (Federal) – Richardson Highway Flood Repairs
- $10 million (GF) – UA Annual Facility Maintenance, Renewal/Renovation
- $32.9 million (various) – Various Agency Facility Maintenance Projects

Planning/Research

Another 8% of the budget is for the planning/research category, primarily federal highway and airport pre-construction appropriations. At $45 million and $18 million, respectively, these highway and airport projects fund the preliminary design, engineering, environmental analysis, right-of-way and utility work for the federal Airport Improvement Program and Surface Transportation Program. Other sizable projects include:

- $4.2 million (AHCC Receipts) – DEC Girdwood Wastewater Treatment Facility
- $22 million (Federal) – DF&G Pacific Coastal Salmon Recovery Fund
- $3 million (AHCC) – DNR Gas Pipeline Implementation
- $6 million (AHCC) – DNR Reservoir Studies Oil and Gas Resources
- $5 million (AHCC) – DOR Gas Spur Line Development
- $2 million (AHFC Dividend) – AHFC Energy Efficiency Monitoring Research

Information Systems/Technology

Information technology projects make up a significant portion of the budget at 6%. This is substantial given that the funding is made up of almost entirely state funds. Spread throughout state agencies, projects include network upgrades/replacements, security projects, document imaging projects, and two notable projects comprising over half the category:

- $23.4 million (AHCC/Gamble Tax) – DOR Tax Management System
- $50 million (AHCC) - DOA Statewide System Replacement (accounting and payroll system)

Equipment/Materials

This category, totaling $161 million, is much larger than normal because it includes $100 million of federal receipt authority for the UAF Alaska Region Research Vessel project. This funding, along with $80 million of previous authority, will allow for construction of a 236 foot ice-capable research vessel. Other significant equipment/ materials projects include:

- $15 million (Hwy Working Capital Funds) – State Equipment Fleet Replacement
- $13.6 million (Federal) – Snow Removal Equipment
- $2.3 million (AHCC Receipts) – Fairbanks Pipeline Training Center Equipment

Other

The Other category, 14% of the budget, is comprised of projects outside the other project categories. They include projects of economic assistance, training, safety grants/ programs, fund capitalizations and others. Notable projects include:

- $58 million (Federal) – DNR Coastal Impact Assistance Program
- $10 million (various) – AHFC Homeless Assistance Program
- $11.5 million (Federal) – DOT&PF Statewide Safety Program
- $20 million (AHCC) – AGIA Reimbursement Fund

ISSUES

Federal Funding

Last summer the Congressional Budget Office projected a Federal Highway Trust Fund shortfall of $3.3 billion for 2009. This shortfall was addressed by Congress, albeit temporarily, by an $8 billion infusion from the general treasury. Current projections have the Trust Fund remaining solvent through federal fiscal year 2009. The infusion fixes the immediate shortfall in funding, but does not address the structural problem with regard to the Trust Fund. Congress will need to address the funding mechanism of the fund on a long-term basis in the transportation authorization bill to follow SAFETEA-LU.

An unprecedented fiscal stimulus package is expected soon after the inauguration of President Obama. How it will affect Alaska is unknown at this time. Conjecture has Alaska receiving upwards of $300 million dollars very soon after the package is signed into law. The stimulus is intended to be very swift, and strings are likely to be attached. There is speculation that projects must be fully vetted through the normal federal rules and be "shovel ready" in short order, or states may lose the funding to a state that is ready to move more rapidly.

The Governor has submitted a $140 million request to the Alaska Congressional Delegation that some regard as less-than-sufficient given the situation. On the list were three gas pipeline infrastructure projects and one for Central Region general surface repairs. It is expected that these projects would come off the top of the $300 million, leaving approximately $160 million for statewide ready-to-build projects.

In order to avoid losing "stimulus funds," DOT&PF may use the new money for projects currently scheduled to receive regular federal program funding. They would then replace the projects removed from the regular funding list with projects scheduled for later years. A supplemental bill addressing the stimulus package is expected from the administration. Fast tracking the bill may be in order to maximize the federal funds. Environmental infrastructure, the Alaska Railroad and other infrastructure may also be included.

Gas Pipeline Infrastructure

The Department of Transportation and Public Facilities previously outlined $2 billion in transportation infrastructure projects that are deemed necessary in order to build the gas pipeline. "Every day, week, month or year that we wait to complete infrastructure will add cost to the project (gas pipeline) and could in fact be the main reason that this project doesn't get built," Federal Pipeline Coordinator Drue Pearce recently said. With only five construction seasons remaining before planned pipeline construction, the 86 identified projects along the Dalton, Elliot, Richardson, Parks, Glenn and Alaska Highways will need to be screened for "mission critical" items. The $2 billion estimate came when oil was over $100/bbl. In this $30-$40/bbl environment, projects may be limited to "must haves" for the safe and efficient construction of the pipeline. The governor has included one pipeline transportation infrastructure project, Dalton Highway MP 9-11 ($26.3 million), in her current bill.

Distribution by House District

The pie charts on the following page (Figures 2 & 3) detail the proportional breakdown of the budget by house district on an "impact" basis.[7] Figure 2 contains all funding sources, while Figure 3 is state funds only. As can be seen, the majority of projects are assigned to the "Statewide" House District. Projects falling under this assignment are generally broad appropriations that span multiple regions or the state. The types of projects included are large deferred maintenance projects, information technology projects, and federal grant programs. The Capital Budget Summary table on page 62 breaks out the funding sources by fund group (general, federal and other funds) for each house district. Project detail reports by House District (along with project back-up) can be found on the Legislative Finance website.

Project Categorization Methodology

The pie chart beginning this section and the spreadsheets accompanying each agency narrative categorize the capital budget by project groups. The groupings have been developed with the intent of creating a mutually exclusive set. This allows for the totaling of projects into a Project Group Summary report that reflects the entire capital budget without duplication. As with any task of categorization, subjectivity exists.

The rules used to define the projects in each group are provided in the table below.

Project Group	Description
Planning and Research	Projects involving planning, design, engineering, research, or studies
Maintenance, Renovation and Repairs	Projects involving the repair of deteriorated conditions, restoration, bringing back to a preexisting or improved state
Remodel and Reconstruction	Projects modifying existing space, changing the function of existing space
New Construction and Land Acquisition	Projects involving the addition of new space
Information Systems and Technology	Projects related to information technology regardless of whether they are in a planning phase or construction (programming) phase - segregated due to their unique nature
Other	Projects that do not fit elsewhere

[7] Legislative Finance assigns two house districts to each project: 1) by the house districts impacted by a project, and 2) by the geographic location of a project.

Fund Capitalization (1)	10,000,000	20,000,000	10,000,000					
Total Capital - "Money on the Street" (3)	**1,797,977,794**	**1,890,578,713**	**92,600,919**			**435,130,058**	**1,103,923,241**	**351,525,414**
Fund Transfers (2)	132,902,035	128,014,065	(4,887,970)	Statewide	1-40	100,014,065	-	28,000,000
Total - Including Fund Transfers	**1,930,879,829**	**2,018,592,778**	**87,712,949**			**535,144,123**	**1,103,923,241**	**379,525,414**
General Funds	341,337,982	535,144,123	193,806,141					
Federal Funds	794,323,817	1,103,923,241	309,599,424					
Other State Funds	795,218,030	379,525,414	(415,692,616)					

Notes:

1) Fund Capitalization in this context refers to funding appropriated to a program not requiring further appropriation for expenditure (e.g.- Harbor Facility Grant Fund, AGIA Reimbursement Fund).

2) Fund Transfers is the funding appropriated from one "fund" to another "fund," not actually adding any new capital project funding to the total.

3) "Money on the Street" is the total amount of funding for capital projects, net of fund transfers. Duplicated fund sources are not removed. Doing so would underestimate the actual amount of funding going toward capital projects. This is the opposite of operating budget duplicate funds, whereby the duplicate fund sources would double the actual money paying for services.

Language Sections of the Governor's FY2010 Capital Budget

*** Sec. 10.** ENTERPRISE INFORMATION TECHNOLOGY PROJECTS. (a) The sum of $7,564,659 is appropriated to the Office of the Governor from the following sources in the amounts stated and allocated for department information technology security projects:

DEPARTMENT AND PROJECT		SOURCE	ALLOCATION BY SOURCE	PROJECT TOTAL ALLOCATION
(1)	Administration Enterprise security projects	Information services fund	$5,000,000	$5,000,000
(2)	Health and Social Services			
(A)	Personal information protection data encryption	Federal receipts	81,814	818,141
		General fund match	736,327	
(B)	Health insurance portability and accountability compliance	Federal receipts	668,724	1,337,448
		General fund match	668,724	
(C)	Disaster recovery	Federal receipts	40,907	409,070
		General fund match	368,163	

(b) The sum of $4,160,800 is appropriated to the Office of the Governor from the following sources in the amounts stated and allocated for department information technology imaging and document management projects:

DEPARTMENT AND PROJECT		SOURCE	ALLOCATION BY SOURCE	PROJECT TOTAL ALLOCATION
(1)	Administration Document management system – microfilm conversion phase 1	General fund	$4,600	$328,000
		Group health and life benefits fund	94,500	
		FICA administration fund account	2,000	
		Public employees retirement trust fund	160,100	
		Teachers retirement trust fund	63,200	
		Judicial retirement system	400	
		National guard retirement system	3,200	

DEPARTMENT AND PROJECT			SOURCE	ALLOCATION BY SOURCE	PROJECT TOTAL ALLOCATION
(2)	Commerce, Community, and Economic Development				
	(A)	Banking and securities management systems	Receipt supported services	890,000	890,000
	(B)	Community and regional affairs imaging	General fund	690,000	690,000
	(C)	Banking and securities imaging	Receipt supported Services	580,000	580,000
(3)	Health and Social Services				
	Contract management automation system		Federal receipts General fund match	47,300 425,500	472,800
(4)	Natural Resources				
	DNR document management system phase 2 or 2		General fund	1,200,000	1,200,000

(c) The distribution to the respective state agencies of the appropriations allocated in (a) and (b) of this section is contingent on the respective state agencies signing an agreement to participate in the Department of Administration's enterprise collaboration model for information technology projects.

Subsections a appropriates $7.6 million to the Office of the Governor for information technology security projects. There are four allocations to various departments.

Subsection b appropriates $4.2 million to the Office of the Governor for information technology imaging and document management projects. There are six allocations to various departments.

Subsection c limits distribution of project funding to agencies that agree to meet unspecified requirements regarding collaboration.

Although details are not yet available, the Enterprise Investment Board (EIB) recently voted to establish a model of collaboration between agencies for IT projects of common scope. The intent is to "leverage opportunities in integration and take advantage of efficiencies and economies of scale." The EIB also voted to group similar projects into appropriations to the Office of the Governor, the intent of which is to compel collaborative work; OMB will hold the purse strings until agencies sign Project Charter Agreements identifying scope, timelines, etc. The minutes from the October 30, 2008 EIB meeting are available online and provide additional information on the topic.

Legislative Fiscal Analyst Comment: *While collaboration is a laudable goal, there may be alternative appropriation language that achieves the same end while allowing the projects to be formally associated the applicable agency.*

* **Sec. 11.** FEDERAL AND OTHER PROGRAM RECEIPTS. (a) Federal receipts, designated program receipts as defined in AS 37.05.146(b)(3), information services fund program receipts as defined in AS 44.21.045(b), receipts of the University of Alaska as described in AS 37.05.146(b)(2), receipts of commercial fisheries test fishing operations under AS 37.05.146(c)(21), corporate receipts of the Alaska Housing Finance Corporation, corporate receipts of the Alaska Aerospace Development Corporation, Exxon Valdez oil spill trust receipts as defined in AS 37.05.146(b)(4), and receipts of the Alaska Fire Standards Council under AS 37.05.146(b)(5), that exceed the amounts appropriated by this Act are appropriated conditioned on compliance with the program review provisions of AS 37.07.080(h).

Subsection a lists types of unanticipated additional receipts that are appropriated subject to review by the Legislative Budget and Audit (LB&A) Committee. Corporate receipts of the AHFC have been added to the list since FY08.

Legislative Fiscal Analyst Comment: *This standard language permits requests for additional capital authorization to be submitted to the LB&A committee for approval. Similar language in the operating budget applies only to operating authorization. The operating language excludes test fisheries receipts and corporate receipts of the Alaska Aerospace Development Corporation.*

(b) If federal or other program receipts as defined in AS 37.05.146 and in AS 44.21.045(b) exceed the estimates appropriated by this Act, the appropriations from state funds for the affected program may be reduced by the excess if the reductions are consistent with applicable federal statutes.

Subsection b permits state authorization to be reduced if unanticipated money is received for projects funded by state funds. There is no formal process for tracking potential reductions.

(c) If federal or other program receipts as defined in AS 37.05.146 and in AS 44.21.045(b) fall short of the estimates appropriated by this Act, the affected appropriation is reduced by the amount of the shortfall in receipts.

Subsection c automatically limits authorization of federal and other receipts to the amount actually received. The language applies to all appropriations in the Act, not merely to appropriations subject to LB&A review.

* **Sec. 12.** FUND TRANSFERS. (a) The income earned during fiscal year 2010 on revenue from the sources set out in AS 37.13.145(d) is appropriated to the Alaska capital income fund (AS 37.05.565).

Subsection a appropriates the FY2010 earnings associated with the State vs Amerada Hess settlement (held within the Permanent Fund) to the Alaska Capital Income Fund. This fund was established in FY05 and is customarily appropriated for capital projects.

Funding: The Amerada Hess settlement portion of the Permanent Fund is "fenced off" from the rest of the Permanent Fund principal. The earnings on this $425 million portion have historically been projected at $28 million per year based on the expected rate of return on Permanent Fund investments. Historically, earnings have averaged almost $35 million per year, and FY09 earnings are currently projected at $18 million.

(b) The interest earned on amounts in the election fund are appropriated to the election fund required by the federal Help America Vote Act.

(c) The following appropriations are made from the general fund to the following funds in the amounts stated:

FUND	APPROPRIATION
(1) Information services fund (AS 44.21.045(a))	$9,500,000

This subsection capitalizes the Information Services Fund for capital projects in Section 1. Typically, project appropriations equal the amount capitalizing the fund.

Legislative Fiscal Analyst Comment: *This cumbersome method of funding projects is intended to identify and track projects so that expenditures can be recouped via IT service charges. Given the high level of IT chargeback rates and the pushback from agencies on rate increases, it is doubtful that capital investments will be recouped.*

Funding: The projects in Section 1 utilizing the Information Services Fund (ISF) total $10.8 million. This exceeds the capitalization by $1.3 million.

Legislative Fiscal Analyst Comment: *Spending in excess of the capitalization of the fund begs questions concerning the available cash balance in the ISF. The balance is approximately $28 million, but the amount of that balance free of future replacement obligations is unknown at this time. Finance committees may wish to examine this issue.*

(2) Renewable energy grant fund (AS 42.45.045(a))	50,000,000

This subsection capitalizes the Renewable Energy Grant Fund created last session in HB 152 (Chapter 31, SLA 2008) and capitalized at $50 million. The fund was capitalized with an additional $50 million in HB4001, the special session appropriation bill.

Legislative Fiscal Analyst Comment: *Despite intent to distribute $100 million during the interim, most of the FY09 deposits remain in the fund. Requests for grants are expected to be part of the regular capital budget process.*

(d) The sum of $40,514,065 is appropriated from Alaska housing capital corporation receipts to the major maintenance grant fund (AS 14.11.007).

This subsection capitalizes the Major Maintenance Grant Fund set up in statute for school maintenance projects. Projects are scored and ranked by the Department of Education and Early Development (DEED). This amount would fund projects 1-23 on the DEED Major Maintenance List. The list contains 138 approved projects of which the state's share amounts to $269.6 million (approximately 75% of the total estimated cost).

Funding: The Alaska Housing Capital Corporation fund source refers to a $300 million general fund appropriation to a subcorporation established within the Alaska Housing Finance Corporation.

Legislative Fiscal Analyst Comment: *The AHCC savings account is a "parking spot" for surplus revenue. The account was created within AHFC in FY07 because doing so made the balance exempt from the annual sweep of unspent general funds to the Constitutional Budget Reserve Fund. Legislative Finance classifies withdrawals from the savings account as general funds; the Governor classifies them as duplicated funds.*

Legislative Fiscal Analyst Comment: *Note that the proposed budget does not address capitalization of—or spending from—the School Construction Grant Fund. The school construction list contains 32 schools projects that have an estimated state cost of $475 million.*

Legislative Fiscal Analyst Comment: *Legislative Finance prefers the Major Maintenance and School Construction Grant Funds be capitalized in the numbers section of the capital bill. The appropriation can go directly to the specific fund in DEED with the projects listed as allocations. Last year, this change was made in the capital bill (see*

page 136, line 13 through page 138 line 17, Section 13, Chapter 29, SLA 2008. The advantages of the FY09 approach are reduced fund source duplication in the budget (which adds clarity), and faster bill writing and modification.

(e) The sum of $20,000,000 is appropriated from Alaska housing capital corporation receipts to the Alaska Gasline Inducement Act reimbursement fund (AS 43.90.400(a)) for the natural gas pipeline project construction inducement under AS 43.90.110(a)(1).

This section appropriates $20 million to the AGIA reimbursement fund for expenses associated with the $500 million inducements provided to TransCanada Alaska with the issuance of the AGIA license. $30 million from the general fund was appropriated to the fund in the special session authorizing the license.

* **Sec. 13.** INSURANCE CLAIMS. The amounts to be received in settlement of insurance claims for losses and the amounts to be received as recovery for losses are appropriated from the general fund to the

(1) state insurance catastrophe reserve account (AS 37.05.289(a)); or

(2) appropriate state agency to mitigate the loss.

This section allows an agency to receive insurance claim settlement payments directly from a third party. Without this provision, settlements would remain in the general fund and would not be available to offset an agency's loss without a specific appropriation.

* **Sec. 14.** NATIONAL PETROLEUM RESERVE - ALASKA IMPACT GRANT PROGRAM. The amount received by the National Petroleum Reserve - Alaska special revenue fund (AS 37.05.530) under 42 U.S.C. 6506a(*l*) or former 42 U.S.C. 6508 by August 31, 2009, estimated to be $22,500,000, is appropriated from that fund to the Department of Commerce, Community, and Economic Development for capital project grants under the National Petroleum Reserve - Alaska impact grant program.

This section appropriates the entire amount received (estimated at $22.5 million for FY2010) from the revenue shared by the federal government from sales, rentals, bonuses, and royalties on leases issued within the NPR-A to the NPR-A Impact Grant Program. Grants are awarded to municipalities impacted by oil and gas development in the NPR-A. AS 37.05.530(g) states that receipts not appropriated as grants are to be distributed as follows: 25% to Permanent Fund Principal, ½% to the Public School Trust Fund, and any remaining amount to the Power Cost Equalization and Rural Electric Capitalization Fund.

Legislative Fiscal Analyst Comment: *The FY09 capital bill contained an itemized listing of all grantees and the projects to be funded. The benefits of listing the grantees in the bill include the ability to search for specific grant recipients.*

* **Sec. 15.** RURAL ELECTRIFICATION REVOLVING LOAN FUND; ELECTRICAL EMERGENCIES PROGRAM. (a) Notwithstanding AS 42.45.020(g), the balance of the rural electrification revolving loan fund (AS 42.45.020) on June 30, 2009, estimated to be $80,400, is appropriated to the Department of Commerce, Community, and Economic Development, Alaska Energy Authority, for the electrical emergencies program.

This section is effectively a general fund appropriation; it makes an FY09 supplemental appropriation of the balance of the Rural Electrification Revolving Loan fund to AEA before the receipts are deposited into the general fund. The balance consists of the loan payments on the remaining loans outstanding. These loan payments totaled approximately $330,000 annually until recently, when several loans accounting for over 70% of the outstanding balance were paid in full. The remaining loan payments will total

approximately $80,000 ($80,400 for FY2010) until 2020, when they will drop to approximately $65,000.

(b) The sum of $250,000 is appropriated from the general fund to the Department of Commerce, Community, and Economic Development, Alaska Energy Authority, for the electrical emergencies program.

The $250,000 is the difference between the $330,000 customary amount appropriated for electrical emergencies and the energy loan repayments of $80,000 appropriated in subsection a.

Legislative Fiscal Analyst Comment: *Scooping a lapsing balance may have made sense when no additional appropriation was necessary, but the legislature may wish to consider deleting this section in favor of a numbers section appropriation of $330,000 general funds.*

*** Sec. 16.** CLIMATE CHANGE IMPACT MITIGATION PROGRAM. Section 10, ch. 11, SLA 2008, page 57, lines 30 - 31, is amended to read:

ALLOCATIONS	APPROPRIATION ITEMS	GENERAL FUND	OTHER FUNDS
Climate Change Impact Mitigation Program (HD 1-40)	**1,400,000** [1,100,000]	**1,400,000** [1,100,000]	

This section adds $300,000 from the general fund to the listed appropriation.

Legislative Fiscal Analyst Comment: *Unless a supplemental adjustment is required, there is no need to amend the original appropriation. This project can be moved to the numbers section of the bill, which would then include a new project in the amount of $300,000 for Climate Change Impact Mitigation. If the section was intended to have a supplemental effective date, it can remain in language, but the effective date clause would need to be revised.*

*** Sec. 17.** LAPSE. (a) The appropriations made by secs. 12 and 13(1) of this Act are for the capitalization of funds and do not lapse.

(b) The appropriations made by secs. 10 and 14 - 16 of this Act are for capital projects and lapse under AS 37.25.020.

This section states that the projects lapse under AS 37.25.020 which provides that the appropriation is for the life of the project. The belief that capital appropriations have a five-year lapse is a common misunderstanding.

(c) A grant awarded in secs. 1 - 16 of this Act to a named recipient under AS 37.05.316 is for a capital project, unless specifically identified in this Act as an operating grant, and lapses under AS 37.25.020 unless otherwise stated or designated for a fiscal year.

This new subsection is included to clarify that all grants under AS 37.05.316 are to be considered capital projects and are to lapse like other capital projects. There has been confusion in the past on whether some grants are intended to be operating grants with a one-year lapse. This language should clarify the situation.

*** Sec. 18.** Section 15(a) of this Act takes effect June 30, 2009.

This effective date makes the $80,000 appropriation for electrical emergencies in section 15 (a) an FY09 supplemental appropriation.

*** Sec. 19.** Except as provided in sec. 18 of this Act, this Act takes effect July 1, 2009.

THIS PAGE INTENTIONALLY LEFT BLANK

Comprehensive Integrated Mental Health Program

The Alaska Mental Health Trust Authority (Authority) administers the Mental Health Trust established in perpetuity. The Authority has a fiduciary responsibility to enhance and protect the Trust and to provide leadership in advocacy, planning, implementation, and funding of a comprehensive integrated mental health program (CIMHP) to improve the lives and circumstances of its beneficiaries. **The Trust's beneficiaries include:**

- People with mental illness;
- People with developmental disabilities;
- People with chronic alcoholism; and
- People with Alzheimer's disease and related disorders.

The Trust

The Mental Health Lands Trust Settlement reconstituted the Trust established by the Alaska Mental Health Enabling Act of 1956 with trust land totaling approximately 930,000 acres. **The settlement required the state to:**

- provide a cash payment of $200 million into a newly created mental health trust fund;
- establish a Trust Authority;
- return the principal of the trust fund to the Authority; and
- perpetually use the income of the trust to pay for trust administration costs and ensure improvements and continuation of the integrated, comprehensive mental health program.

Chapter 6, SLA 1994 appropriated $200 million to the mental health trust fund from the following sources:

Mental health trust income account	$33,000.0
DNR mental health trust income in the general fund	$11,700.0
Proceeds from sale of DNR land sale contract portfolio	$25,000.0
Budget reserve fund	$130,300.0

This appropriation was finalized after the superior court of the State of Alaska made its final determination that the state had satisfied its obligation to reconstitute the Mental Health Trust.

Management of the Trust: The Permanent Fund Corporation manages the trust principal, the Mental Health Trust Lands Office (Dept. of Natural Resources) manages the land, and the Mental Health Trust Authority (Dept. of Revenue) and its Board make recommendations for program funding.

Mental Health Funding: The Trust Authority sources of income for annual spending include:

- a percentage of net asset value of the Trust Fund Corpus (Principal);
- lapsed funds from the prior year;
- income from the Trust's account in the treasury; and
- income from rents, fees, purchase contract interest, and 15% of timber sales from the Trust Land Management.

The Mental Health Budget Process

Separate Appropriation Bill: AS 37.14.001 establishes the responsibilities and authority for management of the Mental Health Trust. The statute requires the Governor to submit a separate appropriation bill limited to appropriations for the state's integrated comprehensive mental health program. If appropriations in the bill submitted by the Governor or the bill approved by the legislature differ from those proposed by the Authority, the bills must be accompanied by a report explaining the reasons for the differences from the Trust's recommendations.

Mental Health Trust Authority Authorized Receipts: The Mental Health Trust generates revenue from the investment earnings on the $200 million trust, land sale/lease proceeds, and land use royalties. Mental Health Trust income, identified in the appropriation bill as MHTAAR or Mental Health Trust Authority Authorized Receipts, provides approximately $10 million per year for CIMHP funded programs and mental health trust administrative costs.

A unique provision of the settlement grants the Authority the power to spend mental health trust income without legislative approval. This provision does not, however, remove the legislature from spending decisions. The Trust's spending plans typically allocate substantial money to state agencies, which cannot spend the money without legislative authorization.

This approach to budgeting requires extensive cooperation between the Authority and the agencies that receive MHTAAR. The Authority considers requests from relevant agencies and beneficiary boards, and then submits a list of approved projects and funding proposals to the Governor. Although the budget is developed cooperatively, the Governor's request makes changes in MHTAAR funding without the approval of the Authority. Similarly, the legislature typically works with the Authority on any revisions to the Authority's plan.

Zero-Based Budgeting: FY2010 is the second year of zero-based budgeting of MHTAAR for the Trust, meaning that all MHTAAR in state agencies was removed from the FY2010 adjusted base budget. This approach emphasizes that MHTAAR funding is not based on prior year appropriations, but is an independent decision made by the Authority each year. The approach has the advantage (from the Authority's perspective) of specifying the purpose of all MHTAAR that appears in the budget. In prior years, the purpose of continuing funding was not stated in budget transactions.

Other Funds Appropriated in the Mental Health Budget: Other state funds and federal funding are typically included in the CIMHP. These might include general funds, AHFC Dividend funds, and Alcohol and Other Drug Abuse Treatment & Prevention Funds. The Authority does not exercise as much control over this portion of the Mental Health budget. Although the Authority is typically consulted about expenditure of non-MHTAAR for mental health purposes, the Authority cannot dictate where other funds may or may not be used. Allocation of state and federal funding for mental health purposes is similar to the process that applies to the regular operating and capital budgets; state agency operating requests show changes to appropriations made the previous fiscal year. Capital requests are typically independent of prior year appropriations.

The FY2010 Mental Health Budget

The Trustees approved five focus areas for the FY2010 budget cycle, with the goals affecting significant system changes in the areas of:

- Bring The Kids Home;
- Affordable, Appropriate Housing for Trust Beneficiaries;
- Disability Justice for Trust Beneficiaries;

- Trust Beneficiary Group Initiatives; and
- Workforce Development

OPERATING

The net increase in state-controlled funding **(GF/MH)** from FY2009 to FY2010 is approximately $12.5 million. Mental Health Trust recommendations do not typically address all Mental Health funding. The Governor's budget request includes the following items not addressed by the Trust:

- FY2009 GF/MH funding included in the base for FY2010; and
- FY2010 Salary Wage and Health Insurance increases.

The FY2010 Trust **MHTAAR** recommended budget totals $12.7 million. The following items are Trust recommendations that are not yet included in the Governor's FY2010 budget request:

- New student loan repayment program to be used as a recruitment and retention tool for providers serving Trustee beneficiaries;
- Pilot program to provide coordinated services to individuals with traumatic brain injury, and their families not otherwise eligible for such services from other agencies or programs; and
- Support for a rural secure treatment provider program under Title 47, which provides for involuntary commitment of clients incapacitated by alcohol and/or drugs. Title 47 client services are the highest level of treatment and the most expensive in providing secure treatment services.

Statewide Total Appropriations for Mental Health Programs

	FY06	FY07	FY08	FY09	AMHTA FY2010 Request	FY2010 Gov
State-Controlled	114,652.0	127,712.4	131,568.6	159,818.2	17,918.6	172,269.9
MH Trust	10,063.5	11,446.4	12,308.7	13,714.2	12,698.4	12,143.9
Total Operating	**124,715.5**	**139,158.8**	**143,877.3**	**173,532.4**	**30,542.0**	**184,413.8**
State-Controlled	9,049.2	12,200.0	13,600.0	10,050.0	18,816.8	16,209.7
MH Trust	3,100.0	2,650.0	2,500.0	3,500.0	2,780.0	2,330.0
Total Capital	**12,149.2**	**14,850.0**	**16,100.0**	**13,550.0**	**21,596.8**	**18,539.7**

CAPITAL

The Governor's FY2010 Capital Budget Request of $18.5 million for Mental Health programs is $3.1 million less than the Trust's recommendations of $21.6 million. The Trust's recommendations include $2.7 million MHTAAR, $6.1 million GF/MH, and $12.8 million AHFC Dividends. Below are some of the significant projects contained in both the Trust's recommendations and the Governor's Mental Health budget (funding levels shown below are from the Governor's budget):

- MH AHFC Homeless Assistance Program (ED 99) $10.0 million
- MH AHFC Beneficiary and Special Needs Housing (ED 99) $1.8 million
- MH Coordinated Transportation and Vehicles (ED 99) $1.1 million
- MH Home Modification and Upgrades to Retain Housing $1.1 million

Department of Administration

The mission of the Department of Administration (DOA) is to provide consistent and efficient support services to state agencies so that they may better serve Alaskans. As a liaison between the Governor's Office and the Legislature, DOA steps in to establish policies and coordinate services among divisions. DOA provides statewide leadership and policy direction in the following areas:

- finance and accounting;
- payroll;
- information technology;
- human resources;
- labor relations;
- procurement, including final administrative decisions on statewide procurement appeals;
- facility leasing and management;
- risk management; and
- employee and retiree benefits programs for state and local governments.

Direct public services are provided through the Division of Motor Vehicles, Public Defender Agency, Office of Public Advocacy, and the Office of Administrative Hearings. The Department also oversees administrative functions of four independent boards and commissions (the Alaska Public Broadcasting Commission, the Alaska Public Offices Commission, the Alaska Oil and Gas Conservation Commission, and the Violent Crimes Compensation Board).

SIGNIFICANT ISSUES

The FY2010 Department of Administration general fund operating budget as submitted by the Governor is $462.1 below the FY09 Revised Management Plan (which excludes fuel/utility & gasline one-time funding of $66.8). The Governor's net GF change from Adjusted Base is $1,396.6.

The following notes correspond to numbers in the last column on the preceding spreadsheet:

1. **Enterprise Technology Services: $300.0 GF.** Additional funding is requested to pay cost increases associated with operation and maintenance of the State of Alaska Telecommunications System (SATS) microwave transmission network. The cost increases include fuel and power for SATS microwave sites and transportation costs, including costs for helicopter access to remote sites. This increment will assist in maintaining the physical operations of the SATS Microwave Network System and telephonic and network communications outside the Anchorage area. These sites are important to daily operations of state agencies, including the Alaska State Troopers. Areas of the state that rely on the SATS Microwave System include Kodiak, the Anchorage-Fairbanks-Delta-Tok-Glennallen highway corridors, the Kenai Peninsula, Valdez and Cordova.

2. **Finance Operations: $140.0 GF/Program Receipts.** The Governor requests additional authority to spend receipts anticipated under a new contract with U.S.

Bank for *One Card*. During FY09, the budgeted credit card rebate was increased by $250.0 for a new total of $463.2. Current projections suggest a rebate of between $550.0 and $600.0 will be available under the new contract with U.S. Bank in FY2010. The Department is asking for the authority to spend these receipts to partially offset cost increases related to supporting the Alaska Data Enterprise Reporting (ALDER) Data Warehouse ($100.0) and to provide for vacancy factor reduction ($40.0).

Per AS 37.05.142-144: Program receipts may not be collected unless authorized by law. An appropriation is required before funds may be expended, and expenditures are restricted to the lesser of the amount collected or amount authorized. Program receipts may be used to administer the program generating the receipts, implement the laws related to the functions generating the receipts, or cover the cost of collecting the receipts. They may not be used directly for programs other than the program that generates the receipts. Because it is not clear that receipts generated by a credit card program can be used for a data warehouse or vacancy factor reduction, subcommittees may wish to consider changing the fund source to GF.

3. **Elected Public Officers Retirement System (EPORS) Benefits: $120.0 GF.** EPORS currently has 39 members (25 retirees and 14 surviving dependents) who are receiving benefits. Increased costs are due to mandatory benefit increases based upon the salaries of the positions from which members retire. Another contributing factor for this increment is the projected rise in the cost of health insurance, which is also a member benefit.

4. **Salary Fund Source Changes: $1,095.1 GF.** The Governor's budget proposes using general funds to replace a portion of other funding sources that could be used to pay for contractual wage and health benefits increases. Subcommittees should carefully examine each of these salary adjustment fund changes. Please see ***Fund Source Changes for Salary Adjustments*** on page 18 for further discussion of this issue. Within the Department of Administration, $1.1 million in GF fund changes have been included to replace Inter-agency Receipts that are "not available" in customer agency budgets. The largest of these fund switches are in Personnel ($472.2) and Enterprise Technology Services ($415.9). As an alternative to these fund source changes, DOA could charge agencies for services and let any necessary fund source changes occur in the agencies. The latter approach would provide more information regarding agencies that are unable to pay for DOA services using existing fund sources.

ORGANIZATIONAL CHANGES

There are no significant changes requested.

CAPITAL REQUEST

The Governor's 2010 capital budget contains $50 million from the Alaska Housing Capital Corporation (AHCC) "savings account" to continue the massive undertaking of replacing accounting (AKSAS) and payroll (AKPAY) systems. The accounting and payroll systems are nearing the end of their useful lives and the Department is attempting to replace them while they are still functioning. Previous appropriations for this project total $41 million. The future anticipated GF requests from FY11 through FY15 would add another $105 million.

Legislative Fiscal Analyst Comment: *The AHCC fund source is classified as GF in Legislative Finance Division's view of the world. The Governor classifies these receipts as "Other" Funds, leading to a discrepancy in how the Department of Administration's largest capital project—the Statewide System Replacement—is classified.*

Section 10 of the capital budget appropriates $11.7 million in Information Technology Projects to the Governor's Office. Two of these projects are allocated to the Department of Administration:

- Administration Enterprise security projects for $5 million funded through the Information Services Fund, and
- Administration Document Management System – Microfilm Conversion Phase 1 for $328,000 funded by a variety of retirement system accounts and a small amount of GF.

The Information Services Fund is capitalized by a $9.5 million GF appropriation in Section 12(c)(1) of the Governor's bill.

The capital request presented by the Governor also includes $930.0 GF for four smaller projects. The most significant of those GF projects is the Lease Management System that will replace the existing systems currently used to project lease and facility costs (in service since approximately July 2002) with one that will interface with the state accounting system. The Department's goal for managing statewide leases, facilities information, and budgets is to provide effective space management, cost tracking, reporting, and projections for leases and facilities.

Legislative Fiscal Analyst Comment: *As in FY09, direct appropriations for costs associated with public employees' retirement systems are segregated from the Department's budget in order to avoid overstating the Department of Administration's budget. A total of $451.2 million in direct appropriations for retirement include:*

(a) ***$206,300.0 GF for the teachers' retirement system*** *defined benefit plan account;*

(b) ***$241,600.0 GF for the public employees' retirement system*** *defined benefit plan account;*

(c) ***$1,722.5 GF for the Department of Military and Veterans' Affairs AK National Guard and Alaska Naval Militia*** *defined benefit plan account; and*

(d) ***$1,550.0 GF for the judicial retirement system*** *defined benefit plan account.*

Department of Commerce, Community, and Economic Development

The Department of Commerce, Community, and Economic Development (DCCED) provides a wide range of development services to private businesses, aids in protecting the public by regulating certain industries, and provides services to communities. The Department:

- provides general assistance and access to capital markets for businesses;
- coordinates numerous state grant and loan programs;
- manages programs aimed at key economic sectors such as electric power generation, tourism, aerospace, mining, and fishing;
- participates in the marketing of Alaskan products and visitor attractions;
- regulates banking, securities and corporations, insurance, occupations and public utilities;
- provides services to local governments and unincorporated communities in the form of grants and direct technical assistance; and
- administers programs offering assistance in the areas of government and financial management, utilities, planning, and energy management.

SIGNIFICANT ISSUES

The FY2010 Department of Commerce, Community, and Economic Development general fund operating budget submitted by the Governor is $18.5 million less than the FY09 Revised Management Plan (which excludes fuel/utility and gasline one-time funding). In FY09, the legislature made a special appropriation of $23.0 million GF for distribution through the Power Cost Equalization Program. This amount is included in the FY09 Management Plan but is removed from the FY2010 base. The Governor's net GF increase from Adjusted Base is $4.8 million, comprised of salary fund source changes and several increments described in the numbered paragraphs below.

Power Cost Equalization (PCE). PCE was an issue in the special session when the legislature raised the cap on subsidies for rural electric rates in response to higher fuel costs. This was intended to be a one-year solution that would be readdressed during the 2009 session. The Governor's FY2010 request reflects a return to FY08 parameters. The FY2010 funding level is $32.8 million—down from $51.1 million in FY09. PCE is not typically addressed by subcommittees.

Core Service Increases. The Department's request includes several increments for "Core Services." According to the Department, the core services increment in the Commissioner's Office is primarily to record *intra-agency* charges, while the core services increments in various divisions are primarily to record *inter-agency* costs.

Most of the $171.0 I/A Receipts increment in the Commissioner's Office reflects indirect cost plan charges that have been collected (but not budgeted) for years. The request is not so much an increment as a clarification of the budget. According to the Department, the core services increments in various divisions cover FY09 and FY2010 increased charges (imposed by the Departments of Administration and Law) that the Department cannot absorb. Subcommittees may

wish to ask the Department to provide additional detail on all the core service increments, including where the money comes from, where it will go and what it will purchase.

Federal Program Funding for National Forest Receipts and Payment in Lieu of Taxes (PILT), $9.9 million Federal Funding. The Department anticipates receiving and distributing (to local governments) $6.3 million in National Forest Receipts and $3.6 million through the PILT formula.

The following notes correspond to the numbers in the last column of the preceding spreadsheet:

1. Community and Regional Affairs: $2.36 million GF.

- **Fund Change, $2 million GF.** Passage of HB 111 (effective 10/1/09), reduced business license fees to $50/year (from $100/year). The approved fiscal note for HB111 showed replacement of lost Business License Receipts revenue with general funds. This appropriation implements the fiscal note. In FY09, $6.26 million of Business License and Corporation Fees was spent to support Community and Economic Development and Operations on issuing licenses. Receipts in FY2010 are expected to be about $4.4 million. Thus, $1.97 million GF funding will be needed to maintain services at current levels.

- **Alaska Legal Services: $200.0 GF.** The Department did not remove this one-time item from the base budget for FY2010. The Department seeks to continue FY09 one-time funding for the Alaska Legal Services Program. Legislative Finance removed the amount from the base, and then added an increment in order to match the Governor's request.

- **Grant Administrators: $164.0 GF.** Two grant administrators were added as a one-time item in FY09 in response to an increasing number of grants appearing in the budget as oil prices (and state revenue) climbed from FY06 through FY09. The Department is requesting these positions be continued in the FY2010 budget. The number of grants distributed/monitored by the Department remains high and the grant administrators are needed to provide technical assistance to recipients. The subcommittee may wish to explore adding these positions to the base budget if the number of grants administered by the Department remains at current levels. On the other hand, if revenue reductions result in a significant reduction in the number of grants appropriated, retaining the one-time designation may be appropriate.

2. Alaska Seafood Marketing Campaign: $1,882.2 GF. The Department's Seafood Marketing program seeks to replace $1,500.0 in Federal grants ($500.0 in direct federal funds and $1 million SDPR from the Alaska Fisheries Marketing Board (AFMB)—federal funds passed through the AFMB). In addition, ASMI claims that $378.0 of authority to receive and spend revenue from fish taxes will be uncollectible and requests that this amount be replaced with general funds. Subcommittees may wish to examine the reasons for declining receipts in this program and the desirability of adding general funds to the base budget.

3. Statewide Project Development, Alternative Energy Efficiency: $431.3 GF.

- **Support for Energy Planning: $150.0 GF.** This request is intended to provide the resources necessary to fund support staff for energy planning.

- **AEA Executive Director for Statewide Energy Coordination: $210.3 GF.** The AEA Executive Director/Statewide Energy Coordinator was funded in FY09 with

CIP receipts from a statewide energy plan capital project. Because the need for this position will not end when the statewide energy plan is completed, the agency is requesting base funding in the FY2010 budget.

- **Renewable Energy Fund/Task Force: $71.0 GF.** The fiscal note for HB 152 identified $71.0 as a one-time FY09 appropriation. The Department did not remove this amount from the base budget for FY2010. Legislative Finance added an increment in order to match the Governor's request, but subcommittees should consider deleting the start-up costs from the budget request.

4. **Fund Changes for salary adjustments: $132.9 GF.** Three fund changes have been requested to "correct unrealizable fund sources in the salary adjustment for bargaining units." The Department states that additional I/A Receipts funds are not available for programs and requests a replacement with GF. Please see ***Fund Source Changes for Salary Adjustments*** on page 18 for further discussion of this issue.

ORGANIZATIONAL CHANGES

There are no significant organizational changes.

CAPITAL REQUEST

DCCED's total capital budget is nearly $140 million; $63 million of which is federal money. The budget consists of a diverse mix of grants and capital projects, most of which are more clearly described as *passing through DCCED* rather than *to DCCED*. The pass-through projects include rural power and transportation systems, community economic assistance, port expansion and cruise ship industry enhancements. Projects requested by DCCED include:

- $17.5 million to build two facilities at the Kodiak Launch complex: a dedicated rocket motor storage facility and an additional launch pad.
- Several information technology projects, including $565.0 appropriated directly to the Department and $2.2 million for imaging and management systems appropriated through the Governor's Office.

Department of Corrections

The mission of the Department of Corrections (DOC) is to provide secure confinement, reformative programs, and a process of supervised community reintegration to enhance the safety of Alaskan communities. The Department:

- provides secure confinement;
- provides reformative programs; and
- provides supervised re-entry.

SIGNIFICANT ISSUES

The FY2010 Department of Corrections general fund operating budget as submitted by the Governor is $3,014.4 above the FY09 Revised Management Plan (which excludes fuel/utility & gasline one-time funding of $1,760.0). The Governor's net GF change from Adjusted Base is $2,097.4.

The following notes correspond to the numbers in the last column of the preceding spreadsheet:

1. **Prison population** has declined recently; however, population increases during the past few years have continued to drive departmental costs upward. The state prisoner population typically exceeds 100% of approved institutional emergency capacity. With increased law enforcement by local and state agencies, the Department has no expectation of a long-term decline in the offender population. The Department addresses the prison population issue with several increments;

   Legislative Fiscal Analyst Comment: *Subcommittee members may wish to inquire about the unprecedented decrease (roughly 5%) in the Department's in and out-of-state prisoner count (from December 2007 to present) and what impact these latest statistics have on costs.*

   - **Community Residential Centers (CRC): $719.2 GF.** Funding is requested for 43 additional regular beds to assist in managing the in-state offender population. In FY2008, the DOC contracted for 710 CRC beds (602 regular beds and 108 per-diem beds) of which approximately 50% of the per-diem beds were funded. DOC used 93% of available funding. In FY2009, DOC received funding for 710 CRC beds but was able to contract for 733 (625 regular beds and 108 per-diem beds) of which approximately 70% of the per-diem beds are funded.

   - **Increased contractual costs for Arizona: $381.1 GF.** The Department is requesting funding for a $1.23/bed/day contract rate increase at the Red Rock Arizona facility that houses Alaska's overflow prisoners. As of October 31, 2008, out-of-state institutional capacity was at 98% (882 of 900 beds filled) with no expectation of a decline in offender population. The DOC anticipates continuing to place prisoners in the contract facility throughout the next fiscal year.

   - **Wildwood Correctional Center: $302.2 GF.** In FY09, the Department received a one-time increment of $302.2 to convert two existing buildings in order to house 80 prisoners. The housing units are scheduled to become available in late FY09. The Department also received $1.1 million to cover ¾ of FY09 operating costs of the new housing units. The $1.1 million remains in the FY2010 base, and an increment for

$353.3 (for ¼ year operating costs) was expected. Instead, the Department request retains the $302.2 one-time funding and adds it to the base budget. The DOC intends to manage the new units at the requested funding level.

- **Goose Creek Correctional Center: $218.6 GF Transfer.** The Department is transferring two positions from the Prison System Expansion component to the new Goose Creek Correctional Center component that is expected to open in FY2012. In anticipation of future staffing needs, the Training Academy has established an annual schedule consistent to meet the needs of the new prison that will be located at Point MacKenzie.

2. **Inmate Health Care** cost increases are primarily due to increased costs for medical services and are associated with the degree of care that is being required for chronic conditions (i.e. dialysis, cardiac, oncology, geriatrics, diabetes, etc). The Department is requesting the following increments to address rising costs and expansion of services:

- **Substance Abuse Treatment Programs: $500.0 GF.** This request provides funding for a second year of expansion of the institutional out-patient treatment programs. This increment would implement two institutional out-patient treatment programs at Anchorage Correctional Complex and Anvil Mountain Correctional Center. In FY09, the Department received $801.0 GF to implement five intensive outpatient treatment programs at Spring Creek Correctional Center, Palmer Correctional Center, Fairbanks Correctional Center, Yukon-Kuskokwim Correctional Center, Lemon Creek Correctional Center, and the Anchorage Community Residential Treatment Centers.

- **Mental Health Services: $444.8 PFD Criminal.** Additional funding is requested to support the increase in Mental Health Trust beneficiaries committed to the custody of the Department. Of the 38,000 bookings processed annually by DOC, 14,000 have a mental health diagnosis. In FY09, the legislature approved a $246.0 increment ($123.0 GF/$123.0 MHTAAR) for this purpose.

- **Sex Offender Treatment: $200.0 PFD Criminal.** This increment is requested to establish an institutional sex offender treatment program within the Wildwood Correctional Center. The sex offender treatment program will enhance community safety by providing more offenders with intensive, offense-specific assessment and treatment prior to release.

Legislative Fiscal Analyst Comment: *As part of the new management strategy of the Palin administration, the agency is working to restore or expand many offender rehabilitation programs. Subcommittees may wish to inquire about the effectiveness of these programs on recidivism.*

- **Criminal Sentencing and Polygraphing: $485.3 PFD Criminal.** This request is the third year of funding associated with the passage of legislation relating to periodic polygraph testing and treatment of all sex offenders on probation or parole [Ch 14 SLA06 (SB 218)]. Previous appropriations for these activities total $786.8 GF in FY08 and $752.5 GF in FY09.

Legislative Fiscal Analyst Comment: *The amount of PFD Criminal funds available varies with the amount of the Permanent Fund dividend and the number of felons incarcerated. Recent investment losses are likely to reduce PFDs in the future, with a*

corresponding decrease in PFD Criminal funds available. The likely result is future requests to replace PFD Criminal funds with general funds.

3. **Administration and Support** has requested the following two increments:

- **Research and Records: $180.0 GF.** This increment replaces one-time funding in the Department's FY09 budget for a File Imaging Program in order to manage the increasing number of criminal records. According to the Department, continued funding is necessary to fully implement the program as well as maintain files as imaged records rather than as hard-copies.
- **Information Technology MIS: $183.9 Federal Receipts.** The Department is requesting authority to receive one-time funding for the second year of the Statewide Automated Victim Information and Notification (SAVIN) grant through the United States Department of Justice/Bureau of Justice Assistance (BJA). The Department will use the grant to enhance Alaska's existing automated victim notification system (VINES) which provides self-registered victims with information regarding the custody status of a given offender. DOC received the first year of funding ($122.6 in FY09) through RPL #20-9-0010.

  The Department will use their existing GF operating appropriation to fund their matching portion (50%) of this grant as required by the BJA.

ORGANIZATIONAL CHANGES

The Department has moved the Correctional Academy and Prison System Expansion allocations from Administration and Support to the Population Management Appropriation. The Substance Abuse Treatment and Sex Offender Programs have been relocated from Offender Habilitation / Population Management to the Inmate Health Care Appropriation.

CAPITAL REQUEST

The Agency's $27.7 million capital budget is primarily comprised of a $20 million dollar appropriation for the Goose Creek Correctional Center scheduled to begin construction in calendar year 2009. With the recent collapse of financial markets, the cost of selling bonds for this project has increased significantly. The Department of Corrections has responded by cutting back elements of construction where possible, however, the gap between the revised construction budget and the bond sale is still short by approximately $20 million. This request to support the construction and occupancy of the new prison utilizes Alaska Housing Capital Corporation (AHCC) Receipts.

Legislative Fiscal Analyst Comment: *Legislative Finance classifies the Alaska Housing Capital Corporation savings account as general funds. The Governor classifies the account as "other" funds.*

Some of the Department's other large capital projects include:

- Annual Facilities Maintenance and Repairs: **$2.5 million GF**
- Combined Hiland Mountain Correctional Center Lead Abatement and Buffer Fence: **$2.0 million GF**
- Medical Information System: **$1.5 million PFD Criminal**

Department of Education and Early Development

The Department of Education and Early Development (DEED) is committed to ensuring quality standards-based instruction to improve academic achievement for all students. The Department is responsible for funding and regulating the state's K-12 schools as well as administering school debt reimbursement and grants for school construction/major maintenance. Core services include the following:

- Provide and evaluate a Comprehensive Student and School Standards, Assessment and Accountability System for all students and schools in Alaska that is based on student, school, educator, and culturally responsive standards and state and federal requirements;
- Provide and support standards-based professional development and mentoring for Alaska's educators to ensure high quality and student achievement;
- Provide a statewide program to ensure all students have the foundational skills required for a successful transition to college and/or the workforce after high school;
- Secure and award state, federal, and private educational funding to school districts and other educational organizations to result in higher student achievement; and
- Provide high quality data to school districts and stakeholders through the use of the Alaska Statewide Longitudinal Data System.

The Department also houses Commissions and Boards (including the Professional Teaching Practices Commission, the Alaska State Council on the Arts and the Alaska Postsecondary Education Commission) and is responsible for Mt. Edgecumbe Boarding School, EED State Facilities Maintenance, and Alaska Library and Museums.

SIGNIFICANT ISSUES

The FY2010 Department of Education and Early Development general fund operating budget as submitted by the Governor is $50,929.9 above the FY09 Revised Management Plan (which excludes fuel/utility & gasline one-time funding of $167.8). The Governor's net GF change from Adjusted Base is $1,286.2.

The following notes correspond to the numbers in the last column of the preceding spreadsheet:

1. K-12 Education Formula Funding. Because education funding changes are likely to come through legislation rather than subcommittee action, the discussion here is brief and general. The Governor's general fund request of $994.3 million for the foundation program is $49.5 million more than the FY09 Management Plan.

Last year the Governor presented a three-year education plan that closely followed the legislative Education Task Force recommendations. The legislature approved HB 273 (Ch. 9, SLA 2008) with fiscal notes that provided for GF appropriations to capitalize the Public Education Fund for increases to the Foundation Program and Pupil Transportation. On the basis of this legislation, the Base Student Allocation (BSA) will increase $100/student/year for FY09, FY2010, and FY2011. There are also approximately 2,000 intensive-needs students in Alaska who experience health conditions and disabilities requiring daily monitoring and assistance with their school day activities. The second

year of a three-year phase-in with significantly higher payments to school districts to educate and care for these students is also included in the Governor's request.

Section 18(w) of the Governor's operating budget bill appropriates $1.062 billion from the general fund to the Public Education Fund for FY2010. This amount is $9.5 million more than required to fund K-12 education in FY2010, but is $50 million less than required to fund education in FY2011.

The concept of forward funding is that the amount appropriated in a given year will be the amount required in the following year. In this regard, the Governor's budget is $50 million short of forward funding K-12 education. However, the Public Education Fund target balance is 3% above the anticipated cost of K-12 in the following year. By using the "cushion" in the fund, the Governor's budget is only about $1 million short of funding anticipated FY2011 K-12 needs.

2. **Pre-Kindergarten Pilot Program: $2,000.0 GF.** Initial program implementation funds are included for an "Age 4 Pre-Kindergarten Pilot Program". According to the Department, this new preschool program would provide a voluntary, comprehensive, half-day for four-year olds and early five-year olds based on the standards set forth in the Alaska Early Learning Guidelines. Participating school districts would be funded through a competitive grant process. It is anticipated that the preschools would serve 500 children statewide.

3. **Alaska Challenge Youth Academy (ACYA): $185.2 GF.** The academy is operated by the Department of Military and Veterans Affairs and is funded through a Reimbursable Services Agreement with DEED in accordance with AS 14.30.740. With this increment, the total general fund budget for the ACYA will be $6,429.1.

Legislative Fiscal Analyst Comment: *The legislature may wish to revisit this formula program. The current statutory program support formula provides seven times the base student allocation for ACYA residential students plus a smaller non-resident amount. The legislature may wish to consider a direct appropriation to DMVA, as DEED has no legal responsibility for the ACYA and, therefore, should not act as a pass-through agency.*

4. **Executive Administration: $824.2 GF.** The Executive Administration allocation includes a request for additional funds ($600.0 GF) aimed at district improvement support services. According to the Department, specialist contracts in the amount of $600.0 are needed to meet the mandate in legislation passed last session (SB285—Ch. 70, SLA2008) which provides for DEED to work toward district improvement in the areas of math, science, arts, IT, culture, and social studies. A second increment ($224.2 GF) funds implementation of school improvement plans and district interventions on a statewide basis.

5. **Early Learning Coordination: $800.0 GF.** An increase of $800.0 GF for Head Start Grants would serve approximately 60-80 additional children. Approximately 1,000 Alaska children remain on wait lists for this program. The legislature increased funding for Head Start by $600.0 in FY09. With approval of this FY2010 increment, overall funding for Head Start grants would be $7,393.3 (GF $7,353.3/Fed $40.0).

6. **Student and School Achievement: $550.0 GF.** General Fund increments in this area are divided into three requests:

   (a) $250.0 for the Alaska Comprehensive System of Statewide Assessments Contractual Increase based on current contract change order costs plus a 4% annual anticipated increase;

   (b) $150.0 (GF/MH) for the GF match portion of the Mental Health Trust Authority's recommendation for an Autism Resource Center. This on-going project to provide education, consultation, and support to families plus resources for mental health community members is managed by DEED through a contract with the Special Education Service Agency. An additional increment of $200.0 Mental Health Trust Authority Authorized Receipts (MHTAAR) provides Trust Authority funding; and

   (c) $150.0 GF/MH funds for the Governor's Council for Rural Secondary Transition—a project managed by DEED to identify the skills of rural residents and seeks to team those residents with youth and communities in transition planning and service delivery. This FY2010 request continues the momentum of the project from FY09 which is currently funded with $50.0 MHTAAR plus $50.0 GF/MH.

7. **WWAMI Medical Education: $524.7 GF.** In the spring of 2007, the Alaska WWAMI program expanded class size to 20 incoming students per year. This increment is required under Alaska's contract with the University of Washington School of Medicine (UWSM). The basis for the funding structure is determined by the partnership contract between the UWSM, the University of Alaska, and the State of Alaska. Students attend the first year of training at the University of Alaska, Anchorage campus, before continuing training at the UWSM in Seattle, Washington. The Postsecondary Education Commission acts as the state's fiscal agent and administers WWAMI participants' services agreements/loans. Funds are used for education and administrative costs for second, third and fourth year students, which average over $40,000 per student per year. In addition, the program provides support for clinical sites in Alaska. WWAMI program administration and community clinical unit costs run about $300,000 per year. Since the inception of the program in 1971, approximately 400 students have been enrolled in this program which to date has a 95% graduation rate.

8. **Boarding Home Grants: $350.0 GF.** In accordance with regulation, Galena City School District is requesting an increase in funding for an additional 55 beds (from 120 to 175 students) for the Galena Boarding Home Residential Program. The capacity increase is due to continued growth of the program and increased dormitory capacity.

9. **Professional Teaching Practices Commission: $252.1 GF.** The Governor's FY2010 budget includes a funding switch from Receipt Supported Services to GF in the amount of $252.1. For the most part, in the past the Professional Teaching Practices Commission (PTPC) has received their revenue from receipts collected through Teacher Certification fees. The fees collected from Teacher Certification services also support the Teacher Certification allocation. For FY2010, the Department has determined that in order to remain self-supporting, the Teacher Certification program no longer has the ability to distribute a portion of their receipts to the PTPC, which has resulted in the increment request. There is neither a plan to increase Teacher Certification fees, nor are additional applications expected.

10. School Finance & Facilities: $219.9 GF. General Fund increments in this area are divided into three requests:

(a) $24.7 for the FY2010 School Bus Transportation contract, which increased due to negotiated CPI adjustments;

(b) $45.2 for school bus driver training program increases; and

(c) $150.0 to provide additional auditors for intensive students. The Department states that these funds will allow for contracts for auditors to review *new* claims regarding intensive students. Currently new claims are backlogged as staff focus on federal programs and current claims. These contracts would take place regionally in Juneau, Anchorage and Fairbanks.

11. School Performance Incentive Program: ($4,800.0) GF: *Decrement* to remove funding for the School Performance Incentive Program, which was initially authorized as a three-year program (FY07 – FY09) and which will sunset at the completion of the FY09 incentive award distributions.

ORGANIZATIONAL CHANGES

There are no significant changes requested.

CAPITAL REQUEST

In addition to school district major maintenance grants totaling over $40 million, the Department of Education and Early Development's FY2010 capital budget includes $2 million GF for continued work on deferred maintenance and construction projects from the Mt. Edgecumbe High School six-year plan. Specific projects are determined by an annual review including verification that the school is performing maintenance and operation tasks in accordance with the requirements of AS 14.11.011.

Legislative Fiscal Analyst Comment: *The school debt reimbursement program is shown in a separate section of this overview that addresses debt obligations (see table on page 47).*

Department of Environmental Conservation

The Department of Environmental Conservation (DEC) is responsible for protecting human health and the environment. This agency provides the following core services:

- develop and enforce standards for protection of the environment;
- provide controls and enforcement for the prevention and abatement of pollution to the environment; and
- provide controls and enforcement to protect citizens from unsafe sanitary practices.

SIGNIFICANT ISSUES

The FY2010 Department of Environmental Conservation general fund operating budget submitted by the Governor is $249.1 GF above the FY09 Revised Management Plan (which excludes fuel/utility and gasline one-time funding of $111.0). The Governor's net GF change from Adjusted Base is $247.4, comprised of salary fund source changes and one GF increment in Air Quality.

The following notes correspond to the numbers in the last column of the preceding spreadsheet:

1. **Climate Change Sub-Cabinet Activity: $184.0 GF.** The Department anticipates that during 2009 and 2010, The Alaska Sub-Cabinet on Climate Change will provide climate change mitigation and adaptation recommendations to the Governor. These recommendations will require coordination between the public and private sectors, between state agencies, and within the Department of Environmental Conservation. The 2008 Legislature added a one-time $184.0 GF increment associated with the Climate Impact Work Group (as part of the Alaska Climate Change Sub-Cabinet established by Administrative Order #238). The Sub-Cabinet's work is not yet done, and the Department requests funds in Air Quality for its completion. Currently, over one hundred Alaskans are serving on various advisory and technical committees providing recommendations to the Sub-Cabinet. The draft strategy is scheduled to be available in late 2009 for public comment before submission to the Governor for approval. The requested funding would pay for contractual costs for preparing final recommendations, public meeting participation costs, advisor travel costs, and a small amount for commodities and personal services. The subcommittee may wish to consider classifying the increment as a one-time item.

2. **Oversight of Activities Associated with Increased Mining Activity: $145.0 Inter-Agency Receipts.** Because mining activities have increased during the last few years, the Division of Water requests funding to provide additional oversight by adding one permanent, full-time Environmental Engineer position (as well as funding for part-time positions) to work with federal agencies to complete a viable and protective mine permitting framework. The receipts come from existing Department of Natural Resources funds within the Large Project Permitting allocation, Resource Development appropriation.

3. **Continuation of Ocean Ranger Program: $4.0 million Ocean Ranger Funds.** The 2008 Legislature approved $4.0 million and implemented a new FY09 fund source code to track expenditures for the Ocean Ranger program and other oversight measures as called for by a ballot initiative passed in August 2006. The

FY2010 Governor's request continues funding for this program. During the 2008 cruise ship season, the Department implemented a full Ocean Ranger program on large cruise ships. Ocean Rangers rode approximately 89% of voyages while a ship was in Alaskan waters. The other vessel voyages were covered using in-port inspections. The $4.0 million annual cost of the program equals the Department's estimate of fees that will be collected from a $4 per berth tax imposed to provide funds for the State to hire or retain Coast Guard licensed marine engineers (Ocean Rangers) to observe health, safety, and wastewater treatment and discharge operations.

Department of Fish and Game

The Department of Fish and Game (ADF&G) is charged with protecting and improving the fish, game, and aquatic plant resources of the state, and managing their use and development in the best interests of the economy and the people of the state, consistent with the sustained yield principle.

Core Services:

- Provide opportunity to utilize fish and wildlife resources;
- Ensure sustainable and harvestable surplus of fish and wildlife resources;
- Provide information to all customers;
- Involve the public in management of fish and wildlife resources; and
- Protect the state's sovereignty to manage fish and wildlife resources.

Goals:

- Optimize habitats and economic benefits from fish and wildlife resources;
- Optimize public participation in fish and wildlife pursuits; and
- Increase public knowledge and confidence about management of fish and wildlife.

SIGNIFICANT ISSUES

The FY2010 Department of Fish & Game general fund operating budget submitted by the Governor is $848.4 above the FY09 Revised Management Plan (which excludes fuel/utility and gasline one-time funding of $227.8). The Governor's net GF change from Adjusted Base is $2,512.3 comprised of salary fund source changes and a limited number of increments described in the numbered paragraphs below.

The Department of Fish and Game's request for FY2010 does not indicate any significant policy changes. The following are noteworthy items reflected in the budget request:

Use of Loan Funds. The Department of Commerce, Community, and Economic Development remains concerned about the long-term health of the Commercial Fisheries Revolving Loan Fund (CFRLF), which the Department of Fish and Game has used as a funding source for several years. Because loan interest rates are linked to the prime rate, and prime rate has fallen to an all-time low, fund income is in decline. Continuing to withdraw money from the loan fund for purposes not related to lending will eventually limit the ability to make loans. Subcommittees may wish to replace $1.3 million of CFRLF receipts used by the Department of Fish and Game with general funds. However, it should be noted that the CFRLF will receive no less than $10 million in direct payments from assignments of Exxon Valdez Oil Spill (EVOS) settlements in FY2011. Subcommittees may wish to examine use of Commercial Fisheries Entry Commission receipts as well.

Federal Funding Issues. For the past four fiscal years, the Department has budgeted federal receipts in excess of actual revenue by an average of $10.7 million per year. The Department states it is making efforts to reduce surplus federal authority for FY2010. The Governor's budget contains decrements that cut surplus federal funding authority by $572.0. Subcommittees may wish to request the Department to further reduce surplus federal authority.

The following notes correspond to the numbers in the last column of the preceding spreadsheet:

1. **Wildlife Conservation (W.C.) Special Projects: $930.0 GF.** In FY09, the legislature made a one-time appropriation of $1,180.0 GF for Pinniped Research (stellar sea lion, harbor seal, ice seals). The Department now requests that a portion of this funding be continued in FY2010. The ADF&G marine mammal program hopes to continue the research and data collection project, which the Department states has provided critical information on commercial fisheries, predation, oil and gas activities, and environmental variability as well as marine mammal populations protected under the Endangered Species Act (ESA).

2. **Commercial Fisheries, Westward Region Fisheries Mgmt.: $793.7 GF.** This general fund increment replaces a portion of a $1,043.7 one-time amount added in FY09 to support the Bering Sea crab research program. The Department states this funding is needed so the division can continue to provide supervision and perform data collection and analyses needed for abundance-based management of commercial king and Tanner crab stocks throughout the Bering Sea and Aleutian Islands area.

3. **Commercial Fisheries, AYK Region Fisheries: Mgmt.: $80.0 GF.** The Department is requesting GF to replace lost federal receipts that had been part of the funding for two subsistence programs in the AYK Region through the Office of Subsistence Management.

4. **Increased Specific Capital Receipt Authority from Pacific Coastal Salmon Recovery Fund (PCSRF) Program to fund CIP Position Costs in Commercial Fisheries Special Projects: 600.0 CIP.** The Division of Commercial Fisheries has additional PCSRF projects that will be funded in the FY10 budget which will require an additional $600.0 of CIP receipt authority to fund positions in the Special Projects Component.

5. **Fund Source Changes.** The Department is seeking $708.6 GF as fund source changes for Salary Adjustments. Subcommittees may wish to examine these fund source changes carefully to ensure that the funds being replaced with general funds are truly unavailable. Please see ***Fund Source Changes for Salary Adjustments*** on page 18 for further discussion of this issue.

ORGANIZATIONAL CHANGES

The Office of Habitat Management and Permitting (OHMP) of the Alaska Department of Natural Resources became the Division of Habitat, a part of the Alaska Department of Fish and Game, effective July 1, 2008, as a result of Executive Order 114. As part of this reorganization, special area planning, permitting functions, and staff, became part of the Division of Habitat, and offices have physically relocated.

CAPITAL REQUEST

The Department of Fish and Game's capital budget is primarily comprised of the following larger projects:

- **Pacific Coastal Salmon Recovery Fund: $22.0 million Federal Receipts**. Federal fiscal year 2009 (FFY09) appropriations legislation contains funding for the Pacific Coastal Salmon Recovery Fund (PCSRF). The Alaska portion of the federal appropriation is estimated to be up to $22.0 million. Funding comes to the state through a Memorandum of Understanding with the U.S. Department of Commerce designating the Alaska Department of Fish and Game as the program manager. This program seeks to maintain salmon populations for sustainability.

- **Genetic Analysis: $1.5 million GF.** This project proposes to continue the use of genetic stock identification to identify the stock composition of western Alaska chum and sockeye salmon fisheries. Upon completion, ADF&G and the stakeholders will have unprecedented information on the numbers and distribution in space and time of the various stocks of AYK (Alaska Yukon Kuskokwim) salmon to allow improved estimation of productivity and fishery impacts on a stock-specific basis.

- **Hazardous Site Cleanup: $750.0 GF.** The Department of Fish and Game has identified several sites across the state that have known, or suspected, hazardous substances contained at the location. This project provides funds to contract for hazardous substances/contamination site assessments and cleanup designs, and (pending funding) follow up with the actual site cleanup contracts. The funds would be allocated approximately as follows: Glennallen $250,000, Kodiak $250,000, and other smaller ADF&G facilities across the state $250,000.

- **Annual Maintenance and Repair: $1.1 million GF.** This request provides for repair, maintenance and renovation of department facilities statewide and vessel and aircraft repair and maintenance. This is an annual ongoing request.

- **Wildlife Conservation Response Team: $750.0 GF.** This project adds teams of trained wildlife technicians to take responsibility for the public education, proactive enforcement, and incidence responses regarding the increased interactions with wildlife in populated areas of the state. A Wildlife Conservation Response Team will be piloted for Anchorage, Kenai/Soldotna, Palmer, and Southeast communities beginning during the spring of 2010. The goal of the team is to save wildlife and work with the public to reduce inappropriate behaviors and practices that serve to entice wildlife into populated areas.

- **Sport Fish Recreational Access: $3.1 million ($2.3 million federal funds & $775.0 Fish/Game Funds).** This annual request authorizes the Division of Sport Fish to continue to construct and upgrade boating and sport fish access facilities statewide from funds comprised of 75% federal assistance and 25% Fish and Game Fund state match. Projects include: boat launches, mooring floats, parking lots, restrooms, fish cleaning facilities, and other services for recreational boaters.

The remainder of ADF&G's request is in seven projects totaling $791.0 in the areas of software development, salmon assessment, and interagency cooperation resources.

Office of the Governor

The Governor's Office is responsible for the operation of the executive branch of Alaska State government, with fiscal and policy duties conferred by the Alaska Constitution and statutes.

SIGNIFICANT ISSUES

The Governor's Office request for FY2010 reveals no significant changes in policy.

The practices of placing branch-wide appropriations (fuel costs and gasline development) in the Governor's Office and removing one-time items from the base budget make year-to-year budget comparisons difficult. Note that the FY09 budget of $76.7 million includes $57 million that is not carried into the FY2010 base budget. The result is that comparing the FY2010 request with the FY09 budget shows a decrease of $19 million, while comparing the request with the adjusted base shows an increase of $27.7 million. A more meaningful comparison focuses only on the FY2010 base increments; these include $2.7 million for various purposes (see the discussion of carryforward below) and $1 million for redistricting.

The following notes correspond to the numbers in the last column of the preceding spreadsheet:

1. Use of Carryforward from FY08. The Governor's Office has been permitted to carry forward unexpended operating appropriations for several years. Over $2.7 million of Governor's Office general funds was carried forward into FY09. The Governor's Executive Contingency Fund is the allocation that has been used in recent years to record the annual carryforward appropriation, which has historically been used by the Governor's Office for operational and unanticipated expenditures. Carryforward is considered to be a one-time item and is backed-out of the budget each year.

Last year, legislative leadership suggested that the annual carryforward appropriation should be eliminated and that the FY2010 Governor's Office budget should reflect appropriate funding levels in all allocations. The Governor's budget request shows FY09 Executive Contingency funds ($2.7 million) being carried forward into FY2010 and then transferred to various allocations within the Office of the Governor as follows:

Human Rights Commission	$175.0
Executive Office	1,346.3
Governors House	100.0
Contingency Fund	90.0
Lieutenant Governor	200.0
Facilities Rent	103.3
Leasing	85.4
Office of Management and Budget	226.5
Elections	416.1

Because the carryforward appropriation lapses at the end of FY09, the $2.7 million is not available for carryforward or transfer in FY2010. Legislative Finance replaced the

Governor's transfers with increments in order to match the amounts appearing in the Governor's request. Subcommittees may wish to ask the Governor's Office to provide information regarding the purpose of each amount in the table above.

2. **Special Fuel/Utility Cost Adjustment: $24 million GF contingency funding.** Section 13 of the Governor's operating budget bill appropriates up to $24 million (depending on the price of crude oil) to be distributed to agencies to cover increased fuel costs in FY2010.

   An FY09 appropriation of $44 million for increased fuel costs was distributed to agencies. The transfers were considered one-time items and were removed from agencies' FY2010 base budgets. The practice of including one-time branch-wide fuel appropriations in the Governor's Office budget inflates the apparent growth in the Governor's Office budget by $24 million; money appropriated via the fuel trigger will be spent by other agencies.

   Legislative Fiscal Analyst Comment: *The maximum amount of the appropriation corresponds to an average oil price of $60 per barrel. The table in section 13 is truncated before it reaches the projected FY2010 price of $74 per barrel. For further discussion, see section 13 of the review of language provisions in the Governor's operating bill.*

3. **Redistricting Planning Committee: $1,000.0 GF.** Chapter 4, SLA 1999 (now AS 15.10.300) established a Redistricting Planning Committee to make advance preparations for the Redistricting Board, which convenes in September of 2010. The Committee may obtain office space, staff and equipment, and procure a computerized system of data and maps for use by the Redistricting Board. This request kicks off the planning process for redistricting per the 2010 census.

4. **Elections: $3,670.8 GF Reduction.** The entire amount of the FY09 increment for general elections has been removed from the FY2010 budget. The reduction includes 29 temporary employees.

CAPITAL REQUEST

The Governor's Office capital budget contains several Information Technology projects that are to be allocated to various agencies. These projects are discussed in the reviews of the various agencies. The Governor's Office has no capital projects that apply to that Office.

ORGANIZATIONAL CHANGES

There are no structural changes, but several allocations no longer have funding. These include:

- the Statehood Celebration Commission,
- Arctic Wildlife Refuge, and
- Alaska Resources Marketing and Development.

In addition, $200.0 GF for the State Energy Coordinator has been moved to the Alaska Energy Authority.

Department of Health and Social Services

The Department of Health and Social Services (DHSS) promotes and protects the health and well-being of Alaskans through the following core services:

- providing the highest quality of life in a safe home environment for older Alaskans and veterans;
- providing an integrated and comprehensive behavioral health system based on sound policy, effective practices, and open partnerships;
- promoting stronger families, and safer children;
- managing health care coverage for Alaskans in need;
- holding juvenile offenders accountable for their behavior, promoting the safety and restoration of victims and communities, and assisting offenders and their families in developing skills to prevent crime;
- promoting self-sufficiency and providing basic living expenses to Alaskans in need;
- protecting and promoting the health of Alaskans;
- promoting independence of Alaska seniors and people with physical and developmental disabilities; and
- providing quality administrative services supporting the Department's mission.

SIGNIFICANT ISSUES

The FY2010 Department of Health and Social Services general fund operating budget as submitted by the Governor is $34.6 million above the FY09 Revised Management Plan (which excludes fuel/utility and gasline one-time funding of $1,760.0). The Governor's net GF change from Adjusted Base is $47.8 million. This is the smallest increase requested since FY2005.

The Department is targeting five program areas in meeting their theme of, "helping individuals and families create safe and healthy communities." The targeted areas include:

1. Substance Abuse;
2. Health and Wellness;
3. Health Care Reform;
4. Long-Term Care Programs; and
5. Protecting Vulnerable Alaskans.

The largest general fund cost increases in the Governor's FY2010 budget are for the following:

- Medicaid costs—$35.5 million, with reductions of $21.2 million, for a net increase of $14.3 million for Medicaid;
- Children's Services programs and Child Care programs—$7.1 million;
- Alaska Heating Assistance Program—$5.0 million; and
- Substance Abuse and Mental Health programs—$4.5 million GF.

Some requested increases in general funds are attributable to decreases in federal receipts (resulting in the need for general funds to replace federal funds in order to maintain service levels):

- Temporary Assistance for Needy Families (TANF)—the estimated FY2010 cost to continue assisting families with children is $5.1 million GF; and
- Child Advocacy Centers (including the cost of establishing two new centers)—the estimated FY2010 cost is $1.1 million GF.

Significant increases in the Governor's budget are discussed below. The following notes correspond to the numbers in the last column of the preceding spreadsheet:

1. **Medicaid Increments: $35.5 million GF.** Medicaid-related increases appear in the Behavioral Health, Adult Preventative Dental Medicaid Services, Health Care Services, and Senior/Disabilities Medicaid appropriations. Increases in Medicaid programs are attributable to the additional capacity expected as a result of the completion of new facilities and to proposed increases in provider reimbursement rates. Additional funding requests include the re-enrollment and updating of provider information in the Department's current Medicaid information system (required by the Federal Centers for Medicare and Medicaid Services), and adding new positions for performing eligibility assessments for Medicaid recipients.

   The Department's request includes the following reductions, which give a net overall Medicaid increase of $14.3 million:

   - Cost containment measures and reduced Medicaid authorizations ($13.5 million). Reductions in this year's budget are due to expanding the use of a Preferred Drug List, requiring prior authorization for certain medical services, and the continued use of the supplemental rebate program; and
   - FFY2010 Federal Medical Assistance Percentage (FMAP) rate increase of 0.9 percentage point ($7.7 million). The rate change reduces GF and increases federal funds in the Behavioral Health, Children's Services, Health Care Services, and the Senior and Disabilities Services appropriations. The rate change affects three-quarters of state FY2010.

     The federal fund reimbursement rate is set by the Centers for Medicare and Medicaid and is outside the control of state government. The FMAP rate is based on the state's national rank of per capita personal income but can be no less than 50%. The amount of federal funds the state receives for its Medicaid program depends on a complex array of reimbursement rates, some of which change each October 1st with the start of a new federal fiscal year.

     This is the first FMAP rate increase since FFY2004. During the period from FFY2004 through FFY2009, the FMAP rate (which is the percentage of program expenses reimbursed by the federal government) decreased by 10.81 percentage points, which shifted a larger share of increasing health care costs to the state.

     The FMAP rate change also affects the State Children's Health Insurance Program (SCHIP) and the Breast and Cervical Cancer program (BCC), both of which are part of Alaska's Medicaid program. Eligible claims for SCHIP and BCC are reimbursed at an enhanced FMAP rate which reduces the state share of costs by 30% over the regular FMAP.

Legislative Fiscal Analyst Comment: *According to the "check write" information available on-line, the FY09 authorization may exceed Medicaid projections by as much as $40 million. Subcommittees may wish to discuss Medicaid expenditure projections and whether further GF surpluses may exist in the FY2010 budget.*

2. **Temporary Assistance for Needy Families (TANF): $5.1 million GF.** General funds are requested to replace lost federal receipts for the state's TANF program within the Children's Services Appropriation (Front Line Social Workers and Family Preservation allocations). The availability of TANF funding has diminished due to the effects of:

- elimination of TANF high performance bonuses (Alaska earned over $12 million in four years) and limiting the extension of supplemental grants to states with high population growth through FFY2009 (Alaska's annual high population grant is about $7 million);
- slower growth in the number of families on temporary assistance; and
- reductions in Alaska's annual TANF block grant as more Tribal TANF programs are established.

Under the welfare reform legislation of 1996 (the Personal Responsibility and Work Opportunity Reconciliation Act), TANF replaced the welfare program known as Aid to Families with Dependent Children (AFDC). The TANF block grant is designed and operated to accomplish:

- assisting needy families so that children can be cared for in their own homes;
- reducing the dependency of needy parents by promoting job preparation, work, and marriage;
- preventing out-of-wedlock pregnancies; and
- encouraging the formation and maintenance of two-parent families.

Alaska's temporary assistance program uses a "Work First" approach, which focuses on getting a job, then developing skills and work habits on the job in order to advance sufficiently to leave temporary assistance.

3. **Alaska Heating Assistance Program: $5.0 million GF.** The requested GF would be added to the base operating budget of the Energy Assistance Program allocation to maintain services beyond FY09. Last year's enacted budget included $10.0 million GF in one-time funding.

In FY09, the legislature appropriated $10.0 million GF and established a state heating assistance program that extended the federal Low-Income Home Energy Assistance Program (LIHEAP). LIHEAP program eligibility is capped at 150% of the federal poverty level and benefit amounts are based on a point system that considers household size and income, fuel costs and the type of housing. The state program provides home heating assistance to households with income levels between 150% and 225% of the federal poverty guidelines for Alaska. The Department estimates that as many as 8,800 households could qualify for the program in FY2010.

4. **Substance Abuse Programs: $4.5 million GF.** The increments requested provide funding in the Behavioral Health Grants allocation to various community based

grantees, the Palmer Mental Health Court participants, and the new Fairbanks Enhanced Detoxification Center. The funding would provide assessment and treatment of Alaskans with substance abuse and/or mental health illnesses. Increments include:

- $1.8 million GF for hard-to-serve adults with severe and persistent mental health illnesses, substance abuse problems, as well as repeated hospitalization, incarceration, and homelessness. Funding would provide treatment capacity for nursing care, 24 hour/day case manager support, daily medication administration, residential dual diagnosis, and transportation to services;
- $1.8 million GF for a 9% increase in statewide grant funding for substance abuse treatment services. The request would provide funding to agencies that are not able to bill Medicaid (due to Medicaid-related exclusions and non-eligible populations);
- $500.0 GF to cover the costs for Alaskans who don't have Medicaid or private insurance coverage. The funding fills the gap (for the new Fairbanks Enhanced Detoxification Center) between total operating costs and the amount of revenue that can be generated from Medicaid and other third-party billings;
- $419.2 GF for grant programs providing prevention and treatment services for substance abuse and mental health clients. The intent is to enhance community based models by recruiting and retaining a qualified workforce; and
- $75.0 GF to continue treatment capacity for Therapeutic Court Participants with co-occurring disorders (mental health and substance abuse), and providing assessment and treatment services (Palmer Mental Health Court program).

5. Children's Services Grantee and Rate Increases: $3.8 million GF. The GF increments include both grantee cost-of-operating increases and provider rate increases within the Family Preservation, Subsidized Adoptions and Guardianship, Residential Child Care, and Infant Learning Program allocations.

- $863.7 GF to address a 4.6% increase in grantee operating costs. According to the Department, without this increment, existing grant funds would need to be used to cover overhead costs, thereby reducing the services currently being provided to vulnerable Alaskans.
- $1.4 million GF for adoption subsidies to foster care base rate levels. Subsidized adoption rates are negotiated using the foster care base rate as the cap. According to the Department, most rates are negotiated at about 85% of the foster care base rate. In FY09 the foster care base rate increased by 28.9%, which affects subsidized adoption rates negotiated since FY06.
- $1.5 million GF increase for Early Intervention/Infant Learning Program (EI/ILP) provider rate increases. The intent of the funding is to adjust for inflation from 2003 for increases in therapy services, travel, fuel and personnel costs. The request is expected to recover up to 20 providers and one training coordinator. The EI/ILP program was not included in last year's provider rate increases.

In 2003, Congress reauthorized the Child Abuse and Prevention and Treatment Act (CAPTA). This required a referral for all children under the age of three with a substantiated report of abuse or neglect to the EI/ILP. Since 2003, EI/ILP has seen a 50% increase in referrals and a corresponding increase in children eligible for services. The federal reauthorization mandate did not include funding for the increase in referrals or services.

6. **Child Care Provider Rate Increases: $3.3 million GF.** This GF increase in the Child Care Benefits allocation is for adjusting the Child Care Provider Rates and grantee cost-of-operating increases for the Anchorage Bowl area. Increments include:

   - $3.0 million GF to increase Child Care Rates to bring the state subsidy rates closer to the 75th percentile, as recommended by the federal government. The rates are currently at the 50th percentile, according to the Department's 2007 Child Care Market Rate Survey. The Department plans to conduct another Child Care Market Rate Survey in March of 2009. The information will be used in conjunction with the Department's comprehensive rate study to develop standardized methodologies for calculating child care rates and recommendations for the FY2010 rate increase.

     Legislative Fiscal Analyst Comment: *The requested increment, as stated by the Department, is an estimate of the cost to bring the rates closer to the 75th percentile. However, the next scheduled Child Care Market Rate Study is not expected to be completed until March of 2009. The subcommittees may wish to explore postponing the increment request until the March 2009 Child Care Market Rate Study is completed and a more accurate figured is calculated.*

   - $305.4 GF to maintain service levels and avoid service reductions for grantees in the Anchorage Bowl area. Eligibility determinations for Child Care Assistance, Child Care Resource and Referral services, and Child Care Licensing in the Anchorage Bowl are provided through community grantees. The inflation adjustment is estimated to be 4.6% in FY2010.

7. **Youth Experiencing Serious Emotional Disturbances (SED): $2.2 million GF.** Increment requests within the Services for Severely Emotionally Disturbed Youth and Infant Learning Program allocations focus on reducing the need for more costly residential level services for youth experiencing serious emotional disturbances. General fund increments include the following:

   - $1.1 million to expand grant funding to Community Behavioral Health Centers for enhancing outpatient services using innovative programs and training. The emphasis will be for youth from birth to age six with Fetal Alcohol Syndrome;
   - $500.0 for continued care of youth experiencing SED who are not qualified under Medicaid or need non-Medicaid eligible services to stay at lower levels of care and avoid more costly Residential Psychiatric Treatment Centers (RPTC);
   - $400.0 to assist in establishing treatment services for SED children in rural areas and to support tribal expansion in the delivery of this health service; and
   - $200.0 to establish an early childhood mental health learning network, add a state coordinator, and provide grant funding for early childhood screening and intervention services at day care programs and Head Start programs to intervene early with youth at-risk of experiencing SED. The funding is part of the Bring-The-Kids Home Initiative in intervening early with youth at risk and avoiding placements in costly out-of-state RPTCs.

8. **Support for Child Advocacy Centers (CAC): $1.1 million GF.** This request for $1.1 million in general funds is to replace lost federal receipts to operate existing centers and support new centers in Homer and Glenallen.

A federal grant from the United States Department of Justice, Office of Juvenile Justice and Delinquency Prevention, provided funding to establish Alaska's Child Care Advocacy Centers over the last five years. At the end of FY09, this federal funding will be exhausted. According to the Department's latest data, reports of child sexual abuse and physical abuse increased 7% from FY07 to FY08.

During the five-year period, Alaska established Child Advocacy Centers in Anchorage, Wasilla, Juneau, Bethel, Nome, Fairbanks, and Dillingham. Child Advocacy Centers provide services for child sexual abuse victims and severe physical abuse victims, ages 0 through 18, and their non-offending parents. This includes a safe, child-friendly place to interview and receive forensic medical examinations and mental health services or referrals. Each victim is assigned a specialized family advocate who will remain with the child and family throughout the investigative process.

ORGANIZATIONAL CHANGES

Behavioral Health Appropriation:

- **Alaska Psychiatric Institute Advisory Board:** In July of 2008, the Governor established the Alaska Psychiatric Institute Advisory Board (Administrative Order Number 241). The advisory board will provide advice and recommendations to the Department's commissioner for meeting the needs of the state and the institute's patients and their families.
- **Alaska Mental Health & Alcohol & Drug Abuse Boards:** According to a Department press release, the above entity will move from the Boards and Commissions appropriation to the Behavioral Health appropriation to more closely align the constituent groups represented by the board or commission.

Health Care Services Appropriation:

- **Health Facilities Survey:** The new allocation's core service is to have certification and licensing surveyors inspect health care facilities in the state to determine whether they meet state and federal standards, and investigate complaints made against care providers. The purpose of the inspection is to determine a care provider's ability to offer services that are safe and meet acceptable standards. The Health Facility Survey program was previously housed in the Certification and Licensing allocation in FY09.

Public Health Appropriation:

- **Preparedness Program:** This newly created allocation's focus will be on the coordination and management of public health and emergency medical disaster preparedness activities such as planning, training, exercises and resource development. The program will provide expertise and funding for public health and emergency medical disaster preparedness to the Municipality of Anchorage, Alaska Native Tribal Health Consortium, all Alaska hospitals, nursing homes and primary care clinics.

Senior and Disabilities Services:

- **Governor's Council on Disabilities and Special Education and the Alaska Commission on Aging:** According to a Department press release, the above entities

will move from the Boards and Commissions appropriation to the Senior and Disabilities appropriation to more closely align the constituent groups represented by the board or commission.

CAPITAL REQUEST

The agency's $21.3 million capital budget includes the following:

- Phase 1 of 4 for renovating the Johnson Youth Center ($9.5 million GF). This phase includes renovation and expansion of the detention unit, new medical suite, and new admissions and police entry areas. Phases 2 through 4 would occur in FY12 – FY14 and are expected to cost an additional $8.1 million GF.
- The Johnson Youth Center is located in Juneau and is the State's fourth oldest facility. According to the Department's 2007 Assessment Study, threats to safety and security in this facility are a result of aging infrastructure, overcrowding, and an increase in behavioral health issues. The original structure is 50 years old and, according to the Department, needs safety and security issues addressed in order to expect positive results from the staff. Examples of deficiencies include antiquated door locking systems and design flaws that prevent adequate observation of the residents.

Section 10 of the Governor's capital budget appropriates $11.7 million in Information Technology Projects to the Governor's Office. Four of these projects are allocated to the Department of Health and Social Services for $2.2 million GF and $838.7 Federal Receipts as follows:

- Personal Information Protection Data Encryption, $736.3 GF/$81.8 Federal Receipts;
- Health Insurance Portability and Accountability Act Compliance, $668.7 GF/$668.7 Federal Receipts;
- Disaster Recovery, $368.2 GF/$40.9 Federal Receipts/$40.9 Federal Receipts; and
- Contract Management Automation System, $425.5 GF/$47.3 Federal Recipts.

Department of Labor and Workforce Development

The Department of Labor and Workforce Development (DOLWD) is responsible for providing safe and legal working conditions and advancing employment opportunities. It has also been charged with developing a statewide training program for an Alaskan workforce capable of managing, constructing, operating, and maintaining a gasline. To accomplish these goals the Department provides the following core services:

- Employment Assistance;
- Training and Education;
- Workforce and Economic Development;
- Injured Worker and Unemployment Compensation;
- Statutory and Regulatory Assistance and Enforcement; and
- Assistance to people with disabilities to obtain and maintain employment.

SIGNIFICANT ISSUES

The FY2010 Department of Labor and Workforce Development's general fund operating budget submitted by the Governor is $1,178.2 more than the FY09 Revised Management Plan (which excludes fuel/utility and gasline one-time funding of $963.6). The Governor's net GF change from Adjusted Base is an increase of $5,008.4 million, which is comprised of salary fund source changes and the increments described in the numbered paragraphs below. The Department's request for FY2010 does not indicate any significant policy changes. The following notes correspond to the numbers in the last column of the preceding spreadsheet:

1. **Construction Academy Training: $3,500.0 GF.** The Alaska Construction Academy received funding in the capital budget in FY07 and FY08, and in FY09 funding was moved to the operating budget. This request seeks to continue the appropriation that was received in FY09 as a one-time item. The Department states that an aging workforce and lack of available training opportunities for young Alaskans leave the construction, mining, transportation and energy industries with a significant shortage of skilled workers. The Department believes the shortage can be remedied in part through continuation of this program. The training takes place in existing facilities throughout the state.

2. **Workforce Development Business Services: $585.0 GF: $575.1 STEP Funds, & $128.5 Votech Ed Funds.** A requested GF one-time increment of $585.0 reestablishes one-time funds received in FY09 as part of the Department's Gasline Training Program. The increment is intended to provide:

   - Training to at least 70 apprentices at Regional Training Centers for gasline related occupations ($180.1);
   - Funding for cooperative training agreements with business and industry for registered apprentices and on-the-job training for approximately 125 workers ($321.7); and
   - Funding for Division of Business Partnerships staff assigned to assist in development of this project ($83.2).

The Business Services Unit is also requesting base increments of State Training & Employment Program (STEP) ($575.1) funds for training and Technical Vocational Education Program Receipts (TVEP) ($128.5) funds for administrative functions.

3. **SW AK Vocational Education Center Ops Grant: $195.0 GF.** The proposed Governor's budget seeks to reestablish one-time funds of $195.0 GF, received in FY09, by Southwest Alaska Vocational and Education Center (SAVEC). The Department says these funds represent approximately one-quarter of the current SAVEC annual operating budget and that a loss of the funds would present SAVEC with significant challenges to continued operations and services. As submitted, the increment would be added to base budgets in future years.

4. **Labor Market Information, Gasline Training Program Guide: $145.0 GF.** The Department requests continuation of a one-time FY09 appropriation for development of a web and print-based Alaska Training Program guide and for development and dissemination of regional employment data products. The guide is intended to identify training programs including Regional Training Centers, State Training Centers, University of Alaska, Registered Apprenticeships, the Pipeliner Training facility and associated career opportunities. The subcommittee may wish to inquire why the guide is not yet completed and to determine how much more time and money are needed to complete and maintain the Program Guide.

5. **Workforce Investment Board – AGIA Training Program: $130.0 GF.** The Department seeks to continue a FY09 one-time appropriation as part of the Department's Gasline Training Program. These funds will support an existing Education Specialist II position and associated costs. The Education Specialist will serve as the education skills coordinator for the Department of Labor and Workforce Development, to implement vocational education strategies contained in the Department's Gasline Training Strategic Plan. The Department requests that the increment be added to base budgets in future years.

6. **Client Services, Voc Rehab Lease Cost Increase: $130.0 GF.** The University of Alaska chose not to renew the lease for the space occupied by the Vocational Rehabilitation Office on University Lake Drive in Anchorage. That lease expires February 28, 2009. An agreement for new space was reached with the Municipality of Anchorage. However, the new space will cost $387,000 per year as compared to $257,000 for the space being vacated. Without this additional $130.0 GF funding, the Department states it may need to layoff a counselor, serving approximately 115 individuals, to pay the additional lease amount.

7. **Workers' Compensation Fund Change, ($10.2) GF, Occupational Safety and Health, Mech. Inspection Program Fund Change: $294.5 Workers' Safety Account (WSA).** The Department is proposing a change to the funding source for a portion of the elevator, boiler/pressure vessel, electrical and plumbing inspections. This change is dependent on approval of a requested $294.5 increase to WSA funding in the OSH component. Inspections are currently fee-supported, but revenue is not sufficient to cover all program and training costs. Nearly all mechanical inspections provide a significant degree of workplace safety. Consequently, the Department proposes to fund a portion of all inspection costs from the Workers' Safety Account instead of from the Building Safety Account. The statutory authority for WSA funding is maintained by the Occupational Safety and Health (OSH) component.

Through a reimbursable services agreement, OSH will contract with Mechanical Inspection to provide these inspections in places of employment.

ORGANIZATIONAL CHANGES

The Construction Academy Training was a separate appropriation in FY09. The FY2010 proposed structure makes it an allocation under the Workforce Development appropriation. Subcommittees may wish to consider retaining this program as a separate appropriation.

CAPITAL REQUEST

The Department of Labor and Workforce Development's capital budget totals $39.2 million, of which $36.1 is GF. These projects are:

- **AVTEC Dormitory Replacement: $20 million Alaska Housing Capital Corporation (AHCC) funds**. The Department requests these funds for replacement of an existing 120-bed facility that has several Americans with Disabilities Act (ADA) code and life-and-safety-deficiencies. The new facility will be fully accessible and reflect the current style dorm preferred by prospective students and will have handicap access.

  Legislative Fiscal Analyst Comment: *The AHCC fund source is classified as GF in Legislative Finance Division's view of the budget. The Governor classifies these receipts as "Other" Funds, leading to a discrepancy in how the capital project is classified.*

- **AVTEC Heavy Equipment Shop and Pipe Welding Program: $12.0 million AHCC funds.** The Department seeks funding to add a 16,000 square foot steel fabricated building to AVTEC's Applied Tech campus to house the Heavy Equipment and Diesel programs. The Heavy Equipment program relocation will facilitate the demolition of the existing building which has Americans with Disabilities Act (ADA) code and life-and-safety deficiencies.

- **Fairbanks Pipeline Training Center: $2.3 million AHCC funds.** The Department requests equipment funding for the Fairbanks Pipeline Training Center. With this additional equipment, the center will have the capacity to train up to 200 students per year initially, increasing to 400 per year during the peak construction phase of the natural gas pipeline.

- **AVTEC Deferred Maintenance and Expansion: $1.5 million GF**. This funding is requested for deferred maintenance in order to obtain materials and equipment for ongoing work performed by AVTEC's maintenance staff, or contractors, especially in the Industrial Electric training facility. Ability to take care of deferred maintenance allows AVTEC to provide safe environments for AVTEC students receiving training for future employment in Alaska.

- **Social Security and Employment Data Interface: $275.4 GF.** Funds are requested for the Division of Vocational Rehabilitation to create an electronic interface between the Division's management information system, the Social Security Administration's (SSA) beneficiary database housed in the Department of Health and Social Services and the unemployment insurance database in the Department of Labor and Workforce Development. The interface is needed to process state reimbursement

claims under SSA's Ticket to Work program and to help clients become more economically self-sufficient.

- **WC Computer Application/Platform Upgrade: $3.1 million Workers Safety funds**. The Workers' Compensation system, at the direction of the Department of Administration, needs to be upgraded to the ".Net" programming application because the old platform "VB6" will no longer be supported by Microsoft. The upgrade appears essential to the program's continued efficient functioning.

Department of Law

The mission of the Department of Law is to provide legal services to state government and to prosecute crime. The Department represents the state in:

- prosecuting violators of state criminal laws;
- representing the state in legal actions;
- providing legal services in the resolution of tax and royalty disputes;
- providing consumer protection;
- providing legal services for extraordinary proceedings such as oil and gas litigation; and
- advising state agencies in areas of legal concern, including promulgating regulations and drafting legislation.

The Criminal Division protects the public by prosecuting all violations of state criminal law committed by adults and juveniles, and by placing them under appropriate controls. The Civil Division serves the interest of Alaska's citizens by providing legal counsel to the executive branch in all civil actions. The Administrative Services Division provides the core administrative services that are essential to the day-to-day operation of the Department and to managing the resources of the Department.

SIGNIFICANT ISSUES

The FY2010 Department of Law GF operating budget as submitted by the Governor is $135.0 above the FY09 Revised Management Plan (which excludes fuel/utility & gasline one-time funding of $3.5 million). The Governor's net GF change from Adjusted Base is $7,153.2, which is comprised primarily of increments in the Oil, Gas and Mining appropriation.

The following notes correspond to the numbers in the last column of the preceding spreadsheet:

1. Oil, Gas and Mining: $6,359.2 GF. The Department is requesting funds in order to continue to play a role in the Governor's top priority project (the construction of a gas pipeline and bringing natural gas to market). Additionally, the Department has a number of other major projects underway that will continue to require outside counsel and experts beyond the funding included in the Department's base budget.

- **$5,109.2 GF** added to the base budget for ongoing oil and non-gas pipeline matters including Pt. Thomson Litigation, proceedings before the Federal Energy Regulatory Commission, TransAlaska Pipeline Service tariff issues, and two major corporate income tax matters.
- **$1,250.0 GF** one-time increment to assist the Department in the preparation of legislation and implementation of a comprehensive plan to commercialize North Slope gas.

  In FY09, the Department received $3.0 million dollars for "Gas Pipeline and Other Oil & Gas Projects" as one-time funding as well as $3.5 million dollars through an Oil and Gas Development transfer from the Governor's Office. Subcommittees may wish to ask the following questions of the Department:

  - How were the one-time increments (totaling $6.5 million) in FY09 broken out between gasline and non-gasline work?

- When does the agency anticipate resolution to the litigation issues mentioned in this request (i.e. Pt. Thomson)? Should the $5.1 million be added to the base budget?

2. **Lease Costs: $590.7 GF.** Additional funding is requested to cover increased lease costs, the largest factors of which are the Whale and Brady buildings in Anchorage. Lease expenses are expected to rise 34% between FY08 and FY2010, primarily due to higher rates per square foot.

   - **$351.2 GF:** Third Judicial District: Anchorage
   - **$239.5 GF:** Deputy Attorney General's Office

3. **Statehood Defense: $187.0 GF.** In FY08 the Department of Law reduced its general fund budget for Statehood Defense by $167.0. The reduction had no operational impact because an FY04 reappropriation of $350.0 (lapsing balance from the legislature) was available for statehood defense. The reappropriation was a multi-year appropriation with a lapse date of FY09, and none of the available funding was spent through FY07. The Department is seeking general funds in the FY2010 budget to cover the costs of an attorney assigned to statehood defense issues. The increment would be included in the base budget in future years. The subcommittee may wish to ask for an explanation of statehood defense issues, with focus on whether this increment should be added to the base budget or be identified as an increment tied to a specific project with an end date in sight.

ORGANIZATIONAL CHANGES

There are no significant changes requested.

CAPITAL REQUEST

The Department of Law has no capital projects for FY2010.

Department of Military and Veterans Affairs

The mission of the Department of Military and Veterans Affairs (DMVA) is to provide military forces to accomplish military missions in the state or around the world; provide homeland security and defense; emergency response; veterans' services; and youth military training and education. The Department accomplishes this mission by providing core services for the following:

- Alaska National Guard Joint Forces Headquarters;
- National Guard Support;
- Homeland Security and Emergency Services Management & Coordination;
- Alaska Statewide Emergency Communications (IT);
- Veterans' Services;
- Alaska Military Youth Academy;
- Administrative Services Support; and
- Special Operations.

SIGNIFICANT ISSUES

The FY2010 Department of Military and Veterans Affairs GF operating budget as submitted by the Governor is $51.5 below the FY09 Revised Management Plan (which excludes fuel/utility & gasline one-time funding of $960.1). The Governor's net GF change from Adjusted Base is $180.0.

The following notes correspond to the numbers in the last column of the preceding spreadsheet:

1. National Guard Retirement Normal Cost Administrative Fees: $130.0 GF. As with other state retirement plans, employer contributions to the Alaska National Guard and Naval Militia Retirement System (NGNMRS) are identified as "normal" costs (the cost of future benefits for current employees) and "unfunded liability" (the cost associated with bringing the fund balance to the actuarially recommended level). DMVA pays the normal costs of the system while the state makes direct contributions to the retirement fund to pay down the unfunded liability.

For FY2010, the Alaska Retirement Management (ARM) Board recommends the same amount of contributions made in FY09, with the addition of a $130.0 GF "expense load" that is equal to a two-year average of the administrative costs incurred by the Department of Administration. In the past, normal contributions did not include administrative costs.

Legislative Fiscal Analyst Comment: *During the last session, the legislature appropriated $10 million to pay off the unfunded liability of the NGNMRS. Although this payment permits the state to eliminate direct payments to the retirement fund, the ARM Board recommends that the state make the same direct contribution ($1,722.5) that was made in FY09. While the recommendation may fail to account for the $10 million contribution, the legislature may wish to make the recommended contribution in order to offset investment losses.*

2. **Expand Outreach to Veterans: $50.0 GF.** These funds will be used to expand the information delivery system on issues pertaining to veterans' benefits and eligibility criteria in order to ensure that Alaskan veterans are receiving benefits to which they are entitled.

3. **Alaska Military Youth Academy formula: $185.2 I/A Receipts.** The Alaska Military Youth Academy (AMYA) ChalleNGe program is a military school program for at-risk youth. The program is funded by a formula set in statute (AS 14.30.740), with general funds appropriated to the Department of Education and Early Development (DEED) and transferred to AMYA.

   The formula was originally designed to produce a specific dollar amount at a specific point in time. It provides seven times the base student allocation (BSA set forth by the Department of Education and Early Development) for each AMYA ChalleNGe program residential student.

   In FY2010, the BSA increased $100 dollars per student (to $5,580) which brings the Department's FY2010 request to $6.4 million ($185.2 more than the amount appropriated in FY09).

   Legislative Fiscal Analyst Comment: *Subcommittees may wish to discuss plans for future enrollment and estimates of operating costs at various student counts. The legislature may wish to consider a direct appropriation to DMVA; as DEED has no legal responsibility for the AMYA and, therefore, should not act as a pass-through agency.*

4. **Army Guard Facilities Maintenance: $500.0 Federal Receipts.** The Department is requesting additional federal authorization for ongoing operating maintenance costs such as snow removal, utilities, general day-to-day maintenance, etc. The federal fund increase reflects the anticipated amount of receipts for army guard facilities eligible for 100% funding from the National Guard Bureau. The Department does not have adequate operating federal authorization to utilize these available funds to meet costs.

ORGANIZATIONAL CHANGES

There are no significant changes requested.

CAPITAL REQUEST

A few of the larger projects included in the Governor's $13.4 million capital request for the Department of Military and Veterans Affairs are:

- **State Homeland Security Grant Program: $9.5 million Federal Receipts.** The 100% federally funded State Homeland Security grant program is annually awarded by the U.S. Department of Homeland Security. Programs include homeland security planning, equipment, training, and exercises to support local first responders, private sector critical infrastructure and state preparedness. This funding has been requested to assist in life-safety citizen preparedness.
- **Army Guard Facilities Project: $2.5 million ($1.75 million Federal Receipts/$750.0 GF Match).** With 237 Alaska Army National Guard buildings at 96 various locations with an average age of approximately 30 years, deferred

maintenance, renewal and replacement are a high priority. Alaska National Guard preventative maintenance is performed on a schedule, yet building components have a limited life requiring eventual renewal and replacement.

- **Military Youth Academy Deferred Maintenance: $1.0 million GF.** The Alaska Military Youth Academy (AMYA) operates at Camp Carroll on Fort Richardson. The campus currently has 23 buildings totaling 61,805 sq ft. with an average building age of 35+ years. Inadequacies include basic life-safety issues, outdated and inefficient heating/ventilation systems, restrooms, showers, and laundry facilities. This request will fund the modification of the Academy's ChalleNGe facilities to improve safety and living conditions (in compliance with ADA regulations), as well as improve technical training and educational training platforms.

Department of Natural Resources

The Department of Natural Resources (DNR) develops, conserves, and maximizes the use of Alaska's natural resources on state-owned land consistent with public interest by providing the following core services:

- provide opportunities to utilize state land and water resources;
- acquire and provide hydrologic, geologic, geographic, historical site, and other land record and natural resource information;
- acquire land;
- make land available for sale to the public, and transfer land to municipalities;
- preserve and enhance the value of state land and water resources and Alaska's coastal areas;
- mitigate potential disasters and hazards; and
- comply with federal regulations and programs related to natural resources.

SIGNIFICANT ISSUES

The FY2010 Department of Natural Resources general fund operating budget submitted by the Governor is $8,366.8 million *less* than the FY09 Revised Management Plan (which excludes fuel/utility and gasline one-time funding of $1,904.4). The Governor's net GF change from Adjusted Base is an increase of $4,273.9 million, which is comprised primarily of salary fund source changes and the increments described in the numbered paragraphs below. The Department's request for FY2010 does not indicate any significant policy changes.

The following notes correspond to the numbers in the last column of the preceding spreadsheet:

1. Oil & Gasline Initiatives: $2.4 million GF. The Division of Oil and Gas Development is seeking to stabilize its base funding for Oil and Gas Development and to enhance its capacity to collect royalty revenues for the state. It is requesting the addition of previous one-time items, which have been renewed, to its base budget. Some of these items are as follows:

- **Workload Base Adjustment: $1.3 million GF.** The Division of Oil and Gas is requesting that this funding, which has been one-time funding each year for five years, be added to the base operating budget. This annual funding has been utilized since FY05 to address workload issues in the Division of Oil and Gas. This money is not related to any specific project and is not related to gasline coordination.
- **Royalty Valuation Litigation: $500.0 GF.** This request is to pay the costs of outside legal counsel and consultants to develop and defend the state's position in royalty disputes and to represent the state in the reopening of royalty arbitration proceedings. (This funding was requested as a capital project in FY09 but was approved as an operating appropriation.) The Department seeks to add this amount to its base budget.
- **Contract Royalty Auditors: $200.0 GF.** The Department is requesting a base increment to cover the ongoing cost of outside auditors to reduce or eliminate the

backlog of royalty and net profit share lease audits. The increment would be added to the base budget in future years. The increment continues a one-time increment of $200.0 GF appropriated in FY09 with the understanding that use of contract auditors solved an anticipated problem with filling auditor positions in the agency. Subcommittees may wish to inquire about the continued use of contract auditors.

- **Gas Pipeline Coordination: $391.0 GF.** This request is made to provide ongoing funding for gasline coordination in DNR's budget. This funding was included in the FY09 operating budget as a one-time distribution from the Governor's Office. DNR is now requesting this funding as part of the base budget. Subcommittees may wish to consider continuing to segregate gasline startup costs from the base budget.

2. North Latitude Plant Material Center (PMC) – AK State Seed Lab: $725.0 GF. In FY09, the PMC received one-time funding to maintain the state's foundation seed program after a loss of federal funds, and to provide certified and pathogen-free seed potatoes to local farmers. The foundation seed program ensures the availability of healthy native seed stock in Alaska, which growers use to supply seeds to construction companies, state and federal agencies, the mining industry, and others tasked with reseeding/revegetation projects. The PMC is the only source of native plant seed stocks.

3. Geological Development – Mineral Survey and Volcano Observatory, $600.0 GF as follows:

- **Alaska Geophysical and Geological Mineral Inventory Fund Source Change: $350.0 GF.** The Department requests a fund source change of $350.0 for its geological survey program. The FY09 operating budget included $450.0 from GF and $350.0 authorization from industry (SDPR) for surveys. Collection of funding from industry was only marginally successful, despite the Department's claim that an increased interest in precious metals has increased the demand for survey data. The Department states that in order to contract for surveys, including airborne mapping, it is necessary to replace the $350.0 SDPR authorization with general funds. The general funds would remain in the base budget in future years.

- **Alaska Volcano Observatory Fund Source Change: $250.0 GF.** The Department requests a fund source change (to replace the expected federal funding decrease in FY2010) to allow functions of the observatory to continue at current levels. The observatory monitors volcanic activity and ash clouds potentially affecting aeronautic conditions for aircraft traffic and local communities along the Aleutian and Cook Inlet volcanic chain and sends alerts as necessary. The general funds would remain in the base budget in future years.

4. Title Acquisition and Defense – Statehood Entitlement Transfers: $300.0 GF. The Department requests funding for the final stages of the Bureau of Land Management (BLM) 2009 Conveyance Project. The state will receive approximately eleven million acres still owed to the state under the Statehood Act. The project will also result in the transfer of over eight million acres of federal land to Alaska Native Corporations formed under Alaska Native Claims Settlement Act (ANCSA). Special attention must be given to these conveyances to protect state ownership interests and public access and ensure that the state receives clear title. The federal government provided money in FY06 for implementation of the transfers, and positions were created, but federal funds were reduced and are no longer available to address public access and

state ownership interests (such as navigable waters). Subcommittees may wish to discuss the status of the land transfers, with a focus on whether the appropriation should be part of the base budget in future years or be identified as project funding with an end in sight.

5. **Fire Suppression Preparedness – Interagency Cost Increases: $90.0 GF.** The Alaska Interagency Coordination Center (AICC), located on Ft. Wainwright, serves as the focal point for initial attack resource coordination, logistics support, and predictive services for all state and federal agencies involved in wildland fire management and suppression in Alaska. Cooperators include the Bureau of Land Management, DNR, USDA Forest Service, National Park Service, Bureau of Indian Affairs, and the Fish and Wildlife Service. This funding will cover DNR's share of cost increases of the AICC, including lightning detection and weather station costs.

6. **Resource Development – Guide Service Initiative: $50.0 GF.** At the request of the guiding industry, the Department is seeking funds to develop a big game guide program that would establish a prospectus review procedure to allocate leased guide areas to specific guides for big game guide services on state land. The money is intended to cover the cost of drafting related regulations and statutes. Subcommittees may wish to consider identifying the funding as a one-time item.

ORGANIZATIONAL CHANGES

The Office of Habitat Management and Permitting (OHMP) of the Alaska Department of Natural Resources became the Division of Habitat, a part of the Alaska Department of Fish and Game (ADF&G), effective July 1, 2008, as a result of Executive Order 114.

CAPITAL REQUEST

DNR has requested a total capital budget of $97.7 million, of which $68.8 is Federal Funds. The budget consists of a diverse mix of capital projects from snowmobile trail development to parks maintenance, coastal management, fire suppression, bear viewing, technology upgrades, boating access, and trails, among others. Through the Governor's Office, DNR has also requested a $1.2 million GF Document Management System. A few of the larger DNR capital projects are:

- **Coastal Impact Assistance Funds: $58 million federal receipts**. The Division of Coastal and Ocean Management is the lead state agency to administer the approximately $29 million annually in Coastal Impact Assistance Program (CIAP) funding disbursed under the Energy Policy Act of 2005 (R.R. 6). As required by law, 35% of these funds will be paid to the coastal districts of the state, and the remaining 65% will be allocated as identified in the approved program. The $58 million reflected in the FY2010 amount includes the amount allocated but not yet received in FY09, as well as the FY2010 amount.

- **Gas Pipeline Implementation: $3.2 million GF**. Implementing the Alaska Gasline Inducement Act (AGIA) will involve contracting with numerous experts and specialists to advise the state on such issues as pipeline engineering, pipeline commercial terms, including analysis of and advice on tariffs, tariff terms, pipeline access, and terms for addressing cost overruns, royalty valuation methodology, enforcement, and remedies. Success of the initial and subsequent open seasons will

depend on the Department's ability to retain these services. This project may be more appropriately placed in the operating budget.

- **Reservoir Studies to Evaluate Oil and Gas Resources on the N. Slope, Phase 2 of 2: $6 million GF.** The primary purpose of this phase of reservoir studies is to determine the best way to maximize remaining Prudhoe oil recovery while optimizing gas for a North Slope gas pipeline. Qualified consultants will be hired through the Request for Proposals (RFP) process to work on the project. Results will enable the state to make informed technical decisions with regards to the impact of gas production on the recovery of remaining Prudhoe Bay oil reserves. This project may be more appropriately placed in the operating budget.

Department of Public Safety

The mission of the Department of Public Safety (DPS) is to ensure public safety and enforce fish and wildlife laws. The Department's core services include the following items:

- perform criminal and traffic law enforcement and investigations;
- manage and perform search and rescue operations for lost and missing persons;
- provide wildlife law enforcement and investigations;
- provide support to rural law enforcement entities;
- provide security to the Alaska Court System, transport inmates to and from court and between correctional institutions, and perform extradition of wanted persons to and from the state;
- provide criminal laboratory and forensic services, administer the statewide breath alcohol program, maintain Alaska's DNA identification system, and provide expert testimony in court proceedings;
- maintain accurate and complete Alaska criminal records and information for use by law enforcement agencies in Alaska and elsewhere;
- manage building and fire codes (development, adoption, interpretation, and review), conduct building plan reviews of commercial buildings and 4-plex and larger housing units, conduct fire and life safety inspections of priority facilities; and
- enforce alcoholic beverage laws.

SIGNIFICANT ISSUES

The FY2010 Department of Public Safety general fund operating budget as submitted by the Governor is $4,121.6 above the FY09 Revised Management Plan (which excludes fuel/utility & gasline one-time funding of $803.3). The Governor's net GF increase from Adjusted Base is $4,250.3.

The following notes correspond to the numbers in the last column of the preceding spreadsheet:

1. Drug Enforcement and Rural Alcohol Interdiction: $2,789.7 GF.

According to the Department, alcohol and drug enforcement remains a significant challenge, particularly with tenuous federal funding. The Department requests continued one-time funding, which could be restored based upon the amount of federal money received by DPS.

- **$1,393.2 GF (Language):** Narcotics Task Force
- **$1,270.0 GF (Language):** Rural Alcohol Interdiction Program (includes $400.0 for prosecution efforts by the Department of Law).

Legislative Fiscal Analyst Comment: *The legislature has included "reduce general funds if federal funds are forthcoming" language for the Narcotics Task Force Program since FY07. Similar language was added for the Rural Alcohol Interdiction Program in FY09. Because the language may imply that federal funds are anticipated, there may be an expectation that these increments will have no GF*

impact. The majority of federal funds have not materialized ($271,840 in FY08 and $715,479 in FY09 were returned to the general fund as a result of these language sections) and the subcommittees may wish to consider placing both funding items into the base budget (numbers section of the operating bill) with intent language stating that the general funds are not to be used if federal funding is received.

- **$126.5 GF: Alaska State Troopers Special Projects** requests funding to replace a federal grant for reducing illegal drug and alcohol use. The grant is no longer available. A portion of this increment will be used to fund cold case homicide investigations.

2. Departmental Overhead and Service Costs: $1,276.4 GF. The Department is requesting increments to pay increased overhead and service costs throughout the agency. Overhead costs include utilities, leases, housing, and medical and laboratory services and supplies. Increments have been requested as follows:

- **Rural Trooper Housing: $427.3 GF.** The Department requests funding to cover the increased cost of housing Alaska State Troopers (AST) located in rural posts. This increment request is for higher lease and utility costs and will assist in the leasing of eight replacement trooper units in Galena and Aniak. The Public Safety Employees Association (PSEA) bargaining unit contract states that troopers are required to pay a portion of their salary for rent with the remaining costs to be borne by the state.
- **Rising Lease Costs: $318.4 GF.** The Department is requesting an increment of $230.3 to cover rising office lease expenses for the AST Detachment component in the following communities: Aniak, Galena, King Salmon, Cooper Landing, Seward, and Wasilla.

  Additionally, $88.1 GF is requested for office and aircraft hangar lease increases in the Wildlife Troopers allocation.
- **Statewide Dispatch Services: $208.3 GF.** The Department is requesting funds for increased costs of contracts with local police departments to provide dispatch services in Wasilla and Kodiak partially funded in a similar increment request in FY09.
- **Ammunition and Uniforms: $31.4 GF.** Additional base funding is requested for the Alaska State Troopers ($25.5) and Wildlife Troopers ($5.9)
- **Medical Exams: $164.0 GF**. Additional funding in the AST Detachment allocation is also requested to offset the rising expense of medical forensic exams of victims of sexual assault and sexual abuse of a minor. Actual costs for these mandated services (AS 18.68.040) have exceeded authorization by roughly $164.0 per year since FY08.
- **Laboratory Services: $127.0 GF.** Overhead expenses for the Scientific Crime Detection Laboratory have increased significantly since FY07. Included in this increment are:
  - **$40.0** for the purchase of enough DNA reagent kits to process 400 additional violent crime and property crime cases and 6,000 Combined DNA Index System (CODIS) cases per year
  - **$40.0** to cover freight and courier service costs to return evidence to the submitting agency to be available for trial and to free up limited laboratory storage space.

3. **Prisoner Transportation: $88.0 GF.** In FY09, the legislature approved a $656.3 GF increment for six new Court Service Officer positions (attributable to a court settlement between DPS and the Municipality of Anchorage that transferred responsibility for prisoner transportation to the Department). A Legislative Finance error in recording conference committee action omitted the funding from the FY09 operating budget (a supplemental request should be expected). The amount was added to the FY2010 adjusted base. The Department requests an additional $88.0 for increased transportation costs.

4. **Corrected FY09 PSEA Salary Adjustments: $50.5 GF.** The Public Safety Employees Association (PSEA) contract negotiations for FY09 occurred late in the 2008 session and a portion of the monetary terms for uniform allowances was omitted from the budget request. This amount has been added to the FY2010 base budget; however, the Department could request supplemental funding for FY09 costs.

5. **Council on Domestic Violence and Sexual Assault (CDVSA): $1,677.9 PFD Criminal.** In FY09, the legislature replaced $1,341.5 GF with PFD Criminal Funds (PFD appropriations in lieu of dividends to incarcerated felons). As permanent fund dividends increase, more PFD Criminal funds are available for program costs.

Legislative Fiscal Analyst Comment: *The amount of PFD Criminal funds available varies with the amount of the Permanent Fund dividend and the number of felons incarcerated. Recent investment losses are likely to reduce PFDs in the future, with a corresponding decrease in PFD Criminal funds available. The likely result is future requests to replace PFD Criminal funds with general funds.*

6. **Department Carryforward: $3,660.2 Federal Receipts.** Beginning in FY08, the department received a $5,000.0 federal multi-year appropriation for domestic violence and sexual assault prevention programs which lapses on June 30, 2010. This amount represents the unspent balance of that appropriation as of July 1, 2008.

7. **State Oversight of Hazardous Pipeline Facilities: $142.0 I/A Receipts.** Funding is requested to staff the new Office of Oil and Gas Systems Facilities within the Department via interagency receipts from the Department of Natural Resources (DNR). This office will provide one-stop servicing for fire inspection, plan review, fire investigation, fire detection and suppression system maintenance, and review of emergency response plans and fire response training for the whole oil and gas industry, statewide, to include onshore and offshore facilities. The new office will be located with the Joint Pipeline Office within DNR and will act as liaison supporting governmental oversight agencies for Trans-Alaska Pipeline System (TAPS) and all hazardous pipeline facilities located throughout the state.

ORGANIZATIONAL CHANGES

There are no significant changes requested.

CAPITAL REQUEST

Some of the larger projects in the Governor's $13.1 million capital budget for the Department of Public Safety are:

- Anchorage Aircraft Hangar Replacement – Phase II: $2.5 million ($2.43 million AHFC Receipts and $.07 million GF)
- Marine Fisheries Patrol Improvements: $2.5 million Federal
- Alaska Public Safety Information Network (APSIN) Redesign: $2.0 million GF
- Statewide Facilities Maintenance, Repairs, and Improvements: $1.5 million GF
- Aircraft and Vessel Repair and Maintenance: $1.5 million GF

Department of Revenue

The Department of Revenue's responsibilities include:

- administration and enforcement of Alaska's tax laws;
- management of the treasury;
- administration of the Permanent Fund Dividend Program;
- collection and distribution of child support; and
- administrative support to the following independent boards and corporations:
  - Alaska Permanent Fund Corporation;
  - Alaska Housing Finance Corporation;
  - Alaska Municipal Bond Bank Authority;
  - Alaska Natural Gas Development Authority;
  - Alaska Retirement Management Board; and
  - the Alaska Mental Health Trust Authority.

SIGNIFICANT ISSUES

The Governor's FY2010 general fund operating budget for the Department of Revenue (DOR) is $3,356.6 above the FY09 Revised Management Plan (excludes fuel/ utility & gasline one-time funding of $1,221.0). The net GF change from Adjusted Base is $4,122.3.

The following notes correspond to the numbers in the last column of the preceding spreadsheet:

1. **Child Support Services Division Match: Fund Change $1,900.0 GF Match/($1,900.0) Receipt Supported Services (RSS).** Continued decline in receipts received by the division, as a result of the decline in Temporary Assistance for Needy Families (TANF) cases, is expected to result in a shortfall of state matching funds. General funds are requested to supplement the shortfall.

   Legislative Fiscal Analyst Comment: *TANF cases continue to decline for a variety of reasons (see H&SS analysis). The Child Support Services Division (CSSD) retains child support when a family is on TANF and splits the funding with the federal government (the state retains 47% as RSS). The retained funding is then utilized by the agency and counted toward the 34% state match. During the last two years, CSSD has been authorized to carry forward prior year receipts, thereby reducing the need for an alternate matching fund source. That funding source has been exhausted.*

2. **Natural Gas Pipeline Development: $771.0 GF.** For FY09, DOR received $1,221.0 for gas line development. This was the amount identified in the fiscal note to HB 177 or the Alaska Gasline Inducement Act (AGIA). The agency continues to follow that fiscal note and is requesting the $771.0 itemized for FY2010.

   Legislative Fiscal Analyst Comment: *Considering that the fiscal note was written almost two years ago, it seems unlikely that the agency's expenditure plan remains*

exactly as written. Subcommittees may wish to ask the Department for further information regarding this request.

3. **Treasury Revised Cost Allocation Plan: Net Increase $572.0 GF/($420.0) Other.** Many agencies utilize federal program revenue for state retirement contributions. The Treasury Division invests these funds and has recently received federal approval of a new cost allocation plan. The plan requires a reallocation of funding sources to be in compliance. According to the Department, the plan will be used to develop budgets and agreements for charging users of Treasury services, and for allocating costs equitably among each fund/trust/client agency. The method is devised to address all costs and all users in a consistent, easily-administered manner, utilizing actual, quantifiable statistics.

Legislative Fiscal Analyst Comment: *The FY2010 cost allocation plan is based on fund net asset value at year end FY08. The plan is effective retroactive to July 1, 2008, making it effective for all of FY09. Adjustments in the supplemental process should be expected.*

4. **Contract Audit Assistance: $540.0 GF.** Last session, Revenue requested just over $1 million for contractual audit assistance during the recruitment of four Audit Master positions. A one-time increment of $540.0 was intended to fund two contract auditors and associated overhead. The Department did not remove this one-time item from the base budget for FY2010. Legislative Finance removed the amount from the base and added an increment in order to match the Governor's request. Contract audit assistance was identified in the fiscal note to AGIA (the oil production tax legislation) as a four-year need at over $1 million per year. The purpose is to supplement auditor functions during recruitment and provide training to less experienced staff. Subcommittees may want to examine the continued use of contract auditing.

5. **Fourth Audit Master: $200.0 GF.** Funding was requested last session for four Audit Master positions created during revision of the oil production tax. Funding for three of the positions ($600.0) was approved in anticipation of a recruitment lag. Funding for the final position is requested for FY2010.

6. **Federal "Moving to Work" Program Adjustments: $1,634.0 Federal Receipts/($674.3) Other.** The Alaska Housing Finance Corporation (AHFC) has recently become a Federal Housing and Urban Development (HUD) "Moving to Work (MTW)" eligible agency. This does not entitle AHFC to receive any additional federal funding per se, but it does allow considerable flexibility regarding how funding is programmed and accounted for. $674.3 of AHFC Receipts are being reclassified as federal receipts (per a rule change in FY08, these were changed from Federal Receipts to AHFC Receipts) while significant other federal funding is essentially being reprogrammed and brought on budget.

7. **Constitutional Budget Reserve (CBR) Fees: $1,673.0 CBR Funds.** As a result of high oil prices, the CBR has grown substantially. As a consequence of higher balances, additional funding for management fees are required (fees are typically a percentage of asset value). For FY09, $4.3 million was budgeted for fees. This amount exceeded the FY09 requirements and expenditure authority is expected to lapse. The amount requested for FY2010 reflects anticipated needs.

8. **Independent Actuary Audit: $300.0 Other Funds.** A one-time increment for an independent audit of the state's actuary was included in the FY09 budget. Per AS 37.10.220(10), an audit is to be performed not less than once every four years. The Department did not remove this one-time item from the base budget for FY2010. Legislative Finance removed the amount from the base, then added an increment in order to match the Governor's request. Subcommittees may wish to delete this increment.

9. **Mental Health Trust Zero-based Budgeting: $2,650.0 Other Funds.** The Alaska Mental Health Trust Authority has implemented zero-based budgeting for all of their programs. The goal of the Trust is to be able to identify how Trust funding is being allocated on a year-by-year basis. Yearly increments will be clearly identifiable as Trust recommended programs.

Legislative Fiscal Analyst Comment: *This concept works very well for Trust targeted program funding. However, there is no benefit to zero-based budgeting of the Trust's own administrative budget. The Trust may wish to return to incremental budgeting of administrative costs.*

ORGANIZATIONAL CHANGES

There are no significant changes requested.

CAPITAL REQUEST

The Alaska Housing Finance Corporation capital budget makes up the majority of DOR's annual request (74% of the budget for FY2010). AHFC has over $84 million budgeted for their housing programs, including $20 million of federal receipts, and almost $63 million of the $68.7 million AHFC dividend to the state. A few of the larger projects are:

- the Supplemental Housing Development Program ($10 million AHFC Dividend);
- the Senior Citizen's Housing Development Program ($7.5 million AHFC Dividend);
- the Homeless Assistance Program ($6 million AHFC Dividend); and
- the Loussac Manor Renovation and Replacement Phase 3 ($8.5 million AHFC Dividend).

The remainder of DOR's request is primarily two large projects totaling $28.5 million:

Gas Spur Line: $5,000.0 AHCC Funds. The Alaska Natural Gas Development Authority (ANGDA) is working to develop a spur line off the future gas pipeline from the North Slope. The intended route is from Delta Junction to Cook Inlet. During the special session last year, ANGDA had requested $25 million for this project, but received no funding. Current estimates for the spur line vary from $1 to 1.5 billion, depending on timing and other factors. This $5 million will allow efforts for right-of-way acquisition and engineering/ design to continue.

Legislative Fiscal Analyst Comment: *The ownership structure of the spur line is presently unclear. It may be prudent to identify ownership rights, revenue flow, and operational aspects before additional state funding is allocated to this project.*

Tax Revenue Management System: $23.4 million GF. DOR received $3.9 million in the FY09 capital budget for tax system(s) replacement. This project will create a single, comprehensive management system that will accommodate all tax types. The prior year funding will be combined with this funding to cover anticipated total project cost of just over $27 million.

Department of Transportation and Public Facilities

The Department of Transportation and Public Facilities (DOT&PF) is responsible for planning, research, design, construction, operation, maintenance, and protection of all state transportation systems and many public facilities. This includes approximately 258 state-owned airports and seaplane bases, 6,000 miles of state roads, 700 buildings ranging from maintenance shops to state office complexes, and 25 ports and harbors. In addition, the Department owns and operates the Alaska Marine Highway System (AMHS). The Department also owns and operates the State Equipment Fleet, which provides full maintenance support and replacement activities for all departments and state agencies, including 7,800 light and heavy duty vehicles and attachments.

SIGNIFICANT ISSUES

The Governor's FY2010 general fund operating budget for the Department of Transportation and Public Facilities is $4,364.8 above the FY09 Revised Management Plan (excludes fuel/ utility & gasline one-time funding of $33 million). The net GF change from Adjusted Base is $11,492.6.

The following notes correspond to numbers in the last column on the preceding spreadsheet:

1. Commodities Market: ($33,000.0) GF. The last three budget cycles have seen unprecedented commodity price inflation that has affected every family, business, organization and government unit in the state. The recent collapse of commodity prices—particularly fuel prices—relieves considerable budgetary pressure on DOT&PF.

The fuel "trigger" appropriation created by the legislature performed as intended. By making fuel appropriations one-time items, and backing them out of base budgets each year, the legislature has avoided excessive base budget build-up due to high fuel prices.

The Governor's budget retains a fuel trigger appropriation for FY2010, even with fuel prices far below the levels of FY09. Legislative Finance believes a trigger mechanism to be prudent given the volatility of markets, but suggests that the table (in section 13 of the Governor's operating bill) extend at least as high as the official forecast of $74 per barrel of oil. Limiting the trigger price to $60 per barrel may provide insufficient funding if oil prices rebound. If oil prices remain low, there is no harm in a higher cap.

DOT&PF received $33 million of the fuel appropriation for FY09. This is their maximum allocation (75%) of the $44 million appropriated. Under the Governor's proposal, DOT&PF would receive a maximum of $18 million in FY2010.

Legislative Fiscal Analyst Comment: *As of this writing, Alaska North Slope is trading near $30 per barrel. If oil stays at this level for the rest of the fiscal year, the year-end average price will be near $60 per barrel (see Fiscal Sensitivity on page 18). This price level would have provided DOT&PF with $18 million for fuel in FY09. The legislature may wish to explore the potential for supplemental appropriations that recover/reallocate a portion of the FY09 fuel appropriation.*

2. Sidewalk Snow Removal: $547.1 GF. $1.25 million was approved in the FY09 capital budget to purchase snow removal equipment for sidewalks on state roads, specifically those in the Anchorage Bowl. The sidewalk snow removal equipment was a legislative addition after discussion in the DOT&PF subcommittee last year revealed the lack of necessary tools to clear the sidewalks. Now part-time man-power is requested to run the equipment. An increment of $500.0 and eight part-time positions is requested for

snow removal operations in Central Region Highways and Aviation. An additional $47.1 is requested for the Southeast Region.

3. **Specialized Contracting Services: $170.0 GF.** The costs of various specialized contracting services in the Northern and Central Regions are increasing. An additional $110.0 in the Northern Region is requested for new Direct Digital Control (DDC) systems coming online, along with other specialized contract services such as elevator maintenance and insulation services. An increment was approved in FY09 for a position to maintain all of the DDC systems in the Northern Region. In FY2010 $60.0 is requested for similar Central Region contract cost increases.

4. **Janitorial Contracts: $165.2 GF.** Northern and Southeast Regions are requesting additional funding for janitorial contracts. In prior years, the cost for janitor contracts has been absorbed. The agency contends that contract prices have reached the point where they require additional funding.

5. **Striping Contracts: $169.3 GF.** Southeast Region Highways and Aviation is requesting funding for increased costs associated with highway and airport runway striping. The current budget for striping in the region is $180.7. Recent striping costs put the required amount near $350.0.

6. **Motor Carrier Safety Assistance Program Expansion: $250.0 Receipt Supported Services (RSS).** Through DOT&PF, Alaska became a Unified Carrier Program (UCR) state during FY09. This federal program authorized in SAFETEA-LU, allows states to mandate commercial motor vehicle registration under the UCR program. Program revenue is required to be used for increased motor carrier safety and motor carrier enforcement along with any administrative costs related to the program. This increment request would allow for expenditure of the additional revenue for motor carrier safety and enforcement activities.

7. **Whittier Tunnel Extended Operating Hours: $500.0 Cruise Ship Gambling Tax.** Last session, a special $500.0 appropriation was made in the capital bill for extended operating hours at the Whittier Tunnel. The extended hours were to benefit cruise ship passengers and industry merchants. An increment is being requested to maintain those extended hours during FY2010. In addition to the increment, a $2 million fund source change is requested from CIP Receipts (via federal capital projects) to gambling tax revenue.

Legislative Fiscal Analyst Comment: *The funding used in FY09 was from the Regional Cruise Ship Impact Fund established by the cruise ship head tax initiative passed in 2006. Present legal opinion is that the head tax revenue may be used only to mitigate cruise ship impacts or to benefit cruise ship passengers (in order to avoid violation of U.S. Constitution Commerce/Tonnage Clauses). The FY2010 request uses cruise ship gambling tax proceeds. Although this revenue source was also created as part of the head tax initiative, use of the fund source is not restricted by the same legal issues. Legislative Finance and the Department of Revenue classify the head tax as restricted Other State Funds, and the gambling tax revenue as part of the unrestricted general fund. Using the same funding source as FY09 may be warranted.*

Legislative Fiscal Analyst Comment: *Upon completion of the Whittier Tunnel, the Federal Highway Administration agreed to partially fund operation and maintenance of the tunnel until such time that it could be self-supporting. This contract expires in February of 2009. The switch from federal funds to state funds appears, however, to be a*

state choice. The federal government is not mandating the fund source change and federal funding may still be available as an option for tunnel operations. That said, using federal funds for tunnel operations makes them unavailable for road construction projects.

8. **International Economic Impacts on International Airports: ($2,153.0) International Airport Revenue Funds.** The global financial situation has caused considerable pressure on both passenger and cargo airlines. The airline association has asked DOT&PF to reduce landing fees given this operating environment. FY09 year-to-date combined cargo/passenger landing weight is approximately 16% below FY08. International Airport revenue is expected to be lower commensurately. The airport system is planning reductions for the FY2010 budget totaling over $2 million. Cost containment has already begun in FY09 and supplemental budget reductions are expected.

9. **Alaska Marine Highway System Maintenance Budget: $8,865.2 GF.** AMHS received two one-time appropriations for FY09. They have requested a continuation of that funding for FY2010 and beyond. $4.6 million was added during the operating budget process as a one-time fleet reconfiguration cost increase during Tustemena and other vessel overhaul. Additionally, $4.2 million was added in the capital bill as a one-time expansion of service to Southwest Alaska during the Tustemena overhaul.

Legislative Fiscal Analyst Comment: *FY2010 will require a different mix of vessels and likely have a different cost structure to maintain the same service level. The finance committees may wish to evaluate whether maintaining the same funding level is appropriate.*

10. **Salary Fund Source Changes: $1,015.2 GF.** The Governor's budget proposes using general funds to replace a portion of other funding sources that could be used to pay for contractual wage and health benefits increases. Subcommittees should carefully examine each of these salary adjustment fund changes. Please see **Fund Source Changes for Salary Adjustments** on page 18 for further discussion of this issue.

ORGANIZATIONAL CHANGES

There are no significant changes requested.

CAPITAL BUDGET

The DOT&PF capital budget comprises the majority of the statewide capital budget each year. Typical programs include the Surface Transportation Program (receipts from the Federal Highway Administration) and the Airport Improvement Program (receipts from the Federal Aviation Administration). Both programs require a state match component that are usually budgeted separately to allow for agency flexibility. The budget also typically has appropriations from the general fund for facility, harbor, airport, highway and Alaska Marine Highway vessel/ terminal deferred maintenance, and for the stockpiling of materials for construction. The Governor's proposal contains elements of all of the aforementioned. See the capital budget section on page 49 for further details.

University of Alaska

The major goals of the University are to inspire learning, and to advance and disseminate knowledge through teaching, research, and public service, emphasizing the North and its diverse peoples by fostering and promoting the following:

- a high quality postsecondary educational system;
- appropriate vocational education development and training;
- advancement and extension of knowledge, learning, and culture; and
- the University as the state's primary research facility with focus on the application of new knowledge and emerging technologies.

SIGNIFICANT ISSUES

The FY2010 University of Alaska operating budget as submitted by the Governor is $13,641.4 GF above the FY09 Revised Management Plan (which excludes fuel/utility & gasline one-time funding of $4.8 million). The Governor's net GF change from Adjusted Base is $4,543.9 (which includes, a requested fund source change, switching FY09 Business License & Corporation Filing Fees and Taxes funding to $550.0 GF for FY2010).

According to the University, the program enhancements in the University's FY2010 budget are critical to meeting the Board of Regents' goals in the following growth priorities:

- K-12 Outreach;
- Energy, Engineering, Climate;
- Health Programs; and
- Workforce and Campus Programs.

The University of Alaska Board of Regents requested an overall increase of $11.6 million (a net result of a $32.3 million GF increase and a net *decrease of $20.7 million* in non-GF). The Governor's budget mirrors the Regents' request in several categories but the end result is less than the Board of Regents' request by $24.6 million ($16.2 million GF and $8.4 million non-GF). (see following table)

- **Compensation Increases** – The compensation package requested by the University and submitted by the Governor includes salary increases for all union-represented groups and for non-represented faculty and staff totaling $14.5 million (including $8.9 million GF). It is based on projections of contractual increases for current employee agreements. This request includes a reduction for the University's Optional Retirement Program (ORP) for FY2010 of $2.4 million ($1.3 million of which is GF). It further includes a reduction of $234.4 GF for a one-time workforce development stipend of $800 per retained Alaska Community Colleges' Federation of Teachers member. As with similar salary adjustments in other agencies, compensation increases were added to the base budget.

The Governor made cuts to some areas as shown in the table on the next page:

In addition to (fully supported) compensation increases, Board of Regents' increments partially supported by the Governor include the following:

- **Non-Personnel Services Fixed Cost Increases** – $7,614.3 non-GF. This increase is intended to cover:
  - projected FY2010 travel for intercollegiate athletic teams at UAA and UAF, as well as academic and research travel, to offset airline travel costs that have risen 30%;
  - annual maintenance and repair calculated at a minimum 1.5% of current building value and other increases in non-discretionary costs (estimated at 2% of contractual services and commodities).
- **Compliance Mandates (personnel)** – $400.0 non-GF. This area includes risk management increases to support required insurance, risk assessment, and operation increases.
- **New Facility Operating and Maintenance Costs** – Total $694.3 ($350.0 GF, $344.3 non-GF) Additional funding in this area would cover:
  - the Bragaw Building Lease Expense in Anchorage for space expansion related to Development, Corporate Programs, Risk and Land Management functions;
  - the Integrated Science Building (ISB) East Campus Parking Garage; and
  - ISB support positions funding.

Legislative Fiscal Analyst Comment: *As in 2009, the Governor has included a contingent appropriation in the operating budget to offset increased fuel and utility costs of agencies. The University Board of Regents requested funds in excess of that contingency (estimating that costs will rise another 10% for FY2010), but that increment was not included in the Governor's budget submission. The University anticipates a possible supplemental request to cover excess fuel costs for FY09.*

The Governor's request does not include the entire Board of Regents' proposal in Priority Program Enhancement and Growth. A total of $15,525.0 ($8,222.6 GF and $7,302.4 non-GF) was cut from the Board of Regents' FY2010 operating budget submittal in these areas. Partial program funding is included in the Governor's budget for the following:

- **K-12 Outreach** – Total $1,030.0 ($800.0 GF, $230.0 non-GF) Funding in this category is intended to support partnerships with the Department of Education and Early Development and school districts, as well as summer camps, career awareness, outreach, special education teacher training, and early testing, assessment and placement. Examples of proposed program investments include expanding the following:
  - UAA Engineering Bridging Activities/Summer Camps;
  - UAA Alaska Native Science and Engineering Program;
  - UAF Alaska Summer Research Academy Engineering Components;
  - UAF Interior Aleutians Campus Early College High School Initiative;
  - UAF Individual Technology Based Math and Summer Bridge Programs; and
  - UAS Summer Bridge, Early College Advising and Programs.
- **Energy, Engineering, Climate** – Total $4,968.1 ($1,000.0 GF, $3,968.1 non-GF)

- The Governor's request focuses on funding to address solutions to the state's most pressing energy issues, including outreach through the Alaska Cooperative Extension Service.
- Operating support for energy is intended to provide the core expertise and support to address the needs expressed through state plans, including a plan prepared by the Alaska Energy Authority.

- **Health Programs** – Total $2,143.4 ($1,843.9 GF, $299.5 non-GF)
  - This priority program request is designed to support the University's next step in building strong health occupation training programs. Specific examples include:
    - Anchorage Campus – Clinical Rotations/Health Pipeline partnering with industry leaders to encourage Alaskans in health careers and support health students to select employment in underserved areas and with underserved populations; UAA distance social work program in partnership with the Alaska Mental Health Trust Authority; Human Services Practicum Coordination to meet accreditation guidelines; faculty/liaisons in the areas of pharmacy careers and physical therapy; and, expansion of the Physician Assistant Program;
    - Fairbanks Campus – increased funding for the UAF Psychology Clinic as the training site and behavioral health research facility for doctoral student clinicians;
    - College of Rural and Community Development – UAF Rural Human Services Faculty to work toward a culturally appropriate training program designed for rural human service workers;
    - Tanana Valley Campus – addition of a tenure-track faculty position to the Allied Health/Medical Assisting Certificate and Associate of Applied Science (AAS) program to expand the Medical Assisting program to rural locations; and
    - Juneau Campus – addition of a UAS Career and Health Coordinator to work with the Health Distance Education Partnership, Student Success Coordinator to work with students prior to and after enrollment in any regional health occupation program, and a biological sciences laboratory technician for the Sitka-based program.

Although the Board of Regents had requested funds for Workforce and Campus Programs, no funds were included in the Governor's request for that purpose.

The Governor's University of Alaska FY2010 budget adds three new PFT positions for a total of 4,919 (4,697 PFT and 222 PPT) positions.

ORGANIZATIONAL CHANGES

For FY2010, the Governor's Office is supporting a single appropriation structure for the University of Alaska. Although this was the structure maintained for many years, in FY09 the legislature determined that seven appropriations would allow more oversight and control from a legislative perspective.

In addition to the single University of Alaska appropriation, an allocation for the Small Business Development Center (SBDC) has been created. In FY09, an appropriation was set up to allow movement of the SBDC from the capital budget to the operating budget. For FY2010, this program is also singled out with a transfer of $337.2 ($257.2 GF, $80.0 non-GF) from the Anchorage Campus operating budget (which supplemented the capital budget appropriation each year) to a newly created allocation which adds to and continues the FY09 funding of $550.0. The University's intent is to keep this allocation complete and separate to track all SBDC activities for the federal match requirements, BuyAlaska and the Procurement Technical Assistance Program.

CAPITAL REQUEST

There are two general fund projects in the University's FY2010 capital budget:

(1) $10 million GF to maintain existing facilities (renewal and renovation annual requirement), and

(2) $2.2 million GF designed as a pass thru to Providence Alaska Medical Center for the Alaska Family Medicine Residency Program which trains medical school graduates who intend to practice family medicine in Alaska. This is the only residency program in the Northwest that does not receive annual direct state appropriations from their state university or higher education system.

Legislative Fiscal Analyst Comment: *Prior funding for this program was provided in the Department of Commerce, Community and Economic Development as a Grant to a Named Recipient ($2.0 million each in FY08 and FY09). If funding for this purpose is approved, the legislature may wish to add it to the operating budget as an ongoing appropriation.*

One other item in the University's capital request is funded by AHCC Receipts – $1,072.0 for University of Alaska Gasline Workforce Development to enable acquisition of a machinery simulator package that would support training for any occupation utilizing heavy equipment. The AHCC fund source is classified as GF by Legislative Finance. The Governor classifies these receipts as "Other" Funds.

Alaska Court System

The Alaska Court System constitutes the Judicial Branch of the state's government. Alaska has a unified, centrally administered, and completely state-funded judicial system. The mission of the Alaska Court System is to provide an accessible and impartial forum for the just resolution of all cases that come before it, and to decide such cases in accordance with the law, expeditiously and with integrity.

There are four levels of courts in the Alaska Court System, each with different powers, duties and responsibilities. The four levels of courts are the Supreme Court, the Court of Appeals, the Superior Court, and the District Court. The Supreme Court and the Superior Court were established in the Alaska Constitution. The District Court was established by state statute in 1959. The Court of Appeals was established by state statute in 1980. Jurisdiction and other areas of the judicial responsibility for each level of court are set out in Title 22 of the Alaska Statutes.

The Alaska Court System budget is presented in three appropriation requests - the Alaska Court System, the Commission on Judicial Conduct, and the Judicial Council.

SIGNIFICANT ISSUES

The FY2010 Alaska Court System GF operating budget as submitted by the Alaska Court System is $5,141.3 above the FY09 Revised Management Plan (which excludes fuel/utility & gasline one-time funding). The net GF change from Adjusted Base is $2,710.6.

The following notes correspond to the numbers in the last column of the preceding spreadsheet:

1. **Improve Public Service: $3,202.0 GF.** The Court System has been experiencing difficulty in recruiting and retaining qualified staff to manage the department's increased caseloads throughout the state. The agency has addressed this problem by adding twenty-five full-time positions to the FY2010 request. Increments for these purposes include:

   - **$2,085.0 GF:** Adding judicial, clerical, and administrative support positions where appropriate in communities with the largest need and expanding some positions from part-time to full-time;
   - **$474.0 GF:** Increasing salaries for Magistrates and Pro Tem Judges and Justices in an effort to maintain parity with employees in the classified and partially exempt state service;
   - **$639.4 GF:** Eliminating vacancy factors that currently exacerbate the number of backlogged caseloads by forcing delays in filling judgeships; and
   - **$3.6 GF:** Reducing personal services underfunding in the office of Judicial Conduct.

2. **Operating Expenses: $2,045.1 GF.** Operating costs are increasing for the Court System in the areas of lease costs, building maintenance, utilities, service contracts, office supplies and equipment, information technology and travel. Increments for these purposes include:

   - **$725.0 GF:** Utilities and service contracts to keep up with the rising cost of fuel and building service contractors (snow removal, janitorial and security services);

- **$492.8 GF:** Update operating systems and replace outdated equipment in addition to the purchase and maintenance of critical software licenses;
- **$297.5 GF:** Office and library products including paper, toner and other consumable supplies;
- **$268.3 GF:** Public Building Fund increases in Palmer and Juneau as well as increased lease costs for the other 22 facilities leased through private landlords;
- **$236.5 GF:** Increased travel costs, largely due to an 8.1% rise in domestic airfares from the second quarter of 2007; and
- **$25.0 GF:** Replacement of aging workstations and furniture.

3. **Judicial Retirement System Savings: $3,529.9 GF Reduction.** During the last session, the legislature appropriated $49 million to pay off the unfunded liability of the Judicial Retirement System (JRS). This reduction of debt enabled the Alaska Retirement Management (ARM) Board to reduce the contribution rate from 57.7% to 26.2%. This rate is expected to be stable for the foreseeable future; individual benefit costs under the Judicial Retirement System are more than twice the cost of individual benefit costs under the Public Employees Retirement System.

4. **Transcript Costs for Criminal Proceedings: $125.0 GF.** With an increase in criminal caseloads, the demand for transcripts has dramatically increased. Coupled with this increased demand, fewer contractors are willing to accept work from the court because the payment rates are below market standards. The Court System is currently paying a per page rate of $2.65 - $3.05, while federal courts are paying a per page rate of $3.65 - $4.85.

