Subject: Health Reform Briefing- Hosted by Sen. Davis

Hi Lynda,

Jenny again. The Primary Care Association is hosting a dinner on Tuesday, Jan 27th at 6pm at Zen Restaurant and we would like to extend an invitation to Sen. Davis. The health reform briefing keynote speaker will be at the dinner as well as Commissioner Bill Hogan. Please let me know if Sen. Davis is interested in joining us.

Thanks for your time,

Jenny Lounsbury

Enrique Martinez-Vidal
Vice President, Academy Health
Washington, D.C.

Keynote Speaker *January, 28, 2008*
What You Need to Know: Health Reform for Alaska

Enrique Martinez-Vidal is a Vice President at AcademyHealth and the Director of the Robert Wood Johnson Foundation's State Coverage Initiatives (SCI) program which works with state policy leaders to develop strategies to improve insurance coverage and foster broad health care reform. Enrique joined AcademyHealth in February 2005 as the deputy director of SCI.

He is currently the project director for the State Quality Improvement Institute, a project of the Commonwealth Fund to assist states that are ready to make substantial commitments to quality improvement and to facilitate development of concrete action plans for further progress. He also has worked on various projects under a contract with the federal Agency for Healthcare Research and Quality (AHRQ) including the oversight of a state-level environmental scan of quality initiatives to help determine how a partnership could be developed between AHRQ and states regarding quality improvement; and a pilot project that presented AHRQ's State Snapshots to four states in an effort to create an ongoing dialogue about how these reports can be used for state-level quality improvement.

Previously Mr. Martinez-Vidal was the deputy director for performance and benefits at the Maryland Health Care Commission, an independent state agency. There he was responsible for the oversight of Maryland's small group insurance market reforms; the annual evaluation of Maryland's mandated health insurance benefits; the collection and public dissemination of quality and performance information for hospitals, nursing homes and health plans; providing primary assistance on all legislative issues; and working on numerous other projects related to the affordability of health care, quality improvement, and patient safety.

Mr. Martinez-Vidal was formerly a policy analyst with the Maryland Department of Legislative Services for five years..During that time he staffed the House Economic Matters Committee and was involved with a number of health-care related issues. He has a B.A. in political science and international studies from Dickinson College and a master's degree in public policy from Georgetown University.

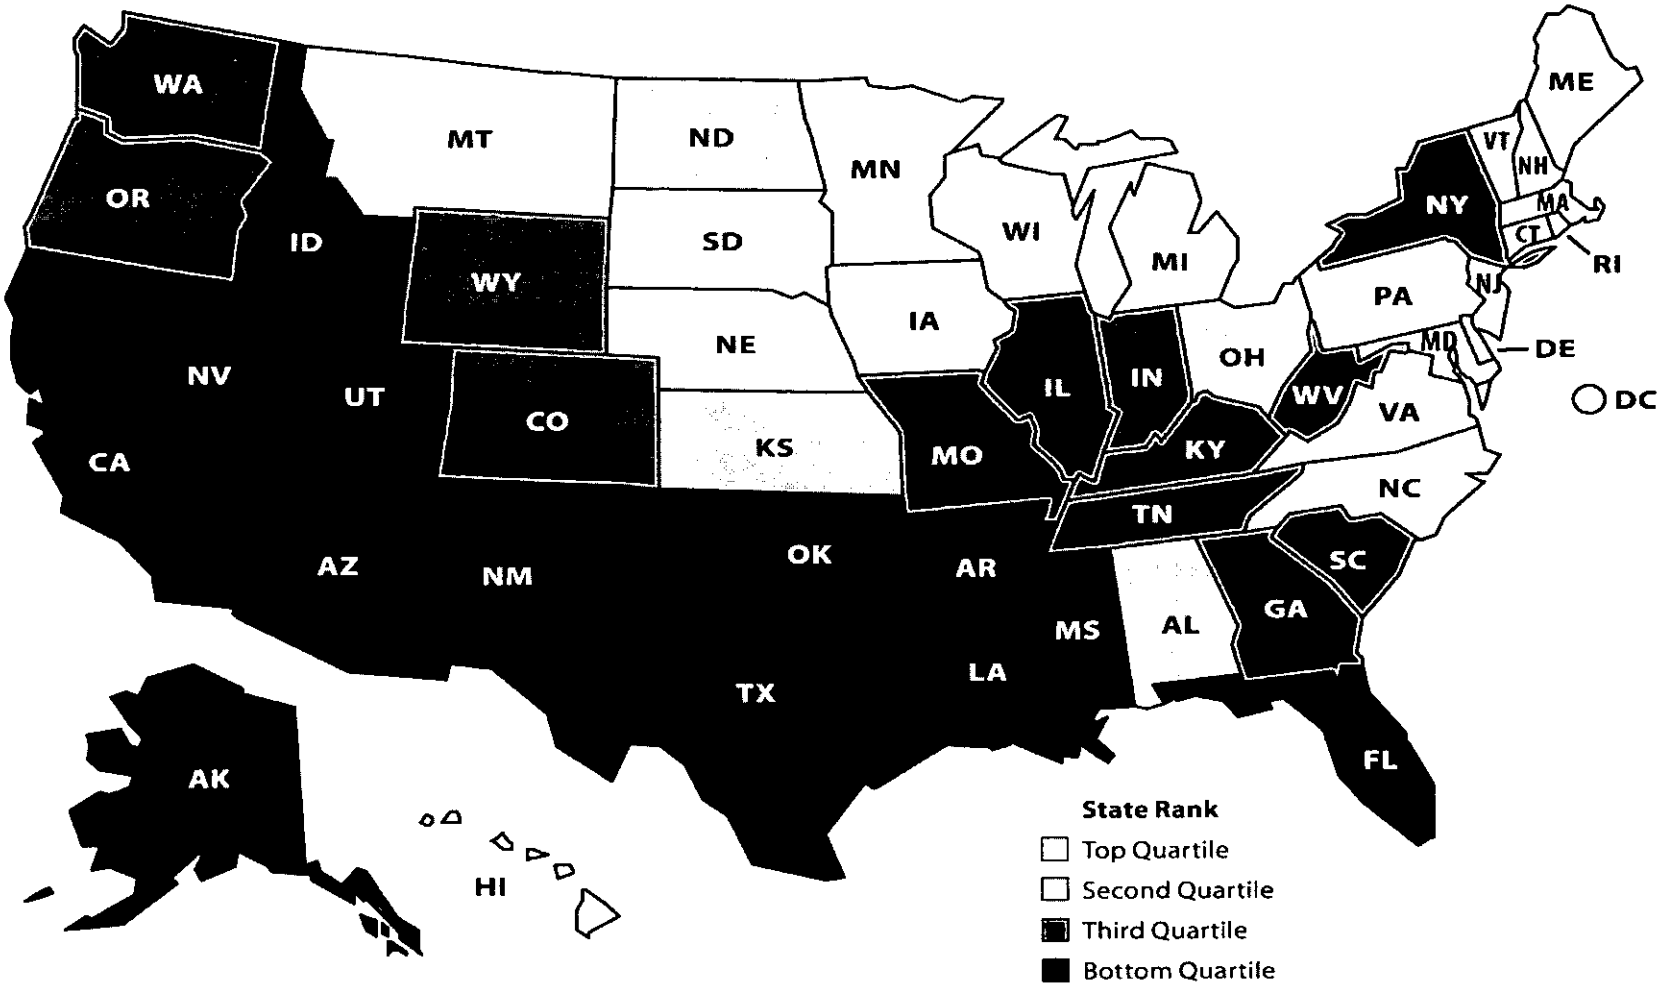
State Ranking on Quality Dimension



SOURCE: Commonwealth Fund State Scorecard on Health System Performance, 2007

2166

Drivers of State Health Reform Efforts

- Uninsured still high
- Employer-sponsored insurance down
- Costs/premiums increasingly unaffordable – Indiv; Families; Govt
- Coverage needed for effective and efficient health care system
- Lack of national consensus – future?
- Greater political will at state level

Key Policy and Design Issues

- Different Populations Require Different Solutions
- Subsidies and Financing: Who will pay? Who will benefit?
- Should Health Insurance Coverage Be Required?
- What is Affordable Coverage?
- What is the Most Appropriate Benefit Design?
- Do Insurance Markets Need to be Reformed/Reorganized?
- Best Mechanisms for Cost Containment/Systems Improvement

"One size fits all" approach won't work

- Those with few resources to bring to private insurance market
  - Ceiling = eligibility for public programs
  - Children: 100-300% FPL
  - SCHIP Parents/Childless Adults: Vary from 12-275% FPL
- Those with some resources but cannot bear the full cost of insurance premiums
  - Subsidies and other methods to reduce premiums
- Those who have sufficient incomes to participate in market on their own
  - Encourage voluntary participation or mandate coverage

No Free Solutions: Who Will Pay? Who Will Benefit?

- Shared responsibility – Who will help cover the costs?
  - Individuals; Employers; Federal government; State government; Health plans/insurers; Providers
- Enough money in current system?
  - If yes, then – Redistribution (Who will pay? Who will get paid?)
  - If not, then need new forms of revenue: Sin taxes; Provider taxes; Payroll taxes; Lease the lottery; Slots revenues; Gross Receipts Tax

Should Health Insurance Coverage Be Required?

- Unenforceable? Impingement on individual freedom?

- Does your state have money for subsidies to help lower-income uninsured (or an exemption process)?

What is Affordable Coverage?

- Related to overall benefit design
- Related to subsidies being considered
- Could be related to individual mandate
- General agreement that levels of both premium and out-of-pocket costs should somehow be related to income and ability to pay

Benefit Design

- Services included/excluded; cost-sharing; structure of access to providers
- Not just cost of coverage but value of the benefit plan – what set of services are purchased for specific amount of money
- Before – limit benefits; raise cost-sharing; limit networks (value issue)
- Levers within benefit design:
  - reduce premiums
  - encourage efficient/appropriate consumer behavior
  - change carrier and provider behavior
- Evidence-based benefit design? MN
- Consumer-driven health plans? IN
- First-dollar benefits? TN
- Direct consumer behavior change? RI

Don't Forget the Delivery System

- Prevention/primary care/wellness
- Chronic care management and coordination
- Public health initiatives
- Value-based purchasing/payment reforms
- Medical error reduction
- Health-acquired infection reduction/patient safety
- Price and quality transparency
- Heath information technology and exchange
- Administrative and regulatory efficiencies

What is a Medical Home?

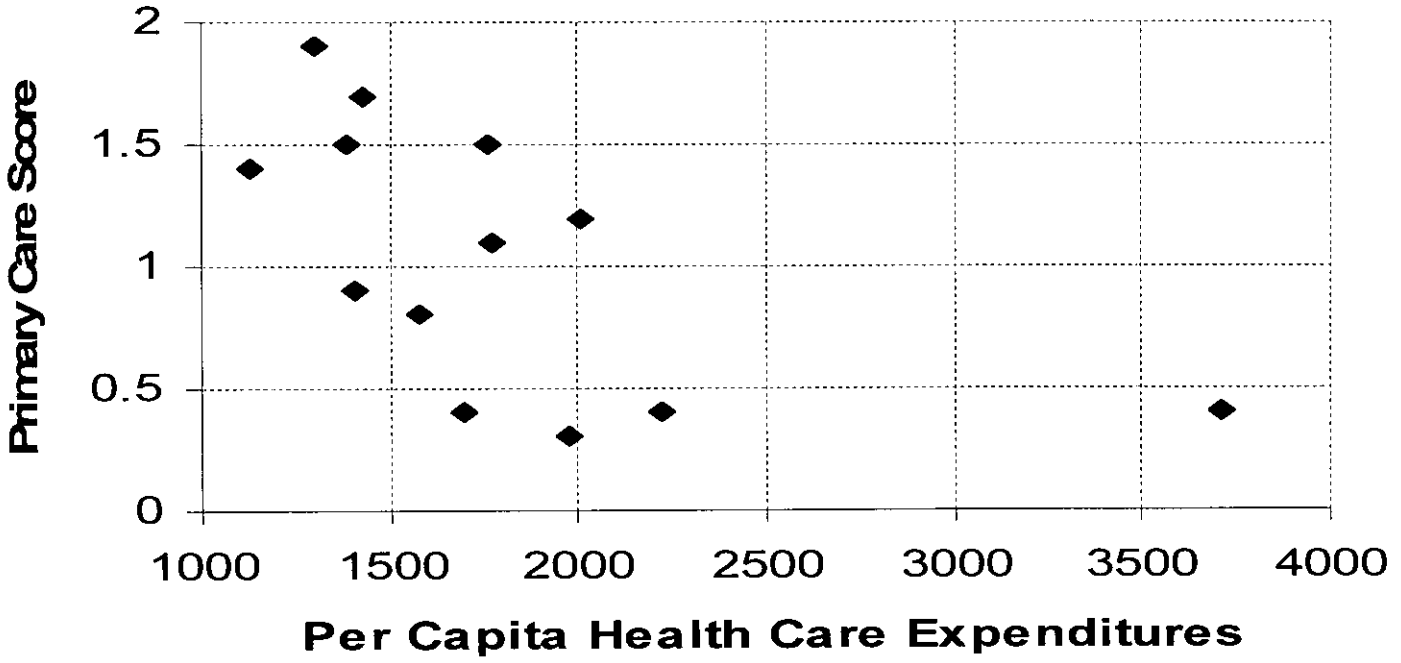
The Joint Principles of the Patient-Centered Medical Home, developed by the leading physician groups

- **Personal Relationship**
- **Team Approach**
- **Comprehensive**
- **Coordination**
- **Quality and Safety**
- **Expanded Access**
- **Payment for Added Value**

Other "Medical Home" Definitions

- NCQA – Has a 3-level standard being used or adopted by several states
  - Based on the Joint Principles
  - Utilized in Vermont, Rhode Island Medicaid and elsewhere
- Health Disparities Collaboratives, the "Wagner Model" or chronic disease management programs
  - A system change model that emphasizes:
    - Using best practice standards of care for specific chronic diseases
    - Use of quantitative process and outcome measures
    - Team approach to care
    - Patient education and self-management
  - Implemented in Community Health Centers around the country
  - Implemented in Washington, Rhode Island, Pennsylvania, and elsewhere
- Primary Care Case Management (PCCM)

High Access to Primary Care Correlates with Low Health Care Spending



Source: Based on The Commonwealth Fund 2006 International Health Policy Survey of Primary Care Physicians in Seven Countries

State Medical Home Programs

- 31 states have implemented programs to advance Medical Homes in Medicaid
- States working across payers on Medical Homes Programs include Colorado, Louisiana, Maine, New Hampshire, Pennsylvania, Rhode Island, and Vermont
- States with model Medical Homes programs include Vermont, North Carolina, Rhode Island and Pennsylvania

Comprehensive Efforts

Enacted

Maine ('03)

Massachusetts ('06)

Vermont ('06)

Significant Proposals

California – failed

Kansas – some pieces

New Mexico – very small pieces

Pennsylvania – in process

Strategies for Comprehensive Reform

	Maine	Massachusetts	Vermont
Individual Mandate	*No*	Yes	*No* *Will consider if coverage targets not met*
Purchasing Mechanism	DirigoChoice	Health Insurance Connector	Catamount Health
Subsidies for Low-Income	Up to 300% FPL	Up to 300% FPL	Up to 300% FPL
Public Program Expansion	Parents <200% FPL Childless Adults <125% FPL	Adults <100% FPL Children <300% FPL	*Builds upon previous expansions* *Children <300%* *Parents <185%* *Childless Adults <150% FPL*
Employer Requirements	*Voluntary* *Participating employers must pay 60% of premium*	$295/employee fee for non-offering. Must offer §125 Plan	$365/FTE fee for non-offering

Massachusetts Pillars of the Reform

- Employer Responsibilities
  - Section 125 Plan Requirement
  - Offer Coverage or Be Assessed
- Personal Responsibility/Individual Mandate
- Expansion of Publicly-subsidized Programs
- Major Changes to Insurance Market
  - Merged Small Group and Individual Markets
  - Raising age of dependents – up to 25
  - Connector

Current State of the Commonwealth

- More than 439,000 newly-insured between June 2006 and March 31, 2008
- 191,000 more in private coverage (no public $$) – more than 40% of all newly covered have no subsidies
- Employer-sponsored insurance remains predominant source of coverage (82% of non-elderly): no crowd-out
- Non-group premiums are down over 40% and membership has grown over 50%
- Approximately 1-2% of the MA population or 60,000 persons may be exempted from the mandate

Vermont - Blueprint Components

Public Policy	▪Blueprint legislation and funding ▪Executive Director at Governor's Office level ▪Integration with Public Health Disease Prevention Programs
Community	▪Community Grants ▪Environmental and Policy Strategies, Smart Planning ▪211 as statewide resource tool
Self-Management	▪Healthier Living Workshop—All conditions - Over 40 statewide; 500+ enrolled - +60% reduction in MD and ED visits post at one year ▪Patient portal planned
Information Systems	▪ Statewide RHIO, Health IT Plan ▪ Web-based chronic care information systems ▪ EMR
Physician Practices	▪Consensus treatment standards—7+ Diseases ▪Clinical Microsystems support in practices –training, coaching, peer support ▪75% participation in 6 Communities (HSAs)□200 practices
Health Systems	▪Required coordination across all payers in 3 pilots in 2008 ▪Contract with National Payment Reform Consultant

California Proposed Reforms

- **Shared Responsibility**
  - Individual mandate
  - Guaranteed issue
  - Financing: Government, Hospitals, Employers, Individuals
- **Prevention/Health Promotion/Wellness**
  - Tied to preventive health practices
  - Reducing medical errors (e-prescribing)
  - Obesity prevention
  - Tobacco cessation efforts
  - Health Care Cost and Quality Commission
- **Affordability & Cost Containment**
  - Subsidies for low-income adults and children
  - Section 125 plans/HSAs
  - Emphasis on HIT
  - Increase Medi-Cal reimbursement rates ('hidden tax')

Kansas – Summary of 2008 Legislative Action

Transforming Medical Care	Improving Public Health	Expanding Affordable Insurance
• Transparency project: Health care cost and quality (Kansas Health Online) • Health literacy • Medical home definition • Medicaid provider reimbursement • Community Health Record (HIE) • Insurance Form Standardization	→ Increase tobacco user fee → Statewide smoking ban → Partner with community organizations → Education Commissioner → Collect fitness data in schools → Promote healthy foods in schools → Promote fitness in schools → Wellness for small businesses → Healthier food for state employees → Dental care for pregnant women → Tobacco cessation in Medicaid (for pregnant women only) → Expand cancer screening	→ Aggressive outreach & enrollment of eligible children (target pop: 20,000) → Premium Assistance for low income adults without children (target population: 39,000) → Small Business Initiatives (target population: 15,000 young adults and 12,000 employees of small businesses)

Green – Passed with Funding, if Needed; Yellow – Passed with No Funding; Red – Did Not Pass

Health Solutions New Mexico Plan

What was Proposed:

- Insurance Reforms
- Phased-In Health Coverage Participation Reqmt
- Electronic Claims and Records
- Health Coverage Authority
- Evaluation

What Happened:

- Funding for eligible but not enrolled: $22.5 m.
- Treat developmentally disabled children: $10 m.

Pennsylvania Proposed Reforms:

Prescription for Pennsylvania

Rx for Affordability	Rx for Access	Rx for Quality
Cover All Pennsylvanians (now Access to Basic Care)	Health Care Workforce	**Hospital-Acquired Infections**
Coverage for College Students and Young Adults	**Removing Practice Barriers – Scope of Practice**	Quality Outcomes
Community Benefit Requirements	Cost-Effective Sites	Pay for Performance
Uniform Admission Criteria	Co-Occurring Disorders	Chronic Care – Exec Order
Fair Billing and Collection Practices	Governor may consider individual mandate if number of uninsured does not decline over next few years	Health Disparities
Capital Expenditures		Child and Adult Wellness
Small Group Insurance Reform		Long Term Living
Health Information Exchange – Exec Order		End of Life and Palliative Care

State Coverage Initiatives
Robert Wood Johnson Foundation

Source: Presentation by Ann S. Torregrossa, Deputy Director & Director of Policy GOHCR. Alliance for Health Reform Briefing, October 26, 2007

Substantial Reforms

Enacted

Indiana - 2007
Iowa – 2008
Maryland - 2007
Minnesota - 2008
New Jersey - 2008
Washington - 2007
Wisconsin - 2007

Indiana: Healthy Indiana Plan (HB 1678)

- Increases tobacco taxes by $0.44 per pack; $0.33 will be used for:
  - Covering adults up to 200% FPL + Immunization programs

- The remaining $0.11 will be distributed as follows:
  - Three cents will increase physician/dentist Medicaid reimbursement rates;
  - Three cents will provide a tax credit to employers that establish Section 125 plans - for employers not offering a fully insured health plan that satisfies Section 125 of the IRS code, the state will provide the lesser of $50 per employee or $2,500 for 2 years if the employer establishes Section 125 plan; and
  - The remaining 5 cents will be used to increase tobacco prevention and cessation programs and for other health programs.

- **A key aspect of HIP is that it utilizes the HSA model combined with comprehensive insurance coverage above the deductible. Individuals will annually receive $500 of pre-deductible, free preventive care and have a $1,100 deductible.**

Iowa Reforms

- Coverage for children up to 300% of FPL (with a sliding scale premium between 200-300% FPL) + one-year continuous eligibility
- Directs an advisory group to develop a plan for full health coverage in five years
- A Medicaid buy-in option for those with disabilities
- A Medical Homes Initiative
- Healthy Communities Initiative, Quality improvement council, transparency, electronic health plan to be developed

Maryland Working Families and Small Business Health Coverage Act

- Provides subsidies to small employers (2-9 employees) and employees of small employers if the employer:
  - has not offered a health benefit plan within the prior 12 months;
  - meets certain low-wage requirements to be established through regulation;
  - establishes a Section 125 payroll deduction plan to allow for pre-tax premium contributions; and
  - agrees to offer a wellness benefit that is designed to prevent disease, reduce poor clinical outcomes, and promote health behaviors and lifestyle choices.
- Expands Medicaid eligibility up to 116% FPL for parents/caretaker relatives.
- Phase-in over four years of Medicaid eligibility up to 116% FPL for childless adults—enrollment may be capped and benefits may be limited based on available funding.
- Financing: combination of general funds, hospital uncompensated care savings, a one-time surplus from high risk pool, and federal funds.

Minnesota – Coverage and Cost

- **Childless Adults to 250%**
- **Section 125 Plans**
- **"Essential Benefit Set"**
- **Easier enrollment and more seamless transitions**
- **Directs development of proposal to promote access to affordable employer-sponsored health care through tax credits and deductions**

Children	275% FPL
Pregnant Women	275% FPL
Childless Adults	175% FPL
SSI Disabled	100% FPL

Minnesota Payment Reform and Quality Improvement

- Establishes a single statewide transparent system for quality-based incentive payments
  - Public reporting on risk-adjusted quality measures
- Establishes new payment system based on "baskets" of care and then allows consumers to compare prices across providers
- Establishes standards for state certification of health care homes (to receive care coordination payments)
- Administrative Efficiency
  - Requirement that all EHRs [Electronic Health Records] be consistent with federal interoperability standards and that all prescriptions are ordered electronically by 2011
  - Uniform methods of claims process
- Public health programs to reduce obesity and cut tobacco use

New Jersey: Phases of Reform

Phase I

- Familycare Buy-in
  - Passed Into Law – 12/1/07
- "Kids First" Mandate
- Familycare Expansion
- Market Reform
  - Signed by Governor 7/8/8
  - Implementation 9/1/08

Phase II

- Creation of Garden State AllCare
- Individual Mandate
- Sliding Scale Subsidies
- Section 125 Mandate
- Charity care/related hospital subsidies redirected over time to premium assistance
- Collaborative Care System Creation/Medical Homes

Washington State Reforms

- Provides access to coverage for all children by 2010 (SB 5093)
- Intensive education/outreach/admin simplification to enroll the currently eligible
- Expands SCHIP to children up to 300% FPL (now 250%) in 2009
- Children above 300% FPL – full cost buy-in
- Creates Washington Health Insurance Partnership (Connector) (SB 1569)
  - Targets small employers w/low-income workers
  - Sliding scale premium subsidies for those <200% FPL
- Provides high quality, affordable health care based on recommendations of the Blue Ribbon Commission in Health Care Costs and Access (SB 5930)
  - Reimbursement Changes
  - Chronic Care Projects/Medical Homes
  - Washington State Quality Forum
  - Health Information Technology
  - Appropriate Care Settings
  - Wellness Programs

Wisconsin Reforms

- BadgerCare Plus: Merge Family Medicaid, BadgerCare (SCHIP - covers children and parents to 185 percent FPL), and Healthy Start:
  - Cover all children (families above 200% FPL can purchase basic health coverage for their children for $10 to $68.53 per child per month, depending on income)
  - Provide coverage/enhanced benefits for pregnant women up to 300% FPL
  - Simplify the program
  - Promote prevention and healthy behaviors (member agreements; incentives for MCOs; incentives for individuals; health literacy/education)
  - Financed through increase by $1 per pack cigarette tax

- New Policy Goals (2008+)
  - Ensure 98% of Wisconsin's population has access to health insurance by expanding to childless adults through **BadgerConnect**, a new online gateway to health care
  - One-stop shop for health care access for low-income families
  - Increase business participation and health insurance portability
  - Use evidence-based medicine to design benefits and control costs

Wisconsin's BadgerCare Plus: Streamlining and Outreach

- Simplified & standardized eligibility rules
  - For example, the state reduced the number of earned income disregards and increased the income limit
  - The goal was to make the program easy to understand for both enrollees and staff

- Invested in outreach & focused on the community level
  - 42 agencies within the state received $25,000 to build the infrastructure needed to help people apply for the program
  - Statewide ad campaign—called the children's coverage expansion an "all kids" program

Wisconsin's BadgerCare Plus: Streamlining and Outreach

- Made online application process easier & more accessible
  - ➢Supported and promoted online applications
  - ➢Simplified the online application and trained community workers around the state to use it
  - ➢During the first few months of the program, online applications increased from about 25 to 50 percent of total applications

- Invested in more staff
  - ➢Increased size of staff statewide, especially in Milwaukee
  - ➢Developed a new processing center in Milwaukee to approve applications and send cards to enrollees within one week

Substantial Reforms

States with Recommendations for 2009 Session

Connecticut
Kansas
Ohio
Oklahoma
Oregon
Utah

HealthFirst Connecticut Authority Recommendations

- Expanded Medicaid/SCHIP eligibility for all residents with family incomes below 300 percent FPL, with sliding scale cost-sharing and premium assistance for those with ESI.
- Access to a restructured Charter Oak program - currently allows families to buy health insurance regardless of their health status at premiums tied to income.
- A Connecticut Health Partnership, using the state employee health benefit plan as a base, will be available to all residents and employers in order to improve employer offer rates and employee take-up rates, and to offer coverage to those in the non-group market.
- Multiple recommendations for containing costs and improving quality.
- Data collection and analysis to drive policy development, implementation, and evaluation.
- Public entity assigned or developed to oversee the proposed reforms and better coordinate state spending on health care.

Kansas 2009 Health Reform Priorities – Kansas Health Policy Authority

- Statewide Clean Indoor Air
- Increased Tobacco User Fees
- Increased Access to Affordable Health Care and Health& Wellness
  - Medicaid Expansion to Parents up to 100% FPL
  - Convene panel to develop proposals to assist small employers and young adults afford health insurance
  - Tobacco Cessation for Medicaid
  - Expand Cancer Screening for Low-Income and Uninsured
  - HIT - Statewide Community Health Record
  - Workplace Wellness Grants for Small Businesses
  - Expand Kansas Coordinated School Health Program

Ohio State Coverage Initiatives Recommendations

- Requiring employers to establish §125 Plans
- Reinsurance for individuals and small businesses
- Extend group coverage to dependents up to age 29
- Premium assistance for low income workers
- Enrolling more Ohioans in Medicaid and expanding Ohio's Medicaid to high income levels
- Allowing non-Medicaid eligible adults to enroll in Medicaid managed care plans
- Reforms to the individual health insurance market (GI; Mandate; Subsidies; Admin Efficiencies)
- Connector

Blueprint for Oklahoma – Draft Report

- Maximizing enrollment in public programs for those eligible but not yet subscribed
- Developing an affordable basic health benefits plan
- Generating sufficient public revenue
- Encouraging the take-up of private coverage

Oregon Health Fund Board Report

- Improve access for children and low-income
- Cost containment and quality improvement mechanisms
- Purchasing strategies and insurance market reforms
- Encourage new models of care delivery
- Ensure health equity for all
- Train new health care workers
- Federal-state relationship

Utah Legislative Health System Reform Task Force Legislation

- Insurance market reforms:
  - Creates new basic benefit plan called the Utah NetCare Basic Health Care Plan
  - Allows mandate-free benefit plans to be offered in certain circumstances
  - Establishes Internet portal for the purchase of these new plans
  - Sole proprietors included in the small group market pool
  - Establishes a reinsurance pool
- Streamlines and standardizes various aspects of provider, insurer, and consumer interactions and communications.
- Framework for demonstration projects for delivery and payment systems reforms.
- Requires certain contractors who do business with the state to offer health insurance to their qualified employees.

Incremental Approaches

Cover All Children

Purchasing Pools/Mechanisms

Increasing Dependent Coverage

New Benefit Design

Reinsurance

Creative Uses of Medicaid
(public/private)

Rhode Island ('07): HealthPact

- Includes coverage for physician visits, hospitalization, preventive services, and prescription drugs
- Design is intended to give incentives to enrollees to be more actively engaged in managing their own health care
- Proposes to achieve significant cost savings though financial incentives for enrollees who improve and maintain their health through **five key wellness initiatives**
- For enrollees who choose to participate in the wellness programs, it is proposed that deductibles, co-pays and co-insurance will be reduced to amounts normally seen in plans with much higher premiums

Cover Tennessee ('07)

- Affordable healthcare coverage
  - Premiums shared equally by employer, individual and state
  - Individual's monthly premium share ranges between $37 and $109
  - Premiums vary depending on age, tobacco use, and obesity
  - No deductibles; reasonable co-pays
  - Maximum Benefit amount: $25,000
- Portable – Individual Product
  - Owned by the individual
  - Individual can keep coverage even if they leave an employer
  - Provides continued coverage during brief periods of unemployment
- Basic – Provides most services most people need

States & the Health Workforce

State Coverage Initiatives
Robert Wood Johnson Foundation

States & the Health Workforce

- States have strong influence over the development and practice of the health workforce.
  - Education, financing and regulation
- State action is critical for current shortages & for the future.
- States are faced with current or imminent health workforce shortages due to multiple factors:
  - Aging population
  - Changing educational & practice environments
  - Limited pipeline of people entering health professions

State Action on Workforce Issues

- Data collection and analysis: State nursing centers, centers for health workforce studies, university centers
- Pipeline development: Health career websites, K-12 outreach programs, scholarships/loan repayment programs
- Retention (geared towards nurses): Career ladder programs, abolish mandatory overtime, pass minimum staffing ratios
- Licensure and Credentialing: Scope of practice changes, Nurse Licensure Compact (currently 23 states)
- Educational capacity building: Faculty scholarships and loan repayments, increasing educational capacity, innovation in educational delivery

Massachusetts (Enacted 8/08)

- Passed comprehensive plan to strengthen primary care infrastructure
  - Creates new Health Care Workforce Center within the Department of Public Health
  - State authority to establish a medical home demonstration project
  - Directs MassHealth Payment Policy Advisory Board to study methods to improve payments or bonuses for primary care providers
- For health care professionals who practice in underserved areas:
  - Loan forgiveness program
  - Affordable housing pilot
- Requires health insurers to recognize and reimburse nurse practitioners as primary care providers

Oregon (11/08 Recommendations)

- Released blueprint for comprehensive health care system reform - one key "building block" is to train a new health care workforce.
- Action steps include:
  - Collecting data through the licensure process to provide an on-going database about current workforce and analyze future workforce needs
  - Implementing strategies to train, attract and retain an appropriate supply of primary care providers in all areas of Oregon
  - Develop direct reimbursement and a certification system for Community Health Workers

Pennsylvania (Enacted 2008)

- Passed a series of measures over the last few years to expand the scope of practice for physician assistants, nurse practitioners, clinical nurse specialists, nurse midwives and dental hygienists
- Generally, the laws allow fewer doctors to oversee these health care providers and expand the types of settings where they can provide health care services

Iowa (Enacted 5/08)

- Requires that the Department of Public Health expand efforts to guarantee a stable & well-qualified workforce
- Creates a Direct Care Worker Advisory Council to continue work on education and certification issues
- Instructs the Department of Human Services (DHS) to maintain an ongoing report that measures direct care worker turnover in nursing facilities
- Directs DHS to design a premium assistance demonstration project to provide health coverage for up to 150 direct care workers and their dependents

Vermont (Enacted 2006)

Workforce measures to increase provider availability:

- Loan repayment program for health care providers & educators
  - Available to primary care doctors, nurses, dentists, and nurse educators/faculty
  - Must agree to serve patients enrolled in Medicare, Medicaid, or other state health benefit plans
- Loan forgiveness program for nurses and dental hygienists
- Tele-psychiatry pilot to fill the state's gap in available child psychiatrists
- Provider reimbursement surveys
  - Examine the adequacy of reimbursement rates and understand impact of rates on recruitment and retention of health care professionals
- Conduct Nurse Authority Study
  - Establish a work group to study and make recommendations on whether an advanced practice nurse need not be required to work in a collaborative practice with a physician

State Quality Reporting Activities

Using Performance Measurement to Improve Quality

- Public Reporting
  - Health Plans
  - Hospitals
  - Nursing Homes
  - Ambulatory Settings
- Purchasing to Improve Quality
  - Value-based purchasing/payment reform
  - Tiered networks
  - To drive delivery system reform
- To Drive Consumer Choice and Internal Quality Improvement

Public Reporting on Health Plan Performance

- Measures
  - HEDIS: Clinical Measures (Administrative/Medical Records)
  - CAHPS: Patient Satisfaction (Survey)
  - Complaints
  - NCQA Accreditation

- **26 States have public reports using HEDIS, CAHPS or both**

- Some Medicaid Programs publicly report as well

Public Reporting on Hospital Performance

- Descriptive Measures: Administrative
  - Volume/Utilization/LOS/Readmission
  - Number of beds; Services available; Financials; etc
- Process Measures: Clinical (CMS/JCAHO)
  - Heart Attack/Congestive Heart Failure/Pneumonia/SIP
- Outcome Measures: Clinical
  - Mortality (CABG/PCI) – risk adjustment
- Patient Satisfaction: Survey
- **15 States publicly report one or more of these measures**

Public Reporting on Nursing Homes

- Structural/Descriptive Measures: Administrative
  - Number of Beds
  - Staffing Info: Number of Nurses; Turnover; Wages
  - Financial/Cost
- Quality Measures: Clinical (CMS)
  - Quality Measures
  - Deficiency/Complaints
- Patient/Family Satisfaction
- **States generally publicly report deficiency/complaint information**

Public Reporting of Healthcare-Acquired Infections (HAI)

- Public Disclosure:
  - 2003: IL (reworked in 2005)
  - 2004: FL, MO, PA
  - 2005: NY, VA
  - 2006: CO, CT, MD, NH, OH, OK, SC, TN, VT
  - 2007: DE, MN, NJ, TX, WA
  - 2008: CA, MA, OR, RI, WV
- Study Bills: TX (2005/public disclosure in 2007), GA (2006), AK (2006 - resolution)
- Pilot Project: NM (2007)
- Confidential Reporting: NE, NV (2005)

Report Card Authors Face Numerous Choices

Choice	Approach	Issues
Source of data	Claims	Easy and cheap to obtain, but less accurate
	Chart review	More accurate, but expensive
	Surveys	Consumers like, but expensive
Level of reporting	Hospital Level	Facility information, not care by specific practitioner
	Large groups of physicians	Heterogeneous, more valid statistically, less useful to patients
	Individual physician	Numbers of procedures too small, hard to do risk adjustment, most useful to patients
Display of data	Stars or bar graphs	Intuitive and familiar to consumers but can be misleading
	Statistical ranges	Closer to "truth," but more difficult to explain

Common Principles in Performance Reporting

- Steering committee of interested parties
- Pilot first then full implementation
- Reduce duplication of effort by carriers, facilities, and practitioners
- Continuous revision and improvement as measurement techniques advance
- Focus on the Positive
- Web-based application

State Health Policy Commissions and Authorities

State Coverage Initiatives
Robert Wood Johnson Foundation

Delaware Health Care Commission - 1990

- Independent public body reporting to the Governor and the Delaware General Assembly
- Policy-setting body rather than a service-delivery body
- **Mission**: To promote accessible, affordable, quality health care for all Delawareans.
  - **Access**- Promote access to health care for all Delawareans.
  - **Cost**- Promote a regulatory and financial framework to manage the affordability of health care.
  - **Quality**- Promote a comprehensive health care system assuring quality care for all Delawareans.
- Uninsured Action Plan
- Information & Technology
- Health Professional Workforce Development
- Research & Policy Development
- Specific Health Care Issues & Affiliated Groups

Delaware Health Care Commission

- Chair is Lt Gov
- Four government officials (ex officio)
  - Secretary of Finance
  - Secretary of Health & Social Services
  - Secretary of Children, Youth & Their Families
  - Insurance Commissioner
- Six private citizens appointed either by the Governor, the Speaker of the House or the President Pro Tempore of the Senate
  - Dean, College of Health and Public Policy, Delaware State Univ.
  - Senior VP for Government Relations, DE Chamber of Commerce
  - Chair, Dept of Family & Comm Med, Christiana Care Health Services
  - President, Maritime Exchange for the Delaware River and Bay
  - Two others

Maryland Health Care Commission

- Develop State Health Plan/administer Certificate of Need program
- Oversee certain aspects of small group market reforms
- Develop and publish consumer guides for health plans, hospitals, nursing homes and ambulatory surgical centers
- Establish and develop a medical care data base on health care services rendered by health care practitioners
- Establish standards for the operation and licensing of medical care electronic claims clearinghouses
- Determine the cost of mandated health insurance services
- Promote the availability of information to consumers on charges by practitioners and reimbursements from payors
- Oversee and administer the Maryland Trauma Physician Services Fund
- Other policy studies as requested: patient safety, affordability, etc

Maryland Health Care Commission

- 15 members appointed by Gov with advise/consent of Senate
  - Nine must be individuals with no connection to the management or policy of a health care provider or payor
  - Remaining six members:
    - Two physicians
    - Two payors
    - One nursing home administrator
    - One non-physician health care practitioner
- Also geographic representation requirements
- To the extent practicable, assure geographic balance and promote racial, ethnic, and gender diversity in the Commission's membership

Kansas Health Policy Authority - 2005

- Responsible for coordinating a statewide health policy agenda that incorporates effective purchasing and administration with health promotion strategies.
- All health insurance purchasing by the State is now combined under KPHA, including publicly funded programs (Medicaid, State Children's Health Insurance Program, and Medikan) and the State Employee Health Benefits Plan.
- Responsible for compiling and distributing uniform health care data in order to provide health care consumers, payers, providers and policy makers with information regarding trends in the use and cost of health care for improved decision making.
- 2007 Legislation: Directed KHPA to develop health reform options in collaboration with Kansas stakeholders.

Kansas Health Policy Authority

- Nine voting health care, business, and community leaders appointed by the Governor and the Legislature
  - President, Chief Executive Officer and General Counsel for Medicalodges, Inc.
  - Associate Professor, Dept of Public Administration, University of Kansas
  - Senior Vice President, Human Resources at EMBARQ Corporation
  - Chairman of the Board, Midway Wholesale of Topeka
  - Professor of Management Practice, Harvard Business School.
  - Retired Co-President and CEO, Center for Health and Wellness
  - Pediatrician
  - CEO of Pratt Regional Medical Center
  - Retired, Midwest Consortium Administrator, Centers for Medicare and Medicaid (CMS), HHS
- Ex-Officio Members
  - Dept of Health & Environment (Sec & Dir of Health); Dept of Social & Rehabilitation Services; Dept of Administration; Dept on Aging; Insurance Department; Department of Education; KHPA Executive Director

Connecticut Office of Health Care Access

- Headed by a Commissioner who is appointed by the Governor

- Mission: To ensure that the citizens of Connecticut have access to a quality health care delivery system:
  - By advising policy makers of health care issues
  - By informing the public and the industry of statewide and national trends
  - By designing and directing health care system development

- **Certificate of Need & Compliance Unit:**

- **Research & Planning Unit:**

Oregon Health Policy Commission - 2003

- Mission: To develop and promote policy recommendations to the Governor, the Legislature, and the Oregon Health Policy and Research (OHPR) that improve the health of all Oregonians by ensuring access to essential health care and support services, increasing quality and improving outcomes for individuals and society, controlling costs, and encouraging healthy lifestyles.

Oregon Health Policy Commission

- Ten voting members appointed by the Governor.
  - Exec VP, Corp Services & Chief Legal Officer,The Regence Group
  - Chair, AterWynne LLP (Strategic Legal Advisors)
  - Director, Integrated Clinical Services, Multnomah County Health Dept
  - Senior Consultant, Watson Wyatt Worldwide
  - President, SEIU Local 49
  - Health Care Consultant
  - Director, Oregon Ctr for Health Professions, Oregon Inst of Technology
  - CEO, The Lussier Center (Management Consulting Services)
  - Chairman, Triquint Semiconductor
  - Vice President and Chief Quality Officer, Samaritan Health Services
- Four legislators (one representing each legislative caucus) serve as non-voting advisory members to the Commission

Lessons Learned in State Reform Efforts

State Coverage Initiatives
Robert Wood Johnson Foundation

Lessons Learned in State Reform Efforts #1

- Successful comprehensive reforms are built on previous efforts, financing mechanisms
- Need ingredients: leadership, opportunity, readiness to act, persistence
- No free solutions
- Successful efforts to enact reforms often need shared financial responsibility
- State expansions in coverage often rely on private insurers to deliver care
- Voluntary strategies will not result in universal coverage - some states are beginning to recognize the need for mandatory participation

Lessons Learned in State Reform Efforts #2

- Hard to get agreement on what is covered (benefit design/affordability)
- Little success so far in addressing underlying cost of health care but a new focus on chronic care management/preventive care holds potential
- Address access, systems improvement, cost containment simultaneously—concern about long-term sustainability of coverage programs and improved population health
- New state reforms can be fairly judged only after several years, allowing a realistic length of time to work through implementation challenges.
- Comprehensive reforms need sequencing
  - Sequential = incremental with a vision

States Can Advance Reform Initiatives But Need Federal Support

- States face growing pressures for reform
  - Uninsurance continues to rise as employer sponsored coverage declines
  - Cost increases threaten state budgets and capacity to sustain Medicaid/SCHIP
- States play critical role in moving the conversations about coverage expansions
  - Testing new ideas (politically and practically)
  - Creating momentum for national policy solution
- States cannot achieve universal coverage without a federal framework and funding
  - Significant variation across states in resources, capacity, and landscape—including uninsured rates, available state funds to invest in coverage, insurance market structures, and other important factors

NCSL Health Committee Roster

Committee Officers & NCSL Staff // Committee Members // Committee Jurisdiction

---

Committee Description

This committee has jurisdiction over state and federal health programs, legislation, regulations and policies. The committee educates Congress and federal agencies about state concerns regarding developments in federal health initiatives and programs and grants to states. In addition, it serves as a forum for legislators and legislative staff to learn about and share information regarding health programs and health policy initiatives in other states. Recently, the committee has addressed the following issues:

- Medicare prescription drug coverage
- Medicaid
- Health care cost containment
- Health care access
- Public health and prevention

NCSL Health Committee

Chair: Senator Judy Lee, North Dakota
Vice Chair: Senator Ronnie W. Cromer, South Carolina
Vice Chair: Senator Bettye Davis, Alaska
Vice Chair: Representative Keith J. Gillespie, Pennsylvania
Vice Chair: Senator Lisa T. Marrache, Maine
Vice Chair: Senator Patrick Alan Nunnelee, Mississippi
Vice Chair: Senator William R. Purcell, North Carolina
Immediate Past Chair: Assemblyman Herb C. Conaway Jr., New Jersey
Staff Chair: Raul E. Burciaga, New Mexico
Staff Vice Chair: Mark D. Andrews, Utah
Staff Vice Chair: Matt Dull, Florida
Staff Vice Chair: Nolan Langweil, Vermont
Immediate Past Staff Chair: Jacquie Donaldson, New York

2/11/09 PRESENTA-TION: BRING THE KIDS HOME INITIATIVE

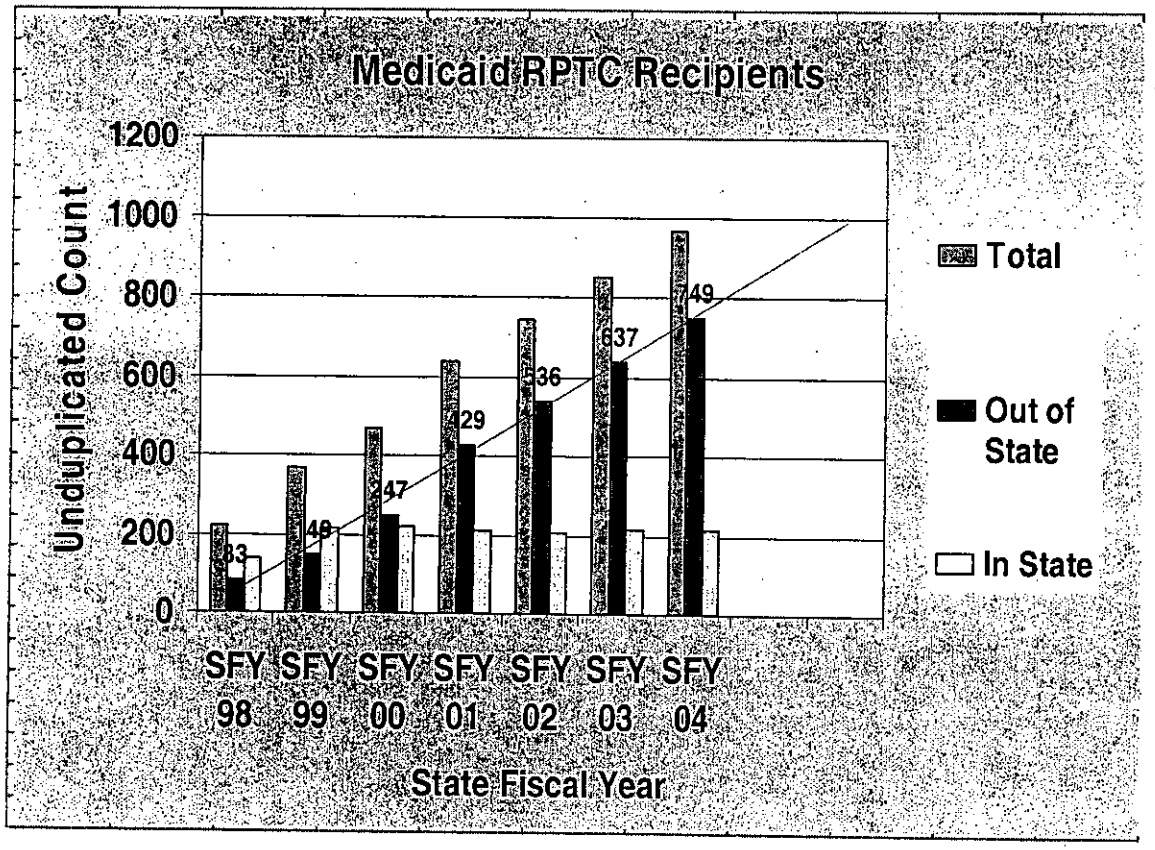
Bringing (Keeping) the Kids Home Update – February 2009

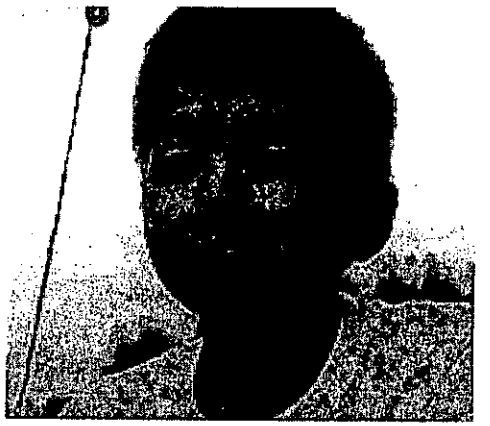
The Trust
The Alaska Mental Health Trust Authority

A collaboration of Department of Health and Social Services, Alaska Mental Health Trust Authority & partner boards, Denali Commission, Rasmuson Foundation, Alaska Native health providers & other service providers, parents, advocacy groups

Exponential Growth In Use of Out-of State Residential Psychiatric Treatment Centers (RPTC)

Between 1998- 2004, out-of-state RPTC placements for children with severe emotional disturbances (SED) grew by nearly 800%





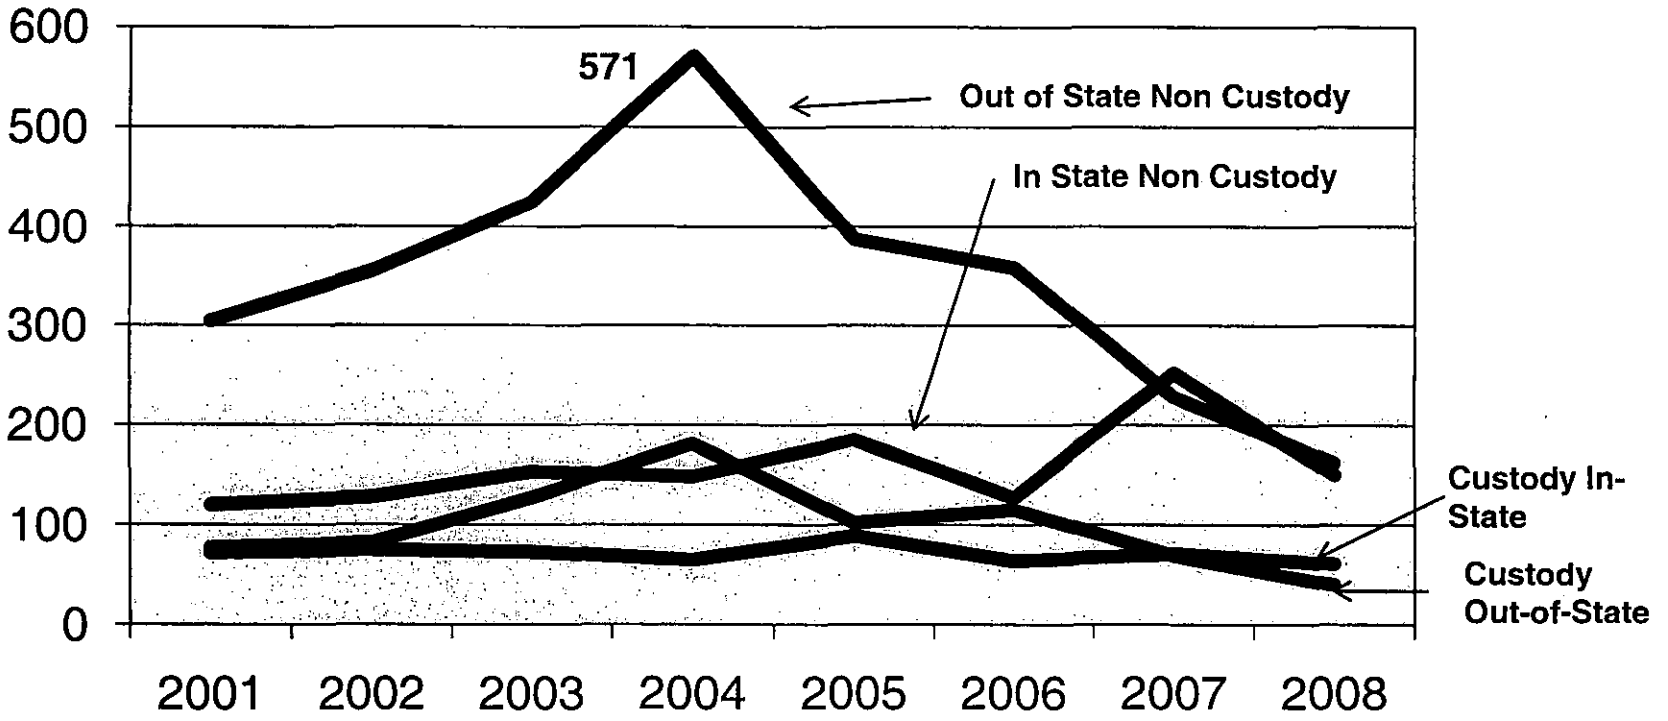
Data are from Behavioral Health (DBH), Policy and Planning based on Medicaid claims paid for unduplicated RPTC recipients. Recipients include all children served per fiscal year – including those admitted in a previous year but served during the current year.

2246

Progress: Decrease in RPTC Admissions

(Youth who enter RPTC during each fiscal year)

Drop of 73% in out-of-state admissions between FY04 and FY08

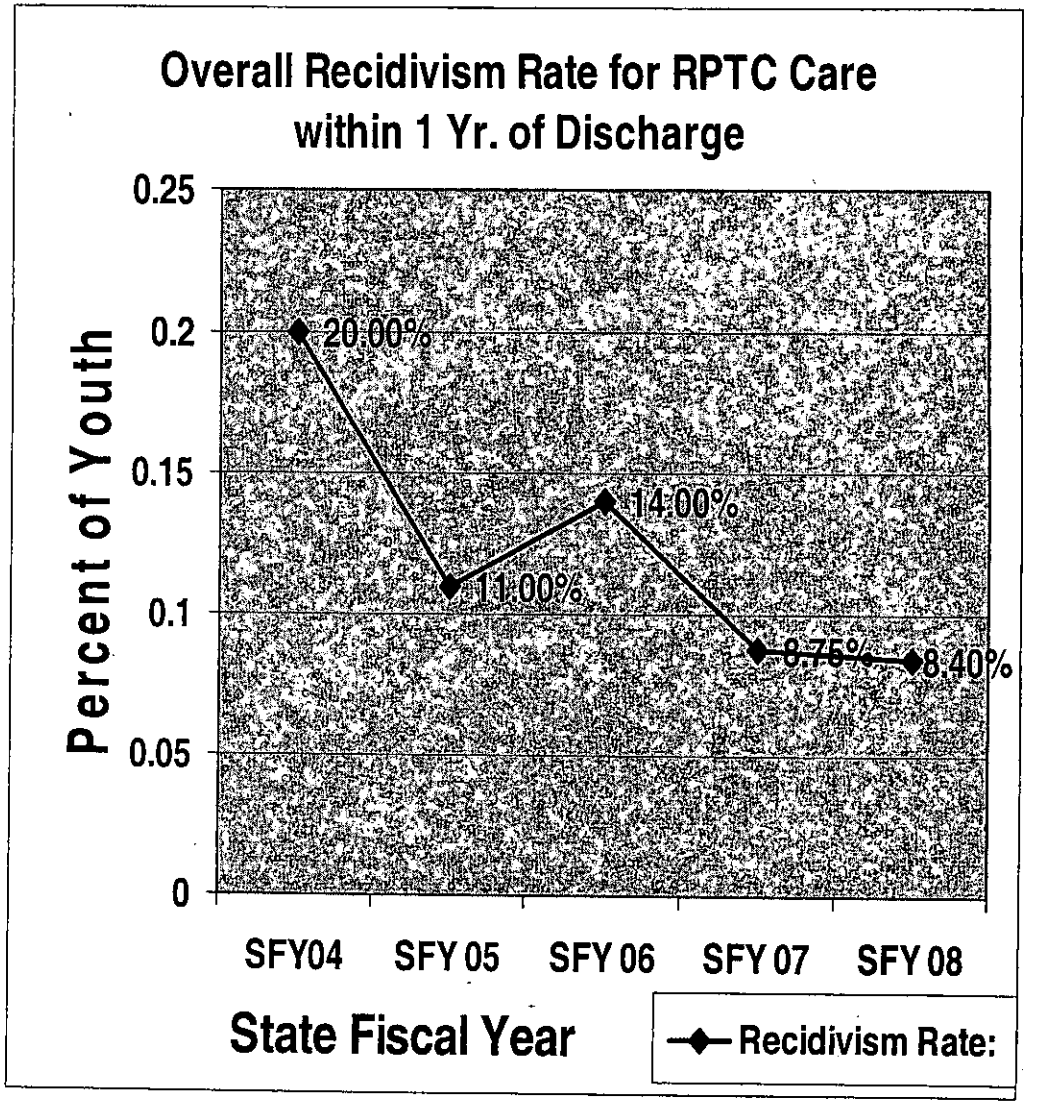


Data are from Behavioral Health, Policy and Planning based on Medicaid claims paid for unduplicated RPTC admissions. Includes only those admitted during the current year.

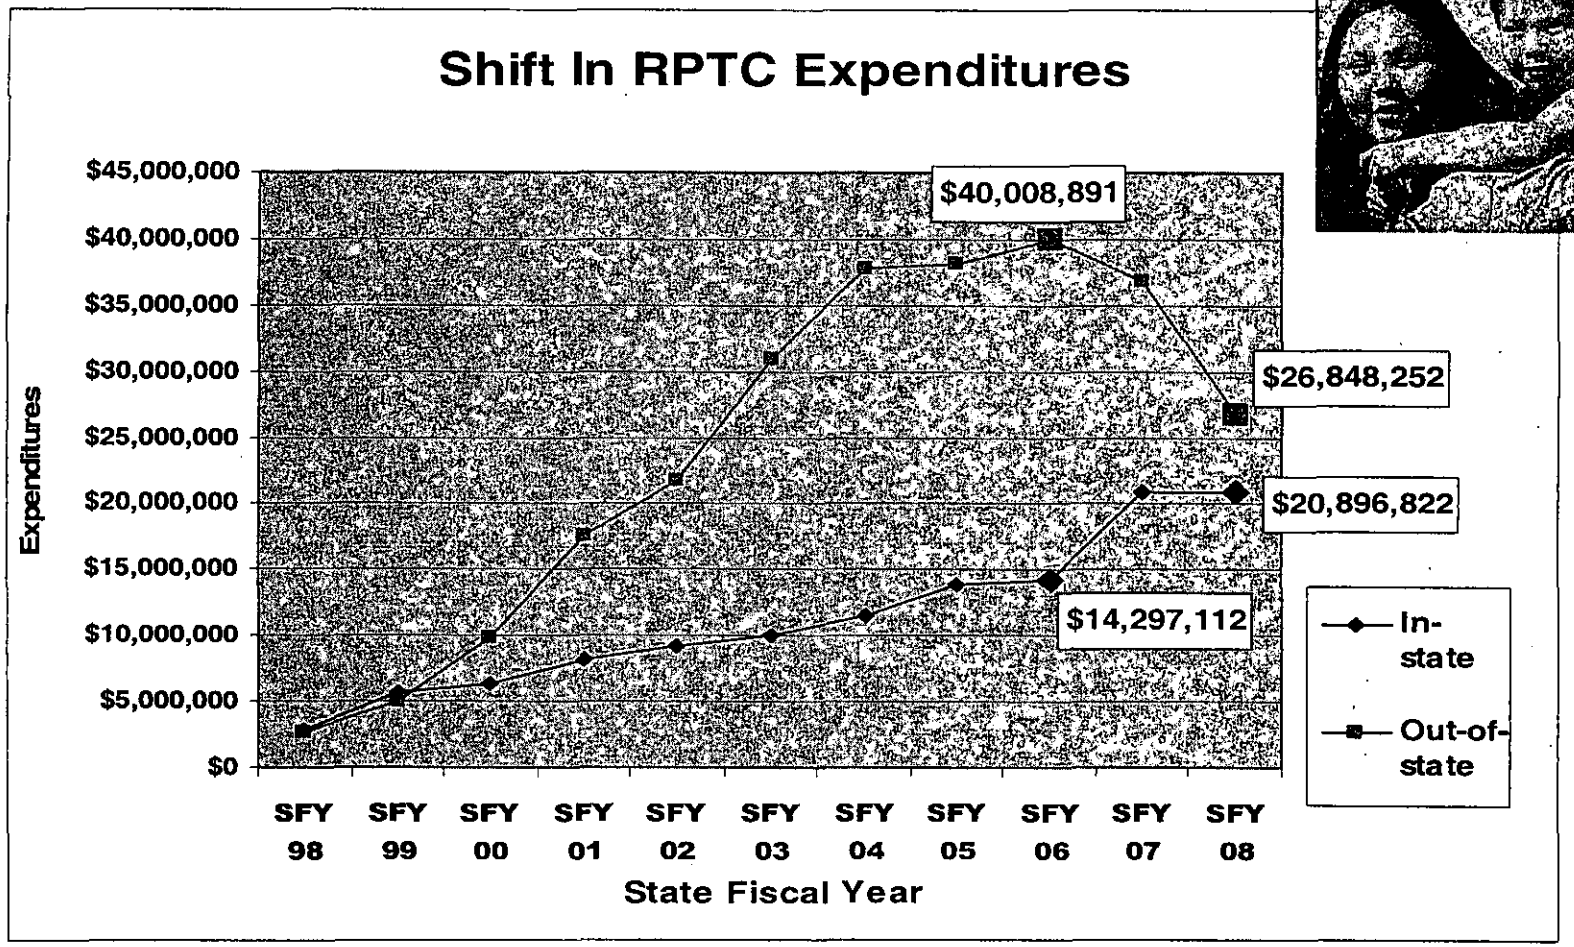
Progress: Length of Stay and Recidivism

Recidivism: Significant decrease since FY04 from 20% to 8.4%

Data are from Behavioral Health, Policy and Planning

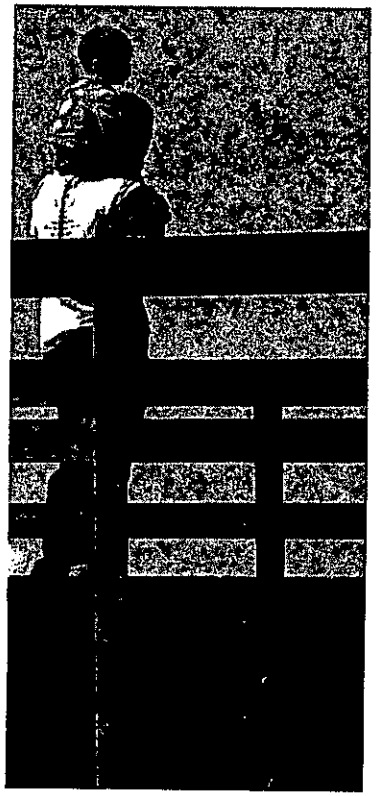


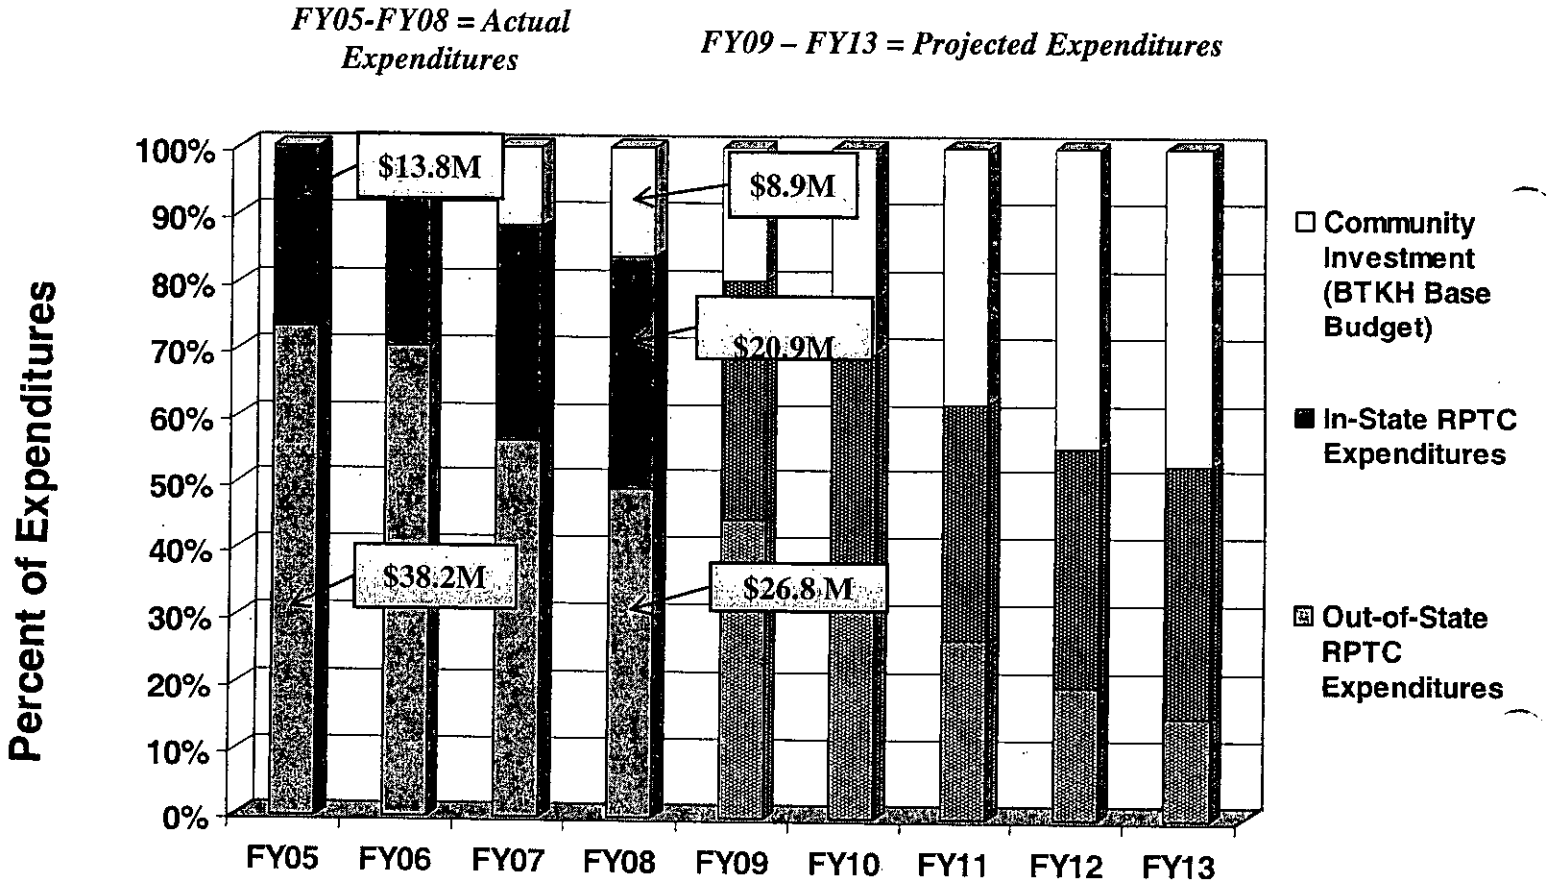
Progress: Medicaid Expenditures for Residential Psychiatric Treatment Centers (RPTC)



Data for FY05-07 are from Behavioral Health based on paid claims for Medicaid data. Expenditure data for FY08 are from Finance Management Services and includes all claims incurred and paid in FY08 and claims incurred in FY08 and paid in the first quarter of FY09.

Progress: Projected BTKH Reinvestment





Data for FY05-07 are from Behavioral Health based on paid claims for Medicaid data. Expenditure data for FY08 are from Finance Management Services and includes all claims incurred and paid in FY08 and claims incurred in FY08 and paid in the first quarter of FY09.

Juneau Youth Services
Transitional Living Program

- Black Bear Apartments:
  - 13-bed facility for youth ages 18 to 21
  - Includes Resident Case Manager
  - Capital funding partnership
    - Denali Commission
    - Alaska Housing Finance Corporation
    - Juneau Youth Services
- Cornerstone Apartments: 5-bed facility
- Operating Funds for TLP
  - Federal Grant; small state BTKH grant; Medicaid

2258

Juneau Youth Services Transitional Living Program

- Data and Outcomes
  - 57 youth received services in the last year
  - 91% received employment and other life skills training
  - 83% received mental health and/or substance abuse counseling
  - 9.17 service hours/per client/per month (average)
  - 78% completed the program successfully
  - **96% exited to safe living arrangements**

What' s Needed:

- Additional state grant support to increase behavioral health counseling and life skills training
  - JYS lost $28,440 in the TLP program in FY 08

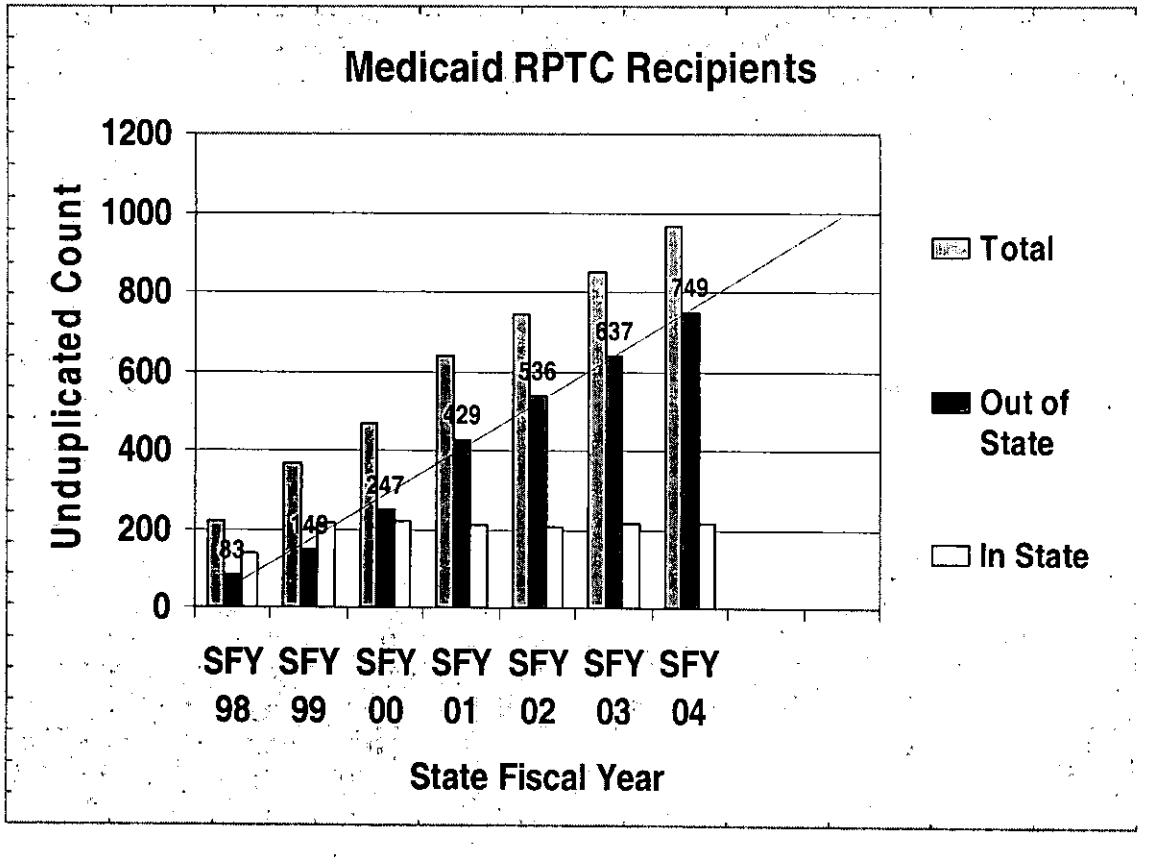
Bringing (Keeping) the Kids Home Update – February 2009

The Alaska Mental Health Trust Authority

A collaboration of Department of Health and Social Services, Alaska Mental Health Trust Authority & partner boards, Denali Commission, Rasmuson Foundation, Alaska Native health providers & other service providers, parents, advocacy groups

Exponential Growth In Use of Out-of State Residential Psychiatric Treatment Centers (RPTC)

Between 1998- 2004, out-of-state RPTC placements for children with severe emotional disturbances (SED) grew by nearly 800%



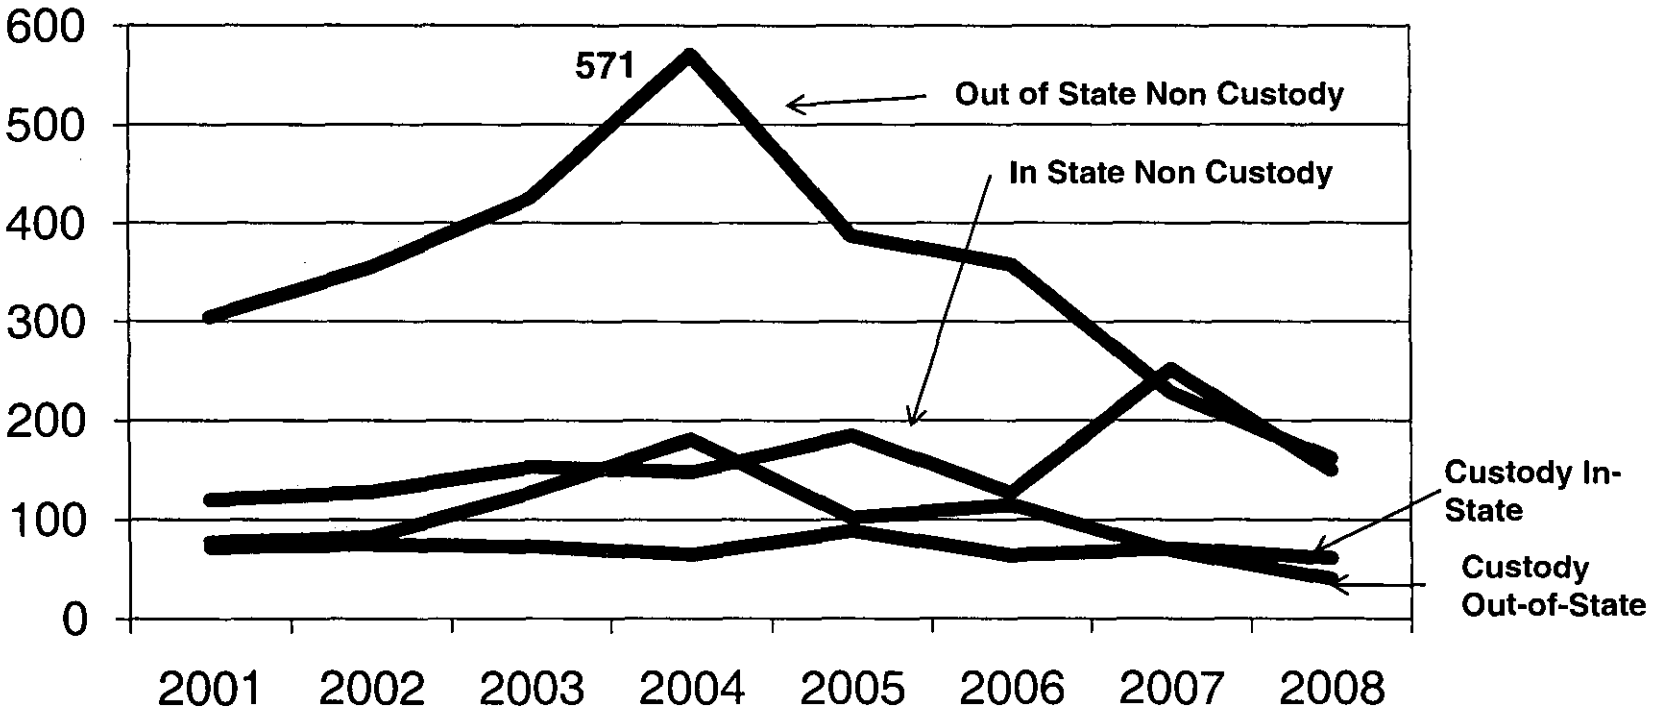
Data are from Behavioral Health (DBH), Policy and Planning based on Medicaid claims paid for unduplicated RPTC recipients. Recipients include all children served per fiscal year – including those admitted in a previous year but served during the current year.

2262

Progress: Decrease in RPTC Admissions

(Youth who enter RPTC during each fiscal year)

Drop of 73% in out-of-state admissions between FY04 and FY08

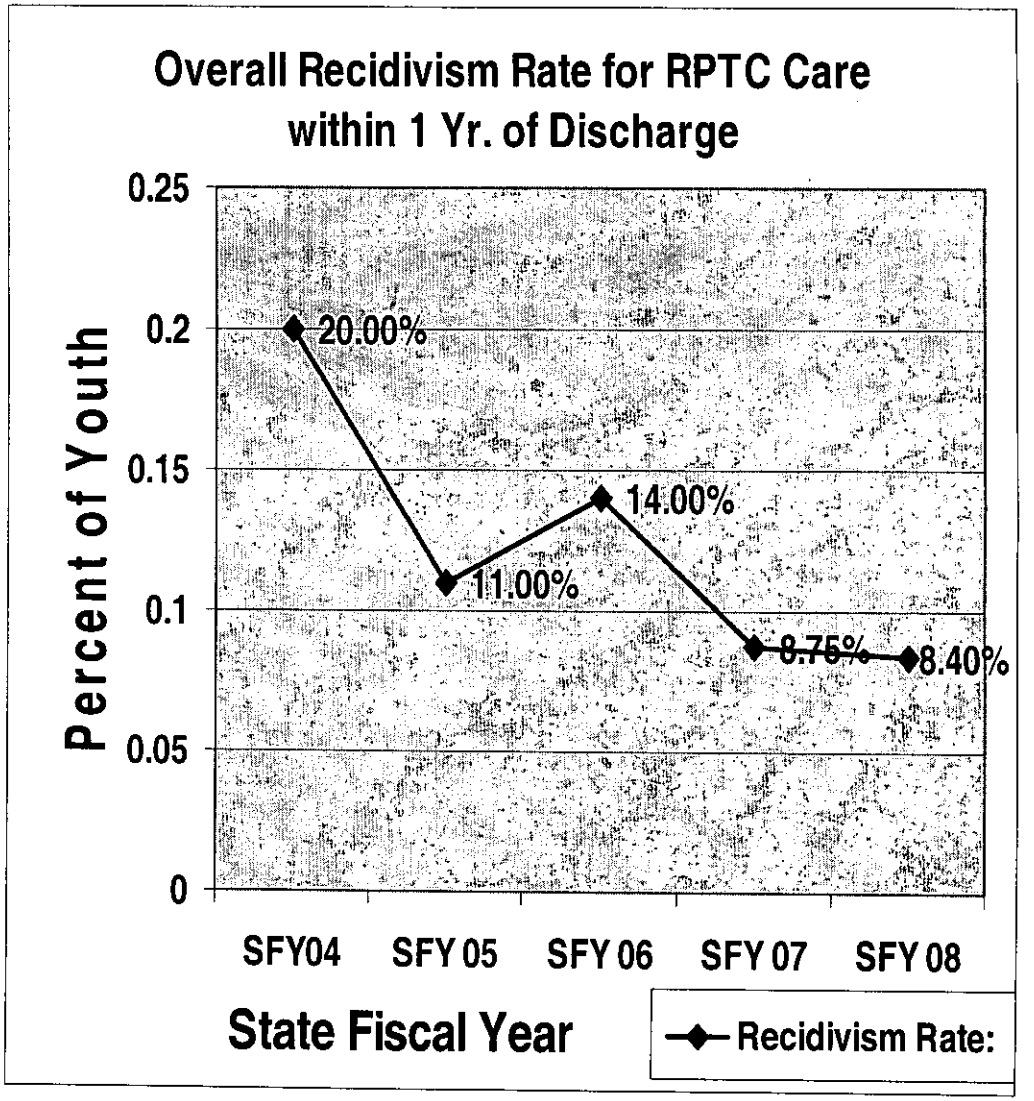


Data are from Behavioral Health, Policy and Planning based on Medicaid claims paid for unduplicated RPTC admissions. Includes only those admitted during the current year.

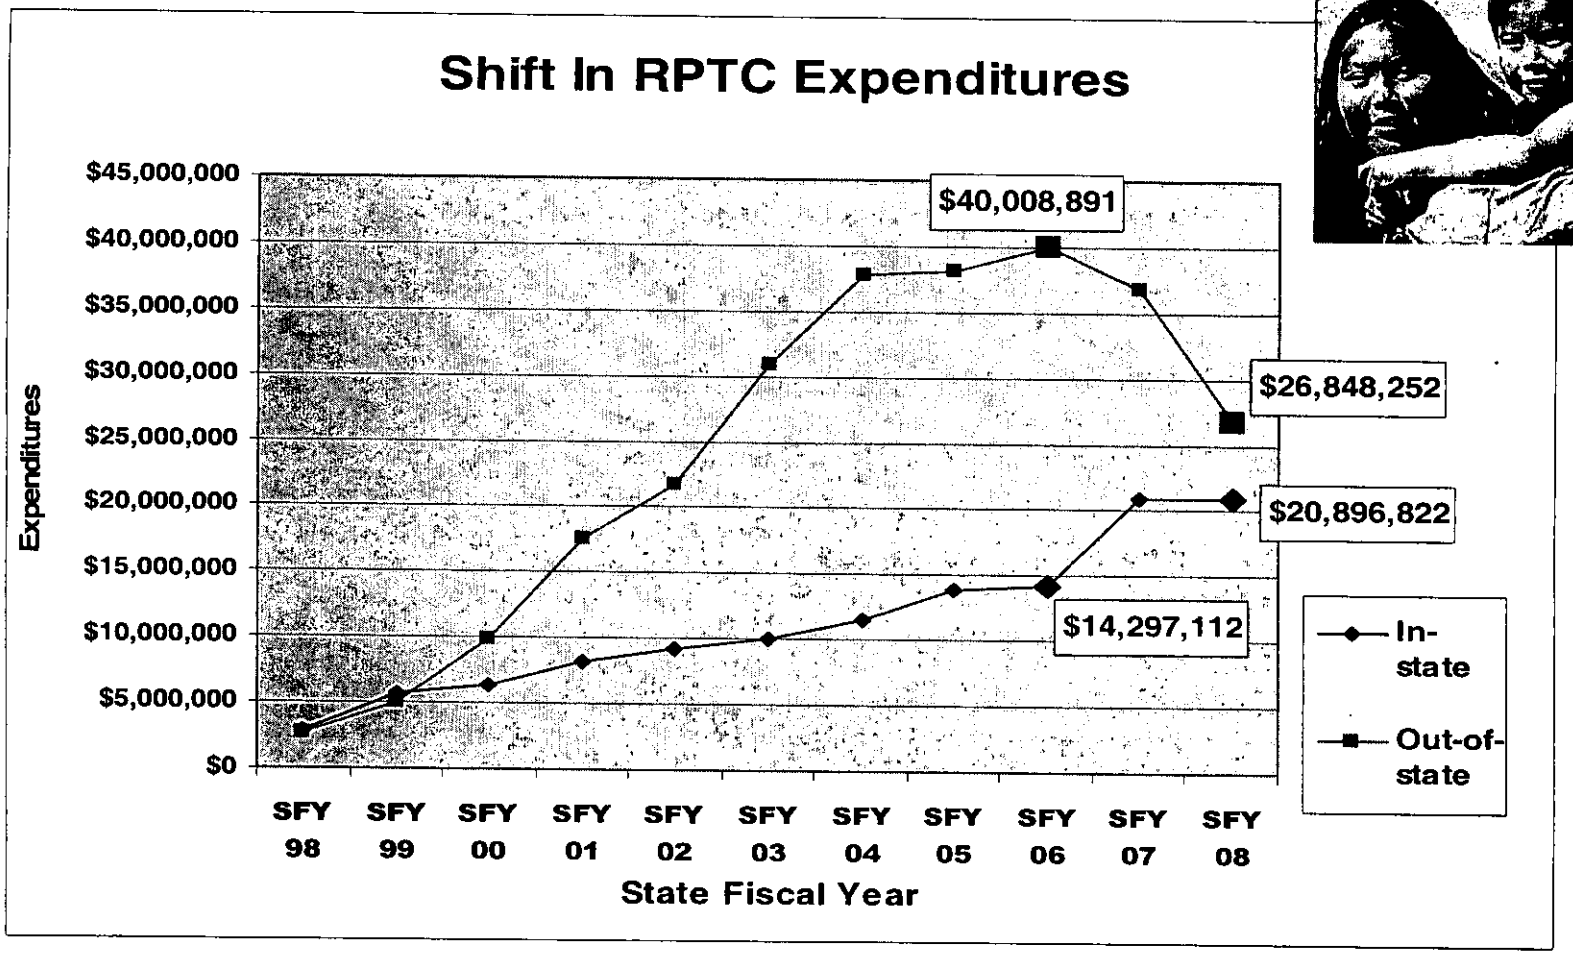
Progress: Length of Stay and Recidivism

Recidivism: Significant decrease since FY04 from 20% to 8.4%

Data are from Behavioral Health, Policy and Planning

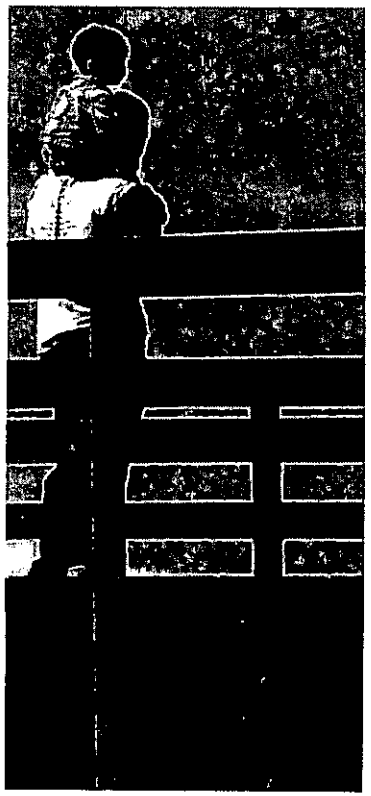


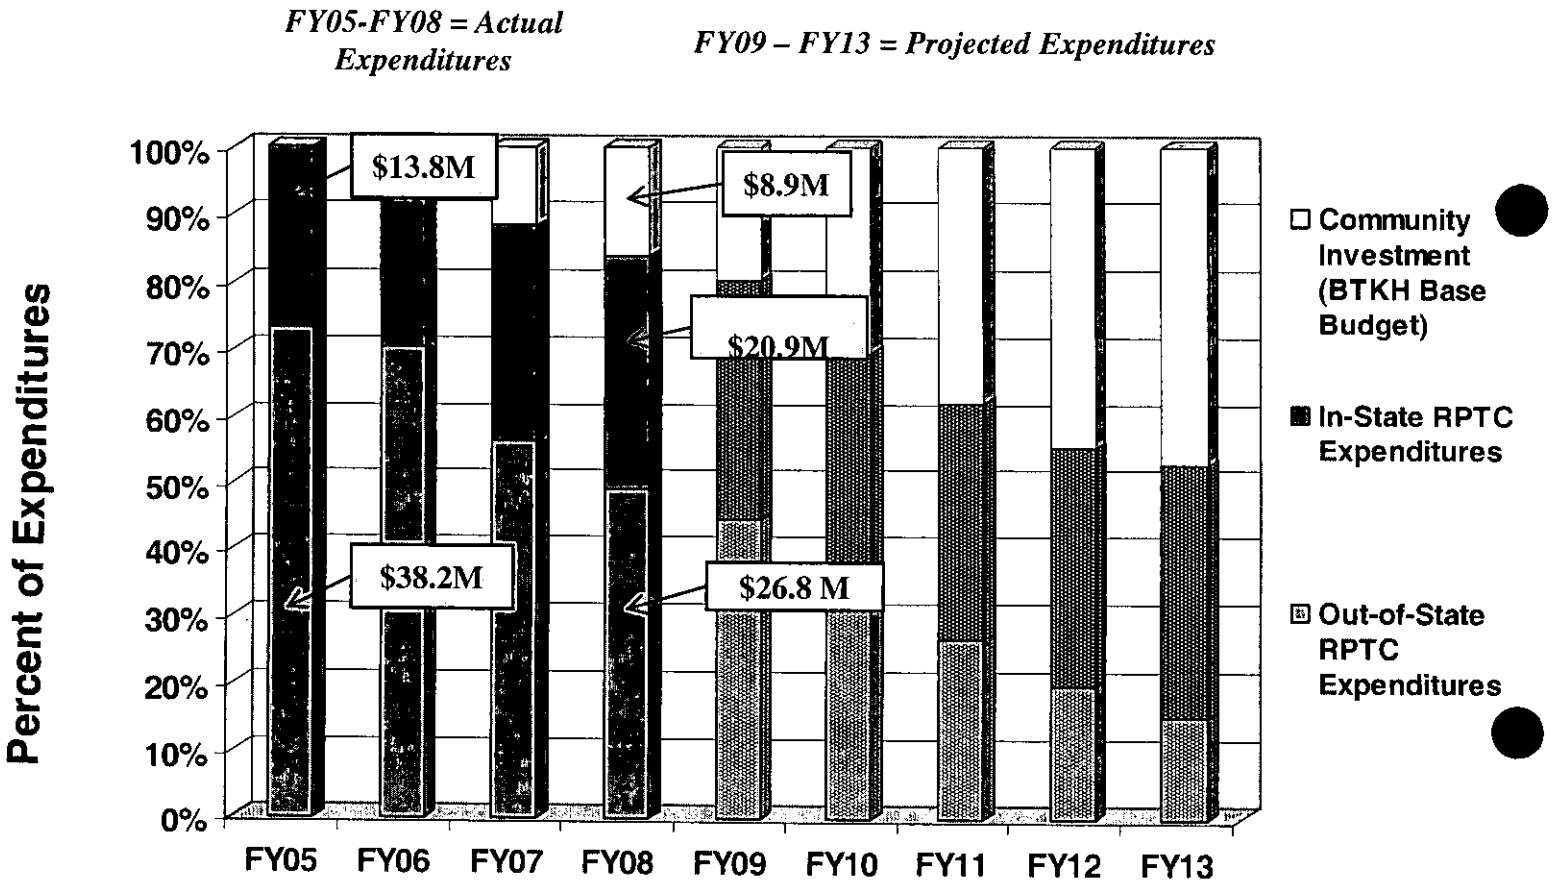
Progress: Medicaid Expenditures for Residential Psychiatric Treatment Centers (RPTC)



Data for FY05-07 are from Behavioral Health based on paid claims for Medicaid data. Expenditure data for FY08 are from Finance Management Services and includes all claims incurred and paid in FY08 and claims incurred in FY08 and paid in the first quarter of FY09.

Progress: Projected BTKH Reinvestment





Data for FY05-07 are from Behavioral Health based on paid claims for Medicaid data. Expenditure data for FY08 are from Finance Management Services and includes all claims incurred and paid in FY08 and claims incurred in FY08 and paid in the first quarter of FY09.

2/20/09 PRESENTATION: ALASKA TRIBAL HEALTH SYSTEM

Jackson, Patsy A

From: Jackson, Patsy A
Sent: Thursday, February 05, 2009 9:44 AM
To: 'Linda_Zaugg@legis.state.ak.us'
Cc: Davidson, Valerie; Dotomain, Evangelyn (ANHB)
Subject: S HSS - February 20

Linda,

Thank you for your help in working with Senator Davis and the Senate HSS schedule to carve a window of time on February 20. We will provide you with handout materials, and I'd like to give you the names of the people who will present.

Will you identify the presentation topic as an overview of the Alaska Tribal Health System with presentations from the Alaska Native Tribal Health Consortium and the Alaska Native Health Board. Please let me know if you think of anything specific you need or if Senator Davis has anything specific she would like to have prepared for the meeting.

Thanks again.

Pat Jackson

Alaska Tribal Health System Sustainability Issues

Presented by
Valerie Davidson, Legal & Intergovernmental Affairs
Alaska Native Tribal Health Consortium
February, 2009

Outline

- Introduction to the Alaska Tribal Health System
- Introduction to the Alaska Native Tribal Health Consortium
- Sustainability issues & Medicaid's role

2

Indian Health Service

- Provides health care in recognition of government to government relationship between Tribes and the U.S. to members of federally recognized Tribes and their descendents
- 3.3 million American Indians/Alaska Natives (AI/AN) in 560 federally recognized Tribes.

3

Alaska Native health history

- ***1900-1970:*** Health care for Alaska Natives was provided by the U.S. government
- ***1970-1998:*** Alaska Natives organized health care organizations under Self-Governance legislation and assumed ownership of health services
  - *Indian Self-Determination and Education Assistance Act* facilitated gradual transfer of health programs from federal to tribal ownership (1976)
  - "*Self-Governance*" legislation provided for perpetual "compact" agreements between U.S. Department of Health & Human Service and tribal programs (1994).
- ***1998-2007-Future:*** All Alaska Native health care is provided by Alaska Native organizations

4

Why Tribal Ownership?

- **Customer-owned health program**
- **Integration of primary care around the family**
- **Local priority setting and budget allocation**
- **Local decision-making & flexibility**
- **Culturally-relevant health programs**

5

Alaska Tribal Health System

- A voluntary affiliation of over 30 Alaskan tribes and tribal organizations providing health services to Alaska Natives/American Indians
- Each tribe or tribal health organization is autonomous and serves a specific geographical area
- Entire Alaska Tribal Health System serves approximately 130,000 Alaska Natives (projected to 160,000 by 2015)

6

Alaska Native Demographics

- Alaska Natives represent 20% of Alaska's population
- Median age is 23.6 years compared to
  - 35.3 years for U.S. All Races and
  - 32.4 years for All Alaskans

7

ATHS Service Population

– Anchorage/Mat-Su valley	40,000	31%
– Rural Southcentral Alaska	12,000	9%
– Arctic Slope (northern coast):	4,300	3%
– Maniilaq (northwest coast):	7,600	6%
– Norton Sound (west coast):	7,400	6%
– Bristol Bay (southwest):	5,300	4%
– Yukon-Kuskokwim (southwest):	24,200	19%
– Southeast Alaska:	16,300	12%
– Interior Alaska:	13,000	10%
TOTAL ALL REGIONS:	130,600	100%

8

Alaska Native Health Status

- Leading Causes of Death:
  - Cancer
  - Heart Disease
  - Unintentional injuries
  - Water transportation/drowning
  - Suicide
  - Alcohol-related
  - Cerebrovascular
  - Chronic Obstructive Lung Disease
  - Influenza and Pneumonia
  - Homicide

9

Alaska Native Health Status

- Leading causes for primary care visits
  - Upper respiratory conditions
  - Accidents and injuries
  - Otitis Media
  - Medical/surgical follow-up
  - Bone and joint disorders
  - Neurosis/other non-psychotic
  - Hypertension
  - Immunization
  - Pre-natal care

10

Alaska Native Health Status

- Leading causes of hospitalization
  - Deliveries
  - Accidents and injuries
  - Pneumonia
  - Pregnancy complications
  - Arthritis
  - Heart Disease
  - Bronchitis/Emphysema
  - Alcohol abuse
  - Cancer

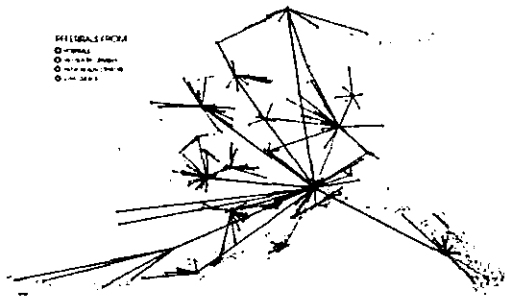
11

Levels of Medical Care Services

- 180 small community primary care centers
- 25 subregional mid-level care centers
- 4 multi-physician health centers
- 6 regional hospitals
- Alaska Native Medical Center tertiary care
- Referrals to private medical providers and other states for complex care

12

Alaska Tribal Health System Referral Patterns



13

Village-Based Medical Services

180 small community health centers

- ~550 Community Health Aides/Practitioners
- ~125 Behavioral Health Aides
- ~20 Dental Health Aides/ 12 Therapists
- ~100 Home health/personal care attendants

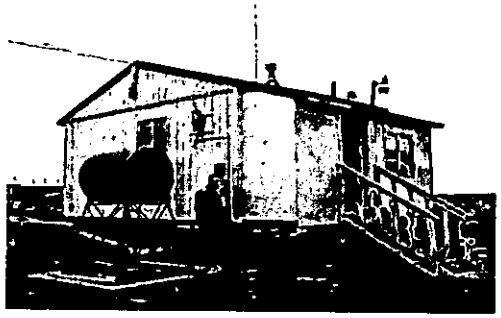
- Average Alaska village: 350 residents

14

Community Health Aide/Practitioners

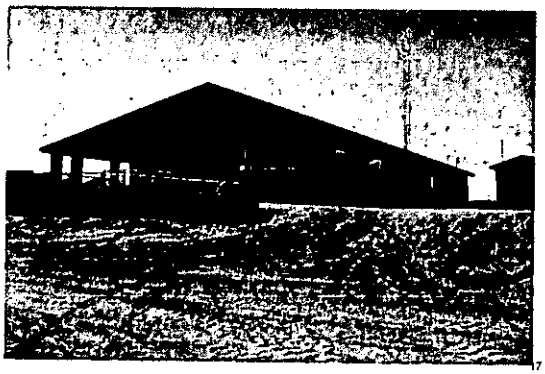
15

Old Newtok Clinic
Yukon-Kuskokwim Delta



16

Kiana Village Clinic- Northwest Alaska



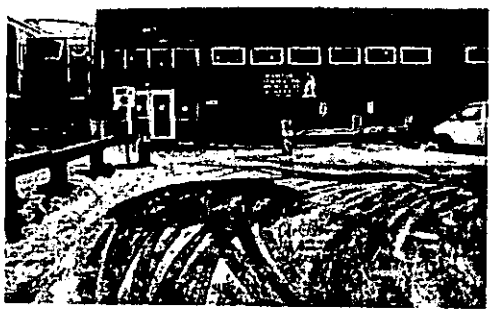
17

Alaska's North and Western Coasts

- Health Systems: Regional health organizations with hospitals serving between 10-50 village clinics
  - Arctic Slope Native Association (6)
  - Maniilaq Association (12)
  - Norton Sound Health Corporation (20)
  - Yukon Kuskokwim Health Corporation (58)
  - Bristol Bay Area Health Corporation (32)

18

Samuel Simmonds Memorial Hospital
Barrow, Alaska

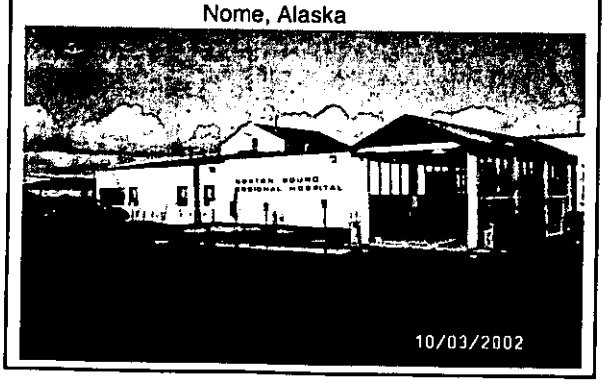


19

Maniilaq Health Center
Kotzebue, Alaska

20

Norton Sound Regional Hospital
Nome, Alaska



Yukon-Kuskokwim Delta Regional Hospital

Bethel, Alaska

22

Bristol Bay/Kanakanak Hospital

Dillingham, Alaska

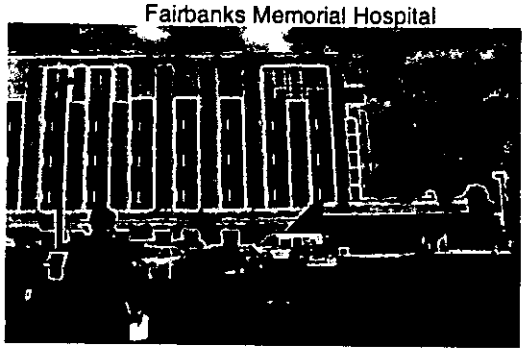
23

Interior Alaska

- Interior region Native health system:
  - 25 village clinics
  - 4 subregional mid-level health centers
  - Physician Health Center in Fairbanks
  - inpatient care purchased from Fairbanks Memorial Hospital

24

Chief Andrew Isaac Health Center and Fairbanks Memorial Hospital



25

Southeast Alaska

- Regional hospital in Sitka : Mt. Edgecumbe
- Physician health centers in Juneau and Ketchikan
- Physician assistants, nurse practitioners, and Community Health Aide/Practitioners in 18 island communities
- Contractual agreements with some community hospitals

26

SEARHC Mt. Edgecumbe Hospital

Sitka, Alaska

27

Metlakatla Health Center

Metlakatla, Southeast Alaska

28

Southcentral Alaska

("Anchorage Service Unit")

- Southcentral Foundation provides
  - direct primary care and community health services in Anchorage, the Matanuska-Susitna Valley, the upper Kuskokwim area, and the Iliamna area
  - primary care support for sixteen (16) Native health organizations in rural Southcentral Alaska

29

Alaska Native Tribal Health Consortium

- Created in 1998 with Congressional authorization
- Provider of statewide health services, supporting all Alaska tribal health organizations and communities
- 1,800 employees
- Provides:
  - Tertiary and specialty medical care,
  - Community health and research,
  - Environmental health & engineering, including water and sanitation facilities construction & management
  - Health information technology services
  - Professional recruitment

30

Alaska Native Medical Center

- Jointly managed by ANTHC (statewide) and Southcentral Foundation (regional)
- Primary hospital services for Alaska Natives from Anchorage and rural Southcentral Alaska
- Tertiary/specialty hospital for all regions

31

Alaska Native Medical Center, Anchorage

32

Alaska Native Medical Center

- 150 beds
- 6,500+ admissions annually
- 1,400+ infants delivered annually
- 385,000 specialty/primary outpatient visits
- 11,000+ surgeries and endoscopies
- 250 medical staff, 700+ nurses
- $250 M operating budget (ANTHC+SCF)

33

Residential Treatment Centers

-Southcentral Foundation (Adolescents/Women)
-Cook Inlet Tribal Council (adults)
-Yukon Kuskokwim Health Corporation
(adolescent inhalant/adults)
-Fairbanks Native Association (adult/adolescent)
-Tanana Chiefs Conference (recovery camp)
-Maniilaq (adult recovery camp)
-SEARHC (youth/adult/women)
-Copper River (family/youth recovery camp)

34

Dental Services

- 14 regional hub dental clinics provide itinerant services to 150 villages
  - 3 to 50 chairs per clinic
- Dentists spend up to 15 weeks a year traveling for village services
- System-wide: 65 dentists/25 vacancies
- ANTHC is training and deploying mid-level Dental Health Aide Therapists

35

Community Health Services

- Medical system is complemented by 'wraparound' community health services programs, provided by tribes and tribal health organizations, and supported by ANTHC:
  - health promotion/disease prevention
  - health research
  - injury prevention
  - food safety monitoring
  - emergency preparedness
  - immunizations

36

Health Facilities

- Annual federal investment in building, renovating, and maintaining Alaska Native health facilities is estimated at $55 million
- ANMC needs a $100M+ expansion
- Barrow and Nome hospitals are ready for replacement at over $100M each
- Nearly 100 primary care clinics have been replaced, another 50+ need replacement
- Long-term care facilities are also needed

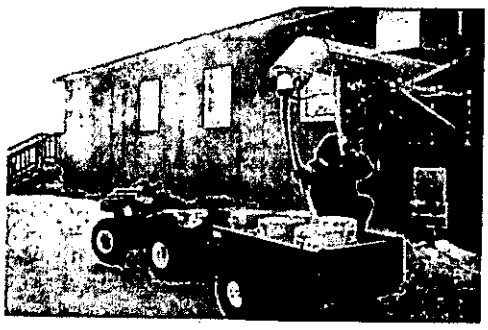
37

Sanitation Facilities Construction

- Statewide funding for all Native community water and sanitation facility projects estimated at $60 million annually from all sources (State, HUD, EPA, Rural Development, Indian Health Service)
- $600 million+ unmet need remains: primarily in 40 western Alaska communities

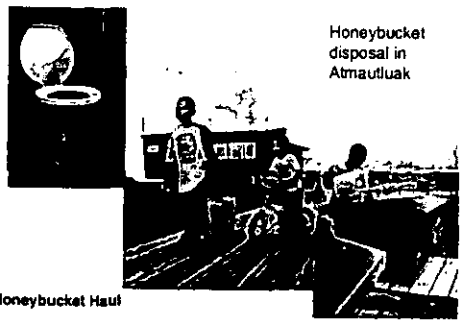
38

Community Watering Points



39

"Honeybucket Haul Systems"



Honeybucket disposal in Atmautluak

Honeybucket Haul

40

Water Service Utilidors

41

Why invest in sanitation?

- Infants in communities without adequate sanitation are:
  - 11 times more likely to be hospitalized for respiratory infections
  - 5 times more likely to be hospitalized for skin infections

42

ATHS Employment & Economic Impact

- Alaska Native tribes and tribal health organizations employ over 7,000 full and part-time staff statewide
- Resources circulate in the state because we are local

43

Some major Alaska Native health initiatives

- *Care coordination* for chronic/high-acuity patients
- *Electronic Health Records* deployment
- Tribal *long-term care*, residential and home-based services development
- *Alternative health resources* enhancement (Medicaid, Medicare, insurance)
- *Wellness/health promotion* effort

44

Sustainability Issues

- The Indian Health Service funds only 51% of the level of funding needed to provide basic health care services.
- IHS funding does not keep pace with basic medical inflation.
- IHS funding is "discretionary" and competes with national parks for funding.

45

Sustainability Issues

- *Severe underfunding of the Indian Health System results in layoffs & reduction in services:*
- Due to the gap between IHS funding and need, health services to AI/ANs are severely rationed.
- Funding levels especially restrict:
  - Adult dental care
  - Non-hospital skilled nursing care
  - Rehabilitation, substance abuse treatment
  - Behavioral health services
  - Psychiatric care

46

Authority to Bill

- Due to this disparity, Congress authorized IHS facilities to recover reimbursements from:
  - Medicaid,
  - Medicare, and
  - State Children's Health Insurance Programs (ie. Denali KidCare)

47

Partnership with State

- Long Term Care
  - Home & Community Based Services
  - Residential
- Behavioral Health Continuum of Care
- Financial Infrastructure
- Managed Care Feasibility

48

Alaska Benefits

- The Centers for Medicare & Medicaid Services (CMS) provides a Federal Medical Assistance Percentage (FMAP) of 51% to the State of Alaska.
- However, State receives 100% FMAP for AI/AN patients who receive their care in an IHS facility.
  - A 49% savings to the State General Fund when patients use the ATHS.

49

Sustainability Issues

- *Facility Demands*
  - *Facility Development Innovations*
    - *Joint Venture*
    - *Small Ambulatory Program*
  - *Facility Operational Needs*
    - *Medical Equipment Replacement*
    - *Facility & Environmental Support*
    - *Maintenance & Improvement*
    - *Village Built Clinic Lease Program*
  - *Other Facility needs*
    - *Long Term Care Facilities*
    - *Residential Alcohol & Substance Abuse Facilities*

50

Sustainability Issues

- *Energy Crisis and its impact on health*
  - *Increase in demand for health services*
  - *Decrease in ATHS ability to provide care*

51

Sustainability Issues: Energy Crisis

- Increase in demand for health services
  - infectious disease due to overcrowded homes (especially in communities without sanitation facilities)
  - behavioral health needs as families begin to experience increased financial pressures
  - Compromised health due to inability to maintain body heat, especially for those with compromised immune systems
  - People who are reliant on durable medical equipment who are not able to pay for increased electrical costs will increase need for emergency care

52

Sustainability Issues: Energy Crisis

- Decrease in ability to provide care
  - Fuel and electricity costs already represented 33% of the cost of clinic operations before the energy crisis
  - Rising fuel and electricity costs combined with chronic underfunding result in exceed the capacity to provide the care
  - Clinics are limiting hours of operation during a time we expect to see an increased demand for health care

53

Sustainability Issues: Energy Crisis

- Need to address sustainability
  - Facility costs for addressing energy needs for:
    - Clinics
    - Hospitals
    - Sanitation Facilities
  - Operating Costs to meet additional burdens on
    - Additional demand for care
    - Transportation costs
    - Increased supply costs
    - Special consideration needs to be made for populations in which there is no other health care provider

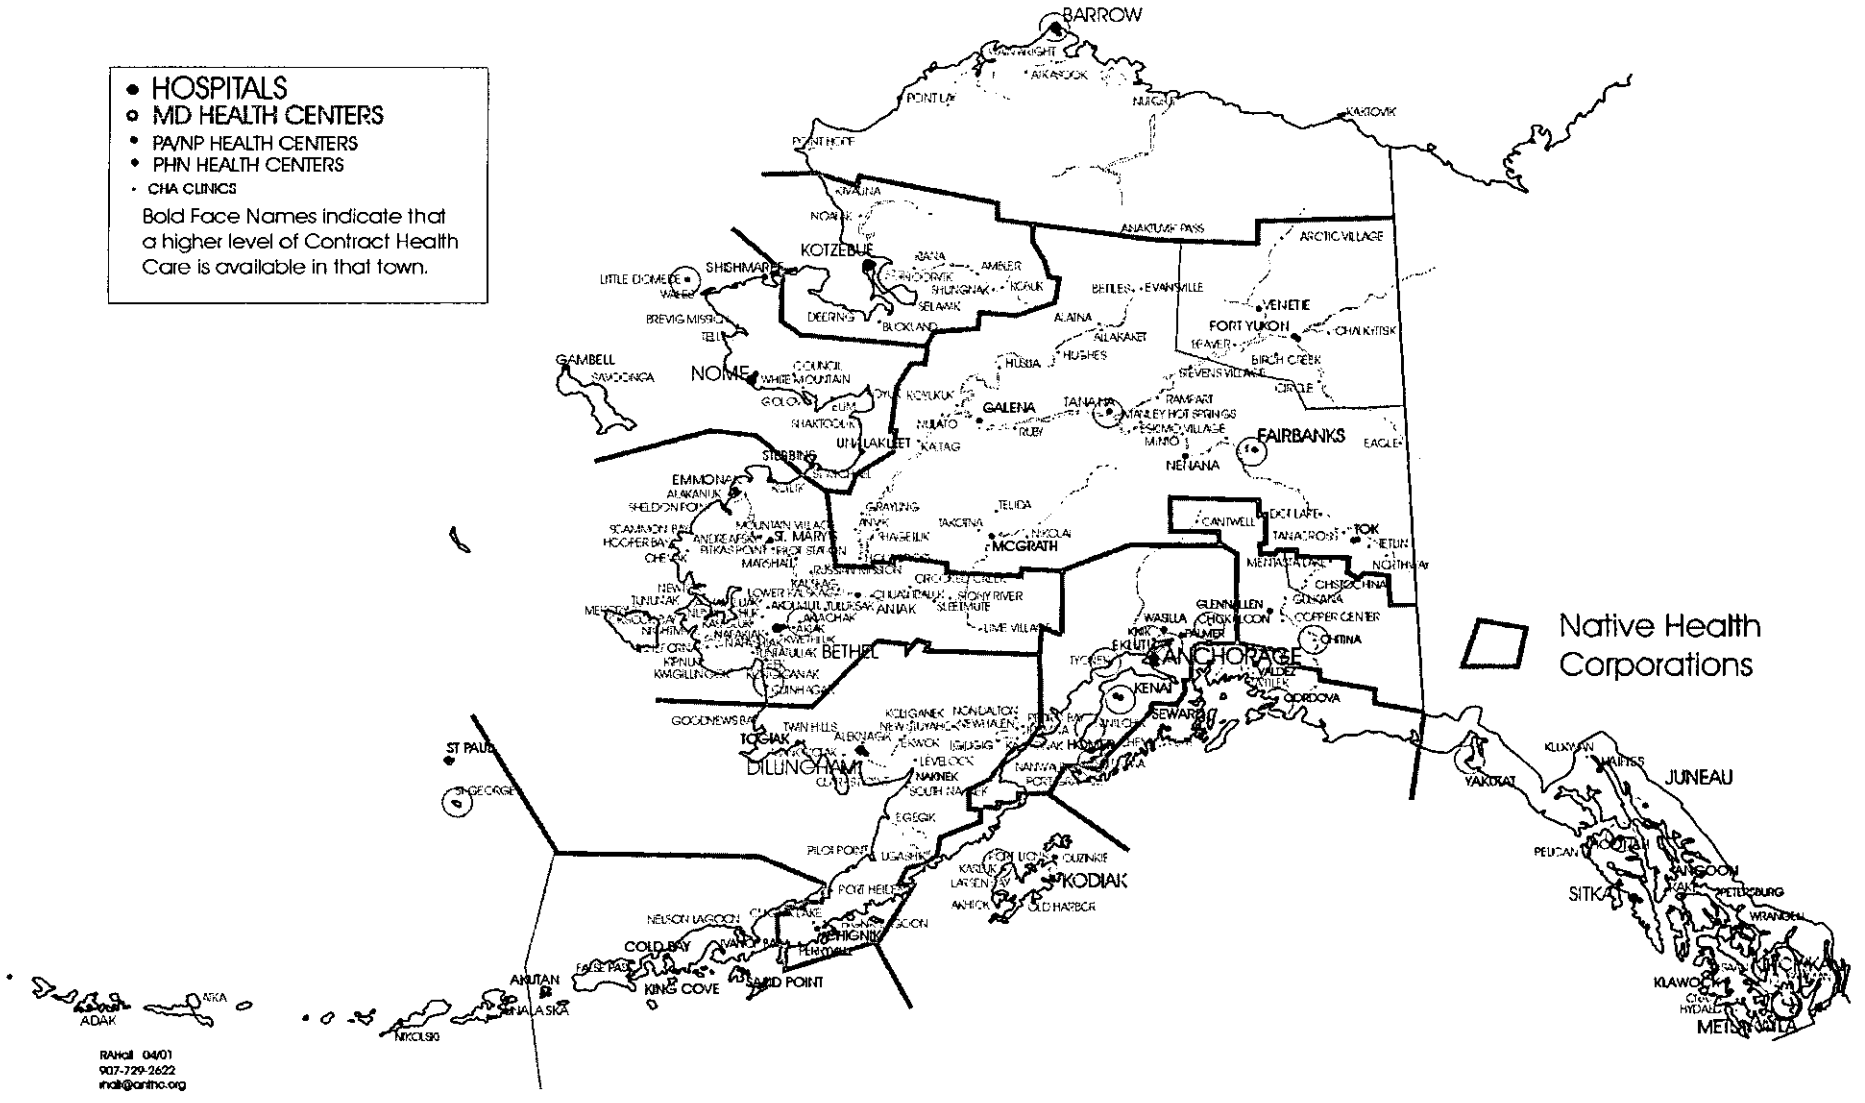
2007 Alaska Economic Trends

THE ALASKA NATIVE HEALTH CARE SYSTEM

Location Names and Service Level



RAHall 04/01
907-729-2622
rhall@anthc.org

Tribal Health Overview

- Tribal health care has improved health for Alaska Natives
- Disease rate have dropped dramatically due to:
  - Improved access to health care
  - Increase in basic public health measures
    - Childhood and Other Vaccines
    - Sanitation and Water Facilities
- However, there are challenges
  - Chronic under-funding
  - Staffing shortages
  - Increasing health care costs
  - Growing Alaska Native population
- Coupled with inadequate funding for Indian Health Service (IHS) for many years
  - Increases have not kept up with yearly inflation rates or medical cost inflation

A Perfect Storm

- Socio-economic Status
  - Remote Communities with little economic base
  - High unemployment rates
  - Low income levels
- Health Care Issues: A Perfect Storm
  - Travel farther than others to receive health care services
  - With money they don't have
  - Usually much sicker and with more medical issues than the average person by the time they receive care at a health facility
  - Fewer medical resources available
  - Higher costs than other facilities in the United States

2306

State Priorities

- Energy Solutions for Health Care
- Medicaid
- Behavioral Health
- Water & Sanitation
- Electronic Health Records
- Ensuring Safe Communities

2307

Energy Solutions for Health Care

- Power Cost Equalization
  - Fully fund for FY10 Operating Budget
  - Expansion of Regulation to include
    - Clinics
    - Non-Profits
- Additional Energy Assistance

Medicaid

- ANHB encourages the State of Alaska to continue to invest in demonstration projects to test innovative approaches through the ATHS
- Any proposed changes to current Medicaid policy should:
  - Enhance or maintain access to Medicaid by vulnerable residents
  - Expand or maintain types of services currently covered by Medicaid
  - Ensure payment rates cover the entire cost of providing the service
  - Improve health, save lives, and reduce emergency health care costs

Behavioral Health

- Support behavioral health grants and programs by utilizing the tribal consultation methodology to direct funding in the most effective manner
- Continue financial support for the Alaska Tribal-State Forums on domestic violence, child abuse, child neglect and sexual assault
- Additional funding to establish housing and treatment options for severely and chronically mentally ill
- Support and funding for the Rural Psychiatric Treatment Center (RPTC) programs
- Strongly supports Suicide Prevention programs which are culturally appropriate and impactful

2310

Water & Sanitation

- Village Safe Water Program support to design and construct water and sanitation facilities in rural Alaska
- Operations & Maintenance Subsidy
  - $15 million investment to support water and sewer operations and maintenance for one year would help protect public health, the major capital investment in this infrastructure, and help extend the life of water and sewer systems

Electronic Health Records

- State appropriations to support the Alaska eHealth Network focusing on the deployment of electronic health records and a system for private, secure exchange of health information between medical providers, their patients, and the payers
- Support for electronic health records to allow for greater continuity of care, less medical and pharmacy errors, and greater efficiency

Ensuring Safe Communities

- Substantial and ongoing increases in funding for VPSO program
  - Greater need for first responders
  - Shortage causes CHA/Ps to take on much of this work
  - But the partnership is essential to both to reduce burnout and provide needed service

Additional: Workforce Development

- High vacancy rates:

Occupational Groups	Statewide Estimates			
	Positions	Vacancies	Vacancy Rate	*Tribal Vacancy*
All Occupations	34738	3529	**10.2%**	***16.5%***
Physicians	1931	226	**11.7%**	***27.1%***
Professional Nurses	7139	696	**9.8%**	***15.5%***
CNA/LPN/PCA/HHA	1762	111	**6.3%**	***14.3%***
Dentist/Pharmacists/ Therapists	2281	404	**17.7%**	***42.9%***
Behavioral Health	7450	1033	**13.9%**	***14.5%***

- Support for loan repayment and incentive programs
- Increased outreach and workforce development opportunities

Ensuring Safe Communities 14

ALASKA TRIBAL HEALTH SYSTEM

The health status of American Indians and Alaska Natives (AI/ANs) is much poorer than that of the average American. Many live in remote communities with little economic base, high unemployment rates and low income levels. These conditions result in a "perfect storm" of health care obstacles: AI/ANs in Alaska travel farther than others to receive health care services with money they don't have, and are much sicker, with more medical issues, than the average person by the time they receive care at a health facility that has fewer resources and higher costs than other facilities in the United States.

Funding for health has led to improved Alaska Native health status
Despite these obstacles the Alaska Tribal Health System (ATHS) has worked to improve health for Alaska Natives. Rates for diseases, such as tuberculosis, have dropped dramatically with improved access to health care and basic public health measures, like childhood vaccinations and installing water and sewer systems in rural Alaska. Between 1950 and 1997, Alaska Native life expectancy rose from 46 years to 68 years of age (ISER, Status of Alaska Natives Report, 2004).

Still, Alaska Natives continue to suffer from significantly higher rates of suicide, violent injury, and unintentional injury than the general population and face unprecedented rates of cancer, obesity, and diabetes. The ATHS provides a broad range of services, consistently improving health care delivery. However, chronic under-funding, increasing health care costs, and a growing Alaska Native population are hampering much needed progress.

Funding has not kept pace with need, inflation
The Indian Health Service (IHS) has not received adequate funding for many years. Modest increases have not kept up with inflation, increasing medical costs, or the ever expanding funding gap.

Overview of the Alaska Tribal Health System
ATHS is a multifaceted, interdependent healthcare system with sophisticated patterns of referral developed over 40 years by Alaska's 231 federally recognized Tribes. The ATHS strives to provide better health care to our people, half of whom live in remote communities across 586,412 square miles of largely road-less land. Alaska's Tribes and Tribal organizations manage more than 99 percent of IHS programs under the Indian Self-Determination and Education Assistance Act and, since 1994, the Alaska Tribal Health Compact, allowing federal programs to be redesigned to meet the needs in Alaska.

The Alaska Native Health Board (ANHB) is the statewide voice of Alaska Native health advocacy, consistently emphasizing the importance of self-determination in healthcare services and encouraging wellness in Native communities through policy change. The ANHB continues a 40 year commitment to ensuring healthier Alaskan Natives. ANHB encourages our federal and state policymakers to join us in finding solutions and funding to help us save lives, improve Alaska Native health, and use resources more efficiently and effectively.

The Alaska Native Health Board (ANHB) represents 24 tribal health organizations serving approximately 130,000 Alaska Native and American Indian individuals. These priorities reflect the current state needs of these members and will be the focus of ANHB state advocacy for Fiscal Year 2010.

PRIORITY ONE: ENERGY SOLUTIONS FOR HEALTH CARE

ANHB urges the Legislature to continue the Power Cost Equalization (PCE) benefit at 100% for FY09 and to fully fund PCE in the Administration's FY10 operating budget. The PCE should be expanded via regulation in three crucial ways for it to be truly effective in rural Alaska:

- Include Clinics, regardless of funding source
- Include non-profits
- Include fuel/heating oil

PRIORITY TWO: MEDICAID SUPPORT AND FUNDING

The federal government covers 100% of Medicaid payments for Alaska Native Medicaid beneficiaries if they receive care from the Alaska Tribal Health System (ATHS). This provides a unique opportunity for the State of Alaska to improve the health of Alaska Natives and save money by:

- Continuing to invest in demonstration projects to test innovative approaches through the ATHS.

PRIORITY THREE: BEHAVIORAL HEALTH SUPPORT & FUNDING

ANHB invites the State Legislature to support the Governor's request for $19.1 million in behavioral health grants. The increased funding level will help address significant unmet needs by:

- Enabling DHSS grant funded programs for domestic violence, mental health, suicide prevention, and substance abuse services to operate in rural Alaska,
- Train providers, community based counselors and behavioral health aides.

DOMESTIC VIOLENCE, CHILD NEGLECT & ABUSE

Continued financial support for Alaska Tribal-State Forums on domestic violence, child abuse, child neglect and sexual assault (DV/CA/CN/SA), as well as increased funding for programs and shelters in Alaska Native communities.

SEVERELY AND CHRONICALLY MENTALLY ILL – HOUSING

ANHB urges support for additional funding to establish housing and treatment options for the severely and chronically mentally ill.

BRING THE KIDS HOME

ANHB encourages continued support and funding for the Rural Psychiatric Treatment Center (RPTC) programs. RPTC programs are needed to ensure children are able to obtain treatment as close to home as possible and provide in-state options for care.

PRIORITY FOUR: WATER AND SANITATION SUPPORT & FUNDING

VILLAGE SAFE WATER PROGRAM

ANHB requests support for $22.9 million for the State's Village Safe Water (VSW) program to design and construct water and server facilities in rural Alaska.

OPERATIONS & MAINTENANCE SUBSIDY

An investment of $15 million for water and sewer operation and maintenance for one year would help protect public health, the capital investment in the infrastructure and help extend the life of water and sewer systems.

PRIORITY FIVE: ELECTRONIC HEALTH RECORDS SUPPORT & FUNDING

ANHB recommends a state appropriation of $6.5 million to support the Alaska eHealth Network focusing on the deployment of electronic health records (EHR) and a system for private, secure exchange of health information (HIE) between medical providers, their patients, and the payers.

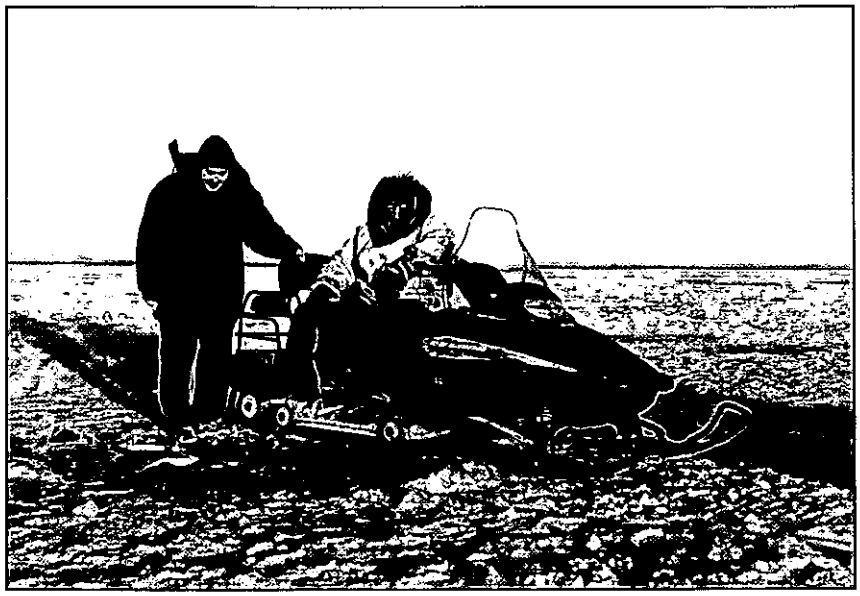
ELECTRONIC HEALTH RECORDS RPMS

The Alaska Tribes propose that all E-health initiatives allocate a percentage of funds to support the Indian Health Service Resource and Patient Management System (RPMS) public domain system.

PRIORITY SIX: ENSURING SAFE COMMUNITIES

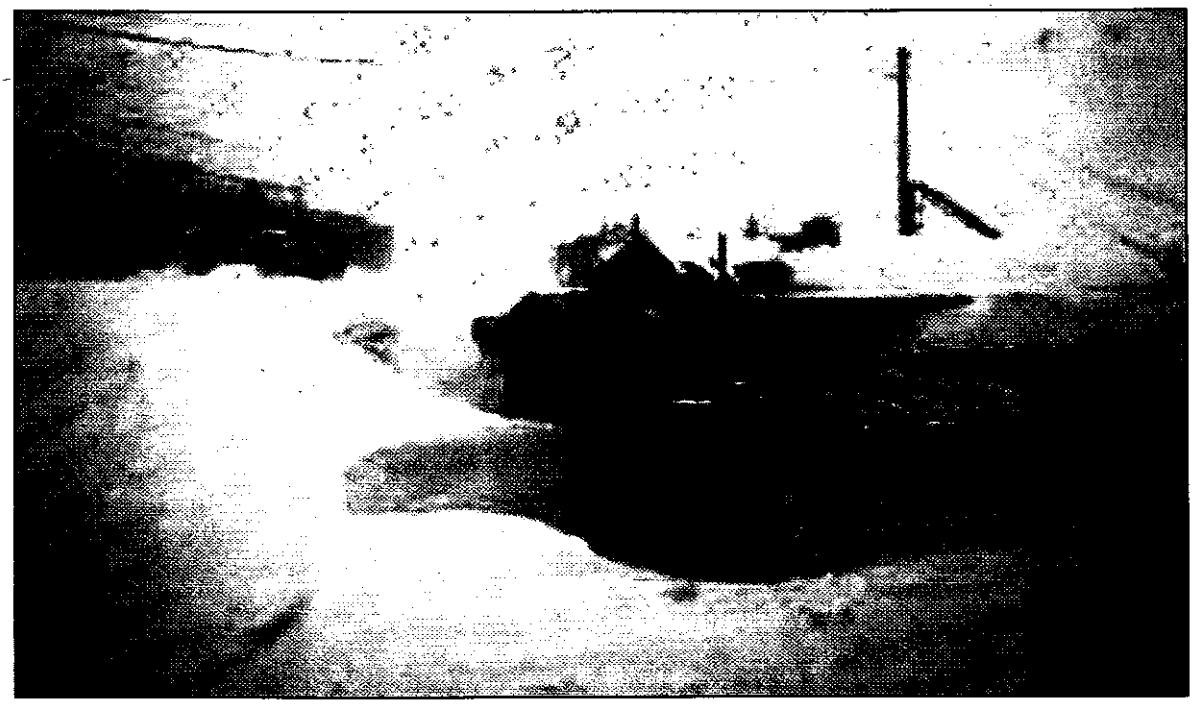
ANHB recommends substantial and ongoing increases in funding for the Village Public Safety Officer program *(VPSO)*. In December 2005, there were only 48 VPSOs across the entire state. At least 147 were needed. As a result of the shortage, victims of violent crimes in rural Alaska communities often wait days before a State Trooper can respond.

Priority One: Energy Solutions for Health Care Across Alaska



Rural Alaska has been battling the Energy Crisis for years, but the burden of the crisis has become so severe that Alaskans are being forced to choose between heating their home or hunting for food for their families. In a time of surplus, no one should have to make this choice. It is time to be inclusive of those in the hardest position and be innovative in leading future alternative energy solutions.

Higher utility and operational costs are negatively impacting health care delivery throughout Alaska, especially in Rural Alaska.



Alaska Native Health Board (ANHB) urges the Legislature to continue the Power Cost Equalization (PCE) benefit at 100% for FY09 and to fully fund PCE in the Administration's FY10 operating budget.

The goal of the PCE program is to provide economic assistance to customers in rural areas of Alaska where the kilowatt/hour charge for electricity can be 3 to 5 times higher than the charge in more urban areas of the state. PCE only pays a portion of approximately 30% of all KWh's sold by the participating utilities. PCE helps small rural areas maintain the availability of communications and the operation of basic infrastructure and systems, including water and sewer, incinerators, heat and light. In order for a clinic to qualify for PCE:

- Must be designated as a Community facility
- Clinics that are designated as government facilities do not qualify for PCE

The PCE should be expanded via regulation in three crucial ways for it to be truly effective in rural Alaska:

- **Include Clinics, regardless of funding source**
- **Include non-profits**
- **Include fuel/heating oil**

Priority Two: Medicaid Support and Funding

The federal government covers 100% of Medicaid payments for Alaska Native Medicaid beneficiaries if they receive care from the Alaska Tribal Health System (ATHS). **This provides a unique opportunity for the State of Alaska to improve the health of Alaska Natives and save money by:**

- **Fully funding and supporting Medicaid, and**
- **Continuing to invest in demonstration projects to test innovative approaches through the ATHS.**

While Alaska Natives are 19% of the state's population, in State FY 2005:

- Natives were 38.8% of the Medicaid-eligible population,
- Of these, almost 70% were children, and
- Of all Medicaid eligible Natives, 88.1% used some form of Medicaid services. (*FY 2005 Tribal Medicaid Activity, State of Alaska DHSS*)

Medicaid is important to Alaska Natives because of the high unemployment and poverty rates in our communities. Like all low/no-income families and children, Alaska Natives who qualify for Medicaid are at higher risk of diseases, injury, and premature death. Ensuring Medicaid covers basic health care for Alaska's most vulnerable residents will decrease costs associated with emergency room visits, increased disease, more complex care, and higher death rates for these Alaskans.

Priority Two: Medicaid Support and Funding

Any proposed changes to current Medicaid policy should:

- **Enhance or maintain access to Medicaid by vulnerable residents**
- **Expand or maintain types of services currently covered by Medicaid**
- **Ensure payment rates cover the entire cost of providing the service**
- **Improve health, save lives and reduce emergency health care costs**

Medicaid helps Alaskans avoid huge social and economic costs otherwise borne by the State and its residents. The State of Alaska will realize substantial cost-savings by continuing to collaborate with the Alaska Tribal Health System.

Priority Three: Behavioral Health Support and Funding

Many Alaska Natives still do not have access to behavioral health services despite the clear need. An integrated health system requires availability of qualified and trained behavioral health providers in every community. The full establishment of this vision is only possible with State financing which supports the concept of services in the right place and at the right time to prevent escalation of the need for more intensive and costly services. To assist in meeting this vision, the following program support and funding is needed.

ANHB invites the State Legislature to support the Governor's request for $19.1 million in behavioral health grants and provide support for behavioral health programs and utilizing the tribal consultation methodology to direct the funding in the most effective manner.

The increased funding level will help address significant unmet needs by:

- Enabling DHSS grant funded programs for domestic violence, mental health, suicide prevention, and substance abuse to operate in rural Alaska,
- Support substance abuse and mental health services, and
- Train providers, community based counselors and behavioral health aides.

Many other health challenges facing Alaska Natives are tied to behavioral health conditions; chief among these is substance abuse. The combination of substance abuse and mental illness is associated with much higher rates of multiple diseases and early death:

- 1 in 11 Alaska Native deaths is alcohol-induced
- Alcohol was the 4th leading cause of death from 1993 to 2002 (*Alaska Bureau of Vital Statistics*)
- Alcohol contributed to 85% of reported domestic violence cases and 80% of reported sexual assault cases between 2000-2003 (*ISER, Status of Alaska Native Report, 2004*)
- Suicide among Alaska Natives remained steadily at 2 times the non-Native rate from 1992 to 2000 (*Alaska Bureau of Vital Statistics*).

DOMESTIC VIOLENCE, CHILD NEGLECT & ABUSE
Continued financial support for Alaska Tribal-State Forums on domestic violence, child abuse, child neglect and sexual assault (DV/CA/CN/SA), as well as increased funding for programs and shelters in Alaska Native communities are direly needed.

Additional support is needed because:

- For the past 27 years, Alaska has ranked nationally in the top five for DV/CA/CN/SA
- American Indian/Alaska Native (AI/AN) people are victimized 3-4 times more frequently than other Alaskans
- Alaska's child sexual assault rate is 6 times the national average
- 75% of AI/AN women are physically and/or sexually assaulted during their lifetime
- In 2005, 62.5% of female homicide victims murdered by men were AI/AN

SEVERELY AND CHRONICALLY MENTALLY ILL– HOUSING

ANHB urges support for additional funding to establish housing and treatment options for the severely and chronically mentally ill. Among AI/AN people with mental illness, the morbidity rates for various mental illnesses are astronomically higher (alcoholism=770% higher; suicide=190% higher) than those of their non-Native peers. (*National Alliance on Mental Illness 2003 Strategic Plan*)

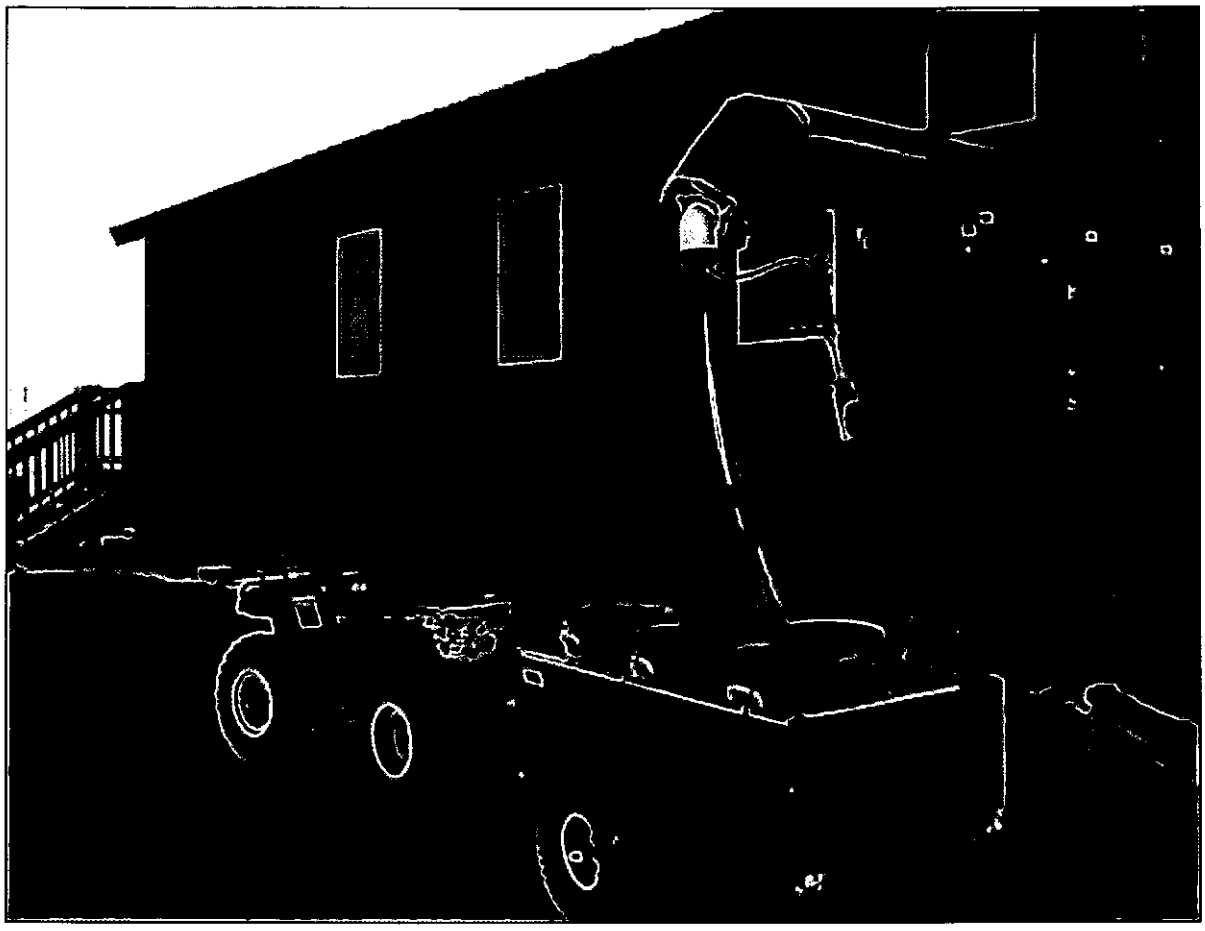
- 33.5% of 21,037 Alaska's State Mental Health Authority clients for 2006 were AI/AN people; this figure represents 6.6 % of the total AI/AN in Alaska, more than double the rate for all Alaskans, and three times the rate for all Americans. (*US HHS Center for Mental Health Services 2006 State Report for Alaska*)
- 36 % of homeless Alaskans are Alaska Native people (who comprise 19 % of the state's total population).
- 4,700 Alaskans are released from institutional care (prisons, state hospitals) to homelessness; 35% of Alaska prison inmates surveyed said they had no place to reside upon release and would enter a homeless shelter or live on the streets.

BRING THE KIDS HOME: Number of Alaska Native children in out-of-state RPTC

ANHB encourages continued support and funding for the Rural Psychiatric Treatment Center (RPTC) programs. RPTC programs are needed to ensure children can obtain treatment close to home and provide in-state options for care.

On May 5, 2008, there were 281 children in out-of-state care. Of these, 33% were Alaska Native youth. All six state regions had Alaska Native youth in out-of state care. The largest proportion of these youth were from the Anchorage region (40%), followed by the Northern region (26%), the Southeast region (11%), both the Mat-Su and Southwest regions (8% each), and finally the Kenai Peninsula region (4%). Home regions were not recorded in slightly over 3% of the Alaska Native youth in out-of-state care.

Priority Four: Water and Sanitation Support and Funding



VILLAGE SAFE WATER (VSW) PROGRAM

There is an urgent and continuing need for safe running water and wastewater systems in many rural communities in our state.

- More than 6,000 homes in rural Alaska are without safe drinking water
- Nearly 14,000 homes require upgrades or improvements to their water, sewer, or solid waste systems to meet minimum sanitation standards
- Leveraging state dollars brings 3 times as many federal dollars to provide safe drinking water and sewage systems to rural households in Alaska

The VSW Act has been momentous to the construction of sanitation systems. In 2005, the Department of Environmental Conservation, VSW received $74 million in federal funding for design and construction of sanitation projects. This funding requires a state match at the rate of $1 for every $3 in federal funding and in FY08 State funding required amounted to just over $18 million.

ANHB requests support for $22.9 million for the State's Village Safe Water (VSW) program to design and construct water and server facilities in rural Alaska.

OPERATIONS & MAINTENANCE SUBSIDY

Having adequate financial resources for water and sewer O&M is necessary for protecting public health as well as the $2.5 billion capital investment in the water and sewer infrastructure.

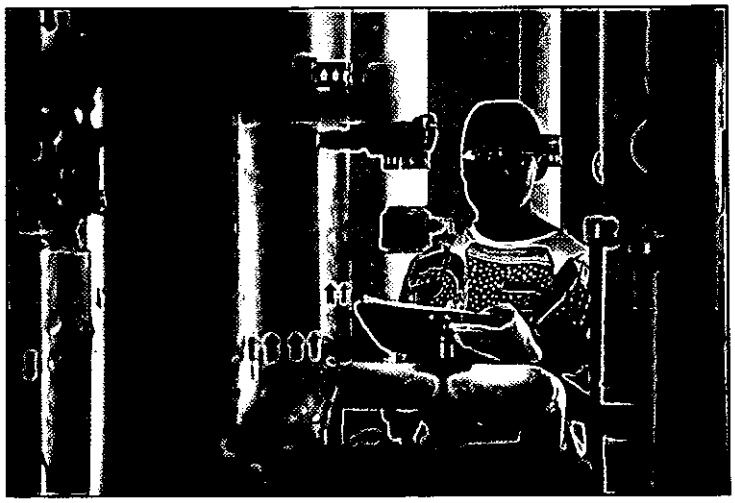
High operational costs due to exorbitant fuel and energy costs, may result in rural water systems being shut down during the winter months. A large percentage of rural residents have limited seasonal incomes that prevent many rural water utilities from generating the revenue necessary to operate effectively without an outside subsidy. Water utility operations have historically been underfunded, resulting in decreased operational life of infrastructure and unreliable water service in many rural villages.

Ineffective or non-existent attention to the O&M of water and sewer systems is a major, long standing threat to the health and economic well being of Alaska Native people.

- Health benefits are generally not seen until people use 8 to 14 gallons of water per day per person.
- Rural residents who travel to haul their water are reported to use as little as 1.8 gallons per day, while the average American uses 80 to 100 gallons per day.

ANHB looks forward to the day when we can report to the Legislature that all the households in rural Alaska have adequate water and sewage systems.

An investment of $15 million for water and sewer operation and maintenance for one year would help protect public health, the capital investment in the infrastructure and help extend the life of water and sewer systems.



Priority Five: Electronic Health Records Support and Funding

ANHB recommends a state appropriation of $6.5 million to support the Alaska eHealth Network focusing on the deployment of electronic health records (EHR) and a system for private, secure exchange of health information (HIE) between medical providers, their patients, and the payers. State assistance will help to ensure that EHR and HIE become part of the strategy for health care reform in Alaska. The EHR Network is a vital step in making health information exchanges a reality in Alaska. Studies from other states show real cost savings for purchasers, providers, and other health care entities, and improved quality of health care.

EHR/HIE deployment brings multiple benefits for Alaskans:

- State matching funds will attract larger federal grants for EHR
- Timely access to secure, clear, appropriate information leading to decreased medical errors and quick response to epidemics and bioterrorism
- Better health care for patients, especially in emergencies, through access to more complete medical history, test results, current medications, allergies, etc.
- Recruitment of new medical providers to Alaska through access to advanced medical support systems

Despite soaring health care costs and concerns about improving the quality of care, health information is maintained and transmitted in much the same way that it has for over 50 years resulting in duplication, waste, and health risks. The technology exists today to create electronic health records that are safe, secure, and provide immediate, meaningful access to personal health care information.

The Alaska Tribes propose that all E-health initiatives allocate a percentage of funds to support the Indian Health Service Resource and Patient Management System (RPMS) public domain system.

RPMS is the Indian Health Service IT-solution for all Tribal Health Organizations participating in the GPRA Tribal reporting project. The flexible hardware configures over 50 software applications and combines appropriate network communication components to provide a comprehensive clinical, financial, and administrative solution. ANTHC provides technical support for the Tribal RPMS Users in Alaska. This support includes installation of new and updated software for new and current sites, training on the applications, and tech support for users.

As a whole IHS does not receive adequate funds to support RPMS nationally and has indicated that they may be forced to implement fees in the future for Tribes wishing to fully use the system.

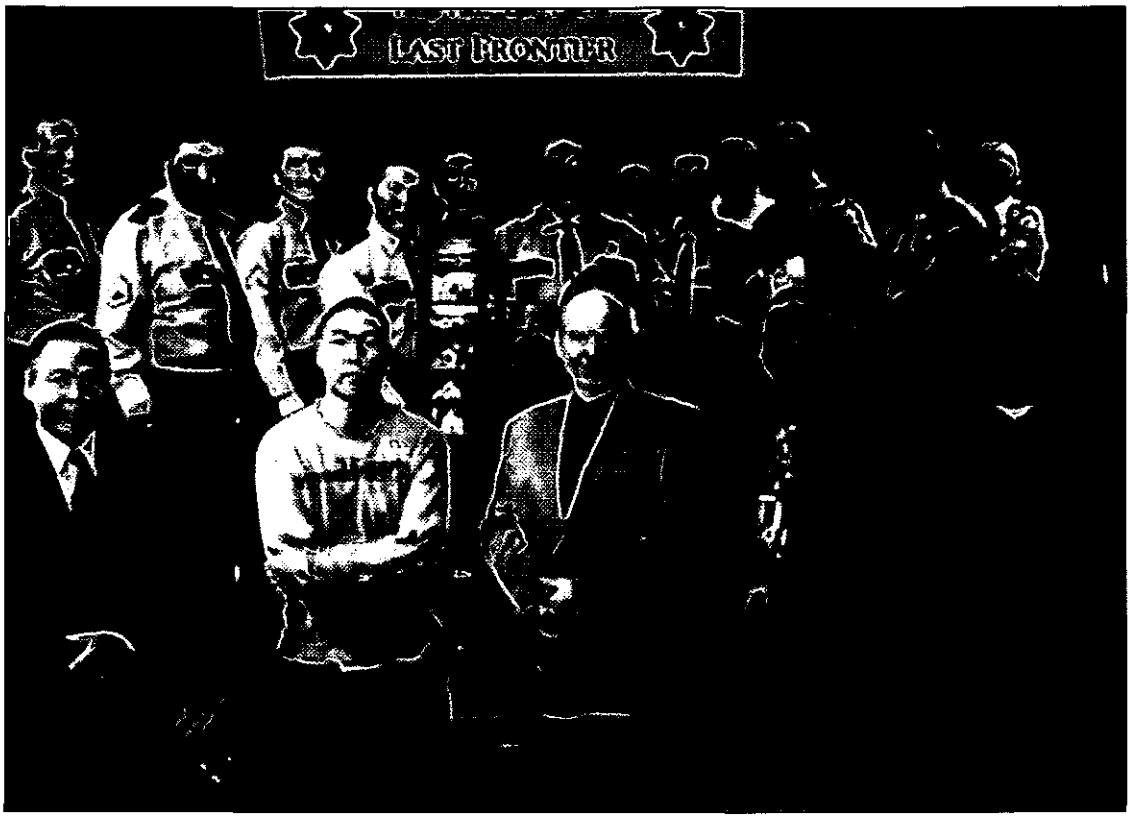
Priority Six: Ensuring Safe Communities



"The Village Public Safety Officer Program was designed to train and employ individuals residing in the village as first responders to public safety emergencies such as search and rescue, fire protection, emergency medical assistance, crime prevention and basic law enforcement. The presence of these officers has had a significant impact on improving the quality of life in the participating villages."

ANHB recommends substantial and ongoing increases in funding for the Village Public Safety Officer program.

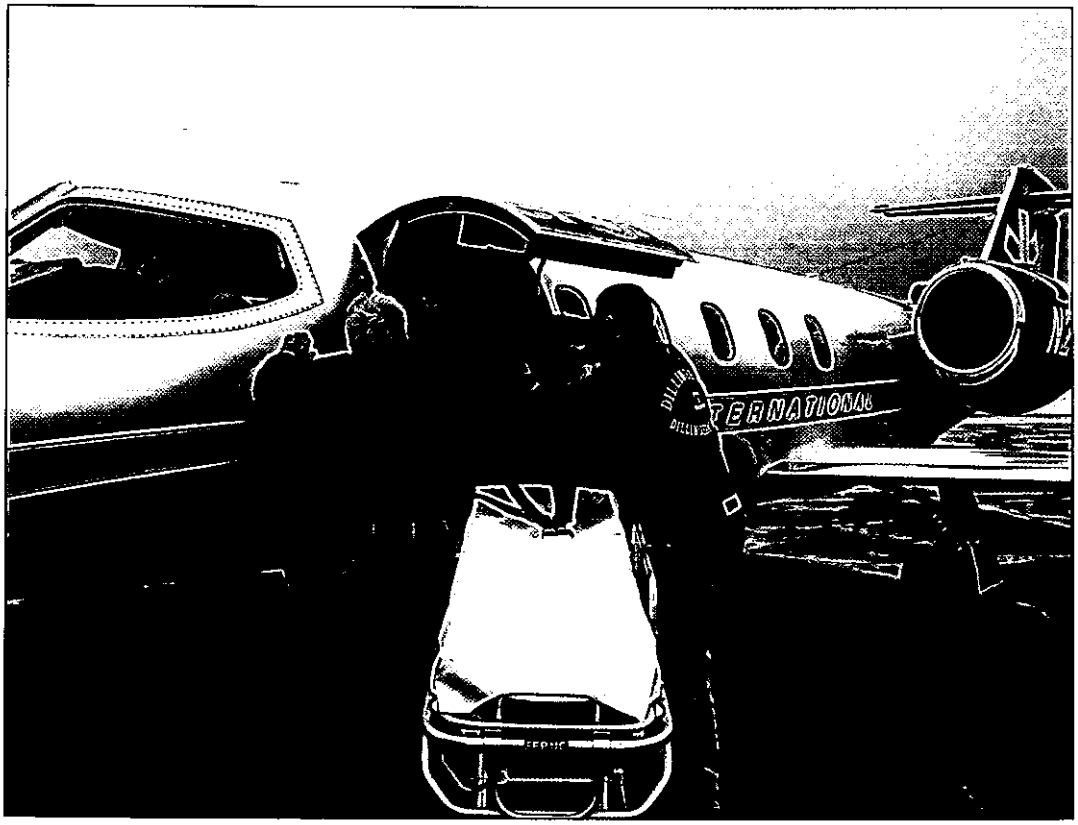
With rising costs of energy moving families into smaller homes and causing greater questions about how families will pay energy bills, is it expected that greater need for first responders to increased domestic violence calls, suicide attempts, violent crimes, and other emergent issues.

Unfortunately, there is a dire shortage of VPSO officers in rural Alaska, despite the original intent of the program. In December 2005, there were only 48 VPSOs across the entire state. At least 147 were needed. As a result of the shortage, victims of violent crimes in rural Alaska communities often wait days before a State Trooper can respond.

In addition, when there is no VPSO in a rural community, Community Health Aides from the local clinic are often called in to be the first responder. During these times, Community Health Aides are not available to provide health care. Also, it is very difficult for proper, high quality health care to be administered amidst crime or in unsafe environments.

Community Health Aides and Community Health Practitioners have been providing primary health care in rural Alaska villages as the first link in the Alaska Tribal Health System.

During major emergencies or epidemics, coordinated responses between VPSO, Volunteer Firemen, Health Aides, and Emergency Medical Services are necessary to the safe provision of health care. However, with a shortage of VPSOs, it can be difficult to provide a unified response.



The Alaska Native Health Board, Alaska Tribal Health System, and our state and federal partners working together to provide the highest quality health care and promote Alaska Native wellness in all aspects of Native life.

Introduction

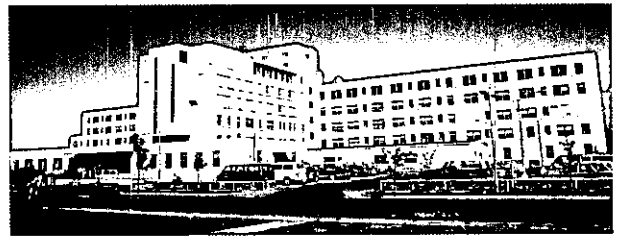
The leaders of the Alaska Native Tribal Health Consortium have a vision: *Alaska Natives are the healthiest people in the world.* To achieve that vision, we work with our customers, members of the Alaska Tribal Health System, and non-Native agencies that share common objectives. We work toward a unified health system to achieve the highest quality services. These efforts continue a journey to wellness that began many years ago.

In the 1800s, infectious diseases such as influenza, smallpox, and tuberculosis (TB) caused deadly epidemics among Alaska Natives. As late as 1950, Alaska Natives had a life expectancy of 47 years, compared to 66 years for non-Natives.

As new remedies became available, that extreme gap between Alaska Native and non-Native life expectancy narrowed, but it didn't close. In 1998, life expectancy was 69 years for Alaska Natives, versus 76 years for non-Natives. Alaska Natives now experience high rates of death from cancer, heart disease, and unintentional injuries. Infectious diseases continue to affect Native people too.

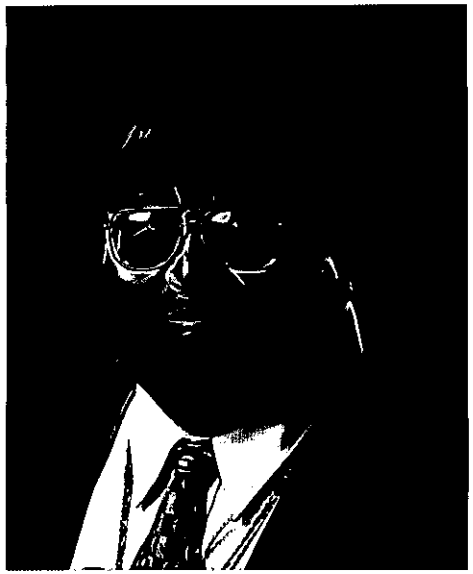
The photographs and timeline in this annual report show some of the steps the Alaska Native Tribal Health Consortium has taken to improve the health status of Alaska Natives since it began operations in 1998. The report outlines the Consortium's achievements during Fiscal Year 2008 (October 1, 2007 to September 30, 2008 or FY08). It shares our hopes for the future.

To help achieve our vision, we ask our employees to provide the highest quality health services, a level of service that makes Alaska Natives proud. We encourage Alaska Natives to make healthy choices and to help keep our families and communities strong. To stay healthy, be informed about health. Be physically active and eat nutritious foods. Be well.



In parts of Alaska in the 1940s, as many as 90 percent of Alaska Natives test positive for tuberculosis (TB). To fight the TB pandemic, the Indian Health Service opens the Anchorage Medical Center of the Alaska Native Service in downtown Anchorage. Commonly called ANS, it serves as a sanitarium until new medications make TB rare, then becomes a medical center offering acute and specialty, as well as outpatient care. *Photos courtesy of University of Alaska Anchorage Archives and Anchorage Museum of History and Art.*

CHAIRMAN OF THE BOARD
AND PRESIDENT



LINCOLN A. BEAN, SR.

Dear friends,

The Alaska Native Tribal Health Consortium is unique. We are the largest, most comprehensive tribal health organization in the nation. Tribal members are our customers and own and manage the company. Moreover, we serve our customers, all across Alaska, throughout their lives.

In the ten years since tribes assumed management of statewide tribal health services in Alaska, tribal health leaders have taken the company in new directions, tailored to tribal needs. In those ten years, the Consortium has taken great, unprecedented, strides to improve the health status of Alaska Native people.

- The percentage of rural Alaska Native homes with water and sewer systems rose from 63 to 76 percent, an increase of 13 percent.
- In 1998, the Alaska Native Medical Center (ANMC) provided medical care for about 100,000 outpatient visits. In FY08, ANMC provided care for more than 400,000 outpatient visits.
- The Consortium has expanded programs to educate and train Alaska Natives in health professions, and has conducted research on many of the priority causes of disease among Alaska Native people.
- Our technological advances have enabled us to improve our level of customer service, and have attracted national awards and international attention for innovation.

In addition, traditional cultures have a strong role in shaping the organization to provide culturally appropriate services.

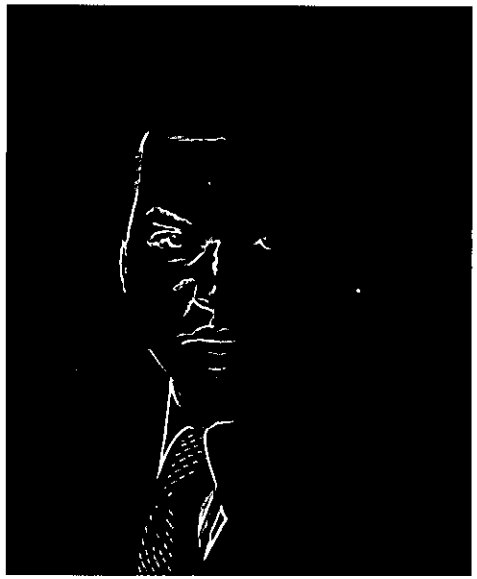
These feats are the result of the hard work and determination of our partners, stakeholders, and employees. I appreciate your continued support and look forward to a bright future. It is a great honor to serve as Board Chairman and President of the Consortium. *Gunalcheesh* (thank you in Tlingit) for the opportunity.

Lincoln A. Bean, Sr.

2334

Don Kashevaroff

CHIEF EXECUTIVE OFFICER



Greetings,

As you may know, I served on the Consortium's Board of Directors for ten years, before becoming the Consortium's Chief Executive Officer in June 2008. To better serve our customers, the Board has overseen many changes and alterations in direction, priorities, and programs.

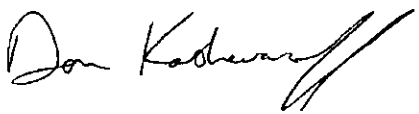
One thing that hasn't changed is that federal funding to meet the health needs of Alaska Native people has been limited. Now we face even greater budgetary challenges. We expect the buying power of public funding to continue to decline due to inflation. In addition, experts predict that the Alaska Native population will keep growing. There is strong demand for ANTHC services and we expect that to continue to grow.

Fortunately, in addition to the funding we receive from the Indian Health Service, we are able to seek funding from other federal agencies. Under tribal management, the Alaska Native Medical Center is able to seek reimbursement from programs such as Medicare and Medicaid, and from private insurance.

In the coming year, the Consortium will more actively reach out to customers who have these forms of insurance. This will bring added dollars into the Alaska Tribal Health System, which helps improve the quality of health services for all Alaska Natives. We also continue to set targets and work toward long-term financial goals. As always, we remain committed to delivering unsurpassed value to every customer.

As you read this annual report, you will see highlights of FY08, and a timeline and photographs outlining achievements from our first ten years. However, our goal is not to stop with these accomplishments. We plan to keep moving forward and working with our people toward a healthier life.

Please let me know how we are doing and how we can improve services across Alaska – many of our achievements have been the result of your comments and suggestions. Thank you for your support.



Don Kashevaroff

ANTHC DIVISIONS

Working as One Family, *Alaska Native Tribal Health Consortium employees cultivate relations that promote trust and value for all parties, or "win-win" relationships. We are building operational excellence – to work faster, better, and at lower costs without compromising the quality of health services we provide. We continue to work to offer exceptional quality services leading to the best outcomes. Our employees strive to be our customers' first choice by exceeding customer expectations in a culturally respectful and positive manner.*

Alaska Native Medical Center

The Alaska Native Medical Center (ANMC)* is part of a network of health care providers located in small village clinics, health centers, and regional hospitals. With other network members, ANMC provides services to patients, and works with their families to help create a warm, healing environment.

ANMC has achieved Magnet Status for nursing excellence, a level of recognition given to only about one percent of all the hospitals in the nation. ANMC is also Alaska's only Level II Trauma Center, the highest level possible in Alaska. It operates full outpatient services and a multi-disciplinary trauma center.

ANMC is a 150-bed inpatient facility and trauma center. The hospital offers a full range of medical services including, for example, board-certified specialists in heart disease, cancer, and in intensive care for babies. ANMC employs close to 250 physicians and midlevel practitioners and more than 525 nurses.

* Together Alaska Native Tribal Health Consortium and Southcentral Foundation jointly own and manage the Alaska Native Medical Center (ANMC) under the terms of Public Law 105-83. These parent organizations have established a Joint Operating Board to ensure unified operations of ANMC.

Alaska Native Medical Center opens on Tudor Road in Anchorage in 1997.

A new era of statewide management of tribal health services begins on June 1, 1998 when the Alaska Area Native Health Service signs a contract transferring statewide services to the Alaska Native Tribal Health Consortium. Pictured here at the signing, seated, from left: Lincoln Bean, SouthEast Alaska Regional Health Consortium; Chris Mandregan, Director, Alaska Area Native Health Service; Alaska Native Tribal Health Consortium Board Chairman Larry Ivanoff, of Norton Sound Health Corporation (NSHC); ANTHC Board Secretary H. Sally Smith, of Bristol Bay Area Health Corporation. Standing, from left to right: Paul Manumik, Yukon-Kuskokwim Health Corporation (YKHC); Ben Atoruk, Manilaq; Evelyn Beeter, Mt. Sanford Tribal Consortium; Connie Chya, Kodiak Area Native Association; Katherine Grosdidier, Southcentral Foundation; Mike Zacharof, Aleutian/Pribilof Islands Association; Henry Hunter, Sr., YKHC; Pat Aamodt, Arctic Slope Native Association; Anne Walker, Chugachmiut; Terrance Booth, Metlakatla Indian Community; and Carolyn Crowder, NSHC.

December 1997 - The US Congress creates the Alaska Native Tribal Health Consortium under Appropriations Legislation, Section 325 (Public Law 105-83).

1998

February 1998 – newly formed Alaska Native Tribal Health Consortium hires its first employee, Chief Executive Officer Paul Sherry.

ANTHC Division of Environmental Health and Engineering works to provide services to some of the 62.8 percent of homes throughout rural Alaska lacking water and sewer service.

Tribal status allows Consortium to collect reimbursements from Medicaid, Medicare, and other insurance payers, which ANTHC uses to expand and improve services for customers.

2336

2337

Division of Environmental Health and Engineering

The Division of Environmental Health and Engineering (DEHE) works to protect the health of Alaska Natives. To stay healthy, it is critical people have safe drinking water, adequate waste disposal facilities, and health care facilities that are properly operated and maintained.

DEHE provides assistance to Alaska Native tribal governments, tribal health organizations, and municipalities across Alaska. It fulfills its role – lasting solutions to promote healthy communities – by providing facility construction and engineering, environmental health support, and tribal utility support. DEHE provides technical support, utility operations, and public works job training to tribal utilities. It assists with utility operations by handling billing and collections.

Division of Community Health Services

The Division of Community Health Services (DCHS) also seeks to elevate the health status of Alaska Native communities. It works directly with many tribal health organizations and with Alaska Native communities to improve the health of Alaska Native families. As just a few examples, DCHS provides these services through:

- Training
- Research
- Health status monitoring
- Promotion of family wellness

DCHS staff develop comprehensive regional and community-based solutions for priority health problems. DCHS provides technical assistance to communities and tribal health programs, and develops partnerships with other agencies for these purposes.

Inventory of sanitization deficiencies in Alaska identifies more than 33,000 types of sanitation assistance needed in Alaska Native homes, with an estimated cost of about $850 million. The only alternative for many villagers is to collect waste in "honey buckets," which they haul to an open lagoon to empty.

July 1999 – Alaska Native Medical Center earns certification as Alaska's only Level II Trauma Center, the highest rating available in Alaska for emergency treatment providers.

October 1999 – Launches statewide telehealth project Alaska Federal Health Care Access Network (AFHCAN), which will allow clinicians statewide to share data for diagnosis and treatment.

1999

January 1999 – Recruits Alaska Natives for engineering externships, with assignments in Bethel, Sitka, and Dillingham.

Working With Our People

One of the Consortium's strategic objectives is to be responsive to our customers' needs, and to provide best-in-class customer service. One way to do this is to increase our ability to support professional development of Native health service providers. This will promote Native employment and foster customer service that is culturally relevant and respectful of Alaska Native cultures.

In FY08, ANTHC created a protocol for assessing community excellence in environmental health. This helps communities decide where to focus limited time and resources to achieve the greatest health benefits.

We conducted research on diseases that are a priority for Alaska Native people and used research results to create better standards of care. Topics included hepatitis, suicide, and helicobacter pylori (a carcinogen and risk factor for gastric cancer).

Nearly 200 Alaska Native Medical Center patients and ANTHC employees enrolled in the Consortium's tobacco cessation (quitting) services. This helps address Alaska Native tobacco use rates that are more than twice the national average.

To increase the ability to provide treatment for nicotine dependence, and to develop or improve on-site programs, ANTHC provided technical assistance to 10 Alaska health care organizations and held its annual tobacco treatment specialist training.

ANTHC worked to ensure agencies address health issues when evaluating and permitting large development projects. We developed a health impact assessment for the proposed expansion of the Red Dog Mine and for oil and gas leasing in the Chukchi and Beaufort seas.

Division of Environmental Health and Engineering works on design and construction of sanitation facilities in more than 70 communities. In 2002, 6,000 homes were still without running water and sewer services.

ANTHC Division of Community Health Services implements a maternal and newborn monitoring program to follow low levels of industrial pollutants now appearing in marine subsistence species.

ANTHC launches a statewide personal health and wellness campaign entitled *Inform and Inspire*, including radio, TV, and print advertising in Alaska. Our message: *Alaska Natives Making Healthy Choices.*

2000

May 2000 - Completes an Alaska Native Health Campus site and facility plan outlining changes needed to accommodate growth, including changes to day surgery, dental operating room, Quyana House, and the laboratory.

Summer 2000 – Begins an internship program to encourage Alaska Native and American Indian high school, under-graduate and graduate students to enter health fields.

November 2000 – Dr. Richard Mandsager retires after nearly 15 years as Alaska Native Medical Center Administrator.

2338

ANTHC coordinated efforts to increase colorectal screening. About 60 percent of colorectal cancer cases would be prevented if those above the age of 50 were screened.

ANTHC banned soda pop sales at all of its facilities. This action supports the health of our customers, employees and visitors, and provides role models of people making healthy choices.

Following the emergence of a few cases of serious, sometimes fatal, vaccine-preventable diseases such as Haemophilus influenzae (Hib) and pneumococcal meningitis, ANTHC began an educational campaign about the importance of receiving vaccinations on schedule.

ANTHC created two Anchorage outreach programs, PROMISE, and Mpowerment, to help reduce the impact of HIV and sexually transmitted disease. We also offered training on HIV and infants, and HIV and dentistry.

ANTHC coordinated several training sessions and statewide meetings. These included workshops on end-of-life decisions, population projections, statistics, and data analysis. We offered mentoring on scientific research techniques.

The Consortium, in partnership with the State of Alaska, held a statewide Maternal and Child Health and Immunization Conference, with two dozen speakers and 30 sessions. Participants included health providers such as midwives, nurses, physicians, and Community Health Aide/Practitioners.

ANTHC held focus groups for parents, interviewed youth, and developed an educational campaign about a vaccine that prevents a virus linked to 70 percent of cervical cancer cases. The prestigious *International Journal of Circumpolar Health* accepted a manuscript on the Consortium's Human Papilloma Virus Parent Focus Group Study.

ANTHC created a suicide prevention video, and began work on a video about historical trauma and its effects on mental and spiritual health.

Staff spoke in international, national, and statewide forums about their research on priority diseases affecting Alaska Natives, a reflection of the significance of their work. These talks included presentations on the Hepatitis B vaccination at the World Health Organization, and on traditional food safety to an Australian conference.

ANTHC helps raise the number of Indian Health Service scholarships from an average of less than a dozen per year to a record 32.

ANTHC assists tribes in administering injury prevention projects involving smoke detector installation, car seats, and float coats.

Completes several hospital remodeling projects, including the day-surgery area, the addition of an operating room, and renovation of the laboratory, and expanded guest areas in Quyana House.

2001

Begins development of a Dental Health Aide program to increase dental care services in rural villages.

March 2001 – ANTHC launches a *Stop the Pop* campaign using letters to schools and stores, support of legislation, and advertising to reduce soda pop consumption and sales in schools.

Constructs $48 million in sanitation facility projects in Alaska Native communities, improving sanitation service to 2,552 homes, 359 of them for the first time.

The Consortium creates the Office of Alaska Native Health Research to study priority issues of Alaska Native health and to train Alaska Native health researchers.

Working With Our Partners

Many federal, state, nonprofit, and private organizations support our vision and share funding, time, and other resources to work toward common outcomes. Working with our customers and partners, the Consortium is in a unique position to continue our leadership role in the national Indian health system and in health services statewide. In FY08, ANTHC worked with its partners on a wide range of projects.

Anticipating the effects of high-energy costs on village utility systems, ANTHC has taken steps to help reduce those impacts. We worked with the State Remote Maintenance Works Program, and the State Department of Commerce and Economic Development to help reduce or eliminate fuel shortages and emergencies.

With the Denali Commission and the people we serve, we helped build six clinics and designed nine clinics in FY08.

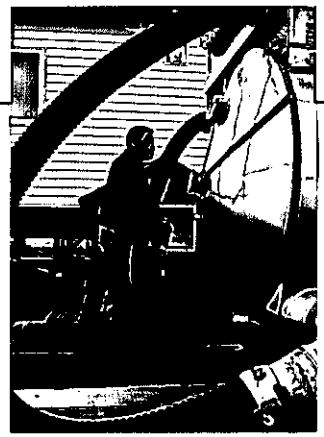
The Consortium co-hosted an international conference on sexually transmitted disease among Alaska Natives and Inuit, First Nations, and Métis of Canada.

With the State of Alaska, ANTHC assisted 100 villages in developing community and clinic disaster plans to reduce rates of preventable injury and disease.

With funding from the Federal Communications Commission, we began work on an "Alaska e-Health Network," an electronic health records system that would allow secure exchange of patient information among Alaska health care providers. This would prevent potential errors and repeated tests, and increase efficiency.

ANTHC raises $4 million in grants to provide training for village-based dental health aides, counseling, and home health care for elders. Dental Health Aide Therapists travel to New Zealand for the best and most cost-effective program training available.

A research project tests the effects of a pneumococcal vaccine that fights serious blood infections, meningitis, and pneumonia.



The ANTHC Division of Environmental Health and Engineering (DEHE) creates the Statewide Utility Association to help member communities connect with resources and create an exchange of knowledge.

DEHE creates the Alaska Utility Supply Center, with a parts warehouse that buys supplies in volume at lower cost and stocks and ships supplies for rural water and sewer systems.

2002

AFHCAN telemedicine project completes goal of providing telemedicine carts to 235 Alaska health care sites.

Division of Environmental Health and Engineering and the Yukon-Kuskokwim Health Corporation create the Regional Utility Cooperative to help reduce outages, improve water quality, lower costs, and provide training.

2340

ANTHC hosted a three-day national Indian Health Service Nursing Leadership Conference with more than 200 participants from across the United States.

With State of Alaska funding, and working with two other tribal health organizations, ANTHC began work to plan and develop new long-term care facilities. ANTHC also completed a feasibility report about long-term care services.

Five staff took part in the Governor's climate change sub-cabinet created to build scientific knowledge, develop policies to protect and prepare for impacts, and assess opportunities to reduce greenhouse gas emissions to decrease the amounts contributing to climate change.

With the Alaska Food Bank, we launched a food distribution program in thirteen villages, with plans to expand it to others.

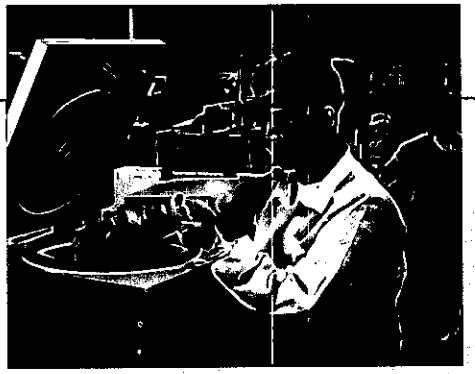
The Consortium sold telehealth technology, now available in any language, to buyers who wish to expand access to health care for people in remote areas. Sales included the first of 15 telehealth cart deployments to Greenland.

The Consortium created the nation's first Dental Health Aide Therapist training facility in partnership with the W.K. Kellogg Foundation, the Rasmuson Foundation, Bethel Community Services Foundation, and academic partner University of Washington.

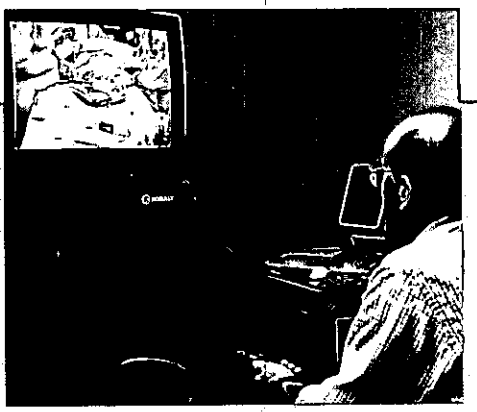
Ten students are in training at two sites, one in Anchorage and the other in Bethel at the Yuut Elitnaurviat (people's learning center) Dental Training Clinic. The first US-trained students will graduate in December 2008.

The success of this program is the result of a huge collaborative effort among tribal health organizations, funding partners, and academic institutions – all working to improve oral health among Alaska Natives.

Alaska Native Medical Center achieves prestigious *Magnet Status* for nursing excellence, an honor achieved by only 1 percent of all US hospitals.



College of American Pathologists reviews Alaska Native Medical Center laboratories and honors it for being in the top 3 percent of laboratories nationally.



Telemedicine helps save the life of a woman who is hemorrhaging and could not be transported to an operating room because heavy fog prohibited air travel. In this photo, Dr. Daniel Szekely uses video teleconferencing to help guide the actual surgery in Kotzebue.

2003

Teleradiology project begins installing equipment in villages, linking health care providers with teleradiology specialists both in and outside Alaska, and reducing time for diagnosis and treatment.

Telemedicine system AFHCAN receives the *Grace Hopper Award for Innovation in Technology.*

Division of Environmental Health and Engineering receives the U.S. Academy of Environmental Engineers Grand Prize in Operations and Management for its work with the Village of Savoonga's water and sewer project.

A Unified Health System

The Consortium is part of the Alaska Tribal Health System, a group of tribal health organizations that work together to promote Native self-determination and health. We work to organize our services so they are in line with services of other Alaska Tribal Health System members. We also work to ensure our internal operations are integrated and aligned with our mission.

ANTHC works with others to ensure patients move smoothly from one location or level of care to another. People representing clinical, patient, and logistical perspectives are considering options on how to redesign processes and develop procedures for use throughout the Alaska Tribal Health System. ANTHC is working to facilitate improvements in areas such as discharge planning, patient referrals, and patient travel.

ANTHC staff met with people from other tribal facilities and formed a laboratory quality assurance committee to ensure accurate and timely laboratory test results for all Alaska Natives.

ANTHC continues to support operation and management of rural water and sewer systems through the Statewide Utility Association. The Association includes the Alaska Utility Supply Center, a parts warehouse that buys and ships supplies, and provides billing and collections services. It also includes an eight-village Regional Utility Cooperative, created with the Yukon-Kuskokwim Health Corporation to help reduce outages, improve water quality, lower costs, and provide training.

Division of Community Health Services staff provide personal care attendant and certified nursing assistant training to 60 students in Bethel and Nome.

Alaska Native Medical Center purchases a 16 slice, high-speed Computer Tomography (CT) Scanner, providing state-of-the-art diagnostic data.

November 2004 - New ANTHC office building opens.

2004

March 2004 – ANTHC is one of thirty tribal partners who sign Memoranda of Agreement to pursue common interests as members of the Alaska Tribal Health System.

The Division of Community Health Services Hepatitis Program establishes a molecular biology diagnostics laboratory. Typically found only in research centers, this is the nation's first housed in a tribal facility.

ANTHC Division of Environmental Health and Engineering starts a construction skills training program that teaches life-long skills and provides Alaska Natives opportunities for advancement.

Internship program provides ten Native undergraduate and graduate students the opportunity to work with Division of Environmental Health and Engineering staff.

2342

ANTHC provided technical assistance to water, wastewater, and solid waste system operators and managers, and project support for sanitation facility construction.

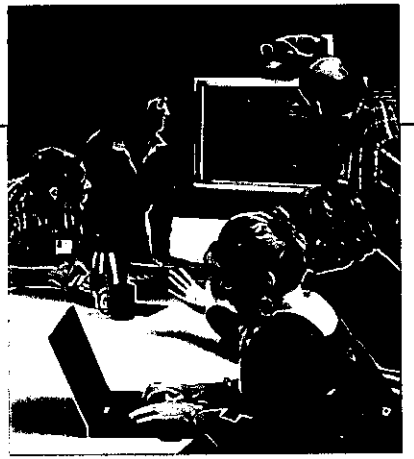
ANTHC coordinated training for utility operators, managers, and local residents, including opportunities in construction trades and operation of water treatment plants.

ANTHC met with tribal health care directors to develop recommendations to the State of Alaska on long-term care, behavioral health, and other aspects of Medicaid reform.

The Consortium saved about $14 million (between 2001 and 2007) by using telehealth in the care of more than 27,000 patients. In one in five of these cases, telehealth helped prevent patient travel, eliminating the inconvenience of being away from family and community. In 7 percent of the cases, telemedicine helped determine that the patient did need to travel and see a specialist. This promotes early diagnosis, when treatment is likely to be of greater benefit.

ANTHC is conducting a 27-year follow-up of children to study the duration of the Hepatitis A vaccine. We are working with 1,350 chronic Hepatitis B carriers to determine risk factors for serious liver disease and liver cancer.

The Consortium expanded a video-teleconference (VTC) system to all Alaska tribal clinics and tribal health care partners. This connects families with their relatives at Quyana House (temporary housing at ANMC for outpatients and escorts). It allows people to connect into meetings and training without having to travel.



ANTHC launches Rural Alaska Village E-Health Network (RAVEN) videoconference project, allowing people in clinics across Alaska to "meet" via videoconferencing

Division of Community Health Services provides basic Health Aide training for 60 students.

ANTHC selects first 15 employees for two-year on-the-job Leadership Excellence through Achievement and Determination, or LEAD, training, which includes a college scholarship.

2005

Division of Community Health Services increases enrollment to 2,586 in a study of the effects on health of diet, physical activity, lifestyle, and cultural activities. The Education and Research Towards Health (EARTH) study involves Alaska Native and American Indian people in Alaska, the Navajo reservation, and North and South Dakota.

Health Information Technology supports more than 10,000 telemedicine encounters, 20,000 telepharmacy encounters, 40,000 teleradiology encounters, and 1 million patient care encounters.

Division of Community Health Services develops training and certification standards for Behavioral Health Aides.

Highest Quality Health Care

The Consortium has created systems to deliver services of ever-improving value to its customers. We strive to boost our overall capability, effectiveness, and productivity. The Consortium works to constantly improve services to become more flexible and responsive to customer needs.

The Alaska Native Tribal Health Consortium extensively remodeled the Alaska Native Medical Center laboratory to improve efficiency, safety, and patient care. ANTHC added computerized systems to the hospital laboratory for processing and testing. This helps produce test results on an efficient, consistent basis.

The changes to the hospital's laboratory improve test turnaround time. This increases safety and reduces the need to send tests to other labs, leading to time and cost savings.

Operation of a new sleep lab was begun to help identify medical problems that can interfere with sleep. Research shows lack of sleep contributes to heart disease and high blood pressure, depression, and impaired immune systems.

The Consortium had construction crews in 32 communities throughout the state to provide safe and reliable in-home water supply and wastewater disposal.

The Consortium's Division of Environmental Health and Engineering completed construction designs despite a 30 percent engineering vacancy rate. Through nation-wide recruiting, DEHE was able to reduce professional level staffing vacancies overall from 35 percent to about 10 percent.

The Division of Community Health Services processes 292 Community Health Aide/Practitioner (CHAP) and Dental Health Aide certification applications for the CHAP Certification Board.

To promote health among employees and customers, ANTHC establishes tobacco-free workplace.

Division of Environmental Health and Engineering improves water and sanitation services in 1,012 homes and works on active projects in 160 communities throughout Alaska.

2006

Alaska Native immunization rates increase to more than 90 percent statewide.

April 2006 – ANTHC publishes the Fourth Edition of the *Alaska Community Health Aide/Practitioner Manual*, as well as a *Comprehensive Cancer Plan for the Alaska Tribal Health System.*

The Consortium's Regional Supply Service Center distributes $5.9 million worth of medical supplies and pharmaceuticals to 95 tribal health facilities.

2344

The following numbers of students received training to work in communities across Alaska:

- 17 students in commercial driver's license (CDL) and heavy equipment operation
- 42 students in carpentry and plumbing
- 98 students in advanced water treatment
- 189 students in water plant operations including basic certification
- The Consortium coordinated Community Health Aide/Practitioner (CHAP) training in multiple learning environments: Nine basic sessions, one clinical update, and one distance session. As a result, 76 students completed CHAP training. Working for tribes and tribal health organizations, CHAPs provide medical care in villages and communities across Alaska.

During FY08, engineering staff completed preparations to expand three important Alaska Native Medical Center service areas:

- A $950,000 construction project to add two new operating rooms
- Remodel and expand oncology
- Build a new neurosurgery clinic

The Consortium held a fundraising Raven's Ball for our *Healthy Alaska Natives Foundation*, which has identified five initiatives: cancer care improvement, elder care support, healthy village environments, wellness and prevention, and Alaska Native health professions scholarship support.

ANTHC launches Camp Coho, a pilot program to help children cope with the loss of loved ones due to cancer.

Consortium completes a groundbreaking study that shows that children in communities where most homes have pressurized, in-home water service have far fewer respiratory disease requiring hospitalization and skin infections.

ANMC receives first of two *Hospital Quality Achievement* awards from Mountain Pacific, a Quality Improvement Organization designated by the US Centers for Medicare and Medicaid Services.

2007

The ANTHC Injury Prevention Program completes the nation's first research project on safer firearm storage practices, installing gun storage cases in 300 homes in six Western Alaska villages to reduce firearm injuries.

ANTHC launches the Healthy Alaska Natives Foundation, which identifies five initiatives to sustain and inspire a healthy Alaska Native community: cancer care improvement; wellness and prevention; healthy village environments; scholarship fund; and elder care support.

The State of Alaska selects the Consortium's Regional Service Supply Center as the agency to deploy National Strategic Stockpile emergency medical supplies in major emergencies.

Future Directions

In Fiscal Year 2009, a new revenue development team will develop collaborative relations with Congress, the Alaska Legislature, federal and state agencies, and private funders to increase revenues to ANTHC.

ANTHC will increase its efforts to prevent employee injuries and to reduce time lost due to injuries, which will increase employee satisfaction through lower rates of injury. It will also allow ANTHC to manage costs and realize savings from reduced premiums for Workers Compensation Insurance.

ANTHC is working to build leadership from within and to transform our workplace culture through leadership training. We are creating a program to build the leadership skills of 200 managers and 700 healthcare providers. We will work to develop employees who are positive and engaged, and who align their efforts with ANTHC mission and values.

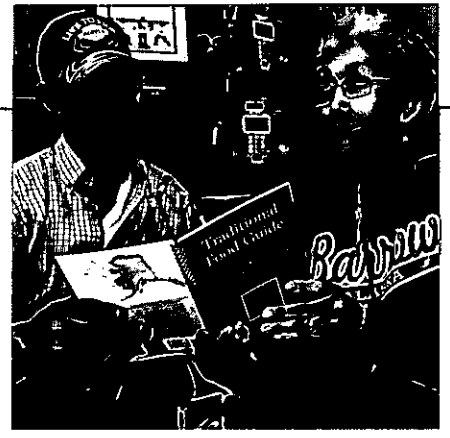
Employees who take pride and are happy in their work contribute to customer satisfaction, and we are working to improve internal communications and teamwork. We will continue to strive to hire the best employees, and nurture and develop their talents.

ANTHC is building systems to help the organization "work smarter." We have created a fund to promote and fund innovation within the company. Increased use of technology has already changed the way we do business. We will continue to look for solutions that reduce costs and maintain or improve quality.

The nation is grappling with declining numbers of health care providers, which is even more of a problem in Alaska. We will continue to work to attract, hire, and retain a host of trained professionals such as doctors, nurses, engineers, dentists, computer technicians, biomedical professionals, respiratory therapists, behavioral health specialists, and trainers. We will continue to sponsor students interested in health careers through internships, externships, and scholarships.

ANTHC begins work on the Alaska e-Health Network, an electronic health records system that provides confidential, secure access to medical records, reduces potential errors and repeated tests, and increases efficiency.

Remodels and adds computerized systems to the Alaska Native Medical Center laboratory to improve efficiency, safety, and patient care.



To support cancer patients and health care providers, the Alaska Native Tribal Health Consortium publishes the *Traditional Food Guide for Alaska Native Cancer Survivors* in April 2008. To order copies of the guide, visit anthc.org on the Internet, or call (907) 729-4491.

2008

June 2008 - Paul Sherry retires as CEO and the Board of Directors hires Don Kashevaroff to fill the CEO position.

Timeline Photographers: Brian Conner, Allen Cousens, Evangeline Dotomain, Kraig Haver, Clark James Mishler, Jan Pennington and Raymond Solomon.

Financial Summary

2008 Revenue (in millions)

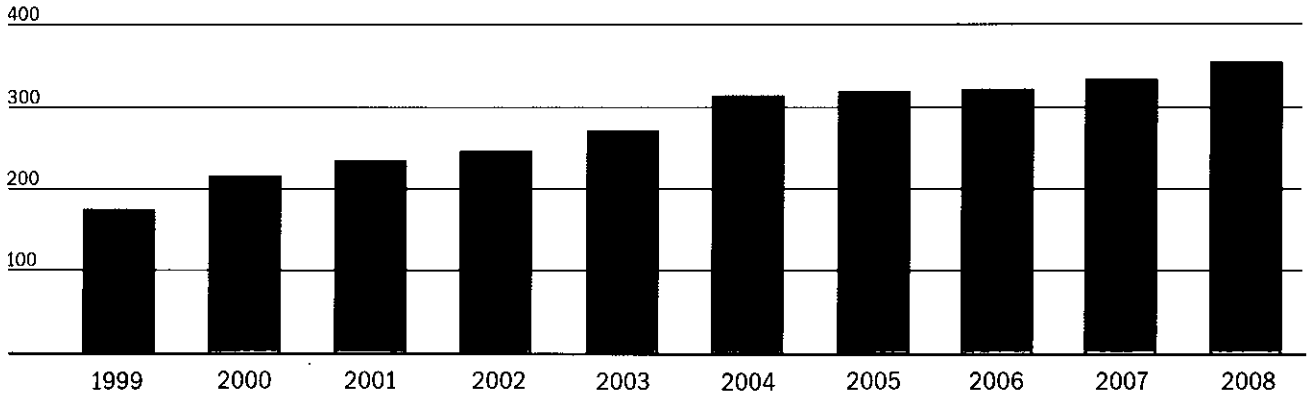
1. Indian Health Service Compact	118
2. Grants Activity	21
3. Medicare, Medicaid, Private Insurance	117
4. Sanitation and Facility Projects	63
5. Statewide Warehouse	19
6. Interest	-3
7. Other	8
Total	343

2008 Expenditures (in millions)

1. Alaska Native Medical Center	201
2. Sanitation and Facility Projects	63
3. Regional Service Supply Center/other	20
4. Grant Activity	21
5. Community Health Services	10
6. Environmental Health and Engineering	7
7. Administration	17
8. Pass-through awards	8
Total	347

This Financial Summary is preliminary as of 10/31/08 and is subject to a formal audit for FY 2008.

Total Revenues 1999-2008 (in millions)



The Alaska Native Tribal Health Consortium was formed in December 1997 to manage statewide health services for Alaska Natives, and began operations in 1998. All Alaska Natives, through their tribal governments and through their regional nonprofit organizations, own the Consortium. It is one of 23 co-signers of the Alaska Tribal Health Compact, a self-governance agreement with the Indian Health Service. In FY08, the Consortium employed 1,855 people, and had an operating budget of $380 million. It is based on the Alaska Native Health Campus near Tudor Road in Anchorage, Alaska.

2348

Vision

Alaska Natives are the healthiest people in the world

Mission

Providing the highest quality health services in partnership with our people and the Alaska Tribal Health System

Values

Achieving excellence
Native self-determination
Treat with respect and integrity
Health and wellness
Compassion

2/25/09 PRESENTA-TION: KEY CAMPAIGN

KEY COALITION OF ALASKA
PRESENTS TO THE
JOINT LEGISLATIVE HEARING

FEBRUARY 25, 2009

NAME	COMMUNITY
1. Emily Ennis	Fairbanks
2. Fred Villa	Fairbanks
3. Kama Gregory	Anchorage
4. Dayna McGuire	Anchorage
5. Ric Nelson	Anchorage
6. Jim Beck	Anchorage/Palmer
7. Shawn Woodard	Fairbanks
8. Janet Maddox	Fairbanks
9. Michaella Maddox	Fairbanks
10. Steve Lesko	Anchorage

2352

What is the Key Coalition?

The Key Coalition is a statewide coalition of supporters, friends and advocates for Alaskans and for their families who experience developmental disabilities.

Key Coalition basic beliefs:

- Community is truly a place for everyone.
- Individuals who experience a disability have a right and a need to live in community.
- Children must have the opportunity to live with natural families. Adults must have supports to exercise maximum independence in community.
- Government has a primary responsibility to provide realistic, non-intrusive, non-segregating, community supports for **ALL** of its citizens.

The **Key Coalition** advocates for equal opportunity, accessibility, and inclusive communities for all Alaskans who experience disabilities. We share the same dream – of a day when no Alaskan has to wait for critical supports, and, a day when our community programs are restored to reasonable health:

Programmatically and Fiscally!

COMMUNITY
And That's what it's all about!

Community services are the most cost-effective way of providing supports

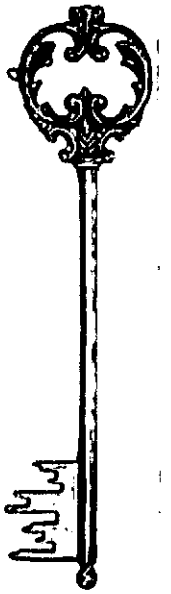
COMMUNITY SERVICES ARE THE KEY FOR INDIVIDUALS WHO EXPERIENCE A DEVELOPMENTAL DISABILITY

Community services support thousands of Alaskans in hundreds of communities throughout our state

Residential Supports
Accessible Housing
Individual Leases/Home Ownership
Low Interest Loans

Employment Supports
Subsistence Activities
Community Jobs
Job Training
Microenterprise

Home Modifications
Ramps/Accessibility
Accessible Bathrooms
Stair Climbers



Family Support Projects
Family Support Program
Short Term Assistance
Crisis Intervention

In-Home Supports
Respite
Personal Care Attendants
Chore Services
Specialized Equipment

TEFRA
Children Staying at Home
Health & Therapeutic Supports

Community services help children remain at home and adults to exercise independence

Please, Support the Key Campaign!

Community services contribute back to the economy

Our Top Priorities

Priority 1: Wait List Elimination

Why? 845 Alaskans still remain on a Wait List in 2009. Cost effective community supports provide for local jobs; keep individuals in their communities and with their families; increase productivity and independence; prevent costly institutionalization of human being.

Priority 2: An Annual Statutory Process to Govern and Adjust Rates for Community Services

Why? After five years of a rate freeze, community programs are no longer able to recruit and retain adequate staff; to meet the escalating costs of gas, heating, insurance; to maintain staff benefits. An equal rate process is essential to assure the heath of our community programs similar to that afforded hospitals and nursing homes.

Priority 3: Enhancement of Infant Learning Program

Why? Early intervention is efficient offering a critical window of opportunity for influencing positive outcomes. Early intervention works, increasing the likelihood of greater individual income and reducing societal costs. Infant Learning strengthens family as parents learn how to provide individualized interventions that help their children in critical areas of development. It is cost effective.

Priority 4: Formation of a Crisis Response Team

Why? In concert with the "Bring the Kids Home" initiative, the establishment of such a Team will: keep many children from costly, removed out-of-state residential placements; assist parents in maintaining kids at home; develop in-state capacity and trained staff; and re-establish our safety net for community supports.

Priority 5: Increase Living Wages: Direct Service Professionals

Why? High vacancy rates, the inability to recruit & retain; low wages; decreased benefits; five plus years of a rate freeze have all contributed to a workforce crisis in our community programs. Quality of care, health and safety are of paramount concerns. As in 24 other states, implement wage pass-throughs for our critical staff.

In addition, the Key Campaign supports:

- Continuation of the Adult Dental Program
- Raising income guidelines for Denali KidCare
- Funding for the Autism Initiative
- Transition funding for the Rural Transition Project

For 22 years, the **Key Coalition** has united people from across Alaska to wage our **Key Campaign**. We have brought together consumers, families and service providers to advocate for those who still wait for services.

In the beginning we were a mere handful of advocates, but we've grown every year. Today we are considered a small army rising across the face of Alaska. With chapters in rural and urban Alaska, we will continue to travel to Juneau for as long as it takes- for as long as people are forced to wait; for as long as our critical community programs are denied access to a fair, reasonable, and annual process of rate adjustment; for as long as the bureaucracy tolerates the disintegration of our families and the denial of the right to community for all Alaskans. Until that day---

Tell our elected officials that you believe in the dream of the Key Campaign – that **COMMUNITY** is for everyone and that the time to end the waiting and to restore our community programs is now!!!

Please join us at the Capitol Steps Rally

Foster Care Legislative Summit
BPH

Foster Care Legislative Summit
Today's Obstacles To Success, Tomorrow's Solutions
March 20, 2009
1:15PM – 3:15 PM
Senate Health and Social Services Committee

OPENING REMARKS
1:15 – 1:20PM

Senator Bettye Davis & Representative Les Gara:

- Introduce Co-Sponsor Legislators & Panel Members
- Forum Goals, Where We Are Today, Problems and Presenter Solution Ideas
- **Questions and discussion will be held at the end of the panel presentations**

FACING FOSTER CARE IN ALASKA: "REAL LIFE POLICY"
1:20 – 1:40

Amanda Metivier, FFCA:

- FFCA Policy Agenda.

RESEARCH DATA AND ALUMNI PERSPECTIVES
1:40 – 2:00

Amanda Metivier
Peter Pecora, Casey Family Programs
FFCA Youth & Alumni Panel (Kaylee Day, Shilo Valle, Anthony (Tony) Barril, Telora Thompson)

- Alaska Alumni Study highlights – homelessness rates
- Post-Foster Care Independent Living Challenges: Hurdles Foster Youth and Alumni Face After Care
- Available Federal Funding after age 21

EDUCATION AND FOSTER CARE
2:00 – 2:20

Barb Dexter, Anchorage School District
Beth Snyder, Anchorage School District

- McKinney Vento

CHILD AND FAMILY SERVICE REVIEWS: PROBLEMS AND SOLUTIONS FOR ALASKA
2:20 – 2:45

John Henderson, U.S. Dept. of Health and Human Services, Children's Bureau *(via phone)*
Tammy Sandoval, Director, Alaska Office of Children's Services (OCS):

- Alaska's Preliminary CFSR Results from September 2008
- Child and family outcomes needing attention most urgently
- Frequency of social worker visits
- Federal Review results
- Performance Improvement Plan – planning and development

CLOSING REMARKS
2:45 – 3:15

Senator Bettye Davis & Representative Les Gara
- Status of current legislation
- Questions & Discussion

PIP = Performance improvement plan
C/E Review - complete set for ~~Sept~~ first part of July
(fines # under Fed Law)

Facing Foster Care in Alaska

Policy Agenda 2008

In May of 2008, the youth and alumni of Facing Foster Care in Alaska, (FFCA) came together from across the state and gathered in Anchorage to share their ideas and experiences about life in Alaska's foster care system. During their gathering youth/alumni brainstormed ideas on what they thought would be most beneficial to them and others in foster care in Alaska. As a result of these ideas, the members of FFCA voted to create this policy agenda.

Tuition Waivers for ALL foster youth in the state of Alaska

The University of Alaska Anchorage currently offers 10 Presidential Tuition Waivers a year to foster youth who are eligible for the OCS Independent Living Program. A young person must have been in foster care on or after their 16th birthday for six consecutive months in order to be eligible for the waiver program. Since these waivers are competing, not every young person in Alaska who applies will receive one. Youth who are placed in a guardianship, adopted, or reunified before age 16 are not eligible to apply for the waiver. Many states provide Tuition Waivers or other forms of reimbursement for college expenses to foster youth interested in pursuing post-secondary education. The youth and alumni of FFCA feel that by providing All of Alaska's foster youth with tuition waivers there would be a higher percentage of foster youth attending post-secondary education. Studies show that approximately 17% of young people who exit foster care pursue post-secondary education, and only about 1% graduate from a four year degree or certificate program. FFCA would like to see that All of Alaska's foster youth are provided with tuition waivers to reduce the stress of worrying about college expenses and knowing that they are guaranteed a higher education.

Support to foster youth pursuing post-secondary education

Many of the youth and alumni who attend post-secondary education programs in Alaska have complained about not having any supports to help them achieve their goals. FFCA members would like to see that universities and vocational programs have supports put in place for foster youth transitioning to higher education. FFCA members recommended adult or alumni mentors, a family to spend the holidays with, and someone within the

2359

university or vocational program to talk with about stressors. If every youth in Alaska's foster care system made a permanent connection with a caring adult during their stay in foster care this would be less of an issue. FFCA members also recommended implementing the, "Circles of Support Program," to ensure youth in care are making permanent connections with caring adults before exiting from care.

More Independent Living Funds going to youth/alumni

The state of Alaska currently gets approximately $500,000 a year (FY2008 $518,814) in Federal Chafee funds to be used for youth in foster care to work toward independent living. There is currently no state match for this money and it is being stretched very thin as the states Independent Living Program grows, and begins to offer more programs and resources to youth in transition. The youth and alumni of FFCA would like to see that more of this money is offered to youth and alumni transitioning from foster care for housing, education, life skills training, and anything that may support them in becoming independent productive members of society. FFCA is also aware that many states provide a match for the Chafee dollars they receive and would like to see that this is made possible by the state of Alaska.

Transitional Living for youth

Alaska currently allows for youth who turn 18 in foster care the option to extend their time in state custody until the age of 20. There many states that allow for youth to extend custody until age 21, or to leave custody and re-enter if they are willing to pursue post-secondary education. According to the Alaskan Alumni Study 38% of Alaska's alumni reported being homeless after exiting foster care. The Covenant House Shelter in Anchorage reports that two-thirds of their current population is comprised of current and former OCS youth. The youth and alumni of FFCA would like to see a stronger focus in the area of transitional housing for youth who exit from the foster care system. FFCA members shared ideas and recommend allowing youth to remain in state custody while living in college dorms, apartments on their own, or other least restrictive environments outside of the traditional family foster home after reaching age 18.

2360

Independent Housing Program

Some states currently allow for foster youth to live, "on their own," after reaching age 18, but to remain in state custody and receive foster care payments on behalf of themselves until the age of 21. This allows for foster youth to continue services with their social worker as well as other services offered to youth in custody, and learn to successfully transition out of state custody. The youth and alumni of FFCA would like to see a program such as this put into place in Alaska, or for the state to consider more creative placements for young people once they reach 18, but are not ready to exit from foster care.

Medicaid increased to age 21 under the Chafee Independence Act

There are currently 17 states that have chosen to enact the Chaffee option to extend Medicaid to age 21 for former foster youth, Alaska is not one of these states. Currently, youth in Alaska's foster care system can receive Denali Kid Care until age 19 under the 1115 Waiver. After age 19 these young people can apply for adult Medicaid, but this holds them back from obtaining decent paying jobs and forces them to choose to go without medical coverage. Youth in foster care often attend counseling and have other medical needs, but they are forced to cut off many of these services when they leave custody. The youth and alumni of FFCA would like to see that Medicaid is increased for Alaska's foster youth to age 21 under the Chafee Foster Care Independence Act.

Braces covered under Medicaid

Children and youth in Alaska's foster care system often have only their Basic needs met because there is a strong emphasis on safety and permanency. There is little or no value put on whether a young person in custody needs braces, as this is usually a cosmetic procedure that parents would normally pay for. The youth and alumni of FFCA felt very strongly about this issue and believe that braces should be covered under Medicaid or by OCS. FFCA members discussed how braces could support higher self-esteem for a young person in foster care, and would give them one less thing to worry about besides the social pressures they face as a, "foster youth." FFCA is also aware that braces are covered under Medicaid in the state of Texas, so this could be an option for Alaska.

Decreased use of Psychotropic Medication for Alaska's foster youth

Many of Alaska's youth and alumni complain about being prescribed psychotropic medications after entering the foster care system for symptoms of depression, anxiety, trauma, attachment issues, and misbehavior. The youth and alumni of FFCA feel that these are all normal symptoms of child maltreatment and dealing with all that comes out of being placed in foster care. There has been a national focus on the use of psychotropic medications being over-prescribed for children and youth in foster care. FFCA members have also complained about side-effects caused by these medications resulting in a decreased ability to focus on their education as well as function in everyday society. The youth and alumni of FFCA would like to see that the prescription of psychotropic medications for Alaska's foster children and youth is decreased and reviewed more closely.

Definitions (according to FFCA)

Youth- A young person currently in state custody (foster care).

Alumni- A person who has spent any period of time in the foster care system

Facing Foster Care in Alaska (FFCA)

Mission Statement: Our mission is to improve the foster care system through sharing our experiences, supporting and educating youth and social services and implementing positive change in society as a whole.

FFCA is Alaska's only foster care advocacy organization completely run by youth and alumni of the foster care system. Since their inception in 2003, FFCA has been working to improve Alaska's foster care system by sharing their experiences with people who can create positive changes for Alaska's foster youth. FFCA is a statewide organization that provides support to Alaska's foster youth and alumni and, gives them the ability to share their voice and become leaders in their community.

Outcomes of Youth in Foster Care and Alumni: How to Maximize Success

Alaska State Legislator Briefing
March 20, 2009

Presenters:
Amanda Metivier and Peter Pecora with a panel of foster care alumni consultants

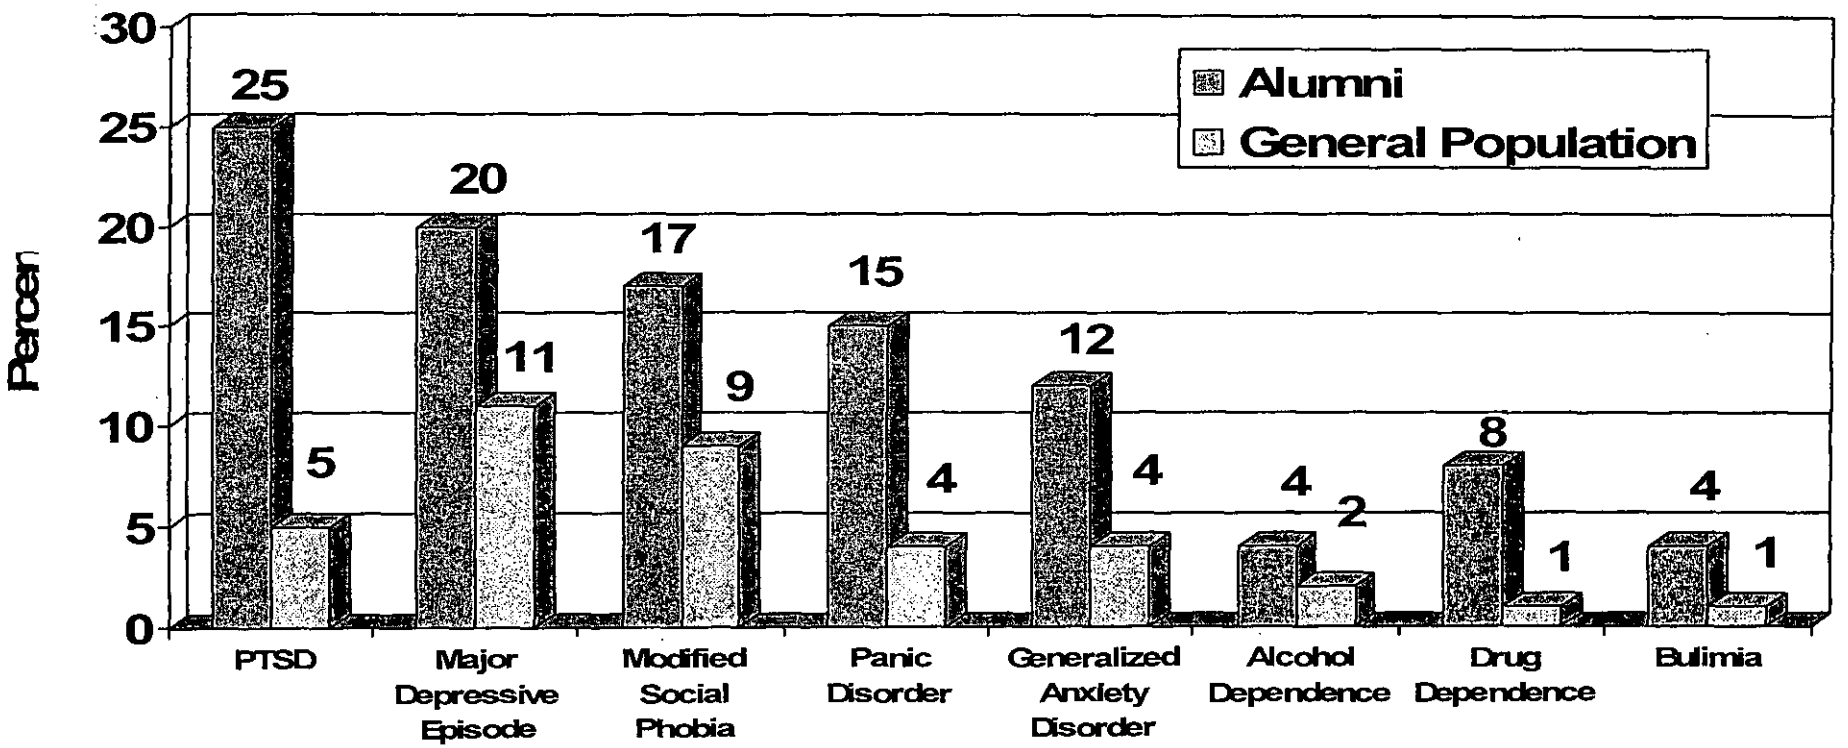
Presentation Overview

Outcome data are interspersed with foster care alumni panel comments and recommendations for:

- Mental Health
- Education
- Employment

Mental Health (NW Study)

Twelve-Month Mental Health Diagnoses Among Foster Care Alumni and the General Population Matched by Age, Race and Gender



Source: Pecora, P. J., Kessler, R. C., Williams, J., Downs, A. C., English, D., & White, J. & O'Brien, K. (Forthcoming). *What works in foster care?* Oxford, England: Oxford University Press.

Midwest Study Diagnoses: Last 12 Months (Illinois, Iowa, Wisconsin)

	Females	Males
At least one CIDI DSM-IV diagnosis	14.2[b]	4.6[b]
Alcohol dependence	3.5	11.6
Drug abuse	1.9	5.8
Drug dependence	1.0	5.1
Generalized anxiety disorder	0	0
PTSD	7.9[d]	3.8[d]

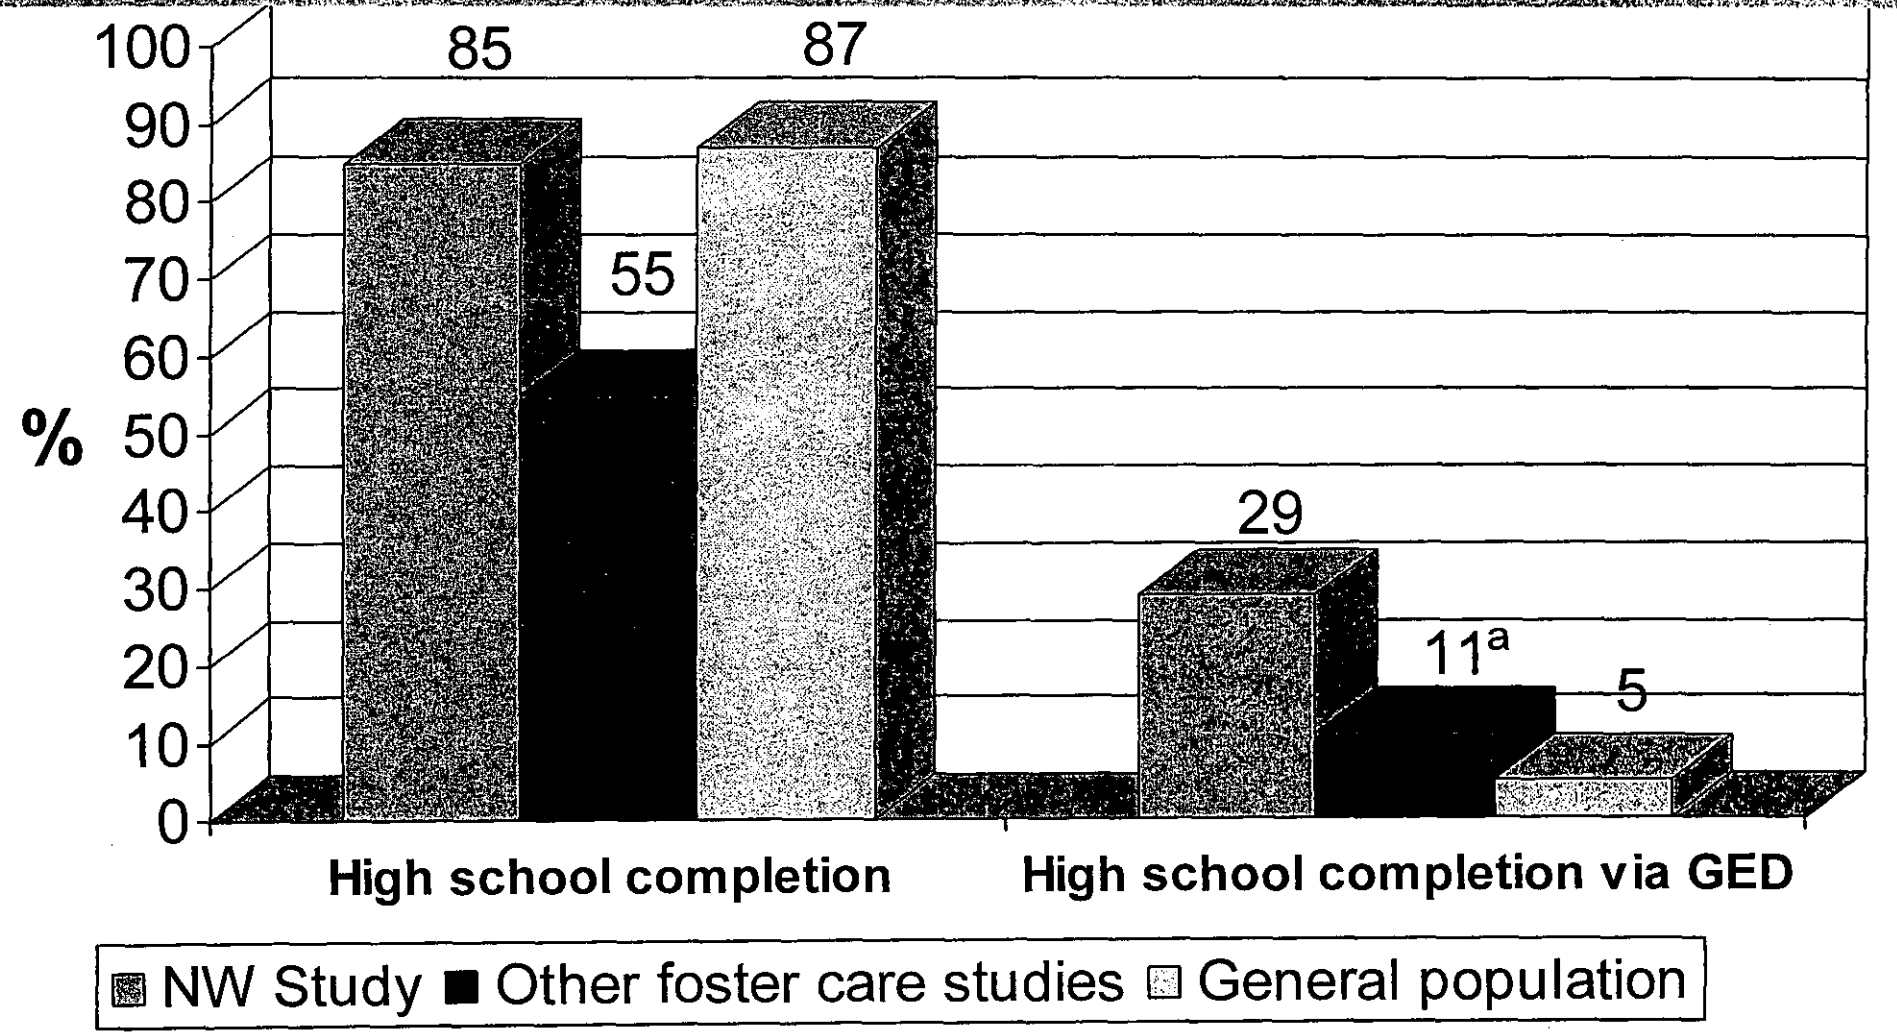
[a] Source: Courtney et al. (2007, p. 46).

Alaska Study Mental Health Findings

- Five times as many alumni scored in a clinical range on the SF-12 scale as the general population (10.3 versus 2.3%)

- 1 in 4 of the alumni had used a hotline, support group, counselor or overnight stay for substance abuse or mental health services in the last year.

Education Outcomes

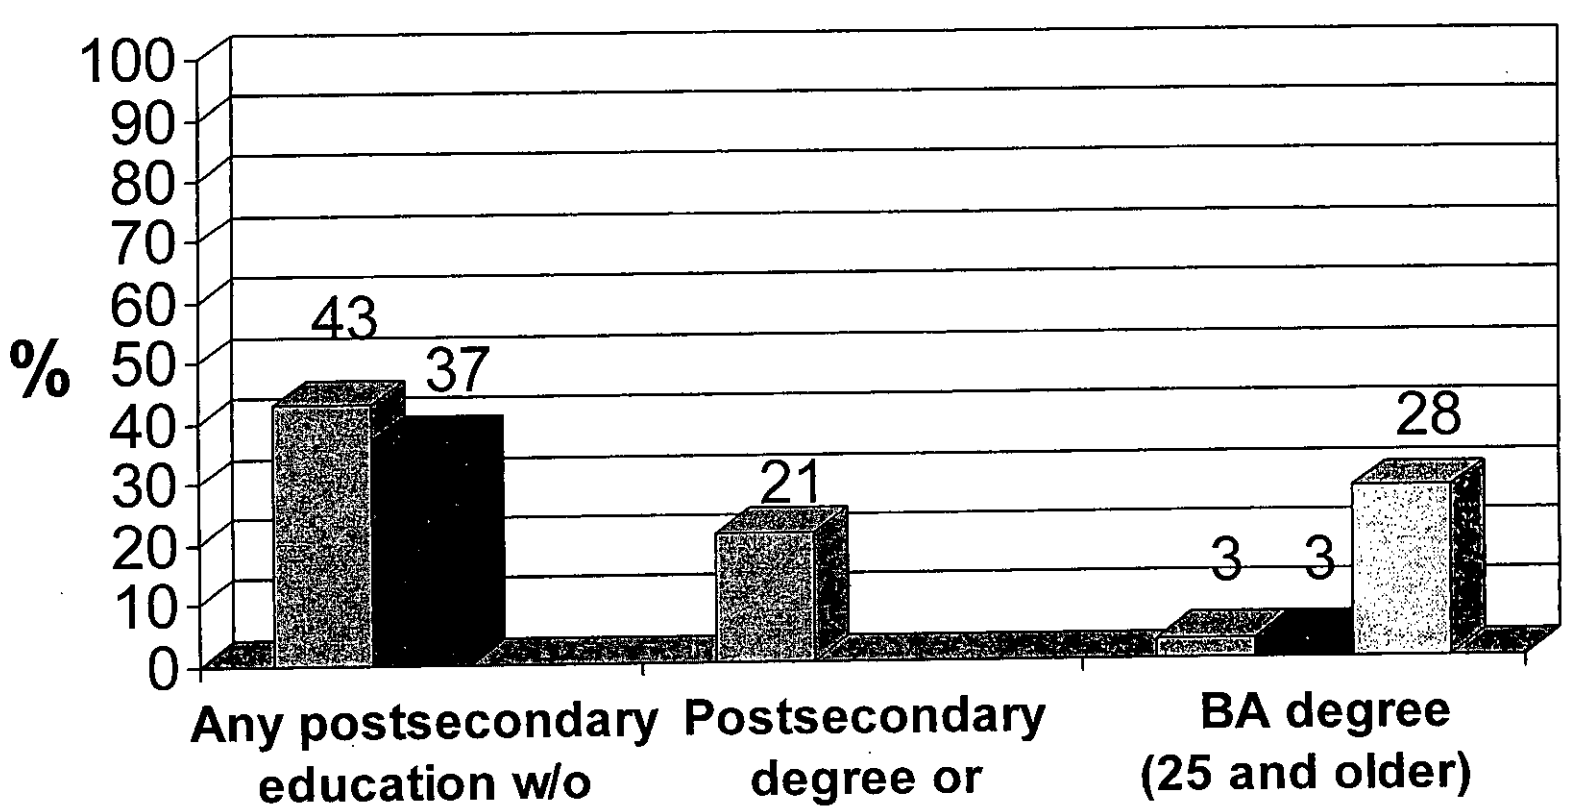


[a] (Mech 2003)

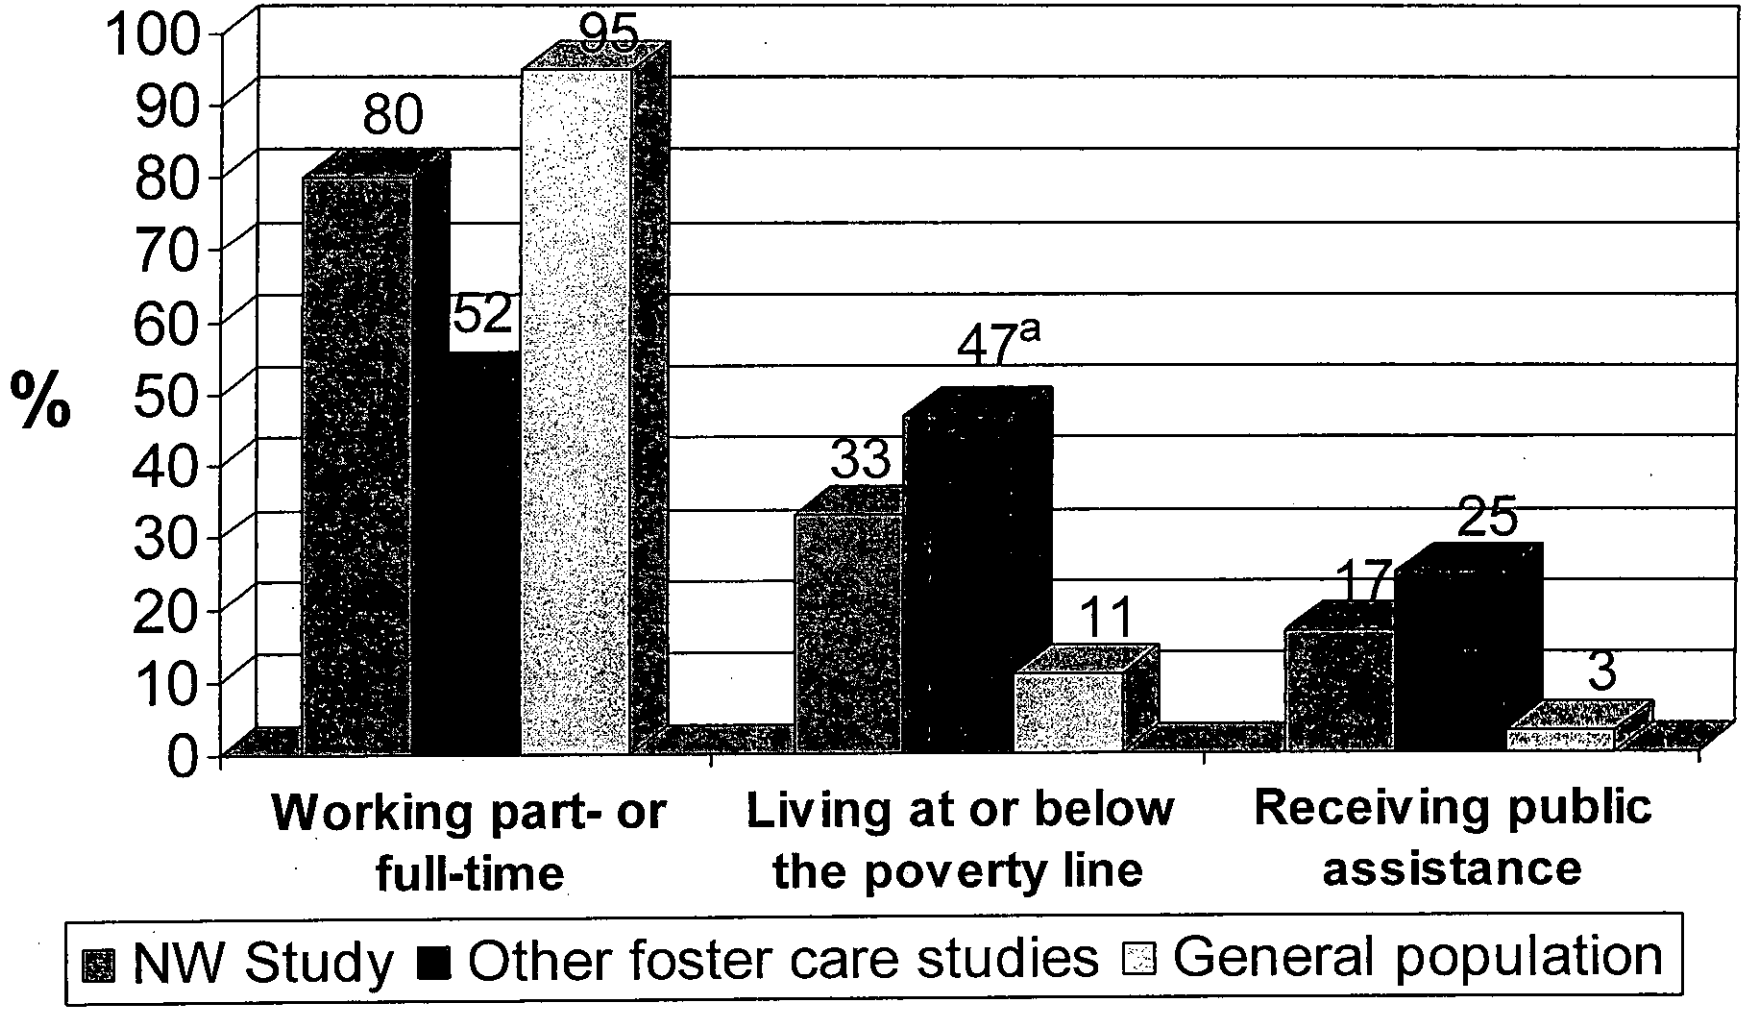
Alaska Education Findings

- In the Alaska study nearly 79% had completed high school by the time of the interview:
- 63.6% with a diploma
- 15.2% had a GED

Outcomes: *Education cont...*



Outcomes: *Employment and Finance*



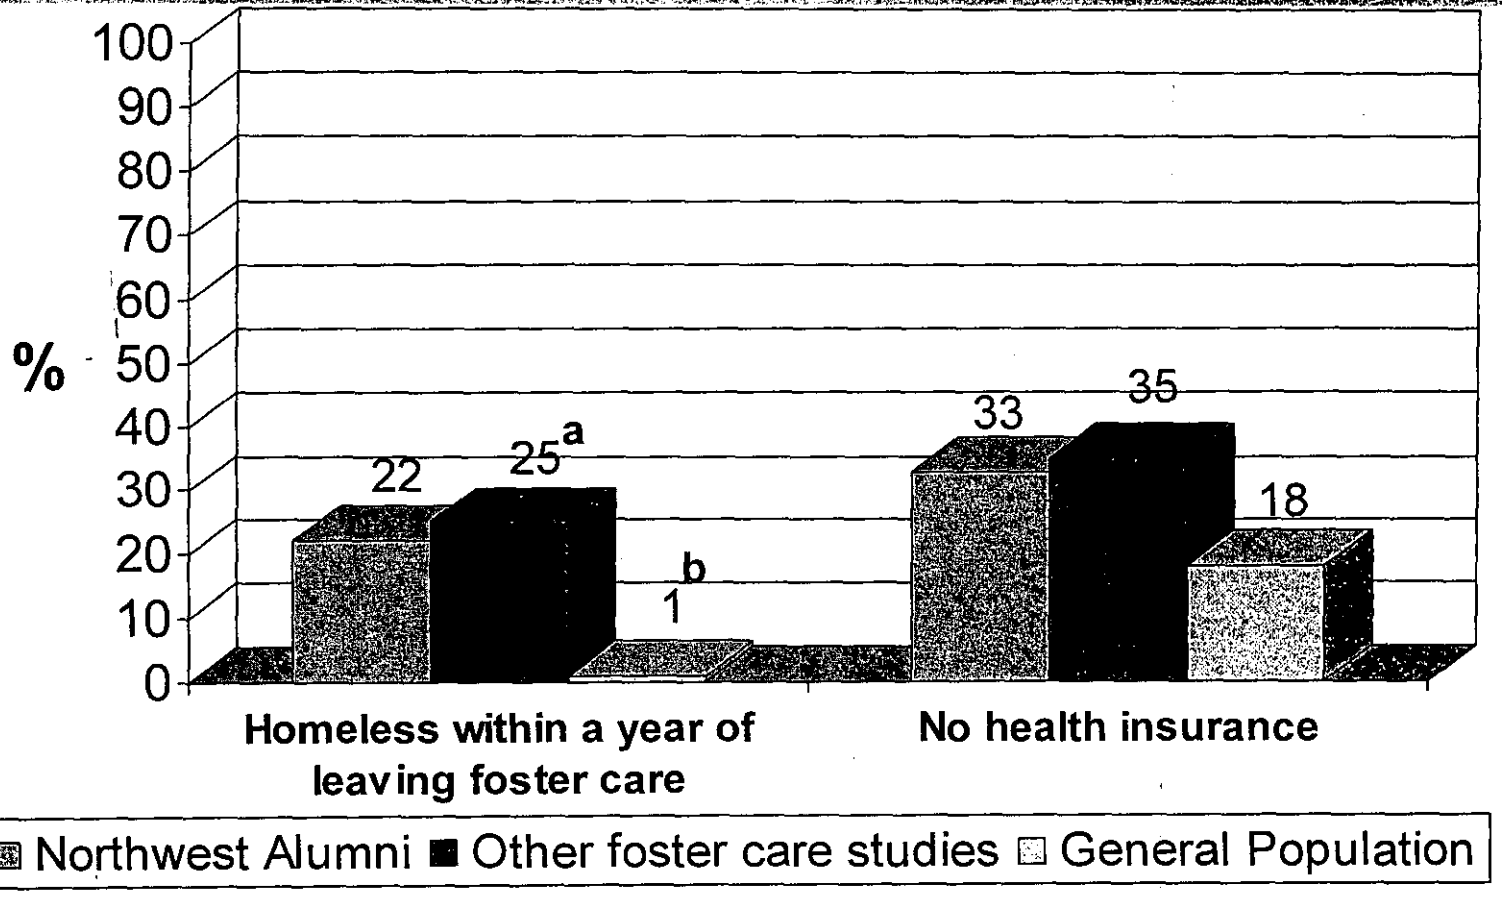
[a] (Brandford & English 2004, Washington State data)

Alaska Alumni Employment

- Alumni unemployment rate: 29.6%
- General population: 7.1%

How can more alumni obtain living wage jobs with health care benefits?

NW Alumni Homelessness and Health Insurance



[a]Homeless at any point since leaving foster care. [b]Homeless at any point in past year.

Outcomes: *The Glass IS half-full!*

- ***Mental Health***
  - 45.6% Have **no** 12-month mental health diagnosis
- ***Education***
  - 85% Completed high school
- ***Employment/Finance***
  - 21.3% Have household income at least three times the poverty level
  - 83.2% Do not currently receive cash public assistance
  - 74.0% Are working now or in school
  - 63.6% Have volunteered in their communities or church

Predictors of Success:
What helps?

1. Stabilize a child's placement experience to build life-long connections with supportive adults and peers.
2. Increase youth access to high quality therapeutic services & support.
3. Targeted educational services.
4. Extracurricular experiences.
5. Life skills development and work experience.

Appendix A: Recommendations
Mental Health

Increase youth and alumni access to evidence-based mental health treatment:

- Provide health insurance coverage through Medicaid,
- Increase availability of group work & evidence-cased treatment approaches (e.g., trauma-focused cognitive therapy).

Minimize placement change:

- Via better child-family matching & more responsive services.
- Association between fewer changes and fewer mental health problems.

Increase education services and experiences:

- Stability and support in the school environment can cause a positive effect on adult mental health

Recommendations: *Education*

- Set high but realistic expectations for youth in care to complete high school via a diploma if at all possible.
- Help young adults enroll in local college-preparatory programs.
  (E.g., GEAR-UP, TRIO, and Upward Bound)
- Ensure staff and youth are aware of good vocational options that pay well.

Recommendations: *Employment & Finances*

Strengthen housing programs:

- To prevent homelessness.
- Increase supervised transitional housing.

Overhaul independent living preparation:

- Evidence shows that alumni vary widely in their level of readiness for emancipation.

Provide youth in transition with concrete resources:

- Begin life skills training at an earlier age.
- Involve youth in real-life work, housing and other situations.

FOSTER CARE SUMMIT MEETS IN JUNEAU FRIDAY

'Today's obstacles to success; tomorrow's solutions

JUNEAU – Sen. Bettye Davis and Rep. Les Gara (both D-Juneau) will host a foster care summit on Friday from 1:15 to 3:15 p.m. in the Senate Health and Social Services Committee room at the State Capitol. The forum will address the state of foster care in Alaska and identify challenges and solutions.

Presenters will include Amanda Metivier, president of Facing Foster Care in Alaska (FFCA); Peter Pecora from Casey Family Programs and representatives from the Anchorage School District the US and Alaska Departments of Health and Human Services and a panel of youth and Alumni from FFCA.

Sen. Davis, who chairs the H&SS Committee, has worked hard to bring this summit to fruition. "This is an important issue in Alaska, and we're trying to inform the public and to get people working together for solutions to the challenges facing these young people. I encourage everyone to attend this summit and help us make Alaska a better place for everybody."

When 38 percent of Alaskans coming out of foster care become homeless, and less than 10 percent end up making it through college, that's a call for action," said Gara who grew up in foster care. "There's a lot we can do to create opportunity for foster youth, and the purpose of the conference is to brainstorm together to find meaningful solutions – now rather than later."

38 percent of foster children go homeless after leaving state custody. Less than 10 percent make it through college. Children bounce between schools as they bounce between families. Policymakers are looking for solutions.

A copy of the agenda is attached for your convenience.

For more information about the summit or foster care please contact Sen. Davis or Rep. Gara.

Sen. Bettye Davis: sen.bettye_davis@legis.state.ak.us , (907) 465-3822
Rep. Les Gara: rep.les_gara@legis.state.ak.us , (907) 465-2647

HB 126: FOSTER CARE/CINA/EDUCATION OF HOMELESS

SPONSOR(S): Representative(s) GARA, Crawford, Kerttula

CURRENT STATUS: (H) HSS

FISCAL NOTE:
1) Zero – ACPE
2) FY10: 204.2 – OCS
3) FY10: 725., FY11 – FY15: 445.2 – OCS
4) FY10: 1,971.4, FY11 – 15: 953.9 – OCS

BILL HISTORY/ACTION:
(H) EDC 2DP: Gardner, Buch; **2NR**: Seaton, Keller

BILL SUMMARY: Continuing the secondary public education of a homeless student; relating to the purpose of certain laws as they relate to children; relating to tuition waivers, loans, and medical assistance for a child placed in out-of-home care by the state; relating to foster care; relating to children in need of aid; relating to foster care transition to independent living; and relating to juvenile programs and institutions."

ISSUES (pros & cons):

TALKING POINTS (if any):

COMMITTEE/DATE: 3/11/2009
Roll: Seaton, Gardner, Buch, Keller
Action: Moved
Next Referral: HSS
Amendments: none
Change in CS: none

Amendments/Changes:

Committee Discussion/Action:
No discussion. Only moved the bill.

Testimony Summary:
No testimony today.

COMMITTEE/DATE: 3/9/2009
Roll: Seaton, Gardner, Buch, Munoz, Keller, Edgmon
Action: Heard and held
Next Referral: HSS
Amendments: 4 adopted
Change in CS:

Amendments/Changes:
1) Adds two provisions to say non-state entities are not required to participate in this program if they do not receive the funds for it.

CONFIDENTIAL – FOR INTERNAL CAUCUS USE ONLY – DO NOT DISTRUBTE

2) First two parts make it clear that we are adopting McKinney Vento concept. Clarifying language. Part 3 adopts McKinney Vento, but if federal law changes, we don't have to until we know what it is and if it is beneficial. Part 4 clarifying language on who is covered.
    a. Amendment to Amendment – Deletes page 3 through 4 that increases foster youth age to 21.
3) Deletes "and for providing comparable education" from page 1, line 11.
4) Deletes "adequate" from page 3, line 31.

Committee Discussion/Action:

Testimony Summary:
Theresa Lombardo, Director of the Casey Family Program, supports bill.

Barb Dexter, Anchorage School District Child District Transition, supports the bill. When you allow a child to stay in their school, they do not have that few months of falling behind when transitioning to another school.

COMMITTEE/DATE: 3/2/2009
Roll: Seaton, Gardner, Buch, Wilson, Munoz, Keller, Edgmon
Action: Heard and held
Next Referral: HSS
Amendments: none
Change in CS: none

Amendments/Changes: none

Committee Discussion/Action:
Rep Seaton only opened up public testimony.

Testimony Summary:
Lauren Rice, Director of Advocacy for Covenant House Alaska, testified in support of HB 126. Most foster youth show up at Covenant House with absolutely nothing. They do not have the resources or skills to make the transition into adulthood. We know more today what foster youth need. This data comes back from foster youth. This bill increases the likelihood of their success.

Carol Comeau, Superintendent for Anchorage School District, Supports this bill. Over 2000 students who have been identified in the Anchorage School District. Concerned about it being defined as one school year instead of every year. Concerned about the "academic exception" exemption clause. Needs more definition.

COMMITTEE/DATE: 2/25/2009
Roll: Seaton, Gardner, Buch, Wilson, Munoz, Keller, Edgmon
Action: Heard and held
Next Referral: HSS
Amendments: none
Change in CS:
1) Sections 4, 14, & 16:Adopt statutory definition of 'out of home' care
2) Section 10: Provide immunity for social worker if they fail to complete their monthly visit to the foster youth

CONFIDENTIAL – FOR INTERNAL CAUCUS USE ONLY – DO NOT DISTRUBTE

3) Section 13: revised conforming language to allow the age of foster youth to be extended up to 21 year olds.
4) Section 17: Provides transitional housing of up to a year for when foster youth come out of foster care.

Amendments/Changes:

Committee Discussion/Action:
Rep. Gardner stated that in section 1, it states that the student may change schools if it is in their best academic interest. Sometimes, it is in a child's best overall interest to be moved. There are more reasons then academic.

Testimony Summary:
Rep. Gara presented the bill. After coming out of foster care, most foster kids end up homeless at one point in their life. When we move them from school to school to school, studies show that the foster youth will do poorly academically. 65% have been in 3 or more elementary schools. These happen during the middle of the school year. This bill helps foster youth to stay in the same school if they move. It provides transportation funding for them if they end up staying in the same school if they move homes.

CONFIDENTIAL – FOR INTERNAL CAUCUS USE ONLY – DO NOT DISTRUBTE

Subject: RE: repeat, trimmed down foster care conference in Juneau, March 20th?

Hi folks,

We have a date and a time for the mini-foster care conference! The event will be **March 20th** from **1:15 to 3:15PM** in the Senate HSS committee. It was difficult securing a two hour block of time for this event so it is absolutely critical that we stay within the assigned time and not use more than we have. That being said, I think it's time we set an agenda! Below is a list of presenters and topics we can use as a starting point for that agenda. This list is in no particular order, and the topics are not set in stone. I'm eager to hear your thoughts.

1. John Henderson: Face to face visits and the Federal review
2. Peter Pecora: homelessness study, and available federal funding for care up to age 21
3. Barb/Beth: McKinney Vento in ASD and whether there is still a need for supplemental state funding
4. Amanda Metivier/FFCA: Reasons behind the FFCA policy agenda items this year
5. OCS: Federal Review, role of OCS in transition from foster care (ILP programs), Tammy's discretion.

Thank you!
Katie

Subject: repeat, trimmed down foster care conference in Juneau, March 13th?

Hi folks,

Last week Representative Gara and Senator Bettye Davis filed comprehensive Foster Care bills relating to education funding, transitional housing, and extending care. This bill is largely the result of the absolutely stellar Foster Care summit this fall in which you were all key contributors. Thank you again! Les and Sen. Davis, co-chair of the Senate Health and Social Services Committee), are now speaking about the possibility of having another Foster Care conference in Juneau during this session. During their brief, preliminary conversation they selected March 13th as a possible date, and the venue would likely be the Senate HSS committee. The idea would be to have similar presentations as during our fall day-long summit but in just two hours. We're hoping you would all be interested and able to participate. The intention with this email is to feel you all out for the possibility of putting this together. Ideally we'd have John Henderson, Peter Pecora, OCS, and FFCA speaking in Juneau, and Barb and Beth by phone from Anchorage (unless you think you could make it here), for a total of five short presentations and a brief intro/conclusion from Rep. Gara and Sen. Davis. What are your thoughts?

Thank you!
Katie

New recovery package is good for Alaska and America

Abundance-based fish, game management can benefit all

It's easy to miss what's in plain sight

It's time for reform in Alaska's foster care system. Just doing the same as last year isn't working. The State of Alaska is custodian to 2,000 foster youth. We're supposed to create hope and opportunity. Instead 40 percent of Alaska's foster youth end up homeless at some point in adulthood.

Statistics paint a picture of blocked opportunity. Foster youth are more likely than their peers to end up in jail at a taxpayer cost of $40,000 a year. The smarter option is University of Alaska job training and college courses at $15,000 a year. Our children should benefit from federally mandated, monthly face-to-face meetings with social work staff who are trained in helping youth succeed. A recent federal review of Alaska foster care says many of our youth get this support once every eight months, not monthly. That's thanks in part to chronic staff turnover, poor pay and crushing workloads at the Office of Children's Services.

It's time for new ideas that will work. That's why we, and Sen. Bettye Davis (D-Anchorage), are pushing House Bill 126 and Senate Bill 105. The bills are products of last fall's Foster Care Summit and information from experts who've advised us about reforms being pushed in other states.

So, what can we do?

• **Stop bouncing foster youth between schools:** In Alaska we bounce foster youth between schools, as they bounce between homes, too often. Moving children between schools during the school year is a proven indicator that a child will underachieve. With each disruptive mid-semester change a child can fall behind in school by another four to six months.

Federal law provides partial funding to keep youth in the same school. The state needs to act so all children can, where it makes sense, stay in their school.

• **College and job training:** Alaska provides minimal support for those who'd seek success through a degree or job training at the University of Alaska. The university and state provide a small number of tuition-only scholarships to foster youth. Beyond that, foster youth face a problem all Alaskans face -- the second-stingiest financial aid system in the nation.

Foster youth have an additional problem. Most children can call their parents when they need a place to stay or when they need support. Foster youth don't have that lifeline. We should make sure all foster youth know that if they want to go to college or get job training, we will help them with tuition, fees and a place to live. Alaska's second-worst in the nation college aid plan needs to be fixed for all youth.

• **Homelessness:** Today the state provides minimal funding for youth coming out of care. They get a month's rent, and then a half month's rent for two months. If you're 18 and have no parent or caring adult to call for support, you need a hand getting on your feet. That's just a fact of life.

We should let foster youth know we'll help with basic housing their first year coming out of care if they need it. And we should offer a steadier hand, with mentoring, to steer them toward the success they want. Parents do this for most children. Foster youth don't have this "luxury."

And, though we have a chronic shortage of foster parents, we should allow foster youth, if they have a good foster home, to stay until age 21 if they feel they need the support. Ending foster care and health coverage at age 19 and then putting youth out on the street with no parental support just isn't working.

The governor says "we have to live within our means." We agree. But we disagree if that means the solution for every aspect of state policy is to do what we did last year. Not when real solutions are cost-effective and cheaper than less important projects that always find their way into Alaska's $7 billion budget.

Things need to change. Keeping them the same costs too much, both financially and to our moral standing.

Rep. Les Gara is an Anchorage Democrat, and grew up in foster care. He can be reached at **Rep.les.gara@legis.state.ak.us**. Amanda Metivier lived in foster care, is coordinator of Facing Foster Care Alaska and recently earned her Social Work degree from UAA.

You seem to leave out the details on how your kid ended up in foster care in the first place? There must be a reason why they wouldn't allow you to have your own child. And behavior issues don't just magically appear out of no where, they stem from many years of child's life. Just thinking your comment is leaving out a lot of details.

Anyways, I totally agree with this article. Foster parents aren't given enough support, and I don't necessarily mean financial support. Social Workers don't keep tabs on these kids enough, and it has been said over and over again these workers are over worked and under paid.

But excuses aren't going to do anything for these kids now are they. Something needs to be done to give these children a chance at success.

My husband and I have talked about becoming foster parents, but to tell you the truth it scares us. Not necessarily because of the kids(maybe a little), but mostly because of the system that seems pretty messed up.

I also think the foster care system is totally twisted. My kid was in foster care with a 70 something year old man alone. Then when I tried to get her back from North Star Hospital because this old man warped her mind and gave her behavior issues they didn't release her to me her biological mom who has a job and a place to live and everything that the state required they released her to some girl that had just moved out of her parents house and just turned 21. That in my opinion has no idea about how to rasie a kid that has behavior problems and requires counseling. It just goes to show how hard at work our tax dollars are. So yea i guess you could say I hate OCS and thier pea brained ways. I think this to them is just a high paying job and not "all about the kids" thing.

I worked for DFYS (named changed to OCS) through the end of Cowper's, all of Hickel's and most of the Knowles' administrations. What I saw generally, though not always, were flaky supervisors, incompetent managers spending more time junketing than managing, and workers who did their jobs and found themselves overwhelmed, or who ignored their jobs without consequences. Most of the losers were delusional, convinced they were doing terrific work. When Hickel took over in many agencies, he replaced competent managers with scam artists and sycophants, from the two Lloyds and Frank Prewitt in Corrections to Mike Price and his sorry crew in DFYS.

Many of the best workers, unable to stomach the dysfunction, became whistleblowers. I never saw a single whistleblower protected. Left to endure chronic abuse, sometimes for years, they were isolated and even unlawfully fired. The system wouldn't and couldn't protect vulnerable kids. I can't imagine Palin's nepotism improving things.

It's easy to miss what's in plain sight

It's time for reform in Alaska's foster care system. Just doing the same as last year isn't working. The State of Alaska is custodian to 2,000 foster youth. We're supposed to create hope and opportunity. Instead 40 percent of Alaska's foster youth end up homeless at some point in adulthood.

Statistics paint a picture of blocked opportunity. Foster youth are more likely than their peers to end up in jail at a taxpayer cost of $40,000 a year. The smarter option is University of Alaska job training and college courses at $15,000 a year. Our children should benefit from federally mandated, monthly face-to-face meetings with social work staff who are trained in helping youth succeed. A recent federal review of Alaska foster care says many of our youth get this support once every eight months, not monthly. That's thanks in part to chronic staff turnover, poor pay and crushing workloads at the Office of Children's Services.

It's time for new ideas that will work. That's why we, and Sen. Bettye Davis (D-Anchorage), are pushing House Bill 126 and Senate Bill 105. The bills are products of last fall's Foster Care Summit and information from experts who've advised us about reforms being pushed in other states.

So, what can we do?

• **Stop bouncing foster youth between schools:** In Alaska we bounce foster youth between schools, as they bounce between homes, too often. Moving children between schools during the school year is a proven indicator that a child will underachieve. With each disruptive mid-semester change a child can fall behind in school by another four to six months.

Federal law provides partial funding to keep youth in the same school. The state needs to act so all children can, where it makes sense, stay in their school.

• **College and job training:** Alaska provides minimal support for those who'd seek success through a degree or job training at the University of Alaska. The university and state provide a small number of tuition-only scholarships to foster youth. Beyond that, foster youth face a problem all Alaskans face -- the second-stinglest financial aid system in the nation.

Foster youth have an additional problem. Most children can call their parents when they need a place to stay or when they need support. Foster youth don't have that lifeline. We should make sure all foster youth know that if they want to go to college or get job training, we will help them with tuition, fees and a place to live. Alaska's second-worst in the nation college aid plan needs to be fixed for all youth.

Lynda Zaugg

From: Katie Conway
Sent: Monday, February 23, 2009 7:38 AM
To: Don Burrell; Lynda Zaugg
Subject: RE: Foster Care conference March 20th?

Thank you Don! Lynda, as soon as you know what the time parameters are for the March 20th meeting please let me know. I'm eager to set the agenda so the participants know exactly how much time they have for presenting, and so they can more confidently arrange their air travel.

Thank you both!
Katie

To: Katie Conway
Cc: Lynda Zaugg
Subject: RE: Foster Care conference March 20th?

Now that we have a positive date, I've discussed extending the hearing time to 2 hours as requested with Senator Davis and Lynda Zaugg, the H.S.S. Committee Aide. I suggested to Lynda that we might try and start the meeting earlier rather the run it later. I'm for sure the Senate Resources committee will be meeting in full force in March and there will be very little chance they will allow us to cut into their meeting time, which begins at 3:30. Follow up with Lynda to see if 1pm could work, scheduling-wise and I think everything will work fine to confirm the meeting once that's completed.

Thanks!!!

Subject: Foster Care conference March 20th?

Hi Don,

I canvassed the potential participants for the mini Foster Care conference our bosses spoke about. I think everyone can make it that day, March 20th, including OCS, FFCA, Casey Family Programs, and others. Now we need to find out the time so they can book travel and we can figure out how much time each presentation would be allotted. Ideally, we'll have two hours for the entire thing. When we put on the full-day foster care conference this fall in Anchorage the presenters had a much longer amount of time to present, and the audience (including many legislators) had a longer amount of time for asking questions. Limiting us to two hours will already be a stretch. I think anything less than that will be quite challenging, though I understand the scheduling will be hard. Please let me know as soon as you do the time available for this event so I can work with the participants on finalizing an agenda.

Thanks!
☺

Gulf of Alaska

- Thousands of leads available to LE
- NCMEC Leads
- Small Police Departments

Computer and Financial Crime Unit Issues

Two different Missions

- 1. Computer Crime
- 2. Financial Crime

One Sergeant (Trooper)

Two Investigators (Trooper)

Two Long Term Non-Perm positions (recently funded by Legislature)

- CFCU expected to cover the entire State of Alaska and investigate all Financial Crime and Technology related offenses
- Expected to provide assistance to smaller Police Agencies
- Expected to Provide training and support
- Few "white collar" or "corruption" cases are actually being worked due to case load

AST Response to ICAC Task Force

- Joined Internet Crimes Against Children Task Force last year
- Co-Located with Federal Agents, to include ICE, soon with FBI & USPIC
- Investigators trained in Peer to Peer Investigations, Forensics
- Recently hired one new investigator and one criminal justice tech II because of Legislature funding

- Invested heavily in Computer Forensic training to increase competency
- Invested heavily in equipment, to include software, forensic computers, cell phone analysis tools, server storage of evidence
- Conducted multi-agency search warrants
- Public Education, presentations
- Partnered with small police departments to provide assistance and training

Results

CFCU Computer Examinations

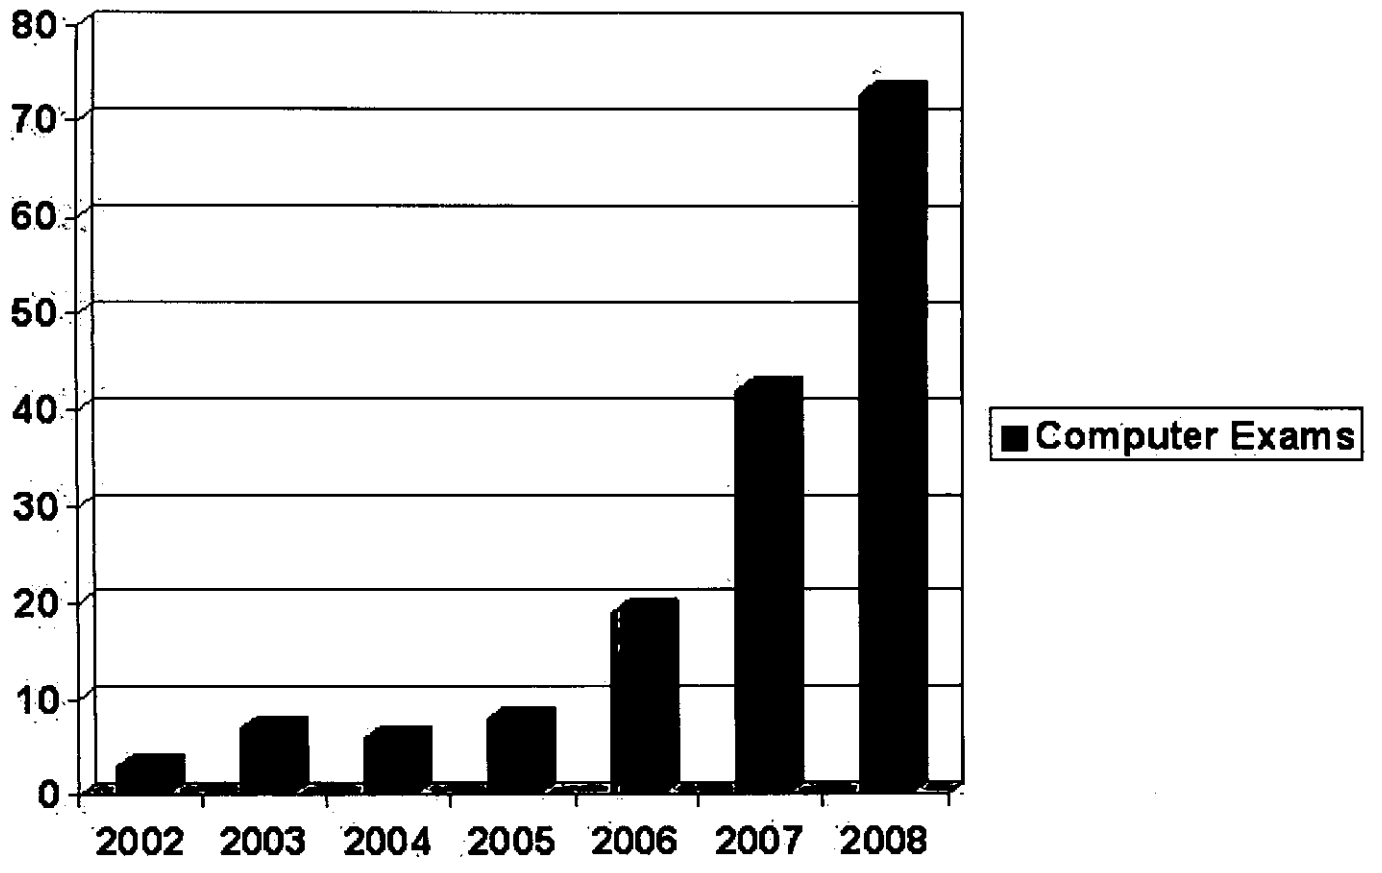

Chart Area

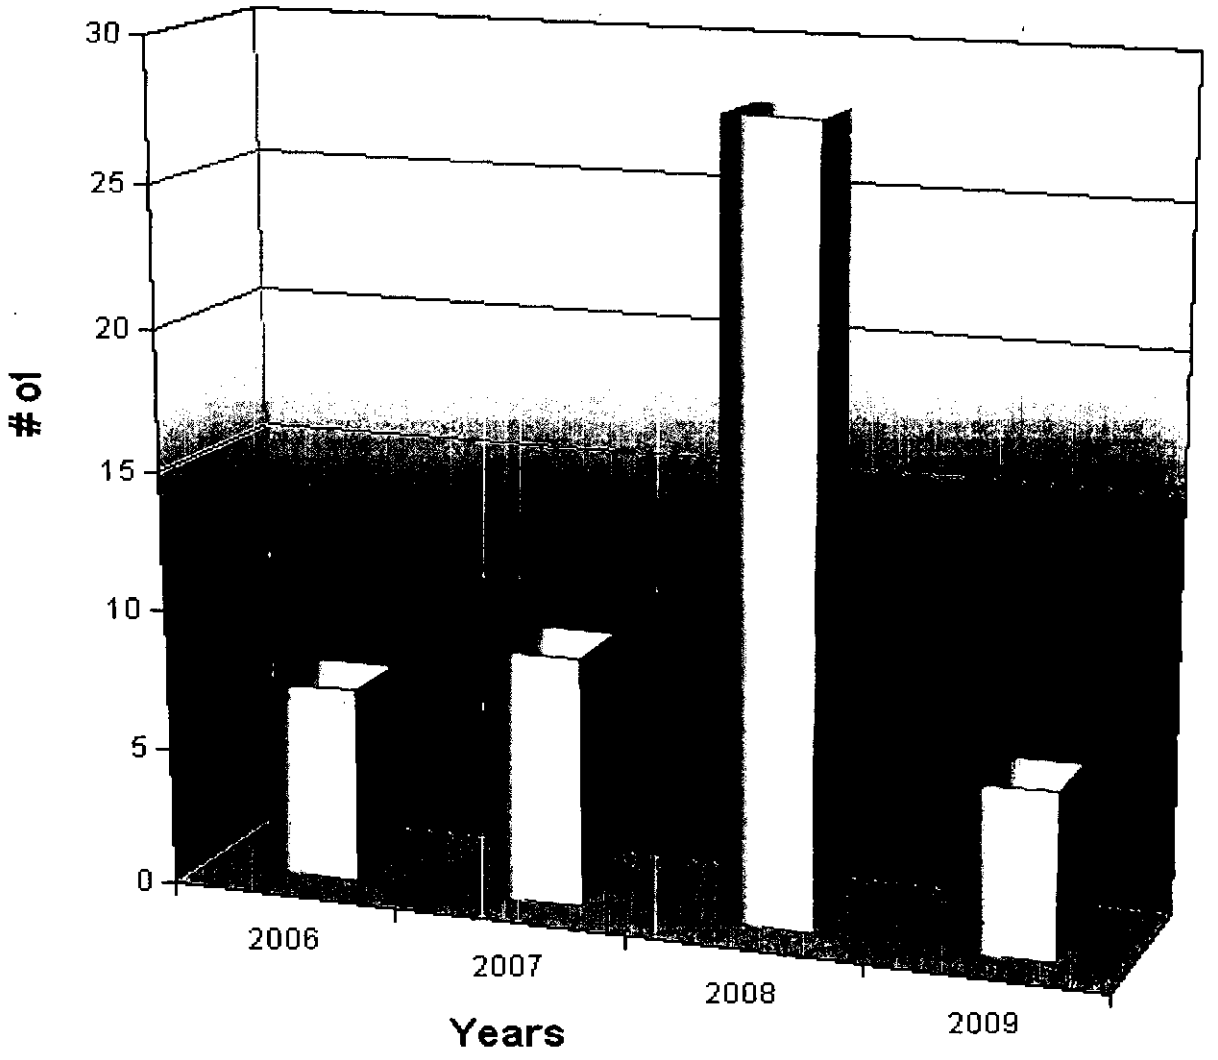
Child Pornography/ICAC cases within ABI CFCU
January 1, 2006 - March 19, 2009
Source: APSIN, 2009



- 400% increase in Child Exploitation Cases being investigated between 2006-2008
- We found the tip of the iceberg
- Problem is growing exponentially

Successes

- NCMEC tip received by ABI for Palmer resident
- Defendant was arrested for distributing and possessing child pornography images
- Investigators found defendant was taking pictures with telephoto lens of neighbor children
- Recently sentenced to 12/4 years (8 years)

- Talkeetna man, a registered sex offender was found to be chatting on-line through game with 13 Y.O. in CA
- He was grooming victim
- He was previously arrested by APD for Child Pornography possession
- ABI found more Child Pornography, continued behavior

- Soldotna man, was arrested for possessing CP images, was found to be actively abusing autistic boy
- What cases are falling through the cracks?

What is needed?

- Additional support for more ABI Investigators, including Forensic Computer Examiners
- Separate Financial Crime and Computer Crimes Units
- More directed response to rural residents of Alaska, they are not being adequately represented by LE

Conclusion

- ICAC is very necessary
- Co-location of agencies is key
- We are headed in the right direction
- We must continue to protect Alaska's children with pro-active investigation
- More Investigators are required
- Disparity of LE response to Rural residents
- We are not there yet…

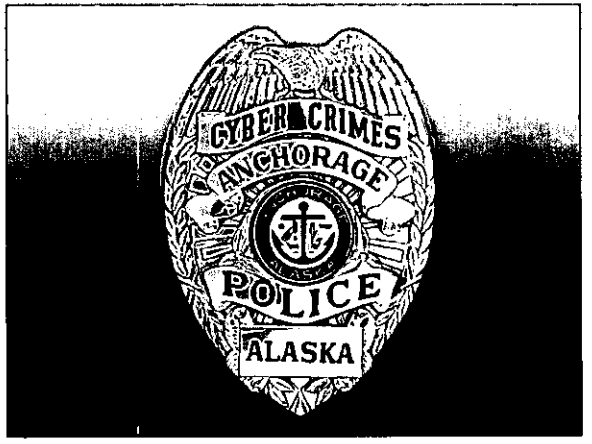
Alaska Internet Crimes Against Children Task Force 2008



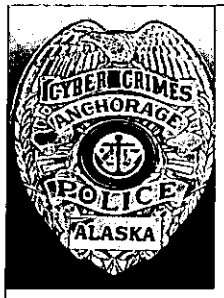
Det. Sgt. Ron Tidler
APD Cyber Crimes Unit

Det. Sgt. Tidler Bio

- 1991- Reserve Police Officer Anchorage Police Dept.
- 1993- Patrol Officer- APD
- Mt. View CAP Team; FTO; Gang Task Force; Level One Commercial Motor Vehicle Inspector; FBI Certified Bomb Technician
- 2003- Promoted Patrol Sgt.
- 2004- Transferred to Detectives. Supervised Crime Investigation Unit- which later became VICE Unit; Supervised Burglary Unit.
- 2006- assisted with formation of Cyber Crimes Unit
- 2007- Cyber Crimes Unit officially created- assigned as Supervisor.

APD Cyber Crimes Unit

- 2002-2005- several Detectives working with the Financial Crimes Unit and Crimes Against Children Unit receive training in Computer Forensics and On-line Peer to Peer training.
- 2006-2007- 5 Detectives are relocated to one small office- 3 forensic examiners; two online investigators.
- 2007- Cyber Crimes Unit officially created with a Supervisor assigned. Larger office space.
- Current staffing: 6 team members:
  - 1 Supervisor
  - 1 dedicated forensic examiner;
  - 1 on-line / cell phone examiner;
  - 1 on-line investigator;
  - 1 on-line / forensic examiner;
  - 1 forensic examiner- On military deployment since 12/07



Rise of the ICAC

- 1998 Office of Juvenile Justice Department (OJJDP) initiates Internet Crimes Against Children Taskforce (ICAC)- 16 Task Forces created.
- Assists law enforcement in developing effective response to online sexual victimization of children.
- 2004- Alaska is an affiliate of the Seattle ICAC.
- 2005- Alaska Investigators trained on P2P.
- 2006- $50,000 is designated for Alaska Affiliates.
- 2007- APD awarded $300K 18 month Grant-
- 2008- Alaska ICAC TF created.

ALASKA

North America at Night

Alaska ICAC Federal Partners

- USAAK- Administrates PSC Program in Alaska; hosts TF Meetings; training; advice; Victim coordinator program.
- I.C.E. – resident agents; provides area for ICE and ABI to work together; pooling resources; joint investigations; foreign country investigation facilitation.
- FBI- Investigates; facilitates training / equipment; victim coordinator.
- US Postal Inspectors
- Military Investigators – AF OSI; Army CID; USN; & Coastguard

Alaska State Affiliates

- Alaska Bureau Investigations- Anchorage and Fairbanks based Investigators
- Dept. Of Corrections- Adult Probations Office- Sex Offender Unit- Several P.O.'s trained
- District Attorney's Offices- several prosecutors from various offices.
- University Of Alaska- Anchorage PD- facilitates training and meetings.
- University Of Alaska- Fairbanks PD- trained investigator

Local Affiliates

- Fairbanks Police Department- 1 investigator
- Kodiak Police Department- 1 investigator
- Sitka Police Department- 1 investigator
- Kenai Police Department- 1 investigator
- Soldotna Police Department- 1 investigator
- Unalaska Police Department- 1 investigator
- Juneau Police Department- 1 investigator

Adult Probations

- Sex Offender Home Visits
- Probations Officers trained in capturing data from computers, via a thumb drive installed software.
- For 2008- 223 Home visits conducted
- For 2008- 26 computers searched

Internet Undercover Investigations Training

- Jan 2005 Seattle WA
- Classroom Experiences
- Webcams
- Internet has made our world much smaller.....
- No laws in AK...until 11-28-2005

Legislative Response

- SB 140 signed into law 8/30/2005 effective date 11-28-2005
- AS 11.41.452 Online Enticement of Minor
- AS 11.61.128 Electronic Distribution of Indecent Material to Minors

AK ICAC TF Training

- American Prosecutors Research Institute conducts SAFETY NET training at Microsoft Headquarters in Redmond, WA.
- Team based training class combining Investigator; Examiner; and Prosecutor.
- AK ICAC Team comprised of APD Cyber Crime Examiner; A.B.I. Investigator; and Asst. D.A. for Prosecutor.
- Part of the training included mock courtroom settings with participants having to present evidence and instruct juries on such topics as Internet Chatting and File Sharing.

Training Results

- First conviction by a jury under Alaska's On-line Enticement Statute.
- Suspect had solicited minors- under the age of 16- for sex, and had electronically transmitted Indecent Images to the minors. The minors were actually undercover APD Investigators.
- 12/8/08- James Clifton Moore-age 42- was convicted by an Anchorage Jury - Moore was found guilty on two counts of Online Enticement of a Minor and one count of the Electronic Distribution of Indecent Material to a Minor.
- ADA Prosecutor Aaron Sperbeck and the lead investigator had attended recent training in Redmond, WA, for courtroom presentations.
- Significant fact discussed during the proceedings: Investigators were following National ICAC Guidelines designed to catch online predators.

Where Did This Sexual Solicitation Occur?

- Send and receive text messages

Dynamics of a Peer 2 Peer Investigation

- Investigator goes online with proper training and equipment.
- Identifies Alaska based suspect who is actively sharing suspected Child Sexual Exploitation images.
- Records and downloads the images.
- Obtains Search warrant for identifying suspect from ISP.
- Conducts surveillance / field work on suspect.
- Obtain search warrant for suspect residence / work / interview.
- Plan / prepare / execute search warrant- seize evidence.
- Conduct forensic examination of digital media- sometimes this is done in field, at suspect's location.
- Analyze data- submit to NCMEC CVIP program.
- Consult with DA / AUSA for appropriate charges.
- Arrest and prosecute Suspect.

Peacock Case Study
APD #08-26835

- **6/13/08-** Anchorage Investigator generated a new Peer To Peer case involving an Alaskan suspect actively sharing child pornography on the internet.
- **6/20/08**- Anchorage Investigator continues to work up the Peer-to-Peer file sharing case, with the suspect, **JESS PEACOCK, Age 24,** identified in Barrow. **PEACOCK** works on the Slope at Kuparak Oil Field. Working directly with Conoco Phillips, transportation is secured from Anchorage to Kuparak for a search warrant. North Slope Police Department is contacted for assistance conducting the Barrow residential Search warrant.
- **6/27/08**- Two Anchorage Investigators travel to Kuparak Oil Field Camp on the North Slope, courtesy of Conoco Philips transportation. Suspect is contacted, and after some initial denials, when confronted with his documented online activity, he provides a detailed confession. PEACOCK'S laptop computer was discovered in his sleeping quarters, turned on and actively downloading and sharing Child Pornography titled internet files, while he worked his shift. North Slope Borough PD served a search warrant at PEACOCK'S home in Barrow, resulting in over 75 items of evidence being seized, and shipped to Anchorage. Conoco Phillip's has expressed that they were impressed with the professionalism displayed by the Investigators.

Peacock Case Study Continued…

- **08/08/08**- Investigators conduct computer forensics on the seized evidence.
- **08/22/08**- Forensic component is completed. Investigators now coordinate with ADA Rural Prosecutor.
- **09/05/08- Charging documents filed on Peacock.**
- **12/5/08-** JESS PEACOCK- accepts Plea Deal 6 years 4 suspended- one count Possession of CP.
- **3/4/09**- Peacock sentenced.

Traveler Case

Danny M. Harvey- 47yo

California man faces 55 years in prison

- The Associated Press
- November 23rd, 2008 12:13 AM
  A federal jury has convicted a California man who faced several child exploitation charges.
- Federal prosecutors say Danny Michael Harvey, of Lancaster, Calif., was convicted of: attempted aggravated sexual abuse, which carries a mandatory minimum 30 years in prison; attempted manufacture of child pornography, carrying a maximum term of 15 years in prison; and possession of child pornography, carrying an additional maximum term of 10 years in prison.
- Prosecutors say Harvey came to Alaska intending to sexually abuse a 5-year-old girl.
- The girl was the fictitious granddaughter of a federal agent posing as a grandfather with sole custody.

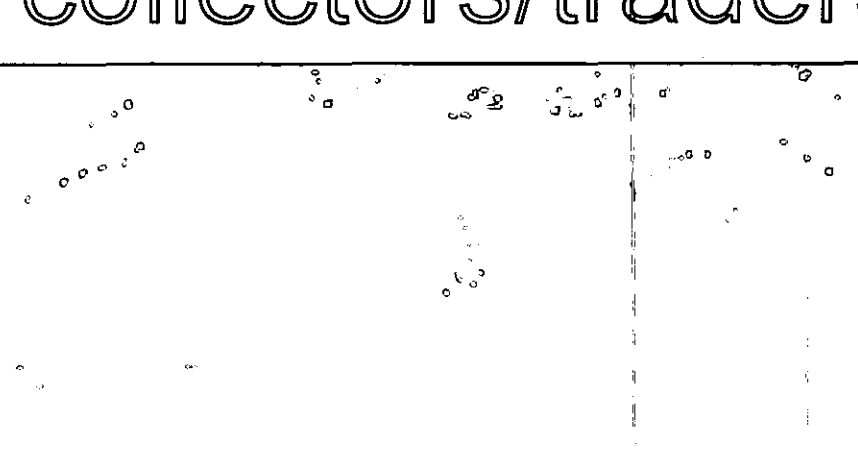
2009 Considerations

- Mobile Internet Devices
- Sexting
- Public Safety Administration in several Local agencies currently are limiting availability of personnel to attend training, and also conduct proactive investigations, based on personnel shortages.

Alaska ICAC Task Force monthly meetings

- Hosted by the Assistant US Attorney's Office in Anchorage.
- Monthly meetings where ICAC members can also attend telephonically.
- Case review; educational opportunities; industry trends; and requests for assistance are conducted.
- Pooling limited resources to target challenges faced by investigators and prosecutors.

Do we have child porn collectors/traders in Alaska?



Challenges

- A study conducted by APD Cyber Crimes Detectives showed that in January of 2008, there were over 5,000 Internet Protocol (IP) addresses in Alaska, that had suspected known images of Child Pornography.
- In January of 2009, the number has increased to over 11,000 IP addresses unique to Alaska.
- A recent study documented by the Federal Government (Hernandez Study) of convicted sex offenders showed that over 80% of persons arrested for possession of Child Pornography had already committed an undisclosed contact Child Sexual Abuse. The nature of the investigations alone demand attention by Law Enforcement.

Alaska has highest per-capita usage of Internet

State	Internet	PC
Alaska	68.5%	73.4%
Utah	62.6%	74.1%
N.H.	65.5%	71.7%
WA	62.3%	71.4%
CO	63.4%	70.3%

Source: US Census Bureau

Utah tops nation in Web porn-site subscribers

At more than five broadband users per thousand population, Utah leads the nation in subscriptions to internet adult entertainment sites. Montana is lowest at 1.92 per thousand.

Top 10 states

State	Rate per 1,000
Utah	5.47
Alaska	5.03
Mississippi	4.30

myspace
a place for friends

- WWW.MYSPACE.COM est. Jan 2004
- Over 200 Million Registered Users Worldwide
- 350,000 new registrants daily
- 61% of kids 13-17 have MySpace page
- It splits 50.2% male, 49.8% female

MySpace is a social networking website offering an interactive network of photos, blogs, user profiles, groups, and an internal e-mail system. As of February 2006 it is the world's fifth most popular English language website (according to Alexa Internet[1]). MySpace has outstripped competitors such as Friendster and LiveJournal to become the most popular English language social networking website with higher traffic and over 59 million users. It is representative of both internet culture and teenage culture.

Alaskan MySpace Pages

- Random Sample from Anchorage, Mat Su Valley & Bethel
- Several presentations audience members knew children in photos…
- Items posted online are potentially there forever….With no expectation of privacy…

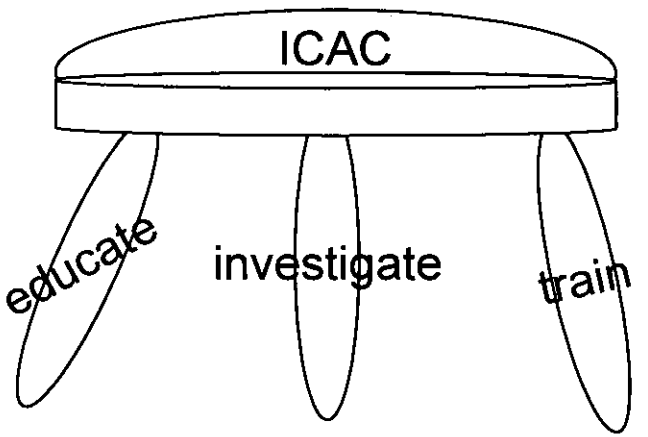
How Do We Fight This?

- NATIONAL ICAC MODEL
- "Three leg stool"

- Education
- Investigation
- Training



What Do We Need?

- Support- These investigations should be at a top priority for agencies involved.
- We need to continue to focus our efforts; pool resources; dedicate personnel; equipment; and funds to this effort.
- Current funding and staffing dedicated to this effort in Alaska is inadequate- realistically, we are targeting less than 1% of the estimated offenders. We will not arrest ourselves out of this problem- education- parental involvement- awareness is the long term solution.

A MESSAGE FROM YOUR STATE

To the parents in Alaska:

The Internet is a powerful tool. As with any tool, we must instruct our children on how to use it safely. A recent study by the University of New Hampshire showed that one in five young people using the Internet received an online sexual solicitation in a one-year period. In an alarming 15% of those cases, the solicitor attempted to meet the child in person.

With the growing risk that the Internet poses to our children, I hope that this site will aid you as you teach your children to protect themselves from Internet predators.

To report a problem anytime, call 1-800-843-5678. This will connect you to the National Center for Missing and Exploited Children. Or you can visit the Center's website at www.missingkids.com.

Thank you for your commitment to our shared priority of protecting children.

Sincerely,

Governor

Sarah Palin

Alaska ICAC Task Force 2009

In a three day training period from 3/3-5/09, APD Cyber Crimes Investigators conducted Peer 2 Peer training for 3 Alaska State Trooper / ABI investigators.

During this training, Proactive investigations were initiated with potential suspects located in Fairbanks; Kotzebue; Bethel; and Anchorage.

Summary

- It is evident, based on our experience, that Alaska's interest in safeguarding the physical and psychological well-being of a minor is compelling.
- The victimization of a child continues when that act is memorialized in an image. The materials produced are a permanent record of the children's participation and the harm to the child is exacerbated by their circulation. Unfortunately, the victimization of the children involved does not end when the pornographer's camera is put away.
- Research has shown that the use of children as subjects of pornographic materials is harmful to the physiological, emotional, and mental health of the child.
- The possession of child pornography drives that industry and…the production of child pornography will decrease if those who possess the product are punished equally with those who produce it.
- The law will decrease the production of child pornography if it penalizes those who possess and view the product, thereby decreasing demand.
- The possession of child pornography inflames the desires of child molesters, pedophiles and child pornographers. Alaska has more than a passing interest in forestalling the damage caused by child pornography: preventing harm to children is one of its most important interests.

Thank you for your attention and concern for Alaska's Children

Det. Sgt. Ron Tidler

AK ICAC Task Force 2008

Background

Over the past decade, the tremendous proliferation of computers connected to the Internet led to a skyrocketing number of Internet crimes against children. In the year 2008, the Alaska Internet Crimes Against Children (ICAC) Task Force recorded the following:

- 176 investigations involving unlawful images of the sexual exploitation of minors.
- 56 incidents of Internet crimes against children reported from the National Center for Missing and Exploited Children's Cybertip hotline.
- 29 cases of the Internet facilitated luring of minors for sexual exploitation.
- 7 reported incidents of Internet related child prostitution.

Alaska Internet Crimes Against Children

In the twelve months between January 2008 and December 2008, a joint task force of Alaska and Federal investigators conducted a series of proactive Cyber crime enforcement operations targeting Internet criminals committing sex crimes against children; including the trafficking of unlawful images depicting the sexual exploitation of minors. This was done in conjunction with an education effort geared towards Internet crime prevention and awareness.

Law Enforcement Agencies

Investigators and Prosecutors affiliated with 16 law enforcement agencies partnered with the Alaska ICAC Task Force in a cooperative effort during 2008. Agencies participating included (alphabetically):

- Alaska Adult Probations- Sex Offender Unit (Investigations)
- Alaska Bureau Investigations (investigations and training)
- Alaska District Attorney Office (education and training)
- Anchorage PD - (investigation and enforcement)
- Fairbanks PD - (investigation and enforcement)
- F.B.I. - (investigation and enforcement)
- I.C.E. - (investigation and enforcement)
- Juneau PD (investigations)
- Kenai PD - (investigation and enforcement)
- Kodiak PD - (investigation and enforcement)
- Military Investigators (investigations)
- Sitka PD (investigations)
- Soldotna PD - (investigation and enforcement)
- Unalaska PD - (investigation and enforcement)
- U.S. Attorney's Alaska Office - (prosecution)

- U. S. Postal Inspection Service - (investigations)
- UAA PD (facilitation / support)
- UAF PD (investigations)

The Investigators' Work

Trained investigators endured witnessing disturbing cyber images and videos depicting brutal sexual torture of actual children. They use sophisticated computer investigative techniques combined with undercover tactics to identify offenders. They conducted surveillance operations, requested subpoenas, and wrote and executed dozens of search warrants. They seized thousands of items of computer evidence. Detectives and special agents conducted computer forensics examinations to identify contraband images. They interrogated offenders and interviewed witnesses. They conducted exhaustive searches of dwellings and wrote voluminous reports on their activities.

The proactive investigators agreed to participate in this undercover operation in addition to their regular duties that involve responding to citizens' complaints of Internet crimes. Through their proactive efforts investigators and special agents sought justice for thousands of children who could not call 911. Their fine efforts are greatly appreciated. They will work closely with prosecutors to prepare for trials.

Cases pursued by local agencies under Alaska State Law have been submitted to the local Alaska District Attorney's Office. Cases pursued by federal agencies under the US Code have been submitted to US Attorney's Office for the Alaska District. The justice system considers all suspects innocent until proven guilty in court.

Penalties

Unlawful images depicting the Sexual Exploitation of minors are described under Alaska State law in AS 11.41.455. Possession of these images is a class C felony under Alaska State law AS 11.61.127.

The luring and enticement of minors for sexual exploitation is described under Alaska State law in AS 11.41.452. It is a class C felony.

Training and Education

During the 2008 calendar year, members of the Alaska ICAC Task Force have attended training, funded in large part by the Alaska ICAC Grant.

Examples of the training classes attended during 2008:

- ICAC Training & Technical Assistance Program (ICAC T&TA) – Investigative techniques course
- ICAC T&TA- Undercover Chat Investigations Program
- ICAC T&TA- Unit Supervisor Training Program
- ICAC T&TA- Project Safe Childhood(PSC) Team Training

- PSC and ICAC National Conference- several training seminars
- Safety Net Prosecutor Team training
- Access Data Forensic Tool Kit training
- Encase basic and advance software training
- National White Collar Crime Conference-(NWC3)
- BK Forensics- Cell Phone Forensic course.
- Access Data Windows registry training

In January 2009, several AK ICAC Members attended the International Consumer Electronic Show, the premier showcase of all the new digital media products that are being developed and marketed.

On March 3-6, 2009, APD Cyber Crimes Unit conducted Peer 2 Peer training for ABI Investigators. This training allows ABI investigators the ability to go on-line proactively to target individuals who are collecting and trading electronic images depicting Child Sexual Exploitation. Alaska ICAC members also conduct public safety presentations bringing the message of Internet safety to children and adults.

- Enough is Enough: www.enough.org
- FBI: www.fbi.gov/innocent.htm
- Get Net Wise: www.getnetwise.org
- ICE: www.ice.gov/pi/childexploitation/index.htm
- ISafe: www.isafe.org
- National Association to Protect Children: www.protect.org
- National Center for Missing and Exploited Children's Netsmartz Program: www.netsmartz.org

More Information

Alaska ICAC Task Force

The Alaska Internet Crimes Against Children (ICAC) Task Force efforts are partially funded by grants from the US Department of Justice, Office of Juvenile Justice and Delinquency Prevention. The ICAC program is a nationwide network of 59 state task forces representing 1,800 local and regionally affiliated agencies engaged in investigations, forensics examinations, prosecutions and community education. We are pleased to know that the recently announced Federal stimulus package provides a much needed $50 million dollar nationwide boost to the program. We hope to see some of those funds in Alaska.

Within Alaska, the ICAC Task Force is affiliated or partnered with 16 law enforcement and prosecutorial agencies statewide. Since 2008, Alaska detectives and special agents have conducted over 176 investigations resulting in the incarceration of 28 offenders.

Unlawful Images

Images depicting the sexual exploitation of minors are commonly called child pornography. The images and videos are contraband. The images that investigators found were not of babies in bathtubs. Some of the unlawful videos included acts of bestiality between minors and animals including the horrible audio sounds of human suffering. Detailed descriptions of the images will not be fully provided here.

2008 Alaska ICAC Task Force Frequently Asked Questions

- What undercover tactics are used?
  - We cannot release details of our tactics because investigations are still underway using the same undercover techniques. Those details will probably not be available until they come out at trial.

- Are the search warrant affidavits public records?
  - Affidavits are sealed by the courts because the investigations using these same techniques are continuing.

- Are these investigations into chat rooms and social networking sites?
  - Many avenues of cyberspace, including but not limited to chat rooms and social networking sites were investigated during this year.

- Are these investigations into P2P file sharing?
  - Many avenues of cyberspace, including but not limited to P2P sources were investigated during this year.

- Where on the Internet were the suspects found?
  - We cannot release that information because investigations are still pending using the same undercover tactics. Those details will not be available until trial.

- Was this an organized ring of people working together?
  - At this time the evidence does not indicate that the offenders know of each others activities.

- What training did the investigators have in order to work on these cases?
  - The average investigator assigned to conduct these investigations has received over several hundred hours of specialized training specific to Internet crimes and/or computer forensics coursework.

- Are the images and videos available for viewing pursuant to a public records request?
  - No - Images depicting the sexual exploitation of minors are contraband. Even in a courtroom setting, the prosecutors try to protect the gallery, the media and everyone but the judge, jury, defense and prosecution from seeing the images.

- Can citizens go on-line and volunteer to go undercover like they did on Dateline with Perverted Justice?
  - Citizen cyber-vigilantism is not supported by the agencies involved in this enforcement operation.

- Can the media "ride along" and accompany the cyber crime investigators?
  - Because child pornography is contraband, we do not permit anyone except those investigating or prosecuting the offenses to be exposed to the images.

- Media exposure of our undercover investigative tactics will make our jobs more difficult by making offenders aware of the techniques we use.

- What Internet safety tips can you provide to citizens about unlawful images?
  - Homeowners: Pay attention to what is occurring on your home computer. Take responsibility for the control of your computer.
  - Business owners: Watch what your employees are doing on their work computers. Law enforcement intervention can result in an embarrassing disruption of services to your customers.
  - Parents: Monitor your child's use of cell phone cameras. A troubling number of minors are using cell phone cameras to create felony images depicting the sexual exploitation of themselves and others. The images are then being shared throughout cyberspace and the images will never be retrieved.

- What Internet safety tips can you provide to citizens about luring/enticement?
  - Parents: Closely monitor your child's use of the computer and know who your child is contacting on line. Be aware that some children have multiple on line profiles. They may show one profile to their parents while keeping another secret profile that they use to communicate with friends and strangers.
  - Also, while you are protecting your children at home, be aware that some children go to places where free Internet access is provided to communicate with others. Coffee shops, libraries and colleges offer free Internet service where young people may be communicating with predators.

- Were any "hands on" contact victims discovered as the result of these investigations?
  - **Yes** – We also have encouraged the families and friends of other suspects to call us if they wish to report contact offenses. We know that victims are understandable reluctant to come forward for fear of embarrassment and because they do not wish to relive the abuse by subjecting themselves to the criminal justice system. We know from the scientific research conducted on the subject of unlawful images that a significant number of possessors are also contact offenders. We encourage victims to report abuse so that we can bring offenders to justice. Complicating our investigative endeavors is the fact that it is impossible for some of the victims, who are as young as infants, to notify the police. How can you call 911 when you are not yet old enough to count or to use a telephone?

- Are women ever arrested for Internet crimes against children?
  - Sometimes, but 99% of the offenders in theses cases are men. During this time period, no women were arrested.

- Where can I go on-line for more information?
  - Anchorage Police Department Internet Safety Tips: www.muni.org
  - Enough is Enough: www.enough.org
  - FBI: www.fbi.gov/innocent.htm
  - Get Net Wise: www.getnetwise.org

- ICE: www.ice.gov/pi/childexploitation/index.htm
- ISafe: www.isafe.org
- National Association to Protect Children: www.protect.org
- National Center for Missing and Exploited Children's Netsmartz Program: www.netsmartz.org

- What is the number to call to report Internet crimes against children?
  - Local crimes can be reported through the telephone 911 service.
  - The National Center for Missing and Exploited Children operates the Cybertip line **1-800-843-5678**, where crimes can be reported on-line. The web site is: www.cybertipline.com

4/13/09 FINAL REPORT: ALASKA CHILD & FAMILY SERVICES

EXECUTIVE SUMMARY
Final Report: Alaska Child and Family Services Review
February 2009

INTRODUCTION

This document presents the findings of the Child and Family Services Review (CFSR) for the State of Alaska. The CFSR is the Federal Government's program for assessing the performance of State child welfare agencies with regard to achieving positive outcomes for children and families. It is authorized by the Social Security Amendments of 1994 requiring the U.S. Department of Health and Human Services (HHS) to promulgate regulations for reviews of State child and family services programs under titles IV-B and IV-E of the Social Security Act. The CFSR is implemented by the Children's Bureau (CB) of the Administration for Children and Families within HHS.

The Alaska CFSR was conducted the week of September 8, 2008. The period under review for the onsite case review process was from April 1, 2007, through September 12, 2008. The findings were derived from the following documents and data collection procedures:

- The Statewide Assessment, prepared by the Alaska Department of Health and Social Services, Office of Children's Services (OCS)
- The State Data Profile, prepared by CB, which provides Alaska's child welfare data for the CFSR target 12-month period ending March 31, 2007
- Reviews of 65 cases (40 foster care and 25 in-home services cases) at three sites, including 31 cases in Anchorage, 17 cases in Bethel, and 17 cases in Juneau, all of which were open child welfare agency cases at some time during the period under review
- Interviews and focus groups (conducted at all three sites and at the State level) with stakeholders including, but not limited to, children, youth, parents, foster and adoptive parents, all levels of child welfare agency personnel, collaborating agency personnel, service providers, court personnel, child advocates, Tribal representatives, and attorneys

Background Information

The CFSR assesses State performance on 23 items relevant to seven outcomes and 22 items pertaining to seven systemic factors. In Section A: Outcomes of the CSFR Final Report, an overall rating of Strength or Area Needing Improvement (ANI) is assigned to each of the 23 items reviewed. An item is assigned an overall rating of Strength if 90 percent of the applicable cases reviewed were rated as a Strength. The ratings for the items are used to determine the performance of a State on the seven outcomes, each of which incorporates one or more of the individual items. Depending on item ratings, an outcome can be Substantially Achieved, Partially Achieved, or Not Achieved. For a State to be in substantial conformity with a particular outcome, 95 percent of the cases reviewed

must be rated as having Substantially Achieved the outcome. Two outcomes—Safety Outcome 1 and Permanency Outcome 1—also are evaluated based on State performance with regard to six national data indicators. For a State to be in substantial conformity with these outcomes, both the national standards for each data indicator and the case review requirements must be met.

In Section B: Systemic Factors, each item incorporated in each systemic factor is rated as either a Strength or an ANI based on whether State performance on the item meets Federal policy requirements as specified for the Child and Family Services Plan (CFSP). Information relevant to each systemic factor comes primarily from the Statewide Assessment and the stakeholder interviews conducted during the week of the Onsite Review. Depending on item ratings, a systemic factor can be either "in substantial conformity" or "not in substantial conformity." The criteria for the rating for each systemic factor are shown in the table below.

Rating the Systemic Factor			
Not in Substantial Conformity		**In Substantial Conformity**	
1	2	3	4
None of the CFSP or program requirements are in place.	Some or all of the CFSP or program requirements are in place, but more than one of the requirements fail to function as described in each requirement.	All of the CFSP or program requirements are in place, and no more than one of the requirements fails to function as described in each requirement.	All of the CFSP or program requirements are in place and functioning as described in each requirement.

A State that is not in substantial conformity with a particular outcome or systemic factor must develop and implement a Program Improvement Plan (PIP) to address that outcome or systemic factor. Because the focus of the CFSR process is on continuous quality improvement, standards are set high to ensure ongoing attention to the goal of achieving positive outcomes for children and families with regard to safety, permanency, and well-being.

Many changes have been made between the first and second CFSR review cycles. These changes were based on lessons learned during the first round and in response to feedback from the child welfare field. Consequently, a State's performance in the second round of the CFSR is not directly comparable to its performance in the first round, particularly with regard to comparison of percentages for performance on the outcomes and items. Key changes in the process that make comparing performance difficult across reviews include, but are not limited to, the following:

- An increase in the sample size from 50 to 65 cases
- Stratification of the sample to ensure a minimum number of cases in key program areas, resulting in variations in the number of cases relevant for specific outcomes and items
- Changes in criteria for specific items to increase consistency and to ensure an assessment of critical areas, such as child welfare agency efforts to involve noncustodial parents

CFSR Findings Regarding Outcomes

Alaska's 2008 CFSR identified the following areas of high performance with regard to achieving outcomes:

- Item 5, which pertains to foster care reentry, was rated as a Strength in 91 percent of applicable cases.
- Item 11, which pertains to proximity of placements in foster care to parents and close relatives, was rated as a Strength in 90 percent of applicable cases.
- Item 12, which pertains to placement of siblings together, was rated as a Strength in 91 percent of applicable cases.
- The State met the national standard for the data indicator of Permanency Composite 3—Achieving permanency for children in foster care for extended time periods.

Despite these areas of high performance, the State performance was at a low level for all case review outcomes. The highest performing outcome was Well-Being Outcome 2 (Children receive services to meet their educational needs), with 76.1 percent of cases found to have substantially achieved the outcome. Less than 50 percent of the cases were found to have substantially achieved four of the CFSR outcomes.

The most critical concerns identified with regard to outcomes for children and families pertained to Safety Outcome 1 (Children are, first and foremost, protected from abuse and neglect), Safety Outcome 2 (Children are safely maintained in their homes when possible and appropriate), Permanency Outcome 1 (Children have permanency and stability in their living situations), and Well-Being Outcome 1 (Families have enhanced capacity to provide for children's needs). Safety Outcome 1 was substantially achieved in only 47.1 percent of the cases. The primary concern for this outcome pertained to delays in initiating investigations of child abuse and neglect allegations. Although stakeholders suggested that delays occurred primarily with regard to allegations assigned as priority 2 or 3, there were four maltreatment allegations among the cases reviewed that were assigned as priority 1 reports (i.e., emergency situations) but were not investigated in the timeframe established by State policy.

Safety Outcome 2 (Children are safely maintained in their homes whenever possible and appropriate) was found to be substantially achieved in only 38.5 percent of the cases. The primary concern in these cases centered on children being left at risk in their own homes because of a lack of service provision, safety and risk assessment, and monitoring.

Well-Being Outcome 1 (Families have enhanced capacity to provide for their children's needs) was found to be substantially achieved in only 23.1 percent of the cases, with the primary concern being the lack of caseworker contact with parents and the lack of engagement of parents in case planning and services. However, it is important to note that there also was a lack of sufficient contact with children in the cases, particularly children in the in-home services cases, some of whom were never seen during the CFSR period under review. Also, although there was less contact with the fathers than with the mothers and less effort to engage the fathers than to engage the mothers, contact with the mothers and engagement of the mothers in case planning also was limited. The lack of contact

applicable Juneau cases. Both item 1 (timeliness of investigations) and item 2 (repeat maltreatment) were rated as ANIs. Alaska also did not meet the national standards for the data indicators pertaining to the absence of maltreatment recurrence and the absence of maltreatment of children in foster care by foster parents or facility staff.

Additional findings for this outcome were the following:

- There were 22 maltreatment reports that occurred during the period under review for which an investigation was not initiated in the timeframes required by State policy. Of these, 11 were priority 3 reports, 5 were priority 2 reports, and 4 were priority 1 reports. One report was never screened or assigned, and one report was assigned to the differential response program, but the children who were the subject of the report were never seen.
- In addition to the recurrence of substantiated maltreatment in a number of cases, case reviewers expressed concern about the many cases involving multiple reports (both substantiated and not substantiated) on the family during the life of the case. For example, in 12 cases there were 15 or more maltreatment reports during the life of the case, with 4 of these cases having more than 20 reports.

Alaska also was not in substantial conformity with Safety Outcome 1 during its first CFSR conducted in fiscal year 2002 and was required to address this outcome in its PIP. Both items assessed for this outcome were rated as ANIs in the 2002 CFSR. Key concerns identified in the 2002 CFSR were the following:

- The State did not meet the national standards for the measure of maltreatment recurrence or the measure of maltreatment of children in foster care by foster parents or facility staff.
- Although the agency initiated investigations of reports involving imminent risk (priority 1 reports) within the required timeframes, the initiation of investigations of maltreatment reports not involving imminent risk (i.e., reports assigned a priority 2 or 3 level) did not consistently meet required timeframes.

To address these concerns, Alaska included the following key strategies in its PIP:

- Revised policies relating to the investigative process, including specifying definitions for "face-to-face contact" and "initiation of investigation," and trained supervisors and caseworkers on the policies
- Established a protocol to review cases that involve a recurrence of maltreatment
- Developed a new safety assessment model (training of staff on the model did not begin until the spring of 2006)

The State met its target goals for this outcome by the end of its PIP implementation period.

Safety Outcome 2: Children are safely maintained in their homes when possible and appropriate

Performance on Safety Outcome 2 is assessed through two indicators. One indicator (item 3) addresses the issue of child welfare agency efforts to prevent children's removal from their homes by providing services to the families that ensure children's safety while

Depending on the child's permanency goal, the remaining indicators focus on the child welfare agency's efforts to achieve permanency goals (such as reunification, guardianship, adoption, or permanent placement with relatives) in a timely manner (items 8 and 9), or to ensure that children who have other planned permanent living arrangement (OPPLA) as a case goal are in stable placements and adequately prepared for eventual independent living (item 10).

Alaska is not in substantial conformity with Permanency Outcome 1. This determination was based on the following findings:

- The outcome was substantially achieved in 15 percent of the 40 foster care cases, which is less than the 95 percent required for an overall rating of substantial conformity. The outcome was substantially achieved in 20 percent of Anchorage cases and 10 percent of Bethel and Juneau cases.
- The State did not meet the national standards for the national data indicators pertaining to the timeliness and permanency of reunification (Composite 1), the timeliness of adoptions (Composite 2), and placement stability (Composite 4).

Alaska met the national standards for the data indicator pertaining to achieving permanency for children in foster care for extended time periods (Composite 3).

For this outcome, item 5 was rated as a Strength, but all other items assessed for the outcome were rated as ANIs. Key findings of the 2008 CFSR were the following:

- Alaska had a very low percentage of reentries into foster care (7.5 percent) compared to the performance of all States nationally.
- Many children in the cases reviewed were in multiple placement settings during the period under review. In nine cases, the children had three or more placements during the period under review, with three of these children having five or more placements.
- The child's permanency goal frequently was not established in a timely manner.
- There was a general lack of sufficient effort to achieve reunification or guardianship in a timely manner.
- Agency practice was inconsistent with regard to filing for termination of parental rights (TPR) in accordance with the Adoption and Safe Families Act (ASFA) requirements.
- There were frequent and considerable delays associated with the home study process for adoption—either completing or approving the home studies, resulting in considerable delays in achieving adoptions in a timely manner.

Alaska also was not in substantial conformity with Permanency Outcome 1 in its 2002 CFSR. At that time, all relevant items except item 5 (foster care reentry) were rated as ANIs. The following key concerns were identified:

- The agency was not consistent with regard to ensuring placement stability for children in foster care.
- Case goals often were not changed even when there were indications that the goal was not likely to be achieved.
- The goals of guardianship and reunification were not achieved in a timely manner in many cases.
- There were many agency-related delays in achieving adoptions in a timely manner, including lack of timely decision-making and lack of follow-up with the child and pre-adoptive family.

To address these concerns, Alaska implemented the following strategies as part of its PIP:

- Standardized practice for setting and changing permanency goals when concurrent planning occurs
- Improved the structure of administrative reviews and permanency planning conferences, with enhanced focus on permanency goals and concurrent planning
- Developed the continuous QA review system to monitor cases
- Established Regional Adoption Specialists who participate in administrative and permanency planning reviews to ensure that goals are established in a timely manner and are documented
- Implemented a statewide contract for post-adoption services

The State met its target goals for this outcome by the end of its PIP implementation period.

Permanency Outcome 2: The continuity of family relationships and connections is preserved for children

Permanency Outcome 2 incorporates six indicators that assess the child welfare agency's performance in (1) placing children in foster care in close proximity to their parents and close relatives (item 11); (2) placing siblings together (item 12); (3) ensuring frequent visitation among children and their parents and siblings in foster care (item 13); (4) preserving connections of children in foster care with extended family, community, cultural heritage, religion, and schools (item 14); (5) seeking relatives as potential placement resources (item 15); and (6) promoting the relationship between children and their parents while the children are in foster care (item 16).

Alaska is not in substantial conformity with Permanency Outcome 2. The outcome was determined to be substantially achieved in 62.5 percent of the 40 foster care cases, which is less than the 95 percent required for substantial conformity. The outcome was determined to be substantially achieved in 65 percent of Anchorage cases, 60 percent of Bethel cases, and 60 percent of Juneau cases. Although items 11 and 12 were rated as Strengths, all other items assessed for this outcome were rated as ANIs.

Key findings for this outcome in the 2008 CFSR were the following:

- In most of the applicable cases, the child was placed in close proximity to parents or, if placed far away, the placement was determined to be necessary to meet the needs of the child and/or support attainment of the child's permanency goal.
- In most of the applicable cases, the child was placed with other siblings in foster care when appropriate.
- There was a lack of concerted effort to ensure visitation between children in foster care and their mothers, fathers, and siblings.
- There was a lack of concerted effort to maintain the child's connections with extended family, particularly with siblings who were not in foster care.
- Relatives were not consistently sought as placement resources for children in foster care.

- There was a lack of concerted effort to support and/or strengthen the bond between parents and children through activities such as encouraging parent participation in school activities and/or doctor's appointments or providing therapy to the family to address their relationship issues.

Alaska also was not in substantial conformity with Permanency Outcome 2 in its 2002 CFSR. At that time, items 11 and 12 were rated as Strengths, but all other relevant items were rated as ANIs. During the 2002 CFSR, the agency was found to be inconsistent with respect to facilitating and supporting visits between children and their parents and siblings, preserving children's connections, seeking relatives as potential placement resources, and promoting or maintaining the parent-child bond.

To address these concerns, Alaska implemented the following strategies as part of its PIP:

- Developed policies and guidelines to clarify supervised and unsupervised visitation requirements to enhance visitation opportunities
- Made paternity testing available statewide to ensure identification of the fathers
- Improved policy and training regarding maintaining connections between children in foster care and their families and communities

The State met its target goals for this outcome by the end of its PIP implementation period.

Well-Being Outcome 1: Families have enhanced capacity to provide for their children's needs

Well-Being Outcome 1 incorporates four indicators. One pertains to the agency's efforts to ensure that the service needs of children, parents, and foster parents are assessed and that the necessary services are provided to meet identified needs (item 17). A second indicator examines agency efforts to actively involve parents and children (when appropriate) in the case planning process (item 18). The two remaining indicators examine the frequency and quality of caseworker contacts with the children in their caseloads (item 19) and with the children's parents (item 20).

Alaska is not in substantial conformity with Well-Being Outcome 1. The outcome was determined to be substantially achieved in 23.1 percent of the 65 cases, which is less than the 95 percent required for substantial conformity. The outcome was substantially achieved in 35 percent of Anchorage cases, 6 percent of Bethel cases, and 18 percent of Juneau cases. Also, the outcome was substantially achieved in 35 percent of the foster care cases compared to 4 percent of the in-home services cases (only one in-home services case was determined to have substantially achieved this outcome). All four items assessed for this outcome were rated as ANIs.

Key findings with regard to this outcome in the 2008 CFSR were the following:

- For the foster care cases, the agency was considerably less consistent in assessing and meeting service needs of mothers and fathers than it was in assessing and meeting the needs of the children. However, even for children, needs were adequately assessed

and met in only 73 percent of the foster care cases and 44 percent of the in-home services cases. The agency was least consistent in assessing and meeting needs of the fathers in both types of cases, although the percentage was particularly low (13 percent) in the in-home services cases.

- There was a general lack of involvement of mothers, fathers, and children (when appropriate) in case planning in both the foster care and in-home services cases. However, in both types of cases, mothers were more likely to be involved in case planning than were fathers or children. In addition, mothers, fathers, and children were more likely to be involved in case planning in the foster care cases than in the in-home services cases.
- In many cases, the frequency of caseworker visits was not sufficient to meet the needs of the child, and if visits did occur, they did not focus on issues pertinent to case planning, service delivery, and goal attainment. Caseworkers were more likely to visit children in foster care at least once a month than they were to visit children in the in-home services cases. In five in-home services cases, the children were never seen by the caseworker during the CFSR period under review.
- The frequency of visits with mothers and fathers was not sufficient and, if visits did occur, the quality was not sufficient to meet the needs of the children or further achievement of case goals.

Alaska also was not in substantial conformity with this outcome in its 2002 CFSR, with all items rated as ANIs. The key concerns identified in the 2002 CFSR were the following:

- In many cases, the service needs of children, parents, and foster parents were neither assessed nor addressed.
- The child welfare agency did not consistently involve parents and children in the case planning process.
- In the majority of cases reviewed, the frequency and quality of visitation with both children and parents was not adequate to meet the needs of the child or promote attainment of case goals.

To address the concerns identified in the 2002 CFSR, the State developed and implemented the following strategies:

- Enhanced and revised policy and procedure for administrative review feedback to the administration in July 2005
- Developed case planning protocols to identify required services
- Strengthened caseworker training in conducting initial assessments
- Developed the expectation that supervisors are to work with their staff regarding the assessment of child and family needs and the incorporation of these needs into a strengths-based case and service planning process
- Implemented statewide tracking of caseworker visits

The State met its PIP target goals for this outcome by the end of its PIP implementation period.

Well-Being Outcome 2: Children receive appropriate services to meet their educational needs

Well-Being Outcome 2 pertains to the agency efforts to address and meet the educational needs of children in both foster care and in-home services cases (item 21).

Alaska is not in substantial conformity with Well-Being Outcome 2, which includes only one item—item 21: Educational needs of the child. Reviewers determined that the outcome was substantially achieved in 76.1 percent of the applicable cases, which is less than the 95 percent required for substantial conformity. The outcome was substantially achieved in 90 percent of applicable Anchorage cases, 42 percent of applicable Bethel cases, and 85 percent of applicable Juneau cases. The outcome was substantially achieved in 78 percent of the 37 applicable foster care cases and 67 percent of the 9 applicable in-home services cases. A key finding was a lack of consistency with regard to both assessing children's educational needs and providing services when educational needs were identified.

Alaska also was not in substantial conformity with this outcome in its 2002 CFSR. A key concern of that review was that children in the in-home services cases had education-related issues to which the agency was not responding. To address this concern, the State implemented the following strategies in its PIP:

- Amended court orders to authorize OCS to gather educational information about children in out-of-home care
- Established an interdepartmental work group to ensure enhanced relationships between the agency and school administrators at the local level
- Provided training regarding a new policy requiring workers to assess, address, and document the educational needs of children in the cases in which children remain in their homes

The State met its PIP target goals for this outcome by the end of its PIP implementation period.

Well-Being Outcome 3: Children receive adequate services to meet their physical and mental health needs

This outcome incorporates two indicators that assess agency efforts to meet children's physical health (item 22) and mental health (item 23) needs.

Alaska is not in substantial conformity with Well-Being Outcome 3. The outcome was determined to be substantially achieved in 52.5 percent of the applicable cases, which is less than the 95 percent required for substantial conformity. The outcome was substantially achieved in 70 percent of applicable Anchorage cases, 12.5 percent of applicable Bethel cases, and 62.5 percent of applicable Juneau cases. Also, the outcome was substantially achieved in 62.5 percent of the 40 foster care cases compared to 32 percent of the 19 applicable in-home services cases. Both items assessed for this outcome were rated as ANIs.

Key findings of the 2008 CFSR were that children's physical and mental health service needs were not consistently assessed nor addressed.

Alaska also was not in substantial conformity with Well-Being Outcome 3 in its 2002 CFSR, with both relevant items rated as ANIs. The key concerns identified in the 2002 CFSR were the following:

- Agency performance was inconsistent with regard to providing health screenings for children at entry into foster care and providing foster parents with children's health records.
- Agency performance was inconsistent with regard to assessing children's mental health needs and providing the necessary mental health services.

To address these concerns, Alaska implemented the following strategies as part of its PIP:

- Training was provided to caseworkers regarding completing the Early Periodic Screening, Diagnosis, and Treatment screenings of children within State guidelines and using the health-care provider's recommendations as a guide for all health treatment decisions.
- Physical and mental health issues were added as a topic of discussion in the administrative review process.
- Policy was established to ensure that all children in foster care received mental health evaluations.

The State met its target goals for this outcome by the end of its PIP implementation period.

II. KEY FINDINGS RELATED TO SYSTEMIC FACTORS

Statewide Information System

Substantial conformity with the systemic factor of Statewide Information System is determined by whether the State is operating a information system that can inform users immediately with the status, demographic characteristics, location, and case goals for the placement of every child in foster care.

Alaska is in substantial conformity with the systemic factor of Statewide Information System. The key finding of the 2008 CFSR is that Alaska's statewide information system—Online Resources for Children in Alaska—can readily identify the legal status, demographic characteristics, location, and case goals for each child in foster care. The State also was in substantial conformity with this systemic factor during its 2002 CFSR and therefore was not required to address this factor in its PIP.

Case Review System

Five indicators are used to assess the State's performance for the systemic factor of a Case Review System. The indicators examine development of case plans and parent involvement in that process (item 25), the consistency of 6-month case reviews (item 26) and 12-month permanency hearings (item 27), implementation of procedures to seek TPR in accordance with the timeframes established in

ASFA (item 28), and notification and inclusion of foster and pre-adoptive parents and relative caregivers in case reviews and hearings (item 29).

Alaska is not in substantial conformity with the systemic factor of Case Review System. Because the Alaska Statewide Assessment did not provide data on any of the key items associated with this systemic factor, the CFSR determinations were based on anecdotal information in the Statewide Assessment and on stakeholder interviews conducted during the onsite CFSR. Using this information, items 26 and 27 were rated as Strengths, and items 25, 28, and 29 were rated as ANIs. In general, the 2008 CFSR determined that periodic reviews and permanency hearings were being held in a timely manner and that they addressed the issues that are relevant to moving a child toward permanency. However, the 2008 CFSR also determined the following:

- Parents are not consistently involved in the development of their case plans.
- TPR petitions are not being filed in a timely manner on a consistent basis.
- Notification of caregivers regarding hearings and reviews involving the children in their care and the caregivers' right to be heard in these proceedings is inconsistent across the State.

Alaska also was not in substantial conformity with this factor during its 2002 CFSR and was required to address the factor in its PIP. In the 2002 review, items 26 and 28 were rated as Strengths. The following concerns were identified in the 2002 CFSR with regard to items 25, 27, and 29:

- There was a lack of goal-oriented case plans.
- The system did not consistently involve parents and children (when appropriate) in case planning.
- Permanency hearings were not consistently held in a timely manner.
- Foster parents and other caregivers were not consistently notified regarding permanency hearings nor were they provided with an opportunity to be heard at the hearings.

The following key strategies were implemented in Alaska's PIP to address these concerns:

- Policy and procedure changes were developed and implemented to strengthen and enhance the use of case plans, ensure that case plans are developed in conjunction with parents and children (when appropriate), and incorporate case planning for in-home services cases.
- In collaboration with the Court Improvement Project, a data system called Court View was implemented to enable the court to track court hearings (operates in only a few jurisdictions).
- In collaboration with the Attorney General's office, a new protocol was developed for notifying foster parents of court hearings. In 2005, Alaska statutes were changed to require that notification of all court hearings in a child's case be provided to the child, each parent, the Tribe, foster parent or other out-of-home care provider, guardian, and guardian *ad litem*. In some circumstances, written notice of all court hearings in a child's case must be provided to a grandparent of the child.

Alaska met its target goals for this systemic factor by the end of its PIP implementation period.

Quality Assurance (QA) System

Performance with regard to the systemic factor of QA System is based on whether the State has developed standards that ensure the safety and health of children in foster care (item 30) and whether the State is operating a statewide QA system that evaluates the quality and effectiveness of services and measures program strengths and ANIs (item 31).

Alaska is not in substantial conformity with the systemic factor of QA System. Both items assessed for this factor were rated as ANIs. Key findings were the following:

- Although the State has developed standards to ensure quality services to protect the safety and health of children, many of the standards are not being implemented on a consistent basis and, at the time of the onsite CFSR, many were not fully operational.
- Although the State has a QA system in place, it does not incorporate a process for following up on QA findings with the field offices to determine whether program improvements have been implemented in response to findings and to assess the effectiveness of program improvement efforts that have been implemented.

Alaska also was not in substantial conformity with this systemic factor in its 2002 CFSR and was required to address the factor in its PIP. In the 2002 CFSR, item 30 was rated as a Strength, but item 31 was rated as an ANI. The key concern identified in the 2002 CFSR was that Alaska did not have a statewide QA process and had no formal process for clients or stakeholders to evaluate agency performance.

To address this concern through its PIP, the State developed and implemented a comprehensive QA system that incorporates both case reviews and interviews with case-related stakeholders. In addition, the PIP focused on ongoing improvement of supervisory case reviews and administrative reviews.

Alaska met its target goals for this systemic factor by the end of its PIP implementation period.

Training

The systemic factor of Training incorporates an assessment of the State's training program for new caseworkers (item 32), ongoing training for agency staff (item 33), and training for foster and adoptive parents (item 34).

Alaska is not in substantial conformity with the systemic factor of Training. All three items assessed for this systemic factor were rated as ANIs. The key findings were the following:

- Initial training provided to staff is not sufficient to prepare them to carry out their responsibilities.
- The State does not require caseworkers or supervisors to receive ongoing training as part of their jobs. In addition, training opportunities that are available for caseworkers and supervisors are limited, particularly outside of Anchorage, and agency staff

often cannot access ongoing training either because of workload responsibilities or constraints related to the cost and time needed for travel.

- Foster parents are not receiving sufficient training to carry out their responsibilities. Although initial training for foster parents is available, it is not required. In addition, although there is a requirement for annual training for foster parents (10 to 15 hours), the Statewide Assessment reports that in 2008, 23 percent of foster parents did not complete this requirement.

Alaska was in substantial conformity with this systemic factor in its 2002 CFSR and therefore was not required to address the factor in its PIP.

Service Array

The assessment of the systemic factor of Service Array addresses three questions: Does the State have in place an array of services that meets the needs of children and families served by the child welfare agency (item 35)? Are the services accessible to families and children throughout the State (item 36)? Can services be individualized to meet the unique needs of the children and families served by the child welfare agency (item 37)?

Alaska is not in substantial conformity with the systemic factor of Service Array. All three items assessed for this systemic factor were rated as ANIs. Key findings of the 2008 CFSR were the following:

- Substance abuse and mental health services, in-home family preservation services, and foster family homes (particularly Native foster homes) are four key service gaps in the State.
- The Children's Services offices are not effective in ensuring that resources are available in all political jurisdictions. Although the Statewide Assessment attributes this to the remoteness of some of Alaska's communities and the resultant transportation difficulties, stakeholders indicated that there is a lack of necessary resources to ensure that people who reside in the more remote areas can access services. They noted that even basic child protective and case management services are limited in these areas because staffing plans for the agencies that serve these communities do not take into account the length of time required to travel to the more remote communities.
- Although there are flexible funding resources and culturally appropriate services in the State, they are not sufficient to meet the needs of the children and families for whom individualized services are critical.

Alaska also was not in substantial conformity with this systemic factor in its 2002 CFSR and was required to address the factor in its PIP. The key concerns identified in the 2002 CFSR were the following:

- Key services were not available in sufficient quantity in either rural or urban communities.
- Many critical services were not available in all communities in the State.

- In many situations, the types of services provided to children and families were more likely to be influenced by what was available rather than by what was needed to meet their particular needs. To address these concerns in its PIP, OCS implemented the following strategies:
- Conducted an assessment of strengths and service gaps using a collaborative approach with community providers and stakeholders
- Collaborated with other State agencies and departments to ensure the efficient use of available resources for shared populations
- Used Tribal, paraprofessional, and village-based resources to assist in case planning
- Developed grant programs to expand services and worked with grantees to develop a baseline of current services and identify changes that are needed to evaluate services (including post-adoption services)

Alaska met its target goals for this systemic factor by the end of its PIP implementation period.

Agency Responsiveness to the Community

Performance with regard to the systemic factor of Agency Responsiveness to the Community incorporates an assessment of the State's consultation with external stakeholders in developing the CFSP (items 38 and 39) and the extent to which the State coordinates child welfare services with services or benefits of other Federal or Federally-assisted programs serving the same population (item 40).

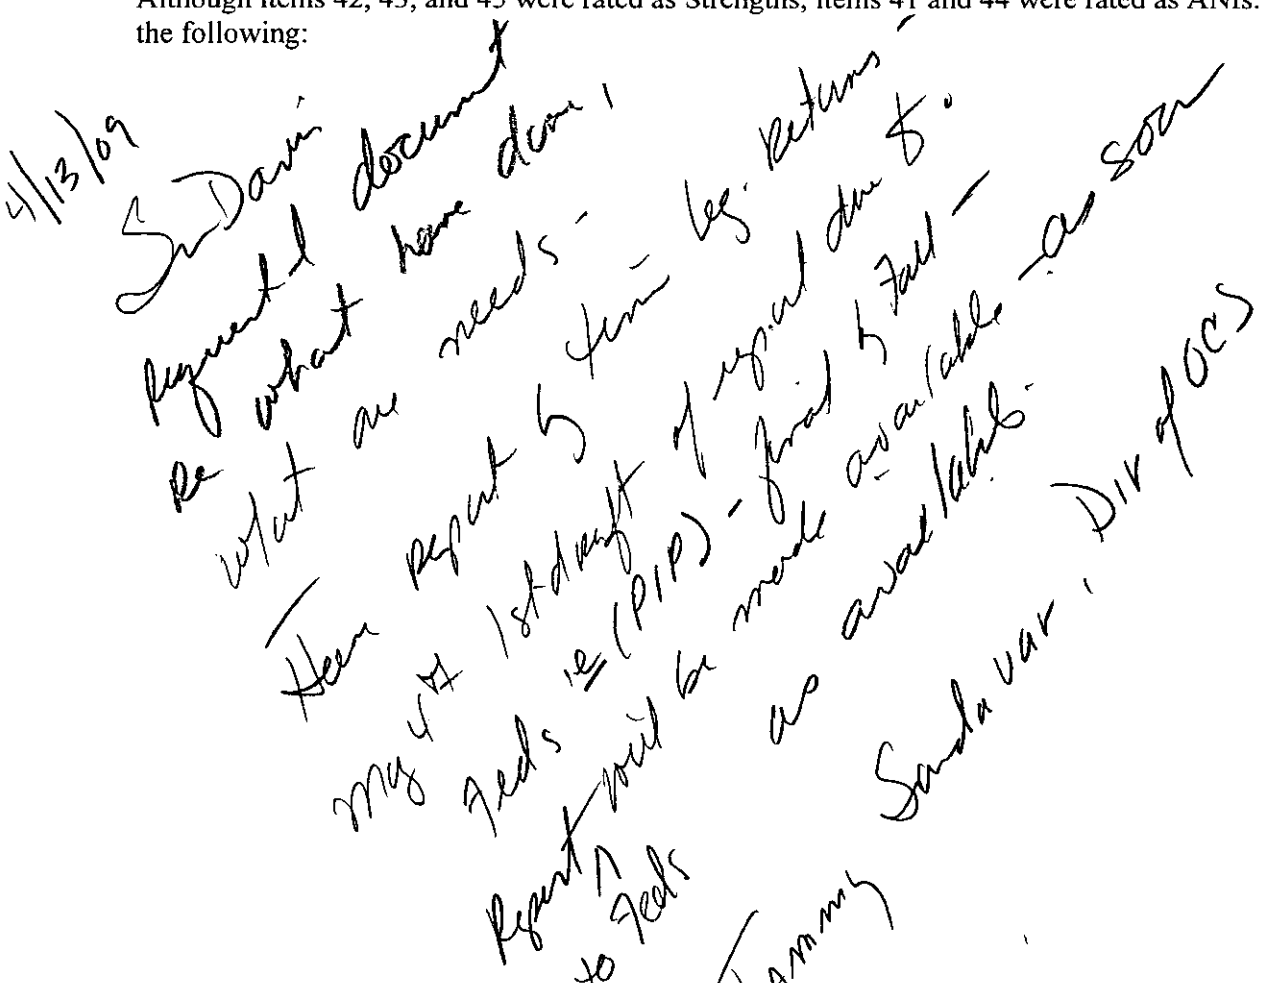
Alaska is not in substantial conformity with the systemic factor of Agency Responsiveness to the Community. Items 38 and 39 were rated as ANIs, although item 40 was rated as a Strength. The State was found to be effective in coordinating with other Federal or Federally-funded agencies in providing services. However, OCS does not have a formal process to consistently seek input from and engage stakeholders, including local child welfare agency staff, in the development of its goals and objectives for the State child and family services programs or in the development of its Annual Progress and Services Report.

The State was in substantial conformity with this systemic factor in its 2002 CFSR and, therefore, did not address this factor in its PIP. Findings from the 2008 CFSR are presented below.

Foster and Adoptive Parent Licensing, Recruitment, and Retention

The assessment of this systemic factor focuses on the State's standards for foster homes and child care institutions (items 41 and 42), the State's compliance with Federal requirements for criminal background checks for foster and adoptive parents (item 43), the State's efforts to recruit foster and adoptive parents who reflect the ethnic and racial diversity of foster children (item 44), and the State's activities with regard to using cross-jurisdictional resources to facilitate permanent placements for waiting children (item 45).

Alaska is not in substantial conformity with the systemic factor of Foster and Adoptive Parent Licensing, Recruitment, and Retention. Although items 42, 43, and 45 were rated as Strengths, items 41 and 44 were rated as ANIs. The key findings of the 2008 CFSR were the following:



- Alaska claims title IV-E funds only for children placed in foster homes that are fully licensed.
- Alaska complies with Federal requirements and completes criminal records checks on all fully licensed foster homes, adoptive homes, and relative placement homes.
- Alaska is effective in using cross-jurisdictional resources to facilitate timely adoptive or permanent placements for waiting children.
- While there are licensing standards established, many licensed homes with ongoing placements do not meet the full licensing standards.
- Alaska does not have a statewide process in place to recruit foster homes despite significant shortages of all types of foster homes; local offices do not have recruitment plans, recruitment resources are limited, and efforts to recruit foster homes are not sufficient.

Alaska also was not in substantial conformity with this factor in its 2002 CFSR and therefore was required to address the factor in its PIP. The 2002 CFSR identified the following key concerns in regard to this factor:

- The State granted variances to the licensing standards with the result that full licensing standards are not equally applied to all foster homes.
- The State did not have an effective recruitment plan for recruiting foster and adoptive parents who meet the needs of the children in foster care.