5. **Judicial Selection: $63.6 GF.** This increment will assist the Commission on Judicial Conduct in meeting its workload requirements in the judicial application and selection processes.

6. **Juror Mileage Reimbursement: $35.0 GF.** By court rule, jurors must reside in excess of 30 miles away from the court to be entitled to receive mileage reimbursement. The Court System is seeking a rule change to permit mileage expenses to be reimbursed after the juror has driven more than 60 miles to perform their service as a juror. This change is particularly important for jurors serving multiple days in rural locations.

7. **Mental Health Programs: $510.3 MHTAAR and $747.1 GF/MH.** FY2010 will be the second year of zero-base budgeting for Mental Health Trust Authority Authorized Receipts (MHTAAR) – meaning that all MHTAAR funding in state agencies is removed from the adjusted base and reconsidered by the Mental Health Trust Authority each fiscal year.

   For FY2010, The Mental Health Trust is recommending $510.3 ($477.5 less than FY09 Authorized) in MHTAAR funding for the MH Trust Disability Justice Initiative. The majority of the funding is for:

   - preventative treatment for youth intended to avoid future costs of more expensive treatment services associated with the adult correctional and judicial systems; and

- developing court ordered treatment plans that address clients treatment needs and are monitored by the court, thus reducing risk of future contacts with the criminal justice system.

The proposed reductions in MHTAAR authorization would be offset by a $747.1 increase in GF/MH funding for additional Disability Justice Initiative programs. Replacement of $647.7 MHTAAR authorization with GF/MH will ensure continued access to treatment services for existing and new therapeutic courts. The remainder of the GF/MH increase will replace FY2009 MHTAAR authorization for the Anchorage Mental Health Court ($99.4).

ORGANIZATIONAL CHANGES

There are no significant changes requested.

CAPITAL REQUEST

Anchorage Campus Project – Phase II: $2.5 Million GF. The Court System's sole capital project included in the Governor's request is a major remodel to all floors of the Boney Courthouse and a minor remodel in the Nesbett Courthouse to accommodate additional judges, provide safe prisoner transport to additional courtrooms in the Boney Courthouse, and provide spaces that are more conducive to efficient customer service.

Alaska Legislature

The Alaska State Legislature sets policy through the adoption of laws and has the power of appropriation as provided in the Alaska Constitution and in state statute. The legislature includes the following appropriations and allocations:

- Legislative Budget and Audit Committee
  - Legislative Audit
  - Legislative Finance
  - Committee Expenses
  - Legislature State Facilities Rent
- Legislative Council
  - Legislative Salaries and Allowances
  - Administrative Services
  - Session Expenses
  - Council and Subcommittees
  - Legal and Research Services
  - Select Committee on Ethics
  - Office of Victims Rights
  - Office of the Ombudsman
- Legislative Operating Budget

SIGNIFICANT ISSUES

The budget submitted to the Governor is traditionally a preliminary draft that has not been formally reviewed by legislative leadership. The FY2010 submittal is essentially identical to the FY09 budget, with the exception of salary adjustments and the following:

1. An increment of $500.0 general funds for potential cost increases during interims.

2. Two one-time appropriations that were carried forward into the FY2010 budget—$100.0 for the Legislative Outdoor Heritage Caucus and $192.5 for a Council of State Governments meeting – lapse at the end of FY09. In keeping with a legislative policy decision (made last session) to minimize carryforward, the legislature may wish to delete these FY09 one-items from the FY2010 budget.

3. A fund change that replaces $178.7 of general funds with PFD Criminal funds.

Legislative Fiscal Analyst Comment: *The amount of PFD Criminal funds available varies with the amount of the Permanent Fund dividend and the number of felons incarcerated. Recent investment losses are likely to reduce PFDs in the future, with a corresponding decrease in PFD Criminal funds available. The likely result is future requests to replace PFD Criminal funds with general funds.*

There are no capital projects or organizational changes requested.

Notes:

January 15, 2009

(1) The Fall 2008 revenue forecast for FY09 is 0.701 mmbd at $77.66 per barrel; the FY2010 forecast is 0.676 mmbd at $74.41/bbl.

(2) Carryforward is money that was appropriated in a prior year that is made available for spending in FY09 via multiyear appropriations or reappropriations.

(3) Corporate dividends include funds made available to the State by the boards of AHFC, AIDEA, and ASLC. Dividends retained by AHFC for debt service on state capital project bonds are excluded from the stated amount. Net dividends for FY09 and FY2010, respec

(4) Duplicated authorizations are in the budget twice, such as when funds flow in and out of a holding account or one agency pays another for services provided. Duplicated authorization also includes the expenditure of bond proceeds when debt service on bonds

(5) The state is responsible for future debt service payments on airport revenue bonds and GO bonds. Bond proceeds are included on line 36 and 37 and are deducted on line 40.

2 * **Sec. 33.** CONSTITUTIONAL BUDGET RESERVE FUND. (a) The sum of
3 $2,600,000,000 is appropriated from the general fund to the constitutional budget reserve fund
4 (art. IX, sec. 17, Constitution of the State of Alaska) for repayment of amounts owed the
5 constitutional budget reserve fund.
6 (b) It is the intent of the legislature that the Department of Revenue invest the assets
7 of the constitutional budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska)
8 in a manner maximizing the long-term earnings of the fund while meeting the minimum
9 liquidity requirements of the state.
10 * **Sec. 34.** LAPSE. (a) The appropriations made by secs. 10, 13, 19(h), 22(b), 22(c), 26(b),
11 and 26(c) of this Act are for capital projects and lapse under AS 37.25.020.
12 (b) The appropriations made by sec. 21 of this Act are for the capitalization of funds
13 and do not lapse.
14 * **Sec. 35.** CONTINGENCY. (a) The appropriation made in sec. 21(d) of this Act is
15 contingent on passage by the Twenty-Fifth Alaska State Legislature and enactment into law of
16 a measure creating the community revenue sharing fund.
17 (b) The appropriations made in sec. 32 of this Act are contingent on passage by the
18 Twenty-Fifth Alaska State Legislature and enactment into law of a version of SB 125.
19 * **Sec. 36.** Sections 1, 16 - 20, 21(a), 21(b), 21(d), and 34 of this Act take effect March 10,
20 2008.
21 * **Sec. 37.** Section 21(c) of this Act takes effect June 30, 2008.
22 * **Sec. 38.** Except as provided in secs. 36 and 37 of this Act, this Act takes effect April 13,
23 2008.

Alaska Statutes
AS 37.10.430

Sec. 37.10.430. Management of the budget reserve fund.

(a) The Department of Revenue may transfer management responsibility over all or a portion of the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska) to the Alaska Permanent Fund Corporation.

(b) By March 15 of each year, the Department of Revenue shall, after consulting with the Alaska Permanent Fund Corporation, prepare a report setting out the balance in the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska) on January 1 and on December 31 of the previous calendar year. The report shall state the nominal, real, and realized return on the budget reserve fund compared to the nominal, real, and realized return on the permanent fund and the general fund during the previous calendar year.

(c) A special subaccount is established in the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska). Money in the subaccount shall be invested to yield higher returns than might be feasible to obtain with other money in the budget reserve fund. In establishing or modifying the investment policy for the subaccount in the constitutional budget reserve fund, the commissioner of revenue shall assume that those funds will not be needed for at least five years. Income earned on money in the subaccount shall be retained in the subaccount by the department.

ALASKA DEPARTMENT OF TRANSPORTATION & PUBLIC FACILITIES

SOUTHEAST REGION

DESIGN & CONSTRUCTION PROJECTS 2009 – 2010

February 18, 2009

ANGOON

AVIATION

Angoon Airport
Estimated Bid Date: Beyond 2010
Estimated Construction Cost: $25,000,000
Funding: FAA
Scope: Construct new airport and airport access road.

MARINE

Angoon-Ferry Terminal Improvements
Estimated Bid Date: Fall 2009
Estimated Construction Cost: $8,000,000
Funding: FHWA
Scope: Reconstruct to accommodate Fast Vehicle Ferry and Leconte class ferry.

ELFIN COVE & PELICAN

FACILITIES

Elfin Cove & Pelican Boardwalks
Estimated Bid Date: March 2009
Estimated Construction Cost: $500,000
Funding: Denali Commission
Scope: Repair, refurbish/reconstruct community boardwalk using Denali funds.

GUSTAVUS

AVIATION

Gustavus-Airport RSA
Estimated Bid Date: Spring 2010
Estimated Construction Cost: $5,000,000
Funding: FAA
Scope: Expand Runway Safety Area.

MARINE

Gustavus-Dock Replacement

Estimated Bid Date: February 2009
Estimated Construction Cost: $21,000,000
Funding: FHWA (bridge rehab) & NPS; Economic Stimulus project.
Scope: Replace the aging Gustavus dock and approach trestle.

Gustavus-Small Boat Float

Estimated Bid Date: Spring 2010
Estimated Construction Cost: $1,200,000
Funding: Denali Commission
Scope: Replace existing mooring floats with heavy duty mooring float that will also serve as a breakwater.

HAINES

HIGHWAY

Haines-Ferry Terminal to Front Street

Contractor: SECON
Award Date: July 7, 2008
Award Amount: $15,409,330
Funding: FHWA
Contract Completion Date: June 30, 2010
Percent Complete: 20%
Scope: Reconstruct Lutak Road from the ferry terminal to downtown. Surveying, clearing and grubbing, and earthwork have been suspended for winter.

Haines-Storm Damage Repair

Contractor: Southeast Road Builders
Award Date: August 5, 2008
Award Amount: $1,775,455
Funding: FHWA (maintenance rehab)
Contract Completion Date: August 30, 2009
Percent Complete: 20%
Scope/Status: Replace culverts and repair roads that were damaged by flooding in 2005. Culvert work is suspended for winter.

Haines-Highway, Front Street to Union Street
Estimated Bid Date: May 2009
Estimated Construction Cost: $3,000,000
Funding: FHWA (Economic Stimulus)
Scope: Reconstruction.

Haines-Highway MP 3.5 to 25.3 / Airport to Bluffs
Estimated Bid Date: Beyond 2010
Estimated Construction Cost: $42,500,000
Funding: No construction funding identified at this time.
Scope: Realign and widen highway to meet 55 mph design speed and replace Chilkat River Bridge.

MARINE

Haines-Terminal Improvements
Estimated Bid Date: Spring 2010
Estimated Construction Cost: $4,500,000
Funding: FHWA
Scope: Replace the failing dock face at the ferry terminal and construct a new stern berth.

HOMER

FACILITIES

Homer-AMHS Warehouse
Estimated Bid Date: September 2009
Estimated Construction Cost: $400,000
Funding: FHWA
Scope: Construct a warehouse for the storage of AMHS supplies.

HOONAH

HIGHWAY

Hoonah-Airport Road Paving, Ferry Terminal to Airport
Estimated Bid Date: June 2009
Estimated Construction Cost: $3,000,000
Funding: FHWA (Economic Stimulus)
Scope: Grind and repave from Ferry Terminal to Airport.

AVIATION

Hoonah-Airport Runway Extension

Estimated Bid Date: Spring 2010
Estimated Construction Cost: $3,000,000
Funding: FAA
Scope: Extend the runway safety area.

MARINE

Hoonah-Ferry Terminal

Estimated Bid Date: July 2009
Estimated Construction Cost: $3,500,000
Funding: FHWA & FTA (Earmark)
Scope: Reconstruct Ferry Terminal building, parking lot, and staging.

Hoonah-Ferry Terminal (Marine)

Estimated Bid Date: July 2009
Estimated Construction Cost: $3,500,000
Funding: FHWA (Economic Stimulus)
Scope: Reconstruct moorings and transfer bridge.

HYDER

HIGHWAY

Hyder-Salmon River Road

Estimated Bid Date: August 2009
Estimated Construction Cost: $6,000,000
Funding: FHWA ($3,400,000) & U.S. Forest Highway Program. Forest Highway Program funding uncertain; project scope may be reduced to match available funding.
Scope: Reconstruct the Salmon River Road from downtown to the Fish Creek wildlife observation site.

Hyder-Causeway Reconstruction

Estimated Bid Date: August 2009
Estimated Construction Cost: $8,000,000
Funding: FHWA (bridge rehab)
Scope: Replace the existing trestle at the Hyder waterfront.

MARINE

Hyder-Harbor Float Rehabilitation

Estimated Bid Date: March 2009
Estimated Construction Cost: $600,000
Funding: State General Fund
Scope: Rehabilitate and replace floats in the Inner Harbor.

JUNEAU

HIGHWAY

Juneau-Whittier & Willoughby Intersection Improvements

Contractor: Chatham Electric
Award Date: May 27, 2008
Award Amount: $986,546
Funding: FHWA
Contract Completion Date: June 15, 2009
Percent Complete: 0%
Scope/Status: Install a 4-way traffic signal at Egan/Whittier Street. Also, add a traffic island to Willoughby/Egan to prohibit left turns from Willoughby on to Egan. Site work will begin March 2009.

Juneau-Areawide Paving

Contractor: SECON
Award Date: July 21, 2008
Award Amount: $688,850
Funding: FHWA
Contract Completion Date: June 30, 2009
Percent Complete: 5%
Scope/Status: Conduct pavement repairs at four locations in Juneau area. Work will begin May 2009.

Juneau-Glacier Highway, Amalga Harbor to Eagle Beach

Estimated Bid Date: March 2009
Estimated Construction Cost: $12,200,000
Funding: FHWA (Economic Stimulus)
Scope: Reconstruct and widen Highway.

Juneau-Areawide Signal Upgrade
Estimated Bid Date: May 2009
Estimated Construction Cost: $500,000
Funding: FHWA
Scope: Upgrade controls and detection equipment at five valley intersections.

Juneau-Egan/Glacier Resurfacing, Loop Road to Ferry Terminal
Estimated Bid Date: May 2009
Estimated Construction Cost: $3,500,000
Funding: FHWA (Economic Stimulus)
Scope: Grind and repave.

Juneau-Stephen Richards Intersection
Estimated Bid Date: Spring 2010
Estimated Construction Cost: $700,000
Funding: FHWA (HSIP)
Scope: Reconfigure turn lanes.

Juneau-Jordan Cr. Br. Replacement & Basin Rd. Trestle Rehab.
Estimated Bid Date: Spring 2010
Estimated Construction Cost: $1,500,000
Funding: FHWA (Bridge)
Scope: Repair Basin Road Trestle and replace Jordan Creek Bridge on Trout Street.

Juneau-Glacier Highway Eagle Beach to Bessie Creek
Estimated Bid Date: Beyond 2010
Estimated Construction Cost: $13,000,000
Funding: No construction funding identified at this time.
Scope: Reconstruct and widen highway.

Juneau-Brotherhood Bridge Widening
Estimated Bid Date: Beyond 2010
Estimated Construction Cost: $10,000,000
Funding: No construction funding identified at this time.
Scope: Widen Brotherhood Bridge to 4 lanes and modify approaches.

Juneau-Salmon Creek Intersection Improvements

Estimated Bid Date: Beyond 2010
Estimated Construction Cost: $15,000,000
Funding: No construction funding identified at this time.
Scope: Construct a grade separated intersection on Egan Drive at the Salmon Creek Intersection.

MARINE

Juneau-Auke Bay West Terminal Modifications

Estimated Bid Date: Beyond 2010
Estimated Construction Cost: $15,000,000
Funding: No construction funding identified at this time.
Scope: Construct multiple stern berths to support overnight moorage and hub and spoke day boat service.

FACILITIES

Juneau-Auke Bay Ferry Terminal FVF Building & Embankment

Contractor: Miller Construction
Award Date: February 25, 2008
Award Amount: $2,781,438
Funding: FHWA
Contract Completion Date: April 30, 2009
Percent Complete: 90%
Scope/Status: Expand parking area to the east of the existing area and add a 4,010 S.F. Support Building (Shop). Building exterior is completed, interior work nearing substantial completion.

Juneau-Library, Archive, and Museum Facility

Estimated Bid Date: Beyond 2010
Estimated Construction Cost: $15,000,000
Funding: No construction funding identified at this time.
Scope: Construct library, archive and museum facility in Juneau.

KAKE

HIGHWAY

Kake to Petersburg Road & Shuttle Ferry Terminals (State)
Estimated Bid Date: Beyond 2010
Estimated Construction Cost: $120,000,000
Funding: No construction funding identified at this time.
Scope: Construct two lane paved road from Kake to Petersburg with shuttle ferry terminals on either side of Wrangell Narrows.

KETCHIKAN

HIGHWAY

Ketchikan-Third Avenue Drainage Improvements (Tremont Street)
Estimated Bid Date: February 2009
Estimated Construction Cost: $500,000
Funding: FHWA
Scope: Improve surface drainage below Third Avenue, down Tremont St.

Ketchikan-Hoadly Creek Bridge
Estimated Bid Date: February 2009
Estimated Construction Cost: $50,000
Funding: FHWA (bridge rehab)
Scope: Repair the north bridge abutment to prevent further scour.

Ketchikan-North Tongass Highway Safety Improvements
Estimated Bid Date: March 2009
Estimated Construction Cost: $2,000,000
Funding: FHWA (HSIP)
Scope: Realignment of the curve between Collins Road and Gena Road to a wider radius, widen shoulders and improve sight distance.

Ketchikan-South Tongass Highway Guardrail Replacement
Estimated Bid Date: March 2009
Estimated Construction Cost: $2,000,000
Funding: FHWA (HSIP)
Scope: Installation of new guardrail and end treatments between MP 10.5 and 15.5.

Ketchikan-Tongass Avenue Viaduct Rehabilitation, Stage II

Estimated Bid Date: Fall 2009
Estimated Construction Cost: $7,200,000
Funding: FHWA (Economic Stimulus)
Scope: Increase the life of the structure by installing cathodic protection.

Ketchikan-North Tongass, Ward Cove to Refuge Cove

Estimated Bid Date: Spring 2010
Estimated Construction Cost: $8,500,000
Funding: State GO Bond
Scope: Rehabilitate pavement and improve drainage.

Ketchikan-Water Street Sidewalk Improvements

Estimated Bid Date: Spring 2010
Estimated Construction Cost: $2,500,000
Funding: No construction funding identified at this time.
Scope: Sidewalk improvements on Tongass Avenue in the vicinity of new City of Ketchikan Berth 4. Project funding dependent on Earmark language change to allow use for work desired by City.

Ketchikan to Shelter Cove Road

Estimated Bid Date: Spring 2010
Estimated Construction Cost: $14,000,000
Funding: $10,000,000 available in GO Bond; remainder not identified.
Scope: Construct 5.5 miles of new road (single lane with turnouts) and rehabilitate 4.5 miles of existing road from end of Harriet Hunt Road to Shelter Cove on Carroll Inlet.

Ketchikan-Airport Creek Bridge

Estimated Bid Date: Summer 2010
Estimated Construction Cost: $1,000,000
Funding: FHWA & USFS
Scope/Status: Construct bridge on Lewis Reef Road across Airport Creek under agreement with the US Forest Service.

Ketchikan-South Tongass, Saxman to Surf St. Pavement Rehab.

Estimated Bid Date: Beyond 2010
Estimated Construction Cost: $6,800,000
Funding: No construction funding identified at this time.
Scope: Reconstruct and widen highway.

Ketchikan-Viaducts Replacement
Estimated Bid Date: Beyond 2010
Estimated Construction Cost: $12,000,000
Funding: No construction funding identified at this time.
Scope: Replace sections of the viaduct with fill.

Ketchikan-North Tongass, D-1 to Whipple Creek
Estimated Bid Date: Beyond 2010
Estimated Construction Cost: $13,800,000
Funding: No construction funding identified at this time. (Potential Economic Stimulus project).
Scope: Widen and reconstruct North Tongass Highway.

AVIATION

Ketchikan-Airport SRE Building
Contractor: McGraw Custom Construction
Award Date: September 4, 2007
Award Amount: $4,289,000
Funding: FAA
Contract Completion Date: April 15, 2009
Percent Complete: 80%
Status: Airport Maintenance has moved in to the first half of the building. Second half of building is framed up and walled in.

MARINE

Ketchikan-Airport Ferry M/V Bob Ellis Replacement
Estimated Bid Date: Bids opened on January 8, 2009
Estimated Construction Cost: $9,670,000 ($12,200,000 if federalized)
Funding: State General Fund
Scope/Status: Construct replacement airport ferry similar to the M/V Oral Freeman. Bids exceed the available funding. Investigating possible alternate funding sources.

Ketchikan-Layup Berth
Estimated Bid Date: Fall 2010
Estimated Construction Cost: $20,000,000
Funding: $4,500,000 State General Fund available at this time; remainder not identified.
Scope: Construct floating dock, bridges, and mooring structures for lay-up of AMHS vessels.

Ketchikan-AMHS HQ Building
Estimated Bid Date: Beyond 2010
Estimated Construction Cost: $6,000,000
Funding: $1,500,000 FTA available at this time; remainder not identified.
Scope: Acquire or construct permanent AMHS HQ building in Ketchikan.

Ketchikan-South Tongass Ferry Terminal
Estimated Bid Date: Beyond 2010
Estimated Construction Cost: $12,000,000
Funding: No construction funding identified at this time.
Scope: Construct marine terminal to serve the Ketchikan/Annette day boat.

KODIAK

MARINE
Kodiak-Ferry Terminal
Estimated Bid Date: Spring 2011
Estimated Construction Cost: $20,000,000
Funding: No construction funding identified at this time.
Scope: New ferry terminal location, including uplands, building and marine structures.

METLAKATLA

MARINE
Metlakatla-Walden Pt. Ferry Terminal
Estimated Bid Date: June 2009
Estimated Construction Cost: $7,000,000
Funding: FTA
Scope: Construct a ferry terminal in Annette Bay at the end of the Army Corps of Engineers' Walden Point Road.

PETERSBURG

HIGHWAY
Petersburg-Mitkof Highway Rehabilitation
Estimated Bid Date: May 2009
Estimated Construction Cost: $6,000,000
Funding: State GO Bond
Scope: Rehabilitate pavement and improve drainage.

Petersburg-Mitkof Highway Fish Culverts
Estimated Bid Date: May 2009
Estimated Construction Cost: $400,000
Funding: USFS
Scope: Replace culverts at MP 25.4 and MP 28.0 to facilitate fish passage.

Petersburg-Road Improvements
Estimated Bid Date: Spring 2010
Estimated Construction Cost: $3,000,000
Funding: FHWA (earmark)
Scope: Street improvements.

AVIATION

Petersburg-Airport Runway Safety Area Expansion, Phase I
Contractor: Kiewit
Award Date: July 11, 2008
Award Amount: $19,775,000
Funding: FAA
Contract Completion Date: October 31, 2009
Percent Complete: 60%
Scope/Status: Widen the Runway Safety Area, with major culvert replacement. RSA widening is mostly complete. Replacement of culverts will occur during scheduled runway closure (March 23 to April 21, 2009).

Petersburg-Airport RSA, Phase II
Estimated Bid Date: June 2009
Estimated Construction Cost: $28,000,000
Funding: FAA
Scope: Lengthen Runway Safety Area, pave, and relocate threshold.

FACILITIES

Petersburg-Falls Creek Fish Ladder
Estimated Bid Date: February 2009
Estimated Construction Cost: $140,000
Funding: FAA
Scope/Status: Reconstruct the fish ladder at Falls Creek as part of Petersburg Airport Environmental Mitigation.

PORT ALEXANDER

FACILITIES

Port Alexander Boardwalk

Estimated Bid Date: March 2009
Estimated Construction Cost: $400,000
Funding: Denali Commission
Scope: Repair, refurbish/reconstruct community boardwalk using Denali funds.

PRINCE OF WALES ISLAND

HIGHWAY

Coffman Cove Streets Paving

Estimated Bid Date: May 2009
Estimated Construction Cost: $1,200,000
Funding: FHWA & Denali Commission
Scope/Status: Pave selected City Streets.

Craig to Klawock Paving

Estimated Bid Date: May 2009
Estimated Construction Cost: $4,000,000
Funding: State GO Bond
Scope: Pavement rehabilitation.

Thorne Bay Bridges Painting

Estimated Bid Date: September 2009
Estimated Construction Cost: $2,000,000
Funding: FHWA (bridge rehab)
Scope: Paint superstructures on Rio Roberts, Rio Beaver and Thorne River Bridges.

Klawock to Hollis Pavement Rehabilitation

Estimated Bid Date: Beyond 2010
Estimated Construction Cost: $20,600,000
Funding: No construction funding identified at this time.
Scope: Rehabilitate pavement from Klawock to Hollis and replace culverts.

SE REGION-WIDE

MARINE

Ferry Dock Hoist Controls Upgrade (Wrangell, Valdez, Haines, & Whittier)
Contractor: Boreal Controls
Award Date: March 4, 2008
Award Amount: $353,052
Funding: FHWA
Contract Completion Date: April 30, 2009
Percent Complete: 80%
Status: Valdez, Whittier and Wrangell completed. Haines underway now.

SITKA

HIGHWAY

Sitka-Indian River Road
Contractor: McGraw Custom Construction
Award Date: January 7, 2009
Award Amount: $1,852,511
Funding: FHWA (earmark) & City
Contract Completion Date: July 31, 2009
Percent Complete: 0%
Scope/Status: Widen, add pedestrian path or sidewalk, and pave Indian River Road and adjacent streets. Work to begin in April.

Sitka-HPR/SCR Roundabout
Estimated Bid Date: February 2009
Estimated Construction Cost: $1,980,000
Funding: FHWA (Economic Stimulus)
Scope: Construct a Roundabout to replace the existing 4-way stop intersection.

Sitka-Japonski Island Roads
Estimated Bid Date: Fall 2009
Estimated Construction Cost: $2,000,000
Funding: FHWA & City (Economic Stimulus)
Scope: Improve CBS utilities and reconstruct streets accessing MEHS.

Sitka-Sawmill Creek Road, Phase III
Estimated Bid Date: Spring 2010
Estimated Construction Cost: $10,200,000
Funding: State GO bond
Scope: Widen and reconstruct roadway.

AVIATION

Sitka-Airport Slotted Drain
Contractor: TM Construction
Award Date: Pending
Award Amount: Pending, bids have been opened
Funding: State General Fund
Contract Completion Date: July 31, 2009
Percent Complete: 0%
Scope: Improve apron drainage by installing a slotted drain. Work to begin in May.

Sitka-Airport RSA, Phase I
Estimated Bid Date: Spring 2010
Estimated Construction Cost: $27,000,000
Funding: FAA
Scope: Expand Runway Safety Area.

SKAGWAY

HIGHWAY

Skagway-Dyea Road Safety Improvements
Estimated Bid Date: Spring 2010
Estimated Construction Cost: $3,000,000
Funding: FHWA
Scope: Widen and straighten sections of the road to improve sight distance.

Skagway-Captain William Moore Bridge Replacement
Estimated Bid Date: Spring 2010
Estimated Construction Cost: $22,000,000
Funding: FHWA (Bridge)
Scope: Replace Captain William Moore Creek Bridge and approaches.

TENAKEE

MARINE

Tenakee-Harbor Float Rehab
Estimated Bid Date: March 2009
Estimated Construction Cost: $1,000,000
Funding: State General Fund
Scope: Rehab and replace a portion of the floats at the small boat harbor.

WRANGELL

HIGHWAY

Wrangell-Road Improvements
Estimated Bid Date: Spring 2010
Estimated Construction Cost: $3,000,000
Funding: FHWA (earmark)
Scope/Status: Reconstruct Front Street.

YAKUTAT

HIGHWAY

Yakutat-Areawide Paving
Estimated Bid Date: May 2009
Estimated Construction Cost: $3,800,000
Funding: FHWA (Economic Stimulus project)
Scope: Pave Airport Road and several local streets.

ALASKA DEPARTMENT OF TRANSPORTATION & PUBLIC FACILITIES

CENTRAL REGION

DESIGN & CONSTRUCTION PROJECTS 2009 – 2010

February 18, 2009

AKHIOK

AIRPORT

AKHIOK AIRPORT RECONSTRUCTION
Estimated Bid Date: Summer 2010
Estimated Construction Cost: $4,900.0 (06)
Fund Source: FAA
Scope: Widen and extend runway, construct new taxiway, apron, SRE building, resurface airport access road, and install runway and taxiway edge lighting.
Status: Final design underway.

AKIACHAK

AIRPORT

AKIACHAK AIRPORT RELOCATION
Estimated Bid Date: Spring 2010
Estimated Construction Cost: $21,000.0 (08)
Fund Source: FAA
Scope: Relocate and construct a new runway, apron, taxiway and airport access road, construct a 2 new single bay snow removal equipment buildings, and install fencing and airport lighting.
Status: Final design and ROW appraisal and acquisitions underway.

HIGHWAY

AKIACHAK SANITATION RD RECONSTRUCTION (VSW)
Contractor: n/a Force Account
Award Date: n/a
Award Amount: $3,200.0
Fund Source: FHWA
Contract Completion Date:
Scope & Status: Reconstruction of road to eastern portion of the village is underway with completion scheduled for the fall of 2009.

AKUTAN

AIRPORT/HIGHWAY

AKUTAN AIRPORT
AKUTAN ACCESS ROAD
Estimated Bid Date: Spring 2009
Estimated Construction Cost: see below
Fund Source: FHWA, FAA, Bond, GF, and TBD
Scope: Design/Build contract to construct a new airport on Akun Island to serve the community of Akutan. Approximately $44 million currently available through federal highway, aviation, state and local bond funds.
Status: Design/Build RFP complete, pending funding.

Year 1 Design/Build $44,000.0
Year 1 Desgin/Build $26,000.0

AMATS

HIGHWAY

ABBOTT RD REHAB - LAKE OTIS TO BIRCH

Estimated Bid Date: N/A
Estimated Construction Cost: $N/A
Fund Source: FHWA
Scope: Improvements are not specific at this time, could range from an improved 2-lane to 4-lane roadway depending on long-term traffic need, includes intersection and pedestrian imp.
Status: Project to be closed. Future project to be identified after Elmore Road traffic impact analysis completed.

BONIFACE PARKWAY / 48TH AVENUE EXTENSION

Contractor: AIC
Award Date: September 2008
Award Amount: $24,200.0
Fund Source: General Fund
Contract Completion Date: July 2010
Scope & Status: Contract to construct new major arterial to connect Tudor/Boniface Intersection with 48th Ave/Elmore Road Intersection is being managed by the Municipality of Anchorage through a Memorandum of Agreement. Work began in fall 2008 with utility relocations, and excavation of muck material and backfill.

CHESTER CR TRAIL CONNECTION & UAA SPUR TRAIL

Estimated Bid Date: Spring 2009
Estimated Construction Cost: $3,400.0 (08)
Fund Source: FHWA
Scope: Construct multi-use trail connection to existing Chester Cr Trail that parallels Northern Lights Blvd, and construct a trail spur to connect UAA student housing to main campus.
Status: Final design and ROW nearing completion.

EAST DOWLING RD EXTENSION & RECONSTRUCTION

Contractor: QAP
Award Date: August 2008
Award Amount: $9,586.9
Fund Source: General Fund
Contract Completion Date: August 2009
Scope & Status: Project to widen and reconstruct East Dowling Road as a 4 lane roadway from Lake Otis to Norm Drive and extend road to newly constructed Elmore Road began in fall of 2008 with clearing and grubbing, and placement of surcharges.

FIREWEED LANE: SEWARD HWY TO SPENARD RD

Estimated Bid Date: TBD
Estimated Construction Cost: $TBD
Fund Source: FHWA
Scope: Convert existing 4-lane facility into a 3-lane facility with a continuous left turn lane. Project development by Municipality, may be re-scoped.
Status: Project on hold.

GLENN HWY TRAIL REHAB: MULDOON TO N. BIRCHWOOD

Estimated Bid Date: Winter 2010/2011
Estimated Construction Cost: $2,700.0 (07)
Fund Source: FHWA
Scope: Resurface the existing Glenn Hwy trail, construct a memorial at MP 8.6, and pave existing parking area at westbound weigh station.
Status: Final design underway.

HUFFMAN RD REHAB- OLD SEWARD HWY TO LAKE OTIS PKWY

Estimated Bid Date: Winter 2009/2010
Estimated Construction Cost: $12,600.0 (07)
Fund Source: FHWA
Scope: Reconstruct and widen to four- lane with a two- way center left turn lane, and roundabouts at Brandon Street and the New Seward Highway Ramps. Project will also provide missing links in pedestrian facilities.
Status: Final design underway.

MULDOON RD PEDESTRIAN & LANDSCAPING, PHASE III

Estimated Bid Date: Spring 2010
Estimated Construction Cost: $5,500.0 (07)
Fund Source: FHWA
Scope: Install pathways, pedestrian amenities, and landscaping from Fred Meyer to Boundary Ave.
Status: Final design underway, ROW acquisitions in 2009.

OLD SEWARD HWY, BRANDON TO O'MALLEY RECONST

Contractor: QAP
Award Date: December 2008
Award Amount: $16,750.0
Fund Source: FHWA
Contract Completion Date: Oct 2010
Scope & Status: Construction to begin in spring 2009 for widening of the existing road to accommodate two lanes of northbound and southbound traffic, and construction of a center two-way left-turn lane. The project also includes lighting, pedestrian improvements, and a roundabout intersection at Huffman Road.

O'MALLEY RD RECON: NEW SEWARD HWY TO HILLSIDE

Estimated Bid Date: Spring 2011
Estimated Construction Cost: $22,000.0 (07)
Fund Source: FHWA
Scope: Reconstruct roadway to improve safety and capacity, includes pedestrian facilities. Likely to be built in phases.
Status: Final design underway.

SPENARD RD RECONST, MINNESOTA DR TO MINNESOTA ON-RAMP

Estimated Bid Date: Spring 2013
Estimated Construction Cost: $14,700.0 (06)
Fund Source: FHWA & Muni Bonds
Scope: Rehabilitate roadway, includes pedestrian facilities. Municipality has proposed constructing the segment between Benson Blvd and Minnesota on-ramp with bond funds in 2009.

Status: Final design underway.

TUDOR / BRAGAW INTERSECTION IMP

Contractor: Granite Construction Co.
Award Date: September 2008
Award Amount: $4,084.5
Fund Source: General Fund
Contract Completion Date: July 2009
Scope & Status: Contractor completed work required for first interim completion date – construction of dual left turns off Tudor Road on to Elmore Road. Final lift paving, signing, striping, and signalization improvements to be completed in 2009 season.

TUDOR ROAD/LAKE OTIS PARKWAY INTX IMP

Estimated Bid Date: Spring 2009
Estimated Construction Cost: $9,000.0 (08)
Fund Source: FHWA Earmark
Scope: Construct intersection improvements for congestion relief.
Status: Final design by Municipal forces nearing completion.

TOILSOME HILL AND CANYON ROAD IMP

Estimated Bid Date: TBD
Estimated Construction Cost: $TBD
Fund Source: General Fund
Scope: Reconnaissance study for improvements on Toilsome Hill and Canyon Road, access routes to Chugach State Park. Work is being accomplished by the Municipality of Anchorage through a Memorandum of Agreement.
Status: Recon study underway, completion 2010.

VICTOR RD, DIMOND BLVD. TO 100TH AVE

Estimated Bid Date: Spring 2010
Estimated Construction Cost: $13,500.0 (08)
Fund Source: FHWA & GO Bond
Scope: Upgrade roadway to minor arterial standards with pedestrian facilities. Funding recently approved in the GO Bond package.
Status: Final design and ROW acquisitions underway.

W.DOWLING RD PH I, OLD SEWARD HWY TO C ST

Estimated Bid Date: Winter 2010/2011
Estimated Construction Cost: $26,800.0 (07)
Fund Source: General Fund
Scope: Widen to 5 lanes and extend W. Dowling Rd. from Old Seward Hwy to C St. Replace Cambell Creek Bridge, install a new traffic signal at C Street, re-align the Cambell Creek Trail to go under the new bridge.
Status: Environmental document approved, final Design underway.

W.DOWLING RD PH II, EXT C ST TO MINNESOTA DR

Estimated Bid Date: Spring 2011
Estimated Construction Cost: see below
Fund Source: General Fund
Scope: Extend W. Dowling Rd 5 lanes wide from C Street to Minnesota Drive. Includes a new bridge over the ARR lines and Arctic Avenue, new traffic signals and separated trails along both sides.
Status: Environmental document approved, final design just underway in 2009.

Year 1 Design $2,500.0
Year 1-2 ROW $6,000.0
Year 2-3 Utilities/Construction $16,250.0
Year 2-3 Utilities/Construction $30,520.0

AMATS – EAGLE RIVER

HIGHWAY

EAGLE RIVER GREENBELT ACCESS & PATHWAY

Estimated Bid Date: TBD
Estimated Construction Cost: $TBD
Fund Source: FHWA
Scope: Construct a new multi-use, ADA accessible, paved trail on a new trail route within the Eagle River Greenbelt.
Status: Environmental document underway, needs additional funding to complete.

EAGLE RIVER LOOP ROAD REHAB: OLD GLENN-EAGLE RIVER RD

Contractor: Wilder Construction Company
Award Date: April 2008
Award Amount: $10,612.2
Fund Source: FHWA
Contract Completion Date: August 2009
Scope & Status: Roadway reconstruction to arterial standards including adding shoulders, turn lanes, and pedestrian facilities is now 80% complete. Remaining work for 2009 includes completion of top lift paving, sidewalks, guardrail, landscaping and signal modifications at Eagle River Loop and Old Glenn Hwy.

EAGLE RIVER RD REHAB: MP 5.3 TO MP 12.6

Estimated Bid Date: Fall 2010
Estimated Construction Cost: $26,400.0 (08)
Fund Source: FHWA
Scope: Upgrade and resurface road with widened shoulders for pedestrians.
Status: Final design underway, ROW acquisitions in 2009.

EKLUTNA RIVER BRIDGE REHABILITATION

Estimated Bid Date: TBD
Estimated Construction Cost: $TBD
Fund Source: FHWA
Scope: Rehab or remove and replace old bridge with a new structure.
Status: Project to be re-evaluated.

OLD GLENN HWY, FIRE LAKE TO SOUTH BIRCHWOOD

Contractor: Pruhs Construction Company
Award Date: Sept 2008
Award Amount: $10,216.5
Fund Source: FHWA
Contract Completion Date: Oct 2010
Scope & Status: Roadway construction for new shoulders and surfacing, a new pedestrian pathway and channelization improvements will begin in the spring.

OLD GLENN HWY, S. BIRCHWOOD LOOP TO PETERS CR

Estimated Bid Date: Fall 09
Estimated Construction Cost: $21,200.0 (08)
Fund Source: FHWA

Scope: Construct new shoulders and surfacing, includes new pedestrian pathway, channelization improvements, truck climbing lane, and replaces bridge at Peters Creek.
Status: Final design underway.

AMATS – GIRDWOOD

HIGHWAY

CROW CREEK ROAD **Contractor:** Fike Industrial Construction, LLC
Award Date: Jan 2008
Award Amount: 2,372.0
Fund Source: FHWA Earmark
Contract Completion Date: Oct 08
Scope & Status: Roadway rehabilitation and paving from Alyeska Highway to the school bus turnaround was substantially completed in 2008. Minor work remaining for 2009 includes approach slabs and waterproof membrane on California Creek Bridge , striping and seeding.

GIRDWOOD ROADS (SEC 330,115 EARMARKS) AK021
Estimated Bid Date: Spring 2009
Estimated Construction Cost: $4,100.0 (08)
Fund Source: FHWA Earmark
Scope: Improve Hightower Rd from Alyeska Hwy to Lindblad Ave, Girdwood Place, Landbald Ave, and Holmgren Place to two lane urban roadways with parallel on-street parking, drainage and sidewalks. Improve roadside drainage swales in Town Park vicinity, and provide flood relief culverts under Alyeska Hwy west of California Creek.
Status: Final design nearing completion.

ANCHORAGE AREA– NON AMATS

HIGHWAY

ANCHORAGE AREAWIDE RR GRADE SEPARATIONS
Estimated Bid Date: TBD
Estimated Construction Cost: $TBD
Fund Source: FHWA Safety
Scope: Reconnaissance level study to review at grade roadway/pathway/railroad crossings and analyze for potential grade separations and recommend a prioritized program for improvements.
Status: Study underway.

ANCHORAGE AREA SAFETY IMPROVEMENTS, CONST 2008
HSIP: CENTRAL REGION SAFETY IMPROVEMENTS, 2008
Estimated Bid Date: Winter 2008/2009
Estimated Construction Cost: $5,437.0 (08)
Fund Source: FHWA Safety
Status: Intersection improvements to include 5th Ave @ C St; Dearmoun Rd @ Hillside Dr; Debarr Rd: Boniface Pkwy to Beaver Place; Dimond Blvd @ Jewel Lake Rd; Lucille St @ Spruce St; Seward Hwy @36th Ave.; Boniface & Mt. View Drive: 4th Ave and Eagle St Intx; 6th Ave & Fairbanks St Intx; and the Dowling and Seward Roundabout.
Status: PS&E Complete.

ANCHORAGE AREA SAFETY IMPROVEMENTS, CONST 2010

Estimated Bid Date: Spring 2010
Estimated Construction Cost: $3,100.0 (07)
Fund Source: FHWA Safety
Scope: Safety improvements at five locations within Anchorage Bowl: 6th Ave @ H St; Brayton Dr @ Lore Rd; Dimond Blvd @ Briarwood St; Homer Dr @ 74th Ave Seward Hwy Off Ramp; and 16thAve @ A St Channelization.
Status: Environmental document expected Spring 09.

GLENN / BRAGAW INTERCHANGE DESIGN-BUILD

Contractor: Wilder Construction Co.
Award Date: May 2007
Award Amount: $30,500.0
Fund Source: General Fund
Contract Completion Date: June 09
Scope & Status: Construction of a new interchange on the Glenn Highway at Bragaw is substantially complete and open to the public. Landscaping and aesthetics to be completed in 2009

GLENN HWY, GAMBELL TO AIRPORT HEIGHTS

Contractor: Alaska Interstate Construction (AIC)
Award Date: April 2008
Award Amount: $13,603.0
Fund Source: FHWA
Contract Completion Date: Oct 2009
Scope & Status: Widening of the existing road to provide three lanes in each direction between Medfra St and Airport Heights was completed and open for traffic in September 2008. Remaining work for the 2009 season includes the finish lift of pavement, pavement markings, installation of permanent lighting and signals, and landscaping.

GLENN HWY, EMERGENCY BRIDGE REPAIRS, 2009

Estimated Bid Date: Spring 2009
Estimated Construction Cost: $900.0 (08)
Fund Source: General Fund
Scope: Replace bridge rails on the southbound Glenn Hwy Bridges at Eagle River, Peters Creek, and Eklutna-Glenn Hwy RR Overpass which have been damaged by vehicle impacts.
Status: Final design underway.

GLENN HWY: HILAND TO ARTILLERY RESURFACING

Estimated Bid Date: Spring 09
Estimated Construction Cost: $6,000.0 (08)
Fund Source: FHWA
Scope: Resurface pavement on Glenn Highway, interchange ramps, and interchange cross roads from Hiland Interchange to Artillery Road Interchange. Remove and replace defective guardrail.
Status: Final design underway.

GLENN HWY RUT REPAIRS: ANCH TO PALMER, 2009

Estimated Bid Date: Spring 2009

Estimated Construction Cost: $10 to 25 million (08)
Fund Source: General Fund & Potential FHWA Economic Stimulus
Scope: Resurface the Glenn Hwy southbound lanes between S. and N. Birchwood exits and all lanes between Peters Creek and Eklutna, and additional areas as funding allows.
Status: Final design underway.

HSIP: 2004 & 2005 PROGRAM PROJECTS

Estimated Bid Date: Winter 2009/2010
Estimated Construction Cost: $1,770.0 (07)
Fund Source: FWHA Safety
Scope: Intersection safety improvements at 6 locations in the Anchorage Bowl: 36th Ave @ Lacarno/Cottonwood Dr; 36th Ave @ Latouche St; Downtown Curl Bulbs; Raspberry Rd @ Jewel Lake; Ingra St-4th Ave to 3rd Ave; and Old Seward Hwy @ 34th Ave.
Status: Environmental document expected spring 09.

HSIP: 2001 GROUP 5A

Estimated Bid Date: Winter 2009/2010
Estimated Construction Cost: $2,700.0 (07)
Fund Source: FHWA Safety
Scope: Channelization and sight distance improvements on Arctic Blvd @ Potter Drive.
Status: Final design underway, ROW acquisition in 2009.

HSIP: GROUP B

Estimated Bid Date: Winter 2009/2010
Estimated Construction Cost: $1,670.0 (07)
Fund Source: FHWA Safety
Scope: Channelization modifications at Lake Otis Pkwy and 68th Ave; and 13th Ave and Gambell St.
Status: Environmental document expected spring 09.

HSIP: MULDOON & NORTHERN LIGHTS INTX IMP
HSIP: INTERNATIONAL AIRPORT RD @ OLD SEWARD HWY

Estimated Bid Date: Summer 2009
Estimated Construction Cost: $2,910.0 (07)
Fund Source: FHWA Safety
Scope: Construct south bound right turn lane at N. Lights Blvd Intersection with Muldoon Road, and construct safety improvements at the intersection of International Airport Road and the Old Seward Highway.
Status: Final design and ROW acquisition underway.

MINNESOTA DR RESURFACING, C ST TO INTL AIRPORT RD I/C

Estimated Bid Date: Spring 2009
Estimated Construction Cost: $7,900.0 (08)
Fund Source: FHWA
Scope: Pavement resurfacing
Status: Final design nearing completion.

MINNESOTA DR RESURFACING, INTL AIRPORT RD I/C TO 13TH AVE

Estimated Bid Date: Spring 2009
Estimated Construction Cost: $6,000.0 (07)
Fund Source: FHWA
Scope: Pavement resurfacing.
Status: Final design nearing completion.

MULDOON ROAD RESURFACING, 36TH TO GLENN HWY
HSIP: 6th AVENUE @ MULDOON RD SAFETY IMPROVEMENTS

Estimated Bid Date: Spring 2009
Estimated Construction Cost: $6,320.0
Fund Source: FHWA
Scope: Pavement resurfacing to include safety improvements at the intersection of 6th Avenue and Muldoon Road.
Status: PS&E Complete.

SEWARD HWY TO GLENN HWY CONNECTION (H2H)

Estimated Bid Date: TBD
Estimated Construction Cost: $750,000.0
Fund Source: FHWA & TBD
Scope: Reconnaissance Study and Environmental analysis for a controlled access freeway link between the New Seward and Glenn Highways.
Status: Environmental document underway.

SEWARD HWY: DOWLING - TUDOR RECONST

Estimated Bid Date: Spring 2011
Estimated Construction Cost: See below
Fund Source: FHWA
Scope: Widen the New Seward Hwy from 4 to 6 lanes, provide improvements to both frontage roads, multi-use trails, replace 5 bridges, and construct an overpass at International Airport Road. Project may be built in increments. Design underway. Received $13M GF appropriation in 2009.
Status: Final design underway.
Year 1-2 ROW $7,200.0
Year 3-4 Utilities/Construction $62,530.0

SEWARD HWY: 92ND AVENUE GRADE SEPARATION IMP

Estimated Bid Date: Winter 2010/2011
Estimated Construction Cost: $20,000+
Fund Source: General Funds
Scope: Construct new grade separation. Design underway. $20M GF appropriated in 2008. Existing funding is sufficient for design, ROW acquisition and partial construction.
Status: Environmental document underway.
Year 1-2 ROW
Year 2-3 Utilities/Construction $20,000+

SEWARD HWY: BIRD PT – POTTER MARSH PASSING LANES & PATHWAY (MP 99-105)

Estimated Bid Date: Spring 2012
Estimated Construction Cost: see below
Fund Source: FHWA
Scope: Project to develop the environmental document for construction of alternating passing lanes from Potter Marsh to Bird Point, and various pathway improvements.
Status: Environmental document underway.

Year 1-2 Design $2,250.0
Year 2-3 ROW $2,250.0

Year 4-5 Utilities/Construction $60,247.7

SEWARD HWY REC IMP, BIRD CREEK CAMPGROUND

Estimated Bid Date: Summer 2009
Estimated Construction Cost: $350.0 (07)
Fund Source: FHWA Earmark
Scope: Provide improved RV circulation, parking, highway access, and pedestrian facilities. Design and construction administration by the Department of Natural Resources through a Reimbursable Services Agreement.
Status: Final design underway.

SEWARD HWY: MP 105-107 WINDY CORNER

Estimated Bid Date: Winter 2011/2012
Estimated Construction Cost: $32,000.0
Fund Source: General Fund & GO Bond
Scope: Improvements may include highway and railroad relocation, passing lanes and sheep viewing turnout.
Status: Construction project scoping being finalized based on voter approval of additional $20M in GO bonds in 2008.

Year 3-4 Utilities/Construction $32,000.0

AVIATION

BIRCHWOOD AIRPORT PROPERTY ACQUISITION

Estimated Bid Date: N/A
Estimated Construction Cost: ROW Acquisition $11,000.0
Fund Source: FAA
Scope: Purchase right of way in support of airport improvements.
Status: Start up of project pending completion of Environmental Assessment funded under Master plan effort.

ANCHORAGE INTERNATIONAL AIRPORT (AIA)

AIRPORT

AIA CONCOURSE A APRON RECONSTRUCTION

Estimated Bid Date: Winter 2009/2010
Estimated Construction Cost: $4,000.0 (06)
Fund Source: FAA
Scope: Reconstruct Concourse A, Apron.
Status: Preliminary engineering and environmental document underway.

AIA REMOTE OVERNIGHT PARKING 12-14

Estimated Bid Date: Spring 2009
Estimated Construction Cost: $21,600.0 (08)
Fund Source: FAA
Scope: Rehabilitate the RON parking positions 12 through 14 to design group VI standards.
Status: Final design underway.

AIA RUNWAY 7R/25L EXTENSION

Estimated Bid Date: Spring 2010
Estimated Construction Cost: $26,800.0 (08)
Fund Source: AIA
Scope: Extend runway to the west, reconstruct Taxiway G.
Status: Preliminary engineering and environmental document underway.

AIA RUNWAY 7R/25L REHABILITATION

Estimated Bid Date: Spring 2010
Estimated Construction Cost: $76,400.0 (08)
Fund Source: FAA
Scope: Rehabilitate runway to meet standards for Design Group VI aircraft.
Status: Preliminary engineering and environmental document underway.

AIA S. AIRPARK ACCESS ROAD

Estimated Bid Date: Spring 2009
Estimated Construction Cost: $15,600.0 (08)
Fund Source: AIA
Scope: Construct a .4 mile new access road to South Airpark from Raspberry Road.
Status: Final design underway.

AIA LAKE HOOD BANK STABILIZATION

Estimated Bid Date: Spring 2010
Estimated Construction Cost: $2,500.0 (07)
Fund Source: FAA
Scope: Construct long term solutions to deal with erosion from aircraft slips around the lake.
Status: Preliminary engineering and environmental document underway. Prototype to be constructed in summer 09.

AIA NORTH TERMINAL GATE N8 APRON RECONSTRUCTION

Estimated Bid Date: TBD
Estimated Construction Cost: $TBD
Fund Source: FAA
Scope: Reconstruct gate aprons. Expand the concrete section to provide better support for ground service equipment.
Status: Project currently on hold at the request of AIA management.

AIA SNOW DISPOSAL FACILITY

Estimated Bid Date: N/A Force Account – Summer 2009
Estimated Construction Cost: $1,000.0
Fund Source: AIA
Scope: Construct a new snow disposal site area that is centrally located to the airport controlled aprons and remote overnight parking. New snow area will be for snow with deicing and anti-icing materials mixed in.
Status: Final design underway.

ATKA

AIRPORT

ATKA AIRPORT RUNWAY EXTENSION & RESURFACING, II

Contractor: Brice Inc.
Award Date: June 2008
Award Amount: $17,966.0
Fund Source: FAA
Contract Completion Date: Oct 2009
Scope & Status: Project will extend, widen, and resurface the existing runway and runway safety area to current standards, construct new SRE building, install airport lighting. Contractor placed surcharge for the runway extension prior to winter shutdown in 2008.

BETHEL

AIRPORT

BETHEL AIRPORT IMPROVEMENTS, PHASE 5

Estimated Bid Date: Summer 2011
Estimated Construction Cost: $3,000.0 (06)
Fund Source: FAA
Scope: Acquire ROW for Cross-wind Runway and future GA apron location. Reconstruct the GA apron and taxiway to cargo standards.
Status: Preliminary engineering and environmental document underway.

BETHEL AIRPORT IMP, COMPLETE PARALLEL RUNWAY PH 3, STG 2

Contractor: Knik Construction Co., Inc.
Award Date: June 2008
Award Amount: $9,743.3
Fund Source: FAA
Contract Completion Date: August 2009
Scope & Status: The surcharge for the construction of B-11 ARC parallel runway was removed, and excavation and backfill of dig outs completed prior to winter shutdown. Placement of surfacing material, and paving remaining for 2009 season. PAPI and REIL hardware may be added to project at the request of the FAA.

HIGHWAY

BETHEL TUNDRA RIDGE RD PAVING

Estimated Bid Date: Spring 2010
Estimated Construction Cost: $3,310.0 (06)
Fund Source: FHWA
Scope: Resurface roadway. Project was delayed for right of way acquisition, BIA is now assisting in resolving this issue.
Status: Final design underway and ROW acquisition underway.

CENTRAL REGION: WINTER TRAIL MARKINGS, 2009
Estimated Bid Date: N/A – Force Account
Estimated Construction Cost: $300.0 (08)
Fund Source: FHWA
Scope: Install high-visibility trail markers in the rural communities in the Bethel area to improve transportation safety.
Status: Environmental document underway.

CHEFORNAK

AIRPORT

CHEFORNAK AIRPORT RELOCATION
Estimated Bid Date: Spring 2010
Estimated Construction Cost: $23,700 (08)
Fund Source: FAA
Scope: Complete construction of a new airport. Reshape embankments and place surfacing material on runway, taxiway, apron and access road, includes airport lighting, equipment storage building.
Status: Preliminary engineering and environmental document underway.

CHIGNIK

AIRPORT

CHIGNIK LAGOON AIRPORT RESURFACING
Estimated Bid Date: TBD
Estimated Construction Cost: $TBD
Fund Source: FAA
Scope: Runway resurfacing, apron and access road construction.
Status: Project on hold until master plan for area is complete.

CHIGNIK LAGOON RUNWAY REPAIRS
Estimated Bid Date: Spring 09
Estimated Construction Cost: $4,000.0 (08)
Fund Source: General Funds
Scope: Runway repairs.
Status: PS&E Complete.

CHIGNIK LK RESURFACING, LIGHTING & SRE BUILDING
Estimated Bid Date: Fall 2011
Estimated Construction Cost: $5,600.0 (08)
Fund Source: FAA
Scope: Reconstruct, widen, and extend existing runway, safety areas, improve taxiway, aircraft parking apron, and access road, construct SRE building, lighting.
Status: Preliminary engineering and environmental document underway.

HIGHWAY

CHIGNIK CONNECTORS
Estimated Bid Date: TBD
Estimated Construction Cost: $TBD
Fund Source: FHWA Earmark
Scope: Reconnaissance study for a 21 mile new gravel road linking the communities of Chignik Bay, Chignik Lagoon, and Chignik Lake is complete.
Status: Reconnaissance Report complete. Project is suspended at this time due to insufficient earmark funds to design and construct.

COLD BAY

FACILITY

COLD BAY AIRPORT RESCUE & FIREFIGHTING BLDG
Estimated Bid Date: Spring 2010
Estimated Construction Cost: $1,610.0 (08)
Fund Source: FAA
Scope: Construct a one-bay addition to the existing Airport Rescue & Firefighting building.
Status: Preliminary engineering and environmental document underway.

CROOKED CREEK

AIRPORT

CROOKED CREEK AIRPORT IMPROVEMENTS
Estimated Bid Date: Spring 2011
Estimated Construction Cost: $15,585.0 (07)
Fund Source: FAA
Scope: Runway extension, a new taxiway and apron, new access roads, Medium Intensity Runway Lighting, a double bay Snow Removal Equipment Building.
Status: Preliminary engineering and environmental document underway.

DILLINGHAM - ALEKNAGIK

AIRPORT

ALEKNAGIK AIRPORT IMPROVEMENTS
Estimated Bid Date: TBD
Estimated Construction Cost: $TBD
Fund Source: FAA
Scope: Extend the existing runway, install runway lighting, and construct SRE building.
Status: Project on hold and may be cancelled after Aleknagik Wood River Bridge is constructed.

DILLINGHAM AIRPORT IMPROVEMENTS
Estimated Bid Date: Spring 2013

Estimated Construction Cost: $36,189.0 (07)
Fund Source: FAA
Scope: RSA expansion, a new parallel T/W, 2 additional exit T/W's, new Chemical Storage Bldg, realign part of Wood River rd., repave main apron.
Status: Preliminary engineering and environmental document underway.

FACILITY

DILLINGHAM 3-BAY CHEMICAL STORAGE BUILDING
Estimated Bid Date: Spring 2009
Estimated Construction Cost: $2,700.0 (08)
Fund Source: FAA
Scope: Construct a 3-bay Chemical Storage Building with a 20,000 gallon storage tank.
Status: Final design underway.

HIGHWAY

ALEKNAGIK WOOD RIVER BRIDGE
Estimated Bid Date: Spring 2010
Estimated Construction Cost: $21,000.0 (08)
Fund Source: FHWA Earmark, GO Bond
Scope: Construct a new two-lane bridge at the Wood River crossing, and .6 miles of roadway between Aleknagik (North Shore) and the Dillingham-Aleknagik Road.
Status: Final design underway, ROW acquisitions in 2009.

ALEKNAGIK FLOAT PLANE ROAD
Estimated Bid Date: TBD
Estimated Construction Cost: $950.0
Fund Source: FHWA Earmark
Scope: Provide access to new city floatplane area.
Status: Design by City of Aleknagik, funding insufficient to construct project.

DILLINGHAM: DOWNTOWN STREETS REHABILITATION
Estimated Bid Date: Fall 2011
Estimated Construction Cost: $2,835.0 (06)
Fund Source: FHWA
Scope: Realign and rehabilitate three streets forming a loop in the downtown area of Dillingham to include pedestrian facilities.
Status: Environmental document underway.

DILLINGHAM: WOOD RIVER ROAD RECONSTRUCTION
Estimated Bid Date: Spring 2012
Estimated Construction Cost: $8,800.0 (08)
Fund Source: FHWA & General Fund for ROW only
Scope: Realign and reconstruct approx 2.8 miles of the Wood River Road to include pedestrian facilities.
Status: Final design underway, ROW acquisitions in 2009.

EKWOK

FACILITY

EKWOK TWO BAY SNOW REMOVAL EQUIPMENT BUILDING

Contractor: Pro-West Contractors, LLC
Award Date: June 2008
Award Amount: $1,228.5
Fund Source: FAA
Contract Completion Date: October 2009
Scope & Status: Foundation for the new two bay snow removal equipment building in completed. Final shipment of building components and building completion weather dependant.

FALSE PASS

AIRPORT

FALSE PASS AIRPORT IMPROVEMENTS

Estimated Bid Date: Spring 2010 (AIP Contingency)
Estimated Construction Cost: $22,000.0 (08)
Fund Source: FAA
Scope: Extend airport to 2,700 feet with adequate safety areas, edge lighting and a 2-bay snow removal equipment building.
Status: Preliminary engineering and environmental document underway.

HIGHWAY

FALSE PASS AIRPORT ACESS ROAD

Estimated Bid Date: Spring 2010
Estimated Construction Cost: $2,600.0 (08)
Fund Source: FHWA Earmark
Scope: Project will resurface the existing gravel access road between the City and the airport to include repairs to the False Pass Creek Bridge. Work to be done in conjunction with airport improvements.
Status: Environmental document to begin in 2009.

GOODNEWS BAY

AIRPORT

GOODNEWS BAY AIRPORT IMPROVEMENTS

Contractor: Knik Construction Co., Inc.
Award Date: September 2008
Award Amount: $13,852.3
Fund Source: FAA

Contract Completion Date: Dec 2009
Scope & Status: Embankment for the extension of the runway and fish ditch excavation began as winter work in October. Remaining work to reconstruct and extend the existing runway, construct new safety area, apron, taxiway, access road, a SRE building, and install lighting to begin in the spring of 2009.

HOMER

AIRPORT

HOMER BELUGA FLOAT PLANE FACILITIES IMPROVEMENTS
Estimated Bid Date: Spring 2010 (AIP Contingency)
Estimated Construction Cost: $1,113.0 (04)
Fund Source: FAA
Scope: Construct access ramp, rescue boat house and lake side floats for transient aircraft parking.
Status: Preliminary engineering and environmental document underway.

HIGHWAY

HOMER: EAST END ROAD RECONST, MP 3.75 TO 8.40
Estimated Bid Date: Spring 2011
Estimated Construction Cost: $18,500.0 (08)
Fund Source: FHWA
Scope: Rehabilitation and safety improvements to include shoulder widening, realignments, and slope flattening.
Status: Final design underway, ROW acquisitions in 2009.

HOOPER BAY

AIRPORT

HOOPER BAY AIRPORT IMPROVEMENTS
Estimated Bid Date: Summer 2011
Estimated Construction Cost: $45,500.0 (08)
Fund Source: FAA
Scope: Repave and extend the runway, and make improvements to apron, taxiway, access road and SREB as necessary to bring the airport up to current standards for a B-II ARC.
Status: Preliminary engineering and environmental document underway.

ILIAMNA

FACILITY

ILIAMNA SRE STORAGE/OFFICE BUILDING
Contractor: G and S Management Services, LLC
Award Date: Pending
Award Amount: $3,500.0
Fund Source: FAA
Contract Completion Date:
Scope & Status: Construct a new SRE storage/office building at the Iliamna Airport. Construction to begin in spring 2009.

HIGHWAY

ILIAMNA-NONDALTON ROAD / BRIDGES
Estimated Bid Date: Summer 2010
Estimated Construction Cost: $18,800.0 (06)
Fund Source: FHWA
Scope: Construct a road and bridge to connect the communities of Iliamna and Nondalton.
Status: Final design on hold pending Cumulative Impacts Analysis.

KENAI PENINSULA

HIGHWAY

KALIFORNSKY BEACH RD, COAL CREEK FISH PASSAGE
Estimated Bid Date: Fall 2009
Estimated Construction Cost: $2,015.0 (08)
Fund Source: FHWA Earmark
Scope: Fix a 9-foot diameter culvert in a large fill that is perched and impeding fish passage.
Status: Environmental document underway.

KALIFORNSKY BEACH RD, PEDESTRIAN PATHWAY
Estimated Bid Date: Spring 2009
Estimated Construction Cost: see below
Fund Source: General Funds
Scope: Construct a pedestrian pathway between Bridge Access Road and Cannery Road. Project will also include approximately 1,000 feet of roadway work from K-Beach Road at MP 16 up to the intersection with Bridge Access at approximately 16.2. The work will include repaving to match existing width, a fish passage culvert, loop detectors, striping and signing.
Status: Final design underway. General fund appropriation of $1.1 million is inadequate for scope of work identified in legislation and desired by community.

Year 1 Final Design $100.0
Year 1-2 Utilities/Contruction $1,000.0
Year 1-2 Utilities/Construction $1,664.0

KENAI AREA ROADS RESURFACING, 2009
Estimated Bid Date: Spring 2009
Estimated Construction Cost: $2,387.0 (08)
Fund Source: General Funds
Scope: Resurface Gas Well Road / Wendy Lane.
Status: Final design nearing completion.

KENAI PEN FLOOD OCT 02, FEMA NINILCHIK RV BR#427 PERMANENT
Estimated Bid Date: TBD
Estimated Construction Cost: $1,400.0 (04)
Fund Source: FEMA
Scope: Replace the damaged bridge on the Ninilchik River.
Status: Project on hold for EPA permit issues.

KENAI PEN FLOOD OCT 02, PERMANENT REPAIRS, PH II

Estimated Bid Date: TBD
Estimated Construction Cost: $500.0 (03)
Fund Source: FHWA-ER
Scope: Embankment repairs, drainage restoration, riprap protection at stream / river crossings on the Sterling Hwy.
Status: Project on hold for EPA permit issues.

KENAI SPUR ROAD EXTENSION

Estimated Bid Date: TBD
Estimated Construction Cost: $TBD
Fund Source: FHWA Earmark
Scope: Extend the Kenai Spur Road north from Captain Cook State Recreational Area. Executed Memorandum of Agreement with Kenai Peninsula Borough to perform environmental studies.
Status: Environmental study stalled at Kenai Peninsula Borough. Insufficient earmark funding to design and construct.

KENAI: VARIOUS RD IMP, 2009

Estimated Bid Date: Spring 09
Estimated Construction Cost: $935.0 (08)
Fund Source: FHWA Earmark
Scope: Improvements to HEA Access Road and Baron Park Lane off of Marathon Road to include roadway rehabilitation and paving, curb and gutter, and lighting if funding allows.
Status: Final design nearing completion.

KEYSTONE DRIVE IMPROVEMENTS

Contractor: Wolverine Supply, Inc.
Award Date: September 2008
Award Amount: $4,146.9
Fund Source: FHWA Earmark
Contract Completion Date: July 2010
Scope & Status: Project to reconstruct Keystone Drive to Kenai Peninsula Borough Standards. Contract approximately 30% complete with placement of surcharge material, some culverts, and utility relocations. Construction to resume in the spring.

SEWARD HWY BRIDGE REPAIR – TRAIL RV, FALLS CR, PTARMIGAN

Estimated Bid Date: Winter 08/09
Estimated Construction Cost: $5,300.0 (09)
Fund Source: GO Bond
Scope: Fix type B Emergency at Trail River, Falls Creek and Ptarmigan Creek Bridges on the Seward Hwy.
Status: Temporary signal system at Trail River to restrict bridge to one lane to be completed by January 31. Contract for installation of Bailey style bridges at Falls Creek and Ptarmigan Creek Bridges to be advertised in February.

SEWARD HWY: MP 21-25, SNOW RIVER TO FALLS CREEK, PH I

Estimated Bid Date: Winter 2010/2011
Estimated Construction Cost: see below
Fund Source: FHWA
Scope: Construct a railroad grade separation at Crown Point, replace Trail River Bridge.
Status: Final design underway.

Year 1 ROW $1,000.0
Year 2-3 Utilities/Construction $31,130.0

SEWARD HWY: MP 25.5-36, TRAIL RIVER TO STERLING WYE

Estimated Bid Date: Summer 2012
Estimated Construction Cost: see below
Fund Source: FHWA
Scope: Resurfacing, restoration and rehabilitation (3R) to include a pedestrian pathway and passing lanes.
Status: Environmental document complete.

Year 1 Design $2,000.0
Year 2-3 ROW $700.0
Year 4-5 Utilities/Construction $23,630.0

SEWARD HWY: MP 43-50 SURFACE REHABILITATION

Estimated Bid Date: Winter 2008/2009
Estimated Construction Cost: $11,422.3 (08)
Fund Source: FHWA
Scope: Pavement resurfacing.
Status: PS&E Complete, currently advertising.

SEWARD HWY: MP 75-90 INGRAM CR TO GIRDWOOD RD & BR REHAB

Estimated Bid Date: Winter 2012/2013
Estimated Construction Cost: see below
Fund Source: FHWA
Scope: Rehabilitate pavement and rehabilitate or replace 8 bridges. Project may include road realignment, grade separations at Portage Valley Road and the Alyeska Hwy, passing lanes, and pedestrian facilities. Project currently in Environmental Document stage (TBD).
Status: Environmental document underway.

Year 2-3 Design $9,500.0
Year 4-5 Utilities/Construction $181,000.0

STERLING HWY BRIDGE REHAB, DEEP CR, NINILCHIK, KASILOF RIVERS

Contractor: Mowat Construction Company
Award Date: Pending
Award Amount: $3,356.0
Fund Source: FHWA
Contract Completion Date: July 2010
Scope: Rehabilitate the bridge decks and steel superstructures.
Status: Construction pending award.

STERLING HWY: MP 37-60: SUNRISE TO SKILAK LAKE ROAD

Estimated Bid Date: Summer 2012
Estimated Construction Cost: see below
Fund Source: FHWA
Scope: Reconstruct/rehabilitate roadway to current standards to include possible 11 mile realignment. Project currently in Environmental Document stage (EIS).
Status: Environmental document underway.

Year 1-2 EIS underway
Year 2-3 Design $2,400.0
Year 3-4 ROW $3,100.0
Year 4-5 Utilities/Construction $180,700.0

STERLING HWY: MP 60-79, SKILAK LK RD - STERLING REHAB & PASS LN

Estimated Bid Date: Spring 2010
Estimated Construction Cost: see below
Fund Source: FHWA
Scope: Rehabilitate roadway to include resurfacing, widening shoulders and adding passing lanes where applicable.
Status: Final design underway.

Year 1-2 Design underway
Year 2-3 Utilities/Construction $24,350.0

STERLING HWY: MP 89.8-91, S. BLUFF ST-FOREST LN PASSING LANES

Estimated Bid Date: Winter 2010/2011
Estimated Construction Cost: see below
Fund Source: FHWA Safety & TBD
Scope: Construct a 4-lane divided highway segment (opposing traffic separated by a depressed median) along the Sterling Hwy between Southern Bluff Street and Forest Lane/Jim Dahler Road.
Status: Environmental document in process.

Year 1-2 Design, ROW $300.0
Year 2-3 Utilities/Construction $5,940.0

STERLING HWY: MP 157-169 RECONST-ANCHOR PT TO BAYCREST HILL

Estimated Bid Date: Winter 2012/2013
Estimated Construction Cost: see below
Fund Source: FHWA
Scope: Reconstruct and upgrade roadway along the existing corridor, to include rehabilitation/replacement of North Fork Anchor River and Anchor River Bridges.
Status: Environmental document underway.

Year 1-2 Design $1,300.0
Year 2-3 ROW $$2,600.0
Year 4-5 Utilities/Construction $34,300.0

STERLING HWY: NINILCHIK INTX IMP AND ILLUMINATION

Estimated Bid Date: Summer 2009
Estimated Construction Cost: $1,326.0 (08)

Fund Source: FHWA & GF
Scope: Provide turning improvements and illumination along the Sterling Hwy in Ninilchik at the intersection of Kingsley/Oilwell Road and Deep Creek Access Road.
Status: Final design underway.

TUSTUMENA, CROOKED CR, JOHNSON LKS RD PAVING

Estimated Bid Date: Fall 2009
Estimated Construction Cost: $5,600.0 (08)
Fund Source: General Fund
Scope: Pave gravel surface.
Status: Final design underway.

KING COVE

HIGHWAY

KING COVE – COLD BAY CONNECTOR

Estimated Bid Date: Summer 2011
Estimated Construction Cost: see below
Fund Source: General Fund and TBD
Scope: Complete road from King Cove to hovercraft terminal.
Status: Environmental document completed by AEB. Preparing Memorandum of Agreement with AEB for next phase of work.

Year 1-2 Design $1,900.0
Year 3-4 Construction $25,000.0

AIRPORT

KING COVE FENCING

Estimated Bid Date: Summer 2009
Estimated Construction Cost: $800.0 (08)
Fund Source: FAA
Scope: Provide perimeter fencing for the King Cove Airport.
Status: Final design underway.

KING SALMON - NAKNEK

AIRPORT

KING SALMON AIRPORT TAXIWAY

Estimated Bid Date: Spring 2009
Estimated Construction Cost: $21,850.0 (08)
Fund Source: FAA
Scope: Construct taxiway improvements.
Status: Final design underway.

HIGHWAY

NAKNEK BRIDGE #1563

Estimated Bid Date: TBD

Estimated Construction Cost: $50,000.0+
Fund Source: FHWA Earmark & TBD
Scope: Evaluation of a bridge crossing the Naknek River at Fishery Point based on recommendations from the Naknek Crossing Intermodal Economic and Land Use Study. Earmark funding insufficient to construct.
Status: Reconnaissance study underway.

KIPNUK

AIRPORT

KIPNUK AIRPORT RELOCATION, PHASE II
Estimated Bid Date: Summer 2009
Estimated Construction Cost: $18,120.0 (07)
Fund Source: FAA
Scope: Surfacing for new realigned runway and connecting taxiway constructed under phase 1, to include runway lighting and a snow removal equipment building.
Status: Final design underway.

HIGHWAY

KIPNUK BOARDWALK IMPROVEMENTS, PH II (IHS)
Estimated Bid Date: Spring 2010
Estimated Construction Cost: $8,000.0 (04)
Fund Source: FHWA
Scope: Construct 4.7 miles of new and replacement boardwalks.
Status: Environmental document underway.

KODIAK

AIRPORT

KODIAK AIRPORT RSA EXPANSION
Estimated Bid Date: Summer 2011
Estimated Construction Cost: $75,100.0 (07)
Fund Source: FAA
Scope: Expand Runway Safety Areas (RSA) to comply with current FAA standards, construct new taxiway from the terminal apron, and resurface R/W 18/36. Project currently in Environmental Document state (EIS).
Status: Preliminary engineering and environmental document underway.

FACILITY

KODIAK AIRPORT CHEMICAL STORAGE BUILDING
Estimated Bid Date: Winter 2009/2010
Estimated Construction Cost: $2,460.0 (08)
Fund Source: FAA
Scope: Construct a building for chemical mixing and storage operations at the Kodiak Airport.
Status: Preliminary engineering and environmental document underway.

HIGHWAY

KODIAK: CHINIAK ROAD MP 23.7 IMPROVEMENTS
Estimated Bid Date: Summer 2010

Estimated Construction Cost: $5,250.0 (05)
Fund Source: FHWA
Scope: Realign roadway, pave, drainage improvements.
Status: Final design underway, ROW acquisitions in 2009.

KODIAK ISLAND ROADS-North Star Student Safety Access

Contractor: Twin Peaks Construction, Inc
Award Date: January 2009
Award Amount: $362.5
Fund Source: FHWA Earmark
Contract Completion Date: October 2009
Scope & Status: Construct a short segment of new pathway behind the guardrail on the curve where Lilly Drive Crosses Island Lake Creek. Construction to begin in the spring.

KODIAK-OTMELOI WAY REHABILITAION

Estimated Bid Date: TBD
Estimated Construction Cost: $TBD
Fund Source: General Funds
Scope: Reconnaissance engineering study to evaluate the proposed rehabilitation of approximately one mile of Otmeloi Way.
Status: Study underway.

KODIAK PASAGSHAK ROAD SURFACING IMP, 2005

Contractor: Brechan Enterprises
Award Date: Dec 2006
Award Amount: $11,314.0
Fund Source: FHWA & General Funds
Contract Completion Date: June 2009
Scope & Status: Roadway surfacing, drainage improvements and minor realignments complete in 2008. Supplemental agreement to add lighting system at the Rezanof Drive and Mill Bay Road Intersection to be constructed Spring 09.

KOLIGANEK

AVIATION

KOLIGANEK AIRPORT RECONSTRUCTION

Estimated Bid Date: Spring 2011
Estimated Construction Cost: $5,800.0 (08)
Fund Source: FAA
Scope: Reconstruct the runway to community class recommendations, replace runway lighting, and improve runway surface.
Status: Preliminary engineering and environmental document underway.

KONGIGANAK

AIRPORT

KONGIGANAK AIRPORT IMPS-STAGE 1

Contractor: Brice Inc.
Award Date: Sept 2007

Award Amount: $16,120.2
Fund Source: FHWA
Contract Completion Date: July 2009
Status: Runway extension, new apron construction, lighting, and access boardwalk work began in Spring 08 continuing with a winter haul.

KWIGILLINGOK

HIGHWAY

KWIGILLINGOK SANITATION BOARDWALK, PH 2 (IHS)
Estimated Bid Date: n/a Force Account – Summer 09
Estimated Construction Cost: $4,023.0 (04)
Fund Source: FHWA
Scope: Construct 2.4 miles of replacement boardwalk connecting housing units. Design and force account construction to be managed by ANTHC under a Memorandum of Agreement between ADOT&PF and the Indian Health Service.
Status: Final design underway.

LAKE & PENINSULA BOROUGH

HIGHWAY

WILLIAMSPORT TO PILE BAY RD SPOT REPAIRS
Estimated Bid Date: Winter 2008/2009
Estimated Construction Cost: $8,500.0 (08)
Fund Source: FHWA Earmark
Scope: Drainage repairs and improvements, erosion protection, grade raise, roadway widening with turnouts along the Williamsport-Pile Bay Road from MP 3 to MP 9. Work will also include re-decking of the Four Mile Creek and Timberline Creek bridges.
Status: PS&E Complete.

LIME VILLAGE

AIRPORT

LIME VILLAGE AIRPORT RELOCATION
Estimated Bid Date: TBD
Estimated Construction Cost: $TBD
Fund Source: FAA
Scope: Relocate airport outside of Stony River floodplain.
Status: Project on indefinite hold due to a drop in population below 20 people.

MATANUSKA-SU VALLEY

HIGHWAY

BIG LAKE SOUTH BIG LAKE ROAD REALIGNMENT
Estimated Bid Date: Winter 2010/2011
Estimated Construction Cost: $15,900.0
Fund Source: General Funds

Scope: Reconstruct on a new or existing alignment, to rural collector standards.
Status: Reconnaissance study underway.

BURMA RD: PT MACKENZIE TO W. SUSITNA/MARION DR

Estimated Bid Date: Winter 2012/2013
Estimated Construction Cost: $50,000.0
Fund Source: General Funds
Scope: Improve Burma Road to NHS standards. Sufficient funding for design and possibly ROW only.
Status: Environmental document underway.

GLENN HWY: MP 34-42 PARKS TO OLD GLENN

Estimated Bid Date: Summer 2011
Estimated Construction Cost: see below
Fund Source: FHWA
Scope: Reconstruct to four lanes to include pathway and shoulders, channelization, traffic and safety improvements as necessary.
Status: Environmental document underway.

Year 1 Design (funded)
Year 1-2 ROW $950.0
Year 2-3 Utilities/Construction $53,100.0

GLENN HWY, MP 49 SLIDE REPAIR

Estimated Bid Date: Spring 2012
Estimated Construction Cost: $5,250.0 (06)
Fund Source: FHWA
Scope: Roadway repairs at the slide are on the Glenn Highway.
Status: Environmental phase to begin in spring 2009.

GLENN HWY MP 53 TO 56 RECONST-MOOSE CK CANYON

Estimated Bid Date: Fall 2013
Estimated Construction Cost: see below
Fund Source: FHWA
Scope: Reconstruct roadway including replacement of the Moose Creek Bridge. Project straightens horizontal curve.
Status: Environmental document underway.

Year 1 Design $2,250.0
Year 3-4 ROW $4,300.0
Year 5-6 Utilties/Construction $33,500.0

GLENN HWY: MP 66.5 TO 80 RECONST - CHICKALOON

Estimated Bid Date: Winter 2013/2014
Estimated Construction Cost: see below
Fund Source: FHWA
Scope: .Reconstruct roadway to current standards, to include major realignments.
Status: Project to be re-scoped.

Year 2-3 Design $5,300.0
Year 4-5 ROW $4,300.0
Year 5-6 Utilities/Construction $82,400.0

GLENN HWY: MP 80 TO 92 CHICKALOON TO CASCADE

Estimated Bid Date: Fall 2012
Estimated Construction Cost: see below
Fund Source: FHWA
Scope: Reconstruct roadway to current standards, to include major realignments.
Status: Project to be re-scoped.

Year 1-2 Design $3,000.0
Year 3-4 ROW $5,500.0
Year 4-5 Utilities/Construction $58,000.0

LITTLE SUSITNA RIVER ACCESS RD & BRIDGE

Estimated Bid Date: TBD
Estimated Construction Cost: $TBD
Fund Source: FHWA Earmark
Scope: Provide Environmental Document and design for new road access and bridge over the Little Susitna River west of Big Lake Area.
Status: Project on hold. Insufficient earmark funds to complete environmental document.

HATCHER PASS RD MP 18-25

Estimated Bid Date: TBD
Estimated Construction Cost: $7,000.0 (03)
Fund Source: FHWA
Scope: Recondition and pave existing gravel road.
Status: Environmental document underway.

PALMER-WASILLA HWY ENVIRONMENTAL STUDY

Estimated Bid Date: n/a
Estimated Construction Cost: $TBD
Fund Source: General Fund
Scope: Provide state project environmental checklist for widening roadway between the Parks Highway and the Glenn Highway.
Status: Environmental document underway.

PALMER-WASILLA HWY INTERSECTION IMP, PH II
KNIK GOOSE BAY & FAIRVIEW LOOP INTERSECTION
KNIK GOOSE BAY & VINE INTERSECTION IMP

Contractor: QAP
Award Date: September 2008
Award Amount: $8,693.3
Fund Source: General Fund
Contract Completion Date: October 2009
Scope & Status: Construction to begin in the spring for signalization of 4 intersections on the Palmer-Wasilla Highway: Shoreline Dr, Midtown, Golden Hills, and Shennum, and upgrade of 5 intersection signals at Knik-Goose Bay Rd, Roberts St, Parks Hwy, Fred Meyer, and the Glenn Highway. Construction also includes installation of traffic signals at Knik Goose Bay Rd and Fairview Loop and Knik Goose Bay and Vine St.

PARKS HWY: 44-52.3 RECON – LUCUS RD TO BIG LAKE CUTOFF

Estimated Bid Date: Fall 2012
Estimated Construction Cost: see below
Fund Source: FHWA
Scope: Widen highway to four lanes to improve safety and reduce congestion.
Status: Environmental document underway.

Year 1-2 Design $5,000.000
Year 3-4 ROW $15,300,000
Year 5-6 Utilities and Construction $109,100,000

PARKS HWY MP 72-83 REHAB: WILLOW CR TO KASHWITNA

Estimated Bid Date: February 09
Estimated Construction Cost: $30,000.0
Fund Source: GO Bond (5.8m) & Potential FHWA Economic Stimulus
Scope: Rehabilitate pavement, reconstruct embankment at failed areas, widen roadway, build passing lanes and bridge improvements, and construct safety improvements.
Status: PS&E complete. Contract advertising contingent on final Economic Stimulus package authorization.

PARKS HWY MP 83-90 WEIGHT RESTRICTION ELIMINATION

Estimated Bid Date: Spring 2010
Estimated Construction Cost: $8,586.5 (08)
Fund Source: GO Bond
Scope: Embankment reconstruction at locations of known pavement fatigue cracking MP 83-84, and MP 89-90), repaving the entire length, widening and turn lanes.
Status: Final design underway.

PT MACKENZIE ROAD IMPROVEMENT

Estimated Bid Date: Spring 2009
Estimated Construction Cost: $2,692.0 (07)
Fund Source: FHWA Earmark
Scope: Improve vehicle access to the Port area by reconstructing roughly a 1.6 mile access road to lessen the vertical grade. Re-grade road sideslopes and ditches to improve drainage and lessen ice buildup. Expand dock and public boat ramp facilities with added fill and armor rock.
Status: Final design underway by the Matanuska Susitna Borough.

PETERSVILLE ROAD REHABILITATION

Estimated Bid Date: Spring 2012
Estimated Construction Cost: $9,500.0 (03)
Fund Source: FHWA
Scope: Rehabilitate roadway to Forks Roadhouse at MP 18.6.
Status: Final design to resume in 2009.

TRUNK ROAD RECONST, PH I PARKS HWY TO PALMER-WASILLA HWY

Estimated Bid Date: Spring 09
Estimated Construction Cost: $40,264.6 (08)
Fund Source: FHWA & GF

Scope: Reconstruct and widen Trunk Road to 4 lanes to include major realignments, includes intersection improvements at the Palmer-Wasilla Hwy, and pedestrian facilities.
Status: PS&E Complete.

TRUNK ROAD RECONST, PH II PALMER-WASILLA HWY TO FISHOOK

Estimated Bid Date: Spring 2010
Estimated Construction Cost: see below
Fund Source: FHWA
Scope: 3R rehabilitation, widen and straighten on existing alignment.
Status: Final design and ROW underway, will need supplemental funding to completed.

Year 1-2 Design, ROW underway
Year 2 Utilities/Construction $27,800.0

MAT-SU: PALMER

HIGHWAY

PALMER URBAN REVITALIZATION

Contractor: Prosser-Dagg Construction Company, LLC
Award Date: November 2008
Award Amount: $762.5
Fund Source: FHWA Earmark
Contract Completion Date: Oct 2009
Scope & Status: Contractor to begin work in spring to construct a pedestrian / bicycle corridor within the railroad right of way from E. Fireweed Ave to East Arctic Ave through the City of Palmer.

PALMER– WASILLA COUPLET

Estimated Bid Date: Spring 2012
Estimated Construction Cost: see below
Fund Source: General Funds
Scope: Project to improve east-west mobility at the Palmer end of the Palmer-Wasilla Highway, while maintaining access to the Palmer City core, and maintaining the function of the Glenn Highway.
Status: Preliminary engineering and environmental document underway.

Year 1 Design $3,250.0
Year 1-2 ROW $13,025.0
Year 3-4 Utilities/Construction $1,800.0
Year 3-4 Utilities/Construction $28,500.0

OLD GLENN HWY, PLUMLEY TO PALMER
HSIP: OLD GLENN, MAT-SU RIVER BRIDGE-GLENN CHANNELIZATION

Contractor: Pruhs Construction Company, LLC
Award Date: May 2008
Award Amount: $9,884.3
Fund Source: FHWA Safety & GO Bond
Contract Completion Date: July 2009
Scope & Status: Construction substantially complete for rehabilitation of roadway to include shoulder widening, channelization, illumination, signalization upgrades, and extension of the separated pathway from Palmer to Clark Wolverine. Final paving remaining in 2009.

MAT-SU: TALKEETNA

AIRPORT

TALKEETNA AIRPORT IMPROVEMENTS - STAGE 2

Estimated Bid Date: Summer 2009 (AIP Contingency 2009, 2010)
Estimated Construction Cost: $7,000.00 (07)
Fund Source: FAA
Scope: Construct new commercial apron, taxiway; new lease lots; new lease lot/commercial apron and taxiway, new GA aprons, and vehicle parking. Final project scope to fit available AIP funding of 7million.
Status: Preliminary engineering and environmental document underway.

MAT-SU: WASILLA

HIGHWAY

FAIRVIEW LOOP RECONSTRUCTION

Estimated Bid Date: TBD
Estimated Construction Cost: $11,000.0
Fund Source: GO Bond
Scope: Rehabilitate existing Fairview Loop Road. Scope consists of adding shoulders and rehabilitating pavement along existing alignment as required under 3R process.
Status: Project scoping underway. Environmental to begin in 2009.

SEWARD MERIDIAN PARKWAY RD IMP - PH I PARKS TO PALMER-WASILLA HWY

Estimated Bid Date: Summer 2010
Estimated Construction Cost: see below
Fund Source: FHWA
Scope: Upgrade to four lanes with a center left-turn lane and a separated pathway to improve safety and increase capacity.
Status: Final design and advance ROW acquisition underway.

Year 1 ROW $5,200.0
Year 2-3 Utilities/Construction $13,100.0

SEWARD MERIDIAN RD, PH II - PAL-WASILLA TO SELDON ROAD

Estimated Bid Date: Summer 2011
Estimated Construction Cost: see below
Fund Source: FHWA
Scope: Upgrade roadway to four lanes, and extend to Seldon Road.
Status: Environmental document complete, final design pending funding.

Year 1 Design $2,100,000
Year 2-3 ROW $10,000,000

Year 3-4 Utilities & Construction $25,300.0

WASILLA – FISHOOK RD – MAIN STREET REHABILITATION

Estimated Bid Date: TBD
Estimated Construction Cost: $12,650.0 (06)
Fund Source: FHWA
Scope: Construct a one-way couplet in downtown Wasilla to improve mobility and circulation in the Main Street and core area. The couplet will extend between the Knik-Goose Bay Road and Centaur Avenue on the south and Bogard Road on the north. The couplet will consist of three lanes southbound on Main Street and Knik-Goose Bay Road and three lanes northbound on Talkeetna Street and Yenlo St.
Status: Environmental document to begin in 2009.

WASILLA GRAVEL ROAD PAVING

Estimated Bid Date: Winter 2008/2009
Estimated Construction Cost: $900.0
Fund Source: General Fund
Scope: Pave existing gravel roads in the City of Wasilla.
Status: PS&E Complete.

WASILLA: LUCUS ROAD IMPROVEMENTS

Estimated Bid Date: TBD
Estimated Construction Cost: $7,000.0
Fund Source: FHWA
Scope: Upgrade between the Parks Hwy and Spruce Ave to include shoulders, turning lanes, and pedestrian facilities.
Status: Environmental document is complete, final design pending funding.

MEKORYUK

AIRPORT

MEKORYUK AIRPORT IMPROVEMENTS

Estimated Bid Date: Summer 2011 (AIP Contingency)
Estimated Construction Cost: $6,300.0 (05)
Fund Source: FAA
Scope: Extend runway, expand safety area, construct SRE building, install lighting, rehabilitate access road.
Status: Preliminary engineering and environmental document underway.

NAPAKIAK

HIGHWAY

NAPAKIAK LANDFILL ACCESS ROAD (VSW)

Contractor: N/A Force Account
Award Date:

Award Amount: $2,075.0
Fund Source: FHWA
Scope & Status: Reconstruction / surface 3,100 feet of community road for access to the new landfill. Construction administration by Alaska Dept of Environmental Conservation, Village Safe Water through a Reimbursable Services Agreement. Work to begin in the spring with project completed in fall 2010.

NAPASKIAK

HIGHWAY

NAPASKIAK: SANITATION BOARDWALK IMP (VSW)
Estimated Bid Date: N/A Force Account, Summer 2009
Estimated Construction Cost: $6,400.0 (06)
Fund Source: FHWA
Scope: Construct 4 miles of new and replacement boardwalks to access new sewage lagoon.
Status: Final design underway.

NEWTOK - MERTARVIK

FACILITY

MERTARVIK BARGE FACILITY
Estimated Bid Date: Winter 2008/2009
Estimated Construction Cost: $1,800.0 (08)
Fund Source: Denali Commission & General Fund
Scope: Construct a barge landing ramp and staging area.
Status: Final design underway.

HIGHWAY

NEWTOK-MERTARVIK RELOCATION
Estimated Bid Date: TBD
Estimated Construction Cost: TBD
Fund Source: General Fund
Scope: Scope, coordinate effort and develop a Project Management Plan to relocate the community of Newtok to the proposed location of Mertarvik. Coordination efforts will include the Mertarvik Barge Landing, the USACE road design, a DCCED proposed evacuation center, and planning for a local airport.
Status: Project Management Plan being developed.

NELSON ISLAND

HIGHWAY

NELSON ISLAND ROADS
Estimated Bid Date: TBD
Estimated Construction Cost: $TBD
Fund Source: General Fund

Scope: Construct an inter-village road system to connect Toksook Bay, Tununak, Nightmute, Umkumiut.
Status: Environmental document anticipated in 2009. No funding identified to continue beyond this stage.

NIGHTMUTE

AIRPORT

NIGHTMUTE AIRPORT IMPROVEMENTS

Contractor: Knik Construction Company, Inc.
Award Date: Sept 2007
Award Amount: $12,421.5
Fund Source: FAA
Contract Completion Date: August 2009
Scope & Status: Work to extend the runway, reconstruct the apron and access road, install runway taxiway edge lighting and construct a new equipment storage building is 45% complete with embankment for the runway extension, widening and apron expansion area in place, riprap stockpiled, and select borrow and crushed aggregate mined and ready to place in spring after embankment has dried out.

NUNAPITCHUK

AIRPORT

NUNAPITCHUK AIRPORT AND ACCESS IMP

Contractor: Bering Pacific Construction
Award Date: Sept 2007
Award Amount: $13,033.6
Fund Source: FAA
Contract Completion Date: July 2009
Scope & Status: Construction of runway extension, safety area, lighting, and SRE building is substantially complete. Remaining work for 2009 includes completion of the final surface course placement on safety area, taxiway, and apron.

OUZINKIE

AIRPORT

OUZINKIE AIRPORT STAGE 1

Estimated Bid Date: Spring 2009
Estimated Construction Cost: $24,970.0 (08)
Fund Source: Potential FAA Economic Stimulus
Scope: Construct a new airport and access road.
Status: PS&E Complete. Contract advertising in 2009 contingent upon Economic Stimulus package authorization. AIP Contingency project in 2009, Expected in 2010.

PLATINUM

AIRPORT

PLATINUM AIRPORT RELOCATION
Contractor: BC Contractors, Inc.
Award Date: Pending
Award Amount: $4,978.0
Fund Source: FAA
Contract Completion Date: October 2010
Scope: Relocate airport and construct a new runway, apron, taxiway, airport access road, new equipment storage building, and install airport lighting.
Status: Award pending. Construction to begin spring 2009.

REGIONWIDE

AIRPORT

CR: EQUIPMENT PROCUREMENT, 09
Estimated Bid Date: Summer 2009
Estimated Construction Cost: $4,726.0 (08)
Fund Source: FAA
Scope: This project will purchase equipment in support of airport maintenance and operations. The airports supported by this purchase are: Aniak, Sleetmute, Cold Bay, Dillingham, False Pass, Illiamna, King Salmon, Kodiak, McGrath, Scammon Bay, and Tuntutuliak. See PMP for details.
Status: Final design underway.

HIGHWAY

CENTRAL REGION HIGHWAY DATA EQUIPMENT FY07
Estimated Bid Date: Spring 2009
Estimated Construction Cost: $1,782.0 (08)
Fund Source: FHWA
Scope: Upgrade, install, and demolish Highway Data Collection Equipment permanent traffic recorder sites at various locations.
Status: PS&E Complete.

CENTRAL REGION GUARDRAIL END TREATMENT UPGRADE
Estimated Bid Date: Summer 2009 (07)
Estimated Construction Cost: $1,000.0
Fund Source: FHWA
Scope: Replace guardrail end terminals that do not meet current crashworthiness standards on NHS routes that have been recently paved.
Status: Final design underway.

CENTRAL REGION RUMBLE STRIPS, PH II

Estimated Bid Date: Winter 2008/2009
Estimated Construction Cost: $2,212.0 (08)
Fund Source: FHWA Safety
Scope: Installation of continuous milled rumble strips on major rural routes in the region.
Status: PS&E Complete

CENTRAL REGION SCHOOL ZONE UPGRADES

Estimated Bid Date: Spring 2010 (07)
Estimated Construction Cost: $1,700.0
Fund Source: FHWA
Scope: Upgrade school zone traffic control devices on Central Region highways. Improvements include flashing beacons where warranted, advance school zone signing, and school zone crossing signing and marking.
Status: Final design underway.

HSIP: NHS WARNING & DELINEATION IMPROVEMENTS

Estimated Bid Date: Summer 2010
Estimated Construction Cost: $2,052.0 (08)
Fund Source: FHWA Safety
Scope: Install signs, delineators, advance curve warning signs, and guardrail at various locations on NHS routes to improve safety.
Status: Final design underway.

STRIPING AND MARKING PERFORMANCE IMP

Estimated Bid Date: Spring 2009
Estimated Construction Cost: $1,500.0 (08)
Fund Source: FHWA & General Fund
Scope: Project includes performing and managing all striping and marking maintenance activities associated with roadway pavement for 5 years for the Glenn Hwy from McCarrey St to Glenn/Parks Interchange and the Parks Hwy from the Glenn/Parks Interchange to Seward Meridian Road.
Status: Final design underway.

WEIGH-IN-MOTION REHAB: STERLING HWY, MINN DR

Estimated Bid Date: Fall 2009
Estimated Construction Cost: $1,100.0 (07)
Fund Source: FHWA
Scope: Rehabilitate existing WIM sites including installation of more reliable and lower life cycle cost load cells.
Status: Final design underway.

SELDOVIA

FACILITY

SELDOVIA SRE BUILDING

Estimated Bid Date: Spring 09
Estimated Construction Cost: $2,950.0 (08)
Fund Source: FAA
Scope: Construct new equipment storage building.
Status: Final design underway.

STONY RIVER

AIRPORT

STONY RIVER AIRPORT IMPROVEMENTS

Estimated Bid Date: Spring 2010 (AIP Contingency)
Estimated Construction Cost: $8,851.0 (08)
Fund Source: FAA
Scope: Construct new runway, taxiway, apron, access road, and equipment storage buildings. Install runway and taxiway edge lighting.
Status: Final design and ROW acquisitions underway.

TAKOTNA

AIRPORT

TAKOTNA AIRPORT RELOCATION

Estimated Bid Date: Spring 09
Estimated Construction Cost: $20,050.0 (08)
Fund Source: FAA
Scope: Relocate airport, construct new gravel runway, safety area, access road, and SRE building, install lighting.
Status: Final design underway.

TOGIAK

HIGHWAY

TOGIAK MAIN ROAD REHABILITATION

Estimated Bid Date: TBD
Estimated Construction Cost: $2,000.0 (07)
Fund Source: Denali Commission & General Fund
Scope: Project to improve safety and reduce dust in community.
Status: Currently on hold for clarification of funding issues.

TULUKSAK

AIRPORT

TULUKSAK AIRPORT RELOCATION

Estimated Bid Date: Spring 2009
Estimated Construction Cost: $18,400.0 (08)
Fund Source: FAA

Scope: Relocate the airport to a new location about a mile east of the community. This will include acquiring property and constructing the following to current standards: new runway, taxiway, apron, airport lighting and visual aids, SRE building and an airport access road.
Status: Final design and ROW acquisitions underway.

TUNUNAK

AIRPORT

TUNUNAK AIRPORT IMPROVEMENTS
Estimated Bid Date: Spring 2011
Estimated Construction Cost: $15,600.0 (06)
Fund Source: FAA
Scope: Extend, widen, and resurface existing runway and safety area, install lighting, construct SRE building.
Status: Preliminary engineering and environmental document underway.

UNALASKA

FACILITY

UNALASKA 2-BAY CHEMICAL STORAGE BUILDING
Estimated Bid Date: Spring 2010
Estimated Construction Cost: $1,670.0 (08)
Fund Source: FAA
Scope: Construct a 3-bay Chemical Storage Building to include storage tanks, mixing tank, and storage area for the de-icing truck.
Status: Environmental document underway.

UNALASKA TORPEDO BUILDING DEMOLITION & CLEAN UP
Estimated Bid Date: Spring 2012
Estimated Construction Cost: $2,300.0 (06)
Fund Source: FAA
Scope: Project will resolve safety concerns with the deteriorating condition of the building in the Fort Mears National Historical Landmark.
Status: Project on hold pending outcome of master plan.

HIGHWAY

UNALASKA: E POINT/BALLYHOO RD REHAB, A/P BEACH RD PV/PATHWY
Estimated Bid Date: TBD
Estimated Construction Cost: $TBD
Fund Source: FHWA
Scope: Rehabilitate roadway with curb, gutter, paving and sidewalks.
Status: Project on hold pending identification of future funding.

ALAKANUK

ALAKANUK AIRPORT RELOCATION STAGE II

Contractor: Knik Construction Co., Inc.
Award Date: 9/25/07
Award Amount: $5,000,000
Fund Source: Federal
Scope: Grade and surface the runway, safety area, taxiway, access road, apron; install segmented circle, lighting, wind cone; construct a SREB, PAPI, REIL and AWOS pads and SREB.
Estimated Completion Date: 6/15/09
Status: Construction is 67% complete.

ALAKANUK AIRPORT RELOCATION STAGE III

Contractor: Knik Construction Co. Inc
Award Date: Pending
Estimated Construction Cost: $4,800,000
Fund Source: Federal
Scope: Place sub-base on airport.
Estimated Completion Date: TBD
Status: Award pending

ALASKA HIGHWAY

ALASKA HIGHWAY MP 1222 - 1235 REHABILITATION

Estimated Bid Date: 7/1/09
Estimated Construction Cost: $16,500,000
Fund Source: Federal
Scope: Rehabilitate, resurface and improve drainage from MP 1222 (Canadian Board) to MP 1235.
Estimated Completion Date: TBD
Status: Environmental approved.

ALASKA HIGHWAY MP 1267 – 1314 REHABILITATION

Contractor: Great Northwest Inc.
Award Date: 5/8/08
Award Amount: $18,961,000
Fund Source: Federal
Scope: Embankment repairs, drainage improvements, and resurfacing at selected locations between and bridge upgrades on the Beaver Creek and Tok River Bridges. Also includes wayside enhancements.
Estimated Completion Date: 7/31/09
Status: Construction is 84% complete.

Alaska Department of Transportation and Public Facilities

Northern Region Construction & Design Projects

February 2009

ALASKA HIGHWAY MP 1303 TANANA RIVER BRIDGE REPLACEMENT
Estimated Bid Date: 2/19/09
Estimated Construction Cost: $39,000,000
Fund Source: Federal Earmark, General Funds, Federal
Scope: Construct a new 903 foot, six-span bridge, over the Tanana River and demolishing the old bridge. Construct approximately one mile of new highway; reconstruct the boat ramp/parking area; and construct an interpretive wayside and a new pullout.
Estimated Completion Date: TBD
Status: Project is advertised.

ALASKA HIGHWAY MP 1308 TOK WEIGH STATION
Estimated Bid Date: April 2009
Estimated Construction Cost: $7,800,000
Fund Source: Stimulus, Federal
Scope: Construct multi-platform scales, new weighing system to facilitate simultaneous axle group and gross weight indications for truck weight enforcement.
Estimated Completion Date: TBD
Status: Anticipate advertising in March 2009.

ALASKA HWY MP 1354 - 1364 REHABILITATION
Estimated Bid Date: TBD
Estimated Construction Cost: $6,500,000
Fund Source: Federal, construction funding not identified
Scope: Rehabilitate, resurface and wayside improvements.
Estimated Completion Date: TBD
Status: Design underway

ALASKA HWY MP 1412 - 1422 REHABILITATION
Estimated Bid Date: May 2009
Estimated Construction Cost: $5,300,000
Fund Source: Stimulus, Federal
Scope: Rehabilitate, resurface and improve drainage.
Estimated Completion Date: TBD
Status: Design complete and anticipate advertising April 2009.

Alaska Department of Transportation and Public Facilities

Northern Region Construction & Design Projects

February 2009

ALLAKAKET

ALLAKAKET AIRPORT IMPROVEMENTS
Estimated Bid Date: Contingency 2009
Estimated Construction Cost: $9,600,000
Fund Source: AIP
Scope: Repair and stabilize the runway embankment and apron to correct settlement areas.
Estimated Completion Date: TBD
Status: Anticipate advertising, pending funding availability.

AMBLER

AMBLER AIRPORT REHABILITATION
Estimated Bid Date: Beyond 2011
Estimated Construction Cost: $9,500,000
Funding Source: AIP
Scope: Extend and widen main and crosswind runway. Resurface operational surfaces.
Estimated Completion Date: TBD
Status: Project on hold to assess environmental issues (asbestos).

AMBLER SEWAGE LAGOON ACCESS ROAD
Estimated Bid Date: unknown
Estimated Construction Cost: $1,500,000
Funding Source: Federal, construction funding not identified
Scope: Construct a new access road to the sewage lagoon.
Estimated Completion Date: TBD
Status: Plans are ready to advertise and working with NANA to resolve environmental issues (asbestos).

BARROW

BARROW (WILEY POST/ WILL ROGERS MEMORIAL) RUNWAY AND APRON PAVING
Contractor: SKW Eskimos Inc.
Award Date: 5/30/03
Award Amount: $25,500,000
Funding Source: AIP
Scope: Pave runway, taxiways, and apron; install new lighting and expand runway safety areas; relocate navigation aids.
Estimated Completion Date: 10/30/10
Status: Project is 65% complete.

BARROW (WILEY POST/ WILL ROGERS MEMORIAL) AIRPORT APRON EXPANSION
Estimated Bid Date: Beyond 2011
Estimated Construction Cost: $7,000,000
Funding Source: AIP
Scope: Expand apron and construct aviation support areas.
Estimated Completion Date: TBD
Status: Design underway.

BARROW ARCTIC RESEARCH CENTER ACCESS ROAD
Estimated Bid Date: 9/15/09
Estimated Construction Cost: $3,000,000
Funding Source: Federal Earmark
Scope: Construct a new road connecting Cake Eater Road to the new Barrow Arctic Research Center.
Estimated Completion Date: TBD
Status: Currently working on environmental documents and preliminary design.

NORTH SLOPE BOROUGH ROAD IMPROVEMENTS (BARROW)
Estimated Bid Date: 11/30/09
Estimated Construction Cost: $3,000,000
Funding Source: Federal Earmark
Scope: Extend the existing Laura Madison Road to Cake Eater Road; repair and upgrade the existing road to the new landfill; and rehabilitate and repair damage to the Dam Road caused by weather erosion.
Estimated Completion Date: TBD
Status: Currently working on environmental documents and preliminary design.

CHALKYITSIK

CHALKYITSIK AIRPORT IMPROVEMENTS
Estimated Bid Date: Contingency 2010
Estimated Construction Cost: $10,500,000
Funding Source: AIP
Scope: Resurface runway and taxiway and place a dust palliative on the surfaces at the Chalkyitsik Airport. Relocate the apron and access road, replace the snow removal equipment building (SREB), rehabilitate the airport lighting system and correct drainage problems at the end of the runway.
Estimated Completion Date: TBD
Status: Design and environmental work underway.

CIRCLE

CIRCLE DUST CONTROL

Estimated Bid Date: Spring 2009
Estimated Construction Cost: $900,000
Funding Source: Denali Commission
Scope: Resurface and provide an asphalt treated surface on Steese Highway near Circle.
Estimated Completion Date: TBD
Status: DOT&PF Maintenance and Operations will be doing the dust control project.

COLDFOOT

COLDFOOT AIRPORT IMPROVEMENTS

Estimated Bid Date: Beyond 2011
Estimated Construction Cost: $6,500,000
Funding Source: AIP, construction funding not identified
Scope: Resurface airport, replace lighting, clear obstructions. Protect runway and access road from erosion from the Koyukuk River.
Estimated Completion Date: TBD
Status: Design underway.

COPPER RIVER HIGHWAY

COPPER RIVER HIGHWAY: MP 38 - 43 HIGHWAY PROTECTION

Estimated Bid Date: Summer 2009
GO Bond Amount: $5,100,000
Funding Source: GO Bond
Scope: Raise highway grade approximately 4-6 feet through this section of the Copper River Highway. The highway embankment adjacent to the Copper River would also be armored to protect against future erosion and install new culverts.
Estimated Completion Date: TBD
Status: Design and permitting underway.

COPPER RIVER HIGHWAY MILLION $ BRIDGE – PHASE 2

Estimated Bid Date: Unknown
Estimated Construction Cost: $11,800,000
Fund Source: Federal, construction funding not identified
Scope: Replace bridge bearings, reconstruct abutment back walls, reinforce Piers #1 and #2, repair the underlying caissons and fix the piers to the caissons.
Estimated Completion Date: TBD
Status: Shelf project

CORDOVA

CORDOVA AIRPORT IMPROVEMENTS – STAGE I

Contractor: Swanson General Contractors Inc.
Award Date: 7/9/08
Award Amount: $3,800,000
Funding Source: AIP
Scope: Complete lighting and regulator building upgrades necessary to support the existing airport as well as the proposed partial parallel taxiway and connecting taxiways planned for the Cordova Airport.
Estimated Completion Date: 9/1/09
Status: Construction is 10% complete.

CORDOVA AIRPORT APRON, TAXIWAY AND GA IMPROVEMENTS, Stage II

Estimated Bid Date: August 2009
Estimated Construction Cost: $14,000,000
Funding Source: AIP
Scope: Construct transient air parking, general aviation parking, access roads, heliport pad, aviation support areas and complete obstruction removal. Expand existing apron area, resolve drainage problems and construct partial parallel and connecting taxiways.
Estimated Completion Date: TBD
Status: In final design

CORDOVA AIRPORT RUNWAY SAFETY AREA IMPROVEMENTS AND DRAINAGE

Estimated Bid Date: Beyond 2011
Estimated Construction Cost: $5,500,000
Funding Source: AIP
Scope: Rehabilitate the runway safety areas including grading and drainage improvements.
Estimated Completion Date: TBD
Status: Design underway

CORDOVA SHEPARD POINT ROAD
Estimated Bid Date: TBD
Estimated Construction Cost: $32,000,000 (for entire facility)
Funding Source: Federal, Exxon Oil Spill Funds, BIA and other unidentified
Scope: Construct approximately 4 miles of road from Orca Cannery to the deep water port site at Shepard Point.
Estimated Completion Date: TBD
Status: DOT&PF will provide $5,000,000 toward construction once the Oil Spill Response Facility has been designed and funding secured. BIA has record of decision for environmental impact assessment and it is signed. BIA is responsible for design.

DALTON HIGHWAY

DALTON HIGHWAY IMPROVEMENTS (MP 144-175 and MP 335-362)
Estimated Bid Date: Spring 2009
GO Bond Amount: $14,000,000
Funding Source: GO Bond
Scope: MP 144-175 and MP 335-362: Heavy deferred maintenance, some crushing and material haul to be contracted out.
Estimated Completion Date: TBD
Status: Design and permitting underway.

DALTON HWY MP 362 - 414 REHABILITATION
Estimated Bid Date: Ready to bid 2012
Estimated Construction Cost: $53,000,000
Funding Source: Federal, construction funding not identified
Scope: Rehabilitate, resurface, and widen 42 miles of highway.
Estimated Completion Date: TBD
Status: Design underway.

DALTON HIGHWAY MP 260 – 321 CULVERTS
Estimated Bid Date: May 2009
Estimated Construction Cost: $26,300,000
Funding Source: Stimulus
Scope: Replace existing culverts at various locations between MP 260 – 321, install one new bridge and raise the grade between MP 311.7 - 313.6.
Estimated Completion Date: TBD
Status: Anticipate advertising April 2009.

Alaska Department of Transportation and Public Facilities

Northern Region Construction & Design Projects

February 2009

DALTON HIGHWAY MP 274 – 289 RECONSTRUCTION
Estimated Bid Date: 8/1/09
Estimated Construction Cost: $24,000,000
Funding Source: Federal Earmark, Federal
Scope: Reconstruct the Dalton Highway between MP 274 – 289.
Estimated Completion Date: TBD
Status: Design underway.

DALTON HWY MP 175 - 197 REHABILITATION
Estimated Bid Date: May 2009
Estimated Construction Cost: $29,600,000
Funding Source: Stimulus
Scope: Rehabilitate, resurface and replace the Marion Creek Bridge.
Estimated Completion Date: TBD
Status: Anticipate advertising April 2009.

DALTON HWY MP 197 – 209 REHABILIATION
Estimated Bid Date: Ready to bid Summer 2009.
Estimated Construction Cost: $16,400,000
Funding Source: Federal, construction funding not identified
Scope: Rehabilitate, resurface.
Estimated Completion Date: TBD
Status: Design underway.

DALTON HWY MP 11 - 18 RECONSTRUCTION
Estimated Bid Date: Ready to advertise 2012
Estimated Construction Cost: $15,000,000
Funding Source: Federal Earmark; Federal, construction funding not identified.
Scope: Reconstruct, widen and pave seven miles of highway.
Estimated Completion Date: TBD
Status: Design underway.

DALTON HWY MP 9 MILE HILL NORTH
Estimated Bid Date: Ready to bid Fall 2009
Estimated Construction Cost: $26,300,000
Funding Source: Federal, construction funding not identified
Scope: Reconstruct and realign 3 miles of highway to remove excessive grades and curves.
Estimated Completion Date: TBD
Status: Design underway.

DENALI HIGHWAY

DENALI HIGHWAY MP 7 WAYSIDE

Estimated Bid Date: May 2009
Estimated Construction Cost: $590,000
Funding Source: Stimulus, construction funding not identified
Scope: Construct a wayside with enhancements near MP 7 of the Denali Highway. Enhancements include a kiosk shelter, information displays and a vault toilet.
Estimated Completion Date: TBD
Status: Anticipate advertising April 2009.

DELTA JUNCTION

DELTA JUNCTION CITY STREET REHABILATION

Estimated Bid Date: Summer 2009
Estimated Construction Cost: $4,000,000
Funding Source: Stimulus
Scope: Rehabilitate city streets within Delta Junction.
Estimated Completion Date: TBD
Status: Design underway

ELLIOTT HIGHWAY

ELLIOTT HWY MP 108 - 120 REHABILITATION

Estimated Bid Date: Ready to bid Spring 2011
Estimated Construction Cost: $9,200,000
Funding Source: Federal, construction funding not identified
Scope: Reconstruct the highway between MP 108 and 120 (near Minto).
Estimated Completion Date: TBD
Status: Design underway.

EMMONAK

EMMONAK AIRPORT REHABILITATION – Stage II

Contractor: Bering Pacific Company
Award Date: 12/30/08
Award Amount: $9,400,000
Funding Source: AIP
Scope: Rehabilitate the main apron including the taxiway intersection and access road. Place surface course on the rehabilitated apron.
Contract Completion Date: TBD
Status: Awarded, to begin spring 2009.

EMMONAK AIRPORT CLINIC ROAD REPAIRS
Estimated Bid Date: Summer 2009
Estimated Construction Cost: $2,500,000
Funding Source: Federal
Scope: Repair damage to airport access road caused by flooding.
Contract Completion Date: TBD
Status: Design underway.

EMMONAK COMMUNITY ROAD IMPROVEMENTS AND DUST CONTROL
Estimated Bid Date: Summer 2010
Estimated Construction Cost: $10,000,000
Funding Source: Denali Commission; Federal Earmark; BIA; General Funds; GO Bond; Stimulus
Scope: Rehabilitate community roads and apply a dust palliative.
Estimated Completion Date: TBD
Status: Design underway.

EMMONAK LANDFILL ROAD
Estimated Bid Date: Summer 2009
Estimated Construction Cost: $2,000,000
Funding Source: see Emmonak Community Road
Scope: Construct a new road to the new landfill site.
Estimated Completion Date: TBD
Status: Design underway.

FAIRBANKS/FMATS

2ND AVE AND MOORE STREET REALIGNMENT
Estimated Bid Date: Unknown
Estimated Construction Cost: $2,125,000
Funding Source: State Earmark
Scope: Realign 2nd Avenue/ Moore Street from Wilbur Street to the Airport Way frontage road.
Estimated Completion Date: TBD
Status: Design underway.

3RD STREET WIDENING
Estimated Bid Date: Ready to bid Summer 2011
Estimated Construction Cost: $12,900,000
Funding Source: Federal, General Funds
Scope: Widen 3rd Ave. from Hamilton Avenue to Minnie Street.
Estimated Completion Date: TBD
Status: Design underway and Right of Way acquisition underway.

Alaska Department of Transportation and Public Facilities

Northern Region Construction & Design Projects

February 2009

23rd AVENUE IMPROVEMENTS
Estimated Bid Date: Spring 2010
Estimated Construction Cost: $2,400,000
Funding Source: Federal Earmark
Scope: Upgrade 23rd Avenue (Cushman Street to Lathrop Street). Project will include new drainage, curbing, sidewalk, and asphalt resurfacing improvements.
Estimated Completion Date: TBD
Status: Design underway

AIRPORT WAY WEST IMPROVEMENTS
Estimated Bid Date: Spring 2011
Estimated Construction Cost: $4,450,000
Funding Source: Federal, construction funds not identified
Scope: Construct intersection improvements at Airport Road, Dale Road and the Airport Access Road.
Estimated Completion Date: TBD
Status: Design underway

BARNETTE STREET: 7TH - GAFFNEY
Estimated Bid Date: Summer 2009
Estimated Construction Cost: $1,100,000
Funding Source: FMATS State Earmark
Scope: Convert Barnette Street to two-way from 7th to Gaffney
Estimated Completion Date: TBD
Status: Design underway

CARTWRIGHT ROAD IMPROVEMENTS
Estimated Bid Date: Spring 2010
Estimated Construction Cost: $2,500,000
Funding Source: State
Scope: Reconstruct Van Horn Road West (Cartwright Road) from Peger Road towards the Fairbanks International Airport, as funding allows.
Estimated Completion Date: TBD
Status: Design underway.

CHENA HOT SPRINGS MP 24 – 56 REHABILITATION
Estimated Bid Date: 3/10/09
Estimated Construction Cost: $12,500,000
Funding Source: Federal
Scope: Resurface and rehabilitate Chena Hot Springs Road from MP 24 – 56.
Estimated Completion Date: TBD
Status: Advertised

CHENA PUMP/ SMALL TRACTS SAFETY IMPROVEMENTS
Estimated Bid Date: Summer 2011
Estimated Construction Cost: $5,000,000
Funding Source: FMATS Federal, construction funding not identified
Scope: Widen Chena Pump Road from Palo Verde to Despain Lane including a new bridge.
Estimated Completion Date: TBD
Status: Design underway

COLLEGE ROAD/ ANTOINETTE AVE INTERSECTION IMPROVEMENTS
Estimated Bid Date: Spring 2011
Estimated Construction Cost: $1,400,000
Funding Source: Federal
Scope: Reconstruct the intersection at College Road/ Margaret/ Antoinette.
Estimated Completion Date: TBD
Status: Design underway.

COLLEGE ROAD REHABILITATION (Univ. to Danby)
Estimated Bid Date: Summer 2011
Estimated Construction Cost: $7,500,000
Funding Source: FMATS Federal, construction funding not identified
Scope: Rehabilitate the pavement on College Road between University Avenue and Danby Street.
Estimated Completion Date: TBD
Status: Design underway

COLLEGE ROAD RIGHT TURN LANES
Estimated Bid Date: 5/16/11
Estimated Construction Cost: $1,200,000
Funding Source: Federal
Scope: Construct right turn lanes at College Road and Old Steese Highway and College Road and the Steese Expressway.
Estimated Completion Date: TBD
Status: Design underway.

COWLES STREET UPGRADE
Contractor: Exclusive Paving
Award Date: 9/5/08
Award Amount: $3,479,000
Funding Source: Federal
Scope: Upgrade Cowles St. (19th-23rd Ave) and 21st Ave (Cowles-Lathrop). Work will include grading, paving, drainage, sidewalks, & illumination improvements.
Estimated Completion Date: TBD
Status: Awarded with work to begin spring 2009.

CUSHMAN STREET RECONSTRUCTION
Estimated Bid Date: Summer 2009
Estimated Construction Cost: $6,000,000
Funding Source: State Earmark
Scope: Convert Cushman Street two-way from 1st Avenue to 10th Avenue, including traffic signal revision, pavement and sidewalk rehabilitation.
Estimated Completion Date: TBD
Status: Stage one (7th to 10th) to be bid this summer. Stage two to be determined. Design by City of Fairbanks is underway.

FAIRBANKS ALASKA RAILROAD FREIGHT YARD (Fairbanks Intermodal Distribution Pilot Grant Program)
Estimated Bid Date: Summer 2009
Estimated Construction Cost: $1,800,000
Funding Source: Federal Earmark
Scope: AKRR Danby Street Improvements: Construct truck staging area for freight movements, two new track crossings, realign the existing access road, and drainage improvements.
Estimated Completion Date: TBD
Status: Alaska Railroad designed project and the under review by Design section.

FIA RUNWAY 1L-19R RECONSTRUCTION
Contractor: Exclusive Paving
Award Date: 10/3/07
Award Amount: $33,000,000
Funding Source: AIP, Entitlements
Scope: Rehabilitate the pavement of Runway 1L-19R and construct a new regulator building.
Estimated Completion Date: 9/1/10
Status: Construction is 30% complete.

FMATS PREVENTATIVE MAINTENANCE PROGRAM
Estimated Bid Date: Summer 2009
Estimated Construction Cost: $900,000
Funding Source: Federal
Scope: Various projects such as pavement surface maintenance, traffic control signal upgrades, street lighting load center rehab, storm drain maintenance, reclaim/double chip seal coat, crack sealing, roadway striping, dust control, signage replacement and intersection upgrades.
Status: Design underway

GAFFNEY ROAD RECONSTRUCTION
Estimate Bid Date: Summer 2009
Estimated Construction Cost: $1,600,000
Funding Source: State Earmark
Scope: Disconnect the sanitary sewer from the storm drain at the intersection of Cushman and Gaffney. Provide new storm drain system east of Cushman and reconnect to the existing Airport Way system. Convert Gaffney two way (west of Cushman) Cushman to Barnette.
Estimated Completion Date: TBD
Status: Design by City of Fairbanks is underway.

ILLINOIS STREET RECONSTRUCTION
Estimated Bid Date: 8/1/10
Estimated Construction Cost: $26,000,000
Funding Source: FMATS Federal, State Earmark
Scope: Reconstruct Illinois Street (1st Avenue to College Road) including the new Barnette Street Bridge across the Chena River and Noyes Slough crossings.
Estimated Completion Date: TBD
Status: Design underway
Note: New Barnette Bridge may be broken out as an FMATS Stimulus Project.

JOHANSEN EXPRESSWAY OFFSET LIGHTING
Estimated Bid Date: 8/1/09
Estimated Construction Cost: $450,000
Funding Source: Federal
Scope: Relocate existing light poles on the Johansen Expressway between Danby Street and College Road.
Estimated Completion Date: TBD
Status: Design underway

LEASURE SUBDIVISION IMPROVEMENTS
Estimated Bid Date: Spring 2010
Estimated Construction Cost: $750,000
Funding Source: Federal Earmark
Scope: Reconstruct 3.0 miles of gravel roads in the Leasure Subdivision area. Resurface and improve drainage.
Estimated Completion Date: TBD
Status: Design underway

NOBLE STREET RECONSTRUCTION
Estimated Bid Date: Spring 2011
Estimated Construction Cost: $10,920,000
Funding Source: FMATS Federal
Scope: Reconstruct Noble Street.
Estimated Completion Date: TBD
Status: Design underway

NORDALE ROAD PAVEMENT REHABILITATION: FNSB
Estimated Bid Date: 6/1/09
Estimated Construction Cost: $7,600,000
Funding Source: FMATS Federal, possible Stimulus for FMATS portion
Scope: Rehabilitate and resurface Nordale Road.
Estimated Completion Date: TBD
Status: In final design. Project to split into two construction projects: Badger Road to Chena River Bridge (FMATS area) and Chena River Bridge to Chena Hot Springs Road. If FMATS portion is not stimulus funded, than no construction funding is identified for entire project.

PHILLIPS FIELD ROAD UPGRADE
Estimated Bid Date: 5/15/09
Estimated Construction Cost: $3,000,000
Funding Source: FMATS Stimulus
Scope: Rehabilitate Phillips Field Road between Illinois Street and Peger Road.
Estimated Completion Date: TBD
Status: Design underway

SOUTH CUSHMAN IMPROVEMENTS
Estimated Bid Date: Summer 2012
Estimated Construction Cost: $9,000,000
Funding Source: Federal, FMATS Federal
Scope: Improve South Cushman Street from the Mitchell Expressway to Van Horn Road.
Estimated Completion Date: TBD
Status: Design underway

STEESE HIGHWAY/ JOHANSEN EXPRESSWAY AREA TRAFFIC IMPROVEMENTS
Estimated Bid Date: Summer 2010 Stage 1; Summer 2012 Stage 2
Estimated Construction Cost: $11,000,000
Funding Source: GO Bond
Scope: Improve the Steese Expressway between College Road and the Johansen Expressway. Include a traffic study to examine traffic circulation issues surrounding the Bentley Trust commercial property on the Steese Expressway, Johansen Expressway and College Road areas.
Estimated Completion Date: TBD
Status: Design underway

TRAINOR GATE AND FAREWELL INTERSECTION IMPROVEMENTS
Estimated Bid Date: Spring 2009
Estimated Construction Cost: $300,000
Fund Source: State Earmark
Scope: Construct intersection improvements to the intersection of Trainor Gate and "F" Street.
Estimated Completion Date: TBD
Status: Under design by the City of Fairbanks.

UNIVERSITY AVENUE WIDENING
Estimated Bid Date: 8/16/11
Estimated Construction Cost: $24,500,000 Stage 1
Funding Source: Federal, GO Bond, State Earmark
Scope: Widen University Avenue to 5 lanes, replace bridge and improve intersections improvements
Estimated Completion Date: TBD
Status: Design underway

WENDELL STREET ADA IMPROVEMENTS
Estimated Bid Date: Summer 2009
Estimated Construction Cost: $800,000
Funding Source: FMATS Federal – possible FMATS Stimulus
Scope: Pedestrian facility improvements to meet American with Disability Act standards.
Estimated Completion Date: TBD
Status: Design underway

WICKERSHAM STREET UPGRADE:
Estimated Bid Date: Summer 2009
Estimated Construction Cost: $3,000,000
Funding Source: State Earmark
Scope: Reconstruct Wickersham Street from 1st Avenue to 6th Avenue and 2nd and 3rd Avenues from Barnette to Cowles.
Estimated Completion Date: TBD
Status: Under design by the City of Fairbanks

WILBUR STREET EXTENSION
Estimated Bid Date: Unknown
Estimated Construction Cost: $850,000
Funding Source: State Earmark
Scope: Extend Wilbur Street from 2nd Avenue to the North and terminate with a cul-de-sac.
Estimated Completion Date: TBD
Status: Design underway.

YANKOVICH/MILLER HILL MULTI-USE PATH
Estimated Bid Date: Summer 2011
Estimated Construction Cost: $800,000
Funding Source: State Earmark
Scope: Construct a multi-use path along Yankovich Road and Mill Hill Road.
Estimated Completion Date: TBD
Status: Design underway

FORT YUKON

FORT YUKON DUST CONTROL

Estimated Bid Date: Summer 2009
Estimated Construction Cost: $1,800,000
Funding Source: Denali Commission
Scope: Provide dust control on Fort Yukon area roads.
Estimated Completion Date: TBD
Status: Design underway

FORT YUKON RUNWAY REHAB

Estimated Bid Date: March 2009
Estimated Construction Cost: $16,000,000
Funding Source: AIP - Stimulus
Scope: Resurface and include a dust palliative on the apron, taxiway, and runway at the Fort Yukon Airport. Construct a snow removal equipment building, correct drainage problems, clear overgrown vegetation, and complete other improvements as funding allows.
Estimated Completion Date: TBD
Status: Anticipate adverting February 2009.

GALENA

GALENA CAMPION ROAD EROSION PROTECTION

Estimated Bid Date: Ready to bid Summer 2010
Estimated Construction Cost: $7,000,000
Funding Source: Federal, construction funding not identified
Scope: Relocate 2 miles of Campion Road to avoid river erosion and install new large diameter culverts.
Estimated Completion Date: TBD
Status: Design underway

GALENA ROAD RESURFACING

Estimated Bid Date: Summer 2009
Estimated Construction Cost: $1,200,000
Funding Source: Federal Earmark
Scope: Raise grade, provide surfacing and apply a dust palliative on area roads.
Estimated Completion Date: TBD
Status: Design underway

GALENA SRE BUILDING
Estimated Bid Date: Summer 2009
Estimated Construction Cost: $1,000,000
Funding Source: AIP
Scope: Refurbish existing USAF building to house snow removal equipment.
Estimated Completion Date: TBD
Status: Design underway

GAMBELL

GAMBELL EVACUATION ROAD REPAIRS AND EXTENSION
Estimated Bid Date: Summer 2010
Estimated Construction Cost: $4,800,000
Funding Source: Earmark
Scope: Repair and extend the evacuation road.
Estimated Completion Date: TBD
Status: Design underway

GLENN HIGHWAY

GLENN HIGHWAY MP 172-189 (GO Bond, MP 181-189)
Estimated Bid Date: Winter 2009
Estimated Construction Cost: $7,500,000 (MP 172-189); $13,000,000 (MP 181-189)
Funding Source: GO Bond
Scope: This project will be split into two construction projects:

MP 172-181: Rehabilitate pavement, improve drainage and replace the Tolsana Creek Bridge. Estimated bid date: Summer 2009

MP 181-189 (GO Bond $13,000,000): Rehabilitate pavement, improve drainage, and construct a separated bike path to the school. Estimated bid date: Summer 2009

Estimated Completion Date: TBD
Status: Design underway

GOLOVIN

GOLOVIN AIRPORT IMPROVEMENTS
Estimated Bid Date: Beyond 2011
Estimated Construction Cost: $7,500,000
Funding Source: AIP, construction funding not identified
Scope: Resurface and widen runway and taxiway; and lighting work.
Estimated Completion Date: TBD
Status: Design underway

GRAYLING

GRAYLING AIRPORT RECONSTRUCTION
Contractor: Cruz Construction Inc.
Award Date: 7/29/08
Award Amount: $14,400,000
Funding Source: AIP
Scope: Lengthen and widen runway and safety area.
Contract Completion Date: 10/31/2010
Status: Construction is 10% complete.

GULKANA

GULKANA AIRPORT APRON AND TAXIWAY REPAVING
Estimated Bid Date: Beyond 2011
Estimated Construction Cost: $1,900,000
Funding Source: AIP, construction funding not identified
Scope: Reconstruct the apron and taxiway pavement.
Estimated Completion Date: TBD
Status: Design underway

HOLY CROSS

HOLY CROSS RUNWAY REHABILITATION
Estimated Bid Date: Beyond 2011
Estimated Construction Cost: $9,000,000
Funding Source: AIP, construction funding not identified
Scope: Relocate airport, raise grade, install new lighting, and resurface all operational surfaces.
Estimated Completion Date: TBD
Status: Design underway

HUGHES

HUGHES LANDFILL ROAD
Contractor: Indian Health Service
Award Date: 8/29/06
Award Amount: $988,000
Funding Source:
Scope: Construct a new landfill access road.
Contract Completion Date: 8/31/09
Status: Construction is 75% complete; under supervision and administration by ANTHC).

HUSLIA

HUSLIA AIRPORT IMPROVEMENTS

Estimated Bid Date: Summer 2010
Estimated Construction Cost: $7,900,000
Funding Source: AIP
Scope: Rehabilitate the safety areas and resurface the runway, taxiway and apron at the Huslia Airport. Apply dust palliative and improve the access road.
Estimated Completion Date: TBD
Status: Design underway

HUSLIA LANDFILL ROAD

Estimated Bid Date: Summer 2009
Estimated Construction Cost: $1,400,000
Funding Source: Federal
Scope: Upgrade the road to the new landfill site.
Estimated Completion Date: TBD
Status: Design underway

KALTAG

KALTAG AIRPORT IMPROVEMENTS

Estimated Bid Date: Beyond 2011
Estimated Construction Cost: $5,000,000
Funding Source: AIP, construction funding not identified
Scope: Resurface runway, reconstruct taxiway and apron, and apply dust palliative.
Estimated Completion Date: TBD
Status: Design underway

KIVALINA

KIVALINA AIRPORT PERMANENT REPAIRS

Estimated Bid Date: Spring 20009
Estimated Construction Cost: $1,000,000
Funding Source: Federal
Scope: Repair the eroded side slopes and safety area at the Kivalina Airport. Protect the most severely damaged portions of the side slopes with stone revetment.
Estimated Completion Date: TBD
Status: Design underway

KOTZEBUE

KOTZEBUE AIRPORT RUNWAY 17-35 RESURFACING

Estimated Bid Date: Beyond 2011
Estimated Construction Cost: $6,600,000
Funding Source: AIP, construction funding not identified
Scope: Resurface runway, install new lighting, expand runway safety area and apply dust palliative.
Estimated Completion Date: TBD
Status: Design underway

KOTZEBUE GENERAL AVIATION (GA) APRON IMPROVEMENTS

Estimated Bid Date: Summer 2009
Estimated Construction Cost: $14,500,000
Funding Source: AIP - Stimulus
Scope: Construct a new taxiway and general aviation apron, pavement and lighting.
Estimated Completion Date: TBD
Status: Design underway

KOTZEBUE SHORE AVENUE

Estimated Bid Date: April 2009
Estimated Construction Cost: $38,000,000
Funding Source: Stimulus, Federal Earmark, Federal
Scope: Reconstruct Shore Avenue and provide beach protection.
Estimated Completion Date: TBD
Status: Anticipate advertising March 2009

LAKE MINCHUMINA

LAKE MINCHUMINA AIRPORT IMPROVEMENTS

Estimated Bid Date: Beyond 2011
Estimated Construction Cost: $5,000,000
Funding Source: AIP, construction funding not identified
Scope: Repair runway settlement areas and re-route airport access road.
Estimated Completion Date: TBD
Status: Design underway

MANLEY

MANLEY AIRPORT RELOCATION
Estimated Bid Date: Contingency 2009
Estimated Construction Cost: $13,800,000
Funding Source: AIP
Scope: Relocate the Manley Airport, near its current location.
Estimated Completion Date: TBD
Status: Design underway, pending right of way acquisition

MARSHALL

MARSHALL BRIDGE REPLACEMENT
Estimated Bid Date: Bid ready Spring 2010
Estimated Construction Cost: $2,800,000
Funding Source: Stimulus
Scope: Replace existing structure on the Marshall Airport Access Road.
Estimated Completion Date: TBD
Status: Design underway, pending right of way acquisition

McCARTHY ROAD / EDGERTON HIGHWAY

McCARTHY ROAD / EDGERTON HWY PERMANENT FLOOD REPAIRS (various locations)
Estimated Bid Date: Summer 2009
Estimated Construction Cost: $1,000,000 - $5,000,000
Funding Source: Federal
Scope: Repair damage caused by October 2006 flooding (embankment, drainage, resurfacing).
Estimated Completion Date: TBD
Status: Design underway

McCARTHY ROAD/ EDGERTON FLOOD PERMANENT REPAIRS: KOTSINA BLUFF
Estimated Bid Date: Summer 2010
Estimated Construction Cost: $10,000,000
Funding Source: Federal
Scope: Repair damage caused by October 2006 flood damage to McCarthy Road from approximately MP 1.6 to 2.8 (Kotsina Bluff).
Estimated Completion Date: TBD
Status: Design underway

MINTO

MINTO AIRPORT IMPROVEMENTS

Contractor: Alaska Interstate Construction
Award Date: 9/10/07
Award Amount: $7,000,000
Funding Source: AIP
Scope: Construct a new runway, taxiway, apron, and aviation support area, PAPI pads, AWOS pad, segmented circle, SREB, new access road and lighting system.
Estimated Completion Date: 8/1/09
Status: Construction is 67% complete.

NOATAK

NOATAK AIRPORT RELOCATION

Estimated Bid Date: Beyond 2011
Estimated Construction Cost: $13,600,000
Funding Source: AIP, construction funding not identified
Scope: Relocate existing runway to avoid river erosion.
Estimated Completion Date: TBD
Status: Design underway

NOME

NOME AIRPORT GENERAL AVIATION IMPROVEMENTS

Estimated Bid Date: Beyond 2011
Estimated Construction Cost: $2,500,000
Funding Source: AIP
Scope: Acquire land and construct general aviation tie-down area. Project will include excavation, grading surface preparation, obstruction and/or hazard removal, storm drainage improvements, security fencing and gates, marking, signage, electrical hook-ups, establishment of lease lot sites and lighting.
Estimated Completion Date: TBD
Status: Design underway

NOME BYPASS ROAD IMPROVEMENTS

Contractor: Pro West Contractors LLC
Award Date: 12/16/08
Award Amount: $2,730,000
Funding Source: Earmark, Federal and SAFETEA-LU
Scope: Upgrade Nome Bypass Road from N Street to the Nome-Teller Highway.
Estimated Completion Date: 10/1/09
Status: Awarded.

NOME CITY STREETS REHABILITATION
Estimated Bid Date: Summer 2009
Estimated Construction Cost: $6,000,000
Funding Source: Stimulus, Federal Earmark
Scope: Rehabilitate Bering, Front and Seppala Streets; provide sidewalk/ pedestrian improvements along Front Street (Being to Steadmen Street).
Estimated Completion Date: TBD
Status: Design underway

NOME COUNCIL ROAD MP 4 - 15 REHABILITATION
Estimated Bid Date: Ready to bid Summer 2010
Estimated Construction Cost: $7,000,000
Funding Source: Federal, construction funding not identified
Scope: Repair, resurface and raise grade.
Estimated Completion Date: TBD
Status: Design underway

NOME HIGHWAY BRIDGE IMPROVEMENTS
Estimated Bid Date: Summer 2009
Estimated Construction Cost: $800,000
Funding Source: Federal Earmark, Federal
Scope: Construct improvements to eight Nome area bridge approaches, to include installing guardrail end treatments, vegetative clearing and slope flattening.
Estimated Completion Date: TBD
Status: Design underway

NOME ROAD IMPROVEMENTS
Estimated Bid Date: Fall 2009
Estimated Construction Cost: $800,000
Funding Source: Stimulus, Federal Earmark
Scope: Construct drainage improvements, resurfacing and provide dust control on Nome area roads.
Estimated Completion Date: TBD
Status: Design underway

NOME SNAKE RIVER BRIDGE REPLACEMENT
Estimated Bid Date: Spring 2010
Estimated Construction Cost: $10,000,000
Funding Source: GO Bond
Scope: Replace the Snake River Bridge in Nome.
Estimated Completion Date: TBD
Status: Design underway

NORTH POLE/FMATS

BADGER/ PEEDE ROAD CURVE RECONSTRUCTION
Estimated Bid Date: Summer 2009
Estimated Construction Cost: $590,000
Funding Source: Federal
Scope: Reconstruct the horizontal curve at Badger Road MP 5.5 at the intersection of Peede and Holmes Road.
Estimated Completion Date: TBD
Status: Design underway

DENNIS ROAD EXTENSION
Estimated Bid Date: Unknown
Estimated Construction Cost: $8,800,000
Funding Source: Federal Earmark, construction funding not identified
Scope: Extend Dennis Road from Badger Raod to Seawolf Drive, to provide access to an existing residential area. Will include pedestrian facility from Badger Road to the north side of the Chena River.
Estimated Completion Date: TBD
Status: Design underway. Earmark for construction lapsed.

NORTH POLE HOMESTEAD ROAD/ NPHS BOULEVARD EXTENSION
Contractor: Exclusive Paving
Award Date: Pending
Award Amount: $1,379,000
Contract Completion Date: TBD
Fund Source: Federal Earmark, State Earmark
Scope: Extend Homestead Road and North Pole High School Boulevard in North Pole to connect the two roadways.
Status: Awarded to Exclusive Paving on January 29, 2009.

NORTH POLE INTERCHANGE PEDESTRIAN FACILITIES
Estimated Bid Date: Beyond 2012
Estimated Construction Cost: $1,700,000
Funding Source: FMATS Federal
Scope: Construct pedestrian facilities along St. Nicholas Drive.
Estimated Completion Date: TBD
Status: Design underway

PLACK ROAD BIKE/ PEDESTRIAN FACILITY
Estimated Bid Date: Beyond 2012
Estimated Construction Cost: $3,820,000
Funding Source: FMATS Federal
Scope: Construct pedestrian facilities along Plack Road.
Estimated Completion Date: TBD
Status: Design underway

NORTHWAY

NORTHWAY AIRPORT PERMANENT REPAIRS
Contractor: Alaska Interstate Construction
Award Date: 11/28/07
Award Amount: $15,300,000
Funding Source: FEMA
Scope: Rehabilitate and repave the airport from the damage caused by the 2002 earthquake.
Estimated Completion Date: 10/31/09
Status: Construction is 45% complete, anticipated completion fall 2009.

NULATO

NULATO AIRPORT IMPROVEMENTS
Estimated Bid Date: Beyond 2011
Estimated Construction Cost: $3,200,000
Funding Source: AIP
Scope: Resurface all operational surfaces.
Estimated Completion Date: TBD
Status: Design underway

NUNAM IQUA (SHELDON POINT)

NUNAM IQUA RUNWAY EXTENSION
Estimated Bid Date: Beyond 2011
Estimated Construction Cost: $14,000,000
Funding Source: AIP
Scope: Widen and extend the existing runway.
Estimated Completion Date: TBD
Status: Design underway

PARKS HIGHWAY

PARKS HIGHWAY MP 194 BROAD PASS RR OVERCROSSING
Estimated Bid Date: Bid ready Summer 2010
Estimated Construction Cost: $25,200,000
Funding Source: Federal
Scope: Construct an at grade separated crossing.
Estimated Completion Date: TBD
Status: The design is complete, construction funding not identified.

PARKS HIGHWAY MP 240 - 262 REHABILITATION
Estimated Bid Date: Bid ready Summer 2011
Estimated Construction Cost: $26,400,000
Funding Source: Federal, construction funding not identified
Scope: Rehabilitate, resurface and construct passing lanes.
Estimated Completion Date: TBD
Status: Design underway

PARKS HIGHWAY MP 287 - 305 RESURFACING
Estimated Bid Date: June 2009
Estimated Construction Cost: $11,000,000
Funding Source: Federal
Scope: Rehabilitate and resurface the Parks Highway between MP 287 – 305.
Estimated Completion Date: TBD
Status: Design underway

PILOT STATION

PILOT STATION AIRPORT RELOCATION
Estimated Bid Date: Contingency 2010
Estimated Construction Cost: $15,700,000
Funding Source: AIP
Scope: Relocate existing airport.
Estimated Completion Date: TBD
Status: Design underway

Alaska Department of Transportation and Public Facilities

Northern Region Construction & Design Projects

February 2009

POINT HOPE

POINT HOPE EVACUATION ROAD REPAIRS AND EXTENSION

Contractor: Ridge Contracting, Inc.
Award Date: Pending
Award Amount: $1,661,000 (summer 2009 portion)
Fund Source: Federal Earmark
Scope: Repair and extend the existing Point Hope evacuation road. There will be another project summer 2010.
Estimated Completion Date: 10/31/09
Status: Awarded.

RICHARDSON HIGHWAY

RICHARDSON HWY MP 148 - 173 RECONSTRUCTION

Estimated Bid Date: Bid ready 2009
Estimated Construction Cost: MP 148-159 $25,000,000; MP 159-168 $24,600,000; MP 167-173 $20,700.000
Funding Source: Federal, construction funding not identified
Scope: Reconstruct the Richardson Highway from MP 148 - 173.
Estimated Completion Date: TBD
Status: Design complete for MP 148-159. Other sections will be completed summer 2009.

RICHARDSON HWY MP 173 - 185 RECONSTRUCTION

Estimated Bid Date: Bid ready 2010
Estimated Construction Cost: $19,200,000
Funding Source: Federal, construction funding not identified
Scope: Reconstruct the Richardson Hwy from MP 174 and 185.
Estimated Completion Date: TBD
Status: Design underway

RICHARDSON HIGHWAY MP 210 & 216 CURVE RECONSTRUCTION

Estimated Bid Date: Bid ready Summer 2009
Estimated Construction Cost: $500,000
Funding Source: Federal
Scope: Reconstruct horizontal curve at MP 210 and 216.
Estimated Completion Date: TBD
Status: Design underway

RICHARDSON HIGHWAY PERMANENT FLOOD REPAIRS (various locations)
Estimated Bid Date: Bid ready Spring 2010
Estimated Construction Cost: $11,400,000
Funding Source: Federal
Scope: Repair damage caused by October 2006 flood event (embankment, surfacing and drainage).
Estimated Completion Date: TBD
Status: Design underway

RICHARDSON HIGHWAY PERMANENT PIPE REPAIRS (Oct. '06)
Contractor: Hamilton Construction
Award Date: 1/16/09
Award Amount: $1,407,000
Funding Source: Federal
Scope: Repair damage drainage structures caused by October 2006 flooding.
Estimated Completion Date: 8/15/09
Status: Awarded.

RICHARDSON HWY PERMANENT FLOOD REPAIRS (various locations)
Estimated Bid Date: Bid ready Winter 2009
Estimated Construction Cost: $11,400,000
Funding Source:
Scope: Repair damage caused by October 2006 flood event (embankment, surfacing and drainage).
Estimated Completion Date: TBD
Status: Design underway.

RICHARDSON HIGHWAY MP 228 ONE MILE CREEK BRIDGE REPLACEMENT
Estimated Bid Date: Bid ready Spring 2010
Estimated Construction Cost: $7,000,000
Funding Source: Federal, construction funding not identified
Scope: Replace the One Mile Creek Bridge and improve approaches.
Estimated Completion Date: TBD
Status: Design underway

Alaska Department of Transportation and Public Facilities

Northern Region Construction & Design Projects

February 2009

RICHARDSON HWY MP 257 - 265 RECONSTRUCTION
Estimated Bid Date: Bid ready Summer 2011
Estimated Construction Cost: $15,400,000
Funding Source: Federal, construction funding not identified
Scope: Reconstruct the Richardson Hwy between MP 257 and 265 and replace the Jarvis Creek Bridge.
Estimated Completion Date: TBD
Status: Design underway

RICHARDSON HIGHWAY MP 276 – 286 RESURFACE
Estimated Bid Date: Bid ready Summer 2009
Estimated Construction Cost: $4,500,000
Funding Source: Stimulus
Scope: Rehabilitate and resurface between MP 276 (Tanana River Bridge) and MP 286 (Shaw Creek Bridge)
Estimated Completion Date: TBD
Status: Design underway

RICHARDSON HIGHWAY MP 287 SHAW CREEK BRIDGE REPLACEMENT
Estimated Bid Date: Bid ready Summer 2009
Estimated Construction Cost: $8,400,000
Funding Source: State earmark
Scope: Replace the Shaw Creek Bridge.
Estimated Completion Date: TBD
Status: Design underway

RICHARDSON HIGHWAY MP 345 SHAW Moose Creek RR Overpass
Estimated Bid Date: Bid ready Spring 2009
Estimated Construction Cost: $14,000,000
Funding Source: Stimulus
Scope: Construct a grade separated railroad crossing at approximately MP 345.
Estimated Completion Date: TBD
Status: Design underway

RICHARDSON HIGHWAY NORTH POLE INTERCHANGE (GARVEE)
Contractor: HC Contractors
Award Date: 9/25/07
Award Amount: $21,800,000
Contract Completion Date: 8/15/09
Scope: Construct a grade separated interchange on the Richardson Highway in North Pole. Reconfigure 5th Ave./Mission Road and Laurance Road intersections to allow only right-in and right-out movements. Acceleration and deceleration lanes will be lengthened.
Status: Project is 65% complete.

RICHARDSON HWY MP 354 - 357 ACCESS/SAFETY IMPROVEMENTS
Estimated Bid Date: Bid ready Summer 2010
Estimated Construction Cost: $3,500,000
Funding Source: Federal, construction funding not identified
Scope: Improve existing access control and provide turn and acceleration lanes.
Estimated Completion Date: TBD
Status: Design underway

RICHARDSON HIGHWAY MP 357 NEW WEIGH STATION
Estimated Bid Date: Summer 2009
Estimated Construction Cost: $12,700,000
Funding Source: Federal
Scope: New weighing system facilities to facilitate simultaneous group axle and gross weight indications for truck weight enforcement.
Estimated Completion Date: TBD
Status: In final design

RUBY

RUBY AIRPORT IMPROVEMENTS
Estimated Bid Date: Beyond 2011
Estimated Construction Cost: $6,300,000
Funding Source: AIP, construction funding not identified
Scope: Reconstruct runway to minimize grade changes.
Estimated Completion Date: TBD
Status: Design underway

SAVOONGA

SAVOONGA AIRPORT IMPROVEMENTS

Contractor: Brice, Inc.
Award Date: 10/24/08
Award Amount: $14,800,000
Funding Source: AIP
Scope: Rehabilitate the Savoonga Airport.
Contract Completion Date: 10/31/10
Status: Bids recently awarded. Construction to begin in spring 2009.