To address these concerns, the State implemented the following strategies:

- Implemented efforts to improve the licensing process, particularly with regard to the use of variances
- Developed a statewide foster care recruitment plan with the assistance of the National Resource Center for Foster Care and Permanency
- Increased recruitment of Native Alaskan foster parents through increased collaboration with Tribes

Alaska met its target goals for this systemic factor by the end of its PIP implementation period.

Table 1. Alaska CFSR Ratings for Safety and Permanency Outcomes and Items

Outcomes and Items	Outcome Ratings			Item Ratings	
	In Substantial Conformity?	Percent Substantially Achieved*	Met National Standards?	Rating**	Percent Strength
Safety Outcome 1: Children are, first and foremost, protected from abuse and neglect	No	47.1	No		
Item 1: Timeliness of investigations				ANI	56
Item 2: Repeat maltreatment				ANI	81
Safety Outcome 2: Children are safely maintained in their homes when possible and appropriate	No	38.5			
Item 3: Services to prevent removal				ANI	51
Item 4: Risk of harm				ANI	39
Permanency Outcome 1: Children have permanency and stability in their living situations	No	15.0	Met C3; did not meet C1, C2, or C4		
Item 5: Foster care reentry				Strength	91
Item 6: Stability of foster care placements				ANI	72.5
Item 7: Permanency goal for child				ANI	45
Item 8: Reunification, guardianship, and placement with relatives				ANI	33
Item 9: Adoption				ANI	18
Item 10: Other planned living arrangement				ANI	60
Permanency Outcome 2: The continuity of family relationships and connections is preserved	No	62.5			
Item 11: Proximity of placement				Strength	90
Item 12: Placement with siblings				Strength	91
Item 13: Visiting with parents and siblings in foster care				ANI	62
Item 14: Preserving connections				ANI	77.5
Item 15: Relative placement				ANI	83
Item 16: Relationship of child in care with parents				ANI	47

* 95 percent of the applicable cases reviewed must be rated as having substantially achieved the outcome for the State to be in substantial conformity with the outcome.

** Items may be rated as a Strength or an ANI. For an overall rating of Strength, 90 percent of the cases must be rated as a Strength.

Table 2. Alaska CFSR Ratings for Child and Family Well-Being Outcomes and Items

Outcomes and Indicators	Outcome Ratings		Item Ratings	
	In Substantial Conformity?	Percent Substantially Achieved	Rating**	Percent Strength
Well-Being Outcome 1: Families have enhanced capacity to provide for children's needs	No	23.1	[redacted]	[redacted]
Item 17: Needs/services of child, parents, and foster parents	[redacted]	[redacted]	ANI	32
Item 18: Child/family involvement in case planning	[redacted]	[redacted]	ANI	37
Item 19: Caseworker visits with child	[redacted]	[redacted]	ANI	26
Item 20: Caseworker visits with parents	[redacted]	[redacted]	ANI	20
Well-Being Outcome 2: Children receive services to meet their educational needs	No	76.1	[redacted]	[redacted]
Item 21: Educational needs of child	[redacted]	[redacted]	ANI	76
Well-Being Outcome 3: Children receive services to meet their physical and mental health needs	No	52.5	[redacted]	[redacted]
Item 22: Physical health of child	[redacted]	[redacted]	ANI	71
Item 23: Mental health of child	[redacted]	[redacted]	ANI	55

* 95 percent of the applicable cases reviewed must be rated as having substantially achieved the outcome for the State to be in substantial conformity with the outcome.

** Items may be rated as a Strength or an ANI. For an overall rating of Strength, 90 percent of the cases reviewed for the item (with the exception of item 21) must be rated as a Strength. Because item 21 is the only item for Well-Being Outcome 2, the requirement of a 95-percent Strength rating applies.

Table 3: Alaska CFSR Ratings for Systemic Factors and Items

Systemic Factors and Items	Substantial Conformity?	Score*	Item Rating**
Statewide Information System	Yes	3	
Item 24: The State is operating a statewide information system that, at a minimum, can readily identify the status, demographic characteristics, location, and goals for the placement of every child who is (or within the immediately preceding 12 months, has been) in foster care			Strength
Case Review System	No	2	
Item 25: The State provides a process that ensures that each child has a written case plan to be developed jointly with the child's parents that includes the required provisions			ANI
Item 26: The State provides a process for the periodic review of the status of each child, no less frequently than once every 6 months, either by a court or by administrative review			Strength
Item 27: The State provides a process that ensures that each child in foster care under the supervision of the States has a permanency hearing in a qualified court or administrative body no later than 12 months from the date the child entered foster care and no less frequently than every 12 months thereafter			Strength
Item 28: The State provides a process for TPR proceedings in accordance with the provisions of the Adoption and Safe Families Act (ASFA)			ANI
Item 29: The State provides a process for foster parents, pre-adoptive parents, and relative caregivers of children in foster care to be notified of, and have an opportunity to be heard in, any review or hearing held with respect to the child			ANI
Quality Assurance System	No	2	
Item 30: The State has developed and implemented standards to ensure that children in foster care are provided quality services that protect the safety and health of children			ANI
Item 31: The State is operating an identifiable quality assurance system that is in place in the jurisdictions where the services included in the Child and Family Services Plan (CFSP) are provided, evaluates the quality of services, identified Strengths and needs of the service delivery system, provides relevant reports, and evaluations program improvement measures implemented			ANI
Training	No	2	
Item 32: The State is operating a staff development and training program that supports the goals and objectives in the CFSP, addresses services provided under titles IV-B and IV-E, and provides initial training for all staff who deliver these services			ANI
Item 33: The State provides for ongoing training for staff that addresses the skills and knowledge base needed to carry out their duties with regard to the services included in the CFSP			ANI
Item 34: The State provides training for current or prospective foster parents, adoptive parents, and staff of State licensed or approved facilities that care for children receiving foster care or adoption assistance under title IV-E that addresses the skills and knowledge base needed to carry out their duties with regard to foster and adopted children			ANI

Systemic Factors and Items	Substantial Conformity?	Score	Item Rating**
Service Array	No	2	
Item 35: The State has in place an array of services that assess the strengths and needs of children and families and determine other service needs, address the needs of families in addition to individual children in order to create a safe home environment, enable children to remain safely with their parents when reasonable, and help children in foster and adoptive placements achieve permanency			ANI
Item 36: The services in item 35 are accessible to families and children in all political jurisdictions covered in the State's CFSP			ANI
Item 37: The services in item 35 can be individualized to meet the unique needs of children and families served by the agency			ANI
Agency Responsiveness to the Community	No	2	
Item 38: In implementing the provisions of the CFSP, the State engages in ongoing consultation with Tribal representatives, consumers, services providers, foster care providers, the juvenile court, and other public and private child- and family-serving agencies and includes the major concerns of these representatives in the goals and objectives of the CFSP			ANI
Item 39: The agency develops, in consultation with these representatives, Annual Progress and Services Reports delivered pursuant to the CFSP			ANI
Item 40: The State's services under the CFSP are coordinated with services or benefits of other Federal or federally assisted programs serving the same population			Strength
Foster and Adoptive Parent Licensing, Recruitment, and Retention	No	2	
Item 41: The State has implemented standards for foster family homes and child care institutions which are reasonably in accord with recommended national standards			ANI
Item 42: The standards are applied to all licensed or approved foster family homes or child care institutions receiving title IV-E or IV-B funds			Strength
Item 43: The State complies with Federal requirements for criminal background clearances as related to licensing or approving foster care and adoptive placements and has in place a case planning process that includes provisions for addressing the safety of foster care and adoptive placements for children			Strength
Item 44: The State has in place a process for ensuring the diligent recruitment of potential foster and adoptive families that reflect the ethnic and racial diversity of children in the State for whom adoptive homes are needed			ANI
Item 45: The State has in place a process for the effective use of cross-jurisdictional resources to facilitate timely adoptive or permanent placements for waiting children			Strength

* Scores range from 1 to 4. A score of 1 or 2 means that the factor is not in substantial conformity. A score of 3 or 4 means that the factor is in substantial conformity.

** Items may be rated as a Strength or as an ANI.

2504

Final Report
Alaska Child and Family Services Review
February 2009

U.S. Department of Health and Human Services
Administration for Children and Families
Administration on Children, Youth and Families
Children's Bureau

INTRODUCTION

This document presents the findings of the Child and Family Services Review (CFSR) for the State of Alaska. The CFSR is the Federal Government's program for assessing the performance of State child welfare agencies with regard to achieving positive outcomes for children and families. It is authorized by the Social Security Amendments of 1994 requiring the Department of Health and Human Services (HHS) to promulgate regulations for reviews of State child and family services programs under titles IV-B and IV-E of the Social Security Act. The CFSR is implemented by the Children's Bureau (CB) of the Administration for Children and Families within HHS.

The Alaska CFSR was conducted the week of September 8, 2008. The period under review for the onsite case review process was from April 1, 2007, to September 12, 2008. The findings were derived from the following documents and data collection procedures:

- The Statewide Assessment, prepared by the Alaska Department of Health and Social Services (DHSS), Office of Children's Services (OCS)
- The State Data Profile, prepared by CB, which provides Alaska's child welfare data for the CFSR target 12-month period ending March 31, 2007
- Reviews of 65 cases (40 foster care and 25 in-home services cases) at three sites: 31 cases in Anchorage, 17 cases in Bethel, and 17 cases in Juneau
- Interviews and focus groups (conducted at all three sites and at the State level) with stakeholders including, but not limited to, children, youth, parents, foster and adoptive parents, all levels of child welfare agency personnel, collaborating agency personnel, service providers, court personnel, child advocates, Tribal representatives, and attorneys

All 65 cases were open child welfare agency cases at some time during the period under review. The key characteristics of the 65 cases reviewed are presented in the table at the end of this section. The percentages presented in this table and in subsequent tables in the report may not always total to 100 percent due to rounding.

The first section of the report (Section A: Outcomes) presents the CFSR findings relevant to Alaska's performance in achieving specified outcomes for children in the areas of safety, permanency, and well-being. For each outcome, there is a table presenting the data for the case review findings and national indicators (when relevant). The table is followed by a discussion of Alaska's status with regard to substantial conformity with the outcome at the time of the State's first CFSR review, which was held in fiscal year (FY) 2002; the State's status relevant to the current review; and a presentation and discussion of each item (indicator) assessed under the outcome. Differences in findings across the sites included in the Onsite Review are described. Variations in outcome and item ratings as a function of type of case (i.e., foster care or in-home services) also are identified when appropriate. The second section of the report (Section B: Systemic Factors) provides an assessment and discussion of the systemic factors relevant to the child welfare agency's ability to achieve positive outcomes for children.

Table of Key Characteristics

Case Characteristics	Foster Care Cases	In-Home Cases
Total Cases	**40**	**25**
When case was opened		
Case was opened prior to the period under review	34 (85%)	13 (52%)
Case was opened during the period under review	6 (15%)	12 (48%)
Child entered foster care during the period under review	11 (27.5%)	NA
Child's age at start of period under review		
Younger than age 10	22 (55%)	*
At least 10 but younger than 13	4 (10%)	*
At least 13 but younger than 16	6 (15%)	*
16 and older	8 (20%)	*
Race/Ethnicity		
American Indian/Alaskan Native	24 (60%)	*
Black (Non-Hispanic)	1 (2.5%)	*
White (Non-Hispanic)	9 (22.5%)	*
Hispanic (of any race)	2 (5%)	*
Two or More Races (Non-Hispanic)	4 (10%)	*
Primary reason for opening case		
Neglect (not including medical neglect)	15 (37.5%)	9 (36%)
Substance abuse by parent	15 (37.5%)	5 (20%)
Physical abuse	3 (7.5%)	2 (8%)
Sexual abuse	2 (5%)	3 (12%)
Medical neglect	0	2 (8%)
Mental/physical health of parent	1 (2.5%)	1 (4%)
Mental/physical health of child	2 (5%)	0
Domestic violence in child's home	0	2 (8%)
Emotional maltreatment	1 (2.5%)	1 (4%)
Abandonment	1 (2.5%)	0

* Information on these characteristics for in-home services cases is not provided because all children in the family are considered in these cases.

SECTION A: OUTCOMES

In the Outcomes Section of the CSFR Final Report, an overall rating of Strength or Area Needing Improvement (ANI) is assigned to each of the 23 indicators (items) reviewed. An item is assigned an overall rating of Strength if 90 percent of the applicable cases reviewed were rated as a Strength. The item ratings are used to determine the performance of a State on the seven outcomes, each of which incorporates one or more of the individual items. The evaluation options for these outcomes are Substantially Achieved, Partially Achieved, and Not Achieved. For a State to be in substantial conformity with a particular outcome, 95 percent of the applicable cases reviewed must be rated as having substantially achieved the outcome. Two outcomes—Safety Outcome 1 and Permanency Outcome 1—also are evaluated based on State performance with regard to six national data indicators. For a State to be in substantial conformity with these outcomes, the national standards for each data indicator must be met as well as the case review requirements. A State that is not in substantial conformity with a particular outcome must develop and implement a program improvement plan (PIP) to address the areas of concern identified for that outcome.

CB has established a very high standard of performance for the CFSR. The standards are based on the belief that because child welfare agencies work with our nation's most vulnerable children and families, only the highest standards of performance should be considered acceptable. The standards are set high to ensure ongoing attention to achieving positive outcomes for children and families with regard to safety, permanency, and well-being. This is consistent with the goal of the CFSR to promote continuous improvement in performance on these outcomes.

It should be noted, however, that States are not required to attain either the 95-percent standard established for the CFSR Onsite Review or the national standards for the six data indicators by the end of their PIP implementation. CB recognizes that the kinds of systemic and practice changes necessary to bring about improvement in particular outcome areas often take time to implement. Also, improvements are likely to be incremental rather than dramatic. Instead, States work with CB to establish a specified amount of improvement or to determine specified activities for their PIP. That is, for each outcome that is not in substantial conformity or item that is an ANI, each State (working in conjunction with CB) specifies the following: (1) how much improvement the State will demonstrate and/or the activities that it will implement to address the ANIs and (2) the procedures for demonstrating the achievement of these goals. Both the improvements specified and the procedures for demonstrating improvement vary across States. Therefore, a State can meet the requirements of its PIP and still not perform at the 95-percent (for outcomes) or the 90 percent (for items) levels established for the CFSR.

The second round of the CFSR assesses a State's current level of performance by once more applying the high standards and a consistent, comprehensive case review methodology. The results of this effort are intended to serve as the basis for continued PIPs addressing areas in which a State still needs to improve, even though prior PIP goals may have been achieved. The purpose is to ensure that program improvement is an ongoing process and does not end with the completion of a PIP.

In the following sections, information is provided pertaining to how the State performed on each outcome in the first round of the CFSR. If the outcome was not substantially achieved during the first round, the key concerns observed at that time are identified as well as the strategies implemented in the PIP to address those concerns.

Because many changes were made in the CFSR process based on lessons learned during the first round and in response to feedback from the child welfare field, a State's performance in the second round of the CFSR is not directly comparable to its performance in the first round, particularly with regard to comparisons of data indicators or percentages regarding Strength and ANI ratings. Key changes in the CFSR process that make it difficult to compare performance across reviews include, but are not limited to, the following:

- An increase in the sample size from 50 to 65 cases
- Stratification of the sample to ensure a minimum number of cases in key program areas, resulting in variations in the number of cases relevant for specific outcomes and items
- Changes in criteria for specific items to enhance consistency and ensure an assessment of critical areas such as child welfare agency efforts to involve noncustodial parents in planning for their children

I. SAFETY

Safety Outcome 1

Outcome S1: Children are, first and foremost, protected from abuse and neglect					
Number of cases reviewed by the team according to degree of outcome achievement					
Outcome Achievement	**Anchorage**	**Bethel**	**Juneau**	**Total**	**Percent**
Substantially Achieved	9	4	3	16	**47.1**
Partially Achieved	6	2	3	11	**32.4**
Not Achieved or Addressed	1	2	4	7	**20.6**
Total Applicable Cases	**16**	**8**	**10**	**34**	
Not Applicable Cases	15	9	7	31	
Total Cases	**31**	**17**	**17**	**65**	

Conformity of statewide data indicators with national standards			
Data Indicators	**National Standard (%)**	**State's Percentage**	**Meets Standard?**
Absence of maltreatment recurrence	94.6 or higher	90.7	No
Absence of maltreatment of children in foster care by foster parents or facility staff	99.68 or higher	99.57	No

Status of Safety Outcome 1

Alaska is not in substantial conformity with Safety Outcome 1. The outcome was determined to be substantially achieved in only 47.1 percent of applicable cases, which is less than the 95 percent or higher required for a rating of substantial conformity. The outcome was substantially achieved in 56 percent of applicable Anchorage cases, 50 percent of applicable Bethel cases, and 30 percent of applicable Juneau cases. In addition, as shown in the table, Alaska does not meet the national standards for the two data indicators relevant to Safety Outcome 1. Alaska was not in substantial conformity with Safety Outcome 1 during its first CFSR conducted in FY 2002 and was required to address this outcome in its PIP.

Key Concerns From the 2002 CFSR

In the 2002 CFSR, both items assessed for this outcome were rated as ANIs. Key concerns identified in the 2002 CFSR were the following:

- The State did not meet the national standards for (1) the percentage of children experiencing more than one substantiated or indicated child maltreatment report within a 6-month period or (2) the percentage of children experiencing maltreatment from caregivers while in foster care.
- Although the agency initiated investigations of reports involving imminent risk (priority 1 reports) within the required timeframes, the initiation of investigations of maltreatment reports not involving imminent risk (i.e., reports assigned as priority 2 or 3) did not consistently meet required timeframes.

To address these concerns, Alaska included the following key strategies in its PIP:

- Revised policies relating to the investigative process, including specifying the definitions for "face-to-face contact" and "initiation of investigation"
- Provided training to supervisors and caseworkers regarding new policy
- Established a protocol to review repeat maltreatment cases
- Developed a new safety assessment model (training of staff on the model in spring 2006)

The State met its target goals for this outcome by the end of its PIP implementation period.

Key Findings of the 2008 CFSR

The findings for Alaska's 2008 CFSR pertaining to the specific items assessed under Safety Outcome 1 are presented below.

Item 1. Timeliness of initiating investigations of reports of child maltreatment

____ Strength __X___ Area Needing Improvement

Case Review Findings

The assessment of item 1 was applicable for 34 (52 percent) of the 65 cases. Cases were not applicable when there were no child maltreatment reports during the period under review. In assessing item 1, reviewers were to determine whether the response to a maltreatment report occurring during the period under review had been initiated in accordance with the State child welfare agency policy requirements.

According to the Statewide Assessment:

"The Alaska Office of Children's Services policy defines the following timeframes:

"Priority 1 [P1] reports mandate that a response to, and an investigation of, a report must be made within 24 hours of the initial report to OCS. P1 reports are defined as reports that indicate a present danger to the child and require an immediate response.
"Priority 2 [P2] reports mandate that a response to, and an investigation of, a report must be made within 72 hours of the initial report to OCS. P2 reports are defined as reports where the situation is serious; however, information available does not indicate the child is in immediate danger.
"Priority 3 [P3] reports mandate that a response to, and an investigation of, a report must be made within 7 calendar days of the initial report to OCS. P3 reports are defined as reports in which a delay in assessing the situation will not result in significant additional harm to the child."

The Statewide Assessment also indicates that some areas of the State have a differential response program. According to the policy document, staff responding to maltreatment reports that are assigned to the differential response program are expected to meet the same timeframe requirements as P3 reports—i.e., a response must be initiated within 7 calendar days of the initial report to OCS. Anchorage is the only site included in the onsite CFSR that has a differential response program.

The results of the assessment of item 1 are presented in the table below.

Item 1 Ratings	**Anchorage**	**Bethel**	**Juneau**	**Total**	**Percent**
Strength	11	5	3	19	**56**
Area Needing Improvement	5	3	7	15	**44**
Total Applicable Cases	**16**	**8**	**10**	**34**	
Not Applicable	15	9	7	31	
Total Cases	**31**	**17**	**17**	**65**	

Item 1 was rated as a Strength in 69 percent of applicable Anchorage cases, 62.5 percent of applicable Bethel cases, and 30 percent of applicable Juneau cases. The item was rated as a Strength when the investigation was initiated and face-to-face contact was made within the timeframes required by State policy or law.

Item 1 was rated as an ANI in 15 cases in which the investigation of at least one maltreatment report on the family was not initiated and/or face-to-face contact was not made within the required timeframes. For the 15 cases rated as ANIs, there were 22 maltreatment reports that did not meet the timeframes required by State policy. Of these, 11 were P3 reports, 5 were P2 reports, and 4 were P1 reports. One report was never screened or assigned, and one report was assigned to the differential response program, but the children who were the subject of the report were never seen.

Rating Determination
Item 1 is assigned an overall rating of ANI. In 56 percent of the applicable cases, reviewers determined that the agency had initiated an investigation of a maltreatment report in accordance with required timeframes. This percentage is less than the 90 percent or higher required for an overall item rating of Strength. This item also was rated as an ANI in Alaska's 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, the State's Quality Assurance (QA) reviews found that P1 referrals are consistently responded to and investigated in a timely manner. However, the QA reviews also found that there are challenges in meeting the response timeframes for P2 and P3 reports. It was noted in the Statewide Assessment that these challenges affect the State's overall results regarding compliance with item 1.

The Statewide Assessment also reports that for the P2 and P3 reports, when initial efforts to locate the child or family are not successful, the case "can fall between the cracks and a follow-up effort does not take place until the required timelines have been exceeded." In addition, the Statewide Assessment notes that although Alaska faces many geographically related challenges, the QA team reported that in the cases reviewed, weather and/or remoteness was seldom the reason that an investigation was not initiated in a timely manner.

Stakeholder Interview Information
Most stakeholders commenting on this item expressed the opinion that investigations of P1 reports generally are initiated within the required timeframes. However, they also noted that because of staff shortages of caseworkers who conduct investigations, when P1 reports are received, P2 and P3 reports tend to get pushed back and may be delayed. Anchorage stakeholders indicated that there are no limits on the number of cases that can be assigned to an investigations caseworker and as a result, the Anchorage office experiences a backlog in investigations. However, Anchorage stakeholders also noted that concerted efforts have been made to clear up the backlog, and it is not as large as it used to be.

Several stakeholders also indicated that although State policy as written specifies that the timeframe for initiating an investigation is to begin with the actual referral call to OCS, many agency caseworkers and supervisors believe that the timeframe for initiating an investigation does not actually begin until the screening decision is made by the intake supervisor, and the report is then assigned to the investigator. As a result, sometimes it is difficult to determine how long cases sit at the desk of the supervisor prior to the screening decision. A few stakeholders indicated that it can be difficult to gather all of the information necessary to make a screening decision in a timely manner.

Bethel and Juneau stakeholders said they were concerned about the lack of standardized criteria for accepting (i.e., screening in) referrals. Stakeholders at these sites expressed the opinion that the lack of standardized criteria can result in children with serious

problems not getting the attention they need because the screener does not accept the report. Several stakeholders suggested that this is a particular problem with sexual abuse reports, chronic neglect reports, and reports involving adolescents; they noted that such reports often are screened out without a clear reason.

Item 2. Repeat maltreatment

____ Strength __X__ Area Needing Improvement

Case Review Findings

The assessment of item 2 was applicable for 26 (40 percent) of the 65 cases. Cases were not applicable for this item if there was no substantiated or indicated maltreatment report during the period under review. For all applicable cases, reviewers were to determine if there had been a substantiated or indicated maltreatment report on the family during the period under review, and if so, whether another substantiated or indicated report involving similar circumstances had occurred within a 6-month period before or after that identified report. The results of the assessment of item 2 are presented in the table below.

Item 2 Ratings	Anchorage	Bethel	Juneau	Total	Percent
Strength	11	4	6	21	**81**
Area Needing Improvement	2	2	1	5	**19**
Total Applicable Cases	**13**	**6**	**7**	**26**	
Not Applicable	18	11	10	39	
Total Cases	**31**	**17**	**17**	**65**	

Item 2 was rated as a Strength in 85 percent of applicable Anchorage cases, 67 percent of applicable Bethel cases, and 86 percent of applicable Juneau cases. Item 2 was rated as a Strength when there was only one substantiated or indicated maltreatment report on the family within a 6-month period. Item 2 was rated as an ANI in five cases when there were at least two substantiated maltreatment reports on the family within a 6-month period.

In addition to the recurrence of substantiated maltreatment reports, reviewers expressed concern about the many cases involving multiple reports on the family during the life of the case. The "life of the case" refers to the time span from the date of the first allegation of abuse or neglect to the time of the Onsite Review. The following are key findings with regard to this concern:

- In 18 cases, there were at least 5 reports during the life of the case but fewer than 10 reports.
- In 9 cases, there were between 10 and 14 reports during the life of the case.
- In 12 cases, there were 15 or more maltreatment reports during the life of the case, with 4 cases having more than 20 reports.

Rating Determination
Item 2 is assigned an overall rating of ANI. In 81 percent of the cases, reviewers determined that there was no recurrence of maltreatment. This percentage is less than the 90 percent or higher required for a rating of Strength. This item also was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, the State's QA team reported that when repeat maltreatment is identified in the QA review, it generally occurs in cases in which an investigation took place but services were not provided and the case was eventually closed. As indicated in the Statewide Assessment, lack of ongoing monitoring and follow-up post-investigation appears to contribute to the repeat maltreatment incidents that occur in these cases. The Statewide Assessment did not provide QA data for this item.

Stakeholder Interview Information
Anchorage stakeholders commenting on this item during the onsite CFSR expressed the opinion that repeat maltreatment is a problem at that site and that it may be attributed in part to a lack of follow through by the assigned caseworker after the initial contact. These stakeholders suggested that OCS is closing cases prematurely or letting cases remain open without efforts to work with the family.

In addition, some stakeholders indicated that maltreatment reports on open cases may be passed directly to the existing caseworker on the case. Sometimes, in these instances, the maltreatment allegation is not reported to intake and there is no full investigation of the new allegation or formal finding regarding substantiation of the allegation. Some Anchorage stakeholders indicated that often when contracted service providers working on an open case need to make a maltreatment report, they will call the ongoing caseworker rather than make a report through the intake process. Stakeholders suggested that at that point, the ongoing caseworker may or may not inform intake of the report so that it can be formally investigated.

Safety Outcome 2

Safety Outcome S2: Children are safely maintained in their homes whenever possible and appropriate					
Number of cases reviewed by the team according to degree of outcome achievement					
Outcome Achievement	**Anchorage**	**Bethel**	**Juneau**	**Total**	**Percent**
Substantially Achieved	16	3	6	25	**38.5**
Partially Achieved	4	4	4	12	**18.5**
Not Achieved or Addressed	11	10	7	28	**43.1**
Total Cases	**31**	**17**	**17**	**65**	

Status of Safety Outcome 2

Alaska is not in substantial conformity with Safety Outcome 2. The outcome was determined to be substantially achieved in only 38.5 percent of the cases reviewed, which is less than the 95 percent or higher required for a rating of substantial conformity. The outcome was substantially achieved in 52 percent of Anchorage cases, 18 percent of Bethel cases, and 35 percent of Juneau cases. Alaska also did not achieve substantial conformity with Safety Outcome 2 in its 2002 CFSR and was required to address the outcome in its PIP.

Key Concerns From the 2002 CFSR

In the 2002 CFSR, both items assessed for this outcome were rated as ANIs. The following key concerns were identified at that time:

- The services offered to families often were not adequate to ensure children's safety and reduce risk of harm, and did not address underlying issues contributing to the maltreatment.
- Frequently, when services were offered to families, there was insufficient monitoring on the part of the agency to assess whether services were actually provided, whether parents were fully participating in services, and/or whether the children were safe.

To address these concerns, the State implemented the following key strategies:

- Issued new policies regarding in-home cases focusing on using Structured Decision Making (SDM) tools for assessments and case planning
- Provided training on reassessment and review of in-home case plans using the Future Risk of Harm form
- Implemented data collection through the QA process to evaluate the use and effectiveness of SDM tools

The State met its target goals for this outcome by the end of its PIP implementation period.

Key Findings of the 2008 CFSR

The findings for the 2008 CFSR pertaining to the specific items assessed under Safety Outcome 2 are presented below.

Item 3. Services to family to protect child(ren) in the home and prevent removal

____ Strength __X__ Area Needing Improvement

Case Review Findings

An assessment of item 3 was applicable for 47 (72 percent) of the 65 cases. Cases were excluded from this assessment if the children entered foster care prior to the period under review and there were no other children in the home or if there was no substantiated or indicated maltreatment report or identified risk of harm to the children in the home during the period under review. For this item, reviewers assessed whether, in responding to a substantiated maltreatment report or risk of harm, the agency made diligent efforts to provide services to families to prevent placement of children in foster care while at the same time ensuring their safety. The results of this assessment are presented in the table below.

Item 3 Ratings	Anchorage	Bethel	Juneau	Total	Percent
Strength	10	6	8	24	**51**
Area Needing Improvement	11	8	4	23	**49**
Total Applicable Cases	**21**	**14**	**12**	**47**	
Not Applicable	10	3	5	18	
Total Cases	**31**	**17**	**17**	**65**	

Item 3 was rated as a Strength in 48 percent of applicable Anchorage cases, 43 percent of applicable Bethel cases, and 67 percent of applicable Juneau cases. Item 3 was rated as a Strength in 24 cases when reviewers determined that services were provided to the parents and children to prevent removal or that children were appropriately removed from the home without service provision because the removal was necessary to ensure the child's safety. Item 3 was rated as an ANI in 23 cases when reviewers determined the following:

- The services provided were insufficient to ensure the safety of the child while the child remained in the home (18 cases).
- The child was removed from the home, and the agency did not make concerted efforts to provide services to prevent the removal (three cases).
- No efforts were made to identify services that would ensure the safety of children residing with a relative (two cases). (In these cases, the child was not in foster care.)

Rating Determination
Item 3 is assigned an overall rating of ANI. In 51 percent of the cases, reviewers determined that the agency had made concerted efforts to maintain children safely in their own homes. This percentage is less than the 90 percent or higher required for a rating of Strength. This item also was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, high caseloads for investigators across the State make it difficult to provide in-home services to ensure safety. The Statewide Assessment also reports that accessing services that meet the complex needs of families also tends to be a challenge. Data provided in the Statewide Assessment indicate that in the State's 2008 QA review, approximately 68 percent of Anchorage cases, 28 percent of Bethel cases, and 78 percent of Juneau cases were found to have had services provided to prevent removal. (The actual percentages are estimates based on the charts provided in the Statewide Assessment. The sites specified in the Statewide Assessment data as Anchorage, Bethel, and Juneau pertain to the same geographic areas as those sites reviewed in the Onsite Review.)

Stakeholder Interview
Some stakeholders in Anchorage and Bethel expressed the opinion that children may not be maintained safely in their homes because of a lack of in-home services and follow up by the caseworker to monitor the family and ensure that services are being provided. The lack of caseworker follow-up was attributed to their high caseloads. A few Anchorage stakeholders also indicated that children may be removed from their homes because there are waiting lists for substance abuse treatment services for the parents and concern that the children cannot be left in the home if parents are not accessing these services.

Some Anchorage stakeholders reported that the caseworkers responsible for case management of in-home services also are responsible for investigations and, as a result, they do not have the time to follow up on these cases. One Anchorage stakeholder indicated that a specific in-home services unit was created recently to work with these families, but that there was no statewide guidance on working with these cases since they are mostly voluntary cases.

Item 4. Risk of harm to child

____ Strength __X__ Area Needing Improvement

Case Review Findings
An assessment of item 4 was applicable for all 65 cases. In assessing item 4, reviewers were to determine whether the agency had made, or was making, diligent efforts to address the risk of harm to the children involved in each case. The results of this assessment are shown in the table below.

Item 4 Ratings	Anchorage	Bethel	Juneau	Total	Percent
Strength	16	3	6	25	**38**
Area Needing Improvement	15	14	11	40	**62**
Total Cases	**31**	**17**	**17**	**65**	

Item 4 was rated as a Strength in 52 percent of Anchorage cases, 18 percent of Bethel cases, and 35 percent of Juneau cases. The item was rated as a Strength when reviewers determined that the risk of harm to children was appropriately addressed by the agency through the following: (1) conducting initial and ongoing assessments of risk and safety either in the children's home or in the children's foster home, and (2) addressing all safety-related concerns identified through the assessment.

Item 4 was rated as an ANI in 40 cases when reviewers determined one or more of the following:

- There was a lack of adequate safety and risk assessments in the home prior to case closure or prior to a trial home visit (nine cases).
- There was a lack of ongoing safety and risk assessments in the children's home during the period under review (23 cases).
- There were continued risk concerns in the home that were not addressed and/or monitored by the agency and the children were at risk in the home (17 cases).
- The case was closed without the child welfare agency ever having had any contact with the children in the home and without an initial risk assessment (one case).
- There was a lack of risk and safety assessments of the foster home (four cases).

Rating Determination
Item 4 is assigned an overall rating of ANI. Reviewers determined that the agency had appropriately addressed the risk of harm to the children in only 38 percent of the applicable cases. This percentage is less than the 90 percent or higher required for an overall rating of Strength. This item also was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, QA reviews have found that children in foster care receive quality care and that abuse in foster care is rare. However, the Statewide Assessment reports that QA reviews also have found that OCS struggles with effectively

reducing risk of harm to children who remain in their own homes. The Statewide Assessment notes that QA case reviews reveal that often families who are receiving in-home services are seen only once in several months and that there is a lack of consistent ongoing monitoring that weakens OCS's ability to ensure the safety of children in their own home. However, no QA data were provided for this item in the Statewide Assessment.

Stakeholder Interview Information
Several State-level, Anchorage, and Juneau stakeholders commenting on this item during the onsite CFSR expressed the opinion that the new safety model, although well-liked, is requiring more time and training than initially anticipated because it involves moving from an incidence-driven system to a more comprehensive holistic decision-based system. However, they also noted that because almost all in-home cases are voluntary, there can be some problems with the family but are not sufficient to keep a case open. Some Juneau stakeholders indicated that there is a lack of clear instruction or policy regarding reassessing the family prior to closing a case. They suggested that although assessments often are conducted, they are not being documented.

Several stakeholders also expressed concern about the safety of children who are being placed in nonlicensed homes because background checks are not completed on these homes prior to the placement and often not until the child has been in the home for several months.

A few stakeholders noted that in some differential response cases the children may need placement services while the contracted agencies are working with the families. However, these stakeholders suggested that OCS often does not address the placement concerns for these children because the case has been assigned to the differential response program.

II. PERMANENCY

Permanency Outcome 1

Outcome P1: Children have permanency and stability in their living situations					
Number of cases reviewed by site according to degree of outcome achievement					
Outcome Achievement	**Anchorage**	**Bethel**	**Juneau**	**Total**	**Percent**
Substantially Achieved	4	1	1	6	**15.0**
Partially Achieved	15	8	6	29	**72.5**
Not Achieved or Addressed	1	1	3	5	**12.5**
Total Foster Care Cases	**20**	**10**	**10**	**40**	

Conformity of statewide data indicators with national standards			
Data Indicators	**National Standard (Scaled Score)**	**State's Composite Score**	**Meets Standard?**
Composite 1: Timeliness and permanency of reunification	122.6 +	122.4	No
Composite 2: Timeliness of adoptions	106.4 +	81.1	No
Composite 3: Permanency for children in foster care for extended time periods	121.7 +	125.4	Yes
Composite 4: Placement stability	101.5 +	73.1	No

Status of Permanency Outcome 1

Alaska is not in substantial conformity with Permanency Outcome 1. This determination was based on the following findings:

- The outcome was substantially achieved in only 15 percent of the cases, which is less than the 95 percent required for an overall rating of substantial conformity. The outcome was substantially achieved in 20 percent of Anchorage cases and 10 percent of Bethel and Juneau cases.
- The State did not meet the national standards for the national data indicators pertaining to the timeliness and permanency of reunification (Composite 1), the timeliness of adoptions (Composite 2), and placement stability (Composite 4).

The State met the national standards for the data indicator pertaining to achieving permanency for children in foster care for extended time periods (Composite 3). Alaska's performance on the individual measures included in each composite data indicator is presented in the discussion of the items related to the measure.

Alaska was not in substantial conformity with Permanency Outcome 1 in its 2002 CFSR and was required to address the outcome in its PIP.

Key Concerns From the 2002 CFSR

During the 2002 CFSR, all relevant items except item 5 (foster care reentry) were rated as ANIs. The following key concerns were identified:

- The agency was not consistent with regard to ensuring placement stability for children in foster care, which was attributed primarily to a lack of effort to match children and foster parents.
- Case goals often were in place for extended periods of time even when there were indications that the goal was not likely to be achieved.
- Appropriate case goals often were not established in a timely manner.
- The goals of guardianship and reunification were not achieved in a timely manner.
- There were many agency-related delays in achieving adoptions in a timely manner, including lack of timely decision-making and lack of follow-up with the child and pre-adoptive family.

To address these concerns, Alaska implemented the following strategies as part of its PIP:

- Standardized practice for setting and changing permanency goals when concurrent planning occurs
- Improved the structure of administrative reviews and permanency planning conferences, with enhanced focus on permanency goals and concurrent planning
- Developed the continuous QA review system to monitor cases
- Established Regional Adoption Specialists who participate in administrative and permanency planning reviews to ensure that goals are established in a timely manner and are documented
- Implemented a statewide contract for post-adoption services

The State met its target goals for this outcome by the end of its PIP implementation period.

Key Findings of the 2008 CFSR

Findings of the 2008 CFSR pertaining to the specific items assessed under Permanency Outcome 1 are presented below.

Item 5. Foster care reentries

__X__ Strength ____ Area Needing Improvement

Case Review Findings

An assessment of item 5 was applicable for 11 (27.5 percent) of the 40 foster care cases. Cases were not applicable for assessment if the child did not enter foster care during the period under review. In assessing this item, reviewers determined whether the entry into foster care during the period under review occurred within 12 months of discharge from a prior foster care episode. The results of this assessment are presented in the table below.

Item 5 Ratings	Anchorage	Bethel	Juneau	Total	Percent
Strength	5	3	2	10	**91**
Area Needing Improvement	1	0	0	1	**9**
Total Applicable Foster Care Cases	**6**	**3**	**2**	**11**	
Not Applicable Foster Care Cases	14	7	8	29	
Total Foster Care Cases	**20**	**10**	**10**	**40**	

Item 5 was rated as a Strength in 10 cases in which the child's entry into foster care during the period under review did not take place within 12 months of discharge from a prior episode. The item was rated as an ANI in one case in which the child reentered foster care within 12 months of discharge from a prior foster care episode. In this case the child was on a trial home visit that lasted longer than 6 months and was re-removed from the home due to the mother's continued substance abuse problem, which had not been adequately treated.

Rating Determination

Item 5 is assigned an overall rating of Strength. In 91 percent of the applicable cases, the child had not reentered foster care in less than 12 months. This percentage exceeds the 90 percent required for a rating of Strength. This item also was rated as a Strength in the State's 2002 CFSR.

Performance on Composite 1: Measure relevant to the permanency of reunification

The data below are presented to provide additional information about foster care reentry. There is no national standard for the measure of foster care reentry. National standards with regard to permanency have been established only for the scaled composite scores. The measure of foster care reentry is part of Composite 1: Timeliness and permanency of reunification. The State's performance on Composite 1 is shown in the table for Permanency Outcome 1.

The following is the State's performance for the CFSR 12-month target period for the data indicators. The CFSR 12-month target period for the data indicators was from April 1, 2006, to March 31, 2007. With regard to the individual measure of foster care reentry (measure C1.4) included in the Composite 1 data indicator—Timeliness and permanency of reunification, 7.5 percent of the children exiting foster care to reunification in the 12-month period prior to the CFSR 12-month target period reentered foster care in less than 12 months from the time of discharge. This percentage is lower than the 25th percentile of 9.9 percent. For this measure, lower percentages are associated with higher levels of performance.

Statewide Assessment Information
According to the Statewide Assessment, efforts to prevent reentries into foster care are a strength for OCS. The Statewide Assessment attributes this positive performance in part to the fact that caseworkers mitigate the safety threats for children and determine that needed changes have taken place before the child is returned home. However, the Statewide Assessment also notes that stakeholders expressed concern that the strength noted in this area may be gained at the cost of "length of time in care."

Stakeholder Interview Information
Stakeholders did not comment on this item during the onsite CFSR.

Item 6. Stability of foster care placement

____ Strength __X__ Area Needing Improvement

Case Review Findings
All 40 foster care cases were applicable for an assessment of item 6. In assessing this item, reviewers were to determine whether the child experienced multiple placement settings during the period under review and, if so, whether the changes in placement settings were necessary to achieve the child's permanency goal or meet the child's service needs. Reviewers also assessed the stability of the child's current placement setting. The results of this assessment are presented in the table below.

Item 6 Ratings	Anchorage	Bethel	Juneau	Total	Percent
Strength	16	7	6	29	**72.5**
Area Needing Improvement	4	3	4	11	**27.5**
Total Foster Care Cases	**20**	**10**	**10**	**40**	

Item 6 was rated as a Strength in 80 percent of Anchorage cases, 70 percent of Bethel cases, and 60 percent of Juneau cases. Item 6 was rated as a Strength when reviewers determined that the child's current placement was stable and that the child either did not experience a placement change during the period under review or that the placement changes experienced were in the child's best

interests (i.e., they were intended to further achievement of the child's permanency goal or to provide specialized services to the child).

Item 6 was rated as an ANI in 11 cases when reviewers determined one or both of the following:

- The child was in multiple placement settings during the period under review and at least one placement change was not planned by the agency to further attainment of the child's permanency goal (11 cases).
- The child's current placement setting (at the time of the onsite CFSR) was not stable (two cases).

Additional findings of the case review were the following:

- Seventeen children had one placement during the period under review.
- Fourteen children had two placements during the period under review.
- Nine children had three or more placements during the period under review, with three of these children having five or more placements.

Rating Determination

Item 6 is assigned an overall rating of ANI. In 72.5 percent of the foster care cases, reviewers determined that children experienced placement stability or that changes in placements were in the best interests of the child. This percentage is less than the 90 percent or higher required for a rating of Strength. Item 6 also was rated as an ANI in the State's 2002 CFSR.

Performance on Composite 4: Measures of placement stability

The data below are presented to provide additional information about placement stability. There are no national standards for the individual measures of placement stability. National standards have been established only for the scaled composite scores for Composite 4: Placement stability. The State's performance on Composite 4 is shown in the table for Permanency Outcome 1.

Alaska's performance for the CFSR 12-month target period for the data indicators on the individual measures included in Composite 4: Placement stability is as follows:

- 65.8 percent of the children in foster care for at least 8 days but less than 12 months experienced two or fewer placement settings. This percentage is less than the national median of 83.3 percent.
- 50.7 percent of the children in foster care for at least 12 months but less than 24 months experienced two or fewer placement settings. This percentage is less than the national median of 59.9 percent.
- 25.8 percent of the children in foster care for at least 24 months experienced two or fewer placement settings. This percentage is less than the national median of 33.9 percent.

Statewide Assessment Information
According to the Statewide Assessment, OCS and stakeholders agree that placement stability is an ANI for the State. The Statewide Assessment notes that placement stability can be affected by the age of foster children, the lack of therapeutic resource families to meet the needs of the child, the lack of consistent and available support resources for families, and the turnover in OCS caseworkers. The Statewide Assessment also notes that there is a lack of foster homes in the State, particularly those homes willing to care for adolescents. In addition, as reported in the Statewide Assessment, there are not enough therapeutic foster homes for youth with fetal alcohol spectrum disorders (FASDs) or significant mental health issues.

Stakeholder Interview Information
Most stakeholders commenting on this item during the onsite CFSR expressed the opinion that ensuring placement stability for children in foster care is a challenge for OCS. Various stakeholders attributed this problem to the following:

- A lack of foster families that are willing to foster children with complex needs and problems
- A lack of support for foster families, particularly respite services
- A lack of support for relative caregivers who are not licensed and whose needs often are ignored
- An insufficient pool of foster families, including Indian Child Welfare Act (ICWA) placement families, to ensure appropriate matching between children and foster parents
- Too frequent use of emergency placements and shelters, even for children younger than age 12
- A lack of training of caseworkers on how and when to support foster parents

A few stakeholders also indicated that foster parents are not always provided with complete information on the child placed in their home and this often "sets them up for failure."

Some Anchorage stakeholders indicated that Team Decision Meetings (TDMs) often are used to prevent placement changes and that some caseworkers are very skilled in this process. However, these stakeholders also reported that TDMs are available only in Anchorage and are not available to all families in that location.

Item 7. Permanency goal for child

____ Strength __X__ Area Needing Improvement

Case Review Findings
All 40 foster care cases were applicable for an assessment of item 7. In assessing this item, reviewers were to determine whether the agency had established a permanency goal for the child in a timely manner and whether the most current permanency goal was

appropriate. Reviewers also were to determine whether the agency had sought termination of parental rights (TPR) in accordance with the requirements of the Adoption and Safe Families Act (ASFA). The results of this assessment are shown below.

Item 7 Ratings	Anchorage	Bethel	Juneau	Total	Percent
Strength	11	5	2	18	**45**
Area Needing Improvement	9	5	8	22	**55**
Total Applicable Foster Care Cases	**20**	**10**	**10**	**40**	

Item 7 was rated as a Strength in 55 percent of Anchorage cases, 50 percent of Bethel cases, and 20 percent of Juneau cases. Item 7 was rated as a Strength when reviewers determined that the child's permanency goal was appropriate and had been established in a timely manner. The item was rated as an ANI when reviewers determined one or more of the following:

- The child's current permanency goal (at the time of the onsite CFSR) was not appropriate given the case situation and the needs of the child (four cases).
- The child's permanency goal was not established in a timely manner (15 cases).
- The agency had not sought TPR in accordance with the requirements of ASFA, particularly with regard to documenting in the case file compelling reasons for not seeking TPR (seven cases).

Case review findings pertaining to the case goals were as follows:

- Ten children had a goal of reunification with parents or relatives only.
- Nineteen children had a goal of adoption only.
- Three children had a goal of other planned permanent living arrangement (OPPLA) only. (OPPLA is a living arrangement other than adoption, reunification, living with other relatives, or guardianship that involves the child remaining in State custody until reaching the age of majority.)
- Two children had a goal of guardianship only.
- Three children had concurrent goals of adoption and reunification with parents.
- Two children had concurrent goals of guardianship and OPPLA.
- One child had concurrent goals of guardianship and reunification with parents.

Case review findings pertaining to meeting ASFA requirements for TPR were as follows:

- At the time of the onsite CFSR, 30 of the 40 children in the foster care cases had been in foster care for 15 of the most recent 22 months. ASFA requirements with regard to seeking TPR and documenting compelling reasons when TPR was not sought were

applicable for 29 of these foster care cases. In one case, ASFA requirements were not applicable because the child was in a foster care placement with a relative during the child's entire time in foster care.

- ASFA requirements were not met in 7 (24 percent) of the 29 cases for which the requirements were applicable.

Rating Determination

Item 7 is assigned an overall rating of ANI. Reviewers determined that the agency had established an appropriate permanency goal for the child in a timely manner and acted in accordance with the requirements of ASFA in only 45 percent of the applicable cases. This percentage is less than the 90 percent or higher required for a rating of Strength. This item also was rated as an ANI in the State's 2002 CFSR.

Performance on Composite 3: Measures pertaining to achieving permanency for children in foster care for extended time periods

The data below are presented to provide additional information about achieving permanency for children in foster care for extended time periods. There are no national standards for the individual measures included in Composite 3. National standards have been established only for the scaled composite scores for Composite 3. The State's performance on Composite 3 is shown in the table for Permanency Outcome 1.

Alaska's performance for the CFSR target 12-month period on the individual measures included in Permanency Composite 3 (achieving permanency for children in foster care for extended time periods) is as follows:

- 20.6 percent of the children in foster care for 24 months or longer at the start of the target period were discharged from foster care to a permanent home (i.e., adoption, reunification with parents or other relatives, or guardianship) by the end of the target period (measure C3-1). This percentage is less than the national median of 25 percent.
- 99.4 percent of the children exiting foster care during the target period who were legally free for adoption at the time of exit were discharged to a permanent home (measure C3-2). This percentage exceeds the 75th percentile of 98 percent.
- 35.7 percent of the children who were discharged from foster care during the 12-month target period with a discharge reason of emancipation (or who turned age 18 while still in foster care) had been in foster care for 3 years or longer (measure C3.3). This percentage is less than the 25th percentile of 37.5 percent. For this measure, lower percentages indicate higher performance levels.

Statewide Assessment Information

According to the Statewide Assessment, the State QA reviews show an improvement in the establishment of permanency goals. However, no data were provided in the Statewide Assessment with regard to State QA findings for this item. In addition, although the Statewide Assessment notes that the incorporation of Regional Adoptions Specialists in administrative reviews and permanency planning conferences has increased the timeliness of goal establishment for children in out-of-home care, no evaluation data were provided to support this statement.

The Statewide Assessment indicates that stakeholders interviewed as part of the Statewide Assessment process expressed concern that OCS caseworkers do not understand the purpose of concurrent plans and that concurrent plans are not being developed as early as they could be in some cases. These stakeholders suggested that additional OCS staff training is needed in the development, use, and purpose of concurrent planning.

Stakeholder Interview Information
Several stakeholders commenting on this item during the onsite CFSR expressed opinions regarding concurrent planning. Some stakeholders indicated that concurrent planning is occurring and that caseworkers are working toward concurrent goals simultaneously. However, a few stakeholders also noted that although the State's automated child welfare information system can accommodate concurrent goals, many caseworkers are not entering concurrent goals into the system, particularly when there is a goal of adoption.

Other stakeholders expressed the opinion that caseworkers generally are not implementing concurrent planning early on in a case and when there are concurrent goals, caseworkers are not working both goals simultaneously. Some Bethel stakeholders, for example, noted that concurrent planning is not considered at all until the 9-month permanency hearing.

A few stakeholders also indicated that sometimes permanency goals other than reunification may not be established in a timely manner because of the extensive turnover in both the caseworker and supervisor positions. These stakeholders said that new caseworkers and supervisors usually want to start over again with the family regardless of how long the child has been in foster care. Other stakeholders suggested that permanency goals may not be changed from reunification because the required services for the parents have not been available and the court will rule that reasonable efforts were not made.

Item 8. Reunification, guardianship, or permanent placement with relatives

____ Strength __X__ Area Needing Improvement

Case Review Findings
Item 8 was applicable for 18 (45 percent) of the 40 foster care cases. In assessing these cases, reviewers were to determine whether the agency had achieved the permanency goals of reunification, guardianship, or permanent placement with relatives in a timely manner, or if the goals had not been achieved, reviewers were to determine whether the agency had made, or was in the process of making, diligent efforts to achieve the goals. The results of this assessment are shown in the table below.

Item 8 Ratings	Anchorage	Bethel	Juneau	Total	Percent
Strength	3	1	2	6	**33**
Area Needing Improvement	4	6	2	12	**67**
Total Applicable Foster Care Cases	**7**	**7**	**4**	**18**	
Not Applicable Foster Care Cases	13	3	6	22	
Total Foster Care Cases	**20**	**10**	**10**	**40**	

Item 8 is rated as a Strength in 43 percent of applicable Anchorage cases, 14 percent of applicable Bethel cases, and 50 percent of applicable Juneau cases. Item 8 was rated as a Strength when reviewers determined that the goal had been achieved in a timely manner or that the agency was making concerted efforts to achieve the goal in a timely manner. Item 8 was rated as an ANI when reviewers determined that the agency had not made concerted efforts to achieve reunification or guardianship in a timely manner. Some of the concerns identified in the cases pertained to problems or delays in completing paperwork, particularly for guardianships, and to a lack of visitation opportunities for parents and children.

Rating Determination
Item 8 is assigned an overall rating of ANI. Reviewers determined that the agency had made diligent efforts to attain the goals of reunification, permanent placement with relatives, or guardianship in a timely manner in only 33 percent of the cases. This percentage is less than the 90 percent or higher required for a rating of Strength. This item also was rated as an ANI in the State's 2002 CFSR.

Performance on the Individual Composite 1: Measures pertaining to timeliness of reunification
The data below are presented to provide additional information about the timeliness of reunification. There are no national standards for the individual measures included in Composite 1. National standards have been established only for the scaled composite score for Composite 1. The State's performance on Composite 1 is shown in the table for Permanency Outcome 1.

Alaska's performance for the 12-month CFSR target period on the three "timeliness" measures included in Permanency Composite 1: (timeliness and permanency of reunification) is presented below.

- 67.3 percent of the reunifications occurred in at least 8 days but less than 12 months of the child's entry into foster care. This percentage is less than the national median of 69.9 percent.
- The median length of stay in foster care for children discharged to reunification was 7 months. This median length of stay is more than the national median length of stay of 6.5 months. For this measure, a lower number of months equates to a higher level of performance.

- 32.2 percent of children entering foster care in the last 6 months prior to the 12-month target period were discharged from foster care to reunification in less than 12 months of entry into foster care. This percentage is less than the national median of 39.4 percent.

Statewide Assessment Information
According to the Statewide Assessment, the QA review team indicated that there are challenges in moving cases to permanency, and they reported that this may be due in part to the fact that some treatment processes take longer than expected. The Statewide Assessment notes that drug and alcohol treatment, in particular, may be delayed because of the lack of available inpatient treatment, which results in waiting lists. The Statewide Assessment also notes that the achievement of permanency goals, such as timely reunification, is thwarted by the lack of consistent caseworker practice due to high staff turnover.

Stakeholder Interview Information
Most stakeholders commenting on this item during the onsite CFSR expressed the opinion that there are barriers to achieving reunification in a timely manner and that one key barrier is a lack of adequate services for the parents. Stakeholders noted that this is a problem in the urban areas as well as in the bush. In particular, many stakeholders identified mental health and substance abuse treatment services for adults and supervised visitation as services that were not readily available to families and therefore resulted in delays in reunification.

Item 9. Adoption

____ Strength __X__ Area Needing Improvement

Case Review Findings
Item 9 was applicable for 22 (55 percent) of the 40 foster care cases. In assessing this item, reviewers were to determine whether diligent efforts had been, or were being, made to finalize adoptions in a timely manner. The results are shown in the table below.

Item 9 Ratings	Anchorage	Bethel	Juneau	Total	Percent
Strength	3	0	1	4	**18**
Area Needing Improvement	10	4	4	18	**82**
Total Applicable Foster Care Cases	**13**	**4**	**5**	**22**	
Not Applicable Foster Care Cases	7	6	5	18	
Total Foster Care Cases	**20**	**10**	**10**	**40**	

Item 9 was rated as a Strength in 23 percent of applicable Anchorage cases, none of the applicable Bethel cases, and 20 percent of applicable Juneau cases. Item 9 was rated as a Strength when reviewers determined that the State had made diligent efforts to achieve finalized adoptions in a timely manner. Item 9 was rated as an ANI in 18 cases due to one or more of the following concerns:

- Delays in filing for TPR (nine cases)
- Delays in the TPR process after filing (two cases)
- Delays in completing or approving home studies (six cases)
- Delays in searching for absent parents (four cases)
- Delays due to the Tribe wanting to ensure that there are no available relatives before they agree to adoption by a nonrelative foster parent (one case)
- Delays due to not addressing key service needs of child (two cases)

In six of the 18 cases rated as ANIs for this item, the child had been in foster care for longer than 3 years at the time of the onsite CFSR or at the time of adoption finalization. During the period under review, adoption was finalized in only 5 of the 22 cases with a case goal of adoption. There was no case in which finalization occurred in less than 24 months of the child's entry into foster care.

Rating Determination

Item 9 is assigned an overall rating of ANI. Reviewers determined that the agency had made diligent efforts to achieve adoptions in a timely manner in only 18 percent of the applicable cases. This percentage is less than the 90 percent or higher required for a rating of Strength. This item also was rated as an ANI in the State's 2002 CFSR.

Performance on the Individual Composite 2: Measures pertaining to the timeliness of adoptions

The data below are presented to provide additional information about the timeliness of adoptions. There are no national standards for the individual measures included in Composite 2. National standards have been established only for the scaled composite score for Composite 2. The State's performance on Composite 2 is shown in the table for Permanency Outcome 1.

Alaska's performance during the CFSR 12-month target period on the individual measures included in Permanency Composite 2 (timeliness of adoptions) is as follows:

- 22 percent of adoptions occurred in less than 24 months from the time of entry into foster care (measure C2-1). This percentage is less than the national median of 26.8 percent.
- The median length of stay in foster care for children adopted was 31.5 months (measure C2-2). This median length of stay is less than the national median of 32.4 months but higher than the 25th percentile of 27.3 months. For this measure, a lower number of months equates to a higher level of performance.

- 16.4 percent of children in foster care for 17 months or longer on the first day of the 12-month CFSR target period were discharged to a finalized adoption by the last day of the target period (measure C2-3). This percentage is less than the national median of 20.2 percent.
- 8.5 percent of children in foster care for 17 months or longer on the first day of the CFSR 12-month target period became legally free for adoption (i.e., there was a TPR for both mother and father) within 6 months (measure C2-4). This percentage is less than the national median of 8.8 percent.
- 40.8 percent of children who were legally free for adoption were adopted within 12 months of becoming legally free (C2-5). This percentage is less than the national median of 45.8 percent.

Statewide Assessment Information

According to the Statewide Assessment, Alaska statutes and OCS policy outline processes for improving timeliness to adoption by addressing timeframes for TPR. Statutes and policy require that when a child has been placed out-of-home for 15 of the last 22 months, a petition for TPR must be filed unless there are compelling reasons for not filing a petition. Additionally, Alaska's statutes and policy address the consent to adoption by parent, which provides expedited achievement of timely adoptions particularly in cases of Alaska Native children. This process offers parents the opportunity to consent to adoption without a relinquishment or TPR.

The Statewide Assessment reports that there is agreement between OCS and stakeholders that delays in adoption may be attributed to insufficient staff training on this issue and that newly assigned caseworkers may resist moving toward TPR. Instead, new caseworkers sometimes want to give parents additional chances to reunify with their child. This is especially problematic when cases move from one worker to another due to staff turnover. Newly assigned caseworkers can be hesitant to move forward with TPR on unfamiliar cases and therefore delays often occur.

The Statewide Assessment also reports that a lack of available mental health and substance abuse services for OCS families is an obstacle for timely TPR. As noted in the Statewide Assessment, the State QA review team observed that there are a number of factors that may affect the timeliness of adoptions. For example, concurrent planning often is not considered early in a case even when there is little hope of successful reunification, and some courts will not accept concurrent plans until 15 months of placement has passed even in poor prognosis cases. Finally, a limited number of cases get lost in the system when cases are transferred from one caseworker to another. These cases may appear stable to the new caseworker and therefore do not get the attention needed to finalize an adoption.

Stakeholder Interview Information

Several stakeholders commenting on this item indicated that, although there are challenges in achieving adoptions in a timely manner, the hiring of Regional Adoption Specialists has greatly improved the situation. However, there was a consensus among stakeholders that adoptions are taking too long to complete and that the most significant barrier to achieving adoptions in a timely manner is the home study process. Many stakeholders indicated that home studies, most of which are done by private contractors, take an extremely

long time to complete and can delay an adoption anywhere from 6 to 12 months. They noted that although the State has adopted stricter time requirements for the home study, it remains a significant cause of adoption delays.

Various stakeholders identified the following as additional barriers to timely adoptions:

- An insufficient number of adoptive homes, particularly ICWA adoptive homes and homes for children with behavior problems
- Delays in achieving TPR, including the need in some areas of the State for the caseworker to prepare a full case summary as part of the petition process
- Delays in scheduling TPR hearings because other types of cases have priority
- High staff caseloads that result in a lack of services to the biological family and, therefore, findings of no reasonable efforts in case
- Delays due to lengthy subsidy negotiations, which cannot take place until after the home study is completed
- The belief of some agency staff that there is an OCS policy requiring that a child be in a home for 3 months before a home study can be requested and 6 months before an adoption can be finalized

Item 10. Permanency goal of other planned permanent living arrangement

____ Strength __X__ Area Needing Improvement

Case Review Findings

Item 10 was applicable for 5 (12.5 percent) of the 40 foster care cases. In assessing these cases, reviewers were to determine if the agency had made, or was making, diligent efforts to assist children in attaining their goals related to OPPLAs. The results are presented in the table below.

Item 10 Ratings	Anchorage	Bethel	Juneau	Total	Percent
Strength	2	1	0	3	**60**
Area Needing Improvement	0	0	2	2	**40**
Total Applicable Foster Care Cases	**2**	**1**	**2**	**5**	
Not Applicable Foster Care Case	18	9	8	35	
Total Foster Care Cases	**20**	**10**	**10**	**40**	

Item 10 was rated as a Strength in three cases when reviewers determined that the agency had made concerted efforts to ensure a long-term placement for the child and to provide the necessary service to prepare the child for independent living. Item 10 was rated as an ANI in two cases when reviewers determined that the child was not in a permanent placement and there were delays in providing the child with Independent Living (IL) services.

Rating Determination
Item 10 is assigned an overall rating of ANI. In 60 percent of the applicable cases, reviewers determined that the goal of OPPLA was being addressed in an appropriate way. This percentage is less than the 90 percent or higher required for a rating of Strength. Item 10 also was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, since the 2002 CFSR, OCS has established Regional Independent Living Specialists (RILS) in each of the four OCS regions. RILS work with foster youth and former foster youth on building IL and transitional living skills. RILS participate in case reviews to ensure that the identified needs are addressed prior to releasing custody and that custody is maintained if those needs have not been addressed. However, the Statewide Assessment also reports that, statewide, the availability of IL services and transitional living programs is limited.

Stakeholder Interview Information
Most stakeholders commenting on this item during the onsite CFSR indicated that IL services are provided to older youth in foster care. Anchorage stakeholders praised the IL services provider and coordinator in that site, although some expressed the opinion that the eligibility age of 16.5 years should be lowered to age 14 or 15. Juneau stakeholders also praised the RILS and noted that this person is effective in reaching out to youth and engaging them in IL services.

Some Anchorage stakeholders indicated that although there are exit plans for most youth, often youth who transition out of foster care do not have a permanent adult resource person in the community.

Permanency Outcome 2

Outcome P2: The continuity of family relationships and connections is preserved for children					
Number of cases reviewed by site according to degree of outcome achievement					
Outcome Achievement	**Anchorage**	**Bethel**	**Juneau**	**Total**	**Percent**
Substantially Achieved	13	6	6	25	**62.5**
Partially Achieved	7	4	3	14	**35.0**
Not Achieved	0	0	1	1	**2.5**
Total Foster Care Cases	**20**	**10**	**10**	**40**	

Status of Permanency Outcome 2

Alaska is not in substantial conformity with Permanency Outcome 2. The outcome was determined to be substantially achieved in 62.5 percent of the cases, which is less than the 95 percent or higher required for substantial conformity. The outcome was determined to be substantially achieved in 65 percent of Anchorage cases and 60 percent of Bethel and Juneau cases. Alaska was not in substantial conformity with Permanency Outcome 2 in its 2002 CFSR and was required to address the outcome in its PIP.

Key Concerns From the 2002 CFSR

In the 2002 CFSR, all items assessed for Permanency Outcome 2 were rated as ANIs except for items 11 (proximity of placement) and 12 (placement with siblings). The following key concerns were identified in the 2002 CFSR:

- Agency practice was inconsistent with respect to facilitating and supporting visits between children and their parents and siblings.
- There was a lack of concerted efforts to preserve children's connections and to seek relatives as potential placement resources.
- In many cases, efforts were not made to promote or maintain the parent-child bond.

To address these concerns, Alaska implemented the following strategies as part of its PIP:

- Developed policies and guidelines to clarify supervised and unsupervised visitation requirements
- Made paternity testing available statewide to ensure identification of noncustodial fathers
- Improved policy and training regarding maintaining connections between children in foster care and their families and communities

The State met its target goals for this outcome by the end of its PIP implementation period.

Key Findings of the 2008 CFSR

The findings of the 2008 CFSR pertaining to the specific items assessed under Permanency Outcome 2 are presented below.

Item 11. Proximity of foster care placement

__X__ Strength ____ Area Needing Improvement

Case Review Findings

Item 11 was applicable for 31 (77.5 percent) of the 40 foster care cases. Cases determined to be not applicable were those in which (1) TPR had been attained prior to the period under review, (2) contact with parents was not considered to be in the child's best interests,

and/or (3) parents were deceased or their whereabouts were unknown. In assessing item 11, reviewers were to determine whether the child's most current foster care setting was in close proximity to the child's parents or close relatives. The results of this assessment are presented in the table below.

Item 11 Ratings	Anchorage	Bethel	Juneau	Total	Percent
Strength	13	8	7	28	**90**
Area Needing Improvement	0	2	1	3	**10**
Total Applicable Foster Care Cases	**13**	**10**	**8**	**31**	
Not Applicable Foster Care Cases	7	0	2	9	
Total Foster Care Cases	**20**	**10**	**10**	**40**	

Rating Determination
Item 11 was assigned an overall rating of Strength. In 90 percent of the cases, reviewers determined that the agency had made diligent efforts to ensure that children were placed in foster care placements that were in close proximity to their parents or relatives, or that were necessary to meet special needs. This percentage equals the 90 percent required for a rating of Strength. This item also was rated as a Strength in the State's 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, QA reviews indicate that OCS is very effective in placing foster children close to their birth parents or their own communities. The Statewide Assessment reports that in the vast majority of QA case reviews, most field offices are performing well in this area.

Stakeholder Interview Information
Stakeholders did not comment on this item during the onsite CFSR.

Item 12. Placement with siblings

__X__ Strength ____ Area Needing Improvement

Case Review Findings
Item 12 was applicable for 32 (80 percent) of the 40 foster care cases. Cases were not applicable if the child did not have a sibling in foster care at any time during the period under review. In assessing item 12, reviewers were to determine whether siblings were, or had been, placed together and, if not, whether the separation was necessary to meet the needs (service or safety needs) of one or more of the children. The results of this assessment are presented in the table below.

Item 12 Ratings	Anchorage	Bethel	Juneau	Total	Percent
Strength	14	7	8	29	**91**
Area Needing Improvement	2	1	0	3	**9**
Total Applicable Foster Care Cases	**16**	**8**	**8**	**32**	
Not Applicable Foster Care Cases	4	2	2	8	
Total Foster Care Cases	**20**	**10**	**10**	**40**	

Item 12 was rated as a Strength in 87.5 percent of applicable Anchorage cases, 87.5 percent of applicable Bethel cases, and 100 percent of applicable Juneau cases. The item was rated as a Strength when reviewers determined the following:

- The child was in a placement with all siblings (14 cases).
- The child was not in a placement with some siblings, but the separation was necessary to meet the special needs of one or more of the siblings (15 cases).

Item 12 was rated as an ANI in three cases when reviewers determined that the agency had not made concerted efforts to place siblings together and the separation was not intended to meet special needs.

Rating Determination

Item 12 was assigned an overall rating of Strength. Reviewers determined that the agency placed siblings together in foster care (when appropriate) in 91 percent of the applicable cases. This percentage exceeds the 90 percent required for a rating of Strength. This item also was rated as a Strength in the State's 2002 CFSR.

Statewide Assessment Information

According to the Statewide Assessment, QA review data indicate that OCS is placing siblings together in the majority of cases. The chart presented in the Statewide Assessment shows 100 percent compliance for this item with regard to placement with siblings for cases reviewed in Anchorage, Bethel, Mat-Su, and Juneau, and approximately 75 percent for cases reviewed in Fairbanks.

Stakeholder Interview Information

Stakeholders did not comment on this item in a substantive way during the onsite CFSR.

Item 13. Visiting with parents and siblings in foster care

____ Strength __X__ Area Needing Improvement

Case Review Findings

Item 13 was applicable for 34 (85 percent) of the 40 foster care cases. Cases were not applicable for an assessment of this item if the child had no siblings in foster care and if one of the following conditions was met with regard to the parents: (1) TPR was established prior to the period under review and parents were no longer involved in the child's life (or parents were deceased), or (2) visitation with a parent was considered to not be in the best interests of the child. In assessing this item, reviewers were to determine the following: (1) whether the agency had made, or was making, diligent efforts to facilitate visitation between children in foster care and their parents and siblings in foster care, and (2) whether these visits occurred with sufficient frequency to meet the needs of children and families. The findings of this assessment are presented in the table below.

Item 13 Ratings	Anchorage	Bethel	Juneau	Total	Percent
Strength	10	6	5	21	**62**
Area Needing Improvement	5	4	4	13	**38**
Total Applicable Foster Care Cases	**15**	**10**	**9**	**34**	
Not Applicable Foster Care Cases	5	0	1	6	
Total Foster Care Cases	**20**	**10**	**10**	**40**	

Item 13 was rated as a Strength in 67 percent of applicable Anchorage cases, 60 percent of Bethel cases, and 56 percent of applicable Juneau cases. The item was rated as a Strength when reviewers determined that (1) the frequency and quality of visitation with parents and siblings met the needs of the children, or (2) the agency made concerted efforts to promote frequent visitation even when the current visitation frequency did not meet the child's needs.

Item 13 was rated as an ANI in 13 cases when reviewers determined one or more of the following:

- The agency did not make concerted efforts to promote visitation with the mother (nine cases).
- The agency did not make concerted efforts to promote visitation with the father (eight cases).
- The agency did not make concerted efforts to promote visitation with siblings in foster care (six cases).

Specific information about visitation frequency is provided in the table below. As shown in the table, for the applicable cases, children visited with their mothers at least once a month in 44 percent of the applicable cases, with their fathers at least once a month in 50 percent of the applicable cases, and with their siblings at least once a month in 56 percent of the applicable cases.

Visitation frequency for children in foster care (during the period under review)	Visits with Mother	Visits with Father	Visits with Siblings in Foster Care
At least once a week	10 (37%)	8 (33%)	5 (28%)
Less than once a week but at least twice a month	1 (4%)	1 (4%)	3 (17%)
Less than twice a month but at least once a month	1 (4%)	3 (12.5%)	2 (11%)
Less than once a month	13 (48%)	9 (37.5%)	6 (33%)
Never	2 (7%)	3 (12.5%)	2 (11%)
Total cases for which item 13 was applicable	**27**	**24**	**18**

Rating Determination
Item 13 is assigned an overall rating of ANI. In 62 percent of the cases, reviewers determined that the agency had made concerted efforts to ensure that visitation was of sufficient frequency to meet the needs of the child and family. This percentage is less than the 90 percent or higher required for a rating of Strength. Item 13 also was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, visitation with parents was addressed in a 2006 Stakeholder Survey of 140 parents. When asked if they were satisfied with the visitation schedule, 50 parents out of the 140 interviewed indicated that they were satisfied with the visitation schedule, while 82 parents indicated that they were not satisfied with the visitation schedule.

The Statewide Assessment reports that QA review data indicate that compliance with the requirements for visitation between parents and siblings varies throughout the State. The table presented in the Statewide Assessment shows that, for 2008, the Juneau and Mat-Su offices were in 100 percent compliance with this item; in Anchorage and Bethel compliance was about 80 percent; and in Fairbanks compliance was approximately 75 percent.

Stakeholder Interview Information
Some Anchorage stakeholders commenting on this item during the onsite CFSR indicated that when visits do not occur with parents it is usually due to the lack of supervised visitation services. They noted that there are not sufficient resources to coordinate and support visits.

Item 14. Preserving connections

____ Strength __X__ Area Needing Improvement

Case Review Findings

Item 14 was applicable for all 40 foster care cases. In assessing item 14, reviewers were to determine whether the agency had made, or was making, diligent efforts to preserve the child's connections to neighborhood, community, heritage, family, faith, and friends while the child was in foster care. This item is not rated on the basis of visits or contacts with parents or siblings in foster care. The results of the assessment are provided in the table below.

Item 14 Ratings	Anchorage	Bethel	Juneau	Total	Percent
Strength	15	8	8	31	77.5
Area Needing Improvement	5	2	2	9	22.5
Total Foster Care Cases	**20**	**10**	**10**	**40**	

Item 14 was rated as a Strength in 75 percent of Anchorage cases and 80 percent of Bethel and Juneau cases. The item was rated as a Strength when reviewers determined that the agency made concerted efforts to preserve the child's connections with extended family members, religious or cultural heritage, schools, neighborhoods, and friends. Item 14 was rated as an ANI in nine cases when reviewers determined one or more of the following:

- The agency did not make concerted efforts to maintain the child's connections to extended family (eight cases). In seven of these cases, the lack of connection was with siblings who were not in foster care.
- The agency did not make concerted efforts to maintain the child's connections to his or her cultural heritage (three cases). In all three cases, the children were of Native American heritage.

Rating Determination

Item 14 is assigned an overall rating of ANI. In 77.5 percent of the cases, reviewers determined that the agency had made concerted efforts to maintain the child's connections with extended family, culture, religion, community, and school. This percentage is less than the 90 percent or higher required for a rating of Strength. Item 14 also was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment Information

According to the table presented in the Statewide Assessment, the QA review for 2008 found that 100 percent of the cases reviewed in Anchorage, Juneau, and Bethel and about 81 percent of the cases reviewed in Fairbanks and Mat-Su were determined to have met the requirements of this item. However, the Statewide Assessment also reports that in a survey of 140 parents conducted in 2006, only 45 percent of the parents reported that their children were able to remain in the same school while in foster care, only 60 percent of the parents surveyed indicated that their children were able to maintain community activities while in out-of-home care, and only 65 percent of the parents reported that their children's cultural activities had been supported and maintained while in out-of-home placement.

Stakeholder Interview Information
Stakeholders commenting on this item during the onsite CFSR expressed different opinions with regard to notification of Tribes when Native children come into contact with the child welfare system. Several stakeholders indicated that in some areas of the State, caseworkers are not making concerted efforts to identify Native children and therefore are not providing timely notice to the Tribes. However, other stakeholders said that OCS does a good job in determining whether children have Native Alaskan heritage and are notifying the Tribes and seeking relative placements whenever possible. Anchorage stakeholders said that Native Alaskan children are not always placed with relatives because if the parents live in Anchorage the parents often do not want the child moved far away to a remote village.

A few Anchorage stakeholders reported that there are 62 languages spoken in the Anchorage schools and many more cultures than Native, and it was not clear whether any efforts were being made to address the cultural heritage of these children. A few Anchorage stakeholders also noted that when children are moved from foster homes or relative placements, no efforts are made to maintain the children's connections to these families.

Juneau stakeholders said that there is a cultural night activity held in that site for non-Native parents who are fostering Native children. They reported that this activity was well attended and perceived as helpful for foster parents and children.

Item 15. Relative placement

____ Strength __X__ Area Needing Improvement

Case Review Findings
Item 15 was applicable for 36 (90 percent) of the 40 foster care cases. Cases were not applicable if relative placement was not an option during the period under review because (1) the child was in an adoptive placement at the start of the time period or (2) the child entered foster care needing specialized services that could not be provided in a relative placement. In assessing this item, reviewers were to determine whether the agency had made diligent efforts to locate and assess relatives (both maternal and paternal relatives) as potential placement resources for children in foster care. The results of this assessment are presented in the table below.

Item 15 Ratings	Anchorage	Bethel	Juneau	Total	Percent
Strength	14	10	6	30	**83**
Area Needing Improvement	4	0	2	6	**17**
Total Applicable Foster Care Cases	**18**	**10**	**8**	**36**	[redacted]
Not Applicable Foster Care Case	2	0	2	4	[redacted]
Total Foster Care Cases	**20**	**10**	**10**	**40**	[redacted]

Item 15 was rated as a Strength in 78 percent of applicable Anchorage cases, 100 percent of Bethel cases, and 75 percent of applicable Juneau cases. The item was rated as a Strength when reviewers determined the following:

- The child was placed with relatives (20 cases).
- The child was not placed with relatives but the agency made diligent efforts to search for maternal and/or paternal relatives (10 cases).

Item 15 was rated as an ANI in six cases when reviewers determined one or both of the following:

- The agency had not made efforts to search for maternal relatives (five cases).
- The agency had not made efforts to search for paternal relatives (five cases).

Rating Determination

Item 15 is assigned an overall rating of ANI. In 83 percent of the cases, reviewers determined that the agency had made diligent efforts to locate and assess relatives as potential placement resources. This percentage is less than the 90 percent or higher required for a rating of Strength. This item also was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment Information

According to the Statewide Assessment, the QA case reviews for the 2008 period found that in 100 percent of the cases reviewed, concerted efforts were made to place the child with relatives, including paternal relatives, when appropriate. However, the Statewide Assessment also reports that in a 2007 survey of 130 Tribes, only 63 percent of respondents stated that they strongly agree or agree that OCS makes efforts to place children in an ICWA-preference placement setting with a relative or Tribal care provider and only 75 percent of the respondents stated that they strongly agree or agree that OCS involves the Tribes in relative searches for children in foster care.

Stakeholder Interview Information

Several Anchorage stakeholders indicated that TDMs in that location have been beneficial in promoting relative placements, particularly for Native children. Some stakeholders at this site also noted that the ICWA specialist raises the issue of the need for continued relative search at every 6-month review involving a Native child.

Although most stakeholders expressed the opinion that relatives often are sought, several noted that some relatives who are not licensed may not have the resources necessary to assume care of the children. A few stakeholders suggested that relatives are not always fully informed about their right to be licensed. Stakeholders also noted that while there might be some criminal background incident that prevents licensure, the children are still placed in the homes. In these situations, the relative caregivers do not get the financial support or other supports that would help them care for the children.

Item 16. Relationship of child in care with parents

____ Strength __X__ Area Needing Improvement

Case Review Findings

Item 16 was applicable for 30 (75 percent) of the 40 foster care cases. Cases were not applicable if (1) parental rights had been terminated prior to the period under review and parents were no longer involved with the child or (2) a relationship with the parents was considered to be not in the child's best interests throughout the period under review. In assessing this item, reviewers were to determine whether the agency had made diligent efforts to support or maintain the bond between children in foster care and their mothers and fathers through efforts other than arranging visitation. The results of this assessment are provided in the table below.

Item 16 Ratings	Anchorage	Bethel	Juneau	Total	Percent
Strength	6	5	3	14	**47**
Area Needing Improvement	7	5	4	16	**53**
Total Applicable Foster Care Cases	**13**	**10**	**7**	**30**	
Not Applicable Foster Care Cases	7	0	3	10	
Total Foster Care Cases	**20**	**10**	**10**	**40**	

Item 16 was rated as a Strength in 46 percent of applicable Anchorage cases, 50 percent of Bethel cases, and 43 percent of applicable Juneau cases. The item was rated as a Strength when reviewers determined that the agency made concerted efforts to support and/or strengthen the bond between parents and children. For the most part, this involved the agency encouraging the parent's participation in school activities and/or doctor's appointments.

Item 16 was rated as an ANI in 16 cases when reviewers determined one or both of the following:

- The agency did not make concerted efforts to support the relationship with the mother (12 out of 27 applicable cases).
- The agency did not make concerted efforts to support the relationship with the father (10 out of 24 applicable cases).

Rating Determination

Item 16 is assigned an overall rating of ANI. Reviewers determined that the agency had made concerted efforts to support the parent-child relationships of children in foster care in only 47 percent of the applicable cases. This percentage is less than the 90 percent or higher required for a rating of Strength. Item 16 also was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, the QA reviews have found that the majority of field offices have been performing at or near 100 percent on this item across the State. However, the Statewide Assessment did not provide specific data pertaining to this item.

Stakeholder Interview Information
Stakeholders did not comment on this item during the onsite CFSR.

III. CHILD AND FAMILY WELL-BEING

Well-Being Outcome 1

Outcome WB1: Families have enhanced capacity to provide for their children's needs					
Number of cases reviewed by the site according to degree of outcome achievement					
Outcome Achievement	**Anchorage**	**Bethel**	**Juneau**	**Total**	**Percent**
Substantially Achieved	11	1	3	15	**23.1**
Partially Achieved	8	4	7	19	**29.2**
Not Achieved or Addressed	12	12	7	31	**47.7**
Total Cases	**31**	**17**	**17**	**65**	

Status of Well-Being Outcome 1

Alaska is not in substantial conformity with Well-Being Outcome 1. The outcome was determined to be substantially achieved in only 23.1 percent of the cases reviewed, which is less than the 95 percent or higher required for substantial conformity. The outcome was substantially achieved in 35 percent of Anchorage cases, 6 percent of Bethel cases, and 18 percent of Juneau cases. The outcome was substantially achieved in 35 percent (14 cases) of the 40 foster care cases compared with 4 percent (1 case) of the 25 in-home services cases. Alaska also was not in substantial conformity with this outcome in its 2002 CFSR and was required to address the outcome in its PIP.

Key Concerns From the 2002 CFSR

During the 2002 CFSR, all items assessed for this outcome were rated as ANIs. The key concerns identified in the 2002 CFSR were the following:

- In many cases, the service needs of children, parents, and foster parents were neither assessed nor addressed.

- The child welfare agency did not consistently involve parents and children in the case planning process.
- In the majority of cases reviewed, the frequency and quality of visitation with both children and parents was not adequate to meet the needs of the child or promote attainment of case goals.

To address the concerns identified in the 2002 CFSR, the State developed and implemented the following strategies:
- Enhanced policy and procedure for administrative review feedback to the child welfare agency administration (issued July 2005)
- Developed case planning protocols to identify required services
- Strengthened caseworker training in conducting initial assessments
- Developed the expectation that supervisors are to work with their staff regarding the assessment of child and family needs and the incorporation of these needs into a strengths-based case and service planning process
- Implemented statewide tracking of caseworker visits with children and parents

The State met its PIP target goals for this outcome by the end of its PIP implementation period.

Findings of the 2008 CFSR

The findings of the 2008 CFSR pertaining to the specific items assessed under Well-Being Outcome 1 are presented below.

Item 17. Needs and services of child, parents, foster parents

____ Strength __X__ Area Needing Improvement

Case Review Findings
Item 17 was applicable for all 65 cases. In assessing this item, reviewers were to determine whether the agency had (1) adequately assessed the needs of children, parents, and foster parents and (2) provided the services necessary to meet those needs. This item excludes the assessment of children's (but not parents') needs pertaining to educational, physical health, and mental health needs. These issues are addressed in later items. The case review results are presented in the table below.

Item 17 Ratings	Anchorage	Bethel	Juneau	Total	Percent
Strength	13	3	5	21	**32**
Area Needing Improvement	18	14	12	44	**68**
Total Cases	**31**	**17**	**17**	**65**	

Item 17 was rated as a Strength in 42 percent of Anchorage cases, 18 percent of Bethel cases, and 29 percent of Juneau cases. The item was rated as a Strength in 45 percent (18 cases) of the 40 foster care cases compared with 12 percent (3 cases) of the 25 in-home services cases.

Item 17 was rated as a Strength when reviewers determined that the needs of children, parents, and foster parents had been adequately assessed and that identified service needs had been met. Item 17 was rated as an ANI when reviewers determined that there was either inadequate assessment of needs or inadequate services to meet identified needs.

Specific case review findings for item 17 are shown in the table below. For the foster care cases, the data suggest that the agency was considerably less consistent in assessing and meeting service needs of mothers and fathers than it was in assessing and meeting the needs of the children, although the needs of children were adequately assessed in only 73 percent of the cases. However, for the in-home services cases, the needs of the children were assessed and met in only 44 percent of the cases. The agency was least consistent in assessing and meeting needs of the fathers in both types of cases, although the percentage was particularly low in the in-home services cases.

Item 17. Assessment and Services Summary

Target person for assessment and services	Foster Care Cases		In-Home Services Cases	
	Yes	Total Applicable Cases	Yes	Total Applicable Cases
Mother's needs assessed and met?	14 (52%)	27	10 (40%)	25
Father's needs assessed and met?	11 (46%)	24	3 (12.5%)	24
Foster parents' needs assessed and met?	25 (66%)	38	[redacted]	[redacted]
Child's needs assessed and met?	29 (72.5%)	40	11 (44%)	25

Rating Determination

Item 17 is assigned an overall rating of ANI. Reviewers determined that the State had adequately assessed and addressed the service needs of children, parents, and foster parents (when applicable) in only 32 percent of the cases, which is less than the 90 percent or higher required for a rating of Strength. This item also was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment Information

According to the Statewide Assessment, the QA reviews have indicated that Alaska's performance with regard to the adequate assessment of needs and services of child, parent, and foster parents has declined in most of the State since 2006. The data presented in the Statewide Assessment for 2008 indicate that slightly less than 60 percent of the cases reviewed in Anchorage, Bethel, and Fairbanks were rated as a Strength, slightly less than 80 percent of the cases reviewed in Juneau were rated as a Strength, and about 90

percent of the cases reviewed in Mat-Su were rated as a Strength. The Statewide Assessment reports that OCS speculates that staff turnover and the struggle with implementation of the safety decision-making model are significant contributing factors to the decline in performance. As noted in the Statewide Assessment, "Again, challenges do not seem to be limited to a specific area or group and are more the result of uncovered cases and cases with new or overworked caseworkers who falter in maintaining consistent contact and follow-through with the provision of needed services."

Stakeholder Interview Information

Several Anchorage stakeholders commenting on this item during the onsite CFSR indicated that there are not sufficient service supports for foster parents, children in residential treatment, and relative caregivers. A few Anchorage stakeholders also expressed concern about the agency not being proactive in engaging parents in services and instead just giving them a list of referrals.

Item 18. Child and family involvement in case planning

____ Strength __X__ Area Needing Improvement

Case Review Findings

Item 18 was applicable for 63 (97 percent) of the 65 cases. A case was not applicable if parental rights had been terminated prior to the period under review and parents were not involved with the child in any way and the child was too young or had cognitive delays or other conditions that were barriers to participation in case planning. In assessing this item, reviewers were to determine whether parents and children (if age-appropriate) had been involved in the case planning process, and if not, whether their involvement was contrary to the child's best interests. A determination of involvement in case planning required that a parent or child had actively participated in identifying the services and goals included in the case plan. This assessment produced the following findings:

Item 18 Ratings	Anchorage	Bethel	Juneau	Total	Percent
Strength	13	4	6	23	**37**
Area Needing Improvement	16	13	11	40	**63**
Total Applicable Cases	**29**	**17**	**17**	**63**	
Not Applicable Cases	2	0	0	2	
Total Cases	**31**	**17**	**17**	**65**	

Item 18 was rated as a Strength in 45 percent of applicable Anchorage cases, 24 percent of Bethel cases, and 35 percent of Juneau cases. The item was rated as a Strength in 58 percent (22 cases) of the 38 applicable foster care cases compared with 4 percent (1 case) of 25 in-home services cases. Item 18 was rated as a Strength when reviewers determined that all appropriate parties actively participated in case planning or that the agency had made concerted efforts to involve them in case planning. The item was rated as an

ANI when reviewers determined that the agency had not made concerted efforts to involve the mother, father, and/or child (when age appropriate) in case planning.

Key findings with regard to this item are presented in the table below. As shown in the table, the largest differences with regard to involving the mothers, fathers, and children in case planning occurred between foster care and in-home services cases. However, in the in-home services cases, the mothers were more likely to be involved in case planning than were the fathers or children.

Target person	Foster Care Cases		In-Home Services Cases	
	Yes	Total Applicable Cases	Yes	Total Applicable Cases
Mother involved in case planning?	18 (67%)	27	7 (28%)	25
Father involved in case planning?	14 (58%)	24	2 (8%)	24
Children involved in case planning?	14 (67%)	21	2 (14%)	14

Rating Determination
Item 18 is assigned an overall rating of ANI. Reviewers determined that the agency had made diligent efforts to involve parents and/or children in case planning in only 37 percent of the applicable cases. This percentage is less than the 90 percent or higher required for a rating of Strength. Item 18 also was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, the results of the QA review in 2008 indicate that Alaska has room for improvement in the area of involving parents and children in case planning. As noted in the Statewide Assessment, in the QA review, only those cases that were determined to have successfully involved all parties in a meaningful way in the development of the case plan were rated as a Strength. The Statewide Assessment reports that in the State's 2008 QA review, a Strength rating was assigned to 52 percent of Anchorage cases, about 12 percent of Bethel cases, about 81 percent of Fairbanks cases, and about 58 percent of Juneau and Mat-Su cases. The Statewide Assessment notes that Bethel's low level of compliance in this area may be related to staffing and workload issues; in comparison, Fairbanks' performance, which is better for this item, may be attributed to its more stable work force.

Stakeholder Interview Information
Several Anchorage stakeholders commenting on this item indicated that children and families can express their opinions and perspectives during a TDM. However, other Anchorage stakeholders indicated that TDMs primarily focus on placement decisions and not on the services or the case plan.

Other comments on parent involvement in case planning are provided under item 25 in the Systemic Factors section of this report.

Item 19. Caseworker visits with child

____ Strength __X__ Area Needing Improvement

Case Review Findings
Item 19 was applicable for all 65 cases. In assessing this item, reviewers were to determine whether the frequency of visits between the caseworkers and children was sufficient to ensure adequate monitoring of the child's safety and well-being and whether visits focused on issues pertinent to case planning, service delivery, and goal attainment. The results of the assessment are presented in the table below:

Item 19 Ratings	Anchorage	Bethel	Juneau	Total	Percent
Strength	13	0	4	17	**26**
Area Needing Improvement	18	17	13	48	**74**
Total Cases	**31**	**17**	**17**	**65**	

Item 19 was rated as a Strength in 42 percent of Anchorage cases, 0 Bethel cases, and 24 percent of Juneau cases. The item was rated as a Strength in 40 percent (16 cases) of the 40 foster care cases compared to 4 percent (1 case) of the 25 in-home services cases.

Item 19 was rated as a Strength when reviewers determined that the frequency and quality of visits between caseworkers and children were sufficient to ensure adequate monitoring of the child's safety and well-being and promote attainment of case goals. Item 19 was rated as an ANI in 48 cases when reviewers determined the following:

- The frequency of caseworker visits was not sufficient to meet the needs of the child and when visits did occur, they did not focus on issues pertinent to case planning, service delivery, and goal attainment (33 cases).
- The frequency of caseworker visits with children was not sufficient to meet the needs of the child, although when visits did occur, they were substantive (four cases).
- The frequency of caseworker visits was sufficient, but the visits did not focus on issues pertinent to case planning, service delivery, and goal attainment (six cases).
- There were no visits with children during the period under review (five cases).

Specific information on the frequency of caseworker visits is presented in the table below. The data in the table indicate that caseworkers visited children less frequently than once a month in 55 percent of foster care cases and 84 percent of in-home services cases.

Typical frequency of caseworker visits with child (during the period under review)	Foster Care Cases	In-Home Services Cases
Visits occurred at least once a week	1 (2.5%)	0
Visits occurred less frequently than once a week but at least twice a month	2 (5%)	0
Visits occurred less frequently than twice a month but at least once a month	15 (37.5%)	4 (16%)
Visits occurred less frequently than once a month	22 (55%)	16 (64%)
There were no visits during the period under review	0	5 (20%)
Total cases	**40**	**25**

Rating Determination
Item 19 is assigned an overall rating of ANI. Reviewers determined that caseworker visits with children were of sufficient frequency and/or quality in only 26 percent of the cases. This percentage is less than the 90 percent or higher required for a rating of Strength. This item also was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, OCS policy requires an OCS caseworker to have face-to-face contact at least once a month with any child with an open case who resides in Alaska and who is placed either in his or her own home or in an out-of-home placement. This contact must occur in the home in which the child resides at least once every other month. The Statewide Assessment also notes that policy requires that the contact must allow for discussion with the child regarding their current placement, activities on the case plan, and any safety or well being issues that have been identified.

The Statewide Assessment reports that the results of the State's QA reviews indicate that Alaska has difficulty conducting monthly caseworker visits. For the 2008 data, caseworker visits with children was rated as a Strength in only 28 percent of Anchorage cases, 18 percent of Fairbanks cases, 9 percent of Juneau cases, 25 percent of Mat-Su cases, and 0 Bethel cases.

The Statewide Assessment also notes that, according to ORCA data, the statewide percentage for caseworker visits for March 2008 for all regions and field offices was 18.9 percent for children in custody. The Statewide Assessment indicates that ORCA data does not include visits with children receiving in-home services, although the QA data includes this population.

Stakeholder Interview Information
Stakeholders commenting on this item during the onsite CFSR expressed different opinions regarding the frequency of caseworker visits with children. Some State-level stakeholders cited the State data regarding the lack of adequate contact between caseworkers and children and suggested that this may be due to a lack of skills on the part of the caseworkers and a lack of confidence in their

ability to engage children and families. Several Anchorage stakeholders, however, said that caseworkers have at least monthly contact and often weekly contact with the children on their caseloads, although they may not be documenting this appropriately. However, several Anchorage stakeholders also noted that contact varied across caseworkers, with some caseworkers doing a better job than others.

Item 20. Caseworker visits with parents

____ Strength __X__ Area Needing Improvement

Case Review Findings

Item 20 was applicable for 55 (85 percent) of the 65 cases. Cases were not applicable for this assessment if parental rights had been terminated prior to the period under review and parents were no longer involved in the lives of the children. All cases that were not applicable were foster care cases. In assessing this item, reviewers were to determine whether the caseworker's face-to-face contact with the children's mothers and fathers was of sufficient frequency and quality to promote attainment of case goals and/or ensure the children's safety and well-being. The results of this assessment are presented in the table below:

Item 20 Ratings	Anchorage	Bethel	Juneau	Total	Percent
Strength	6	1	4	11	**20**
Area Needing Improvement	18	16	10	44	**80**
Total Applicable Cases	**24**	**17**	**14**	**55**	[redacted]
Not Applicable Cases	7	0	3	10	[redacted]
Total Cases	**31**	**17**	**17**	**65**	[redacted]

Item 20 was rated as a Strength in 25 percent of applicable Anchorage cases, 6 percent of Bethel cases, and 29 percent of applicable Juneau cases. The item was rated as a Strength in 30 percent (9 cases) of the 30 applicable foster care cases compared with 8 percent (2 cases) of the 25 in-home services cases.

Item 20 was rated as a Strength when reviewers determined that visits occurred with sufficient frequency to meet the needs of parents and children and that visits focused on issues pertinent to case planning, service delivery, and goal attainment. Item 20 was rated as an ANI when reviewers determined the following with regard to visits with the mothers (52 applicable cases):

- The frequency of visits with mothers was not sufficient and, when visits did occur, the quality was not sufficient to meet the needs of the children or further achievement of case goals (24 cases).
- The frequency of visits with mothers was sufficient, but when visits did occur, the quality was not sufficient (two cases).

- The frequency of visits with mothers was not sufficient, but when visits did occur, the quality was sufficient (seven cases).
- There were no visits with the mother during the period under review (five cases).

Item 20 was rated as an ANI when reviewers determined the following with regard to visits with the fathers (48 applicable cases):

- The frequency of visits with fathers was not sufficient and, when visits did occur, the quality was not sufficient to meet the needs of the children or further achievement of case goals (20 cases).
- The frequency of visits with fathers was sufficient, but when visits did occur, the quality was not sufficient (one case).
- The frequency of visits with fathers was not sufficient, but when visits did occur, the quality was sufficient (three cases).
- There were no visits with fathers during the period under review (13 cases).

In one case, there were no visits with either the mother or the father during the period under review, but the case was rated as a Strength because reviewers determined that the agency had made concerted efforts to visit both the mother and the father.

Additional information on the frequency of caseworker visits with parents is provided in the table below. As shown in the table, the most typical frequency of visits with both mothers and fathers was less than once a month for both types of cases.

Typical frequency of caseworker visits with parents (during the period under review)	Foster Care Cases		In-Home Services Cases	
	Mother	Father	Mother	Father
At least once a week	0	0	0	0
Less than once a week but at least twice a month	2 (7%)	2 (8%)	1 (4%)	0
Less than twice a month but at least once a month	2 (7%)	4 (17%)	5 (20%)	3 (12.5%)
Less than once a month	20 (74%)	13 (54%)	16 (64%)	12 (50%)
Never	3 (11%)	5 (21%)	3 (12%)	9 (37.5%)
Total Applicable Cases	**27**	**24**	**25**	**24**

Rating Determination

Item 20 is assigned an overall rating of ANI. Reviewers determined that the frequency and quality of caseworker visits with parents were sufficient to monitor the safety and well-being of the child or promote attainment of case goals in only 20 percent of the applicable cases. This percentage is less than the 90 percent or higher required for a rating of Strength. This item also was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, OCS policy requires that the assigned caseworker must have face-to-face contact with both of the parents, or Native custodian, with an open case at least once a month. This contact must occur in the home in which the parent(s)/Indian custodian reside(s) at least once every other month and may occur in an alternate setting every other month. The Statewide Assessment also reports that if the required contact standards cannot be met, the caseworker must document the reasons why in the ORCA case file.

As indicated in the Statewide Assessment, QA reviews found that visits with parents are not occurring in accordance with OCS policy. The data presented in the Statewide Assessment show that in the QA case reviews, visits with parents were rated as a Strength in only 17 percent of Anchorage cases, 20 percent of Fairbanks cases, and 0 cases in Bethel, Juneau, and Mat-Su.

Stakeholder Interview Information
Stakeholders did not comment on this item during the onsite CFSR.

Well-Being Outcome 2

Outcome WB2: Children receive appropriate services to meet their educational needs					
Number of cases reviewed by the team according to degree of outcome achievement					
Outcome Achievement	**Anchorage**	**Bethel**	**Juneau**	**Total**	**Percent**
Substantially Achieved	19	5	11	35	**76.1**
Partially Achieved	1	0	0	1	**2.2**
Not Achieved	1	7	2	10	**21.7**
Total Applicable Cases	**21**	**12**	**13**	**46**	
Not Applicable Cases	10	5	4	19	
Total Cases	**31**	**17**	**17**	**65**	

Status of Well-Being Outcome 2

Alaska is not in substantial conformity with Well-Being Outcome 2, which includes only one item—item 21: Educational needs of the child. Reviewers determined that the outcome was substantially achieved in 76.1 percent of the applicable cases, which is less than the 95 percent or higher required for substantial conformity. The outcome was substantially achieved in 90 percent of applicable Anchorage cases, 42 percent of applicable Bethel cases, and 85 percent of applicable Juneau cases. The outcome was substantially

achieved in 78 percent (29 cases) of the 37 applicable foster care cases and 67 percent (6 cases) of the 9 applicable in-home services cases. Alaska also was not in substantial conformity with this outcome in its 2002 CFSR and was required to address the outcome in its PIP.

Key Concerns From the 2002 CFSR

A key concern of the 2002 CFSR was that children in the in-home services cases had education-related issues to which the agency was not responding. To address this concern, the State implemented the following strategies in its PIP.

- Court orders were amended to authorize OCS to gather educational information about children in out-of-home care.
- An interdepartmental work group was established to ensure enhanced relationships between the agency and school administrators at the local level.
- Training was provided regarding a new policy requiring workers to assess, address, and document the educational needs of children who remain in their homes.

The State met its PIP target goals for this outcome by the end of its PIP implementation period.

Key Findings of the 2008 CFSR

The findings of the 2008 CFSR with regard to this outcome are presented below.

Item 21. Educational needs of the child

____ Strength __X__ Area Needing Improvement

Case Review Findings
Item 21 was applicable for 46 (71 percent) of the 65 cases reviewed. Cases were not applicable if any of the following applied: (1) children were not of school age; or (2) children in in-home cases did not have service needs pertaining to education-related issues. In assessing this item, reviewers were to determine whether children's educational needs were appropriately assessed and whether concerted efforts were made to meet those needs. The results of this assessment are provided below.

Item 21 Ratings	Anchorage	Bethel	Juneau	Total	Percent
Strength	19	5	11	35	**76**
Area Needing Improvement	2	7	2	11	**24**
Total Applicable Cases	**21**	**12**	**13**	**46**	
Not applicable	10	5	4	19	
Total Cases	**31**	**17**	**17**	**65**	

Item 21 was rated as a Strength when reviewers determined that the child's educational needs were appropriately assessed and concerted efforts were made to provide services, if necessary. Item 21 was rated as an ANI in 11 cases when reviewers determined the following:

- No efforts were made to assess the child's educational needs (seven cases).
- Educational needs were assessed or identified but no services were provided (four cases).

Rating Determination

Item 21 is assigned an overall rating of ANI. Reviewers determined that the agency had made diligent efforts to meet the educational needs of children in 76 percent of the applicable cases. This percentage is less than the 95 percent or higher required for this item to be rated as a Strength. A 95-percent standard is set for this item because it is the only item assessed for the outcome.

Statewide Assessment Information

According to the Statewide Assessment, OCS policy requires that the case plan address the goal of child and family well-being, which includes the outcome that children in custody will have their educational needs met. As indicated in the Statewide Assessment, when a child enters custody, the caseworker is required to obtain education information from the parents including whether or not the child has been determined eligible for services by the special education or infant learning programs. The caseworker is expected to use this information in developing case plans and placement plans. The Statewide Assessment reports that for 2008, QA case review findings were that educational needs were met in approximately 92 percent of Anchorage cases, 100 percent of Bethel cases, 88 percent of Fairbanks cases, 82 percent of Juneau cases, and 100 percent of Mat-Su cases.

Stakeholder Interview Information

Some Anchorage stakeholders commenting on this item said that the school system is using the McKinney-Vento Act to identify foster care children as homeless so that they can transport them to their "home" school if they are placed away from their communities. However, a few of these stakeholders expressed the opinion that OCS caseworkers often do not know about this transportation program, and other stakeholders suggested that caseworkers may not be accessing the program because foster parents may want children to attend their local schools.

Some stakeholders expressed the opinion that OCS caseworkers are not knowledgeable about education-related concerns. Bethel and Juneau stakeholders suggested that the agency is involved in the education of youth in foster care, but that youth often are forced to change schools when they enter placements.

Well-Being Outcome 3

Outcome WB3: Children receive adequate services to meet their physical and mental health needs					
Number of cases reviewed by the team according to degree of outcome achievement					
Outcome Achievement	**Anchorage**	**Bethel**	**Juneau**	**Total**	**Percent**
Substantially Achieved	19	2	10	31	**52.5**
Partially Achieved	3	3	3	9	**15.3**
Not Achieved or Addressed	5	11	3	19	**32.2**
Total Applicable Cases	**27**	**16**	**16**	**59**	
Not Applicable	4	1	1	6	
Total Cases	**31**	**17**	**17**	**65**	

Status of Well-Being Outcome 3

Alaska is not in substantial conformity with Well-Being Outcome 3. The outcome was determined to be substantially achieved in 52.5 percent of the applicable cases, which is less than the 95 percent required for substantial conformity. The outcome was substantially achieved in 70 percent of applicable Anchorage cases, 12.5 percent of applicable Bethel cases, and 62.5 percent of applicable Juneau cases. The outcome was substantially achieved in 62.5 percent (25 cases) of the 40 foster care cases compared with 32 percent (6 cases) of the 19 applicable in-home services cases. Alaska also was not in substantial conformity with Well-Being Outcome 3 in its 2002 CFSR and was required to address the outcome in its PIP.

Key Concerns From the 2002 CFSR

In the 2002 CFSR, both relevant items were rated as an ANI. The key concerns identified in the 2002 CFSR were the following:

- Agency performance was inconsistent with regard to providing health screenings for children at entry into foster care and providing foster parents with children's health records.
- Agency performance was inconsistent with regard to assessing children's mental health needs and providing the necessary mental health services.

To address these concerns, Alaska implemented the following strategies as part of its PIP:

- Training was provided to caseworkers regarding completing the EPSDT screening of children within State guidelines and using the health-care provider's recommendations as a guide for all health treatment decisions.
- Physical and mental health issues were added as a topic of discussion in the administrative review process.
- Policy was established to ensure that all children in foster care received mental health evaluations.

The State met its target goals for this outcome by the end of its PIP implementation period.

Key Findings of the 2008 CFSR

The findings for the 2008 CFSR pertaining to the specific items assessed under Well-Being Outcome 3 are presented and discussed below.

Item 22. Physical health of the child

____ Strength __X _ Area Needing Improvement

Case Review Findings
Item 22 was applicable for 49 (75 percent) of the 65 cases reviewed. Cases that were not applicable were in-home services cases in which physical health concerns were not an issue. In assessing this item, reviewers were to determine whether (1) children's physical health needs (including dental needs) had been appropriately assessed, and (2) the services designed to meet those needs had been, or were being, provided. The findings of this assessment are presented in the table below:

Item 22 Ratings	Anchorage	Bethel	Juneau	Total	Percent
Strength	20	5	10	35	**71**
Area Needing Improvement	4	8	2	14	**29**
Total Applicable Cases	**24**	**13**	**12**	**49**	
Not Applicable Cases	7	4	5	16	
Total Cases	**31**	**17**	**17**	**65**	

Item 22 was rated as a Strength in 83 percent of applicable Anchorage cases, 38 percent of applicable Bethel cases, and 83 percent of applicable Juneau cases. The item was rated as a Strength in 80 percent (32 cases) of the 40 foster care cases and 33 percent (3 cases) of the 9 applicable in-home services cases.

Item 22 was rated as a Strength when reviewers determined that children's health needs (medical and dental) were routinely assessed and services provided as needed. The item was rated as an ANI when reviewers determined one or more of the following:

- Physical health needs were not assessed or addressed (eight cases).
- Dental health needs were not assessed or addressed (eight cases).
- Physical health needs were assessed but identified needs were not addressed (four cases).

Rating Determination

Item 22 was assigned an overall rating of ANI. In 71 percent of the applicable cases, reviewers determined that the agency adequately addressed the health needs of children in both the foster care and in-home services cases. This percentage is less than the 90 percent or higher required for a rating of Strength. This item also was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment Information

According to the Statewide Assessment, the State QA case review findings for 2008 indicate that meeting the physical health needs of children was a Strength in 73 percent of the Anchorage, Bethel, and Fairbanks cases and 100 percent of the Juneau and Mat-Su cases.

Stakeholder Interview Information

Some stakeholders in Anchorage expressed concern about the need for children in foster care to have parental consent for any medical procedure unless there has been a TPR for both parents. This problem was noted to be critical in emergency situations. Stakeholders also indicated that there are other barriers with regard to children to receiving medical care. These barriers include a lack of dentists who will accept Medicaid, the fact that the agency does not supply either foster parents or children with a list of doctors who accept Medicaid, and the need to have proof of Native Alaskan blood to receive services from Alaska Native Health Care.

Item 23. Mental health of the child

____ Strength __X_ Area Needing Improvement

Case Review Findings

Item 23 was applicable for 44 (68 percent) of the 65 cases reviewed. Cases were not applicable if the child was too young for an assessment of mental health needs, or if there were no mental health concerns. In assessing this item, reviewers were to determine whether (1) mental health needs had been appropriately assessed and (2) appropriate services to address those needs had been offered or provided. The findings of this assessment are presented in the table below.

Item 23 Ratings	Anchorage	Bethel	Juneau	Total	Percent
Strength	15	2	7	24	**55**
Area Needing Improvement	5	10	5	20	**45**
Total Applicable Cases	**20**	**12**	**12**	**44**	
Not Applicable Cases	11	5	5	21	
Total Cases	**31**	**17**	**17**	**65**	

Item 23 was rated as a Strength in 75 percent of the applicable Anchorage cases, 17 percent of applicable Bethel cases, and 58 percent of applicable Juneau cases. The item was rated as a Strength in 62 percent (18 cases) of the 29 applicable foster care cases and 40 percent (6 cases) of the 15 applicable in-home services cases.

Item 23 was rated as a Strength when reviewers determined that children's mental health needs were appropriately assessed and the identified mental health needs were addressed. Item 23 was rated as an ANI in 20 cases when reviewers determined the following:

- Mental health needs were not assessed nor addressed (15 cases, 7 foster care, and 8 in-home services cases).
- Mental health needs were assessed but services were not provided to address identified needs (four cases, all foster care cases).
- Mental health needs were assessed for some of the children in the family and services provided, but there was no assessment or service provision for the other children in the family (one in-home services case)

Ratings Determination

Item 23 is assigned an overall rating of ANI. Reviewers determined that the agency had made concerted efforts to address the mental health needs of children in 55 percent of the cases reviewed, which is less than the 90 percent or higher required for a rating of Strength. This item also was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment Information

According to the Statewide Assessment, the State QA case review for 2008 found that children's mental health needs were adequately assessed and addressed in approximately 68 percent of Anchorage cases, 38 percent of Bethel cases, 75 percent of Fairbanks cases, 80 percent of Juneau cases, and 50 percent of Mat-Su cases.

Stakeholder Interview Information

A few Anchorage stakeholders expressed the opinion that youth in foster care sometimes are medicated when they do not need to be and are placed in residential treatment when they do not need to be there. Some Juneau stakeholders indicated that in that location there are a limited number of mental health service providers, which results in waiting lists for mental health services. They also noted that some providers there are not of the highest quality.

SECTION B: SYSTEMIC FACTORS

This section of the CFSR Final Report provides information on Alaska's substantial conformity with the seven systemic factors examined during the CFSR. Information on the items included under each systemic factor comes from the Statewide Assessment and from interviews with stakeholders conducted during the onsite CFSR. It should be noted that ratings for the systemic factors are not based on single comments from an individual stakeholder; however, these comments are included in the report when they provide important insights or clarification regarding the State's performance on a particular systemic factor.

The scoring categories for the systemic factors are "Not in Substantial Conformity" or "In Substantial Conformity." The assessment for substantial conformity pertains to the requirements of the Child and Family Services Plan (CFSP) that States are required to submit to CB. Numerical scores of 3 and 4 represent substantial conformity. Scores of 1 or 2 mean that a State is not in substantial conformity with the requirements of the systemic factor. If a State is not in substantial conformity with a specific systemic factor, then that factor must be addressed in the State's PIP. Specific information regarding the scoring of systemic factors is provided in the table below.

Rating the Systemic Factor			
Not in Substantial Conformity		**In Substantial Conformity**	
1	2	3	4
None of the CFSP or program requirements are in place.	Some or all of the CFSP or program requirements are in place, but more than one of the requirements fail to function as described in each requirement.	All of the CFSP or program requirements are in place, and no more than one of the requirements fails to function as described in each requirement.	All of the CFSP or program requirements are in place and functioning as described in each requirement.

Information is provided in this section regarding the State's performance on each systemic factor and on each of the items incorporated in a systemic factor. Information also is provided about the State's performance on each systemic factor during the State's 2002 CFSR. If the systemic factor was part of the State's PIP, the key concerns addressed in the PIP and the strategies for assessing those concerns are presented.

I. STATEWIDE INFORMATION SYSTEM

Rating of Review Team Regarding Substantial Conformity				
	Not in Substantial Conformity		Substantial Conformity	
Rating	1	2	3X	4

Status of Statewide Information System

Alaska is in substantial conformity with the systemic factor of Statewide Information System. The State was in substantial conformity with this systemic factor during its 2002 CFSR and, therefore, was not required to address the factor in its PIP. Findings of the 2008 CFSR are presented below.

Item 24. The State is operating a statewide information system that, at a minimum, can readily identify the status, demographic characteristics, location, and goals for the placement of every child who is (or within the immediately preceding 12 months, has been) in foster care

___X___ Strength _____Area Needing Improvement

Item 24 is rated as a Strength because the State is operating a Statewide Information System called ORCA from which staff can readily identify the legal status, demographic characteristics, location, and goals for each child in foster care. Stakeholders expressed the opinion that information in ORCA with regard to these data elements is current and reliable. This item was rated as a Strength in the State's 2002 CFSR.

Statewide Assessment Information

According to the Statewide Assessment, ORCA is used to track the location of every child in foster care and maintains information regarding each child's legal and placement status (including pre-adoptive placements, type of custody, and trial home visits); permanency goals (if the child is in out-of-home care); and characteristics such as age, gender, ethnicity, and Tribal affiliation. The Statewide Assessment reports that in the majority of cases, information regarding placement information and child characteristics is entered in a timely manner, although there may be a few cases in rural areas where there is a delay in data entry due to connectivity and bandwidth issues. The Statewide Assessment also reports that ORCA supports intake, investigation, case management, adoption, and provider management. ORCA also is the system of record for eligibility determination, payment processing, and personnel functions.

The Statewide Assessment notes that ORCA is a relatively new data system for Alaska. In January 2008, using ORCA, Alaska was able to produce data sufficient for the CB to generate a State Data Profile in preparation for the September 2008 CFSR.

Stakeholder Interview Information
Most stakeholders commenting on this item during the onsite CFSR expressed the opinion that the State's management information system (ORCA) can identify the location of children in foster care, their demographic characteristics, and their case goals. Stakeholders in all sites also indicated that managers and supervisors have access to a variety of managerial reports and that, despite several problems with the system, ORCA is an improvement over the previous legacy system. However, there were some differences of opinion regarding how up-to-date the location information is at any given point in time. While some stakeholders indicated that ORCA information is current, others suggested that the currency of the information varies by caseworker. Several stakeholders also suggested that ORCA is not user-friendly and Bethel stakeholders noted that in some of the more rural locations in the State, there are connectivity problems that often frustrate caseworkers and contribute to delays in data entry.

Some stakeholders suggested that there is variation across caseworkers with regard to entering data into ORCA correctly and in a timely manner and that this may be attributed to the lack of access to consistent ongoing training on ORCA, particularly for caseworkers who are not in the Anchorage area. Juneau stakeholders, for example, expressed concern that sometimes the information that caseworkers enter is not showing up in ORCA because the caseworkers did not enter it correctly, but the system does not alert them to the data entry error. However, it was noted that this problem does not pertain to basic information regarding the children's demographic characteristics, case plan, or location.

II. CASE REVIEW SYSTEM

Rating of Review Team Regarding Substantial Conformity				
	Not in Substantial Conformity		Substantial Conformity	
Rating	1	2X	3	4

Status of Case Review System

Alaska is not in substantial conformity with the systemic factor of Case Review System. Alaska was not in substantial conformity with this factor during its 2002 CFSR and was required to address the factor in its PIP.

Key Concerns From the 2002 CFSR

In the 2002 review, items 25 (case planning process), 27 (permanency hearings), and 29 (notice to foster parents and other caregivers) were rated as ANIs. The following key concerns were identified:

- There was lack of goal-oriented case plans (item 25).
- The system did not consistently involve parents and children (when appropriate) in case planning (item 25).
- Permanency hearings were not consistently held in a timely manner (item 27).
- Foster parents and other caregivers were not consistently notified regarding permanency hearings nor were they provided with an opportunity to be heard at the hearings (item 29).

The following key strategies were implemented in Alaska's PIP to address these concerns:

- The State developed and implemented policy and procedure changes to strengthen and enhance the use of case plans, to ensure that case plans are developed in conjunction with parents and children (when appropriate), and to incorporate case planning for in-home services cases.
- The State implemented, in collaboration with the Court Improvement Project (CIP), a court data system called Court View to enable the court to track court hearings. (This system currently is in operation in only a few jurisdictions.)
- In conjunction with the Attorney General's office, developed a new protocol for notification of foster parents of court hearings. In 2005, Alaska statutes were changed to require that notification of all court hearings in a child's case be provided to the child, each parent, the Tribe, foster parent, or other out-of-home care provider, guardian, and guardian *ad litem*. In some circumstances, written notice of all court hearings in a child's case must be provided to a grandparent of the child.

Alaska met its target goals for this systemic factor by the end of the PIP implementation period.

Key Findings of the 2008 CFSR

The specific findings of the 2008 CFSR are presented below.

Item 25. The State provides a process that ensures that each child has a written case plan to be developed jointly with the child's parent(s) that includes the required provisions

____ Strength __X___ Area Needing Improvement

Item 25 is rated as an ANI because, as noted in the Statewide Assessment, a statewide survey of parents found that although parents are familiar with their case plans, their input is not consistently sought in developing the plans. The Statewide Assessment also notes that stakeholders expressed similar concerns about the case planning process and said that caseworker training does not focus adequately on involving parents in developing the case plan. In addition, in the CFSR onsite case reviews, item 18, which assesses the involvement of parents and children in case planning, was rated as a Strength in only 37 percent of the cases. Item 25 also was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment Information

According to the Statewide Assessment, although OCS has enhanced policy and procedure to improve case planning, the concerns outlined in the previous CFSR continue to exist. The Statewide Assessment reports that in a consumer survey conducted by OCS, parents indicated that they are familiar with their case plan and that they receive copies of their plan, but that their input is not sought in developing the case plan. The Statewide Assessment also reports that stakeholders expressed similar concerns about the case planning process and said that caseworker training does not focus adequately on involving parents in developing the case plan.

The Statewide Assessment identifies the following as potential reasons why parents and children are not being involved in case planning:

- OCS does not have a structured process for working with parents, youth, or children in the development of the family's case plan.
- Caseworkers do not always understand the importance of case planning with regard to reunifying children with their parents in a timely manner.
- New caseworkers lack training on the purpose, value, development, and maintenance of well-defined, measurable case plans that parents can understand and follow.

The Statewide Assessment reports that the agency QA team looks comprehensively at case plans and how they are developed and has found that performance is inconsistent across the State. The QA findings for FY 2007 indicate that case planning met Federal guidelines in 50 percent of Anchorage cases, slightly more than 80 percent of Fairbanks case, fewer than 30 percent of Juneau cases, and about 58 percent of Mat-Su cases.

Stakeholder Interview Information
Stakeholders in the three sites included in the CFSR expressed a wide range of opinions regarding both the timeliness of the written case plan, the quality of the case plan, and the involvement of parents and children (when appropriate) in case planning. However, there was general agreement among stakeholders that the ORCA case plan is difficult to understand and not family-friendly. Some stakeholders indicated that ORCA-generated case plans are not considered useful in the court process because of their complexity and volume. Several stakeholders made strongly negative comments about the ORCA case plan, such as "Everybody hates it." A few Bethel and Juneau stakeholders expressed concern that the initial case plan is not routinely or consistently updated. The lack of updated case plans was attributed to the caseload burden of caseworkers, turnover in the caseworker positions, and the difficulty of updating case plans in ORCA. Stakeholders also noted that the quality of case plans varies considerably across caseworkers.

Stakeholders expressed different opinions about the involvement of parents in case planning. Most stakeholders suggested that the involvement of parents in case planning varies depending on the skill level of the caseworker. A few Bethel stakeholders suggested that parent involvement is particularly problematic in ICWA cases. However, a few stakeholders indicated that there is a process for involving parents when the caseworker meets with the family initially and conducts a social history interview, followed by a case planning conference. These stakeholders noted that there is ample opportunity for parent input into the case plan during the case planning conference.

Several stakeholders reported that Tribal caseworkers rarely are involved in case planning and often do not see the case plan until just before the 6-month review. These stakeholders suggested that OCS caseworkers often do not respond to Tribal efforts to be involved in case planning.

Item 26. The State provides a process for the periodic review of the status of each child no less frequently than once every 6 months either by a court or by administrative review

___X__ Strength ____Area Needing Improvement

Item 26 is rated as a Strength. Although data are not available for this item, there was general agreement among stakeholders interviewed during the onsite CFSR that the State is conducting timely and meaningful 6-month administrative reviews for all children in foster care. This item was rated as a Strength in the State's 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, OCS policy requires that a Child and Family Conference, which is an administrative review process, must be held every 6 months for all children in custody. The Statewide Assessment notes that reviews always are held before an established panel no later than 6 months from the date of the most recent removal from the home and/or no later than 6 months from the

date of the last administrative review. It is written in policy that administrative reviews must continue every 6 months until the child returns home, or until the child is in a finalized guardianship or adoption.

The Statewide Assessment reports that stakeholders interviewed during the development of the Statewide Assessment expressed the opinion that most case reviews, but particularly the 6-month administrative reviews, are occurring consistently, and that many case participants, including the public defenders and guardians *ad litem*, are regularly invited.

As indicated in the Statewide Assessment, youth surveyed during the Statewide Assessment process reported that often they were not given sufficient notification of the administrative reviews and that reviews were scheduled at times when they (the youth) were not able to attend. The Statewide Assessment reports that recently regions have been making efforts to schedule an administrative review at the end of the school day when the review involves a youth. Although youth agreed that they are encouraged to attend reviews, they said that they do not always understand the process nor do they think their opinions or concerns are acknowledged.

Stakeholder Interview Information
Almost all stakeholders commenting on this item during the onsite CFSR expressed the opinion that administrative case reviews are held at least every 6 months and that the reviews are effective in moving a case toward permanency. They noted that policy requires that the first review be held after 3 months in foster care and then every 6 months after that.

Stakeholders also reported that there have been improvements in the number of people attending the reviews and that the reviews currently are very detailed and comprehensive. A few Anchorage stakeholders expressed concern about a new agency policy to reduce the time for the reviews from 1 hour to 45 minutes. Stakeholders indicated that 45 minutes was not sufficient to cover the issues necessary to ensure that the reviews are meaningful.

Some stakeholders also expressed concern that although the reviews result in recommendations regarding case plan changes, these changes do not consistently happen and there is no accountability to ensure that they occur.

Item 27. The State provides a process that ensures that each child in foster care under the supervision of the State has a permanency hearing in a qualified court or administrative body no later than 12 months from the date the child entered foster care and no less frequently than every 12 months thereafter

__X__ Strength _____Area Needing Improvement

Item 27 is rated as a Strength. Although the Statewide Assessment did not provide data with regard to the timeliness of permanency hearings or whether the hearings are substantive, most stakeholders reported that the hearings are held in a timely manner and that they focus on achieving permanency for children. Item 27 was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, permanency hearings are occurring for every child and youth who has been in foster care for 12 months. The Statewide Assessment reports that the Alaska Court System analyzed the timeliness of permanency hearings in the Anchorage, Fairbanks, and Palmer courts during 2006 and found that, for all three communities, the average number of days from probable cause to permanency hearing "did not support a concern that permanency hearings are untimely." The Statewide Assessment also reports, however, that in approximately 16 to 31 percent of the cases, findings were not made in a timely manner due to continuances.

As reported in the Statewide Assessment, input from judges indicated that for permanency hearings they will most often grant continuances for reasons related to the parties' due process rights—e.g., because a required report was late or missing, or because a party could not attend the hearing. The Statewide Assessment reports that an investigation found a correlation between late reports and continued hearings. Specifically, in the two court locations with the longest time between probable cause and the permanency hearing, approximately 36 percent of reports were filed late. In the court with the shortest time between probable cause and the permanency hearing, only 23 percent of reports were late.

The Statewide Assessment indicates that, in an effort to improve timely submission of reports needed for the permanency hearing, OCS issued a Program Instruction in Spring 2008 that mandated the timeframe for submitting permanency reports to the court. The Department of Law reported in May 2008 that timely submissions of permanency reports are occurring in Anchorage, Southeast, and Northern regions, but that challenges for filing timely permanency reports continue in the Southcentral region and could be due to the diverse geographical location of the region, staff turnover, and the number of vacancies in the child welfare agency.

Stakeholder Interview Information
Most stakeholders commenting on this item during the onsite CFSR expressed the opinion that Permanency Hearings are held at least every 12 months for every child in foster care. Stakeholders noted that the date for each subsequent hearing is set at the current hearing so that the date is entered early on court dockets. Stakeholders reported that often the permanency hearing dates are scheduled for 10 months to allow for unforeseen circumstances that may delay the hearing. Stakeholders said that continuances are possible, but that they do not occur often. Several stakeholders acknowledged that continuances have been more of a problem in the past and when they occur now, they are most frequently due to late reports from the caseworkers. This was attributed to the excessive caseloads carried by the caseworkers.

Most stakeholders also indicated that permanency hearings are substantive and are effective in moving the case forward. However, a few stakeholders expressed concern about the lack of judicial support in some courts for the agency establishing concurrent goals. In addition, some Bethel stakeholders questioned the efficacy of the permanency hearings.

Item 28. The State provides a process for termination of parental rights proceedings in accordance with the provisions of the Adoption and Safe Families Act

_____Strength __X__ Area Needing Improvement

Item 28 is rated as an ANI. As noted in the Statewide Assessment, OCS does not track the percentage of cases in which TPR petitions are filed on time and, consequently, no data are available to support timely filing. In addition, most stakeholders interviewed during the onsite CFSR expressed the opinion that TPR petitions are not filed in a timely manner. Finally, the data from the CFSR onsite case review indicate that ASFA requirements regarding petitioning for TPR were met in only 72 percent of the applicable cases. This item was rated as a Strength in the State's 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, Alaska has a process for filing TPR petitions in accordance with ASFA. The Statewide Assessment reports that ". . . it is the view of the practitioners that, generally, petitions for TPR are filed in a timely manner unless compelling reasons exist." No data were provided to support this statement. The Statewide Assessment also reports that OCS does not track the percentage of cases for which petitions are filed in a timely manner or whether compelling reasons are documented when a petition is not filed.

Stakeholder Interview Information
Most stakeholders commenting on this item during the onsite CFSR said that OCS has established a process for filing a TPR petition within the timeframes required by the ASFA and a process for documenting compelling reasons if the decision is made not to petition for TPR. Although a few stakeholders expressed the opinion that OCS usually files for TPR in a timely manner, most stakeholders expressed the opinion that sometimes caseworkers are not implementing the OCS procedural requirements pertaining to filing TPR petitions in accordance with ASFA timeframes or documenting compelling reasons when a TPR petition is not filed.

Some stakeholders noted that often a case goal is changed to adoption but no TPR petition is filed. Several Anchorage stakeholders attributed this to the requirement in that location that caseworkers instead of the agency attorneys must complete the TPR petition, which is a time-consuming and difficult process, particularly given their caseload demands and the frequent turnover among caseworkers.

Stakeholders also noted that in some cases, the child will have been in foster care for 15 of the most recent 22 months, but the caseworker and supervisor do not want to change a goal to adoption and want to continue to work with parents toward reunification. Stakeholders noted that this situation is most likely to occur when there is a new caseworker or supervisor assigned to the case who wants to "start over" with the family.

With regard to documentation of compelling reasons, many stakeholders said that the issue of compelling reasons is frequently discussed in the permanency conference held at 9 months, as well as during the permanency review. However, several stakeholders questioned whether compelling reasons are being documented in the case file or in ORCA. They suggested that in some situations compelling reasons may be presented at the court hearing but not documented in ORCA

One concern identified by stakeholders is that there is no automated system in place to alert caseworkers when a case is due for a TPR filing and the "month count" usually has to be done by the caseworker or supervisor. Stakeholders also expressed concern that there are no statewide data to track TPR filings or outcomes.

Item 29. The State provides a process for foster parents, pre-adoptive parents, and relative caregivers of children in foster care to be notified of, and have an opportunity to be heard in, any review or hearing held with respect to the child

_____ Strength _X___ Area Needing Improvement

This item is rated as an ANI. According to the Statewide Assessment and stakeholders interviewed during the onsite CFSR, although OCS caseworkers are responsible for notifying caregivers, notification is not occurring consistently across the State. This item also was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment Information

According to the Statewide Assessment, OCS policy and Alaska State statutes outline notification procedures for all parties for court hearings and case conferences for each child in out-of-home care. When there is a court hearing, the Attorney General's Office is responsible for notifying the legal parties to the case, and OCS caseworkers are responsible for notifying the foster parents and relative caregivers. When there is an administrative review or permanency planning conference, all notifications are sent out by OCS staff 30 days prior to the administrative review or permanency planning conference. The Statewide Assessment reports that although the notifications to the legal parties of the case are made consistently by the Attorney General's (AG) Office, the notifications that the OCS caseworkers are responsible for (foster parents, grandparents, and other relative caregivers) are not occurring consistently. The Statewide Assessment also reports that data are not available to document how well OCS is complying with notification to foster parents, grandparents, and other relative caregivers.

Stakeholder Interview Information

All stakeholders who commented on this item during the onsite CFSR expressed the opinion that foster parents are notified of administrative reviews and that they are given ample opportunity to be heard during those reviews. However, stakeholders expressed different opinions regarding notification and participation of foster parents in court hearings. Most Anchorage stakeholders indicated that foster parents are not routinely notified of court hearings in that location. They suggested that this may be due to the confusion regarding the responsibility for notification. That is, according to stakeholders, the agency believes it is the AG's responsibility to notify foster parents and other caregivers of court reviews, but the AG's Office believes it is the responsibility of the OCS caseworker to make the notification. In contrast, stakeholders in Bethel and Juneau indicated that foster parents are routinely notified about court hearings and are given opportunities to be heard when they attend.

III. QUALITY ASSURANCE SYSTEM

Rating of Review Team Regarding Substantial Conformity				
	Not in Substantial Conformity		Substantial Conformity	
Rating	1	2X	3	4

Status of Quality Assurance System

Alaska is not in substantial conformity with the systemic factor of QA System. Alaska was not in substantial conformity with this systemic factor in its 2002 CFSR and was required to address the factor in its PIP.

Key Concerns From the 2002 CFSR

In the 2002 CFSR, although item 30 was rated as a Strength, item 31 was rated as an ANI. The key concern identified in the 2002 CFSR was that Alaska did not have a statewide QA process and had no formal process for clients or stakeholders to evaluate agency performance.

To address this concern through its PIP, the State developed and implemented a comprehensive QA system that incorporates both case reviews and interviews with case-related stakeholders. In addition, the PIP focused on ongoing improvement of supervisory case reviews and administrative reviews.

Alaska met its target goals for this systemic factor by the end of its PIP implementation period.

Key Findings of the 2008 CFSR

The findings of the 2008 CFSR with regard to the items assessed for this systemic factor are presented below.

Item 30. The State has developed and implemented standards to ensure that children in foster care are provided quality services that protect the safety and health of the children

_____Strength ___X__ Area Needing Improvement

Item 30 is rated as an ANI. Although the State has developed standards to ensure quality services that protect the safety and health of children, many of the standards are not being implemented on a consistent basis and, at the time of the onsite CFSR, many were not fully operational. This item was rated as a Strength in the 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, OCS has revised policy and procedures to ensure that children in foster care receive quality services to protect their safety and health. It was noted that OCS policy is readily available online and easy to access for caseworkers and stakeholders. Each caseworker also has a hardcopy binder that is updated as new or revised policies are issued. The Statewide Assessment reports that OCS has made concerted efforts to ensure that policies are written in a manner that is clear and easily understood by all staff. The Statewide Assessment also reports that OCS managers and caseworkers have indicated that the newly written sections of the policy are easier to follow and provide better guidance to workers.

Stakeholder Interview Information
Most stakeholders commenting on this item during the onsite CFSR expressed the opinion that some of the standards that have been established by OCS are not being implemented. Stakeholders noted, for example, that although OCS has established a safety-related standard requiring caseworkers to have once-a-month contact with each foster child in the home, this requirement is not being met. Anchorage stakeholders expressed concern about the ability of the agency to meet safety standards pertaining to timeliness of investigations because of the considerable backlog of child maltreatment allegations requiring investigation. Stakeholders also indicated that the safety model is not fully implemented. Stakeholders in Juneau noted that while the safety model process is being used at the beginning of a case, it is not being used throughout the life of the case.

Item 31. The State is operating an identifiable quality assurance system that is in place in the jurisdictions where the services included in the Child and Family Services Plan are provided, evaluates the quality of services, identifies strengths and needs of the service delivery system, provides relevant reports, and evaluates program improvement measures implemented

____Strength _X__ Area Needing Improvement

Item 31 is rated as an ANI. Although the State has a QA system in place, the QA system does not incorporate a process for evaluating program improvement measures that are implemented. For example, there is no process for following up on QA findings with the field offices to determine whether program improvements have been implemented in response to findings and/or the effectiveness of program improvement efforts. This item also was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment Information

According to the Statewide Assessment, over the past 5 years, the State has developed a QA system that provides for ongoing consistent measurement of the quality of practice, incorporates stakeholder input, and includes a system of data dissemination to the agency staff and public. The Statewide Assessment reports that the current QA system is able to evaluate practice and generate outcome information that is disseminated to caseworkers and supervisory staff as well as managers. The system also has a feedback loop that provides the field offices with an opportunity to respond and make changes in practice to improve outcomes. As indicated in the Statewide Assessment, the findings from all QA activities are compiled into reports for use by field staff and managers. These data are used to examine programs and practice and make changes to improve outcomes.

The Statewide Assessment describes the QA system as including a review of a random sample of approximately 250 cases per year and interviews with case-related stakeholders. In addition, the QA system conducts various surveys to gain additional information from families served by the system and from Tribal and community partners. The Statewide Assessment reports that the QA unit conducts approximately 10 surveys per review year either by mail, telephone, or electronically and that survey findings and focus group information are compiled into reports that are provided to managers, supervisors, staff, and the public. The reports are available online at the OCS website.

The Statewide Assessment reports that a continuing challenge in Alaska with regard to ongoing QA is the size of the State, the number of field offices (26), and the ability of the QA program to adequately serve each office. As noted in the Statewide Assessment, approximately 20 field offices are reviewed per year, with other field offices rotated for review on alternate years. The Anchorage Field Office is reviewed at least twice yearly because approximately 41 percent of the State's caseload is in that field office. Twelve cases are reviewed in each field office; half are in-home and half are out-of-home cases. The Statewide Assessment notes that there are difficulties in some field offices in identifying a sufficient number of in-home cases to fit the ratio of in-home to out-of-home cases.

The Statewide Assessment also notes that, in addition to the activities of the QA team, each region has a Continuous Quality Improvement Committee composed of representatives from the community. The committees meet on a regular basis and review information and data from the QA case reviews, information gained from stakeholder surveys, and other data reports through the SACWIS system. As indicated in the Statewide Assessment, the committees assist regional management in planning and in responding to agency issues and provide a community perspective that can directly affect practice.

Stakeholder Interview Information

Stakeholders commenting on this item during the onsite CFSR indicated that there is a statewide QA system in place that is very similar to the CFSR case review process and uses the CFSR Onsite Review instrument (with some additional questions specific to Alaska). Several stakeholders noted that input from community stakeholders is obtained through surveys of foster parents, providers, and other relevant groups. However, a key concern expressed by stakeholders at the State level and in all three sites was that although OCS shares information with local offices about the QA review findings, the State does not have a formal program improvement process or requirement of the field offices to address identified concerns. In addition, OCS has no process in place to monitor whether changes are being made. Stakeholders in one site, for example, noted that the local child welfare office will hold discussions about the QA findings and possible improvement efforts, but there is no State requirement to report on these discussions or to implement program improvement efforts. Some stakeholders suggested that the lack of accountability results in little change actually being made.

State-level stakeholders indicated that there is a need to formalize the feedback loop to ensure that caseworkers, supervisors, and managers are getting the information that they need. Some stakeholders suggested that it would be useful if caseworkers had a better understanding of the QA process, although they noted that the high level of turnover makes this difficult.

Local level stakeholders also identified other forms of QA including a manager's retreat held once per quarter, a self-evaluation workgroup started in Anchorage through the Family-to-Family initiative, individual unit meetings to review cases, and weekly office staff meetings. Stakeholders also said that ORCA reports are used to monitor and evaluate the performance of caseworkers and to identify areas of concern.

IV. TRAINING

Rating of Review Team Regarding Substantial Conformity				
	Not in Substantial Conformity		Substantial Conformity	
Rating	1	2X	3	4

Status of Training

Alaska is not in substantial conformity with the systemic factor of Training. Alaska was in substantial conformity with this systemic factor in its 2002 CFSR and therefore was not required to address the factor in its PIP. The findings for the 2008 CFSR with regard to the specific items assessed for this factor are presented below.

Item 32. The State is operating a staff development and training program that supports the goals and objectives in the CFSP, addresses services provided under titles IV-B and IV-E, and provides initial training for all staff who deliver these services

_____Strength __X____ Area Needing Improvement

Item 32 is rated as an ANI because the initial training that is provided to staff is not sufficient to prepare them to carry out their responsibilities. This item was rated as a Strength in the State's 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, OCS partners with the University of Alaska Anchorage, Family and Youth Services Training Academy (FYSTA) to provide the Training and Orientation of New Employees (TONE) program. TONE is the initial orientation and training offered to all new line staff and licensing workers. It is a 10-day training that must be completed before a caseload is assigned to a new employee. The Statewide Assessment reports that even after a new employee is assigned a caseload, training continues throughout the first 12 months of employment for a total of 20.5 days.

The Statewide Assessment also notes that in response to concerns about the adequacy of cultural training, the TONE curriculum was revised in 2006 to improve the cross-cultural training component and issues in child protection. In addition, as indicated in the Statewide Assessment, Tribal-State collaboration members, in partnership with FYSTA, are revising the ICWA curriculum to better serve workers.

The Statewide Assessment reports that the Anchorage region has recently implemented a 2-week New Employee Orientation for Anchorage regional employees, which immediately follows each TONE training. This additional training is a part of the initial training that focuses on specific programs in the Anchorage region such as Family-to-Family. The training is provided to support administrative staff as well as front-line caseworkers.

As indicated in the Statewide Assessment, at the completion of each course, FYSTA conducts an evaluation of the training. FYSTA also conducted a survey about the training in January 2008. The Statewide Assessment reports that over 90 percent of trainees saw the

training as useful (the child abuse and neglect training was the most well-received by staff, while the court/legal training was rated lower). However, the Statewide Assessment also reports the following survey or evaluation findings with regard to TONE:

- Almost all respondents wanted to see additional trainings in the following topics: interviewing/information gathering; family assessment; ICWA; legal issues; and cultural awareness beyond Alaska Native cultures.
- After 6 months of employment, the majority of training attendees reported that TONE was useful but was not sufficient to cover all aspects of CPS work.
- Survey respondents consistently mentioned wanting more support in making the transition from the classroom or theory aspect of training to the field. This included the opportunity to shadow workers in a variety of OCS positions and to have mentors who assist new employees.

The Statewide Assessment reports that although licensing workers are required to complete the TONE training as their initial training, the initial training for licensing workers currently does not provide a focus on the statutory and regulatory processes for licensing foster homes, foster group homes, and child placement agencies. Instead, training on the statutory and regulatory requirements for licensing has been provided annually through the State of Alaska Department of Law to all licensing staff. Licensing staff do not routinely receive training in the licensing process before being assigned a caseload.

Stakeholder Interview Information

Most stakeholders commenting on this item during the onsite CFSR expressed the opinion that caseworkers generally complete the initial 10-day TONE training before being assigned a caseload. However, most stakeholders also expressed the opinion that the current (at the time of the onsite CFSR) initial training (TONE) does not adequately prepare caseworkers for their jobs and that the entire initial training program is under revision, with the new version to be piloted in January 2009. Anchorage stakeholders indicated that an additional 2-week training program is provided to new caseworkers in the Anchorage office because the State training is not sufficient. Anchorage stakeholders reported that new caseworkers in that office must complete the additional 2-week training before they are assigned a caseload.

The following are some key concerns noted by various stakeholders with regard to the existing TONE initial training:

- There is a "disconnect" between what is offered in training and what is actually going on in the field. As a result, current workers and supervisors must fill in the gaps through on-the-job training, but there is no formalized system for them to do that. Stakeholders noted that existing caseworkers become overwhelmed when they are given the responsibility of training new caseworkers but are not paid for that task or given the time to do it correctly.
- The current training that must be completed before assuming a caseload tends to emphasize investigations and safety, so caseworkers who are not going to be investigators are not prepared for their jobs after the initial 10-day training. This was seen as particularly problematic because not all new caseworkers have social work backgrounds or degrees in that field.

- Although there is a post-training test, there is no evaluation of how caseworkers are doing in the field after training. Stakeholders noted that most caseworkers feel they have not received adequate training.
- ORCA training is not provided in the initial training and sometimes is not accessible until 4 to 12 weeks after employment. This means that new caseworkers are working on cases without training on how to manage the case through ORCA. Stakeholders noted that it is an addition burden for supervisors or other caseworkers to have to train new caseworkers on how to use ORCA. Although web-based training is available, most stakeholders said that it is just an introductory training, and most caseworkers do not access it.
- Although improvements have been made in focusing the training on cultural competency, that component of the training is still not adequate to prepare caseworkers for working with Native Alaskan families.

Stakeholders' recommendations regarding initial training included the following:
- New caseworkers should shadow experienced caseworkers before they attend TONE training.
- Supervisors should go out in the field with new caseworkers to see how they are interacting with clients.

Item 33. The State provides for ongoing training for staff that addresses the skills and knowledge base needed to carry out their duties with regard to the services included in the CFSP

_____Strength __X__ Area Needing Improvement

Item 33 is rated as an ANI. The State does not require caseworkers or supervisors to receive ongoing training as part of their job requirements. In addition, the training opportunities that are available for caseworkers and supervisors are limited, particularly outside of Anchorage. As noted in the Statewide Assessment, agency staff often cannot access training either because of workload responsibilities or lack of transportation. This item was rated as a Strength in the State's 2002 CFSR.

Statewide Assessment
According to the Statewide Assessment, although on-going training opportunities are available to all OCS caseworkers and licensing staff, on-going training varies from region to region and is based on availability of funds. Stakeholders and OCS agree that caseload demands and high staff turnover impact the time workers have to attend trainings. The Statewide Assessment identifies the following as additional factors that affect the ability of the State to deliver ongoing training on a consistent basis.
- There are constraints on the training budget that limit the provision of ongoing training to all caseworkers throughout the State. Often, field offices outside of Anchorage must make choices to send new caseworkers to the initial training instead of existing caseworkers to on-going training due to these budget constraints.
- Training is not readily accessible to all caseworkers statewide. Scheduled trainings in OCS service regions outside of Anchorage occur when FYSTA sends staff to other locations to provide trainings. However, if trainings do not have enough trainee

participants, they are cancelled. This scarcity of training opportunities makes it difficult for caseworkers to receive the required ongoing training hours.

- Staff turnover and burnout limits the opportunities for expanded training options for tenured employees, as much of the training time is spent on the provision of initial trainings.
- The lack of caseworker availability to attend training limits the numbers of trainings that can be offered by FYSTA.

The Statewide Assessment also reports that ongoing, in-service training for supervisors is limited to two courses through FYSTA trainings and is not mandated, although it is strongly encouraged. In addition, as noted in the Statewide Assessment, OCS has recognized that expanded training to supervisors is needed to meet the needs of OCS staff. The Statewide Assessment reports that supervisors new to OCS are required to complete the initial 10-day TONE training as well as two courses specific to supervision of child protection workers, which total 6 hours. Both of the supervisory training courses are offered within the first year of a supervisor's employment. The Statewide Assessment also reports that the State of Alaska through the Department of Personnel provides a week-long Academy for Supervisors specific to Human Resource matters within the State system generally and that OCS supervisors are encouraged to attend these trainings.

The Statewide Assessment reports that OCS received increased funding for staff training from the legislature in July 2007 and OCS is expanding TONE training from 2 weeks to 4 weeks and developing a mandatory new supervisory curriculum.

The Statewide Assessment notes that a stipend program is available to current OCS staff interested in pursuing continued education to obtain a Bachelor or Master of Social Work degree.

Stakeholder Interview Information

All stakeholders commenting on this item during the onsite CFSR indicated that there is a training requirement for new caseworkers during the first year of employment, but there are no requirements for ongoing training beyond the first 12 months of employment. Stakeholders in Bethel and Juneau said that caseworkers in those communities have difficulty even accessing the required training during the first 12 months of employment, although they are able to access the initial 10-hour TONE training.

Stakeholders indicated that, for the most part, caseworkers are not receiving the training support that they need after their first year on the job. Stakeholders suggested that training is needed in domestic violence, substance abuse, interviewing, adoption (particularly how to have a conversation with families about TPR), and other critical areas.

Stakeholders also noted that OCS will not fund training for caseworkers to maintain their licenses. It was noted that in order to maintain a license, caseworkers must have 45 hours of Continuing Education Units (CEUs) each year, but many caseworkers are unable to obtain the required credits because the agency will not pay for the training and because they often cannot leave their

caseloads unattended in order to access training. Stakeholders indicated that the lack of ongoing continuing education opportunities is one reason why many of the caseworkers do not become licensed social workers. A few stakeholders in Anchorage indicated that some, but not all, caseworkers in that office are able to meet their CEU requirements for licensure. They noted that a training is offered by the Anchorage office every Tuesday. Juneau stakeholders reported that although agency trainers are supposed to come to that location to offer training, they usually do not.

Stakeholders also expressed concern about the lack of training for new supervisors and of ongoing training for supervisors. A few stakeholders noted that the State is developing new training for supervisors that will focus on the role of the supervisor as a coach and consultant and the need for supervisors to set expectations for work quality. One stakeholder noted that there used to be statewide supervisory meetings but that these were stopped in 2005.

Stakeholders reported that while ongoing training on ORCA is available in Anchorage, it is not available in the other field offices and caseworkers have to go to Anchorage to access the training.

Item 34. The State provides training for current or prospective foster parents, adoptive parents, and staff of State licensed or approved facilities that care for children receiving foster care or adoption assistance under title IV-E that addresses the skills and knowledge base needed to carry out their duties with regard to foster and adopted children

____Strength __X___ Area Needing Improvement

Item 34 is rated as an ANI because foster parents are not receiving sufficient training to carry out their responsibilities. The Statewide Assessment and stakeholders interviewed as part of the onsite CFSR process indicated that initial CORE training for foster parents is available but is not required. In addition, although there is a requirement for annual training (10 to 15 hours), the Statewide Assessment reports that in 2008, 23 percent of foster parents did not complete these requirements. This item also was rated as an ANI in the 2002 CFSR.

Statewide Assessment Information

According to the Statewide Assessment, State statutes and regulations outline foster parent orientation and training requirements. OCS provides resource families with a 2-hour orientation session covering basic information on becoming a resource family. All resource families are encouraged (but not required) to complete the orientation process before placement of a child in their home. In emergency placement situations, training is initiated at the beginning of placement.

The Statewide Assessment also describes a resource family training that consists of an 8-week initial CORE curriculum, as well as specialized training for all resource families. As indicated in the Statewide Assessment, new resource families are strongly encouraged

to complete the 8-week CORE curriculum before placement, or within the first year of licensure. Specialized trainings are offered to resource families to assist them in meeting specific needs of the children in their care.

Although there are no mandatory training requirements for foster parents prior to placement of a child in their home, there are requirements for training after a child is placed in the home. The Statewide Assessment reports that State statutes and regulations require that foster parents complete 10-15 hours of resource family training per year: 10 hours for a single-parent family; and 15 hours for a two-parent family, with each parent completing at least 5 hours of training. As noted in the Statewide Assessment, OCS encourages foster parents to access trainings that are held in the foster parents' community and the Alaska Center for Resource Families works with foster parents to identify available trainings within the community that can be used to fulfill the required training hours. Despite efforts to ensure that foster parents can access training, the Statewide Assessment reports that in 2008, about 23 percent of resource homes statewide had not met the training requirement. Due to an increased focus on compliance with training standards by regional licensing staff and management, OCS has been able to demonstrate incremental improvements on meeting training requirements in three of the four OCS service regions.

According to the Statewide Assessment, training for State-licensed or State-approved residential facilities is provided through a grant with Alaska Children's Services. Initial training primarily consists of behavioral intervention strategies and building rapport with children and families. Ongoing training is provided according to the facilities' self assessment of their needs and based on staff skills and client profiles.

Stakeholder Interview Information

Stakeholders commenting on this item during the onsite CFSR indicated that there is an orientation session (the 2-hour initial session) that is mandatory, but the core training for foster parents, which consists of six sessions, is not mandatory, although it is strongly encouraged. However, most stakeholders noted that foster parents do not have to complete the core training to have a child placed in their home. They said that many foster parents participating in the core training already have children placed in their homes.

Stakeholders also noted that foster parents must complete 10 hours (for a single parent) to 15 hours (for a couple) of ongoing training each year to maintain their licensure. However, when foster parents do not meet training requirements, they may still be issued a new license, although the license will indicate that not all conditions have been met. Many stakeholders said that foster parents do not always meet the ongoing training requirements. While several stakeholders noted that ongoing training is available on the Internet and in a number of distance learning formats, a few stakeholders expressed the opinion that if a foster parent's primary language is not English, it is difficult for them to take advantage of many of the training opportunities.

Stakeholders reported that there are no training requirements for relative caregivers who are not licensed.

V. SERVICE ARRAY

Rating of Review Team Regarding Substantial Conformity				
	Not in Substantial Conformity		Substantial Conformity	
Rating	1	2X	3	4

Status of Service Array

Alaska is not in substantial conformity with the systemic factor of Service Array. The State was not in substantial conformity with this systemic factor in its 2002 CFSR and, therefore, was required to address this factor in its PIP.

Key Concerns From the 2002 CFSR

The key concerns identified in the 2002 CFSR were the following:

- Key services were not available in sufficient quantity in either rural or urban communities (item 35).
- Many critical services were not available in all communities in the State (item 36).
- In many situations, the types of services provided to children and families were more likely to be influenced by what was available rather than by what was needed to meet their particular needs (item 37).

To address these concerns in its PIP, OCS implemented the following strategies:

- Conducted an assessment of strengths and service gaps using a collaborative approach with community providers and stakeholders
- Collaborated with other State agencies and departments to ensure the efficient use of available resources for shared populations
- Used Tribal, paraprofessional, and village-based resources to assist in case planning
- Developed grant programs to expand services and worked with grantees to develop a baseline of current services and identify changes that are needed to evaluate services, including post-adoption services

Alaska met its target goals for this systemic factor by the end of the PIP implementation period.

Key Findings of the 2008 CFSR

Findings from the 2008 CFSR for the specific items assessed for this factor are presented below.

Item 35. The State has in place an array of services that assess the strengths and needs of children and families and determine other service needs, address the needs of families in addition to individual children in order to create a safe home environment, enable children to remain safely with their parents when reasonable, and help children in foster and adoptive placements achieve permanency

_____Strength __X___ Area Needing Improvement

Item 35 is rated as an ANI. The Statewide Assessment and stakeholders interviewed during the onsite CFSR reported that statewide, substance abuse and mental health treatment services are not sufficient to meet the needs of children and families. Stakeholders also identified the lack of in-home family preservation services and basic case-management services, and the statewide shortage of foster homes (particularly Native Alaskan foster homes) as key service gaps. This item also was rated as an ANI in the 2002 CFSR.

Statewide Assessment Information

According to the Statewide Assessment, in January 2005, OCS modified the grantee process for grants funded by title IV-B that resulted in an improvement in the availability of family support services; family preservation services, which are prioritized for families with an open in-home case; family preservation visitation centers; time-limited reunification services; the differential response program; adoption support services; and Child Advocacy Centers.

The Statewide Assessment also identifies the following services as part of the service array for children in the Alaska child welfare system:

- Early Intervention and Infant Learning services are available for families with infants and toddlers (birth to age 3).
- Resource Family Training and Support Services are available to all OCS foster families providing initial and ongoing training to assist with meeting the individualized and unique needs of children.
- The Alaska Children's Trust's grantees provide a hotline for parents to obtain services to improve knowledge, skills and understanding about child development, age-appropriate expectations, and roles and responsibilities. Services also include professional counseling, parenting classes, and education.
- The Bring the Kids Home program was established within the DHSS across the Division of Behavioral Health, Division of Juvenile Justice (DJJ), and OCS with funding partners at the Mental Health Trust, Denali Commission, and the Department of Education. The focus of this project is to decrease the number of children placed in out-of-State residential treatment facilities and increase capacity to serve Alaska's children at home.
- The Rural Social Services program provides grants to three Tribal organizations to provide services such as child abuse prevention, support services to families at risk of entering into OCS custody, coordinated case management services, and placement support for children who are involved in the OCS system.

Despite these services, the Statewide Assessment notes that substance abuse treatment services and mental health services are not sufficient to meet the needs of children and families in any areas of the State. With regard to mental health services, the Statewide Assessment reports that staff shortages, low pay, and demanding job duties within provider agencies add to the lack of services available. Also, as indicated in the Statewide Assessment, although collaboration to deliver behavioral health services exists among community providers statewide, the focus often is on crisis care rather than on long-term therapies that are crucial to parents and children on the path to reunification. In addition, the Statewide Assessment indicates that OCS recognizes that allocations of funding for mental health services continue to be a challenge due to the fact that residential placements consume the majority of limited funds that are available to OCS; OCS would like to shift funding to serve children in less restrictive environments.

With regard to substance abuse treatment services, the Statewide Assessment notes that most, if not all, substance abuse treatment programs have waiting lists and that many clients must wait an average of 2 to 3 months before they are accepted into an in-patient treatment program. As noted in the Statewide Assessment, this waiting period diminishes the likelihood of the parent actually enrolling in the in-patient program. The Statewide Assessment also reports that only three programs in the State allow children to reside with parents during the course of treatment. This means that many parents attending programs far from their homes have little or no contact with their children during the course of treatment.

Stakeholder Interview Information

Almost all stakeholders commenting on this item during the onsite CFSR expressed the opinion that the current service array in the State is not sufficient to meet the needs of children and families regardless of their locations. The most frequently mentioned service gaps pertained to mental health and substance abuse services, particularly in-patient substance abuse treatment services. Stakeholders also reported that a lack of sufficient in-patient substance abuse treatment for youth was a statewide concern and that there are no detoxification services available for parents and children.

A few stakeholders indicated that substance abuse assessments can be done quickly, but other stakeholders said that the assessment process often involves a long waiting period, sometimes 2 to 3 months. Some stakeholders noted that because of a scarcity of substance abuse treatment services, even when assessments are done in a timely manner, parents may not be able to access treatment for several months, at which time the assessment may be out-of-date and a new one required by the court.

With regard to mental health services, Stakeholders said that there are clinics available throughout the State that will provide short-term, crisis-related mental health services, but that there is a lack of longer-term services. Stakeholders reported that many therapists will not accept Medicaid, and OCS will not pay for services from anyone who does not accept Medicaid.

Another key service gap identified by stakeholders in all sites pertained to in-home services and placement prevention services. Many stakeholders spoke about the disappearance of these services over the past few years as budget cuts have eliminated funding for them.

Stakeholders suggested that as a result, children who are being removed from their homes could have remained at home if services were available. Stakeholders also expressed concern about the lack of services statewide for parents and children with FASDs. In particular, stakeholders noted that parents with FASD experience numerous difficulties parenting and need ongoing support, which is not readily available.

A third key service gap identified by stakeholders pertained to the lack of foster and adoptive homes throughout the State. In particular, stakeholders expressed concern about the insufficient number of Native Alaskan foster and adoptive homes to meet the needs of these children who are in foster care.

Finally, most stakeholders said that even the basic case management services are not being provided consistently. They attributed this lack of basic case management services to insufficient staffing of OCS offices and insufficient support for OCS caseworkers.

Other key services gaps identified by various stakeholders were the following:

- Housing for youth who are in custody and after leaving custody
- Visitation services to ensure sufficient and high quality visitation between children and parents
- Domestic violence services for both victims and perpetrators
- Family support services for foster parents, particularly respite services
- Parenting classes
- Pre- and post-adoption support services
- Sex offender treatment services, including treatment for youth who are perpetrators
- Methadone clinics

Despite these concerns, most stakeholders praised the State's IL program, although a few noted that it is difficult to extend this program to youth living in the very remote villages. Stakeholders also noted that youth are referred to the IL program even if they do not have a case plan goal of OPPLA and can be served as young as 14 years of age. Anchorage stakeholders identified the local trauma program, positive parenting program, and Father's Journey program as exemplary services available in that location. Other stakeholders praised the Programs for Infants and Children and the Anchorage Child Advocacy Center.

Item 36. The services in item 35 are accessible to families and children in all political jurisdictions covered in the State's CFSP

_____Strength __X__ Area Needing Improvement

Item 36 is rated as an ANI. As indicated in the Statewide Assessment and by stakeholders interviewed during the onsite CFSR, the agency is not effective in ensuring that resources are available in all political jurisdictions. Although the Statewide Assessment

attributes this lack of available services to the remoteness of some of Alaska's communities and the resultant transportation difficulties, stakeholders indicated that there also is a lack of State effort to ensure that local offices have the resources necessary to adequately serve those populations residing in remote areas. These stakeholders said that even basic child protective and case management services are limited in these areas due in large part to insufficient child welfare staff in the offices that serve these areas. This item also was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, Alaska continues to struggle to provide all services in all political jurisdictions of the State. The lack of available services was attributed to the size of the State, the fact that the population is spread out among numerous villages, and the lack of a road system in many areas of the State. The Statewide Assessment notes that OCS is divided into four regions: Anchorage, Northern, Southcentral, and Southeast. As indicated in the Statewide Assessment, key resources such as family support, family preservation, time limited reunification, early intervention/infant learning program, Child Advocacy Centers, residential treatment, and post-adoption services are available in all regions. However, the Statewide Assessment also notes that although these services are available in each region, they may not be available from each field office location and access to services may require plane, boat, or snow machines.

According to the Statewide Assessment, QA team members have reported that in some cases children and families receive all required services regardless of their geographic location, while in other cases, they do not.

The Statewide Assessment reports that although residential treatment facilities are available in all regions, psychiatric services for the most complex children and adults are located only in Anchorage, Fairbanks, and Juneau. Family Preservation Supervised Visitation is available only in Anchorage, while the Differential Response program is available only in Anchorage, Wasilla, and Nome.

Stakeholder Interview Information
Stakeholders commenting on this item during the onsite CFSR expressed the opinion that key services are not available to children and families in all jurisdictions covered by the CFSP. For the most part, stakeholders attributed the differential availability of services to the fact that some of the families served in Alaska live in remote areas that have few if any services. They noted that most of these areas do not have funds to pay for families to come to the more urban areas to access services.

Some stakeholders also noted that many children in rural areas are not being protected and are not safe. They expressed the opinion that the lack of safeguards for children is due to the fact that OCS offices that serve these areas are understaffed because OCS staffing plans do not take into account the large distances that caseworkers have to travel and the potential for bad weather. As a result, even basic child protective services and case management services are not available to many children and families.

Item 37. The services in item 35 can be individualized to meet the unique needs of children and families served by the agency

_____Strength ___X_ Area Needing Improvement

Item 37 is rated as an ANI. Although there are flexible funding resources and culturally appropriate services in the State, they are not sufficient to meet the needs of the children and families requiring individualized services. This item also was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment Information

According to the Statewide Assessment, Alaska has worked on providing individualized services to children and families through the use of individualized service funds, which are intended to keep children in their home communities. However, the Statewide Assessment also notes that these funds are limited and approval must be provided through the State office. The Statewide Assessment reports that the special needs funds that are available support individualized service needs because they allow caseworkers to pay for services that are not available under Medicaid, not covered by the foster care base rate, and/or not attainable by the family. Examples of these services include bus passes, entry fees for camps/activities, individual counseling services, drug screening, and genetic testing for paternity.

The Statewide Assessment says that to individualize services for children and families, caseworkers must be creative and collaborate with local resources to ensure that these services are provided. One example noted in the Statewide Assessment is that in many rural communities there are ICWA workers who provide services to families in an effort to keep them together. These services include transportation, food, shelter, heating fuel, parenting skills development, anger management classes, and respite care.

The Statewide Assessment reports that OCS recognizes that it is critical to understand the cultural differences among families in Alaska to be able to address individual needs of Alaska Native children and families. Although all caseworkers are required to take the ICWA training offered through TONE, it can be difficult for local child welfare agencies to consistently be staffed by caseworkers who are aware of the cultural issues of children from diverse villages and Alaskan Native cultures primarily due to high staff turnover and limited training opportunities. The Tribal State Collaboration Group (TSCG) is working on development of culturally appropriate training for all State employees. Additionally, OCS is working with Tribes to include cultural training requirements for OCS grantees.

The Statewide Assessment also notes that the populations of Hispanic, Asian, and African Americans varies across the State with a greater number of these ethnic and racial groups located in Anchorage, Juneau, and Fairbanks. There has been a higher rate of immigration to the State of Hispanics and Asians in the past few years. Resources are accessed from leaders in the Asian and Hispanic communities for services such as interpreters and culturally based services.

Stakeholder Interview Information
Stakeholders commenting on this item during the onsite CFSR acknowledged that the general lack of services makes it difficult for caseworkers to address the individual needs of children and families. Many stakeholders identified the scarcity of OCS caseworker staff as a key problem in ensuring that cases are treated individually. However, a few stakeholders noted that because of the lack of services, some good caseworkers and service providers get creative about working with families and advocate for the families to meet their unique needs.

Many stakeholders spoke about the lack of culturally appropriate services for Native Alaskan children and families. A few stakeholders noted that there is a need for proven traditional Native services to be accepted by the general culture as effective in resolving some of the problems experienced by children and families. They noted, for example, that if a family goes to a traditional healer, that is not counted for the case plan. Some stakeholders suggested that although the OCS caseworkers are supposed to work with Tribal caseworkers on case planning for Native children, often the Tribal caseworker receives the case plan just before the 6-month administrative review without having had any input into the plan.

Stakeholders also noted that there are few culturally appropriate resources for the Korean and Hmong communities in Anchorage.

VI. AGENCY RESPONSIVENESS TO THE COMMUNITY

Rating of Review Team Regarding Substantial Conformity				
	Not in Substantial Conformity		Substantial Conformity	
Rating	1	2X	3	4

Status of Agency Responsiveness to the Community

Alaska is not in substantial conformity with the systemic factor of Agency Responsiveness to the Community. The State was found to be in substantial conformity with this systemic factor in its 2002 CFSR and therefore did not address this factor in its PIP. Findings with regard to the 2008 CFSR are presented below.

Item 38. In implementing the provisions of the CFSP, the State engages in ongoing consultation with Tribal representatives, consumers, service providers, foster care providers, the juvenile court, and other public and private child- and family-serving agencies and includes the major concerns of these representatives in the goals and objectives of the CFSP

_____Strength ___X__ Area Needing Improvement

Item 38 is rated as an ANI because OCS does not have a process to consistently seek input from and engage stakeholders, including local child welfare agency directors and staff, in the development of its goals and objectives for the State child and family services programs. This item was rated as a Strength in the State's 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, the goals and objectives of the Alaska CFSP reflect input from individuals who represent a wide range of agencies and community partners throughout the State. These include the following: TSCG; CIP; Department of Law; Alaska Citizen Review Panel; Facing Foster Care in Alaska; OCS grantees; Alaska Association of Homes for Children; and State office administrators, managers, program staff, regional managers, and supervisors.
As indicated in the Statewide Assessment, although OCS may not facilitate regularly scheduled "formal" CFSP meetings, the regular contact and collaboration with the partners listed above provides a rich ongoing exchange of information and allows for an evaluation of CFSP progress and services.

In addition, Facing Foster Care in Alaska, a foster care youth group that was established in 2003, meets quarterly with the OCS IL Coordinator and the statewide IL Specialists to discuss challenges facing youth as they prepare for adulthood. Membership comprises youth currently in the system as well as alumni. Members also have participated in other child welfare conferences and public forums.

Stakeholder Interview Information
Most stakeholders commenting on this item during the onsite CFSR reported that there is no formal child welfare advisory group in the State that provides input to the State's 5-year plan or CFSP, or that is consulted on a formal and routine way when making decisions regarding the child welfare system. In addition, stakeholders at the local sites indicated that even local-level agency supervisors and administrators often are not engaged in the development of the State plan, and there is no mechanism in place for seeking or using their input. Stakeholders also noted that Tribal input with regard to new child welfare program initiatives often is sought after OCS has decided to develop a particular initiative and not during the early decision-making stages. Tribes are asked to assist with implementation but not the development of the initiative. One stakeholder noted that there is a new effort to have one person from OCS focus on Tribal input, and that effort may help this situation.

A few stakeholders reported that some members of the Citizen's Review Panel participated in the development of the last 5-year plan. Some stakeholders also indicated that recently representatives of various departments, including the Department of Education, participated on a State Assessment Team, which was a group of about 45 people who were given the task of determining how to improve the State child welfare system.

Item 39. The agency develops, in consultation with these representatives, Annual Progress and Services Reports (APSRs) delivered pursuant to the CFSP

_X___ Strength _X _Area Needing Improvement

Item 39 is rated as an ANI because OCS does not have a formal process for engaging stakeholders in developing annual progress and services reports. This item was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment
According to the Statewide Assessment, OCS is actively involved with all representatives that contribute to the CFSP and works with them to evaluate CFSP goals and strategies on an informal basis. If necessary, goals and strategies are modified to support the direction of the agency and its partners. Information for the plan is regularly obtained from the collaboration with these groups and is integrated into the APSR, which is developed once a year. The APSR is shared with community partners and is available on the OCS website.

Stakeholder Interview Information
Several stakeholders reported that they participate in a variety of meetings and workgroups designed to affect practice and the direction of the child welfare agency. Stakeholders noted for example that the TSCG is used to work together on identified statewide issues such as disproportionality. However, several stakeholders also noted that, although in past years Tribal groups have had a chance to comment on the APSR, in the past year, they were not provided with the report for comment. Other stakeholders noted that community stakeholders may have seen the report, but most expressed the opinion that they have not had much opportunity for input into the annual report although they believe that they have input into agency planning and programs.

Item 40. The State's services under the CFSP are coordinated with services or benefits of other Federal or Federally-assisted programs serving the same population

_X_Strength _____Area Needing Improvement

Item 40 is rated as a Strength because the State's services are coordinated with services or benefits of other Federal or Federally-assisted programs serving the same population. This item also was rated as a Strength in the State's 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, coordination efforts are ongoing with the Division of Behavioral Health—mental health and substance abuse, DJJ, Child Advocacy Centers, Alaska Children's Trust, CIP, Division of Public Assistance—TANF and Child Care, Department of Revenue—Child Support, Faith Based Programs (FLAME), Department of Education—Individual Service Plans and Head Start, Division of Public Health, Division of Senior and Developmental Disabilities, Department of Public Safety, Social Security Administration, Department of Law, Department of Labor—Workforce Investment Act, and the Bureau of Vital Statistics.

In addition, as reported in the Statewide Assessment, OCS has memoranda of agreement with the Department of Education, Department of Public Safety, Department of Revenue, and numerous Tribes/Tribal Entities that outline the agency interchanges and responsibilities for children under the purview of Alaska's Child Welfare System.

The Statewide Assessment also reports that the DHSS Leadership Team includes all Division Directors within the Department and works cooperatively to resolve departmental issues that arise. In May 2008, the Department published its five top priorities: substance abuse, vulnerable Alaskans; health and wellness; health-care reform; and long term care. The Children's Policy Team meets bimonthly and includes representatives from DHSS Commissioner's Office, Behavioral Health, Public Assistance, OCS, Public Health, Medicaid, and Senior and Developmental Disabilities to coordinate services and programs among divisions within the department.

Stakeholder interview information
Stakeholders commenting on this item during the onsite CFSR identified the following efforts to coordinate services among Federal or Federally-assisted programs serving the same population:

- OCS and the courts are working together to develop meaningful visitation plans for parents and children.
- OCS, DJJ, and Division of Behavioral Health (DBH) agencies work together to ensure that children do not get lost when they transition from Juvenile Justice to OCS.
- OCS, DBH, and the courts collaborate on developing the Shields program for residential substance abuse treatment for mothers and children.
- OCS and TANF work together to ensure integrated services to families through the Families First! initiative.
- There is preliminary matching of families who are served by OCS, DJJ, TANF, and DBH at the same time.
- OCS and TANF work together to ensure support for relative caregivers not licensed foster parents.

- OCS participates in a system of care effort with TANF, Tribes, and other divisions of DHSS.
- The Bring the Kids Home program is a joint effort of DBH, OCS, and other agencies.
- OCS works with Tribal groups and other agencies on disproportionality issues.

VII. FOSTER AND ADOPTIVE PARENT LICENSING, RECRUITMENT, AND RETENTION

Rating of Review Team Regarding Substantial Conformity				
	Not in Substantial Conformity		Substantial Conformity	
Rating	1	2X	3	4

Status of Foster and Adoptive Parent Licensing, Recruitment, and Retention

Alaska is not in substantial conformity with the systemic factor of Foster and Adoptive Parent Licensing, Recruitment, and Retention. Alaska also was not in substantial conformity with this factor in its 2002 CFSR and, therefore, was required to address the factor in its PIP.

Key Concerns From the 2002 CFSR

The 2002 CFSR identified the following key concerns with regard to this factor:

- The State granted variances to the licensing standards with the result that full licensing standards are not equally applied to all foster homes.
- The State did not have an effective recruitment plan for recruiting foster and adoptive parents who meet the needs of the children in foster care.

To address these concerns, the State implemented the following strategies in its PIP:

- Implemented efforts to improve the licensing process, particularly with regard to the use of variances
- Developed a statewide foster care recruitment plan with the assistance of the National Resource Center for Foster Care and Permanency
- Increased recruitment of Native Alaskan foster parents through increased collaboration with Tribes

Alaska met its target goals for this systemic factor by the end of the PIP implementation period.

Key Findings of the 2008 CFSR

Findings of the 2008 CFSR for this factor are provided below.

Item 41. The State has implemented standards for foster family homes and child care institutions which are reasonably in accord with recommended national standards

_____Strength ___X __ Area Needing Improvement

Item 41 is rated as an ANI because while there are licensing standards established, many licensed homes with ongoing placements do not meet the full licensing standards. This item was rated as a Strength in the State's 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, Alaska's new licensing standards provide adequate protection to the health and safety of children and require monitoring and home visits as part of the renewal process. The initial provisional license is issued for a period of 1 year. The provisional license can be fully licensed or not fully licensed; at the end of 1 year the license changes to a biannual license. If at any time, the license does not meet all "fully" licensed standards, the worker will change the status of the license from "fully" licensed to "not fully" licensed.

The Statewide Assessment also reports that many homes in rural communities do not meet all of the standard-by-standard home environmental licensure requirements, especially with regard to the "physical plant" of the home. In these cases, a variance may be requested and approved in order to accommodate children's special needs, or the best interest of children, such as placement of a sibling group. The variance process allows a particular standard to be varied if an alternate way of meeting the standard can be identified and implemented while ensuring the child's safety. The two most common reasons that variances are utilized are the following: (1) the physical plant of the foster home does not meet necessary fire and safety codes, and (2) the number of children in the home exceeds the standard in order to accommodate large sibling groups. OCS does not use variances for safety equipment requirements such as fire extinguishers, smoke detectors, and carbon monoxide detectors. In cases of foster home capacity, variances are approved whenever possible to ensure that children are placed with a relative and/or that siblings are placed together.

Stakeholder Interview Information
Stakeholders commenting on this item during the onsite CFSR identified the following types of foster parent licenses:

- Provisional license: Foster parents who meet all of the requirements for a licensed foster home and have had a complete background check with fingerprints are given a provisional license for a 12-month period.

- 2-year license: Foster parents who complete the first year as foster parents, and for whom no problems have been identified, are then issued a license for a 2-year period.

While there are licensing standards established, many licensed homes with ongoing placements do not meet the full licensing standards.

Anchorage stakeholders reported that in that location, licensing caseworkers conduct the home assessments for all applicants, including relatives, and explore whether they can be licensed and then give the information to the placement caseworker who makes the final placement decision. These stakeholders also indicated that licensing caseworkers investigate licensing violations and if there is a child abuse or neglect allegation, the licensing caseworker goes out to investigate with the CPS investigator.

Stakeholders also indicated that variances often are made to licensing standards and regulations. It was noted that these variances can apply to the number of children who can be placed in the home (this is not limited to sibling groups), whether there is a criminal record indicating a "barrier" crime, and for the physical aspects of the home, such as windows that are narrow. Stakeholders in Anchorage noted that many caseworkers have children in foster families that have variances that permit more children in the home. This situation may be because foster families in Alaska generally are licensed for a maximum of only three children. Stakeholders noted that with variances, this maximum often is increased to six children, even if the children are young. In addition to variances, some stakeholders noted that some families, in order to have more children in the home, will be licensed as group home facilities rather than be given a variance, which allows them to care for six or more children.

Some stakeholders expressed concern about the licensing process and about licensing workers having little contact with foster homes except for the 6-month assessments. However, other stakeholders reported that licensing caseworkers have frequent interaction with foster homes and provide support and assistance to foster parents that caseworkers cannot provide because of their caseloads.

A few stakeholders commented on Native Alaskan foster homes and noted that in some places a Tribe can license their own homes, but State funds cannot be used for payment in these homes. Some stakeholders indicated that State-licensed Native foster homes often are pushed to capacity.

Item 42. The standards are applied to all licensed or approved foster family homes or child care institutions receiving title IV-E or IV-B funds

___X___ Strength _____Area Needing Improvement

Item 42 is rated as a Strength because the Statewide Assessment and stakeholders both stated that Alaska claims title IV-E funds only for children placed in foster homes that are fully licensed. This item was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment
According to the Statewide Assessment, all licensed foster homes, relative and non-relative, are required to comply with the same set of standards. Relatives are provided a choice of whether to be licensed or not. If relatives are not licensed, OCS requires a criminal and child protection background check and a physical check of the home surroundings. Unlicensed relatives do not receive reimbursement from OCS; however, unlicensed relatives can receive TANF funding through the Division of Public Assistance to assist with the support of the children in their homes.

As indicated in the Statewide Assessment, variances are requested and approved through regional variance committees. In every case, OCS is utilizing the variance process to make sure that each standard for licensure is applied equally and that each home meets the safety requirements outlined in the licensing regulations. In the event that a variance is denied, OCS may use State funding and title IV-E reimbursement to make necessary physical modifications to the home so that a child can be placed in the home.

Stakeholder Interview Information
Stakeholders commenting on this item expressed the opinion that the standards for foster home licensing are applied equally to all licensed homes that receive title IV-E funds. Stakeholders noted that the State does not claim title IV-E funds if the foster parents are missing training, fingerprints, criminal history check, background information forms, references, or if they are not in compliance with key licensing issues. However, a few stakeholders indicated that many families often are not in compliance with the training requirements, particularly families in the rural areas, and it is not clear whether or not these homes continue to have full licenses.

Stakeholders noted that relatives are required to meet the same licensing standards as other foster homes. However, they can choose not to be licensed and still provide care to children.

Item 43. The State complies with Federal requirements for criminal background clearances as related to licensing or approving foster care and adoptive placements and has in place a case planning process that includes provisions for addressing the safety of foster care and adoptive placements for children

_X__Strength ____ Area Needing Improvement

Item 43 is rated as a Strength because the State complies with Federal requirements and completes criminal records checks on all licensed foster, adoptive, and relative placement homes. This item also was rated as a Strength in the State's 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, criminal background clearances are required for all foster parents, unlicensed relatives and pre-adoptive or adoptive homes. The Federal barrier crime regulations apply to unlicensed relatives and foster and adoptive families. The State barrier crime statutes and regulations only apply to licensed foster homes and facilities within the DHSS and are more restrictive. The Statewide Assessment also reports that Alaska has faced challenges in the timeliness of receiving fingerprint results, but is actively working to improve these outcomes through the use of fingerprint scanners. It is anticipated that the electronic transfer of fingerprints and results will significantly reduce the timelines for foster care licensing and adoption home study approvals.

Stakeholder Interview Information
Stakeholders commenting on this item during the onsite CFSR expressed the opinion that the State conducts criminal background clearances, including fingerprint checks, in the process of licensing foster care placements and approving relative placements. However, many stakeholders expressed concern regarding the length of time required to get fingerprint information, which ranged from 3 to 6 months.

Item 44. The State has in place a process for ensuring the diligent recruitment of potential foster and adoptive families that reflect the ethnic and racial diversity of children in the State for whom foster and adoptive homes are needed

____Strength __X__ Area Needing Improvement

Item 44 is rated as an ANI because numerous stakeholders reported that Alaska does not have a statewide process in place to recruit foster homes despite significant shortages of all types of foster homes. Stakeholders reported that local offices do not have recruitment plans, recruitment resources are limited across the State, and efforts to recruit foster homes are insufficient. This item was rated as an ANI in the State's 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, over the past 5 years, Alaska has invested many resources into recruiting and retaining foster and adoptive parents. However, the Statewide Assessment notes that better tracking of these efforts is needed to determine their effectiveness with regard to the outcomes for children. The Statewide Assessment also notes that the development of a multi-year recruitment plan will better synthesize the various local and regional recruitment and retention efforts.

The Statewide Assessment identifies the following activities as part of Alaska's recruitment and retention efforts:

- Technical assistance was received from 2003 to 2005 from the National Resource Center on Foster Care and Permanency Planning to develop a recruitment and retention plan for OCS. (The Statewide Assessment indicates that this recruitment and retention plan was never formalized within OCS; however, a smaller recruitment effort was developed to address the need for additional Native foster families in rural Alaska.)
- The Native Rural Recruitment Team (NRRT) was developed in 2006 in response to the need for more Alaska Native and rural resource family homes to prevent Alaska Native rural children from being removed from their community and placed in urban areas of Alaska. This approach has increased the number of homes in rural villages available to children in need. To date, 37 foster homes in remote, village communities have been identified and licensed through the NRRT community teams.
- The Annie E. Casey Foundation's Family-to-Family Initiative has been implemented in the Anchorage region since 2004.
- As a part of the National Adoption Awareness month in 2006 and 2007, OCS funded a statewide media campaign that focused on the adoption of older youth in foster care. These media ads (radio and television) ran from November through May.
- Other recruitment strategies have occurred such as advertising signs on city buses, interviews with newspapers and radio stations, as well as print media. National Foster Care month activities have included foster parent appreciation events in all of the OCS service regions.
- Adoption days were implemented in the Anchorage, Palmer, Fairbanks, and Juneau courts over the past 3 years.
- The DHSS Office of Faith-Based Initiatives brought together the faith-based community in the Anchorage region to create a support network for resource families. This group has been meeting for more than a year and has developed a support plan that was finalized in March 2008; however, the plan is not yet implemented.
- In 2007, the OCS became a grantee of the Dave Thomas Foundation's Wendy's Wonderful Kids program. Through this program, Wendy's Wonderful Kids funds a half-time position for a child-specific recruiter in the Anchorage region to actively focus on six children a year who have been in foster care for the longest period of time and are legally free for adoption. In early 2008, this position was expanded by OCS to a full-time position through State funding resources to provide recruitment efforts focused on adoption and guardianship in the Anchorage region.

The Statewide Assessment notes that, despite efforts by OCS, Tribally licensed foster homes have not been established in Alaska due to various legal barriers. As indicated in the Statewide Assessment, OCS remains committed to working with the Tribal partners on the establishment of licensed foster home standards for Alaska Native families and children in foster care, should legal impediments be resolved.

Stakeholder Interview Information

All stakeholders commenting on this item expressed the opinion that there is a considerable need for foster homes, particularly for Native Alaskan children. Stakeholders indicated that at present, there is no systematic agency plan for recruiting Native Alaskan foster homes either at the State or local levels.

Stakeholders also noted that homes are needed for older children who often must seek their own placements or end up living in a shelter for 6 months or longer until they turn 18 because there is no place for them to go. Stakeholders indicated that families are needed for children with special needs, but when those families are found, they do not receive the support they need from the agency, and as a result, they drop out. Stakeholders generally viewed the lack of support for foster parents as problematic. Many stakeholders indicated that it is difficult to ask current foster parents to recruit other families to be foster parents because so little support is given to the foster parents. Several stakeholders indicated that, as a result, attention is being given more to retaining existing foster parents rather than recruitment. Some stakeholders said that licensing staff are trying to provide more of the support services to foster families because they realize that caseworkers are overwhelmed and do not have the time to assist foster parents with their concerns.

All stakeholders commenting on this item also expressed the opinion that there is no statewide recruitment plan. It was noted that local offices do their own recruitment, but have few resources; it was noted that even at the local levels, there is no systematic recruitment plan. Anchorage stakeholders reported that licensing caseworkers are responsible for recruiting foster homes but that they do not have a systematic recruitment plan and there is no budget set aside for recruitment.

The general recruitment strategies identified by stakeholders included recruitment picnics, ads, posters, word-of-mouth, and child-specific recruitment through the Heart Gallery.

Item 45. The State has in place a process for the effective use of cross-jurisdictional resources to facilitate timely adoptive or permanent placements for waiting children

_X___ Strength ____Area Needing Improvement

Item 45 is rated as a Strength because the State is effective in using cross-jurisdictional resources to facilitate timely adoptive or permanent placements for waiting children. This item was rated as a Strength in the State's 2002 CFSR.

Statewide Assessment Information
According to the Statewide Assessment, in 2007, the Alaska Adoption Exchange was established as a service within the Adoption program of the OCS State Office. The listing of a child on the Alaska Adoption Exchange automatically means that the child will be listed on the Northwest Exchange and the AdoptUsKids exchange. The Statewide Assessment notes that since the Alaska Adoption Exchange was established within OCS, 32 children have been listed on the exchange. One of the successes of the exchange has been to connect families from various locations in Alaska with waiting children statewide.

Stakeholder Interview Information
Stakeholders commenting on this item identified the following as cross-jurisdictional resources to facilitate adoptive or permanent placements for children:

- Placement of the child on the Alaska Adoption exchange, which leads to automatic placement on AdoptUsKids, and the Northwest Adoption Exchange
- The Heart Gallery

Stakeholders noted that the greatest barrier to out-of-State placement is the Interstate Compact for the Placement of Children process, which can result in considerable delays.

2/3/10 PRESENTA-TION: UNITED WAY 2-1-1 PROJECT

2-1-1 | Help starts here.

Alaska 2-1-1: A key resource for legislators

As an Alaska legislator, you and your aides can ...

- ... refer constituents to Alaska 2-1-1 or www.alaska211.org when they come to you with health and social services needs.
- ... use Alaska 2-1-1 as a resource or referral point for federal, state and local programs, as well as public health and crisis/disaster preparedness information.

This frees up legislative aide time that is usually spent researching and seeking out resources.

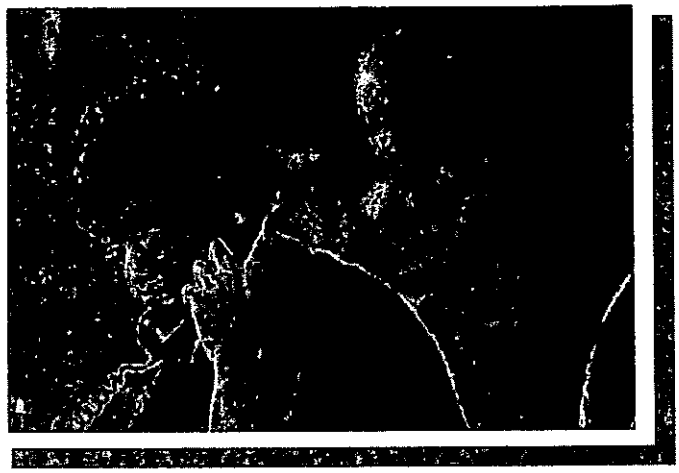
■ ■ ■

Alaska 2-1-1 is an efficient, confidential, easy-to-remember and free communications infrastructure and a statewide resource. Alaska 2-1-1 is operated by United Way of Anchorage. The Regulatory Commission of Alaska granted United Way of Anchorage the use of the designated three-digit entity for information referral services for the State of Alaska.

Alaska 2-1-1 is accessible by most phones in Alaska, and those communities that can't reach 2-1-1 directly can use the free (800) number, 1-800-478-2221.

Alaska 2-1-1 has already resulted in a reduction of non-emergency calls to 9-1-1.

Alaska 2-1-1 plays a critical role in responding to disaster. Alaskans face natural and manmade disasters, and Alaska 2-1-1 has become tool for disaster response and can be used as a central communications point for disaster relief and recovery. Recently, Alaska 2-1-1 was involved in assisting during Juneau Unplugged.



Help your constituents

find the resources they need by referring them to Alaska 2-1-1 via phone (2-1-1) or on the web (www.alaska211.org).

Help all Alaskans

discover this valuable service by spreading the word about Alaska 2-1-1. We can supply links for your website and widgets (below) for your newsletters.

- Dr. Lawrence Stinson – Health Care Provider
- Ex-Officio
  - Senator Donny Olson
  - Representative Wes Keller
  - Linda Hall – State Insurance Commissioner

Alaska Health Care Commission

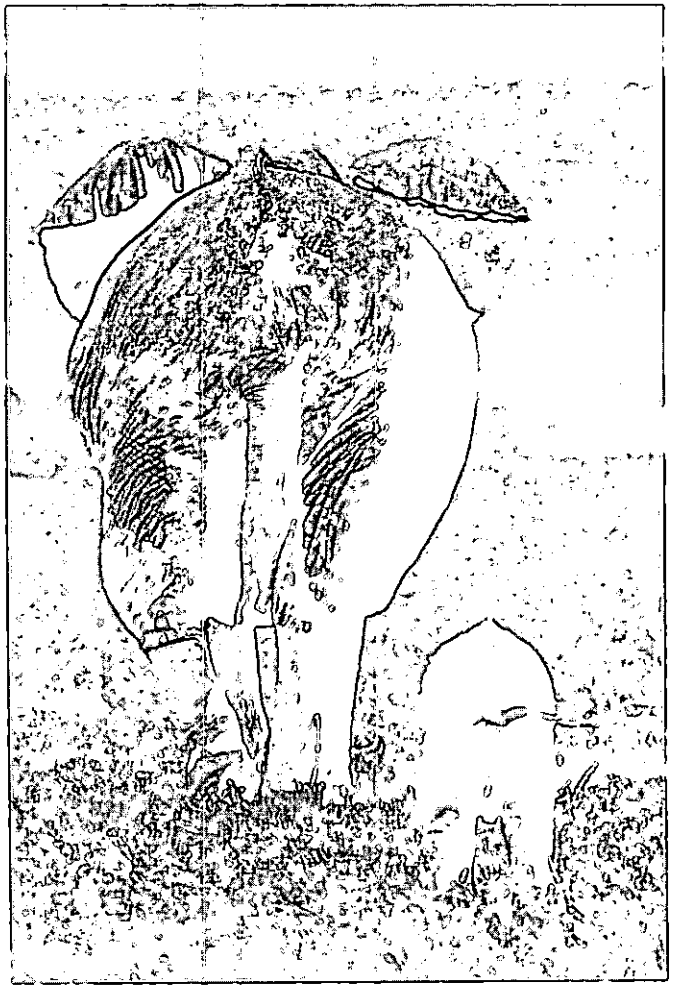
Duties

1. State health planning and coordinating body

2. Foster development of a:
   - Comprehensive statewide health care policy
   - Strategy for improving the health of Alaskans

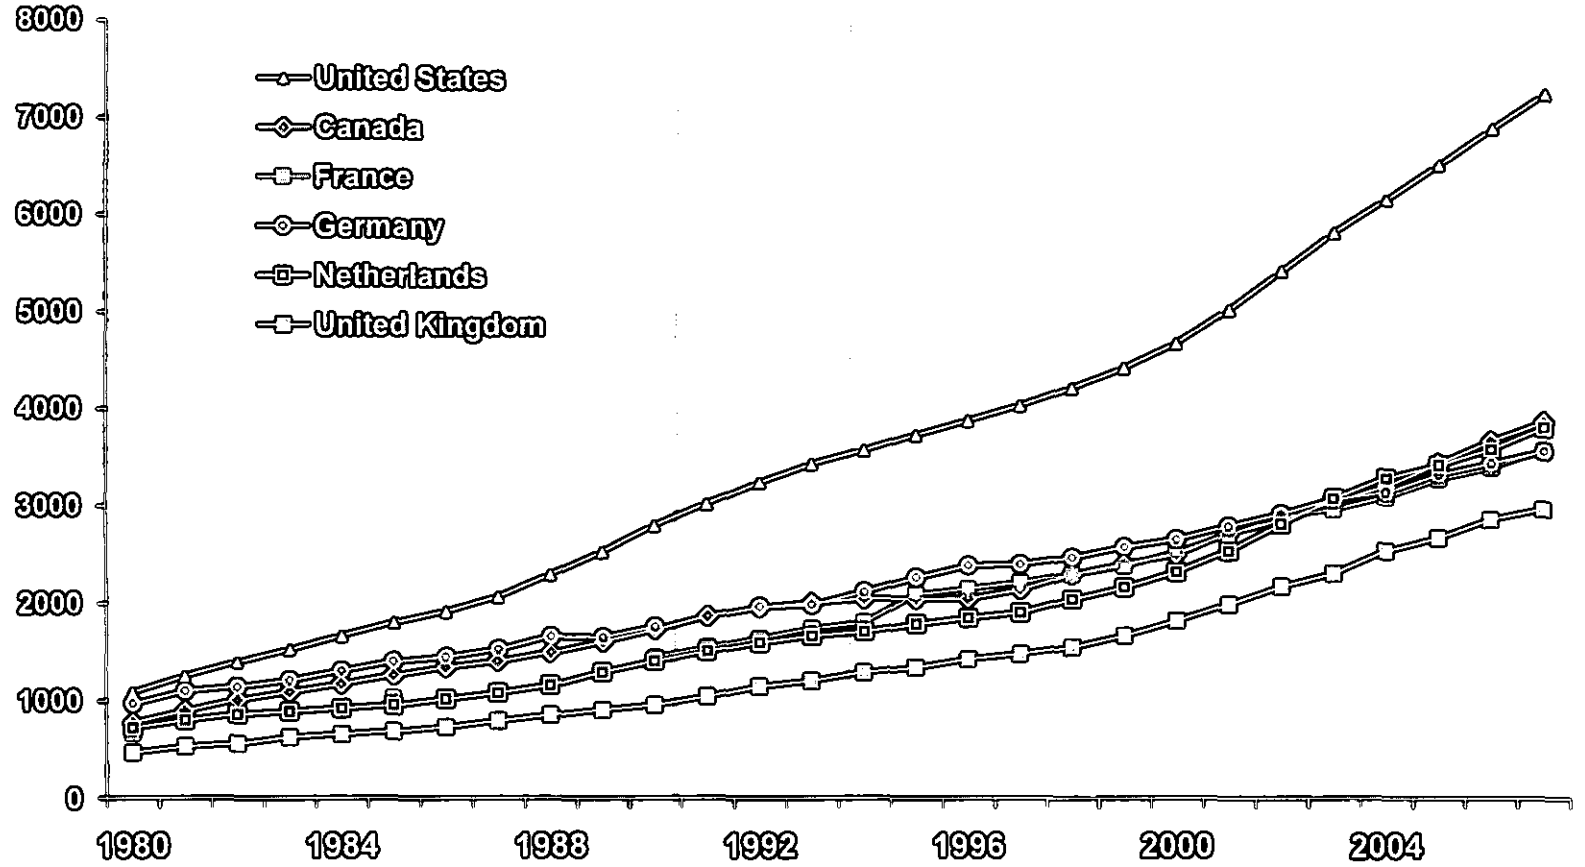
3. Report due to Governor and Legislature January 15, 2010

The Elephant in the Room



National Health Expenditures per Capita, 1980-2007

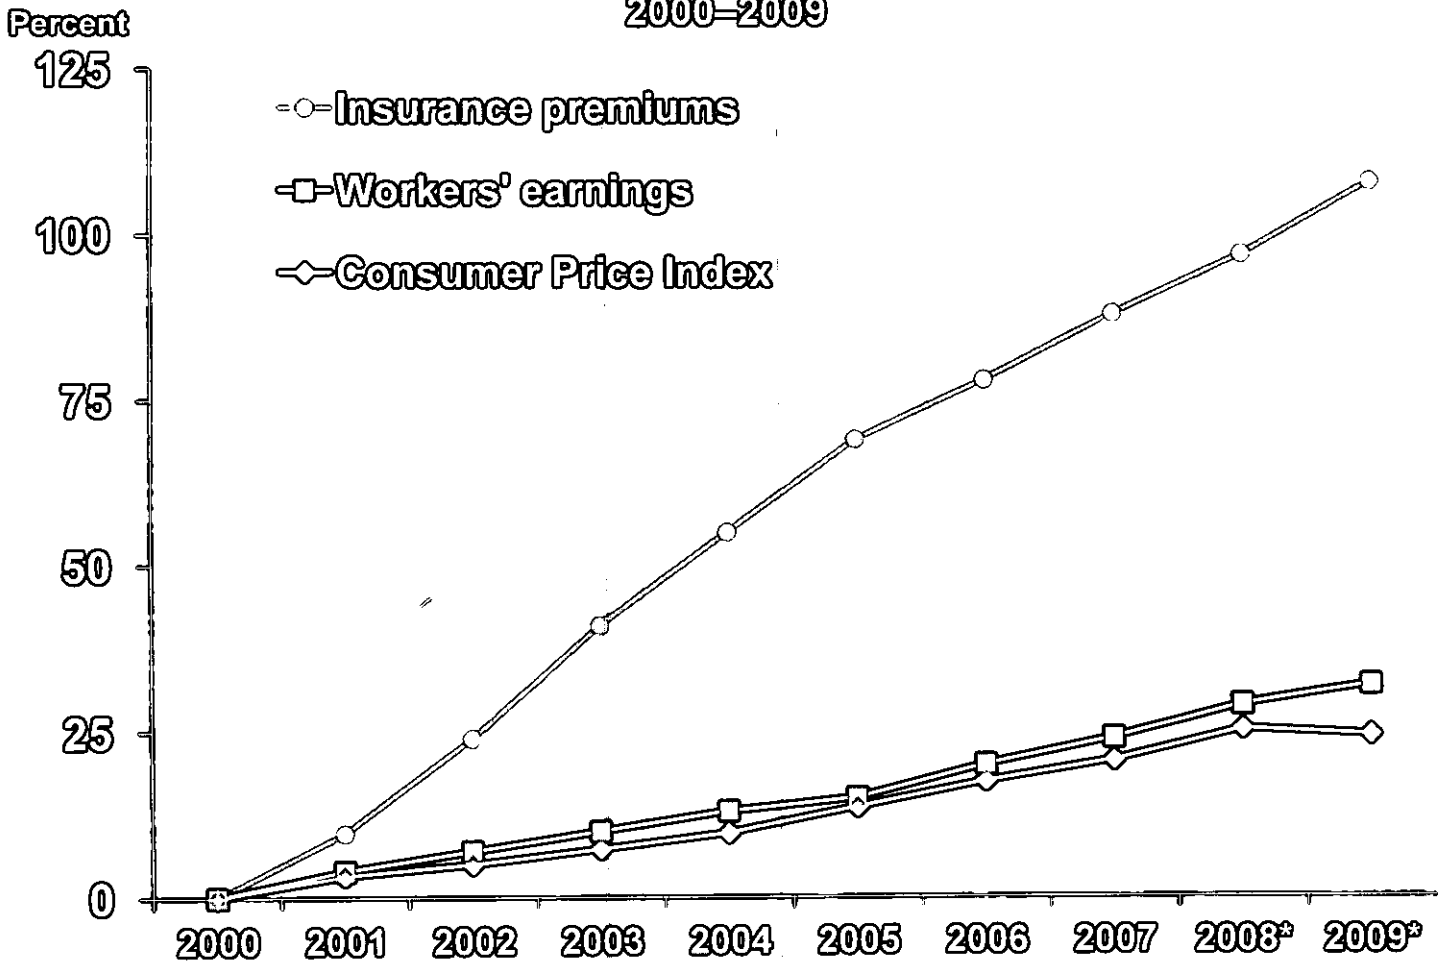
Average spending on health per capita ($US PPP)



Data: OECD Health Data 2009 (June 2009); from the Commonwealth Fund (Nov 2009)

Premiums Rising Faster than Wages and Inflation

Cumulative Changes in Components of U.S. National Health Expenditures and Workers' Earnings, 2000–2009



The High Cost of Care in Alaska

- Alaska has the highest annual Medicaid expenditure level per enrollee in the nation at $10,417 (2004)
- Alaska has ranked first in the nation for cost of Workers' Comp premium rates since 2005
  - Alaska has the highest Worker's Comp medical fee schedule rates in the nation – on average 3.5 times higher than the state with the lowest rates (2006)
  - Medical costs make up 72% of total Worker's Comp benefit claims in Alaska, compared to the national average of 58% (2008)
  - Alaska's average medical cost per Workers' Comp claim is $40K per injury compared to the national average of $26K (2008)
- The average cost per hospital stay in Alaska is $27,171 compared to the national average of $15,455 (2007)
- The price for medical care in Anchorage doubled between 1991 and 2005, while the Anchorage CPI for all items increased 38% during that same period

Differences in Medicaid Fees, 2009

Description	Code	AK Fee	WA Fee	% Difference
Outpatient Office Visit – Lower Level	99212	$62.46	$22.69	175%
Outpatient Office Visit – Highest Level	99215	$221.58	$76.00	192%
Emergency Department Visit	99283	$109.14	$37.48	191%
Knee Arthroscopy/Surgery	29881	$976.77	$358.08	173%
Gall Bladder Removal, Laparoscopic	47563	$1,175.10	$412.29	185%
Cataract Surgery w/Lens Implant	66984	$1,141.23	$394.44	189%

Differences in Workers' Comp Fees, 2006

Description	Code	AK Fee	WA Fee	HI Fee
Outpatient Office Visit – Mid Level	99213	$127.00	$76.00	$61.00
Radiology (MRI, spinal canal cervical)	72141	$2,339.00	$769.00	$634.00
General Medicine (nerve conduction)	95904	$219.00	$81.00	$66.00
Knee Arthroscopy/Surgery	29881	$4,181.00	$869.00	$693.00
Physical Medicine (therapeutic proc)	97110	$83.00	$40.00	$32.00

U.S. HEALTH CARE SYSTEM
MATSON
ST. LOUIS POST-DISPATCH

Diagnosis of Alaska's Health Care System

- Costs are unaffordably high and continue to climb
- The delivery of health care services is fragmented
- Financing and payment mechanisms are complex
- Many Alaskans lack health insurance
- Some Alaskans cannot find a doctor to care for them
- There are high vacancy rates in Alaska's health care workforce
- Levels and variations in quality of care are not well understood
- Consumers and health care providers are frustrated
- The system as currently designed is not sustainable

Commission's Strategic Plan

- 5-Year Planning Framework
  - I. Develop Vision
  - II. Accurately Describe Current System
  - III. Build the Foundation
  - IV. Design Transformation Elements
  - V. Measure Progress
  - VI. Engage Public & Stakeholders
- Action Plan for 2009 Recommendations
- 2010 Commission Work Plan

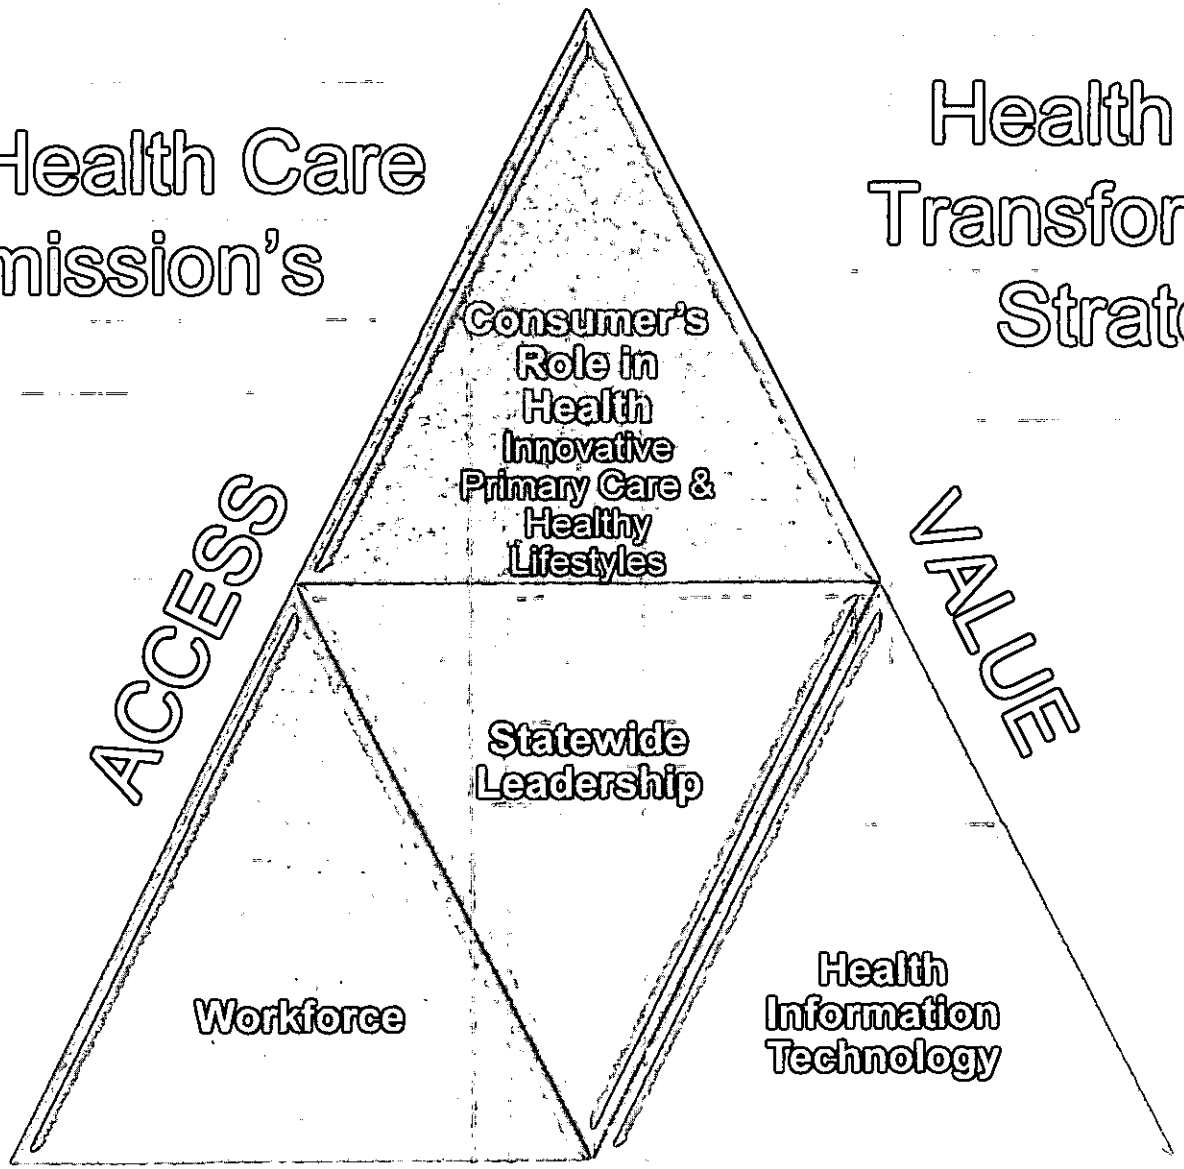
Vision & Values

- Vision
  - *Alaska's health care system produces improved health status, provides value for Alaskans' health care dollar, delivers consumer and provider satisfaction, and is sustainable.*
- Reform Goals
  - Improved Access
  - Controlled Costs
  - Improved Quality
  - Prevention-Based
- Values
  - Sustainability
  - Efficiency
  - Effectiveness
  - Individual Choice
  - Personal Engagement

Year 1 Priorities

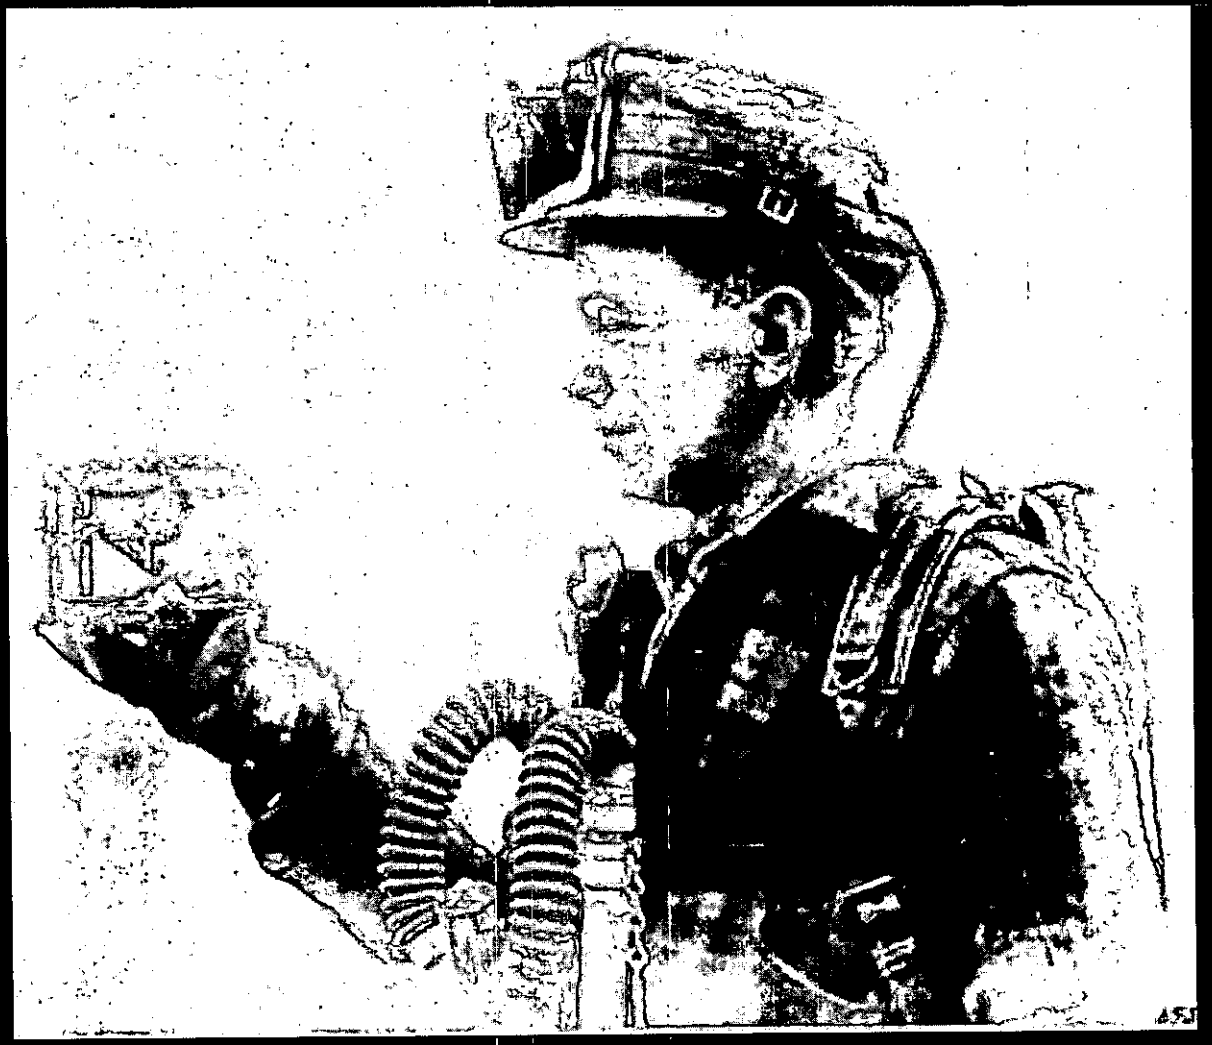
- Consumer's Role in Health Care
  - Healthy Lifestyles
  - Innovative Primary Care
- Statewide Leadership
  - Response to National Health Reform
  - Permanent State Health Planning Board
- Health Care Workforce Development
  - Physician Supply and Distribution
- Health Information Technology
  - Health Information Exchange/EHR
  - Telemedicine
- Primary Care Access for Medicare Enrollees

Alaska Health Care Commission's Health Care Transformation Strategy



PREVENTION-BASED

Medicare Access Problem - The Canary in the Coal Mine?



Recommendations

Strengthen Consumer's Role

- Support Healthy Lifestyles and Create Culture of Wellness
- Develop Patient-Centered Primary Care Model
  - Payment Reform
  - Removal of Statutory/Regulatory Barriers
  - Pilot Projects

Recommendations

Foster Statewide Leadership

- Invest in Health Policy Infrastructure to Respond to National Reform

- Permanent State Health Planning Board

Recommendations

Develop Health Care Workforce

- Priority for Health Care Reform and Economic Development Agendas
- Strengthen the Workforce "Pipeline"
- Innovation and Adaptation
- Coordinated Planning
- Target Physician Development $s to Primary Care
  - Loan Repayment & Financial Incentives for R&R
  - WWAMI Expansion as Resources Allow
  - GME for Peds, Psych, and Primary Care Internal Medicine

Recommendations

Deploy Health Information Technology

- Support HIT Adoption and Utilization
- Ensure Privacy and Security
- Broadband Telecom Infrastructure Access
- Reimbursement for Telemedicine

Recommendations

Improve Medicare Access

- Increase Supply of Primary Care Providers
  - Loan Repayment & Financial Incentives for R&R
  - WWAMI Expansion
  - GME for Primary Care Internal Medicine
  - Mid-Level Practitioners
- Support FQHCs and RHCs
- Request Relief from Federal Reimbursement Inequities and Administrative Burden
- Develop PACE Program

Transformation Elements

I. Access to Care

- Health Insurance Coverage
- Health Care Workforce Development
- Physical Health Care Services
- Behavioral Health & Long Term Care

Transformation Elements

II. Cost & Quality (VALUE)

- Analyze Cost of Care in Alaska
- Foster Primary Care Innovation
- Move to Value Driven Purchasing
  - Leverage State Purchasing Power
  - Transparency – Cost and Quality
  - Evidence-Based Medicine
  - Pay-for-Performance
  - Bundled Payment Systems
  - Medical Error and Infections Reporting & Non-Payment
- Fraud & Abuse Control
- Tort Reform
- Support Process & Quality Improvement Mgmt Strategies

Transformation Elements

III. Prevention

- Public Health & Community-Based Prevention
- Safe Water & Sanitation Systems
- Employee Health Risk Management

Commission's Future

- A.O. 246 expires 04/30/10 if not extended

- Creation of Commission in Statute
  - Bills Pending – 2010 Legislative Session
    - SB 172 Olson
    - HB 25 Hawker
    - HB 75 Cissna

Thank You

Question? Comments?

2/24/10 PRESENTATION: BEST BEGINNINGS EARLY CHILDHOOD

2636

Investing in Alaska's Young Children

Alaska Early Care and Education: Public Policy Priorities for 2010

Denali Kid Care: Increase the income eligibility guidelines for Denali Kid Care (DKC) from 175% to a minimum of 200% of Alaska's federal poverty level (FPL). This change would restore eligibility to 1,300 children and 225 pregnant women. Children with access to preventative health care and developmental screenings have better outcomes for health and learning abilities throughout their lives.

Head Start: Increase State investment in Head Start to: expand services, address critical infrastructure needs, and keep existing slots from being reduced to due to rising costs. Provide workforce development funds to enable Alaskan Head Start staff to meet federal teacher qualification requirements.

Home Visiting: Establish research-based voluntary early childhood home visiting programs in Alaska, such as *Parents as Teachers*, with universal access for families with children prenatal up to kindergarten entry. Such programs increase parent knowledge of child development, improve parenting practices, promote early literacy experiences, provide early detection of developmental delays and health issues, and increase children's school readiness and school success. Through these preventative programs, future costs such as special education and remedial education have been shown to be reduced.

Best Beginnings: Support community-based **Early Childhood Partnerships** and **Imagination Library**. This leverages funding from the private sector and helps support the public-private partnership working to create and sustain a comprehensive statewide early childhood system. **Early Childhood Partnerships** provide a statewide coordinated network and structure necessary to move decisions closer to those being served, pinpoint actual needs, respond to cultural considerations, and ensure the best outcomes for young children in every community. **Imagination Library** mails a book per month to Alaska children from birth to age 5. Research shows that children who have not developed some basic literacy skills by the time they enter school are three to four times more likely to drop out in later years. Too many Alaska children, about 40%, are entering kindergarten without those skills. This program makes a difference by bringing quality books into the home, engaging young children and their families in early literacy activities.

Access to Quality Child Care: Increase child care reimbursement rates to the 75th percentile. This allows low-income children the opportunity to access higher quality programs, resulting in outcomes such as increased school readiness. Increase family eligibility to 85% of the state median income. This will enable the state to quantify and respond to support for families to enter or remain in the workforce.

Quality Rating and Improvement System (QRIS): Implement phase one of QRIS in Alaska. A QRIS is an organized method to assess, improve, and communicate the level of quality in early care and education settings outside the home. The system would provide a roadmap for individual early learning programs to improve their quality of care, thereby increasing parent access to a larger supply of quality options. The system would provide greater accountability for policy makers who govern public investments in Alaska's early care and education system and would ensure that publicly funded Pre-K services can be delivered through a variety of delivery systems that meet the needs of parents.

Professional Development and Retention of Early Educators: Provide funding to thread, **Alaska's Child Care Resource and Referral Network**, to increase the current Individual Reimbursement Awards (IRF's) for college child development courses, and reinstate the ROOTS (Retaining Our Outstanding Teacher) Awards to recognize and incentivize teachers with credentials in early education. There is a direct relationship between teacher preparation and quality of early care and education for children. It is difficult for individuals working full-time and earning low wages to afford the cost of education. In addition, due to low wages and lack of recognition, the teacher turnover rate in Alaska in early care and education programs is approximately 46%. By providing these incentives, the early care and education field would be able to recruit and retain a more qualified and stable workforce.

These priorities are recommendations articulated in no particular order. The recommendations are meant to assist public policy leaders in developing a system of early learning to promote school readiness, strong families, and a strong workforce. These are advanced by a coalition of early childhood advocates working together to support young children.

thread connecting early care & education to alaska

The Alaska Child Care Resource and Referral Network, thread, has a mission to advance the quality of early education and child development by empowering parents, educating child care professionals and collaborating with our communities.

AILPA

The Alaska Infant Learning Professional Association-AILPA is a member organization to advocate for and support high quality early interventions services for infants and toddlers with special needs and their families.

BEST BEGINNINGS

Alaska's Early Childhood Investment

Early Childhood Partnerships

Request

- $1 million FY11 to support early childhood partnerships
- Funds would pay for grants to partnerships established in FY10, enabling them to begin work on locally identified priorities and their two-year strategic plans. Funding would also support technical assistance and start up of three to four new partnerships.

Rationale

- Current services and programs are like a jigsaw puzzle with mismatched pieces. There are gaps, overlap, and lack of coordination. People at the local level are in the best position to identify problems, design solutions, and improve coordination to meet local needs.
- Effective local organizations have been recognized in state and national studies as essential to building effective statewide systems.

Accomplished to date

- In July 2009, Best Beginnings awarded one-year grants to nine communities to form early childhood partnerships or support partnerships already established.
- Communities represented in the partnerships are home to 39,000 children under age 5. That's about 78% of all children birth to age 5 in Alaska.
- Partnerships create opportunities for local people from varied interests and backgrounds to improve services and resources for young children.
- Core funding from the state and private sector has been leveraged in local communities, resulting in $133,000 in cash and in-kind contributions.
- Partnerships are assessing needs and assets in their communities, developing priorities, and building strategic plans. The results will be improved coordination of services, better access for families, and communities that are very engaged in meeting the needs of young children.

Longer term goals

- Organize and mobilize early childhood partnerships all over Alaska.
- Develop a coordinated system of early childhood programs and services.
- "Delegate" to people in communities responsibility for identifying programs and systems that work well, where gaps exist, and how best to respond to local needs.
- Form a network of effective community and regional organizations that support comprehensive early childhood services. Such networks and a comprehensive systems-wide approach have been strongly recommended by state and national studies as key to meeting the needs of babies and young children.
- Children begin school prepared to succeed.

3350 Commercial Drive, Suite 104A • Anchorage, Alaska 99501

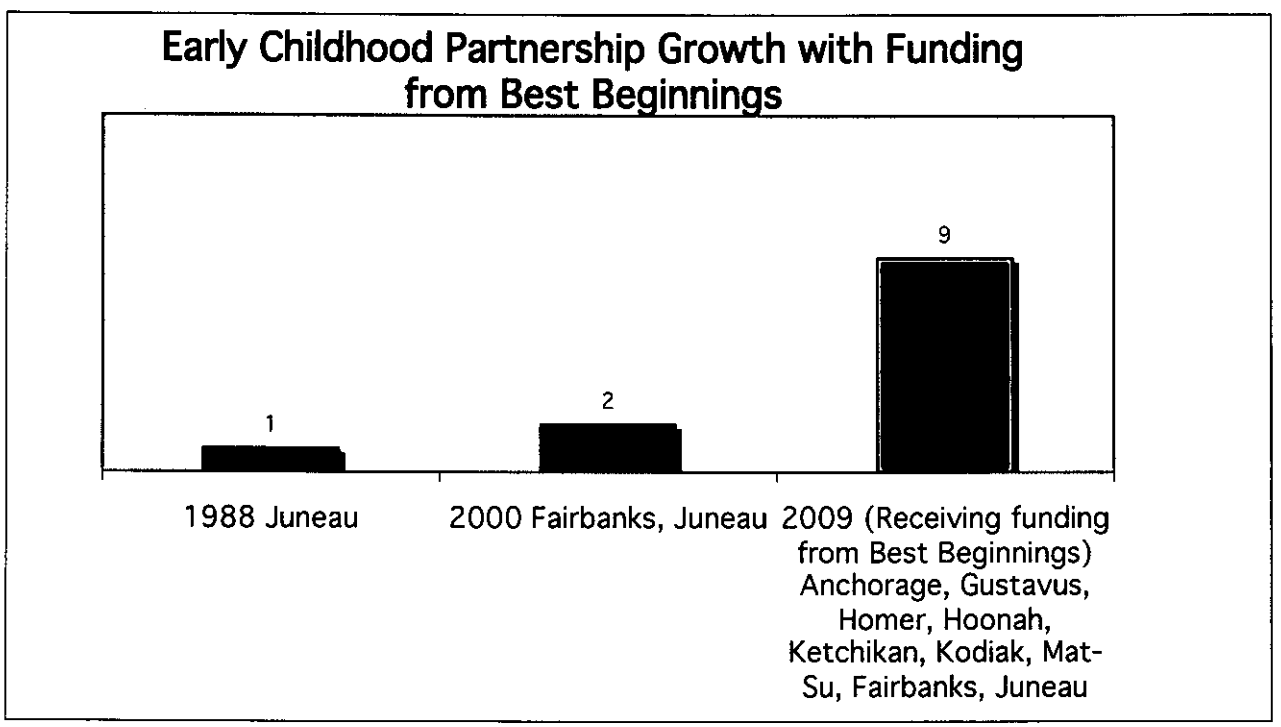
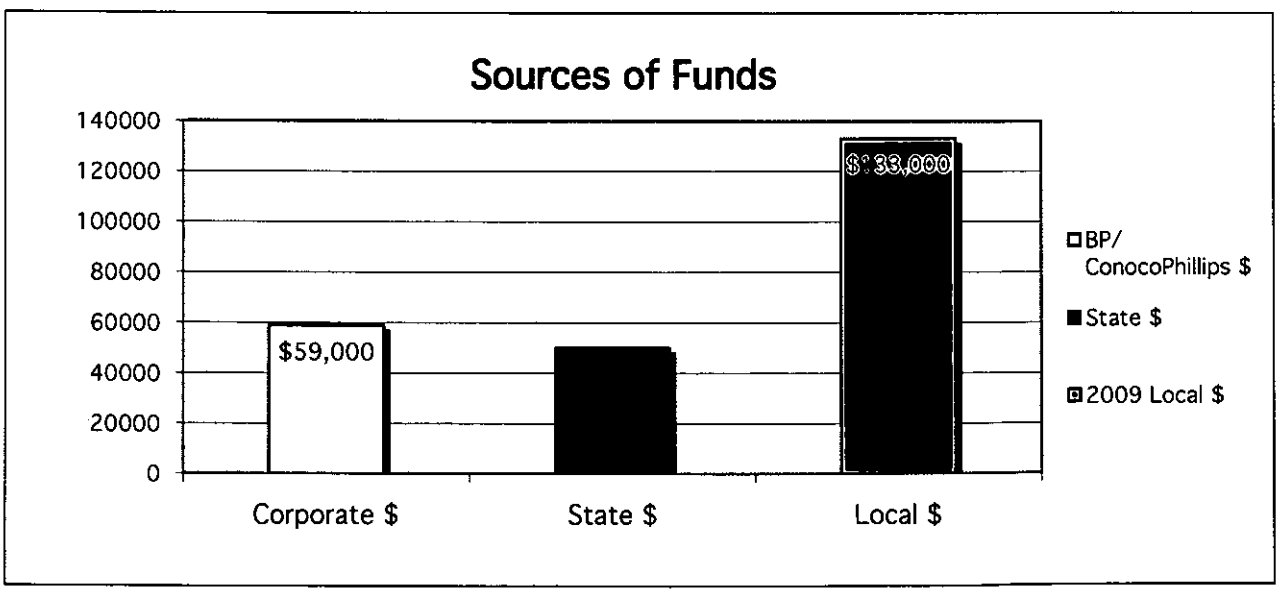
BEST BEGINNINGS

Alaska's Early Childhood Investment

BEST BEGINNINGS EARLY CHILDHOOD PARTNERSHIPS





BEST BEGINNINGS

Alaska's Early Childhood Investment

Imagination Library

Request

- $400,000 for FY11 to expand Imagination Library, which mails a free book every month to enrolled children, birth to age 5.
- Requested funds would expand the program to cover at least 14,000 Alaska children, about 28% of all children under 5. Leveraged local and private funding would increase the number of children served.

Rationale

- About 40% of Alaska children begin school unprepared to succeed. Alaska's dropout rate is among the highest in the nation.
- Early literacy is a key indicator of how a child will fare in school and in life. Children who have not developed some basic literacy skills *by the time they enter school* are three to four times more likely to drop out in later years.
- Imagination Library helps children develop the literacy skills they'll need to succeed … in their own homes, with their families.
- Imagination Library in Alaska has grown by leaps and bounds since Best Beginnings became involved. Best Beginnings provides technical assistance and funds to launch Imagination Library in new communities and to continue and expand the program in communities already participating.

Accomplished to date

- Children impacted: Through the efforts of Best Beginnings and its partners, funds have been allocated to enroll 10,192 children in 32 communities. More than 1,500 additional children have graduated from the program when they turned 5.
- Private and local support: In most communities, volunteers raise funds locally to match grants from Best Beginnings. Best Beginnings has received major grants for Imagination Library from the private sector, foundations, and the Alaska Department of Education & Early Development. To date, $471,130 has been contributed in private and local support. The total will rise further later this year when local contributions begin matching a second Rasmuson Foundation grant (for 2010 and 2011) of $150,000.

Longer term goals

- Fully subsidize Imagination Library in communities with very limited resources.
- Enroll at least 80% of the children under age 5 in the current Imagination Library communities.
- Expand to additional communities so that every Alaska child, birth to age 5, would be eligible for Imagination Library.

Investing in Alaska's Young Children

Alaska Early Care and Education: Public Policy Priorities for 2010

A Collaborative Effort

- Abbe Hensley, Executive Director, Best Beginnings
- Melissa Pickle, Director, RurAL CAP Parents as Teachers
- Candace Winkler, CEO, thread
- Joy Lyon, Alaska Association for the Education of Young Children (AK AEYC)
- Other Partners: Alaska Head Start Association (AHSA), Alaska Infant Learning Programs Association (AILPA)

Alaska Facts

- 49,670 children under 5
- 1 out of 5 living below the federal poverty level
- Most likely to be poor – youngest children

Alaska's Early Childhood Legislative Priorities 2010

- Denali Kid Care
- Head Start
- Home Visiting
- Early Childhood Partnerships
- Imagination Library
- Access to Quality Child Care
- Quality Rating and Improvement System
- Professional Development and Retention of Early Educators

Early Childhood System

- Comprehensive early childhood system, not just separate, individual programs
  - Early learning
  - Health, mental health, and nutrition
  - Family support
  - Special needs/early intervention

Legislative Priority

- Early childhood partnerships
  - Move decisions closer to those being served
  - Bring people together to solve problems
  - Pinpoint actual needs
  - Respond to cultural considerations
  - Focus on solutions, not turf
  - Ensure the best outcomes in each community for young children
  - A network of effective community and regional organizations that support comprehensive early childhood services called for by ECCS, Ready to Read, Ready to Learn, and Governor's Summit on Early Learning

Legislative Priority

- Early childhood partnerships 2009-10
  - Nine communities, with about 78% of Alaska children 0-5
  - Conducted needs and assets assessments
  - Identified priorities
  - Developing strategic plans
  - Taking action!

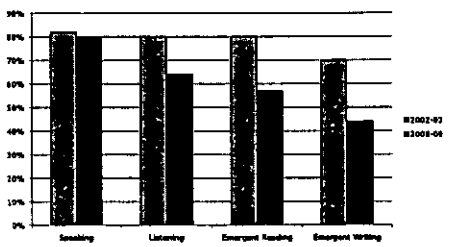
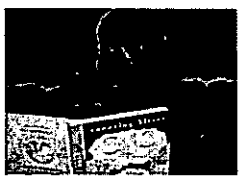
Alaska Kindergarten Developmental Profile Results



10

Legislative Priority

- Dolly Parton's Imagination Library in Alaska



11

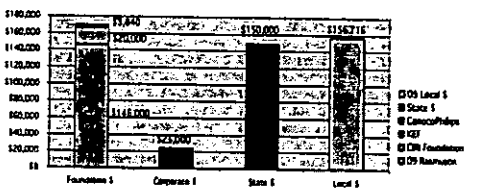
Legislative Priority

- Imagination Library 2009-10
  - 32 communities participating
  - **7,594** children enrolled March 2010
  - Funds allocated for 10,192 children
  - 1,500 children have already "graduated"
  - Kuskokwim Educational Foundation funding books in all 10 villages
  - Funding from Rasmuson Foundation, Dept. of Education & Early Development, ConocoPhillips, The CIRI Foundation, multitude of individuals and local businesses
  - 49,670 Alaska children under 5

12

Legislative Priority

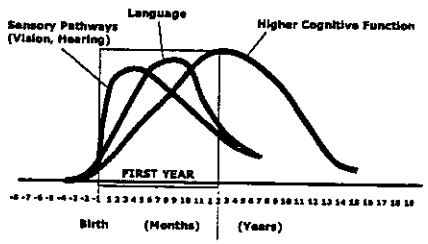
Sources of Imagination Library Funds



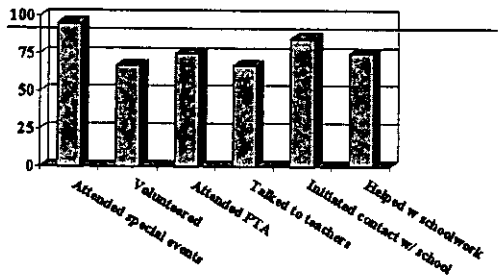
Legislative Priority

- Early Childhood Home Visitation Programs
  - Increase parent knowledge of early childhood development beginning at birth
  - Promote early literacy experiences
  - Improve parenting practices
  - Prevent child abuse and neglect
  - Provide early detection of developmental delays and health issues
  - Increase children's readiness to succeed in school
  - Increased parent involvement in school

Neural Connections in the Brain



PAT Parent Involvement at School



Legislative Priority

- Alaska Parents as Teachers 2008-09
  - 11 programs funded through federal grants
  - 47 communities served
  - 910 families served
  - 1,112 children served
  - 74 prenatal women served
  - 14 homeless families served
  - 762 children received developmental screenings with 162 found to need further evaluation
  - 336 families linked to other services

Head Start/Early Head Start

- Comprehensive school readiness program providing educational, health , nutritional social and other support services
- Eligibility criteria based on income level and poverty of access designation
- Models of service include classroom and home visitation
- Parents as partners in program design, implementation and evaluation

Alaska Head Start Association (AHSA)

- An Overview of Head Start in Alaska
  - 16 Head Start Grantees across the state
  - Providing services in over 100 communities
  - Serving over 3,500 children and employing over 950 staff members
  - Funded by Federal and State grants

Support Brings Success!

2008-2009 Alaska Head Start Summary Report

- 276 children identified as needing medical treatment
- 515 children identified as needing dental treatment
- 77 children identified as needing mental health services
- 379 children identified as having special needs
- 781 parents referred for emergency/crisis intervention services
- 1119 parents requested parenting information
- $27,744 – Average pay for a BA degreed Head Start Teacher in Alaska

Alaska Head Start Association (AHSA)

Legislative Priorities: Head Start & DKC

- AHSA Critical Issues 2010
  - Inflation proof current state investment in Head Start to prevent reduction of children served
  - Increase state investment in Head Start to expand services and address critical infrastructure needs such as facilities
  - Develop a comprehensive statewide plan to enhance service delivery and minimize duplication
  - Dedicate workforce development funds
  - Increase income eligibility guidelines for Denali Kid Care

thread, AK early care & ed connection

"the common thread" that ties together statewide support for families, early educators and Alaska communities

- Linked 7,600 families with referrals
- Educated 2,500 professionals
- Guided 200 programs to best practice
- Served 58 communities throughout AK

Alaskan Children With Working Parents

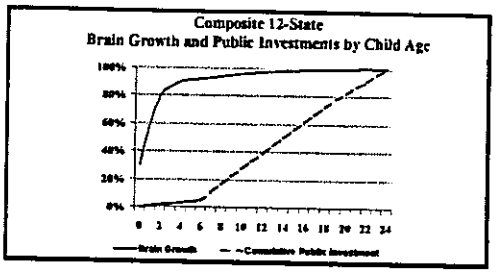
- In AK 60,000 children under age 6
- Of those 40,000 children have all of their parents in the workforce
- In AK less than 24,000 licensed or approved spaces in child care, head start, preschools

Challenges for many families…

- The average rate for Infant and Toddler care between $500- $1000 per month
- Most programs spend 70-80% of their budgets on Personnel Expenses
- Early Educators make an average of $9/hour and turnover is 46%

36% of households with children under age 6 reported work restrictions due to child care issues

Public Investment in Early Education



25

Legislative Priority: Access to Quality Child Care:

- Goal: Provide lower income children the opportunity to access higher quality child care services through Child Care Assistance
  - Increase the reimbursement rate to the 75th percentile
  - Increase family eligibility to 85% of the state median income.

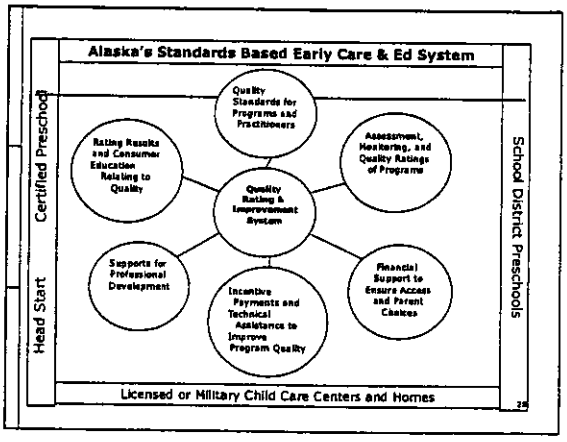
Family eligibility hasn't been changed since 2002

26

Legislative Priority: Quality Rating and Improvement System (QRIS)

- Helps parents make the best choices for their families
- Moves programs towards quality
- Provides outcome information for policy makers to assess different funding strategies

27



28

Legislative Priority: Professional Development & Retention of Workforce

Purpose of Priority:

- Decrease financial barriers to professional development opportunities
- Increase recruitment and retention in the early care and education field

Research indicates the biggest factor in the quality of a program and in improving child outcomes is the teacher education level

29

Alaska's Child Care Workforce

- Less than 10% of the child care workforce has a college degree
- National Accreditation standards and Head Start standards are moving towards a BA teacher in each classroom
- In Child Care with the average wage of $9/hr and a 45% turnover rate additional support is needed to increase the quallfications of teachers

30

Alaska's Early Childhood Legislative Priorities 2010

thread

ALASKA HEAD START ASSOCIATION
Critical Issues
2010

- **INCREASE STATE OF ALASKA INVESTMENT IN HEAD START BY $3,500,000**

During the summer of 2008 the Alaska Head Start Association worked to put together a comprehensive two-year Head Start expansion plan to present to the Department of Education and Early Development. This plan called for $2.5 million in new funding from the state of Alaska in FY 2010 and FY 2011 to enroll approximately 275 new children. Another $1.6 million was included for deferred maintenance and to assist grantees to maintain existing slots that would otherwise be eliminated due to increased operating costs. While AHSA appreciates the Legislature's appropriation of $600,000 for Head Start expansion in FY 2010, this amount allowed grantees to enroll only 59 new children in three communities. In addition, programs across the state have struggled to maintain the same quality and quantity of services because appropriations have failed to keep pace with rising costs. Increased energy costs continue to be a serious concern for programs.

ACTION NEEDED: ***Increase Head Start funding by a total of $3,500,000. This amount allows approximately 220 additional children to receive Head Start services, addresses critical infrastructure needs and prevents any reduction in the number of Head Start slots available in Alaska.***

- **SUPPORT A COMPREHENSIVE STATE-WIDE PLAN TO ENSURE THAT ALL EARLY CHILDHOOD EDUCATIONAL SYSTEMS AND SERVICES ARE COORDINATED AND COMPLEMENTARY**

The Alaska Head Start Association supports continuation and expansion of a Pilot Preschool Program. AHSA believes that the need for Early Childhood Education in our state far exceeds what our existing systems can provide. However, the association also believes that the state has a responsibility to ensure that all publicly funded systems, existing and new, are working together to provide services in a coordinated and complementary manner. Written agreements addressing eligibility, enrollment, and recruitment need to be in place between all early childhood systems that are providing services in a common area.

ACTION NEEDED: ***Ensure that a comprehensive state-wide plan addressing how early childhood services will be delivered is developed and implemented. Any new legislation should require written coordination agreements between early childhood systems to eliminate duplication or competition in early childhood service delivery.***

• DEDICATE WORKFORCE DEVELOPMENT FUNDS TO SUPPORT HEAD START TEACHER QUALIFICATIONS

The "Improving Head Start for School Readiness Act of 2007" has established the following professional development requirements for Head Start:

- By September 30, 2011 100% of Head Start teachers must have an associates degree in early childhood education
- By September 30, 2013 50% of Head Start teachers nationwide must have a bachelor's degree in early childhood or a bachelor's degree and course work equivalent to major in early childhood education.
- By September 30, 2013 100% of Head Start Education Coordinators and Curriculum Specialists must have a bachelor's degree.
- By September 30, 2013 100% of Head Start teaching assistants must have a CDA and be enrolled in a degree program.

Alaskan Head Start grantees have made significant progress over the past five years to try and meet the existing professional development requirements. However to meet these new requirements by the timeframes outlined we will need to have a coordinated statewide response. Obtaining degrees takes time, especially when staff are taking classes via distance delivery and working full time jobs. Often this means that early childhood educators are only able to take classes in the evenings and during the summer.

ACTION NEEDED: ***The Department of Labor and Workforce Development should designate workforce development funds for early childhood education because it is an under-developed profession.***

• SUPPORT INCREASED HEALTH CARE ACCESS FOR ALASKAN FAMILIES WITH YOUNG CHILDREN

The Alaska Head Start Association strongly supports an increase in funding for the Denali KidCare Program. By taking this action our state will restore and expand eligibility criteria for health care coverage for the children of Alaska's working families. The primary goal of Head Start is to make sure children are prepared for success as they enter their school years. A vital piece of this preparation is insuring that families have affordable, adequate health insurance coverage for their children, which Denali KidCare provides.

ACTION NEEDED: ***Increase the income eligibility guidelines for Denali KidCare to at least 200% of Alaska's federal poverty level.***

Alaska Head Start Association

Why Head Start Matters

Alaska's Head Start programs prepare young children for success in school and life.

1. **Head Start children are healthier than their peers from similar socio-economic backgrounds who are not enrolled in Head Start. Healthy children learn better.**

FACTS*
(The following figures refer to Head Start only. Early Head Start is not included.)

- 78% of Alaska's Head Start children received health screenings that meet Early Periodic Screening, Diagnosis and Treatment (EPSDT) standards. (EPSDT is Medicaid's well child check up program.) This compares to a 50% EPSDT medical screening rate for eligible 2-5 year olds statewide**.
- Of the 2,152 Head Start children who received health screenings, 356 were diagnosed as needing treatment for a variety of potentially serious conditions, including hearing & vision problems, anemia and asthma.

CONCLUSION
Without Head Start, we estimate that 100 or more children would enter kindergarten by 2009 with significant undiagnosed and untreated health problems.

**Based on federal 2007 Program Information Reports (PIR) for Alaska grantees.*
***For 2003, reported in the National Health Policy Forum issue brief #819, 11/20/2006.*

FACTS*
(The following figures refer to Head Start only. Early Head Start children are not included.)

- 88% of Alaska's Head Start children received dental exams. This compares to a 25% EPSDT dental screening rate for eligible 3-5 year olds statewide**.
- Of the 2,425 Head Start children who received dental exams, 586 were diagnosed as needing dental treatment. 376 of these children (64%) received treatment.

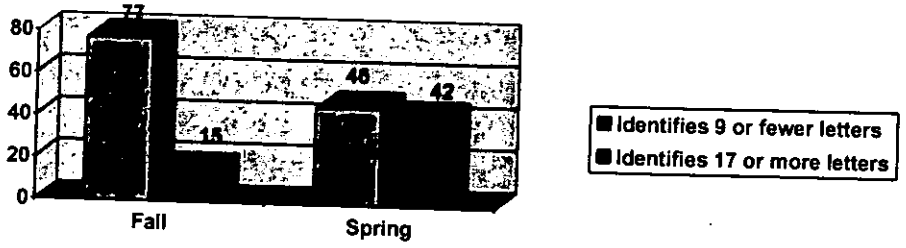
CONCLUSION
Without Head Start, we estimate that 270 or more children every year would live with untreated oral health needs. These conditions place a child's speech development, nutritional well-being, overall health and future oral health at risk.

**Based on federal 2007 Program Information Reports (PIR) for Alaska grantees.*
***For 2003, reported in the National Health Policy Forum issue brief #819, 11/20/2006.*

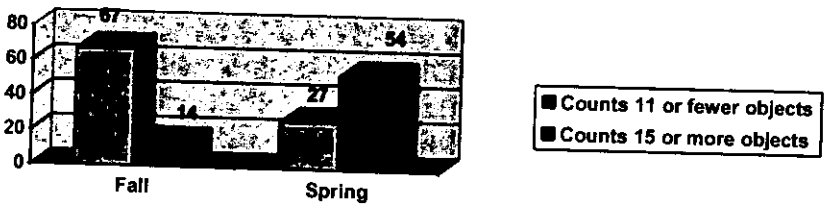
2. **Participation in Head Start improves literacy and math skills for many children who are at risk of starting kindergarten behind their better off peers in these areas.**

The following graphs are based on information taken from the National Head Start Reporting System (NRS) results of 11 Alaska grantees during the 2006-2007 program year. The NRS assesses only children who were going to kindergarten in 2007. The graphs include only those children assessed in both fall and spring— a total of 352 children in Region X programs and 329 children in AIAN programs.

Letter Recognition
(Percentages)



Early Math Skills
(Percentages)



Alaska's Head Start programs achieved results that approach national norms even though program characteristics differ from national averages in several significant ways.

- Alaska has fewer full day programs
- Alaska has fewer teachers with a Bachelor's degree

Program Characteristic	Alaska Program Averages	National Head Start Averages
Percentage of teachers with Bachelor's degree or higher	20%	44%
Percentage of children enrolled in full day programs	10%	53%

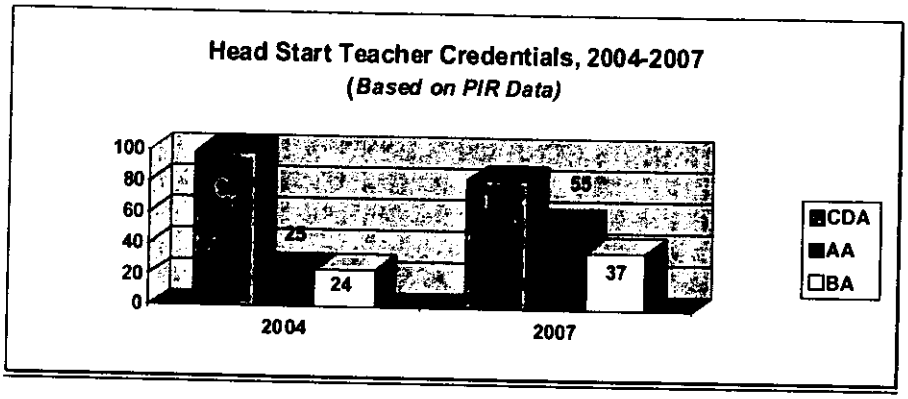
3. **Participation in Head Start increases the likelihood that children with previously undiagnosed disabilities will receive diagnosis and therapy for their disability before they enter kindergarten.**

FACTS*
(The following figures from the federal 2007 Program Information Report for Alaska grantees refer to Head Start only. Early Head Start children are not included.)

- 95% of Alaska's Head Start children received developmental screenings exams.
- Of the 2,600 Head Start children who received developmental screenings, 276 were eventually diagnosed with a disability.

CONCLUSION
Without Head Start, hundreds of Alaska's children would enter kindergarten every year with undiagnosed disabilities.

4. **The quality of Head Start teachers continues to improve in spite of funding and distance learning challenges.**



5. **Head Start provides economic benefits for all of Alaska.**

Federal Head Start grants injected over 27 million dollars into Alaska's economy in FY 2007. This sum does not include the many other sources of federal revenue, such as Child and Adult Care Food Program (CACFP) reimbursements, which Head Start programs attract. This investment provides an important source of economic activity and employment in many of the rural communities listed on page one. For example, Head Start programs employed 927 people in 2006.

The Future of Head Start in Alaska

Many studies link high quality early child development programs to large and long term economic savings. We believe that the early intervention, health, and school readiness results described above testify to the high quality of Alaska's Head Start programs.

System for Early Education Development

Professional Development and Retention of Early Educators
(Public Policy Priority for 2010)

THE ISSUE

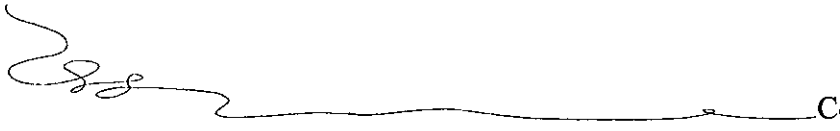
- The turnover rate for early care and education teachers in Alaska is approximately 46% (2003, Market Rate Survey). Teacher retention promotes attachment and quality relationships between young children and those who care for them which are crucial to optimal brain development and learning.
- Low wages and lack of financial resources for teacher's professional development impacts recruitment and retention of a qualified and stable workforce.
- Positive child outcomes are increased with higher levels of teacher preparation and formal education.

PROFESSIONAL DEVELOPMENT AND RETENTION OF EARLY EDUCATORS

- Three factors are positively associated with teacher quality: compensation, participation in professional development, and stability. Compensation appears to be the strongest predicator of classroom quality in child care centers (Kagan, et al., 2006). thread, Alaska's Child Care Resource and Referral Network, has the infrastructure to incentivize teachers with current credentials through the ROOTS (Retaining Our Outstanding Teacher) Awards. To impact retention, these awards must be calculated and distributed at significant levels that follow the SEED Professional Framework. Formal evaluation has shown that compensation programs have demonstrated considerable increased retention rates in states where initiatives exist.
- Scholarship type programs can reduce financial barriers to further education and training for teachers. thread provides up to $500 per year for qualified education expenses for early educators working in licensed programs. Increasing these annual awards an additional $500 would facilitate the completion of additional professional development and improve the quality of early care and education for Alaska's children.
- Research has consistently shown that higher levels of provider education and training are associated with more positive and stimulating teacher behavior resulting in more positive child outcomes. Education and training that increase positive interactions between adults and children impacts multiple areas of development (Pianta, 2006; Ramey et al., 2008).

ACTION NEEDED

- $1.5 million to increase professional development opportunities for early educators and to provide financial incentives to increase retention in the early education field



Connected with thread.

Rationale for Alaska SEED ROOTS Awards

The Alaska 2009 Child Care Market Rate Survey with 395 respondents provides data that supports the need for wage increases tied to increased professional development. The majority (81%) of responding programs report needing to hire new staff from once every month to 2-3 times per year and 61% of all providers report hiring and retaining qualified staff as "very difficult." Responses to questions about challenges with staff retention include lack of qualifications/education as the number one factor with lack of ability to offer benefits as second. Center/group home providers reported to hire and retain qualified caregivers requires on average $12.50 per hour.

Other national programs such as WAGE$ has produced the following recent outcomes:

- The annual turnover rate was 15% for WAGE$® Project participants, far less than the pre-program statewide turnover rate of 31% per year and less than the current statewide turnover rate of 24%.
- Sixty percent (64%) of WAGE$® Project participants indicated that they had taken college level coursework since applying to the Child Care WAGE$® Project and 86% plan to do so in the future.
- Eighteen percent (19%) of WAGE$® Project participants moved up a level on the supplement scale due to continued education.

To increase early educators' wages from the statewide average of $ 11 per hour (2008, wage survey, Alaska Department of Labor) to the desired $12 per hour would require the following increases. Each tier is tied to incremental educational attainment with a 60% increase for each one. Calculations are based on the current professional development of the early childhood field to include child care and Head Start.

TIER I: Child Development Associate Level (used SEED level 6& 7) includes CDA and unrelated AA with credits or Occupational Endorsement	223	223 x $2080= $463,840
TIER II: AA/AAS Level (used SEED levels 8 &9) includes related AA and ECE AA and unrelated BA	119	119 x $3328=$396,032
TIER III: BA/BS/MA Level (used SEED levels 9, 10, &11) related BA, unrelated BA with ECE credits, BA in ECE, & MA	129	129x $5324=$686,796

TOTAL: $1,546,668

ANCHORAGE URBAN LEAGUE

ALASKA SEEDS OF CHANGE

Providing Transitional Services for Our Youth

National Urban League
celebrating 100 years

ANCHORAGE URBAN LEAGUE

Mission:

The purpose of the Anchorage Urban League is to provide direct services to African-Americans and other people of color in our community – thereby empowering us to secure economic self-reliance and parity.

The Anchorage Urban League endeavors to enrich our community by embracing our diversity and addressing real needs among our population.

National Urban League
celebrating 100 years

ANCHORAGE URBAN LEAGUE

Alaska Seeds of Change - Challenges Facing Transitional Youth:

- High rates of unemployment, lower wages.
- High dropout rates.
- Involvement with criminal justice system.
- High rates of homelessness/unsafe housing.
- Development of mental health & substance abuse problems.
- Less community engagement.

National Urban League
celebrating 100 years

ANCHORAGE URBAN LEAGUE

Alaska Seeds of Change - Why a Social Enterprise?

- Funding sustainability.
- Providing services in a normalized setting.
- "Real world," challenging opportunities to acquire and apply skills.
- Youth recognized as resources and not merely as "problems."

National Urban League
celebrating 100 years

ANCHORAGE URBAN LEAGUE

Alaska Seeds of Change - Program Highlights:

- Comprehensive, individualized transitional services for youth with complex emotional and behavioral needs.
- Youth acquire independent living skills (including employability skills and job experience) by participating in all major aspects of running an urban greenhouse business.
- Internships for students from the University of Alaska Anchorage. SOC will promote workforce development.
- Measure functional outcomes and implement evidence-supported practices.
- Help grow the local food production system through the use of innovative energy-conservation growing practices.

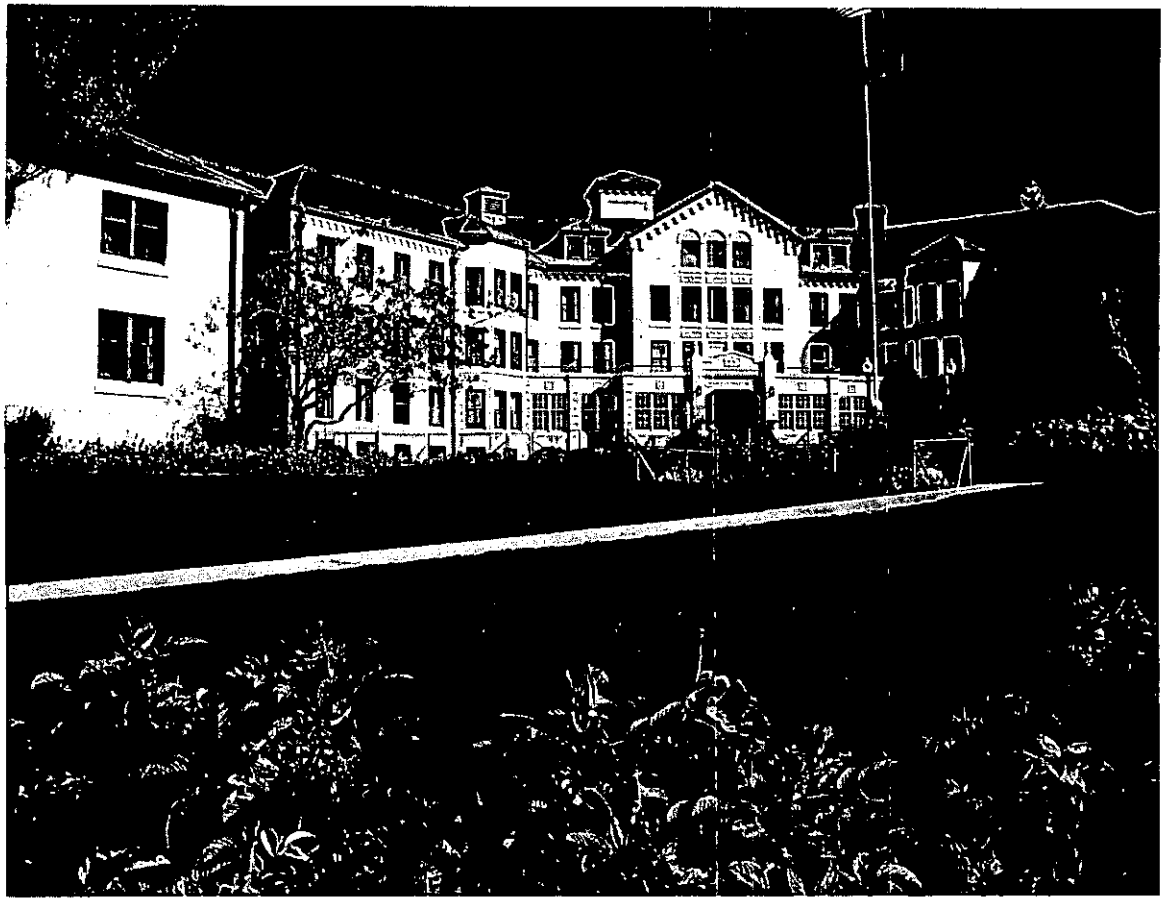
The Alaska Division of Pioneer Homes; Planning for Tomorrow

February 2010

The Pioneer Homes have a long history of providing care to Alaska's elderly and are an important part of the senior services continuum of care.



The Sitka Pioneer Home built in 1913

Where the Alaska Elder population is going….

Table 1: Alaska population projections by age group for ages 60 and up, 2010-2030

Age	2010	2015	2020	2025	2030
60-64	35,359	43,061	44,317	40,560	33,434
65-69	21,872	31,865	39,135	40,455	36,954
70-74	13,251	19,091	28,193	35,020	36,363
75-79	8,854	10,924	15,916	23,880	29,953
80-84	6,026	6,655	8,278	12,264	18,645
85-89	3,435	4,033	4,475	5,635	8,414
90+	1,886	2,412	2,905	3,292	4,062

How we meet the need's of Alaska's elder's today

Age	2010	2015	2020	2025	2030	2010-15	2015-20	2020-25	2025-30
65-69	641	809	891	946	692	26.2%	10.1%	6.2%	26.8%
70-74	472	558	708	789	849	18.2%	26.9%	11.4%	7.6%
75-79	277	382	454	589	668	37.9%	18.8%	29.7%	13.4%
80-84	227	208	285	348	460	-8.4%	37.0%	22.1%	32.2%
85-89	145	155	144	198	241	6.9%	-7.1%	37.5%	21.7%
90+	85	97	104	102	130	14.1%	7.2%	-1.9%	27.5%

How will the Alaska Pioneer Homes meet the needs of elder Alaskans in the future?

Table 13: New beds needed to meet projected demand, 2015-2030

*June 2009

Pioneer Home	Occupied Beds*	2015	2020	2025	2030
Anchorage	164	35	49	82	121
Fairbanks	84	20	23	37	65
Palmer	71	25	28	37	58
Juneau	43	5	9	15	27
Ketchikan	42	6	10	14	11
Sitka	58	7	12	17	16
Total	**462**	**98**	**131**	**202**	**298**

Total projected new beds needed for the period 2015 – 2030 = 729 (per Information Insights projection data).

Conclusion

- There is clearly a need to expand the service array for seniors in the next twenty years.
- As part of this service array, the Pioneer Homes should consider expanding bed capacity by approximately 200 beds in a phased approach.
- Emphasis should be on creating Level III beds, our most dependent level of care, because elders are entering our homes at higher acuity levels and consequently there is more demand for Level III beds.
- A study should be conducted to determine the feasibility of adding to the existing Homes in particular where we currently own land and/or determining where additional Homes could be built.

questions to be asked by Sen Paskvan

Amory Lelake

From: Jake Hamburg
Sent: Wednesday, March 18, 2009 11:24 AM
To: Amory Lelake
Subject: HSS Confirmation Questions

I want to compliment you and your department for the 2009 Priorities list.

- Please describe the progress made on substance abuse prevention, intervention and treatment outlined in your 2009 priority list.
- Please describe the status of developing a long-term care plan and outline the plan.
- Please discuss social service staffing, and any progress made toward improving the staffing levels, as well as what is needed.
- How would you classify mental health treatment in Alaska?
- In Fairbanks, the waiting list for mental health care can be roughly 3 months if no physical harm has been committed by a patient, in corrections we fund treatment programs that face uselessness because of limited available access to out of facility treatment, and those that are lucky to find treatment can often see a different person each visit. Would you comment on this, and please discuss how you are working to address these problems.
- This committee has largely supported efforts to improve health care access and affordability. Please address your plan to address these same problems. Also, please share where you see needed improvements.
- Rates of domestic violence and sexual assault remain the highest in the country. What must be done to finally end this terrible problem in our state? How do you view the department's role in reducing the rates of domestic violence? Please describe the department's increased efforts.

Jake Hamburg

Senate Committee on Health & Social Services

Sen. Bettye Davis, Chair
Sen. Joe Paskvan, Vice Chair
Sen. Johnny Ellis

Sen. Joe Thomas
Sen. Fred Dyson

SENATE CONFIRMATION COMMITTEE REPORT

Date: 3/18/2009

In accordance with AS 39.05.080, the Health and Social Services Committee reviewed the following and recommends the appointments be forwarded to a joint session for consideration:

Commissioner Department of Health and Social Services:
William H. Hogan

State Medical Board:
Edward A Hall
Casey M. Millar
Dr. David Miller
Dr. David J. Powers.

Alaska Mental Health Trust Authority Board of Trustees:
Dr. William Doolittle
Mary Jane Michael
Chief Daniel Hoffman

Board of Dental Examiners:
Robyn Chaney
Dr. Mary Ann Navitsky
Deborah Stauffer
Dr. Clifford Douglas White

Board of Marital and Family Therapy:
Kimberly K. Horn
Patricia A. White

Board of Certified Direct-Entry Midwives:
Barbara Norton

Board of Nursing:
Thomas Hendrix
Janine L. McCready

Board of Examiners in Optometry:
Dr. Dennis A. Swarner

Board of Pharmacy:
Leah Handley
Steve R. Johnson
Chris "CJ" Kim
Mary D. Mundell

Board of Professional Counselors:
Ray DePalatis
Lillian Mitchell
Tashawna L. Olson

Board of Psychologist and Psychological Associate Examiners:
Dr. Kristin H. Fuller

Board of Social Work Examiners:
Darrell Allman
Gail La Rose-Henderson
Patty McMillin

This does not reflect an intent by any of the members to vote for or against the confirmation of the individuals during any further sessions.

Signature:	**Printed Last Name**
	PASKVAN
	DYSON
Chair: Betty Davis	DAVIS

Please return to the Senate Secretary's Office (Room 213).

Alaska Department of Health and Social Services

2009 PRIORITIES

The overriding theme for future direction for the Alaska Department of Health and Social Services is ***helping individuals and families create safe and healthy communities.***

Substance Abuse

Substance abuse affects every family and community in Alaska. It is a contributing factor in suicides, crime, unemployment, domestic violence, child abuse, school dropouts, juvenile delinquency, etc. We need to prevent, intervene early, treat and help people recover from substance abuse through public/ private partnerships and long-term strategies.

Major strategies include:

- **Prevention:** Implement Prevention of Underage Drinking Initiative; target substance abuse and suicide prevention programs to those communities most in need.
- **Early Intervention:** Integrate primary care with behavioral health (mental health and substance abuse); screen all youth in the juvenile justice system for substance abuse.
- **Treatment:** Develop and implement family-based treatment services (based on the California SHIELDS for FAMILIES project); submit substance abuse Medicaid Waiver targeting adults; implement involuntary treatment and secure detoxification services.
- **Recovery:** Support array of recovery services using performance-based standards and funding. Continue to integrate mental health and substance abuse services into a behavioral health system.

Health and Wellness

Many Alaskans lead less happy and less productive lives, and many die prematurely each year, because of disability and death caused by tobacco, alcohol abuse, injuries, obesity, diabetes, cancer, heart disease, and sexually transmitted diseases. The economic impact of chronic disease alone in Alaska is staggering: an estimated $600 million is spent annually on direct medical services and $1.9 billion in lost productivity. Most of this is attributable to personal choice involving diet, physical activity and tobacco use — and is preventable. We can do a better job of screening, diagnosing and treating these conditions.

Major strategies include:

- **Prevention:** Implement evidence-based, population-based health promotion efforts. Increase primary prevention approaches, including those targeting increased self responsibility, improved policies and environmental supports that encourages healthy choices. Educate about and improve methods for screening, diagnosis, and early treatment of conditions and behaviors most detrimental to the physical and mental health of Alaskans. Implement Early Childhood Comprehensive System recommendations (including a focus on early childhood mental health).
- **Access:** Grow the health care workforce and expand the number of Alaskans with health insurance.
- **Trauma system:** Develop a statewide trauma system.
- **Emergency Response Planning and Preparedness:** Work with communities to prevent health emergencies and prepare for pandemics and natural disasters.
- **Environmental Health Impacts:** Assess, guide and mitigate environmental impacts on health in Alaska. Develop expertise in performing health impact assessments.

Health Care Reform

Alaska's health care system continues to be fragmented and uncoordinated and doesn't produce the kinds of outcomes we expect. By strategically focusing on care management, reforming Medicaid, creating a Health Care Commission and growing our health care workforce, we can transform our health care system.

Major strategies include:

- **Care Management:** Improve care coordination; implement disease management program for chronic diseases and explore use of primary care case management strategy for most disabled populations; complete planning for the Bring the Kids Home Initiative.
- **Medicaid Reform:** Develop legislative and systemic recommendations for reforming Medicaid aimed at improving Medicaid sustainability.
- **Health Care Commission:** Establish a commission in order to build public awareness and define the future roles of the state, business, providers and individuals regarding health care funding and delivery.
- **Health Care Workforce:** Partner with the federal government and other states to increase training capacity and expand training programs for health care professions.

Continued ...

Alaska Department of Health and Social Services

2009 PRIORITIES

Long-Term Care

Seniors represent the fastest growing population in Alaska and it is our responsibility to determine what kinds of services we want for our aging parents (and grandparents) in order to keep them at home in their own communities. We need to develop a long-term care plan, improve services to those with Alzheimer's Disease and related disorders, and promote the expansion of aging and disability resource centers.

Major strategies include:

- **Long-Term Care Plan:** Develop an immediate and sustainable long-term care plan. DHSS has contracted with HCBS Strategies to develop this plan, which includes:
  - support for family caregivers;
  - improved service arrays and definitions of future roles of residential settings, e.g., the Pioneer Homes and nursing homes;
  - development of the workforce to meet long-term care needs; and
  - interdisciplinary departmental planning to provide quality assurance, provider training, audit and compliance coordination.
- **Long-Term Care and Services for Alaska Natives:** Work with the Alaska Native Tribal Health Consortium to identify and implement long-term care services.
- **Alzheimer Disease and Related Disorders Waiver:** Submit Waiver.
- **Aging and Disability Resource Centers:** Promote expansion of these centers.

Vulnerable Alaskans

We need to ensure that both kids and communities are safe, that developmentally disabled kids and adults have access to quality services and supports, and that individuals and families get the kind of financial and vocational supports they need to be contributing members of society. By focusing on family-centered services and through the use of performance-based standards and funding, we can better meet the needs of our most vulnerable citizens and their families.

Major strategies include:

- **Family-Centered Services Project:** Expand this project, which is designed to help families leave the public assistance rolls and find employment.
- **Performance-Based Standards:** Implement use of performance-based standards and funding for grantees.
- **Licensing, Certification and Training Standards:** Ensure providers comply with these standards.
- **Social Service Workforce:** Recruit and retain a qualified social services workforce using evidence-based practices to design and implement a department-wide approach.

WILLIAM H. HOGAN
P.O. Box 3896 Palmer, Alaska

William.Hogan@alaska.gov

EDUCATION

1991 Virginia Commonwealth University, Richmond, VA
Doctoral Work – Sociological Theory
1979 – 1980 West Virginia University, Morgantown, WV
Graduate – Master of Science in Social Work (MSW)
1976 – 1979 Syracuse University, Syracuse, NY
Graduate Course Work
1967- 1971 State University of New York at Buffalo, Buffalo, NY
Undergraduate – Bachelor of Arts in Sociology (B.A. Soc.)

PROFESSIONAL EXPERIENCE

2008-Current Alaska Department of Health and Social Services; Anchorage, Alaska – Commissioner –
Has authority and responsibility for all aspects of the department including policy development, planning, program and service delivery, finance and budgeting, information technology and statutory and regulatory compliance. The department is considered a "super agency" comprised of the Divisions of Public Health, Behavioral Health, Juvenile Justice, Public Assistance and Senior and Disabilities Services as well as the Office of Children's Services and the Alaska Pioneer Homes. In addition the department provides oversight and financing (Medicaid and state grants and contracts) of all health facilities through its Division of Health Care Services.
The department currently employs over 3600 staff and has a budget of $2.1 billion.

2005-2008 Alaska Department of Health and Social Services; Anchorage, Alaska – Deputy Commissioner, Family, Community and Integrated Services –
Had oversight responsibility for the Divisions of Public Assistance, Behavioral Health, Juvenile Justice, Senior and Disability Services, Office of Children's Services (Child Welfare) and the Alaska Pioneer Homes (Long Term Care). In addition was the primary liaison with the Alaska Mental Health Board, Advisory Board on Alcoholism and Drug Abuse, Alaska Commission on Aging, Governor's Council on Special Education and Disabilities, Suicide Prevention Council and the Council on Domestic Violence and Sexual Assault. Also provided supervision to the Office of Faith Based and Community Initiatives.
In conjunction with directors, ensured each entity or agency met or exceeded performance goals while maintaining alignment with overall department vision, mission and values.

2003-2005 Alaska Department of Health & Social Services, Division of Behavioral Health; Juneau, Alaska - Director

Was responsible for directing, planning, organizing and managing statewide programs for mental health and substance abuse (behavioral health). Formulated policy for community mental health services, the state psychiatric center and community programs for those experiencing substance abuse problems. Monitored program performance, reviewed and evaluated existing policies, procedures, statutes, regulations and recommended changes as appropriate. Oversaw all Division program and policy functions, coordinated administrative and financial activities with other components of the Department and designed and implemented the Division's performance management program. Oversaw the integration of the mental health and substance abuse service delivery system (behavioral health) as well as the development and implementation of the "Bring the Kids Home" Initiative. This initiative, designed to bring Alaskan kids with a serious emotional disturbance back to the state from out of state Residential Psychiatric Treatment Centers – and to keep kids in Alaska - by building a comprehensive system of care and proactively managing care – is considered a model program. Developed the conceptual framework for the creation of Regional Behavioral Health Authorities designed to manage care for all behavioral health services provided to Seriously Emotionally Disturbed (SED) Children and Seriously and Persistently Mentally Ill (SPMI) adults. The Division of Behavioral Health has 320 staff with a budget of $275 million.

1998-2003 Life Quest, Wasilla, Alaska – Chief Executive Officer – Was responsible for designing, developing, implementing and managing all prevention, treatment and rehabilitation services in a private not for profit community mental health center. The organization served over 1200 individuals annually in a geographic area comparable to the size of the state of West Virginia. The agency employed 150 staff with a budget of $6.5 Million.

1997-1998 National Association of Social Workers, New York State Chapter, Albany, NY – Executive Director – Served as chief executive and was responsible for planning, organizing, directing, and implementing all chapter programs and activities. Had management responsibility for all administrative, financial, human resource, marketing, and educational functions. The New York Chapter was the largest of all NASW Chapters with approximately 12,500 members.

1993-1997 Southwest Mississippi Mental Health (SWMMH) Complex, McComb, MS – Executive Director – Responsible for directing, planning, coordinating, operating, and monitoring all mental health, developmental disabilities services and substance abuse programs within ten counties of Mississippi. Served as Chief Executive Officer of the SWMMH Commission and President of the SWMMH Foundation. Was administratively responsible for the supervision of 200 staff members and consultants, and a $6.5 million annual budget. Was instrumental in preparing Mississippi mental health providers for Medicaid Managed Care through the creation of a community mental health provider network.

1986-1993 Colonial Community Services Board, Williamsburg, VA – Coordinator – Planned and coordinated mental health and substance abuse prevention, treatment, and rehabilitation services in York County and the City of Poquoson, Virginia. Supervised 12 staff members and consultants. Maintained a caseload of 50 clients.

1987-1993 Systemetrics – Medical Record Reviewer/Analyst – Responsible for reviewing both care coordination and mental health records in outpatient, residential and acute inpatient settings in the first mental health managed care program undertaken by the Dept. of Defense.

1990-1993 Catholic Charities of Hampton Roads, Virginia Beach, VA – Private Practitioner – Provided individual, couple, and family therapy in a managed care environment. Member of managed care provider panel. Experienced obtaining preauthorization for services and complying with all managed care requirements.

1990-1993 Virginia Commonwealth University, Richmond, VA – Adjunct Faculty Member – Supervised gradate-level students.

1984-1986 Essex County Community Services Board, Elizabethtown, NY – Director – Planned, coordinated, and served as chief executive of mental health and substance abuse prevention, treatment, and rehabilitation programming in Essex County, N.Y. Supervised 28 staff members.

1982-1984 Appalachian Mental Health Center, Developmental Disabilities Program, Elkins, WV – Director – Developed, directed, and coordinated services for developmentally disabled children and adults in four counties in West Virginia. Supervised a staff of 26.

1980-1981 Appalachian Mental Health Center, Barbour County, Philippi, WV – Director – Coordinated and ensured the delivery of mental health and substance abuse services to county residents. Maintained a caseload of 35 clients and supervised a staff of 12.

1979 West Virginia University Center for Extension and Continuing Education, Morgantown, WV – Graduate Social Work Intern – Facilitated the planning and implementation of the Cooperative Extension Leadership Development Program, which included program-evaluation mechanisms, project planning, and grant writing

1979 Summit Center for Human Development, Clarksburg, WV – Graduate Intern and Staff Member – Developed and implemented a primary prevention project in a small mining community. Involved grant writing, developing and conducting needs-assessment surveys, organizing community education programs, and revitalizing the Harrison County Mental Health Association.

1975-1978 Oswego County Community Mental Health Center, Oswego, NY – Social Work Assistant – Developed community support programs for long-term psychiatric

clients. Acted as the liaison to state hospitals and provided case-management services to 50 clients.

PHS Public Health Service for promoting dental hygiene in Southeast Alaska; 1991
Certificate, American Dental Association Institute for Diversity in Leadership; Kellogg School of Management, North Western University, 2005

Statement

After serving six years with the United States Public Health Service, I have established my own private practice in my hometown of Sitka, Alaska. In the Navitsky Dental Clinic, I have provided care for the last eighteen years, managing all aspects of my clinic. In a community with many limitations, my practice is handicap accessible.

In Sitka, my practice is focused on prevention, restoration, fixed and removable prosthodontics, oral surgery, and dental education of the patient's investment in their dental needs and care. As part of the community, my practice determines and offers pro bono dental care every year for special need cases. We provide a yearly open house for kindergarten school children for early dental education. We also support long term facilities, such as the Sitka Pioneer Home, Sitka Community Hospital Resident Care, and the Sitka Against Family Violence with dental care and supplies.

OBJECTIVE: To serve as a member of the Alaska Board of Dental Examiners

QUALIFICATIONS

Strong background in dental hygiene clinical procedures and processes; program evaluation; educational methodology; curriculum development and evaluation. Excellent oral and written communication and proofreading skills. Creative problem-solver.

EDUCATION

1970	Certificate in Dental Hygiene, Temple University; Philadelphia PA
1975	B.S. in Interdisciplinary Studies, University of Alaska, Anchorage; Anchorage AK
1977	Dental Auxiliary Faculty Training Institute, University of Washington, Seattle WA
1982	M.S. in Vocational Education, University of Alaska, Juneau (currently named the University of Alaska Southeast); Juneau AK
1987	Ed.D. in Higher and Postsecondary Education, secondary emphasis in Educational Administration and concentration in Continuing Professional Education; University of Southern California, Los Angeles CA
1970-present	Various formal continuing professional development courses in dentistry and education

LICENSES AND CERTIFICATIONS

Alaska Dental Hygiene License – AA0088 – Held since 1971
Alaska Local Anesthesia License – AK 0014 – Held since 1982
Healthcare Provider (CPR) certification – Held since approximately 1975
Pennsylvania Dental Hygiene License – DH3593 (inactive) – 1970

EMPLOYMENT

2004 – 2006 *Doctoral Committee Member, University of La Verne*, LaVerne CA.
Emphasized University Student Services

2004 *Education Consultant, Cook Inlet Tribal Council, Inc.*, Anchorage
Developed entrepreneurship curriculum and student and teacher workbooks, and provided training to instructors geared to the Alaska Native population.

2001-present *Temporary Clinical Dental Hygienist*, Anchorage AK

Provide dental hygiene treatment services and health education for patients in general practices.

2001- present *Educational Consultant, International Training Institute*, Anchorage AK
Evaluate online interactive multimedia training curriculum for dental professionals.

2001 *Associate Dean for Academics, UAA College of Health, Education, and Social Welfare*
Administered all aspects of student-, program-, and curriculum-related issues for undergraduate and graduate programs in education, justice, social work, physical education, nursing, and human services. Taught clinical dental hygiene courses.

1990-1993 *Doctoral Program Manager and Adjunct Professor, Oregon State University*, Corvallis OR
Conducted student applicant recruitment, managed the program, and taught two classes for an off-campus (Anchorage) doctoral program in Vocational Education. OSU selected ten students and, in coordination with the dean and myself, developed a program that would meet the advanced education needs of this cohort group. Seven graduated and the remaining quit the program for personal reasons.

1988-2000 *Associate Dean for Academics, UAA College of Career and Vocational Education* (now known as the Community and Technical College)
Administered all aspects of student-, program-, and curriculum-related issues for approximately 30 career fields. Provided staff development for the College for as many as 75 full-time and 100 adjunct faculty per semester. Led the development, revision, and approval process for all noncredit, undergraduate, and graduate courses. Served as the program chairperson for Emergency Medicine and Fitness Technology. Presented numerous training and informational workshops for staff, potential students, matriculated students, and families about career selection, college choice, financial aid, and job-seeking skills as part of my responsibility for seeking potential students for all programs. Developed, conducted, and evaluated marketing strategies for all College programs. Recruited students. Supervised staff positions. Chaired and served on numerous search committees for faculty, staff, and administrative positions. Represented the College on all relevant University committees. Conducted statistical analyses of student- and program-related populations and issues. Taught face-to-face and online dental hygiene and graduate teacher education courses.

1975 – 1988 *Served as Teacher through tenured Professor of Dental Hygiene, UAA Dental Hygiene Program and Department of Dental Programs*

Helped to establish the first dental hygiene program in Alaska. Developed curriculum and taught all dental hygiene courses (except pharmacology) and also taught radiology, dental anatomy, and oral health education courses to dental assisting students. Served on numerous university and college committees, including faculty governance, curriculum, faculty and staff searches, and student recruitment and advising. Helped coordinate the merging of dental hygiene and dental assisting programs into one department with core courses. Served as chair of the department 1983-87. Hired adjunct faculty, supervised staff, developed budgets, and monitored finances. Led and/or was a member of accreditation and program review committees. Led community advisory committees. Developed, evaluated, and revised self-instructional aids.

1971-1975 *Clinical Dental Hygienist, Luther L. Paine, D.D.S.,* Anchorage AK.

Provided dental hygiene treatment and health education for patients in a general practice.

1970 *Clinical Dental Hygienist, Red Cross Volunteer*, Karamursal Air Station, Turkey

Provided dental hygiene treatment and health education for military personnel, dependents, and Turkish national patients.

State of Alaska	License #1113	December 31, 2009

WORK EXPERIENCE:

Apr. 2004 To Present — **Chief Dental Officer**
Bristol Bay Area Health Corp., Kanakanak Hospital, Dillingham, Alaska

On April 01, 2004 I retired from the United States Public Health Service and assumed the same responsibilities and job title for BBAHC, as a civilian dentist.

Aug. 1997 To April 2004 — **Chief Dental Officer (O-6 billet)**
Bristol Bay Area Health Corp., Kanakanak Hospital, Dillingham, Alaska

Since coming to the Dillingham area seven years ago, I have come to appreciate the many difficulties in providing dental services in bush Alaska. My prior training and experience hardly prepared me for the special needs of my service population. The dental needs in isolated fishing villages are so much different

than rural 'Lower-48' Indian communities. I have increased patient access through better use of the facilities, improved patient awareness of dental disease through prevention activities, and provided dental services to Alaska natives wanting care through increased efficiency and motivation of staff.

- Supervise 4 dentists, 2 dental hygienists, 13 dental assistants, 2 administrative assistants, and a dental insurance clerk.
- Supervise the dental aspect of two HRSA grants that provide dental services to underserved populations.
- Helped plan and initiate an orthodontic program for the Bristol Bay area.
- Assisted with a $250,000 OPEL grant that was awarded to my program for the purpose of researching the dental decay process in remote villages.
- Initiated training of entire dental staff to become part of IHS demonstration program, dealing with diagnosis and treatment of dental decay using medical model.
- Coordinated training of professional staff in conjunction with the Air Force in Arctic Survival due to extensive bush travel in winter months.
- Designed new 16 chair dental clinic for construction beginning in near future.
- Provide comprehensive dental care to a native and non-native service population spread over 46,000 square miles in rural (bush) Alaska.
- Provide onsite dental services to 24 remote villages. Necessary to transport dental equipment and staff into villages by small aircraft.
- Manage an extensive prevention program that includes all villages.
- Because of remoteness, provide comprehensive oral surgery, endodontic, pediatric, periodontal, and prosthetic services, since specialty services are not otherwise available.
- Initiated methods I designed in Oklahoma, to improve patient scheduling, dental assistant utilization, dental chair usage, and efficiency of the clinic.
- Supervise, coordinate, and schedule 5-6 contracting dentists and several TDY dentists who provide dental services at various times throughout the year.

Aug. 1993 to Aug. 1997 **<u>Chief Dental Officer (O-6 billet)</u>**
Creek Nation-Okmulgee Dental Clinic, Okmulgee, Oklahoma

- Provided expertise in starting Expanded Function Program at the Claremore Hospital Dental Clinic. Scheduling examples were demonstrated and dental assistant usage was verified for proper clinic usage.
- Managed Okmulgee Health Center as the Facility Director for one year in addition to my dental responsibilities. The clinic was staffed by 2 physicians, 8 medical support staff, 3 dentists, 10 dental support staff, 1 pharmacist, and 5 medical records personnel. Annual budget was in excess of 2 million dollars. I interviewed and hired the majority of this staff

- Set up Policy and Procedures manuals for new clinic, as well as, all operational manuals needed for JCAHO accreditation.
- Supervised 3 dental clinics supported by 5 dentists, 12 dental assistants, 1 hygienist, 2 office clerks,
- Designed, organized and initiated a Crown and Bridge Program with tribal bingo funds in 1995, which provided recurring yearly funds.
- Designed, organized and initiated Denture and Partial Program with National Council funding in 1995, that provided funds through 1997.
- Designed and set-up new 12-chair dental clinic in Okmulgee, which opened in March of 95. I installed most of the equipment, cabinetry, and plumbing during my own time, because reliable installers could not be found in a timely manner.
- Member, Hospital and Clinics Governing Board for 2 years, which managed the entire Health Care System.
- Member of Division of Health Administration (DHA) Compensation Committee.
- Member of Division of Health Administration Executive Management.
- Member, Service Unit Infection Control Committee.
- Member, Service Unit Quality Improvement Committee.
- Member, Creek Nation Eligibility Committee.
- Okmulgee Facility Safety Officer.
- Member of Health Careers Advisory Committee with local Vo-tech.
- Provided PTA and grade school instruction on dental health prevention.
- Designed and implemented tribal orthodontic program in 1994.
- Designed and implemented tribal staff evaluation program.
- Member of several area-wide committees (Efficiency Design Team, Residency Utilization Committee, Yearly Area Dental Meetings, and Equipment Usage Committee).
- Instructor, the University of Oklahoma Preceptor Program.

Sept. 1991 to Aug. 1993 **Chief Dental Officer (O-6 billet)**
Sapulpa Indian Health Center, IHS, Sapulpa, Oklahoma

- Supervised 3 clinics supported by 4 dentists, 9 dental assistants, 1 hygienist, and 1 office manager.
- Because of success of efficiency model, all waiting lists were eliminated and patients could call for appointments for comprehensive care at anytime.
- Member, Creek Nation Hospital and Clinics Governing Board.
- Member, Creek Nation Executive Committee.
- Member, Sapulpa Clinic Infection Control Committee.
- Member, Creek Nation Quality Improvement Committee.
- Safety Officer, Sapulpa Indian Health Center.
- Test site for several new dental products and equipment (dental burs, prophy angles, impression materials, handpieces, etc.).

- Served on the Area Efficiency and Effectiveness Committee.
- Organized and coordinated annual Oklahoma Area Dental Meeting 1993.
- Proposed and initiated several dental programs to the Creek Nation with alternative funding.
- Completed a Masters of Public Health degree, using personal time.
- Formulated and initiated a pilot orthodontic program for Creek Nation with special bingo funds.
- Wrote a comprehensive Dental Quality Improvement Manual that was approved by the Health Board.
- Completed standardization of all dental clinics within Creek Nation.
- Completed a standardized Dental Policies and Procedures Manual for Creek Nation.
- Maintained an exceptionally high productivity level despite under-staffed clinic.
- Participated in and organized several Community Health Fairs and school-based programs involving prevention activities and health promotion and disease prevention activities dealing with both medical and dental needs.

Sept. 1989 to Sept. 1991 **Chief Dental Officer (O-5 billet)**
Sapulpa Indian Health Center, IHS, Sapulpa, Oklahoma

- Responsible for 3 separate dental clinics (Sapulpa, Okmulgee, and Eufaula) which were supported by 4 dentists, and 8 dental assistants.
- Service Unit Dental Prevention Officer.
- Chairman, Oklahoma Area Promotional Materials Committee.
- Sapulpa Clinic Safety Officer.
- Chairman, Creek Nation Infection Control Committee.
- Member, Creek nation Quality Assurance Committee.
- Continued to work on Master of Public Health degree.
- Initiated a Denture Program for the elderly with special funding for1990 fiscal year.
- Started standardization of dental clinics within the Creek Nation.
- Participated in many Health Fairs and local school systems with health promotion and disease prevention activities, such as smoking cessation, diabetic training, and oral hygiene education.

Sept. 1986 to Sept. 1989 **Facility Dental Officer (O-4 billet)**
Sapulpa Indian Health Center, IHS, Sapulpa, Oklahoma

- Responsible for Sapulpa Dental Clinic with staff of 1 dentist and 2 dental assistants.
- Responsible for coordinating information from the Sapulpa, Okmulgee and Eufaula dental clinics.

- Chairman, Oklahoma Area Promotional Materials Committee .
- Creek Nation Prevention Officer.
- Chairman, Sapulpa Clinic Safety Committee.
- Chairman, Sapulpa Clinic Infection Control Committee.
- Member, Sapulpa Clinic Quality Assurance Committee.
- Instructor, University of Oklahoma Dental Preceptor Program.
- Instructor for several dental assisting programs (2 Vo-Techs, & Bryant Institute).
- Started work on a Masters of Public Health at the University of Oklahoma, spring semester, 1989.
- Responsible for Sapulpa Dental Clinic with staff of 1 dentist and 2 dental assistants.
- Eliminated 4-year waiting list for adults by double booking and working extended hours.
- Stepped up community activities dealing with health promotion and disease prevention.

Aug. 1982 to Sept. 1986 **Facility Dental Officer (O-4 billet)**
Pawnee Indian Health Center, IHS, Pawnee, Oklahoma

- Responsible for Pawnee Dental Clinic with staff of 1 dentist, 2 dental assistants, and 1 receptionist.
- Chairman, Pawnee Service Unit Quality Assurance Committee.
- Member, Pawnee Service Unit Executive Committee.
- Eliminated 3-year waiting list for adults and children by working extended hours and implementing an effective and efficient dental program.
- Started comprehensive dental care for adults and children.
- Fluoridation of the Tri-County water system.
- Extensive community activities dealing with oral health.

PERSONAL

The most important and enjoyable special skills I have revolve around keeping up with my seven children and seven grandchildren. They keep me directly involved with activities such as baseball, softball, t-ball, soccer, drama, dance, wrestling, track, etc., etc., etc. I enjoy working with the youth, especially in a Scouting capacity. I have been either a Scoutmaster or a Scouting Coordinator for the past 20 years. I enjoy any activity involving the outdoors. The activities I especially savor are big game hunting, rock climbing, rappelling, hiking, orienteering, pioneering, swimming, and horseback riding.

STATE OF ALASKA
OFFICE OF THE GOVERNOR

EDUCATION

8/73 – 5/75 Masters of Science, Rehabilitation Counseling, University of Arizona, Tucson, Arizona. Practicum and internships included the following:

- Internship with the student services for a small rural college in Wyoming. Responsibilities included tutoring and counseling for disabled students. Performed surveys to assess student needs. Developed residence hall activities, recruitment guide, and a film series and community forum. Led discussion groups. Served as advisor to student newspaper. Provided work-study supervision.
- Practicum placements as a counselor in alcohol treatment program and adolescent outpatient substance abuse clinic.
- Counseled disabled clients and families who were referred by the University's Rehabilitation Department.
- Volunteered as co-leader of Rehabilitation Department's Group Process course.

9/69 – 1/72 Bachelor of Arts, Sociology, State University of New York, Oneonta, NY. Co-developed crisis hot line sponsored by the University and operated by the students. Recruited and trained 100 volunteers to staff the "crisis hot line." Hired a coordinator to supervise the "hot line" operations upon graduation. Chairwoman, Experimental College, a college within the University provided for independent study and alternative educational programs. Within a committee, the Experimental College awarded academic credit for nontraditional course work.

WORK EXPERIENCE

Teaching:

1/89-present **Trainer:** Provide training for local nonprofit organizations. Develop and provide the needs assessment, training materials, training and evaluation based on the organization's needs.

1/89 –8/95 **Adjunct instructor**, University of Alaska, Southeast, Human Relations in the Workplace; Clinical Psychology, counselor training coursework. Developed curriculum; Instructed course; Evaluated student efforts.

Administrative and Clinical

8/88-present **Patricia White, M.S., L.M.F.T., Counseling Services,** 130 Seward Street Suite, 218, Juneau, Alaska 99801

Counselor, consultant and trainer in private practice. Provide counseling to individuals, couples, families, and groups. Training contracts with REACH, Inc., Catholic Community Services, Johnson Youth Center, and Bartlett Regional Hospital.

8/90 –8/93 **Human Affairs of Alaska, Juneau Affiliate.**

Provided Employee Assistance Program (EAP) Services to contracted Businesses for Human Affairs of Alaska, Anchorage, Alaska.

8/93 – 11/97 **Contractor** for EAP for Vasquez Management, United Behavioral Health, Greens Creek Mines and Echo Bay Mining Company. Provided EAP Counseling and referral services to the United States Postal Service, the United States Coast Guard, and other businesses of Juneau, AK.

7/88 – 9/89 **Southeast Regional Training Coordinator,** National Council on Alcoholism, Juneau Affiliate, 211 4th Street, Suite 102, Juneau, AK.

Coordinated relevant training events for substance abuse counselors, prevention workers, and administrators in Southeast region. Provided technical assistance to communities and agencies in Southeast region with regard to substance abuse, education, prevention, treatment and rehabilitation. Coordinated video training programs and course work for counselor certification. Maintained supporting library and student files.

8/87 –7/88 **Clinical Services Supervisor/Program Director**, City and Borough of Juneau, Department of Health and Social Services, Division of Chemical Dependency, 3406 Old Glacier Highway, Juneau, AK 99801.

Administrative: Responsible for outpatient clinic's compliance with state and federal funding guidelines; policy and procedures manual; grant writing; record keeping; billing and client flow systems. Coordinated all referring agencies; collaboration of substance abuse services in the Borough including the School District's student assistance program.

Clinical: Supervised six full time counselors and three contract counselors in delivery of direct therapy services to 600 clients per year. Counselors worked in a hospital-based treatment program or an outpatient clinic. Responsible for the maintenance of state and federal standards for sound clinical approaches to addiction treatment and rehabilitation.

12/78 – 8/79 **Probations Subsidy Counselor Consultant to Cochise County Juvenile Court**, Cochise County Juvenile Court Center, P.O. 4219, Bisbee, AZ 85603.

Worked under the guidelines of Arizona Supreme Court. Developed and implemented a first offender program. Provided counseling for juvenile first-time felony offenders and families. Assessments, report writing, compliance with State of Arizona guidelines, and regular court appearances.

1/76 – 8/79 **Detention Home Parent**, Cochise County Juvenile Court Center, P.O. Box 4219, Bisbee, AZ 85603.

Worked with Center's director and probation officer. My husband and I provided 24 hour care, recreation and support counseling for up to 20 juveniles in detention. The facility provided housing for those incarcerated and those under protective care of the county.

3/72 –3/73 **Counselor**, Tucson Awareness House, Inc. Tucson, AZ

Provided counseling, crisis intervention, referrals, and recreational activities to clients and families. Team leader 12/72 in charge of training and scheduling counselors and volunteers, and coordinating all of the Eastside House activities.

Volunteer Work

1992-1994 **Board Member/Vice President,** Gastineau Human Services, Juneau, AK.

1989-1991 **Advisory Board Member,** Wellness Program, Juneau Racquet Club, Juneau, AK

1985-1987 **Secretary/Member,** Alaska Alcoholism and Drug Abuse Counselor Certification Review Board, a statewide, private nonprofit corporation for the certification of drug and alcohol counselors in the State of Alaska.

Membership: American Counseling Association.
Licenses: State of Alaska Marriage and Family Therapist. No. AA0088

5/83 –8/87 **Rehabilitation Therapist**, City and Borough of Juneau, Department of Health and Social Services, Division of Chemical Dependency, 3406 Old Glacier Highway, Juneau, AK 99801.

Provided professional level alcohol and drug rehabilitation counseling for inpatient and outpatient setting. Led therapy sessions, delivered lectures, and applied knowledge of group dynamics to assist in problem resolution. Completed case studies and reports on services; provided reviews, case histories and diagnoses to determine trends and progress to gain insight for further treatment and referral. Assisted clients through crisis situations, and in recognizing and resolving denial solutions. Communicated with staff from auxiliary services and programs. Developed Patient Orientation Packets and certificates of completion, and developed and implemented a Student Assistant Program in the local school district.

11/82 –5/83 **Program Coordinator**, Gastineau Manor, Inc. a continuing care facility for the treatment of alcoholism, 306 West Eighth Street, Juneau, AK 99801.

12/80 – 6/82 **Counselor**, Cochise Community Counseling Services, Copper Queen Station, Bisbee, AZ 85603

Lead counselor for emotionally disturbed and delinquent youth. This year-long program included individual and group therapy for clients and families, recreational activities and tutoring. Worked closely with Arizona Department of Economic Security's Sierra Vista Office to resolve problems of foster homes, adoptions, and treatment of sexual abuse and rehabilitation of teenage substance abusers. Worked with local school districts' psychological and counseling services to improve clients' school experiences. Supervised four counselors and volunteers.

8/79 – 12/80 **Family Counselor**, Cochise County Juvenile Court Center, P.O. Box 4219, Bisbee, AZ 85635

Worked as itinerant social worker in five rural communities through referrals from five probation officers. Provided individual, family and peer group counseling. Made reviews and recommendations to the courts as well as appearing as an expert witness. Developed recreational and special projects for clients. Worked closely with adoptive and foster home and Child Protective Services. Performed chemical assessments and referred chemically dependent clients to treatment programs. Spoke to community service organizations to encourage financial support for special needs clients. Supervised two interns. Responsible to the Superior Court Judge of Cochise County and the Arizona Supreme Court.

Work Experience Summary:

Throughout my twenty-year tenure with the Fairbanks Police Department, I have accepted position assignments and promotions encompassing increasing levels of instruction, management oversight, and program administration. Currently serving as the Chief of Police, I am responsible for all planning, budgeting, and daily operations of our fifty-one (51) member department, with an approved (2008) budget of $6.1 million. Extensive operational and administrative experience in the high-liability field of modern policing has resulted in my development of an extremely comprehensive administrative skill-set, with an emphasis on:

- Program and budget development/administration
- Proper employee training, with utilization of sound risk-management practices
- Federal and State of Alaska grant application and administration
- Knowledge of current "best practices" in human resource management
- De-escalation and conflict-resolution skills.
- Policy and procedure development and implementation.

In addition to internal department operations, the position of Police Chief requires extensive community involvement through participation on numerous task-forces, boards, and commissions. Outreach through local service groups and charity events, conflict-resolution with citizen's groups, and regular education/interaction with federal, state, and local political leaders is also required. Additionally, significant community interaction and education through speaking engagements, written editorials, formulation/publishing of departmental *Annual Reports,* draft and revision of an ongoing *Three Year Strategic Plan,* and routine media interaction are necessary to keep our populace engaged. This segment of my service, in particular, has enhanced what I believe to be a very strong communications skill-set, emphasizing:

- Exceptional written communication skills.
- Strong public-speaking skills, with the ability to assume leadership and facilitate discussion.
- Exceptional planning and research skills, preparing information for effective presentation. (See *FPD Reports* at http://www.ci.fairbanks.ak.us/departments/police/news.htm)

Education:

A.J. Dimond High School
Anchorage, AK
1979-1983

University of Alaska, Fairbanks
1983-1988
B.S. Degree: Wildlife Biology
Minor: Criminal Justice

F.B.I. National Academy
225th Session, April-June 2006
United States Department of Justice

University of Alaska, Fairbanks
2005-2008
M.A. Degree: Justice Administration

Law Enforcement Employment:

City of Fairbanks Police Department, 911 Cushman Street, Fairbanks AK 99701

-Patrol Officer: March 1989- May 1995
-Field Training Officer: March 1993-May 1995
-F.P.D. Tactical Team: January 1990- April 1998
-Patrol Sergeant: May 1995- April 1998
-Investigations Supervisor: April 1998-February 2002
-Patrol Lieutenant: February 2002-2003
-Director, Alaska Police Corps: Feb 2003- May 2004
-Deputy Chief: June 2004- February 2005
-Police Chief: February 2005- Present

Current Boards & Commission Service:

- Governor's appointee, *Alaska Police Standards Council* (current service as Chair)
- Board member, *United Way of the Tanana Valley*
- Member, *Police Professional Advisory Committee*- Alaska Municipal League
- Member, *Fairbanks Local Emergency Planning Committee*
- Member, *Fairbanks Golden Heart Project* (Community chronic inebriate task force)
- Commissioner, *Alaska Law Enforcement Agency Accreditation Commission*
- Board Member (Ex-Officio), Fairbanks *Volunteers in Policing*

Instructional Capabilities:

Given my combination of education and professional experience, I am well qualified and prepared to instruct in any areas pertaining to organizational leadership, public agency administration, application of human-resource issues, and general criminal-justice and security practices. As an APSC Certified Police Instructor, I am comfortable with both classroom and dynamic/interactive presentations. I have published instructional articles in numerous law enforcement publications on topics pertaining to public safety and effective community education/interaction, to include: *Police Magazine, Law and Order, 911 Magazine,* and the *F.B.I. Law Enforcement Journal.* In 2008, I was invited to present an instructional symposium on effective community and media-relations strategies for the *International Association of Chiefs of Police* conference in San Diego, CA.

Professional and Service Associations:

- Alaska Peace Officers Association (Vice President, Farthest North Chapter)
- Alaska Association of Chiefs of Police (Executive Board Member)
- International Association of Chiefs of Police
- Rotary Club of Fairbanks

PROFESSIONAL EXPERIENCE

Executive Director 2003 - Present
Office of Economic and Community Development, Municipality of Anchorage

For the past five years I have served as an executive to the Mayor, responsible for promoting public and private economic development projects for the Municipality of Anchorage. Highlights have included the new Dena'ina Civic and Convention Center schedule for completion September of 2008, the transfer of the Museum from a public to private non-profit entity, the Library Renewal Initiative, the reorganization of the Parks and Recreation Department and the creation of the Parks Foundation. I have oversight for the rewrite of the Municipality's land use codes to be completed in 2008, completion of the Downtown Comprehensive Plan and the revitalization of one of our most underserved neighborhoods, Mountain View. In addition to spearheading many projects for the city I am responsible for an array of department including: the Port of Anchorage, the Planning Department, Heritage Land Bank and Real Estate Services, the Libraries, Parks and Recreation, and the Department of Neighborhoods and the Anchorage Community Development Authority. Responsibilities also include formulating and approving budgets for each department, spearheading departmental reorganizations, long range transportation planning for Anchorage, multimillion dollar grant proposals, real estate, capital improvement project planning and local, state and federal budget request formulation.

Executive Director and CEO 1999 to 2003
Anchorage Neighborhood Housing Services /
Anchorage Mutual Housing Association

I served as the Chief Executive Officer for Anchorage Neighborhood Housing Services (ANHS) a non-profit community development corporation dedicated to promoting affordable housing and neighborhood revitalization. ANHS is affiliated with the National Neighborhood Reinvestment Corporation and is certified as a Community Financial Institution. From 1998-2003 ANHS loaned $18 million and leveraged $34 million in first mortgages. Of the 545 loans made to low to moderate income families, 91 of those borrowers have been persons who experience a disability. Also under my direction was the sister organization, Anchorage Mutual Housing Association, which owned and managed 1,150 units of affordable rental housing in twelve locations citywide. Total assets for both companies at the time was 62.2 million relations, legislative affairs, and the overall administration of the organization. Duties also include the oversight of Anchorage Mutual Housing Association.

Executive Director 1981 to 1999
The Arc of Anchorage, Anchorage, Alaska

For 18 years served as the Executive Director for The Arc of Anchorage. I was instrumental in building an organization with an initial grant of $180,000 to more than 12 million. Programs included an array of services for persons with developmental and other disabilities including a day activity center, residential care, case management, in-home family services, respite, and specialized services for persons who experience dual diagnosis and emotional disturbances. I also sought funding, purchased, renovated and/or constructed more than 60 housing units, single and multifamily, to ensure safe, affordable housing for those we served. I worked with the Governor's office and the legislature on many issues facing persons with disabilities throughout the State of Alaska. Responsibilities included assets management, program development, grant writing, public relations, fundraising, legislative affairs, and advocacy on behalf of person with developmental and other disabilities and their families.

State Executive Director. 1982 to 1996
The Arc of Alaska, Anchorage, Alaska

In a dual role along with being the Executive Director for The Arc of Anchorage, I also coordinated statewide efforts for The Arc of Alaska. I was responsible for coordinating with the national office, The Arc of the United States on national issues facing persons with developmental disabilities, as well as statewide efforts.

University Research Assistant. 1986
Department of Human Services, University of Northern Colorado

Project assistant for research assessing the long-term care needs of elderly developmentally disabled adults in the state of Colorado. Included surveying existing services for the developmentally disabled and elderly and determining feasibility of integrated programs.

EDUCATION

1986 **University of Northern Colorado, Greeley**
Master of Arts in Rehabilitation Counseling with an Emphasis in Vocational Evaluation

1976 **California State University, Fresno**
Bachelor of Science in Therapeutic Recreation

BOARDS AND COMMISSIONS APPLICATION FORM

INSTRUCTIONS

A separate application is required for each position for which you apply. Complete and specific answers will aid in rapid and accurate processing of your resume. Please type or print legibly in ink. Forward to the above address. Be sure your answers are true. A willfully false answer may result in your disqualification or removal from office if you are appointed.

Board or Commission and seat for which I am applying: Board of Nursing
(For example, Board of Agriculture, public seat)

Please list any other State Boards or Commissions on which you currently or previously have served:
Health Care Strategic Planning Council

Name: Thomas J. Hendrix

Mailing Address: 3336 Sun Valley Drive, Eagle River, AK 99577

Residence Address: 3336 Sun Valley Drive

City, State and Zip Code: Eagle River, AK. 99577

Home or Message Telephone: (907) 622-3379 Business Telephone: -Same-

Fax Number: _____ Cell Phone: N/A

Email address: tjh@utaonline.net

AS 39-05-100 requires that a person appointed to a state board or commission be a registered voter prior to the last general election:

Are you a registered voter: YES ✓ NO _____ Voter Registration Number (Optional): _____

Social Security Number (Optional, required if appointed for travel reimbursement etc.): _____

Have you ever been convicted of a misdemeanor within the past five years or a felony within the past ten years?

YES _____ NO ✓ if "YES", explain the circumstances on a separate sheet of paper and attach it to this application. A conviction is not necessarily grounds for disqualification. The number of convictions, nature, recentness, and relationship to the board position applied for, will be evaluated and a determination will be made after a review of all relevant facts.

CONFLICTS OF INTEREST: Certain boards and commissions require full disclosure of personal financial data under AS 39.50.010. If required for the board or commission for which you are applying, are you willing to do so?
YES ✓ NO _____

Could you or any member of your family be affected financially by decisions to be made by the board or commission for which you have applied? YES _____ NO ✓

If "YES", explain:

Fax Received
NOV 13 2006
Office of the Governor

TRAINING AND EXPERIENCE: (If resume attached, it is not necessary to complete items A-D)

A. List any professional licenses, certifications, or registrations and dates obtained that may be used as qualifying criteria:

See attached vitae

B. List both formal and informal education and training experiences: (Use additional paper if necessary).

See attached vitae

C. List any community service, municipal government, and state positions held, and any awards received. Include both compensated and uncompensated positions (such as president of a service organization or a mayor). Include length of time serviced.

See attached vitae

D. Employment work history – paid, unpaid or voluntary: (Use additional paper of necessary).

See attached vitae

The Office of the Governor and the State of Alaska have an Affirmative Action Equal Employment Opportunity Program. To assist in the program, you are asked to voluntarily answer the following questions to provide the information necessary for reporting purposes. Under State and Federal law, the information you provide will not be used to ille[illegible]st you.

DATE OF BIRTH: ____ ____ SEX: FEMALE _____ MALE ✓

ETHNICITY:
Alaska Native ____ American Indian ____ Asian or Pacific Islander ____ Black ____ Hispanic ____ White ✓

MILITARY SERVICE (if applicable, give dates): U.S. Air Force 1/72 thru 5/94

CERTIFICATION: I swear the information I have entered on this form is true to the best of my knowledge. I understand that if I deliberately conceal or enter false information on the form my application may be rejected, I may be removed from the list of eligible candidates, or I may be removed from the position. I agree that the Office of the Governor may contact present or former employees or other persons who know me to obtain an additional information about my skills and abilities. I understand that the information on this application is public information and may be released through a legal request for such information.

Subject: Medical Emergency Services Board

Hi Ivy. My name is Lillian Mitchell, a RN that retired from Providence Alaska Medical Center in 2005 after working there over 27 years. I had worked for Providence several years before in the late 60's and early 70's. I have a BA degree in human resources and a MAT. I am 67 years old. I am currently involved in volunteer work with the Alaska state fair and I am involved in the Parish nurse ministry with my church. I served on the board of directors for the Blood Bank of Alaska for several years. I have lived in Anchorage over 34 years, arriving in Alaska the first time in 1968 when my husband was assigned here with the Air Force. If you need additional information, please e-mail me. I would like information regarding the medical emergency Board, the duties, purpose, location and expectations etc. Thanks, Lillian Mitchell.

Residence Address: Westwood Estates, Rosewood Ct. Lot #17

City, State and Zip Code: Homer, AK 99603

Home Telephone: 907-235-8808 Business or Message Telephone: same

Fax Number: — Cell Phone: —

Email address : saje@ak.net

AS 39.05.100 requires that a person appointed to a state board or commission be a registered voter prior to the last general election:

Are you a registered voter? YES X NO

Voter Registration Number (Optional): Social Security Number (Optional):

Have you ever been convicted of a misdemeanor within the past five years or a felony within the past ten years?

YES NO X If "YES", explain the circumstances on a separate sheet of paper and attach it to this application. A conviction is not necessarily grounds for disqualification. The number of convictions, nature, recentness, and relationship to the board position applied for will be evaluated and a determination will be made after a review of all relevant facts.

CONFLICTS OF INTEREST: Certain boards and commissions require full disclosure of personal financial data under AS 39.50.010. If required for the board or commission for which you are applying, are you willing to do so?
YES X NO

Could you or any member of your family be affected financially by decisions to be made by the board or commission for which you have applied? YES NO X

If "YES", explain:

TRAINING AND EXPERIENCE: (If resumé attached, it is not necessary to complete items A-D) (see Vitae (Emailed to you))

A. List any professional licenses, certifications, or registrations and dates obtained that may be used as qualifying criteria:

B. List both formal and informal education and training experiences: (Use additional paper if necessary)

C. List any community service, municipal government, and state positions held, and any awards received. Include both compensated and uncompensated positions (such as president of a service organization or a mayor). Include length of time served.

D. Employment work history - paid, unpaid or voluntary: (Use additional paper if necessary)

The Office of the Governor and the State of Alaska have an Affirmative Action Equal Employment Opportunity Program. To assist in the program, you are asked to voluntarily answer the following questions to provide the information necessary for reporting purposes. Under State and Federal law, the information you provide will not be used to illegally discriminate against you.

DATE OF BIRTH: Nov. 29, 1950

SEX: Male____ Female K

ETHNICITY: Alaska Native___ American Indian___ Asian or Pacific Islander___ Black___ Hispanic___ White K

MILITARY SERVICE (if applicable, give dates): —

CERTIFICATION: I swear the information I have entered on this form is true to the best of my knowledge. I understand that if I deliberately conceal or enter false information on the form my application may be rejected, I may be removed from the list of eligible candidates, or I may be removed from the position. I agree that the Office of the Governor may contact present or former employees or other persons who know me to obtain additional information about my skills and abilities. I understand that the information on this application is public information and may be released through a legal request for such information.

Minor Area: Behavioral Neurology

M.A. (1991) Louisiana State University

outpatients referred by community physicians and agencies (Office of Children's Services, Department of Vocational Rehabilitation, Juvenile Justice), as well as inpatient neuropsychological and psychological consultations for patients at Providence Alaska Medical Center. Brief, goal focused cognitive behavioral treatment of anxiety, mood, and behavioral disorders was also provided on a limited basis.

10/1996 to 10/1997 Alaska Guidance and Diagnostic Clinic
3260 Providence Drive, Suite 422
Anchorage, AK 99508 Telephone (907) 561-0044
Neuropsychologist; private practice (full time)

Full time private practice, emphasis was in neuropsychological and psychological evaluations of children and adolescents (age range 3 to 18) with identified cognitive risk factors. Individual and family treatment for children and adolescents with anxiety, depression, adjustment and behavioral disorders was provided on a limited basis. Patient populations included outpatients and adolescents receiving treatment at the Providence Discovery Program.

9/1994 to 9/1996 Oregon Health Sciences University
3181 S.W. Sam Jackson Park Road
Portland, OR 97201
Post-Doctoral Residency in Medical Psychology (full time)
Emphasis in Clinical Neuropsychology

Duties included psychological and neuropsychological assessment of patients referred by various hospital clinics (e.g. Pediatrics, Oncology, Neurology, Psychiatry) and state agencies (e.g. Child and Family Services, Juvenile Justice System, Vocational Rehabilitation, Social Security). Clinical responsibilities included hospital wide consultation services, and short-term, goal focused psychotherapy for outpatients referred by primary care physicians. Agency evaluation questions included legal capacities (medical decision making, parenting, driving). Clinical supervisors were board certified through the American Board of Professional Psychology (ABPP). Other responsibilities included presentations at the medical psychology department's weekly seminar series, and providing instruction and consultation regarding cognitive and mental health issues to nursing, medical, and physician assistant students. Conducted quarterly Quality Assurance reviews of departmental providers, participated in systematic review and documentation of clinic services including utilization review and treatment efficacy.

Supervisors: Arthur N. Wiens, Ph.D., ABPP
Ruth G. Matarazzo, Ph.D., ABCN, ABPP
Antonia Forster, Ph.D., ABPP
John R. Crossen, Ph.D.

9/2003 to 9/1994 **American Lake Veterans Medical Center**
Tacoma, WA
APA approved Pre-Doctoral Internship in Clinical Psychology

Selected clinical rotations included geriatric psychology, consultation service, acute inpatient psychiatry, chronic post-traumatic stress disorder unit, and domiciliary for homeless veterans. Duties during all rotations included group and individual psychotherapy, assessment (neuropsychological and psychological), and consultation with multidisciplinary treatment teams. Additional duties included quarterly presentations at departmental seminar and participation in departmental quality assurance and productivity review programs.

Primary Supervisor: Mona Weir, Ph.D.

08/1991 to 08/1993 Family Therapy Clinic
7423 Picardy
Baton Rouge, LA 70808
Louisiana State University Externship (20-30 hours per week)

Primary duties included neuropsychological evaluation of outpatients eligible for state vocational rehabilitation services, evaluation of children and adolescents referred by the State Office of Mental Retardation, and neuropsychological and psychological evaluations of inpatients at our Lady of the Lake Regional Medical Center's general medical and psychiatric units. Additional duties included individual and group psychotherapy utilizing brief, goal focused cognitive-behavioral interventions and completing civil forensic evaluations (TBI, toxin exposure).

Supervisors: Wm. Drew Gouvier, Ph.D.
Don A. Williamson, Ph.D.

08/1991 to 05/1993 Parkland Hospital, Baton Rouge, LA
2414 Bunker Hill Drive
Baton Rouge, LA 70808
Psychological Associate (15-20 hours a week)

Provided cognitive, educational, and personality evaluations of psychiatric inpatients under supervision of hospital psychologist. Primary patient population included children and adolescents with acute behavioral and psychiatric symptoms.

Supervisor: Jean George, Ph.D.

08/1989 to 06/1992 Louisiana State University Practicums

1. Earl K. Long Hospital, Baton Rouge, LA
   (10 to 20 hours per week)
2. Psychological Services Center, LSU
   (12 to 20 hours per week)

Duties included psychological and neuropsychological assessments as well as individual and group psychotherapy. Primary populations included adolescents and adults (1) referrals from neurologists and general medicine physicians (2) individuals self-referred for treatment of anxiety, depression, somatoform disorders, sleep disorders, and eating disorders.

Supervisors: Donald A. Williamson, Ph.D.
W. Drew Gouvier, Ph.D.
William F. Waters, Ph.D., ABPP

BOARDS AND COMMISSIONS APPLICATION FORM

INSTRUCTIONS

A separate application is required for each position for which you apply. Complete and specific answers will aid in rapid and accurate processing of your resume. Please type or print legibly in ink. Forward to the above address. Be sure your answers are true. A willfully false answer may result in your disqualification or removal from office if you are appointed.

Board or Commission and seat for which I am applying: Board of Social Work Examiners
(For example, Board of Agriculture, public seat)

Please list any other State Boards or Commissions on which you currently or previously have served:

Name: Patty McMillin

Mailing Address: PO Box 2803

Residence Address: 1017 Naun Rag

City, State and Zip Code: Bethel, AK 99559

Home or Message Telephone: _____ Business Telephone: 543-4874

Fax Number: 543-4925 Cell Phone: _____

Email address: Patty-McMillin@LKSD.org

AS 39-05-100 requires that a person appointed to a state board or commission be a registered voter prior to the last general election:

Are you a registered voter: YES ✓ NO _____ Voter Registration Number (Optional): _____

Social Security Number (Optional, required if appointed for travel, reimbursement etc.): _____

Have you ever been convicted of a misdemeanor within the past five years or a felony within the past ten years?

YES _____ NO ✓ if "YES", explain the circumstances on a separate sheet of paper and attach it to this application. A conviction is not necessarily grounds for disqualification. The number of convictions, nature, recentness, and relationship to the board position applied for, will be evaluated and a determination will be made after a review of all relevant facts.

CONFLICTS OF INTEREST: Certain boards and commissions require full disclosure of personal financial data under AS 39.50.010. If required for the board or commission for which you are applying, are you willing to do so?
YES ✓ NO _____

Could you or any member of your family be affected financially by decisions to be made by the board or commission for which you have applied? YES _____ NO ✓

If "YES", explain:

OVERVIEW

I am currently the Lead Social Worker for the Lower Kuskokwim School District. This is my fifth year in this position. It is an administrative position with such duties as hiring, training and supervising a staff of MSWs. I am also responsible for evaluating staff and service delivery. I have created a program for keeping statistical information for our department, and am currently working with the ASDN as a sub-recipient for a competitive DOE grant. We are creating a cross-age peer e-mentoring program for 4-8 grade students in our district.
I am a member of the Bethel Child Protective Multi-Disciplinary Team, The Bethel Children's Advocacy Center MDT and the Delta Inter-Agency Team. I have been trained and worked with Wrap Around services and Intensive In-Home Family services. I have completed and am certified in the Pathways to Hope program and the Gatekeepers Suicide Prevention program.
Additionally, I am independently contracted with the Alaska Court System as a Mediator and Family Group Conference facilitator working with CINA cases and am also contracted with Catholic Social Services as a Home Study Writer for adoptions.
To keep my soul healthy, I play and teach piano lessons. I currently have twenty students.
For sanity, I spin (as in "create yarn on a spinning wheel"), knit, crochet, do counted cross-stitch, quilting and weaving. Some of my intellectual passions are studying history, anthropology and comparative religions.
I previously worked for three years with the Lower Kuskokwim School District as an itinerant School Social Worker. This involved traveling 4-5 days a week throughout the school year to the 21 small and isolated Yup'ik villages in the district. In that context I worked extensively with students, school staffs, families, ICWA workers, VPSO's, Alaska State Troopers, tribal councils and courts. I have subsequently developed familiarity with other involved agencies such as the Office of Children's Services, DJJ and the local community Behavioral Health department, under the umbrella of the Yukon Kuskokwim Native Health Corporation. I have coordinated care with treatment programs and in-patient care settings both within and outside of the State of Alaska and participated in after-care planning for students returning to our district.
I have strong written and oral communication skills; experience in cross-cultural work with Hispanic migrant workers, Native Americans and Native Alaskans; experience with organizing and working with both grass roots and professional groups; and demonstrated ability in teaching/training based on past experience teaching and training children and adults in various settings.

EDUCATION

April, 2001	Master of Social Work	Grand Valley State University Allendale, Michigan
May, 1997	Bachelor of Social Work (with Highest Distinction)	Ferris State University Big Rapids, Michigan

HONORS

1996-1997	Who's Who in American Universities	Ferris State University
1998	CH.A.D.D. Coordinator of the Year	State ADD Council of Michigan
2008	Outstanding Inclusive Practices	Alaska Governor's Council on Disabilities and Special Education

EMPLOYMENT

July, 2004 - Present — **Lower Kuskokwim School District**
Lead Social Worker — **Bethel, Alaska**

I supervise and administrate a department consisting of ten School Social Workers who serve in twenty-one villages (each with a K-12 school) and five schools in Bethel. I am responsible for recruiting, hiring, training and supervising the department. I report to the Superintendent and the Board of Education for the district. I interface with other administrative personnel and teaching staff within the school district as well as other agencies both locally and throughout the state. I am the point of entry for referrals from agencies such as OCS and the Children's Advocacy Center. I am the primary responder for crisis intervention and crisis response for the school district; coordinating with other LKSD administrative/teaching staff, other local and referral agencies as needed, and my own department. I sit on both the Bethel Child Protection Multi-Disciplinary Team and the local Children's Advocacy MDT. I have created and presented various trainings on child safety, mandated reporting of child abuse, the impact of domestic violence on child development and other child behavioral health issues for the school district staff, village child protective teams, Tribal organizations and Head Start staffs. I have created, presented and trained my staff in classroom presentations, which are age and culturally appropriate, on topics such as safe touch, suicide, drug and alcohol abuse, abusive dating relationships and complicated grief issues. I participated, by invitation, in a panel presentation at the Alaska State Behavioral Health Summit on the suicide prevention work my department has implemented.

June, 2005 - Present — **Alaska Court System**
Mediator and Family Group Conference Facilitator — **Anchorage, Alaska**

I am contracted with the Alaska State Court system to provide mediation services and to facilitate Family Group Conferencing in Child in Need of Aid cases with a court referral. The court system provides extensive and ongoing training in these models.

October, 2007 - Present — **Catholic Social Services**
Home Study Writer — **Anchorage, Alaska**

I have been trained and am contracted with Catholic Social Services to conduct and write home studies of prospective adoptive homes for the court.

August, 2001 - June, 2004 — **Lower Kuskokwim School District**
School Social Worker (Itinerant) — **Bethel, Alaska**

I traveled to villages in the LKSD area and worked with children, families, schools, communities and other agencies to provide behavioral health services. I did behavioral health assessments, crisis intervention, suicide assessments, referrals, classroom observations and behavior management plans, as well as ongoing counseling. I coordinated with the Tundra Women's Center (for domestic violence), the Children's Advocacy Center (for juvenile victims of sexual assault), Public Health, the Yukon-Kuskokwim Health Corporation, OCS, DJJ, ICWA, Behavioral Health Aids, Family Advocates and Health Educators to provide community and school programs, and individual and family services.

2000-2001 — **Master's Practicum**
Outpatient Clinical Therapist — **Kalkaska Community Mental Health**

In this capacity, I did intake assessments, crisis assessments, individual, family and group therapy using appropriate modalities with an emphasis on Brief Therapy and Cognitive Therapy. I co-led a therapy group for adults who were diagnosed with Borderline Personality Disorders utilizing Dialectical Behavioral Therapy. I organized and led a Parenting Class. I assisted in individual and group sessions and assessments for prison alternative treatment and outreach.

PROFESSIONAL EXPERIENCE

Executive Director 2003 to 2009
Office of Economic and Community Development, Municipality of Anchorage
For the past six years served as an executive to the Mayor, responsible for promoting public and private economic development projects for the Municipality of Anchorage. Highlights have included the new Dena'ina Civic and Convention Center completed in September of 2008, the transfer of the Museum from a public to private non-profit entity, the Library Renewal Initiative, reorganization of the Parks and Recreation Department and the creation of the Parks and Library Foundations which raised more than $30 million combined. Supervised the completion of the Downtown Comprehensive Plan and helped spearhead the revitalization of one of our most underserved neighborhoods, Mountain View. Responsible for seven departments including the Planning Department, Heritage Land Bank and Real Estate Services, Libraries, Parks and Recreation, the Department of Neighborhoods, the Port of Anchorage, and the Anchorage Community Development Authority. Responsibilities also included formulating and approving budgets, departmental reorganizations, multimillion dollar grant writing, real estate, capital improvement project planning and local, state, and federal requests.

Executive Director and CEO 1999 to 2003
Anchorage Neighborhood Housing Services
Executive Director for Anchorage Neighborhood Housing Services (ANHS) a non-profit community development corporation dedicated to promoting affordable housing and neighborhood revitalization. ANHS is affiliated with the National Neighborhood Reinvestment Corporation and is certified as a Community Financial Institution. From 1998 to 2003 ANHS loaned $18 million and leveraged $34 million in first mortgages. Of the 545 loans made to low to moderate income families, 91 of those borrowers were persons with a disability. Additionally, ANHS owned and managed 1,150 units of affordable rental housing in twelve locations citywide. Total assets at the time were $62.2 million. Other responsibilities included overall management, legislative affairs, and grant writing.

Executive Director 1981 to 1999
The ARC of Anchorage
For 18 years served as the Executive Director for The Arc of Anchorage. The agency grew from a budget of $180,000 a year to $12 million serving more than 400 individuals. Programs included an array of services for children and adults with developmental and other disabilities including a day activity center, 24 hour residential care, case management, in-home family services, respite, and specialized services for persons with

dual diagnosis and emotional disturbances. Responsible for securing the funding, purchased, renovated and/or constructed more than 60 housing units, single and multifamily, to ensure safe, affordable housing. Worked with the Governor's Office and the legislature on many issues facing persons with disabilities throughout the State of Alaska. Other duties included assets management, program development, grant writing, public relations, fundraising, legislative affairs, and advocacy.

CARLTON SMITH

3000 Goodwin Road, Juneau, AK 99801 ▪ (907) 463.4800 wk ▪ carltonsmith@gci.net

Corporate leader and investment professional with 20+ year success record of crafting financial turnarounds and growth by instituting corporate governance true to core mission, creating financial discipline within subsidiaries, and structuring top asset portfolio performance to fuel cash flow / long-term growth.

Extensive corporate board experience. Stanford graduate. Skilled steward for real estate, portfolio management, land, and ANCSA settlement trusts for corporate/high-net-worth investor portfolios up to *$225+M.* Own positive relations with government and Alaskan community. Deep understanding and respect for native culture and goals.