SELAWIK

SELAWIK BOARDWALK AND LANDFILL ROAD

Contractor: Northern Construction Services
Award Date: 4/4/08
Award Amount: $5,200,000
Funding Source: Denali Commission
Scope: Construct a 6,200' gravel road from Selawik to the new landfill and replace approximately 2 miles of boardwalk.
Contract Completion Date: 9/30/09
Status: Construction is 45% complete.

SELAWIK RUNWAY EXTENSION

Estimated Bid Date: Beyond 2011
Estimated Construction Cost: $5,000,000
Funding Source: AIP, construction funding not identified
Scope: Expand the existing runway.
Estimated Completion Date: TBD
Status: Design underway

SHAGELUK

SHAGELUK AIRPORT ACCESS ROAD IMPROVEMENTS

Estimated Bid Date: Bid ready Spring 2012
Estimated Construction Cost: $6,200,000
Funding Source: Federal, construction funding not identified
Scope: Realign and improve the airport access road.
Estimated Completion Date: TBD
Status: Design underway

Alaska Department of Transportation and Public Facilities

Northern Region Construction & Design Projects

February 2009

ST. MARY'S

ST. MARY'S CROSSWIND RUNWAY REHABILITATION
Estimated Bid Date: Contingency 2009
Estimated Construction Cost: $6,000,000
Funding Source: AIP
Scope: Resurface existing runway and obstruction removal.
Estimated Completion Date: TBD
Status: Design underway, funding pending availability

ST. MICHAELS

ST. MICHAELS AIRPORT IMPROVEMENTS
Estimated Bid Date: Beyond 2011
Estimated Construction Cost: $7,500,000
Funding Source: AIP, construction funding not identified
Scope: Rehabilitate operational surfaces, install lighting, and resurface.
Estimated Completion Date: TBD
Status: Design underway

STEBBINS

STEBBINS AIRPORT IMPROVEMENTS
Estimated Bid Date: Beyond 2011
Estimated Construction Cost: $3,000,000
Funding Source: AIP, construction funding not identified
Scope: Extend and widen existing runway.
Estimated Completion Date: TBD
Status: Design underway

STEESE HIGHWAY

STEESE HIGHWAY MP 62 - 81 REHABILITATION
Estimated Bid Date: Bid ready
Estimated Construction Cost: MP 62-69, $7,000,000 and MP 69-8, $9,200,000
Funding Source: Federal, construction funding not identified
Scope: Resurface and improve drainage.
Estimated Completion Date: TBD
Status: Shelf project

TAYLOR HIGHWAY

TAYLOR HIGHWAY MP 64 TO THE CANADIAN BORDER
Estimated Bid Date: varies see status
Estimated Construction Cost: $43,500,000
Funding Source: Federal, construction funding not identified
Scope: Rehabilitate the Taylor Hwy between MP 64 and the Canadian Border.
Estimated Completion Date: TBD
Status: Design underway. Construction would be broken down into three shorter sections.
MP 70 Lost Chicken Slide; $5,000,000; Bid ready Summer 2010
MP 95-Border; $10,700,000; Bid ready Summer 2010
MP 64-82; $16,400,000; Bid ready Summer 2010
MP 82-95; $11,500,000; Bid ready Summer 2011

TOK CUTOFF

TOK CUTOFF MP 2 GAKONA RIVER BRIDGE REPLACEMENT Estimated Bid Date: Summer 2009
Estimated Construction Cost: $8,100,000
Funding Source: Stimulus
Scope: Replace the Gakona River Bridge.
Estimated Completion Date: TBD
Status: Design underway

UNALAKLEET

UNALAKLEET AIRPORT PAVING
Contractor: QAP
Award Date: 8/10/06
Award Amount: $21,100,000
Funding Source: AIP
Scope: Runway, taxiway & apron repaving/reconstruction; replace fencing & lighting.
Estimated Completion Date: 9/30/09
Status: Project is 75% complete.

UNALAKLEET AIRPORT SNOW REMOVAL EQUIPMENT BUILDING
Estimated Bid Date: Fall 2009
Estimated Construction Cost: $6,300,000
Funding Source: AIP
Scope: Construct a new snow removal equipment building.
Estimated Completion Date: TBD
Status: Design underway

VALDEZ

VALDEZ: BIKE/ PED AND PAVEMENT REHABILITATION

Estimated Bid Date: Bid ready Summer 2010
Estimated Construction Cost: $3,300,000
Funding Source: Stimulus
Scope: Repave the bike path along the Richardson Highway from Egan Drive to Robe River Subdivision (7 miles). Rehabilitate and pave the access road to the Blueberry Lake Campground.
Estimated Completion Date: TBD
Status: Design underway

WHITE MOUNTAIN

WHITE MOUNTAIN AIRPORT IMPROVEMENTS

Estimated Bid Date: Beyond 2011
Estimated Construction Cost: $3,600,000
Funding Source: AIP, construction funding not identified
Scope: Extend and widen existing crosswind runway.
Estimated Completion Date: TBD
Status: Design underway

ALASKA SEISMIC HAZARDS SAFETY COMMISSION

A LOOK AT CURRENT ACTIVITIES WITH AN EMPHASIS ON SCHOOLS

Presented at a joint Meeting of
the Senate Education and
Finance Committees

Dr. JOHN L. AHO, Ph.D., Sc.D.

February 20, 2009

ASHSC Alaska Seismic Hazards Safety Commission

Presentation Summary

- A Brief History of the Alaska Seismic Hazards Safety Commission (ASHSC)
- ASHSC Standing Committees (with an emphasis on schools)
- An Historic Perspective of School Failures and a Look at Resultant Mitigation Legislation
- An Alaskan Communities' Experience
- Presentation Closure and Next Steps Forward
  - » http:www.dggs.dnr.state.ak.us/seismic_hazards_safety_commission.htm

ASHSC Alaska Seismic Hazards Safety Commission

History of ASHSC

- HB 53 established ASHSC in 2002
- 11 Members
- Policy Recommendations
- ASHSC Goals
- Standing Committees
- Administered by DNR

ASHSC Alaska Seismic Hazards Safety Commission

ASHSC Standing Committees

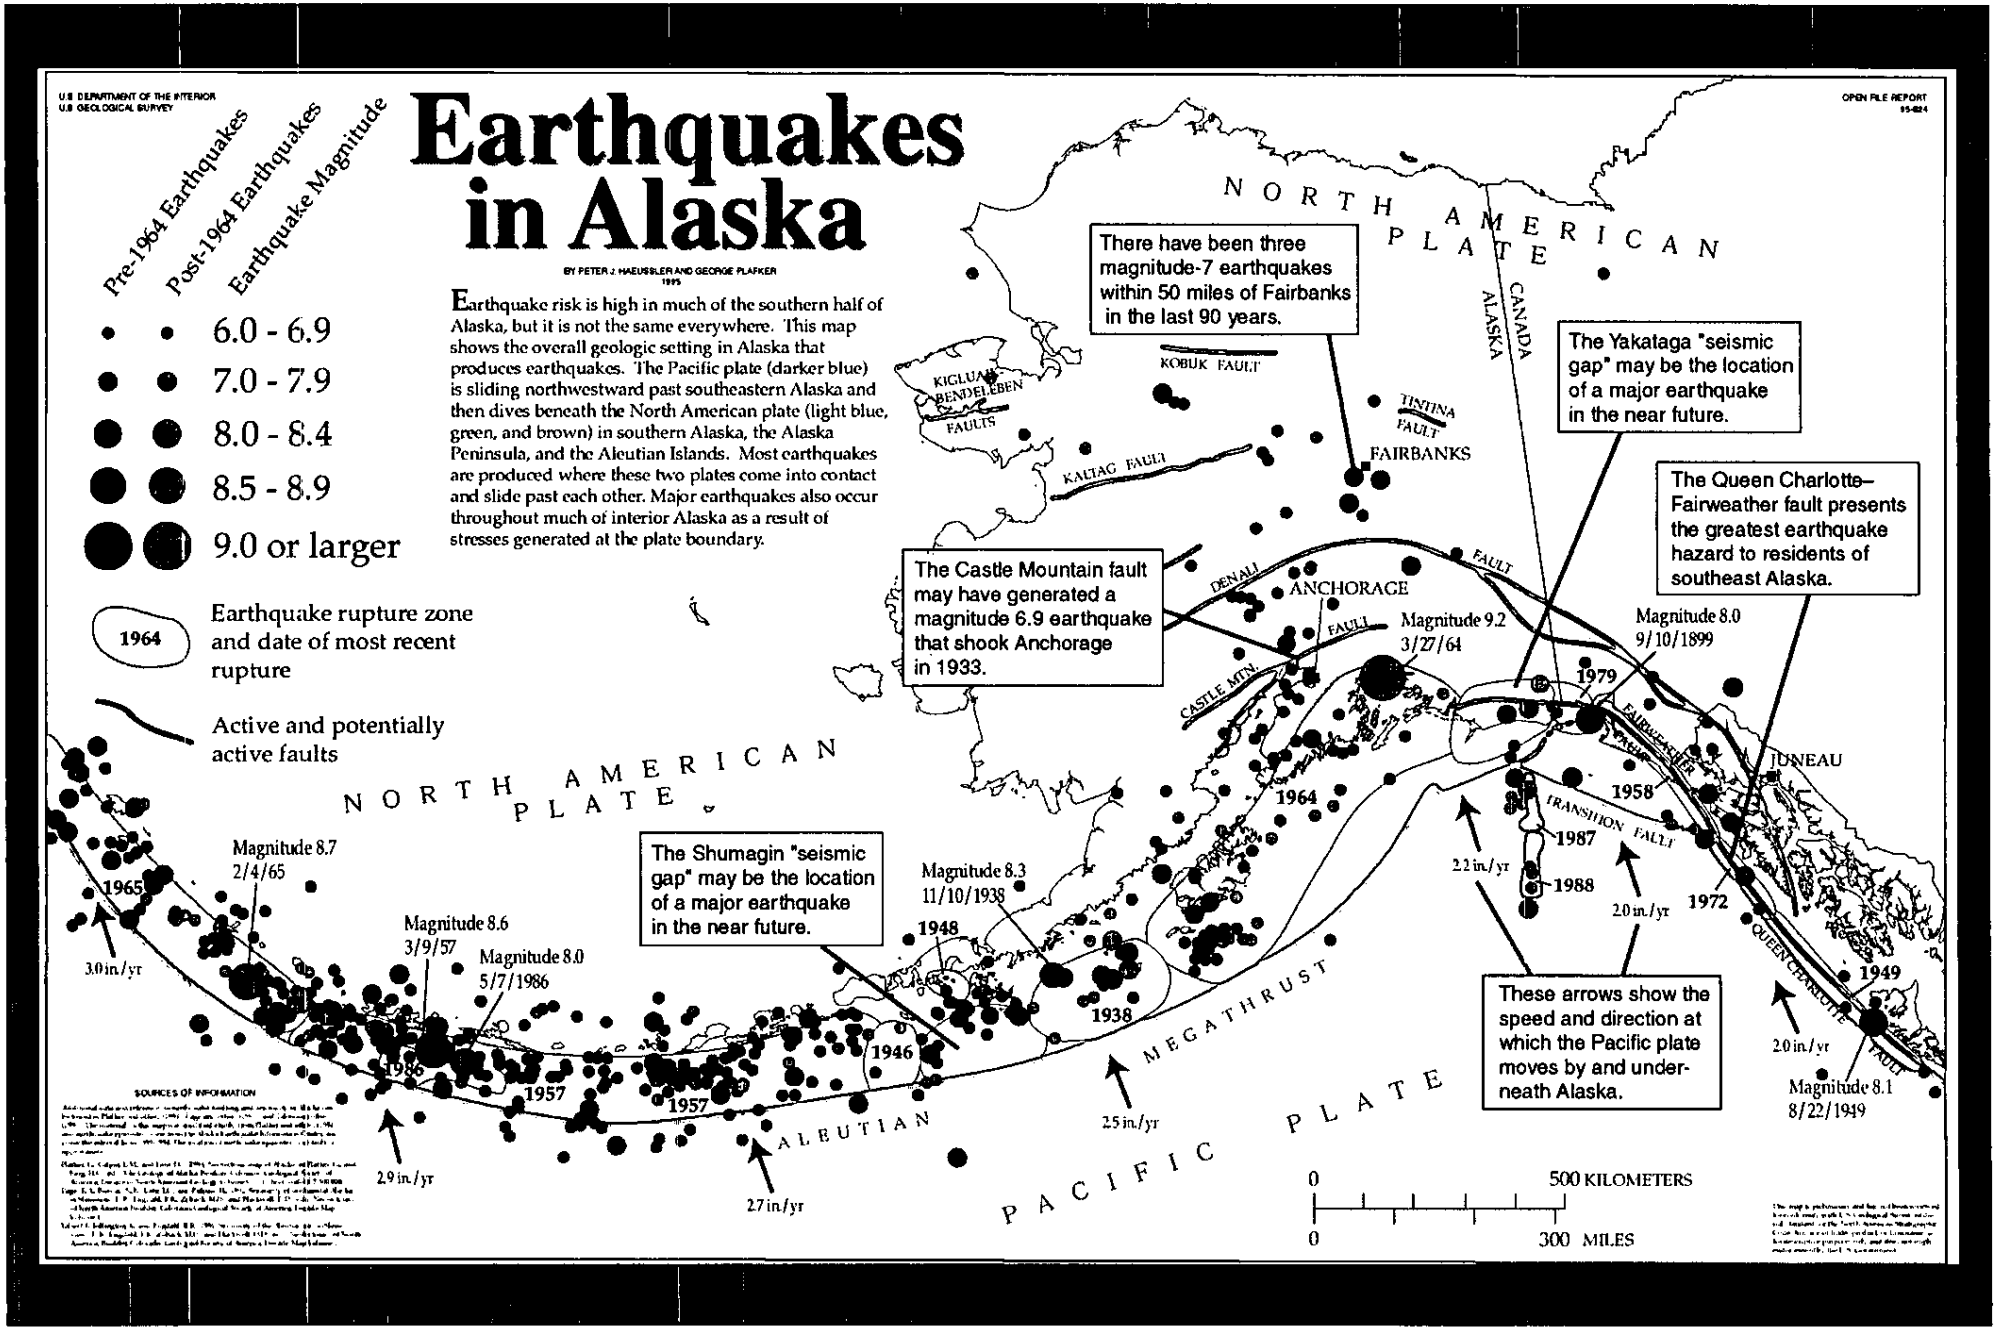
- Insurance
- Schools
- Earthquake Scenarios
- Education & Outreach
- Hazards Identification
- Response, Recovery, & Loss Estimation
- Post-Earthquake Planning
- Partnership

ASHSC Alaska Seismic Hazards Safety Commission

Schools Committee Tasks

- Identify previously accomplished work
- Identify legislation affecting design & construction
- Examine current plan review/inspection procedures
- Examine Code provisions relating to schools
- Identify seismically at-risk facilities
- Identify and interview stakeholders
- Develop conclusions/recommendations and way forward

ASHSC Alaska Seismic Hazards Safety Commission



U.S. DEPARTMENT OF THE INTERIOR
U.S. GEOLOGICAL SURVEY
OPEN FILE REPORT
95-624
Earthquakes in Alaska
BY PETER J. HAEUSSLER AND GEORGE PLAFKER
1995
Earthquake risk is high in much of the southern half of Alaska, but it is not the same everywhere. This map shows the overall geologic setting in Alaska that produces earthquakes. The Pacific plate (darker blue) is sliding northwestward past southeastern Alaska and then dives beneath the North American plate (light blue, green, and brown) in southern Alaska, the Alaska Peninsula, and the Aleutian Islands. Most earthquakes are produced where these two plates come into contact and slide past each other. Major earthquakes also occur throughout much of interior Alaska as a result of stresses generated at the plate boundary.
Pre-1964 Earthquakes
Post-1964 Earthquakes

Earthquake rupture zone and date of most recent rupture
Active and potentially active faults
There have been three magnitude-7 earthquakes within 50 miles of Fairbanks in the last 90 years.
The Yakataga "seismic gap" may be the location of a major earthquake in the near future.
The Queen Charlotte–Fairweather fault presents the greatest earthquake hazard to residents of southeast Alaska.
The Castle Mountain fault may have generated a magnitude 6.9 earthquake that shook Anchorage in 1933.
The Shumagin "seismic gap" may be the location of a major earthquake in the near future.
These arrows show the speed and direction at which the Pacific plate moves by and underneath Alaska.

ASHSC Alaska Seismic Hazards Safety Commission

ALASKA SEISMIC HAZARDS SAFETY COMMISSION

Report to the Governor and State Legislature

FEBRUARY 2009

EXECUTIVE SUMMARY

This annual report to the Governor and Legislature from the Alaska Seismic Hazards Safety Commission (ASHSC) reiterates the priority issues and goals of the Commission and identifies its 2008 accomplishments. The report updates the history and status of the Commission, identifies the current membership, lists the accomplishments to date, describes various committee functions, and presents the Commission's recommendations to improve seismic safety in Alaska.

The Commission operates under the powers and duties prescribed by its enacting legislation (Appendix A) and is guided by its Charter (Appendix B) which provides a clear understanding of the Commission's roles and expectations, empowers Commission members, and provides operating guidelines agreed to by all members.

During the past year the Commission has invited numerous governmental and private organizations to give presentations describing their approaches to seismic risk mitigation. These briefings have provided the members of the Commission with opportunities to gain an understanding of current programs and various approaches to seismic risk mitigation, identify areas of concern, and to focus initial mitigation efforts in these areas. These briefings are available for viewing on the Commission web site.

The Commission's efforts in 2008 have reinforced its belief that seismic risk mitigation issues can be addressed in an economical way that will result in improving the quality of life and public safety in Alaska. The Commission continues to address the following policy recommendations:

- Structural stability of critical facilities
- Earthquake insurance necessity and availability
- Approaches to seismic risk mitigation in future construction
- Response and recovery practices to mitigate future seismic risk
- Hazard identification and public education

These policy recommendations are currently being addressed through the following standing committees:

- Insurance
- Schools
- Earthquake Scenarios
- Education and Outreach
- Hazards Identification
- Response, Recovery, and Loss Estimation
- Post-earthquake Planning
- Partnership

The 2008 activities of these committees are described in more detail in subsequent paragraphs.

Our basic public-policy goal areas remain unchanged from the 2007 Commission report:

- Education
- Guidance
- Assistance
- Implementation

INTRODUCTION

The Alaska Seismic Hazards Safety Commission ("the Commission") is charged by statute (AS 44.37.067; Appendix A) to recommend goals and priorities for seismic hazard mitigation to the public and private sectors; recommend policies to the governor and the legislature, including needed research, mapping, and monitoring programs; review the practices for recovery and reconstruction after a major earthquake; recommend improvements to mitigate losses from similar future events; and to gather, analyze, and disseminate information of general interest on seismic hazard mitigation, among other duties to reduce the state's vulnerability to earthquakes. The Commission consists of eleven members appointed by the Governor from the public and private sectors for three-year terms. It is administered by the Department of Natural Resources, Division of Geological & Geophysical Surveys (DGGS).

Commission members include: A representative from the University of Alaska, three representatives from local government; a representative from the Department of Natural Resources; a representative of the Department of Military and Veterans' Affairs; a representative from an appropriate federal agency; a representative of the insurance industry; and three members of the public who are experts in the fields of geology, seismology, hydrology, geotechnical engineering, structural engineering, emergency services, or planning. Six members constitute a quorum. The Commission membership elects its own chair and vice-chair. There is no executive director, although DGGS provides administrative, travel, and publication support.

History and status of the Commission

In 2002, the 22nd Alaska Legislature passed, and the Governor signed into law, House Bill 53 establishing the Alaska Seismic Hazards Safety Commission with nine members. The legislation originally placed the Commission in the Office of the Governor, but in January 2003, Governor Frank Murkowski issued Executive Order Number 105 transferring the Commission to the Department of Natural Resources. Governor Murkowski appointed nine members to the Commission in 2005.

In 2005, the House of Representatives passed House Bill 83 (HB 83) to extend the Commission to June 30, 2008, add tsunami risks to its purview, and provide two additional Commission positions representing local government. In 2006, the Senate passed a substitute version of HB 83 including the two additional local government positions but omitting specific mention of tsunamis in the Commission's powers and duties. The Senate bill extended the Commission through June 30, 2012. The House concurred with the Senate version and Governor Murkowski signed the bill into law at a Commission meeting on June 16, 2006. Although the revised statute does not specifically include tsunami hazards in the Commission's powers and duties, the definitions in AS 44.37.069 include tsunami inundation as a seismic hazard. Consequently the Commission addresses tsunamis in its discussions and recommendations. As a result of passage of HB 83, the Commission currently has 11 members.

The Commission first met on October 28, 2005, at which time it elected a Chair and Vice Chair, listened to briefings from the California Seismic Safety Commission and various state and local agencies in Alaska with responsibilities in earthquake-risk mitigation, and began developing goals and priorities for its activities. There were twelve meetings of the Commission through December 2006, six of which were via teleconference. In both 2007 and 2008, the Commission held nine meetings, seven of which were via teleconference. The Commission published its first annual report to the governor and legislature on April 18, 2006. A Commission Web site posts basic information about its mission, earthquake risk in Alaska, meeting agendas, minutes, presentations, and appropriate links. The Web site address is:

http://www.dggs.dnr.state.ak.us/seismic_hazards_safety_commission.htm.

EARTHQUAKE RISK IN ALASKA

Alaska has more earthquakes than any other region of the United States and is, in fact, one of the most seismically active areas of the world. The second largest earthquake ever recorded occurred on the Prince William Sound portion of the Alaska-Aleutian megathrust in southern Alaska on March 27th, 1964, with a moment magnitude of 9.2. The largest on-land earthquake in North America in almost 150 years occurred on the Denali fault in central Alaska on November 3rd, 2002, with a magnitude of 7.9. In 2008 alone, the Alaska Earthquake Information Center recorded about 27,000 earthquakes (see Cover photograph), including over 400 events with magnitude 4.0 or greater, 73 events of magnitude 5.0 or greater and nine events of magnitude 6.0 or greater. It is not possible to predict the time and location of the next big earthquake, but the active geology of Alaska guarantees that major, potentially damaging earthquakes will continue to occur.

Alaska has changed significantly since the great 1964 earthquake. The population has more than doubled, but many new buildings are designed to prevent collapse during intense shaking. Some older buildings have been reinforced, and development has been discouraged in some particularly hazardous areas. However, despite these improvements, and because practices to reduce vulnerability to earthquakes and tsunamis are not applied uniformly in regions of high risk, future earthquakes may still cause life-threatening damage to buildings, cause items within buildings to be dangerously tossed about, and disrupt the basic utilities and critical facilities that we take for granted.

With the occurrence of the 1964 Prince William Sound and 2002 Denali fault events in recent decades, damaging earthquakes in the near future may be more likely to occur on other geologic sources. These include the Castle Mountain fault in lower Matanuska-Susitna valley, the Wadati-Benioff zone beneath Anchorage, the active belt of faulting and folding in northern Cook Inlet, the Fairbanks seismic zone, and Yakataga seismic gap near Yakutat, among others. While the seismic provisions of current Alaska building codes are largely geared toward preventing collapse from the types of shaking that occurred in 1964, earthquakes on these other sources may affect structures differently, in ways that may or may not be ameliorated by the current codes.

As discussed below, earthquakes of magnitudes that could cause major structural damage and injury to residents continue to occur in Alaska.

Earthquake activity in 2008

On April 15, 2008, at 2:59 pm ADT, a strong earthquake, magnitude 6.4, occurred in the Andreanof Islands region. It was followed by a larger earthquake of magnitude 6.6 on April 15 at 9:54 pm ADT (red stars on fig. 1). The events were about 124 km (77 miles) ENE of Amchitka and 179 km (112 miles) W of Adak. The Alaska Earthquake Information Center (AEIC) located over 550 aftershocks through the end of April (crosses). The largest aftershock of magnitude 5.0 occurred on April 18 at 12:51 pm ADT. These earthquakes are the largest to occur in this region since the magnitude 7.2 event on December 19, 2007 (large white star on the map).

The April, 2008 earthquakes occurred in the area separating rupture zones of the 1965 M8.7 Rat Islands earthquake to the west and the 1957 M8.6 Andreanof Islands earthquake to the east (approximate extent of the rupture zones is shown in red). In the last five years, sixteen M6-7 and three M7+ earthquake occurred within the area shown on the above map. Most of these events occurred on the plate interface between the subducting Pacific and overriding North American plates.

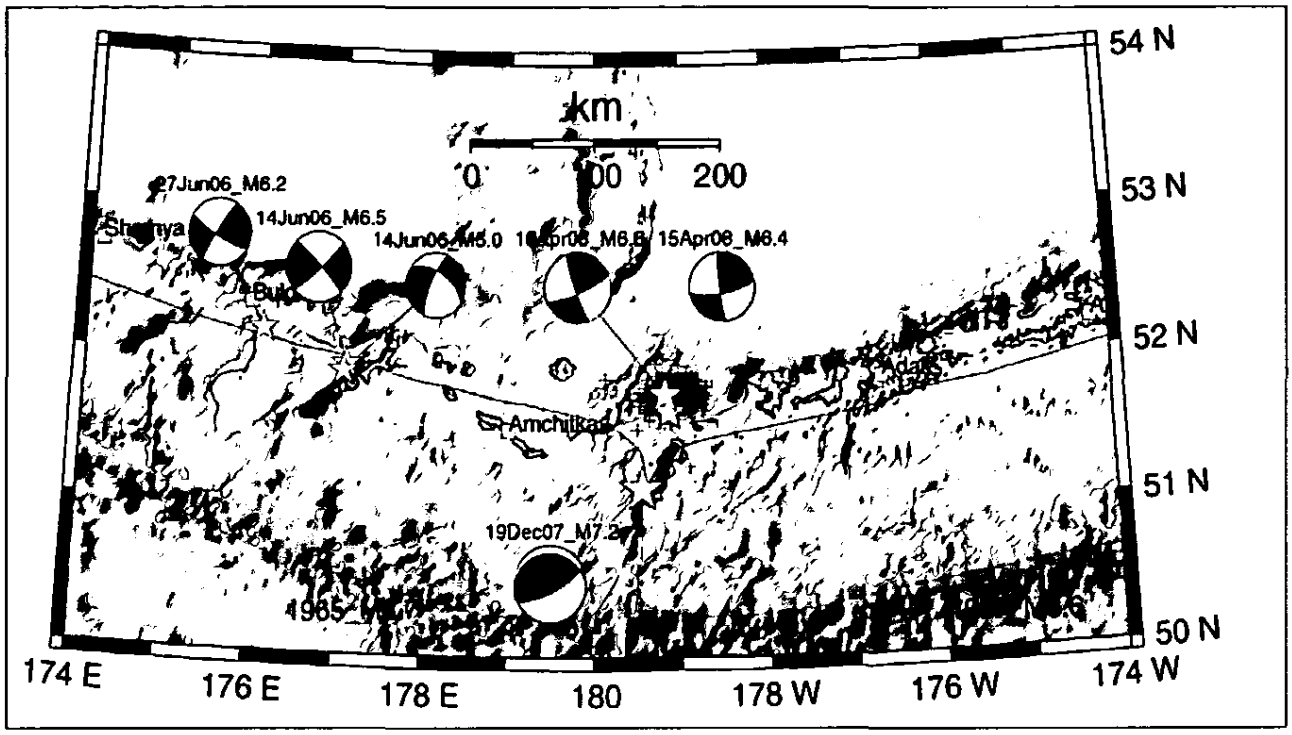

Figure 1. April 15 and 16, 2008 M6.4 and 6.6 Andreanof Islands earthquakes.

On May 2, 2008, at 5:33 pm ADT, a strong earthquake, magnitude 6.6, occurred in the Andreanof Islands region of the Aleutian Islands (see fig. 2). The event was about 64 km (40 miles) W of Adak and 238 km (149 miles) E of Amchitka. It was felt strongly on Adak. No reports of damage have been received. The AEIC recorded nearly 1500 aftershocks through the end of May. The largest aftershock was magnitude 5.0 and occurred on May 8 at 6:12 am ADT. On April 15 and 16, magnitude 6.4 and 6.6 earthquakes, respectively, occurred about 110 km (69 miles) west of the May 2 event (red stars).

The strongest known earthquakes in this region are the 1965 M8.7 Rat Islands earthquake to the west and the 1957 M8.6 Andreanof Islands earthquake to the east (approximate extent of the rupture zones is shown in red). In the last five years, eighteen M6-7 and three M7+ earthquake occurred within the area shown on the above map. Most of these events occurred on the plate interface between the subducting Pacific and overriding North American plates.

On August 6, 2008, a vigorous seismic swarm occurred in the vicinity of Kasatochi volcano in Andreanof Islands (see fig. 3). Starting at 7:00 am ADT on August 6, the intensity and frequency of the earthquakes rapidly increased resulting in ~1,100 events located over the course of 48 hours during the most energetic part of the swarm. The largest earthquake, magnitude 5.8, occurred about 27 hours into the sequence and about 3.5 hours before the first aerial ash discharge from Kasatochi was detected by the Alaska Volcano Observatory through satellite data. This discharge was followed by two more explosions, also detected via satellite monitoring. The 3rd explosion consisted of nearly continuous ash emissions and declined in frequency and intensity through about 2:00 pm ADT on August 8. The seismic swarm intensity started to decline at about 10:00 am ADT on August 8, and continued to decline through the end of August. Overall, there is a strong causative relation between behavior of the seismic swarm and the eruption episodes. Due to seismic network limitations in the region (all stations

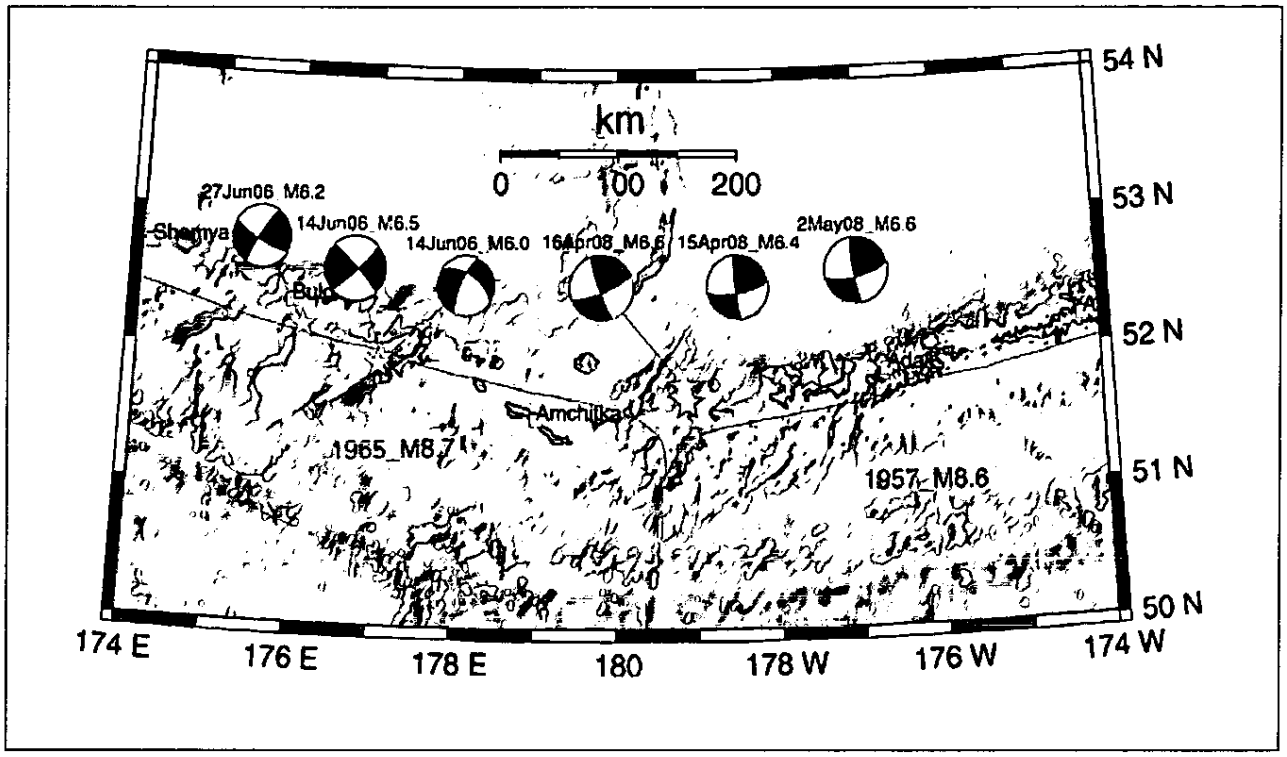

Figure 2. May 2, 2008 M6.6 Andreanof Islands earthquake.

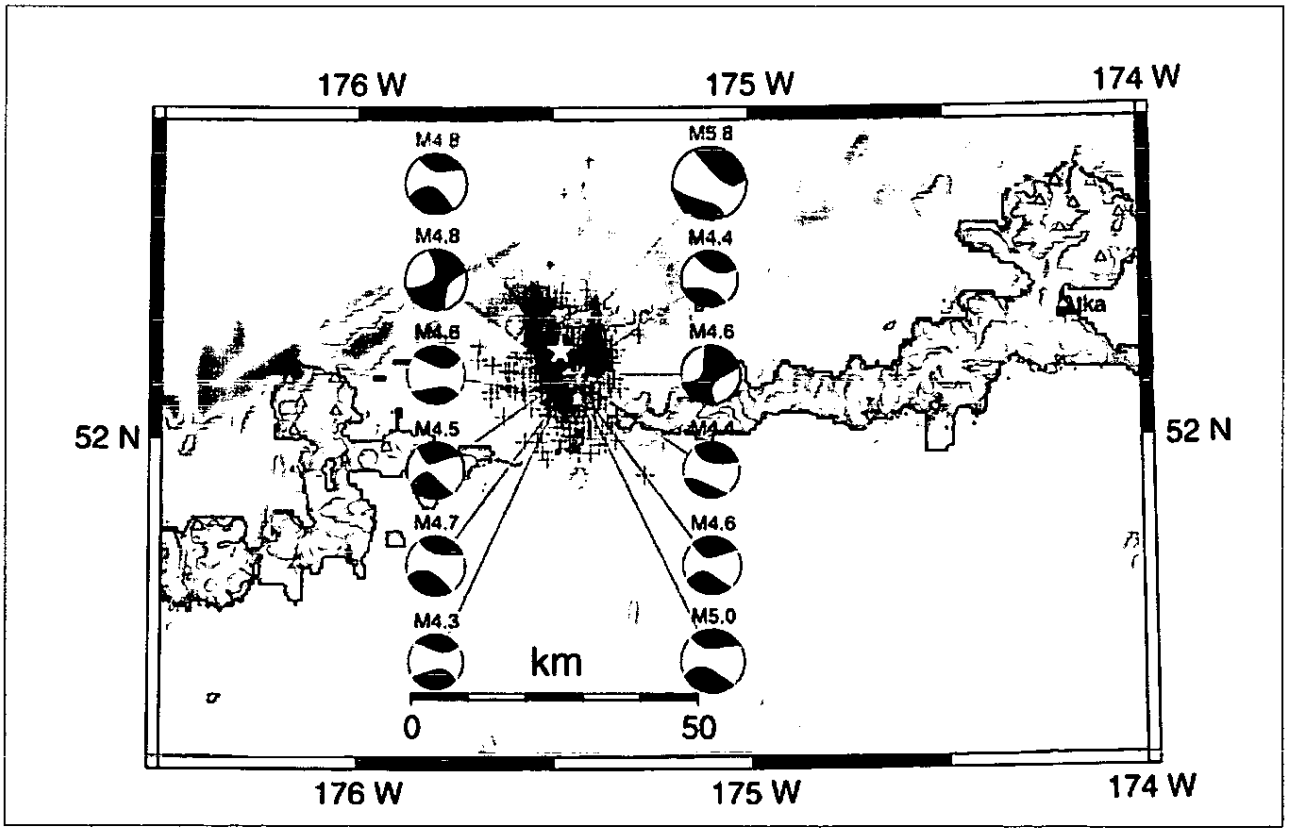

Figure 3. Earthquake swarm associated with the August 2008 Kasatochi volcano eruption.

are in a linear array along the island arc), determining accurate locations of the Kasatochi seismicity became a challenge. The locations have much larger uncertainties in the N-S direction than in the E-W direction, and overall are poorly constrained.

Some additional earthquake statistics for Alaska

- Eleven percent of the world's recorded earthquakes have occurred in Alaska.
- Alaska has more frequent earthquakes than the entire rest of the United States.
- Three of the eight largest earthquakes in the world were in Alaska (see fig. 4).
- Seven of the ten largest earthquakes in the United States were in Alaska.

Since 1900, Alaska has had an average of:

- One "great" earthquake (magnitude 8) or larger earthquake every 13 years
- One magnitude 7 to 8 earthquake every year.
- Six magnitude 6 to 7 earthquakes per year.
- Forty five magnitude 5 to 6 earthquakes per year.
- Three hundred twenty magnitude 4 to 5 earthquakes per year.
- About 1,000 earthquakes recorded in the state each month.

It is not possible to predict the time and location of the next big earthquake, but the active geology of Alaska guarantees that major potentially damaging earthquakes will continue to occur. Scientists have estimated where large earthquakes are most likely to occur, and the probable levels of ground shaking to be expected throughout the state. With this information, as well as information on soil properties and landslide potential, it is possible to estimate earthquake risks in any given area. It is also possible to estimate the potential for earthquakes to generate tsunamis, and to model the extent to which tsunamis will inundate coastal areas.

The Federal Emergency Management Agency[1] estimates that with the present infrastructure and policies, Alaska will have the second highest average annualized earthquake-loss ratio (ratio of average annual losses to infrastructure) in the country. Reducing those losses requires public commitment to earthquake-conscious siting, design, and construction. The Seismic Hazards Safety Commission is committed to addressing these issues. Earthquake-risk mitigation measures developed by similar boards in other states have prevented hundreds of millions of dollars in losses and significant reductions in casualties when compared to other seismically active areas of the world that do not implement effective mitigation measures.

COMMISSION ACCOMPLISHMENTS IN 2008

General

- Held seven telephonic and two face-to-face meetings of the Commission.
- Four Commission members were invited, and attended, a national workshop on development of Earthquake Planning and Response Scenarios, sponsored and funded by the Earthquake Engineering Research Institute with a grant from the National Earthquake Hazards Reduction Program.

[1]HAZUS 99 Estimated Annualized Earthquake Losses for the United States, Federal Emergency Management Agency Report 366, September 2000.

- The Commission sponsored the Kodiak Island Borough School District's nomination to the Western States Seismic Policy Council (WSSPC) for recognition of their seismic safety efforts. The School District won the national overall Award for Excellence in Seismic Mitigation for these activities.
- ASHSC Commission Chairman John Aho gave a presentation to DNR Commissioner Tom Irwin concerning Commission activities.
- Heard briefings on seismic risk reduction and current research from seven individuals representing external organizations.
- Developed and published its third annual report to the governor and legislature in March 2008.
- The Commission cosponsored, with the University of Alaska Anchorage and the Earthquake Engineering Research Institute (EERI), the Joyner Lecture given by Chris Poland of Degenkolb Engineers, titled '*Building a Resilient Community: Preparing for the Next Earthquake*".
- Commissioner Laura Kelly was named 2009 Engineer of the Year by the United States Coast Guard (USCG). This award recognizes the outstanding engineer throughout the entire USCG. She is also nominated as a candidate for Federal Engineer of the Year.
- Delivered Commission correspondence to Department of Geological and Geophysical Services (DGGS) Director Robert Swenson that encouraged the mapping of existing earthquake faults. Director Swenson responded favorably indicating that fault tectonics is on the short-term planning list.
- Continued work associated with the existing six standing committees: Insurance, Schools, Earthquake Scenario, Education and Outreach, Hazards Identification, and Response, Recovery and Loss Estimation.
- ASHSC Commission Chairman John Aho gave presentations concerning Commission activities specifically related to seismic risk mitigation for schools to the State of Alaska Board of Education and Early Development and to the Council of Educational Facility Planners International.
- Toured the Alaska Division of Homeland Security and Emergency Management (ADHS&EM) Emergency Operations Center.
- The Commission heard a short presentation by Department of Natural Resources (DNR) Commissioner Tom Irwin in support of their activities.

Policy Recommendations

- Assess the structural stability of critical facilities
- Address the importance of earthquake insurance
- Address approaches to seismic risk mitigation in future building construction
- Address response and recovery practices to mitigate future seismic risk
- Address hazard identification and public education

The following Standing Committees are now functional with chairpersons named and members assigned

- Insurance
- Schools
- Earthquake Scenario
- Education and Outreach
- Hazards Identification
- Response, Recovery, and Loss Estimation
- Post Earthquake Planning
- Partnership

ONGOING COMMISSION ACTIVITIES

The Alaska Seismic Hazards Safety Commission (ASHSC) continues to operate within its budget of $10,000 per year. The eleven (11) Commission members, representing over 250 years of combined experience in seismic risk identification and mitigation activities, continue to donate their time and effort to addressing the seismic safety issues so important to Alaska's residents.

The activities of the various Commission standing committees are discussed in the following paragraphs.

Insurance Committee

A 1985 Federal Emergency Management Agency (FEMA) document titled "Earthquake Insurance: A Public policy Dilemma" examined the issues and problems associated with the availability and procurement of earthquake insurance. This dilemma has touched residents of Alaska with the announcement that the number two carrier, with slightly more than 21 percent of the Alaska earthquake insurance market, recently announced that it is withdrawing its optional earthquake coverage nationwide. Many previously insured Alaska residents are now without property earthquake insurance.

The committee is currently addressing the following issues and concerns:

- Expertise required by Division of Insurance regarding the use of modeling for earthquake insurance premiums.
- Public understanding of the consequences of inaction concerning obtaining insurance protection.
- Public expectations of post-event assistance from the government.
- The current public perception of earthquake insurance rates and availability.
- The potential of providing incentives for earthquake risk mitigation efforts such as cost savings for individual efforts.
- Consider approaches to addressing public apathy toward obtaining earthquake insurance.
- How can earthquake insurance be offered that is equitable, fair, and affordable?
- How can the public be motivated to consider earthquake insurance?

The following deliverable items are being considered to address the issues and concerns;

- Work with the Alaska Department of Insurance (ADOI) to assist in establishing and developing standards for rate modeling for earthquake insurance premiums.
- Partner with ADOI to develop public information and awareness.
- Develop a topic paper to disseminate to the public regarding earthquake insurance issues focusing on insurance availability and coverage and what assistance is, or is not, available.
- Develop instructions to the public on how to make informed decisions regarding the need for earthquake insurance.

Schools Committee

The Commission considers the safety of children in Alaska's schools during a major seismic event of paramount importance. Schools are also considered critical public facilties because they are often

used as temporary shelter following earthquakes and other disasters. The committee is considering existing, renovated, and new school facilities. While seismic safety of existing facilities will continue to be addressed there will be an increased concentration on addressing the appropriate design and construction oversight of new and renovated facilities. The committee will develop recommendations to be presented to the Alaska Board of Education and Early Development and, if required, the Legislature requesting:

- That all new school design projects be required to have an independent review of the seismic design calculations and details.
- That major renovations to existing facilities be required to have a review, and modification if necessary, of their existing lateral force resisting system.
- That qualified resident observation be required of construction of the facility's lateral force resisting system.

The committee's goals include mitigating the potential for damage as shown in figures 4 & 5.

The Anchorage High School failure (fig. 4) was a result of strong ground shaking during the 1964 Great Alaska Earthquake and the inadequate lateral force resistance of the non-ductile concrete material design. Although most are probably safe, many structures designed prior to 1973 have the potential for similar damage in major seismic event. All schools in areas of high seismic risk should be evaluated.

Figure 5 shows an entire gymnasium roof collapse initiated by a heavy snowfall and inadequate structural design and improper construction. Research relating to the roof failure also uncovered the fact that the entire building was inadequately designed and constructed for lateral force (wind and seismic) resistance. The redesigned facility was constructed at a cost that exceeded the original cost of the facility.

Figure 4. Anchorage High School, 1964 Alaska earthquake (photo credit Anchorage Museum).

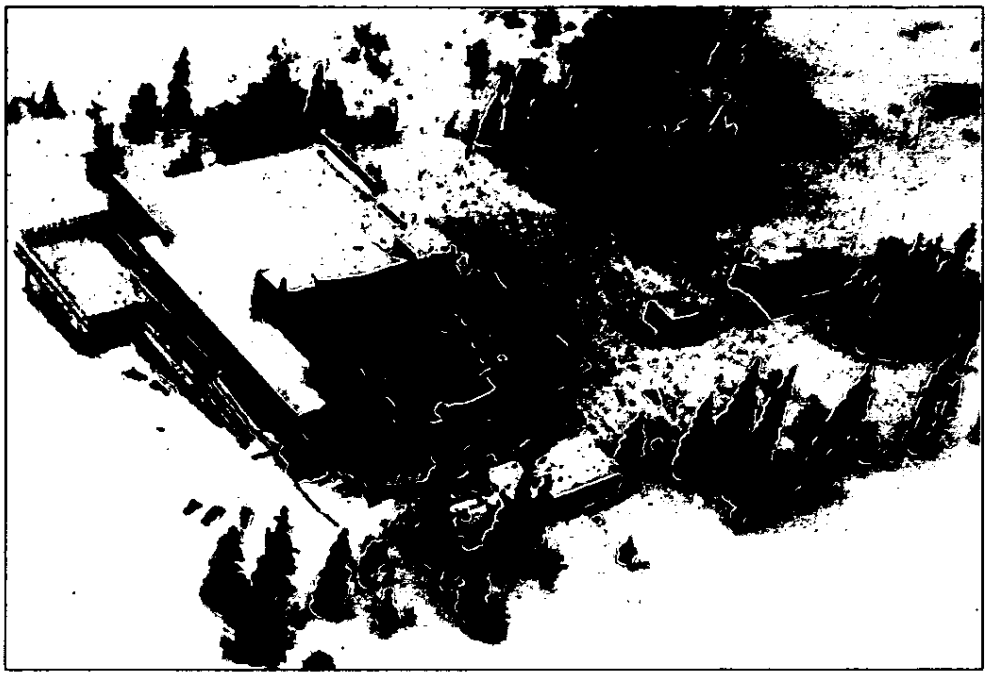

Figure 5. Aleknagik gym roof failure, snow load 1983 (photo credit John Aho).

The Anchorage High School failure reinforces the need for independent peer review of designs. The Aleknagik School failure reinforces the need for not only independent peer reviews of school designs but also qualified resident observation of construction.

Earthquake Scenario Committee

Earthquake planning scenarios have been used successfully in other areas of the U.S. to identify weaknesses in the built environment as well as vulnerable interdependencies among utility systems that could result in multiple or cascading failures if even only one system fails. These planning scenarios describe a hypothetical but geologically realistic earthquake; define the types and severity of shaking and ground breakage likely to occur; describe the likely impacts to facilities, including disruptions to utilities and transportation systems; describe secondary effect such as fire and toxic materials release; estimate the numbers of deaths, injuries, and dollar value of losses by building type; and estimate the long-term business losses and socioeconomic consequences. The resulting information provides the basis for planning earthquake response exercises, prioritizing and pre-locating response resources, and developing mitigating measures for reducing vulnerability to future earthquake damage.

Developing an earthquake planning scenario requires assembling pertinent geologic and seismologic data for a realistic event, compiling building and utility system inventory information for the affected region, assigning seismic fragilities to the building stock, assembling current data on population demographics, using loss-estimation technology such as HAZUS software to model the event using all the compiled data, and documenting the results in one or more reports and presentations. The Earthquake Engineering Research Institute (EERI) has noted in a document titled "An Overview of Scenario Planning" that: "A well crafted scenario provides a powerful tool for members of private industry, government officials, and the general public to begin to draft mitigation policies and programs."

Committee members attended a national workshop on developing earthquake scenarios sponsored by the Earthquake Engineering Research Institute and are now considering the requirements and funding necessary to develop planning earthquake scenarios for Alaskan urban and rural communities.

Education and Outreach Committee

Initial ASHSC Education and Outreach Committee efforts will be to focus on legislators, the governor's office, administrative agencies, local governments, local emergency planning committees, and industry groups. The Committee strives to avoid duplicating efforts by other groups with responsibility for addressing earthquake education and outreach.

The Committee is currently working on the following future deliverables:

- Periodic press releases addressing Commission activities or interesting facts relating to seismic risk mitigation
- Periodic newsletter to the governor's office and legislators
- Develop a directory of speakers with an expertise in seismic risk mitigation issues
- Develop a media education package with materials to explain basic seismic risk information to students and the public (see for example fig. 6)
- Develop potential model legislation

Figure 6. Mentasta children iImmediately after 2002 Denali Fault earthquake (photo credit John Aho).

696

The reaction of residents of rural communities following the 2002 Denali Fault Earthquake underscores the need to begin considering methods of educating residents of Alaska's smaller isolated communities of the potential consequences of a major earthquake and what they can do to mitigate potential effects of such an event.

Hazards Identification Committee

Earthquake-risk mitigation authors have noted that any earthquake loss reduction program entails three basic elements: (1) understanding the nature and extent of the earthquake risk, (2) taking actions to reduce that risk, and (3) establishing policy to guide the development of effective earthquake risk reduction programs. The purpose of the ASHSC Hazards Identification Committee is to address item 1 above.

Goals of the Committee continue to be to promote:

- Identification and characterization of the seismic hazards
- Definition and description of the seismic risks
- Seismic risk and hazard research
- Dissemination of seismic hazard and risk information to state and local governments, the public, business and industry, and the scientific and professional communities

The committee continues to address approaches to identifying and mapping previously unknown earthquake faults through its own activities and requests to the State of Alaska for mapping existing known fault systems. The ultimate result will be to prevent situations such as shown in figure 7 where construction occurred over an active earthquake fault. In addition we hope to make residents aware of massive landslides and other ground failures that can occur during a major seismic event (see fig. 8).

Figure 7. Denali Fault 2002 (photo credit John Aho).

Figure 8. Massive land sliding, Black Rapids Glacier, Denali earthquake 2002 (photo credit USGS).

The Commission also heard a presentation on the Sechuan Earthquake by UAA professor Dr. Joey Yang concerning the relatively common phenomenon called "quake lakes". These are large bodies of water that form when earthquake-initiated landslides dam rivers. These can have detrimental effects on land and infrastructure downstream from the dams and bordering the rivers, particularly when the water overtops the dam, breaches the loosely deposited material, and drains catastrophically.

Response, Recovery, and Loss Estimation Committee

Among the powers and duties assigned to the commission by enacting legislation are to "offer advice on coordinating disaster preparedness and seismic mitigation activities of government at all levels, review the practices for recovery and reconstruction after a major earthquake, and recommend improvements to mitigate losses from future similar events.

The ASHSC Response, Recovery, and Loss Estimation Committee, chaired by the Commission member from the Division of Homeland Security and Emergency Management will address such tasks as:

- The need for an integrated approach to building design, land use, and emergency planning
- Creation of standard protocols for the various functions necessary in managing an earthquake disaster
- Address warning systems and the appropriate distribution of warnings
- Develop an understanding of the recovery process
- Address the provision of shelter and relief supplies

Important issues to be addressed prior to a damaging earthquake include the approaches to be used for victim extraction and debris removal. These are often areas that are neglected in earthquake risk reduction planning.

For example, development of a local guidance plan for debris removal is important. This would include pre-disaster agreements with public and private equipment and service providers and identification of disposal sites.

The committee will address approaches to situations as shown in figure 9 should they occur.

The Committee will develop work tasks for their efforts in 2009.

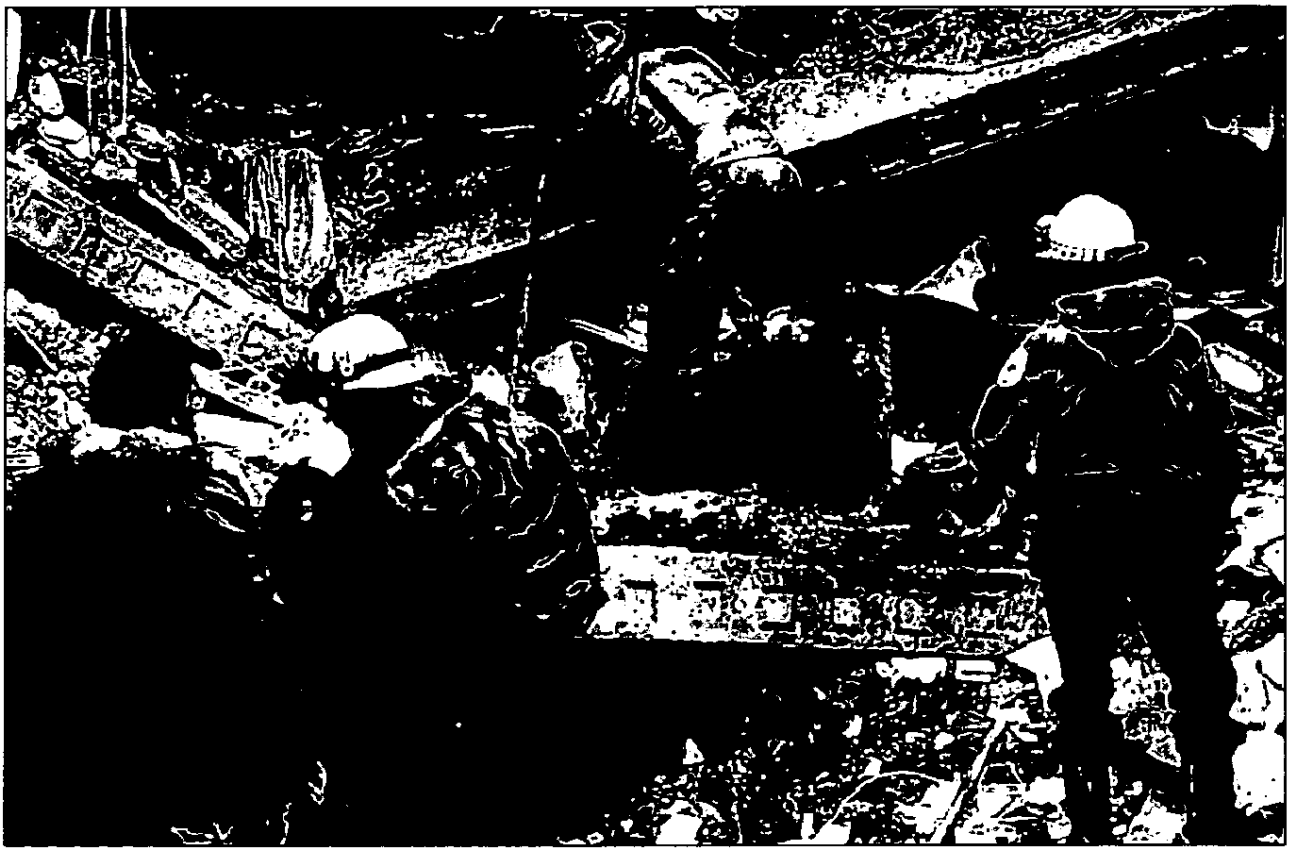

Figure 9. Rescue efforts in Mexico City, 1985 (photo credit EERI).

Post-Earthquake Planning Committee

This committee will be combined with the Response, Recovery, and Loss Estimation Committee and the new committee will be renamed to reflect its new tasks.

The tasks associated with the current ASHSC Post-Earthquake Planning Committee are currently being developed. The purpose of the Committee is to recommend future recommendations and draft policies that will be developed in advance and made available during the window of opportunity after a major seismic event when public and legislative interest is high. The deliverables might address specific response approaches based on the size of the event and resultant damages, as well as proposed new policies to prevent similar damage from future earthquakes.

Partnership Committee

Commission enacting legislation charges them to "establish and maintain necessary working relationships with other public and private agencies". The purpose of the ASHSC Partnership Committee is to investigate potential relationships.

The committee partnered with the Earthquake Engineering Research Institute and the University of Alaska Anchorage to present the "Joyner Lecture" given by Chris Poland, an internationally known structural engineer. Poland's lecture focused on the responsibility of earthquake professionals to deliver expertise on earthquake resilience in an understandable fashion that can be interwoven into public policy. "No one else has the technical knowledge to bring that perspective to the policy table." Poland observed that progress on implementing an action plan for reducing losses to acceptable levels in future earthquakes appears to be stalled due to a lack of funding and political will caused by complacency, misunderstanding, and an absence of persistent lobbying by the earthquake experts. He believes that the way to help policy makers understand how much damage the built environment will experience is to craft a message in broad-based, usable terms that name the hazard, define performance, and establish a set of performance goals that make clear the resiliency needed to enhance a community's natural ability to rebound.

Future committee activities will include beginning initial planning for the 2014 International Earthquake Engineering Conference to be held in Anchorage, Alaska. This conference will draw 1000-1500 earthquake risk mitigation specialists from all over the world in commemoration of the fiftieth anniversary of the Great Alaska Earthquake of 1964.

SEISMIC-RISK ISSUES BEING ADDRESSED BY THE ALASKA SEISMIC HAZARDS SAFETY COMMISSION

The following issues relating to seismic risk mitigation continue to serve as a guide to developing the path forward for the Commission and for the formation of standing committees.

1. Assess the Structural Stability of Critical Facilities

Description of the Issue: Some existing critical buildings in the state may not be constructed in a manner to withstand future earthquake and tsunami events. A specific concern is school buildings. Hospitals, clinics, and fire, rescue and police stations across the state may also be vulnerable to

failure. Also at possible risk are large Federal, State and private complexes such as military bases, Coast Guard stations, airports, college campuses, harbors, power-generating stations, communication centers, water and waste-water treatment facilities, jails and detention facilities, pipelines, and highways and bridges.

Importance of the Issue: If attention is not brought to bear on this issue before a damaging earthquake or tsunami, communities in the State could see massive structural failure of important community facilities, resulting in human casualties, economic loss, and environmental damage. Furthermore, Alaska's remote nature and extreme weather conditions can cause delays in response efforts and put displaced building occupants at severe risk from exposure. Adequate preparedness is imperative for timely rapid response and recovery from a significant seismic event.

Benefits of Addressing the Issue: Some private and public entities have taken important steps to improve the seismic resistance of key facilities and infrastructure. For example, prior to constructing the Trans-Alaska Pipeline System, Alyeska hired geologists and engineers to specifically address seismic hazards. The resulting design and earthquake-resistant construction prevented the spillage of any oil during the M7.9 Denali fault earthquake of November 3, 2002. The Alaska Department of Transportation and Public Facilities is undertaking a seismic retrofit program for State-owned bridges, and is focusing on upgrading bridges that provide critical access to communities. Some boroughs and cities across the State have taken the initiative to identify and begin retrofitting seismically vulnerable school buildings and other essential facilities.

Despite the recency of most construction in Alaska and implementation of modern building codes, many buildings and key infrastructure remain vulnerable due to proximity to seismic hazards, some of which are known and others of which are poorly understood. Building codes continue to change and have been significantly upgraded in the period between 1976 and 1997. The Federal Emergency Management Agency (FEMA) and earthquake consortia such as the Cascadia Regional Earthquake Workgroup (CREW) in the Pacific Northwest have long recognized that addressing the problems prior to a catastrophic event can have long-standing benefits in the future. However, building codes are often inadequately implemented and recommendations of advisory bodies are often ignored.

How the Commission Can/Will Address the Issue: The Commission will encourage mitigation efforts by presenting information about earthquake hazards and risk and suggesting approaches to addressing the strengthening of at-risk critical facilities. Public education must include the correct mix of information on potential damage and suggestions of effective actions to be taken.

2. Address the Importance of Earthquake Insurance

Description of the Issue: Catastrophic natural perils, particularly earthquakes, are unpredictable, relatively infrequent, and can be financially disastrous. Earthquake risk is especially difficult to insure against because insurers are unable to accumulate adequate reserves for such high severity, low frequency losses.

Importance of the Issue: Insurers are unwilling to provide insurance in a market where premium rates are inadequate to create the reserves necessary to pay for damages in the event of a major

earthquake. This can create a severe deficiency in availability of insurance as existing insurers withdraw from the market and new insurers are unwilling to enter.

Benefits of Addressing the Issue: Improved pre-loss mitigation efforts, such as retrofitting existing structures; emergency planning to speed post-loss recovery; and actuarially sound earthquake insurance rates encourage additional insurers to enter the market. This in turn improves availability of insurance products and results in more competitive premiums.

How the Commission Can/Will Address the Issue: The Commission can encourage development of public-private partnerships that provide education and mitigate the potential impact of future events. We will examine the seismic-hazard information needs of the insurance industry and provide recommendations for improvement.

3. Approaches to Seismic Risk Mitigation in Future Building Construction

Description of the Issue: Sustainable development entails maintaining environmental quality, improving a community's quality of life, and fostering social equity while maintaining a healthy economy. Therefore, sustainable development includes incorporating disaster resilience and mitigation into a community's decisions and actions. Building codes normally have a performance goal of life safety, which is considered a minimum safety level, but typically become the maximum level to which buildings are designed. Codes do not appropriately address the effects of ground failure, ground-shaking amplification, or provide guidance to designers and construction contractors.

Importance of the Issue: Communities need to know the potential earthquake risk and impacts at a structure site and should implement appropriate standards to mitigate the identified risk so new buildings are not subjected to the effects of massive ground failure and strong ground shaking.

Benefits of Addressing the Issue: The results of addressing the issue are more effective mitigation and an assurance that countermeasures are not only adequate but the cost of implementation is not prohibitive.

How the Commission Can/Will Address the Issue: The Commission will encourage continued Federal, State, and private partnerships in updating ground failure susceptibility mapping of Anchorage, ground shaking characterization in high-risk Alaskan communities, and determination of structural response of buildings and bridges. We will work with the technical community and the construction industry to inform, educate and work with communities to provide guidance to improve building and land-use codes.

4. Response and Recovery Practices to Mitigate Future Seismic Risk

Description of the Issue: Communities don't have a good understanding of the costs and resources needed for response and recovery. First responders to a damaging earthquake in one of Alaska's major cities will be overwhelmed in the initial hours following the event. Damage to transportation systems will make movement of people and goods difficult. Demand for emergency shelter, food, and water will strain a communities' resources. Disruptions to lifeline systems will complicate recovery.

Importance of the Issue: An understanding of response and recovery issues is critical to assessing the impacts to State and local resources.

Benefits of Addressing the Issue: Implementing effective response and recovery practices will reduce economic and social costs of recovery and will help mitigate risks from future events.

How the Commission Can/Will Address the Issue: The Commission will promote and assist in the development and use of "earthquake planning scenarios" to define the impact of future damaging earthquakes and will communicate lessons learned from past events to provide guidance to communities on recovery planning and preparation.

5. Hazard Identification and Public Education

Description of the Issue: A damaging earthquake has not affected a major population region in Alaska since 1964. The majority of the population is unaware of the consequences of a major seismic event. The 2002 Denali fault earthquake resulted in relatively minor damage to smaller rural communities but had little effect in larger communities such as Anchorage and Fairbanks. It was evident, during damage assessment evaluations after the Denali fault event, that the residents of the smaller at-risk communities had little understanding of the earthquake hazard, had not implemented measures to mitigate damage, and were unprepared to respond to the consequences of damage. It is important that the population of Alaska be aware of the earthquake hazard and be informed of the measures that can be taken to mitigate risk.

Importance of the Issue: There is a high probability that Alaskans will experience the results of a damaging earthquake in the future. All Alaskans will be better prepared to take measures ahead of time to reduce losses and casualties and to respond to the event if they are informed of, and truly understand, the hazard and the resultant risk.

Benefits of Addressing the Issue: An educated public has a greater potential of responding appropriately before, during, and after a damaging earthquake. Improved knowledge and public awareness of hazard and risk can change behavior and lead to more cost-effective mitigation.

How the Commission Can/Will Address the Issue: The Commission will examine the need for greater public investment in identification and assessment of earthquake hazards, and the most effective ways of communicating this information to the public. The Commission will examine and promote the concept of seismic resilience of communities, addressing reduced failure probabilities, reduced consequences of failure, and reduced time to recovery..

6. Recommended Public-policy Goals of the Commission

a. Education
   - Develop an effective public education and outreach program.
   - Convey scientific and technical information from credible authorities.
   - Communicate information in a manner that is understandable by the public.

b. Guidance
   - Provide advice on seismic risk mitigation and recommend policies to improve preparedness.

- Recommend goals and priorities for risk mitigation to public and private sectors.
- Recommend needed research, mapping, and monitoring programs.
- Offer advice on coordinating disaster preparedness and seismic risk mitigation.

c. Assistance
- Review seismic and tsunami hazard notifications and recommend appropriate response.
- Review predictions and warnings and suggest appropriate responses.

d. Implementation
- Establish and maintain working relationships with other private and public agencies.
- Gather, analyze, and disseminate information.
- Conduct public hearings.
- Appoint committees from Commission membership and/or external advisory committees to address risk mitigation issues.
- Accept grants, contributions, and appropriations.

APPENDIX A

Alaska Seismic Hazards Safety Commission statute

Sec. 44.37.065. Commission established; membership.

(a) The Alaska Seismic Hazards Safety Commission is established in the Department of Natural Resources. The Department of Natural Resources shall provide staff support to the commission.

(b) The commission is composed of 11 members appointed by the governor for terms of three years. A vacancy is filled for the unexpired term.

(c) The governor shall appoint to the commission

(1) a representative from the University of Alaska;

(2) three representatives, each from a local government in a separate seismically active region of the state;

(3) a representative from the Department of Natural Resources;

(4) a representative from the Department of Military and Veterans' Affairs;

(5) a representative from an appropriate federal agency;

(6) a representative of the insurance industry; and

(7) three members from members of the public who are expert in the fields of geology, seismology, hydrology, geotechnical engineering, structural engineering, emergency services, or planning.

(d) The commission shall elect annually from its members a chair and vice-chair. A majority of the commission may vote to replace an officer of the commission.

(e) Six members constitute a quorum.

(f) Members of the Alaska Seismic Hazards Safety Commission serve without compensation but are entitled to per diem and travel expenses authorized for boards and commissions under AS 39.20.180.

Sec. 44.37.067. Powers and duties.

(a) The commission shall

(1) recommend goals and priorities for seismic hazard mitigation to the public and private sectors;

(2) recommend policies to the governor and the legislature, including needed research, mapping, and monitoring programs;

(3) offer advice on coordinating disaster preparedness and seismic hazard mitigation activities of government at all levels, review the practices for recovery and reconstruction after a major earthquake, and recommend improvements to mitigate losses from similar future events;

(4) gather, analyze, and disseminate information of general interest on seismic hazard mitigation;

(5) establish and maintain necessary working relationships with other public and private agencies;

(6) review predictions and warnings issued by the federal government, research institutions, and other organizations and persons and suggest appropriate responses at the state and local levels; and

(7) review proposed seismic hazard notifications and supporting information from state agencies, evaluate possible socioeconomic consequences, recommend that the governor issue formal seismic hazard notifications when appropriate, and advise state and local agencies of appropriate responses.

(b) The commission may
(1) advise the governor and the legislature on disaster preparedness and seismic hazard mitigation and on budgets for those activities and may recommend legislation or policies to improve disaster preparedness or seismic hazard mitigation;
(2) conduct public hearings;
(3) appoint committees from its membership and appoint external advisory committees of ex-officio members; and
(4) accept grants, contributions, and appropriations from public agencies, private foundations, and individuals.

Sec. 44.37.069. Definitions.
In AS 44.37.065 - 44.37.069,
(1) "commission" means the Alaska Seismic Hazards Safety Commission;
(2) "disaster preparedness" means establishing plans and programs for responding to and distributing funds to alleviate losses from a disaster as defined in AS 26.23.900 ;
(3) "seismic hazard" means an earthquake-induced geologic condition that is a potential danger to life and property; in this paragraph, "geologic condition" includes strong ground shaking, landslide, avalanche, liquefaction, tsunami inundation, fault displacement, and subsidence;
(4) "seismic hazard mitigation" or "mitigation" mean activities that prevent or alleviate the harmful effects of seismic hazards to persons and property, including identification and evaluation of the seismic hazards, assessment of the risks, and implementation of measures to reduce potential losses before a damaging event occurs;
(5) "tsunami" means a large ocean wave produced by an earthquake, landslide, or volcanic eruption.

JANUARY 2007

ASHSC Alaska Seismic Hazards Safety Commission

Charter

Vision

Eliminate losses from future earthquakes and tsunamis. Gain public recognition for enhancing Alaska's approach to seismic risk mitigation issues.

Mission

Advise the public and private sectors on approaches for mitigating earthquake and tsunami risk. Make recommendations to the governor and legislature for reducing the State's vulnerability to these seismic hazards.

Act in an Advisory Capacity

Advise the Governor, the Legislature, and the public and private entities on seismic risk mitigation issues.

Provide Information and Technical Guidance

Recommend studies and programs that will mitigate the risks associated with seismic hazards.

Recommend Educational Programs

Recommend and participate in programs that will disseminate information to government agencies and the public.

Support Seismic Hazards Risk Mitigation Efforts

Support efforts to address the issues related to seismic hazards risk mitigation

By achieving this mission, we create an opportunity to be an effective body in mitigating the potential damaging effects of major seismic events.

Core Values

- Honesty
- Integrity
- Trust
- Diligence

- Service to the State
- Responsibility for One's Own Work
- Support for Other Commission Members
- Commitment to Complete Accepted Assignments
- Provide Value to Stakeholders
- Be Objective and Reasonable
- Advocate for Seismic Risk Mitigation Efforts
- Recognize exemplary seismic risk mitigation efforts

Key Success Factors and Measures of Success

Success Factor	Measure
• Stakeholder Satisfaction	• Facilitate Governor & Legislature understanding of seismic risk mitigation issues • Meet or exceed SOA expectations • Advice is sought • Advice is accepted • SOA endorsement • Positive feedback from staff
• Advocate Seismic Risk Mitigation	• Provide advocacy for seismic risk mitigation programs • Create opportunities for seismic risk mitigation advocacy • Become familiar with current programs • Develop stakeholder support
• Advocate Public Outreach Programs	• Encourage social environment where seismic risk mitigation is accepted • Examine existing programs within the State • Be available for public educational presentations
• Critical Facilities Earthquake Risk Mitigation	• Identify at-risk facilities • Develop work plan(s) • Initiate cost/benefit analysis • Identify current legislation/programs • Identify pertinent code requirements • Recommend improvements
• Earthquake Insurance in Alaska	• Review and advise on issues • Develop "White Paper" on issues • Recommend improvements
• Promote Seismic Hazard Identification	• Promote improved seismic monitoring • Promote identification, mapping, and characterization of seismic sources and seismically induced hazards (e.g., tsunamis, liquefaction, landslides)
• Facilitate Partnerships for Seismic Risk Reduction	• Identify potential partners to address Commission goals • Involvement with Federal, State, Municipal, and Priva sector organizations to address Commission goals

ENDORSEMENT

We, the members of the State of Alaska Seismic Hazards Safety Commission, enthusiastically and fully endorse this Commission Charter for guiding and enhancing efforts in seismic risk mitigation.

3/10/09 PRESENTATION: ALASKA HOUSING FINANCE CORPORATION

<target><bill></bill><subject>3-10-09 PRESENTATION ALASKA HOUSING FINANCE CORPORATION</subject><comm>SFIN26</comm></target>

Alaska Housing
FINANCE CORPORATION
Built to Last.

Alaska's Housing Market 2009

Alaska Housing Finance Corporation

www.ahfc.us

Alaska Housing
FINANCE CORPORATION
Built to Last.

Alaska's Housing Market

- Interest rates are historically low
- Prices are stable
- New construction
  - Extremely low
  - Contractors busy with remodeling

Alaska Housing
FINANCE CORPORATION
Built to Last.

What Happened Outside?

- Collapse of housing market
  - Economy – Loss of jobs
  - Excessive speculation
    - Buying
    - Construction
  - Subprime mortgages defaulted
  - Depreciating home values

Alaska Housing
FINANCE CORPORATION
Built to Last.

The good news is…

- Alaska is different from the Lower 48
  - Adjustable rate mortgages (ARMs) were a very small proportion of total market
  - Small lending community that didn't participate in riskier loan products
  - AHFC did not participate in them
  - Minimal speculative development or buying
  - Continued moderate growth in economy expected

Alaska Housing
FINANCE CORPORATION
Built to Last.

Delinquencies—Are we in trouble?
4th Quarter 2008

- Mortgage Bankers Association survey – 7.88 percent nationally
  - In Alaska our rate was 3.81 percent — the second lowest in the nation
  - AHFC's delinquencies—4.11 percent

- Alaska's delinquency rate reached 5.9 percent in 2000 and 2001

Alaska Housing
FINANCE CORPORATION
Built to Last.

Foreclosures
4th Quarter 2008

- Alaska ranks 50th in foreclosures at .90 percent
- Less than one-third the national average of 3.3 percent

720

Alaska Housing
FINANCE CORPORATION
Built to Last.

Market is cooling

- 2008 end-of-year numbers of homes for sale in Anchorage much lower than '90s
- From 1999 to 2005, market hot for sellers
- Now a more moderate pace

Alaska Housing
FINANCE CORPORATION
Built to Last.

Average Sales Price as of Dec. 2008

- Anchorage $326,000 (stable)
- Bethel $233,213 (-2.3%)
- Fairbanks $214,000 (-.004%)
- Mat-Su $221,000 (stable)
- Nome $185,000 (-15.9%)
- Sitka $295,333 (-12.3%)

Mortgage Rate Trend Survey Predictions as of 02/09/09

Over the next 30 days:

- rates will rise significantly: 0.0%
- rates will rise slightly: 17.9%
- rates will remain unchanged: 14.3%
- rates will decline slightly: 64.3%
- rates will decline significantly: 3.6%

Over the next 90 days:

- rates will rise significantly: 0.0%
- rates will rise slightly: 17.9%
- rates will remain unchanged: 25.0%
- rates will decline slightly: 42.9%
- rates will decline significantly: 14.3%

Low Interest Rates – What has changed?

Alaska Housing FINANCE CORPORATION
Built to Last.

- Eligible borrowers have diminished 30 – 40 percent
  - Loan investors & mortgage insurance companies tightened credit standards
    - Higher down payment required
    - Higher FICO score required
    - Jumbo loan financing limited
    - No more exotic loans
      - No income; no jobs; no assets; interest-rate teaser; payment option (interest-only, half-interest, etc., payments)
  - FHA
    - increased fees
    - no seller-financed down payment assistance
  - People don't qualify to refinance
    - Decrease in property values
    - Shouldn't have gotten the loan in the first place & don't qualify

Alaska Housing

Interest Rates Equate to Buying Power

- 1 percent decrease in interest rates roughly translates into a 10 percent increase in homebuyer purchasing power

Demand for housing isn't likely to subside...

- State demographers forecast population growth in Alaska = increased likelihood of demand for housing. (Source: Alaska Dept. of Labor & Workforce Development, Research & Analysis Sec.)

What's the Big Picture?

- Average home prices stable
- Home sale activity down
- Time on market up
- Delinquencies low
- Foreclosures low
- Interest rates low
- Overall construction outlook good
  - New home construction down
- Additional $1 billion estimated in Stimulus Package
- Population growth forecasted

Energy-Efficiency Programs

Progress Update for Alaska Legislature 3.4.2009

Weatherization PROGRAM

Home Energy Rebate PROGRAM

Overview

- $200 million for **weatherization**
  (income-based, no-cost program)
- $100 million for **rebates**
  (for those NOT qualifying for weatherization program:
  rebates for eligible improvements - ratings required)
- $60 million additional for rebates 9/2008
  (to carry program into next calendar year)
- Large training component for both programs

Allocations

	Rebate	Weatherization
Anchorage Region	$26 million	• $34 million
Southcentral Region	$16 million	• $24 million
Fairbanks Region	$17 million	• $29 million
Interior Region	$2 million	• $12 million
Juneau Region	$4 million	• $12 million
Southeast Region	$5 million	• $14 million
Northern Region	$4 million	• $18 million
Western Region	$5 million	• $20 million
Southwest Region	$2 million	• $12 million

Program Start-Up

- April 2008: Programs approved
  - AHFC operates under emergency regulations
  - Training & personnel ramp-up started
- May 2008: Programs launched
- July 2008: Public hearing & final regulations adopted
- Summer 2008: Continued ramp-up & training

Weatherization
PROGRAM

Alaska Railroad Quick Facts

Purchase Price (January 5, 1985)

Paid to federal government	$ 22.3 million
Start-up costs & contributed capital	$ 11.9 million
Total Investment-State of Alaska	$ 34.2 million

Organization (following State purchase)

- Independent corporation owned by State
- Managed by a seven-member board of directors. Position qualifications are spelled out in law, members appointed by the Governor.
- Mandated to be self-sustaining, responsible for all its own financial and legal obligations

Financial Statistics (Jan. 1 - Dec. 31, 2008)

Total Assets	$ 856 million
Total 2008 revenues	$ 138 million
Total 2008 expenses	$ 125.4 million
2008 net income	$ 12.6 million
2009 net income budget	$ 16.8 million

Operating Data

Miles of main line	467
Miles of branch line	54
Miles of yards and sidings	135
Total miles of track	656
Freight cars (owned & leased)	1,381
Passenger cars	51
Locomotives	57

Operating Statistics (Jan. 1 - Dec. 31, 2008)

Passenger ridership	541,019 passengers
Freight tonnage	5.82 million tons

Employees (as of January 2008)

Number of year-round employees	715
Average years of service	11.5
Average age	45
Male	585
Female	130

Unions (as of January 2008)

Most ARRC employees are members in 1 of 5 unions:

United Transportation Union	121
Transportation Communication Union	44
International Association of Machinists	63
American Federation of Govt. Employees	283
American Train Dispatchers Association	10

Benefits

- Corporation provides a defined benefit pension plan
- Corporation provides health and life insurance
- Corporation provides retiree medical benefits

ARRC Guiding Principles

Alaska Railroad Mission

Safety... Service... Profitability

Alaska Railroad Vision

Building a great Railroad across the Greatland.

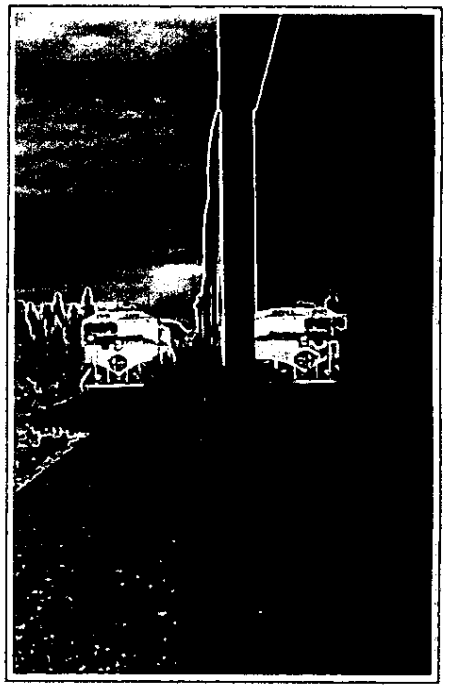
An important element in fulfilling this vision is ARRC's success since 1996 in qualifying for federal funding...an entitlement afforded by the railroad's public status and its passenger service mission. As a result, ARRC has been able to greatly accelerate long overdue mainline maintenance and upgrades.

ARRC Core Values

- Integrity
- Service
- Excellence

ARRC Operating Style

- Safe
- Secure
- Customer responsive
- Financially solid
- Environmentally sound
- Employee friendly corporation



"We must provide a stable, reliable foundation that can be counted on to enhance the future economic growth of the state and the municipalities we support," Pat Gamble, President and CEO.

772

Different from Other State Agencies

The Alaska Railroad Corporation Act of 1984 established an independent state-owned corporation that is governed by a seven-member board of directors appointed by the Governor. The President and CEO of the corporation reports to the board. Although ARRC is not covered under the State's Executive Budget Act, the state government ensures oversight of ARRC's operation and management practices through the following controls:

- The ARRC Board of Directors is responsible for initiating both a financial and a performance audit each year conducted by independent auditors and management companies. The annual performance audit is conducted by a recognized railroad management expert to ensure that ARRC is being managed and operated effectively and efficiently.
- The Legislative Budget and Audit Committee can review ARRC's operation, management and financial practices.
- ARRC must file an oversight report with the Legislature and Governor before it undertakes certain expansion, reduction, or diversification of services.
- Legislative approval is required for certain corporate actions, such as sale or transfer of the Railroad's entire interest in land, or leasing land for longer than 55 years.
- ARRC's procurement procedures are required to be substantially equivalent to state procurement requirements.
- ARRC employees and directors are subject to the Executive Branch Code of Ethics.
- ARRC's spill prevention and response plans are filed and regulated by the State and ARRC is required by state law to show sufficient financial responsibility to respond to spills.
- Bond authorizations must be approved by the Legislature.
- ARRC is required by law to submit an annual report with audited financial statements
- ARRC is required by law to adopt a long-range capital improvement plan each year and shall share that plan with the Governor and Legislature.
- ARRC is defined as an interstate commerce carrier by the Federal Alaska Railroad Transfer Act of 1982 (ARTA).

Alaska's Railroad

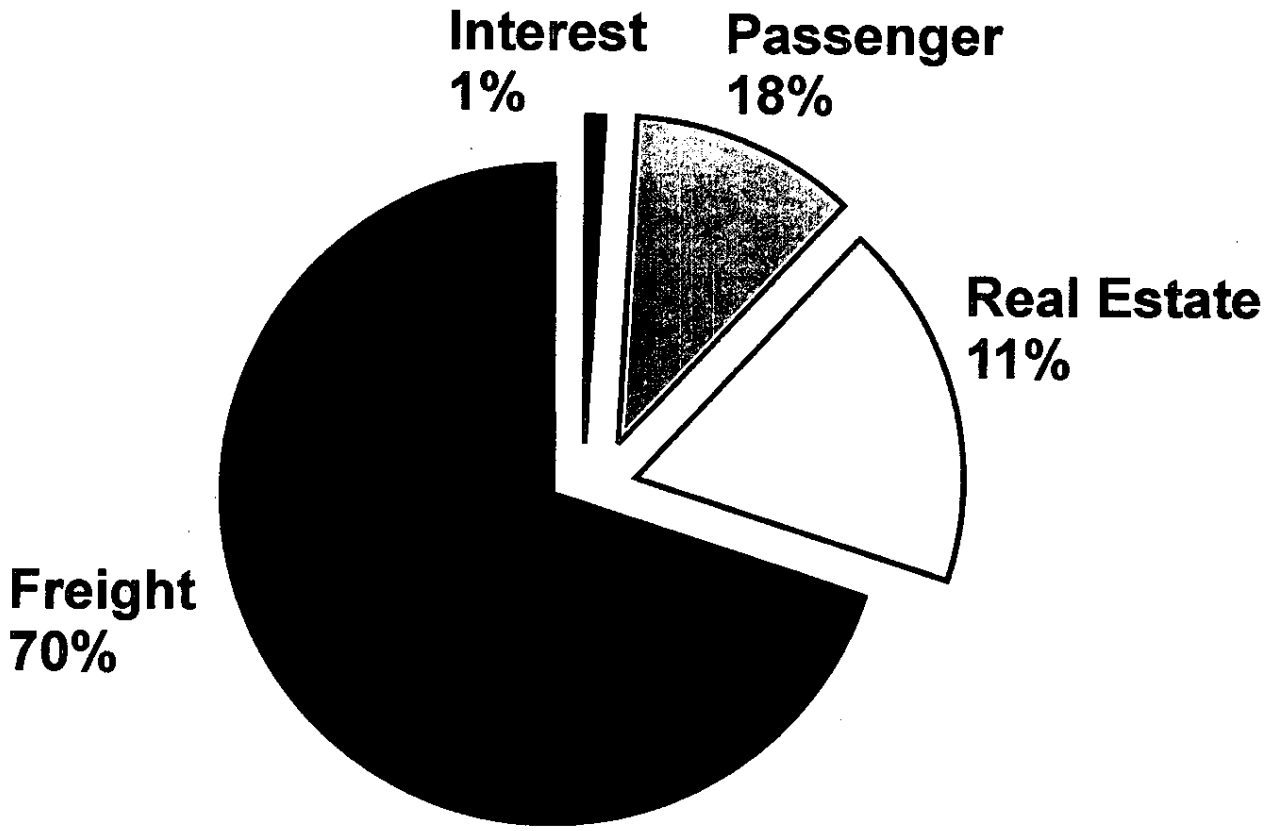
- Contributes to health care, business services, and retail payrolls
- Principal transport for heavy and/or bulk commodities to tidewater
- Major mover of jet fuel to Anchorage International Airport.
- Viable passenger alternative to long-distance driving
- Supports the U.S. military with the transport of equipment to and from the "DOD Strategic Port" of Anchorage
- Potential to reduce pressure on State road system … commuting
- Potential to significantly contribute to the Alaska Natural Gas Pipeline

Creates 3,000 jobs and $150 million in payroll across the State

Source: "Economic Significance of Alaska Railroad", December 2004, ISER report, University of Alaska

774

2008 Sources of Revenue



Freight and Passenger Service

Freight Service in 2008:

- 5.82 million tons moved

Passenger Service in 2008:

- 541,019 passengers moved
- Award Winning Service
- Homegrown high school tour guide hosts and hostesses

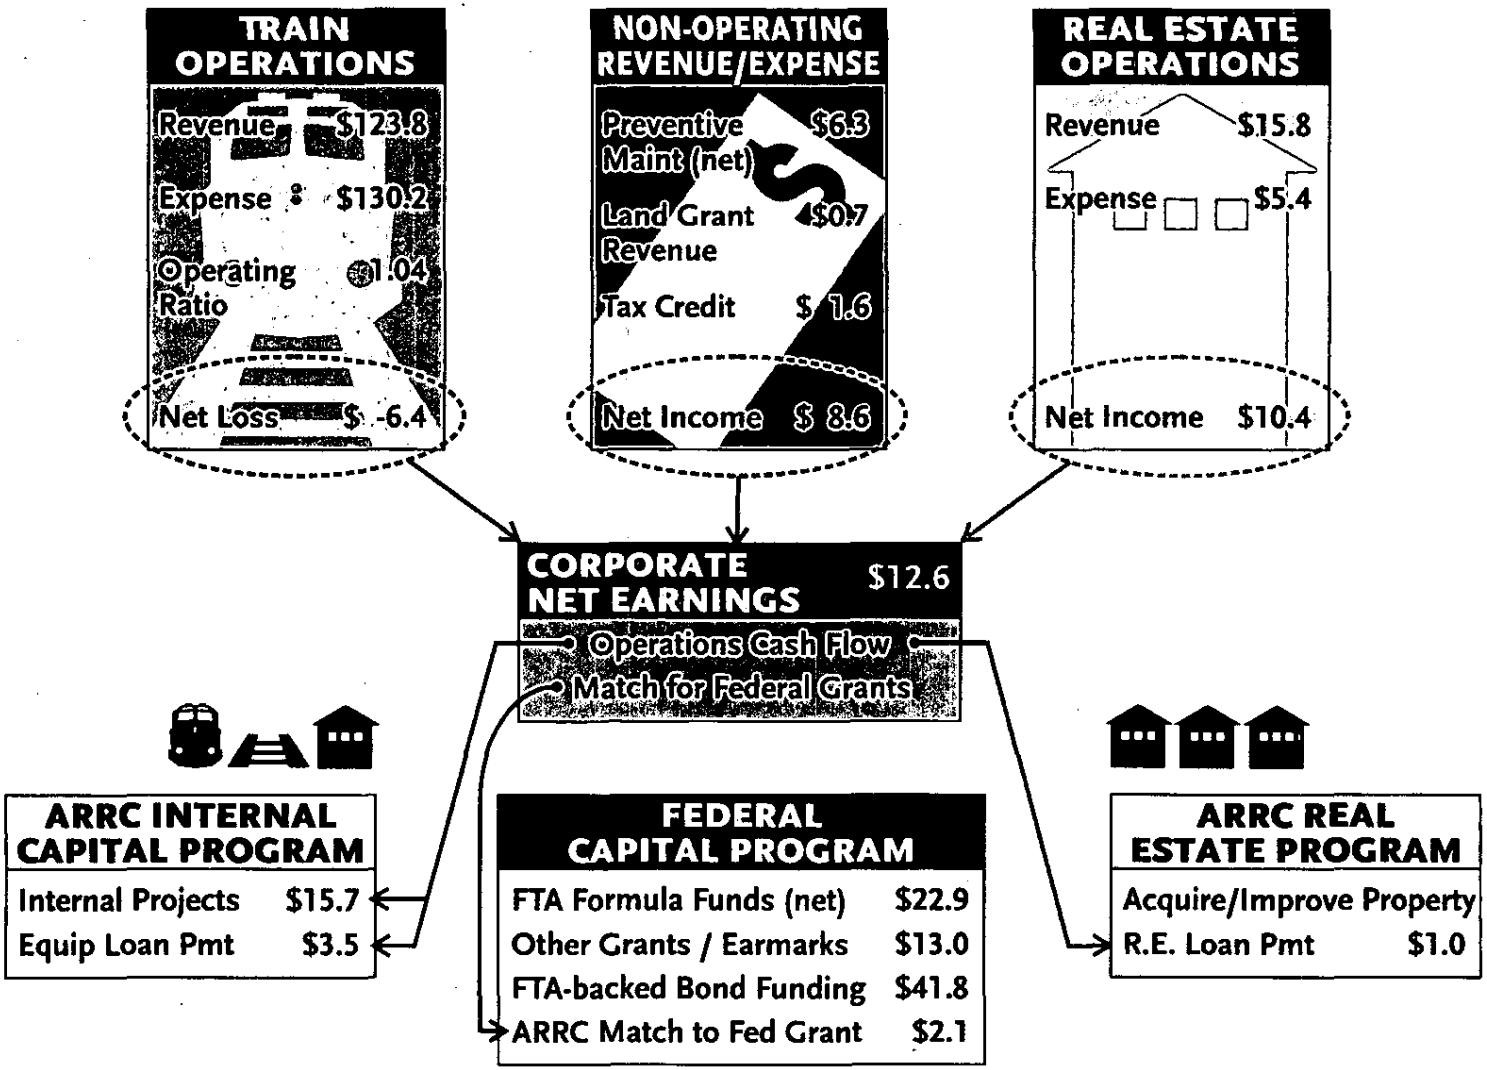
ARRC Fund Flow Model: 2008 Data



Overall Growth Pattern

	2001	2008	% difference
Total Assets	$ 306.0 M	$856 M	180%
Total Earnings	$ 6.6 M	$ 12.6 M	91%
Total Revenue	$ 105.0 M	$ 138 M	31%
Passenger Train Starts	771	839	9%
Freight Train Starts	3,386	2,524	-25%
Freight Cars and Intermodal Units Moved	96,453	92,190	-4%
Capital Investments	$ 67 M	$ 135 M	101%
Employees (FTE*)	788	897	14%

* FTE: Full Time Equivalent. Accounts for seasonal and capital project jobs; includes overtime.

Passenger Bi-level Dome Cars (4 to 6) 50%

784

Capital Projects

2009 Program

Major Projects

Capital Funding Sources

- ARRC Internal Funding
- DOT/Federal Railroad Administration
  - Alaska Railroad Track Rehabilitation funds
  - Department of Defense Allocations
- DOT/Federal Transit Administration
  - Formula Funds; Grants
  - 9-20% ARRC Match Required
- DOT/FHWA
- Federal funds allocated to ARRC do not routinely affect federal funding for other state transportation projects
- ARRC federal match is *not* from State of Alaska general fund or gas tax...match is solely from ARRC earnings.
- ARRC does not receive operating funds or reimbursements from the State Budget.

780

2009 Capital Budget

- $785 million+ in federal grant money received since 1996, including $109 million budgeted for 2009:
  - $60 million Department of Defense (administered through FRA)
  - $15 million Federal Transit Administration (FTA)
  - $31 million from Bond sales (repaid by FTA formula funds)
  - $1 million Federal Highway Administration
  - $2 million Federal Emergency Management Administration
- ARRC has provided $42 million in federal grant matching funds since 1996, including $1.3 million budgeted for 2009.
- Additional $214 million ARRC funds spent on non-federally-funded projects since 1996, including $29 million budgeted for 2009.
- **Total capital budget for 2009 is $138 million**
- **Stimulus likely to add $26 million**

Stimulus Package Funding

American Recovery and Reinvestment Act of 2009 Final Bill (as of February 17, 2009) Estimated Funding for ARRC		
Funding Pot	Program Amount	Alaska Railroad
Sec 5307 Urbanized Area Formula	$ 5,399,200,000	$ 25,825,000
Energy Program	$ 100,000,000	TBD
Multimodal Discretionary Funds*	$ 1,500,000,000	TBD
Total estimated increased funding from the Economic Stimulus Package		**$ 25,825,000**

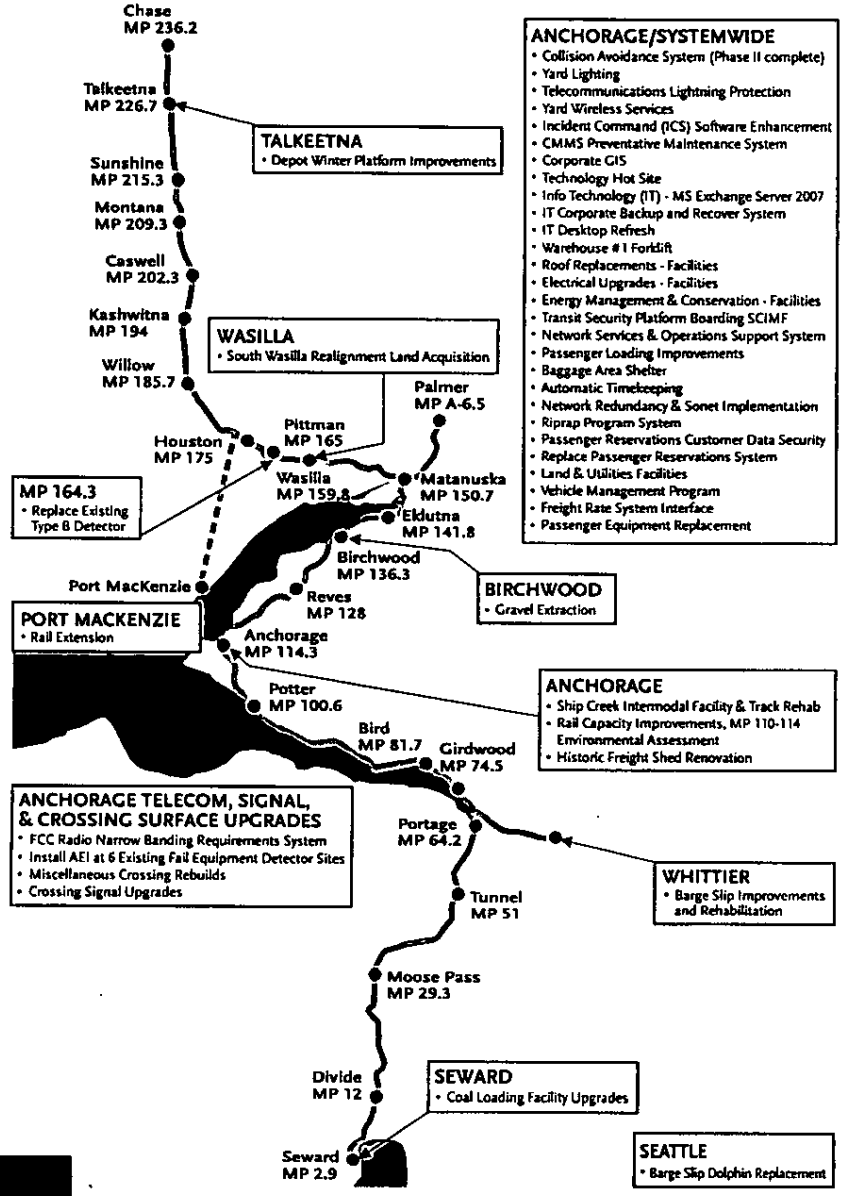
* This program is very competitive, with many criteria. Grant minimum $20 million to maximum $300 million.

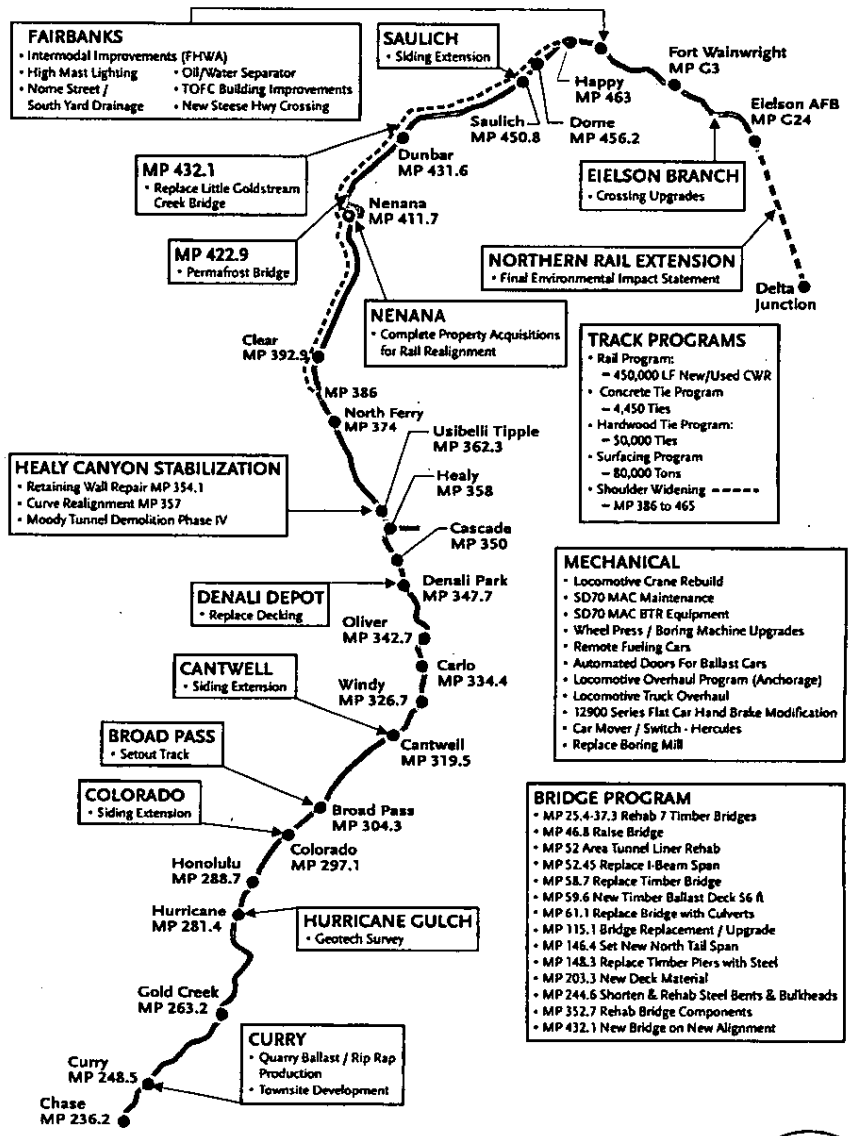
788

Major Capital Categories

■ Rail	$	18.7 M
■ Ties	$	7.5 M
■ Ballast/Surfacing/Widening	$	3.9 M
■ Bridges / Docks	$	6.9 M
■ Slope Stabilization	$	2.0 M
■ Track Realignment/Extension	$	60.9 M
■ Technology / Signal / Collision Avoidance System	$	10.8 M
■ Equipment/Vehicle Purchase	$	2.7 M
■ Rip Rap / Gravel	$	0.8 M
■ Mechanical / Equip Maint.	$	3.1 M
■ Facilities	$	4.4 M

Capital projects started, continued or completed in 2009 are all along the railroad.

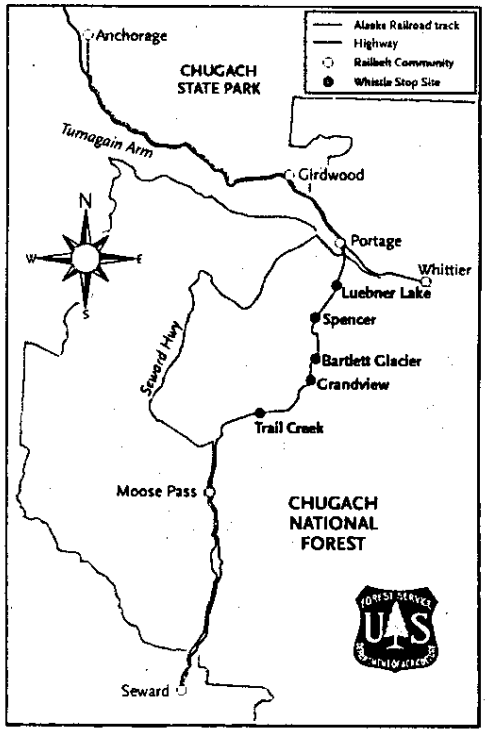




790

Chugach Forest Whistle Stop

- Joint venture with Forest Service to develop camping and viewing facilities at 5 whistle stop sites, interconnected by a system of trails, along the track between Portage and Moose Pass.
- Spencer built 2007-08, with a water well to be installed in 2009. Grandview site is conceptual.
- Self-propelled railcar to be delivered early 2009.

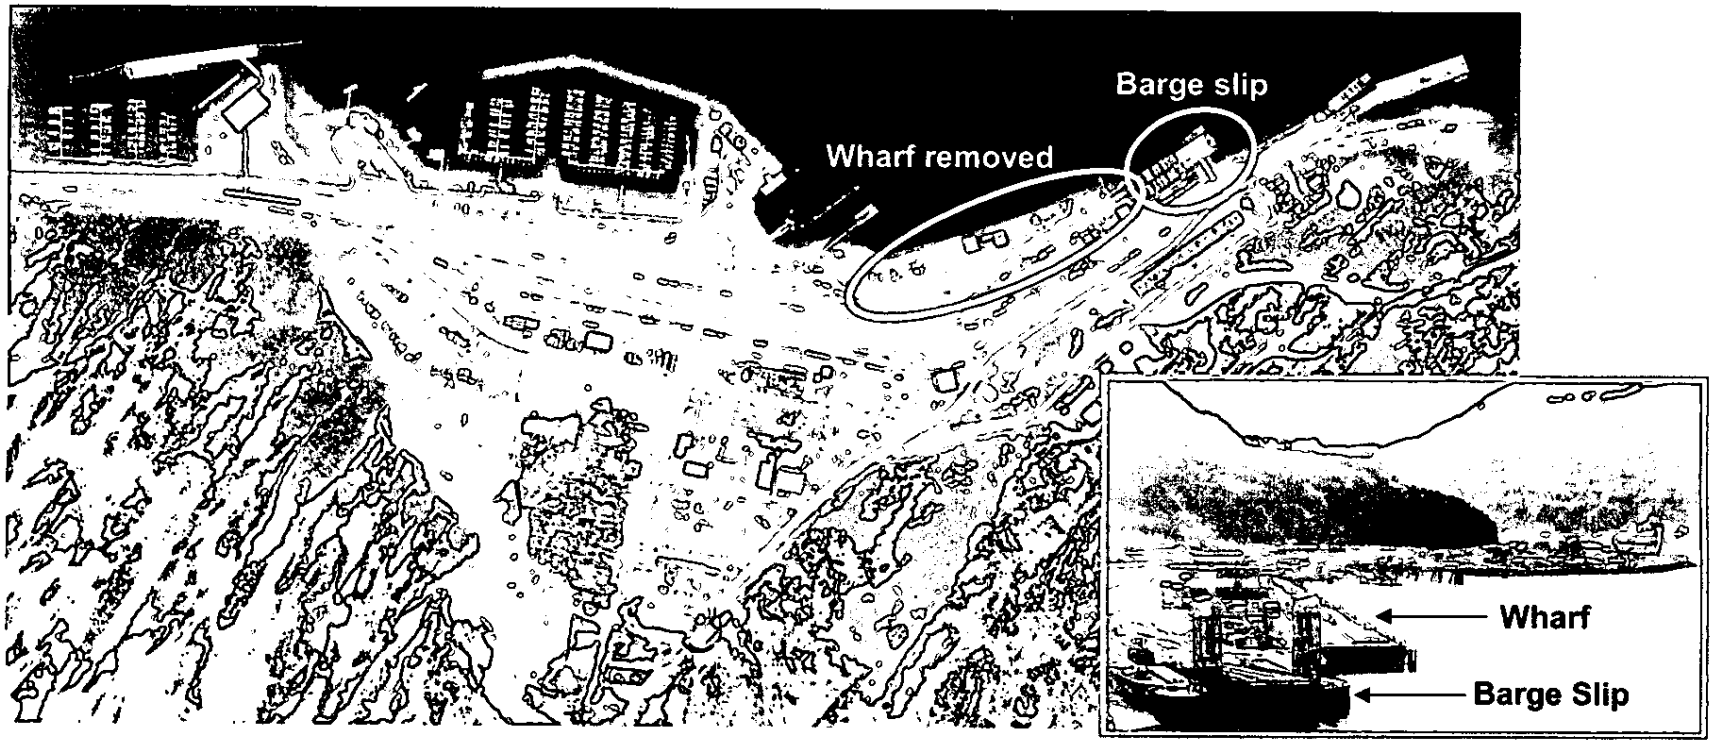


Spencer construction in 2007

Grandview is next.

Whittier Infrastructure

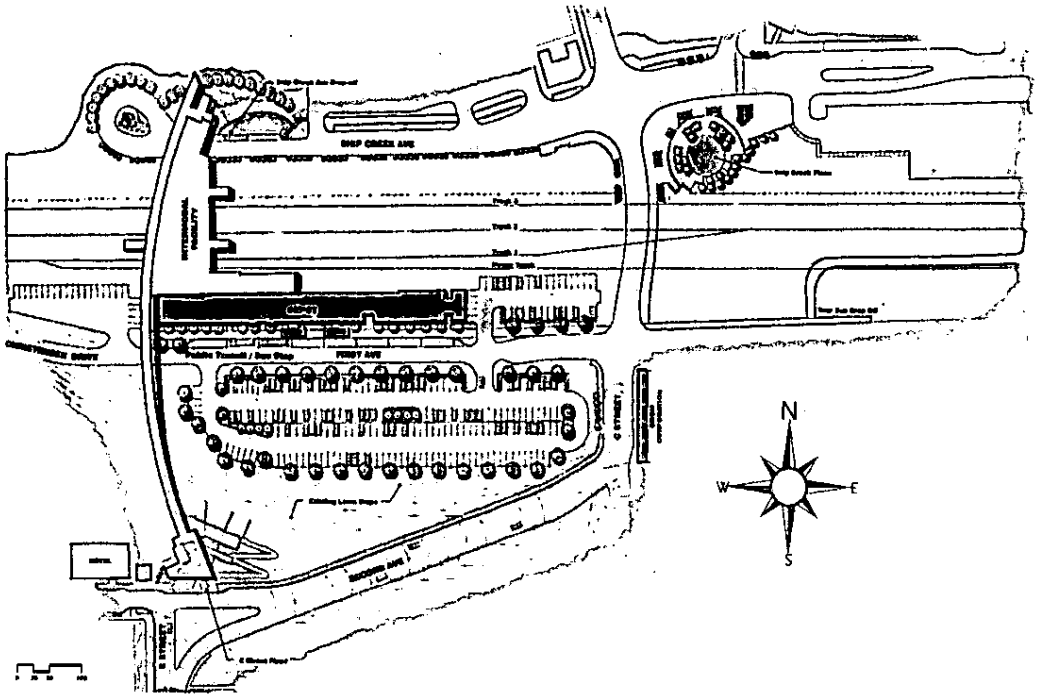
- Marginal Wharf demolished and new winch installed in 2008; Long-term plans for a passenger dock and intermodal facility.
- Freight Barge Slip repairs budgeted for 2009.

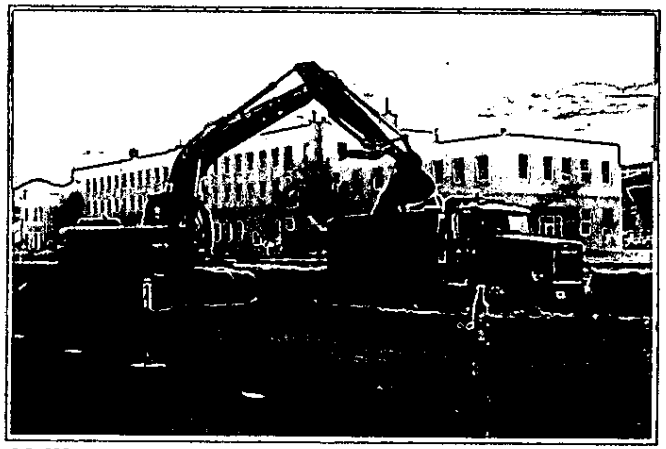


792

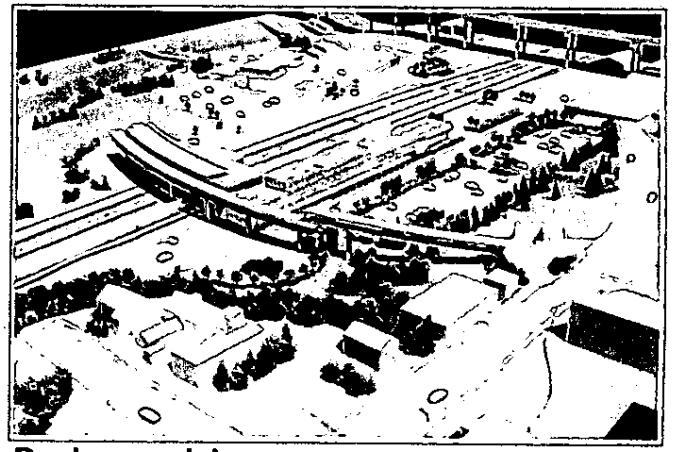
Ship Creek Intermodal Center

- Multi-phased project to build an intermodal hub that incorporates the Historic Depot.
- Phase 1 utility and track work 2007-09.





Utility and track construction

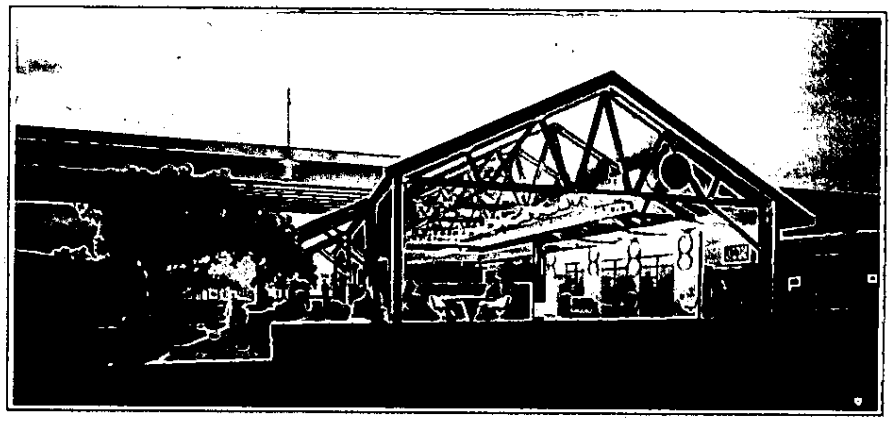


Design model

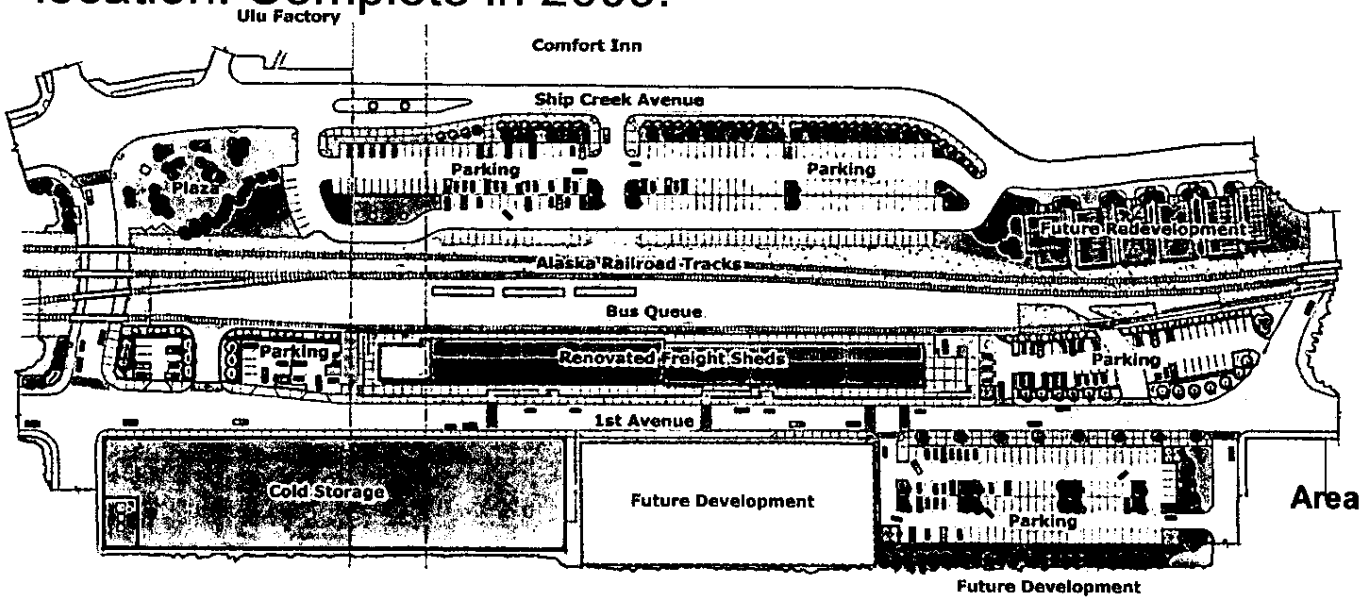
793

Historic Freight Shed

- Renovate a 36,000 sf historic large timber freight shed into a LEED-certified office building.
- Green design, ample parking, raised sidewalk, downtown location. Complete in 2009.



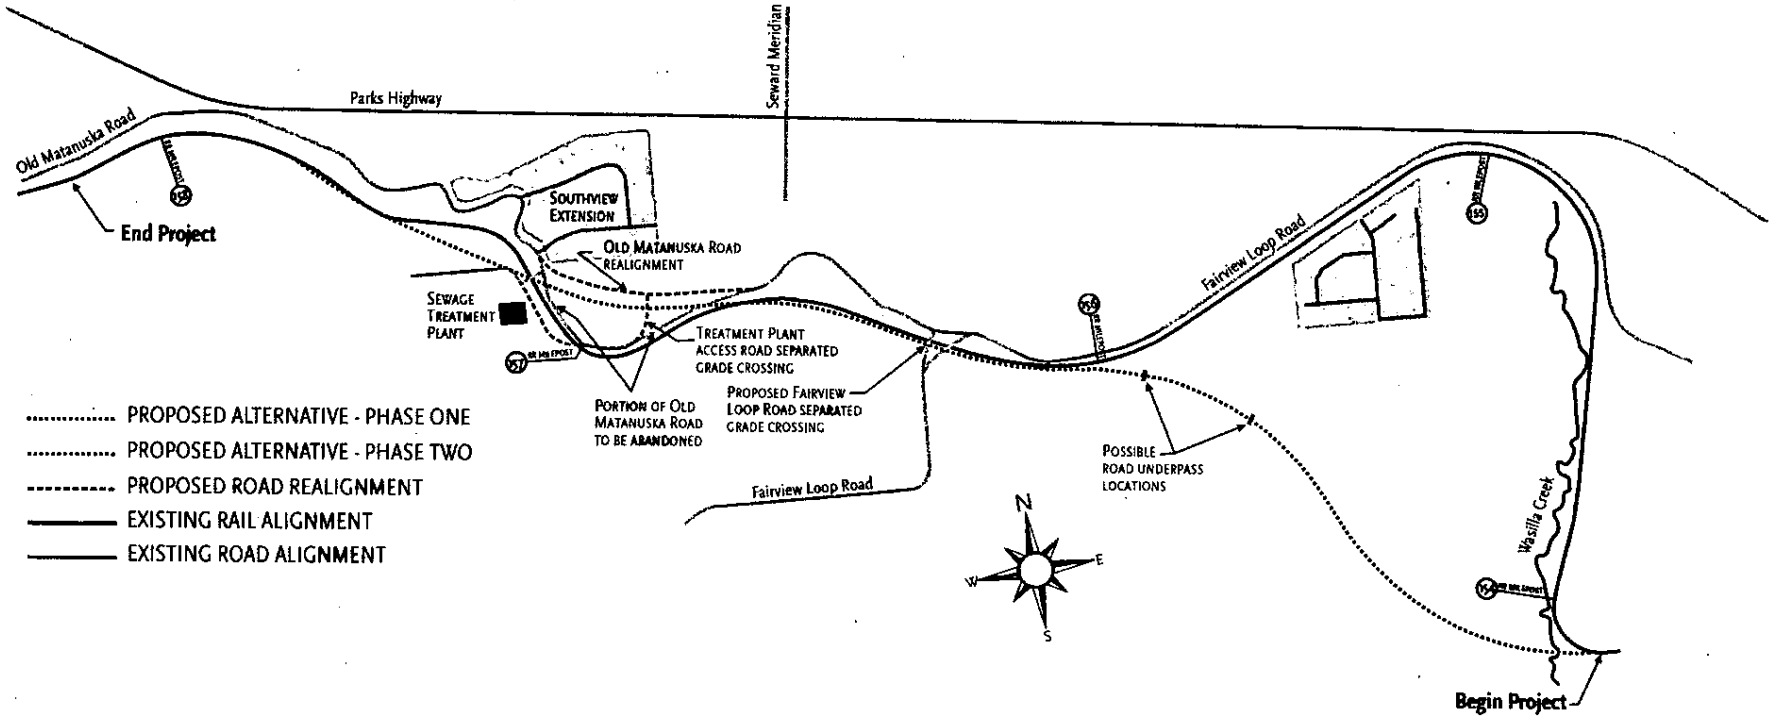
Architect's rendition.

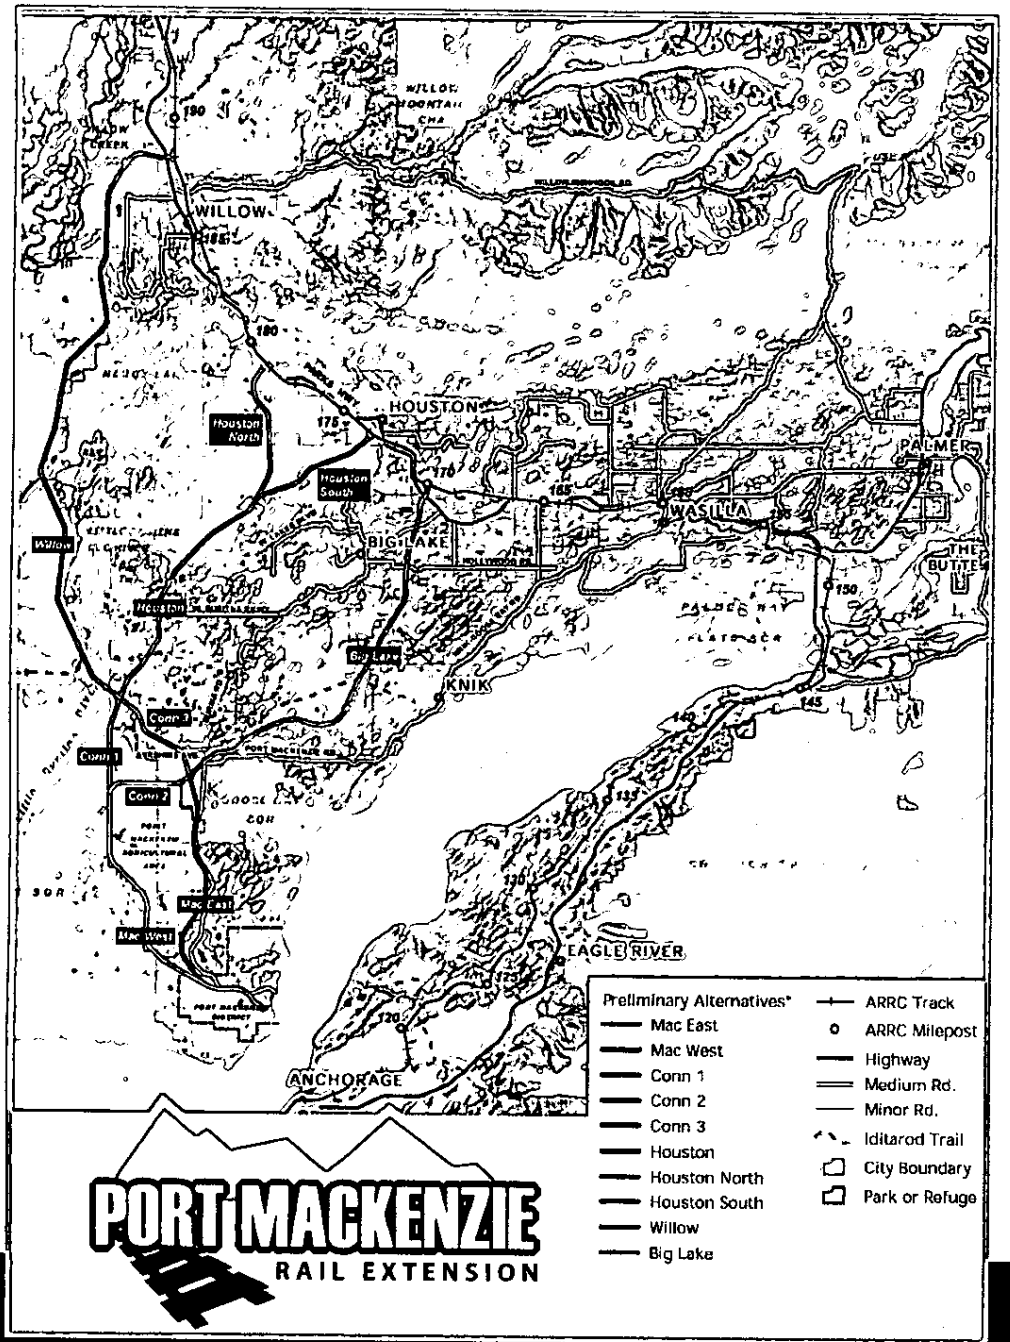


Area Site Plan

South Wasilla Rail Relocation

- Straighten curves along a 4-mile stretch in south Wasilla to eliminate at-grade crossings and increase track speed.
- EA complete, and new ROW land acquisition is underway. Construction cost of $30 million is not yet funded.





Port MacKenzie Rail Extension

- Construct a 30- to 45-mile rail line to connect the port to the main line.
- Sponsored by the Mat-Su Borough, with $27.5 funds allocated to date by the State Legislature to fund an EIS.
- Surface Transportation Board (STB) is overseeing EIS.

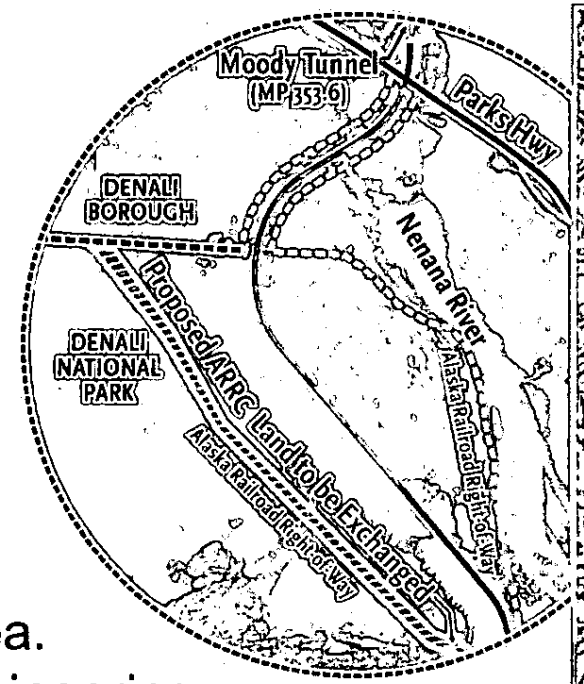
AlaskaRailroad.com

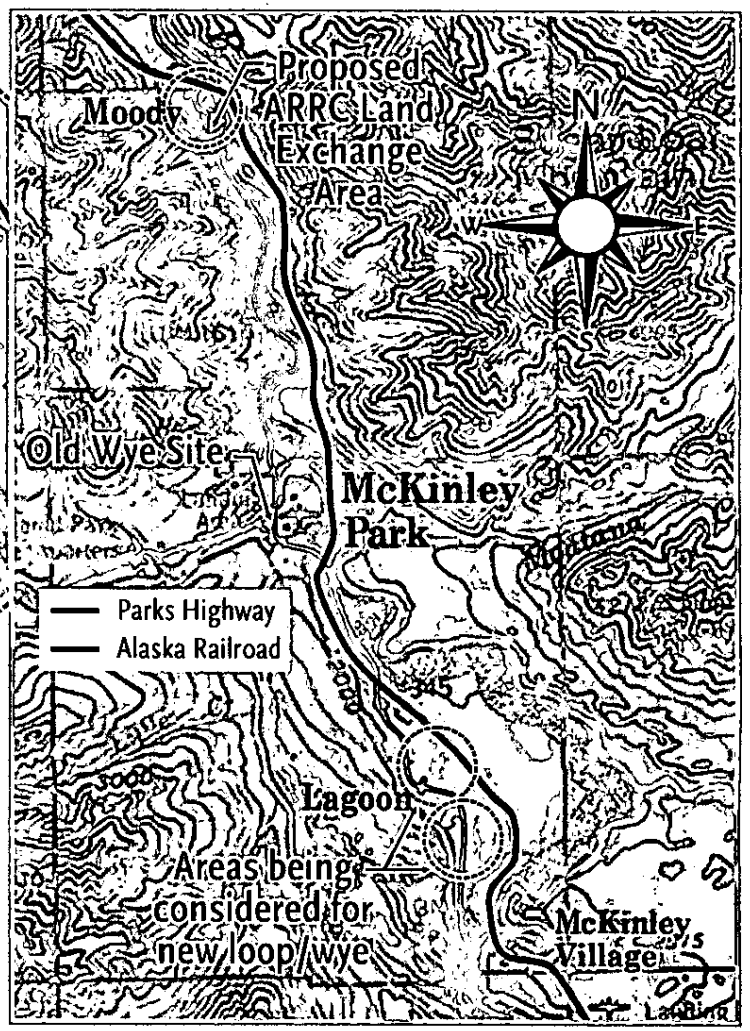
ALASKA RAILROAD CORPORATION EST. 1914

796

Denali Park Turnaround Track

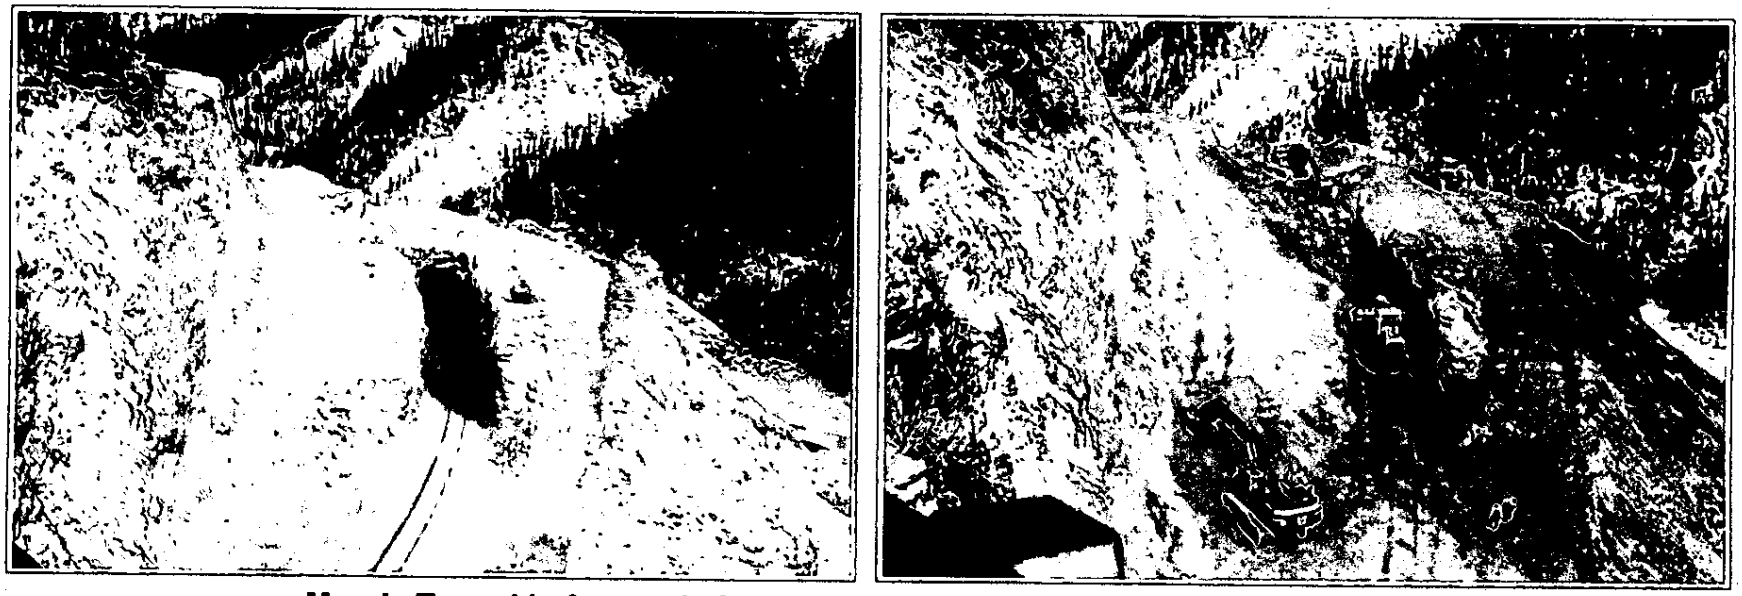
Re-establish a loop or wye track to allow passenger trains to turn around in the Denali Park area. Conceptual engineering recommends a small land exchange, which requires Congressional and Alaska Legislative approval. The National Park Service is preparing the environmental document.





Healy Canyon Stabilization

- Series of projects to stabilize track bed, control rock falls, reinforce tunnels and realign the track.
- 2009 Program: **$900,000**. Moody Tunnel Phase 4

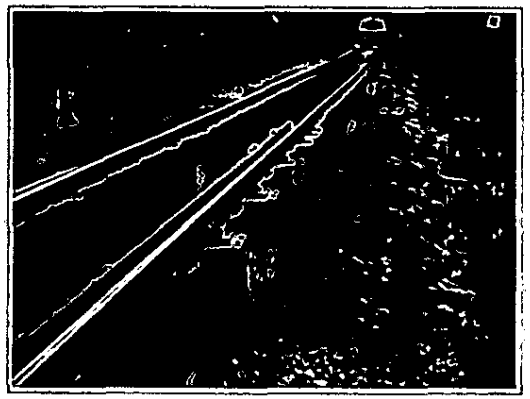


Moody Tunnel before and after a final blast to remove the top in April 2008.

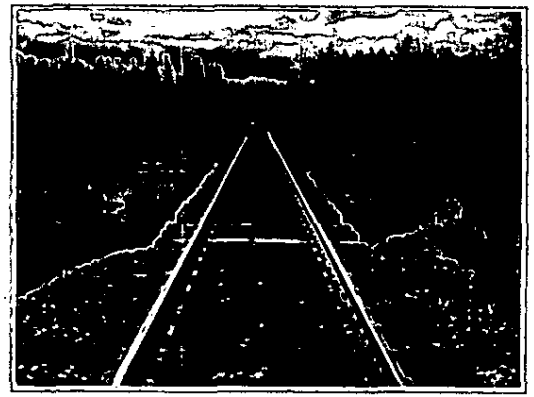
798

FEMA: Track Flood Repair

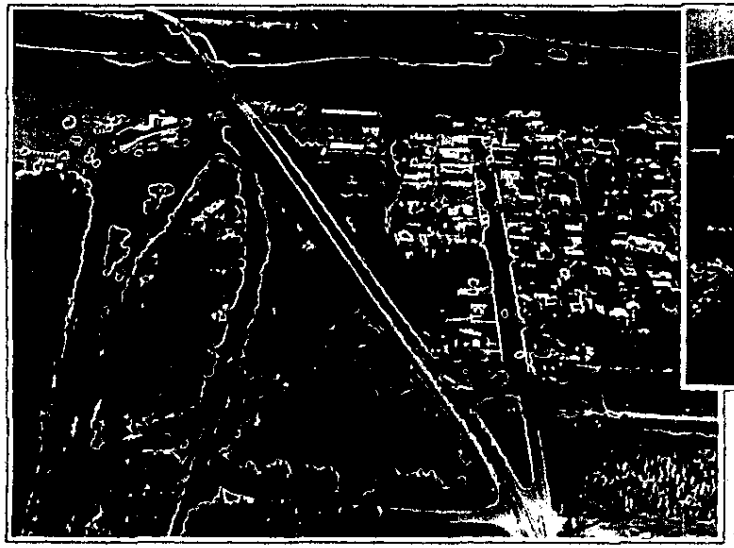
- In August 2008, three Alaska rivers overflowed, flooding several communities, such as Nenana, where road and rail were submerged.

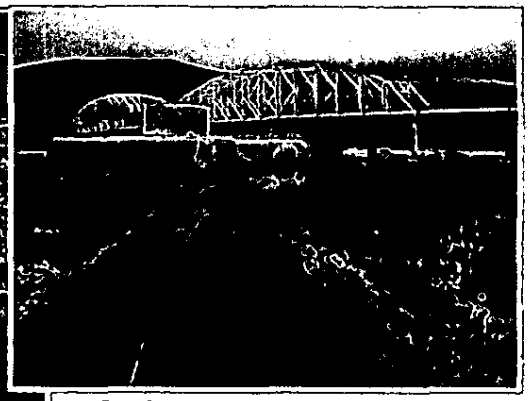


Flood waters flow over the track.

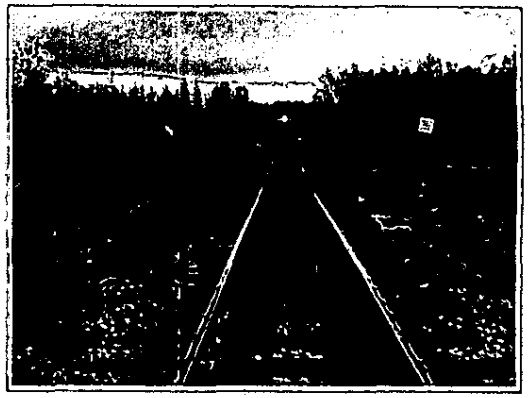


Track bed and ballast washout.





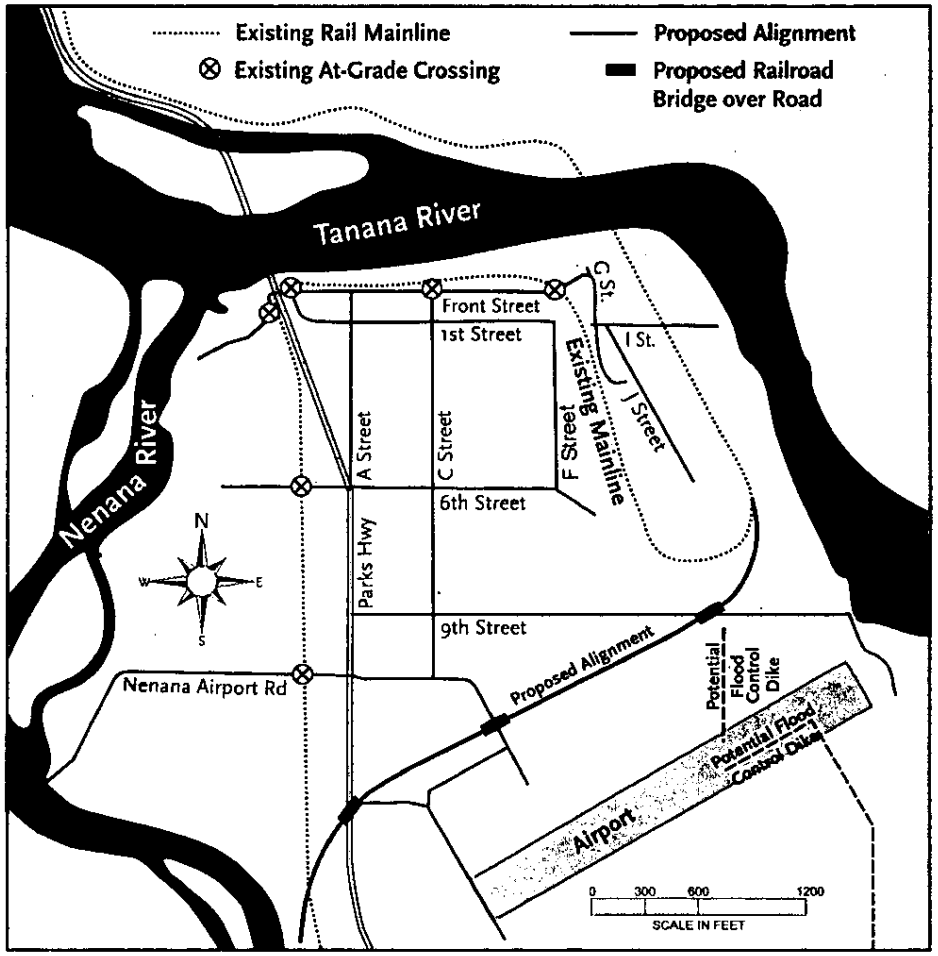
Left: Aerial view show road and rail submerged near the bank of the Nenana River. Above: Submerged rail.



Work trains respond immediately to repair the washouts and other serious track damage.

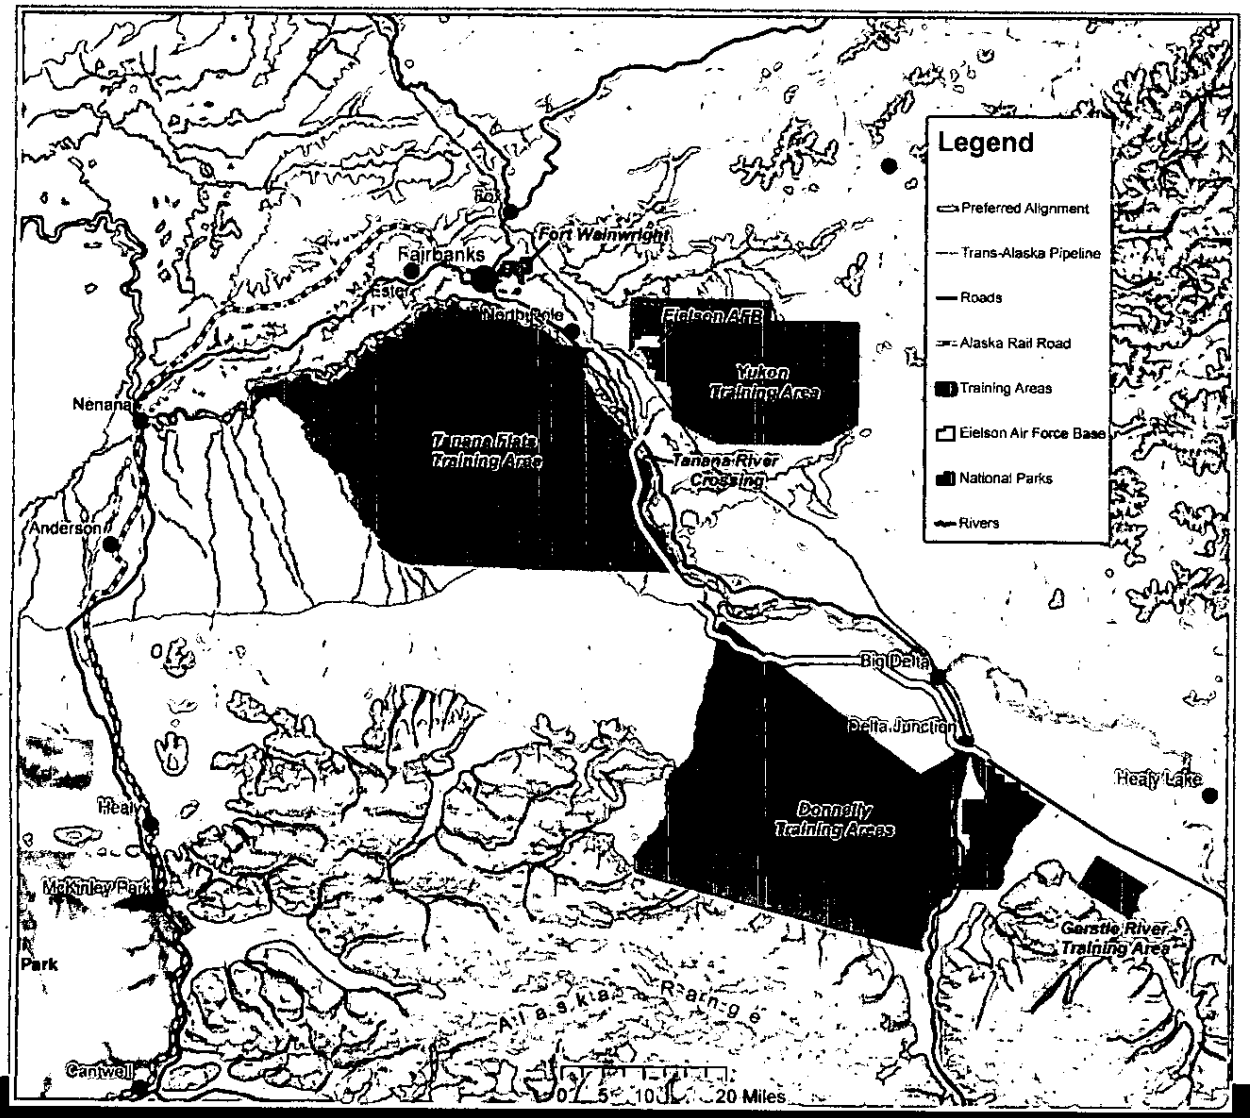
Nenana Rail Realignment

Started in 2008 the project seeks to relocate the tracks around downtown Nenana. The EA was complete in 2004. Right-of-way land acquisition will be complete in 2009. Construction estimate of $25M is not funded.



800

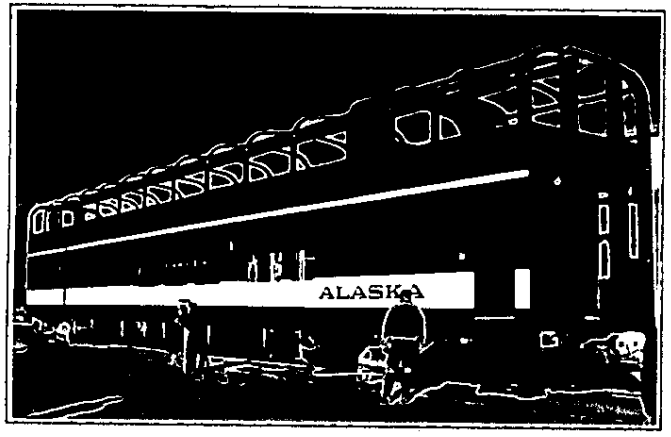
Northern Rail Extension



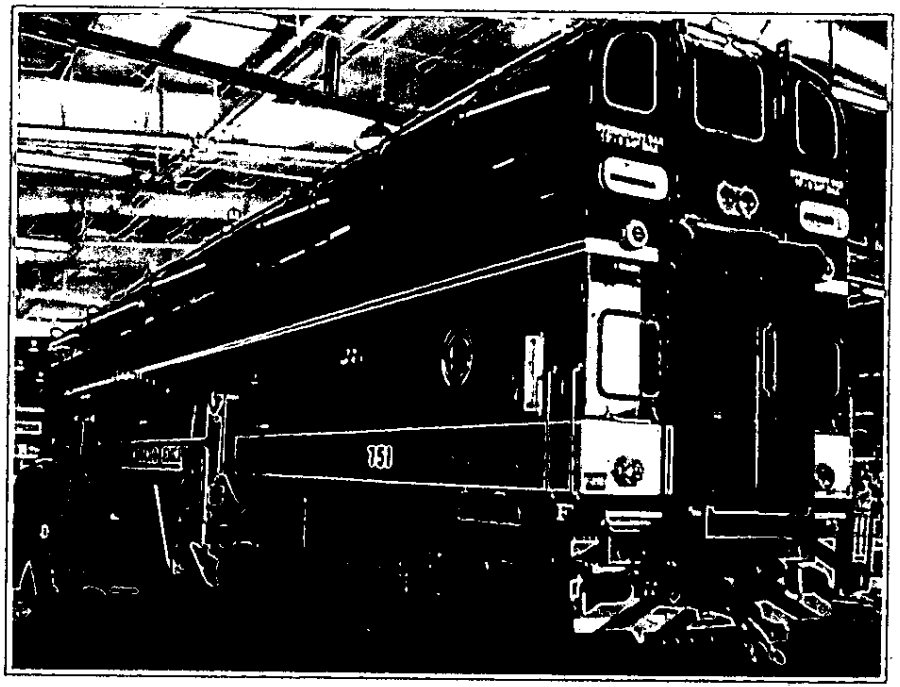
- Construct an 80-mile rail line between North Pole and Delta Junction
- Surface Transportation Board (STB) released draft EA for public comment in December 2008
- STB decision expected in 2009

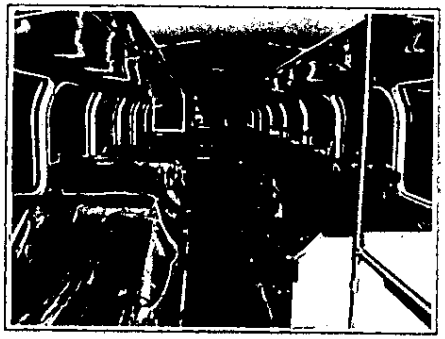
Passenger Rolling Stock

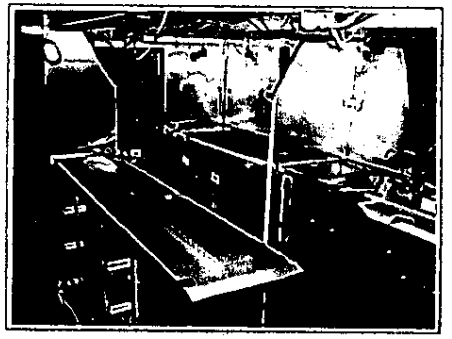
- Colorado Rail Car built one self-propelled DMU and two bi-level railcars for 2009 service.
- Additional Passenger Equipment rehabilitation scheduled for 2009.