Value Offered

- **Strategic Leadership & Opportunities Analysis** – Evaluated the competition, establishing lead banking facilities for Kootznoowoo Real Estate LLC entities. Forged organizational and financial strategies that cut portfolio admin costs and radically increased ROI on their $10M business revenue and a $12M real estate portfolio.
- **Financial Management & Turnarounds** – Restructured Kootznoowoo Inc., restoring profits in less than 2 years. Led loan workout with Wells Fargo Bank, forestalling foreclosure.
- **Boards & Due Diligence** – Director, corporate officer, and board advisor for multiple ANCSA corporations. Named to national Dept. of Commerce panel to evaluate new Native American Entrepreneurship and Trade office. Assistant Corp. Secretary to Sealaska and subsidiaries; driver of all outreach to 15,000 shareholders.
- **Corporate Real Estate** – Assess, broker opportunities, and acquire properties for ~ *$50M* portfolios. Oversee property management agreements for portfolio holdings with external property managers in multiple markets.
- **Trusts & Investment Policy** – Facilitated Kootznoowoo executives, staff, and auditing team in setting audit standards, corporate governance, investment guidelines, and portfolio performance standards. Managed stock, real estate, and business investments in Permanent Fund and Elder's Settlement Trusts. Managing member of 3 LLC real estate entities: Chatham Properties, Mitchell Bay Properties, and Admiralty Bay Properties, LLC.
- **Land Management** – Deep knowledge of land stewardship. At Kootznoowoo, oversaw 31,000 acres of ANCSA land, handling environmental, security, timber harvests, marketing, and co-management with US Forest Service.

Professional Experience

THE CARLTON SMITH COMPANY, www.thecarltonsmith.com, Juneau, AK — 1989 - 1998 and 2001 - Present

President / Chief Investment Adviser

Represent corporations, both in-state and nationwide, native and private, in various types of real estate transactions including: sales, commercial leasing, valuations, acquisitions, exchanges, and property management. Coordinate acquisitions for corporate clients with balance sheet equity in excess of *$50M.* Key clients include:

Village Corporations

- **Shee Atika** – Advisor for creation of a real estate policy. Conducted board training. Facilitated *$28M* portfolio of investment-quality lower-48 income properties with returns that outpaced policy guidelines.
- **Shee Atika Fund Endowment** – Identified and secured $7m of property in 2005 within policy guidelines.
- **Goldbelt Inc.** – Profitably sold 2 subdivisions, an office building, and a distressed sand and gravel tract.
- **Kootznoowoo, Inc.** – Established holding company structure and LLCs to own and manage acquisitions. Acquired and managed *$12M* portfolio comprised of NNN and multi-tenanted properties.
- **MTNT Limited** – (5-village corp. consortium). Negotiated favorable purchase of a 75-unit downtown Anchorage apartment building. Developed corporate real estate policy for acquisitions and management/ resale of corporate land owned by 975 shareholders.

Regional Corporations

- **NANA Development Corp.**- Facilitated purchase from Puget Sound Bank of a 41K SF Class A office building in Anchorage as NANA corporate headquarters. Conducted buy/sell analysis of 88 multi-family units and a 17-acres industrial parcel in Kotzebue, AK.
- **CHUGACH** - Provided foreclosure consulting for re-marketing the sale of 2 Anchorage headquarters buildings. Negotiated both sales.

Professional experience (continued)

THE CARLTON SMITH COMPANY – continued

Regional Corporations – continued

- **AHTNA Corporation** - Provide investment analysis and leasing services.
- **Central Council of Tlingit Haida Indian Tribes of Alaska** - Designated leasing broker, CCTHITTA.

Private Corporations

Alaska USA Federal Credit Union; The Salvation Army, Alaska Division; The Church of Jesus Christ of Latterday Saints (National); Federal Express; First Bank of Ketchikan; The Grand Camp of the Alaska Native Brotherhood

MAMMOTH EQUITIES LLC, Mission Viejo, CA 2001 -2004

Vice President, Capital Markets

Raised investment capital from high-net-worth individuals, Native American tribes, and ANCSA corporations. Maintained investor relations for investors nationwide including investment reporting and asset performance.

- **Investor Relations & Capital Growth:** Served a national equities firm with $225M under management. Groomed relationships with new and existing investors, including corporate and high-net-worth individuals. Supervised a $16M portfolio, including asset allocations, distribution policies, and reporting to stakeholders.

KOOTZNOOWOO INCORPORATED 1998 – 2001
TAQUAN AIR SERVICES 1998 – 2001

Chief Executive Officer

Took on challenge of leading and crafting the comprehensive turnaround of an overextended ANCSA native organization and a cash-poor airline subsidiary. Analyzed existing assets, opportunities, organizational strengths and weaknesses, human capital investment and a diverse investment portfolio. Developed and executed a two-prong strategy that instituted cuts and *near-term profits/sufficient cash flow restoration in just 20 months* and overhauled operational/investment practices, creating *ample long-term income* for sustained growth and solvency.

Led leadership team, 22 staff, and 2 field offices. Worked closely with Finance Officer, finance staff, and external auditors to strengthen audit standards, corporate governance, analysis of new investment opportunities, and establishment/monitoring of portfolio performance standards. Used trusts/legal vehicles to avoid foreclosures.

- **Strategic Leadership & Organizational Development**
  - **Redesigned the corporate staffing structure** to better establish direct reporting relationships and accountability for specific corporate functions with new individual position descriptions company-wide.
  - **Brought portfolio management oversight in-house, cutting costs 50% and upping returns.** Promoted the Vice President of Finance to Senior Vice President of Finance to provide direct oversight for Portfolio consultants, money managers, and Real Estate financing and refinancing activities.
  - **Bred accountability: Implemented quarterly/semiannual /annual personnel evaluations.**
  - **Formalized quality service delivery, leading creation of procedures, policies, and manuals.** Structured and led development of personnel manual and office procedures manual for corporate and subsidiary employees, including the addition of updated policies on company security, use of computers, and corporate ethics. Developed job categories/supporting job descriptions for all positions.
- **Financial Management:**
  - **Executed the creation of Kootznoowoo, Inc.'s commercial real estate portfolio,** achieving profitability for the parent corporation in 20 months. Formulated short- and long-term strategies for acquisition, management, and disposition of a real estate portfolio valued at $12 million.
  - **Maintained exceptional returns for a *$10M* portfolio** and slashed overhead costs. Stringently introduced a prudent asset reallocation/balanced investment strategy, replacing former high-risk practices. Established formal investment policy to support Board's strategic vision and mission.
  - **Successfully restructured debt** with Wells Fargo Bank and all major creditors, avoiding foreclosure.

Professional experience (continued)

SMITH STEVENS INSURANCE – Anchorage, AK 1995 - 1999

Chairman of the Board

Led development and profitable operations for Alaska's first MWBE financial services firm. Correctly identified need for a local provider of investment, employee benefit, and HR administrative services that understood the Alaskan community. Served business needs for payroll deduction, life insurance, and employee benefit plans. Acted as local underwriter for major insurers, i.e., Premera Blue Cross, TransAmerica, NY Life, and Principal Financial Group. Primary clients: Alaskan Native Tribes, Village and Regional Corporations and subsidiaries.

Other employment: SEALASKA– Juneau, AK 1980 - 1984 and 1996 - 1998

Assistant Corporate Secretary/Manager, Investor Relations (1980-1984)/ **Boardmember** (1989-1998)

As sole administrative liaison to 18-member Board and 8 standing committees: Researched and provided strategy and planning recommendations, strategic communications, logistics, documentation compilation support, and overall coordination of governance/investment issues. Developed and implemented outreach, annual meetings, communication plans/proxies, and compliance to satisfy the needs of 15,000 shareholders.

As a boardmember charged with portfolio due diligence and policy development: Led creation of first-ever investment policy for a $135M balanced portfolio. Instilled financial discipline, overseeing outside financial consultants and money managers in the development of asset allocation guidelines.

Objective: To serve on the Alaska State Board of Nursing

Currently employed as CEO of Care Net Pregnancy Center of the Tanana Valley, a faith based, 501(c)(3) pregnancy resource clinic; mission statement: *Serving women, Upholding Life*

Summary of Qualifications:

- Currently licensed as registered nurse in Alaska, license # 17680
- Six years experience as executive director/CEO of Care Net Pregnancy Center
- 15 months experience as peer counselor / Care Net Pregnancy Center
- Has demonstrated leadership / administrative / program development skills,
- Has extensive nursing experience in maternal/child health.
- Easily establishes and maintains rapport with supervisors and coworkers.
- Is a member of Door of Hope Church since its founding; attends regularly and participates with husband in leadership activities such as greeting and leading a cell group in their home.
- Has working knowledge of the major nonprofits, agencies, service providers, and faith-based organizations in the community.

Experience:

April, 2004 – present – CEO of non profit organization, Care Net Pregnancy Center of the Tanana Valley, serving over 1000 women annually. The Center is a pregnancy resource clinic, providing pregnancy confirmation, options counseling, and pregnancy support services for women experiencing unplanned pregnancy.

September 30, 2008 – On behalf of Care Net Pregnancy Center, successfully competed for the Federal CBAE (Community Based Abstinence Education) grant. The five year award of $515,000 per year from the US DHHS, ACF/ACYF/FYSB was received 9/30/08 and has funded the *Step Up Now to Healthy Relationships* program. Step Up Now serves 12 to 18 year old youth in Fairbanks with the message of risk avoidance and healthy relationships.

November, 2002 – April 2004 – volunteered regularly (8-10 hours/weekly) at Care Net Pregnancy Center (then known as Pregnancy Resource Center) as a peer counselor and post abortion healing group facilitator. Served 8 women in 2 groups in 2004-2005 Training includes: Adoption Specialist Training, Care Net Peer Counselor training, Post Abortion Truth for Healing facilitator training. Enjoyed an excellent relationship with the staff and volunteers of the CPC. Became familiar with the structure and function of the CPC by being available for assisting the staff in various tasks.

1998-2002 – Contact person for Door of Hope Church/Love, INC

1998-2000 – Assisted in establishing of Father's House Single Parent Ministry. Facilitated parenting classes for two years for Father's House.

1996-1999 – Employed by the Northwest Medical as home health nurse; duties included equipment rental, CPR instruction, home testing (sleep studies on infants), in-hospital testing of high risk infants.

Dec 1995-Sept 1996 – Volunteered to care for neighbor's infant who required skilled NICU nursing care at home; averaged 3-4 days/week.

Spring 1994-Summer 1995 – Volunteer caseworker for Love, INC

(Moved to Fairbanks, Alaska from San Antonio, Texas in January 1994)

1985-1993 – Humana Women's Hospital, San Antonio, TX – employed as RN – staff nurse labor/delivery, NICU, ante- and post-partum. Also taught childbirth classes, developed curriculum for and taught cesarean classes, and sibling classes.

1984-1989 – San Antonio - employed in OB/BYN office shared by 3 MD's. Was the only licensed nurse; carried out multiple tasks and had numerous responsibilities involving all aspects of patient care, with an emphasis on patient teaching/phone counseling.

1977-1984 – San Antonio - co-director of Alamo Childbirth Training Association, as independent non-profit organization providing childbirth instruction to the community. Was certified as a Lamaze instructor. Taught childbirth classes and cesarean classes. As co-director, was liaison to the professional community. Responsibilities included office reception, arranging classes, handling accounts receivable, light bookkeeping, setting up events such as Professional Division luncheon meetings, which at times involved guest speakers.

Education: Bachelor of Science in Nursing / University of Texas Health Science Center at San Antonio School of Nursing; 1977

Personal – Married to Richard Bienvenue 1993; 5 children, 4 grandchildren. Interests: gardening, sewing/crafts, outdoor activities, traveling

Personal testimony and references available upon request

Wendy S. Hamilton
Box 240674
Douglas, AK 99824
907-209-0023

Education:

Bachelor of Human Services, University of Alaska Anchorage, Magna Cum Laude, 2002
Relevant coursework: Alternative Dispute Resolution; Rural Treatment Strategies; Substance Abuse Counseling; Counseling Skills I-IV; Natives of Alaska; Human Behavior and Diversity; Ethics; Statistics; Fundamentals of Oral Communication and Leadership Skills; and Methods of Written Communication.

Work Experience:

National Council on Alcoholism and Drug Dependence **Dec. 2004-Present**
Therapeutic Court Coordinator – Dec. '04 – Oct. '06 - Initiated and implemented Juneau's first Therapeutic Court; designed forms, wrote policies and procedures and coordinated the therapeutic court team; networked with local community organizations such as State Dept. of Law, City and Borough of Juneau Law Dept., Juneau Police Dept. and Rainforest Recovery Center; wrote grant renewals and quarterly reports; supervised all clients in the Juneau Therapeutic Court, including compliance checks, coordinating adjunctive services and regular home visits.
Tobacco Program Coordinator – Oct. '06 – Present - Coordinate implementation of the State Tobacco Prevention and Control grant; supervise the Teens Against Tobacco Use (TATU) coordinator; create media campaigns about tobacco policy issues; organize the Juneau Clean Air community coalition; work to implement Juneau's Clean Air ordinance.

State of Alaska, Dept. of Corrections, Felony Probation **June 2002-Dec. 2004**
Taught Cognitive Self Change and Victim Impact classes; taught and worked with clients participating in the Driving While Intoxicated Byrne Grant program; conducted group and individual intake orientation sessions reviewing conditions of release; perform individual case management and record keeping; administer risk assessment tools such as the LSI-R and Static 99; interview and counsel victims; provide clerical support to probation officers, writing reentry support groups both at the jail and the halfway house, including topics such as relapse, addictions, staying out and staying free and living in recovery; network with service providers in the community including the Job Center, Tlingit and Haida, JAMHI, individual counselors, child support services and Alaska Legal Services.

Self-employed **1989 - 2002**
Owned and operated yoga studio and bodywork practice; presented stress management classes and seminars for both the public and private sector; facilitated bereavement support groups and individual bereavement counseling.

Internship Experience:

State of Alaska, Dept. of Health & Social Services, Division Public Health, Community Health and EMS **2000 - 2001**

Assisted research analyst in data collection and compilation; interviewed health care providers throughout Alaska; utilized Access and Excel to enter data and print reports; prepared HPSA applications for federal approval.

Additional Training and Conferences:

ACCDPC Chemical Dependency Counselor I Certification; ASAM Criteria Training; Motivational Interviewing for Substance Abuse Counselors; Group Therapy for Substance Abuse Counselors; Cognitive Behavioral Skills training; Sex Offender Treatment Conference; National Conference on Addiction and Criminal Behavior; National Reentry Conference; Critical Incident Stress Management, Basic and Individual; Comprehensive Bereavement Skills.

Objective: To volunteer on the **Alaska Human Rights Commission** in respect for the mission of the Commission as stated in our Alaska statute, Tittle 18.

PROFESSIONAL QUALIFICATIONS:

ATTORNEY at LAW: Member of the Alaska Bar Association since 1981. Admitted to practice by the Alaska Supreme Court and the U. S. District Court for the District of Alaska.

General Counsel: Served as legal counsel to the Alaska District Council of Laborers for 25 years (1981-2006) full-time, and currently part-time. This position involved the handling of Employment law cases including Employment Discrimination cases in the courts, EEOC, Alaska Human Rights Commission, and the AERC.

Vermont Law School: Juris Doctorate degree awarded 1981.
University of Massachusetts: Bachelors of Science degree awarded in 1978.

Governor's Task Force on Worker Compensation; Served on State of Alaska committee in 2006 to study the administration of the Alaska Worker Compensation law and review draft amendments.

COMMUNITY SERVICE:

PREGNANCY RESOURCE CENTER; Serve as member of the Board of Directors and Treasurer for the Eagle River PRC which assists women in crisis pregnancies, aiding families needing maternity clothing, or clothing and supportive items for newborns through their early childhood years. [2005-present].

LOVE INC of EAGLE RIVER: Serve as Vice President and Board member on organization dedicated to assist all people in need in the Eagle River to Peters Creek region by coordinating volunteer help and support from local Christian churches. [2005-present].

MOUNTAIN VIEW BOYS & GIRLS CLUB: Served on Advisory Board and assisted in fundraising activities for the purpose of supporting the mission of the Club to provide a

positive place for the teens and children of the Mtn. View neighborhood. Also provided free classes to teens on "How to Apply for a Job" to give them the confidence to enter the workforce, tips on filling out job applications, and good presentation at job interviews. [1990's].

CYSA SOCCER COACH: Served as coach for local children's soccer league. [1995-2000's].

Career Experience:

Director SE AHEC (12-08 to present)
SouthEast Area Health Education Center (SE AHEC) hosted by the
SouthEast Alaska Regional Health Consortium (SEARHC), Sitka, AK
Building a brand new program to encourage individuals to serve in a variety of health professions in underserved areas of southeast Alaska. Emphasizing retention through continuing education, recruiting individuals into exploring health careers, supporting students in health professions seeking rotations to complete their education. Support the goals of the program through networking and public speaking, writing grants, grants and program management. Mentoring staff to assume leadership positions. Serving all of southeast Alaska.

Community Family Services Coordinator (01-96 to 07-08)
SouthEast Alaska Regional Health Consortium (SEARHC), Sitka, AK
Efficiently managed a complex multi-site CARF accredited outpatient behavioral health program long range planning, policy setting, training emphases, budget and grant management, providing administrative and clinical supervision and training to staff in several remote southeast Alaska villages. Support the career development of Behavioral Health providers working in remote locations. Network within SEARHC, with Native organizations, with the University system in Alaska and with other agencies. Active on advisory boards promoting career development opportunities. Provided internship supervision and supervision for licensure. Served as a mentor for females going into leadership and management positions.

Assistant Professor of Psychology (08-91 to 12-95)
Concordia College, Moorhead, MN
Responsibilities: Taught three psychology courses per semester, general psychology, educational psychology, developmental and/or cross-cultural psychology. Mentored and advised students on academic matters. Conducted research in my fields of interest. Networked and became involved with the community, through presentations or direct participation on committees, clubs, or boards. Worked closely with the Native American students.

Consultant (1987 to 1997 and 2008 to 2009)
Self-employed part-time
Responsibilities: Provided training and presentations primarily on Native American mental health issues, including substance abuse and suicide, in the United States and internationally. Provided case consultations and training for sexual assault counselors. Conducted a needs assessment in region focusing on Indian mental health. Conducted psychological evaluations. Evaluated grants for the federal government and Headstart programs, specifically the mental health and disabilities components. Gathered data on tribal responses to the Native American Graves Protection & Repatriation Act (NAGPRA) in the Minnesota region.

Therapist (05-88 to 05-90)
Intermountain Sexual Abuse Treatment Center, Logan, Utah
Responsibilities: Provided individual, group and family therapy in the context of "family focused" treatment which supports family members with the required services and provides the support for the victim. Worked with victims of sexual abuse, sexual offenders, parents and siblings of abuse victims and adults who were molested as children. Led time limited focused therapy groups for preschool, young females, pre-adolescent females, and adolescent female victim groups. Co-led an on-going therapy group for young female adolescent victims.

Mental Health Specialist (01-78 to 06-87)
USPHS Indian Health Service, Poplar and Crow Agency Montana
Responsibilities: Provided individual, group, marital, and family therapy. Conducted intake interviews and presented cases for review. Worked with clients with a variety of diagnoses. Led

focused therapy groups on sexual abuse and parenting. Provided educational interactive presentations for children promoting safety. Provided workshops for community meetings and in-service training for staff on children of alcoholics and sexual abuse and other behavioral health issues.

RELATED WORK EXPERIENCE:

- **Youth Substance Abuse Counselor/Prevention Specialist**, Drug Free Communities Support Program Coordinator, Providence Valdez Counseling Center (PVCC). Valdez, Alaska, 1/01/2005-Present (First hired to position on 5/24/2004 under Valdez Regional Health Authority). A full-time exempt position under the administrative designation.
  Duties and Essential Functions: Responsible for accurate, timely documentation of program activities, correspondence, client referral and coordination of prevention and treatment planning within PVCC and the community. Maintain strict confidentiality within federally mandated guidelines and maintain professional boundaries with clients and staff. Supervise counselors, volunteers and interns. Perform job duties, independently, with high public contact. Work with agencies and organizations including schools, the court system, juvenile probations, Youth Court, City Parks and Recreation, law enforcement, the Office of Children's Services, school psychologists, the faith community, the general public and other individuals. Coordinate community advocacy efforts, education and awareness campaigns through public meetings, use of print, radio and electronic media, and other prevention-specific programming. Identify and obtain continued funding through federal, state and local agencies, organizations, businesses and individuals through grant-writing, and other fundraising. Required to have a computer proficiency to include familiarity with word processing software.

- **Youth Substance Abuse counselor/prevention Specialist**, Valdez Regional Health Authority (VRHA)Valdez Counseling Center, Valdez, Alaska, 5/24/2004-12/31/2004 (9 months). A full-time nonexempt position eligible for overtime.
  Duties and Essential Functions: Ibid.

- **Social Worker II (CS)**, State of Alaska Department of Health and Social Services, Office of Children's Services (formerly DFYS). Kenai Field Office, Kenai, Alaska, 4/16/2001-5/17/2004 (3 years in Kenai--4 years total). A full-time nonexempt position eligible for overtime.
  Duties and Essential Functions: Worked with at-risk children and families addressing physical and sexual abuse, neglect and harm. Coordinated care and safety/case planning services for at-risk families and children with multiple community providers and entities including the courts, guardian *ad litem*, law enforcement, public behavioral health, public health, substance abuse treatment facilities, public assistance, public housing, the local school district, state representatives and senators, ombudsman, the client's extended family, and other relevant individuals and agencies. Worked independently to manage a high caseload, utilizing skills in crisis management, mediation, negotiation, critical thinking, interpretation, application and enforcement of state policy, statute and federal law. Facilitated coordination of funding, travel logistics and escort for minor children, families, foster parents, and other agency staff. Other duties included: on-call emergency child protection services and crisis response; extensive travel to remote areas; legal contact with the State's Assistant Attorney General, the Public Defender, and Office of Public Advocacy; door-to-door investigation, cold-calling, public relations and education. Required proficiency with Microsoft Office software and with the OCS PROBER program (a proprietary database software).

- **Social Worker I**, State of Alaska Department of Health and Social Services, Division of Family and Youth Services (DFYS). Aniak Field Office, Aniak, Alaska, 3/23/2000-4/13/2001 (1 year). A full-time noncxempt position eligible for overtime.
  Duties and Essential Functions: In addition to the duties listed in the previous section, work with DFYS in the Aniak office required frequent travel to remote locations, in inclement and dangerous weather, often by small aircraft, boat or snowmobile. Other duties required in the Aniak position included: coordination of foster care licensure, home inspection, and investigation; ongoing case planning, management and oversight for families of adjudicated children; extensive travel planning, to include air and ground travel, lodging and board.

ASSETS:

- Team player.
- Self motivated.
- Enthusiastic leader.
- Goal oriented, high achiever.
- Analytical, reflective, and reliable.
- Personable, positive, empathetic and thoughtful of others.

EDUCATION:

Bachelor's of Science Degree, Eastern Oregon University, La Grande OR. 6/12/99.
Major: **Philosophy, Political Science and Economics** (PPE Program).
Minor: **Political Science.**
Cumulative GPA: 3.4
Senior Capstone Project: ***The Economic, Political and Environmental Impacts of the Mexican Maquiladora Industry.***

LICENSES and CERTIFICATION:

- **Licensed Baccalaureate Social Worker**, State of Alaska Department of Economic Development, Division of Occupational Licensing, Alaska License, No. 487, Effective: 6/30/2004. Expires: 6/30/2006.
- **Licensed Baccalaureate Social Worker**, State of Alaska Department of Economic Development, Division of Occupational Licensing, Alaska License, No. 487, Effective: 7/01/2002. Expired: 6/30/2004.
- **Licensed Baccalaureate Social Worker**, State of Alaska Department of Economic Development, Division of Occupational Licensing, Alaska License, No. 487, Effective: 11/20/2001. Expired: 6/30/2002.
- **Awarded Paralegal Certificate**, Eastern Oregon University Small Business Development Department, 3/1999.

MOST RECENT ACCOMPLISHMENT IN ORGANIZATION:

In March of 2006, the Valdez Youth Awareness Coalition (YAC), a Drug-Free Communities Support Program (DFCSP), funded through the Substance Abuse and Mental Health Services Administration (SAMHSA), achieved its non-profit status with the State of Alaska.
This success was the result of a year-long effort to organize a discussion-based community council into an action-oriented vehicle for community mobilization around the issues of youth substance-use and other negative risk taking behaviors in the City of Valdez.
As DFCSP Grant Coordinator and *ex officio* representative of the grant's fiscal agent I was able to serve a critical role organizing and facilitating all aspects of YAC's transformation into a coalition and non-profit organization.

Parental Consent Laws for Adolescent Reproductive Health Care: What Does the Psychological Research Say?

Psychological research has found that most adolescents seek parental or other adult guidance in decisions about contraceptive use and abortion, and that adolescents are generally competent to make such decisions. Given the overall lack of empirical support for parental notification and consent laws for adolescent reproductive health care, resources need to be directed to teen pregnancy prevention efforts, including family support, education, and psychosocial services.

ARE ADOLESCENTS COMPETENT TO MAKE DECISIONS REGARDING REPRODUCTIVE HEALTH SERVICES?

Psychological theory and research on cognitive, social, and moral development support the finding that adolescents, as a group, are able to understand, reason, and make decisions about important life situations.

- Research on pregnancy-related decision-making abilities, and more general studies on cognitive and social development, support the view that by middle adolescence (ages 14 to 15) minors have developed many adult-like intellectual and social capacities (Ambuel, 1995; Ambuel & Rappaport, 1992; Lewis, 1987; Mann et al., 1989). These capacities include the specific abilities necessary for understanding treatment alternatives, considering risks and benefits, and giving legally competent consent. It is important to note that the ability to make a legally competent decision is not equivalent to making an intelligent, mature, or right decision (O'Keefe & Jones, 1990). Adults, like adolescents, can make decisions that are not in their best interests or are considered immature by others.

- When comparing adolescents to adults, research has found that adolescents who considered abortion were generally as competent as legal adults in their decision-making; however, adolescents under age 15 who did not consider abortion were generally found to be less competent in their decision-making than adults (Ambuel & Rappaport, 1992).

- It is also noteworthy that almost all adolescents who exercise the judicial bypass option provided in parental consent/notification laws governing abortion are successful in obtaining court permission to forgo parental involvement (Ambuel, 1995; Crosby & English, 1991; Ptiner & Yates, 1992). Nearly 90 percent of the minors who use judicial bypass procedures are ages 16 and 17; and in those cases where minors were considered immature, the courts have almost always decided that the abortion was in the minor's best interest (O'Keefe & Jones, 1990) . Research on sociodemographic and economic factors has found that adolescents who choose to obtain abortions tend to be relatively well-educated, white, unmarried residents of the northeast or west, and either in school or working (Stevans et al., 1992). There is also evidence to suggest that adolescents who choose abortion are more mature and competent than those who decide to carry the pregnancy to term (Ambuel & Rappaport, 1992).

DO ADOLESCENTS SEEK ADULT GUIDANCE WHEN MAKING DECISIONS ABOUT REPRODUCTIVE HEALTH SERVICES?

Empirical studies have found that the majority of adolescents consult a parent or other adult about reproductive health care. Family characteristics that facilitate parent-child communication include openness and adaptability.

- Without any legal compulsion, over 50 percent of adolescents consult a parent about contraceptive use (Pistella & Bonati, 1998) and abortion decisions (Ambuel, 1995; Ambuel & Rappaport, 1992; Crosby & English, 1991; Griffin-Carlson & Mackin, 1993). Studies have also found that adolescents consult adult, nonparental relatives about reproductive health care (Pistella & Bonati, 1998) and abortion-related decisions (Resnick et al., 1994). Moreover, younger adolescents (age 13 and 14) are most likely to notify their parents about abortion decisions (Resnic, et al., 1994).

- Adolescent girls report feeling more free to talk about sex and birth control with their mothers than with any other single person (Griffin-Carlson & Schwanenflugel, 1998). They regard their mothers and male partners as most helpful in their abortion decision-making process, followed by friends and counseling services (Resnick et al., 1994).

- Adolescents who describe the communication in their family as generally open were more likely to involve their parents in their decision whether to have an abortion (Griffin-Carlson & Mackin, 1993). Family adaptability (parents' ability to change their interactions with their children in age-appropriate ways) has been found to influence the quality of parental involvement in an adolescent's abortion decision (Griffin-Carlson & Schwanenflugel, 1998). Parents who are adaptable are more likely to be approachable, and provide the necessary guidance, understanding, and support to an adolescent faced with an unwanted pregnancy. Yet, even adolescents in adaptable families with open communication may still refrain from seeking parental consent for fear of disappointing their parents about the pregnancy.

- A disproportionate number of young adolescents who become pregnant live in severely unstable families (Ambuel, 1995). Thus, adolescents most at risk for pregnancy are also those most likely to come from violent and/or chaotic homes where they may not be able to seek guidance from their parents. Moreover, nearly half of pregnant adolescents with a history of physical assault report being hit during their pregnancy, most often by a family member (Berenson et al., 1992). These at-risk teens may suffer the most from mandatory parental consent laws, because they are confronted with having to seek permission from an abusive parent or are forced to delay medical care until they obtain a judicial bypass. Alternatively, these teens may choose to become young parents or may seek

dangerous, extralegal methods of abortion.

WHAT ARE THE EFFECTS OF PARENTAL INVOLVEMENT LAWS ON ADOLESCENTS?

Parental notification and consent laws can have harmful psychological and health consequences for the minors affected by these laws. By restricting adolescent access to confidential contraceptive services, these laws can result in an increased number of unintended pregnancies.

These laws often have the following additional unintended effects:

- Delayed timing of contraceptive services and/or abortion, which increases health risks and expenses (Ambuel, 1995; Lieberman & Felerman, 1999; Melton, 1987; Pfiner & Yates, 1992)
- Stress, fear, and anxiety for those adolescents who go to court to obtain a judicial bypass for an abortion (Crosby & English, 1991; O'Keefe & Jones, 1990)
- Intrafamilial conflict in abusive homes (Ambuel, 1995; Melton, 1987; O'Keefe & Jones, 1990)
- Restriction of adolescent access to abortion resulting in teenage parenthood or the use of dangerous extralegal methods of abortion (Crosby & English, 1991; O'Keefe & Jones, 1990).

WHAT IS NEEDED?

First, there needs to be general consensus that adolescent health is of paramount importance in discussions of contraceptive use and abortion. Next, strategies need to be identified to safeguard and promote adolescent health. Such strategies include the widespread dissemination and implementation of provenly effective adolescent pregnancy prevention programs, such as school-based curricula (e.g., Arnold et al., 1999); community-based initiatives (e.g., Lewis et al., 1999); family support programs (e.g., Solomon & Liefeld, 1998); peer support/counseling programs (e.g., Ferguson, 1998); and skills training (e.g., Hovell et al., 1998). Concurrently, concerted efforts need to be undertaken to promote open, meaningful communication between parents and their adolescent children. In the absence of such communication (e.g., as in the case of abusive families), parental notification and consent laws place the health of adolescents in jeopardy. Yet, psychological research has shown that most adolescents consult their parents or other adult relatives about contraceptive use and abortion and are generally competent to make such decisions. Taken as a whole, these findings call into question the value of parental notification and consent laws and point to the general ability of adolescents to exercise control over their own reproductive health care.

Senator Bettye Davis

SB 10 26-LS0073\A

"An Act requiring health care insurers to provide insurance coverage for medical care received by a patient during certain approved clinical trials designed to test and improve prevention, diagnosis, treatment, or palliation of cancer; directing the Department of Health an Social Services to provide Medicaid services to persons who participate in clinical trials; relating to experimental procedures under a state plan offered by the Comprehensive Health Insurance Association; and providing for an effective date."

SPONSOR STATEMENT

Clinical trials are research studies that test how well new medical approaches work in patients. Each study answers scientific questions and tries to find better ways to prevent, screen for, diagnose, or treat disease. Patients who take part in cancer clinical trials have an opportunity to contribute to the knowledge of, and progress against cancer. They also receive state-of-the art treatment from experts in the field. The National Cancer Institute, as part of the U.S. National Institutes of Health, reports 6,000 cancer trials in the United States any one time. They include trials in prevention, screening, diagnosis, treatment, quality-of-life, and genetic studies.

SB 10 removes important barriers to the participation of patients in cancer clinical trials in Alaska. It requires that applicable health care plans, including Medicaid, cover routine patient care costs for patients enrolled in all phases of clinical trials, including prevention, detection, treatment, and palliation (supportive care) of cancer. Currently Alaska health plans may exclude coverage for routine patient-care costs while a patient with cancer is enrolled in a clinical trial. Providers of health care plans often conclude that money is saved by excluding care while patients participate in clinical trials. But these patients, if not enrolled in clinical trials, will continue to receive conventional therapy at roughly the same or slightly increased costs in the short-run.

Studies have shown that only 2-3 percent of eligible adult patients enroll in clinical trials with a 6.5% increase in costs for clinical trial participants compared to nonparticipants. (National Conference of State Legislatures, www.ncsl.org/programs/health/clinicaltrials.htm, accessed 2/27/08) Without in-state facilities and support of clinical trials participants in Alaska currently have to travel out of state, increasing the cost of non-emergency transportation which is about 3% of total Medicaid costs.

In FY 2007 an estimated 4,600 patients received cancer treatments through Alaska's Medicaid program at a cost of $21.5 million. The average payment per beneficiary was about $4,675. **The federal government reimburses the state at about 50% of the total costs.** Based on an estimated 2.5% participation rate per above, about 115 patients are expected to participate in clinical trials each year. A 6.5% average increase for 115 persons would add $35.00 per year to Medicaid for cancer treatments. Non-emergency transportation costs for the same group are estimated to add another $15.00 per year. Medicaid insurance cost for cancer clinical trials is estimated to increase $50,000 with the federal government paying half of this.

Twenty-three or more states have passed legislation or instituted special agreements requiring health plans to pay the cost of routine medical care patients receive while participating in clinical trials. Passage of SB 10 will result in more successful outcomes in cancer treatments in Alaska, increase retention of patients in Alaska for their cancer care, and also, after full implementation, result in cost savings in the short and long term.

A description of "The Access to Cancer Clinical Trials Act of 2009" (Rep. Sue Myrick) per "The Hill's Congress Blog" January 30, 2009 sums up to a large extent what SB 10 is attempting to do:

"Clinical trials are so critical for patients and or medical research, yet many patients find that their health insurance won't cover the rest of their routine cancer treatment if they decide to enroll in clinical trials. We're not asking insurance companies to pay for clinical trials. This bill simply states that insurers must continue to pay for routine treatments — that they would be paying for regardless — if patients enroll in a clinical trial.

No patient should ever have to fear exploring all treatment options at the cost of losing coverage. We should be encouraging participation in clinical trials, not discouraging it by removing coverage for routine care. Were it not for patients who have enrolled in past trials, the medial advancements we've experienced toward finding a cure for cancer would not be possible.

CS for Senate Bill 10( ) 26-LS0073\E

"An Act requiring health care insurers to provide insurance coverage for medical care received by a patient during certain approved clinical trials designed to test and improve prevention, diagnosis, treatment, or palliation of cancer; directing the Department of Health an Social Services to provide Medicaid services to persons who participate in clinical trials; relating to experimental procedures under a state plan offered by the Comprehensive Health Insurance Association; and providing for an effective date."

EXPLANATION OF COMMITTEE SUBSTITUTE

The Committee Substitute for Senate Bill 10( ) makes several **substantive definitional changes in the body of the bill** itself **to clarify sections in the original bill** outlined below and it reorganizes the bill in accordance with requirements of the Drafting Manual by Legislative Counsel:

1) "**Approved clinical trial related to cancer**" (AS 21.42.410(1)(e)(1) means a scientific study using human subjects designed to test and improve prevention, diagnosis, treatment, or palliative care of cancer, or the safety and effectiveness of a drug, device, or procedure use in the prevention, diagnosis, treatment, or palliative care of cancer if the study is approved by....
2) "**Routine patient costs**" (AS 21.42.410(1)(e)(2) means costs incurred for medical care for an approved clinical trial related to cancer that would otherwise be covered under a health care insurance plan if the medical care was not in connection with an approved clinical trial related to cancer, including: coverage for items or services needed for reasonable and necessary care arising form the provision of an investigational item or service, including the diagnosis or treatment of complications; and transportation for the patient that is primarily for and essential to the medical care.
3) "**Coverage for approved and non-approved drugs and devices**"(AS 21.42.410(1)(e)(2) (off-label use) includes coverage for routine patient care costs incurred for drugs and devices that have been approved by the Food and drug Administration (FDA), whether or not the FDA has approved the drug or device for use in treating the patient's particular condition, to the extent that the drugs or devices are not paid for by the manufacturer, distributor, or provider of that drug or device. This shall include coverage for reasonable and medically necessary services needed to administer the drug or device under evaluation in the clinical trial.

CS FOR SENATE BILL NO. 10( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATOR DAVIS

A BILL

FOR AN ACT ENTITLED

"An Act requiring health care insurers to provide insurance coverage for medical care received by a patient during certain approved clinical trials designed to test and improve prevention, diagnosis, treatment, or palliation of cancer; directing the Department of Health and Social Services to provide Medicaid services to persons who participate in those clinical trials; relating to experimental procedures under a state plan offered by the Comprehensive Health Insurance Association; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 21.42 is amended by adding a new section to read:

Sec. 21.42.410. Coverage for clinical trials related to cancer. (a) A health care insurer that offers, issues for delivery, delivers, or renews a health care insurance plan in the state shall cover routine patient care costs incurred by a patient enrolled in an approved clinical trial related to cancer, including leukemia, lymphoma, and bone

marrow stem cell disorders.

(b) The health care insurer is required to provide coverage under this section only if the patient's treating physician determines that

(1) there is no clearly superior noninvestigational treatment alternative; and

(2) available clinical or preclinical data provide a reasonable expectation that the treatment provided in the clinical trial will be at least as efficacious as any noninvestigational alternative.

(c) The coverage to be provided under (a) of this section must include payment for the costs of

(1) prevention, diagnosis, treatment, and palliative care of cancer;

(2) medical care for an approved clinical trial related to cancer that would otherwise be covered under a health care insurance plan if the medical care were not in connection with an approved clinical trial related to cancer;

(3) items or services necessary to provide an investigational item or service;

(4) the diagnosis or treatment of complications;

(5) a drug or device approved by the United States Food and Drug Administration without regard to whether the United States Food and Drug Administration approved the drug or device for use in treating a patient's particular condition, but only to the extent that the drug or device is not paid for by the manufacturer, distributor, or provider of the drug or device;

(6) services necessary to administer a drug or device under evaluation in the clinical trial; and

(7) transportation for the patient that is primarily for and essential to the medical care.

(d) The coverage to be provided under (a) of this section may not include the cost of

(1) a drug or device that is associated with the clinical trial that has not been approved by the United States Food and Drug Administration;

(2) housing, companion expenses, or other nonclinical expenses

associated with the clinical trial;

(3) an item or service provided solely to satisfy data collection and analysis and not used in the clinical management of the patient;

(4) an item or service excluded from coverage under the patient's health care insurance plan; and

(5) an item or service paid for or customarily paid for through grants or other funding.

(e) The coverage required by this section is subject to the standard policy provisions applicable to other benefits, including deductible, coinsurance, or copayment provisions.

(f) This section does not apply to a fraternal benefit society.

(g) In this section, "approved clinical trial" means a scientific study using human subjects designed to test and improve prevention, diagnosis, treatment, or palliative care of cancer, or the safety and effectiveness of a drug, device, or procedure used in the prevention, diagnosis, treatment, or palliative care of a subject, if the study is approved by

(1) an institutional review board that complies with 45 CFR Part 46; and

(2) one or more of the following:

(A) the United States Department of Health and Human Services, National Institutes of Health, or its institutes or centers;

(B) the United States Department of Health and Human Services, United States Food and Drug Administration;

(C) the United States Department of Defense;

(D) the United States Department of Veterans' Affairs; or

(E) a nongovernmental research entity abiding by current National Institute of Health guidelines.

*** Sec. 2.** AS 21.55.140(a) is amended to read:

(a) A state plan may not provide benefits for charges for the following:

(1) care for an injury or disease either

(A) arising out of and in the course of an employment subject

to a workers' compensation or similar law or where the benefit is available to be provided under a workers' compensation policy or equivalent self-insurance to a sole proprietor, business partner, or corporation officer; or

(B) to the extent benefits are payable without regard to fault under a coverage statutorily required to be contained in a motor vehicle or other liability insurance policy or equivalent self-insurance;

(2) treatment for cosmetic purposes other than surgery for the prompt repair of an accidental injury sustained while covered or for replacement of an anatomic structure removed during treatment of tumors;

(3) travel, other than transportation covered under AS 21.55.110(17);

(4) private room accommodations to the extent it is in excess of the institution's most common charge for a semiprivate room;

(5) services or articles to the extent that the charge exceeds the reasonable charge in the locality for the service;

(6) services or articles that are determined not to be medically necessary, except for the fabrication or placement of the prosthesis as specified in AS 21.55.110(12) and (2) of this subsection;

(7) services or articles that are not within the scope of the license or certificate of the institution or individual rendering the services or articles;

(8) services or articles furnished, paid for, or reimbursed directly by or under any law of a government, except as otherwise provided in this chapter;

(9) services or articles for custodial care or designed primarily to assist an individual in the activities of daily living;

(10) service charges that would not have been made if no insurance existed or that the covered individual is not legally obligated to pay;

(11) eyeglasses, contact lenses, or hearing aids or the fitting of them;

(12) dental care not specifically covered by this chapter;

(13) services of a registered nurse who ordinarily resides in the covered individual's home, or who is a member of the covered individual's family or the family of the covered individual's spouse;

(14) experimental procedures**, except during an approved clinical**

trial; in this paragraph, "approved clinical trial" has the meaning given in AS 21.42.410; and

(15) services and supplies for which the patient was not charged.

* **Sec. 3.** AS 47.07.030 is amended by adding a new subsection to read:

(e) The department shall provide the services set out in (a) and (b) of this section to an eligible person, notwithstanding the person's participation in an approved clinical trial. In this subsection, "approved clinical trial" has the meaning given in AS 21.42.410.

* **Sec. 4.** This Act takes effect January 1, 2010.

MEMORANDUM February 2, 2009

SUBJECT: Mandatory insurance for clinical trials for cancer, sectional summary (SB 10; Work Order No. 26-LS0073\A)

TO: Senator Bettye Davis
Attn: Thomas Obermeyer

FROM: Dennis C. Bailey
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents.

Section 1. Requires health care insurers to cover approved clinical trials for cancer if there is no clearly superior noninvestigational treatment alternative, and available clinical or preclinical data provide a reasonable expectation that the treatment in the clinical trial will be at least as efficacious as any noninvestigational alternative; makes coverage for clinical trials subject to standard policy provisions that are applicable to other benefits; and defines covered clinical trials and patient costs.

Section 2. Requires the state health insurance plan provided by the Comprehensive Health Care Insurance Association to include clinical trials related to cancer in its minimum standard benefits.

Section 3. Requires the state Medicaid program to cover clinical trials related to cancer.

Section 4. Gives the Act a January 1, 2010, effective date.

SENATE BILL NO. 10

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY SENATOR DAVIS

Introduced: 1/9/09
Referred: Prefiled

A BILL

FOR AN ACT ENTITLED

"An Act requiring health care insurers to provide insurance coverage for medical care received by a patient during certain approved clinical trials designed to test and improve prevention, diagnosis, treatment, or palliation of cancer; directing the Department of Health and Social Services to provide Medicaid services to persons who participate in those clinical trials; relating to experimental procedures under a state plan offered by the Comprehensive Health Insurance Association; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 21.42 is amended by adding a new section to read:

Sec. 21.42.410. Coverage for clinical trials related to cancer. (a) A health care insurer that offers, issues for delivery, delivers, or renews a health care insurance plan in the state shall cover routine patient care costs incurred by a patient enrolled in an approved clinical trial related to cancer. The coverage provided must include the

costs of prevention, diagnosis, treatment, and palliative care of cancer. The health care insurer is required to provide coverage under this section only if the patient's treating physician determines that

(1) there is no clearly superior noninvestigational treatment alternative; and

(2) available clinical or preclinical data provide a reasonable expectation that the treatment provided in the clinical trial will be at least as efficacious as any noninvestigational alternative.

(b) The coverage to be provided under (a) of this section must include leukemia, lymphoma, and bone marrow stem cell disorders.

(c) The coverage required by this section is subject to the standard policy provisions applicable to other benefits, including deductible or copayment provisions.

(d) This section does not apply to a fraternal benefit society.

(e) In this section,

(1) "approved clinical trial related to cancer" means a scientific study using human subjects designed to test and improve prevention, diagnosis, treatment, or palliative care of cancer, or the safety and effectiveness of a drug, device, or procedure used in the treatment of cancer if the study is approved by

(A) an institutional review board that complies with 45 CFR Part 46; and

(B) one or more of the following:

(i) the United States Department of Health and Human Services, National Institutes of Health, or its institutes or centers;

(ii) the United States Department of Health and Human Services, United States Food and Drug Administration;

(iii) the United States Department of Defense;

(iv) the United States Department of Veterans' Affairs; or

(v) a nongovernmental research entity abiding by current National Institute of Health guidelines;

(2) "routine patient care costs"

(A) means the costs incurred for medical care for an approved clinical trial related to cancer that would otherwise be covered under a health care insurance plan if the medical care was not in connection with an approved clinical trial related to cancer, including transportation for the patient that is primarily for and essential to the medical care;

(B) does not include the cost for

(i) a drug or device that is associated with the clinical trial that has not been approved by the United States Food and Drug Administration;

(ii) housing, companion expenses, or other nonclinical expenses associated with the clinical trial;

(iii) an item or service provided solely to satisfy data collection and analysis and not used in the clinical management of the patient;

(iv) an item or service excluded from coverage under the patient's health care insurance plan; and

(v) an item or service paid for or customarily paid for through grants or other funding.

* **Sec. 2.** AS 21.55.140(a) is amended to read:

(a) A state plan may not provide benefits for charges for the following:

(1) care for an injury or disease either

(A) arising out of and in the course of an employment subject to a workers' compensation or similar law or where the benefit is available to be provided under a workers' compensation policy or equivalent self-insurance to a sole proprietor, business partner, or corporation officer; or

(B) to the extent benefits are payable without regard to fault under a coverage statutorily required to be contained in a motor vehicle or other liability insurance policy or equivalent self-insurance;

(2) treatment for cosmetic purposes other than surgery for the prompt repair of an accidental injury sustained while covered or for replacement of an anatomic structure removed during treatment of tumors;

(3) travel, other than transportation covered under AS 21.55.110(17);

(4) private room accommodations to the extent it is in excess of the institution's most common charge for a semiprivate room;

(5) services or articles to the extent that the charge exceeds the reasonable charge in the locality for the service;

(6) services or articles that are determined not to be medically necessary, except for the fabrication or placement of the prosthesis as specified in AS 21.55.110(12) and (2) of this subsection;

(7) services or articles that are not within the scope of the license or certificate of the institution or individual rendering the services or articles;

(8) services or articles furnished, paid for, or reimbursed directly by or under any law of a government, except as otherwise provided in this chapter;

(9) services or articles for custodial care or designed primarily to assist an individual in the activities of daily living;

(10) service charges that would not have been made if no insurance existed or that the covered individual is not legally obligated to pay;

(11) eyeglasses, contact lenses, or hearing aids or the fitting of them;

(12) dental care not specifically covered by this chapter;

(13) services of a registered nurse who ordinarily resides in the covered individual's home, or who is a member of the covered individual's family or the family of the covered individual's spouse;

(14) experimental procedures**, except during an approved clinical trial related to cancer; in this paragraph, "approved clinical trial related to cancer" has the meaning given in AS 21.42.410**; and

(15) services and supplies for which the patient was not charged.

* **Sec. 3.** AS 47.07.030 is amended by adding a new subsection to read:

(e) The department shall provide the services set out in (a) and (b) of this section to an eligible person, notwithstanding the person's participation in an approved clinical trial related to cancer. In this subsection, "approved clinical trial related to cancer" has the meaning given in AS 21.42.410.

* **Sec. 4.** This Act takes effect January 1, 2010.

ANALYSIS: *(Attach a separate page if necessary)*

SB 010 amends the Medicaid statute (AS 47.07.030) to add a new subsection (e) that requires the program to pay for Medicaid covered services for Medicaid recipients even when provided as part of an approved clinical trial related to cancer.

The bill would be effective on January 1, 2010. It is not expected to result in an increase in Medicaid expenditures as Medicaid already covers these services.

To: 'Jeanne Anderson'; Emily.Nenon@cancer.org; Tammy@hotsheet.com; Latha Subramanian; mstewartonc@yahoo.com; Doug Debenham; muffz326@aol.com; Wooley, Beverly K (HSS); Rangitsch, Krista

Cc: Sen. Bettye Davis; Lynda Zaugg; Don Burrell; Richard Benavides

Subject: RE: CS for SB 10 and memo

Dr. Anderson,

Linda Zaugg, Senate HSS Committee Aide to Senator Davis, Linda_Zaugg@legis.state.ak.us, would appreciate knowing in advance those doctors and others who wish to testify on Wednesday, February 18, 2009 at 1:30-3:00 pm. All Senate HSS meetings are from 1:30-3:00 pm. The hearing schedule is already posted on "BASIS," on the Legislature web site. SB 10 is the first bill to be heard and likely will be given as much time as needed, although there may be another item on the agenda as well. If the hearing runs over, it could be continued to another day.

If you wish to have the physicians testify first, e-mail the request to Linda Zaugg, Linda_Zaugg@legis.state.ak.us, who will ask Senator Davis to accommodate this request. They can call in after 1:30, and a communications person at the hearing will receive notice by computer of people on the phone and hand a new list to Linda who will forward their presence to Senator Davis. Be sure when physicians call in they identify themselves as doctors. When called upon to testify, they will be asked their name and affiliation or organization.

Senator Davis often asks to the Department (DHSS) to comment before testimony of constituents, but physicians, as experts may wish to testify both before and after Departmental comments, or stay on line to explain misunderstandings in the bill. This testimony will be recorded and useful in the next hearings in Labor & Commerce and Finance. So the best effort is needed in this first hearing if possible.

Keep in mind that rather than a teleconference call to 888-295-4546, physicians and/or patients or parties of interest who wish to testify in Anchorage could meet at the Legislative Information Office (LIO) in Anchorage at 716 W. 4th Avenue, 2nd floor conference room, which is already set up with microphones and aides to assist in communications. Make sure you understand operation and use of the on/off buttons on the microphones. The LIO phone number is 269-0111. Parking is available at the Legislature parking lot on 4th & H, and parking permits are available either by the guard at the front door or at the LIO office on the 2nd floor.

As a last comment, it would be helpful to have one or two doctors and/or others testify in person at the hearing on the 2nd floor of the Capitol, Room 205. This adds weight and urgency to the need for cancer clinical trials. You may also want to have contacts from your oncology and cancer society organizations, or peers from other states which conduct cancer clinical trials testify telephonically.

Subject: RE: CS for SB 10 and memo

Tom-
A few questions about the logistics of the hearing:

1. Do you need a list, in advance, of names of people who are going to call in?
2. Can we have the physicians who call in testify first (or at the time they call, if they call later than 1:30)? I think we may have 4 physicians calling in (I don't think they will be in person).
3. How long do you expect the hearing to last?

Dr. Anderson,

I would prefer to have currently dated letters or written testimony, even if from last year, and if from professional offices, on letterhead if possible. This helps show the earnest interest of the parties and their affiliations. However, if I do not receive currently dated letters or written testimony, I will use last year's. Please be sure to have people testify by teleconference or in person if they are in Juneau. The call-in number is 888-295-4546.

To all involved-
Here is the latest draft of the bill. It looks fine to me.

Note the date, time and instructions for the first hearing, given below.

Please forward to anyone else who may want to participate.

Mr. Obermeyer-
Will the written testimony that was submitted last year be included in this year's hearings? Or, should we re-submit testimony, even if identical to last year's?

February 4, 2009

Dr. Anderson,

Attached is the latest draft of the clinical trials bill, a **Committee Substitute for Senate Bill 10, 26-LS0073\E**, and an accompanying memo from our Legislative Counsel. The drafter incorporated your requested changes with substantive terms in the body of the bill itself instead of including them in a definition section in accordance with the requirements of the Drafting Manual.

We will be unable to make further changes before the Senate HSS hearing scheduled February 18 at 1:30 pm, but your suggestions and comments are welcome any time in writing. The teleconference number on the date of the hearing is 888-295-4546.

Your help in organizing support at the hearing is most important.
Please notify your peers, local and national organizations, and patients of the hearing and have them call or write in to support the bill or appear in person to testify. If you testify in person or telephonically and provide written copies for the record, please provide the written copies in advance on letterhead, if available, to me and Lynda Zaugg, Senate HSS Committee Aide to Senator Davis. Our fax machine produces a poor quality copy, so I suggest you mail or e-mail written documents, if possible.

MEMORANDUM February 3, 2009

SUBJECT: Insurance coverage for clinical trials (CSSB 10( );
Work Order No. 26-LS0073\E)

TO: Senator Bettye Davis
Attn: Thomas Obermeyer

FROM: Dennis C. Bailey
Legislative Counsel

This memo accompanies the blank draft CS you requested and explains the changes made to your request.

You will notice that I have reworked the bill to avoid incorporating substantive terms in the definitions section in accordance with the Drafting Manual. While making these drafting changes, I did not intend to make substantive changes to the bill other than those you requested. Please review the new draft closely to be sure that it reads as intended.

AS 01.10.040(b) provides: "(b) When the words 'includes' or 'including' are used in a law, they shall be construed as though followed by the phrase 'but not limited to.'" Therefore, the change in Item 4 of your request is not necessary.

If I may be of further assistance, please advise.

CS FOR SENATE BILL NO. 10( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATOR DAVIS

A BILL

FOR AN ACT ENTITLED

"An Act requiring health care insurers to provide insurance coverage for medical care received by a patient during certain approved clinical trials designed to test and improve prevention, diagnosis, treatment, or palliation of cancer; directing the Department of Health and Social Services to provide Medicaid services to persons who participate in those clinical trials; relating to experimental procedures under a state plan offered by the Comprehensive Health Insurance Association; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 21.42 is amended by adding a new section to read:

Sec. 21.42.410. Coverage for clinical trials related to cancer. (a) A health care insurer that offers, issues for delivery, delivers, or renews a health care insurance plan in the state shall cover routine patient care costs incurred by a patient enrolled in an approved clinical trial related to cancer, including leukemia, lymphoma, and bone

marrow stem cell disorders.

(b) The health care insurer is required to provide coverage under this section only if the patient's treating physician determines that

(1) there is no clearly superior noninvestigational treatment alternative; and

(2) available clinical or preclinical data provide a reasonable expectation that the treatment provided in the clinical trial will be at least as efficacious as any noninvestigational alternative.

(c) The coverage to be provided under (a) of this section must include payment for the costs of

(1) prevention, diagnosis, treatment, and palliative care of cancer;

(2) medical care for an approved clinical trial related to cancer that would otherwise be covered under a health care insurance plan if the medical care were not in connection with an approved clinical trial related to cancer;

(3) items or services necessary to provide an investigational item or service;

(4) the diagnosis or treatment of complications;

(5) a drug or device approved by the United States Food and Drug Administration without regard to whether the United States Food and Drug Administration approved the drug or device for use in treating a patient's particular condition, but only to the extent that the drug or device is not paid for by the manufacturer, distributor, or provider of the drug or device;

(6) services necessary to administer a drug or device under evaluation in the clinical trial; and

(7) transportation for the patient that is primarily for and essential to the medical care.

(d) The coverage to be provided under (a) of this section may not include the cost of

(1) a drug or device that is associated with the clinical trial that has not been approved by the United States Food and Drug Administration;

(2) housing, companion expenses, or other nonclinical expenses

associated with the clinical trial;

(3) an item or service provided solely to satisfy data collection and analysis and not used in the clinical management of the patient;

(4) an item or service excluded from coverage under the patient's health care insurance plan; and

(5) an item or service paid for or customarily paid for through grants or other funding.

(e) The coverage required by this section is subject to the standard policy provisions applicable to other benefits, including deductible, coinsurance, or copayment provisions.

(f) This section does not apply to a fraternal benefit society.

(g) In this section, "approved clinical trial" means a scientific study using human subjects designed to test and improve prevention, diagnosis, treatment, or palliative care of cancer, or the safety and effectiveness of a drug, device, or procedure used in the prevention, diagnosis, treatment, or palliative care of a subject, if the study is approved by

(1) an institutional review board that complies with 45 CFR Part 46; and

(2) one or more of the following:

(A) the United States Department of Health and Human Services, National Institutes of Health, or its institutes or centers;

(B) the United States Department of Health and Human Services, United States Food and Drug Administration;

(C) the United States Department of Defense;

(D) the United States Department of Veterans' Affairs; or

(E) a nongovernmental research entity abiding by current National Institute of Health guidelines.

*** Sec. 2.** AS 21.55.140(a) is amended to read:

(a) A state plan may not provide benefits for charges for the following:

(1) care for an injury or disease either

(A) arising out of and in the course of an employment subject

to a workers' compensation or similar law or where the benefit is available to be provided under a workers' compensation policy or equivalent self-insurance to a sole proprietor, business partner, or corporation officer; or

(B) to the extent benefits are payable without regard to fault under a coverage statutorily required to be contained in a motor vehicle or other liability insurance policy or equivalent self-insurance;

(2) treatment for cosmetic purposes other than surgery for the prompt repair of an accidental injury sustained while covered or for replacement of an anatomic structure removed during treatment of tumors;

(3) travel, other than transportation covered under AS 21.55.110(17);

(4) private room accommodations to the extent it is in excess of the institution's most common charge for a semiprivate room;

(5) services or articles to the extent that the charge exceeds the reasonable charge in the locality for the service;

(6) services or articles that are determined not to be medically necessary, except for the fabrication or placement of the prosthesis as specified in AS 21.55.110(12) and (2) of this subsection;

(7) services or articles that are not within the scope of the license or certificate of the institution or individual rendering the services or articles;

(8) services or articles furnished, paid for, or reimbursed directly by or under any law of a government, except as otherwise provided in this chapter;

(9) services or articles for custodial care or designed primarily to assist an individual in the activities of daily living;

(10) service charges that would not have been made if no insurance existed or that the covered individual is not legally obligated to pay;

(11) eyeglasses, contact lenses, or hearing aids or the fitting of them;

(12) dental care not specifically covered by this chapter;

(13) services of a registered nurse who ordinarily resides in the covered individual's home, or who is a member of the covered individual's family or the family of the covered individual's spouse;

(14) experimental procedures**, except during an approved clinical**

trial; in this paragraph, "approved clinical trial" has the meaning given in AS 21.42.410; and

(15) services and supplies for which the patient was not charged.

*** Sec. 3.** AS 47.07.030 is amended by adding a new subsection to read:

(e) The department shall provide the services set out in (a) and (b) of this section to an eligible person, notwithstanding the person's participation in an approved clinical trial. In this subsection, "approved clinical trial" has the meaning given in AS 21.42.410.

*** Sec. 4.** This Act takes effect January 1, 2010.

Mr Obermeyer,
I have committments from Dr Michael O'Connell of NSABP (National Surgical Adjuvant Breast Project) to speak at the hearing next week. Also, from our national professional oncology society, ASCO, the president-elect, Dr Doug Blayney, of the University of Michigan, will call in. I have told them both that the meeting starts at 1:30 our time, and I expect they will be calling in at about that time. I can email them to call a little later if you like. Two survivers, Angela Verploeg and Paula Call will testify. I will be phoning in as well, but will not be able to listen to the proceedings continuously.
Mary Stewart

Tom-
I also want you and Senator Davis to know that, although I cannot attend in person, I will be on the phone during the entire hearing. So, I will be available to help answer questions and clarify issues during the hearing, if any arise.

Thank you, again, for your support.
-Jeanne

Dr. Ancerson,
Thank you for the written testimony. It is very important and detailed. I will ask Lynda Zaugg to include it in the committee packages or hand it out to committee members at the hearing.

Subject: RE: CS for SB 10 and memo

I have attached the written testimony that I will be giving by phone on Wed, 2/18. Unfortunately, I cannot attend in person.

I have also attached an update of the position paper from the Denali Oncology Group regarding the bill. Can you please use this document as written testimony also?

In addition to the names of people that Dr. Mary Stewart sent to Linda Zaugg yesterday, I expect there will be a few additional patients who call in, although I don't have an exact list. A research nurse, Krista Rangitsch will be calling in, too.

Cc: Sen. Bettye Davis; Lynda Zaugg; Don Burrell; Richard Benavides
Subject: RE: CS for SB 10 and memo

Dr. Anderson,

Linda Zaugg, Senate HSS Committee Aide to Senator Davis, Linda_Zaugg@legis.state.ak.us, would appreciate knowing in advance those doctors and others who wish to testify on Wednesday, February 18, 2009 at 1:30-3:00 pm. All Senate HSS meetings are from 1:30-3:00 pm. The hearing schedule is already posted on "BASIS," on the Legislature web site. SB 10 is the first bill to be heard and likely will be given as much time as needed, although there may be another item on the agenda as well. If the hearing runs over, it could be continued to another day.

If you wish to have the physicians testify first, e-mail the request to Linda Zaugg, Linda_Zaugg@legis.state.ak.us, who will ask Senator Davis to accommodate this request. They can call in after 1:30, and a communications person at the hearing will receive notice by computer of people on the phone and hand a new list to Linda who will forward their presence to Senator Davis. Be sure when physicians call in they identify themselves as doctors. When called upon to testify, they will be asked their name and affiliation or organization.

Senator Davis often asks to the Department (DHSS) to comment before testimony of constituents, but physicians, as experts may wish to testify both before and after Departmental comments, or stay on line to explain misunderstandings in the bill. This testimony will be recorded and useful in the next hearings in Labor & Commerce and Finance. So the best effort is needed in this first hearing if possible.

Keep in mind that rather than a teleconference call to 888-295-4546, physicians and/or patients or parties of interest who wish to testify in Anchorage could meet at the Legislative Information Office (LIO) in Anchorage at 716 W. 4th Avenue, 2nd floor conference room, which is already set up with microphones and aides to assist in communications. Make sure you understand operation and use of the on/off buttons on the microphones. The LIO phone number is 269-0111. Parking is available at the Legislature parking lot on 4th & H, and parking permits are available either by the guard at the front door or at the LIO office on the 2nd floor.

As a last comment, it would be helpful to have one or two doctors and/or others testify in person at the hearing on the 2nd floor of the Capitol, Room 205. This adds weight and urgency to the need for cancer clinical trials. You may also want to have contacts from your oncology and cancer society organizations, or peers from other states which conduct cancer clinical trials testify telephonically.

Sent: Wednesday, February 18, 2009 9:46 AM
To: Lynda Zaugg
Cc: Sen. Bettye Davis; Don Burrell
Subject: drafter Bailey will be available in person on on-line per Sen.Davis's Request

Lynda,

I have confirmed that Dennis Bailey, drafter and legal counsel, will be on line to handle drafting and legal questions at hearing today regarding SB 10.

Please also REMIND SENATOR DAVIS THAT WE WANT TO ADOPT THE COMMITTEE SUBSTITUTE for SB 10, 26-LS0073\E, the "E" version, not the "A" version which was initially read across and available to the public.

Tom

SB 10 \"Medicaid/Ins For Cancer Clinical Trials\"

CANCER CLINICAL TRIALS FAST FACTS
DENALI ONCOLOGY GROUP, October 28, 2007

Frequently Asked Questions (FAQ)

1. **What is a clinical trial?** A clinical trial is a scientific way of studying a new treatment for a specific disease that may be better and/or safer than existing treatments.
2. **Why are clinical trials necessary?** Without these studies, we can not determine whether a new treatment is safe, effective, and better than existing options.
3. **What types of cancer clinical trials exist?** Trials may be for prevention, early detection, diagnosis, or treatment of cancer. There are also trials for reducing symptoms and improving quality-of-life.
4. **Why would a cancer patient consider participating in a clinical trial?**
   a. Treatment given on the clinical trial offers the potential for better outcome (e.g. longer life or higher cure rate) than the standard treatment.
   b. Results of the trial will help improve treatment for future patients.
5. **Is it risky to be on a clinical trial?** There are risks with any type of cancer treatment. Side effects that occur in patients on a clinical trial are monitored very closely and described in paperwork that patients receive (i.e., consent form).
6. **Are clinical trials available in Alaska?** Yes, more than 50 cancer clinical trials are open in Alaska for patients to receive treatment in-state.
7. **Do doctors or patients gain financially from participating in clinical trials?** We only support the conduct of studies where there is no financial gain for patients or physicians. Support is provided by the sponsor of the study to help pay for costs associated with the trial, such as research personnel and regulatory requirements.

Myths

1. **"I may receive placebo."** Placebo is rarely used in cancer clinical trials because there is usually an acceptable standard treatment. However, if the standard is to offer no treatment, then the new treatment under investigation will be compared to no treatment (i.e., placebo). Patients will always be informed of the potential to receive placebo.
2. **"I will be a guinea pig."** Patients on clinical trials are treated with respect, receive informed consent, and have all questions answered. They have the right to withdraw from the study at any time without compromising their future care.
3. **"I'm not sick enough for a clinical trial."** Many trials are studying ways to prevent cancer in healthy people at risk for cancer. Other trials are studying ways to improve upon the most common types of treatment used when patients are first diagnosed with cancer.

POSITION PAPER ON HEALTH PLAN COVERAGE FOR PATIENT CARE COSTS IN CANCER CLINICAL TRIALS

Sponsored by the Denali Oncology Group, the Alaska State Affiliate of the American Society of Clinical Oncology

February 24, 2008

BACKGROUND:

1. Clinical trials for cancer patients provide state-of-the-art treatment for patients with life-threatening diseases. Cancer patients and their physicians typically look to clinical trials as an option when the investigational treatment offers as much or more benefit than standard treatment.
2. Currently, in Alaska, health plans can exclude coverage for routine patient care costs while a patient with cancer is enrolled on a clinical trial.
3. Since 2000, Medicare has provided coverage for beneficiaries for routine costs associated with cancer clinical trial enrollment.
4. Twenty-three states in the United States have passed legislation or instituted special agreements requiring health plans to pay the cost of routine medical care a patient receives while participating in a clinical trial.
5. Health plans mistakenly think that money is saved by excluding care while patients participate in clinical trials. However, if not enrolled on a clinical trial, these patients will continue to receive conventional therapy. Studies have shown that there are not differences in cost of care for patients enrolled on clinical trials compared with patients on conventional therapy.
6. Results of clinical trials lead to more rational use of cancer treatment and more successful outcomes, resulting in short-term and long-term cost savings.

PROPOSED LEGISLATION:

We propose that the Senate and House of the State of Alaska pass a bill requiring that all health care plans, including Medicaid, cover routine patient care costs for patients enrolled in all phases of clinical trials, including prevention, detection, treatment and palliation (supportive care) of cancer.

BENEFITS:

1. Passage of this bill will remove an important barrier to the participation of patients in cancer clinical trials. It will result in physicians more often recommending patient participation and in patients having greater desire to enroll in clinical trials.
2. Greater participation by Alaskans in cancer clinical trials will result in improved care of our patients in the short- and long-term, improved doctor-patient relationship, increased patient satisfaction with treatment, and increased retention of patients in Alaska for their cancer care.
3. Alaska will be in the forefront in making meaningful progress in providing care for cancer and other life threatening conditions.

Coverage of Routine Patient Care Costs in Clinical Trials
Position Statement
Approved by the ASCO Board of Directors, March 2005

For people with serious or life-threatening illness, like cancer, completely satisfactory or curative treatment often is not available. Those patients are nevertheless able to receive state-of-the-art therapy through high-quality clinical trials, offering not only an important treatment option but an opportunity to advance medical knowledge.

Cancer patients face a number of obstacles to clinical trials enrollment. One of the barriers is the potential denial of third party payment for the routine patient care costs for those enrolled in clinical trials. Historically, payers have denied coverage for care provided in a clinical trial, arguing that such care is "experimental" and therefore not a covered benefit.

Current Clinical Trials Coverage

The American Society of Clinical Oncology (ASCO) and its partners in the patient advocacy community have sought, over the course of more than a decade, to reform clinical trials payment policy in public and private health plans. These efforts have resulted in reforms in Medicare payment policy and in enactment of legislation to ensure clinical trials coverage in more than 20 states.

In 2000, in response to Congressional pressure and cancer community advocacy, the Clinton Administration issued an Executive Memorandum setting a policy for coverage of the routine patient care costs for Medicare beneficiaries enrolled in clinical trials for all diseases.

In addition to action by Medicare, a number of states have enacted legislation that would ensure coverage of routine patient care costs in clinical trials (coverage ranges from cancer clinical trials only to trials for all diseases) by those health plans that are regulated by the state. Some of those states have adopted, either in statute or in implementing regulations, the coverage standards of the Medicare program. In several states without clinical trials coverage mandates, third party payers have entered into voluntary agreements to cover routine costs in clinical trials. States continue to engage in efforts to improve coverage in state plans.

ASCO Position

These federal, state, and private sector initiatives reflect widespread recognition of clinical trials coverage as a critical element of quality cancer care. However, not all of the initiatives meet the standards for coverage endorsed by ASCO, and a significant number of cancer patients remain beyond the reach of these reimbursement reforms. ASCO recommends that every cancer patient should have access to clinical trials under the criteria defined below.

Standards for Clinical Trials Coverage

The following ASCO standards should remain the standard for Medicare coverage and should serve as the model for state legislative initiatives, including provisions governing coverage under state-funded programs like Medicaid, as well as mandates for private insurance and managed care plans.

The cost of medical care provided when a patient with serious or life-threatening disease is entered on a Phase I, II, III, or IV (post-marketing) clinical trial – including hospital, physician, and other health care items and services as well as the cost of approved drugs for labeled or unlabeled uses which might be part of the regimen[1] – should not be denied coverage when all of the following are demonstrated:

- Treatment is provided with a therapeutic intent[2];
- Treatment is being provided pursuant to a clinical trial approved by one of the National Institutes of Health (NIH), an NIH cooperative group or an NIH center; the Food and Drug Administration (FDA) in the form of an investigational new drug (IND) or new device (IDE) exemption; the Department of Defense; the Department of Veterans Affairs; or a qualified non-governmental research entity as identified in National Cancer Institute guidelines or center support grants;
- The trial is conducted according to a written protocol, which includes the following elements: trial design and scientific justification, criteria for inclusion and exclusion, outcome measures, statistical analysis plan, conflicts and other ethical controls, and publication policy;
- The protocol has undergone scientific review by a group of independent and qualified experts;
- The clinical trial has been reviewed and approved by a qualified institutional review board (IRB);
- The facility and personnel providing the treatment are capable of doing so by virtue of their experience or training;
- There is no non-investigational therapy that is clearly superior to the protocol treatment; and
- The available clinical or preclinical data provide a reasonable expectation that the protocol treatment will be at least as efficacious as non-investigational therapy.[3]

Originally adopted February 1993
As amended June 1994 and March 2005

---

[1] Items and services required by the design of the trial should be covered, except those items or services normally paid for by other funding sources such as the cost of certain investigational drugs, the costs of any non-health services that might be required for a person to receive the treatment, and the costs of managing the research.

[2] Treatment with therapeutic intent may be aimed at improving patient outcome relative to either survival or quality of life.

[3] While these standards refer to clinical trials involving "treatment" or "therapy", the same principles would apply equally to trials of interventions to prevent, rather than treat, diseases.

Subject: Clinical Trials What are States Doing 2008

Although it is not possible to provide this live by phone today, the NCSL report provided below is our best information on this topic. Next week Karmen Hanson, our author and expert, may be able to provide additional information or insights.
The online version is located at: http://www.ncsl.org/programs/health/clinicaltrials.htm

NCSL Health Program

Clinical Trials: What are States Doing?
April 2008 Update

What is a Clinical Trial?

A clinical trial is a research study on human patients to test the safety and effectiveness of new treatments. These trials offer patients access to new and potentially life saving drugs and cures.

The dramatic progress made in treating childhood cancers in recent years, is attributable, in part, to clinical trials, because 60 percent of all children with cancer are enrolled in some kind of trial. A ten percent drop in breast cancer mortality for women under the age of 50 is said to be the result of clinical trials research conducted in the 1970's.

Who Enrolls in Clinical Trials?

Only two to three percent of eligible adult patients enroll in clinical trials. For cancer patients, clinical trials are often the last resort after exhausting all other approved means of treatment.

Insurance Coverage for Clinical Trials

Typically, when a patient enrolls in a clinical trial, the cost of tests, procedures, drugs and any research activity directly associated with the investigation, are covered by the group sponsoring the trial, such as a pharmaceutical company or the National Cancer Institute. However, because some health plans define clinical trials as "experimental" or "investigational," health insurance coverage may or may not include some or all of the costs of "routine patient care," such as the doctor visits, hospital stays, tests and x-rays, that a patient would normally receive whether or not they were enrolled in a trial.

Nevertheless, a growing number of states have passed legislation or instituted special agreements requiring health plans to pay the cost of the routine medical care a patient receives as a participant in a clinical trial.

Advantages:

For cancer patients, properly designed and conducted clinical trials represent an important therapeutic option, as well as a critical means of advancing medical knowledge. Lack of insurance coverage is a barrier to patients who might otherwise participate. Sixty percent of patients in one survey cited fear of insurance denial as a major reason for not participating in clinical trials. And finally, a recent study found only a slight increase in treatment costs for adult clinical trial patients compared to nonparticipants--$35,418 versus $33,248.

Disadvantages:

Even though the same recent study found only a slight increase in treatment costs, the 6.5 percent increase between participants and nonparticipants in clinical trials translated into an additional $16 million in 1999 spent on treatment costs for the 19,000 adult patients enrolled in National Cancer Institute-sponsored clinical trials. These additional insurance costs, like other mandated benefits and services, may result in higher insurance premium rates, which are often cost-shifted onto workers in the form of higher deductibles and copayments.

Definitions of Phases:

A clinical trial study is conducted in four phases.

Phase I: Research is conducted on a small group of volunteers (20 to 80 people) for the first time to evaluate its safety, determine a safe dosage range and identify side effects.

Phase II: The experimental drug or treatment is given to or a procedure is performed on a larger group of people (100 to 300 individuals) to further measure its effectiveness and safety.

Phase III: Further research is conducted to confirm the effectiveness of the drug, treatment or procedure, monitor the side effects, compare commonly used treatments and collect information on safe use. Phase III trials are typically conducted on 1,000 to 3,000 individuals.

Phase IV: After the drug, treatment or medical procedure is marketed, investigators continue testing to determine the effects on various populations and whether there are side effects associated with long-term use.

Summary of State Laws

Table One provides a summary of the **20 states** that have enacted laws regarding mandated coverage of clinical trials.

Table One
Clinical Trials Laws
April 2006

State Year of Enactment Bill Number and/or Citation	Who is Required to Pay?	What Services or Benefits are Covered?	Other Key Criteria:
Arizona (2000) Senate Bill 1213 20-2328	Hospital or medical service corporations, benefit insurers, health care service organizations, disability insurers, group disability insurers and accountable health plans	Patient costs associated with participation in Phase I through IV cancer clinical trials.	Trail must be reviewed by an Institutions Review Board in AZ. Health professional must agree to accept reimbursement from insurer as payment in full. Only covers trial when no clearly superior nonivestigational treatment exists. Trail must be in AZ.
California (2000) Senate Bill 37	All California insurers, including Medicaid and other medical assistance programs	Routine patient care costs associated with Phase I through IV cancer clinical trials.	May restrict coverage to services in CA.
Connecticut (2001) Senate Bill 325	Private insurers, individual and group health plans	Routine patient care costs associated with cancer clinical trials.	Prevention trials are covered only in Phase III and only if involve therapeutic intervention.

Public Act 01-171			Insurer may require documentation of the likelihood of therapeutic benefit, informed consent, protocol information and/or summary of costs.
Delaware (2001)Senate Bill 181	Every group of blanket policy, including policies or contracts issued by health service corporations	Routine patient care costs for covered persons engaging in clinical trials for the treatment of life threatening diseases under specified conditions.	Trial must have therapeutic intent and enroll individuals diagnosed with the disease. Trial must not be designed exclusively to test toxicity or disease pathophysiology.
Georgia* (1998) 33-24-59.1	Insurers and the state health plan	Routine patient costs incurred in Phase II and III of prescription drug clinical trial programs for the treatment of children's cancer.	For the treatment of cancer that generally first manifests itself in children under the age of 19.
Illinois (1999) House Bill 1622 (amended 2004) Senate Bill 2339 Public Act No. 93-1000 20 ILCS 1405/56.3**	HMOs and individual/group insurance policies to offer coverage to the applicant or policyholder (2004 amendment: Plans may not be canceled or non renewed based on an individual's participation in a qualified clinical trial)	Routine patient care if the individual participates in an approved Phase II through IV cancer research trial.	Coverage benefit can have annual limit of $10,000. Trial must be conducted at multiple sites in state. Primary care MD must be involved in coordination of care. Researchers must submit results of trial for publication in nationally recognized scientific literature.
Louisiana (1999) RS 22:230.4	HMOs, PPOs, State Employee Benefits Program and other specified insurers	Patient costs incurred in Phase II through IV cancer clinical trials.	Only covers costs when no clearly superior, noninvestigational approach exists. Available data must support reasonable expectation that the treatment will be as effective as the noninvestigational alternative. Patient must sign an Institutional Review Board-approved consent form.
Maine (2000) 24-A-4310	Managed care organizations and private insurers	Routine patient care costs associated with clinical trial.	Participation must offer meaningful potential for significant clinical benefit. Referring physician must conclude that trial participation is appropriate.
Maryland*** (1998) Chap 146-15-827	Private insurers and other specified managed care organizations.	Patient costs for Phase I through IV cancer treatment, supportive care, early detection, and prevention trials. Phase II through IV for other life-threatening conditions, with Phase I considered on a case-by-case basis.	There is no clearly superior, nonivestigational alternative. The data provide a reasonable expectation that the treatment will be as least as effective as the alternative.
Massachusetts (2002)	All health plans issued or renewed after Jan. 1,	Patient care services associated with all phases of qualified cancer clinical	Insurers must provide payment for services that are consistent with the

Chap 176A Sec 8X	2003	trials.	usual and customary standard of care provided under the trial's protocol and that would be covered if the patient did not participate in the trial.
Missouri (2002) 376.429 (2006)- Phase II SB 567 & 792	All health benefit plans operating in the state	Routine patient care costs as the result of Phase II, III or IV clinical trials for the prevention, early detection, or treatment of cancer.	There must be identical or superior nonivestigational treatment alternatives available before providing clinical trial treatment, and there must be a reasonable expectation that the trial will be superior to the alternatives. Requires coverage of FDA-approved drugs and devices even if they have not be approved for use in treatment of patient's particular condition.
New Hampshire (2000) 415:18	Private insurers and specified managed care plans	Medically necessary routine patient care costs incurred as a result of a treatment for Phase I through IV cancer clinical trial or trial for a life-threatening disease.	Coverage for Phases I or II decided on case-by-case basis. Coverage is required for services needed to administer drug or device under evaluation. Coverage is required for routine patient care associated with drugs or devices which are not subject of trial, as long as they have been approved by FDA.
Nevada (2003) (amended 2005) SB 29 NRS 695G.173	All health insurance insurers, medical service corporations, HMOs and managed care organizations	Patient costs associated with Phase I through IV cancer or chronic fatigue clinical trial	Healthcare facility and personnel must have experience and training to provide the treatment in a capable manner. There must be no medical treatment available which is considered a more appropriate alternative medical treatment than the medical treatment provided in the clinical trial. There must be a reasonable expectation based on clinical data that the medical treatment provided in the clinical trial or study will be at least as effective as any other medical treatment. Amendment revises type of medical treatment covered.
New Mexico (2002) (amended 2004 to delay repeal until July 1, 2009) 59A-22-43	A health insurer; a nonprofit health service provider; a HMO; a managed care organization; a provider service organization; or the state's medical	Routine patient care costs incurred as a result of the patient's participation in a phase II, III or IV cancer clinical trial.	Must be undertaken for the purposes of the prevention of reoccurrence of cancer, early detection or treatment of cancer for which no equally or more effective standard cancer treatment exists. Must not be designed exclusively to

	assistance program.		test toxicity or disease pathophysiology and it has a therapeutic intent. Must be provided as part of a scientific study of a new therapy or intervention and is for the prevention of reoccurrence, early detection, treatment or palliation of cancer in humans and in which includes specific provisions of scientific study.
New Mexico (2001) 59A-22-43	Private insurers, specified managed care plans, and Medicaid and other state medical assistance programs	Routine patient care costs incurred as result of Phase I through IV cancer clinical trial.	Effective through July 1, 2004. Trial must have therapeutic intent. Reasonable expectation that investigational treatment will be at least as effective as standard treatment.
North Carolina (2001) ? 58-3-255	All health insurance plans and teachers' and state employees' comprehensive major medical plan.	Medically necessary costs of health care services associated with Phase II through IV of covered clinical trials.	Patients suffering from a life-threatening disease or chronic condition may designate a specialist who is capable of coordinating their health care needs.
Rhode Island (1994, 1997) 94-S 2623B 97-S 1A am	Private insurers and specified managed care plans	Coverage for new cancer therapies if treatment is provided under Phase II through IV cancer clinical trial.	
Tennessee (2005) HB 837	All health benefit plans	Routine patient care costs related to Phase I through IV cancer clinical trial.	Treatment must involve drug that is exempt under federal regulations from a new drug application, or approved by: NIH, FDA in form of new drug application, DOD, or VA.
Vermont (2001) (amended 2005 to remove March 1, 2005 sunset provision) Chap 107 ? 4088b HB 6	All health insurance policies and health benefit plans, including Medicaid	Routine patient care costs incurred during the participation in a cancer clinical trial.	Providers and insurers required to participate in a cost analysis to determine impact of the program on health insurance premiums. Amended law allows for participation in trial outside of Vermont if patient notifies health benefit plan prior to participation, and no clinical trial is available at Vermont or New Hampshire cancer care providers.
Virginia (1999) ? 38.2-3418.8	Private insurers, specified managed care plans, and public employee health plans	Patient costs incurred during the participation in Phase II through IV cancer clinical trials. Coverage provided on a case-by-case basis for Phase I.	There must be no clearly superior, nonivestigational alternative. Data must provide a reasonable expectation that the treatment will be at least as effective as the alternative.
West Virginia (2003) ?9-2-12	Individual and group insurers, health service corporations, health care corporations,	Patient costs associated with the participation in Phase II through IV clinical trial for treatment of life-threatening condition or the	Facility and personnel providing the treatment are capable of doing so by virtue of their experience, training and volume of patients

	HMOs, public employees insurance agency, Medicaid and the children's health insurance program	prevention, early detection and treatment of cancer.	treated to maintain expertise. There must be no clearly superior, noninvestigational treatment alternative. Data provide a reasonable expectation that the treatment will be more effective than the noninvestigational treatment alternative.
Wisconsin AB 617 (2006) Act 194	Any health insurance plan offered by the state, any self-insured plans	Routine patient care costs incurred during the participation in all phases of a cancer clinical trial. No policy, plan, or contract may exclude coverage for the cost of any routine patient care that is administered to an insured in a cancer clinical trial satisfying the criteria under par. (c) and that would be covered under the policy, plan, or contract if the insured were not enrolled in a cancer clinical trial.	Trial must meet all criteria: 1. The purpose is to test whether the intervention potentially improves the trial participant's health outcomes. 2. The treatment provided as part of the trial is given with the intention of improving the trial participant's health outcomes. 3. The trial has therapeutic intent and is not designed exclusively to test toxicity or disease pathophysiology. 4. The trial does one of the following: a. Tests how to administer a health care service, item, or drug for the treatment of cancer. b. Tests responses to a health care service, item, or drug for the treatment of cancer. c. Compares the effectiveness of health care services, items, or drugs for the treatment of cancer with that of other health care services, items, or drugs for the treatment of cancer. d. Studies new uses of health care services, items, or drugs for the treatment of cancer. 5. The trial is approved by one of the following: a. A National Institute of Health, or one of its cooperative groups or centers, under the federal department of health and human services; federal food and drug administration; federal department of defense; federal department of veterans affairs.
Wyoming SF 024 (2008 budget	All health insurance policies, contracts, and certificates providing	Routine patient care for a person enrolled in a Phases II- IV clinical trial. Includes a medical service or	Trial must also be approved by NIH, FDA, Dept. of Defense, or Dept. of Veterans Affairs. The medical

session)	coverage to any resident of this state.	treatment that is a benefit under a health plan that would be covered if the patient were receiving standard cancer treatment; or a drug provided to a patient during a cancer clinical trial, other than the drug that is the subject of the clinical trial, if the drug has been approved by the federal food and drug administration for use in treating the patient's particular condition.	treatment must be provided by a licensed health care provider operating within the scope of his/her license in a facility whose personnel has the experience and training necessary to provide the treatment in a competent manner. The clinical trial participant must have signed an informed consent document prior to starting the trial.

*In 2002, all major insurers in Georgia agreed to cover routine patient care costs associated with Phase I, II, III, or IV cancer clinical trials. Trials include those that involve a drug that is currently exempt under federal regulations from a new drug application or those that are approved by specified federal agencies or a local institutional review board. The agreement also provides for the coverage of cancer screens and examinations in accordance with the most recently published guidelines and recommendations established by any nationally recognized health care organization (see below).

**Illinois Executive Branch Administrative Code (20 ILCS 1405/1405-20) required the Department of Insurance to conduct an analysis and study of costs and benefits derived from the implementation of the coverage requirements for investigational cancer treatments. The study covered the years 2000 through 2002 and included an analysis of the effect of the coverage requirements on the cost of insurance and health care, the results of the treatments to patients, the mortality rate among cancer patients, any improvements in care of patients, and any improvements in the quality of life of patients.

***A 2003 Maryland law (S 128) repealed a reporting requirement for insurers, nonprofit health service plans, and HMOs to submit a report that described the trials covered during the previous year.

Summary of Other Actions

Table Two summarizes the special agreements some states have arranged with insurance companies to voluntarily provide coverage for clinical trials.

Table Two
Special Agreements

State (Year Agreement Became Effective) Web Address of Agreement	Who is Required to Pay?	What Services or Benefits are Covered?	Other Key Criteria:
Georgia (2002) Georgia Cancer Coalition	All major insurers	Routine patient care costs associated with Phase I through IV cancer clinical trials.	Trials include those that involve a drug that is currently exempt under federal regulations from a new drug application or those that are approved by specified federal agencies or a local institutional review board. Provides for the coverage of cancer screens and examinations in accordance with the most recently published guidelines and recommendations established

			by any nationally recognized health care organization.
Michigan (2002) Michigan Consensus Agreement	Private insurance plans, HMOs and Medicaid	Routine patient care costs associated with Phase II and III cancer clinical trials.	Coverage for Phase I trials is under consideration.
New Jersey (1999) New Jersey Consensus Agreement	All insurers	Routine patient care costs associated with all phases of cancer clinical trials.	
Ohio (1999) Ohio Med Plan	State employees on Ohio Med Plan	Routine patient care costs associated with Phase II and III cancer treatment clinical trials.	Preauthorization is required for clinical trial participation.

Federal Activity

In 2000, Medicare began covering beneficiaries patient care costs in clinical trials. While many state Medicaid programs have no legal requirements to cover clinical trials costs, many do cover all or some of the costs.

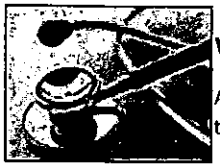
Clinical Trials: What are States Doing?
February 2009 Update



What is a Clinical Trial?

A clinical trial is a research study on human patients to test the safety and effectiveness of new treatments. These trials offer patients access to new and potentially life saving drugs and cures.

The dramatic progress made in treating childhood cancers in recent years, is attributable, in part, to clinical trials, because 60 percent of all children with cancer are enrolled in some kind of trial. A ten percent drop in breast cancer mortality for women under the age of 50 is said to be the result of clinical trials research conducted in the 1970's.

Who Enrolls in Clinical Trials?

Only two to three percent of eligible adult patients enroll in clinical trials. For cancer patients, clinical trials are often the last resort after exhausting all other approved means of treatment.
Only a small percentage (approximately 20%) of cancer patients are eligible to participate in a clinical trial and very few (approximately 3% of cancer patients and less than 0.5% of Medicare patients) currently enroll. Even if enrollment was increased to the full 20 percent, it is unlikely that these numbers will significantly impact overall costs to health plans;[1]

Insurance Coverage for Clinical Trials

Typically, when a patient enrolls in a clinical trial, the cost of tests, procedures, drugs and any research activity directly associated with the investigation, are covered by the group sponsoring the trial, such as a pharmaceutical company or the National Cancer Institute. However, because some health plans define clinical trials as "experimental" or "investigational," health insurance coverage may or may not include some or all of the costs of "routine patient care," such as the doctor visits, hospital stays, tests and x-rays, that a patient would normally receive whether or not they were enrolled in a trial.

A growing number of states have passed legislation or instituted special agreements requiring health plans to pay the cost of the routine medical care a patient receives as a participant in a clinical trial.

Advantages:

For cancer patients, properly designed and conducted clinical trials represent an important therapeutic option, as well as a critical means of advancing medical knowledge. Lack of insurance coverage is a barrier to patients who might otherwise participate. Sixty percent of patients in one survey cited fear of insurance denial as a major reason for not participating in clinical trials. And finally, a recent study found only a slight increase in treatment costs for adult clinical trial patients compared to nonparticipants--$35,418 versus $33,248.[2]

Some large HMOs have computed costs associated with patients in clinical trials. Kaiser Permanente discovered the cost of medical care for enrollees in clinical trials that haven't had bone marrow transplant were no higher than for patients who were not enrolled in a trial. The Kaiser report further states, "Kaiser has been participating in cancer clinical trials without substantial increases in the direct costs of medical care."[3]

Researchers at the Mayo Clinic found that patient care costs for those enrolled in clinical trials is only slightly more than for patients who received standard therapy protocols.[4]

The Institutes of Medicine has also found the following:
-The reimbursement costs are limited to the cost of "standard care" which would be covered if the patient were not enrolled in the trial;[1]

-Only a small percentage (approximately 20%) of cancer patients are eligible to participate in a clinical trial and very few (approximately 3% of cancer patients and less than 0.5% of Medicare patients) currently enroll. Even if enrollment was increased to the full 20 percent, it is unlikely that these numbers will significantly impact overall costs to health plans;[1]

-Through clinical trials, we will be able to identify ineffective treatments, which could save health plans money and will benefit the nation as a whole.[1]

Disadvantages:

Even though the same recent study found only a slight increase in treatment costs, the 6.5 percent increase between participants and

nonparticipants in clinical trials translated into an additional $16 million in 1999 spent on treatment costs for the 19,000 adult patients enrolled in National Cancer Institute-sponsored clinical trials.[2] These additional insurance costs, like other mandated benefits and services, may result in higher insurance premium rates, which are often cost-shifted onto workers in the form of higher deductibles and copayments.

For states without insurance mandates, it is possible that some physicians may enroll patients in clinical trials but not inform the patients' insurance companies, bypassing the reimbursement issue for the patient and potentially the physician.[5]

It may also be possible to encourage participation in clinical trials by working within networks of health care providers and industry, research facilities, patient groups, as well as major media outlets, without enacting a state wide insurance mandate.

Definitions of Phases:

A clinical trial study is conducted in four phases.

Phase I: Research is conducted on a small group of volunteers (20 to 80 people) for the first time to evaluate its safety, determine a safe dosage range and identify side effects.

Phase II: The experimental drug or treatment is given to or a procedure is performed on a larger group of people (100 to 300 individuals) to further measure its effectiveness and safety.

Phase III: Further research is conducted to confirm the effectiveness of the drug, treatment or procedure, monitor the side effects, compare commonly used treatments and collect information on safe use. Phase III trials are typically conducted on 1,000 to 3,000 individuals.

Phase IV: After the drug, treatment or medical procedure is marketed, investigators continue testing to determine the effects on various populations and whether there are side effects associated with long-term use.

Summary of State Laws as of December 2008

Table One provides a summary of the **23 states and District of Columbia** that have enacted laws regarding mandated coverage of clinical trials.

Table One
Clinical Trials Laws

State Year of Enactment Bill Number and/or Citation	Who is Required to Pay?	What Services or Benefits are Covered?	Other Key Criteria:
Arizona (2000) Senate Bill 1213 20-2328	Hospital or medical service corporations, benefit insurers, health care service organizations, disability insurers, group disability insurers and accountable health plans	Patient costs associated with participation in Phase I through IV cancer clinical trials.	Trail must be reviewed by an Institutions Review Board in AZ. Health professional must agree to accept reimbursement from insurer as payment in full. Only covers trial when no clearly superior nonivestigational treatment exists. Trail must be in AZ.

California (2000) Senate Bill 37	All California insurers, including Medicaid and other medical assistance programs	Routine patient care costs associated with Phase I through IV cancer clinical trials.	May restrict coverage to services in CA.
Connecticut (2001) Senate Bill 325 Public Act 01-171	Private insurers, individual and group health plans	Routine patient care costs associated with cancer clinical trials.	Prevention trials are covered only in Phase III and only if involve therapeutic intervention. Insurer may require documentation of the likelihood of therapeutic benefit, informed consent, protocol information and/or summary of costs.
Delaware (2001) Senate Bill 181	Every group of blanket policy, including policies or contracts issued by health service corporations	Routine patient care costs for covered persons engaging in clinical trials for the treatment of life threatening diseases under specified conditions.	Trial must have therapeutic intent and enroll individuals diagnosed with the disease. Trial must not be designed exclusively to test toxicity or disease pathophysiology.
District of Columbia (2008) Bill 17-469 (D.C. Law 17-166)	All insurers in the District	Routine patient care costs for people in clinical trials undertaken for prevention, early detection, treatment, or monitoring of cancer and approved or funded in full or in part by one of the following: National Institutes of Health or one of its cooperative groups or centers, Centers for Disease Control and Prevention, Agency for Health Care Research and Quality, Centers for Medicare and Medicaid Services, U.S. Food and Drug Administration (FDA), U.S. Department of Defense, U.S. Department of Veterans Affairs, U.S. Department of Energy, nongovernmental research entity that has been awarded a National Cancer Institute support grant.	Routine patient care costs shall not include tests or measurements conducted primarily for the purpose of the clinical trial involved. services or products provided solely for data collection and analysis purposes. services or products customarily provided free of charge to trial participants by the research sponsors.
Georgia* (1998) 33-24-59.1	Insurers and the state health plan	Routine patient costs incurred in Phase II and III of prescription drug clinical trial programs for the treatment of children's cancer.	For the treatment of cancer that generally first manifests itself in children under the age of 19.
Illinois (1999) House Bill 1622 (amended 2004) Senate Bill 2339 Public Act No. 93-1000 20 ILCS 1405/56.3**	HMOs and individual/group insurance policies to offer coverage to the applicant or policyholder (2004 amendment: Plans may not be canceled or non renewed based on an individual's participation in a qualified clinical trial)	Routine patient care if the individual participates in an approved Phase II through IV cancer research trial.	Coverage benefit can have annual limit of $10,000. Trial must be conducted at multiple sites in state. Primary care MD must be involved in coordination of care. Researchers must submit results of trial for publication in nationally recognized scientific literature.
Louisiana (1999) RS 22:230.4	HMOs, PPOs, State Employee Benefits Program and other specified insurers	Patient costs incurred in Phase II through IV cancer clinical trials.	Only covers costs when no clearly superior, noninvestigational approach exists. Available data must support reasonable expectation that the treatment will be as effective as the noninvestigational alternative. Patient must sign an Institutional Review Board-approved consent form.
Maine (2000) 24-A-4310	Managed care organizations and private insurers	Routine patient care costs associated with clinical trial.	Participation must offer meaningful potential for significant clinical benefit. Referring physician must conclude that trial participation is appropriate.

Maryland*** (1998) Chap 146-15-827	Private insurers and other specified managed care organizations.	Patient costs for Phase I through IV cancer treatment, supportive care, early detection, and prevention trials. Phase II through IV for other life-threatening conditions, with Phase I considered on a case-by-case basis.	There is no clearly superior, nonivestigational alternative. The data provide a reasonable expectation that the treatment will be as least as effective as the alternative.
Massachusetts (2002) Chap 176A Sec 8X	All health plans issued or renewed after Jan. 1, 2003	Patient care services associated with all phases of qualified cancer clinical trials.	Insurers must provide payment for services that are consistent with the usual and customary standard of care provided under the trial's protocol and that would be covered if the patient did not participate in the trial.
Missouri (2002) 376.429 (2006)- Phase II SB 567 & 792	All health benefit plans operating in the state	Routine patient care costs as the result of Phase II, III or IV clinical trials for the prevention, early detection, or treatment of cancer.	There must be identical or superior nonivestigational treatment alternatives available before providing clinical trial treatment, and there must be a reasonable expectation that the trial will be superior to the alternatives. Requires coverage of FDA-approved drugs and devices even if they have not be approved for use in treatment of patient's particular condition.
New Hampshire (2000) 415:18	Private insurers and specified managed care plans	Medically necessary routine patient care costs incurred as a result of a treatment for Phase I through IV cancer clinical trial or trial for a life-threatening disease.	Coverage for Phases I or II decided on case-by-case basis. Coverage is required for services needed to administer drug or device under evaluation. Coverage is required for routine patient care associated with drugs or devices which are not subject of trial, as long as they have been approved by FDA.
Nevada (2003) (amended 2005) SB 29 NRS 695G.173	All health insurance insurers, medical service corporations, HMOs and managed care organizations	Patient costs associated with Phase I through IV cancer or chronic fatigue clinical trial	Healthcare facility and personnel must have experience and training to provide the treatment in a capable manner. There must be no medical treatment available which is considered a more appropriate alternative medical treatment than the medical treatment provided in the clinical trial. There must be a reasonable expectation based on clinical data that the medical treatment provided in the clinical trial or study will be at least as effective as any other medical treatment. Amendment revises type of medical treatment covered.
New Mexico (2002) (amended 2004 to delay repeal until July 1, 2009) 59A-22-43	A health insurer; a nonprofit health service provider; a HMO; a managed care organization; a provider service organization; or the state's medical assistance program.	Routine patient care costs incurred as a result of the patient's participation in a phase II, III or IV cancer clinical trial.	Must be undertaken for the purposes of the prevention of reoccurrence of cancer, early detection or treatment of cancer for which no equally or more effective standard cancer treatment exists. Must not be designed exclusively to test toxicity or disease pathophysiology and it has a therapeutic intent. Must be provided as part of a scientific study of a new therapy or intervention and is for the prevention of reoccurrence, early detection, treatment or palliation of cancer in humans and in which includes specific provisions of scientific study.
New Mexico	Private insurers,	Routine patient care costs incurred as result of	Effective through July 1, 2004.

(2001) 59A-22-43	specified managed care plans, and Medicaid and other state medical assistance programs	Phase I through IV cancer clinical trial.	Trial must have therapeutic intent. Reasonable expectation that investigational treatment will be at least as effective as standard treatment.
North Carolina (2001) ? 58-3-255	All health insurance plans and teachers' and state employees' comprehensive major medical plan.	Medically necessary costs of health care services associated with Phase II through IV of covered clinical trials.	Patients suffering from a life-threatening disease or chronic condition may designate a specialist who is capable of coordinating their health care needs.
Ohio (2008) ORC Ann. 1751.01 (2008)	All health benefit plans including those for public employees.	Medically necessary costs of health care services associated with any stage of clinical trial.	Trial must be approved by NIH or another group under HHS, FDA, DOD or VA. May exclude coverage for service or product that is part of the investigative trial, item or procedure used only for data collection for the trial, item not approved by FDA, and transportation, lodging and food related to travel for participation in the trial.
Rhode Island (1994, 1997) 94-S 2623B 97-S 1A am	Private insurers and specified managed care plans	Coverage for new cancer therapies if treatment is provided under Phase II through IV cancer clinical trial.	
Tennessee (2005) HB 837	All health benefit plans	Routine patient care costs related to Phase I through IV cancer clinical trial.	Treatment must involve drug that is exempt under federal regulations from a new drug application, or approved by: NIH, FDA in form of new drug application, DOD, or VA.
Vermont (2001) (amended 2005 to remove March 1, 2005 sunset provision) Chap 107 ? 4088b HB 6	All health insurance policies and health benefit plans, including Medicaid	Routine patient care costs incurred during the participation in a cancer clinical trial.	Providers and insurers required to participate in a cost analysis to determine impact of the program on health insurance premiums. Amended law allows for participation in trial outside of Vermont if patient notifies health benefit plan prior to participation, and no clinical trial is available at Vermont or New Hampshire cancer care providers.
Virginia (1999) ? 38.2-3418.8	Private insurers, specified managed care plans, and public employee health plans	Patient costs incurred during the participation in Phase II through IV cancer clinical trials. Coverage provided on a case-by-case basis for Phase I.	There must be no clearly superior, nonivestigational alternative. Data must provide a reasonable expectation that the treatment will be at least as effective as the alternative.
West Virginia (2003) ?9-2-12	Individual and group insurers, health service corporations, health care corporations, HMOs, public employees insurance agency, Medicaid and the children's health insurance program	Patient costs associated with the participation in Phase II through IV clinical trial for treatment of life-threatening condition or the prevention, early detection and treatment of cancer.	Facility and personnel providing the treatment are capable of doing so by virtue of their experience, training and volume of patients treated to maintain expertise. There must be no clearly superior, noninvestigational treatment alternative. Data provide a reasonable expectation that the treatment will be more effective than the noninvestigational treatment alternative.
Wisconsin AB 617 (2006) Act 194	Any health insurance plan offered by the state, any self-insured plans	Routine patient care costs incurred during the participation in all phases of a cancer clinical trial. No policy, plan, or contract may exclude coverage for the cost of any routine patient care that is administered to an insured in a cancer	Trial must meet all criteria: 1. The purpose is to test whether the intervention potentially improves the trial participant's health outcomes. 2. The treatment provided as part of the trial is given with the intention of

		clinical trial satisfying the criteria under par. (c) and that would be covered under the policy, plan, or contract if the insured were not enrolled in a cancer clinical trial.	improving the trial participant's health outcomes. 3. The trial has therapeutic intent and is not designed exclusively to test toxicity or disease pathophysiology. 4. The trial does one of the following: a. Tests how to administer a health care service, item, or drug for the treatment of cancer. b. Tests responses to a health care service, item, or drug for the treatment of cancer. c. Compares the effectiveness of health care services, items, or drugs for the treatment of cancer with that of other health care services, items, or drugs for the treatment of cancer. d. Studies new uses of health care services, items, or drugs for the treatment of cancer. 5. The trial is approved by one of the following: a. A National Institute of Health, or one of its cooperative groups or centers, under the federal department of health and human services; federal food and drug administration; federal department of defense; federal department of veterans affairs.
Wyoming SF 024 (2008 budget session)	All health insurance policies, contracts, and certificates providing coverage to any resident of this state.	Routine patient care for a person enrolled in a Phases II- IV clinical trial. Includes a medical service or treatment that is a benefit under a health plan that would be covered if the patient were receiving standard cancer treatment; or a drug provided to a patient during a cancer clinical trial, other than the drug that is the subject of the clinical trial, if the drug has been approved by the federal food and drug administration for use in treating the patient's particular condition.	Trial must also be approved by NIH, FDA, Dept. of Defense, or Dept. of Veterans Affairs. The medical treatment must be provided by a licensed health care provider operating within the scope of his/her license in a facility whose personnel has the experience and training necessary to provide the treatment in a competent manner. The clinical trial participant must have signed an informed consent document prior to starting the trial.

*In 2002, all major insurers in Georgia agreed to cover routine patient care costs associated with Phase I, II, III, or IV cancer clinical trials. Trials include those that involve a drug that is currently exempt under federal regulations from a new drug application or those that are approved by specified federal agencies or a local institutional review board. The agreement also provides for the coverage of cancer screens and examinations in accordance with the most recently published guidelines and recommendations established by any nationally recognized health care organization (see below).

**Illinois Executive Branch Administrative Code (20 ILCS 1405/1405-20) required the Department of Insurance to conduct an analysis and study of costs and benefits derived from the implementation of the coverage requirements for investigational cancer treatments. The study covered the years 2000 through 2002 and included an analysis of the effect of the coverage requirements on the cost of insurance and health care, the results of the treatments to patients, the mortality rate among cancer patients, any improvements in care of patients, and any improvements in the quality of life of patients.

***A 2003 Maryland law (S 128) repealed a reporting requirement for insurers, nonprofit health service plans, and HMOs to submit a report that described the trials covered during the previous year.

Medicare Widens Drugs It Accepts for Cancer

By REED ABELSON and ANDREW POLLACK

Medicare, with little public debate, has expanded its coverage of drugs for cancer treatments not approved by the Food and Drug Administration.

Cancer doctors had clamored for the changes, saying that some of these treatments, known as off-label uses, were essential if patients were to receive the most up-to-date care. But for many such uses there is scant clinical evidence that the drugs are effective, despite costing as much as $10,000 a month. Because the drugs may represent a patient's last hope, though, doctors are often willing to try them.

The new Medicare rules are the latest twist in a protracted debate over federal spending on off-label drugs — drugs prescribed for uses other than those for which they have been specifically approved.

Proponents of the changes say such spending not only helps patients, but can also enhance medical understanding of which treatments work against various forms of cancer.

But opponents argue that the new approach may waste money and needlessly expose patients to the side effects of drugs that may not help them. They also raise the possibility of conflicts of interest, because the rules rely on reference guides that in some cases are linked to drug makers.

The new policy, which took effect in November, makes it much easier to get even questionable treatments paid for, critics of the changes say. Medicare is providing "carte blanche in treatment for cancers," said Steven Findlay, a health policy analyst for Consumers Union. He said overly expansive coverage encourages doctors to use patients as guinea pigs for unproved therapies.

Because Medicare officials canceled a cost analysis of the changes, it is hard to predict how much spending will increase beyond the $2.4 billion Medicare paid in 2007 for cancer drugs. But cancer doctors and other experts say the new policies, adopted in the final months of the Bush administration, seem almost certain to raise the federal drug bill, while making it more difficult for the new administration to rein in spending on unproven medical treatments.

Although President Obama has made a goal of controlling health care costs, a spokesman for the Obama administration declined to comment on the Medicare changes.

One of the many drugs whose use is likely to expand is the Eli Lilly product Gemzar, which costs $2,500 to $5,000 a month. The F.D.A. has approved it to treat only four types of cancer. But the new rules will virtually guarantee that Medicare will pay for its use for about a dozen other cancers, including advanced cervical cancer — even though the evidence supporting Gemzar for that use is "inconclusive," according to one of the reference guides Medicare will now be consulting.

In the case of Genentech's Avastin, one of the world's most expensive and widely used cancer drugs, Medicare

rejected in 2007 nearly all of the estimated $16 million in requests from doctors' offices to cover its off-label use for ovarian cancer, according to claims specialists who work with Medicare data but declined to be identified because of the controversy over the topic. Under the new rules, Avastin will be routinely covered for ovarian cancer — as will at least some other off-label uses, including for brain and kidney cancer.

It is unclear how much precedent Medicare's new rules might have on private insurers, which often follow the agency's lead on paying for drugs.

Medicare officials defend the new policies, saying they respond to cancer doctors' concerns that the agency has been too slow to recognize promising new off-label treatments. Dr. Steve Phurrough, who has overseen coverage for the agency since 2003, noted that a 1993 federal law gave Medicare specific authorization to cover some unapproved uses of cancer drugs.

"Congress wanted a lesser level of evidence," Dr. Phurrough said. The question of what is adequate evidence is "not a line in the sand," he said. "It's a broad stripe in the sand."

The American Society of Clinical Oncology, which represents cancer doctors, has hailed the new rules, saying they will ensure that the appropriate off-label uses are covered.

But some specialists say that being able to offer off-label drugs can also let physicians avoid hard discussions with patients about a grim prognosis.

"It makes it easier to give drug after drug," said Dr. Andrew Berchuck, director of gynecologic oncology at Duke University, "and keep the fantasy alive."

The new rules expand the number of reference guides — or compendiums — that Medicare relies on for determining which off-label uses of cancer drugs to cover. The writers and editors of these compendiums, who work completely outside the federal government, scan the medical literature and evaluate the evidence in making their recommendations.

In 1993, Congress had authorized three compendiums for Medicare, all published by not-for-profit organizations. But by 2007 two had stopped publishing, leaving Medicare with a single compendium. Having selected three additional guides last year, the agency plans to review its choice of guides every year.

Under the old rules, Medicare representatives were supposed to consult the compendiums but also use their own discretion in interpreting the guides' recommendations. The new rules essentially delegate the decision to guides Medicare has selected, even when there is little clinical evidence behind a particular recommendation. As long as at least one of them recommends a cancer treatment, Medicare is essentially obliged to pay for it — unless one of the other guides specifically advises against it.

And some of these new compendiums have close financial ties to the drug industry, according to the draft of a report Medicare commissioned last year after Congress raised questions about possible conflicts of interest. The draft was completed in October, with a final version to be released soon.

The draft criticizes the new rules for essentially taking most decisions about off-label cancer drugs out of Medicare's hands, even when the agency is aware of potential conflicts. The guide's recommendation, the report says, "becomes the final word."

For some experts, the bigger concern about using some cancer drugs off-label without adequate evidence is that they may not only be useless — they may cause dangerous side effects.

"We have very little faith that those indications that make it into the compendia are safe, let alone effective," said Dr. Allan M. Korn, the chief medical officer for the Blue Cross and Blue Shield Association, who added that Medicare should cover off-label drugs only if the results of their use are carefully tracked afterward. There is no such requirement in the new Medicare guidelines.

There have been three different top Medicare administrators since the off-label rule changes were set in motion a few years ago. The second of them, Leslie V. Norwalk, chose to select the compendiums through a streamlined and internal administrative process, instead of the more elaborate and public process that Medicare often uses for broad coverage decisions.

"I did not see it as a significant step in coverage," said Ms. Norwalk, who left Medicare in 2007.

Drug makers say they welcome the Medicare changes. A spokesman for the Pharmaceutical Research and Manufacturers of America, the industry's main trade group, said the new rules ensured "that cancer patients have access to the treatments they need."

Many oncologists say they needed greater flexibility in using cancer drugs because it can take months or years for a new use to be approved by the F.D.A. They cite the example of Celgene's drug thalidomide, now a mainstay treatment for multiple myeloma, which was prescribed only off-label for years before the F.D.A. formally approved it for that use.

And in the case of rare types of cancer, there may be so few potential patients that companies have little financial incentive to undergo the formal F.D.A. process for approving a drug for expanded use. Only two drugs have been approved by the F.D.A. for brain cancer, for example, and cancer doctors say they need the ability to try other drugs or other combinations of treatments.

"To arbitrarily stop after two drugs to me is ludicrous," especially for younger patients, said Dr. Virginia Stark-Vance, a solo practitioner in Dallas and Fort Worth. She said one of her brain cancer patients had been kept alive for 10 years by off-label use of irinotecan, a colon cancer drug that was the ninth drug the patient tried.

Medicare seems to have ignored some concerns raised by a group of outside researchers whom the agency had asked to survey a half-dozen compendiums, including the four that Medicare has now adopted. That report, completed in 2007, found that the six guides "cited very little of the available evidence," said Dr. Amy P. Abernethy, a Duke oncologist who led the study.

The study also found great variability among the guides, in terms of what uses were recommended — or discussed at all.

Despite her study's findings, Dr. Abernethy says she does not oppose Medicare's new rules.

"I think the addition of the new compendia this year is an important increase in the bandwidth," she said.

Critics say the agency also seems to have played down the potential financial conflicts of interests between the drug industry and the producers of the compendiums. The draft study that was completed in October notes that one of the new guides is published by the National Comprehensive Cancer Network, a group of 21 leading

cancer centers that routinely employs experts who have financial ties to the drug industry.

William T. McGivney, the network's chief executive, said each committee of reviewers had 20 to 30 members, which "diminishes the opportunity for dominance of one person's opinion," regardless of any ties to drug makers.

Then there is the American Hospital Formulary compendium, the one that Medicare was using before the November changes and will continue to consult. It has long been published by the nonprofit American Society of Health-System Pharmacists. But last year the society forged a financial relationship with a foundation linked to drug companies and some cancer doctors' private practices.

A drug company can apply to that foundation, the Foundation for Evidence-Based Medicine, and pay a $50,000 fee to have new uses of its drug reviewed by the compendium within 90 days. The foundation was started in 2007 by the Association of Community Cancer Centers, which represents oncology practices, and says it received about $200,000 in initial funding from drug makers.

Gerald K. McEvoy, the guide's editor in chief, said the application fee was meant to raise money to pay for additional researchers, to address previous criticism that the publication was too slow to vet new evidence. The foundation insulates the guide's staff from industry pressure, he said, and fewer than one-third of the reviews under the new arrangement have resulted in a positive recommendation in the compendium.

Medicare officials acknowledge that some of the potential conflicts need to be addressed. But they say they have confidence in the guides they have chosen. "We had significant conversations with all the companies," Dr. Phurrough said.

The Costs of Routine Care Provided in a Clinical Trial are comparable to the Costs of Standard Therapy

The evidence from numerous studies has overwhelmingly shown that patient care in clinical trials costs approximately the same as care delivered in standard therapy. In some cases, because the third-party payer is not billed for the drug or treatment under investigation, the costs associated with care in a clinical trial can actually be less than the care delivered in standard therapy.

Several studies specifically focused on the costs of cancer clinical trials have recently been published in highly respected peer-reviewed publications.

- A pilot study conducted by the American Association of Cancer Institutes (AACI) showed that the total mean direct medical charges for patients enrolled in a clinical trial *were less than the charges for patients receiving standard therapy.*[1]
- A December, 2001 article similarly found that some clinical trials may actually result in *lower* patient care costs. In addition, in cases where trials resulted in modest increases in patient care costs, the authors concluded that these costs were justified by the benefits that clinical trials bring to all patients.[2]
- The Mayo Clinic has found that the cost of care for patients enrolled in clinical trials is often little more than for patients who received standard therapy.[3]
- Authors of a study conducted at Kaiser Permanente found that the cost of medical care for enrollees in clinical trials without bone marrow transplant were no higher than for patients who were not enrolled in a trial. Kaiser further states, "Kaiser has been participating in cancer clinical trials without substantial increases in the direct costs of medical care."[4]
- The most comprehensive study yet confirms that there are only slightly higher patient-care costs associated with treating patients in cancer clinical trials compared to treating similar patients outside of trials.[5]

Some esteemed hospitals and universities have also conducted cost analysis studies.

- A study at Memorial Sloan-Kettering Cancer Center in New York City showed that the overall average cost of treating clinical trial patients was 17% *less* than treating patients receiving standard care.[6]
- A study conducted at the Karmanos Cancer Center in Detroit showed that the 6-month costs for treating advanced lung cancer were an average $1400 less for patients enrolled in a clinical trial.[7]

The Institute of Medicine has also concluded that the cost impact of providing coverage for routine patient care costs is likely to be "quite small."[8] The IOM's reasoning included the following:

- The reimbursement costs are limited to the cost of "standard care" which would be covered if the patient were not enrolled in the trial;[8]
- Only a small percentage (approximately 20%) of cancer patients are eligible to participate in a clinical trial and very few (approximately 3% of cancer patients and less than 0.5% of Medicare patients) currently enroll. Even if enrollment was increased to the full 20 percent, it is unlikely that these numbers will significantly impact overall costs to health plans;[8]
- Through clinical trials, we will be able to identify ineffective treatments, which could save health plans money and will benefit the nation as a whole.[8]

The Access To Cancer Clinical Trials Act of 2009 (Rep. Sue Myrick)

January 30th, 2009

Clinical trials are so critical for patients and or medical research, yet many patients find that their health insurance won't cover the rest of their routine cancer treatment if they decide to enroll in clinical trials. We're not asking insurance companies to pay for clinical trials. This bill simply state that insurers must continue to pay for routine treatments — that they would be paying for regardless — if patients enroll in a clinical trial.

No patient should ever have to fear exploring all treatment options at the cost of losing coverage. We should be encouraging participation in clinical trials, not discouraging it by removing coverage for routine care. Were it not for patients who have enrolled in past trials, the medial advancements we've experienced toward finding a cure for cancer would not be possible.

Key Points

- Clinical trials are research studies that test how well new medical approaches work in people (see Question 1).
- Every clinical trial has a protocol, which describes what will be done in the study, how it will be conducted, and why each part of the study is necessary (see Question 4).
- Informed consent is a process by which people learn the important facts about a clinical trial to help them decide whether to participate (see Question 6).
- Payment of patient care costs in clinical trials varies by health insurance plan and by study (see Question 11).

1. What are clinical trials, and why are they important?

   Clinical trials are research studies that test how well new medical approaches work in people. Each study answers scientific questions and tries to find better ways to prevent, screen for, diagnose, or treat a disease. People who take part in cancer clinical trials have an opportunity to contribute to knowledge of, and progress against, cancer. They also receive up-to-date care from experts.

2. What are the types of clinical trials?

   There are several types of clinical trials:

   - **Prevention trials** test new approaches, such as medications, vitamins, or other supplements, that doctors believe may lower the risk of developing a certain type of cancer. Most prevention trials are conducted with healthy people who have not had cancer. Some trials are conducted with people who have had cancer and want to prevent recurrence (return of cancer), or reduce the chance of developing a new type of cancer.

   - **Screening trials** study ways to detect cancer earlier. They are often conducted to determine whether finding cancer before it causes symptoms decreases the chance of dying from the disease. These trials involve people who do not have any symptoms of cancer.

   - **Diagnostic trials** study tests or procedures that could be used to identify cancer more accurately. Diagnostic trials usually include people who have signs or symptoms of cancer.

   - **Treatment trials** are conducted with people who have cancer. They are designed to answer specific questions about, and evaluate the effectiveness of, a new treatment or a new way of using a standard treatment. These trials test many types of treatments, such as new drugs, vaccines, new approaches to surgery or radiation therapy, or new combinations of treatments.

   - **Quality-of-life (also called supportive care) trials** explore ways to improve the comfort and quality of life of cancer patients and cancer survivors. These trials may study ways to help people who are experiencing nausea, vomiting, sleep disorders, depression, or other effects from cancer or its treatment.

   - **Genetics studies** are sometimes part of another cancer clinical trial. The genetics component of the trial may focus on how genetic makeup can affect detection, diagnosis, or response to cancer treatment.

     Population- and family-based genetic research studies differ from traditional cancer clinical trials. In these studies, researchers look at tissue or blood samples, generally from families or large groups of people, to find genetic changes that are associated with cancer. People who participate in genetics studies may or may not have cancer, depending on the study. The goal

of these studies is to help understand the role of genes in the development of cancer.

3. Who sponsors clinical trials?

Government agencies, such as the National Cancer Institute (NCI) and other parts of the National Institutes of Health (NIH), the Department of Defense, and the Department of Veterans Affairs, sponsor and conduct clinical trials. In addition, organizations or individuals, such as physicians, medical institutions, foundations, volunteer groups, and pharmaceutical companies, also sponsor clinical trials.

NCI sponsors a large number of clinical trials and has a number of programs designed to make clinical trials widely available in the United States. These programs include the following:

- The **Cancer Centers Program** provides support to research-oriented institutions, including those that have been designated as NCI Comprehensive or Clinical Cancer Centers for their scientific excellence. More information is available in the NCI fact sheet *The National Cancer Institute Cancer Centers Program*, which is available at http://www.cancer.gov/cancertopics/factsheet/NCI/cancer-centers on the Internet.

- The **Specialized Programs of Research Excellence (SPOREs)** bring together scientists and researchers to design and implement research programs that can improve prevention, detection, diagnosis, and treatment of specific types of cancer. More information about SPOREs is available at http://spores.nci.nih.gov/index.html on the Internet.

- The **Clinical Trials Cooperative Group Program** brings researchers, cancer centers, and doctors together into cooperative groups. These groups work with the NCI to identify important questions in cancer research, and design and conduct multisite clinical trials to answer these questions. Cooperative groups are located throughout the United States and in Canada and Europe. For more information, refer to the fact sheet *NCI's Clinical Trials Cooperative Group Program* at http://www.cancer.gov/cancertopics/factsheet/NCI/clinical-trials-cooperative-group on the Internet.

- The **Cancer Trials Support Unit (CTSU)** makes NCI-sponsored phase III treatment trials available to doctors and patients in the United States and Canada . Doctors who are not affiliated with an NCI-sponsored Clinical Trials Cooperative Group (see above) must complete an application process, which includes credential verification and site preparedness assessment, to become members of the CTSU's National Network of Investigators. CTSU members can enroll patients in clinical trials through the program's Web site, which is located at http://www.ctsu.org on the Internet. General information about the CTSU is also available on the program's Web site, or by calling 1–888–823–5923.

- The **Community Clinical Oncology Program (CCOP)** makes clinical trials available in a large number of communities across the United States. Local hospitals throughout the country affiliate with a cancer center or a cooperative group. This affiliation allows doctors to offer people participation in clinical trials more easily, so they do not have to travel long distances or leave their usual caregivers. The **Minority-Based Community Clinical Oncology Program** focuses on encouraging minority populations to participate in clinical trials. More information about the CCOP can be found in the NCI fact sheet *Community Clinical Oncology Program: Questions and Answers*, which is available at http://www.cancer.gov/cancertopics/factsheet/NCI/CCOP on the Internet.

- The **National Institutes of Health Clinical Center**, a research hospital located in Bethesda, Maryland, is part of the NIH. Trials at the Clinical Center are conducted by the components of the NIH, including the NCI. The NCI fact sheet *Cancer Clinical Trials at the National Institutes of Health Clinical Center: Questions and Answers* has more information about the Clinical Center. This fact sheet is available at http://www.cancer.gov/cancertopics/factsheet/NCI/clinical-center on the Internet.

4. How are participants protected?

Research with people is conducted according to strict scientific and ethical principles. Every clinical trial has a protocol, or action plan, which acts like a "recipe" for conducting the trial. The plan describes what will be done in the study, how it will be conducted, and why each part of the study is necessary. The same protocol is used by every doctor or research center taking part in the trial.

All clinical trials that are federally funded or that evaluate a new drug or medical device subject to Food and Drug Administration regulation must be reviewed and approved by an Institutional Review Board (IRB). Many institutions require that all clinical trials, regardless of funding, be reviewed and approved by a local IRB. The Board, which includes doctors, researchers, community leaders, and other members of the community, reviews the protocol to make sure the study is conducted fairly and participants are not likely to be harmed. The IRB also decides how often to review the trial once it has begun. Based on this information, the IRB decides whether the clinical trial should continue as initially planned and, if not, what changes should be made. An IRB can stop a clinical trial if the

researcher is not following the protocol or if the trial appears to be causing unexpected harm to the participants. An IRB can also stop a clinical trial if there is clear evidence that the new intervention is effective, in order to make it widely available.

NIH-supported clinical trials require data and safety monitoring. Some clinical trials, especially phase III clinical trials, use a Data and Safety Monitoring Board (DSMB). A DSMB is an independent committee made up of statisticians, physicians, and patient advocates. The DSMB ensures that the risks of participation are as small as possible, makes sure the data are complete, and stops a trial if safety concerns arise or when the trial's objectives have been met.

5. What are eligibility criteria, and why are they important?

Each study's protocol has guidelines for who can or cannot participate in the study. These guidelines, called eligibility criteria, describe characteristics that must be shared by all participants. The criteria differ from study to study. They may include age, gender, medical history, and current health status. Eligibility criteria for treatment studies often require that patients have a particular type and stage of cancer.

Enrolling participants with similar characteristics helps to ensure that the results of the trial will be due to what is under study and not other factors. In this way, eligibility criteria help researchers achieve accurate and meaningful results. These criteria also minimize the risk of a person's condition becoming worse by participating in the study.

6. What is informed consent?

Informed consent is a process by which people learn the important facts about a clinical trial to help them decide whether to participate. This information includes details about what is involved, such as the purpose of the study, the tests and other procedures used in the study, and the possible risks and benefits. In addition to talking with the doctor or nurse, people receive a written consent form explaining the study. People who agree to take part in the study are asked to sign the informed consent form. However, signing the form does not mean people must stay in the study. People can leave the study at any time—either before the study starts or at any time during the study or the follow-up period.

The informed consent process continues throughout the study. If new benefits, risks, or side effects are discovered during the study, the researchers must inform the participants. They may be asked to sign new consent forms if they want to stay in the study.

7. Where do clinical trials take place?

Clinical trials take place in doctors' offices, cancer centers, other medical centers, community hospitals and clinics, and veterans' and military hospitals in cities and towns across the United States and in other countries. Clinical trials may include participants at one or two highly specialized centers, or they may involve hundreds of locations at the same time.

8. How are clinical trials conducted?

Clinical trials are usually conducted in a series of steps, called phases. Treatment clinical trials listed in PDQ®, the NCI's comprehensive cancer information database, are always assigned a phase. However, screening, prevention, diagnostic, and quality-of-life studies do not always have a phase. Genetics clinical trials generally do not have a phase.

- **Phase I** trials are the first step in testing a new approach in people. In these studies, researchers evaluate what dose is safe, how a new agent should be given (by mouth, injected into a vein, or injected into the muscle), and how often. Researchers watch closely for any harmful side effects. Phase I trials usually enroll a small number of patients and take place at only a few locations. The dose of the new therapy or technique is increased a little at a time. The highest dose with an acceptable level of side effects is determined to be appropriate for further testing.

- **Phase II** trials study the safety and effectiveness of an agent or intervention, and evaluate how it affects the human body. Phase II studies usually focus on a particular type of cancer, and include fewer than 100 patients.

- **Phase III** trials compare a new agent or intervention (or new use of a standard one) with the current standard therapy. Participants are randomly assigned to the standard group or the new group, usually by computer. This method, called randomization, helps to avoid bias and ensures that human choices or other factors do not affect the study's results. In most cases, studies move into phase III testing only after they have shown promise in phases I and II. Phase III trials often include large numbers of people across the country.

- **Phase IV** trials are conducted to further evaluate the long-term safety and effectiveness of a

treatment. They usually take place after the treatment has been approved for standard use. Several hundred to several thousand people may take part in a phase IV study. These studies are less common than phase I, II, or III trials.

People who participate in a clinical trial work with a research team. Team members may include doctors, nurses, social workers, dietitians, and other health professionals. The health care team provides care, monitors participants' health, and offers specific instructions about the study. So that the trial results are as reliable as possible, it is important for participants to follow the research team's instructions. The instructions may include keeping logs or answering questionnaires. The research team may continue to contact participants after the trial ends.

9. What are some of the benefits of taking part in a clinical trial?

The benefits of participating in a clinical trial include the following:

- Participants have access to promising new approaches that are often not available outside the clinical trial setting.
- The approach being studied may be more effective than the standard approach.
- Participants receive regular and careful medical attention from a research team that includes doctors and other health professionals.
- Participants may be the first to benefit from the new method under study.
- Results from the study may help others in the future.

10. What are some of the possible risks associated with taking part in a clinical trial?

The possible risks of participating in a clinical trial include the following:

- New drugs or procedures under study are not always better than the standard care to which they are being compared.
- New treatments may have side effects or risks that doctors do not expect or that are worse than those resulting from standard care.
- Participants in randomized trials will not be able to choose the approach they receive.
- Health insurance and managed care providers may not cover all patient care costs in a study.
- Participants may be required to make more visits to the doctor than they would if they were not in the clinical trial.

11. Who pays for the patient care costs associated with a clinical trial?

Health insurance and managed care providers often do not cover the patient care costs associated with a clinical trial. What they cover varies by health plan and by study. Some health plans do not cover clinical trials if they consider the approach being studied "experimental" or "investigational." However, if enough data show that the approach is safe and effective, a health plan may consider the approach "established" and cover some or all of the costs. Participants may have difficulty obtaining coverage for costs associated with prevention and screening clinical trials; health plans are currently less likely to have review processes in place for these studies. It may, therefore, be more difficult to get coverage for the costs associated with them. In many cases, it helps to have someone from the research team talk about coverage with representatives of the health plan.

Health plans may specify other criteria a trial must meet to be covered. The trial might have to be sponsored by a specified organization, be judged "medically necessary" by the health plan, not be significantly more expensive than treatments the health plan considers standard, or focus on types of cancer for which no standard treatments are available. In addition, the facility and medical staff might have to meet the plan's qualifications for conducting certain procedures, such as bone marrow transplants. More information about insurance coverage can be found on the NCI's *Clinical Trials and Insurance Coverage: A Resource Guide* Web page at http://www.cancer.gov/clinicaltrials/learning/insurance-coverage on the Internet.

Many states have passed legislation or developed policies requiring health plans to cover the costs of certain clinical trials. For more information, visit the NCI's Web site at http://www.cancer.gov/clinicaltrials/developments/laws-about-clinical-trial-costs on the Internet.

Federal programs that help pay the costs of care in a clinical trial include those listed below:

- Medicare reimburses patient care costs for its beneficiaries who participate in clinical trials designed to diagnose or treat cancer. Information about Medicare coverage of clinical trials is available at http://www.medicare.gov on the Internet, or by calling Medicare's toll-free number for beneficiaries at 1-800-633-4227 (1-800-MEDICARE). The toll-free number for the hearing impaired is 1-877-486-2048. Also, the NCI fact sheet *More Choices in Cancer Care: Information for Beneficiaries on Medicare Coverage of Cancer Clinical Trials* is available at http://www.cancer.gov/cancertopics/factsheet/support/medicare on the Internet.

- Beneficiaries of TRICARE, the Department of Defense's health program, can be reimbursed for the medical costs of participation in NCI-sponsored phase II and phase III cancer prevention

(including screening and early detection) and treatment trials. Additional information is available in the NCI fact sheet *TRICARE Beneficiaries Can Enter Clinical Trials for Cancer Prevention and Treatment Through a Department of Defense and National Cancer Institute Agreement*. This fact sheet can be found at http://www.cancer.gov/cancertopics/factsheet/NCI/TRICARE on the Internet.

- The Department of Veterans Affairs (VA) allows eligible veterans to participate in NCI-sponsored prevention, diagnosis, and treatment studies nationwide. All phases and types of NCI-sponsored trials are included. The NCI fact sheet *The NCI/VA Agreement on Clinical Trials: Questions and Answers* has more information. It is available at http://www.cancer.gov/cancertopics/factsheet/NCI/VA-clinical-trials on the Internet.

12. What are some questions people might ask their health care provider before entering a clinical trial?

It is important for people to ask questions before deciding to enter a clinical trial. Questions people might want to ask their doctor or nurse include the following:

The Study

- What is the purpose of the study?
- Why do the researchers think the approach being tested may be effective? Has it been tested before?
- Who is sponsoring the study?
- Who has reviewed and approved the study?
- What are the medical credentials and experience of the researchers and other study personnel?
- How are the study results and safety of participants being monitored?
- How long will the study last?
- How will the results be shared?

Possible Risks and Benefits

- What are the possible short-term benefits?
- What are the possible long-term benefits?
- What are the short-term risks, such as side effects?
- What are the possible long-term risks?
- What other treatment options are available?
- How do the possible risks and benefits of the trial compare with those of other options?

Participation and Care

- What kinds of treatment, medical tests, or procedures will the participants have during the study? How often will they receive the treatments, tests, or procedures?
- Will treatments, tests, or procedures be painful? If so, how can the pain be controlled?
- How do the tests in the study compare with what people might receive outside the study?
- Will participants be able to take their regular medications while in the clinical trial?
- Where will the participants receive their medical care? Will they be in a hospital? If so, for how long?
- Who will be in charge of the participants' care? Will they be able to see their own doctors?
- How long will participants need to stay in the study? Will there be follow-up visits after the study?

Personal Issues

- How could being in the study affect the participants' daily lives?
- What support is available for participants and their families?
- Can potential participants talk with people already enrolled in the study?

Cost Issues

- Will participants have to pay for any treatment, tests, or other charges? If so, what will the approximate charges be?
- What is health insurance likely to cover?
- Who can help answer questions from the insurance company or health plan?

13. What happens when a clinical trial is over?

After a clinical trial is completed, the researchers look carefully at the data collected during the trial before making decisions about the meaning of the findings and further testing. After a phase I or II trial, the researchers decide whether to move on to the next phase, or stop testing the agent or intervention because it was not safe or effective. When a phase III trial is completed, the researchers look at the data and decide whether the results have medical importance.

The results of clinical trials are often published in peer-reviewed, scientific journals. Peer review is a process by which experts review the report before it is published to make sure the analysis and conclusions are sound. If the results are particularly important, they may be featured by the media and discussed at scientific meetings and by patient advocacy groups before they are published. Once a new approach has been proven safe and effective in a clinical trial, it may become standard practice. (Standard practice is a currently accepted and widely used approach.)

The National Library of Medicine's Web site offers links to resources for finding the results of clinical trials. It includes information about published and unpublished results. This resource can be found at http://www.nlm.nih.gov/services/ctresults.html on the Internet.

14. Where can people find more information about clinical trials?

In addition to the resources described in Question 3, people interested in taking part in a clinical trial should talk with their health care provider. Information about cancer clinical trials is also available from the NCI's Cancer Information Service (CIS). Information specialists at the CIS use PDQ to identify and provide detailed information about specific ongoing clinical trials. PDQ includes all NCI-funded clinical trials and some studies conducted by independent investigators at hospitals and medical centers in the United States and Europe.

People also have the option of searching for clinical trials on their own. The clinical trials page of the NCI's Web site, located at http://www.cancer.gov/clinicaltrials/ on the Internet, provides information about clinical trials and links to PDQ. Another resource is the NIH's ClinicalTrials.gov Web site. ClinicalTrials.gov lists clinical trials sponsored by the NIH, other Federal agencies, and the pharmaceutical industry for a wide range of diseases, including cancer and other conditions. This site can be found at http://clinicaltrials.gov on the Internet.

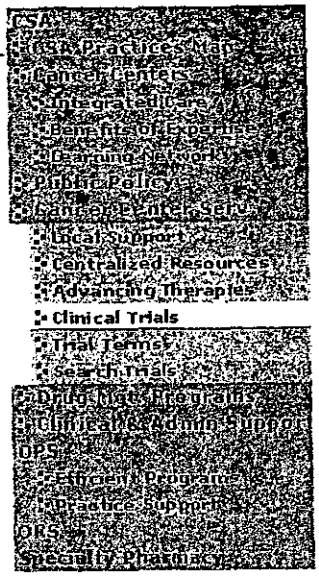
Clinical Trial Information



The greater the number of people who participate in clinical trials, the faster emerging anticancer therapies can be brought to market. US Oncology accrued more than 32,000 cancer patients to clinical trials, and is bringing the search for new therapies directly into local communities across America.

Our research team members conduct more than 50 clinical trials each year. While we have complete Phase I-IV capabilities, the majority of our research is in Phase II and III development stages.

Our extensive clinical trial program, plus our provision of care for approximately 200,000 new cancer patients each year, provides us with a unique research platform. In sharing what we learn with one another, we can more readily advance the latest developments as they relate to investigational drugs, the reduction of side effects, and new methods of care.

If you are interested in contacting a US Oncology-affiliated physician to learn more about our clinical trial program, please click here.

Frequently Asked Questions About Clinical Trials

If you are a cancer patient or someone you know is a cancer patient, you may be interested in learning more about clinical trials. The information below offers a brief overview of the clinical trial process, with a look at key questions and terms.

What are Clinical Trials?
Clinical trials, or research studies, utilize patient volunteers to help investigate different ways to treat diseases - such as cancer. Clinical trials involve the use of investigational drugs (also known as study drugs) and drug delivery methods. Each study tries to answer specific scientific questions about different ways to prevent, diagnose, and treat whatever disease it is addressing.

Why are Clinical Trials Important?
Clinical trials contribute to the overall knowledge and progress made in developing therapies for diseases, such as cancer. These research studies are conducted to determine if a study drug or delivery method is safe and effective. Patients who agree to participate may possibly benefit from the research study, while receiving the best current standard treatment as well.

How are Clinical Trials Structured?
Clinical trials are structured into four phases:

In *Phase I clinical trials*, researchers test a study drug in a small group of people (20 to 80) for the first time to evaluate its safety, determine a safe dosage range, and identify side effects.

In *Phase II clinical trials*, the study drug is tested in a larger group of people (100 to 300) to measure its effectiveness and further evaluate its safety.

In *Phase III clinical trials*, the study drug is tested in large groups of people (1,000 to 3,000) to confirm its effectiveness, monitor side effects, compare it to approved standard treatments, and collect information that will allow the study drug to be used safely.

In *Phase IV clinical trials*, the drug is tested after it has been marketed to collect information about its effect in various populations and about any side effects associated with long-term use.

What Happens During a Clinical Trial?
In many trials, if the patient is eligible and agrees to participate through Informed Consent, the patient is randomized (by chance, like a coin toss) to either receive the current standard treatment, or the current standard treatment and the study drug regimen. If no standard treatment is available, a trial may compare the study drug to a placebo, which is similar to the study drug, but contains no active ingredient. During a trial, patients are treated and monitored by a team of health care professionals. This team will give the patient specific instructions about the trial, about more tests, and additional doctor's visits that might be required.

Throughout the clinical trial, you come first. If there is no improvement or you experience intolerable side effects, you and your physician can decide to discontinue trial participation and resume other

treatment options. Should you do so, your decision will be respected without any effect on future treatment plans.

Why Do Some Cancer Patients Choose to Participate in Clinical Trials?
Some cancer patients may participate because they are hoping for a possible cure and longer life or a way to feel better. Others find that the current standard therapies are not optimal for their cancer and wish to be among the first to participate in a research study and receive an investigational drug. Whatever the reason, participation could make a difference in a patient's future, as well as in the lives of future cancer patients.

How Do I Know If I Should Participate in a Clinical Trial?
The decision to participate in a clinical trial is one that only you can make, with the help of your physician and the people close to you. If you are interested in participating in a clinical trial, you will be informed of the clinical trial's potential benefits and drawbacks before making your decision. If the investigational drug is proven to be effective, you may be among the first to benefit. In addition, through your participation in a research study, you will also be helping future cancer patients.

Are There Risks Involved in Participating?
Because clinical trials are research studies, study drugs may not be better than current standard drugs or treatments. In addition, you may experience side effects that are worse than those of current standard drugs and treatments. Also, your health insurance company or managed care provider may not cover all of the patient care associated with a clinical trial. All of these factors should be discussed thoroughly with your physician and those close to you before deciding whether or not to participate in a clinical trial.

Where are the Trials Held?
Many clinical trials may be available right in your own community. Ask your physician for specific information or search the US Oncology clinical trial list to find a current US Oncology trial in your region.

How Do I Learn More About a Specific Clinical Trial?
Through a process called "Informed Consent," you will learn the key facts about a particular clinical trial before making a decision about participating. Your doctor will explain the purpose and requirements of the study, including any potential drawbacks and benefits. If you agree to take part in the trial, you will be asked to review and sign a form that outlines the study's details prior to participating.

How Do I Get More Information?
Consult your physician to find out whether or not there is a clinical trial that would be appropriate for your care. If you are a US Oncology patient, your physician has information on clinical trials that are being held throughout the company's national research network. Or you can search a list of all current US Oncology clinical trials for more specific information.
For more details on clinical trial research conducted by the US Oncology network, please click USON Research.

State Laws Addressing Third-Party Reimbursement for Clinical Trials for the Treatment of Cancer (as of September 30, 2007)

State	Statute	Coverage Requirements			Types of Insurers Covered				Clinical Trial Phases Covered			
		Mandatory Coverage	Mandatory Offer	Prohibits Exclusion of Coverage	Private Insurers	Specified Managed Care	Medicaid/Other Medical Assistance	Public Employee Health Plans	Phase I	Phase II	Phase III	Phase IV
West Virginia	W. VA. CODE §§ 5-16-7d, 5-16-7e, 5-16B-6a, 5-16B-6b, 9-2-12, 9-2-12a, 33-25F-1, and 33-25F-2	X[4]			X	X	X	X		X	X	X
Wisconsin	WIS. STAT. ANN. §§ 632.87 and 40.51			X[4]	X			X	X	X	X	X

Note: Because arrangements for the reimbursement of clinical trials for several states fall outside the scope of the State Cancer Legislative Database protocols, those states are not included herein. Michigan and New Jersey, for example, instituted special non-legislative agreements whereby insurers voluntarily cover routine medical care that is part of a clinical trial. According to the state employee benefits handbook, Ohio provides coverage for cancer treatment clinical trials to state employees who are enrolled in the state employee health benefit plan. In Georgia, a non-legislative agreement among a number of private health plans and state-based plans provides coverage for adults and children.

* Laws in Delaware, Maine, and North Carolina provide coverage of clinical trials for life threatening medical conditions and not specifically for the treatment of cancer.

[1] Indicated insurers are only obligated to provide coverage for covered patient costs that are directly associated with the clinical trial.

[2] Coverage requirement applies only to routine patient care costs related to cancer clinical trials having a therapeutic purpose, upon recommendation by a treating physician.

[3] In order to be eligible for coverage, clinical trials for the *prevention of cancer* must be a Phase III trial that involves a therapeutic intervention and is conducted at multiple institutions under the auspices of an independent peer-reviewed protocol approved by a specified Federal authority.

[4] Coverage requirement applies only to clinical trials that have a therapeutic intent.

[5] Coverage requirement applies only to routine patient care costs incurred in connection with clinical trials for the treatment of children's cancer.

[6] Applies only to Phase II or III prescription drug clinical trial programs.

[7] Coverage for Phase I and Phase II clinical trials is decided on a case-by-case basis.

[8] Requires the state Department of Banking, Insurance, Securities, and Health Care Administration to issue regulations that specify the requirements for coverage of routine costs for patients who participate in approved cancer clinical trials conducted by specified providers. Coverage requirements are included in Regulation H-2001-04.

[9] Treatment in a Phase I clinical trial may be covered on a case-by-case basis.

The Access To Cancer Clinical Trials Act of 2009 (Rep. Sue Myrick)

January 30th, 2009

Clinical trials are so critical for patients and or medical research, yet many patients find that their health insurance won't cover the rest of their routine cancer treatment if they decide to enroll in clinical trials. We're not asking insurance companies to pay for clinical trials. This bill simply state that insurers must continue to pay for routine treatments — that they would be paying for regardless — if patients enroll in a clinical trial.

No patient should ever have to fear exploring all treatment options at the cost of losing coverage. We should be encouraging participation in clinical trials, not discouraging it by removing coverage for routine care. Were it not for patients who have enrolled in past trials, the medial advancements we've experienced toward finding a cure for cancer would not be possible.

ASCO

American Society of Clinical Oncology

February 17, 2009

The Honorable Bettye Davis
Alaska State Senator
District K
Capitol Building Room 30
Juneau, AK 99801-1182

Dear Senator Davis:

The Denali Oncology Group and American Society of Clinical Oncology are pleased to offer support for your legislation to require insurance coverage for people who participate in clinical trials. Our organizations represent physicians specializing in cancer treatment and clinical research, and clinical research is a vital mission of our membership.

Clinical trials are critically important because they offer the promise of new cancer treatments. As you know from personal experience, they also provide an essential, state-of-the-art treatment option for current cancer patients. Therefore, insurance coverage of the routine patient care costs associated with clinical trials is vital for cancer patients.

For many people with cancer, participation in a clinical trial is often their best treatment option. Yet, as you know, many third-party payers take the position that routine patient care costs should be denied to anyone who enrolls in such trials. We believe such policy deprives beneficiaries of the value of their health insurance, wrongly restricts their treatment options, and inhibits medical progress against serious and life-threatening diseases. DOG and ASCO believe that insurers should cover all routine care costs for patients who are enrolled in cancer clinical trials. Your legislation is the key to making this happen.

DOG and ASCO applaud your leadership in pursuing legislation that provides this essential element of quality cancer care. We are eager to work with you to ensure passage. Please do not hesitate to contact Suanna Bruinooge, ASCO's Director of Research Policy, at 571-483-1613 or suanna.bruinooge@asco.org, or Dr. Mary Stewart at mstewartonc@yahoo.com or 907-279-3155.

Sincerely,

Joseph S. Bailes

American Society of Clinical Oncology
Statement In Support of Insurance Coverage for Clinical Trials

With more than 26,000 members worldwide, ASCO is the leading medical society for physicians involved in cancer treatment and research. Engagement in clinical research is a vital mission of ASCO members. Unfortunately, many cancer patients have limited curative treatment options and enrollment in a clinical trial may offer hope for a response to a new drug or other intervention. Oncologists want their patients to consider enrolling in clinical trials, not only because of potential treatment benefits for the individual patient but also because it is through these trials that general progress against cancer is achieved. Patients are usually eager to participate if given the opportunity. ASCO considers the opportunity to participate in cancer clinical trials as an essential element of quality cancer care.

Unfortunately, participation in clinical trials is significantly deterred by the prospect that insurance coverage may be withheld on the ground that treatment provided in trials is "experimental" or "investigational." This position has been effectively discarded by the federal Medicare program, as well as by the Department of Defense health care system, and by many states. ASCO strongly supports state and federal efforts to ensure that patients enrolled in clinical trials receive coverage for the routine health care costs that would be covered if they did not participate on a trial. It is a basic issue of fairness, and it will help ensure that we continue to improve treatment options for cancer patients and learn about this devastating group of diseases.

What is a Clinical Trial?

Clinical trials are research studies involving people. Clinical trials are designed to evaluate whether a new treatment is safe, effective, and better than the current standard of care. These interventions can include new drugs, new combinations of existing therapies, new approaches to radiation therapy or surgery, new methods of treatment, complementary or alternative therapies, and new prevention methods. Cancer clinical trials are designed to compare an investigational therapy with the standard treatment regimen being used at the time. Placebo-controlled clinical trials in cancer research are rare, but are used when there is no effective, standard treatment available.

Cancer clinical trials have led to scientific advances that have increased doctors' understanding of how and why tumors develop and grow. The knowledge gained has helped scientists and doctors develop new ideas on how

to slow, halt, and even prevent the development of the disease. Clinical trials are the most reliable route to definitive answers and are the only accepted scientific method to determine if a new treatment works better than the current standard of care.

Clinical trials undergo rigorous review prior to opening and involve regular oversight during and after a trial to protect the safety and rights of the participants involved. Each clinical trial follows a set of rules called a protocol. A protocol describes inclusion and exclusion criteria; the schedule of tests, procedures, medications, and doses; and the length of the study. While in a clinical trial, participants are seen regularly by the research staff to monitor their health and determine the safety and effectiveness of the treatment.

Precedents for Clinical Trials Coverage

For more than two decades, the cancer community has expressed its concerns about the negative impact of restrictions on coverage of clinical trials by third-party payers, both public and private. Such restrictions are harmful not only to individual patients but also to overall progress against cancer. In 1999, public authorities began to respond favorably to these arguments and to reform their coverage policies with respect to clinical trials.

Pursuant to a negotiated agreement between the National Cancer Institute (NCI) and the Department of Defense (DoD), the DoD's TRICARE health care plan commenced coverage of NCI-sponsored clinical trials in 1999. The original agreement, began as a pilot project, was made a permanent benefit in March 2008, accompanied by a DoD press release describing it as "a long successful project between the NCI and DoD."

In 2000, the Medicare program took a more expansive approach to clinical trial coverage. In an Executive Memorandum, President Clinton instructed Medicare officials to adopt a clinical trials policy covering not just cancer trials but all diseases and all phases. To implement the policy, the Centers for Medicare & Medicaid Services (then the Health Care Financing Administration) published a National Coverage Determination in September 2000.

State governments have also been active in ensuring coverage of clinical trials by private insurance plans under their control. Almost half of the states throughout the U.S. enjoy coverage of clinical trials, either through legislation

or through voluntary consensus agreements with insurers, and more are considering such requirements.

Impact of Policy Changes on Clinical Trial Participation

One of the nation's leading cooperative research groups, the Southwest Oncology Group (SWOG), has conducted studies that underscore the impact of the Medicare coverage policy on clinical trial participation among the elderly. In 1999, SWOG published a study finding significant under-representation of the elderly in cancer clinical trials.[1] The study found that, whereas 63% of cancer patients were Medicare eligible, seniors were only 25% of those patients participating in SWOG clinical trials during the period 1993-1996. Following the Medicare coverage policy in 2000, a second SWOG study found there was a significant increase in participation among Medicare beneficiaries, with seniors representing 38% of SWOG trial participants in the period 2001-2003.[2]

Cost of Clinical Trials Coverage

While there have been no definitive studies of the cost consequences of clinical trial coverage, there have been a series of articles finding that participation in clinical trials "did not result in substantial increases in the direct costs of medical care,"[3] that "[c]linical protocols may add relatively little to that cost,"[4] and that "additional costs of an open reimbursement policy for government-sponsored cancer clinical trials appear minimal."[5] And with almost eight years of experience with the 2000 Medicare coverage policy, there is no evidence of increased cost to the program.

Conclusion

In light of the experience described above, we heartily support efforts to ensure that health plans and all insurers provide coverage for the routine costs

The Honorable Bettye Davis, Chair
Senate Health and Social Services Committee
Alaska State Capitol, Room 30
Juneau, AK 99801-1182

RE: SB 10 (Davis)--Support

Dear Chair Davis,

On behalf of the members of AARP in Alaska, we encourage you and your colleagues on the Senate Health and Social Services Committee to support SB 10, authored by you.

SB 10 would require insurance programs, including Medicaid, to provide coverage for cancer victims undergoing clinical trials just as they would if the individual was not in the trial.

Most of our significant advances in cancer treatment that have become standard procedures began as clinical trials.

It makes no sense not to offer health insurance coverage for procedures that may be still considered experimental but offer some hope for the cancer victim. We purchase insurance (or the State provides it through Medicaid) so that we can have help with the costs that accompany a threatening disease. SB 10 is one of those bills that AARP believes makes sense, especially to a cancer victim and his/her family.

AARP recommends an "AYE" vote on SB 10.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin

SB 280 Testimony 4/3/08

Jeanne E. Anderson, MD
Katmai Oncology Group, LLC
3851 Piper Street, Suite U340
Anchorage, AK 99508-4627

I am Jeanne Anderson, a Medical Oncologist in practice in Anchorage. On behalf of Alaska cancer physicians and patients, I thank the members of the Labor and Commerce Committee members for considering this bill. It is predicted that 2,650 Alaskans will be diagnosed with cancer in 2008. In the 1970's, only 50% of cancer patients lived 5 years after diagnosis. In 2008, 66% are predicted to survive 5 years. We all know that many Alaskans die of cancer every day and that improvements are desperately needed. The cancer physicians in Alaska are committed to providing the best care possible to our patients, to relieve suffering and reduce death from cancer. In caring for our patients, we often turn to clinical trial as providing the best treatment for our patients. A clinical trial is a formal, scientific way to test whether a new treatment is safe, effective, and superior to existing treatments. The physicians and hospitals in Alaska support clinical trials and there are over 50 trials open in this state for our cancer patients. However, only a small number of our patients enroll on these clinical trials, approximately 40 per year. There are many reasons why enrollment is low. These reasons include lack of knowledge or interest on the part of the patient or physician, lack of availability of an appropriate trial for the patient, and (relevant to this bill) lack of insurance coverage or fear by the patient they will lose coverage if enrolled on a study. Passage of this bill will clearly remove an important barrier to access of a clinical trial. It will result in Alaska physicians providing improved care for our patients, reducing the burden of cancer in our population, and facilitating patients to stay in Alaska for state-of-the-art care.

April 2, 2008

Testimony to Support SB280

To

Senate Labor & Commerce Committee,

I am a medical oncologist-hematologist practicing in Anchorage.
Hence I am involved in caring for many, many patients with cancer, which are oftentimes deadly.
As yet, many cancers do not have curative treatments. One of the options I offer to all my patients is to consider treatment under clinical trials- scientifically conducted studies by approved medical organizations to try & improve cancer care.

Unfortunately, due to Insurers denying coverage for routine medical care when patients enter clinical trials, patients very obviously & naturally, decline to participate in clinical trials.
In my opinion, this state of affairs is a major handicap for patients/ individuals in Alaska to receive State of Art Care for Cancer & related problems in Alaska.

Just to give you an example, Herceptin is now used in early breast cancer treatment as the women with breast cancer who participated proved its efficacy in a clinical trial. This trial included at least 2 women in Alaska.

I wholeheartedly support SB280 & sincerely hope your committee members will too for all of our sakes.

Sincerely,

Latha Subramanian MD, FACP

TESTIMONY OF D. LAWRENCE WICKERHAM, MD, ASSOCIATE CHAIRMAN OF THE NSABP, CONCERNING SB280

I am Dr. Lawrence Wickerham, the Associate Chairman of the National Surgical Adjuvant Breast and Bowel Project (NSABP), which is one of the National Cancer Institute's Cooperative Trials Groups.

The NSABP conducts large phase III studies that compare standard treatments with newer innovative therapies in patients with early stage breast or colorectal cancer. The group's mission is to improve the survival and quality of life of these patients. 2008 is the 50th anniversary of the NSABP and over those years we have entered over 130,000 individuals into our trials. Today we have 200 participating centers and 300 satellite centers located throughout the U.S., Canada, Puerto Rico, and Ireland, and we do have centers in Alaska.

Results of previous NSABP studies have had a major impact in improving the care of both breast and bowel cancer The results of our breast cancer studies have eliminated the use of true radical mastectomies, demonstrated that lumpectomy is an effective alternative, and we have shown that adjuvant treatment (treatment after surgery) can improve survival. Adjuvant therapy for breast cancer includes chemotherapy, hormonal therapy, and newer targeted treatments.

Figures from the American Cancer Society demonstrate that the mortality rate from breast cancer in the U.S. has declined for over a decade. This improvement is thought to be the result of screening mammograms to detect the disease and improvements in treatment. These improvements in care come primarily from clinical

trials like those conducted by the NSABP. The more patients that enter these studies, the more quickly we get results and the faster we can improve care. Unfortunately, for a variety of reasons, less than 5% of cancer patients choose to enter clinical trials. Cost is a major barrier.

Requiring health care insurers to cover the standard of care costs for individuals participating in cancer clinical trials would remove one significant barrier to increasing participation. Any research trial includes two general categories of costs: 1) research costs – expenses that the patient would not routinely incur if he or she was not a part of the trial (extra lab tests, x-rays, etc.), and 2) standard of care costs – expenses that would occur whether or not the patient entered the trial.

NSABP studies routinely identify the non-standard of care components. We provide the drug(s) being studied and typically provide additional non-federal funding to help defray the costs of trial participation, including the cost of non-standard of care items. The goal is to minimize any additional costs to the patient, improve trial participation and improve cancer care in general.

I and the NSABP strongly urge you to enact this bill so that cancer patients in Alaska can have improved access to state-of-the-art research studies like those available to patients in other states.

Thank you for listening to my testimony and I would be pleased to try to answer your questions.

American Association for Cancer Research

Association of American Cancer Institutes

American Society of Clinical Oncology

December 1, 2008

Kevin J. Cullen, MD
Director, University of Maryland
Marlene and Stewart Greenebaum Cancer Center
22 South Greene Street
Baltimore, MD 21201

Dear Dr. Cullen:

This letter is written in follow-up to our recent discussions about Medicare coverage of routine patient care costs for beneficiaries participating in phase I cancer clinical trials. As the world's leading professional and scientific organizations representing oncology cancer care professionals, we write to affirm our position that phase 1 cancer clinical trials are the essential gateway for advancement of new cancer treatments—and a vital component of our cancer treatment armamentarium.

It is the view of the undersigned organizations that the current Medicare National Coverage Determination (NCD) (310.1) for Routine Costs in Clinical Trials explicitly includes coverage of phase I cancer clinical trials and that these trials should be covered.

Requirements for Medicare Coverage
The NCD lays out three basic requirements for Medicare coverage:

- The subject or purpose of the trial must be the evaluation of an item or service that falls within a Medicare benefit category (e.g., physicians' service, durable medical equipment, diagnostic test) and is not statutorily excluded from coverage (e.g., cosmetic surgery, hearing aids).
- The trial must not be designed exclusively to test toxicity or disease pathophysiology. It must have therapeutic intent.
- Trials of therapeutic interventions must enroll patients with diagnosed disease rather than healthy volunteers. Trials of diagnostic interventions may enroll healthy patients in order to have a proper control group.

The NCD also requires that clinical trials covered under the policy have seven "desirable characteristics."

1. The principal purpose of the trial is to test whether the intervention potentially improves the participants' health outcomes;
2. The trial is well-supported by available scientific and medical information or it is intended to clarify or establish the health outcomes of interventions already in common clinical use;

3. The trial does not unjustifiably duplicate existing studies;
4. The trial design is appropriate to answer the research question being asked in the trial;
5. The trial is sponsored by a credible organization or individual capable of executing the proposed trial successfully;
6. The trial is in compliance with Federal regulations relating to the protection of human subjects; and
7. All aspects of the trial are conducted according to the appropriate standards of scientific integrity.

The policy also states that certain trials "are presumed to meet these characteristics and are automatically qualified to receive Medicare coverage." Trials that are automatically deemed include:

1. Trials funded by NIH, CDC, AHRQ, CMS, DOD, and VA;
2. Trials supported by centers or cooperative groups that are funded by the NIH, CDC, AHRQ, CMS, DOD and VA;
3. Trials conducted under an investigational new drug application (IND) reviewed by the FDA; and
4. Drug trials that are exempt from having an IND under 21 CFR 312.2(b)(1) will be deemed automatically qualified until the qualifying criteria are developed and the certification process is in place. At that time the principal investigators of these trials must certify that the trials meet the qualifying criteria in order to maintain Medicare coverage of routine costs. This certification process will only affect the future status of the trial and will not be used to retroactively change the earlier deemed status."

Phase 1 Cancer Clinical Trials Have Therapeutic Intent

The National Cancer Institute's (NCI) Investigator Handbook is instructive as to the therapeutic intent of a Phase I trial. That handbook includes the following information about phase 1 cancer clinical trials (emphasis added):

> Phase 1 trials determine a safe dose for Phase 2 trials and define acute effects on normal tissues. In addition, these trials examine the agent's pharmacology and may reveal evidence of antitumor activity. **Therapeutic intent is always present in Phase 1 trials**; indeed, anticancer agents are not tested in patients unless preclinical activity studies have already demonstrated evidence of significant activity in laboratory models.[1]

The Food and Drug Administration (FDA) has also adopted a definition of phase 1 trials that is consistent with the NCI's definition. FDA states that phase 1 studies "are designed to determine the metabolic and pharmacologic actions of the drug in humans, the side effects associated with increasing doses, and, if possible, to **gain early evidence of effectiveness**." This early evidence of effectiveness is the grounding for therapeutic intent – both in the choice of oncologists and patients to enroll in the trial, and as one of the aims of the trial.