Two bi-level dome cars were delivered for *GoldStar* first-class service in 2009.



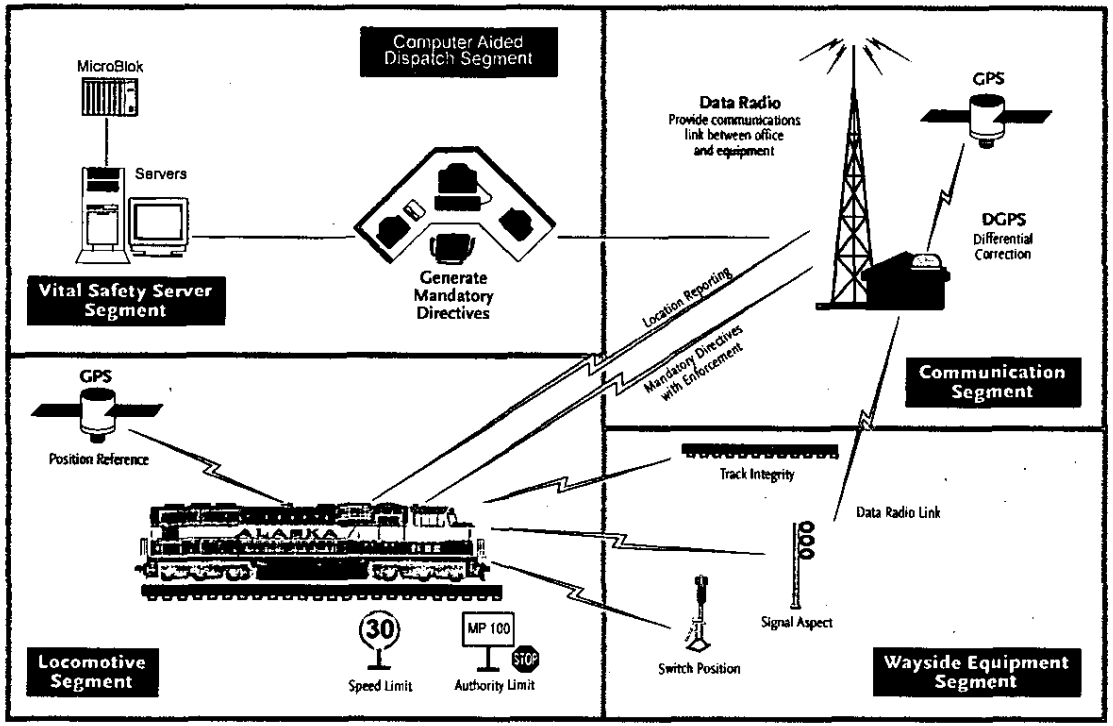




Delivery of the new DMU for service in 2009.

Collision Avoidance System

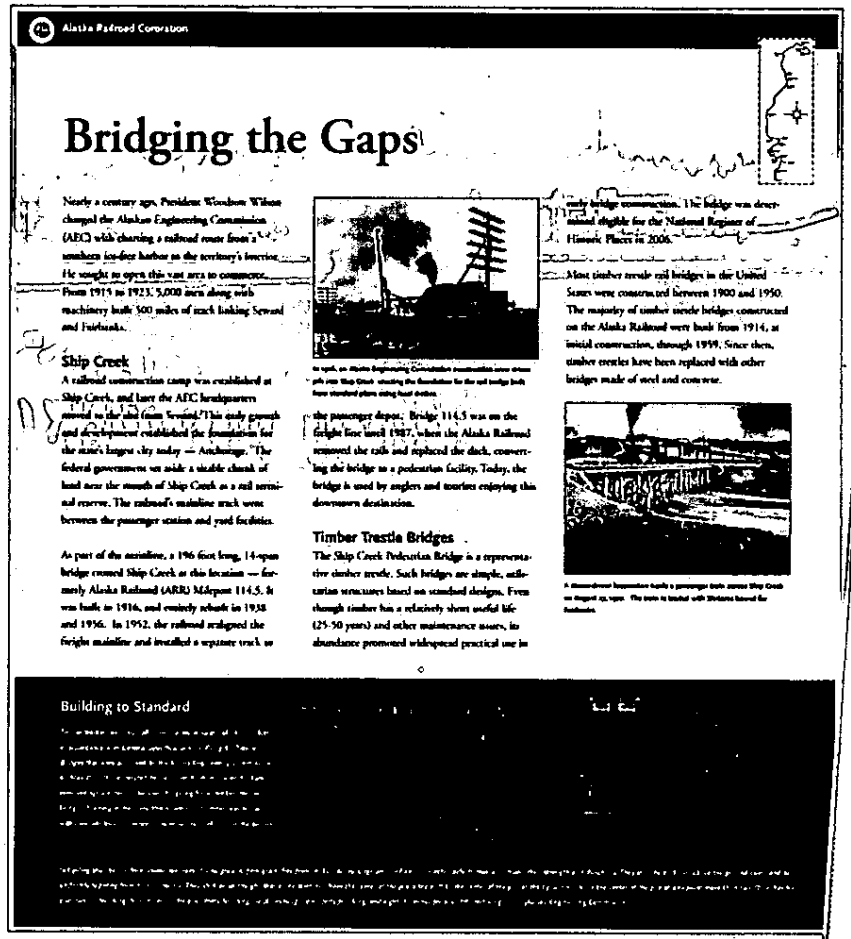
- Multi-phased project to develop and implement a train control system that greatly reduces the risk of human error.
- Integrates a computer aided dispatch system, locomotive on-board computer system, GPS locator, track-side detection devices and a dedicated communications network.



Historic Preservation

ARRC works with state and federal historic preservation agencies and organizations to preserve railroad history.

Preservation efforts include educational and informational materials.



Alaska Railroad Corporation

Bridging the Gaps

Nearly a century ago, President Woodrow Wilson charged the Alaskan Engineering Commission (AEC) with charting a railroad route from a southern ice-free harbor in the territory's interior. He sought to open this vast area to commerce. From 1915 to 1923, 5,000 men along with machinery built 500 miles of track linking Seward and Fairbanks.

Ship Creek

A railroad construction camp was established at Ship Creek, and later the AEC headquarters moved to the site from Seward. This early growth and development established the foundation for the state's largest city today — Anchorage. The federal government set aside a sizable chunk of land near the mouth of Ship Creek as a rail terminal reserve. The railroad's mainline track went between the passenger station and yard facilities.

As part of the mainline, a 196 foot long, 14-span bridge crossed Ship Creek at this location — formerly Alaska Railroad (ARR) Milepost 114.5. It was built in 1916, and entirely rebuilt in 1938 and 1956. In 1952, the railroad realigned the freight mainline and installed a separate track so the passenger depot. Bridge 114.5 was on the freight line until 1987, when the Alaska Railroad removed the rails and replaced the deck, converting the bridge to a pedestrian facility. Today, the bridge is used by anglers and tourists enjoying this downtown destination.

Timber Trestle Bridges

The Ship Creek Pedestrian Bridge is a representative timber trestle. Such bridges are simple, utilitarian structures based on standard designs. Even though timber has a relatively short useful life (25-50 years) and other maintenance issues, its abundance promoted widespread practical use in early bridge construction. The bridge was determined eligible for the National Register of Historic Places in 2006.

Most timber trestle rail bridges in the United States were constructed between 1900 and 1950. The majority of timber trestle bridges constructed on the Alaska Railroad were built from 1914, at initial construction, through 1959. Since then, timber trestles have been replaced with other bridges made of steel and concrete.

Building to Standard

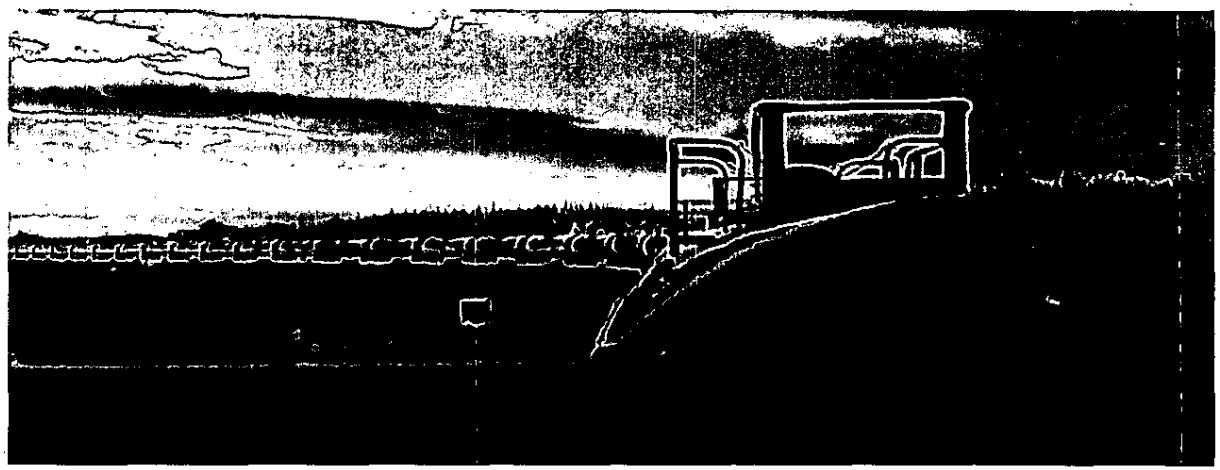
1st Five Year Plan



2002 - 2006

Here Is What Guides Us

President's Overview	Foundation	ARRC Today	Milestones	Landscape	5-Year Strategic Program
Setting the tone for this working document	History, early vision & amendment components	Assessing where we've been, who and what we are	Operating/capital benchmarks and forecasts	Issues impacting the railroad environment	Plan components and supporting initiatives
2	5	7	11	15	20

808

807

The Methodology: Effects Based Thinking

- A way to help stay focused on the strategic level
- What is the high order *effect* we are trying to achieve?
- Formulate the desired outcome *first*, freeze it, then consider only the timely, affordable, relevant paths that can get you there

Components of ARRC Planning

- **Strategic** Level – *"Forest"*
  - Describing the desired corporate outcome … effects
- Operational Level – *"Trees"*
  - Major independent elements which jointly compromise the desired outcome.
- Tactical Level – *"Weeds"*
  - Bits and pieces that compromise each operational element.
  - ARRC project list goes here.

Desired Strategic Effects

- Continue to improve safety
- Recruit, train, and retain quality employees
- Establish effective railroad security
- Improve financial soundness
- Improve productivity
- Build constructive community relationships
- Position for growth and sustainability

Productivity

- **A product of:**

  People x Stuff

- Both need attention if you are trying to maximize the outcome
- Depends upon the concept of "balance" across the entire company, regardless of job
- The more employees "feel the love", the more productivity you gain

Productivity Comes From Satisfied Employees, But We Had ...

- No 401K match
- No retirement health care account
- Unhappiness over profit sharing
- Working conditions/quality of life needs repeatedly deferred ... failing to make the cut in the capital budget
- Extensive wage tiers creating resentment
- Guard/reserve considerations outdated
- Corporate training program lacking
- Sick leave abuse rampant

Conclusion: We needed to do much more

Tactical Activity: We Began Budgeting to Improve Productivity

- Pay
- Benefits
- Workplace tool modernization
- Break/Rest Areas
- Workplace facility improvements
- Recruiting
- Schedules
- Rewards
- Training
- Mentoring

812

First Five-Year Plan Achievements

2002 - 2006

Safety

- Incident Command Center created
- Response plan, training, field exercises
- Employees create a user friendly Safety Manual
- National Safety Employee of the Year
- Harriman Award

Four record years out of last six

2006 Best Ever !!

814

Safety (continued)

- 65% reduction in FRA reportable injuries
- 72% reduction in derailments
- ARRC FRA reportable train accidents 82% below US Railroad average
- Employee lost time down 60%

Wholesale Change in Safety Culture

External Affairs

- ARRC public opinion poll approval: 63% → 85%
- Six favorable bills passed in Juneau
- Employee Recognition Program started
- Corporate Branding Program started
- Moose Salvage Program started
- Rebuilt Corporate "Charitable" Giving program, ARRC external website, All Aboard, Community Ties newsletters
- Created Dispatch, Tenant Ties newsletter
- Community outreach visits increased to over 1,000/year
- Sea Train … All Anchorage 5th graders to Sea Life Center
- Conducted 3 employee cultural surveys (2002, 2004, 2008)

9118

Corporate Recognition

Corporate Awards

- 2004: Public Relation Society of America (PRSA):
  - Award of Excellence for 2004 Annual Report
- 2005: International Silver Davey Awards:
  - Consumer Magazine Advertisement – Industrial Strength
  - Print Collateral Annual Report – Alaska Railroad Annual Report
  - Print Collateral (safety advertisement) – Planes, Trains

Corporate Recognition

Marketing Sales & Service Awards

- 2003: Seven awards given from *Onboard Services*. Overall best Railroad; 1st place in safety, Equipment, entertainment, uniforms, and food services; 2nd for onboard services.
- 2004: Rob Halpin receives Distinguished Service Award from National Defense Transportation Association

818

Corporate Recognition

Operations Awards

- 2005: Dwight West for Safety Person of the Year, American Short Line and Regional Railroad Association (ASLRRA).
- 2004, 2005: "Jake" Award from the ASLRRA for exceeding the industry safety average.
- 2006: Wasilla Chamber "Gold Award" for significant contributions to the visitor industry

Real Estate

- New facilities brought on line
  - Airport, Denali and Fairbanks Depots
  - Anchorage Operation Center
  - Consolidated Projects and Signals Building
  - Facilities Maintenance Shop
  - Seward Intermodal Facility upgrades
  - Railroad Police / Security Building
- Ship Creek property development continues
  - The Bridge
  - C-Street Park
  - Paved parking lots, curbs, landscaping
  - Purchased Railroad HQ building
  - Trail improvements
- Fairbanks Terminal/Yard Heat Conversion Project completed…coal fired boiler plant shut down

820

Real Estate

- Facilities department created
  - Cradle to grave comprehensive property management and maintenance
  - Owner-user concept applied
  - Standards developed for design, architecture, energy efficiency
  - $11M account
- Real estate facilities acquisition strategy developed
  - "Bundling" for better market response, using debt

Passenger Service

- 2008 sets another passenger revenue record
- GoldStar… first class upgraded service a big winner
- 2009: 2 New luxury bi-level coaches and a new self-propelled DMU to fit growing demand
- New charters:
  - 2007: Cruise Train and Princess "Straight to the Wilderness"
- New Services
  - 2008: U.S. Forest Service Whistle Stop – first site completed at Spencer

822

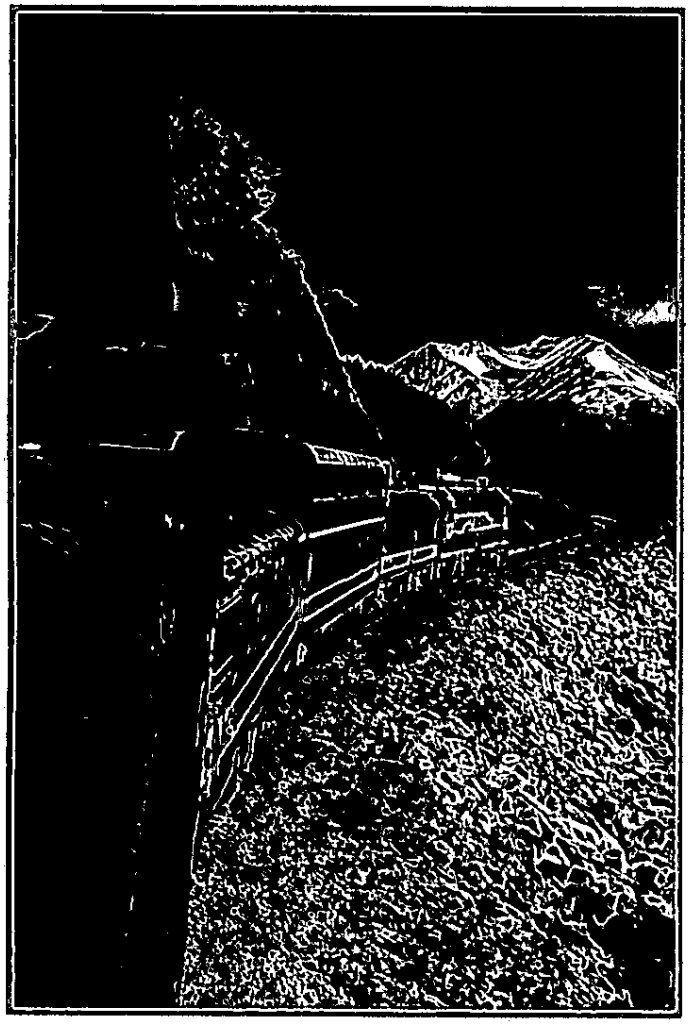
Track Rehabilitation Program

2006 - 2012

Project	2007 Actual	2001 Actual
Wooden Ties	61,052	30,600
Concrete ties	22,224	0
Welded Rail	45.72 miles	7.6 miles
Surfacing	319.38 miles	242 miles
Rail Grinding	500 miles	0
Rail Detection	2,000 miles	0
Bridge Replace/Rehab	10	6
Siding Upgrades	0	3

Productivity!

What's in Our Future?



Second Five Year Plan

2008 – 2012

824

2009 Budget: Challenges

- Core Business… train income from operations … should be profitable
- Financial security … betting the farm on Federal Entitlements is too risky
- Must reverse Operating Ratio trend line
- Railroad must create a culture of thrift throughout
- Railroad must improve ability to control costs despite a tough environment of seasonal demands

Directions from the ARRC Board

- Improve Net Income from Operations and Operating Ratio in the 2009 Budget
- Look at ALL railroad areas for possible cost savings, including manpower

826

Personnel Impacts, So Far

- 79 positions eliminated (attrition)
  - 39 Management (8 received layoff notices)
  - 26 Represented (attrition)
  - 14 Special Services
- 3 more management reclassified from expense to all capital
- 1 Assistant Vice President position downgraded
- 1 Assistant Vice President position eliminated
- 4 Director-level positions eliminated

2009 Revenue Wild Cards

Possible Gains

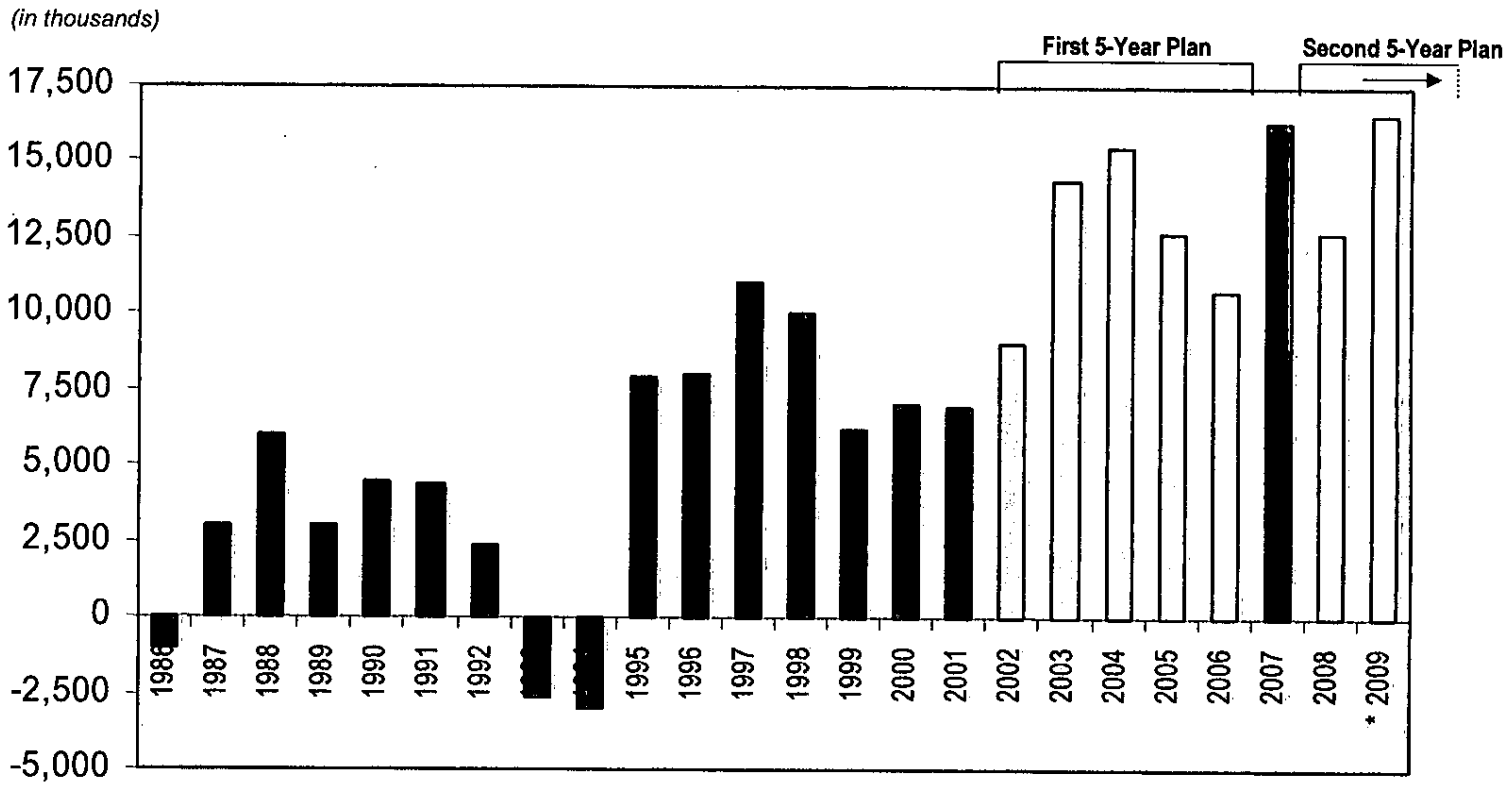
- Gravel
- Coal
- Pipe

Probable Losses

- Petroleum

828

Forecast Impact on ARRC Corporate Net Income



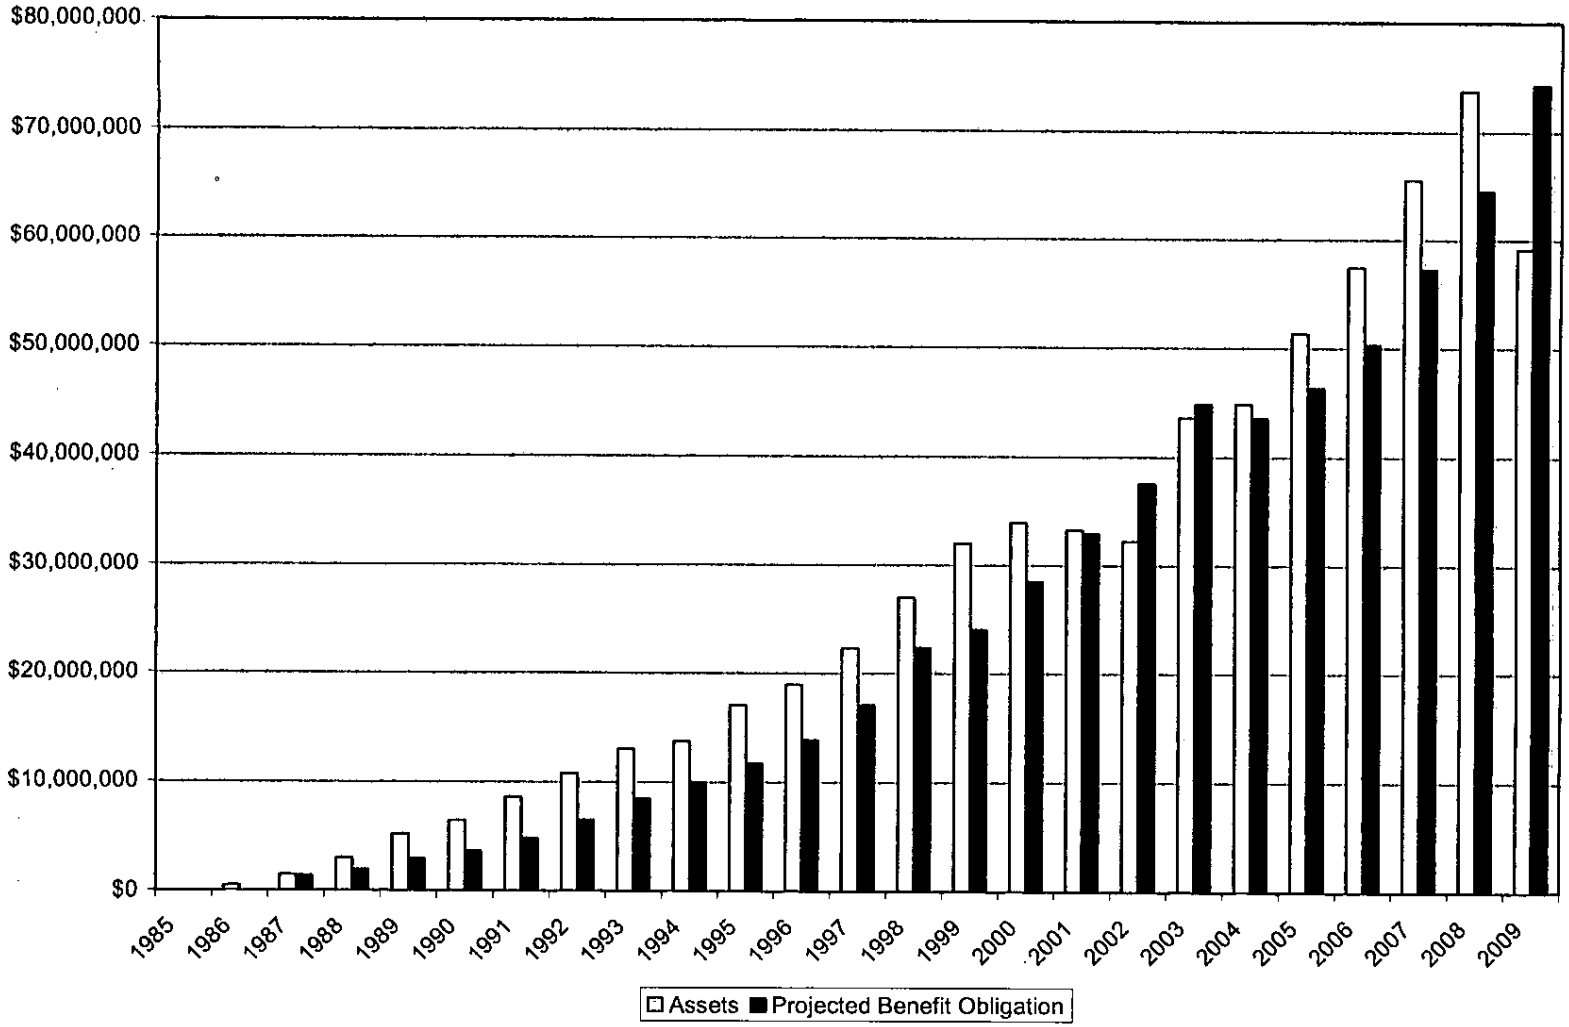
* 09 - Budget

2009 Status of Benefit Trust Funds

- Defined benefit pension trust fund totaled $59.8 million
  - Down $13.8.1 million from year end 2007
  - Liability exceeds funding by $15.1 million (79.6% funding ratio)
- Retiree medical trust fund totaled $19.0 million
  - Down $2.6 million from year end 2007
- Considerable down-market impact

830

Funded Status of the Pension Plan



Pension Plan Administration

- ARRC Pension and Represented 401(k) Committee
  - Two Union Members
  - Three Management Representatives
- Retirement Specialist in Human Resources

832

How Does It Work?

Alaska Railroad Post Retirement Medical Program

Post-Retirement Medical

- ARRC Labor Contracts (5 union contracts) provide that retirees can purchase ARRC medical insurance by paying 60% of the monthly premium.
- Non-represented employees are eligible for retiree medical coverage under ARRC policy
- Eligible retirees must be:
  - 62 or older under the ARRC Pension Plan (represented)
  - 58 or older under the ARRC Pension Plan (non-represented)
  - With the Civil Service Retirement System
  - On disability retirement

834

Post-Retirement Medical

- Retirees who don't meet the criteria above can participate by paying 100% of the premium
- Certain surviving annuitants and family members can continue their participation following the death of the retiree on the same cost sharing basis
- Surviving dependent children of an ARRC pension plan participant are eligible to participate on the same cost sharing basis, without the requirement that there be a pension plan recipient

Post Retirement Medical

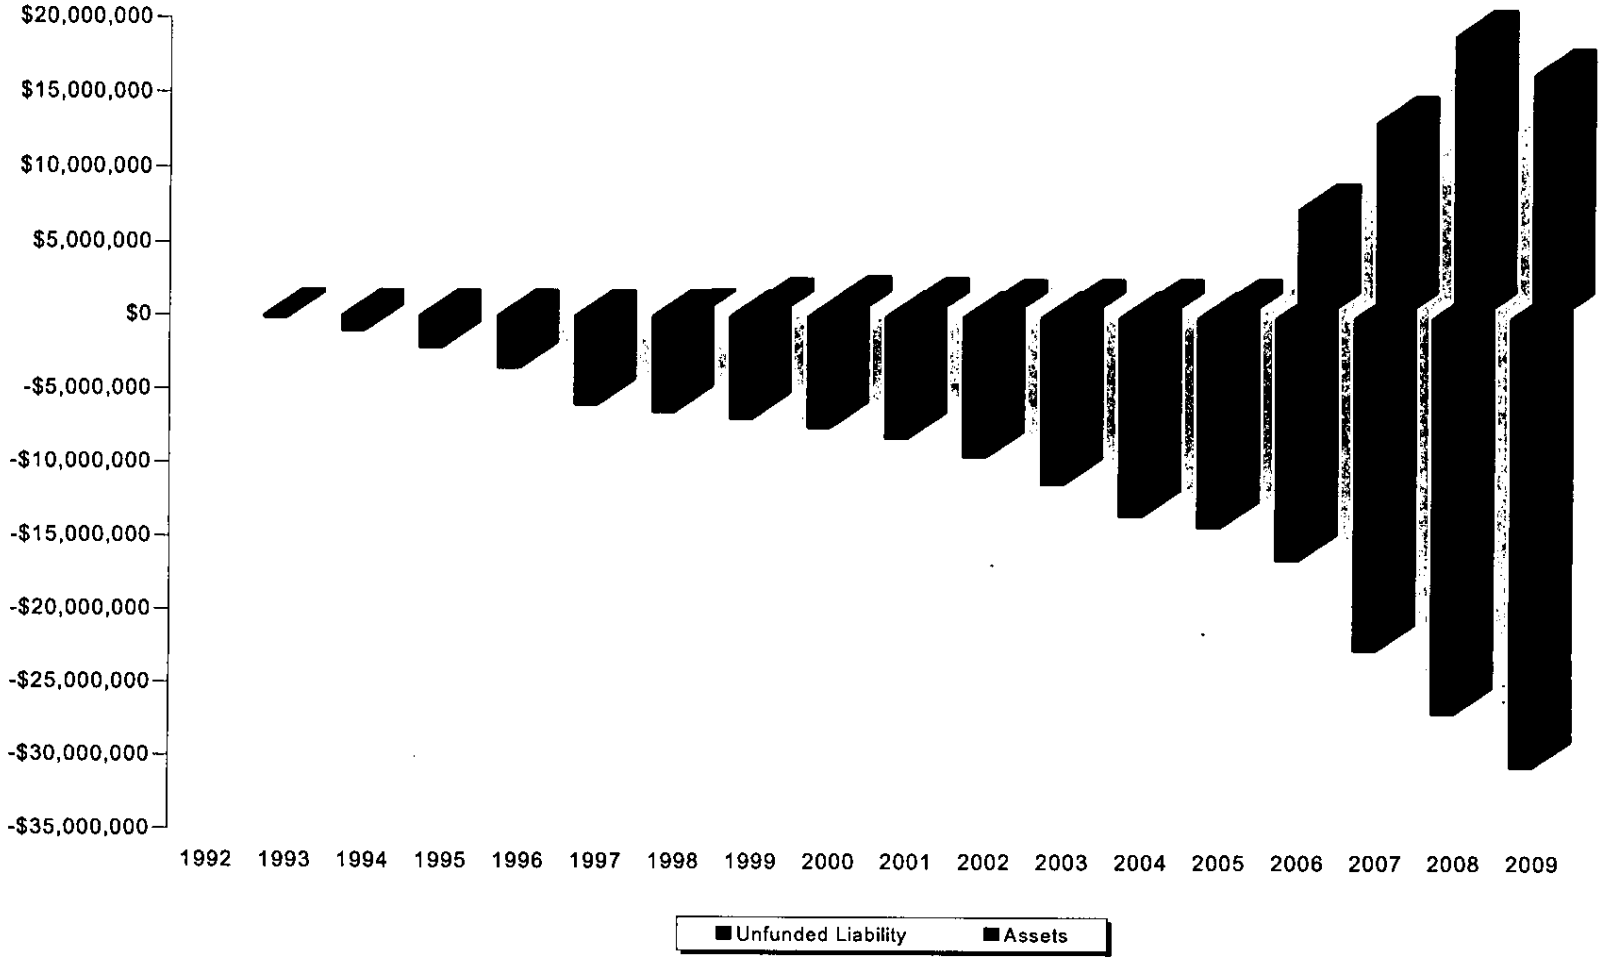
- Deductible: $500
- Co-insurance: $80/20 up to $1,500
- Includes prescription drug benefit
- Does not include audio, vision and dental coverage
- Medical Plan for retiree is identical to the plan for active ARRC employees

836

ARRC Contributions

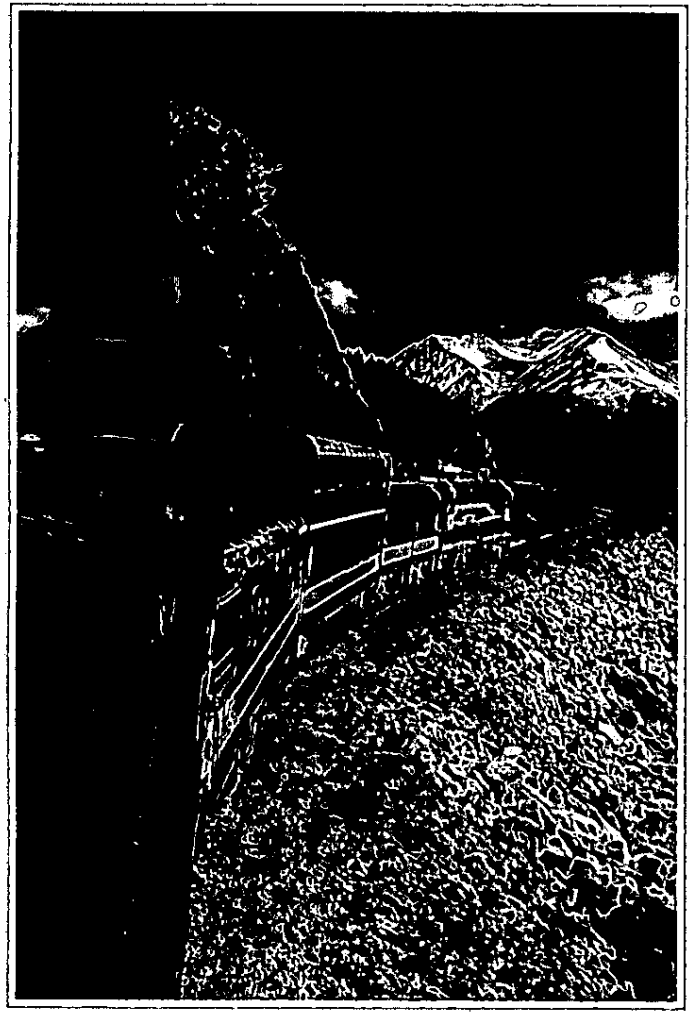
- In addition to the premium contributions, ARRC makes annual contributions to the Post Retirement Medical Trust based on the recommendations of the actuary. The 2008 contribution was $2.8 million.

Post Retirement Medical Expense/Accrued Liabilities/Assets



838

Hot Topics



Issues impacting the rail belt

Importance of Flint Hills to ARRC

- **By far, ARRC's largest and most important customer**
  - 2007 Freight Revenue from Flint Hills Resources (FHR) - $43.6M
    - 45% of total freight revenue
  - Year-round, high-margin business line buffers highly seasonal passenger/gravel revenue fluctuations
  - Land lease revenue >$1.2 million/yr
  - ARRC contracts to maintain FHR leased fleet of ~400 tank cars at > $1 million/yr

- **Partnership that heralded great potential when Flint Hills purchased the North Pole Refinery in 2004… but,**
  - While the petroleum compound annual growth rate (CAGR) between 1998 – 2003 = 11.5%... …the Flint Hills CAGR 2004 – 2008 = 1.2%
  - We have already experienced a 25% volume reduction (200 million gal/yr) between 2004-2008

840

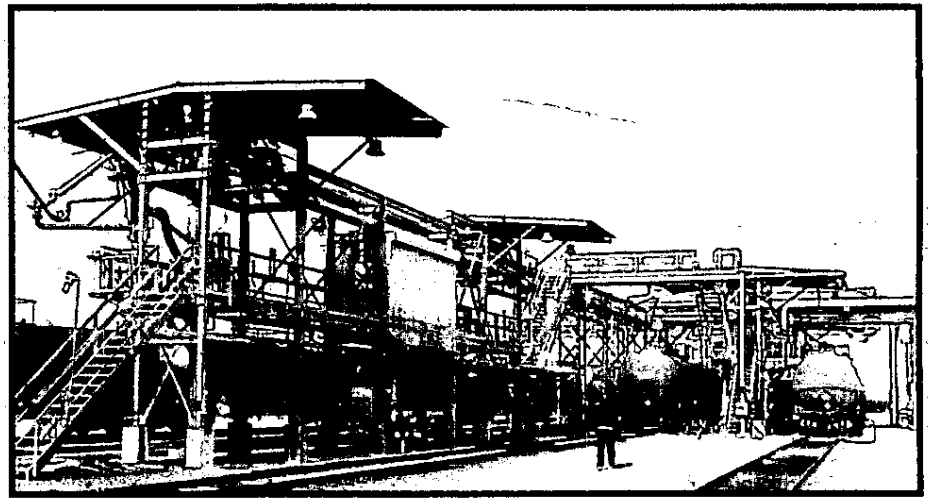
Flint Hills Resources at Crossroads

- FHR had originally indicated it was considering 3 alternatives, with a decision to be made by end of 2008:

1. [redacted]
   Major capital investment into North Pole Refinery, significantly increasing production capabilities to Alaska, Pacific Rim.

2. **Practical Option:**
   Give up on Alaska… sell North Pole Refinery.

3. **Last Resort:**
   Convert to "terminal operation." Minor amount of refined fuel is shipped north to Fairbanks and there distributed by truck. Refinery closed.
   Flint Hills jobs lost ~165.

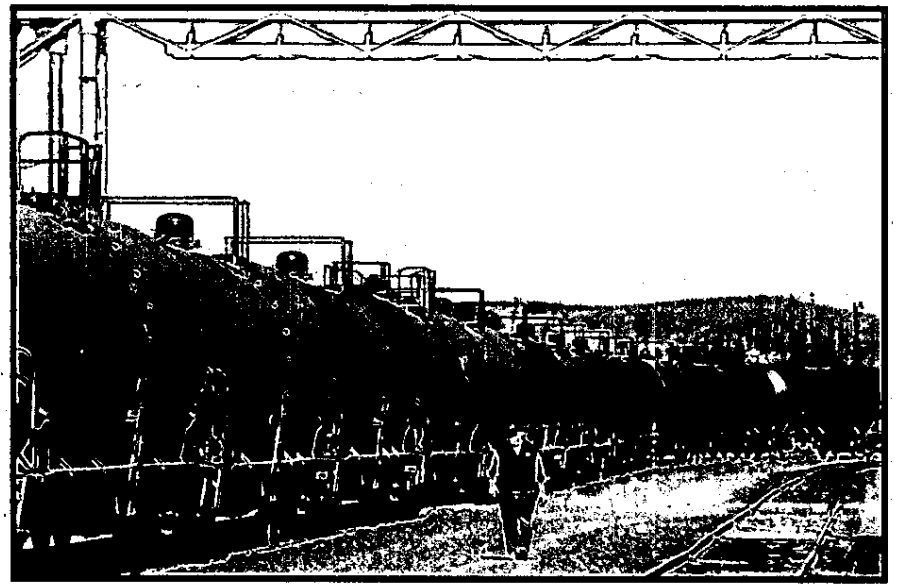


Impact of Terminal Scenario

- **Option #3 would devastate ARRC's economic contribution to the State of Alaska**
- **To fulfill statutory mandate of self-sufficiency, massive restructuring of ARRC would be required**
  - Roughly $25-30 million/yr in expense reductions would need to be offset
  - **200+ high-paying railroad position eliminations**, divestiture of locomotives/track equipment, draconian reductions in rail service and railbelt capital programs necessary
  - Precipitous drop in winter cash flow would necessitate a close look at the ability to provide year-round interior train service.

Railroad Bottom Line

Almost overnight, the Alaska Railroad would cease to be one of the State's most successful and well-recognized annual economic contributors.



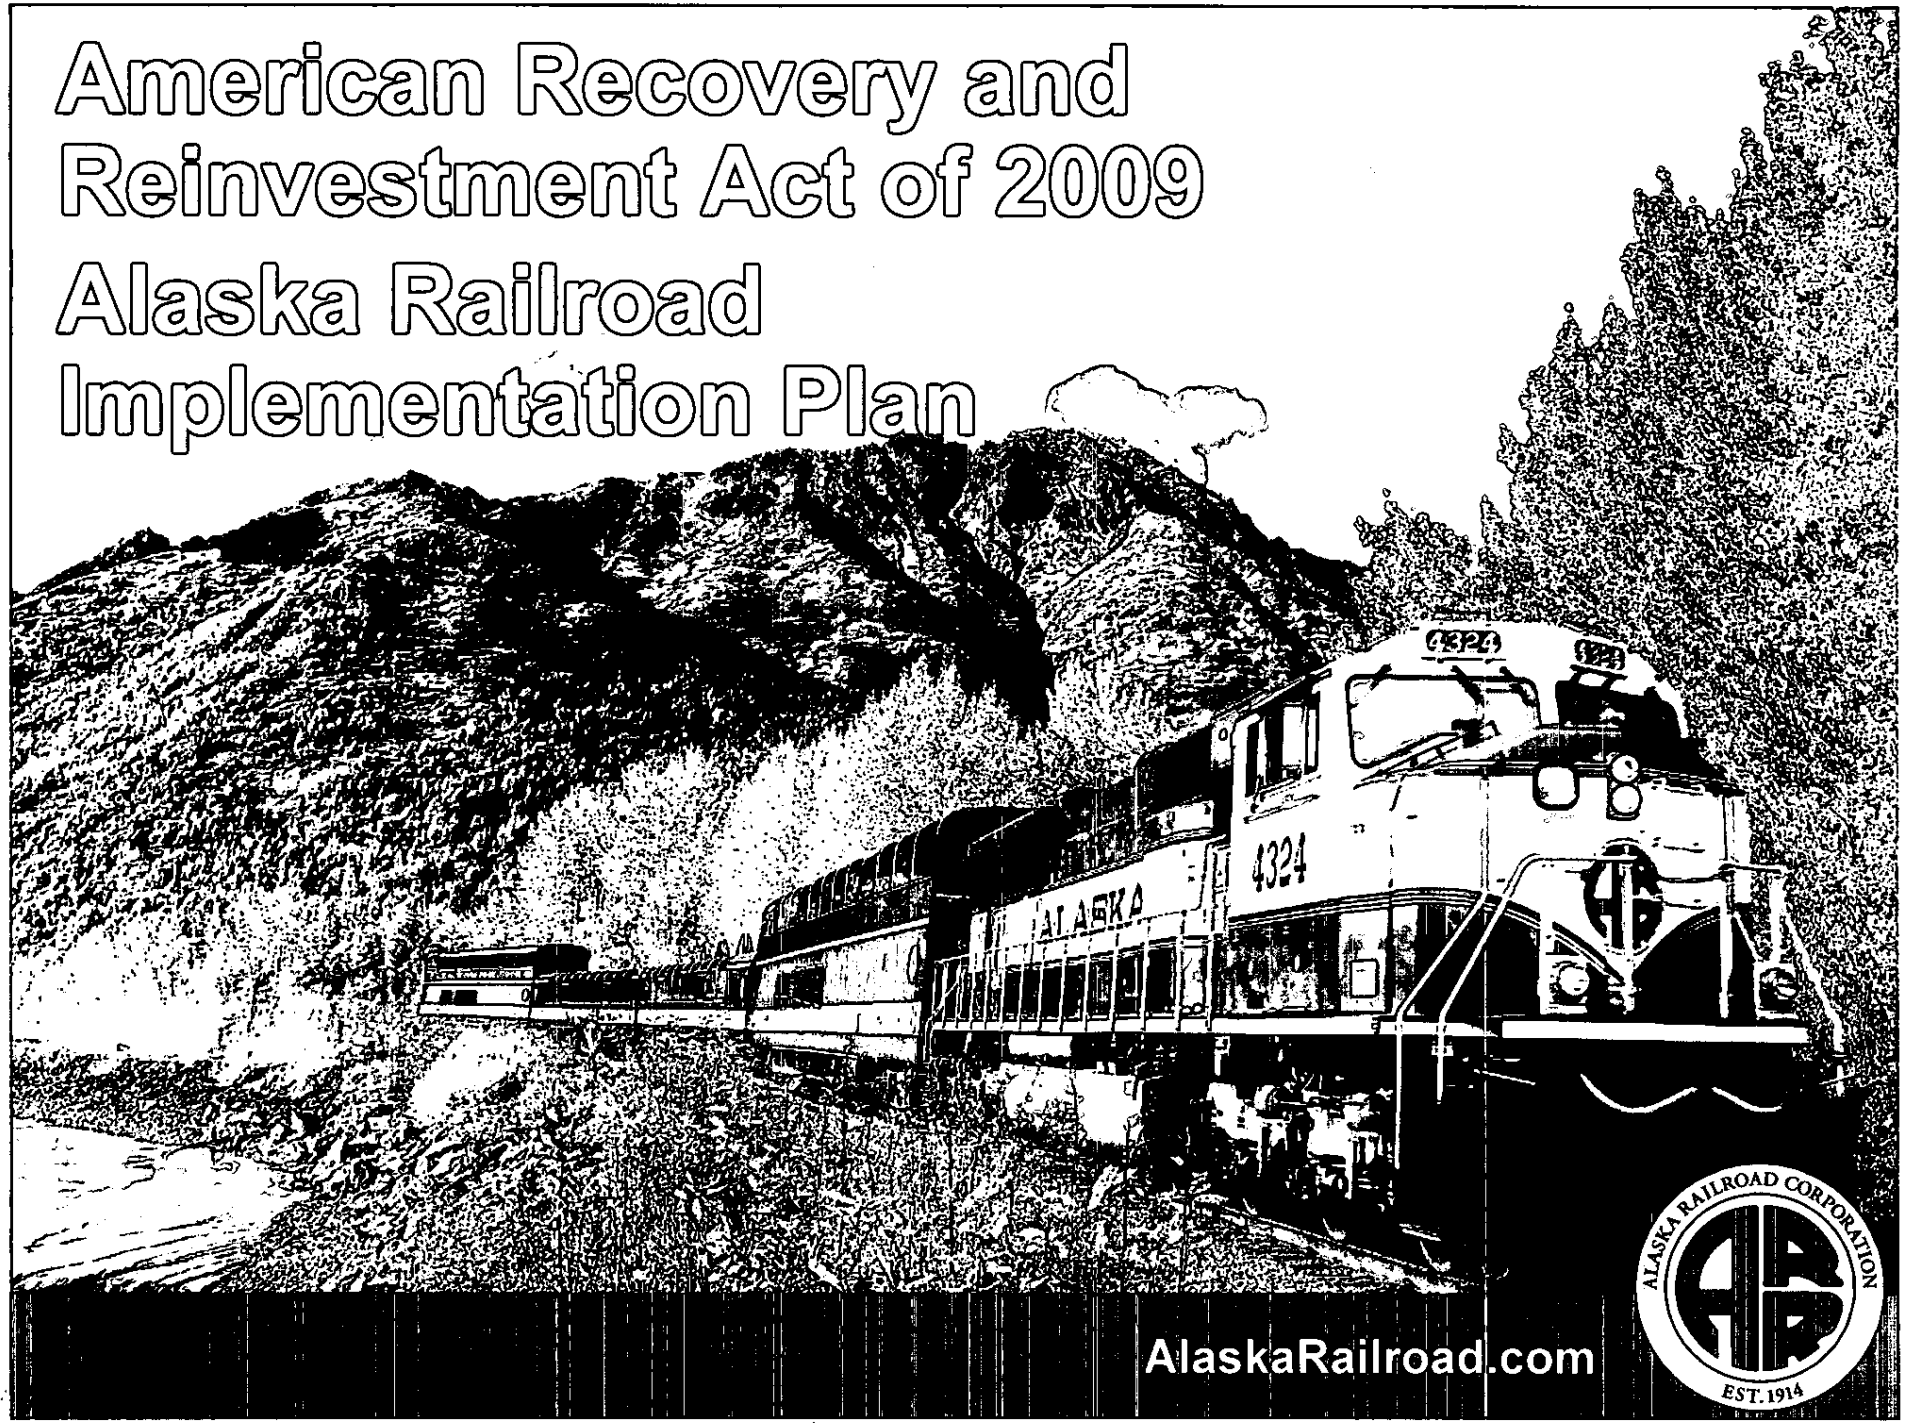
Impact of Terminal Scenario

- **Economic Impact to Alaskan communities significant**
  - —ISER quantified impact of ARRC reductions on Alaskan communities
    - **250 non-ARRC jobs lost due to ARRC reductions**
    - **Another $21 million/yr in non-ARRC payroll lost**
  - —Many, many more Alaskan jobs at serious risk from economic shockwave
    - Fairbanks, North Pole, Municipality of Anchorage, Anchorage International Airport, Port of Anchorage
  - —**Loss of annual capital expenditures in the tens of millions/yr.** Significant annual railbelt work that typically uses Alaskan-owned businesses, labor and material purchases, dries up.
  - —Anchorage International Airport left with a single source of jet fuel.
  - —Alaska would need to import POL products and ship them north.

844

American Recovery and Reinvestment Act of 2009

Alaska Railroad Implementation Plan



$26 million

American Recovery and Reinvestment Act – 2009 (ARRA-09)

Anchorage UZA Fund Allocation

FEDERAL TRANSIT ADMINISTRATION

Breakdown of ARRA Section 5307 Apportionment for the Anchorage, AK UZA					
FTA Program/Formula	**UZA Total**	**Bus Non-incentive Tier**	**Bus Incentive Tier**	**Rail Non-incentive Tier**	*** Rail Incentive Tier**
Section 5307 Urbanized Area Formula	$31,508,087	$5,368,329	$314,491	**$25,823,761**	**$1,507**
Section 5340 Growing States Formula	$277,491				
Total	$31,785,578	$5,368,329	$314,491	**$25,823,761**	**$1,507**

$5,960,310

Amount Attributable to People Mover for Anchorage bus service only

$25,825,268

Amount Attributable to Alaska Railroad for passenger operations from Seward to Fairbanks

ARRA-2009 Federal Rules

- ✓ **Passenger related projects only:** Federal Transit Administration (FTA) Section 5307 funding mandate
- ✓ **Project in federal planning document:** Must be included in a federally approved plan, such as:
  - Statewide Transportation Improvement Program (STIP)
  - Transportation Improvement Program (TIP) in Anchorage and Fairbanks
- **Project meets standard regulations and guidelines:**
  - Environmental, air quality conformity, Disadvantaged Business Enterprises, Buy America, Department of Labor, etc.
- **Meet time certain deadlines:** If obligating fund deadlines are not met, *funds will be withdrawn*
- **First report deadline: April 4, 2009.** Includes project list, certifications, jobs created, jobs sustained, etc.

New Reporting Requirements

Requirement Drivers: "Transparency and Accountability"

- ✓ **CEO Certification:** Chief Executive Officer must certify investments made under ARRA-2009
- ✓ **Quarterly Reporting:** Reports required no later than 10 days after end of each quarter
- ✓ **Jobs Report:** Indicate jobs created and jobs sustained
- ✓ **Website Posting:** requires posting to *local and federal websites*
- ✓ **Purpose and Rationale:** Define and outline for each investment
- ✓ **Subcontract Details:** Complete information on subcontracts

FTA developing ***more*** reporting requirements

STATE CERTIFICATIONS

When President Obama signed the American Recovery and Reinvestment Act into law on February 17, 2009, it marked the beginning of a 45-day window for each state to claim the funds allocated to it by the act.

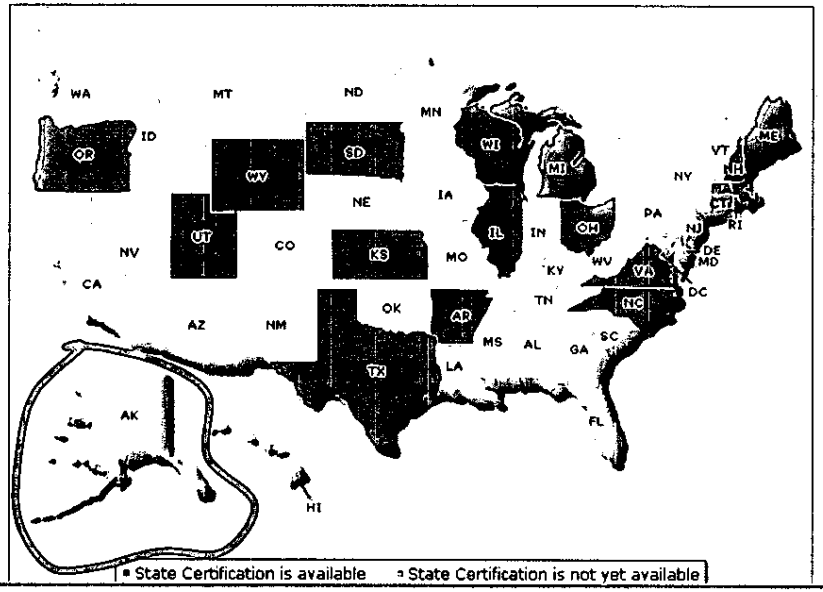
IN THIS SECTION

State Recovery Sites

In order to receive funds from the ARRA, governors have 45 days to certify that they will first of all "request and use" funds from the ARRA and second of all use them to create jobs and promote economic growth.

If a governor does not accept funds allocated to his or her state before that window expires, the state's legislature then has the option of certifying those two conditions itself.

Check out the list below to see which states have accepted funds and examine the certifications they have submitted. This list will expand as more states issue their responses, so check back often.



Accountability and Transparency

This is your money. You have a right to know where it's going and how it's being spent. Learn what steps we're taking to ensure you can track our progress every step of the way.

Share your Recovery Story

Tell us how the Recovery Act is affecting you. What's working? What isn't? We want to hear from you.

State Progress and Resources

Curious about the recovery progress in your state? Learn more about statewide recovery efforts here.

Agency Progress and Resources

We're bringing transparency and accountability to all areas of government. Learn about Recovery investments and grant programs at government agencies and departments.

Internet

Congressional Oversight

- ✓ **Congressional reports:** Reporting mandates *in addition* to FTA required reports
- ✓ **Committee reports:** Direct reporting to Congressional committee(s)
- ✓ **Same info, shorter deadlines:** Congress wants similar reporting information, but *sooner.*
  - Congress information deadline - April 4
  - Agency information deadline - April 10

ARRC Implementation Plan

- ✓ **Identify eligible projects:** Meet eligibility requirements and contained in current federal planning documents
- ✓ **Confirm "shovel ready" status:** Ensure projects are ready to implement and can meet obligation deadlines
- ✓ **Verify other requirements:** Able to meet security mandates, enhancement rules, buy-America rules and other criteria
- ✓ **Submit grants ASAP:** FTA processing takes up to three months; ensure prompt qualified applications.

Project Candidate Categories

Proposed eligible projects fall primarily into three categories:

- Infrastructure
- Safety
- Passenger facilities

Juneau, Alaska 99801-1182

AGENDA

Tuesday, March 17, 2009 — 9:00 AM

Presentation on the Alaska Railroad Corporation by Patrick Gamble, CEO

SB 75-BUDGET: CAPITAL, SUPP. & OTHER APPROPS
Department of Commerce, Community and Economic Development

Alaska Gas Pipeline
Alaska Railroad Corporation
Transportation Infrastructure Enabler Projects

Capital Project	Cost and Spending	*Jobs Impact	Status
Fairbanks Airport Branch & Eielson Branch Staging Areas	$ 12 million	40	
Seward Freight Dock Extension and Uplands Staging Area	$ 23 million	75	✓
Fairbanks Freight Intermodal Terminal Rail/Truck Staging Area	$ 18 million	60	
Valdez Staging Area Rehabilitation	$ 6 million	20	
Whittier Wharf Replacement and Staging Areas	$ 60 million	200	✓
Port of Anchorage Track Improvements	$ 8 million	26	✓✓
Fairbanks Area Rail Line Relocation - Phase One (North Pole to Milepost 9 on Richardson Hwy)	$ 50 million	165	
Total Infrastructure Enabler Projects	**$ 177 million**	**586**	

* Source: Institute of Social & Economic Research (University of Alaska Anchorage) study, March 2005 "Alaska Railroad Pulls Jobs & Income into State Economy," Research Summary #63. (As a measure of conservatism, only 25% of estimated jobs created or sustained is used for the purposes of this presentation.)

** Double check (✓✓) indicates the project is "shovel ready" within 90 days. Single check (✓) indicates the project is "shovel ready" within six to 12 months.

- These projects are not eligible for Federal Transit Administration (FTA) formula funds because they are freight-related, not passenger-related.
- For additional information, please contact:
  Bruce Carr, Director, Strategic Planning • Alaska Railroad Corporation • (907) 265-2468 • carrb@akrr.com

FEB. 03, 2009

State of Alaska • Alaska Railroad • Enabler Project Details

✓✓= Economic Stimulus Project "shovel ready" within 90 days. ✓ = Economic Stimulus Project "shovel ready" within 6-12 months.

Fairbanks Airport Branch and Eielson Branch Staging Areas ○$ 12M ○40 jobs

The branch track to Fairbanks Airport and Eielson Branch skirt large undeveloped areas that could be utilized as major staging areas for pipe and gas pipeline construction materials. Upon completion of the short-term construction phase, the land at the Fairbanks Airport is designated by the Airport Master Plan for expansion. Both areas include excellent highway access. Undeveloped land near Eielson Air Force Base is comprised of old gravel pits easily developed into a gas pipeline and construction material staging area.

Seward Freight Dock Extension & Uplands Staging Area ○$ 23M ○75 jobs ✓

Expansion of 200-by-620-foot freight dock by widening 120 feet and extending 500 feet to handle additional freight ships carrying gas pipeline construction and re-supply materials. Includes track rehabilitation in the yard, and uplands development for pipe and construction material storage and staging.

Fairbanks Freight Intermodal Terminal Rail/Truck Staging ○$ 18M ○60 jobs

Fairbanks space is tight for handling containers- and trailers-on-flat-car traffic, creating a bottleneck for this service. Containers and trailers carrying gas pipeline construction and supply materials from Anchorage, Whittier and Seward can move by rail to this terminal. This cargo will then travel onto the Johansen Expressway headed to the North Slope and along the proposed Alaska Gas Pipeline Corridor.

Valdez Staging Area Rehabilitation ○$ 6M ○20 jobs

ARRC owns ~86 acres of land in Valdez that was used extensively during construction of the TransAlaska Pipeline. We anticipate similar use of this area for staging gas pipeline construction and supply materials for the Alaska Gas Pipeline. Project will rehabilitate land that is strategically located at water's edge with barge capacity, near the airport for air cargo transport, and has access to the Richardson Highway for rubber tire distribution of gas pipeline materials.

Whittier Wharf Replacement and Staging Areas ○$ 60M ○200 jobs ✓

Construction of a replacement wharf to serve freight ships carrying gas pipeline construction and supply materials for the Alaska Gas Pipeline. Also build additional track from Whittier port to the rail tunnel leading to Anchorage and Fairbanks terminals.

State of Alaska • Alaska Railroad • Enabler Project Details

✓✓= Economic Stimulus Project "shovel ready" within 90 days. ✓ = Economic Stimulus Project "shovel ready" within 6-12 months.

Port of Anchorage Track Improvements

○$ 8M **○26 jobs** **✓✓**

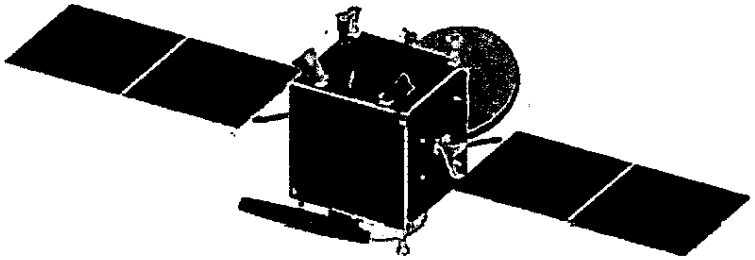
Request two additional tracks be extended to the port's new north end barge facility, in anticipation of extensive port use for unloading break bulk equipment, containers, trailers and other pipeline support material best moved on barges. Includes construction of a new 6,000-foot receiving / departing track within the Anchorage yard to expedite movement of train traffic between Anchorage, Whittier, Seward and Fairbanks.

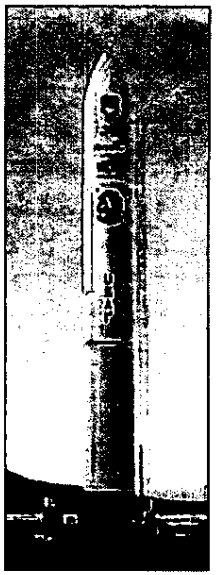
Fairbanks Area Rail Line Relocation: Phase One

○$ 50M **○165 jobs**

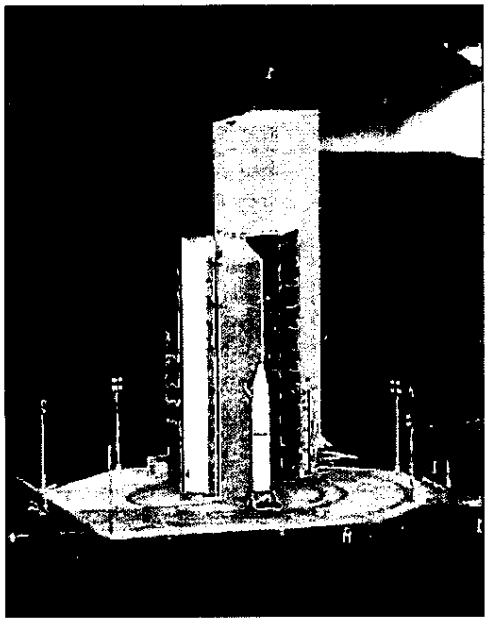
ARRC anticipates development of a gas pipeline construction and supply material staging area near Eielson Air Force Base. This staging area will create a corresponding increase in train traffic through North Pole. Phase One would realign the mainline track outside the community's downtown and residential areas.

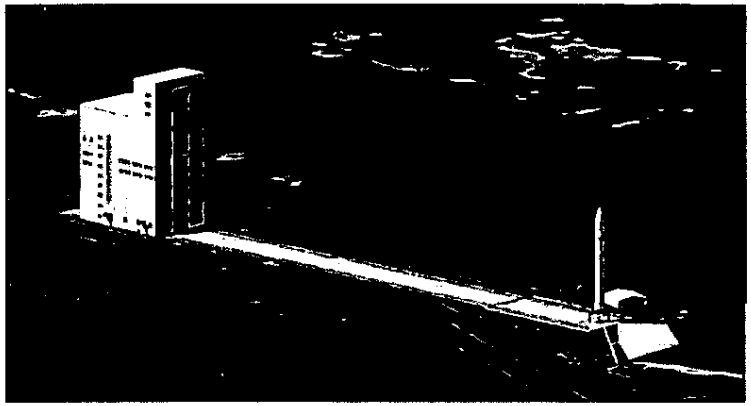
Alaska Aerospace Development Corporation briefing to the Senate Finance – Capital Budget

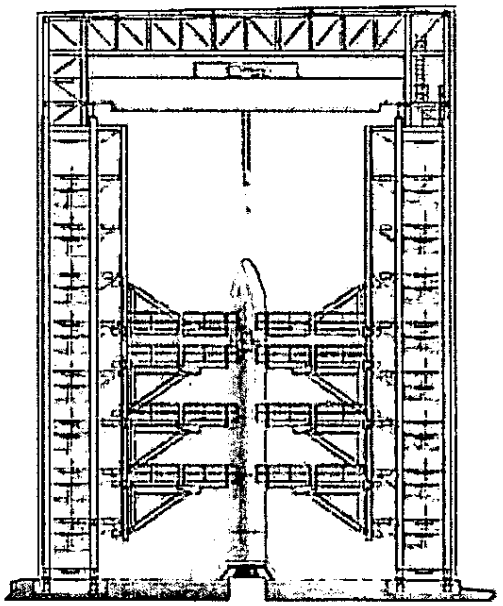




Dale Nash, CEO
Tom Case, LtGen (Ret), Pres/COO
17 March 2009



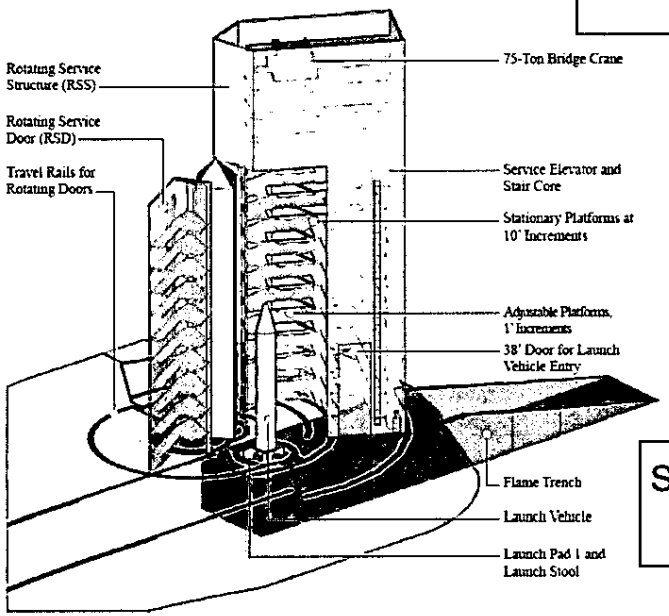




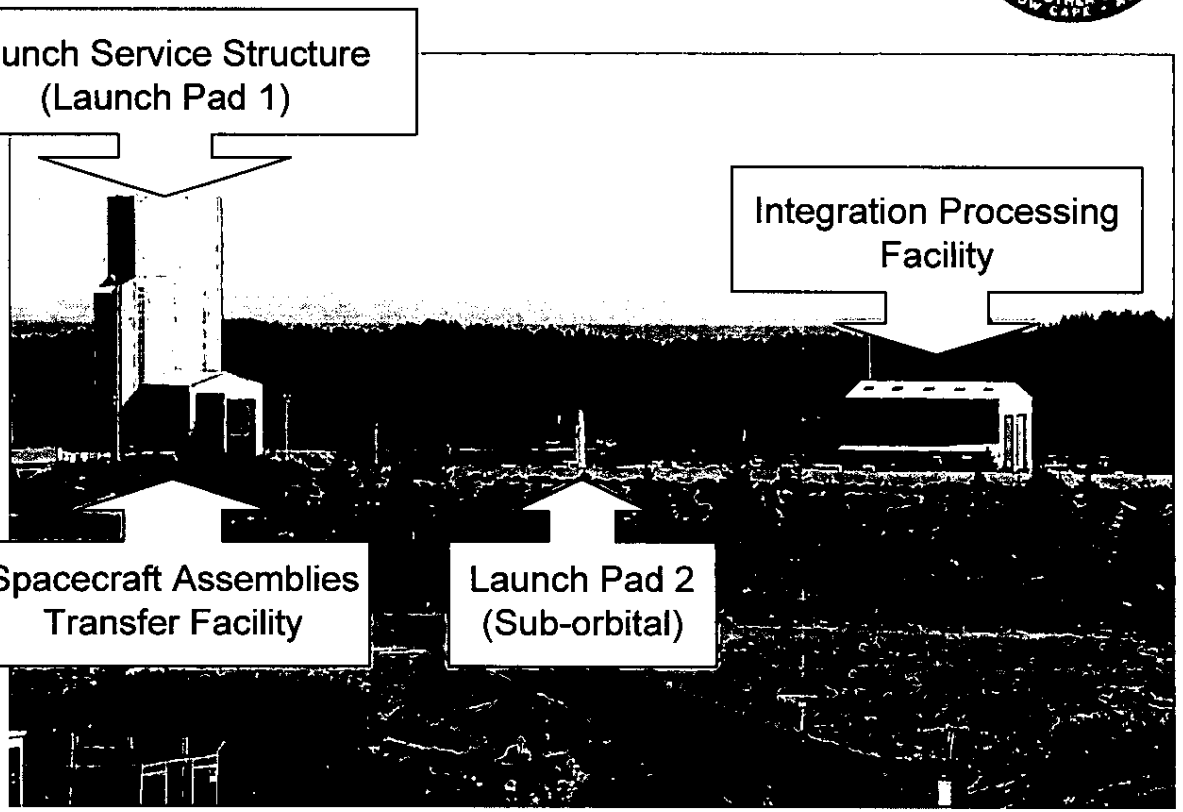
ALASKA AEROSPACE DEVELOPMENT CORPORATION

Current Launch Complex

KODIAK LAUNCH COMPLEX — THE OTHER CAPE — NARROW CAPE · ALASKA



Kodiak Launch Complex
Launch Service Structure and Launch Pad 1



The current launch complex includes three buildings and two launch pads. The Launch Service Structure (LSS) houses Launch Pad 1 which is capable of supporting up to Castor 120 boosted (Minotaur, SLV, Athena, & Taurus), Trident C-4 Class vehicles and Minuteman derivatives.

Launch Activity

KODIAK LAUNCH COMPLEX — THE OTHER CAPE — BARROW CAPE · ALASKA

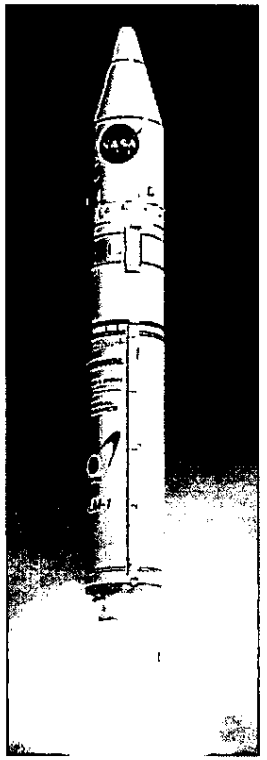
Successful Launches

Year	Date	Launch
1998	5 Nov	AIT-1, USAF
1999	15 Sep	AIT-2, USAF
2001	22 Mar	QRLV-1, USAF-Northern Edge
2001	29 Sep	Lockheed/NASA Kodiak Star
2001	9 Nov	SMDC STARS, U.S. Army
2002	24 Apr	QRLV-2, USAF-Northern Edge
2004	14 Dec	IFT-13C, MDA–Target Missile
2005	13 Feb	IFT-14, MDA–Target Missile
2006	23 Feb	FT04-1, MDA–Target Missile
2006	1 Sep	FTG-02, MDA–Target Missile
2007	25 May	FTG-03, MDA–Target Missile
2007	28 Sep	FTG-03a, MDA–Target Missile
2008	18 Jul	FTX-03, MDA–Target Missile
2008	5 Dec	FTG-05, MDA–Target Missile

Planned Launches

Year	Date	Launch
2009	Sep	TacSat-4, USAF–Orbital Sat
2009	Dec	STP-S26,USAF- Orbital Sat.
2010	Mar	FTG-07, MDA–Target Missile

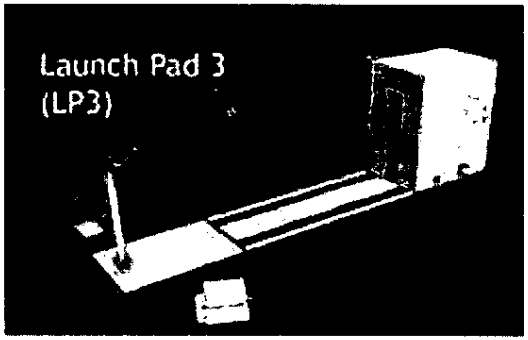
- 14 Successful launches to date
- 3 future launches on contract
- AADC is conducting proactive business development to win launches in the growing small and medium satellite industry.
- Several major telecommunication companies and rocket providers are expressing active interest in using KLC

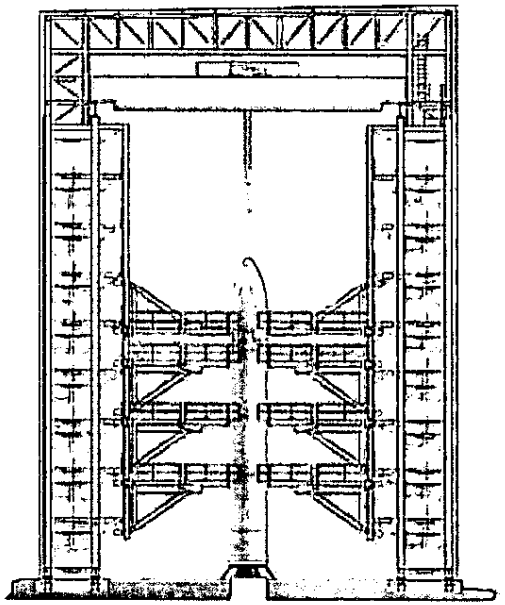


ALASKA AEROSPACE DEVELOPMENT CORPORATION

Rapid Launch

- Rapid launch is a proposal to build a new Launch Pad and Rocket Motor Storage Facility that to allow payload launch into orbit 24 hours after notification.
- Rapid launch has many unique applications
  - Replace damaged or aging satellites in days, not years.
  - Provide responsive satellite communications to areas damaged by natural disasters
  - Increase satellite communications for peacekeeping forces.
- No other launch facility in the US has rapid launch capabilities.



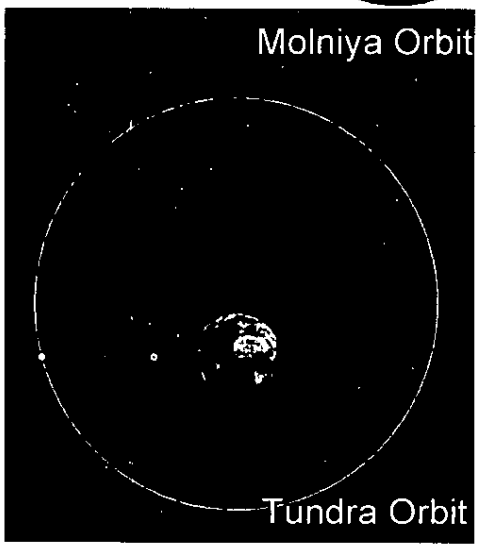


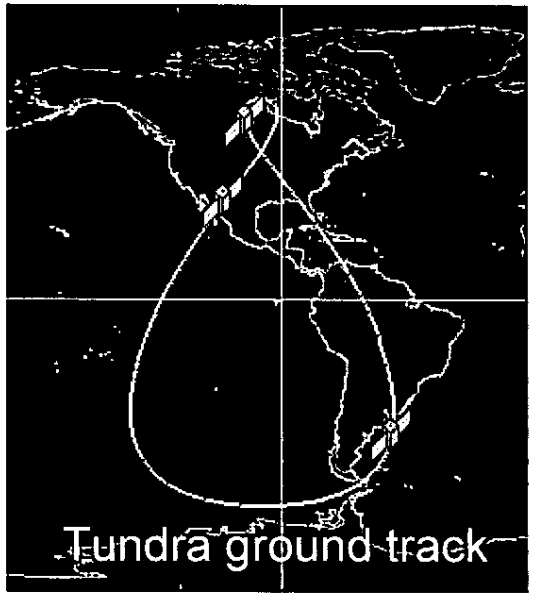
ALASKA AEROSPACE DEVELOPMENT CORPORATION

Unique Orbits from KLC Tundra and Molniya

KODIAK LAUNCH COMPLEX — THE OTHER CAPE — BARROW CAPE — ALASKA

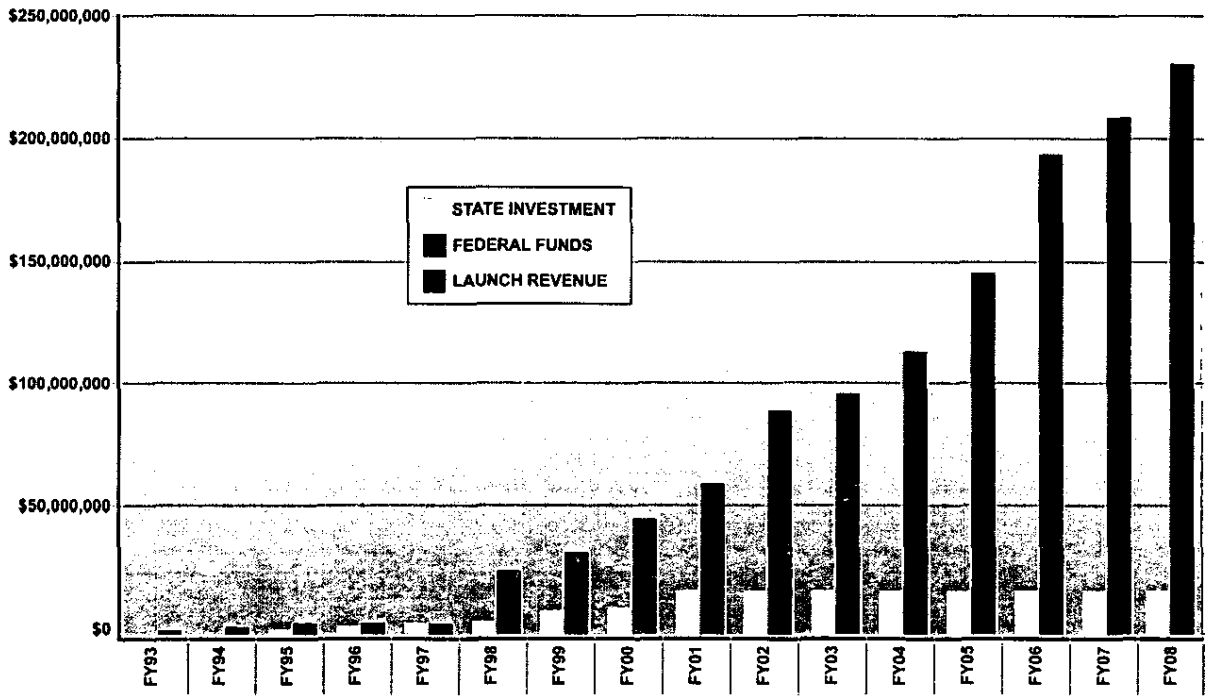
- Near polar (high inclination-63.4 degrees) elliptical orbits
  - Tundra orbit allows geosynchronous coverage because orbital period is timed with the earth's rotation.
  - Molniya has a long dwell time over two geographic areas
- Developed by the Russians because they do not have a launch complex close enough to the equator to allow equatorial geostationary orbits.
- **Advantages**
  - **2 to 3 satellites can provide continuous coverage over a singe area**
  - High "look angle" for northern latitudes, not low on the horizon
  - **Good for communication and earth-monitoring**
  - Avoid crowding of equatorial geosynch orbits and their associated regulations
  - **Ideal for northern launch complexes** (less horizontal velocity from the Earth's rotation)
- US has not used these orbits because there has not been a major northern launch facility until KLC.
- Sirius Satellite Radio uses three satellites in Tundra orbit to cover the entire US.
- **KLC's latitude and launch azimuths make it the best launch facility in the U.S. for these orbits**.





ALASKA AEROSPACE DEVELOPMENT CORPORATION

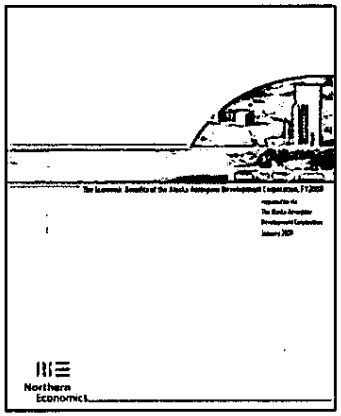
Leverage of Initial State of Alaska Investment



- **Every Alaska dollar invested has been leveraged**
- **Initial financial investment of <u>$15.6 million provided by State of Alaska</u>**
  - Alaska Science and Technology Foundation (ASTF)
  - $9 million for capital expenditures; $6.6 million for operations
- **The initial State of Alaska investment has <u>returned a total of $232.5 million</u>**
  - $93.5 million in launch revenues (MDA, Air Force, Lockheed Martin)
  - $139 million in capital investments (NASA, US Air Force and US Army)

ALASKA AEROSPACE DEVELOPMENT CORPORATION

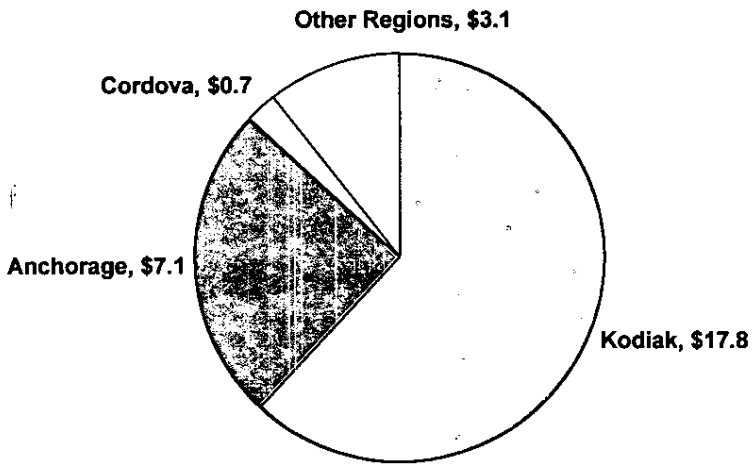
Economic Benefits



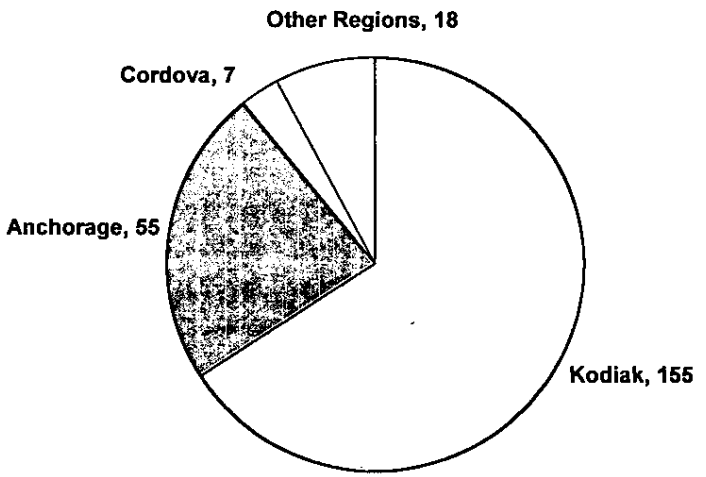
2008 Economic Impact Report

- 2008 Economic Impact Report prepared by Northern Economics, an independent economic consulting firm.
- AADC activities contributed $17,800,000 to the Kodiak economy.
- AADC activities generated 155 jobs in Kodiak.

FY08 Total Economic Contribution ($millions)
Total Impact: $28.7 million



FY08 Total Jobs Generated



ALASKA AEROSPACE DEVELOPMENT CORPORATION

Summary

KODIAK LAUNCH COMPLEX — THE OTHER CAPE — NARROW CAPE, ALASKA

- Launch Pad 3 and the Rocket Motor Storage Facility upgrade at KLC
  - More than Doubles the Launch Capacity
  - Rapid Launch Capability (Only US Spaceport)
    - Meets National Strategic Need
  - Concurrent Customers and Launches
    - Reduces OH Costs per Launch
    - Will help attract more Customers/Launches
  - Construction can begin this Spring
    - RMSF can complete Fall 2009
    - Launch Pad 3 with Vehicle Processing Facility can be fully operational Summer 2011
  - Continuing to Pursue Federal Funding
    - Congressional Delegation, Governor, Key Customers

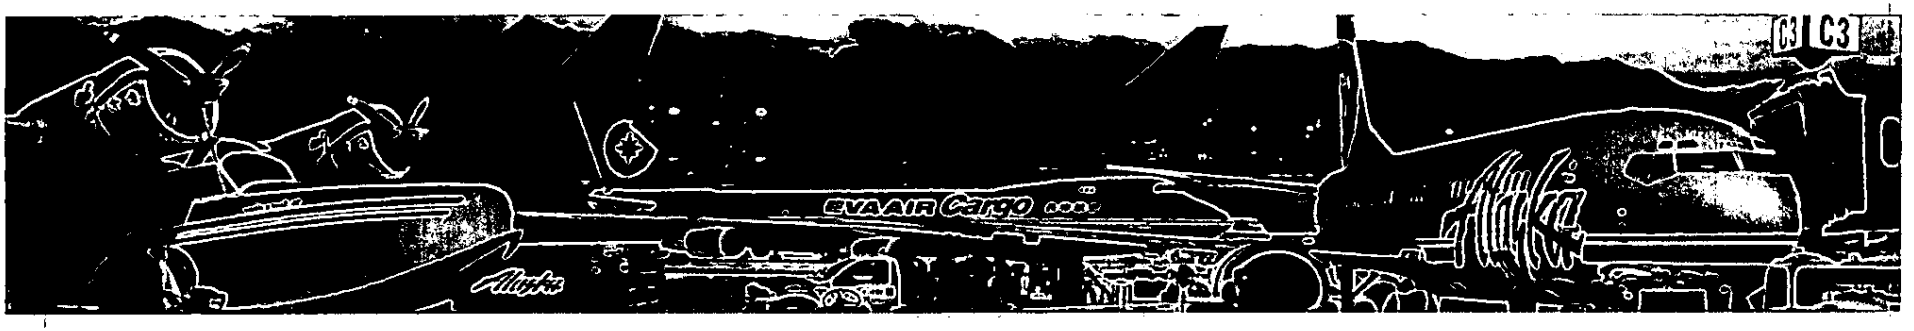
Christine Klein, AAE
Deputy Commissioner



Overview:

I. System Advantages & Strengths

1. Alaska System Global Advantage
2. Airport System Strengths
3. Economic Impacts

II. Traffic, Trends, Concerns

1. Growth of Past 10 Years
2. Weakening of 2008 Events
3. AIAS Responses

III. Future Outlook

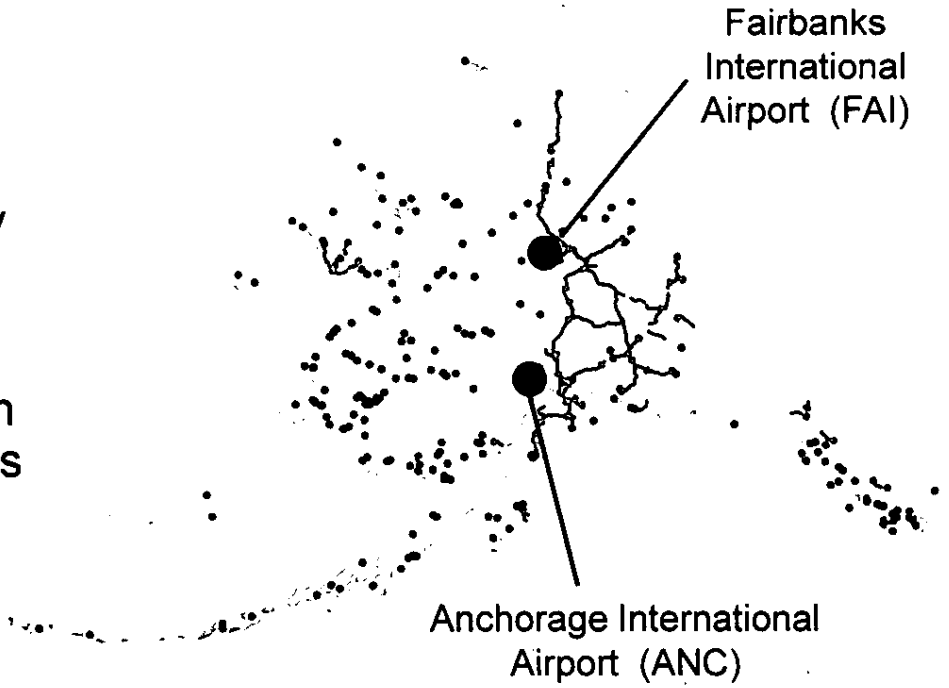
1. AIAS Tie to Global & National Markets
2. Responsiveness and Competitive
3. Cautious Stable Growth

I. System Advantage & Strengths

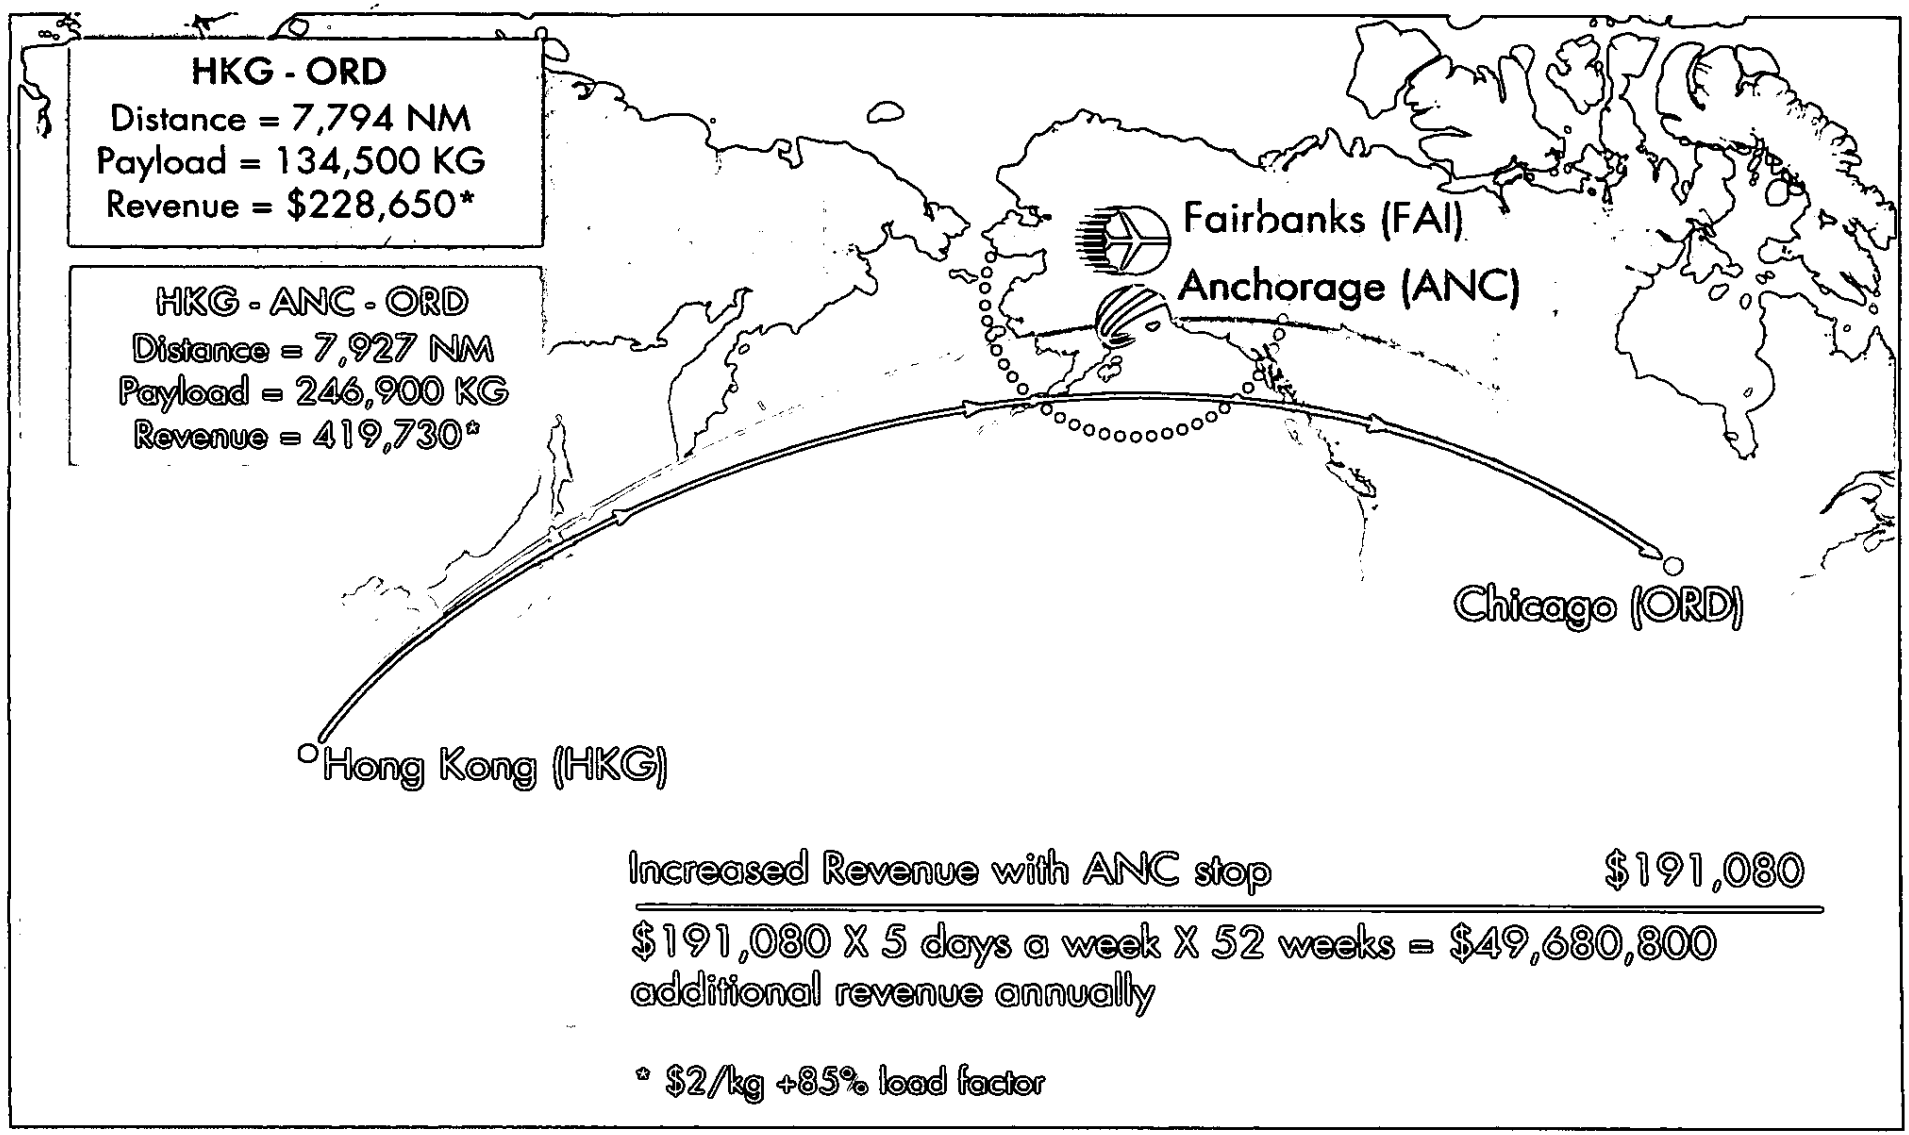
1. Alaska International Airport System
2. System Strengths
3. Economic Impact

Alaska International Airport System (AIAS)

- **Established in 1961**
- **Airports of ANC and FAI**
  - Shared Assets & Resources
  - Capital & Bonding Capability
- **Aviation Support across vast and remote distances**
  - Aircraft Alternate & Diversion Options for weather/disasters
- **Serving Alaska and World**
  - Part of the National Priority International Airport System



Alaska's Global Advantage
Payload vs Range



Increased Revenue with ANC stop $191,080

$191,080 X 5 days a week X 52 weeks = $49,680,800 additional revenue annually

* $2/kg +85% load factor

Alaska System Advantages

Regulatory:

- Progressive Clearance
- International to International Cargo Transfers
- USDOT awarded Cargo Transfer Flexibility in '96
  - On-line transfers
  - Commingling foreign domestic Foreign-domestic, foreign-foreign transfers
- Expanded Cargo Transfer '03
  - Expands transfer authority for foreign carriers with revenue relationship w/U.S. carrier

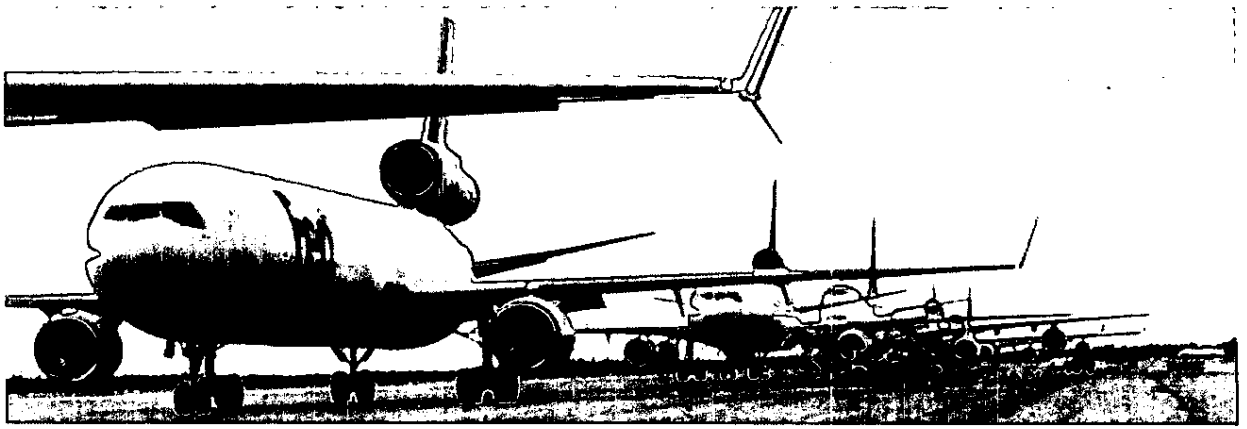
Location & Cost:

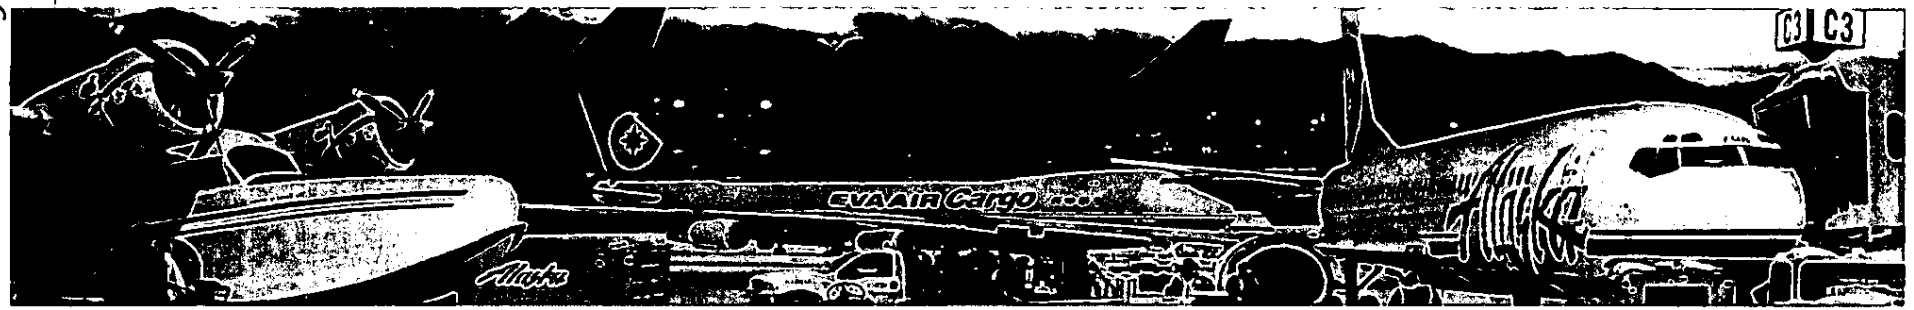
- Strategic Location for Trans-Pacific Asia Cargo
- Pay-load vs Range
  - Aids Carrier Profit Margin
- Growing Asia Market and Base of Chinese Freighters
- Close alternate airport
- No Slots or Curfews
- Parts exchange program
- Competitive airports: each with same low rates & fees

AIAS Strengths

- One Revenue System
- Two Large Intl. Airports
- Competitive Rates & Fees
- Diverse Revenue Sources
- Wide Mix of Air Carriers
- Air Cargo center for Asia
- Long-term Commitments
- System Capacity for Growth
- Economic Engines for the State of Alaska and the Local Communities

19 wide-body aircraft diverted from ANC to FAI October 2008 and all revenues kept in Alaska

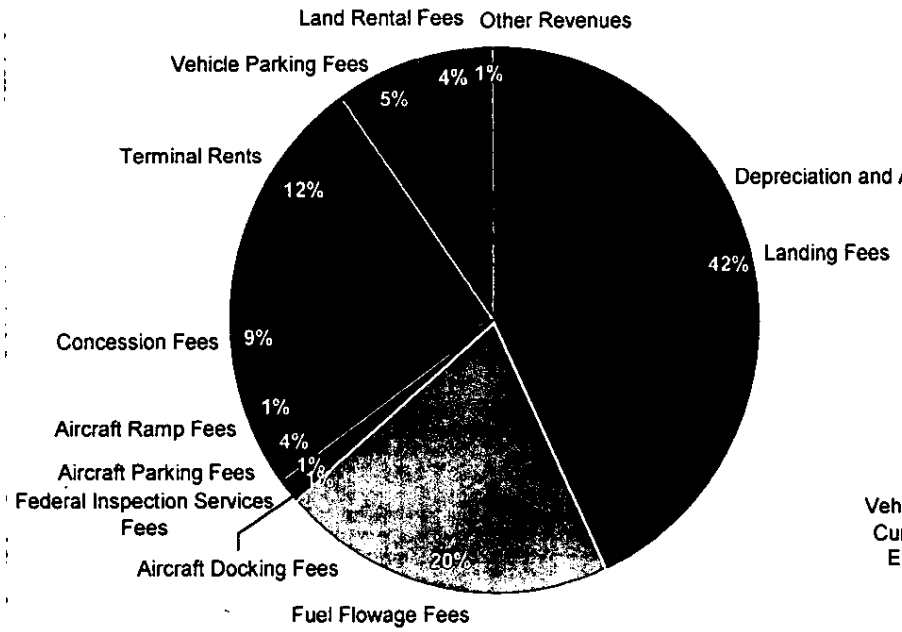




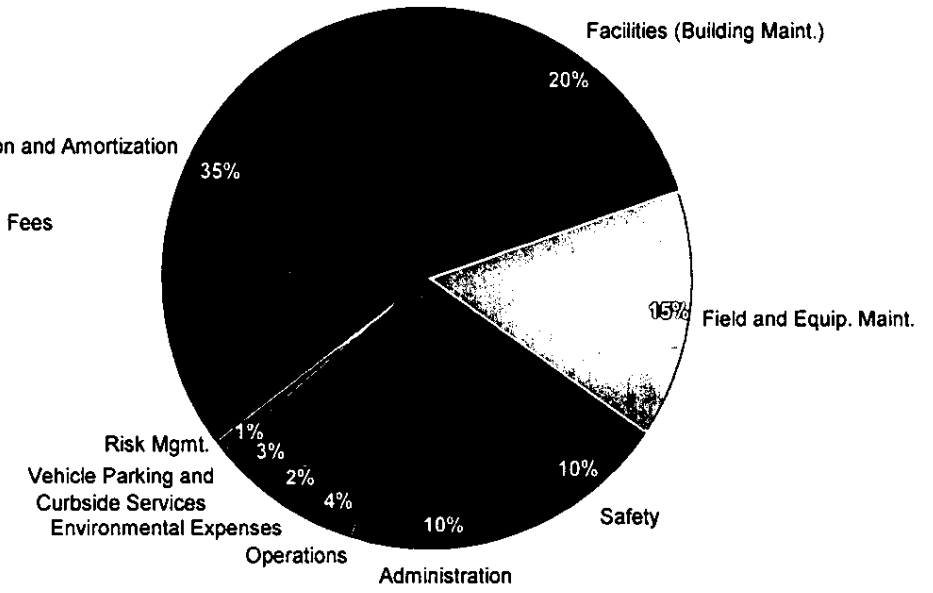
Strength: Diverse Business Revenues

FY 2008 Operating Revenues & Expenses

Operating Revenues
($118.87 million)



Operating Expenses
($111.52 million)



Cargo and Diversity of Carriers

Cargo Carriers by Home Country:

• USA	14
• China	5
• Japan	3
• Korea	2
• Taiwan	2
• Hong Kong	1
• Singapore	1
• Australia	1
• Canada	1

Current Carriers (35):

- ACE Air Cargo
- ANA
- Air Atlanta Icelandic
- Air Canada
- Air China
- Alaska Airlines
- Asiana Airlines
- Atlas Air
- Cargo 360
- Cathay Pacific Airways
- China Airlines
- China Cargo
- China Southern
- Empire Airlines
- Eva Airways
- Evergreen International
- Everts Air Cargo
- Federal Express
- Focus Air Cargo
- Japan Airlines
- Kalitta Air
- Korean Air Cargo
- Lynden Air Cargo
- Nippon Cargo Airlines

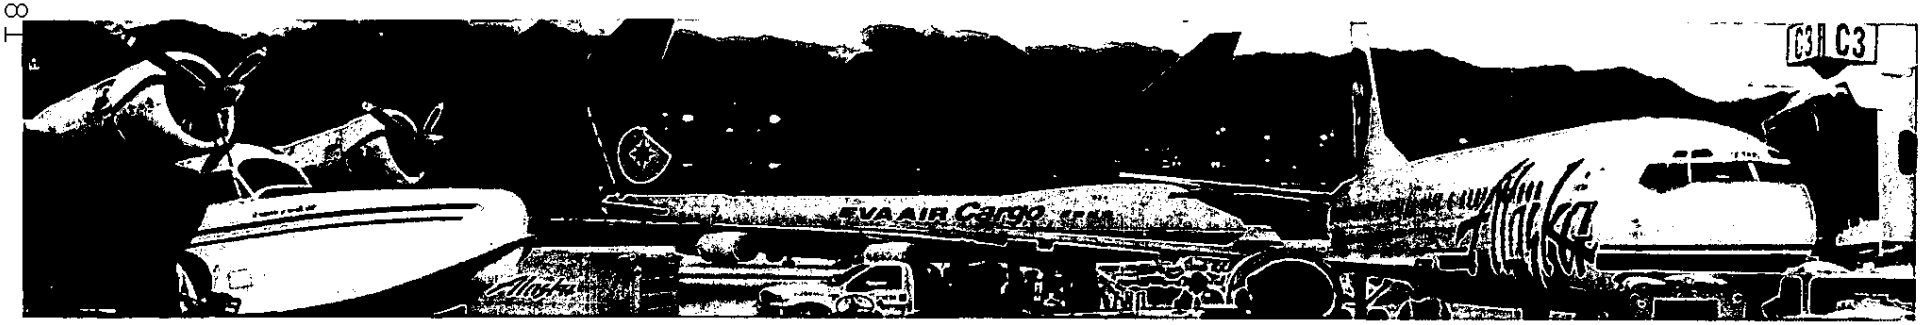
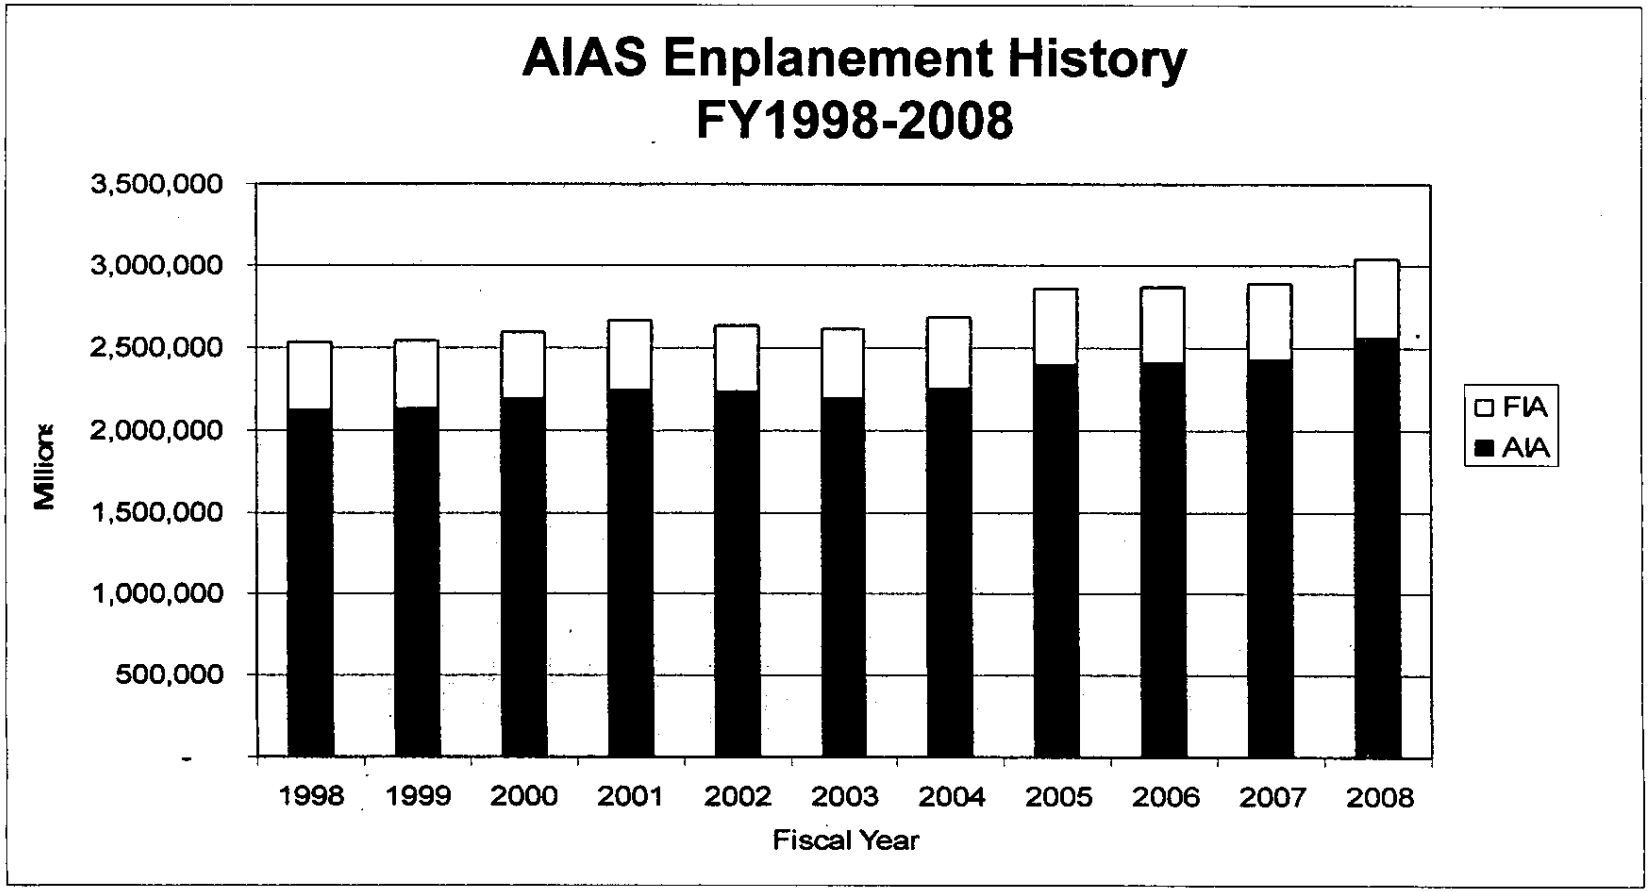
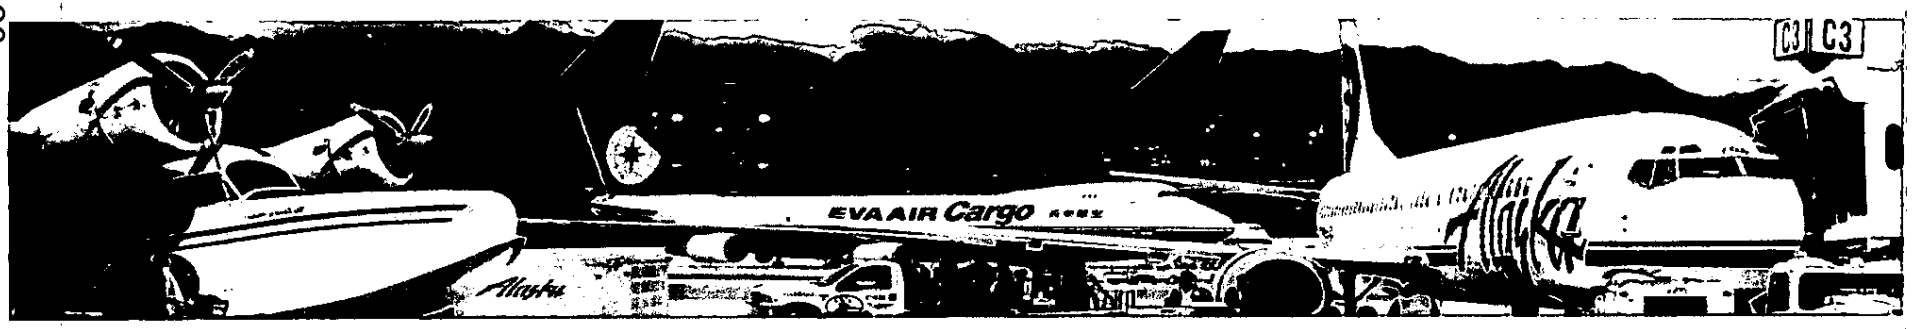
II. Traffic, Trends, and Concerns

1. Growth Past 10 Years
2. Past Year 2008 Weakened
3. Traffic Downturn & Concerns
4. AIAS Responses

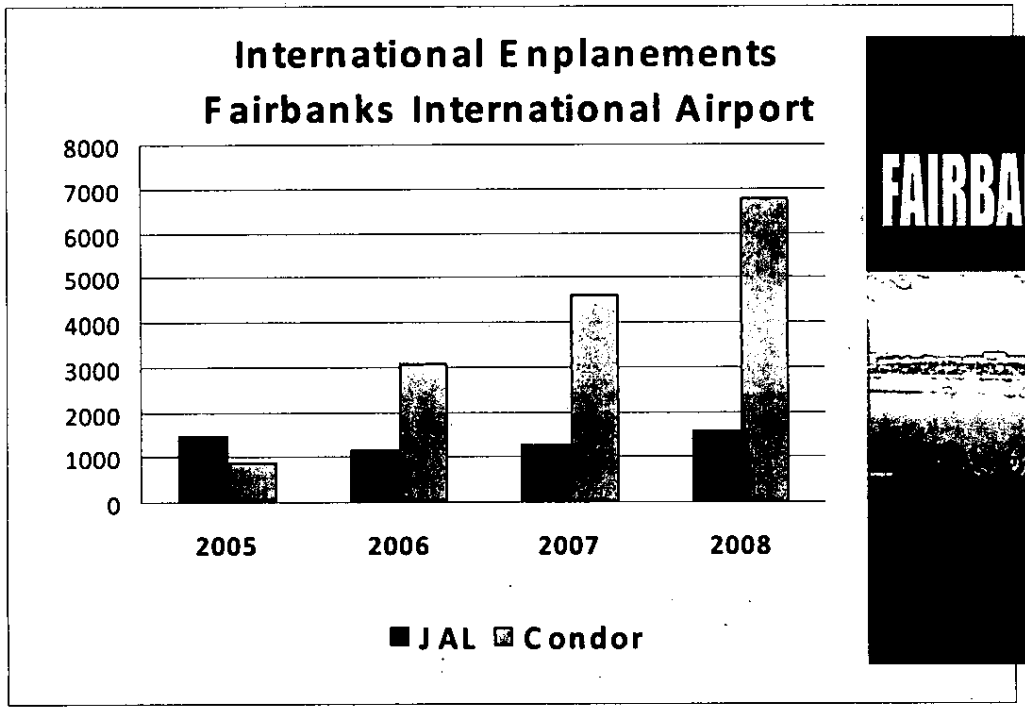


Traffic: Passenger Growth

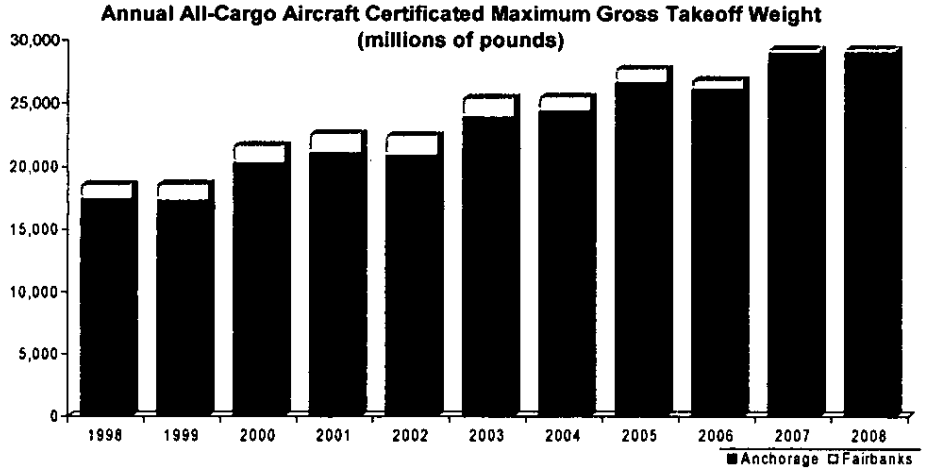


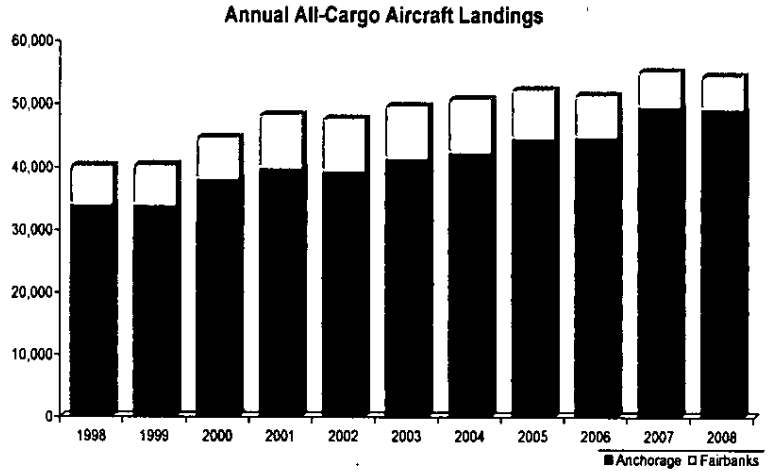


Fairbanks: a Star in Winter
International Passenger Enplanements



Traffic: Cargo Growth

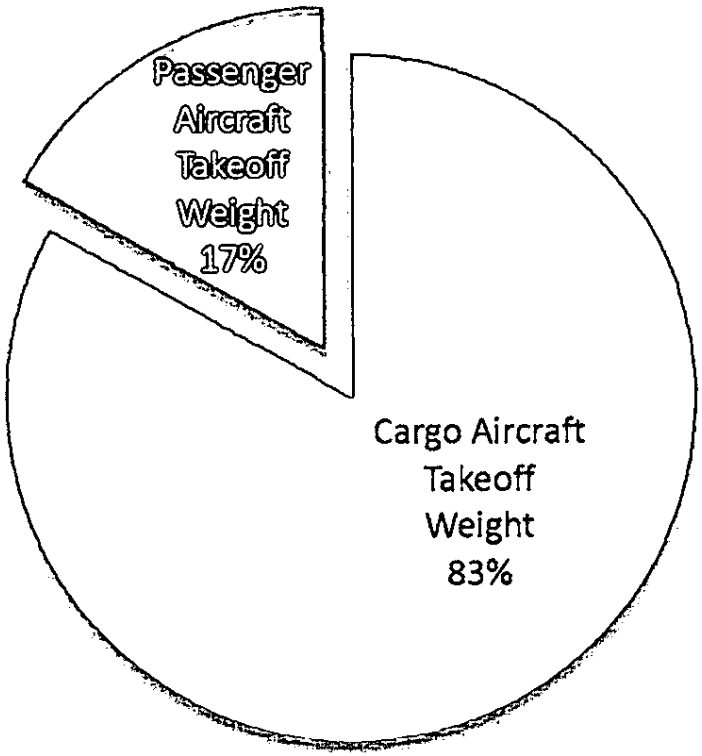




Compound Annual Growth Rate		
	All-Cargo Take-off Weight	All-Cargo Aircraft Landings
1998-2008	4.26%	2.80%
2006-2008	4.48%	6.04%

884

International Cargo is Big Business



Air cargo dominates airfield activity at ANC and generates most of ANC aircraft landing fees

- Nearly 35% of AIAS International Cargo traffic is from China
- 2000 – 15 landings per week
- 2006 - 198 lpw
- 2007 - 260 lpw

Total China-US air cargo market in 2007 is equal to 36.7% of all Asia North America air cargo

International Cargo at Anchorage

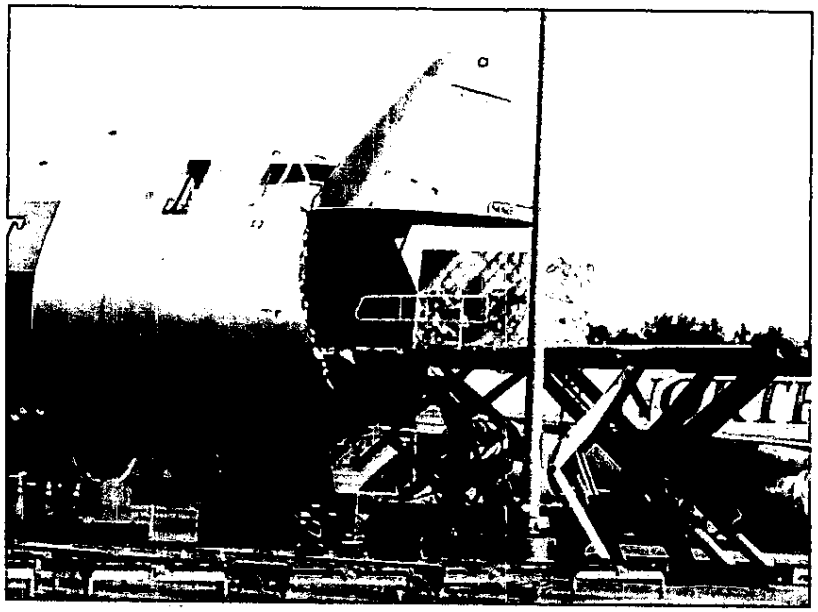
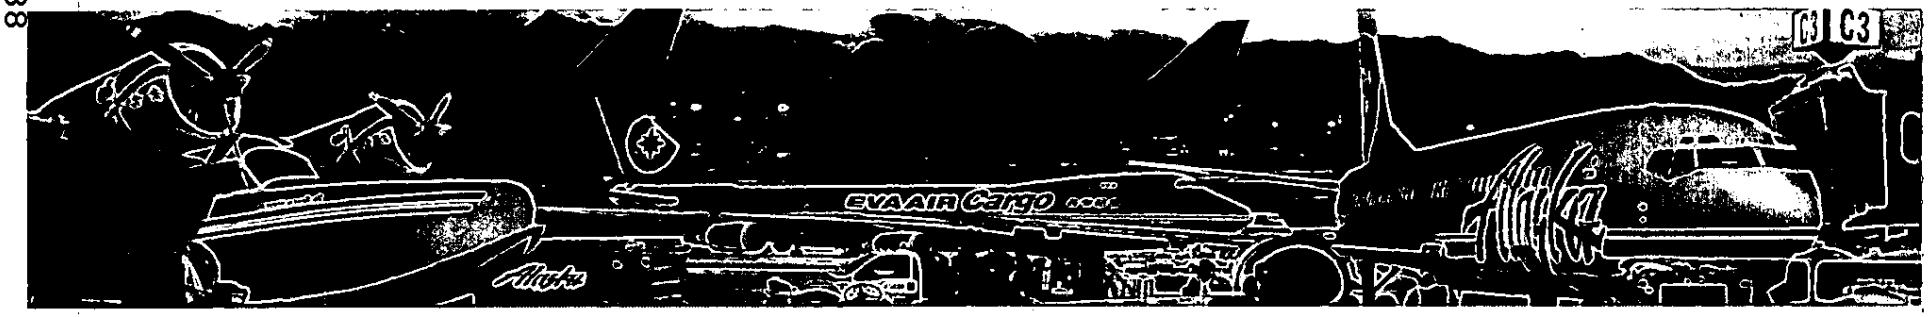
Weakening in 2008

- **US Economic Recession**
  - Passenger downturn elsewhere
- **Aviation Industry in Crisis**
  - Airline Bankruptcies & Mergers
  - High Fuel Costs
  - Fewer Flights & Capacity
- **AIAS Activity & Revenue**
  - Cargo Activity Declines
  - Fuel Flowage Down
  - High Debt



888

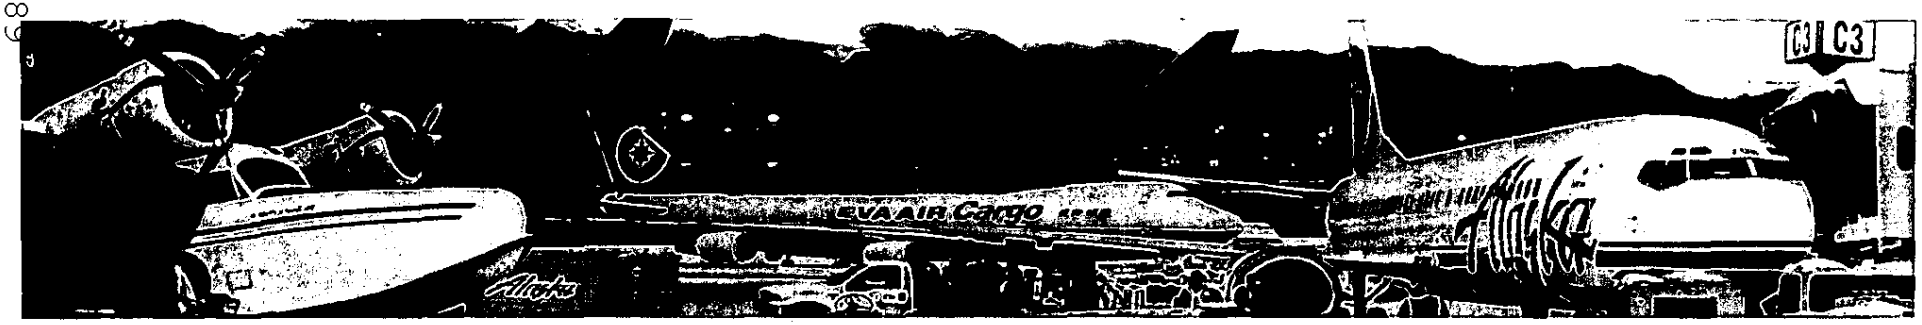


Summary of Fiscal Year 2008

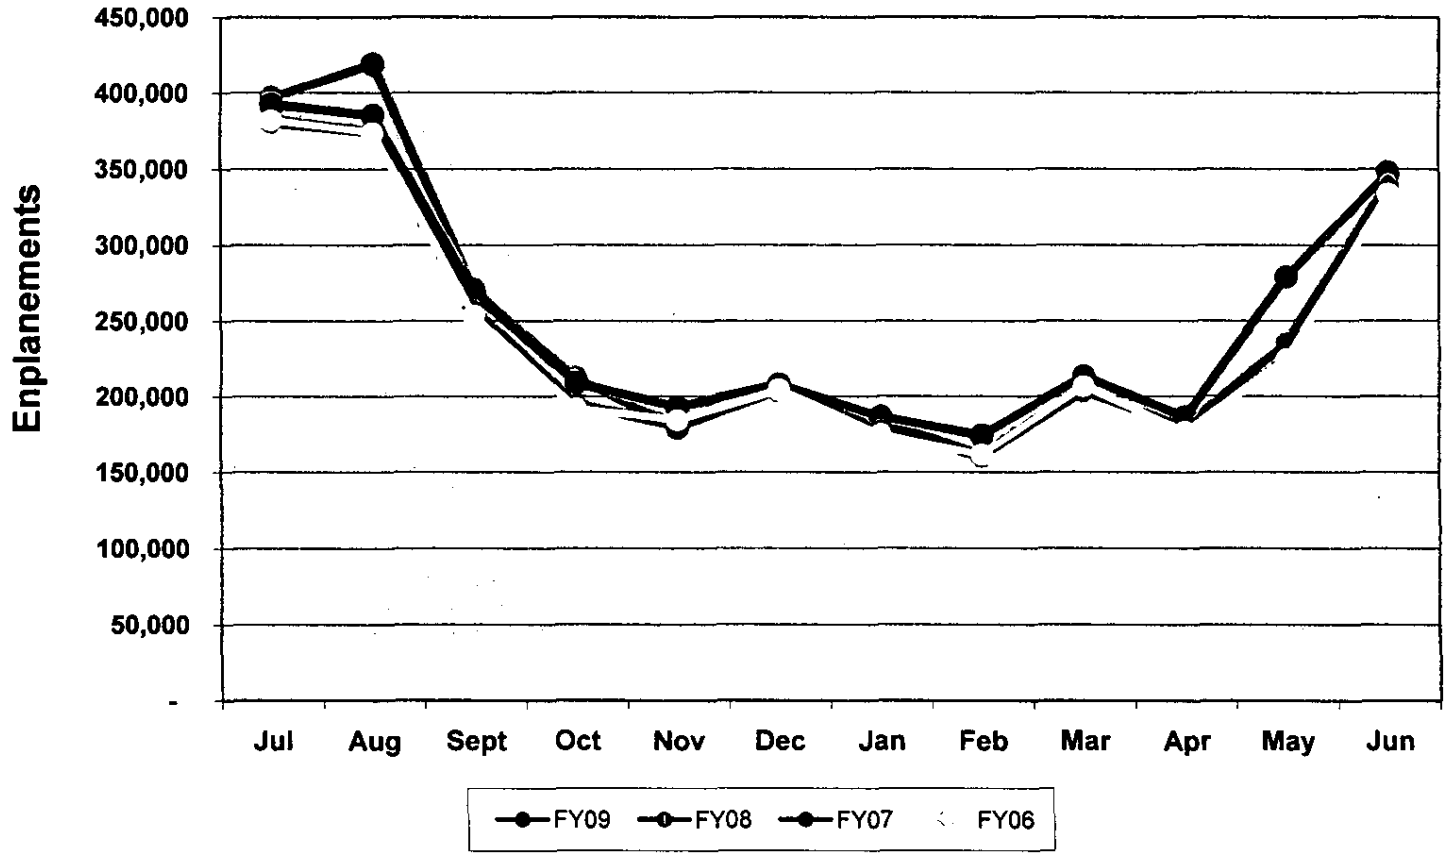
Alaska International Airport System (AIAS) Activity

- Total Landings = 101,863 (-05%)
- Cargo by Landings = 46,965 (-5.4%)
- Passengers by seats = 5,380,811 (+4.4%)
- Fuel Flowage = 865 million gallons (-6.6%)

(Fiscal Year 2008 is July 1, 2007 through June 30, 2008)



AIAS FY06-FY09 YTD
Monthly Passenger Enplanements

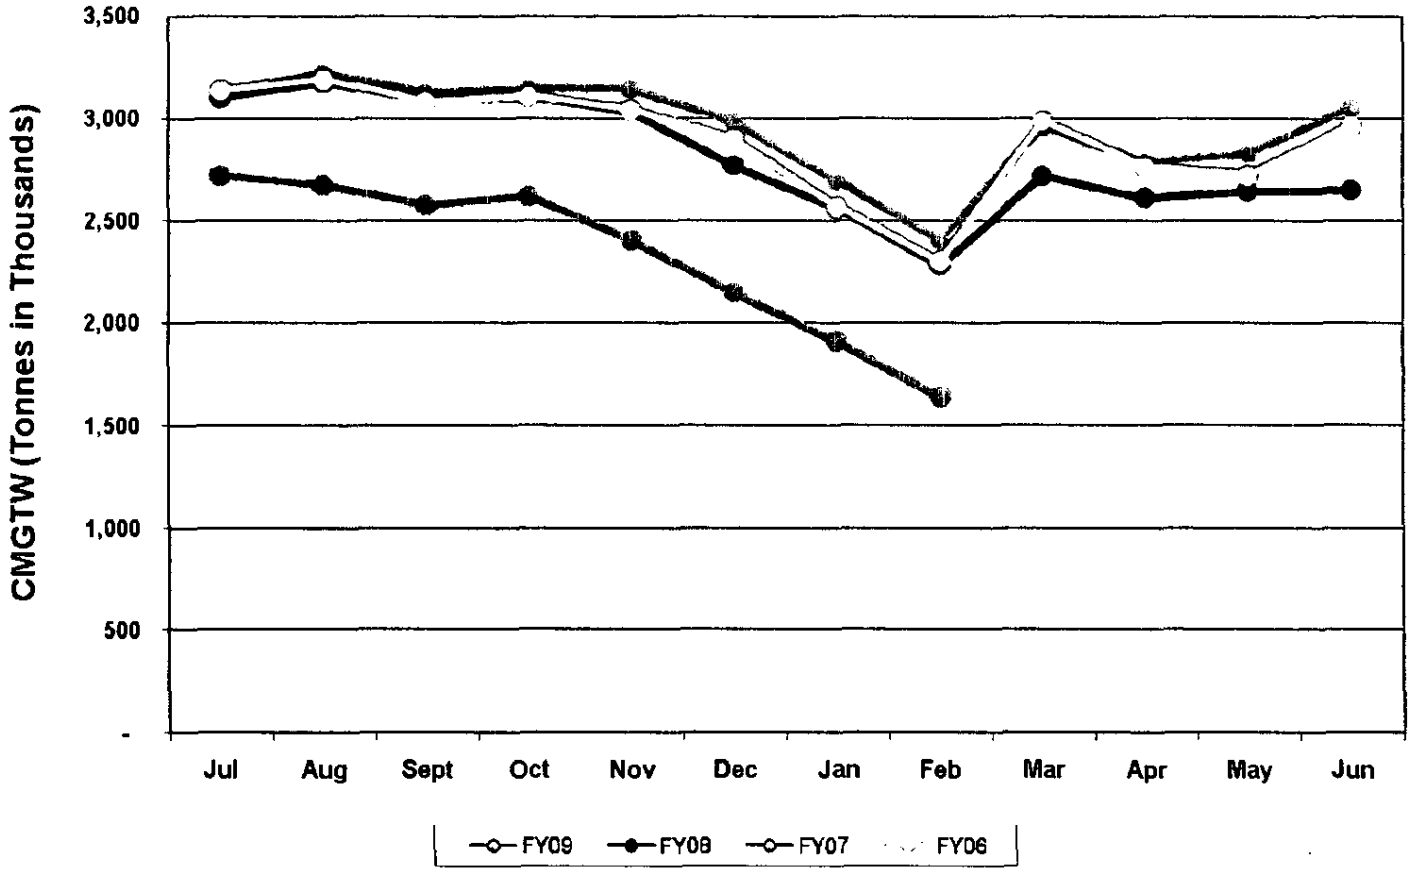


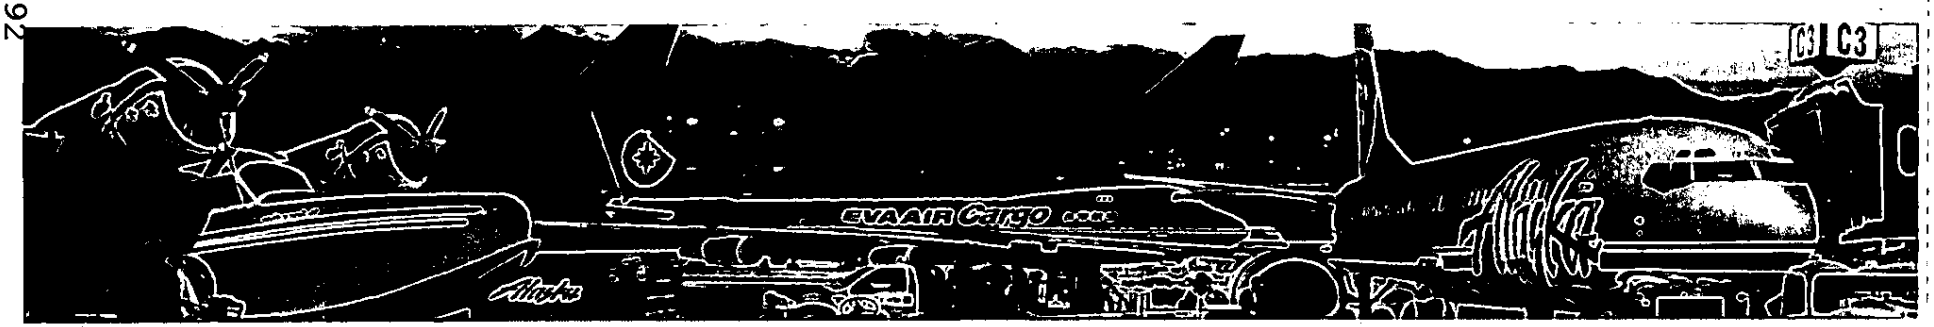
Landing Revenue by Aircraft Certified Maximum Gross Take-Off Weight

- Cargo aircraft
- Passenger (Pax) aircraft
- Airport's as a standard, charge landing fees to air carriers for use
- Airport Landing Fees are charged by the aircraft manufacturer's Certified Maximum Gross Take-Off Weight (CMGTW) for each use
- Air Carriers are required to report aircraft weights monthly in certified activity reports (CAR's) to the airport's they utilize

T68

AIAS FY06 - FY09 YTD
Monthly Combined Cargo - Pax CMGTW





Airport CMGTW Concerns and Comparisons

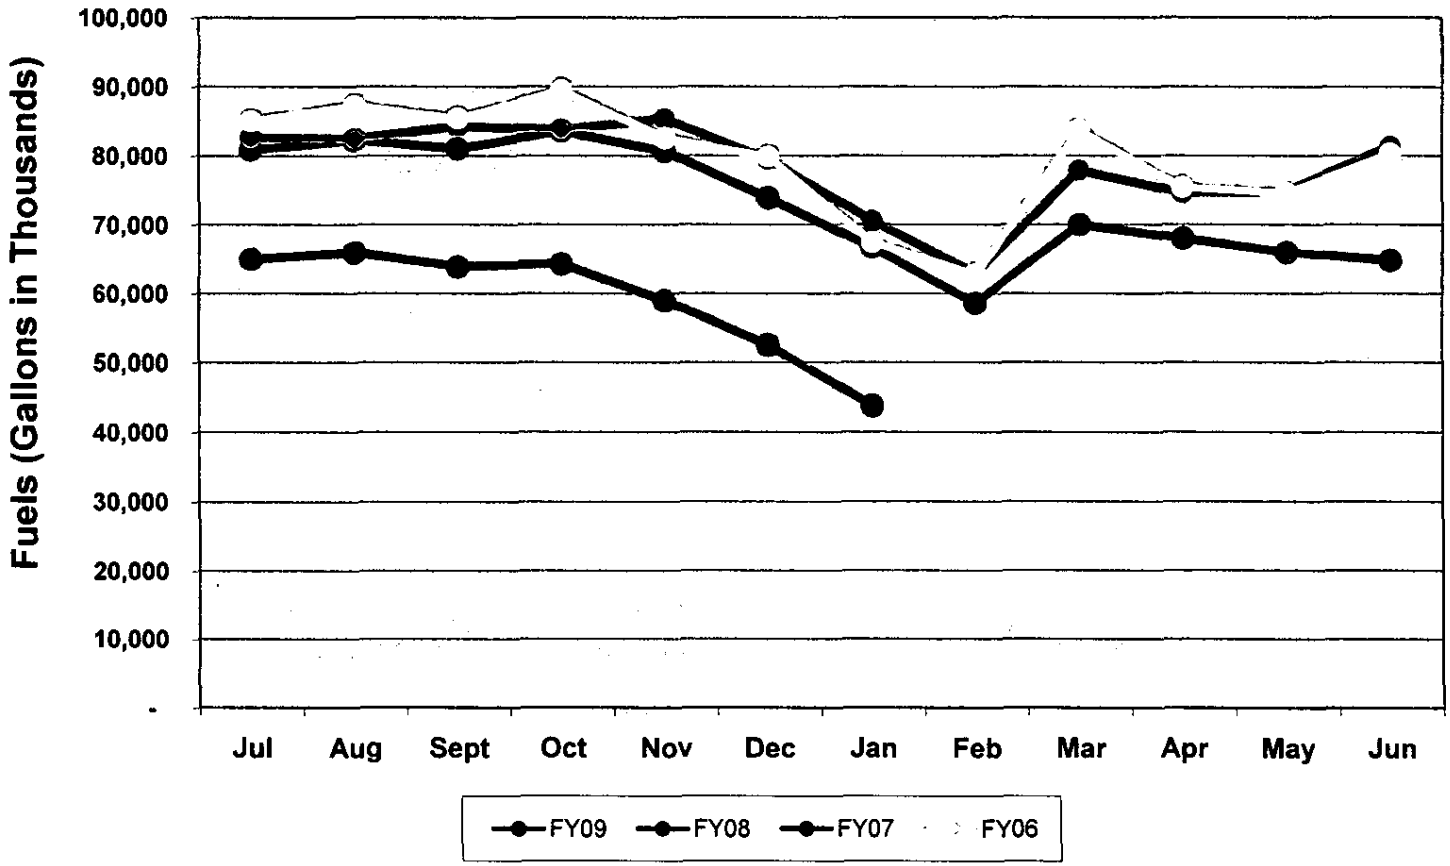
AIAS:

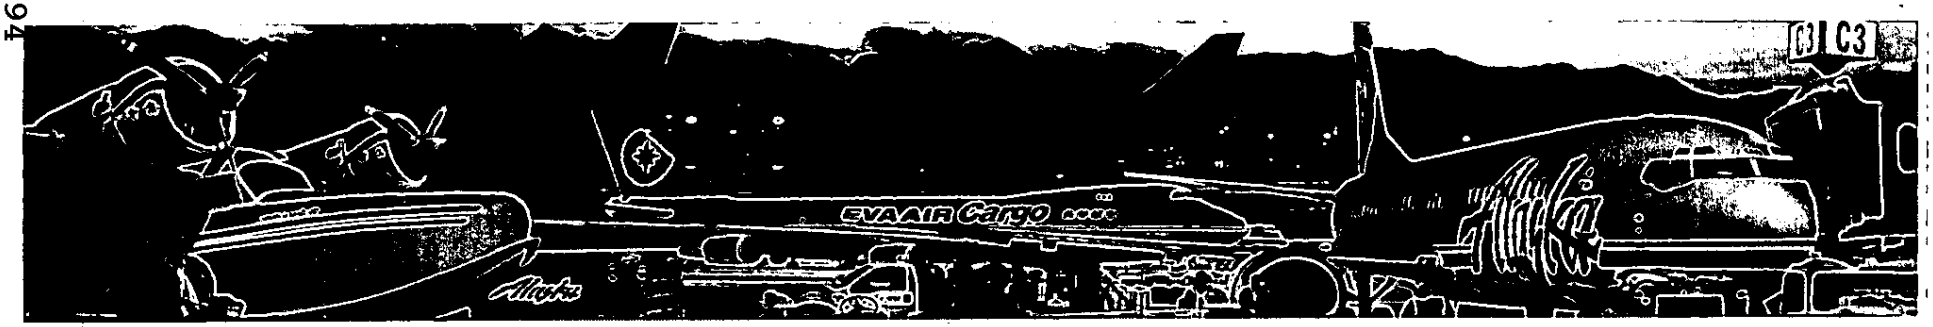
- Month of December CMGTW compared to same month of prior year down 22.50%
- FY09 (with 7 months of year) shows a CMGTW average decline 19.92%

Other Airports:

- San Francisco freight for December down 43%
- Los Angeles freight for December down 24.3%
- *IATA reports "22.6% collapse in air freight volumes for December as export volumes fell 20-30% in the US, Asia, and Europe"*

AIAS FY06 - FY09 YTD
Monthly Fuels





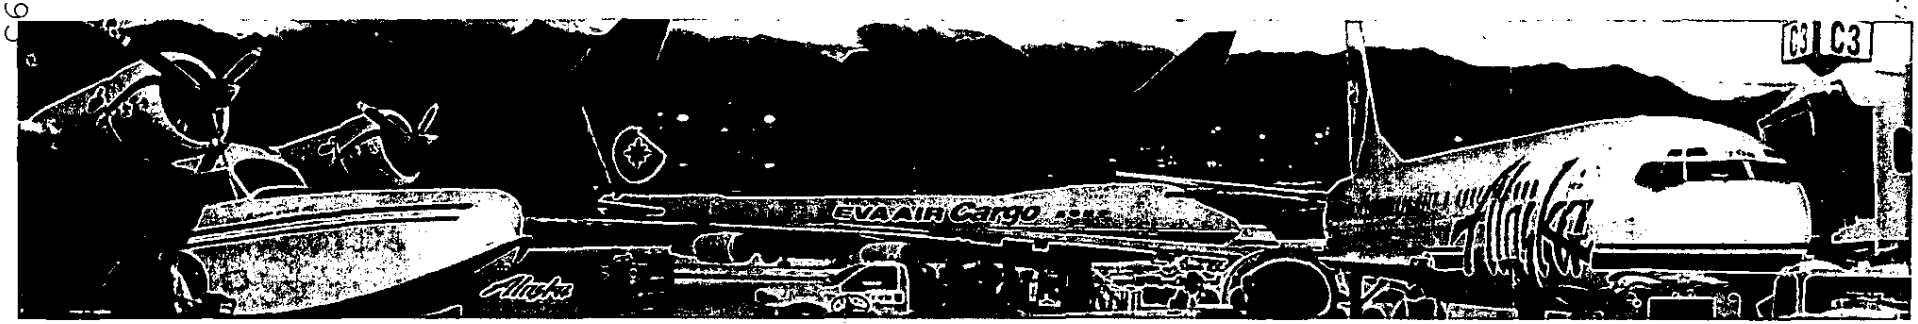
AIAS Fuel Trends

Fuel Flowage Fees

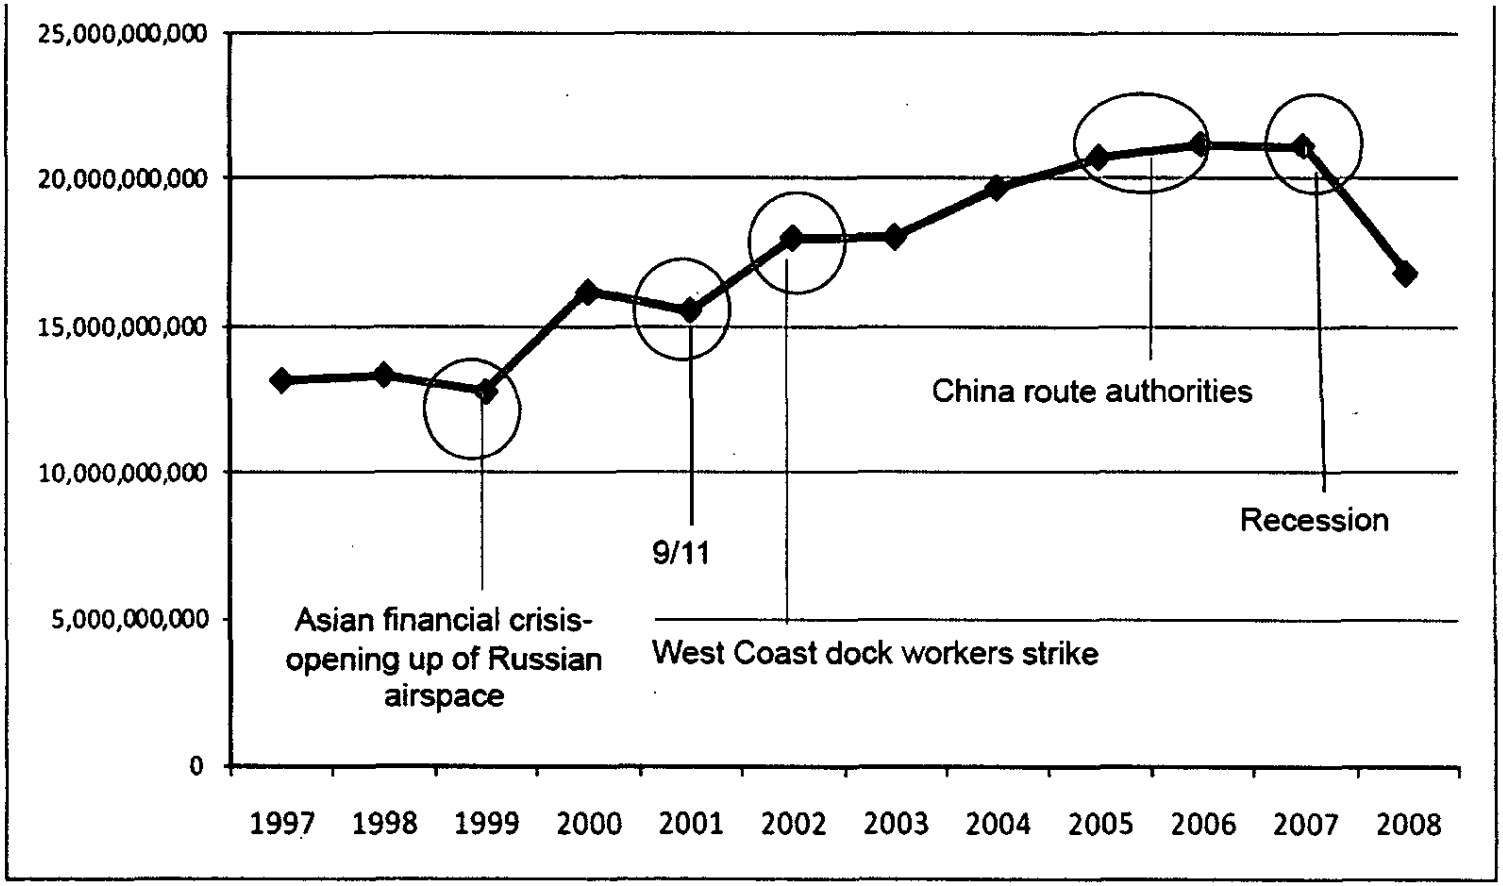
- Charged on each gallon of fuel
- $0.027 per gallon for aircraft >12,500 (signatory carriers)
- Accounts for ~20% of the AIAS Revenue

Changes

- Cargo Freight Down
- Old Aircraft Being Parked
- Airlines Improved Efficiencies
- Carrying Less Fuel Weight



Trends in International Freight



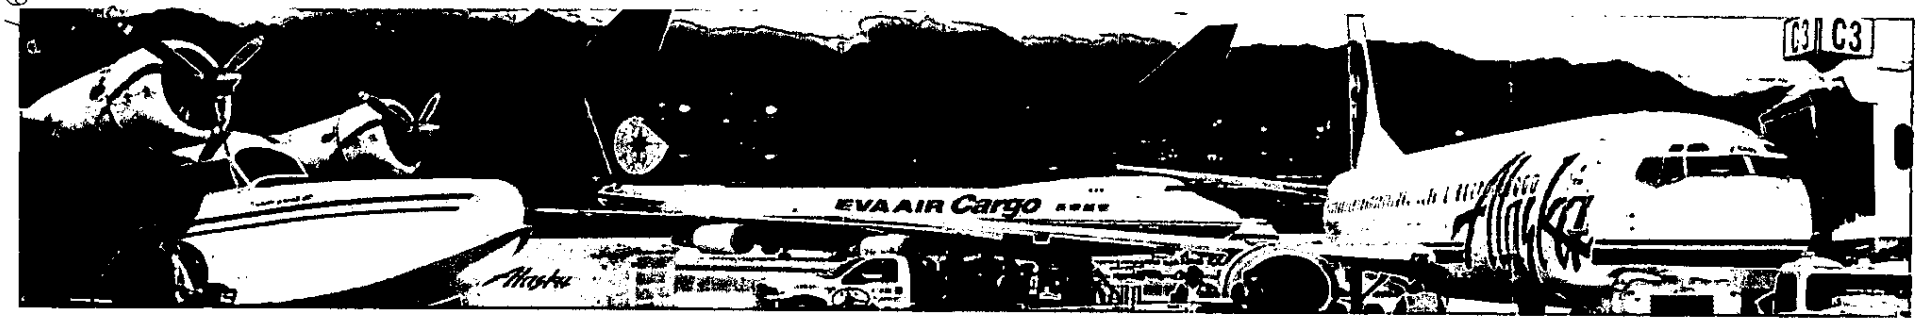
AIAS Responded Early to Trends

Reduced Operating Costs:

- June: reduce '08 budget spending
- July: defer, delay, and cut capital projects by $300 Million
- August: projected year traffic declines of 15 - 20%
  - Cut development funds
  - Hold utility increases & costs flat
  - Put TSA reimbursement to debt
- October: reduce '09 operating budget by $3 Million (3%)
- March: further cost containment

Stay Competitive:

- September: Initiated independent 3rd Party Asian Cargo Analysis Report… *(Keiser Phillips)*
- Assess and Track Other US Competing Airports…
- December: Airport Operating Agreement Lease completed in partnership with airlines



III. AIAS and the Future Outlook

1. Tied to National & Global Economy
2. Responsive & Competitive Airport
3. Cautious Positive Growth

AIAS Linked to the World

Global Economy

- AIAS tied to World and US trends
  - Passengers US
  - Cargo International
- Economic Recession

Response & Vigilence

- Respond to Market & Costs
- Track Airport Competition
- Assess Over-flights to US

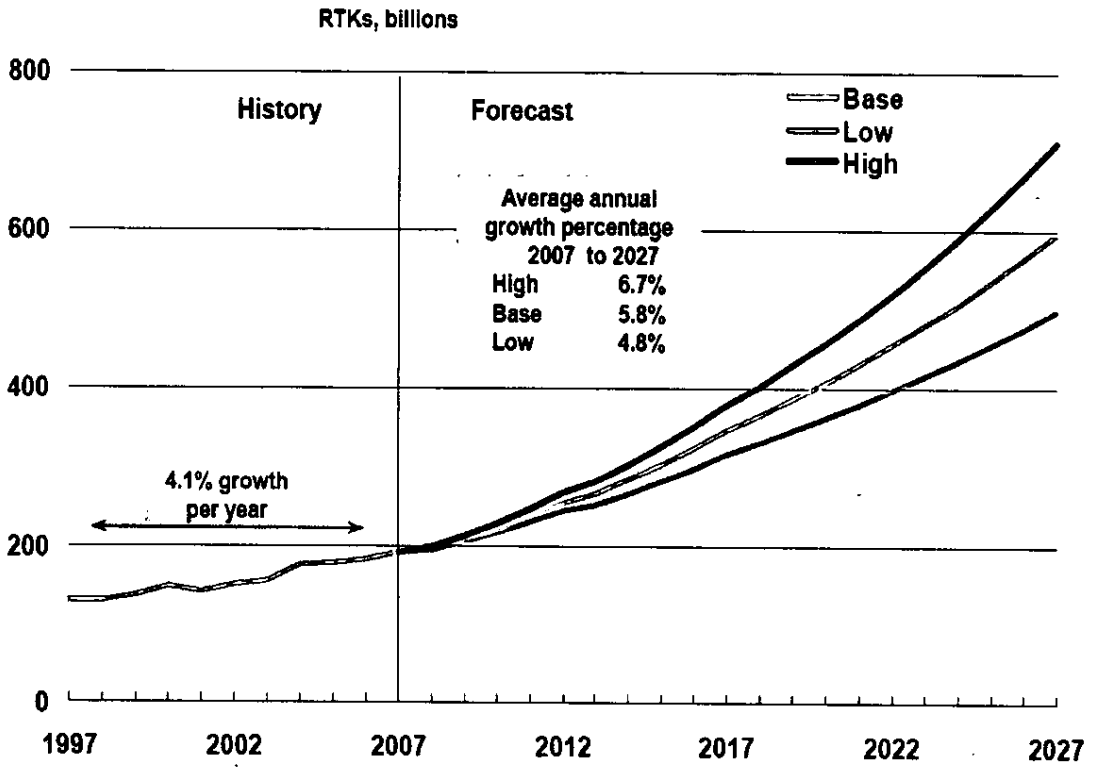
Realize Limitations

- Surface & Intermodal Limited
- Northern Climate Disadvantage
- No local manufacturing
- Limited air exports

Alaska Tied to World Air Trade

Projections:

- Air Freight Growing Worldwide by 6% year
- Market size doubles every 10 years
- World Air Cargo will Triple over next two Decades (Boeing)
- US Cargo Share of Air Freight Revenue:
  - 5% Domestic Majors
  - 15% European Majors
  - 20-50% Asian Majors

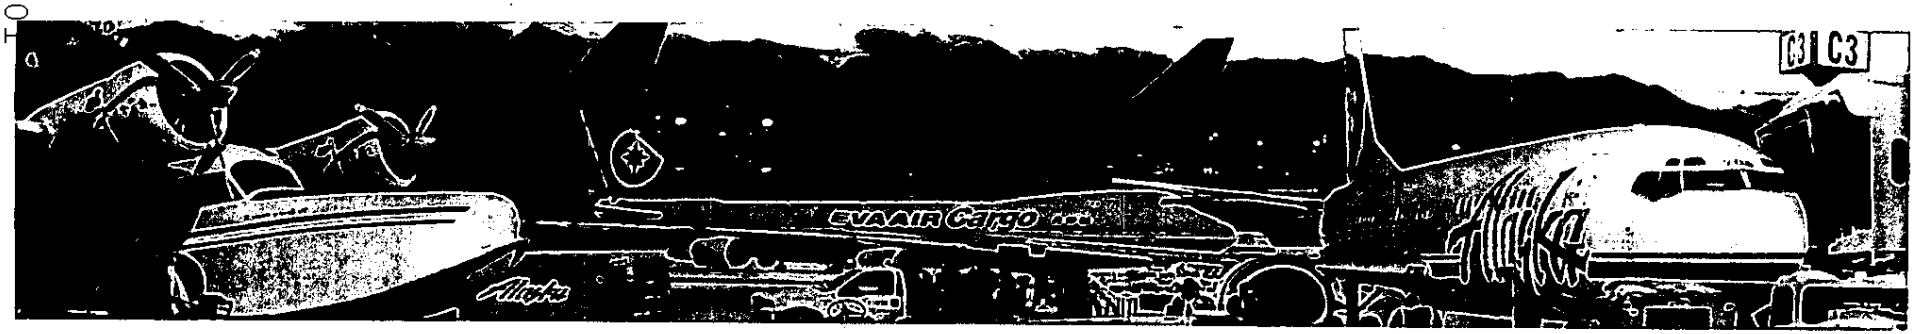


Source: ANC Air Cargo Market Profile, Keiser Phillips Associates March 2009

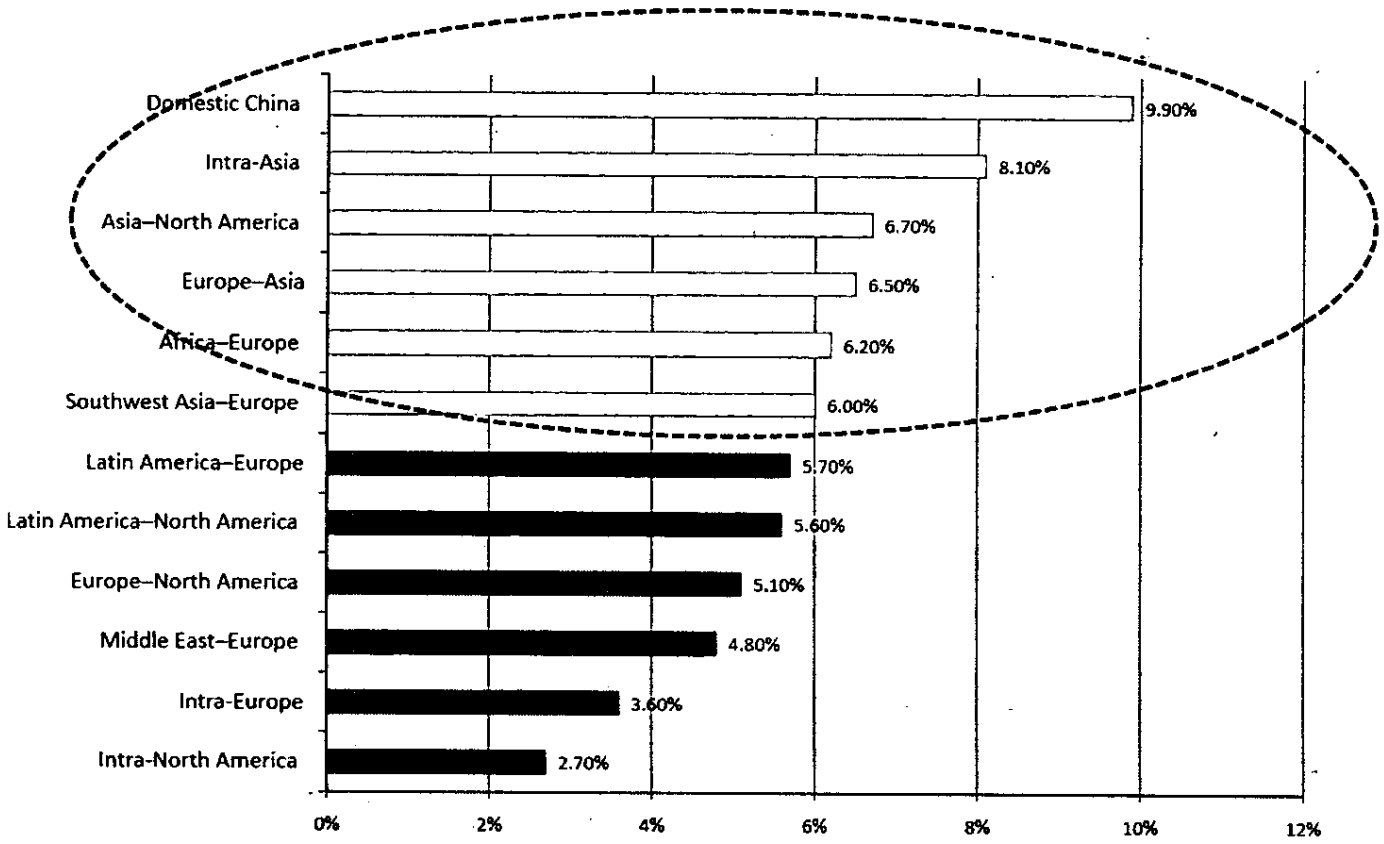
AIAS on the Forefront

Responsive:

- **Early Response to USA Economic Downturn**
  - Responded to Carrier's Requests for Relief (Fuel)
  - Focused on Debt & Rate Stability (Finance)
  - Reduced Operating Expenses
  - Lower Landing Fees
- **International Trade Impacts**
  - Asian Producers
  - USA Consumers



Asian Market Projected to Lead Growth



Source: ANC Air Cargo Market Profile, Keiser Phillips Associates, March 2009.

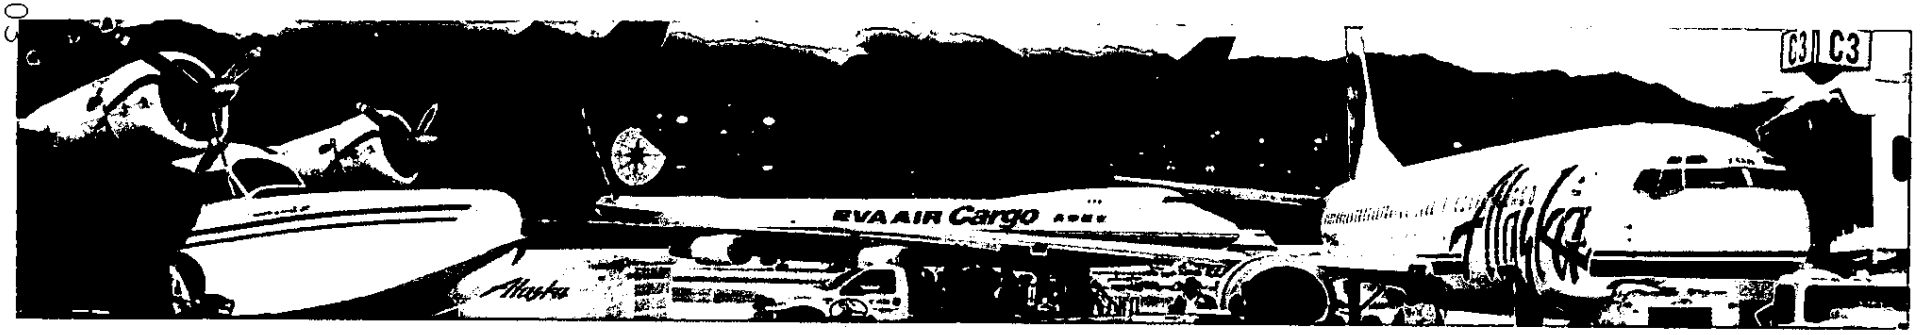
AIAS Remains Competitive

Terminal Rent

	Ticket Counter/Gate
Seattle	$396.01/$237.60
Portland	$242.00/$218.00
Ontario	$139.99/$139.99
Reno	$117.04/ $93.63
Boston	$100.21/$100.21
AIAS	$61.50/$61.50

Landing Fee

	Cost 747-400
Toronto	$12,799.08
Tokyo	$7,405.37
Newark	$4,789.75
New York	$4,456.55
Dallas	$3,349.98
Seoul	$2,982.14
Chicago	$2,759.24
Seattle	$1,918.00
Vancouver	$1,837.08
AIAS	$1,174.53



Conclusion: AIAS Leads the Way

Responsive, Vigilant, and Serving

- **Assess the Competitors**
  - Other USA Cargo Airports
  - Asian Cargo Carriers & Markets
- **New Carrier Partnerships**
  - **NCA** - JFK Station
  - **Cathay Pacific** - New freighters and new stations
  - **Evergreen/Kalitta** - New China designation
  - **UPS** - Anchorage Training Center, China frequencies

- #1 Airport for excellent service
- #1 Airport in North America for landed weight of cargo aircraft
- #3 Airport in the world for cargo throughput
- New four-wide body cargo aircraft apron
- 11,800-foot runway
- International and domestic processing facilities

Thank you

3/24/09

Cruise Ship Stationary Dilution Study Presentation

Senate Finance Committee
March 24, 2009

Department of Environmental Conservation
Division of Water
Cruise Ship Program

COPY ON FILE

What is a dilution factor?

- A dilution factor is a measure of the dye concentration in the marine water relative to the concentration of the dye in the ship's treated wastewater.

- If the concentration of a dye in the ship's treated wastewater is 100 and the measured concentration of the dye in the receiving water is 5, then the dilution factor is 20.

What is a dilution factor important?

- DEC must evaluate both the pollutant sample results and the dilution of the wastewater in the environment to estimate whether wastewater would exceed Water Quality Standards (WQS) in marine waters.

Dilution of Wastewater while Vessel is Moving

- Wastewater is subject to a tremendous amount of dilution when cruise ships are moving.

- Based upon field studies, Science Advisory Panel estimated a conservative dilution factor of 50,000.

(min speed of 6 knots and discharge at 200 cubic meters/hour)

Dilution of Wastewater while Vessel is Stationary

- DEC partnered with EPA to collect field data to examine the dilution factors (mixing) for a stationary cruise ship.

- This study collected field data in order to calculate the dilution that occurs to wastewater when it is discharged under worst case conditions -- from a stationary cruise ship into a confined receiving environment with limited flushing.

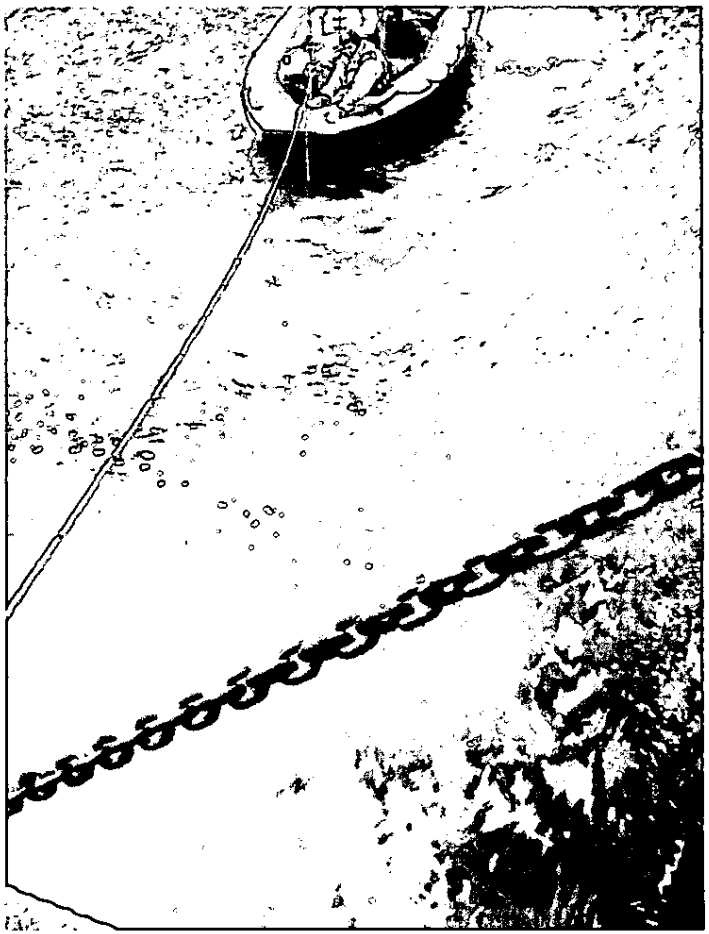
Methods Used to Collect Dilution Data for Stationary Cruise Ships

- This is a near field dilution study.
- Measurements were taken in the receiving water between the hull of the vessel at intervals up to 15 meters (49 feet; 1 meter = 3.28 feet) away.
- Six cruise ships volunteered to participate.

Methods Used to Collect Dilution Data for Stationary Cruise Ships

- A fluorescent dye (Rhodamine WT) of a known concentration was injected into the treated sewage and graywater discharges on each cruise ship.
- Outside of the vessel, a small boat with a fluorometer recorded the concentration of the dye in the receiving water.

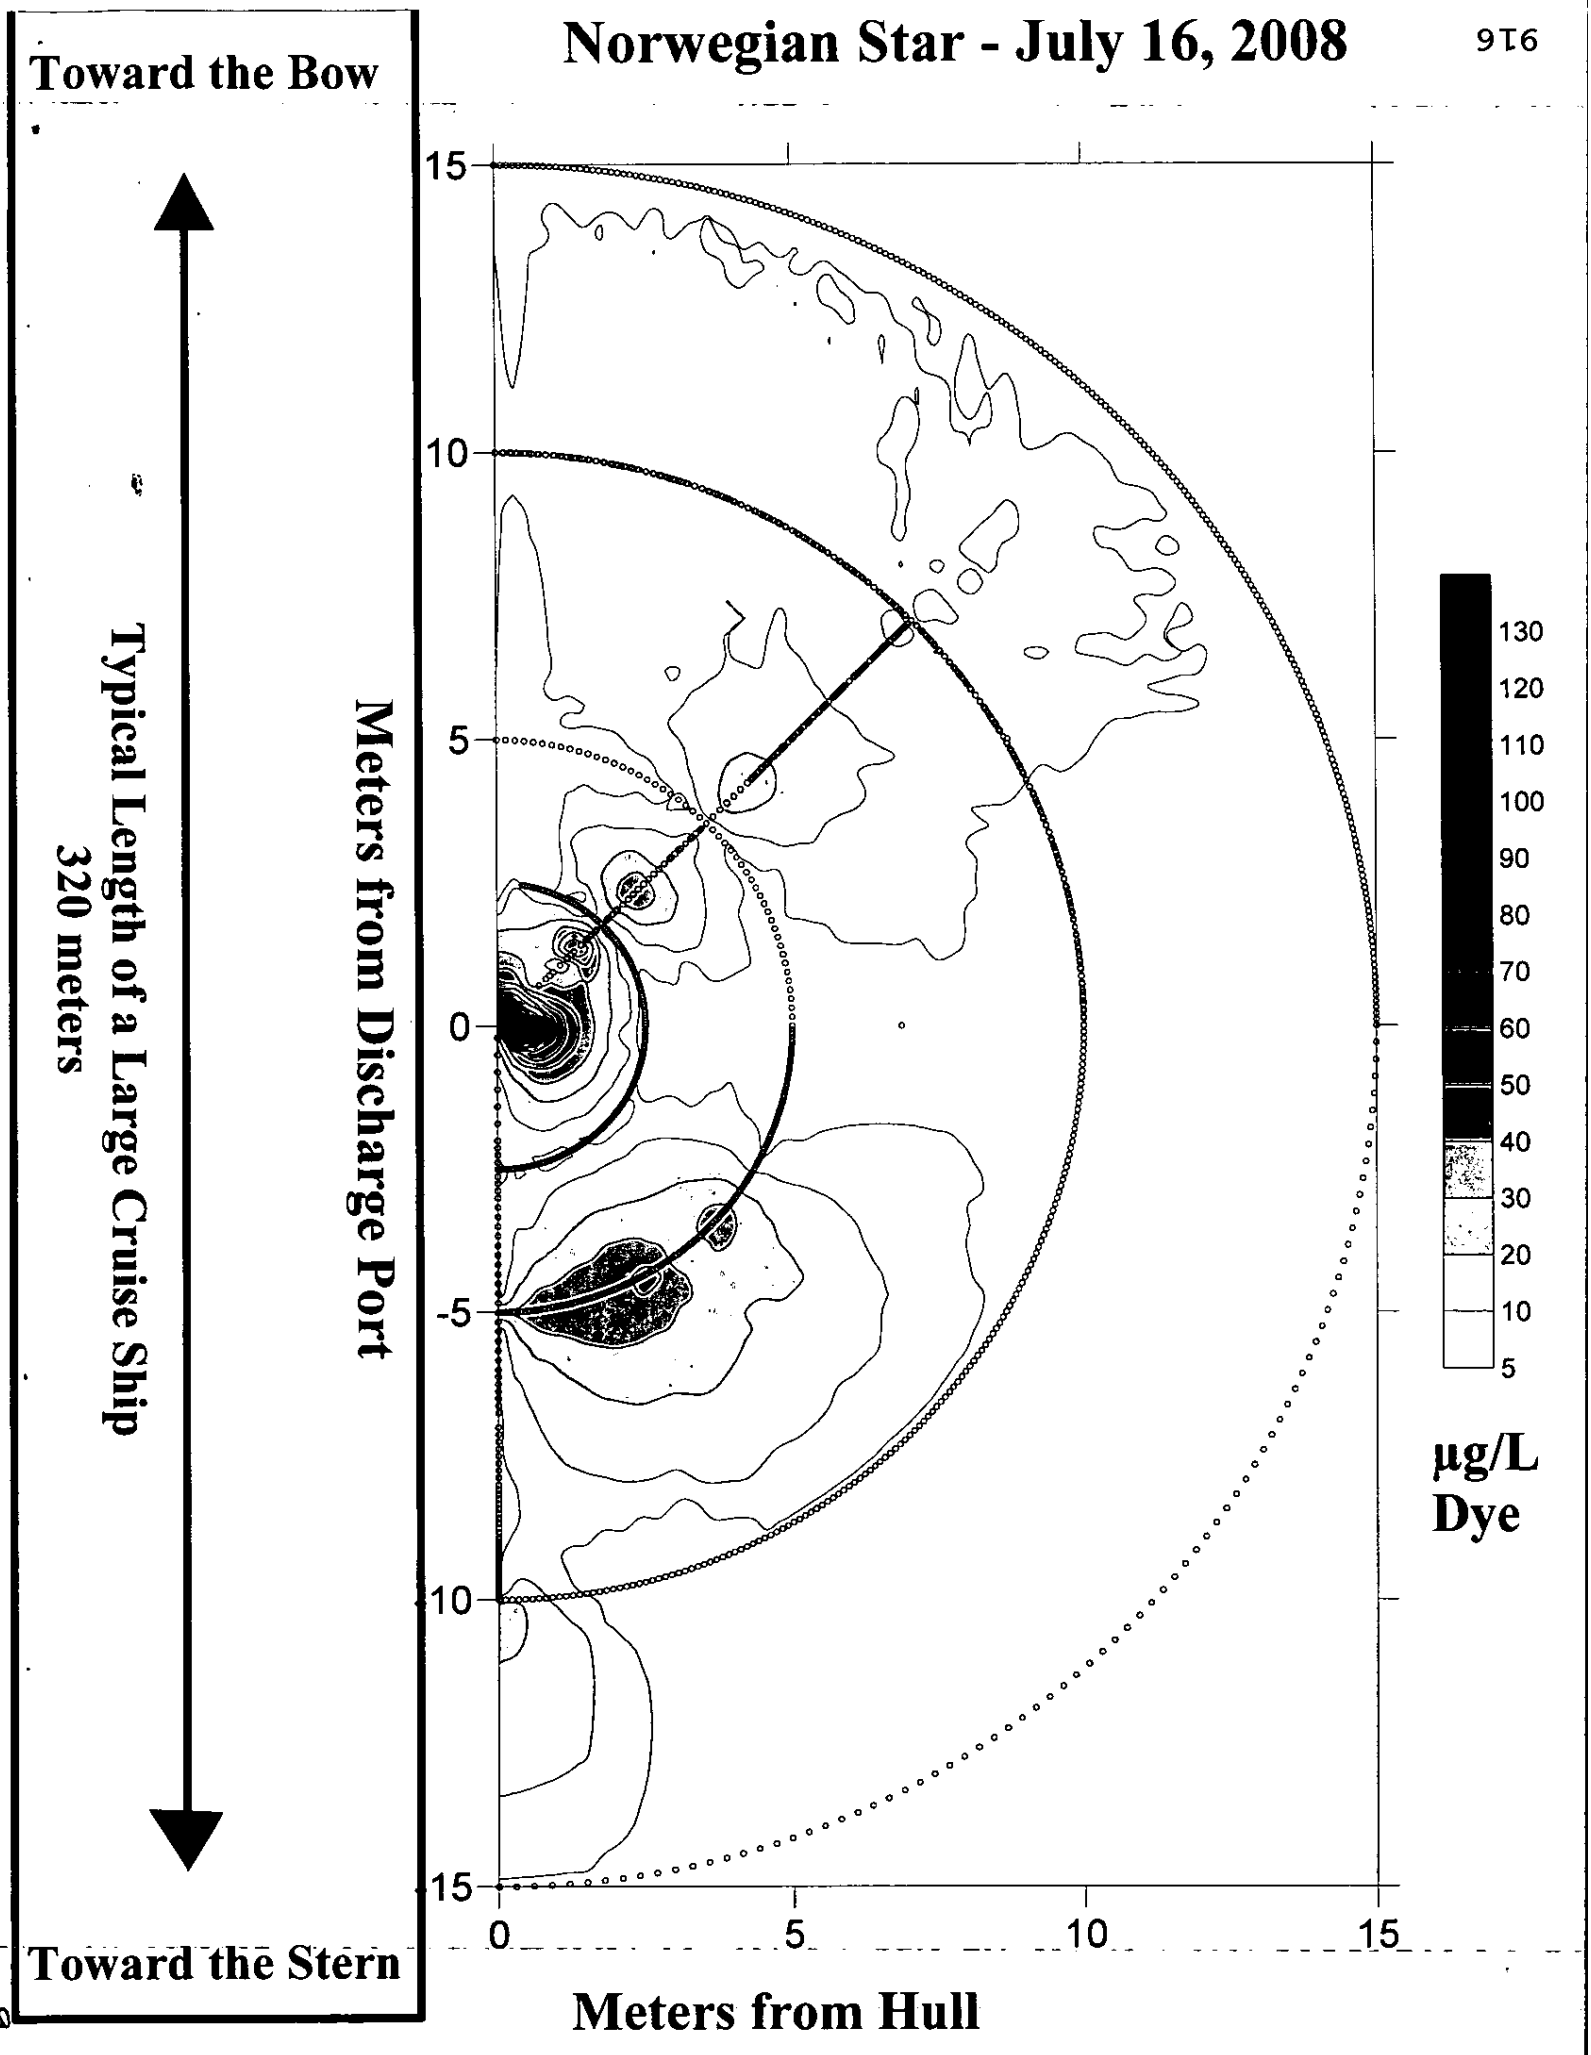
Release of dye from cruise ship and measurements being taken in receiving waters



Results

- Enormous and complex data set that fills >1,400 pages.
- Summary of a complex data set.
- "Time Lapse" plot of plume on Norwegian Star

Norwegian Star - July 16, 2008



How do you apply the dilution results to cruise ship sample data to determine where Water Quality Standards are met in the harbor?

- The cruise ship general permit requires that the discharges must meet the Alaska Water Quality Standards at the point of discharge.

- Ships meet most standards but are not able to consistently meet this stringent requirement for ammonia, copper, nickel and zinc.

How do you apply the dilution results to cruise ship sample data to determine where Water Quality Standards are met in the harbor?

- A standard scientific approach to a complex data set is to look first at the potential worst case scenario. If there is no exceedance in Water Quality Standards from the worst case scenario, then you will be confident that Water Quality Standards will be met in other situations.

- Skagway + max conc of pollutants + lowest dilution factor = worst case scenario

Dilution Factor at 2.5 meters from Ship

- The dilution factors ranged from about 4 to 12

- When the maximum pollutant concentration detected for ammonia, copper, nickel, and zinc for all ships during the 2008 season is divided by a factor of 4 (i.e. worst case dilution), the pollutants will exceed Water Quality Standards in the receiving water.

Dilution Factor at 2.5 meters from Ship

- If we divide the maximum pollutant concentrations by the highest (best case dilution) of 12, nickel and zinc will meet the WQS in the receiving water. However, the concentration of ammonia and copper found in the harbor will still exceed Water Quality Standard at 2.5 meters. (See Table 3 of DEC Draft Report for pollutant concentrations.)

Dilution Factor at 15 meters from Ship

- The lowest dilution factor (i.e. the least dilution or "worst case") was 28.
- The highest dilution factor (i.e. best case – most dilution) was 63.

Dilution Factor at 15 meters from Ship

- If you apply the highest dilution (e.g. best case) to the maximum concentration (e.g. worst case), all four parameters will meet WQS at 15 meters.

- A worst case combination of a maximum pollutant concentration for ammonia and copper with the minimum dilution (28) will exceed the Water Quality Standards in the receiving water at 15 meters.

Comparison with Interim Limits in Cruise Ship Permit

- If a similar procedure is used to divide the interim limits in the current permit for ammonia, copper, nickel, and zinc concentrations by the worst case dilution factor (4), they will exceed Water Quality Standards for all four parameters at 2.5 meters.

Comparison with Interim Limits in Cruise Ship Permit

- If we applied this same procedure using the worst case dilution found in this study, all four parameters will meet Water Quality Standards at 15 meters.

- Based upon the data from the four ships in this study, a ship whose wastewater complies with the interim limits will meet the Water Quality Standards at 15 meters (49 feet).

Validation of the Computer Models

- DEC compared the observed dilution to what was estimated by computer modeling software.
- In the near field (0 – 15 meters) that the computer models were fairly accurate at predicting the dilution factor.
- The models actually estimated a lower dilution factor (i.e. less dilution) than was observed.

3/24/09

DRAFT

An Assessment of the Cruise Ship Plume Dilution Study Performed in Skagway, Alaska, July 2008

Alaska Department of Environmental Conservation

March 24, 2009

DISCLAIMER: This report is a work in progress and is still being finalized.

926

COPY ON FILE

Executive Summary

This report describes a plume dilution study conducted as a partnership between the Alaska Department of Environmental Conservation (DEC) and the U.S. Environmental Protection Agency (EPA). The study was conducted by EPA's Ocean Survey Vessel *Bold* in July 2008. It was designed to characterize the near-field dilution that occurs to wastewater that is discharged from a stationary cruise ship.

The dilution factors in this study were calculated by taking the known concentration of a pollutant in the pipe before discharge and dividing it by the concentration measured in the receiving water. For example, if a value of 100 concentration units was determined in the pipe and a concentration of 5 was measured after the wastewater was discharged into the receiving water, the dilution factor would be 100 / 5 which equals 20.

None of the vessels that visited Alaska in 2008 could consistently meet the State of Alaska Water Quality Standards for ammonia and selected metals at the point of discharge.

After undergoing turbulent mixing in the first 2.5 meters, plumes remained relatively intact to a distance of 15 meters.

In order to determine where cruise ship effluent would be diluted to the point where it would meet water quality standards in the receiving water, DEC divided the maximum reported concentrations for ammonia, copper, nickel, and zinc effluent levels from all ships that discharged in Alaska during the 2008 season by the highest dilution factor of 63 found at 15 meters. In this case water quality standards would be met in the receiving water for ammonia, copper, nickel, and zinc. When you take the most conservative approach of dividing the maximum concentration of pollutants by the lowest dilution factor of 28, ammonia and copper concentrations in the receiving water would exceed water quality standards at 15 meters.

We then looked at the interim limits that are currently in the cruise ship permit. If a similar procedure is used to divide the interim limits in the current permit for ammonia, copper, nickel, and zinc concentrations by the worst case dilution factor, they will exceed Water Quality Standards for all four parameters at 2.5 meters. If we applied this same procedure using the worst case dilution found in this study, all four parameters will meet Water Quality Standards at 15 meters.

Based upon the data from the four ships in this study, a ship whose wastewater complies with the interim limits will meet the Water Quality Standards at 15 meters (49 feet).

DEC also compared the near field dilution factors that were predicted by the PLUMES and CORMIX computer dilution models to the observed dilution. The maximum dye concentrations that were measured were in fair agreement with the modeled values in the 5 – 15 meter range. The modeled values were conservative and predicted higher maximum plume concentrations compared to those that were observed in the field. This means that the models are more protective of the environment. However, the PLUMES and CORMIX models diverged greatly when attempting to predict dilution factors beyond 15 meters and may not be appropriate for determining far-field dilutions.

DRAFT

Introduction

The Alaska Department of Environmental Conservation (DEC) has had the regulatory responsibility of protecting the waters of Alaska through the Cruise Ship Program since 2001. DEC provides detailed information about the Cruise Ship Program at the following web page:

http://www.dec.state.ak.us/water/cruise_ships/index.htm

As a part of the Cruise Ship Program DEC has completed and participated in studies that have provided information on the impacts that cruise ship discharges have on water quality. In 2001, DEC participated in a study of the dilution of wastewater discharge plumes from large moving cruise ships (Cruise Ship Wastewater Science Advisory Panel, 2002). The Science Advisory Panel concluded that very high dilution factors of 1/50,000 would conservatively be achieved behind a moving vessel.

In 2004, DEC used computer models to estimate the concentration and distribution of cruise ship discharges at three Alaska harbors; Juneau, Ketchikan and Skagway (DEC, 2004). The input conditions to the models in that study assumed the ships were stationary, and that normal tidal and hydrographic conditions existed. Individual characteristics such as discharge pipe diameter, flow rates and temperature of the discharge were based on individual data from eighteen vessels. DEC used the EPA approved computer modeling packages PLUMES and CORMIX to estimate the expected dilutions from each individual ship. Concentrating only on the modeling that was reported for the conservative conditions in Skagway harbor, the dilution factors achieved in the first 2 meters ranged from 1/10 to 1/20. At a distance of 5 meters the dilution factors were between 1/24 and 1/60.

In July 2008, DEC worked in partnership with the United States Environmental Protection Agency (EPA) on a study in Skagway harbor to directly measure the dilution of waste water discharge plumes from stationary cruise ships. The study was performed by DEC and EPA personnel and supported by the crew of the EPA research vessel *Bold*. Discharges from six cruise ships were tested between July 7, 2008 and July 17, 2008. Discharges from two of the ships were sampled twice so that a total of eight visits were completed. The purpose of this study was to measure the real world dilution factors that exist in the marine waters in order to assess whether the Alaska water quality standards are currently being met, and in addition, to compare these actual dilutions to the values predicted by the computer models.

Over the years, the cruise ship industry has, in general, worked to continually reduce the concentration of pollutants through major upgrades to advanced treatment systems onboard the vessels. There have been reductions in the levels of fecal coliform bacteria, biological oxygen demand (BOD), total suspended solids (TSS), pH (a measure of acidity) and chlorine. In 2008, however, four parameters continue to exceed the water quality standards that are mandated by law to be met at the point of discharge. The four parameters are ammonia, copper (Cu), nickel (Ni) and zinc (Zn). This report will focus on these parameters when assessing compliance with water quality standards.

Figure 1 provides a detailed map of the study area in Skagway harbor. It depicts the three areas where large cruise ships dock, the Ore Terminal, Broadway, and Railroad docks. The locations of the Alaska Marine Highway System Ferry dock and the City of Skagway domestic waste water outfall are also shown.

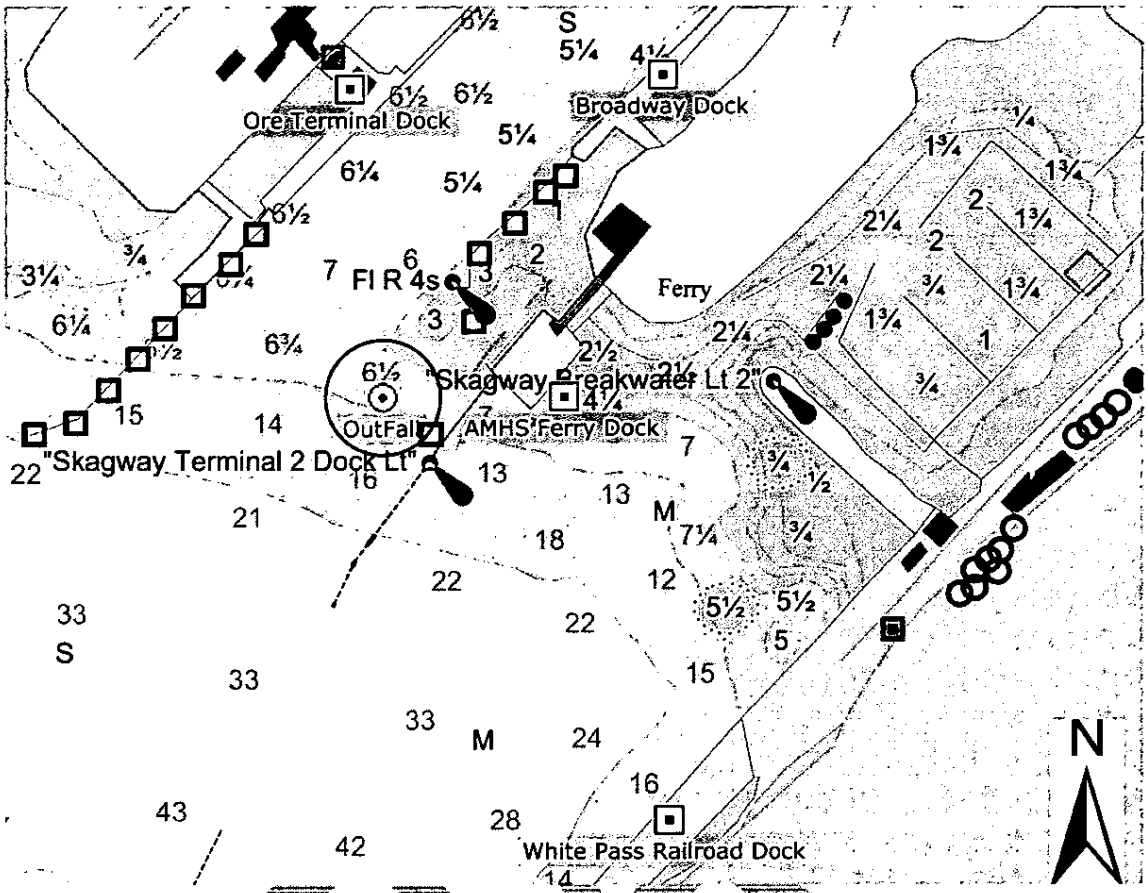


Figure 1 Skagway Harbor Showing Cruise Ship Sampling Sites.**Methods**

Criteria for selecting the ships that were tested.

DEC acknowledges the tremendous cooperation and support that this project received from the officers and crew members on the vessels that were sampled during this work. One of the main criteria for selection in the project was that the ship volunteered to participate. Another important factor was that, as far as possible, DEC tried to include ships that were studied in 2004. Of the six ships that were sampled, four had been included in the previous study. While the ships were not selected randomly, DEC also attempted to select ships with a wide variety of treatment systems.

The following section provides a summary of the methods that were followed in introducing dye into the individual cruise ship wastewater streams and then in tracing the resultant dye plumes that formed in the receiving water. This summary of the methods used is based on the US EPA report entitled "Sampling

Episode Report Cruise Ship Plume Dilution Study, Skagway, Alaska", February 25, 2009. That report should be consulted for further sampling details and to locate all the raw data that was gathered during the plume dilution study.

Pre-Sampling Activities

Visits to each of the six ships were conducted during the week prior to the start of the sampling episode to establish ship contacts, communications, and safety and emergency procedures, and to inspect sampling ports and associated fittings.

Dye Injection Methodology

A variable speed peristaltic pump was used to inject the fluorescent dye, Rhodamine WT, into the waste discharge stream at a point downstream of the wastewater treatment system. The flow in the pipe was monitored using an ultrasonic flow meter. The in-situ concentration of the dye was calculated from the known input concentration, the discharge flow rate, and injection rate. In addition, the concentration of the dye was measured directly downstream using a calibrated fluorometer. This instrument was used successfully in three of the four surveys where plume distributions were mapped outside the ships. Usable data was not obtained in the other cases due to instrument failures.

Vessel	Target Concentration µg/L	Used by DEC µg/L
Star Princess	420	420
Coral Princess	1050	1050
Ryndam	754	700
Millennium	663	573 ± 218
Norwegian Star	893	606 ± 140
Volendam	918	787 ± 100

Table 1 Target Concentrations and actual Measured Concentration.

932

DEC used the measured concentration to calculate the dilution factors. Table 1 lists the concentration of dye that DEC used as the maximum in-pipe concentration for each ship surveyed. The value used for the Star Princess, Coral Princess and Ryndam was based on the calculated target concentration. For the Millennium, Norwegian Star and Volendam the maximum input was based on the mean value measured by the fluorometer and the standard deviation.

Plume Monitoring Methodology

A Sea-Bird SBE-19 CTD (conductivity, temperature, and depth) was deployed to provide detailed measurements of the ambient hydrographic conditions. In addition, this instrument package, which is pictured in Figure 2, was outfitted with a fluorometer and turbidimeter to measure the dye concentrations and possible interferences. Conductivity was an important parameter because it is used to calculate salinity which is a measure of the amount of dissolved salts in the seawater. This parameter along with temperature is used by the models to calculate density of the water and predict the behavior of the plumes. All of the parameter readings were measured two times a second and transmitted by cable to a laptop computer. It is important to note that the sensors and seawater intake hoses are located at the bottom of the instrument. In the case of the vessel Star Princess this feature prevented characterization of the surface plumes that formed.

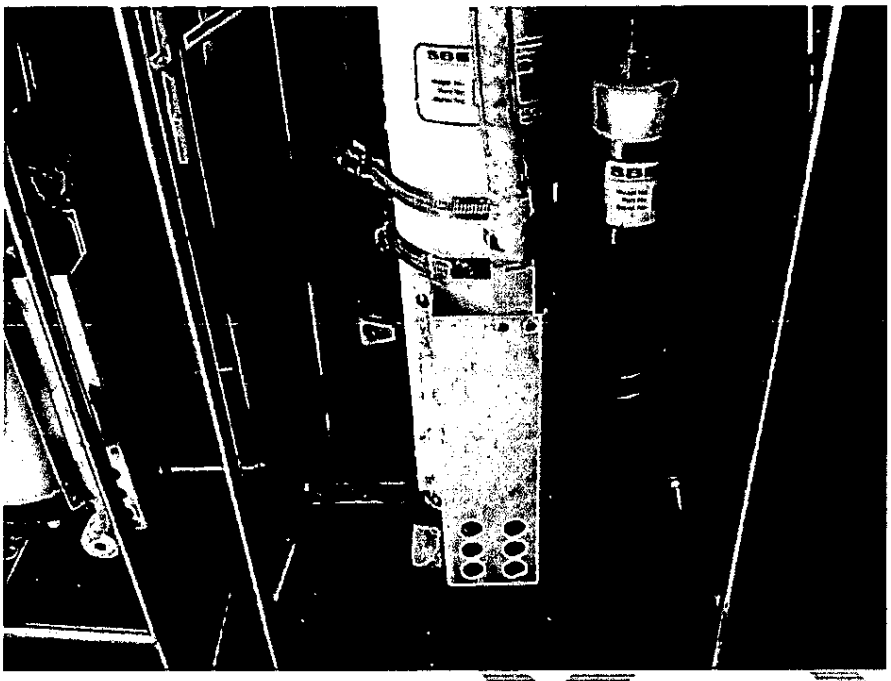

Figure 2. Sea-Bird SBE-19 CTD Sensor with Integrated SCUFA® Fluorometer

DRAFT

934

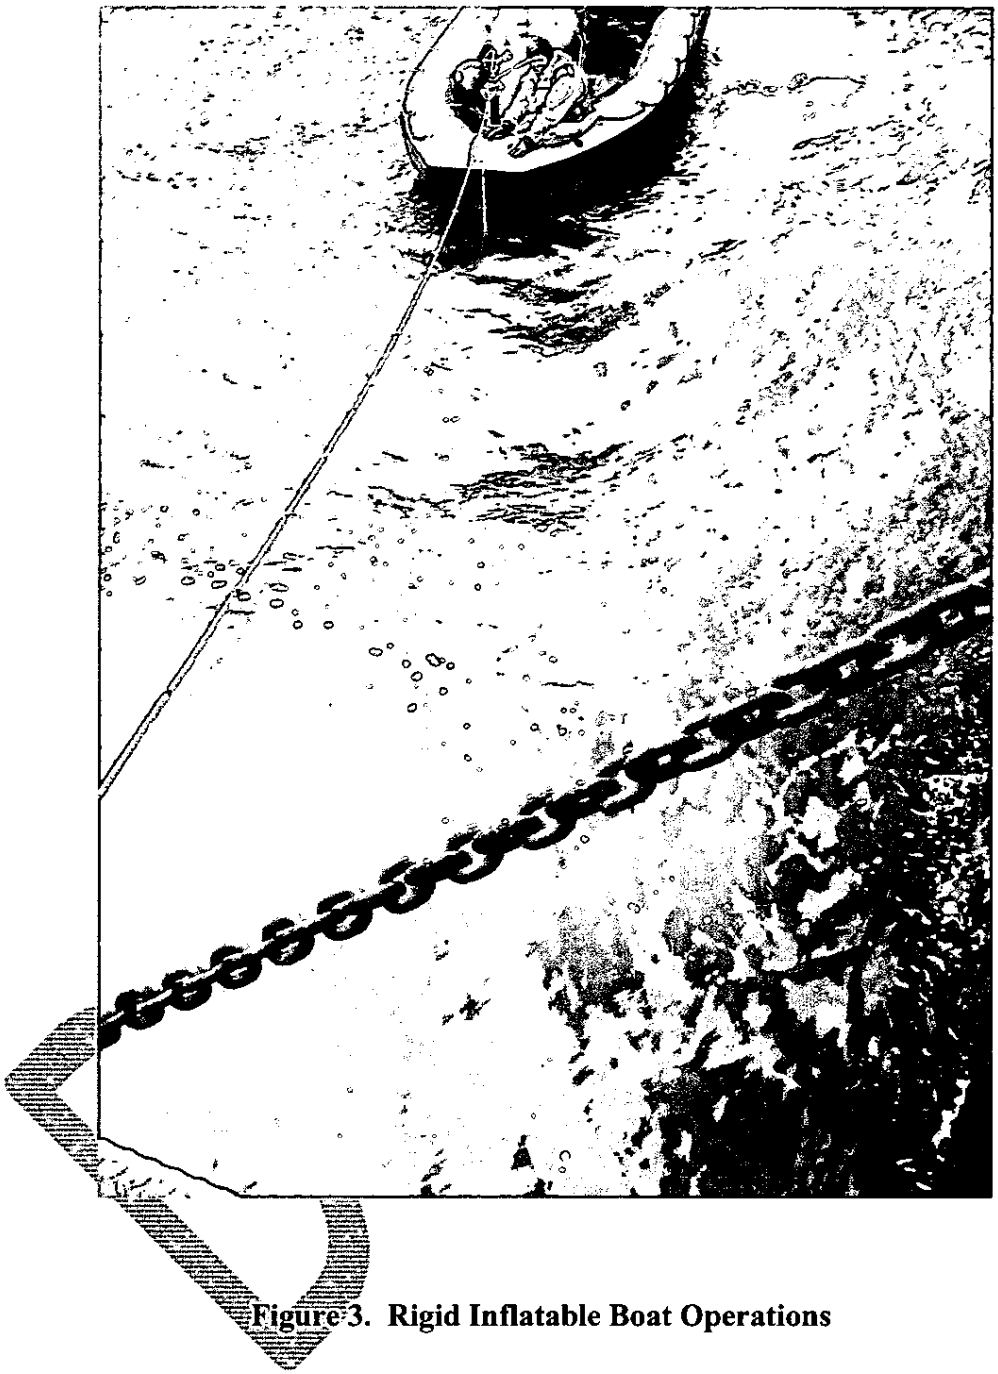

Figure 3. Rigid Inflatable Boat Operations

The CTD was deployed from the bow of a rigid inflatable boat (RIB). At times the CTD was lowered and raised at a stationary position to provide a vertical profile of the water column. In order to track the plume concentration distributions a series of arc transects were performed. To accomplish these, a hull magnet was first attached above the discharge port. The RIB then traversed a semicircle path at the nominal distances of 2.5, 5, 7.5, 10 and 15 meters away from the port. This

pattern was repeated with the CTD held at the nominal depths of 1.5, 3, 5 and 7.5 meters deep.

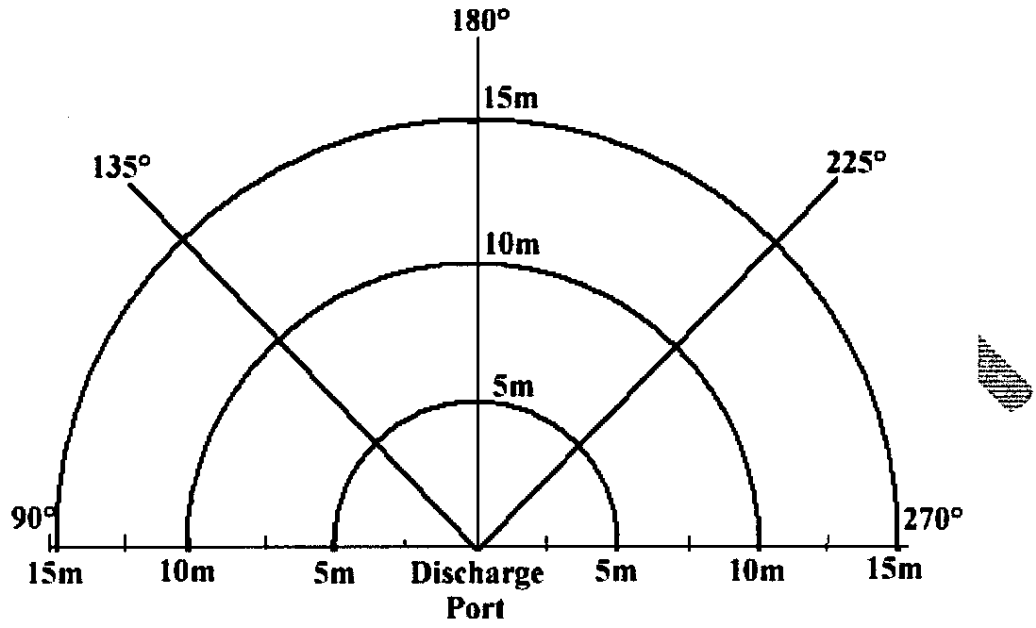

Figure 4 Sampling transect pattern used to locate dye plumes

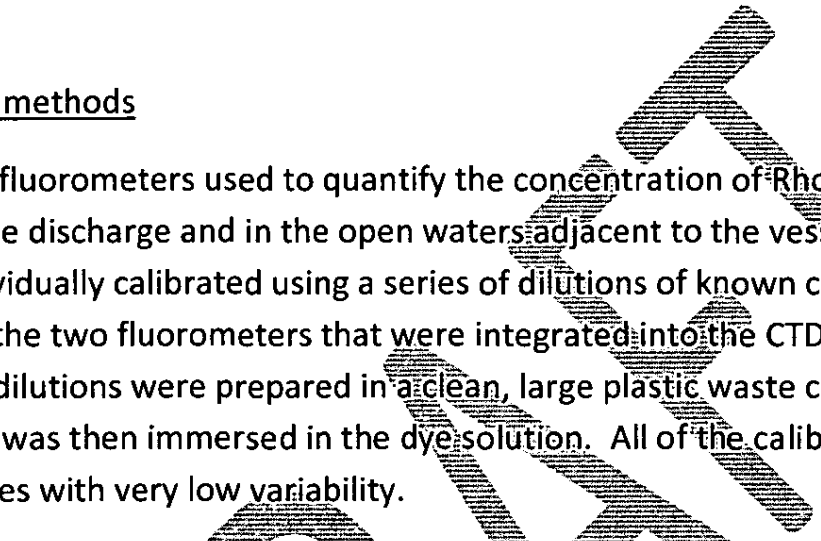
Another type of transect was performed in order to maximize the definition of the plume distribution is shown in figure 4. The RIB was directed either toward or away from the discharge port along a straight course at constant depth where the plumes were expected to have the least dilution and greatest concentration of dye, i.e. in the center of the plumes.

936

Current and Weather Measurements

Current meters were used to record the major currents in the vicinity of the discharge port during the plume surveys. They were deployed at 1, 3 and sometimes 5 meters.

Personnel on the OSV Bold recorded weather conditions during the surveys.



DEC methods

The fluorometers used to quantify the concentration of Rhodamine WT dye both in the discharge and in the open waters adjacent to the vessels hulls were individually calibrated using a series of dilutions of known concentrations of dye. For the two fluorometers that were integrated into the CTD instrument packages, the dilutions were prepared in a clean, large plastic waste container. The entire CTD was then immersed in the dye solution. All of the calibrations produced curves with very low variability.

Raw data from the transects were first converted to the equivalent concentration of dye in micrograms/Liter (µg/L) using the calibration curves described above. The position of the instruments was estimated for each arc and linear transect by apportioning the angle to the ship based on the total time of the transect (assuming that the motion of the RIB was relatively constant). These positions were then converted from polar to rectangular coordinates and the dye distributions were plotted for a given depth using the commercially available software, Surfer8. Since the CTD/fluorometer instrument package was recording data for conductivity, depth, temperature and dye concentration at an interval of once every ½ second, the sampling coverage for defining the extent of the plumes appears to have been adequate. The resulting plots are a time average, not a snapshot of where the plumes were found, since the individual plumes were moving at speeds of about 10cm/sec and the entire process of mapping the area next to the ships out to a distance of 15 meters took up to ½ an hour.

Results

General

The initial attempts to characterize the dye plumes from the cruise ships were made on July 7, 2008 on the Millennium and July 9, 2008 on the Norwegian Star. In both cases no usable plume data was obtained.

After modifying procedures, dye plumes were detected during the sampling of the Star Princess on July 10, 20008. The plumes were observed at the surface moving away from the discharge port at an angle of 225° and directly along the ship's hull at about 270°. When the CTD is used at the surface the actual depth of the seawater that is sampled is about 0.8 meters. This configuration prevented the determination of plume values that were between the surface and 0.8 meters. A maximum plume value of 48 µg/L was detected at 1.3 meters depth at a distance of 10 meters from the discharge port. It is possible that higher concentrations were present nearer to the surface. No arc transects were completed for this sampling.

Coral Princess

For most of the sampling effort during the July 11, 2008 survey of the Coral Princess, the discharge was extremely intermittent. Near the end of the sampling period the Rhodamine WT dye concentration was increased to approximately 1050 µg/L and substantial plumes were detected at a depth of about 3.6 meters and a distance of 5 meters from the ship. Concentrations that were >158 µg/L were found at angles of 180°, 220°, from 235° to 240°.

Ryndam

The vessel Ryndam was sampled on July 12, 2008. Figure 5 provides a time-averaged mapping of the plume concentrations. The nominal depth for this plot is 3 meters. Extensive transects were also performed at depths of 1.5, 2.5, and 4.5 meters without detecting plumes. Using an arbitrary convention for compass rose direction, zero is looking directly at the discharge port and the angle increases clockwise such that 90 is to the stern, 180 directly away from the ship and 270 to the bow. See Figure 4. The plume is primarily distributed along an angle of 135° from the hull. The semi-circular arcs that are shown on the plot give the position of the CTD instrument at the ½-second interval sampling frequency. While the plot is not an instantaneous snapshot of the plume locations, it does

represent a useful tool to compare the plume density between the different sampling events.

In this plot the ship is on the left axis with the direction toward the stern at the top and direction toward the bow and Northeast is at the bottom. The plume distribution is very different from the smooth and continuously varying results that both model s predict. The empirical data show that outside a distance of 5 meters from the ship the plumes are defined by roughly circular zones of high dye concentration that appear to be advected away from the ship. There is very good agreement between the 135° angle of the plume train and the direction of the 4 cm/sec tidal current that was measured at 3 meters depth.

DRAFT

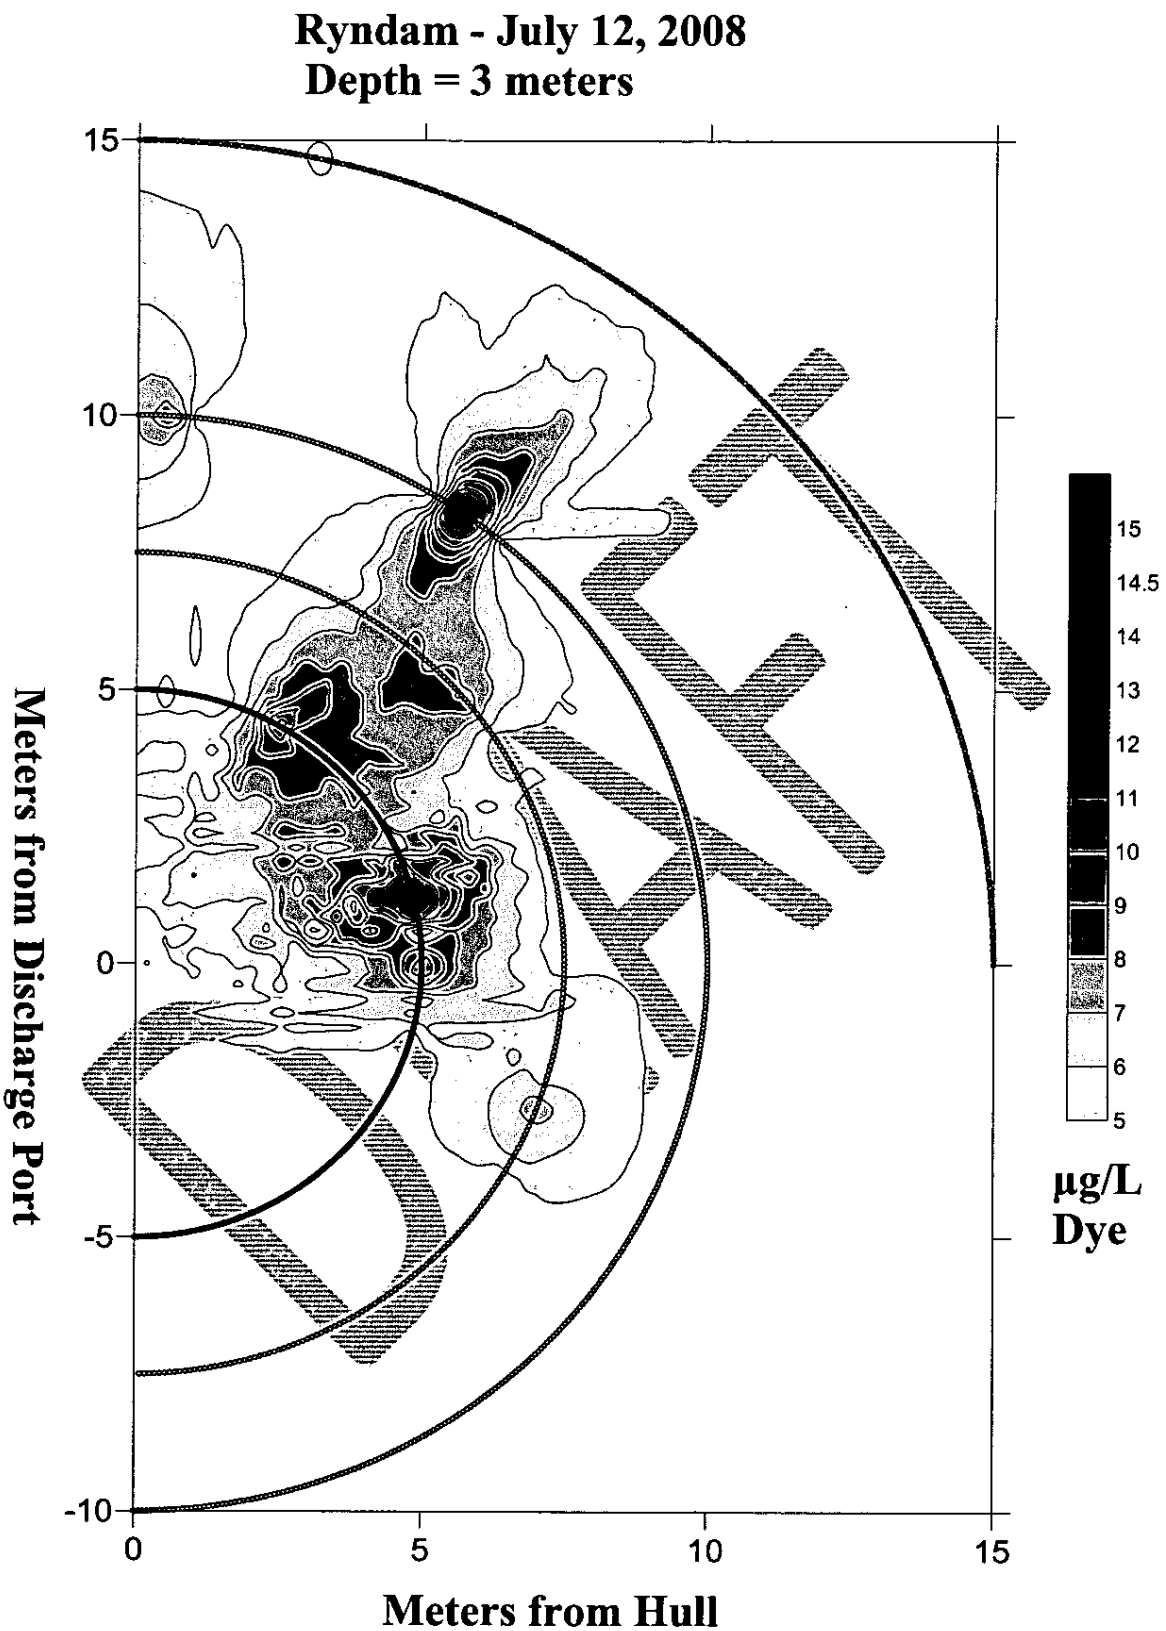


Figure 5 Plume distributions near the Ryndam at 3 meters depth

Figure 6 is a plot of the comparison between the measured value for the plume maximum concentration and the values predicted by the CORMIX and PLUMES computer models. The modeling was evaluated at 5, 10 and 15 meters from the discharge port. The average modeled dilution factor for the 5 to 15 meter range away from the discharge port is about 1/30. If the measured value at 7.5 meters is included the actual dilution factor is found to be 1/50. In this case, the models are predicting less dilution than was actually observed. In figure 6 the error bars that are plotted for the measured values are based on the variation of the input dye concentration that resulted from the variation in flow in the waste water.

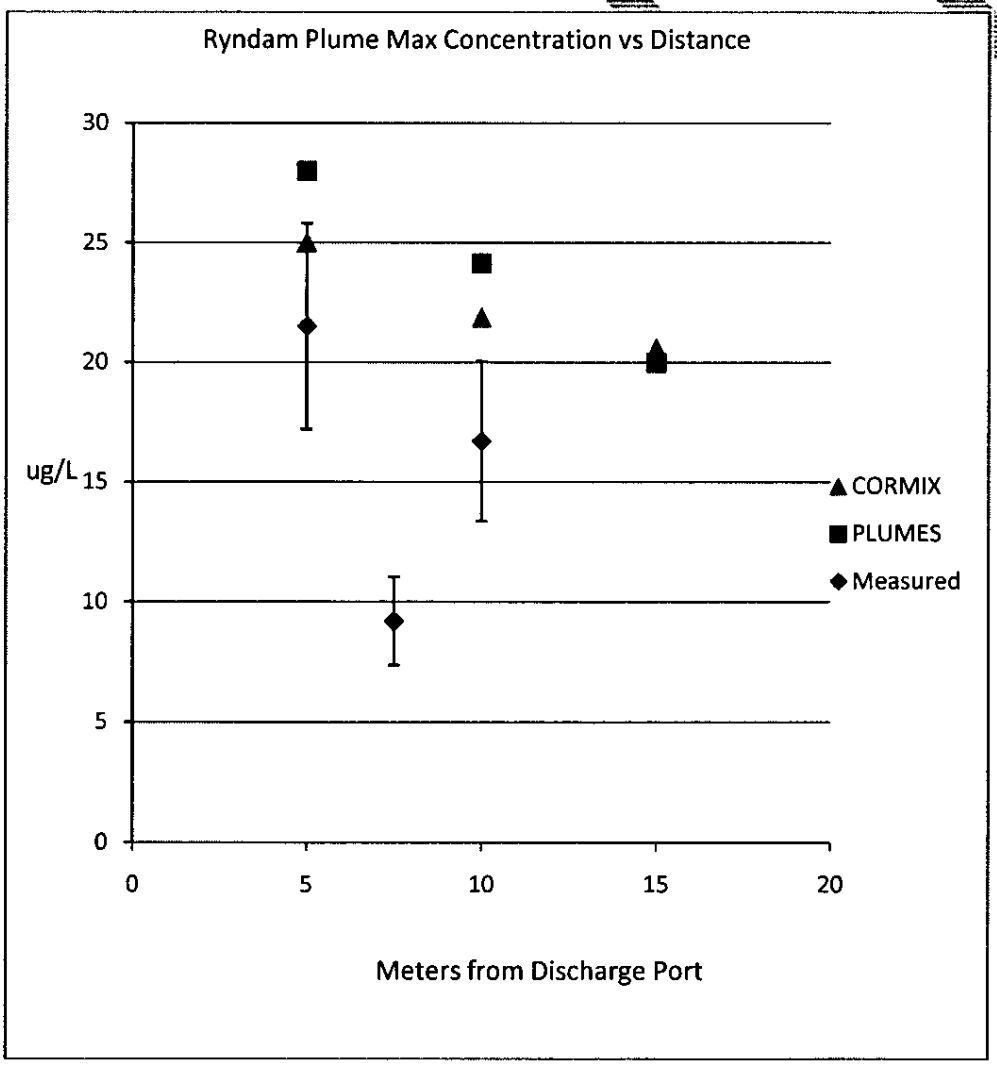

Figure 6 Plume maximum dye concentration vs distance from the discharge port at 3 meters depth.

Millennium

The vessel Millennium was sampled on July 15, 2008 and the results of the plume distribution survey are plotted in Figure 7. In this case the plume was located primarily at 5 meters depth and although the orientation of the ship and structure of the plumes were similar to those seen in the Ryndam survey, the direction that the plumes were moving was completely reversed, near 270°. In the case of the Millennium sampling, the tide was flowing in toward the harbor and during the Ryndam sampling it was ebbing away. Unfortunately the nearest current meter data that we have from the Millennium survey is at 3 meters depth and the results do not correlate well with the observed plume movements.

The maximum plume concentrations that were observed during the Millennium survey appeared to be higher than the Ryndam values. In addition to the 5 meter depth transects that are plotted in Figure 7, extensive transects were also completed for depths of 1.5, 3, and 7.5 meters, however, no major plumes were detected.

DRAFT

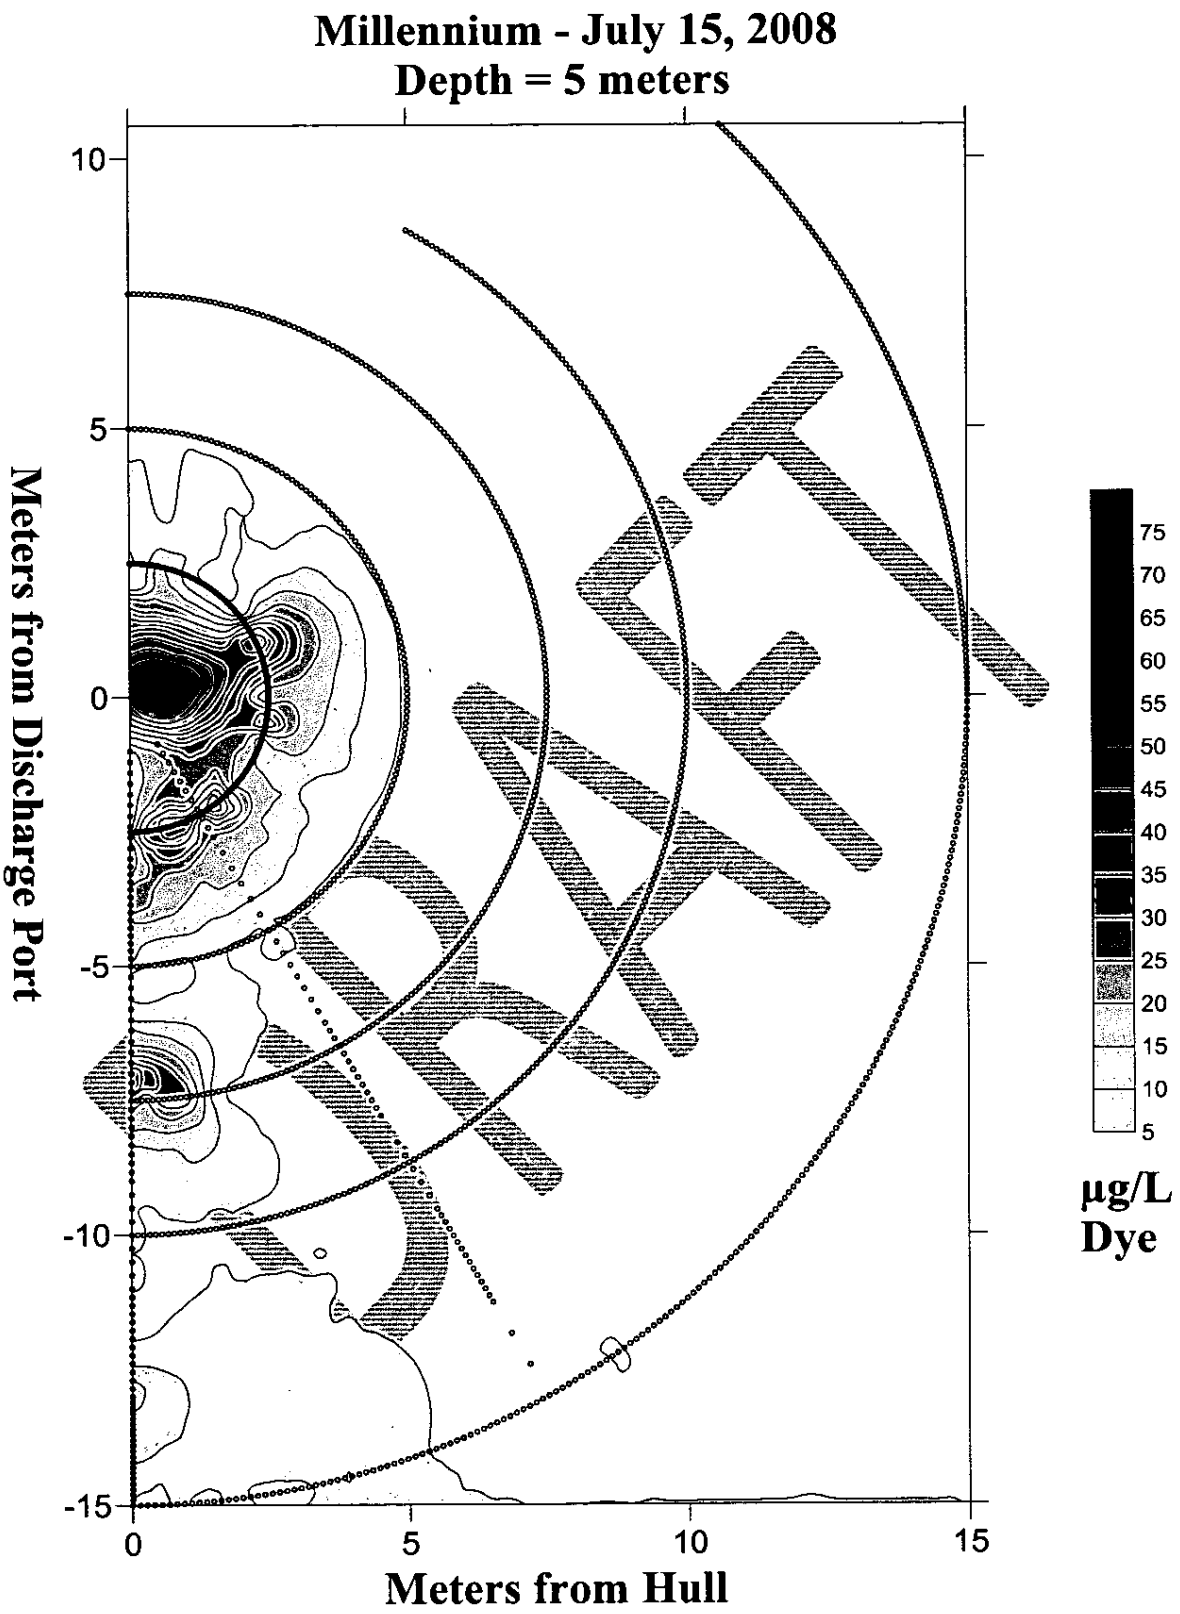

Figure 7 Plume Distribution Near the Millennium at 5 meters Depth

Figure 8 details the maximum concentration that was measured for the Millennium. The average dilution factor for the measured maximum was 1/39 for the 5 to 15 meter range. The PLUMES model generated an average dilution factor of 1/20. The CORMIX model generated an average dilution factor of 1/12. The modeled values again predicted less dilution than was observed, but the agreement between the models show considerable divergence. The large estimated error for the observed values are based on the measured variation in the input dye concentration.

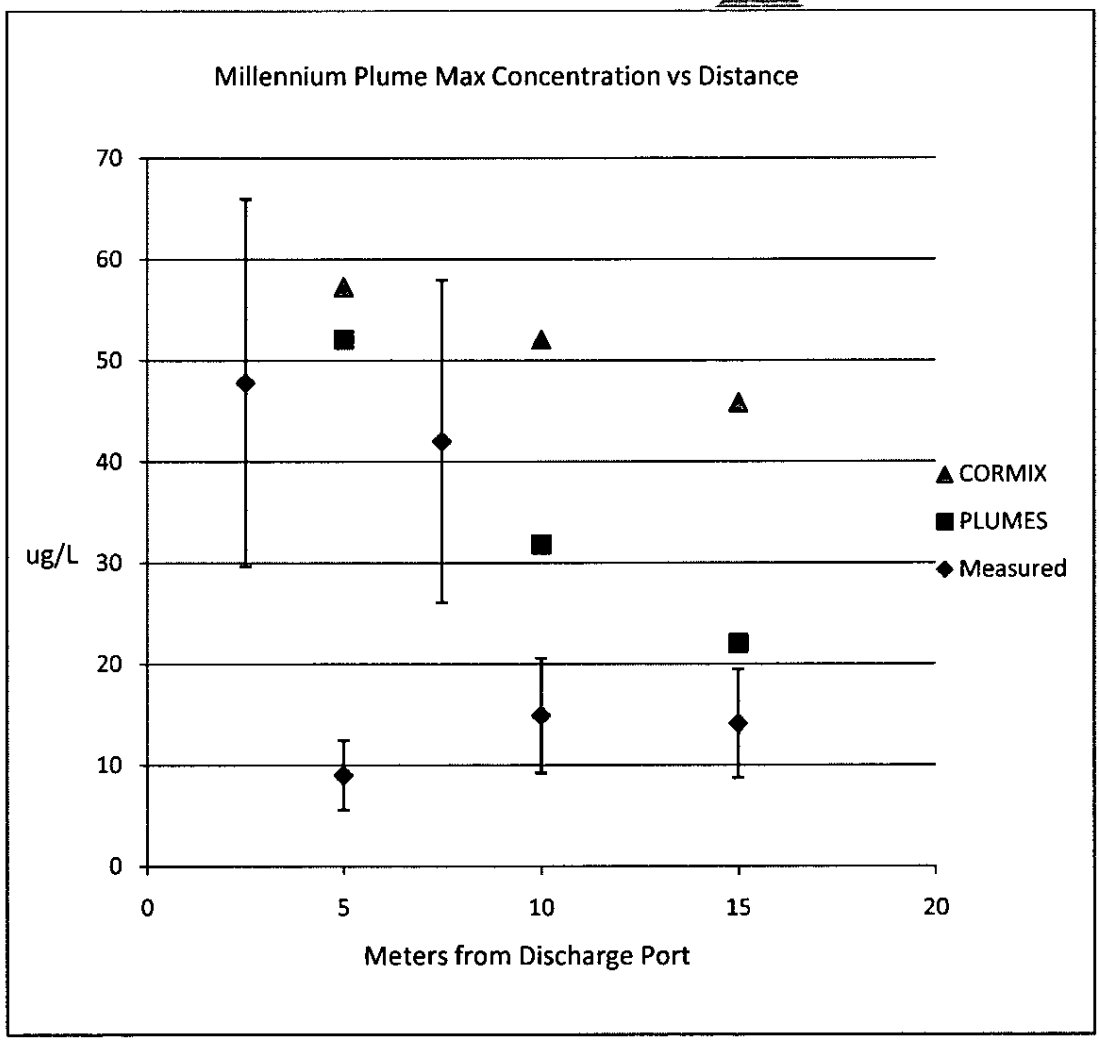

Figure 8 Plume Maximum vs Distance from the Discharge Port for the Millennium

Norwegian Star

Significant plumes were found over a wider range of depths when the Norwegian Star was surveyed on July 16, 2008. Plumes were detected at 3, 4 and 5 meter depths. No plumes were found at 1.5, 2.5 and 7.5 meters. Figure 9 provides a visualization of the plumes at two levels, approximately 3.5 and 5 meters. In this plot the upper left corner would point forward toward the bow and the Northeast. The ship would still be on the left of the plot. The plumes in both the upper and lower zones appear to be advecting along an angle of 135 ° where 90 ° is at the top left corner. One apparent difference between the two plots is an extensive plume that was mapped at the 3.5 meter level but was not seen at the 5 meter depth.

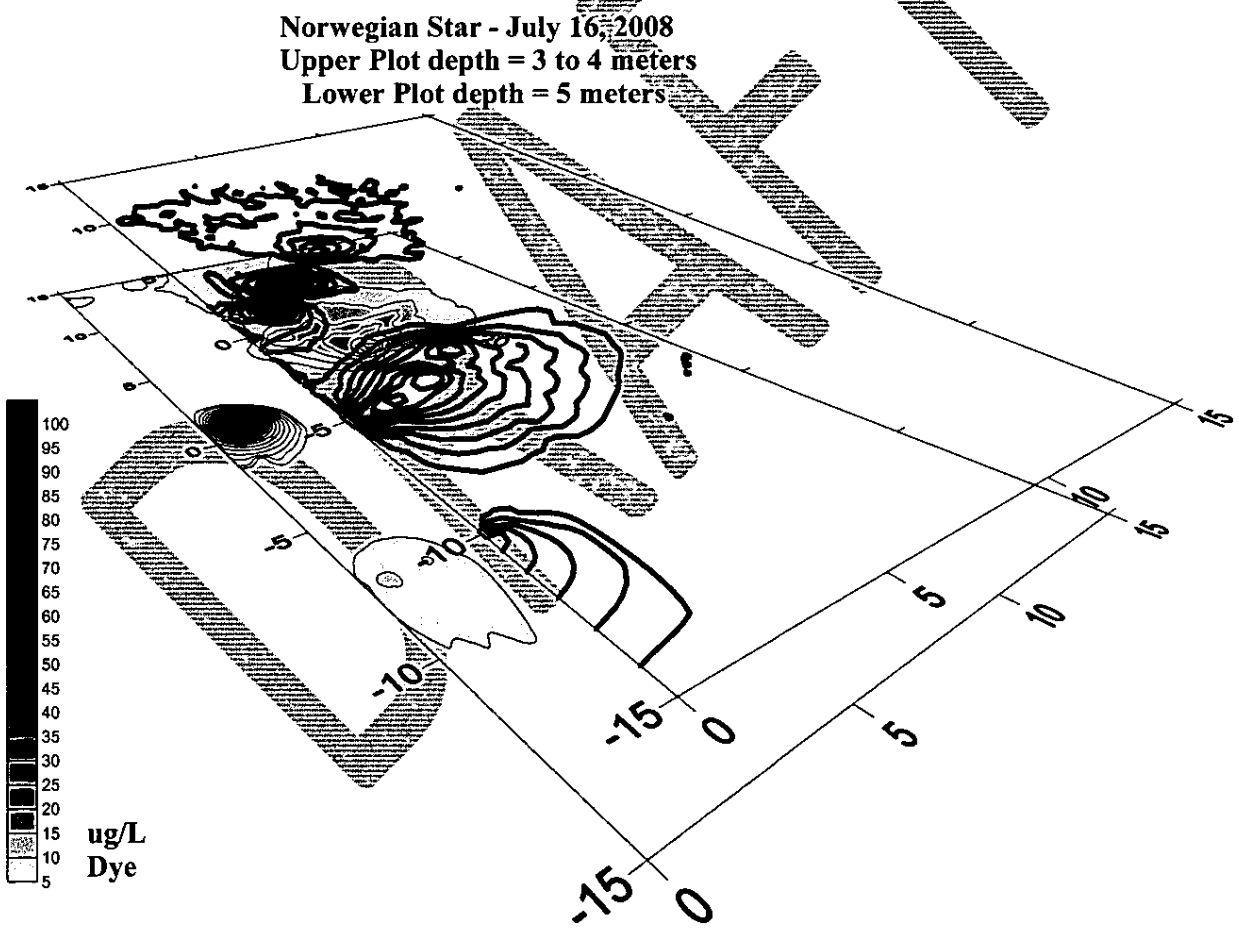

Figure 9 Plumes detected near the Norwegian Star at multiple depths.

Figure 10 details the maximum concentration that was observed for the Norwegian Star. The average dilution factor that was observed in the 5 to 15 meter distance from the discharge port was 1/22. The PLUMES model average was 1/19 and CORMIX predicted 1/12. The PLUMES model, while still conservative, did appear to provide a closer approximation to the observed plume maximums.

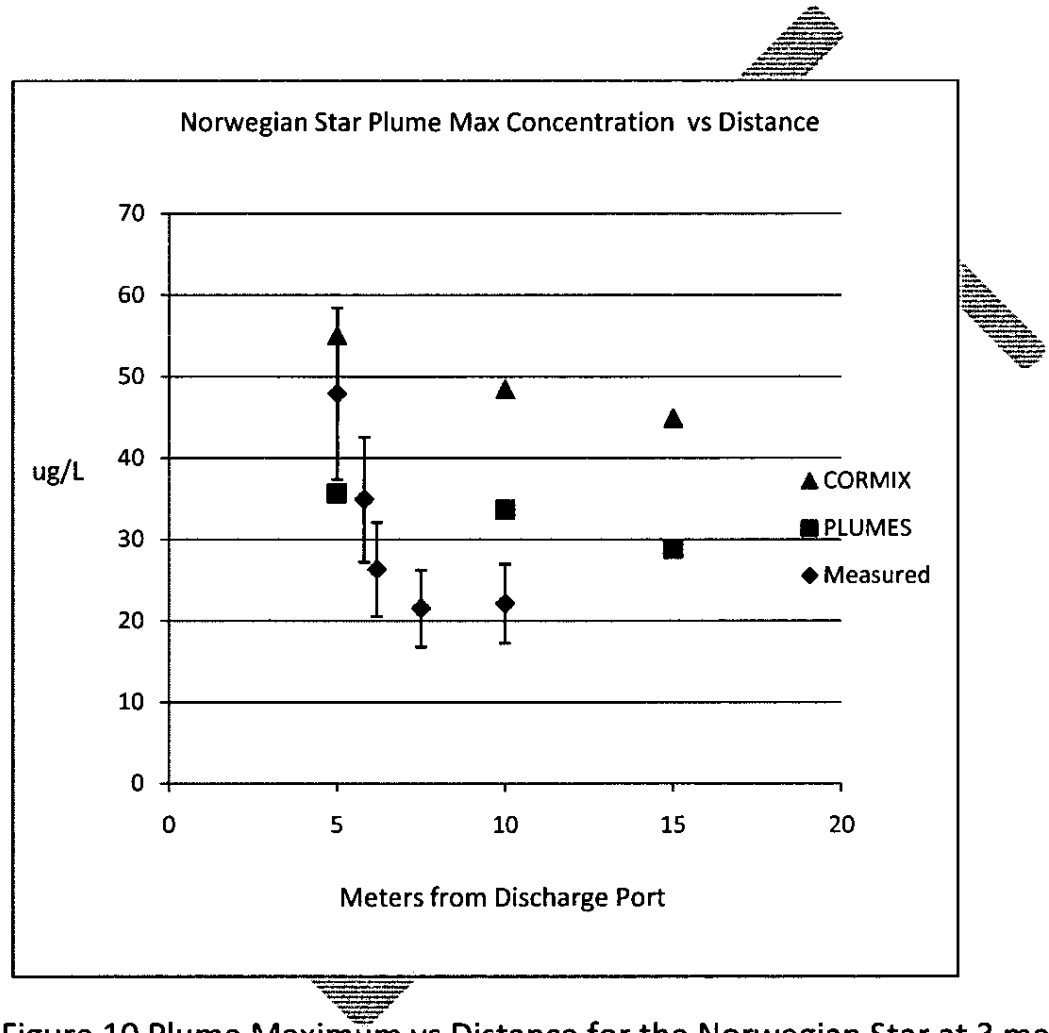

Figure 10 Plume Maximum vs Distance for the Norwegian Star at 3 meters depth.

In Figure 11 the upper level from plot 9 is shown in greater detail. While not in perfect alignment with the plume's directions, currents with a speed of 10 cm/sec were recorded at 3meters depth and they likely contributed to the measured plume distributions.

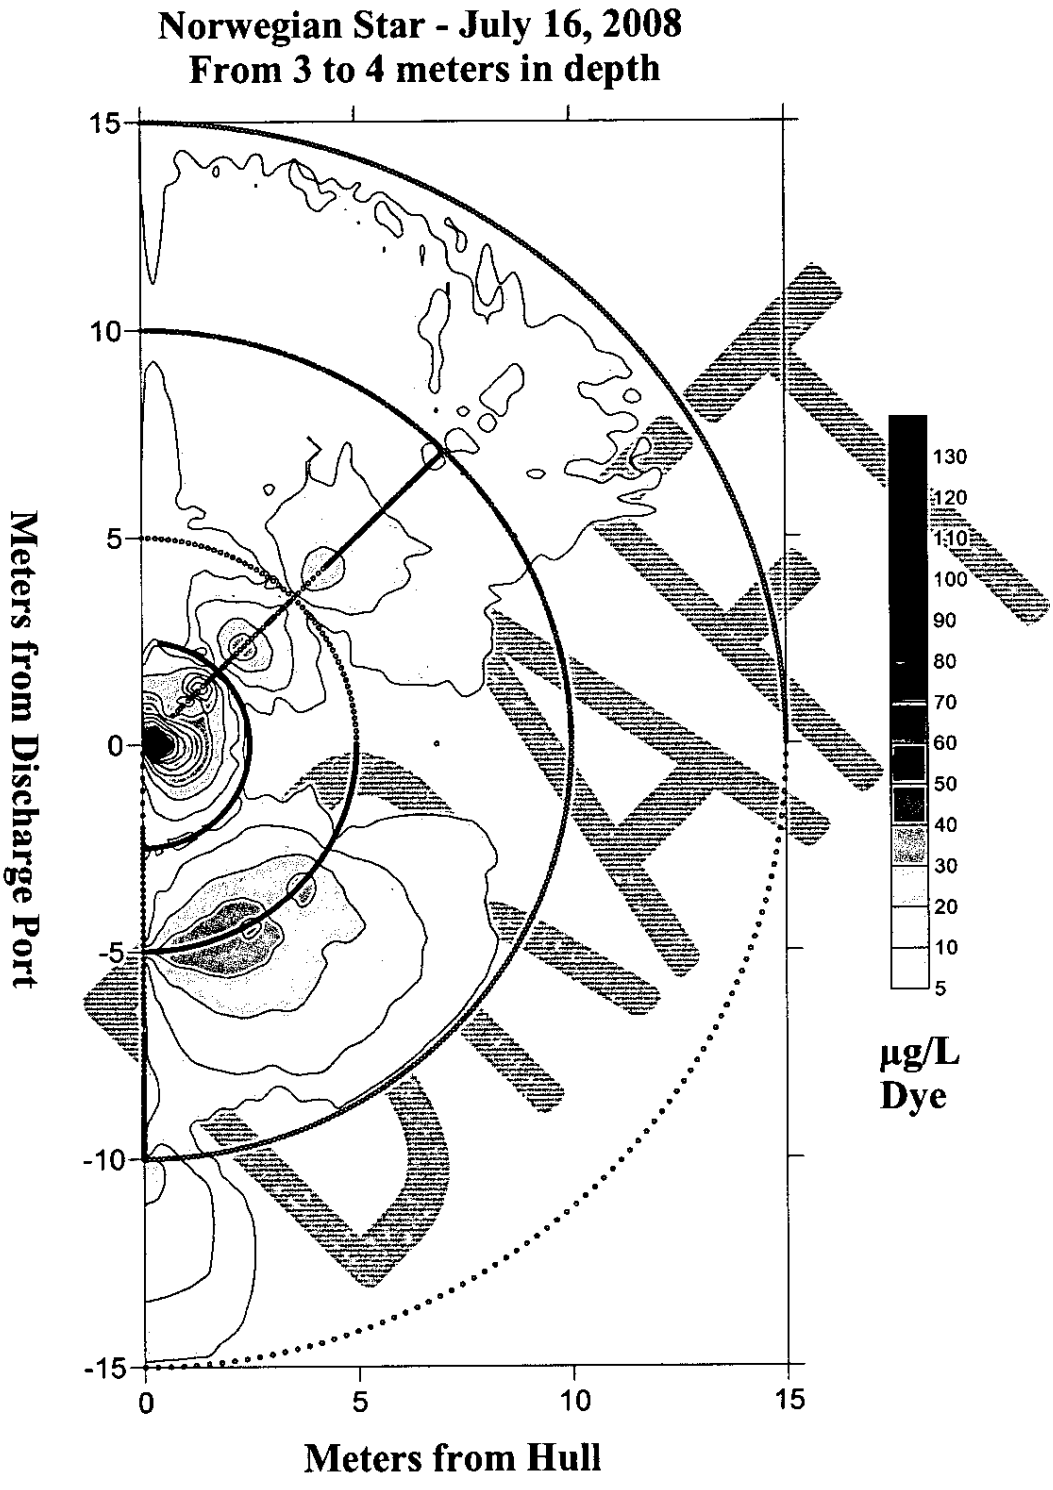

Figure 11 Plume distributions near the Norwegian Star between 3-4 meters depth from the surface.

Volendam

In Figure 12 the stern of the vessel Volendam lies in the direction of the top of the page and bow and Northeast are toward the bottom. The majority of the plumes were detected at 5 meters depth and appear to be advected away at an angle of 225°, which is consistent with the direction of the incoming tide. The dominant 10 cm/sec current that was recorded for this depth is in fairly good agreement with the plume direction, but is about 15° from overlaying it directly. The maximum dye concentrations and the general patterns of plume distributions appear to be consistent with the conditions found in the previous surveys.

DRAFT

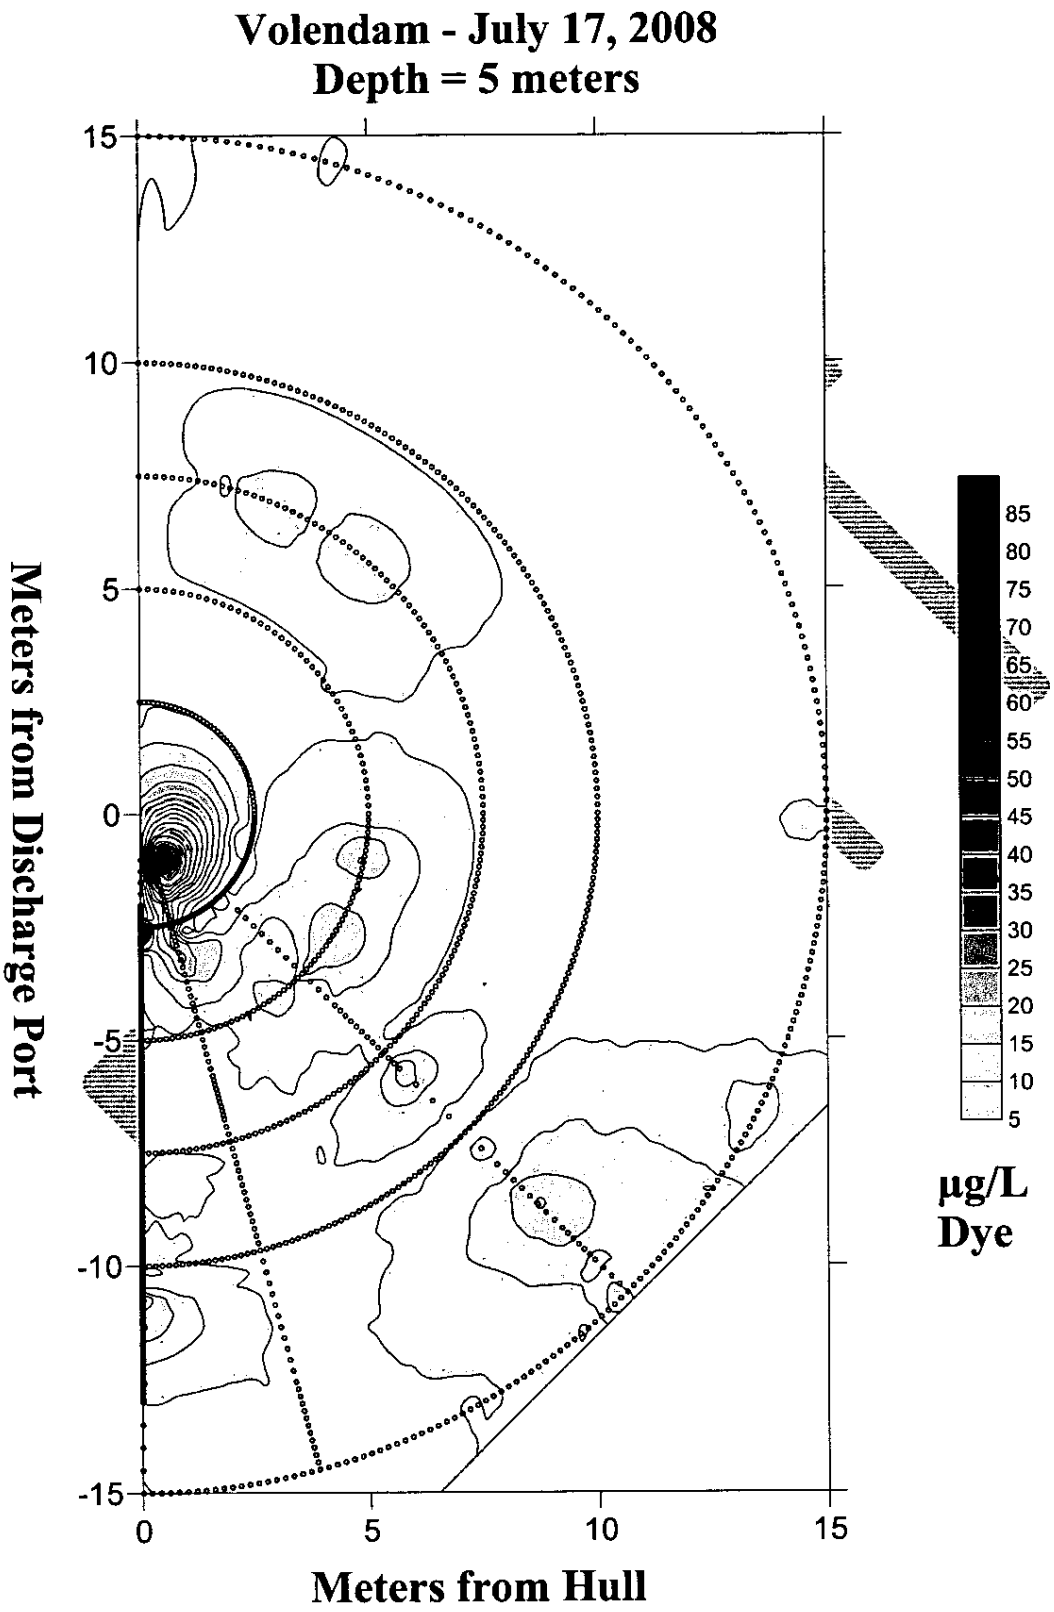

Figure 12 Plume distributions near the Volendam at 5 meters depth.

The average measured plume dilution factor for the measurements between 5 and 15 meters from the ship was 1/48. In contrast to the other surveys that were done, the PLUMES generally predicted greater dilution factors with associated lower plume maximum values than were measured. The PLUMES average dilution factor was 1/59. This value is nearly identical to value that was calculated in 2004 for the Volendam for a distance of 5 meters. Compared to the measured maximum plume concentrations the PLUMES model overestimates the dilution seen near the Volendam. The CORMIX model did predict a mean dilution factor of 1/44 that was closer to the observed value of 1/48. In Figure 13 the value for the CORMIX calculated plume maximum actually overlays the observed value at 5 meters.

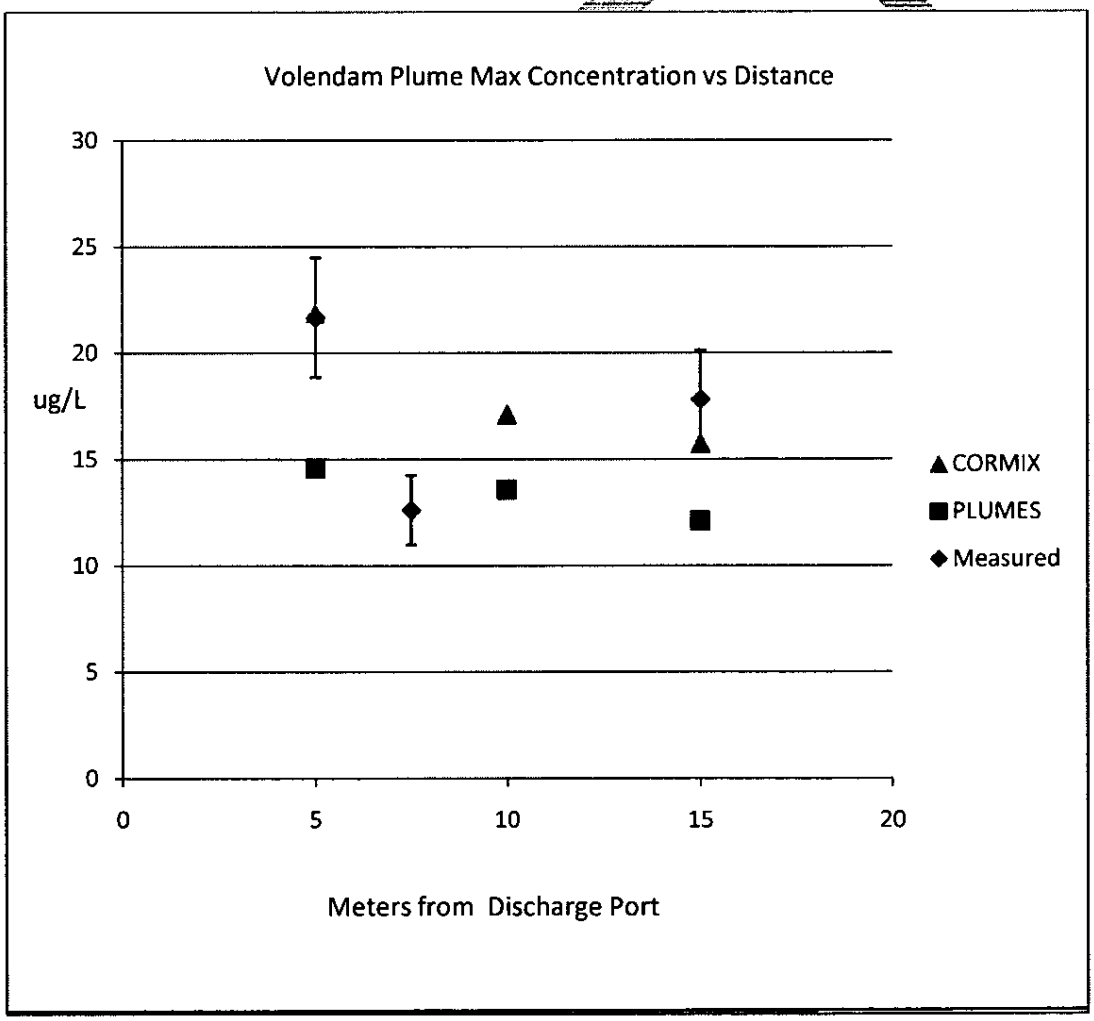

Figure 13 Plume maximum vs distance near the Volendam at 5 meters depth.

Discussion

In order to assess the significance of the dilution factors that were measured for each of the six cruise ships in this study, we will focus attention on the permit requirement that the discharges must meet the Alaska Water Quality Standards for ammonia, copper, nickel and zinc at the point of discharge. The data that have been reported to DEC by these ships for the 2008 cruise season show that the criteria for these four parameters are not consistently being met.

Water Quality Standard	Ammonia	Cu	Ni	Zn
	mg/L	ug/L	ug/L	ug/L
Salt water	2.9	3.1	8.2	81
Vessel				
	mg/L	ug/L	ug/L	ug/L
Millennium	[illegible]	2.3	[illegible]	65
Ryndam	[illegible]	[illegible]	[illegible]	[illegible]
Volendam	[illegible]	[illegible]	[illegible]	[illegible]
Norwegina Star	[illegible]	[illegible]	[illegible]	[illegible]
Star Princess	[illegible]	[illegible]	[illegible]	[illegible]
Coral Princess	[illegible]	[illegible]	[illegible]	[illegible]
Generic worst case	[illegible]	[illegible]	[illegible]	[illegible]

Table 2 Maximum measured concentrations of ammonia, Cu, Ni, and Zn found in 2008 in the discharge of the cruise ships that were surveyed in this study as well as the overall maximum values from all ships that discharged in 2008 (e.g. Generic worst case) at the point of discharge.

Table 2 lists the maximum value for each of the four parameters of concern that were measured in cruise ship effluent during 2008. The generic worst case entry indicates the maximum value detected by any large cruise ship that discharged into Alaska waters during 2008. Of the six ships that participated in the plume dilution survey only the Millennium would meet the Water Quality criteria for Cu and Zn. During 2008, only one large cruise ship out of the 23 that reported data to DEC for 2008 met the criteria for the water quality standards for all the parameters listed above. That vessel only discharged selected streams of accommodation graywater.

Immediately after the discharge leaves the port, it begins an initial dilution characterized by rapid and turbulent entrainment and a vertical rise usually of a few meters. The dilutions that result in the near field zone which extends out to about 2.5 meters were measured during this study and they ranged from about 1/4 to 1/12. The results of applying these measured near field dilution factors to the concentrations from Table 2 are listed in Table 3. The highlighted values represent calculated concentrations that still exceed the Water Quality Criteria for ammonia and copper even after the initial mixing. When dividing by worst case dilution (1/4), all parameters exceed water quality standards at 2.5 meters.

Water Quality Standard		Ammonia	Cu	Ni	Zn
		mg/L	ug/L	ug/L	ug/L
Salt water		2.9	3.1	8.2	81
Vessel	Factor				
Millennium	1/12	0.4	0.2	1.3	5.4
Ryndam	1/4	1.4	[redacted]	4.3	25
Volendam	1/6	[redacted]	[redacted]	2.6	17
Norwegian Star	1/4	[redacted]	1.6	3.7	42
Star Princess	1/9	[redacted]	[redacted]	2.4	47
Coral Princess	1/7	[redacted]	[redacted]	2.5	30
Generic worst case	1/4	[redacted]	[redacted]	[redacted]	[redacted]

Table 3. Calculated Concentrations Expected after Initial Dilution (2.5 meters from discharge port)

Table 4 summarizes the information that was plotted in figures 6, 8, 10 and 13 above. Those figures compared the mean measured dilution to the modeled values for the range 5 to 15 meters from the discharge port. In almost all cases where a comparison can be made, the average dilution predicted by combining both model outputs would predict a maximum concentration that is higher than the measured concentration. Therefore, the models are conservative and more protective of the environment. The one standard deviation error that is reported for the observed values was computed based on the measured plume concentrations. For each ship this value is larger than that calculated based on the changing dye concentration caused by pipe flow variation. The range in

plume maximum concentration is most likely the result of highly turbulent mixing that takes place near the ship's hull in addition to the discharge flow variation.

In the case of all four vessels where the plume distributions were mapped in detail between 5 and 15 meters away, using the actual maximum reported ammonia, Cu, Ni, and Zn concentrations from the 2008 season, the discharge from these ships would have met the water quality standards. The measured dilutions in that range were sufficiently adequate to reduce the concentrations below the criteria. For the range 0 to 5 meters away, however, most of the discharges from these ships would have exceeded the water quality standards for ammonia and copper.

	2008 Field Study			2008 Model		2008 Model		Average
	5 to 15 meter distance			PLUMES		CORMIX		Modeled

* not determined

Table 4 Compare Averaged Measured Dilutions to 2008 Models for 5 to 15 meters.

The modeling in this study in 2008 produced dilutions that were considerably smaller than those produced in the 2004 study, probably because more of the input parameters needed for the models were measured and not estimated.

Parameter		Ammonia (mg/L)	Cu (µg/L)	Ni (µg/L)	Zn (µg/L)
Alaska Water Quality Standard		2.9	3.1	8.2	81
2008 Maximum Measured Concentration		150	140	43.2	501
Highest Dilution Factor	63	2.4	2.2	0.7	7.9
Lowest Dilution Factor	28	[redacted]	[redacted]	1.5	17.9

Table 5 The maximum plume concentration based on measured dilutions at 15 meters

If the comparison to water quality standards is based on the measured dilution factors and the maximum concentrations for the four parameters and the lowest the dilution factor (28) is applied, then the concentrations of ammonia and copper still exceed the respective water quality standards. As shown in table 5 even at a dilution of (63) the results for ammonia and copper are higher than the water quality standard.

Based upon the maximum concentrations for ammonia (150 mg/L) and copper (140 µg/L) that were recorded for all ships in the 2008 season, a dilution factor necessary to achieve the water quality criteria would be 1/135 for ammonia and 1/117 for copper. This value includes a 2.6 factor to accommodate 'reasonable potential' and would provide a conservative design criteria in order to meet the requirement of state regulations. "Reasonable Potential" is a term used to increase the maximum observed value to what one may expect over the life of a permit. It is a statistically determined multiplier from EPA's Technical Support Document for Water Quality-based Toxics Control (EPA, 1991).

The distance away from any large stationary cruise ship that is required to achieve that level of dilution varies between vessels and the environmental conditions found at each Alaskan port. Using the PLUMES model as a guide for the ships in this study, the range of distances to reach a dilution factor of 1/135 for ammonia is from 40 to 150 meters from the discharge port. In the case of the CORMIX model, the distances range from 460 to 1040 meters (between 0.29 and 0.64 miles) for ammonia. The distances are smaller for copper.

The differences in results between the two models is probably due to the way the size and location of a plume is calculated. With the PLUMES program a deeper, narrower plume was calculated. For CORMIX, the plume flattened out due to "trapping" in a stratified water column, i.e. one with less dense fresh water above more dense saline water, and became thin and wide.

Vessel	PLUMES		COREMIX	
	Distance (m) to reach 1/135 ammonia	Distance (m) to reach 1/117 copper	Distance (m) to reach 1/135 ammonia	Distance (m) to reach 1/117 copper
Coral Princess	40	26	553	523
Ryndam	57	44	556	510
Millennium	150	132	673	619
Norwegian Star	105	89	1040	958
Volendam	49	42	460	381

Table 6 Modeled Distances to Reach Dilutions that Achieve Water Quality Standards

Both the CORMIX and the PLUMES models correlate well with the measured field data for distances up to 15 meters from the discharge point. However, the results from applying the two computer models to greater distances vary significantly. Therefore, it may not be appropriate to use these two computer models to predict the concentration of the pollutants in the receiving water at distances far from the discharge port.

A one-way analysis of variance (ANOVA) was applied to the 2008 monitoring data for ammonia to determine if the averages from the individual cruise ships could be summarized into an overall average. Table 7 lists the results of that calculation.

	Sum of Squares	df	Mean Square	F
Between ships	140782.28	18	7821.24	22.16
Within each ship	64237.11	182	352.95	
Total	205019.39	200		

Table 7 Results of ANOVA

The calculated F value equals 22.16 which greatly exceeds the expected value of 2. This indicates that it is statistically not valid to combine the individual ammonia averages of the ships into one pooled mean. Data from each ship must be treated separately when evaluating the dilutions of effluent from stationary vessels.

A one-way analysis of variance was also performed for the 2008 monitoring data for copper and the calculated F value of 13.68 is also much greater than the expected value. The copper data cannot be pooled.

It is important to note that when the individual input parameters from each vessel were used, including the pipe diameters, port size and shape and the flow characteristics, that the measured and modeled plume concentrations were reasonably consistent. In order to use the models effectively to predict the attainment of water quality standards, a number of requirements must be met. Each ship should be modeled individually so that the physical characteristics of the discharge systems are included as inputs. The concentration of pollutants in the waste stream needs to be measured and characterized. In addition, realistic hydrographic inputs should be developed for each harbor where the vessel docks.

While the comparison of the actual and modeled plume values that were determined in this study do appear to be in reasonable agreement, it is important to stress the limitation of the models to capture all the parameters that lead to variability in the real world. The disclaimers for the models routinely state that the resulting values have a variability of 50%. It was found during sensitivity testing of both models in this study that the results from CORMIX were much more sensitive to the angle and velocity assigned to the external tidal currents.

This information is often not available to the modeler and it is assumed the discharge is perpendicular to the current.

Conclusions

None of the vessels that were surveyed in this study in Skagway harbor in July 2008 can currently meet the State of Alaska Water Quality Standards for ammonia and selected metals at the point of discharge.

The initial dilution which occurs within the first 2.5 meters from ship is insufficient to bring the discharges into compliance for ammonia and copper in 5 of the 6 ships that were studied.

Between 5 and 15 meters away from the ships after additional dilution has taken place, the maximum measured dye concentrations were in fair agreement with the modeled values predicted by the PLUMES and CORMIX models. The modeled values calculated in this study produced somewhat higher maximum plume concentrations compared to those that were observed. Therefore, the models are more conservative and more protective of the environment.

Using the highest reported concentrations from the 2008 season for ammonia and copper as a worst case guide, modeled distances as great as 1040 meters and 958 meters from a discharge (0.64 and 0.59 mile respectively) may be needed to ensure compliance with the Water Quality Standards criteria.
Both the CORMIX and the PLUMES models correlate well with the measured field data for distances up to 15 meters from the discharge point. However, the results from applying the two computer models to greater distances vary significantly. Therefore, it may not be appropriate to use these two computer models to predict the concentration of the pollutants in the receiving water at distances far from the discharge port.

EXECUTIVE SUMMARY

Sampling Episode Report for Cruise Ship Plume Dilution Study

This Sampling Episode Report (SER) describes a plume dilution study conducted under the direction of the U.S. Environmental Protection Agency (EPA) in collaboration with the Alaska Department of Environmental Conservation (ADEC). This study, part of a survey conducted in Alaska by EPA's Ocean Survey Vessel *Bold* in July 2008, was designed to characterize near-field cruise ship discharge plumes from six cruise vessels while they were docked in Skagway Harbor, Alaska. Sampled vessels represented three cruise lines and a variety of advanced wastewater treatment system types, wastewater discharge flow rates, discharge port sizes, and port depths below the waterline. This study was conducted as a continuation of EPA's assessment of standards for sewage and graywater discharges from large cruise ships operating in Alaska.

Using in-situ measurements of Rhodamine WT dye in the effluent plume, the survey team determined the location and concentration of each vessel's treated sewage and graywater discharge plume. A metering pump injected Rhodamine WT dye into the discharge line upstream of the discharge port, with a target dye discharge concentration of 700 µg/L (ppb). Dye concentrations in the resulting discharge plume were measured using a submersible fluorometer. Additional parameters (temperature, conductivity, depth, turbidity, and salinity) were measured simultaneously with plume discharge dye concentration, while manual notations of distance and location from the discharge port were made. Performing transects for plume characterization required approximately two hours per ship, with one ship tested per day. Measurements of the harbor current in the vicinity of the discharge plumes were collected using magnetic current meters. Dye concentrations in discharge plumes typically decreased by a factor of 65 or more within 15 meters of the discharge port.

1. INTRODUCTION

This Sampling Episode Report describes sampling and analysis activities to characterize graywater and sewage discharge plumes from six cruise vessels (Star Princess, Coral Princess, Holland America Ryndam, Celebrity Millennium, Norwegian Star, and Holland America Volendam) discharging at port in Skagway Harbor, Alaska. This study, which was conducted from July 7 through July 17, 2008, is a collaboration of EPA's Oceans and Coastal Protection Division and the Alaska Department of Environmental Conservation (ADEC). This sampling study was partially funded via an interagency agreement between EPA and ADEC.

This study was part of a survey conducted in Alaska by EPA's Ocean Survey Vessel *Bold* and is a continuation of EPA's assessment of the need for additional standards for sewage and graywater discharges from large cruise ships operating in Alaska under the "Certain Alaskan Cruise Ship Operations" law (also known as "Title XIV"; 33 USC 1901 Note). The data and information gathered through this sampling episode were collected using EPA's authority under Section 308 of the Clean Water Act, as also provided by Title XIV. The cruise lines voluntarily provided information and data gathered for and represented in this report, notwithstanding the above authority, in the interest of research for the improvement of wastewater treatment standards.

This plume dilution study was designed to provide information on near-field cruise ship treated sewage and graywater effluent discharge plume characteristics in harbor waters. The study will also provide preliminary information on whether these plumes behave as predicted by modeling performed by ADEC (Assessment of Cruise Ship and Ferry Wastewater Impacts in Alaska, 2004). ADEC used EPA's *Visual Plumes* model system[1] to simulate the dilution of discharges from both large and small vessels. ADEC's estimated dilution factor for initial dilution of discharges from stationary cruise ships in Skagway during a neap tide ranged from 5 to 60. The objectives of this study were to (1) determine the effluent dilution characteristics of discharges from stationary cruise ships; (2) track the near-field mixing dynamics of the effluent plume; and (3) provide information that can be used to validate the modeling studies (see Survey Plan, Appendix I).

Other sampling programs supporting EPA's assessment of cruise ship wastewater discharge standards in Alaska include two onboard sampling programs conducted during the 2004 and 2005 Alaska cruise seasons that focused on characterizing pollutants found in wastewater (graywater and sewage) onboard cruise vessels and evaluating the performance of the advanced wastewater treatment systems. The results of these sampling programs can be found on EPA's website at www.epa.gov/owow/oceans/cruise_ships/results.html.

Section 2 of this report describes the cruise vessels selected to participate in this study. Section 3 describes the data collection methodology. Section 4 presents the results. Section 5 provides a quality assurance assessment of the study.

3. DATA COLLECTION METHODOLOGY

3.1 Pre-Sampling Activities

Visits to each of the six ships were conducted during the week prior to the start of the sampling episode. Visits were made to establish ship contacts, communications, and safety and emergency procedures, and to inspect sampling ports and associated fittings.

3.2 Sampling Schedule

Discharge plumes from six different cruise ships were monitored per the schedule in Table 3-1. Only one plume dilution study was conducted per day.

Table 3-1. Sampling Schedule

Cruise Vessel	Date of Study	Times of Study	Skagway Pier
Star Princess	July 10, 2008	1025 to 1230	Railway
Coral Princess	July 11, 2008	1040 to 1245	Railway
Holland America Ryndam	July 12, 2008	1025 to 1205	Railway
Celebrity Millennium*	July 15, 2008	0950 to 1135	Railway
Norwegian Star*	July 16, 2008	1000 to 1145	Ore
Holland America Volendam	July 17, 2008	1005 to 1140	Broadway

* Trial testing was also conducted on the Celebrity Millennium on July 7, 2008, and the Norwegian Star on July 9, 2008, to refine sample collection methodology.

3.3 Dye Injection Methodology

Metering pumps (Series 2001HEC-30 Variable Speed Peristaltic Pump, Flomotion Systems) were used to inject Rhodamine WT dye (Rhodamine WT Liquid, ORCO Organic Dyestuffs Corporation) into the cruise ships' treated sewage and graywater discharge. The pumps were installed downstream of the advanced wastewater treatment system, but as far upstream of the discharge port as possible so that multiple pipe bends and fittings provided thorough mixing of the dye.

Strap-on ultrasonic flow meters (BE 6000 Ultrasonic Flow Meter, Flomotion Systems) were installed on the discharge piping to record discharge rates (presented in Appendix G). Measured discharge rates were multiplied by the known Rhodamine WT dye feed stock concentration to calculate and adjust discharge dye concentration to attain the target concentration (discussed below). Discharge dye concentration also was measured directly on three cruise vessels (Celebrity Millennium, Norwegian Star, and Holland American Volendam) using a fluorescence sensor with a flow-through cell (SCUFA®, Turner Designs) installed on the discharge piping as close as possible to the discharge port. While the shipboard survey team was able to monitor discharge dye concentration via laptop computer connected to the SCUFA® sensor, it was not possible to electronically log these data. Therefore, the survey team kept manual logs of discharge dye concentrations. Tables F-1 through F-4 of Appendix F contain the raw data obtained from the fluorometer (see Section 5.1).

Trial dilution studies conducted on the Celebrity Millennium and the Norwegian Star revealed that the originally planned target discharge dye concentration of 100 ppb (see Survey Plan, Appendix I) was too low to be detected outside the cruise vessel (see Section 5.1, Accuracy and Calibration). Therefore, the target discharge Rhodamine WT dye concentration was increased to 700 ppb for most transects (Table 3-2). Target dye concentration was decreased during the Star Princess study because the plume was visible on the surface of the water (most likely because of the relatively shallow discharge port; see Table 2-1); this was the only vessel where the plume was visible on the surface of the water. Target dye concentration was increased during the Coral Princess study because the highly intermittent nature of the discharge; in addition strong water currents made plume detection difficult (see Section 4.1).

Table 3-2. Target Discharge Rhodamine WT Dye Concentrations by Cruise Vessel

Cruise Vessel	Discharge Rhodamine WT Dye Concentration (ppb)
Star Princess	700 (cast 4), then 420 (casts 5 through 11)
Coral Princess	700 (casts 2 through start of 5), 875 (portion of cast 5), 1,050 (end of cast 5 through cast 7)
Holland America Ryndam	700
Celebrity Millennium	700
Norwegian Star	700
Holland America Volendam	700

Discharge dye concentrations are the product of the known initial dye concentration, dye injection rate, and discharge flow rate. While the initial dye injection concentration and dye injection rate were constant (with the exception of the Coral Princess; see Section 4.1), discharge flow rates varied, resulting in variability of the discharge dye concentration. Any analysis of the data collected in this study should consider this variability when calculating near-field discharge plume dilution.

On four cruise vessels, temperature, turbidity, and pH of the treated effluent also were recorded from the ship's wastewater treatment control panel. These data are provided in Appendix F. Similar data were not available for the remaining two ships.

3.4 Plume Monitoring Methodology

Dye was injected into the treated sewage and graywater discharge for approximately two hours on each cruise vessel. During that time, dye concentrations in the water outside the cruise vessel were measured to determine near-field plume dilution after discharge. (The cruise vessels all were positioned so that the discharge ports faced the harbor and not the piers.) Prior to dye injection, measurements were taken of background fluorescence concentrations in the water. These measurements verified that no background seawater fluorescence was detected above the detection limit of fluorometer, which was approximately 1.6 ppb. For most ships, a salinity depth profile also was performed prior to dye injection to locate the halocline.

Dye concentrations were measured using an in-situ fluorometer (SCUFA®, Turner Designs) integrated into a Sea-Bird SBE-19 conductivity, temperature, and depth (CTD) sensor

967

package (Sea-Bird SBE-19, Sea-Bird Electronics, Inc.) (Figure 3-1). This sampling array was deployed from a rigid inflatable boat (RIB) conducting transects at low speed (Figure 3-2).

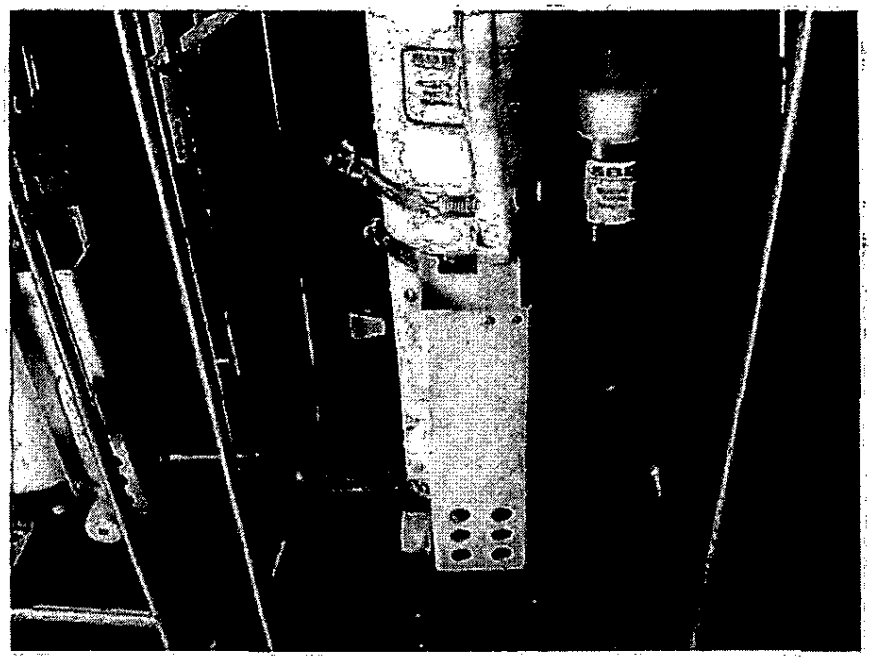

Figure 3-1. Sea-Bird SBE-19 CTD Sensor with Integrated SCUFA® Fluorometer

Figure 3-2. Rigid Inflatable Boat

One rope was used to control the depth of the towed array, while a second rope was used to control the distance of the towed array from the discharge port. This second rope was tied to the

bow of the RIB and attached to the cruise vessel via a hull magnet affixed just above the waterline at the location of discharge port. Sensor depth was recorded electronically by the sampling array, while RIB location relative to the hull magnet was recorded manually by the sampling team onboard the RIB. The RIB sampling team also monitored sensor measurements, including Rhodamine WT dye concentrations, in real time using a laptop computer. The following measurements were collected by CTD + SCUFA® sampling array at 0.5 second intervals during the plume transects: dye concentration (uncorrected; see Section 5.1); temperature; conductivity; depth (of the sensor array); turbidity; and salinity.

For most ships, a variety of transect types were conducted to provide detailed characterization of the discharge plumes (see Appendix A). Transects can be described by visualizing polar axes on the water surface, with the location of the hull magnet corresponding to the origin, and the array location and movement indicated by a radius (distance from cruise vessel) and polar angle (estimated in degrees by the RIB sampling crew) (see Figure 3-3). For example, 90° indicates the array is located to the right of the discharge port at the ship's hull, while 270° indicates the array is located to the left of the discharge port at the ship's hull. Four different types of transects were performed to characterize the discharge plumes:

- Arc. Array was moved in an arc (e.g., 90° to 270°) at a fixed distance from the hull magnet. Arc transects at varying water depths and distances from the hull magnet were the most common type of transect performed, and were the primary means to locate and characterize discharge plumes.

- Inward or Outward Profile. Array was moved toward or from a fixed position on the hull (i.e., the hull magnet) at a constant angle (e.g., 225°). Inward and/or outward profiles were performed after the location of the discharge plume was determined using arc transects. These profiles produced continuous dye dilution profiles determined by distance from the hull magnet.

- Stationary. Array was maintained at a fixed location (depth, distance, and angle from the ship) over a period of time. This profile produced a continuous dye dilution profile at a fixed array location as the plume moved past the array over time. This was the primary type of transect used for the Star Princess because the plume was visible on the surface of the water (most likely because of the relatively shallow discharge port on the vessel; see Table 2-1), therefore an arc transect was unnecessary to find the plume. This type of profile also was used frequently for the Coral Princess, where ship discharge flow rates were highly variable and/or intermittent.

- Depth Profile. Array was maintained at a fixed distance and angle from the ship while the array was raised or lowered through the water column. These profiles produced continuous dye dilution profiles by depth.

969

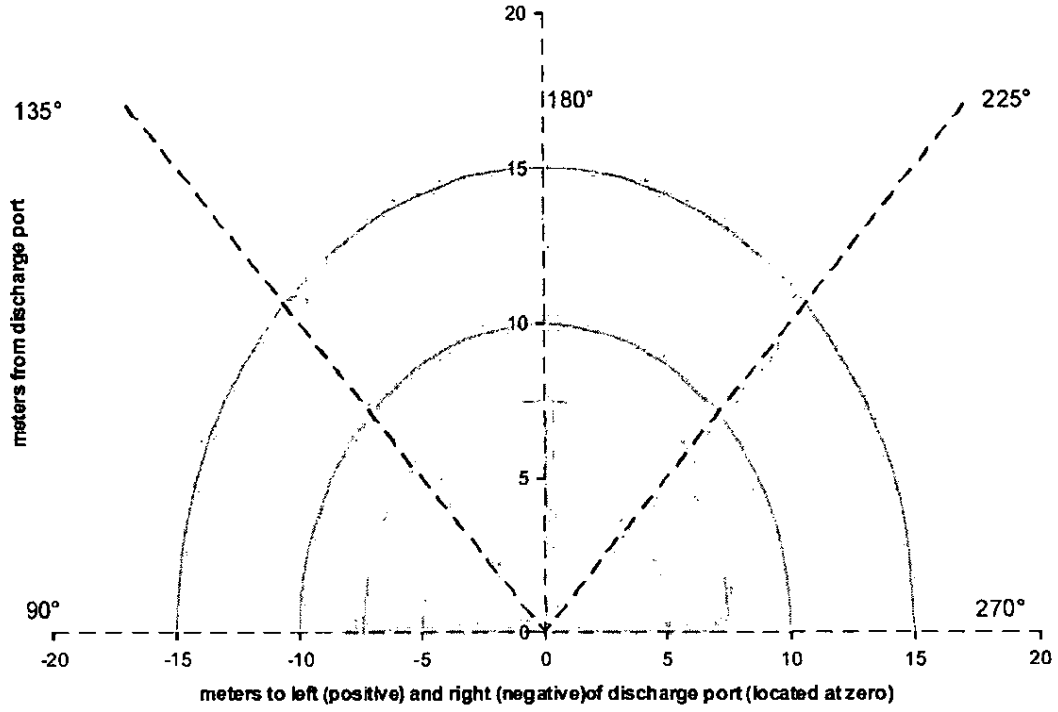

Figure 3-3. Orientation of Arc Transects for Dye Measurements

3.5 Current and Weather Measurements

At least two current meters (S4 current meters, InterOcean Systems, Inc.) were deployed to collect current measurements during the dilution studies for each cruise vessel (in some cases, three meters were used). The meters were deployed from the cruise vessels (to negate current meter motion relative to the vessels), approximately 15 meters away from the discharge port and approximately three meters out from the hull (to avoid interference from the vessel's metallic hull with the magnetic sensor of the current meter). The current meters were deployed at depths of one and three meters (or at depths of one, three, and five meters if a third current meter was used). Current measurements documented the ambient currents that affected the trajectory and dilution of the plume.

Weather conditions (e.g., air temperature, wind speed, and wind direction) were recorded by OSV *Bold* personnel during the dilution studies.

4. RESULTS

4.1 Discharge Plumes

Uncorrected dye concentration data for all transects are provided in Appendix B (see Section 5.1). In general, it appears that most near-field dilution occurs within the first 2.5 meters from the discharge port, with an average minimum dilution factor of approximately 50. After the first 2.5 meters, the plumes remained relatively intact to distances of 15 meters. At a distance of 15 meters, the average of the minimum dilution factors was approximately 65. These data will be further analyzed by the Alaska Department of Environmental Conservation to validate previous modeling studies on nearfield dilution of these treated sewage and graywater discharges.

Star Princess. This ship's discharge port was the shallowest of all the sampled cruise vessels (see Table 2-1). The discharge plume was the only one visible from the water surface; it moved along the hull at an angle between 255 and 270° from the discharge port location. Detected dye concentrations ranged up to approximately 57 ppb. It is unknown whether higher concentrations may have been detected if the CTD + SCUFA® array was able to measure dye concentrations near the surface of the water column (see section 5.1). Detected dye concentrations observed along the 270° transect were approximately similar at distances of 5 meters and 7.5 meters from the discharge port, and somewhat lower at a distance of 10 meters; however, the highest concentration was observed along the 255° transect at a distance of 10 meters. EPA did not prepare a profile of arc transect results for the Star Princess because arc transects were not performed.

Coral Princess. Discharge from the Coral Princess was highly intermittent. During periods of no flow, the shipboard survey team suspended dye injection to minimize dye accumulation in the discharge piping which would cause spikes and variability in discharge Rhodamine WT dye concentration. As a result, dye concentration data in Appendix B for the Coral Princess represent intermittent wastewater discharge with discharge dye concentration variability that is not well characterized. Because of this variability and strong water currents, the discharge plume was difficult to detect. Toward the end of the sampling period, detected plume dye concentrations ranged up to 270 ppb and were highly variable in concentration and in location as measured both by depth and degrees from the discharge port. EPA did not prepare a profile of arc transect results for the Coral Princess due to the highly intermittent nature of the discharge.

Holland America Ryndam. The discharge plume was most clearly characterized moving at an angle of 135° from the discharge port. Plumes were also detected at angles of 180° and 90°, particularly toward the end of the sampling period. Detected plume dye concentrations ranged from 5 ppb to approximately 20 ppb. During the arc transects, the minimum dilution factor, approximately 34, was observed at a distance of 5 meters from the discharge port. Maximum dye concentrations observed during arc transects, at various distances and depths are presented in Figure 4-1.

971

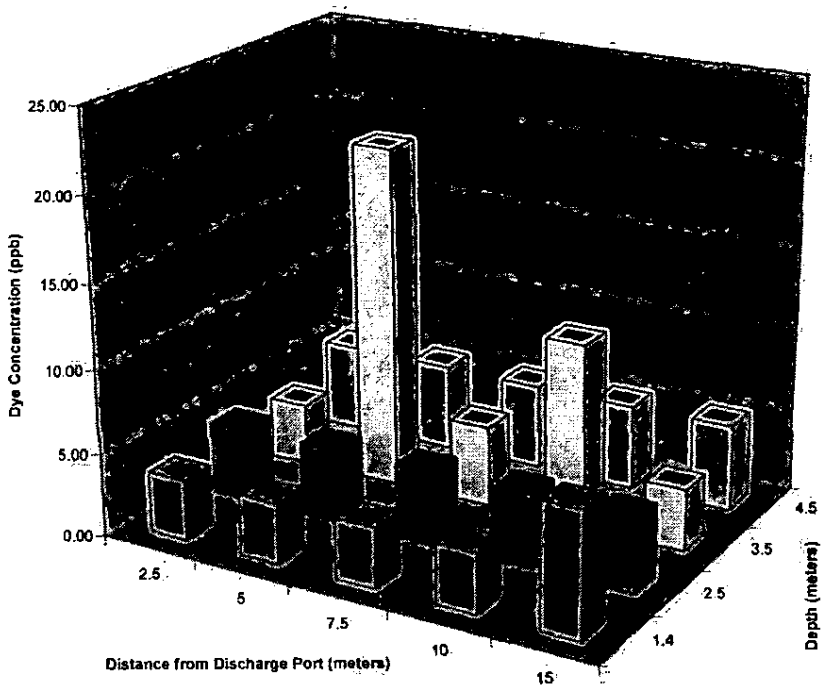

Figure 4-1. Profile of Arc Transect Results for Holland America Ryndam

Celebrity Millennium. The discharge plume was most clearly characterized moving at angles ranging from 240° to 270° from the discharge port. The discharge plume was observed at depths ranging from 5 to 7 meters. Detected plume dye concentrations ranged up to 47 ppb. During the arc transects, the minimum dilution factor, approximately 11, was observed at a distance of 2.5 meters from the discharge port. Maximum dye concentrations observed during arc transects, at various distances and depths are presented in Figure 4-2.

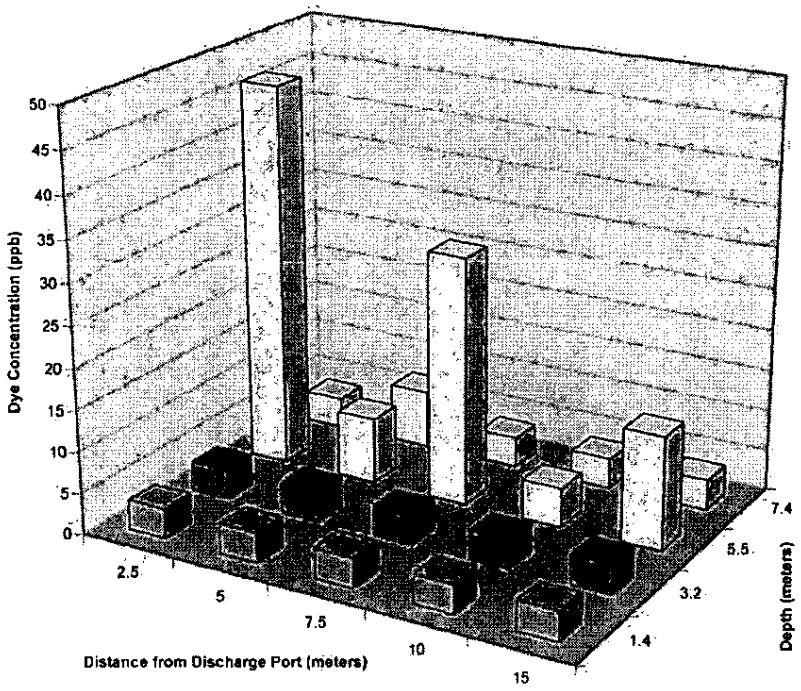

Figure 4-2. Profile of Arc Transect Results for Celebrity Millennium

Norwegian Star. The discharge plume was most clearly characterized moving at angles ranging from 250° to 270° from the discharge port. The discharge plume was observed at depths ranging from 3 to 5.5 meters. Detected plume dye concentrations ranged up to approximately 88 ppb. During the arc transects, the minimum dilution factor, approximately 13, was observed at a distance of 5 meters from the discharge port. Maximum dye concentrations observed during arc transects, at various distances and depths are presented in Figure 4-3.

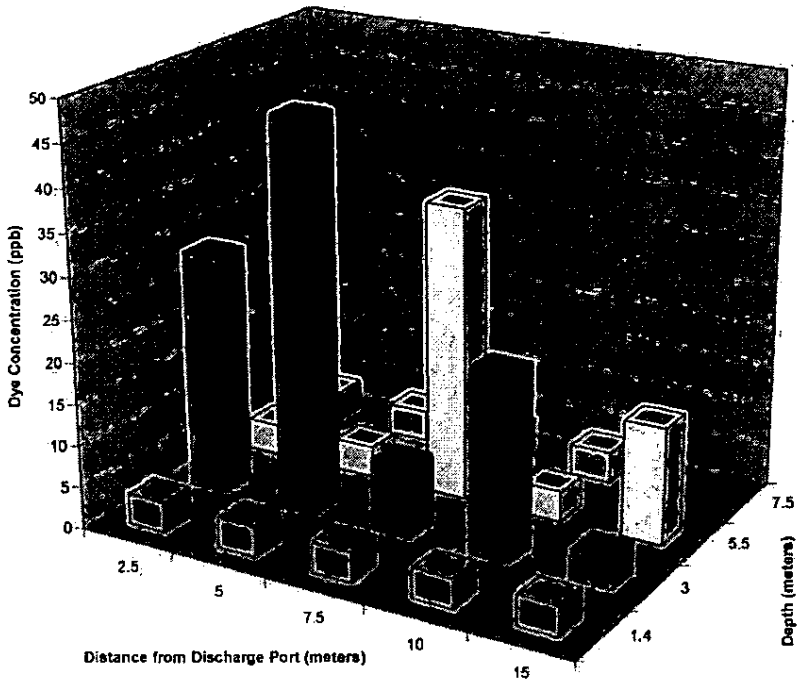

Figure 4-3. Profile of Arc Transect Results for Norwegian Star

Holland America Volendam. The discharge plume was most clearly characterized moving at angles within the range of 125° to 225°. The discharge plume was generally observed at a depth of 5.3 meters with detected dye concentrations ranging up to approximately 21 ppb. During the arc transects, the minimum dilution factor, approximately 37, was observed at a distance of 5 meters from the discharge port. Maximum dye concentrations observed during arc transects, at various distances and depths are presented in Figure 4-4.

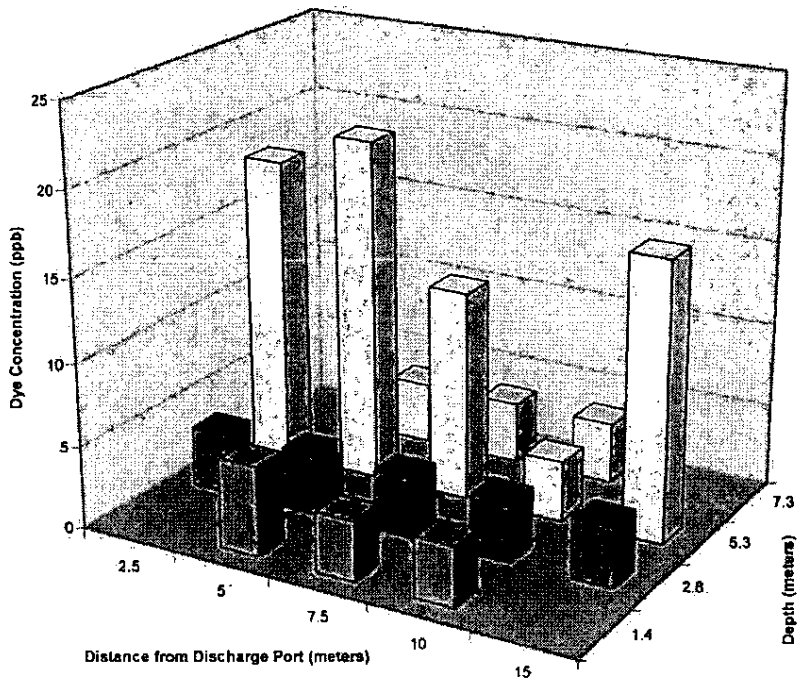

Figure 4-4. Profile of Arc Transect Results for Holland America Volendam

4.2 Transect Water Quality Data

Data on water temperature, conductivity, depth (of the sensor array), turbidity, and salinity from each transect are provided in Appendix B. Skagway Harbor salinity depth profiles (from the pre-dye transects for most ships) are provided in Appendix C. For all vessels, the halocline appeared to be below the discharge port depth (see Figures C-1 through C-4 in Appendix C).