Although the scientific goals of a phase 1 trial are to determine the toxic effects, pharmacologic behavior, and recommended doses for future study of a new agent, there is always a strong preclinical

[1] Available on the NCI website at http://ctep.cancer.gov/handbook/index.html

rationale for bringing the drug into the clinic with the expectation of positive clinical outcomes for some patients.[2] In fact, Institutional Review Boards would not permit the administration of potentially toxic treatments to patients unless there was some reasonable prospect of antitumor effect.[3] It is also important to note that phase 1 oncology treatment trials are **never** done in healthy volunteers because of the potential toxicities associated with the treatments under investigation.

Additionally, many of the NCI phase 1 trials involve agents that are already approved for the treatment of one type of cancer and are being studied in a different type of cancer, or in combination with other treatments. As a result, we have some evidence of therapeutic effectiveness that provides solid grounding on which to base therapeutic intent. Indeed, an analysis of 12,000 individuals who participated in 460 NCI-funded phase 1 trials done in 2005 found that 10.6% of patients experienced an objective response. This number increased to 17.8% of patients when one drug included in the trial regimen was already FDA-approved.[4]

Furthermore, our growing knowledge of the molecular basis of cancer is allowing us to increasingly develop treatments that are targeted to particular molecular pathways and personalized to specific patient populations. These types of agents will provide a "high pretreatment probability of achieving both an objective response and more subjective clinical benefit" for the trial participants.[5]

To bring about these exciting new developments in cancer treatment, clinical trials participation is required. It is particularly important in the Medicare-aged population not only because of the increased incidence of cancer in the elderly and but also to develop our understanding of how treatments work in this population. Both the NCI and FDA definitions demonstrate that phase 1 oncology trials meet the requirements for Medicare coverage, including therapeutic intent, and should be covered.

Juneau, Alaska 99801-1182

RE: Senate Bill 10

Dear Senator Davis,

On behalf of the National Federation of Independent Business/Alaska, I wish to express our opposition to Senate Bill 10. The National Federation of Independent Business is the largest small-business advocacy group in the Alaska.

Health-care costs have been the No. 1 issue facing small-business owners since 1986, and those concerns are growing, according to NFIB's members. As health-care costs go through the roof, small-business owners have very few choices when selecting insurance coverage for their employees. The tipping point is here, and small businesses are begging for solutions to rising health-care costs, lack of access and other issues.

For many small employers in Alaska insurance premiums for small groups or single coverage have increased by more than 82 percent since 2000, a jaw-dropping statistic. This is completely unsustainable over the long-term. Much of the increase is driven by the additions to coverage by state mandates

Unfortunately, SB10 mandates specified coverage of medical care coverage during specified clinical trials that may not fit employee's needs but for which small employers providing health insurance bear the cost. Increased mandates force employers to consider whether they can afford to continue coverage or are forced

National Federation of Independent Business — ALASKA
P.O. Box 34761 • Juneau, AK 99803 • 907-723-6667 • denny.dewitt@nfib.org

by increased prices to eliminate health insurance for their employees. Mandates prevent small employers from providing affordable insurance programs tailored to its specific work force.

SB 10 is discriminatory against small employers as the mandate applies to those who provide coverage regulated by state insurance statutes, but not programs offered by the state and other governmental entities or large employers who typically offer ERISA programs. Thus it creates a less fair business environment for small employers.

Sincerely yours,

Dennis L. DeWitt
Alaska State Director

Senator Bettye Davis

Senate Bill 11, 26-LS0074\A

"An Act relating to health care insurance coverage of a dependent child who is less than 26 years of age and making a conforming age amendment in the statute describing health insurance policies that may be delivered or issued in this state."

Sponsor Statement

SB 11 requires an insurer to enroll, and prohibits taking off the rolls or eliminating health care insurance coverage without the consent of the insured, for a person less than 26 years old who is related to the insured, unmarried, financially dependent on the insured, does not have dependents, enrolled in an institution of higher education, and not insured under another policy. SB 11 changes the age that a person is considered a child from 23 years of age to 26 for purposes of determining who may be insured under the same policy of health insurance.

Young adults, ages 19-29, are one of the largest growing segments of the U.S. population without health insurance. In 2004 almost 14 million young adults lacked coverage, an increase of 2.5 million since 2000. This rapid change is due in part to their losing coverage under their parents' policies at 19, or Medicaid, or State Children's Health Insurance Program, or graduation from high school or college. Almost half of college graduates and high graduates will be uninsured for a substantial time after graduation.

Age 19 is a crucial year in health insurance coverage. Both public and private insurance plans treat this age as a turning point for insurance coverage. Even if youth go on to college, parents' insurance plans often stop before graduation. Almost all private universities and about one fourth of public universities require health insurance as a condition of enrollment. Forty percent of part-time students and non-students, and 20% of full-time students ages 19-23 are uninsured.

Insurance coverage is important for this generally healthy group of young adults who should be encouraged to start taking responsibility for their own health care. It has been found that 14% of adults 18-29 are obese, an increase of 70% in the 1990s, - the fastest rate of increase among all adults. There are 3.5 million pregnancies each year among the 21 million women ages 19-29. One-third of all diagnoses of HIV are made among young adults. Emergency room visits are far more common among young adults than children or older adults. Most young adults have no regular doctor, no link to the health care system, and more than one-third of those who do require medical attention are often saddled with debt and collection agencies.

States are taking action to mandate coverage for young adults, often allowing for targeted policy options. For example, in 2006 New Jersey required most group health plans to cover single adult dependents up to age 30. Massachusetts as part of its expanded health insurance law in 2006 considered dependents for insurance purposes up to age 25 or for two years after they are no longer claimed on their parents' tax returns. Since 1994 Utah has required coverage through age 26, and New Mexico provides coverage for unmarried dependents up to age 25, regardless of school enrollment. Texas in 2003 allowed full-time students up to be covered by their parents' insurance plans to age 25. It is not uncommon, or unreasonable, therefore, that Senate Bill 179 requires offering family health insurance coverage to dependent children up to age 26.

MEMORANDUM February 2, 2009

SUBJECT: Health insurance for a person who is 26 years of age (SB 11)

TO: Senator Bettye Davis
Attn: Thomas Obermeyer

FROM: Dennis C. Bailey
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents.

Section 1. Requires an insurer to enroll, and prohibits disenrolling or eliminating health care insurance coverage without the consent of the insured, for a person less than 26 years old who is related to the insured, unmarried, financially dependent on the insured, does not have dependents, enrolled in an institution of higher education, and not insured under another policy.

Section 2. Changes the age that a person is considered a child from 23 years of age to 26 years of age for purposes of determining who may be insured under the same policy of health insurance.

LEGISBRIEF

BRIEFING PAPERS ON THE IMPORTANT ISSUES OF THE DAY

JUNE/JULY 2008 VOL. 16, NO. 29

Health Insurance Coverage for Young Adults

By Laura Tobler

Young adults are at risk of being uninsured.

Young adults between the ages of 19 and 29 are at risk of being uninsured more often than any other age group. Eleven percent of the nation's children through age 18 are uninsured, while 30 percent of those between the ages of 19 and 29 lack coverage.

Percent Uninsured Children and Young Adults by Federal Poverty Level*, 2005

Income Level	Children Age 18 and Younger	Young Adults Ages 19 to 29
Total	11%	30%
Makes less than 100% FPL	20	51
Makes between 100% - 199% FPL	16	42
Makes more than 200% FPL	7	16

*Federal poverty level (FPL) guidelines are used to determine financial eligibility for many government programs.

Source: Analysis of the March 2006 Current Population Survey by S. Giled and B. Mahato for the Commonwealth Fund.

Graduation from high school or college may mean loss of health insurance.

Young adults typically lose health insurance coverage under a parent's or guardian's policy at age 19 or upon college graduation. Most parents who cover their children or dependents do so through their employer's health insurance benefits. Sixty percent of employer health plans do not cover young adults after they reach age 19 if they are not enrolled full time in college. In the first year after graduation, about 40 percent of college graduates and 50 percent of high school graduates who do not enroll in college will be uninsured.

Eligibility for coverage as a child under Medicaid and the State Children's Health Insurance Program ends when the child reaches age 19. To remain covered by either of these public programs, children must meet the more restricted eligibility standards for an adult that, in most states, is limited to very low-income parents and adults with disabilities. As a result, most young adults are dropped from public coverage when they reach age 19.

Employment and lifestyle affect young adults' ability to obtain coverage.

The employment opportunities for and lifestyles of young adults also affect their ability to get health insurance. Young adults often move in and out of school and jobs throughout their 20s—working part-time while attending school, changing jobs for personal or professional reasons, or taking time off from school to work and then returning to school. This affects their ability to remain on their parent's or guardian's policy or to become eligible for employer-sponsored insurance. When they enter the workforce, young adults are more often faced with low-wage, temporary or hourly positions that typically do not include benefits. If they are hired by an employer who offers benefits, young adults may have a three- to six-month waiting period before coverage begins.

Purchasing private health insurance coverage as an individual is unaffordable for many uninsured young adults who disproportionately reside in low-income households. About 50 percent of uninsured young adults between the ages of 19 and 29 reside in households with incomes below the federal poverty level ($21,200 per year for a family of four).

Many young adults cannot afford private health insurance coverage.

2008 Department of Health and Human Services Poverty Guidelines

Source: *Federal Register* 73, no. 15 (Jan. 23, 2008): 3971-3972.

State Action Several states have enacted legislation to extend dependent benefits to older children and to young adults who are not enrolled in college. In 1994, Utah became the first state to enact legislation allowing coverage to continue for unmarried dependents up to age 26, regardless of whether the dependent is enrolled in school. A 2006 New Jersey law requires most group health plans to offer health insurance coverage (at the option of the insured) to unmarried dependents up to age 30. At least 21 states—including Colorado, Connecticut, Florida, Idaho, Indiana, Iowa, Kentucky, Maine, Maryland, Massachusetts, Minnesota, Missouri, Montana, New Hampshire, New Jersey, New Mexico, Rhode Island, Tennessee, Texas, Utah and Washington—have passed this type of legislation.

Expanded coverage for young adults may be structured as an insurance policy rider with a supplemental premium. In New Jersey, for example, the insurance provider may charge a higher rate, which cannot exceed 3 percent of the premium. More commonly, coverage is extended to all policies, and the young adult is simply covered by the family premium. Some experts predict that the latter strategy may increase employer premiums for family coverage by about 5 percent to 9 percent.

Federal Action Under current Internal Revenue Service (IRS) regulations, children must meet specific requirements to be considered a dependent for tax purposes, including relying on the parent or guardian for more than half of their financial support. If the dependent who is eligible for coverage based on a state law does not meet the requirements for the IRS definition of dependent, the value of the benefit is taxable income for the employee. This could create an administrative burden for some employers.

IRS regulations define dependent for tax purposes.

Health insurance coverage under the Federal Employees Health Benefits Program for government employees and members of Congress currently is available for unmarried dependent children up to age 22.

Issue Brief

Rite of Passage? Why Young Adults Become Uninsured and How New Policies Can Help

Sara R. Collins, Cathy Schoen, Jennifer L. Kriss, Michelle M. Doty, and Bisundev Mahato*

ABSTRACT: Young adults (ages 19 to 29) are one of the largest and fastest-growing segments of the U.S. population without health insurance: 13.7 million lacked coverage in 2004, an increase of 2.5 million since 2000. Young adults often lose coverage under their parents' policies, Medicaid, or the State Children's Health Insurance Program at age 19, or when they graduate from high school or college. Nearly two of five college graduates and one-half of high school graduates who do not go on to college will be uninsured for a period during the first year after graduation. Three policy changes could extend coverage to uninsured young adults and prevent others from losing it: extending eligibility for Medicaid and the State Children's Health Insurance Program beyond age 18; extending eligibility for dependents under private coverage beyond age 18 or 19 regardless of student status; and ensuring that colleges and universities require full- and part-time students to have insurance, and that they offer coverage to both.

* * * * *

OVERVIEW

Young adults between the ages of 19 and 29 represent one of the largest and fastest-growing segments of the population without health insurance in the United States. Often dropped from their parents' policies or public insurance programs at age 19 or on graduation day, they are left to find insurance on their own as they make the transition from high school to work or college.

This is a revision of the issue brief *Rite of Passage*, first released in May 2003. It updates analyses with new data from the March 2005 Current Population Survey, the 2003 Medical Expenditure Panel Survey, and the Commonwealth Fund Biennial Health Insurance Survey (2005). It also provides new information on state legislation and other proposals recently introduced to increase health insurance coverage among young adults.

This and other Commonwealth Fund publications are online at www.cmwf.org. To learn more about new publications when they become available, visit the Fund's Web site and register to receive e-mail alerts.

Doty, Ph.D., is senior analyst, all at The Commonwealth Fund. Bisundev Mahato is with the Mailman School of Public Health, Columbia University.*

Yet, jobs available to young adults are usually low-wage or temporary—the type that generally do not come with health benefits. Young adults who are able to go to college full-time may have some protection through their parents' policies, but upon graduation usually lose access to family coverage.

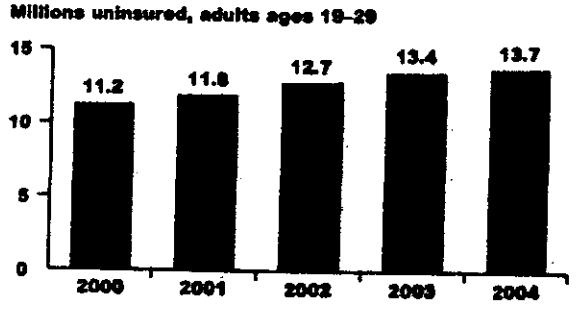
Moving on and off coverage places the health of young adults at risk and subjects them and their families to financial stress just as they are starting out in the workforce. This issue brief assesses the scope of the health insurance problem facing young adults, its causes and implications, and what can be done to ensure stable and continuous coverage. It also offers some targeted policy steps that could help young adults stay insured as they make the transition to independent living.

A LARGE AND GROWING PROBLEM

The number of uninsured young adults ages 19 to 29 climbed to 13.7 million in 2004, an increase of 2.5 million since 2000 (Figure 1). Young adults were the fastest-growing age group among the uninsured over this period, accounting for 40 percent of the increase in the uninsured under age 65. Even though they comprise just 17 percent of the under-65 population, young adults account for 30 percent of the nonelderly uninsured.[1]

By far, the young adults most at risk of lacking coverage are those from low-income households.

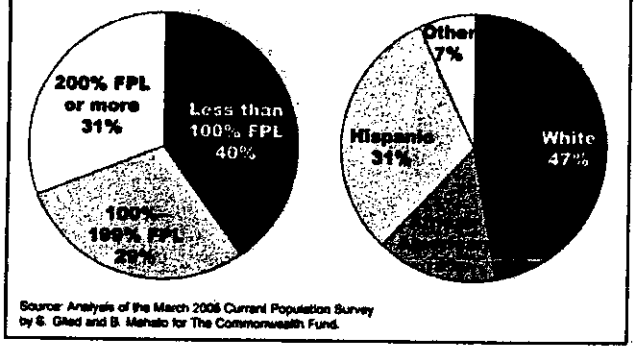
Figure 1. Uninsured Young Adults Up by 2.5 Million in Last Four Years



Source: Analyses of the March 2001–2005 Current Population Surveys by S. Glied and B. Mahato for The Commonwealth Fund.

These individuals, like children and older adults in low-income families, are disproportionately represented among the uninsured. About 23 percent of adults ages 19 to 29 live in households with incomes below 100 percent of the poverty level, but two-fifths (40%) of the 13.7 million young adults who are uninsured live in households with incomes below poverty (Figure 2).[2]

Figure 2. Distribution of Uninsured Young Adults Ages 19–29 by Poverty Status and Race/Ethnicity, 2004



Source: Analysis of the March 2005 Current Population Survey by S. Glied and B. Mahato for The Commonwealth Fund.

Nearly half of uninsured young adults are white. But Hispanics are disproportionately represented among the young and uninsured. While Hispanics comprise 19 percent of adults ages 19 to 29, they comprise 31 percent of uninsured young adults (Figure 2). Hispanics and African Americans are both at greater risk of being uninsured than white young adults: about 36 percent of African Americans and 52 percent of Hispanics ages 19 to 29 are uninsured, compared with 24 percent of whites in that age range (data not shown).

WHAT A DIFFERENCE A YEAR CAN MAKE

Nineteenth birthdays are crucial milestones in Americans' health insurance coverage. Both public and private insurance plans treat this age as a turning point for coverage decisions. Employer health

plans often do not cover young adults as dependents after age 18 or 19 if they do not go on to college. Public programs, such as Medicaid and the State Children's Health Insurance Program (SCHIP), also typically have one set of income and eligibility standards for children and another for adults, with the 19th birthday as the critical divide.

Losing Coverage Under a Parent's Policy

Employer-sponsored health insurance is the mainstay of most family and dependent coverage. Typically, such policies cover children as dependents as long as they meet eligibility rules. Age 18 or 19 tends to be a crucial turning point, after which coverage most often continues only for those young adults who attend college full-time. A 2004 Commonwealth Fund study found that, among employers who offer coverage, nearly 60 percent do not insure dependent children over age 18 or 19 if they do not attend college.[3]

Young adults who enroll in college full-time when they graduate from high school are the most likely in their age group to have insurance coverage, primarily because they are able to maintain eligibility under their parents' employer's policies. A small share of full-time students also gains coverage through plans offered by universities. Roughly 25 percent of public universities and about 90 percent of private universities and colleges require that students have health insurance as a condition of enrollment.[4] Idaho, Massachusetts, and New Jersey have passed either legislative or administrative rulings requiring that students have health insurance in order to enroll.[5] About half (46%) of full-time students ages 19 to 23 receive health insurance through their parents' employer-sponsored plans, while another 20 percent have individual coverage, including college and university plans (Figure 3).

Young adults who are not in school full-time post-high school graduation are much more likely to be uninsured, primarily because it is much harder for them to gain access to employer coverage.

Figure 3. Insurance Sources for College-Age Adults Ages 19–23, 2004

Source: Analysis of the March 2005 Current Population Survey by S. Glied and S. Maheta for The Commonwealth Fund.

Forty percent of part-time and non-students ages 19 to 23 are uninsured, compared with 20 percent of full-time students. Young adults who opt to enter the labor market rather than go to college are unlikely to be eligible for coverage under their parents' policies, and may have difficulty finding a job with health benefits. New entrants to the labor market without college educations are often candidates for positions that are the least likely to come with health benefits—those that pay low wages, are in small companies, or are part-time or temporary in nature.[6] The Commonwealth Fund Biennial Health Insurance Survey (2005) found that 43 percent of all workers ages 19 to 29 who earn less than $10 per hour are uninsured.[7] Almost one-third (31%) of workers between ages 19 and 29 have jobs that pay less than $10 per hour.[8]

Losing Medicaid/SCHIP Coverage at Age 19

Medicaid and SCHIP reclassify all teenagers as adults the day they turn 19. As a result, young adults who had been insured under Medicaid or SCHIP as children typically do not have an option to stay on public coverage unless they are able to qualify for Medicaid as adults. Regardless of

school, work, or dependent status, they lose their eligibility as dependents or children. Most low-income young adults become ineligible for public programs, since eligibility for adults generally is restricted to very low-income parents or disabled adults. Even teenagers with disabilities who qualified for Medicaid before their 19th birthdays have to go through a new set of screening tests to determine whether they will still be eligible for benefits as disabled adults.[9]

Net Impact of the 19th Birthday

As a result of the combined impact of such public and private insurance rules, uninsured rates jump sharply at age 19. Turning 19 increases the risk of being uninsured by more than twofold: the uninsured rate rises from 12 percent among children age 18 and under to 31 percent among those ages 19 to 29 (Figure 4).

Figure 4. Percent Uninsured, Children and Young Adults, by Poverty Level, 2004

Percent Uninsured	Children Age 18 and Under	Young Adults Ages 19–29

<100% FPL	20	54
100%–199% FPL	17	42
≥200% FPL	7	18

Source: Analysis of the March 2005 Current Population Survey by S. Glied and B. Mahato for The Commonwealth Fund.

Low-income young adults are particularly vulnerable. Among those living in families below the poverty level, more than half (54%) are uninsured, compared with about one of five (20%) children in low-income families. Those with slightly higher incomes (100% to 199% of poverty) fare only marginally better—roughly two of five (42%) are uninsured.

THE (UNINSURED) GRADUATE

The transitional nature of young adults' lives following their 19th birthday makes it difficult to secure a stable and consistent source of health insurance coverage. Young adults move in and out of school and jobs throughout their 20s. Full-time students might take a leave of absence from school, attend college part-time, or graduate—effectively closing off access to their parents' insurance policies or university-sponsored plans. In addition, job tenure is shorter among younger workers, thus increasing the risk that they will be without health insurance coverage for periods of weeks, months, or even years.

Surveys that track people over time provide an opportunity to examine what happens to the insurance coverage of young adults as they graduate from high school or college or move through their early adult years. The federal multiyear longitudinal survey known as SIPP (Survey of Income and Program Participation) interviewed a sample of people about their health insurance and other characteristics in 1996 and tracked their history through 2000.

The four-year insurance history of all young adults who were ages 19 to 23 at the beginning of 1996 reveals the extent to which life transitions disrupt insurance coverage. Over the 1996–2000 period, two-thirds (64%) of this cohort of young adults went without coverage for at least part of the time (Figure 5).[10] One-third were uninsured for more than a year, while one-fifth were uninsured for more than two years.

Young adults from households with low incomes were most exposed: they were both more likely to go without insurance for at least some period and more likely to endure long periods without insurance. Nearly 80 percent of young adults living under 200 percent of the poverty level were uninsured for at least part of the four-year period; more than half (52%) were uninsured for 13 months or more (Table 1). Reflecting their generally lower incomes, Hispanic and African American young adults were at similarly high risk of losing insurance and experiencing long spells

Figure 5. Percent of Young Adults Who Had a Time Uninsured During Four Years, 1996–2000*

without coverage. Fifteen percent of Hispanic young adults ages 19 to 23 at the beginning of the four years were uninsured for the entire period.

Graduation: High School and College

Tracking people over time also reveals how the major life events of early adulthood noted in this brief disrupt insurance coverage.

Graduation from high school marks a key juncture in the health insurance coverage of young adults. Tracking a sample of young adults in the year following graduation reveals the extent to which college enrollment is correlated with more secure insurance coverage. Among all young adults graduating from high school, three of 10 were uninsured for some time in the year following high school (Figure 6). Half of young adults who graduated from high school but did not go to college were uninsured for some time during the year following their graduation—twice the rate for young adults who attended college that year.

Among those young adults who go to college, the year following their college graduation also can be a time during which connections to the health system are fragile and break down. The protections afforded them by virtue of being a full-time student—coverage through a parent's employer policy or a student health plan—are lost upon graduation. As new, albeit college-educated, entrants to the labor force, they confront similar hazards that high school graduates face: waiting periods, temporary positions, lower-wage jobs, employment in small firms, and job turnover. Of those college students who graduated during 1996 to 2000, 38 percent were uninsured for at least part of the time in the year following graduation, with 21 percent uninsured for six months or more (Figure 7). Based on the experiences of recent graduates, nearly two of five college graduates can expect to spend at least some time uninsured in the year just after graduation.

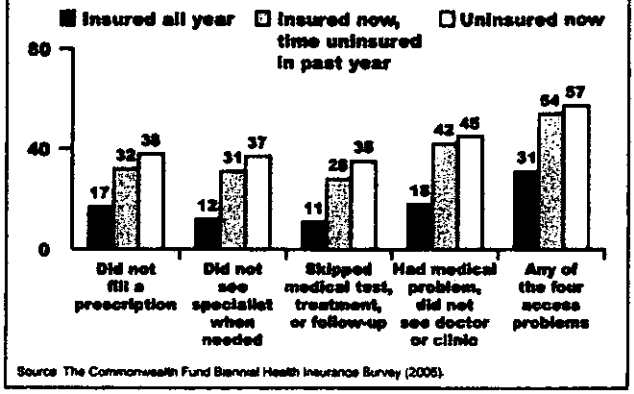
WHY COVERAGE IS IMPORTANT FOR YOUNG ADULTS

Although young adults in general constitute a healthy group, going without insurance disrupts their access to the health care system, introduces barriers to care when it is needed, and leaves young adults and their families at risk for high out-of-pocket costs in the event of a severe illness or injury. Young adults, particularly women, are in need of regular preventive care. If young adults lose their coverage at age 19 or upon graduation from college, their ties with primary care physicians may be severed at precisely the time they should be forming stronger links to the health care system and taking responsibility for their own care. The following are just a few reasons coverage is so important for young adults:

- Fourteen percent of adults ages 18 to 29 are obese. In the 1990s, obesity increased by 70 percent in this age group—the fastest rate of increase among all adults.[11]
- There are 3.5 million pregnancies each year among the 21 million women ages 19 to 29.[12]
- One-third of all HIV diagnoses are made among young adults.[13]
- Injury-related visits to emergency rooms are far more common among young adults than they are among either children or older adults.[14]
- More than 20,000 people with congenital heart disease reach their 19th birthday each year.[15]

The Commonwealth Fund Biennial Health Insurance Survey (2005) shows that being uninsured or having unstable health insurance hampers access to the health care system. More than half (54%–57%) of young adults ages 19 to 29 who either were uninsured for the entire year or had a time without coverage said that they had gone without needed health care because of cost (Figure 8). Forgone care included failing to fill a prescription, not seeing a doctor or specialist when sick, or skipping a recommended medical test, treatment, or follow-up visit.

Figure 8. Lacking Health Insurance for Any Period Threatens Young Adults' Access to Care, 2005



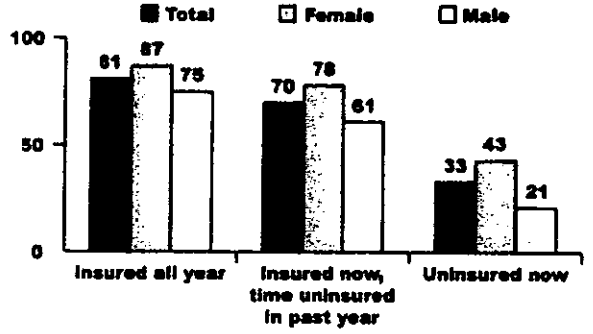
Source: The Commonwealth Fund Biennial Health Insurance Survey (2005).

In addition, uninsured young adults are far less likely than those with coverage to have a regular doctor. Only one-third of uninsured young adults ages 19 to 29 had a regular doctor, compared with 81 percent of those who were insured all year (Figure 9). Uninsured female young adults had regular doctors at about half the rate of young women who were insured all year. Male young adults who were uninsured had the most fragile link to the health care system: just 21 percent had a regular doctor compared with 75 percent of male young adults who were insured all year.

Many young adults have problems paying medical bills or are paying off medical debt over time. More than one-third (35%) of all young adults, both insured and uninsured, said that they had experienced problems with medical bills: having trouble making payments, being contacted by a collection agency because of inability to pay

Figure 9. Young Adults Without Insurance Are Less Likely to Have a Regular Doctor, 2005

Percent of adults ages 19-29 who have a regular doctor



Source: The Commonwealth Fund Biennial Health Insurance Survey (2005)

bills, significantly changing their way of life in order to pay medical bills, or paying off medical debt over time (Figure 10). About one of five (20%) young adults were paying off medical debt over time. Uninsured young adults were the most burdened with medical bills and debt; 46 percent reported at least one of the aforementioned problems.

Contrary to conventional wisdom, young adults appear to value the protection that health insurance coverage provides. The Commonwealth Fund Biennial Health Insurance Survey (2005) found that nearly three-quarters (73%) of employed young adults accept health insurance coverage when it is offered to them, only slightly less than the take-up rate (82%) of workers age 30 or older (Table 2).

POLICY OPTIONS TO HELP YOUNG ADULTS STAY INSURED

Health insurance coverage of young adults would be improved by system-wide changes to expand access to and stabilize coverage among the general population. Some recent proposals to achieve near-universal coverage would build on the existing health insurance system, and several have included specific provisions to increase coverage among young adults in current private and public insurance arrangements.[16] For example, The Commonwealth Fund's Karen Davis and Cathy Schoen have proposed a framework for achieving near-universal coverage that includes a requirement for companies to extend coverage to dependent young adults under age 23 through their parents' insurance plan.[17] Other proposals would expand coverage for children as well as young adults, or exclusively target young adults. Senator Jay Rockefeller (D-W.Va.) and Representative Pete Stark (D-Calif.) have introduced legislation creating a Medicare-like program for children that will eventually cover young adults up to age 23.[18] Representative Vic Snyder (D-Ark.) and Senator Blanche Lincoln (D-Ark.) have introduced legislation that would permit states to cover low-income young adults under Medicaid and SCHIP up to age 23.[19] Senate Republicans have proposed financial incentives for colleges and universities that provide or require health insurance for full-time students.[20]

Recent State Action

In the absence of federal action to expand coverage, several states have recently passed or are considering legislation to substantially increase the age

of dependency for young adults for private insurance coverage eligibility status.[21] In general, these laws apply to plans covered under state insurance regulations and thus would not apply to self-insured employers.

In a law taking effect in May 2006, New Jersey will require most group health plans to cover single adult dependents up to age 30 (Table 3).[22] A Colorado law that became effective in January 2006 requires group and privately purchased individual health plans to cover unmarried dependents up to age 25.[23] Dependents must be unmarried or financially dependent, or live at the same address as the parent(s), but eligibility is not dependent on full-time enrollment in school. The New Jersey and Colorado laws both allow insurers to charge a separate premium for extended dependent coverage.

As part of Massachusetts' April 2006 health insurance expansion law, young adults are considered dependents for insurance purposes up to age 25 or for two years after they are no longer claimed on their parents' tax returns, whichever comes first.[24]

Utah has required insurance policies that include dependent coverage to cover unmarried dependents through age 26 since 1994,[25] and New Mexico requires that all insurance policies provide coverage for unmarried dependents up to age 25, regardless of school enrollment.[26]

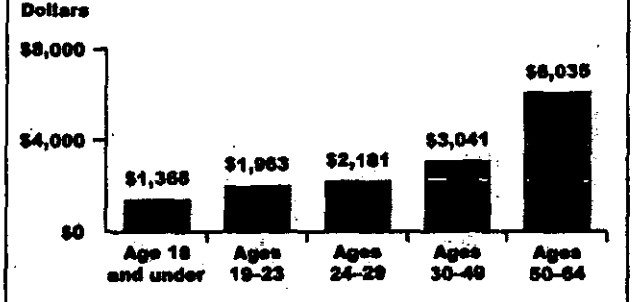
A Texas law effective in September 2003 allows full-time students up to age 25 to be covered by their parents' insurance plans.[27] South Dakota prohibits any insurance provider that offers dependent benefits from terminating coverage before age 19, or 24 if the dependent is a student.[28]

Several state legislatures are considering similar laws. Rhode Island is currently considering a bill that would phase in, through 2009, coverage of unmarried and financially dependent young adults up to age 25.[29] And a California bill that was passed by the state legislature but vetoed by the governor would have prohibited health plans that cover dependent children from establishing a limiting age for coverage of less than 26 years.[30] The bill is expected to be submitted to the governor for consideration again this year.

Targeted Policy Options

Whether as part of a broader expansion plan or implemented on their own, targeted policy options like those recently pursued by states could improve access to coverage for young adults and help them stay insured during the transition to independence. This is a relatively low-cost group to insure: young adults generally are healthier than older adults and therefore have far lower per capita health care expenditures (Figure 11).[31] Indeed, keeping young adults in insurance pools may have the effect of lowering the average costs for group insurance.

Figure 11. Annual Per Capita Total Health Expenditures by Age Group, 2006*



* Inflated to 2006 dollars using actual and estimated annual growth rates in national health expenditures.
Source: Analysis of the 2003 Medical Expenditure Panel Survey by S. Glied and S. Mahato for The Commonwealth Fund.

Three different public or private policy changes could extend coverage to a substantial portion of uninsured young adults and prevent others from losing coverage in the future.

1. *Extend eligibility for Medicaid/SCHIP public coverage beyond age 18.* Congress could allow or require states to extend coverage to those young adults in Medicaid and SCHIP who lose their eligibility because of age, with federal matching funds provided. Young

adults in households with incomes under 100 percent of poverty are by far the group most at risk of lacking health insurance coverage. Such an expansion would have the biggest impact in terms of lowering the number of uninsured young adults. Young adults with incomes of 100 percent to 199 percent of poverty also lack insurance at a high rate. As proposed in the Snyder and Lincoln legislation, states would have the option of extending coverage up to a target age such as 23, and could phase in coverage one year at a time. Alternatively, Congress could require states to extend coverage to those currently enrolled in the programs and who "age off," just as states are now required to extend Medicaid coverage to those who become ineligible because of higher earnings.[32] Such a policy change could help the 2.9 million uninsured young adults ages 19 to 23 with incomes under 100 percent of poverty.

2. *Extend eligibility for dependents under private coverage beyond age 18 or 19.* Private insurers and both public and private employers could be required to define dependent coverage as all unmarried dependents beyond age 18 or 19. As noted above, many states have recently redefined the age at which a young adult is no longer a dependent—from age 25 in Colorado and New Mexico up to age 30 in New Jersey. Some private and public employers already provide such coverage voluntarily. Under the Federal Employees Health Benefits Program, federal employees and members of Congress currently enjoy coverage for unmarried dependent children under age 22.[33] Such an expanded benefit could either be structured as a rider with a supplemental premium or simply be extended to all policies and covered by the family premium. Even increasing the age to 23 could cover an estimated 1 million unmarried, dependent young adults.[34] If the benefit requirement were extended to family policies, the average premium for those plans would rise by about 3 to 5 percent.[35]

3. *States could ensure that all colleges and universities require full-time and part-time students to have health insurance, and that they offer health insurance coverage to both.* Many colleges and universities already require health insurance coverage as a condition of enrollment, and a handful of states (Idaho, Massachusetts, New Jersey) have legislative or administrative rulings requiring all students at local institutions to be covered. Students at these institutions generally can choose to enroll in a school health plan or provide proof of coverage from another source, usually a parent's employer-based plan. The cost of the school plans, which ranges from about $500 to $2,400 per year, is usually added to tuition along with other required fees.[36] Increasing the number of schools that require students to have health insurance coverage and that offer such coverage through state mandates could help cover the 1.9 million part-time and full-time uninsured students ages 19 to 23. Federal or state subsidies for premiums would help offset the costs of insurance coverage for students.

Notes

[1] All analyses of the March Annual Social and Economic Supplement to the Current Population Survey (CPS), 1987–2005, are from S. Glied and B. Mahato, Columbia University, for The Commonwealth Fund. See Methodology for a description of the CPS.

3021

[2] In 2004, the under-65 poverty thresholds were $9,827 for one person, $12,649 for two adults, $13,020 for two adults and one child under 18, and $19,157 for two adults and two children under 18. See C. DeNavas-Walt, B. D. Proctor and R. J. [35] This estimate is based on the costs of adding the estimated number of adults 19 to 23 who currently do not have employer-sponsored health insurance to different types of family policies. The range reflects the average premium increases resulting from spreading those costs across family policies with dependent children (5%) or all non-single policies (3%).

[36] The range reflects the costs of those school health plans that are consistent with standards recommended by the American College Health Association. Communication with S. Beckley, Stephen L. Beckley & Associates, Inc., Fort Collins, Colo.; L. Rosellini, "Healthcare Headaches," *U.S. News & World Report,* Apr. 15, 2002, p. 52.

Table 1. Months Uninsured Among Young Adults, 1996–2000

	Population in millions	Any part of 4-year period	13 months or more	25 months or more	48 months
Total 19–23*	17	64%	33%	22%	6%
Poverty					
≤ 200% FPL	5	79	52	37	12
> 200% FPL	12	57	25	15	3
Race					
White	12	61	29	18	3
Black	2	65	38	25	11
Hispanic	2	76	52	39	15

* People who were 19–23 at beginning of survey in 1996.

Table 3. State Laws That Increase the Age Up to Which Young Adults Are Considered Dependents for Insurance Purposes

State	Year law passed or implemented	Limiting age of dependency status	Applies to non-students?
Colorado	2006	25	Yes
Massachusetts	2006	25[1]	Yes
New Jersey	2006	30	Yes
New Mexico	2005	25	Yes
South Dakota	2005	24[2]	No
Texas	2003	25	No
Utah	1994	26	Yes

[1] Or for two years after they are no longer claimed on their parents' tax returns, whichever comes first.

[2] Age 19 for non-students.

Notes: Four states have passed laws to extend the dependency eligibility age for young adults in the military or who are disabled. Pennsylvania requires that full-time students whose studies are interrupted by military service are considered dependents until they finish school, regardless of age; Illinois requires that full-time students whose studies are interrupted by military service are considered dependents for the amount of time they spent serving, up to age 25. Oregon includes disabled adult children in the definition of dependent; Maine requires that children with a mental or physical disability that prevents them from enrolling in school are considered dependents up to age 24.

Methodology

Most data in this issue brief are from four surveys: the March Annual Social and Economic Supplement to the Current Population Survey (CPS), 2000–2005; the Medical Expenditure Panel Survey (MEPS), 2003; the 1996 Panel of the Survey of Income and Program Participation (SIPP); and the Commonwealth Fund Biennial Health Insurance Survey (2005). Sherry Glied and Bisundev Mahato of Columbia University, Mailman School of Public Health, provided analysis of the CPS and MEPS. Pamela Farley Short and Deborah Graefe of Pennsylvania State University, Center for Health Care and Policy Research, provided analysis of the SIPP. The authors analyzed the Commonwealth Fund Biennial Health Insurance Survey.

The CPS, MEPS, and SIPP are federal surveys sponsored by the Census Bureau (CPS and SIPP) and the Agency for Healthcare Research and Quality (MEPS). The CPS, the primary source of information on U.S. labor force characteristics, is conducted monthly on a sample of about 57,000 households representing approximately 140,000 people. The Annual Social and Economic Supplement to the CPS is conducted in March of each year with a sample of about 99,000 households. The MEPS uses an overlapping panel design in which data are collected in a series of five interviews over a 30-month period, with a new panel started each year. The sample size in 2003 was about 13,000 families, representing 33,000 people. The SIPP is a multiyear panel survey that interviews a sample of households every four months for several years. The 1996 panel was fielded for four years and consisted of about 37,000 households.

The Commonwealth Fund Biennial Health Insurance Survey (2005) was conducted by Princeton Survey Research Associates International from August 18, 2005, through January 5, 2006. The survey consisted of 25-minute telephone interviews in either English or Spanish and was conducted among a random, nationally representative sample of 4,350 adults age 19 and older living in the continental United States. The analysis in this report is based on 603 adults ages 19 to 29 in the sample. Statistical results are weighted to correct for the disproportionate sample design and to make the final total sample results representative of all adults age 19 and older living in the continental U.S. The data are weighted to the U.S. adult population by age, sex, race/ethnicity, education, household size, geographic region, and telephone service interruption, using the U.S. Census Bureau's 2005 Annual Social and Economic Supplement. The resulting weighted sample is representative of the approximately 212 million adults age 19 and older, including 35.5 million young adults ages 19 to 29.

The Commonwealth Fund is a private foundation that undertakes independent research on health care issues and makes grants to improve health care practice and policy. The views presented here are those of the authors and not necessarily those of The Commonwealth Fund or its directors, officers, or staff, or of The Commonwealth Fund Commission on a High Performance Health System or its members.

Senator Bettye Davis

Senate Bill 12 26-LS0075\R

"An Act relating to limitations on mandatory overtime for registered nurses and licensed practical nurses in health care facilities; and providing for an effective date."

Sponsor Statement

SB 12 prevents registered nurses and licensed practical nurses from being forced to work mandatory overtime, *i.e.,* work beyond an agreed to, predetermined, regularly scheduled shift, and it protects patients from the dangers caused by overworked nurses. Senate Bill 12 is applicable to all hospitals and health care facilities licensed in Alaska. Under SB 12 a nurse may not be required or coerced directly or indirectly to work more than 14 consecutive hours without 10 hours of rest; beyond 80 hours in a 14-day period; or to accept an assignment of overtime if, in the judgment of the nurse, the overtime would jeopardize patient or employee safety. Nurses, however, can volunteer to work additional shifts beyond this limit, so long as the nurse does not work more than 14 consecutive hours without 10 hours of rest.

In recognizing the complexity in delivering quality nursing care on a 24-hour basis, a number of concessions have been made to Alaska hospitals in this bill. The 14-hour maximum workday with 10 hours rest, which exceeds that allowed in many other states, permits a two-hour transition for nursing supervisors to call in additional help after 12-hour shifts. This provision was intended to help remedy the problem of nurses being called back to work without adequate rest after working a 12-hour shift. Also, exceptions have been provided for flight nurses on medical transport, school nurses on school sponsored field trips, and official state emergencies. This bill limits hospital reporting of hours to twice a year; it eliminates triple-time penalties for egregious violations; it limits maximum fines; and it requires enforcement for only "knowing" violations.

There are few official overtime complaints by nurses due to constant attention to patients, busy and varied schedules, and to some extent, fear of direct or indirect retaliation by employers. Many nurses testified to overwork, fatigue, disruption of family life, unexpected shift changes, mandatory overtime, and mandatory on-call over the course of several hearings on a similar bill, SB 28, in the 25th Legislature. Low numbers of complaints and benign exit interviews may belie growing dissatisfaction with the difficult work life of nurses, many of whom report "burn-out" and are leaving the profession.

3032

It has been estimated that 500,000 licensed registered nurses have left or are not working in the profession. There are bills in Congress to stem the nursing shortage, including financial aid for education, and more rigorous regulation of overtime hours, *e.g.,* H.R. 2122, and S.1842 in the 110th Congress, and before that, H.R. 791, "The Safe Nursing and Patient Care Act." The *Journal of the American Medical Association*, October 23-30, 2002, reported that nurses who suffer from fatigue, increased patient work-loads, and shifts in excess of 12 hours greatly increase nursing errors and mortality among patients who have common surgeries. Both nurses and employers alike state that patient safety is paramount, but nurses are allowed to work far beyond their endurance levels, depending on age and condition, unlike other safety-sensitive jobs, including commercial airline pilots, FAA controllers, railroad engineers, and long-haul truckers.

The nursing profession must attract more young people to replace the aging nurses' workforce which nationwide averages 46 years of age and is 95% women. In 2000 only 9% of RNs were under age 25, compared to 25% in 1980. Women are finding alternative career choices, so it is important for the nursing profession to create more jobs for nurses with higher wages, greater responsibilities, and better quality of work life. Although the University of Alaska has made great progress in increasing the numbers of nursing graduates in Alaska and in improving nursing programs at all levels, these efforts can only be successful through employment and retention if the nursing profession can provide a quality of life comparable to that in other competitive fields. SB 12 will help remedy this problem by encouraging employers to employ more nurses rather using mandatory overtime and mandatory on-call with short staffs to fill both routine and critical care positions on a regular basis. The greatest beneficiaries will be the patients who will receive the care and safety they deserve.

Senate Bill 12

"An Act relating to limitations on mandatory overtime for registered nurses and licensed practical nurses in health care facilities; and providing for an effective date."

Sectional Analysis

Note: As a preliminary matter, this sectional analysis should not be considered an authoritative interpretation of the bill; the bill itself is the best statement of its contents.

Section 1. Adds a temporary law section on legislative findings and intent concerning administration of overtime provisions in the nursing profession.

Section 2. Adds an "Article 4" to AS 18.20 that includes the following sections concerning working hours for nurses:

Sec. 18.20.0400. Subsection (a) prohibits the use of direct or indirect coercion to cause a nurse in a health care facility to:

(1) "work beyond a predetermined and regularly scheduled shift that is agreed to by the nurse and the health care facility;
(2) work beyond 80 hours in a 14-day period; or to
(3) accept an assignment of overtime if, in the judgment of the nurse, the overtime would jeopardize patient or employee safety."

Subsection (b) requires that the nurse shall not have less than 10 consecutive hours of off-duty time immediately following the end of work on a predetermined and regularly scheduled shift agreed to by the nurse and the health care facility.
Subsection (c) lists exceptions to subsection (a).

Sec. 18.20.410 Provides an anonymous process by which a patient or nurse may make a complaint about staffing levels and patient safety that relates to overtime work by nurses;

Sec. 18.20.420 Provides enforcement; lists offenses and penalties for violations;

Sec. 18.20.430 Prohibits retaliation for reporting alleged violations.

Sec. 18.20.440 Provides enforcement against prohibition of retaliation. Requires the Commissioner of Labor and Workforce Development to investigate all complaints and provide to the complainant a written determination within 90 days.

Sec. 18.20.445 Provides semiannual reporting requirements

Sec. 18.30.449 Defines key words, including "health care facility," "nurse," "on-call," and "overtime."

Section 3. Requires that if the bill becomes law the filing of the first semi-annual reports under AS 18.20.445 must be filed before February 1, 2010 for the period July 1, 2009 through December 31, 2009.

Section 4. requires that the reporting requirements of AS 18.20.445 take effect July 1, 2009.

Section 5. provides that except as provided in sec. 4 of this Act, this Act takes effect January 1, 2010.

ANALYSIS: *(Attach a separate page if necessary)*

This bill sets limitations for nurses working overtime hours beyond the scope of their regular duties. While the language in the bill makes it applicable to public health nurses, it would have a very limited effect on the Division of Public Health Section of Public Health Nursing. Most Public Health Nurses, as salaried employees, are not overtime eligible.

The mandated semi-annual report to the Department of Labor and Workforce Development would typically require no effort because public health nurses rarely work "in excess of a predetermined and regularly scheduled shift that is agreed upon by the nurse and a health care facility." Normal itinerant schedules, even though they often involve more than a 7.5-hour day, are always predetermined and agreed upon. In addition, the bill exempts reporting requirements for unforeseen emergencies requiring extra work. There is no projected fiscal impact on the Section of Public Health Nursing.

SB12 establishes limitations on overtime for Registered Nurses (RNs) in health care facilities, provides penalties for violations, and requires reporting of any overtime, with the overtime designated as voluntary or mandatory by the RN. The intent of SB12 is to eliminate mandatory overtime for RNs unless the overtime is due to a grave and unforeseen event. Under the bill, use of mandatory overtime in excess of the bill's limitations will result in a report to the Department of Labor.

The division has determined that passage of this bill will have a zero fiscal impact. Situations requiring overtime are adequately addressed by requesting voluntary overtime. Changes in the pay to nurses and new management strategies have resulted in the limited use of mandatory overtime, and does not pose a significant burden to API. The semi-annual reporting requirement costs will be absorbed by the division.

ANALYSIS: *(Attach a separate page if necessary)*

The bill requires the Department of Labor and Workforce Development to investigate and take enforcement action to resolve complaints of unlawful mandatory overtime use and alleged retaliation. Due to the significant number of registered nurses and licensed practical nurses currently licensed in Alaska (approximately 10,000 RN's and 1,000 LPN's), the department anticipates the workload will require at least one full-time Wage and Hour Investigator I position funded with General Funds. Costs include $73.6 for salary and benefits, $3.0 for investigation travel, $18.9 for contractual which includes normal per position costs such as office space, phone, data processing and administrative support and $5.0 for Department of Law advice and representation, $0.5 for office supplies and an additional $3.3 for office furniture and equipment in the first year and an additional $1.3 for computer equipment replacement in the fourth year.

AMENDMENT

OFFERED IN THE SENATE BY SENATOR DAVIS

TO: SB 12

Page 3, following line 16:

Insert a new paragraph to read:

"(7) a nurse at a residential psychiatric treatment center who agrees to work under a contract that requires the employer to provide full-time pay and benefits equivalent to the pay and benefits for a 40-hour workweek if the nurse works a weekend schedule of four eight-hour shifts with not more than 16 consecutive hours on duty without a break of at least eight hours; in this paragraph, "residential psychiatric treatment center" has the meaning given in AS 18.07.111 and "weekend" means the period that begins Friday at 5:00 p.m. and ends Monday at 8:00 a.m.;"

Renumber the following paragraph accordingly.

Subject: Final Answer from Hospitals

Tom,

Rod Betit called me on Friday afternoon and said it's a **no go** on working something out. Believe Rod made a good faith effort, but think it was just a stall tactic by the hospitals. Please let Senator Davis know. We are proceeding to put in the hard push. I'll keep you posted.

Am curious if there's any feedback from the recent visit by Providence?

Subject: nurses overtime bill SB 12

Tom, our nurses love our Baylor plan and we use it at both our hospital and residential treatment centers. This plan is used for both full and part-time employees. An employee who regularly works only one weekend Baylor shift (16 hours) receives 20 hours pay and part-time benefits. If they work two Baylor shifts (32 hours) they receive 40 hours pay and full time benefits. I provided language earlier and at one time last year Senator Davis' bill exempted our Baylor plan.

I would propose the following language.

"A nurse at a psychiatric treatment hospital or residential treatment center who agrees to work two consecutive eight hour shifts on weekends, provided the employer provides pay and benefits equivalent to twenty hours for each two consecutive shifts. A nurse that works four eight hours shifts cannot work more than 16 consecutive hours on duty without a break of at least eight hours. In this paragraph, a weekend means Friday at 5:00 p.m. and ends Monday at 8:00 a.m."

Thanks. Feel free to call me on my cell, 952-5871, if you have any questions.

Nurse 01

Bill Text 26th Legislature

HOUSE BILL NO. 50

"An Act relating to limitations on mandatory overtime for registered nurses and licensed practical nurses in health care facilities; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

LEGISLATIVE FINDINGS AND INTENT. The legislature finds that

(1) it is essential that registered nurses and licensed practical nurses providing direct patient care be available to meet the needs of patients;

(2) quality patient care is jeopardized by registered nurses and licensed practical nurses who work unnecessarily long hours in health care facilities;

(3) registered nurses and licensed practical nurses are leaving their profession because of workplace stresses, long work hours, and depreciation of their essential role in the delivery of quality and direct patient care;

(4) it is necessary to safeguard the efficiency, health, and general well-being of registered nurses and licensed practical nurses, and the health and general well-being of the persons receiving care from registered nurses and licensed practical nurses in health care facilities;

(5) it is necessary that registered nurses and licensed practical nurses be made aware of their rights, duties, and remedies concerning hours worked and patient safety; and

(6) health care facilities should provide adequate and safe nurse staffing without the need for or use of mandatory overtime.

* **Sec. 2.** AS 18.20 is amended by adding new sections to read:

Article 4. Overtime Limitations for Nurses.

Sec. 18.20.400. Limitations on nursing overtime. (a) Except as provided in (c) of this section, a nurse in a health care facility may not be required or coerced, directly or indirectly,

(1) to work beyond a predetermined and regularly scheduled shift that is agreed to by the nurse and the health care facility;

(2) to work beyond 80 hours in a 14-day period; or

(3) to accept an assignment of overtime if, in the judgment of the nurse, the overtime would jeopardize patient or employee safety.

(b) Except as provided by (c) of this section, after working a predetermined and regularly scheduled shift that is agreed to by the nurse and the health care facility as authorized by (a)(1) of this section, a nurse in a health care facility shall be allowed not less than 10 consecutive hours of off-duty time immediately following the end of that work.

(c) Subsection (a) of this section does not apply to

(1) a nurse who is employed by a health care facility providing services for a school, school district, or other educational institution, when the nurse is on duty for more than 14 consecutive hours during an occasional special event, such as a field trip, that is sponsored by the employer;

(2) a nurse voluntarily working overtime on an aircraft in use for medical transport, so long as the shift worked is allowable under regulations adopted by the Board of Nursing based on accreditation standards adopted by the Commission on Accreditation of Medical Transport Systems;

(3) a nurse on duty in overtime status because of an unforeseen emergency situation that could jeopardize patient safety; in this paragraph, "unforeseen emergency situation" means an unusual, unpredictable, or unforeseen situation caused by an act of terrorism, disease outbreak, natural disaster, major disaster as defined in 42 U.S.C. 5122, or disaster emergency under AS 26.23.020 or 26.23.140, but does not include a situation in which a health care facility has reasonable knowledge of increased patient volume or inadequate staffing because of some other cause, if that cause is foreseeable;

(4) a nurse fulfilling on-call time that is agreed on by the nurse and a health care facility before it is scheduled;

(5) a nurse voluntarily working overtime so long as the work is consistent with professional standards and safe patient care and does not exceed 14 consecutive hours;

(6) a nurse voluntarily working beyond 80 hours in a 14-day period so long as the nurse does not work more than 14 consecutive hours without a 10-hour break and the work is consistent with professional standards and safe patient care;

(7) the first hour on overtime status when the health care facility is obtaining another nurse to work in place of the nurse in overtime status.

Sec. 18.20.410. Health care facility complaint process for overtime work by nurses. A health care facility shall provide for an anonymous process by which a patient or a nurse may make a complaint about staffing levels and patient safety that relate to overtime work by nurses and to limitations on overtime work by nurses under AS 18.20.400.

Sec. 18.20.420. Enforcement, offenses, and penalties. (a) The commissioner shall administer AS 18.20.400 - 18.20.449 and adopt regulations for implementing and enforcing AS 18.20.400 - 18.20.449.

(b) A complaint alleging a violation of AS 18.20.400 - 18.20.449 must be filed with the commissioner within 30 days after the date of the alleged violation. The

commissioner shall provide a copy of the complaint to the health care facility named in the filing within three business days after receiving the complaint.

(c) If the commissioner finds that a health care facility has knowingly violated an overtime provision of AS 18.20.400 - 18.20.449, the following civil penalties shall apply:

(1) for a first violation of AS 18.20.400 - 18.20.449, the commissioner shall reprimand the health care facility;

(2) for a second violation of AS 18.20.400 - 18.20.449 within 12 months, the commissioner shall reprimand the health care facility and assess a penalty of $500;

(3) for a third violation of AS 18.20.400 - 18.20.449 within 12 months, the commissioner shall reprimand the health care facility and assess a penalty of not less than $2,500 but not more than $5,000;

(4) for each violation of AS 18.20.400 - 18.20.449 after a third violation of AS 18.20.400 - 18.20.449 within 12 months, the commissioner shall reprimand the health care facility and assess a penalty of not less than $5,000 but not more than $25,000.

(d) As an employer, a health care facility violates an overtime provision of AS 18.20.400 - 18.20.449 "knowingly" when the facility is either aware that its conduct is of a nature prohibited by the overtime provision or aware that the circumstances described in the overtime prohibition exist; however, when knowledge of the existence of a particular fact is required to establish that the violation was knowing, that knowledge exists when the facility is aware of a substantial probability of its existence, unless the facility reasonably believes it does not exist.

Sec. 18.20.430. Prohibition of retaliation. A health care facility may not discharge, discipline, threaten, discriminate against, penalize, or file a report with the Board of Nursing against a nurse for exercising rights under AS 18.20.400 - 18.20.449 or for the good faith reporting of an alleged violation of AS 18.20.400 - 18.20.449.

Sec. 18.20.440. Enforcement of prohibition against retaliation. The commissioner shall investigate every complaint alleging a violation of AS 18.20.430, and, within 90 days after the date of filing of the complaint, provide to the complainant, the Department of Law, and the health care facility named in the complaint a written determination as to whether the health care facility violated AS 18.20.430. If the commissioner finds a violation of AS 18.20.430, the commissioner shall request that the Department of Law represent the department and the complainant and obtain from the health care facility all appropriate relief, including rehiring or reinstatement of the complainant to the complainant's former position with back pay.

Sec. 18.20.445. Report requirements. A health care facility shall file with the division of labor standards and safety, Department of Labor and Workforce Development, a semiannual report. The report for the six-month period ending June 30 must be filed before the following August 1, and the report for the six-month period ending December 31 must be filed before the following February 1. The report must include, for each nurse employed by the health care facility or under contract with the health care facility, the number of overtime hours worked, the number of overtime hours that were mandatory, the number of overtime hours that were voluntary, the number of on-call hours, the number of on-call hours that were mandatory, and the number of on-call hours that were voluntary.

Sec. 18.20.449. Definitions. In AS 18.20.400 - 18.20.449,

(1) "commissioner" means the commissioner of labor and workforce development;

(2) "health care facility" means a private, municipal, state, or federal hospital; psychiatric hospital; independent diagnostic testing facility; residential psychiatric treatment center, as defined in AS 18.07.111; skilled nursing facility; kidney disease treatment center, including freestanding hemodialysis units; intermediate care facility; ambulatory surgical facility; Alaska Pioneers' Home or Alaska Veterans' Home administered by the Department of Health and Social Services under AS 47.55; correctional facility owned or administered by the state; juvenile detention facility, juvenile detention home, juvenile work camp, or treatment facility, as defined in AS 47.12.990; private, municipal, state, or federal facility employing one or more public health nurses; long-term care facility; or primary care outpatient facility;

(3) "nurse" means an individual licensed to practice registered nursing or practical nursing under AS 08.68 who provides nursing services through direct patient care or clinical services and includes a nurse manager when delivering in-hospital patient care;

(4) "on-call" means a status in which a nurse must be ready to report to the health care facility and may be called to work by the health care facility;

(5) "overtime" means the hours worked in excess of a predetermined and regularly scheduled shift that is agreed to by a nurse and a health care facility.

* **Sec. 3.** The uncodified law of the State of Alaska is amended by adding a new section to read:

APPLICABILITY. The first report required to be filed under AS 18.20.445, enacted in sec. 2 of this Act, shall be filed before February 1, 2010, for the period July 1, 2009, through December 31, 2009.

* **Sec. 4.** AS 18.20.445, enacted in sec. 2 of this Act, and sec. 3 of this Act take effect July 1, 2009.

* **Sec. 5.** Except as provided in sec. 4 of this Act, this Act takes effect January 1, 2010.

ALASKA NATIVE MEDICAL CENTER

Pat Jackson

FOR IMMEDIATE RELEASE

Brandy M. Dixon, 907.729.1967

Alaska's only Magnet Status Hospital Retains Distinction

Alaska Native Medical Center wins highest honor in nursing excellence – *Again!*

Anchorage, AK – Jan. 19, 2009 – For the second time, the Alaska Native Medical Center (ANMC) has earned the highest honor offered by the American Nurses Credentialing Center (ANCC). ANCC is the world's largest and most prestigious nurse credentialing organization.

ANMC first earned this distinction in 2003, and remains the first and only hospital in Alaska, and the first and only tribal hospital in the nation to receive Magnet Status. According to ANCC, fewer than 5 percent of hospitals nationwide achieve Magnet Status, and even fewer achieve re-designation.

"This award validates the outstanding care our employees provide to our patients every single day. We've set the standard in Alaska – now we're going to set the standard in the country," said Alaska Native Tribal Health Consortium Chief Executive Officer Don Kashevaroff.

"It's an honor to work with such a dedicated team of professionals whose expertise and pursuit of excellence is evident in everything they do," said ANMC Chief Nurse Executive Kathy Hillburn. "For all patients who come here and those already in our care, our Magnet designation assures them that ANMC's healthcare is of the highest quality in the nation."

The call announcing the designation came via a speaker phone surrounded by anxious staff members who work at ANMC. They burst into cheers upon hearing the good news from Gail Wolf, chairwoman of the Commission on Magnet Recognition.

In her phone call, Wolf said "in recognizing quality patient care, nursing excellence, and innovations in professional nursing practice, the Magnet Recognition Program gives consumers the ultimate benchmark to measure the quality of care that they can expect to receive."

When U.S. News & World Report publishes its annual showcase of America's Best Hospitals" status as a Nurse Magnet™ facility contributes to the total score for quality of inpatient care. Of the hospitals listed on the exclusive 2007 Honor Roll (July 23, 2007), seven of the top ten were Magnet hospitals. (For more information on Magnet status, visit ancc.org.)

# # #

The Alaska Native Tribal Health Consortium and Southcentral Foundation jointly own and manage ANMC under the terms of Public Law 105-83. These parent organizations have established a Joint Operating Board to ensure unified operation of health services provided by the Medical Center.

Mandatory Overtime Legislation: A positive approach to improved patient care for the State of Alaska

January 2008

Executive Summary

Robert Steinbrook, MD, begins his report in the New England Journal of Medicine about nurses this way: "Nursing is an embattled profession." (2002). Since the Institute of Medicine Report (IOM) in 1996 and this article in 2002, many states have taken positive steps to stop the hemorrhaging of seasoned, experienced professional registered nurses from the workforce and to add more, younger energetic people to the mix. The same can be said of other health professionals such as pharmacists, certain physician specialties, and health care professionals in general. How the states are accomplishing this is through positive legislative efforts evidencing a sincere desire for improved working conditions and health care environments.

In the nursing profession, states that have passed legislation in four main target areas are having the most success in retaining and drawing registered nurses to employment. The four legislative areas include but are not limited to: banning mandatory overtime, safe patient handling, staffing ratio systems, and increasing scholarship funds.

In this context, we will discuss the necessity of banning mandatory overtime and/or mandatory call as a first step in advancing the retention of professional registered nurses in the State of Alaska.

Background

The population in Alaska as well as the rest of the United States is aging. Registered nurses (RN's) are aging as well. In 2000, the average age of the RN was 45. Today that age is 46 and remains 95 percent female; in Alaska, the average age is 48 (2007 Alaska Senate Testimony by AaNA). At the same time, the IOM report concluded that "women are finding other choices". Dr. Steinbrook quoted Frank Sloan of Duke University and co-chair of the committee of the IOM that reported on nursing as saying, nursing "is a very stressful job with a very flat career path." Dr. Steinbrook continued by noting RN's are discontented for many reasons including inadequate levels of staffing for both nurses and support staff and excessive workloads. That discontent goes beyond the RN's according to the April 2002 report of the American Hospital Association's Commission on Workforce for Hospitals and Health Systems. That report notes, "Most health care professionals entered their profession to make a difference through personal interaction with people in need. Today many in direct patient care feel tired and burned out from a stressful, often understaffed environment, with little or no time to experience the one-on-one caring that should be the heart of hospital employment."

Linda H. Aiken of the University of Pennsylvania School of Nursing notes that, "There is a sense that nursing is becoming an impossible job, and that nurses have no control over things that are required to provide good patient care. Yet nurses are accountable for the health and welfare of their patients." Combine this feeling with an aging work force and the future looks bleak. In 2000, only 9 percent of RN's were less than 30 years of age, as

compared with 25 percent in 1980. According to Buerhaus et al in their 2000 JAMA article, by 2020 a shortage of more than 400,000 RN's is possible. The Bureau of Labor Statistics estimates that the United States will need an additional 1.1 million registered nurses by 2014.

Ann Converso, Vice-President of the UAN, when addressing the 6th International Conference on Occupational Stress and Health, March 2, 2006 noted: **"In one of the latest Institute of Medicine reports, they found that work shifts longer than twelve hours per day endanger patient safety due to fatigue, causing reduced attention span and capacity to catch errors. However, the same study found that 27 percent of full-time hospital and nursing home nurses reported working more than 13 consecutive hours one or more times per week. The IOM recommends that states prohibit nurses from working more than 12 hours in a 24 hour period or more than 60 hours per week."**

Through it all, the worst case scenario is a tired, over-extended health care professional administering care to a patient.

Statement of the Problem

In October of 2007, the Alaska Statewide Nurses Conference was held in Anchorage. Over 120 nurses attended over a three day period representing RN's from Kotzebue to Ketchikan. Every staff nurse in attendance agreed that mandatory overtime is a curtailment to the working environment. Over 50 nurses (a majority of the staff nurses present) indicated that not only have they been asked to work overtime in the past three months, many indicated they had to take mandatory call. Several nurses indicated that "not only does it mess with your family life; you really worry about patient safety when you're so exhausted." In the instance of mandatory call, the RN may or may not be called to work, but must curtail personal/family time above and beyond the normal work time just in case they're needed for work. In many cases, the callback occurs within a few hours of completing a regular-12 hour shift – resulting in working more than 14 hours within a 24-hour period. Most facilities do provide incentives for on-call pay and on-call return to work status, but it continues to remain a way to staff facilities across the state without hiring more RN's.

Upon further questioning of the staff nurses at the Statewide Conference, 100 percent indicated that mandatory overtime, if used and maintained in their workplace, would cause them to leave the profession early and/or look for employment elsewhere. Several nurses with spouses in other professions noted their spouses have time curtailments in their work areas for safety, especially pilots and truck drivers. "You'd think the same people who set those limits would worry if their grandmother was in the hospital being treated by someone who had been there for over 14 hours." one nurse said. At meetings held between AaNA members, staff, hospital managers and administrators during the fall and winter of 2007, no one could say overtime does not exist and no one could guarantee mandatory overtime or mandatory call didn't occur at times.

In her testimony to the House Ways and Means Committee in Washington, D.C., Mary Foley, President of the American Nurses Association, stated, "By far the riskiest result of understaffing is the abuse of mandatory overtime as a staffing tool" (2002). According to a study published by the American Association of Nurse Executives, 61 percent of respondent RN's said they had observed increases in overtime or double shifts during the past year (2002).

Solutions

Around the country, **California, Washington, Oregon, Missouri, Texas, Connecticut, Illinois, Maine, Minnesota, New Hampshire, New Jersey, and West Virginia have all passed legislation limiting nurses to 12 hour shifts with mandatory rest periods prior to another work time. Rhode Island's legislature just passed the same legislation on an override of a governor's veto.** New York and Pennsylvania are poised to pass the legislation this year. Congress has HR2122 and S1842 pending with the support of the United American Nurses and the American Nurses Association.

"In the long term, the future of the nursing profession is related to its ability to attract more young nurses, to support the careers of current nurses, and to create more jobs for nurses with higher wages, and greater responsibilities. Such efforts can be successful only if the positions students are training to fill are sufficiently attractive, as compared with the alternatives in other fields." (Steinbrook, 2002)

In Alaska we are on the cusp of a legislative effort to begin making a true commitment to the professional registered nurse. **The current version of Senate Bill 28 actually provides for an extended work period up to 14 hours to assist hospitals that routinely schedule nurses for 12-hour shifts. The legislation also provides for an exemption from this limitation to address legitimate, unforeseeable emergencies. The Alaska Nurses Association urges the passing of this legislation as an effort to retain nurses in the state, increase the incentives to new nurses, and most importantly assist with improved patient safety.**

ANA
AMERICAN NURSES ASSOCIATION

Mandatory Overtime

Position

ANA opposes the use of mandatory overtime as a staffing tool.

Background

Nurses report a dramatic increase in the use of mandatory overtime as a staffing tool and fear potential consequences for the safety and quality of care provided to their patients. Today, overtime (mandatory and voluntary) is the most common method facilities use to cover staffing insufficiencies. In fact, some employers have described mandatory overtime as a staffing model and have actually coined the term "mandation" to define the methodology. Many nurses contend employers insist they work an extra shift (or more) or face dismissal for insubordination and being reported to the state board of nursing for patient abandonment.

Federal regulations place limits on the amount of time that can be worked in other industries in which the work directly affects public safety (e.g., aviation and transportation). Those regulations also set requirements for defined periods of time that workers must rest or be off duty before returning to work. Health care is exempt from such overtime regulations.

A few United American Nurse bargaining units have been successful in negotiating limits on mandatory overtime. In fact, concerns about the effects of mandatory overtime were central concerns in recent strikes in Washington, D.C., Minnesota, and New York.

Rationale

The American Nurses Association (ANA) is concerned about the impact of mandatory overtime on the ability of our nation's acute care nurses to provide high-quality health care services. ANA believes that the elimination of mandatory overtime for the nation's nurses is a critical step in efforts to improve the quality of health care and reduce medical errors. Following are a few facts about the dangers of forced overtime:

- Nurses are, in general, an aging workforce. The average working nurse is slightly over 43 years of age.
- Increased reliance on mandatory overtime has occurred at the same time that patient acuity has increased, the use of sophisticated technology has increased, and the length of hospital stay has decreased.
- Research in 1977 by Dawson and Reid at the University of Australia showed that "work performance is more likely to be impaired by moderate fatigue than by alcohol consumption." Their research shows that workers staying awake for long periods pose significant safety risks.
- Sleep loss influences several aspects of performance, slowing thinking and reaction time, delaying responses, causing failure to respond when appropriate or false responses, and diminishing memory, among others.

FAX (907) 272-0292
www.aknurse.org

What will legislation regulating mandatory overtime really do?

The mandatory overtime legislation being suggested does not prohibit nurses from working overtime. It will discourage an employer from assigning mandatory overtime and will prohibit an employer from threatening or retaliating against a nurse who refuses overtime. It will support the nurse who believes patient care would be compromised if that nurse is forced to work overtime. We must be able to count on the professional nurses who are providing care to make the judgment call about whether or not they are safe to practice.

Basic Facts on Mandatory Overtime

In the United States there has been an overall increase in overtime hours for all American workers over the last two decades. Almost one third of the workforce regularly works more than 40-hours a week and one fifth work more than 50 hours. It has been no different in health care where working overtime is becoming an every day occurrence. "Time after Time: Mandatory Overtime in the US Economy" Briefing Paper. January 2002. 1

"Mandatory overtime hours" are those hours above an agreed upon, predetermined, regularly scheduled shift, that the employer makes compulsory (as opposed to voluntary) with the threat of job loss or reprisals such as discharge, discipline, demotion or assignment to unattractive tasks or work shifts or in some cases licensure removal, retaliatory reporting, and charges of "abandonment". RN schedules are often 12, 10 or 8 hour shifts and some nurses do not get overtime for staying additional time unless they have reached 40 hours in one week. For example, a RN could work their regular 8 hour shift, but then be mandated to work an additional 8 hours for a total of 16, but not qualify for overtime pay.

---

1 - 18 page report available at http://www.epinet.org/briefingpapers/120/bp120.pdf

A recent study, published in July 2004, shows a strong link between medical errors and the long work hours of nurses and it has called on congress to take action on the Safe Nursing and Patient Care Act (H.R. 745, S. 373), which would strictly limit the use of mandatory overtime for nurses. 5

Ann E Rogers, Wei-Ting Hwang, Linda D. Scott, Linda H. Aiken, and David F. Dinges did an important study called, "The Working Hours Of Hospital Staff Nurses And Patient Safety", which was published in the July/August issue of Health Affairs6

This study found that the risk of making an error was three times higher when nurses had to work shifts that were longer than 12 hours, when they worked significant overtime or when they worked more than 40 hours in a week. Working overtime increased the odds of making at least one error, regardless of how long the shift was originally scheduled. Fatigue related to working overtime was identified as the cause of approximately 12% of the absences reported by a random sample of Canadian staff nurses.

This reported outcome reinforced the findings of the 2003 Institute of Medicine Report, "Keeping Patients Safe: Transforming the Work Environment of Nurses" (7), which also said that nurses' long working hours pose a serious threat to patient safety.

...And Because We Are Losing Nurses

Mandatory overtime is one of the main reasons nurses leave nursing. Recent studies indicate that one in five nurses are considering leaving nursing. When polled on their reasons for leaving, mandatory overtime is always listed in the top ten reasons. In the face of a severe nursing shortage, we need to keep nurses at the bedside.

Surveys have shown that the exodus of registered nurses, therapists, technologists, technicians and service and maintenance workers is directly attributable to difficult working conditions, including inadequate staffing, mandatory overtime and insufficient compensation. This is not expected to improve over the next decade because as well as leaving the bedside, much fewer numbers of people are looking to nursing as a career.

Retaliation by Employers

Nurses do suffer retaliation from employers for refusing to accept overtime hours. There are reports from all over the country. According to a report, The Minnesota Nurses Association has documented complaints from nurses who were threatened by their employer. These nurses were told that if they would not work additional shifts, they would be reported to the State Board of Nursing for "patient abandonment". While the Board does not view the refusal to accept additional shifts because of fatigue as "patient abandonment", the fear of such a complaint often compels nurses to work against their better judgment. Another form of retaliation is more direct and involves simply firing or suspending the nurse who refuses overtime. In this situation, the nurse is forced to choose between their ethical obligation to the patient to provide quality care and their livelihood. This is a choice that nurses should not have to make.

What is this term ABANDONMENT?

According to the New Jersey Board of Nursing, the term "patient abandonment" should be differentiated from the term "employment abandonment," which becomes a matter of the employer-employee relationship and not that of the Board of Nursing. It should be noted that from a regulatory perspective, in order for patient abandonment to occur, the nurse must have first accepted the patient assignment and established a nurse-patient relationship, then severed that nurse-patient relationship without giving reasonable notice to the appropriate person (supervisor, employer) so that arrangements can be made for continuation of nursing care by others. Providing appropriate nursing personnel to care for patients is the responsibility of the employer. Failure of a nurse to work beyond his/her scheduled shift, refusal to accept an assignment, refusal to float to another unit, refusal to report to work, and resigning without notice are examples of employment issues and not considered by the New Jersey Board to constitute patient abandonment.

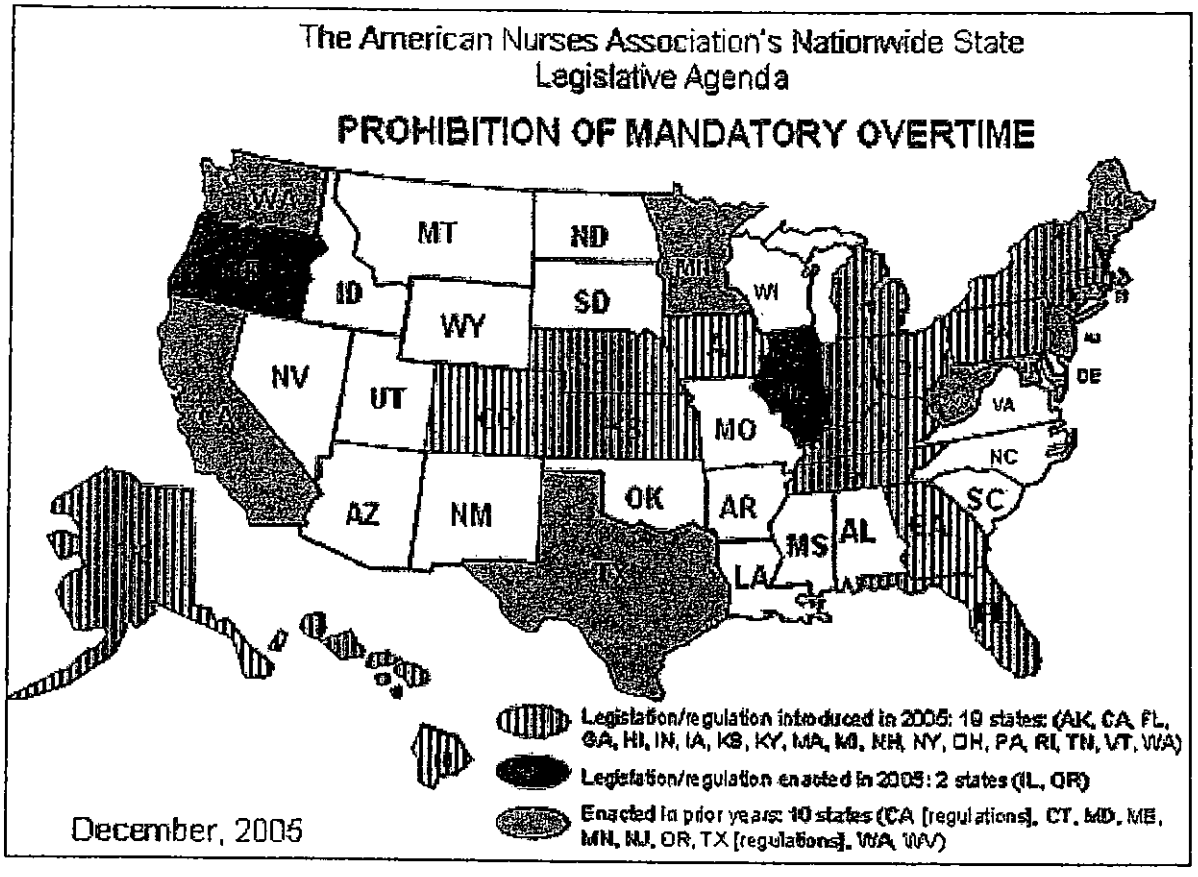
What are other states doing?

In 2003, three states, LA, NV and WV enacted legislation requiring the establishment of study committees to further explore the issue. 22 other states introduced prohibition of mandatory overtime legislation/regulation designed to set maximum hours of work per day/week with protected right of refusal for work time requested in excess of predetermined maximums.

Approximately 28+ states have completed or initiated steps toward legislation to restrict mandatory overtime for RNs, LPNs and, in some cases, all health care workers. In 2004, WV enacted legislation prohibiting a hospital from mandating a nurse to accept an assignment of overtime. CT enacted legislation that prohibits a hospital from requiring a nurse to work in excess of a predetermined scheduled work shift except in certain circumstances (emergency etc). Legislation was also introduced in FL, GA, HI, IA, IL, MA, MI, MO, NY, OH, PA, RI, TN, VT, and WA.

ANA State Government Relations

2005 Legislation: Mandatory Overtime (updated 12/05)



Background: Mandatory Overtime

Mandatory overtime is a difficult problem for RNs and health care facilities. Because of inadequate RN staffing, employers have used mandatory overtime to staff facilities often as a cost savings factor. Nurses are concerned about the health effects of long term overtime and the quality of care being provided. Research indicates that risks of making an error were significantly increased when work shifts were longer than 12 hours, when nurses worked overtime, or when they worked more than 40 hours per week[1].

As part of the American Nurses Association's (ANA) Nationwide State Legislative Agenda on the nurse staffing crisis, State Nurses Associations support the enactment of mandatory overtime legislation in state legislatures and regulatory agencies. ANA is also pursuing the enactment of federal legislation to prohibit mandatory overtime. The Safe Nursing and Patient Care Act of 2005 (HR

not to exceed 40 hours per week. **TX** regulations require hospitals to develop policy and procedures for mandatory overtime. **WA**'s new language states that acceptance of mandatory overtime by a nurse is strictly voluntary and refusal is not grounds for adverse actions against the nurse.

Legislation enacted in 2001 in **ME** would prevent a nurse from being disciplined for refusing to work more than 12 consecutive hours except in certain circumstances and must be given 10 consecutive hours off following overtime. **OR** enacted legislation prevents a nurse from being required to work more than 2 hours beyond a regularly scheduled shift or 16 hours in a 24 hour time period. Regulations adopted in **CA** prior to 2001 prevent an employee scheduled to work a 12 hour shift from working more than 12 hours in a 24 hour period except in a health care emergency.

Mandatory Overtime

A Statement from The American Association of Critical-Care Nurses (AACN)

BACKGROUND

Mandatory overtime is identified as a workplace issue and a patient safety issue. Mandatory overtime is the practice of hospitals and health care institutions to maintain adequate numbers of staff nurses through forced overtime, usually with a total of twelve to sixteen hours worked, with as little as one hour's notice. With mandatory overtime nurses are unable to refuse the required extra hours due to 1) fatigue, or 2) feeling that she/he would be unable to deliver adequate, safe patient care. This does not include overtime mandated in an unforeseen emergency, such as a mass casualty situation, or a sudden snowstorm. "On call" time is not included in this definition, unless the nurse's on call time is immediately before or after a scheduled shift, and it would force him or her to work a double shift.

THE ISSUE

The dramatic changes in the health care environment that have impacted nursing practice in recent years have come as managed care programs grew in dominance and federal Medicare and Medicaid reimbursements declined (Berens, M.J.). With the nursing shortage continuing, the growing trend is for hospitals to use mandatory overtime as a common staffing practice (ANA, June 2000).

Mandatory overtime may cause or lead to increased stress on the job, less patient comfort and mental and physical fatigue that can contribute to errors and "near-misses" with medications and case-related procedures. This is occurring as patient acuity has increased. The practice of mandatory overtime ignores the responsibilities nurses may have at home with children, other family members, or other obligations. Being forced into excessive overtime can cause an exhausted

a lower incidence of needlestick injuries among nurses was also noted. If mandatory overtime is allowed to continue, one could easily project:

1) Increase in medication errors,
2) Decrease in safe, quality patient care,
3) Decrease in patient satisfaction,
4) Increase in hospital length of stay,
5) Increase in mortality and morbidity,
6) Decrease in recruitment of new nurses,
7) Decrease in retention of nurses, and
8) Increase in legal liability issues against nurses.

LEGISLATIVE HISTORY

February 12, 2003 - Senator Edward M Kennedy re-introduced **S. 373, the Safe Nursing and Patient Care Act of 2003**, which amends title XVIII of the Social Security Act to provide for patient protection by limiting the number of mandatory overtime hours a nurse may be required to work in certain providers of services to which payments are made under the Medicare program. A companion bill, H.R. 745 was again re-introduced in the House by Representative Pete Stark. The bills are currently in committee.

November 14, 2001- Senator Edward M Kennedy, introduced **S. 1686 "The Safe Nursing and Patient Care Act of 2001"** which was referred to the Committee on Finance. The bill would amend title XVIII of the Social Security Act to provide for patient protection by limiting the number of mandatory overtime hours a nurse may be required to work in certain providers of services to which payments are made under the Medicare Program. and referred to the House Committee on Education and the Workforce and to the Subcommittee on Workforce Protections.

September 15, 2000- H.R. 5179 "The Registered Nurses and Patients Protection Act" was introduced into the U.S. House of Representatives by Rep.Tom Lantos (D-Calif.). The bill would amend the Fair Labor Standards Act so that no RN would be required to work beyond eight hours in any workday or 80 hours in any 14-day work period. This legislation was not acted on in the 106th Congress and Lantos reintroduced the bill **(H.R. 1289)** in the 107th Congress where it was referred to the House Committee on Education and the Workforce and to the Subcommittee on Workforce Protections.

AACN's POSITION

AACN believes that mandatory overtime is not an acceptable means of staffing a hospital, because it may place nurses and their patients at increased risk of being involved in medical errors. Instead, nurses should be able to decide whether working overtime will affect their ability to care safely and effectively for patients. They should have the option of refusing overtime assignments and not be forced into working beyond their capacity to provide optimal care. AACN supports this legislation and will continue to work to educate the public on the negative impact that mandatory overtime can have on patient safety.

RN to practice unsafe patient care, jeopardizing her nursing licensure status. Impact is felt at the level of the bedside nurse in three major areas identified through current literature: medication errors, quality patient care, and nurses' legal liability.

Medication Errors - The Institute of Medicine's report *To Err is Human: Building a Safer Health System* (IOM, 12/1999) states the deaths from medication errors that take place both in and out of hospitals, more than 7000 annually, exceed those from workplace injuries. In a separate report, investigation by the Chicago-Tribune states that since 1995, at least 1,720 hospital patients have died and 9,548 others have been injured because of mistakes made by RN's across the country (Associated Press, 9/10/2000).

Quality Patient Care - As the nurse-to-patient ratio worsens, and as patient acuity increases, hospital management is free to demand that nurses work mandatory sixteen-hour shifts, with one-hour notice (MNA, 4/3/2000). In a 1989 article published in the Journal of Occupational Health and Safety, the author stated, "Once a shift exceeds twelve consecutive hours, acute fatigue sets in. A worker may still be able to perform routine tasks, but his brain waves exhibit a pattern of stage one alpha sleep. Errors made in this stage are frequently major, since the worker tends to perform the opposite of the correct action."

Legal Liability - Nurses practice under each state's Nurse Practice Act, which govern nursing practice. Most nurse practice acts state that nurses are held accountable for the safety of their patients. Thus, if a nurse accepts a patient assignment and something untoward happens to that patient, the nurse is liable under her license. Once a nurse accepts an assignment, her license can be in jeopardy if she is unable to deliver safe patient care.

Implications of Change - If mandatory overtime is legally banned in all states, hospitals and health care institutions will have to look at real remedies for understaffed facilities such as:
1) Hiring more RN's, and
2) Utilizing strategies to recruit and retain more nurses.

ANA's recent study, *Nurse Staffing and Patient Outcomes in the Inpatient Hospital Setting* (3/2000), tracks five adverse outcomes measures that can be mitigated if adequate patient staffing is provided: hospital length of stay, nosocomial pneumonia, postoperative infections, pressure ulcers, and nosocomial urinary tract infections. With sufficient nurse staffing, time is available for more thorough patient assessment and interventions to improve outcomes.

The American Academy of Nursing (AAN) conducted research in the 80's, which has had several follow-up studies since, which reinforce the original findings of researcher Linda Aiken. Her research affirmed that specific organizational variables create a milieu that not only attracts nurses, but also create practice environments that provide better outcomes for patients. "Magnet facilities" have higher nurse-staffing levels, and lower mortality and morbidity rates, shorter length of stay, and lower utilization of ICU days. In the 1999 follow-up research,

WHAT YOU CAN DO

Work with the administrators in your facility to develop systems that support the delivery of quality care and a safe work environment.

Let your legislators know that this bill has strong support of nurses. Discuss with him or her:

Your concern that mandatory overtime is not an acceptable means of staffing a hospital because it can place nurses and their patients at increased risk for making errors.

The fact that studies have shown that when a worker (especially a health care worker) exceeds 12 hours of work, and is fatigued, the likelihood of their making an error increases. The IOM report on medication errors substantiates these findings, where the experts who compiled the report specifically recommended that safe staffing and limits on mandatory overtime are a component to preventing medication errors.

Explain RN accountability for the delivery of safe care and that nurses should not be forced into working beyond his or her capacity to provide optimal care without the right to refuse that assignment.

JAMA study: High RN workloads impact mortality

Nurse researchers add more evidence to growing body of work on nurse staffing

In a new study looking at nursing care, University of Pennsylvania (Penn) researchers have determined that patients who have common surgeries in hospitals with the worst nurse staffing levels have up to a 31 percent increased chance of dying. Further, more nurses at the bedside could save thousands of patients' lives every year, report researchers in the Oct. 23-30 issue of the Journal of the *American Medical Association (JAMA).*

The researchers found that every additional patient in a hospital nurse's average workload increased the risk of death in surgical patients by seven percent. Patients with life-threatening complications also were less likely to be rescued in hospitals where nurses' patient loads were heavier.

"Nurses reported greater job dissatisfaction and emotional exhaustion when they're responsible for more patients that they can safely care for," said Pennsylvania State Nurses Association member Linda Aiken, PhD, RN, FAAN, director of the Center for Heath Outcomes and Policy Research at Penn's School of Nursing. Aiken, along with colleagues, conducted the study. "Failure to retain nurses contributes to avoidable patient deaths."

ANA President Barbara Blakeney, MS, APRN,BC, ANP, said: "This new study is dramatic because it highlights the fact that people can die when nursing care is inadequate. It is an important contribution, but frankly, this is something that nurses have known for years. Nurses make the critical, cost-effective difference in providing safe, high quality patient care."

Specifically, the Penn nursing researchers found that:

* If all hospitals in the nation staffed at eight patients per nurse rather than four, the risk of hospital deaths would increase by 31 percent, roughly translating to as many as 20,000 avoidable deaths in the United States annually.

* Having too few nurses may actually cost more because of the high costs of replacing burned-out nurses and the higher cost of caring for patients with poor outcomes.

* Adding two patients to a nurse already caring for four increases the risk of death by 14 percent.

The report, "Hospital Nurse Staff and Patient Mortality, Nurse Burnout and Job Dissatisfaction," concluded that, "When taken together, the impacts of staffing on patient and nurse outcomes suggest that by investing in registered nurse staffing, hospitals may avert both preventable mortality and ... problems with low nurse retention in hospital practice."

The study, funded by the National Institute of Nursing Research of the National Institutes of Health, examined data collected from 168 hospitals, 232,342 surgical patients, and 10,184 nurses in Pennsylvania from 1998 to 1999. They examined data on relatively common, general, orthopedic surgeries and vascular surgeries, excluding cardiac operations such as coronary bypass.

JAMA Article Links Hospital Staffing and Patient Mortality, Nurse Burnout and Job Dissatisfaction

ANA's Blakeney calls on hospitals to utilize Principles for Nurse Staffing to address problem

Washington, DC -- A study published today in the Journal of the American Medical Association (JAMA) found that Registered Nurse (RN) staffing levels have a significant effect on preventable hospital deaths among surgical patients. According to researchers, the odds of patient mortality rose 7 percent for every additional patient added to the average nurses's workload. The difference between four to six and four to eight patients-per-nurse was accompanied by a 14 percent and 31 percent increase in mortality respectively. The study from the University of Pennsylvania affirms the critical role RNs play in patient safety when able to make direct assessments and life-saving interventions.

"This new study is dramatic because it highlights the fact that people can die when nursing care is inadequate," said Barbara A. Blakeney, MS, APRN,BC, ANP, president of the American Nurses Association (ANA). "It is an important contribution, but, frankly, this is something that nurses have known for years," she said. "Nurses make the critical, cost-effective difference in providing safe, high-quality patient care," she added. Blakeney pointed to ANA's own report, Nurse Staffing and Patient Outcomes in the Inpatient Hospital Setting," which was released in May 2000. The study looked at hospital and Medicare data in nine states in five categories of adverse outcomes: length of hospital stay, hospital-acquired pneumonia, postoperative infection, bed sores and hospital-acquired urinary tract infections. All five measures were markedly lower with higher levels of RN involvement in patient care. Two other studies published this year, one in the New England Journal of Medicine and one by the Joint Commission on the Accreditation of Healthcare Organizations (JCAHO), also found direct links between nurse staffing levels and better patient outcomes.

Today's JAMA article also reported that patient load had a direct impact on nurse retention rates. Adding one patient-per-nurse to a hospital's staffing level increased nurse burnout by 23 percent and job dissatisfaction by 15 percent. The data indicate that more than 40 percent of nurses who reported high burnout and job dissatisfaction intended to leave their job within the next year.

"Inappropriate staffing is the number one concern of nurses today," Blakeney said. "Nurses already face great stress and challenges on the job. They must care for greater numbers of patients than ever before and patients in hospitals are more acutely ill than in the past. Adequate nurse staffing is critical to the delivery of quality patient care because it allows nurses time for appropriate assessment of patients and their needs and initiation of suitable interventions."

Blakeney emphasized that nurses are dissatisfied because of a lack of control over their work environment which prevents them from delivering high-quality nursing care. In addition to the

right number and mix of direct care staff for hands-on care, other resources are necessary to support RNs' ability to deliver the best possible care. ANA has developed and strongly encourages the use of its Principles for Nurse Staffing, which include: nurse control over the practice environment; effective and efficient support services; readily available and current patient information; sufficient orientation and mentoring for new staff and new nursing graduates; education in the use of new technology; and sufficient time for collaboration, planning, coordination and delivery of care that meets both patient and family needs. Research has shown that hospitals which incorporate much of the philosophy embedded in the Principles for Nurse Staffing into their organizational culture and practice have higher rates of satisfaction and retention among nursing staff, and better outcomes for patients.

ANA is advocating for a comprehensive set of strategies to address the nurse staffing crisis, including state and federal legislation that would limit mandatory overtime, provide whistle-blower protections for nurses, mandate collection of workforce and nursing-sensitive quality data, establish patient staffing systems and provide funding for nursing education.

In addition, hospitals that utilize nursing "best practices" can apply for designation as "Magnet" facilities a recognition made by the American Nurses Credentialing Center, a subsidiary of ANA. Hospitals that have achieved "Magnet"status have higher retention rates for nurses and improved patient outcomes.

Many of the issues touched on in the JAMA study have been addressed in Nursing's Agenda for the Future (www.NursingWorld.org/naf). The plan, which was released in April, is the result of an in-depth strategic planning process that involved leaders from more than 60 national nursing organizations. It reflects the brain trust of nursing and includes strategies to address basic issues, such as recruitment, as well as more complex issues, such as the economic value of nursing.

The authors of the new JAMA study said that improving nurse staffing may not only save patient lives and decrease nurse turnover but also reduce hospital costs, if recently published estimates of the costs of replacing a hospital medical and surgical general unit and a specialty nurse ($42,000 to $64,000) are correct.

"Hospital Nurse Staffing and Patient Mortality, Nurse Burnout, and Job Dissatisfaction," by Linda H. Aiken, et. al, appears in the October 23/30, 2002 issue of JAMA. The study, funded by the National Institute of Nursing Research of the National Institutes of Health, looked at 232,342 patients between the ages of 20 and 85 who underwent general surgical, orthopaedic, or vascular procedures in 168 Pennsylvania hospitals from April 1, 1998, to Nov. 30, 1999.

###

ANA is the only full-service professional organization representing the nation's 2.7 million Registered Nurses through its 54 constituent associations. ANA advances the nursing profession by fostering high standards of nursing practice, promoting the economic and general welfare of nurses in the workplace, projecting a positive and realistic view of nursing, and by lobbying the Congress and regulatory agencies on health care issues affecting nurses and the public.

Nurse-Staffing Levels and the Quality of Care in Hospitals

Jack Needleman, Ph.D., Peter Buerhaus, Ph.D., R.N., Soeren Mattke, M.D., M.P.H., Maureen Stewart, B.A., and Katya Zelevinsky

ABSTRACT

Background It is uncertain whether lower levels of staffing by nurses at hospitals are associated with an increased risk that patients will have complications or die.

Methods We used administrative data from 1997 for 799 hospitals in 11 states (covering 5,075,969 discharges of medical patients and 1,104,659 discharges of surgical patients) to examine the relation between the amount of care provided by nurses at the hospital and patients' outcomes. We conducted regression analyses in which we controlled for patients' risk of adverse outcomes, differences in the nursing care needed for each hospital's patients, and other variables.

Results The mean number of hours of nursing care per patient-day was 11.4, of which 7.8 hours were provided by registered nurses, 1.2 hours by licensed practical nurses, and 2.4 hours by nurses' aides. Among medical patients, a higher proportion of hours of care per day provided by registered nurses and a greater absolute number of hours of care per day provided by registered nurses were associated with a shorter length of stay ($P=0.01$ and $P<0.001$, respectively) and lower rates of both urinary tract infections ($P<0.001$ and $P=0.003$, respectively) and upper gastrointestinal bleeding ($P=0.03$ and $P=0.007$, respectively). A higher proportion of hours of care provided by registered nurses was also associated with lower rates of pneumonia ($P=0.001$), shock or cardiac arrest ($P=0.007$), and "failure to rescue," which was defined as death from pneumonia, shock or cardiac arrest, upper gastrointestinal bleeding, sepsis, or deep venous thrombosis ($P=0.05$). Among surgical patients, a higher proportion of care provided by registered nurses was associated with lower rates of urinary tract infections ($P=0.04$), and a greater number of hours of care per day provided by registered nurses was associated with lower rates of "failure to rescue" ($P=0.008$). We found no associations between increased levels of staffing by registered nurses and the rate of in-hospital death or between increased staffing by licensed practical nurses or nurses' aides and the rate of adverse outcomes.

Conclusions A higher proportion of hours of nursing care provided by registered nurses and a greater number of hours of care by registered nurses per day are associated with better care for hospitalized patients.

Nurses' Solutions to the Nurse Staffing Shortage
UAN National Sample Survey of Staff RNs

Key Findings and Talking Points for CMAs

The United American Nurses has conducted a national poll exclusively of hospital staff RNs on the front lines of direct patient care to spotlight their experience and expertise about the critical staffing shortage and how to solve it.

Lake Snell Perry and Associates, a leading national political and public policy research firm, designed and administered this survey which was conducted by phone using professional interviewers in November 2002. The survey reached 600 licensed hospital staff nurses who provide direct patient care.

1. **Problems in today's hospitals**

The nursing shortage is the top problem in hospitals today. Eight of ten nurses feel there is a serious shortage in their hospital.

When asked about the two biggest problems facing them, nurses identify the staffing shortage and inadequate wages as top concerns.

Other problems include:
Workload issues
Nurse to patient ratios
Stress and fatigue
Lack of respect and recognition
Long hours
Support from the administration
Quality of patient care
Turnover rate and retaining nurses

Time for patient care has decreased, according two-thirds of those surveyed (67%), and nearly four in ten nurses (38%) say less than half their day is spent on direct patient care. 31% say administrative reports and documentation take more than half their day.

2. **Why nurses leave the profession.**

Work-related stress, patient load, and inadequate pay are the top three reasons nurses leave the profession.
Three out of ten nurses say it's unlikely they will be a hospital staff nurse in five years.
The majority of nurses surveyed feel their hospital is doing only a fair to poor job attracting and retaining nurses.

3. **Solutions to the Nursing Shortage**

The best solutions are:
Increased pay (82%),
Reduced nurse patient ratios (85%)

Collectively, staff nurses have a lot of experience. Over a third (35%) have worked as a staff nurse for more than 20 years and 65% have more than 10 years experience. Only 12% have 5 years or less experience. The other side of that coin is that the lower percentages of less experienced nurses reflects fewer people entering the nursing profession now and foreshadows future shortages.

An overwhelming number (86%) say they would be confident having someone close to them receive care at the hospital in which they work. The fact that one of every ten (13%) said they would not is a strong reminder that patients need to choose hospitals carefully.

When asked about how good a place to work their hospital is, just over half (52%) said it was too good a place to work to leave. However, four out of ten (41%) said their hospital isn't a great place to work, but they probably would not leave and 5% said it was so bad a place to work that they definitely intend to leave.

Historic Pact Creates Largest RN Union Ever in U.S.

Powerful New Association of 150,000 RNs Joins to Organize All RNs, Promote Healthcare Justice

United American Nurses, California Nurses Assn/NNOC, and Massachusetts Nurses Assn Reach Landmark Accord

In a dramatic move to unite the power and influence of America's leading direct care RN organizations, the United American Nurses, California Nurses Association/National Nurses Organizing Committee, and the Massachusetts Nurses Association today announced they are joining together to form a new, 150,000-member association.

The new organization will be called the United American Nurses-National Nurses Organizing Committee, UAN-NNOC (AFL-CIO), the three said in a joint statement issued today.

"Under the principle that RNs should be represented by an RN union," the statement declared, "we resolve to create a new union of staff nurse-led organizations named UAN-NNOC" to:

1. "Build an RN movement in order to defend and advance the interests of direct care nurses across the country;
2. "Organize all non-union direct care RNs (a substantial majority of the budget shall be dedicated to new organizing);
3. "Provide a powerful national voice for RN rights, safe RN practice, including RN-to-patient staffing ratios under the principle that safe staffing saves lives, and health care justice;
4. "Provide a vehicle for solidarity with sister nurse and allied organizations around the world;
5. "Create a national Taft-Hartley pension for union RNs."

Central to the new organization is a guiding principle that all RNs "should be represented by an RN union," the joint statement declared.

Press Releases & Statements

UAN gives a voice to the issues that are important to staff nurses. Here's what UAN staff nurses are saying to the media, Congress and the public:

Return to 2006 Releases

FOR IMMEDIATE RELEASE: March 2nd 2006

UAN VP Converso's remarks to the Sixth International Conference on Stress and Health

THE OCCUPATIONAL SAFETY AND HEALTH IMPACTS OF INADEQUATE STAFFING AND MANDATORY OVERTIME ON REGISTERED NURSE

Ann Converso, RN, Vice President
United American Nurses, AFL-CIO

The Sixth International Conference on Occupational Stress and Health
March 2, 2006

Long hours of work, mandatory overtime, and inadequate staffing cause extreme stress to nurses, impacting their physical and mental health. They also ultimately affect the quality of patient care. Like many other industrialized nations, the United States is experiencing a severe shortage of nurses that will intensify as the baby boom

generation ages, with shortages currently in at least 30 states according to the Health Resources and Services Administration. The Bureau of Labor Statistics estimates that the United States will need an additional 1.1 million registered nurses by 2014.

At the same time, health care costs continue to rise. Managed care compels hospitals to discharge patients more rapidly, resulting in higher patient acuity levels. Hospitals attempt to control labor costs by reducing the number of registered nurses they employ. But cutting the number of nurses at the bedside is counterproductive as overworked nurses get injured or burned out and leave the professionóexacerbating the shortage of nurses.

A 2003 study by Aiken with Clarke, Sloane, Sochalski, and Silber found that higher emotional exhaustion and greater job dissatisfaction were strongly associated with higher nurse-to-patient ratios. Each additional patient per nurse correlated to a 23 percent increased risk of burnout, as well as a 15 percent increase in the risk of job dissatisfaction. Among the nurses surveyed in this study, 43 percent reporting job burnout and dissatisfaction stated that they intended to leave their current position within the year. When the United American Nurses surveyed hospital nurses in 2002 about staffing and job satisfaction issues, a third said they were likely to leave the profession within five years due to frustration about inadequate staffing and mandatory overtime.

How bad is the situation? Unfortunately, we do not have systematic national data on nurse-to-patient ratios and the hours worked by nurses. We are looking forward to a NIOSH study on the combined influence of shift work and overtime on nursesí health and safety.

In the interim, some studies on patient safety have shed light on nurse-to-patient ratios and hours of work. Patient safety has gotten a lot of attention since the Institute of Medicine announced in 1999 that approximately 98,000 people in the United States die annually due to hospital errors. In 2003, the IOM surveyed the literature on factors in the nursing profession and the impact on patient safety. They concluded that there is ample evidence that leaner nurse staffing and long work shifts are associated with errors and adverse reactions, such as post-operative infections, pneumonia, urinary tract infections, and increased length of hospital stay.

The IOM found that while the average registered nurse-to-patient ratio in medical-surgical units is one-to-six, 23

percent of hospitals reported that day shift registered nurses in medical-surgical units were responsible for seven to twelve patients. Night shift nurse-to-patient ratios are likely to be even poorer. In contrast to those staffing ratios, Aikenís study found that for each additional patient over four in a nurseís workload, the risk of death increased by seven percent for surgical patients.

The Institute of Medicine also found that work shifts longer than twelve hours per day endanger patient safety due to fatigue, causing reduced attention span and capacity to catch errors. However, the same study found that 27 percent of full-time hospital and nursing home nurses reported working more than 13 consecutive hours one or more times per week. The IOM recommends that states prohibit nurses from working more than 12 hours in a 24-hour period or more than 60 hours per week.

However, available data suggest that hospital staff nurses are working longer hours, with fewer breaks, with little time for recovery between shifts. A 2004 study by Rogers with Hwang, Scott, Aiken, and Dinges on the impact of long working hours on patient safety reveals excessively long work shifts among hospital nurses. In this study, 393 Registered nurses were asked to log their actual work times over a four-week period, providing 5,317 work shifts over 28 consecutive days to analyze.

- On average, the nurses in the study worked 55 minutes beyond their scheduled shift, of 8.5 or 12.5 hours. (An extra 30 minutes for the handover period at the end of shifts is already built into the schedule.)

- Nurses reported leaving work at the end of the scheduled shift less than 20 percent of the time during the study.

- Although 31 percent of the shifts were scheduled for 12.5 or more hours, the percentage of shifts that the nurses actually worked 12.5 or more hours was 39 percent.

- Fourteen percent of the respondents reported working 16 or more consecutive hours at least once during the four-week period. The longest shift recorded was 23 hours, 40 minutes.

- Almost two-thirds of the nurses worked overtime ten or more times during the period, and a third reported working overtime each day during the 28-day period.

- Not surprisingly, the risk of making an error increased with longer work hours and was three times higher when nurses worked 12.5 or more hours. Working overtime increased the odds of making at least one error, regardless of how long the shift was originally scheduled.

In addition to the pressure that registered nurses face to work overtime, many are required to be on call, especially those in specialized units. There is also anecdotal evidence that 24-hour shifts are becoming more common, particularly in emergency departments and on units where nurses self-schedule.

Beyond long work shifts and mandatory overtime, nurses face other scheduling issues that cause fatigue and stress as a result of being shift workers in a 24-hour-a-day industry. Nurses working night shifts struggle against their circadian rhythm, our biological tendency to sleep at night and be active during the day. The circadian rhythm makes it difficult to get enough restorative rest during the day and often requires night shift workers to miss out on activities with family and friends. Bureau of Labor Statistics injury data indicate that the risk of injury for all workers is substantially higher during the night shift than during the day or evening shifts. Risk of injury is nearly three times greater very early in the morning than at mid-afternoon, the low and high points of the circadian cycle.

Nurses have an even harder time if they work rotating schedules which prevent them from getting adequate rest between shifts. They are not just tired from not having enough sleep between shiftsótheir bodies have not had enough time to recuperate from the previous shift.

So what happens to these nurses who work such long hours and difficult schedules? We know that long hours of work, night shifts, or rotating shifts increase nursesí risk of musculoskeletal injuries by reducing the recovery time between shifts that nurses need to allow their backs to rest and heal. Nurses develop musculoskeletal injuries through the cumulative effect of repetitive actions, lifting

transferring patients, moving heavy, awkward equipment, and stretching to work in poorly designed spaces. The Bureau of Labor Statistics, which ranks occupations sustaining the most musculoskeletal injuries, ranked registered nursing eighth among all jobs in 2003. Fifty-two percent of registered nurses have chronic back pain and 38 percent have pain severe enough to require leave from work. Research by Lipscomb, Trinkoff, Geiger-Brown, and Brady in 2002 found that:

- Registered nurses working twelve or more hours per shift were at increased risk for musculoskeletal disorders compared to those working eight-hour shifts.

- Registered nurses working twelve or more hours per day and 40 or more hours per week doubled their odds of getting a back, neck, or shoulder injury.

- Registered nurses working nights or weekends also significantly increased their risk of musculoskeletal injuries, due in part to lower staffing levels on those shifts.

- Registered nurses working rotating shifts had twice the number of reported accidents as those working day or night shifts only.

- Another study by Gold found that nurses working rotating shifts had twice the number of reported accidents or errors related to sleepiness than nurses who worked only a day or an evening shift.

Of course, nurses face a number of occupational hazards beside musculoskeletal disorders. In one study by Macias, the number of needlestick injuries and incidents of biological fluid exposure increased in the last two hours of twelve-hour shifts, but no increase in these incidents was found in the last two hours of eight-hour shifts.

Other research indicates that as health care workersí work hours increase, car crashes and occupational accidents increase. Ninety-six percent of Intensive Care Unit nurses reported car crashes or near misses while driving home

after a night shift in a study by Novak and Auvil-Novak in 1996.

We know less about the cardiovascular impacts or psychological stress caused by inadequate staffing and long working hours among nurses, although there has been research indicating that shifts longer than eight hours increase the incidence of smoking. Overtime has been associated with unhealthy weight gain among nurses. Overtime, shifts over eight hours, and night shifts and rotating shifts longer than eight hours have been associated with higher alcohol consumption among nurses.

However, we do knowóbecause nurses have been voting with their feet, whether through strikes or by leaving hospital employment or the professionóthat the environment they work in is stressful. In a 1999 study by the Minnesota Nurses Association, an affiliate of United American Nurses, registered nurses expressed escalating frustration and concern about their ability to provide safe care to patients under short staffing situations. They reported a decrease in organizational support and peer support.

What is the solution? Hospitals are not going to solve this problem on their ownóotherwise, it would already be fixed. Nurses who are on the frontlines must be part of the solution and have a voice in decision-making. UAN nurses have negotiated a variety of remedies through contract language, such as:

- a prohibition on mandatory overtime,
- specific nurse-to-patient ratios,
- the authority to close a department to new admissions when staffing ratios are too high to be safe for patients,
- and the power to determine staffing levels based on patient acuity rather than just the number of patients.

However, contract language is not enoughówe need a legislative solution for all nurses, not just those who have

[redacted]n representation, and the state [redacted]islatures are beginning to address the issues.

Ten states have passed laws prohibiting the use of mandatory overtime for registered nurses and 14 other states have introduced legislation or are considering legislation on mandatory overtime. Illinoisí law ensures that a nurse will work no longer than four hours beyond the scheduled shift and requires an eight-hour rest period between shifts. Oregonís law prohibits hospitals from mandating nurses to work beyond 48 hours in a week or more than 12 consecutive hours in a 24-hour period.

Legislation requiring hospitals to develop and implement nurse staffing plans and include input from nurses has been passed in five states. Going beyond staffing plans, California enacted a nurse-to-patient ratio law in 1999, requiring one nurse for every six patients in medical-surgical units when it which went into effect in 2001. The law also provided that the ratio would be strengthened to one nurse for every five medical-surgical patients in 2005.

The United American Nurses supports two federal bills which would prohibit mandatory overtime and create minimum staffing ratios. The Safe Nursing and Patient Care Act of 2005, introduced by Senator Edward Kennedy, Democrat of Massachusetts and Representative Pete Stark, Democrat of California, would set strict limits on mandatory overtime for nurses. Nurses could not be forced to work beyond their scheduled shift, except in the event of a state of emergency declared by a local, state, or federal government. The bill also provides nurses with whistleblower protections.

UAN also supports the Nurse Staffing Standards for Patient Safety and Quality Care Act of 2005, sponsored by Representative Janice Schakowsky, which would establish federal minimum staffing nurse-to-patient ratios in all hospitals that receive federal funding, except during a declared emergency. This bill gives registered nurses and other health care workers a real voice in providing quality, safe health care. The bill also provides real penalties to hospitals that fail to comply and nurse whistleblower protections.

There are some people who say that staffing ratios wonít workóthat hospitals canít hire nurses who donít existóand that employing more registered nurses will increase health care costs even faster. But preliminary evidence from California and the state of Victoria in Australia, where ratios have been implemented, show that nurses who left

the profession will return, students will apply for nursing school, and nurses who are stressed will stay.

And a 2006 study by Needleman with Buerhaus, Stewart, Zelevinsky, and Mattke indicates that there is a business case for staffing ratios. They found that increasing the use of RNs to care for patients reduced costs by reducing patient complications and deaths and reducing patientsí time spent in the hospital.

Nursing, unlike other professions that impact public safety such as pilots and air traffic controllers, has been operating for generations without rules preventing them from working under unsafe conditionsóworking understaffed and fatigued. That needs to changeóconditions have only been getting worse due to the huge changes in health care and will worsen even more with the shortage of nurses. Nurses have been pushed too faróand we will no longer tolerate working understaffed and exhaustedóit is unsafe for our patients and it is unsafe for us.

Legislative Issue Brief

Safe Nursing and Patient Care Act of 2005 (H.R. 791/S. 351) -- Legislation to Strictly Limit Mandatory Overtime

ISSUES: Strictly limiting mandatory overtime for nurses is a critical step in improving the quality of health care and reducing medical errors. In its 1999 report "To Err is Human", the Institute of Medicine (IoM) estimated that as many as 98,000 hospitalized Americans die each year as a result of errors in their care. In a recent IoM study (2003) of nurses' role in patient safety, the report concluded that "evidence revealed that typical work environment of nurses is characterized by many serious threats to patient safety." The IoM report identifies long hours for nurses as one of the critical problems – "the long hours of some nurses represents on of the most serious threats."

Unlike many other major industries where public safety is a concern, health care is exempt from regulations which limit the use of overtime as a staffing tool. Mandatory overtime puts patients and nurses at risk for medical errors, as well driving registered nurses out of patient care. The effects of mandatory overtime were central issues in major RN strikes in Washington, D.C., Minnesota, Ohio, New York and Hawaii.

The UAN supports and is working on legislation that would eliminate mandatory overtime for registered nurses except in true emergencies.

STATUS: Senator Edward Kennedy (D-MA) and Representative Pete Stark (D-CA) have introduced the **"Safe Nursing and Patient Care Act of 2005" (H.R. 791/S. 351)** in the House and Senate. This legislation would:

- Set strict, new federal limits on the ability of health facilities to require mandatory overtime from nurses. Nurses would use their own professional judgment in deciding to volunteer for overtime But, forced mandatory overtime would only be allowed when an official state of emergency was declared by federal, state or local government;

- Provide HHS with the authority to investigate complaints from nurses about violations. It also grants HHS the power to issue civil monetary penalties of up to $10,000 for violations of the act and to increase those fines for patterns of violations;
- Require facilities to post notices explaining these new rights and to post nurse schedules in prominent workplace locations. Nurses would also receive anti-discrimination protections against employers who continue to force work hours for nurses beyond what a nurse believes is safe for quality care;
- Require the Agency on Healthcare Research and Quality to report back to Congress with recommendations for developing overall standards to protect patient safety in nursing care.

ACTION NEEDED: For those members of Congress who have not cosponsored H.R. 791/S. 351 as of yet, the UAN strongly urges them to do so. If members have already cosponsored this legislation, the UAN urges them to work for the final passage of H.R. 791/S. 351.

POLICY RATIONALE:

- A 2001 report by the General Accounting Office, Nursing Workforce: Emerging Nurse Shortages Due to Multiple Factors, concluded: [T]he current high levels of job dissatisfaction among nurses may also play a crucial role in determining the extent of current and future nurse shortages. Efforts undertaken to improve the workplace environment were reduce the likelihood of nurses leaving the field and encourage more young people to enter the nursing profession.....

- Current projections are that the nurse workforce in 2020 will have fallen 20 percent below the level necessary to meet demand.

- There currently exist government standards that limit the hours that pilots, flight attendants, truck drivers, railroad engineers and other professions can safely work before consumer safety is endangered. However, no similar limitation currently exists for our nation's nurses who are caring for patients.

I

109TH CONGRESS
1ST SESSION

H. R. 791

To amend title XVIII of the Social Security Act to provide for patient protection by limiting the number of mandatory overtime hours a nurse may be required to work in certain providers of services to which payments are made under the Medicare Program.

IN THE HOUSE OF REPRESENTATIVES

FEBRUARY 14, 2005

Mr. STARK (for himself and Mr. LATOURETTE) introduced the following bill; which was referred to the Committee on Energy and Commerce, and in addition to the Committee on Ways and Means, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned

---

A BILL

To amend title XVIII of the Social Security Act to provide for patient protection by limiting the number of mandatory overtime hours a nurse may be required to work in certain providers of services to which payments are made under the Medicare Program.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "Safe Nursing and Patient Care Act of 2005".

(5) The dangers with mandatory overtime are made clear by numerous studies. A November 2003 Institute of Medicine report, Keeping Patients Safe: Transforming the Work Environment of Nurses, concluded that limiting the number of hours worked per day and consecutive days of work by nursing staff, as is done in other safety-sensitive industries, is a fundamental safety precaution. The report went on to specifically recommend that working more than 12 hours in any 24-hour period and more than 60 hours in any 7-day period be prevented except in case of an emergency, such as a natural disaster.

(6) Another study published in the July/August 2004 Health Affairs Journal, The Working Hours of Hospital Staff Nurses and Patient Safety, found that nurses who worked shifts of twelve and a half hours or more were three times more likely to commit an error than nurses who worked standard shifts of eight and a half hours or less. The study also found that working overtime increased the odds of making at least one error, regardless of how long the shift was originally scheduled.

(7) That same study also illustrates how nurses are being forced to work more and more overtime. The majority of nurses surveyed reported working

Comments on SB 12 & HB 50: "An act relating to limitations on mandatory overtime for registered nurses and licensed practical nurses in health care facilities." Patient Safety Act

To Whom It May Concern:

Thank you for listening to my comments. As a physician, specializing in endocrinology, I am distressed at the physical alterations that can occur in an aging nursing workforce while their hours and demands steadily rise. It is no secret that the population of America is aging. In Alaska the average age of a professional registered nurse is close to 49 years old.

According to John Howard, MD, former director of the National Institute for Occupational Safety and Health, "the average number of hours worked annually by workers in the United States has increased steadily over the past several decades and currently surpasses that of Japan and most of Western Europe." (2004) Dr. Howard continues noting, "the influence of overtime and extended work shifts on worker health and safety, as well as on worker errors, is gaining increased attention from the scientific community, labor representatives, and industry...the volume of legislative activity seen nationwide indicates a heightened level of societal concern and timeliness of the issue." Many states have passed safe patient legislation with its foundation based on research correlating much higher error rates with overtime. The Institute of Medicine identifies long hours for nurses as one of the critical problems in safety studies, and has been advocating for safeguards.

Nurses are critical thinking professionals employed to assess, treat, and evaluate patients, and need a non-mandated work environment to function well. Patients should not be subjected to those who are fatigued, stressed, and forced to work overtime. We all depend on the nurse to be alert and aware.

I encourage the Alaska Legislature to be judicious and rational in its thinking. Regardless of the workforce challenges for institutions, we have no alternative but to follow a strategy of safety for patients and communities. Please limit the overtime and extended hours worked by nurses in the State of Alaska.

I thank you for this opportunity,

Patrick M Nolan, DO, FACE

February 12, 2009

Re: HB50/SB12

Dear Honorable Legislators

I would like to see mandatory overtime/on call addressed. I was in the hospital from 0645 till 0045 last night then had to return at o645 today. I am on call again this pm 1900 to 0700 tomorrow.

I still have to come to work tomorrow and if I get called in tonight how mentally alert will I be?

Thanks,

JoAnne Zemlicka

To my Legislature regarding patient safety:

February 10, 2009

Ladies and Gentleman,

As a current Registered Nurse in Alaska of 31 years, I must say that patient safety is very important to me as a professional. I would not ever practice as a Nurse if patient safety was an issue for me. Making a Nurse work mandatory overtime puts not only the Nurse at risk of injury, it also puts her patients at risk as well. For 29 years I worked in an Intensive Care Unit full time 12 hour shifts leaving home at 6pm and getting home most mornings at 8:30am if my patients did not go bad on me in the last hour of work, otherwise it might be more like 10am.

Nurses work extremely hard with life and death situations and would not hesitate to help when needed. To make it mandatory for a Nurse to work overtime is not only wrong, it is dangerous.

I feel that Nursing is such a hard job, that it is truly a calling from God himself to accomplish this professional practice every single day.

Sincerely,

Helen Christine Wood, RN, B.S.N.

RE: HB 50/SB12

Dear Legislators:

I am writing this letter is support of HB 50/SB 12, acts relating to limitations on mandatory overtime for RNs and LPNs. Having been a nurse for over 25 years I can attest to how physically and mentally draining it is to work a shift as a nurse. A nurse caring for adults lifts over 1.2 tons in an 8 hour shift. The patients are feeling poorly and can become critically ill at any point, medications must be given in correct amounts to avoid toxic effects, families are anxious and often a little short, and there are many other healthcare providers with whom care must be coordinated. Because the consequences of errors can be so serious, this is not the type of work environment where nurse fatigue should be allowed to happen.

Over 30% of the nursing workforce is over the age of 50 years, and many of these nurses plan to retire in the next five years. In Alaska we have worked hard to train new nurses. We do not want to drive these nurses out of the Alaskan workforce because they are being forced to work excessive hours. Remember, Oregon , Washington and California have banned mandatory overtime for nurses making them a very attractive destination for Alaska nurses. Everyone I have talked to has been amazed that there would be any opposition to limiting the hours a nurse can work to 14.

Thank you for considering my views. Hopefully this will be the year that we work to create a work environment in which RNs and LPNs can provide quality patient care without concern of being worked to exhaustion.

Sincerely,

Patricia Senner MS, RN, ANP

February 16, 2009

Re: SB12/HB50

Dear Legislators,

I am currently a nurse educator, but have 25+ years of clinical nursing experience, as well as having recently been a consumer of health care for close family members. I am also a Certified Professional in Healthcare Quality (CPHQ), and in that role in a hospital reviewed medical records and worked to drill down adverse patient outcomes. It has been my personal experience as a bedside nurse in hospital and long term care positions that mandated overtime to cover staffing shortfalls, that the quality of care delivered was adversely impacted.

Exhausted people make poor drug calculations, poor assessments, and are less apt to walk around and check in on their patients frequently. It puts patient care in jeopardy and it also puts nurses at risk for bad practice and subsequent litigation. It is also a major reason why some nurses quit practicing in direct care positions -- and we need those nurses with high standards and clear boundaries taking care of us and our families through critical illnesses.

I ask you to support legislation that would ban mandatory overtime for nurses. Instead, support nursing education opportunities and we will continue to bring bright and motivated caregivers into the healthcare field.

Thank you for your consideration.

February 16, 2009

Dear Representative Wilson:

Thank you for introducing HB 50, Limit Overtime for Nurses. Nurses perform tasks that require accuracy, quick thinking and sound judgment; each of which is diminished after long consecutive hours of work in stressful environments. Both as a patient myself and as a caretaker for my father and then my mother as they had extended stays in hospital settings, I have seen overworked nurses make mistakes. Fortunately, for us, they were not life-threatening, but it is easy to imagine how they might have been.

Although some nurses may want to work overtime in these tough economic times and hospitals may believe the practice saves money, neither reason should take precedence over patient safety. Nurses need to be alert and ready to handle emergency situations as they arise. We should do everything we can to help ensure the dedicated people who choose to work in the nursing profession can do their jobs safely and well. HB 50 is a good first step.

Sincerely,

Lauree Morton

Letter of Support
HB 50, Limit Overtime for Nurses

The Alaska Women's Lobby, a statewide group working to defend and advance the rights and needs of women, children and families, supports HB 50. Limiting overtime for nurses is a patient safety issue. When you are in their care you want someone available to you that is well rested and nourished, can think quickly on their feet, and can interact with patients in a friendly professional manner. You do not want someone responsible for your care that has been working for ten or twelve or more hours straight without a break to be the one in charge of the decisions that can mean the difference between your living or dying. Regardless of how hospitals or nurses posit this bill, patient safety should be paramount to any other concern.

Several studies have found patient safety is at risk when nurses work more than 12 hours in a 24 hour period. The 2004 study, Working Hours of Hospital Staff Nurses and Patient Safety, found that nurses working more than 12.5 consecutive hours were three times more likely to make an error than nurses working shorter hours. Working overtime at the end of a shift also increased the risk of making an error. Possible errors, which also applied to nurses who worked unplanned overtime at the end of a scheduled shift, included giving patients incorrect medications or dosages, according to the study.

According to a 2007 study sponsored by the US Agency for Healthcare Research and Quality (AHRQ), components of working conditions, including a hospital's organizational climate, staffing, and overtime, were found to influence outcomes in the elderly patients in hospital intensive care units (ICUs). Other recent AHRQ-funded studies on nurses' working conditions and patient outcomes have found a significantly greater risk to patient safety when nurses worked beyond their regularly scheduled number of hours.

The Institute of Medicine in its 2003 report, Keeping Patients Safe: Transforming the Work Environment of Nurses recommended that nurses provide direct patient care for no more than 12 hours in any given 24-hour period and less than 60 hours in a 7-day period. AHRQ called for the report in recognition of the key role of nurses in patient safety.

Alaska should do everything possible to ensure patient safety. Limiting overtime for nurses is a solid first step. Support passage of HB 50 this session. Take seriously the charge to keep Alaskans safe as they try and get their health care needs met.

2/11/09

Re: HB50/SB12

To the Honorable Senators and Representatives of the Alaska Legislature,

Please join with your counterparts in 12 other states that have passed legislation to prohibit mandatory overtime for nurses. Join our congressional delegation of Senator Murkowski and Congressman Young who co-sponsored the Safe Nursing and Patient Care Act of 2007 which prohibits mandatory overtime except in cases of states of emergency.

Most people would not choose to fly in a plane with a pilot forced to work beyond what they felt was their safety limit in competence for work hours. In fact, it is illegal. How then has it taken so long to pass this legislation that will contribute to patient safety? This is not a matter of employer rights in staffing. If a nurse tells the employer she or he has worked too many hours and is not safe to practice; why on earth would you not believe him/her? Would you risk your life or a loved one's on the nurse's word or their employers?

The rules for pilots solved this long ago. Similar restrictions in on-call and work hours are even now being addressed for medical residents due to safety reasons in an attempt to reduce medical errors. Alaska will not be the first state to address this problem with legislation but I certainly hope it will not be the last.

Although I no longer work in a hospital myself, I have been a patient in one and may be again. Speaking both as a nurse and a consumer, I urge you to support passage of HB 50 and SB 12.
Sincerely,

Lynn Hartz MSN, FNP-BC

fax 907-222-1498

Re: HB50/SB12

2/11/09

Dear Legislators,

As a registered nurse (RN), I heartily support these two pieces of legislation. Patient safety will be jeopardized if health care facilities are given free reign to impose mandatory overtime.

Patient safety is Job 1 for nurses, to borrow a phrase from different industry. An RN who is required to work overtime beyond a twelve-hour day or even an eight-hour day is physically, mentally, and emotionally fatigued. Thus, her judgment is potentially compromised, her physical strength weakened, and her emotional capacity diminished.

In my institution, on my unit, I care for extremely sick individuals, with co-morbidities that include dementia, confusion, obesity (majority of patients), and often lower extremity amputation.

My unit is already suffering from budget issues that have resulted in less nurse's aide assistance. Hence I am responsible for safely assisting any combination of obese patients with altered mental status who are missing at least one leg to the toilet, with little or no staff assistance. At the end of a twelve-hour day, I am ready to go home. I have reached my daily limit of sharp, focused thought for decision-making, and accurate charting.

I may or may not have had a chance to take a quick break for a snack. Sometimes I am so busy caring for patients I forget to use the ladies room. Our institution's break and meal policy is catch as catch can. So, if mandatory overtime was added, I am not sure I would even get to eat dinner before my next "shift" started.

Mandatory overtime? That's too much to ask. It is not humane, IT IS NOT SAFE FOR THE PATIENT OR THE NURSE. An increase in back injuries in nurses, medication errors, and patient falls are examples of the consequences of mandatory overtime.

I care for renal patients who often have a minimum of a dozen or more scheduled medications in addition to "PRN" or as needed medications. These medications usually include insulin, blood pressure medications, and heparin or coumadin---all high risk medications. At the end of a twelve hour day, I can tell you that I become fatigued, and would be prone to making mistakes.

The health care industry is seriously compromising the public trust with mandatory overtime. The health care industry is exchanging the health and safety of their patients/clients for monetary gain.

Mandatory overtime results in nurses who themselves become patients due to fatigue, stress, and physical deterioration of their feet and legs.

The health care industry, in requiring mandatory overtime, falls in with a crowd that practices human exploitation.

Sincerely, Theresa E. Philbrick, RN

To The Legislative Committee:

It is easy to see that the sacrifices a nurse makes to help the individuals in our communities is a significant one.

We do not take our responsibility lightly nor should we. Privileged to care for the injured and ill, for our neighbors and friends, sharing their moments of triumph and helping them cope with devastating losses.

I want to tell you that a nursing practice ratio makes a patient safer. In that bed that will be you, me, our child or our loved one. By focusing on each person we care for, we are able to see signs of problems early, catch them, alert the doctors and fix them. If we are exhausted from no breaks or seeing to many patients we can, like all good people, fail.

In practice for 20 years I have seen hundreds of these cases. I can tell you that patients in California are safer due to support to nurses for adequate breaks and established rules.

These laws most likely cost more but please believe me, if that was your child or your mom, you would sacrifice your life savings and more to secure their well being. I would too. No amount of tears can solve an error caused by lack of adequate and safe staffing. I have sat with people as those tears flow like mountain streams with family and clinicians devastated by the simple lack of prudence in health care planning.

I urge you, the noble men and women to adequately consider what effects are created by adequate staffing or the lack thereof.

Very truly yours:

Gary C. Goins MS, BSN, RN.

RE: House Bill 50 Senate Bill 12

Dear Legislator,

My name is Debbie Thompson, I am a Registered Nurse certified in the Operating Room and Peri-Operative nursing and I am the Executive Director of the Alaska Nurses Association. In this role I act as a spokesperson for not only the public safety at large but just as importantly for the nurses of Alaska.

I would like to express my support in both House Bill 50 and Senate Bill 12. As a long time operating room nurse I can tell you that these bills address a serious public safety issue within the health care industry. Each citizen in the state of Alaska deserves to have a well rested nurse taking care of them. The government has stepped in made requirements for the airplane pilots, truck drivers and train conductors and engineers. Why would anyone put the lives of their loved ones or themselves at risk for potentially fatal medical errors.

Thank you for consideration to this matter.

Debbie Thompson, BSN, RN, CNOR

Re: Support for HB50/SB12

Dear State Legislators,

I am a registered nurse of over 14years now. I am in total favor of supporting HB50 and SB12. It is absolutely imperative that registered nurses and licensed practical nurses be able to provide safe patient care, this is why we became nurses, to care for patients. Patient care will without a doubt, be in jeopardy when nurses are forced against their better judgment to work excessive hours in health care facilities. Any overtime should be done out of personal choice and professional judgment. With mandatory overtime, we are placing the patients, whom have entrusted us to take care of them at one of the most vulnerable times in their life in danger.

Nurses are compassionate, caring individuals. It takes a special person to become a nurse, and then stay one for any length of time. Many nurses do not make it through the first year. That is not due to the fact that they suddenly do not care anymore. It is due to increased workload demands, workplace stresses, long working hours, and a complete lack of respect in general by administrative personnel who run hospitals.

Can you imagine what it is like to have to walk out of one patients room who is dying of cancer and may be at the end of their life and then be able to go on to the next patient with a smile on our face and deal with a whole new set of circumstances. We are not only caring for that patient we are caring for their family members as well. This routine gets played out several times just in one shift.

Nurses are burning out at a high rate and there is not going to be another nurse just around the corner to replace them. By the year 2020 there will be a nursing shortage of estimated 500,000 nurses. We cannot continue to look the other way. We must make a positive step, not only to make nursing a honored profession to the newcomer, but also retain the experienced knowledgeable nurses we have.

A nurse's bottom line is patient care and safety. Please help support HB50 & SB12, the very life it may save may be your own.

Thank you,

Janet Hilleary RN

Re: Support for HB 50 & SB 12

Dear Legislators,

I know how important this bill is for the future of nursing experience. I do 12 hour nights and I know there's no way in the world I'd want to be responsible for patients beyond my shift time. I'm sure our malpractice insurance won't cover that kind of stupidity!

Thanks.

Ginny Weisman

Re: HB50/SB12

Dear Honorable Legislators,

My name is Barbara Quaid and I have been a registered nurse since 1970. Currently I am employed as a recovery room nurse at a local Anchorage hospital. Because I work in an O.R. setting we must take call. Recently I worked for 21 hrs, and that wasn't the first time. If it is your call night and things run late, or emergency cases are added, we must stay.

It is definitely a safety issue. A nurse at hour 3 of her shift is not the same nurse at hour 16, etc. With hospitals running at full capacity, be it due to a shortage of floor RNs or available beds, we must at times manage patients all night and all day in the recovery room. More times than not these are ICU/CCU patients.

We definitely need legislature governing the amount of hours a nurse is allowed to work, because it is not being safely managed the way it runs now. I testified via teleconference this past summer regarding this issue, and would be most willing to testify again. I hope this will be of assistance in your endeavor to keep nursing at a safe level.

Sincerely,

Barbara M. Quaid, R.N. CPAN.

February 13, 2009

Re: HB50/SB12

Dear Honorable Legislators,

My name is Ginger Spohr and I am an Emergency Room nurse. This is my first time getting involved in the legislative process and I am doing so because HB 50 and SB 12 are important bills for both myself and my co-workers. I strongly want to encourage support for both of these bills.

Right now there is a great opportunity for those in the House and Senate to help us continue the hard work that we do every day and help insure that we do so in a safe way.

My husband recently retired after working 20 years on the slope. He went back to school and earned a degree in nursing. After his first week of work, he told me, "I've never worked so hard in my entire life." Nursing is hard work at any age but with more and more people retiring and entering the field as a "second" profession, we must insure a safe and welcoming environment for them.

In closing, I would also like to ask anyone considering blocking these bills to imagine being a patient of a nurse who has just been told he/she must stay and work late. Imagine your boss telling you that you had to miss a birthday party of child or friend and that it would cost you your job if you didn't stay and work.

Please help keep nursing a respected profession. Most of the nurses I know are proud of what they do, please help us continue take pride in the work we do and help to ensure we are rested and willing to work.

Please support HB 50 and SB 12.

Sincerely,

Ginger Spohr, RN.

February 19, 2009

Re: SB12/HB50

I am a registered nurse at providence hospital. I want to tell you how important it is for nurses to be well rested & alert when caring for sick people. We make critical decisions, often at a moment's notice, that affect the lives of our patients. The giving of medications also is a critical event, considering the risk of making a mistake. Patients depend on us to make the right decisions for them. They have to trust us to do the job safely. That is dangerously hard to do when you are over tired & needing sleep.

Most of us work twelve hour shifts. The thought that employers can insist that we continue to work beyond that is scary. Likewise, working more than 3 days in a row, I feel, puts us at risk to make mistakes. When human lives are at stake, this could be a critical mistake. Only the individual knows how they feel, how tired, how sleepy, etc. nurses need to have the option to say no to mandatory overtime, to agree to that only if they feel fresh enough.

I'm hoping that we can get HB50SB12 passed this session.

Thank you for your help.

Sincerely,

Connie Lynch RN

2/19/09

Re: HB50/SB12

Dear Legislators,

Please support HB50 and SB 12. I believe RN's will provide overtime when we can. For our 36 week, we do what we can, as the population gets sicker. Management is getting more illogical.

Scott Young, RN

258-1861

2/14/09

Re: HB50/SB12

Dear State Legislator,

I am against mandatory overtime in any form. When we are subjected to mandatory overtime it leads too more mistakes in medication administration because we are tired. At one of my jobs; I work a 12 hour shift at a local hospital and find that the longer I am required to stay to finish required paperwork or patient care the more I have problems focusing on the task at hand and thus the more potential for a mistake. At another job that I work 8 hours; if I am mandated to work an extra shift The more I feel unsafe as I work in a psychaitric facility where patient safety and staff safety are imperative. Being tired I have problems with determining when patient's are feeling unsafe or threatened and thus there is more potential for violent and threatening outcomes.

Again I am very against manditory overtime. I just hope with the nursing shortage coming it is not made worse by mandating overtime in unsafe jobs as it will lead to more nurses rethinking this line of career choice thus increasing the nursing shortage.

Thank you for allowing me to air my opinions,

Barbara Popken RN

February 14, 2009

Re: HB50/SB12

Dear Legislatures,

I am an active member of the AaNA organization. I send this message in support of HB 50 and SB 12. Upon review of the last years (2008) activity around these two Bills, I stand behind all of the nurses in support of the passing of these two Bills.

As a nurse, I am in support of protecting the nursing professional at the bedside (and elsewhere as it applies) in being able to conduct a full day's work without the intimidation of mandatory overtime on their shoulders.

Thank you for all the work you do.

Sincerely,

Shirley LaForge, RN, MSN

2/11/09

Re: HB50 and SB12

Dear Honorable Senators and Representatives,

I am not in favor of mandatory overtime for nurses. Any overtime should be the nurse's choice. In addition I am not in favor of a nurse working more than 14 hours in a row. That allows for a 12 hour shift and any follow-up charting, etc. I know too many nurses who cannot recall how they even got home after working too long. Also, though 15 minute breaks are great, what concerns me is someone who doesn't even have time for lunch.

Thank you,

Mary Ann Wilson, RNC

2/12/09

Re: HB50/SB12

Dear Honorable Senators and Representatives,

I support the passage of HB 50 and SB 12. Please work on my behalf as well as my colleagues and patients to see that these bills are passed. Mandatory overtime for nurses has the potential for creating a more severe shortage of nurses in areas already in desperate need of licensed staff. Mandatory overtime and inflexible scheduling has the potential for deterring students from selecting nursing as a career option.

Please seek options that enhance the appeal of nursing as a career option, increase the nurse's ability to provide safe and effective care at the bedside, and decrease the attrition of nursing staff related to excessive work hours and work load. Please vote yes on HB50/SB12.

Thank you,

Janice McGraw, MS, RN, CNRN

February 10, 2009

Re: HB50/SB12

Dear Legislators,

As a Registered Nurse in the State of Alaska, I find it critically important that we have a say in our work scheduling and who dictates our professional practice. As a Registered Nurse, I make it my prime responsibility to be the advocate of patients. Because of this and the importance of our profession, I am supportive of House Bill 50 and Senate Bill 12.

Sincerely,

Joshua Meals, RN, BSN.

2/11/09

Re: HB5/SB 12

To the Honorable Senators and Representatives:

This is a letter of support for HB 50 and SB 12. As a working nurse in the Operating Room at Providence Hospital, I feel it is important for me to share my support for legislation that ends the practice of mandatory overtime for nurses in Alaska. Such practices are unfair to nurses, and unfair to the patients who deserve top-notch care from nurses who are properly rested and satisfied in their work environment. Currently, I am obligated to be available for over 24 hours of mandatory overtime each month.

Sincerely,

Paul Bryner

2/11/09

Re: HB50/SB12

Dear Honorable Legislators,

I am asking for your support on House Bill 50 & Senate Bill 12. I have been a registered nurse for 16 years and have been personally affected by both mandatory overtime and insufficient rest between shifts. We have tried to address these safety concerns with our employer; however, there is no incentive for hospital administrations to change current practice. It becomes financial, and the bottom line is it is cheaper to work a nurse extended hours than it is to provide safe working conditions. I have worked in other states with this type of legislature and it does have a positive impact. Therefore, I ask for your support from a state level. If the employer won't self regulate, then someone needs to for the sake of quality patient care and safe working conditions for the nurses. .

Thanks you for your time.

Wendy Conradi, RN, CNOR

2/11/09

Subject: Support for HB 50 and SB12

I urge house and senate members to support HB 50 and SB 12 to protect the rights of our patients and the welfare of our nurses.

Patricia Peacock, RN, BSN, CURN, CHPN.

RE: HB50/SB12

2/11/09

Dear Legislator,

As an RN of 30+ years, I am writing to support HB 50 and SB 12. I recently returned to bedside nursing after working outside of the hospital for the past 14 years. I find it astounding that the legislature wants to continue to require mandatory overtime for nurses.

After working 3, 12 hr. shifts in one week, I find I need a day to recovery and then have 3 days "off" to enjoy things other than my job, which allow me to have the energy to return to the bedside for 3 more days the next week. While I have worked overtime in the past year, it was done by choice. If overtime is to be required, it will decrease morale in nursing staff, thereby compromising patient care. Perhaps a meat packing plant or other assembly line type job sees the benefits of mandatory overtime. When one is caring for the human spirit and body, it is definitely not in the best interests of the patient to be cared for by a nurse who is working mandatory overtime.

Thank you for your work on our behalf.

Sincerely Yours,
Jeanne Kemp RN, BSN

February 10, 2009

Dear Honorable Senators and Representatives:

I have been a Registered Nurse for the past 30 years. Twenty-nine of those have been spent in the Intensive Care Unit in various hospitals across the US. I have been contributing to the care of Alaskans for the past 15 years. I have shared in some very intense and uncertain times for many families. I know that nurses do not let patients or their families know when staffing is short, or when we are exhausted or hungry. We really try to make people feel secure when they are in our care.

The Institute of Medicine (IOM) report has identified how long hours and fatigue contributes to errors in healthcare. These errors can cost lives, or increase length of stay in the hospital which in turn adds to the already ballooning cost of healthcare.

I urge you to support HB 50 & SB 12. When patient are at their most vulnerable, is not the time they or their families should be concerned at the number of hours the nurse caring for them has worked. Long hours, fewer resources and higher patient acuity drive nurses from staying at the bedside in today's hospitals. Nurses will only last so long, when they go home after 12.5 hours concerned about what they might have missed because they are so exhausted and hungry. The University of Alaska is doing a great job educating tomorrow's nurses. I encourage you to do what you can by passing this legislation that will help to keep the nurses of the future working in hospitals.

Thank you,
Donna Phillips, RN
Girdwood, AK

Date: 2/11/09

Re: HB50/SB12

Dear Legislators,

I have just been informed of the ASHNA's position regarding legislation to block any regulations regarding employer rights to address such issues as nurse and patient safety. It seems to me that this is not in the best interest of any of the parties that participate in direct patient care, much less the person who is being cared for. I seriously doubt that the public knows anything regarding this and would that be known, there would be an abundance of objections from both parties. The only persons who this would benefit would be the people managing the books of these employers and their board of directors. That is, unless it was their family or themselves who was receiving this care. This issue has been going on for too long and as one of those people who work long shifts for the sickest of these patients, it would be akin to whipping a horse who has plowed the fields too long in the day. It just can't be done without consequences. These consequences would have implications for public health and in the long run risk increasing hospital days for the patients who got marginal care from the employees forced to do this work. It is also comparable to asking for volunteers, then picking them anyway, should no one raise their hand. It is one thing for someone to use their judgement in working overtime, but another to cut costs and recruiting people to do this extra work, such as travelors who have no intention to stay in this area. The answer to the higher paid travelers would be make the lower paid employees do this work. It is also like bringing in employees from out of the country, give them lower wages, and make them do a job, whatever that job is. Thankfully, we have the union here to prevent such nonsence, but then the ASHNA position is just as ridiculous. The term "Magnet Hospital" has been tossed around as a buzz word for quite some time now, and it is laughable that forcing employees to do something that not only would affect their life outside of work, but to risk their license as well, would somehow make a difference in obtaining that status. It is words on paper and a status that looks good but really means nothing if employees are not happy. Please know that even though you may not have hundreds of comments regarding this, that it is due to not many people knowing the position of this board. I have been in critical care for close to 30 years and have seen my job get harder, despite the experience I have. This risks everything that health care has to offer, despite breakthroughs in disease prevention and treatment.

Sincerely Yours,

Debbie O'Brien, RN, CCRN
Anchorage, Alaska

Position Statements

Assuring Patient Safety: The Employers' Role in Promoting Healthy Nursing Work Hours for Registered Nurses in All Roles and Settings

Effective Date:	December 8, 2006
Status:	New Position Statement
Originated by:	Congress on Nursing Practice and Economics
Adopted by:	ANA Board of Directors

Purpose: This position statement articulates the American Nurses Association's position with regard to patient[1] safety and encourages employers of registered nurses[2] to establish policies and procedures that promote healthy nursing work hours and patterns that do not extend beyond the limits of safety for both nurses and patients.

ANA Position: Given the well-documented relationship between nurse fatigue and an increased risk of nurse error with the potential for compromising patient care and safety, it is the position of the American Nurses Association that all employers of registered nurses should ensure sufficient system resources to provide the individual registered nurse in all roles and settings with:

1. a work schedule that provides for adequate rest and recuperation between scheduled work; and
2. sufficient compensation and appropriate staffing systems that foster a safe and healthful environment in which the registered nurse does not feel compelled to seek supplemental income through overtime, extra shifts, and other practices that contribute to worker fatigue.

It is intended that this position statement be used in conjunction with ANA's position statement on the responsibility of the individual registered nurse to make decisions consistent with her or his ethical obligation to decline work assignments when fatigue may compromise her or his ability to deliver safe patient care, "*Assuring Patient Safety: Registered Nurses' Responsibility in All Roles and Settings to Guard Against Fatigue" (in press).*

---

[1] ANA, in its *Nursing's Social Policy Statement,* "recognized the importance of clearly identifying the recipients of professional nursing care, be they individuals, groups, families, communities, or populations." The *Social Policy Statement* notes that "[t]o date, professional nursing has not yet selected ... the term best depicting the healthy or ill recipients of professional nursing care." Therefore the term "patient" was selected to be used "throughout the text to provide consistency and brevity"... and readers are asked "to keep in mind that the breadth of nursing practice always includes the various recipients of care," be they the individual, the group, the family, the community, or the population. *Nursing's Social Policy Statement (2nd edition),* 2003, American Nurses Association, p. v & 22.

[2] While ANA's membership is limited to registered nurses, it is ANA's belief that employers of health care personnel have a similar obligation to these employees to establish policies and procedures regarding employee fatigue and patient safety.

3117

History/Previous Position Statements: In 2000, the American Nurses Association (ANA) House of Delegates adopted an action "Opposing the Use of Mandatory Overtime as a Staffing Solution" (CNPE-2). Embedded in this and other statements on related issues, ANA has consistently reiterated its position that registered nurses have a responsibility to reject any work assignment that puts patients or themselves in jeopardy (1995 ANA Position Statement, *"The Right to Accept or Reject an Assignment"*). Further, ANA's consistent position has been that such a principled rejection does not constitute "patient abandonment;" on the contrary, it is the only ethical option for the fatigued nurse.

Then, in 2004, the House of Delegates adopted a resolution entitled "Transforming the Work Environment for Nurses," based largely on the recommendations set out in the exhaustive Institute of Medicine (IOM) report of the same year, *Keeping Patients Safe: Transforming the Work Environment of Nurses.* The report described the central role of registered nurses in protecting patient safety and achieving better patient outcomes; and it discussed the frequent mismanagement of the nurse's work environment that often threatens these integral contributions. Among those issues highlighted in the report, the IOM focused on institutional support and structures for maintaining nurse staffing at levels sufficient to avoid patient safety issues cause by nurse fatigue.

The ANA 2005 House of Delegates overwhelmingly passed a resolution regarding the "Implications of Fatigue on Patient and Nurse Safety." That resolution built on the above described significant work that ANA has pursued for several years linking patient safety with a host of workplace environmental and staffing factors that affect the number of hours registered nurses work. It acknowledged the impact of nurse fatigue on patient safety, quality of care and nurse safety and urged individual nurses, nurse managers, nurse administrators, employers of nurses, trustees and other stakeholders to fulfill their legal and ethical obligations to assure that registered nurses' work hours and patterns do not extend beyond the limits of safety for both nurses and patients.

Supportive Material: The 2004 IOM report, *Keeping Patients Safe: Transforming the Work Environment of Nurses,* recognized that creating a healthy work environment for registered nurses that is most conducive to patient safety will require fundamental change within a health care organization.

Strong evidence links prolonged work hours (more than 12 hours in a 24-hour span, or more than 60 hours in 7 days), rotating shifts and insufficient breaks to:

- slowed reaction time,
- lapses of attention to detail,
- errors of omission,
- compromised problem solving,
- reduced motivation, and
- decreased energy for successful completion of required tasks (IOM, 2004, p.12).

Further, Rogers, Hwang, Scott, Aiken, and Dinges (2004) found that the likelihood of making an error was three times higher when nurses worked shifts lasting 12.5 hours or more, and that

nurses, indeed, worked longer than scheduled on a daily basis, and generally worked more than 40 hours a week. Research examining consecutive hours worked by medical interns and residents also found that after extended work shifts there was an increased risk for both patient errors while at work and motor vehicle crashes leaving work (Landrigan, et al., 2004; Barger, et al., 2005).

Recent research with 2,273 RNs by Trinkoff, Geiger-Brown, Brady, Lipscomb and Muntaner (2006) documented that more than half of the hospital nurses in their study typically worked 12 hours or more per day and more than 50 hours per week. Further, nurses were likely to work many days consecutively, without sufficient rest between shifts and during scheduled time off.

Excessive total hours worked puts nurses and patients at risk; in addition, *rotating* shifts can also threaten patient safety. Research by Circadian Technologies Incorporated has found that the number of accidents for all shift workers is 1.2 times greater than that for traditional workers and the resulting incremental cost to business is $8.5 billion (BNA, 2003).

Given this risk, the individual nurse's ethical responsibility to consider her or his level of fatigue when deciding whether to accept a patient assignment is addressed in the ANA's complementary position statement, "*Registered Nurses' Responsibility in All Roles and Settings to Guard Against Working When Fatigued.*" In the present statement, *"Assuring Patient Safety: The Employers' Role in Promoting Healthy Nursing Work Hours for Registered Nurses in All Roles and Settings,"* ANA urges employers of registered nurses to acknowledge their responsibility to assure a safe workforce, and to initiate fundamental change in their staffing and salary policies so as to create incentives for a rested and safe nursing workforce.

At the institutional or organizational level, the risk that fatigue poses to both nurse and patient safety mandates that nurse managers and administrators actively promote changes in the work environment of nurses. Provision Six of *the Code of Ethics for Nurses with Interpretive Statements* clarifies:

> *The nurse participates in establishing, maintaining, and improving health care environments and conditions of employment conducive to the provision of quality health care and consistent with the values of the profession through individual and collective action* (p. 20).

Interpretive Statement 6.3 further delineates the ethical responsibilities of nurse managers and administrators to take action to curtail extended work hours and insufficient rest time between shifts:

> *Acquiescing and accepting unsafe or inappropriate practices, even if the individual does not participate in the specific practice, is equivalent to condoning unsafe practice* (p. 21).

Nurse managers and administrators, bound by this ethical code of practice, may feel torn by conflicting professional obligations. Hospitals and other health care entities, not similarly bound, are clearly under pressure to reduce expenses; the managers of these institutions and organizations may not recognize the connections between their budget and nurse fatigue. Their

response to market pressures has often been an "adhocracy" of registered nurse understaffing, patched with excessive overtime, expensive agency nurses and rotating shifts that further deteriorates working conditions for already overworked nurses, thereby threatening patient safety.

Administrators need to be educated to the larger costs to their institutions of nurse fatigue as well as the costs of excessive overtime and agency nurses. The most obvious cause-and-effect may be seen in the reduction of adverse patient outcomes when an adequate, appropriate, and *rested* nursing staff is available. Study after study has concluded that nursing care, specifically, and appropriate staffing in general, is central to improved patient outcomes. This directly affects the institution's bottom line.

For example, ANA's 2000 study, *Nurse Staffing and Patient Outcomes in the Inpatient Hospital Setting*, describes five adverse outcomes measures that respond favorably to adequate nurse staffing: hospital length of stay, nosocomial pneumonia, postoperative infections, pressure ulcers, and nosocomial urinary tract infections. Each of these might cost a hospital or health facility money that it would otherwise not spend. Appropriate nurse staffing that permits time for thorough patient assessment and timely interventions ultimately improves outcomes, and has the potential for significantly reducing these types of expensive risks.

Risks to nurses in the health care environment, only amplified by the fatigue factor, can similarly affect the cost of doing business for employers of nurses. Health care jobs are already among the most hazardous occupations. In a 2004 survey, the U.S. Bureau of Labor Statistics noted that, of the fourteen private industry sectors with the highest reported number of cases of injury or illness, three were in the health care and social assistance sector. In fact, "hospitals and nursing and residential care facilities have *led* [italics added] the list of industries reporting [the highest number of] cases for the past two years" (p. 8). The rate of illnesses experienced by workers in the hospital industry was almost three times that of workers in private industry as a whole.

Knowing all of this, and supported by the extensive research linking human fatigue with error, institutions that persist in policies supporting a culture where overwork, understaffing and underpay are the norm may ultimately find themselves facing extensive accountability for their short-sightedness. The consequence of institutional intractability is even more stark as the evidence accumulates specifically linking nurse fatigue with errors in clinical judgment that have the potential to harm patients or nurses themselves.

Employers may begin to experience the legal implications of the mounting research on fatigue, as well. For example, a registered nurse successfully claimed workers' compensation for injuries from a motor vehicle accident that occurred when she fell asleep while driving home after working back-to-back double shifts, at the behest of her manager and against her own judgment. The court ruled in her favor because it deemed the hospital's systematic abuse of overtime as a foreseeable and avoidable cause of the accident (Deland v. Hutchings, 1994). As hospitals and other health care institutions increasingly look to *institutional systems* to assure patient safety, as opposed to a model that only looks at individual responsibility, it is possible

that courts will follow the trend in finding institutional liability for those lapses in *institutional* policy that foreseeably result in harm to patients or staff.

Institutions also accrue the secondary costs of nurse fatigue that must be paid in time, and that ultimately affect the *entire* health care system. Clearly, nurse fatigue and the factors contributing to it are not isolated from the larger issues of health care workforce and access to care. In its 2001 report, "Nursing Workforce: Emerging Nurse Shortages Due to Multiple Factors," the US General Accountability Office cites "inadequate staffing, heavy workloads, the increased use of overtime, a lack of sufficient support staff, and the adequacy of wages" as key factors in the emerging registered nurse shortage (p. 2). When all the related factors are considered, fairer wages for registered nurses may be, at a minimum, cost-neutral for hospitals and other entities.

The drive for "organizational efficiency," when its proponents fail to balance it with other values, continues to backfire in industry after industry. Increasingly, businesses must balance the cost of assuring a rested workforce against the regrettable cost of *not* having rested workers. The shift and duty times of airline pilots and truck drivers are regulated for precisely these reasons. In health care, teaching hospitals can be denied their accreditation for graduate medical education if they routinely ignore resident work hour limits. Although the application of this logic has been slow to reach the rest of the health care community, employers need to make the connection between nurse fatigue and safety of both the patient and the nurse.

The management of hospitals and other healthcare entities must be accountable for making the changes necessary to align their rewards systems with their espoused value of high quality patient care and safety. Nursing can support this mission by generating specific recommendations as to what institutions can do differently to address the factors that contribute to nurse fatigue.

Several nursing specialty organizations have addressed how their members might best balance work and rest to optimize safety, and how their employers might support their doing so. The Association of periOperative Registered Nurses (AORN), an organizational affiliate of the American Nurses Association (ANA), offers several strategies in its 2005 Position Statement on Safe Work/On-Call Practices, to promote patient and perioperative personal safety. Those strategies that directly target action by institutions and organizational systems include:

- Perioperative Registered Nurses should not be required to provide direct patient care for more than 12 consecutive hours in 24 hours and not more than 60 hours in a seven-day period.
- Off-duty periods should be scheduled to provide for an uninterrupted eight-hour sleep cycle.
- Arrangements should be made to relieve a perioperative registered nurse who has worked on-call and is scheduled to work the following shift to allow for adequate off-duty recuperation time.
- The type of facility and possible number of sustained work hours should be taken into consideration when making on-call shift assignments.

- The individual's ability to be able to meet the potential work demands should be considered when making on call assignments.
- Employers should support perioperative registered nurses to change cultural attitudes so that fatigue is recognized as an unacceptable risk to patient and worker safety rather than a sign of their dedication to their job.

AORN's full position statement and guidance statement on Safe On-Call Practices in Perioperative Practices can be found on the AORN web site at the following link: http://www.aorn.org/about/positions/default.htm.

The American Association of Critical Care Nurses has explored how "mental and physical fatigue can contribute to errors and 'near-misses' with medications and case-related procedures" in its position statement opposing mandatory overtime. Without the ability to resort to mandatory overtime, "hospitals and health care institutions will have to look at real remedies for understaffed facilities, such as: 1) hiring more RN's, and 2) utilizing strategies to recruit and retain more nurses" (http://www.aacn.org/AACN/pubpolcy.nsf/vwdoc/pmp, ¶ 7).

A 2006 study by Scott, Rogers, Hwang and Zhang targeted at this critical care nursing population generally affirms earlier studies, showing respondents "worked longer [hours] than scheduled and for extended periods," and that "longer work duration increased the risk of error and near error and decreased nurses' vigilance" (p. 1). It also supports the IOM's recommendations to minimize the use of 12-hour shifts and to limit nurses' working hours to 12 consecutive hours during any one 24-hour period. The authors were particularly persuaded by the potentially dire consequences of a fatigue-induced mistake in critical care, where "patients are not only exposed to more medications and treatments than are patients in general care areas but are also seriously ill, with little natural resilience or ability to defend themselves from the consequences of healthcare mishaps" (Scott, 2006, p. 1).

This evidence, highlighting the detrimental effects of nurse fatigue on patient and nurse safety, as well as on institutional and organizational accountability, leads ANA to recommend the following actions for registered nurses, employers, researchers and educators.

Recommendations: As a means of implementing this position statement, the ANA recommends the following eleven specific actions:

Practicing Registered Nurses:

1. Individual registered nurses should consistently exercise their ethical obligations as articulated in the ANA's position statement on *Registered Nurses' Responsibility in All Roles and Settings to Guard Against Working When Fatigued (ANA, in press).*

2. Nurse managers and administrators have a responsibility to examine and institute scheduling practices that promote safe work hours, adequate break time, and minimal rotation of shifts.

Employers/Health Care Agencies:

3. All employers should provide fair compensation that encourages the elimination of the need for such strategies as excessive overtime or rotating shifts. The ANA recommends a thorough examination of overtime pay expenditures and a reassignment of those dollars toward both the additional staff necessary to eliminate overtime and subsequent increases in registered nurses' base compensation. These steps should be cooperatively pursued and negotiated in an open and equitable process that includes both registered nurses and healthcare administrators.

4. Registered nurses' salaries must be adjusted to appropriately reflect their education, training, experience and the value they add within the health care entity for which they work. In particular, "wage compression," or the stagnation of salary growth relatively early in a nurse's career, should be eliminated and experience rewarded so that the health care system retains its nursing workforce. Salaries should be such that registered nurses do not feel compelled to seek supplemental income through rotating shifts, overtime and other voluntary practices that contribute to worker fatigue.

5. All employers of health professionals should provide ongoing education to employees concerning the impact of consecutive and total hours worked and employee fatigue on patient safety, quality of care, and the personal safety of employees.

6. Employers should institute policies, including whistleblower protections, permitting the free exchange of ideas and information about staffing and quality of care issues among their staff without fear of reprisal or retribution.

7. Employers should adopt as official policy, the position that registered nurses have the right to accept or reject a work assignment based on fatigue; that such rejection does not constitute patient abandonment; and that registered nurses should not suffer adverse consequences in retaliation for rejecting in good faith a work assignment based on fatigue.

8. Employers should have a system in place for evaluating instances of registered nurses rejecting assignments in order to evaluate causes and effectiveness of staffing patterns.

Education:

9. Schools of Nursing should add to their curricula information on the impact of hours worked, rotating shifts, and neglecting to take meal and rest breaks on patient safety and harm to self and peers. In addition, the ethical obligation of the individual registered nurse to monitor fatigue and to decline assignments that put patients at risk should be

stressed, relying on Provisions and Interpretive Statements from the *Code of Ethics for Nurses* (ANA, 2001).

10. Academic education and training programs for health care administrators should include curricula content regarding the impact of nurse and health care worker fatigue on patient and staff safety, and the importance of supporting a healthy workplace for registered nurses and other employees.

Research:

11. ANA should partner with specialty nursing organizations and other stakeholders to assure that the following subjects are included on the research agendas of various funding entities:
    - Determinants of registered nurse fatigue
    - Impact of nurse fatigue on the health and well-being of nurses
    - Impact of registered nurse fatigue on patient safety
    - Patient classification/acuity systems
    - Staffing patterns and nursing-sensitive patient outcomes
    - Salaried registered nurse-staffing models

12. Schools of Nursing, as well as Schools of Public Health, Occupational Health, Health Services Research and Economics, should develop graduate research foci around the areas of patient acuity, nurse staffing patterns, nurse fatigue and quality of care.