4.3 Current Measurements and Weather Data

Current measurements collected during the cruise ship plume dilution studies are provided in Appendix D (see Figures D-1 through D-13 in Appendix D). For the polar plots, magnetic north corresponds to 0°. In Skagway, true north is 22.6° east from magnetic north. The heading of all the cruise vessels in this study was 40° east from true north. Therefore, when analyzing the current data, the ships' heading was 62.6° east from magnetic north.

The current meters were pre-programmed to begin data collection well before actual deployment from the cruise ships, and that the meters continued to collect data until the data were downloaded after their retrieval. Current data presented in this report include only the subset of data collected during the cruise ship plume dilution studies (see Table 3-1).

National Oceanic and Atmospheric Administration Tide Tables for Skagway for July are provided in Appendix E. These tide tables are provided to supplement and inform the current measurements.

Weather data (air temperature, wind speed, and wind direction) recorded during the cruise ship plume dilution studies are provided in Appendix H.

5. DATA QUALITY

Quality assurance/quality control (QA/QC) procedures applicable for this program are outlined in the *Quality Assurance Project Plan for Support for OSV Bold Survey of Large Cruise Ship Wastewater Impacts in Alaskan Waters (QAPP)*, which is reproduced in Appendix J. This section provides an assessment of the QAPP project data quality objectives specific to the cruise ship plume dilution study, which were established for the key measurements of the concentration of Rhodamine WT dye in the near-field plume and in the cruise ship discharge. In addition, this section provides a brief quality assurance assessment of non-key measurements.

Trial dilution studies were conducted on the Celebrity Millennium on July 7 and on the Norwegian Star on July 9 to refine the sample collection and analysis methodologies. Data from these trial studies are not presented in this report. Sampling on the Celebrity Millennium and the Norwegian Star was repeated on July 15 and July 16, respectively.

5.1 Quality Assurance Assessment of Key Plume Dilution Study Measurements

For the cruise ship plume dilution study, the key measurements identified in the QAPP are the concentration of Rhodamine WT dye in the near-field plume and in the cruise vessel discharge (end-of-pipe). The data quality objectives for these measurements are defined in terms of completeness, accuracy, precision, representativeness, and comparability.

Completeness (Near Field Plume Dye Concentrations)

Dye concentration data in the near-field plume are complete for all vessels surveyed except the Star Princess. The discharge plume for the Star Princess was visible at the surface of Skagway Harbor. The CTD + SCUFA® array is designed to take measurements at approximately 1.5 meters of depth and deeper. As a result, data for the Star Princess do not characterize the entire plume, but only the portion of the plume at depths of approximately 1.5 meters or greater.

Completeness (Cruise Ship Discharge Dye Concentrations)

Discharge dye concentration was calculated by multiplying the measured discharge rates by the known feedstock dye concentration. On three cruise vessels (Celebrity Millennium, Norwegian Star, and Holland American Volendam), a SCUFA® fluorescence sensor was installed on the discharge piping to verify dye concentration. For the other three vessels, the SCUFA® sensor could not be used to verify dye concentration due to damage sustained during an unannounced emergency generator power drill on one of the ships. On these three ships, the survey team verified dye discharge by visual observation. Dye concentration was assumed to be the nominal calculated concentration..

Accuracy and Calibration

Dilution series performed for the three SCUFA® fluorometers prior to field testing showed excellent accuracy, with a highly linear response from approximately 5 ppb through 300 ppb. The dilution series and initial trial testing on Celebrity Millennium on July 7 revealed that the practical detection limit for the fluorometers was the seawater background signal of

977

approximately 1.6 ppb (contrary to the detection limit of 0.04 ppb reported by the manufacturer[2]). A calibration curve for the range of 5 to 50 ppb was found to be linear ($R^2 > 0.99$). Actual dye concentrations are obtained using the following expression:

$$C = 0.768*C' + 4$$

where C equals dye concentration and C' is the uncorrected fluorometer response.

In consideration of the loss of two orders of magnitude of SCUFA® sensitivity, the survey team increased the target shipboard dye concentration from the planned 100 ppb to 700 ppb. Consequently, a second calibration curve was prepared for high dye concentrations. For the calibration range of 84 to 660 ppb, the calibration curve was linear ($R^2>0.99$) and fit the following expression:

$$C = 1.02*C' + 9$$

where C equals dye concentration and C' is the uncorrected fluorometer response.

Precision and Representativeness

The QAPP specified collection of duplicate CTD+SCUFA® data using a pair of arrays towed side-by-side from the rigid inflatable boat. Field duplicate sampling using two adjacent CTD+SCUFA® arrays was not performed. The secondary CTD+SCUFA® array was dismantled to provide a SCUFA® to replace the shipboard unit that was damaged during an emergency generator power drill onboard one of the cruise vessels.

Comparability (Among Ship Discharge Tests)

The sample collection and analysis methodology was consistent for all cruise ship plume dilution studies. Dilution study transects were generally consistent among ships, with some deviations to account for ship-specific conditions and weather conditions during each test.

Overall Data Quality Assessment

This data quality assessment indicates that the key measurements collected during the cruise ship plume dilution study are of sufficient quality for use in analyzing near-field mixing dynamics of the effluent plumes from stationary cruise ships in Skagway Harbor.

5.2 Quality Assurance Assessment of Non-Key Plume Dilution Study Measurements

Discharge Flow Measurements

Ship discharge flows were measured on all cruise vessels except the Norwegian Star. For the Norwegian Star, discharge flows were measured only during the set-up period because the meter malfunctioned at the start of the sampling period. Repeated attempts to reinstall the flow

[2] Telephone contact with the manufacturer revealed that the reported detection limit can be achieved only under ideal, laboratory conditions.

meter were unsuccessful. For this Norwegian Star, discharge dye concentration was measured using a SCUFA® sensor (as it could not be calculated using flow rates).

While discharge flow data were monitored by the shipboard survey team, they were not reliably logged electronically because of a smaller than expected data-logging buffer capacity. For the Star Princess, Coral Princess, Holland America Ryndam, and Celebrity Millennium sampling events, electronic data logs are available for only the last 7 to 15 minutes of testing. For the Norwegian Star, electronic data logs are available for the last 2 hours of testing. For the Holland America Volendam, electronic data logs are complete for the entire period of testing. Electronically logged discharge flow data are supplemented by field logs taken by the shipboard survey team (see Appendix F).

Two ships, Holland America Ryndam and Holland America Volendam, operated flow meters on their discharge. On both of these ships, ultrasonic flow meter measurements closely matched measurements made by these ships' installed meters.

Current Measurements

Harbor current was measured during all sampling events for all 6 ships. For two of the six ships tested, current meters were deployed at 1m, 3m, and 5m depths. For the other four ships current meters were deployed only at 1m and 3m depths due to the difficulty of deploying the meters. For one ship (Norwegian Star), current was not measured at the 1m depth due to water seepage into the connector cover. Current measurements are reasonable, based on their correlation to the location and direction of the detected plume.

Weather Data

Weather conditions (e.g., air temperature, wind speed, and wind direction) were recorded by the OSV *Bold* personnel during the dilution studies, with the exception of the Coral Princess plume dilution study on July 11.

Abstract
This study is designed to be *both* an update *and* an evolution of previous "Components of Fuel Costs" studies. It will update the most recent Components study by collecting and reporting the most recent fuel prices. It will be an evolution of the previous studies in that the investigation and analysis will attempt to describe in greater detail and scope the structure of Alaska fuel markets as well as identify possible ways to lower the cost of fuel in Alaska.

Purpose of this Project
Many Alaskans face extremely high, volatile and variable fuel prices. Little is publically known about the actual structure of Alaska's various fuel markets and what drives the price for each community. Alaska State Senators Burt Stedman and Lyman Hoffman are interested in investigating ways to lower the price and cost of fuel to Alaska communities. They have asked ISER to investigate Alaska fuel markets and to identify any fuel market inefficiencies that could be targeted by legislative action in order to reduce fuel prices.

Scope of Work
As a starting point, ISER will update the fuel prices for the ten study communities that were investigated in the previous two fuel cost analyses. ISER will expand the Discussion section of the previous reports to specifically address issues identified by Senators Stedman and Hoffman including an investigation of possible market inefficiencies. In its analysis of Alaska fuel markets, ISER will collaborate with Alaska's fuel markets participants including: refineries, distributors, retailers, fuel purchasing co-ops and government agencies involved in community fuel purchases. The work will be completed in five stages outlined below.

1. Update the prices of the previous report. This will entail surveying the ten communities to determine the current price of retail fuel oil. Information regarding the timing of fuel deliveries, the landed price, timing of pricing and accounting and inventory practices will be investigated. The report will contain the same community by community descriptions of the components of fuel cost.

2. Describe the structure of Alaska fuel markets in detail. We will indentify different Alaska heating fuel and propane markets (including interior, remote rural, southern coastal and southeast markets) and describe the structure of each market. We will identify which refineries the fuel likely originates from, where it is stored and for how long, how many times it changes hands, the transportation and delivery methods for reaching the final community, and how the fuel is stored, distributed and sold within the community.

3. Identify potential "market inefficiencies" that could result in higher than necessary costs/prices. Based on the analysis of the structure of Alaska fuel markets we will identify areas of potential market inefficiencies.
Examples of potential market inefficiencies:

- Using market power to generate excess profits
- Communities and fuel users who fail to coordinate purchases to take advantages of economies of scale
- Inefficiencies in transportation, distribution and storage systems
- Communities and fuel users who pay unnecessarily high finance costs because they do not have adequate cash or access to low cost loans
- Deficient infrastructure that increases the cost of fuel transportation, delivery and storage.

4. Allow for "comment" on market inefficiencies. Instead of directly trying to explain or determine whether the potential market inefficiencies are actually driving up prices we will allow for involved parties, businesses, and agencies to directly comment on and "explain" why or why not the identified costs are increasing prices. This section will clearly identify the words and ideas of third parties as not the words and ideas of ISER. The inclusion of this section is meant to facilitate greater participation of those directly affected by this study by giving them a direct voice.

5. Discussion of policy solutions. ISER will identify potential state actions that could reduce high fuel costs. ISER will identify the potential economic impact of alternative state policies on fuel markets and prices.

Key Contacts and Collaborators

ISER will work with the following people and companies. These contacts have expertise and many years of experience regarding the structure of Alaska fuel markets.

Mark Smith, formerly of Crowley and Yukon Fuel. We will explore using Mr. Smith as a contracted consultant as he has unparalleled insight into Western Alaska fuel markets.

Office of the Attorney General, State of Alaska. The Office of the Attorney General is investigating Alaska fuel markets and will share information with ISER. However, ISER's research and report will be an independent analysis.

Del Conrad, Rural Alaska Fuel Services (RAFS). Rural Alaska Fuel Services is a not-for-profit corporation organized to contract for the operation and maintenance of rural Alaska bulk fuel storage facilities constructed by the Denali Commission and granted to selected communities. RAFS can provide insight on fuel markets from their experience and expertise managing fuel deliveries and cooperative buying to rural tank farms.

Alaska fuel distributors. Including, Crowley, Delta Western, Petro Marine, Ruby Marine and Shoreside Petroleum.

Meera Kohler, Alaska Village Electric Association (AVEC). AVEC is a large purchaser of fuel in rural Alaska and can share insight into the pricing structure and the benefits of large, coordinated fuel purchases.

Budget and budget justification

This project has a total budget of $49,974. The following table shows budget expenditures for salary, leave and benefits for each study task as well as non-labor components, including $10,000 to be paid to Mark Smith for subcontracting services.

SENATE FINANCE HEARING

Attachment #1	**UA Strategic Plan** *The Plan provides a summary of campus missions and UA program priorities. It serves as the basis for UA budget deveolpment as well as internal allocations, reallocations and investments.*
Attachment #2	**UA Financial Statement - 2008**
Attachment #3	**UA Financial Audit for Federal Funds**
Attachment #4	**Fund Source & NCHEM Definitions**
Attachment #5	**Operating Budget Revenue Trend by Fund Source**
Attachment #6	**Operating Budget Revenue Trend by NCHEM Categories**
Attachment #7	**Expenditure by Category and Revenue Type**
Attachment #8	**Authorized v Actuals FY86-FY10**
Attachment #9	**Research as an Economic Enterprise**
Attachment #10	**Spring Management Report & Operating Budget Review** *The Spring Review is principally a financial review. The questions focus on management of funds, facilities, reallocations, and end-of-year contingencies. All campus reports are available for distribution.*
Attachment #11	**Fall Financial and Performance Review** *The Fall Review highlights alignment between revenue and expenditures with a focus on program investments, strategic choices, and performance, as well as specific fiscal issues facing each MAU during the current fiscal year. These reviews are held during October and all reports will be available for distribution.*
Attachment #12	**MacTaggart/Rogers Review of SW Administration** *President Hamilton and the Board of Regents commissioned a study to review the current statewide administrative organization to determine ways to increase efficiency, effectiveness and cost savings.*
Attachment #13	**FY 11 Operating Budget Development Guidelines**
Attachment #14	**FY 11 Capital Budget Development Guidelines**
Attachment #15	**September 2009 Performance Report to OMB/Legislature**

Here is an email that has most of the names and titles of the potential testifiers today.

From: Wendy Redman [wredman@alaska.edu]
Sent: Monday, October 12, 2009 3:45 PM
To: Miles Baker; Darwin Peterson; Joe Hardenbrook
Subject: Senat Finance Work Session - October 14/15

Hi Miles and Darwin....

At this time these are the Regents I think will be at the meeting: Cynthia Henry, Erik Drygas, Ashton Compton, Carl Marrs, Kirk Wickersham, Bob Martin (Mary Hughes is out of state; Tim Brady had a death in the family; Pat Jacobson & Fuller Cowell are questionable as of today). Regents profiles are available at: <http://www.alaska.edu/bor/members/>. You have to click on each member's name to get the bio info.

The three chancellors will be there: Fran Ulmer, UAA, Brian Rogers, UAF, and John Pugh,UAS. The Vice Chancellors for Administration will also be there: Bill Spindle, UAA, Pat Pitney, UAF, and Carol Griffin, UAS.

The SW Administrative Staff making presentations will be: me, Joe Trubacz, VP Finance; Myron Dosch, Assoc. VP Finance & Controller; Michelle Rizk, Assoc. VP Budget; Steve Smith, Chief Information Officer; Beth Behner, Chief Human Resource Office; and Kit Duke, Assoc. VP Facilities Planning & Development.

Any questions.....give me a call. President Hamilton will not be here. He is traveling out of the country and alternative arrangements weren't possible.

THE UNIVERSITY OF ALASKA SYSTEM STRATEGIC PLAN 2009:

BUILDING HIGHER EDUCATION FOR ALASKA'S GOLDEN ANNIVERSARY

This strategic plan seeks to set forth the goals and assumptions, strategic planning principles, and action strategies that will guide the University of Alaska between now and the "Golden Anniversary" of statehood in 2009. Just as the University of Alaska is a system, a whole made of many varied parts, this strategic plan is a synthesis of the myriad ongoing planning efforts of our system and its campuses. As such, it reflects the true value of any plan - what we learn about ourselves and our environment while we are planning.

Mark R. Hamilton
President
University of Alaska

Approved September 2003

Revised February 2009

The Vision for Public Higher Education in Alaska

Alaska is a great land, vast in area and rich in history and cultural diversity. Alaska has provided a harsh test for its men and women: the Alaska Natives who have sustained vibrant lives and rich cultures in one of the most formidable climates on Earth; the miners, risking all for the promise of riches; the soldiers and airmen taking back invaded American soil; the searchers for black gold, finding it at last near the shores of the Beaufort Sea; and the many others seeking adventure in this most challenging place we call "The Great Land."

Alaska provides a harsh test for a University system as well:

- Serve a land 1/5th the size of the continental United States;
- Operate 16 different campuses up to 1,300 miles apart, many of which are inaccessible by land, in order to deliver post-secondary education beyond the major cities;
- Offer academic programs from certificate through baccalaureate to PhD;
- Admit all Alaskans wherever they may live and wherever they may be in their academic preparation;
- Conduct research that solves problems of importance to the state, the nation, the north, and the world;
- Meet the educational, cultural, and economic needs of the diverse peoples of Alaska; and
- Demonstrate responsible stewardship of the treasures of the state with which we are entrusted.

Our vision at the University of Alaska is to meet all of these exacting requirements and to go beyond. Through our excellent faculty, staff, and students, we will produce the social, economic, scientific, civic, and cultural leadership of the state. We will be the source, the example, and often the forum for informed and rigorous debate. We will offer practical advice to policy makers. We will develop the state's workforce. We will make the discoveries that solve problems and create opportunities. We will be fully accountable – regents, faculty, staff, students, and administration - to each other in the pursuit of shared governance, and, most important, to those we serve. We will not surrender excellence.

We will build by 2009 a University system, highly respected and strongly supported by the citizens of Alaska, and by scholars and policy makers the world over.

Vision is a light, illuminating our present status and stature by the accomplishments of our past. We hope that in 2009 we will have both increased the lumens and added to our stature. Until then our plan is one we may expect ourselves to achieve, and one the great land of Alaska will depend upon.

Mission

The University of Alaska is hereby established as the state University...and shall be governed by a board of regents...The board shall, in accordance with law, formulate policy and appoint the president of the University. Alaska Constitution, Article 7, Sections 2-3

Pursuant to its constitutional and statutory powers and responsibilities, the Board of Regents has established the following mission for the University of Alaska system:

> The University of Alaska inspires learning, and advances and disseminates knowledge through teaching, research, and public service, emphasizing the North and its diverse peoples.

The Board of Regents also has established missions for its several major administrative units.

> *The University of Alaska Anchorage* inspires learning and enriches Alaska, the nation, and the world through UAA teaching, research, creativity, and service. UAA is a comprehensive university that provides opportunities to all who can benefit from education programs of high quality in an inclusive environment rich in diversity. Located in Anchorage and on community campuses serving Southcentral Alaska, UAA is committed and uniquely situated to serve the needs of its communities, the state, and its diverse peoples.
>
> *The University of Alaska Fairbanks*, as the nation's northernmost Land, Sea, and Space Grant University and international research center, advances and disseminates knowledge through creative teaching, research, and public service with an emphasis on Alaska, the North, and their diverse peoples.
>
> *The University of Alaska Southeast* is an open enrollment, public University that provides postsecondary education for a diverse student body. UAS promotes student achievement and faculty scholarship, lifelong learning opportunities, and quality academic programs.

There is a significant degree of consistency in missions across the three units, in undergraduate and selected graduate programs, and the "community college mission." This includes providing vocational and occupational instruction, the first two years of undergraduate education, preparatory and developmental instruction, and other credit and non-credit courses and programs designed to be responsive to the needs of local communities and to adult learners in particular.

Differentiation is also realized through the designation of statewide leadership and centers of excellence in specific focus areas. UAA and UAS focus on undergraduate and graduate education through the master's degree, with particular emphasis on fields such as business, public health, public administration, engineering, English and the liberal arts, biology, and teacher education. UAF is the state's primary academic research institution; it provides undergraduate and graduate education including the doctoral degree.

Values

And we who are gathered here today do most solemnly dedicate these grounds and this cornerstone to the everlasting support of the principles of free government, free speech and free schools for which our forefathers fought.

Territorial Delegate James Wickersham
At the dedication of the Alaska Agricultural College and School of Mines, July 4, 1915.

Our approach to the future reflects these fundamental values set by the Board of Regents:

Unity in promoting communication and collaboration.

Effective operation of a system as culturally diverse and geographically distributed as the University of Alaska requires a strong and constant commitment to communication and collaboration among the numerous academic and administrative units that comprise the system.

Accountability to our students, faculty, staff, alumni, and the diverse peoples of Alaska.

As an institution largely supported by public funds, the University must be accountable to those who contribute to its work, whether through tuition and fees, scholarship and teaching, research funding, administrative support, employment of our graduates, or public advocacy.

Leadership for Alaska's people and institutions.

Through its University, a state produces social, economic, civic, and cultural leadership. The University of Alaska has a strong commitment to the development of leadership through our teaching and training of the present and future workforce, our discovery of new knowledge and practical application of our intellectual property, and our outreach to the diverse peoples and communities we serve.

Excellence in our programs and services.

The University community pledges to perform its work to the very highest standards of excellence. In everything we do - from providing preparatory education, to preparing students for the workforce and the professions, to conducting cutting edge research, to helping small businesses and community groups - we aspire to perform at the very highest level of excellence.

Accessibility to all Alaskans.

As an open admission institution, the University is committed to providing the greatest possible access to higher education and, therefore, to the opportunities afforded those with advanced education. This requires a physical presence in communities smaller and more diverse than national norms, and innovative and culturally sensitive means of distance delivery and the opportunity of access to every Alaskan.

Dedication to serving diverse community needs.

The University's 16 campuses, from the largest in Anchorage to the smallest in Kotzebue, are dedicated to meeting community needs through training citizens for the workforce, serving small businesses and community organizations with relevant research and practical advice, enhancing our community engagement programs, and providing facilities for community athletic and cultural events.

Stewardship of our resources.

The University is a responsible steward of the financial, physical, land, and human resources it is entrusted to invest and develop for the betterment of the state.

Goals and Objectives

The University system priorities and decisions through 2009 will be guided by key goals and objectives. Examples of the major decisions that must be made are the following:

- What students should be recruited, at what level of tuition, with what advising programs, and with what opportunities for employment or additional study once they graduate?
- What academic programs should be developed, modified, or eliminated? How much are we looking to gain from, or willing to pay, for these decisions? Where should we focus this review effort?
- What research programs should be supported, where, and for how much financial, space, and other resources?
- Who (faculty and staff) should be recruited, in what academic or administrative fields, for how much, and with what opportunities for career development?
- What are the needs of the state, at present and in the foreseeable future, and how can the University meet those needs through its teaching, research, and outreach?
- What facilities and information technology are required to support our mission? Where should we expand our facilities? How much will it cost? How long will it take?

The key goals and objectives of the Board of Regents, in the context of the University's values and available resources, will guide University system decision-making. More detailed implementation plans will be developed for each goal, with direction for each MAU based on its mission, capabilities, opportunities, and resources.

Goal 1: Student Success

The University will provide the learning environments, support systems, academic programs, facilities, technology, and faculty to enable the life-long success of our students, with their diverse needs, interests, capabilities, and ambitions. We seek to increase the number and share of traditional and non-traditional student attending a University campus. We are particularly committed to the success of Alaska Native students.

Objectives

- Enhance efforts in student recruitment and retention.
    - Develop recruitment programs that target traditional, non-traditional students, Alaska Native, and former students.
    - Enroll college-bound Alaskans at the national average rate.
    - Expand the Emerging Scholars program to all three MAUs.
    - Expand on-line student resources.
    - Obtain funding for the Alaska Scholars program.
    - Support a needs-based financial aid program and increase coordination between financial aid and admissions offices.
- Continue placing students in good jobs.
    - Increase partnerships with major employers.
    - Provide additional internship programs.
- Build life-long relationships with alumni.
    - Complete construction of an alumni database.
    - Create a network of alumni groups and events at various locations in and outside Alaska.
    - Develop alumni publications, including a periodic magazine.
    - Enlist alumni in student recruitment efforts.

Goal 2: Educational Quality

The University will offer the highest quality in our educational offerings, from non-degree training programs to graduate degrees. Our campuses will provide the highest possible quality programs and services within their respective missions.

Objectives

- Emphasize the community college mission.
    - Increase the number of programs, course sections, and scheduling options in the areas of vocational/technical training, community interest, and professional workforce development.
    - Increase partnerships with high schools in vocational/technical fields.
- Improve collaboration among campuses.
    - Expand collaborative graduate programs across MAUs and with other institutions.
    - Develop additional degree programs that rely on content from the several campuses.
    - Erase technology barriers to communicate and share content between campuses and beyond campuses.
- Ensure efficient allocation of programs.
    - As new programs are introduced and existing programs reviewed, determine the most appropriate location(s) and methods for program delivery.
- Develop new and relevant programs.
    - Expand the range of degree programs to that of comparable university systems.
    - Provide additional staff support for entrepreneurial program development.
    - Expand opportunities through distance delivery for graduate training (including the PhD level) for place-committed Alaskans.
- Strengthen advising services for our diverse student community.
    - Add to campus-based academic advising resources.
    - Build new on-line advising services.
- Accreditation Alignment: The University of Alaska shall engage in policy coordination, communication and alignment, prior to requesting substantive changes to institutional or programmatic accreditation which may have an impact on institutional or system resources. Such accreditation changes, if warranted, shall reflect institutional and programmatic priorities as set forth in the Academic Master Plan

Goal 3: Research Excellence

The University will be a globally recognized leader in areas of research for which Alaska has special competitive capabilities or unique environments in key areas of culture, economy, and health, using approaches that integrate the human dimension with natural sciences, and expand from basic processes to synthesis and policy advice.

Objectives

- Enhance competitive capacity.
    - Rely to a greater extent on competitively obtained financial support for research.
    - Recruit/inspire the faculty in areas of comparative advantage and provide the research facilities and administrative support required to compete effectively.
- Increase opportunities for undergraduate and graduate student participation in research.

- Capture Alaska-specific opportunities for the State and the University.
    - Establish strong research relationships with the private sector and government agencies that address issues of importance to Alaska.
    - Focus on fields where the University has an advantage, e.g., cold climates and coastal engineering, ocean science, arctic biology, climate change, telecommunications, fisheries, and health.
- Account for the value and cost of research.
    - Communicate the value of University research in terms of the University's educational quality and Alaska's economy.
    - Ensure that the costs of research are fully accounted for and weighed in the balance with alternative priorities.
- Expand support for the transfer of University intellectual property to private economic development.
    - Enhance support for faculty with interests in the development of intellectual property.
    - Create opportunities for the private sector to be informed about University development works.
- Grow percentage of Alaska Native participation to a part with the population.

Goal 4: Faculty and Staff Strength

The University will recruit, develop, and retain a culturally diverse faculty and staff who bring excellence to our research, teaching, and public service and through innovative and mission-focused academic and staff human resources programs and services.

Objectives

- Invest in faculty and staff development.
    - Regularly assess development needs including career planning and professional development.
    - Provide development programs that reflect University priorities and are suited to particular faculty and staff, relying where possible on existing University resources and expertise.
    - Routinely use visiting committees and other peer review mechanisms.
- Reward faculty and staff for innovation, creativity, and excellence.
    - Ensure merit-based and market competitive recognition, promotion, and compensation programs.
    - Provide venues for faculty and staff to demonstrate excellence.
- Ensure alignment between institutional goals and workload, productivity, and selection.
    - Regularly review faculty and staff workloads in appropriate comparative context and standards of their fields.
    - Distinguish faculty selection criteria and professional expectations based on the respective mission of the MAU and its academic programs.
- Ensure excellent administrative practices that are integrated with the university's strategic priorities.
- Ensure high quality teaching.
    - Maintain a rigorous faculty evaluation system.

Goal 5: Responsiveness to State Needs

The University will continuously enhance its capacity to meet the changing needs of Alaska's people and work through core programs as well as creative, entrepreneurial arrangements and partnerships to meet those needs. Among the changing conditions affecting the state's needs are continued rapid population growth in Anchorage and surrounding communities, the need for economic diversification, particularly in rural Alaska, and uncertainty regarding the state's ability to provide for its own economic future.

Objectives

- Assess and meet Alaska's current and projected workforce needs.
    - Continue to survey employers and work with the cognizant state agencies to assess workforce demand.
    - Build strong partnerships with employers to ensure our graduates possess needed skills and abilities.
    - Strengthen the University's continuing education and corporate programs.
    - Streamline review processes for non-degree programs.
- Focus on rural Alaska needs.
    - Continue to build health research programs that address the needs of Alaska Natives.
    - Expand vocational/technical training programs in rural Alaska to provide greater employment opportunities for local people.
    - Explore new technologies that will create economic development opportunities in rural Alaska.
- Provide support for cultural needs.
    - Celebrate the unique contributions to Alaska that come from its Native Peoples.
    - Continue to conduct research and provide instruction in Alaska Native languages and cultures.
    - Build on the role University campuses play as centers for cultural activity, e.g., arts and lectures.
- Increase public policy analysis.
    - Expand the study of critical public policy issues.
    - Develop the means to more rigorously identify critical public policy issues and expand faculty participation across the University.
    - Protect the role of the University as a venue for the exploration of potentially contentious issues.
- Build community engagement programs.
    - Encourage faculty, student, and staff involvement in service to Alaska's diverse communities.
    - Integrate community service with research and instructional programs.
    - Increase partnerships with Alaska Native corporations and social service agencies to foster stronger communities.
- Enhance responsiveness to workforce needs.
    - Expand programs to train graduates in high demand fields.
    - Continue to survey industry, small business, and governments for their workforce needs.
    - Continue to reallocate faculty, staff, and other resources to high need areas.

Goal 6: Technology and Facility Development

The University will provide students, faculty, and staff the facilities and technology they need to most effectively pursue their research, education, and public service goals.

Objectives

- Address process issues: facility planning and facility utilization.
  - Develop campus master plans that are aligned with University system priorities, institutional missions, funding opportunities, and needs.
  - Create culture of facilities responsiveness to needs and concerns of faculty and students.
  - Increase effective utilization of facilities, to include times not traditionally in use.
  - Obtain land near University campuses to accommodate expansion.
- Explore privatization and partnering.
  - Focus University resources on its educational mission by privatizing those services that may be performed at a higher level of performance and/or lower cost.
  - Explore creative, opportunistic approaches with the private sector to providing needed research, instruction, telecommunications, or residential facilities.

- Support distance education through additional technology and faculty development.
  - Work with the provider community to provide internet connectivity among all University facilities sufficient to support distance delivery of academic programs, collaboration between researchers, and administrative coordination.
  - Provide all faculty the support necessary to develop and deliver high quality curricula with appropriate technologies, based on research into the effectiveness of various distance education pedagogies.
  - Work with the provider community to provide affordable access for every Alaskan, regardless of location, to university programs and services offered online.

- Expand access through appropriate technologies to as many university programs and services as possible.
  - Develop an integrated, interactive interface for students that is comprehensive and customizable by each student as educational needs and goals change.

Goal 7: Diverse Sources of Revenue

Engaging major stakeholders to increase their investment in the University is a critical precondition for the achievement of the above six goals. These stakeholders include all citizens of Alaska, but especially alumni, state, federal, and local governments; businesses, including non-profit organizations; and private philanthropy.

Objectives

- Diversify funding sources to reduce reliance on the state's general fund.
  - Increase tuition rates so they bear an appropriate share of the University's revenue base.
  - Increase financial support from alumni, faculty, and staff.
  - Increase financial participation from partnerships with industry and government agencies.
  - Increase financial support from corporate and individual donors giving to the University of Alaska Foundation.

- Pursue land for long term endowment and growth.
  - Ensure the University obtains a sufficient land grant.
  - Manage proceeds from the land grant to the maximum benefit of the University.

- Encourage the commercial utility and application of University intellectual property.
  - Increase the number of patents filed by University supported investigators.
  - Expand interaction between University faculty and the state's business community.

Appendix

System Structure and Functions

The University of Alaska System

The University of Alaska System is composed of several major units: the system office; three separately accredited institutions, University of Alaska Anchorage (UAA), University of Alaska Fairbanks (UAF), and University of Alaska Southeast (UAS); and one separately accredited community college, Prince William Sound Community College that reports through UAA.

Each of the three major institutions is led by a chancellor who reports to the president of the University system, who in turn reports to the Board of Regents[1]. The Board has 10 members with 8-year appointments and a student regent with a 2-year appointment; they are appointed by the governor and confirmed by the legislature. System administrators reporting to the president include the University's executives in the areas of finance, University relations, research, information technology, legal counsel, human resources, health programs, and student services. While the system office does not deliver any academic degrees or certificates, direct any research programs, or engage in any public service *per se*, it plays important internal coordinating and external advocacy roles. As well, it provides services to the campuses that are not replicated at the campus level.

Examples of this coordinating function include:

- overseeing the development of academic initiatives, including the state and federal agendas;
- articulating course credits for students transferring between campuses;
- linking the University's training programs with large statewide employers;
- ensuring an appropriately focused academic mission for each major campus;
- encouraging collaborative research and instructional programs across campuses;
- supporting campus-based student services and enrollment management systems;
- leading and staffing a wide variety of consultative councils and governance groups;
- developing the annual operating and capital budgets; and
- ensuring appropriate information technology investment.

Examples of direct services provided by the system to the campuses include providing:

- direction for the University's annual drives for funding from the state legislature and Congress;
- enhancement of the image of the University system with the public of the state;
- aspects of the human resources and labor relations functions, e.g., payroll, benefits, labor relations, classification and compensation;
- legal counsel;
- numerous financial services including the accounting system, land management, risk management, institutional research and management reporting, audit, treasury, debt management, control, and procurement oversight;
- staff support for the Board of Regents and primary responsibility for ensuring implementation of Board policy and direction;
- representation of the University with state and federal officials and agencies; and
- information technology networks and student, finance, and human resources information system services.

[1] The president of the separately accredited Prince William Sound Community College reports to the UAA chancellor.

The University of Alaska Anchorage

The Anchorage campus has evolved from the merger of a large community college and Anchorage –Senior College to an urban "master's college and University" with programs ranging currently from certificate to master's degrees in fields such as business and public policy, health care, process technology, English and the liberal arts, biology, teacher education, psychology, social work, engineering, and global transportation logistics. Through a collaborative arrangement with the Fairbanks campus, UAA faculty members have contributed to the preparation of several recipients of the doctoral degree.

In the state's largest city, UAA also provides the first year of medical school training to Alaskans participating in a consortium of northwestern states led by the University of Washington Medical School, leads outreach to the state's several military communities, and has several research institutes, most notably the Institute for Social and Economic Research, the state's Small Business Development Center, and a program providing business education to students in Russia.

UAA is rightly proud of its innovative community engagement focus, bringing the broad range of expertise among faculty and staff together to bear on the needs of the Anchorage community and the state. The campus has several NCAA Division II athletics programs and its debate team won the national championship in 2001. The community campuses in Homer, Kenai, Kodiak, Palmer, and the separately accredited Prince William Sound Community College in Valdez are units of UAA. UAA particularly treasures the Edward Albee Theater Festival held in Valdez, a nationally renowned program that annually hosts Pulitzer Prize winning authors and provides a venue for young artists.

The University of Alaska Fairbanks

Established as the original home of the University of Alaska in 1917, the Fairbanks campus has developed into a widely respected "doctoral/research intensive University" with programs ranging from certificate to doctoral degrees, the latter in fields closely related to its geographic location and research strengths (e.g., arctic biology, anthropology, chemistry, geophysics, climate change, marine science, and cold regions engineering). UAF is particularly proud of its numerous programs and facilities serving Alaska Native students.

In the hub of Alaska's interior, the Fairbanks campus had research revenues in fiscal year 2002 in excess of $90 million, about 91 percent of the system total. It is the home of the Arctic Region Supercomputing Center and numerous research institutes including the Geophysical Institute, the Institute for Arctic Biology, the School of Fisheries and Ocean Science, and the International Arctic Research Center. Among its many facilities, UAF operates the nation's largest arctic biology field station, the nation's only University-based rocket range, and the nation's largest volcano observational network.

Like UAA, UAF participates in NCAA Division II athletics and boasts the nation's top rifle team over the last three years. In 2002, UAF's men's basketball team became the first Division II team to win a Division I tournament. The community campuses in Bethel, Dillingham, Fairbanks, Interior-Aleutians, Kotzebue, and Nome are units of UAF.

The University of Alaska Southeast

Leading UAS is the Juneau campus, a dynamic "master's college and University" with emphases on certificate through master's degree programs in teacher education, distance education, business and public administration, natural sciences, liberal arts, and career education.

Current and emerging research focus areas include fisheries/marine science, distance education, environmental science, and government. The Juneau campus collaborates with Middlebury College in offering the nationally recognized Breadloaf summer program and has developed training and graduate programs in public administration, taking advantage of its location in the state's capital city and by extensive use of distance education technology. The community campuses in Ketchikan and Sitka are components of UAS.

Strategic Planning Principles

Commitment

The University is committed to the development of a systemwide strategic plan and planning process that is responsive to the needs of the state and consistent with the University's values of unity, accountability, leadership, excellence, accessibility, dedication, and stewardship.

Leadership

The president oversees the development of the plan with leadership from the Board of Regents' planning and development committee. The process will assure appropriate collection and consideration of input from key internal and external stakeholders.

Focus

The plan will reflect the focus of each major campus such that there is clear and cost-effective mission differentiation and, within those missions, full opportunity for campus aspiration in the quality and quantity of its programs and services.

Scope

The plan will emphasize universal access to higher education, expanded professional and workforce development programs, a greater concentration of advanced training and research, and the important role of the university in providing lifelong learning through its outreach and extension functions.

Engagement

The plan will underscore the importance of outreach and engagement, fostering a culture of connection and collaboration across campuses and with communities.

Conditions

The plan will be informed by key internal and external conditions such as student demographics, admissions policies, operating efficiencies, campus plans, geographic location, faculty and staff recruitment and retention, facility condition, access to information technology, and funding opportunities and constraints.

Development

The plan will reflect a distinct focus for each campus which will recognize opportunities for and guide the future development of both academic and non-academic programs, facilities and information technology infrastructure, student recruitment and retention plans, faculty and staff services, and research and outreach/extension initiatives.

Strategic Planning Process

The University of Alaska Board of Regents (BOR), through its Planning and Development Committee, commenced a strategic planning process to guide the University's continued development through the coming years to 2009. The planning process did not start from scratch; nor was it driven from the top. Instead, it synthesizes into a single document the wide variety of planning activities that are occurring on our campuses and at the system level over the last several years. Examples of activities, reports, and other sources that contribute to this effort include the Regents' Issue Focus Areas, UA Values, mission statements, Major Administrative Unit (MAU) self assessments, MAU accreditation reports and master plans, external reviews, missions and measures, academic initiatives, and needs assessments.

Planning Timeline

August 27- September 11	President's Office prepares for BOR review.
September 12	BOR P&D Committee reviews above.
October 12	President's Office prepares working draft.
October 15	President's Cabinet (chancellors) reviews draft
October 16	BOR P&D Committee reviews working draft
October-December	Internal and external groups provide input to working draft.
December 5	BOR P&D Committee receives update.
January 18, 2003	BOR P&D Committee receives update.
February 20	BOR P&D Committee receives update.
April 18	BOR P&D Committee receives update.
June 10	BOR approves plan.

Lead Staff

President's Office	Jim Johnsen, Chief of Staff
Academic Programs	Paul Reichardt, Chair, System Academic Council
University Relations	Wendy Redman, Vice President, University Relations
Research	Craig Dorman, Vice President, Research
Finance and Facilities	Joe Beedle, Vice President, Finance
Information Technology	Steve Smith, Chief Technology Officer
Human Resources	Janet Jacobs, Executive Director, Human Resources
Student Services and Health Programs	Mike Sfraga, Associate Vice President for Student Services Karen Perdue, Associate Vice President for Health Programs

Preliminary Planning Questions

1. What are the most important documentary sources for strategic planning?
2. What internal and external groups should be consulted in this process?
3. What is the overall assessment of current activity in your area of focus?
4. What is your vision for your area of focus?
5. What goals would you recommend to realize this vision?
6. What changes are necessary in order to meet these goals?
7. How should these changes be accomplished (e.g., communication, information, reorganization, reallocation, new resources, new vision)?
8. How should these changes be measured and be aligned with decisions regarding resources?

MANAGEMENT'S DISCUSSION AND ANALYSIS
(Unaudited – see accompanying accountants' report)

Introduction

The following discussion and analysis provides an overview of the financial position and activities of the University of Alaska (university) for the years ended June 30, 2008 (fiscal year 2008) and June 30, 2007 (fiscal year 2007), with selected comparative information for the year ended June 30, 2006. This discussion has been prepared by management and should be read in conjunction with the financial statements including the notes thereto, which follow this section.

Using the Financial Statements

The university's financial report includes the basic financial statements of the university and the financial statements of the University of Alaska Foundation (foundation), a legally separate, non profit component unit. The three basic financial statements of the university are: the Statement of Net Assets, the Statement of Revenues, Expenses and Changes in Net Assets and the Statement of Cash Flows. These statements are prepared in accordance with generally accepted accounting principles and Governmental Accounting Standards Board (GASB) pronouncements. The university is presented as a business-type activity. GASB Statement No. 35, *Basic Financial Statements—and Management's Discussion and Analysis—for Public Colleges and Universities,* establishes standards for external financial reporting for public colleges and universities and classifies resources into three net asset categories – unrestricted, restricted, and invested in capital assets, net of related debt.

The University of Alaska Foundation is presented as a component unit of the university in accordance with GASB Statement No. 39, *Determining Whether Certain Organizations Are Component Units.* The foundation's financial statements include the Statement of Financial Position and the Statement of Activities and these statements are presented as originally audited according to generally accepted accounting principles and Financial Accounting Standards Board (FASB) pronouncements.

The foundation was established to solicit donations and to hold and manage such assets for the exclusive benefit of the university. Resources managed by the foundation and distributions made to the university are governed by the foundation's Board of Trustees (operating independently and separately from the university's Board of Regents). The component unit status of the foundation indicates that significant resources are held by the foundation for the sole benefit of the university. However, the university is not accountable for, nor has ownership of, the foundation's resources.

Statement of Net Assets

The Statement of Net Assets presents the financial position of the university at the end of the fiscal year and includes all assets and liabilities of the university. The difference between total assets and total liabilities (net assets) is one indicator of the financial condition of the university, while the change in net assets is an indicator of whether the financial condition has improved or declined during the year.

A summarized comparison of the university's assets, liabilities and net assets at June 30, 2008, 2007 and 2006 follows ($ in thousands):

	2008	2007	2006
Assets:			
Current assets	$ 105,847	$ 101,667	$ 106,614
Other assets	306,979	296,233	251,405
Capital assets, net of depreciation	792,161	736,894	731,010
Total assets	1,204,987	1,134,794	1,089,029
Liabilities:			
Current liabilities	88,894	84,421	80,444
Noncurrent liabilities	177,290	162,923	161,730
Total liabilities	266,184	247,344	242,174
Net assets:			
Invested in capital assets, net of debt	671,700	619,665	608,596
Restricted – expendable	73,856	82,736	58,590
Restricted – nonexpendable	126,752	124,114	123,275
Unrestricted	66,495	60,935	56,394
Total net assets	$ 938,803	$ 887,450	$ 846,855

Major changes to assets and liabilities during fiscal year 2008 include increased operating and restricted cash and cash equivalents, a decline in endowment investments, increased accounts receivable, growth in net capital assets, and increased liabilities due to construction activity and new debt issuance. In fiscal year 2008, the university experienced overall growth in net assets of $51.4 million, or 5.8 percent. Each of these changes is discussed in more detail in the following sections.

Total assets increased by $70.2 million during fiscal year 2008 to a total of $1.2 billion. Total assets are categorized as either current assets or noncurrent assets on the Statement of Net Assets. Key components of current assets include cash and cash equivalents, short-term investments and accounts receivable. Noncurrent assets are comprised mainly of restricted cash and cash equivalents, investments and net capital assets.

Operating cash and cash equivalents at June 30, 2008 were a positive $8.6 million as compared to a negative $0.5 million at June 30, 2007. Operating cash and cash equivalents includes checking accounts, change funds, and the university's repurchase agreements. Near the end of fiscal year 2008 funds were moved from short-term investments to cash to cover liabilities such as payroll, that were due in July.

Restricted cash and cash equivalents increased from $4.1 million at June 30, 2007 to $19.7 million at June 30, 2008. Increased restricted cash and cash equivalents are mostly attributed to unexpended general revenue bond proceeds from the issuance of Series O general revenue bonds in January 2008.

Short-term investments decreased from $39.3 million at June 30, 2007 to $26.5 million at June 30, 2008. As discussed earlier, funds were moved from this category to cash at year end. These funds were invested in the Commonfund's Short Term Fund and Intermediate Term Fund, which

had a 5.25 percent and 5.54 percent total return for the year ended June 30, 2007 and a 3.21 percent and 0.54 percent total return for the year ended June 30, 2008, respectively.

Long-term investments increased $0.4 million to $83.9 million for fiscal year 2008. Approximately, $47.6 million was invested in the Commonfund's Absolute Return Fund, $27.4 million in the Commonfund's Multi-Strategy Bond Fund, and $8.9 million in various bond or construction-related funds. The Absolute Return Fund had a negative 1.89 percent total return for the year ended June 30, 2008 and a positive 13.17 percent total return for the year ended June 30, 2007. The Multi-Strategy Bond Fund had a 6.14 percent total return for the year ended June 30, 2008 and 6.98 percent total return for the year ended June 30, 2007.

Endowment investments at June 30, 2008 were $145.2 million as compared to $148.7 million at June 30, 2007. This decrease was primarily caused by a negative 2.4 percent total return in 2008 as compared to a positive 17.9 percent total return in 2007.

Net accounts receivable increased $8.2 million from $53.6 million at June 30, 2007 to $61.8 million at June 30, 2008. Growth in accounts receivable is primarily due to an increase in capital construction activity in process at year end which increased capital receivables from $6.6 million at June 30, 2007 to $12.6 million at June 30, 2008. Year end construction activity attributed to increased receivables includes $4.6 million for the University of Alaska Anchorage (UAA) Integrated Science Building, $0.7 million for the University of Alaska Fairbanks (UAF) Tanana Valley Campus renovation, and $0.6 million for UAA fire alarm system upgrades. The other components of accounts receivable consist of tuition and fees, sponsored programs, and auxiliary services. See Note 3 of the financial statements for accounts receivable detail.

Net capital assets at June 30, 2008 were $792.2 million as compared to $736.9 million at June 30, 2007. For further discussion, see Note 6 of the financial statements for capital asset detail, and the *Capital and Debt Activities* section which follows.

Total liabilities are categorized as either current liabilities or noncurrent liabilities on the Statement of Net Assets. Current liabilities are primarily comprised of accounts payable, accrued payroll and other expenses, insurance and risk management payables, current debt and student deposits. Noncurrent assets are comprised mostly of long-term debt and net pension and OPEB obligations. Total liabilities increased by $18.8 million during fiscal year 2008 to a total of $266.2 million. Increased liabilities are mainly attributed to:

- The increase in accounts payable from $10.8 million at June 30, 2007 to $13.6 million at June 30, 2008 is reflective of increased capital construction activity in process at year end. Construction activity constituted 70 percent, or $9.4 million of the accounts payable balance at year end as compared to 55 percent or $5.9 million, the year before. The remaining accounts payable balance represents amounts due for recurring supplies and services for operations.

- Long-term debt financing increased with the issuance of Series O general revenue bonds totaling $23.8 million in fiscal year 2008. The majority of this bond is for the UAA Parking Garage as discussed in the *Capital and Debt Activities* section that follows.

Unrestricted net assets increased $5.6 million from June 30, 2007 to June 30, 2008. At year end, $29.8 million of the $66.5 million total is designated for specific purposes or otherwise limited by

contractual agreements with external parties. See Note 7 of the financial statements for a detailed list of these designations.

Fiscal Year 2007 Comparisons (Statement of Net Assets)

Significant comments about changes between 2006 and 2007 that were noted in fiscal year 2007 *Management's Discussion and Analysis* are summarized below:

Major changes from 2006 to 2007 on the Statement of Net Assets included a reduction in cash and cash equivalents and short-term investments, long-term investment growth, increased accounts receivable and increased liabilities due to the net pension and other postemployment benefit obligations, and accrued expenses. Overall, the financial position of the university improved in fiscal year 2007 as indicated by the growth in net assets of $40.6 million or 4.8 percent. For comparative purposes, cash and cash equivalents, short-term investments, and long-term investments in the June 30, 2007 financial statements have been reclassified to conform to the presentation in the June 30, 2008 financial statements.

The Statement of Net Assets reflected a decrease in cash and cash equivalents and short-term investments, and an increase in long-term investments. Cash and cash equivalents at June 30, 2007 were a negative $0.5 million as compared to a positive $1.3 million in 2006. Additionally, short-term investments decreased from $47.1 million at June 30, 2006 to $39.3 million at June 30, 2007. In fiscal year 2007, the university began investing more of the university's core operating funds in long-term investments. At June 30, 2007, long-term investments were $83.5 million as compared to $65.6 million at June 30, 2006. Approximately, $41.5 million was invested in the Commonfund's Absolute Return Fund, $33.2 million in the Commonfund's Multi-Strategy Bond Fund, and $8.8 million in various operating and capital bond or construction-related funds. The Absolute Return Fund had a total return of 13.17 percent for the year ended June 30, 2007 and a 10.77 percent total return for the year ended June 30, 2006. The Multi-Strategy Bond Fund (a new university investment in fiscal year 2006) had a 6.98 percent total return for the year ended June 30, 2007.

Net accounts receivable increased 11.5 percent, from $48.1 million at June 30, 2006 to $53.6 million at June 30, 2007. This growth was primarily due to an increase in net sponsored program receivables.

Total liabilities increased 2.1 percent from $242.2 million at June 30, 2006 to $247.3 million at June 30, 2007. Increased liabilities were attributed to:

- The State of Alaska Public Employees' Retirement System (PERS) combined net pension and OPEB obligations increased from $25.4 million at June 30, 2006 to $30.8 million at June 30, 2007.

- Accrued expenses increased from $4.2 million at June 30, 2006 to $9.5 million at June 30, 2007 due to agreed upon net settlement costs of $4.65 million for the University of Alaska Museum of the North construction activity.

Unrestricted net assets increased $4.5 million from June 30, 2006 to June 30, 2007.

Statement of Revenues, Expenses and Changes in Net Assets

The Statement of Revenues, Expenses and Changes in Net Assets presents the results of operations for the university as a whole. Revenues, expenses and other changes in net assets are reported as either operating or nonoperating. Significant recurring sources of university revenue, such as state appropriations and investment earnings, are defined by GASB Statement No. 35 as nonoperating.

A summarized comparison of the university's revenues, expenses and changes in net assets for the years ended June 30, 2008, 2007 and 2006 follows ($ in thousands):

	2008	2007	2006
Operating revenues	$ 356,624	$ 352,410	$ 341,205
Operating expenses	(716,476)	(672,802)	(631,372)
Operating loss	(359,852)	(320,392)	(290,167)
Net nonoperating revenues	325,545	320,205	272,422
Gain (loss) before other revenues, expenses, gains, or losses	(34,307)	(187)	(17,745)
Other revenues, expenses, gains or losses	85,660	40,782	30,541
Increase (decrease) in net assets	51,353	40,595	12,796
Net assets at beginning of year	887,450	846,855	834,059
Net assets at end of year	$ 938,803	$ 887,450	$ 846,855

The Statement of Revenues, Expenses and Changes in Net Assets reflects an overall increase in net assets of 5.8 percent, or $51.4 million. Revenue sources contributed positively to the increase in net assets. These revenue sources include: capital appropriations and capital grants and contracts revenue, tuition and fee revenue, and State of Alaska general fund appropriations. However, net health care costs and salaries and employee benefits offset overall growth in net assets.

- Net health care costs increased by $5.9 million to $50 million for fiscal year 2008.
- Salaries and employee benefits increased by $19.7 million for fiscal year 2008.

In 2008, the university recorded a $0.5 million net pension and OPEB expense (and related liability) for the state-administered PERS defined benefit plan. This expense represents the difference between contribution amounts based on actuarially determined rates and contributions actually paid to PERS. The university made the contributions required by the PERS plan, and these amounts were based on a capped rate that was 6.23 percentage points lower than the actuarially computed rate. For further discussion on PERS, see the *Other Economic and Financial Conditions* section which follows.

Capital appropriations and capital grant and contract revenue increased from $40.8 million in 2007 to $85.7 million in 2008. Revenue from capital sources is generally recognized as expenditures occur. The State of Alaska appropriated capital funds totaling $107.9 million in 2007 and $12.9 million in 2008. For further discussion on capital activity, see the *Capital and Debt Activities* section which follows.

Gross student tuition and fee revenue increased to $99.9 million in fiscal year 2008 as compared to $91.5 million in fiscal year 2007. This was due in large part to a 7 percent increase in tuition rates for students for academic year 2007 – 2008, and a $2.4 million increase in total fee revenue from $16.4 million at June 30, 2007 to $18.8 million at June 30, 2008.

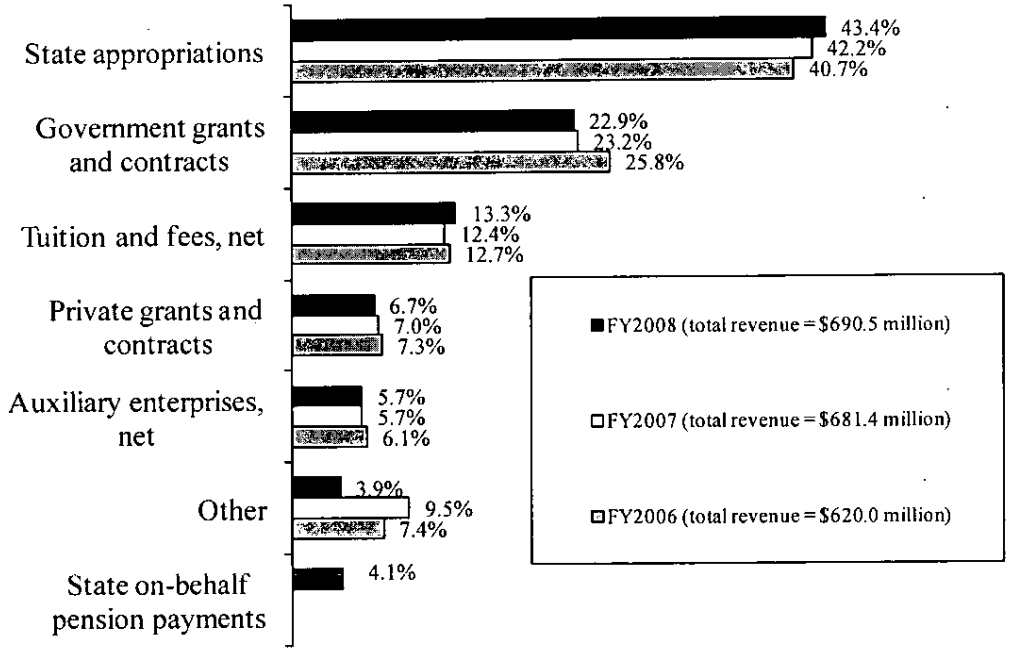
Endowment investments experienced a $4.6 million loss in 2008 as compared to a $22.3 million gain, in the prior year. Total return was a negative 2.4 percent in 2008 as compared to a positive 17.9 percent in 2007.

Endowment gifts, sales and other proceeds totaled $5.6 million in fiscal year 2008 as compared to $7.7 million in fiscal year 2007. The $2.1 million decline in revenue between fiscal year 2007 and fiscal year 2008 is due mostly to receipt of a $2.6 million pledge in fiscal year 2007. This category also includes yield from, or sales of, trust land, timber and mineral interests, the net proceeds of which are generally deposited to the land grant endowment trust fund.

State of Alaska general fund appropriations continue to be the single major source of revenue for the university, providing $300 million in 2008, as compared to $287.4 million in 2007. Historically, the Legislature has funded the university at an amount equal to or above the prior period's appropriation.

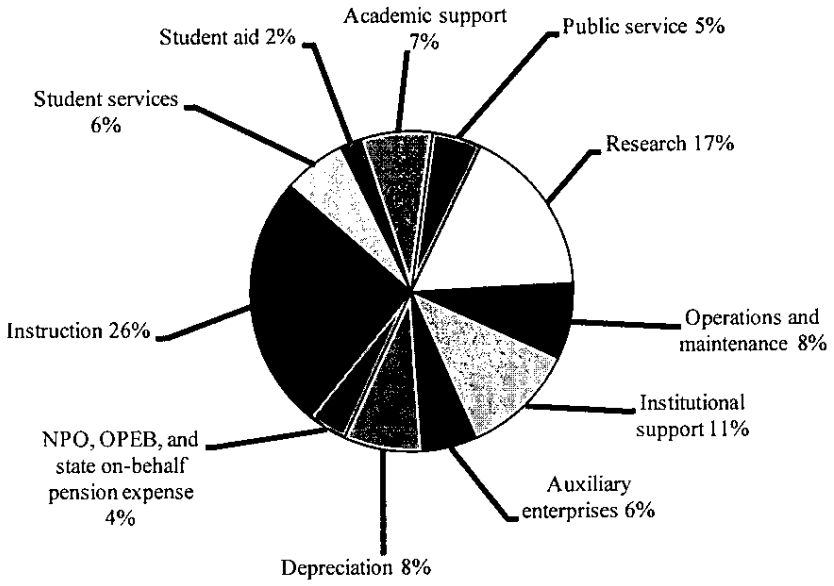
A comparison of operating and nonoperating revenues by source for fiscal year 2008, 2007 and 2006 follows:

Operating and Nonoperating Revenues (excluding capital) by Year



A comparison of operating expenses by functional and natural classification for selected fiscal years follows (see Note 16 of the financial statements for more information):

Fiscal Year 2008
Functional Classification



Operating Expenses
Functional Classification (in millions)

	FY2008		FY2007		FY2006	
Instruction	$183.2	25.6%	$181.2	26.9%	$163.5	25.9%
Student Services	45.4	6.3%	41.9	6.2%	38.5	6.1%
Student Aid	14.9	2.1%	13.5	2.0%	13.4	2.1%
Academic Support	52.2	7.3%	50.7	7.6%	44.6	7.1%
Student and Academic	$295.7	41.3%	$287.3	42.7%	$260.0	41.2%
Public Service	36.1	5.0%	32.9	4.9%	32.1	5.1%
Research	121.8	17.0%	131.3	19.5%	126.3	20.0%
Operations and Maintenance	55.0	7.7%	50.2	7.5%	44.2	7.0%
Institutional Support	82.6	11.5%	69.6	10.3%	61.8	9.8%
Auxiliary Enterprises	39.4	5.5%	38.7	5.8%	37.2	5.9%
NPO,OPEB, State On-Behalf	29.0	4.1%	5.4	0.8%	9.9	1.5%
Depreciation	56.9	7.9%	57.4	8.5%	59.8	9.5%
Total Operating Expenses	$716.5	100.0%	$672.8	100.0%	$631.3	100.0%

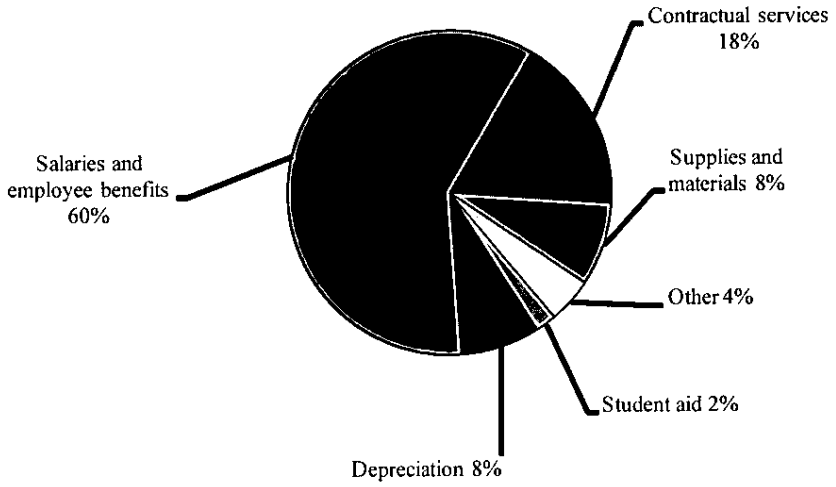
Student aid expense increased from $13.5 million in fiscal year 2007 to $14.9 million in fiscal year 2008. Certain amounts applied to student accounts for tuition, fees, or room and board are not reported as student aid expense, but are reported in the financial statements as a scholarship allowance, directly offsetting student tuition and fee revenue or auxiliary revenue. Allowances totaled $9.1 million in 2008 and $8.3 million in 2007. In addition to the allowances, students participate in governmental financial aid loan programs. The loans are neither recorded as revenue nor expense in the financial statements, but are recorded in the Statements of Cash Flows as direct lending receipts totaling approximately $67.4 million and $64.8 million in fiscal year 2008 and 2007, respectively.

Net pension, OPEB and state on-behalf pension payments increased to $29 million in fiscal year 2008 as compared to $5.4 million in fiscal year 2007. This was primarily due to first-time state on-behalf pension payments, totaling $28.5 million, paid directly to the PERS and TRS defined benefit plans to reduce the PERS and TRS employers' contributions for fiscal year 2008. The pension payments were made on-behalf of the university and are presented as revenue and expenses in the university's financial statements in accordance with GASB Statement No. 24, *Accounting and Financial Reporting for Certain Grants and Other Financial Assistance.*

Research expenses decreased $9.5 million from $131.3 million at June 30, 2007 to $121.8 million at June 30, 2008. The decreases in recent years reflects loss or reduction in congressionally directed funding, plus stagnant competitive federal research budgets and lack of new state base support for research.

Institutional support expenses fluctuate due to the accounting method used to record employee benefits. The university employs a central benefits pool concept, and uses a staff benefit rate, to charge estimated employee benefits, such as pension and healthcare costs, to labor recorded in the various functional expense categories. Institutional support expenses are impacted when the amounts charged exceed, or are less than, actual benefits paid to third parties. Over recovery or under recovery of charges in one year are built into the rate building process the following year. When considered in total, operating expenses across all functional categories include the correct amount of employee benefit expense each fiscal year.

Fiscal Year 2008
Natural Classification



Operating Expenses
Natural Classification (in millions)

	FY2008		FY2007		FY2006	
Salaries and Employee Benefits	$426.7	59.6%	$407.0	60.5%	$370.3	58.6%
Contractual Services	126.2	17.6%	124.8	18.5%	119.7	19.0%
Supplies and Materials	59.8	8.3%	61.7	9.2%	56.2	8.9%
Other	32.0	4.5%	8.3	1.2%	11.9	1.9%
Student Aid	14.9	2.1%	13.6	2.0%	13.4	2.1%

	$716.5	100.0%	$672.8	100.0%	$631.3	100.0%

Salaries and employee benefits increased 4.8 percent, or $19.7 million, in fiscal year 2008. Employee benefits, such as pension plan contributions and health care costs, increased 2.9 percent and comprised $3.5 million of the change. Salaries and wages increased 5.7 percent, or $16.2 million. Other expenses increased by $23.7 million in fiscal year 2008 and are primarily attributed to the State of Alaska PERS and TRS on-behalf pension payments.

Fiscal Year 2007 Comparisons (Statement of Revenues, Expenses and Changes in Net Assets)

Significant comments about changes between 2006 and 2007 that were noted in fiscal year 2007 *Management's Discussion and Analysis* are summarized below:

The Statement of Revenues, Expenses and Changes in Net Assets reflected an overall increase in net assets of 4.8 percent or $40.6 million. Revenue sources contributed positively to the increase

in net assets. These revenue sources included: capital appropriations and capital grants and contracts revenue, tuition and fee revenue, endowment investment income and other proceeds, and State of Alaska general fund appropriations. However, increased costs in pension plans, net health care costs, salaries and wages, and the PERS net pension and OPEB obligations offset overall growth in net assets.

- PERS, TRS, and ORP costs increased by $12.2 million for the year ended June 30, 2007.
- Net health care costs increased by $9.9 million for fiscal year 2007.
- Salaries and wages increased by $14.3 million for fiscal year 2007.
- The PERS net pension and OPEB obligations increased by $5.4 million for the year ended June 30, 2007.

The increase in revenue recognized from capital funding sources also contributed to increases in net assets. Capital appropriations and capital grants and contracts revenue increased from $30.5 million in 2006 to $40.8 million in 2007.

Other major revenue sources included state general fund appropriations, tuition and fee revenue, and endowment investment income. State general fund appropriations were $287.4 million in 2007, as compared to $252.5 million in 2006. Gross tuition and fee revenue increased to $91.5 million in fiscal year 2007 as compared to $85.3 million in fiscal year 2006. This was due in large part to a 10 percent increase in tuition rates for students in academic year 2006 – 2007. Student full-time equivalent enrollment for Fall 2006 was 17,541, a 0.8 percent increase from the prior Fall period. Additionally, endowment investment income was approximately $22.3 million in 2007 as compared to $13.9 million in 2006.

Capital and Debt Activities

The University of Alaska has continued to modernize various facilities and to build new facilities to address emerging state needs. Net capital additions totaled $97.7 million in 2008, as compared with $57.4 million in 2007 and $44.5 million in 2006. These capital additions primarily comprise replacement, renovation, code corrections and new construction of academic and research facilities, as well as investments in equipment and information technology. State capital appropriations for 2008 and 2007 were $12.9 million and $107.9 million, respectively. At June 30, 2008, $88.8 million remains unexpended from current and prior year capital appropriations and general revenue bond proceeds, of which $61.9 million is committed to existing construction contracts. The balance is for projects still in design or preconstruction, or is held for contingencies for work in progress.

Construction in progress at June 30, 2008 totaled $92.9 million and includes the following major projects:

- University of Alaska Anchorage Integrated Science Building (ISB): This $91 million facility will incorporate the existing science facility into expanded instructional, student, and administrative space. Features include state of the art science academic labs and technology associated with distance delivery. The facility is designed to incorporate program growth in integrated sciences, including integrated science instruction for majors and non-majors, environmental studies and systems research, biomedical research, and

complex system studies to prepare students to meet the employment needs of the state of Alaska. The estimated occupancy date is fall 2009.

- University of Alaska Anchorage Parking Garage associated with the ISB, Loop Road and Amenities Building: This $17.2 million structure will consist of a three level parking garage for 445 vehicles, a loop road connecting ISB service entrance to the Fine Arts building parking lot and a detached amenities/auxiliary building that will house the elevator, stairs, mechanical and electrical support for the garage. The estimated completion date is August 2009.

- University of Alaska Fairbanks School of Fisheries and Ocean Sciences (SFOS) Facility at Lena Point in Juneau, Alaska: This $26.2 million facility will provide long-term support for the SFOS's academic and research mission. The facility will allow for consolidation of classes, research facilities and faculty currently spread between two locations.

State of Alaska capital appropriations for fiscal year 2009 total $107.2 million. The main components of this appropriation include $15 million designated for a new UAA Sports Arena, $46 million for the new UAA Health Sciences Building, $3 million for the UAF Tanana Valley Campus Revitalization, and $42.8 million for maintaining existing facilities and equipment.

At June 30, 2008, total debt outstanding was $136.7 million, comprised of $110.1 million in general revenue bonds, $24.6 million in notes payable, and $2 million in bank financing contracts. In December 2007, Moody's Investors Service raised its previous university credit rating of A1 to Aa3 with stable outlook, and in January 2008, Standard & Poor's affirmed its rating of AA- with stable outlook. Moody's Investors Service's upgrade of the university's credit rating is the university's first rating change since its general revenue issues were first rated in 1992.

The university issued Series O general revenue bonds totaling $23.8 million in fiscal year 2008. The bonds mature annually each October 1, through 2033, and bear coupon interest rates ranging from 3.375 percent to 4.25 percent. Series O bond proceeds are being used for capital projects.

In previous years, other bonds were issued to finance construction of student residences at three campuses, the West Ridge Research Building, student recreation centers, a research facility to house the International Arctic Research Center, the acquisition and renovation of several properties adjacent to or near the university's campuses, additions to the university's self-operated power, heat, water and telephone utility systems in Fairbanks, purchase of the University Center Building in Anchorage, and to refund previously issued general revenue bonds and other contractual obligations in order to realize debt service savings.

The university has traditionally utilized both tax exempt and non-tax exempt equipment lease financings to provide for its capital needs or to facilitate systematic renewals. Short-term lines of credit or working capital is available to provide interim cash flow financing for facilities intended to be funded with general revenue bond proceeds.

Other Economic and Financial Conditions

The following is a description of currently known facts, decisions, or conditions that are expected to have a significant effect on the financial position (net assets) or results of operations (revenues, expenses, and other changes in net assets) of the university.

At their September 2007 meeting, the Board of Regents approved a 5 percent increase in tuition for the 2008 – 2009 and 2009 – 2010 academic years. At their September 2008 meeting, the Board of Regents approved a 4 percent increase in tuition for 100 to 200 level courses and a 7 percent tuition increase for 300 to 400 level courses in the 2010 – 2011 academic year.

The rising cost of participation in the state-administered defined benefit PERS and TRS has been a challenge for several years. Since fiscal year 2005, the university has accrued a total PERS net pension and OPEB liability of $31.3 million and in addition to the university's annual fiscal year 2008 employer contributions to PERS and TRS, the state contributed a combined $28.5 million in on-behalf pension payments directly to both defined benefit plans. Continued employer relief has been sought through recently enacted state legislation, Alaska Legislature Senate Bill 125 (SB 125), effective July 1, 2008. SB 125 converted PERS from an agent multiple-employer plan to a cost-sharing plan, like the TRS, and provided for one integrated system of accounting for all employers. SB 125 further amended AS 39.35.255 (PERS) and reenacted AS 14.25.070 (TRS) as follows:

- The bill established one uniform rate for PERS employers at 22 percent for fiscal year 2009, with the state contributing the difference between total PERS actuarial required contributions and the employer contribution rate. The Alaska Retirement and Management Board (ARMB) fiscal year 2009 adopted rate for the actuarial required contributions is 35.22 percent.

- The bill established the TRS employer contribution rate at 12.56 percent for fiscal year 2009, with the state contributing the difference between total TRS actuarial required contributions and the employer contribution rate. The ARMB fiscal year 2009 adopted rate for the actuarial required contributions is 44.17 percent.

With the enactment of SB125, it is expected the university will no longer have a net pension and OPEB obligation reported on its Statement of Net Assets, effective July 1, 2008. In accordance with generally accepted accounting principles, net pension and OPEB obligations are not reported by each employer in a cost-sharing pension plan when an employer contributes the contractually required amounts.

For fiscal year 2009, state appropriations for operations and debt service reimbursement total $321 million, a 7 percent increase over fiscal year 2008. The level of annual state appropriation funding is conditional upon the legislative process, which is directly influenced by current economic conditions and other factors. The university continues to seek additional revenues from sources other than state appropriations.

Subsequent to June 30, 2008, several major U.S. financial institutions and investment banks experienced significant financial difficulties primarily as a result of the decline in value of risky investments. The risky investments are often referred to as "sub-prime" mortgages. These entities were either purchased by other entities, or were otherwise aided by federal funding in an effort to keep them in business.

Consequently, there has been significant unrest in the financial markets, decrease in stock values and a substantial decrease in inter-bank lending and the extension of credit. At the time of this writing, there remains uncertainty and instability in the financial markets. The university has experienced a decline in the value of its investments subsequent to June 30, 2008. In addition, the university experienced the closure of one of its cash management accounts on September 29, 2008 as further described in Note 2 of the financial statements. Management continues to monitor these events, and at this time, does not anticipate any significant disruption to its activities, functions and operations.

Independent Auditors' Report

The Board of Regents
University of Alaska:

We have audited the accompanying basic financial statements of the University of Alaska and its discretely presented component unit (University), a component unit of the State of Alaska, as of and for the years ended June 30, 2008 and 2007 as listed in the table of contents. These financial statements are the responsibility of the University's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the University's internal control over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the respective financial position of the University of Alaska and its discretely presented component unit at June 30, 2008 and 2007, and the respective changes in its financial position and its cash flows for the years then ended in conformity with U.S. generally accepted accounting principles.

In accordance with *Government Auditing Standards,* we have also issued our report dated November 4, 2008 on our consideration of the University of Alaska's control over financial reporting and on our tests of its compliance with certain provisions of laws, regulations, contracts, and grant agreements and other matters. The purpose of that report is to describe the scope of our testing of internal control over financial reporting and compliance and the results of that testing, and not to provide an opinion on the internal control over financial reporting or on compliance. That report is an integral part of an audit performed in accordance with *Government Auditing Standards* and should be considered in assessing the results of our audit.

The Management's Discussion and Analysis, on pages 1 through 13, and the Schedule of Funding Progress for PERS on page 49 are not a required part of the basic financial statements but are supplementary information required by U.S. generally accepted accounting principles. We have applied certain limited procedures, which consisted principally of inquiries of management regarding the methods of measurement and presentation of the required supplementary information. However, we did not audit the information and express no opinion on it.

Noncash Investing, Capital and Financing Activities:

For the Year Ended June 30, 2008

Additions to capital assets include $0.9 million expended and capitalized but not paid for at year end.

The university financed the purchase of equipment totaling $0.2 million.

Book value of capital asset disposals totaled $0.7 million.

The university received on-behalf pension payments from the state of Alaska totaling $28.5 million.

For the Year Ended June 30, 2007

Additions to capital assets include $0.6 million expended and capitalized but not paid for at year end.

The university financed the purchase of equipment totaling $1.2 million.

Book value of capital asset disposals totaled $4.6 million.

Interest expense on general revenue bond financed projects totaling $0.2 million was capitalized during the year.

Endowment assets increased $0.1 million through receipt of donated real property.

Endowment investment real property was purchased in part through issuance of a note totaling $4.6 million.

1. Organization and Summary of Significant Accounting Policies:

Organization and Basis of Presentation:

The University of Alaska (university) is a constitutionally created corporation of the State of Alaska which is authorized to hold title to real and personal property and to issue debt in its own name. The university is a component unit of the State of Alaska for purposes of financial reporting. As an instrumentality of the State of Alaska, the university is exempt from federal income tax under Internal Revenue Code Section 115, except for unrelated business activities as covered under Internal Revenue Code Sections 511 to 514.

The University of Alaska Foundation (foundation) is a legally separate, non profit component unit of the university. The foundation was established to solicit donations and to hold and manage such assets for the exclusive benefit of the university. Resources managed by the foundation and distributions made to the university are governed by the foundation's Board of Trustees. Governmental Accounting Standards Board (GASB) Statement No. 39, *Determining Whether Certain Organizations Are Component Units*, required the university to include the foundation as part of its financial statements to better report resources benefiting the university. The university is not accountable for, nor has ownership of, the foundation's resources. The foundation's financial statements include the Statement of Financial Position and the Statement of Activities and these statements are presented in their original audited format according to Financial Accounting Standards Board (FASB) pronouncements.

In preparing the financial statements, management is required to make estimates that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities as of the date of the statement of net assets. Actual results could differ from those estimates. The more significant accounting and reporting policies and estimates applied in the preparation of the accompanying financial statements are discussed below.

GASB Statement No. 35 establishes standards for external financial reporting for public colleges and universities and requires that resources be classified for accounting and reporting purposes into the following net asset categories:

- **Unrestricted Net Assets:** Assets, net of related liabilities, which are not subject to externally-imposed restrictions. Unrestricted net assets may be designated for specific purposes by the Board of Regents or may otherwise be limited by contractual agreements with outside parties.
- **Restricted Net Assets:**

  Expendable – Assets, net of related liabilities, which are subject to externally-imposed restrictions that may or will be met by actions of the university and/or that expire with the passage of time.

  Non-expendable – Assets, net of related liabilities, which are subject to externally-imposed restrictions requiring that they be maintained permanently by the university.
- **Invested in capital assets, net of related debt** – Capital assets, net of accumulated depreciation and outstanding principal balances of debt attributable to the acquisition, construction or improvement of those assets.

Summary of Significant Accounting Policies:

The accompanying financial statements have been prepared on the economic resources measurement focus and the accrual basis of accounting. All significant intra-university transactions have been eliminated. The university reports as a business type activity, as defined by GASB Statement No. 35. Business type activities are those that are financed in whole or in part by fees charged to external parties for goods or services.

The university has the option to apply all Financial Accounting Standards Board (FASB) pronouncements issued after November 30, 1989, unless FASB conflicts with GASB. The university has elected not to apply FASB pronouncements issued after the applicable date.

Cash and Cash Equivalents

All highly liquid investments, not held for long-term investment, with original maturities of three months or less are reported as cash and cash equivalents.

Inventories

Inventories are stated at the lower of cost (first-in, first-out method) or market.

Investments

Investments are stated at fair value. Investments in fixed income and equity marketable securities are stated at fair value based on quoted market prices. Investments in private partnership interests are valued using the most current information provided by the general partner. General partners typically value privately held companies at cost as adjusted based on recent arms' length transactions. Public companies are valued using quoted market prices and exchange rates, if applicable. Real estate partnerships and funds are valued based on appraisals of properties held and conducted by third-party appraisers retained by the general partner or investment manager. General partners of marketable alternatives provide values based on quoted market prices and exchange rates for publicly held securities and valuation estimates of derivative instruments. General partners of oil and gas partnerships use third-party appraisers to value properties. Valuations provided by the general partners and investment managers are evaluated by management and management believes such values are reasonable at June 30, 2008. When, in the opinion of management, there has been a permanent impairment in the asset value, the asset is written down to its fair value. Income from other investments is recognized when received.

Investment securities are exposed to various risks, such as interest rate, market and credit risks. Due to the level of risk associated with certain investment securities, it is at least reasonably possible that changes in the values of investment securities will occur in the near term and that such change could materially affect the amounts reported in the statement of net assets. Investments also include securities with contractual cash flows such as asset-backed securities, collateralized mortgage obligations and commercial mortgage-backed securities. The value, liquidity and related income of these securities are sensitive to economic conditions, including real estate value, delinquencies or defaults, or both, and may be adversely affected by shifts in the market's perception of the issuers and changes in interest rates. Long-term investments include those restricted by outside parties as to withdrawal or use for other than current operations, or are designated for expenditure in the acquisition or construction of noncurrent assets or held with an intent not to be used for operations.

Capital Assets

Capital assets are stated at cost when purchased and at fair value when donated. Equipment with a unit value of $5,000 or greater is capitalized. Buildings and infrastructure with a unit value of $100,000 or greater are capitalized. Other capitalizable assets with a unit value of $50,000 or greater are capitalized. Certain land and other resources acquired through land grants and donated museum collections for which fair value at date of acquisition was not determinable are reported at zero basis in the financial statements.

Depreciation is computed on a straight-line basis with useful lives of building and building components ranging from 12 to 50 years, 10 to 35 years for infrastructure and other improvements, and 5 to 11 years for equipment. Library and museum collections are not depreciated because they are preserved and cared for and have an extraordinarily long useful life.

Endowments

Endowments consist primarily of the land grant endowment trust fund established pursuant to the 1929 federal land grant legislation and its related inflation proofing funds. Alaska Statute 14.40.400 provides that the net income from the sale or use of grant lands must be held in trust in perpetuity. At June 30, 2008 and 2007 the accumulated net earnings and appreciation on investments is $60.7 million and $70 million, respectively. These amounts, which are recorded in the restricted expendable net asset category, are available for expenditure in accordance with spending policies established by the Board of Regents in its capacity as trustee. Alaska Statute 14.40.400 provides the Board of Regents with authority to manage the fund under the total return principles which are intended to preserve and maintain the purchasing power of the endowment principal. The investable resources of the fund are invested in the consolidated endowment fund, a unitized investment fund. The annual spending allowance is currently based on five percent of a five-year moving average of the invested balance. Withdrawals of net earnings appreciation to meet the spending allowance are limited to the unexpended accumulated net earnings of the endowments.

Operating Activities

The university's policy for defining operating activities as reported on the statement of revenues, expenses and changes in net assets are those that generally result from exchange transactions such as payments received for providing services and payments made for services or goods received. Certain significant revenue streams relied upon for operations are recorded as non-operating revenues, as defined by GASB Statement No. 35, including state appropriations and investment earnings.

Scholarship Allowances

Student tuition and fee revenues and certain other revenues from students are reported net of scholarship allowances in the statement of revenues, expenses and changes in net assets. Scholarship allowances are the difference between the stated charge for tuition and room and board provided by the university and the amount paid by the student and/or third parties making payments on the students' behalf.

Lapse of State Appropriations

Alaska Statutes provide that unexpended balances of one-year appropriations will lapse on June 30 of the fiscal year of the appropriation; however, university receipts in excess of expenditures may be expended by the university in the next fiscal year. University receipts include student tuition and fees, donations, sales, rentals, facilities and administrative cost recovery, interest income, auxiliary and restricted revenues. The unexpended balances of capital appropriations lapse upon completion of the project or upon determination that the funds are no longer necessary for the project.

Reclassifications

Certain amounts in the June 30, 2007 financial statements have been reclassified for comparative purposes to conform to the presentation in the June 30, 2008 financial statements.

2. Deposits and Investments:

Deposits and investments at June 30, 2008 were as follows ($ in thousands):

Operating funds consist of cash on hand, time deposits, an overnight repurchase agreement and investments in Commonfund pooled investment funds. Alaska Statutes and Board of Regents' policy provide the university with broad authority to invest funds. Generally, operating funds are invested according to the university's liquidity needs. The Commonfund is a not-for-profit provider of pooled multi-manager investment vehicles for colleges and universities. The university invests in a variety of these funds according to its investment objectives.

Within the operating funds, the university uses the Commonfund Short Term Fund for regular cash management activities and liquidity. In prior years, the Short Term Fund had been classified as a cash and cash equivalent. However, $18.6 million in the Short Term Fund that had been previously classified as a cash and cash equivalent in the June 30, 2007 financial statements, has been classified as a short-term investment for operating purposes in these financial statements. For further discussion, see the *Subsequent Events* section which follows.

Capital funds include unexpended general revenue bond proceeds and related reserves, advances from state capital appropriations and other reserves designated for capital purposes. General revenue bond proceeds of $19.6 million and related reserves totaling $4.3 million are invested with a third party trustee in accordance with terms of a trust indenture, requiring purchase of investment securities that are investment grade.

Endowment funds primarily consist of $143.1 million in investable resources of the university's land grant endowment trust fund and are invested in a consolidated endowment fund (fund) managed by the University of Alaska Foundation (foundation). These resources are combined with the foundation's pooled endowment funds for investment purposes, and managed by the foundation's investment committee and treasurer on a total return basis in accordance with an investment policy approved by the Board of Regents.

College savings program investments include the operating funds of the Education Trust of Alaska, established pursuant to state statute by the Board of Regents to facilitate administration of the state's Internal Revenue Code Section 529 College Savings Program. Program investments are in mutual funds of T. Rowe Price Associates, Inc., the program manager. See Note 4 for further information.

Certain funds held in trust for the benefit of the university are not included in the financial statements as the university has only limited control over their administration. These funds are in the custody of independent fiduciaries and at June 30, 2008 had an estimated fair value of approximately $5.1 million.

At June 30, 2008, the university has approximately $100.8 million in investments which are not readily marketable. Approximately $53.2 million is invested in the consolidated endowment fund managed by the foundation and $47.6 million is invested in hedge funds within the university's operating funds. These investments represent 34.5 percent of total deposits and investments and 10.7 percent of net assets at June 30, 2008. These investment instruments may contain elements of both credit and market risk. Such risks include, but are not limited to, limited liquidity, absence of regulatory oversight, dependence upon key individuals, and nondisclosure of portfolio composition. Because these investments are not readily marketable, their estimated value is subject to uncertainty and therefore may differ from the value that would have been used had a ready market for such investments existed. Such difference could be material.

Disclosures for deposits and investments are presented according to GASB Statement No. 40, *Deposit and Investment Risk Disclosures* (GASB 40). Accordingly, the following information addresses various risk categories for university deposits and investments and the investment policies for managing that risk.

Credit Risk:

Credit risk is the risk that an issuer or other counterparty to an investment will not fulfill its obligations. The university does not have a policy regarding credit risk since it does not normally invest its operating and capital funds in individual debt securities. The consolidated endowment fund investment policy requires all purchases of debt securities to be of investment grade and marketable at the time of purchase unless otherwise approved by the foundation's investment committee. At June 30, 2008, investments consisted of securities with credit quality ratings issued by nationally recognized statistical rating organizations as follows ($ in thousands):

Investment Type	Rating	Operating	Capital Funds	Endowment	College Savings Program
Money Market Mutual Fund	Aaa	-	$ 23,060	-	-
Money Market Mutual Funds	Not Rated	-	-	$ 6	$ 405
Short Term Fund	AAA	$ 21,696	$ 898	$ 6,815	-
Intermediate Term Fund	AA+	$ 5,429	-	$ 98	-
Multi-Strategy Bond Fund	AA	$ 27,380	-	$ 8,834	-
Hedge Funds	Not Rated	$ 47,647	-	$ 27,325	-
Debt-related:					
Federal Agency	AAA	-	$ 876	-	-
Fixed Income Funds	Baa2	-	-	$ 276	-
Fixed Income Funds	Not Rated	-	-	$ 8,922	$ 4,841

Concentration of Credit Risk:

Concentration of credit risk is the risk of loss attributed to the magnitude of the university's investment in a single issuer. GASB 40 requires disclosure when the amount invested with a single issuer, by investment type, exceeds five percent or more of that investment type. At June 30, 2008, the university did not have any material concentrations of credit risk.

The consolidated endowment fund investment policy limits debt investments to five percent by issuer (except for mutual and pooled funds and U.S. government and agencies) for each specific managed portfolio within the consolidated endowment fund unless approved by the treasurer. The university does not have a policy regarding concentration of credit risk since it does not normally invest its operating and capital funds in individual debt investments.

Interest Rate Risk:

Interest rate risk is the risk that changes in interest rates will adversely affect the fair value of an investment. The university uses the modified duration measurement to evaluate interest rate risk. Modified duration measures a debt investment's exposure to fair value changes arising from changing interest rates. For example, a modified duration of 2 means that for a rise in interest rates of one percent, the value of the security would decrease two percent. The university does not have a policy regarding interest rate risk. At June 30, 2008, the university had the following debt investments and corresponding modified duration ($ in thousands):

	Fair Value				
Investment Type	Operating	Capital Funds	Endowment	College Savings Program	Modified Duration
Short Term Fund	$ 21,696	$ 898	$ 6,815	-	3.10
Intermediate Term Fund	$ 5,429	-	$ 98	-	1.90
Multi-Strategy Bond Fund	$ 27,380	-	$ 8,834	-	4.80
Federal Agency	-	$ 876	-	-	1.82
Fixed Income Fund	-	-	-	$ 4,841	4.66
Fixed Income Fund	-	-	$ 8,922	-	4.68
Collateralized Loan Obligation	-	-	$ 276	-	5.42

Hedge funds totaling $75 million are exposed to interest rate risk, however, underlying fund data is not available to measure the interest rate risk.

Custodial Credit Risk:

The custodial credit risk for deposits is the risk that, in the event of the failure of a depository institution, the university will not be able to recover deposits or will not be able to recover collateral securities in the possession of an outside party. For investments, custodial credit risk is the risk that, in the event of failure of the counterparty to a transaction, the university will not be able to recover the value of investment or collateral securities in the possession of an outside party.

At June 30, 2008, the university does not have custodial credit risk. Deposits of the university are covered by Federal Depository Insurance or securities pledged by the university's counterparty to its repurchase agreement held at the Bank of New York. The collateral is held in the name of the university and at June 30, 2008, provided $5.2 million coverage in excess of deposits.

Foreign Currency Risk:

Foreign currency risk is the risk that changes in exchange rates could have an adverse affect on an investment's value for investments denominated in foreign currencies. GASB 40 requires disclosure of value in U.S. dollars by foreign currency denomination and investment type. The university does not have a policy regarding foreign currency risk. At June 30, 2008, the university did not have any foreign currency risk.

Subsequent Events:

Effective September 29, 2008, Wachovia Bank, N.A., as Trustee of the Commonfund for Short Term Investments (the "Short Term Fund") announced its decision to terminate and liquidate the Short Term Fund. No additional contributions to the Short Term Fund will be accepted. Under the liquidation plan, investors in the Short Term Fund will be allowed to withdraw balances based on their proportional interest in the Short Term Fund as assets mature or are sold.

The university's balance in the Short Term Fund was $29.4 million and $46.3 million as of June 30, 2008 and October 29, 2008, respectively. As of October 29, 2008, approximately 16.2 percent of Short Term Fund assets were available for withdrawal. The value of the liquidation proceeds received by the university is not expected to vary significantly from the fair value carried on the fund's books based on the current net asset value of the Short Term Fund. However, the realization of this value will depend upon market conditions including the liquidity of the Short Term Fund's assets during the liquidation period. The university is not anticipating any adverse effects on its available working capital.

Subsequent to June 30, 2008, the fair value of the university's investments had declined due to deterioration in market conditions. Further deterioration in the markets could more likely than not result in further declines.

3. Accounts Receivable:

Accounts receivable consisted of the following at June 30, 2008 and 2007 ($ in thousands):

June 30, 2008	Gross	Allowance	Net
Student tuition and fees	$ 11,857	$ (3,748)	$ 8,109
Sponsored programs	42,176	(1,414)	40,762
Auxiliary services and other operating activities	510	(77)	433
Capital appropriations, grants and contracts	12,554	-	12,554
	$ 67,097	$ (5,239)	$ 61,858

June 30, 2007	Gross	Allowance	Net
Student tuition and fees	$ 9,846	$ (2,888)	$ 6,958
Sponsored programs	40,330	(1,699)	38,631
Pledge receivable	1,100	-	1,100
Auxiliary services and other operating activities	401	(91)	310
Capital appropriations, grants and contracts	6,647	-	6,647
	$ 58,324	$ (4,678)	$ 53,646

4. Education Trust of Alaska:

Assets held in trust include operating funds of the Education Trust of Alaska (Trust). The Trust was established pursuant to state statute on April 20, 2001 by the Board of Regents to facilitate administration of the state's Internal Revenue Code (IRC) Section 529 College Savings Program. The program is a nationally marketed college savings program developed in accordance with IRC Section 529 and includes the resources of the university's former Advance College Tuition (ACT) Program. Participant account balances of approximately $3.2 billion and $3.1 billion at June 30, 2008 and 2007, respectively, are not included in the financial statements. Separately audited Trust financial statements are available upon request from the University of Alaska Controller's office.

Assets of the Trust are invested in various mutual funds at the direction of T. Rowe Price Associates, Inc., the program manager. The net assets of the Trust, which include a reserve for University of Alaska (UA) Tuition Value Guarantees, are available for payment of program administrative costs, benefits and other purposes of the Trust. Based on actuarial studies, management estimates reserve requirements for the UA Tuition Value Guarantees to be approximately $3.5 million and $1.9 million at June 30, 2008 and 2007, respectively.

5. Land Grant Trust Property and Other Assets:

Land Grant Trust property and other assets consist of real property and timber and other rights. By Acts of Congress in 1915 and 1929, approximately 110,000 acres of land was granted to the territory of Alaska to be held in trust for the benefit of the university. The lands were managed by the territory, and later the state of Alaska. In accordance with a 1982 agreement, the lands were subsequently transferred to the Board of Regents, as trustee. In 1982 and 1988 certain state lands including timber and other rights were transferred to the trust as replacement for lands disposed of or adversely affected during the period of administration by the territory and the state. These lands and property interests were recorded at their fair value as of the date of transfer. The net proceeds from timber, land and other rights are deposited in the land grant endowment trust fund as described in the *Endowment* section in Note 1 above. At June 30, 2008 and 2007, approximately 108,614 and 83,200 acres, respectively, were held in trust at no basis because fair value at the date of transfer was not determinable.

On October 23, 2005 House Bill 130, granting to the University of Alaska approximately 250,000 acres of state land, passed into law. The intent of the Legislature is to provide the university with an equitable land grant as originally envisioned in the federal land grant of 1915 and to provide the university ownership of a significant portfolio of income producing land to help fund public higher education in the state of Alaska. Because of restrictions in the legislation related to native allotments, municipal entitlements and the University Research Forest, and delays in the conveyance of two parcels from the federal government to the state of Alaska, only 49 parcels, totaling approximately 198,900 acres, are eligible for immediate conveyance to the university. As of June 30, 2008, the state of Alaska has conveyed 25,902 acres of the state grant lands to the university. Net proceeds and royalties received from property development will be deposited into the land grant endowment trust fund. The lands will be recorded at zero basis when no determinable fair value is available at the time of transfer. The legislation has been challenged and management does not believe the outcome will have a material effect on the financial statements.

6. Capital Assets:

A summary of capital assets follows ($ in thousands):

	Balance July 1, 2007	Additions/ Transfers	Reductions	Balance June 30, 2008
Capital assets not depreciated:				
Land	$ 27,969	$ 145	$ 31	$ 28,083

Less accumulated depreciation:				
Buildings	417,425	38,235	186	455,474
Infrastructure	25,332	1,700	-	27,032
Equipment	133,646	15,387	18,015	131,018
Leasehold improvements	4,563	1,272	-	5,835
Other improvements	14,663	861	-	15,524
Total accumulated depreciation	595,629	57,455	18,201	634,883
Capital assets, net	$ 731,010	$ 79,378	$ 73,494	$ 736,894

7. Unrestricted Net Assets:

At June 30, unrestricted net assets included the following ($ in thousands):

	2008	2007
Designated:		
Auxiliaries	$ 6,394	$ 9,053
Working capital fund	4,715	4,715
Working capital advances	(955)	(2,302)
Service centers	9,705	9,158
Debt service funds	1,494	1,404
Renewal and replacement funds	7,498	6,360
Quasi-endowment funds	79	79
Net pension and OPEB obligations	(31,325)	(30,786)
Employee benefit funds	9,537	6,987
Endowment earnings	12,346	11,296
Encumbrances	10,307	12,256
Total designated	29,795	28,220
Undesignated	36,700	32,715
Total unrestricted net assets	$ 66,495	$ 60,935

Unrestricted net assets include non-lapsing university receipts of $56.7 million at June 30, 2008. Non-lapsing university receipts of $54.1 million from 2007 were fully expended in 2008.

At June 30, 2008 and 2007, $31.8 million and $32.4 million, respectively, of auxiliary funds, encumbrances and other unrestricted net assets were pledged as collateral for the university's general revenue bonds, as calculated under the terms of the 1992 General Revenue Bonds Trust Indenture.

8. Long-term Debt:

Debt service requirements at June 30, 2008 were as follows ($ in thousands):

Year ended June 30,	Principal	Interest	Total
2009	$ 9,659	$ 5,469	$ 15,128
2010	6,280	4,955	11,235
2011	6,469	4,733	11,202
2012	6,685	4,501	11,186
2013	6,916	4,258	11,174
2014-2018	34,935	17,486	52,421
2019-2023	33,913	10,659	44,572
2024-2028	22,376	4,510	26,886
2029-2033	7,775	1,056	8,831
2034-2036	1,670	76	1,746
	$ 136,678	$ 57,703	$ 194,381

Long-term debt consisted of the following at June 30, 2008 and 2007 ($ in thousands):

	2008	2007
Revenue bonds payable 1.40% to 5.45% general revenue bonds due serially to 2036, secured by a pledge of unrestricted current fund revenue generated from tuition, fees, recovery of facilities and administrative costs, sales and services of educational departments, miscellaneous receipts and auxiliaries.	$ 110,120	$ 90,280
Note payable – capital construction 1.826% assisted note to the Alaska Housing Finance Corporation (AHFC) to finance construction of Anchorage campus housing, due semiannually through February 2024.	20,732	21,838
Note payable – real property purchase 8.00% note for purchase of Bunnell Park property adjacent to the University of Alaska Fairbanks campus. The note was fully paid off in September 2008.	3,852	4,646
Equipment financings 3.52% to 4.77% notes for the purchase of equipment and vehicles due in quarterly installments through June 2017.	1,974	2,246
	$ 136,678	$ 119,010

On January 31, 2008, the university issued Series O general revenue bonds totaling $23,795,000. The bonds mature annually each October 1, through 2033 and bear coupon interest rates ranging from 3.375 percent to 4.25 percent. Series O bond proceeds are being used for capital improvement projects.

In fiscal year 2008, the state reimbursed the university $1,411,900 for debt service on Series K general revenue bonds. Subject to annual appropriation, the state will reimburse the university for principal and interest on $18,205,000 of the remaining bond principal. Annual debt service on this portion of the bonds is approximately $1.4 million.

Under the terms of the 1992 General Revenue Bonds Trust Indenture, the university is required to maintain a reserve account with a trustee at an amount equal to one-half of the maximum annual general revenue bond debt service. The balance in the reserve account at June 30, 2008 and 2007 was $4.9 million and $4.2 million, respectively. The reserve balance at June 30, 2008 includes a reserve fund policy, purchased with the issuance of Series L, totaling $0.6 million.

In fiscal year 2006, the university defeased certain maturities of Series G general revenue bonds by placing the proceeds of new bonds in irrevocable trusts to provide for all future debt service payments on the old bonds. Trust assets and related liabilities for the defeased bonds are not included in the university's financial statements. Outstanding defeased bonds were $7.9 million for the year ended June 30, 2007. At June 30, 2008, outstanding defeased bonds were fully paid.

9. Deferred Lease Revenue:

In fiscal year 1997, the university entered into an agreement to construct a facility and establish the International Arctic Research Center (IARC). The university received $19,215,000 through a Japanese non-profit corporation to support the construction of the IARC in exchange for a commitment to provide research facilities to various Japanese research organizations and agencies for a period of 25 years, including lease extensions. The Japanese research organizations began occupying the IARC in fiscal year 1999. The deferred lease revenue at June 30, 2008 is $7,365,750 and is reduced at the rate of $1,281,000 per year with a corresponding increase to other operating revenue.

10. Long-term Liabilities:

Long-term liability activity was as follows ($ in thousands):

	Balance July 1, 2007	Additions	Reductions	Balance June 30, 2008	Amounts due within one year
Capital appropriation advances	$ 6,313	$ 1,903	$ 2,752	$ 5,464	$ -
Deferred lease revenue	8,647	-	1,281	7,366	1,281
Long-term debt	119,010	23,948	6,280	136,678	9,659
Net pension and OPEB obligations	30,786	539	-	31,325	-
Security deposits and other liabilities	5,726	1,671	-	7,397	-
	$ 170,482	$ 28,061	$ 10,313	$ 188,230	$ 10,940

	Balance July 1, 2006	Additions	Reductions	Balance June 30, 2007	Amounts due within one year
Capital appropriation advances	$ 8,116	$ 1,562	$ 3,365	$ 6,313	$ -
Deferred lease revenue	9,928	-	1,281	8,647	1,281
Long-term debt	118,383	5,899	5,272	119,010	6,278
Net pension and OPEB obligations	25,397	5,389	-	30,786	-
Security deposits and other liabilities	6,387	25	686	5,726	-
	$ 168,211	$ 12,875	$ 10,604	$ 170,482	$ 7,559

11. Capital Appropriations and Construction Commitments:

Major construction projects of the university are funded primarily by state of Alaska appropriations and university revenue bonds. The appropriations are financed through state-issued general obligation bonds or capital project bonds issued by the Alaska Housing Finance Corporation, a component unit of the state of Alaska, while other appropriations are received directly from the state or state agencies.

Unexpended and unbilled capital funds appropriated by the state of Alaska in prior years, which are not reflected as appropriation revenue or receivables on the university's books at June 30, 2008, totaled $70.5 million. In addition, unexpended proceeds of university-issued general revenue bonds designated for construction projects totaled $18.3 million at June 30, 2008.

Construction commitments at June 30, 2008 aggregated $61.9 million. At June 30, 2008, the university had received $5.5 million from State of Alaska capital appropriations and other sources in advance of expenditures.

12. Pension Plans:

Substantially all regular employees hired before July 1, 2006 participate in one of the following pension plans:

- The State of Alaska Public Employees' Retirement System (PERS), an agent multiple-employer defined benefit plan,
- The State of Alaska Teachers' Retirement System (TRS), a cost-sharing multiple-employer defined benefit plan,
- The University of Alaska Optional Retirement Plan (ORP), a single-employer defined contribution plan.

In addition, substantially all eligible employees participate in the University of Alaska Pension Plan, a supplemental single-employer defined contribution plan.

State legislation enacted in July 2005 offers new eligible employees hired on or after July 1, 2006 defined contribution retirement plans under PERS and TRS.

The University of Alaska Retirement Program, a single-employer defined contribution plan, which includes participation in both the ORP (Tier III) and the University of Alaska Pension Plan, is also effective for new participants hired on or after July 1, 2006.

Each new eligible employee will have a choice to participate in the applicable state plan or the University of Alaska Retirement Program.

None of the retirement systems or plans own any notes, bonds or other instruments of the university.

Defined Benefit Plans:

State of Alaska Public Employees' Retirement System (PERS)

Plan Description

The university contributes to PERS, a defined benefit, agent multiple-employer public employee retirement system established and administered by the state of Alaska. PERS provides pension, postemployment health care, death and disability benefits to eligible participants. Benefit and contribution provisions are established by state law and may be amended only by the state legislature.

Each fiscal year, PERS issues a publicly available financial report which includes financial statements and required supplementary information. That report may be obtained by writing to the State of Alaska, Department of Administration, Division of Retirement and Benefits, P.O. Box 110203, Juneau, Alaska, 99811-0203 or by calling (907) 465-4460.

Funding Policy and Annual Pension Cost

Employee contribution rates are 7.5 percent for peace officers and firefighters and 6.75 percent for other employees, as required by state statute. The funding policy for PERS provides for periodic employer contributions at actuarially determined rates that, expressed as a percentage of annual covered payroll, are sufficient to accumulate the assets to pay benefits when due. However, the 2008 actuarially determined rate was 28.23 percent of applicable gross pay and the employer contribution rate was capped by the state at 22 percent. Additionally, the state appropriated funding directly to the PERS defined benefit plan to augment the PERS employers' contribution for fiscal year 2008. The university recognized $7,672,429 in state on-behalf pension payments for the PERS defined benefit plan.

The university's annual pension cost for the current year and related information is as follows:

	Pension	Postemployment healthcare	Total
Contribution rates:			
Employee:			
Peace officers and firefighters	3.83%	3.67%	7.50%
Other employees	3.44%	3.31%	6.75%
Employer	11.22%	10.78%	22.00%
Annual pension/OPEB cost	$18,391,477	$17,656,104	$36,047,581
Contributions made	$18,116,422	$17,392,050	$35,508,472
Actuarial assumptions:			
Inflation rate	3.50%	Same	
Investment return	8.25%	Same	
Projected salary increase:			
Inflation	3.50%	N/A	
Productivity and merit:			
Peace officers and firefighters	2.50%	N/A	
Others	2.00%	N/A	
Health cost trend			
Medical	N/A	8.50%	
Pharmacy	N/A	12.00%	

An actuarial valuation as of June 30, 2005 set the contribution rates for the year ended June 30, 2008. The projected unit credit method was used and the initial unfunded accrued liability and future gains/losses are being amortized on a 25-year fixed period level percentage of pay.

The university's net pension obligation (NPO) for fiscal year 2008 was as follows:

Annual required contribution	$ 18,116,422
Interest on net pension obligation	1,295,840
Adjustment to annual required contribution	(1,020,785)
Annual pension cost (APC)	18,391,477
Contributions made	(18,116,422)
Increase in net pension obligation	275,055
Net pension obligation beginning of year	18,733,288
Net pension obligation end of year	$ 19,008,343

Three year trend information for pension benefits follows:

Year Ended June 30	APC	Percentage of APC Contributed	NPO
2006	$18,116,634	66.92%	$15,572,221
2007	$18,801,669	83.19%	$18,733,288
2008	$18,391,477	98.50%	$19,008,343

The university's net other postemployment obligation (OPEB) for fiscal year 2008 was as follows:

Annual required contribution	$ 17,392,050
Interest on net OPEB obligation	1,244,026
Adjustment to annual required contribution	(979,972)
Annual OPEB cost	17,656,104
Contributions made	(17,392,050)
Increase in net OPEB obligation	264,054
Net OPEB obligation beginning of year	12,052,964
Net OPEB obligation end of year	$ 12,317,018

Three year trend information for postemployment healthcare benefits follows:

Year Ended June 30	Annual OPEB Cost	Percentage of Annual OPEB Cost Contributed	Net OPEB Obligation
2006	$12,107,981	66.92%	$ 9,824,318
2007	$13,255,737	83.19%	$12,052,964
2008	$17,656,104	98.50%	$12,317,018

Funding Status and Funding Progress

Actuarial valuations involve estimates of the value of reported amounts and assumptions about the probability of events far into the future. Actuarially determined amounts are subject to continual revision as actual results are compared to past expectations and new estimates are made about the future. The schedule of funding progress, presented as required supplementary information (RSI) following the notes to the financial statements, presents multiyear trend information that shows whether the actuarial value of plan assets is increasing or decreasing over time relative to the actuarial accrued liabilities for pension and other postemployment healthcare benefits. The funded status of PERS for pension and other postemployment healthcare benefits (OPEB) as of June 30, 2006, was as follows ($ in thousands):

	Pension	OPEB	Total
Actuarial accrued liability (AAL)	$ 522,315	$ 468,355	$ 990,670
Actuarial value of plan assets	456,238	195,281	651,519
Unfunded actuarial accrued liability (UAAL)	$ (66,077)	$(273,074)	$(339,151)
Funded ratio (actuarial value of plan assets/AAL)	87%	42%	66%
Covered payroll (active plan members)	$ 135,451	$ 135,451	$ 135,451
UAAL as a percentage of covered payroll	49%	202%	172%

PERS Defined Benefit Pension Plan Changes

The Alaska Legislature Senate Bill 125, signed into law April 9, 2008, converts PERS from an agent multiple-employer plan to a cost-sharing plan effective July 1, 2008. This change provided for an integrated system of accounting for all employers. Under the integrated system, the PERS defined benefit plans' unfunded liability will be shared among all employers. The Bill also established a uniform PERS employer contribution rate of 22 percent of participating employees' covered payroll.

State of Alaska Teachers' Retirement System (TRS)

Plan Description

TRS provides pension, postemployment health care, death and disability benefits to participants. Benefit and contribution provisions are established by state law and may be amended only by the state legislature.

Each fiscal year, TRS issues a publicly available financial report which includes financial statements and required supplementary information. That report may be obtained by writing to the State of Alaska, Department of Administration, Division of Retirement and Benefits, P.O. Box 110203, Juneau, Alaska, 99811-0203 or by calling (907) 465-4460.

Funding Policy

Employees contribute 8.65 percent of their base salary as required by state statute. The funding policy for TRS provides for periodic employer contributions at actuarially determined and ARMB approved rates that, expressed as percentages of annual covered payroll, are sufficient to accumulate sufficient assets to pay benefits when due. During fiscal year 2008, contractually required employee and employer contribution rates were 8.65 percent and 12.56 percent, respectively. No net pension or OPEB obligation is recorded for TRS, since according to GASB 27 and GASB 45 no such obligation is recorded for cost-sharing defined benefit plans when an employer's contribution equals the contractually required contribution. The amounts contributed to TRS by the university during the years ended June 30, 2008, 2007 and 2006 were $5,444,878, $11,177,596, and $9,167,681, respectively, equal to the required employer contributions for each year.

The actuarially determined employer contribution rate for 2008 was 42.26 percent. Upon consideration of actuarial reports on the funded status of the TRS defined benefit plan, the ARMB approved an employer contribution rate of 54.03 percent for FY08. As provided by Alaska Statute AS 14.25.070(a), the Legislature appropriated funding directly to the TRS defined benefit plan to augment the TRS employers' contribution for FY08. For fiscal year 2008, the university recognized $20,790,988 in state on-behalf pension payments for the TRS defined benefit plan.

Defined Contribution Plans:

State of Alaska Public Employees' Retirement System (PERS)

For eligible employees hired on or after July 1, 2006, the university contributes to PERS (Tier IV), a hybrid defined contribution and OPEB cost-sharing defined benefit plan established and administered by the state of Alaska. PERS provides pension, post employment health care, and occupational death and disability benefits to eligible participants. Benefit and contribution provisions are established by state law and may be amended only by the state legislature.

Each fiscal year, PERS issues a publicly available financial report which includes financial statements and required supplementary information. That report may be obtained by writing to the State of Alaska, Department of Administration, Division of Retirement and Benefits, P.O. Box 110203, Juneau, Alaska, 99811-0203 or by calling (907) 465-4460.

Employee contribution rates are 8 percent and employer contributions are 5 percent of covered payroll for fiscal years 2008 and 2007. For the years ended June 30, 2008 and 2007, the university's total covered payroll for the PERS plan was approximately $3.2 million and $1.3 million, and contributions made by the university totaled $158,626 and $66,682, respectively.

On July 1, 2006, the Public Employees' and Teachers' Retiree Major Medical Insurance Plan (RMP) and Health Reimbursement Arrangement Plan (HRA) were created. A separate stand-alone financial report that includes financial statements and required supplementary information is issued for RMP and HRA. These reports may be obtained by writing to the State of Alaska, Department of Administration, Division of Retirement and Benefits, P.O. Box 110203, Juneau, Alaska, 99811-0203 or by calling (907) 465-4460.

PERS defined contribution participants are eligible members of RMP and HRA. The employer RMP contribution rates for fiscal year 2008 and 2007 are 0.99 percent and 1.75 percent for medical coverage, and 0.58 percent and 0.3 percent (1.33 percent and 0.4 percent for peace officers and firefighters) for occupational death and disability benefit contributions, respectively. For fiscal years 2008 and 2007, the HRA employer contributions are at 3 percent of the employer's average annual employee compensation, based on the participant's employment classification.

The amounts contributed to the RMP by the university during the years ended June 30, 2008 and 2007 were $50,374 and $27,183, respectively, equal to the required employer contributions for each year.

Contributions to the HRA by the university during the years ended June 30, 2008 and 2007 were $137,148 and $70,096, respectively.

State of Alaska Teachers' Retirement System (TRS)

For eligible employees hired on or after July 1, 2006, the university contributes to TRS (Tier III), a hybrid defined contribution and OPEB cost-sharing defined benefit plan established and administered by the state of Alaska. TRS provides pension, postemployment health care, and occupational death and disability benefits to eligible participants. Benefit and contribution provisions are established by state law and may be amended only by the state legislature.

Each fiscal year, TRS issues a publicly available financial report which includes financial statements and required supplementary information. That report may be obtained by writing to the State of Alaska, Department of Administration, Division of Retirement and Benefits, P.O. Box 110203, Juneau, Alaska, 99811-0203 or by calling (907) 465-4460.

Employee contribution rates are 8 percent and employer contributions are 7 percent of covered payroll for fiscal years 2008 and 2007. For the years ended June 30, 2008 and 2007, the university's total covered payroll for the TRS plan was approximately $1.8 million and $0.9 million, and contributions made by the university totaled $129,000 and $60,403, respectively.

On July 1, 2006, the Public Employees' and Teachers' Retiree Major Medical Insurance Plan (RMP) and Health Reimbursement Arrangement Plan (HRA) were created. A separate stand-alone financial report that includes financial statements and required supplementary information is issued for RMP and HRA. These reports may be obtained by writing to the State of Alaska, Department of Administration, Division of Retirement and Benefits, P.O. Box 110203, Juneau, Alaska, 99811-0203 or by calling (907) 465-4460.

TRS defined contribution participants are eligible members of RMP and HRA. The employer RMP contribution rates for fiscal year 2008 and 2007 are 0.99 percent and 1.75 percent for medical coverage, and 0.62 percent and 0 percent for occupational death and disability benefit contributions, respectively. For fiscal years 2008 and 2007, the HRA employer contributions are at 3 percent of the employer's average annual employee compensation, based on the participant's employment classification.

The amounts contributed to the RMP by the university during the years ended June 30, 2008 and 2007 were $29,682 and $15,087, respectively, equal to the required employer contributions for each year.

Contributions to the HRA by the university during the years ended June 30, 2008 and 2007 were $53,701 and $28,415, respectively.

University of Alaska Optional Retirement Plan (ORP)

The ORP is comprised of three layers of participants, the original ORP or ORP Tier 1, ORP Tier 2 which was created for participants hired on or after July 1, 2005, and ORP Tier 3 which was created for participants hired on or after July 1, 2006. For ORP Tier 1 and ORP Tier 2, faculty classified as regular and certain administrators made a one-time election to participate in the ORP as an alternative to participation in the defined benefit plans, PERS or TRS. For ORP Tier 3, each new eligible employee may make a one-time election to participate in the University of Alaska Retirement Program (includes ORP Tier 3 and the University of Alaska Pension Plan) as an alternative to participation in the State of Alaska defined contribution plans, PERS or TRS. The ORP is an employer funded defined contribution plan which operates in conjunction with a companion mandatory tax-deferred annuity plan.

ORP Tier 1

The ORP Tier 1 participants make employee contributions to one of the plan's annuity programs at a rate of 8.65 percent of covered payroll. The university contributes to one of the plan's authorized employee-selected annuity providers or investment managers at a rate equal to the three-year moving average of the TRS employer contribution rates (19.85 percent for FY08 and 21 percent for FY07).

In fiscal year 2008 and 2007, the university's total covered payroll for the ORP Tier 1 plan was approximately $50.1 million and $52 million, respectively. The amounts contributed to the ORP Tier 1 by the university during the years ended June 30, 2008, 2007, and 2006 were $9,945,730, $10,927,908 and $8,907,978, respectively.

ORP Tier 2

The ORP Tier 2 participants make employee contributions to one of the plan's annuity programs at a rate of 8.65 percent of covered payroll. The university contributed to one of the plan's authorized employee-selected annuity providers or investment managers at a rate of 12 percent of covered payroll for fiscal years 2008 and 2007.

In fiscal year 2008 and 2007, the university's total covered payroll for the ORP Tier 2 plan was approximately $5.1 million and $5.7 million, respectively. The amounts contributed to the ORP Tier 2 by the university during the years ended June 30, 2008, 2007 and 2006 were $614,390, $683,786 and $484,288, respectively.

The ORP Tier 2 plan was available for newly-hired ORP benefit-eligible employees hired in fiscal year 2006. As of July 1, 2006, the ORP Tier 2 plan was no longer available to newly-hired ORP benefit-eligible employees.

ORP Tier 3

The ORP Tier 3 is eligible for employees hired on or after July 1, 2006. The ORP Tier 3 participants make employee contributions to one of the plan's annuity programs at a rate of 8 percent of covered payroll. The university contributed to one of the plan's authorized employee-selected annuity providers or investment managers at a rate of 12 percent of covered payroll for fiscal years 2008 and 2007.

In fiscal years 2008 and 2007, the university's total covered payroll for the ORP Tier 3 plan was approximately $30.8 million and $12.3 million, respectively. The amounts contributed to the ORP Tier 3 by the university during the years ended June 30, 2008 and 2007 were $3,700,880 and $1,473,090, respectively.

Plan Assets

At June 30, 2008 and 2007, plan assets (participants' accounts attributable to employer contributions) had a net value of approximately $98.9 million for ORP Tier 1, ORP Tier 2 and ORP Tier 3, and $92.3 million for ORP Tier 1, ORP Tier 2 and ORP Tier 3, respectively. ORP Tier 1 and ORP Tier 2 participants are 100 percent vested at all times. University contributions for ORP Tier 3 participants are 100 percent vested after three years of service.

University of Alaska Pension Plan (Pension)

In addition to the other retirement plans, substantially all regular employees (hired before July 1, 2006) and certain faculty classified as temporary participate in the Pension plan which was established effective January 1, 1982, when the university withdrew from the federal social security program. Eligible employees, hired on or after July 1, 2006, electing to participate in the University of Alaska Retirement Program also participate in the Pension plan. Effective January 1, 2008, employer contributions for regular employees were 7.65 percent of covered wages up to a maximum of $42,000 and $102,000 for certain faculty classified as temporary. The plan provides for employer contributions to be invested in accordance with participant-directed investment elections to the plan's fixed income and/or equity funds. Participants hired before July 1, 2006 are 100 percent vested at all times. University contributions for participants hired on or after July 1, 2006 are 100 percent vested after three years of service.

In 2008 and 2007, the university's total covered payroll for the Pension plan was approximately $175.7 million and $175.3 million, respectively. The university's costs to fund and administer the plan totaled $13.4 million, or 7.65 percent of covered payroll. At June 30, 2008 and 2007, plan assets (participants' accounts) had a net value of approximately $298.9 million and $318.8 million, respectively.

13. Insurance and Risk Management:

The university is exposed to a wide variety of risks including property loss, bodily and personal injury, intellectual property, errors and omissions, aviation and marine. Exposures are handled with a combination of self-insurance, commercial insurance, and membership in a reciprocal risk retention group. The university is self-insured up to the maximum of $2 million per occurrence for casualty claims and $250,000 for property claims. Commercial carriers provide coverage in excess of these amounts. Health care, workers' compensation and unemployment claims are fully self-insured.

Liabilities have been established to cover estimates for specific reported losses, estimates for unreported losses based upon past experience modified for current trends, and estimates of expenses for investigating and settling claims.

Changes in applicable liability amounts follow ($ in thousands):

	Balance July 1, 2007	Provision for Claims	Claims Payment	Balance June 30, 2008
Health	$ 6,862	$ 49,052	$ (48,116)	$ 7,798
General liability	5,075	857	(570)	5,362
Workers' compensation	6,161	1,688	(1,798)	6,051
Unemployment	70	303	(301)	72
	$ 18,168	$ 51,900	$ (50,785)	$ 19,283

	Balance July 1, 2006	Provision for Claims	Claims Payment	Balance June 30, 2007
Health	$ 6,404	$ 45,764	$ (45,306)	$ 6,862
General liability	7,518	743	(3,186)	5,075
Workers' compensation	5,778	2,075	(1,692)	6,161
Unemployment	69	316	(315)	70
	$ 19,769	$ 48,898	$ (50,499)	$ 18,168

14. Commitments and Contingencies:

Amounts received and expended by the university under various federal and state grants, contracts and other programs are subject to audit and potential disallowance. From time to time the university is named as a defendant in legal proceedings or cited in regulatory actions related to the conduct of its operations. In the normal course of business, the university also has various other commitments and contingent liabilities which are not reflected in the accompanying financial statements. In the opinion of management, the university will not be affected materially by the final outcome of any of these legal proceedings, environmental investigations, audit adjustments, or other commitments and contingent liabilities. In addition, an ongoing environmental assessment for the Northwest Campus Front Street property is discussed below:

- The university received a Potentially Responsible Party (PRP) letter from the Alaska Department of Environmental Conservation (ADEC) in August 2006. The letter identified the university as one of the potential parties that may be responsible for cleanup costs of soil contamination found during a water line improvement project next to Northwest Campus property. The extent of the contamination source, the number of potentially responsible parties, and remediation costs are being assessed but the outcome is unknown.

15. University of Alaska Foundation:

The University of Alaska Foundation (foundation) is a legally separate, non profit organization formed in 1974 to solicit donations for the exclusive benefit of the University of Alaska. During 2008 and 2007, the university transferred $1.1 million and $1 million, to the foundation, of which institutional support comprised $0.9 million and $0.8 million, respectively. For the same periods, the foundation reimbursed the university for operating expenses totaling $1.8 million and $1.5 million, respectively. At June 30, 2008 and 2007, distributions and expenditures by the foundation for the benefit of the university totaled $15.4 million and $15.5 million, of which $14.9 million and $15.2 million were direct reimbursements to the university. Additionally, the foundation owed the university $2 million at June 30, 2008 and $1.9 million at June 30, 2007, primarily for reimbursement of expenditures on grants provided by the foundation.

The investable resources of the university's land grant endowment trust fund and the foundation's pooled endowment funds are combined into a consolidated endowment fund for investment purposes. At June 30, 2008 and 2007, the fair value of the fund was $259.3 million and $266.5 million, respectively. The university's share of this fund was $143.1 million and $147.0 million, which is reflected in endowment investments. The fund is managed by the foundation's investment committee and treasurer on a total return basis in accordance with an investment policy approved by the Board of Regents. The net assets and related activity for the university's land grant endowment trust's investment in the fund is reflected in the university's financial statements.

16. Functional Classifications with Natural Classifications:

The university's operating expenses by natural classification were as follows ($ in thousands):

	Year ended June 30, 2008						
	Compensation & Benefits	Contractual Services	Supplies & Materials	Other	Student Aid	Depre-ciation	Total

Independent Auditors' Report on Compliance with Requirements Applicable to Each Major Program, Internal Control over Compliance and Supplementary Schedule of Expenditures of Federal Awards in Accordance with OMB Circular A-133

The Board of Regents
The University of Alaska:

Compliance

We have audited the compliance of the University of Alaska with the types of compliance requirements described in the *U.S. Office of Management and Budget (OMB) Circular A-133 Compliance Supplement* that are applicable to each of its major federal programs for the year ended June 30, 2008. The University of Alaska's major federal programs are identified in the summary of auditors' results section of the accompanying schedule of findings and questioned costs. Compliance with the requirements of laws, regulations, contracts and grants applicable to each of its major federal programs is the responsibility of the University of Alaska's management. Our responsibility is to express an opinion on the University of Alaska's compliance based on our audit.

We conducted our audit of compliance in accordance with auditing standards generally accepted in the United States of America; the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States; and OMB Circular A-133, *Audits of States, Local Governments, and Non-Profit Organizations*. Those standards and OMB Circular A-133 require that we plan and perform the audit to obtain reasonable assurance about whether noncompliance with the types of compliance requirements referred to above that could have a direct and material effect on a major federal program occurred. An audit includes examining, on a test basis, evidence about the University of Alaska's compliance with those requirements and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion. Our audit does not provide a legal determination on the University of Alaska's compliance with those requirements.

In our opinion, the University of Alaska complied, in all material respects, with the requirements referred to above that are applicable to its major federal programs for the year ended June 30, 2008. However, the results of our auditing procedures disclosed instances of noncompliance with those requirements, which are required to be reported in accordance with Circular A-133 and which are described in the accompanying schedule of findings and questioned costs as item 2008–1.

Internal Control over Compliance

The management of the University of Alaska is responsible for establishing and maintaining effective internal control over compliance with the requirements of laws, regulations, contracts, and grants applicable to federal programs. In planning and performing our audit, we considered the University of Alaska's internal control over compliance with the requirements that could have a direct and material effect on a major federal program in order to determine our auditing procedures for the purpose of expressing our opinion on compliance, but not for the purpose of expressing an opinion on the effectiveness of internal

KPMG LLP, a U.S. limited liability partnership, is the U.S. member firm of KPMG International, a Swiss cooperative.

control over compliance. Accordingly, we do not express an opinion on the effectiveness of the University of Alaska's internal control over compliance.

Our consideration of internal control over compliance was for the limited purpose described in the preceding paragraph and would not necessarily identify all deficiencies in the University of Alaska's internal control that might be significant deficiencies or material weaknesses as defined below. However, as discussed below, we identified a certain deficiency in internal control over compliance that we consider to be a significant deficiency.

A control deficiency in an entity's internal control over compliance exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent or detect noncompliance with a type of compliance requirement of a federal program on a timely basis. A significant deficiency is a control deficiency, or combination of control deficiencies, that adversely affects the entity's ability to administer a federal program such that there is more than a remote likelihood that noncompliance with a type of compliance requirement of a federal program that is more than inconsequential will not be prevented or detected by the entity's internal control. We consider the deficiency in internal control over compliance described in the accompanying schedule of findings and questioned costs as item 2008-1 to be a significant deficiency.

A material weakness is a significant deficiency, or combination of significant deficiencies, that results in more than a remote likelihood that material noncompliance with a type of compliance requirement of a federal program will not be prevented or detected by the entity's internal control. We did not consider the deficiency described in the accompanying schedule of findings and questioned costs to be a material weakness.

Schedule of Expenditures of Federal Awards

We have audited the basic financial statements of the University of Alaska and its discretely presented component unit as of and for the year ended June 30, 2008, and have issued our report thereon dated November 4, 2008. Our audit was performed for the purpose of forming an opinion on the basic financial statements taken as a whole. The accompanying schedule of expenditures of federal awards is presented for purposes of additional analysis as required by OMB Circular A-133 and is not a required part of the basic financial statements. Such information has been subjected to the auditing procedures applied in the audit of the basic financial statements and, in our opinion, is fairly stated, in all material respects, in relation to the basic financial statements taken as a whole.

* * * * * * *

This report is intended for the information of the Board of Regents, management, and federal awarding agencies and pass-through entities and is not intended to be and should not be used by anyone other than these specified parties.

KPMG LLP

November 4, 2008, except for compliance with requirements applicable to each major program and internal control over compliance which is as of December 18, 2008.

UNIVERSITY OF ALASKA

Notes to Schedule of Expenditures of Federal Awards

Year ended June 30, 2008

(1) General

The accompanying Schedule of Expenditures of Federal Awards presents the activity of all federal financial assistance programs of the University of Alaska. The University of Alaska is a constitutionally created corporation and a component unit of the State of Alaska. Federal financial assistance received directly from federal agencies as well as federal financial assistance passed through other government agencies is included on the schedule.

(2) Basis of Accounting

The accompanying Schedule of Expenditures of Federal Awards is presented using the economic resources measurement focus and accrual basis of accounting, which is described in note 1 to the University of Alaska's financial statements.

(3) Noncash Federal Awards

The University receives Federal awards under the Perkins Loan Program (CFDA #84.638). The outstanding loan balances under this program totaled ($2,327) as of June 30, 2008.

(4) Subrecipients

The University of Alaska passed through $6,187,553 of federal awards to subrecipients during the year ended June 30, 2008. Expenditures incurred by the subrecipients are listed below by federal program. These amounts are included in the Schedule of Expenditures of Federal Awards.

Federal Agency and Program	CFDA#	Expenditures
Department of Agriculture		
Agricultural Research – Basic and Applied Research	10.001	$ 295,664

Schedule of Findings and Questioned Costs

June 30, 2008

(1) Summary of Auditors' Results

Financial Statements:				
Type of auditor's report issued	Unqualified			
Internal control over financial reporting:				
Material weakness(es) identified?		yes	X	no
Significant deficiency(ies) identified that are not considered to be material weaknesses?		yes	X	none reported
Noncompliance material to financial statements noted?		yes	X	no
Federal Awards:				
Internal control over major programs:				
Material weakness(es) identified?		yes	X	no
Significant deficiency(ies) identified that are not considered to be material weaknesses?	X	yes		no
Type of auditor's report issued on compliance for major programs	Unqualified			
Any audit findings disclosed that are required to be reported in accordance with section 510(a) of OMB Circular A-133?	X	yes		no

Identification of major programs:

CFDA Numbers	Name of Federal Program or Cluster
Various	Student Financial Aid Cluster
84.031	Department of Education, Higher Education-Institutional Aid
84.356	Department of Education, Alaska Native Education Grants

Dollar threshold used to distinguish between type A and type B programs:	$ 3,000,000			
Auditee qualified as low-risk auditee?	X	yes		no

(2) Findings Relating to General Purpose Financial Statements Reported in Accordance with *Government Auditing Standards*

None.

1082

(3) Findings and Questioned Costs Related to Federal Award

Finding 2008–1

Department of Education (DOE), Student Financial Assistance (SFA) Programs Cluster, Federal Family Education Loans (FFEL) (CFDA #84.032) and Federal Pell Grant Program (CFDA #84.063)

Criteria or Specific Requirements – According to the Code of Federal Regulations (CFR), Title 34, Section 668-22, when a recipient of Title IV grant or loan assistance withdraws from an institution during a payment period in which the recipient began attendance, the institution must determine the amount of Title IV assistance earned by the student as of the student's withdrawal date. If the total amount of Title IV assistance earned by the student is less than the amount that was disbursed to the student or on his or her behalf as of the date of the institution's determination that the student withdrew, the difference must be returned to the Title IV programs. In accordance with CFR, Title 34, Section 668-22, returned funds are to be allocated in the following order: unsubsidized, subsidized and then Pell Grants.

According to the CFR, Title 34, Section 668-173, returns of Title IV funds are required to be deposited or transferred into the Student Financial Assistance account or electronic fund transfers initiated to the Department of Education or the appropriate Federal Family Education Loans lender as soon as possible, but no later than thirty days after the date the institution determines the student withdrew.

Condition – For the program year 2007-2008, the University of Alaska Fairbanks failed to identify withdrawn Title IV recipients in a timely manner, incorrectly calculated return amounts for some students, and allocated one return to the wrong fund.

For the program year 2007-2008, the University of Alaska Anchorage and the University of Alaska Southeast failed to identify withdrawn Title IV recipients in a timely manner.

Questioned Costs – None.

Context – Isolated to Federal Family Education Loans and Federal Pell Grant Program.

Effect – The University of Alaska Fairbanks returned Title IV funds untimely for 11 students that withdrew from the institution. For 9 of the 11 returns, no return of funds calculation was made for $2,095, $2,394, and $1,854 in subsidized loans, unsubsidized loans and Pell Grant awards, respectively. In addition, due to a manual entry error, a return for $2,036 was allocated to the wrong loan fund.

The University of Alaska Anchorage returned Title IV funds untimely for 5 students that withdrew from the institution.

The University of Alaska Southeast returned Title IV funds untimely for 3 students that withdrew from the institution.

Recommendation – The University should make every effort to properly calculate and return Title IV funds within the allowable time period.

701 West Eighth Avenue
Anchorage, AK 99501

Independent Auditors' Report on Internal Control over Financial Reporting and on Compliance and Other Matters Based on an Audit of Financial Statements Performed in Accordance with *Government Auditing Standards*

The Board of Regents
The University of Alaska:

We have audited the financial statements of the University of Alaska and its discretely presented component unit as of and for the year ended June 30, 2008, and have issued our report thereon dated November 4, 2008. We conducted our audit in accordance with auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States.

Internal Control over Financial Reporting

In planning and performing our audit, we considered the University of Alaska's internal control over financial reporting as a basis for designing our auditing procedures for the purpose of expressing an opinion on the financial statements, but not for the purpose of expressing an opinion on the effectiveness of the University of Alaska's internal control over financial reporting. Accordingly, we do not express an opinion on the effectiveness of the University of Alaska's internal control over financial reporting.

A control deficiency exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent or detect misstatements on a timely basis. A significant deficiency is a control deficiency, or combination of control deficiencies, that adversely affects the entity's ability to initiate, authorize, record, process, or report financial data reliably in accordance with generally accepted accounting principles such that there is more than a remote likelihood that a misstatement of the financial statements will not be prevented or detected by the entity's internal control.

Our consideration of internal control over financial reporting was for the limited purpose described in the first paragraph of this section and would not necessarily identify all deficiencies in internal control that might be significant deficiencies or material weaknesses. We did not identify any deficiencies in internal control over financial reporting that we consider to be material weaknesses, as defined above.

Compliance and Other Matters

As part of obtaining reasonable assurance about whether the University of Alaska's financial statements are free of material misstatement, we performed tests of its compliance with certain provisions of laws, regulations, contracts and grant agreements, noncompliance with which could have a direct and material effect on the determination of financial statement amounts. However, providing an opinion on compliance with those provisions was not an objective of our audit and, accordingly, we do not express such an opinion. The results of our tests disclosed no instances of noncompliance or other matters that are required to be reported under *Government Auditing Standards*.

KPMG LLP, a U.S. limited liability partnership, is the U.S. member firm of KPMG International, a Swiss cooperative.

November 4, 2008

Revenue Descriptions

State appropriated funds:

General Fund (1004): Monies received from the general operating fund of the state used to finance the general operations of the university.

General Fund Match (1003): Monies received from the general operating fund of the state specifically authorized for funding matching requirements of restricted funds and are reserved for these purposes exclusively.

GF/Mental Health (1037): GF/Mental Health revenues help fund the Masters of Social Work program at UAA. This program provides specialized curriculum for working with the beneficiary groups of the Mental Health Trust Authority and Alaska Native populations, providing an in-state avenue for social workers in Alaska to earn a Master's Degree. This degree is required for licensing for many federal and state positions, including clinical social workers. Licensed clinical social workers are the primary providers of mental health services in much of Alaska, particularly communities served by and dependent upon community mental health centers.

Science & Technology (1025): Alaska Science & Technology funds were first appropriated directly to the university in FY93 as a replacement for general funds for agricultural, forestry and other land resource programs. They were the primary source of unrestricted revenue for these programs and provided match for federal and other restricted grants. This fund source was changed to Alaska Science and Technology Endowment Funding (1176) in FY03 and eliminated in FY04.

Alaska Science and Technology Endowment Fund (1176): Alaska Science and Technology Endowment Fund was appropriated in FY03 to UA to replace part of the annual funds UA has received from Alaska Science and Technology Foundation (1025).

Statutory Designated Program Receipts (1108): Statutory Designated Program Receipts include UA Alumni License Plate Funds.

ACPE (1150): Alaska Commission on Postsecondary Education (FY01 and FY02 only)

Technical and Vocational Education (1151): Since 2001 Senate Bill 137 (established in 2000 by SB289), has provided Technical Vocational Education Program (TVEP) funding to be used for workforce development (WFD) programs at UA.

Business License and Corporate Filing Fees and Taxes (1175): Used in FY09 as the funding source for UAA's Small Business Development Center (previously funded through the capital budget). This fund source was changed to General Fund (1004) in FY10.

University Receipts:

Interest Income (1010): Interest Income includes income generated from short-term investments from grant receipts and auxiliary enterprises.

Auxiliary Receipts (1015): Auxiliary Receipts include all revenues associated with self-support activities such as the bookstore, food service and housing operations.

Student Tuition/Fees (1038): Student Tuition/Fees includes revenues generated from tuition charged to students for instructional programs as well as fees charged in support of specific activities such as material, lab, activity and health center fees.

Revenue Descriptions (continued)

Indirect Cost Recovery (1039): Indirect Cost Recovery (ICR) revenues are generated from federal and other restricted grants, and are used to help offset administrative and support costs that can not be efficiently tracked directly to grant programs. ICR rates vary according to rates audited and approved by the university's cognizant federal oversight agency.

University Receipts (1048): University Receipts include restricted revenues received from corporate sources, private donations, and local governments, as well as revenues received from publication sales, non-credit self-support programs, recreational facility use fees, and other miscellaneous sources. As of FY03, University Receipts does not include current State Intra-Agency Receipts (1007), those funds are now reported as State Intra-Agency Receipts (1007), while funds previously reported using code 1007 are now under a new code (1174) as UA Intra-Agency Receipts.

Other Funds:

Federal Receipts (1002): Federal Receipts include all revenues received from the federal government. These include restricted federal grants from such agencies as the National Science Foundation, U.S. Small Business Administration, U.S. Dept. of Defense and other federal agencies, as well as federal funding for student financial aid and work-study programs.

State Inter-Agency Receipts (1007): State Inter-Agency Receipts includes contractual obligations between state agencies. University account code 9330 only, which prior to FY03 was included in state code 1048. Prior to FY03 state code 1007 was UA Intra-Agency Receipts. UA account codes that went to state code 1007 prior to FY03 now are captured in state code 1174.

MHTAAR (1092): Mental Health Trust Authority Authorized Receipts

CIP Receipts (1061): CIP receipts are generated by chargeback to capital improvement projects to support CIP personal service administrative costs.

UA Intra-Agency Receipts (1174): Previously this Fund Source was UA Intra-Agency Receipts (1007). UA Intra-Agency Receipts include all internal charges for services provided by central service departments to other university departments. This includes services such as physical plant work orders, printing, and computer repairs, and certain administrative functions such as risk management and labor relations.

Fund Types:

Unrestricted Funds: Unrestricted funds are those current funds which are available for use within the current operating period, i.e., fiscal year, for which there is no apparent use restriction.

Auxiliary Funds: Auxiliary funds are unrestricted current funds of enterprises which furnish services directly or indirectly to students, faculty or staff and which charge fees directly relating to, but not necessarily equal to, the costs of the services. Bookstores and housing systems are examples of enterprises which generally meet the accounting criteria for classification as auxiliary enterprises.

Designated Funds: Designated funds are unrestricted current funds which have internal restrictions but which do not meet the accounting guidelines for restricted funds. Funds for UA Scholars is an example of designated funds.

Restricted Funds: Restricted funds are current funds received by the university but their use is limited to specific projects or purposes by grantors, donors or other external sources.

NCHEMS Descriptions

The University of Alaska classifies all expenditures into standardized categories that are nationally recognized and are generally utilized by most institutions of higher education. These categories, which were first developed by the National Center for Higher Education Management Systems (NCHEMS), are described below:

Instruction and Student Related:

Academic Support: The academic support category includes expenditures related to academic administration and governance to the institution's academic programs; academic program advising; course and curriculum planning, research, development and evaluation, including faculty development; and academic computing, including regional academic mainframes and the student micro-computer labs.

Instruction: The instruction service category includes expenditures for all activities, which are part of the system's instruction programs. Instructional services include all credit and non-credit courses for academic and vocational instruction.

Intercollegiate Athletics: Intercollegiate athletic sports are organized in association with the NCAA or NAIA. The intercollegiate athletics category includes expenditures for the necessary support staff associated with the athletic programs.

Library Services: The library services category includes expenditures for services, which directly support the collection, cataloging, storage and distribution of published materials -- periodical, subscription and book holdings, microfiche and other reference technology aids and inter-library bibliographic access through networks such as Online Computer Library Center (OCLC) and Alaska Library Network.

Scholarships: The scholarships category includes scholarships and fellowships in the form of grants to students, as well as trainee stipends, prizes, and student awards.

Student Services: The student services category includes expenditures related to admissions, the registrar and those activities whose primary purpose is to contribute to the students' emotional and physical well-being and to their intellectual, cultural, and social development outside the context of the formal instruction program. Student services include social recreational, and cultural activities; counseling services which include personal, career guidance and placement, and vocational testing; student health medical services; financial aid management and student employment; student admissions, registration and student records administration; and student recruitment marketing and counseling.

Infrastructure:

Institutional Support: The institutional support category includes expenditures related to executive services including the office of the President, chancellors' offices, and other institutional support functions including business offices, accounting, budget development, EEO/AA, educational properties management, facilities planning and construction, finance, human resources, information services, institutional research, internal audit, investment properties management, legal counsel, payroll, procurement, records, risk and hazardous materials management, systems maintenance, university relations and support for the assemblies and the Board of Regents.

Debt Service: The debt service category includes expenditures for the repayment of debt obligations.

NCHEMS Descriptions (continued)

Physical Plant: The physical plant category includes expenditures related to plant administrative services; building maintenance services including routine and preventative repair and maintenance of buildings and structures; remodeling and renovation projects; custodial services including janitorial and elevator operations; landscaping and grounds maintenance services; utilities services including electricity, heating fuel, garbage and sewage disposal; and specialized safety and code compliance management services including campus security and hazardous materials management. Also included are expenditures for fire protection, property insurance, and similar items.

Other:

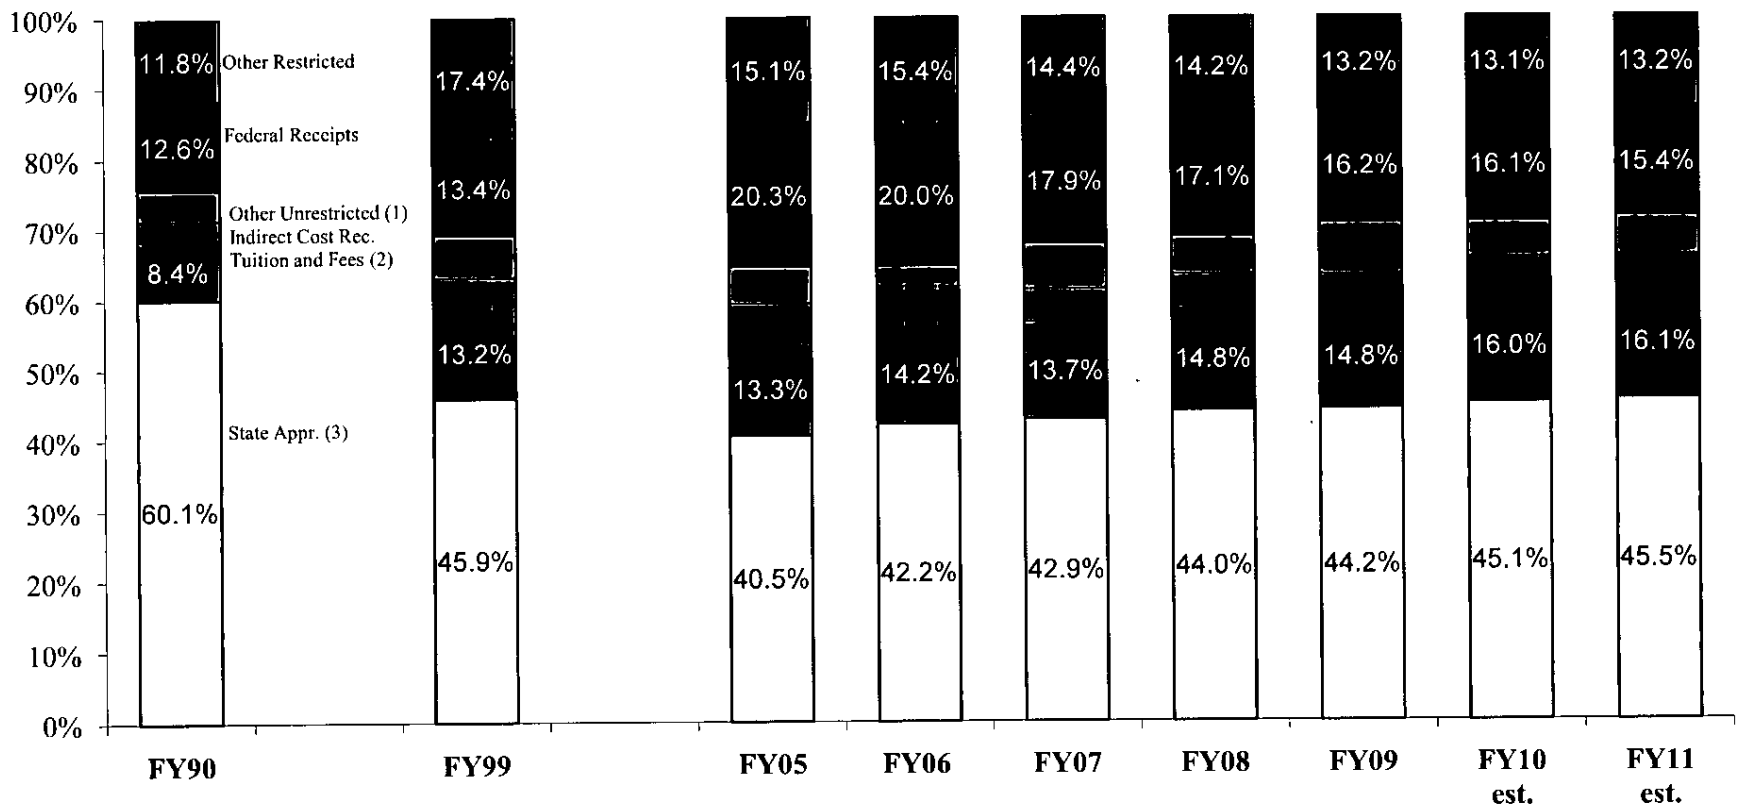
Public Service: The public service category includes expenditures for activities whose primary purpose is to make available to the public the various unique resources and capabilities of the university in response to a specific community need or problem. The major public service units are the Cooperative Extension Service, KUAC Radio and TV, small business development programs and other community service programs produced in cooperation with community organizations and local governments.

Research: The research category includes expenditures for activities directly related to scientific and academic research. The majority of the research is funded by non-general funds.

Auxiliary Services: The auxiliary services category includes expenditures for conveniences and services needed by students to maintain an on-campus, resident student body. These services include resident student housing, food service dining halls, retail stores' operations such as the bookstore and vending machines, and specialized services such as child care.

Unallocated Authority: The unallocated authority category is not part of the standardized NCHEMS categories used by other institutions of higher education. It is a special category created by the University of Alaska to hold additional budget authority separate from other NCHEMS until such a time as it is needed.

University of Alaska Revenue by Source
FY90, FY99, FY05-FY09, FY10-FY11est



1. UA Intra Agency Receipts are excluded from this table, but are included in the totals in the rest of the publication.

2. This table provides the gross tuition and fees amount whereas tables in the rest of the publication provide figures in accordance with the accounting rules used, thus gross figures through FY02 and net figures FY05-FY11.

3. State Appropriation includes one-time funding for utility increases: FY06 $2,355.6, FY07 $2,640.0, FY08 $2,640.0 & $2,317.9, FY09 $4,840.0.

Executive Summary

Over the past decade, the University of Alaska System has developed into a remarkably high performing organization. Under the strong leadership of its president, the System has defined and implemented a vision that links the universities with the most important aspirations of the people of the state. This "public agenda" along with the president's communications skills and the commitment of faculty and staff at the universities have resulted in unprecedented levels of financial support from the legislature. Thanks to well-placed political representatives in Washington, D.C., the System has also garnered substantial federal investment. The additional resources from state and federal sources, plus tuition increases, have led to increases in programs and services at the system level that are unparalleled in the history of the state.

Recognizing that this rate of increasing government investment may drop off in the next few years, the System commissioned a review of Statewide offices and functions with an eye toward reducing their costs. There are several rationales for this study. Following a decade of unprecedented public investment in academic programs and services in support of the economic, social and cultural life of the state, many observers believe that there will be fewer state and federal dollars available in the near future. Thus it seemed prudent to engage outside experts with substantial experience in Alaska higher education to objectively review the System's Statewide services for, broadly speaking, efficiency and cost-effectiveness. In addition, some policy makers and others have questioned the costs of the central administration, irrespective of the available resources. Again, an external review of Statewide operations seemed a useful way to dispassionately respond to these expressions of concern. Finally, it is a widely recognized best practice to periodically review administrative operations with an eye toward making them less costly and more effective. After all, the business of higher education is education. The university exercises its responsibility for ensuring a prudent approach to administrative costs by commissioning this review.

During the course of October and November 2007, we interviewed administrative leaders at the System and campus levels, as well as current and former Regents. Along with an Advisory Committee we conducted open hearings during which the vice-presidents and directors of all the major Statewide units reported on their areas of responsibility and responded to questions from members of the Advisory Committee and the consulting team.

The gist of the recommendations is that the core virtues of the System would remain, but that operations could be conducted at lower cost and with greater collaboration with the campuses. A streamlined UA System would retain the critical strengths that have made it so successful over the past decade. Strong executive leadership, the clear public agenda so consistently articulated by that leadership, stringent fiscal management, and the readiness to engage in critical self-appraisal and create change based on those assessments would remain distinguishing features of the UA System.

But some things would change. There would be a clearer understanding among all parties of the division of authority and responsibility between Statewide and the campuses. The division we have suggested — governance, service and program functions—may be useful template in clarifying these distinctions. The central administration would be a more lean operation with fewer staff and lower overall costs. There would be more conversations among campus and System leaders earlier in the process of decision-making. This more integrated model of arriving at strategic and operational policy decisions does not diminish the executive authority of the president, but it does ensure more dialogue before policy and administrative choices are made. Our recommendations are intended to assist this high performing system to continue its exemplary service to the people of Alaska in a time when there may be fewer resources to carry out that noble purpose.