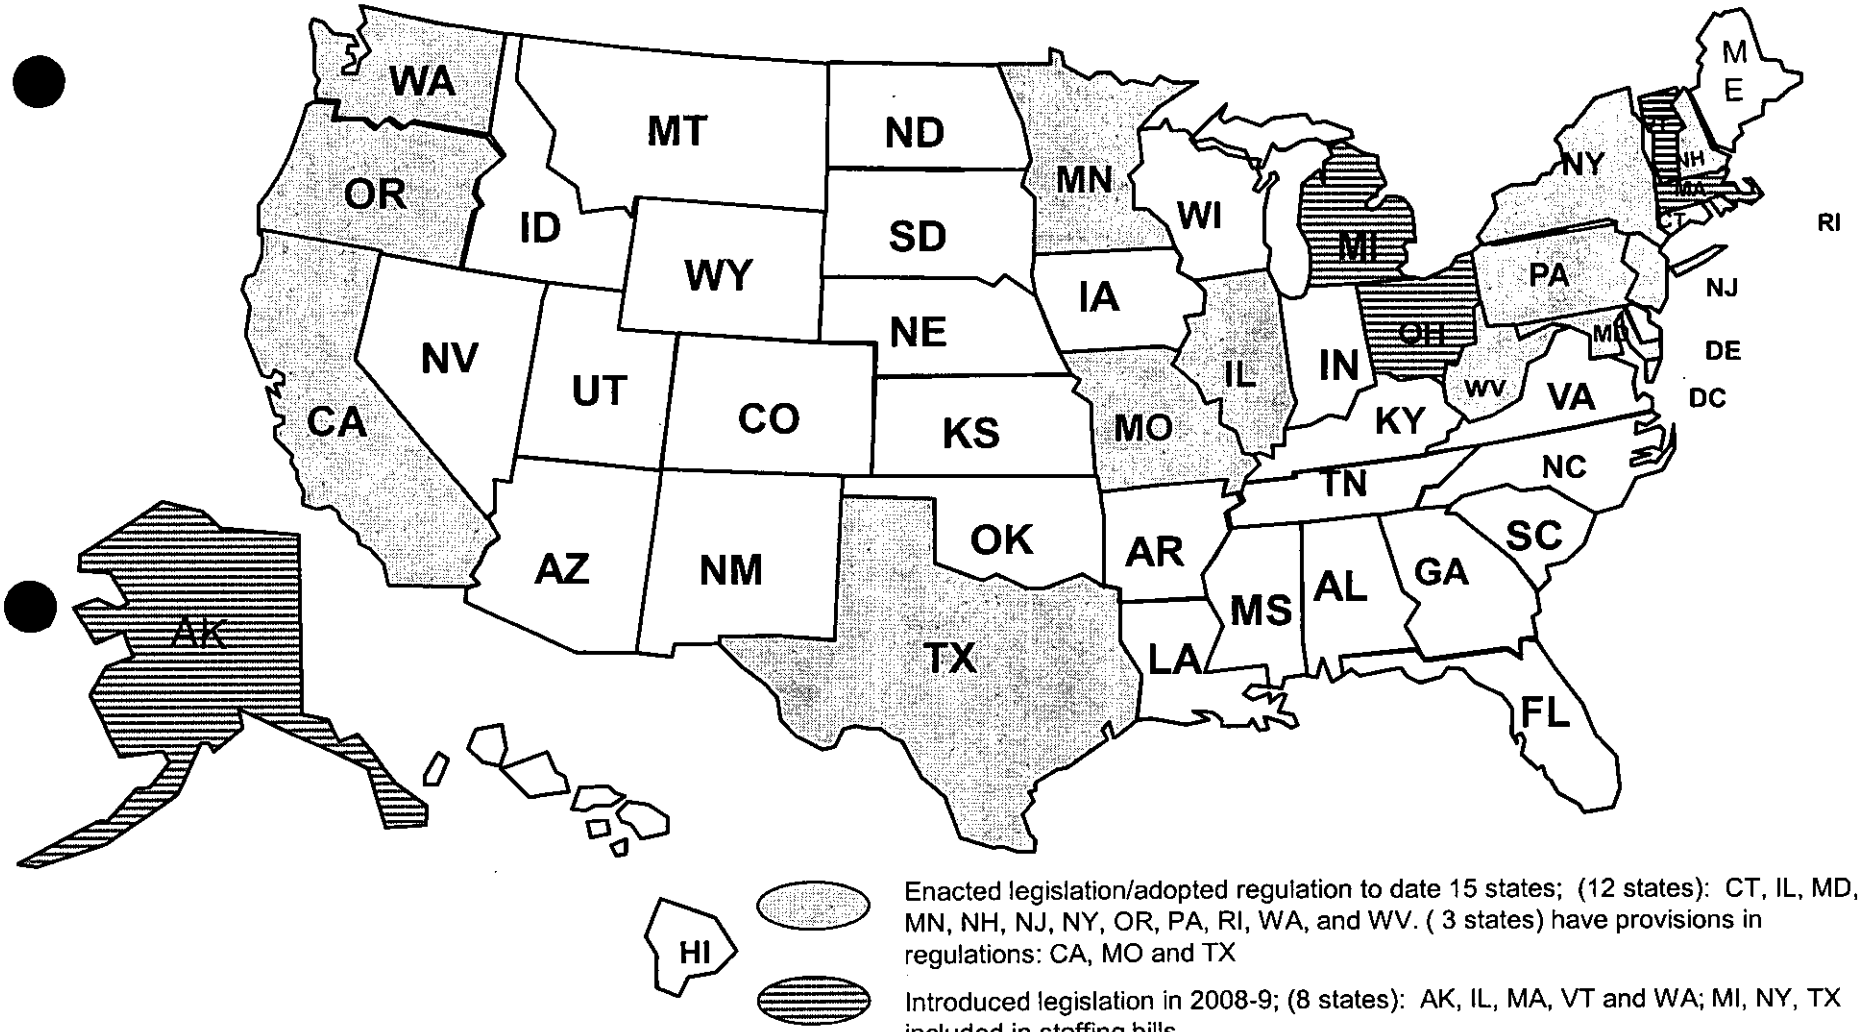
The American Nurses Association's Nationwide State Legislative Agenda

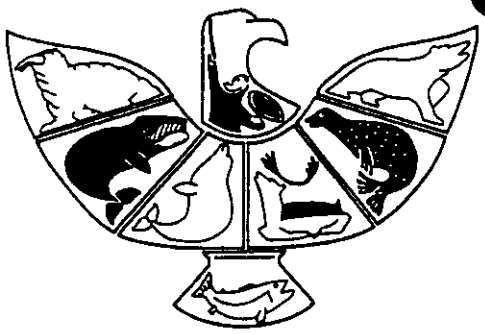
PROHIBITION OF MANDATORY OVERTIME



Enacted legislation/adopted regulation to date 15 states; (12 states): CT, IL, MD, MN, NH, NJ, NY, OR, PA, RI, WA, and WV. (3 states) have provisions in regulations: CA, MO and TX

Introduced legislation in 2008-9; (8 states): AK, IL, MA, VT and WA; MI, NY, TX included in staffing bills.

February 2009



Alaska Native Health Board

Fax: (907) 563-2001

March 6, 2009

Senator Bettye Davis, Chair
Senate Health & Social Services Committee
State Capital Building, Room 30
Juneau, Alaska 99801-1182

Dear Senator Davis,

We write to express our deep reservations over SB 12, limiting mandatory nurse overtime.

The Alaska Native Health Board appreciates and values the services nurses provide to patients in Alaska, especially our Alaska Native patients, whom we consider to be our customer-owners.

It is the experience of Tribal health providers that nurses are highly dedicated, caring providers who will give their last ounce of skill to care for their patients. Tribal health providers expend a great deal of effort and expense to recruit and retain good nurses to provide care and cover all necessary shifts. Providing adequate and safe nurse staffing is an important part of Tribal health providers' overall responsibility to provide high-quality care to our patients. It is out of this responsibility to care for our patients that we express our concerns over SB 12, as follows:

SB 12 will hurt patient care, especially in rural Alaska

In healthcare, the guiding principle is "do no harm." However, with SB 12, in many remote Tribal health locations, all it would take to leave a shift uncovered would be for one or two nurses to decide, for any reason or no reason at all, that they don't want to work overtime.

The rural Tribal health provider would in many cases have no choice but to simply not cover the shift and put patients at risk, because rural Tribal health providers do not have the urban luxuries of (1) calling in other off-duty nurses, (2) getting temporary "agency" nurses to cover shifts on short notice or (3) re-directing patients to other nearby facilities.

In practice, SB 12 would make it impossible for Tribal health providers to make sure all shifts were covered, particularly in the remote rural parts of the State. Perhaps this is why almost no rural States have adopted legislation similar to SB 12.

SB 12 is an unfunded mandate that will unnecessarily drive up costs

Many Alaska Tribal health providers are having a tough time financially due to sky-high fuel and other costs commonly associated with running a facility in rural Alaska. They have had no choice in some cases but to lay off healthcare workers and reduce services.

Under SB 12, even in a situation where a Tribal health provider might be able to cover a shift when one or more nurses were to choose not to work overtime, the Tribal health provider would likely only be able to do so at GREAT COST, e.g., (1) over-hiring extra regular-shift nurses ahead of time (assuming a sufficient labor pool) and hoping one of the new hires is willing to pull non-scheduled shifts; (2) flying in temporary "agency" nurses from an urban area at the last

minute (expensive), or (3) transferring / referring patients to an urban provider (adding an additional expensive travel cost to providers and to the Medicaid program).

Laws such as SB 12 are intended to solve urban problems not applicable in Alaska

Legislation such as SB 12 has been adopted in only 15 States, nearly all urban, out of concerns that hospitals might be (1) under-hiring and then abusing mandatory overtime in order to control payroll/benefits costs, or (2) abusing mandatory overtime rules as a collective bargaining tactic.

There is no evidence that these conditions exist in Alaska. While there are well-documented chronic challenges in nurse staffing, particularly among Tribal health providers, these staffing challenges are no different than the staffing challenges we experience with all the healthcare professional categories. And while we cannot speak for others, we can say unequivocally that Alaska Tribal health providers are not purposely understaffing as an abusive labor practice. The reality is that to the degree we have nurse staffing challenges, it is because of the tight national nurse labor market, compounded by the never-ending challenge of figuring out how to get good nurses, doctors, technicians, administrators, etc. to live and work in remote locations in Alaska.

SB 12's proponents agree *that "there are few official overtime complaints by nurses..."*, and that there are *"low numbers of complaints and benign exit interviews...."*

We acknowledge that nursing is a tough profession. The work itself is challenging enough, in addition to the difficult shift scheduling that of necessity must put patients' needs first. But those challenges come with the territory in healthcare: Physicians, administrators, technicians, clerks, etc. also must adjust the scheduling of their work to meet the needs of the patients.

SB 12 is unnecessary because mandatory nurse overtime can be addressed by other means

Because of the well-documented nurse shortage in Alaska, there is a very tight labor market for nurses. Nurses have significant leverage in negotiating the terms and conditions of their employment. Hours and shifts to be worked, shift-swapping flexibility, on-call requirements and how to handle anticipated overtime are all commonly agreed to in employment agreements.

In reality, the tight labor market for nurses in Alaska, combined with well-established avenues and procedures for nurses to negotiate the terms and conditions of employment, give nurses more than sufficient leverage to address any concerns they might have with regard to mandatory overtime, or for that matter, any other terms or conditions of employment.

The result, acknowledged by SB 12's proponents, is that *"there are few official overtime complaints by nurses..."*, and *"low numbers of complaints and benign exit interviews...."*

Senator Davis, we thank you for efforts on behalf of Alaska Tribal health providers. We appreciate this opportunity to express our concerns with SB 12, and we look forward to working with you in a cooperative manner on the many other important healthcare issues pending this session.

Respectfully,

Evangelyn Dotomain
President/CEO

POSITION PAPER

SB 12/HB 50 – "An Act relating to limitations on mandatory overtime for registered nurses and licensed practical nurses in health care facilities; and providing for an effective date."

CONTACT: Valerie Davidson, Senior Director
Legal and Intergovernmental Affairs
through Pat Jackson, State Liaison for Alaska Native Health
523-0363 – pajackson@anthc.org

DATE: March 9, 2009

POSITION: Oppose

The Alaska Native Tribal Health Consortium (ANTHC) is a tribally controlled, non-profit, statewide tribal health organization formed pursuant to federal law to provide a range of medical and community health services for more than 130,000 Alaska Natives. It is part of the Alaska Tribal Health System (ATHS), which is owned and managed by the 231 federally recognized tribes in Alaska and by their respective regional health organizations.

ANTHC and Southcentral Foundation jointly manage the Alaska Native Medical Center (ANMC), the tertiary hospital of the ATHS located in Anchorage. We employ 500 nurses. In January of this year ANMC was recognized for a second time as a Magnet Hospital, a highly prized award given by the American Nursing Association. Only five percent of all U.S. hospitals achieve Magnet Status, and even fewer are designated a second time. ANMC is the first and only Alaska hospital to receive Magnet Status. Magnet hospitals have demonstrated that they meet a set of criteria designed to measure the strength and quality of their nursing, including the ability of its nurses to contribute to patient outcomes, and where nurse job satisfaction, low turnover rates and appropriate grievance resolution are part of the standard.

We value our nurses, but we do not support SB 12 or HB 50, bills that seek to legislate work schedules and tie the hands of managers who are constantly juggling the demands of patient care against workforce availability and rising costs/chronic underfunding in the tribal health care system. We have three primary concerns about the bill as currently written:

1) *It would have a disproportionate and detrimental impact on patients in rural Alaska*
2) *It conflicts with Alaska's longstanding policy of supporting access to health care through allowing health care facilities an appropriate degree of flexibility in scheduling direct health care providers.*
3) *It creates the inaccurate impression that it applies to federal and tribal facilities and programs that comprise the Alaska Tribal Health System*

1) Disproportionate and Detrimental Impact on Patients in Rural Alaska

The bill provides no new resources and no new options. In rural Alaska recruiting and retaining qualified nurses is not merely a challenge, as it is for all of Alaska and much of the United States; it is a constant struggle. Vacancy rates, recruitment costs and staff turn-over continually plague these providers, especially tribal health providers.

This bill restricts the ability of hospital managers to work with their nursing staff to craft options in a health system that is already stretched to its limits in both staffing and financial resources. There is a real risk that the bill would lower nurse/patient ratios and decrease the quality of care patients receive by tying the hands of providers to balance patient needs with available workforce, including nurses. In rural Alaska, when nurses are not available, then patients must be diverted to another facility. Since there are no other options in rural Alaska, patients typically get diverted to the Alaska Native Medical Center. Because ANMC, as a statewide facility, serves all regions, then we experience a compounding effect at ANMC, a facility that is already too small to meet patient care needs. When ANMC is at capacity, we too are forced to divert patients to other facilities in Anchorage. This is an every day challenge, but is especially problematic during public health outbreaks. Diverting patients disrupts the continuity of care for our patients and imposes an additional financial burden on our already under-funded health system.

The bill also sets forth a reporting requirement to the State Department of Labor. Because tribal health facilities are not licensed by the state, as explained below, we believe we would not be subject to the reporting requirements. To the extent a tribal provider did comply, it would create a new, costly system of collecting data and preparing reports. ANMC employs nurses who are licensed by the state and nurses who are part of the Commissioned Corp under the federal Public Health Service, further complicating any perception of what would be required under a state law.

2) Conflict with Longstanding State Policy of Supporting Access to Health Care

The Alaska Legislature has recognized the necessity of promoting access to health care through appropriate limitations to wage and hour requirements since at least 1962 when it enacted the "hospital employee" exemption.[1] From 1962 to 1983, all employees of *non-profit hospitals* were exempt from that law. While the exemption was narrowed slightly in 1983 to cover only those employees who provide "medical services," the Legislature also expanded the exemption to the employees of *all hospitals*, not just those employed by non-profits.[2] This change addresses the "interest in keeping medical facilities open and providing more flexible schedules for employees whose extended hours of labor were needed to maintain the hospital in operation at all time" and more generally the need to "enhanc[e] access to health care" in Alaska.[3]

[3] *Hutka*, 102 P.3d at 953.

3) Applicability to Federal and Tribal Health Providers

Providing health care services to Alaska Natives and American Indians is a federal function that contributes to the fulfillment of the federal government's trust responsibility to Alaska Natives and their Tribes.[4] A federal facility performing a federal function is not subject to state regulation, even if the function is carried out by another entity, unless Congress clearly authorizes such regulation.[5] Congress has not authorized state regulation of federal health facilities serving Indian tribes and their members or of tribal facilities that fulfill this federal function pursuant to the Indian Self-Determination and Education Assistance Act.

Rather, Congress has taken pains to promote self-determination and self-governance by ensuring that Tribes and tribal organizations have sufficient flexibility to address the unique needs of Native Americans and the extraordinary challenges of providing quality, culturally appropriate health care with very limited resources, often in extremely remote locations. This is because one of the purposes of the ISDEAA is to provide

> a meaningful Indian self-determination policy which will permit the orderly transition from the Federal domination of programs for, and services to, Indians to effective and meaningful participation by the Indian people in the planning, conduct, and administration of those programs and services.[6]

For similar reasons, Congress has provided an explicit exemption for Tribes and tribal organizations from the operation of most federal employment law, including Title VII of the Civil Rights Act of 1964, the American with Disabilities Act, and the Davis-Bacon prevailing wage rate requirements.[7] Courts have also recognized tribal exemptions with respect to other federal laws, like the Age Discrimination in Employment Act (ADEA), that do not specifically address their applicability to Tribes and tribal organizations.[8] One federal appellate court ruled that other federal laws and interests must give way to ISDEAA's overriding objectives when it

Modoc Indian Health Project*, 157 F.3d 1185, 1188-89 (9th Cir. 1998) (non-profit corporation created by two tribes qualified as an "Indian tribe" under Title VII where corporation was formed to deliver health care services under an ISDEAA agreement, even though services were provided outside the boundaries of a reservation), *Setchell v. Little Six, Inc.*, No. C4-95-2208, 1996 WL 162560, at *2 (Minn.App. April 9, 1996), *cert. den.* 521 U.S. 1124 (1997).

[8] 29 USC§ 626(d). *E.g.*, *EEOC v. Karuk Tribe Housing Authority*, 260 F.3d 1071, 1081 (9th Cir. 2001) (ADEA inapplicable to tribal housing authority that "occupies a role quintessentially related to self-governance"); *Taylor v. Alabama Intertribal Council*, 261 F.3d 1032 (11th Cir. 2001) (employee's race discrimination claim concerned tribal self-governance and intramural Indian matters). *See also Penobscot Nation v. Fellencer*, 164 F.3d 706 (1st Cir. 1999) (employment of a non-Native in federally funded public health nurse position is an "internal tribal matter" and not subject to state regulation).

addressed the potential applicability of the National Labor Relations Act to the Yukon-Kuskokwim Health Corporation.[9]

Congress and the federal courts have thus essentially deemed the Fair Labor Standards Act (FLSA) to be sufficient protection for tribal employees.[10] Because of the unique nature of nursing care, however, some nurses are exempt from FLSA's wage and hour requirements while others are protected through special provisions that specifically accommodate the need for scheduling flexibility. The Act's implementing regulations were recently revised with the benefit of comprehensive comments from nursing associations, patient advocacy groups, and health care facilities and they continue to recognize the need and appropriateness of allowing for this degree of flexibility. Alaska's own wage and hour laws and regulations are quite similar to the federal scheme in this respect.

At the same time, the Indian Health Care Improvement Act (IHCIA) and the Indian Self-Determination and Education Assistance Act (ISDEAA) provide a comprehensive framework for regulating tribal health care. Their broad language, together with the exemption from most federal employment law, provide a clear indication that Congress did not intend to allow federal agencies to impose their own rules on Tribes and tribal organizations, much less subject them to potentially overlapping and less flexible requirements enacted by individual states. Otherwise state law would "obstruct[] the execution of the purpose of the federal [law]."[11] The Supremacy Clause and the federal preemption doctrine prohibit this, especially in areas like Indian health care that has been a federal responsibility for centuries.[12]

"The Alaska courts have noted that the provision of Indian health care services is an area that is "comprehensively and pervasively regulated by the federal government which is manifested in both the ISDEAA and the IHCIA."[13] Once the federal government has thus occupied the field, there is no allowance for state regulations, even if it is consistent with statutory purposes.[14]

Burke,* 414 F.3d 305, 313 (2d Cir. 2005) (no presumption against federal preemption in fields substantially occupied by federal authority for extended time); *United States v. Locke*, 529 US 89, 108 (2000) (no presumption against preemption is triggered when significant history of a federal presence,).

[13] *Alaska Dental Society* at 15, *citing Ketchikan Gateway Borough v. Ketchikan Indian Corporation*, 75 P.3d 1043, 1049 (Alaska 2003). *See also, id.* at 1048 (majority setting aside issues of whether tribal health clinic is "subject to comprehensive and pervasive federal oversight.")

[14] *E.g., National Audubon Society v. Davis*, 307 F.2d 835, 851 (9th Cir. 2002).

In addition to this existing federal law, CMS quality standards and Joint Commission standards impose high quality standards on federal and tribal facilities that participate in the Medicare and Medicaid programs. In Alaska, this includes all of the major IHS and tribal health facilities.

Together, these federal laws address the same concerns intended to be addressed by SB12/HB50. However, they do so in a way that allows facilities more flexibility. While they impose certain performance and quality standards, they do not dictate the means for accomplishing them by imposing rigid requirements that may or may not lead to the same level of performance or quality (or, in the case of rural Alaska, undermine the very goals that the bill sponsor is trying to promote).

Conclusion

We understand that the bill sponsors and supporters are trying to protect nurses from being overworked and patients from accidental errors that may occur as a result. However, we don't believe legislating hours is the right solution. ANTHC and our partner tribal health facilities work very hard to recruit and retain quality nurses. We place high value on the nurses who work for us, and are actively involved in programs like the University of Alaska's Rural Nursing Program. We have been innovative in crafting solutions where physician and nursing services have been non-existent—principal among them, the Community Health Aide Program.

We also value the partnerships we have with many of our non-tribal hospitals/health system partners. We understand the value of flexibility in workforce negotiations. Legislation, of course, takes discussion regarding choices off the table. We in the tribal health system have our own history of suffering unintended consequences from legislation that started with the best of intentions. Today, through our compact with the Indian Health Service, we engage each year in a very formal negotiation, where challenges for everyone involved are brought to the table and worked through to the point of consensus. We support the request of our partners that this legislation be held and to let the process of labor negotiations to proceed.

Thank you for your careful consideration of these issues. We would be happy to provide any further information upon request.

Dangers of Mandatory Overtime:

FATIGUE and ERRORS

Support Senate Bill 12

Referred to as the Alaska Safe Nursing and Patient Care Act

Danger: Might As Well Of Had a Drink!

The long hours worked by some nurses pose some of the most serious threats to patient safety. Prolonged periods of wakefulness can produce effects that are similar to the effects produced by alcohol intoxication. This may include decreases in reaction time and the speed of mental processing.

Danger – Close to Intoxication

Periods of wakefulness in excess of 16 hours can produce performance decrements equivalent to a blood alcohol concentration (BAC) level of .05 percent. Alcohol intoxication is defined as .08 to .10 varying among the individual states. Do you want an exhausted nurse taking care of you or your family members?

Danger – Patient Safety at Risk

The impact of hours worked, duration of work, and overtime in this study were shown to have a statistically significant impact on patient safety as well as nurse satisfaction and retention in the profession.

Source

Michigan Nurses Association Public Policy Associates, Incorporated –

The Costs of Mandatory Overtime for Nurses,

August 2004

Danger –

likely to make at least one error

"The likelihood of making an error increased with longer work hours and was three times higher when nurses worked shifts lasting 12.5 hours or more…." and "working overtime increased the odds of making at least one error, regardless of how long the shift was originally scheduled."

Link Found

The authors of this study conclude that these findings imply a link between poor working conditions (long hours and overtime, mandatory or otherwise) and patient safety. In response to this and other admonitions concerning the elimination of mandatory overtime for nurses, almost half of the states in the nation have either enacted or introduced legislation concerning this issue.

Danger – PATIENT SAFETY AT RISK!

Threats to patient safety that are likely to result from extensive nursing overtime include the following:

- **Nurses being less alert to changes in patients' condition**
- **Nurses having slower reactions**
- **Medication errors – adverse drug events**
- **Increase in nosocomial infections**
- **Increase in decubiti**

Institute of Medicine Report

The Institute of Medicine estimates that approximately 100,000 hospital deaths can be attributed to medical errors each year. Mandatory overtime is a serious contributing factor to medical errors. The final recommendation of the IOM is that all overtime, voluntary and mandatory/ involuntary done by nurses should be curtailed.

Not A "Bargaining Issue"!

This is a Public Safety Issue

The Alaska public has a right to expect when they walk into a healthcare facility, that the nurse taking care of them is properly rested and alert.

(And that their RN hasn't been working 16 hours that day already.)

Not A "Bargaining Issue"!
This is a Public Safety Issue

- At registration, a member of the public should not have to request a copy of the most recent Collective Bargaining Agreement to see how successful their nursing staff has been in negotiating reasonable working conditions.
- Not all nurses are represented by a union. What do we do for these nurses' patients and themselves?

Washington State Passes Law in 2002

Anne Piazza, lobbyist for WSNA testified before Representative Peggy Wilson's special House HESS committee in January 2006:

"The State of Washington passed a law to prohibit mandatory overtime for nurses with the cooperation of the WSNA, other nursing unions, and the Washington Hospital Association."

Washington State

Mandatory overtime puts patients, nurses and the profession at risk. Many health care facilities have turned to the use of mandatory overtime as a common practice to fill longstanding staffing and scheduling problems.

Shifting the entire burden to employees when there is a labor shortage is not the answer to attracting qualified persons to the profession.

Washington State

One of the reasons that the nursing shortage as it exists today is because qualified nurses are not working in the field or leaving the profession because they can no longer work the long hours or safely take care of their patients. Forced overtime is adding to this shortage.

Massachusetts Study

Research from the University of Massachusetts shows a strong link between working overtime and sustaining a work-related injury. This was found to be true for all occupations… working longer hours (12 hours a day or more) was associated with a 37 percent increase in risk.

(Chantal Britt, Bloomberg, "Overtime, Long Houses Increase Illness, Injury Risk, Study Shows," August 22, 2005.)

States that have passed a Mandatory Overtime Bill & States with legislation pending

The American Nurses Association's Nationwide State Legislative Agenda

PROHIBITION OF MANDATORY OVERTIME

February 2009

Support Alaska Senate Bill 12

Your nurse will always be there for you in time of an unforeseen emergency situation, disease outbreak, natural or man-made disaster.

Your nurse will be able to voluntarily work overtime so long as the work is consistent with professional standards of safe patient care and does not exceed 14 consecutive hours.

Support Alaska Senate Bill 12

But with SB 12, a nurse will be able to say, "I have worked my shift; I'm tired; and possibly I'm not as swift as I would otherwise be if I had some rest. My patients could possibly be at risk if I push on any longer."

Knowing his or her own limits, the nurse can refuse to be assigned the forced overtime in the first place. Our nurse would now be able to do this without fear of reprisal or loss of job.

Questions for you as Law Makers

- Where is the law that says as a nurse you lose your right to basic human rights? Time off, time to rest, to eat and to have time off for family?
- The Federal Government has passed laws to limit the number of hours that pilots can safely fly, truckers can safely drive, conductors and engineers can drive a train and a ship - all for public safety. Why would we not try to do the same for people when they are at their most vulnerable?

3701 E.Tudor Rd., Suite 208, Anchorage, AK 99507

Questions for you as Lawmakers

- Do you think nurses should have the right to refuse an overtime assignment if they feel either the patient's or nurse's safety is in jeopardy other than during an unforeseen emergency?
- When you answer these questions, I hope that you will not only support SB 12, but also the nurses that have come forward with risk of their job and livelihood to provide quality patient care to you and your loved ones at one of the most vulnerable times.

We Urge Your Support for SB12

It will protect the individual patient.

It will protect the Registered Nurse.

It will protect the healthcare facility.

It will enhance the nursing profession.

It will help recruit nurses.

It will help retain nurses.

It's good public policy.

It's common sense.

Thank you.

www.ashnha.org

TESTIMONY ON SENATE BILL 12

ASHNHA represents 27 private, federal, state, and tribal health care facilities located throughout Alaska. The testimony presented here has been approved by ASHNHA's general membership (see detailed member list at bottom of testimony).

Senate Bill 12 sponsor Senator Bettye Davis is well respected by *ASHNHA's* members for her commitment to improving health care access and quality in Alaska. We share Senator Davis' passion for increasing eligibility levels for Denali Kid Care to at least 200% of the federal poverty level, and in seeking creation of an Alaska Health Commission to address Alaska's health care issues.

However, *ASHNHA's* membership does not believe that Senate Bill 12 is needed to assure continued delivery of excellent patient care throughout the State, and therefore does not support Senate Bill 12. *ASHNHA's* members have had and will continue to have a strong commitment to respect the individual importance of each nurse in our health care delivery mission, and to treat each nurse fairly in the work place. We believe our annual nurse overtime survey demonstrates that this commitment to our nursing staff and to our patients is being met.

ASHNHA has conducted a facility survey on mandatory overtime for the last four years to gain a better understanding of the frequency with which 'mandatory' overtime is used by our member facilities. 'Mandatory' in this context is overtime that is not willingly worked by a nurse and does not include 'on-call' overtime hours. As displayed in the latest survey for 2007 and 2008 calendar years (copy attached), the number of mandatory overtime hours imposed is minimal and only occurs in a few facilities. Most of that mandatory overtime occurs at the State operated Alaska Psychiatric Institute but even that level of mandatory overtime usage is down substantially from 2006.

ASHNHA member facilities have taken a number of steps over the years to minimize the need to use mandatory overtime to fill gaps in nursing shifts. Some examples include:

1. Financially contributing to the University of Alaska expansion of their nursing program from 100 nurses each year to over 200 nurses each year.
2. Creating clinical experiences for student nurses and recently graduated nurses to gain hands-on nursing experience required to complete their education, or to achieve the patient care experiences necessary to become employed in a hospital setting.
3. Providing distance learning opportunities so local residents can take nursing courses in their own community with minimal need to spend large amounts of time out of town to achieve their clinical experiences.
4. Purchasing tens of thousands of hours of temporary nursing hours to fill staffing gaps to minimize use of mandatory overtime.

3160

Even with these initiatives approximately half of the facilities reporting on this year's survey believe the nursing shortage situation has worsened, and the solutions to address this shortage become more complex.

RECAP OF ASHNHA's CONCERNS with SB 12:

- *ASHNHA's* data shows Alaska's hospitals and nursing homes are not routinely relying on mandatory overtime to fill staffing gaps. On the contrary *ASHNHA's* data shows that use of mandatory overtime is a rare occurrence with all but 4 facilities reporting **ZERO** use of mandatory overtime in 2008 (see attached chart). Most of this is at the State operated Alaska Psychiatric Institute. No employee grievances on overtime were reported for 2008 by facilities.

- *ASHNHA* believes work hours and scheduling are appropriately a local employer responsibility to negotiate with its employees. This is being done in every community in a responsible manner with equal concern to employee and patient concerns. Work force challenges vary significantly from one community to the next making a single approach to addressing this challenge unworkable. A number of facilities are either in negotiations with nursing staff or will begin those negotiations shortly. These negotiations should be given an opportunity to address any concerns from nursing staff.

- With respect to overtime required to meet on-call requirements, these understandings are locally developed between management and nursing in each community based on the unique needs and staffing challenges each face.

- The ongoing monitoring systems operated by federal, state or independent private agencies that review patient care show Alaska health care quality is excellent. None of these organizations has identified use of mandatory overtime as a problem related to delivery of excellent patient care in Alaska.

- ASHNHA's members have worked diligently to reduce the nursing shortage problem in Alaska by contributing substantial funding over the last four years to help support an expanded nursing program at the University of Alaska. This program is now graduating 200 nurses annually compared to 100 nurses before the program's expansion.

- SB 28 would impose a new reporting burden for Alaska facilities. These reports would have to be filed semi-annually and must contain detailed work hour information for each staff nurse employed by the facility as well as each contract nurse.

To: Thomas Obermeyer
Cc: Sen. Bettye Davis; raygillespie@ak.net
Subject: nurses overtime bill SB 12

Tom, our nurses love our Baylor plan and we use it at both our hospital and residential treatment centers. This plan is used for both full and part-time employees. An employee who regularly works only one weekend Baylor shift (16 hours) receives 20 hours pay and part-time benefits. If they work two Baylor shifts (32 hours) they receive 40 hours pay and full time benefits. I provided language earlier and at one time last year Senator Davis' bill exempted our Baylor plan.

I would propose the following language.

"A nurse at a psychiatric treatment hospital or residential treatment center who agrees to work two consecutive eight hour shifts on weekends, provided the employer provides pay and benefits equivalent to twenty hours for each two consecutive shifts. A nurse that works four eight hours shifts cannot work more than 16 consecutive hours on duty without a break of at least eight hours. In this paragraph, a weekend means Friday at 5:00 p.m. and ends Monday at 8:00 a.m."

Thanks. Feel free to call me on my cell, 952-5871, if you have any questions.

Senator Bettye Davis

SB 13 "An Act relating to eligibility requirements for medical assistance for certain children and pregnant women; and providing for an effective date."

Sponsor Statement

SB 13 increases the qualifying income eligibility standard for the Denali KidCare Program to 200% of the Federal Poverty Line (FPL) and makes health insurance accessible to an estimated 1300 more uninsured children and 225 pregnant women in Alaska. Denali KidCare is an "enhanced" reimbursement program with up to 70% matching funds under the federal government's State Children's Health Insurance Program (SCHIP), which was created in 1997. Congress reauthorized the SCHIP program for five years and President Obama just signed into law on February 4, 2009 with expanded coverage for 4 million more children.

Alaska as one of the nation's richest states is only one of 7 states which funds its SCHIP program below 200% FPL. Increasing Alaska Denali KidCare to 200% FPL only brings it to the level at which it was established 10 years ago. Consider the following information from the Kaiser Commission on Medicaid and the Uninsured, January, 2009:

- 44 states, including D.C., cover children in families with incomes at 200% FPL or higher.
- 33 states cover children in families with income between 200% and 250% FPL.
- 19 states including D.C., cover children in families with income at 250% or higher. 10 of these states cover children in families with income at 300% FPL or higher.
- 35 states allow premiums, enrollment fees, or co-payments for selected services in SCHIP programs on a sliding scale of FPL.

Denali KidCare serves an estimated 7600 7900? Alaska children and remains one of the least costly medical assistance programs in the state at about $1,700 per child with full coverage, including dental, which is about 20% of the cost of adult senior coverage.

Early intervention and preventative care under SB 13 will greatly increase Alaska children's health and yield substantial savings to the state and public and private sector hospital emergency rooms which must admit indigent and uninsured patients for non-emergency treatment. It is estimated that uninsured children with a medical need are five times as likely not to have a regular doctor as insured children and four times more likely to use emergency rooms at a much higher cost.

There are still an estimated 18,000 uninsured children in Alaska, or about 9% of the children age 18 and under. Private health care coverage for children has declined over 30% in the last ten years, and the deepening recession is pulling more children and families into the uninsured ranks. The reauthorized SCHIP program and "Stimulus Package" should help, and Alaska should do its share and take advantage of federal matching funds by insuring its low income children up to and including 200% FPL under SB 13.

MEMORANDUM January 22, 2009

SUBJECT: Sectional Summary (SB 13; Work Order No. 26-LS0076\A)

TO: Senator Betty Davis
Attn: Tom Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Amends the medical assistance eligibility provisions for persons under 19 years of age and for pregnant women by increasing the household income limit from 175 to 200 percent of the federal poverty line.

Section 2. Increases the household income limit from 175 to 200 percent of the federal poverty line for requiring premiums and cost-sharing contributions from medical assistance recipients who are under 19 years of age.

Section 3. Provides for an immediate effective date.

ANALYSIS: *(Attach a separate page if necessary)*

This legislation increases the income level for covering children and pregnant women under Denali KidCare to 200% of the federal poverty guidelines, up from 175%. It restores eligibility levels to the levels used when the Denali KidCare (DKC) program was originally created.

Between October 2003 and July 2007, the upper income limit for these individuals was "frozen" at an amount equivalent to the 2003 federal poverty guideline (FPG). By April 2007, that income amount was calculated by the department to correspond to about 150% of the 2007 FPG. Senate Bill 27, implemented in summer 2007, made the upper income standard for children and certain pregnant and postpartum women equal to 175% of the

(continued on page 2)

ANALYSIS CONTINUATION

prevailing federal poverty guideline (FPG) for Alaska, as published annually in the federal register, and effectively raised the income level from 150% to 175% FPG. However, children and pregnant women with incomes between 176% and 200% of the prevailing FPG did not regain eligibility.

Between 2003 and 2006, the number of enrolled children with household incomes between 151% and 200% FPG dropped by 2,553 and the number of enrolled pregnant women with incomes between 134% and 200% dropped by 436. This fiscal analysis assumes that the additional enrollment due to this bill will be equal to about half that number of people (estimated as 218 pregnant women and 1,277 children). The assumption is that most people affected by this bill will enroll by the end of SFY 2010 and that enrollment will resume normal growth (about 2% per year) thereafter.

Further assumptions are that participation, i.e. the proportion of enrollees that obtain services during the year, will not change with implementation of this bill and will remain the same throughout the projection period. First year costs are based on an estimate for the number of new enrollees times the average cost per enrollee for the affected eligibility subtypes in 2008. Medicaid children in the income range addressed by this bill tend to have lower Medicaid costs than those from families with lower incomes, and those lower costs are reflected in our estimates.

Costs projections incorporate 8.6% annual growth (Long Term Forecast of Medicaid Enrollment and Spending in Alaska: 2005-2025, DHSS, updated for 2006). That growth rate includes changes in population, enrollment, utilization, and medical-price inflation.

Fund source calculations are based on the relative proportion of costs for these eligibility types that were reimbursed at IHS, Title XIX, or Title XXI rates during 2008 and our best estimates for federal medical assistance percentages (FMAPs) between 2010 and 2015. Children affected by this legislation are included in the State Children's Health Insurance Program (SCHIP) so most of their Medicaid costs would normally be matched at the enhanced rate for Title XXI services. Fund projections assume sufficient SCHIP allocation to fully fund the additional children between 2010 and 2015;, however, the program is currently funded under a continuing resolution. Title XXI funding for the balance of SFY 2009 after March 30, 2009 and for SFY 2010 will not be established until Congress takes additional action to reauthorize and fund the SCHIP program.

Expenditures for the Behavioral Health Medicaid Services component were determined based on the component's share of expenses for the affected eligibility subtypes in 2008. Behavioral Health paid about a quarter of the costs for affected DKC children in 2008. No charges for services for DKC pregnant women were paid by this component in 2008.

ANALYSIS: *(Attach a separate page if necessary)*

This legislation increases the income level for covering children and pregnant women under Denali KidCare to 200 percent of the federal poverty guidelines, up from 175%. It restores eligibility levels to the levels used when the Denali KidCare (DKC) program was originally created.

Between October 2003 and July 2007, the upper income limit for these individuals was "frozen" at an amount equivalent to the 2003 federal poverty guideline (FPG). By April 2007, that income amount was calculated by the department to correspond to about 150% of the 2007 FPG. Senate Bill 27, implemented in summer 2007, made the upper income standard for children and certain pregnant and postpartum women equal to 175% of the

BILL NO. SB013

ANALYSIS CONTINUATION

prevailing federal poverty guideline (FPG) for Alaska, as published annually in the federal register, and effectively raised the income level from 150% to 175% FPG. However, children and pregnant women with incomes between 176% and 200% of the prevailing FPG did not regain eligibility.

Between 2003 and 2006, the number of enrolled children with household incomes between 151% and 200% FPG dropped by 2,553 and the number of enrolled pregnant women with incomes between 134% and 200% dropped by 436. This fiscal analysis assumes that the additional enrollment due to this bill will be equal to about half that number of people (estimated as 218 pregnant women and 1,277 children). The assumption is that most people affected by this bill will enroll by the end of SFY 2010 and that enrollment will resume normal growth (about 2% per year) thereafter.

Further assumptions are that participation, i.e. the proportion of enrollees that obtain services during the year, will not change with implementation of this bill and will remain the same throughout the projection period. First year costs are based on an estimate for the number of new enrollees times the average cost per enrollee for the affected eligibility subtypes in 2008. Medicaid children in the income range addressed by this bill tend to have lower Medicaid costs than those from families with lower incomes, and those lower costs are reflected in our estimates.

Costs projections incorporate 8.6% annual growth (Long Term Forecast of Medicaid Enrollment and Spending in Alaska: 2005-2025, DHSS, updated for 2006). That growth rate includes changes in population, enrollment, utilization, and medical-price inflation.

Fund source calculations are based on the relative proportion of costs for these eligibility types that were reimbursed at IHS, Title XIX, or Title XXI rates during 2008 and our best estimates for federal medical assistance percentages (FMAPs) between 2010 and 2015. Children affected by this legislation are included in the State Children's Health Insurance Program (SCHIP) so most of their Medicaid costs would normally be matched at the enhanced rate for Title XXI services. Fund projections assume sufficient SCHIP allocation to fully fund the additional children between 2010 and 2015; however, the program is currently funded under a continuing resolution. Title XXI funding for the balance of SFY 2009 after March 30, 2009 and for SFY 2010 will not be established until Congress takes additional action to reauthorize and fund the SCHIP program.

Expenditures for the Health Care Services Medicaid component were determined based on that component's share of expenses for the affected eligibility subtypes in 2008. Health Care Services Medicaid paid 100% of the costs for DKC pregnant women and about three quarters of the costs for affected DKC children in 2008.

STATE OF ALASKA
2009 LEGISLATIVE SESSION

BILL NO. SB 013

ANALYSIS CONTINUATION

The eligibility decision includes verifying information and determining whether a pregnant woman or child qualifies for DKC when they apply, acting on changes, and periodically re-examining a household's eligibility.

We assume that 218 pregnant women and 1,277 children will enroll in Medicaid if the qualifying income limit is revised to 200% FPG, and that implementation will begin July 1, 2009. We estimate two additional Eligibility Technician I (Range 13) positions will be needed to manage this additional work in FY2010.

Total Administrative Costs for ET I Positions:

Personal Services: Two Eligibility Technician I Range 13 at a cost of $134.4, including benefits, for 12 months.
Contractual: Annual cost for office space, phones, etc. will be $17.6.
Commodities: Annual cost for the office supplies will be $1.0.

Additional Cost of FY2010:
Equipment/Supply: A one time cost of $14.4 for desktop computer, software, printer, and work stations will be needed for the new positions.

http://www.akdemocrats.org

Senator Bettye Davis

SB 13 "An Act relating to eligibility requirements for medical assistance for certain children and pregnant women; and providing for an effective date."

Background of SCHIP/Denali Kid Care

- SCHIP was created in 1997 to reduce the number of uninsured children by providing subsidized insurance to children of those parents who are too poor to afford insurance but make too much to receive Medicaid coverage. About 1/3 of all children in America get health services through Medicaid or the State Children's Health Insurance Program (SCHIP), which is administered in Alaska through the Denali KidCare Program.
- The Denali KidCare Program is 70% funded by the federal government up to the state's allocated funding level. After that, the reimbursement rate declines to slightly over 50%. In fiscal year 2006 the cost of Denali KidCare was $25.9 million, of which $18.2 million was paid by the federal government.
- Denali KidCare provides health insurance for children age 18 and pregnant women who meet income guidelines. There is no cost to eligible children, teens and pregnant women. However, youth who are 18 may be required to contribute a limited amount for some services.
- Roughly 7,600 children were covered by Denali KidCare as of December, 2006.
- The cost per child of Denali KidCare is about $1,700 annually, compared to over $12,000 for an elderly person who qualifies for federal aid.
- By comparison, private health insurance for a family of three, *e.g.*, a pregnant woman with two children, is estimated at $8,000-$17,000 annually. Unlike Denali KidCare, this insurance may require a $1,000 deductible, 20% co-pay, and no vision, dental or hearing benefits.
- Alaska remains one of the lowest eligibility rates in the nation. Forty-one states allow participation by families at or above 200% of the FPL. Seven have rates at or above 300% of the FPL. The US and state governments' rationale for higher eligibility for children's health insurance is that it will save huge sums in transfer costs and improve health in the future through early detection and care.

Senator Bettye Davis

SB 13 "An Act relating to eligibility requirements for medical assistance for certain children and pregnant women; and providing for an effective date."

Repercussions of the unmet health needs of Alaska's uninsured children

---

- The number of uninsured children in Alaska is estimated to be about 18,000 or 9% of the population age 18 and under (Urban Institute and Kaiser Commission on Medicaid and the Uninsured).
- Over the last 10 years Alaska has seen a 31% decline in the number of children covered by private health insurance (Robert Wood Johnson Foundation).
- Nationally, more than 80% of uninsured children are from working families (Kaiser Commission on Medicaid and the Uninsured).
- Uninsured children have much higher health risks than do covered children. The receive less preventative care and are diagnosed at more advanced stages of illness (Kaiser, *supra*).
- Uninsured children are more likely to develop throat, eye, and ear infections, serious dental problems, and chronic conditions such as asthma and diabetes. They are more than five times as likely as insured children to have an unmet need for medical care and nine times more likely not to be examined by a regular doctor. They are also four times more likely to use emergency rooms which are much more costly than care in physicians' offices (*Pediatrics* 105, 113; "Care for Children," *New England Journal of Medicine*, 330).
- Almost 1/3 of uninsured children received no medical treatment during a 1-year period between 2002 and 2003 (*Health Affairs* 23, no. 5, September-October 2004).
- Uninsured children are 25% more likely to miss school than insured children (Children's Defense Fund, Minnesota). Continued illness affects school performance and, in the long run, workforce participation (Southern Institute on Children and Families). A National Institute of Medicine study indicates that lack of insurance results in lost national economic productivity of $65-$130 billion annually.

Why Coverage for Pregnant Women is Important In Alaska

- Alaska has one of the nation's highest documented pregnancy-associated mortality ratios – 58 per 100,000 live births during 1990-1999 (DHSS). National data indicate that women who receive no prenatal care are al increased risk of pregnancy-related death.
- Only 58% of women in Alaska receive adequate prenatal care, compared with 75% nationally.
- Mothers having late or no prenatal care are more likely to have low birth weight or pre-term infants and are at increased risk fro pregnancy-related mortality and complications of childbirth (DHSS).
- The average cost of hospital care for a premature baby was $75,000 in 2001, compared with $1,300 for a healthy, full-term infant. The March of Dimes Prenatal Data Center reports that premature babies cost about $13.1 billion annually.

RE: Support for Senate Bill 13

Dear Senator Davis:

I am writing to you to express the support of March of Dimes for **Senate Bill 13.** The mission of March of Dimes is to improve the health of babies by preventing birth defects, premature birth and infant mortality can best be achieved if all women of childbearing age, infants and children have access to comprehensive health coverage.

Senate Bill 13 reinstates Medicaid and Denali KidCare (DKC) for children and pregnant women in Alaska up to 200% of Federal Poverty Level (FPL). This was the original eligibility level when DKC was established in 1997. The eligibility threshold was reduced and frozen at 175% FPL by the Legislature in 2003. This bill will help reinstate eligibility to many of Alaska's 19,000 uninsured children.

The Institute of Medicine has found that health coverage is the single most important factor in determining whether or not a child receives needed health services. Coverage also plays a key role in access to maternity care services for pregnant women.

Women who receive maternity care are more likely to have access to screening and diagnostic tests that can help to identify problems early; services to manage developing and existing problems; and education, counseling, and referral to reduce risky behaviors like substance use and poor nutrition. Such care may thus help improve the health of both mothers and infants. For example, singleton infants born to mothers who received late or no prenatal care in 2004 were nearly twice as likely to be low birth weight (less than 5 1/2 pounds) as infants born to mothers who received early prenatal care —9.9 percent compared with 5.9 percent.

In addition to pregnant women, health insurance status is the single most important influence in determining whether health care is accessible to children when they need it, according to another Institute of Medicine study. Though uninsured newborns are more likely than insured babies to be sick, they receive fewer hospital services.

Alaska State Chapter
3209 Denali Street, Suite 200
Anchorage, AK 99503
(907) 276-4111
1-800-478-5245
Fax: (907) 276-3375

marchofdimes.com/alaska

Uninsured children are the most likely to have no usual source of medical care - 28.8 percent, compared with only 2.3 percent of privately insured youngsters and 4.6 percent of children in public insurance programs. March of Dimes is a leading nonprofit organization for maternal, infant and child health. With chapters nationwide and its premier event, March for Babies, March of Dimes works to improve the health of women, infants and children. **Thank you for sponsoring Senate Bill 13.**

Sincerely,

Janie Odgers
State Director

Re: Support for Expanding Eligibility for Denali KidCare

Senator Davis:

The Alaska Mental Health Board and Advisory Board on Alcohol and Drug Abuse appreciate your recognition of the need for quality health care for Alaska's children. An estimated 19,670 of Alaska's children live in poverty. For them, Denali KidCare is an important safety net – and the way we can insure that our children grown to be healthier and happier adults.

Medicaid-enrolled children who are up-to-date on their well-child checkups through age two years are 48% less likely to experience an avoidable hospitalization. Children with incomplete care are 60% more likely to visit an emergency department for any cause compared to children who are up-to-date on their well-child care. By providing regular preventative care to our children, we save on the cost and trauma of unnecessary hospitalizations.

Denali KidCare is especially important for children with serious emotional disturbances and other mental health needs. In Alaska, more than 75% of children with special health care needs who have Denali KidCare receive the mental health services they need. This is far better than the national rate for uninsured children: only 56.8% of uninsured children with special health care needs receive the necessary mental health services.

Children of families whose income exceeds the current 175% FPIG ceiling, but who still lack resources or insurance to pay for their children's health care, go without necessary health care. The costs of health care have continued to rise, and with that the number of uninsured children who go without care rises. In 2007, nearly 16% of uninsured children in the United States went without necessary care because the costs were prohibitive.

Thank you for your work, and please let us know if the Alaska Mental Health Board and Advisory Board on Alcoholism and Drug Abuse can assist in the effort to pass this important legislation.

Sincerely,

Debi Keith, Chair
AMHB

Lonnie Walters, Chair

Thomas,

Martha King and I will be on the call this afternoon to answer questions.

As we discussed on the phone on Friday, Alaska's SCHIP program is a Medicaid expansion program and therefore must comply with Medicaid's cost-sharing rules as specified under the Deficit Reducation Act of 2005.

The following document summarizes these requirements and I would refer you to the summary on page 1 under the heading "Options for Premiums and Cost-sharing" and the "Important Links" on the bottom of page 2.
See the document here: http://www.cms.hhs.gov/DeficitReductionAct/Downloads/Costsharing.pdf

Under provisions of the Deficit Reduction Act of 2005, states generally cannot impose cost sharing on children in families with income below 150 percent of the federal poverty guidelines except in certain circumstances. In addition, even at more moderate-income levels, federal rules exempt some special services from any cost sharing requirements.

To create cost sharing requirements that differ from the Medicaid requirements, states can do so by submitting a waiver to and obtaining approval from the Centers for Medicare and Medicaid (CMS) or by creating a stand-alone SCHIP program.

For more information about cost sharing and SCHIP, please see the following CMS website:
http://www.cms.hhs.gov/MedicaidGenInfo/05_SCHIP%20Information.asp
(Scroll down to see the information under the heading "Cost Sharing.")

RE: Request for:

A) review and comments concerning Alaska Senate Bill 13 (attached), and
B) request for NCSL staff to testify at Senate HESS hearing concerning SB 13, Denali KidCare, Alaska SCHIP program February 9, 2009 at 1:30-3:00 pm (3:30-5:00 pm Mountain/Denver time). **Call in number is 888-295-4546**

Dear Ms. King,

Please read the attached **Alaska Senate Bill No. 13,** 26th Legislature, sponsored by Senator Bettye Davis, regarding **increasing income eligibility** under the Denali KidCare -State Children's Health Insurance Program (SCHIP) **to 200% Federal Poverty Guidelines (FPG)**. It was raised to 175% last year under SB 27, 25th Legislature.

Senator Davis, Chair, Senate HESS Committee (and Vice-Chair NCSL Health Committee) is considering an amendment at hearing to extend optional coverage to applicants over 200% FPG not to exceed 250% FPG with provisions of premiums or co-payments . You will note that there is no asset test in the bill.

Your comments in return e-mail to me as soon as possible before the hearing would be particularly helpful in the following areas:

1. Please let me know if other states are drafting similar bills, and if one or another state has particularly clear or comprehensive language to review, and
2. if asset tests, payments, and co-payments are common, and if other matters of eligibility other than income and household size under federal poverty guidelines are codified in statutes or are limited to and found in administrative codes, regulations, department or agency directives, and/or just in signed or unsworn applications for benefits.
3. Please provide an update, if possible, concerning the number of other states currently at or over 200% FPG, and the number of states over 300% FPG.
4. Please also comment regarding the SCHIP Bills running through Congress. An Associated Press Article appeared today, January 26, 2009, in the *Juneau Empire*, page A6, "Kids' health care bill angers Republicans" -because, among other things, there appears to be no income limit in the legislation, only reduced Medicaid reimbursement rates if states move higher than three times the federal poverty guidelines..

Please have NCSL staff call in to the hearing teleconference line on February 9, 2009 noted above at 888-295-4546 to testify and/or field questions.

Sincerely,

Thomas S. Obermeyer

Subject: Re: SB 13, Denali KidCare/SCHIP program - Senate HESS Hearing Feb 9, 2009 1:30-3:00 AK Time (3:30-5:00pm Mtn time)

Thomas,

Yes, the following Kaiser report indicates that 7 states have SCHIP eligibility levels below 200 percent of the federal poverty guidelines (FPG):
Challenges of Providing Health Coverage for Children and Parents in a Recession: A 50 State Update on Eligibility Rules, Enrollment and Renewal Procedures, and Cost-Sharing Practices in Medicaid and SCHIP in 2009
http://www.kff.org/medicaid/7855.cfm
(See page 10, Figure 1.)

The 7 states are:

Alaska	175 percent FPG
Idaho	185 percent FPG
Montana	175 percent FPG
Nebraska	185 percent FPG
North Dakota	150 percent FPG
Oklahoma	185 percent FPG*
Oregon	185 percent FPG

* Oklahoma passed legislation to increase the income eligibility guideline to 300 percent of the federal poverty line under its current section 1115 waiver. However, the currently proposed expansion has been scaled back to 217 percent of the federal poverty line and the future expansion of 218 percent to 300 percent of the federal poverty line is pending further CMS guidance and SCHIP reauthorization.

Would you still like for NCSL to participate by phone in the Senate HESS hearing concerning SB 13 on February 9, 2009?
If yes, what are you expecting from us (a presentation, or just being available to answer questions, etc.)?

Please feel free to contact me if you would like any additional information or if you have any additional questions.

Best regards,
Jennifer

GARA, WIELECHOWSKI, KAWASAKI AND BUCH CALL FOR AFFORDABLE, UNIVERSAL KIDS HEALTH COVERAGE.

FEDERAL LAW SIGNED THIS WEEK HELPS STATES EXPAND CHILDREN'S HEALTH PLANS

JUNEAU – Today legislators presented a plan to provide affordable medical care to every child in Alaska. The Democratic legislators' "No Child Left Uninsured" plan follows on the heels of the children's health care expansion President Obama signed this week. Under the enhanced federal plan, states can choose to extend low cost health coverage to their children.

"Denying low cost medical care to children who need it would be failure, not leadership," said Rep. Les Gara (D-Anchorage).

"This is a cost-effective way to provide needed medical care to children of working families," said Rep. Scott Kawasaki (D-Fbks.). Rep. Bob Buch of Anchorage is the third co-sponsor.

Alaska's children's health plan ranks second worst in the nation, and roughly 10,000 Alaska children of working families receive no private or public health coverage. Current Alaska law cuts off coverage to families that earn more than 175% of the federal poverty level, or roughly $30,000 for a single parent with one child. Alaska had a flagship state plan in the 1990's under Governor Tony Knowles.

"Private plans cost upwards of $3,000 - $4,000 or more for a child. That's a significant cost to parents. Roughly half of Alaska's small businesses aren't able to offer employer health insurance, leaving parents and children without medical coverage" said Gara.

In 2007, Rep. Gara and Sen. Bill Wielechowski (D-Anchorage) proposed similar legislation. The new federal law that passed this week will enable states to provide universal children's health coverage at a low cost to families, and to the state.

Under the new federal law, Alaska will qualify for federal funding that would cover 60-70 percent of the cost of this insurance. No Child Left Uninsured:

- provides no-cost coverage for families that earn up to 200% of the poverty level ($34,000/year for a single parent with one child);

- allows families to purchase this health coverage at higher incomes up to 350% of the poverty level.

- Higher income families would be charged the full state cost of the plan.

"The Anchorage Neighborhood Health Center supports expansion of Denali KidCare that allows more parents the peace of mind in knowing they can access quality health care when they need it," said Joan L. Fisher, Executive Director of Anchorage Neighborhood Health Center.

"American Academy of Pediatrics supports this effort to help working families. Maximizing the health of children is the basis for success in school and an active lifestyle," said Dr. Jody Butto, a prominent Anchorage pediatrician.

For more information, contact Representative Gara (465-2647) or Scott Kawasaki (465-3466).

STATE HEALTH POLICY

STATE HEALTH POLICY BRIEFING PROVIDES AN OVERVIEW AND ANALYSIS OF EMERGING ISSUES AND DEVELOPMENTS IN STATE HEALTH POLICY.

With Congress debating the reauthorization of the State Children's Health Insurance Program (SCHIP), this *State Health Policy Briefing* seeks to inform the federal legislators and other policymakers working on reauthorizing legislation, as well as others who are concerned about the program's future, about the views of state SCHIP program directors. The brief, first published in April 2007, has been updated and is being re-issued to address changes in the policy landscape that have occurred since that time. The brief was developed by the National Academy for State Health Policy (NASHP) through a workgroup of state SCHIP directors, and was reviewed by all directors. NASHP's work with SCHIP directors, including the development of this brief, is made possible through the generous support of the David and Lucile Packard Foundation as part of broader efforts to provide assistance and report on state SCHIP programs since the program's inception.

NATIONAL ACADEMY *for* STATE HEALTH POLICY

Briefing

A PUBLICATION OF THE NATIONAL ACADEMY FOR STATE HEALTH POLICY

JANUARY 2009

REAUTHORIZING SCHIP: Principles, Issues And Ideas From State Directors

Updated January 2009

The State Children's Health Insurance Program (SCHIP) deservedly enjoys broad support as a successful program. That success rests on a legislative foundation enacted as a result of careful bi-partisan compromise. Title XXI of the Social Security Act established a federal-state partnership program with a delicate balance of state flexibility and core program requirements. SCHIP was created with the goal to provide health coverage for low-income uninsured children. This essential program, now serving over seven million annually, is again up for reauthorization this year.

Reauthorizing SCHIP, first published in April 2007, was developed to inform federal policymakers then working on legislation to renew SCHIP, as well as others concerned with the program's future, about the views of state SCHIP directors. The April 2007 brief built upon the 2005 report *"Perspectives on Reauthorization: SCHIP Directors Weigh In."* The present publication updates the April 2007 brief primarily to address changes in the policy landscape that have occurred since that time. These reports have been developed by the National Academy for State Health Policy (NASHP) in conjunction with state SCHIP directors through the generous support of the David and Lucile Packard Foundation as part of broader efforts to provide assistance and report on state SCHIP programs since the program's inception.

This document describes the views of SCHIP directors on key issues at stake in the reauthorization process. The April 2007 brief was the product of a workgroup of 15 states

3189

representing varying SCHIP program types from across the country, convened by NASHP to identify important issues, review information and recommendations from other key stakeholders, and discuss commonly held as well as differing views. The group met by phone and communicated electronically from January through March 2007. The results of the workgroup discussions were summarized in a draft brief, shared with all SCHIP programs across the country, and discussed at a March 2007 meeting attended by the majority of state programs. The April 2007 brief was finalized based on this meeting.

With SCHIP reauthorization delayed but now again on the horizon, NASHP reconvened the original workgroup in September 2008. Members of the workgroup reviewed the April 2007 brief to recommend updates. The workgroup's recommendations were discussed with all SCHIP directors attending the Annual Preconference Meeting for SCHIP directors held by NASHP in October 2008. Final revisions were subsequently recommended by the workgroup and sent to all SCHIP directors for feedback in December 2008. This revised edition of *Reauthorizing SCHIP* is the result. This updated brief reflects added emphasis on a few issues raised in the April 2007 brief as well as a small number of new issues that have surfaced since that time. These revisions address changes in federal policy after the April 2007 brief was published. While the brief does not capture all of the views of all of the states on all issues relevant to reauthorization, it does represent the views of most state SCHIP directors on issues of priority concern to them.

1. SCHIP FUNDING SHOULD BE RENEWED AND INCREASED SUBSTANTIALLY TO PROVIDE SUFFICIENT AND PREDICTABLE FUNDS FOR STATES TO EFFECTIVELY MANAGE PROGRAMS AND REDUCE THE NUMBER OF UNINSURED.

States responded to federal options in implementing programs to address state objectives. State SCHIP programs now cover over 7 million individuals annually. Most enrollees are children. But some states also provide coverage to pregnant women and parents, and a number have provided coverage to childless adults. (The Deficit Reduction of Act of 2005, however, mandated that coverage of childless adults be phased out, and the Centers for Medicare and Medicaid Services (CMS) no longer approves waivers for such coverage.) Over the past decade, states have used the flexibility afforded them to cover these individuals through different pathways and on different timetables. The structure of SCHIP – including the statutory redistribution mechanism and other federal policies, such as federal encouragement to use and approval of waivers to cover more of the uninsured – strongly influenced the decisions states made. States successfully utilized the flexibility inherent in SCHIP to initiate and build programs in ways that fit the needs of their states' children and families – both when states started up their programs and as their needs changed over time. The result today is a successful program nationwide, which reflects the diversity of state responses to federal policies and to their own residents' needs and circumstances.

State SCHIP programs have evolved to fit with the economies, health care systems, values, politics, and fiscal capacities of their states. Most states have been able to raise income eligibility for children up to at least 200 percent of the federal poverty level (FPL), although many eligible children in these states remain unenrolled. Six states, most of which are spending all of their allotted funds, have not yet been able to set eligibility levels high enough to reach children with family incomes up to that level. Over one-third of all states reach uninsured children in families with income over 200 percent FPL, or have covered parents or pregnant women with the intent of improving child coverage and health. State directors share a common vision and many common goals for coverage, access to quality care, and improved health for children and, ultimately, for everyone, but states are at different points along a number of possible pathways to achieving that vision.

Future funding needs to be substantially increased over the course of the next five years. SCHIP directors are united in concluding that SCHIP is a successful program that should be renewed with substantial additional funding that allows the program to grow and meet more of the need in the nation for health insurance coverage. The highest federal annual allotment provided in past years will not support the program today. Future funding levels need to be increased substantially to account for state success over the past decade in covering increasing numbers of children for whom private insurance is either unavailable or unaffordable and in enrolling greater proportions of those who already are eligible but not enrolled.

State directors also strongly agree that funding should be stable and predictable in order to allow them to adequately plan for program maintenance and growth. Annual appropria-

3190

tions provided many states with more funds than they could spend in the early start up years, and insufficient funds later on as their programs expanded and matured. This funding structure, coupled with the different starting points and pacing of states in developing their programs, led some states to rely on redistributed funding, and more recently, short term federal relief for states experiencing shortfalls. The redistribution system provided little advance notice of amounts that would be available and just one year to spend the redistributed funds, making it very hard for states to plan and manage their programs effectively. The uncertainty surrounding SCHIP reauthorization in 2007, and the ultimate year-end action that provided a short-term extension of the program through March 31, 2009, rendered state planning and management of SCHIP in 2008 and 2009, much less future years, extremely difficult. Without stability in federal funding, states simply are more reluctant to conduct outreach or make program improvements requiring longer-term investment.

Predictability, stability, and growth over time are critical for effective program management. SCHIP directors believe that the total SCHIP appropriation should increase steadily over a five-year authorization period, taking into account population growth and cost increases, including health care cost inflation.

The funding structure needs to be reconsidered. There is fairly broad agreement among state SCHIP directors that the funding formula needs to be revisited. In particular, directors are concerned that use of the number of uninsured children within the current formula can penalize states for being effective in enrolling more children. Collectively, SCHIP directors have identified a number of factors which federal policymakers might consider for inclusion in a revised formula. These potential formula factors include enrollment levels, eligible but unenrolled populations, regional differences in cost of living, and state coverage levels for children at the time of SCHIP enactment. Directors also have concerns about the use of Current Population Survey data in the formula, as these data are often inconsistent with data that many states collect. State directors urge careful analysis and consultation with states in consideration of any alternative funding formulas and data sources.

State SCHIP directors' views vary on the extent to which and how funding should be structured in covering targeted low-income children, other children needing health insurance, pregnant women (whose coverage can improve child health outcomes), parents (whose coverage can boost rates of children's enrollment), or others. As noted previously, six states have not been able to set program eligibility as high as the target level of 200 percent of FPL, while many other states have been able to reach uninsured children above that level, and a number of states do or have covered parents or pregnant women. This variation again reflects the differing circumstances of states at the time of SCHIP enactment and over time, as well as prior federal encouragement and approval for covering parents, pregnant women, and others.

2. SCHIP AND MEDICAID PLAY VITAL, COMPLEMENTARY ROLES IN COVERING CHILDREN AND ADOLESCENTS, AND EACH PROGRAM NEEDS TO BE MAINTAINED AND STRENGTHENED.

SCHIP and Medicaid work in tandem. SCHIP was designed to build on Medicaid, to support states in covering uninsured children not eligible for Medicaid when SCHIP was enacted. States had the choice to implement SCHIP through a Medicaid expansion, a separate program that could work in conjunction with Medicaid to cover more uninsured children, or through a combination of both approaches. In 2005, approximately 29 million children were covered through Medicaid funding and 6.1 million children through SCHIP.

As the nation and states focused attention over the past decade on enrolling children eligible for SCHIP, policy and systems improvements were made in both Medicaid and SCHIP. As of January 2008, for example, almost all states (46) had eliminated the asset test and in-person interviews for children's eligibility in both programs. As more states have implemented separate programs, they also have worked to improve the coordination between Medicaid and SCHIP. As of January 2008, for example, the vast majority of states with a separate SCHIP program (31 of 39) used the same application for both Medicaid and SCHIP. Other common strategies to promote coordination between the two programs include: aligning eligibility criteria and employing the same staff to determine eligibility for both programs; expanding the locations at which, and technologies through which, families can apply for coverage; developing administrative verification capability; and adopting presumptive eligibility. State efforts to simplify eligibility and streamline the application process have been critical to improving enrollment in both programs.

3191

There should be greater consistency and more options for SCHIP and Medicaid eligibility. SCHIP's successes have been built on the shoulders of the Medicaid program, and SCHIP has driven system improvements in both programs. State directors need continued flexibility to use and combine Medicaid and separate program approaches and to make the interface between them work smoothly for children and families.

State directors see elimination of inconsistent and inequitable federal eligibility rules as important to states and families. Currently, states cannot enroll uninsured children whose parents are state employees in their separate SCHIP programs, although they can enroll such children in Medicaid and they can enroll children of federal employees in both programs. States would like the eligibility rules for separate SCHIP programs aligned with those of Medicaid expansion programs to allow for consistent and equitable treatment of children of state and federal employees.

States also would like the option to cover all legal resident children. The federal welfare reform law barred coverage of such children for the first five years of their residency. Some states cover these children with state funds; other states do not. Including these children as an optional group would enable more states to cover them and promote better health for all children.

Additional flexibilities are needed to enroll or retain specific groups of children who are eligible for Medicaid, in order to make the two programs as seamless as possible for families. Fluctuations in family income mean that children frequently move between the two programs. Policies and procedures to avoid or diminish breaks in coverage are essential to ensuring that children and families maintain access to critical preventive and treatment services, and directors would like increased flexibility to ensure continuity of coverage for children whose family incomes change.

States also would like the option to give families who have children eligible for both programs the choice to enroll all children in a family in one program – either Medicaid or SCHIP – in order to keep the children together in one plan and reduce the burdens on parents. Since states get a higher federal matching rate for children enrolled in SCHIP, state directors propose that they receive the lower Medicaid match for children who are Medicaid-eligible but opt for enrollment in SCHIP. This would eliminate any financial incentive that states might have to encourage families to choose SCHIP over Medicaid. Finally, some states have raised the possibility of having the option to cover youth up to age 21 with SCHIP funds, something that is permitted under Medicaid.

States which expand Medicaid coverage of children should have the option to use SCHIP funds or their regular Medicaid matching rate and funds. States have the option to draw down federal funds from their SCHIP allotment by expanding coverage of children under their Medicaid program or by establishing a separate program. Due to limited SCHIP funds, some states have sought to expand coverage to children under Medicaid and claim regular Medicaid federal funding at their regular federal match, thereby leaving more SCHIP funds available to cover children at incomes higher than the Medicaid levels. The Centers for Medicare and Medicaid Services (CMS), however, recently has interpreted the statute to require that states which expand Medicaid coverage of children above the level covered as of June 1997 (when SCHIP was passed), must draw down funds for such children from their SCHIP allotment. This interpretation has limited these states' ability to cover greater numbers of uninsured children. SCHIP directors believe that CMS' interpretation is inconsistent with the purpose of the program, and states should have the option to use either federal Medicaid or SCHIP funding streams in order to make most effective use of both programs in covering uninsured children.

3. THE PROGRESS THAT STATES HAVE ACHIEVED IN SIMPLIFYING ENROLLMENT FOR CHILDREN AND FAMILIES SHOULD BE SUPPORTED AND NOT HAMPERED BY FEDERAL PROGRAM REQUIREMENTS.

Simplification is a state success story. Some of the greatest state success stories in SCHIP are about the simplifications in enrollment and renewal processes for families. As noted, nearly all states have eliminated the asset test and in-person interview requirement. Over two-thirds of all states allow mail-in applications for children, and increasing numbers accept faxed applications, take applications over the phone, or are developing electronic applications and administrative verification. The majority allow families to apply at provider locations, and a growing number permit providers and other qualified entities to determine whether children are presumptively eligible for coverage, pending a complete review by the state. Most programs also have lengthened the period between renewals to the least frequent (12 months) permitted under federal law,

3192

thereby reducing the likelihood that children will lose coverage for failing to complete required paperwork.

New documentation requirements for citizens threaten to reverse this enrollment progress. Provisions in the Deficit Reduction Act (DRA) of 2005 require citizens to prove their identity and citizenship in order to obtain Medicaid. The regulations implementing this law include the need to present original (not photocopied) documents, a provision that particularly undermines the effectiveness of mail-in applications and the elimination of the in-person interview. In many states, the new requirements have resulted in major delays, and some states have documented a significant decline in enrollment in public coverage.

These rules directly affect SCHIP Medicaid expansion programs, which must follow federal Medicaid policy. But they also have a major impact on separate SCHIP programs. As noted earlier, most states with separate programs have one application form for both SCHIP and Medicaid. This means that any new requirements attached to Medicaid affect the application process for SCHIP-eligible children, unless the state reverses progress and develops separate applications for each program. In addition, SCHIP programs must refer children potentially eligible for Medicaid to that program, so that these children are affected. Most SCHIP directors believe the citizenship documentation requirements should be rescinded or modified substantially, and should not be applied to separate SCHIP programs.

States need tools to carry out essential outreach, enrollment, and retention activities. State experience has shown that outreach, enrollment, and retention activities are integral to effective program management in achieving the goal of insuring children. Ongoing attention to these functions is critical, as the need to reach, enroll, and retain children and families is continual. Families move in and out of state; they change jobs; their incomes fluctuate; and their access to employer sponsored insurance changes. To ensure effective ongoing strategies, state programs need access to funding, research, and best practices. To effectively manage their programs within capped funding, states need the flexibility to determine when outreach should be increased, and when slowed down. While it should not come at the expense of funding for coverage, funding for outreach is critical. For this reason, state SCHIP directors recommend that outreach funding not be subject to the current 10 percent administrative cap.

Additionally, the directors seek flexibility to implement "express lane" or "auto enrollment" systems that allow enrollment in or income determinations from certain other public programs to count as proof of eligibility for SCHIP. If accompanied by assurances that such "deeming" will not be disallowed in federal audits, such a streamlined approach holds great promise for improving enrollment and retention.

State flexibility in specific areas of program design has been an important component of SCHIP's success and should be supported and enhanced.

4. STATE FLEXIBILITY WAS PART OF SCHIP'S DESIGN AND HAS CONTRIBUTED TO ITS WIDE BASE OF SUPPORT.

The state flexibility that was an integral part of the SCHIP program's design has been key to its success. States have tailored marketing, enrollment, benefits, service delivery systems and other key features of their programs to the circumstances and culture of their states. This state tailoring has led to broad based support at the state and national levels. State directors believe maintaining such flexibility is vital to the continued support and success of SCHIP.

More flexibility to coordinate with private coverage could meet more of children's needs. State SCHIP directors are very concerned with the erosion in employer-based coverage, as well as market trends toward limited-benefit health insurance products that may not address children's needs for preventive developmental services. Additionally, directors are keenly aware of substantial unmet service needs, particularly in the areas of oral health and mental health benefits. The directors would like to have more options to help families keep children and youth enrolled in the private market and have critical health needs met.

One option is providing assistance to families in paying private coverage premiums. While the SCHIP law does allow states to provide such premium assistance, numerous programmatic and administrative requirements make it very difficult to operate a successful and cost-effective program. In 2005, most of the states which had premium assistance programs paid for by SCHIP funds did so through federal waivers; no separate state SCHIP program operated a premium assistance program under a state plan.

3193

States also would like the option to provide benefits that often are not covered for children enrolled in private plans. This could be accomplished by amending the definition of "targeted low income child" to include children with creditable but less-than-comprehensive coverage, or by allowing states to offer supplemental benefits for children with private coverage that does not include important services, such as dental, mental health, vision, hearing, or prescription drugs. Another option would be to allow states to offer supplemental benefits as a health services initiative, but as a category that is exempt from the 10 percent cap.

Flexibility to set income standards and methodologies appropriate for state circumstances should be maintained. When the federal legislation authorizing SCHIP was first enacted, only eight states provided coverage for children above the levels mandated under Medicaid (133 percent FPL for children under age 6; 100 percent FPL for children ages 6 – 18). Today, all but six states provide coverage for children in families with income up to 200 percent FPL, and over one-third of all states provide coverage at incomes above that level. The varying eligibility levels reflect variations in family income, cost of living, and health care costs across states. As experience with SCHIP has matured and the cost of health insurance has risen, states are finding that private group and individual health insurance coverage is unavailable or unaffordable even for many more moderate-income families. States also are finding that covering children at higher income levels is proving to be an effective strategy to reach eligible but unenrolled children at lower income levels.

Policies announced by CMS during 2007 and 2008, including the August 17, 2007 directive addressing substitution of public for private coverage, have created significant roadblocks to state efforts to ensure that more uninsured children have access to affordable coverage. While SCHIP directors agree that preventing substitution of coverage is a worthwhile goal, the anti-crowd out measures imposed by the August 17 directive are not grounded in an evidentiary base and were not developed in consultation with states. Most SCHIP directors believe that the August 17 directive should be rescinded; that state flexibility to adopt income standards and methods that best fit state circumstances and achieve federal program purposes should be maintained; and that states and the federal government should work together to examine and develop effective strategies for reducing crowd out of private coverage as public coverage is expanded.

5. STATES SHOULD BE SUPPORTED IN THEIR EFFORTS TO IMPROVE PROGRAM PERFORMANCE AND PROMOTE ACCESS TO QUALITY CARE.

The federal-state partnership is the foundation for program improvement. States are committed to effective program management and accountability, operating within the capped funding and program flexibility of SCHIP. The SCHIP statute provides a good framework for state reporting, and states worked cooperatively with the federal government to develop a standard reporting format which has been improved over time. States also worked with the federal government to develop core performance measures to be reported on a voluntary basis. While standard performance measures raise challenging technical and resource issues, within two years a majority of states were reporting on all four core measures. Beginning in FY 2006, states also now report on quality improvement initiatives.

States are implementing quality improvement strategies tailored to their states' systems. States also have implemented various policies to ensure that program participants have access to quality care. These strategies differ by state, and by delivery system: managed care, Primary Care Case Management (PCCM)-based, and fee-for-service. Most SCHIP programs that deliver services through managed care systems consider factors related to access and quality when selecting contractors; have contract provisions, including cultural and linguistic requirements that promote access to quality care; and monitor contractor performance to ensure that program expectations are met. Many of these programs also use program performance data to help participants make a choice of health plans, produce public reports on health plan performance, and conduct quality improvement projects. PCCM-based programs use various reimbursement and provider requirements strategies to promote access. To ensure quality, programs with PCCM-based systems may conduct enrollee surveys to assess access and quality. States with fee-for-service based systems have adopted a variety of strategies to improve quality as well – e.g., surveying participants to gather information about access and quality and promoting medical homes.

Federal oversight is overly focused on payment errors, draining state resources. Recent new federal requirements under the Payment Error Rate Measurement (PERM) system have directed limited administrative resources and state focus toward measuring errors. State directors believe that program

3194

accountability should continue to focus on performance in reaching and enrolling eligibles, reducing numbers of uninsured, and improving access and outcomes, and not disproportionately on the burdensome and bureaucratic federal payment error measurement system.

PERM has not been implemented through a federal-state partnership approach. Methods were not developed in consultation with SCHIP directors, and have been implemented with little advance notice or technical assistance. As currently structured, PERM represents a significant administrative burden on state SCHIP programs, which is further exacerbated in the current fiscal climate. States have received conflicting and confusing guidance from the Centers for Medicare and Medicaid Services (CMS) and its Regional Offices. Auditors often are unfamiliar with program rules and policies established for SCHIP programs. Definitions of errors often are inconsistent with, and threaten to undermine, progress made in simplifying the program. The rules also do not provide adequate adjustment for services provided in a capitated versus a fee-for-service environment.

SCHIP directors believe that in implementing PERM, CMS has used a bureaucratic hammer in an area where significant problems have not been documented, and implementation has been burdensome and expensive. In the case of SCHIP, which has an administrative cost cap, the resources that must be devoted to PERM audits take away from administrative efforts in outreach, enrollment, quality measurement, and improvement. The costs of PERM audits should be 100 percent federally-funded and outside the 10 percent administrative cap. PERM reviews also should be temporarily suspended and CMS should be required to revisit the PERM implementation requirements, in consultation with state SCHIP directors, and to issue clear, uniform guidance to all states. The different incentives in capitated versus fee-for-service environments should be taken into account in the guidance. CMS also should be prohibited from requiring a uniform sampling platform, as has been required. States included in the 2007 or 2008 reviews should not be penalized for high error rates found as a result of a faulty PERM review process.

States want assistance to strengthen measurement and improve performance and quality. State directors found the federal technical assistance for SCHIP performance measurement that was provided for several years to be very important in helping states develop and improve reporting of core performance measures. Technical assistance, which was discontinued, should be reinstated; the federal-state partnership for performance measurement needs to be renewed. The directors also believe the federal government should strengthen leadership and resources for working in partnership with states to review and develop optional new child health quality measures. These measures should be relevant to and used not only by SCHIP, but also by Medicaid and other programs which fund or provide health services for children. Currently, standard measures are not available, and federal agencies do not have a well-funded or coordinated effort in place to develop them. State SCHIP directors are ready and interested in working with other state and federal partners and experts to develop strategies to improve measurement of child health care quality.

CONCLUSION

State SCHIP directors are committed to working with federal and state policymakers, the private sector, advocates, and other key stakeholders to promote successful reauthorization of the SCHIP program. SCHIP has been resoundingly successful over the past decade in providing coverage to uninsured children, and reauthorization that provides sufficient, stable, and predictable funding and retains and expands the kinds of flexibility that have contributed to SCHIP's success is essential. For more information about state SCHIP programs, go to www.chipcentral.org, or call NASHP at 202-903-0101.

NATIONAL ACADEMY for STATE HEALTH POLICY

The National Academy for State Health Policy (NASHP) is an independent academy of state health policy makers working together to identify emerging issues, develop policy solutions, and improve state health policy and practice. As a non-profit, nonpartisan organization dedicated to helping states achieve excellence in health policy and practice, NASHP provides a forum on critical health issues across branches and agencies of state government. NASHP resources are available at: www.nashp.org.

Subject: State Children's Health Insurance Program (SCHIP)

Thomas,

I have compiled some information regarding your questions about the State Children's Health Insurance Program and have included additional resources. At the end of this document, you will find summaries of enacted state legislation that you may find helpful. Please feel free to contact me if you would like any additional information or if you have any additional questions.

Best regards,
Jennifer

---

1. Please let me know if other states are drafting similar bills, and if one or another state has particularly clear or comprehensive language to review.

At least one other state has introduced legislation (as of January 27, 2009) to increase SCHIP eligibility.

North Dakota
2009 Senate Bill 2362
http://www.legis.nd.gov/assembly/61-2009/bill-text/JAVD0300.pdf
Directs the Department of Human Services to establish a buy-in program through which a parent/guardian whose family net income exceeds 250 percent of the federal poverty guidelines

may purchase, on a sliding income scale, a plan of coverage for a child who is uninsured. The bill also would increase the net income eligibility from 150 percent to 250 percent of the federal poverty guidelines. In addition, the bill would direct the Department of Health to seek a federal waiver to increase the income eligibility level to 350 percent of the federal poverty guidelines.
The bill also would establish the children's health insurance program advisory committee.

In previous sessions, many other states have also increased eligibility levels. Please see the list of state examples at the end of this document for the links to such legislation.
In addition, you may also view this information on NCSL's Children's Health Reform webpage: http://www.ncsl.org/programs/health/kidsins.htm

2. Are asset tests, payments, and co-payments common, and are other matters of eligibility other than income and household size under federal poverty guidelines codified in statutes or are limited to and found in administrative codes, regulations, department or agency directives, and/or just in signed or unsworn applications for benefits? Are other states allowing payments of premiums or co-payments by those seeking income eligibility over 200% and not over 250% FPG?

As of January 2009, 46 states and the District of Columbia do not require an asset test for children's health coverage.

- See also Kaiser State Health Facts:
  http://www.statehealthfacts.org/comparetable.jsp?ind=228&cat=4

Under provisions of the Deficit Reduction Act of 2005, states generally cannot impose cost sharing on children in families with income below 150 percent of the federal poverty guidelines except in certain circumstances. In addition, even at more moderate-income levels, federal rules exempt some special services from any cost sharing requirements. SCHIP programs that are Medicaid expansions are subject to the same cost sharing rules as Medicaid, but states with separate stand-alone SCHIP programs have more flexibility in imposing cost sharing.

Ten states— Alabama, Arizona, California, Delaware, Florida, Georgia, Idaho, Nevada, Tennessee, and Utah—impose premiums on children in families with income below 150 percent of the federal poverty guidelines, and they can do so because they operate separate SCHIP programs or because they have a federal waiver to do so for their Medicaid population. As of January 2008, 26 states charge premiums at an income level over 150 percent of the federal

poverty guidelines, 29 states at 200 percent of the federal poverty guidelines and 19 states at 201 percent of the federal poverty guidelines.

  http://www.cbpp.org/5-31-05health2.pdf
  Center on Budget and Policy Priorities, July 7, 2005.

Please see the state examples at the end of this document for links to legislation that define cost-sharing requirements. Additional state examples can be found on NCSL's Children's Health Reform webpage: http://www.ncsl.org/programs/health/kidsins.htm

At least one state, **Colorado**, has cost sharing requirements, but does not specify the cost sharing structure in statute. Instead, the act directs the Colorado Health Department to design and implement a structure of premiums and co-payments. In addition, at least two states—**Louisiana and Washington**—specifically require cost sharing between 200 percent and 250 percent of the federal poverty guidelines.

3. Please provide an update, if possible, concerning the number of other states currently at or over 200% FPG, and the number of states over 300% FPG.

The following summary describes the SCHIP eligibility guidelines that states have enacted through legislation. However, these eligibility guidelines may not be implemented in all states.

As of January 1, 2009, five states—Alaska, Idaho, Nebraska, North Dakota and Oregon—have enacted eligibility levels for children below 200 percent of the federal poverty guidelines. Forty-

five states and the District of Columbia have enacted eligibility levels for children with a family income of 200 percent of the federal poverty guidelines or greater. Sixteen states have enacted eligibility levels for children at 200 percent of the federal poverty guidelines. Twenty-six states and the District of Columbia have enacted eligibility levels between 200 and 300 percent of the federal poverty guidelines. Three states—Massachusetts, New Jersey and New York—have enacted eligibility levels above 300 percent of the federal poverty guidelines.

These eligibility levels may not be implemented in all states due to a variety of reasons; for example, the legislation may specify an effective date that is in the future, or the state plan amendment has been denied or is under review by the Centers for Medicaid and Medicare Services. For example, in Colorado, the enacted expansion of SCHIP eligibility to 225 percent of the federal poverty guidelines is anticipated to be implemented in July 2009, but this may be delayed due to the state's budget shortfall.

For more information:

- Eligibility Levels in Medicaid & SCHIP for Children, by State as of January 1, 2009
  Center for Children and Families at Georgetown University Health Policy Institute
  http://ccf.georgetown.edu/index/cms-filesystem-action?file=statistics/eligibility expansions by state.pdf

In addition, some states effectively cover children whose family incomes are above the established eligibility limit of the state's SCHIP program by using income disregards. When determining eligibility, these states do not count certain portions of earnings from a working family's income (e.g., such as earnings used to cover the cost of child care). As of January 2008, SCHIP eligibility levels in 22 states and the District of Columbia are effectively greater than 250 percent of the federal poverty guidelines, and in 16 states eligibility levels are effectively between 200 percent and 250 percent of the guidelines. Six states have set eligibility levels at 200 percent of the federal poverty guidelines, and six are below 200 percent of the federal poverty guidelines.

4. Please also comment regarding the SCHIP Bills running through Congress. An Associated Press Article appeared today, January 26, 2009, in the *Juneau Empire*, page A6, "Kids' health care bill angers Republicans" -because, among other things, there appears to be no income limit in the legislation, only reduced Medicaid reimbursement rates if states move higher than three times the federal poverty guidelines.

For more information about the SCHIP Reauthorizations bills before Congress, please visit the following NCSL webpage:
http://www.ncsl.org/statefed/health/SCHIPreauth.htm

House Majority Leader Hoyer has stated the House will accept the Senate version of the SCHIP reauthorization bill next week, clearing the bill for President Obama's signature.

If you have additional questions about this federal legislation, please contact the following NCSL staff:

Joy Johnson Wilson, Health Policy Director at 202-624-8689 or joy.wilson@ncsl.org or Rachel Morgan RN, BSN, Senior Health Policy Specialist at 202-624-3569 or rachel.morgan@ncsl.org.

State Examples of Enacted Legislation

For more information about these states, please visit NCSL's Children's Health Reform webpage at:
http://www.ncsl.org/programs/health/kidsins.htm

Colorado

2008 Senate Bill 160
http://www.leg.state.co.us/clics/clics2008a/csl.nsf/fsbillcont3/EE9D222D73A97EF68725736300812716?open&file=160_enr.pdf
Increases SCHIP eligibility from 205 percent of the federal poverty guidelines to 225 percent of the federal poverty guidelines; the law allows that if funding is available, the eligibility level can be raised to 250 percent of the federal poverty guidelines. In addition the law stipulates that it is among the duties of the Health Department to design and implement a structure of premiums and co-payments.

Connecticut
2007 Senate Bill 1484
http://www.cga.ct.gov/2007/ACT/Pa/pdf/2007PA-00185-R00SB-01484-PA.pdf
Increased the HUSKY (SCHIP) program eligibility level from 300 percent federal poverty level to 400 percent federal poverty level.

District of Columbia
Fiscal Year 2007 Budget Support Act of 2006
http://www.dccouncil.washington.dc.us/images/00001/20060727152635.pdf
Expands Medicaid/SCHIP eligibility to 300 percent federal poverty guidelines. CMS approved the expansion in March and the expansion was implemented starting in June 2007.

Indiana
2008 House Bill 1678
http://www.in.gov/legislative/bills/2007/HE/HE1678.1.html
Increases SCHIP eligibility for children in families with incomes up to 300 percent federal poverty level. In May 2008, CMS approved the expansion of eligibility to only 250 percent federal poverty level. The expansion to increase eligibility to 250 percent of the federal poverty level was implemented beginning October 1, 2008.

Iowa
2008 House File 2539
http://coolice.legis.state.ia.us/Cool-ICE/default.asp?category=billinfo&service=billbook&GA=82&hbill=HF2539
Increases SCHIP eligibility from 200 percent of the federal poverty guidelines to 300 percent of the federal poverty guidelines. Establishes cost sharing guidelines for children whose family income is 150 percent to 200 percent of the federal poverty guidelines; and for families with incomes between 200 and 300 percent of the federal poverty guidelines. The expansion is expected to be effective as of July 1, 2009.

Kansas
2008 Senate Bill 81
http://www.kslegislature.org/bills/2008/81.pdf

Increases SCHIP eligibility from 200 percent of the federal poverty level to 225 percent of the federal poverty guidelines in 2009 and, finally, to 250 percent of the federal poverty guidelines in 2010, subject to appropriations. The law establishes cost sharing provisions on a sliding scale basis

Louisiana
2007 House Bill 542
http://www.dhh.louisiana.gov/offices/miscdocs/docs-119/Act407.pdf
Created the Louisiana Children and Youth Health Insurance Program, expanding Louisiana's SCHIP program, LaCHIP. The act aims to expand eligibility to children in families with incomes up to 300 percent federal poverty level from the former eligibility threshold of 200 percent federal poverty level. A request for approval of the plan was submitted to CMS in September 2007. In February 2008, CMS approved the expansion of eligibility to only 250 percent federal poverty level. The coverage under this expansion will be provided through the State Group Benefits program, which also provides insurance to state government employees. Families will contribute premiums (approximately $50), co-payments and deductibles.

Montana
2007 Senate Bill 22
http://data.opi.mt.gov/bills/2007/billpdf/SB0022.pdf
Increased the SCHIP eligibility level for children in families with income up to 175 percent of federal poverty guidelines--from the current level of 150 percent--provided there is funding available.

New York
2007 Senate Bill 2108
The state budget included an SCHIP eligibility level increase from 250 percent of the federal poverty guidelines up to 400 percent of the federal poverty guidelines and allowed families with incomes above 400 percent to buy-in to the program for their children. Due to the August 17 directive, CMS denied New York's request for this expansion.
http://www.cms.hhs.gov/LowCostHealthInsFamChild/downloads/NYCurrentFactsheet.pdf
2008 Senate Bill 6808
The 2009 budget was enacted and appropriated state funds for the implementation of the expansion of the Child Health Plus program to 400 percent of the federal poverty guidelines. This expansion was implemented beginning September 1, 2008.

Pennsylvania
2006 Senate Bill 1192
http://www.legis.state.pa.us/CFDOCS/Legis/PN/Public/btCheck.cfm?txtType=HTM&sessYr=2005&sessInd=0&billBody=S&billTyp=B&billNbr=1192&pn=1734
Expanded CHIP coverage from 200 percent of the federal poverty guidelines to 300 percent of the federal poverty guidelines with premiums based on a sliding income scale, ranging from $36

to $57 per child per month. The expansion was approved by CMS in February and the program began implementation in March 2007.

South Carolina
2007 House Bill 3620
http://www.scstatehouse.gov/sess117_2007-2008/appropriations2007/tap1b.htm
A provision in the 2007-2008 budget passed the state legislature and creates a separate State Children's Health Insurance Program, Healthy Connections Kids, that expands eligibility to children with family incomes up to 200 percent of the federal poverty level. This provision was vetoed by the Governor, but the legislature overrode the veto.

West Virginia
2006 House Bill 4021
http://www.legis.state.wv.us/Bill_Text_HTML/2006_SESSIONS/RS/BILLS/HB4021%20ENR.htm
Expanded SCHIP eligibility up to 300 percent of the federal poverty guidelines. In January 2007, the state began enrolling children with incomes up to 220 percent of the federal poverty level. Families with income between 200 and 220 percent of the federal poverty level will be required to pay premiums based on a two-tier system. Families with one child will pay a monthly premium of $35 and families with two children or more will pay $71 per month. Due to the failure of SCHIP reauthorization, the expansion to 300 percent of the federal poverty level was delayed.
http://www.kaisernetwork.org/Daily_reports/print_report.cfm?DR_ID=38314&dr_cat=3
An expansion from 220 percent to 250 percent of the federal poverty guidelines went into effect January 1, 2009.
http://www.wvchip.org/chipnotes.shtml

Wisconsin
2007 Senate Bill 40
http://www.legis.state.wi.us/2007/data/SB-40.pdf
Expands SCHIP eligibility to families with incomes up to 300 percent of the federal poverty guidelines. Due to the August 2007 CMS directive, state-only funds will be used to finance coverage for children with family incomes between 250 and 300 percent of the federal poverty guidelines. Under the BadgerCare Plus program, Wisconsin's SCHIP program, families with annual incomes between 200 percent and 300 percent of the federal poverty level are eligible for health coverage for their children and will be required to pay premiums (approximately $10 to $90.74 per month).

http://www.akdemocrats.org

Senator Bettye Davis

SB 13 "An Act relating to eligibility requirements for medical assistance for certain children and pregnant women; and providing for an effective date."

Sponsor Statement

SB 13 increases the qualifying income eligibility standard for the Denali KidCare Program to 200% of the Federal Poverty Line (FPL) and makes health insurance accessible to an estimated 1300 more uninsured children and 225 pregnant women in Alaska. Denali KidCare is an "enhanced" reimbursement program with up to 70% matching funds under the federal government's State Children's Health Insurance Program (SCHIP), which was created in 1997. Congress reauthorized the SCHIP program for five years and President Obama just signed into law on February 4, 2009 with expanded coverage for 4 million more children.

Increasing Alaska Denali KidCare to 200% FPL only funds it to the level at which it was established 10 years ago. Consider the following information from the Kaiser Commission on Medicaid and the Uninsured, January, 2009:

- 44 states, including D.C., cover children in families with incomes at 200% FPL or higher.
- 33 states cover children in families with income between 200% and 250% FPL.
- 19 states including D.C., cover children in families with income at 250% or higher. 10 of these states cover children in families with income at 300% FPL or higher.
- 35 states allow premiums, enrollment fees, or co-payments for selected services in SCHIP programs on a sliding scale of FPL.

Denali KidCare serves an estimated 7600 Alaska children and remains one of the least costly medical assistance programs in the state at about $1,700 per child with full coverage, including dental, which is about 20% of the cost of adult senior coverage.

Early intervention and preventative care under SB 13 will greatly increase Alaska children's health and yield substantial savings to the state and public and private sector hospital emergency rooms which must admit indigent and uninsured patients for non-emergency treatment. It is estimated that uninsured children with a medical need are five times as likely not to have a regular doctor as insured children and four times more likely to use emergency rooms at a much higher cost.

There are still an estimated 18,000 uninsured children in Alaska, or about 9% of the children age 18 and under. Private health care coverage for children has declined over 30% in the last ten years, and the deepening recession is pulling more children and families into the uninsured ranks. The reauthorized SCHIP program and "Stimulus Package" should help. Alaska should do its share by insuring its low income children and participating in Denali KidCare at 200% FPL under SB 13.

Subject: SCHIP Cost Sharing Rules

Senator Davis,

We enjoyed listening to your Health and Social Services committee meeting on Monday. This memo is intended to answer the question posed about the SCHIP cost-sharing rules.

Alaska's SCHIP program is a Medicaid expansion program and therefore must comply with Medicaid's cost-sharing rules as specified under the Deficit Reduction Act of 2005. Under provisions of the Deficit Reduction Act of 2005 (DRA), states generally cannot impose cost sharing on children in families with income below 150 percent of the federal poverty guidelines except in certain circumstances. In addition, even at more moderate-income levels, federal rules exempt some special services from any cost sharing requirements.

Most children under the age of 18 are exempt from premiums and from cost-sharing on most services. However, the DRA rules allow states to require co-payments for prescription drugs and use of the emergency room for non-emergency care on all children in certain circumstances. The DRA also allows states to assess premiums and cost-sharing charges on some children in families with income above the poverty line. The total amount of premiums and cost-sharing charges cannot exceed a cap of five percent of family income, which is calculated on a monthly or quarterly basis at the option of the state.

Please see the following document by the Center on Budget and Policy Priorities for more detailed information about cost-sharing and premiums in Medicaid:
Cost-sharing and Premiums in Medicaid: What Rules Apply? February 28, 2007
http://www.cbpp.org/2-28-07health.pdf

In addition, you may also find the following document by the Congressional Research Service helpful. The table on page 5 compares service-related cost-sharing rules in traditional Medicaid, the DRA options and SCHIP.
Medicaid Cost-Sharing Under the Deficit Reduction Act of 2005 (DRA)

CRS Report for Congress, January 25, 2007
http://assets.opencrs.com/rpts/RS22578_20070125.pdf

The following document by the Centers for Medicare and Medicaid Services (CMS) also summarizes these Medicaid requirements and you may find the "Important Links" on the bottom of page 2 helpful.
See the CMS document here:
http://www.cms.hhs.gov/DeficitReductionAct/Downloads/Costsharing.pdf

For more general information about cost sharing and SCHIP, please see the following CMS website:
http://www.cms.hhs.gov/MedicaidGenInfo/05_SCHIP%20Information.asp
(Scroll down to see the information under the heading "Cost Sharing.")

To create cost sharing requirements that differ from the Medicaid requirements, states can do so by submitting a waiver to and obtaining approval from the Centers for Medicare and Medicaid Services (CMS) or by creating a stand-alone SCHIP program.

If you have more specific or detailed questions regarding cost-sharing requirements under Alaska's SCHIP program, I would suggest that you contact CMS directly.

Best regards,
Jennifer Saunders

Thomas Obermeyer

Subject: Re: SB 13, Denali KidCare/SCHIP program - Senate HESS Hearing Feb 9, 2009 1:30-3:00 AK Time (3:30-5:00pm Mtn time)

Thomas,

Yes, the following Kaiser report indicates that 7 states have SCHIP eligibility levels below 200 percent of the federal poverty guidelines (FPG):
Challenges of Providing Health Coverage for Children and Parents in a Recession: A 50 State Update on Eligibility Rules, Enrollment and Renewal Procedures, and Cost-Sharing Practices in Medicaid and SCHIP in 2009
http://www.kff.org/medicaid/7855.cfm
(See page 10, Figure 1.)

The 7 states are:

Alaska	175 percent FPG
Idaho	185 percent FPG
Montana	175 percent FPG
Nebraska	185 percent FPG
North Dakota	150 percent FPG
Oklahoma	185 percent FPG*
Oregon	185 percent FPG

* Oklahoma passed legislation to increase the income eligibility guideline to 300 percent of the federal poverty line under its current section 1115 waiver. However, the currently proposed expansion has been scaled back to 217 percent of the federal poverty line and the future expansion of 218 percent to 300 percent of the federal poverty line is pending further CMS guidance and SCHIP reauthorization.

Greetings Thomas!
We're happy to provide the information you've requested in your email and to participate by phone on February 9th, if you continue to think we could be helpful. I am asking the two NCSL staff named in the cc line to work on the specifics you've asked for and we will be getting back to you as soon as possible.
In the meantime, please give our regards to Senator Davis & stay warm up there! martha

E-mail: Martha.king@ncsl.org

RE: Request for:

A) review and comments concerning Alaska Senate Bill 13 (attached), and
B) request for NCSL staff to testify at Senate HESS hearing concerning SB 13, Denali KidCare, Alaska SCHIP program February 9, 2009 at 1:30-3:00 pm (3:30-5:00 pm Mountain/Denver time). **Call in number is 888-295-4546**

Dear Ms. King,

Please read the attached **Alaska Senate Bill No. 13,** 26th Legislature, sponsored by Senator Bettye Davis, regarding **increasing income eligibility** under the Denali KidCare -State Children's Health Insurance Program (SCHIP) **to 200% Federal Poverty Guidelines (FPG)**. It was raised to 175% last year under SB 27, 25th Legislature.

Senator Davis, Chair, Senate HESS Committee (and Vice-Chair NCSL Health Committee) is considering an amendment at hearing to extend optional coverage to applicants over 200% FPG not to exceed 250% FPG with provisions of premiums or co-payments . You will note that there is no asset test in the bill.

Your comments in return e-mail to me as soon as possible before the hearing would be particularly helpful in the following areas:

1. Please let me know if other states are drafting similar bills, and if one or another state has particularly clear or comprehensive language to review, and
2. if asset tests, payments, and co-payments are common, and if other matters of eligibility other than income and household size under federal poverty guidelines are codified in statutes or are limited to and found in administrative codes, regulations, department or agency directives, and/or just in signed or unsworn applications for benefits.
3. Please provide an update, if possible, concerning the number of other states currently at or over 200% FPG, and the number of states over 300% FPG.
4. Please also comment regarding the SCHIP Bills running through Congress. An Associated Press Article appeared today, January 26, 2009, in the *Juneau Empire*, page A6, "Kids' health care bill angers Republicans" -because, among other things, there appears to be no income limit in the legislation, only reduced Medicaid reimbursement rates if states move higher than three times the federal poverty guidelines.

Please have NCSL staff call in to the hearing teleconference line on February 9, 2009 noted above at 888-295-4546 to testify and/or field questions.

Sincerely,

Thomas S. Obermeyer

THE 2009 HHS POVERTY GUIDELINES

One Version of the [U.S.] Federal Poverty Measure

[*Federal Register* notice, January 23, 2009 (PDF - 3 pages)]
[Prior Poverty Guidelines and *Federal Register* References Since 1982]
[Frequently Asked Questions (FAQs)]
[Further Resources on Poverty Measurement, Poverty Lines, and Their History]

Revised 5/13

There are two slightly different versions of the federal poverty measure:

- The poverty thresholds, and
- The poverty guidelines.

The **poverty thresholds** are the original version of the federal poverty measure. They are updated each year by the **Census Bureau** (although they were originally developed by Mollie Orshansky of the Social Security Administration). The thresholds are used mainly for **statistical** purposes — for instance, preparing estimates of the number of Americans in poverty each year. (In other words, all official poverty population figures are calculated using the poverty thresholds, not the guidelines.) Poverty thresholds since 1980 and weighted average poverty thresholds since 1959 are available on the Census Bureau's Web site. For an example of how the Census Bureau applies the thresholds to a family's income to determine its poverty status, see "How the Census Bureau Measures Poverty" on the Census Bureau's web site.

The **poverty guidelines** are the other version of the federal poverty measure. They are issued each year in the *Federal Register* by the **Department of Health and Human Services** (HHS). The guidelines are a simplification of the poverty thresholds for use for **administrative** purposes — for instance, determining financial eligibility for certain federal programs. The *Federal Register* notice with the 2009 poverty guidelines (PDF - 3 pages).

The poverty guidelines are sometimes loosely referred to as the "federal poverty level" (FPL), but that phrase is ambiguous and should be avoided, especially in situations (e.g., legislative or administrative) where precision is important.

Key differences between poverty thresholds and poverty guidelines are outlined in a table under Frequently Asked Questions (FAQs). See also the discussion of this topic on the Institute for Research on Poverty's web site.

The 2009 Poverty Guidelines for the 48 Contiguous States and the District of Columbia

Persons in family	Poverty guideline
1	$10,830
2	14,570

8	3,708.33	4,450.00	4,932.08	5,006.25	5,562.50	6,489.58	6,860.42	7,416.67	9,270.83

What should be done about it: *More Alaskans need to be covered by efficient health insurance plans. Increasing the number of Alaskans covered by efficient health insurance will be the result of several specific actions. In the short-term, the Council recommends that the state immediately pursue and support change in the Denali KidCare program to make Alaskan children in families at 200% of the federal poverty level eligible for coverage. While there was a majority vote among Council members regarding this expansion of Denali KidCare coverage, the role of that program within an efficient and effective system of health care coverage is worthy of continued debate at the statewide level, through the recommended "Alaska Health Care Commission."*

To most effectively cover the adults and remaining children without health insurance, bringing consumerism to the forefront of Alaska's health insurance structure is important. Alaskans should have access to choices, through a wide range of health insurance options, including at the very least high deductible coverage with a strong prevention component. The key to success is insurance that at least covers catastrophic care, so no Alaskan suffers from the extreme financial burden of catastrophic or unanticipated health events. Whereas some uninsured Alaskans are not working, most are working for employers who would like to, but cannot necessarily afford to, provide health insurance coverage for their employees. Therefore, through incentives, Alaskan employers should be encouraged to offer a wide range of coverage choices, to include at a minimum, high deductible coverage.

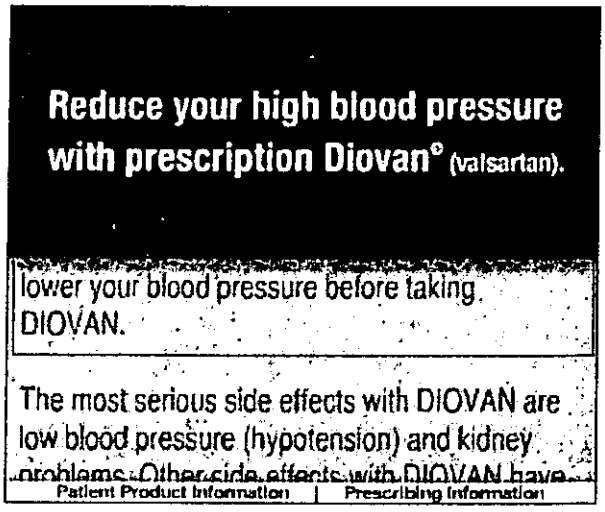
Senate Passes Health Insurance Bill for Children

Immigrant Clause Opens Rift

By Ceci Connolly
Washington Post Staff Writer
Friday, January 30, 2009; 9:24 AM

Advertisement



The Senate overwhelmingly approved legislation yesterday to provide health insurance to 11 million low-income children, a bill that would for the first time spend federal money to cover children and pregnant women who are legal immigrants.

The State Children's Health Insurance Program, which is aimed at families earning too much money to qualify for Medicaid but not enough to afford private insurance, currently covers close to 7 million youngsters at a cost of $25 billion.

Lawmakers voted 66 to 32, largely along party lines, to renew the joint state-federal program and spend an additional $32.8 billion to expand coverage to 4 million more children. The expansion would be paid for by raising the cigarette tax from 39 cents a pack to $1.

The House approved similar legislation on Jan. 14, and President Obama is expected to sign a final version as early as next week.

During the presidential campaign, Obama pledged to provide coverage to every American child. Experts estimate that once the program is fully implemented about 5 million youngsters will remain uninsured.

In a statement released this morning, Obama praised the Senate's action as the "worsening economy causes families to lose their jobs and health insurance." He added, "Providing health care to more than ten million children through the Children's Health Insurance Program will serve as a down payment on my commitment to ensure that every American has access to quality, affordable health care."

Democratic lawmakers, noting that President George W. Bush twice vetoed similar legislation, praised the vote as evidence of the changing Washington landscape.

"Low-income, uninsured kids all across America have been waiting for Congress to fulfill the promise of the Children's Health Insurance Program for them," said Senate Finance Committee Chairman Max Baucus (Mont.). The program "works to get low-income, uninsured kids the doctor's visits and medicines they need to stay healthy, and approval of this bill opens the door of the doctor's office to millions of children who live without proper health care today."

But the political victory may come at a price. The rancorous debate -- on a program that once basked in bipartisan popularity -- raised doubts about whether the two parties can unite to pass broader health reform later this year, several moderate Republicans said.

"This is a very unfortunate beginning," said Sen. Charles E. Grassley (Iowa). The top Republican on the Senate Finance Committee, a stalwart supporter of the program, said he was "disgusted" by the way

Democratic leaders handled the debate. "It does not bode well for cooperative work in the coming months," he said. But Grassley emphasized that he did not blame Baucus for the change in substance and style.

As the vote came just one day after the House passed an $819 billion economic stimulus package without a single Republican vote, some longtime lawmakers questioned the president's ability to forge a new era of cooperation in the capital.

"If they wanted a nice signing ceremony that showed bipartisanship and carried through on the president's language, this would have been a good vehicle to do it on," said Sen. Judd Gregg (R-N.H.).

Since its creation in 1997 under a Republican-led Senate, the children's health program has received broad bipartisan support.

"Few government programs in our time have enjoyed such great success, as acknowledged by members of both parties and all bipartisan health-care experts," said Senate Majority Leader Harry M. Reid (D-Nev.).

Governors, business executives and consumer advocates lobbied for the expansion, arguing that more and more families have sought the assistance in this weakened economy.

"During this economic turmoil, it is critical that we maintain and strengthen this important lifeline to our nation's children and that we help financially strapped states respond to the growing need for affordable health-care coverage," said Cindy Mann, executive director of Georgetown University's Center for Children and Families.

In 2007, prominent Republicans such as Grassley and Sen. Orrin G. Hatch (Utah) bucked Bush to support renewal of the program.

"We carried a lot of water and took a lot of flak" for that stand, Hatch said. To push through a different version now is "not only unfair," he said, "but a slap in the face to those of us who worked so strongly with our friends on the other side."

The bill approved last night closely resembles the versions many Republicans supported in the past, countered Democrats.

GOP lawmakers objected to the new provision allowing states to enroll certain legal immigrants. Until now, many immigrants' families have been forced to wait five years for coverage.

"The bottom line is: This is a debate about children's health coverage," said Sen. Richard J. Durbin (D-Ill.). "This is not a debate about immigration."

In more than two days of debate -- in unusually personal and emotional language -- Republicans expressed a sense of betrayal that Democrats had dropped the 2007 compromise.

"We could have had 95 votes," Hatch said. "That would have sent a tremendous, tremendous message that hasn't been sent around here for a long time."

Both sides had hoped, and even predicted, that early bipartisan action on children's coverage would demonstrate that Washington's elected officials can cooperate on critical issues such as health care.

"This is on something for which there is so much agreement and something that almost no one argues about," said Helen Darling, president of the National Business Group on Health, which represents 300 large employers. "For the tough things like real national health-care reform, it unfortunately portends a really rocky road."

Compared to the daunting task of overhauling the entire U.S. health system, the debate on the children's health program should have been easy, said Sen. Olympia J. Snowe (R-Maine).

"You would have thought this issue would have been clear sailing on both sides," she said.

Karen Ignagni, president of America's Health Insurance Plans, agreed that "we're not seeing bipartisanship" but said she is optimistic that the public's overwhelming desire for improvement in the health system will force the two parties to the bargaining table. "People are talking about how to do it as opposed to whether to do it," she said.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Office of the Secretary

Annual Update of the HHS Poverty Guidelines

AGENCY: Department of Health and Human Services.

ACTION: Notice.

SUMMARY: This notice provides an update of the HHS poverty guidelines to account for last calendar year's increase in prices as measured by the Consumer Price Index.

DATES: Effective Date: Date of publication, unless an office administering a program using the guidelines specifies a different effective date for that particular program.

ADDRESSES: Office of the Assistant Secretary for Planning and Evaluation, Room 404E, Humphrey Building, Department of Health and Human Services (HHS), Washington, DC 20201.

FOR FURTHER INFORMATION CONTACT: For information about how the guidelines are used or how income is defined in a particular program, contact the Federal, state, or local office that is responsible for that program. Contact information for two frequently requested programs is given below:

For information about the Hill-Burton Uncompensated Services Program (free or reduced-fee health care services at certain hospitals and other facilities for persons meeting eligibility criteria involving the poverty guidelines), contact the Office of the Director, Division of Facilities Compliance and Recovery, Health Resources and Services Administration, HHS, Room 10-105, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland

[[Page 4200]]

20857. To speak to a staff member, please call (301) 443-5656. To receive a Hill-Burton information package, call 1-800-638-0742 (for callers outside Maryland) or 1-800-492-0359 (for callers in Maryland). You also may visit http://www.hrsa.gov/hillburton/default.htm. The Division of Facilities Compliance and Recovery notes that as set by 42 CFR 124.505(b), the effective date of this update of the poverty guidelines for facilities obligated under the Hill-Burton Uncompensated Services Program is sixty days from the date of this publication.

For information about the percentage multiple of the poverty guidelines to be used on immigration forms such as USCIS Form I-864, Affidavit of Support, contact U.S. Citizenship and Immigration Services

at 1-800-375-5283.

For information about the number of people in poverty or about the Census Bureau poverty thresholds, visit the Poverty section of the Census Bureau's Web site at http://www.census.gov/hhes/www/poverty/poverty.html or contact the Census Bureau's Demographic Call Center Staff at (301) 763-2422 or 1-866-758-1060 (toll-free).

For general questions about the poverty guidelines themselves, contact Gordon Fisher, Office of the Assistant Secretary for Planning and Evaluation, Room 404E, Humphrey Building, Department of Health and Human Services, Washington, DC 20201--telephone: (202) 690-7507--or visit http://aspe.hhs.gov/poverty/.

SUPPLEMENTARY INFORMATION:

Background

Section 673(2) of the Omnibus Budget Reconciliation Act (OBRA) of 1981 (42 U.S.C. 9902(2)) requires the Secretary of the Department of Health and Human Services to update, at least annually, the poverty guidelines, which shall be used as an eligibility criterion for the Community Services Block Grant program. The poverty guidelines also are used as an eligibility criterion by a number of other Federal programs. The poverty guidelines issued here are a simplified version of the poverty thresholds that the Census Bureau uses to prepare its estimates of the number of individuals and families in poverty.

As required by law, this update is accomplished by increasing the latest published Census Bureau poverty thresholds by the relevant percentage change in the Consumer Price Index for All Urban Consumers (CPI-U). The guidelines in this 2009 notice reflect the 3.8 percent price increase between calendar years 2007 and 2008. After this inflation adjustment, the guidelines are rounded and adjusted to standardize the differences between family sizes. The same calculation procedure was used this year as in previous years. (Note that these 2009 guidelines are roughly equal to the poverty thresholds for calendar year 2008 which the Census Bureau expects to publish in final form in August 2009.) The guideline figures shown represent annual income.

2009 Poverty Guidelines for the 48 Contiguous States and the District of Columbia

Persons in family	Poverty guideline

1	$13,530
2	18,210
3	22,890
4	27,570
5	32,250
6	36,930
7	41,610
8	46,290

For families with more than 8 persons, add $4,680 for each additional person.

2009 Poverty Guidelines for Hawaii

Persons in family	Poverty guideline
1	$12,460
2	16,760
3	21,060
4	25,360
5	29,660
6	33,960
7	38,260
8	42,560

For families with more than 8 persons, add $4,300 for each additional person.

Separate poverty guideline figures for Alaska and Hawaii reflect Office of Economic Opportunity administrative practice beginning in the 1966-1970 period. (Note that the Census Bureau poverty thresholds--the version of the poverty measure used for statistical purposes--have never had separate figures for Alaska and Hawaii.) The poverty guidelines are not defined for Puerto Rico or other outlying jurisdictions. In cases in which a Federal program using the poverty guidelines serves any of those jurisdictions, the Federal office that administers the program is generally responsible for deciding whether to use the contiguous-states-and-DC guidelines for those jurisdictions or to follow some other procedure.

Due to confusing legislative language dating back to 1972, the poverty guidelines have sometimes been mistakenly referred to as the ``OMB'' (Office of Management and Budget) poverty guidelines or poverty line. In fact, OMB has never issued the guidelines; the guidelines are issued each year by the Department of Health and Human Services. The poverty guidelines may be formally referenced as ``the poverty guidelines updated periodically in the Federal Register by the U.S. Department of Health and Human Services under the authority of 42 U.S.C. 9902(2).''

Some programs use a percentage multiple of the guidelines (for example, 125 percent or 185 percent of the guidelines), as noted in relevant authorizing legislation or program regulations. Non-Federal organizations that use the poverty guidelines under their own authority in non-Federally-funded activities can choose to use a percentage multiple of the guidelines such as 125 percent or 185 percent.

The poverty guidelines do not make a distinction between farm and non-farm families, or between aged and non-aged units. (Only the Census

Bureau poverty thresholds have separate figures for aged and non-aged one-person and two-person units.)

Note that this notice does not provide definitions of such terms as ``income'' or ``family.'' This is because there is considerable variation in how different programs that use the guidelines define these terms, traceable to the different laws and regulations that govern the various programs. Therefore, questions about how a particular program applies the poverty guidelines (for example, Is income before or after taxes? Should a particular type of income be counted? Should a particular person be counted in the family or household unit?) should be directed to the organization that administers the program; that organization has the responsibility for making decisions about definitions of such terms as ``income'' or ``family'' (to the extent that the definition is not already contained in legislation or regulations).

RE: Request for:

A) review and comments concerning Alaska Senate Bill 13 (attached), and
B) request for NCSL staff to testify at Senate HESS hearing concerning SB 13, Denali KidCare, Alaska SCHIP program February 9, 2009 at 1:30-3:00 pm (3:30-5:00 pm Mountain/Denver time). **Call in number is 888-295-4546**

Dear Ms. King,

Please read the attached **Alaska Senate Bill No. 13,** 26th Legislature, sponsored by Senator Bettye Davis, regarding **increasing income eligibility** under the Denali KidCare -State Children's Health Insurance Program (SCHIP) **to 200% Federal Poverty Guidelines (FPG)**. It was raised to 175% last year under SB 27, 25th Legislature.

Senator Davis, Chair, Senate HESS Committee (and Vice-Chair NCSL Health Committee) is considering an amendment at hearing to extend optional coverage to applicants over 200% FPG not to exceed 250% FPG with provisions of premiums or co-payments . You will note that there is no asset test in the bill.

Your comments in return e-mail to me as soon as possible before the hearing would be particularly helpful in the following areas:

1. Please let me know if other states are drafting similar bills, and if one or another state has particularly clear or comprehensive language to review, and
2. if asset tests, payments, and co-payments are common, and if other matters of eligibility other than income and household size under federal poverty guidelines are codified in statutes or are limited to and found in administrative codes, regulations, department or agency directives, and/or just in signed or unsworn applications for benefits.
3. Please provide an update, if possible, concerning the number of other states currently at or over 200% FPG, and the number of states over 300% FPG.
4. Please also comment regarding the SCHIP Bills running through Congress. An Associated Press Article appeared today, January 26, 2009, in the *Juneau Empire*, page A6, "Kids' health care bill angers Republicans" -because, among other things, there appears to be no income limit in the legislation, only reduced Medicaid reimbursement rates if states move higher than three times the federal poverty guidelines.

Please have NCSL staff call in to the hearing teleconference line on February 9, 2009 noted above at 888-295-4546 to testify and/or field questions.

Sincerely,

Thomas S. Obermeyer

Challenges of Providing Health Coverage for Children and Parents in a Recession:

A 50 State Update on Eligibility Rules, Enrollment and Renewal Procedures, and Cost-Sharing Practices in Medicaid and SCHIP in 2009

Prepared by:

Acknowledgments

The authors would like to extend our deep appreciation to the many Medicaid and SCHIP officials throughout the country who participated in this survey and so generously shared their time and expertise with us. We are grateful for their willingness to explain recent program developments -- from the broadest policy change to the most detailed program rule. Their important contribution to improving the health of children and families deserves recognition and our thanks. We also would like to thank our colleagues at the Center on Budget and Policy Priorities, particularly Matthew Broaddus, for their assistance and helpful suggestions as we prepared this report. We also appreciate the assistance of the Center for Children and Families at Georgetown University's Health Policy Institute.

Executive Summary

Medicaid and SCHIP have been instrumental in covering more low-income uninsured children over the last decade. While much progress has been made, nine million children remain uninsured. As SCHIP reauthorization approached in 2007, states were poised to move forward with efforts to cover more uninsured children. However, federal obstacles, including the Medicaid citizenship documentation requirements, the issuance of a CMS-directive on August 17th 2007 limiting state expansions, and the failure to reauthorize SCHIP have hampered progress. A temporary extension provided funds for SCHIP through March 31, 2009.

When states adopted their budgets for the fiscal year starting July 1, 2008, many were able to include funding for children's coverage expansions. Later, the severity of the unfolding fiscal crisis became clearer and state budget shortfalls are now expected to total $350 billion for the remainder of FY 2009 and through 2011. States face mounting pressure to cut Medicaid and SCHIP just as the need for coverage rises due to climbing unemployment and loss of health coverage. In the last downturn, some states implemented restrictive enrollment procedures and reported dramatic declines in children's enrollment as a result. States may soon feel pushed to take such steps. Key findings from the annual KCMU survey of state Medicaid and SCHIP policies for children and parents that were implemented or authorized between January 2008 and January 2009 in the 50 states and D.C. include:

- **States continued to make progress on improving access to health coverage, particularly for children, but several significant setbacks warn about impending problems.** One-third of states (19) increased access to health coverage, while ten states enacted at least one measure to restrict coverage. The most common restriction was imposing new or higher premiums in SCHIP, but two states also restricted eligibility. California increased the frequency of renewal, a change estimated to affect more than 260,000 children as well as large numbers of parents.

- **The economic crisis is widespread and serious healthcare cuts are looming, but the commitment to children is still strong.** States continued to enact eligibility expansions for children, and state officials in several of those states plan to go forward even though they are facing significant budget shortfalls. Federal constraints, such as the unresolved reauthorization of SCHIP and the August 17th directive, have caused some states to put expansions on hold temporarily. Others are using state funds to pay for coverage precluded by the directive.

- **Parent coverage is still more difficult to obtain than children's coverage.** The median income at which children qualify for coverage is 200 percent of the federal poverty line, but is much lower — 68 percent of the federal poverty line — for working parents. However, for unemployed parents, the median income eligibility for Medicaid is just 41 percent of the federal poverty line, $601 per month for a family of three in 2008. Jobless parents who need coverage may find that unemployment payments put them over the income limit for Medicaid.

- **Outreach budgets were increased in a number of states, however, some are beginning to report that these funds are being curtailed.** Outreach, including community-based application assistance, is critical in a recession, since newly eligible families may be unfamiliar with public programs. But in light of budget shortfalls, some states expressed skepticism for conducting aggressive outreach. About half the states are using technology to implement or develop online applications and to develop more efficient enrollment and renewal systems.

As the economic crisis deepens, states will be under major pressure to contain costs. This may lead them to take steps that not only reverse coverage gains, but intensify the hardships that many families are already facing as a result of losing their jobs and their health insurance. Congress is currently considering SCHIP reauthorization and an economic recovery package that would provide additional federal Medicaid matching funds. These would help states to maintain vital coverage for low-income families, support state efforts to enroll more eligible children, and make program improvements. Strengthening Medicaid and SCHIP in these ways is an essential precursor to the larger task of enacting broad health care reform.

I. Introduction

A commitment to providing health coverage for uninsured children has inspired nationwide efforts that began in earnest with enactment of the State Children's Health Insurance Program (SCHIP) in 1997. Like Medicaid, the chief source of health coverage for low-income families, SCHIP finances coverage through a partnership between the federal and state governments. State measures to expand eligibility and adopt streamlined enrollment procedures in Medicaid and SCHIP have strengthened both of these programs, and they have been instrumental in reducing the percentage of low-income uninsured children by one-third over the last decade.[1] Notably, the number of low-income uninsured parents increased over the same period, since eligibility levels and resources for addressing their health coverage needs do not approach those related to children.

While considerable progress has been made, nine million children in the United States remain uninsured, with nearly two-thirds of them eligible for Medicaid and SCHIP. In 2007, with relatively robust state budgets and the reauthorization of SCHIP at hand, across the country, states came forward to reaffirm their commitment to closing this gap. That year, state efforts to expand children's health coverage represented the most aggressive steps forward since the early years of SCHIP. Of the 20 states that expanded eligibility for children, 12 raised or authorized raising SCHIP income limits to 300 percent of the federal poverty line, more than doubling the number of states that previously had eligibility set at this level. States also made progress on adopting simplified enrollment and renewal procedures in both Medicaid and SCHIP, emphasizing strategies that reduce paperwork and jump-start enrollment.[2]

Despite this burst of activity, efforts to advance children's coverage met unanticipated federal obstacles. The Medicaid citizenship documentation requirement, enacted in 2006 as part of the Deficit Reduction Act, sent state simplification efforts backwards by requiring U.S. citizens applying for Medicaid to present original documents proving their citizenship and identity. States reported that this new rule ushered a deep decline in the enrollment of eligible U.S. citizens, especially children.

The expected reauthorization of SCHIP also encountered roadblocks. Congress passed two versions of legislation to reauthorize SCHIP and President Bush vetoed each of them. And, on August 17, 2007, as SCHIP reauthorization was proceeding, the Centers for Medicare and Medicaid Services (CMS) issued a directive that impeded states' ability to expand coverage.[3] The year ended with these problems unresolved, meaning states were without the infusion of funds they were anticipating, and the new tools to bolster outreach and enrollment did not materialize. A temporary extension provided funds for SCHIP through March 31, 2009.

When states adopted their budgets for the state fiscal year starting July 1, 2008, they were able to include funding for children's coverage expansions. Later, the economy began to show signs of trouble, but it was not until September 2008 that the breadth and depth of the unfolding fiscal crisis became clear as financial markets collapsed and unemployment started to rise sharply. States are now facing an extremely threatening fiscal situation, with state budget shortfalls expected to total $350 billion for the remainder of FY 2009 and through 2010 and 2011.[4]

So far, most states have managed to maintain existing eligibility levels and procedural improvements. For example, despite serious financial pressures, states that enacted earlier children's coverage expansions, such as Iowa and New York, have reiterated their intentions to go forward. But, there are warning signs that this will become more and more difficult.

As in past economic downturns, states will continue to struggle with the mounting pressure to cut health coverage programs just at the time that an increasing number of people need the vital services they provide. Many states have already implemented or announced major cuts to health programs, mainly in the area of provider rates and benefits, which have a significant impact on access and the quality of care. States that have not yet expanded are likely to be deterred from increasing coverage because of the dire economic environment.

Medicaid enrollment and spending growth peaked in 2002 at the same time state revenues dropped sharply. In response, states adopted an array of cost containment strategies to control spending growth. Then federal fiscal relief was made available to states through the Jobs and Growth Tax Relief Reconciliation Act of 2003, increasing the federal share of Medicaid costs, and lifting some of the burden states were carrying. The legislation restricted states from lowering Medicaid eligibility between September 2003 and June 2004, as a condition of receiving relief funds. Thus, no state retracted Medicaid eligibility during this time period. SCHIP eligibility also remained relatively constant, with only a few states cutting back.

However, because they were still grappling with budget shortfalls, nearly half the states put in place enrollment procedures that made it more difficult for children and parents to secure and retain health coverage between April 2003 and July 2004.[5] Some states reported dramatic declines in children's enrollment as a result of these budget-driven changes, and children who were most likely *eligible* for existing programs became uninsured. For example, in Texas, SCHIP enrollment dropped by more than 149,000 children (a 29 percent decline), in large measure, due to reducing continuous coverage from 12 months to six months. Washington state also repealed the guarantee of 12 months of coverage and required parents to renew their child's eligibility every six months as well as report changes in the interim. This, along with other procedural changes, led to a dramatic caseload reduction of more than 40,000 children. In Wisconsin's BadgerCare program, establishing more rigorous documentation requirements resulted in an enrollment decline of 13,000 children and parents in just the first four months of implementation. Several states also froze SCHIP enrollment. In addition to turning away children who qualified for coverage under SCHIP, this strategy adversely affected Medicaid-eligible children not subject to the freeze. Eligible applicants' path to coverage was limited when states stopped taking joint Medicaid/SCHIP applications or because families mistakenly interpreted news reports to mean that all coverage programs were closed to new applicants.[6]

Coming out of the last economic downturn, states worked to eliminate SCHIP enrollment freezes and reverse some of the enrollment barriers they had imposed. This enabled caseloads to recover somewhat. An important lesson learned, however, is that the problematic effects of changing administrative procedures can endure if such changes send conflicting messages to prospective and current program participants.

As this report goes to press, two major developments are within reach. Congress has taken up SCHIP reauthorization once again and is working towards passing a bill that will likely be one of the first pieces of legislation to be presented to the nation's new president, Barack Obama. Next will come a significant economic recovery package that will contain substantial state fiscal relief in the form of enhanced federal matching funds for Medicaid that will reduce the share of the costs states will have to contribute for the program. Passage of both these bills would provide needed relief, as well as the support to move forward on enrolling more eligible, uninsured children. These measures would also help reinforce the federal/state partnership that is fundamental to the viability of health coverage programs. Strengthening Medicaid and SCHIP by making sure they are in a position to provide coverage to more

low-income uninsured individuals, is also an essential precursor to the larger task of enacting broad health care reform.

II. About this Survey

This report presents the findings of a survey of eligibility rules, enrollment and renewal procedures, and cost-sharing practices in Medicaid and SCHIP for children and families that were implemented or authorized between January 2008 and January 2009 in the 50 states and the District of Columbia. These policies have a large influence on how effectively Medicaid and SCHIP can deliver health coverage to the eligible children, pregnant women and parents who rely on the vital services these programs provide. They are the driving forces behind efforts to reduce the number of low-income people who lack adequate insurance but cannot afford to pay for it on their own.

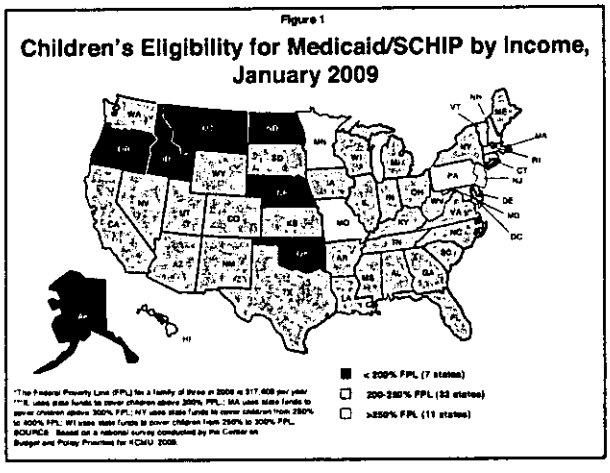
This study, the eighth annual survey conducted by the Center on Budget and Policy Priorities for the Kaiser Commission on Medicaid and the Uninsured, was carried out in the summer and early fall of 2008, through extensive telephone interviews with state Medicaid and SCHIP program administrators. Detailed follow-up interviews proceeded through the end of the year. The findings reflect policies and procedures in effect in the states in January 2009, as well as coverage expansions that were authorized, but were not implemented, by states during the survey period.

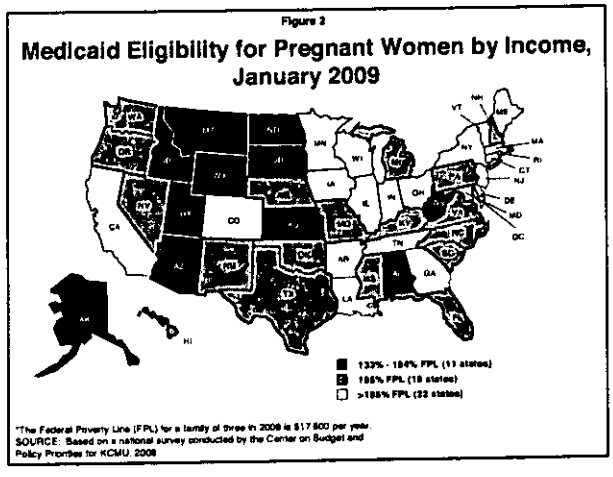
III. Key Survey Findings – Current Status of Coverage for Children and Parents

States continue to make progress on improving access to health coverage for low-income families. As of January 2009, income eligibility levels are as follows:

States provide health coverage for children and pregnant women under Medicaid or SCHIP as follows (Figures 1 & 2):

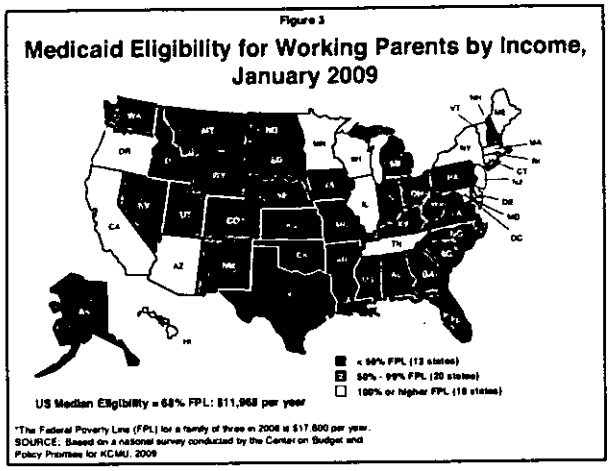
- 44 states, including DC, cover children in families with income at 200% FPL or higher. ($35,200 for a family of three in 2008).
- 33 states cover children in families with income between 200% and 250% FPL. (200%: $35,200 for a family of three in 2008; 250% FPL: $44,000 for a family of three in 2008).
- 19 states, including D.C., cover children in families with income at 250% FPL or higher. 10 of these states cover children in families with income at 300% FPL or higher. ($52,800 per year for a family of three in 2008).
- 40 states, including DC, cover pregnant women with income 185% FPL or higher. ($32,560 for a family of three in 2008).

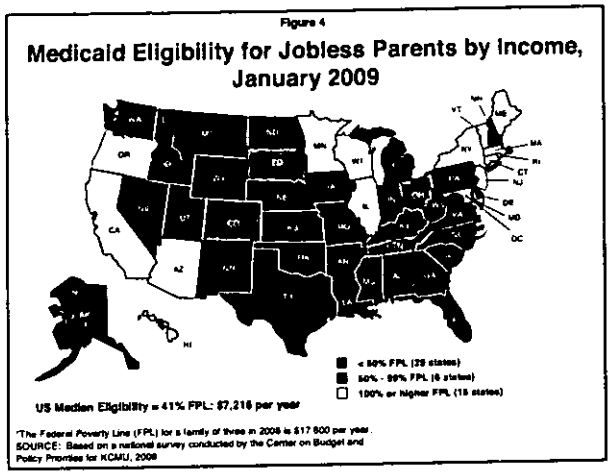




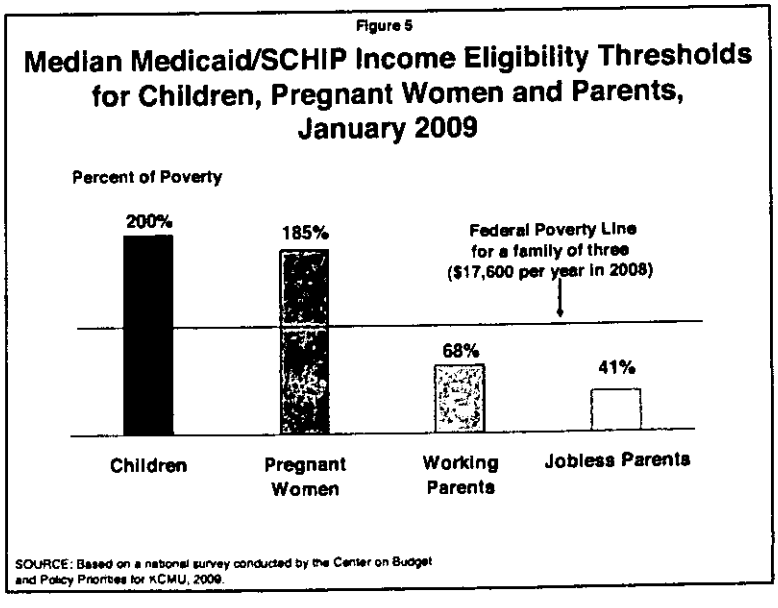
States provide health coverage for parents under Medicaid as follows (Figures 3 & 4):

- In 12 states, family income must be less than half the federal poverty line for a working parent to qualify for Medicaid ($8,700 per year for a family of three in 2008).
- In 29 states, family income must be less than half the federal poverty line for a jobless parent to qualify for Medicaid ($8,700 per year for a family of three in 2008).
- 18 states, including the District of Columbia, cover parents in families with income at 100 percent of the federal poverty line or higher ($17,600 per year for a family of three in 2008).
- In 28 states, a parent in a family of three, working full-time at the minimum wage, earning on average, $1,092 per month, cannot qualify for Medicaid.





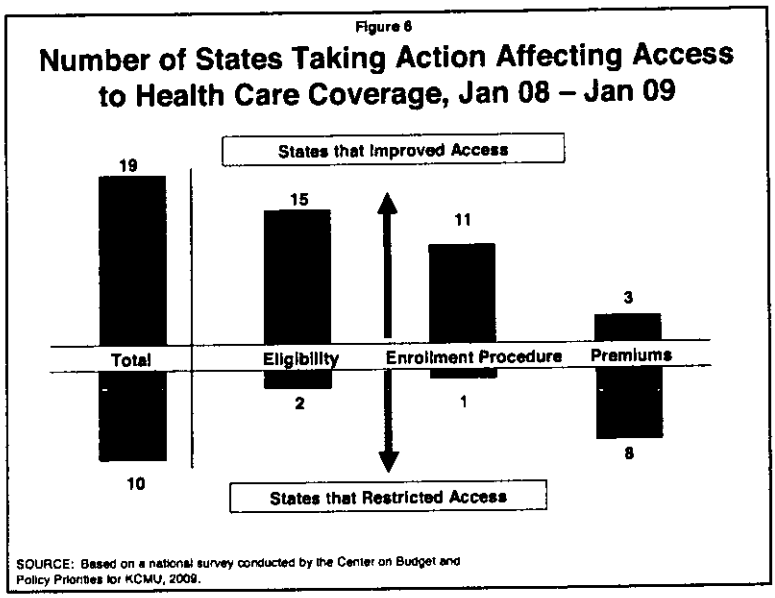
It continues to be more difficult for a low-income parent to qualify for health coverage than for a child (Figure 5). The median income at which children qualify for Medicaid or SCHIP is 200 percent of the federal poverty line, but is much lower — 68 percent of the federal poverty line — for working parents. For jobless parents, the median income eligibility for Medicaid is just 41 percent of the federal poverty line, $601 per month for a family of three in 2008. In an economic downturn, this low income limit can take a serious toll on families. For many individuals who have lost their jobs and also their health insurance, COBRA coverage is likely to be prohibitively expensive or may not be available, and parents may turn to public programs for coverage. However, they may find that the unemployment compensation payments they receive put them over the income limit for Medicaid. (Since unemployment compensation is unearned income, "earnings disregards" that are designed to help working families qualify do not apply.) Jobless parents may eventually become eligible, but in the interim they are subject to health risks and financial exposure that can have deleterious consequences for themselves and their families.



IV. Key Survey Findings – State Actions During 2008

Overall, states continued to make progress on improving access to health coverage, but a few setbacks warn about impending problems (Figure 6).

- **More than one-third of the states (19 states) took steps to increase access to health coverage for low-income children, pregnant women and parents.** Fifteen(15) states authorized or implemented coverage expansions *(CO, LA, IN, KS, LA, MD, MT, ND, NJ, NY, OK, OR, SC, TN, WI)*; 11 states reduced procedural barriers *(AZ, CO, LA, KY, LA, MD, MT, NV, OR, SC, UT)* and three states reduced financial barriers to Medicaid and SCHIP *(TN, WA, WI)*.



- **Ten states (10 states) enacted at least one measure to restrict coverage.** The most common restriction was to increase financial barriers such as new or higher premiums in SCHIP programs. Eight states *(GA, LA, MN, MO, NJ, NV, PA, RI)* went in this direction. *Rhode Island* and *South Carolina* restricted eligibility, the former cutting income eligibility for parents, and the latter establishing a three-month waiting period in its new separate SCHIP program, during which children must remain uninsured before they can enroll. *California*, increased the frequency with which parents and children are required to renew coverage.

The actions taken by *Rhode Island* and *California*, among the first states to feel the effects of the economic downturn, raise concerns about where other states could be headed if their fiscal pressures go unaddressed. The premium increases in *Rhode Island* are steep, coming at a time when families are likely to be financially strapped. Premiums of $45 per child per month are now required for children in families with incomes as low as 133 percent of the federal poverty line ($23,467 for a family of three in 2008), as compared to the previous starting point, 150 percent of the federal poverty line. Premiums for other children range from $86 per month to $114 per month, representing an increase of up to $29 per month for some.

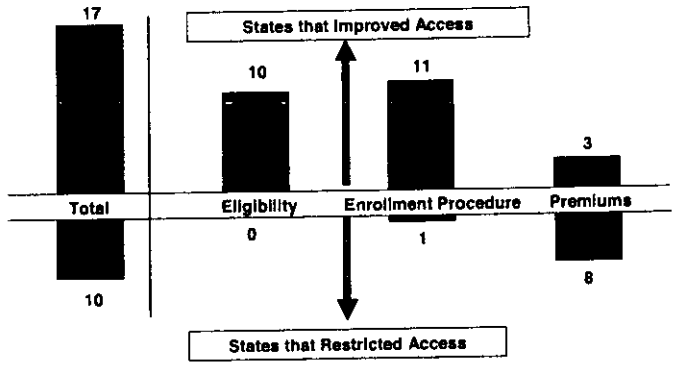
California's retraction of 12-month continuous eligibility for children withdraws the guarantee of full-year coverage, which is critical for children with ongoing medical needs. In addition, the state will

now require children and parents on Medicaid to comply with a semi-annual reporting procedure that is likely to cause otherwise avoidable gaps in coverage for eligible families. It will also create unnecessary and costly administrative burdens, since eligible families dropped from the program are likely to reapply within a short period of time. These changes could result in more than 260,000 children losing coverage by 2011. A large number of parents would be affected as well.[7]

The economic crisis is widespread, and serious health care and other cuts are looming, but states are demonstrating a steadfast commitment to covering children (Figure 7). States continued to enact eligibility expansions for children, and state officials in several of those states, such as *Iowa* and *New York*, plan to go forward even though they are facing significant budget shortfalls. Federal constraints that have dampened states' ability to expand, such as the unresolved reauthorization of SCHIP and the August 17th directive, have caused several states to put expansions on hold or scale back temporarily. Others, such as *Wisconsin* and *New York*, are using state funds to pay for children whose coverage is precluded by the August 17th directive.

Figure 7

Number of States Taking Action Affecting Children's Access to Health Care Coverage, Jan 08 – Jan 09



SOURCE: Based on a national survey conducted by the Center on Budget and Policy Priorities for KCMU, 2009.

- **One-third of the states (17 states) increased access to coverage for children.** Ten (10) states implemented or authorized eligibility expansions for children. *Iowa* and *Montana* raised children's coverage (scheduled to begin later this year), to 300 percent of the federal poverty line and 250 percent of the federal poverty line, respectively; *Kansas* implemented a children's coverage expansion to 250 percent of the federal poverty line. If the August 17th directive remains in place, these states will be subject to the strict conditions it imposes. Eligibility increases were also implemented, but to more modest levels in *Colorado, North Dakota* and *South Carolina*. *New York* adopted the option to allow children leaving foster care upon reaching age 18 to keep their Medicaid coverage.

  Of the ten states that expanded coverage for children, four were implementing expansions that were authorized last year, but which had been held back by the August 17th directive or by the uncertainty surrounding SCHIP reauthorization. *Louisiana* and *Indiana* increased eligibility to 250 percent of the federal poverty line, rather than 300 percent. *Wisconsin* and *New York* chose to move forward with their full expansions, funding coverage over 250 percent of the federal poverty line with state funds only. *Illinois* has been funding its expansion using state dollars. Planned expansions in five additional states (*NC, OH, OK, WA*, and *WV*) remain stalled.

Iowa Children Get A Coverage Boost

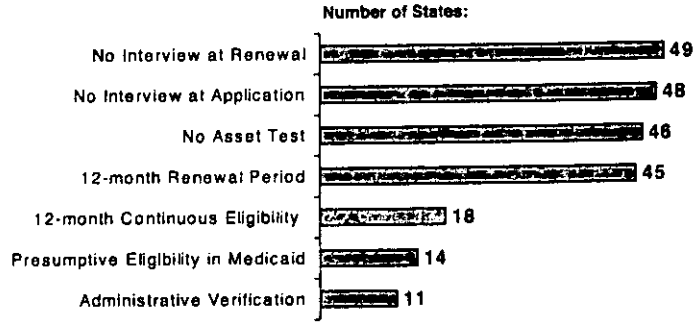
Buoyed by a groundswell of public support for covering children, Iowa Governor Chet Culver, along with state legislators, remain strong in their pledge to expand health insurance to more of the state's uninsured children. In the last legislative session, state legislators passed an expansion of hawk-i, the state's SCHIP program, to 300 percent of the federal poverty line, which will be implemented in July 2009, and cover an estimated 5,000 new children. Program improvements have already proceeded. The state now guarantees children a full 12 months of continuous coverage and is pursuing ways to ease premium payment policies. For example, families new to the program will not have to pay premiums for the first two months of enrollment. Outreach is expected to go forward as well, but may possibly be scaled back. Like many other states, Iowa is in a severe budget crunch, with an expected shortfall of more than $600 million in the coming year. Major spending cuts are being planned, but it appears that the children's coverage expansion will go forward. Senate Majority Leader, Mike Gronstal (D) stated recently, "We committed to providing access to affordable coverage to every kid in the state of Iowa. I'm not interested in backing up on that commitment."

* "Health Promises Persist: Iowa lawmakers reconcile health care goals, budget" The Hawkeye, January 15, 2009.

- **Eleven (11) states took steps to reduce procedural barriers to coverage for children (Figure 8).** *Arizona, Kentucky,* and *Utah* no longer require families to participate in face-to-face interviews to obtain health coverage for their children, and *Colorado* adopted "administrative verification and renewal," meaning the state no longer requires families to provide paper documentation of their income and eligibility workers use existing databases to verify the information families provide on the application. *Maryland, Montana, Louisiana, South Carolina* and *Utah* have revised their applications to allow parents to apply using the same simplified forms that are used for children, a change that benefits both children and parents. *Iowa, North Dakota* and *Oregon* now guarantee 12 months of continuous eligibility, considered to be one of the most effective tools for keeping children covered for as long as they qualify. One serious setback, the changes to the renewal procedures in *California,* was discussed earlier.

Figure 8

Simplifying Enrollment and Renewal: Strategies States are Using in Children's Health Coverage Programs, Jan 09



SOURCE: Based on a national survey conducted by the Center on Budget and Policy Priorities for KCMU, 2009.

States Explore the Use of Technology to Facilitate Enrollment

Emergence of Online Applications

About half the states reported that they are implementing, or are in the process of designing, on-line applications. Several of these states also report allowing the use of electronic signatures, so that a follow-up signature page does not have to be printed and mailed in. (Other states appear unsure about the permissibility of electronic signatures and point to the lack of clear federal guidance on this subject.) Some states at the forefront of using on-line applications also report that their applications currently interface with existing eligibility systems (or will in the future), so that information from the on-line application does not have to be re-entered by eligibility workers and an eligibility determination can move forward more rapidly.

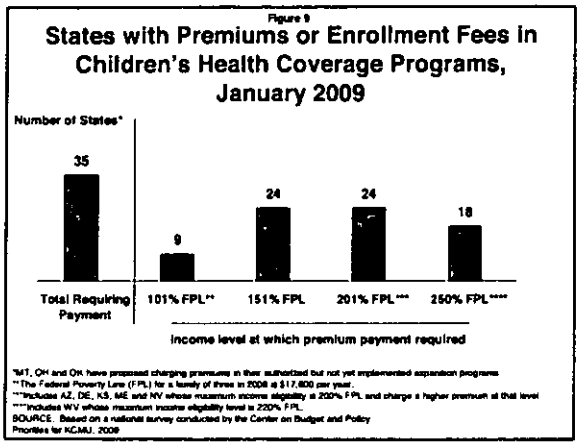
Database Usage

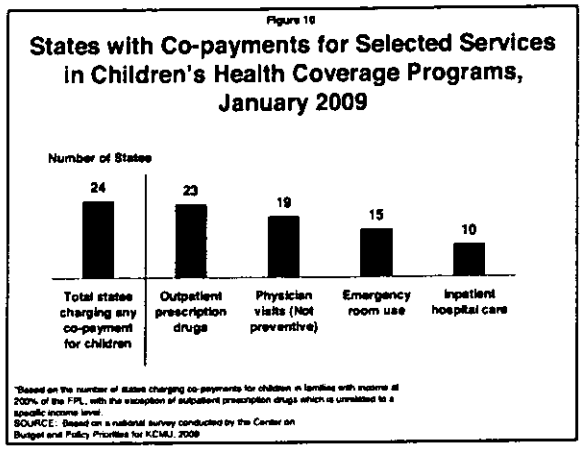
Eleven states (12 states at renewal) report using technology to streamline the enrollment and renewal process. States report conducting matches with existing databases to verify income and other information, as well as eliminating rules requiring families to submit pay stubs or other paper documentation. This procedure is referred to as "administrative verification and renewal." Many states also are conducting data matches with their Vital Records departments to help families comply with the Medicaid citizenship documentation requirement, however, the technological capacity to do this efficiently varies considerably. Finally, states are exploring the use of technology to target outreach, for example, by conducting data matches with existing databases to identify children and parents who are likely to qualify for health coverage but who are not enrolled. States report using matches with food stamp databases for this purpose, and have expressed interest in using state tax system databases.

- **Outreach budgets in a number of states were increased in 2008, however, some states are beginning to report that these funds are being curtailed.** Several states reported increases in outreach funding in 2008, sometimes associated with new expansions, but also for ongoing promotional activities and community-based application assistance. In recent follow-up interviews, some state officials indicated that their outreach budgets have now been cut; others expressed skepticism for conducting aggressive outreach in light of budget shortfalls. Still others said their outreach activities would go forward, with some indicating that activities would emphasize renewal assistance so that already enrolled children do not lose coverage.

- **A few states reduced financial barriers to children's coverage, eliminating or lowering premiums for some children, while other states increased premiums (Figure 9).** *Tennessee, Washington* and *Wisconsin* either reduced premiums or eliminated them for some children. *Georgia, Minnesota, Missouri, Nevada, New Jersey, Pennsylvania* and *Rhode Island* increased premiums for children, with two of these states showing significant increases. *Minnesota* premiums increased by up to $14 per month for some children. Premium increases in *Rhode Island*, discussed earlier, represented the most severe increases for children this year. New premiums implemented in *Louisiana*, apply to the state's new expansion group (children with incomes between 200 percent and 250 percent of the federal poverty line).

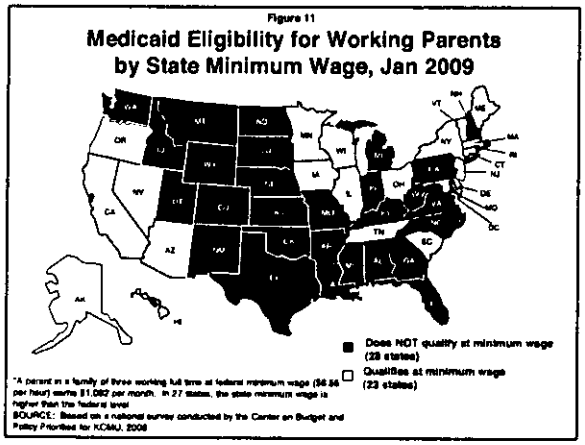
- **Co-payments for health services were adopted in one state and increased in two states (Figure 10).** Currently, 24 states charge co-payments for children's health services. *Wisconsin* adopted new co-payments, and *West Virginia* and *Utah* increased co-payments for prescription drug coverage. Only one state, *Montana* decreased co-payment amounts.

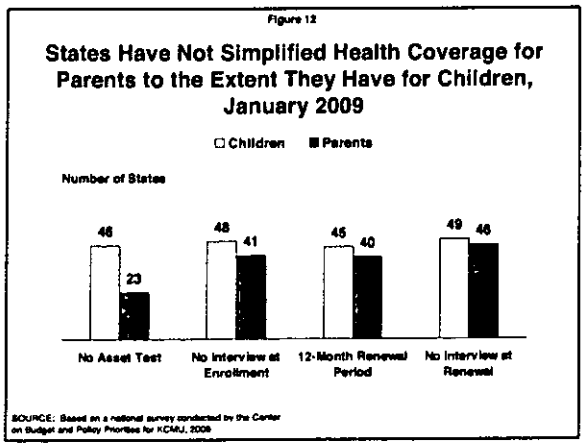




Low-income parents applying for Medicaid coverage continue to face substantially restricted income eligibility and access as compared to their children (Figure 11 and 12).

- **A few states took steps to boost coverage and simplify procedures for parents.** Three states — *New Jersey, Maryland,* and *Wisconsin* — implemented parent coverage expansions. Still, in 28 states, parents working full time at minimum wage cannot qualify for Medicaid. One state, *Rhode Island*, cut parent coverage. *Maryland* also stopped counting assets in determining eligibility for parents, a step that fewer than half the states have taken. Given the restrictive income eligibility levels for parents in most states, the majority of parents applying are not likely to have substantial bank accounts, multiple vehicles of significant value, or other resources that would disqualify them. The burdensome and intrusive paperwork associated with proving that one does not exceed the asset limit often deters eligible parents from completing the application process. Other measures were implemented to reduce procedural barriers for parents, including eliminating interviews and reducing the frequency of renewal (*AZ, MD, UT*), but these practices are still more prevalent in children's coverage programs.





Maryland Expands Medicaid Eligibility for Low-Income Parents

Access to health coverage increased measurably for thousands of low-income Maryland parents this year when an income eligibility expansion and a package of procedural improvements were implemented on July 1, 2008. The state boosted parent eligibility from about 30 percent of the federal poverty line to 116 percent. The state also eliminated the asset test and no longer requires parents to have a face-to-face interview at the Medicaid office. This streamlined the process for parents and also aligned procedures for parents and children to a greater extent so that they can apply using the same simplified application form. Since its implementation, 29,682 adults have enrolled as a result of the expansion.

To achieve this early success, a logical first step was to identify children already in Medicaid whose family income is below 116 percent of the federal poverty line and enroll the parents when they renew their child's coverage. Traditional outreach efforts including TV, print and radio publicity, as well as activities with the Baltimore Ravens football team, also have done much to inform families about the new coverage opportunity. In addition, the Medicaid and revenue agencies coordinated on a new initiative that used the tax system to identify 150,000 people who were potentially eligible. They were sent a letter from the state Comptroller inviting them to call a toll-free number for an application. Between December 1 and December 12, 2008, nearly 1,800 hotline callers were sent applications. Others obtained applications on-line and through other avenues.

Enrollment continues to increase and the recession is apparently a driving force: there were more approvals of parents in the expansion group during the first two weeks in December than there have been since it was implemented in July and state officials say they are seeing people who previously had secure jobs and are seeking help, perhaps for the first time. The budget is tight in Maryland, but in two rounds of cuts, the expansion has not been targeted.

*Conversations with Maryland State Officials, January 2009.

- **Income eligibility for pregnant women remained stable with nearly half the states covering pregnant women at 185 percent of the federal poverty line.** Two states, *Tennessee* and *Wisconsin*, increased eligibility for pregnant women to 250 percent and 300 percent of the federal poverty line respectively. *Oklahoma* and *Oregon* both adopted the option to use SCHIP funds to cover unborn children of pregnant women.

V. Discussion

Recession Jeopardizes States' Ability to Maintain and Advance Coverage for Low-Income Children and Parents

States have made substantial progress in reducing barriers to health coverage for low-income children and families. They continued to do so during the first half of 2008 by further expanding eligibility and streamlining enrollment and renewal procedures. Now, as the economic crisis deepens, states will be under major pressure to contain costs. This may lead them to take steps that would not only reverse critical coverage gains, but would intensify the hardships so many families are already facing as a result of losing their jobs and their health insurance. In the last economic downturn, federal fiscal relief was successful in helping states address budget shortfalls, avoid deeper Medicaid cuts, and preserve eligibility, which was a condition of receiving enhanced federal funds. However, to deal with tight budgets, many states made procedural changes to their programs which blocked eligible children and parents from obtaining coverage at a time when they could least afford health care on their own.

Easing Eligibility and Simplifying Procedures Are Especially Important During an Economic Downturn

Individuals who have lost health coverage due to unemployment need a smooth path to Medicaid and SCHIP.[8] Any period of time without insurance could cause ongoing medical conditions to escalate if it is not possible for families to find or pay for needed medication or other treatment on their own. Parents who are recently unemployed may find that the unemployment compensation payments they receive put them over the income limit for Medicaid. States can choose to disregard these payments or a portion of them in determining eligibility for jobless parents. States can eliminate their SCHIP waiting periods or at least ensure that a job-loss exemption is available. Minimizing documentation requirements and rescinding face-to-face interviews also are important since complicated, burdensome forms and procedures often discourage families from completing the process. Enrolling children for a full 12 months and simplifying renewal helps ensure beneficiaries remain covered for as long as they qualify. In addition to protecting children and families, taking such steps also saves administrative costs by reducing the workload on eligibility workers. Eligibility staff may have been cut at the same time application volume has increased.

Premium Payment Policies Matter

It also is important to ensure that unreasonable out-of-pocket costs do not keep eligible children from obtaining coverage and needed care. When a family has lost income or a job, it will be more difficult to keep up with premium payments on top of regular living expenses. Numerous studies show that premiums for low-income individuals can depress enrollment in health coverage programs.[9] Similarly, burdensome co-payments can be an obstacle to getting needed care or medication. Programs should also avoid imposing strict payment timeframes after which children are disenrolled from SCHIP, as well as lock-out periods that bar children from returning to SCHIP if the lack of a premium payment forces them to lose coverage.

Outreach Is Critical During Economic Downturns

In tight budget times, it may appear sensible to cut outreach funds as states seek ways to contain the costs associated with expanding caseloads. Conducting outreach may also seem counterintuitive when hiring freezes and lay-offs mean there are fewer eligibility workers to process a larger volume of applications. However, families that previously had stable jobs with health insurance are likely to have little or no experience navigating the public benefits system. They may not know where to turn for help when they become jobless, nor are they likely to know much about Medicaid and SCHIP or realize that they may qualify. Community-based organizations and institutions can play a vital role in alerting families to the availability of free or low-cost coverage and in assisting families with application procedures.

States are attempting to balance these competing pressures. For example, although New Mexico has had to make significant cuts to its Medicaid budget, the state will continue to reach out and enroll more uninsured children, a goal Governor Richardson has prioritized. A state Medicaid official explained that, while available funding will continue to be used for outreach, "the state does not have funds to do anything very aggressive or costly. It's difficult to justify spending on outreach when we're cutting elsewhere, however we will conduct some data matches to identify eligible but unenrolled children."[10] Given the demands that outreach generates and the limitations created by personnel cuts, adopting simplified procedures are more important that ever. Streamlining renewal, in particular, protects the investment in outreach since it guards against eligible children and parents losing coverage unnecessarily.

Federal Legislation May Provide Needed Help for States

Two major pieces of legislation are being considered in Congress as this report is being written. Both are critical to addressing the challenges states are facing as they report mounting deficits and also attempt to assist the growing demand for health coverage among families that are suffering the effects of the weakening economy. The first is reauthorization and extension of SCHIP legislation, which is currently operating with temporary funding through March 2009. This legislation would provide the additional funds to maintain coverage for children currently enrolled and cover additional uninsured children. It would also provide bonus payments designed to encourage states to enroll more eligible children under Medicaid.

The second piece of legislation is the economic recovery package. In this recession, with substantial state deficits, one form of assistance the federal government could provide is an increase in the federal share of financial assistance for the Medicaid program (FMAP). The amount of funding for the enhanced FMAP, the duration of the relief, the distribution of the funds across states, and the conditions or maintenance of effort requirements related to eligibility are critical issues in the design of a recovery package. In 2003, one of the conditions for states receiving an increased FMAP was that they were prohibited from reducing eligibility levels in order to qualify for this financial assistance. Congress could also consider requiring states to maintain enrollment procedures to qualify for federal assistance and additional provisions to extend temporary Medicaid coverage to individuals affected by the economic downturn.