Introduction

In October 2007, the University of Alaska System contracted with two consultants, Dr. Terry MacTaggart and Mr. Brian Rogers, principal consultant at Information Insights (an Alaska-based consulting firm) to review the organizational structure of the System's Statewide offices and operations. The System asked MacTaggart, the former system head of the Minnesota State University System, the University of Maine System and the author of many publications dealing with system organization, to serve as lead consultant for the project. Rogers, former member and chair of the University of Alaska Board of Regents and former vice president for finance for the System, co-authored the report, and his company, Information Insights, Inc., provided logistical and informational support. Appendix A provides professional biographies of both consultants.

There are several rationales for this study. Following a decade of unprecedented public investment in academic programs and services in support of the economic, social and cultural life of the state, many observers believe that there will be fewer state and federal dollars available in the immediate future. Thus the president's office determined it prudent to engage outside experts with substantial experience in Alaska higher education to objectively review System services for, broadly speaking, efficiency and cost-effectiveness. In addition, some policy makers and others have questioned the costs of the central administration, irrespective of the available resources. Again, an external review of Statewide operations seemed a useful way to dispassionately respond to these expressions of concern. Finally, it is a widely recognized best practice to periodically review administrative operations with an eye toward making them less costly and more effective. After all, the business of higher education is education. The university exercised its responsibility for ensuring that administrative costs are kept to the minimum necessary by commissioning this review.

During the course of October and November 2007, we interviewed administrative leaders at the System and campus levels, as well as current and former Regents. Along with an Advisory Committee (whose membership is listed in Appendix B), they conducted open hearings during which the vice-presidents and directors of all the major Statewide units reported on their areas of responsibility and responded to questions from members of the Advisory Committee as well as the consulting team. Appendix C contains the schedule of interviews and hearings.

The consultants also discussed Statewide services with System officers as well as campus leaders in private settings and in confidence. We guaranteed that while some of the ideas presented in these private meetings would find their way into the report, we would not connect any specific comments with the name or office of the individual who voiced them.

The consultants and the Advisory Committee also reviewed dozens of reports, studies, commentaries, and university financial records. The input to this report, then, included substantial public testimony and discussion; private meetings to probe more deeply on

particular issues; volumes of other external reviews and internal reports; and our own sense of what makes for the most effective System leadership and management.

The Advisory Committee represented faculty and staff and commented on the draft report and recommendations.

The Questions We Asked

The consultants pursued the following questions during the open sessions as well as in the more private discussions with University officers:

- What are the major officers, functions and initiatives of the System currently? Of these, which are essential to fulfilling the Regents' legislative and constitutional responsibilities for fiduciary and academic oversight, and which are more discretionary? Among the essential functions, which, if any, can be conducted at lower cost or more effectively?

- Of the more or less discretionary functions, we found it important to distinguish those which serve an important educational support function from others that are less critical, or have outlived their usefulness or simply don't work. Relevant questions here include:

    1. Is this function, program or service so effective and important to the educational or research mission that it should be retained?
    2. Can it be conducted in a less costly, more effective way?
    3. What would be the consequences of locating the service at a campus rather than in a System office in Fairbanks or Anchorage?
    4. What are the pros and cons of outsourcing this function to a non-university provider?
    5. What would be the consequences of discontinuing this function, program or service?

The people we spoke with were not shy in expressing opinions beyond the scope of these questions. A clear majority of campus officials expressed concern, and often dismay, on what might be best summarized as the *working relationships and communications* between some System staff and the campuses. We did not seek out these views, but came to feel that perceptions of the quality of communications and relationships are so important to effective management of the System, that they deserved to be noted.

Characteristics of High Performing Systems

What separates high functioning systems of colleges and universities from those that are merely adequate? Our experience is that the best systems, regardless of their structures, feature seven important attributes. The following list of characteristics of high performing systems derives from the literature on successful organizations generally and the authors' own experience with what works best in system administration.

1. Strong Executive Leadership

The senior leader of the most effective systems—be the title president, chancellor, or commissioner—are politically adroit, credible, imaginative in linking public needs with academic capacity, and strong willed. The senior executive heads a team with a few, able, tough minded players. The essential roles are chief financial and operations officer, chief academic officer, and a person to provide leadership in student affairs. Other critical members of the leadership team include system legal counsel, the chief of human resources management and increasingly a chief information officer. In the most effective systems, trustees are deeply engaged in setting strategic policies, but leave the implementation and the politics up to their senior executive.

2. A Simple, Clear Public Agenda

Historically, systems were formed to plan, coordinate, respond to legislative inquiries and provide some equilibrium among competing regions of the state. For the past decade and a half, the best systems have asserted leadership in the most critical economic (and to a lesser degree social and cultural) issues facing their states. Many systems erect a "public agenda" for the system and the component institutions that focuses on economic development, workforce preparation, commercializing university-based research, sustaining communities, and providing a more seamless linkage with the schools. This agenda, often developed through a grassroots process of meetings with community leaders as well as ordinary citizens, underpins the funding request to the legislature, and indeed has become a fundamental goal of most systems.

3. Fiduciary Capacity

Effective systems harbor the administrative capacity to carry out the core fiduciary responsibilities entrusted by the state to the governing board. Usually, this means strengths in the areas of budgeting, finance, legal affairs, human resource management, academic affairs, information technology, and political and public advocacy. This resource management role includes not only the oversight and audit functions, but leading processes to ensure that resources are allocated fairly and consistently with public needs. The best systems effectively balance a purely rational approach to distributing resources with the practical wisdom that acknowledges the political clout of institutions and the regions they serve.

4. Clarity of Responsibilities and Authority

The most effective systems have achieved clarity of understanding of the roles, responsibilities and authority of the campus and the central administration. While "who does what" and "who decides" may be spelled out in administrative policies, these understandings are also widely understood and accepted, if sometimes grudgingly.

5. Models of Frugality

The best systems are highly disciplined in their use of resources, recognizing that their function is to support the colleges' and universities' educational efforts and that administration is not an end in itself. Effective systems resist the temptation to step into the education business by offering academic programs themselves, except to get a new effort involving several institutions off the ground and then only for a defined period of time.

6. Integral Decision-making

While the most adroit systems enjoy strong, decisive executives, the *process* leading up to making decisions is a highly collaborative one. Campus executives are systematically consulted. Periodic retreats to engage in strategic planning, to address major problems and evaluate current practices are the norm. Dissent from campus leaders and within the system during these discussions is accepted as a healthy component to arriving at good decisions and in securing buy-in. In the most effective systems, working relationship are described as cordial, friendly, and mutually respectful.

7. Critical Self-Appraisal and Change

The best managed systems periodically secure external evaluations of how they conduct their business and whether they are doing the right things. They seek unedited reviews of their core functions. They also stay alert to how changing political, economic and social realities demand changes in system behavior. Recent downsizing of the central administrations in Maine, Missouri and California in response to public criticism of system costs as well as reduced resources illustrate this kind of responsiveness.

Comparisons with Other Systems

Effective systems of higher education in the U.S. display nearly infinite variety in terms of the number of constituent institutions, enrollment, budget, locus of authority, relative reliance on rules and regulations versus less formal relationships, and costs. There is no one template that works in all states under all conditions. Having said that, comparing the UA System with others in the lower 48 helps to raise questions about the relationships between size (number of institutions, enrollment), organizational complexity, decision-making processes and relative system costs.

Size and Complexity

Systems designed to govern, coordinate and lead public colleges and universities in the United States come in all shapes and sizes. The State University of New York (SUNY) is the largest with some 64 institutions enrolling 400,000 students. At the other end of the spectrum, the Vermont system is comprised of 5 state colleges with a combined enrollment of less than 12,000 students.

Figure 1 on the next page compares operating budgets per student for the UA System and six of its peer institutions. The UA Office of Institutional Research identifies three peer systems with less than 30,000 FTE students – Maine, Montana and Southern Illinois – and seven peer systems with 30,000 to 60,000 FTE students, of which four – Massachusetts, Nebraska, Hawaii and Colorado – are shown in the figure.

Among the eight institutions shown, Alaska's $17,100 state appropriation per FTE student is highest, but only two percent above Colorado's $16,900. The total operating budget of $42,200 per student is also highest, but again only four percent higher than Massachusetts' $40,700 per student.

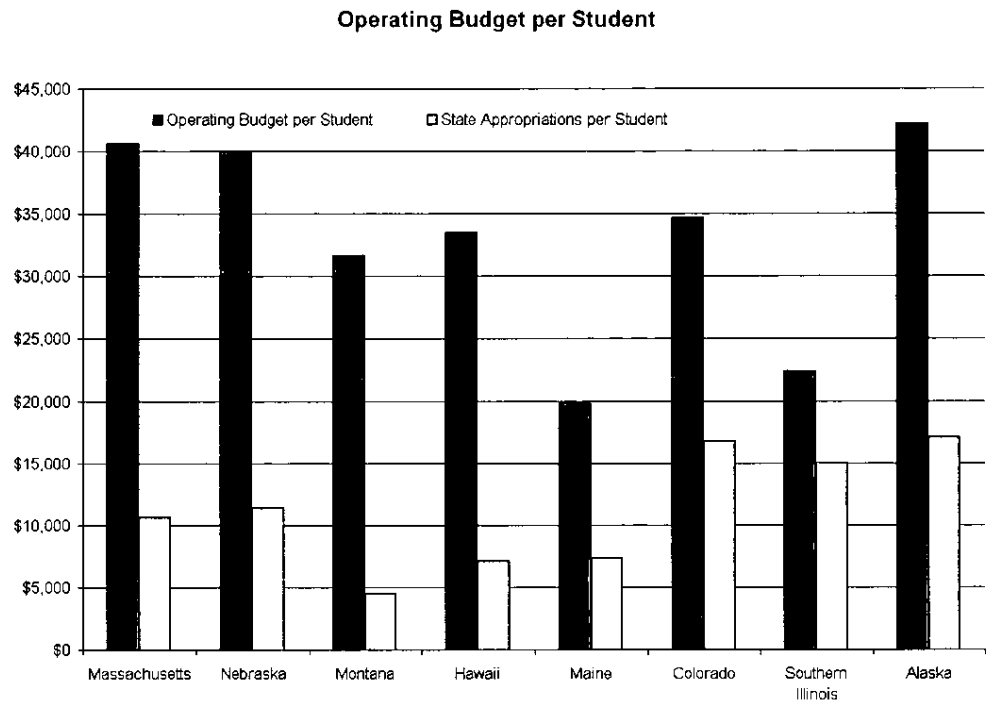

Figure 1 Operating Budget per Student

With three universities, the University of Alaska System would appear at first glance to be a relatively simple organization. However, because of the distinctive missions of each of the universities, the community college functions embedded in various ways in each, the shear geographic reach of their service areas, the extensive distance education network, the number of separate bargaining units within the System, the ethnic and cultural diversity of the state and the cost of doing business in a state this large with its climatic and geographic extremes, the University of Alaska is anything but organizationally simple.

Authority and Working Relationships

Systems also vary greatly in the degree of authority of the central administration, their relative reliance on rules and regulations to ensure compliance and the character of the working relationships among players within the organization. The SUNY System is notorious for its bureaucracy, multiple layers of authority, and Dickensian levels of obscurity when it comes to getting a decision made. Others Systems like those in Maine, the Southern Illinois University System and Vermont rely more on informal relationships and interactions to get their business done.

The University of Wisconsin System with 26 institutions ranging from the internationally recognized flagship in Madison to the generally superior regional universities to the network of two-year centers spread across the state concentrates authority in the system

office of the president. Yet the working relationships within the system are cordial, and mutually respectful. There is no question where the ultimate authority lies, but there is high level of campus participation upstream before policy decisions are presented to the Regents for action. Much the same can be said for the high functioning well regarded University of North Carolina System.

The locus of authority within the University of Alaska System, for reasons partially explained in the Points of Inflection section below, lies with the central administration in the Butrovich Building. Alaska shares the penchant for centralized leadership and control with systems in New York and Wisconsin, among others. We will comment later in the report on perceptions of decision-making processes and working relationships within the Alaska System.

Responses to Reduced Resources

Unfortunately, there are no reliable studies comparing system costs across the fifty states. Thus we cannot do a table of standard costs of systems in light of their number of component institutions, enrollment, or structure. This lack is explained by the immense variety of system structures, the fact that some systems present their total costs as a separate line item while others provide less clarity, and resistance on the part of some of these agencies to participate in comparative studies.

However, there are lessons to be learned from the experiences of systems in reducing their operational costs. The chief models for reducing administrative costs are summarized below.

The three main approaches to reducing overall system costs are consolidation, privatization, and reduction. Consolidation requires the merging of campuses as illustrated by the merger of several two-year campuses in Minnesota or the subordination of smaller campuses under larger ones, as occurred in Montana with the clustering of regional campuses under the two larger universities. During its most recent restructuring, Alaska pursued this model by locating the community colleges under the three regional universities. It is unlikely that further consolidation is either politically or managerially feasible in Alaska. Thus further campus consolidation is not an option.

A variant on the consolidation theme is to aggregate administrative functions, rather than campuses, either at a central location in the System office or at one of the institutions. The University of Maine System attempted this approach during a period of centralization from 2002 to 2005. South Dakota recently completed an initiative to capture scale economies by consolidating administrative functions. The South Dakota model involved at least temporarily reducing campus personnel in human relations, admissions processing and information technology in order to enhance the system capacity to offer these services centrally. Officials in South Dakota report that they believe this effort reduced costs. They also surmise that the campuses have in fact replaced some of the staff, resulting in some duplication of effort. Since the effort in Maine did not include a reduction in campus personnel, the System has not realized any

net savings, and likely increased total administrative costs. The last few years have witnessed substantial consolidation of services in the UA System's Fairbanks headquarters. The benefits have been greater consistency of service, but central administrative costs have risen as well.

Privatization in its purest form is turning to non-governmental organizations to provide functions historically conducted by governmental entities. In a more general sense, creating independent nonprofit enterprises to fulfill public functions represents another form of privatization. Oregon pursued the second option when it removed its health science center from the state's university system, granted it administrative independence from state control, and drastically reduced its funding. While the UA System has occasionally turned to outsourcing for specific administrative functions requiring specialized technical talent, it has not outsourced its core educational and research functions. What worked in Oregon with health sciences would likely not be successful in Alaska due to the relatively small market for higher education services and the lack of any independent institution with the capacity to replace Alaska's higher education institutions.

The third and more common option is to review administrative functions with an eye toward reducing or eliminating them, or transferring some of the functions to campuses with the capacity to manage the service. Following the effort to save through the consolidation mentioned above, the University of Maine System engaged in this process and reduced central costs by $2.6 million or about 11 percent. That System is about to engage in a second round of reductions aimed at reducing central costs by another five percent. In 2004, the Oregon University System undertook a dramatic downsizing of its central office, which led to the elimination of over 100 positions (from 187 to 82). This shift included the transfer of some 35 positions from the central office to Oregon State University for implementing the BANNER information system for all the universities and the central office.

This report follows the third model of seeking cost reductions following a review of administrative functions. As noted above, Alaska has consolidated its major campus units, and further aggregation of campuses holds little promise. Large-scale privatization of the sort accomplished in Oregon is unlikely to work in Alaska's competitive landscape. The only practical alternative at this point is to patiently review, analyze and prune or transfer central functions and costs.

Budget Growth and Constraints

The University's Budget

The University of Alaska has seen three periods of significant budget growth in the post-statehood era.

The discovery of oil at Prudhoe Bay in 1969 brought new wealth into a small state government, which responded with significant increases in budgets for education, at both the K12 and post-secondary level. At the time, the University of Alaska was its Fairbanks campus, with community colleges in Anchorage, Juneau and Ketchikan, some university courses in Anchorage and some extension programs. The state budget expansion of the early 1970s brought new campus buildings, new community colleges, and establishment of the University of Alaska at Anchorage.

While state money was flowing to the university, its fiscal control systems weren't keeping up with the more complex institution. Following the failure of a university bond issue in 1976, the university found itself with significant cash flow problems, poor accounts receivable management, and an inability to fully account for its financial performance. The state administration and legislature responded by clamping down on the university, requiring new financial controls and segregation of funds between campuses and among functions within campuses. One result of the 1977 troubles was the establishment of firm financial controls for the whole university in the System office. In many ways significant aspects of the System office of today reflect the control tone set by the problems of 30 years ago.

In 1979 oil prices skyrocketed. Over the following two years, the university budget blossomed again, rising as much as 40 percent in a single fiscal year, and new buildings were added throughout the System. Unfortunately, what goes up usually comes down, and in 1986 oil prices crashed, resulting in a $25 million reduction in the FY87 UA state appropriation, a whopping 15 percent reduction in a single year. The Regents cancelled capital projects to generate enough cash to avoid financial exigency, and directed the administration to retrench, ultimately restructuring the System to its current configuration of three multi-campus, multi-mission institutions and a Statewide administration.

In the ten years following System restructuring in 1988, state appropriations were essentially flat, allowing growth in only those areas that could find other sources of funding, including growing tuition income.

On his arrival as president in 1998, Mark Hamilton characterized the years following restructuring as the UA System's "decade in the desert," and proceeded to lead the System out of the desert. In the following ten fiscal years, the UA state appropriation increased each year, up to 14 percent in a single year. Non-state funds increased by as much as 21 percent in a single year. From FY99 through FY07, actual spending of state appropriated funds grew by 73 percent, and of non-state funds by 89 percent. Without a

doubt, this is the best consistent positive budget growth for the UA System since statehood, and is one of the longest runs of consistent budget growth in American public higher education.

Future Constraints

The outlook for the future is less rosy; and the university may need to prepare for tighter times. A variety of factors are coming together that increase the probability of flat funding, or perhaps even budget declines.

At the state level, declining state oil production will over time reduce the ability of the state to meet increasing budget needs. While the production decline is ameliorated in the short term by record high oil prices and the significant recent tax increase, the state administration is talking of budget problems within five years. And lower oil production will, over time, reduce the donations by BP Exploration (Alaska) and Conoco-Phillips made under their 1998 Compact commitment.

At the same time, the federal picture isn't looking good. Federal budget constraints caused by the demands of the Iraq war are likely to hit research spending; Congress is tightening the earmarking process; and Alaska's delegation has warned of diminishing ability to direct funding for Alaska priorities. Tighter budgets are also affecting the indirect cost picture, as the federal climate is to cap or reduce indirect rates.

The university has few opportunities to make up for flat or falling state and federal funds with other fund sources. Tuition rates have increased in the past decade at rates exceeding inflation, leaving little headroom for significant growth beyond inflationary increases in the future. As interest rates fall, university interest income also falls. On a very positive note, charitable gifts and donations to the university are increasing significantly, but these funds are unlikely to become a major source of operating revenue in the near term.

The combined effect of these potential budget constraints is an increased likelihood that the UA System will need to be increasingly frugal, with increased need to reallocate funds from low priority programs to meet its priorities for growth. The System office that has guided the remarkable growth of the university's programs and services in the last decade will need to be retooled to guide the System in a time of scarcity. This examination of the System office provides an opportunity to begin that process of examination, reallocating System office funds and functions to the highest System priorities.

System Office Roles

Our examination of the System office found three very different roles in the university's Statewide Major Administrative Unit (MAU):

- System governance – the portions of Statewide that have fiduciary responsibility for UA as a corporate entity, maintaining the constitutional, statutory and regulatory responsibilities for the System set by the state and federal governments, and the policy requirements set by the Board of Regents;
- Statewide services – the portions of Statewide that are established to provide central administrative services for the entire System for reasons of economy of scale, efficiency or effectiveness;
- Statewide programs – the portions of Statewide that deliver academic, research or public service programs on a statewide basis.

We find that virtually everyone involved understands the requirement of the fiduciary governance role of the System office, and we have few recommendations to make for change to the functions therein.

In the Statewide services arena, there is room for honest disagreement about centralized versus decentralized services, and whether each of the central services can be provided at lower cost, higher efficiency, or higher effectiveness. And there is room for disagreement as to when lower cost is more important than higher effectiveness. That said, there are several choices that can be made for any administrative service:

- Centralized Statewide – the service can be provided by the System office on behalf of all campuses
- Centralized Lead MAU – the service can be provided by one MAU on behalf of all the MAUs
- Centralized Consortium – the service can be provided by a consortium formed by the MAUs
- Decentralized MAU – the service can be provided at the MAU level by each of the MAUs, without coordination between MAUs
- Distributed – the service can be provided at the campus level within each MAU, without coordination between campuses or MAUs
- Outsourced – the service can be provided by the private sector
- Ignored – the System office can ignore whether the service is provided or not
- Discontinued – the service can end
- Hybrid – the service can be provided by a hybrid of one or more of the above choices

Our examination raised several questions that go beyond the basic tradeoffs among cost, efficiency and effectiveness. For example, which delivery mode is best suited to the nature of the service being delivered? Do Statewide services display a sufficient degree

of customer orientation when the campus is the customer? Have some Statewide functions that began as a service morphed into control functions?

The third Statewide role, responsibility for administration or delivery of academic and research programs, was the most problematic. We admit our bias going into this work, that the administration and delivery of academic, research and service programs belongs in the accredited academic institutions, the campuses. We see a clear planning role at the System office – of coordination, adjudication of competing claims for program resources, of academic planning and quality control.

Other key roles for the System office in academic programs include:

- As incubator, or initiator, of new Statewide academic programs, with a clear plan to transition the program to an MAU or campus
- As a receiver, when a campus program is failing and the campus is unable to perform its mission, with a plan to transition the program back to an MAU or campus
- As a transition, for programs that are within the UA System but are being readied for movement outside the System to a state agency or nonprofit, or for programs transferred from a state agency or nonprofit pending the decision on which campus or whether the campus should take on the function
- As a budget holder, to ensure a single MAU doesn't cut back on program delivery outside its core service area during a time of retrenchment without the concurrence of the other MAUs or president, but actual program delivery should be by an MAU or campus.

Reduction in the size and scope of the System office can come in three ways:

- Reducing the function at the System office
- Transferring the function from System office to MAU or campus
- Eliminating the function from the System office

Those recommendations we make that affect budgets generally fall into the first two categories.

System Office Budget Growth

An examination of the relative growth of units within the University System shows that the System office has grown at a more rapid rate than that for the UA System as a whole. As shown in Figure 2, in total funds, the Statewide budget grew from FY99 through FY07 by roughly 225 percent, compared to a growth of other units averaging 170 percent. Figure 3 shows a similar trend in state appropriations, as Statewide's general fund budget grew over the same period by about 210 percent compared to 170 percent in other units.

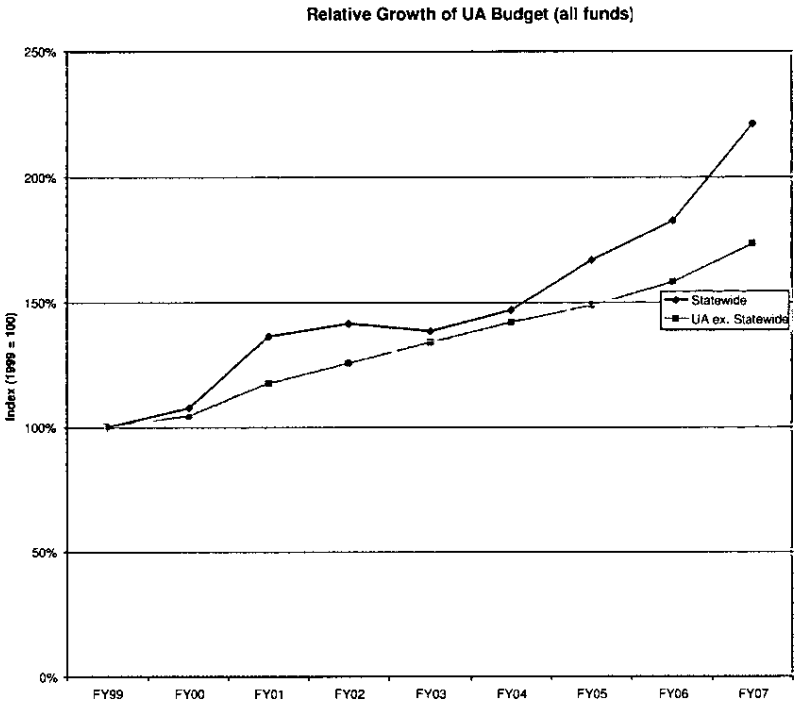

Figure 2 Relative Growth of UA Budget (all funds)

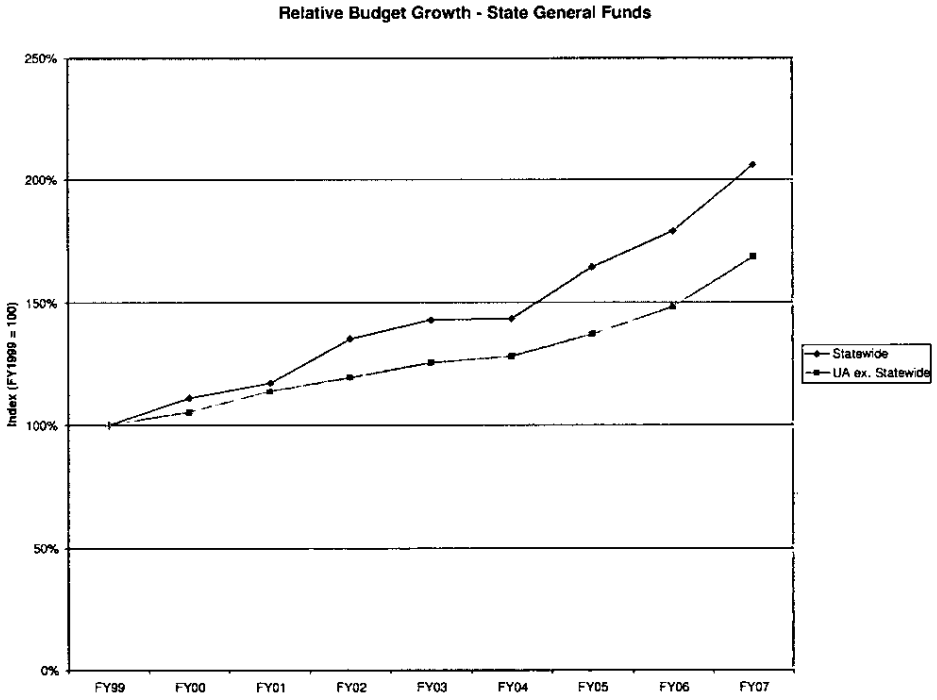

Figure 3 Relative Growth of UA Budget - General Fund

The result of this growth can be shown in the following Figure 4, showing the Statewide share of total funds and of general fund, growing from about 6.2 percent of the UA total budget (6.3 percent of general funds) to about 8 percent (7.7 percent of general funds).

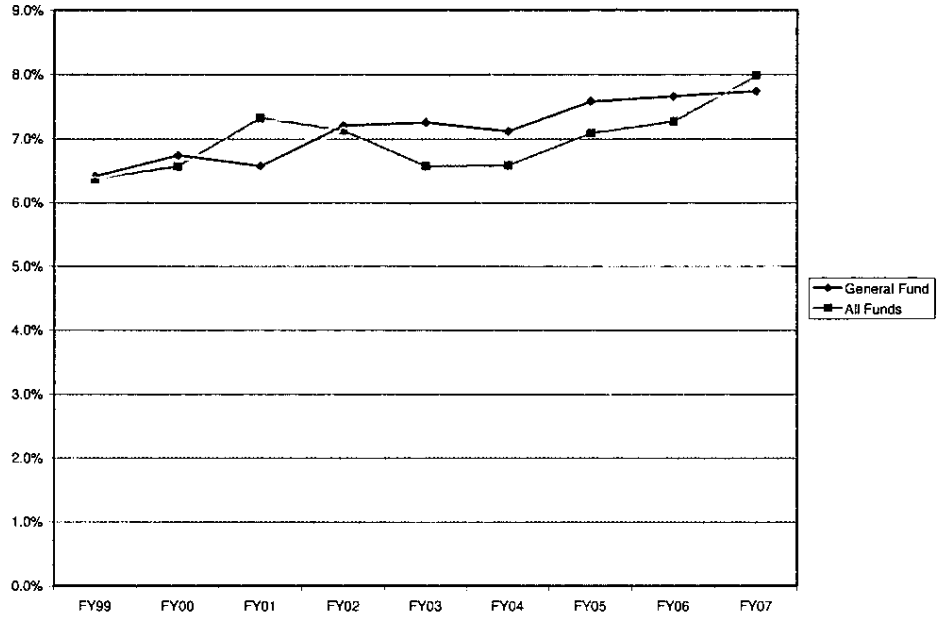

Figure 4 Statewide Share of UA Budget

The increase in the System office's percentage share of the UA budget represents about $15 million more in total FY07 spending ($5.2 million in general fund appropriations and $9.8 million in other funds) than would be the case if the Statewide MAU had the same percentage in FY07 as in FY99.

This look at the total System office budget masks the true growth, however. As mentioned earlier, we examined the System office in three different, but somewhat overlapping, categories:

- System governance – the portions of Statewide that are responsible for UA as a corporate entity, maintaining the constitutional, statutory and regulatory responsibilities for the System set by the state and federal governments, and the policy requirements set by the Board of Regents;
- Statewide services – the portions of Statewide that are established to provide central services for the entire System for reasons of efficiency or effectiveness [recognizing that some central services can be or are being provided by one institution for the other institutions, while others are provided by the System office];

- Statewide programs – the portions of Statewide that deliver academic, research or public service programs on a statewide basis.

When we analyze the Statewide budget among these three categories, it becomes clear that the majority of recent growth has been in the third category – the delivery of statewide programs, as shown in Figure 5 below.

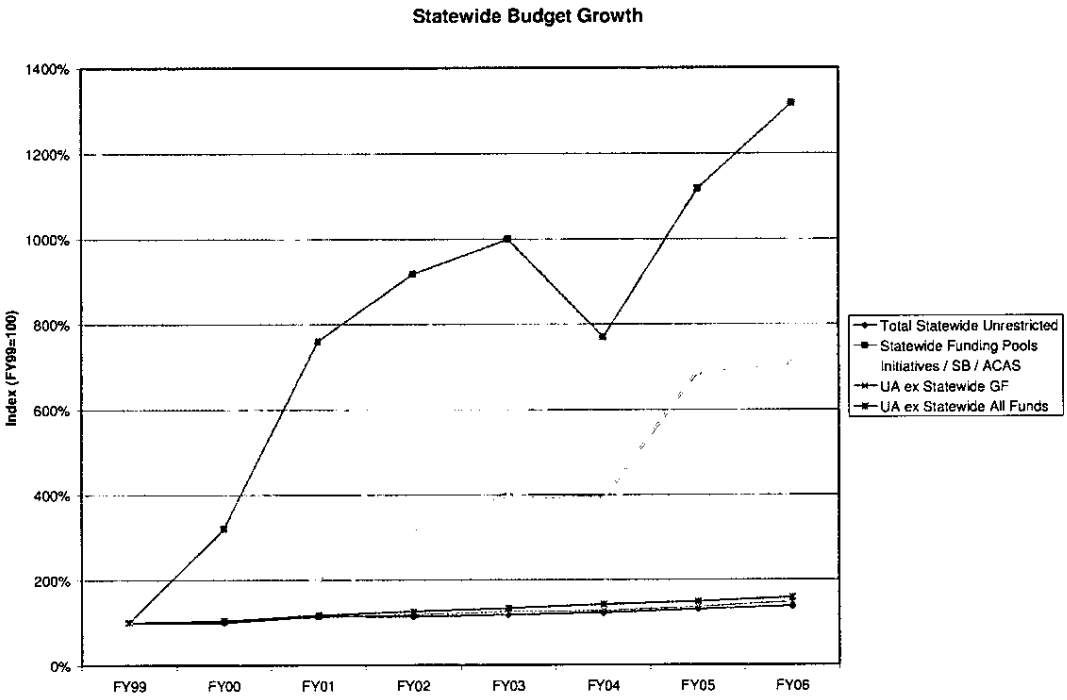

Figure 5 Unrestricted Statewide Budget Growth by category

This figure demonstrates that the largest percentage growth of the System office budget has been in the areas of Statewide Funding Pools, Initiatives, Staff Benefits, and the Accountability and Sustainability processes. Major portions of this funding are shared with campus programs, and do not represent growth of the System office governance or service functions.

The following figures show growth in System offices by functional area. Figure 6 shows growth on a percentage basis among the Statewide offices. The highest percentage growth areas have been Academic Affairs, Planning and Budget, and University Relations, each of which exceeded the average growth of the university as a whole. The smallest percentage increases were in the areas of President/Board of Regents/General Counsel, Information Technology, and Administration, each of which lagged behind the average growth of the university as a whole.

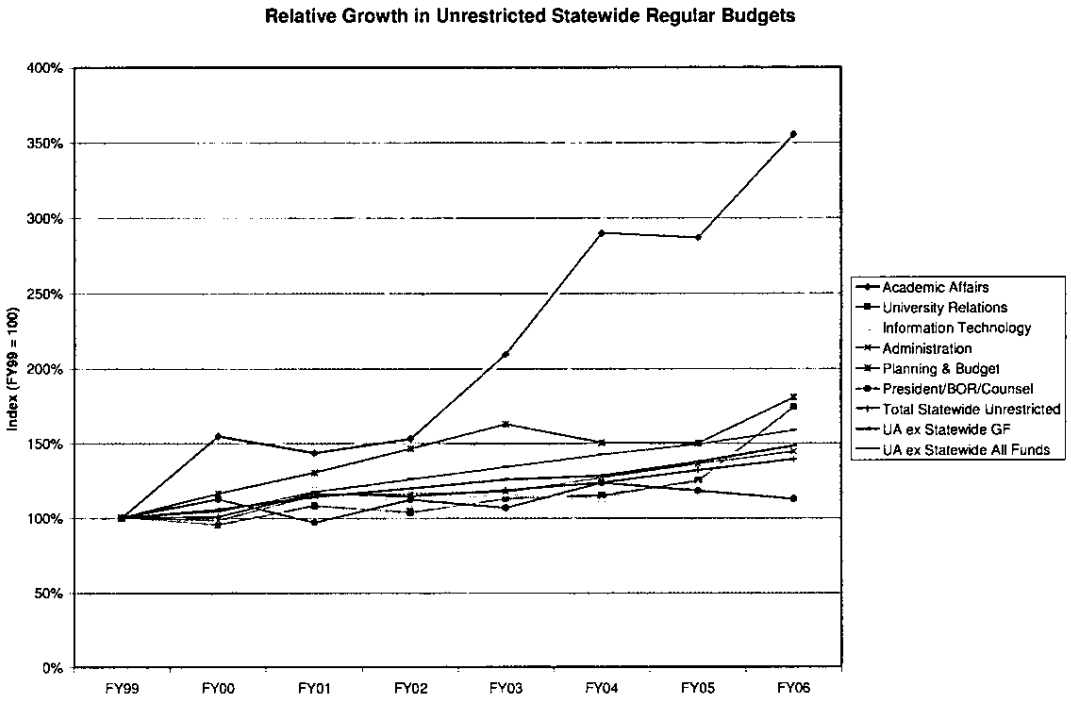

Figure 6 Unrestricted Statewide Budget Growth by function

Figure 7 shows budget trends in the largest Statewide functional areas – those with annual budgets exceeding $1 million.

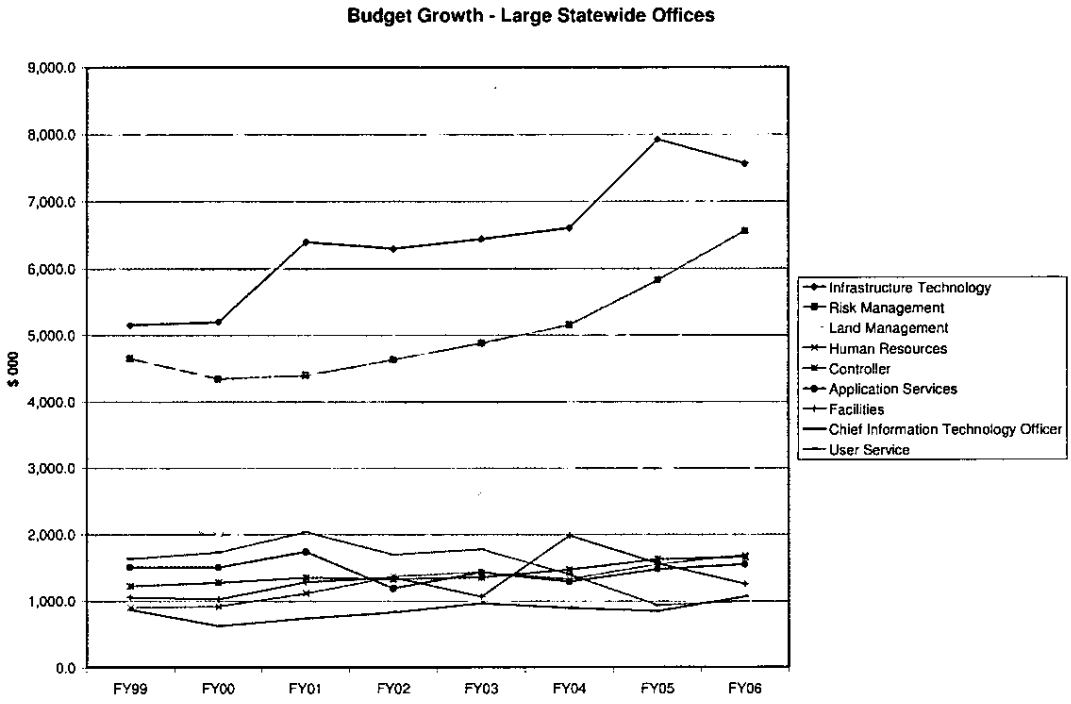

Figure 7 Budget trends in large Statewide offices

In unrestricted dollars, the largest growth has occurred in the following budget lines, each of which increased by more than $250,000 over the 7-year period:

System Budget Unit	FY99	FY06	Growth
IT – Infrastructure Technology	$ 5,145.7	$ 7,558.0	$ 2,412.3
Administration – Risk Management	4,636.6	6,550.8	1,914.2
Administration – Human Resources	893.2	1,683.8	790.6
Administration – Controller Initiatives/ACAS	0.0	606.8	606.8
University of Alaska Foundation	164.7	759.5	594.8
Administration – Land Management	2,139.6	2,669.5	559.5
Academic Affairs – Student Services	0.0	547.4	547.4
IT – Infrastructure Technology Initiatives/ACAS	149.0	666.6	517.6
Planning & Budget	622.5	1,123.0	500.5
Academic Affairs – Workforce Development	0.0	466.0	466.0
University Relations – Public Affairs	266.1	712.2	446.1
Administration – Controller	1,215.6	1,649.0	433.4
Academic Affairs – Research Funding Pool	0.0	400.3	400.3
Administration – Financial Systems	372.4	763.1	390.7
Academic Affairs	319.9	646.1	326.2
Administration – College Savings Program	161.6	435.4	273.8

Table 1 Statewide Budget Units with Largest Growth FY99-FY06

Conclusions

The conclusions regarding the relatively high costs in absolute terms and measured with respect to student enrollment, number of institutions and faculty derive from several realities:

- In recent years, the UA System has pursued a high service model in which the central office takes leadership for and funds educational and service programs that the campuses are unable or unwilling to support.
- In Alaska, the unavoidable fixed costs of System administration are spread over relatively few institutions, students and faculty. If the enrollment were to double in size, the per student costs of System administration would be cut nearly in half.
- Though small in population, Alaska is large in terms of the numbers of distinct groups needing educational services. To be responsive to the needs of these different groups means the System delivers directly and through its universities a host of important, but relatively high cost, low volume programs and services.
- While the Alaska System is organized under three MAUs, in fact there are multiple distinct campuses or learning centers spread across the largest state in the nation. In other states, the community college campuses might well be in a separate system altogether. Using the number of institutions in determining system costs per major unit dramatically exaggerates the result.
- As often stated, there are substantial additional costs to doing business in a state the size of Alaska with its extremes of geography and climate.

In sum, the UA System is a high cost system for a variety of legitimate reasons. There is no evidence that System administrators are wasteful or profligate. But with shrinking state and federal support highly likely, substantial recent tuition increases, and increasing demands for educational services, it is clear to us that the System would be well advised to streamline its operations and reduce its costs.

Working Relationships between Statewide and the Universities

What We Heard

One or Three?

It will surprise few in the UA System that there continues to be a question: Are we one university or are we three universities? This fundamental question, and the organizational principles that flow from its answer (or lack thereof) continue to create confusion at the campus and Statewide levels. For purposes of this study, we answer as follows:

> This is one university System comprised of three accredited universities, each of which is itself a mini-system.

What is Statewide's Role?

There is a lack of clarity in the role of the System office that flows in large part from the first question. The decision flow process is clear to few people, and the plethora of councils and task forces diffuses accountability and responsibility. Campuses see a mixing of headquarters functions with operational functions, with "situational floating spheres of influence" among the Statewide offices. Many campus leaders believe they spend too much time in meetings or preparing for System meetings (although they also call for more collaboration). Both System and campus interviews recognized that the System office possesses specialized expertise not found on the campuses. Our interviews of current and former regents indicated that Statewide offers a more consistent and responsive attitude toward external authorities and the regents.

Does Father Know Best?

Campus interviews repeatedly brought out resentment to an "autocratic attitude" among some Statewide staff, characterized by some as "father knows best." Campuses believe some Statewide offices are second guessing, interfering and attempting to micro manage operational decisions at the campus level, rather than adopting a team approach. They saw a lack of perspective of campus needs, the campus environment, and the campus calendar. This sense is particularly acute toward the finance and budget arenas, where control functions appear strongest. In our System office interviews, we saw concern in the other direction – if functions are devolved to the campuses, what fiduciary accountability is there to the corporate whole, and what should happen if campuses fail or outright refuse to meet statutory, regulatory or policy requirements?

Where is the Sauce for the Gander?

The System office has developed increasingly stringent metrics for campus performance in order to demonstrate accountability for public funds and to use a rational process for allocation of resources. There is some campus feeling that the metrics do not completely capture the broad missions of their multi-mission, multi-campus institutions. More troubling is a perceived lack of metrics for the System office – what are the standards of performance for Statewide, what are the peers, how can the performance of individual Statewide offices be evaluated.

System Office Functions

Academic Affairs:

Since 2002, the UA System has invested heavily in developing its academic affairs program. As Figure 5 presented earlier suggests, academic affairs stands out as the unit with the greatest budget increases. This rate of growth is explained by the fact that prior to 2002, the System lacked a chief academic officer and many of the programs associated with a centralized academic affairs unit.

The efforts of the new vice president for academic affairs to reach out to the campuses, to meet personally with faculty and staff, and to jointly identify priority areas for this unit have received broad approval at the campuses.

Campuses cited the health programs initiatives regularly as a positive example of what the System office can do in a new initiative. There was a very high confidence in the open, collaborative process used to respond to the needs of the health industry. There was general agreement that the responsibility for health programs should be centered at UAA, with the understanding that delivery of nursing and allied health programs outside the UAA core service area is important and requires a shared campus and Statewide decision before any changes are made.

We heard support for an academic affairs agenda that included clarifying the missions of the universities, leading discussions on the location and levels of new graduate programs, supporting the community college function within the universities, and leading in the development of a multi-year strategic plan for academic affairs.

Administration:

Finance: There were concerns about the strong control culture that derived from the 1977 fiscal crash of the System, that some procedures, such as those involving campus spending of foundation receipts, require documentation equivalent to pre-audit of transactions. Internal audit was seen as a positive, service-oriented function that is responsive to campus needs. The legal and policy role of Statewide in purchasing was clearly recognized, as was the lead role being taken by campuses –

UAF in complex procurements, UAA in construction procurements. Risk management was seen as too controlling, even in those functions that are primarily services to campuses. The indirect cost process was a touchy issue, with several key campus officers not clear about the process for determining rates or allocating revenues.

Facilities was seen as "a mess," but campuses saw the need for a System office role in keeping a level playing field, reviewing campus work for consistency with the plan, helping campuses needed, and advising the president and the board on policies. The campuses generally agree that there needs to be Statewide oversight of capital planning and construction, but there is less agreement about oversight of maintenance and operations, with the general thought being that Statewide should set parameters and require a plan, but leave the rest up to campuses. Campus leaders think Statewide should be the voice of capital construction, understand master planning, and ensure that space utilization studies are completed as a part of campus planning. Campuses think they should take the lead on facilities planning, and should be responsible for facilities construction and maintenance.

Human Resources: All campuses recognize that UA is one employer, and that employees need to be treated similarly across campuses in issues such as job classification, pay and benefits, retention and dismissal. Several campus interviewees felt the System office—perhaps under direction of the Legal office— makes it too difficult to dismiss at-will employees; that there is too much fear of litigation so poor employees are kept on, or passed around. Some also said that campuses need to be more involved in contract negotiations. There is a feeling that Statewide doesn't recognize what campuses are doing well; UAA has a robust training program but the Statewide human resources department hired new resources rather than using UAA's program. The compensation project, originally set to be a three-year project, has stretched out to six years, costing more without fully addressing the needs it was designed to serve. The biggest campus concern is over the UAF-Statewide human resource merger, which creates a different relationship between Statewide and the other campuses than that between UAF and Statewide. Both UAA and UAS are concerned that either "they're next" or that UAF concerns will have priority in Statewide initiatives, while the Statewide perspective is that UAF was in serious need of help and the 'shared services model' is commonly employed at other universities across the country.

Land Management is seen, with some exceptions, as a real help to the campuses, not questioning why a campus wants to do something but rather providing help and understanding of the rules. People recognize the clear focus on making money; the one area of concern is when to override financial with educational issues, or when community or political concerns should delay or revise the process.

ACAS: The Ad-hoc Committee on Accountability and Sustainability process was seen as generating good ideas, and identifying significant savings potential in automation. It was criticized for lack of clear project management, recognizing that

the new Project Executive Group was created to address that concern. There is a desire for stronger efforts to prioritize the rollout of ACAS projects, and to utilize project management expertise at the campus level.

Legal:

The System legal office received generally high marks everywhere, with clear acknowledgement that it should be a core System governance and service function. Some expressed concern that the office is overly risk-averse, particularly on personnel matters, which results in a system-wide culture of offices passing their personnel problems on to others rather than addressing problems. UAA interviews indicated a desire for stationing one lawyer in Anchorage. Statewide staff pointed out that has been done in the past, and spoke of concerns about the connection to other Statewide functions.

Planning and Budget:

Budget Development: There are concerns about the relationship and timing issues; campuses do not see budget development as a collaborative process but rather as driven from the top-down, in direction and format, contrasting with a stronger campus role in the past. Campus leaders want earlier involvement in the process, so that their budget development can align with System priorities; they feel that university budget priorities are set in the budget office rather than by a collaborative process among university leaders. Some campus leaders see performance-based budgeting as a punitive process, not recognizing what they do well. All would like to see more upfront discussion of PBB and other budget processes.

Institutional Research has a larger staff than the campus institutional research staff, which campuses think should mean Statewide IR provides campuses with Banner reports rather than asking campuses to produce the reports. All recognize that Statewide and campuses need to agree on the process for generating numbers used in university reports; it does little good to argue over who is right. Campuses would like more communication on analyses of faculty workload.

Information Technology:

This area was one of the most challenging in our study; information technology underlies all of the university's administrative and academic processes; it is critical to the mission and people have passionate views about the issues.

The Statewide IT offices were seen as strongest in management of the network backbone, network planning, central data systems and quality assurance. The System office has a role in developing multi-institutional consortia, working with national and state organizations for research and educational networks, and on group purchasing efforts to hold down costs. It also has a role in mediating technology

disputes between the campuses, as with the current difference between UAA and UAF over deployment of DegreeWorks.

UAA is strongest in student services, enrollment management, and instructional technology. UAF has the strongest database and research network capabilities. UAS has the best user interface. Information Technology is one arena where the lead campus model is already in use – UAA operates E-live and hosts UAS and UAF, and provides telephone billing and licensing for OneCard for UAS. Statewide is seen as significantly better staffed than the campuses, and as not making a clear business case for all new major initiatives.

Network: Statewide provides the wide area network and commodity internet, and is the primary point of contact for the private data carriers in the state. Campuses would like to see an improved backbone, with particular attention paid to backup and restoration plans for outages. Creation of the capability to allow advanced users to provision their own circuits will be a positive development.

Banner Administrative Systems: Campuses perceive that the financial systems, human resources and student services staff are stretched too thin to fully address campus needs [note: Banner support functions are shared between IT and the Statewide system users in Finance, Human Resources, and Student Services.] Campuses see the Project Executive Group as providing needed project management, but would like to see an outsource contractor or contractors selected for special projects. Urgent needs of one campus are often not addressed in the decision-making process, which favors multi-campus needs, even if less urgent. Statewide often does not use the best of campus implementations, for example UAA's operational Banner dashboard should be considered for use elsewhere in the System.

MyUA: Campus interviewees used this system as an emblem of "what's wrong with Statewide." It was frequently cited as a Statewide mandate that did not take into account campus needs and priorities, or the changing nature of the students who are expected to use it. There is, however, also a perception—that few disputed—that campus participants actively undermined the implementation process. When originally proposed, it did not have clear buy-in from campuses; they had higher priorities for spending of the significant funding required. The campus customers use a variety of methods to access UA services today. The question now is to determine which portions of this system are likely to be used (absent a decision to make usage mandatory, which would be very controversial), and which deserve further investment. Campuses believe that Statewide is not recognizing what campuses are already doing for identity management, and how best to get directory services and identity management under control.

Statewide-UAF IT: There was general agreement that combining IT functions by location makes sense, but as with human resources real concern at UAA and UAS that the combination will mean UAF issues get first priority at Statewide. A more favored model would be to combine functions at the local level under campus control

– UAF for Fairbanks IT support, UAA for Anchorage IT support. UAF needs stronger IT leadership and support in order to resume management of Fairbanks IT, and will need to determine how to centralize at the campus level identity management, server support and some storage issues.

University Relations:

Foundation and Development: The development staff were seen as working well together, but there is some concern about the differentiation in roles between Statewide and campus leadership. Campuses see their leadership role in the development of local and alumni donors, and the Statewide role in reaching major donors outside Alaska and the biggest companies that give to multiple campuses. Some campus leaders cite a problem when Statewide staff work directly with campus alumni donors, bypassing campus leadership. Campuses support the centralized back room functions providing service to them.

Legislative liaison: The advocacy and lobbying role is a generally recognized central role, and the federal initiatives process is seen as generally successful. UAA interviews indicated the need for a stronger connection to Anchorage, with a broader base of contacts and follow-through.

Public Affairs was cited by campus interviewees as a positive, can-do office, particularly in the media relations and publications portions of its work. Statewide is helping smaller campuses with branding, which continues to be an issue with some disagreement – is it better to brand as UA or, for example, UAS, when reaching different audiences for university services? Most see a beneficial effect for campus-level branding for student enrollment, recruitment and retention, and for employee and alumni giving, but it's not as clear for other processes.

Our Perspective on the Relationships

Relationships and attitudes between System administrations and the campuses are always complex amalgams of positives and negatives. Even the most harmonious systems harbor conflicting attitudes as resentment of authority mingles with respect for the talents of colleagues at both levels, frustration over "one more eleventh hour request for information" is balanced by appreciation for success in securing state resources. Understandably, the campus priority for serving their region often positions campus leaders at odds with a Statewide agenda. The question is not over whether there is conflict between the system and the campuses—conflict always exists. The critical question centers on whether or not the inevitable conflict is sufficiently managed to ensure successful joint efforts in delivering to Alaskans the education they need and deserve.

In most instances, the Statewide administration and the campuses have effective working relationships. However this is not universally the case. We found that mutual trust and respect seem to be missing in several Statewide-campus relationships. There is a sense at the campuses that Statewide too often bypasses campus leadership to achieve its objectives, and some campus deans and directors end run their campus leadership by going directly to Statewide. Campuses perceive that some Statewide staff don't understand campus culture or work schedule, and have little appreciation of what's on the campus plate. In campus terms, they view the essential Statewide service role as facilitating campus work, in a service mode responsive to the campus needs and recognizing that sometimes effectiveness at the local level is more important than efficiency or cost savings to the System. Statewide interviews yielded a concern that campuses are often institution-centric rather than student-centric, and can be blind to the needs of students who utilize the services of multiple campuses. At times, Statewide leaders argue that because "the campuses simply won't or can't" solve some problem, the System needs to take responsibility for an entire function rather than insisting that the campus address the problem.

We emphasize that in the midst of disagreement, frustration and conflict, we consistently heard campus leaders express great respect for the talent and intentions of their Statewide colleagues. This fundamental reservoir of respect will underpin whatever efforts the UA System makes to improve negative relations where they exist. Several of our recommendations, especially those calling for earlier and deeper engagement of campus leaders in decision-making, will help to strengthen the working culture in the System.

Recommendations for a High Performing UA System

In our view, under the leadership of President Mark Hamilton and his team, the UA System has developed over the past decade into a high performing system. The catalogue of achievements is familiar to most in the System and the state. Increased public awareness of the importance of higher education to economic and social opportunity in the state, greater public investment, the addition of important programs and services all speak to a System that has substantially increased its service to the people of the state. The task facing the president and his team of System and campus leaders is to sustain the achievements of the past decade while substantially reducing the cost of delivering many of them.

Merely reducing costs, regardless of the consequences for quality, accountability, and service, would be easy for these experienced administrators. The challenge instead is to exercise good judgment in order to reorganize System offices, programs and services so as to reduce net costs while maintaining high levels of performance.

A useful template in responding to this challenge is to organize recommendations for streamlining and other changes in terms of the characteristics of high performance in systems.

Strong Executive Leadership

- The University of Alaska enjoys exceptionally able executive leadership in its president. His team of senior System officers is recognized even by critics of the System as being bright, talented and committed to high standards of service. The current chancellors combine extensive experience in public affairs in Alaska and elsewhere with practical skill in getting things done. Few systems in the country can match this array of talent and experience.
- This group would be an even more effective team were the System to more deeply engage the chancellors in decision-making on the most important System problems, in setting strategic directions and addressing concerns over such perennially difficult topics as approving new doctoral programs, the budget request to the legislature, resource allocation among the campuses and the like. Monthly face to face meetings of the resident, the chancellors and the vice presidents (not the staff who report to them) is a commonly used venue for discussions at this level in many systems. In University systems, campus heads (whatever their titles) are far more than unit managers. As spokespersons for their institutions and powerful – and often very popular – symbols in their communities, these individuals in fact strengthen the public presence of the System as a whole.
- At the same time, collaboration would be improved if the chancellors routinely involved senior System executives in campus decisions that have implications for

the System office, or for the UA System as a whole, and particularly those decisions with visible impacts to significant external constituencies.

- Currently, there are too many System officers and functions reporting directly to the president. This flat reporting structure threatens to detract either from the time the chief executive can devote to his leadership and representational duties, or give short shrift to important administrative functions. We believe that aggregating planning and budget development, facilities management, and possibly information technology under the office of the vice president for administration would be a useful way of aligning responsibility, helping to ensure coordination in these interconnected administrative areas.

A Simple, Clear Public Agenda

- Everyone we spoke to credits the president with communicating a clear, strong message about the linkage between investing in the University and a brighter economic future for the people of the state. The president defines this vision, articulates it cogently to policy makers and opinion leaders, and uses it to garner more resources for higher education. The University is acknowledged as understanding the needs of the state and doing a great job in focusing on workforce development. There is still work to be accomplished in obtaining public buy-in for research, and the public service role is uneven in its application.
- Having defined the agenda and secured support and funding for it, the trick for System leaders is to create incentives for the campuses to actually implement it. As a general rule, Statewide should resist the temptation to directly manage educational programs themselves, but instead should provide resources and other incentives for the universities—individually or in cooperation with each other—to get the job done. The argument that "the campuses won't do it" represents a failure of management or leadership, and should not serve as an excuse for the System stepping in prematurely. Statewide initiatives need linkage to the university's strategic plan, with accountability for outcomes.

Fiduciary Capacity

- By all accounts, the System under President Hamilton's leadership has been highly effective at securing resources from the state legislature (and from the federal government as well). Judging from the opinions of the external auditors, there is also a high standard of accountability for funds as well. The accounting deficiencies of the 1970s have clearly been addressed.
- Planning and budget development appear to be well managed from a technical viewpoint. But we heard numerous tales from the campuses of problems with the *process* of assembling the budget. Campus officials complained of last minute demands for information and indifference to campus work schedules. Converting what is widely regarded as a highly directive process into a more collaborative one, with early campus engagement, would increase buy-in, and might improve the quality of the resulting product as well.

- The System has an effective, somewhat decentralized approach to facilities planning and management in which the bulk of the actual work is performed at the campuses, while a coordinator at the System level presents capital planning information to the Regents. A senior, experienced (preferably with an engineering background) facilities coordinator with good communications skills should be hired to replace the individual who recently resigned. This position should be located in Fairbanks to be close to other senior officers, and to the campus with the largest physical plant.
- Like every other statewide system, the UA System has become more sensitive to the importance of risk management. Currently, this is a highly centralized function. Other systems have found it more effective to divide responsibility for risk management such that the central office, with input from the campuses, defines the template for assessing risk, but the chancellors are charged with implementing risk assessment reviews and steps for remediation at their campuses. An annual report to the Regents on this process and its findings would help ensure that it remains a priority for campus leaders. The service function of insurance procurement, claims processing, and self-insured retention allocation should be clearly separated from risk management's governance and control functions to ensure a service philosophy pervades those functions. We recognize that the System office has in the past stepped in to fill risk management functions neglected at the campus level. Returning responsibility to the campus level will require a commitment of time and resources to risk management by campus leadership that exceeds past efforts.
- Information technology is mission critical to the UA System. The System office should maintain its primary responsibility for connecting the UA networks to the world, and providing sufficient bandwidth for internal traffic. It should develop a clear Enterprise Architecture model, communicating with the campuses to ensure MAUs align their strategic plans with Statewide's.
- OIT should develop a clear service catalog to identify all service lines and services, working with campus IT leadership to determine on a service-by-service basis which ones should remain in OIT and which should devolve to campuses. OIT should recognize itself as a service business, responding to the customer base and rolling out best practices of customer service.
- OIT, the IT Council, and the Project Executive Group should clearly articulate the requirements for future projects and the problems they are designed to serve: they should solicit ideas and practices from campuses before developing new solutions. The PEG should clearly communicate priorities and timelines for IT system improvements, and outsource when necessary to accomplish key automation improvements.
- The IT Council should focus on strategic information technology issues, leaving decisions on the business needs of the information systems to the Banner system owners (finance, human resources and student services). This could allow membership of the IT Council to be streamlined; its current over-inclusiveness comes at the cost of decision-making efficiency.

- The Banner support functions should include an outsource contractor for surge projects and to address, at campus cost, unique campus concerns. The Statewide office should focus on quality assurance and system security.
- OIT should begin a dialog with campus leaders on the future of MyUA, recognizing that past efforts are sunk costs, to determine where any future investment should be focused. An early decision needs to be made on the directory environment – whether monolithic or federated – to allow progress on directory services and identity management. Resolving identity management issues should be a high priority.
- Help desk and desktop support should be campus functions; Statewide staff needs in Anchorage and Fairbanks can be supported (through reimbursement contracts if necessary) by the campuses.

Clarity of Responsibility and Authority

- At the most senior level in the System, there is no doubt that President Hamilton is in charge and provides overall leadership for public higher education in the state.
- But the System as a whole would be more effectively led and managed if there were a more precise and agreed-upon understanding of the apportionment of responsibility, accountability and authority between the System and the campuses. In general, we recommend that the decision-making processes, and indeed the whole culture, of the System evolve from a highly centralized model to a more collaborative one. The first step to achieving this would be for the president, the chancellors, and senior vice presidents to meet in a retreat setting with a well-defined agenda to develop a written statement of their *modus operandi*.
- The president and chancellors should delineate the responsibilities and roles of the various System councils. They should adopt a charter, clear delineation of responsibility, and chart the decision process flow for those Systemwide councils deemed necessary. We understand the current councils to be the Business Council, Community Campus Council, Development Council, Distance Education Steering Board, Educational Technology Team, Facilities Council, Human Resources Council, Information Technology Council, Public Relations Council, Risk Management Council, Statewide Academic Council, and Student Services Council. As useful as the councils are, it should be remembered that an advisory council member drawn from a campus is not a substitute for consultation with the formal leaders at the campus, especially the chancellor.
- It is critical that the System office differentiate between governance, service and program functions, focusing on the core governance mission and those service functions that provide the clearest benefits to campuses and the System.
- The University campuses need to reassume responsibility and accountability for administration and delivery of academic and research programs. This would require transfer of current Statewide health programs, corporate programs, teacher mentoring, K-12 outreach, and the Alaska Teacher Placement Program to

appropriate university campuses. We recognize a crucial Statewide role in incubating new programs and from time to time acting as "receiver" for problematic academic and support functions, but believe System office placement of academic programs should be limited to two or three years. Any System office hiring for academic programs should be in term positions to emphasize the temporary nature of Statewide academic programs.

- In the same vein, we believe that "mergers" of functions between the System office and any single university campus create role confusion and stimulate negative perceptions by the other campuses. It is politically far safer for a campus to provide services for Statewide staff and functions that are located in the campus' community than for Statewide to assume responsibility for one campus.
- We thus recommend that the combined human resource functions – recruitment, hiring, payroll, retention and dismissal – for UAF and Statewide's Fairbanks staff be managed by UAF, with Statewide retaining the System human resource policy functions and those functions serving all campuses. These roles could be performed by UAA for Statewide functions and staff located in Anchorage. Alternatively, if the System and campus leadership determine that additional human resource functions should operate on a service center basis, the Statewide-UAF model should be implemented on a system-wide basis, including UAA and UAS, with shared decision-making on key issues.
- As with HR, we recommend that the combined information technology functions for UAF and Statewide be managed by UAF, with Statewide retaining those functions that it provides for all the universities.
- There should be a stronger System office presence in Anchorage. Statewide is seen in Anchorage as allied with Fairbanks, even if Fairbanks doesn't see it that way. There are important programmatic reasons for a change, too – the University of Alaska Foundation and development functions need a visible Anchorage presence to accomplish their mission; legal services would be easier for UAA leadership to access with an Anchorage office; information technology staff recruitment would be easier in the larger Anchorage labor market; the legislative center for the state is in Anchorage for most of the year. We believe the Anchorage-based System offices should be co-located to avoid the isolation experienced by earlier efforts to base System office staff there, and to provide opportunities for sharing of support staff, equipment, and specialized space. Statewide should negotiate with UAA for human resources and information technology support to the Anchorage System offices.

Models of Frugality

- Our perception is that System staff members are uncommonly talented and committed to their work. It is also our view that this may be too much of a good thing. In comparison with central offices elsewhere in the country, and indeed with the Alaska System itself a decade ago, the number of staff has increased significantly and the budget has grown by over 100 percent.

- We believe that total System expenditures can be reduced to the FY99 relative level in a combination of absolute reductions and the shifting of some programs and activities to the campuses, a total reduction of $15 million ($5 million in general funds and $10 million in other funds). The intention of this recommendation is not to create unfunded mandates that burden the universities, but to shift appropriate resources from the System to the campuses to cover the additional assignments.
- The System should make the process for calculating indirect cost recovery fully transparent to campus leaders, with annual review of the cost drivers and allocation based on those cost drivers. There should be an open periodic review of the allocation of indirect cost recovery revenues, and by reducing the current System office share of the indirect cost recovery rate below the current 12.8 percent. A decision to designate a portion of the reduction for support and incentives for research in areas critical to the economic future of the state would send a strong signal about System priorities. In short, greater transparency in both the cost recovery and revenue allocation process would benefit all parties.
- Greater transparency in the allocation of indirect cost recovery revenues, coupled with the current transparency on Statewide's allocation of other funds (such as UA Land Grant Trust Funds, and funds from BP Exploration (Alaska) and ConocoPhillips Alaska, for example), would for example make it readily apparent that the System office is now contributing significantly to UAF research efforts, to an extent greater than the System office has received in indirect cost recovery from UAF.

Integral Decision-Making

- The importance of more deeply engaging the chancellors in discussions and decisions regarding fundamental System issues has been emphasized elsewhere in this report. When it comes to advocacy for resources in particular, greater engagement of campus and student leaders, both urban and rural, in a coalition in support of shared priorities would help make the case for sustained public support.
- We also recommend an effort across the board to engage campus personnel far upstream in decisions that affect their functional areas. In particular, the campus perceptions of arrogance on the part of a few System staff and of indifference to peak work times at the universities when requesting information need to be addressed by changes in staff communication and attitude.
- We recommend the System and campus human resources offices work together to create employment incentives for Statewide staff to have campus experience. Establishing an exchange program for Statewide staff to campuses, and vice versa, would improve the understanding of both parties' roles. Statewide hiring decisions for most positions should include campus experience as a factor (as is the case for Statewide human resources positions), and development of specific career paths between campus and Statewide should be a priority.

- Prior to initiating new projects at the System office, Statewide staff should be soliciting campuses for their expertise and ideas, and should be willing to modify project goals based on campus experience.

Critical Self-Appraisal and Change

- The external reviews and reports commissioned by the System and focused on its own operations testify to a willingness to seek evaluations of processes and performance.
- By commissioning this study, and especially in naming an Advisory Committee of campus-based persons who were forthright in their criticism, System leaders provided further evidence of seeking constructive suggestions for improvement. Actually acting to implement some of the recommendations will further confirm the System's enthusiasm for reforming itself.
- The System office could show its commitment to continued self-appraisal by increasing budget transparency in the Statewide budget units. At a minimum, the budget should differentiate between governance, service and program functions, perhaps at the allocation level.
- The System office should begin development of a new UA strategic plan, since the current plan only extends through 2009. Under the leadership of the vice president for academic affairs, a new six-year planning process should build from the previous plan, incorporating the new campus and state environment and the campus planning efforts of the past several years. The plan should include a clear academic program review process in anticipation of the changing fiscal environment.
- We recommend that the System identify, in collaboration with campus colleagues, a set of metrics to evaluate System performance. Examples of measures might include System office cost per student, administrative cost per faculty member, changes in System office expenditures and staffing levels compared to expenditures and staffing changes at the MAUs, and total costs compared to peer systems (recognizing that the substantial differences in systems makes the 'peer' choice a challenging one).

These recommendations will take time to implement; they cannot be accomplished overnight. Many of the recommendations need further refinement that cannot be accomplished by outside consultants; they require the active participation and collaboration of System and campus officers. We believe the president, his key System office staff, and chancellors should develop a three-year plan to implement the recommendations.

What a Streamlined UA System Would Look Like

A streamlined UA System would retain the critical strengths that have made it so successful over the past decade. Strong executive leadership, the clear public agenda so consistently articulated by that leadership, stringent fiscal management, and the readiness to engage in critical self-appraisal and create change based on those assessments would remain distinguishing features of the UA System.

But some things would change.

There would be a clearer understanding among all parties of the division of authority and responsibility between Statewide and the campuses. The division we have suggested—governance, service and program functions—may be a useful template in clarifying these distinctions. The System administration would become a leaner operation with fewer staff and lower overall costs. There would be more conversations among campus and System leaders earlier in the process of decision-making.

This more integrated model of arriving at strategic and operational policy decisions does not diminish the executive authority of the president, but it does ensure more dialogue before policy and administrative choices are made. Our recommendations are intended to assist this high-performing system to continue its exemplary service to the people of Alaska in a time when there may be fewer resources to carry out that noble purpose.

Appendices

Appendix A – Authors' Backgrounds

Terry MacTaggart is an experienced leader and scholar in higher education. He recently completed a one-year assignment as the chancellor of the University of Maine System of seven universities, ten campuses, thirteen centers, a hundred learning sites and a distance education network. His consulting and research work focuses on higher education leadership and policy, strategic planning, turning around troubled institutions, trustee development and leadership evaluation. He has served as a faculty member and administrator at several public and independent colleges and universities where he has led or participated in substantial institutional turnarounds. He has held the chancellor's position at the Minnesota State University System and the University of Maine System, where he was asked to return for the 2006-2007 academic year.

He has served as a consultant and facilitator of board retreats for numerous colleges, universities and systems including the University of Connecticut, Rutgers, University of Nebraska System, the University System of Maryland, the University of North Carolina at Chapel Hill, East Carolina University, the Oregon University System, the University of Alaska System, the University of Northern British Columbia, the University of Victoria in British Columbia, the University of Houston System, Texas Southern University, the Texas Tech University System, the Massachusetts Maritime Academy, Johnson & Wales University, New England College, Endicott College, Fielding Graduate University and others.

He has served as Chair of the Commission on Institutions of Higher Education (CIHE) of the New England Association of Schools and Colleges (NEASC). He has led multiple visiting teams for several regional accrediting associations. He has served as a Fulbright Scholar to Thailand and to Vietnam as an expert on accreditation and quality assurance.

His research and publications focus on governance, improving relations between institutions and the public, and restoring institutional vitality. His most recent book, published by ACE/Praeger in 2007, is titled *Academic Turnarounds: Restoring Growth and Vitality to Challenged American Colleges and Universities.* With James Mingle, he authored *Pursuing the Public's Agenda: Trustees in Partnership With State Leaders.* In 1996, he served as the editor and lead author of *Restructuring Public Higher Education—What Works and What Doesn't in Reorganizing Public Systems.* Two years later he produced *Seeking Excellence Through Independence*, which focuses on rebalancing campus autonomy and accountability in order to achieve better results. In 2000, he wrote, along with Robert Berdahl, a study of the partial privatization of public institutions entitled *Charter Colleges: Balancing Freedom and Accountability.*

His academic credentials include a doctorate and master's degree in English Literature from Saint Louis University, a Master of Business Administration degree from St. Cloud University, and an honorary doctor of law degree from the American College of Greece. He is a member of Phi Beta Kappa.

BRIAN ROGERS

Professional

Information Insights, Inc. Fairbanks, Alaska

Principal Consultant and Chief Financial Officer, 1996 to present.

Management, economics, and public policy consulting firm. Principal author of a variety of economic and public policy research projects for state and local governments, nonprofit organizations, tribes and the private sector. Facilitator and mediator for stakeholder and regulatory processes, strategic planning and policy summits for a variety of Alaska clients.

University of Alaska Statewide System, Fairbanks, Alaska

Vice President for Finance, 1988-95. Director of Budget Development, 1984-87.

Policy-level position with broad responsibilities to the president. Led system office staff in finance, accounting, budget, facilities, computing, telecommunications, risk management, investment land management, and financial systems development.

Superior Court, State of Alaska, Juneau, Alaska Special Master, 1992.

With two other special masters, in accordance with instructions from the Superior Court, developed and mapped proposed Interim Reapportionment Plan for Alaska's Legislative districts for the 1992 election.

Alaska State House of Representatives State Representative, Fairbanks, 1979 – 1982.

Chaired University Budget Subcommittee; co-chaired Workers' Compensation Study Commission, Constitutional Convention Committee, Power Alternatives Committee, GO Bond Conference Committees. Served on Finance, Labor and Commerce, Permanent Fund, Transportation, Oil and Gas Taxation and Leasing Policy Committees.

Education

Kennedy School of Government, Harvard University

Masters in Public Administration, 1984

Attended Trinity College, Brown University, University of Alaska.

Selected Civic and Professional

Director, Alaska Communications Systems (NASDAQ: ALSK), since 2001, serve on Audit Committee, Compensation and Personnel Committee; Director, Usibelli Coal Mine, since 2007; Member, University of Alaska Foundation Investment Committee, since 1995.

Formerly: Regent, University of Alaska, 1999-2007, chair from 2003-3005; Co-Chair, Creating Alaska Advisory Committee for 50th Anniversary of State Constitutional Convention, 2004 – 2006; Trustee, Northern International University (Magadan, Russian Far East), 1992-2005; Member, University of Alaska Foundation Board of Trustees, 2000 – 2002; Member, Governor's Task Force on Jobs and the Economy, 2001; Chair, State of Alaska Long-Range Financial Planning Commission 1995 – 1996; Member, Governor-elect's Fiscal Policy Transition Team 1995, vice chairman, 1986; Member, Alaska Statehood Commission, 1980 – 1983

Appendix B – Members of the Advisory Committee

Ro Bailey, Vice Chancellor of Administrative Services, University of Alaska Fairbanks

Megan Carlson, Chair, UA Staff Alliance; President, UAA Classified Employee Council; and Assistant to Associate Provost, University of Alaska Anchorage

Cathy Connor, President, UAS Faculty Senate and Associate Professor of Geology, University of Alaska Southeast

Jan Gehler, Dean, Community and Technical College, University of Alaska Anchorage

Jon Genetti, President, UAF Faculty Senate and Associate Professor of Computer Science, University of Alaska Fairbanks

Carol Griffin, Vice Chancellor for Administrative Services, University of Alaska Southeast

Lee Haugen, Director, University of Alaska Fairbanks, Northwest Campus

Bogdan Hoanca, Chair, Faculty Alliance; President, UAA Faculty Senate, and Associate Professor of Computer Information Systems, University of Alaska Anchorage

Linda Lazzell, Vice Chancellor for Student Affairs, University of Alaska Anchorage

Buck Sharpton, Vice Chancellor for Research, University of Alaska Fairbanks

Bill Spindle, Vice Chancellor for Administrative Services, University of Alaska Anchorage

Appendix C – Interview Schedule and Hearing Participants

Interview Schedule

October 1: Fairbanks
- President's Office
- Advisory Committee
- Hearing: Statewide – VP Administration departments

October 2: Juneau
- UAS Chancellor's executive team
- Hearing: Statewide – Information Technology departments

October 3: Anchorage
- UAS Chancellor's executive team
- Hearing: VP Academic Affairs departments
- Assoc. VP Budget and Planning
- Anchorage area regents and former regents

October 4: Fairbanks
- UAF Chancellor's executive team
- Hearing: Human Resources
- Fairbanks area regents and former regents

October 5: Fairbanks
- Advisory Committee

November 1: Juneau / Fairbanks
- UAS Chancellor
- VP Administration staff
- UAF Chancellor

November 2: Anchorage
- UAA Chancellor
- Statewide executives
- UAF Facilities
- UA Foundation
- UAA Director, Information Technology

November 5: Anchorage
- Chair, Board of Regents
- UAA faculty/staff open session
- UAA Director Business Services

Interviewees and Hearing Participants

Statewide

Mark R. Hamilton, President
Julie Baecker, Chief Risk Officer, Risk Management
Beth Behner, Associate Vice President Human Resources
Roger Brunner, General Counsel
Rebekah Cadigan, Risk Management
Myron Dosch, Controller
John Duhamel, Human Resources
Jim Durkee, Technology Oversight
Vickie Gilligan, Director HR Systems & Accounting
Mike Humphrey, Director Benefits
James Johnsen, Vice President, Administration
Dan Julius, Vice President Academic Affairs
Karl Kowalski, User Services
Julie Larweth, Business Office, Information Technology
Guy Lee, Information Technology
Linda Luper, Program Director, UA College Savings Plan
Jim Lynch, Chief Procurement Officer; Associate Vice President Finance, Procurement
Richard Machida, Senior Planning Engineer
Ramona McAfee, Director, Distance Education & Military Services
Mari Montgomery, Director, Land Management
Jim Mullen, Labor Relations Director
Saichi Oba, Assistant Vice President Student & Enrollment Management
Russell O'Hare, Chief Records Officer
Rory O'Neill, Applications Services
Karen Perdue, Associate Vice President Health Programs
Pat Pitney, Vice President Budget
Kris Racina, Director Labor Relations
Dave Read, Director, Internal Audit
Wendy Redman, Vice President University Relations
Kate Ripley, Director, Statewide Public Affairs
Michelle Rizk, Director, Budget
RayeAnn Robinson, Assistant Controller, Financial Systems
Anne Sakumoto, Director Training & Development
Richard Schointuch, Associate Vice President, Facilities
Jeanine Senechal, Director Classification, Comp & Recruitment
Steve Smith, Chief Information Technology Officer
Fred Smits, Infrastructure Technology Services
Joe Trubacz, Associate Vice President, Finance
Dave Veazey, Assistant Vice President Academic Affairs
Fred Villa, Associate Vice President Workforce Programs
Tammi Weaver, Chief Investment Officer, Cash Management & Investments
Gwen White, Director, Institutional Research

Cathy Connor, President, UAS Faculty Senate and Associate Professor
Dick Dent, Vice Chancellor Student Services
Keith Gerken, Director, Facilities Services
Carol Griffin, Vice Chancellor Administrative Services
Kirk McCallister, Director Human Resources
Kevin Meyer, Director Public Affairs
Robbie Stell, Provost

We want to thank all of these individuals, and others whose names were inevitably missed in this listing, for the energy and enthusiasm they gave to this project.

DATE: March 2, 2009

TO: Chancellor Ulmer, Rogers, Pugh

FROM: Mark Hamilton

SUBJECT: MAU Operating Review Guidelines – Spring 2009

To set the framework, the operating review discussions will begin with a recap of the management review information presented at the March 25th Business Council Meeting. Then a focus on FY10 distribution and implementation plans to achieve stated targets and goals, and strategic issues to consider for FY11 and beyond. The 2009 Operating Review dates are listed below.

UAF	April 21	9:00 am – 3:00pm
UAS	April 29	8:00 am – 2:00pm
UAA	April 30	9:00 am – 3:00pm
SW	May 4	10:00 am – 4:00pm

Proposed Schedule:

1 hrs Management Report Recap:

- The Management Report Review will be March 25th. The operating review recap will be spent discussing the highlights of that meeting. Questions provided by Myron Dosch via email (Appendix A).
- In addition as a follow up to the Management Report meeting, please answer the following questions.
  1) Comment on maintenance and repair (M&R) and renewal and replacement (R&R) expenditure requirements per BOR policy. Please report FY08 operating and capital expenditures for M&R and R&R support; FY09 budgeted operating and capital commitment for M&R and R&R. Comments should include the major projects funded with those funds in FY08, and expected to be funded in FY09 and FY10. If specific equipment or maintenance costs are funded through the capital budget in FY10, how will that affect the FY10 operating plan?
  2) Provide a status of all active capital accounts.
  3) Specify and quantify (to the best of your ability) major cost savings and efficiency actions/efforts taken to date in FY09, and any additional actions anticipated through year end. Identify whether these actions generate one-time or ongoing savings and the projected amount.

2 hrs FY10 Conditions/Distributions

- What are your MAU conditions and anticipated operating assumptions?
- FY10 distribution and relative impact to your MAU.
- Provide a brief update on FY09 projected final performance for common system measures, including non-credit instruction, and actively managed MAU strategy measures, focusing on strategies implemented and review of FY10 performance targets given environment and progress on planned strategies.
- What criteria will be used to create and distribute the one percent general fund performance funding pool within your MAU?

2 hrs FY11 Budget and 3-5 year Planning Horizon

- Chancellor will present expected outcomes 1-2 page summary submitted as part of the FY11 budget planning process to include quantitative impacts on primary performance measures as well as MAU strategy measures.
- Discussions will focus on:
  - Recognizing your MAU's priorities and compelling advantages particularly those that align most directly to the Systemwide Priorities (priorities are in discussion phase with MAU leadership but will be similar to FY09's), system performance goals, and BOR strategic plan goals.
  - MAU specific program needs outside of the systemwide priorities and MAU fixed cost needs.
- MAU Campus Master Plan and 6-year Capital Plan
  - Report status of MAU and Community Colleges campus master plans; indicate expected schedule for review and update of these plans.
- Discuss your MAU's method for monitoring and controlling space allocation. What efforts are made to increase space utilization for rooms in the master schedule and for those controlled by departments? Identify your MAU's optimization target for space utilization.
- Discuss your MAU's 3-5 year planning horizon addressing, as specifically as possible, facilities/IT, students changes, academic programs, research emphasis, faculty/staff impact, and key performance measure targets/goals.

Presentations should be by the chancellor, provost or vice-chancellor. Please invite appropriate leadership you want in the room to attend. Sufficient time should be included within the presentation for discussion.

The information prepared for this review has become a valuable reference. In addition to the management and operating review information, please be sure to include copies or preferably web links to your MAU strategic plan, campus master plan, and academic, enrollment, and research plan documents. Similar to last year, one week prior to the scheduled visit, please provide 15 copies of the information requested to Michelle Rizk, Statewide Planning & Budget, P.O. Box 755260, Fairbanks, AK, 99775-5260 (907.450.8182 /michelle.rizk@alaska.edu). In addition to the paper copies, please send an electronic copy as well.

APPENDIX A

January 16, 2009

To: Vice Chancellors Spindle, Griffin, and Pitney

From: Myron Dosch, Controller

Subject: FY09 Spring Management Report Meeting

On behalf of President Hamilton, the questions for the spring management report reviews follow. The first eight questions should be covered at the March 3rd Business Council meeting, while all of the questions should be covered at the April Operational Reviews. Many of the questions should be answered during the preparation of your regular management reports. Using the management reports submitted for the period ended January 31, 2009, please cover the following topics:

1. Carryforward analysis – What is the anticipated carryforward for FY09? What is the projected unrestricted carryforward (i.e. not including recharges) as a percent of unrestricted and restricted revenues? What are the primary factors influencing the projected balance? What is the plan to expend the carryforward? Discussion of how the plan was developed and projects/expenditures were prioritized.

2. FY09 budget building process and status – FY09 budget distribution challenges or flexibility. Was carryforward used to balance the FY09 budget? Any additional flexibility created through new revenue or reduced expenditure requirements? Discussion of each revenue source and projections through year-end. Discussion of expenditures by allocation and program.

3. Management of contingencies - What contingency level is built into the initial budget load? How is this managed throughout the year? As additional funding becomes available during the year, through salary savings, additional tuition, etc., what process do you use to allocate those funds? How much additional funding have you had this year? At what point in the fiscal year did you become aware of the additional funding? How does the amount and timing compare to previous years? How are you allocating these funds this year? How are your extended sites included in the allocation process? Describe your progress in accumulating the 2% of unrestricted revenues flexibility for priority internal reallocation.

4. FY09 initiative and initiative pool, SB137 status - Describe how pool funds and SB137 funds are being monitored, and expectations of ability to spend by the end of the fiscal

year. Identify those pool projects that are not progressing as planned and dollar amounts that may be unexpended at year end.

5. Specify debt strategies and plans – What projects are you anticipating needing debt financing? When would debt service payments begin? What would be the source for paying debt service? Discuss why debt is a necessary or desirable funding source.

6. FY10 initial budget analysis – Discuss status of FY10 budget analysis. Do you anticipate a certain amount of carryforward from FY09 necessary to balance the FY10 operating budget?

7. Accounts Receivable (A/R) analysis - For purposes of this question, A/R includes grants and contracts only. Please report the trend of these A/R balances for the three years ending December 31, 2008. Use quarterly data points, or more frequent if you desire. What caused changes in the balances? How has the grants and contracts A/R balance changed for the last three fiscal years as a percent of total grant and contract revenue (federal, state, local and private)?

8. Discuss the impact of reduced endowment payouts and UA Foundation available funds for the development function.

9. Specify and quantify (to the best of your ability) major cost savings and efficiency actions/efforts taken to date in FY09, and any additional actions anticipated through year end. Identify whether these actions generate one-time or ongoing savings. (Operational Review Only – April)

10. Report on maintenance and repair (M&R) and renewal and replacement (R&R) expenditure requirements per BOR policy. Please report FY08 operating and capital expenditures for M&R and R&R support; FY09 budgeted operating and capital commitment for M&R and R&R; and the FY09 and FY10 annual calculated need for M&R and R&R. Comments should include the major projects funded with those funds in FY08, and expected to be funded in FY09 and FY10. If specific equipment or maintenance costs are funded through the capital budget in FY10, how will that affect the FY10 operating plan? (Operational Review Only – April)

Let me know if you have questions or comments prior to the meetings. Thanks for your help and I look forward to learning more about your challenges and opportunities.

cc: Hamilton, Redman, Julius, Rogers, Ulmer, Pugh, Hyde, Orley, Harings, Roberts, Trubacz, Harrington, Stockwell, Coker, Rutherford

UNIVERSITY of ALASKA
Many Traditions One Alaska

September 8, 2009

TO: Chancellor Fran Ulmer
Chancellor Brian Rogers
Chancellor John Pugh

FROM: Mark Hamilton, President

SUBJECT: MAU Financial and Performance Review Guidelines

The 2009 MAU Financial and Performance Review dates are listed. Access via video conference will be available for additional Statewide and MAU off site participants as well as the option for other MAU interested individuals to observe.

UAA	Oct. 8	11:00 am – 5:00pm
UAF	Oct. 20	9:00 am – 3:00pm
UAS	Oct. 27	9:00 am – 3:00pm
SW	Oct. 29	8:30 am – 12:30pm

The financial review section (Attachment 1) should highlight alignment between revenue and expenditure changes relative to program investments, strategic choices, and performance, as well as specific fiscal issues facing your MAU.

The performance review portion will be supported by MAU Performance Evaluation submissions, due no later than September 15th, 2009. The Performance Evaluation information submitted by each MAU will serve as the primary reference for performance-related related discussions, and alignment between the strategic direction outlined in the MAU Performance Evaluation and your presentations is expected. In the presentation, please highlight the following for the six "End Result" performance measures being submitted to the State in conjunction with the FY11 budget request:

- Execution and performance impact of FY08, FY09 and FY10 program funding increments
- Targets and goals on subcategories significant to strategies and program investments (i.e. engineering, fisheries, specific health programs, space alignment for F&A rate impact, development targets)
- Strategies that worked and did not work, and why

The information prepared for reviews has proven to be a valuable reference. Similar to last year, one week prior to the scheduled visit, please provide fifteen copies of the information requested to Antonia Trice, Statewide Planning and Budget, P.O. Box 755260, Fairbanks, AK, 99775-5260 (907.450.8180 /snabt20@email.alaska.edu). In addition to the paper copies, please send an electronic copy as well.

Please let me know if you have any questions.

cc: Pat Pitney, Carol Griffin, Bill Spindle, Michelle Rizk, Saichi Oba, Joe Trubacz, Myron Dosch, Jim Lynch, Susan Henrichs, Dan Julius, Robbie Stell, Beth Behner, Karen Perdue, Fred Villa, Steve Smith, Wendy Redman, Gwen White

Attachment 1 ---- Finance, Facilities, Administrative Review Instructions:

Financial reporting will be based on the S report definitions and totals (FBB2SBD tables in RPTS public). Unit level reporting is available from SW Planning and Budget at http://www.alaska.edu/swbir/ir/publications-reports/ or, you may use school/college level reporting consistent with the S report.

As you identify significant changes that can be explained by accounting difference - adjust for the accounting differences so that the schedule shows a normalized view of the information (i.e., tuition revenue with discounting verses gross tuition revenue) then provide a brief explanation of the changes and significant findings.

Section 1-- Expenditure and Revenue Trend Reports

A. Five-year trend and one-year changes in revenue by source, fund, MAU, and Campus. Note significant trend and one-year changes.

B. Five-year and one-year changes in general fund and non-general fund revenue by unit (School/College/Institute/Division). Note significant trends and one-year changes and provide a brief explanation of the programmatic activity generating the trend/change.

C. Five-year trend and one-year changes in general fund/state appropriation authorized budget and actuals by allocation with explanation of the changes in actuals and the differences between authorized budget and actuals.

D. Five-year trend and one-year changes in expenditures by NCHEMS and Fund Type for the MAU and campus level noting significant changes. Although outside of the five-year trend, note how the following percentages have changed since FY99.
   - Instruction expenditures relative to total
   - Student services expenditures relative to total
   - Research expenditures relative to total; provide context for FY10-FY15 targets and goals for restricted research expenditures
   - Public Service expenditures relative to total
   - Academic support relative to total
   - Institutional support relative to total
   - Physical plant relative to total

E. Five-year trend and one-year changes in expenditures by major account code and fund for the MAU and campus level noting significant changes. Please note MAU and campus authorized budget vs. year-end actuals by major account code and explain variances that exceed 3%.

Section 2 - Revenue Projections

A. Provide projections for University Receipts, State RSAs, Federal Receipts, Indirect Cost Recovery and Tuition for FY10 and FY11, in context of MAU FY10-FY15 targets and goals for University Generated Revenue. Note units where significant change (increase or decrease) is expected. Using information prepared in previous financial reviews and performance evaluations, compare FY08, FY09, and FY10 projections by revenue source to actuals to give an idea of the accuracy of previous projections.

Section 3 - Auxiliary and Recharge Schedule

A. Use the same format as last year to report on auxiliary and recharge operations. Highlight any significant changes, areas of concerns, and trends of lowering fund balances.

B. Provide a three-year trend of housing capacity by building and occupancy. Note buildings that are off-line and why, and the effect of any configuration changes on capacity and occupancy.

C. Note any MAU plans to internally fund growth of auxiliary or recharge operations.

Section 4 - Process for Requesting and Distributing Contingency and/or Reallocated Resources

A. Report five-year trend and one-year changes of carry forward by allocation and fund. Identify units that contribute significantly to the carry forward amount. Discuss how the carry forward is managed. Provide an initial estimate for the FY10 carry forward. What can you do to better predict FY10 carry forward in the March/April estimate?

B. Discuss your MAU's plan to accumulate the FY10 and FY11, 2% available funding target for priority internal reallocation. Specifically, what programs have been reduced to garner funds for reallocation?

C. Report the use of FY09 contingency, including carry forward. Report the FY10 planned contingency and any pending issues.

D. Describe the process used to determine how requests are forwarded and reviewed for consideration of contingency/reallocation of resources. Note how community campus requests are forwarded and considered and how many community campus requests are currently being reviewed.

E. Report the net amount of contingency/reallocation invested in community campuses each year, FY06 to FY09

Section 5 -- Facilities and IT Issues

A. Briefly review your MAU projects that are included in the draft FY11 capital request that will be funded in-full or in-part by non-state funding source. Address your plans to secure the necessary revenue sources.

B. What steps have you made or intend on making to improve the facilities aspect of the F&A rate? This should include analysis of space utilization on your campus. (Changed – from last year's specific approach on classroom utilization only)

C. Provide a listing of construction in progress (projects over $250K) and detail important issues

D. Lease, Joint Use, Debt and Rental:
    1. As part of the capital budget process, your MAU submits a list of current leased properties, with corresponding annual payments and terms. Please review this list and provide the following information:
        a. What percentage of total MAU utilized space is leased?
        b. What are the actions planned for those leases that expire in the next 24 months?
        c. Provide a listing by building and space of MAU owned space leased to a third party. What percentage of total MAU owned space is leased to a third party?
        d. What are the actions planned for these leases that expire in the next 24 months and what new efforts are planned to lease out additional space?
        e. Provide a list of non-UA owned and non-UA occupied facilities/space that are situated on your MAU educational property.

E. Provide an annual listing of all debt payments (by building/project/vehicles/equipment) and the term of the debt (FY09 to FY19). Include new debt payments projected through FY14 based on your MAU's master plan and projects in the six-year capital plan.

F. Address new opportunities and review issues that pertain to joint use, collaborative, non-UA buildings on campus, and other partnerships and creative solutions (examples include UAS Joint Readiness Facility, UAF Cold Climate Housing Research, State Virology Lab, etc.)

G. IT infrastructure: describe any significant IT infrastructure issues your MAU addressed in FY09 and planned projects in FY10 and FY11. How do MAU IT investments reflect alignment with MAU strategic plans and performance goals? Is there a plan in place, including funding, for renewal and replacement of core administrative and academic IT infrastructure? Are the community campuses included in this plan? What is the plan for adoption, including training, for the ACAS and other systemwide automation services being introduced (such as digital document delivery).

Section 6 - Human Resources

A. Address staffing changes at your MAU from FY99 to FY09, highlighting any expected changes in FY10. For your convenience, Statewide Human Resources will provide for you with headcount data for regular employees (including term positions) at the school and college level by September 15th. The trend data provided will include FY99 and the last three Fiscal Years (FY07, FY08 and FY09).

B. What are the primary issues and concerns regarding the MAU's current/future workforce, specific areas affected, and steps being taken to address these issues. For example: recruitment and retention, turnover, retirements, succession planning, knowledge transfer of departing employees. To assist with this analysis, Statewide Human Resources will provide you with recruitment and turnover data for the last two fiscal years (FY08 and FY09) by September 15th.

Section 7 – Risk Management

A. What program goals/objectives have been established for your campuses to meet this upcoming year in the following areas:
   a. Emergency management
   b. Business Continuity
   c. Student health and safety
   d. Occupational health and safety

Section 8 – Other

A. Specify and quantify major cost savings and efficiency actions/efforts taken FY09 and any additional actions anticipated in FY10. Identify whether these actions generate one-time or ongoing savings. Include information related to utilities and how building operating and maintenances costs are being monitored and controlled.

B. Distance and Technology Delivered Programs and Courses (including hybrid) - Please report on FY09 activity, successes, and challenges for the following two areas, noting financial, academic, advising and financial aid resources directed to these activities:

   1) MAU's programs and courses delivered by distance and/or technology to students across the entire UA system;
   2) Distance and/or technology delivery of another MAU's programs and courses to students affiliated with this MAU.

<u>State Budget Narrative Reminder: Updated</u>

As these review presentations are being developed, keep in mind that each campus and MAU must provide operational narratives in conjunction with UA's budget submission to the Governor (referred to as "ABS narrative" (Alaska Budget System)). To the degree that the ABS narratives, MAU Performance Evaluations and the fall reviews are coordinated, the ABS narrative will be easier to develop than in past years. The topics required for the ABS narrative include:

- Contribution of the campus/MAU to UA's mission (Referred to in 'ABS' as **Contribution to Dept Mission**) which describes why the campus/MAU exists
- Significant challenges facing the campus and MAU (**Key RDU/Component Challenges**)
- Provide the results on "End Results" measures as well as campus and MAU based measures associated with strategies (**Changes in Results Delivered**). This is to identify the impacted measures and expected performance results that would be realized with new funding being requested.
- Describe the accomplishments the campus and MAU is celebrating. To the extent these accomplishments are in the context of UA's Performance measures or accepted campus/MAU measures, it will add additional credibility (**Accomplishments**). The accomplishments must be within 2009.

Items that were previously included and updated in ABS, but are now populated using the State's "Performance Evaluation" framework include:

- Strategic and/or primary activities-at UA and MAU levels only (**Activities**)
- Core services of the campus and MAU (**Core Services**)
- What specific actions and strategies are planned (**Goals/Strategy**)

UNDERSTANDING ALASKA UPDATE

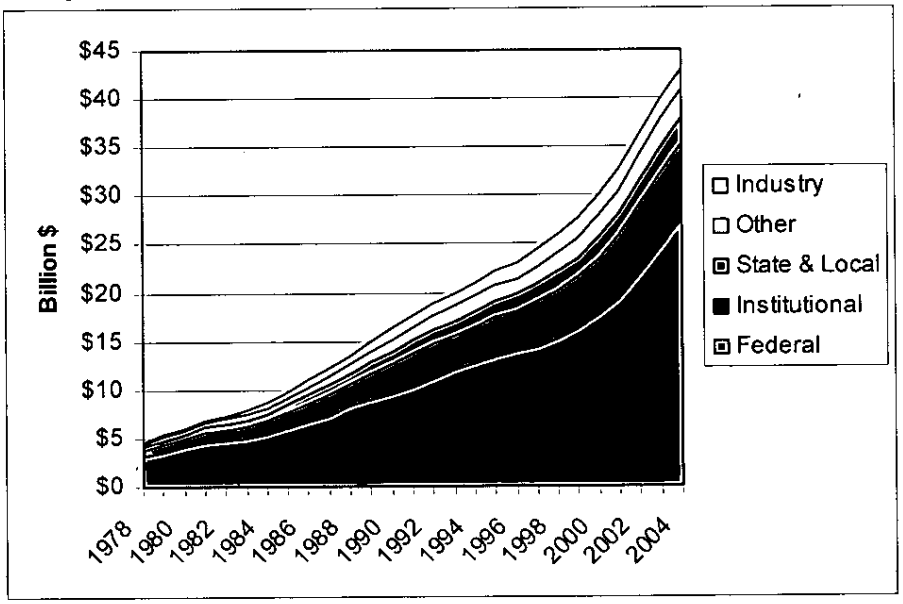
University of Alaska Research: An Economic Enterprise[1]

Scott Goldsmith, Professor of Economics
Institute of Social and Economic Research (ISER)
University of Alaska Anchorage
March 2007

National Trends in University Research

Nearly $50 billion of the $312 billion of total U.S. research and development expenditures in 2004 (preliminary) consisted of university research. Excluding federally funded research and development centers administered by universities, like the Los Alamos National Laboratory, total research-related revenues of U.S. universities were $43 billion in FY 2004, continuing a positive trend stretching back at least to the early 1950s.

Figure 1. U.S. University Research Revenues: Historical Growth



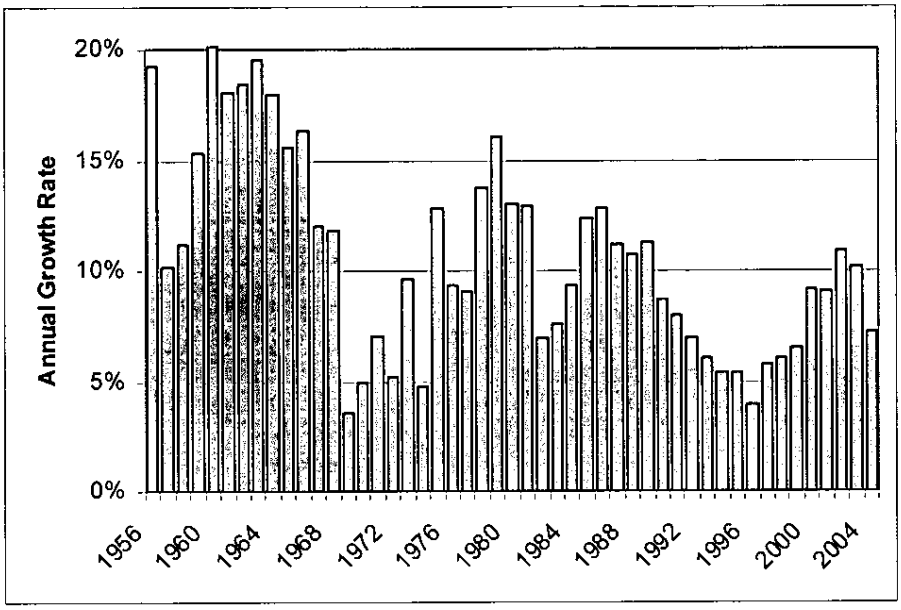
Source: National Science Foundation

[1] This paper updates the June 2004 ISER analysis entitled The Economics of University Research.

1154

In the last 50 years the annual increase in research revenues has ranged between 4 and more than 20 percent, and since 1978 it has averaged 9 percent--considerably above the overall growth rate for the U.S. economy.

Figure 2. U.S. University Research Revenues: Annual Growth Rate



Source: National Science Foundation

The federal government is the largest source of funding for university research, accounting for 64 percent in 2004. Internal university funding (institutional funding) is next in order of importance, contributing 18 percent of the total. State and local governments account for nearly 7 percent, as does the category of other (including nonprofit organizations). Private industry is the smallest category of contributor, providing less than 5 percent.

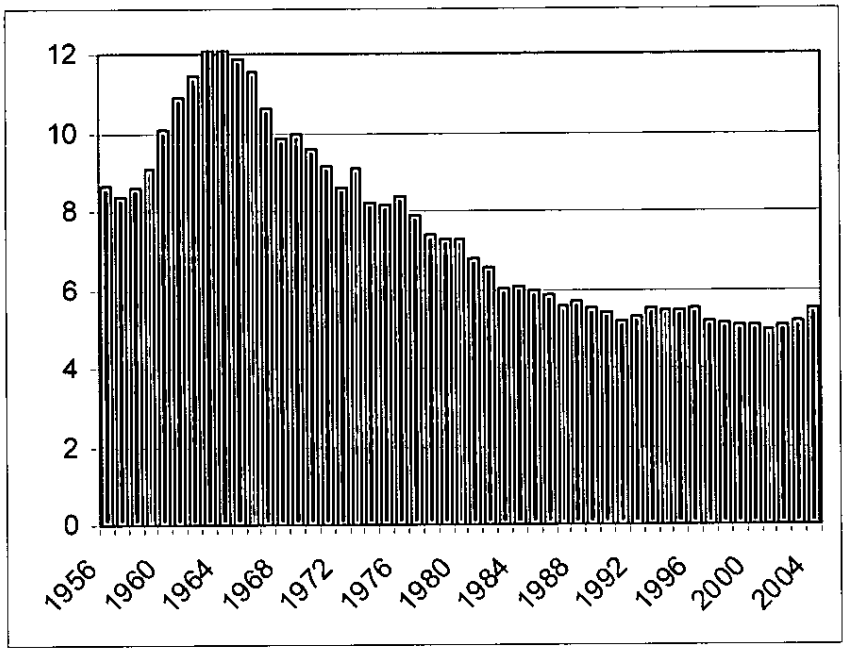
Table 1. Sources of U.S. University Research Funding, 2004

	Billion $	Share
TOTAL	$ 42.95	100%
Federal Government	$ 27.38	63.8%
Institutional Funds	$ 7.77	18.1%
State and Local Govt	$ 2.85	6.6%
Other	$ 2.84	6.6%
Industry	$ 2.11	4.9%
Source: National Science Foundation		

A research multiplier is one way to summarize the productivity of internal (institutional) research funding in generating external funds for research. It is defined as the ratio of total research dollars to internal (institutional) university funding. Nationally the multiplier has trended downward over time, but in the last 20 years it has stabilized in a range between 5 and 6. The

multiplier was 5.5 in 2004 meaning that each internal dollar of university funding generated total research funding of $5.50.

Figure 3. U.S. University Research Multiplier



Source: ISER from National Science Foundation data

University of Alaska Research Revenues

Total research and development spending (including not only academic but also government and private research) in Alaska in 2003, the most recent year for which complete information is available, was $321 million. Alaska ranked 48th among the states, consistent with the size of its economy, measured by gross state product. Academic research was a higher share of total research and development, as reflected by Alaska's rank of 43rd among the states.

Table 2. Alaska Research and Development (R&D) Profile, 2003

	Amount (Million $)	State Rank
Total	$321	48
Industry	$36	51
Academic	$141	43
Other	$144	Na
Gross State Product (Billion 2004 $)	$34	47
Source: National Science Foundation		

The importance of academic research in Alaska is also reflected in the amount of spending in relation to population and the work force. In 2003 university research was $215 per capita in Alaska compared with the U.S. average of $135.

Table 3. Alaska Academic Research and Development (R&D) Spending per Person in 2003, Alaska and U.S.			
	Alaska	U.S. Average	Ratio
Per Capita	$215	$135	1.59
Per Worker	$422	$269	1.57
Source: ISER from National Science Foundation data			

University of Alaska research revenues have been increasing for at least a decade, and in FY 2006 exceeded $151 million. Of this total, less than $20 million came from the state general fund (institutional funds). At the same time the research multiplier, a measure of the productivity of internal funding (institutional or state general fund), has been trending upward. In 2006 it was 7.6, indicating that each state general fund dollar allocated to research produced $7.60 in total research funding for the university.

Table 4. Sources of University of Alaska Research Revenue (Million $)					
	State General Fund (a)	All Other	Total (b)	Research Multiplier (b / a)	Growth Rate of Total Revenue
FY98	$15.1	$62.1	$77.2	5.1	
FY99	$13.0	$68.5	$81.5	6.3	5.5%
FY00	$15.4	$75.3	$90.7	5.9	11.3%
FY01	$16.3	$92.9	$109.4	6.7	20.7%
FY02	$16.3	$103.4	$119.8	7.3	9.5%
FY03	$16.6	$116.5	$133.1	8.0	11.1%
FY04	$16.8	$121.4	$138.3	8.2	3.9%
FY05	$18.7	$126.3	$145.0	7.7	4.9%
FY06	$19.9	$131.5	$151.3	7.6	4.3%
Source: University of Alaska Statewide Budget and Institutional Research					

As is the case nationally, university research in Alaska is highly dependent on federal spending, which provided $111 million in 2006, including funds that passed through state government and private (and nonprofit) enterprises.

Table 5. University of Alaska's Direct Research Expenditures by Source of Funds (Million $)							
	Direct From Federal	Total From State		Total From Other		Total	Item: Total Federal
		Direct	Fed Pass Through	Direct	Fed Pass Through		
	a		b		c		(a+b+c)
FY01	$ 54.7	$ 1.8	$ 2.3	$ 8.3	$ 19.0	$ 86.1	$ 76.0
FY02	$ 67.2	$ 2.5	$ 3.0	$ 9.7	$ 14.6	$ 97.1	$ 84.9
FY03	$ 80.7	$ 2.0	$ 2.4	$ 10.0	$ 15.7	$ 110.8	$ 98.8
FY04	$ 91.4	$ 1.4	$ 1.6	$ 10.4	$ 10.7	$ 115.5	$ 103.7
FY05	$ 97.1	$ 1.8	$ 1.1	$ 13.9	$ 8.6	$ 122.6	$ 106.8
FY06	$ 100.4	$ 2.4	$ .7	$ 15.0	$ 10.0	$ 128.6	$ 111.1
These figures exclude state general fund support.							
Expenditures differ from awarded amounts because many grants are multiyear awards.							
Source: Data supplied by MAUs via UA Information Systems: Banner SI Closing Extracts 2001- 2006. Compiled by Statewide Budget and Institutional Research							

University Research's Direct Economic Impact

Over half of the University of Alaska's research budget in 2006 (excluding $13.1 million of indirect cost recovery that provided general university support) was paid out in wages and benefits to 1,292 university employees.[2] The next largest budget item was contracted services, comprising a diverse array of purchases, from computer and aircraft maintenance to facilities rental to freight services. Purchases of capital equipment were largely computer related and miscellaneous research equipment, but also included items such as safety and transportation equipment. Commodity purchases included a variety of items such as field camp supplies, food for animals, and fuel for planes and boats. Travel included both in-state and out-of-state travel. Small amounts were budgeted for student aid and miscellaneous expenses.

Table 6. University of Alaska Research: Direct Expenditures by Category, 2006		
	Million $	Share
Total	**$ 138.2**	
Wages	$ 52.6	38 %
Benefits	$ 25.0	18 %
Contracted Services	$ 33.2	24 %
Capital Equipment	$ 7.3	5 %
Commodities	$ 8.5	6 %

[2] Full-time equivalent employees

1158

Travel	$ 6.3	5 %
Student Aid	$ 3.5	3 %
Miscellaneous	$ 1.7	1 %
Source: University of Alaska Statewide Budget and Institutional Research		

Although some of these purchases, like computer and other research equipment, were made outside the state and had little effect on the Alaska economy, most of the research budget funds either wages paid to Alaska workers or purchases from Alaska businesses. Because of this, the total effect on Alaska's economy is large, relative to the total amount spent on university research.

Adding to the direct effect of university research on the economy is the spending associated with visiting scholars who travel to Alaska to conduct their own research activities, funded through their home academic institutions in other states.[3] The economic effect of these visitors is analogous to that of tourists visiting Alaska from other parts of the world, bringing outside money into the state and spending it to the benefit of the Alaska economy.[4]

Growth Since 2003

Total university research spending increased 14 percent between FY 2003 and 2006, with most of the growth occurring in personal services and benefits. Payroll growth of 16 percent contributed to an increase of 5 percent in total employment, after taking into account growth in the average wage. The rapid increase in costs of employee benefits, which grew by 53 percent, absorbed a large share of the total increase in spending.

Table 7. University of Alaska Research: Recent Growth (Million $)

	FY 2003	FY 2006	Change	% Change
TOTAL	$ 121.6	$ 138.2	$ 16.6	13.7%
Personal Services and Benefits	$ 62.8	$ 77.6	$ 14.9	23.7%
Staff Benefit Expense*	$ 12.9	$ 19.7	$ 6.9	53.4%
Payroll	$ 45.3	$ 52.6	$ 7.4	16.3%
Average Wage	$ 36,852	$ 40,753	$ 3,900	10.6%
Direct Jobs	1,228	1,292	64	5.2%

[3] For example, Toolik Field Station in Northern Alaska every year hosts large numbers of non-resident researchers during the summer field season. The effect of these non-resident researchers is not included in our estimate of the total economic effect of university research on the state economy.

[4] University and other research facilities in Alaska also attract tourist visitors to the state and help to enhance the quality of the experience of visitors. Examples include the Sealife Center in Seward and the museum at the University in Fairbanks.

*Benefits here excludes sick and holiday pay and tuition wavers.
Source: ISER

University Research Total Economic Effect

Most of the money that funds university research in Alaska comes from sources outside the state, or in-state sources that could spend their research dollars elsewhere. So university research can be viewed as an economic enterprise similar to the metal mining industry, the seafood industry, the timber industry, the oil and gas industry, or any of the other basic industries that drive the state economy. Each brings new dollars into the state.

The infusion of research dollars into Alaska leads to expansion of the economy. These dollars pay the salaries of Alaska workers and support sales to Alaska businesses. Their economic effect extends beyond the direct effect of paying for the cost of research. The economic multiplier generates employment, payroll, and business sales throughout the state.

The total economic effect of university research can be measured by the number of jobs supported, total payroll produced, and business sales generated within the state by research dollars. In 2006 2,392 jobs could be traced back to university research spending. Of this total, 1,292 jobs were within the university—faculty, staff, student assistants, and others—and 1,100 were in a broad range of private businesses scattered throughout the state—in industries like construction, transportation, wholesale and retail trade, and services.

The total payroll associated with these jobs was more than $92 million, with a little over half going to university employees and the rest to workers in the private economy.

We estimate direct in-state procurement of $49 million was associated with the university research budget. As indicated, this includes purchases of a wide array of services and commodities, as well as some construction and transportation services. Employees spending their paychecks, and companies doing business with the university that also made local procurement purchases generated an estimated $76 million more in business sales throughout Alaska, for a total of $125 million in sales.

Table 8. University of Alaska Research: Total Economic Effect in 2006 (Million $)

Jobs	
Total	2,392
University	1,292
Private	1,100
Payroll (Million $)	
Total	$ 92.1
University	$ 52.6
Private	$ 39.5
Private Business Sales (Million $)	

1160

Total	$ 125.2
Direct Procurement	$ 49.3
Other Sales	$ 75.9
Source: ISER calculations	

Characteristics of the Research Industry

Viewed as an economic enterprise, university research has a number of attractive features.

- Labor Intensive—Over 1/3 of the revenues from this industry (38 percent) went directly into payroll.
- High Wage—The average wage is higher than the economy-wide average.
- Quality Jobs—Most jobs come with a full benefits package that adds considerable value over and above the wage.
- Year-Round Employment—Although some jobs are seasonal or only for the academic year, most are year-round, and may offset the summer seasonal decline in teaching activity at the university.
- Diverse Job Mix—The variety of research activities generates a diverse mix among the private sector jobs that depend on research spending.
- High Resident Job Share—Residents hold most of the jobs in university research.
- Stable—Spending on university research nationally has increased each year for at least the last 50 years and for at least the last 10 within Alaska.
- Growing—Growth in spending on university research has outpaced growth in the overall U.S. economy.
- Footloose—Research can be conducted wherever there is a decent laboratory with support for the scientists. It need not be located in proximity to resource deposits, as is the case for our natural resource industries, or close to markets, as is the case for most services.
- Environmentally Benign—University research is a clean industry with minimal effects on the quality of the environment.
- Low Burden on Government—Government regulation and oversight is not required.
- Non-Competitive with Other Industry—University research does not generate conflicts over appropriate and conflicting uses of the environment and natural resources.

- Stable Potential Tax Base—Although it does not directly create a product that is taxable, the large payroll and in-state procurement per dollar of spending on research create potential tax bases of personal and business income.

- Backward Linkages—Unlike some industries (like oil and gas and rural tourism) that are "enclaves" physically located in Alaska but not linked to the rest of the economy through purchases of local inputs, the large procurement budget and urban location for most research activities result in strong backward linkages that foster economic activity in support industries.

- Forward Linkages—There are no direct forward linkages in the form of sales to other sectors of the economy from university research, but most of Alaska's resource industries also lack forward linkages.

Benefit to Cost Comparison

The state general fund appropriation to the university for general support of research in 2006 was $19.8 million, about 8 percent of the total university general fund budget of $248 million. Total university research expenditures in that year were $151.3 million, producing 2,392 jobs and $92.1 million in payroll.[5]

If we think of the state general fund appropriation for research as "seed money," then we can calculate the return to the economy from that expenditure as the jobs and income created. Specifically the "bang per buck" for each $1 million of general fund appropriation for research in 2006 was 121 jobs and $4.7 million in payroll within the state.

There are indirect benefits to the university from research activities as well. World-class research adds prestige to the university, which in turn leads to a greater demand among potential students and an increased ability to attract quality faculty.[6]

The Product of University Research

The value of the output of private basic industry is reflected in the prices of their products, and their objective is profit for their shareholders. Increasing knowledge, productivity, and personal well-being are incidental to what they produce. In contrast, the objective of university research is new knowledge that can be applied to increase productivity in business and government and improve the well-being of households. These value added spin-offs, difficult to quantify, are a unique feature of university research—and an added bonus that other Alaska basic industries do not provide.

---

[5] Not counting the impact of the $13.1 million of reallocated indirect cost recovery.

[6] For example the research of Brian Barnes of UAF's Geophysical Institute has been highlighted on the cover of Science magazine. The first Rasmuson Chair in Economics was held by Dr. Vernon Smith, a Nobel Prize Laureate.

Comparisons With Some Other Alaska Basic Industries

Each Alaska basic sector industry has different features and characteristics. In this section we review some features of selected industries to provide some general comparisons with university research as an economic enterprise.

Each of these industries receives support from state government through a variety of mechanisms. These include the operating expenditures of government agencies for public resource management, tax incentives, capital grants, and loans. We have not attempted to quantify the support provided each industry to make any comparisons with our "bang per buck" calculation for university research, because such data is not readily available for most industries.

Metal Mining. The value of metal minerals production in Alaska--primarily zinc, gold, and silver--was $1.3 billion in 2005,[7] generating a payroll of $96 million and annual average employment of 1,298 in the mining sector[8]. Mining is very capital intensive (as reflected in the low ratio of payroll to value of production), high wage, resource dependent (subject to market price fluctuations and location-dependent), and environmentally sensitive. It generated $25.4 million in revenues to the state in 2005, as well as $12 million to local governments.[9]

Tourism. Non-resident vacationers spent $811 million in Alaska in 1998, directly generating 12,835 wage and salary jobs and 3,584 proprietor jobs for a total of 16,419 jobs. Wages were $249 million and proprietor income was an additional $65 million.[10] These jobs were concentrated in the lodging, restaurant, retail, and transportation services sectors of the economy. Tourism-related employment tends to be highly seasonal with a large non-resident share. Tourism is a rapidly expanding industry and the growth potential is significant for Alaska.

There has not been a comprehensive analysis of either the public expenditures or public revenues associated with the tourism industry in Alaska.[11] However, continued expansion of this industry will require substantial public investments in infrastructure, marketing, and other services.

---

[7] Alaska's Mineral Industry 2005, Division of Geological and Geophysical Surveys, and Alaska Department of Labor.

[8] Alaska Department of Labor, Employment and Earnings.

[9] Alaska Mineral Industry 2005, op. cit. A Department of Commerce, Community, and Economic Development study reported mining industry revenues to the state in FY 2005 of $13.9 million compared to state expenditures related to mining of $1.8 million. See, "The Net Return to the State of Alaska from Timber, Tourism, Minerals, and Commercial Fisheries," March 21, 2006. An earlier study by Legislative Research in June 1996 however reported state revenues of $4 million and state expenditures related to mining of $8 million.

[10] Alaska Visitor Industry Economic Impact Study, 1999 Update, McDowell Group, 1999.

[11] "The Net Return to the State of Alaska from Timber, Tourism, Minerals, and Commercial Fisheries" reported state revenues from tourism in FY 05 of $49.8 million compared to state expenditures related to tourism of $29.2 million. However, half of revenues and expenditures consisted of state ferry operations but none of the fixed costs of the system were attributed to tourists. Similarly a large share of revenues were attributed to hunting and fishing licenses, but none of the costs of management of the state fish and game resources were included.

Seafood. The annual value of the Alaska seafood harvest exceeds $1 billion and after processing it has a wholesale value in excess of $2 billion. During 2000 45,550 people were engaged seasonally in commercial fishing and seafood processing from both Alaska waters and the adjacent federally managed waters. This was equivalent to 27,877 full time jobs, of which Alaskans held 36 percent. Total personal income generated was $437 million.[12] Taxes from fishing activity averaged $47 million in the 1990s, with about half going to local communities.[13] In FY 2005 state seafood revenues were reported to be $53 million.[14]

International Air Cargo. Employment associated with international air cargo operations at Ted Stevens International Airport in 2000 has been estimated to be 3,058 with a payroll of $126 million.[15] The operation is labor intensive and is part of a rapidly expanding industry. It is somewhat sensitive to environmental issues and the business cycle, as well as to technological developments that could affect the relative attractiveness of Anchorage as a location for air cargo services.

Air cargo operations produce revenues for the airport, but the amount of revenue generated for the state general fund has not been calculated. State expenditures in support of the industry have also not been specifically studied. They are probably modest, although the industry does enjoy a tax advantage on fuel sales.

#13
MAU
main administrative unit

University of Alaska
Approved FY11 Operating Budget Development
Guidelines and Process

Guidelines

The Operating Budget Request Guidelines incorporating a longer term 3 to 5 year budget planning horizon will be used to align the University of Alaska's Budget Request with existing resources to maximize progress toward the Board of Regents' strategic plan goals, while maintaining administrative and program efficiencies.

The State is setting its course for the next thirty years. A strong University System is a key element for the State's success. Through preparing the workforce, providing expertise and leadership in a variety of fields, and serving as the driving force for research in Alaska, the University of Alaska (UA) contributes significantly to the State's economic success and its citizens' quality of life.

UA is committed to building a strong workforce foundation for the future as well as meeting State workforce needs by delivering programs responding to expected employment growth over the next five years. UA's competitive research capacity is remarkably situated to address State, Arctic, and global solutions, particularly in climate change mitigation and adaptation, and energy.

The UA Operating Budget Request will include compensation and other fixed cost increases for maintaining existing programs and services, as well as program growth requests. Program requests will be driven by the program enhancement priorities with continued emphasis on three themes:

- Enhancing Student Success and College Readiness
- Preparing Alaskans for the State's High Demand Jobs
- Enhancing Competitive Research and benefits of research as an industry in Alaska

In addition, there will continue to be greater attention on strategies to align public service and outreach efforts within each of these three themes.

The University of Alaska recognizes that funding availability will be challenging in FY11. Priorities for the University have not changed significantly and the focus will remain on providing services to the State of Alaska. To ensure UA's resources are used most effectively to meet State needs, a continued emphasis is being placed on systemwide planning efforts in strategic areas.

The MAUs will review the prior year requests and leverage the significant work already done as part of the FY10 budget process. If there have been significant changes in conditions, the MAUs will recommend and justify changes to the respective planning groups.

Through this participatory process, each MAU will be represented in the budget process to accomplish its underlying mission and strengthen the MAU and campus compelling strategic advantages.

Proposed systemwide planning groups include: (see pages 5-6 for Roles and Responsibilities)

Enhancing Student Success and College Readiness
- Student Success
- Social Sciences, Humanities, Arts

Preparing Alaskans for Jobs:
- Health
- Energy, Engineering
- Career and Vocational Tech. Workforce
- Teacher Education

Alaska Relevant Research (inclusive research planning group)
- Climate, Energy, Engineering, Biomedical/Health

The FY11 total program request level will range between $10-13 million with each MAUs program growth amount 3-4% over the current year budget. The FY11 Operating Budget Request will include MAU specific requests as well.

Factors to be considered in the final request include; demonstrated efficiency and effectiveness of existing programs; ability to successfully execute the program request; strategic linkage to and impact on meeting performance goals; and responsibility for executing systemwide priorities.

Additionally, the following mechanisms will be used throughout the year to maintain UA's high standard of accountability and transparency:
- Performance assessment and performance measure tracking
- Annual operating and management reviews
- Systemwide academic program planning and monitoring
- Systemwide internal and external reviews

Timeline:

January 8th	FY11 Systemwide Joint Council Meeting
Jan-Feb	Meetings with various councils and President's cabinet to discuss FY11 Systemwide Priorities
February	Statewide assign facilitators to planning groups
March	Instructions to MAUs providing outline for one-page outcomes summary, Draft of FY11 Operating Budget Guidelines, and FY11 Budget Request Form
March	Chancellors assign members to strategic planning groups
April 8th-9th	BOR approval of the FY11 budget guidelines
Late April	Chancellors submit MAU expected outcomes document with the Operating Review
Late April	MAU Operating Reviews: FY09 Status Review; FY10 Expectations; 3-5 year Outlook
May 4th	MAUs submit initial program list to respective planning groups
May 8th	BC, SAC, RAC, SSC, and ITEC joint council meeting to review Chancellor's expected outcomes summary and initial program list
May-June	Planning groups review MAU program priorities
July 1st	Planning Groups submit prioritized budget requests to MAU budget offices
July 28th	MAUs submit prioritized FY11 Budget Request and 3-5 year Planning Horizon considerations to the Statewide Budget Office
August 4th	Face-to-Face MAU Budget Request Briefing
August 11th	BC, SAC, RAC, SSC, ITEC, FAC review of priorities

Process Considerations

Integration of Performance Reporting: As a part of the FY11 operating request submission process, each MAU will be required to input:

- The quantitative positive impact of the request on each of the system wide performance measures, or for replacement funding requests the quantitative positive impact of the current program on each measure; and
- What MAU strategy specific sub-metric(s) will be tracked to measure intermediate progress toward moving common, system wide metric goals. For example, a budget request for a new high-demand program might propose tracking applications and enrollment in the program as a preliminary indicator of eventual increases in high demand graduates.

Many strategy specific sub-metrics could be appropriate to report in the MAU performance evaluations. The information submitted will be used to note the impact of the Governor's proposed budget on the system wide performance measures in relation to the Board of Regents' request.

Each MAU will control the distribution of its FY11 performance funding pool, to be used in support of performance-related strategies. One percent of general funds is the expected funding pool size, although annual circumstances will dictate the exact amount chosen by the MAU for internal reallocation. These performance funds should be allocated to appropriate strategic investments and reported as part of the overall performance and accountability process. It is important to note that, although performance awards are MAU-based, accountability reporting for performance funding distributions and strategy success will continue to be required in the future.

In the FY11 budget and planning process, MAU performance evaluation and reporting requirements are based on the State of Alaska's requirements. In addition, the university will begin external reporting of the new Non-Credit Instruction performance measure[1], approved in 2007. MAU performance evaluation submissions to the Office of Planning and Budget will be used in conjunction with MAU increment request detail to compile final performance evaluations submitted to the state. The system and MAU performance evaluations will be updated to reflect the BOR approved FY11 request, as well as, the Governor's proposed FY11 budget.

Expected Outcomes: Each Chancellor will prepare a 1 to 3 page summary (instructions on pg. 4) for the MAU of expected outcomes that will recognize MAU priorities and compelling advantages, particularly those that align most directly to systemwide strategic planning group areas, the system performance goals, the BOR strategic plan goals, and will help align the internal MAU budget process with the systemwide process.

In addition, as part of the August Face-to-Face MAU Budget Request Briefing, to more clearly articulate anticipated outcomes into the planning process, each planning group will create a 1 to 3 page summary. The summary document, similar to the ones produced last year, will be developed by the appropriate planning group facilitator and lead. There will be various levels of detail depending on the maturity of the discipline planning to-date, and in addition to addressing planned outcomes it will include basic statistics such as current funding level, efficiency ratios, and past investments, and the 3-5 year planning horizon.

[1] See http://www.alaska.edu/swbir/performance/metrics/Non-CreditMetric.pdf for more information on the non-credit instruction performance measure.

Each planning group will have a statewide person assigned to it as a facilitator, an MAU-based lead or co-leads, campus/program representatives (assigned by each MAU Chancellor), and service/outreach representatives (see the planning group roles and responsibilities with draft recommendations for leads and SW facilitators, with campus/program representative TBD pages 5 and 6).

Fixed Costs/Administrative Requests: Fixed Costs/Administrative Requests will be developed using systemwide standards. Information Technology (IT) and business process improvement initiatives will be vetted through the Information Technology Executive Council (ITEC), Information Technology Council (ITC), and Business Council (BC) respectively. No request range will be set on these requests, however, it is important to know that few administrative increases are funded and the need to reallocate to address these improvements is predictable.

Process: The web-based budget request submission process used last year will be used again this year. Each MAU must submit all requests related to their campuses.

Chancellor's Expected Outcomes Document Instructions

Guiding Principles

- This document demonstrates the alignment of the MAU's key goals to the systemwide priorities.

Timeline

Please submit this document to Statewide Planning and Budget as part of the Spring Operating Review.

Areas to address

- MAU priorities and compelling advantages aligned with systemwide strategic planning group areas (listed below) – incorporate appropriate Outreach, Cooperative Extension
    - Climate Change
    - Energy
    - Engineering
    - Health and Biomedical
    - Social Sciences, Humanities, Arts
    - Student Success/Teacher Education
    - Workforce Development
- The BOR strategic plan goals including system performance measures
- Specific MAU strategy measures (i.e. Anchorage requested external sponsored program expenditures in addition to external sponsored research, Fairbanks wanted Bacc. retention rates, and specific external research measures)
- MAU 3-5 year outlook
- Identify planning assumptions, environmental scan, key internal and external conditions

FY11 Budget and Planning Guidelines Planning Groups Roles and Responsibilities:

Planning Group MAU-based Lead/Co-Lead:
Role: Serves as the chair of the planning group.
Responsibilities:
Acts as the primary spokesperson for the planning group.
Communicates progress and issues of the planning group at various budget and planning meetings.
Communicates progress and issues of the planning group at President Cabinet meetings.
Contributes to and assures criteria are established for prioritizing program requests.
Assures the various campus issues are addressed in the planning process.

Statewide Facilitator:
Role: Supports and coordinates planning group meetings, and serves as primary liaison between the planning group and the President, Planning and Budget Office, and SW executive staff.
Responsibilities:
Provides support to the MAU-based lead for planning group activities.
Assures the planning group is aware of deadlines and process requirements.
Assures the various campus issues are addressed in the planning process.
Provides assessment of program requests within the established criteria.
Provides input, feedback, and perspective regarding criteria, program alignment, and system overview.
Communicates progress and issues of the planning group at various meetings to the President, Planning and Budget Office, and SW executive staff.

Campus-based Planning Group Representatives:
Role: Represent campus program needs and provide program specific expertise.
Responsibilities:
Submits campus program/budget request proposal for planning group consideration.
Informs campus leadership and budget personnel of planning group recommendations in regards to MAU program requests.
Provides expertise, advice, and information required for planning group activities.

Public Service/Outreach/Development/Engagement Representatives:
Role: Assure formal public service, and outreach and development offices emphasize and are aligned with program priorities.
Responsibilities:
Provides input and recommendation to strengthen outreach and service activities in support of the overall program group goals. May prompt related budget requests to be considered by the planning group.
Participation: It is expected that public service and outreach and development personnel will participate in each of the planning groups. In addition, all group members should advance appropriate service/outreach activities in conjunction with program proposals.

Strategic Planning Group Leads, SW Facilitator and Campus Representatives

Planning Group MAU-based Lead	Statewide Facilitator	Campus Representatives and Service/Outreach Representatives[2]
Climate Change Brian Rogers, UAF Interim Chancellor	Dan Julius	UAA-Steve Colt, Kim Peterson, Jeff Welker UAF-Larry Hinzman, Buck Sharpton, Sarah Trainor UAS-Eran Hood, Matt Heavner
Energy Gwen Holdmann,UAF	Dan Julius	UAA-Dennis Clark, Orson Smith, Ginny Fay UAF-Gwen Holdmann, Dan White, Fred Schlutt UAS-Karen Schmitt, Marquam George
Engineering Rob Lang, UAA Doug Goering, UAF	Fred Villa	UAA-Rob Lang UAF-Doug Goering, Charlie Mayer UAS-not assigned
Health and Biomedical Fran Ulmer, UAA Chancellor	Karen Perdue Jan Harris	Health: UAA-Cheryl Easley, Sandra Carroll-Cobb, Jim Liszka, Jan Harris UAF- Jennie Carroll (alt. Pete Pinney), Anita Hartmann UAS-Karen Schmitt BioMedical: UAF- John Blake UAS-Karen Schmitt SW-Karen Perdue
Social Sciences, Humanities, Arts Jim Liszka, UAA Susan Henrichs, UAF James Everett, UAS	Dan Julius	UAA-Patty Linton, John Petraitis, Carol Swartz UAF-Susan Henrichs, Eric Heyne UAS-James Everett, Kevin Krein
Student Success (Co-leads) John Pugh, UAS Chancellor Mike Driscoll, UAA Dana Thomas, UAF James Everett, UAS	Saichi Oba Melissa Hill	Student Success: UAA-Mike Driscoll, Bruce Schultz UAF-Dana Thomas UAS- James Everett, Larry Harris Teacher Education: UAA-Mary Snyder UAF-Eric Madsen UAS-Larry Harris SW-John Monahan

Workforce Development (Co –leads) Renee Carter-Chapman, UAA Bonnie Nygard, UAA Jennie Carol, UAF Karen Schmitt, UAS	Fred Villa	UAA-Renee Carter-Chapman, Bonnie Nygard UAF-Jennie Carroll (alt. Pete Pinney) UAS-Karen Schmitt

Additional Notes:

1. Service/Outreach/Development/Engagement Representatives: Service, Outreach, Development and Engagement representatives will be invited to participate in all 7 of the planning groups. Small Business Development Center (SBDC), Center for Economic Development and other units focused on external partnerships may also attend. Additionally, campus program representatives and campus leaders are encouraged to define the service activities that will take place when a program is proposed.

2. It is encouraged that each group identify existing external advisory groups that should be informed and/or consulted throughout the process. The broader awareness of existing program performance and the next logical programs step, the stronger our chances are to be successful.

Programmatic areas will be incorporated into an overall academic plan for the University of Alaska being led by Dan Julius, VPAA

University of Alaska
Approved FY11 Capital Budget Request and
FY11-FY16 Capital Improvement Plan

Development Guidelines

The goal of the Board of Regents' University of Alaska (UA) FY11-FY16 Capital Plan is to ensure that the necessary facilities, equipment and infrastructure are in place for the continued growth, refinement and improvement of the University as prescribed in the UA Strategic Plan and the Board approved MAU strategic and campus master plans. A six-year capital plan that mirrors the needs of the University provides the Board, President, executive staff, and university community a clear understanding of the needed resources for capital projects and the annual operating costs associated with those projects. The six-year capital plan, which is based on the assumption of full funding by the State, will balance the required capital improvements with realistic expectations of UA's ability to systematically implement such improvements.

The guidelines are organized in the following sections: Background, Guiding Principles, General Development Process, Capital Project Categories, and Capital Project Scoring Criteria.

Background

- Facility renewal and renovation (R&R), deferred renewal, code corrections, and upgrades for University facilities are significant capital budget priorities. UA maintains nearly 400 buildings worth in excess of $1.7 billion. These facilities comprise 6.4 million gross square feet and have annual depreciation totaling $57 million. More than half of UA's buildings are more than 30 years old. UA must assure adequate funding requests for major renewal and renovation and deferred renewal projects for University facilities. Given the magnitude of its facilities, UA requires an annual minimum investment of $50 million for facility renewal and renovation. UA has received an average of $16.1 million over the last ten years.

- Through its operating budget the University dedicates funding every year to maintenance and repair (M&R), and in FY08 dedicated about $31 million (approximately 1.5% of adjusted facility value) of its operating budget to this category. National industry standards prescribe 2-4 percent of current replacement value as the appropriate annual investment for M&R. Factors such as the age of the buildings, level of building use, and climate will determine the specific percentage.

- In November 2002 the State approved a significant General Obligation (GO) Bond, the first in over 20 years. As a result of the GO Bond, UA received partial funding for three major science facilities. Since that time, full funding has been appropriated for the UAA Integrated Sciences Facility (FY03, FY06 and FY07); for the UAF School of Fisheries and Ocean Sciences Lena Point facility in Juneau (final $6.8 million in non-state funding received in FY08); and for the UAA Health Sciences Building ($46 million in FY09). Additional funding is still required for the final phase of the biological and computational sciences (BiCS) concept, the UAF Life Sciences Innovation and Learning Facility in Fairbanks satisfies the biosciences research and teaching components of this concept (FY10 request: GF $82.195 million, NGF $20.625 million).

- Prior to FY07, an average of $7 million in state capital funding was appropriated for maintaining existing facilities, thus elevating UA's deferred maintenance need from $200 million in 2000 to over $800 million as of August 2008. State funding for UA's capital project priorities averaged $46.5 million annually in the ten year period 2000 to 2009. Since 2000, UA has received $464.8 million of state capital funding. The Board requested, as its highest capital budget priority, $98 million and $120 million in FY07 and FY08 respectively, for maintaining existing facilities and equipment. The legislature appropriated $49 million and $46 million toward those priorities.

- The current six-year capital plan totals $2.3 billion. The UA FY10 Capital Budget Request totaled $717.2 million, with $541.8 million requested from state funding and $175.4 million from receipt authority. Of the $717.2 million request, $200 million was requested for maintaining existing UA facilities and equipment.

Guiding Principles

- Project requests addressing renewal, renovation, deferred renewal, and code corrections for existing University facilities will be the highest priority for funding in the FY11 capital request and the six-year capital plan.

- New facility project requests included in UA's current six-year capital plan for which partial funding has been appropriated will be the second highest priority.

- Consistent with the Board of Regents' strategic plan and the MAU's academic and research plan, key strategies will include:
    - Enhancing student success and college readiness with an emphasis on increasing student enrollment
    - Preparing Alaskans for the state's high-demand jobs
    - Enhancing competitive research and taking advantage of UA's position in the international research community and benefits of research as an industry in Alaska

- Project requests to be fully funded through university-generated revenue (UA Revenue Bonds or Partnership Funding) will be categorized separately from project requests requiring partial or full State funding.

- The FY11-FY16 capital plan total cost will reflect the actual amounts of total project needs based on the best available project budget information at the time of the request.

- Project requests requiring university-generated revenue must be accompanied by an appropriate business plan, which includes review of the debt payment impact on the operating unit, the MAU, and on UA's operating budget.

- Facilities used primarily for instructional and administrative activities that have limited revenue generating capacity should be contingent upon State funding. Facilities used primarily for sponsored research or auxiliary enterprises that have moderate to significant revenue generating capacity must evaluate a funding plan that includes university-generated funding.

General Development Process

- The capital budget will be developed in accordance with the timeframe set forth in the budget development calendar.

- Each MAU will submit its capital request bifurcated between main and community campuses and will rank the projects from the highest to lowest in terms of MAU priority.

- Submitted projects will be reviewed, scored and ranked system-wide by appropriate councils including the Facility Council, Business Council, System-wide Academic Council and Information Technology Council. Sufficient time will be allocated in the process to allow for appropriate input from the chancellors.

- Based on this input the President will submit a draft of the six-year plan—including details of any changes to the current plan—to the Board of Regents for review at the September meeting.

- All projects proposed for the FY11 budget request and the six-year capital plan will be entered into the capital database and obtain the Preliminary Administrative Approval in accordance with Board of Regents' Policy P05.12, through this capital budget process.

Capital Project Categories
Projects will be presented in draft form to the Board of Regents using these categories:

- Renewal and Renovation (includes deferred renewal), Code, ADA, and Expansion

- Essential Renewal and Renovation of Academic (including technical) Equipment and Administrative (communications) Equipment

- New Construction, Expansion (if the project only includes expansion)

- Land, Property and Facilities Acquisition

New construction projects for the present year will be scored and ranked. The final draft will be presented to the administration for approval in the thematic approach.

Capital Project Scoring Criteria
In addition to the specific category criteria below, projects demonstrating responsiveness to programs and services directed at the following goals will be given priority consideration:

  - Enhancing student success and college readiness
  - Preparing Alaskans for the state's high demand jobs
  - Enhancing competitive research and taking advantage of UA's position in the international research community and benefits of research as an industry in Alaska

- Renewal and Renovation Code and ADA will address the following criteria without scoring:
  - Code and ADA requirements
  - Impact on students, programs, faculty, and staff
  - Impact on meeting accepted performance goals
  - Impact on accountability and sustainability efforts
  - Impact on existing and planned space utilization
  - MAU/Campus priority
  - Reduction of legal liability; general improvement of well being; consequences of not proceeding with the project
  - Developed plan/project readiness/ability to execute
  - Demonstrates responsiveness to UA Strategic Plan and state needs
  - Potential for non-state funding
  - Actual non-state funding in hand

- New Construction will address the following criteria with scoring:
  - Impact on students, programs, faculty, and staff
  - Impact on meeting accepted performance goals
  - Impact on accountability and sustainability efforts
  - Impact on existing and planned space utilization
  - MAU/Campus priority
  - Developed plan/project readiness/ability to execute
  - Responsiveness to UA Strategic Plan and state needs

- Potential for non-state funding
- Actual non-state funding in hand

- Academic and Administrative Equipment
  - Impact on students, programs, faculty, and staff
  - Impact on meeting accepted performance goals
  - Impact on accountability and sustainability efforts

- Land, Property and Facilities Acquisition
  - Conformance with the UA Strategic Plan, Campus Master Plan and campus land acquisition plan
  - Likelihood of adverse development/redevelopment by another party versus time horizon before campus use

Criteria Descriptions

- Addresses Code and ADA requirements
  - Does this project correct immediate code or ADA requirements issues? Those projects that address code issues will rate higher than those that do not.
  - The extent to which a project addresses health and code issues for students, faculty, staff and the general public.

- Impact on students, programs, faculty, and staff
  - To what extent does the project enhance the students' educational experience and how many students will be served by the technology/service/new facility? A project that a large number of students will benefit from will rate higher than a project that benefits few students.
  - To what degree does the project enhance the ability to deliver programs and how many programs will be served by the technology/ service/new facility? A project impacting several programs will rate higher on this criteria than a project benefiting few programs. Programs may be instructional, research, outreach or administrative in nature.
  - To what extent will the project enhance the faculty/staff career/employment experience and strengthen the ability to recruit and retain faculty and staff?
  - To what extent does it strengthen research competitiveness?
  - To what extent will this project align with community and student demographic trends?

- Impact on meeting accepted performance goals
  - To what extent will the project enhance the MAU's ability to meet its accepted performance goals?
  - Which performance measures does this project impact?

- Impact on accountability and sustainability efforts
  - To what extent will the project enhance the MAU's efforts toward efficiency and cost savings?

- Impact on existing and planned space utilization
  - To what extent will the project enable the MAU to maximize its existing space?
  - What is the MAU existing space utilization?
  - Has an analysis of space utilization determined that this project is the best solution to meet the space needs?

- MAU/Campus priority

- To what extent does the project meet the priority goals and objectives of the MAU academic/service plan? A project high on the MAU (campus) list will rate higher on this criteria than a project lower on the campus priority.

- Developed plan/ project readiness/ability to execute
  - What stage of the planning process is the project currently in (i.e. an identified project concept/vision/idea, project scope has been developed, the schema is developed, the project is bid ready)? A bid ready project will rate higher than a project in the idea stage. Additionally, added weight will be given to projects, which clearly demonstrate all operating cost and potential sources of funding for these costs.

- Demonstrates responsiveness to UA Strategic Plan and state needs
  - The extent to which the project supports the delivery of programs in strategic initiative areas and objectives outlined in the UA Strategic Plan. Projects that support identified goals addressed in academic initiatives, strategic plans or other goal setting processes will rate higher than projects that do not.

- Potential for non-state funding
  - What are the potential NGF funding sources (both construction and operating costs)?
  - What level of participation is expected?
  - What is the current commitment of partners?

- Strategic plan, campus master plan and campus land acquisition plan conformance
  - What is the necessity of the project within the framework of appropriate MAU and system goals and objectives as articulated in the UA Strategic Plan and MAU planning documents?

- Likelihood of adverse development/redevelopment by another party versus time horizon before campus use
  - What is the possibility that this acquisition will not be available if not included in the current six-year capital plan or one year capital budget request?

University of Alaska
Preliminary Performance Evaluation
September 2009

This document provides an overview of recent performance and future expectations for key measures. The information presented here will be updated based on comprehensive MAU performance evaluations due September 15th, discussions at the fall financial and performance reviews in October, and feedback from the Governor's Office of Management and Budget (OMB). Initial UA performance evaluations are due to OMB mid-September, with later refinements made to reflect the Board of Regents' approved FY11 budget request and the Governor's proposed FY11 budget. Updated information will be presented for discussion at the October 30th Board of Regents' meeting.

UA's performance evaluation process, in place since FY04, is the mechanism used to communicate, drive and measure resource alignment and progress toward meeting the Board of Regents' strategic goals. Performance impacts are a key consideration in the development of budget request and distribution recommendations, and the long-range fiscal and performance plan. The university currently utilizes six common, system wide performance measures, referred to as "End Results" by the State of Alaska, including: high demand job area program awards, student retention, student credit hour enrollment, non-credit instruction, grant-funded research expenditures, and university generated revenue.

As part of the annual budget request cycle, each MAU submits an in-depth assessment of recent performance, in the context of UA and MAU mission, strategies, and established expectations. In addition, each MAU proposes and/or updates the targets and goals for the upcoming five-year period. The president and each chancellor agree on appropriate targets and goals for each MAU. Throughout the year MAUs monitor the impact of implemented strategies and operating condition changes on performance and adjust strategies as needed to meet, or understand the difference between results and targets.

Each MAU controls the distribution of its performance funding pool, to be used in support of performance-related strategies. One percent of general funds is the expected funding pool size, although annual circumstances dictate the amount chosen by the MAU for internal reallocation. These performance funds are allocated to appropriate strategic investments and reported as part of the overall performance and accountability process.

Recent performance trends as well as future targets and goals for UA's common, system wide performance measures are provided the table starting on page 2, followed by a brief discussion of each measure.

Table 1. University of Alaska Performance Results, Targets and Goals, FY06 - FY15

Future year targets and goals will be updated based on discussion of MAU performance evaluations due September 15, 2009. Updates will reflect the impact of the FY10 budget distributions and the assumption of full funding for UA's proposed FY11 operating and capital budget requests.

Performance Measure Highlights

A discussion of FY09 performance for each of the six common, system wide End Result measures follows. For more detail and historical activity on each End Result measure and supporting Strategy performance measures, see: http://www.alaska.edu/swbir/performance.

High Demand Job Area Program Degree, Certificate and Endorsement Awards

In FY09, UA awarded nearly 2,440 degrees, certificates and endorsements in programs qualifying students to work in high demand job areas (HDJA). This represents a decrease of about 90 awards (-3.5 percent) from the FY08 level. Observed FY09 performance fell below the FY09 target, which represented a 6 percent increase (150 additional awards) over the FY08 performance level. The university must average a 6 percent annual increase to achieve the existing goal of 3,450 HDJA awards by FY15. Additional context related to recent performance, as well as updated targets and goals will be available in October 2009.

Although growth on this measure is expected to continue, recent performance demonstrates a relative plateau, due in part to some programs reaching capacity. Another factor impacting this measure is the additional time required for many students to successfully complete preparatory math or other coursework in addition to the standard course requirements of each academic program. To maintain the expected level of performance, it will be necessary to continue focusing resources over time.

Undergraduate Retention

The University of Alaska undergraduate retention rate reached an all-time high at 67.2 percent in FY09, an increase of 4 percent (2.6 percentage points) from the FY08 performance level. This level exceeded the FY09 target of 66.4 percent undergraduate retention. Preliminary information for FY10 suggests UA is on track to meeting the FY10 target of 67.7 percent undergraduate retention.

UA must increase undergraduate retention by an average of half a percent each year to meet the existing FY15 performance goal. Additional context related to recent performance, as well as updated targets and goals will be available in October 2009.

Future growth on this performance measure will rely on increased outreach and partnerships with K-12 to better prepare high school students for college. Across the nation and in Alaska, the issue of college and career readiness has become a focal point for higher education. The job landscape has changed such that individuals must be able to succeed at some form of post-secondary education in order to succeed and advance economically. UA will continue to work collaboratively with K-12, employers, and others to address these issues in the short and long-term.

Student Credit Hours

In FY09, UA delivered a total of 566,000 student credit hours (SCH), representing an increase of 7,000 SCH (1.3 percent) from the FY08 level and very nearly meeting the FY09 target increase of 1.4 percent. Significant, steady enrollment gains of 1 percent per year will have to be made to meet the existing

FY15 performance goal. Additional context related to recent performance, as well as updated targets and goals will be available in October 2009.

The University of Alaska is forecasting continued growth on this metric primarily resulting from the current economic situation driving more individuals to post-secondary education. Without corresponding state support, UA will be challenged to meet any dramatic long-term increases in demand. Projected growth is also in anticipation of positive results stemming from UA's strategic investments in student recruitment, student success, workforce development and the addition of new academic programs. Achieving this growth may be a challenge due to external conditions, such as an anticipated decrease in the number of recent Alaska high school graduates over time.

Non-Credit Instructional Unit Production

UA delivered nearly 10,900 non-credit instructional units (NCUs) in FY09. Each MAU will report on NCU baseline performance for the first time this year, and have indicated that additional data entry process refinements are in progress to improve data quality going forward. Additional context related to FY09 performance, as well as future targets and goals for this measure will be available in October 2009.

Grant Funded Research Expenditures

In FY09, UA had $115.8 million in grant-funded research expenditures, a decrease of $2.9 million (-2.4 percent) from the FY08 level. Observed performance fell short of the FY09 target, which was to remain essentially level with FY08 grant funded research expenditures. To achieve the current FY15 research focus goal of $146.1 million, UA would have to increase grant-funded research expenditures by an average annual rate 4 percent. Additional context related to recent performance, as well as updated targets and goals will be available in October 2009.

The University of Alaska is struggling with space constraints, and future growth in research is likely not possible without additional space.

University Generated Revenue

University generated revenue (UGR) reached $381 million in FY09, an increase of $2 million (0.5 percent) over the FY08 performance level of $379 million. This fell short of the FY09 target increase of $15 million (3.8 percent) from the observed FY08 level. The primary factor impacting performance on this measure was investment losses sustained in FY09. For a number of years the university has been able to rely on investments for interest income, however this was not the case in FY09. Additional context related to recent performance, as well as updated targets and goals will be available in October 2009.

Growth in university generated revenue is expected to be moderate due to modest increases in tuition revenue mitigated by the current financial market crisis, a more competitive federal funding environment, as well as challenges with other major external, temporary funding sources.

Mary Snyder, Dean of College of Education UAA

Presented by:
The University of Alaska Board of Regents
Regent Cynthia Henry, Chair of the Board
Regent Patricia "Pat" Jacobson, Chair of the Academic & Student Affairs Committee

On February 18, 2009

PURPOSE STATEMENT

In 2008, the 25th Alaska State Legislature passed Senate Bill 241. This legislation required the University of Alaska Board of Regents to deliver a report titled "Alaska's University for Alaska's Schools" no later than the 30th legislative day of the first session of each legislature, which for the 26th Legislature is on or before February 19, 2009.

OVERVIEW

The following report describes the efforts the university is making to attract, train, and retain qualified public school teachers. This report includes information on teacher graduation data; a gap analysis documenting the shortage areas in the teaching workforce; a three to five year plan outlining the university's priorities to address the gap; and existing efforts to attract, train, and retain school teachers for Alaska.

HIGHLIGHTS

Teacher preparation, retention, and recruitment at the University of Alaska

- The University of Alaska (UA) on average produces 190 new teachers each year, about half of whom are certified in elementary education, and half in secondary education.
- Teacher recruitment and retention in Alaska is a complex issue not limited to simple solutions that one single entity or agency can resolve; there is no magic bullet.
- The University of Alaska offers a combination of over 120 programs dedicated to K-12 Outreach, including college preparation, professional development, or teacher recruitment and retention.
- To increase the number of Alaska prepared teachers will require more Alaska students going to college. Thus, the University of Alaska has made K-12 Outreach a top priority.

Alaska's Teacher Workforce

- 8,902 public school classroom teachers currently work in Alaska.
- Teacher shortage areas in Alaska include special education, mathematics, and science.
- Each year, Alaska school districts hire roughly 900 to 1,100 teachers.
- Roughly 800 to 900 vacant positions are a result of teachers exiting a teaching position.
- The average teacher salary in Alaska is $56,757.
- In 2010, roughly thirty-four percent (34%) of current teachers will be eligible for retirement.
- Sixty-five percent (65%) of Alaska's teachers are currently over the age of 40.
- Alaska Native teachers make up six percent (6%) of the teaching workforce.
- Forty-one percent (41%) of special education teachers exit the Alaska school system after four years.

RECOMMENDATIONS

Invest in Special Education Teacher Preparation

Invest in growing the special education teacher preparation programs at the University of Alaska Fairbanks. Currently, UAF is the only school of education in the university system without a special education program. Funding to support this effort would expand the universities' teacher preparation capacity and provide a new source for teachers in a high-demand area for Alaska.

Invest in Education Studies and Research for the State of Alaska

Invest in expanding and updating data collection systems, and workforce development studies in education for the State of Alaska. Expanding the universities' capacity to conduct studies and research in education will enable the following:

- Provide valuable ongoing information and data analysis for the standing Senate and House Education Committees, and ensure future reports meet state expectations.

- Support the State Education Plan prepared by the Alaska Department of Education & Early Development, including the following goals and activities:

  Collaborate with Alaska's postsecondary institutions to ensure that education-related degree programs and staff development programs reflect research, best practices, Alaska's diverse cultures, and alignment to academic standards, and are sufficient in scale and scope to meet the public school workforce needs.

  Develop a staff development infrastructure that is collaborative, need-based, research proven, and provides opportunities for continuous growth for new and experienced teachers.[1]

Expand Scholarship Opportunities for Education Majors

Expand scholarship opportunities for students in high-demand job areas such as education with specific emphasis on shortage areas. Re-evaluate loan forgiveness programs, and sustain and increase funding for programs that demonstrate efficacy in preparing and supporting teacher recruitment and retention.

[1] Source: Alaska Department of Education and Early Development (2008) Draft Alaska Education Plan retrieved from: http://www.eed.state.ak.us/edsummit/pdf/Education_Plan_Draft.pdf.

TEACHER EDUCATION GRADUATION DATA

This section of the report includes aggregate data on University of Alaska graduates eligible to enter the K-12 education workforce as licensed teachers, administrators, counselors, or district office administrators. The data reflects three-year trends in graduate rates reported by Academic Year (AY) starting in 2006 and ending in 2008.

GAP ANALYSIS: SHORTAGES IN THE TEACHING WORKFORCE

The Gap Analysis on the teacher workforce is based on survey data collected from K-12 school administrators. It also includes hiring data for the K-12 education system made available through collaboration between the University of Alaska Anchorage Institute for Social and Economic Research (ISER), the Alaska Department of Labor (DOL), the Alaska Department of Education & Early Development (EED), and the Alaska Teacher Placement (ATP). It provides a general overview of the K-12 education work and highlights turnover data in specific shortage areas.

EFFORTS TO ATTRACT, TRAIN, AND RETAIN QUALIFIED SCHOOL TEACHERS

Programs and activities that directly impact K-12 teachers employed in Alaska include professional development, curriculum and resources, mentoring, and research efforts sponsored through the University of Alaska system. This section highlights many of the programs UA offers.

THREE TO FIVE YEAR PLAN FOR TEACHER PREPARATION

Senate Bill 241 (2008) reads,"*The report must include an outline of the university's current and future plans to close the gap between known teacher employment vacancies in the state and the number of state residents who complete teacher training. The information reported under this subsection may also include short-term and five-year strategies with accompanying fiscal notes and outcome measures.*"[2]

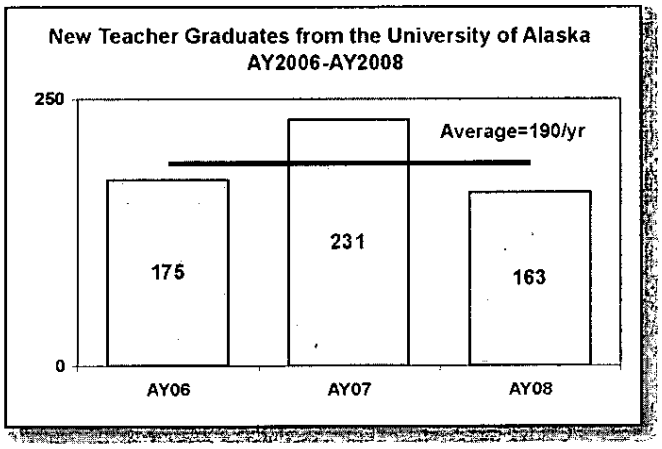
TEACHER EDUCATION GRADUATION DATA

New Teachers for Alaska

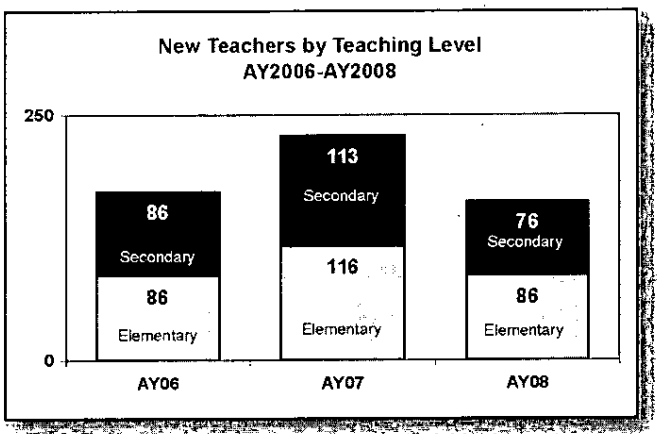
The University of Alaska graduated 175 new teachers in Academic Year (AY) 2006, 231 in AY07, and 163 in AY08. This number reflects bachelor's degrees, master's degrees, and licensure degrees in elementary, secondary, and early childhood for the three universities: University of Alaska Anchorage, University of Alaska Fairbanks, and University of Alaska Southeast. The increase from AY06 and AY07 reflects a variance due in part to the use of the start and end dates necessary to eliminate duplicate counts of graduates.



The three-year average of 190 graduates per year reflects the most accurate number of graduates eligible to enter the K-12 teacher workforce each year.

Of the teacher graduation count, the total breakdown by grade level shows that annually the University of Alaska graduates slightly more elementary teachers than secondary teachers each year. This trend may be the result of several factors, including that students can earn a bachelor's degree in elementary education in four years. A degree in elementary education is also offered at all three campuses and is available onsite or via distance delivery.

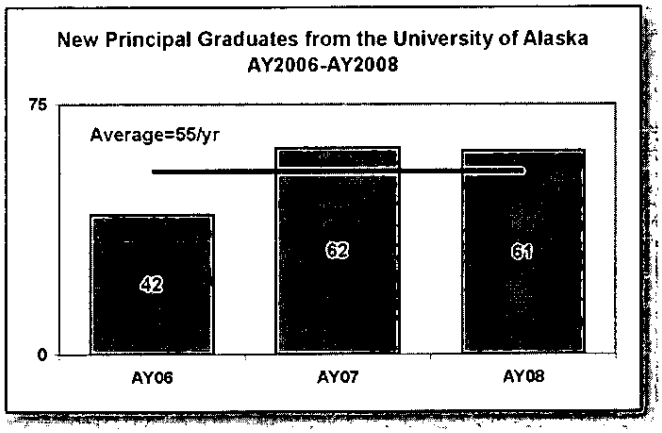
The majority of the secondary degree programs in education typically require five years of college before a student is eligible to teach. Most secondary programs require students to transfer into a master's program with a bachelor's degree in a core content area. Students with advanced degrees in mathematics and science in Alaska have many more employment opportunities in the state compared to a student graduating with a degree in elementary education.



Note: Does not include UA K-12 Art or K-12 Music graduates

New Principals for Alaska

The University of Alaska graduated 42 new principals in Academic Year (AY) 2006, 62 in AY07, and 61 in AY08. The average number of graduates completing a licensure program for administration is 55. However, not all graduates seek an administrative position following graduation; some continue as classroom teachers, mentors, or pursue district office positions.



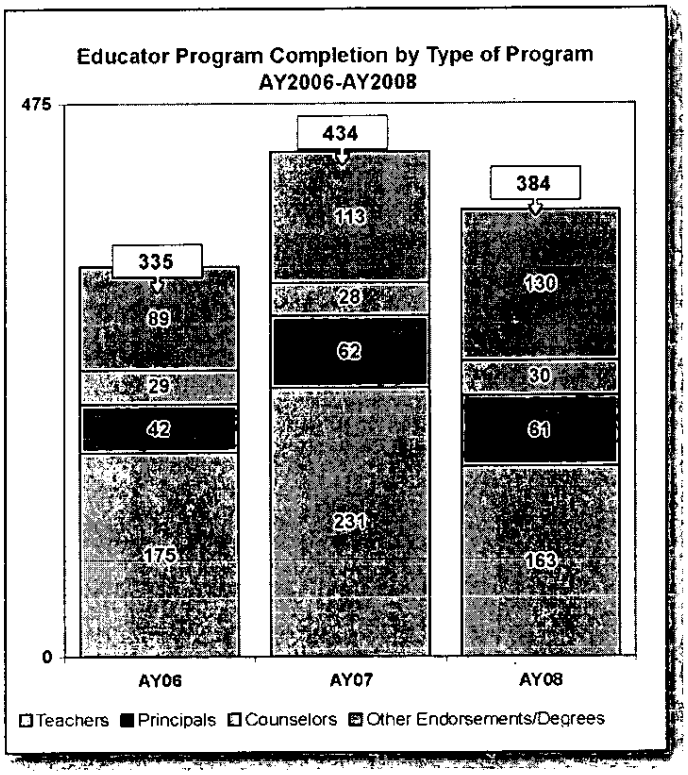
The University of Alaska Anchorage is currently the only campus offering a principal licensure program. The University of Alaska Southeast in Juneau will be launching a new program in 2009. The summer cohort has 20 new applicants, some of whom are former and current Alaska Statewide mentors.

Other Endorsements & Degree Programs

Each campus offers a variety of endorsement programs that lead to an advanced degree or, in some cases, a certificate of completion. Some of these programs are designed for current teachers who seek to add an endorsement and/or complete a master's degree while also fulfilling requirements for state certification.

The University of Alaska Anchorage offers degree programs in Special Education, Reading, and the state's only Superintendent degree program. UAA also has an affiliated speech language pathology program with East Carolina University (ECU). UAA provides the preparatory coursework via distance delivery to candidates applying to the ECU graduate program to become a speech-language pathologist.

The University of Alaska Southeast Masters of Arts in Teaching prepares teachers statewide, and enrollment in that program has increased 24% between 2006 and 2008. In addition, UAS expect to graduate in AY09 an additional 30 special education teachers.

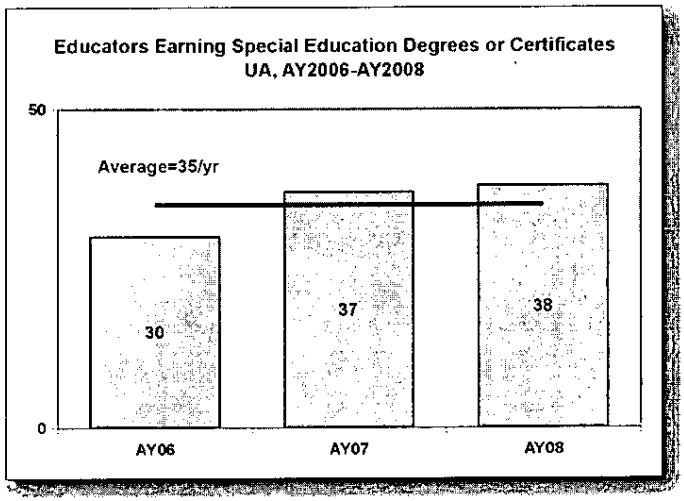


The University of Alaska Fairbanks offers the only terminal degree for educators through the Interdisciplinary Studies Ph.D. program. The UAF Elementary Licensure Program is a post baccalaureate, year-long elementary licensure program. UAF also offers Masters of Education degrees in Curriculum and Instruction, Cross-Cultural Education, Language and Literacy, Guidance and Counseling, and Reading. UAF is seeking to expand their teacher preparation program to include Special Education. The University of Alaska campuses in both Fairbanks and Anchorage offer degrees in Counseling and Guidance. Over the three-year average, collectively they graduate 29 counselors a year.

Over half, fifty-three percent (53%) of the University of Alaska education graduates are new teachers. According to trend data, each year the state of Alaska can expect 190 new teachers prepared to enter the K-12 education teacher workforce. However, not all students enroll in high demand teacher certification areas, nor do all graduates go on to teach after completing a degree in education.

New Special Education Teachers

The University of Alaska produces an average of 35 special education teachers each year. Special education teachers have a higher rate of turnover compared to other teaching positions; thus, administrators must replace teachers who leave a district or the teaching profession, and replace vacant positions in special education when teachers move from a special education position to a regular classroom teacher position within their district. As a result, special education teachers are in high demand each year. According to the Alaska Department of Education and Early Development, Special Education is also a federally designated teacher shortage area. Additional information is provided in the following sections on special education teacher turnover rates in Alaska. Enrollment in special education programs at UA is growing.



New Math & Science Teachers

Secondary teaching degrees awarded by the University of Alaska in mathematics and science over the three-year period averages out to 11 mathematics certificates and 24 science certificates a year.

Number of UA Graduates in Mathematics and Science
UA, AY2006-AY2008

	AY06	AY07	AY08	3 Year Average
Mathematics	9	14	9	11
Science	23	35	13	24

* Data gathered from UA Teacher Preparation programs, not reflected in UA Institutional Research Student Banner data.

GAP ANALYSIS: SHORTAGES IN THE TEACHING WORKFORCE

Understanding the Alaska Teaching Workforce

- 8,902 public school classroom teachers currently work in Alaska.
- Teacher shortage areas in Alaska include special education, mathematics, and science.
- Each year, Alaska school districts hire roughly 900 to 1,100 teachers.
- Roughly 800 to 900 vacant positions are a result of teachers exiting the system.
- The average teacher salary in Alaska is $56,757.
- In 2010, roughly thirty-four percent (34%) of current teachers will be eligible for retirement.
- Sixty-five percent (65%) of Alaska's teachers are currently over the age of 40.
- Alaska Native teachers make up six percent (6%) of the teaching workforce.

Annually, Alaska districts hire roughly 900 to 1,100 teachers for vacant positions in every teaching subject. However, special education and secondary content areas are in disproportionately high-demand. Of the estimated 1,000 new positions, roughly 150-200 reflects "movers" – teachers who leave one school district for another, rather than exiting the system. Movers are common in Alaska as teachers migrate from district to district. The majority of vacancies are often in rural Alaska, yet the majority of the Alaska teachers live in urban areas.

Average Number of Teachers by School District Region FY06 to FY08

Number of Teachers by Region	Number of Teachers
Urban	5,580
Southeast	411
Road System/Other	236
Off the Road System/Rural	1,864
Total	8,091

Source: ISER tabulations of DEED Certified Staff Accounts.
Urban: Anchorage, Fairbanks, Kenai, Juneau, and Mat-Su
Southeast: All districts from Yakutat to Ketchikan (including Haines and Skagway)
Road System/Other: Denali, Alaska Gateway, Copper River, Delta Greeley, Nenana, and Valdez
Off the Road System/Rural: All other districts, typically accessible only by air

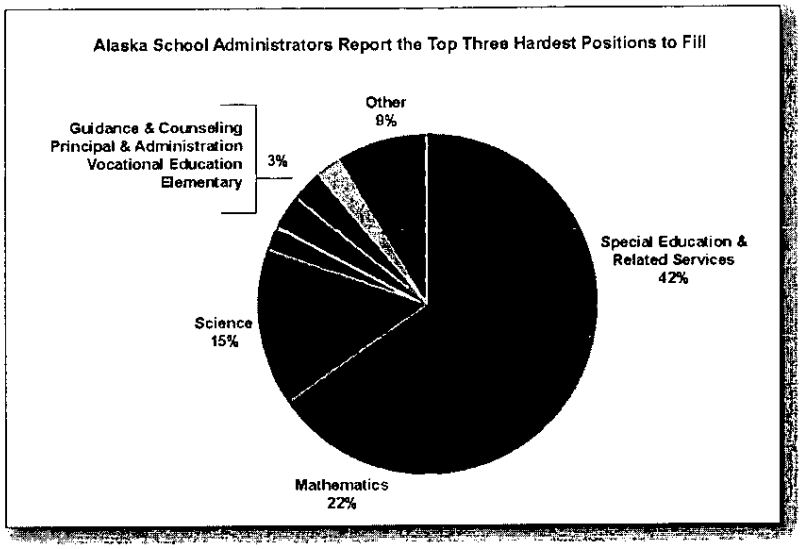
The Economics of Education in Alaska

In 1998 the Alaska Department of Labor Economic Trends reported, "*Jobs with local school districts in kindergarten through 12th grade number over 20,000— nearly seven percent of all wage and salary jobs in Alaska. No other industry in Alaska is more ubiquitous than education. Often local education is the single largest employer in a community. In fact, two of the state's 10 largest employers are school districts. In many communities, one of the few employers is the local school district.*"[3]

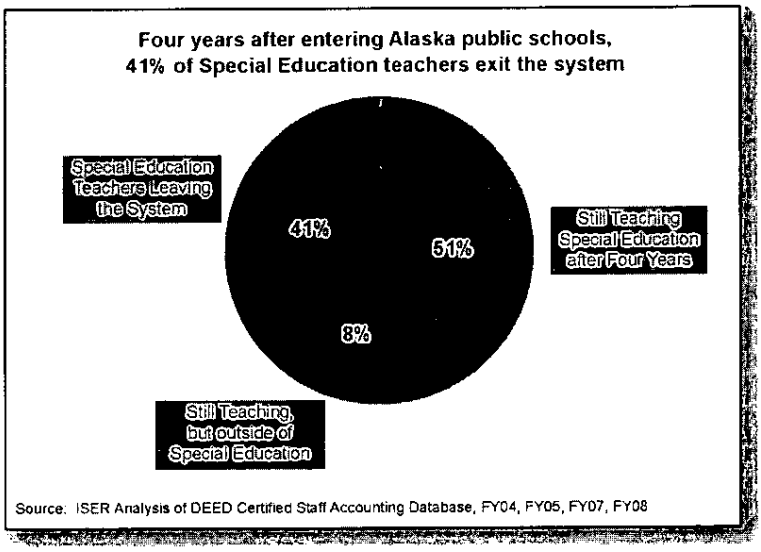
Further, the report finds education dollars represent economic activity in the state and in all of the communities education is present. Local education spending in Alaska is not only an investment in education but also has immediate economic impacts statewide. Ten years later, the report's findings still hold true, however the analysis needs to be updated to reflect the current economic impact of education accurately.

[3] Alaska Economic Trends (1998) Kelm, Diana, Editor Alaska Dept. of Labor. February 1998, Volume 18, Number 2

Gap Analysis for Special Education, Mathematics, and Science



Special education vacancies are unquestionably the hardest to fill. This trend is equally common on a national level. While the need for special education teachers is not unique to Alaska, teaching in Alaska, especially rural Alaska, remains unique compared to the rest of the United States. In a recent survey conducted by Alaska Teacher Placement (M. Hill, 2008) school administrators reported the hardest K-12 education positions to fill include special education and related services at forty-two percent (42%) of the total responses, followed by mathematics (22%) and science (15%). Additional studies could be conducted to better understand the complexities of these trends.



According to a recent report by the Institute of Social and Economic Research at UAA, (A. Hill & Hirshberg, 2008) special education teacher turnover is higher compared to statewide turnover. Four years after entering a teaching position, forty-nine percent (49%) of special education teachers were no longer teaching special education, and of those, only eight percent (8%) remained in the Alaska system, but teaching outside of special education. However, simply producing more teachers in these areas may not address the issue of retention. The Alaska Statewide Mentor Project (ASMP) reported, "*Through grant funding, ASMP has been able to increase focus on mentoring special education teachers by pairing mentors with special education certifications to work with early career special education teachers. Working with a sub-sample of about a third of all new special education teachers, ASMP has retained over 80% each year.*"[4]

[4] Source: Alaska Statewide Mentor Project Research Summary 2004-08, Barbara L. Adams, Ph.D. Fall 2008

The table below shows the average number of teaching positions, vacancies, and filled vacancies from 2006 to 2008 in the following three key shortage areas: special education, mathematics, and science. The average number of new University of Alaska graduates prepared in those fields (last row in the table), coupled with the difference between the average number of new teachers needed and the supply (UA graduates) shows that even if every University of Alaska graduate takes a job with Alaska schools, districts across the state would still need to recruit from outside the state to fill the gap.

Special Education Gap

After accounting for the teachers who move within the state, districts need to hire about 100 new special educators each year. UA graduates, based on a three year average, account for roughly 35 new special educators each year; – thus, districts need to find at least 64 teachers from outside of Alaska.

Mathematics Gap

Mathematics shows the greatest percentage gap. Districts need an average of 48 new mathematics teachers each year, and the University of Alaska prepares roughly 11, which equates to one-fourth the number needed.

Science Gap

The science numbers, aggregated across all science areas, demonstrates the universities' capacity to prepare teachers. Across the state, districts need to hire 41 new science teachers, and the University of Alaska graduates 24. However, Superintendents report their hardest-to-fill fields includes the physical sciences. Again, for a variety of reasons, many outside of the university's sphere of influence, newly prepared teachers might not accept a position after completing a teacher preparation program

Shortage Teacher Assignments in Alaska
Average, AY2006-AY2008

	Special Education	Math	Science
Average Number of Teaching Positions Districts Must Fill			
Total Teacher Positions	1,068	593	494

New Teachers	51	32	25
The number of University of Alaska Graduates			
Average Number of UA Teacher Graduates	**35**	**11**	**24**

EFFORTS TO ATTRACT, TRAIN, AND RETAIN QUALIFIED SCHOOL TEACHERS

To increase the number of teachers prepared in Alaska, more Alaska students will need to enroll and complete degree programs in education. The University of Alaska has an array of programs and activities designed to support teacher recruitment and retention of K-12 educators. In addition, the university has made K-12 Outreach and Bridging Programs a priority for future operating requests to the legislature. This section lists over 100 programs, activities, and initiatives underway at the university in this area. Expansion of the data collection methods for future reports will include a more comprehensive analysis of these efforts.

THREE TO FIVE YEAR PLAN FOR TEACHER PREPARATION

The University of Alaska is committed to meeting the workforce needs of Alaska public schools. Producing quality teachers and administrators for Alaska who are likely to remain teaching in Alaska is the primary concern for the Teacher Education Planning Group. Additionally, the Teacher Education Planning Group is tasked with development and implementation of a three-to-five year plan. This group has established the following priorities to be addressed in the UA Teacher Education Statewide Plan for Teacher Preparation. This effort will maximize resources and increase collaborations internally and system-wide. The group has engaged stakeholders in education, industry, and state agencies in this effort. Collaborations are focused around the workforce needs of Alaska.

Senate Bill 241 (2008) states, "*The report must include an outline of the university's current and future plans to close the gap between known teacher employment vacancies in the state and the number of state residents who complete teacher training. The information reported under this subsection may also include short-term and five-year strategies with accompanying fiscal notes and outcome measures.*"[5]

Members of the Teacher Education Planning Group

- John Pugh, Chancellor of UAS, Lead
- Melissa Hill, Director of ATP at Statewide Office of Academic Affairs
- Dean Larry Harris, School of Education UAS
- Dean Eric Madsen, School of Education UAF
- Dean Mary Snyder, College of Education UAA

Priorities for the Teacher Education Planning Group

The following priorities are to be addressed over the next three to five years under SB241.

1. Expansion of Special Education Teacher Preparation Program
2. Recruitment of New Teacher Through Outreach
3. Program Access Through Distributed Teaching and Learning
4. Focus Efforts in Science, Technology, Engineering and Mathematics, STEM
5. Early Childhood Education

[5] Source: Sec. 2. AS 14.40.190(b) Laws of Alaska (2008) Source Chapter No. HCS CSSB 241(HES) of the 25th Legislative Session.

1. Special Education

According to data collected through the statewide supply and demand studies and school district administrators, special education is the hardest position to fill and has the highest turnover rate. The Teacher Education group will work collaboratively to implement a cross-MAU endorsement and degree program in special education system-wide offered via distance. Funding for Special Education would provide a faculty member at UAF to ensure that each program has the capacity to support the needs of school districts. UAF is the only campus that does not have a special education program in the school of education. This funding will respond to the highest need identified by former Fairbanks Northstar Borough School District Superintendent Ann Shortt, current Superintendent Nancy Wagner, and virtually all other Alaska superintendents.

2. Recruitment Efforts

It has become apparent schools and colleges of education need to focus more on recruiting students in high-demand jobs as early as intermediate grades to encourage college and high school students to become teachers. Education units need to connect with other departments on campus and with school districts to set up recruitment activities. Each campus may need to look at their existing recruiting resources and engage their enrollment and student services offices in this effort. The MAUs will work collectively to develop a system-wide marketing effort that each of the schools of education would implement.

3. Program Access Through Distributed Teaching and Learning

Serving students in rural areas where the need for teachers is greater due to teacher turnover is a priority for the State and University. Data suggests that teachers trained in their region have a higher retention rate. Providing access to education to students in rural areas will require resources from distance education programs and school districts to build infrastructure to deliver courses and monitor practicum students via distance.

4. STEM Resources

Science and Mathematics are core areas under No Child Left Behind. Additionally, those positions are the second "hardest to fill" according to survey data from K-12 school administrators. Meeting the needs in secondary core content areas will require increased faculty awareness and the capacity to engage STEM colleagues across the campuses in a dialog about ways to produce more STEM teachers. This effort will require the campus administration to enlist the assistance of the appropriate deans and directors who supervise faculty and researchers in the STEM areas.

5. Early Childhood Education

Better coordination and alignment is needed to develop career paths in programs, and increase the university's involvement in early childhood education. This alignment and articulation will provide students with programs that will meet their needs, as well as those of the State. However, compensation is a barrier the state may want to examine to increase recruitment and retention of early childhood providers. The University of Alaska applauds the State's effort to increase the number of children receiving early childhood services, and welcomes collaboration with the Alaska Department of Education & Early Development on this very important issue.

Long Term Goals of the Planning Group

1. Establish the UA Teacher Education consortium or taskforce, which will continues to meet with school districts and industry representatives to engage these stakeholders in the planning effort.

2. Develop an ongoing, long-range planning process for Teacher Education based on the priorities identified by stakeholders and the University of Alaska Board of Regents.

3. Work with school districts and policymakers to research current recruitment and retention challenges, best practices, and alignment of K-12 and college ready.

4. Develop an integrated, cross-MAU marketing campaign to recruit students into the teaching profession with the goal of increasing enrollment in and awareness of the advantages of completing a teacher preparation program. Similar to the "Hot Jobs" and other industry career guides, education needs to develop resources and materials for education.

RECOMMENDATIONS & FISCAL NOTE REQUEST

Invest in Education Studies and Research for the State of Alaska

Invest in expanding and updating data collection systems, including workforce development studies in education for the State of Alaska. Expanding the university's capacity to conduct studies and research in education will enable the following:

- Provide ongoing valuable information and data analysis for the standing Senate and House Education Committees, and ensure future reports meet state expectations.

- Support the State Education Plan prepared by the Alaska Department of Education & Early Development, including the following goals and activities:

  Collaborate with Alaska's postsecondary institutions to ensure that education-related degree programs and staff development programs reflect research, best practices, Alaska's diverse cultures, and alignment to academic standards, and are sufficient in scale and scope to meet the public school work force needs.

  Develop a staff development infrastructure that is collaborative, need-based, research proven, and provides opportunities for continuous growth for new and experienced teachers.[6]

[6] Source: Alaska Department of Education and Early Development (2008) Draft Alaska Education Plan retrieved from: http://www.eed.state.ak.us/edsummit/pdf/Education_Plan_Draft.pdf.

Invest in Special Education Teacher Preparation

Invest in growing the special education teacher preparation programs at the University of Alaska Fairbanks. Currently, UAF is the only school of education in the university system that does not have a special education program. Funding to support this effort would increase the number of special education teachers for the state of Alaska.[7]

Expand of Scholarship Opportunities for Education Majors

Expand scholarship opportunities for students in high-demand job areas such as education with specific emphasis on shortage areas. Re-evaluate current loan forgiveness programs, and sustain and increase funding for programs that demonstrate efficacy in preparing and supporting teacher recruitment and retention.

University Receipts Received in One Year and Expended in the Succeeding Fiscal Year

Regarding the request, "The University of Alaska shall, in the report required under 24 AS 14.40.190(a) [AS 14.40.190], report the amount of university receipts received in one year and expended in the succeeding fiscal year. The University of Alaska shall, in the report required under 24 AS 14.40.190(a) [AS 14.40.190], report the amount of university receipts received in one year and expended in the succeeding fiscal year."[8]

This information can be found in Note #7 of the Financial Statements submitted by the University of Alaska finance department.

Requests for Additional Information

For additional copies of the report, information on specific items, or questions, please contact Melissa Hill at the University of Alaska at (907) 450-8400.

December 10, 2009

The Honorable Sean Parnell, Governor of Alaska
P.O. Box 110001
Juneau, Alaska 99811-0001

Dear Governor Parnell,

I am pleased to present to you the Department of Revenue's Fall 2009 *Revenue Sources Book* (RSB). The RSB is a compilation of revenues received in Fiscal Year 2009 and projections of revenues for FY 2010 through FY 2019, and is prepared for the purpose of informing you, the Alaska Legislature, and the public of Alaska's revenue outlook. The RSB represents a collaborative effort between the Department of Revenue Tax and Treasury divisions, the Permanent Fund Corporation, and the Office of Management and Budget.

Alaska's revenue is presented in four categories, unrestricted and restricted oil revenue, and unrestricted and restricted revenue from non-oil sources. Revenue from oil production continues to dominate the state's revenue picture, providing close to 89% of the general fund unrestricted revenue in FY09. We project that oil revenue will provide at least 87% of general fund unrestricted revenue throughout the forecast period, to FY 2019.

The amount of oil revenue received depends heavily on oil prices, and oil prices in FY 2009 were exceptionally volatile, climbing to $133 per barrel early in the fiscal year, and dropping to $38 per barrel five months later. Oil prices have stabilized significantly since the beginning of FY 2010, and we forecast continued stabilization for the remainder of the year, with FY 2010 prices averaging $66.93 per barrel. This is $8.64 above our previous FY 2010 forecast of $58.29, provided in Spring 2009. Our longer term oil price forecast is based upon an expectation of gradual economic recovery for the U.S. and other developed nations, and a corresponding gradual increase in demand for petroleum products. Under this scenario, we forecast oil prices increasing to $76.35 and $83.93 in FY 2011 and FY 2012, respectively.

Oil production on the North Slope continues to decline, with 3.3% less oil produced in FY 2009 than in FY 2008. Production in FY 2010 is expected to decline 4.8%, to 659,000 barrels per day, and a decline of another 5.4% is expected in FY 2011. We project some improvement

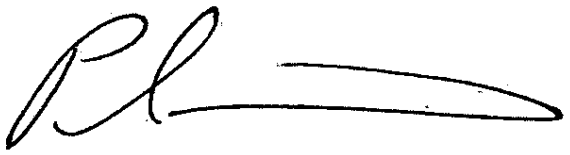
in production beginning in FY 2012, with new projects coming online. Our forecast calls for first oil production in the Nikaitchuq Unit in FY 2011 and in the Point Thomson Unit in FY 2014.

Total unrestricted revenue in FY 2009 was approximately $5.8 billion. For FY 2010 and FY 2011, we forecast total unrestricted revenue to be $4.8 billion, and $5.2 billion, respectively. Non-oil sources are projected to make up $610 million and $589 million of the FY 2010 and FY 2011 unrestricted totals.

Relatively high oil prices since 2005 have enabled the state to set aside some of the excess revenue in the state's Constitutional Budget Reserve Fund (CBRF). We devote this RSB's feature chapter to the establishment and history of the CBRF, its use over the years, its current balance, and its future. More about the CBRF—the state's "other" savings account—can be found in Chapter 3 of this publication.

We hope you find the information provided in the Fall 2009 *Revenue Sources Book* to be useful. Our next forecast for FY 2010 and FY 2011 will be published in the spring of 2010.

Sincerely,



Patrick Galvin
Commissioner

Revenue Sources Book

Alaska Department of Revenue – Tax Division

FALL 2009

1. **Introduction** 1

2. **Executive Summary** 3

3. **The Consitutional Budget Reserve Fund** 17

   A historical look at the Constitutional Budget Reserve Fund.

4. **Oil Revenue** 25

   In FY 2010, oil revenues are projected to contribute 87% of the state's General Purpose Unrestricted Revenue. Oil revenues will continue to play a key role in Alaska's future.

5. **Other Revenue (except Federal & Investment)** 45

   Revenue from non-oil sources includes non-oil taxes, charges for services, fines and forfeitures, licenses and permits, rents and royalties and other revenue sources.

6. **Federal Revenue** 59

   Federal funding accounted for $2.1 billion of the state's total revenue in FY 2009.

7. **Investment Revenue** 63

   Investment earnings come from the Alaska Permanent Fund, Constitutional Budget Reserve Fund, General Fund and other state investments.

8. **State Endowment Funds** 71

   Alaska has six endowment funds including the Alaska Permanent Fund, Mental Health Trust, Public School Trust, Alaska Children's Trust, Power Cost Equalization Endowment and the University of Alaska Endowment.

9. **Public Corporations & the University of Alaska** 75

   Seven public corporations and the University of Alaska are treated as separate component units of state government for financial reporting purposes.

10. **Appendices** 83

    The appendices provide 10 years of historical data and 10 years of forecast data on oil revenue, prices and production.

FALL 2009

1205

1. Introduction

General Discussion

The purpose of the Revenue Sources Book is to provide the governor, legislature and citizens of the state a summary of our past collections of state revenue and a forecast of future revenue. Revenues are categorized into four major components: oil revenue, income from sources other than oil, federal revenue and investment revenue.

Oil revenue continues to dominate the unrestricted revenue picture—and is projected to provide more than 87% of General Purpose Unrestricted Revenue through FY 2019. However, North Slope oil production is declining. In FY 2009, Alaska North Slope (ANS) output was 0.692 million barrels per day compared to a peak of 2.006 million barrels per day in FY 1988. While production declined by about 65% over that period, the market price of oil has more than tripled. For FY 2010, we project ANS oil production will decrease to 0.659 million barrels per day.

Before 2003, the Constitutional Budget Reserve Fund (CBRF) was used to balance the state's budget in 10 of the previous 15 years. Fiscal Year 2008 was a banner revenue year, in which surpluses exceeding $5 billion were deposited in the CBRF. Lower prices in the future, combined with the fall in North Slope crude oil volumes, could lead to future budget shortfalls and draws on the CBRF.

The oil and gas production tax known as Alaska's Clear and Equitable Share (ACES) was signed into law on December 19, 2007. This tax is designed to encourage investment in Alaska by the petroleum industry, while providing an open, transparent tax system in which both the industry and the people of the state can have confidence that the state is receiving a fair share of the revenue from Alaska's petroleum resources.

Alaska's total revenue picture also includes earnings from investments in the Permanent Fund and CBRF, federal revenue and other sources, such as taxes, charges for services, licenses, permits, and fines and forfeitures. The information in this book will provide greater insight into not only the sources of revenue that support the state today, but also into future revenue from potential new sources.

Please note that totals in some tables throughout this publication may not equal the sum of components due to rounding.

Unrestricted Revenue and Restricted Revenue

Throughout this forecast, we report two categories of revenue: General Purpose Unrestricted Revenue (frequently referred to as unrestricted revenue) and restricted revenue. These two types of revenue are based on the two components of the General Fund in the Alaska State Accounting System (AKSAS)—the unrestricted component and the restricted component—with certain adjustments.

General Purpose Unrestricted Revenue (GPUR)

General Purpose Unrestricted Revenue reflects revenue that is not restricted by the constitution, state or federal law, trust or debt restrictions, or customary practice. Most legislative and public debate centers on this category of revenue, and this is the amount generally used for budget planning purposes and designated in budget documents as General Fund revenue. In this forecast, General Purpose Unrestricted Revenue includes funds deposited into the unrestricted component of the General Fund, with certain adjustments:

- Reductions might include (a) revenue earmarked for specific programs, (b) pass-through revenue for qualified regional aquaculture and dive fishery associations and (c) revenue shared with municipal governments and organizations (e.g., fisheries taxes).
- Additions might include transfers from the unclaimed property trust to the state treasury.

The Department of Revenue uses a three-step process to make its final estimate of General Purpose Unrestricted Revenue.

Step 1. We estimate all revenue for the unrestricted component of the General Fund in AKSAS, as well as certain program receipts, by using our forecast models and obtaining estimates from other state agencies.

Step 2. We then consult the Governor's Office of Management and Budget and Legislative Finance for their input.

Step 3. Finally, following analysis, we adjust our initial projection to derive a forecast of total General Purpose Unrestricted Revenue.

Figure 2-5 on the next two pages sets out FY 2009 General Purpose Unrestricted Revenue and our forecast for FY 2010 and 2011.

Restricted Revenue

Restricted revenue represents any revenue that is not considered General Purpose Unrestricted Revenue. This includes revenue restricted by the constitution, state or federal law, trust or debt restrictions, or customary practice. Restricted revenue reported in this forecast includes money deposited into the restricted component of the General Fund with certain additions. Additions might include (a) receipts deposited in funds other than the General Fund and (b) receipts that are deposited into the unrestricted component of the General Fund but are restricted by statute or customarily appropriated for a particular purpose or program, such as sharing of fish tax revenue with municipalities.

Article IX, Section 15 of the Alaska constitution requires that at least 25% of all mineral lease rentals, royalties, royalty sale proceeds, federal mineral revenue sharing payments and bonuses received by the state be placed in the Permanent Fund. Until 2003, Alaska Statute 37.13.010 required the placement of 50% of royalties from certain leases into the permanent fund. House Bill 11, passed by the legislature in 2003, changed the law so that 25% from all leases would be placed into the Permanent Fund, contingent on the impact of this change to the Permanent Fund Dividend. On October 1, 2008, the impact of HB 11 on the Permanent Fund Dividend had exceeded the limitations provided in HB 11, and HB 11 was repealed. As of October 1, 2008, 50% of the royalties from applicable leases are paid to the Permanent Fund, while 25% from other leases are paid to the fund. This change is reflected in this revenue forecast as a decrease in unrestricted revenue and an increase in restricted revenue.

Crude Oil Price Forecast

Oil revenue is projected to provide more than 87% of forecasted General Purpose Unrestricted Revenue through FY 2019. Three elements are critical to the oil revenue forecast: price, volume, and to a lesser extent lease expenditures.

There is no price for Alaska crude oil on the New York Mercantile Exchange (NYMEX)[1] or other commodity exchanges. The price of Alaska North Slope (ANS) crude oil is calculated by subtracting a market differential from the price of West Texas Intermediate (WTI) quoted on the NYMEX. Four different reporting services estimate that market differential and report a daily spot price for ANS.

All of Alaska's oil production is delivered to refineries on the U.S. West Coast (including Alaska and Hawaii). Consequently, Alaska's royalty and production tax revenue depends in large part on the average market price of ANS crude oil at U.S. West Coast refining centers.

Figure 2-6 shows crude oil prices for FY 2009 and the Department of Revenue's forecast of prices for the 10-year period beginning with the current fiscal year FY 2010 and continuing through FY 2019. The oil price forecast is based on a subjective assessment of market dynamics and trend analysis by participants at a Department of Revenue price forecasting session and other commercial price forecasting sources.

Figure 2-6. Nominal WTI, ANS West Coast and ANS Wellhead, FY 2009 and Forecasted FY 2010-2019 ($ per barrel)

Fiscal Year	WTI	ANS West Coast	ANS Wellhead
2009	69.71	68.34	61.86
2010	68.71	66.93	61.03
2011	78.85	76.35	70.36
2012	86.43	83.93	77.78
2013	88.74	86.24	80.02
2014	91.11	88.61	82.27
2015	93.55	91.05	84.57
2016	96.05	93.55	86.89
2017	98.63	96.13	89.22
2018	101.27	98.77	91.54
2019	103.99	101.49	93.84

[1] The NYMEX futures market is one source for a WTI quote. Several reporting services also report a daily WTI price quote.

Figure 2-7 shows: (1) the monthly ANS West Coast market price from November 2004, through October 2009, (2) the 60-month moving average of the ANS West Coast market price for the same period and (3) estimated ANS futures price for December 2009 to December 2014.

The figure illustrates a number of issues with respect to oil prices:

- Month-to-month crude oil price volatility—monthly ANS West Coast prices during this time period ranged from $36.66 per barrel to $133.78 per barrel.
- The 60-month moving average is $68.44 per barrel and has more than doubled since 2004.
- Futures prices from November 2009 are dramatically lower than July 2008 record highs, but higher than the 60-month moving average.

We project that ANS oil prices will average $66.93 per barrel in FY 2010, $76.35 per barrel in FY 2011 and $83.93 per barrel in 2012 in nominal dollars. ANS oil prices are projected to increase at approximately 2.75% per year starting in FY 2013, based on inflation.

Figure 2-7. Monthly Nominal ANS West Coast and Futures Oil Prices ($ per barrel)

Crude Oil Production Forecast

Alaska North Slope crude oil production peaked at 2.006 million barrels per day in FY 1988 and has steadily declined since. We anticipate volumes will decline by 4.8% in FY 2010 to about 0.659 million barrels per day. For FY 2011, we project a 5.4% decrease in North Slope production. More discussion of the Fall 2009 oil production forecast can be found in Section 4. Oil Revenue. Also, a detailed field-by-field production forecast is included in the appendices of this forecast.

Crude Oil Expenditures Forecast

A third component of oil revenue forecasting is the expenditures forecast. Under the new ACES production tax, companies are allowed to deduct certain lease expenditures from the gross value of their production before applying the tax rate. Future tax collections, therefore, are dependent not only on the oil price and the level of production, but on the cost of that production. Costs of production may include fixed and variable operating expenses, such as labor costs and the expense to run a facility, and they may include costs to acquire production equipment or to drill a well—usually deemed to be capital expenses. A portion of capital expenses is also allowed as a credit against the ACES production tax.

Lease expenditures for the exploration for, and production of, crude oil have risen over the three-year period that they have been reported. In FY 2007, over $3.6 billion was spent producing and exploring for oil on the North Slope. In FY 2008, reported expenditures totaled $4.6 billion, and in FY 2009, reported expenditures totaled $4.9 billion. It is important to note that these are unaudited lease expenditures. We project spending in FY 2010 to moderate somewhat, partially due to cost reductions attributable to operational efficiencies and lower costs, with a total of $4.5 billion. For FY 2011, we expect capital spending to increase, with totals reaching $5 billion. These spending estimates are contingent on oil prices staying at current levels or increasing.

Long-Term Unrestricted Revenue Outlook

Using the price, volume and lease expenditure components developed for this fall forecast, Figure 2-9 summarizes the department's forecast of total General Purpose Unrestricted Revenue through FY 2019.

Figure 2-9. Total General Purpose Unrestricted Revenue, FY 2009 and Forecasted FY 2010-2019 ($ million)

Fiscal Year	Unrestricted Oil Revenue	Unrestricted Other Revenue (except Federal & Investment)	Unrestricted Investment Revenue	Total Unrestricted Revenue	Percent From Oil
2009	5,181.0	402.6	247.6	5,831.2	89%
2010	4,167.5	389.3	221.1	4,777.9	87%
2011	4,647.7	405.8	183.2	5,236.6	89%

2019	5,321.6	498.0	183.2	6,002.7	89%

Spending, Revenue Forecast and the Constitutional Budget Reserve Fund

As approved by voters in 1990, all receipts from mineral tax and royalty settlements are deposited into the Constitutional Budget Reserve Fund (CBRF). The state has deposited about $14.3 billion into the fund and generated another $1.9 billion in investment earnings. Through September 30, 2009, approximately $3.9 billion had been borrowed from the CBRF to balance the budget and another $4.1 billion had been spent through direct appropriations. During the years of FY 2007, 2008, and 2009, all borrowed funds were repaid from the General Fund into the CBRF. The net asset value in the CBRF as of September 30, 2009 was about $8.3 billion. Since the increase in oil prices beginning in 2003, no significant CBRF withdrawals were necessary to balance the state's budget, however given price volatility and the decline in expected oil volumes from the North Slope, the state may have to depend on the CBRF in the future.

Figure 2-10 is presented to help the reader understand the time period in which the CBRF could be depleted, based on the current revenue forecast and the assumption that all excess revenue would be deposited into the CBRF. This figure shows that, given the current revenue forecast and up to 10% in budget growth from FY 2010, the CBRF would not be depleted before 2020. If oil prices were to fall below our forecasted level and stay at that low level, we expect the CBRF to be depleted as early as July 2014, if the budget increases at a rate of 10% per year. If oil prices were to decline to an annual average of $50 per barrel, and the budget increases at 3% per year, the CBRF could be depleted by July 2017.

FALL 2009

3. The Constitutional Budget Reserve Fund: Its Purpose, History and Use

Boom and Bust History of Natural Resource Revenues

For all of recorded history, Alaska has been a resource extraction state. From sea otter fur to timber, to gold, and finally to oil and natural gas, Alaskans have relied on natural resources as the major economic driver in the state. Because of its economic dependence on natural resources, Alaska has had a long history of boom and bust cycles.

As early as 1778, Captain Cook observed that traders would likely find a lucrative market for sea otter pelts or "sea-beaver" as they were called at the time. In fact, Captain Cook went so far as to call the sea otter pelts "soft gold."[1] Fur from sea otters and seals did indeed become a major source of revenue for Alaskan traders. Yet less than fifty years after Captain Cook correctly predicted the value of the sea otter trade in Alaska, a "fur boom" ensued and sea otters were hunted to virtual extinction.[2] This pattern of discovery of a resource in commercial quantities, followed by a subsequent rush to harvest the resource and ultimately the depletion of the resource, sadly played out again and again in Alaska over the next hundred years. Gold caused the next natural major resource boom for Alaska only to crash in the early 1940s. Fishing, specifically salmon, was a leading source of revenue for the Alaskan economy during World War II.

Another significant source of revenue in Alaska is federal spending, especially military spending. During World War II, over a billion dollars in federal money flowed into the state over a relatively short period of time, leading some to refer to the period as a "defense rush." Yet Alaska experienced a painful contraction within a few years of the end of World War II.

While federal revenues were flowing into the state at a record pace, tax revenues from the two leading sources of government revenue, fishing and mining, were dropping. Revenues from fishing and mining dropped so dramatically in the 1940s that by 1948, alcohol taxes had overtaken fishing and mining to become Alaska's main source of revenue.[3] At the same time, spending for state services skyrocketed, leaving Alaska with a multi-million dollar budget shortfall in 1947.

1222

Over the years there were numerous discussions of the need to stabilize revenues and protect Alaska from the boom and bust cycles associated with reliance on natural resources, but there never seemed to be enough of a surplus or a willingness to save until oil was discovered in Alaska in world-class quantities.

The Permanent Fund

By the late 1970s, numerous groups and individuals had pointed out the need for Alaska to establish a savings fund to protect against swings in commodity prices for natural resources. As early as 1941, then Territorial Governor Ernest Gruening called for a budget stabilization fund to guard against the revenue volatility experienced by a natural resources dependent economy.[4]

Gruening's dream of an "Alaska fund" came true in the form of the Alaska Permanent Fund. While one purpose of the Permanent Fund was arguably to create a "rainy day account" for government spending when oil revenues dwindled, it has not been used for that purpose. Former Governor Jay Hammond is credited with the idea of generating public support for protecting the Alaska Permanent Fund by paying out dividends to Alaskans. The idea has been quite effective.

While legislators may appropriate money from the earnings of the Alaska Permanent Fund for government projects, the dividend program has made any dipping into the Alaska Permanent Fund for purposes other than dividends extremely controversial.

The 1980s Bust and Impetus for CBR

In the mid-1980s, roughly a decade after the Alaska Permanent Fund was established, Alaska experienced another severe resource bust as the price of oil dropped to roughly $10 per barrel, bringing widespread foreclosures and bankruptcies to Alaska.

The 1980s bust was the same painful story Alaskans weathered through for over a century: resources flowed in and government spending grew, resources played out or values dropped and suddenly Alaskans were faced with a tremendous shortfall. As the individual income tax and several other state taxes were repealed in 1979-1980 as a result of soaring oil revenues, taxes paid by Alaskan residents plummeted. As Stephen Jackstadt and Dwight Lee noted, "real taxes paid to the state by individual Alaskans after 1980 were only 14 to 16 percent of the real taxes they paid during fiscal year 1976."[5]

Revenues were declining and state spending was expanding. Over the seven years from 1981 to 1988, state spending increased almost 2,000% with state spending representing approximately $70,000 per Alaskan.[6]

Statutory Budget Reserve

In 1986 as the Alaskan economy cratered under the pressure of $10 per barrel oil, the legislature created another "rainy day" account: the Statutory Budget Reserve. The Statutory Budget Reserve was created to cover General Fund shortfalls using "excess revenues" from more profitable years.

The Alaska Legislature seeded the Statutory Budget Reserve with the balance of the remaining General Funds at the end of fiscal year 1991, $696.3 million.[7] By fiscal year 1994, the legislature had appropriated all of the money in the Statutory Budget Reserve leaving it with a zero balance. However, in 2008 the Legislature deposited approximately $1 billion in the Statutory Budget Reserve, which remains in the account today.

The Statutory Budget Reserve served its purpose for a short period of time before lying empty for over a decade. There was concern among some state legislators that the problem with the Statutory Budget Reserve was that funds were available through a simple majority vote. Some felt the Statutory Budget Reserve was doomed to fail because the money in the fund was simply too easy to spend.

Constitutional Budget Reserve History and Passage

The statutory reserve fund alone was not sufficient to protect Alaska from declining oil production and volatile prices. In the late 1980s, Alaskan legislators began discussing the idea of creating another budget reserve to be enshrined in the Alaska Constitution. The concept of the Constitutional Budget Reserve (CBR) as we know it today (an account containing oil and

gas settlements from which appropriations generally require a three-quarter majority vote) came about as the state was considering the possibility of a large windfall from an oil settlement. Currently, CBR funds consist of revenues from the settlement of litigation over mineral taxes and royalties and the interest earned on those funds.

The legislation that created the CBR was sponsored by Senator Jan Faiks. Senator Faiks was the Chair of the Senate Judiciary Committee at the time and had just finished two years as the first female president of the Alaska State Senate from 1987 to 1988. Although Senator Faiks was the prime sponsor of the bill that created the CBR, the legislature changed the bill, which was ultimately combined with elements of a House Finance bill shepherded by Representative Kay Brown.

Originally, Senator Faiks' bill contained a number of provisions related to budgeting, one of which was labeled the Budget Stabilization Fund. Several other major sections in Faiks' bill were removed through the committee process including a constitutional spending limit to accompany the budget stabilization fund.

Today, under most circumstances the legislature can appropriate funds from the CBR only with a three-quarters majority vote. However, it is possible to make appropriations from the CBR with a simple majority vote under certain circumstances as provided in section 17(b) of the Constitution, and the legislature did so in 2003. Withdrawals from the CBR are required to be repaid.

The CBR was established in 1991, and since that time more than a dozen pieces of legislation have been introduced that would amend or change the CBR. However, the only significant changes to the CBR have been the asset allocation and the establishment of the CBR sub-account, a separate fund invested and managed with a longer time horizon than the main fund.

The CBR has been used heavily since 1991 and its exhaustion date is regularly forecasted as part of the official fall revenue forecast each year. There have been warnings that the State of Alaska will face a "fiscal gap" when the CBR is exhausted.

CBR Legislative and Balance History

Mary Halloran of the Governor's Office of Management and Budget summed up the impetus for the legislation in her comments before the Senate Finance Committee, which ultimately authorized the Constitutional Budget Reserve: "In mentioning the outstanding oil and gas litigation, [Halloran] said that, though the timeline is uncertain, it looks like the State could have some 'windfalls' during the next five years. [Halloran] said the Legislature has taken some very strong steps over the last couple of years to try to stabilize the spending limit, but there are still a number of programs 'out of control.'"[8]

Former Senator Jan Faiks recalled the passage of Senate Joint Resolution 5 (SJR 5) and creation of the CBR reserve as a bipartisan effort: "The decision was contentious because hardly anyone wanted to change the terms and conditions of the original Permanent Fund without approval from the people. So most Senators... insisted on another statewide vote and I think most House members agreed; thus, it was a bipartisan decision to propose a constitutional amendment. The Governor [Cowper] gets credit for recognizing the state had a real financial problem and he wanted to find a permanent solution. We knew the current situation of relying on the ups and downs of oil revenues was not good for either state or local governments. A bipartisan solution had to be found."[9]

Originally, SJR 5 was an updated version of a bill that had passed the Senate nearly unanimously in 1987. The bill called for a 50-30-20 distribution of the income of the Permanent Fund. Fifty percent of the Permanent Fund's earnings would have gone to the payment of dividends, thirty percent to inflation proofing and twenty percent to a budget stabilization fund. The twenty percent of earnings in Senator Faiks' bill as originally introduced eventually became the CBR as we know it today. One major piece of Senator Faiks' bill that was removed in the process was an appropriation limit. Another was a sunset clause under which the constitutional amendment would have expired after five years.

Just getting the bill out of the Senate was a challenge, even for the former Senate President Faiks. After failing to pass once and being returned to the Rules Committee on a motion by Senator Arliss Sturgulewski, SJR 5 was reported out of the Rules Committee and brought to the Senate Floor under a supplemental calendar on April 18,

[9] Faiks, Jan. "CBR." Email to Department of Revenue. November 10, 2009.

1990. The bill passed the Senate by a vote of 15-5 with Senators John Binkley and Michael Szymanski switching their votes to support passage.

Meanwhile, in the State House of Representatives, a bill with similar intent was making progress. House Joint Resolution 66 (HJR 66), while nominally sponsored by the House Finance Committee, was heavily supported by Representative Kay Brown. In fact, the legislative record describes Representative Brown as the Prime Sponsor of HJR 66. Co-Chairman of the House Finance Committee Ron Larson explained that the bill, "...evolved from the House Finance Fiscal Policy Subcommittee, chaired by Representative Brown, and was modified by the House Judiciary Committee."[10] The two bills (SJR 5 and HJR 66) finally collided in May of 1990 in the House Finance Committee.

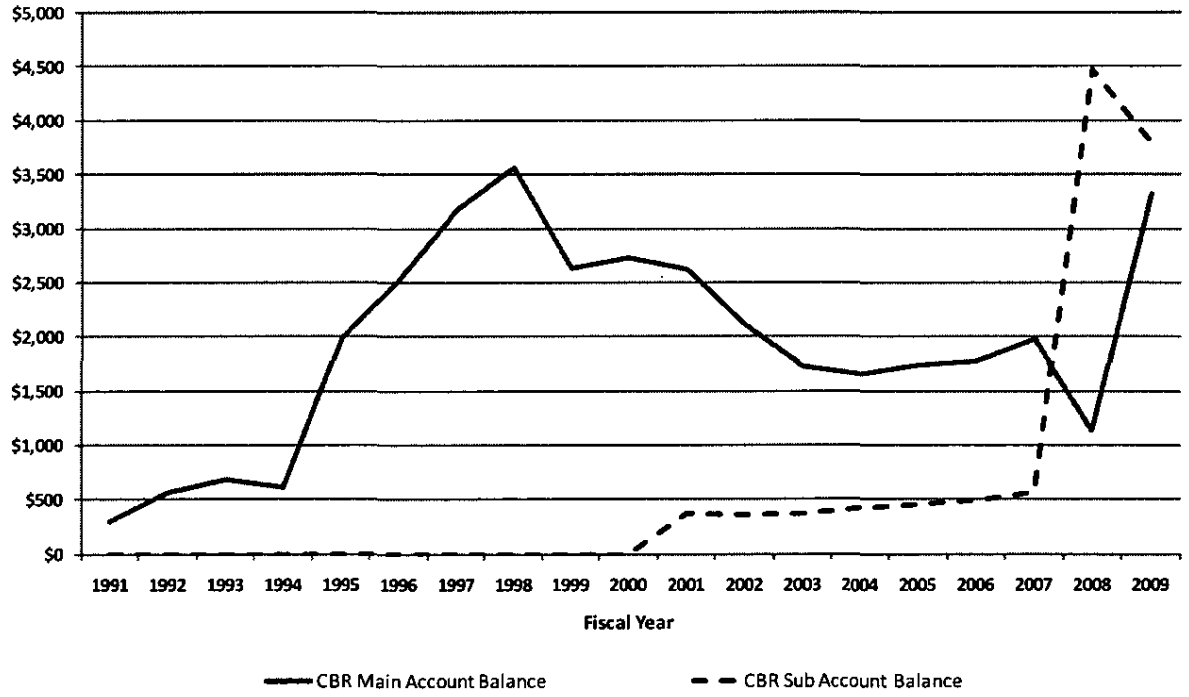
As is often the case with two pieces of similar legislation introduced separately in the House and Senate, the first bill to pass its respective house of origin typically becomes the "vehicle" or version to pass into law. In this case, SJR 5 by Senator Faiks had already passed the Senate and was assigned to the House Finance Committee for a hearing. HJR 66 never passed the House. However, the language from HJR 66 relating to the budget reserve, including the use of the term "budget reserve" rather than "budget stabilization fund" as it was referred to in SJR 5, was incorporated into SJR 5. Representative Brown testified before the House Finance Committee that the language in SJR 5 was nearly identical to the language in HJR 66 after the House Finance Committee had amended SJR 5.

In essence, SJR 5 was amended in the House to reflect the language of HJR 66. In the process, the spending limit in SJR 5 was eliminated. Numerous legislators and the Alaska Public Employees Association, a public employees union, opposed the constitutional spending limit.[11] Because the spending limit was deemed not politically viable, it was removed.

The Senate concurred with the House in a vote of 15-5 on May 8, 1990. The bill was sent to the governor on May 24, 1990, for signature. Governor Steve Cowper signed the bill almost exactly two months later on July 23, 1990.

Despite the passage of SJR 5 and the creation of the CBR, some question

Figure 3-1. Balance of the Constitutional Budget Reserve Main Account and Sub Account ($ million)



[10] Testimony of Ron Larson. 16th Alaska State Legislature, Senate Finance Committee. May 1, 1990. Transcribed by Alaska Legislative Records Dept.

remained about which funds were to be deposited into the CBR. Former Governor Cowper and a number of legislators sued then Governor Wally Hickel, Department of Revenue Commissioner Darrel Rexwinkle and the State of Alaska in 1993 to dispute the State's interpretation of "administrative proceeding." Former Governor Cowper and the legislators argued that the State had been improperly depositing funds received during the informal conference stage of dispute[12] into the General Fund when they should have been deposited into the CBR. The Alaska Superior Court ruled in favor of former Governor Cowper and required the state to properly fund the CBR, with interest and foregone earnings, by the end of the regular session of the 18th Alaska Legislature in 1994.[13]

In another instance, nearly a billion dollars in funds which should have been deposited in the CBR were spent instead. When oil companies ARCO, Unocal, BP Exploration and Chevron agreed to pay the state $1.7 billion to settle long-running disputes over payments of back taxes and royalties in 1992 and 1993, the governor and legislature appropriated over half the amount. By spending this settlement rather than saving it, the state was able to maintain overall spending and more than double capital spending, from $300 million to $616 million.[14]

Historically, funds from the CBR were usually appropriated for general purposes. However, the CBR has also been used to fund specific programs in a number of instances. For example, a 2004 legislative research report listed the following expenditures from the CBR for specific programs: expenditures for oil and gas litigation and state title to oil and gas lands, capitalization of the Alaska Mental Health Trust, Y2K assessment, compliance, and remediation, and establishment of the Power Cost Equalization endowment fund.[15]

Figure 3-1 illustrates the history of the balances in the Constitutional Budget Reserve and the sub-account of the CBR from the first deposit through fiscal year 2009. Figures 3-2 and 3-3 illustrate the balance of each the Constitutional Budget Reserve and the Constitutional Budget Reserve sub-account with contributions and withdrawals by year. Figure 3-4 presents this information in tabular form.

CBR as a Stabilization Fund or Alternative to Hedging

The CBR as it exists today functions as a budget stabilization fund in the same manner as funds in many other states and oil producing nations. Like many resource producing states, the State of Alaska is exposed to tremendous commodity price risk. This is a difficult position for a government as expenses typically cannot be scaled back as quickly as revenues fall.

As a result of commodity price exposure, a number of resource producing states and nations from Texas to Mexico have actively hedged oil prices. The State of Alaska has studied hedging oil prices on a number of occasions with the most detailed discussion occurring in 2002 under the direction of Department of Revenue Commissioner Wilson Condon. In its hedging report, the Department of Revenue raised some concerns with using the CBR to protect the State from commodity price volatility, but also recognized the role the CBR plays in smoothing state revenues. However, because the CBR already insulates the state from the volatility of commodity prices, the report concluded that hedging oil prices was not ideal until the CBR was depleted or nearly depleted.[16]

"Alaska has not yet needed to pay the costs or take the risks of hedging its future oil revenues because our cushion against fluctuating oil prices for the past decade has been the Constitutional Budget Reserve Fund (CBRF). The fund was established a decade ago for exactly that purpose — to fill the gap between a fluctuating revenue source and a constant need for public services," wrote the Department in 2002.[17]

Conclusion

Alaska's economy has always been at the mercy of commodity production and prices. After centuries of exhilarating resource booms followed all too regularly by severe busts, the State of Alaska created a budget stabilization fund in 1990: Alaska's Constitutional Budget Reserve. The CBR was created shortly after a time of economic crisis and with a view toward several large windfall settlements for the state.

Over nearly two decades, the CBR has almost single-handedly staved off massive budget shortfalls. In some years, withdrawals from the CBR reached a billion dollars in nominal terms. Yet the CBR remains vulnerable to prolonged overspending and the potential that oil prices may fall.

While the CBR is still vulnerable to overspending, and has at times appeared on the verge of exhaustion, the fund has acted as a buffer against commodity price volatility for almost two decades and can be expected to do so for the near future.

[1] Includes bonuses and interest

General Discussion

The state receives oil and gas revenue from four sources: oil and gas production tax, property tax, royalties and corporate income tax. The bulk of the revenue goes into the General Fund for general purpose spending. With the repeal of HB 11,[1] approximately 30% of oil and gas royalties goes into the principal of the Alaska Permanent Fund and 0.5% goes into the Public School Trust Fund. There also are two other funds that receive specific oil and gas revenues: the National Petroleum Reserve-Alaska (NPR-A) Fund,[2] which receives the state's share of all lease bonuses from sales in the NPR-A; and the Constitutional Budget Reserve Fund (CBRF), which receives settlements of tax and royalty disputes between the state and oil and gas producers.

Figure 4-2 shows the actual amount of each tax and royalty source in FY 2009 and the forecast for FY 2010 and FY 2011. As can be seen from the figure, royalties and production tax constitute the largest part–81% for FY 2010–of restricted and unrestricted oil revenue combined. Figure 4-3 shows the department's unrestricted oil revenue forecast from the current fiscal year through FY 2019 by revenue category.

This section begins with a discussion of production taxes and royalties, both of which are driven by price and volume. We then review the price forecasting methodology that underlies this report, and discuss the linkage between market prices and wellhead values. We also review our production forecast and close this section with a discussion of oil and gas property taxes, oil and gas corporate income taxes and the restricted portions of oil revenue.

[1] For more discussion on deposits to the Permanent Fund and HB 11, see the Executive Summary section.

[2] This fund implements a federal requirement that the state use its share of NPR-A oil revenue to satisfy the needs of local communities most affected by development in the NPR-A. For detailed information on this fund, see Section XII-P of Treasury's Investment Policies and Procedure Manual.

Crude Oil and Natural Gas Production Taxes

All oil and gas production in Alaska, except the federal and state royalty share and a small amount used in production operations, is subject to the state's production tax, and to the hazardous release surcharge, which is levied only on crude oil. Taxes and surcharges are estimated and collected on a monthly basis.

The Production Tax Known as "Alaska's Clear and Equitable Share" (ACES)

In November 2007, the Alaska Legislature passed the Alaska's Clear and Equitable Share plan (ACES), which made changes to the state's production tax system, retroactive to July 1, 2007. The previous production tax, known as the Petroleum Profits Tax (PPT), had been in place for one year prior to the passage of ACES. Both production tax systems are based on net profits of oil and gas production (see Figure 4-4). For more than 20 years prior to the enactment of the PPT, the state used a production tax system that was based on the gross value at the point of production as adjusted by the Economic Limit Factor (ELF).

The ACES tax calculation starts with the value at the point of production, and then subtracts upstream costs, including costs capitalized on company financial statements, from this value to arrive at the "production tax value." Each company that produces oil in Alaska has a production tax value based on this calculation, which is conceptually similar to a company's net profit. The production tax value is multiplied by the tax rate—25%—to arrive at the base tax. Should the production tax value exceed $30 per barrel of oil produced (or the equivalent in gas), the tax rate increases 0.4% for every dollar the per-barrel production tax value is over $30. For production tax values greater than $92.50, the progressivity factor changes to 0.1% for every additional dollar of profit on a barrel of oil. The maximum total tax rate is 75%.

Under ACES, a company's production tax liability is reduced to the extent that it invests in equipment, projects, or other items that are deemed "capital expenditures." Capital expenditures generally include costs related to the purchase of drilling rigs or other equipment, infrastructure, exploration, and facility expansion. Capital costs are eligible for a 20% credit against the company's ACES liability and the credits must be spread over two years. The 20% capital expenditure credit is intended to encourage investment in Alaska.

ACES also encourages investment in Alaska through three other tax credits. Companies producing less than 100,000 barrels of oil per day may be eligible for a tax credit of up to $12 million per year. Net losses are eligible for a 25% tax credit in the year following the loss. ACES also expanded the Exploration Incentive Credit, changing the credit rates from 20% and 40% to 30% and 40% of qualified exploration expenditures.

Figure 4-5 shows the credits that companies reported on their annual tax returns filed March 31, 2008 and March 31, 2009. Note that most of the credits were applied against tax liabilities; those that could not be immediately applied against a tax liability will be carried forward or sold to the state or another company.

Figure 4-4. ACES Tax Liability Calculation

ACES Tax Liability = [(Value – Costs) * Tax Rate] – Credits

The terms used in the equation are defined as follows:

Value = Volume of Oil & Gas Produced * Wellhead Value

Costs = Operating Expenditures + Capital Expenditures

Tax Rate = 25% + 0.4% for every $1 per barrel that this "net profit" exceeds $30 up to $92.50, then 0.1%

Credits = (20% * Capital Expenditures)(1) + (20% * Eligible Transition Expenditures)(2) + Base Allowance

(1) Spread over two years

(2) Limited to those credits earned while the PPT was in effect and could not be used

The oil and gas tax credit fund, authorized under AS 43.55.028, was created to fund the state's purchase of production tax credit certificates. In FY 2009, the fund paid out $193 million, and thus far in FY 2010, the fund has paid out $49 million to purchase credits. As of November 2009, the fund balance was $138.5 million.

Hazardous Release Surcharge

The Oil and Hazardous Substance Release Prevention and Response Fund was created by the legislature in 1986 to provide a "readily available funding source to investigate, contain, and clean up oil and hazardous releases." An amendment in 1994 divided the fund into two separate accounts comprised of: (1) the Response Account, which requires a surcharge on all oil production, except federal and state royalty barrels, that may be used to finance the state's response to an oil or hazardous substance release declared a disaster by the governor; and (2) the Prevention Account which is an additional surcharge on all oil production, except federal and state royalty barrels, that may be used for the clean up of oil and hazardous substance releases not declared a disaster by the governor. This account can also be used to fund oil and hazardous substance release prevention programs in Alaska.

The Response surcharge (AS 43.55.201) is $.01 per taxable barrel of oil and the Prevention surcharge (AS 43.55.300) is $.04 per taxable barrel of oil produced.

The Response surcharge is suspended when the balance of the Response account is equal to or exceeds $50 million. As of September 30, 2009, the cumulative balance of the account was $45.8 million. The Response Surcharge was re-imposed effective April 1, 2007, by the Department of Revenue.

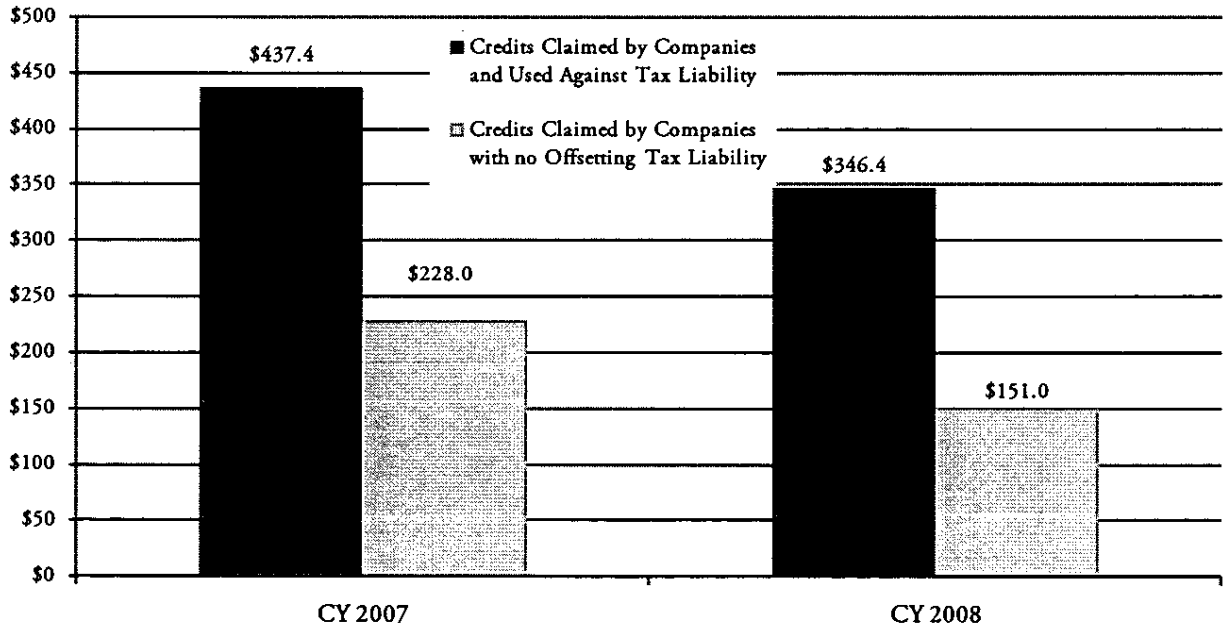
Oil Royalties

Almost all Alaska oil and gas production occurs on state lands leased for exploration and development. As the land owner, the state earns revenue from leasing as: (1) upfront bonuses, (2) annual rent and (3) a royalty interest in oil and gas production.

Typically the state issues leases based on a competitive bonus bid system. The state generally retains a royalty interest of at least 12.5%. The vast majority of current production is from leases that carry that rate. Some currently producing leases carry rates as high as 20%, and some leases also have a net profit-share production agreement.

State oil and gas leases provide that the state may take its oil royalty in barrels (in-kind) or as a percentage of the production value (in-value). In FY 2009, the state took approximately 56,000 barrels per day of North Slope

Figure 4-5. Production Tax Credits Reported, CY 2007 and CY 2008 ($ million)



production in-kind and sold it to Flint Hills Resources Alaska, LLC for their refinery at North Pole.

The royalty oil taken in-value is valued according to a formula using a market basket of spot crude oil prices closely approximating the ANS West Coast spot price of oil less a transportation allowance back to the lease. Royalties are based on a destination price—the higher of the actual sales price or the prevailing value.[3] Pipeline and marine transportation costs are deducted from the destination value to derive the taxable wellhead value of the oil or gas.

Crude Oil Prices, Lease Expenditures, Transportation Costs and Crude Oil Production: Forecasting Methodology & Assumptions

For many years, the level of revenues accruing to the state from oil production have been contingent primarily on oil prices and production volumes. With the implementation of the production tax on net profits, a third factor influences the level of revenues anticipated from oil production—costs related to exploring for, developing and producing oil, all or part of which are deductible and/or creditable under the production tax as "lease expenditures."

Estimating oil revenue for the state entails projecting four factors:

1. Crude oil prices
2. Lease expenditures
3. Transportation charges
4. Crude oil production

This section reviews each of these factors.

To forecast oil prices, the department conducts a day-long price forecasting session to review and discuss petroleum supply and demand price drivers. The session includes professionals from the Department of Revenue, Department of Natural Resources, Department of Labor, the Governor's Office of Management and Budget, the Division of Legislative Finance, the University of Alaska and industry experts.

To forecast crude oil production volumes, the Department of Revenue uses an engineering consultant in conjunction with assistance from the Department of Natural Resources and the Alaska Oil and Gas Conservation Commission. The statewide production volume forecast is summed from projections of oil and gas production by field.

To forecast lease expenditures, the department uses data from earlier filings for a base and projects short-term future expenditures from company documents. Mid and long-term expenditure forecasts take into account long-term development plans as detailed in company documents and are intended to coincide with our production forecast.

Transportation charges include tariffs on pipelines, marine transportation and other cost adjustments for moving crude oil to market. ACES allows "reasonable" costs to be subtracted as transportation charges.

Each of these forecasted items play an important role in determining the level of revenue anticipated from oil production. These four items are used as inputs into the department's revenue model.

More information about expenditures and tax calculations is provided later in this section.

1. Crude Oil Prices

Methodology for Forecasting Prices

The department compiles its oil price forecast from several sources, including a day-long price forecasting session with attendees from various agencies in the state government. Session attendees are asked for their projections for West Texas Intermediate (WTI) crude oil for three cases–a low case, a high case and a base case. The prices are forecast in real 2009 dollars. The Department of Revenue projects the differential between WTI and ANS and uses a projection of inflation to arrive at the nominal dollar forecast used in this publication. Among the other forecasting sources reviewed by the department are those prepared by the Energy Information Administration (EIA), the New York Mercantile Exchange (NYMEX), and industry analysts.

Oil prices were extremely volatile in FY 2009, due in large part to the economic crisis experienced in the U.S. and other developed nations. Although prices have stabilized thus far in FY 2010, there is still a significant amount of uncertainty about whether or not the economy is on a sustained path of recovery and if so, what impact that will have on oil demand and supply. In the 11 months since oil prices reached their recent low of $25 per barrel (December 2008), prices have rebounded to triple that amount, currently holding fairly steady in the $70 range for the past six months. Yet, many impacts of the recession continue to be felt, including high unemployment, shaky financial

[3] ANS West Coast prevailing value per 15 AAC 55.171 is the monthly average of daily spot market prices reported by Platt's Oilgram, Reuters and Dow Jones Energy reporting services. This price is published monthly on the Tax Division website at www.tax.state.ak.us.

markets and lower than normal consumer spending. Oil markets are intricately linked to the health of economies in the world and with so much potential for economic volatility still in the mix, it is difficult to predict with any accuracy the direction oil prices will go in the longer term.

Due to these uncertainties, we focused our oil price forecast on the near term, forecasting only out to 2012. Our forecast for the following seven years was held flat in real terms and escalated with inflation. The following observations and assumptions were considered in the preparation of our oil price forecast.

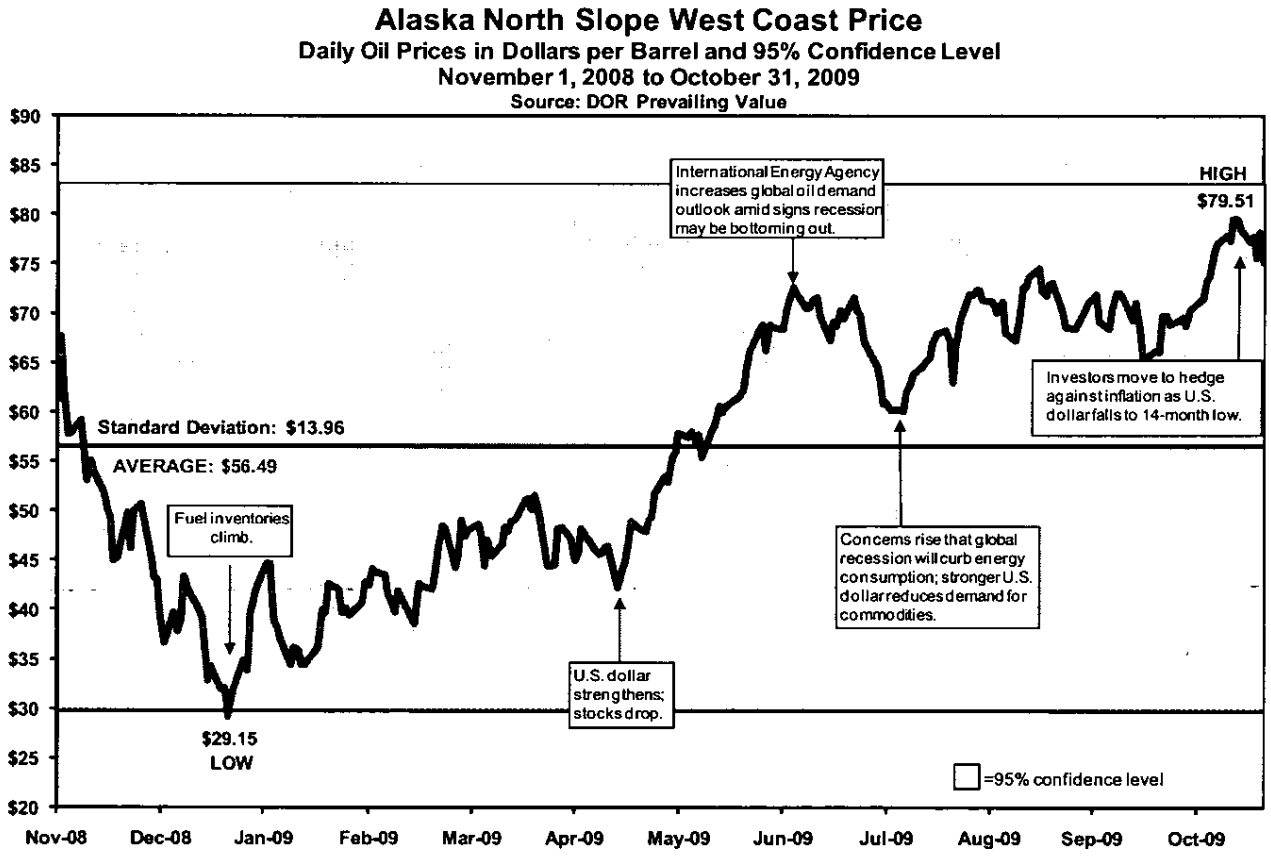
Factors that Influence Oil Prices

Many factors contribute to the pricing of oil on the world market. There are the fundamental economic factors of supply and demand, there are geopolitical events, there are inventory levels and weather-related events. There are other related issues, such as the impact of the financial sector, including commodities trading, and of facility constraints, including refinery capacity and configuration limitations. There is the influence of a strong oil market cartel—OPEC—which strives to keep oil prices within a pre-determined price band by increasing and decreasing supply. These are all factors that help determine the price of oil in the world market, and each of them must be considered in forecasting oil prices. At any given time, most of these factors are likely influencing the price of oil. Some of the factors push prices higher and some push them lower.

Oil Price Drivers

The most significant oil price driver for this forecast—both for high and low prices—is the health of the U.S. economy and other developed countries. Since the economy has been cited as the most commonly accepted reason for the crash in oil prices that occurred in late 2008, it should not be surprising that the economy is the most influential factor for oil price movements in the near term. The fact that the economy is the

Figure 4-6. ANS Crude Price Volatility



Note: 95% confidence level equals two standard deviations, or +/- $27.92 from the average of $56.49 per barrel

1236

top reason for oil prices increasing, as well as for oil prices decreasing, reinforces the uncertainty that still exists in the future of the U.S. and other economies. While some notable economists have been quick to declare that the worst of the recession is past us and the economy is on an upward path, others warn of continued market volatility, as well as unemployment and inflation fears.

There have been several measures of positive economic growth in recent months that may help signal the end of the recession. In late October 2009, the Bureau of Economic Analysis (BEA) released an early report that the U.S. gross domestic product (GDP) had increased in the third quarter of 2009—the first such increase since the second quarter of 2008. Also according to the BEA, U.S. personal income was up in the second quarter of 2009, the first increase in a year. With regard to international trade, the BEA reported in the second quarter of 2009 that the deficit in international trade on goods and services declined to its lowest level since 2001. These are all positive economic signs that the worst of the recession could be over in the U.S.

Alternatively, should the U.S. economy slide back into negative growth again, the impact on oil prices could be severe. As the recession deepened in the fourth quarter of 2008, oil prices plunged from over $90 per barrel to about $25 per barrel, a 72% decrease. One year later, prices have rebounded as the economy appears to be recovering, but unemployment is the highest it has been in over 25 years. Prolonged unemployment could erode oil demand, sending prices downward again. Any economic impacts felt in the U.S. to some extent carry over to other parts of the world and could dampen oil demand there as well.

Along with the rebound in the economy has been an increase in commodities trading, particularly in oil futures. Oil is traded on the New York Mercantile Exchange (NYMEX) and the price of oil, at least in the near term, is significantly influenced by thousands of trades conducted daily on the commodity. Some economists opine that the huge number of commodity trades on oil could be contributing to the volatility of oil prices seen in recent years. These opinions have generated suggestions that the commodities markets should be more tightly controlled and regulated. It has yet to be determined what impact, if any, commodities trading has on long-term oil pricing. The influx of money into commodities, however, has been linked to the decreasing value of the U.S. dollar. The U.S. dollar has dropped in value by over 7% this year and by 37% since 2001 due to years of low interest rates and recent federal stimulus spending. The weakened U.S. dollar has also been linked to the price of another commodity, gold, which recently soared to over $1,100 per ounce. Futher weakening of the dollar is often cited as contributing to higher oil prices.

Other drivers of oil prices cited less frequently include decisions made by OPEC and whether members adhere to the quotas the organization sets. OPEC successfully cut production in the fourth quarter of 2008, hoping to reverse the downward trend in oil prices. Although the cuts had some impact, they did not have an immediate response in oil prices, due in part to the over-supply of oil in the market. The organization cut production again in the spring of 2009, with the goal of increasing oil prices. Since June 2009, prices appear to have stabilized in the $70 per barrel range. It is difficult to know how much influence OPEC's cuts have had on oil prices, but the organization does have the ability to control how much oil is in the market at any given time.

Disruptions in supply due to geopolitical events, weather-related events and infrastructure constraints played less of a role in this year's oil price forecast. The hurricane season failed to produce any real threatening storms that could shut in production in the Gulf of Mexico or elsewhere. Geopolitical events such as those seen in Nigeria and Iran and other oil-producing regions are still occurring, but appear to be taking a back seat to the economy's impact on oil prices. Recently, there have been no overwhelming infrastructure concerns, at least in the oil markets, to drive prices up or down.

Demand and Supply Projections

in the long run, oil prices are ultimately a function of two factors: the supply of oil and the demand for oil. While oil price forecasting necessarily considers the impact of such factors as financial speculation and weather events, the underlying fundamentals of supply and demand must also be examined.

In their November 2009 update, the EIA predicted that world oil demand will rebound in 2010 by over one million barrels per day, with most of the increase coming from developing countries. Economic growth in China and other Asian nations is expected to lead the rebound in oil consumption. The developed world, as represented by the nations in the Organization for Economic Cooperation and Development (OECD), is expected have essentially no change in consumption from 2009 to 2010. However, the U.S. is expected to reverse its downward trend in oil consumption that began in 2005.

On the supply side, OPEC production, which was 2.4 million barrels per day lower than 2008 over the first nine months of 2009, will gradually increase in 2010 as oil demand increases, according to the EIA. OPEC spare capacity is expected to remain above four million barrels per day, which represents significantly more excess capacity than the historical average. Most of this spare

capacity is located in Saudi Arabia. In contrast to OPEC, non-OPEC oil production was actually 500,000 barrels per day higher than 2008 over the first nine months of 2009, with most of the increase coming from Russia. Non-OPEC supply is expected to show an additional increase in 2010 of 250,000 barrels per day.

Although oil supply and demand are currently showing signs of stabilization, we know that oil prices will continue to move in cycles in the future as they have in the past. The EIA cited renewed economic growth as the driver of increased oil demand which in turn has helped prices to stabilize. Likewise, participants in the department's price forecasting session identified the state of the U.S. and world economy as the most important factor in determining oil prices. With OPEC showing a historically high level of quota discipline and holding enough spare capacity to help smooth out any supply disruptions, oil demand now appears to be the most important fundamental driver of oil prices. Demand, as we know, is a function of the economy: as the world economy goes, so too will oil prices. Our oil price forecast assumes that the world economy will be well on the way to recovery by late 2010.

Forecast for West Texas Intermediate and Alaska North Slope Crude Oil

We forecast the price for West Texas Intermediate (WTI) crude oil to average $68.71 for FY 2010, $78.85 for FY 2011, and $86.43 for FY 2012. Corresponding ANS prices are $66.93, $76.35, and $83.93 for the three years. We forecast a WTI-ANS differential of $2.50 per barrel, except in the case of FY 2010, which has some actual monthly differentials incorporated into the price. Beyond FY 2012, we project that oil prices will stay flat in real terms and increase in nominal terms by the projected 2.75% based on advice from Callan Associates on capital market inflation.

2. Lease Expenditures

The passage of PPT and now ACES requires the Department of Revenue to forecast lease expenditures, in addition to oil prices and production. Lease expenditures are defined in part as the upstream costs that are the direct costs of exploring for, developing, or producing oil or gas deposits. The production tax under PPT and now ACES allows the deduction of lease expenditures to arrive at a taxable base. The production tax system also allows a partial credit against the tax liability for certain lease expenditures known as qualified capital expenditures. For more information on how ACES production tax is calculated, see Figure 4-4.

Methodology

The Department of Revenue has received three annual filings of tax returns under a net profits production tax, under PPT in 2006, and under ACES in 2007 and 2008. Additionally, the department receives monthly information filings from oil and gas companies operating in the state that provide estimated monthly lease expenditures by property. Semi-annually, the department receives projections of lease expenditures by property for up to five years into the future. These reports have greatly enhanced the department's ability to prepare better revenue forecasts.

The department also uses several other means to forecast lease expenditures, including consulting other taxpayer-submitted information, such as plans of development, federal partnership returns, and other documentation. Production profiles are reviewed, as well as publicly available information on estimated costs to bring new fields online and projected start-up dates.

Forecast

In FY 2009, the following unaudited lease expenditures were reported on monthly information forms by companies producing or exploring for oil and/or gas on the North Slope: $2.1 billion in operating expenditures[4] and $2.2 billion in capital expenditures. For FY 2010, we forecast operating expenditures at $2 billion and capital expenditures at $2.5 billion. For FY 2011, we forecast operating expenditures at $2.1 billion and capital expenditures at $2.9 billion. The lower forecast for operating expenditures reflects lower costs of operation associated with lower oil prices, as well as efficiencies gained in companies streamlining their operations. Higher capital expenditure forecasts reflect continuing development in newer fields like Oooguruk, Nikaitchuq, and Point Thomson as well as projects aimed at enhanced oil recovery and the development of heavy oil.

3. Transportation Charges and Other Production Costs

Taxpayers subtract marine transportation costs, the Trans Alaska Pipeline System (TAPS) tariff, feeder pipeline tariffs and an adjustment for quality bank charges from the appropriate destination value. This netback calculation is shown in Figure 4-8 for FY 2009-2019.

Marine Transportation Costs

Crude oil delivered to Valdez through TAPS is shipped by tanker to refineries in Washington, California, Hawaii and the Kenai Peninsula. Most North Slope

[4] Includes the standard deduction for Prudhoe Bay and Kuparuk units per AS 43.55.165(j).

Figure 4-7. Basic Data Used for ANS Oil & Gas Production Taxes

	History FY 2009	Forecast FY 2010	Forecast FY 2011
State Production Tax Revenue from the North Slope			
Millions of Dollars	3,112.0	2,126.1	2,430.9
Key North Slope Assumptions			
Price of ANS WC in dollars per barrel	68.34	66.93	76.35
Transit Costs & Other in dollars per barrel	6.48	5.90	6.61
ANS Wellhead in dollars per barrel	61.86	61.03	69.74
Production in barrels per day	692,127	658,762	622,879
Royalty and federal barrels per day	93,664	85,564	80,255
Taxable barrels per day	598,463	573,198	542,624
Lease Expenditures in Millions of Dollars			
Operating Expenditures (Opex)	2,085	1,996	2,100
Capital Expenditures (Capex)	2,212	2,505	2,923
Total Expenditures	4,297	4,501	5,023
Implied North Slope Data			
Credits Used against Tax Liability in $millions	350.0	350.0	400.0
Credits for Potential Purchase in $millions	200.0	250.0	200.0
Lease Expenditures per barrel of oil produced			
Opex	8.3	8.3	9.2
Capex	8.8	10.4	12.9
Total Expenditures	17.0	18.7	22.1
Average Production Value per Barrel (Pre-Tax)	44.9	42.3	47.6
Production Tax Collected per Taxable Barrel	14.2	10.2	12.3

Notes

1 This table presents a grossly simplified snapshot of the production tax calculation on an average North Slope basis, and any use of this data should be viewed accordingly. Additionally, because production tax is calculated on a company basis, any simplification such as this distorts the actual value to companies. For example, a company's pre-tax production value per barrel could be significantly more or less than that shown in this table, depending on the "mix" of petroleum investments they have on the North Slope.

2 Lease expenditures for FY 2009 were prepared using unaudited company reported expenditure estimates.

3 Expenditure data for FY 2010 and FY 2011 are compiled from company submitted expenditure forecast estimates and other documentation as provided to the DOR.

4 CAPEX credits are spread out over two years as specified in the ACES production tax. In addition, the assumptions for the transitional credits and the $12 million credits for small Alaska producers are not included in the table.

5 Operating expenditures for Prudhoe Bay and Kuparuk units include the standard deduction provision per AS 43.55.165(j).

crude is delivered to Puget Sound, San Francisco and Los Angeles to meet the demand of Washington and California refineries. These voyages take about two weeks depending on loading and unloading time and potential delays.

The majority of crude oil delivered is by BP's "Alaska Class" and ConocoPhillips' "Endeavour Class" tankers, all of which are state-of-the-art double-hulled tankers. Double-hulled tankers have an inner hull containing the tanker's crude oil and a surrounding outer hull to offer additional protection against oil pollution. These tankers range from about 140 to 195 deadweight tons and can carry over a million barrels at full capacity.

Allowable costs for oil transported by a vessel not owned or effectively owned by the producer of the transported oil are the total costs under the charter or contract and other allowable costs borne by the producer.

For crude oil shipped on tankers that are owned or effectively not owned by the producer of the transported oil, which is typically the case, the bulk of allowable costs are the following:

- depreciation,
- return on investment,
- fuel for the vessel while in port and at sea,
- wages and benefits for the crew and captain,
- routine maintenance,
- tug and pilotage fees and
- drydocking costs.

We forecast a modest increase in tanker transportation costs per barrel that is considered necessary in order to maintain the integrity of the fleet.

Trans Alaska Pipeline System (TAPS) Tariff

The tariff model for TAPS is developed from the Federal Energy Regulatory Commission (FERC) Opinion 502 compliance filings. Opinion 502 requires the carriers to establish a uniform rate using the Order 154-B methodology of trended original cost (TOC). Treatment of dismantlement, removal and restoration (DR&R) expense is specified and the return on equity component is consistent with FERC's new policy for oil pipelines.

The forecasting model simulates what the tariff would be with a TOC cost-of-service model using information from Opinion 502 and projections of capital additions and operating costs. The cost-of-service components and the methodology are modeled to emulate the regulatory approach and outcome. We do not attempt to predict the outcome of pending litigation or estimate the level and timing of protested rates. Corrections between filed, charged and allowed rates are made through the refund process and are not part of the tariff forecast.

In the summer of 2009 both BP Pipelines Alaska (BPPA) and ExxonMobil filed new $4.01 interstate rates that were in effect subject to refund for short periods (BPPA July 1 to July 31st, and ExxonMobil May 1st to July 8th). The state protested those rates and therefore are subject to refund. ConocoPhillips also filed a $4.01 rate but then withdrew it. ExxonMobil, ConocoPhillips and BPPA then each filed a $4.10 rate, their current rates, that are subject to refund due to state protests. Unocal and Koch are still operating under their 2008 compliance rate tariffs.

A total revenue requirement (TRR) for operating and maintaining the pipeline while providing a reasonable rate of return for the investment in the pipeline. This TRR is then unitized by dividing by the total number of barrels of oil put through the pipeline.

To calculate the rate of return and depreciation components for the cost-of-service model, the beginning rate base is established and depreciated according to the FERC opinion, which extended the life of the line from 2011 to 2034. Carriers use 2034 as the end of the useful life of TAPS for setting depreciation rates, and FERC has rejected arguments to use a 2042 end-life for setting depreciation rates.

Additions to the rate base are made to account for future investments and capital expenditures for the Strategic Reconfiguration project.

Adjustments to the rate base use

- beginning rate base,
- trending,
- deferred return,
- new capital additions,
- depreciation,
- ending rate base.

The capital cost structure, cost of debt and real rate of return on equity are from the test period filing with FERC. Return on equity is consistent with the new FERC policy statement which allows Master Limited Partnerships to be included in rate of return proxy groups for determining rates for services. Property tax reflects the 2009 State Assessment Review Board (SARB) decision. Operating costs are function of the level of throughput and inflation. The deferred return and the Allowance for Funds Used During Construction (AFUDC) are amortized per the rate stipulated in the order. Other cost components are projected using relationships developed from historical data and statistical analysis.

Components of the total revenue requirement include

- operating expenses,
- property tax,
- depreciation expense,
- interest expense,
- return on equity,
- amortization of AFUDC,
- amortization of deferred return,
- income tax allowance,
- non-transportation revenues.

The TRR for the pipeline is the sum of the components listed above. A dollar per barrel tariff is calculated by dividing the TRR by deliveries. This makes the tariff sensitive to the inherent uncertainties of forecasting production as well as the uncertainties in forecasting the cost-of-service components.

TAPS is an old pipeline with about 75 percent of the TRR attributable to operating expenses. As the relatively fixed operating expenses are spread over fewer barrels, the tariff increases rapidly. From about $5.60 per barrel in 2019 the tariff increases to over $15.00 by the 2034 end-life for setting depreciation rates.

Feeder Pipeline Tariffs and Other Adjustments

These costs include feeder pipeline charges, other cost adjustments to account for the different qualities of oil entering the pipelines, and market-location differentials for intrastate sales.

Transportation costs for feeder pipelines are incurred to move the crude oils from the various North Slope production fields to Pump Station No. 1 of TAPS. There are six feeder pipelines on the North Slope.

The tariff forecast for each pipeline is based on a cost-of-service model tailored to match the particular settlement agreement of each feeder pipeline. The tariff, under a cost-of-service ratemaking approach, includes certain costs incurred by the pipeline owner and a return on the rate base. These costs may include operating expenses, DR&R allowance, depreciation and other costs. The return on the rate base is the product of the rate base and a rate of return. The rate base is the value of the carrier property minus depreciation and other adjustments. The rate of return is an equity-and-debt-weighted return agreed upon in the settlement agreement. To forecast each pipeline's tariff per barrel, projected total costs and the return on the rate base are summed and divided over the projected total number of barrels throughput.

Wellhead Price

The combination of ANS wellhead value and production volumes forms the basis for both state production taxes and royalties. The wellhead value is calculated by subtracting the relevant marine transportation and pipeline tariff costs (as well as adjustments for North Slope feeder pipelines and pipeline quality bank) from the appropriate destination value. Figure 4-8 reflects this calculation for FY 2009-2019.

4. Crude Oil Production Methodology

In a hydrocarbon rich basin such as the North Slope of Alaska, any discussion regarding production forecasting methodology should begin with identifying those resources that are not included in our estimates. We do not include any estimates for undiscovered oil, including future potential from the Alaska National Wildlife Refuge (ANWR),

Figure 4-8. Fall 2009 Forecast Assumptions, FY 2009 and Forecasted FY 2010-2019 (nominal $ per barrel)

the National Petroleum Reserve-Alaska (NPR-A), the federal Outer Continental Shelf (OCS) or onshore lands within the state of Alaska. We exclude from our estimates production from most of the known heavy or viscous oil deposits; in fact we consider none of the approximately 20 billion barrels from the giant Ugnu deposit. We exclude 96% of the viscous/heavy oil from the large West Sak field, projecting roughly 400 million barrels recovery out of roughly 10 billion barrels in place. We also exclude 87% of the heavy oil at Schrader Bluff, projecting roughly 285 million barrels recovery out of over 2 billion barrels in place. Additionally, none of the known oil discoveries in the federal OCS, in fields such as Sivilluq, Kuvlum and Sandpiper, potentially totaling hundreds of millions of barrels of recoverable oil, are considered in the forecast. None of the known discoveries outside of the small NPR-A accumulations in the vicinity of the Alpine field are included. Finally, we limit any production attributed to a promising new enhanced oil recovery technology termed 'low salinity waterflood' to a portion of the Endicott field, where results from an ongoing pilot project are expected by year end. Laboratory tests using Endicott rock show low salinity waterflood can increase ultimate recovery by 10-15%, or approximately 150 million barrels. Successful slope-wide implementation of low salinity waterflood could result in incremental recovery measured in the billions of barrels. We also exclude any enhanced oil recovery from CO_2 injection, a long proven technology that complements low salinity waterflood and provides necessary disposition of an otherwise unwanted byproduct of gas conditioning associated with major gas sales from the North Slope. Carbon dioxide injection, presumed to occur only with major gas sales, could add hundreds of millions barrels of incremental recovery from the North Slope.

We exclude the aforementioned resources, both known and unknown, in order to avoid speculation and to reduce the uncertainty typically associated with the commercialization, timing and magnitude of resource development. Accordingly, we believe that our current estimates of ultimate recovery from the North Slope are conservative.

For the production forecasting process, we engage a certified petroleum engineering consultant who performs a bottom-up evaluation on each of the individual fields that yields a forecast of three types of oil production: (1) oil that is currently being produced, (2) oil production that we expect to realize from projects currently under development and (3) oil production that we expect to realize from projects under evaluation. A detailed description of each type of production is provided later in this section. The engineering consultant employs decline curve analysis, augmented by generally accepted engineering principles, discussions with field operators and public and private information, in order to assemble our long range production forecast.

Assumptions

We continue to make adjustments to our production expectations from the North Slope in this fall 2009 forecast. As always, we examined reservoir performance, reviewed the uncertainty associated with the pace and scope of development of new fields and new projects within existing fields and re-evaluated planned and unplanned downtime for all fields. Our review indicates that, with minor exceptions, and notwithstanding planned and unplanned surface disruptions, all reservoirs are performing at or above expectations. From FY 2009 through FY 2050, we expect to produce almost 5.3 billion barrels of liquid hydrocarbons.

In the next ten years, we anticipate new developments on state and federal lands, both of which benefit the state. Most of the opportunities to add production from state lands are from expanded heavy/viscous oil development (West Sak, Orion, Polaris, Schrader Bluff fields), continued satellite development at Alpine (Fiord, Fiord-West, Nanuq, Qannik, Alpine West fields), and new developments at Oooguruk and Nikaitchuq. Production from the Oooguruk field began during the summer of 2008 and is progressing as expected. The Nikaitchuq field was sanctioned in early 2008 and development is underway, with first oil anticipated at year-end 2010. Although we forecast expanded development at West Sak, we have slowed the pace of heavy oil development there to allow the operator to fully evaluate technical and commercial issues associated with the development. For similar reasons, heavy oil development at Orion and Polaris has been slowed. For the Milne Point Unit, which includes both the Kuparuk pool and the heavier Schrader Bluff pool, we have slowed the pace of development to allow for reprioritized spending on infrastructure renewal projects. We have delayed the development of Point Thomson satellites one year in keeping with our 10-year development lead time, which may be conservative. The development of Point Thomson is based on the most recent Plan of Development submitted by the operator. Our review of Alpine satellite field development yielded expanded development at Alpine West, the addition of satellite Fiord West, increased expectations from Fiord and reduced expectations from Nanuq. New satellite Qannik came on production during the summer of 2008 and is under continued development.

Our forecast includes production from state lands as well as from federal lands. From a revenue standpoint, the State of Alaska benefits in at least five ways, albeit to a lesser degree, from new developments on federal lands: (1) shared royalties from federal OCS fields such as Liberty; (2) production taxes on federal oil produced onshore within Alaska (NPR-A); (3) increased property tax on any infrastructure on state lands required to produce and transport federal oil; (4) corporate income taxes; and (5) lower pipeline transportation tariffs, which increase wellhead prices. In addition, any oil processed through the Endicott facility (Liberty field) may increase net profits payments to the state. Federal oil produced within the State of Alaska can return up to 75% of the revenue generated by oil produced on state lands. Federal oil produced from non-state lands provides a revenue benefit limited to decreased transportation tariffs and increased property taxes.

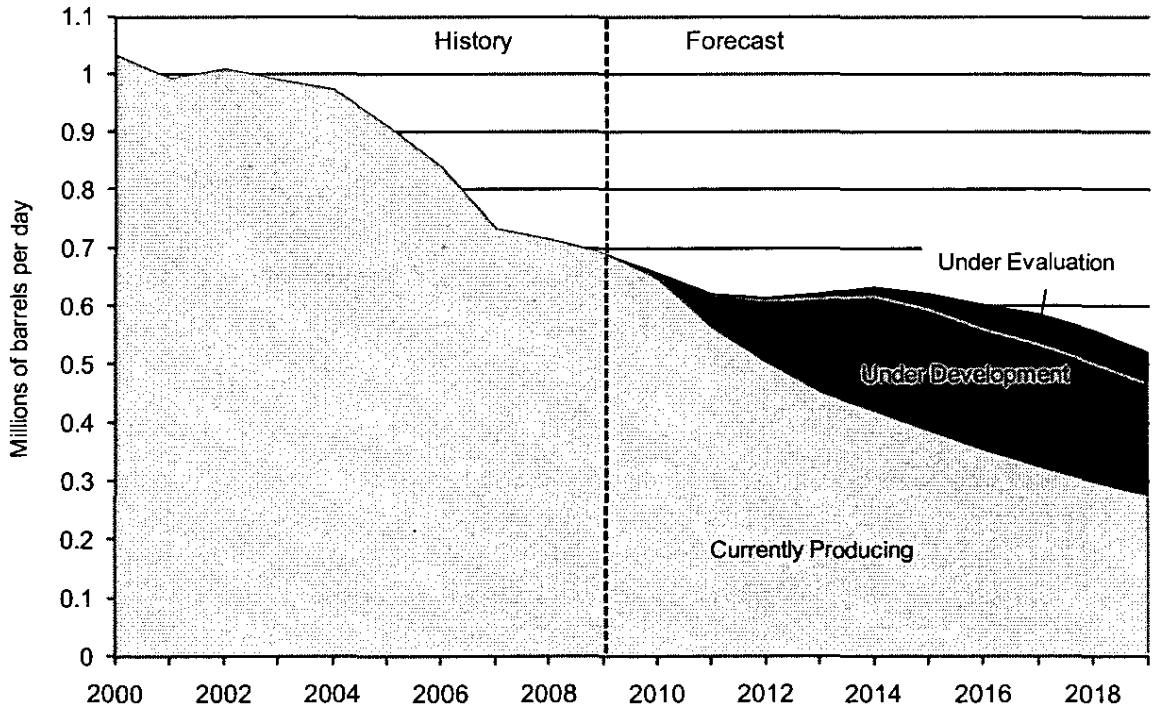
For the fall forecast we have reevaluated the scope and pace of development of projects within the federal NPR-A to better reflect the timing of competing projects at Alpine and to account for further delineation drilling and subsequent evaluation this winter. The end result is a slight delay in development at known accumulations Spark and Moose's Tooth. Liberty development is underway, with long lead items such as building the world's largest land drilling rig setting the pace. The rate profile we use for Liberty is adapted from the plan of development filed with the Minerals Management Service and should be considered a base case scenario with upside potential.

Although we anticipate new developments from state and federal lands over the next 10 years to contribute to overall production and partially mitigate base decline, we continue to make near-term adjustments to reflect ongoing infrastructure renewal projects. Much of the new production we forecast relies upon the continued use of aging wells, flowlines, production facilities and pipelines, as does at least 500,000 barrels per day of existing production.

Crude Oil Production Forecast

Our three categories of North Slope production are illustrated in Figures 4-9 and 4-10. We do this so that the reader will have an understanding of the uncertainty associated with the production forecast. We forecast production of only those fields that have already been discovered and at a minimum are being evaluated for development.

Figure 4-9. Alaska North Slope Production, FY 2000-2009 and Forecasted FY 2010-2019



Currently Producing

Production characterized as "currently producing" includes baseline production and presumes a continued level of expenditure sufficient to promote safe, environmentally sound operations. Such expenditures include the following: well diagnostic and remedial work, data acquisition and rate-enhancing expenditures such as perforating, acid stimulation, well workovers, fracture treatments, artificial lift optimization and production profile optimization. This category of production also presumes continued gas and water injection for pressure support. Based on historical forecasting performance, we assign a 98% confidence level for the current fiscal year and a 95% confidence level for the second fiscal year forward.

Currently Under Development

Production characterized as "currently under development" is based on new projects either currently funded or awaiting project sanctioning in the very near future. It includes projects that may be in the design/construction phase, as well as development drilling and enhanced oil recovery (miscible or immiscible injection) projects, currently funded or underway, but not included in the "currently producing" category. It also includes incremental oil expected from the long-term gas cap water injection project at Prudhoe Bay and Endicott which is planned for 2012. Examples of production currently under development include the Fiord, Nanuq, Alpine West, Fiord West and Qannik satellites at Alpine, the Borealis, Orion and Polaris satellites at Prudhoe Bay, development drilling at Tarn, Liberty, Ooguruk, and Nikaitchuq.

The timing of these projects are often influenced by budget cycles, working interest owner approval, available human resources, equipment procurement, and rig availability. Our subjective confidence for this category of production is 85% to 90%.

Currently Under Evaluation

Production characterized as "currently under evaluation" includes technically viable projects currently in the "pencil sharpening" stage where engineering, cost, risk and reward are all being actively evaluated. These projects are all currently unfunded by the operators but have a high chance of being brought to fruition. Examples include heavy oil development outside of the core or near core area at West Sak, longer term Orion drilling, half of all new Schrader Bluff drilling, long-term production from Point Thomson and associated satellites, and pools within the NPR-A.

Figure 4-10. Alaska North Slope Production, FY 2009 and Forecasted FY 2010-2019[1] (million barrels per day)

Fiscal Year	Currently Producing	Under Development	Under Evaluation	Total ANS
2009	0.692	0.000	0.000	0.692
2010	0.646	0.012	0.000	0.659
2011	0.562	0.060	0.000	0.623
2012	0.504	0.109	0.003	0.617
2013	0.452	0.165	0.007	0.624
2014	0.420	0.201	0.014	0.635
2015	0.385	0.213	0.025	0.623
2016	0.353	0.211	0.041	0.604
2017	0.324	0.214	0.051	0.588
2018	0.298	0.207	0.055	0.561
2019	0.276	0.196	0.052	0.524

[1] Some of the oil forecasted in the Under Development and Under Evaluation categories are from new projects in fields currently producing.

Confidence levels vary for this category of production. Production from the known NPR-A fields that are undergoing further delineation and likely will use the existing Alpine facility might have confidence levels approaching that of "production under development." High cost, scope challenged developments such as Point Thomson probably deserve lower confidence, not because of the lack of reserves, but because of the uncertainty in the timing of first production.

As Figure 4-11 shows, by FY 2014 more than one-third of our projected oil production will come from projects requiring significant new investment.

Undiscovered Potential

The long-term revenue outlook published in this book is associated with our forecast of production from oilfields that have already been discovered. However, it is important to discuss the potential for future production from resources currently undiscovered.

In April 2009, the U.S. Department of Energy released an addendum to their 2007 report entitled *Alaska North Slope Oil and Gas: A Promising Future or an Area in Decline?*[5] which assesses the potential for Alaska to remain a major producer of oil and gas under different development scenarios. The report summarizes near-term potential (2005-2015) and long-term potential (2015-2050) mostly under a major natural gas sales scenario. According to the report, the North Slope is a relatively young petroleum province from an exploration perspective, and may provide oil, and increasingly more important natural gas, for years to come.

The DOE report evaluates geologic and commercial viability of future oil and gas production from five areas or provinces: (1) the central Arctic area between the Colville and Canning Rivers (and adjacent state waters); (2) the 1002 area of ANWR; (3) NPR-A; (4) the Beaufort Sea OCS and (5) the Chukchi Sea OCS. Under the most optimistic scenario, DOE reported mean technically recoverable oil resources of 47.8 billion barrels and mean technically recoverable gas resources of 194.9 trillion cubic feet (TCF) from these five areas. Figure 4-12 shows the breakout by exploration area.

These figures represent the amount of hydrocarbon resources that are technically recoverable with today's technology assuming that all five areas are open to development; however, they say nothing about the economic recoverability. DOE also estimates economically recoverable reserves from these five areas using a range of oil and gas prices ($25 to $60 per barrel and $3.13 to $7.50 per thousand cubic feet of gas), and an 8:1 oil-to-gas price ratio. Using the high oil price case of $60 per barrel, total economically recoverable oil for the 2005-2050 time period is estimated at 31 billion barrels of oil and 135 TCF of gas. Figure 4-13 details the economic recoverable resources by area.

Figure 4-11. New Oil as a Percentage of Total Oil (million barrels per day)

Fiscal Year	Total New Oil	ANS Total	Percent New Oil
2010	0.012	0.659	1.9%
2011	0.061	0.623	9.7%
2012	0.113	0.617	18.3%
2013	0.172	0.624	27.6%

Petroleum Property Tax

An annual tax is levied each year on the full and true value of property taxable under AS 43.56. The tax on oil and gas property is the only statewide property tax. The valuation procedure for three distinct classes of property—exploration, production and pipeline transportation—is described here.

Exploration Property

Value is based on the estimated price that the property would bring in an open market under prevailing market conditions in a sale between a willing seller and a willing buyer, both conversant with the property and with prevailing general price levels.

The state petroleum property assessor gathers raw data for determining market value by reviewing the details of equipment sales in Alaska when available and reviewing trade journals. This data is then applied to the taxable property, taking into account age, capacity and physical and functional obsolescence.

Production Property

Value is determined on the basis of replacement cost new less depreciation, based on the economic life of the proven reserves.

The factor used in the depreciation calculation for the facility typically equals the years of remaining life divided by the total life.

Pipeline Transportation Property

The full and true value of taxable pipeline property is determined with due regard to the economic value of the property based on the estimated life of the proven reserves of gas or unrefined oil that will be transported by the pipeline. We rely upon several standard appraisal techniques to value Alaska pipelines. When market rents are available, we analyze the income method under which the value is the net present worth of all future income streams of the pipeline. We primarily rely on replacement cost new less depreciation, based on the economic life of the reserves that feed the pipeline. This is especially useful when rents are constrained by the regulatory process or when market rents cannot be obtained for use in the income method.

Figure 4-14 illustrates the property tax distribution between local communities and the state for FY 2009. The property value is assessed by the state. A local tax is levied on the state's assessed value for oil and gas property within a city or borough, and is subject to the local property tax limitations established in AS 29.45.080 and AS 29.45.100. The state's mill rate is effectively 20 mills minus the local rate.

Petroleum Corporate Income Tax

Alaska levies two types of corporate income tax. This section focuses on the oil and gas corporate income tax. Forecasts and discussion of the corporate income tax as applied to corporations other than oil and gas corporations can be found in the Other Revenue section of this forecast.

[1] Amounts shown here do not include the supplemental property tax roll and as a result may not exactly match data presented elsewhere in this forecast.

[2] Includes Matanuska-Susitna Borough, Cordova and Whittier.

An oil and gas corporation's Alaska income tax liability depends on the relative size of its Alaska and worldwide activities and the corporation's total worldwide net earnings. The corporation's Alaska taxable income is derived by apportioning its worldwide taxable income to Alaska based on the average of three factors as they pertain to the corporation's Alaska operations: (1) tariffs and sales, (2) oil and gas production and (3) oil and gas property.

Historically, oil and gas corporate income tax revenue has varied greatly along with oil prices and oil industry profits. In FY 1982, revenue from this tax was $668.9 million. As recent as FY 1994, the oil and gas corporate income tax generated a mere $17.8 million. For the past several years, revenues from the oil and gas corporate income tax have benefited from high oil prices and oil industry profits, generating $492.2 million in FY 2009. This represents a decrease from the $605.8 million collected in FY 2008.

Our forecast of oil and gas corporate income tax collections uses an economic model based on the statistical relationships between historical tax payments, crude oil prices, North Slope oil production and refinery margins. We then adjust for refunds and carryforwards which cause actual collections to differ from estimated payments.

We forecast oil and gas corporate income tax collections of $470 million in FY 2010. We expect moderate increases in nominal oil prices to result in corresponding increases in oil and gas corporate income tax revenue.

Restricted Oil Revenue

According to Article IX, Section 15 of the Alaska Constitution, a minimum of 25% of all mineral lease rentals, royalties, royalty sale proceeds, federal mineral revenue sharing payments and bonuses received by the state must be deposited into the Alaska Permanent Fund. With the repeal of HB 11[1] approximately 30% of oil and gas royalties goes into the principal of the Alaska Permanent Fund and 0.5% goes into the Public School Trust Fund. In addition, AS 37.14.110 requires a contribution of 0.5% of all royalties and bonuses to the Public School Trust Fund. Settlements with, or judgments against, the oil industry involving tax and royalty disputes must be deposited in the Constitutional Budget Reserve Fund (CBRF).

The state is entitled to 50% of all bonuses, rents and royalties from oil development activity in the federal NPR-A, all of which flows into the NPR-A Special Revenue Fund. Revenue in the fund is available for appropriation in the form of grants to municipalities that demonstrate present or future impact from NPR-A oil development. Of the revenue not appropriated to the municipalities, 25% goes to the Permanent Fund, 0.5% goes to the Public School Trust Fund, and the rest may be appropriated to the Power Cost Equalization and Rural Electric Capitalization Fund. Any remaining revenue after these appropriations lapses into the General Fund.

Figure 4-15 reflects restricted oil and gas revenue.

General Discussion

This section includes income from sources other than oil, state investments and federal receipts including non-oil taxes, charges for services, fines and forfeitures, licenses and permits, rents and royalties and other revenue sources. These revenue sources are divided between unrestricted and restricted revenues; the amounts of each are reflected in Figures 5-2 through 5-8 throughout this chapter. Restricted revenue includes money deposited in funds other than the General Fund, as well as receipts that are restricted by statute or that the legislature customarily appropriates for a particular purpose or program, such as sharing of fish tax revenue with municipalities.

Taxes

Alcoholic Beverages Tax

Alcoholic beverage taxes are collected primarily from wholesalers and distributors of alcoholic beverages sold in Alaska. The per-gallon tax rates on alcoholic beverages are $1.07 for beer, $2.50 for wine and $12.80 for liquor. The tax on beer produced by qualifying small brewers is $0.35 per gallon. Revenue is deposited into the General Fund. Fifty percent of the revenue is deposited into a subfund of the General Fund, the Alcohol and Other Drug Abuse Treatment and Prevention Fund, and is treated as restricted in this forecast.

Over the past 10 years, alcohol consumption has grown at an average annual rate of 0.6% for beer, 4.2% for wine, and 3.3% for liquor. We forecast that consumption will continue to grow at these historical average rates.

Charitable Gaming

Under Alaska law, municipalities and qualified nonprofit organizations may conduct certain charitable gaming activities. The purpose of these activities is to derive public benefit in the form of money for the charities and revenues for the state. The Department of Revenue collects permit and license fees, a 1% net proceeds fee and a 3% pull-tab tax. We forecast that revenues from charitable gaming activity will decrease slightly in FY 2010 and remain flat in FY 2011.

Commercial Passenger Vessel Taxes

In August 2006, Alaska voters approved an initiative that imposed new taxes and fees associated with commercial passenger vessels:

- The Cruise Ship Passenger Fee is a tax of $46 on each passenger traveling on a commercial passenger vessel with 250 or more berths. Revenues are deposited into a subfund of the General Fund, the Commercial Vessel Passenger Tax Account. Five dollars of the tax is distributed to each of the first five ports of call, and an additional 25% of the tax is designated for other local governments impacted by the cruise ship industry via the Regional Cruise Ship Impact Fund. The entire passenger fee is considered restricted for purposes of this forecast. Based on company announcements, we forecast passenger counts, and therefore tax collections, to decline for both FY 2010 and FY 2011. There may be some growth in FY 2012.
- The Ocean Ranger Fee is an additional per-berth fee of $4 to operate the Ocean Ranger program, which provides for independent observers of engineering, sanitation and health practices. This fee is considered restricted and is included in the Charges for Services section of this forecast.
- The Large Passenger Vessel Gambling Tax is a tax of 33% on the adjusted gross income from gaming or gambling activities aboard large passenger vessels in the state. Revenue goes into a subfund the General Fund and is considered restricted for purposes of this forecast. We expect revenue to decline to $5.7 million in FY 2010 from $6.3 million in FY 2009.
- The Alaska corporate income tax now applies to large commercial passenger vessels. The effects of this provision are included in our forecast of corporate income taxes.
- There are new penalties for false reporting, violating environmental regulations and failing to make proper disclosures on promotions and shore side activity sales. Any revenue from these provisions is included in the Fines and Forfeitures section of this forecast.

Corporate Income Tax

Alaska levies two types of corporate income tax: one that applies to oil and gas corporations and one that applies to corporations other than oil and gas corporations. Forecasts and discussion of the corporate income tax as applied to oil and gas corporations can be found in the Oil Revenue section of this forecast.

Alaska levies the corporate income tax on net income of corporations that do business in the state and derive income from sources within Alaska. Corporate tax rates are graduated from 1% to 9.4% in $10,000 increments of Alaska taxable income; the maximum rate of 9.4% applies to taxable income over $90,000. S-Corporations and LLCs that file federally as partnerships are generally exempt from corporate income tax. Corporations compute their tax liability based on federal taxable income with Alaska adjustments. Corporations other than oil and gas corporations apportion their income to Alaska by using a three-factor apportionment based on sales, property and payroll. Alaska taxable income is determined by applying the apportionment factor to the corporation's modified federal taxable income.

We produce our forecast of non-petroleum corporate income tax collections by using two economic models: one for the largest sector in terms of collections (mining) and one for all other sectors.

The mining sector model is based on the statistical relationship between historical tax payments, corporate profits and zinc prices. Zinc prices are used because zinc accounts for over half of Alaska minerals production. The model for all sectors other than mining is based on the statistical relationship between historical tax payments, corporate profits and crude oil prices. Crude oil prices are used because the price of oil influences company profitability in many economic sectors in Alaska. After forecasting estimated payments, we then adjust for refunds, carry-forwards and other payments that cause actual collections to differ from estimated payments.

Over the past few years, income tax revenue from corporations other than oil and gas corporations has been above the historical average. In FY 2009, revenue was $120.9 million, the fourth consecutive year of collection over $100 million. Looking forward, collections will be lower because of the economic downturn as well as lower prices for Alaska's oil and minerals. The first half of FY 2010 appears weak and collections are expected to total $86.6 million for the year. In FY 2011 we expect that collections will be $89 million – about $32 million less than FY 2009.

Electric Cooperative and Telephone Cooperative Taxes

The electric cooperative tax is based on kilowatt hours furnished by qualified electric cooperatives recognized under Title 10 of the Alaska Statutes. The telephone cooperative tax is levied on gross revenue of qualified telephone cooperatives under Title 10. Revenue from cooperatives located in municipalities is treated as restricted revenue in this forecast because it is shared 100% with the municipalities. The small amount of revenue collected from cooperatives outside municipalities is retained by the state. We forecast that revenues from the electric and telephone cooperative taxes will grow according to the overall rate of inflation.

Estate Tax

The estate tax is levied on the transfer of an estate upon death. The Alaska estate tax is tied to the federal tax, with the amount of the state tax equaling the maximum state credit allowed on the estate's federal return. All revenue derived from estate taxes is deposited in the General Fund.

As a result of changes to the federal estate tax, the Alaska estate tax was phased out completely beginning January 1, 2005. The federal estate tax changes that caused the state tax to phase out are currently scheduled to sunset after December 31, 2010. Assuming the tax changes sunset as scheduled, Alaska will begin to receive revenue from the estate tax again in FY 2012.

Fisheries Business Tax

The fisheries business tax is levied on businesses that process fisheries resources in or export fisheries resources from Alaska. Although the tax usually is levied on the act of processing, the tax is often referred to as a "raw fish tax" because it is based on the value of the raw fishery resource. Tax rates vary from 1% to 5%, depending on whether a fishery resource is classified as "established" or "developing," and whether it was processed by a shore-based or floating processor. Revenue from the tax is deposited in the General Fund. Fifty percent of the revenue (before credits) is shared to qualified municipalities and is treated as restricted in this forecast.

We forecast fisheries business tax revenues based on estimated taxable values of the major fisheries in the state and historical effective tax rates. Fisheries business tax revenue retained by the state is reduced by a forecast of tax credits, including Salmon Product Development credits, which apply only to the state portion of the tax.

Fishery Resource Landing Tax

The fishery resource landing tax is levied on fishery resources processed outside of and first landed in Alaska, and is based on the unprocessed statewide average price of the resource. The tax is collected primarily from factory trawlers and floating processors that process fishery resources outside the state's 3-mile limit and bring their products into Alaska for shipment. The tax rates vary from 1% to 3%, based on whether the resource is classified as "established" or "developing." All revenue derived from the tax is deposited in the General Fund. Fifty percent of the revenue (before credits) is shared to qualified municipalities, and is treated as restricted in this forecast.

We forecast fisheries resource landing tax revenues based on estimated taxable values of the major fisheries in the state and historical effective tax rates. Fisheries resource landing tax revenue retained by the state is reduced by a forecast of tax credits which apply only to the state's share of the tax.

Insurance Premium Tax

Insurance companies in Alaska pay an insurance premium tax instead of corporate income tax, sales or other excise taxes. Revenue is deposited into the General Fund, and for most types of insurance, the tax is treated as unrestricted revenue. Insurance premium taxes on worker's compensation insurance are deposited into a subfund of the General Fund, the Workers Safety and Compensation Fund, and are reflected as restricted in this forecast. The restricted component also includes service fees paid into the Workers Safety and Compensation Fund by employers who are uninsured or self-insured.

We forecast insurance premium tax revenues based on estimates provided by the Department of Commerce, Community and Economic Development's Division of Insurance, which administers the insurance premium tax, and the Department of Labor and Workforce Development's Workers Compensation Division, which collects worker's compensation service fees.

Mining License Tax

The mining license tax is a tax ranging from 0% to 7% on the net income of all mining operations in the state. Except for sand and gravel operations, new mining operations are exempt from the mining license tax for a period of 3½ years after production begins.

Our forecast is produced using a bottom-up approach that estimates tax payments for each of the major mines in the state based on expected minerals prices and production.

Mining license tax revenues were $15.5 million in FY 2009, a dramatic decrease from $54.4 million in FY 2008. However, prices for many minerals have climbed recently. In particular, zinc prices have stabilized and are likely to increase as the global demand returns.

(Zinc prices are particularly important because zinc accounts for more than half of Alaska's non-petroleum mineral production).

Based on expectations of higher profits at Alaska's mines, we forecast mining license tax revenues will increase from what was collected in FY 2009. We foresee an increase to over $29 million in FY 2010 followed by collections of more than $28 million by FY 2011.

Motor Fuel Tax

The motor fuel tax is imposed on all motor fuel sold, transferred or used within Alaska. Per gallon rates are 8 cents for highway use, 5 cents for marine fuel, 4.7 cents for aviation gasoline, 3.2 cents for jet fuel, and 8 cents or 2 cents for gasohol, depending on the season, location and EPA mandate. Motor fuel taxes are collected primarily from wholesalers and distributors licensed as qualified dealers. Various uses of fuel are exempt from tax, including fuel used for heating or flights to or from a foreign country. Although the statutes state that the legislature may appropriate the revenue for specific purposes, including highway construction and maintenance and water and harbor facilities, all motor fuel tax receipts are paid into the general fund and are treated as unrestricted for purposes of this forecast. Sixty percent of the taxes attributed to aviation fuel sales at municipal airports are shared with the respective municipalities, and are treated as restricted for the purposes of this forecast.

A temporary suspension of the motor fuel tax took effect September 1, 2008 and ended August 31, 2009. Therefore, FY 2009 included only two months of motor fuel tax collections and FY 2010 will include ten months of collections.

We forecast motor fuel tax revenue based on Energy Information Agency projections for U.S. motor fuel consumption growth, with adjustments for the temporary tax suspension.

Tire Fee

The tire fee has two components. The first component is a tax of $2.50 on all new tires sold in Alaska for motor vehicles intended for highway use. The second component is an additional $5 fee per tire on all new tires with heavy studs sold in Alaska, and a $5 fee per tire on the installation of heavy studs on a previously un-studded tire.

We forecast tire fee revenue based on the expected number of vehicle registrations in the state.

Seafood Assessments and Taxes

The Department of Revenue administers five different programs that raise money through seafood assessments and taxes. The rates for these assessments and taxes are determined by a vote of the appropriate association within the seafood industry, by members of the Alaska Seafood Marketing Institute, or by the Department of Revenue.

The five programs are the following:

- The seafood marketing assessment, which applies to all seafood products made or first landed in Alaska and all unprocessed products exported from Alaska.
- The dive fishery management assessment, which is levied on the value of fishery resources taken using dive gear in a designated management area.
- The regional seafood development tax, which is levied on the value of fishery resources in a designated management area.
- The salmon enhancement tax, which is levied on salmon sold or exported from designated aquaculture regions.
- The cost recovery fisheries assessment, a new program authorized in 2006. This program allows hatcheries to establish a common property fishery and recoup costs through an assessment on fishery resources taken in the terminal harvest area. So far, no hatcheries have elected to use this program as a funding source.

Although revenue received under these assessments is deposited in the General Fund, funds are treated as restricted revenue in this forecast because they are set aside for the legislature to appropriate for the benefit of the seafood industry, either in marketing or in management and development of the industry.

We forecast revenue for seafood assessments and taxes based on the estimated taxable value of the relevant seafood income.

Tobacco Tax

The tobacco tax is levied on cigarettes and tobacco products sold, imported or transferred into Alaska. Tobacco taxes are collected primarily from licensed wholesalers and distributors. There are two components to the tobacco tax: the cigarette tax and the other tobacco products tax.

The tax rate on cigarettes has been $2.00 per pack since July 1, 2007. Of the cigarette tax, $0.76 per pack is deposited into the School Fund, and is considered restricted revenue. All cigarette and tobacco products license fees are also deposited in the School Fund. The remainder of the cigarette tax revenue is deposited into the General Fund. Of the General Fund portion, 8.9% is deposited into a subfund of the General Fund, the Tobacco Use Education and Cessation Fund, and is treated as restricted in this forecast.

We forecast cigarette tax revenue based on projected average consumption declines of 4% annually.

The tax rate on other tobacco products, such as cigars and chewing tobacco, is 75% of the wholesale price and is deposited entirely in the General Fund.

We forecast that moderate increases in wholesale prices and consumption will result in other tobacco products tax revenue continuing to increase at the 10-year average rate of over 7% annually.

Our forecast for both cigarettes and other tobacco products includes an adjustment for the demand response to increased federal excise taxes on tobacco that took effect April 1, 2009.

Vehicle Rental Tax

The vehicle rental tax is a 10% tax on most passenger vehicle rentals of 90 days or less, and a 3% tax on rentals of recreational vehicles for 90 days or less.

[1] In addition to the worker's compensation insurance premiums for the Insurance Premium Tax, this amount also includes services fees from employers who are self-insured.

The vehicle rental tax provisions became effective January 1, 2004.

We forecast that vehicle rental tax revenue will remain essentially flat in FY 2010 due to the economic downturn then increase with the overall rate of inflation.

Charges for Services

The charges for services category includes fees and other program charges for state services. Revenues reported in this category do not include all charges for state services—just those that do not fit into other categories in this report.

Most of these receipts are considered restricted revenue because they are returned to the program where they were generated. The only unrestricted revenues listed in this category come from charges that do not have program receipt designations, or are not otherwise segregated and appropriated back to a program. Many of the charges for services are small amounts that we have grouped into the broad categories "General Government," "Natural Resources" and "Other." Our forecast for these categories is based on fiscal year-to-date collections and historical averages. The largest categories of charges for services are listed separately and are discussed below.

Marine Highway Fund

The Alaska Marine Highway Fund is a subfund of the General Fund and receives revenue from state ferry system operations. The legislature has discretion over how the revenue is allocated. Because revenue is customarily appropriated for Alaska Marine Highway operations, they are considered restricted for this forecast. We forecast Marine Highway Fund receipts based on revenue expectations in the Alaska Marine Highway System business plan.

Commercial Passenger Vessel Fees

Commercial passenger vessel fees paid into the Environmental Compliance Fund come from two sources: ocean ranger fees and environmental compliance fees. All fees paid into the fund are considered restricted for purposes of this forecast. We forecast receipts based on passenger count estimates that are consistent with our Commercial Passenger Vessel tax forecast.

The Ocean Ranger Fee is a per-berth fee of $4 that applies to commercial passenger vessels with 250 or more berths. The fee is levied to support the Ocean Ranger Program, which provides for independent observers of engineering, sanitation and health practices aboard the vessels. This fee was imposed as part of an initiative passed by voters in August 2006, and is covered in more detail in the Taxes section of this chapter.

Environmental compliance fees are levied on commercial passenger vessels with over 50 berths. Fees range from $75 to $3,750 per vessel based on the number of berths, and funds are used to support environmental compliance programs.

Program Receipts

Under AS 37.05.142 – 37.05.146, receipts from authorized state programs are accounted for separately and appropriated to administer the source program, implement laws related to the program, or cover costs associated with collecting the receipts. Some programs with program receipt authority are not included in our Charges for Services category because they are reported elsewhere in this forecast or because they do not generate revenue available for general appropriation.

We forecast program receipt revenues based on discussions with the Governor's Office of Management and Budget and analysis of the most recent budget expectations for these categories.

Program receipts listed in this section are

- Receipt supported services, which includes state services such as Pioneers homes and occupational licensing that are funded by program receipts. Some seafood assessments are included in this category.
- Statutorily designated program receipts, which include money received from sources other than the state or federal government and restricted by the terms of a gift, grant, bequest or contract.
- Regulatory Commission of Alaska (RCA) receipts, which are regulatory cost charges and user fees levied on utilities and pipelines to fund costs of regulation.
- Test fisheries receipts, generated by the Department of Fish and Game from selling fish caught during testing the commercial viability of fisheries.
- Timber sale receipts, which are used to fund the timber disposal program of the Department of Natural Resources.
- Oil and Gas Conservation Commission receipts, which are fees and charges for regulation of oil and gas wells and pipelines.
- Business license fees collected by the Department of Commerce, Community and Economic Development.

Other	1.8	1.5	1.5
Total Restricted	**39.1**	**36.1**	**34.9**
Grand Total	**49.6**	**45.0**	**43.8**

Fines and Forfeitures

Fines and forfeitures include civil and criminal fines and forfeitures and money received by the state from the settlement of civil lawsuits. The largest single source of receipts under this category is the multi-state tobacco settlement. Other sources are forecast based on fiscal year-to-date collections and historical averages.

Tobacco Settlement

The tobacco Master Settlement Agreement was signed by 46 states (including Alaska) in November 1998 and dictates annual payments to each of the states. All tobacco settlement revenue is considered restricted for purposes of this forecast. Eighty percent of the settlement revenue is earmarked for the Northern Tobacco Securitization Corporation for payments on bonds that were sold based on the future revenue stream. The remaining 20% of the revenue is deposited into the Tobacco Use Education and Cessation Fund, a subfund of the General Fund.

Tobacco settlement payments are based on a complex formula that takes into account several factors including declines in cigarette consumption, inflation and certain adjustments for litigation expenses and market share losses related to the settlement. We forecast that cigarette consumption will decline at an annual rate of 4% and inflation will be 2.75%.

Licenses and Permits

Licenses and permits represent government revenue derived from charges for participating in activities regulated by the state. The majority of the receipts under this category are from motor vehicle registration and fishing and hunting license fees. Alcoholic beverage license fees are also forecast separately. There are several other small license and permit fees which are summarized in the Other Fees category.

Alcoholic Beverage Licenses

Alcoholic beverage licenses are required to manufacture or sell alcoholic beverages in Alaska. Licenses are issued by the Alcoholic Beverage Control Board and revenue is deposited into the General Fund. All of the revenue from biennial license fees collected within municipalities, excluding annual wholesale fees and biennial wholesale license fees, is shared with the municipalities and treated as restricted for purposes of this forecast. We forecast little change in revenue because alcoholic beverage license issuance is limited based on population.

Fishing and Hunting License Fees

Fishing and hunting licenses are issued by the Alaska Department of Fish and Game for participation in various fishing, hunting and related activities. The majority of these fees are appropriated to a special revenue fund called the Fish and Game Fund. Money in the fund may only be spent for fish and game management purposes. We forecast fishing and hunting license fee revenue based on expectations of the Alaska Department of Fish and Game.

Motor Vehicle Registration Fees

Motor vehicle registration fees are collected by the Division of Motor Vehicles within the Department of Administration. Most are considered unrestricted license and permit revenue; however, some registration fees are considered restricted receipt supported services and are reflected in the Charges for Services section of this forecast. We forecast motor vehicle registration fee revenue based on expectations of the Division of Motor Vehicles.

Rents and Royalties

Rents and royalties from sources other than oil and gas fall into two categories: mining rents and royalties and other non-petroleum rents and royalties.

All rents and royalties from oil and gas are reported in the Oil Revenue section of this forecast.

Mining Rents and Royalites

As with oil and gas production, the state earns revenue from other mineral production that occurs on state lands leased for exploration and development. As the landowner, the state earns revenue from leases as (1) upfront bonuses, (2) annual rent charges and (3) as a retained royalty interest in minerals production.

Until October 2008, only 25% of the rents and royalties were deposited in the Permanent Fund and 0.5% to the School Fund. With the repeal of House Bill 11 last year, the amount rose to 50% for leases issued after December 1979. The amound deposited into the School Fund remains unchanged. See the Executive Summary section for a more complete discussion of HB 11.

We forecast mining rents and royalties based on expected changes in minerals prices as well as mine-specific forecasts for large mines on state land.

Other Non-Petroleum Rents and Royalties

The state receives revenue from the leasing, rental and sale of state land. While all of these revenues are deposited into the General Fund, some are deposited in subfunds of the General Fund and are treated as restricted for purposes of this forecast. This category includes revenues from leasing, rental and sale of state land that do not fall into the oil and gas or mining royalties categories. We forecast other non-petroleum rents and royalties based on analysis of fiscal year-to-date and historical collections.

Other

This category includes unclaimed property transfers, transfers to the state from component organizations and miscellaneous revenues. Miscellaneous revenues, which include contributions to the state and other revenues, are projected based on analysis of fiscal year-to-date and historical collections. Unclaimed property and transfers from component organizations are discussed below.

Unclaimed Property

Alaska's Unclaimed Property statutes require businesses and corporations to report unclaimed intangible property to the state. Property is reportable if an owner cannot be located, the owner has not cashed a property check, or an account has not had any owner-initiated activity for at least three years. Unclaimed property may include checking accounts, customer deposits and over-payments, gift certificates, unpaid wages, and security related accounts. The state holds the property in trust until the owner or his or her legal heir claims it. Each year the unclaimed property trust account is evaluated and the excess of the working trust balance is transferred to the General Fund.

A $3.8 million transfer was processed during FY 2009. Transfers in FY 2010 and following years are expected to be $4.0 million per year. We forecast unclaimed property revenue based on estimates prepared by the Unclaimed Property Group of the Department of Revenue.

Total Restricted	**7.4**	**9.0**	**9.6**
Grand Total	**23.0**	**22.6**	**23.8**

Transfers from Component Organizations

Each year, the state receives money in the form of transfers from component organizations, such as the Alaska Housing Finance Corporation, frequently in the form of dividends. Component organizations are covered in more detail in the Public Corporations & the University of Alaska section of this forecast. Some component organizations do not make transfers to the state, and as a result not all component organizations are listed here.

Actual transfers for FY 2009 are reflected in draft tables from the Comprehensive Annual Financial Report. Forecasts for FY 2010 and FY 2011 transfers are based on discussions with the Governor's Office of Management and Budget and analysis of the most recent budget expectations for these categories.

Transfers from component organizations presented under this category may differ from those presented in the Public Corporations & University of Alaska section for two reasons: (1) amounts in this section account differently for funds paid over time for multi-year capital projects; and (2) amounts in this section include funds that are transferred to the state and then appropriated to the component unit for operations.

General Discussion

The federal government continues to play a significant role in Alaska's economy. In Federal Fiscal Year (FFY) 2008 the federal government spent $9.4 billion in total direct expenditures in Alaska.[1] The majority of that spending came from the activities of various federal agencies, including defense spending, procurement contracts, retirement and disability payments, wages, loans and grants. Another $1.3 billion was spent on other federal assistance, such as loan guarantees and insurance.

Alaska has historically ranked first in per capita federal spending, however, increased federal expenditures to Louisiana and Mississippi after Hurricane Katrina and Rita in FFY 2006 dropped Alaska to third place. In FFY 2007, Alaska moved up, ranking second only to Virginia. Maryland surpassed Alaska in per capita spending in FFY 2008 to put Alaska in third place out of all states again (see Figure 6-3). Historically, federal spending in Alaska has grown faster than total U.S. spending. However, for FFY 2007, federal direct expenditures in Alaska increased by only 1.4% from FFY 2006, while total U.S. federal expenditures increased by 4.4%. Federal spending grew at a slower rate in Alaska again in FFY 2008 with an increase of 0.5% in direct federal expenditures while overall federal spending increased 9.2%. In FFY 2005, the latest year for which data is available, Alaska received $1.84 for every dollar paid in federal taxes,.[2]

Among federal agencies, the Department of Defense spends the most in Alaska, followed by the Department of Health and Human Services. Together, these two departments account for 53% of all federal direct spending in the state. Not surprisingly, a large portion of federal money flows into Alaska through salaries of federal employees. However, 29% of all federal direct spending comes in the form of grants, mostly to state and municipal governments, and to nonprofit organizations.

In FY 2009, the State of Alaska received and spent nearly $2.1 billion in federal funds. This federal funding is generally restricted to specific uses such as road improvements, Medicaid payments and aid to schools. Potential changes to federal law, differing federal and state fiscal years and varying numbers of eligible Alaskans in certain

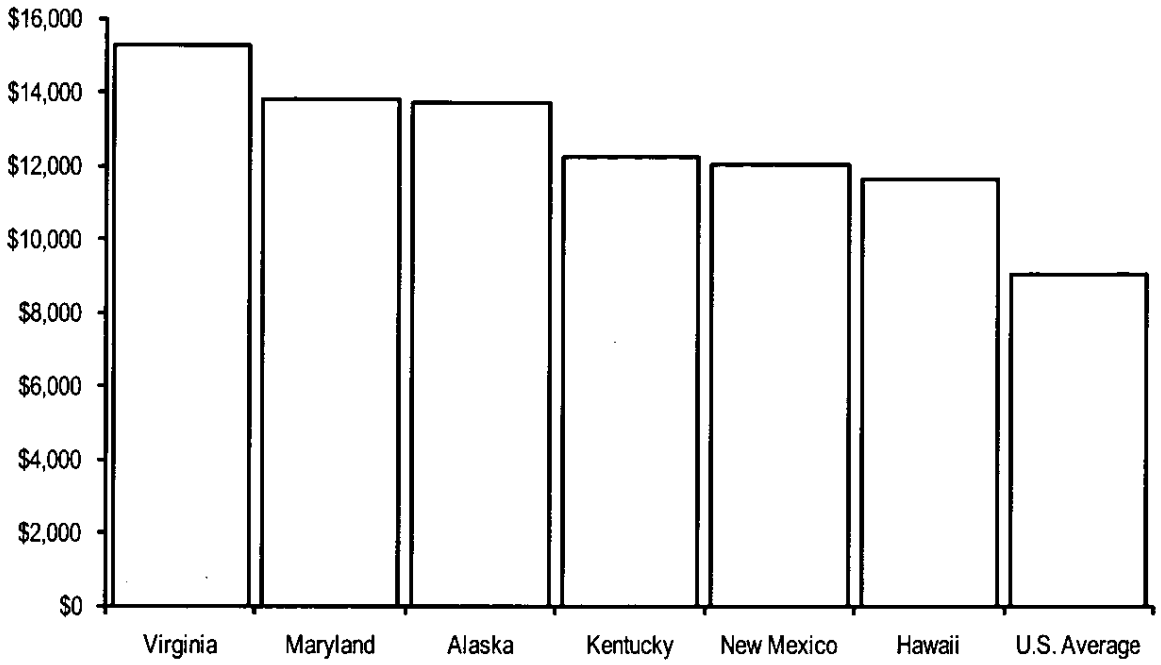
[2] Tax Foundation's "Federal Spending in Each State per Dollar of Federal Taxes," www.taxfoundation.org/research/show/266.html.

Figure 6-3. FFY 2008 Federal Spending per Capita, Top Six States



programs make forecasting federal revenue difficult. The estimates we present for FY 2010 and FY 2011 are from the Office of Management and Budget and are based on state agency projections of potential federal revenues.

In FY 2010, the budgeted amount of federal funds is $2.9 billion. In FY 2009, the American Recovery and Reinvestment Act of 2009 played a critical part in the overall level of federal funding in the state budget. Approximately $846.8 million or 24% of all federal funds, came as a result of ARRA. In FY 2010, the overall role of ARRA was significantly reduced, with a total of $174.6 million which represents 6% of all federal funds. Most federal funding requires state matching money. The budgeted state match and the top three budgeted categories for federal spending in Alaska for FY 2009 and FY 2010 are included in Figure 6-5.

It is important to note that the state routinely budgets for federal funds in excess of expected allotments. The legislature authorizes state agencies to receive and spend the maximum that federally funded programs might receive, while the actual appropriation amounts are generally less. In addition, some of the funding granted for multi-year capital projects is received and spent in years following the one in which the money is procured. All federal funds, whether spent in the operating or capital budget, are restricted by legislative appropriation to specific uses.

1266

Figure 6-4. Total Federal Spending in Alaska, FFY 2008

By Distributing Agency

	$ Million	Percent
Defense	3,628.6	39%

[1] Governmental Accounting Standards Board (GASB) principles require the recognition of changes in the value of investments as income or losses at the end of each trading day, whether the investment is actually sold or not.

Investment Forecast

To forecast investment revenue for the current fiscal year—FY 2010—we combine actual performance through September 30, 2009, with a projection for the remainder of the year. Forecasts and estimated capital market median returns are based on information supplied by the state's investment consultant, Callan Associates Inc., and their 5-year capital market estimated returns.

Unrestricted Investment Revenue

Unrestricted investment revenue is earned on the General Fund non-segregated investments managed by the Treasury Division. Interest Paid by Others is interest received by the state other than on its investments. Oil and gas royalty interest, production tax interest, and corporate income tax interest are included in the Oil Revenue section of this forecast.

Restricted Investment Revenue

Restricted investment revenue consists of earnings from governmental funds, the Constitutional Budget Reserve Fund (CBRF), other Treasury-managed governmental funds and the Alaska Permanent Fund.

Figure 7-3. Callan Associates Inc.'s 5-year Capital Market Estimated Returns, as of September 30, 2009

Asset Class	Benchmark for Asset Class	%/Year Median Expected Return	%/Year Expected Risk[1]
Equities			
U.S. Broad	Callan Associates Inc. (CAI) Broad	9.48%	16.40%
U.S. Large Cap	Standard and Poors (S&P) 500	9.22%	15.25%
U.S. Small Cap	Russell 2000 Index	10.04%	22.60%

Conservative Aggregate	90% Lehman Aggregate / 10% Lehman Treasury Index	5.01%	5.05%
Inflation	CPI-U	2.75%	1.40%

[1] The continued volatility in the world's financial markets makes focus on the "Expected Risk" column (far right in the table above) particularly appropriate. The numbers in the Expected Risk column represent a statistical measure called standard deviation, which is the most commonly used measure of risk in the investment world. The standard deviation is a measure of the dispersion of data around its mean. The analyst can use this measure of dispersion to provide a range of possible outcomes at any desired level of confidence. In the data in this table, the level of confidence is set at 67% or one standard deviation. A higher level of confidence would require a broader range. For example, Callan estimates an average annual return for the domestic broad market fixed-income asset class of 5.24% and an expected risk for that asset class of 5.0%. That means Callan is forecasting that two-thirds of the time the annual return for the domestic broad fixed-income asset class will fall between 0.24% (the median expected average annual return of 5.24% minus the expected risk of 5.0%) and 10.24% (the median expected return plus the expected risk). A prediction at 95% confidence would run from -4.76% to 15.24%, too broad a range to be useful. The probability that a particular asset class or portfolio will have a negative return over a given period of time is another way to reflect the riskiness of that asset class or portfolio.