The SCHIP reauthorization and economic recovery plan could provide an essential boost that would enable states to sustain the coverage gains they have achieved and give families hard-hit by the recession the confidence that assistance with health coverage will be available.

Health Insurance Coverage of America's Children

January 2009

THE HENRY J. KAISER FAMILY FOUNDATION

THE KAISER COMMISSION ON
Medicaid and the Uninsured

3243

The Kaiser Commission on Medicaid and the Uninsured provides information and analysis on health care coverage and access for the low-income population, with a special focus on Medicaid's role and coverage of the uninsured. Begun in 1991 and based in the Kaiser Family Foundation's Washington, DC office, the Commission is the largest operating program of the Foundation. The Commission's work is conducted by Foundation staff under the guidance of a bipartisan group of national leaders and experts in health care and public policy.

Health Insurance Coverage of America's Children
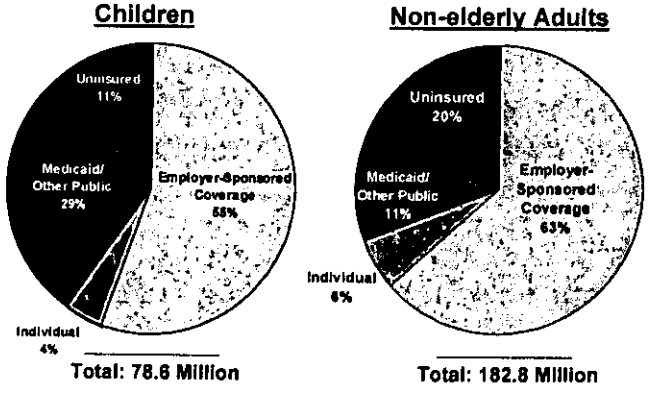
2007

**Thirty-four million—over 40% of all children—are from poor or near-poor families.
Over twenty million rely on Medicaid and SCHIP for health insurance.
Nearly nine million children were uninsured in 2007.**

There are about 79 million children in the United States and their access to health care is determined in large part by whether or not they have health insurance coverage. Uninsured children are less likely to have a medical home compared to those with health insurance. Needed care is more likely to be postponed and uninsured children are also less likely to see a physician or dentist for standard preventive care. Unhealthy children miss school and their parents miss work to care for them – just some of the consequences the nearly 9 million uninsured children in the U.S. experience.

Health Insurance Coverage of Children And Adults, 2007



Data may not total 100% due to rounding.
SOURCE: KCMU/Urban Institute analysis of 2008 ASEC Supplement to the CPS.

Children are at greater risk than adults of being uninsured because as a group they are more likely to be poor. While about a third of adults under age 65 come from low-income families (incomes less than twice the poverty level, which in 2007 was about $42,000 for a family of four) — more than 40% of children come from low-income families. However, children are much less likely than adults to be uninsured (11% vs. 20% in 2007) because of two public insurance programs: Medicaid and the State Children's Health Insurance Program (SCHIP). Medicaid and SCHIP cover all children whose family incomes are below levels set by individual states that are at or above federal minimum requirements.

Medicaid, SCHIP, and other state programs for children's coverage play an important role in providing health insurance for children. The programs cover more than 60% of all poor children (family incomes less than the poverty level) and about 40% of near-poor children (those with family incomes between one and two times the poverty level). Including higher income children with disabilities who qualify, these public programs insure more than a quarter of all children in the United States.

This chartbook provides essential facts about children's health insurance coverage today. Using the most recent Census Bureau data available (2007), it examines children's coverage by:

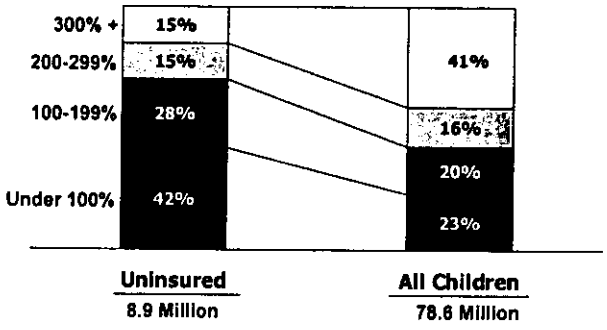
- family income
- family work status
- type of family or household
- age
- health status
- race and ethnicity
- citizenship status, and
- geographic region.

In addition to figures, each section also contains tables that provide more detailed information about family income and health insurance. For example, estimates of the share of uninsured children in families with full-time workers who are from poor, near-poor, middle-income or higher income families are included in the tables. Not all subgroups of children could be analyzed in this way however, because the survey sample size was not large enough to produce reliable estimates in all cases. Due to small sample sizes, two years of data, from 2006 and 2007, were used to analyze health coverage of children by race and ethnicity, citizenship and health status. Sample sizes were too small for Asian, American Indian, and multiracial children to analyze their health coverage by income groups. In addition, a set of state-level tables (for all children, low-income children, and uninsured rates by poverty level) can be found at the end of the chartbook.

Family Poverty Level and Health Coverage

While 43% of all children come from poor or near-poor families, more than two-thirds (70%) of uninsured children come from low-income families (less than 200% of the poverty level, e.g., about $42,000 for a family of four in 2007). The majority of low-income children do not have private health insurance.

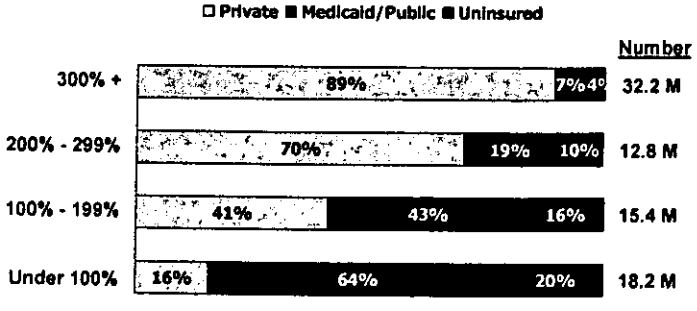
Uninsured Children vs. All Children, by Family Poverty Level, 2007



The Federal Poverty Level for a family of four in 2007 was $21,203 (according to the U.S. Census Bureau's poverty threshold). Family size and total family income are grouped by insurance eligibility. Children includes all individuals under age 19.
SOURCE: KCMU/Urban Institute analysis of 2008 ASEC Supplement to the CPS.

Public insurance programs—Medicaid, SCHIP, and other state programs—are essential sources of coverage for children in this country, covering nearly two-thirds of all poor children and more than 40% of near-poor children. However, one in five poor children and 16% of near-poor children remain uninsured. Most of these low-income uninsured children are eligible for Medicaid or SCHIP, but confusion over who qualifies for these programs and an enrollment process that can be difficult to navigate have left many uninsured

Children's Health Insurance Coverage by Family Poverty Level, 2007

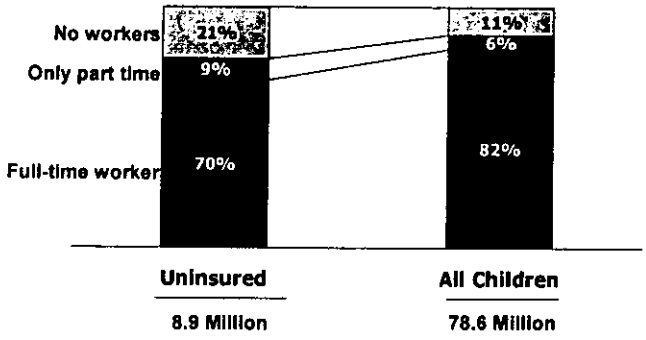


Data may not total 100% due to rounding. The Federal Poverty Level for a family of four in 2007 was $21,203 (according to the U.S. Census Bureau's poverty threshold). Family size and total family income are grouped by insurance eligibility. Children includes all individuals under age 19.
SOURCE: KCMU/Urban Institute analysis of 2008 ASEC Supplement to the CPS.

Work Status and Health Coverage

Although job-based health insurance is declining, it still covers more than half of children in this country. However, not all working families have access to, or can afford, employer-sponsored insurance. Seventy percent of uninsured children live in families where there is at least one full-time worker.

Uninsured Children vs. All Children, by Family Work Status, 2007



Data may not total 100% due to rounding. Children includes all individuals under age 19.
SOURCE: KCMU/Urban Institute analysis of 2008 ASEC Supplement to the CPS.

Just over one fifth of children in families with a full-time worker are covered by Medicaid or other public insurance; leaving 10% of this large group of nearly 65 million children with no health insurance. Fewer than one-third of low-income children living in families with at least one full-time worker have employer-sponsored insurance.

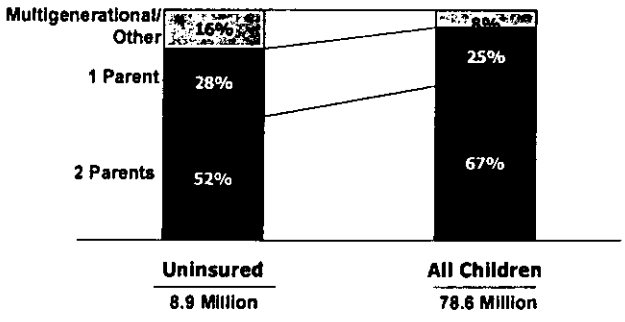
Estimates with relative standard errors greater than 30% are not provided.

Household Type and Health Coverage

Most children live in households with two parents (67%), as do over half of uninsured children. Uninsured children however, are more likely than others to live with just one parent and/or with grandparents, or other extended family members (referred to as multigenerational and other households here).

Uninsured Children vs. All Children, by Household Type, 2007



Children includes all individuals under age 19. Approximately 1% of children live in households with no adult, three-quarters of whom are 17-18 years old.
SOURCE: KCMU/Urban Institute analysis of 2008 ASEC Supplement to the CPS

Children living with two parents are the most likely to have private health insurance (71%) because family incomes are generally higher and there are potentially two sources for employer-based insurance. Children living with one parent are more likely to qualify for Medicaid and SCHIP and, for them, these programs are the primary source of health insurance, covering nearly half of these children (49%). Children living with extended family are the least likely to have health coverage—25% are uninsured.

* Multigenerational/other households with children include families with at least three generations in a household, plus families in which adults are caring for children other than their own (e.g. a niece living with her aunt).

** Totals do not equal 100% because approximately 3% of uninsured children live in households with no adult.

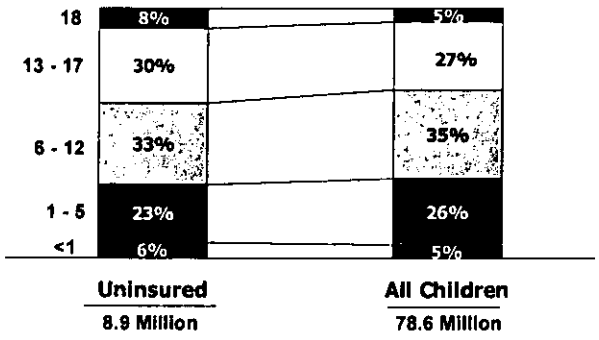
( ) = Estimate has a large 95% confidence interval of +/- 5.0 - 7.9 percentage points.

Estimates with relative standard errors greater than 30% are not provided.

Age and Health Coverage

Uninsured children span the age spectrum, but 18 year-olds are at the greatest risk of being uninsured, in part because some of them are no longer living at home and may no longer be dependents. Infants compose 6% of the uninsured, and they are particularly vulnerable to the negative effects of being uninsured given their high health care needs.

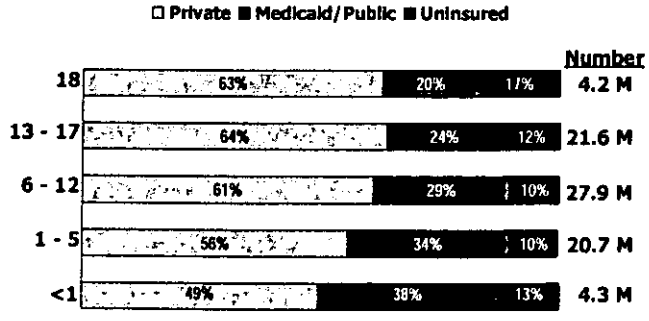
Children
Uninsured vs. Population, by Age Group, 2007



Data may not total 100% due to rounding. Children includes all individuals under age 19.
SOURCE: KCMU/Urban Institute analysis of 2008 ASEC Supplement to the CPS.

Younger children are more likely to be insured by Medicaid or other public coverage. Were it not for Medicaid and SCHIP, the chances of being uninsured among children would be much higher, particularly among pre-schoolers and infants.

Children's Health Insurance Coverage by Age Group, 2007



Children includes all individuals under age 19.

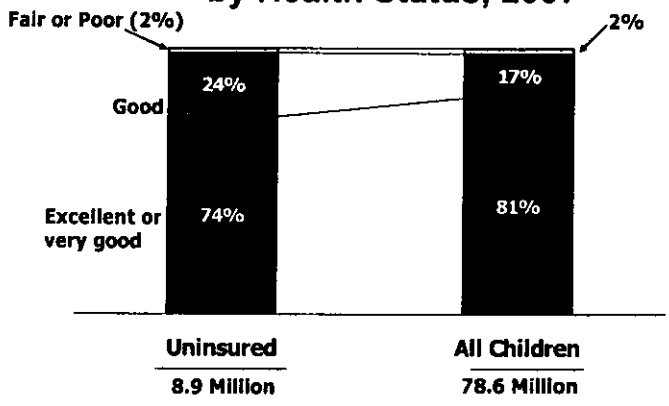
Health Status and Health Coverage

Uninsured children are somewhat less likely to be in the best health compared to all children. While 81% of all children are reported to be in excellent or very good health, only 74% of uninsured children are in such good health.

Uninsured Children vs. All Children, by Health Status, 2007



Children includes all individuals under age 19.
SOURCE: KCMU/Urban Institute analysis of 2008 ASEC Supplement to the CPS.

Among children in the worst health (reported as fair or poor), the majority are covered by Medicaid and other public insurance, and just 30% are enrolled in private insurance. In contrast, nearly two-thirds of children in the best of health are insured privately, and a quarter are covered by public programs.

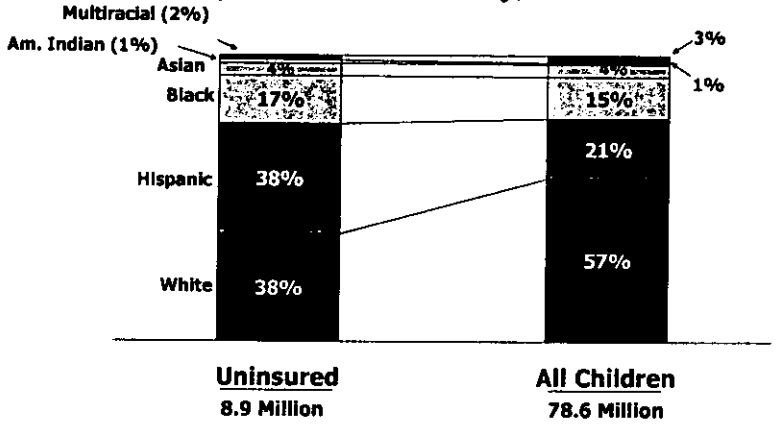
Estimates with relative standard errors greater than 30% are not provided.

Race and Health Coverage

Almost 60% of all children are white in this country, but they compose only 38% of uninsured children. As a group, white children come from higher income families, which explains part of the racial and ethnic differences in health coverage. Hispanic children make up just 21% of all children, but 38% of uninsured children.

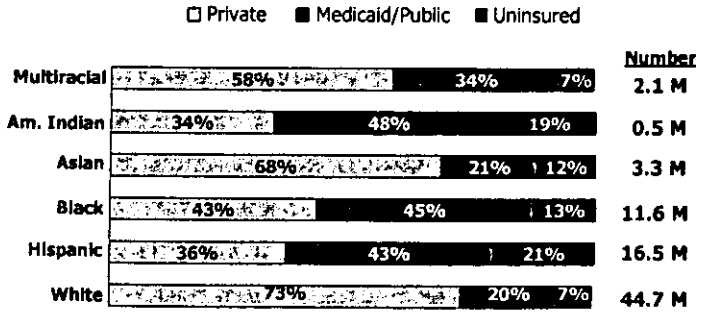
Uninsured Children vs. All Children, by Race and Ethnicity, 2007



Children includes all individuals under age 19. American Indian category includes Aleutian Eskimos. Asian includes South Pacific Islander. Data may not total 100% due to rounding.
SOURCE: KCMU/Urban Institute analysis of 2008 ASEC Supplement to the CPS.

The majority of white, Asian, and multiracial children have private health insurance, compared to about 40% of Black, Hispanic, and American Indian children combined. Medicaid plays a larger role for low-income groups; still, among all American Indians and Hispanics, about 20% of children are uninsured.

Children's Health Insurance Coverage by Race and Ethnicity, 2007



Children includes all individuals under age 19. American Indian category includes Aleutian Eskimos. Asian includes South Pacific Islander. Data may not total 100% due to rounding.

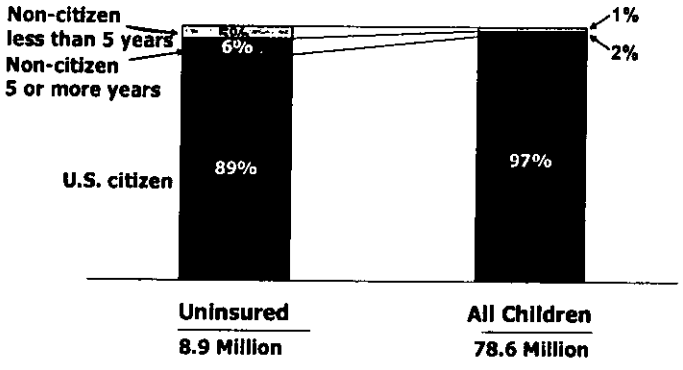
( ) = Estimate has a large 95% confidence interval of +/- 5.0 - 7.9 percentage points.
Estimates with relative standard errors greater than 30% are not provided. The sample size was too small to produce reliable estimates of health coverage by income for Asian, American Indians and multiracial children.

Citizenship and Health Coverage

Almost 90% of uninsured children are U.S. citizens. However, non-citizen children are disproportionately represented among the uninsured (11% vs. 3% of all children) in part because they are more likely to be from low-income families and many do not qualify for public coverage. The chances of being uninsured are substantially greater for non-citizen children, who are almost four times as likely to go without coverage as citizen children.

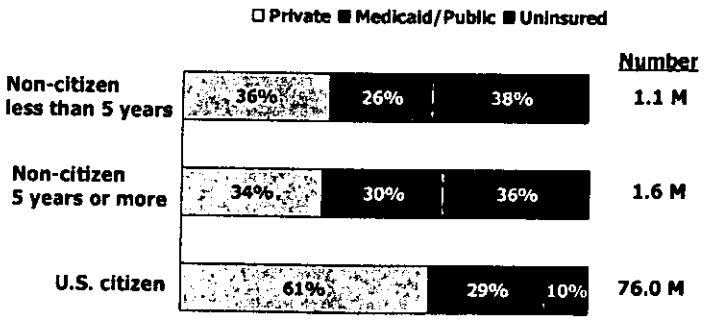
Uninsured Children vs. All Children, by Citizenship Status, 2007



Children includes all individuals under age 19.
SOURCE: KCMU/Urban Institute analysis of 2008 ASEC Supplement to the CPS.

Legal immigrants entering the country are only eligible for the full benefits of Medicaid after they have lived here five years unless their state chooses to provide separate coverage for legal non-citizens. Some 38% of non-citizen children who have lived in the U.S. less than five years have no health insurance.

Children's Health Insurance Coverage by Citizenship Status, 2007



Children includes all individuals under age 19. Data may not total 100% due to rounding.

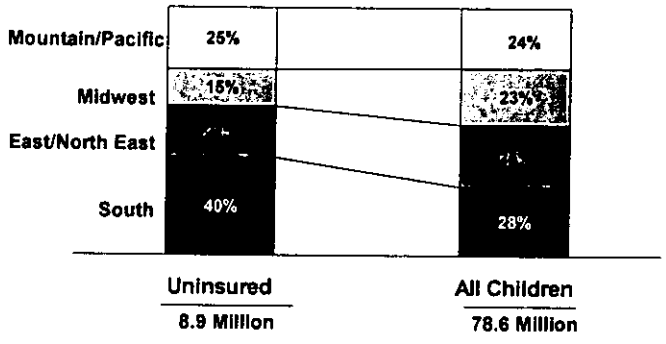
Estimates with relative standard errors greater than 30% are not provided.

Region and Health Coverage

Health insurance coverage varies by region, and even by state, depending on the share of families with low incomes, the nature of employment in the area, and the inclusiveness of state Medicaid and SCHIP programs. While fewer than 30% of all children live in ten southern states, about 40% of uninsured children live there.

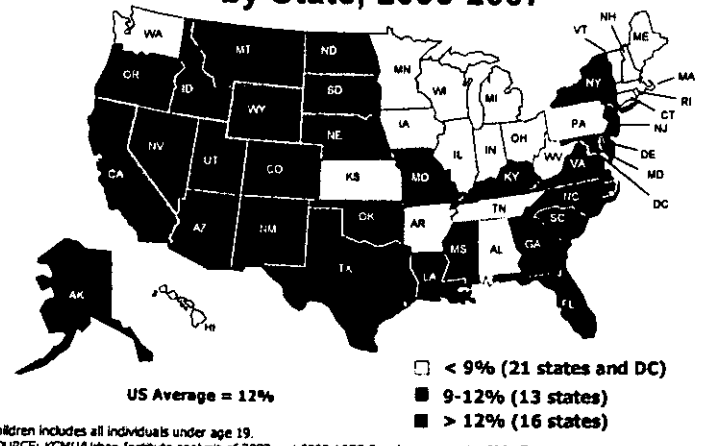
Children
Uninsured vs. Population, by Region, 2007



Children includes all individuals under age 19. Data may not total 100% due to rounding.
SOURCE: KCMU/Urban Institute analysis of 2008 ASEC Supplement to the CPS.

More than one in ten children nationally are uninsured, but the chances of being uninsured range widely across the states—from a low of 5% (MA, WI) to a high of 22% in Texas. Among the states in which children's uninsured rates exceed the national average, all but one is in the southern and western regions.

Uninsured Rates for Children under 19, by State, 2006-2007



Children includes all individuals under age 19.
SOURCE: KCMU/Urban Institute analysis of 2007 and 2008 ASEC Supplements to the CPS. Two-year pooled estimates for states and the US (2006-2007).

Table Endnotes

The term family as used in family income, family poverty levels, and family work status, is defined as a health insurance unit (those who are eligible as a group for "family" coverage in a health plan) throughout this report.

[a] Children includes all individuals under age 19.

[b] Other includes other public insurance (mostly Medicare and military-related, e.g., Veterans Administrati and TRICARE). SCHIP is included in Medicaid.

[c] The 2007 federal poverty level for a family of four was $21,203.

Senator Davis,

We enjoyed listening to your Health and Social Services committee meeting on Monday regarding Senate Bill 13 and Senate Bill 87.
The attached memo is intended to answer the question posed about the SCHIP cost-sharing rules.

Please let me know if you have additional questions or need additional information.

Best regards,
Jennifer

Subtitle B—Focus on Low-Income Children
and Pregnant Women
SEC. 111. STATE OPTION TO COVER LOW-INCOME PREGNANT WOMEN
UNDER CHIP THROUGH A STATE PLAN AMENDMENT.
(a) IN GENERAL.—Title XXI (42 U.S.C. 1397aa et seq.), as
amended by section 112(a), is amended by adding at the end the
following new section:
"SEC. 2112. OPTIONAL COVERAGE OF TARGETED LOW-INCOME PREGNANT WOMEN THROUGH A STATE PLAN AMENDMENT.
"(a) IN GENERAL.—Subject to the succeeding provisions of this section, a State may elect through an amendment to its State child health plan under section 2102 to provide pregnancy-related assistance under such plan for targeted low-income pregnant women.
"(b) CONDITIONS.—A State may only elect the option under subsection (a) if the following conditions are satisfied:
"(1) MINIMUM INCOME ELIGIBILITY LEVELS FOR PREGNANT WOMEN AND CHILDREN.—The State has established an income eligibility level—
"(A) for pregnant women under subsection
(a)(10)(A)(i)(III), (a)(10)(A)(i)(IV), or (l)(1)(A) of section 1902
that is at least 185 percent (or such higher percent as
the State has in effect with regard to pregnant women
under this title) of the poverty line applicable to a family
of the size involved, but in no case lower than the percent
in effect under any such subsection as of July 1, 2008;
and
"(B) for children under 19 years of age under this title (or title XIX) that is at least 200 percent of the poverty line applicable to a family of the size involved.
"(2) NO CHIP INCOME ELIGIBILITY LEVEL FOR PREGNANT
WOMEN LOWER THAN THE STATE'S MEDICAID LEVEL.—The State
does not apply an effective income level for pregnant women
under the State plan amendment that is lower than the effective
income level (expressed as a percent of the poverty line and
considering applicable income disregards) specified under subsection
(a)(10)(A)(i)(III), (a)(10)(A)(i)(IV), or (l)(1)(A) of section
1902, on the date of enactment of this paragraph to be eligible
for medical assistance as a pregnant woman.
"(3) NO COVERAGE FOR HIGHER INCOME PREGNANT WOMEN
WITHOUT COVERING LOWER INCOME PREGNANT WOMEN.—The
State does not provide coverage for pregnant women with
higher family income without covering pregnant women with
a lower family income.
"(4) APPLICATION OF REQUIREMENTS FOR COVERAGE OF TARGETED
LOW-INCOME CHILDREN.—The State provides pregnancyrelated
assistance for targeted low-income pregnant women
in the same manner, and subject to the same requirements,
as the State provides child health assistance for targeted lowincome
children under the State child health plan, and in
addition to providing child health assistance for such women.
"(5) NO PREEXISTING CONDITION EXCLUSION OR WAITING
PERIOD.—The State does not apply any exclusion of benefits
H. R. 2—20
for pregnancy-related assistance based on any preexisting condition
or any waiting period (including any waiting period
imposed to carry out section 2102(b)(3)(C)) for receipt of such
assistance.

"(6) APPLICATION OF COST-SHARING PROTECTION.—The State provides pregnancy-related assistance to a targeted low-income woman consistent with the cost-sharing protections under section 2103(e) and applies the limitation on total annual aggregate cost sharing imposed under paragraph (3)(B) of such section to the family of such a woman.
"(7) NO WAITING LIST FOR CHILDREN.—The State does not impose, with respect to the enrollment under the State child health plan of targeted low-income children during the quarter, any enrollment cap or other numerical limitation on enrollment, any waiting list, any procedures designed to delay the consideration of applications for enrollment, or similar limitation with respect to enrollment.

Thomas,

Martha King and I will be on the call this afternoon to answer questions.

As we discussed on the phone on Friday, Alaska's SCHIP program is a Medicaid expansion program and therefore must comply with Medicaid's cost-sharing rules as specified under the Deficit Reducation Act of 2005.

The following document summarizes these requirements and I would refer you to the summary on page 1 under the heading "Options for Premiums and Cost-sharing" and the "Important Links" on the bottom of page 2. See the document here: http://www.cms.hhs.gov/DeficitReductionAct/Downloads/Costsharing.pdf

Under provisions of the Deficit Reduction Act of 2005, states generally cannot impose cost sharing on children in families with income below 150 percent of the federal poverty guidelines except in certain circumstances. In addition, even at more moderate-income levels, federal rules exempt some special services from any cost sharing requirements.

To create cost sharing requirements that differ from the Medicaid requirements, states can do so by submitting a waiver to and obtaining approval from the Centers for Medicare and Medicaid (CMS) or by creating a stand-alone SCHIP program.

For more information about cost sharing and SCHIP, please see the following CMS website:
http://www.cms.hhs.gov/MedicaidGenInfo/05_SCHIP%20Information.asp
(Scroll down to see the information under the heading "Cost Sharing.")

Subject: Re: SB 13, Denali KidCare/SCHIP program - Senate HESS Hearing Feb 9, 2009 1:30-3:00 AK Time (3:30-5:00pm Mtn time)

Thomas,

Yes, the following Kaiser report indicates that 7 states have SCHIP eligibility levels below 200 percent of the federal poverty guidelines (FPG):
Challenges of Providing Health Coverage for Children and Parents in a Recession: A 50 State Update on Eligibility Rules, Enrollment and Renewal Procedures, and Cost-Sharing Practices in Medicaid and SCHIP in 2009
http://www.kff.org/medicaid/7855.cfm
(See page 10, Figure 1.)

The 7 states are:

Alaska	175 percent FPG
Idaho	185 percent FPG
Montana	175 percent FPG
Nebraska	185 percent FPG
North Dakota	150 percent FPG
Oklahoma	185 percent FPG*
Oregon	185 percent FPG

* Oklahoma passed legislation to increase the income eligibility guideline to 300 percent of the federal poverty line under its current section 1115 waiver. However, the currently proposed expansion has been scaled back to 217 percent of the federal poverty line and the future expansion of 218 percent to 300 percent of the federal poverty line is pending further CMS guidance and SCHIP reauthorization.

Jennifer,
In reviewing one of your recommended web sites, the Kaiser Commission on Medicaid and the Uninsured, January 2009 reported that only 7 states, apparently including Alaska, are below 200% FPL. Can you tell me which are the other 6 states?

Thomas,

In the attached document, I have compiled some information regarding your questions about the State Children's Health Insurance Program and have included additional resources. At the end of the document, you will find summaries of enacted state legislation that you may find helpful. Please feel free to contact me if you would like any additional information or if you have any additional questions.

Best regards,
Jennifer

Greetings Thomas!

We're happy to provide the information you've requested in your email and to participate by phone on February 9th, if you continue to think we could be helpful. I am asking the two NCSL staff named in the cc line to work on the specifics you've asked for and we will be getting back to you as soon as possible.
In the meantime, please give our regards to Senator Davis & stay warm up there! martha

RE: Request for:
A) review and comments concerning Alaska Senate Bill 13 (attached), and
B) request for NCSL staff to testify at Senate HESS hearing concerning SB 13, Denali KidCare, Alaska SCHIP program February 9, 2009 at 1:30-3:00 pm (3:30-5:00 pm Mountain/Denver time). **Call in number is 888-295-4546**

Dear Ms. King,

Please read the attached **Alaska Senate Bill No. 13,** 26th Legislature, sponsored by Senator Bettye Davis, regarding **increasing income eligibility** under the Denali KidCare -State Children's Health Insurance Program (SCHIP) **to 200% Federal Poverty Guidelines (FPG)**. It was raised to 175% last year under SB 27, 25th Legislature.

Senator Davis, Chair, Senate HESS Committee (and Vice-Chair NCSL Health Committee) is considering an amendment at hearing to extend optional coverage to applicants over 200% FPG not to exceed 250% FPG with provisions of premiums or co-payments . You will note that there is no asset test in the bill.

Your comments in return e-mail to me as soon as possible before the hearing would be particularly helpful in the following areas:

1. Please let me know if other states are drafting similar bills, and if one or another state has particularly clear or comprehensive language to review, and
2. if asset tests, payments, and co-payments are common, and if other matters of eligibility other than income and household size under federal poverty guidelines are codified in statutes or are limited to and found in administrative codes, regulations, department or agency directives, and/or just in signed or unsworn applications for benefits.
3. Please provide an update, if possible, concerning the number of other states currently at or over 200% FPG, and the number of states over 300% FPG.
4. Please also comment regarding the SCHIP Bills running through Congress. An Associated Press Article appeared today, January 26, 2009, in the *Juneau Empire*, page A6, "Kids' health care bill angers Republicans" -because, among other things, there appears to be no income limit in the legislation, only reduced Medicaid reimbursement rates if states move higher than three times the federal poverty guidelines.

Please have NCSL staff call in to the hearing teleconference line on February 9, 2009 noted above at 888-295-4546 to testify and/or field questions.

Sincerely,

Thomas S. Obermeyer

Subject: Re: SB 13, Denali KidCare/SCHIP program - Senate HESS Hearing Feb 9, 2009 1:30-3:00 AK Time (3:30-5:00pm Mtn time)

Thomas,

In addition, you may be interested to know that the legislation signed by President Obama to reauthorize SCHIP last week includes a provision that requires states who wish to cover low-income pregnant women under SCHIP must also cover children in families with incomes up to 200 percent of the federal poverty guidelines.

Please see the link to the full text of this legislation (HR 2).
http://ccf.georgetown.edu/index/cms-filesystem-action?file=policy/2009_schip_reauth/chipra2009.pdf

I have also copy and pasted this information below.

Best regards,
Jennifer

Subtitle B—Focus on Low-Income Children
and Pregnant Women
SEC. 111. STATE OPTION TO COVER LOW-INCOME PREGNANT WOMEN
UNDER CHIP THROUGH A STATE PLAN AMENDMENT.
(a) IN GENERAL.—Title XXI (42 U.S.C. 1397aa et seq.), as
amended by section 112(a), is amended by adding at the end the
following new section:
"SEC. 2112. OPTIONAL COVERAGE OF TARGETED LOW-INCOME PREGNANT WOMEN THROUGH A STATE PLAN AMENDMENT.
"(a) IN GENERAL.—Subject to the succeeding provisions of this section, a State may elect through an amendment to its State child health plan under section 2102 to provide pregnancy-related assistance under such plan for targeted low-income pregnant women.
"(b) CONDITIONS.—A State may only elect the option under subsection (a) if the following conditions are satisfied:
"(1) MINIMUM INCOME ELIGIBILITY LEVELS FOR PREGNANT WOMEN AND CHILDREN.—The State has established an income eligibility level—
"(A) for pregnant women under subsection
(a)(10)(A)(i)(III), (a)(10)(A)(i)(IV), or (l)(1)(A) of section 1902
that is at least 185 percent (or such higher percent as
the State has in effect with regard to pregnant women
under this title) of the poverty line applicable to a family
of the size involved, but in no case lower than the percent
in effect under any such subsection as of July 1, 2008;
and
"(B) for children under 19 years of age under this title (or title XIX) that is at least 200 percent of the poverty line applicable to a family of the size involved.
"(2) NO CHIP INCOME ELIGIBILITY LEVEL FOR PREGNANT
WOMEN LOWER THAN THE STATE'S MEDICAID LEVEL.—The State
does not apply an effective income level for pregnant women

under the State plan amendment that is lower than the effective income level (expressed as a percent of the poverty line and considering applicable income disregards) specified under subsection (a)(10)(A)(i)(III), (a)(10)(A)(i)(IV), or (l)(1)(A) of section 1902, on the date of enactment of this paragraph to be eligible for medical assistance as a pregnant woman.
"(3) NO COVERAGE FOR HIGHER INCOME PREGNANT WOMEN WITHOUT COVERING LOWER INCOME PREGNANT WOMEN.—The State does not provide coverage for pregnant women with higher family income without covering pregnant women with a lower family income.
"(4) APPLICATION OF REQUIREMENTS FOR COVERAGE OF TARGETED LOW-INCOME CHILDREN.—The State provides pregnancyrelated assistance for targeted low-income pregnant women in the same manner, and subject to the same requirements, as the State provides child health assistance for targeted lowincome children under the State child health plan, and in addition to providing child health assistance for such women.
"(5) NO PREEXISTING CONDITION EXCLUSION OR WAITING PERIOD.—The State does not apply any exclusion of benefits
H. R. 2—20
for pregnancy-related assistance based on any preexisting condition or any waiting period (including any waiting period imposed to carry out section 2102(b)(3)(C)) for receipt of such assistance.
"(6) APPLICATION OF COST-SHARING PROTECTION.—The State provides pregnancy-related assistance to a targeted low-income woman consistent with the cost-sharing protections under section 2103(e) and applies the limitation on total annual aggregate cost sharing imposed under paragraph (3)(B) of such section to the family of such a woman.
"(7) NO WAITING LIST FOR CHILDREN.—The State does not impose, with respect to the enrollment under the State child health plan of targeted low-income children during the quarter, any enrollment cap or other numerical limitation on enrollment, any waiting list, any procedures designed to delay the consideration of applications for enrollment, or similar limitation with respect to enrollment.

Sponsor Statement

Senate Bill 13: "An Act relating to eligibility requirements for medical assistance for certain children and pregnant women; and providing for an effective date"

SB 13 increases and restores the qualifying income eligibility standard for the Denali KidCare Program to 200% of the Federal Poverty Line (FPL) to its original levels 12 years ago. As you know, Alaska is one of the nation's wealthiest states yet Alaska is only one of 5 states that still funds our SCHIP program below 200% FPL. SB 13 makes health insurance accessible to approximately 1,277 uninsured children and 225 pregnant women in Alaska.

Denali KidCare is an "enhanced" reimbursement program with Alaska currently receives about 66% under the federal government's State Children's Health Insurance Program (SCHIP), which was created in 1997. Congress reauthorized the SCHIP program and President Obama signed into law on February 4, 2009. This reauthorization expanded the coverage to 4 million additional children and is re-authorized through 2013.

Consider the following information from the Kaiser Commission on Medicaid and the Uninsured, January, 2009:

- 45 states, including D.C., cover children in families with incomes at 200% FPL or higher.
- 33 states cover children in families with income between 200% and 250% FPL.
- 19 states including D.C., cover children in families with income at 250% or higher. 10 of these states cover children in families with income at 300% FPL or higher.
- 35 states allow premiums or enrollment fees, and 24 states have co-payments for selected services in SCHIP programs on a sliding scale of FPL.
- 46 states do not require asset tests.

Denali KidCare serves an estimated 7,900 Alaska children and remains one of the least costly medical assistance programs in the state at about $1,700 per child with full coverage, including dental, which is about 20% of the cost of adult senior coverage.

It is estimated that uninsured children with a medical need are five times as likely not to have a regular doctor as insured children and four times more likely to use emergency rooms at a much higher cost. Early intervention and preventative care under SB 13 will greatly increase Alaska children's health and yield substantial savings to the state, public and private sector hospitals, emergency rooms which are required to admit indigent and uninsured patients for non-emergency treatment.

There are still an estimated 18,000 uninsured children in Alaska. This is about 9% of the children age 18 and under. Private health care coverage for children has declined over 30% in the last ten years, and the deepening recession is pulling more children and families into the uninsured ranks. Alaska should do its share and take advantage of available federal matching funds by insuring its low income children and pregnant women up to and including 200% FPL under SB 13.

Subject: Re: SB 13, Denali KidCare/SCHIP program - Senate HESS Hearing Feb 9, 2009 1:30-3:00 AK Time (3:30-5:00pm Mtn time)

Thomas,

Yes, the following Kaiser report indicates that 7 states have SCHIP eligibility levels below 200 percent of the federal poverty guidelines (FPG):
Challenges of Providing Health Coverage for Children and Parents in a Recession: A 50 State Update on Eligibility Rules, Enrollment and Renewal Procedures, and Cost-Sharing Practices in Medicaid and SCHIP in 2009
http://www.kff.org/medicaid/7855.cfm
(See page 10, Figure 1.)

The 7 states are:

Alaska	175 percent FPG
Idaho	185 percent FPG
Montana	175 percent FPG
Nebraska	185 percent FPG
North Dakota	150 percent FPG
Oklahoma	185 percent FPG*
Oregon	185 percent FPG

* Oklahoma passed legislation to increase the income eligibility guideline to 300 percent of the federal poverty line under its current section 1115 waiver. However, the currently proposed expansion has been scaled back to 217 percent of the federal poverty line and the future expansion of 218 percent to 300 percent of the federal poverty line is pending further CMS guidance and SCHIP reauthorization.

Would you still like for NCSL to participate by phone in the Senate HESS hearing concerning SB 13 on February 9, 2009?
If yes, what are you expecting from us (a presentation, or just being available to answer questions, etc.)?

Please feel free to contact me if you would like any additional information or if you have any additional questions.

Best regards,
Jennifer

Alaska's Citizen Review Panel

Citizen Review Panel

Our focus areas today will be:

- To provide a brief overview of the Citizen Review Panel & to highlight our activities since last year
- To share with you what we hear about the Office of Children's Services
- To ask you to help improve the situation

Mandate for the Group

The Citizen Review Panel is mandated by state and federal law. The CRP was created through the federal Child Abuse Prevention & Treatment Act (CAPTA); Keeping Children & Families Safe Act of 2003 and through Alaska statute Sec. 47.14.205.

Citizen Review Panel

CRP Vision

To enable the Office of Children's Services to implement its policies and procedures in a culturally sensitive and consistent manner across the state.

Citizen Review Panel

Who are we?

The CRP is composed of volunteer members who are broadly representative of the state, including members who have expertise in the prevention and treatment of child abuse and neglect. The group chooses its own members.

Current members

- Fred VanWallinga, Willow (Chair)
- Carol Olson, Anchorage (Vice-Chair)
- Pamela Dupras, Kodiak
- Dana Hallett, Soldotna
- Art Hansen, Fairbanks
- Susan Heuer, Anchorage
- Kristin Hull, Wasilla
- Ralph Taylor, Anchorage (currently deployed with the Alaska National Guard)

CRP Duties

Evaluate Office of Children's Services (OCS) compliance with federal and state laws, examine the policies, procedures and practices of OCS, and, where appropriate, evaluate specific cases of child abuse or neglect.

CRP Duties (continued)

The CRP must also:

- Maintain confidentiality
- Conduct public outreach
- Produce an annual report
- Meet at least quarterly

Our focus for the past year

- Potential for additional 5th service region
- Improving situation in Copper River Basin

Citizen Review Panel

What we've been doing

- Holding monthly teleconferences
- Produced an annual report
- Attended the Alaska Native Indian Child Welfare Summit
- Attended national Citizen Review Panel conference in Minnesota
- Meeting in-person quarterly

What else we've been doing

- Meeting with OCS partner agencies
- Meeting with OCS staff from Director Sandoval to line workers
- Participated in the federal Child and Family Services Review
- Met with UA staff responsible for OCS training
- Meeting with the Commissioner and Legislators

A couple more things we did

- Attended the Family to Family Conference
- Attended the Community Care Conference
- Heard from concerned citizens
- Received training on safety assessment

Where some of us have been

- Aniak
- Bethel
- Copper Center
- Dillingham
- Fairbanks
- Glennallen
- Juneau
- King Salmon
- Naknek
- St. Mary's
- Unalaska

Citizen Review Panel

We've met with...

- Counseling center staff
- District attorneys
- Foster parents
- Health aides & public health nurses
- ICWA workers
- Local police departments
- OCS staff
- School principals, nurses & counselors
- State troopers
- Tribal representatives
- WIC workers

OCS is improving due to...

- Key personnel changes
- System changes—safety assessment, expanded training, ORCA programming improvements
- Increased collaboration with partnering state agencies (DJJ, Dept. of Law, etc.)

OCS is improving due to…

- Continued and increased financial support from Legislature during past couple fiscal years
- Responsive to outside recommendations (ACTION for Children, CRP, federal audit)

Issues of concern

- Hiring freeze
- Region 5
- Many solutions to problems are beyond the control of OCS, Director lacks discretion
- Standardization

Issues of concern

- Hiring freeze

  OCS is public safety like the Troopers in as much as they have a protective function

In rural areas, workers are already stretched, further unfillable vacancies with no end in sight will directly affect child safety

Increased risk of current workers leaving due to work overload

Issues of concern

- Region 5
  - Last year we strongly advocated for Region 5 based on Bethel community support
    - SCRO has 13 offices, next largest region has 7
  - OCS costed-out Region 5 for $1.5 million, but the region was not in the Governor's budget

Issues of concern

- Region 5
  - Bethel OCS and community partners continue to support this idea, but other communities have concerns
  - Over the next year, the CRP will intensively survey all Southwestern Alaska field offices and community partners
  - We continue to think that a smaller more culturally focused region is in the best interest of children

Issues of concern

- Many solutions to problems are beyond the control of OCS, Director lacks discretionary powers

Issues of concern

- Standardization of supports for employees varies between state agencies
  - Housing
  - Internet

We'd like your help to address these concerns

- Support the exemption of OCS from hiring freeze and issuance of immediate variances
- Investigate and resolve the lack of standardization between state agencies

Benefits of CRP

- Seven volunteer members all contributing a minimum of 250 active hours annually
- We're the eyes and ears of the public for the Legislature and OCS
- Unique function of identifying and advocating for ancillary services that OCS cannot request
- Jointly we can achieve a vastly improved child protection system for the children of Alaska

Senator Bettye Davis

Senate Bill 27

"An Act relating to tuition waivers for a child who was in foster care; relating to eligibility for foster care and subsidy payments for a hard-to-place child; and amending the definition of 'child' in certain statutes."

Sponsor Statement

SB 27 provides waivers of tuition and fees combined with other assistance to help foster or out-of-home care children enjoy the opportunity and benefits of a higher education afforded to others. Recognizing the severe educational disadvantages of persons placed in foster care or out-of-home care, many states have initiated a variety of college tuition waiver and scholarship programs for these persons. The University of Alaska increased tuition waivers and additional assistance from five (5) to ten (10) students statewide who were in foster care on their 18th birthday, but the need is much greater. Data in 2006 indicated that there are over 2,000 children in foster care in Alaska at any one time. Over 5,000 live in out-of-home care with relatives who are in a subsidized guardianship program. The average length of stay in foster care in Alaska was 25 months but only 40% of children had 2 or fewer placements.

Education has been shown in studies to be a significant factor in determining the success of children and youth as they exit the foster care system. Research measuring educational, social, and vocational outcomes for children and youth in foster care indicates that the majority of children who enter the protection of child welfare agencies do poorly in school due to instability in placements and changes in schools. The small number who have successfully finished high school and are eligible and qualified to attend college need financial support and other assistance to continue in school. Too often they "age out" of the foster care system at age 18 and wind up on the streets and in shelters.

A Casey Family Program study of 1,000 foster care youth found that youth who had one or fewer home placements per year were twice as likely to graduate from high school before leaving care. Additionally, it was found that:

- Less than **70%** of youth in foster care finish high school before leaving care.
- Children and youth in out-of-home care experience **1 or 2** placement changes per year on average.
- Students in foster care score **16 to 20** percentile points below others in statewide standardized tests (Washington State study).
- Only about **3%** obtain a bachelor's degree within a few years of emancipation.

Nationwide the Casey Foundation reports that every year more than 25,000 youth attempt to make the transition from foster care to self-sufficiency as they reach age 18. Only half finish high school, and about 11 percent go on to college or vocational schools. Statistically, Alaska which regularly lags behind many other states in educational performance, provides far less assistance to persons in foster care to go to college. SB 27 should help many more deserving foster care and out-of-home care youth go to college and obtain undergraduate degrees.

3/27 - hearing - No action

CSSB 27 ( ) "E" version, 26-LS0205\E

"An Act relating to tuition waivers for a child who was in out-of-home care; relating to out-of-home care for a child; amending the definition of 'child' in certain statutes; and relating to out-of-home care transition to independent living."

The CS SB 27 ( ) "E" version It changes the definition of "foster care" to "out-of-home" care because so many relatives who are not licensed take care of children who are in "out-of-home" care. The bill extends eligibility for tuition waivers for a person in the foster care from 19 to 21, if the person was in foster care at age 16 for not less than 6 consecutive months and is in out-of home care at time of application. The bill subjects waivers of tuition to availability of funds by appropriation.

Section 1. Adds a new section, AS 14.43.086, entitling a person who was placed by the state in out-of-home care to a waiver of undergraduate tuition and fees in a state-supported school.

Section 2. Adds a cross reference to a definition for out-of home care for purposes of the tuition waiver.

Section 3. Changes "foster care to "out-of-home care" for purposes of the procurement code.

Section 4. Adds a cross reference to a definition for out-of-home care form medical assistance provision.

Section 5. Extends court orders to age 21 for a child committed to the custody of the department if they are placed in out of home care.

Section 6. Changes definition of "child" under AS 47.10.990(3) (child in need of aid) to include a person under 21 years of age living in out-of-home care.

Section 7. Changes "foster care" to "out-of-home care" for purposes of the child in need of aid statutes.

Section 8. Changes "foster care" to "out-of-home care" for purposes of the transition program to independent living.

Section 9. Changes "foster care" to "out of home care" form purposes of the transition program for children who are not less than age 18 living in out-of-home care, as defined.

Section 10. Adds children who were placed in out –of-home care to provide transition program services for the purpose of achieving self-sufficiency.

Section 11. Changes "foster care" to "out-of-home" care for purposed of the transition program definition .

Section 12. Adds a monetary stipend for children in the transition program for a specified period of time.

Section 13. Adds a cross reference to a definition for out-of-home care for purposes of the transition program.

MEMORANDUM March 10, 2009

SUBJECT: Sectional Summary (CSSB 27( )
(Work Order No. 26-LS0205\E))

TO: Senator Bettye Davis
Attn: Thomas Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Adds a new section entitling a person who was placed by the state in out-of-home care to a waiver of undergraduate tuition and fees in a state-supported school.

Section 2. Adds a cross reference to a definition for out-of-home care for the tuition waiver.

Section 3. Changes "foster care" to "out-of-home care" for purposes of the procurement code.

Section 4. Adds a cross reference to a definition for out-of-home care for medical assistance provisions.

Section 5. Extends court orders to age 21 for a child committed to the custody of the department.

Section 6. Changes the definition of "child" under AS 47.10 (child in need of aid) to include a person under 21 years of age living in out-of-home care.

Section 7. Changes "foster care" to "out-of-home care" for purposes of the child in need of aid statutes.

Section 8. Changes "foster care" to "out-of-home care" for purposes of the transition program to independent living.

Section 9. Changes "foster care" to "out-of-home care" for purposes of the transition program for children who are not less than age 18 living in out-of-home care, as defined.

Section 10. Adds children who were placed in out-of-home care to provide transition program services for the purpose of achieving self-sufficiency.

Section 11. Changes "foster care" to "out-of-home care" for purposes of the transition program definition.

Section 12. Adds a monetary stipend for children in the transition program for a specified period of time.

Section 13. Adds a cross reference to a definition for out-of-home care for purposes of the transition program.

CS FOR SENATE BILL NO. 27( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATORS DAVIS, Ellis

adopted 3/11 by comm. No changes

A BILL

FOR AN ACT ENTITLED

"An Act relating to tuition waivers for a child who was in out-of-home care; relating to out-of-home care for a child; amending the definition of 'child' in certain statutes; and relating to out-of-home care transition to independent living."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.43 is amended by adding a new section to read:

Article 3A. Free Tuition for a Person Who Was in Out-of-home Care.

Sec. 14.43.086. Free tuition and fees for a person who was in out-of-home care. (a) A person who enrolls as a student in good standing in a state-supported educational institution in the state is entitled to a waiver of tuition, fees, and room and board expenses if the person provides adequate proof that the person

(1) was in the custody of the state under AS 47.10 or AS 47.14; and

(2) was placed in out-of-home care for a period of not less than six consecutive months on or after the person became 16 years of age.

(b) The amount of the waiver to which a person is entitled under this section is

the amount of unmet need for tuition, room, and board expenses, as determined by the commission after deducting all available funding for the school year from education loans, grants, or scholarships for a person eligible for a waiver.

(c) The proceeds of an education loan, grant, or scholarship received by a person eligible for a waiver under this section must be paid to the educational institution to offset the person's tuition, fees, and room and board expenses.

(d) A state-supported educational institution in the state is required to provide a waiver under (a) of this section only if the legislature appropriates funds for the purpose of offsetting waivers under this section. If an appropriation is not sufficient to fully offset waivers for each person entitled to a waiver under (a) of this section, the institution may offer full or partial waivers to eligible applicants as funding permits and at the discretion of the institution.

*** Sec. 2.** AS 14.43.160 is amended by adding a new paragraph to read:

(7) "out-of-home care" has the meaning given in AS 47.14.400.

*** Sec. 3.** AS 36.30.850(b)(42) is amended to read:

(42) grants and contracts with qualified entities for services under AS 47.18.330 for the **out-of-home** [FOSTER] care transition program;

*** Sec. 4.** AS 47.07.020 is amended by adding a new subsection to read:

(o) In this section, "out-of-home care" has the meaning given in AS 47.14.400.

*** Sec. 5.** AS 47.10.080(c) is amended to read:

(c) If the court finds that the child is a child in need of aid, the court shall

(1) order the child committed to the department for placement in an appropriate setting for a period of time not to exceed two years or in any event not to extend past the date the child becomes 19 years of age, except that the department or the child's guardian ad litem may petition for and the court may grant in a hearing

(A) one-year extensions of commitment that do not extend beyond the child's 19th birthday if the extension is in the best interests of the child; and

(B) **one-year extensions of commitment that do not extend beyond the child's 21st birthday** [AN ADDITIONAL ONE-YEAR PERIOD OF STATE CUSTODY PAST 19 YEARS OF AGE] if the continued state

custody is in the best interests of the person and the person consents to it;

(2) order the child released to a parent, adult family member, or guardian of the child or to another suitable person, and, in appropriate cases, order the parent, adult family member, guardian, or other person to provide medical or other care and treatment; if the court releases the child, it shall direct the department to supervise the care and treatment given to the child, but the court may dispense with the department's supervision if the court finds that the adult to whom the child is released will adequately care for the child without supervision; the department's supervision may not exceed two years or in any event extend past the date the child reaches 19 years of age, except that the department or the child's guardian ad litem may petition for and the court may grant in a hearing

(A) one-year extensions of supervision that do not extend beyond the child's 19th birthday if the extensions are in the best interests of the child; and

(B) an additional one-year period of supervision past 19 years of age if the continued supervision is in the best interests of the person and the person consents to it; or

(3) order, under the grounds specified in (o) of this section or AS 47.10.088, the termination of parental rights and responsibilities of one or both parents and commit the child to the custody of the department, and the department shall report quarterly to the court on efforts being made to find a permanent placement for the child.

*** Sec. 6.** AS 47.10.990(3) is amended to read:

(3) "child" means a person **who is**

(A) under 18 years of age**;**

(B) [AND A PERSON] 19 years of age if that person was under 18 years of age at the time that a proceeding under this chapter was commenced**; and**

(C) under 21 years of age if that person is living in out-of-home care;

*** Sec. 7.** AS 47.10.990 is amended by adding a new paragraph to read:

(33) "out-of-home care" has the meaning given in AS 47.14.400.

* **Sec. 8.** AS 47.18.300(a) is amended to read:

(a) The department, in coordination with local public and private agencies, shall design, develop, and implement **an out-of-home care** [A FOSTER CARE] transition program to provide support and services to individuals who

(1) reach or have reached the age of 16 or older while in state **custody and placed in out-of-home** [FOSTER] care and have not yet reached 23 years of age; and

(2) meet other eligibility criteria established by the department under (b) of this section.

* **Sec. 9.** AS 47.18.310 is amended to read:

Sec. 47.18.310. Program design. The department, in coordination with local public and private agencies, shall design the program as a continuation of the training efforts related to independent living skills that were initiated **for a child in state custody who was placed in out-of-home care and** [WHEN THE STATE FOSTER CARE RECIPIENTS WERE] identified as being likely to remain in **out-of-home** [STATE FOSTER] care until reaching **not less than** the age of 18. The program design must require that program participants are directly involved in identifying the program activities that will prepare them for independent living.

* **Sec. 10.** AS 47.18.320(a) is amended to read:

(a) Subject to the availability of an appropriation made for the purposes of AS 47.18.300 - 47.18.390, the program may provide

(1) education and vocational training;

(2) assistance in obtaining basic education and training;

(3) career and employment services;

(4) training in basic life skills;

(5) housing and utility assistance;

(6) mentoring and counseling; and

(7) other appropriate services to complement the efforts of former state foster care recipients **or a child who was in state custody and placed in out-of-home care** to achieve self-sufficiency.

* **Sec. 11.** AS 47.18.390(1) is amended to read:

(1) "program" means the **out-of-home** [FOSTER] care transition program authorized under AS 47.18.300 - 47.18.390;

* **Sec. 12.** AS 47.18 is amended by adding a new section to read:

Sec. 47.18.335. Monetary living expense stipend. The department shall provide to an individual eligible for services under the program who has left out-of-home care a monthly stipend in an amount set by the department that is not more than the daily rate provided to a licensed foster parent for necessary living expenses. The stipend shall continue for a period of not more than one year and shall end before the individual is 23 years of age. The department may adopt regulations to implement this section.

* **Sec. 13.** AS 47.18.390(3) is repealed and reenacted to read:

(3) "out-of-home care" has the meaning given in AS 47.14.400.

The intent of CS SB 027 is to address the educational, financial, and housing challenges that face youth as they transition out of foster care, and to support those care providers who are willing to help them during that period of transition.

The Office of Children's Services Online Resource for the Children of Alaska (ORCA) data base is mandated by the federal government and must be continuously updated to reflect changes in both state and federal law and policy. The following provides the estimated cost of ORCA updates that will be required to implement this bill.

ANALYSIS: *(Attach a separate page if necessary)*

The intent of CSSB27 is to address the educational, financial and housing challenges that face youth as the transition out of foster care and to support foster care providers who are willing to help youth during that period of transition.

CSSB 27, as it relates to the Department of Health and Social Services Office of Children's Services, amends AS 47.10.080(c) to provide the court the authority to commit a child to placement to age 21 if in the best interest of the youth and the youth is in agreement; amends AS 47.10.990(3) by further defining a child to include youth under 21 years of age if that youth is living in out-of-home care; and expands the current Foster Care Transition Program (AS 47.18.300-390) to include children in state custody who were placed in out-of-home care and

ANALYSIS CONTINUATION

identified as likely to remain in out-of-home care until age 18; and allows for a one-year monetary living expense stipend to eligible youth who have left out-of-home care up to age 23. This fiscal note addresses increased costs related to the one-year monetary living expense stipend to eligible youth up to age 23 who have left out-of-home care.

The OCS, lacking historical data or comparative program results, has made the following assumptions and applied them to this fiscal note:

1) The monetary stipend will be made available to youth age 18 to 23 who leave out-of-home care at any time during that age span.

2) The monetary stipend is not tied to post secondary education.

3) The number of youth who age out of foster care will remain somewhat stagnant at about 110 youth annually;

4) Assumes that 70% of youth ages 18 to 23 who are eligible to participate in the Independent Living Program (IL) will make use of the monetary stipends in FY2010. This equates to approximately 380 full time equivalents (FTEs) who will become eligible, resulting in higher program costs the first year the stipend is available. FTEs are used to account for the constant change in the population as more youth turn 18 to 23 and move on and off the program at varying rates.

5) The out years will lose children aging out of foster care and pick up new youth between ages 19 and 23 who have not yet utilized the program, still maintaining the assumption that 70% will eventually utilize the program. There is no available data or program results upon which to base these assumptions.

6) Calculations are based on 360 days at an average daily rate of $35.33; $35.33 x 30 = $1,060/month.

7) Currently, federal reimbursement for the extension of the IL program is not available. However, the Adoption and Guardianship Fostering Connections to Success and Increasing Adoptions Act of 2008 includes the option to enhance the program. This fiscal note assumes that option can be implemented when available, October 1, 2010, and therefore is available for the final three quarters of FY2011 forward, only.

8) The foster care penetration rate and the Medical Assistance Percentage Rate will remain somewhat stable over the time period of this fiscal note.

	FFP	IL FTE	MOS FC/FTE	TOTAL EXP	Federal	GF
SFY 2010	0.00%	380	$1,060	$4,833,144	$0	$4,833,144
SFY2011	12.50%	150	$1,060	$1,907,820	$238,414	$1,669,406
SFY2012	16.59%	150	$1,060	$1,907,820	$316,546	$1,591,274

FISCAL NOTE

STATE OF ALASKA

2009 LEGISLATIVE SESSION

BILL NO. CSSB027(HSS)

ANALYSIS CONTINUATION

The OCS, lacking historical data or comparative program results, has made the following assumptions and applied them to this fiscal note:

1) Foster care reimbursement payments will be made available to foster parents who provide care for youth who remain in the custody of the state beyond age 18 to age 21;

2) The choice made by youth in custody to remain in custody after age 18 is not tied to post secondary education;

3) Youth who are between the ages of 18 and 21 and were in state custody will not re-enter foster care;

4) The number of youth who age out of foster care will remain somewhat stagnant at about 110 youth annually;

5) It is assumed that many of the youth who decide to stay in foster care will be interested in post secondary education.

6) It is assumed that the percent of youth who choose to stay in foster care will decline as they age; at which point the youth will instead chose the option for a monetary stipend.

7) Calculations are based on 360 days per year, at an average daily rate of $35.33, using full time equivalents (FTEs) to account for the constant change in the population as youth turn 18, 19, and 20 and move on and off the program at varying rates. $35.33/day x 30 = $1,060/mo x 12 months = $12,720/year.

8) FTEs were estimated based on assuming that 15% of the youth in foster care will decide to remain in their foster homes when they reach 18 (17 individuals); 10% when they reach 19 (11 individuals); and 5% when they reach 20 (5 individuals); for a total of 33 youths in FY2010.

9) In addition to the 33 youth who choose to remain in foster care in FY2010, the OCS estimates that 24 additional children with special needs will want to remain in foster care in FY2010. Approximately 18 special needs children age out of foster care annually. Currently about 6 of the 18 are placed annually in extended care by the courts. While there is no statistical data to support the assumption that youth with special needs will chose to remain in foster care, the OCS believes that during FY2010, the ability for these youth currently age 17, 18, and 19 to agree to stay in care will be encouraged by foster parents, guardians ad litem, and the courts. The OCS projects that 12 of those youth will remain in foster care when they turn 18; 6 will remain when they turn 19; and 6 will remain when they turn 20; for a total of 24 youths with special needs in FY2010.

10) In FY2010, 33 youth will decided to stay in foster care, many of whom will seek post secondary education and 24 children with special needs will be encouraged to remain in foster care in order to receive the services they require, bringing the total number of youth to 57.

(continued on next page)

FISCAL NOTE

STATE OF ALASKA

2009 LEGISLATIVE SESSION

BILL NO. CSSB027(HSS)

ANALYSIS CONTINUATION

11) The OCS believes that after the first year of implementation when those youth currently age 17, 18, and 19 are brought into the program, out years will stabilize at 35 as the OCS, the courts, guardians ad litem, foster families and youth better prepare to take advantage of free tuition and costs as well as the monetary stipend. There is no data or comparative program information available to support this assumption.

12) Currently, federal reimbursement for the extension of the foster program is not available. However, the Adoption and Guardianship Fostering Connections to Success and Increasing Adoptions Act of 2008 includes the option to extend the assistance age through 20. This fiscal note assumes that option will be implemented when available, October 1, 2010, and therefore is available for the final three quarters of FY2011 forward, only.

13) The foster care penetration rate and the Medical Assistance Percentage Rate will remain somewhat stable over the time period of this fiscal note.

Fiscal Year	FTEs	AGES	Annual Cost per/FTE	Est. FFP	Total Annual Est. Cost	Federal Funds	General Funds

MEMORANDUM March 10, 2009

SUBJECT: Sectional Summary (CSSB 27( )
(Work Order No. 26-LS0205\E))

TO: Senator Bettye Davis
Attn: Thomas Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Adds a new section entitling a person who was placed by the state in out-of-home care to a waiver of undergraduate tuition and fees in a state-supported school.

Section 2. Adds a cross reference to a definition for out-of-home care for the tuition waiver.

Section 3. Changes "foster care" to "out-of-home care" for purposes of the procurement code.

Section 4. Adds a cross reference to a definition for out-of-home care for medical assistance provisions.

Section 5. Extends court orders to age 21 for a child committed to the custody of the department.

Section 6. Changes the definition of "child" under AS 47.10 (child in need of aid) to include a person under 21 years of age living in out-of-home care.

Section 7. Changes "foster care" to "out-of-home care" for purposes of the child in need of aid statutes.

Section 8. Changes "foster care" to "out-of-home care" for purposes of the transition program to independent living.

Section 9. Changes "foster care" to "out-of-home care" for purposes of the transition program for children who are not less than age 18 living in out-of-home care, as defined.

Section 10. Adds children who were placed in out-of-home care to provide transition program services for the purpose of achieving self-sufficiency.

Section 11. Changes "foster care" to "out-of-home care" for purposes of the transition program definition.

Section 12. Adds a monetary stipend for children in the transition program for a specified period of time.

Section 13. Adds a cross reference to a definition for out-of-home care for purposes of the transition program.

CS for Senate Bill 27( ) 26-LS0205\R

"An Act relating to tuition waivers for a child who was in out-of-home care; relating to eligibility for out-of-home care payments for a child; and amending the definition of 'child' in certain statutes."

Explanation of Committee Substitute

The Committee Substitute for Senate Bill 27 **narrowed the scope of the original bill** to include a) only those persons living under state custody in foster care or out-of-home care; b) who are under age 23; and c) who are presently enrolled as students in good standing. **It did not**, as the former bill indicated, **extend subsidies** to all foster care or out-of-home care persons ages 18-23 who may have aged out of the foster care system and are no longer under custody of the department or full-time students.

Senator Bettye Davis

CS for Senate Bill 27( ) 26-LS0205\R

"An Act relating to tuition waivers for a child who was in out-of-home care; relating to eligibility for out-of-home care payments for a child; and amending the definition of 'child' in certain statutes."

Sponsor Statement

The Committee Substitute (CS) for Senate Bill 27( ) adds a new section entitling a person who was placed by the state in foster or out-of-home care to a waiver of undergraduate tuition and fees in a state-supported school if the person is under 23 years of age, is living in out-of-home care, and enrolls as a student in good standing. The CS also changes the definition of "child," or child in need of aid or delinquent minor under AS 47.10 and 47.12 respectively, to include a person under 23 years of age living in out-of-home care. The hope is that the waiver of tuition and fees provided by CS SB 27 combined with other assistance in scholarships, mentoring, and in life skills without parental support will help level the playing field for out-of-home care children who deserve the opportunity and benefits of a higher education afforded to others.

Recognizing the severe educational disadvantages of persons placed in foster care or out-of-home care, many states have initiated a variety of college tuition waiver and scholarship programs for these persons. **Only recently the University of Alaska increased tuition waivers and additional assistance from five (5) to ten (10) students statewide who were in foster care in the state of Alaska on their 18th birthday.** The need is much greater. Data in 2006 indicated that there are over 2,000 children in foster care in Alaska at any one time. Over 5,000 live with relative care givers who are in a subsidized guardianship program. The average length of state in foster care in Alaska was 25 months but only 40% of children had 2 or fewer placements.

Education has been shown in studies to be a significant factor in determining the success of children and youth as they exit the foster care system. Research measuring educational, social, and vocational outcomes for children and youth in foster care indicate that the majority of children who enter the protection of child welfare agencies do poorly in school due to instability in placements and changes in schools. The small number who have successfully finished high school and are eligible and qualified to attend college need financial support and other assistance to continue in school. Too often they "age out" of the foster care system at age 18 and wind up on the streets and in shelters.

A Casey Family Program study of 1,000 foster care youth found that youth who had one or fewer home placements per year were twice as likely to graduate from high school before leaving care. Additionally, it was found that:

- Less than **70%** of youth in foster care finish high school before leaving care.
- Children and youth in out-of-home care experience **1 or 2** placement changes per year on average.
- Students in foster care score **16 to 20** percentile points below others in statewide standardized tests (Washington State study).
- Only about **3%** obtain a bachelor's degree within a few years of emancipation.

Nationwide the Casey Foundation reports that every year more than 25,000 youth attempt to make the transition from foster care to self-sufficiency as they reach age 18. Only half finish high school, and about 11 percent go on to college or vocational schools. Statistically, Alaska which regularly lags behind many other states in educational performance, provides foster care persons far less assistance in going to college. The CS SB 27 should help many more deserving and qualified foster care or out-of-home care youth obtain undergraduate degrees.

CS FOR SENATE BILL NO. 27( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATORS DAVIS, Ellis

A BILL

FOR AN ACT ENTITLED

"An Act relating to tuition waivers for a child who was in out-of-home care; relating to eligibility for out-of-home care payments for a child; and amending the definition of 'child' in certain statutes."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.43 is amended by adding a new section to read:

Article 3A. Free Tuition for a Person Who Was in Out-of-home Care.

Sec. 14.43.086. Free tuition and fees for a person who was in out-of-home care. A person who was in the custody of the state under AS 47.10 or AS 47.14 and placed in out-of-home care is entitled to a waiver of undergraduate tuition and fees if the person enrolls as a student in good standing in a state-supported educational institution in this state.

*** Sec. 2.** AS 47.10.990(3) is amended to read:

(3) "child" means a person **who is**

(A) under 18 years of age;

New Text Underlined [DELETED TEXT BRACKETED]

3334

(B) [AND A PERSON] 19 years of age if that person was under 18 years of age at the time that a proceeding under this chapter was commenced**; and**

(C) under 23 years of age if that person is

(i) in the custody of the department;

(ii) currently placed in out-of-home care; and

(iii) a full-time student.

*** Sec. 3.** AS 47.14.990 is amended by adding a new paragraph to read:

(13) "child" means a person under

(A) 18 years of age; and

(B) 23 years of age if the person is

(i) in the custody of the department;

(ii) currently placed in out-of-home care; and

(iii) a full-time student.

MEMORANDUM January 30, 2009

SUBJECT: Sectional Summary (CSSB 27( ); Work Order No. 26-LS0205\R)

TO: Senator Bettye Davis
Attn: Tom Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Adds a new section entitling a person who was placed by the state in out-of-home care to a waiver of undergraduate tuition and fees in a state-supported school.

Section 2. Changes the definition of "child" under AS 47.10 (child in need of aid) to include a person under 23 years of age living in out-of-home care.

Section 3. Changes the definition of "child" under AS 47.12 (delinquent minors) to include a person under 23 years of age living in out-of-home care.

Subject: Request by OCS staff for appointment this week with Sen Davis regarding SB 27, Tuition Waiver, Foster Care

Don Burrell, 465-3822 -

Mike Lesmann, Program Coordinator and legislative liaison for OCS left me a voice-mail message today requesting an appointment with Senator Davis on Wednesday or Thursday this week including him, his

supervisor Tammy Sandoval, and perhaps me, concerning SB 27, Foster care Tuition Waiver.

I noted Senator Davis has a very busy schedule this week, but since you are the gate-keeper of her appointments, **could you please see what time may be arranged with Mr. Lesmann and Ms. Sandoval and give Mr. Lesmann a call? Mr. Lesmann's phone is 465-3548. Please advise of an agreed time.**

Rally spotlights foster kid needs

IDEAS: Braces, tuition waivers, longer health benefits advocated.

By LISA DEMER
ldemer@adn.com

(09/30/08 23:31:47)

Alaska foster kids and former foster kids rallied Tuesday to put attention on their agenda for improved college opportunities, better health benefits and help with housing as they leave foster care.

The event took place across the street from the state Office of Children's Services downtown, and some state workers stood alongside the kids, said Amanda Metivier, president of the advocacy group Facing Foster Care in Alaska. About 20 people, including state Rep. Les Gara, who grew up in foster care, took part, she said.

"We're rallying around our policy agenda," said Metivier, a former foster child who will graduate in December with a social work degree from the University of Alaska Anchorage.

The group's efforts are powerful and could make a difference, said Tammy Sandoval, director of the state Office of Children's Services.

"I am thrilled that they have come together and have found their voice to help OCS and legislators and other policy makers to help get their needs known and out," Sandoval said.

The group wants tuition waivers for all former foster children at the University of Alaska instead of a limited number a year, which just increased from five to 10 statewide, Metivier said. Studies show that only about 1 percent of former foster kids now graduate with a four-year college degree or vocational certificate, the group says.

The foster care group also wants more help for kids as they reach adulthood. For one, the group says Alaska kids should be able to receive state support until age 21, even if they live on their own. Some states allow that, the group says, and Alaska needs to be more creative. Too many former foster kids end up on the streets and in shelters, Metivier said.

"This summer has been terrible. We've had so many homeless youth," Metivier said.

The foster care group would also like to see Medicaid coverage extend to former foster children until age 21. And they want Medicaid to pay for braces for foster youth, which is currently not the case.

In coming up with their agenda, the foster youth and former foster kids "brainstormed all these ideas. But the braces were No. 1. It's a self-esteem thing," Metivier said.

The foster care group did its homework, Sandoval said. Now it's up to OCS, legislators and others to study the proposals and see what could work here, she said. Some things already are improving. Sandoval mentioned a bill that passed last year allows churches, private groups, businesses and individuals to create college savings accounts for foster kids.

CLASP

Child Welfare In Alaska

September 2006

Alaska's Children [1]

Child Population	183,355
Children Living in Poverty	26,623
Child Poverty Rate	14.5%

Child Abuse and Neglect [2]

Child Victims — Data Unavailable

Type of Abuse and Neglect	Percent*
Neglect and Medical Neglect	Data Unavailable
Physical Abuse	Data Unavailable
Sexual Abuse	Data Unavailable
Psychological and Other Maltreatment	Data Unavailable

*Percentages may not total 100% because abuse or neglect can be reported in one or more categories.

Foster Care [3]

Number of Children in Foster Care*	2,040	Average Length of Stay in Foster Care	25.1 mos.
Children with 2 or Fewer Placements	40%	Abused and Neglected While in Care	Data Unavailable

*Foster care includes family foster care, group care and institutional care

Permanency [4]

Number of Exits from Foster Care — 781

Type of Exit	Percent
Adoption	22.5%
Reunification	66.7%
Legal Guardianship	4.1%
Other	3.5%
Missing Data	3.2%

Percent of Children Reunified		Percent of Children Adopted	
Within 0-11 months	58.7%	Within 0-11 months	6.8%
Within 12-23 months	29.8%	Within 12-23 months	17.0%
After 24 months	11.1%	After 24 months	76.1%

Number of Children Waiting for Adoption — 639

Relative Caregivers [5]

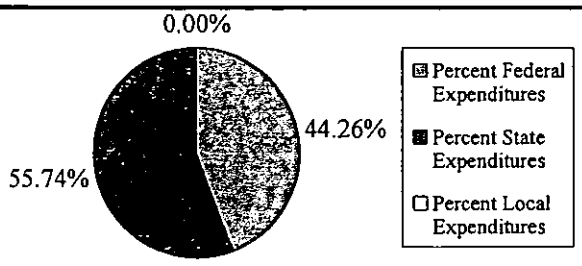
Number of Children Living with Relatives Without Either Parent Present (not necessarily in foster care) — 5,110

Subsidized Guardianship Program? — Yes

Subsidized guardianship programs make it possible for eligible children to live permanently in the care of a legal guardian who has agreed to provide a safe and loving home for them and who receives ongoing payments to help provide for the needs of the child. In many cases, the child's guardian is a relative or a close family friend.

Sources of Child Welfare Spending [6]

FY 2004	Amount
Federal Expenditures	$37,786,604
State Expenditures	$47,581,700
Local Expenditures	$0
Total	$85,368,304



Major Federal Child Welfare Spending [6]

FY 2004	Amount	Percent of Total Federal Spending
Title IV-B	$1,081,499	2.86%
Title IV-E	$20,441,777	54.1%
Social Services Block Grant (SSBG)	$7,042,600	18.64%
TANF (Temporary Assistance for Needy Families)	$0	0%
Medicaid (Excludes Medicaid expenditures for routine health care services provided to children in foster care.)	$7,008,813	18.55%

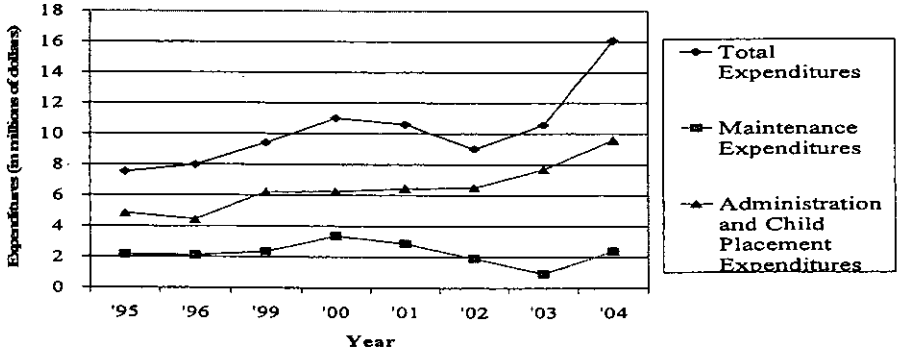
Percentages may not total 100% because some states could not categorize all federal spending by source.
The previous version of this fact sheet contained information on spending from SSI. The Urban Institute did not collect that data in the most recent survey.

Federal Title IV-E Spending [7]

Foster Care Expenditures FY 2004			Adoption Assistance Expenditures FY 2004		
Type	Amount	Percent	Type	Amount	Percent
Maintenance Payments	$2,389,921	14.87%	Adoption Assistance Payments	$6,365,459	91.27%
Administration and Child Placement Services	$9,586,594	59.64%	Administration	$596,641	8.55%
SACWIS	$3,314,715	20.62%	Training	$12,411	0.18%
Training	$781,653	4.86%	Total	$6,974,511	
Total	$16,072,883				

- In 2003, 190 (9.31%)* Children in Foster Care Received Title IV-E Funded Foster Care Payments
- In 2002, 995 (85.63%)** Children Adopted from Foster Care Received IV-E Funded Adoption Assistance Payments

Federal Title IV-E Foster Care Spending 1995-2004



*Average monthly number of children receiving federal foster care divided by the number of children in foster care on the last day of the year.
**Average monthly number of children receiving federal adoption assistance divided by the total number of children receiving adoption assistance at a point in time.

Why Focus on Foster Care and Education?

For the over **800,000** children and youth served in foster care each year in the United States, education is a potential positive counterweight to abuse, neglect, separation, impermanence and instability.

Positive school experiences enhance their well-being, help them make more successful transitions to adulthood, and increase their chances for personal fulfillment and economic self-sufficiency, as well as their ability to contribute to society.

Education should be approached as an integral part of permanency rather than as a choice between permanency and education.

Studies have shown that education is a significant factor in determining the success of youth as they exit the foster care system and beyond.

When the focus is on education, the results are improved educational performance, fewer behavior problems, lower drop-out rates, and more successful transitions to employment and higher education.

Facts and Figures*

- Less than **70%** of youth in foster care finish high school before leaving care.
- Children and youth in out-of-home care experience **1 or 2** placement changes per year on average.
- Students in foster care score **16 to 20** percentile points below others in statewide standardized tests (Washington State study).
- Only about **3%** obtain a bachelor's degree within a few years of emancipation.

The National Working Group on Foster Care and Education

The mission of the National Working Group on Foster Care and Education is to ensure successful educational outcomes for children and youth in foster care across the country.

This partnership has grown out of the recognition that only through collaboration can practice, policy, and cultural changes take place that will support educational stability and achievement as priorities in the lives of children and youth in care.

The Working Group is committed to heightening awareness of the educational needs of children and youth in care and to promoting best and promising practices and reforms across the education, child welfare, and court systems.

The Working Group's goals are to promote:

- Educational stability for children and youth in foster care
- Seamless educational transitions for children and youth when education changes do occur
- High quality educational experiences, expectations and aspirations for young people in foster care
- Greater national attention to the disparate educational outcomes for young people in foster care, particularly youth of color

College Tuition Waiver and Scholarship Programs

A significant post adoptive service offered by states is the waiver or payment of college tuition on behalf of adopted children who were once in foster care.

States with College Tuition Waiver Programs

Florida
Children who are in foster care, receiving independent living services, or who are adopted from the Department of Children and Families after December 31, 1997 are exempt from all undergraduate fees, including registration, matriculation, and laboratory fees associated with enrollment in college preparatory instruction and completion of the college level communication and computation skills testing program in the State Community College System, the State University System, and other adult general education programs.

Kentucky
Tuition and mandatory fees for any public postsecondary institution, including all four year universities and colleges and institutions of the Kentucky Community and Technical College System, shall be waived for a Kentucky foster or adopted child who is a full-time student. [KRS 194B.050(1), 164:2847]

Maine
Funding is available for children up to age 21 using Title IV-B dollars. The program is limited to children whose families received adoption assistance.

Maryland
Available for youths who were adopted after their 14th birthday.

Massachusetts
Legislation passed July 1, 2000

Oregon
Children who were a ward of the court and in the legal custody of the state between age 16 and 21 are able to apply for the Former Foster Children Scholarship. More information is available from 800-452-8807 x 7395

Texas
Available for youth in state conservatorship at 14 years or older, if the youth is eligible for adoption

Virginia
Children must have been in foster care. For special needs children. Legislation passed in the 2000 session. Go to: www.vccs.cc.va.us/vccsasr/tuitiongrant/tuitiongrant.html

States With Other College Tuition Programs

Delaware
Offers a scholarship program for former foster children. Adopted children can apply but family income is considered. The DE Legislature budgeted $50,000 in 2001.

District of Columbia
Offers a scholarship program for children adopted from the District's foster care system after Oct. 1, 2000. Covers vocational training, as well as college funding.

Hawaii
Continues to pay board rate for former foster children (not adopted) up to the 22nd birthday if in vocational school/college. See www.hcf-hawaii.org or 888-731-3863.

Illinois
DFS has statutory authority to award up to 48 scholarships per year to children who are in substitute care, who have been adopted and prior to their adoption were under the Department's legal responsibility, or who are in subsidized guardianship living arrangements.

Minnesota
The Minnesota State College and University System offers free tuition to children committed to state guardianship (i.e., foster children) but are not adopted.

West Virginia
The department has tuition waivers for foster children only.

States That Are Exploring a Tuition Waiver Programs

Arkansas

Missouri

Montana

Casey Family Programs and Orphan Foundation of America

Each year, more than 25,000 youth attempt to make the transition from foster care to self-sufficiency as they reach age 18. Only half finish high school, and about 11 percent go on to college or vocational education much lower rates than the national averages. Through a new post-secondary education scholarship program, The Casey Family Programs will provide up to $10,000 per year to youth under the age of 25 who have spent at least 12 months in foster care and were not subsequently adopted.

The awards will be renewable each year, based on satisfactory progress and financial need. The Orphan Foundation of America (OFA) will administer the program, and the recipients will also receive ongoing support through OFA's E-Mentor Program. OFA scholarship coordinators will match each student with a trained, screened adult who will interact with the student via e-mail, letters, and phone calls on a weekly basis to address specific issues faced by young people without parental support, including money management and life skills.

For more information on this and other OFA scholarship programs, visit www.orphan.org/casey.html or call 800-950-4673.

FAQs

Florida	Children who are in foster care, receiving independent living services, or who are adopted from the Department of Children and Families after December 31, 1997 are exempt from all undergraduate fees, including registration, matriculation, and laboratory fees associated with enrollment in college preparatory instruction and completion of the college level communication and computation skills testing program in the State Community College System, the State University System, and other adult general education programs.
Kentucky	Tuition and mandatory fees for any public postsecondary institution, including all four year universities and colleges and institutions of the Kentucky Community and Technical College System, shall be waived for a Kentucky foster or adopted child who is a full-time student. [KRS 164:2847]
Maine	Funding is available for children up to age 21 using Title IV-B dollars. The program is limited to children whose families received adoption assistance.
Maryland	Maryland offers the Maryland Waiver, which allows children who meet certain criteria to attend college in Maryland. To be eligible for the waiver you must meet the following criteria: 1. Be a Maryland resident 2. Be in a foster care placement at the time you are graduating high school, or successfully completed your GED or adopted after your 14th birthday. 3. Attend a college in Maryland, the waiver does not pay for a training program, nor does it cover the cost of books and or transportation. 4. Applicant must complete the Free Application for Federal Student Aid

	(FAFSA). 5. Waiver is good for 5 years after first year enrolling.
Massachusetts	Legislation passed July 1, 2000
New Jersey	New Jersey offers a College Tuition Waiver or College Scholarship program for foster and adopted youth. Adopted children over the age of 12 are eligible. The program is managed by Foster and Adoptive Family Services (FAFS), 800-222-0047 (ask for the scholarship department), email at scholarship@FAFSonline.org, or on the web at www.fafsonline.org/Scholarship.html
Oregon	Children who were a ward of the court and in the legal custody of the state between age 16 and 21 are able to apply for the Former Foster Children Scholarship. More information is available from 800-452-8807 x 7395
Texas	As of September 1, 2003, a student is exempt from the payment of college tuition and fees at state supported colleges and universities if the student was adopted AND was the subject of an adoption assistance agreement between the adoptive parents and DFPS (under Subchapter D, Chapter 162, of the Texas Family Code) Please note that any child adopted and who was the subject of an adoption assistance agreement between the adoptive parents and DFPS before September 1, 2003 is eligible, as well as any person in the future meeting this requirement.
Virginia	Children must have been in foster care. For special needs children. Legislation passed in the 2000 session. Go to: http://www.dss.state.va.us/family/tuitiongrant.html

States With Other College Tuition Programs

Delaware	Offers a scholarship program for former foster children. Adopted children can apply but family income is considered. The DE Legislature budgeted $50,000 in 2001.
District of Columbia	Offers a scholarship program for children adopted from the District's foster care system after Oct. 1, 2000. Covers vocational training, as well as college funding.
Hawaii	Continues to pay board rate for former foster children (not adopted) up to the 22nd birthday if in vocational school/college. See www.hcf-hawaii.org or 888-731-

	3863.
Illinois	DFS has statutory authority to award up to 48 scholarships per year to children who are in substitute care, who have been adopted and prior to their adoption were under the Department's legal responsibility, or who are in subsidized guardianship living arrangements.
Minnesota	The Minnesota State College and University System offers free tuition to children committed to state guardianship (i.e., foster children) but are not adopted.
West Virginia	West Virginia has a tuition waiver program available. It is limited to children residing in a foster care setting when they graduate from high school, starting with the graduating class of 2000. It is available in state-supported colleges only. The application can be obtained from the college of choice. (Effective October 2002) Children adopted from the DHHR foster care system during the month they turn 16 are eligible to receive the Chafee Education Voucher to assist with post-secondary education costs.

States That Are Exploring a Tuition Waiver Programs

Arkansas

Missouri

Montana

Casey Family Programs and Orphan Foundation of America

Each year, more than 25,000 youth attempt to make the transition from foster care to self-sufficiency as they reach age 18. Only half finish high school, and about 11 percent go on to college or vocational education much lower rates than the national averages. Through a new post-secondary education scholarship program, The Casey Family Programs will provide up to $10,000 per year to youth under the age of 25 who have spent at least 12 months in foster care and were not subsequently adopted.

The awards will be renewable each year, based on satisfactory progress and financial need. The Orphan Foundation of America (OFA) will administer the program, and the recipients will also receive ongoing support through OFA's E-Mentor Program. OFA scholarship coordinators will match each student with a trained, screened adult who will interact with the student via e-mail,

letters, and phone calls on a weekly basis to address specific issues faced by young people without parental support, including money management and life skills.

For more information on this and other OFA scholarship programs, visit www.orphan.org/programs/casey.html or call 800-950-4673.

Getting Foster Youth to and through College

Successes and Challenges of the New Jersey Foster Care Scholars Program

This report was made possible by grants from the Annie E. Casey Foundation and the Delisi Family Foundation. It was written and researched by ACNJ Communications Director Maia Davis and ACNJ legal intern Elizabeth Losey.

Introduction

In 2003, New Jersey took advantage of federal funding to start a scholarship program for foster youth to attend college. State officials anticipated that a few dozen youth would apply. But New Jersey Foster Care Scholars drew 90 young people its first year. By the 2007-08 academic year, the number enrolled in the program had grown six-fold to 556. Of those, 443 went on to register for classes and receive grants.

The popularity of the scholarship program is a testament to its importance. Many young people flocking to apply for scholarships see an opportunity for higher education that they thought they would never have.

> *"I always thought, 'College costs too much. I don't have money to pay for it.'" —Kassim, 22, in the scholarship program three years and starting his senior year of college.*

Young people know a college degree is increasingly essential to success in today's competitive economy. Without it, they risk spending their lives stuck in low-wage work.

Youth aging out of foster care are particularly vulnerable. Many come from families unable to provide the stability or support children need to succeed in school. After being removed from their homes because of abuse or neglect, the children may endure repeated moves, further disrupting their schooling. The results of such childhood trauma, deprivation and dislocation can show up in their academic records. Among a 2005 sample of Midwestern foster youth, more than a third had not achieved either a high school diploma or GED by age 19. That is more than three times the percentage of their peers without this basic level of educational attainment.[1]

The New Jersey Foster Care Scholars program (NJFC Scholars) requires scholarship recipients to have either a high school diploma or GED. But some begin college with an educational deficit they have to make up through non-credit remedial courses. In addition to academic challenges, former foster youth are more likely than their peers to lack either the financial or emotional support of parents. On average in the United States, young people ages 18 to 34 receive an estimated $38,000 from parents to pay for college, supplement wages, assist with down payments on a house and other types of financial help.[2] This gives an idea of what former foster youth lose when they lack parents' financial support during college and after.

Typical college students also rely on parents for non-material assistance, including emotional support; advice on possible career paths and how to adapt to college life; and a place to live during college breaks. Studies show the lack of family involvement experienced by many foster youth creates a need for supplemental, non-financial supports, such as mentoring or counseling. For some students, such supports could make the difference of whether they stay in college or drop out.

The Association for Children of New Jersey has taken a look at the scholarship program through interviews with staff at the state Department of Children and Families (DCF) and the private agency that administers the program for the state; older foster youth and their counselors; and officials in other states that run similar scholarship programs. This report is the second in a series of ACNJ briefs on youth aging out of foster care.

To address the needs of foster youth, a comprehensive scholarship program should have:

- **Stable funding** sufficient to cover students' room and board costs as well as tuition and fees.
- **Non-material assistance** for students, including mentoring or counseling and access to academic tutoring.
- **Expansive eligibility rules** that offer scholarships to youth who left foster care as teenagers through adoption or guardianship in addition to those still in care or who have aged out.

35 Halsey Street, Newark, NJ 07102 ◘ (973) 643-3876, Fax (973) 643-9153 ◘ www.acnj.org ◘ www.kidlaw.org ◘ www.MakeKidsCountNJ.org

- **Practices based on the principles of "positive youth development,"** an approach designed to help youth become independent, self-supporting adults. This approach helps young people strengthen their abilities to make good decisions, reach out to community resources for help, and connect to the larger society.
- **Extensive data collection to track the progress of students,** including on how many graduate and what conditions are conducive to success in college. For example, data should be collected on whether students live on or off campus; are in state custody or enrolled in some state-funded service for aging out youth; whether they work full- or part-time; and whether they have student loans.

Our findings show New Jersey has most of these elements at least partially in place. But some are missing:

- New Jersey's scholarship program lacks a sufficient, stable source of funding because the Legislature never appropriated funds to implement a 2003 law guaranteeing former foster youth free tuition to state public colleges. Notably, the program lacks enough funding to cover room and board costs for all students. The lack of a legislative appropriation is of particular concern because of a cut this year in New Jersey's share of federal funds for foster youth scholarships. The federal funding cut is a result of a reduction in the number of New Jersey children in foster care.
- New Jersey offers mentoring to NJFC scholarship recipients but not all students have availed themselves of the service. Students may also receive counseling or case management from other sources, including a Division of Youth and Family Services (DYFS) caseworker, if they are still in state care. The challenge for New Jersey is that scholarship recipients have varied situations. Some may be receiving the counseling and emotional support they need; others may not. Academic tutoring is not offered through NJ Scholars. Students who need academic support are expected to seek it at their college.
- New Jersey's scholarship program has more expansive eligibility guidelines than scholarship initiatives in many other states. The state has intentionally, for example, opened enrollment to youth who are homeless, in Kinship Legal Guardianship, or who were adopted from foster care between 12 and 15 years old. Still, data suggest the program reaches only a fraction of the approximately 1,900 young people who may be eligible.
- DCF embraces the positive youth development approach to older youth and has this year conducted trainings in it for caseworkers and contracted service providers. The state is also incorporating some principles of positive youth development directly into the scholarship program, such as through a new requirement for scholarship recipients to sign an agreement that sets out their obligations in the program.
- New Jersey has insufficient data on youth who have received scholarships. DCF and Foster and Adoptive Family Services (FAFS), the private agency that administers NJFC Scholars for the state, are concerned that too many students are dropping out. They need data to confirm this and to track what might be contributing to the problem. FAFS will this year begin a significant expansion of its data collection, including on the number of students who return each year and the number who withdraw.

I. How It Began: A State Law With No Funding

Former Governor James McGreevey and the New Jersey Legislature in 2003 passed a law establishing the Statewide Tuition Waiver Program.[3] Despite its name, the law does not waive the college tuition of foster youth. Rather, it mandates that the state cover whatever tuition costs remain for eligible foster youth at state public colleges and vocational schools after all other grants, such as from Pell and the Tuition Aid Grant (TAG), are applied. In addition to these restrictions, the law was never funded by the Legislature, which has undercut its potential benefit to foster youth.

Federal Funding to the Rescue But it is Not Enough

New Jersey has been able to avoid appropriating money for the tuition-waiver law by relying largely on federal money. Around the same time the state law was passed, federal scholarship funds became available through Chafee Independent Living Education and Training Vouchers (ETV) for foster youth. The ETV program allows states to give up to $5,000 per year to current and former foster youth for higher education tuition, room, board and other expenses.

DCF has supplemented the ETV funds with significant additional financing from other state and federal grants to its department. It has used this mix of funding to fulfill the tuition-waiver law's mandate and go beyond it by providing scholarships to both public and private colleges, in and out of state. The funding is insufficient, however, to cover room and board for all students; housing costs are a big source of anxiety for many scholarship recipients. The funding crunch has been exacerbated this year by a cut in the state's share of federal ETV funding from $1,066,000 to $926,000.

II. How it Works: Some Quick Facts on the New Jersey Foster Care Scholars Program

- The scholarship program is run through a partnership of three agencies—DCF, FAFS and the Project Myself program at Rutgers University School of Social Work. FAFS, formerly called the Foster Parents Association, was a driving force behind the state's establishment of a foster youth scholarship initiative.
- DCF contracts with FAFS to administer the program, which includes processing applications; determining the size of grants based on students' eligibility and need; liaising with college financial aid offices; and disbursing grants for tuition and living expenses as varied as a computer, child care, or a bus pass.

- FAFS' responsibilities also include outreach to potential scholarship recipients. Its contract this year calls for less mass outreach, such as through advertising, and more targeted outreach to organizations and individuals who work with older and former foster youth, which DCF thinks will be more effective.
- DCF also contracts with the Rutgers School of Social Work to run Project Myself, which provides mentoring and arranges volunteer community service work for scholarship recipients.
- Students can qualify for scholarships through meeting the eligibility rules of either the state tuition waiver or federal ETV programs. Scholarships are also available to youth who have been homeless or left foster care through adoption or Kinship Legal Guardianship, an important benefit to families who provide permanent homes to older foster youth.
- Although there are several ways to qualify, scholarships all essentially come out of the same pot of money, which is a combination of federal and state funds.
- The maximum ETV grants are $5,000 per academic year. Grants may be higher for students who qualify under the tuition-waiver program and whose remaining tuition costs, after other federal and state grants are applied, exceed $5,000. FAFS works to develop a scholarship package for each student that maximizes the availability of funds.
- Most scholarships provided are for college; approximately 10 percent of the youth in 2007-08 applied for scholarships to private technical schools.
- FAFS encourages students to choose a college, public or private, that best meets their needs. Many foster youth begin their studies at state community colleges, which offer vocational-type courses such as in nursing or technology that may be in line with students' career goals. Courses at two-year colleges are also less costly than at four-year schools, which is particularly important when students must take non-credit remedial classes.

III. How NJFC Scholarship Participants Fare

How They Fare Financially: The Anxiety Over Living Expenses

College is an expensive proposition. Many NJFC scholarship recipients attend with no financial support from family.

As shown by examples on the chart below, the "cost of attendance" at New Jersey public and private colleges varies greatly. The chart does not include the costs at private technical schools, which can approach or exceed that of private colleges.

Students attending community colleges typically get nearly all their tuition covered by federal and state grants. They are more likely to get NJFC scholarship aid for room and board. But those at the more costly four-year schools, particularly schools that are private or out of state, are less likely to have anything but tuition covered. These students are more likely to have to pay some or all of their room and board and other living expenses on their own.

continued on page 6

Sample of One Year of Higher Education Costs in NJ vs. Grants Available for Youth in NJ Foster Care Scholars Program[1]

Cost of Attendance	Felician College (Private)	Montclair State University (Public)	Rutgers University (Public)	Brookdale Community College (Public)
Tuition and Fees	$23,500	$9,781	$10,614	$1,772
Room and Board	$9,350	$10,304	$9,482	$9,239
Books	$1,000	$1,000	$1,000	$600
Transportation	$800	$1,152	$900	$1,136
Miscellaneous	$1,800	$3,637	$1,500	$849
Total Cost	**$36,450**	**$25,874**	**$23,496**	**$13,596**
Maximum Entitlement Grant Eligibility				
Federal Pell Grant	$4,731	$4,731	$4,731	$4,310
Federal Supplemental Educational Opportunity Grant (SEOG)	$1,000	$1,800	unknown	$400
State Tuition Aid Grant	$10,136	$6,036	$7,922	$2,646
NJ Educational Opportunity Fund (EOF)[3]	$2,500	$1,400	$1,400	$1,050
From NJ Foster Care Scholars, either:				
State Tuition Waiver or	0	Covers remainder of tuition and fees only, after other grants are applied		
Maximum Chafee ETV	$5,000	$5,000	$5,000	$5,000
Total Grants (excluding tuition waiver)	**$23,367**	**$18,967**	**$19,053**	**$13,406**
Deficit	**$13,083**	**$6,907**	**$4,443**	**$190**

[1] All costs calculated based on full-time, in-state student living on campus. In the case of Brookdale Community College, estimated costs are for a student living independently.
[2] Cost of Attendance is the amount calculated by the college and used in the calculation of financial aid, including for NJFC Scholars.
[3] The New Jersey EOF serves students who are capable and motivated to attend college but who are economically disadvantaged and had poor high school preparation. It is primarily available to students from lower socioeconomic school districts. EOF is offered by nearly all private and public colleges and is administered separately at each college.

Comparison of State Scholarship Programs for Foster Youth

Numbers are for 2007–08 year unless otherwise noted.

Eligibility	Number of potentially eligible youth[1]	Number scholarships	Tuition coverage to state public colleges	Tuition coverage to private colleges	Tuition coverage to out-of-state colleges
NEW JERSEY 1. Eligible for tuition waiver: Youth who have been homeless or in foster care for at least 9 months at age 16 or older and youth who have lived in DYFS-funded transitional housing. Also homeless youth. Must apply by 23rd birthday and attend college full-time. 2. Eligible for ETV: Youth 16 to 21 who were in care or adopted from care after 16th birthday. 3. Youth who left care between ages of 12 to 16 through adoption or Kinship Legal Guardianship.	1903 total for state	443 total for state	Yes	Yes, except for students who qualify only for tuition waiver	Yes, except for students who qualify only for tuition waiver
CONNECTICUT Youth must voluntarily remain in state care to get scholarships. Eligibility for vocational school is up to age 21, for college it is up to age 23.	1,581	562	Yes	Yes	Yes
MARYLAND 1. Eligible for tuition waiver: Youth in care upon receipt of h.s. diploma or receipt of GED, or adopted from care after 14. 2. Eligible for ETV: Youth in care or who have aged out of care, and those adopted from care after age 16.	3,038	128 tuition waivers; 256 ETV recipients, 2006–07	Yes	No on tuition waiver, yes on ETV	No on tuition waiver, yes on ETV
NEW YORK ETV program only: Youth in care or who have been in care from age 18 up to 23, and those adopted from care after age 16.	8,680	810	Yes	Yes	Yes
NORTH CAROLINA 1. Eligible for ETV program: In state care on or after 17th birthday or adopted from care after 16th birthday. Eligible up to age 23. 2. Eligible for NC REACH, a new program starting in 2008-09: Youth who aged out of care at age 18 or were adopted from care after age 12.	1,583	263 ETV recipients. No number available for NC REACH as it is new program.	Yes	Yes on ETV; no on NC REACH	Yes on ETV; no on NC REACH

[1] *Based on the number of youth ages 16 to 21 who are or were in foster care, 2004 data from the federal Adoption and Foster Care Analysis Reporting System (AFCARS).*

Room and board coverage	Other Supports	Federal ETV Funding	Other federal money	State contribution	Total amount spent
Amount available is generally what is left after tuition. Maximum grant for tuition, room and board is $5,000.	Mentoring and community service work through Project Myself. Some students also receive counseling or case management from DYFS caseworkers or through DYFS-funded programs.	$1,066,000.	$947,327 (from Temporary Assistance to Needy Families (TANF) and Chafee Independent Living funds).	$905,396 (from state grants to DCF and DCF purchase of services).	$2,918,618.
Youth receive up to $1,813 per month from state housing program.	Funding from ETV also used for tutoring, computers and other supports.	$668,612.	Unknown.	$7,336,157 on tuition, housing and other supports.	$8,004,769.
dependent living supports (rent, utilities, etc.) available on case-by-case basis.	Mentoring, tutoring, and other supports provided by Orphan Foundation.	$962,000.	None.	$307,200 to tuition waiver program. $86,580 to ETV program.	$1,355,780.
Generally, amount available for room, board and other expenses is what is left after tuition and fees are paid.	Mentoring, tutoring, and other supports provided by Orphan Foundation.	$2,603,191.	None.	$234,287.	$2,837,478.
1. ETV: Amount available is generally what is left after tuition. Maximum grant for tuition, room and board is $5,000. 2. NC REACH: fully covers room, board, transportation and school supplies.	In both the ETV and NC REACH programs, mentoring, tutoring, and other supports are provided by Orphan Foundation.	$947,000.	None.	1. ETV: State contribution is equal to at least 20 percent of federal grant, or $189,400. 2. NC REACH: not available.	1. ETV program: At least $1,136,400. 2. NC REACH: unknown.

Housing in particular can be a big source of anxiety for scholarship recipients. Unlike other college students, many youth in the scholarship program have no stable family home where they might live while attending classes or during college breaks.

One student, whose name is being withheld, said housing and money are constant sources of worry: "Where am I going to go over the winter break? What do I do for housing junior and senior year? How can I work full-time and maintain the GPA I need?....Money is a huge thing."

Even some who may have a family or foster family they could live with choose to stay away. One student told ACNJ he avoided spending time at his foster home because it is in a crime-ridden neighborhood. He does not want to subject himself to that environment.

The Difficulty Students Face with Housing is Fueled in Part by Limitations of the State Tuition Waiver Law.

The law restricts waiver money to be used only for tuition, not housing. It also covers only what remains of tuition after other grants are applied. That can amount to very little aid for students whose tuition is covered nearly in full by Pell, TAG and other grants. Students at private or out-of-state colleges with higher tuition costs who could benefit most from the waiver are ineligible because it can be used only for state public colleges.

The damaging effect of these restrictions is perhaps most evident for students who qualify only for tuition waiver and not ETV. This includes homeless youth who were never in state care, youth who first apply for scholarships after their 21st birthday, and those who continue their studies after their 23rd birthday.

Among students ineligible for ETV, the fortunate ones live in a DYFS-funded transitional or independent living program or with their family or foster family. DCF last year began to extend foster care payments to families of college students so that more foster families may continue providing a home for young people pursuing a higher education.

But some youth are left to cover room and board through working full-time or student loans. The potential loan burden is a concern. There is growing alarm nationally that the increasing loan burden on U.S. undergraduates is excessive and harmful to their future prospects. This is a greater worry for former foster youth who are more likely to lack financial support from parents after college when loans become due.

"The scholarship was central to my academic success," says James Taylor, 25, profiled in a Star-Ledger newspaper article[4] when he graduated from Kean University in June 2008. James told ACNJ that while his tuition was covered by the tuition waiver, he paid for living expenses through working and student loans that amount to more than $30,000 for his five years in college. He feels lucky the total isn't higher. But he added that students need affordable, safe housing. "No one expects to get a free ride. But the environments we have to move to, you have to deal with drugs and vandalism and theft. Areas near college campuses are too expensive."

How Scholarship Recipients Fare Academically and Emotionally

Living expenses aren't the only source of stress for some foster youth in college. Some begin college with educational deficits and find themselves placed by their colleges in non-credit remedial courses. It can be frustrating to earn no credits while struggling to balance work and school.

"The first year was all non-credit classes. It seemed kind of pointless," said Delanne, 20, a community college student. But she said that after her DYFS case was closed when she was 18, she benefited from counseling in a DYFS-funded aftercare program for former foster youth. "I had somebody to really guide me and help me."

Students who do not need remedial courses can also feel overwhelmed by the demands of course work, jobs and personal responsibilities.

Jasmine, 23, found it a struggle a couple of years ago to balance caring for her baby daughter, working part-time, and carrying a full course load at a four-year college. She transferred to a community college where, "It seemed like the professors were more willing to sit down and talk if you needed to." She completed her associate's degree and is transferring to another four-year college this fall.

College students need emotional support and guidance to steer their way to a degree. Delanne has gotten that from a counselor in a state-funded program. Jasmine said she has benefitted from mentoring from Project Myself. The situations of NJFC scholarship recipients are varied, with some in DYFS-funded programs or state care and others living on their own without counseling or case management. DCF needs to ensure that all students have someone to offer guidance and encouragement.

IV. How Project Myself Works

Project Myself was founded in 1999 to offer supports to the then small number of former foster youth receiving DYFS scholarships. The program now serves NJFC scholarship recipients. It also runs the Transitions for Youth web site, www.transitionsforyouth.org, for aging out youth and operates a small summer program in which scholarship recipients live on the Rutgers campus, receive living stipends and participate in summer internships.

Project Myself's services to scholarship recipients have evolved over the years. In the past, it gave them several options for participating, including mentoring a younger NJFC scholarship student or doing community service. For the 2008-09 academic year, the plan is for graduate interns in social work to provide all of the mentoring, which promises a higher quality of service. In addition, all NJFC scholarship recipients will be required to do volunteer community work for 20 hours per semester. The purpose is to help them connect to their communities, gain experience that can guide career choices, and have something to put on their resumes.

All NJFC scholarship recipients are supposed to participate in Project Myself. But in 2007-08, only about a third were active, according to the Project Myself program director. One problem is that some students, after receiving their grants, don't keep in touch with either Project Myself or FAFS and fail to apprise them of changes in contact information. When Project Myself staff reach out by phone or email to students who have not contacted the program on their own, they often cannot get through or their messages aren't returned.

That should change this year. NJFC scholarship recipients are being required to sign a participation agreement in which they pledge among other things to keep in regular contact with FAFS and to participate in Project Myself. This means more students could potentially benefit from Project Myself. But it raises the question of how the program's small staff of two employees plus four social work interns could handle a potential tripling of their caseload. DCF may need to examine whether more funding is necessary for Project Myself to serve all scholarship recipients effectively.

V. How NJFC Scholars is Changing in the 2008–09 Academic Year

Despite the enormous growth in the scholarship program over the past few years, it is facing a federal funding cut. Chafee ETV funds are distributed to states based on their overall number of children in foster care. A significant drop in children in out-of-home placement in New Jersey has led to a 13 percent cut in ETV funds to about $926,000.

DCF has responded to both the funding squeeze and concerns about student retention by making certain changes to program management and the requirements upon scholarship recipients. The goal is to stretch available funds without turning away eligible students.

- Students will now have an October deadline to apply for scholarships for fall semester and March to apply for spring, in contrast to the past practice of rolling admissions throughout the year.
- The program will operate on an academic year. Previously, it ran on the federal fiscal year. That allowed some first-year students to receive up to $10,000 in ETV grants instead of $5,000 because they received one full installment early in the calendar year and the second after the start of the new fiscal year in October. The maximum ETV grant will now be up to $2,500 per semester, consistent with federal guidelines.
- Students will have to sign a participation agreement.
- Youth whose semester GPA falls below the required 2.0 will be put on academic probation and will have to demonstrate they have sought academic tutoring. They will have one semester to bring their GPA up or they will lose their scholarship.

DCF and NJFC program staff hope these changes will encourage students serious about higher education to pursue scholarships. They believe some foster youth may have pursued college scholarships because they lacked a sense of direction and were drawn by ETV funding for living expenses. But since the scholarship program began, there are more options for older foster youth in New Jersey. DYFS now allows young people to stay in foster care until age 21. The state also has significantly increased the amount of subsidized housing for aging out youth. These changes should help DCF reserve the scholarship program for those who really want higher education.

VI. What Other States Are Doing

The critical need to provide educational supports to former foster youth has been widely recognized by the federal government and states. It is useful to compare New Jersey's program to scholarship initiatives elsewhere to see what our state is doing well and where it might improve.

All 50 states plus the District of Columbia and Puerto Rico receive federal Chafee ETV funds for educational supports to older foster youth. Some, unlike New Jersey, fail to fully utilize these funds and return some portion to the federal government.

Eighteen states and the District of Columbia also give some type of tuition support for foster youth. The most common approach is like New Jersey's, a tuition waiver to state-funded colleges and vocational schools. Unlike New Jersey, however, at least some of these states have made a direct appropriation from their state budgets to fund the waiver.

Most states offering tuition waivers or other educational supports also cover at least some of the cost of housing and other expenses. Connecticut stands out. It spent $7.3 million of state funds last year in addition to $668,612 in ETV funds to cover full room and board, tuition and other expenses for foster youth attending any accredited college, public or private, in or out of state. Participants have no need for student loans. Unlike New Jersey and most other states, Connecticut requires youth to remain in state care to receive the tuition and housing aid.

Connecticut officials aren't satisfied with their program's graduation rate, 52 percent in 2005. Similar to New Jersey, they believe some students not ready for college may have enrolled because they or their social workers felt the young people weren't ready to live independently. To combat this, the state is now offering alternative paths to independence, including a new employment program that helps youth sustain gainful employment for 12 months while giving them limited support for living expenses.

New Jersey also offers housing to older and former foster youth through transitional living and independent living programs. The cost of these programs is not included in the $2.9 million spent on the scholarship initiative. Although some college students live in such housing, there are no spots reserved for them.

A glance at other states' programs suggests the New Jersey program might have an untapped potential for raising private money. Private fundraising could not substitute for stable and adequate state funding to the New Jersey program. But it might allow the scholarship program to offer more supports, such as through expanding mentoring or other services to scholarship recipients.

A model for this may be the national Orphan Foundation of America, which administers foster youth scholarship programs for nine states and raises private money to supplement its services. OFA's executive director says the program focuses strongly on both student retention and positive youth development.

OFA's practices include requiring that every ETV scholarship recipient be enrolled in a student support group and get matched with one of the trained volunteers in OFA's national virtual mentoring program. OFA matches mentors based on students' stated needs, including professional and career interests, according to the foundation's web site. Each student also receives three personalized care packages a year and phone calls and text messages on birthdays and during holidays and exam periods. Both the mentoring and care packages are funded at least in part through private donations to OFA.

For students identified as at a high risk of dropping out, OFA staff try to help students pinpoint obstacles to their achievement. The efforts appear to pay off in some states. In North Carolina, 85 percent of the students who began college in 2004-05 remained in school three years later. In New York state, the retention rate is lower: 65 percent of ETV recipients in 2007-08 were returning students. OFA is obligated under its contract with New York to improve retention.

New Jersey has recognized some OFA activities as "best practices" and is consciously adopting some. The participation agreement that students in the New Jersey program will have to sign this year is an example of positive youth development, as is the emphasis on community service at Project Myself.

VII. Conclusion

The fast growth of the NJ Foster Care Scholars program since it began five years ago shows its importance: The program touched a need. Its growth also testifies to the program's inclusiveness. New Jersey has gone beyond the requirements of the state tuition waiver law to meet the needs of vulnerable youth who have been in foster care or homeless. In addition, the state is taking important steps this year to strengthen the program, including requiring youth to get tutoring if their grades begin to slip and collecting data to track the progress of students.

But the lack of a legislative appropriation for the tuition waiver law or, for that matter, for any part of the NJFC Scholars program, has forced DCF to scramble for funding each year. The cut in federal ETV money this year exacerbates the funding crunch.

One solution could be for New Jersey to make the tuition waiver a true waiver by not charging tuition to eligible foster youth attending state public colleges and vocational schools. That would allow the scholarship program to use more of its funds for students' living expenses. Another option is for the Legislature to appropriate money for the tuition waiver law. Either way, the scholarship program would end up with more funds for strengthening its supports to foster youth in college. Those supports could make a difference, helping more foster youth achieve a college degree and become successful adults contributing to the future of New Jersey.

Senator Donny Olson
State Capital Building, Room 514
Juneau, Alaska 99801-1182

Dear Senator Olson,

We write to express our support for SB 139, an act establishing a health professions loan repayment program and employment incentive program. **Alaska is one of only six states without a state-sponsored health professions support-for-service program such as a loan repayment and incentive program.** This, in combination with national health profession shortage dynamics, has given rise to an alarming vacancy rate among health professions in Alaska, particularly for Alaska Tribal providers, many of whom are located in remote rural areas of Alaska, and many of whom are the only health providers in their regions.

The competition for recruitment of providers is very difficult. Nationally, only 2% of medical students are choosing the primary care field. In Alaska, there are more than 90 pharmacist vacancies, many in rural areas. Many communities, particularly in rural areas, have well-documented shortages of dentists, physician assistants, nurse practitioners, nurses, dental hygienists, psychologists, licensed certified social workers, and physical therapists.

SB 139 provides an important part of the solution to the workforce shortage Alaska faces. The proposal was developed after careful review of national studies of best practices for workforce recruitment and retention and input from stakeholders statewide, including consideration of factors unique to Alaska. More cost-efficient and results-producing than other methods, loan repayment and incentives have been shown to effectively help alleviate shortage problems in other states. SB 139 establishes a loan repayment and incentive program customized for Alaska and will provide much needed relief for our state.

Because of the severe impact of the health workforce shortage on healthcare access for Alaska's residents, particularly among Alaska Natives and others served by Alaska Tribal health providers, the Alaska Native Health Board strongly supports SB 139 to establish a loan repayment and incentive program to allow Alaska to compete in recruitment of health professionals from a shrinking national labor pool.

Respectfully,

Evangelyn Dotomain
President/CEO

ANALYSIS: *(Attach a separate page if necessary)*

This legislation would require the Department to set rates for Medicaid home and community-based services providers as it currently sets rates for facilities such as hospitals and nursing homes. This rate-setting process involves providers developing detailed cost reports that the Department would then audit and use the findings to develop cost-based rates. Additional resources in staffing and contracting would be needed by the Department to fulfill its rate-setting functions for this new group of providers.

Date 2/2/2009
Dept. Health and Social Services

FISCAL NOTE

STATE OF ALASKA

2009 LEGISLATIVE SESSION

BILL NO. SB 032

ANALYSIS CONTINUATION

Under this legislation, the Department would receive and audit cost reports from approximately 350 home and community-based service providers. The Department would contract with auditors to perform the audits. Additional staff positions would be necessary to oversee the work and conduct rate setting operations. The contract would begin in FY2011 to audit all providers; in subsequent years, half of the providers would be audited on a biennial schedule.

In addition, the Department anticipates that, beginning in FY2012, its volume of rate setting appeals would increase as a result of auditing these new providers and that additional funds would be needed to the existing rate-setting process. Additional funds would be needed to support rate-setting appeal work in the Department of Law.

Assumption:

Annual Personal Services:
3 Internal Auditor III positions in the Office of Rate Review for cost reporting - $249.8 (half year in FY2010)
2 Internal Auditor positions in the Office of Rate Review for appeals - $166.6 (beginning in FY2012)

Annual Travel for audit staff to provide technical assistance and training to providers and receive training required by Government Auditing Standards - $5.0 per FTE

Annual Contractual:
Contract to hire auditors for biennial audit of cost reports
FY20 11 - $3,560.0
Subsequent years - $1,780
RSA with Dept. of Law for appeals - $400.0 (beginning in FY2012)
Office space, phones, etc. - $12.8 per FTE

Annual Supplies - $0.6 per FTE

One-Time Equipment - $15.0 per FTE , year of initial hire

ANALYSIS: *(Attach a separate page if necessary)*

The proposed legislation would add home and community-based service providers to the Medicaid health facility rate setting statute, AS 47.07.070. This legislation would require the Department to use a similar rate methodology for establishing rates for home and community-based service providers.

Passage of this bill would likely require additional Medicaid benefits appropriations in the division of Senior and Disabilties of $8,680.7 in 2010 and a 2.8% annual increase to home and community based provider payments in the basic cost of services each subsequent year. Costs would increase to a projected $31,065.8 by 2015.

FISCAL NOTE

STATE OF ALASKA BILL NO. SB032

2009 LEGISLATIVE SESSION

ANALYSIS CONTINUATION

BACKGROUND

This statute would affect an estimated 356 businesses who are providers of home and community based services, including residential living services. These services are delivered under four Medicaid waivers: Adults with Disabilities, Children with Complex Medical Conditions, Mental Retardation/Developmental Disabilities, and Older Alaskans. The total expenditure for these waivers in 2008 was $141.5 million. Costs are projected to increase by $4.1 million in 2009 to $145.6 million, which is the baseline projection used for this fiscal note. By assuming the status quo, without changes in population or utilization, costs associated with rate increases can be isolated.

HCBS providers currently have their rates or rate methodologies established in regulation. Since 2004 all of those rates have been frozen (some longer), except for 2009, when the legislature approved a 4-6% increase. This statute will apply the current Medicaid law requiring that the Department use a rigorous, cost-based rate setting process for establishing Medicaid payment rates for health facilities to HCBS providers. There would be two types of additional costs incurred: costs for the rate adjustment and costs providers would incur to comply with new financial reporting requirements.

ESTIMATED RATE ADJUSTMENT

For the purpose of this fiscal note, it is assumed home and community based providers receive an annual inflation adjustment as facilities currently do under AS 47.07.070. The 2.8% is the inflation for Home Health Agencies as this is the closest provider category to the waiver service providers. The department does not have the detailed cost reports required to fully implement section 070 until 2012; however, the department has assumed it will make interim rate increases averaging 2.8% prior to that time. The 2.8% increase has been applied to the 2009 baseline starting in 2010 for an increase of $26,235.0 by 2015. Other impacts to the amount of additional reimbursement rates to providers are not possible to determine at this point in time.

ESTIMATED COSTS TO COMPLY WITH NEW FINANCIAL REQUIREMENTS

Many home and community based providers do not have the financial infrastructure to comply with the rigorous financial requirements of AS 47.07.070. Home and community based providers would have to invest substantial sums in accounting and report processes which in turn are passed on to the state through higher Medicaid payment rates. These costs are in addition to the costs for the rate adjustments. One-time costs include accounting system upgrades ($142.5) and purchase of specialized cost reporting software ($338.2). Ongoing annual costs include recordkeeper/accountant/contractor to obtain assistance with accounting efforts ($1,425.0); professional assistance in preparing cost reports and completing forms ($855.0); and annual independent audit ($1,543.8). Legal fees to challenge rate setting regulations ($300.0) would occur in 2010 & 2011 while legal fees for providers who appeal their rates ($1,007.0) would begin in 2012 once those rates are established. Total additional costs to comply with new financial requirements would be $4,604.5 in 2010, $4,123.8 in 2011, and $4,830.8 each year thereafter.

FUND SOURCE

Costs are eligible for the federal medical assistance percentage which is projected to be 50%.

A BILL

FOR AN ACT ENTITLED

"An Act relating to medical assistance payments for home and community-based services, provision of personal care services in a recipient's home, and assisted living homes; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 47.07 is amended by adding a new section to read:

Sec. 47.07.069. Payment rates for provision of personal care services in a recipient's home, home and community-based services, and assisted living homes. (a) The department shall, by regulation, set rates of payment for provision of personal care services in a recipient's home under AS 47.07.030, home and community-based services under AS 47.07.045, and assisted living homes under AS 47.24.017 and AS 47.25.195(e) in accordance with 42 U.S.C. 1396 (Title XIX, Social Security Act, Medical Assistance) and this section. A rate established under this section takes effect under AS 44.62 (Administrative Procedure Act) but not until approved in writing by the commissioner. The commissioner may delegate the performance of these

functions.

(b) The department shall review the rates of payment established under of (a) of this section for a fiscal year. In reviewing the rates, the department shall, within the limit of appropriations made by the legislature for the department's programs under this chapter and under AS 47.25.120 - 47.25.300 for that fiscal year, including anticipated available federal revenue for that fiscal year, set rates that are based on

(1) reasonable costs related to patient care;

(2) audit and inspection results and reports, when the audit or inspection is conducted under AS 47.07.074; and

(3) the rate of inflation contained in the home health agency market basket data of the Centers for Medicare and Medicaid Services, United States Department of Health and Human Services.

(c) As a condition of obtaining payment under this section, a provider of personal care services in a recipient's home, a provider of home and community-based services, and an assisted living home shall allow

(1) the department reasonable access to the records of medical assistance recipients and providers; and

(2) audit and inspection of the records by state and federal agencies.

*** Sec. 2.** AS 47.24.017(d) is amended to read:

(d) If the protective services under this section include the placement of a vulnerable adult in an assisted living home at the state's expense, the minimum daily reimbursement rate to the assisted living home for the vulnerable adult is **the amount set under AS 47.07.069 for assisted living homes plus eligible room and board expenses** [$70]. The department may, under its regulations, provide for a daily rate higher than **the amount set under this section** [$70] if the additional care provided to the vulnerable adult in the assisted living home justifies the additional reimbursement. In this subsection, "assisted living home" means an assisted living home licensed under AS 47.32.

*** Sec. 3.** AS 47.25.195(e) is amended to read:

(e) Notwithstanding other provisions of this section and the provisions of AS 47.07, if the assistance provided to a needy person under AS 47.25.120 -

2/23

Dr Ellis -

Rate-adj - what kind?

Social Security -

General Relief - & S.S. Disability

Request Sherwood rd ##

for rate increase

for this yr -

47.25.300 includes the initiation or continuation of placement of the person in an assisted living home at the state's expense, the department's minimum daily reimbursement rate to the assisted living home for the person is **the amount set under AS 47.07.069 plus eligible room and board expenses** [$70. THIS MINIMUM RATE IS NOT SUBJECT TO REDUCTION UNDER (c) OF THIS SECTION]. The department may, under its regulations and under the procedures of AS 47.07.070 - 47.07.075, provide for a daily rate higher than **the amount set under this section** [$70] if the care provided to the needy person in the assisted living home justifies the higher reimbursement. [A DAILY RATE HIGHER THAN $70 FOR ASSISTED LIVING HOMES MAY BE REDUCED UNDER (c) OF THIS SECTION, BUT NOT BELOW $70.]

*** Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REPORT ON MEDICAL ASSISTANCE PAYMENT RATES. (a) The Department of Health and Social Services shall prepare and submit an annual report on medical assistance payment rates established under AS 47.07.069 to the governor that

(1) identifies trends in established rates of payment;

(2) explains how the department has complied with AS 47.07.069(b) in establishing the rates; and

(3) includes a cross reference to regulations adopted under AS 47.07.069 and the availability of the regulations.

(b) The department shall notify all legislators of the availability of the report prepared under (a) of this section and provide a copy of the report to the

(1) presiding officers of each house of the legislature;

(2) chairs of the senate and house finance committees; and

(3) chairs of the senate and house health and social service committees.

*** Sec. 5.** Section 4 of this Act is repealed June 30, 2014.

*** Sec. 6.** This Act takes effect July 1, 2011.

SENATOR JOHNNY ELLIS
SENATE MAJORITY LEADER

MEMORANDUM

DATE: **January 26, 2009**

TO: **Senator Bettye Davis**
Senate Health & Social Services Committee

FROM: **Senator Johnny Ellis**

RE: **Hearing Request for SB 32 – Medicaid: Home/Community Based Services**

I am requesting that Senate Bill 32 be scheduled for a hearing in the Senate Health and Social Services Committee at your earliest convenience.

This bill includes the providers of home- and community-based services to Alaska's senior and developmentally disabled populations in the regular rate review process afforded to providers of institutional care. Alaska has made great strides in reforming our network of support for seniors as well as for children and adults with developmental disabilities. Allowing people who live with developmental disabilities the opportunity to live a full life as a member of their community took a great leap forward with the closing of Harborview ten years ago. However, our statutes provide for an annual Medicaid rate review for our institutions without providing that same treatment to home and community based service providers, a situation which may force people back into the institutions we have worked to avoid.

Included in this packet:

- A current version of SB 32 – 26-LS0218\R
- Sponsor Statement
- Background Information
- Letter of Support

Other backup will be forthcoming as required. Thank you.

SENATOR JOHNNY ELLIS
SENATE MAJORITY LEADER

SPONSOR STATEMENT – SENATE BILL 32

AN ACT RELATING TO MEDICAL ASSISTANCE PAYMENTS FOR HOME- AND COMMUNITY-BASED SERVICES

Senate Bill 32 creates a mechanism for regular Medicaid rate review for providers of home- and community-based services to Alaska's elderly and developmentally disabled citizens. Institutional service providers receive regular reviews in order to bring rates in line with costs. Over the last few years, however, rates for home- and community-based services have been frozen. During that time, not only have costs increased, the medical environment – including regulations, technology, and client expectations – has shifted dramatically. Home and community based services are the key to helping our seniors and those living with developmental disabilities live their lives as productive members of our communities, and without this regular review process, many providers will be forced out of business.

SENATOR JOHNNY ELLIS
SENATE MAJORITY LEADER

MEMORANDUM

To: Senator Donny Olson,
Chair, Senate Finance Subcommittee on the Department of Health and Social Services

From: Senator Johnny Ellis JE

Date: February 23, 2009

Subject: Home and Community Based Services Increment

Home- and community-based services are a crucial element in the array of services provided to seniors and persons experiencing developmental disabilities in our state. They are a less-intrusive and more cost-effective way of dealing with long-term care, and play a crucial role in containing the overall growth of Medicaid spending.

While institutional care providers receive a statutorily mandated annual rate review, providers of home- and community-based services depend on regulatory action for increased rates. Except for an across-the-board increase last year, most providers have not received rate reviews or increases since 2004, and many have waited over a decade. While I have introduced legislation to remedy this situation (Senate Bill 32 is currently in front of the H&SS Committee, and goes next to the full Finance Committee), this long-term fix does nothing to solve this years problem.

I would ask for your subcommittee's support for a $3.9 million increment in the FY2010 budget in the Senior and Disability Services Medicaid funding. This amount would support a 2.8% increase for the providers of Medicaid waiver services, equivalent to the Home Health Agency inflation factor. Thank you for your consideration, and feel free to contact my office at any time with questions or concerns you may have.

Cc: Sen. Bettye Davis
Sen. Lesil McGuire
Sen. Kevin Meyer

Cc: Sen. Johnny Ellis
Subject: SDS increment

If I may suggest an appropriate number, the original fiscal note for SB32 from SDS Medicaid Services contains the cost estimates for the amount of the Home Health Agency inflation rate (2.8%) for the 4 Medicaid waivers – a cost of approximately $3.9 million.

Subject: RE: SB 32 draft language
Attachments: GR rates.pdf

Max,

Sorry for the delay, but I wanted to make sure I got it right. Medicaid pays for assisted living services out of the Senior and Disabilities Medicaid Services component. Room and board charges for Medicaid recipients are paid for out of their own funds (including any state or federal cash assistance such as APA or SSI), or if insufficient, the General Relief Assisted Living (AS 47.25.195(e)). Medicaid rates for assisted living are either pay under a formula established in regulation, which adjust for type of facility, regional differences, and client use of adult day care outside the assisted living home, or the rates can be individual provider rates that were originally based on budgeted costs prior to the rate freeze in 2004.

Payments for assisted living under Adult Protective Services (AS 47.24.017) and General Relief Assisted Living (AS 47.25.195(e)) would be paid out of Protection and Community Services under Senior and Disabilities Services after any required client contribution was paid. The GR/APS base rate is $70, which is the rate in Anchorage and Southeast. The base rates are higher in other parts of the state, with the highest being $93.10 for the Southwest Region. I have attached the rate document and a copy of the applicable regulations. The SDS/APS rates can be augmented up to $22 per day, per 7 AAC 47.471. The Behavioral Health folks, who are also in the GR program, have higher augmented rates, per 7 AAC 47.472

Thanks again for the prompt reply. I do have one question, and am working with the drafters to make these changes. How does the Department currently pay the rates for the assisted living homes we are addressing in this bill (what is the fund source, if Medicaid dollars are disallowed), and what is the rate (if it's not the $70 minimum that is in statute)?

I look forward to hearing your response.

Subject: RE: SB 32 draft language

Max,
I wanted to get back to you with our comments on the proposed committee substitute. The department appreciates the willingness of the Senator and the Committee to consider suggestions from us and our partners at the Department of Law.

First, as we discussed, the Department does not support tying the rate setting authority to specific criteria, such as those listed in the proposed AS 47.07.069(b).

The Department of Law recommends the following changes to the proposed substitute (CSSB 32( ) 26-LS0218\P Luckhaupt/Mischel 2/13/09) to make sure that the same language is used throughout to mean the same thing and to preclude overbroad references that might lead to unintended consequences.

- Replace the phrase "personal care attendants" with "provision of personal care services in a recipient's home" at Page 1, Lines 2, 5, and 8. This is necessary as the phrase 'personal care attendants' does not currently appear in the relevant statutes. AS 47.07.070 (referenced in Line 8) includes many optional services, but does not use the phrase "personal care attendants". However, it does include providing 'personal care services in a recipient's home' as an allowed service. 'Personal care services in a recipient's home' is defined at AS 47.07.900(15)
- Page 1, Line 9-10. Limit statutory reference for assisted living homes to "under AS 47.24.017(d) and AS 47.25.195(e)" as rates for assisted living homes are only referenced in those two subsections. The broad reference used in this draft [AS 47.25.120 – 47.25.300] includes all general relief, including an appeal provision at 47.25.180 for fair hearings which would be entirely inappropriate for provider rates. The broad statutory reference [AS 47.25.120 – 47.25.300] is not a problem when used on Page 2, Line 4 in .069(b) – as the reference there is the same as in AS 47.07.070(b) and does not specifically address whose rates are being set.

Also, if we are going to base rates on reasonable costs, as proposed in AS 47.07.069(b), the department will need audit authority. The Department of Law would prefer that if an audit section is included, it be separate (even if identical language is used) from the audit and inspection reports for health care facilities at 47.07.074. Rather than amending .074, a separate provision could be enacted allowing the audits. It would be necessary to require the same type of reports and audits from all providers included within the same statutory provision. Dept. of Law and our department are concerned that requiring the same kind of audits and reports for these providers as are required for health care facilities might prove overly burdensome for some of the smaller providers.

The Department also believes that the medical care services component of the CPI is not the right measure to use for a producer price inflation factor because it is a measure of consumer prices. Instead, our rate setting folks recommend the Home Health Agency Market Basket, which measures provider input prices.

With regard to payment to assisted living homes, federal law prohibits Medicaid from paying for room and board costs for people residing in non-institutional settings, such as assisted living facilities. So assisted living rates set for Medicaid under the proposed AS 47.07.069 must exclude the portion of the cost attributed to room and board. However, assisted living rates set under AS 47.24.017(d) and AS 47.25.195(e) are intended to include the room and board piece. As written, the proposed statutes would only require the department to pay the portion of the charge related to supportive services, not room and board. While the department is willing to consider the same factors when developing the rates under the different statutes, it is not possible to pay the same rates because the service purchased is not the same for Medicaid as for the other two statutes.

Let me know if you have questions. Oh, and please make sure to keep Linda Zaugg in the loop. Thanks. Jon

Subject: SB 32 draft language

I've attached what I received from our bill drafters regarding SB32. There are two components which are not currently included: first, we need to discuss a framework for the phase-in in order to find a way to define which groups will be included in the statute at which rates. Second, they need more time to work on the immunity language. I'm looking forward to hearing your thoughts, and would like to set up one more meeting for next week to discuss this version with the Senator. Thank you.

Subject: SB32 - rate review

I wanted to follow up with you in regards to the proposed language from the Department that we received this morning so that Sen. Davis can be kept in the loop. We are working with the supporters of the original bill and trying to come up with some compromise language that will satisfy our intent and the Department's cost concerns. I will keep you informed as soon as we have something the committee can work on. Let me know if you have any questions – we are working quickly to bring it back to the committee as soon as possible. Thanks for your help.

Section 1. 47.07 is amended by adding a new section to read:

Sec. 47.07.068 Payment rates for assisted living homes and home and community based services. (a) The department shall, by regulation, set rates of payment under this chapter for assisted living homes (AS 47.24.017 and AS 47.25.195(e)) and home and community-based services (AS 47.07.045) in accordance with 42 U.S.C. 1396 (Title XIX, Social Security Act, Medical Assistance).

(b) the department shall review annually the rates set under this section for compliance with federal standards under 42. U.S.C. 1936.

(c) the department shall submit a report to the governor containing the information required under this subsection. The department shall send a copy of the report to the persons chairing the house and senate finance committees and the persons chairing the house and senate health and social services committees and shall notify the full legislature that the report is available to all legislators. The report must

(1) identify trends in rates of payment established under subsection (a);

(2) explain how the department has determined that the rates set under this section are in compliance with the requirements of subsection (b);

(3) indicate that written or electronic copies of regulations and reports developed by the department under this section are available.

Section 2. AS 47.07.068(c) is repealed June 30, 2014.

CS FOR SENATE BILL NO. 32( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATORS ELLIS, Davis, Paskvan

A BILL

FOR AN ACT ENTITLED

"An Act relating to medical assistance payments for home and community-based services, personal care attendants, and assisted living homes; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 47.07 is amended by adding a new section to read:

Sec. 47.07.069. Payment rates for personal care attendants, home and community-based services, and assisted living homes. (a) The department shall, by regulation, set rates of payment for personal care attendants under AS 47.07.030, home and community-based services under AS 47.07.045, and assisted living homes under AS 47.24.017 and AS 47.25.120 - 47.25.300 in accordance with 42 U.S.C. 1396 (Title XIX, Social Security Act, Medical Assistance) and this section. A rate established under this section takes effect under AS 44.62 (Administrative Procedure Act) but not until approved in writing by the commissioner. The commissioner may delegate the performance of these functions.

(b) The department shall review the rates of payment established under of (a) of this section for a fiscal year. In reviewing the rates, the department shall, within the limit of appropriations made by the legislature for the department's programs under this chapter and under AS 47.25.120 - 47.25.300 for that fiscal year, including anticipated available federal revenue for that fiscal year, set rates that are based on

(1) reasonable costs related to patient care;

(2) audit and inspection results and reports, when the audit or inspection is conducted under AS 47.07.074; and

(3) the rate of inflation contained in the medical care services section of the Consumer Price Index, as determined by the Bureau of Labor Statistics, United States Department of Labor.

*** Sec. 2.** AS 47.07.074(a) is amended to read:

(a) As a condition of obtaining payment under **AS 47.07.069 or 47.07.070, a provider of personal care attendant services, a provider of home and community-based services, an assisted living home, and** [AS 47.07.070,] a health facility shall allow

(1) the department reasonable access to the records of medical assistance recipients and providers; and

(2) audit and inspection of the records by state and federal agencies.

*** Sec. 3.** AS 47.24.017(d) is amended to read:

(d) If the protective services under this section include the placement of a vulnerable adult in an assisted living home at the state's expense, the minimum daily reimbursement rate to the assisted living home for the vulnerable adult is **the amount set under AS 47.07.069 for assisted living homes** [$70]. The department may, under its regulations, provide for a daily rate higher than **the amount set under AS 47.07.069** [$70] if the additional care provided to the vulnerable adult in the assisted living home justifies the additional reimbursement. In this subsection, "assisted living home" means an assisted living home licensed under AS 47.32.

*** Sec. 4.** AS 47.25.195(e) is amended to read:

(e) Notwithstanding other provisions of this section and the provisions of AS 47.07, if the assistance provided to a needy person under AS 47.25.120 -

47.25.300 includes the initiation or continuation of placement of the person in an assisted living home at the state's expense, the department's minimum daily reimbursement rate to the assisted living home for the person is **the amount set under AS 47.07.069** [$70. THIS MINIMUM RATE IS NOT SUBJECT TO REDUCTION UNDER (c) OF THIS SECTION]. The department may, under its regulations and under the procedures of AS 47.07.070 - 47.07.075, provide for a daily rate higher than **the amount set under AS 47.07.069** [$70] if the care provided to the needy person in the assisted living home justifies the higher reimbursement. [A DAILY RATE HIGHER THAN $70 FOR ASSISTED LIVING HOMES MAY BE REDUCED UNDER (c) OF THIS SECTION, BUT NOT BELOW $70.]

*** Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REPORT ON MEDICAL ASSISTANCE PAYMENT RATES. (a) The Department of Health and Social Services shall prepare and submit an annual report on medical assistance payment rates established under AS 47.07.069 to the governor that

(1) identifies trends in established rates of payment;

(2) explains how the department has complied with AS 47.07.069(b) in establishing the rates; and

(3) includes a cross reference to regulations adopted under AS 47.07.069 and the availability of the regulations.

(b) The department shall notify all legislators of the availability of the report prepared under (a) of this section and provide a copy of the report to the

(1) presiding officers of each house of the legislature;

(2) chairs of the senate and house finance committees; and

(3) chairs of the senate and house health and social service committees.

*** Sec. 6.** Section 5 of this Act is repealed June 30, 2014.

*** Sec. 7.** This Act takes effect July 1, 2011.

STATE OF ALASKA

DEPT. OF HEALTH & SOCIAL SERVICES

Alaska Commission on Aging

SARAH PALIN, GOVERNOR

P.O. BOX 110693
JUNEAU, ALASKA 99811-0693
PHONE: (907) 465-3250
FAX: (907) 465-1398

December 12, 2008

Senator Ellis
716 West 4th Ave. Suite 440
Anchorage, AK 99501

Dear Senator Ellis:

Alaska is home to more than 76,500 older Alaskans (people at least 60 years old), comprising 11% of the state's population, according to the Alaska Department of Labor 2007 estimates. Alaska's senior population is growing faster than any other state's except Nevada. Over the next 25 years, the growth of the Alaska senior population will be strong and continuous; the number of seniors is expected to grow at a rate of almost 6% annually statewide, increasing the number of seniors by nearly 5,000 each year. Most of this increase is attributable to the aging of our state's large baby boomer population.

The increasing cost of long-term care services, ranging from community services and in-home supports to assisted living and nursing home care, is a critical issue facing Alaska's Medicaid and senior grants programs, as the Alaska senior population continues to build and grow older. According to the Department of Health and Social Services, the cost of Medicaid will quadruple from 2006 to 2026 due to population growth, aging of the population, greater utilization of Medicaid services, and increased health care costs (The Lewin Group Report: February 2006).

On the bright side, Alaska is one of the leading states in establishing a balance between home- and community-based services and institutionalized care for elderly and disabled people, as stated in a recent AARP report. While other states have built nursing homes and other institutional long-term care facilities, Alaska has prudently invested in a continuum of long-term service supports that allow individuals to remain in their homes and communities for as long as possible close to family, friends, and tradition and are less costly. Alaska's senior home- and community-based grants program, using a combination of federal Older Americans Act funds with state funds, provides services to seniors of modest income who are not eligible for Medicaid. Like Medicaid, these services also face the pressures of rising demand.

The Alaska Commission on Aging (ACoA) is a State agency within the Department of Health and Social Services, established in 1982. Our mission is to plan, advocate, and educate on behalf of all older Alaskans and their caregivers to ensure their dignity and independence so that they may lead useful and meaningful lives.

We know that you value your senior constituents as active, well-informed members of your community. As the 2009 legislative session begins, we would like to share with you our recommendations on a number of senior issues before the Alaska Legislature.

1. Increase the availability of home- and community-based services to the growing senior population by supporting an increment of $2.0 million for the **Senior Home- and Community-Based Grants** budget within Senior and Disabilities Services (for senior nutrition programs, senior transportation, adult day

services, family respite, care coordination, chore services, and Alzheimer's Disease and Related Dementia education); **establish regular Medicaid waiver rate reviews for all home- and community-based service providers** serving Alaska seniors and Alaska Mental Trust Authority beneficiaries; and support funding for the **Aging and Disability Resource Centers** under Senior and Disabilities Services to help individuals and their families navigate the long-term care system with information, referral, and options counseling services.

2. Support the re-authorization of the **Adult Dental Medicaid Program** that is scheduled to sunset on June 30, 2009. Continuation of this program is important for older Alaskans and all vulnerable adults who are Medicaid eligible to have access to prevention and intervention dental services that are not covered by the regular Medicaid dental program.

3. Support high quality, affordable, and accessible **health care for seniors** by strengthening workforce development efforts for health care professionals and direct service staff, providing adequate funding for Community Health Centers that serve senior patients and offering incentives to physicians and dentists to accept Medicare and Medicaid patients.

4. Create an **Alaskan Public Transportation Fund** for operation of local coordinated transportation systems that address barriers to access experienced by people with disabilities and fund development of coordinated transportation efforts in communities without public transit systems.

5. Enact legislation creating the **Alaska Housing Trust** and appropriate sufficient funds to support meaningful services for homeless Alaskans (17% of whom are age 55 and older) and those who are at risk of becoming homeless, including those Alaska seniors who are diagnosed with a mental illness and are unable to find a licensed assisted living or nursing home facility to care for them.

Public policy often focuses on the potential costs of services for seniors and may overlook the social and economic benefits of an increased retired senior population. Older Alaskans provide a wealth of experience, wisdom, historical perspective, and volunteer time. They also contribute to the state's economy with their retirement income and health care spending that totaled almost $1.5 billion in 2004. Taking into account the social and economic assets Alaska seniors offer, we do well to invest in programs and services to ensure their ability to continue living here and contributing to the progress of our state.

Please feel free to contact Denise Daniello, ACoA's executive director by phone (465-4879) or email (Denise.Daniello@alaska.gov) for information about these issues or with any questions concerning Alaska's senior population.

The Alaska Commission on Aging will be meeting in Juneau on February 10th-12th, 2009 and hopes to schedule a meeting with you to discuss our priorities in person. We truly appreciate your support of important senior legislation in prior years and look forward to working with you this legislative session. Thank you for your consideration of these advocacy priorities.

Sincerely,

Sharon Howerton-Clark, Chair
Alaska Commission on Aging

Sincerely,

Denise Daniello
ACoA Executive Director

NEWS

The least among us

Alaska's developmental disabilities providers look for allies in the state government

By Brendan Joel Kelley

IS COMING SATURDAY, on his Fox News program *Geraldo at Large*, Geraldo Rivera is devoting the show to the long waiting lists where people with developmental disabilities languish while waiting to receive services.

"The waiting list is, in essence, the new institution," Rivera told a Pennsylvania blogger associated with The Arc, a national network of service providers for the developmentally disabled. "It's imprisoning in some ways, handicapping the families of the developmentally disabled, really handcuffing them in ways that put tremendous stress and strain on their lives."

Though it's doubtful that Alaska will be mentioned on the show, our state also maintains a list of developmentally disabled people who are eligible for services but aren't receiving them due to inadequate funding. Each year the Department of Health and Social Services prepares a report on this list, and the report for 2008 is due any day now. When the last annual report was released last December, there were 943 individuals on the waiting list. They've been waiting for services an average of 3.7 years.

At the beginning of December, a couple of weeks before Republican Governor Sarah Palin released her budget, state Senator Johnny Ellis (D-Anchorage) wrote Palin a letter asking her to address the waiting list, known officially as the Developmental Disabilities Registry.

"During your time on the campaign trail with Senator John McCain as the Vice Presidential nominee, I was very pleased to hear you speak on multiple occasions about the problems faced by special needs children in our country," Ellis wrote. He then pointed out that as of October 1, the registry contained 993 individuals, mostly between the ages of 4 and 17. "I respectfully request that you do your very best to provide the funding necessary to fully eliminate the Waitlist," Ellis continued, before asking Palin to include funding recommended by the governor's Ad Hoc Committee on the DD Registry in her budget.

But that money wasn't included in the budget that Palin released on December 15. And for service providers in the developmental disabilities community, the waiting list is far from the only problem. Organizations like The Arc of Anchorage, Hope Community Resources, and many other home and community-based service providers are barely afloat financially, because the rates at which they're reimbursed aren't commensurate with the actual costs.

Ellis is hoping to change that with a bill he'll introduce in the next legislative session. The bill would evaluate reimbursement rates for home and community-based service providers annually.

"THE NUMBER ONE THING we want [the legislature] to do is establish a regular rate review process for how they pay us," says Gwendolyn Lee, executive director of The Arc of Anchorage. "The current system is not equitable."

Even if the waiting list were eradicated by sufficient funding from the state, Lee says, it would bring those people to a service provider system "that's weakened in its ability to deliver high quality services, and can't find the workers to meet the needs of the existing people."

At The Arc, which offers a large variety of services to those with developmental disabilities, under-funding has resulted in high turnover despite cost-cutting measures. "We have deferred maintenance; we have cut health insurance; we do not give raises; we ask people to do more," Lee says. "We are stretched; the rubber band is truly stretched."

Simply put, The Arc can only afford to hire workers at the lowest possible wages, making for high turnover and training costs. This means that the person with a disability has a constant revolving door of people coming and going from their life, each one having to learn the individual's critical issues, health issues, and personality nuances. "It's really depressing for the staff who are trying to deliver quality if they're constantly hiring and retraining people to do the very basics," Lee says.

There's a real danger to not addre[illegible] the financial concerns of home a[illegible] community-based

> "... this would be a real opportunity for Sarah Palin and myself and other legislators from both sides of the aisle to work together and put our money and our commitment where our mouths are. rates were as low as 9 percent, while only a couple categories gathered responses from over 50 percent of the providers, due to the complexity of the audits.

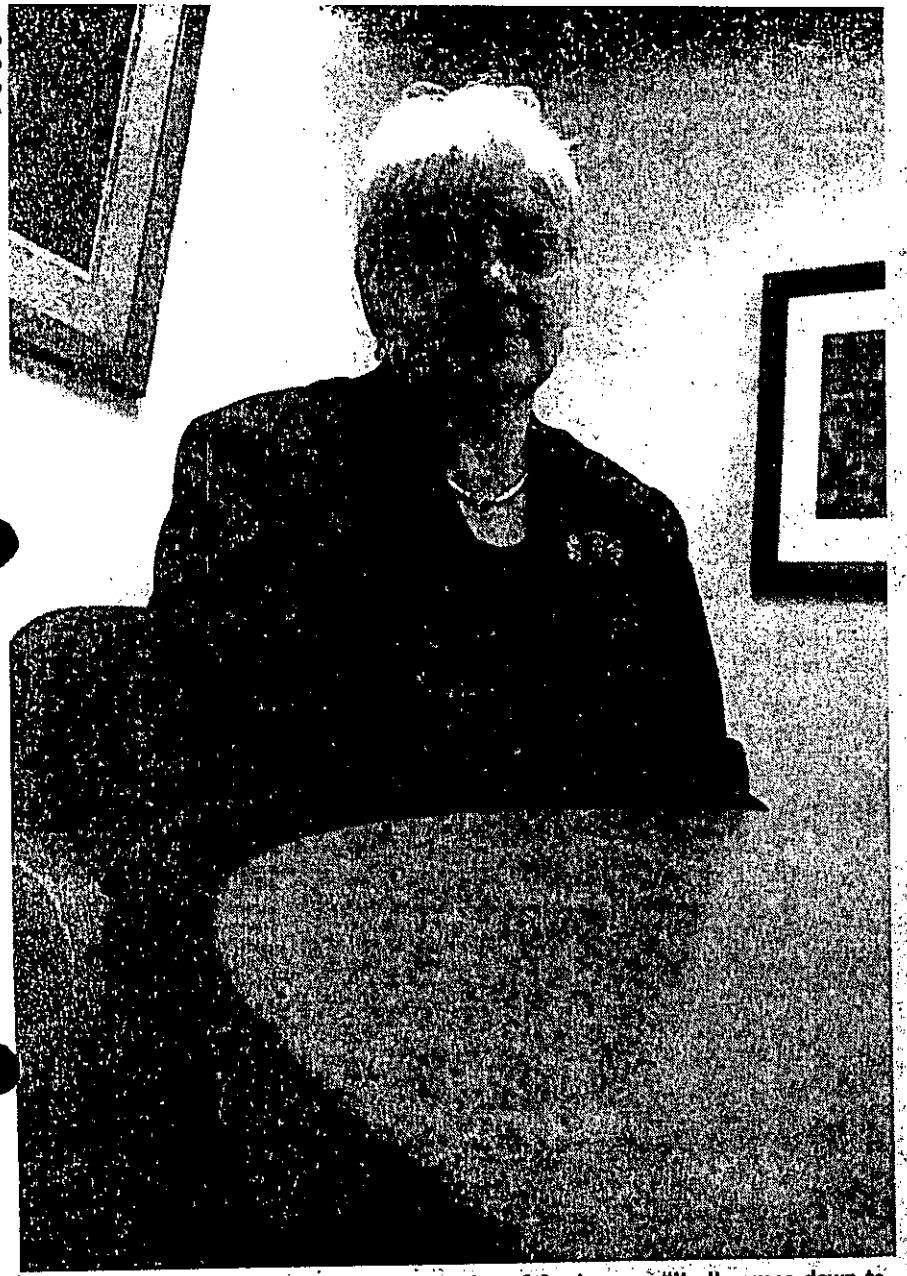
Meanwhile, hospitals and nursing homes are reimbursed for their costs based on an annual rate review, which is what the home and community-based developmental disabilities providers are asking for. The difference between the two groups, Ellis says, is that "frankly, hospitals and nursing homes have powerful lobbyists in Juneau. These community-based services have never been joined together in a really organized group and have never really had effective lobbyists to get what they need.

"I'm going to put this bill in to the legislature, but it's a really difficult bill to get through, to do what the service providers want—regular rate review and adjustment. I've said to them that they need to create a coalition of people all over the state, clients and service providers and workers to say, 'we need the same thing that the hospitals and nursing homes have.' I think maybe the time has come."

IT'S NOT JUST GERALDO RIVERA that's put the spotli[illegible] on the issues the developmental disabilities community f[illegible]



Gwendolyn Lee, Executive Director of The Arc of Anchorage: "It all comes down to how we think about our fellow human beings."

ger provide these services because they can't afford to, based on the poor reimbursement from the state and/or the feds under Medicaid, then there will be people without services in the community who will have to be institutionalized at greater public expense and more human tragedy."

"It all comes down to how we think about our fellow human beings," Lee says. "Do we have an attitude that the least of these is the most important, and everyone is entitled to fair access to basic community life?"

SIX YEARS AGO, THE STATE realized that the system for reimbursing service providers was flawed and froze the reimbursement rates while studying the issue. Last year, for the first time, the legislature granted an increase in rates, which varied according to the type of services provided. But there is still no mechanism in place for rates to keep up with inflation and cost of living increases.

To study the problem, the state hired an auditing firm, Myers and Stauffer, which attempted to analyze the service providers' costs versus reimbursements. The technique that the firm used, however, was unwieldy for many of the smaller sized organizations that provide services for the developmentally disabled.

"I don't think they got great participation," Ellis says. Indeed, some of the provider response would find an ally in her, while she held her baby boy Trig, who has Down syndrome.

"I understand that statement," Lee says. "As a parent of a new child with disabilities, it's easy to say 'I feel your pain, I understand your situation, I'll work to improve it.' It's easier said than done to really be an advocate. She is in a very different position than a lot of our families that may not have the circle of support that she has. I think that every family that heard that statement is watching now. We are now anxious to work with her to make that her legacy. It's an incredible opportunity for her, but she has to be willing to do it."

"This morning I heard Governor Palin say that we need to tighten our belts," says Ann WingQuest, The Arc of Anchorage's director of public affairs. "We're beyond tightened anymore. It frightens me when I hear her say that, because we have been so weakened and so stretched. She did say that we're not supposed to look to the government to make us healthy; the problem with our population is that their health care needs are not something that they elected. It wasn't like they were smoking and drinking and becoming obese. These are genetic or birth defects or whatever, and they need help."

Ellis is also looking to the governor to stand by what she campaigned on. "[Palin] got a lot of acclaim on the campaign trail as an advocate for kids with disabilities, not just kids with Down syndrome, but kids with disabilities. Now it's time to live up to that, and I'm hoping and inviting the governor to work with me to pare down the waiting list for DD services, to consider the bill on rate adjustment for DD providers and other community-based service providers. So this would be a real opportunity for Sarah Palin and myself and other legislators from both sides of the aisle to work together and put our money and our commitment where our mouths are. And I expect that she will, I just hope that we do enough to help those people that need the help the most."

There's still a chance that agencies such as The Arc and their advocates in the legislature might get their wishes. Governor Palin's communications director Bill McAllister says, "all of this is pending. The Department of Law is evaluating the rate re-basing issue. And the wait list is under review in the [Department of Health and Social Services] commissioner's office." ◆

Establish a Regular and Periodic Schedule of Rate Reviews for Home and Community-Based Services

The Governor's Council on Disabilities and Special Education, Alaska Mental Health Board, Advisory Board on Alcoholism and Drug Abuse and the Alaska Commission on Aging, in collaboration with the Alaska Mental Health Trust Authority, the Alaska Brain Injury Network and the Alaska Suicide Council, have identified the establishment of a regular and periodic schedule of rate reviews for home and community based services one of their four legislative priorities for 2009. Regular and periodic rate reviews, for both Medicaid and grant-funded services, are imperative to maintaining the systems of care that serve Alaska's most vulnerable populations. The provisions for this legislation are in SB 32, sponsored by Senator Ellis.

- Before last year's rate rebasing for FY09, most home and community-based services providers had been over a decade without a rate review or increase. This resulted in an erosion of the system, as frozen rates resulted in a diminishing pool of resources – reducing the quality and availability of services.

- In FY07, home and community based services were provided to nearly 57,000 people who would have otherwise been served by costly institutional or nursing home care.

- In order for the Department of Health and Social Services (DHSS) and the State of Alaska to create and maintain a 10-year fiscal plan that adequately budgets for the costs of home and community-based services, a schedule of rate reviews is necessary.

- Our system of care for Alaskans with special needs is based on a network of non-profit providers. Without adequate funding, our providers cannot continue to provide quality services. Without our providers, we have no system of care.

Overview

Home and community-based services include a wide range of Medicaid and grant-funded services for Trust beneficiaries and other vulnerable Alaskans. Mental health care, infant learning, personal care attendant services, assisted living services, senior care, substance abuse counseling, and services for Alaskans with developmental disabilities are all examples of services provided at home or in our communities. These services maintain individuals' quality of life and reduce the need for more costly institutional, emergency and nursing home care.

For more that 10 years, providers have struggled to meet the demand for services while maintaining an acceptable quality of service because there has been no structure for reviewing the rates paid for those

services. Not only does the lack of periodic reviews prevent adequate fiscal planning by providers, it prevents adequate fiscal planning by the State. By establishing a regular schedule (e.g. every 2 or 4 years), providers and DHSS can plan and allocate resources so that rate reviews create a minimal administrative burden. This is turn will permit the Legislature to engage in more effective management of our state's budget and the responsibility to care for our most vulnerable neighbors.

Our network of non-profit providers touch the lives of thousands of Alaskan families. In FY 2007, over 30,000 Alaskans received behavioral health services from non-profit providers. Provider associations report that almost 20,000 Alaskan seniors received home and community based services; 3,807 Alaskans received personal care attendant services; 2,636 Alaskans with developmental disabilities received services; 1,500 Alaskans received care through assisted living homes; and an estimated 1,400 children were enrolled in early intervention/infant learning programs.. This is nearly 60,000 Alaskans who receive care at home and in their communities, so that they do not require nursing home or other institutional care.

This is why we advocate for a schedule of home and community based rate reviews, inclusive of Medicaid and grant-funded services, to be established by statute.

Subject: Support Letter for SB 32

Dear Senator Ellis:

The Alaska Mental Health Trust Authority (The Trust) encourages support of SB 32, a bill to establish a schedule of regular and periodic rate reviews for home and community based services (HCBS) in statute sponsored by you and co-sponsored by Senator Davis. This issue is one of our Coordinated Advocacy Agenda priorities with our six advisory groups and is critical to the providers who serve our beneficiaries. Unlike hospitals and nursing homes there are no mechanisms in place that provide for regular rate review or periodic adjustments for home- and community-based providers that serve Medicaid-eligible persons. Adequate funding for HCBS is essential for maintaining the foundation of care for vulnerable Alaskans close to home.

Prior to last year's rebasing of FY09 rates for HCBS providers rates had been frozen for 10 years without a review or increase, despite cost increases and mounting demand for services which The Trust study in FY 2008 on grant funding and Medicaid funding from 2000 through 2007 documented. Investment in the foundation of HCBS is prudent to assure services meet the needs of all vulnerable Alaskan with 2006 estimates provided by Senior and Disabilities Services showing the average annual cost of a semi-private room in a nursing facility was $172,685 compared to $25,026 for Medicaid Personal Care Attendant services and $21,436 for the Medicaid waiver.

Home- and community-based services touch the lives of thousands of Alaskan families daily. In FY07, HCBS were provided to more than 59,000 Alaskans of all ages and included 30,000 recipients of behavioral health services; 2,636 Alaskans with developmental disabilities; an estimated 1,400 children enrolled in early intervention/infant learning programs; 3,807 Alaskans who received personal care attendant services; 1,500 Alaskans who received care through assisted living homes; and 20,000 older Alaskans who received senior home and community based services.

Regular rate reviews promote sound fiscal planning by the State and providers, which is essential for providing consistently high quality services and responsible state budget management.

Sincerely,

-for Melissa Culpepper

February 3, 2009

The Honorable Bettye Davis, Chair
Senate Health, Education and Social Services Committee
Alaska State Capitol, Room 30
Juneau, AK 99801-1182

Dear Chair Davis: RE: SB 32-Ellis--Support

On behalf of the members of AARP in Alaska, we encourage you and your colleagues on the Senate Health and Social Services Committee to support SB 32, authored by your Committee colleague Senator Johnny Ellis and co-sponsored by you.

SB 32 would allow annual rate reviews of all home and community based services similar to the process for hospitals. Rates for HCBS services under Medicaid have remained the same for several years, discouraging needed providers from entering the field and forcing current providers to reduce their services and cut back on clients.

As we age, many of us would prefer to stay at home or with our families but sometimes we need extra help to do so. With the growing numbers of older people who need support to live on their own, private and public organizations now offer many different options to allow us to "age in place" in our homes and communities. These options form the continuum of home and community based services, ranging from meals on wheels to adult day care. In addition to meeting our personal preferences to remain home and in our communities, HCBS services are much less expensive than institutional care.

Younger persons with disabilities are also primary users of HCBS services to allow them to continue their education, work and participate as full citizens in their communities and with their families.

We cannot expect the providers of HCBS to continue to operate on rates often set years ago. It makes sense to review HCBS rates every year just as we do with hospitals.

AARP requests an "AYE" vote on SB 32.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-752-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin
