Alaska Behavioral Health Association

alaskabehavioralhealth.net

The Honorable Senator Johnny Ellis
State Capitol
Juneau, Alaska 99801-1182

Dear Senator Ellis;

I am writing in support of SB 32 on behalf of the membership of the Alaska Behavioral Health Association. The issues of rates and the mechanism and frequency of adjusting those rates are the primary issue for our membership this year.

We support the effort to put into place rate setting mechanisms for the home and community based services and that this model will be applied to the other providers that contract with the State of Alaska to deliver services. It is difficult to manage a business that is focused on delivering health care services when the cost for reimbursement does not keep pace with inflation and cost of living. Fixed costs don't go away and agencies have been trying to meet their grant obligations while keeping the business solvent. Employers are not able to offer competitive wage and benefit packages because of insufficient reimbursement rates.

Please let me know what else our members can do to support your legislation.
Thank you.

In Health,

Steve Horn
Executive Director

The Honorable Bettye Davis
Chair – Senate Health & Social Services
State Capital, Room 30
Juneau, AK 99801

Re: Support for Senate Bill 32 – An Act relating to medical assistauce payments for home and community-based services.

Dear Senator Davis:

I want to thank you for taking the time to hold a hearing in regards to Senate Bill 32, which was sponsored by Senator Johnny Ellis. I strongly support this legislation and feel that community based service providers for the developmentally disabled should be treated as fairly and equally as hospitals and nursing homes.

As someone who has worked for one of the agencies for the past 23 years, I know first hand the effects of rate freezes. Not only are the lives of our support recipients being under minded and diminished, the negative impact on the workforce is taking its toll.

Families are not receiving the quality of services they should be due to lack of an inadequate workforce. Families are being penalized because agencies are unable to offer reasonable wages, and maintain decent benefits. In addition, the escalating cost of heating fuel, gasoline, utilities, insurance and other supplies are crippling agencies.

We need something that is fair and equitable if agencies are to survive and provide the much needed services to Alaskan who experience a disability.

Thank you for your time and I urge the committee to pass this legislation on to the next step.

Sincerely,

Kristan Jez

Assets, Inc.

Matthew J. Jones M.A., Executive Director

February 3, 2009

The Honorable Bettye Davis
Chair – Senate Health & Social Services
State Capital, Room 30
Juneau, AK 99801

Re: Support for Senate Bill 32 – An Act relating to medical assistance payments for home and community-based services.

Dear Senator Davis:

Thank you for scheduling Senate Bill 32, sponsored by Senator Johnny Ellis, for a hearing in Senate H&SS on Wednesday, February 4th. As a provider of services to individuals experiencing developmental disabilities, Assets Inc. strongly supports this legislation and greatly appreciates the added authority of your co-sponsorship.

All too frequently I have to account to families and guardians our inability to hire and keep employees qualified to work with their family member. Years of frozen rates and no manner in which to regularly review them have been very destructive to the goal of maintaining meaningful therapeutic relationships between our clients and staff.

Each year about this time I have to make the painful decisions about what part of employee benefits to reduce or eliminate. It impacts our ability to recruit and maintain employees and destroys morale. These good people aren't leaving to work for another provider, but rather are leaving the field altogether.

We are extremely grateful that Senator Ellis has introduced this much needed legislation and urge the Committee to pass it on to the next Committee of Referral.

Thank you for your consideration.

Respectfully,

Matthew J. Jones M.A.
Assets Inc.
Executive Director

February 3, 2009

Senator John Ellis
Senator Bettye Davis
via email

Dear Senator Ellis and Senator Davis,

I am writing to support SB 32, which establishes periodic rate reviews for home and community-based services. Ensuring consistent rate increases for providers enables less expensive care for the elderly and develops a workforce aimed at the medical field.

As the second largest provider of in-home care services, we are intimately familiar with the associated challenges. The cost of doing business has increased while rates have been flat. Without entrepreneurial incentive, providing direct care may rest on the more expensive option; state-managed assisted living facilities and state-managed skilled nursing facilities

Workforce development for the medical field starts with our in-home care staff. Our Personal Care Assistants (PCA's) can receive certification and provide low level care for the elderly. Many family members and college-age PCA's get their first glimpse at the medical field.

Thank you for your support of SB 32. Please contact me with any questions. My direct line is extension 104 at (907) 336-3365.

Best regards,

Brian Richardson
Chief Executive Officer

Bettye Davis

Dear Bettye Davis:

I support SB 32, establishing periodic rate reviews for home and community-based services.

Home and community-based services include a wide range of Medicaid and grant-funded services for vulnerable Alaskans.

Mental health care, infant learning, personal care attendant services, assisted living services, senior care, substance abuse counseling, and services for Alaskans with developmental disabilities are all examples of services provided at home or in our communities.

Home and community-based services maintain individuals' quality of life and reduce the need for more costly institutional, emergency and nursing home care.

Both Medicaid and grant-funded services, are imperative to maintaining the systems of care that serve Alaska's most vulnerable populations.

Before last year's rate rebasing for FY09, most home and community-based services providers had been over a decade without a rate review or increase.

In FY07, home and community based services were provided to nearly 57,000 people who would have otherwise been served by costly institutional or nursing home care.

Our system of care for Alaskans with special needs is based on a network of non-profit providers. Without adequate funding, our providers cannot continue to provide quality services. Without our providers, we have no system of care.

For more that 10 years, providers have struggled to meet the demand for services while maintaining an acceptable quality of service because there has been no structure for reviewing the rates paid for those services. Not only does the lack of periodic reviews prevent adequate fiscal planning by providers, it prevents adequate fiscal planning by the State.

By establishing a regular schedule (e.g. every 2 or 4 years), providers and DHSS can plan and allocate resources so that rate reviews create a minimal administrative burden. This is turn will permit the Legislature to engage in more effective management of our state's budget and the responsibility to care for our most vulnerable neighbors.

The Alaska network of non-profit providers touch the lives of thousands of Alaskan families. In FY 2007, over 30,000 Alaskans received behavioral health services from non-profit providers. Provider associations report that almost 20,000 Alaskan seniors received home and community based services; 3,807 Alaskans received personal care attendant services; 2,636 Alaskans with developmental disabilities received services; 1,500 Alaskans received care through assisted living homes; and an estimated 1,400 children were enrolled in early intervention/infant learning programs.

This is nearly 60,000 Alaskans who receive care at home and in their communities, so that they do not require nursing home or other institutional care.

This is why we advocate for a schedule of home and community based rate reviews, inclusive of Medicaid and grant-funded services, to be established by statute.

Sincerely,

Walter Majoros

Bettye Davis

Dear Bettye Davis:

I support reauthorizing preventive and restorative dental services for adult Medicaid recipients. Medicaid coverage for these services will sunset June 30, 2009 without legislative reauthorization. The provisions for this are in both SB 65 and SB 82.

The Department of Health and Social Services reports that approximately 7,600 adult Medicaid recipients received these dental services in FY08 with 252 participating dental providers.

The American Dental Association recommends adult preventive and restorative dental services be included in all state Medicaid programs.

Dental pain, missing and decayed teeth and infection can affect employment and job advancement, contribute to missed work, dietary choices for seniors, and complicate management of other chronic diseases.

Dental infections due to periodontal disease have been associated with pre-term births, management problems for individuals with diabetes, risks for pneumonia in nursing homes, and other chronic diseases including cardiovascular disease.

The bacteria involved with the dental decay process are typically passed parent to child. Part of the efforts to reduce dental decay in young children relates to reducing the level of dental infection in the caregiver. Additionally, parents with dental coverage are more likely to access dental services for their children.

The coverage of preventive and restorative dental care for adult Medicaid recipients along with necessary behavioral changes, over the long term, offer a reduced likelihood of using more expensive services, like the hospital emergency room for management of a dental infection.

Sincerely,

Walter Majoros

Bettye Davis

Dear Bettye Davis:

My personal story is I have a disabled daughter with a TBI, getting and keeping qualified home care-providers is very hard. Once you have them trained and they develope good skills they go to work in the hospital or pioneer home where they can get more money. Or they are offered a job whee they not only make more money but are offered health care benefits for them and their family.

It is unsafe to leave a disabled person who is unable to speak or move to care for them selves with unqualified providers. Yet I have a full time job that I use to try to provide insurance for my daughter's care so not to be a drain on the state. Many times I have had to stay home or come home early due to no providers.

It is imperative to the care of the seniors and disabled that are in their homes or assisted living facilities to compete in wages with the rest of the community. Without the assistance of the state helping with the pay for providers we would be living in proverty and she would not have the care as my health would become impacted.

I urge you to increase the rate of pay for qualified personnel in home and community based services.

Sincerely,

Patricia Chapman

Dear Bettye Davis:

I support SB 32, establishing periodic rate reviews for home and community-based services.

My personal story is ... that I have been a care coordinator with South Peninsula Hospital working to provide these services to the lower Kenai Peninsula for 10 years. I have seen the enormous value to the recipients of these services and the increased quality of life it provides to the elderly and disabled first hand, not to mention the savings to the state by preventing Long Term Care admissions. While the cost of providing these services has increased dramatically, the reimbursement has not kept pace. Please fund these programs adequately. We have an enormous wave of elderly citizens who are in need of these services heading our way. The Baby Boomers have arrived! The reality is there are not enough expensive long term care beds to service all who need this level of care.

Home and community-based services maintain individuals quality of life and reduce the need for more costly institutional, emergency and nursing home care.

Before last year s rate rebasing for FY09, most home and community-based services providers had been over a decade without a rate review or increase.

Sincerely,

Mary Fries

Bettye Davis

Dear Bettye Davis:

I support SB 32, establishing periodic rate reviews for home and community-based services.
Home and community-based services include a wide range of Medicaid and grant-funded services for vulnerable Alaskans.

My personal story is ...
I am a 2 time brain tumor survivor, That needed immediate assistance inorder to survive the brutal treatment regimes of radiation & 1 year of chemotherapy. In an adled cognitive state, I went looking for answers and found the Head Injury Support Group @ Access Alaska Inc. After 2 & a Half years of speech therapy & 2 years of volnteering w/ the group. II graduated from DVR, was retrained & hired as a peer support specialist, so I get to relive the struggles of my past, every day in advocacy efforts for the under served populations of our state.

I also work as the coordinator for the Home E-Mods grant projects @ Access Alaska, I have seen the benifits first hand, as the institutionalized are set free to be care for by people they choose.

Home and community-based services maintain individuals a quality of life and reduce the need for more costly institutional, emergency and nursing home care. Family members can be trained to provide care to a person they know and are able to communicate with.

The Alaska network of non-profit providers touch the lives of thousands of Alaskan families. In FY 2007, over 30,000 Alaskans received behavioral health services from non-profit providers. Provider associations report that almost 20,000 Alaskan seniors received home and community based services; 3,807 Alaskans received personal care attendant services; 2,636 Alaskans with developmental disabilities received services; 1,500 Alaskans received care through assisted living homes; and an estimated 1,400 children were enrolled in early intervention/infant learning programs.

Bettye Davis

Dear Bettye Davis:

I support SB 32, establishing periodic rate reviews for home and community-based services.

My personal story is ...my 28 year old son who was dual diagnosed at the age of 15. He was going in and out of jail from the time he turned 18 to the age of 25. Since the time he became eligible for home and community based services, he has only been there once. The services also has given him a sense of stability due to the structured atmospere of homes. This has made considerable improvements with his impulsive behavior. I have observed however, that the rate of pay for day hab employees may affect his behavior. He gets used to a person but the person does not stay. I have become acqainted with some of the day hab workers and they want to stay but cannot because of the minimum rate of pay. The providers spend monies to train the staff and unfortunately a good majority of them do not stay. With continued support, this could be a great opportunity for both the consumers and the providers.

Mental health care, infant learning, personal care attendant services, assisted living services, senior care, substance abuse counseling, and services for Alaskans with developmental disabilities are all examples of services provided at home or in our communities.

Home and community-based services maintain individuals quality of life and reduce the need for more costly institutional, emergency and nursing home care.

Both Medicaid and grant-funded services, are imperative to maintaining the systems of care that serve Alaskas most vulnerable populations.

Re: CS for SB 35 (SBS)

Sen. Davis is requesting a CS for SB 35 to make the attached proposed changes in Suicide Council Membership.

Attachment: Recommended changes to Statewide Suicide Council Membership

Recommended changes to Statewide Suicide Council Membership Compositions. Recommendations made by the SSPC membership at their quarterly meeting, February 4, 2009 in Juneau, AK.

Proposed changes:

1. The four (4) legislative members appointed by the Legislature would become advisory in nature and would no longer be voting members. This would reduce the difficulty obtaining a quorum at meetings.
2. Change the "two members who are employed in the executive branch of state government" (a.) to add the language: one person representing the DHSS and one person representing the DEED.
3. Change "one person who is a counselor in a secondary school to "(e.) an employee from a secondary school system such as, but not limited to, a teacher, administrator, counselor, nurse or other school personnel.
4. Change "one adult who is active in a statewide youth organization" (f.) to one person who is active in a youth organization.
5. Change "one person who is under the age of 18" (j.) to one person who is enrolled in high school.
6. Add one public member at large.

Office of Senator Bettye Davis

April 10, 2009
Senator Charlie Huggins, Chair
Senate Rules Committee

RE: Request to calendar SB 35, "An Act extending the termination date of the Statewide Suicide Prevention Council; and providing for an effective date."

Dear Senator Huggins,

Senator Davis respectfully requests that Senate Rules promptly calendar SB 35 which extends the termination date of the Statewide Suicide Prevention Council to June 30, 2013. The Statewide Suicide Prevention Council Suicide sunsets June 30, 2009, so immediate action is required if the state is to help curtail this avoidable loss of life by suicide, particularly by so many young people each year. The mission of the Statewide Suicide Prevention Council is to advise the governor and the legislature on issues relating to suicide. In collaboration with communities, faith-based organizations, and public-private entities, the Council works to improve the health and wellness of Alaskans by reducing suicide and its devastating effect on individuals, families, and communities. Over 125 Alaskans die each year by suicide, which is twice the national average per capita. Suicide is four times more prevalent among young males than females. Guns, alcohol, drugs, and unattended depression are often involved.

Attached in order are the following:

1. Sponsor Statement
2. The most recent version of the bill
3. Sectional analysis
4. Fiscal Notes
5. Additional Documentation

Sincerely,

Thomas S. Obermeyer
Legislative Administrative Assistant

Sponsor Statement

SB 35 **"An Act extending the termination date of the Statewide Suicide Prevention Council; and providing for an effective date."**

SB 35 extends the termination date of the Statewide Suicide Prevention Council to June 30, 2013. Suicide is a very serious public health concern in Alaska, particularly among young males and the Alaska native population. Extension of the Statewide Suicide Prevention Council is important in curtailing this avoidable loss of life. The mission of the Statewide Suicide Prevention Council is to advise the governor and the legislature on issues relating to suicide. In collaboration with communities, faith-based organizations, and public-private entities, the Council works to improve the health and wellness of Alaskans by reducing suicide and its effect on individuals and communities.

The Executive Summary of the July, 2005 study by the Alaska Injury Prevention Center funded by Alaska Mental Health Trust Authority "Alaska Suicide Hospitalizations, 2001-2002," reported that in 2002 32,000 people took their own lives in the United States, and 20 times that number sought treatment for self-inflicted injuries. Alaska had the highest age-adjusted suicide rate of all the states in 2002 at 21.12 per 100,000 population, which is nearly twice that of the U.S. rate of 10.99 per 100,000. An average of 125 people die from suicide each year in Alaska, making it the number one cause of death for Alaskans under the age of 50 years (if unintentional injuries are examined individually instead of in groups).

Hospitalizations for suicide per the above study make a compelling case for the prevention of suicide and new insights into this dramatic public health problem. Over $4 million in hospital costs alone is spent in public funds each year to care for suicide attempts. This did not include physicians' and specialists' costs. While the toll on society and family members by suicide may be incalculable, significant numbers were revealed:

- The average age for the patients was 30 years.
- The average length of each hospital stay was 4 days, with a range of 1 to 366.
- The average cost per case was $8,986.
- Over 75% of the hospital costs were paid through public funding sources.
- 15% of hospital costs had to be written-off for patients' inability to pay.

The unabated high rate of suicide in Alaska demands continued attention and effort and earnestly urges, if not compels, the extension of the Statewide Suicide Prevention Council. A subsequent study to the above by the Alaska Injury Prevention Center from 9/1/03-8/31/06 found 426 suicides in Alaska during this 36-month period, with the continuing rate of suicide at over 21/100,000. Males outnumbered females 4 to 1. The age-group 20-29 had both the greatest number of suicides and the highest rate per 100,000 population. Alaska Natives had a significantly higher average rate of suicide than the non-Native population (51.4/100,000 compared to 16.9/100,000). The leading cause of death was firearms with toxicology reports in 1/3 of the cases. Alcohol was found in 44% of the toxicology tests and marijuana was found in 15%.

EXECUTIVE SUMMARY

INTRODUCTION

In 2002, nearly 32,000 people took their own lives in the United States, and estimates indicate that 20 times that number sought treatment for self-inflicted injuries. Alaska had the highest age-adjusted suicide rate of all the states in 2002 at 21.12, which is nearly double the U.S. rate of 10.99 per 100,000 population. An average of 125 people die from suicide each year in Alaska, making it the number one cause of death for Alaskans under the age of 50 years (if unintentional injuries are examined individually instead of grouped). The epidemiology for suicide deaths is very different from the epidemiology for suicidal acts that result in hospitalization. This analysis looks at the epidemiology and costs associated with hospitalizations for self inflicted injuries.

RESULTS

Using data supplied by the Alaska Trauma Registry (ATR) and funding from the Alaska Mental Health Trust, the Alaska Injury Prevention Center (AIPC) conducted a thorough analysis of the 1,223 hospitalized suicide attempts in Alaska for 2001 and 2002. The epidemiology and hospital costs associated with this injury group are reported below.

A few of the interesting facts revealed by this study for Alaska's suicide attempts:

- ✓ The average age for the patients was 30 years.
- ✓ The average length of each hospital stay was 4 days, with a range of 1 to 366.
- ✓ The average hospital costs per year were $5,508,363.
- ✓ The average cost per case was $8,986.
- ✓ Over 75% of the hospital costs were paid through public funding sources.

More than $4 million in "public funds" is spent each year to care for suicide attempts, and those are just the documented hospital costs. Physician's fees and other specialist's fees are usually not included in the hospital costs. Also not included in hospital costs are self-inflicted injuries that result in death or long-term disabilities. These suicidal acts take a huge toll on individuals and families and are very difficult to quantify.

CONCLUSIONS

The *Alaska Suicide Hospitalizations* analysis makes a compelling case for the prevention of suicide, and gives new insights into this dramatic public health problem. Hospitals must accept the loss of at least 15% of the costs due to the patients' inability to pay.

Alaska Suicide Follow-back Study Final Report

Executive Summary

Goals

There were two goals for the study: (1) to do an in-depth demographic analysis of the suicides in Alaska for three years from September 1, 2003 through August 31, 2006 and (2) to conduct interviews with key informants for as many suicide cases as possible. This report is divided into two sections, Section 1 addressing the epidemiological data and Section 2 addressing the data derived from the interviews.

Purpose

The purpose of the data gathering, reporting, and analysis was to better understand the etiology and antecedents of suicide among Alaskans, in order to identify potential points of intervention and strategies to reduce the rate of suicide.

Methods

Death certificates attributed to suicides occurring in Alaska between September 1, 2003 and August 31, 2006 were reviewed retrospectively. Information from the Alaska State Medical Examiner, State Troopers, and other law enforcement agencies was collated and reviewed for each suicide death. A cadre of Native and non-Native interviewers was trained in how to use the interview protocol and how to conduct follow-back interviews with survivors of the decedents. All information was entered into a secure database. All efforts to protect confidentiality were in accordance with the Institutional Review Board requirements of the Alaska Native Medical Center, the University of Alaska – Anchorage, and the National Institutes of Health (Certificate of Confidentiality).

Results

There were 426 suicides during the 36 month study period. The average annual suicide rate for the three year study period was 21.4/100,000 (U.S. Census, 2005 estimated population). Males out-numbered females 4 to 1. The age-group of 20 to 29 had both the greatest number of suicides and the highest rate per 100,000 population. Alaska Natives had a significantly higher average rate of suicide than the non-Native population (51.4/100,000 compared to 16.9/100,000). The leading mechanism of death was firearms, accounting for 63% of the suicides. The use of handguns was more prevalent in the non-Native population whereas long guns were used more often by Alaska Natives. The EMS region with the greatest number of Native suicides was Region 4, which includes Bethel and the Yukon-Kuskokwim Delta. Region 2, which includes the Northwest Arctic census area had the highest overall rate of suicide deaths. Follow-back interviews were conducted with 71 informants for 56 of the suicide decedents. Reported alcohol/drug use was the same for Urban as for Rural Native decedents. The same alcohol/drug use pattern was seen for Urban and for Rural non-Native decedents. Toxicology results were received for 33% of all the suicide cases. Alcohol was found in 44% of the toxicology tests and THC (marijuana) was found in 15%.

Conclusion

This study adds volumes of information to our existing knowledge of suicide in Alaska. More in-depth studies are already in progress, which will continue to add to our knowledge base while bringing in additional resources for prevention and treatment. The report also highlights the need for better death data collection, to quantify alcohol and drug involvement and other contributing factors.

Our Mission

The Statewide Suicide Prevention Council advises the governor and legislature on issues relating to suicide. In collaboration with communities, faith-based organizations, and public-private entities, the Council works to improve the health and wellness of Alaskans by reducing suicide and its effect on individuals and communities.

RE: SB 35 (Davis)--Support

Dear Co-Chairs Hoffman and Stedman:

On behalf of the members of AARP in Alaska, we encourage you and your colleagues on the Senate Finance Committee to support SB 35, authored by Senator Bettye Davis and co-sponsored by Senators Johnny Ellis and Gene Therriault.

Unfortunately, Alaska has a high rate of suicide. Many of these suicides include mid-life and older Alaskans. The Statewide Suicide Prevention Council needs to continue its work and address this issue for our citizens. The Council still has much to do and, in our opinion, should be allowed to continue for another four years.

AARP requests an "AYE" vote on SB 35.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin

CS for SENATE BILL ~~123~~ 35 HB 123

Sam Trivette

- My wife and I lost our son to suicide on 6-28-07
- He worked half time as an intern at the University of Alaska/Fairbanks Police Department & won high praise
- He would have entered his Junior at UAS in the criminal justice program in the fall of 2007
- For two weeks straight after Pete's death, not ONE day went past without at least one person telling us of a suicide in their family or close friend's circle
- In a recent one year period, 7 young people took their lives in the Juneau area alone
- Young people, with the highest potential, have the highest suicide rate, with older seniors coming in a very close second
- We found out after Pete's death that he suffered from depression even while in high school
- At that time, there was no program in the school system to educate students, teachers or parents on depression and suicide issues
- Recently, the Juneau School District added a component in the high school curriculum that educates students on the basic issues regarding depression and provides them ideas to help their friends and classmates who might be experiencing depression. This program was piloted in another Alaska school district, which experienced NO suicides after its implementation
- This program has been supported by the SPC
- The SPC has implemented a number of other initiatives at various local levels [such as community task forces]
- The Suicide Prevention Council is the organization that is focused on getting out information to all our citizens, that THEY can help lower the rate of suicide. No one else is.
- Professional training, seminars, state wide and national teleconferences, are all issues the SPC has supported to help reduce the incidents of suicide.
- We believe the SPC is beginning to have an impact on depression and suicide in Alaska and urge you extend the Council for the next 4 years.

Office of Senator Bettye Davis

April 10, 2009
Senator Charlie Huggins, Chair
Senate Rules Committee

RE: Request to calendar SB 35, "An Act extending the termination date of the Statewide Suicide Prevention Council; and providing for an effective date."

Dear Senator Huggins,

Senator Davis respectfully requests that Senate Rules promptly calendar SB 35 which extends the termination date of the Statewide Suicide Prevention Council to June 30, 2013. The Statewide Suicide Prevention Council Suicide sunsets June 30, 2009, so immediate action is required if the state is to help curtail this avoidable loss of life by suicide, particularly by so many young people each year. The mission of the Statewide Suicide Prevention Council is to advise the governor and the legislature on issues relating to suicide. In collaboration with communities, faith-based organizations, and public-private entities, the Council works to improve the health and wellness of Alaskans by reducing suicide and its devastating effect on individuals, families, and communities. Over 125 Alaskans die each year by suicide, which is twice the national average per capita. Suicide is four times more prevalent among young males than females. Guns, alcohol, drugs, and unattended depression are often involved.

Attached in order are the following:

1. Sponsor Statement
2. The most recent version of the bill
3. Sectional analysis
4. Fiscal Notes
5. Additional Documentation

Sincerely,

Thomas S. Obermeyer

SB 35

here now as drafted up

DHSS Vanguard

Recommended changes to Statewide Suicide Council Membership Compositions. Recommendations made by the SSPC membership at their quarterly meeting, February 4, 2009 in Juneau, AK.

Proposed changes:

1. The four (4) legislative members appointed by the Legislature would become advisory in nature and would no longer be voting members. This would reduce the difficulty obtaining a quorum at meetings.
2. Change the "two members who are employed in the executive branch of state government" (a.) to add the language: one person representing the DHSS and one person representing the DEED.
3. Change "one person who is a counselor in a secondary school to "(e.) an employee from a secondary school system such as, but not limited to, a teacher, administrator, counselor, nurse or other school personnel.
4. Change "one adult who is active in a statewide youth organization" (f.) to one person who is active in a youth organization.
5. Change "one person who is under the age of 18" (j.) to one person who is enrolled in high school.
6. Add one public member at large.

Gary, the two folks

Subject: RE: SB 35 sponsor statement

Lynda,

It is insignificant that I added one word: "Alaska" before "native" in the first paragraph. You can ignore it or re-post the revised on the web. I added "Alaska" before "native" in the first paragraph to be more accurate, i.e., less vague, and also to show more respect to Alaska natives.

The more important issue is that Senator Davis asked for review of composition of the council by the administration and department – for possible amendment – before rehearing the bill and approving termination date. Clearly, the 4-year extension of termination date versus the more common 8 years, as explained in audit by Pat Davidson, shows there may be problems with the council as well as the bill.

Lilly Ledbetter Bill: House approves bill to fight wage discrimination

AP Photo/Ron Edmonds, FILE

Pay Equity pioneer Lily Ledbetter addresses the Democratic National Convention in Denver, Tuesday, Aug. 26, 2008 file photo. Democrats are ushering in what they believe will be a new labor-friendly era in Washington with House votes on two bills aimed at helping women fight pay discrimination in the workplace. The House was to vote on the bills Friday Jan. 9, 2009, and they could reach Barack Obama's desk soon after he enters the White House. One of the bills, the Lily Ledbetter Fair Pay Act, is a response to a 2007 Supreme Court decision that made it more difficult to sue over past pay discrimination.

Text size: small | medium | large

BY JIM ABRAMS
ASSOCIATED PRESS WRITER
Published: January 9, 2009

WASHINGTON (AP) — Energized by the prospects of a pro-labor president, House Democrats marked the first week of the new Congress Friday by pushing through two bills to help workers, particularly women, who are victims of pay discrimination.

Unlike President George W. Bush, who threatened to veto the two bills when they came up in the last session of Congress, President-elect Barack Obama has embraced them.

"Today we face a transformational moment," said Rep. Rosa DeLauro, D-Conn., chief sponsor of the Paycheck Fairness Act. "With a new Congress, a new administration, we have a chance to finally provide equal pay for equal work and make opportunity real for millions of American women."

The Lilly Ledbetter Act would reverse a 2007 Supreme Court ruling that a worker must file claims of wage discrimination within 180 days of the first decision to pay that worker less, even if the person was unaware of the pay disparity. The Paycheck Fairness Act would close loopholes that have enabled employers to evade the 1963 law requiring equal pay for equal work. The first passed 247-171, the second 256-163.

The Ledbetter bill could reach the Senate floor as early as next week. Democrats, who have increased their majority in the Senate, last year fell three votes short of shutting off a GOP-led filibuster that blocked the bill after it passed the House.

Republican opponents of the two measures argued that they would foster lawsuits against businesses and mainly benefit trial lawyers.

It sends a signal, said Rep. Howard "Buck" McKeon of California, senior Republican on the Education and Labor Committee, "that the first substantive order of business is not job creation or tax relief but rather a trial lawyer boondoggle that can put jobs and worker pensions in jeopardy."

Lilly Ledbetter was a supervisor at a Goodyear Tire & Rubber Co. plant in Gadsden, Ala. She sued the company over pay discrimination when she learned, shortly before retiring after a 19-year career there, that she earned less than any male supervisor. A jury ruled in her favor, but the Supreme Court, in a 5-4 vote, threw out her complaint, saying she had failed to sue within the 180-day deadline after a discriminatory pay decision was made.

"This ruling just doesn't make sense in the real world," Ledbetter said in a telephone news conference Thursday. "In a lot of places you could get fired for asking your co-workers how much they are making."

The House bill would clarify that each paycheck resulting from discrimination would constitute a new violation, extending the 180-day statute of limitations.

"It should not become the law of the land that if you are an employer and can hide discrimination for 180 days you can get away with it," said Rep. Robert Andrews, D-N.J.

The liberal Alliance for Justice said the Supreme Court decision already had seriously impacted worker rights: It said that since the 2007 ruling, federal and other courts had cited Ledbetter in 347 cases involving pay discrimination and other issues such as fair housing and the availability of sports programs for women.

The Paycheck Fairness Act puts gender-based discrimination on an equal footing with other forms of discrimination in seeking compensatory and punitive damages. It also puts the burden on employers to prove that any disparities in wages are job-related and not sex-based, and bars employers from retaliating against workers who discuss or disclose salary information with their co-workers.

The early foray into labor rights issues is a prelude to what could be the most controversial bill that Congress tackles in the first year of the Obama administration — legislation to take away the right of employers to demand secret-ballot elections by workers before unions could be recognized.

Business groups maintain the Employee Free Choice Act is an affront to democratic principles. Unions say companies have used secret ballots to intimidate pro-union workers and that the bill could help reverse the downward trend in union membership.

The Ledbetter bill is H.R. 11. The Paycheck Fairness Act is H.R. 12.

ALASKA STATE LEGISLATURE

LEGISLATIVE BUDGET AND AUDIT COMMITTEE

Division of Legislative Audit

P.O. Box 113300
Juneau, AK 99811-3300
(907) 465-3830
FAX (907) 465-2347
legaudit@legis.state.ak.us

November 4, 2008

Members of the Legislative Budget
and Audit Committee:

In accordance with the provisions of Title 24 and Title 44 of the Alaska Statutes (sunset legislation), the attached report is submitted for your review.

DEPARTMENT OF HEALTH AND SOCIAL SERVICES
STATEWIDE SUICIDE PREVENTION COUNCIL
SUNSET REVIEW
November 4, 2008

Audit Control Number
06-20055-08

The review was conducted as required by AS 44.66.050 and under the authority of AS 24.20.271(1). Currently, under AS 44.66.010(a)(8), the Statewide Suicide Prevention Council (council) is scheduled to terminate on June 30, 2009. We recommend the legislature extend the termination date of the council until June 30, 2013.

Four of the fifteen voting members of the council are legislators. Since the Legislative Audit Division is part of the legislative branch, our agency does not meet the independence standard required by generally accepted government auditing standards. Therefore, we are disclosing our lack of adherence to the independence auditing standard.

Except for the independence standard discussed above, the audit was conducted in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives. Fieldwork procedures utilized in the course of developing the findings and discussion presented in this report are discussed in the Objectives, Scope, and Methodology.

Pat Davidson, CPA
Legislative Auditor

Statewide Suicide Prevention Council	23

OBJECTIVES, SCOPE, AND METHODOLOGY

In accordance with Titles 24 and 44 of the Alaska Statutes, we have reviewed the activities of the Statewide Suicide Prevention Council (SSPC or council) to determine if there is a demonstrated public need for its continued existence and if it has been operating in an efficient and effective manner.

As required by AS 44.66.050(a), the legislative committee of reference shall consider this report as part of the oversight process in determining if the termination date of the council should be extended. State law currently specifies SSPC will terminate on June 30, 2009. If no action is taken by the legislature, the council will have one year from that date to conclude its administrative operations.

Objectives

The three central, interrelated objectives of our report are:

1. To determine if the termination date of the council should be extended.

2. To determine if the council is operating in the public interest.

3. To provide a current status on the recommendations made in the prior report.

Our assessment of the operations and performance of the council was based on criteria set out in AS 44.66.050(c). Criteria set out in this statute relate to the determination of a demonstrated public need for the council.

Scope and Methodology

Auditors and audit organizations are required to be independent in both fact and appearance to the entities being audited. Audit organizations are presumed to be organizationally independent per generally accepted government auditing standards under various situations. One of those situations, which is applicable to the Division of Legislative Audit, is when the,

> *. . .audit organization is in a different branch of government within the same level of government as the audited entity; for example, legislative auditors auditing an executive branch program.*

The Division of Legislative Audit does not meet the organizational independence requirements because four of the fifteen voting members of SSPC are members of the Alaska State Legislature. Readers of this report may not view the conclusions, findings, and

recommendations as impartial because of the lack of organizational independence. Nevertheless, we conducted the audit of SSPC as required by AS 24.20.271 and AS 44.66.050.

Our audit reviewed the operations and activities of the council from FY 05 through FY 08.

During the course of our examination, we reviewed and evaluated the following:

- Applicable statutes and regulations.
- Budget documents, session laws, and other legislative information related to the council's operations.
- Council meeting minutes, bi-laws, and website.
- Annual reports to the legislature and governor.
- Financial reports from the State Accounting System.
- The *Statewide Suicide Prevention Plan.*
- Alaska Injury Prevention Center's follow-back studies to the council.
- Other documents related to the council's operations and mission, as necessary.

In addition, we interviewed:

- Various SSPC members, SSPC coordinators, and staff under the Department of Health and Social Services.
- Board members, executive directors and other staff of the Alaska Mental Health Trust Authority (AMHTA), Alaska Mental Health Board (AMHB) and Advisory Board on Alcoholism and Drug Abuse (ABADA).

We also attended the following meetings:

- May 5-6, 2008 meeting of SSPC.
- June 13, 2008 meeting of representatives from SSPC, Division of Behavioral Health, Division of Senior and Disability Services, the Alaska Commission on Aging, AMHTA, ABADA, AMHB, and the Governor's Council on Disability and Special Education.
- June 17, 2008 SSPC teleconference for a working session on the revision of the Suicide Prevention Plan.

ORGANIZATION AND FUNCTION

Under AS 44.29.350, the Statewide Suicide Prevention Council (SSPC or council) is charged with advising the legislature and the governor on,

> *...actions that can and should be taken to improve health and wellness throughout the state by reducing suicide and its effect on individuals, families, and communities.*

In addition to this advisory role, the council's activities include planning, coordinating, educating, training, and providing technical support on the prevention of suicide.

The council consists of 15 members. There are two senators, two representatives, two executive branch employees, and nine public members. The senate seats and the representative seats are appointed by the president of the senate and the speaker of the house, respectively. The executive branch and public seats are appointed by the governor.

Exhibit 1

Council Members
As of September 30, 2008

Officers:
- Brenda Moore, Public, Chair
- Pat Donelson, Public, Chair-Elect
- Renee Gayhart, DHSS, Treasurer

Other Members:
- Charles Jones, Public
- Celena Powder, Public
- William Martin, Public
- Bernard Gatewood, Public
- Vacant, Public
- Vacant, Public
- Vacant, Public
- Bill Hogan, DHSS
- Johnny Ellis, Senate
- Kim Elton, Senate
- Woodie Salmon, House
- Reggie Joule, House

Alaska Statute 44.29.300 specifies the public seats be filled by,

> *...one member of the Advisory Board on Alcoholism and Drug Abuse; one member of the Alaska Mental Health Board; one person recommended by the Alaska Federation of Natives, Inc.; one person who is a counselor in a secondary school; one adult who is active in a statewide youth organization; one person who has experienced the death by suicide of a member of the person's family; one person who resides in a rural community in the state that is not connected by road or the Alaska marine highway to the main road system of the state; one person who is a member of the clergy; and one person who is under the age of 18.*

Except for the members of the House of Representatives who serve two years, council members serve staggered four-year terms.

The council is staffed by a coordinator, who, by statute, is employed by the council and directly responsible to the council. As of July 1, 2008, the coordinator is the project manager for the Prevention and Early Intervention section. The coordinator is employed for the council on a part-time basis and is assisted by a project coordinator from the same division.

The council receives administrative assistance from the Department of Health and Social Services.

REPORT CONCLUSIONS

Under AS 44.66.010(a)(8), the Statewide Suicide Prevention Council (SSPC or council) will terminate on June 30, 2009. If the legislature does not take action to extend the termination date, the council will have one year to administratively conclude its affairs.

Alaska Statute 44.29.350 defines the purpose of the council.

> *The council shall serve in an advisory capacity to the legislature and the governor with respect to what actions can and should be taken to...*

The statute continues, listing the six areas where the council should advise the legislature and the governor. In addition to advising the legislature through testimony to the House and Senate Committees, the council has taken on a direct role in various areas. These areas include broadening the public awareness of suicide and the related risk factors, the development of a statewide suicide prevention plan, and other examples which are discussed in more detail in the Analysis of Public Need section of this report.

Suicide remains a major public health problem in Alaska. Over the last seven years, the crude rate[1] for suicide has ranged from over 16 to 23, while the national average crude rate for suicide was 11 in 2005[2].

Exhibit 2

Suicides of Alaska Residents By Year*

	Year of Death						
	2001	**2002**	**2003**	**2004**	**2005**	**2006**	**2007**
Deaths	103	131	123	154	127	132	146
Crude Rate	16.3	20.5	19	23.4	19.1	19.7	21.6

*2006 and 2007 data is still provisional and subject to change.

Source: Alaska Bureau of Vital Statistics

In addition to the rate of suicide being significantly higher than the national average, the profile of those committing suicide is also substantially different. In national statistics, elderly individuals are more likely to commit suicide; in Alaska, suicide is most commonly committed by individuals in their 20s. Suicide rates in Alaska are also disproportionately high in the native population.

---

[1] Crude rate is the number of suicides per 100,000 population.

[2] USA Suicide: 2005 Official Final Data, from American Association of Suicidology on its website, http://www.suicidology.org.

In developing our conclusion on whether SSPC's termination date should be extended, we evaluated SSPC's operations using the 11 factors set out in AS 44.66.050(c) to determine if the council has demonstrated a public need for its continued operation.

We found no direct correlation between the activities of the council and the change in the suicide rate for any particular year. However, given that the council's role is primarily advisory and suicide is a public health concern that is often linked with mental illness and substance abuse, both which are long term health issues, it is unlikely that a direct identifiable correlation will ever be clearly visible.

However, through the efforts of the council we have seen a broader and more public acknowledgement of the problem of suicide in Alaska. We saw the council responding to communities by working to revise the statewide suicide prevention plan, making it less clinical and more user-friendly. The council and the Department of Health and Social Services, Division of Behavioral Health (DHSS, DBH) have proposed an initiative to develop a cross-disciplinary, community-driven, and research-based approach to reducing the number of deaths by suicide in Alaska. A Suicide Prevention Strategy and Implementation Plan will be available to the legislature by December 15, 2008.

Overall, we found that the council is operating in the public interest and spearheading efforts that are necessary to address the public health concern of suicide. Therefore, we recommend the legislature extend the termination date of the council to June 30, 2013.

The four year extension is recommended because of the following issues:

- At the end of FY 08, the council was organizationally aligned with the Prevention and Early Intervention section, Division of Behavioral Health. A key to enhancing the effectiveness of the council is a good working relationship between the council and DBH, each focused on its own mission – coordinating but not duplicating. A limited extension will allow for a reevaluation of whether the closer alignment with DBH has impeded the independent voice of the council.

- Secondly, the membership requirements for appointment to the council make it difficult to fill all the seats and to ensure sufficient participation to meet quorum requirements. Again, a limited extension will allow a timely reexamination of this problem.

These issues are more fully discussed in the Findings and Recommendations section of this report.

FINDINGS AND RECOMMENDATIONS

Recommendation No. 1

The Statewide Suicide Prevention Council (SSPC or council) should, in accordance with statutes, appoint its own coordinator and perform annual performance reviews.

Effective July 1, 2008, the Department of Health and Social Services (DHSS) assigned SSPC coordinator responsibilities to the Prevention and Early Intervention section[3] manager in the Division of Behavioral Health (DBH). This SSPC coordinator appointment was not made in accordance with the statutes and appears to diminish SSPC's autonomy and independent voice with the governor and legislature. Also, the coordinator may be placed in a position with potentially conflicting responsibilities between the council and DBH.

DHSS' decision was based on department personnel resource needs and a desire to align the activities of the council and the section.

The hiring, supervision, and evaluation of the SSPC coordinator are part of the council's rights and responsibilities per the statutes.[4] DHSS has traditionally assisted the council with the coordinator's selection. However, SSPC was not involved in the latest selection. Also, the council has not annually evaluated the coordinator's performance for at least the past four years. Neglecting these statutory requirements may have diminished the council's ability to maintain an independence voice.

We recommend the council either accept the current coordinator through a formal vote or initiate actions to hire a new coordinator. In addition, it is critical that the council conduct annual performance evaluations as required by statute, particularly if the coordinator is a DBH employee. Only through the council's interest in remaining autonomous can its independent voice be assured.

Recommendation No. 2

The legislature should consider modifying the composition of council membership.

During FY 05 – FY 08, there were excessive vacancies on the council and significant absences by council members at its meetings. Additionally, those being appointed to the

[3] Prevention and Early Intervention is the section responsible for DHSS programs that address suicide prevention.
[4] Alaska Statute 44.29.330(b) states,

> *The council may employ a coordinator to assist the council. The coordinator is in the partially exempt service. The coordinator shall be directly responsible to the council in the performance of the coordinator's duties. The council shall annually review the performance of the coordinator.*

council did not always meet the statutory qualifications for the position. Exhibit 3 illustrates the extent of vacancies and absences over the last four years.

Exhibit 3

Statutory Qualifications	Do incumbents meet the qualifications	Rate of attendance at SSPC meeting FY 05 – FY 08
Four legislator seats: Senate majority member Senate minority member House majority member House minority member	 Yes No No Yes	Overall 15%
Two persons employed by the executive branch of state government	Yes	Overall 73%
A member of the Advisory Board on Alcoholism and Drug Abuse	Yes	60%
A member of the Alaska Mental Health Board	Yes	100%
A person recommended by the Alaska Federation of Natives, Inc.	Yes	100%
A person who is a secondary school counselor	No[5]	80%
A person who is an adult and active in statewide youth organizations	Yes	73%
A person whose family has experienced death by suicide	Vacant[6]	33%
A person who lives in a rural community – not connected by either the road system or the marine highway	Vacant[7]	0%
A member of the clergy	Yes	93%
A person under the age of 18	Yes	33%
Overall Average[8]		**54%**

The composition of the council's membership is established in AS 44.29.300 and includes very specific qualifications which have created difficulties in filling the positions. Vacancies combined with low attendance rates make it difficult for the council to establish a quorum at its meetings.

The legislature should consider changes to AS 44.29.300 to broaden the qualifications of council members to ensure that appointees are interested in the work of the council and can

[5] The current incumbent is a secondary school principal.
[6] This position has been vacant since November 2005.
[7] This position has been vacant for more than 3 of the 4 years between FY 05 and FY 08.
[8] This average includes one member appointed to the council that does not meet any of the statutory criteria. This member's attendance over the last 4 years has been at 87%.

make the time commitment necessary to serve. Additionally, consideration should be given to making legislative members non-voting to prevent potential quorum issues.

Current Status of Prior Audit Recommendations

Prior Recommendation No. 1

The Division of Behavioral Health Community-based Suicide Prevention Program coordinator should ensure prevention programs conform to the statewide suicide prevention plan.

Current Status

This recommendation is no longer an issue. Starting in FY 06, the State has followed a national trend to provide grants on a more comprehensive programmatic basis. Grant funds are awarded in a way that allows communities to focus the funds according to local priorities, rather than awarding separate grants for mental health, substance abuse, or suicide programs.

Additionally, the council has undertaken a rewrite of the statewide suicide prevention plan to make it more user-friendly, so Alaskan communities can better use the plan in developing their grant activities and community plans.

Prior Recommendation No. 2

The administrative manager for Department of Health and Social Services Boards and Commission and the Statewide Suicide Prevention Council coordinator should develop a more formalized information system of reporting financial information to the council.

Current Status

This recommendation has been resolved. Council members are receiving budget and financial reports as part of their meeting packets.

Prior Recommendation No. 3

The council should ensure it provides public notice of all council meetings as required by Alaska Statute 44.62.310.

Current Status

This recommendation has been resolved.

Prior Recommendation No. 4

The Office of the Governor should make appointments to the council in a timely manner.

Current Status

Appointments to the council continue to be a problem. See current Recommendation No. 2.

(Intentionally left blank)

ANALYSIS OF PUBLIC NEED

The following analysis of commission activities relates to the public need factors defined in the sunset law, AS 44.66.050. This analysis was not intended to be comprehensive, but to address those areas we were able to cover within the scope of our review.

Determine the extent to which the board, commission, or program has operated in the public interest.

To assess whether the Statewide Suicide Prevention Council (SSPC or council) has operated in the public interest, we measured the council's activities against objectives set out by the legislature for SSPC in state law, at AS 44.29.350.[9] From our review of council activities, we conclude SSPC has reasonably addressed its statutory objectives.

The council, as an advisory body, has made presentations to the House and Senate Committees on Health, Education and Social Services. Additionally, they provide the legislature and the governor with the council's annual report.

The council also actively participates in the six areas in which they are intended to advise the legislature and the governor. The following discussion describes the council's areas of active participation:

1. Actions to be taken to improve health and wellness by reducing suicide.

   During FY 08, the council, in partnership with Department of Health and Social Services, Division of Behavioral Health (DHSS, DBH), proposed the Alaska Suicide Prevention Initiative to the governor and the legislature. The initiative proposed developing a cross-disciplinary, community-driven and research-based approach to reduce the number of deaths by suicide in Alaska. The initiative addressed potential activities from FY 09 through FY 13. The FY 09 budget included an increment dedicated to the development of the Suicide Prevention Strategy and Implementation Plan, which is to be completed by December 15, 2008.

---

[9] Alaska Statute 44.29.350 states,

> *The council shall serve in an advisory capacity to the legislature and the governor with respect to what actions can and should be taken to (1) improve health and wellness throughout the state by reducing suicide and its effects on individuals, families, and communities; (2) broaden the public's awareness of suicide and the risk factors related to suicide; (3) enhance suicide prevention services and programs throughout the state; (4) develop healthy communities through comprehensive, collaborative, community-based and faith-based approaches; (5) develop and implement a statewide suicide prevention plan; and (6) strengthen existing and build new partnerships between public and private entities that will advance suicide prevention efforts in the state.*

2. Increasing public awareness of suicide and the related risk factors.

The council has become increasingly diligent in this area. The council continues to maintain a website[10] that provides suicide statistics, risk factors, and prevention. Additionally, the website provides links to resources such as the council's annual reports and statewide suicide prevention plan.

The council participated in many conferences and workshops during FY 05 through FY 08, making presentations or providing information displays. The council also purchased and distributed items such as pens, pencils, magnets, and posters to those needing support for suicide prevention related functions.

In 2006 the council initiated the "Live Your Dream" bracelet campaign which targets the State's youth population. This has been viewed as particularly popular and successful in spreading suicide awareness.

The council has contributed to the "YOU KNOW ME" media campaign which focuses on suicide prevention awareness. The Alaska Mental Health Trust Authority (AMHTA) has sponsored the council in this endeavor since 2005.

3. Enhance suicide prevention services and programs throughout the State.

Overall, the council enhances suicide prevention services and programs by directly providing information or providing direction to other knowledgeable sources. Throughout the year, the council receives two to three requests per week for information or technical assistance. Their web site generates questions from the public and other organizations who then request informational materials from the council. As appropriate, they also provide studies, DVDs, books, and other materials on suicide and suicide prevention.

Other examples of SSPC's enhancement of suicide prevention services include:

- Involvement in the certification of Careline[11] and DBH's targeted gatekeeper training.[12]

- Having the Careline phone number placed in phone books across the State.

[10] http://health.hss.state.ak.us/suicideprevention/default.htm
[11] Careline is Alaska's statewide toll-free crisis intervention and assistance hotline.
[12] DBH has contracted for the development of a training curriculum specific to Alaska. Gatekeepers are individuals who have face-to-face contact with large numbers of people in their community. The council's role in the initiative is to review the developed curriculum and provide feedback.

- Sponsoring travel for communities that needed assistance to attend gatekeeper training.

- Providing funds which allowed the Careline project manager, the Boys & Girls Club representative, and the Survivor Group representative to attend the American Association of Suicidology Conference in 2006.

4. Develop healthy communities though comprehensive, collaborative, community-based and faith-based approaches.

   The council has maintained faith-based partnerships through some SSPC members' participation in faith-based organizations. Other community approaches have included:

   - Sponsoring an Alaska State Council on the Arts workshop in Bethel to orient artists and arts organizations to programs, resources, and grant opportunities.

   - Providing a liaison to assist grassroots community members as they researched and established a nonprofit organization whose mission is suicide prevention, awareness, and support of the survivors.

   - Providing technical support to community programs providing suicide prevention services via research, best practices updates, referral resources, training, and conference opportunities.

   - Recommending the Boys & Girls Clubs' staff development director receive training and certification as a gatekeeper[13] trainer.

5. Develop and implement a statewide suicide prevention plan.

   SSPC completed its first statewide plan in 2004, and it followed the format of the National Strategy for Suicide Prevention and existing plans from other states. However, communities did not find the plan user-friendly in providing guidance in aligning their grant activities and community plans with the statewide plan. The council is now revising the statewide plan to make it more relevant to the granting process for the Comprehensive Behavioral Health Prevention and Early Intervention Services grants.

6. Collaborating on planning activities with other related agencies.

   In 2005 SSPC established a memorandum of agreement (MOA) with the Advisory Board on Alcoholism and Drug Abuse (ABADA), the Alaska Mental Health Board (AMHB), and DHSS. In 2006 an MOA was established with AMHTA. The purpose of the MOAs is coordination and collaboration to achieve the best outcomes for their targeted

[13] See footnote 12 for more information about gatekeepers.

beneficiaries. Their websites are interlinked and these entities participate in reciprocal reporting.

Other boards that SSPC collaborates with include Alaska Commission on Aging, Alaska Brain Injury Network, Governor's Council on Disabilities and Special Education, Faith-Based and Community Initiatives, and Division of Behavioral Health. While there is reciprocal reporting between these boards, MOAs have not yet been established.

Determine the extent to which the operation of the board, commission, or agency program has been impeded or enhanced by existing statutes, procedures, and practices that it has adopted, and any other matter, including budgetary, resource, and personnel matters.

SSPC has not operated in strict compliance with the statutes in regards to the composition of the council and some personnel matters. Specifically:

1. SSPC was not involved in hiring its latest coordinator, a position directly responsible to the council; nor has the council reviewed the coordinator's performance for any of the past four years. These are requirements stated in AS 44.29.330. At least in appearance, these moves could impede the council's independence and autonomy when advising the legislature and the governor. (See Recommendation No. 1)

2. Some council members either do not meet the positions' requirements as presented in the statutes or have excessive absences from the board meetings and other SSPC activities. (See Recommendation No. 2)

Exhibit 4

Schedule of Operating Expenditure and Funding Sources
(Unaudited)

	FY 05	FY 06	FY 07	FY 08
Expenditures				
Personal Services	$ 18,300	$ 26,028	$ 22,307	$ 35,915
Travel	23,847	32,636	41,155	51,072
Services	33,335	37,515	19,821	18,205
Commodities	14,383	6,336	8,461	2,142
Total Operating Expenditures	$ 89,865	$ 102,515	$ 91,744	$ 107,334
Funding Sources				
General Fund Appropriations	$ 89,865	$ 102,515	$ 91,744	$ 107,334
Total Funding	$ 89,865	$ 102,515	$ 91,744	$ 107,334

Determine the extent to which the board, commission, or agency has recommended statutory changes that are generally of benefit to the public interest.

The council has not pursued any statutory changes.

Determine the extent to which the board, commission, or agency has encouraged interested persons to report to it concerning the effect of its regulations and decisions on the effectiveness of service, economy of service, and availability of service that it has provided.

The council provided public notices to all but one of their meetings. However, public comment periods occurred during all of the meetings. The council has conscientiously made efforts to conduct at least one of their four meetings in a remote location such as Bethel, Kotzebue, and Sitka. They have held three town hall meetings, usually following one of their regularly scheduled meetings. Additionally, the public has the opportunity to contact the council, through its website, to offer feedback and request information.

Determine the extent to which the board, commission, or agency has encouraged public participation in the making of its regulations and decisions.

Under AS 44.29.350, the council has developed and implemented a statewide suicide prevention plan. The existing plan is currently under major revision to increase its usability. The council has requested input from participants outside the council such as the grantees, gatekeepers,[14] and members of other boards. Once the plan has been approved by the council, it will be sent out for public testimony. Further revisions, as a result of public testimony, may be made before its release.

Determine the efficiency with which public inquiries or complaints regarding the activities of the board, commission, or agency filed with it, with the department to which a board or commission is administratively assigned, or with the office of victims' rights or the office of the ombudsman have been processed and resolved.

Neither the Office of the Ombudsman nor the Office of Victim's Rights reported any complaints filed with them regarding SSPC.

Determine the extent to which a board or commission that regulates entry into an occupation or profession has presented qualified applicants to serve the public.

This criterion is not applicable since SSPC does not regulate any occupations or professions.

Determine the extent to which state personnel practices, including affirmative action requirements, have been complied with by the board, commission, or agency to its own activities and the area of activity or interest.

Nothing in our review of the council indicated that there were any complaints involving SSPC personnel practices.

[14] See footnote 12 for more information about gatekeepers.

Determine the extent to which statutory, regulatory, budgeting, or other changes are necessary to enable the agency, board, or commission to better serve the interests of the public and to comply with the factors enumerated in this subsection.

As discussed in Report Conclusions, we recommend the council be continued. However, in Recommendation No. 1, we also suggest that the appointment of the council's coordinator be approved by the council and annual performance reviews of the coordinator's performance should be conducted as set out in statute. This is important for SSPC to maintain its autonomy in the future for advising the legislature and governor. Due to personnel resource concerns and the desire for closer alignment between the council and DBH, DHSS has organizationally moved the administration of the council to DBH, specifically the Prevention and Early Intervention section. It is essential that DHSS and the council develop means to assure the council maintains an independent voice.

As discussed in Recommendation No. 2, the council should ensure that appointed members meet the qualifications of AS 44.29.300. We suggest the legislature consider broadening the qualifications for membership to ensure sufficient qualified and interested individuals are available and willing to serve on the council.

Determine the extent to which the board, commission, or agency has effectively attained its objectives and purposes and the efficiency with which the board, commission, or agency has operated.

The council established performance measures which are detailed in the annual reports to the legislature. For the FY 08 annual report, the measures were:

- Reduction of the three-year average rate of Alaska suicides.

  SSPC has been unable to achieve this objective at this time. During FY 08, the council has partnered with DHSS, DBH in an initiative, attempting to accomplish this by FY 13.

- Review and update the statewide suicide prevention plan.

  SSPC members are currently reviewing the plan with the objective of making it more relevant to the granting process for the Comprehensive Behavioral Health Prevention and Early Intervention Services grants.

- Consistently review data to identify trends, make analyses, and provide recommendations regarding suicide prevention, education and services needed in the State.

  The Follow-Back Study, which presented Alaska suicide data and analysis for the period from September 1, 2003 through August 31, 2006, was received by SSPC in February 2007. The council has and continues to use this study to make recommendations to the legislature, executive branch agencies, and the public.

- Support and assist Alaskans in starting a state Suicide Prevention Awareness Network (Network).

  The council supported the Alaska Suicide Prevention Action Coalition (ASPAC) in its research into becoming a Network affiliate. Although the Coalition decided to incorporate and maintain its autonomy, its goals are similar to the Network and further the goals of the council.

- Increase the number of communities that can recognize the warning signs of suicide through increasing the number of community-based suicide prevention grantees who align their community funding with the statewide suicide prevention plan.

  The Prevention and Early Intervention section gave comprehensive prevention grants to communities for the FY 06 - FY 08 three-year grant cycle. A comprehensive prevention grant can be used to address any alcohol, drug, mental health, or suicide related issue. Since none of the grants during this grant cycle were specifically for suicide prevention, no tracking was done to determine whether grantees aligned their funding with the statewide plan. As comprehensive prevention grants continue to be made by DBH, the council should revise this performance measure.

Determine the extent to which the board, commission, or agency duplicates the activities of another governmental agency or the private sector.

The Statewide Suicide Prevention Council mission overlaps with other state entities such as the Alaska Mental Health Board, the Advisory Board on Alcoholism and Drug Abuse, and the Alaska Mental Health Trust Authority. However, the council was established to bring attention and focus, specifically, to the suicide issue in Alaska, so overlapping missions are to be expected.

While the council actively collaborates with various other boards and commissions with related missions, there does not appear to be any duplication of activities between the council and these other governmental agencies or in the private sector.

LEGISLATIVE AUDIT

Pat Davidson
Legislative Auditor
Alaska State Legislature, Division of Legislative Audit
PO Box 113300
Juneau, AK 99811-3300

Dear Ms. Davidson:

Thank you for this opportunity to provide a written response to the *Preliminary Audit Report on the Statewide Suicide Prevention Council, Sunset Review, November 4, 2008.* I have reviewed the report and offer the following comments.

First, we appreciate your staff's careful attention to detail and the thorough nature of the audit process, including the many interviews and opportunities for individuals to be heard and to voice their opinions. Suicide is a critical social issue for the State of Alaska and the Statewide Suicide prevention Council (SSPC) has a significant responsibility to find strategies and solutions to begin reducing the rate of suicide throughout our state.

As stated in the audit report, the SSPC has recently undergone a significant change in location within the department and in their staff coordination. Beginning July 1, 2008, the SSPC is now under the direction of the Division of Behavioral Health, section of Prevention & Early Intervention Services. The reason for this change of location was to allow for better coordination of statewide suicide prevention efforts between the SSPC and Behavioral Health and to promote a more seamless and coordinated approach to suicide prevention in Alaska. While this transition is complete, the SSPC members and Behavioral Health staff are continuing to define and develop their relationship and structure. We are confident this change will accomplish its intended purpose and provide for better statewide alignment in issues related to suicide prevention.

The Department of Health and Social Services (DHSS) supports and agrees with the audit findings and recommendations. We are pleased with the recommendation to extend the SSPC for four more years, with a new sunset date of June 30, 2013. We believe the DHSS and the SSPC are at a critical juncture to make significant progress in reducing and preventing suicide in Alaska. DHSS, in partnership with the council and others, recently received a 3-year federal Garrett Lee Smith Youth Suicide Prevention grant to focus on developing regional strategies to 'turn the corner' on suicide data. In addition, with one-time funding from the FY08 Legislature, we are offering regional suicide prevention planning grants focusing on those regions of Alaska with the highest rates of suicide. It is our intent that these planning grants will become the foundation of the Statewide Suicide Prevention Initiative, a joint effort of the DHSS and the Council. The four (4) year extension will allow these projects to become embedded in our statewide strategy and to develop sustainability of community/regional efforts.

In response to the other two recommendations, again we are in agreement with the findings and recommendation, with the following comments and suggestions.

Recommendation No. 1:

The Statewide Suicide Prevention Council should, in accordance with statues, appoint its own coordinator and perform annual performance reviews.
With the change in location of the SSPC to the Division of Behavioral Health, and the departure of Kathryn Craft as Coordinator, interim decisions were made with minimal input from the council. One decision was to have two current Behavioral Health staff share the role of providing support to the council. L. Diane Casto, Section Manager and James Gallanos, Project Coordinator, are currently sharing the task of providing staff support to the council. It was never the intent that these two staff would be the Council Coordinator, but would be available to provide support and guidance as requested from Council Chairperson Brenda Moore.

Due to limited funding, there are not enough funds for a full-time coordinator, and in fact, Ms. Craft provided approximately .25 FTE services to the council. At the most recent SSPC meeting in September, and again during a November telephonic executive work session of the council , it was decided that the personnel money available in the SSPC budget will be used to hire a . 50 FTE Project Assistant, hired by the council, to provide day-to-day support. We are beginning the process to reclass the current Position Control Number (PCN) previously assigned to Ms. Craft. Once completed, we will begin the solicitation and hiring process, with input and direction from the council. The position will be located in the Juneau offices of the Division of Behavioral Health.

We also support the audit recommendation for the council to conduct annual evaluations of the council staff person and will provide assistance as requested.

Recommendation No. 2:

The legislature should consider modifying the composition of council membership.

As stated in the audit, there have been "excessive vacancies on the council and significant absences by council members at its meetings. "In addition, it is noted that "those being appointed to the council did not always meet the statutory qualifications for the position." We agree with both of these conclusions and support the recommendation to consider modifying the composition of the council membership.

In July, when the SSPC came into the Division of Behavioral Health, section of Prevention & Early Intervention Services, Ms. Casto began a dialogue with the Director of Boards and Commissions about the current vacancies and how best to recruit and/or encourage applications to fill these positions. Through this process, it became evident that the current membership did not directly meet the statutory qualifications for council membership. Discussions with the office of Boards and Commissions continue with DBH staff to make sure vacant positions are

filled in a timely manner and that applicants meet the statutory requirements. The office of Boards and Commissions is currently reviewing a number of applications for SSPC membership.

In addition, at the September meeting of the SSPC, there was a discussion about these current qualifications or categories of representation, and the council agrees that some modifying of the council composition would be beneficial. Providing more flexibility and broader definitions (i.e. expanding a secondary school counselor to a school counselor or K-12 school personnel) would allow for a larger pool of potential candidates.

Another area that has concerned the council is the large number of legislators required as council members. While the council is not concerned with having legislative representation and in fact supports their membership, it is difficult for legislators to be available for meetings, creating difficulty having a quorum for conducting council business. As reported in the audit, legislative members have attended meeting 15% of the time over the last 4 years.

With the challenges the current statutory qualifications have created, the DHSS supports the recommendation to modify the membership and, upon request, will work with the council to develop broader and more flexible categories of representation for possible legislative action.

I want to thank you for the opportunity to review and respond to the preliminary audit report. We support the work of the Legislative Audit team, and believe your recommendations will strengthen the Statewide Suicide Prevention Council, the collaboration with Behavioral Health, and the council outcomes.

Please do not hesitate to contact me if you have questions or would like additional information.

Sincerely,

William H. Hogan

William H. Hogan

Division of Legislative Audit

RECEIVED
NOV 30 2008
LEGISLATIVE AUDIT

From: Statewide Suicide Prevention Council
Brenda Moore, Chair

Re: Department of Health and Social Services
Statewide Suicide Prevention Council, Sunset Review, November 4, 2008

November 28, 2008

Recommendation No. 1

The Statewide Suicide Prevention Council (SSPC or council) should, in accordance with statutes appoint its own coordinator and perform annual performance reviews.

During an executive session, Nov. 24, 2008, the council discussed hiring a part-time coordinator to work in conjunction with the Division of Behavioral Health, Office of Prevention and Early Intervention manager and prevention specialist that currently provides administrative support to the council. There was consensus among council members that it could develop its own goals and implementation plans with input and assistance from its current administrative support staff. A coordinator is needed to organize and carry out operational activities necessary to support the council in achieving its goals. The council determined to form a committee to review the budget and job classification in order to hire a coordinator. A performance review schedule and procedure will also be established.

Recommendation No. 2

The legislature should consider modifying the composition of council membership.

The council is in agreement with the recommendation to broaden the qualifications of council members to ensure that appointees are interested in the work of the council and can make the time commitment necessary to serve. In addition the council agrees to the recommendation that consideration should be made to making legislative members non-voting to prevent potential quorum issues.

ANALYSIS: *(Attach a separate page if necessary)*

This legislation acts to remove references, definitions, and confidentiality of information provisions relating to managed care entities, and substitute health care insurers in the former role of managed care entities. It also amends the definitions of 'covered person,' 'managed care plan,' and 'utilization review,' as those terms relate to the administration of managed care insurance plans. The bill authorizes persons to act as pharmacy benefits managers subject to oversight by the division of insurance and amends the definition of 'health care insurer' as it relates to health care insurance.

Attached to this fiscal note is a letter from Buck Consultants upon which the estimates within this note are based. It is difficult to estimate the costs of the proposed changes in this bill because there is no experience with this arrangement in Alaska. The studies used to create these estimates are cited in the attached letter from Buck Consultants. Increased drug claim spend may exceed $77 million from FY10 through FY15. The increased drug claim spend would be paid through increased personal services costs in all State agencies and SB 125 payments to the retirement health trusts in FY11.

RE: Fiscal Note for SB 38 – PBM Portion

Dear Kathy:

As requested, we are providing you the information for a Fiscal Note on SB 38 regarding the pharmacy benefit manager (PBM) contracting portion of the bill. This bill defines allowable contract provisions to be overseen by the Division of Insurance. The following table includes brief comments on various sections of the bill and indicates if any cost estimate for each item is included below or instead if there is not yet a reasonable estimate of potential costs for such item:

Section Number	Description	Fiscal Impact
21.07.100(a)	Subjects PBM contracts to DOI oversight.	Potential cost increase to DRB attributable to assimilation of contract provisions not determined by the DRB (as with remainder of DRB contracting). Cost not estimated.
21.07.100(b)	Specified list of services PBMs are allowed to provide.	Potential cost increase to DRB as new cost-saving services are developed but excluded from allowed services, or through delay of inclusion of such cost-saving services. Specialty pharmacy services may already be in this category. Cost not estimated.
21.07.100(c)	Prohibited PBM contract provisions.	Potential cost increase to DRB to the extent current or newly developed cost-saving contract provisions are developed. Cost not estimated.

Tabor Center, 1200 17th Street, Suite 1200 • Denver, CO 80202
720.359.7700 • 720.359.7701 (fax)

21.07.100(d)	Requirement that uniform patient out-of-pocket features apply to prescriptions filled by contracted retail and mail-order pharmacies.	Cost increase to DRB through removal of patient incentives to use mail-order services; cost estimate included below. Potential cost increase to DRB to the extent all prescriptions under a given plan are required to have the same out-of-pocket feature(s). For example, if a plan uses a fixed-dollar copay approach and this copay may not be varied by formulary, brand, generic or specialty pharmacy category, the DRB will experience significant cost increases; cost for this potential impact not estimated.
21.07.100(e)	PBM fiduciary requirement.	Potential cost increase to DRB if PBMs charge a fee for fiduciary liability and/or additional administrative services attributable to this provision. Cost estimate included in general TPA admin cost increase estimate.
21.07.105	Prohibited practices.	Potential cost increase to DRB to the extent practices listed interfere with or inhibit application of disease management programs. Cost not estimated.
21.07.115	Basis of PBM reimbursement to contracted pharmacies.	Cost increase to DRB to the extent allowable bases for reimbursement lag industry developments. This is likely already the case for First DataBank and Facts and Comparisons databases as products of both firms are part of pending class action settlements regarding overpricing. Cost increases to DRB will be significant to the extent allowable reimbursements exceed any ingredient-cost based contracting the DRB may be otherwise able to develop in the future. Cost not estimated.
21.07.125	Requirements regarding PBM payments to and audits of pharmacies.	Potential cost increase to DRB to the extent additional compliance costs are passed through and to the extent that costs currently recoverable through prohibited retroactive adjustments and audits are forgone in future. Cost estimate included in general TPA admin cost increase estimate.
21.07.130 – 140	Drug substitution, complaint process and pharmacy compensation	Potential cost increase to DRB to the extent additional compliance costs are passed through. Cost estimate included in general TPA admin cost increase estimate.
21.07.145	Required pricing disclosures	Potential "loss of competition" cost increase to DRB to the extent PBMs anticipate disclosure of proprietary data (despite confidentiality provisions) and decide not to do business in Alaska. Cost not estimated.

The table below shows the cost of the bill for Fiscal Years 2010 through 2015. Dollars are in thousands.

AlaskaCare	FY10	FY11	FY12	FY13	FY14	FY15
Increase in third-party administrative cost	$60	$65	$70	$76	$82	$89
Increase in prescription claims cost	$10,759	$11,657	$12,485	$13,221	$14,000	$14,823
Total	$10,819	$11,722	$12,555	$13,297	$14,082	$14,912

Summary for Analysis Continuation Section of Fiscal Note

Cost estimates are based on AlaskaCare claims information used for setting 2009 (retiree) and FY2010 (active) premiums, health care cost trend assumptions used for the June 30, 2008 retiree health care valuations, and the following research:

- 2004 Rhode Island press release referencing "data from studies in the impact of any willing provider laws in other states point to a related increase in health insurance premiums." http://www.rilin.state.ri.us/News/pr1.asp?prid=1050
- 2003 Academy of Managed Care Pharmacy posting indicating that any willing pharmacy laws "*result in increased costs to the health care system" through loss of* "economies of scale, "*laws that do not require the pharmacy to meet the terms and conditions of the health plan's contract undermine managed care's ability to control the quality of clinical services provided," and that* "the Federal Trade Commission has held that any willing provider laws discourage competition in the health care marketplace for both pharmaceutical services and managed care programs, restricting consumer access to affordable health care." http://www.amcp.org/amcp.ark?p=AA21D611
- 2002 Journal of Health Politics, Policy and Law study *Any-Willing-Provider Laws: Their Financial Effects on HMOs* that indicates "Our results show that 'all-provider' AWP (any willing provider) laws have a very limited effect on the financial performance measures we examine. 'Pharmacy' AWP laws have a more significant effect." This study indicates that HMO administrative costs are 5.6% higher in states with any willing pharmacy laws (result is significant at the 5% level). http://www.oregonmentalhealth.info/Any-Willing-Provider%20Laws%20Carrol.pdf
- 2001 Ohio fiscal note indicating "potential negligible (cost) increase" for any willing pharmacy legislation that did NOT impact any PBM contracting provisions (i.e., some costs will increase even if PBMs continue to contract per usual but open such contracts to any pharmacy willing to accept terms) http://www.lbo.state.oh.us/fiscal/fiscalnotes/124ga/HB0053IN.HTM

We estimate a 0.5% increase in TPA fees. Prescription claim cost increases are estimated using calendar 2008 average retail and mail-order ingredient costs and duration, current employee and retiree copays and by assuming that if any copay-based incentive to use mail-order is eliminated, 50% of the current lower average duration-adjusted mail-order costs will be lost. This 50% factor accounts for the fact that some members will still use mail-order due to lack of local retail options, and conservatively understates lost savings due to the underlying difference in the type of prescriptions currently dispensed by mail-order versus retail.

Kathy, please let us know if you need any further information.

Sincerely,

Christopher R. Hulla

ANALYSIS: *(Attach a separate page if necessary)*

SB 38 provides for regulation of pharmacy benefit managers by the Division of Insurance. It updates the terminology to be consistent throughout Title 21 with the use of "health care insurer". It also proposes to require registration of pharmacy benefit managers as third-party administrators, details the functions that can be performed, describes prohibited practices, requires disclosures and regulates medication reimbursement rates. These changes should have no fiscal impact to the Division of Insurance.

SENATE DISTRICT B

MEMORANDUM

TO: Senator Bettye Davis, Health & Social Services Chair

FROM: Senate District B Kristen Bressette

SUBJECT: SB 38 Hearing Request

DATE: 3/25/2009

I respectfully request a hearing on SB 38, "An Act relating to insurance; removing references, definitions, and confidentiality of information provisions relating to managed care entities, substituting health care insurers in the former role of managed care entities, and amending the definitions of 'covered person,' 'managed care plan,' and 'utilization review,' as those terms relate to the administration of managed care insurance plans; authorizing persons to act as pharmacy benefits managers subject to oversight by the division of insurance; and amending the definition of 'health care insurer' as it relates to health care insurance."

SB 38 would regulate and bring transparency to the business practices of pharmacy benefit mangers in Alaska. Pharmacy benefit managers are the largely unregulated drug middlemen that administer the prescription drug benefit portion of health insurance plans for governments, private companies, and unions. The three major pharmacy benefit managers are Medco, CVS Caremark, and Express Scripts. Premera Blue Cross Blue Shield, the State of Alaska's health insurance provider, has a contract with Medco to administer prescription drug benefits for state employees.

Sixteen states as well as the District of Columbia have enacted laws that regulate the business practices of pharmacy benefit managers. In addition, the federal government and many states have sued pharmacy benefit managers and won. Other states have led the way with legislation regulating the business practices of pharmacy benefit managers and it is time for the Alaska Legislature to do the same.

Thank you for considering a hearing on SB 38. Please feel free to contact Kristen Bressette at 465-4790 if you have any questions.

SENATE DISTRICT B

SB 38 - PHARMACY BENEFITS MANAGERS; MANAGED CARE

"An Act relating to insurance; removing references, definitions, and confidentiality of information provisions relating to managed care entities, substituting health care insurers in the former role of managed care entities, and amending the definitions of 'covered person,' 'managed care plan,' and 'utilization review,' as those terms relate to the administration of managed care insurance plans; authorizing persons to act as pharmacy benefits managers subject to oversight by the division of insurance; and amending the definition of 'health care insurer' as it relates to health care insurance."

Sponsor Statement

SB 38 would regulate and bring transparency to the business practices of pharmacy benefit mangers in Alaska. Pharmacy benefit managers are the largely unregulated drug middlemen that administer the prescription drug benefit portion of health insurance plans for governments, private companies, and unions. The three major pharmacy benefit managers are Medco, CVS Caremark, and Express Scripts. Premera Blue Cross Blue Shield, the State of Alaska's health insurance provider, has a contract with Medco to administer prescription drug benefits for state employees.

Pharmacy benefit managers negotiate with drug manufacturers and pharmacies on behalf of health insurance plans. These negotiations include cash rebates that drug manufacturers pay for drugs placed on lists of approved drugs. The confidential and proprietary nature of these contracts and financial arrangements with drug manufacturers and pharmacies creates the opportunity for pharmacy benefit managers to engage in unfair business practices. Pharmacy benefit managers increase profits by accepting incentives from drug manufacturers that are not shared with health plan sponsors, such as the State of Alaska. SB 38 would prohibit pharmacy benefit managers from intervening in the delivery or transmission of prescriptions.

Twenty-nine states and the District of Columbia have sued Express Scripts and won, resulting in a settlement of $9.3 million to states and up to $200,000 to affected patients in May of 2008. Twenty-eight states and the District of Columbia have sued CVS Caremark and won, resulting in a settlement of $41 million in February of 2008. The federal government and twenty states have sued Medco and won, resulting in a settlement of $184.1 million in 2006. The lawsuits were filed under the federal False Claims Act and/or state False Claims Acts and/or statutes.

In addition to lawsuits against pharmacy benefit managers, sixteen states as well as the District of Columbia have enacted laws that regulate the business practices of pharmacy benefit managers. Other states have led the way with legislation regulating the business practices of pharmacy benefit managers and it is time for the Alaska Legislature to do the same.

MEMORANDUM January 7, 2009

SUBJECT: Managed care insurance, pharmacy benefits manager; sectional summary (Work Order No. 26-LS0244\A)

TO: Senator Kim Elton
Attn: Kristen Bressette

FROM: Dennis C. Bailey
Legislative Counsel

You have requested a sectional summary of the above-described bill. As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. In this summary, for ease of reading, instead of using the phrase "pharmacist and pharmacy," I have used only the term "pharmacy" to refer to both. Also, please be aware that in previous correspondence I have identified issues with the draft summarized in this memorandum that have not been resolved.

Sections 1 - 16. Replaces statutory references to a "managed care entity" with a "health care insurer" with regard to the regulation of managed care insurance plans.

Section 17. Sec. 21.07.100 requires a pharmacy benefits manager to operate under the terms of a written agreement approved by the director; defines what benefits may be managed by a pharmacy benefits manager; defines what matters may not be included in an agreement between a health care insurer and a pharmacy benefits manager; and, requires that a pharmacy benefits manager that receives payment for the services of a pharmacy acts as a fiduciary of the pharmacy that provided the services.

Sec. 21.07.105 prohibits certain activities by a pharmacy benefits manager.

Sec. 21.07.110 limits the terms under which an agreement between a pharmacy benefits manager and a pharmacy may be terminated; requires notice of termination before a pharmacy is excluded from a network, allows immediate termination of the agreement if the pharmacy loses a license or is convicted of fraud; and prohibits discrimination against a pharmacy acting within the scope of a license or certification with respect to participation in a network or reimbursement plan.

Sec. 21.07.115 designates the method for determining reimbursement payments to pharmacies, including reimbursement for equivalent and interchangeable products.

Sec. 21.07.120 establishes time limits for electronic or non-electronic payments; requires price adjustment within 24 hours of notice of a price increase from a supplier; prohibits retroactive denial of certain claims; prohibits an extrapolation audit as a condition of participating in a contract, network, or program; and prohibits disputed setoff payments to the pharmacy benefits manager or health care insurer until review by the director.

Sec. 21.07.125 requires a health care insurer using the services of a pharmacy benefits manager to notify a covered person of the relationships among the pharmacy benefits manager, the health care insurer, and the covered person.

Sec. 21.07.130 authorizes a pharmacy benefits manager to substitute a lower priced generic or equivalent drugs if approved by the health professional; requires that the substitute of a higher cost drug must be made for a medical reason; requires a pharmacy benefits manager to disclose information to the covered person related to the substitution; and requires a pharmacy benefits manager to compensate a health care insurer for a benefit received by the pharmacy benefits manager as a result of a substitution.

Sec. 21.07.135 requires the director of the division of insurance to adopt regulations for the investigation of complaints concerning the activity of a pharmacy benefits manager.

Sec. 21.07.140 prohibits certain compensation to a pharmacy benefits manager based on claims experience, but does not prohibit payment based on the total number of claims paid or processed.

Sec. 21.07.145 requires a pharmacy benefits manager to provide financial and use information requested by a heath care insurer; allows a pharmacy benefits manager to designate the information as confidential and prohibits disclosure of the information by a covered entity without the consent of the pharmacy benefits manager or when required by a court; requires a pharmacy benefits manager to disclose to a health insurer the financial arrangement between the pharmacy benefits manager and a drug manufacturer or labeler; requires a pharmacy benefits manager to disclose whether there is a difference between the price paid to a retail pharmacy and the amount billed to the health care insurer; and allows a health care insurer to audit a pharmacy benefits manager's records.

Sec. 21.07.150 requires a pharmacy benefits manager to register as a third-party administrator.

Sec. 21.07.155 allows the division of insurance to regulate fees from a pharmacy benefits manager for costs of administration and prescribes penalties for failure to pay fees and for failure to register.

Sec. 21.07.160 applies the regulation of pharmacy benefits managers to the state when it provides group insurance by means of self insurance for eligible state employees or under a collective bargaining agreement, and for certain others receiving benefits; and applies

the regulation of pharmacy benefits managers to certain collective bargaining units

Section 18. Amends the definition of a "managed care plan" to remove a reference to a "managed care entity."

Section 19. Amends the definition of a "participating health care provider" substituting a "health care insurer" in place of a "managed care entity."

Section 20. Rewrites the definition of a "utilization review."

Section 21. Adds definitions to AS 21.07 for "Board of Pharmacy" or "board," "covered person," "health care insurer," "pharmacist," and "pharmacy."

Section 22. Amends the definition of a "health care insurer" to include a person subject to Title 21 (the Insurance Code) who provides coverage for the cost of medical care and to remove references in the definition relating to a church plan, a governmental plan, and an exception related to nonfederal governmental plans.

Section 23. Defines a "pharmacy benefits manager" for purposes of Title 21.

Section 24. Repeals AS 21.07.040, relating to confidentiality medical and financial information in the care of a managed care entity; and repeals AS 21.07.250(8) - 21.07.250(10), removing definitions for "managed care," a "managed care contractor," and a "managed care entity."

If I may be of further assistance, please advise.

09-004.plm

LAWS THAT PROVIDE REGULATION OF THE BUSINESS PRACTICES OF PHARMACY BENEFIT MANAGERS

ARKANSAS
Title 17, Chapter 92
Section 17-92-1201, et.seq.

- Sets forth standards for audits by a managed care company, an insurance company, a third-party payor or any entity that represents such companies or groups.
- Pharmacy must be given at least one week advance notice of an audit.
- If clinical or professional judgment is required audit must be conducted by or in consultation with a pharmacist.
- Pharmacy may use records of a hospital, physician or other authorized practitioner to validate the pharmacy record.
- Recoupment of claims has to be based on actual overpayment unless it is part of a settlement with the pharmacy.
- Period covered by audit cannot exceed 24 months from the date the claim was submitted to or adjudicated by the entity.
- Unless consented to by the pharmacy, the audit cannot take place during the first 7 days of the month due to high volume of prescriptions filled during that time.
- Preliminary audit report must be delivered within 120 days after the conclusion of the audit - final report must be delivered within 6 months.
- Use of extrapolation audits for calculation of recoupments or penalties is prohibited.
- Copy of the final audit report to be provided to the plan sponsor.
- Applies to audits of claims submitted after January 1, 2008.
- Effective: 04.03.07

CONNECTICUT
Public Act No. 07-200
Registration of Pharmacy Benefit Managers

- PBM must obtain a certificate of registration from the Insurance Department.
- PBM must complete an application form and include the name and address for an agent for service of process, pay a fee and provide evidence of a surety bond.
- PBM operating as a line of business or affiliate of a health insurer or other entity does not have to obtain a certificate of registration but must provide annual notification to the Commissioner of its status.
- Registration may be denied and a hearing process is provided for an appeal.
- Commissioner has the authority to suspend, revoke or refuse to issue or renew for conduct of a character likely to mislead, deceive or defraud the public or the commissioner, unfair or deceptive business practices or nonpayment of renewal fee.
- Effective: 01.01.08

GEORGIA
Title 26, Chapter 26-4.110.1

- Requires a PBM to be licensed as a pharmacy, with a few exceptions, if it provides the services or benefits that constitute the practice of pharmacy.
- If the PBM is licensed then the Board can inspect its premises whether they are located within or outside the state.
- Effective: 05.22.02

Title 26, Chapter 4 – 26-4-118
The Pharmacy Audit Bill of Rights

- Requires certain procedures when an audit of pharmacy records is undertaken by a managed care company, insurance company, third-party payor or any entity that represents such companies (which would include PBMs).

NCPA
NATIONAL COMMUNITY PHARMACISTS ASSOCIATION

- Pharmacy must be given notice at least one week prior to conducting the audit.
- Any audit that requires clinical or professional judgment must be conducted by or in consultation with a pharmacist.
- A finding of an overpayment or underpayment may be a projection based on the number of patients served having a similar diagnosis or on the number of similar orders or refills for similar drugs; however recoupment of claims must be based on the actual overpayment or underpayment unless the pharmacy agrees as part of a settlement.
- Pharmacy must be allowed at least 30 days following the receipt of the audit report to produce documentation to address any discrepancy found during the audit.
- Period covered by the audit may not exceed two years from the date that the claim was submitted to or adjudicated by the entity.
- An audit may not be scheduled during the first 7 calendar days of any month without the consent of the pharmacy.
- The preliminary report must be delivered to the pharmacy within120 days after conclusion of the audit.
- Extrapolation is prohibited in calculating recoupments or penalties for audits.
- Each entity conducting an audit shall establish an appeals process.
- Plan sponsor must be provided with a copy of the audit report.
- Effective: 04.19.06 (applies to audits to claims submitted for payment after 07.01.06)

IOWA
Title XIII Commerce
Subtitle 1 Insurance and Related Regulation
Chapter 510B.1 – 510B.9

- PBM must obtain a certificate as a third party administrator.
- PBM must perform its duties exercising good faith and fair dealing.
- PBM must notify the covered entity in writing of any conflicts.
- PBM cannot contact a covered individual without permission of the covered entity.
- PBM cannot require more stringent record keeping than that required by state or federal law or regulation.
- PBM must notify the pharmacy when it receives notice from a covered entity of a contract cancellation within 10 working days.
- Within 3 business days of a price increase notification by a manufacturer or supplier the PBM must adjust its payment to the pharmacy consistent with the price increase.
- Commissioner must enforce the provisions and adopt rules concerning timely payment of pharmacy claims and a process for adjudication of complaints and settlement of disputes between a PBM and a pharmacy related to auditing practices and termination of pharmacy agreements.
- Legislative Council is directed to establish an interim committee on PBMs to review transparency, disclosure, confidentiality protections, ability of covered entities to audit PBMs and appropriate remedies for covered entities to enforce the provisions in the Act.
- Effective: 01.01.08

KANSAS
Chapter 154
Pharmacy Benefits Manager Registration Act

- Requires PBMs to obtain a valid certificate of registration issued by the insurance commissioner in order to operate in the state.
- PBM must file an application form which includes:
  (a) Name, address, official position and professional qualification of each individual who is responsible for the conduct of the affairs of the PBM, including all members of the board of directors, board of trustees, executive committee, other governing board or committee, the principal officers in the case of a corporation, the partners or members in the case of a partnership or association and any other person who exercises control or influence over the affairs of the PBM.

(b) Name and address of the applicant's agent for service of process in the state and
(c) A nonrefundable application fee of $140.

- Registration expires on March 31st of each year and the renewal fee is $140.
- If the fee is not paid the registration may be revoked or suspended.
- PBMs must register within 90 days after the effective date of the act.
- Insurance commissioner may adopt rules.
- If a PBM acts without registering, it will be subject to a fine of $500 per violation.
- Effective: 04.28.06

LOUISIANA
Title 22: Sections 250:51 – 61

- Provides that nonelectronic "clean" claims submitted must be paid within 45 days and not more than 60 days after a corrected claim is submitted.
- Provisions must be made for late payment adjustments equal to one percent of the unpaid balance due for each month or partial month that such claim remains unpaid. An additional one percent will be added for those payments more than 25 days after the due date.
- Provides for electronic "clean" claims to be paid within 15 days after receipt, if not late payment adjustments are applicable.
- Reimbursement must be calculated according to a nationally recognized reference and the most current price or amount must be used based on the date of service shown on the claim.
- Recoupment of amounts owed to a pharmacy must begin with a notice to the pharmacy and a 30 day period for the pharmacy to respond.
- Effective: 01.01.2005

MAINE
Title 22, Chapter 603, Subchapter 4, Section 2699
Prescription drug practices

- Provides that a PBM owes a fiduciary duty to a covered entity and must discharge that duty in accordance with the provisions of state and federal law.
- Requires PBM to perform its duties with care, skill, prudence and diligence in accordance with the standards of conduct applicable to a fiduciary in an enterprise of a like character and with like aims.
- Requires PBM to notify the covered entity in writing of any practice that is a conflict of interest.
- Upon request by the covered entity, the PBM must provide all financial and utilization information relating to services to that covered entity.
- The PBM may designate any information provided to the covered entity as confidential and the information may not be disclosed without the permission of the PBM except that disclosure may be ordered by a court. Also this provision does not limit the Attorney General's use of its investigative authority.
- Requires PBM to transfer in full to the covered entity any benefit or payment received as a result of a substitution.
- Requires PBM to disclose to the covered entity all financial terms and arrangements for remuneration of any kind that apply between the PBM and any drug manufacturer or labeler, including formulary management, drug-switch programs, educational support, claims processing and pharmacy network fees that are charged from retail pharmacies and data sales fees. The PBM may designate the information as confidential. However disclosure may be ordered by a court and this provision does not limit the Attorney General's use of its investigative authority.
- Provides that a violation of the Act is a violation of the Maine Unfair Trade Practices Act and subject to a fine of not more than $10,000.
- Applies to contracts executed or renewed on or after September 13, 2003.
- Effective: 04.13.05 (On 06.05.06, the U. S. Supreme Court denied the Petition for a Writ of Certiorari filed by PCMA seeking to overturn the Maine law on the grounds that ERISA preempted it. The Supreme Court ruling ended PCMA's legal challenges to the law.)

- Prior to entering into a contract, the PBM must inform the purchaser that the PBM may solicit and received manufacturer payments, pass through or retain those payments depending on the contract terms, sell aggregate utilization information and share aggregate utilization information with other entities.
- PBM must offer to provide to the purchaser a report that contains net revenue and manufacturer payments.
- If a purchaser has a rebate sharing agreement, the PBM must offer to provide a repot fore each fiscal quarter and each fiscal year that contains information on the net revenues, prescription drug expenditures, manufacturer payments and rebates.
- PBM may require purchaser to sign a nondisclosure agreement prior to releasing information.
- Ability of Attorney General or Insurance Commissioner to obtain information and use the information in any proceedings not affected by this section.
- PBM must disclose at the time of contracting with a pharmacist and at least 30 days before any contract change: the terms of reimbursement, process for verifying benefits and beneficiary eligibility, dispute resolution and audit appeals process and procedures for verifying drugs included on the formularies used by the PBM.
- PBM may not schedule an onsite audit to begin during the first 5 calendar days of a month unless requested by the pharmacist.
- PBM must use a pharmacist if the audit requires clinical or professional judgment.
- All pharmacies in the network must be audited under the same standards and parameters.
- Audit limited to claims submitted or adjudicated within the 2 year period immediately preceding the audit.
- Extrapolation audits are prohibited unless the pharmacist agrees to projected overpayments or denials as part of a settlement agreement.
- PBM must establish an internal appeals process for disputed audit claims.
- PBM must follow certain procedures for the timing of audit reports and payment of amounts due as a result of the audit,
- PBM may not request a therapeutic interchange unless certain criteria are met unless the proposed interchange is for medical reasons that benefit the beneficiary or it will result in financial savings and benefits to the purchaser or the beneficiary.
- PBM must follow disclose certain information to the prescriber when the PBM solicits the prescriber to make an interchange.
- If PBM receives payment from a manufacturer for making the interchange that payment must be disclosed to the prescriber at the time of the solicitation.
- If an interchange occurs, the PBM must provide certain information to the beneficiary.
- PBM must maintain a toll free number for prescribers, pharmacists and beneficiaries.
- PBM must register with the Insurance Commissioner and renew registration every 2 years.
- Commissioner may suspend, deny, revoke or refuse to renew a registration, PBM subject to administrative penalties.
- PBM may not ship, mail or deliver drugs through a non-resident pharmacy unless it holds a pharmacy permit from the Board of Pharmacy.
- Establishes requirements for the PBM's pharmacy and therapeutics (P&T) committee
- Members of a P&T committee must sign a conflict of interest statement.
- A majority of the P&T committee members must be practicing physicians or pharmacist.
- PBM must have policies and procedures including disclosure requirements to address potential conflicts of interest and a process to evaluate medical and scientific evidence concerning the safety and effectiveness of prescription drugs.
- PBM may not require a pharmacist to participate on the P&T committee.
- Effective: 10.01.08

Title 15, Subtitle 10B, Section 15-10B-20
Private Review Agents

- Requires the Insurance Department to conduct an examination of any PBM registered as a private review agent at least once every three years.
- Requires the Commissioner to issue a report based on the examinations.
- Effective: 05.13.03

MISSISSIPPI
Pharmacy Audit Integrity Act

- Establishes minimum and uniform standards and criteria for the audit of pharmacy records.
- Pharmacy contract must identify and describe in detail the audit procedures.
- Entity conducting an onsite audit must give the pharmacy at least 2 weeks prior written notice before conducting an initial audit.
- An audit that involves clinical and professional judgment must be conducted by or in consultation with a pharmacist.
- Entity conducting the onsite audit may not interfere with the delivery of pharmacy services.
- Pharmacy may use records of a hospital, physician or other authorized practitioner to validate the pharmacy record
- Recoupment of claims has to be based on actual overpayment.
- A finding of an overpayment shall include the dispensing fee amount unless the prescription was not dispensed.
- Period covered by the audit may not exceed two years from the date that the claim was submitted to or adjudicated by the entity.
- Audit cannot take place during the first 5 days of the month.
- Preliminary audit report must be delivered within 120 days after the conclusion of the audit - final report must be delivered within 180 days. Pharmacy has at least 30 days to review preliminary report. Audit report must be written.
- Recoupments of disputed funds or repayment of funds must occur after final internal disposition of the audit including the appeal, if any, process. If identified discrepancy exceeds $25,000 future amounts in excess of that amount may be withheld pending finalization of the audit.
- Interest may not accrue during the audit period.
- Entity conducting the audit must establish a written appeals process and if either party is not satisfied with the appeal, that party may seek mediation.
- Plan sponsor must receive a copy of the final report.

Effective: 07.01.08

Title 73 – Professions and Vocations
Chapter 21 – Pharmacists
Sections 73- 21-151 – 73-21-159
Pharmacy Benefit Prompt Pay Act

- Requires PBMs to file financial statements with the Insurance Department.
- PBMs must use a nationally recognized reference in pricing calculations when reimbursing pharmacies and must update that reference no less than every three business days.
- Clean claims filed electronically must be paid within 15 days (not later than 35 days if filed as a paper claim).
- The Board of Pharmacy shall monitor PBMs for compliance with the law and is authorized to subject PBMs to administrative penalties for non-compliance.
- Effective: 06.30.06

NEW MEXICO
Chapter 61 – Article 11
61-11-18.2

- Requires a managed care company, insurance company, third-party payor or representative of the managed care company, insurance company or third-party payor to conduct audits according to certain criteria.
- Must give pharmacy at least 2 weeks notice prior to conducting an initial on-site audit.
- An audit that requires clinical or professional judgment must be conducted by or in consultation with a pharmacist.
- Pharmacy can use the records of a hospital, physician or other authorized practitioner for the purposes of validating the pharmacy record.
- A finding of overpayment or underpayment cannot be based on a projection and recoupment of claims must be based on actual overpayment or underpayment unless a statistically justifiable method of projection is part of an agreed settlement.
- Pharmacy must be allowed at least 21 days, with reasonable extensions, to produce documentation to address any discrepancies.
- Audit period cannot exceed 2 years, unless agreed by contract, from the date that the claim was submitted or adjudicated.
- Audit may not be initiated or scheduled during the first 5 calendar days of a month unless consented to by the pharmacy.
- Preliminary audit report must be delivered within 120 days, with reasonable extensions allowed, after the conclusion of the audit.
- Final report must be delivered within 6 months after receipt of the preliminary audit report or final appeal, whichever is later.
- Audit criteria apply to all audits of claims submitted after July 1, 2007.
- Extrapolation audits are prohibited in calculating recoupments or penalties.
- Each entity conducting an audit must have an appeals process. If the discrepancy exceeds $25,000 future payments to the pharmacy may be withheld pending finalization of the audit.
- Law does not apply to any investigative audit that involves fraud or willful misrepresentation.
- Effective: 07.01.07

NORTH DAKOTA
Chapter 26.1-27

- Defines a PBM as an administrator and requires PBM to be registered as an administrator.
- Requires disclosure of ownership interest in the PBM by an insurer or a pharmaceutical manufacturer.
- Requires the PBM to notify the Commissioner in writing within 5 business days of any material change in the PBM's ownership.
- Requires PBM to comply with statutory provisions concerning substitution of one drug for another.
- PBM may not exclude an otherwise qualified pharmacy from its network if the pharmacy accepts the terms, conditions and reimbursement rates of the PBM's contract.
- PBM may not require a pharmacist or pharmacy to participate in one contract in order to participate in another contract.
- PBM must offer to the covered entity contracting options that must include: a transaction fee without a sharing of a payment received by the PBM, a combination of transaction fee and a sharing of the payment received by the PBM or a transaction fee based on the covered entity receiving all of the benefits of payments received by the PBM.
- Agreement between the PBM and the covered entity must include a provision allowing the covered entity to audit the PBM's books, accounts and records as necessary to confirm that the benefit of a payment received by the PBM is being shared as required by the contract.
- During an examination of a covered entity, the Commissioner may examine any contracts between the covered entity and the PBM in order to determine whether payments received from the PBM are being applied to reduce the covered entity's rates or have been distributed to covered individuals.

- Covered entity must disclose annually the benefits of the payments received and describe how the benefits received were applied towards reducing rates or distributed to covered individuals.
- Any information disclosed to the Commissioner is considered a trade secret.
- Commissioner may adopt rules as necessary.
- Effective: 08.01.05

OKLAHOMA
Title 59, Section 356
Pharmacy Audit Integrity Act

- Establishes minimum and uniform standards and criteria for the audit of pharmacy records.
- Pharmacy contract must identify and describe the audit procedures.
- Entity conducting an onsite audit must give the pharmacy at least 2 weeks prior written notice before conducting an initial audit.
- An audit that involves clinical and professional judgment must be conducted by or in consultation with a licensed pharmacist.
- Entity conducting the onsite audit may not interfere with the delivery of pharmacy services.
- Pharmacy may use records of a hospital, physician or other authorized practitioner to validate the pharmacy record
- Recoupment of claims has to be based on actual overpayment or underpayment; however a projection may be used as part of a settlement as agreed to by the pharmacy.
- A finding of an overpayment shall include the dispensing fee amount unless the prescription was not dispensed or a physician denied authorization.
- Each pharmacy must be audited under the same standards and parameters as other similarly situated pharmacies audited by the entity.
- Period covered by the audit may not exceed two years from the date that the claim was submitted to or adjudicated by the entity.
- Audit cannot take place during the first 5 days of the month.
- Must disclose to the plan sponsor any money recouped in the audit.
- Preliminary audit report must be delivered within 120 days after the conclusion of the audit - final report must be delivered within 6 months after receipt of the preliminary report or final appeal. Pharmacy has at least 60 days to review preliminary report. Audit report must be written.
- Recoupments of disputed funds or repayment of funds must occur after final internal disposition of the audit including the appeal, if any, process. If identified discrepancy exceeds $25,000 future amounts in excess of that amount may be withheld pending finalization of the audit.
- Interest may not accrue during the audit period.
- Entity conducting the audit must establish a written appeals process.
- Plan sponsor must receive a copy of the final report.
- Act does not apply to any audit which involves fraud, abuse or willful misrepresentation.

Effective: 11.01.08

RHODE ISLAND
Title 27 – Insurance
Chapter 27-29.1

- Includes PBMs in the definition of third-party administrator under Chapter 20.7 which requires filing an annual report with the Department of Business Regulation.
- Annual report must include: contractual language that provides a complete description of the financial arrangements between the third-party administrator and each of the insurers covering benefit contracts delivered in Rhode Island.
- If the third-party administrator is owned by or affiliated with another entity or entities, it shall include an organization chart and brief description which shows the relationships among all affiliates within a holding company or otherwise affiliated.
- Report must be in a format required by the director and filed with the department as a public record.
- Effective: 07.05.04

SOUTH DAKOTA
Chapter 58-29E -- Pharmacy Benefits Management

- Requires PBMs to be licensed as a third party administrator.
- Requires PBM to perform its duties by exercising good faith and fair dealing toward the covered entity.
- Gives the covered entity the option to request information from the PBM on rebate revenues and retrospective utilization discounts.
- Gives the covered entity the option to request information on the nature, type and amount of all other revenue received from a pharmaceutical manufacturer or labeler for programs that the covered entity offers to its enrollees.
- Prohibits PBM from contacting a covered individual without express written permission of the covered entity.
- Provides that information disclosed to the covered entity shall be confidential and proprietary information; however insurance department may request information but it will be considered confidential and privileged and not open to public inspection or disclosure.
- Provides that the covered entity may audit the PBM's records as they relate to rebates and other information described in the law.
- Prescription may be substituted if it is a lower priced generic or if the substitution is for medical reasons but PBM must obtain prior approval from the prescriber.
- Allows the Division of Insurance to promulgate rules.
- Applies to contracts entered into or renewed after June 30, 2004.
- Effective: 03.09.04

TENNESSEE
Titles 56 and 63

- Establishes standards for audits of pharmacies conducted by PBMs.
- At least 2 weeks prior written notice must be given to the pharmacy before conducting the initial on-site audit.
- If clinical or professional judgment is required audit must be conducted in consultation with a pharmacist who has knowledge of the Tennessee Pharmacy Practice Act.
- Pharmacy may use records of a hospital, physician or other authorized practitioner to validate the pharmacy record.
- Unless consented to by the pharmacy, the audit cannot take place during the first 7 days of the month due to high volume of prescriptions filled during that time.
- Pharmacist must be given no less than 30 days following receipt of the audit report to produce documentation to address any discrepancy.
- PBM must establish an appeals process and provide the pharmacist a written explanation of the process.
- Use of extrapolation audits for calculation of recoupments or penalties is prohibited.
- Preliminary audit report must be delivered within 120 days and the final report must be delivered within 6 months after receipt of the preliminary audit report or final appeal, whichever is later.
- Period covered by an audit cannot exceed 2 years from the date the claim was submitted or adjudicated.
- Recoupment of any disputed funds cannot take place until after the final internal disposition of the audit including any appeal process.
- If PBM uses a nationally recognized reference to calculate reimbursement then the PBM must use the most current reference price or amount.
- Requires PBMs to provide timely updates to pharmacy product pricing files used to calculate prescription prices and reimburse pharmacies. Files must be updated no less than every 3 business days.
- Effective: 07.01.07

VERMONT
18 V[illegible]. Chapter 221, Sections 9421, 947[illegible]473
Pharmacy Benefit Managers

- PBM must discharge its duties with reasonable care and diligence and be fair and truthful.
- PBM must provide notice to a health insurer that the following terms may be included in its PBM contract:
  (1) all financial and utilization information requested by the insurer relating to the provision of benefits to beneficiaries through that insurer's health plan (information may be designated as confidential);
  (2) notification of any proposed or ongoing activity that, directly or indirectly, poses a conflict of interest;
  (3) if a substitute drug is to be dispensed which costs more than the prescribed drug and the PBM receives a payment or benefit then the cost of both drugs and the benefit or payment must be disclosed;
  (4) if PBM derives any benefit based on volume of sales for certain drugs or classes or brands of drugs, that payment or benefit must be passed on in full to the health insurer; and
  (5) disclosure of all financial terms and arrangement for remuneration of any kind that apply between the PBM and the drug manufacturer including formulary management and drug-switch programs, educational support, claims process and pharmacy network fees charged from retail pharmacies and data sales fees(information may be designated as confidential).
- PBM must register before doing business in the state.
- PBM must notify health insurers that they are entitled to a quote for an administrative-services-only (ASO) contract with full pass through of negotiated prices, rebates and other such financial benefits which would identify to the insurer external sources of revenue and profit generally available and whether the PBM offers that type of arrangement.
- In order to verify the pricing arrangements of ASO contracts, the PBM must allow access to the Commissioner to conduct an audit.
- Department's expenses in conducting the audit must be paid by the PBM.
- Applies to all contracts executed or renewed on or after September 1, 2007.
- Effective: 07.01.07

DISTRICT OF COLUMBIA
Title 48, Subtitle II, Chapter 8A, Subchapter II.
Transparent Business Practices Among Pharmacy Benefit Managers

- Requires a PBM to act as a fiduciary.
- PBM must perform its duties with care, skill, prudence and diligence.
- Requires the PBM to notify the covered entity in writing of any practice that is a conflict of interest.
- Requires any payments/benefits that a PBM receives from a drug manufacturer or labeler based on volume of sales or market share must be paid in full to the covered entity; however covered entity can agree to return a portion of the benefit or payment to the PBM.
- Upon request by the covered entity, the PBM must provide information on all rebates, discounts and other similar payments.
- Upon request by the covered entity, the PBM must disclose all financial terms and arrangements for remuneration of any kind between the PBM and a drug manufacturer or labeler including formulary management, drug substitution programs, educational support, claims processing and data sales fees.
- PBM may designate the information provided as confidential.
- If a PBM substitutes another prescription drug for a prescribed drug and if the substitute drug costs more than the prescribed drug, the PBM must disclose the costs of both drugs and any benefit or payment directly or indirectly that accrues to the PBM as a result of the substitution. Any benefit or payment received as a result of the substitution must be transferred in full to the covered entity.
- Violations are subject to a fine of not more than $10,000.
- Effective: 09.16.06 (This law is still the subject of a legal challenge by PCMA)

Federal and State Litigation Regarding Pharmacy Benefit Managers

David A. Balto
January 2009

From 2004 – 2008, the three major PBMs (Medco, CVS Caremark, and Express Scripts) faced six major federal or multidistrict cases over allegations of fraud; misrepresentation to plans, patients, and providers; unjust enrichment through secret kickback schemes; and failure to meet ethical and safety standards. These cases resulted in over $371.9 million in damages to states, plans, and patients so far. Below is a summary of these six cases. Note that the regulatory provisions of many of these settlements will expire within 2-10 years.

---

1. *United States v. Merck & Co., Inc., et. al* (also cited as *United States of America v. Merck-Medco Managed Care L.L.C., et al.)* (E.D. Pa.)

Settled: October 23, 2006
Damages: $184.1 million

States participating: Arizona, California, Connecticut, Delaware, Florida, Illinois, Iowa, Louisiana, Maine, Maryland, Massachusetts, Nevada, New York, North Carolina, Oregon, Pennsylvania, Texas, Vermont, Virginia, and Washington.

Claims:

Whistleblower lawsuits, filed under the federal False Claims Act and state False Claims Acts against Medco Health Solutions, Inc., alleged that Medco:

- systematically defrauded government-funded health insurance by accepting kickbacks from manufacturers in exchange for steering patients to certain products;
- secretly accepted rebates from drug manufacturers;
- secretly increased long term drug costs by switching patients away from cheaper drugs; and
- failed to comply with state-mandated quality of care standards.

Settlement:

- A preliminary settlement in April of 2004:
  - Required Medco to pay $29.1 million to participating states and affected patients;
  - Placed restrictions on the company's ability to switch drugs;

3500

- Imposed measures to increase transparency; and
- Required Medco to adopt the American Pharmacists Association code of ethics for employees.

- The final settlement, brokered in October 2006 required Medco to:
  - Pay an additional $155 million;
  - Enter into a consent degree regulating drugs switching and mandating greater transparency; and
  - Enter into a Corporate Integrity Agreement (CIA) as a condition of Medco's continued participation in government health programs.

The Corporate Integrity Agreement will expire in 2011.

2. *United States of America, et al. v. AdvancePCS, Inc. (Case No. 02-cv-09236)(E.D. Pa.)*

Filed: 2002
Settled: September 8, 2005
Damages: $137.5 million

Claims:

Whistleblower lawsuit, filed under the Federal False Claims Act, alleging that Advance PCS (now part of CVS Caremark):

- Knowingly solicited and received kickbacks from drug manufacturers in exchange for favorable treatment of those companies' products;
- Paid improper kickbacks to existing and potential customers to induce them to sign contracts with the PBM;
- Submitted false claims in connection with excess fees paid for fee-for-service agreements; and
- Received flat fee rebates for inclusion of certain heavily utilized drugs.

Settlement:

A settlement in September, 2005 required Advance PCS, Inc., to:

- Pay a $137.5 million settlement and face a five-year injunction;
- Submit to regulations designed to promote transparency and restrict drug interchange programs;
- Enter into a five-year Corporate Integrity Agreement; and
- Develop procedures to ensure that any payments between them and pharmaceutical manufacturers, clients, and others do not violate the Anti-Kickback Statute of Stark Law.

3. ***United States of America, et al v. Caremark, Inc. (Case No. 99-cv-00914)(W.D. Tex.)***

Filed: 1999
Pending as of January 2009

States participating: Arkansas, California, DC, Florida, Hawaii, Illinois, Louisiana, Massachusetts, Nevada, New Hampshire, New Mexico, North Carolina, Tennessee, Texas, Utah and Virginia.

Claims:

Filed by an ex-employee, this case was prosecuted under the Federal False Claims Act and numerous state False Claims Statutes. It alleges that Caremark (now part of CVS Caremark):

- Submitted reverse false claims to the Government in order to avoid, decrease or conceal their obligation to pay the government under several federal health insurance programs including Medicaid, Indian Health Services, and Veterans Affairs/Military Treatment Facilities.

4. ***States Attorneys General v. Caremark, Inc.***

Filed: February 14, 2008
Settled: February 14, 2008
Damages: $41 million

States participating: Arizona, Arkansas, California, Connecticut, Delaware, District of Columbia, Florida, Illinois, Iowa, Louisiana, Maryland, Massachusetts, Michigan, Mississippi, Missouri, Montana, Nevada, New Mexico, North Carolina, Ohio, Oregon, Pennsylvania, South Carolina, South Dakota, Tennessee, Texas, Vermont, Virginia and Washington.

Claims:

Complaint decrees and consent orders against Caremark issued by 29 Attorneys General on February 14, 2008 allege that Caremark:

- Engaged in deceptive trade practices by encouraging doctors to switch patients from originally prescribed brand drugs to different brand name drugs.
- Did not inform clients that Caremark retained all the profits reaped from these drug switches; and
- Restocked and re-shipped previously dispensed drugs that had been returned to Caremark's mail order pharmacies.

Settlement:

In conjunction with the complaints, states issued a consent decree/final judgment that required Caremark to:

- Pay a collective settlement of $41 million;
- Significantly change its business practices by imposing restrictions on drug switches and creating greater transparency;
- Apply a code of ethics and professional standards; and
- Refrain from restocking and re-shipping returned drugs unless permitted by law.

5. *State Attorneys General v. Express Scripts*

Settled: May 27, 2008
Damages: $9.3 million to states, plus up to $200,000 to affected patients

States participating: Arizona, Arkansas, California, Connecticut, Delaware, District of Columbia, Florida, Illinois, Iowa, Louisiana, Maine, Maryland, Massachussetts, Michigan, Mississippi, Missouri, Montana, Nevada, New Mexico, North Carolina, Ohio, Oregon, Pennsylvania, South Carolina, South Dakota, Tennessee, Texas, Vermont, Virginia, and Washington.

Claims:

State Attorneys general settled consumer protection claims alleging that Express Scripts:

- Engaged in deceptive business practices by illegally encouraging doctors to switch their patients to different brand name drugs; and
- Illegally increased their spreads and rebates from manufacturers without passing the savings on to the plans.

Settlement:

The settlement required Express Scripts to:

- pay $9.3 million to the states, plus up to $200,000 in reimbursements to affected patients.
- Accept restrictions on drug switching practices;
- Increase transparency for plans, patients and providers; and
- Adopt a certain code of professional standards.

6. *Local 153 Health Fund v. Express Scripts (In re Express Scripts, Inc. Pharmacy Benefits Management Litigation)* (Case No. 4:05-md-01672-SNL)

Case consolidated: April 29, 2005
Pending as of January 2009

Claims:

This case, filed in the Eastern District of Missouri, alleges that Express Scripts:

- Retained undisclosed rebates from manufacturers;
- Enriched itself by creating a differential in fees;
- Failed to pass on or disclose discounted drug rates and dispensing fees;
- Gained kickbacks from drug manufacturers in exchange for favoring certain drugs on the formulary;
- Circumvented "Best Pricing" rules to artificially inflate AWP; and
- Enriched itself with bulk purchase discounts that it failed to pass on to the plaintiffs.

EXPRESS SCRIPTS®

6625 West 78th Street
Mail Route BL0220
Bloomington, MN 55439

Senator Bettye Davis
Chairwoman
Senate Health & Social Services Committee
Alaska State Capitol Building
Juneau, Alaska 99801

RE: SB 38 - Pharmacy Benefits Managers

Dear Chairwoman Davis and Committee Members:

I am writing to express my concerns with S.B. 38, a bill to regulate and restrict the use of pharmacy benefit services.

Express Scripts, Inc. is one of the largest pharmacy benefit management (PBM) companies in North America, providing PBM services to millions of consumers. PBMs manage prescription drug benefits for thousands of client groups, including managed-care organizations, insurance carriers, third-party administrators, employers and union-sponsored benefit plans.

Pharmacy Benefit Managers employ a variety of management tools to deliver an affordable and quality drug benefit to beneficiaries. PBMs provide purchasers a variety of tools and techniques that promote quality, improve outcomes and help drive down the cost of prescription drugs. PBMs also provide clients with clinically based services that reduce medication errors, increase compliance with drug therapies and improve health outcomes. According to a study by PricewaterhouseCoopers, pharmacy management by PBMs results in savings of 29 percent of retail prices.[1]

S.B. 38 would mandate that a PBM owe a fiduciary duty to a covered entity and require public disclosure of proprietary contract terms and conditions. (Section 21.07.100 (e); Section 21.07.125; Section 21.07.145). A study of PBM management tools shows that fiduciary mandates coupled with disclosure increases pharmacy costs by 7.1 percent.[2] PBMs simply do not fit the definition of fiduciaries under the Employee Retirement Income Security Act of 1974 (ERISA) law. PBMs perform claims processing and other ministerial tasks that do not involve discretionary control of plan assets, an essential threshold requirement for fiduciary status under ERISA. In addition, the Federal Trade Commission (FTC) has warned several states that legislation requiring PBM contract disclosure could increase costs and undermine the ability of some consumers to obtain drugs at a price they can afford. [3]

---

[1] PricewaterhouseCoopers Pharmacy Benefit Management Savings in Medicare and the Commercial Marketplace & the Cost of Proposed PBM Legislation 2008-2017; March 2007.
[2] IBID
[3] FTC letter to Assemblyman Greg Aghazarian, California State Assembly (Sept. 3, 2004); FTC Letter to Delegate Terry Kilgore, Commonwealth of Virginia House of Delegates (Oct. 2, 2006).

This legislation restricts many of the tools and techniques that help manage costs and assure the appropriateness and suitability of prescribed medications, including prior authorization, drug utilization review, generic substitution, negotiated rebates and the option to use mail order. (Section21.07.100; Section 21.07.105). These tools all respect the physician's prescribing authority; PBMs do not "switch" prescriptions. Only a licensed pharmacy or pharmacist with a valid physician order can change an individual's prescription. Contrary to the assertions of some, these techniques reduce quality, recent research shows that employing behavior-centric clinical programs — strategies that help manage out waste and lower costs — can simultaneously achieve better patient compliance and improve overall beneficial use of prescription drugs. [4]

S.B. 38 mandates certain pricing terms that may look favorable in the short run, but could lead to higher long-term drug costs. (Section 21.07.130; Section 21.07.145). Specifically, the bill bans certain pricing models used by plan sponsors to align PBM financial incentives with that of the plan sponsor to lower overall costs. Plan sponsors are sophisticated purchasers and currently utilize several pricing methods with full knowledge of the financial incentives built in for PBMs. They should be able to choose the pricing model that best meets their needs.

Forty-one states and the District of Columbia currently require payment between 30-60 days. Alaska requires payment of clean claims within 30 days. S.B. 38 reduces this to 7 days (Section 21.07.120). This would significantly reduce the PBMs ability to proactively monitor for fraud and abuse and interfere with the PBM's ability to perform certain drug management techniques that are essential for consumer safety.

Finally, the bill prohibits PBMs from selectively contracting with only those providers necessary to enable the organization to provide patients with adequate access to pharmacy services, and quality, cost-effective health care (Section 21.07.100). PBMs go to great lengths to assure they have enough qualified providers in their networks so patients have adequate access to needed medical services. Any willing pharmacy laws increase costs to enrollees by disallowing efficiencies based on economies of scale and undermine PBM's ability to control the quality of clinical services provided to its members.

Now more than ever, the current state of the economy requires us to look for ways to ensure patients have access to affordable quality drug coverage. S.B. 38 would drive up overall drug expenditures and risk patient safety without any evidence of clinical benefit to the consumer.

Sincerely,

Michael Harrold
Senior Director, State Government Affairs

Achieving Optimal Pharmacy Value©

Gerry Purcell
Managing Partner

Since 1998, Gerry Purcell has become a nationally recognized heath care reformer, speaker and thought leader calling for full disclosure and transparency in health care spending. His primary focus has been in the fast growing area of Pharmacy Benefit Manager (PBM) revenues. He advocates on behalf of commercial, union and public sector plans, assisting them in managing their pharmacy programs and expenditures. He has led the charge in requiring PBMs to properly disclose, manage and account for plan assets where a fiduciary and/or a good faith duty exists.

Gerry ignited a national discussion with his 1998 article, "A Cost Effective Guide To Pharmacy Benefits", about the hidden practices PBMs have utilized for years to inflate pharmacy costs and derive excessive profits. Gerry authored the article with an insider's vantage point while serving as a sales manager for a leading public sector PBM. The article quickly gained national attention and was published in *Employee Benefit News, Benefit Solutions* and nine other health related publications.

Gerry is frequently interviewed by national news organizations to include being featured in the August 12, 2002 issue of *US News & World Report*, which exposed questionable PBM practices. He has served as a panelist in town hall debates moderated by Fox News' Chris Wallace and NBC's Forrest Sawyer.

In addition to work in the private sector, Gerry is frequently asked to offer insight to state executive and legislative entities and to testify before both federal and state legislative bodies, most recently in Georgia, New York, Oklahoma, Texas and Virginia. He has briefed Department of Justice attorneys and given confidential executive briefings to more than a dozen State Attorneys Generals on the subject of pharmacy benefits, and evaluated their respective state programs. He has worked extensively, on retainer, in support of the multi-state Attorneys Generals litigation against a major PBM regarding reimbursement of Medicaid claims; with estimated damages reported at potentially $500 million.

Gerry assists states, cities and private plans in selecting and contracting the best PBM, negotiating optimal contracts with pharmacies and drug manufacturers, selecting benefit designs, evaluating formularies, maximizing drug manufacturer rebate strategies and rebate migration, auditing, and litigation strategies. He is actively involved in assessing PBM business practices and the potential financial damages and overcharges as a result of their practices. He has evaluated hundreds of plan sponsor agreements, thousands of pages of PBM documents to include agreements with drug manufacturers and network pharmacies, and collaborated with the top PBM consultants and auditors in the United States for the purpose of developing a baseline model to determine potential overcharges, and ultimately the optimal contracting terms.

Gerry's efforts, along with other full disclosure advocates, are yielding substantial savings and recoveries for clients and are beginning to change PBM practices nationally.

Prior to working in the PBM industry and forming Pharmacy Partners, Gerry worked in the managed care industry with Kaiser Permanente. Prior to Kaiser, he served in several supervisory positions with multi-million dollar profit and loss responsibility to include Mobil Oil Corporation and six years as an Army intelligence officer. In 1980, he served as National President of the 300,000 member Vocational Industrial Clubs of America (VICA). In this capacity, he worked closely with corporate and union leaders and educators to prepare young people to enter trade and industrial industries.

Gerry graduated with honors from the U.S. Army Intelligence Center and School and is a Distinguished Military Graduate of Chaminade University of Honolulu.

Gerry can be reached in his Atlanta office at 404.783.2020 or via email at gerrypurcell@mac.com.

David Balto is a Senior Fellow at American Progress focusing on competition policy, intellectual property law, and health care. He has over 20 years of experience as an antitrust attorney in the private sector, the Antitrust Division of the Department of Justice, and the Federal Trade Commission. He is nationally known for his expertise in competition policy in high tech industries, semiconductors, health care, pharmaceuticals, medical devices, media, and financial services. He regularly provides advice on mergers, strategic alliances, and joint ventures.

From 1995-2001 he was the policy director of the Bureau of Competition of the Federal Trade Commission and attorney advisor to Chairman Robert Pitofsky. In these leadership roles Mr. Balto was a senior advisor in developing competition policy and identifying key enforcement initiatives. He helped draft guidelines involving intellectual property, joint ventures, and health care. He played a key role in several litigated cases, including the challenges to the Staples/Office Depot and Heinz/Beechnut mergers, the Intel monopolization case, and the challenges to anticompetitive conduct by several pharmaceutical companies. He is the only person to twice win the FTC's award for outstanding scholarship and won the FTC's award for distinguished service, the highest award given a staff attorney.

Mr. Balto has authored more than 60 articles about competition policy focusing on intellectual property, health care, pharmaceuticals, financial services, and mergers. He regularly testifies before Congress, state legislatures, the FTC, and DOJ. He has authored numerous amicus briefs for consumer groups in seminal antitrust cases.

TESTIMONY OF DAVID BALTO,
ANTITRUST ATTORNEY
SENIOR FELLOW
CENTER FOR AMERICAN PROGRESS ACTION FUND
FORMER POLICY DIRECTOR, FEDERAL TRADE COMMISSION

Hearing on Senate Bill No. 38: On Health Care Provider and Patient Protection
Senate Health & Social Services Committee
Alaska Senate
April 3, 2009

Distinguished members of the Alaska Senate, thank you for this opportunity to testify today regarding the use, and misuse of Pharmaceutical Benefit Managers ("PBMs") and the need to enact legislation to protect patients and providers. My testimony today presents a brief overview based on my over 25 years as an antitrust attorney and enforcer. I conclude that: (1) there is a significant problem involving PBMs, due to the concentration in the market, deceptive practices and lack of transparency; (2) because of the market power of PBMs pharmacies are compelled to participate in pharmacy benefit networks at extremely low reimbursement rates, leading to a reduction in pharmacy services for consumers; (3) market forces alone will not correct these problems; (4) litigation will not adequately address the issues; (5) the FTC report on PBM self-dealing is critically flawed; and (6) legislation is the appropriate solution for the competitive and deceptive practices in the market. I strongly believe that Senate Bill No. 38 is an appropriate response to these competitive and consumer protection problems.

I have practiced antitrust law for over 25 years both in the government and in private practice. Prior to entering private practice, I was at the Federal Trade Commission for almost a decade in several senior positions. I was the Assistant Director of the Office of Policy and Evaluation for the Bureau of Competition of the Federal Trade Commission and attorney advisor to Chairman Robert Pitofsky. In these positions, I was a senior advisor in the FTC's merger and non-merger enforcement program. I was involved in the drafting and issuance of the FTC and

3510

DOJ Statements of Antitrust Enforcement Policy in Healthcare. I also assisted in the litigation of numerous monopolization cases as well as challenges to anticompetitive and exclusionary conduct by several health care companies. I am also a Senior Fellow at the Center for American Progress, where my work focuses on competition and health care reform.

During my tenure at the FTC PBMs began to arise and become a more significant competitive force. PBMs offered the potential for significant cost savings and other benefits. However, this depended upon whether market forces could function in an unimpeded fashion. In order for a market to function competitively two factors are crucial: choice and information. If either is lacking then government enforcement or regulation may be necessary. That is why the FTC acted in the 1990s to require restructuring of the Merck's acquisition of the Medco PBM, and Lilly's acquisition of the PCS PBM.

I have been in private practice for the past several years working extensively on healthcare antitrust issues. I counsel a wide variety of firms on pharmaceutical regulatory and antitrust issues. My clients include all types of participants in the PBM market including chain and independent pharmacies, plan sponsors, insurance companies and Pharmacy Benefit Managers.[1]

State legislatures around the country – as well as the U.S. Congress itself – have been searching for ways to stem dramatically rising healthcare costs. In recent years this has grown from a serious concern to a pressing crisis. Many proposals involve Pharmaceutical Benefit Managers as a promising way to increase efficiency and lower costs. PBMs provide a number of valuable services, including managing formularies and negotiating lower prices with pharmaceutical companies.

Although PBMs offer a great deal of promise in terms of controlling pharmaceutical costs, there is a pattern of conflicts of interest, self-dealing and anticompetitive conduct, which ultimately means that Alaska consumers pay far more for drugs than necessary. The dominant

[1] My views today reflect my own views and not those of any client.

PBMs have been plagued with opaque business practices, limited market competition and widespread allegations of fraud. Senator Montigny, Chair of the Board of The National Legislative Association on Prescription Drug Prices (NLARx), says "we know of no other market in which there has been such a significant number of prominent enforcement actions and investigations, *especially a market with such a significant impact on taxpayers.*"[2] The facts are clear: while PBMs may well prove a necessary expedient in lowering the cost of healthcare, measures must be taken to ensure that they operate as they are supposed to.

PBMs in their current form pose a serious financial problem for the state of Alaska and its consumers. While PBMs are in a position to negotiate low prices from pharmaceutical manufacturers, a lack of transparency makes this a dubious proposition. Even if PBMs receive significant revenue from pharmaceutical manufacturers; it is increasingly unclear the degree that these rebates reduce costs for the PBM's clients. Therefore, the very same aspect of the PBM that should create savings also contains an inherent conflict of interest. A review of the considerable federal and state litigation against PBMs reveals several recurring issues:

(1) conflicts of interest because PBMs both manage drug benefits and dispense drugs;

(2) the exercise of monopsony power harming pharmacies and reducing pharmacy services for consumers;

(3) improper prescription drug switching to a higher priced drug without medical justification and without the authorization of the prescribing physician;

(4) failing to disclose and pass on the full extent of rebates and other incentives received from drug manufacturers, and failing to pass through such discounts to pharmacies and consumers; and,

(5) price fixing.

The tremendous amount of litigation by employers, insurers, consumer groups and others against PBMs demonstrates the extent of the financial problem, fundamentally stemming from the lack of transparency. Regulation to create some sort of market transparency is crucial to the proper

[2] Letter from Senator Mark Montigny, on behalf of NLARx, to Deborah Platt Majoras, FTC Chair, May 11, 2005.

functioning of this market. The First Circuit Court of Appeals that upheld Maine's regulatory statute noted that PBMs "introduce a layer of fog to the market that prevents benefits providers from fully understanding how to best minimize their net prescription drug costs." Over the past four years, more than twenty states either have passed or are considering regulation of PBMs to address these problems. The State of Alaska should seriously consider legislation to alleviate the same opaque conditions that have already cost so much to so many.

PBMs harm consumers by using their market power to reduce compensation to pharmacies. As noted below the PBM market is highly concentrated and that enables them to exercise "monopsony" or buyer power to reduce compensation to the pharmacies that provide dispensing services. Although a reduction in compensation may appear attractive from the perspective of a buyer of PBM services, that attraction is misleading. The savings from reducing compensation is not passed on to buyers in lower prices because of the market power of PBMs. Moreover, ultimately the consumer of drugs is harmed because there are fewer pharmacies available or other forms of pharmacy services diminish.[3]

This is a particularly severe problem in largely rural states such as Alaska. Consumers value convenience and the ability to visit community pharmacies for face to face service. The interest of PBMs is to lower compensation to the minimal level (or even less) to drive pharmacies out of the market. PBMs have an inherent conflict of interest because they dispense drugs through their own mail order operations.

In Alaska, there is a chronic problem with PBMs either paying pharmacies late or manipulating the PBM claims process. Senate Bill No. 38 addresses this problem by requiring the timely payment of claims and limiting the ability of PBMs to manipulate claims processing.

Market forces and litigation are not the solution to this problem. PBMs consistently claim that market forces have taken or will take care of any problems. Clients are sophisticated, and can sufficiently ensure that their plans save money. The PBMs therefore contend that no

[3] 3] This monopsony power that PBMs enjoy is similar to that of health insurers, which have the ability to impose take-it-or-leave it contracts on physicians.

supervision is needed. Furthermore, they pretend, the litigation that has already occurred has been sufficient to iron out any difficulties with the current structure. Both of these arguments are critically flawed.

Market forces are not a complete solution. First of all, the PBM market is highly concentrated. The three largest PBMs (Caremark, Express Scripts, and Medco) control over 80% of insured prescriptions and 90% of insured mail order prescriptions... Furthermore, high barriers to entry insulate the market from potential competition. Meanwhile, the PBMs dismiss the issue by saying that clients are competent enough not to lose money. Indeed, those who have the resources for monitoring the PBMs have in some cases done so, and prosecution has been the frequent result.

Indeed, there have been market-driven reforms, such as contract negotiations which involve a degree of transparency similar to that of proposed legislation. This again relies on clients, however, to have sufficient resources for researching and sufficient leverage for negotiating such a contract. Clearly, PBMs are willing to accept transparency when necessary; though they will fight tooth and nail to avoid it whenever possible.

Litigation is not a complete solution. Proponents of PBMs may argue that if there are competitive problems or deceptive practices they will be cured by litigation. Certainly there are numerous antitrust, fraud and consumer protection cases ongoing. But as the Senate knows all too well, litigation is expensive and time-consuming. Some of these cases have been pending for several years. And the ultimate resolution of these cases will cure a single problem in the past. Litigation is too episodic, slow and expensive to be a cure all

Each of the major PBMs has been the subject of a major enforcement action brought by a coalition of state attorneys generals and in some cases by the Department of Justice. These cases have secured over $370 million of penalties and damages. And numerous settlement agreements involving varying degrees of information disclosure strongly recommend transparency as a reasonable solution to the problem. (A list of the respective cases is attached.)

For example, in September 2005, AdvancePCS (acquired by Caremark) agreed to a $137.5 million fine and a five-year injunction and settlement agreement with the United States Department of Justice. The allegations against AdvancePCS included receiving kickbacks from pharmaceutical manufacturers, improper therapeutic substitutions, as well as making false claims to the government. One key provisions of the settlement agreement was – unsurprisingly – disclosure to client plans of all information reasonably necessary to audit contract compliance.

Perhaps most importantly, recent litigation upheld a Maine law addressing these issues. In *PCMA v. Maine*, PBMs attempted to strike down a Maine statute that required them to disclose information regarding rebates from pharmaceutical manufacturers. The federal district court granted summary judgment in favor of Maine on all claims.[4] Furthermore, the First Circuit Court of Appeals upheld this decision unanimously. Judge Torruella of the First Circuit wrote, "If PBMs truly assumed that they would be free from disclosure requirements of the sort set forth in the Maine law here, this would be more wishful thinking than reasonable expectation. Whether or not the law strikes the right economic balance between competing producer and consumer interests, it is no more a taking than the requirement that public corporations disclose private corporate information about financial prospects to the public through regular SEC filings." In this context, it is easy to understand why so many states are considering saving themselves millions of dollars by demanding PBM transparency from the outset.

Senate Bill No. 38 attempts to address two problems identified in the past government enforcement actions. First, the Bill attempts to protect patients from unwarranted so-called "therapeutic substitutions." The government enforcement actions found that PBMs often compel patients to switch drugs, not because a drug is preferable or less costly, but because the PBM receives a greater rebate for the new drug. Senate Bill No. 38 requires the PBM to secure the approval of the prescriber to substitute the drug and informed the patient of the substitution and the reason for the substitution. (Section 21.07.130).

[4] Pharmaceutical Care Management Association (PCMA) v. Rowe, Civil No. 03-153-B-H (April 2005)(at 4-5)

Second, PBMs are often reluctant to provide information to covered entities on the sources and amounts of compensation and rebates they receive from pharmaceutical manufacturers. This lack of information allows the PBMs to secure new sources of revenue by failing to disclose the amount of revenue they secure or engaging in spread pricing. Transparency is essential for covered entities to make sure they receive the best price from their PBM and the provisions in the Bill will result in greater competition and cost savings.

Greater efficiency and ability to control costs are within reach. American healthcare is changing rapidly, and PBMs have become an important element in healthcare management. Legislation is absolutely necessary to ensure that this arrangement turns out to be a blessing and not a curse. If transparency and a fiduciary duty are mandated for PBMs, there will be little chance for them to defraud their clients and the state of Alaska with conflicts of interest or cryptic closed-door financial dealings. With careful legislation that actually allows market forces to work, the rising costs of pharmaceuticals can be at least in some considerable measure abated.

I appreciate the opportunity to provide this testimony and would be pleased to answer any questions.

CS FOR SENATE BILL NO. 46(HSS)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY THE SENATE HEALTH AND SOCIAL SERVICES COMMITTEE

Offered:
Referred:

Sponsor(s): SENATOR KOOKESH

A BILL

FOR AN ACT ENTITLED

"An Act relating to child support awards; and repealing Rule 90.3, Alaska Rules of Civil Procedure."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 25 is amended by adding a new chapter to read:

Chapter 28. Child Support Awards.

Sec. 25.28.010. Guidelines; primary physical custody. (a) A tribunal shall calculate a child support award in a case in which one parent is awarded primary physical custody as an amount equal to the adjusted annual income of the noncustodial parent multiplied by a percentage specified in (b) of this section.

(b) To calculate the child support award, the tribunal shall multiply the noncustodial parent's adjusted annual income by the following percentages:

(1) 20 percent for one child;

(2) 27 percent for two children;

(3) 33 percent for three children; and

New Text Underlined *[DELETED TEXT BRACKETED]*

(4) an additional three percent for each additional child.

(c) The tribunal may allow the obligor parent to reduce child support payments by up to 75 percent for a period in which the obligor parent has extended visitation of more than 27 consecutive days. The order must specify the amount of the reduction that is allowable if the extended visitation is exercised.

(d) The tribunal may calculate child support based on a determination of the potential income of a parent who voluntarily and unreasonably is unemployed or underemployed. A determination of potential income may not be made for a parent who is physically or mentally incapacitated, or who is caring for a child under two years of age to whom the parents owe a joint legal responsibility. Potential income shall be based on the parent's work history, qualifications, and job opportunities. The tribunal also may impute potential income for nonincome producing or low income producing assets.

(e) In this section, "adjusted annual income" means the parent's total income from all sources less

(1) mandatory deductions, including

(A) federal, state, and local income tax;

(B) social security tax or the equivalent contribution to an alternate plan established by a public employer, and self-employment tax;

(C) Medicare tax;

(D) mandatory union dues;

(E) mandatory contributions to a retirement or pension plan;

(2) voluntary contributions to a retirement or pension plan or account in which the earnings are tax-free or tax-deferred, except that the total amount of these voluntary contributions plus any mandatory contributions under (1)(E) of this subsection may not exceed 7.5 percent of the parent's gross wages and self-employment income;

(3) child support and alimony payments arising from previous relationships that are required by another tribunal and actually paid;

(4) child support for children from prior relationships living with the parent, calculated by using the formula under this chapter; and

(5) work-related child care expenses for the child who is the subject of the child support order.

Sec. 25.28.020. Guidelines; shared, divided, and hybrid custody awards. (a) The tribunal shall calculate shared, divided, and hybrid physical custody awards as provided in this section.

(b) The tribunal shall calculate a child support award in a case in which the parents are awarded shared physical custody by

(1) calculating the annual amount each parent would pay to the other parent under AS 25.28.010 assuming the other parent had primary custody; in this calculation, the income limit in AS 25.28.030(c) and the minimum support amount in AS 25.28.030(d) apply;

(2) multiplying the amount determined under (1) of this subsection for each parent by the percentage of time the other parent has physical custody of the child; however, if the tribunal finds that the percentage of time each parent will have physical custody does not accurately reflect the ratio of funds each parent will directly spend on supporting the child, the tribunal shall vary this percentage to reflect its findings;

(3) determining which parent has the greater amount under (2) of this subsection; the parent with the greater amount under (2) of this subsection is the obligor parent, and the annual award is equal to the difference between the two amounts under (2) of this subsection multiplied by 1.5; however, if this amount is greater than the amount of support calculated under AS 25.28.010 assuming the obligor parent has primary custody, the annual support is the amount calculated under AS 25.28.010.

(c) The child support award for shared custody under (b) of this section must be paid in 12 equal monthly installments, except that if

(1) shared custody is based on the obligor parent's having physical custody for periods of 30 consecutive days or more, the total annual award may be paid in equal installments over those months in which the obligor parent does not have physical custody; or

(2) the obligor parent's income is seasonal, the tribunal may order

unequal monthly support payments as provided in AS 25.28.030(g) and (h).

(d) The child support order must state that failure to exercise sufficient physical custody to qualify for shared physical custody under (b) or (c) of this section is grounds for modification of the child support order. Denial of visitation by the custodial parent is not cause to increase a child support award.

(e) The tribunal shall

(1) calculate a child support award in a case in which the parents are awarded divided custody by determining the amount each parent would pay to the other parent for support of a child for whom that parent has primary physical custody under AS 25.28.010, taking into account the income limit in AS 25.28.030(c) and the minimum support amount in AS 25.28.030(d), and offsetting those amounts; and

(2) consider whether the amount determined under (1) of this subsection should be varied under AS 25.28.030(b).

(f) The tribunal shall

(1) calculate a child support award in a case in which the parents are awarded hybrid custody by

(A) applying AS 25.28.010, taking into account the income limit in AS 25.28.030(c) and the minimum support amount in AS 25.28.030(d), to determine support for a child in the primary physical custody of each parent;

(B) applying (b) of this section to determine support for a child in the shared physical custody of the parents;

(C) adjusting pro rata the percentages provided in AS 25.28.010(b) based on the number of children to which each type of custody applies; and

(D) combining the amounts to determine the net obligation; and

(2) consider whether the amount determined under (1) of this subsection should be varied under AS 25.28.030(b).

Sec. 25.28.030. Exceptions to support awards. (a) Notwithstanding the requirements in AS 25.28.010 and 25.28.020, the tribunal may vary the award for the reasons stated in this section.

(b) The tribunal may vary the child support award as calculated under the other provisions of this chapter for good cause on proof by clear and convincing evidence that manifest injustice would result if the support award were not varied. The tribunal shall specify in writing the reason for the variation, the amount of support that would have been required but for the variation, and the estimated value of any property conveyed instead of support calculated under the other provisions of this chapter. Good cause may include a finding that unusual circumstances exist that require variation of the award in order to award an amount of support that is just and proper for the parties to contribute toward the nurture and education of their children. The tribunal shall consider the custodial parent's income in this determination.

(c) The calculation for primary physical custody under AS 25.28.010 does not apply to the extent that the parent has an adjusted annual income of more than ~~$105~~,000. The tribunal may make an additional award only if it is just and proper, ~~taking into account~~ the needs of the child, the standard of living of the child, and the extent to which that standard should reflect the supporting parent's ability to pay.

(d) Except as provided in AS 25.28.010(c) and 25.28.020, the minimum child support amount that may be ordered is $50 a month or $600 a year.

(e) In addition to ordering a parent to pay child support as calculated under this chapter, the tribunal may, in appropriate circumstances and when the parents are minors as described in (f) of this section, order one or more grandparents of a child to pay child support to an appropriate person in an amount determined by the tribunal to serve the best interests of the child; however, the amount may not exceed the lesser of

(1) a proportionate share of the amount required to provide care in a supervised setting to the grandchild, as determined by the tribunal; or

(2) the amount that would have been awarded if the child's parents had the incomes of the child's grandparents and AS 25.28.010 and 25.28.020 were applied.

(f) An order under (e) of this section may be issued only with respect to a child whose parents are both minors, and the order terminates when either parent becomes 18 years of age. The tribunal shall specify in writing the reasons it considers it to be appropriate to order a grandparent to pay child support under this subsection and the factors considered in setting the amount of the child support award. In this

subsection, "grandparent" means the natural or adoptive parent of the minor parent.

(g) If the noncustodial parent's income is seasonal, the tribunal may order that the annual support amount be paid in unequal monthly payments, with higher payments during the months the parent expects to receive higher income and lower payments in other months; the tribunal may not make an unequal payment order unless

(1) the tribunal finds that the burden of budgeting for periods of unequal income should be placed on the obligee rather than the obligor; and

(2) the obligee agrees.

(h) An order of the tribunal for unequal payments under (g) of this section must specify the annual support amount, the average monthly support amount, and the amount due for each month. The order must provide that variations from the average monthly amount begin with monthly payments in excess of the average monthly amount so that a deficit situation cannot occur. Until the excess payments begin, the tribunal shall order payment of the average monthly amount.

Sec. 25.28.040. Health care expenses. (a) The tribunal shall include in the order coverage of the child's health care needs and require health insurance for the child if insurance is available to either parent or both parents at a reasonable cost. The tribunal shall consider whether the child is eligible for services through the Indian Health Service, any other entity, or other insurance coverage before ordering either parent or both parents to provide health care coverage through insurance, cash medical support, or other means. A court shall find that health insurance is available only if the ~~dependent child has reasonable geographic access~~ to the covered services or the insurance includes the coverage of transportation needed for the services.

~~(b) The tribunal shall allocate equally the cost of insurance and cash~~ medical support between the parents unless the tribunal orders otherwise for good cause. An obligor's child support obligation shall be decreased by the amount of the obligee's portion of health insurance payments and cash medical support ordered by the tribunal and actually paid by the obligor. The tribunal shall increase a child support award by the obligor's portion of health insurance if the obligee is ordered to, and actually does, obtain and pay for insurance.

(c) The cost of insurance is the cost attributable to the child for whom support

is paid. If the cost to the employee of covering the employee alone is the same as the cost to the employee of covering the employee and dependents, then there is no additional cost to the employee for adding the child and no portion of the cost of coverage may be allocated to the child. If dependent coverage can be added for a single cost, rather than for each dependent, and the dependent coverage covers dependents in addition to the child subject to the order, the cost of the dependent coverage shall be allocated equally among the dependents covered. If there is reason to believe that there is an incremental cost to the employee for insuring dependents but evidence of that incremental cost is unavailable, the cost of insurance is determined by dividing the total cost of coverage by the number of family members covered and multiplying that amount by the number of children subject to the order.

(d) The tribunal shall allocate equally between the parties the cost of reasonable health care expenses not covered by insurance unless the tribunal orders otherwise for good cause. A party shall reimburse the other party for the party's share of the uncovered health care expenses within 30 days after receipt of the bill for the health care, payment verification, and, if applicable, a health insurance statement indicating what portion of the cost is uncovered. The tribunal shall allocate the reasonable, uncovered health care expenses exceeding $5,000 in a calendar year based on the parties' relative financial circumstances when the expenses occur.

(e) A court shall find that the cost of cash medical support or private health insurance is reasonable under this section if the cost to the responsible parent does not exceed five percent of the responsible parent's gross income. In calculating the percentage for purposes of health insurance coverage, the cost is the cost of adding the dependent child to the existing insurance coverage or the difference between self-only and family coverage.

(f) In this section,

(1) "cash medical support" means an amount ordered to be paid toward the cost of health insurance provided by a public entity or by another parent through employment or otherwise, or for other medical costs not covered by insurance;

(2) "health care expenses" includes medical, dental, vision, and mental health counseling expenses.

Sec. 25.28.050. Child support affidavit and documentation. (a) Subject to the confidentiality requirements of Rule 90.1(f), Alaska Rules of Civil Procedure, each parent in a proceeding of a tribunal at which child support is involved shall file a statement under oath that states the parent's adjusted annual income and the components of adjusted annual income as described in AS 25.28.010(e). This statement must be filed with a party's initial pleading in superior court, including the dissolution petition, divorce complaint or answer, motion to modify, and any response to a motion to modify, and must be accompanied by documentation verifying the income. The documents must be redacted to delete social security numbers and to provide only partial financial account information as provided in Rule 90.1(f), Alaska Rules of Civil Procedure. The statement must state whether the parent has access to health insurance for the children and, if so, the additional cost to the parent of the children's health insurance.

(b) While there is an ongoing monthly support obligation, each party shall provide to the other party, within 30 days after a written request, documents such as tax returns and pay stubs showing the party's income for the prior calendar year. The party making the request shall provide documentation of the party's annual income for the same period at the time the request is made. A request under this section may not be made more than once a year. This section does not preclude discovery under the Alaska Rules of Civil Procedure.

(c) Unless the information has already been provided to the tribunal under Rule 90.1(f), Alaska Rules of Civil Procedure, a statement under (a) of this section must be accompanied by a confidential information sheet as described in Rule 90.1, Alaska Rules of Civil Procedure. Once a complete confidential information sheet has been submitted to the tribunal listing names, dates of birth, and social security numbers as required, the parties shall omit or redact social security numbers from documents subsequently filed in the action unless otherwise ordered by the tribunal.

(d) The tribunal may withhold or assess costs or attorney fees for a violation of this section as the circumstances and discouragement of like conduct in the future may require. Costs and attorney fees may be imposed on offending attorneys or parties.

Sec. 25.28.060. Travel expenses. After determining an award of child support under this chapter, the court shall allocate between the parties reasonable travel expenses that are necessary to exercise visitation as may be just and proper for the parties to contribute.

Sec. 25.28.070. Modification; defense against arrearages. (a) A tribunal may modify a final child support award on a showing of a material change of circumstances as provided by state law. A material change of circumstances shall be presumed if support as calculated under this chapter is more than 15 percent greater or less than the outstanding support order. An award may be modified to require cash medical support regardless of whether insurance is available to either parent if neither parent has purchased health insurance. In this subsection, support includes health insurance payments ~~or cash medical~~ support made under AS 25.28.040.

(b) A court may not modify a child support arrearage retroactively, except as authorized by AS 25.27.166(d). A modification that is effective on or after the date that a motion for modification, or a notice of petition for modification by the child support services agency, is served on the opposing party is not considered a retroactive modification.

(c) The tribunal may find that a parent and a parent's assignee are precluded from collecting arrearages for support of a child that accumulated during a time period exceeding nine months for which the parent agreed or acquiesced to the obligor exercising primary custody of the child. A finding that preclusion is a defense must be based on clear and convincing evidence.

Sec. 25.28.080. Third-party custody. (a) When the state, or another third party entitled to child support, has custody of all children of a parent, the parent's support obligation to the third party is an amount equal to the adjusted annual income of the parent multiplied by the percentage specified in AS 25.28.010(b). If the third party has custody of some but not all children, the parent's support obligation to the third party is an amount equal to the adjusted annual income of the parent, multiplied by the percentage specified in AS 25.28.010(b) for the total number of the parent's children, multiplied by the number of the parent's children in third-party custody, divided by the total number of the parent's children. In this subsection, the number of

the parent's children includes only children of the parent who live with the parent, are substantially supported by the parent, or are in custody of the third party entitled to support.

(b) If, in addition to a support obligation to a third party, one or both parents retain primary or shared physical custody of at least one of their children, the support obligation between the parents is calculated under the other provisions of this chapter, without consideration of the third-party custodian or any children in the custody of the third-party custodian, except that the percentage in AS 25.28.010(b) must be adjusted pro rata for the number of children in the primary custody of a parent, or shared custody of the parents, compared to the total number of children. After that calculation is completed, any support owed may be offset with support owed to a third-party custodian under (a) of this section in order to minimize transactions.

Sec. 25.28.090. Support order forms. All orders for payment or modification of child support shall be entered on a form developed by the administrative director of the tribunal. A party may lodge a duplicate of the tribunal form produced by a laser printer or similar device. A device may also print, in a contrasting typestyle equivalent to that produced by a typewriter, text that otherwise would have been entered by a typewriter or word processor. A party or attorney who lodges a duplicate certifies by lodging the duplicate that it is identical to the current version of the court form.

Sec. 25.28.100. Dependent tax deduction. The court may allocate the dependent tax deduction for each child between the parties as is just and proper and in the child's best interests. The allocation must be consistent with AS 25.24.152 and federal law.

Sec. 25.28.300. Definitions. In this chapter,

(1) "child support" and "child support obligation" have the meaning given "duty of support" in AS 25.27.900;

(2) "divided custody" means that one parent has primary physical custody of one or more children of the relationship and the other parent has primary custody of one or more other children of the relationship, and the parents do not share physical custody of any of their children;

(3) "hybrid custody" means that at least one parent has primary

physical custody of one or more children of the relationship, and the parents have shared physical custody of at least one child of the relationship;

(4) "primary physical custody" or "primary custody" means that a child resides with the other parent for a period, specified in the custody order, of less than 30 percent of the year;

(5) "shared physical custody" or "shared custody" means that a child resides with one parent for a period, specified in writing in the custody order, of at least 30 percent but not more than 70 percent of the year, regardless of the status of legal custody;

(6) "tribunal" means the superior court or the child support services agency created in AS 25.27.010.

*** Sec. 2.** AS 47.10.120(a) is amended to read:

(a) When a child in need of aid is committed under this chapter, the court or the child support services agency created in AS 25.27.010 shall, after giving the parent a reasonable opportunity to be heard, require that the parent pay to the department in a manner that the court or the child support services agency directs a sum to cover in full or in part the maintenance and care of the child. The support obligation shall be calculated under **AS 25.28** [RULE 90.3(i) OF THE ALASKA RULES OF CIVIL PROCEDURE].

*** Sec. 3.** AS 47.12.230(a) is amended to read:

(a) When a delinquent minor is committed under this chapter, the court or the child support services agency created in AS 25.27.010 shall, after giving the parent a reasonable opportunity to be heard, require that the parent pay to the department in a manner that the court or the child support services agency directs a sum to cover in full or in part the maintenance and care of the minor. The support obligation shall be calculated under **AS 25.28** [RULE 90.3(i) OF THE ALASKA RULES OF CIVIL PROCEDURE].

*** Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REPEAL OF COURT RULE. Rule 90.3, Alaska Rules of Civil Procedure, is repealed.

*** Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to

read:

NONAPPLICABILITY OF TWO-THIRDS VOTE REQUIREMENT. Because the rule repealed in sec. 4 of this Act is a substantive rule rather than a rule of practice or procedure, the repeal of the rule takes effect even if sec. 4 of this Act does not receive the two-thirds majority vote of each house required by art. IV, sec. 15, Constitution of the State of Alaska.

CS FOR SENATE BILL NO. 46( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): SENATOR KOOKESH

A BILL

FOR AN ACT ENTITLED

"An Act relating to child support awards; and repealing Rule 90.3, Alaska Rules of Civil Procedure."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 25 is amended by adding a new chapter to read:

Chapter 28. Child Support Awards.

Sec. 25.28.010. Guidelines; primary physical custody. (a) A tribunal shall calculate a child support award in a case in which one parent is awarded primary physical custody as an amount equal to the adjusted annual income of the noncustodial parent multiplied by a percentage specified in (b) of this section.

(b) To calculate the child support award, the tribunal shall multiply the noncustodial parent's adjusted annual income by the following percentages:

(1) 20 percent for one child;

(2) 27 percent for two children;

(3) 33 percent for three children; and

(4) an additional three percent for each additional child.

(c) The tribunal may allow the obligor parent to reduce child support payments by up to 75 percent for a period in which the obligor parent has extended visitation of more than 27 consecutive days. The order must specify the amount of the reduction that is allowable if the extended visitation is exercised.

(d) The tribunal may calculate child support based on a determination of the potential income of a parent who voluntarily and unreasonably is unemployed or underemployed. A determination of potential income may not be made for a parent who is physically or mentally incapacitated, or who is caring for a child under two years of age to whom the parents owe a joint legal responsibility. Potential income shall be based on the parent's work history, qualifications, and job opportunities. The tribunal also may impute potential income for nonincome producing or low income producing assets.

(e) In this section, "adjusted annual income" means the parent's total income from all sources less

(1) mandatory deductions, including

(A) federal, state, and local income tax;

(B) social security tax or the equivalent contribution to an alternate plan established by a public employer, and self-employment tax;

(C) Medicare tax;

(D) mandatory union dues;

(E) mandatory contributions to a retirement or pension plan;

(2) voluntary contributions to a retirement or pension plan or account in which the earnings are tax-free or tax-deferred, except that the total amount of these voluntary contributions plus any mandatory contributions under (1)(E) of this subsection may not exceed 7.5 percent of the parent's gross wages and self-employment income;

(3) child support and alimony payments arising from previous relationships that are required by another tribunal and actually paid;

(4) child support for children from prior relationships living with the parent, calculated by using the formula under this chapter; and

(5) work-related child care expenses for the child who is the subject of the child support order.

Sec. 25.28.020. Guidelines; shared, divided, and hybrid custody awards. (a) The tribunal shall calculate shared, divided, and hybrid physical custody awards as provided in this section.

(b) The tribunal shall calculate a child support award in a case in which the parents are awarded shared physical custody by

(1) calculating the annual amount each parent would pay to the other parent under AS 25.28.010 assuming the other parent had primary custody; in this calculation, the income limit in AS 25.28.030(c) and the minimum support amount in AS 25.28.030(d) apply;

(2) multiplying the amount determined under (1) of this subsection for each parent by the percentage of time the other parent has physical custody of the child; however, if the tribunal finds that the percentage of time each parent will have physical custody does not accurately reflect the ratio of funds each parent will directly spend on supporting the child, the tribunal shall vary this percentage to reflect its findings;

(3) determining which parent has the greater amount under (2) of this subsection; the parent with the greater amount under (2) of this subsection is the obligor parent, and the annual award is equal to the difference between the two amounts under (2) of this subsection multiplied by 1.5; however, if this amount is greater than the amount of support calculated under AS 25.28.010 assuming the obligor parent has primary custody, the annual support is the amount calculated under AS 25.28.010.

(c) The child support award for shared custody under (b) of this section must be paid in 12 equal monthly installments, except that if

(1) shared custody is based on the obligor parent's having physical custody for periods of 30 consecutive days or more, the total annual award may be paid in equal installments over those months in which the obligor parent does not have physical custody; or

(2) the obligor parent's income is seasonal, the tribunal may order

unequal monthly support payments as provided in AS 25.28.030(g) and (h).

(d) The child support order must state that failure to exercise sufficient physical custody to qualify for shared physical custody under (b) or (c) of this section is grounds for modification of the child support order. Denial of visitation by the custodial parent is not cause to increase a child support award.

(e) The tribunal shall

(1) calculate a child support award in a case in which the parents are awarded divided custody by determining the amount each parent would pay to the other parent for support of a child for whom that parent has primary physical custody under AS 25.28.010, taking into account the income limit in AS 25.28.030(c) and the minimum support amount in AS 25.28.030(d), and offsetting those amounts; and

(2) consider whether the amount determined under (1) of this subsection should be varied under AS 25.28.030(b).

(f) The tribunal shall

(1) calculate a child support award in a case in which the parents are awarded hybrid custody by

(A) applying AS 25.28.010, taking into account the income limit in AS 25.28.030(c) and the minimum support amount in AS 25.28.030(d), to determine support for a child in the primary physical custody of each parent;

(B) applying (b) of this section to determine support for a child in the shared physical custody of the parents;

(C) adjusting pro rata the percentages provided in AS 25.28.010(b) based on the number of children to which each type of custody applies; and

(D) combining the amounts to determine the net obligation; and

(2) consider whether the amount determined under (1) of this subsection should be varied under AS 25.28.030(b).

Sec. 25.28.030. Exceptions to support awards. (a) Notwithstanding the requirements in AS 25.28.010 and 25.28.020, the tribunal may vary the award for the reasons stated in this section.

(b) The tribunal may vary the child support award as calculated under the other provisions of this chapter for good cause on proof by clear and convincing evidence that manifest injustice would result if the support award were not varied. The tribunal shall specify in writing the reason for the variation, the amount of support that would have been required but for the variation, and the estimated value of any property conveyed instead of support calculated under the other provisions of this chapter. Good cause may include a finding that unusual circumstances exist that require variation of the award in order to award an amount of support that is just and proper for the parties to contribute toward the nurture and education of their children. The tribunal shall consider the custodial parent's income in this determination.

(c) The calculation for primary physical custody under AS 25.28.010 does not apply to the extent that the parent has an adjusted annual income of more than $100,000. The tribunal may make an additional award only if it is just and proper, taking into account the needs of the child, the standard of living of the child, and the extent to which that standard should reflect the supporting parent's ability to pay.

(d) Except as provided in AS 25.28.010(c) and 25.28.020, the minimum child support amount that may be ordered is $50 a month or $600 a year.

(e) In addition to ordering a parent to pay child support as calculated under this chapter, the tribunal may, in appropriate circumstances and when the parents are minors as described in (f) of this section, order one or more grandparents of a child to pay child support to an appropriate person in an amount determined by the tribunal to serve the best interests of the child; however, the amount may not exceed the lesser of

(1) a proportionate share of the amount required to provide care in a supervised setting to the grandchild, as determined by the tribunal; or

(2) the amount that would have been awarded if the child's parents had the incomes of the child's grandparents and AS 25.28.010 and 25.28.020 were applied.

(f) An order under (e) of this section may be issued only with respect to a child whose parents are both minors, and the order terminates when either parent becomes 18 years of age. The tribunal shall specify in writing the reasons it considers it to be appropriate to order a grandparent to pay child support under this subsection and the factors considered in setting the amount of the child support award. In this

subsection, "grandparent" means the natural or adoptive parent of the minor parent.

(g) If the noncustodial parent's income is seasonal, the tribunal may order that the annual support amount be paid in unequal monthly payments, with higher payments during the months the parent expects to receive higher income and lower payments in other months; the tribunal may not make an unequal payment order unless

(1) the tribunal finds that the burden of budgeting for periods of unequal income should be placed on the obligee rather than the obligor; and

(2) the obligee agrees.

(h) An order of the tribunal for unequal payments under (g) of this section must specify the annual support amount, the average monthly support amount, and the amount due for each month. The order must provide that variations from the average monthly amount begin with monthly payments in excess of the average monthly amount so that a deficit situation cannot occur. Until the excess payments begin, the tribunal shall order payment of the average monthly amount.

Sec. 25.28.040. Health care expenses. (a) The tribunal shall include in the order coverage of the child's health care needs and require health insurance for the child if insurance is available to either parent or both parents at a reasonable cost. The tribunal shall consider whether the child is eligible for services through the Indian Health Service, any other entity, or other insurance coverage before ordering either parent or both parents to provide health care coverage through insurance, cash medical support, or other means. The tribunal shall allocate equally the cost of insurance and cash medical support between the parents unless the tribunal orders otherwise for good cause. An obligor's child support obligation shall be decreased by the amount of the obligee's portion of health insurance payments and cash medical support ordered by the tribunal and actually paid by the obligor.

(b) The tribunal shall increase a child support award by the obligor's portion of health insurance if the obligee is ordered to, and actually does, obtain and pay for insurance. The cost of insurance is the cost attributable to the child for whom support is paid. If the cost to the employee of covering the employee alone is the same as the cost to the employee of covering the employee and dependents, then there is no additional cost to the employee for adding the child and no portion of the cost of

coverage may be allocated to the child. If dependent coverage can be added for a single cost, rather than for each dependent, and the dependent coverage covers dependents in addition to the child subject to the order, the cost of the dependent coverage shall be allocated equally among the dependents covered. If there is reason to believe that there is an incremental cost to the employee for insuring dependents but evidence of that incremental cost is unavailable, the cost of insurance is determined by dividing the total cost of coverage by the number of family members covered and multiplying that amount by the number of children subject to the order.

(c) The tribunal shall allocate equally between the parties the cost of reasonable health care expenses not covered by insurance unless the tribunal orders otherwise for good cause. A party shall reimburse the other party for the party's share of the uncovered health care expenses within 30 days after receipt of the bill for the health care, payment verification, and, if applicable, a health insurance statement indicating what portion of the cost is uncovered. The tribunal shall allocate the reasonable, uncovered health care expenses exceeding $5,000 in a calendar year based on the parties' relative financial circumstances when the expenses occur.

(d) In this section, "health care expenses" means medical, dental, vision, and mental health counseling expenses.

Sec. 25.28.050. Child support affidavit and documentation. (a) Subject to the confidentiality requirements of Rule 90.1(f), Alaska Rules of Civil Procedure, each parent in a proceeding of a tribunal at which child support is involved shall file a statement under oath that states the parent's adjusted annual income and the components of adjusted annual income as described in AS 25.28.010(e). This statement must be filed with a party's initial pleading, including the dissolution petition, divorce complaint or answer, motion to modify, and any response to a motion to modify, and must be accompanied by documentation verifying the income. The documents must be redacted to delete social security numbers and to provide only partial financial account information as provided in Rule 90.1(f), Alaska Rules of Civil Procedure. The statement must state whether the parent has access to health insurance for the children and, if so, the additional cost to the parent of the children's health insurance.

(b) While there is an ongoing monthly support obligation, each party shall provide to the other party, within 30 days after a written request, documents such as tax returns and pay stubs showing the party's income for the prior calendar year. The party making the request shall provide documentation of the party's annual income for the same period at the time the request is made. A request under this section may not be made more than once a year. This section does not preclude discovery under the Alaska Rules of Civil Procedure.

(c) Unless the information has already been provided to the tribunal under Rule 90.1(f), Alaska Rules of Civil Procedure, a statement under (a) of this section must be accompanied by a confidential information sheet as described in Rule 90.1, Alaska Rules of Civil Procedure. Once a complete confidential information sheet has been submitted to the tribunal listing names, dates of birth, and social security numbers as required, the parties shall omit or redact social security numbers from documents subsequently filed in the action unless otherwise ordered by the tribunal.

(d) The tribunal may withhold or assess costs or attorney fees for a violation of this section as the circumstances and discouragement of like conduct in the future may require. Costs and attorney fees may be imposed on offending attorneys or parties.

Sec. 25.28.060. Travel expenses. After determining an award of child support under this chapter, the tribunal shall allocate between the parties reasonable travel expenses that are necessary to exercise visitation as may be just and proper for the parties to contribute.

Sec. 25.28.070. Modification; defense against arrearages. (a) A tribunal may modify a final child support award on a showing of a material change of circumstances as provided by state law. A material change of circumstances shall be presumed if support as calculated under this chapter is more than 15 percent greater or less than the outstanding support order. In this subsection, support includes health insurance payments made under AS 25.28.040.

(b) A tribunal may not modify a child support arrearage retroactively, except as authorized by AS 25.27.166(d). A modification that is effective on or after the date that a motion for modification, or a notice of petition for modification by the child

support services agency, is served on the opposing party is not considered a retroactive modification.

(c) The tribunal may find that a parent and a parent's assignee are precluded from collecting arrearages for support of a child that accumulated during a time period exceeding nine months for which the parent agreed or acquiesced to the obligor exercising primary custody of the child. A finding that preclusion is a defense must be based on clear and convincing evidence.

Sec. 25.28.080. Third-party custody. (a) When the state, or another third party entitled to child support, has custody of all children of a parent, the parent's support obligation to the third party is an amount equal to the adjusted annual income of the parent multiplied by the percentage specified in AS 25.28.010(b). If the third party has custody of some but not all children, the parent's support obligation to the third party is an amount equal to the adjusted annual income of the parent, multiplied by the percentage specified in AS 25.28.010(b) for the total number of the parent's children, multiplied by the number of the parent's children in third-party custody, divided by the total number of the parent's children. In this subsection, the number of the parent's children includes only children of the parent who live with the parent, are substantially supported by the parent, or are in custody of the third party entitled to support.

(b) If, in addition to a support obligation to a third party, one or both parents retain primary or shared physical custody of at least one of their children, the support obligation between the parents is calculated under the other provisions of this chapter, without consideration of the third-party custodian or any children in the custody of the third-party custodian, except that the percentage in AS 25.28.010(b) must be adjusted pro rata for the number of children in the primary custody of a parent, or shared custody of the parents, compared to the total number of children. After that calculation is completed, any support owed may be offset with support owed to a third-party custodian under (a) of this section in order to minimize transactions.

Sec. 25.28.090. Support order forms. All orders for payment or modification of child support shall be entered on a form developed by the administrative director of the tribunal. A party may lodge a duplicate of the tribunal form produced by a laser

printer or similar device. A device may also print, in a contrasting typestyle equivalent to that produced by a typewriter, text that otherwise would have been entered by a typewriter or word processor. A party or attorney who lodges a duplicate certifies by lodging the duplicate that it is identical to the current version of the tribunal form.

Sec. 25.28.100. Dependent tax deduction. The tribunal may allocate the dependent tax deduction for each child between the parties as is just and proper and in the child's best interests. The allocation must be consistent with AS 25.24.152 and federal law.

Sec. 25.28.300. Definitions. In this chapter,

(1) "child support" and "child support obligation" have the meaning given "duty of support" in AS 25.27.900;

(2) "divided custody" means that one parent has primary physical custody of one or more children of the relationship and the other parent has primary custody of one or more other children of the relationship, and the parents do not share physical custody of any of their children;

(3) "hybrid custody" means that at least one parent has primary physical custody of one or more children of the relationship, and the parents have shared physical custody of at least one child of the relationship;

(4) "primary physical custody" or "primary custody" means that a child resides with the other parent for a period, specified in the custody order, of less than 30 percent of the year;

(5) "shared physical custody" or "shared custody" means that a child resides with one parent for a period, specified in writing in the custody order, of at least 30 percent but not more than 70 percent of the year, regardless of the status of legal custody;

(6) "tribunal" means the superior court or the child support services agency created in AS 25.27.010.

* **Sec. 2.** AS 47.10.120(a) is amended to read:

(a) When a child in need of aid is committed under this chapter, the court or the child support services agency created in AS 25.27.010 shall, after giving the parent a reasonable opportunity to be heard, require that the parent pay to the department in a

manner that the court or the child support services agency directs a sum to cover in full or in part the maintenance and care of the child. The support obligation shall be calculated under **AS 25.28** [RULE 90.3(i) OF THE ALASKA RULES OF CIVIL PROCEDURE].

*** Sec. 3.** AS 47.12.230(a) is amended to read:

(a) When a delinquent minor is committed under this chapter, the court or the child support services agency created in AS 25.27.010 shall, after giving the parent a reasonable opportunity to be heard, require that the parent pay to the department in a manner that the court or the child support services agency directs a sum to cover in full or in part the maintenance and care of the minor. The support obligation shall be calculated under **AS 25.28** [RULE 90.3(i) OF THE ALASKA RULES OF CIVIL PROCEDURE].

*** Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REPEAL OF COURT RULE. Rule 90.3, Alaska Rules of Civil Procedure, is repealed.

*** Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

NON-APPLICABILITY OF TWO-THIRDS VOTE REQUIREMENT. Because the rule repealed in sec. 4 of this Act is a substantive rule rather than a rule of practice or procedure, the repeal of the rule takes effect even if sec. 4 of this Act does not receive the two-thirds majority vote of each house required by art. IV, sec. 15, Constitution of the State of Alaska.

ANALYSIS: *(Attach a separate page if necessary)*

Moving the court rule to statute has no fiscal impact on the Child Support Services Division.

The fiscal impact of zero is based on the assumption that the Legislature will assume the responsibility of the four year review including the costs of the program review.

Re: SB 46

Dear Senator:

I am writing to express my support for the proposed SB 46, which, if passed, would finally enact a child support guideline into statute.

The lack of a child support guideline has been a blot on our constitutional system for over 20 years. In 1987 the Alaska Supreme Court adopted Civil Rule 90.3, which I am sure they intended to be only a short-term solution to avoid loss of federal benefits until the legislature replaced the rule with an actual statute. Unfortunately the justices, who predictably do not have a very good collective ear for political realities, did not realize that when you take a hot potato away from the legislature, you tend to get stuck with the hot potato for life. And so in 23 years, no legislator (until now) has even introduced a bill to enact a specific guideline. In the meantime the Supreme Court, with its typical inability to admit when it is wrong, has whitewashed the fact that this is a substantive law enacted by the judiciary, by trying to claim that it is "merely a guideline" even though its own cases require that the guideline be followed.

The Alaska Constitution gives the judiciary the authority to enact administrative and procedural rules, and to decide individual cases. It has no right or ability to enact substantive laws. For the judiciary to enact a substantive law, is a terrible precedent which threatens the structure of separation of powers. And so I implore you to remedy this embarrassment by enacting a substantive child-support law to replace 90.3.

That said, if this bill gets a committee hearing you will be provided with a lot of options, some of them probably better than what you have here. SB 46 essentially adopts the present system of child support guidelines, which is generally referred to as a "percentage of income" system. It does have the advantage of being consistent with the way we have done this in Alaska for the past 23 years, so that the many people who have to apply these rules (judges, attorneys, and CSSD workers) do not have to start all over again. On the other hand most states have adopted the "income shares" system, under which both parents' incomes are taken into account. Our system takes into account, in most cases, only the income of the noncustodial parent. There are good arguments on both sides, and you may want to consider using the income shares system instead. Likewise, there are many desirable changes which could be made to the guidelines, even if the basic structure is kept intact.

Please consider the many changes which are likely to be presented, and keep an open mind to them, but at the end of the day please pass something. Under the current system, the people who are affected by this substantive law can never talk to the people who can change it, because the justices who actually decide on changes do not talk to people. Every four years, the justices appointed a review committee, a group of lawyers who then solicit comments for change, and hold public hearings. However the review committee does not make the final decision, and the justices have been anything but a rubber stamp for the committee's recommendations. I have been on two of the review committees over the years, and many of the changes we proposed were either rejected, or dramatically revised, by the Supreme Court.

The current system is undemocratic. You have the option of changing it into a system which is democratic, in which people can petition their legislators if they believe further changes should be made. Please take some such action. The exact details of how child support is calculated, is less important than that our system of democratic government is able to continue operating the way it should.

Please feel free to contact me if there are any other questions you, or any of your fellow legislators, have for me.

Sincerely,

Kenneth Kirk

Subject: tomorrow's hearing

I had this lame notion that I'd catch up with you yesterday but that did not really account for the Key Campaign's arrival!

For tomorrow's hearing we will have 3 in-person witnesses and one person on-line -- all adult survivors of child sexual abuse, and all originally from villages, so I wanted to let you know that if Senator Davis is willing, right after the basic bill presentation we'd like these folks to testify just because it's hard testimony to give, so that way they can get it done and not sit and be terrified any longer than they need to be.

In person witnesses are: Florence Penny, from Juneau (originally from Holy Cross)
Elsie Boudreau (I can't remember where Elsie was originally from but she went to school in Nome)
Henry Napoleon, Hooper Bay

On line will be Delbert Ackerman from Stebbins. He is using the offnet number.

Finally, I'd expect in-person testimony testimony from a woman named Joelle Castix, who will talk about how this kind of bill worked in California, and the Alaska Women's Lobby and the Network on Domestic Violence may be there and may offer brief testimony in support.

Let me know if you need anything else from me. I will be bringing one brief handout for the committee and will bring an adequate number for them and for handouts. :)

Subject: SB47

Hi!

I will be carrying SB47 for Hollis and I wanted to let you know that we will need some time to put together witnesses for this bill hearing (it's kind of complicated because we need to get witnesses in from some rural communities and I also want an attorney on line who can speak to the provisions of the bill), --- so although I know Andy dropped off a hearing request, we actually will not be ready to have it heard for a week or so.

Please don't schedule us next week and I'll let you know sometime next week if we've been able to get everybody organized for the week of the 16th or after that.

Thanks!

Alaska State Legislature

Senator Hollis French

SB 47 - Statute of Limitations for Sexual Offenses

Senate Bill 47 creates a one year period in which civil action may be brought in felony sexual assault cases that have been time barred by the formerly restrictive statute of limitation laws in Alaska. During the 2001 legislative session, both the House and Senate voted unanimously to remove the statute of limitations for felony sexual offenses that were still open to prosecution at that time. For instances of felony sexual assault where the statute of limitations had expired, no recourse was given to the victims of the crime.

SB 47 allows the victims of felony sexual assault to have their day in court. Experts have found there are several reasons that a victim, especially a child, will not report sexual abuse for years after it occurred. Multiple studies have shown:

- Victims of childhood sexual assault are often extremely embarrassed by the abuse, and may not disclose the crime against them until adulthood.
- Children who are victims will often fail to report sexual abuse due to fear of the consequences; a child may also feel guilty for reporting the perpetrator or fear retaliation from his or her abuser.
- It can take years for a victim to understand the connection between the problems they are experiencing as an adult and the abuse they experienced as a child.
- Among victims of sexual assault, an inability to trust is common. This inability can prevent many victims from disclosing abuse.
- Many victims of childhood sexual abuse have repressed all memory of the abuse for years; it is often only under the guidance of professional counseling or therapy that the victim may come to realize that a crime against them took place.

SB 47 allows past victims of sexual abuse the same rights they would have under today's law - the right to file charges against their perpetrators no matter when the abuse occurred. I urge your support for this important bill that provides closure for victims of sexual assault, while holding the perpetrators for these crimes accountable.

ANALYSIS: *(Attach a separate page if necessary)*

The bill would amend the statute of limitations for civil actions involving certain sexual offenses, so that actions that are pending in court on the effective date or are filed within one year after the effective date of the bill would be considered timely. Enactment of the bill is not anticipated to fiscally impact the Department of Law.

LEGISLATIVE RESEARCH REPORT

MARCH 13, 2007

REPORT NUMBER 07.156

HISTORY OF ALASKA STATUTES OF LIMITATIONS FOR CIVIL ACTIONS RELATED TO SEXUAL OFFENSES

PREPARED FOR SENATOR HOLLIS FRENCH

BY CHUCK BURNHAM, LEGISLATIVE ANALYST

You asked about Alaska statutes of limitations. Specifically, you wanted a history of statutes involving time limitations for bringing civil actions related to sexual offenses.

As you know, pursuant to AS § 09.10.065, there currently exists no statutory time limitation on bringing a civil action resulting from the crimes of felony sexual abuse of a minor, felony sexual assault, or unlawful exploitation of a minor.[1] Other statutes that currently impact time limitations on civil actions for sexual offenses are provided in AS § 09.10.140 and AS § 09.55.650. We provide a review of the legislative histories of each of the three aforementioned statutes as follows.[2]

The state's general statute of limitations for civil actions related to "assault" contained in AS § 09.10.070 was enacted as § 1.07 ch 101 SLA 1962; however § 1.14 of the same chapter provided that the general limitation did not apply to a plaintiff who was under age 19 at the time of the cause for the action.[3] This section, currently AS § 09.10.140, recognized "minority," that is, being under age 19, as a "disability" with regard to an individual's ability to bring civil action. The legislature therefore determined that the time spent in "disability," or the time period between the subject of the civil action and the date the plaintiff reaches age 19, should not be considered as part of the time limitation on the commencement of a civil action. In effect, this section implemented a two-year limit beginning on the plaintiff's 19th birthday. In 1979, the age clause of AS § 09.10.140 was changed from "19 years of age" to the age of "majority," which is currently age 18 (AS § 25.20.010).

---

[1] These crimes are enumerated in statute as follows: felony sexual abuse of a minor—AS §§ 11.41.434-438; felony sexual assault—AS §§ 11.41.410-425; unlawful exploitation of a minor—AS § 11.41.455.

[2] We include copies of AS § 09.10.65, AS § 09.10.140, and AS § 09.55.650 as Attachment A.

[3] We include a copy of each of the session laws mentioned in this report as Attachment B.

State Capitol
Juneau, AK 99801

With the enactment of §§ 1-4 ch 4 SLA 1990, the legislature expanded time limitations for civil actions for most serious sexual offenses, particularly offenses involving minors. Section 1 added a new subsection to what is currently AS § 09.10.065 to provide that a victim of sexual assault or sexual abuse of a minor may not maintain an action for damages against a perpetrator unless the action is commenced within three years of the act or knowledge of the act. This section alone extended the time limitation by just one year; however, § 4 added AS § 09.55.650 to provide that a victim who was under sixteen years of age at the time of the abuse may "maintain an action for recovery of damages" for an injury or condition that is the result of the abuse. This new section also provided that if more than one act of abuse has occurred, the plaintiff need not prove which act caused the damage or injury. Finally, §§ 2-3 amended AS § 09.10.140 to provide that a victim whose abuse is subject to AS § 09.55.650 (under age sixteen at the time of abuse) is exempt from the three-year limitation under AS § 09.10.065 if an action is commenced within three years of the time the plaintiff "discovered" or should have reasonably discovered that an act, or series of acts, of abuse caused the injury or condition underlying the action.

The intent of the 1990 legislation was to maintain a general limitation on bringing civil actions—three years—but to provide a mechanism by which individuals who, as adults, discovered that they were sexually abused as children could pursue civil remedies for damages and injuries resulting from that abuse. Testimony on the enacting legislation before the House Judiciary Committee wide acceptance that many victims of sexual abuse "block-out" memories, or are otherwise unaware, of the abuse until they discover the negative impacts resulting from that abuse years later. Legislators, therefore, determined that the period of time limitation on civil actions stemming from the impacts of sexual abuse should commence at the point of a plaintiff's "discovery" of the abuse rather than from the time of the offense or the age of majority.[4]

The legislature removed time limitations for bringing a civil action for felony sexual abuse of a minor and felony sexual assault with the enactment of § 1 ch 86 SLA 2001, which repealed and reenacted AS § 09.10.065. This statute was further amended by § 2 ch 40 SLA 2003 by removing time limitations on actions for unlawful exploitation and adding subsection (b) to provide a three-year limitation on bringing actions for misdemeanor sexual offenses, incest, and felony indecent exposure. This new language was also referenced in AS § 09.10.140(b). The result was the exemption of misdemeanor sexual offenses against victims who were under age sixteen at the time of the abuse from the three-year limitation provided in AS § 09.10.065(b), permitted that action for those offenses is commenced within three years of the time the plaintiff "discovered" or should have reasonably discovered that an act, or series of acts, of abuse caused injury or damage.

The attached table provides a brief summary of the history of statutes related to time limitations for bringing civil actions related to sexual offenses.

I hope you find this information to be useful. Please do not hesitate to contact us if you have questions or need additional information.

---

[4] Testimony before the House Judiciary Committee, April 6 and 19, 1989.

History of Statutes of Limitation for Civil Actions Related to Sexual Offenses

Session Law	AS § 09.10.140		
§ 1.14 ch 101 SLA 1962	Provided that the general limitation of two years for bringing action for an "assault" (as established in § 1.07) did not apply to a victim under age 19; however, the exemption was limited to not more than two years following the 19th birthday.		
§ 1 ch 46 SLA 1979	Changed the age clause from "19 years" to the age of "majority."		
	AS § 09.10.065	**AS § 09.10.140**	**AS § 09.55.650**
§§ 1-4 ch 4 SLA 1990	Added subsection (c) to provide that a victim of sexual assault or sexual abuse of a minor may not maintain an action for damages against a perpetrator unless the action is commenced within three years of the act or knowledge of the act.	Provided that a victim whose abuse is subject to AS § 09.55.650 (under age sixteen at the time of abuse) is exempt from the three-year limitation under AS § 09.10.065 if an action is commenced within three years of the time the plaintiff "discovered" or should have reasonably discovered that an act, or series of acts, of abuse caused the injury or condition underlying the action.	Added section to provide that a victim who was under sixteen years of age at the time of the abuse may "maintain an action for recovery of damages" for an injury or condition that is the result of the abuse. Also provides that if more than one act of abuse has occurred, the plaintiff need not prove which act caused the damage or injury.
§§ 1-2 ch 81 SLA 1998	Added the crime of indecent exposure in the first degree [provided by § 3] to the crimes to which subsection (c) applies.	Section not amended.	Added the crime of indecent exposure in the first degree to the definitions of the "sexual abuse" crimes to which the section applies.
§ 1 ch 86 SLA 2001	Removed time limitations on bringing actions for felony sexual abuse of a minor and felony sexual assault.	Section not amended.	Section not amended.
§§ 1-3 ch 40 SLA 2003	Removed time limitations on bringing action for unlawful exploitation of a minor. Added subsection (b) to provide a three-year limitation on bringing an action for misdemeanor sexual offenses, incest, and felony indecent exposure.	Referenced AS § 09.10.065(b) in subsection (b), to provide that a victim who was under age sixteen at the time of a sexual abuse misdemeanor or felony indecent exposure is exempt from the three-year limitation under subsection (a) if an action is commenced within three years of the time the plaintiff "discovered" or should have reasonably discovered that an act, or series of acts, of abuse caused the injury or condition underlying the action.	Section not amended.

Judge says sex suit filed too late -
DISMISSED: Victim claimed priest got her pregnant in 1977.
Anchorage Daily News (AK)
February 22, 2006
Author: SHEILA TOOMEY
Anchorage Daily News

A Nome judge on Tuesday dismissed a sex abuse lawsuit against the Jesuits and the Fairbanks Catholic diocese, ruling that a woman who says former Nome priest James Poole got her pregnant when she was 14 waited too long to take legal action.

Superior Court Judge Ben Esch said the woman, known as Jane Doe 2, should have known when Poole told her to get an abortion that he and the church had done something wrong to her. In legal terms, that knowledge triggered her "duty to inquire" and set in motion the civil statute of limitations, which required her to file suit no more than two years after she turned 18.

"This will be seen as unjust by many people," Esch wrote in his dismissal, "but is, I believe, required by the laws of the State of Alaska." The decision came less than a week before trial was scheduled to begin.

Both sides reacted to the dismissal as might be expected. In a written statement, the Jesuits -- formally the Society of Jesus, Oregon Province -- said the ruling confirms "the justice of our position" but vowed to seek healing for "those who have suffered from abuse."

"(W)e still hope to find a path to reconciliation," the statement said.

"We do not celebrate today's decision."

Attorney Ken Roosa, who represents Jane Doe 2 and dozens of other litigants reporting childhood abuse by Alaska-based priests, said he will appeal the dismissal to the Alaska Supreme Court.

"I think Judge Each is a fine judge, but I think he called it wrong here," Roosa said. The decision is based on the facts of this case and does not imperil other pending cases, he said.

"This is just one skirmish in a long battle."

In her 2004 lawsuit, Jane Doe 2 said Poole abused her in the late 1970s and got her pregnant in 1977. She said she had an abortion in 1978 at Poole's urging.

Roosa said the woman reported the abuse to two different local priests within the

allowed time period and was told to do penance.

Both religious organizations have said they knew nothing of such accusations at the time.

In 2001, the Alaska Legislature eliminated the statute of limitation for child sex abuse cases. That means anyone abused after that date has no deadline for filing suit.

Roosa claims, and is arguing in another case before the state Supreme Court, that the law is retroactive and covers people like Jane Doe 2. Esch apparently did not agree.

In December, he removed Poole as a defendant in the case, saying Jane Doe 2 should have known something wrong was done to her and needed to take action within two years of her 18th birthday.

He left the Jesuits and the Fairbanks diocese as defendants, saying it was not clear she should have known she had a case against the two organizations, according to Roosa.

The case was scheduled to go to trial in Nome next week. In the meantime, the Alaska Supreme Court in an unrelated case ruled that judges, not juries, must decide statute-of-limitation questions, Roosa said.

Forced to decide, Esch concluded Jane Doe 2 should also have taken timely action against the two organizations.

On Tuesday, Roosa seemed bitter that the church even raised the timing question. "Would Christ assert the statute of limitations against a victim who had been sexually abused by a priest?" he said. " I just don't think so."

In their statement, the Jesuits spoke of a resolution better than a "legal dispensation."

"There remains, at this time, a woman whose suffering and story deserve our respect and our pastoral care. ... we continue to pray that we will find together a deeper justice, based not on adversarial strife but on our shared concern for the well-being and healing of all those involved."

In addition to the dismissed case, two other suits against Poole have been settled and two remain.

The Associated Press and the Fairbanks Daily News-Miner contributed to this story. Sheila Toomey can be reached at 907-257-5341 or stoomey@adn.com.

28 men allege abuse by monk -
1965 TO 1975: Western Alaska men sue Fairbanks Catholic Diocese, Jesuits.
Anchorage Daily News (AK)
November 12, 2004
Author: RICHARD MAUER
Anchorage Daily News
Staff
Estimated printed pages: 4

Twenty-eight Alaska men say that when they were children, a religious brother who served several Western Alaska villages bought sexual favors from them with candy, better grades, sacramental wine and coins from collection plates.
The men, now mostly in their 40s, say in a lawsuit filed in Bethel that the former Trappist monk, Joseph Lundowski, abused their trust as deacon and religious instructor and engaged them in sexual misconduct, including oral sex. One man said he was also raped.

The men's identities are not disclosed in the lawsuit, which seeks monetary damages from the Fairbanks Catholic Diocese and the Jesuit province in Oregon, which has a historical affiliation with the Fairbanks diocese. At the time of the alleged abuse, from 1965 to 1975, the victims ranged in age from 6 to 24, with most of them in their adolescence.

The lawsuit says that Lundowski was forced from Alaska by church authorities in 1975. He is believed to have died. He was born in 1918.

A spokeswoman for the Fairbanks diocese said it had not received a copy of the suit and couldn't comment on the allegations.

"From the best I can figure, he left in the mid-'70s," said Ronnie Rosenberg, the director of human resources. "There are not many people here now who even remember him. As for the victims, all them are 'James Doe,' and we don't know who they are now. We do pray for healing for anyone who may have been injured."

In a prepared statement, the Jesuits denied any direct connection to Lundowski.

"The Society of Jesus learned this morning about the filing of litigation alleging multiple instances of sexual misconduct several years ago by Mr. Joseph Lundowski. As we have been committed to healing in the Church, we are saddened by these new allegations, and keep all who have suffered in our prayers. However, the Society wishes to clarify that Mr. Joseph Lundowski was at no time a member of the Society of Jesus nor in any way subject to the authority of any Jesuit superior or Provincial," it said.

According to the lawsuit, Lundowski was kicked out of his monastery "because of his

inability to withstand the rigors of monastic life." The lawsuit asserted that the language was code for "his improper and illegal sexual involvement with young boys."

Lundowski was recruited to Alaska by The Rev. George Endal for the Holy Rosary Mission School in Dillingham around 1949. Endal put Lundowski in charge of the boys' dormitory.

In 1963, when Endal went to the Western Alaska village of Nulato, Lundowski followed, the lawsuit said. It was there that Lundowski was "involved in a scandal with a person 'who is not a woman,' " the lawsuit said, quoting from a 1965 letter written to another priest in Western Alaska by his superior. The letter, discovered by the plaintiffs' attorney, Ken Roosa of Anchorage, in another abuse case, suggested that Lundowski's behavior was already established and known, though nothing was done about it other than complaining.

"Rather," the lawsuit continued, "he was transferred to Hooper Bay with Father Endal in 1965, where he continued to molest and sexually assault boys and young men."

Lundowski was deacon and religious instructor over the next 10 years at parishes in Hooper Bay, Stebbins and St. Michael. He also left a trail of abuse, according to the suit. Six of the victims were from Little Flower of Jesus parish at Hooper Bay; 11 attended St. Michael's parish at St. Michael; and 11 were from St. Bernard's parish in Stebbins.

His "sexual predation accelerated" when he was transferred to St. Michael and Stebbins in 1968, the lawsuit said. "He continued to serve as a deacon and catechist, often molesting boys after Mass or catechism."

The suit charged he engaged in oral copulation with each of the victims, "and forced many to submit to anal sodomy and required them to masturbate him." The boys were rewarded with candy, money stolen from collection plates, cooked and baked foods, beer, sacramental wine "and better grades on their catechism assignments."

He also warned them against telling. He said "no one would believe them because he worked for God," the suit said.

His abuse finally came to an end when a resident of St. Michael, Martha Abochook, caught him in the act with the 24-year-old, the suit said. Abochook, who is now dead, "raised a fuss" that resulted in the Fairbanks diocese removing Lundowski from Alaska.

Each of the men still lives in Western Alaska. Until other lawsuits against priests in the area became known, the men didn't understand their depression, anxiety, self-blame, shame and guilt were caused by Lundowski, the suit said. "They didn't know they had the right to sue the diocese until they heard of the others."

Church officials should have stopped the abuse and reported Lundowski's felonies to authorities, but failed, the lawsuit said.

Date: February 12, 2008

To: All Senators

From: Senator Hollis French HSF

RE: SB 112

I would like to draw your attention to the following court decision.

The case was one of many involving alleged abuse committed by a priest against young Alaskans. The case was dismissed by the court after defendants in the case successfully used the statute of limitations as a defense. If the abuse had happened under today's laws, no statute of limitations would apply – the victim could bring suit at any time in the future.

The judge in the case was aware of the unfairness of the old statute of limitations. In reaching his decision, he wrote:

"The court believes that a legislative remedy to the conundrum these cases present might be fair and reasonable. Perhaps something akin to SB 112, presented in the most recent legislative session, will allow individuals who have been victimized to obtain fair redress these many years later."

I urge you to support SB 112.

IN THE SUPERIOR COURT FOR THE STATE OF ALASKA

SECOND JUDICIAL DISTRICT AT NOME

JANE DOE 3,

Plaintiff,

vs.

JAMES E. POOLE, S.J.; CATHOLIC BISHOP OF NORTHERN ALASKA; THE SOCIETY OF JESUS, OREGON PROVENCE; and THE SOCIETY OF JESUS, ALASKA,

Defendants.

Case No. 2NO-05- 56 CI

RULING ON STATUTE OF LIMITATIONS

The defendants have moved to dismiss this action based upon the statute of limitations and the motion was opposed by the plaintiff. The plaintiff has also cross-moved for summary judgment on the claim that fraudulent concealment precludes the Catholic Bishop and the Jesuits from relying on the statute. The parties have briefed the issues and an evidentiary hearing was held. The court considered the arguments of counsel and the testimony presented at the hearing, the exhibits offered and admitted, and the deposition testimony filed with the court.

FACTS:

The circumstances giving rise to the plaintiff's claims begin in the 1960s. Ms. Doe lived in Nome. Her life, at that time, was impacted by emotional and sexual abuse perpetrated by others. Her first direct contact with Fr. Poole arose at a junior high dance at which he was a chaperone. Fr. Poole was an ordained priest and member of the Society of Jesus working under their supervision. He was employed by the Bishop of Northern Alaska to establish a radio station in Nome. Ms. Doe was fourteen years old. He asked her to dance and she testified that during the dance he had an erection and rubbed against her. This same conduct occurred at another dance later

in the school year. On another occasion during that school year, Poole invited Doe to participate in a musical group. When she arrived at Poole's office, there were none of her contemporaries present. She described events that transpired as Poole sitting close to her and then rubbing his groin area through his clothing. The incident was interrupted when Poole's mother entered the room and asked Ms. Doe to leave. Finally, some months later, after a man who had been sexually abusing her murdered her aunt, she met Poole on the street. Doe had witnessed the murder and was despondent. Poole offered her solace at the Catholic church. Doe testified that when the two arrived at the Church, they went to his office and spoke for some time. She said that he then took her to a nearby dark hallway, pulled up her shirt, pulled down her pants and sexually penetrated her with his penis. This attack was interrupted by the sound of some men approaching the hallway. This incident occurred in 1969, when Doe was fifteen. Doe had no further direct contact with Poole.

Ms. Doe graduated from high school in Nome, attended college in Fairbanks for two years, and then married. She and her husband lived in Nome from their marriage in about 1975 until the late 1980s. They then moved to Florida for about two years and over the next few years moved between Florida and Anchorage at least twice. They have been residents of Anchorage since the mid-1990s.

Ms. Doe testified that while she and her husband lived in Nome, she worked for Kawarek, Inc. and for Norton Sound Health Corporation. In these jobs she provided training for village counselors on mental health issues, was an alcoholism counselor and provided training to members of various tribal councils. Doe became involved in issues of child abuse from very early in her career with Kawarek. She attended workshops on the issue and got intensive on-the-job training from psychologists and other professional. As part of her job, she wrote articles which were published in the Nome paper on the subject of child abuse. A number of these articles discussed the

3563
SEP-13-2007

emotional and physical consequences of sexual abuse. On one occasion, she reported sexual abuse by a foster parent. On another occasion, in the early 1980s, Ms. Doe learned that her brother was sexually abusing her daughter. She reported the abuse, got her children involved in individual counseling, she and her husband got couples counseling, and all participated in family counseling. At another time, after she moved to Anchorage, she was fired for trying to report sexual abuse by a superior on a young girl.

By 2000, Ms. Doe began to see mental health counselors on a regular basis. Shortly thereafter she was hospitalized at Alaska Psychiatric Institute. There were other hospitalizations subsequently. She received initial therapy from Joelle Werner, transferred to Tim Mannen and then returned to Ms. Werner in 2003. Her initial therapy focused on the death of her aunt and the sexual abuse that her aunt's murder had perpetrated upon her. In May 2004 she reported Poole's alleged abuse to Anchorage Police after reading an article about allegations of abuse by Poole asserted by another woman. This suit followed thereafter.

LEGAL STANDARD:

First, the plaintiff suggests that AS 09.10.065 is the statute of limitations to be applied in this case. However, in *Catholic Bishop Of Northern Alaska v. Does 1-6*, 141 P.3d 719 (Alaska 2006) our Supreme Court concluded that AS 09.10.065 does not revive civil claims that were time-barred before the effective date of the statute, October 1, 2001. Consequently, that argument has no merit.[1]

The plaintiff argues that the discovery rule excuses her delay in filing the complaint. The defendants argue the discovery rule cannot operate to extend the statute for the more than thirty

[1] At oral argument, the plaintiff withdrew the claim that AS 09.10.130 tolled the statute for the time that Fr. Poole was outside the state of Alaska.

years that passed between the abuse and when the complaint was filed.

The Alaska Supreme Court has formulated the discovery rule in three possible ways:

> (1) a cause of action accrues when a person discovers, or reasonably should have discovered, the existence of all elements essential to the cause of action; (2) a person reasonably should know of his cause of action when he has sufficient information to prompt an inquiry into the cause of action, if all of the essential elements of the cause of action may reasonably be discovered within the statutory period at a point when a reasonable time remains within which to file suit.

Cameron v. State, 822 P.2d 1362, 1366 (Alaska 1991).

> (3) where a person makes a reasonable inquiry which does not reveal the elements of the cause of action within the statutory period at a point where there remains a reasonable time within which to file suit, the limitations period is tolled until a reasonable person discovers actual knowledge of, or would again be prompted to inquire into, the cause of action.

Pedersen v. Zielski, 822 P.2d 903, 908 (Alaska 1991).[2]

The plaintiff offers an additional way in which a discovery rule could delay the filing deadline. Alaska Statute 09.10.140(b) states:

> An action based on a claim of sexual abuse under AS 09.55.650 that is subject to AS 09.10.065(b) may be brought more than three years after the plaintiff reaches the age of majority if it is brought under the following circumstances:
>
> (1) if the claim asserts that the defendant committed one act of sexual abuse on the plaintiff, the plaintiff shall commence the action within three years after the plaintiff discovered or through use of reasonable diligence should have discovered that the act caused the injury or condition;
>
> (2) if the claim asserts that the defendant committed more than one act of sexual abuse on the plaintiff, the plaintiff shall

---

[2] No evidence exists in this case that Ms. Doe made any inquiry into the existence of a claim, let alone a reasonable inquiry. Consequently, the third method for extending the deadline of the statute of limitations has no application in this case.

3565
SEP-13-2007 14:04

> commence the action within three years after the plaintiff discovered or through use of reasonable diligence should have discovered the effect of the injury or condition attributable to the series of acts; a claim based on an assertion of more than one act of sexual abuse is not limited to plaintiff's first discovery of the relationship between any one of those acts and the injury or condition, but may be based on plaintiff's discovery of the effect of the series of acts.

This statutory formulation of the discovery rule was adopted in 1990, but was specifically made fully retroactive. Alaska Statute 09.55.650 states that an individual who "as a minor under 16 years of age, was the victim of a sexual abuse may maintain an action for recovery of damages against the perpetrator of the act or acts of sexual abuse based on the perpetrator's intentional conduct for an injury or condition suffered as a result of the sexual abuse."

However formulated, the discovery rule allows an individual to maintain an action on a claim that would otherwise be barred.

> Where the plaintiff does not actually know of the existence of elements essential to her cause of action, under the "discovery rule," the limitations period does not begin to run until "a reasonable person [in like circumstances would have] enough information to alert that person that he or she has a potential cause of action or should begin an inquiry to protect his or her rights."

Alaska Tae Woong Venture, Inc. v. Westward Seafoods, Inc., 963 P.2d 1055, 1065 (Alaska 1998). The discovery rule is measured by an objective not subjective standard, requiring the court to determine what a reasonable person in Ms. Doe's circumstances would have known. None of the legislative history submitted by the plaintiff regarding the operation of the statutory formulation of the rule suggests that a subjective standard should be used in its operation.

The determination of which of the various formulations of the discovery rule should be used and how it operates in the particular case is an issue that must be resolved by the court. In

Cikan v. ARCO Alaska, Inc., 125 P.3d 335, 342 (Alaska 2005) our Supreme Court stated:

> disputes concerning the statute of limitations raise preliminary questions of fact that should ordinarily be decided by the court after conducting an evidentiary hearing. In the present case, then, the superior court should conduct a pretrial evidentiary hearing on remand to resolve ARCO's statute-of-limitations defense.

In determining these preliminary evidentiary issues, the court will use the preponderance of evidence standard.

The cross-motion for summary judgement on fraudulent concealment seeks to prevent reliance on the statute of limitations due to the active concealment of facts that would prevent the plaintiff from being aware of her cause of action.

> "A party who fraudulently conceals from a plaintiff the existence of a cause of action may be estopped to plead the statute of limitation if the plaintiff's delay in bringing suit was occasioned by reliance on the false or fraudulent representation." To establish equitable estoppel, the plaintiff must show (1) fraudulent conduct, which may take the form of either an affirmative misrepresentation or a failure to disclose facts where there is a duty to do so; (2) justifiable reliance; and (3) damage.

Williams v. Williams, 129 P.3d 428, 432 (Alaska 2006).

Summary judgment may be entered for a party under Civil Rule 56 when there is no genuine issue as to any material fact and ... [the] party is entitled to judgment as a matter of law. All reasonable inferences of fact are drawn in favor of the party opposing the motion [for summary judgment] and against the moving party. *Kaiser v. Umialik Ins.*, 108 P.3d 876, 879 (Alaska 2005)(citations omitted).

ANALYSIS:

The plaintiff asks the court to use the date of Ms. Doe's psychological counseling with Ms. Werner when she disclosed Poole's conduct as the discovery date. It was only then that

she asserts that she learned that the sexual abuse she suffered at the hands of Poole was a cause of her ongoing mental injuries. Ms. Doe testified that she failed to discuss her abuse by Poole in her initial counseling with Mr. Mannen because he was Irish and Catholic. She also stated that her initial counseling with Ms. Werner was focused on crisis management and she did not consider disclosing about Poole. The plaintiff argues that the legislative history of AS 09.10.140 discloses that many people only connect their later life problems with earlier sexual abuse when in counseling. The testimony of Dr. Sperbeck at the evidentiary hearing was equivocal and not overly helpful regarding the issue of when a person in similar straits as Ms. Doe would objectively know that she had been injured by the sort of abuse that Poole allegedly visited upon her.

In his direct examination, the doctor discussed his opinion that Ms. Doe was suffering from serious psychological problems and that Poole's abuse was a cause of those problems. The doctor did testify at one point that Ms. Doe "couldn't connect the dots" to really understand the relationship between Poole's abuse and why she developed as she did. However, in response to the court's question he indicated that she may have understood the effect of the abuse but couldn't come forward to disclose it. He testified on several other occasions that the sexual abuse she suffered made it difficult or impossible to come forward and disclose what had happened. He also testified that is normal or common for adult victims of childhood sexual abuse to disclose in adulthood, often in the context of therapy, what had happened to them. He conceded that therapy is not a necessary prerequisite to disclosure. However, the court finds this testimony to be unhelpful to resolving the issue of the statute of limitations. The testimony concerning Ms. Doe's individual issues is directed to her subjective ability to discover the claims against the defendants. The testimony about the circumstances that objectively allow others to disclose abuse is likewise of little concern. The issue is not the time that an individual discloses abuse, but rather the time a victim objectively understands

that injury flows from the abuse that triggers the duty to inquire.

An individual has a duty to investigate when they are aware that another has wrongfully visited injury upon them. That duty to inquire does not await full recognition of the extent of the injury. *Sopko v. Dowell Schlumberger, Inc.*, 21 P.3d 1265, 1272 (Alaska 2001). Here, the plaintiff makes no assertion that she believed that Poole's action in sexually penetrating her was not wrong. Doe stated in her deposition that she knew what he did was wrong. Her action in avoiding even walking by him on the street demonstrates that she was aware that he had injured her. The court believes that any victim of such abuse would objectively feel these emotions. The central question of whether a victim would know that the abuse would cause psychological injuries that would manifest themselves years later is not so clear.

In Ms. Doe's case, however, the answer is clearer. She later, in adulthood, received training in the issue of child abuse. She authored articles that specifically noted:

> It is estimated that at least 50% of all sexually abused children never tell anyone about their abuse. . . . Many are later identified as having serious problems that interfere with their ability to cope with to [sic] pressures of adult life. Other victims, who lead normal, healthy lives are at risk for a number of other problems that interfere with personal happiness. Many suffer form low self-esteem, social skills and problems in trusting others, distorted attitudes toward sex resulting in poor sexual adjustment, problems with independence and mature judgment, and difficulties in providing proper parenting to their own children. More extreme problems may include mental illness, drug and alcohol abuse, suicide, physical abuse of children or partners, and sexual abuse of children or adults.

Evidentiary Hearing Exhibit AN (dated 2/16/89).

The court believes it must consider and attempt to determine if a reasonable person in a situation similar to Ms. Doe would have appreciated that the sexual abuse she experienced would have serious

long-standing consequences. By the time Ms. Doe wrote these things, she had graduated from high school, attended college, received extensive on-the-job training in child abuse, and worked in the field of child abuse prevention for years. That she could author articles like the one cited above demonstrates that she was aware of the problem of sexual abuse and its likely consequences. Dr. Sperbeck opined that these articles were merely unconscious "warning flags" raised for others, not evidence that she appreciated that these things were happening to her. The court believes, however, that a reasonable person who had received such training and worked in a similar job would be aware of the consequences of abuse. Perhaps not aware of the full extent of such consequences, but that knowledge is not necessary to trigger the duty to investigate.

However, in Ms. Doe's case, additional factors demonstrate that she subjectively knew that sexual abuse would likely result in psychological damage. In the early 1980s she discovered that her brother had sexually abused her daughter. Upon learning this, she reported his abuse to the authorities. She then arranged individual counseling for both of her children, enrolled in couples counseling with her husband and arranged counseling for the entire family. This seems to be evidence that Ms. Doe was aware of the potential for psychological injury from one or more instances of sexual abuse.

Ms. Doe asserts that the doctrine of fraudulent concealment prevents the assertion of the statute by the Catholic Bishop and the Jesuits. She argues that both the defendants were aware of conduct by Poole that suggested he was disposed to engage in sexual misconduct. The plaintiff asserts that the defendants were under a duty to disclose this information and their failure to do so is the sort of fraud by inaction that justifies application of the doctrine. The defendants deny a duty to disclose and the court fails to find such a duty exists. Additionally, a party generally cannot invoke estoppel "unless [they have] exercised due diligence in attempting to uncover the concealed

facts." *Waage v. Cutter Biological Div. of Miles Labs., Inc.*, 926 P.2d 1145, 1151 (Alaska 1996). Here, the allegedly concealed fact is that Poole presented an unreasonable threat of perpetrating sexual assault against individuals similar to Ms. Doe. However, by 1990, Ms. Doe knew that Fr. Poole presented more than a threat. It would have been utterly unreasonable for her not to be aware of this because she had been abused. Because Ms. Doe is not entitled to judgment as a matter of law on the issue of fraudulent concealment, her motion for summary judgment will be denied.

The court will find that by 1990 Ms. Doe had sufficient information to prompt an inquiry into the existence of a claim of sexual abuse against Fr. Poole. The court will further find that had she used reasonable diligence by that time, she would have discovered the effect of Poole's injury and the condition attributable to the series of acts he perpetrated. Because Doe took another fifteen years to file this suit, the court finds that the claims of Count I are time-barred and will dismiss them.

Similarly, Ms. Doe knew that Fr. Poole was associated with the Catholic Church and KNOM radio. Tom Busch testified that it was common knowledge in the community that Poole was a member of the Jesuit order. Consequently, Ms. Doe was on inquiry notice as to those entities responsibility under theories of vicarious liability, by that time as well. Therefore, the court will dismiss the plaintiff's claims against defendants Catholic Bishop and the Jesuits set out in Counts II, III and IV. Finally, the plaintiff has indicated she has no opposition to the dismissal of the claims in Count VI and IX against Fr. Poole.

CONCLUSION:

The court believes that application of the facts of this case to the binding authority it is required to follow mandates the decision reached here. Had Ms. Doe's background and life experiences been different, another result would have been reached. That the court is taking the

actions it has is in no way a decision condoning the actions of Fr. Poole, assuming they occurred. The court believes that a legislative remedy to the conundrum these cases present might be fair and reasonable. Perhaps something akin to SB 112, introduced in the most recent legislative session, will allow individuals who have been victimized to obtain fair redress these many years later.

For the reasons set out herein, the defendants' motions to dismiss are GRANTED. The plaintiff's motion for summary judgement on fraudulent concealment is DENIED. And the claims against Fr. Poole set out in Counts VI and IX are DISMISSED. Since these are the last theories of liability asserted against Poole, the claim for punitive damages against him, asserted in Count V, is also DISMISSED.

Dear Senator French:

On behalf of the eighteen member domestic violence and sexual assault programs throughout the state that comprise the Alaska Network on Domestic Violence & Sexual Assault, we thank you for bringing forth SB 47.

As state-wide advocates for victims of sexual assault, we strongly support the right of all victims of sexual assault to pursue justice in our courts of law. SB 47 will allow past victims of sexual abuse, previously excluded by a statute of limitations, the right to file charges against their perpetrators no matter when the abuse occurred. This is the same right they would have today under current law.

The Network believes that this is a commonsense approach to ensure justice for all victims of sexual assault equally and in a timely manner. The Network is in full support of SB 47. Thank you for advocating for victims of sexual assault in our state, and if I may be of any assistance or provide you any information, please let me know.

Sincerely,

Peggy Brown

Letter of Support
SB 47: Statute of Limitations for Sexual Offenses

The Alaska Women's Lobby, a statewide group defending and advancing the rights and needs of women, children and families, supports SB 47. It gives an important window of time to certain victims of felony sexual assault.

The statute of limitations for felony sexual assault was eliminated in 2001 for cases that were open at the time and for sexual assault that occurred after the passage of the bill. Unfortunately, the limitation was not lifted for those victims who were assaulted and the statute of limitations had already run. We applaud Senator French for introducing SB 47 which allows a one year period of time in which those victims may bring a civil action against the perpetrators who committed the sexual assault.

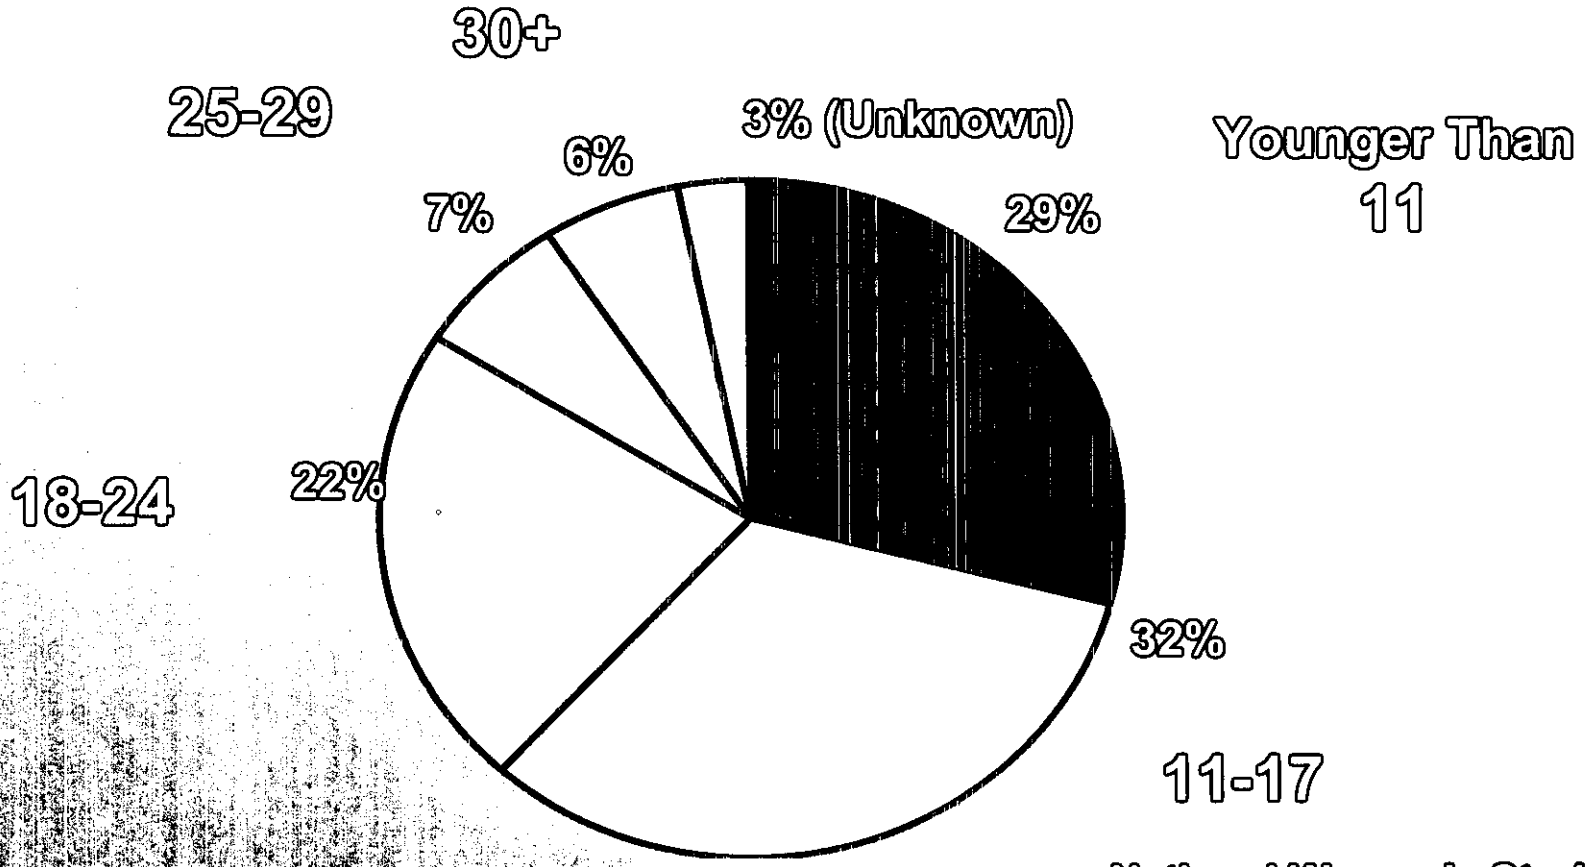
Sometimes civil actions are the only legal means to recover some measure of personal loss caused by the trauma of sexual assault and its emotional effects. The perpetrator or those responsible for an assault can be held accountable. The victim has a chance to tell her/his story and confront the perpetrator. The case can put the community on notice about the perpetrator. Having the perpetrator formally held accountable for his/her actions may provide relief to the victim and restore a sense of balance that has been missing for too long.

Creating this window of opportunity for justice and closure is the least we can do for those who continue to suffer in silence without a recourse that is available to anyone who has been assaulted since 2001. Please pass SB 47 this session.

Most Victims Are Young

61% of rapes victims are 17 years old or younger

Age at Time of Rape



National Women's Study (n=714)

Most Victims Know the Perpetrator

- Children
  - Fear of being disbelieved, punished or unprotected (Lawson & Chaffin, 1992)
  - Fear or experience of being blamed for break up of family
    - Often the outcome is more devastating to the child than to the perpetrator
    - Child is held responsible for the father's absence from the family
    - Almost 100% of children said they would not report the incident if they were molested again

(William Marshal presentation, Ass. Of the TX of Sex Abusers 1995)

Lag Time for Detection

Study	Type of Offender	# of Years
Freeman-Longo(1985)	Rapist	6
	Child Molester	13
Elliot (1986)	Paraphiliacs	10
Ahlmeyer et al.(2000)	Rapists and Child Molesters	16

PERSONAL & SOCIAL COSTS

- More than half of victims have been raped more than once
- Victims of sexual assault are:
  - 6x more likely to develop Post-Traumatic Stress Disorder
  - 3x more likely to develop major depression
  - 13x more likely to attempt suicide
  - 25 - 50% of rape and child sexual abuse victims receive some sort of mental health treatment as a result of the victimization (Miller, 1996)

POSITION STATEMENT IN OPPOSITION TO SB 47

The Society of Jesus, Oregon Province

Senate Bill 47 seeks to make a retroactive change to the statute of limitations for certain civil claims alleging felony sexual abuse. Sexual abuse is a serious crime which must be eradicated from our society. SB 47, however, does not assist with that goal. SB 47 does not deter or prevent sexual abuse. Instead, it seeks to create a retroactive suspension of the statute of limitations to allow lawsuits to be filed to collect monetary damages for acts that took place many decades ago on claims which have already expired under existing law.

The Society of Jesus, Oregon Province ("Province") has been dealing with claims arising out of alleged sexual abuse of minors; claims date back to the 1940s and continue through the early 1990s. The vast majority of the claims are from 30-40 years ago. Alaska law has a series of statutes of limitations which have been interpreted by our courts so as to strike a balance between insuring claimants have enough time to file a claim and protecting persons from due process concerns that arise when subjected to stale claims.

Courts (and common sense) long have recognized that adjudications become less reliable with the passage of time; both our Alaska Supreme Court and the United States Supreme Court have said so. Over time, the risk grows that evidence may be lost or that key witnesses may disappear or die. The testimony of available witnesses also becomes less reliable over time as memories fade and recollections of events are colored by intervening experiences.

What SB 47 does is create a one year period of time where no statute of limitations whatsoever would apply. If this bill were to become law, it would pose serious problems for the State of Alaska, as well as public and private organizations within the state. The problems generally are as follows:

- Retroactively suspending the statute of limitations would impair the integrity of Alaska's judicial system for dispute resolution. Retroactive suspension would allow plaintiffs to make allegations of past wrongdoing without any consideration to how long ago the alleged wrongdoing occurred. As a result, the State of Alaska, public entities (such as, schools, correctional facilities foster care programs, municipalities—any government program where adults work with minors under age 18) and non-profit entities that work with children (such as the Boy and Girl Scouts, Boys and Girls Clubs, sports and religious organizations) will be subjected to defending claims alleging misconduct many decades ago.

- SB 47 would significantly increase the risk of inaccurate adjudications or potentially fraudulent claims. Although a plaintiff making an allegation necessarily would be alive and available to testify, the passage of time makes it likely that other key witnesses and evidence would be unavailable to disprove plaintiff's allegations. Documents about supervision and attendance (or potential insurance) are regularly discarded over time. Our system of justice works only when witnesses on both sides can be heard and one party is not deprived of important evidence. Reviving decades-old claims where an important witness or party has died or is unable to testify as to the allegations is inherently unfair.

- Strong arguments exist that SB 47 is unconstitutional. Due process and other constitutional considerations weigh against, and sometimes prohibit, retroactive revival of time-barred claims.

The primary beneficiaries of SB 47 are not necessarily real victims of abuse. It is public knowledge that in the 2008 settlement the Province made with more than 100 plaintiffs in Northern Alaska, $20 million of the $50 million settlement went to two private law firms. Moreover, in testimony before the Alaska Senate Judiciary Committee in 2007, the Executive Director of a victim's advocacy group testified that the normal recovery to victims of sexual abuse is approximately 30% on every dollar.

The Alaska legislature previously modified the statute of limitations to allow claims for felony sexual abuse to be initiated at any time for any claim arising after October 1, 2001. In addition, under the current state of the law (and as the Province is well aware), access to the courts for child sexual abuse is still possible with the understanding that claimants are required to demonstrate why their claims are timely under the law as it presently exists.

While the Province has recently filed for protection under Chapter 11 of the Bankruptcy Code, the fact remains that numerous claims are outstanding and remain to be decided and ultimately handled through the legal processes available under the law. The full impact of SB 47 is being evaluated, but at this point in time, the Province believes, as it did in years past, that SB 47 does not serve the public good of state, private and public institutions, as well as religious institutions. Thus, the Province believes that SB 47 is a bill that should not be passed into law.

Committee Minutes
Apr 27, 2007

SB 38-SALVIA DIVINORUM AS CONTROLLED SUBSTANCE

2:32:44 PM
CHAIR FRENCH announced the consideration of SB 38.

SENATOR THERRIAULT, sponsor of SB 38, said Mr. Stancliff would introduce the bill.

DAVE STANCLIFF, Staff to Senator Therriault, said the bill will add Salvia divinorum, the most potent naturally occurring hallucinogenic substance on the planet, to the state's list of controlled substances. He cited cautionary testimony from users and said that young people in particular are being targeted. The problem law enforcement has with this substance is that it can't be detected in the bloodstream. Another problem is that it's readily available over the Internet and Alaska is considered to be a "green-light" state for shipping the substance. In fact it's being sold down the street and in other places around the state as incense. Indications are that shipments stop or are much reduced when an area becomes "red-light." Simply because the substance can't be identified in the bloodstream should not be an impediment to saying that Alaska is not a place to sell Salvia divinorum.

SB 38 simply places Salvia divinorum on same schedule II list as peyote, mescaline and LSD. This is not a safe drug, he concluded.

2:39:26 PM
CHAIR FRENCH recalled the bill coming through judiciary last year but he didn't recall its presence in local head shops. He asked if this is a new phenomena.

MR. STANCLIFF replied he discovered one shop in Anchorage and one in Fairbanks. Since that time a number of other locations have the substance including one down the street here in Juneau. It's a fairly good source of revenue. You can buy the leaf, the plant, or the extract. Use is proliferating and youths are being targeted. Many experienced "mind travelers" warn against its use, particularly for youths. But there is support for allowing people over age 18 to use the substance. That's a policy call you have to think about, he said.

2:41:38 PM
SENATOR McGUIRE asked if the problem is that law enforcement can't stop sales because there's nothing on the books about the substance.

MR. STANCLIFF said that is the problem; currently there is nothing that would allow interdiction.

SENATOR McGUIRE suggested it might be time to consider an ability for the Department of Public Safety to use something like the emergency regulation process before going to the legislature for a full vetting.

MR. STANCLIFF said an advantage to law enforcement is that it is very difficult to grow Salvia divinorum in places that it doesn't occur naturally. If Alaska were to become a "red-light" state it would be easier to control than a substance that readily grows here.

2:44:56 PM
CHAIR FRENCH questioned why the federal government hasn't taken any action on this substance.

MR. STANCLIFF answered it is on the Drug Enforcement Administration (DEA) watch list and federal legislation is being considered. Also, the Navy bans this substance as part of its administrative code. "I think they're just lagging behind the states and the states aren't waiting," he added.

CHAIR FRENCH pointed out that the substance is legal today. Passing this law means that in 90 days it would be a B felony to

Ind
25th Leg 08

possess and an A felony to sell or distribute. It seems as though we've either severely under reacted on one side or we're about to severely over react on the other, he said.

MR. STANCLIFF said he isn't sure what happened with regard to transition periods when other psychotropic substances were made illegal. There is an increased awareness and he knows that Internet sites warn that Alaska is looking at outlawing the substance. Currently someone could argue that they thought the substance was sage and they'd have a good shot at a successful defense because the best chemists at the state lab can't identify the psychotropic substance from the plant.

CHAIR FRENCH clarified that the penalty for a C felony is 0-5 years with no presumptive sentence. The penalty for a B felony is 0-10 years with no presumptive sentence, but there's a guideline for serving. Referring to the statement that the lab can't identify the substance, he questioned how the crime could be prosecuted.

MR. STANCLIFF said a lab can identify the substance that causes the psychotropic reaction. The chemical and botanical difficulty is to identify that particular plant among thousands in the sage family.

2:49:08 PM
SENATOR WIELECHOWSKI referred to an article that says that Salvia divinorum has medical and research value. Noting that it's potentially being used as a non-addictive painkiller, for Alzheimer's disease, and mental illness he asked if this bill would ban medical use or research.

MR. STANCLIFF said no. In fact this is the only substance of its kind that promises to help people who have addictions to more serious substances. On the other side there's evidence that it exacerbates depression. It is an unpredictable substance and very little is known about it. Error on the side of caution, but keep the door open for medical and scientific purposes, he said.

SENATOR McGUIRE added there is nothing in the substance schedule that prohibits prescription. The bill says the penalties come into play unless the substance is prescribed. I don't see a problem as long as research and prescription by a licensed physician aren't prohibited.

CHAIR FRENCH observed that if the state makes the substance illegal, head shops will stop carrying it and the market will evaporate.

SENATOR McGUIRE suggested the committee consider an effective date to allow the public time to learn about the change in law. Intent language could also be added to make folks as aware as possible.

CHAIR FRENCH brought up the topic of an effective date.

SENATOR THERRIAULT said his sense is that a limited number of sites within the state are selling the substance so a long period isn't necessary.

CHAIR FRENCH agreed that 90-days would do it.

2:53:39 PM
SENATOR THERRIAULT noted that the poison quarterly newsletter warns against using Salvia divinorum. "There's a lot of alarming information about this and the power of this drug so I think it's advisable that we do take the step that is suggested in the legislation today," he stated.

CHAIR FRENCH said he supported the bill in a previous session. Finding no further questions or testimony he closed public testimony.

SENATOR McGUIRE motioned to report SB 38 from committee with individual recommendations and attached fiscal note(s). There being no objection, it was so ordered.

Committee Minutes

SB 38-SALVIA DIVINORUM AS CONTROLLED SUBSTANCE

2:51:04 PM
CHAIR BETTYE DAVIS announced SB 38 to be up for consideration.

DAVE STANCLIFF, staff to Senator Therriault, sponsor of SB 38, said that the bill would add Salvia divinorum to the state's list of controlled substances. It's the most potent naturally occurring hallucinogenic substance on the planet; there are groups on both sides of the issue of classification, and Mr. Stancliff cited testimony from users. Alaska is considered to be a "green-light" state for shipping of the substance, meaning it can be easily obtained over the internet without legal ramifications. It has gained popularity as a legal alternative to marijuana, and many young people have access to it. Studies indicate that the use of it is rising, while the internet is making it very easy to find. The state crime lab is in the process of creating a way to identify the presence of the drug in a user's system. SB 38 will send a message to all using the drug that it's a substance that is unpredictable, powerful, and dangerous, while allowing it to remain prescribeable for medical reasons. He added that the drug is currently available in Juneau and online; he showed print-outs from the internet showing the prevalence of Salvia divinorum information on the internet.

2:59:21 PM

SENATOR COWDERY asked if the drug is a plant.

MR. STANCLIFF said that it's a plant grown in Mexico, and a member of the sage genus; there's no blood or breath test available for the drug. The main purpose of the bill is to act as a disincentive to people shipping it to Alaska.

SENATOR COWDERY asked about the effects of the drug.

MR. STANCLIFF said that according to online research, the drug causes hallucinations and a state of uncontrolled delirium. It would be dangerous to operate a motor vehicle under the influence.

3:02:03 PM

JACK HURD, analyst for the Alaska Scientific Crime Detection Laboratory, said that he was available for questions on the bill.

SENATOR DYSON asked if people are victimized under the influence of the drug.

MR. STANCLIFF said that that would be possible.

SENATOR DYSON asked how many other states have criminalized the drug.

MR. STANCLIFF said that four states have banned it, and at least seven countries have banned it or control it heavily.

3:03:25 PM

SENATOR ELTON asked if the state crime laboratory is currently developing tests for identification in a person's body, and asked if there are costs incurred by the process.

MR. HURD said that the costs would be negligible.

SENATOR ELTON asked if the drug is federally banned.

MR. STANCLIFF said that the DEA has not placed it on its controlled substance list, although there have been several measures before Congress to begin that action.

3:05:06 PM

No SS
25th Ly 08

JACK DEGENSTEIN, with the Alaskan Libertarian Party, said that he's studied the plant for the last four years, and the information in the sponsor statement is skewed. He said that the news on the drug has changed to become more pejorative over time, and that facts often cited about the case of a kid who committed suicide under the influence were not clearly used.

He explained that Salvia divinorum is not a similar substance to LSD or marijuana. The bill proposes to keep children from accessing the plant, but since it's federally legal it can't ever become totally illegal in Alaska. Other substances are more dangerous than Salvia divinorum, which doesn't cause brain damage. If Salvia is made illegal, it will simply be replaced by something else. It will only make criminals out of law-abiding citizens, and people using it irresponsibly will continue to do so. Vendors have said that they will continue sending it to Alaska despite a state ban, so the bill will be pointless.

He explained how the drug has been found to relieve depression where other substances have failed. Recent studies have shown that it relieves cocaine and opium addiction in rats; if the plant is made illegal in the state, research possibilities will be limited. The drug is non-toxic even with prolonged exposure, and shows promise in addiction help; the bill would be harmful to those wishing to cease their addictions. The bill could be altered to allow for older individuals to receive the plant; Maine is attempting to make it legal for those 18 and older, but a felony for provision to underage kids. The people who want to use the plant responsibly shouldn't be punished.

SENATOR COWDERY asked if the testifier had used the drug.

MR. DEGENSTEIN said that he had, 4 months previously.

SENATOR COWDERY asked how he found the plant.

MR. DEGENSTEIN replied that he ordered a live plant over the internet.

DAVIS said that there were some concerns about the bill but she thought it should be allowed to move through the system. She then asked the will of the body.

SENATOR COWDERY moved to report SB 38 from committee with individual recommendations and attached fiscal note(s). There being no objection, the motion carried.

CHAIR DAVIS, seeing no further business before the committee, adjourned the meeting at 3:16:47 PM.

Thank you Sue. SB 52

Importance: High

Linda,

If the committee needs information and assistance from the Department of Public Safety regarding SB 52 – Salvia, we will have the folks listed below available on teleconference:

Captain Keith Mallard, Commander, Alaska Bureau of Alcohol and Drug Enforcement
Location: Anchorage

David Schade, Director, Division of Statewide Services
Orin Dym, Forensic Laboratory Manager
Jack Hurd, Forensic Scientist
Location: Anchorage

If you need to reach me please feel free to call either number below. Thanks for your help.

Sue Stancliff
Special Assistant to the Commissioner
Legislative Liaison
Department of Public Safety
465-2649 desk
351-2722 cell

will be on line @ 2:30

This legislation will add Salvia Divinorum to the list of controlled substances. Since Salvia Divinorum is not currently classified as a controlled substance and because the number criminal prosecutions this may generate is unknown, the agency cannot accurately predict the fiscal impact. Accordingly, OPA submits an indeterminate fiscal note.

This bill adds Salvia Divinorum to the list of controlled substances. Because this substance has not previously been listed as a controlled substance, it is not possible to determine the potential fiscal impact. The Agency, therefore, submits an indeterminate fiscal note.

Re: Senate Bill 52 / Listing as a controlled substance, Salvia Divinorum

I respectfully request a hearing on Senate Bill 52. It is a bill your committee took up last session and passed out with strong support.

Unfortunately, it failed to clear the Finance Committee prior to adjournment so I have brought it back before the legislature this session.

Thank you for your cooperation and assistance in helping to get this dangerous hallucinogenic listed along with LSD, Mescaline and other similar substances.

Sponsor Statement

Senate Bill 52

Salvia Divinorum (pronounced Div-i-nor-um) is very powerful a hallucinogenic substance primarily grown in the mountainous regions of Mexico. It has a history of use as a vision inducing substance by the Mazatec Indians of the region. Because it is so easy to misuse and can produce long-lasting psychological effects, it is banned in several countries and an ever growing number of states.

The leaves of this perennial herb, once processed can be eaten, drunk as a tea, or inhaled. Salvia is presently available to persons in Alaska who choose to order it over the Internet. Although purchasers of this substance are asked to certify they are over the age of 18, we know such restrictions are loosely applied. Sellers and their web sites promise mind-altering experiences, but experts warn that depression and schizophrenia are very real risks with this drug. (www.intheknowzone.com)

As with all items that enter the pop drug culture, Salvia Divinorum is enjoying a rise in use due to the lack of restrictions. We have an opportunity to get ahead of this powerful substance and reduce the risk to our young people by following the lead of other states and countries in declaring Salvia a dangerous substance and adding it to our Schedule II list of illegal drugs. Such action would place it in the same category as mescaline and Peyote.

I urge your support for this important action.

Legal high new worry for parents

LSD-like herb blamed in Delaware teen's suicide

BY MIKE CHALMERS
THE NEWS JOURNAL
02/26/2006

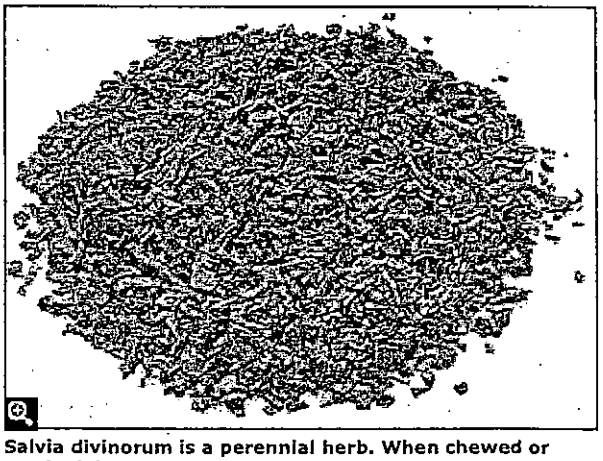
In the daily search for reasons behind their 17-year-old son's suicide, Dennis and Kathy Chidester keep coming back to the same answer: salvia divinorum.

The herb, a cousin of the flowering sages enjoyed by backyard gardeners, contains the world's most potent natural hallucinogen, as strong as LSD. The drug is legal in most states, including Delaware, and easily available through hundreds of Internet sites, including eBay.

That aura of legitimacy lulled Brett Chidester, a straight-A senior at Salesianum School, into thinking smoking salvia leaves was safe, even while convincing himself that he had gained incredible insights into the universe, his parents said.

COURTESY OF THE CHIDESTER FAMILY

Bret Chidester's parents are certain that smoking salvia divinorum led him to take his own life.



Salvia divinorum is a perennial herb. When chewed or smoked, it produces LSD-type hallucinations.

"Salvia allows us to give up our senses and wander in the interdimensional time and space," Brett wrote in an essay his parents found after his death. "Also, and this is probably hard for most to accept, our existence in general is pointless. Final point: Us earthly humans are nothing."

Brett acted on that belief Jan. 23.

Dennis Chidester had been trying to call Brett all day with no luck. He came home at 5 p.m., opened the garage door and saw a tent pitched inside -- an odd sight that he didn't process right away.

"I just ran upstairs calling his name," Chidester remembered. "Now my heart's pounding. He's not in his room. I go downstairs, I go into the garage and I open up that tent.

"That's the one thing I didn't want to do," he said, his voice cracking. "I found him in there, dead. He had taken a charcoal grill and ... carbon monoxide poisoning."

About the time Brett Chidester started smoking salvia, his parents say, he began falling into moods of anger or melancholy.

Brett's essay, suicide note and actions before his death still

leave his parents with more questions than answers.

"We just won't have any answers, and we have to learn to accept that," Kathy Chidester said. "But my gut feeling is it was the salvia. It's the only thing that can explain it."

Abuse concerns DEA

Mazatec Indians have used salvia divinorum to divine spiritual truths for hundreds or thousands of years, experts said. Outsiders discovered it in the 1960s, but it remained a relatively obscure drug until popularized on the Internet, beginning in the 1990s. It's now sold as live plants that can be grown indoors, dried leaves or liquid extracts, from tiny bags costing a few dollars to wholesale shipments for hundreds of dollars.

"You type 'salvia divinorum' in a search engine and you get 10,000 hits, most of which are head shops on the Internet," said Thomas E. Prisinzano, a medical researcher at the University of Iowa. "That's not good. People are going to abuse it."

Experts and users say when the leaves are chewed or smoked, they produce powerful visions that make users believe they're in an alternate place and time. Despite its growing popularity online, law enforcement and health officials, as well as several teenagers and their parents, said salvia is not a common drug in Delaware.

Since 2003, the federal Drug Enforcement Agency has considered salvia divinorum a "drug of concern" because of its wide availability, potential for abuse and unknown long-term effects. Louisiana, Missouri and several countries have outlawed it, but congressional attempts to control it in the United States have failed, in part because of a reluctance to infringe on the religious freedoms of American Indians.

"It's dangerous," DEA spokeswoman Rogene Waite said. "Just because it's not a controlled substance, people shouldn't think it's OK to use it."

Dennis and Kathy Chidester, who divorced when Brett was 3, are uncomfortable talking publicly about their son's salvia use and suicide. But, they said, they are more uncomfortable remaining silent and letting other parents learn through tragedy.

"If other states can [regulate] it, why do we have to wait for a nationwide law?" Dennis Chidester said. "States should act on their own."

Delaware should consider outlawing salvia, two state legislators said. Sen. Karen E. Peterson, chairwoman of the Senate Combat Drug Abuse Committee, and Rep. Pamela S. Maier, chairwoman of the House Health and Human Development Committee, had not heard of the herb but said they would look at the laws in Louisiana and Missouri.

COURTESY OF THE CHIDESTER FAMILY

SALVIA Q&A

Is it legal?

It is not a controlled substance, so it is legal to own, use and distribute salvia divinorum in Delaware and most states. Louisiana, Missouri and several countries have outlawed salvia.

What are the effects?

The DEA considers salvia divinorum a "drug of concern" because its full effects are not known. Researchers said they do not know the long-term effects of using salvia.

Is it addictive?

Researchers and users said salvia is not addictive.

Who uses it?

Mazatec Indians have chewed salvia divinorum for ritual divination and healing for hundreds of years. Westerners discovered it in the 1960s, and its popularity has grown among teenagers and young adults since the 1990s because of availability over the Internet.

Does it have other uses?

Medical researchers are interested in the herb's potential to treat pain without addiction and to better understand Alzheimer's, Parkinson's and other diseases that alter a patient's perception of reality.

How is it sold?

Web sites and Internet vendors sell salvia divinorum as live plants, dried leaves, crushed leaves and a liquid extract.

Legislators in those states banned salvia last year over concerns about teenagers' abuse of it and other hallucinogenic plants.

"It was being marketed to high school kids," said Scott Lipke, a Missouri state representative. "It's not a widespread problem, but we were trying to be out in front on it."

Delaware police said they know little about salvia. "I don't think we'd even know what it is," said Sgt. William Wells, Wilmington police spokesman.

Health officials said it hasn't hit their radar screen, either.

"If it's not an FDA-regulated drug, we couldn't track it any more than we could track someone using ginkgo biloba," said Heidi Truschel-Light, spokeswoman for the Delaware Division of Public Health.

Local merchants who sell glass pipes and other smoking supplies said they don't sell salvia, even though customers ask for it and wholesalers have urged them carry it.

"Kids come in here all the time and ask for it," said Randy Neil, a cashier at Frolic in Newark. "But we don't mess with it. As far as I know, the only place you can get it is the Internet. Probably the reason it's legal now is most people don't know about it."

'Getting deep'

Dennis and Kathy Chidester had never heard of salvia until Brett's cousin told them last summer that she was worried about his salvia use.

About the same time, a friend showed Kathy Chidester Brett's site on MySpace.com, an Internet service where teenagers can chat and share pictures and music. Brett's site contained a video of him and a friend smoking salvia. She confronted him.

"He kept saying, 'Mom, it's legal. It's just an herb. The Indians used to use it to divine knowledge of the universe,' " she remembered. He told them he stopped using salvia, and they believed him.

Still, when Brett was out with friends, his parents would stay up until he came home.

"I thought, if he's doing this stuff or he's drinking, I'm going to know," Kathy Chidester said. "And when he came home, he would be normal, always normal."

Experts said salvia's effects last from a few minutes to an hour or two, with no hangover or other symptoms. Daniel Siebert, a California botanist who sells the herb online and promotes its "responsible" use, described the experience as similar to a vivid

dream. "It's like your mind is on autopilot," Siebert said. "Your brain is generating images that have some kind of narrative line to them. It puts your mind in a very introspective place. It's a way of getting deep inside yourself."

Siebert said crowds and loud music make a salvia-induced trip unpleasant, so it's unlikely people would use it as a "party drug" more than once or twice. He supports some regulations on salvia, such as age restrictions and penalties for driving under the influence of salvia.

"People take their experiences way too literally and read too many things into it," Siebert said. "If you take it literally, you really believe you've traveled to other dimensions and met other beings that told you things. Minors are particularly prone to not understanding that."

That doesn't stop some Internet merchants from billing salvia as a legal, albeit more expensive, alternative to illicit recreational drugs.

The site where Brett Chidester got at least one batch sells it in packages dubbed "mind bender," "mood mix" and "freshman selection." It sells a "party pack" of three different strengths of extract, plus four ounces of leaves, for $207.90.

Promising medical use

Salvia does have legitimate research value.

Prisinzano, who earned a bachelor's degree in chemistry from the University of Delaware in 1995, is studying whether salvia's main ingredient, salvinorin A, could be used to create a nonaddictive painkiller. Also, he said, understanding the way salvia creates hallucinations could help scientists better understand Alzheimer's disease and mental illnesses that alter patients' perceptions of reality.

"It's actually become a hot area of research," said Bryan Roth, a leading salvia researcher at Case Western Reserve University in Cleveland. In 2002, he discovered how salvinorin A travels through the brain.

One salvia user described watching a mountain lake turn into a desert, Roth said. Another said she found herself in a room with an alternate future behind each door. She picked one door and saw the death of her child, he said.

"Depending on the dose, it can cause a mild sense of distortion," Roth said. "In the extreme, people are basically shot out into another reality, another place and time."

A changed son

Dennis and Kathy Chidester think that's what happened to Brett.

About the time Brett began using salvia, he became more melancholy and had trouble sleeping, his parents said. He was sometimes angry for no reason. Because Brett had never displayed typical teenager moodiness, they thought he was just catching up to his peers.

"He definitely changed," Kathy Chidester said. "It wasn't a drastic change. I just figured well, this is the other shoe dropping. This is what teenagers are like and we haven't experienced it."

The week before Brett's suicide, Kathy Chidester called him from Austria, where she was leading an annual ski trip for the Wilmington Ski Club. Brett said he was fine and probably was going to make the Salesianum honor roll again.

The next Saturday night, Jan. 21, Brett went to his girlfriend's homecoming dance. In the few months they had been dating, the relationship had become serious, his parents said. Brett noted in his daily planner that he was going to buy her flowers and take her to dinner for Valentine's Day.

Brett spent much of the weekend writing college application essays, hoping to become an architect. Brett was off work Monday, Jan. 23, from his job in the dining room of Cokesbury Village, an assisted living facility.

He was still sleeping when his father left the house that morning.

"Mom and Dad, don't worry about me," Brett wrote in his suicide note. "Please don't cry. I love you guys so much. I always have. Take a vacation. You deserve it. Please do not be sad. I want you to carry on your lives. Remember me and be happy when you think of me, not sad. Tell yourselves I'm in a better place, because I am. I'm sorry I didn't get to say goodbye before this, but I love you."

SALVIA DIVINORUM

(Hallucinogenic) sage, Salvia divinorum, salvia, the matrix

Salvia is derived from the American plant *Salvia divinorum*, a member of the mint family. It is used by the Mazatecs and others in Meso America. It is marketed in the UK under many guises. In head and sex shops it is often sold as herbal ecstasy, using names such as Eclipse. It is also sold as a dried natural high, intended for smoking (in variable amounts) or as a herbal remedy under its botanical name, or as the matrix or 'hallucinogenic sage'.

"Salvinorin A" the active component of Salvia Divinorum, is most effective when vaporized and inhaled, but the most common way to take it is by swallowing or smoking. Its effects are more hallucinatory than other legal highs - though high doses of the raw plant are usually needed to achieve these effects.

A dose of 200-500 mcg produces profound hallucinations that last from 30 minutes to an hour or two, while doses over 2mg are effective for much longer. According to the literature, doses greater than 500 mcg can cause the user to become completely unaware of their surroundings and enter a state of uncontrollable delerium during which they must be watched carefully. [1]

Updated October 2003

Powerful but legal, hallucinogenic under scrutiny

USA Today

A little-known hallucinogenic leaf that is legal in most of the USA is the target of new calls for a ban after the suicide of a teenager who smoked it.

Salvia, a relative of flowering sages enjoyed by many gardeners, is the most powerful natural hallucinogen known — almost as strong as LSD, experts say. Known as "diviner's sage," salvia has been used for centuries by the Mazatec Indians in Mexico. In the USA it is sold in leaf and liquid form by websites and head shops and is available to anyone at any age.

"Kids fall into a false sense of security because it's legal," says state Sen. Karen Peterson, a Delaware Democrat. "We control LSD, and we should control this."

Peterson has filed a bill to make Delaware the third state to designate *Salvia divinorum* a banned substance like marijuana and heroin. Louisiana and Missouri have already taken such action.

Her action came in response to the suicide of Brett Chidester, 17, of Wilmington, Del., whose family blames the drug.

Brett was a straight-A student who ranked top in his state in Spanish and was making plans for college and to buy his girlfriend roses for Valentine's Day, his family says. On Jan. 23 he put a charcoal grill inside a tent in his father's garage, lit the grill and crawled inside the tent.

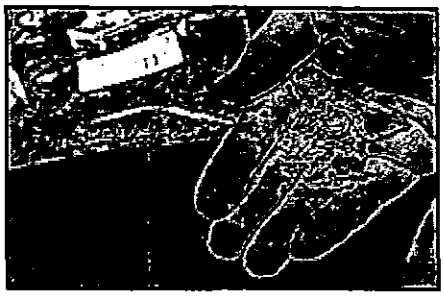
A suicide note described revelations that echoed descriptions of salvia experiences posted by users to various salvia-related websites. "How can I go on living after I learned the secrets of life," he wrote. "It took me 17 years, but I finally figured it out. I can't tell you that here because that kind of information can cause chaos."

His mother, Kathleen Chidester, says her son bought salvia on a website. His father, Dennis, says police took salvia from his room. Kathleen Chidester says she believes Brett was depressed and used salvia because it was legal. His suicide note left no doubt in her mind that salvia had something to do with his death.

Despite salvia's powerful nature, the Drug Enforcement Administration has not recommended that it be banned as a dangerous drug. The DEA has been collecting information for years on the leaf, says Rogene Waite, a spokeswoman for DEA. The process involves measuring its availability, potential for abuse and medical uses.

November 13, 2005

Salvia: It's intense, it's dangerous, it's inexpensive ... and it's legal



Salvia is a powerful, legal herb from Mexico that produces vivid, often terrifying hallucinations. The drug is sold in Magic Man in various strengths.

Mail Tribune / Bob Pennell

By JOHN DARLING
for the Mail Tribune

Few police, teachers or counselors have even heard of it, but the drug salvia — a powerful psychedelic herb from Mexico — is legal in the U.S. and easily purchased over the counter in Medford or on eBay.

Also known as Diviner's Sage or Sally-D, salvia divinorum is extremely intense, say those who have tried it. They say it is as powerful or more so than LSD and produces vivid, often terrifying hallucinations and out-of-body experiences lasting five to 10 minutes. Effects vary widely; a few users report little or no effect.

The herb is sold at Magic Man in the Bear Creek Shopping Center in various strengths for $11.95 to $44.95. In Ashland, Zen Den doesn't sell it and Puff's used to but stopped.

Theresa Jermain of Medford called police when a 17-year-old high school student, for whom she is guardian, bought salvia at Magic Man and, after smoking it, told her he "got real high" and it was "way too strong."

After checking out the shop, police reported back to Jermain that the drug was not illegal and there was nothing they could do, she said.

The student, "Chris," who asked not to be identified by his full name, said he smoked it with 15 fellow South Medford High School students and that only three of them had a "good trip" – the rest being "very bad." Students, he added, are little aware of the drug and it's not being much used there.

He described his experience as an "out-of-body experience in a totally different world" followed by a bad "body high," in which he felt sick and awkward and couldn't move. With a cell phone, he videoed another student on salvia hallucinating and trying to crawl out the back window of a car, he said.

Sheriff's Lt. Dewey Patten, commander of the Jackson County Narcotics Enforcement Team, said he wasn't aware of the drug. "I don't know what we'd do if we found someone whacked on it, because it's not illegal," he said.

Jan Janssen, community outreach officer with Ashland Police, said she'd never encountered it, but after consulting the drug Web site erowid.org, said it's surprising that it's legal, considering that most users report unfavorable experiences. Ashland officers trained as drug recognition experts do know the drug and can spot its effects, she said.

Patten consulted a comprehensive drug reference, "Uppers, Downers and All-Arounders," co-written by Ashlander William Cohen, who also lectures and makes films about psychoactive drugs.

Salvia, wrote Cohen, is similar to PCP and originates among the Mazatec Indians of Oaxaca, Mexico, who use it to induce dreamlike hallucinations, delirium and out-of-body experiences, so as to seek out the causes of illness.

The effects, or "trip," last up to 10 minutes, tapering off over half an hour, with the nature of the trip dependent on the person's mind-set and surroundings.

"Cliff," a 19-year-old from Ashland who asked not to be identified, called salvia an "anti-drug drug" because his trip was so intense that it turned him off alcohol and drugs.

"In my first trip, my legs turned to a waterfall of tears," said Cliff. "The second time, I thought, seriously, that I had died and that my soul was being sucked out of me. It was the most intense thing I've ever done. Coming off it, I felt needles were coming out of my body. It definitely had teaching value because I was abusing (alcohol and drugs) and it gave me a lot of insight about what I was doing."

Magic Man owner John Hopf said salvia is sold as an incense or meditative aid like sage — and that customers learn about it on the Internet and come in to buy it. Although Hopf said he knows of no psychedelic properties for the plant, his store had a stack of printouts from a government Web site warning that salvia is a powerful hallucinogen.

"Pete," 27, another Medford resident who used salvia and asked not to be identified, said he had bought salvia from Magic Man seven or eight times. He described it as "a meditative thing that helps you feel a reality outside the ordinary reality and become one with yourself, as a unity."

He added, "It's very personal, not smoke-a-bowl-and-relax."

"Max," an 18-year-old senior at North Medford High School who bought salvia last week at Magic Man and declined to be identified, said friends suggested he try it. "I'm curious. I'll probably feel good for a while and hallucinate. They said it was worth the money for the feeling you get."

The federal Drug Enforcement Administration has the plant under review based on its potential abuse, availability and effects on users, said DEA public affairs officer Lauren Alder in Washington, D.C.

"The DEA lists it as 'of concern,' but just because it's not listed as a controlled substance doesn't mean it's healthy or safe," said Alder. "The medical profession stresses the danger of it."

The DEA Web page on salvia — www.usdoj.gov/dea/pubs/states/newsrel/newark_intel_bulletin_salvia.html — classifies it as a psychoactive terpenoid, a family that includes marijuana. It produces "profound hallucinations," with effects similar to mescaline, the DEA bulletin said.

The DEA welcomes comments at its Drug and Chemical Evaluation Section: 202-307-8570 (fax) or 202-307-7183 (phone).

Three years ago, staff Oregonian columnist Margie Boule branded salvia "the most powerful natural hallucinogen known on earth."

"Salvia divinorum is a wild ride," wrote Boule. "This is not a drug that simply makes people play Beatles' records backward. It induces powerful hallucinations that sometimes are terrifying."

Salvia is illegal in Australia, Italy, Denmark, Norway and South Korea. California Rep. Joe Baca in

2002 introduced a bill to ban it in the U.S., but, says erowid.org, it is chemically different from schedule I and II drugs, so it is not covered by the federal law used to ban drugs.

SALVIA

salvia divinorum

- **Other names**: Diviner's Sage, Sally-D
- **Cost**: Sold in various strengths for from $11.95 to $44.95 a bag
- **Use**: Similar to PCP, intense hallucinations lasting for 5-10 minutes when the drug is smoked
- **Legal use**: An incense or meditative aid, akin to sage
- **Federal position**: The U.S. Drug Enforcement Administration has the plant under review. The government classifies it as a psychoactive terpenoid, with effects similar to mescaline
- **Why is it still legal?** Chemically differences from schedule I and II drugs mean it is not covered by the federal law used to ban drug
- **Where is it banned?** Australia, Italy, Denmark, Norway and South Korea
- **Salvia web site**: erowid.org
- **DEA information**: www.usdoj.gov/dea/pubs/states/newsrel/newark_intel_bulletin_salvia.html
- **Comments**: The DEA welcomes comments at its Drug and Chemical Evaluation Section: 202-307-8570 (fax) or 202-307-7183 (phone).

The Legal Hallucinogen Targeted to Teens

By Laura Dawn Lewis

Salvia Divinorum (Salvia) or *Salvinorin A*, street names *Salvia, Divine Sage* and *Magic Mint* is a legal, powerful natural hallucinogen marketed to and easily accessed by teens on the web and at times, health and spirituality stores. Health care and law enforcement officials described Salvia as the organic hallucinogen as potent as LSD. Users dispute the comparing of Salvia to LSD and insist that it is a mild, harmless perception and spirituality enhancer.

Generally it takes science a few years to catch up with new herbal remedies that create potentially harmful reactions. This may be why even the DEA cannot respond to many questions regarding *Salvia Divinorum*. Though the DEA may not be able to junior high, high school and college students can.

Salvia Divinorum is currently legal in every country but Australia. The Australian government banned Salvia effective as of June 2002. Salvia is a member of the sage family and a common garden plant. To date, the Divinorum species of Salvia seems to be the only member of this family with perception-altering or intoxicating capabilities. Divinorum seeds are rare.

NEW Salvia Divinorum Special

IN STOCK!!!!
Get the best of both worlds with 1/2 oz. of Prime Salvia Leaves & 1 gm Salvia standardized 5x Extract
For a limited time $36

Salvia Divinorum Leaves -Prime Oaxacan Harvest Leaves

The leaves are harvested fresh in the high mountains of Oaxacan by the native people of that region, then dried, cured & blessed. Oaxacan salvia leaves are known to be 50% more potent than Hawaiian or other grown salvia leaves. These are the highest potency and quality leaves you can get anywhere.

$20 for 1/2 oz. (14 g) of Prime Salvia Divinorum Leaves
$35 for 1 oz. (28 g) of Prime Salvia Divinorum Leaves

Actual Sales Copy from a Salvia Dealers Web site

Salvia Divinorum is not a new drug or plant. Classified in the sage/mint family the Mazatec Indians of Northern Mountains in Oaxaca, Mexico have been using the leafy plant in healing and in religious ceremonies for centuries. The drug itself provides a trip for the user that can range from mild to extreme. Cases have been documented of users falling asleep while driving and walking through glass walls while under its influence.

Referring to the above cases, a 23-year-old Salvia defender in Pittsburgh, PA commented, *"You state things like, it could cause a user to fall asleep while driving. What idiot would use this while trying to drive a car?"*

Users argue that the effect lasts only about five minutes. One responded to this article by stating, *"When salvia is smoked the "trip" only lasts about 3 minutes."* The few medical sources we were able to find with some

Copyright © 2002, Couples Company
All Rights Reserved

> background on Salvia placed intoxication closer to thirty to forty minutes. Several aficionados also insist that the effects *"Aren't much more "intense" than smoking tobacco"*.

User sites dispute our reader's assertion that Salvia highs are no more intense than smoking tobacco. Search and you will see notations referring the 5th and 6th levels of intoxication, called immaterial and amnesiac. These notations dispute what many of the users are stating and do warn of the potential hazards and need for supervision. These are stressed for the highest level, Amnesiac.

"User remains conscious but loses accurate perception of actual surroundings. At this point the person should not be left alone and must have a sober person in the room. The user is in an altered reality, will wander and encounter brief periods of unconsciousness and blackouts."

The DEA's limited information on Salvia describes its use as follows: "*Salvia is being smoked to induce hallucinations, the diversity of which are described by its users to be similar to those induced by ketamine, mescaline, or psilocybin. It is being widely touted on internet sites aimed at young adults and adolescents eager to experiment with these types of substances.*"

Access

Obtaining this drug is as simple as entering a store or visiting eBay. Users adamantly defend its virtues and their right to partake in its pleasures. The following came in to Couples Company from a reader. We found this letter interesting because unlike the others it wasn't angry but it does illustrate the allure. The writer is also mature and in his mid-thirties, showing the appeal to this drug transcends generations.

> Dear Couples Company.
>
> Thank you for bringing this subject to parents' attention. I wonder, why would the parents be the last to know about this plant? In answer to my own question, I say the parents are too comfortable in their lives and they don't want to know. Answering your question - I do know what salvia is. My first experience took place last December. Even though I had been reading what other people posted about their encounters with salvia for a few months before I got enough courage to try it myself (unfortunately, I am not a teenager any more). It was so unexpected, so moving, so out-of-this-world that you wouldn't believe. That experience that lasted no more than 5 minutes of Earth time changed my outlook on life in general and my life in particular. I set up a site to collect any salvia related posts that were ever published online - SalviaDivinorumCorps.org, started a discussion group "SalviaD Alliance" on Yahoo and recently formed "Salvia Buyers Club" to provide good quality salvia at wholesale prices to salvia community. My advice to the parents - take it into your hands, "say once to salvia" and be the judges what is good for your children.

Sincerely,
Slava M 37,
Potomac Falls, VA

Salvia is not just an intercity drug issue; like crack or ecstasy it is in small towns and the big cities. This legal consciousness-altering drug is being used in small towns and major cities around the world. The Internet makes it accessible by overnight delivery to anyone with a credit card, checking account or money order. About half of the 30 web sites we visited selling this drug were based in Germany. The rest are US based.

"Some drugs alter reality in such a way that you come face to face with thoughts that which you have been afraid to confront. There is a reason these substances have been (some still are) researched for psychiatric application," states an anonymous reader of Couples Company.

"This is an escape drug? You are totally wrong, unless you consider 3 minutes of calm an escape. No, alcohol is an escape drug," comments another reader.

Though users argue the drug does not offer an escape from reality, their web sites, comments and culture contradict this through the act of assigning varying descriptions to levels of intoxication or the exaltation of the trips; the creation of a special language for the drug and its altered states of reality. The documentation of experiences under the influence of the drug as exceptional, extraordinary and life-changing. These actions dispute and disprove claims of non-escapism or of a drug with little impact on the user.

Targeting Teens

The target market for Salvia is teens and twenty-something's and it taps into the issues, insecurities and confusion this age group struggles with and identifies with. Salvia ads promise to deliver spiritual enlightenment and bliss to the user. Testimonials from other users further convince and persuade potential users of the benefits of using the product. Many Salvia sales web sites includes step-by-step instructions for smoking the product, while enthusiastically showcasing the results through affirming statements, user trip reports and other personal accounts of the experiences. The following is the introduction from one of the largest legal Salvia dealers on the web:

General FAQ's

A typical ounce usually contains 100 – 200
One ounce = 4 to 12 doses

To achieve moderately strong effects from 1/2 gram of average potency leaf, or 1/4 gram of stronger material.

Salvinorin A is the fortified leaf

"Salvia Divinorum has been steadily growing in popularity over the last few years due to the incredible visionary mystical experiences people are having. Many People are discovering Salvia Divinorum as a powerful tool for soul searching, exploration of consciousness and pure bliss."

Copyright © 2002, Couples Company
All Rights Reserved

From this copy it is easy to see why many people refer to Salvia as the legal LSD Travel back in time to the 1960's and this same statement, nearly verbatim could be heard emanating from the lips of those enjoying or promoting LSD. Many *Salvia Trip Reports* are also eerily similar to the trip descriptions recorded by those on LSD.

> *"There were beautiful closed eye visuals: a dome composed of ribs of light forming arched groining like that of a Gothic cathedral. The colors were the iridescent rainbow in a peacock's tail. This "reality" opened into another one: a narrow red rock canyon with a fast moving river plunging over rocks.*
>
> *I then felt that I was no longer a specific individual, but was an awareness that opened into every individual's consciousness everywhere, forever. I had the feeling that there was a lesson to be learned."*
>
> Salvia Trip Report

Also like LSD, Salvia users have created their own language, logic and culture based around the experiences and consumption of the drug.

Salvia & Health

Salvia is endorsed and marketed by dealers as healthy with spiritual significance. Spirituality is empowered through the action of blessing the dried and cured leaves by an Indian Shaman. Then the leaves are consumed by smoking or chewing.

The health claims are easily disproved by the fact that the leaves are smoked. To date no scientific evidence exists to prove a medicinal purpose for this drug. It also must be noted that scientists have been unable to determine how it works. It does not appear to alter the nervous system and scientists speculate its effects can range from hormonal to affecting a gland yet to be studied. It is possible at a later date a medical purpose may be discovered. Claiming health benefits at this time has no foundation and is simply marketing.

Salvia is also marketed in high-potency drops referred to as Emerald Essence. The drops enter blood stream through the cells in the mouth where it is held for a period of time. Users insist the drops have no effect if ingested or added to food. Currently no scientific research or evidence exists to either prove or disprove this statement.

Salvia & Spirituality

The faith claim for Salvia is stronger than the health claims. As one reader points out, *"For countless millennia, Shamanic traditions have used plant medicines and plant teachers for ceremonial and spiritual use."*

Ancient Indian religions may use Salvia as part of their worship, but the majority of people using the drug today do not subscribe to Shamanic traditions and are not using it

Copyright © 2002, Couples Company
All Rights Reserved

for religious purposes. Cocaine, peyote, opium and other drugs have also been used in religious observances in the past. To claim and use the drug as a religious necessity, users would need to convert and practice the Mazatec Indian's faith and then only use it for ceremonial purposes.

What Salvia Does:

Salvia Divinorum provides the user with an escape, or as users prefer, an enhancement of his or her reality. The drug creates a sense of well being within the user when the experience is positive. Negative experiences can be living nightmares and cause blackouts.

The 3 Degrees of Use

- **General inebriation, (a few hits):** Similar to mushrooms with brighter colors and increased sexual desire.
- **Increased Potency:** Users fall into Trances
- **Further Increased Potency:** User remains conscious but loses accurate perception of actual surroundings. At this point the person should not be left alone and must have a sober person in the room. The user is in an altered reality, will wander and encounter brief periods of unconsciousness and blackouts.

Salvia users rate trips on a 6-tiered scale based upon the name of the drug:

- **S = SUBTLE effects**
- **A = ALTERED perception**
- **L = LIGHT visionary state**
- **V = VIVID visionary state**
- **I = IMMATERIAL existence**
- **A = AMNESIC effects**

As a parent, what can you do and how do you know if your child is using this?

Going through the Salvia sites one thing stood out, vocabulary. The users speak about Trip Reports. These are retellings of their drug-induced experiences. The words "visionary, spiritual enhancement, soul, altered-consciousness, sage." There is an official Salvia dictionary for proper trip descriptions and these includes:

Copyright © 2002. Couples Company
All Rights Reserved

Salvia User's Vocabulary, *Partial List*

- accepting
- afterglow
- besaged
- dissociadelic
- dream people
- endoreality
- fantasia
- floating
- goofy
- healing
- magic casements
- mind tunnels
- sound of silence
- strange attractor
- teacher
- tranSalviaimensional
- visions
- weird
- wiSalviaom

For More information on Salvia:

- DEA
- Sage Group FAQ
- Trip Reports
- Group for Cognitive Liberty and Ethics

Many of these words are not common in the English language or have been created specifically for this drug's culture. The use of such vocabulary may be your only clue as a parent that your child is involved in the Salvia culture. Symptoms of use are vague appear like those experienced under LSD, mushrooms and PCP.

The reason Salvia is not illegal is that scientist can't figure out how it works. This also means there is no documentation on the long-term ramifications of this drug, good or bad. The only professional consensus on Salvia at this time is that it is a hallucinogen. Unlike other hallucinogens, the active ingredient in Salvia, *Salvinorin A* does not attach itself to the neurotransmitters, a requirement for illegal classification. Unless the definitions for controlled substances are changed or process of intoxication is discovered, the drug can and will remain legal.

A group called the Group for Cognitive Liberty and Ethics is currently working a grassroots effort to keep Salvia Divinorum legal and easily accessible to the masses. Their stance is that drug use enhances creativity and brainpower and should be encouraged rather than prohibited.

This article was inspired by the October 20, 2002 Portland Oregonian Article by staff reporter Margie Boulé entitled: Meet the most potent natural hallucinogen—And it's legal!

Drug Enforcement Administration
Newark Division

Michael Pasterchick, Jr.
Special Agent in Charge

Salvia Divinorum, ska Maria Pastora, Salvia (Salvinorin A, Divinorin A)

Introduction

Salvia Divinorum is a perenial herb in the mint family native to certain areas of the Sierra Mazateca region of Oaxaca, Mexico. It is one of 500 species of Salvia in the New World is in similar to the sage plant. The plant grows in large groupings to well over 3 feet in height. It's large green leaves, hollow square stems and flowers are it's characteristic features. S. Divinorum is one of several vision-inducing plants employed by the Mazatec Indians

There has been a recent interest among young adults and adolescents to re-discover ethnobotanical plants that can induce changes in perception, hallucinations, or other psychologically-induced changes. Since S. Divinorum, or any of its active ingredients are not specifically listed in the Controlled Substances Act, some on-line botanical companies and drug promotional sites have advertised Salvia as a legal alternative to other plant hallucinogens like mescaline. The plant material is smoked for the induction of "mystical" or hallucinogenic experiences.

Chemistry/Pharmacology

"Salvinorin A" the active component of S. Divinorum, is most effective when vaporized and inhaled. Chemically, Salvinorin A is a neoclerodane diterpene, a psychotropic terpenoid. The grouping of psychoactive plants containing terpenoid essential oils includes Salvia Divinorum, Wormwood (Absinth), and Cannabis Sativa (tetrahydrocannabinols, THC). Divinorin A was chemically characterized by Valdes et al., in 1984, however Ortega et al., (1982) had previously characterized the same substance and called it Salvinorin A and thus, out of convention, the psychoactive substance should be called Salvinorin A. A dose of 200 to 500 micrograms produces profound hallucinations when smoked. Its' effects in the open field test in mice and locomotor activity tests in rats are similar to mescaline. Salvinorin A's action in the brain are not

well elucidated. However, recent tissue testing (in vitro assays) have suggested that Salvinorin A may act at the kappa opiate receptor site, but functional assays are lacking to determine the exact mechanism of action of this drug substance.

Illicit Uses

Salvia is being smoked to induce hallucinations, the diversity of which are described by its users to be similar to those induced by ketamine, mescaline, or psilocybin. It is being widely touted on internet sites aimed at young adults and adolescents eager to experiment with these types of substances.

User Population

The user populations, thus far, seems limited to younger adults and adolescents influenced by the promotion of the drug on internet sites

Illicit distributed

Salvia Divinorum is grown domestically and imported from Mexico, and Central and South America.

Control status

Salvia Divinorum, Salvinorin A, and Divinorin A are not listed in the Controlled Substances Act.

Comments and additional information are welcomed by the Drug and Chemical Evaluation Section, FAX 202-307-8570 or telephone 202-307-7183.

September, 2002

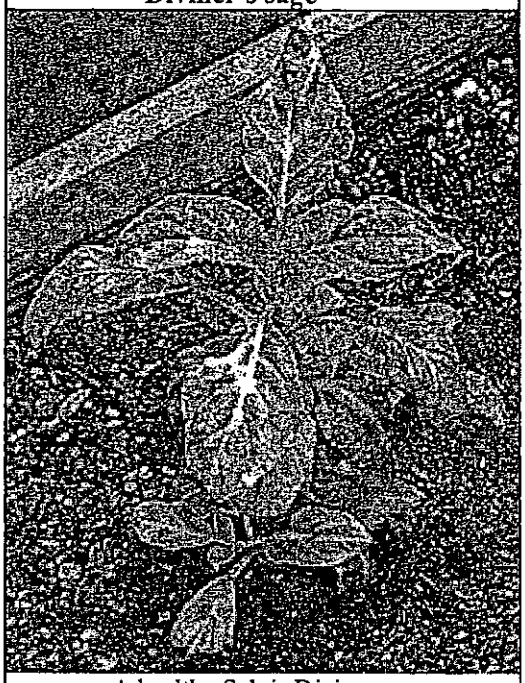
Salvia divinorum

From Wikipedia, the free encyclopedia

Salvia divinorum (also known as **Diviner's sage**, ***María Pastora*** or simply **Salvia**, although the genus name is shared among many plants) is a psychoactive plant, a member of the sage genus and the Lamiaceae (mint) family. The plant is grown by the Mazatec indigenous people of the Oaxaca mountains of southern Mexico in isolated, moist, and secret plots. It has been used as an entheogen by their shamans for centuries for healing during spirit journeys. It is thought to be a cultigen. No definitively wild populations have been found. The Latin name *Salvia divinorum* literally translates to "sage of the diviners".

The primary psychoactive constituent is trans-neoclerodane diterpenoid known as *salvinorin A*. Salvia also contains the closely related compounds salvinorins B-G, divinatorins A-E, salvinicins A and B, and hardwickiic acid. Salvinorin A is the most potent naturally-occurring hallucinogen known. It is active at doses as low as 100 μg [1] (http://www.erowid.org/plants/salvia/salvia_faq.shtml). Recent research has shown that salvinorin A is a remarkably potent and selective kappa opioid receptor agonist. It has been demonstrated that the effects of salvinorin A are blocked by kappa opioid receptor antagonists. This indicates that the effects of *S. divinorum* can be largely, if not entirely, attributed to kappa agonism. Salvinorin A is unique in that it is the only naturally occurring substance known to induce a visionary state *via* this mechanism of action.

Diviner's sage



A healthy Salvia Divinorum.

History

In 1939 Salvia was first recorded in print by Jean Basset Johnston. He was studying the psilocybin mushroom use

of the Mazatecs in Mexico when he encountered this entheogen. R. Gordon Wasson documented its use a decade later and reported its effects through his own testimonials. Historical data at this point is largely unresearched, but it is likely to date back into the early history of Central America. It was not until the 1990s that it become more widely known through the experiments of Daniel Siebert.

As is often the case with cultigens, it is likely that the history of this plant dates back a number of generations. Cultigens require a long historical relationship with human cultures, and salvia is no exception. Perhaps the decline of its widespread use began with the Spanish Conquest, or this phenomenon may have been already underway, either due to religious or political reasons.

Gordon Wasson theorized that this plant was the mythological pipilzintzintli, the "Noble Prince" of the Aztec codices. This theory would explain why a cultigen of such extraordinary power was not otherwise known to the Aztecs, but this theory is not without dispute. The Aztecs were extremely knowledgeable in plant identification, and in their records report that *pipilzintzintli* has both male and female varieties. Salvia divinorum is lacking sexes, meaning there are no male or female flowers, as its flowers contain both sexes. The skeptics of this theory report that the Aztecs would have known the difference between male flowers and female flowers. Wasson, still, may have been correct in his hypothesis, in that there are a number of historical accounts of gendered properties being assigned to plants in a metaphorical manner, not in a botanically anatomical one.

Usage and effects

Methods of ingestion

Traditional Methods

Mazatec shamans use two methods of ingestion. Often, they simply eat the fresh leaves by chewing and swallowing them. Sometimes, they crush the leaves to extract the leaf juices, which they then drink (usually mixed with water). Reportedly, dosages vary from as few as 6 leaves to as many as 120, when using these methods.

Nontraditional Methods

Dry leaves can be smoked in a pipe but most users prefer the use of a bong to cool the smoke. The temperature required to release salvinorin-A from the plant material is quite high (about 240°C). A regular flame will work, but the direct application of something more intense, such as the flame produced from a butane torch lighter, is often preferred.

Many people find that smoking the unprocessed dried salvia leaf produces only light or unnoticable effects, perhaps due to the large volume of plant material that must be smoked to produce psychoactive effects. However, responses vary widely. A concentrated preparation of salvia leaf called salvia extract, with relative strength suggested by terms such as 5x, 10x, and 20x, may be smoked in place of natural strength leaves; this reduces the total amount of smoke inhaled for a given dosage of salvinorin overall, and facilitates more powerful experiences. One cone of 5X strength extract should be enough to produce the desired effect.

Sublingually ingested tinctures constitute another form of prepared salvia. A tincture is made from salvia leaf that has had the psychoactive components extracted, often using high-proof ethanol. Once produced, the liquid can either be used as a tincture or infused into salvia leaf, creating smokable salvia extract.

The traditional Mazatec method can also be employed; however, Salvinorin-A is generally considered to be inactive when ingested, because the chemical is inefficiently absorbed in the gastrointestinal tract unless

thoroughly emulsified; therefore, emphasis is often placed on holding the leaves (and also the saliva secreted during chewing) in the mouth as long as possible, to facilitate absorption through the oral mucosa. This consumes much more of the drug than smoking, but also produces a longer-lasting experience.

Subjective effects

Most users find that the effects of salvinorin are not conducive to socializing. People given Salvia often feel as though a trick has been played on them; in fact, while under the influence, most people tend to find any external stimuli distracting. Most people under the influence of salvia will remain in place although some users may move around. This can be especially dangerous as the user is in an altered state of consciousness and is therefore at a greater risk of unintended bodily injury. It is advisable to have a sober trip sitter present.

The effects of salvia are found by many to be highly spiritual entheogenic experience. Others find salvia useful for meditation. Consciousness is retained until the highest doses, but body control, awareness of externalities, and individual personality can disappear with even modest amounts. Even experienced drug users may feel totally out of control and confused.

At lower doses the user may experience spontaneous laughter, mild closed-eye visuals, stuttering or strobing visual effects, changes in depth perception, and a heightened sense of color and texture.

Moderate doses appear trance-like. Time distortion and open-eye visuals become increasingly apparent. Fractal patterns and geometric shapes may be noticeable with eyes open, and can be very confusing. Many people experience sensations of falling, similar to what is occasionally felt at the onset of sleep. The user may experience fully formed visions of other places, people, and events, especially with eyes closed.

At high doses, the effects become more powerful and may additionally include out-of-body experiences, perceptions of gravitational distortion, vertigo, sensations of wind or physical pressure, hearing voices, flanging of sound, significant open and closed-eye visuals, experiencing alternate realities, contact with beings or entities, dissolution of one's ego, and dissociation. It is also typical that, while under the effects of salvia, a person will not realize they have used the drug. The salvia experience is quite different from that of most other hallucinogenic drugs and may be overwhelming, even with the correct set and setting. Most users recommend darkness and silence as the best environment, however, minimal, ambient or relaxing music can be helpful.

According to experience reports at Erowid (http://www.erowid.org/experiences/subs/exp_Salvia_divinorum.shtml) and elsewhere, Salvia seems to produce visual hallucinations which have a somewhat higher level of consistency than other substances. Reports of contact with an entity supposedly associated with the plant, ("the Shepherdess") again with fairly consistent characteristics, are also common.

Many salvia users, during high-dose out-of-body experiences, may suddenly "merge" with objects. With the significant time distortion typical of salvia, users may live a lifetime as another person, or as an inanimate object, such as a wall or a piece of furniture. The experiences can be extremely pleasant, or very frightening and confusing.

People often fail to achieve the effects the first time they try the plant, possibly due to problems in the administration of the drug. With repeated use, anecdotal evidence suggests that decreased dosage may be possible for the same level experience. Due to the lack of scientific studies on Salvia, if true it is unknown whether this is due to learning proper techniques of administration or a sensitization factor, sometimes colloquially referred to as "reverse-tolerance".

Some people who try Salvia find it difficult or impossible to achieve the desired effects. This may be due to an

insufficient flame. However, sometimes the results are unpredictable. For example, a user may smoke a large amount and feel no effect, but the next day may smoke a small amount and experience a strong trip.

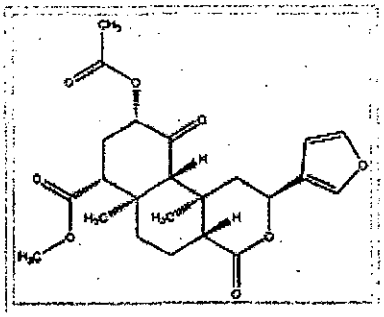
Duration and after-effects

If inhaled, the effects do not last very long, with the peak reached within one minute and then a slow descent back to one's self after about five minutes and back to baseline within 15 to 20 minutes. Chewing the leaf (in a 'quid') makes the effects come on more slowly and be experienced for longer. The first 5 minutes after smoking extract are very intense, and should be experienced lying or sitting down, eyes closed.

Most users report no hangover or negative after-effects. Some users report a pleasing "afterglow," or pleasant sensation and state of mind persisting after the experience has ended. Others, however, claim that Salvia has a depressing effect. Salvia has not been found to be either physically or psychologically addictive. There are no proven health risks associated with the psychoactive chemicals, although the long-term effects on the human body are not well documented. However, smoking any substance is generally regarded as unhealthy by medical professionals.

Chemistry

The primary active constituent is ***Salvinorin A***, sum formula $C_{23}H_{28}O_8$. Unlike most other known psychoactive compounds, Salvinorin A is not an amine—meaning it contains no nitrogen functional group. The Salvinorin group of compounds (including Salvinorin A, Salvinorin B and Salvinorin C) are called neoclerodane diterpenoids.



Salvinorin A

Extraction and purification of Salvinorin A has been documented but should only be attempted by qualified researchers with experience in chemistry and the proper laboratory equipment. Measurement of safe dosages is difficult and requires a sophisticated analytical balance, due to the extreme quantitative potency of Salvinorin A.

Legal status, Controversy

Until the late 1980s, not many people knew about salvia. The heavy commercialization of the Internet in the mid-1990s and the realization that the plant was not legally controlled engendered numerous Internet mail-order businesses which sold dried salvia leaves and other preparations, sometimes for exorbitant prices.

The general public became increasingly aware of salvia in 2002. As of June 1, 2002, Australia became the first country to ban salvia and salvinorin [2] (http://www.cognitiveliberty.org/news/salvia_australia.htm), [3] (http://www.thecouriermail.news.com.au/common/story_page/0,5936,5717251%5E3102,00.html). In late 2002, Rep. Joe Baca (D-California) introduced a bill in the United States House of Representatives to schedule salvia as a controlled substance, and the DEA has indicated on its website that it is aware of salvia and is evaluating the plant for possible scheduling.

Press accounts of efforts to ban salvia often quote law enforcement and government officials who exhibit an inaccurate knowledge of the drug's effects, and frequently characterize the "high" as "chewable marijuana", or as identical to LSD and PCP (two drugs with quite dissimilar effects to *each other*, as well as to salvia).

Under Louisiana Act № 159, 40 plants, including *Salvia divinorum*, have become illegal if sold for human consumption. It is still legal to own the plants. More laws regarding *S. divinorum* can be found at Erowid's Salvia

Law vault (http://www.erowid.org/plants/salvia/salvia_law.shtml).

Salvia divinorum was outlawed in Missouri in fall 2005. New York is considering a bill that would place heavy civil penalties on the sale of the plant. Illinois is also considering regulating Salvia divinorum.

In January 2006, the Swedish government declared their intention on making salvinorin A and all plants containing the chemical illegal. This law has been in effect since 1 March 2006.

In Delaware on January 23 2006, teen Bret Chidester (http://www.delawareonline.com/apps/pbcs.dll/article?AID=/20060226/NEWS/602260356/-1/NEWS01) committed suicide. His suicide note referred to the drug. In an essay found after his death, he wrote "*Salvia allows us to give up our senses and wander in the interdimensional time and space,... Also, and this is probably hard for most to accept, our existence in general is pointless. Final point: Us earthly humans are nothing.*" Because his use of the drug is considered to have contributed to his suicide, the Delaware State Legislature is rapidly moving to pass legislation (http://www.delawareonline.com/apps/pbcs.dll/article?AID=/20060323/NEWS/603230360/-1/NEWS01) that would make the drug illegal there.

Unlike marijuana, salvia has a nondescript appearance (being in the same genus as cooking sage), can be grown in a small space, has no odor and requires no elaborate lighting set-up, criminalization is likely to affect only the commercial sale of the plant, and not its private cultivation, which would be impossible to police. For most regular users growing the plant is considered to be an integral part of establishing a relationship with it.

Botany

Unlike other sages, *Salvia divinorum* produces very few seeds, and the seeds it does produce seldom germinate. It appears to have very little histocompatibility variation, so the pollen from a plant genetically identical to the style fails to reach the ovule. It is propagated by cuttings and by falling over and growing new roots. Although reportedly (Valdez, et al) isolated stands of *S. divinorum* exist in its native range, these are thought to be purposely created and tended by the people of the region. Therefore it is considered a true cultivar and thus does not occur naturally in the wild anywhere.

For the most part, the fate of the species lies with a very small number of clone plants. Of these few clones, there are only two that are in any kind of public circulation; the Wasson/Hofmann strain, and the Blosser ("Palatable") strain. The former is a strain discovered by those whose name the plant bears, when on a visit to the Mazatecs. The latter is the same case, in regards to name, and was discovered in Oaxaca; it is called "Palatable" as well, as it is said to have more palatable leaves when ingested orally than those of the Wasson/Hofmann strain, though other reports state that there is little difference between the taste of the plants. Other varieties are also grown, including the Luna strain which is a strange offshoot of the Hofmann/Wasson line. A few other strains exist, but they are mostly quite similar, in potency, effect, and growth.

Salvia

How To Smoke Salvia Divinorum

by MSS

After numerous attempts I finally came upon what I call the Secret of Smoked Salvia divinorum. I will not discuss the subjective effects except in a limited sense, but what I do wish to discuss is how one might better feel these effects.

Find a comfortable position, preferably sitting down in a quiet environment. Load a water pipe with a full hit of Salvia, light and inhale as deeply, and hold as long, as possible.

While holding in the hit it may be advantageous to poke out the left over ash/foliage and reload. Upon exhalation take a couple deep breathes of fresh air then inhale a second hit as above.

Before taking another hit you may want to empty the water pipe of the left over smoke from the previous hit since the smoke stales quickly and make the next hit more difficult to inhale and hold for a length of time.

Depending on unknown factors, or insufficient inhalations, one may find it necessary to do a hit or two more. Two deep hits has always been good for me, but I have unusually large lung capacity.

Those who are used to smoking are more likely to feel the effects of Salvia simply due to the fact that their lungs are much better prepared to inhale a large amount of smoke. One technique to use to bring in large volumes of smoke is to take a few deep breathes, exhale all the air in the lungs and then inhale from the water pipe.

One other technique is to continue loading and smoking until you no longer have the coordination to load anymore. I've tried this last technique before and it is really great for open eye visuals.

Most people don't feel anything the first time they try Salvia. If you do not get any results after several attempts, try using a high temperature lighter (or torch) and water pipe. The high temperature flame will vaporize more of the active ingredient than a standard lighter.

If you use a torch, don't do it alone. Make sure someone is there to turn off the torch. If the Salvia hits in the middle of a toke, you might loose control of the torch.

After taking the necessary hits close your eyes, lay your head back on a comfortable support, and get your arms and legs in a comfortable open position that won't require you to move after the effects have begun. When the effects begin one might have a strong desire to open ones eyes or change ones position to reestablish an equilibrium. It is important that you not do this. Lay perfectly still with eyes closed for the duration.

If you desire to attempt the experiment with eyes open I highly recommend staying still as possible, having no moving objects in sight, and fixing ones eyes upon a motionless object for the duration. The initial peak last for no more than three to five minutes while residual effects may carry on for ten.

With continued usage over time one becomes more adept at both noticing the effects of Salvia and at exploring the new landscape. As I continued using Salvia I reached a peak experience and now the visions are rather mundane, failing in their once spectacular glory.

The three most important factors in feeling the Salvia experience are appropriate silence, lack of movement, and closed eyes. I have found that a lack of dialog, either from other participants, or from TV is of primary importance, but that instrumental music makes for a quite intriguing experience, especially if 4 speakers are properly placed surrounding ones head.

Since silence is such an integral part of the experience I've conducted sessions with only one person experimenting at a time. The participation of others during ones Salvia

experience can at times be a hindrance.

If others are present when you are experimenting it is important that they be as quiet as possible, both vocally and in their physical movements (no creaking in chairs or traversing hardwood floors, heavy breathing, or, the hardest thing for an observer to hold back, laughter).

I've always required of other participants/observers that they be completely still so as to cause absolutely no noise. During the experience a new landscape is opened up, one without borders, and space can appear to go on infinitely.

Usually this landscape is one that can shift from one scene to the next without apparent provocation and which resembles a rapid succession of unconscious material forcefully trying to push itself into conscious awareness. If someone makes a noise or speaks the vision may be lost or altered since the noise, and where it is located in space, can still be comprehended by the conscious and rational mind.

This causes the mind of the experimenter, which can be quite conscious of two realities at once, to become aware of the inconsistency between these realities, and this can, and in my case usually does, disrupt the experience.

What the motionless body allows the mind to do is to slip deeper into the 3 dimensional nature of the vision. If the body is moved the vision will often alter or slip away. In some way the physical body defines the inner landscapes of the vision. My only way to explain this is to say that the conscious rational mind retains awareness of consensus reality while under the influence of Salvia.

Since Salvia creates a non-consensus reality body movement causes a dichotomy of awareness which can cause the mind to attempt a reconciliation between these realities. Consensus reality often wins, causing the vision to dissipate, or at least lose its convincing nature.

This sort of dual awareness is also played out with sight, which may be why many who attempt to feel the effects of Salvia, and have failed to try closing their eyes, cannot. By having ones eyes open the mind appears to be unconsciously forced to recognize one reality over the next and therefore cannot fall deeply into the full Salvia experience.

Of course this dichotomy of forces appears to be overcome

depending on how much is smoked, and obviously extracted Salvinorin-A forces consensus reality to the wayside.

The main physical effects that I have noticed are a feeling of a rise of body temperature and a slight tightening of the muscles, especially in the hands. I found that if I consciously focus on relaxing my body during this tensioning that I would be pulled further into the vision. This fits into my theory of dichotomy.

I've also found that after the main effects have worn off short term memory may be slightly impaired. For example, I kept forgetting about my lit cigarette in the ashtray. I would lay it down and then, in what appeared a couple minutes, it would be completely burned down to the filter.

One may also notice an inability to recall many of the aspects of the vision and may suffer from incoherent speech. The incoherent speech is very important in attempting to interpret the experience. Just as in Freudian dream psychoanalysis the mind make attempts to fill in the blanks of the vision with coherent structure, basically by adding material to make the vision make sense. But the visions in themselves are unconscious material coming up to a conscious level and this is very difficult to fully interpret.

When a participant comes down from the experience with me I remain completely silent, allowing the partaker to speak freely without my interjections or my attempts to make sense of what is being said. Let them freely speak, without the criticism of the all to common laughter, and try to form a new mental picture from remembered material. Let them have enough quiet time to digest what has happened so that they might come to their own personal understanding.

The main psychological effects seem to be a dissociation from ones physical surroundings. One becomes aware of other surroundings and of communication with alien, though not necessarily extraterrestrial or spiritual, beings. One of the more interesting factors I have found with Salvia is its ability to cause laughter, sometimes even uncontrollably so. Rarely have I seen fear from smoked foliage, but with Salvinorin-A I understand it is common.

Of course these are only my own observations and I make no guarantees of the same effects for others. Two last, though not thoroughly tested observations are that marijuana smoked beforehand interferes with the effects of Salvia and

that the effects of Salvia plateau, thereby requiring a rapid succession of hits.

I have yet to see if any other entheogen limits Salvia's effects. I look forward to testing and hearing about others' experiments with smoked Salvia during Mescaline, Psilocybin, Ayahuasca, and LSD excursions. It might also be interesting to try Salvia (masticated or smoked) in conjunction with smoked DMT. I have personally tried a smoked Salvia/5-MeO-DMT combination with highly dissociative effect on the ego (due to Id influences) while keeping a sense of superego awareness.

I became my superego aware of my ego as it was being affected and effected by my id. You could also say I became my super consciousness aware of my conscious mind being affected and effected by my unconscious mind. Quite a spectacular feeling. Tripartite Being recognized as one.

You should be aware that Salvia suitable for smoking purposes is available in different strengths and forms, for the sake of your own health always get standardized extract when possible, see below for more info.

--- ***Normal Salvia Leaves*** are just that, leaves that have been harvested and dried.

--- ***High Grade Salvia Leaves*** come from premium plants, similar to high grade marijuana compared to a standard strain.

--- ***Crude Extract*** is prepared by mixing crude extract with Salvia divinorum leaves. This concentrates tars and other harmful components of the leaf. It is usually described by a number followed by an x (such as "5x," "10x," etc). The number indicates the ratio of extract to leaf. For example 'Salvia Divinorum 10X Organic Extract', is prepared by mixing one unit of leaf with the tar-like crude extract obtained from nine units of leaf. The resulting product is ten times as potent as the leaves used to produce it. This type of product can vary tremendously in potency because the potency of the leaves used to produce it varies. It has a somewhat sticky feel and inferior burning characteristics due to the impure quality of the extract.

--- ***Standardized Extract*** is prepared by extracting pure salvinorin A (the active principal of the plant), then adding a measured quantity back onto Salvia divinorum leaves to bring them up to a specific, reliable, and consistent level of

potency. This type of product is time consuming to prepare, but is far superior to crude-extract enhanced leaf. Products that have been prepared in this manner have particularly good burning characteristics because they do not contain the tar-like, gummy chemicals found in crude extracts. Since the impurities have been removed during the extraction process, they won't end up in your lungs.

Salvia has been available legally in most areas of the world but it is being made illegal in more countries as time passes. Louisiana made it illegal to use Salvia as a drug in 2005. It used to be easy to buy Salvia online, it is becoming harder to find.

If you find a source, don't pay more than
$50 for a gram of 20x standardized extract
$25 for a gram of 10x standardized extract
$15 for a gram of 5x standardized extract

When smoked (in the ways described), the effects of Salvia can be overpowering and overwhelming. If it is your first time trying Salvia use the table below to find the dosage you should start at.

Normal Salvia Leaves: 1/2 - 1 gram
High grade Salvia Leaves: 1/4 - 1/2 gram
Salvia Extract 5x: 1/10 - 1/3 gram
Salvia Extract 10x: 1/10 gram
Salvia Extract 15x: 1/20 gram
Salvia Extract 20x: 1/20 gram

The bouncing bear company sells salvia, that is ideal for smoking purposes, in the Salvia divinorum section of their site. They ship from the US to most areas of the world.

Liquid Salvia Extracts

I have seen liquid Salvia extracts (tinctures) available in the past but do not know if they are still available. They are recommended for people who don't like smoking or would prefer to ingest a liquid for a milder Salvia experience. Follow the manufacturers recommendations about how much to use and how to use it.

Using a liquid Salvia extract will not be as powerful as smoking Salvia, but the Salvia experience lasts longer when taken in liquid form than it does when smoked.

See talking with god for another persons idea of what the

Salvia experience is like.

Books

The Salvia Divinorum Grower's Guide

This book is dedicated to growing Salvia Divinorum only. There are other books that about dozens or hundreds of types of salvia, but this is the book to get if you want to grow the mind altering Salvia Divinorum plant.

It's an informative book that tells you everything you need to know about the special growing conditions of this unusual plant. It is only 64 pages, but the information it contains will help anyone start and maintain a Salvia Divinorum garden with ease.

The Salvia Divinorum Grower's Guide

A Book of Salvias:
Sages for Every Garden

Salvias constitute the largest genus in the mint family, valued for their medicinal and culinary qualities. The name is derived from the Latin word salvare, to heal, and salvia provides a beneficial addition to any garden.

More than 900 species of Salvia exist, with more than half occurring in North and South America. In this book, the author has selected over 100 beautiful, garden worthy species and dozens of commercially significant hybrids and arranged them alphabetically with documentation providing the scientific name and native habitat of each, including elevation ranges and temperature tolerance, as well as historical background.

The author describes the leaves and flowers of each species, its blooming cycle, and its light, watering, fertilizing, and pruning requirements. Also suggests companion plants and offers data on propagation. The book includes a list of where to see and buy salvias, a flowering guide by seasons, and cold and shade tolerance guides. There are 96 color photographs and 40 line drawings.

Salvinorin A: Notes of Caution

What's Related >>

by Daniel J. Siebert. From "The Entheogen Review" Vol. 3, No.4: Winter Solstice, 1994.

Salvinorin A (the major active principal of the plant Salvia divinorum) is an extremely powerful consciousness altering compound. In fact it is the most potent naturally occurring hallucinogen thus far isolated. But before would-be experimenters get too worked-up about it, it should be made clear that the effects are often extremely unnerving and there is a very real potential for physical danger with its use.

When the herb Salvia divinorum is consumed either by smoking the dried leaf or chewing the fresh leaves the effects are usually (but not always) pleasant and interesting, this is because when used this way the amount of salvinorin A absorbed into the blood stream is usually very small and in the case of the chewed leaves it is absorbed into the blood stream very gradually.

The pure compound salvinorin A is active at 200 - 500 mcg when vaporized and inhaled. Since very few people have the costly equipment necessary to accurately weigh anything close to this small an amount, it is inevitable that people will try to visually estimate the dose. Unfortunately there is little room for error before the effects become potentially dangerous. When the dose goes above 500 - 1000 mcg the effects can be very alarming, I have seen several people get up and lunge around the room falling over furniture, babbling incomprehensible nonsense and knocking their heads into walls. Several people have tried to wander out of the house. When the experience is over they have no memory of any of this. In fact they usually remember very different events. To an outside observer people in this condition have a blank look in their eyes as if no one is present (and perhaps no one is). It is also common for people to have a facial expression which is probably best described as being like that of a frighten ed animal. It appears that at these "larger" doses one completely loses awareness of, and control over, the physical body and for some reason part of the brain causes the body to get up and move about recklessly while the individual has no awareness of where their physical body is or what it is doing. It seems inevitable that one of these days some careless person will do too large a dose without a sitter and will wander out in the street, or hurt themselves in some way.

Because the dose is so small and insignificant looking, there is a tendency for people to think they need more than what they are told is a safe dose. Another problem is that the technique of vaporizing and inhaling the compound can be a bit tricky. Salvinorin A has a relatively high boiling point and people often don't get it hot enough to remain a gas all the way down into the lungs. Another problem is that so little is used that the vapor often disperses before it gets inhaled. Sometimes people just don't hold the vapor in their lungs long enough for thorough absorption. Several people after trying a dose in the recommended safe range and not getting an effect assumed that they needed a larger dose, when in fact the problem was that they did not vaporize the material efficiently the first time. I have already seen more than one intelligent, careful and experienced person accidentally do too large a dose because of this. Fortunately they had sitters and managed to get through the experience safely.

It is also important to understand that there have been no toxicological studies of

this compound in humans. It is true that the Mazatecs have used the plant for a very long time and don't seem to have problems with it, but when the pure compound is used it would be a simple matter to consume a dose hundreds of times greater than anything ever encountered by the Mazatecs.

Not only is salvinorin A chemically different from other hallucinogens (it is a diterpene not an alkaloid) but its effects are quite different as well. Many people consider the effects less manageable and harder to work with than other entheogens. The majority of people who have had a full blown experience with salvinorin A are reluctant to ever do it again. Anyone choosing to experiment with this compound should always have an alert, clear-thinking sitter present to prevent them from injuring themselves or others.

Salvia divinorum as an herb can be used quite safely and many people claim that it has proved beneficial to them. Hopefully there will not be a rush to isolate the pure compound as it is almost inevitable that it will cause problems, people will get hurt, the compound and possibly the plant will get negative attention and it will become scheduled. We will just be adding one more potentially valuable plant ally to the list of species which are already feared and condemned in our society.

If you choose to pursue a relationship with this plant please treat it with respect and care. Perhaps if people can use the plant safely and responsibly it will be able to grow and thrive freely into the future.

MEMORANDUM

Date: March 10, 2009

To: Senator Bettye Davis, Chair
Senate Health and Social Services committee

From: Senator Hollis French
Senate Bill 61 Prime Sponsor

RE: Background information for SB 61 Senate HSS subcommittee

On March 2 the Senate Health and Social Services committee formed a subcommittee to consider several issues related to Senate Bill 61 that were brought up during the legislation's first hearing. In an effort to assist the subcommittee discussion on these questions, this memo provides background information from the bill sponsor for use during the March 10 subcommittee meeting.

The AARP letter of support for Senate Bill 61 noted a particular concern about health coverage for Alaskans between the ages of 50-64. The subcommittee has expressed an interest in determining how Senate Bill 61 will impact this group of Alaskans.

AARP's Public Policy Institute[1] goes into detail about the difficulty Americans between the ages of 50-64 have when they attempt to access, and afford, health care. While Medicare kicks in at 65, many people retire before they become eligible for those benefits, and often standard individual market offerings are withheld, forcing older Alaskans into ACHIA plans which can cost up to 50% more than the price of standard risk premium rates[2].

Senate Bill 61 will ensure that all Alaskans have access to affordable, quality health coverage by putting the price of a plan within reach. Like most Americans who lack health coverage, a majority of individuals who lack benefits between the ages of 50-64 are still members of the workforce[3]. The bill will assist these

working, uninsured individuals in the same way that it will work for all other Alaskans.

In addition, there are some elements of the legislation that should be of particular interest to Alaskans between the ages of 50-64:

Guaranteed Issue, Credible Coverage and Preexisting Condition Exclusions:

Medical underwriting in Alaska's individual market can result in denial of standard coverage by private insurers, particularly when an applicant has less than perfect health. Since the need for medical attention often increases with age, this trend is particularly worrisome for older Alaskans, who are more likely to have identified medical needs than 20 year olds. And while the state's high risk pool cannot reject an individual, these plans are often too expensive for applicants. Senate Bill 61 requires that health insurance plans for sale through the health care clearinghouse offer coverage to any applicant, preventing a scenario where the only course of action is purchasing a plan through ACHIA.

The legislation also requires that plans sold through the clearinghouse give credit for prior coverage, and that preexisting condition exclusions be reduced by any length of "continuous credible coverage" that an individual had before they applied for coverage. For Alaskans that are leaving the workforce who aren't provided benefits through a retirement package, these protections will ensure a more seamless transition into retirement.

The final element that will assist individuals acquiring coverage for the first time through Senate Bill 61 is the provision that prohibits preexisting condition limitations from extending for over one year. By capping limitations at one year, Alaskans will still be discouraged from buying coverage only when it is medically necessary, but it will also ensure that health coverage sold through the clearinghouse is a quality product for those who haven't been able to buy coverage in the past, due to cost or other circumstances.

The three consumer protections listed above – guarantee issue, credit for continuous coverage, and preexisting condition limitation caps - are currently required elements of small group, employer based plans available in Alaska. Extending these protections to individual plans sold in the clearinghouse will level the playing field for all Alaskans, both young and old.

What is the structure of the clearinghouse, and how will it take into account Alaska's unique geographic and technological situation when attempting to reach all Alaskans?

The health care clearinghouse is the entity that is charged with administering the program, under the direction of the health care board. In particular, the bill specifies that the clearinghouse will disseminate information about health care insurance products, and provide assistance in the enrollment process for businesses or individuals[4].

[4] Senate Bill 61 – Sec. 21.54.230

During the Senate Health and Social Services committee hearing on March 2, 2009, the clearinghouse was characterized as an electronic web-based 'place' where health plans can be compared and purchased. This concept, taken from Massachusetts and the Federal Employee Health Benefits program, is an innovative model that has proven successful in both instances. That being said, nothing in the bill confines how the board can structure the clearinghouse, despite the recent successes of an electronic, web based solutions.

In Massachusetts, a variety of means have been used to implement health reform. The Commonwealth Connector website touts advertizing efforts, along with partnerships, mailings, employer education and grassroots initiatives as successful elements to educating the public[5]. As one example, 'Connect to Health' events were held throughout the state to educate and enroll residents in health insurance plans through the connector. A press release noted that these forums were made possible through the involvement of public officials, community health centers, hospitals, business groups, public school districts and health care advocates[6].

Customer service centers were also created to help implement the legislation, and toll free call centers are open daily to answer questions and provide enrollment assistance.

As currently drafted, the bill leaves all options open for the health care board to determine how to communicate with and enroll eligible Alaskans. Given the broad composition of the board - which includes consumer advocates, insurance representatives, business people, labor, medical professionals and hospitals - the perspectives necessary to craft an Alaska specific approach to enrolling people in health coverage should be achievable, particularly when we use other states as models.

The National Federation of Independent Business commented on Senate Bill 61 in a letter to Senator French dated January 25, 2009. In particular, the letter stated two specific concerns:

The first concern: "Unfortunately, SB 61 mandates that small employers bear the cost of fixing the problem through mandated tax on a percentage of their gross payroll."

Senate Bill 61 has a unique section regarding employer contributions, as described during the March 2 bill hearing. The rules are simple. There is no levy for businesses whose payroll is less than $500,000 a year. For businesses with a payroll between $500,000 and $1 million annually, the levy is 1%. For businesses with a payroll greater than $1 million annually, the levy is 2% of payroll. The 'bar' of what it means to provide health coverage is set relatively low – either an employer must offer to pay 33% of a premium cost or they must successfully enroll 25% of employees in their program – regardless of their level of contribution – to avoid the employer levy. In addition, if an employer establishes a Section 125 account that allows employees to purchase health

[5] http://www.mahealthconnector.org - Overview -> Public Education and Outreach
[6] http://www.mahealthconnector.org - January 11, 2008 press release

insurance with pre-federal tax dollars, they too avoid the levy, since the establishment of such an account produces great tax savings for employees. The cost of section 125 accounts are relatively cheap – quotes last year were around several hundred dollars a year total for a small employer, covering all employees. This means that an employer can fulfill all provisions of the employer levy simply by giving employees access to a Section 125 account, at a total cost of several hundred dollars – for all employees – per year.

On the broad scale of health reform options, Senate Bill 61 includes very few obligations on non-providing employers. Massachusetts requires a payout of $295 per non-covered employee per year, and includes a provision which also encourages the creation of Section 125 accounts. California proposals on the table last year included payroll taxes that ranged from 1% to 6.5%. In San Francisco, a plan that requires businesses with over 100 employees in the city to pay at least $1.76 per hour towards health benefits was affirmed by the 9th circuit court of appeals just last year, it not being an excluded policy option for the city due to ERISA preemption.

The second concern: "It also creates mandated coverage design that will increase the cost of basic coverage that might be offered by small employers."

The legislation broadly defines 'essential health care services' as including preventative and primary care, emergency services, inpatient services and hospital treatment, ambulatory patient services, prescription drug coverage and mental health services[7]. It does not specify benefit levels that must be provided in each category, nor does it address permissible co-pays, co-insurance, deductibles, or other fiscal elements of a plan. For a private offering to fulfill the individual responsibility clause proposed in Sec 21.54.240, a private plan must 'meet or exceed' the definition of essential health care services provided in that section[8].

Currently most employer based group health plans are subject to regulation under ERISA, and health insurers that are licensed in the state are regulated by state insurance law, as well[9]. The concern about mandated benefits may be rooted in the specific medical procedures that current Alaska law requires as elements of state regulated health insurance plans. Examples of such mandates include cancer screening procedures, well baby examinations and limited alcoholism and drug abuse treatment. The more benefits a plan includes, the higher cost of the plan.

Language should be changed in Senate Bill 61 to say that a health care insurance plan sold in the group market fulfills the individual responsibility clause of the legislation. This change would help alleviate the concerns expressed by the National Federation of Independent Business, because the comprehensive group plans that currently provide benefits to employees around the state would fulfill the legislation, without requiring a modification of the benefits that they offer.

CS FOR SENATE BILL NO. 61( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATORS FRENCH, Ellis

A BILL

FOR AN ACT ENTITLED

"An Act establishing an Alaska health care program to ensure insurance coverage for essential health services for residents of the state, the Alaska Health Care Board to administer the Alaska health care program and the Alaska health care fund, the Alaska health care clearinghouse to administer the Alaska health care program under the direction of the Alaska Health Care Board, and eligibility standards and premium assistance for health care coverage of persons with low incomes; creating the Alaska health care fund; providing for review of actions and reporting requirements related to the health care program; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

FINDINGS; PURPOSE. (a) The legislature finds that

(1) the current health care system is unsustainable;

(2) improving and protecting the health of Alaskans must be a primary goal of the state;

(3) all Alaskans should have access to essential health care services that are affordable, that are based on publicly debated criteria, and that consider the well-being of individuals across their life spans;

(4) Alaska has an economic interest in ensuring equitable financing of essential health care for Alaskans who do not have access to basic health care;

(5) health care policies should emphasize public health and encourage the use of quality service and evidence-based treatment that are appropriate and safe and that discourage over-treatment;

(6) health care providers and informed patients must be the primary decision makers who are accountable for an individual's health;

(7) health care funding should be explicit, predictable, and economically sustainable;

(8) an economically sustainable health care system requires that providers receive fair and adequate compensation;

(9) health care must be balanced with other programs that also affect health; and

(10) health care must account for the allocation of resources and the human consequences of funding decisions.

(b) The purpose of this Act is to address the findings and concerns listed in (a) of this section by creating the Alaska health care program.

*** Sec. 2.** AS 21.54 is amended by adding new sections to read:

Article 2A. Alaska Health Care Program.

Sec. 21.54.200. Alaska health care program. The Alaska health care program is established to

(1) ensure that residents of the state have access to affordable health care insurance;

(2) require that residents of the state have, at a minimum, insurance covering essential health care services;

(3) reduce unsustainable health care cost increases;

(4) establish a system of health care insurance that integrates public involvement and oversight, consumer choice, and competition within the private health care insurance market;

(5) use models of health care insurance benefits, service delivery, and payments that control costs and overuse, emphasizing preventative care and chronic disease management within a primary care environment; and

(6) provide services for humane and dignified end-of-life care.

Sec. 21.54.210. Alaska Health Care Board. (a) The Alaska Health Care Board is established in the division to manage the Alaska health care program.

(b) The board shall consist of 13 members, including 12 members appointed by the governor, subject to confirmation by the legislature, and the commissioner of health and social services or the commissioner's designee, serving ex officio. The members of the board appointed by the governor must include

(1) one representative who is a licensed insurance producer;

(2) one representative from a health insurance company licensed to transact health care insurance in the state;

(3) two representatives of the business community other than health care insurers, one representing large businesses, and one representing small businesses;

(4) one representative each from two Alaska hospitals;

(5) one representative of a labor organization;

(6) two physicians licensed in Alaska;

(7) two health care consumer advocates; and

(8) one registered nurse.

(c) Except for the commissioner or the commissioner's designee, who serves ex officio, each board member serves for a term of three years beginning on January 1 and until a successor has been appointed. A member is eligible for reappointment.

(d) If there is a vacancy, the governor shall make an appointment, effective immediately, for the balance of the unexpired term.

(e) Members of the board are entitled to per diem and transportation costs

under AS 39.20.180.

(f) The board shall select a member to serve as chair and a member to serve as vice-chair for a term and with duties and powers necessary to perform their functions.

(g) A majority of the board constitutes a quorum for transacting business.

Sec. 21.54.220. Powers and duties of the Alaska Health Care Board. (a) The Alaska Health Care Board shall

(1) administer, as a fiduciary, the Alaska health care fund established under AS 21.54.280 in accordance with the Alaska health care program established by AS 21.54.200 - 21.54.310;

(2) establish types or categories of health care insurance plans offered through the Alaska health care clearinghouse;

(3) classify each plan offered through the clearinghouse as a comprehensive or basic health care insurance plan, based on criteria including the financial cost of the plan, including premium cost, deductible costs, and co-pay provisions;

(4) establish criteria for participation by residents and insurers in the Alaska health care program;

(5) establish an Alaska health care voucher system that provides health care insurance to each individual who meets the needs-based participation criteria set out in AS 21.54.240 or who is the beneficiary of contributions made to the fund that specify the individual as the beneficiary under AS 21.54.280(b);

(6) ensure that eligible individuals are enrolled in a health care insurance plan that provides essential health care services;

(7) prescribe the method for determining individual income for the purpose of the Alaska health care program;

(8) establish procedures for enrolling a participant in the Alaska health care program, including enrollment procedures describing when an individual may enroll or select a different health insurance plan offered through the Alaska health care clearinghouse; the procedures established under this paragraph must allow an individual insured by a health care insurance plan offered through the Alaska health care clearinghouse to select a different health care insurance plan from the plans

offered through the clearinghouse and to make that selection at least annually;

(9) require that participants receive complete information regarding the cost of obtaining health care insurance;

(10) establish procedures for notice and hearings for a person aggrieved by a decision of the board or the Alaska health care clearinghouse; and

(11) ensure that every Alaskan who is required to participate in the Alaska health care program is offered health care insurance that protects the insured from severe financial hardship caused by the cost of receiving medical care.

(b) The board may hold regular and special meetings as the board considers necessary; board meetings may be held by teleconference; meetings shall be recorded and made available on request.

Sec. 21.54.230. Alaska health care clearinghouse. (a) The Alaska health care clearinghouse is established in the division.

(b) The clearinghouse shall be administered by the director.

(c) The clearinghouse shall

(1) administer the Alaska health care program under the direction of the Alaska Health Care Board;

(2) disseminate information about health care insurance products available through the clearinghouse; and

(3) provide assistance in the enrollment process for a small business or an individual.

Sec. 21.54.240. Essential health care services; eligibility. (a) Every resident of the state shall participate in the Alaska health care program except a resident who

(1) is a beneficiary of a health care plan that provides health care benefits that meet or exceed the benefits for essential health care services;

(2) is enrolled in a publicly funded medical assistance program providing services that meet or exceed the benefits required as essential health care services;

(3) is enrolled in Medicaid or Medicare;

(4) is covered under a health benefit plan offered in the group market;

(5) is an individual insured under an individual state plan of health

insurance under the Comprehensive Health Insurance Association under AS 21.55;

(6) is receiving health care benefits under a medical care program of the Indian Health Service; however, a person receiving health care benefits under a medical care plan of the Indian Health Service may elect to participate in the Alaska health care program;

(7) has resided in the state for less than one year; however, a person who has resided in the state for less than one year may receive services provided by the Alaska health care clearinghouse under AS 21.54.230; or

(8) demonstrates satisfactorily to the board, under criteria established by the board, that the person has deeply held religious beliefs contrary to the Alaska health care program and the requirement to purchase health care insurance for essential health care services.

(b) Except as provided in (g) of this section, the Alaska Health Care Board shall provide a voucher to a resident with an income that is not more than 450 percent of the most recent federal poverty guidelines, updated periodically in the Federal Register by the United States Department of Health and Human Services under the authority of 42 U.S.C. 9902(2), and who is only eligible for coverage through the Comprehensive Health Insurance Association (AS 21.55). A voucher authorized by this subsection must equalize the cost of insurance under the Comprehensive Health Insurance Association with the cost of purchasing a health care insurance plan that provides substantially equivalent benefits through the Alaska health care clearinghouse. For purposes of cost comparison under this subsection, the board shall determine whether a plan provided under the Comprehensive Health Insurance Association provides substantially equivalent benefits to a health care insurance plan offered through the clearinghouse.

(c) Except as provided in (g) of this section, a resident with an income that is not more than the most recent federal poverty guidelines, updated periodically in the Federal Register by the United States Department of Health and Human Services under the authority of 42 U.S.C. 9902(2), who is required to participate in the Alaska health care program shall receive private health care insurance coverage for essential health care services at no cost, paid from the fund.

(d) Except as provided in (g) of this section, a resident with an income between 100 percent and not more than 300 percent of the most recent federal poverty guidelines, updated periodically in the Federal Register by the United States Department of Health and Human Services under the authority of 42 U.S.C. 9902(2), who is required to participate in the Alaska health care program shall pay premiums for health care insurance for essential health care services on a sliding scale established by the board.

(e) A resident with an income of 300 percent or more of the most recent federal poverty guidelines, updated periodically in the Federal Register by the United States Department of Health and Human Services under the authority of 42 U.S.C. 9902(2), who is required to participate in the Alaska health care program shall pay the premium for health care insurance for essential health care services.

(f) A person who is an alien is not eligible for assistance under AS 21.54.200 - 21.54.310 unless the person is a qualified alien, as defined under 8 U.S.C. 1641, or an alien excepted under 8 U.S.C. 1612(b). However, a qualified alien may only be eligible for assistance under AS 21.54.200 - 21.54.310 if the person is not precluded by the limited eligibility provision of 8 U.S.C. 1613.

(g) A person who is exempt from being required to participate in the Alaska health care program under

(1) (a)(1) - (5) of this section, but who is eligible to participate in a program identified in (a)(1) - (5) of this section, may not receive benefits under (b) - (d) of this section.

(2) (a)(7) of this section may not receive benefits under (b) - (d) of this section until the person has resided in the state for one year or more.

Sec. 21.54.250. Essential health care services. For purposes of AS 21.54.200 - 21.54.310, essential health care services means medical services performed for an individual covered by a health care plan for the diagnosis or treatment of nonoccupational disease or nonoccupational injury. The medical services that must be performed for an individual covered by a health care plan include, as a minimum,

(1) preventative and primary care;

(2) emergency services;

(3) inpatient services and hospital treatment;

(4) ambulatory patient services;

(5) prescription drug coverage; and

(6) mental health services.

Sec. 21.54.260. Alternative or additional health care services. (a) An employer may offer health insurance coverage that meets or exceeds coverage for essential health care services.

(b) An individual or employer may purchase health care insurance for health care services in addition to the essential health care services required under AS 21.54.200 - 21.54.310.

(c) If an employer does not provide a health care insurance plan for all employees or provides a health care insurance plan that meets or exceeds coverage for essential health care services but does not enroll at least 25 percent of the employer's employees in the plan or does not offer to pay at least 33 percent of the premium for health care insurance under the plan, the employer shall pay the department as follows:

(1) if an employer's annual gross payroll paid to employees who are required to participate in the Alaska health care plan under AS 21.54.240 is $500,000 or less, no payment is required;

(2) if an employer's annual gross payroll paid to employees who are required to participate in the Alaska health care plan under AS 21.54.240 is greater than $500,000 but less than $1,000,000, the employer shall pay one percent of the gross payroll; or

(3) if an employer's annual gross payroll paid to employees who are required to participate in the Alaska health care program under AS 21.54.240 is $1,000,000 or greater, the employer shall pay two percent of the gross payroll.

(d) An employer that establishes a cafeteria plan under 26 U.S.C. 125 (Internal Revenue Code) that offers employees the option to elect health care insurance coverage that meets or exceeds essential health care services is not subject to the payment requirements under (c) of this section, regardless of whether an employee elects to receive the offered health care insurance.

(e) In this section, "essential health care services" means those services set out in AS 21.54.250.

Sec. 21.54.270. Health care insurance plan; children's coverage. (a) A health care insurance plan that is approved by the director that provides coverage for essential health care services under AS 21.54.200 - 21.54.310 and meets the other requirements established under this title may be offered through the Alaska health care clearinghouse.

(b) A health care insurance plan offered through the Alaska health care clearinghouse may not deny enrollment to an eligible individual.

(c) A health care insurance plan offered through the Alaska health care clearinghouse may include

(1) different benefits for network or out-of-network providers;

(2) varied levels of copayment, coinsurance, deductable amounts, out-of-pocket maximums;

(3) high deductible health plans as defined by 26 U.S.C. 223(c)(2) (Internal Revenue Code); and

(4) special insurance terms applicable only to individuals between 18 and 30 years of age.

(d) A health care insurance plan offered through the Alaska health care clearinghouse that covers children must provide that the coverage will continue until the earlier of the child's reaching 25 years of age or two years after the child no longer resides with the family.

(e) Notwithstanding AS 21.54.110(a), a health care insurance plan offered through the Alaska health care clearinghouse may not exclude coverage for a preexisting condition that

(1) relates to a condition, regardless of cause, for which medical advice, diagnosis, care, or treatment was recommended or received more than two years before the enrollment date;

(2) considers genetic information as a condition for which a preexisting exclusion may be imposed in the absence of a diagnosis of the condition related to the genetic information;

(3) extends more than 12 months after the enrollment date; or

(4) excludes a condition relating to pregnancy.

(f) A period of a preexisting condition exclusion permissible under (e) of this section must be reduced by the aggregate periods of creditable coverage, if any, as determined under AS 21.54.120, including creditable coverage resulting from participation in a plan offered through the Alaska health care clearinghouse, or a plan described in AS 21.54.240(a)(1) - (6). The aggregate of periods of creditable coverage is determined by adding all periods of creditable coverage before the enrollment date, excluding periods of creditable coverage before a continuous break in coverage of more than 90 days. This subsection does not apply if an individual's most recent period of creditable coverage ended on a date more than 90 days before the enrollment date. This subsection does not preclude application of a waiting period to all new enrollees under a health care insurance plan.

Sec. 21.54.280. Alaska health care fund. (a) The Alaska health care fund is established as a separate trust fund of the state. The fund consists of

(1) state money appropriated to the fund;

(2) federal money appropriated to the fund;

(3) private employer and employee health care contributions or fees received by the department and appropriated to the fund;

(4) health care premiums received by the department and appropriated to the fund;

(5) other appropriations by the legislature;

(6) contributions appropriated to the fund from the United States government and its agencies or from any other source, public or private, provided for purposes that are consistent with the goals of the Alaska health care program; and

(7) interest earnings from investments of the fund appropriated to the fund.

(b) Contributions may be made to the fund by an employer, employers, or an individual that is specified for a particular beneficiary. If a contribution is made to the fund for the benefit of a particular beneficiary, the beneficiary shall receive a health care voucher in the amount of the contribution that may be used to purchase a health

care insurance plan. Money collected under AS 21.54.260(c) is not considered made for the benefit of a particular beneficiary.

(c) The board may use the fund for the purpose of administering the Alaska health care program consistent with AS 21.54.200 - 21.54.310.

Sec. 21.54.290. Disputes and appeals. A person is entitled to notice and an opportunity for a hearing under regulations adopted by the Alaska Health Care Board if

(1) the board or the Alaska health care clearinghouse denies enrollment to the person;

(2) an accountable health care plan refuses to enroll an individual or fails to provide essential health care services; or

(3) the person is adversely affected or aggrieved by a decision of the board or the clearinghouse.

Sec. 21.54.300. Reporting. The Alaska Health Care Board shall submit a written report on the operation of the Alaska health care program to the commissioner and to the legislature by January 1 of each year. The report must include

(1) the number of individuals enrolled in the Alaska health care program;

(2) the cost savings to the state, to employers, and to health care providers;

(3) a measure of patient satisfaction;

(4) an assessment of patient access to essential health care services;

(5) a description of the changes or adjustments made to the program during the period covered by the report;

(6) a discussion of the state agencies delivering redundant services, if any, relating to health care benefits;

(7) an evaluation of state programs that regulate or deliver health care benefits;

(8) recommendations for legislative changes necessary to meet the goals of the program;

(9) an evaluation of and recommendations on the following topics:

(A) the use of electronic health records;

(B) children's health insurance programs;

(C) the effectiveness of Medicaid and the potential expansion of the Alaska Medicaid program, including a comparison between the costs of expanding the Alaska Medicaid program and the cost of providing benefits through the Alaska health care program;

(D) the effect of mandated benefits;

(E) prescription drug bargaining;

(F) evidence-based treatment procedures including a comparison of the use of evidence-based treatment in other states;

(G) the recruitment and retention of medical professionals in the state;

(H) expanding offerings of the University of Alaska in medical fields;

(I) maximizing federal funding to implement the program;

(J) innovations that could produce health care cost savings, including waivers under 42 U.S.C. 1315 (sec. 1115, Social Security Act), which allows experimental, pilot, or demonstration projects likely to assist in promoting the objectives of the Medicaid statute.

Sec. 21.54.310. Regulations. The Alaska Health Care Board shall adopt regulations under AS 44.62 (Administrative Procedure Act) consistent with AS 21.54.200 - 21.54.310.

*** Sec. 3.** AS 21.54.500 is amended by adding new paragraphs to read:

(30) "alien" means a person who is not a citizen or national of the United States;

(31) "board" means the Alaska Health Care Board;

(32) "fund" means the Alaska health care fund;

(33) "resident" has the meaning given in AS 01.10.055.

*** Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITIONAL PROVISIONS. Notwithstanding AS 21.54.210, enacted by sec. 2

of this Act, the initial terms for members of the Alaska Health Care Board, except for the commissioner of health of social services who serves ex officio, are as follows:

(1) four members shall be appointed to serve for a term ending December 31, 2010;

(2) four members shall be appointed to serve for a term ending December 31, 2011; and

(3) the remaining members shall be appointed to serve for a term ending December 31, 2012.

*** Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITIONAL PROVISIONS: REGULATIONS. The Alaska Health Care Board established under AS 21.54.210, enacted by sec. 2 of this Act, may proceed to adopt regulations necessary to implement this Act under AS 21.54.310, enacted by sec. 2 of this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before the effective date of the statutory changes.

*** Sec. 6.** AS 21.54.210, 21.54.220, and 21.54.230, enacted by sec. 2 of this Act, and sec. 5 of this Act take effect immediately under AS 01.10.070(c).

*** Sec. 7.** Except as provided in sec. 6 of this Act, this Act takes effect January 1, 2010.

Alaska State Legislature

Senator Hollis French

Sponsor Statement

SB 61 - Affordable Health Insurance for All Alaskans

The time has come for us to begin addressing the health care crisis in Alaska. Increasing costs have made it difficult for businesses and individuals to acquire the health services they need. This crisis is only getting worse; family health insurance premiums have risen 4.6 times faster than the median earnings of Alaskans over the past 6 years. As costs continue to increase, it is likely that additional hard working Alaskans will go uninsured. Employers who choose to provide employee health plans will watch their costs go up, making it difficult to run a competitive business in the state. The federal government might take action, but if it doesn't, Alaska needs to be ready to take the lead.

Many other states have joined the universal health care debate, but this bill is uniquely Alaskan. SB 61 puts people in control of their own health, giving them the tools they need to make smart investments. Vouchers, funded by a variety of stakeholders, make the prospect of acquiring health coverage realistic to all Alaskans. By guaranteeing that everyone has coverage, insurance premiums will go down. This bill ensures that everyone can purchase an affordable health plan that they select to fulfill their medical needs.

This bill establishes a framework mandating and ensuring affordable health coverage for all Alaskans. A board of 13 stakeholders will oversee the plan, making certain that residents are able to choose and purchase coverage that provides adequate care. The bill also provides:

A framework for personal choice: This bill facilitates a relationship between health insurance providers and individuals, and doesn't assume that a one size fits all solution will meet the health care needs of all Alaskans.

A unique voucher system: By pooling money from all stakeholders, a sliding scale voucher system will ensure that every Alaskan can take personal responsibility for acquiring health insurance coverage. The system will also make it easy for multiple entities to contribute towards a health plan for an individual.

A health care clearinghouse: The clearinghouse will disseminate information about quality health care products, assisting Alaskans who are utilizing vouchers under the Alaska health care plan.

The Alaska health care fund: This fund will receive contributions from individuals, businesses and government to ensure that all interested parties contribute to the health of Alaskans.

Satisfied with your current coverage? This bill will not affect employer based health plans that provide quality health care coverage. In addition, the bill may reduce cost increases for those who currently pay for coverage. A hospital cannot turn down anyone in need of emergency care, and when someone cannot pay their medical costs, those who can pay are forced to subsidize the cost of the uninsured. A recent study estimated that Alaska health insurance premiums are 13.6% higher than they would be if everyone had health coverage (Families USA report). Through ensuring equitable financing of the health care system, SB 61 will reduce the burden on individuals and businesses currently buying coverage.

This bill isn't really about reforming the health care system; it is about ensuring the health of residents across the state. I urge you to consider supporting this bill as we work to improve the quality of life for all Alaskans.

FISCAL NOTE

STATE OF ALASKA
2009 LEGISLATIVE SESSION

BILL NO. SB 61

ANALYSIS CONTINUATION

Caveat: The Division of Insurance has no existing expertise in establishing or administering State benefits programs. The Division of Insurance oversees the conduct of insurance companies, ensures solvency, and approves rates and forms. The Division of Insurance does not determine what are minimum essential health services or how they should be priced. Further, the Division of Insurance has no expertise in determining the eligibility of individuals for government subsidies. All of this expertise will have to be developed by the Division of Insurance from scratch, primarily by recruiting and hiring a substantial number of employees with this type of expertise.

Senate Bill 61 allows for a wide range of options that may be considered essential health care services. As a result, it is not possible to determine the cost of the bill with a high confidence in accuracy. The range of possible costs is wide, depending upon how the Board defines certain terms.

This fiscal note examines the potential cost of the program , as well as the estimated cost of administering the benefit. Costs for insurance premiums are very preliminary until the "essential health care services" are defined. This fiscal note reflects the high-premium scenario using the State of Alaska employee plan as a model and is not broken out by budget component.

Assumptions:
*The Health Care Fund only pays for the non-Medicaid eligible population. State matching funds for Medicaid do not come from the Fund.
*The estimated cost for insurance premiums is $12,000 per person per year (based on the State of Alaska employee insurance plan).
*The cost of premiums to purchase insurance are on a needs-based sliding scale. The State share of premiums will be paid from the Fund.
*Co-pays and deductibles are not addressed in the bill so we assume none are required by any plan.
*There are an estimated 115,000 uninsured persons in Alaska, 83% of whom are adults.

Cost Estimates for Alaska Health Care Program:
*There are 27,000 uninsured persons who are below 100% of the poverty level. Insurance is provided at no cost to the individual. Total cost to the state is $324,000,000.

*43,000 have incomes between 100% and 300% of poverty. They would pay premiums on a needs-based sliding scale. With an estimated average cost of $6,000 per person, the total cost to the state is $258,000,000.

Above 300% of poverty: $0 total. No cost to the State.
*There are about 25,500 uninsured individuals who are above 300% of the poverty level. They would bear the full cost of the mandatory insurance. These individuals would bear a total cost of about $306,000,000.

Fund Source
*A portion of the cost will be paid by a payroll tax of up to 2%, depending upon the size of the business. The Division of Insurance is aware of no statistics on which to estimate the amount of money that would be raised by the tax.

* A portion of the cost will also be funded by premiums paid in part by persons with income between 100% and 300% of the poverty line. These revenues are shown in the general fund program receipts fund source.

ANALYSIS: *(Attach a separate page if necessary)*

The purpose of this bill is for all Alaskans to have access to essential health care services. It requires all residents to have health insurance and creates the Alaska health care program, which is administered by the Division of Insurance.

The bill is expected to increase enrollment in Medicaid, since enrollment in Medicaid is one of the criteria that makes a person ineligible for health care coverage under the new program. The Division of Public Assistance accepts applications and determines whether a person meets program criteria and financially qualifies for the Medicaid program. This fiscal note reflects the additional administrative costs needed to support the increased workload as a result of more people applying for Medicaid.

FISCAL NOTE

STATE OF ALASKA
2009 LEGISLATIVE SESSION

BILL NO. SB061

ANALYSIS CONTINUATION

SB 61 has a January 1, 2010 effective date.

Assumptions:

In FY2010, the department anticipates receiving 14,000 Medicaid applications from persons who do not currently receive Medicaid, and that 10,000 will qualify and be enrolled. Additional staff will be needed to manage the increased application volume and workload. The Division of Public Assistance assumes that funding for additional staff in FY 2010 will include a three month start-up period beginning October 2009 to accommodate hiring and training of new staff.

Fourteen Eligibility Technicians are needed to make decisions on applications and act on changes in household income or other factors affecting a household's eligibility; two Lead Eligibility Technicians are needed to perform quality assurance, training on program rules, and other lead worker duties; one Eligibility Supervisor is needed to oversee and manage the work of the new staff; and four administrative support staff are needed to provide customer service, manage phone lines, and perform clerical support.

The increased volume of applications is anticipated to result in increased denials of eligibility and fair hearing requests. Hearing requests usually result when applicants do not receive an affirmative decision on their application. This increased demand will result in the need for one additional Public Assistance Analyst to serve as a hearing representative and support the fair hearing function.

Additionally, interaction with another department will also increase complexity of referrals and processing of applications. A Program Coordinator is necessary to establish and maintain service coordination and collaboration with the Alaska Health Care Program, and to facilitate consumer education, etc.

FY 2010 Administrative Costs (for 9 months): $1,785.6
Personal Services: $1,234.7 (salary and benefits for 23 new positions)
Travel: $10.0 (for training)
Contractual: $255.3 (for 9 month's cost for information technology, telecommunication, office space, phones)
Supplies: $35.6 (program materials and general office supplies
Equipment: $250.0 (One-time cost for desktop computers, printers, and workstations, and other office equipment

FY 2011 – FY 2015 Annual Administrative Costs: $2,044.2
Personal Services: $1,646.3 (salary and benefits for 23 new positions)
Travel: $10.0 (for training)
Contractual: $340.4 (annual cost for information technology, telecommunication, office space, phones)
Supplies: $47.5 (program materials and general office supplies)

FISCAL NOTE

STATE OF ALASKA

2009 LEGISLATIVE SESSION

BILL NO. SB061

ANALYSIS CONTINUATION

ASSUMPTIONS

Enrollment

Participation is required for every resident who is not enrolled in a public medical assistance program (e.g. Medicaid, Medicare) or a private insurance program that provides essential health care services. About 20% of the uninsured are Native who have coverage under Indian Health Services. Most children who need long term care are expected to have already applied for Medicaid.

There are an estimated 109,500 uninsured persons in Alaska (children = 17,200, adults = 91,500, and elderly = 800) who would be required to take up coverage. Of the 109,500 uninsured persons, **an estimated 10,000 persons, mostly children below 175% of poverty, could be enrolled in Medicaid/SCHIP** without changes to the current eligibility guidelines. This includes the eligible Native population who we assume would enroll in Medicaid as a result of outreach/advertising for the AK Health Care program.

Cost of Benefits

Once deemed eligible, a Medicaid enrollee is entitled to all Medicaid services, and is not limited to only those "essential health care services" listed in the bill. The average cost for all Medicaid benefits for children is **$3,000 per person per year** (based on analysis of Medicaid claim payments for non-disabled children). The total additional cost for benefits (all Medicaid components) is $30 million per year (10,000 persons x $3,000).

This component is allocated about 20% of the total Medicaid costs. Behavorial Health Medicaid Services include acute psychiatric hospital, residential psychiatric treatment centers and outpatient mental health services.

Fund Source

The federal government reimburses the state approximately 50% of the cost for most Medicaid claims. Some claims get an enhanced match rate (e.g. Indian Health Services is 100% federal). The fund source is based on the projected weighted average federal revenue for Behavioral Health Medicaid Services of **61% federal funds**. State matching funds for Medicaid are GF/M and do not come from the AK Heath Care Fund.

ANALYSIS: *(Attach a separate page if necessary)*

The purpose of this bill is for all Alaskans to have access to essential health care services. It requires all residents to have health insurance and creates the Alaska health care program, which is administered by the Division of Insurance. The effective date for coverage is January 1, 2010.

This bill is expected to increase enrollment in Medicaid, which will increase costs. This fiscal note reflects the portion of additional costs to the Medicaid program for health care services, other than behavioral health.

FISCAL NOTE

STATE OF ALASKA

2009 LEGISLATIVE SESSION

BILL NO. SB061

ANALYSIS CONTINUATION

ASSUMPTIONS

Enrollment

Participation is required for every resident who is not enrolled in a public medical assistance program (e.g. Medicaid, Medicare) or a private insurance program that provides essential health care services. About 20% of the uninsured are Native who have coverage under Indian Health Services. Most children who need long term care are expected to have already applied for Medicaid.

There are an estimated 109,500 uninsured persons in Alaska (children = 17,200, adults = 91,500, and elderly = 800) who would be required to take up coverage. Of the 109,500 uninsured persons, **an estimated 10,000 persons, mostly children below 175% of poverty, could be enrolled in Medicaid/SCHIP** without changes to the current eligibility guidelines. This includes the eligible Native population who we assume would enroll in Medicaid as a result of outreach/advertising for the AK Health Care program.

Cost of Benefits

Once deemed eligible, a Medicaid enrollee is entitled to all Medicaid services, and is not limited to only those "essential health care services" listed in the bill. The average cost for all Medicaid benefits for children is **$3,000 per person per year** (based on analysis of Medicaid claim payments for non-disabled children). The total additional cost for benefits (all Medicaid components) is $30 million per year (10,000 persons x $3,000).

This component is allocated about 80% of the total Medicaid costs. Health Care Services - Medicaid Services include inpatient/outpatient hospitals, physicians & clinics, prescription drugs, dental, transportation, lab/x-ray, durable medical equipment, physical/occupational/speech therapy, vision, and home health/hospice.

Fund Source

The federal government reimburses the state approximately 50% of the cost for most Medicaid claims. Some claims get an enhanced match rate (e.g. Indian Health Services is 100% federal). The fund source is based on the projected weighted average federal revenue for Health Care Services - Medicaid Services of **66.7% federal funds.** State matching funds for Medicaid are GF/M and do not come from the AK Heath Care Fund.

SB 61 *Health Insurance For All Alaskans*

Detailed Bill Summary

SECTION 1 of the bill – Findings **Corresponds with version \R**

SECTION 2 of the bill - Provides the framework for the bill

Sec. 21.54.200: Establishes the health care program
This section lays out what the legislation will accomplish.

- it ensures that all state residents can afford quality health coverage that suits their particular needs
- it requires that health coverage is meaningful, as discussed later in AS 21.54.250
- it reduces unsustainable health care cost increases, through encouraging primary care and prevention
- it centers on consumer choice by providing a framework for competition, where insurance plans must compete to acquire and retain customers

Sec. 21.54.210: Establishes the Alaska Health Care Board
This section establishes the Alaska Health Care Board under the Division of Insurance. The board will have 13 voting members, and will include:

- one insurance producer licensed to do business in the state
- one representative from a health insurance company licensed in Alaska
- one representative that works for a large business
- one representative that works for a small business
- two representatives from Alaska hospitals
- one representative of a labor organization
- two licensed Alaska physicians
- two consumer advocates
- one registered nurse
- the commissioner of Health and Social Services, or their designee

Each member, except the commissioner, serves a 3 year term and are subject to appointment and reappointment by the Governor. Members will be entitled to standard per diem and transportation costs under AS 39.20.180. The board will select a chair and a vice chair, and a majority of the board will be considered a quorum for transacting business.

Sec. 21.54.220: Defines the powers and duties of the Alaska Health Care Board
The board oversees two of the main elements in this bill: the health care Clearinghouse and the health care fund, the function of which are described in later sections of the bill.

In particular, the board will:

- ensure that a variety of plans are available in the clearinghouse, where individuals make plan selections based on their personal needs
- help educate the public about different plan options, and ensure that residents are enrolled in a health benefit plan
- establish enrollment criteria and procedures for individuals, and provide for an annual open season when customers can change their plan selections.

For more information, contact Sen. French's office:
Phone: (907) 465-3892 E-Mail: Senator_Hollis_French@legis.state.ak.us **www.healthyalaskans.com**

Detailed Bill Summary

In particular, the board will *(continued)*:

- The board will hear complaints or objections to decisions made by the program or clearinghouse. Individuals who feel aggrieved by a decision of the board are entitled to a hearing
- Establish criteria and implement the voucher system, which will be discussed in a later section
- Ensure that plans protect individuals from severe financial hardship in times of medical need

Sec. 21.54.230: Alaska Health Care Clearinghouse
The health care clearinghouse will be the 'place' where Alaskans are connected up with private health plans that suit their needs. The clearinghouse will disseminate information about health insurance and the plans that are 'certified' to fulfill the essential health care services criteria, as defined later in the bill.

The Clearinghouse will be the place where individuals with health care vouchers make plan selections and are connected up with quality insurance products.

Sec. 21.54.240: Establishes the Voucher system, and includes the individual responsibility clause
This section ensures that all Alaskans can afford quality health coverage. It begins in (a) with the individual responsibility clause, which requires that all Alaskans have health coverage that provides essential health care services. This requirement will only affect those who don't currently have coverage: (1) – (8) outline specific examples of individuals who will be exempt from the individual responsibility clause. Excepted from the requirement are individuals who receive benefits under employer plans or publicly funded programs, including IHS recipients. In addition, individuals who have objections to the requirement to have health coverage on religious grounds can apply to be exempt from the individual responsibility clause.

Subsections (b) through (e) describe the sliding scale voucher system which makes health coverage affordable for all legal residents. Sliding scale vouchers are issued to individuals in households based on the federal government's federal poverty level criteria (FPL), which sets a poverty line annually based on household size. This year the FPL has been set at $13,000 of gross income a year for an individual, or $26,500 per year for a family of four.

Subsection (c) provides a guarantee that anyone who falls below the federal poverty line won't have to pay for health coverage.

Subsection (d) provides vouchers, on a sliding scale, to individuals in households that earn between 100% and 300% of the FPL. Using the numbers from above, this means that an individual who earns between $13,000 and $39,000 a year or a family of four that has a household income between $26,500 and $79,500 will be eligible for a sliding scale voucher that makes health insurance affordable. The amount of these vouchers will be set by the board, and will vary, with more assistance going to those who earn less.

Subsection (e) requires that all individuals over 300% of the FPL acquire health coverage. While these individuals will not receive needs based vouchers, they will be eligible to receive specified beneficiary vouchers, which are discussed in a later section of the bill.

Detailed Bill Summary

Subsection (b) provides larger vouchers to individuals who only qualify for ACHIA coverage, making the cost of coverage equal to that available in the normal market. These vouchers will be issued to people who earn up to 450% of the FPL.

Subsection (f) ensures that only legal residents of Alaska receive needs based vouchers.

Subsection (g) clarifies that an individual who is eligible for health coverage funded by a source other than the health care clearinghouse won't receive needs based vouchers to make insurance affordable.

Sec. 21.54.250: Defines essential health care services
This section defines the benefits that all health insurance plans sold through the clearinghouse must include. Insurance plans will include coverage for:

- preventative and primary care
- emergency services
- inpatient services and hospital treatment
- ambulatory patient services
- prescription drug coverage
- mental health services

Sec. 21.54.260: Relates to employer provided health coverage
(a) and (b) are included to make it clear that nothing in this legislation changes employer based health coverage for companies that elect to provide it.

(c) and (d) relate to the employer levy, which ensures that all employers contribute to the health of employees around the state. This tax is only levied against employers who don't offer health coverage, and the amount depends on the number of employees who lack health coverage and are required to attain it under this legislation. For businesses that pay below $500,000 gross annually to employees that are required to participate, no levy will be charged. For businesses with $500,000 to $1 million a year in gross payroll to employees required to participate in the plan, the levy will be 1% of gross payroll. For $1 million or greater, the levy will be 2%. If an employer either a) offers to pay 33% of premium costs or b) successfully enrolls 25% of employees in an employer sponsored plan they will be exempt from this tax. In addition, if an employer establishes a so-called 'Section 125' cafeteria plan that allows employees to purchase health coverage with pre-federal tax dollars, the employer will be exempt from this levy.

Sec. 21.54.270: Relates to the structure of insurance plans available in the clearinghouse
This section requires that plans provide coverage for essential health care services, as described in 21.54.250. (b) in this section mandates that an insurance company not turn down an individual looking for coverage.

Subsection (c) makes clear that health insurance plans can have varied levels of deductibles, co-pays, co-insurance and out of pocket maximums. They can include high deductible health care plans, and benefit levels can be different for in network and out of network providers. In addition, this subsection encourages lower

Detailed Bill Summary

cost plans that are especially designed for young adults, ages 18-30, which have different terms than are found in normal plans.

Subsection (d) increases the length of time that a child must be covered under a clearinghouse plan to 25 years of age, or until 2 years after the dependent no longer resides with the family.

Subsection (e) borrows language from Alaska's small group health insurance law that limits the length of time a preexisting condition limitation can be imposed on new enrollees to a maximum of 12 months. It also only allows a two year look back for determining when preexisting conditions exist.

Subsection (f) requires insurers to give credit for prior coverage when determining preexisting condition exclusion periods on newly issued health insurance plans sold through the clearinghouse.

Sec. 21.54.280: Establishes the Alaska Health Fund and Specified Beneficiary vouchers
The health fund is established as a separate trust fund of the state, and will include:

- state money and appropriations
- federal money, pursued through a variety of routes including 1115a waivers
- employer levy established in 21.54.260
- health care premiums received and appropriated to the fund
- money from any source that is given with purposes consistent with the purpose of the program

(b) establishes specified beneficiary vouchers, which gives an employer, employers or individuals the ability to contribute to the health premium of a given individual, through a voucher.

Sec. 21.54.290: Disputes and appeals
This section gives an individual the opportunity for a hearing if they are denied health coverage by a certified plan, or if a plan fails to deliver essential health care services. In addition, if a person feels adversely affected or aggrieved by a decision of the board or clearinghouse, they have the right to a hearing.

Sec. 21.54.300: Reporting
This section provides for an annual report by the health care board that includes statistics relating to how the health reform program is performing. In addition, the board will also give an evaluation and recommendations on a variety of important health reform topics, including the use of electronic health records, S-CHIP, the effect of mandated benefits, prescription drug bargaining, ways to maximize federal health care dollars, recruitment and retention of medical professionals, evidenced based treatment procedures, Medicaid effectiveness/expansions and more.

Sec. 21.54.310: Regulations
This section requires that the board establish regulations under the Administrative Procedure Act.

The remainder of the bill deals with definitions, transitional provisions and effective dates.

Health Insurance For All Alaskans

A Bipartisan Solution To Cover The Health Needs Of All Alaskans

SB 61 - AFFORDABLE HEALTH INSURANCE

Comments about the legislation:

Anchorage Daily News Editorial:

"BOTTOM LINE: Here's a promising, market-based, consumer-driven approach to universal health insurance in Alaska."

- Published September 23rd, 2007

Al Parrish, VP/Chief Executive, Providence Health Systems Alaska:

"I believe it is crucial for Alaskans to engage in a public policy debate on this important issue and this legislation provides an excellent forum around which this discussion can be held."

- Written in a letter to Senator French and included in this packet

Laile Fairbairn, Managing Owner, Snow City Café (located in Anchorage, AK):

"I feel that [this bill] is a very promising solution to a significant problem faced by a large number of Alaskan businesses."

- Testimony during a September 10th, 2007 bill hearing in Anchorage, AK

SB 61 *Health Insurance For All Alaskans*

Legislation Summary

Senate Bill 61 is an innovative, market based solution to the national health care crisis in Alaska. It is not socialized medicine. By maximizing consumer choice and creating a health insurance clearinghouse, this legislation guarantees affordable quality health coverage for all legal Alaskan residents.

Many working Alaskans cannot acquire insurance because the cost of coverage places a plan out of reach. While all Alaskans have legal 'access' to insurance products, those who cannot afford the full cost must hedge their bets on good health. Alaska's unique economy adds additional challenges: seasonal employees, for instance, find themselves outside the traditional 'group' market, lacking an easy route to maintain continuous, portable coverage. And with the amount of uncompensated care rising, the pressure on individuals and businesses who do buy coverage will only increase, because unpaid hospital bills are essentially transferred to those who pay for services. SB 61 will reduce uncompensated care and ensure that all Alaskans have meaningful access to health coverage, regardless of job type.

The solution requires that all Alaskans participate. While individuals will have the responsibility to acquire coverage under the bill, the state will guarantee that a quality insurance product will be affordable. Sliding scale vouchers will assist Alaskans that cannot afford the full price of coverage on their own. The bill allows for unique plans that cater specifically to young Alaskans. This legislation does not assume that a one size fits all solution will work for Alaska.

The health care 'clearinghouse' will give participating Alaskans choices when it comes to health coverage, in a competitive marketplace framework. It allows for unsatisfied consumers to change insurers or plans without a loss of benefits, and provides a private market solution to rising costs. By placing the consumer in control and providing information about comparable products, the clearinghouse should reduce cost increases while increasing customer satisfaction.

In short, this legislation will ensure that all Alaskans have access to health care in times of great need, through an equitably financed system.

SB 61

Health Insurance For All Alaskans

Frequently Asked Questions

Why is this bill necessary?
As medical costs increase uninsured Alaskans have greater difficulty taking charge of their own health, because the cost of insurance becomes prohibitive. Through a unique voucher system, this bill will allow individuals to purchase coverage that is affordable, putting everyone in charge of their own medical future.

Why is this bill necessary now?
Recent reports show that medical expenses for Alaska's families have increased 4.3 times faster than the median family income. Businesses across the country have expressed concern about rising insurance costs and the difficulty of providing quality health coverage to employees. The time has come to ensure that all Alaskans have access to affordable coverage, since without action things will only get worse.

How many Alaskans currently lack health insurance?
The latest numbers developed by the Lewin Group estimate that 15.5% of Alaskans lack health insurance, for a total uninsured population of 97,689.

I already have insurance, so why should this bill be of interest to me?
The impact of the uninsured is felt by all Alaskans, not only socially, but economically. When someone cannot pay their medical bills, the costs for their care is essentially covered by hospitals, businesses and the individuals who can pay. A recent legislative research report found that the State of Alaska, as an employer, paid an extra 18.9 million dollars for state employee benefits because of the increased prices caused by uncompensated care.

This bill ensures equitable financing of the health care system while reducing expensive emergency room procedures by encouraging preventative care.

Does this bill change my current employer based health insurance plan?
No – if you are satisfied with your current coverage and it provides essential health services no changes will occur.

Is this bill socialized medicine?
No, and far from it. Socialized medicine is characterized by government run health care; this bill protects consumer choice and encourages competition through a unique voucher system. Under the bill, the government only acts as a facilitator in the health coverage arena, making certain that everyone can afford quality health coverage.

SB 61

Health Insurance For All Alaskans

Personal Choice Under The Bill

For more than 70 years a majority of Americans have received health coverage through their employer. Some see the system of employer based coverage as an unfortunate historical accident, largely resulting from federal tax loopholes following World War II. Others note that employers worldwide play a large role in providing coverage to their employees. SB 61 works within this country's traditional employer-based framework while guaranteeing portable, consumer centric coverage. This legislation places Alaskans in full control of health care decisions that dramatically affect their lives.

Nothing in SB 61 would require a person to change their health coverage if they are satisfied with the benefits they receive today. However, many Alaskans want more options. Through the health care Clearinghouse, this legislation will facilitate a new relationship between individuals and insurance providers: the bill does not assume that a one size fits all solution will work for all Alaskans.

SB 61 places individuals in control of their coverage decisions. Under the employer based system, the employer is a middleman between an individual and health coverage. Currently 80% of employer offerings give only one plan option to employees, and the individual must either accept or refuse that coverage. When employers decide which insurance company to contract with, the way a plan serves employees is clearly considered but coverage decisions aren't left to the individual. The clearinghouse under this legislation provides consumers with information, leaving decisions of plan type and provider up to the person who is affected most by the decision.

The health care clearinghouse established under this legislation will create a marketplace where health insurance information is shared. The annual open season encourages competition by allowing individuals to change plan types and providers seamlessly, which has the potential to reduce rates. In short, this legislation will put Alaskans in a new position of control when designing their plan and choosing an insurer, through a competitive, market based framework.

80% of employers who offer subsidized health plans only offer employees one type of plan design.

SB 61

Health Insurance For All Alaskans

Reducing Medical Bankruptcy

Half of all personal bankruptcies in America are caused by medical problems. While health insurance alone won't provide perfect protection from large health costs, SB 61 could dramatically reduce the bankruptcy rates of Alaskans who will be faced with high medical expenses.

Coverage through the Clearinghouse separates insurance from employment, making a health insurance plan continuous despite job status. Sliding scale vouchers will exist for those who truly cannot afford the full price of a plan on their own, helping those who haven't had access to health coverage. For seasonal employers who generally don't offer a group plan to employees, the option of contributing some funds towards an employee's plan would become easier, and multiple employers could contribute. By ensuring affordable coverage, individuals will have financial protection in times of great need.

Three out of four people who cite medical problems as a partial reason for declaring bankruptcy had health coverage when their ailment began, but most had a lapse in that coverage before declaring bankruptcy. In an employer based coverage system, a job loss is coupled with a loss of employer subsidized benefits. While options do exist to extend coverage, these options charge an individual the full price of the employer offering, and often leave little or no choice in plan design. As mentioned earlier, over 80% of employer sponsored health plans across the country only offer one type of plan that employees can either accept or reject. Often, employees with pre-existing conditions must either drop coverage altogether or pay for a 'Cadillac' plan if they want continuation of benefits, since private carriers in the individual market aren't required to provide them with a plan. For people participating in the clearinghouse, this legislation would open up options when it comes to plan design and portability.

To protect Alaskans, SB 61 makes certain that insurance products are of good quality, with the capability to protect the plan holder from a medical catastrophe. Insurance plans come in all shapes and sizes today, and that is a great thing for consumer choice. However, a one size fits all approach won't work in Alaska. As an example, while many Alaskans may prefer a low premium, high deductible health plan, a policy that has a $10,000 deductible won't be of much use to an individual who makes minimum wage, amounting to approximately $15,000 a year. By setting deductible, co-pay and out of pocket maximums for plans that qualify for sliding scale vouchers, SB 61 ensures that everyone has access to quality coverage that fits their financial needs.

SB 61

Health Insurance For All Alaskans

Voucher System Ensures Affordability, Access

The voucher system in this legislation promotes consumer choice for all Alaskans. Two types of vouchers will be issued under the bill. The first type puts the price of insurance within the reach of all Alaskans by providing assistance, on a sliding scale, to those who cannot afford the full cost of a plan. The funding for these vouchers would come from the levy charged to non-providing employers, as well as from state and federal contributions. Without sliding scale vouchers the individual responsibility component of the legislation wouldn't be meaningful, because insurance is priced out of reach for many working Alaskans.

The second type of voucher is issued to specified individuals, who have had contributions made on their behalf by an employer or another individual, for use on health insurance products. These vouchers create a convenient way for employers to pool health contributions for an individual, whether they have one or many jobs. In particular, specified beneficiary vouchers are particularly appealing for individuals with multiple jobs, because it helps multiple employers share the cost of coverage. The system also gives businesses some certainty of their health expenditures in a given year, since expenses can be defined by contribution level and not by benefit package. The choice of plan type is left to the individual, for the obvious reason that he or she is most affected by the selection.

Contributions to specified beneficiary vouchers will not be mandated; instead, that element of the bill promotes equitable financing of health coverage by making it easier than ever for employers to contribute to the health and well being of their employers.

Alaskans spent $5.3 billion on health care in 2005, a 230% increase from 1991.

- ISER

Affordability provides true access

Under current Alaska law any small business can buy private coverage, and every individual can buy an insurance plan, either through the private market or ACHIA (the state high risk pool). However, claiming that this equals access to health insurance is simply false. Access to health care must be more than just the legal right to buy a policy; it should ensure that all Alaskans have coverage in times of need. SB 61 mandates true access to health care through a unique voucher system that makes coverage affordable for all Alaskans.

For more information, contact Sen. French's office:
Phone: (907) 465-3892 E-Mail: Senator_Hollis_French@legis.state.ak.us

www.healthyalaskans.com

SB 61

Health Insurance For All Alaskans

Prevention, Innovation and The Affordability Guarantee

Prevention and Innovation

This legislation acknowledges that lowering costs while improving quality requires innovative solutions to old problems. Under SB 61, the Alaska health care board will weigh in on potential cost and quality improvements, including but not limited to recommendations on:

- Electronic health records and health information exchanges
- Denali Kid Care/Medicaid effectiveness
- Prescription drug bargaining
- Insurance market reforms
- Mandated benefits
- Evidence based treatment procedures
- Recruitment and retention of medical professionals
- University of Alaska offerings in medical fields

The health care board's suggestions regarding cost and quality improvements will be given to the commissioner of the Department of Health and Social Services and the legislature in an annual report. This report will get the consideration of both the legislative and executive branches, where substantive health policy changes can be considered, discussed and implemented.

More than half of Alaska's uninsured population is employed.

- Families USA

The Affordability Guarantee

SB 61 requires that quality basic health insurance is made affordable for all Alaskans. If an individual feels that he or she cannot afford coverage under the legislation's framework, that person has a right to an appeal before the health care board. If the board reviews the case and agrees that an insurance plan places an undue financial burden on the household, the requirement to have coverage will be lifted. While SB 61 should place the price of coverage within reach for all Alaskan families, the affordability clause in the bill provides a guarantee that no one will be forced to purchase coverage they cannot afford.

For more information, contact Sen. French's office:
Phone: (907) 465-3892 E-Mail: Senator_Hollis_French@legis.state.ak.us

www.healthyalaskans.com

SB 61

Health Insurance For All Alaskans

Individual Responsibility - Financial Relief

Critics of the new type of universal health care efforts being implemented around the country have questioned the necessity of requiring that all residents have some form of health coverage. Yet, judging from these efforts, a consensus has been reached: Until something is enacted on a federal level, mandating coverage is the only responsible option for promoting universal health coverage in a state today. Beyond the social benefit of making certain that all residents have better access to health care, there are also economic reasons why reform efforts must include everyone.

Financial Relief For Current Policyholders

In a sense, universal health care is already provided in America because emergency rooms cannot turn down a person in need of medical attention. While this system may provide emergency care for all Alaskans, it doesn't equal universal access to health care in times of need, nor does it protect the financial concerns of the insured or uninsured alike. In addition to producing less than ideal health outcomes for those who lack coverage, it also places an undue financial burden on people who do buy coverage. And this financial burden is large.

The amount of uncompensated care in Alaska is staggering. Families USA estimate that $125 million of uncompensated care is provided each year in Alaska, and that only 21% of that bill is reimbursed by federal, state and local governments. That leaves medical providers with $100 million of unpaid bills every year. This doesn't mean that hospitals 'lose' money every year: To make up for outstanding bills, hospitals charge more to people who can actually pay for services. Since government health care reimbursement rates are often at or below the actual price of providing care in Alaska, nearly the entire burden of uncompensated care is recouped through inflated insurance premiums.

How much does the cost of an average plan go up? Families USA estimates that 13.6% of an insurance premium in Alaska covers uncompensated care costs, meaning that, for a family of 4 with a comprehensive policy, nearly $1,500 a year go towards covering uncompensated care. SB 61 ensures that everyone can afford quality basic coverage, potentially reducing the amount of uncompensated care given out by hospitals. This element of the bill will give much needed relief to everyone who currently invests in health coverage.

An estimated 125 million dollars of medical bills aren't paid each year in Alaska.

SB 61 *Health Insurance For All Alaskans*

Individual Responsibility - Improving The 'Pool'

Improving the 'Pool' to Increase Affordability

An insurance 'pool' is a bundle of risks. It works this way: for the sake of determining premiums, a 'pool' is a group of individuals who are considered together when determining expected medical costs. Once anticipated costs are determined, each member of that pool can be billed for a fair portion of what expenses the 'pool' is likely to incur on their behalf.

Adverse selection occurs when individuals utilize their private knowledge of their own health when deciding whether to buy health insurance. Since an individual has better knowledge of their lifestyle, habits and health then an insurance company, adverse selection has the potential to greatly affect who buys insurance. Simply put, people who expect to be sick want health insurance more than healthy people.

Certain pools are affected by adverse selection more than others. As an example, in the individual market, the decision to buy or forego insurance isn't left to chance – someone must make the conscious decision to buy a plan. Employer provided coverage, on the other hand, doesn't always require that the employee opt in: Often coverage is highly subsidized or provided free of cost.

The best insurance pool includes both healthy and sick individuals. If pools are structured to distinguish between people by health, the cost of insurance for those with severe illnesses will be extraordinarily high, and out of reach for most Alaskans. Similarly, if a pool only includes healthy individuals, the costs of a plan may be lower for those who are included, but the amount of uncompensated care would be high, since plans for those with severe health problems would be cost prohibitive. Today the amount of uncompensated care is large, and as discussed earlier, that cost is transferred to Alaskans that do have coverage.

Adverse selection has undoubtedly raised the costs of plans in Alaska's health insurance marketplace through self selection within the individual market. And while the Alaska Comprehensive Health Insurance Association (ACHIA) was created by the state to provide health coverage to individuals with pre-existing health conditions, the offered plans are often cost prohibitive for normal Alaskans. This legislation will reduce adverse selection by ensuring that all Alaskans participate.

SB 61 *Health Insurance For All Alaskans*

Individual Responsibility - Avoiding Price Spirals

Damaging price spirals are often caused by adverse selection in voluntary participation health reform efforts. When an individual weighs the decision to buy coverage they consider many factors, including the cost of a plan, what they can afford, and the probability of requiring care. This often causes people of good health to forego insurance, since they figure the odds are in their favor. And when healthier individuals don't acquire coverage, the pool of people who do purchase insurance is more likely to require health attention. As a result, premiums increase.

The price of coverage in voluntary state reform efforts that include some individual contributions have often spiraled upward after introduction, with plan costs increasing when the healthiest individuals decide to hedge their bets on good health. Once the healthiest people in the pool leave, the expected cost per member increases. If these price increases are charged to individuals within the pool, additional people may reconsider their participation in a voluntary plan. Maine's Dirigo program ran into this problem, when fewer people than expected signed up, and once the program began, the spiraling effect occurred as the participation price increased. If everyone is required to get 'in the pool' this price spiral will be eliminated.

"The problem is that the individuals in the insurance pools don't cooperate. Guaranteed issue and community rating regulations cause premiums to be higher than would otherwise be the case. As a result, the healthiest individuals drop their coverage, leaving the members with the highest health care costs in the pool. As the cost of care rises, premiums also go up, causing more members to drop out and creating a rising spiral of cost and premium increases."

- Portland Press/Maine Sunday Telegram, October 28, 2007

Not Socialized Medicine

This legislation does not create a socialized system of medicine in Alaska. Socialized medicine is characterized by government run health care: Under this legislation, the only role of the government is to guarantee that all residents have true access to health coverage.

SB 61

Health Insurance For All Alaskans

Proven Concepts - Learning From Programs That Work

While many critics of consumer centered health reform claim that the ideas haven't been tested, these critics fail to recognize several extremely successful consumer driven programs in place today.

The first is the Federal Employees Health Benefit program. This program provides federal employees, retirees and their survivors with the "widest selection of health plans in the country" through a mechanism much like the clearinghouse under SB 61. The program provides information about numerous plan providers and types, giving consumers a meaningful role in choosing their health coverage. Plans offered through the FEHB program feature no waiting periods for enrollees, and all participants are guaranteed that a plan will accept them. The health care clearinghouse in SB 61 will provide a similar system which can be accessed by all Alaskans.

The bi-partisan reform effort being implemented in Massachusetts is still young, but the results thus far are encouraging. One year after the legislation was enacted over 200,000 previously uninsured residents gained health coverage in Massachusetts. This effort ensures that similar successes can be seen in Alaska, largely through the Massachusetts inspired sliding scale voucher system under SB 61.

Since the passage of Governor Romney's health reform effort, consumer choice has drastically increased while uncompensated care has decreased in the state of Massachusetts. Over 44 different types of plans are available in the Massachusetts Connector, which, when compared to the standard employer offering of only one plan type, represents a large improvement of choice for residents of the state. Furthermore, uncompensated care has decreased by almost 13% in the state during the first year, even though the plan was just being implemented during that time. When everyone has coverage further declines should be seen.

By no means is this to say that a silver bullet exists, but, so far, the results of both programs are encouraging. This legislation builds an Alaskan version of health reform practices like these that are working in different parts of the country.

SB 61

Health Insurance For All Alaskans

Continuity of Coverage

Seasonal Employment Requires a Creative Solution

Alaska's natural landscape provides unique employment opportunities in the state. Both the tourism and fishing industries peak during summer months, with relatively little activity during the middle of winter. Judging from historic employment data, there are roughly 45,000 fewer jobs during the peak of winter compared to the busiest months in the summer. While the economic benefits that come with seasonal employment are great for Alaskans – tourism alone brought $1.8 billion into the state last year - many workers in seasonal industries work for multiple employers over the course of a year. Unfortunately, this doesn't line up with the traditional employer based health insurance model.

The United Fishermen of Alaska have expressed particular concern over this issue, noting that a lack of health insurance options creates a significant barrier of entry for future generations of commercial fishermen. In particular, they note difficulty with the traditional group market structure, because fishing organizations don't fit the traditional mold of a group client. The marketplace solution provided through the health care Clearinghouse should help fishermen, and all other seasonal employees, get many of the group benefits of coverage while maintaining the portability that seasonal workers require. Edmund Haislmaier, a senior research fellow at the Heritage Foundation, noted that few people are uninsured for years at a time: In fact, he has found that up to 40% of the national uninsured problem could be solved if coverage was tied to an individual, and not an employer, because the shorter lapses of coverage could be prevented. Alaska's seasonal industries give the state even more reason to tie coverage to the individual, to make certain that benefits are available when they are needed.

SB 61

Health Insurance For All Alaskans

Unique Solutions for Business, Young Alaskans

Structured With Small Business In Mind

Most Alaskans who lack health coverage also work for a living, leaving behind the notion that only the unemployed require assistance when it comes to making health coverage affordable. Even the most successful small Alaskan businesses can have difficulty providing coverage, because of the high costs of health plans. This legislation aims to strengthen businesses around the state by putting coverage in reach for all employees.

Clearly a healthy workforce is more productive, because absenteeism and productivity is tied to the health of an individual. But in addition to health benefits that would arise if everyone had access to basic medical care, Alaska's businesses have much to gain through this legislation economically. Retaining qualified employees is difficult for businesses that cannot afford coverage. This forces high retraining expenses on employers, since they must fill vacancies more frequently than businesses that provide coverage. In addition, recruitment is more difficult for companies that don't offer coverage.

Not all businesses can afford the full price of health coverage. In addition, not all employees need insurance through their employer - many have coverage through spouses or public programs. Roughly 20% of Alaskans have limited health coverage through the Indian Health Service. Because of this, an employer will not be taxed under this legislation for not providing coverage to someone that already has health access, as defined in the legislation.

The employer levy is simple. It is calculated by adding up the gross payroll of all employees who participate in the framework of this bill. For businesses that pay less than $500,000 gross annually to employees who lack health coverage, no levy will be collected. For businesses that pay between $500,000 to $1,000,000 a year, the levy will be 1% of payroll. For over $1,000,000 annually, the payroll tax will be 2%. Companies that currently invest even a small amount of money into employee health coverage will be exempt from this levy, whether that investment consist of a modest contribution towards the price of a premium, or through the establishment of a Section 125 account, which facilitates pre-federal tax purchases of health coverage.

Young Alaskans Have Unique Needs

Young Alaskans have special needs when it comes to their health coverage. Statistically, they require less health services than their older counterparts. They also show less of a willingness to pay for expensive, comprehensive coverage, and even a moderate deductible can be difficult to pay, particularly for college aged students. This legislation acknowledges that young Alaskans have unique needs, and it provides for a special category of plans that are designed specifically to fulfill their health requirements.

SB 61

Health Insurance For All Alaskans

Massachusetts and SB 61 Compared

Issue Area	Alaska - SB 61	Massachusetts - Enacted
Sliding Scale Subsidies *Definitions:* FPL = Federal Poverty Line	**Yes:** Households with incomes below 300% of the FPL will receive vouchers to make the price of coverage affordable. Residents only eligible for ACHIA coverage will receive vouchers up to 450% FPL. Health care vouchers will put the consumer in control when choosing a plan and a provider.	**Yes:** Households with income below 300% receive subsidized health coverage through the connector. For individuals who utilize vouchers, one plan type is available to households below 200% FPL and two plan types are available to those earn between 200-300% FPL.
Establishing A New Insurance Marketplace	The health care Clearinghouse will disseminate information, encourage competition, and help residents learn about different health coverage options.	The Connector provides information, encourages competition, and helps residents learn about different coverage options. It is a web-based marketplace.
Requirements for Consumers	All Alaskans would be required to have a minimum level of coverage, as defined by statute. If a product isn't affordable a hearing process allows for some exceptions.	All residents must have a minimum level of coverage, as defined by the Connector board. However, some residents have been exempted from the mandate because an affordable product isn't available to them.
Effect on Existing Public Programs	No changes to existing publicly funded programs.	Free care funds will still be available to hospitals, but the program will shift dollars from this account to the reform effort as more people get coverage and don't require free care. Medicaid reimbursement rates were also increased under the legislation.
Financing	Employer payroll tax, varying from 0-2% of payroll depending on payroll size and the number of uncovered employees. Federal dollars will be pursued through 1115 waivers. State funds will also be used.	Employer payroll tax of up to $295 per employee for employers with more than 10 full time workers. A free rider surcharge can also be assessed if employers don't help employees get coverage and they utilize free care. Federal dollars from 1115 waivers have been funneled to the project.
Insurance Market Reforms	**Yes:** Guarantee Issue for individual health plans, on the premise that the individual responsibility clause will prevent adverse selection. Preexisting condition limitations can extend no longer than 12 months for plans sold under the clearinghouse, and credit for prior coverage is required.	**Yes:** By merging the non-group and small group markets, insurance is portable and not tied to employment. Massachusetts already had guarantee issue laws and provisions that regulate preexisting condition limitations and credit for prior coverage within the individual market.

For more information, contact Sen. French's office:
Phone: (907) 465-3892 E-Mail: Senator_Hollis_French@legis.state.ak.us **www.healthyalaskans.com**

SB 61

Health Insurance For All Alaskans

Other State Reform Efforts

Issue Area	**Alaska** - Senate Bill 61	**California** - Governor Schwarzenegger's Plan 2008	**Colorado**–Legislature's Blue Ribbon Commission '08
Sliding Scale Subsidies *Definitions:* FPL = Federal Poverty Line	**Yes:** Households with incomes below 300% of the FPL will receive vouchers to make the price of coverage affordable. Residents only eligible for ACHIA coverage will receive vouchers up to 450% FPL. Health care vouchers will put the consumer in control when choosing a plan and a provider.	**Yes:** Households with incomes below 400% of the FPL will receive a tax subsidy to help cover insurance costs, residents below 250% FPL won't pay more than 5% of income for coverage, and individuals below 150% FPL won't pay anything- including co-pays and deductibles - for health care	**Yes:** Full subsidy of most basic plan for households with incomes below 250% FPL and partial subsidy for households below 300%. Colorado is also proposing a asset test and an additional subsidy to households below 400% of the FPL if a premium will be more than 9% of household income.
Establishing A New Insurance Marketplace	The health care Clearinghouse will disseminate information, encourage competition, and help residents learn about different health coverage options.	A purchasing pool will be established for residents who receive sliding scale assistance to cover health insurance costs.	The Coverage Clearinghouse will disseminate information, encourage competition, and help residents learn about different health coverage options.
Requirements for Consumers	All Alaskans would be required to have a minimum level of coverage, as defined by statute. If a product isn't affordable a hearing can allow an exception.	All Californians must have a minimum level of coverage, as defined by the Secretary of Health and Human Services, through the regulatory process.	All legal residents of Colorado must have basic plan coverage, with some exceptions if a product isn't affordable. Basic coverage includes plans with benefit caps.
Effect on Existing Public Programs	No changes to existing publicly funded programs.	Expansion of S-CHIP to 300% regardless of immigration status, and Medicaid expansions to certain groups up to 250% FPL.	Expansion of S-CHIP to 250% and Medicaid. Allows for a Medicaid buy in program for households at 200% FPL and up.
Financing	Employer payroll tax, varying from 0-2% of payroll depending on payroll size and the number of uncovered employees. Federal dollars will be pursued through 1115 waivers. State funds will also be used.	Employer payroll tax, varying from 1-6.5% of payroll depending on payroll size. Hospitals will pay 4% of revenue towards the reform effort. Federal dollars will be pursued through 1115 waivers.	Increases in alcohol and tobacco taxes. In addition, taxes on snacks and soda will be established. Increase the state income tax. Federal dollars will be pursued through 1115 waivers.
Insurance Market Reforms	**Yes:** Guarantee Issue for individual health plans, on the premise that the individual responsibility clause will prevent adverse selection. Preexisting condition limitations can extend no longer than 12 months for plans sold under the clearinghouse, and credit for prior coverage is required.	**Yes:** Guarantee issue and guarantee renewal to all Californians in the individual market. Rating bands will ensure that only age and geography determine premiums. Health plans will have to spend 85% of premiums on patient care.	**Yes:** Guarantee Issue for individual health plans, on the premise that the individual responsibility clause will prevent adverse selection. High risk pool will exist for those who currently are uninsured. Premiums will equal the normal price paid in the individual market.

Testimony 3/9/2009 SB 61

The Alaska Nurses Association is pleased to support Senator French's Senate Bill 61, Mandatory Universal Health Insurance. The legislative committee of the Association also represents the affiliate groups of the Alaska Chapter of Nurse Midwives, Alaska Home Health and Hospice Association, Alaska Nurse Anesthetists Association, Alaska Nurse Practitioner Association, Alaska School Nurses Association and the Alaska Chapter of the Forensic Nurses Association.

Our members are on record in support of innovative legislation that would make health insurance affordable for businesses and individuals. This bill meets that goal. According to a national survey by Consumer Reports [3/2008], 81% of respondents were concerned about being able to afford health care in retirement, 68% worry about being bankrupted by medical bills following a serious illness or accident and 65% feared losing their job-related coverage. The current economic picture with rising unemployment has exposed the weakness of relying on job-related health insurance. Senator French's bill addresses that problem.

The Alaska Nurses Association applauds Senator French's commitment to ensuring that health care become available for all Alaskans. We sincerely hope that SB61 will pass in the 26th legislative session.

Respectfully,

Lynn Hartz MSN
Family Nurse Practitioner
For the legislative committee of the Alaska Nurses Association
3701 E Tudor, ste. 208
Anchorage, AK 99507

MEMORANDUM

Date: March 10, 2009

To: Senator Bettye Davis, Chair
Senate Health and Social Services committee

From: Senator Hollis French
Senate Bill 61 Prime Sponsor

RE: Background information for SB 61 Senate HSS subcommittee

On March 2 the Senate Health and Social Services committee formed a subcommittee to consider several issues related to Senate Bill 61 that were brought up during the legislation's first hearing. In an effort to assist the subcommittee discussion on these questions, this memo provides background information from the bill sponsor for use during the March 10 subcommittee meeting.

The AARP letter of support for Senate Bill 61 noted a particular concern about health coverage for Alaskans between the ages of 50-64. The subcommittee has expressed an interest in determining how Senate Bill 61 will impact this group of Alaskans.

AARP's Public Policy Institute[1] goes into detail about the difficulty Americans between the ages of 50-64 have when they attempt to access, and afford, health care. While Medicare kicks in at 65, many people retire before they become eligible for those benefits, and often standard individual market offerings are withheld, forcing older Alaskans into ACHIA plans which can cost up to 50% more than the price of standard risk premium rates[2].

Senate Bill 61 will ensure that all Alaskans have access to affordable, quality health coverage by putting the price of a plan within reach. Like most Americans who lack health coverage, a majority of individuals who lack benefits between the ages of 50-64 are still members of the workforce[3]. The bill will assist these

---

[1] AARP Public Policy Institute, "Health Coverage among 50- to 64-Year-Olds," Data Digest #155, May 2007
[2] AS 21.55.150 (c)
[3] AARP Public Policy Institute, "Health Coverage among 50- to 64-Year-Olds," Data Digest #155, May 2007

working, uninsured individuals in the same way that it will work for all other Alaskans.

In addition, there are some elements of the legislation that should be of particular interest to Alaskans between the ages of 50-64:

Guaranteed Issue, Credible Coverage and Preexisting Condition Exclusions:

Medical underwriting in Alaska's individual market can result in denial of standard coverage by private insurers, particularly when an applicant has less than perfect health. Since the need for medical attention often increases with age, this trend is particularly worrisome for older Alaskans, who are more likely to have identified medical needs than 20 year olds. And while the state's high risk pool cannot reject an individual, these plans are often too expensive for applicants. Senate Bill 61 requires that health insurance plans for sale through the health care clearinghouse offer coverage to any applicant, preventing a scenario where the only course of action is purchasing a plan through ACHIA.

The legislation also requires that plans sold through the clearinghouse give credit for prior coverage, and that preexisting condition exclusions be reduced by any length of "continuous credible coverage" that an individual had before they applied for coverage. For Alaskans that are leaving the workforce who aren't provided benefits through a retirement package, these protections will ensure a more seamless transition into retirement.

The final element that will assist individuals acquiring coverage for the first time through Senate Bill 61 is the provision that prohibits preexisting condition limitations from extending for over one year. By capping limitations at one year, Alaskans will still be discouraged from buying coverage only when it is medically necessary, but it will also ensure that health coverage sold through the clearinghouse is a quality product for those who haven't been able to buy coverage in the past, due to cost or other circumstances.

The three consumer protections listed above – guarantee issue, credit for continuous coverage, and preexisting condition limitation caps - are currently required elements of small group, employer based plans available in Alaska. Extending these protections to individual plans sold in the clearinghouse will level the playing field for all Alaskans, both young and old.

What is the structure of the clearinghouse, and how will it take into account Alaska's unique geographic and technological situation when attempting to reach all Alaskans?

The health care clearinghouse is the entity that is charged with administering the program, under the direction of the health care board. In particular, the bill specifies that the clearinghouse will disseminate information about health care insurance products, and provide assistance in the enrollment process for businesses or individuals[4].

[4] Senate Bill 61 – Sec. 21.54.230

During the Senate Health and Social Services committee hearing on March 2, 2009, the clearinghouse was characterized as an electronic web-based 'place' where health plans can be compared and purchased. This concept, taken from Massachusetts and the Federal Employee Health Benefits program, is an innovative model that has proven successful in both instances. That being said, nothing in the bill confines how the board can structure the clearinghouse, despite the recent successes of an electronic, web based solutions.

In Massachusetts, a variety of means have been used to implement health reform. The Commonwealth Connector website touts advertizing efforts, along with partnerships, mailings, employer education and grassroots initiatives as successful elements to educating the public[5]. As one example, 'Connect to Health' events were held throughout the state to educate and enroll residents in health insurance plans through the connector. A press release noted that these forums were made possible through the involvement of public officials, community health centers, hospitals, business groups, public school districts and health care advocates[6].

Customer service centers were also created to help implement the legislation, and toll free call centers are open daily to answer questions and provide enrollment assistance.

As currently drafted, the bill leaves all options open for the health care board to determine how to communicate with and enroll eligible Alaskans. Given the broad composition of the board - which includes consumer advocates, insurance representatives, business people, labor, medical professionals and hospitals - the perspectives necessary to craft an Alaska specific approach to enrolling people in health coverage should be achievable, particularly when we use other states as models.

The National Federation of Independent Business commented on Senate Bill 61 in a letter to Senator French dated January 25, 2009. In particular, the letter stated two specific concerns:

The first concern: "Unfortunately, SB 61 mandates that small employers bear the cost of fixing the problem through mandated tax on a percentage of their gross payroll."

Senate Bill 61 has a unique section regarding employer contributions, as described during the March 2 bill hearing. The rules are simple. There is no levy for businesses whose payroll is less than $500,000 a year. For businesses with a payroll between $500,000 and $1 million annually, the levy is 1%. For businesses with a payroll greater than $1 million annually, the levy is 2% of payroll. The 'bar' of what it means to provide health coverage is set relatively low – either an employer must offer to pay 33% of a premium cost or they must successfully enroll 25% of employees in their program – regardless of their level of contribution – to avoid the employer levy. In addition, if an employer establishes a Section 125 account that allows employees to purchase health

[5] http://www.mahealthconnector.org - Overview -> Public Education and Outreach
[6] http://www.mahealthconnector.org - January 11, 2008 press release

insurance with pre-federal tax dollars, they too avoid the levy, since the establishment of such an account produces great tax savings for employees. The cost of section 125 accounts are relatively cheap – quotes last year were around several hundred dollars a year total for a small employer, covering all employees. This means that an employer can fulfill all provisions of the employer levy simply by giving employees access to a Section 125 account, at a total cost of several hundred dollars – for all employees – per year.

On the broad scale of health reform options, Senate Bill 61 includes very few obligations on non-providing employers. Massachusetts requires a payout of $295 per non-covered employee per year, and includes a provision which also encourages the creation of Section 125 accounts. California proposals on the table last year included payroll taxes that ranged from 1% to 6.5%. In San Francisco, a plan that requires businesses with over 100 employees in the city to pay at least $1.76 per hour towards health benefits was affirmed by the 9th circuit court of appeals just last year, it not being an excluded policy option for the city due to ERISA preemption.

The second concern: "It also creates mandated coverage design that will increase the cost of basic coverage that might be offered by small employers."

The legislation broadly defines 'essential health care services' as including preventative and primary care, emergency services, inpatient services and hospital treatment, ambulatory patient services, prescription drug coverage and mental health services[7]. It does not specify benefit levels that must be provided in each category, nor does it address permissible co-pays, co-insurance, deductibles, or other fiscal elements of a plan. For a private offering to fulfill the individual responsibility clause proposed in Sec 21.54.240, a private plan must 'meet or exceed' the definition of essential health care services provided in that section[8].

Currently most employer based group health plans are subject to regulation under ERISA, and health insurers that are licensed in the state are regulated by state insurance law, as well[9]. The concern about mandated benefits may be rooted in the specific medical procedures that current Alaska law requires as elements of state regulated health insurance plans. Examples of such mandates include cancer screening procedures, well baby examinations and limited alcoholism and drug abuse treatment. The more benefits a plan includes, the higher cost of the plan.

Language should be changed in Senate Bill 61 to say that a health care insurance plan sold in the group market fulfills the individual responsibility clause of the legislation. This change would help alleviate the concerns expressed by the National Federation of Independent Business, because the comprehensive group plans that currently provide benefits to employees around the state would fulfill the legislation, without requiring a modification of the benefits that they offer.

Lynda Zaugg

From: Andy Moderow
Sent: Monday, March 02, 2009 5:15 PM
To: Lynda Zaugg
Cc: Amory Lelake; Sen. Hollis French
Subject: SB 61 Subcommittee

Lynda,

Does this look accurate re: our conversation earlier? I'm sending this along to Amory in the Ellis office as well for her review.

240 - A8

1. As noted in the AARP of support, Senator Davis is concerned about individuals in the 50-64 age group and how the bill would address their needs. She would also like to see those questions answered or at least discussed.

2. Christian Science proposal – she is curious if there is a way to deal with their concerns (without necessarily doing exactly what they proposed, depending on how the discussion goes.)

3. Discuss the NFIB letter, and see if there is a way to make the bill more palatable to small businesses who share their concerns.

4. Provide more guidance about the clearinghouse, in regards to the question from Senator Thomas who wanted to ensure that individuals without internet had the resources they needed to utilize clearinghouse services.

I spoke with Senator French about these questions/concerns, and he has mentioned his willingness for our office to produce, in writing, a 'report' addressing these question. After this is complete, maybe we could have one meeting of the subcommittee, where it is presented, questions can be asked, and further action is decided on? We could be ready for such a meeting by next week, and it probably wouldn't take too long.

Thoughts?

Memo

TO: Senator Bettye Davis, Chair, Senate HSS Committee
FROM: Bev Smith, Christian Science Committee on Publication for Alaska BLS
DATE: March 9, 2009
RE: SB 61

Thank you for considering religious nonmedical healthcare as a covered benefit under SB 61.

I would like to bring to your attention California SB 840(sponsored by Sen. Kuehl) that passed both chambers of the legislature in August 2008 but was vetoed by the governor. In trying to provide a system of universal health care coverage for California residents the bill included in its list of covered benefits, Section 140501(z): "Benefits offered by a bona fide church, sect, denomination, or organization whose principles include healing entirely by prayer or spiritual means provided by a duly authorized and accredited practitioner or nurse of that bona fide church, sect, denomination, or organization." This same language was included in a recent refile of the bill last week (SB810) in the current 2009 California session by Sen. Leno, who has replaced Sen. Kuehl as the principal bill sponsor following Sen. Kuehl's exhaustion of her term limits last session.

Similar language was also provided in another California bill ABx1. In Section 12739.50(c) it says: " In establishing the standards for minimum creditable coverage, including the scope of services, enrollee and dependent deductible, copayment requirements, and coverage of services outside the deductible, the board shall consider all of the following:...(4) The extent to which and under what circumstances benefits offered or provided by a bona fide church, sect, denomination, or organization whose principles include healing entirely by prayer or spiritual means may be included in or qualify as meeting the requirement to maintain minimum creditable coverage under Section 8899.50 of the Government Code."

The latter bill passed the Assembly but it never came before the Senate.

I offer these examples of California legislation to support including benefits for religious non-medical health care in SB 61. I hope you find them helpful. Please feel free to contact me with any questions you may have.

Thank you.

January 25, 2009

The Honorable Hollis French
Alaska State Senate
State Capitol Building
Juneau, Alaska 99801-1182

RE: Senate Bill 61

Dear Senator French,

On behalf of the National Federation of Independent Business/Alaska, I wish to express our opposition to Senate Bill 61. The National Federation of Independent Business is the largest small-business advocacy group in the Alaska.

Health-care costs have been the No. 1 issue facing small-business owners since 1986, and those concerns are growing, according to NFIB's members. As health-care costs go through the roof, small-business owners have very few choices when selecting insurance coverage for their employees. The tipping point is here, and small businesses are begging for solutions to rising health-care costs, lack of access and other issues.

We're reminded weekly, if not daily, that 47 million Americans are uninsured. This hits especially close to home for small businesses, since approximately 27 million of those uninsured are the self-employed and small-business owners, their employees and their families. Many of those are in Alaska. Insurance premiums for small groups or single coverage have increased by more than 82 percent since 2000, a jaw-dropping statistic. This is completely unsustainable over the long-term.

National Federation of Independent Business — ALASKA
P.O. Box 34761 • Juneau, AK 99803 • 907-723-6667 • denny.dewitt@nfib.org

Unfortunately, SB 61 mandates that small employers bear the cost of fixing the problem through mandated tax on a percentage of their gross payroll. It also creates mandated coverage design that will increase the cost of basic coverage that might be offered by small employers.

The NFIB has adopted **Small Business Principles for Health Care Reform**. I have enclosed a copy for your review. NFIB knows that no one solution will help all the uninsured Alaskans cover health-care costs, but a multi-faceted approach will allow many more to find health care at costs they can afford. This approach should include health-insurance purchasing pools for small businesses, tax-based incentives to assist with the purchase of health insurance and implementing cost-containment measures.

Sincerely Yours

Dennis L. DeWitt
Alaska State Director

The Voice of Small Business®

Small Business Principles for Health Care Reform

Our current system of health insurance and health care is financially unsustainable and threatens the health and financial security of the American people. Small-business owners and their employees are especially vulnerable to the weaknesses of our current system. NFIB supports policy reforms to balance the competing goals of access to quality care, affordability, and predictability and consumer choice. The resulting health care system would be:

Universal: All Americans should have access to quality care and protection against catastrophic costs. A government safety net should enable the neediest to obtain coverage.

> Several reasons underlie our support for universal access to care. First, lack of insurance is especially problematic for small businesses and their employees. Second, having millions of uninsured Americans distracts us from focusing on affordability, quality and comprehensiveness of care and coverage. Third, laws already provide some level of insurance for everyone, but coverage is expensive, inefficient and often inadequate – guaranteed access to emergency rooms is one example. Under this piecemeal coverage, costs fall arbitrarily and inequitably on individuals, providers, governments and businesses.

Private: To the greatest extent possible, Americans should receive their health insurance and health care through the private sector. Care must be taken to minimize the extent to which governmental safety nets crowd out private insurance and care.

> One-size-fits-all insurance and care are not wise options in a nation of 300 million people. Restoring and invigorating America's health care system requires rapid innovation; history shows that such rapid advances rarely come from government and more often come from private enterprises. America's health care system is far from perfect, but the world's single-payer systems have deep problems of their own. We need better health care delivery models, financial-management systems and risk-sharing arrangements. America remains the world's engine of health care innovation, and entrepreneurship is the key to that innovation. Given the current financial path of health care, governments ought to be wary of taking on the entire burden.

Affordable: Health care costs to individuals, providers, governments and businesses must be reasonable, predictable and controllable.

> America's health care costs are high and growing more rapidly than earnings. The burden of costs often falls arbitrarily on individuals, businesses, providers and governments. Wages stagnate as health care costs eat further into take-home pay. Employers and governments struggle to balance budgets as health care costs rise. Health care uncertainties paralyze long-term financial planning. Through excessive malpractice judgments, we penalize good doctors practicing good medicine when their patients happen to experience bad outcomes.

Unbiased: Health care and tax laws should not push Americans into employer-provided or government-provided insurance programs and hobble the market for individually purchased policies. Small employers should be treated the same as large employers, who can already pool across state lines. A health care system built on employer mandates or on play-or-pay taxes is unacceptable.

Today, our tax and insurance laws riddle the health insurance market with inefficiencies. An employer who buys insurance for employees can write off the cost on its taxes. But if employees wish to purchase different policies on their own, they receive no tax benefit. Thus, an oddity of the tax code, not economic efficiency, artificially herds businesses and workers into the employer-based market. Current laws allow large employers to build large interstate risk pools and enjoy a reasonable level of regulatory oversight. Laws deny small employers the same opportunities, forcing them to offer insurance with inadequate risk pools. The result is to arbitrarily load a competitive disadvantage on the small firms that are an engine of America's productivity. Employer mandates compound the problem, penalizing the most vulnerable firms and workers, including cutting-edge startups, lower-income workers striving to rise and companies operating in economically disadvantaged markets. These mandates can force a promising enterprise out of business, sweeping away jobs and future economic growth.

Competitive: Consumers should have many choices among insurers and providers. Policymakers must alleviate the limitations that state boundaries and treatment mandates place on competitiveness.

In the next decades, America's capacity to deliver high-quality health care will face increased financial pressures. Maintaining or improving upon our current quality of care will depend critically upon our ability to develop newer and less expensive modes of treatment and delivery systems. Innovation is unlikely to come from a system where insurers or providers face little risk of competition. Under our current system, restrictions on interstate purchases of policies place powerful limits on choice. Some states are left with close to monopoly control on the issue of insurance as fewer and fewer insurers offer coverage in the small-group market. A cautionary note is in order: Any competitive system must guard against adverse selection—a situation in which some individuals purchase policies only after learning that they are likely to face high medical costs. Adverse selection can render insurance too expensive for healthier individuals. (In property insurance, an example would be someone who buys fire insurance only after he moves dangerous, combustible materials into his house.)

Portable: Americans should be able to move throughout the United States and change jobs without losing their health insurance.

Our current health-insurance system locks people into jobs and localities. An existing health problem may make it impossible for an individual to change jobs. Employer-based health insurance and restrictions on purchasing insurance across state lines limit a worker's ability to seek higher pay, greater opportunity, or a better locality for his or her family. This phenomenon of job lock is not only a tragedy for the locked-in worker. It harms the overall economy by preventing workers from discovering their own entrepreneurial talents or accepting more productive jobs. It creates a significant impediment to those who wish to leave positions as employees and start small businesses of their own. Health care reform must maximize the mobility of American workers by eliminating health insurance as an impediment to changes in job and residence.

Transparent: Information technology should enable all parties to access accurate, user-friendly information on costs, quality and outcomes. Providers must be able to obtain relatively complete medical histories of patients. At the same time, patients' privacy must be guarded zealously. The private sector must play a vital role in developing the new technologies.

In any market, buyers and sellers need accurate and useful information on costs, quality and performance of the product. Health care is no different in this respect. Well-functioning health insurance and health care markets require information that is easy for consumers, providers and insurers to obtain and that is comprehensible to all. Today, information is often difficult to obtain and incomprehensible to consumers and providers alike. This is a function of the system we have, and not an inherent characteristic of health care

data. Governments will have a role in the development of new and better information technologies, but many of the breakthroughs can come only from the private sector.

Efficient: Health care policy should encourage an appropriate level of spending on health care. Laws, regulations and insurance arrangements should direct health care spending to those goods and services that will maximize health. Adequate risk pools throughout the health care system are vital to accomplishing these goals.

Today's health care system encourages misallocation of resources. All parties lack access to vital information for making medical decisions. Providers can give too little guidance on cost-effective treatments because they lack access to accurate, comprehensible, comparable cost data that provide true "apples-to-apples" comparisons of services and treatments. Reimbursement systems encourage excessive spending on health care and poor spending choices within health care. Medical delivery systems are poorly structured. American health care is on an impossible path, with costs rising much more rapidly than the country's real economic output. To avoid catastrophe, incentive structures across the system need to be reconfigured to give consumers, providers and insurers the educational tools and the motives to use their dollars wisely and efficiently.

Evidence-based: The health care system must encourage consumers and providers to accumulate evidence and to use that evidence to improve health. Appropriate treatment choices and better wellness and preventive care should be key outcomes.

Current information and decision systems make it difficult to accumulate, interpret and use evidence affecting treatment decisions. One result is overspending on treatments and underspending on prevention. Decision-makers must understand the impact of their decisions on both costs and outcomes. Such an understanding must be based on solid clinical and economic evidence.

Realistic: Health care reform should proceed as rapidly as possible, but not so quickly that firms and individuals cannot adjust prudently. It is important to assure that no one's quality of care suffers as we move to provide coverage for all Americans.

Reform is a delicate balancing act. Moving too slowly will allow costs to rise too far and too fast. In the process, the health of Americans will suffer, and the financial security of some will be disastrously impacted. But excessive speed is also risky. Thus, we must assure that reform does not allow some Americans to slip through the cracks—to lose coverage or see their costs rise too rapidly. Somewhere in between is a seamless transition from the status quo to a more efficient and equitable system.

Employer Healthcare Mandate Would Wipe Out 1.6 Million Jobs

Business Simulations Show Negative Impact on Local Jobs, Revenue

WASHINGTON, D.C., January 28, 2009 – In a study released this week, the National Federation of Independent Business Research Foundation analyzed the potential impact of a national employer mandate on small businesses to provide healthcare.

The study conducted business simulations to measure the effects of a hypothetical national mandate requiring employers to offer private health insurance to all employees starting in 2009, and to finance a minimum of 50 percent of the cost. The simulation ran six classes of business to determine the impact on employers of different sizes. The results show that an employer mandate would have significant negative impacts on local jobs and on state revenues, particularly considering the rising costs of health insurance.

"In the current environment, an employer mandate could wipe out 1.6 million jobs in just five years and reduce the GDP by around $200 billion," said NFIB Senior Research Fellow William "Denny" Dennis. "This research should alarm everyone about the consequences of costly mandates to small businesses. It is essential that our leaders take into account the drastic impact a mandate like this would have on the livelihood of small businesses and families in local communities."

Simulation Results (Fact Sheet attached)

- Of the more than 1.6 million jobs lost between 2009 and 2013, small businesses would account for more than 1 million, 66 percent, of all jobs lost.
- U.S. real GDP would contract by approximately $200 billion between 2009 and 2013.
- Small businesses would lose roughly $113 billion in real output and account for 56 percent of all real output lost.
- Labor intensive industries (e.g. construction or restaurant) and businesses with 20 – 99 employees would experience the most job loss.

"In our current economic environment, it is so important that we stimulate and support our country's job creators – small businesses. Enacting healthcare reforms that fail to address rising costs, and place unmanageable burdens on business, is not a viable pathway for meaningful reform," said Todd Stottlemyer, president and CEO, NFIB. "It is important that reform fosters growth and doesn't place undue burdens or new financial pressures on these small employers."

Healthcare premiums continue to skyrocket, increasing by nearly 130 percent in just eight years, and are, on average, 18 percent higher than those of large businesses. These unsustainable costs significantly hinder small businesses' ability to invest in and grow their business. Healthcare reform legislation must take steps to curtail costs for small businesses, individuals and the self employed by pursuing creative approaches to pooling, tax code parity, and improved, competitive insurance markets.

-more-

About the Simulation Model

NFIB used a proprietary Business Size Impact Module (BSIM) to simulate the impact of a national employer healthcare mandate on businesses by size of firm. The BSIM consists of a series of ten regional models designed to measure macroeconomic changes due to increased business costs. It receives inputs (new costs and spending) and generates outputs (macro variables) according to firm size. The unique capability of this model is important because often government policies have financial effects on businesses, and regulatory costs per unit are often higher on small firms than their larger counterparts.

The assumed mandate used in the study required that all employers must offer private health insurance to their employees, and that employers must finance at least 50 percent of their employees' health insurance premiums. The remaining share of employee premiums was assumed to be financed by employee contributions and federal subsidies. Implementation of the mandate is assumed to begin in 2009. Employment and output effects of the mandate were forecast for years 2009 to 2013, the first five years of program implementation.

For a copy of the full report, written by Michael Chow and Bruce Phillips, please contact Stephanie Cathcart, stephanie.cathcart@nfib.org, 202-314-2056.

March 2, 2009

The Honorable Bettye Davis, Chair
Senate Health, Education and Social Services Committee
Alaska State Capitol, Room 30
Juneau, AK 99801-1182

Re: SB 61 (French)—Support

Dear Chair Davis:

On behalf of the members of AARP in Alaska, we encourage you and your colleagues on the Senate Health and Social Services Committee to support SB 61, authored by Senator Hollis French and co-sponsored by Senator Johnny Ellis.

We applaud Senator French's efforts to develop a health care plan that works toward access to adequate coverage for all residents of all ages.

AARP pledges that we will work with Senator French and your colleagues in the Legislature to support efforts to provide high quality, accessible and affordable health care that offers reasonable choices for all Alaskans.

The current health system costs too much, makes too many mistakes, and often returns little value for our money. Access to affordable coverage is increasingly difficult—especially for AARP's 50- to 64-year old members who are among the fastest growing groups of uninsured. Even those with Medicare, if they can find a physician, are struggling to keep up with rapidly rising premiums costs that threaten their health and financial security.

One of the basic legislative principles AARP supports is that expansion of health coverage is desirable. Those who lack either private or public coverage are less likely to receive access to timely medical care and more likely to experience adverse health outcomes.

We understand that SB 61 is a work in progress and is probably the initial effort in what make take several sessions to work out. That's fine with us. The more participatory the debate, the more all Alaskans will understand how important it is to cover all of us. There are major issues that should be addressed in SB 61 and each of these issues should be thoroughly debated in the Legislature, in the media, and over the dinner table by Alaskan families.

Who is covered and how comprehensive is the coverage?

Jennie Chin Hansen, President
William D. Novelli, Chief Executive Officer

Is SB 61 efficient and economically practical?

Will the bill result in fairness and equity?

How much choice and autonomy does the bill permit?

Health care, as you know, is extremely complex. For example, if SB 61 passes, will there be a need for additional physician visits and nursing care? Do we have the health professionals to provide them? What new or expanded medical technology resources will be consumed as a result of coverage expansion? Conversely, what will we save in fewer visits to an emergency room through program expansion?

What will be the effect on quality of care, eg., medical outcomes and patient satisfaction?

What will be the effect on physician patterns of practice, eg., will we have greater adherence to practice guidelines?

The questions can go on for pages...and they should. SB 61 is a bill that deserves serious debate in every Committee of referral. AARP believes that we will eventually come out with a bill that all of us can live with and one that will improve the health status of all Alaskans of all ages. Let's keep that discussion going in the Senate Health and Social Services Committee.

We urge an "AYE" vote on SB 61.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin

Email: Alaska@compub.org

To: Senator Bettye Davis, Chair
Members of the Senate Health and Social Services Committee

From: Beverly Smith, Christian Science Committee on Publication for Alaska

Date: March 2, 2009

RE: Senate Bill No. 61
An Act establishing an Alaska health care program to ensure insurance coverage for essential health services for residents of the state;...

Thank you for giving me the opportunity to testify regarding SB 61.

In my capacity as Christian Science Committee on Publication for Alaska, one of my roles is to ensure that you have accurate information concerning spiritual healing as practiced in Christian Science, so that this cost effective, reliable and effective form of care is not overlooked or restricted in the State's health care reform efforts. In this regard, it is important to preserve the choice of Alaskans to pursue spiritual means for the prevention and cure of disease, including Christian Science treatment and care, and this legislation can be an important avenue for doing so.

I would like to thank the sponsors for including in the bill under Sec. 21.54.240(a) (8) an opportunity for some Alaskans to "opt-out" of participation in the Alaska health care program if "that...person has deeply held religious beliefs contrary to the Alaska health care program and the requirement to purchase health care insurance for essential health care services." However to meet the health care needs of ALL Alaska residents we feel that health care reform legislation should include coverage for spiritual care similar to state and federal government plans that currently do so.

To accomplish this, we request that the following amendment be incorporated into such legislation to provide for consideration of spiritual care benefits as follows:

Amend Section 2 of the bill, by adding the following

"21.54.251. Definitions. The term "essential health care services" as used in Section 21.54.250 shall be interpreted to include nonmedical health care services provided by a religious nonmedical provider as defined in AS 21.07.250 (15)." *

I have provided an attachment which sets forth the explanation for including religious nonmedical care in legislation such as SB 61.

This document provides some examples of religious nonmedical care addressed in various government and private insurance plans. Note that the final bullet under Recommendation #1 shows Premera, Blue Cross Blue Shield of Alaska, covers treatment by Christian Science practitioners.

I am happy to work with lawmakers to make sure language is included so that insurance coverage is provided for those Alaskans choosing spiritual care to meet their healthcare needs.

This care is both reliable and effective. If people are achieving complete healing through spiritual care without incurring large medical bills, society is benefited.

We applaud you for your efforts in bringing solutions to the health care challenges in Alaska and we appreciate the desire to make humanity safer and healthier. We respectfully request that the inclusion of religious nonmedical health care as a covered benefit be expressed clearly within SB 61.

* Chapter 21.07. REGULATION OF MANAGED CARE INSURANCE PLANS

Sec. 21.07.250. Definitions.

In this chapter, ...

(15)"religious nonmedical provider" means a person who does not provide medical care, but who provides only religious nonmedical treatment or nursing care for an illness or injury;

ACCESS TO SPIRITUAL CARE

Recommendations for
Health Care Reform Legislation

As the Alaska legislature considers health care reform, it is important that any new framework include spiritual care. Prayer-based healing has been a mainstay in American life for years. Despite the progress in medical science, many Americans continue to rely on prayer as their primary means of health care for one simple reason: they trust its effectiveness, its completeness and its reliability. For millions of other Americans, the issue at hand is, in some ways, more fundamental: having the option to choose the method of health care that is most effective for them.

Everyone deserves access to reliable and cost-effective health care. This should be one of the primary goals of health care reform. Because spiritual care is reliable and cost-effective, it should be part of the solution in addressing the health care challenges facing our nation.

Christian Science is a method of spiritual care that is available to everyone. For over a century, individuals from many different faith traditions have found Christian Science to be reliable and effective in addressing the challenges posed by injury, illness, and disease. For this reason, they will often choose religious nonmedical health care in lieu of medical care. The practice of Christian Science includes assistance from Christian Science practitioners (individuals who have been recognized as having demonstrated the ability to help others achieve healing through prayer), as well as from Christian Science nurses (individuals who provide physical assistance for the patient's daily needs while the patient prays for healing).

We have identified two areas where statutory provisions may be needed to achieve public access to spiritual care within the context of health care reform legislation, and make the following two recommendations:

Recommendation # 1: Provide Public Access to Spiritual Care.

Health care reform legislation should provide the public with access to spiritual care. Existing law contains numerous examples of programs that offer benefits for spiritual care, including:

- Four plans under the Federal Employees Health Benefits Program (FEHBP) cover religious nonmedical nursing care and/or Christian Science practitioner services:
  - Government Employees' Health Association (GEHA)
  - Mail Handlers Benefit Plan
  - Special Agents Mutual Benefit Association
  - Association Benefit Plan

- Religious nonmed[redacted] nursing services are covered un[redacted] the Medicare and Medicaid programs (see 42 U.S.C. §§ 1395x(ss) and 1395i-5).

- TRICARE (for military dependents) – Covers care in Christian Science nursing facilities, Christian Science nursing services, and Christian Science practitioner services.

- Under Section 223 of the Internal Revenue Code ("IRC"), funds contained in a Health Savings Account may be used to pay for spiritual care. Section 223 references the definition of "medical expenses" in Section 213(d) of the IRC, which has been interpreted to include Christian Science practitioner services and Christian Science nursing care.

- Alaska and a number of other states (e.g., California, Illinois, Kansas, Missouri, Oklahoma, Oregon, Texas) allow coverage of spiritual treatment through prayer in their governmental employees' health insurance plans. Premera, Blue Cross Blue Shield of Alaska, under the Alaska Care plan for state employees and retired state workers, covers treatment by "Christian Science Practitioners authorized by the Mother Church, First Church of Christ, Scientist, Boston, Massachusetts." (See Select Benefits Booklet, pg. 27-8.)

Recommendation # 2: Application of Nonmedical Requirements for Quality Assurance

Statutory provisions that require insurers to make determinations of "medical necessity" and to provide medical oversight for services rendered serve as important patient protections in the context of medical care. However, patients choosing spiritual care in lieu of medical care do not want medical requirements applied to the services they receive. In addition, spiritual care providers do not diagnose disease or provide any form of medical intervention or treatment. For these reasons, the application of medical requirements to spiritual care providers can limit patient access to care. While accommodation from medical criteria may be necessary, we support the application of nonmedical safeguards to ensure that funds are spent appropriately. Some examples of existing laws that contain this type of accommodation are:

- The federal Medicare law accommodates patients in religious nonmedical health care institutions from being required to have a medical diagnosis and from the activities of peer review organizations, but requires religious nonmedical health care institutions (RNHCIs) to meet detailed requirements designed to protect patient health and safety. 42 U.S.C. §§ 1395x(ss)(3); 42 U.S.C. § 1320c-11; 42 C.F.R. § 403.700, et seq.

- Some states' insurance laws, including Alaska's, specifically accommodate health plans that include religious nonmedical providers by allowing the plans not to apply medical requirements that would limit patient access to religious nonmedical care. (see, e.g., Alaska Stat. Ann. § 21.07.080 and Me. Rev. Stat. tit. 24-A, § 4307(4); Mass. Gen. Laws Ann. 176O, § 11; Wash. Rev. Code Ann. § 48.43.520).

Thank you for considering these important issues. We offer to act as a resource regarding spiritual care, and would appreciate being included in future health care reform discussions and stakeholder meetings.

Memo

TO: Senator Bettye Davis, Chair, Senate HSS Committee
FROM: Bev Smith, Christian Science Committee on Publication for Alaska BLS
DATE: March 9, 2009
RE: SB 61

Thank you for considering religious nonmedical healthcare as a covered benefit under SB 61.

I would like to bring to your attention California SB 840(sponsored by Sen. Kuehl) that passed both chambers of the legislature in August 2008 but was vetoed by the governor. In trying to provide a system of universal health care coverage for California residents the bill included in its list of covered benefits, Section 140501(z): "Benefits offered by a bona fide church, sect, denomination, or organization whose principles include healing entirely by prayer or spiritual means provided by a duly authorized and accredited practitioner or nurse of that bona fide church, sect, denomination, or organization." This same language was included in a recent refile of the bill last week (SB810) in the current 2009 California session by Sen. Leno, who has replaced Sen. Kuehl as the principal bill sponsor following Sen. Kuehl's exhaustion of her term limits last session.

Similar language was also provided in another California bill ABx1. In Section 12739.50(c) it says: " In establishing the standards for minimum creditable coverage, including the scope of services, enrollee and dependent deductible, copayment requirements, and coverage of services outside the deductible, the board shall consider all of the following:...(4) The extent to which and under what circumstances benefits offered or provided by a bona fide church, sect, denomination, or organization whose principles include healing entirely by prayer or spiritual means may be included in or qualify as meeting the requirement to maintain minimum creditable coverage under Section 8899.50 of the Government Code."

The latter bill passed the Assembly but it never came before the Senate.

I offer these examples of California legislation to support including benefits for religious non-medical health care in SB 61. I hope you find them helpful. Please feel free to contact me with any questions you may have.

Thank you.

Senator Bettye Davis

SB 65 "An Act repealing the repeal of preventative and restorative adult dental services reimbursement under Medicaid; providing for an effective date by repealing the effective date of sec. 3, ch. 52, SLA 2006; and providing for an effective date"

Sponsor Statement

The purpose of this bill is repeal the termination date on June 30, 2009 of coverage for adult restorative and preventative dental services under Medicaid. Without this repeal the coverage for adult dental services would revert to minimal treatment for the immediate relief of pain or to reduce the spread of infection. Coverage of adult preventative and restorative dental services under Medicaid began in 2006 with the passage of HB 105.

It has been demonstrated that across the continuum of the average life span, good preventative and restorative oral and dental health is not just a luxury, but a necessity – and far less expensive in the long run. Delaying or under-utilizing dental care causes more harm and expense than preventing or treating problems when they occur. If adult dental services under Medicaid only covered emergencies and abatement of pain and infection, long-term costs of dental care and other preventable medical conditions would increase. Studies have found that lack of preventative and restorative dental services is linked to increased diabetes, cancers, and cardiovascular disease. A correlation also has been found between pre-term low birth-weight babies and delay of necessary dental services.

ANALYSIS: *(Attach a separate page if necessary)*

This bill eliminates the sunset date of June 30, 2009 on enhanced dental servcies for adult Medicaid recipients. Services for adult Medicaid recipients would otherwise revert to emergent dental services (treatment for immediate relief of pain and acute infection), only. During FY2008 about 7,600 adults received treatment under this program. Forecasted expenditures are based on an analysis of paid claims. The estimated federal portion is based on projected federal financial participation rates for 2010 through 2015. The fiscal note amount for 2010 anticipates continuation of the adult dental program without anticipating program growth. FY 2010 projections will be updated to reflect the most recent trends during the course of the legislative session.

FISCAL NOTE

STATE OF ALASKA

2009 LEGISLATIVE SESSION

BILL NO. SB065

ANALYSIS CONTINUATION

In April 2007, Alaska began providing preventive and restorative dental care for adults age 21 and older enrolled in Medicaid. The Legislature established a three year trial period to evaluate the new program, which will end June 30, 2009, if not reauthorized. Services provided under the Adult Preventative Dental Medicaid program must be preauthorized and are subject to a $1,150 annual cap per individual. Services include exams, cleanings, fillings, root canals and dentures. Total program costs are limited to fiscal limits set by the legislature, ensuring that total program spending remains within the budgeted amount.

The Adult Preventative Dental Medicaid program helps protect and promote the health of Alaskans by improving affordable access to dental care services to the nearly 40,000 eligible adult Alaskans enrolled in Medicaid annually. During fiscal year 2008 about 7,600 adults received treatment under this program. In the past, Medicaid only treated emergency pain relief and acute infection for adult dental needs. This coverage expansion was added because infections in the mouth are no different than infections in other parts of the body. Dental infections cause pain and lost time at work, and affect overall health. Waiting until a dental emergency occurs can result in more expensive dental care. Missing teeth can affect employability.

The Alaska Mental Health Trust Authority contributed to state matching funds during the first three years of the program but will not do so after June 30, 2009. Fund source calculations for this fiscal note assume only GF match for the state portion. The federal portion is estimated for 2010 through 2015 based on the proportion of tribal and Title XIX reimbursable costs as forecast for 2010, and the estimates of federal matching percentages for 2010 through 2015. Approximately 18% of the claims are eligible for Indian Health Services which receives 100% federal reimbursement. The remaining 82% of claims are eligible for regular title XIX FMAP, which is projected to average 51.21% for state FY2010, 50.36% for FY2011 and 50% for FY 2012 to FY 2015.

MEMORANDUM January 30, 2009

SUBJECT: SB 65 Sectional Summary (Work Order No. 26-LS0224\R)

TO: Senator Bettye Davis
Attn: Tom Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Repeals two sections, secs. 3 and 5, from HB 105, 24th Legislature. HB 105 provided broader medicaid coverage for adult dental services for a three year period. Section 3 of HB 105 revived the previous definition of "adult dental services" that limited medicaid reimbursement to minimal treatment that was being temporarily repealed in the bill. Section 5 provided a sunset date of June 30, 2009, for the higher level of dental services added in HB 105.

Section 2. Makes this bill retroactive to June 30, 2009, to avoid a conflict with HB 105's effective dates if this bill passes after that date.

Section 3. Repeals section 7 of HB 105, 24th Legislature. Section 7 of HB 105 provided a delayed effective date of July 1, 2009, to revive the minimal treatment definition of "adult dental services" provided in sec. 3 of HB 105.

Section 4. Provides an immediate effective date for this bill.

JMM:ljw
09-049:ljw

SB 65 - Adult Dental Services under Medicaid

Talking Points

Focus on Prevention

- **Healthy smiles = improvement in employment opportunities.** Decayed or missing teeth can be a significant factor in employability and/or job advancement. Welfare recipients who received rehabilitative dental treatment (including fillings, extractions, and dentures) were "...twice as likely to receive favorable or neutral employment outcomes as they were to receive unfavorable employment outcomes."[1]
- **Improvement in dental care access helps those most in need.** The American Dental Association recommends that adult preventive and restorative dental services be included in all state Medicaid programs. Alaska tribal health programs and community health centers have embraced adult preventative and restorative dental care under Medicaid and are providing such care to those most in need.

Reduction in Medicaid Expenses

- **Prevention = reduction in Medicaid expenses for adult emergency care.** Preventive and restorative dental care avoids many emergencies and costly care later. Prior to the enactment in 2006 of HB 207 which added adult preventative and restorative dental care under Medicaid, adult dental services were limited to expensive emergency care for relief of pain and acute infection only and often included expensive, painful, and avoidable extraction of permanent teeth.
- **Possible reduction in Medicaid expenses for clients with chronic diseases.** Studies show links between oral health and other systemic/chronic disease including diabetes and cardiovascular disease. [2]
- **Possible reduction in Medicaid expenses for children with poor birth outcomes.** Maternal periodontal disease is linked with pre-term, low birth-weight (PTLBW) births. One recent study indicated women with periodontal disease are 7.5 times more likely to have a PTLBW baby. [3]
- **Annual cap controls costs.** The maximum cap of $1,150 per adult encourages the dentist and client to discuss priorities and treatment options, which in some cases can pay for a set of dentures over a two-year period.

[3] Lieff S, Hared H, McKaig R et al., "Periodontitis and Preterm Low Birth Weight in Pregnant Women" *Journal of Dental Research*, 2000;79(supplemental):608

Improved Overall Health

- **Alaskan children will experience better dental health and less dental infection.** Studies show increased risks of early childhood caries in infants with mothers/caregivers who have active dental decay due to transmission of bacteria.[4]
- **Alaskan adults will experience less dental decay and periodontal disease.** While much of the focus on dental decay is on children, adults remain at high risk for two common health problems: dental decay and periodontal disease. Cancer treatment and medications that reduce saliva flow can further elevate risk for oral diseases.[5]

Alaska State Capitol, Room 30
Juneau, AK 99801-1182

RE: SB 65 (Davis)–Support

Dear Chair Davis:

On behalf of the members of AARP in Alaska, we encourage your colleagues on the Senate Health and Social Services Committee to support SB 65, authored by you and co-sponsored by your Committee colleague Senator Johnny Ellis.

SB 65 would eliminate the sunset date on the adult dental benefit in the Medicaid program. This program has proven to be invaluable over the past years not only for dental exams, prevention, and treatment but also for providing dentures, primarily to older Alaskans in long term care facilities. In addition, adults who had low incomes and qualified for Medicaid were able to see a dentist and have the restorative work completed that allowed them to be able to successfully participate in job interviews.

Older Alaskans who have dental problems, missing teeth, or are in need of dentures often have accompanying nutrition problems. These nutrition problems can exacerbate other health issues and create an overall deterioration in health status. AARP believes that dental care is essential to quality health care. Funding for dental care should be considered sensible prevention with the long term possibility of saving Medicaid funds that would not need to be spent on more serious health care problems resulting from poor oral health status.

The current program has a limit of $1,150 per year per Medicaid beneficiary. Originally this figure was used because it was the amount that would pay for either upper or lower dentures. We understand that the average cost for dentures has gone up to $1,700 or $1,800 for just one set. We recommend that some appropriate increase in the annual benefit be included with the passage of SB 65. If possible, some form of "cost of dentures" inflation could be built into the program to keep up with dental inflation.

AARP requests an "AYE" vote on SB 65.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Senate HESS Committee Members

This week all Legislators will receive a mailing from the Alaska Dental Society (ADS) on dental issues in Alaska. One of our focus areas this legislative session will be on dental Medicaid and changes we believe are long overdue to the Medicaid system. At this point in the legislative session we offer cautious support for SB65 and its companion bill HB26. We have had preliminary discussions with the House sponsor, Rep. Hawker but were unable to discuss our position with committee members before Monday's hearing. The ADS feels it would be better to repeal the sunset date rather than extending as the Governor's bill, SB82 does.

A letter outlining the ADS position on Medicaid will be in our packet of information; I have copied a portion below:

A limited "Adult Dental" Medicaid program that provides for basic preventative and restorative services to adults is set to sunset this year. The Alaska Dental Society **cautiously supports** the continuation of this program and the expansion of our Alaska Denali Kid Care Program under the State Children's Health Insurance Program (SCHIP).

While the intent of both of these programs is good -- to increase the level of dental care within the state, the fact is that the existing Medicaid delivery system for dental benefits is already severely strained and discourages dentists from participating.

Therefore the ADS recommends that bills repealing the sunset of the adult Medicaid program and extending adult benefits and bills expanding eligibility for the Denali Kid Care include meaningfully changes to the Medicaid program that will remove barriers to participation by providers.

To this end, the ADS has been working with coalitions of health care groups, advocacy groups, along with representatives of the Medicaid Division and private practitioners over the past two years. Progress has been made on some of the issues, while others remain a "work in progress." The ADS has become convinced that without legislative a mandate some or all of the progress that has been made may fall by the wayside.

The ADS is planning an informal meeting in February with legislators, the Medicaid program leaders and other stakeholders. We will be asking about dates shortly and hope that a time can be chosen to allow as many to participate as possible.

A separate sheet is enclosed listing some of the key issues and reasons change is needed is attached

If there are any questions on the issues raised I can be reached at drdave@acsalaska.net or 723-2884.

David Logan, DDS
Legislative Chair, Alaska Dental Society

Alaska Dental Society Medicaid Priority List

- Removal of dentistry from state audits.
  - Superseded by federal audits
  - General consensus that this can be done
- Reimburse provider for treatment if patient is eligible for services at initial treatment date.
  - Currently payment will be denied if patient is eligible when treatment started but ineligible when treatment completed.
  - Key dental procedures such as crowns and dentures require 2-3 weeks to be completed after treatment is begun.
  - Insurance industry standard is 30 days to complete treatment if patient is eligible for benefits at time of initial treatment
- Provide yearly reimbursement adjustments.
  - Yearly increases will provide consistency and fairness to offset cost of delivering care. The 8 year gap between rate adjustments before fees were adjusted last year caused providers to drop out.
  - Set reimbursement at 65th percentile of UCR from a verifiable source.
- Remove eligibility from non federally mandated recipients who chronically abuse system.
  - Patients who schedule appointments and fail to show or cancel
  - Patients who use travel benefits then fail to show for appointments
  - Patients who engage in drug seeking
- Have Medicaid act as secondary insurance for non EPSDT recipients
  - Current system for patients with private insurance and Medicaid is confusing
  - Cost to Medicaid system would be less then acting as sole primary payer and forgoing private insurance
- Remove Hold Harmless provision from provider agreement
  - Opinion from AG's office it can be removed
  - Little legal consequence
  - Barrier to participation by providers

FAX: (907) 465-1398

January 31, 2009

The Honorable Bettye Davis, Chair
Senate Health and Social Services Committee
Alaska State Capitol, Room 30
Juneau, AK 99801-1182

Subject: Support Letter for SB 65

The Alaska Commission on Aging (ACoA) encourages support of SB 65, a bill to reauthorize preventive and restorative dental services for adult Medicaid recipients, sponsored by you and co-sponsored by Senator Ellis. Medicaid coverage for these services will sunset June 30, 2009 without legislative reauthorization.

Good nutrition is vital for health and wellness across the life span and depends on oral health. Dental pain, missing and decayed teeth affect dietary choices for seniors which impacts overall health and wellness. Without preventive and restorative dental services, which include exams, fillings, extractions, and dentures, older vulnerable Alaskans are at risk of developing dental infections that have been associated with periodontal disease, diabetes, pneumonia, and other chronic diseases including cardiovascular disease. Currently, Medicaid dental services are limited to expensive emergency care for immediate relief of pain and acute infection, with no coverage for preventative and restorative dental care. These limited services often lead to extraction of permanent teeth.

Children can also benefit from the enhanced Medicaid adult dental program. Research has shown that bacteria involved with the dental decay process are typically passed from parent to child or from grandparent to grandchild, in situations where the grandparent is the primary caregiver, and that part of the efforts to reduce dental decay in young children relates to reducing the level of dental infection in the caregiver. Moreover, primary caregivers with dental coverage are more likely to access dental services for their children.

In addition to the health issues involved, decayed or missing teeth can be a factor in employability or job advancement, which is of concern to all persons seeking employment, regardless of age. Preventive and restorative dental services result in fewer tooth extractions for Medicaid clients and offer increase chance of employment.

Preventive and restorative dental services can help prevent the progression of serious dental disease and discomfort which may result in more costly emergency care. These services contain future Medicaid costs for emergency dental work, assist in chronic disease prevention, and promote healthy lifestyles.

Since inception on April 1, 2007 through September 30, 2008, this program has served 9,267 unduplicated persons with 283 providers participating who have performed 42,268 procedures. During FY 2008 alone, 7,470 Alaskans received services through this program.

Because infections in the mouth are no different than infections in other parts of the body, ACoA believes that the enhanced dental program should continue for as long as possible and we appreciate the retroactive feature of your bill that extends coverage if the legislation is passed after the sunset date. We also suggest that the cap for services be reexamined in light of current costs for providing dental care. According to estimates from the National Dental Advisory Service, for example, the estimated median charge in Alaska for a complete set of dentures is in excess of $2,900.

ACoA supports SB 65 and believes that this program is a wise public investment that will help reduce expensive emergency dental needs, associated costs in health care, and enhance health and wellness for elderly Alaskans. Please feel free to contact Denise Daniello, ACoA's executive director (465-4879), should you have any questions regarding our position. Thank you for your consideration.

Sincerely,

Sharon Howerton-Clark
Chair Alaska Commission on Aging

Sincerely,

Denise Daniello

February 26, 2009

Senator Bettye Davis
State Capitol, Room 30
Juneau, AK 99801-1182

Re: Support for SB 65 – Medicaid for Adult Dental Services

Dear Senator Davis:

The Alaska State Dental Hygienists' Association (ASDHA) supports Senate Bill 65. As dental hygienists, we are a community of professionals devoted to the prevention of disease and the promotion and improvement of the public's health. There is a strong body of evidence that supports the relationship between oral health and overall health. It is crucial that individuals in our state have access to and receive dental care. Medicaid coverage for adult dental services provides funding for individuals in our state in need of assistance, and potentially experiencing untreated dental disease. SB 65 will continue to provide dental coverage for these Alaskans and ultimately aid in employability and cost effective care for the state. The ASDHA supports SB 65, and is hopeful more legislation in the future will address issues surrounding Medicaid reimbursement and increased funding for oral health care in Alaska.

Sincerely,

Gail Walden

Psychiatric Patient Survey

We are trying to improve the complaint procedure for psychiatric patients in Alaska.

We want to reduce unnecessary trauma to psychiatric patients.

Please help by filling out this survey and sent it to the address on the bottom of the page before December 1st, '08.

Age: Check one Male: Female:

1. Have you ever felt you were abused or traumatized during psychiatric treatment in a psychiatric facility or unit in Alaska—either physically, mentally or emotionally?
   Describe How?

2. Have you ever tried filing a complaint or filing a grievance with a psychiatric facility or unit in Alaska?
   Were you treated fairly and were you satisfied with the results? Explain.
   (Use next page if necessary.)

Send to: Mental Health Advocates—Faith Myers/Dorrance Collins, 3240 Penland Pkwy, Sp. 35, Anchorage, AK. 99508

Psychiatric Patient Survey

Send to: Mental Health Advocates, Faith Myers / Dorrance Collins, 3240 Penland Pkwy, Sp. 35, Anchorage, AK. 99508

Excerpts from: Trauma within the Psychiatric Setting: A Preliminary Empirical Report

Karen J. Cusack, Ph.D.; B. Christopher Frueh, Ph.D.; Thom Hiers, Ph.D; Samantha Suffoletta-Maierle, Ph.D; and Sandy Bennett, BSW, LMSW

Evidence indicates that PTSD (Posttraumatic stress disorder) is associated with nearly the highest rate of medical and mental health service use, making it one of the costliest mental disorders (Greenberg et al., 1999) Given this, it is clear that trauma has a prominent impact on public health and it should be of great interest to those concerned with public mental health administration and policy. However, trauma survivors tend to receive inadequate mental health services (Amaya-Jackson et al.,1999; Freugh et al.,2002)...

In our own recent review of the literature, we noted that there had been virtually no empirical investigation of trauma within the psychiatric setting (Frueh et al., 2000)...

Clinic rosters at five community mental health centers in the state public mental health system were used to recruit subjects...subjects would receive $25 compensation for their time...Subjects were men and women with a history of psychiatric hospitalization who were attending one of five mental health center clinics in a state public mental health system. All subjects were adults between the ages of 19 and 73...

A commonly held belief among clinicians is that asking vulnerable consumers detailed questions about their trauma history may be too upsetting to the consumer. However, none of the subjects in this study were significantly upset over questions related to their trauma history. In fact, many subjects reported at the conclusion of the interview that they found it helpful; some even indicated that they would like to further address these issues in their treatment. The notion that the interview is helpful for subjects is consistent with other studies conducted with public mental health consumers (Goodman et al., 1999)...

Conclusions: One of the goals of the study was to determine rates of traumatic events, as defined by the DSM-IV criteria for PTSD, occurring in the psychiatric setting (sanctuary trauma). Forty-seven percent of subjects reported experiencing a DSM-IV-defined traumatic event while in the hospital...

Events that were not traumatic, but were nevertheless thought to be harmful or capable of producing or exacerbating symptoms from previous traumas were also assessed. The events reported most frequently by subjects included being placed in seclusion (58%), being around other patients who were very sick and/ or frightening (56%), being handcuffed and placed in a police car (53%), and witnessing other patients being taken down (47%). Thirty-three percent of the subjects had been put in restraints (of any kind).

Subjects consistently reported experiencing fear, helplessness, or horror in response to these events...Only 24% of subjects had ever been asked about these types of events by (public-sector) mental health staff...

THE FIRST RULE OF MEDICINE

"DO NO HARM"

For some reason the first rule of medicine is not always followed by Alaska's psychiatric facilities, including evaluation units.

In a recent Alaska Supreme Court decision, the Justices stated there is a clear unavoidable tension between psychiatric facilities seeking convenience/ economics and patient rights, which can manifest itself into patient abuse.

The Justices saw it as a given that without oversight / good regulations that patients would be denied their rights and be more likely to experience abuse.

In general, Alaska as a young state has not produced rules that adequately protect psychiatric patients (those civilly committed and those in emergency rooms for forced psychiatric evaluations.)

Published by Mental Health Advocates, Faith Myers / Dorrance Collins, 3240 Penland Pkwy, Sp. 35, Anchorage, AK. 99508 Phone—(907) 929-0532
Unless otherwise stated, all articles are written by the Publisher.

ADVOCACY GOALS

1. Reducing unnecessary trauma to psychiatric patients

Studies show that trauma to psychiatric patients during treatment, civil commitment, transportation can cause or exacerbate a mental illness i.e.--PTSD, which is one of the most costly mental illnesses in America.

2. Improving Alaska psychiatric patient grievance procedures

Alaska has some of the worst psychiatric grievance procedure statute and regulations in America. Alaska needs to revise their grievance procedure statute and regulations.

3. Establishing a state Ombudsman's Office for psychiatric patients

Psychiatric patients need a state office to call concerning the grievance procedure and all patients in treatment must be given their phone number.

4. Encourage proper use of psychotropic drugs for patients

Psychotropic medication allows many patients to conduct reasonable normal lives, but over-prescribing has become an American epidemic and it needs to be curtailed.

Why must the Alaska Legislature be involved in revising psychiatric patient grievance procedure statute AS47.30.847

The current psychiatric grievance procedure statute AS47.30.847 is too vague. And according to a recent letter from the Dept. of Health and Social Services, the current grievance procedure statute, which is expressly meant to protect psychiatric patients, does not apply to some of the new hospital psychiatric units that do forced evaluations, etc.

There is little more fundamentally important to the psychiatric patient than a grievance procedure. A good grievance procedure not only protects and empowers psychiatric patients, it also forces a psychiatric facility to improve.

Psychiatric patients are unique in that they can be picked up by the police for forced evaluations and they can be placed in locked facilities, which makes protecting their rights more imperative.

The current grievance procedure statute and Behavioral Health 4 pages of Grantee grievance procedure requirements have loopholes which have been utilized by psychiatric facilities. The statute says "patients can file a grievance," but it doesn't say <u>when</u> patients can file a grievance. That is a huge loophole. Nowhere in the statute or in Behavioral Health requirements does it say a grievance/ complaint must be answered in writing. Federal regulations only state that hospitals must answer a grievance in writing. <u>The list goes on.</u> The loopholes must be closed.

In the state of Georgia, the legislature got involved and created an office to produce fair grievance procedure rules for psychiatric patients, after an investigation showed that Georgia's equivalent of DHSS was unable or unwilling to produce and administer fair grievance procedure rules for psychiatric patients. Georgia state officials said that DHSS as a provider writing fair rules was like " a fox watching the henhouse."

In the state of Maine, new psychiatric patient grievance procedure rules were produced after the citizens sued the state and their equivalent of DHSS. The citizens prevailed and the state was forced to adopt new and better grievance procedure rules for psychiatric patients.

Remember, Alaska's DHSS is a provider of psychiatric services.

We are asking the legislature of Alaska to take the initiative and produce a grievance procedure statute that will protect <u>all</u> psychiatric patients.

(Refer to back pages for more information on this subject)

Why the Alaska Legislature must create an independent office to investigate complaints from psychiatric patients or an interested party on behalf of patients

The Dept. of Health and Social Services is presently and for years has been required by statute AS47.30.660 to "investigate a psychiatric patient's complaints or the complaints of an interested party on behalf of a patient." Yet DHSS does not post, nor do they require to be posted, their phone number in psychiatric facilities. Federal regulations (hospitals, including the new hybrids) state that if a state office is required to investigate complaints, like DHSS, (which they are), their phone number is required to be posted / given to all patients. But it is not routinely done in Alaska.

DHSS is required to investigate psychiatric patient complaints and DHSS cannot delegate its responsibility to a non-state entity—i.e. a Board of Directors, non-profit agencies, certification organization, etc., but DHSS is presently doing just that.

In the state of Georgia, their equivalent of DHSS was not properly investigating patient complaints or establishing fair rules for psychiatric patient grievance procedures. The Georgia legislature stepped in and created an independent office "charged with promoting the safety, well-being, and rights of consumers."

In a state of Alaska Ombudsman's report (2008) it came to light that the Dept. of Behavioral Health to their knowledge have not even investigated 1 psychiatric complaint in 5 years and that includes some very serious complaints filed by psychiatric patients.

Remember, Alaska's DHSS is a provider of mental health services and should not be investigating itself or even writing rules to govern themselves.

The Long-Term Care Ombudsman's Office, which is Federally mandated, was under the umbrella of DHSS. But that was viewed as a conflict of interest as DHSS is a provider of senior care. The Long-Term Care Ombudsman's Office was moved under the care of the Alaska Mental Health Trust Authority.

The Dept. of Health and Social Services have shown they will not give out their phone number to all psychiatric patients, they will not in a timely way investigate patient complaints, and they will not write fair grievance procedure rules.

We are asking the Alaska Legislature to create an independent office that will assist any psychiatric patient asking for help through the grievance process and investigate psychiatric patient's complaints especially concerning sexual abuse, physical abuse, etc.

Reducing Unnecessary Trauma to a Psychiatric Patient in Emergency Rooms / Evaluations and Psychiatric Facilities In Alaska

A severe mental illness like schizophrenia can happen to everyday people, who may be going about their business of raising children, or going to school; high I.Q, low, mental illness can be an equal opportunity disease.

How a state treats a patient / person may determine the prospects for the person returning to a normal life and as a state, we are certainly not going to help recovery by unnecessarily traumatizing the patient.

The mental illness, schizophrenia or a severe psychotic break can leave a person wandering the streets with a form of dementia. Such a person can be detained, handcuffed, placed in the back of a marked police car and transported to a hospital for a forced evaluation. For the patient it is terrifying, humiliating, embarrassing and intimidating. It is a traumatizing experience that sticks in a person's memory for a long time. The person is not first asked to volunteer to go to the hospital for a psychiatric evaluation; even if cooperative, the person is not given a choice whether they will be handcuffed or ride in a marked police car. (Private transport companies do not always handcuff psychiatric patients when transporting, nor do ambulances.)

Forced Evaluation

A citizen picked up for forced psychiatric evaluation might be put in a E.R. waiting room with an examination table and a chair in a hospital like Providence for up to twelve hours; a person might be picked up at 6 o'clock at night and released back on the street at 1 o'clock in the morning (the hospitals are only required to return the person to the point of pick-up), or the person might be transferred to a psychiatric hospital.

The next thing a patient / person knows, they are in a world that to a great extent is indifferent to their eventual recovery and returning to something of a normal life. Stabilization is the key or buzz-word in some big psychiatric institutions as opposed to psychiatric treatment and recovery. (There must be higher goals and standards for all psychiatric institutions or psychiatric units in Alaska that keep psychiatric patients over three days than just stabilization.)

Corporate greed: making things easy for hospitals as a way to make more money is all too common. In the lower 48, some psychiatric E.R.'s have patients lined up in the corridors strapped down to gurneys as a way of convenience. You can hear patients calling out for a drink of water, asking to please let them up to go to the bathroom; their pleas go mostly unheeded by hospital staff walking past.

(This is not really where Alaska should be going)

Excerpts from: Trauma within the Psychiatric Setting: A Preliminary Empirical Report

Karen J. Cusack, Ph.D.; B. Christopher Frueh, Ph.D.; Thom Hiers, Ph.D; Samantha Suffoletta-Maierle, Ph.D; and Sandy Bennett, BSW, LMSW

Evidence indicates that PTSD (Posttraumatic stress disorder) is associated with nearly the highest rate of medical and mental health service use, making it one of the costliest mental disorders (Greenberg et al., 1999) Given this, it is clear that trauma has a prominent impact on public health and it should be of great interest to those concerned with public mental health administration and policy. However, trauma survivors tend to receive inadequate mental health services (Amaya-Jackson et al.,1999; Freugh et al.,2002)...

In our own recent review of the literature, we noted that there had been virtually no empirical investigation of trauma within the psychiatric setting (Frueh et al., 2000)...

Clinic rosters at five community mental health centers in the state public mental health system were used to recruit subjects...subjects would receive $25 compensation for their time...Subjects were men and women with a history of psychiatric hospitalization who were attending one of five mental health center clinics in a state public mental health system. All subjects were adults between the ages of 19 and 73...

A commonly held belief among clinicians is that asking vulnerable consumers detailed questions about their trauma history may be too upsetting to the consumer. However, none of the subjects in this study were significantly upset over questions related to their trauma history. In fact, many subjects reported at the conclusion of the interview that they found it helpful; some even indicated that they would like to further address these issues in their treatment. The notion that the interview is helpful for subjects is consistent with other studies conducted with public mental health consumers (Goodman et al., 1999)...

Conclusions: One of the goals of the study was to determine rates of traumatic events, as defined by the DSM-IV criteria for PTSD, occurring in the psychiatric setting (sanctuary trauma). Forty-seven percent of subjects reported experiencing a DSM-IV-defined traumatic event while in the hospital...

Events that were not traumatic, but were nevertheless thought to be harmful or capable of producing or exacerbating symptoms from previous traumas were also assessed. The events reported most frequently by subjects included being placed in seclusion (58%), being around other patients who were very sick and/ or frightening (56%), being handcuffed and placed in a police car (53%), and witnessing other patients being taken down (47%). Thirty-three percent of the subjects had been put in restraints (of any kind).

Subjects consistently reported experiencing fear, helplessness, or horror in response to these events...Only 24% of subjects had ever been asked about these types of events by (public-sector) mental health staff...

Excerpts from:

On Being Invisible In the Mental Health System

Ann F. Jennings, Ph.D.
Trauma-Informed Systems Consultant

This chapter brings into question one of the basic assumptions operating in the public mental health field today: that mental illness is biological or genetic in origin and is therefore treatable primarily by symptom control or management...

Anna was a client of the mental health system for 19 years, until age 32. For nearly 12 of those years, she was institutionalized in psychiatric hospitals. When in the community, she rotated in and out of acute psychiatric wards, psychiatric emergency rooms, crisis residential programs, and locked mental facilities...

Anna was hospitalized a total of 4,124 Billing days...Not included ...is the cost of social services, police, ambulance and legal / court services, conservator and patient advocacy services, residential treatment, psychiatric and therapist sessions, crisis services, day programs, and intensive case management...

Four days after Anna's 32nd birthday, after another haunted sleepless night, she hung herself, by her T-shirt, in the early morning bleakness of her room in a California State mental hospital. She was found by a team of three night staff who were on their way in to give her another shot of medication...

A result of ...paradigmatic "blindness," conventionally accepted psychiatric practices and institutional environments repeatedly retraumatized Anna, re-enacting and exacerbating the pain and sequelae of her childhood experience...The effect of the institutional retraumatization was to continually leave Anna "in a condition that fulfilled the prophecy of her pathology."

Institutional Retraumatization

Institutional Retraumatization

Early childhood Trauma Experience	Common Mental Health Institutional Practices
Anna's child psychiatrist did not inquire into or see signs of sexual trauma. Anna misdiagnosed.	Adult psychiatry does not inquire into, see signs of sexual trauma. Anna misdiagnosed.
Abuser stripped Anna, pulled T-shirt over her head.	Stripped of clothing when secluded or restrained, often by or in presence of male attendants.
Stripped by abuser to "with nothing on below."	To inject with medication, patient's pants pulled down, exposing buttocks and thighs, often by male attendants.
"Tied up," held down, arms and hands bound.	"Take down," "restraint." Arms and legs shackled to bed.
Abuser "blindfolded me with my little T-shirt."	Cloth would be thrown over Anna's face if she spit or screamed while strapped down in restraints.
Abuser "opened my legs." position.	Forced four-point restraints in spread-eagle
Abuser was "examining and putting things in me."	Medication injected into her body against her will.
Boundaries violated. Exposed. No privacy.	No privacy from patients or staff. No boundaries.
Taken by abuser to places hidden from others.	Forced, often by male attendants, into seclusion room.
Isolated in her experience: "Why just me?"	Separated from community in locked facilities.
Anna was defenseless against perpetrator abuse. Her attempts to tell went unheard. There was no safe place for her, even in her own home or room.	Mental patients defenseless against staff abuse. Reports disbelieved. No safeguards effectively protect patients. Personnel policies prevent dismissal of abusive staff.
Appropriate anger at sexual abuse seen as something wrong with Anna. Abuse continued, unseen.	Appropriate anger at abusive institutional practices judged pathological. Met with continuation of practices.

"Recovery or growth begins with being able to effectively complain." (Whether it be) "psychiatric patients—children—husband or wife—etc"

A 2008 survey at state-run Alaska Psychiatric Institute showed 21% of the patients were afraid to complain or file a grievance; 19% did not answer the question with the possibility they were afraid to answer.

The patient's voice must be encouraged and allowed to come forward to facilitate true recovery.

Consumer Survey:

Male states—"They were treating me for my bi-polar and depression, but they were not giving me any treatment that could help--Grievance procedure doesn't work."
(Name withheld by request)

Male states—"My psychiatrist cut me off medication instead of tapering me off. I told him it was harmful. I tried to file a grievance and get my doctor changed. It didn't work."
(Name withheld by request)

Female states—"I was brought to Providence Psychiatric E.R. One of the male staff hit me in the eye with his elbow which knocked me out and he gave me a black eye. I asked to file a complaint. The hospital staff refused to give me a written copy of the grievance procedure. They would only give it verbally and my mental illness made it difficult to follow verbal instructions.

There was no satisfactory outcome to my grievance. Providence's attorney advised me that Providence does not have to follow the grievance procedure statute."
(Name withheld by request)

*Publishers Note: DHSS confirmed that Providence's Psychiatric units do not have to follow Psychiatric Patient Grievance Procedure Statute—AS47.30.847.

Male states—"It's never been really clear to me how the grievance procedure works. It has never been clear who I was supposed to complain to and who was supposed to help me. When I did file a complaint, no one ever answered."
(Name withheld by request)

Consumer Survey continued:

Don Roberts states—"Basically, as of now, the grievance procedures are pretty useless. Anytime a person's grievance can be dismissed as symptoms of their illness there is a problem. People are deemed less than persons with rights. And doctors, psychiatric facilities seem to think that they can set aside those rights. It's an unjust system."

Female states—" I was transported from API to the court house for a hearing. I was accompanied by two males, one an API staff member. I requested to have at least one female accompany me but they sent two males. I went into the bathroom at the courthouse. The API male orderly walked into the women's bathroom to get me to hurry up. The other women there were shocked and upset. I was humiliated. Complaining to the staff didn't help."
(Name withheld by request)

Male states—"I've actually had API give me the wrong medication. It made me sick, nauseous. I couldn't sleep, I came out for water. The staff told me to go to bed or they would give me more medication. I tried to complain to staff but found out it didn't do any good. They just look at you as though you don't know what you are doing."
(Name withheld by request)

*Publishers Note—In 2008, API was often above the national average for medication mistakes.

Female states—"Police surrounded me and told me they were going to take me to Providence Psychiatric for an evaluation. They handcuffed me and put me in a marked police car.

There has to be a better way for transporting a cooperative individual for a psychiatric evaluation than handcuffing them and taking them in a marked police car!"
(Name withheld by request)

A volunteer patient advocate at one of the community centers who works with those with a dual diagnosis (alcohol/mental illness) states—"There doesn't appear to be enough Crisis Intervention Team (CIT) police officers properly trained to deal with psychiatric patients. Not all of our clients know to ask the police to provide a trained CIT officer."
(Name withheld by request)

Female states—"Anchorage Police Department physically and mentally does not have any training on dealing with psychiatric behaviors."
(Name withheld by request)

Which Psychiatric Patients should be allowed to File a Grievance

For over 20 years in Alaska there has been a debate: "which psychiatric patient should be allowed to file a grievance." "And when" can a psychiatric patient file a grievance. The Alaska Legislature needs to weigh in and make clear what patient rights are on this issue.

The Dept. of Health and Social Services (DHSS), Behavioral Health (BH), most psychiatric facilities and even some employees of state-run psychiatric patient rights organizations believe that : "psychiatric facilities need to be able to choose who can file a grievance." They also believe facilities need to be able to choose when a patient can file a grievance as a way to eliminate frivolous grievances. Many psychiatric patients are required to go through an informal complaint process before being allowed to file a grievance.

Granted, there are some frivolous complaints filed. The problem in places like state-run Alaska Psychiatric Institute (API); middle of '05 to middle of '06, over 200 complaints were filed by patients, yet not one was allowed to become a grievance, not one patient received a written response (Federal requirement). API has changed somewhat, but they can always change back when they want to. (In '08 less than 15 patients received a written response.)

Regardless of what API does, it still leaves 50 or so grantee psychiatric facilities that may or may not be doing the right thing. The loopholes in the current state grievance procedure rules need to be closed.

Advocates and former patients believe that patients or a person representing a patient should be able to file a grievance with a psychiatric facility at the time of their choosing and there should be a paper trail for complaints. The state of Maine has come up with a very simple procedure and form to deal with any frivolous grievances.

The one thing that is certain, the state legislature and patient advocates cannot allow psychiatric facilities and providers, and remember, DHSS is a provider, to choose who can and can't file a grievance and when.

The psychiatric facilities have demonstrated in the past, that if given a choice, they will often not let anybody file a grievance.

Reference Information:

AS47.30.840 passed in 1981 and gave 7 basic rights to psychiatric patients. In 1984, major revisions were made and 4 more rights were added.

AS47.30.847, Psychiatric Patient Grievance Procedure Statute passed in 1992, sixteen years ago. To date there have been no major revisions.

The present statute 47.30.847 is vague, with loopholes which allows psychiatric facilities to deny patients due process, an appeal process, and even deny patients their right to file a grievance.

AS47.30.847 was expressly written to protect psychiatric patients. Because of changing times, method of treatment, now the statute only applies to a few facilities. This is verified by a recent letter from DHSS.

The state of Maine through a lawsuit forced their state to develop uniformity in the psychiatric grievance procedure regulations. The state of Georgia recently passed a statute that will bring about uniformity in their psychiatric patient grievance procedures / regulations.

Maine and Georgia found out that a state cannot give a vague set of guidelines or regulations to 50 or 60 psychiatric facilities and expect fair treatment of patients.

Alaska must design a grievance procedure statute that will cover all psychiatric patients/facilities and with enough detail to guarantee the protection and rights of all psychiatric patients.

AS47.30.847 states psychiatric patients can file a grievance but it does not say when. It does not say who the impartial body is. The patient must receive a written answer-etc. For more information, refer to back pages / committee report

Psychiatric patients' grievance procedure Statute AS47.30.847

Sec.47.30.847. Patients' grievance procedures. (a) A patient has the right to bring grievances about the patient's treatment, care, or rights to an impartial body within an evaluation facility or designated treatment facility.

(b) An evaluation facility and a designated treatment facility shall have a formal grievance procedure for patient grievances brought under (a) of this section. The facility shall inform each patient of the existence and contents of the grievance procedure.

(c) An evaluation facility and a designated treatment facility shall have a designated staff member who is trained in mental health consumer advocacy who will serve as an advocate, upon a patient's request, to assist the patient in bringing grievances or pursuing other redress for complaints concerning care, treatment, and rights. (10 ch109 SLA 1992)

Should Alaska treat Psychiatric Patients (Those civilly committed—Forced evaluations) the same as Criminals

In the early 80's, the Alaska legislature passed an amendment to a law that included "psychiatric patients have a right to be free of corporal punishment."

It really wasn't that long ago in American history that corporal punishment was seen as a legitimate tool for behavioral modification.

A second very questionable way psychiatric facilities / psychiatrists employ behavioral modification: the in-patient facilities remove a great deal of patient rights that are granted by statute. They then require the patient to earn their rights back and for any minor infraction of hospital rules a patient's rights may be removed again.

Across America, state courts, state supreme courts, Federal courts, have ruled in a unanimous way, that psychiatric patients that have not committed a crime cannot be treated as criminals and a "psychiatric patients rights are to remain intact to the greatest extent possible."

Removal of psychiatric patient's rights as part of a treatment plan is often arbitrary in nature, depending on the mood of the staff person. The legislature should make it clear that patient rights cannot be removed for minor infractions of hospital rules.

In a recent Alaska Supreme Court decision concerning a civilly committed psychiatric patient, the Justices were critical of the Dept. of Health and Social Services, stating DHSS's court briefs almost exclusively referred to people who had committed a crime and were in jail. The Justices reminded DHSS that there is a fundamental difference between people/ psychiatric patients who have not committed a crime and someone who has.

Ultimately, it's going to take more than a few Judges or losing a case and $200,000 to change DHSS's mindset. It will take a directive from the legislature.

Voluntary and civilly committed psychiatric patients who have not committed a crime have a right not to be placed in jail or a forensic unit (unless an emergency exists, and then must be kept separate from criminals.) Conversely, the same rule should apply. But the legislature has not made it clear.

Presently state-run psychiatric facility API uses non-forensic units as a halfway house for murderers, hard-core criminals, etc.

Mixing voluntary patients and criminals is done by the state/DHSS for convenience and to save money. The legislature should weigh in.

Follow the Money, Follow the money

Treating psychiatric patients in a psychiatric facility or unit is a billion dollar business.

Non-profit organizations that specialize in protecting psychiatric patients represent a multi-million dollar business. The job can provide a good paycheck, put the children through college, etc.

HELPING PSYCHIATRIC PATIENTS IS BIG BUSINESS. Some organizations do a lot of good. But psychiatric facilities do not necessarily see a down side to increasing the number of patients or recidivism.

And most patient rights organizations do not see an up side to empowering psychiatric patients to advocate for themselves.

There is a strong, in-bred motivation by service organizations to keep psychiatric patients helpless and to keep them coming back.

The Alaska state Legislature should take into account that psychiatric facilities—drug companies—patient rights organizations are, to a great extent, going to act in their own best interest and their actions may not always be in the best interest of the patient.

It is up to the Alaska Legislature (with the encouragement of advocates) to advance new rules that will empower psychiatric patients—giving patients an increased ability to protect themselves.

A good grievance procedure statute is one example. It has 5 ingredients:

1. It forces psychiatric facilities to respond.
2. Easy to understand.
3. Timely
4. Has a paper trail.
5. Gives patients the right to file a grievance at the time of their choosing.

A good grievance procedure, along with other advancements in patient rights, is needed by psychiatric patients.

(Reprinted from Ketchikan Daily News)

Validating Legitimate Patient Complaints as an Aid to Recovery

(Revising the Psychiatric Patient Grievance Procedure Statute AS47.30.847 Con.)

Recommendations to revise grievance procedure policy (Completed 2007)—A committee worked for one year to revise state-run Alaska Psychiatric Institute's grievance procedure.

The committee was made up of Alaska Mental Health Board members (including the chair), hospital employees, API Board members, Disability Law Center, public members, former patients. Following are their recommendations:

1. If the patient requests to file a grievance, neither the grievance nor the process can be denied because of the availability of a complaint procedure.

2. Patients have a right to a written answer to their grievance / complaint.

3. Each program area shall have complete written copies of the grievance procedure/policy and associated rules and they shall be made available to the patient. Each patient shall be offered a written copy of these rules. (Including Behavioral Health's 4 pages of grantee grievance procedure requirements.)

4. All committee members agree that there should be an urgent formal grievance procedure and urgent grievances should be resolved within 24 hours.

5. It should be made clear that patients can file a grievance on any subject and receive the same due process on any subject.

6. The committee wanted the hospital to adopt a form that could contain the complaint, the hospital's answer and the appeal process all on one form.

7. Timeline for facility resolving a patient grievance. A grievance should be resolved within 5 days not counting weekends or holidays. Facilities can ask for a 5 day extension. The facility is required to inform the patient in writing of the extension and not to exceed three 5 day extensions, not counting the 5 day investigative period initially and to include the reason for the extension. The extension should be for "good cause" such as a staff member needing to be interviewed is on vacation, etc. and the written notification to the patient should include the reason for the extension.

(Continued on next page)

8. Once filed, all formal grievances must be completed to resolution. A reasonable attempt by mail must be made to contact patients who may have left the hospital prior to resolution, informing the patient in writing of the decision.

9. AS47.30.847 states "the facility shall have a designated staff member who is trained in mental health consumer advocacy who will serve as an advocate, upon a patient's request, to assist the patient in bringing grievances or pursuing other redress for complaints concerning care, treatment, and rights." The committee recommended that the designated staff person be clearly identified in writing (policy) as the "patient advocate."
(A later committee felt the advocate training could be adequately done by the advocate reviewing an on-line program)

Note: The state of Maine had similar problems with facilities not letting patients file a grievance and they added to their regulations: "Under no circumstances shall the remedies requested in a grievance be denied nor the processing of a grievance be refused because of the availability of a less formal procedure."

The committee spent a year producing recommendations to improve the API psychiatric patient grievance procedure policy. And those recommendations are relevant to the revision of the grievance procedure statute, AS47.30.847.

"Recovery begins with being able to effectively complain."

Support Letters:

Disability Law Center in a letter dated January 9, 2007, addressed to the Alaska Mental Health Board and committee members, endorses the recommended changes to the grievance procedure. Shortly thereafter, the AMHB endorsed the recommended changes to the grievance procedure. And the API Advisory Board endorsed the additions to the grievance procedure.

Also: In a letter, Psychiatric Rights and NAMI—Anchorage called for the improvement of the psychiatric patient grievance procedure statute—AS47.30.847.

Gov. Sarah Palin; **November 5, '08**
Mr. Mike Nizich, Chief of Staff;
Alaska Senate;
Alaska House of Representatives;

We are asking that you help bring Alaska psychiatric patient statute / regulations into the 21st Century. The goal is to reduce unnecessary trauma, improve patient rights and to reduce unnecessary recidivism.

Alaska has some of the worst psychiatric patient rights and government oversight in the nation.

The Department of Health and Social Services (DHSS) is required by law to investigate a psychiatric patient's complaint and cannot delegate its responsibility to a non-state agency.

1. Behavioral Health has not to their knowledge investigated a psychiatric patient's complaint in the last 5 years. (Ombudsman's report '08)

2. DHSS does not routinely give out their phone number to psychiatric patients.

3. DHSS does not keep statistics of the number and type of complaints filed by patients in psychiatric facilities or complaints filed with DHSS.

4. Psychiatric patient grievance procedure statute AS47.30.847 needs to be revised with a goal of fairness and state-wide uniformity.

The enclosed state Ombudsman's report is critical of DHSS.

In closing, as advocates we have looked at numerous other states. No DHSS or their equivalent has made any significant advancement in patient rights or oversight without pressure from a Governor's Office, the courts by way of a lawsuit or the legislature stepping in and writing new rules / statutes.

The examples would be—the state of Maine—lengthy lawsuit—state of Georgia—legislature recently rewrote the statutes after it was shown their equivalent of DHSS was not investigating complaints and was not writing fair grievance procedure rules for psychiatric patients. The state of Washington—the Governor/office stepped in on a couple of issues.

In closing, we are asking for the help of your office in remedying the deficiencies of the DHSS in Alaska in the 4 issues we have set out.

Thank you,

Alaska State Capitol, Room 30
Juneau, Alaska 99801

Re: SB 66 – Mental Health Patient Grievance Procedure

Dear Senator Davis,

On behalf of the Alaska Mental Health Board, please except our appreciation for your support for Alaskans with mental illness. We appreciate that you are open to hearing about the needs of mental health consumers and are committed to providing them with greater security and dignity.

For the past year or so, our staff and board members have been involved in an extensive discussion around the patient grievance process. Thus, we are familiar with the current procedures in place and the discussions related to the idea of a statutory grievance procedure. Our staff has reviewed SB 66 regarding the establishment of a statutory grievance procedure for mental health patients, and would like to identify some serious concerns we have with the proposed procedure.

We are concerned that the proposed procedure will have a negative effect of patient-centered care, given its complexity and bureaucratization of the grievance process. We are also concerned that it will deter mental health consumers and their providers from reporting crimes against patients to law enforcement. The proposed procedure would add a layer to existing grievance procedure requirements, rather than replace them. We worry that this will increase the complexity for mental health consumers as well as providers, and further reduce the incentives for hospitals to expand their capacity for designated evaluation and treatment/stabilization (DET or DES) services. We also have concern that singling out mental health consumers, rather than looking to a more comprehensive procedure that includes all patients' needs, increases the stigma of mental illness. There are costs associated with this proposed grievance procedure that potentially outweigh the benefits. Finally, the proposed language gives rise to a host of construction concerns, which we worry will lead to litigation and further compromise care available to mental health consumers.

Interference with Patient-Centered Care

We applaud the acceptance of patient-centered care as the model, not just for our psychiatric institution but also for our community mental health centers and hospital services. It has been an arduous process for advocates to shift the thinking to focus on mental health consumer's participation in the treatment process, and to show the value of peer-to-peer services in the continuum of care. As written, SB 66 brings a level of government into the process that we feel compromises that patient-centered focus. We also worry that the potentially adversarial process suggested will damage the relationships between mental health consumers and their treatment teams. Given the scarcity of resources in our communities (some of which have a single provider), we do not want to risk the loss of care by overly polarizing the grievance process.

The definition of "grievance" is far too broad. It includes a "complaint, **concern or suggestion.**" The benefit of patient-centered care is that mental health consumers are able to participate in the development – and evolution – of their treatment plans. If every time a consumer wants to suggest a change to his or her treatment plan they must engage in this grievance procedure, the flexibility and responsiveness of the treatment plan are lost.

The issue of the burden of proof being placed on the provider is also concerning. To ask the provider to prove that the complained of act or behavior did not happen in reality creates a situation in which a grievance cannot be resolved in a manner acceptable to both the mental health consumer and the treatment provider. This will erode the partnership between the two, impairing the treatment process by creating an adversarial relationship.

Minimization of Serious Offenses

As proposed, AS 47.30.847(b)(7) provides an "urgent level of review" for grievances involving sexual or physical abuse, denial of "lifesaving" medical care, or denial of "basic care of human rights." Were these acts to be committed against a mental health consumer by a mental health provider, they would be criminal acts. As such, they should not be minimized or reduced to "grievances." They should be considered crimes and reported to law enforcement immediately for investigation and prosecution if appropriate.

Unfortunately, crimes against persons with disabilities often go unaddressed. Either the victim is blamed or they are undervalued to the point where crimes committed against them no longer matter. To codify this attitude in statute seems to be a step back after so many years of advocacy.

We also wonder if the very broad definition of a "grievance" doesn't minimize serious complaints about patient care. Is the intent that suggestions about menus, décor, etc. are to be considered grievances?

The Impact of Duplication

Currently, mental health providers are already required to have formal grievance procedures by state, federal and accrediting authorities. The Division of Behavioral Health has a policy with which all recipients of community behavioral health grants must comply. Alaska statute and regulations require that the grievance procedure and patient rights be posted at the facility (AS 47.30.855 and 7AAC 71.220). Providers of Medicaid-reimbursed services must comply with the grievance procedure requirements established by CMS. Hospitals and community behavioral health centers accredited by JCAHO must also comply with grievance procedure standards. This is three layers of grievance procedures already imposed upon mental health providers.

To add an additional layer, that is not coordinated with existing procedures, means a more complex grievance process for mental health consumers and a greater burden to providers. We worry that hospitals providing mental services, especially DES/DET services, will see this as another obstacle and will choose not to maintain or expand their capacity to serve people in psychiatric emergencies. We already have a fragile DES/DET system, having lost our beds in Sitka last year. Further reductions will make it even harder for mental health consumers to receive quality care when they most need it.

Exclusivity and Stigma

We agree that all patients have a right to receive quality health care, and to complain or grieve about unacceptable care. We worry that by providing a grievance procedure limited to mental health consumers, we validate the myths and stigma about mental illness by implying that mental health patients are somehow different or more vulnerable that other people with disabilities. We would recommend that a health care grievance procedure that applies to all patients regardless of disability or need as a more inclusive and equitable approach. The Disability Law Center is willing, as are we, to help in creating such a process, should you be interested in pursuing that course of action.

Cost vs. Benefit

Over the past year, we have worked with the Disability Law Center, patient advocates, the Department of Health and Social Services and the public to determine whether mental health consumers are being denied the ability to pursue grievances. We have heard no public comment from mental health consumers or family members who have been denied the right to a grievance. The Disability Law Center reports no applicants calling for assistance in asserting their grievance rights. Other social services agencies and advocacy groups report the same.

The Division of Behavioral Health (DBH) does require grantees to have a grievance procedure (the policy is attached). The policy includes departmental review if the mental health consumer cannot achieve a satisfactory resolution with the treatment provider. Between 2005 and 2007, only **five** grievants sought departmental review. Thus, there is no overwhelming evidence that mental health consumers are being denied their rights to grieve.

As proposed, providers must have a designated staff member to advocate for patients. This is currently required by the DBH policy for its grantees, so it's unclear as to whether that suffices or whether a specific FTE advocate is required by SB 66. The procedure also requires departmental review of all grievances. With the definition of grievance being so broad, this will result in requiring additional departmental staff. The result is a financial burden on providers and the state that outweighs the need.

As discussed above, we have serious concerns that this sort of procedure will damage the relationships so necessary for good patient care. If the intent is to include peer support services under this law, the damage to those relationships is even more concerning. This is an unacceptable cost for such a limited benefit.

Language

There are specific terms and provisions in the bill as drafted which lead to questions of intent and construction of the law should it be enacted.

As discussed above, the definition of "grievance" is far too broad. On its face, this would include "concerns and suggestions" unrelated to patient care. Is this the intent?

What is "a public or private evaluation facility or unit?" Is the intent that only those mental health providers identified by AS 47.30.660-47.30.915 be included, or is the intent to also include community mental health centers and/or peer support services? There is not a statutory definition of a treatment or evaluation "unit," so it's not clear what is included.

There is a great deal of specificity as to the grievance form, which could lead us to construe the statute to prohibit the making of a grievance in person, by telephone, by email, or through a family member or designated representative/advocate. This actually narrows the procedure from what currently exists for behavioral health grantees.

The proposed AS 47.30.847(b)(4)(C) permits an administrative appeal if the executive director of the provider cannot resolve the grievance in a way acceptable to the person making the grievance. Since all of our providers except API are private non-profits, there is no governmental action to be the subject of an administrative appeal. There would need to be some review by the Department of Health and Social Services or Division of Behavioral Health to be appealed administratively.

There are also two legal questions. What is meant by "due process?" Is this a procedural concept requiring notice and hearing or is it a substantive due process concept? Also, the assignment of the burden of proof on the provider in atypical — usually the complainant must establish the grounds for the complaint. As drafted, SB 66 limits the provider to proving "compliance or remedial action" — which presupposes that the facts alleged in the grievance are true (thereby denying the provider its due process).

Please do not interpret this extensive list of concerns as being "anti-patient" or as our taking a position to limit the rights of mental health consumers. The Alaska Mental Health Board strongly supports the rights of mental health consumers and their families and we would like to see an easier, more accessible grievance system for all patients. We simply do not feel that SB 66 as drafted achieves that result. We look forward to partnering with you on this issue, to better serve all our constituents.

Sincerely,

J. Kate Burkhart
Executive Director

State of Alaska
Department of Health and Social Services
Behavioral Health

Policy & Procedure

Topic: State Behavioral Health Requirements for Grantee Grievance Procedures

Policy: All Behavioral Health (BH) grantee treatment organizations are required to develop grievance procedures by which all clients, without regard to services used or funding source, including those clients denied services, may seek redress of grievances. The procedures, written in plain language, should be developed with meaningful consumer participation utilizing the general guidelines established by State Behavioral Health. A copy of the procedures must be filed with BH and should also be posted at the grantee organization's facility(s).[1]

Intent: The Department of Health and Social Services (DHSS) by law is required to adopt regulations to assure patient rights[2], to establish standards for treatment facilities and to keep related records[3], and to investigate complaints made by a patient[4]. This policy outlines the DHSS BH guidelines for grantee grievance procedures, explains BH's role in response to grievances, and lists relevant policy clarifications and all related references of the Alaska Statutes and the Alaska Administrative Code.

Grievance Procedure Guidelines: Grantee consumer grievance procedures must, at a minimum, meet the following criteria:

1. Provision(s) that ensure the right of consumers to file a grievance without intimidation
2. Provision(s) that ensure there is NO retaliation perpetrated against consumers who have filed a grievance
3. Provision(s) that outline a process by which consumers may easily file a grievance, to include:

[1] 7 AAC 13.135 Grievance procedures; 7 AAC 71.220 Grievance procedures
[2] AS 47.30.590 Comprehensive services
[3] AS 47.37.030 Powers of Department; AS 47.37.140 Public and Private Treatment Facilities
[4] AS 47.30.660 (b) (12) Powers and duties of department

APPROVED: 6-18-2007

a. A simple form written in plain language that also provides for an optional waiver of confidentiality which consumers may complete and submit,
b. Procedure(s) that allow consumers to submit a grievance orally
c. Procedure(s) that allow consumers to submit a grievance over the phone or via email

4. Explanation of agency's grievance procedure / policy provided to ALL consumers upon entry to services, to include the following:
   a. Copy of agency procedure / policy
   b. A form for consumers to sign, which shall be maintained in the consumer's clinical record, that declares their receipt and understanding of the agency procedure / policy
5. Provision(s) for consumers to designate a representative or advocate to assist them with all steps of the grievance process
6. Procedure(s) for the agency, upon consumers request, to assist the consumer with filing a grievance, which should include either:
   a. Identifying specific agency staff to provide assistance
   b. Written referral to other consumer advocacy resources such as the Disability Law Center and NAMI-Alaska
7. Step-wise procedures, limited to the following, for resolving ALL grievances:
   a. **Resource and means for commonly resolving consumer disputes to minimize the need to invoke the grievance process**
   b. Communication with consumer upon receipt of grievance that the agency has begun the process to resolve the grievance
   c. Direct resolution through dialogue with the agency staff member involved or with the staff member's supervisor, or with both as consumer requests
   d. Resolution through the agency Executive Director
   e. Resolution through the agency Governing or Advisory Board
   f. Referral of grievances unresolved at the agency's highest level to DHSS Behavioral Health for technical assistance
8. Established time frames to include the following that ensure prompt hearing of grievances:
   a. Initiation of resolution (according to the procedures noted in # 7 above) within 5 days of receiving a grievance
   b. If agency is unable to adequately initiate resolution within 5 days, a written notification shall be sent to the consumer by the end of 5 days from receipt of grievance explaining why and identifying when the grievance process will initiate
   c. Satisfactory resolution to grievances within 30 days of receipt of grievance
   d. Referral to BH, within 5 business days, for technical assistance with grievances that remain unresolved after 30 days.
9. Provision(s) for immediately elevating to the Governing or Advisory Board level any grievances that involve abuse, neglect or unnecessary seclusion or restraint.
10. Procedure(s) that provide for the creation, maintenance and storage of files for each individual grievance which shall contain all related documents, records, actions and communications.

11. Provision(s) that address maintenance of consumer confidentiality throughout the grievance process

BH Role & Responsibility:

DHSS BH shall initially represent the Department of Health and Social Services for any grievance referred for technical assistance involving BH grantee treatment organizations. BH shall take the following steps to assist with these grievances:

1. **Exercise the primary responsibility of DHSS BH to orient consumers, or other individuals calling on behalf of consumers, to the grievance process and procedures available thru the involved grantee organization**
2. For questions regarding grievances which have been heard according to the involved grantee organization's grievance procedures, BH may:
   a. Review any written response from the involved grantee organization regarding their findings and resolution to the grievance.
   b. Investigate whether the involved grantee organization complied with the following, as indicated, in regards to processing the consumer grievance:
      i. Alaska Statute / Behavioral Health Regulations
      ii. Medicaid Regulations
      iii. Special Conditions of Grant Award
   c. Determine if resolution of the grievance is reasonable based on resources available to the grantee organization
   d. Share BH findings with both the consumer and the involved grantee organization
3. In the course of providing technical assistance for any consumer grievance BH may:
   a. Communicate with any involved party to seek clarification of information, or to obtain access to supporting documents
   b. Consult with other Department or division resource
   c. Refer case to other Department or division resource for continued technical assistance or action
   d. Take any other action deemed prudent or necessary to assist consumer and / or grantee organization

Policy Clarifications:

1) The Department of Health and Social Services is authorized to review, obtain, and copy confidential and other records and information about clients, including services requested or furnished, to evaluate a grantee organization's compliance with statutes (AS 47.30.520 – 47.30.620)[5]

2) For substance abuse treatment facilities and programs, DHSS has adopted by reference the standards contained in the Joint Commission on Accreditation of Healthcare Organizations (JCAHO) *Standards for*

[5] AS 47.30.590 (b) Patient rights and the confidential nature of records and information

Behavioral Health Care, 2004 – 2005.[6] The Department also provides for exemption from the provisions regarding substance abuse facilities or programs established by the State of Alaska Administrative Code for those private and public treatment facilities currently certified by JCAHO or the Commission on Accreditation of Rehabilitation Facilities (CARF).[7] Therefore:

a. All substance abuse grantee organizations are also obligated to comply with JCAHO standards regarding client Ethics, Rights, and Responsibilities (RI.2.120 – RI.2.130)[8] OR
b. If certified by CARF are obligated to also comply with the CARF standards for rights of persons served (Section 1. Business Practices: Criterion D. Rights of Persons Served)[9]

Senator Bettye Davis, **February 14, 2009**
Chair---HESS Committee,

We would like to comment on the contents of the letter you received from J. Kate Burkhart, Executive Director of the Alaska Mental Health Board (Feb 12, '09—5 page letter) concerning SB 66.

J. Kate Burkhart does a good job of stating the position of providers and DHSS.

"Alaska needs to improve the psychiatric patient grievance procedure statute / regulations." Not one of J. Kate Burkhart's proposals will do that. In fact, her proposals will actually make it possible to remove some of the patient rights that an API committee worked one year to gain.

From a psychiatric patient's view:

From a psychiatric patient's point of view: it takes less than 5 minutes of reading the current 3 grievance procedure guidelines to know they are inadequate and unfair to psychiatric patients and it takes less than 5 minutes of talking to mental health consumers at places like the Alaska Mental Health Computer Web (which we did) to know consumers are not satisfied with the current grievance process.

SB 66 is a good bill, it is necessary and we are asking that it receives a hearing. When signed into law, SB 66 will give needed protection to Alaska psychiatric patients that is already enjoyed by patients in some other states.

We want to clarify some of the information that J. Kate Burkhart provided in her letter.

Reasons not to combine the grievance procedures:

Psychiatric patients, individuals with a developmental disability, individuals with drug and alcohol addictions, individuals with traumatic brain injury cannot all be included in the same grievance procedure. (with the exception of dual diagnosis)

Psychiatric patients are unique in that they can be civilly committed (locked up), committed for forced evaluation, forced medicated, etc. Psychiatric patients need their own grievance procedure because of the uniqueness of their position.—Those with other disabilities are generally not locked up unless they exhibit symptoms of a mental illness or commit a crime.

The state of Maine came to the same conclusion that they could not combine individuals with a mental illness and individuals with developmental disabilities in the same grievance procedure. (with the exception of dual diagnosis)

Good foundation for SB 66:

Many of the provisions in SB 66 came out of a Bi-Partisan Alaska Psychiatric Institute grievance procedure committee and from other states. The committee recommendations (2007) were endorsed by the Alaska Mental Health Board, Disability Law Center and the API Board.

In many instances, J. Kate Burkhart is speaking against rules that were approved by the AMHB, Disability Law Center and the API Board and also rules in general practice at API today meant to protect psychiatric patients.

As an example:

As an example, in the 2007 committee recommendations, the API committee stated that patients should have a right to file a grievance on any issue and at the time of their choosing.—Just because an issue rises to a level that it should be reported to the police, does not mean that patients should not still retain the right to file a grievance in addition to the reporting to the police—that was a committee decision.—there were too many cases in the past at API where serious issues were never allowed to become a grievance and were also not reported to the police. That is one of the reasons why all psychiatric patients need an absolute right to file a grievance at the time of their choosing.

There are numerous acceptable ways to deal with a frivolous grievance. But the state cannot allow psychiatric facilities / units or DHSS to choose which patient can file a grievance and when.

Keeping statistics as a way to improve care:

In an '08 Ombudsman's report it came to light that DHSS / Behavioral Health has not investigated a psychiatric patient's complaint in 5 years—although they may have accepted a few complaints, they did not investigate them. And they do not routinely give out their phone number to patients...

Also, an '08 Ombudsman's report was critical of DHSS / Behavioral Health for not keeping statistics on the number and type of complaints filed by psychiatric patients in psychiatric facilities and units...SB 66 will require that statistics be kept.

Too many grievance procedure guidelines, too many loopholes:

There are 3 separate grievance procedure guidelines for psychiatric patients in Alaska and no single grievance procedure guideline covers all psychiatric facilities or units. In Maine and Georgia, before they changed their grievance procedures, psychiatric patients were abused and/or died and they were using a JCAHO grievance procedure just like in some Alaskan facilities / units. One of the necessary goals of SB 66 is to consolidate and have one improved grievance procedure statute for all psychiatric patients.

Bring SB 66 into a hearing:

We are asking that SB 66 be given a hearing and passed. (Any minor shortcomings in the bill can be fixed in committee) In the end, it will be the legislature that will have to make the final decision.

DHSS and practically every hospital opposed SB 8 last year—even the Unions opposed it. They were predicting patient treatment as we knew it would end.

When we called the hospitals recently, they stated they were complying with SB 8—no problems.

The same thing will happen with SB 66—Institutions / DHSS will predict the end of the world—but when it passes they will comply and Alaska will be better for it.

Thank you,

Juneau, AK 99811-3000

RE: Ombudsman Complaint J2008-0233

Dear Ms. Leibowitz:

This is to confirm the teleconference held on January 15, 2009 regarding the above referenced complaint and your suggestions to the department as set forth in your letter dated November 4, 2008. Participants in the discussion from the Department of Health and Social Services included Patrick Hefley, Deputy Commissioner; Division of Behavioral Health staff Melissa Stone, Director; Stacy Toner, Deputy Director; and Brenda Knapp, Treatment and Recovery Program Administrator. You suggested that the department develop and maintain a logging system for complaints received by DBH and that we clarify which records the Licensing and Certification Section (Division of Public Health) may be appropriately released.

Division of Behavioral Health staff advised you that we thoroughly considered the desirability and practicality of establishing a logging system and reached the conclusion that we do not receive enough complaints to justify the development and maintenance of a tracking system. Nearly all complaints and grievances are handled successfully at the service provider level, as they should be. Since the providers are independent corporations, municipal entities or tribal organizations, they hold responsibility for resolving complaints and grievances that come to them. As a condition of a grant award, each grantee is required to have formal grievance policies and procedures in place.

Your second suggestion was that we determine our authority to release records maintained by the Facilities Licensing and Certification Section, specifically complaint or grievance information. This will not be an issue for us since we do not plan to establish a complaint tracking system.

We appreciate your thorough investigation of the above complaint, and the observations and suggestions you subsequently shared with us. It is always helpful to get feedback on how the department's operations are perceived so that we can make necessary changes and be more responsive to the needs and concerns of consumers, their families and the general public.

Sincerely,

Patrick B. Hefley
Deputy Commissioner

From: NAMI Anchorage [namianchorage@nami.org]
Sent: Monday, February 16, 2009 4:37 PM
To: Sen. Bettye Davis
Subject: SB 66

RECEIVED
FEB 17 2009

Dear Senator Davis:

NAMI Anchorage is the local affiliate of the National Alliance on Mental Illness. We provide support, education and advocacy to people who experience severe mental illness.

NAMI Anchorage supports SB 66 in its general principles. More particularly, we support uniformity of procedures for all psychiatric hospitals. Uniformity, properly crafted, can provide a guard against arbitrary action or enforcement.

Additionally, we support the adoption of a grievance system specifically for patients with mental illness. The position has been taken by others that making such a distinction somehow diminishes people with mental illness. The distinction is necessary not because these patients have mental illness, but because patients with mental illness can be locked up and forcibly medicated. People with developmental disabilities, substance abuse disorder or traumatic brain injury do not face such losses of liberty unless they have a dual diagnosis or they have committed a crime. It is the possible consequence of this loss of liberty that requires a grievance procedure tailored for people in psychiatric institutions, not the fact that the grievants have mental illness.

Finally, there is a long, sad history of grievances by psychiatric patients not being taken seriously, or being considered a symptom of mental illness. Even if institutions and caregivers today are more progressive in general, there still exists the possibility of this disregard of grievances in particular instances. So again, a strong grievance procedure tailored for those in psychiatric institutions is called for.

NAMI Anchorage will leave it to others more familiar with the proposed legislation to offer suggestions on tightening up some language that appears on the surface vague or too broad. We support a uniform grievance procedure for psychiatric patients in the outline set out in SB 66.

Thank you for your continued advocacy for persons with mental illness.

Re: SB 66

Dear Senator Davis:

This is to reaffirm[1] the Law Project for Psychiatric Rights' (PsychRights) support for the current iteration of your proposed legislation to beef up psychiatric patients' rights surrounding grievances, SB 66. Our experience is it is common for patients' grievances to be summarily disregarded by psychiatric facilities as symptoms of mental illness.[2] In this way, psychiatric facilities evade accountability. It is well known that even serious events such as rape, especially by staff, when reported by patients, are summarily ignored as "delusions," when in fact, these types of events occur with disturbingly regularity. Psychiatric facilities should be required to treat all grievances with respect as required by SB66. I urge passage of SB 66.

Yours truly,

James B. (Jim) Gottstein, Esq.
President/CBO

Testimony to the Senate Hess Committee-- **February 2, 2009**

Madam Chair, Senate Committee members,

I support the passage of Sen. Bill 66, which will improve the present psychiatric patient grievance procedure statute AS47.30.847.

As a state, we must protect and guarantee a psychiatric patient's right to file a grievance at the time of their choosing. And above all, a grievance must be fair. The current grievance procedure statute is not fair.

In the state of Maine, the citizens had to sue the state to force the improvement of the psychiatric patient grievance procedure.

In the state of Georgia, within the last couple of years, their legislature stepped in to redo the psychiatric patient grievance procedure statute, after it was shown that Georgia's equivalent of DHSS was not in any legitimate way investigating psychiatric patient complaints. And their DHSS was not keeping statistics of complaints filed by psychiatric patients in facilities. They didn't have a clue.

In the matter of health care, there are a lot of similarities between Alaska, Maine and Georgia. The difference is—they have fixed their grievance procedure statutes and we need to fix ours.

There are now 3 separate grievance procedure guidelines for psychiatric patients in Alaska.

One, grievance procedure statute AS47.30.847 presently only applies to some facilities. It doesn't require that patients receive a written answer to their grievance; there is no due process; there is no appeal process; there is no urgent grievance procedure. Even in-mates in Alaska prisons have an urgent grievance procedure. The present grievance procedure statute has loopholes which allow psychiatric facilities to deny patients a right to file a grievance in a timely manner.

Two, thousands of psychiatric patients must use a Joint Commission for Accreditation of Hospital Organizations (JCAHO) grievance procedure. And that includes some patients civilly committed and those in hospitals for a forced evaluation. --There is no appeal process mandated by JCAHO. There is no urgent grievance procedure. There is no impartial body. Hospitals have 14 days to offer a resolution—the average stay is under 14 days for psychiatric patients.

Three, Behavioral Health's psychiatric patients' grievance procedure requirements for Grantees (4 pages) covers about 50 locations.

Under Behavioral Health guidelines, psychiatric facilities have 5 days to contact a patient after the patient files a grievance. At that point the facility can ask for an open-ended extension. After 35 days, a facility is supposed to forward an unresolved grievance to Behavioral Health for technical assistance. Or the facility can offer a resolution which may deny the patient's request—then the facility does not have to forward the grievance, even if the patient is not satisfied with the resolution.

As of now, the Behavioral Health facilities do not have to offer a written resolution and basically, the facilities have 35 days in which to offer a resolution to a patient.

Sen. Bill 66 will consolidate and improve the present psychiatric grievance procedure guidelines into one statute.

I am asking that you pass Sen. Bill 66 with your support out of the Hess committee.

Thank you,

Dorrance Collins

Dorrance Collins

Testimony to Senate Hess Committee **February 2, 09**

Madam Chair, Senate Committee members,

I support the passage of Senate Bill 66.

There is a long applaudable history of improving psychiatric patient rights and care. But we must recognize that we should continue.

In the early 80's the legislature outlawed using corporal punishment on psychiatric patients. It was also written into the rules that psychiatric facilities can no longer experiment on patients. In the 70's and 80's, AS47.30.840 finally granted 11 basic rights to psychiatric patients. About the same time, new rules were put into place that required the psychiatric facilities to include the patient when developing a treatment plan. Prior to that passage, states and facilities would just tell the patient what the treatment was going to be.

In 2008, Sen. Bill 8 was signed into law. It provided that psychiatric patients with trauma in their background would be included in the conversation of which gender staff would provide them their intimate care.

There has never been a shortage of individuals who will testify against patient rights improvements: Even policies that increase quality of care and increase the opportunity for recovery and reduce unnecessary trauma.

In closing, we must revise the grievance procedure statute AS47.30.847 and make it accessible to all patients. We must also see to it that the due process is fair.

Passing a good grievance procedure statute will not only protect psychiatric patients, without costing any more money, it will also require psychiatric facilities to improve.

I am asking for support in the passing of Sen. Bill 66.

Re: Request for Amendment to AS 47.30.847
Psychiatric Grievance Procedures

Honorable Senators and Representatives:

NAMI Anchorage provides support, education and advocacy to persons experiencing a mental illness and their families. This letter is about the grievance rights of patients in mental health facilities. Those rights are set out in broad terms in AS 4.30.847. See copy attached.

We have received reports that patients have been unduly burdened by hospital procedures in their efforts to bring grievances. For example, the facility may repeatedly require the patient to confer with members of the very same treatment team that have aggrieved the patient as a pre-condition to filing a formal grievance. It can be traumatizing to a patient to be required to seek redress from the same caregivers with whom the patient has a dispute.

It has also been reported to NAMI that patients are not always being provided a written statement of the grievance procedure upon admission to the facility. The ability of the patient or patient's representative to advocate for themselves requires knowledge of the "what" and "how" of the grievance procedure *prior* to treatment. NAMI believes that self-advocacy is one of the building blocks for real and lasting recovery.

These examples demonstrate that the due process rights of patients can be easily limited or circumvented because the language of AS 47.30.847 is too broad. The statute does not say precisely what the mental health facilities must do, giving them considerable latitude in interpreting the law and developing the grievance procedures as they wish. The statute needs to be amended to state the following specific requirements:

- the written grievance procedure will be provided to the patient at the time of admission.
- the patient's written complaint will be accepted and delivered to the "impartial body" required in subsection (a) without requirement of further consultation with or approval by the treatment team or other precondition.
- the patient will be allowed the assistance of a self-designated representative and will not be limited to a representative as defined by the facility.
- the complaint will be addressed and resolved within specific time frames to be set out in the amended statute.

Additional specific provisions may be required as investigation continues. NAMI Anchorage is prepared to assist in this important revision process as requested. In the meantime, we ask the legislators and the administrators of mental health facilities to bear in mind the trauma that hospitalization by itself causes a patient, on top of the underlying problem resulting in the hospitalization. In such a situation, the balancing of administrative inconvenience with the health and welfare of the patient should weigh in favor of the patient.

Thank you for this opportunity to comment.

Re: Psychiatric Rights Legislation

This is to support the proposals by Faith Myers and Dorrance Collins to amend Alaska law to enhance certain rights given to people diagnosed with serious mental illness and held at inpatient facilities.

For example, the wording "patients must be given reasonable opportunity" gives some facilities license to deny patients the rights the statute is intended to ensure. Some facilities turn these rights on their head and make them "privileges." To address this, it is recommended that something like the following be added to AS 47.30.840:

> At no time shall the rights set forth in this chapter be treated as privileges that the recipient must earn by meeting certain standards of behavior.

Of course these rights are meaningless if there is no effective enforcement process. It is therefore suggested that AS 47.30.847 be amended to specify a time limit in which grievances/complaints must be answered and that patients 18 and older have a right to appoint a representative of their choice to help them file and pursue grievances/complaints.[1] Such representatives should have the right to "reasonable access to all living and program areas and to staff involved in the treatment of the patient in order to assist the patient in the protection of his or her rights."

In addition the state Ombudsman or some other state oversight authority should have the right to go into any facility holding people because being diagnosed with mental illness. The Ombudsman's Office is presently excluded from all but state hospitals and would have to he granted a different authority to enter other facilities.

I have known Faith Myers and Dorrance Collins for a number of years and they are absolutely spot on with their suggestions. Alaska citizens deserve the type of consideration Faith and Dorrance are asking for and I urge you to act favorably upon their suggestions.

Yours truly,

James B. (Jim) Gottstein, Esq.

[1] For patients under 18, their guardian would retain that right.

Dear Faith and Dorrance:

You have requested a letter of support from the Disability Law Center of Alaska for your effort to revise the grievance rights of psychiatric patients in Alaska. In essence, your proposed revisions seek to ensure that psychiatric patients are afforded basic due process rights when filing a grievance.

The Disability Law Center of Alaska supports your efforts to ensure that psychiatric patients in Alaska are afforded basic due process rights. Your recommendations, including permitting psychiatric patients the right to obtain the assistance of a self-designated representative and establishing specific time frames for certain actions, are very appropriate means of assuring that rights can both be exercised and are protected.

Please let me know if there is anything we can do to assist you in this effort.

Sincerely,

DISABILITY LAW CENTER OF ALASKA

Re: Recommended Changes to API Grievance Policies and Unit Manuals

Dear Ms. Schmook:

On behalf of our agency, I am writing in support of the recommended changes to API's Grievance/Complaint policies, procedures, and practices, as well as recommended changes to API's unit manuals, that will be offered to you and the other AMHB members during this week's meeting.

We have actively participated in the development of these recommendations, as part of the API Governing Body's sub-committee, formed to address these issues. We firmly believe these changes will benefit those who receive care and treatment at API, and assist the hospital in its efforts to develop and maintain a more person-centered, recovery model of treatment. So too, these changes support and lend themselves to one of our agency's fundamental beliefs and mission – to protect and promote individual rights, dignity and ability to self-advocate.

We hope you and the other board members will add your support and any additional recommendations you may have, as these recommendations make their way to API's Governing Body for final review and consideration.

Sincerely,

THE DISABILITY LAW CENTER OF ALASKA

The Trust

The Alaska Mental Health Trust Authority

To Whom It May Concern:

Subject: Support of legislation and regulations to ensure prompt and appropriate handling of grievances that are held in inpatient facilities in Alaska.

At a full Board of Trustees meeting on September 7, 2007 the Board of Trustees of the Alaska Mental Health Trust Authority approved the following Statement of Support as follows:

The Board of Trustees of the Alaska Mental Health Trust Authority are in support of the Department of Health and Social Services and the Alaska State Legislature working with Alaska mental health advocacy groups and individuals to ensure the passage of legislation and the implementation of regulations that improves the prompt and appropriate handling of grievances/complaints from people diagnosed with serious mental illness that are held in inpatient facilities in Alaska. "Prompt and appropriate handling" at minimum, is defined by the attributes listed below.

1. *Written grievance procedures will be provided to the patient at time of admission.*
2. *A patient's written complaint will be provided to an "impartial body" without further preconditions.*
3. *The patient will be allowed an array of assistance and not be limited to utilizing representatives solely defined by the facility.*
4. *Complaints shall be addressed and resolved within specific time frames to be set out in the amended statute.*

Sincerely,

Jeff Jessee

News Release

The state of Georgia recently established an Ombudsman's Office that will exclusively handle complaints by psychiatric patients. (The psychiatric patient Ombudsman's Office is modeled after the long-term-care Ombudsman's Office.)

The new Ombudsman's Office was created after a series of articles by the Atlanta Journal Constitution newspaper in which it was shown that the grievance procedure system for psychiatric patients in Georgia was ineffective and unfair. The series of articles showed that oversight by the Dept. of Human Resources (equivalent to our DHSS) was not protecting patients. DHR oversight was like the fox protecting the henhouse, according to a state official.

The new Georgia psychiatric patient Ombudsman's Office reports directly to the Governor's office.

Alaska's psychiatric patient grievance procedure system, both Behavioral Health grantee grievance procedure requirements and the state statute, is unfair to psychiatric patients.

Alaska's DHSS doesn't keep statistics of the number and type of grievances filed by psychiatric patients / clients. DHSS does not maintain an office to investigate psychiatric patient complaints, even though they are required to do so by statute. DHSS does not give their phone number to all psychiatric patients and inform patients that DHSS is required to investigate complaints. DHSS cannot delegate its responsibility to investigate psychiatric patient complaints to a non-state facility or agency.

DHSS ---- Governor Sarah Palin

Psychiatric patients are one of the most vulnerable groups in our society. Many persons that are in acute care facilities for forced evaluations have dementia.

There must be a state office that can respond to a psychiatric patient's complaint without needing 2 to 4 weeks and writing to the Medicaid / Medicare Office in Seattle.

State of Maine, State of Georgia, etc., have established offices that can immediately respond to a psychiatric patient's complaint.

Anchorage, AK 99508

Dear Mr. Collins:

This letter is in response to the complaint our office received from you on 11/29/06 regarding your dissatisfaction with the current grievance procedure at Alaska Psychiatric Institute. In addition, you stated that several hospitals in the state of Alaska refused to release their grievance policy to you.

In order for our office to perform an on-site investigation at a facility such as Alaska Psychiatric Institute we must first get approval from the Centers for Medicare and Medicaid Services (CMS) Regional Office in Seattle. Therefore, the documentation you provided to our office in regard to your concerns was forwarded to that office. Upon review by CMS, it was determined that there were no regulatory compliance issues identified.

In addition, you indicated in your letter that you feel the grievance procedure statute AS 47.30.847 should be changed. Unfortunately, our office is not able to assist you with this change. You may pursue that change through the State of Alaska Legislature. Alaska Psychiatric Institute administrative staff should be able to provide you with the name and contact information for their Legislative Representative or you may contact the State Legislative Department directly at (907) 465-4648.

Thank you for notifying us of your concerns. If you have any further questions you may contact me or Kathy Thomas at 334-2483.

Sincerely,
CERTIFICATION AND LICENSING

Bernadean Anselm
Program Manager

AS47.30.847—Psychiatric Patient Grievance Procedure was expressly written to protect psychiatric patients.

The Department of Health and Social Services (DHSS) has stated that the statute 47.30.847 does not apply to the new hybrid medical hospitals that contain psychiatric units.

Providence Hospital treats approximately 4000 psychiatric patients a year, including forced psychiatric evaluations. And there are numerous other hospitals around the state that treat patients/ do forced psychiatric evaluations which can last 3 to 7 days because of holidays, weekends, etc. during which the patient is in a locked facility. The present statute AS47.30.847 does not apply to many of those hospitals.

These hospitals use Joint Commission for Accreditation of Hospital Organizations (JCAHO) grievance procedure / oversight. Alaska may be the only or one of the few states that civilly commits, does forced evaluations on citizens and the state of Alaska does not write special rules to protect those patients.

Faith Myers

Reference:

"Recovery or growth begins with being able to effectively complain."

(Whether it be) "psychiatric patients—children—husband or wife—etc"

A 2008 survey of Alaska Psychiatric Institute's patients shows 21% of the patients were afraid to complain or file a grievance. Nineteen percent didn't answer the question with the possibility they were afraid to answer.

The patient's voice must be encouraged and allowed to come forward to facilitate true recovery.

Testimony to the Senate HESS Committee, April 1, '09

Madam Chair, Senate HESS Committee members,

My name is Dorrance Collins. I support the passage of SB 66.

In the state of Maine, citizens sued their equivalent of the Department of Health and Social Services (DHSS) to force improvements in the state's psychiatric patient grievance procedures.

In the state of Georgia, the legislature in '08 stepped in and revised the grievance procedure statute after it was shown that Georgia's equivalent of DHSS was not properly investigating psychiatric patient's complaints, not writing fair rules for the grievance procedures and also not keeping statistics of the number of complaints filed by psychiatric patients.

I have in front of me a 3 page report from Alaska Psychiatric Institute (API) which is managed by DHSS. It is dated 2006. It shows 256 complaints were filed by patients in a 12 month period. Not one was considered a grievance. Not one patient had their grievance heard in front of an impartial body. Not one person received a written response, which is a Federal requirement.

The loopholes and inadequacies in the current grievance procedure statute AS47.30.847 allowed API, which is managed by DHSS, to treat all patient complaints in an informal manner; allowing API to by-pass regulations.

Just some of the patient complaints—
--54 were concerning respect and dignity,
--3 sexual abuse allegations,
--11 complaints against doctors
--17 complaints about medication
--18 complaints concerning safety,
--4 complaints concerning medical treatment, etc.

Now, under pressure, API has made some improvements. But that still leaves approximately 50 other psychiatric patient treatment locations and as of now there is nothing to stop API from going back to their old habits.

Some state officials are going to say that hospitals with psychiatric units are governed by Joint Commission for the Accreditation of Hospital Organizations (JCAHO) rules and thus there is no need to expand the psychiatric patient grievance procedure statute to cover places like Providence; which handles approximately 4000 psychiatric patients a year; some of those patients are there for forced evaluation. And then there are Fairbanks Memorial and Bartlett Juneau Hospitals, which can do civil commitments. And also there are 50 or so grantee facilities where some psychiatric patients are court ordered or court required to receive treatment.

I have in front of me a letter from Joint Commission for the Accreditation of Hospital Organizations (JCAHO) Quality Control. I'll read one sentence.

"Please be aware our current Public Information Policy precludes us from providing you (the patient) with the specific results of any complaint investigation."

A patient can file a complaint with JCAHO but cannot find out the results and that is not good enough—patients need to know the results of their grievance and appeals and that can only be done with a state appeal process.

I have testified in front of JCAHO. I've also spoken with Medicaid and Medicare Regional office in the state of Washington. Those organizations set some minimum standards for grievance procedures but they fully expect every state to develop their own comprehensive grievance procedure statute and Alaska has not done it to this day.

I also have in front of me—two five page reports from the state Ombudsman's Office. They are critical of DHSS for not keeping statistics of the number of complaints filed by psychiatric patients. In a return letter, DHSS stated to the Ombudsman's Office that they do not want to keep statistics. SB 66 will require DHSS to do so.

In the same Ombudsman's reports, it also came to light that DHSS has not investigated a psychiatric patient complaint in a number of years even though they are required to do so by AS47.30.660. DHSS cannot or should not delegate its responsibility of investigating a patient's complaint to non-state entities, but that is exactly what DHSS is doing at this time.

In closing, there is a nation-wide trend of revising and up-dating psychiatric patient's grievance procedure statutes, making them uniform to cover all psychiatric patients.

I am asking that you pass SB 66. Thank you,

Dorrance Collins
3240 Penland Pkwy, Sp. 35

Cc: Open Letter

Testimony to Senate HESS Committee **April 1, '09**

Madam Chair, Senate Committee members,

My name is Faith Myers. I support the passage of SB 66 as written and amended.

The current psychiatric patient grievance procedure statute, AS47.30.847, is inadequately framed and does not protect psychiatric patients and their rights. It needs to be revised.

As a former psychiatric patient, I have been in acute-care psychiatric facilities, evaluation units and I have also received treatment as an out-patient. As an advocate, I've talked to former psychiatric patients and when producing our newsletter, which we mailed to the legislature this year, we conducted a survey of former patients. That survey is in the newsletter. The survey shows there is dissatisfaction with current psychiatric patient grievance procedures.

Ten different categories of clients receiving services from the Department of Health and Social Services (DHSS) , who are not satisfied, can file an appeal with the Department or an Administrative law judge.

Individuals in 10 prisons or jails can file an appeal with the Department of Corrections (DOC).

As of now, all psychiatric patients do not have a clear path to filing an appeal with the state or DHSS.

Alaska may be the only state not letting psychiatric patients file an appeal to a higher level, past the facility they are receiving services from. Alaska must give psychiatric patients the right to file an appeal either with DHSS or an Administrative law judge. Either one would be acceptable.

The loopholes in the current statute AS47.30.847 allow psychiatric facilities to deny patients their right to file a grievance at the time of their choosing.

Here is what is important to a person like myself, who has a mental illness, who is in a psychiatric institution or in a psychiatric E.R. or as an outpatient consumer.

--To be able to receive a written copy of the grievance procedure and associated rules.

--To get a written answer or resolution to a complaint or formal grievance.

--To be able to file a grievance when I choose, instead of having to go through the facility's informal complaint resolution process first.

(Con.)

–To receive an answer to my grievance or complaint in a timely manner, before the complaint becomes moot because I am discharged.

–To be able to appeal to a higher level of authority, hopefully impartial, when I am dissatisfied with the facility's resolution of a grievance even to appeal to DHSS.

--To have a method of urgent grievance reporting that will be looked at by more than one person within 24 hours when I have an emergency grievance.

These are rights that I or any other psychiatric patient or mental health consumer need and would benefit from and these are all rights given by SB 66 to protect the psychiatric patient.

In closing, I am asking you to support the passing of SB66.
Thank you,

Faith Myers

DIVISION OF PUBLIC ASSISTANCE

ALL ABOUT FAIR HEARINGS

WHAT IS A FAIR HEARING?

A fair hearing provides the opportunity for you to have your case reviewed by a higher authority whenever you disagree with action taken that reduces, suspends, denies or ends your benefits. A fair hearing can be requested for any Division program.

WHO CAN REQUEST A FAIR HEARING?

You, any household member, your authorized representative, or a responsible person acting on your behalf may request a fair hearing. In many cases the Division must give you at least 10 days advance written notice for an action to reduce, to suspend, to deny, or to end your benefits. In many cases the agency does not give 10 days advance written notice because only "adequate" notice is required, not "timely" notice. This notice must include the reasons for the proposed actions and explain your right to a fair hearing and the situations under which benefits may be continued when a fair hearing is requested.

HOW MUCH TIME DO YOU HAVE TO MAKE A REQUEST FOR A FAIR HEARING?

You may request a Food Stamp fair hearing up to 90 day from the effective date of the proposed action. For all other programs, you may request a fair hearing up to 30 days from the date of the notice of action.

HOW DO YOU REQUEST A FAIR HEARING?

You, any household member, your authorized representative, or a responsible person acting on your behalf may make a request for a fair hearing in person, on the telephone, or in writing. Written requests may be hand-delivered or mailed to any Division of Public Assistance office.

WHEN CAN THE DIVISION REFUSE TO HOLD A FAIR HEARING OR DISMISS A SCHEDULED FAIR HEARING?

The division can refuse to hold a fair hearing or to dismiss a scheduled fair hearing when:

1) The request is received after the time allowed for requesting a fair hearing has expired; or

2) The request is withdrawn in writing by you or your representative; or

3) You or your representative fail, without a good reason, to appear at the fair hearing; or

4) The sole issue of the request is one of federal or state law which requires and automatic benefit reduction for classes of recipients; or

5) The issue you are presenting is not one over which the agency has jurisdiction.

WHAT HAPPENS AFTER THE DIVISION RECEIVES YOUR REQUEST FOR A FAIR HEARING?

After the request of a fair hearing is received, the Division office will send you a written notice of the place and time of the fair hearing and the name and phone number to notify if you or your representative cannot attend the fair hearing. This notice will be sent to you at least 10 days before the fair hearing so that you have time to prepare.

CAN YOU POSTPONE THE SCHEDULED FAIR HEARING?

You have the right to request and receive one postponement of the scheduled fair hearing, not to exceed 30 days.

WHAT DOES THE FAIR HEARING OFFICER DO?

The Fair Hearing officer is responsible for conducting the fair hearing and notifying you of the decision in writing. The written letter of the decision must include the decision, the reason for that decision, and the laws or regulations supporting the decision. In addition, the letter includes a statement about your rights and how to appeal the decision.

HOW LONG MUST YOU WAIT FOR A DECISION ON YOUR FAIR HEARING?

The Division must hold the fair hearing, notify you of the decision, allow you 15 days to appeal the decision to the Division Director and notify you of the appeal decision:

1) Within 60 days from the date the Division receives a Food Stamp Program fair hearing request; or

2) Within 90 days from the date the Division receives a fair hearing request for any other public assistance programs.

If the hearing is decided in your favor, the Division has another 10 days to make a required change in your benefits.

The deadlines for the hearing decision will be extended for the same number of days as the fair hearing was postponed, or otherwise delayed at your request.

WHAT ARE YOUR RIGHTS BEFORE AND DURING THE FAIR HEARING?

You have the right to all the following before and during the fair hearing:

1) Review your case file.

2) Obtain a copy of all documents and records that will be used at the fair hearing. This includes appropriate program manual sections relied on by Division employees to take the action with which you disagree. This applies only to case materials which are related to your timely request for a fair hearing.

3) Present the case yourself or be represented by an attorney, paralegal, friend, relative or any other person who may be helpful in presenting your case.

4) Bring witnesses and submit evidence to establish pertinent facts and circumstances.

5) Establish facts and arguments having to do with the issue without undue interference.

6) Question or refute any testimony or evidence, including the opportunity to confront and cross-examine witnesses.

WHAT IS A PRE-HEARING CONFERENCE?

The pre-hearing conference is a voluntary meeting between you or your representative and a representative of the Division to discuss your concerns about the action taken on your case. Sometimes this discussion will help you understand the reasons for the action or reveal any agency mistakes and may make the fair hearing unnecessary. The pre-hearing conference cannot replace or cancel the scheduled fair hearing. However, if your concerns are resolved at the conference, you may decide to withdraw the request for a fair hearing.

IS THERE ANY PLACE WHICH PROVIDES FREE REPRESENTATION AT THE FAIR HEARING?

You may be eligible for free legal representation from Alaska Legal Services Corporation which has offices throughout the state. Such representation is not required, but may be to your advantage. Your caseworker can give you the phone number and address of you local Alaska Legal Services office, or you may refer to your telephone book for the phone number and address.

HOW FORMAL IS THE FAIR HEARING?

The fair hearing is NOT a trial. It will be conducted in an informal manner and will be attended by the Fair Hearing Officer, a representative for the Division, and by you or a member of your household and/or your representative. You do not have to be familiar with the rules of order. Every effort will be made to arrive at the facts in a way which makes you feel comfortable. The fair hearing will be scheduled in a place which is easily accessible to you and your representative. The fair hearing may be conducted by telephone.

April 1, 2009

Dear Senate Health and Social Service Committee Member:

I am writing you today regarding Senate Bill 66 – the mental health patient grievance procedure bill that is scheduled to be heard in the Health and Social Services committee this afternoon.

Broadly speaking, we support the concept of a better defined and more uniform grievance process. I think it safe to say that Alaska lacks any procedurally coherent process at this time. In checking with other states that have a more defined process, the genesis for their laws arose after some tragic event. I do not believe that we should wait for a tragic event to improve our grievance process. That said, SB 66 as currently written is not the vehicle for achieving the goal of a uniform grievance process.

There are several areas of concern regarding SB 66. These concerns can be organized into two general categories: concerns regarding definitions and concerns regarding the grievance procedure itself. In addition, there are several areas in which SB 66, as written, is overly confusing and unclear.

Definitions:
First, in section (b)(8), there is concern with the definition of an urgent grievance which as written allows for an urgent level of review to be provided when a grievance alleges sexual abuse, physical abuse or a denial of lifesaving treatment or procedures, lifesaving medications or basic care or human rights, as defined by the commissioner. This urgent level of review is to be provided within 24 hours after receipt.

Sexual and physical abuse are assaults and should be addressed through appropriate authorities (for example law enforcement or Adult Protective Services) and not the grievance process. If a sexual assault occurred, the grievance reporting the assault could go unprocessed for up to 24 hours. This amount of time could result in the loss of physical evidence, witnesses and other information that is critical for law enforcement or other appropriate agencies. That is not to say that an individual who experiences an assault should not be entitled to file a grievance, however, an urgent grievance is not the most appropriate avenue for relief. In addition, SB 66 does not indicate whether once a grievance is received complaining of sexual or physical abuse, does this trigger mandatory reporting under AS 47.24.010? If so, does the agency who receives the report take responsibility for the grievance or is the facility required to continue to process it despite the involvement of a potentially more appropriate agency?

There is also some concern with the very broad categories that are included in the urgent grievance process. For example, "basic care or human rights as defined by the commissioner" is so broad, that it could encompass most if not all of the

MEMBER OF THE NATIONAL DISABILITY RIGHTS NETWORK

grievances that an individual may file. It is questionable whether these categories of issues necessarily require an urgent grievance response, or are more appropriately addressed by another agency or process. Furthermore, leaving "basic care" and "human rights" undefined and at the discretion of the commissioner is questionable. These terms have much for far-reaching impact than just the grievance procedure at issue here.

In addition it would appear that a grievance is too broadly defined, including not only rights violations, but 'suggestions' and 'concerns'. We feel that such a broad use of the grievance process would dilute the efficacy of the system, and be unduly burdensome to the facility if they are required to process, at several levels, all 'suggestions' and 'concerns' they receive from patients. Perhaps a less exhaustive process could be developed to deal with this type of complaint that would not require the expenditure of resources that could be better used to process grievances involving violations of rights.

In section (j)(1) the definition of facility includes a "clinic in which mental health patients receive . . . treatment . . ." This is far broader than the scope of the rest of the bill which applies to "a public or private evaluation facility or unit or designated treatment facility or unit under AS 41.30.660 – 47.30.915." This inconsistency will cause confusion among both patients who will not know what facilities the grievance procedure applies to, and to facilities and providers who will be unsure what grievance procedure is required.

Grievance Procedure:

SB 66 as written does not outline the appeal rights for an urgent grievance. The CEO or commissioner makes a decision within 24 hours, but there is no indication whether that decision is a first level or second level review or what step in the process comes next. If it goes next to the Office of Hearings and Appeals, (OHA), OHA has 30 days to issue a recommended decision which is not very timely for an urgent appeal. If an urgent grievance goes through the three step process, in the final step, the recommended decision goes back to the commissioner who may be the individual that issued the decision in the first place. Or is the commissioner's decision on an urgent grievance the final administrative action for purposes of superior court jurisdiction?

There concern that the Office of Hearings and Appeals (OHA), who would be responsible for making findings and recommendations to the commissioner in the third level of the process has no jurisdiction over private facilities, raising concern that a level three appeal may not be available to residents of all facilities. In addition there is no guidance in the bill as to what records and information must be provided to OHA and the hearing officer when they make their findings.

In section (d), facilities would be required to designate an advocate to assist patients with grievances "or pursuing other redress for complaints concerning care, treatment and rights." This provision could be read to require the advocate required to assist the patient in filing complaints with other appropriate agencies or assist them in obtaining private counsel to pursue a lawsuit. The responsibilities assigned to this advocate seem a bit open-ended and goes beyond the intent of the grievance statute.

There are also several provisions in SB 66 which are confusing and unclear. For example:

(b)(5)(B) – "if the level-two review results in a finding of no adverse effect, no additional review is necessary . . ." Does this mean that a facility is not required to provide further review when they make a determine of no adverse effect? What does a determination of no adverse effect mean? "the written response must include a list of options . . ." What options are there beyond proceeding to a level three review? Are there additional options a patient might pursue beyond the scope of the grievance procedure?

(f) – burden of proof is on facility to prove compliance with "applicable laws and procedures." What if the grievance is about a "suggestion" or "concern" and the facility is in compliance with all applicable laws and procedures – what burden of proof is required if a facility declines to adopt a suggestion when the facility is in full compliance?

(g) – the department shall "intervene in all level three appeals." The department is making the decision on a level three appeal, so how can it intervene? When is the department required to intervene in lower level decisions? What type of intervention is appropriate or required?

We appreciate the Committee's attention to this issue, however, given the number of concerns Disability Law Center has it cannot support SB 66 as written. A member of DLC staff will be made available to testify by telephone at the hearing this afternoon. If you have any questions or concerns regarding DLC's position or the issues raised in this letter please contact me.

Sincerely,

Holly Johannknecht

Re: Sen. Bill 66

Disability Law Center (DLC) gave us a copy of their letter concerning SB 66 (dated April 1, '09). In their letter they state, "I do not believe that we should wait for a tragic event to improve our grievance procedure." (AS47.30.847)

DLC also offered some criticism of SB66.

Basically SB 66 is good/ fair. If there is a technical problem with SB 66—Who should fix it? "We believe it should be the Senate and the House in committee."

DHSS should not be the author of SB 66. They are Providers. Also non-profits receiving grant money to investigate patient complaints or just receiving grant money from DHSS (some) may have a financial interest in killing SB 66 or rewriting it.

Thank you,

Cc: Open Letter

April 1, 2009

The Honorable Bettye Davis
Alaska State Senator
Alaska Senate
Juneau, Alaska

Dear Senator Davis:

First of all, I would like to personally thank you for the work that you do on behalf of people with mental illness and for the work you have done on SB 66 and CS for Senate Bill No. 66.

I waited on the telephone today to testify to the Senate HSS Committee on these two bills. In case I don't have an opportunity to call-in again, I wanted to write this letter to you regarding the testimony I wanted to present today.

I am the Alaska Mental Health Board representative on the API Advisory Council and I have been a patient in API. Additionally, I had a contract with API in 2003 and 2004 to establish the Office of Consumer and Family Affairs. One of the tasks of this office was to take complaints from patients in API. It was during this time that I reviewed grievance policies and procedures from other state hospitals around the country and wrote a draft grievance policy and procedure for review at API. The policy went through many reviews and rewrites, as well as review by the API Advisory Board. The API Advisory Board established a committee to make recommendations to the hospital management on the developing policy. Mental health consumers were included on the committee who were not on the Advisory Board at the time.

The Alaska Mental Health Board is very committed to support protection of patients' rights. However, API serves people who are civilly committed, or under an ex parte, and patients who are involuntarily medicated. This requires that there are extra safeguards in place for the patient population in API. It requires a higher standard than it does in community agency settings and other hospitals where people go voluntarily.

When I worked in Illinois as the Director for the Office of Consumer and Family Affairs for the State of Illinois Department of Health and Social Services, Division of Mental Health, we had 11 state hospitals and 210 community agencies. Each state hospital's grievance procedure was very different from the other hospitals, depending on whether it was rural or in the city of Chicago, or depending on the culture of the hospital and even the ethnicity of the patients being served so grievance policies and procedures needed to be different but with some similarities. The grievance policies and procedures were different too in the community agencies, and this also depended on even the size of the agency—some were small, some were large.

Currently, SB66 and CS for Senate Bill 66 requirements don't allow for flexibility so that providers can have easy to understand and accessible policies and procedures for their specific clients such as, large native populations where the policy needs to be culturally sensitive. I support the need for the Alaska Mental Health Board to work with the bills as they are written to allow for more flexibility rather than everyone meeting the high standards that are set for specific reasons that only apply to API. Not only

does API's Quality Improvement program track data from the grievances, but also data collected about the outcomes of the MHSIP surveys and data gathered on the reduction of the use of restraints and seclusion. Other hospitals and community agencies aren't required to track this data as it only applies to state hospitals so the requirements for everyone other than API need to be less rigid, more flexible and accessible, with easy to follow procedures for their clients.

While I support the intent to protect patients' rights through grievance policies and procedures, I ask that you consider allowing the Alaska Mental Health Board staff time to review and amend the bills that are being considered at this time. Once again, I want to thank you for all the work that you do on behalf of Alaska citizens with mental illness.

Sincerely,

Andrea Schmook
Member of the Alaska Mental Health Board

*Re: **ACLU of Alaska – Support of SB 68***

Dear Senator Davis:

On behalf of the American Civil Liberties Union (ACLU) of Alaska and our thousands of members and activists throughout the state, as well as our Board of Directors and Staff, I am writing to express our **strong support of Senate Bill 68** seeking to enfranchise formerly incarcerated Alaskans.

We are grateful for your work in sponsoring this bill, and your historic commitment to the most fundamental of constitutional rights – the right to vote.

Thanks also to your office for responding to our inquiries regarding the details of this legislation. We appreciate the hard work of your staff in seeking to ensure that SB 68 will reduce unnecessary impediments to enfranchisement. As you know, those who participate in voting are less likely to re-offend, and reducing barriers to voting contributes to the public welfare of all Alaskans.

The ACLU of Alaska is pleased to support SB 68 and hopes to work with you towards quick passage of this legislation.

Please feel free to contact us at (907) 258-0044, or jmittman@akclu.org, if you require any additional information.

Sincerely,

Jeffrey A. Mittman
Executive Director

Sen. Bettye Davis

Sent: Friday, April 10, 2009 10:27 PM
To: Sen. Bettye Davis
Subject: Ensure all Alaskans have the right to vote

Apr 11, 2009

RECEIVED
APR 13 2009

Senator Bettye Davis
120 4th Street
Juneau, AK 99801-1182

Dear Senator Davis,

As your constituent, I ask you to support SB 68, which helps keep all Alaskans safer, by ensuring that ex-offenders have the right to vote and function as responsible citizens and taxpayers.

Restricting voting? rights does not prevent crime or provide compensation to victims. Research shows that people who vote are much less likely to be re-arrested. That is why the American Probation and Parole Association, the National Black Police Association, the American Bar Association and others support full voting rights when former offenders return to their communities.

Senate Bill 68 encourages the behaviors we all wish to see and that society ought to encourage a commitment to community and participation in our democracy.

Thank you for supporting SB 68.

Sincerely,

Mr. Garrett Ennis
5432 E Northern Lights Blvd # 329
Anchorage, AK 99508-4713

AS 15.60.010 (9)

(8) "federal election" means a general, special, or primary election held solely or in part for the purpose of selecting, nominating or electing a candidate for the office of President, Vice-President, presidential elector, United States senator, or United States representative;

(9) "felony involving moral turpitude" includes those crimes that are immoral or wrong in themselves such as murder, manslaughter, assault, sexual assault, sexual abuse of a minor, unlawful exploitation of a minor, robbery, extortion, coercion, kidnapping, incest, arson, burglary, theft, forgery, criminal possession of a forgery device, offering a false instrument for recording, scheme to defraud, falsifying business records, commercial bribe receiving, commercial bribery, bribery, receiving a bribe, perjury, perjury by inconsistent statements, endangering the welfare of a minor, escape, promoting contraband, interference with official proceedings, receiving a bribe by a witness or a juror, jury tampering, misconduct by a juror, tampering with physical evidence, hindering prosecution, terroristic threatening, riot, criminal possession of explosives, unlawful furnishing of explosives, promoting prostitution, criminal mischief, misconduct involving a controlled substance or an imitation controlled substance, permitting an escape, promoting gambling, possession of gambling records, distribution of child pornography, and possession of child pornography;

(10) "general election" means the election held on the Tuesday after the first Monday in November of even-numbered years;

(11) "hand-counted ballot" means a ballot designated to be counted by hand in precincts where precinct tabulators are not available;

(12) "house district" means one of the districts described in art. VI, sec. 1, Constitution of the State of Alaska;

(13) "judicial district" means one of the districts defined in AS 22.10.010;

(14) "lieutenant governor" includes an appointed lieutenant governor, governor, or acting governor if a vacancy has occurred in the office of lieutenant governor or governor;

(15) "limited political party" means a political group which organizes for the purpose of selecting candidates for electors for President and Vice-President;

(16) "local election" means a regular or special election held by a borough, city, school district, or regional educational attendance area;

(17) "master register" means the list of all registered voters in the state which is maintained by the director of elections;

(18) "member of a political party" means a person who supports the political program of a party;

(19) "numerical identifier" means a voter's date of birth, the last four digits of a voter's social security number, a voter's Alaska driver's license number, or a voter's Alaska identification card number or voter identification number;

(20) "oath" includes affirmation;

(21) "official registration list" means the list of all voters qualified to vote at a particular election compiled in accordance with AS 15.07.125;

(22) "optically scanned ballot" means a paper ballot designed to be read by an optical scanning machine;

(23) "party district committee" means the political party committee that performs the executive function for a region representing an area larger than a precinct and smaller than the state;

(24) "political group" means a group of organized voters which represents a political program and which does not qualify as a political party;

(25) "political party" means an organized group of voters that represents a political program and

(A) that nominated a candidate for governor who received at least three percent of the total votes cast for governor at the preceding general election or has registered voters in the state equal in number to at least three percent of the total votes cast for governor at the preceding general election;

Not a problem. You really do not need to be present ---- I am just planning on using the numbers you provided re number of people currently with suspended voting rights due to felony convictions. This bill will tie the return of felon voting rights to release from incarceration rather then the end of probation supervision. Your Div. did not object to the bill last year so I am assuming that would still to be the case? If not please let me know. And if you are busy with your Mom – do not worry about this. Take care and thank you. Lynda

Subject: Information from elections regarding felon voters

Good morning Lynda,
Lauri Wilson provided me with the questions you had regarding felon voters. The division's responses to your questions are below. Please let me know if you have any other questions or need additional information.
Gail Fenumiai

(1) Number of felons we have in our system now that have lost their voting rights: 6,081

(2) What processes we have in place to obtain information from DOC for convictions and discharges:
(3) What kind of information we receive from DOC that allows us to place a voter in I/FC status:
The State Dept. of Corrections has created a weblink to their files of felony charges. Once a week our staff runs the electronic report from this website for a list of felony charges that occurred in the timeframe entered. This report is then compared to VREMS to determine if we should inactivate a voter's record for those that have been charged with a felony regarding moral turpitude. There have been occasions where the charge listed on the report does not provide enough information to determine if it's a felony regarding moral turpitude, so staff will refer to the courts website for further information or contact DOC. A voter's record is then inactivated to FC (Felony conviction) based on the date of the conviction listed on the report.

We also receive an electronic notice once a month from the Federal Courts regarding felonies of moral turpitude. This report is processed in the same manner as the state felony report. If there is a question regarding the charge we request assistance from Sarah Felix.

Once a felon has served all time associated with the charge, his rights are restored. A "Notification of Restoration of Rights" letter from corrections is sent to the Division of Elections.

We then change the voter's record from inactive FC (felony conviction) to inactive FD (felony discharge). The voter can then re-register to vote. If we do not receive a notice from DOC that the voter's rights have been restored and the voter submits a new registration form, we contact the DOC for a release date of the felony and update the voter's record. The voter becomes a new voter and his original registration date is the date of the new registration form.

(4) What we do if we don't receive notification from DOC that a person has been discharged. Do we go out on our own and research lists independently on an annual or bi-annual basis? The division does not conduct an independent review.

? does the DOC
Rep - tells them when
Reg @ end of sent
& now are not -
To do that Rep
people cannot
still not
to vote

Sponsor Statement

SB 68 "An Act relating to the voting rights of felons"

Across the country states handle the right to vote for returning felons differently. Two (2) states, Maine and Vermont do not take away a felons right to vote. Thirteen states (13) allow felons to vote upon release from incarceration. Twenty one (21) including Alaska allow felons to vote after they complete all parole/probation requirements while fourteen (14) states permanently disenfranchise certain felons. If our belief is that felons once released have paid their debt to society then returning their right to vote upon release from incarceration would be a positive step.

SB 68 allows felons upon release from incarceration to register to vote. This bill starts the process which allows felons to start assuming responsibility for their reintegration in their communities. We are each responsible for how our government works and we do that through voting. In Alaska, 6081* Alaskans have lost their right to vote because of felony convictions. Currently, Alaska law bars the vote to persons convicted of felonies of moral turpitude until the expiration of a post-incarceration period of parole or probation, which is often years after they have reentered society to become productive citizens and tax payers. .

Harsh sentencing laws over the past 30 years have allowed the prison population to balloon, while reducing the rehabilitative model to almost non existent. Over 4.7 million Americans or 1 in 43 adults cannot vote due to felony convictions, with 1/3 or more of them were incarcerated due to alcohol and drug offenses. In Alaska we have gone from slightly over 800 prisoners in 1984 to 5344 in 2008, an increase of 149%. Of those incarcerated in Alaska 48% are Caucasian, 36% are Alaska Native, 10% are African American, 3% are Hispanic, and 3% are Asian/Pacific Islanders.* Nationally minority felons are disproportionately disenfranchised under current law and the harm of this continued disenfranchisement after release is exacerbated by stigma and other forms of discrimination as they try to reenter society. In Alaska 52% of our incarcerated offenders are minorities.

In Alaska, we do not have a problem taking a person off the voting roles if convicted of a felony but we do not have a system that will automatically allow them to return to the voting roles upon termination of supervision. Voting is just one of many steps a returning felon must make to become a productive member of the community. This Bill will help provide a clear time for returning voting rights and provide an important right/responsibility to felons returning to their communities.

MEMORANDUM February 2, 2009

SUBJECT: Sectional Summary of SB 68 (Work Order No. 26-LS0324\A)

TO: Senator Bettye Davis
Attn: Thomas Obermeyer

FROM: Alpheus Bullard
Legislative Counsel

You have requested a sectional analysis of the above referenced bill. As a preliminary matter, please note that a sectional analysis should not be considered an authoritative interpretation of the bill, and the bill itself is the best statement of its contents.

Section 1. Establishes that a person convicted of a crime that constitutes a felony involving moral turpitude under state or federal law may not vote while incarcerated for that crime, and that the person upon release will be advised of voter registration requirements and procedures.

Section 2. Establishes that the voter registration of a person convicted of a crime that constitutes a felony involving moral turpitude will be cancelled while that person is incarcerated.

Section 3. Establishes that a person convicted of a crime that constitutes a felony involving moral turpitude under state or federal law is disqualified from voting while incarcerated for that crime.

Section 4. Repeals AS 15.60.010(39), a definition of "unconditional discharge."

Sponsor Statement

SB 68 **"An Act relating to the voting rights of felons"**

Across the country states handle the right to vote for returning felons differently. Two (2) states, Maine and Vermont do not take away a felons right to vote. Thirteen states (13) allow felons to vote upon release from incarceration. Twenty one (21) including Alaska allow felons to vote after they complete all parole/probation requirements while fourteen (14) states permanently disenfranchise certain felons. If our belief is that felons once released have paid their debt to society then returning their right to vote upon release from incarceration would be a positive step.

3806

SB 68 allows felons upon release from incarceration to register to vote. This bill starts the process which allows felons to start assuming responsibility for their reintegration in their communities. We are each responsible for how our government works and we do that through voting. In Alaska, 6081* Alaskans have lost their right to vote because of felony convictions. Currently, Alaska law bars the vote to persons convicted of felonies of moral turpitude until the expiration of a post-incarceration period of parole or probation, which is often years after they have reentered society to become productive citizens and tax payers. .

Harsh sentencing laws over the past 30 years have allowed the prison population to balloon, while reducing the rehabilitative model to almost non existent. Over 4.7 million Americans or 1 in 43 adults cannot vote due to felony convictions, with 1/3 or more of them were incarcerated due to alcohol and drug offenses. In Alaska we have gone from slightly over 800 prisoners in 1984 to 5344 in 2008, an increase of 149%. Of those incarcerated in Alaska 48% are Caucasian, 36% are Alaska Native, 10% are African American, 3% are Hispanic, and 3% are Asian/Pacific Islanders.* Nationally minority felons are disproportionately disenfranchised under current law and the harm of this continued disenfranchisement after release is exacerbated by stigma and other forms of discrimination as they try to reenter society. In Alaska 52% of our incarcerated offenders are minorities.

In Alaska, we do not have a problem taking a person off the voting roles if convicted of a felony but we do not have a system that will automatically allow them to return to the voting roles upon termination of supervision. Voting is just one of many steps a returning felon must make to become a productive member of the community. This Bill will help provide a clear time for returning voting rights and provide an important right/responsibility to felons returning to their communities.

Re: SB 68 "An Act relating to the voting rights of felons"

SB 68 carries a zero fiscal note from both the Dept. of Corrections and the Div. of Elections. It has been vetted in both Sen. H&SS and Sen. Judiciary. This is a request that you waive SB 68 to Senate Rules Committee at the earliest possible date.

Please find attached a copy of the bill, a sponsor statement, fiscal notes, and a sectional analysis. Your attention to this request would be appreciated. Thank you.

26-LS0324\A

SENATE BILL NO. 68

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY SENATOR DAVIS

Introduced: 1/21/09
Referred: State Affairs, Judiciary, Finance

A BILL

FOR AN ACT ENTITLED

"An Act relating to the voting rights of felons."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 15.05.030 is amended to read:

Sec. 15.05.030. Loss and restoration of voting rights. (a) A person convicted of a crime that constitutes a felony involving moral turpitude under state or federal law may not vote in a state, federal, or municipal election **while incarcerated for that crime** [FROM THE DATE OF THE CONVICTION THROUGH THE DATE OF THE UNCONDITIONAL DISCHARGE OF THE PERSON]. Upon **release from incarceration** [THE UNCONDITIONAL DISCHARGE], the person may register under AS 15.07.

(b) The commissioner of corrections shall establish procedures by which a person **released from incarceration** [UNCONDITIONALLY DISCHARGED] is advised of the voter registration requirements and procedures. **The procedures established under this subsection must provide that at the time of the person's release from incarceration,**

(1) the department shall give the person a written notification of the person's restored right to vote; and

(2) the commissioner of corrections shall notify the director that the person is entitled to be reregistered as a voter.

*** Sec. 2.** AS 15.07.135 is amended to read:

Sec. 15.07.135. Cancellation of registration of incarcerated [CONVICTED] persons. (a) The director shall make reasonable efforts to obtain the names of persons convicted of a felony involving moral turpitude **and incarcerated for that crime**. Promptly after receipt of evidence satisfactory to the director that a person has been convicted of a felony involving moral turpitude **and incarcerated for that crime**, the director shall cancel the registration of the person.

(b) Upon presenting proof that a person whose registration was canceled under (a) of this section has been **released from incarceration** [UNCONDITIONALLY DISCHARGED FROM CUSTODY], the person may register. The director shall make reasonable efforts to verify the **released from incarceration** [UNCONDITIONAL DISCHARGE] of persons applying for registration under this subsection.

*** Sec. 3.** AS 33.30.241(a) is amended to read:

(a) A person who is convicted of a felony involving moral turpitude as defined in AS 15.60.010 is disqualified from voting in a state or municipal election **while the person is incarcerated for that crime** [UNTIL THE PERSON'S UNCONDITIONAL DISCHARGE].

*** Sec. 4.** AS 15.60.010(39) is repealed.

Urgent **[X] For Review** **☐ Please Comment** **Please Reply** **☐ Please Recycle**

To whom it may concern:

Senator Davis would like to start work orders for three additional bills in the 26th Legislature:

1) CSSB 7(STA), 25-LS0100\K, or a later draft - Felon Voting rights. Any changes to be considered will be forwarded as soon as possible, probably in the next week.

2) Senate Resolution to enact a "New Deal for Higher Education" to rebuild access for students to our nation's public colleges and universities. Refer to attached California HR 4 which calls for:

a) a federal program for higher education in the amount of $70 billion, or 10% of federal stimulus packages;

b) establish college-going grants, including increased Pell grants to lower income students and grants similar to the WWI era G.I. Bill of Rights; and

c) student loan debt forgiveness for all students who take jobs in public service. Note: I will draft some additional language and statistics which are pertinent to Alaska, some of which are attached in ADN article: *Our View: Higher Education*

3) A bill to re-establish the Alaska Commission on the Status of Women which I understand was consolidated with the Alaska Commission on Children and Youth in 1993 by Governor Hickel's Executive Order #84 (and may never have been implemented). See attached letter from Jan Angvik dated November 30, 2008.

States' prison populations are expected to grow in the next decade and prison costs are projected at almost too much to afford. You can read about efforts of some states in the article on Page 19, and share your experiences on Capitol Comments. E-mail *mchavers@csg.org* and we may feature your programs and efforts dealing with the growing prison population on our blog, Capitol Comments.

Several states are working hard to make higher education more affordable for residents as tuition costs skyrocket. Read about some of those efforts on Page 30, and check out Capitol Comments for more details about Indiana's 21st Century Scholars program and Oklahoma's Promise. You can also get advice about steps to affordability and learn more about state 529 programs on the blog.

Alan Sokolow, director of The Council of State Governments' Eastern Regional Conference, is retiring after more than four decades with CSG. Read the interview on Page 11 and hear more from Sokolow at Capitol Comments.

And don't forget to check Capitol Comments for updates from the ERC meeting in August, as well as the previous regional meetings held in July.

This month's issue of *State News* includes a new indicator that alerts you to more information about a particular topic at Capitol Comments. Look for it throughout the magazine, then check CSG's blog for special Web-only features.

capitol trivia

Question:

What are the three states that employ the most people to operate state government? Which state has the fewest state employees?

To find the answer, log onto CSG's Web site at www.csg.org!

$1 MILLION EVERY MINUTE OF EVERY DAY

By Daniel Sullivan

By the time you finish reading this, Canada and the United States will have traded well-over $1 million. That's $1 million every minute of every day. Canadians and Americans produce things together. We create jobs together. Trade with Canada supports 7.1 million American jobs—that's one in 25.

As Canada's representative in New York, New Jersey and Connecticut, in June, I shared the importance of the Canada-U.S. economic relationship with members of Congress. The message? Think North American competitiveness. Think jobs in your state. Think Canada.

Canada buys four times more from the United States than does China. Canada, not China. Thirty-five states, including New York, New Jersey and Connecticut, sell more to Canada than to any other country in the world. All 50 states sold $250 billion to Canada last year alone.

In fact, for every $1 of New York's goods that China buys, Canada buys more than $5.25. And in New Jersey, Canada buys nearly $7 to China's $1 purchase.

Incredibly, Connecticut exports more goods to Canada than to the United Kingdom, Japan, Mexico and Australia combined.

The jobs supported by U.S.-Canada trade are equally impressive—207,000 jobs in New Jersey are linked to U.S.-Canada trade, 469,000 jobs in New York and 90,250 Connecticut jobs.

Take Montreal-based Bombardier, a leader in the production of aircraft, trains and other transport systems. Facilities in Québec produce rail car shells destined for urban and suburban transport systems in the U.S. These shells are finished in Plattsburgh, N.Y., using a process that employs 800 workers. A new rail car system at JFK International Airport will utilize Bombardier rail cars, a project that has enabled its contractor, Total Transit Systems of Pittsburgh, to bring 100 jobs to New York.

And consider, Unison, a GE subsidiary with a manufacturing plant in the town of Brookhaven, N.Y., that employs 115 people and manufactures aviation components while providing maintenance and support services. Unison enjoys an extensive supply-management relationship with Canada that includes both purchasing component pieces from Canadian suppliers and then selling finished aviation products to clients, such as Bombardier.

And Campbell Soup Company, founded in Camden, N.J., is one of many international firms that depend on the fluid exchange of goods between the U.S. and Canada. Campbell relies on a highly integrated North American supply chain organized around 23 facilities in 14 states and Ontario. In 2007, Campbell shipped nearly 4,500 truckloads from Canada to the United States containing its premium soups and frozen foods. Meanwhile, 3,500 truckloads entered Canada, bringing microwavable soups from the company's largest plant, located in northwest Ohio, as well as Pepperidge Farm snacks from Connecticut, Pennsylvania and other sites.

The movement of goods across the U.S.-Canada border is key to the competitiveness of companies like Bombardier, Unison/GE and Campbell Soup Company whose operations are integrated across North America.

Canadians and Americans are in this together. We depend on one other to compete globally. Deal makers and job creators—that's who we are.

—Daniel Sullivan, who was appointed consul general of Canada in New York in October 2006, will speak at The Council of State Governments' Eastern Regional Conference in August.

Inaugural
Henry Toll Fellowship
Class of 1986

Location: Lexington, Ky.

Building Leadership REACHING OUT

In founding The Council of State Governments, Colorado Sen. Henry Toll displayed his exceptional leadership skills by recognizing a national need and taking the steps to fill that need.

In recognition of its founding father and his leadership, CSG in 1986 started the Henry Toll Fellowship Program with an eye to equipping state leaders with the tools, knowledge and skills necessary to be the statesmen and women of tomorrow—leaders in the mold of Toll himself.

Twenty-two years later, the Toll Fellowship Program is one of the nation's foremost leadership development programs. Graduates have gone on to serve

Twenty-two years later, the Toll Fellowship Program is one of the nation's foremost leadership development programs.

as governors, secretaries of state, chief justices and as members of the United States Congress. Just as CSG is the only organization serving all three branches of state government, each year the Toll Fellowship Program brings together representatives of all three branches from across the country. A key goal for the Toll program is to assist state leaders in working successfully across party lines, across branches of state government and across state borders to make creative policy and solve key problems.

Annually, 40 of the nation's most promising state leaders come to Lexington, Ky., for a five-night, six-day "intellectual boot camp." CSG routinely brings in some of the nation's top lecturers on a variety of topics that have included effective political communication techniques, time management, crisis management, state governance transformation and generational communication styles. Dynamic team building and leadership exercises are important components of the Toll program.

Since its inception, the Toll Fellowship Program was designed to provide a broad foundation of leadership skills. While CSG's committees and task forces focus on specific policy issues, the Toll Fellowship Program strives to provide the skills with which its alumni can tackle the policy problems facing the states. In addition, one of the program's most beneficial outcomes is the creation of a national, multi-branch network. The relationships forged during the Toll Fellowship Program provide an opportunity for sharing policy ideas and solutions with leaders from other states and branches of government. Recognizing the importance of such networking, the Toll Fellow Alumni network meets regularly at CSG spring and annual meetings allowing these new bonds to spread between classes as well.

CSG Associates Program

Also in the 1980s, CSG began to reach out to members of the corporate community and established the Associates Program in 1984. Since then, the program has provided three key elements to government relations professionals:

- access to key decision-makers in all three branches of state government;
- participation in discussions on policy development and emerging trends in the states; and
- opportunities to network and exchange ideas on cutting edge issues.

Members of the CSG Associates Program include Fortune 100 and Fortune 500 companies as well as trade associations. As partners with CSG, the Associates participate in CSG's committee and task force deliberations and participate actively in CSG's 21st Century Foundation decision-making process. In addition to providing their perspectives on state trends, the Associates also make significant contributions to CSG's meetings and international exchanges.

Founding members of the Associates program are 3M, Altria, American Chemistry Council, AT&T, Avon, Eastman Kodak Company, PhRMA, R.J. Reynolds and The Proctor & Gamble Company.

Associates members are encouraged to be actively involved in CSG's task forces and committees that help establish CSG policy and programs. CSG's Associates Awards program recognizes Associates for public-private programs that benefit the states.

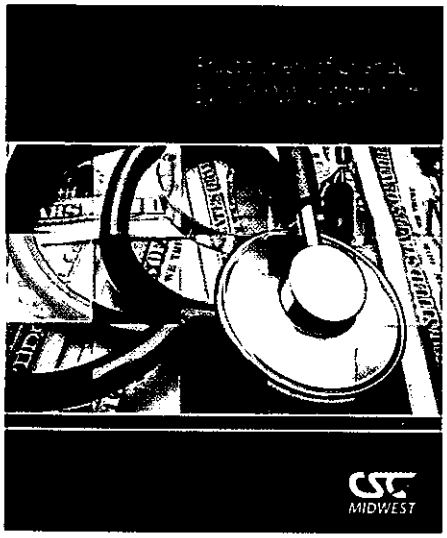
New CSG Midwest Report Examines Health Care Reform in Region



As the price of health care increases and states face myriad budget challenges, reducing costs and ensuring quality health care for all is a top concern of lawmakers and their constituents.

Last month, The Council of State Governments' Midwestern Office released a report exploring recent health reforms in the region.

"Practitioners of Change: Regional Case Studies in State Health Care Reform and Cost Containment" was unveiled in July at the Midwestern Legislative Conference Annual Meeting in Rapid City, S.D.

Using 11 case studies—one from each Midwestern state—the report examines key policy issues in health care and highlights innovative efforts in the region to control costs and reform state health systems.

The case studies are based on interviews with Midwestern state officials, legislators and experts, as well as studies and data from the nation's top sources in health policy.

The report also includes an appendix on cost-containment strategies in the Canadian provinces.

The project was completed as part of the 2008 MLC chair's agenda of South Dakota Sen. Tom Dempster.

To read the report, visit *www.csgmidwest.org*.

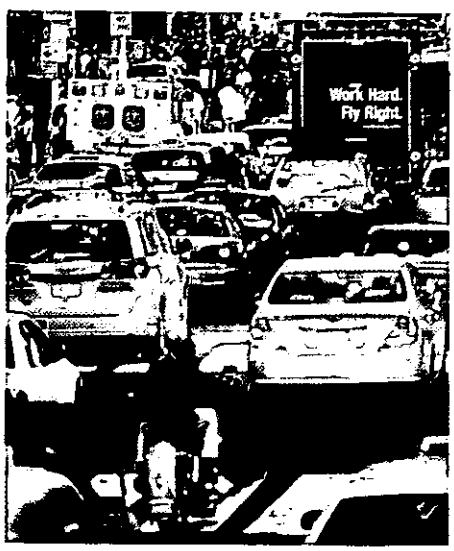
States Look to Save on Gasoline Bills



As prices at the pump continue to hover around $4 a gallon this summer, several states are considering options to cut costs.

In July, Kentucky State Police announced a plan to scale back patrols and set up at least 200 checkpoints to reduce the amount of gas used, according to *The Courier-Journal*.

The new policy began July 4 and is expected to continue through Labor Day, according to the Louisville newspaper. Kentucky State Police spent $132,000 more for gasoline in May than the agency did in May 2007, according to *The Courier-Journal*.

State Police Capt. Tim Lucas told the newspaper the plan was an effort to "let traffic come to us instead of us seeking traffic."

And in June, Utah became the first state to mandate four-day workweeks for the majority of its state employees. Many Utah state employees will work from 7 a.m. to 6 p.m. Monday through Thursday, and 1,000 of the 3,000 Utah state buildings will close on Friday, according to *Stateline.org*.

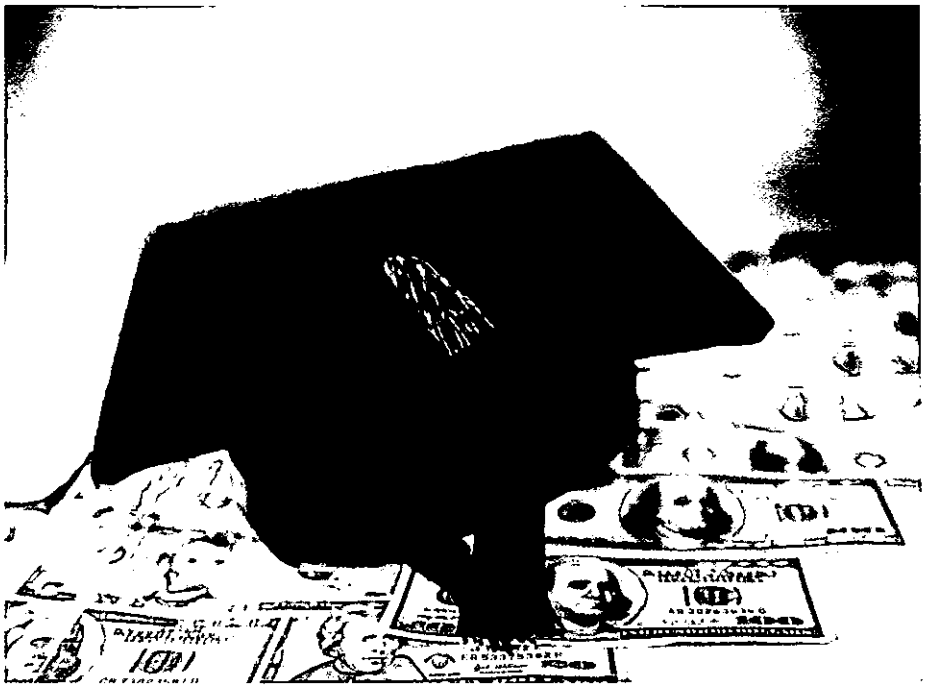
"Utah is the only state to mandate a four-day workweek for most of its state government employees and no other state currently has plans to mandate a four-day work week, although a number of states are going to be keeping a close eye on Utah's effort," said Leslie Scott, executive director of the National Association of State Personnel Executives, an affiliate of The Council of State Governments.

In Michigan, Gov. Jennifer Granholm announced in July that her office is considering work-schedule alternatives to save fuel. In New Mexico, Gov. Bill Richardson ordered state agencies to adopt policies for telecommuting and alternative work schedules by Sept. 1.

Kentucky and South Carolina are also offering shorter work weeks to state employees this summer, according to *Stateline.org*.

"Many states are promoting the greater use of already existing alternative work schedule and telecommuting policies to be used whenever possible," Scott said. "Some states are in the process of updating their policies, which may have been written decades ago. The handful of states that didn't already have telecommuting and/or flexible work schedule policies are creating them."

Ohio Gives Veterans, Families In-State Tuition



> "It delivers real support to veterans while helping strengthen Ohio's strategic plan for higher education, which calls for attracting and keeping talent in the state."
>
> —*Ohio Gov. Ted Strickland*

To combat rising higher education costs, all military veterans, their spouses and dependent children can now attend Ohio colleges and pay the in-state tuition rate, according to *The Plain Dealer* in Cleveland.

"This is a great benefit for veterans, as well as for Ohio," Gov. Ted Strickland said in a press release after signing an executive order July 8. "It delivers real support to veterans while helping strengthen Ohio's strategic plan for higher education, which calls for attracting and keeping talent in the state. Who better to have as part of Ohio's colleges and universities, work force and communities than the veterans who have served, led and protected our country?"

State officials hope the plan will help more veterans and their families attend the state's 13 colleges and universities and 23 community and technical colleges, according to *The Plain Dealer.*

"We think we have an incredible value," Ohio Board of Regents Chancellor Eric Fingerhut told the newspaper. "We hold the University System of Ohio as second to none."

In addition to the in-state tuition for all veterans and their families, the executive order will also:

- Establish The Ohio GI Promise Council;
- Launch The Ohio GI Promise Hotline and Web site;
- Schedule a University System of Ohio systemwide conference on veterans services;
- Expand the use of Ohio National Guard Scholarships; and
- Designate Ohio colleges and universities "Servicemember Opportunity Colleges."

Read more about what the states are doing to help make higher education more affordable in the story, "Funding the Future" on page 30.

States Testing New 9-1-1 System

Public safety agencies—including those in Montana and Indiana—have spent weeks testing a new 9-1-1 system, a project organized by the U.S. Department of Transportation.

The current 9-1-1 system is designed around telephone technology and cannot handle the text, data, images and video that are increasingly common in the way people communicate and are critical to the future, according to the U.S. Department of Transportation Web site. The Next Generation 9-1-1 initiative, nicknamed NG 9-1-1 by the federal government, "will establish the foundation for public emergency communications services in a wireless mobile society," according to the Department of Transportation.

Joining Indiana and Montana as testing sites are three cities: Rochester, N.Y., Seattle, Wash., and St. Paul, Minn.

The testing began June 16 and the initiative aims to improve 9-1-1 access for deaf or hearing-impaired users, such as through text messaging, according to *The Journal Gazette* of Fort Wayne, Ind.

The initiative also aims to improve how the 9-1-1 system tracks callers, regardless of whether the 9-1-1 call is made from a landline or from a wireless phone or using Voice over Internet Protocol, according to the newspaper.

For more information on the new initiative, visit the U.S. Department of Transportation's Web site at *http://www.its.dot.gov/ng911/index.htm.*

CHANGING TIMES

Longtime ERC Director Reflects on His Tenure as Retirement Nears

Alan Sokolow, director of The Council of State Governments' Eastern Regional Conference in New York City, will retire in December after 41 years. Sokolow, 65, began as a field representative and became director of the ERC in the fall of 1972. The Brooklyn native, who now lives in Montclair, N.J., spoke recently with *State News* about his tenure and the successes of CSG, as well as the changes he's witnessed in state government operations. Here are highlights of that interview.

By Mary Branham Dusenberry

As you look back on your tenure at CSG, what do you see as your most significant accomplishment?

"I think I've kind of sent the message to the whole organization of always trying to have us work as a team and believe in the esprit and treat colleagues as part of the family. I think I've also been successful in doing that with the Eastern leadership over the years so that their investment is deeper than just being a member of an organization, but feeling a significant commitment to its work and to its staff.

Alan Sokolow, left, who is retiring from The Council of State Governments after 41 years, is pictured with New York Sen. Hugh Farley, center, and Wendell Hannaford, who will take over as ERC director upon Sokolow's retirement.

Specific things that we've accomplished over the years: One that we've grown the office in member jurisdictions. ... We have now 10 states, the U.S. Virgin Islands, Puerto Rico and six Canadian provinces. We have gone from 11 to 18 over this period, so that's been very exciting growth for us.

Secondly, in the late 90s, we had an active program through our criminal justice project that was focusing on issues of over-representation of minorities in the prison system of the Northeast. It attracted a number of key Hispanic legislators who were part of National Hispanic Caucus of State Legislators. That had been in existence for about 10 years but had fallen on harder days, and had a very minimal budget, no full-time staff, just struggling to survive. Four of the members ... approached me at one of our annual meetings in 1998 to see whether I would be willing to help them re-energize the organization. It was a real joy and labor of love."

ERC has also created a number of affiliate organizations. Can you discuss those?

"We're the only one that has a regional trade group of state trade directors that the states fund and we staff through this office. It was really the work of that regional group since 1999 or 2000, that created the decision by the national organization, SIDO (State International Development Organizations), to join CSG as an affiliate member.

In the late 90s ... we created a regional agriculture project that is also being funded primarily by our member states, called the Northeast States Association for Agricultural Stewardship. That's provided a really significant support system for rural legislators in the region who are interested in northeast agriculture not only surviving, but growing. It was an uphill battle because we didn't have the leverage or strength compared to other regions of the country where the powerful agriculture interests are based ...

On the criminal justice front I'm beyond thrilled about how the regional effort led by Mike Thompson has grown so phenomenally and astoundingly over the last 10 years and turning it into the Justice Center for national CSG. I'm very, very proud of the major accomplishments they've made in serving all of state government and being a wonderful example of our mission and purpose and providing very exciting and important technical assistance to the states."

You have worked with state governments for 40 years. What has been the biggest change in state government operations or funding during that time?

"I would say the biggest change is the growth of partisanship and ideology in the political process. When I started, Republicans and Democrats could fight like cats and dogs over substantive issues in legislation, but when the debate on the floor was over,

they would get together and socialize and enjoy each other's company. There was a respect for the institution to support it.

I think over the years ... you see the parties separating both politically and socially. You see the use of the press to point the finger at the other side. It plays out for us in a very big way when participation in conferences becomes a political issue between the parties. Everyone gets very insecure to travel no matter what the value of the event is. So I think that's probably been the biggest—the loss of mutual trust and camaraderie in the legislative houses over the years. It's the big states and small states as well. It just poisons the atmosphere.

I've also seen the amazing growth of the influence of lobbyists in state capitals. It's a huge industry. That's certainly had an impact. Responding to that, at least in this region, is the growth of the conflict of interest and ethics laws and rules to challenge too cozy relationships. But all of that lends itself to people looking over their shoulders and not being as open with each other about working on things in a bipartisan fashion. You just rarely see that these days, which is really a shame."

What challenges are states facing that they may not have faced 40 years ago?

"I think one of the most significant challenges now is that there is not a federal government committed financially to the federal system in terms of domestic spending. It's a terrible struggle for the states to handle all the issues that they're confronted with without a strong federal presence, whether it's health care, education, transportation. ... The federal government continues to try to promulgate rules to have control over these areas but they've backed away because of, currently, the war or because of deficit and debt issues. Also, I guess, ideologically opposed to what's called big government, there has been a real shift of federal resources away from domestic spending, which has made it so difficult for the states.

The second, I think, is just the power of the anti-tax agenda that has made it impossible for state government, federal government to probably face the bigger challenges of the financial cost of doing domestic programs as needed, whether it's health care, infrastructure, education ... kind of starving themselves by not being able to raise taxes when necessary. I think that's a very difficult problem for our whole government, state and federal, local. There's still a demand for valued services, but no willingness to be taxed to get that done.

I think the other is the continuing view by the media of government as almost the enemy, not the friend—the assumption that federal officials and state officials are venal and on the take and that less government is better. I think all of those themes still play large."

We are in the midst of another energy crisis, similar to the one in the 1970s. What is different about how states are responding this time as opposed to the 1970s?

"I think the states are doing everything they possibly can, particularly to protect the poorest of the poor, through the Low Income Home Energy Assistance. ... A lot of families in this region, particularly in New England, get their heat through home heating oil and kerosene, so there've been efforts by the states to supplement the federal spending. (While states are working on energy efficiency issues) the realities are without a very deep and committed federal program, it's very hard for the states to deal with this; and they have no control over the cost of gas or foreign oil. They can plug away at trying to do the right thing, but without a federal commitment to alternative fuels and auto efficiency standards and climate change. ...The states are trying but you probably make difference at the edges, I think, without a major national leadership to make this a high priority, almost like a Marshall plan decision at becoming energy independent. The resources at the states are limited and they need the federal government resources to make a significant difference."

How has the relationship between the state and federal governments changed over the years?

"In the Nixon administration there was a great deal of commitments to the federalism idea and the grants programs domestically and trying to work through the regionalization of the federal agencies to support the states and work as teams. I think that was a highlight until, when the Reagan administration came in, there was less ambition to do so. I think to this day, there seems to be greater effort by the feds to have a much bigger say in education than it ever had and yet not providing the resources to make the kind of changes that were contemplated.

I'm not sure where the Supreme Court is going to go on the 10th amendment. Losing the Sandra Day O'Connors of the world is a tough hit for the states because she was very supportive of states' rights in the best sense of that phrase. I'm not sure that's going to continue with the court.

And in the transportation area, the Bush administration is basically on a path to privatize or turn over the responsibilities of transportation to the states and probably with a grants program that is not enough for the states to do the job. There's not a belief in the national transportation system. When you think back to the '50s with Eisenhower and the interstate highway system, it's kind of turned on its head. There's much less investment or perception that there's a national system and that it needs to be invested in and protected by the national government."

Is there a particular policy issue that creates more challenges for state government than other issues?

"I think we're not going to get to the bottom of our domestic needs without a committed federal government that's in much better economic shape to support the states. I think it's going to be an ongoing struggle to make change, but I think it's going to be on the edges and incremental and never get to the bottom of how to deal with this. Whether it's housing or transportation, we're losing ground."

—Mary Branham Dusenberry conducted the interview and is managing editor of State News.

Alan Sokolow discussed the growth of The Council of State Governments Eastern Regional Conference's jurisdictions, as well as the ERC associates program and changes in the relationships between the national CSG headquarters and the regions, in greater depth. Visit Capitol Comments, CSG's blog, for more from the interview.

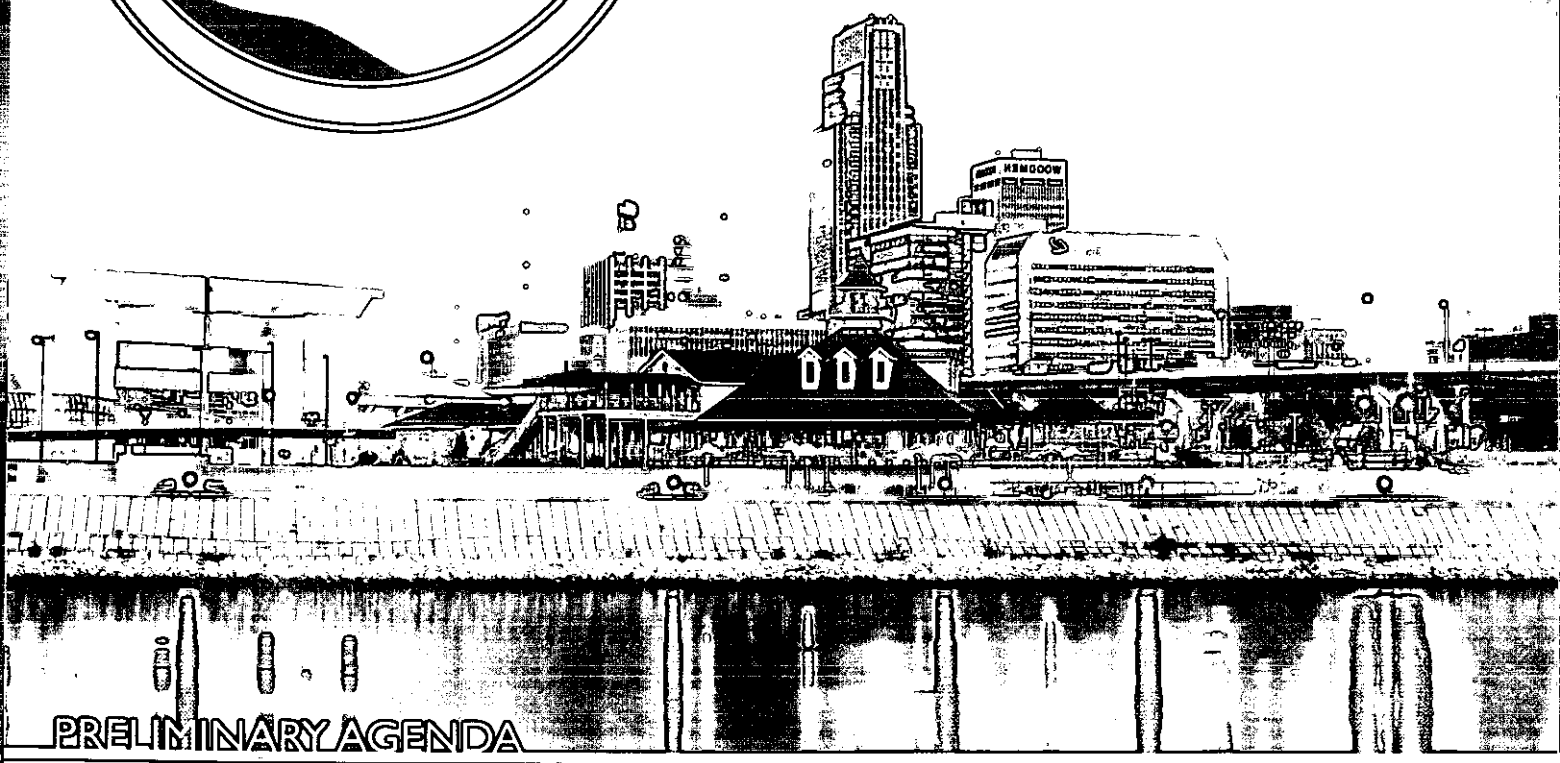
CSG's 75th Anniversary Celebration Annual Conference

Register Now at www.csg.org!



PRELIMINARY AGENDA

Thursday, Dec. 4

Noon	Registration Opens
Noon–4 p.m.	Guest Program
1:30–3 p.m.	Interbranch Working Group
1:30–3 p.m.	Technology Working Group
1:30–3 p.m.	Investment Subcommittee
3:30–5 p.m.	Financial Services Working Group
3:30–5 p.m.	Transportation Advisory Group
3:30–5 p.m.	Finance Committee
3:30–5 p.m.	Associates Advisory Committee
5–5:45 p.m.	New Members Reception
6–8 p.m.	Opening Reception *Holland Performing Arts Center*

Friday, Dec. 5

7–9 a.m.	Breakfast Tabletop Policy Discussions
9–12:15 p.m.	Strategic Planning Committee
9–4 p.m.	Guest Program
9–4:30 p.m.	CSG Exhibit Show
9–12:15 p.m.	Energy & Environment Policy Task Force
9–12:15 p.m.	Education Policy Task Force
9–12:15 p.m.	Health Policy Task Force
9–12:15 p.m.	Public Safety & Justice Task Force
12:30–2 p.m.	Lunch Plenary
2–3:45 p.m.	International Committee
2–3:45 p.m.	Annual Meeting Committee
2–5 p.m.	Suggested State Legislation (I)
2–5:30 p.m.	Technical Tours
5:30–6:45 p.m.	Regional Receptions
9–Midnight	SGAC Late Night Event

Saturday, Dec. 6

7:30–8:30 a.m.	Breakfast Tabletop Policy Discussions
7:30–10:15 a.m.	Suggested State Legislation (II)
8:30–4:30 p.m.	CSG Exhibit Show
8:30–10:15 a.m.	Intergovernmental Affairs Committee
8:30–10:15 a.m.	21st Century Foundation
8:30–10:15 a.m.	Policy Workshop
9–4 p.m.	Guest Program
10:30 a.m.–Noon	Plenary II
Noon–2:00 p.m.	Awards Luncheon *Qwest Center Ballroom* *Speaker: Mark Shields*
2:30–4 p.m.	Policy Workshop: Health
3–5 p.m.	Governing Board/ Executive Committee Meeting
6–9 p.m.	Omaha Host State Dinner *Joslyn Art Museum*

Sunday, Dec. 7

7:30–8:30 a.m.	Breakfast Tabletop Policy Discussions
8:30 a.m.	Conference Adjourns

KEYNOTE SPEAKER

Mark Shields

Mark Shields is a nationally known columnist, commentator with unmatched credentials as an analyst of the U.S. political system. He is best known for his work as moderator on CNN's *Capital Gang* where he debated policy issues with Robert Novak, Al Hunt, Kate O'Beirne and Margaret Carlson. He currently serves as an analyst on *The NewsHour with Jim Lehrer* on PBS, seen every Friday and during primaries, national conventions and elections.

Since 1979, Mark Shields has been writing his column on national politics for the *Washington Post*. The column is now distributed nationally by Creators Syndicate.

adapting to SURVIVE

States Prepare for the Health Effects of Climate Change

In the absence of federal action, a number of states and localities are stepping up to the plate to address issues surrounding climate and health.

By Sean Slone

3838

"I think everyone's focus originally was on mitigation but there is a clear understanding now that we have to look at adaptation. The fact is (climate change) is already here and to ignore steps that need to be taken, I think, you do at your own peril."

—Maryland Sen. Paul Pinsky, Chair of the Environment Subcommittee

With its relatively mild temperatures and persistent drizzle, Seattle isn't usually the first city that comes to mind when discussing the effects of climate change. But rising global temperatures could mean more frequent, more intense and longer lasting heat waves, even for the land of Starbucks. The city could see heat waves like the ones responsible for hundreds of deaths in the United States in recent years.

In addition, increased smog and fine particulate matter, combined with a longer pollen season, could mean more respiratory problems for many of Seattle's 580,000 residents, according to the Climate Impacts Group at the University of Washington. Rising temperatures and flooding in the Emerald City could also contribute to higher numbers of communicable diseases spread by rodents, shellfish and mosquitoes.

Washington state is one of a handful of states trying to address both the causes of climate change and its probable impacts. Gov. Christine Gregoire in 2007 charged the directors of the state departments of ecology and community, trade and economic development with determining steps the state should take to prepare for impacts to five sectors—public health, agriculture, the coast line, forestry and infrastructure. The directors formed several preparation and adaptation working groups to develop recommendations for the governor.

Anne Biklé, a former Seattle-King County Public Health Department official, was a member of the working group on human health.

"When the (work group) came up, we at the health department were very excited about it because we felt like finally there (would) be a place to talk about what our changing climate means for people," said Biklé, who now works for the National Wildlife Federation.

Biklé's working group issued a series of recommendations that included enhancements to public health tracking of diseases, emergency preparedness and response, and community design policies to reduce driving.

The group also recommended the state departments of health and agriculture collaborate on improving monitoring of diseases spread by animals and insects. It called for establishing long-term laboratory capacity, funding for disease identification and testing, and increased training of veterinarians in reporting these diseases. The group also called for the state departments of health and ecology to collaborate on outdoor air quality surveillance and health risk communication strategies.

In the area of emergency preparedness and response, members recommended creating a heat emergency task force and called on the Washington Military Department's Emergency Management Division to help improve the state's ability to respond to heat wave emergencies.

The working group also included a series of recommendations for local governments to make communities more walkable and pedestrian friendly.

"If we are building communities and engaging in new developments, are we siting them in a way that means people have to drive every time they want to try to accomplish some part of their daily routine?" Biklé said. "Or are we designing things in a way that we minimize the primary generating source for greenhouse gas emissions? We also want more walkable, livable communities so people can get more physical activity to help reduce rates of overweight and obesity."

A bill introduced in the 2008 session of the Washington legislature would have directed the state department of ecology to develop a report using the recommendations of the human health and other work groups. Though the Senate approved the bill, the House

failed to pass it, due largely to budgetary concerns. But state Rep. Dave Upthegrove, who chairs the House Ecology and Parks Committee, expects a similar proposal to be introduced next year. "There was great interest," he said.

States' Mitigation and Adaptation Plans

Washington isn't the only state tackling both the causes of climate change through mitigation of greenhouse gas emissions and its probable impacts through adaptation policies. The Pew Center on Global Climate Change reports that 33 states have created or are in the process of creating climate action plans, most of which deal primarily with reducing greenhouse gas emissions.

While reduced emissions may help, climate scientists say global warming will be a reality for decades, so states will also need to adopt strategies to adapt to the probable impacts of climate change. While six states—Arizona, Colorado, New Hampshire, North Carolina, Utah and Vermont—include adaptation within the scope of climate action plans, six others—Alaska, California, Florida, Maryland, Oregon and Washington—address adaptation with parallel, stand-alone efforts. These adaptation plans, which are in various stages of implementation, address the health effects of climate change to varying degrees.

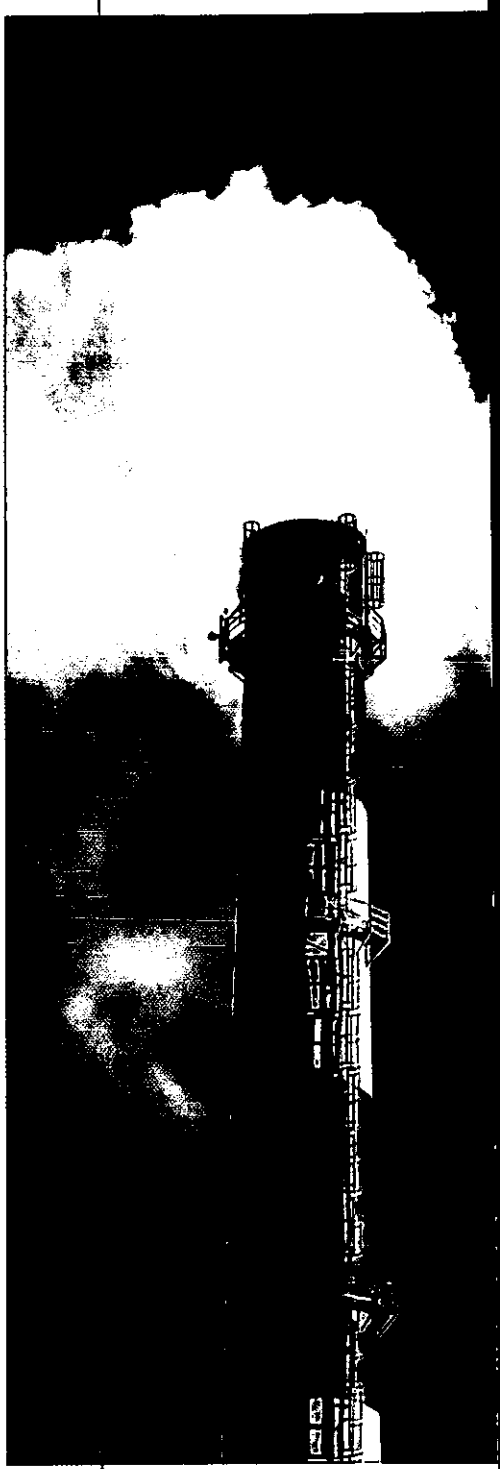
In Florida, a 2007 executive order by Gov. Charlie Crist calls for the Governor's Action Team on Energy and Climate Change to issue legislative recommendations for "adaptation strategies to combat adverse impacts to society, public health, the economy, and natural communities in Florida" by Oct. 1, 2008.

In 2006, Oregon Gov. Ted Kulongoski established the Climate Change Integration Group by executive order. The group's final report, issued in January, offered 10 recommendations, which include incorporating the public health implications of climate change into state policy, planning and preparation. It promotes recognizing the public health benefits of many climate change mitigation, preparation and adaptation activities, and encourages watching for unintended public health consequences of these activities.

In California, the secretary of the state environmental protection agency is required to report to the governor and the state legislature biannually on the impacts of global warming on the state, including impacts to public health, and to report on mitigation and adaptation plans to address them.

In Maryland, a 2007 executive order by Gov. Martin O'Malley established the Maryland Climate Change Commission, which is charged both with developing an action plan to address the causes of climate change and preparing for the likely consequences and impacts of climate change. The commission's Web site, www.mdclimatechange.us, includes an analysis of policy options, several of them health-related.

Maryland Sen. Paul Pinsky is a member of the commission and chairs the Environment Subcommittee in the state Senate. "For the state of Maryland, which has the Eastern Shore just a couple of feet above sea level, with tourism and agriculture and with the Chesapeake Bay, (climate change) has significant implications," he said. "I think everyone's focus originally was on mitigation but there is a clear understanding now that we have to look at adaptation. The fact is (climate change) is already here and to ignore steps that need to be taken, I think, you do at your own peril."



Preparedness of the Public Health Work Force

The success of states in adapting to the health effects of climate change may hinge on personnel and resources, public health officials believe.

"The public health system will be a frontline responder to potential emergency conditions caused by climate change," Dr. Georges Benjamin, executive director of the American Public Health Association, told the U.S. House Select Committee on Energy Dependence and Global Warming in April. "As a frontline protector and communicator to communities, the public health community plays a key role in helping to mitigate and adapt to climate change. As such, the public health community must have the tools, skills, training and education and resources to fulfill this role," he said.

But a 2008 national survey of local public health departments revealed some cause for concern about the preparedness of the public health community for dealing with the health

effects of climate change. Three-fourths of local health directors surveyed by the Environmental Defense Fund, George Mason University and the National Association of City and County Health Officials (NACCHO) said they lacked the expertise to assess local health impacts of climate change in their region or to craft adaptation plans. Moreover, they said their state departments of health also lacked expertise in crafting such plans. The directors also believed they lacked the necessary resources to address climate-related health threats and specifically cited a need for additional funding and staff.

"The response doesn't surprise me at all," said Dr. Dennis McBride, health director for the Milford, Conn., Health Department and chairman of NACCHO's Environmental Health Committee. "I think there's a set of skills ... that health departments have to be brought up to speed on. Most of us in public health rarely use climate as something we have to take into account. There's also the expertise on the interface of human ecology with other ecologies, which to me involves a whole different set of skills that are not there in public health."

NACCHO and the Trust for America's Health reported last year that even as state and local health agencies work to meet public health preparedness goals, funding has declined by more than 25 percent since 2005, threatening the sustainability of new emergency preparedness programs. The Trust also reported that 12 states lack an electronic disease surveillance system compatible with the national system and nationwide disease monitoring remains disconnected from monitoring of related health, behavioral and environmental factors.

Another disconnect between human and animal health agencies prevents quick responses to climate-related emerging diseases that can be transmitted between animals and humans. Moreover, the Centers for Disease Control and Prevention this year said that public health departments and state public health laboratories have reported difficulty recruiting and retaining qualified epidemiologists and laboratory scientists.

The Climate Change Health Challenge

Two University of California-Berkeley researchers earlier this year recommended several adaptation strategies for states to consider. Richard Jackson and Kyra Naumoff Shield in the *Annual Review of Public Health* recommended that states:

- Create a multidisciplinary leadership team to lead state adaptation and mitigation scenario planning;
- Develop partnerships with other government agencies, the private sector, nongovernmental organizations and universities to more effectively address health aspects of climate change;
- Support training programs in universities and other settings to develop the interdisciplinary experts needed to confront the broad spectrum of climate and health issues;
- Encourage state health departments to implement asthma tracking and control programs with a view toward instating similar programs at the local health department level; and
- Explore opportunities for the detection of real-time heat stress-related conditions by tracking electronic medical records.

Jackson and Naumoff Shield also wrote: "As the impact of climate on health is expected to vary by location and given the level of leadership shown on this issue by the U.S. government, it is important to address issues at the state level rather than wait for federal agencies to respond."

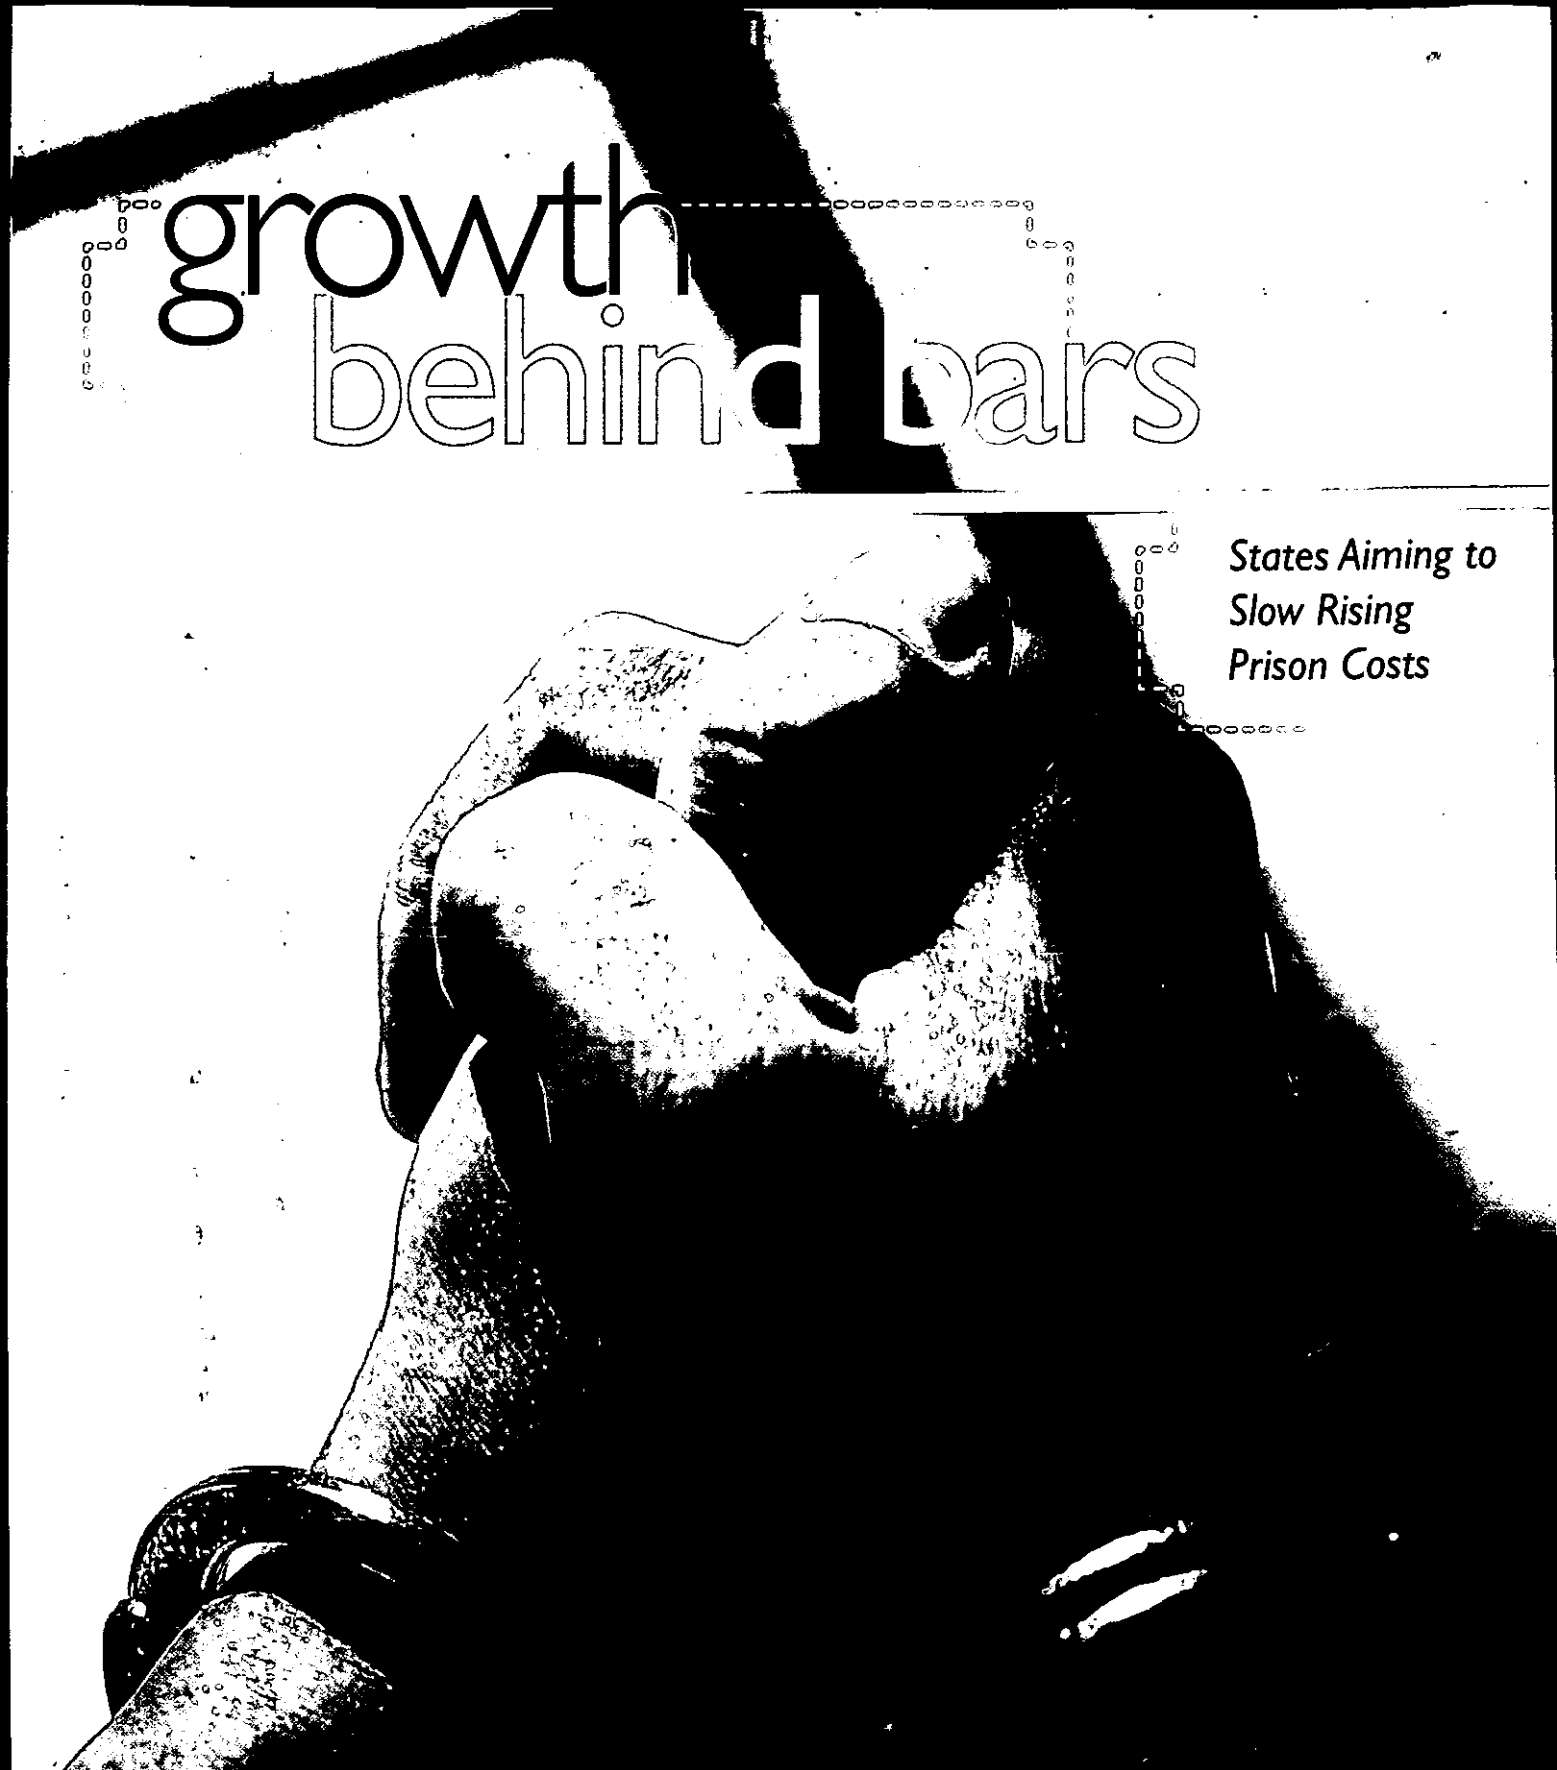
growth behind bars

States Aiming to Slow Rising Prison Costs



States' prison populations are expected to grow in the next decade and prison costs are projected at almost too much to afford. With so many people behind bars, some states are employing strategies to keep people from returning to prison and spending money on treatment programs, while some states face a future of building expensive jails.

By Mikel Chavers

In 2006, Kansas, like many other states, was feeling the pressure of a corrections system that was ready to bust at the seams. Legislators feared the state would need to handle an influx of inmates projected at far more than the state could afford to lock up.

The Kansas prison system was staring a dismal future in the face—it would need an additional $500 million by 2016 to house an inmate population projected to increase by 22 percent, according to The Council of State Governments' Justice Center.

In fact, according to a new Pew Center on the States report, "One in 100: Behind Bars in America 2008," released in January, for the first time in history more than one in every 100 Americans is locked up in prison.

And like Kansas, many state departments of corrections' budgets are feeling the crunch.

But prisons are expensive to build.

In Texas, for example, it costs $250 million to $300 million to build a medium security prison housing 2,200 to 2,500 inmates and another $40 million a year to staff and operate the facility, according to Texas Rep. Jerry Madden, who is also the chair of the Texas Corrections Committee for the legislature.

Last year, states spent more than $49 billion on corrections, up from $11 billion 20 years earlier, according to the Pew report.

"The stakes here truly are high," Jake Horowitz, senior associate with the Public Safety Performance Project of the Pew Center on the States, told an audience at CSG's spring meeting in Lexington, Ky., in May. "If we don't do our job well in this field, people get hurt and taxpayer dollars can get squandered."

Kansas Takes Action

Kansas officials decided a better use of taxpayer dollars would be to curb prison spending and reinvest those dollars in programs targeting the root of the problem.

Partnering with the Justice Center, Kansas officials worked to uncover the multiple factors driving the prison population growth.

At the root of the problem, for one, were individuals whose parole or probation was revoked—landing them back in prison. Those individuals accounted for 65 percent of prison admissions and took up 27 percent of prison capacity in the state, according to the Justice Center.

Ninety percent of those who lost their probation or parole in Kansas in 2006 went back to jail because they violated the terms of their parole or probation. Thirty-two percent broke parole or probation with alcohol or drug use, the Justice Center reports. And 58 percent of the people who lost their parole or probation demonstrated a need for substance abuse or mental health treatment, according to the Justice Center.

In May 2007, Kansas lawmakers came up with a plan to solve all that—Senate Bill 14.

The bill "was designed to give (the corrections depart-

> "... We ought to look at some programs that keep people either from returning to prison or from coming there in the first place that do not endanger public safety."
>
> —*Texas Rep. Jerry Madden*

ment) funding to kick-start risk reduction programs," said Margie Phelps, director of Re-entry Services in the Kansas Department of Corrections.

Kansas risk-reduction programs are designed to keep people from relapsing and coming back to prison once they get out. And legislators in Kansas believe in these programs.

Lawmakers are seeing that risk reduction programs that are a few years old are reducing return rates, the number of people absconding is going down, and crimes committed by parolees are going down, Phelps said.

With Senate Bill 14, lawmakers in Kansas basically provided an additional $7 million in funding to special risk reduction programs in the prisons and provided incentives to get more offenders to participate in those programs. Those measures and others in the bill are expected to avert $80 million in state spending over the next five years, according to the Justice Center.

As a result of the new law, state officials changed prison population projections. Instead of a 22 percent increase, state officials are expecting a much lower 4 percent increase in Kansas' prison population over the next 10 years.

Of the treatment programs receiving additional funding, therapeutic communities—an extreme Kansas program that seeks to change risky behaviors in specific groups of the prison population—are receiving additional funding. In the yearlong program, inmates with similar issues are literally housed together in a specific satellite unit or prison facility and they learn to function socially within that community.

"It's uncomfortable," Phelps said. "Think about the behavior that you have had that most bothers you and that it's a habit that you've had for the longest time in your life and you're trying to change that—that's what we're dealing with here."

But it can be difficult to get inmates to sign up for such a life-changing and behavior-breaking experience.

When staff in the Kansas Department of Corrections asks offenders to work with the risk reduction staff and join one of these therapeutic communities or other treatment programs, "one out of three will say no," Phelps said.

But with the new legislation, inmates can qualify to get out of jail 60 days early if they participate. "So the 60-day credit is just one incentive in their toolbox now," Phelps said. "If you're in a yearlong or 22-week program, you come to some spots where you just want to chuck it—again, that's very common in our population. I think this will be a chance to say, 'are you sure you want to chuck it? Look how far you've come, and remember you can get these 60 days of credit.' It will just be a part of the conversation."

The first offenders eligible for the 60-day credit are those whose offenses occurred after Jan. 1—and to date, no inmates are eligible, according to Phelps.

Prison Beds No Longer for Rent

Virginia, like Kansas, is also feeling the budget crunch in the department of corrections. To make up a budget shortfall in the department, state lawmakers OK'd a plan to rent prison beds to out-of-state inmates. But Virginia Gov. Timothy Kaine halted that plan in June.

"The issue there is we all had budget cuts. Every agency had budget cuts and (are) getting ready to go through some more," said Barry Green, deputy secretary of Public Safety in Virginia. "So for the Department of Corrections it was $19.2 million a year."

The plan to rent the prison beds was supposed to make up that money.

"That way they'll be able to keep all of their existing prisons open," Green said. "But with a $19.2 million reduction—and if you had to take that in cuts—they'd have to close something."

The governor put a stop to the plan after several sheriffs complained that Virginia was leasing space in its prisons to out-of-state prisoners while Virginia inmates remained in local jails funded with local tax dollars, according to *The Virginian-Pilot*.

The state is currently housing 300 Wyoming inmates—generating $7.2 million a year for two years, according to Green, but won't take in any other states' inmates, although more may come from Wyoming.

"So how they're going to make up that budget cut is still up in the air," Green said.

That shortfall is an estimated $12 million a year, according to Green. That means a new 800-bed expansion to a Virginia state prison will not open because the state doesn't have the money to operate it, Green said.

And further adding stress to the budget, Virginia's prison population is expected to grow by 1,000 prisoners a year, Green said. "It would take a prison a year to meet that forecast," he said. "If it's necessary to protect public safety, we'll find the money."

Delegate David Albo agrees. "We usually don't have a problem finding communities for prisons, because they provide good jobs," he said.

The newest project is a prison in Charlotte County, which could be a privately run prison, although that decision is not final, Green said. The new prison could house another 1,500 to 2,000 beds, he said.

"There's a lot of stuff that we're trying and I can't tell you that it hasn't made a difference. I can just tell you that we continue to have a reasonable amount of (prison population) growth—or unreasonable amount of growth as you might call it," Green said.

Texas Says Prisons Cost Too Much

Texas, some might say, used to be in a similar spot as Virginia.

Back in 2005 when Texas Rep. Madden became chair of the Texas Corrections Committee, the speaker of the state House gave him one charge: Don't build any prisons—they cost too much, he said.

"We had the projection going into the last legislative session that by 2012 we would be 17,000 plus prison beds short in the state of Texas," Madden said. "We had facing us what would have amounted to a big building project that would have cost us lots of money."

The dilemma for Texas was how to keep from spending billions of dollars in construction costs.

Then in May 2007, the Texas legislature passed a package of criminal justice legislation that included funding to expand treatment and diversion programs as well as new policies and procedures for probation and parole.

The biggest part of that package, according to Madden, was in the appropriations act where slightly less than $250 million was included to expand existing programs. Those programs include:

- 800 new beds in a residential substance abuse program for people on probation;
- 3,000 slots for outpatient substance abuse treatment for people on probation;
- 1,400 new beds in intermediate sanction facilities, diverting probation and parole technical violators from prison;
- 300 new beds in halfway houses;
- 500 new beds in a treatment facility targeting drunken drivers;
- 1,500 new beds for an in-prison intensive substance abuse treatment program; and
- 1,200 slots for intensive substance abuse treatment programs in the state jail system, according to the Justice Center.

"Here's a group of things we should spend money on and oh by the way, it's a lot less expensive than this other option of putting down a lot of concrete and a lot of bars and doing the things that you have to do to build a prison," Madden said.

Some of the programs got an early start after the funds became available Sept. 1, 2007. However, the programs that required new facilities are still in the planning stages, Madden said.

Texas is still several months away from measurable results, Madden said. But with the new funding and policy changes in place, the statistical evidence is enough to make Texas lawmakers proud.

"They came out with our new projection in January of this year as to what our prison needs are and what the prison population needs will be in 2012," Madden said.

"The number of prison beds we have to build is zero."

KEEPING TRACK

Updated Compact Keeps Juvenile Offenders from Falling Through the Cracks

After more than five years, a new Interstate Compact for Juveniles is expected to soon be official. The compact, which is designed to keep juvenile offenders from falling through the cracks of the justice system, needed passage in 35 states before becoming effective.

By Mikel Chavers

Updated Compact Adds Accountability, Enforcement

Every year thousands of juvenile offenders cross state lines and are lost in the system. Often left to fend for themselves and disconnected from social services and the help they need, some young offenders who would otherwise be supervised commit violent and nonviolent crimes.

But the new Interstate Compact for Juveniles seeks to change that.

First written in 1955, the compact is an agreement among states to track young offenders. The Council of State Governments' National Center for Interstate Compacts took on the challenge of rewriting the outdated compact in 2001 and advocating for its passage. The first state introduced the compact in 2003. In order to take effect, 35 states must sign the compact into law.

The new Interstate Compact for Juveniles significantly updates the agreement for tracking and supervising juveniles who move across state borders. The new language provides enhanced accountability, enforcement, visibility and communication and seeks to update a tool for ensuring public safety as well as preserving child welfare.

Now fully updated from the 1955 version, changes in the new Interstate Compact for Juveniles include:

- The establishment of an independent compact operating authority to administer ongoing compact activity, including a provision for staff support;
- Gubernatorial appointments of representatives for all member states on a national governing commission (The commission would meet annually to elect the compact operating authority members, and to attend to general business and rule-making procedures);
- Rule-making authority, provision for significant sanctions to support essential compact operations;
- A mandatory funding mechanism sufficient to support essential compact operations (staffing, data collection, training/education, etc.); and
- Language to compel collection of standardized information on juvenile offenders.

For up-to-date information on the passage of the compact in the 35th state, go to *www.csg.org* and click on the Capitol Comments link. For more information on the new compact, visit CSG's National Center for Interstate Compacts Web site at *http://www.csg.org/programs/ncic/default.aspx*.

On Sept. 18, 1998, the bodies of Gordon and Barbara Erickstad were found in a desolate area near Selfridge, N.D.—they had been stabbed. Earlier that day, police searched the couple's bloodstained home in Bismarck and found knives in the kitchen sink, according to North Dakota Supreme Court records.

The police investigation focused on the couple's adopted son and his friend from Texas. The two were later picked up in Texas and extradited to North Dakota where they faced charges of murder and other offenses, according to the court documents.

"It was just a horrific deal from one end to the other," said North Dakota Rep. Duane DeKrey. "When it was all done and said, we found out that the Texas kid was under supervision in Texas but had come to North Dakota, and Texas had absolutely no idea where this guy was or what he was up to."

With such a horrific murder involving youth lost in the system fresh in their minds, the North Dakota legislature became the first state to pass a special agreement for tracking and monitoring juvenile offenders designed to update an old, broken system.

"With this murder at the backdrop and the success of the adult compact, we were able to get it adopted," DeKrey said.

Back in March 2003, North Dakota was signed onto the new Interstate Compact for Juveniles. And after a more than five-year effort, the compact is expected to become official soon.

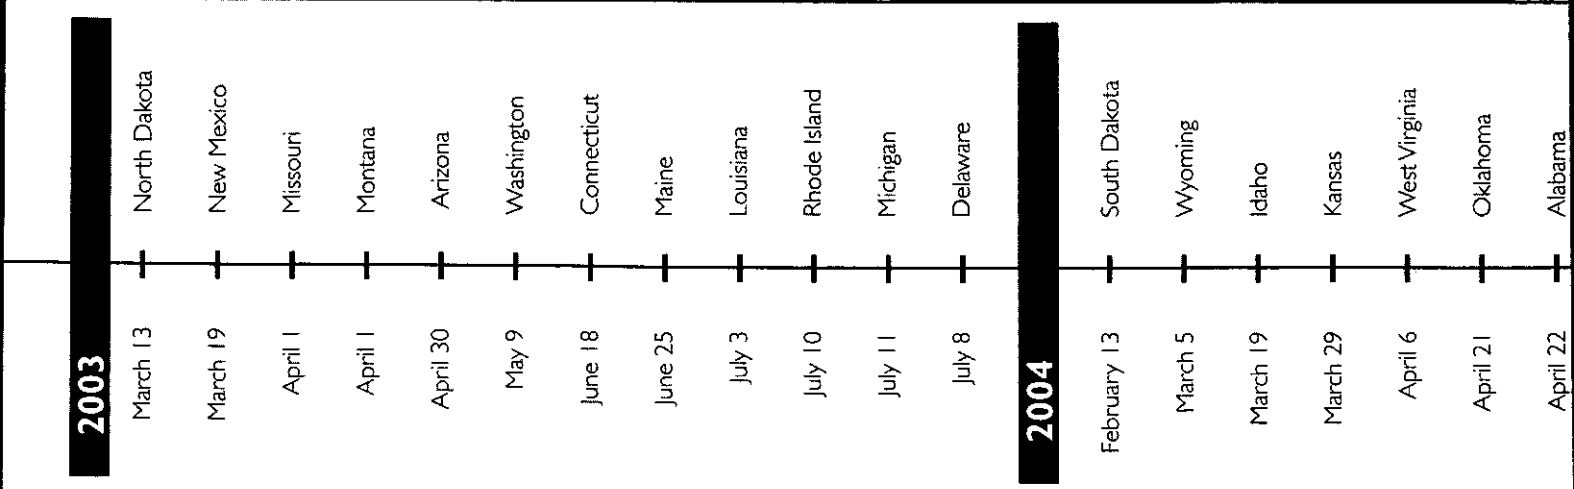
Illinois became the 35th state to pass the agreement when the legislature approved the compact and sent it to the governor for his signature in late June. As soon as the governor signs it there, the new compact will take effect nationwide. EDITOR'S NOTE: *At the time* State News *went to press, Illinois Gov. Rod Blagojevich had not yet signed the compact. Check The Council of State Governments blog, Capitol Comments, for the latest update.*

Fixing a Broken Compact

After taking on the project in 2001, The Council of State Governments' National Center for Interstate Compacts has stayed the course with the updated compact. "NCIC has devoted significant time and resources to making sure that 2008 did not end without something to show for our efforts," said Keith Scott, director of the center, which is based at CSG's Lexington, Ky., headquarters.

When 2008 began, Scott and his staff were faced with the predicament of having four states that had carryover legislation for the compact from 2007. The center began discussions with sponsors

Passing the Interstate Compact for Juveniles *(date compact passed)*



of the carryover legislation in an effort to jumpstart the bills for the 2008 session, according to Scott. At the same time, the center began intensive discussions with potential sponsors in the other respective legislative chambers.

"Fortunately we were successful on both counts in Illinois and Tennessee," Scott said. "Consequently, Tennessee has now enacted the compact into law and Illinois is on the verge of doing the same if the governor signs the bill."

And the old version compact was in dire need of an update, said Ray Wahl, a juvenile court administrator in Utah.

"First of all the compact language was antiquated; it hadn't been updated for quite some time," Wahl said of the original compact, which was written in 1955.

"Then there was this problem that there were three amendments to the original juvenile compact that some states signed on to (and) some states didn't sign on to them," Wahl said. "So it became very confusing for states to know which states were on board with certain stuff and not on board with certain stuff."

And because of the outdated compact, children were falling through the cracks, as in the case of the Bismarck murders. States were literally losing track of their young offenders when they crossed state borders.

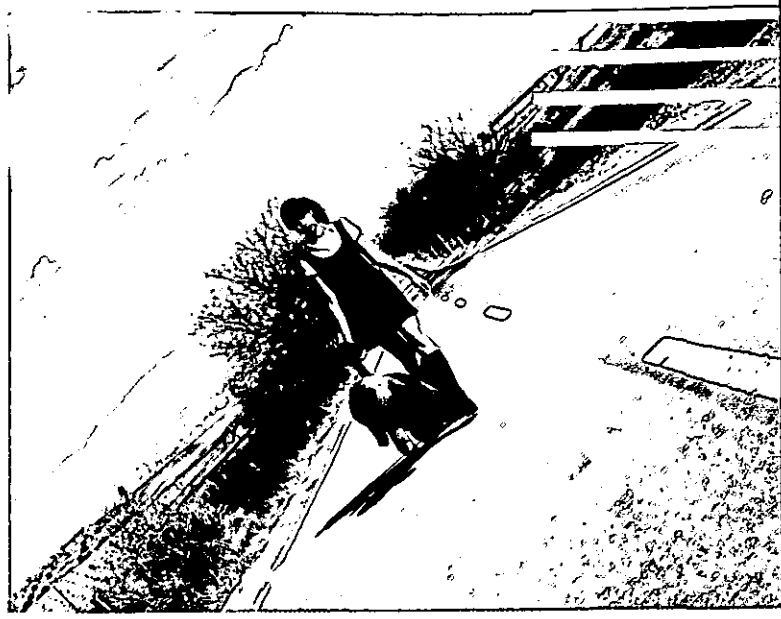
"Another big deal is there was really no authority anywhere to promulgate rules about this compact so whatever policies or rules that existed weren't promulgated with the proper authority—and that was part of the reason why they were unenforceable," Wahl said.

So, in effect, even though the old compact is still in place, there's no real way to settle disputes through the compact, Wahl said.

"So you have these rules that some states were complying with and some states weren't complying with but when a state didn't comply with the rules, there was no way to get a grievance, if you will, or a complaint heard about that," Wahl said.

But the new compact seeks to change all that with a built-in system to review complaints. The juvenile compact language took much the same form as the Interstate Compact for Adult Offender Supervision's language (the compact's equivalent for adult offenders), in that a national commission serves as a rule-making authority.

"And then there are the state councils and the state councils file complaints to this national commission for review and there's a process by which you resolve those," Wahl said.



The new juvenile compact was written with this in mind.

"The new compact was specifically designed to fill in those types of holes," Scott said. "Everyone has recognized for quite some time that enforcement was lacking. They have also realized that disputes between states have arisen with little in the way of structured resolutions. The current compact, with its interstate commission structure, is specifically set up for the purposes, among others, of providing just such a means of reliable enforcement and conflict resolution between jurisdictions."

The Next Steps

When Illinois officially enacts the compact, member states can implement the changes they intended when they passed the compact into law, Scott said. The states will all participate in, and develop, the transition from the old compact to the new one, he said.

And states such as Utah and North Dakota realize the benefit of getting in on the ground floor—participating in the transition from the old compact to the new one.

"I think its going to be something that is really going to be important in the juvenile area," Wahl said.

ANALYSIS: PAVING THE ROAD TO PROSPERITY

Auto Industry in the South Faring Well in Contracting National Economy

In stark contrast to the difficult fiscal positions states such as Michigan and Ohio face—primarily as a result of the decreasing automobile sector there—the auto industry continues to flourish in the South, generating billions of dollars in economic impact and creating thousands of direct and indirect jobs.

By Sujit M. CanagaRetna

The auto industry's drive to move South is paving the road for prosperity in the region, even while the U.S. economy inches toward recession.

The auto industry continues to prosper and play a dominant role in the economic calculations of the South with the advancement of several foreign automakers at a time when the industry's domestic Big Three—Chrysler, Ford and General Motors—face wrenching problems. As the U.S. economy experiences a great deal of tumult with a serious slowdown in growth, the automobile industry in general and the industry in the South in particular, have received an additional boost from the depreciating U.S. dollar—increasing auto exports of autos and other goods.

As a result, the industry's drive to move South continues, unabated and with renewed vigor.

A Growing Industry in the South

The South has attracted an impressive roster of foreign automakers in the last 25 years or so. Researchers attribute the success to a number of factors:

- the ability to construct new manufacturing facilities—incorporating all the latest technologies—more efficiently and effectively at a Southern location, than reconfiguring older assembly plants in the Midwest;
- the economies of scale created by the cluster effect with the growing number of automobile assembly plants and thousands of auto parts suppliers in close proximity to each other;
- the low or nonexistent rates of unionization and the negligible level of interest among Southern autoworkers to unionize;
- the attractive incentive packages—including tax breaks, worker training programs, an abundant labor pool and the ability to train a work force that has not worked in the auto industry previously—proffered by Southern states; and
- the extremely cost-effective intermodal transportation network in the region, spanning railways, highways, airports and, most importantly, ports.

Other attributes make the South attractive for automakers. The weather, reduced cost-of-living, lower or no personal income taxes, free or inexpensive property to build assembly plants, along with other attractive quality of life attributes, all make Southern locations very enticing. In addition, the cutting-edge research being conducted by two high-end research facilities—the Advanced Vehicle Research Center in Garysburg, N.C., and Clemson University's International Center for Automotive Research in Clemson, S.C.—confirms that the automotive industry in the South now extends far beyond assembly operations.

The region's success in attracting automakers has helped the South in the growing economic slowdown.

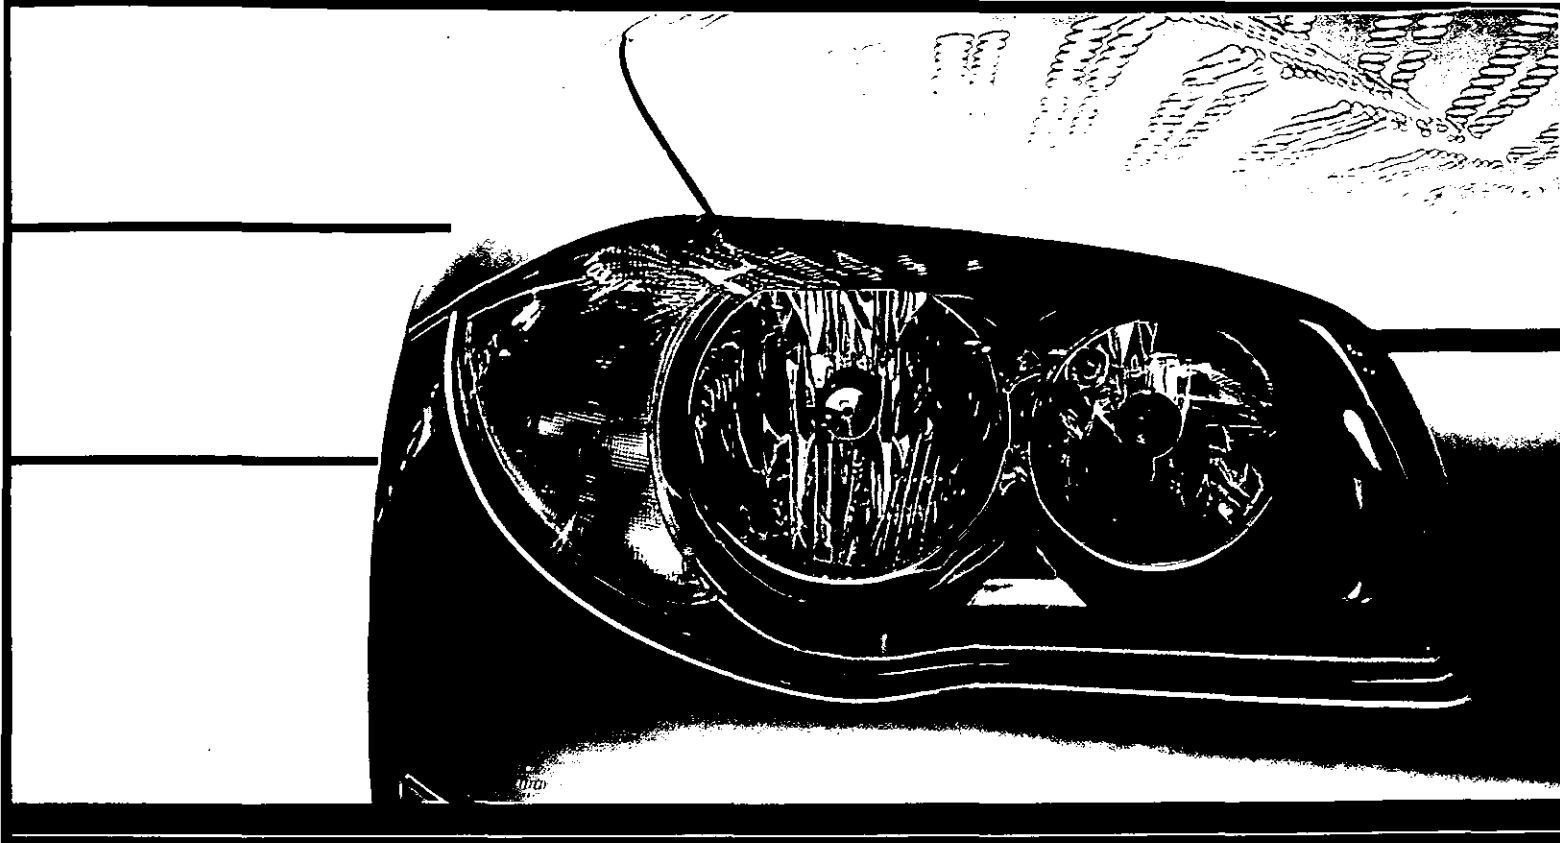
The ominous signs of a slowdown in the national economy apparent in several parts of the country by mid-2007, were made clearer in early 2008 with the release of recent gross domestic product figures, as well as weakening consumer spending, mounting inflation rates, tightening credit, rising unemployment, falling home prices and surging foreclosure rates.

But even with the gloomy economic news affecting both the national and individual state economies, the auto industry in the South has continued its upward trajectory in the last year. One factor driving this trend has been the rapidly depreciating U.S. dollar.

Automotive Exports from the South Increase

In the last year or so, the deteriorating economic situation in the U.S. was precipitated by the collapse in the housing and construction sectors in many areas of the country—propelled by the unraveling of the subprime mortgage sector—along with an unprecedented rise in energy prices and severe tightening in the credit

3849



markets. But in the midst of all this economic doom and gloom, the nation's export sector has been the one bright spot.

Not only did exports increase twice as fast as imports in 2007, which narrowed the U.S. trade deficit for the first time since 1995, but the increased level of trade is keeping the economy afloat. The impetus for the blossoming export sector has been the depreciating U.S. dollar.

On a year-to-year basis for the past seven years or so, the U.S. dollar has depreciated steadily, thus providing a sizable boost not only to American exports but also in attracting foreign direct investment into the country. The automobile sector in general and the South in particular, have benefited tremendously from both developments.

A depreciating dollar makes U.S. exports much more competitive with exports from other countries. Similarly, purchasing or investing in America becomes relatively less expensive compared to times when the dollar's value is rising.

The dollar depreciated by 79 percent between 2002 and 2008. In April 2001, a single Euro cost 90 U.S. cents; by April 2008, a single Euro cost $1.57 in U.S. currency. (See Table 1) The critical role played by a depreciating dollar in stimulating exports is apparent in U.S. trade flows of road motor vehicles between 2002 and 2007. (See Table 2)

Motor vehicle exports increased by impressive levels, both in terms of value and units, from 2002 to 2007, with the exception of 2003 when there was a nearly 3 percent drop in units exported. In 2007, in particular, when the depreciation of the dollar was significant, road motor vehicle exports increased by more than 22 percent in terms of value and more than 18 percent in terms of units, a trend that reinforces how the depreciating dollar promoted vehicle exports.

Even in terms of the 16 states is The Council of State Governments' Southern Legislative Conference, the impressive growth in U.S. transportation equipment exports—including motor vehicles and motor vehicle bodies and parts—to the world is apparent from a review of federal export statistics: Between 2002 and 2007, these exports expanded on average in these Southern states by nearly 97 percent, with Mississippi (279 percent), Alabama (141 percent) and North Carolina (132 percent) leading the way. In terms of the value of transportation equipment exports in key Southern states in 2007, Texas led the way with $16.3 billion, followed by Kentucky with $7.7 billion, Florida with $7.1 billion, Alabama with $5.9 billion, and South Carolina with $5.6 billion.

Previous SLC research noted how Southern ports rank at the highest level of significance from a national trade dimension—more than two-thirds of all U.S. exports and imports transit through a Southern port. Recent data from the ports of Baltimore, Md., Jacksonville, Fla., Charleston, S.C., and Savannah, Ga., document the significant number of automobiles handled by these Southern ports—more than any other set of ports in the country.

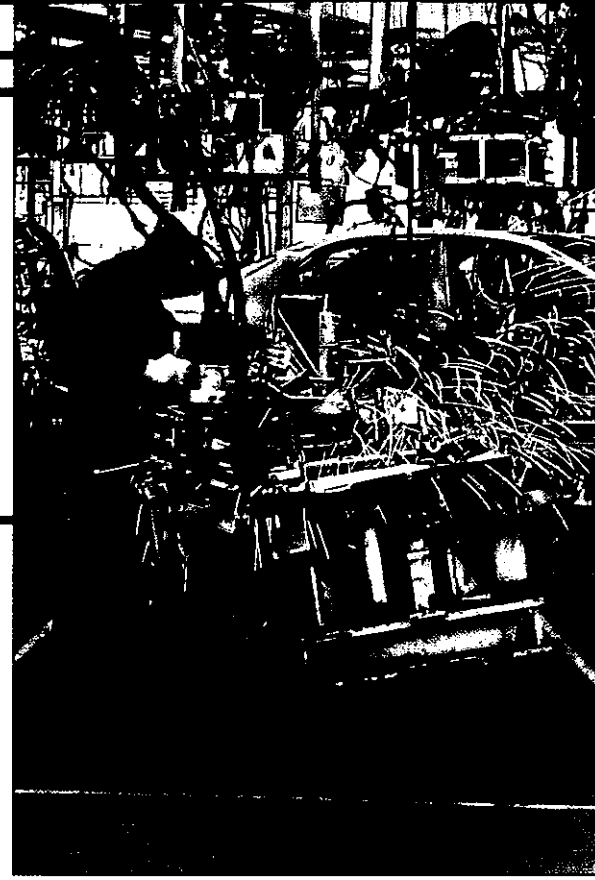
In 2007, Baltimore surpassed Jacksonville as the nation's top vehicle exporter—with an 80 percent increase from the previous year, to nearly 294,000 units—as the weakening dollar propelled a surge in auto exports. Jacksonville still handled an imposing 614,647 vehicle units in fiscal year 2007, while Charleston saw a 67 percent jump in BMW vehicle exports from its terminals in 2007. Savannah's growth in automotive exports over the five-year period from 2003 to 2007 amounted to a staggering 183 percent, including a 52 percent expansion between 2006 and 2007.

Foreign Investment in the South Grows

Along with the surge in automobile industry exports, particularly from the South, the atrophying U.S. dollar also resulted in sizable foreign investment in the industry in the region. In March 2008, BMW announced it would spend $750 million and

3850

The Council of State Governments' Southern office, the Southern Legislative Conference, continues to focus on the economic impact of the automobile industry in the South. In November 2003, the SLC released a report titled The Drive to Move South: The Growing Role of the Automobile Industry in the Southern Legislative Conference Economies. *This 148-page report featured an in-depth review of the auto industry in the South. The SLC has also published articles further clarifying the growing importance of the automobile industry in the South in Global Corporate Expansion. Visit* www.slcatlanta.org *to read the publications.*



hire 500 workers in an expansion that will transform its Greer, S.C., plant into one of its largest facilities. While increasing production by 50 percent at the South Carolina plant by 2012, BMW will slash 7.5 percent of its German work force in the next two years.

Then, Volkswagen, which relocated its North American headquarters from Michigan to Virginia in 2007, announced it would build "a high-volume auto factory in the USA to escape the currency exchange pinch from a weak dollar and a strong Euro." Once again, a number of Southern states—Alabama, Kentucky, South Carolina and Tennessee—top the list of prospective locations for the plant, which will begin producing up to 250,000 vehicles and employ about 2,000 people by 2011. Also, in April 2008, Nissan announced it would invest an additional $118 million in its Canton, Miss., facility to build three new models of light commercial vehicles by June 2010.

On the auto parts supplier front, more news confirmed the continuing importance of the South in the auto industry. In Tennessee, 948 auto suppliers operate in 194 communities across the state; in total, the industry employs 125,000 Tennesseans, including the assembly workers at the Nissan plants in Smyrna and Decherd, the GM plant in Spring Hill and the Peterbilt truck plant in Madison.

After considering two other states, the Indiana-based automotive supplier PK chose to invest $35 million and build a facility in Senatobia, Miss., to make stamped and welded steel parts for the $1.3 billion Toyota manufacturing plant that will open in nearby Blue Springs in 2010. Also in preparation for the new Mississippi Toyota plant, auto parts supplier Vuteq plans a $31 million facility that will employ 630 people in New Albany, Miss., to manufacture molded plastic pieces and components. Another supplier, Toyoda Gosei, will establish a $19 million plant creating 120 new jobs in Batesville, Miss., to build injection-molded plastic parts for the Toyota Highlander. Mississippi has more than 90 automotive manufacturing, distribution and supplier companies.

In Georgia, Kia auto parts supplier Daehan Solutions revealed plans to open a $35 million facility creating 300 new jobs in Harris County, Ga., near the proposed Kia manufacturing facility in West Point.

—Sujit M. CanagaRetna is a senior fiscal analyst in The Council of State Governments' Southern office, the Southern Legislative Conference.

funding the future

States Strive to Make Higher Education Affordable

As tuition increases at sometimes double-digit rates across the country, states are looking for ways to help students from low-income families pay for higher education. Some states are providing full tuition at in-state public universities, while others give scholarships based solely on academic performance.

By Mary Branham Dusenberry

When she was an Indiana eighth grader, Joy Martin-Day made a decision: She would go to college, regardless of the obstacles she might face along the way.

Like many students, one of her biggest obstacles was the ability to pay tuition and all the costs associated with higher education. Another was getting her mother to buy into the education dream.

"Parents, their mindsets are more on 'I'm trying to plan our meal for tonight. If you look in our cupboard, there's not much there, and how can you plan for college and there's nothing in the house to eat,'" Martin-Day said.

Indiana's 21st Century Scholars program changed that attitude, and convinced both Martin-Day and her mom that a college education was within the youngster's reach.

Seana Murphy, director of the 21st Century Scholars, said a first step in the program's success was changing people's perceptions about the ability of low-income students to afford college.

"The initial thought behind it was how do you change student aspirations so that they believe themselves capable of going to college, with the understanding that the affordability issue was one of the primary barriers to students in that income percentile even thinking about going to college," Murphy said.

That's why Indiana's scholarship program is about more than just money. It strives to educate parents and students about the whole college experience. But the financial worry was a major hurdle, even with Indiana's robust need-based aid program. The assurance of additional scholarship money to help pay the growing college costs, Martin-Day said, "is like a pillow ... easy to sleep at night."

Costs of Education Rising

As tuition and other college costs skyrocket, more states are looking at programs to make college more affordable.

Measuring Up 2006—the latest report card available from the National Center for Public Policy and Higher Education judging state performance on such issues as affordability, participation and benefits of higher education—said college tuition and fees rose 375 percent between the 1982–84 baseline to 2005. That's more than the increases in the cost of medical care, which increased 223 percent, the consumer price index, which increased 95 percent, and family income, which increased 127 percent.

But Patrick Callan, the center's president, advises state officials to not look past their own borders to determine whether their residents can afford college.

Each state's report card, he said, is based neither on the perceived value of higher education nor on what other states are charging. Instead, it's based "in terms of family income in your state—what portion of that income it would take to send someone to a two-year public, a four-year public or a four-year private college or university," he said. "Of course, the whole country has gone south dramatically."

In fact, Measuring Up 2006 gave only seven states passing scores for affordability, and their grades were Cs and Ds.

In Indiana, for instance, the cost to attend a public university would take, on average, about 30 percent of annual family income—but that's up to 69 percent of annual

income for those in the lowest income category, according to the 2006 report. Even after financial aid is factored in, those with the lowest income would still pay more than 44 percent of their income for higher education. While Indiana received an F for affordability, it did get good marks for state investment in need-based aid, and the 21st Century Scholars is just one program that ensures college is within reach.

By contrast, in Utah—which, with a C-, had the best grade on affordability—families would need to pay an average 18 percent of their income for college expenses, the report said. The range was from 7 percent for the highest income earners to 40 percent for those with the lowest income.

The need for increased family contribution comes as states have decreased the amount given to colleges and universities, and is also at a time when colleges and universities are increasing tuition costs.

While state funding for higher education has fared well in good years, it's been cut more severely than other programs in the bad years, Callan said. "You have this roller coaster effect which spills over, unfortunately, into tuition," he said. "So we end up cutting budgets and raising tuition the most when the economy is down, when it's harder on students."

That often comes at a price for states: "The bottom line is that in states with citizenry that have a higher likelihood of having a degree, per capita, income is higher. The higher the educational attainment is, the higher per capita tax revenues flow back to state coffers," said Dan Hurley, director of state relations and policy analysis for the American Association of State Colleges and Universities.

The need for better educating the nation's younger work force is heightened by the retirement of baby boomers, which, Callan said, comprise not only the biggest generation but the most educated one as well. To fill the gap left by those retirements, states will need to educate a larger portion of subsequent generations, and for that reason, he said, states should set a goal for higher education attainment, and find funding to meet that goal.

States Offer Programs

Several states have done just that. Oklahoma, for example, includes educational excellence, along with strengthening the economy, among its top priorities. Increasing the number of college graduates is a key to meeting both those goals.

"The states that have a higher percentage of their citizens with college degrees are the states with higher per capita income and a stronger economy," said Glen D. Johnson, chancellor of the state's Board of Regents. "I think we've made the case that there's not an entity in state government that helps the state reach its goals quicker or more comprehensively than higher education."

That case has helped state regents to secure permanent funding for the Oklahoma's Promise scholarship program, which pays the full tuition for students who meet eligibility criteria. "The state of Oklahoma, through our legislature and governor, is saying that the top priority in state government is funding the Oklahoma's Promise program," Johnson said. "They literally fund that before they fund anything else in state government."

The scholarship is available to students from families with less than a $50,000 annual income. Students must also maintain a 2.5 grade point average and take college preparation courses in high school, and agree to "stay out of trouble," said Johnson.

Bryce Fair, associate vice-chancellor for scholarships and grants, said the $50,000 income limit takes in about half of Oklahoma's families.

Fair said the income eligibility was much lower when the program began in 1992. He said the program had a stigma because it was limited to families earning under $24,000, and therefore had fewer students interested in participating. With the change to $50,000 in 2000, "it instantaneously became a broad-based program ... the sensitivity about being identified as an Oklahoma's Promise student dropped dramatically," Fair said.

More than 20,000 students have received the scholarship to date. By 2010, Johnson said, more than 20,000 students will be participating in the program in any given year. The scholarship is available to students on top of other traditional need-based and merit-based aid.

Not all educational assistance programs being developed by states are need-based. Kentucky, for instance, funds scholarships for students based on grades and test scores.

Former Gov. Paul Patton believes states should also provide assistance to middle and upper income students who make the grade. Patton spearheaded higher education reform in Kentucky in 1997, and was recently appointed to the state's Council on Postsecondary Education.

Part of the reform effort, Patton said, was to get more money for scholarships. The Kentucky Lottery funds need-based college aid, but a portion also goes to the Kentucky Educational Excellence Scholarship. The popular program—commonly known as KEES—is based on a student's grade point average in each of the four years of high school as well as the ACT or SAT score. It's not an all or nothing proposition, Patton said, because the amount earned is based on performance in individual years.

"What KEES does is give parents the opportunity to sit down with their child as a freshman in high school and start talking about the college education," he said. "They can start saying, it's your responsibility to earn part of the cost of your education."

That additional tuition assistance has helped to offset the annual increases in the cost of higher education, Patton said. When he was elected, the state offered $15 million worth of scholarships, but by the time he left office after his second term, scholarship investment had grown to about $150 million, he said.

Like Kentucky, Arkansas is considering a lottery to fund scholarships. Lt. Gov. Bill Halter is backing a constitutional amendment to allow the state to operate a lottery with the restriction that all net proceeds be used for college scholarships. Arkansas residents will vote on the amendment in November. Halter said some estimate the proceeds could reach $100 million a year for scholarships. He believes more funding for college scholarships is imperative for Arkansas.

"We are 49th out of 50 states with the percentage of the adult population with a college degree. We need to be competitive in the 21st century economy and we need to change that," he said.

"Higher education has never been more important to the economic success of the individual or the states and at the same time, it's never been more expensive," said Halter. "The initiative we have underway is designed to bridge that gap."

529s Bridge the Gap

States across the country are striving to bridge similar gaps in the affordability of higher education for their residents. And

some states have been offering a tax-free way for parents to save for their children's higher education costs since 1988.

Similar to 401(k) retirement plans, the 529 savings plans grow depending on the investment options selected by parents. Michigan and Florida started the first two college savings plans in 1988, and now 10.5 million accounts exist in 49 states and Washington, D.C., according to Kevin Johnson, communications manager for the National Association of State Treasurers, with which the College Savings Plan Network is affiliated.

"All the earnings in these plans are exempt from federal taxes as long as they're used for qualified education expenses," Johnson said.

"Higher education has never been more important to the economic success of the individual or the states and at the same time, it's never been more expensive."

—Arkansas Lt. Gov. Bill Halter

Some states previously offered prepaid tuition plans through the 529 program, but these plans are not as common as the savings plan, Johnson said.

"States saw this problem of families not being able to afford college, so these plans address that need and they also make it affordable for most families to do it," Johnson said.

Anything states can do will help, Hurley, of the American Association of State Colleges and Universities, said. "We need to seek collectively to elevate higher education as a major public policy priority," he said. "Otherwise, that whole middle class is going to continue to erode further and faster."

CSG Initiative Aims to Reduce Childhood Obesity

SCORE team members visited Osceola High School to view their anti-obesity efforts while attending the Southern Collaborative on Obesity Reduction Efforts Leadership Summit in May in Orlando, Fla. Dr. Veronica Gunn, from left, Tennessee's chief medical officer, talks to Susan McKay, physical education/health specialist at Osceola High School. Kentucky state Rep. Addia Wuchner discusses physical education programs with Principal Charles Paradiso. Photo by Jennifer Ginn.

How can states fight childhood obesity? Who needs to be involved? What type of policies can be implemented, and how do you get the public to buy in to these new ideas?

Those were just a few of the questions facing policymakers during the Southern Collaborative on Obesity Reduction Efforts—known as SCORE—Leadership Summit in Orlando May 8–10. A new Council of State Governments' initiative, SCORE is a two-year program funded by the Leadership for Healthy Communities aimed at reducing childhood obesity through policymaking in six Southern states.

The conference brought together teams from Kentucky, North Carolina, South Carolina, Tennessee, Texas and West Virginia to share ideas and begin planning how each state will tackle childhood obesity.

Dr. Robert Cluck, a physician and mayor of Arlington, Texas, said the best part of SCORE is that the teams bring together a wide array of people from each state—legislators, representatives of the departments of education, health and agriculture, mayors and even local educators. The time to talk to other states during the meeting also helped form new ideas, he said.

"There's no need to reinvent the wheel," Cluck said. "A lot of the states are doing innovative programs."

Each state is eligible for a $10,000 grant to be awarded this fall. The grants will be targeted toward helping the team advance its work of reducing childhood obesity in its state.

"Every state appears to be at a different level," said Lynn Hoggard, state director of child nutrition services at the North Carolina Department of Public Instruction. "For North Carolina, this allows us to continue the momentum. ... The meeting gave us new ideas, different ways of approaching this epidemic."

CSG Launches New Transportation Advisory Group

A new panel to address the increasing importance of transportation policy in state governments met for the first time during The Council of State Governments' Spring Conference in Lexington, Ky. CSG's movement into this policy area comes at a critical time, as Congress prepares to debate the future federal role in transportation financing.

"The debate over transportation needs and how government meets them in the next generation is fundamental," said Tennessee Senate Majority Leader Mark Norris, the group's chairman. "The Transportation Advisory Group assures CSG a voice in that debate and an opportunity to provide an additional forum ... not only to represent the interests of our stakeholders in the defense of states' rights but to assure fairness within our federal system as funding is reauthorized."

The advisory group was assembled based on the recommendations of staff from the CSG regional offices. Its initial membership includes two legislators and one executive branch official from each of the four regions. Sens. Carlene Walker of Utah and Yvonne Miller of Virginia were elected as vice-chairs during the Lexington meeting.

At its initial meeting, the group passed a resolution in support of transportation initiatives that incorporate increased intergovernmental participation, a multi-modal and regional approach, environmental and economic development concerns, as well as preservation of the federal-state partnership in transportation funding. The resolution also calls on Congress to take immediate steps to ensure the Highway Trust Fund does not reach a negative balance and to pass legislation establishing a reliable and predictable long-term funding source for transportation.

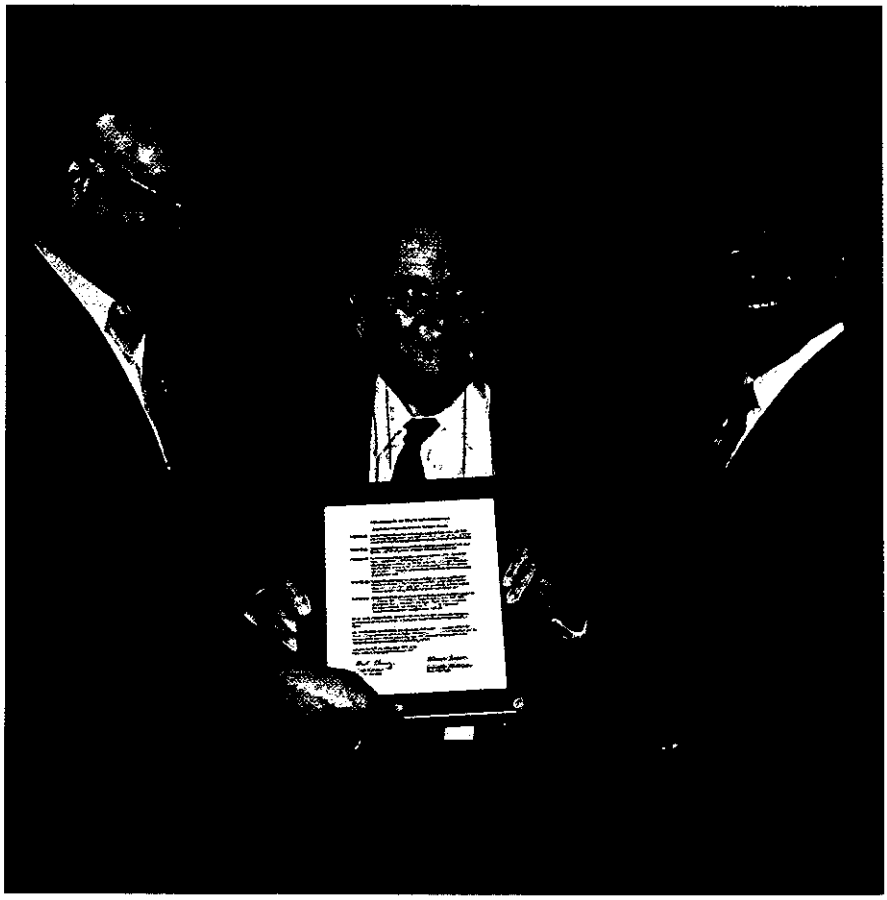
Norris said the enthusiasm of members and panelists during the Lexington forums was very high. "Everyone is eager to be a part of the advocacy," Norris said. "There is a sense of urgency about this with the realization that the lifeblood of liberty flows through our transportation network, and it is in jeopardy."

CSG hopes to eventually expand the membership of the Transportation Advisory Group and to convene in the future as a full working group.

"I am honored to chair the advisory group at this critical time and value the wisdom of my colleagues and resources of CSG," Norris said. "They will be invaluable in meeting the challenge we face."

3858

Guardian of Federalism Award Named for Tennessee Sen. Douglas Henry



State Sen. Douglas Henry of Tennessee, center, was presented a resolution renaming the Guardian of Federalism Award in his honor at CSG's spring conference in Lexington, Ky., by Kentucky Senate President David Williams, left, and CSG Executive Director Daniel M. Sprague. The award is now the Douglas Henry Guardian of Federalism Award. Photo by Jack Penchoff.

The annual Guardian of Federalism Award, presented each year by The Council of State Governments to members of Congress who demonstrate outstanding efforts on issues concerning states' rights, is now named in honor of Tennessee state Sen. Douglas Henry.

Each year CSG presents the awards to one member of the U.S. House and one member of the U.S. Senate who during the past year most actively defended federalism and the interests of states.

The Senator Douglas Henry Guardian of Federalism Awards were announced Saturday, May 31, at the CSG 75th Anniversary Spring Conference in Lexington, Ky. Sen. John D. Rockefeller of West Virginia and U.S. Rep. Tom Davis of Virginia were recognized with the award this year.

Following the announcement, CSG Vice Chair David Williams, president of the Kentucky State Senate, said Henry's "fidelity to the cause of federalism has provided the crucial contribution advancing CSG's participation in amicus briefs filed by the State and Local Legal Center before the U.S. Supreme Court defending state sovereignty and the core principles of federalism."

Henry is a past chairman of The Southern Legislative Conference of CSG and serves on CSG's national governing board and intergovernmental affairs committee, of which he is past chairman.

David Eisenhower Returns to Midwestern Leadership Institute

Prominent author, historian and political scientist David Eisenhower will return for a second year as the keynote speaker at the Bowhay Institute for Legislative Leadership Development, the leadership training program hosted by The Council of State Governments Midwestern Legislative Conference.

Eisenhower is director of the Institute for Public Service at the University of Pennsylvania's Annenberg Public Policy Center. His biography of his grandfather, *Eisenhower: The War Years, 1942–45*, was a runner-up for the Pulitzer Prize in history. Eisenhower has a unique perspective on the workings of American politics, and will discuss the meaning of public service and his insights as part of a family legacy of public service with this year's BILLD Fellows.

In May, the BILLD Steering Committee met to award this year's BILLD Fellowships. Thirty-seven lawmakers from the Midwestern states and Canadian provinces will gather in Madison, Wis., Aug. 8 for five days of intense leadership training, professional development seminars and policy workshops. A complete list of this year's BILLD class can be found on the CSG Midwest Web site at *www.csgmidwest.org*.

Each year, fellowships are awarded to Midwestern legislators through a competitive, nonpartisan selection process overseen by the MLC BILLD Steering Committee. Iowa Rep. J. Scott Raecker and Illinois Rep. Elaine Nekritz serve as the committee's co-chairs and Minnesota Rep. Laura Brod and Michigan Rep. John Moolenaar are the panel's vice chairs.

3859

Wilson Wins Rooney Award

Sara Redding Wilson was selected as the winner of the 2008 National Association of State Personnel Executives Eugene H. Rooney Jr. Leadership Award.

Wilson was appointed director of the Virginia Department of Human Resource Management in April 1998 and is the first person since 1974 to be reappointed twice to that position. During her tenure, Wilson was instrumental in re-engineering human resource programs statewide and introducing technological solutions to human resources initiatives.

She is a former executive vice president, general counsel and corporate secretary for Signet Banking Corporation and served as a member of the management committee. She is a graduate of Hamilton College and the University of Richmond School of Law. Wilson served as NASPE president from 2006 to 2007 and hosted the association's 2007 Annual Meeting in Williamsburg, Va.

Delaware's DelaWELL and the Delaware Employment Link share honors as winners of the 2008 Rooney Award for Innovative State Human Resource Management Program. Louisiana's Retiree Rehire Database received the Award of Merit. Visit NASPE's Web site at *www.naspe.net* to see the winning submissions and other entries. The winning submissions were recognized in July during the awards banquet during NASPE's 2008 Annual Meeting Strategic HR: The New Frontier, in Oklahoma City.

The Rooney program was established in memory of Eugene H. Rooney Jr., who served as NASPE president at a time of great growth for the organization. This awards program recognizes innovative state human resource management practices that ensure access and equity while enhancing productivity and service delivery. It also recognizes individuals who exemplify the character, qualities and influence Rooney had on state personnel administration.

New Member Orientation Featured at Joint Legislative Service Agency Meeting

New member orientation was at the top of the agenda for legislative service agency directors from around the U.S. when they gathered in Lexington, Ky., May 29–30.

Staff leaders from Virginia, Ohio, Louisiana and Wyoming opened the discussions on new member orientation. In a second session, lawmakers from Kentucky, Idaho and Connecticut were invited to tell participants what works and what doesn't from legislators' perspective.

Participants in the meeting also enjoyed a morning spent in teamwork training offered by the University of Kentucky.

In addition, participants were invited to optional policy briefings on interstate compacts, health and criminal justice at CSG national headquarters as well as to meetings on Selected State Legislation and financial services.

Hosted by the Southern and Western regions of The Council of State Governments, the joint meeting was an opportunity for legislative staff directors to share best legislative management practices across their respective regions. This was the first joint meeting of CSG's regional staff groups in 10 years.

Limited copies of new member orientation agendas from the Southern and Western regions of CSG are available by calling 404-633-1866 and 916-553-4423 respectively.

3861

Although the federal government tends to get more attention, state officials are often on the front lines of cutting-edge trends and issues. On the other hand, sometimes in the community of state governments, the more things change, the more they stay the same.

In print since 1958, *State News* (formerly *State Government News*) has chronicled many of the changes ... and continuities.

Here's what we reported on:

40 years ago—August 1968

Lieutenant Governors Call for Educational Change

The National Conference of Lieutenant Governors—now known as the National Lieutenant Governors Association, an affiliate of The Council of State Governments—called for a major re-examination of the 12-year system of public education, according to an article in the August 1968 *State Government News*.

The lieutenant governors, in their eighth annual meeting, adopted a resolution suggesting the Department of Health, Education and Welfare, in cooperation with the Education Commission of the States, meet with state representatives to consider compressing the present education system into a shorter time-span, improving the curricula and improving flexibility.

Update

Many state education systems were reformed in the past few decades, and state legislatures are constantly looking for ways to improve the schools in their states. However, the 12-year system of education has actually been expanded, with many states adding kindergarten and preschool as educational opportunities for children.

25 years ago—August 1983

States Pursue High-Tech Jobs

As early as 1983, states were going after high-tech jobs, and governors focused their messages on proposals to attract such industries, according to an article in the August 1983 *State Government News*. While experts at the time said the Silicon Valley of California, the Research Triangle in North Carolina and the Boston area accounted for most of the high-tech jobs, they expected a shift to the Midwest, South and Plains states because of the availability of labor. The problem, they said in 1983, was education. The shortage of math and science teachers at the time raised concerns about those areas' ability to educate the labor force.

A panel of governors, business and education leaders said strengthening all levels of education is imperative for the U.S. to be able to compete with countries such as Japan for high-technology and energy-related industries. A National Governors Association survey of state initiatives in high-tech industries, found many governors had appointed task forces or boards to recommend overall state policy on high tech.

Update

States are still learning to compete in the global marketplace. Check out the analysis of the auto industry in the South on page 26, and learn what some states are doing to increase the education level of residents on page 30.

10 years ago—August 1998

Increasing Numbers of College Graduates

An article in the August 1998 issue of *State Government News* predicted a surge of college-age students in the coming decades. Enrollment in the nation's elementary and secondary schools reached an all-time high in 1996. And the U.S. Department of Education predicted in the mid-1990s that about 3 million more children would be enrolled in the nation's schools than at that time. That means more students would be enrolling in postsecondary education, wrote Robin Zuniga, then a research associate at the Western Interstate Commission for Higher Education.

Zuniga suggested in the article that state leaders would be forced to decide how to make room for every student who wants a postsecondary education and is eligible for admission.

Update

States today are trying to figure out how to get even more students into higher education. Because of the changing global economy, states are recognizing that if they are to remain competitive, they need to increase the rates of people attending and graduating from college. To that end, many states are focusing on programs to make college more affordable, especially for students from the lowest-income families. Read the story on page 30, and check out the CSG blog, Capitol Comments, for more on what states are doing to address college affordability issues.

Acknowledgements

Hornby Zeller Associates would like to acknowledge the support received from all of the agencies and individuals involved in this study. The depth and intricacy of the data analysis presented in this report was made possible through landmark business, research and confidentiality agreements between the Department of Corrections and Department of Health and Social Services.

In particular, we would like to thank Linda Walsh and Ron Hollar from the Alaska Department of Health and Social Services, Division of Health Care Services, for dedicating the time to generate a data extract from the State's Medicaid Management Information System. We would also like to thank Stephen Schneider from the Alaska Psychiatric Institute and Mike Gimm from the Department of Corrections for generating the data extracts from their respective data warehouses. We would not have been able to produce many of the outcomes in this report had it not been for their cooperation and assistance. We would also like to thank all the key officials within the Alaska Department of Corrections, Alaska Department of Health and Social Services and the Alaska Mental Health Trust Authority. We particularly acknowledge Steve Williams and Colleen Patrick-Riley for their guidance and detailed reviews of previous drafts. Without this collaborative support, this report simply would not have been possible.

This project is funded by the Alaska Mental Health Trust Authority under contract with the Alaska Department of Corrections. Colleen Patrick-Riley from the Alaska Department of Corrections and Steve Williams from the Mental Health Trust Authority served as the primary officials involved in the study. Its contents are the sole responsibility of the authors and do not represent the opinions of the funding agency.

Executive Summary

People with mental illness and cognitive impairments are over-represented in the correctional system compared to their prevalence in society. This has been shown in previous research. However, the impact of over-representation both on the correctional system itself and on the individuals affected remained largely unexplored. Therefore, the Alaska Mental Health Trust Authority (AMHTA) in conjunction with the Alaska Department of Corrections commissioned this study to obtain a more in-depth and comprehensive understanding of the experiences of this population. They wanted answers to questions such as: Are people with mental illness and cognitive impairments more or less likely to be incarcerated than others who commit similar crimes? Are they identified and treated while incarcerated? Do they stay longer? Do they recidivate more? What kinds of mental illnesses and cognitive impairments do they have and how do these relate to the kinds of offenses committed? How long does it take for them to get services in the community once they are released? Are there particular service models that have been shown to be effective and could reduce recidivism?

Performed by Hornby Zeller Associates, Inc. (HZA), the study examines four years of data using a unique methodology which matches information from multiple agencies and information systems within Alaska. The sources include Medicaid data from the Alaska Department of Health and Social Services, Division of Health Care Services (DHSS), psychiatric history from the Alaska Psychiatric Institute (API) and correctional history from the Alaska Department of Corrections (ADOC). The methodology allows, for the first time, the identification of individuals who were known to have a history of mental health treatment but who may not have been identified as needing treatment by ADOC during their period of incarceration. It also provides the ability to track Medicaid funded and hospital services received in the community during periods of diversion or post-incarceration.

Results of the study provide the State of Alaska with a unique opportunity to explore a critical and yet largely neglected dimension in correctional research — the impact of those with mental illness[1] or cognitive impairments on the statewide correctional systems as well as the impact of state services and correctional detainment on the individual. More importantly, the report provides key baseline information from which changes in the system can be assessed.

The report reveals the consequences of not adequately treating the needs of Trust Beneficiaries[2] in the community. It costs the State of Alaska millions of dollars each year in added prison costs and loss of Federal entitlements to have people recycle through the corrections system. Many Trust Beneficiaries are not identified as having mental health or substance abuse problems while incarcerated; as a result, a large proportion of these individuals are not receiving the mental health and behavioral health-related services they need upon release. For others there is a delay in time to resume Medicaid-funded services upon release. Consequently, Trust Beneficiaries as a whole are far more likely to return into the custody of ADOC and stay in custody longer than other offenders in the general population.

Additional correctional resources, improved systems integration, and better linkages with community health care providers will undoubtedly assist in alleviating the burden of care for Trust Beneficiaries on Alaska's criminal justice system. Should the State of Alaska invest in more diversionary strategies and implement

[1] As defined by the Diagnostic and Statistical Manual of Mental Disorders (DSM-IV-TR). See Appendix C for the list of multi-axial classifications.

[2] Trust beneficiaries are those experiencing: 1) mental illness; 2) developmental disabilities; 3) chronic alcoholism with psychosis; and, 4) Alzheimer's disease, related dementias and other cognitive impairments. See Appendix B for a more complete definition of Beneficiaries that fall under the purview of the Alaska Mental Health Trust Authority.

more evidence-based service programs, the State should ultimately realize net institutional savings while at the same time improving public safety and generating better quality-of-life outcomes for Trust Beneficiaries in Alaska's communities.

Major findings from the study indicate that approximately 42 percent of all inmates in custody ADOC are Beneficiaries of the Alaska Mental Health Trust Authority. Among those identified, Trust Beneficiaries are more likely to recidivate, recidivate sooner and spend more time in custody of the ADOC than other inmates.

The following highlights other key findings presented in the report:

- Over a four year time frame, a total of 11,631 people within the ADOC were identified as Beneficiaries of the Alaska Mental Health Trust Authority.

- On June 30, 2006, of the 3,628 people who were in the custody of one of Alaska's thirteen correctional institutions, 1,524 people (42 percent) constituted AMHTA Beneficiaries[3].

- Approximately 62 percent of Trust Beneficiaries in the Alaska Department of Corrections were identified from sources provided by the Department of Health and Social Services as opposed to databases maintained by the ADOC. Most of these had Axis I substance-related disorders and generalized mood disorders such as depression. Only a small proportion of Trust Beneficiaries with severe mental disorders such as schizophrenia or other psychotic disorders were identified as not having been known to both agencies.

- With the exception of those with more severe mental illnesses, there was an overall decline in mental health service utilization among previously Medicaid-funded Trust Beneficiaries exiting the ADOC. Medicaid-eligible Trust Beneficiaries with more severe mental illness (e.g., schizophrenia and other psychotic disorders) received more services after exiting the ADOC than they did prior to entry.

- The overall rate of recidivism for the Trust Beneficiary population is 1.6 times higher (36.2%) than for other offenders released from the ADOC (21.9%). Trust Beneficiaries are significantly more likely to re-enter the ADOC sooner than others released who did not have a mental illness. On the whole, Trust Beneficiaries with severe mental illness were less likely to recidivate than Trust Beneficiaries with mild mental illness or substance-related disorders who had a far higher rate of recidivism.

- Trust Beneficiaries who are either Alaska Native or Black are significantly more likely to recidivate than Whites or other races.

- Trust Beneficiaries with Axis I disorder(s) and Axis II personality disorder(s) are 1.6 times more likely to recidivate than Trust Beneficiaries who do not have both disorder.

- Trust Beneficiary populations most likely to recidivate are young, Black or Alaska Native males who have Axis I disorder(s) and Axis II personality disorder(s) but not an adjustment disorder.

- Trust Beneficiary populations least likely to recidivate are older, white females presenting mild mental health disorders who do not have Axis I disorder(s) and Axis II personality disorder(s).

[3] This does not include individuals in custody of the ADOC either in community residential centers or the contracted facility in Arizona.

- Sixty-one percent of Trust Beneficiaries with a psychiatric admission in the year preceding entry into the ADOC were re-admitted to a psychiatric facility in the one-year period following release from the ADOC.

- More than half of Trust Beneficiary clinical recidivists had at least two Axis 1 mental health disorders and nearly three-quarters had a co-occurring substance-related disorder.

- Trust Beneficiaries who receive mental health services upon release from the ADOC have a lower rate of recidivism than Trust Beneficiaries who did not receive any mental health services.

As a result of the major findings presented throughout the report, HZA encourages the Alaska Department of Corrections and key Stakeholders within the State to consider the following recommendations:

Recommendation 1:
Review and revise screening and assessment protocols for mental health to capture a higher, more accurate portion of the population.

Approximately two-thirds of all Trust Beneficiaries incarcerated within the Alaska Department of Corrections were identified by administrative data sources not maintained by the ADOC. Although the clinical characteristics of these unidentified Beneficiaries constitute mostly those with alcohol, drug and mild mental disorders such as anxiety or depression, the ADOC should consider reviewing its screening and assessment protocols because many of these Beneficiaries are continually recycling in and out of its correctional institutions. Current DOC screening provides identification of individuals with severe or obvious mental illness, but relies on self report to identify other Beneficiaries. It would be useful to develop screening tools to systemically identify moderate mental illness, brain injury, fetal alcohol spectrum disorder (FASD) and other brain disorders. Better identification will enable the ADOC to increase the number of potential Beneficiaries appropriate for referral to substance abuse or other institutional programming or for diversion into community-based services, thereby reducing recidivism and related costs while at the same time preserving public safety.

Recommendation 2:
Consider replacing the CONCON system with one that is more standardized, would allow entry of information pertaining to clinical screens and would be online so that contracted service providers in remote areas could also have access to it.

The Alaska Department of Corrections database (referred to as CONCON) used to maintain records on the Trust Beneficiary population it serves is antiquated, designed largely for qualitative purposes and the information it contains cannot be quantified without reading narrative summaries and hand counting, a particularly onerous task for staff within the ADOC as there are thousands of records maintained in that system.

In addition, information pertaining to the Trust Beneficiary population is entered into the CONCON database only for those individuals who assessed positively for a mental illness while in custody at one of Alaska's 13 correctional facilities. If an individual received a positive *screening* for mental illness but was released from the ADOC before he or she could receive a full assessment, the information would not be captured (screening results exist on paper copy only.)

There is also missing information in the CONCON database about Trust Beneficiaries being served among the remote facilities where the ADOC uses contractors to provide clinical services. These service providers do not enter information into the CONCON database; rather, they maintain assessment and clinical information on paper copy form only.

The number of Trust Beneficiaries identified by the ADOC without an electronic version of their clinical assessment in the CONCON database is estimated to be 1,124 people.
For these reasons and others, the ADOC should consider replacing the system with one that is more standardized, would allow entry of information pertaining to clinical screens and would be online so that contracted service providers in remote areas can also have access to the system. The new system should also include the ability to identify specific Trust Beneficiary populations particularly those with traumatic brain injury, fetal alcohol spectrum disorder, borderline intellectual functioning, and mental retardation, to name a few. This system should also identify and track individuals appropriate for or participating in diversion programs, therapeutic courts, and DOC mental health release programs.

This new system should also be designed in such a way to facilitate cross-referencing against DHSS systems to identify current or former clients of the behavioral health system. As previously noted, the cross-referencing activity in this study yielded a significant number of Trust Beneficiaries who were not identified by the Department of Corrections. Although it is recognized that this cross-referencing activity will not identify every inmate with a mental illness (e.g., an inmate who received private, grant, or other public or federally funded mental health care), it does represent a starting point from which to gather more reliable baseline data. Alaska would benefit from exploring other ways of exchanging information between DHSS divisions and DOC so as to best identify and serve the Trust Beneficiary population.

Recommendation 3:
Identify Trust Beneficiaries entering the ADOC who are Medicaid-eligible so that upon release assistance can be provided to help ensure continuity of care. Use ADOC liaisons with local Social Security and State Medicaid offices to facilitate reinstatement of Federal disability benefits (SSI, SSDI, Medicaid) for a broad diagnostic population of Trust Beneficiaries just prior to their release.

Individuals can qualify for Medicaid-funded mental health services in one of four ways, either through a qualifying mental health diagnosis that meets the Social Security definition of disability, as a side treatment for a qualifying physical disability that meets the Social Security definition of disability, as a side treatment for individuals who qualify for Medicaid because they are age 65 or older, or as a side treatment for individuals who qualify for Medicaid as the caretaker relative of a family with dependent children. While the primary reason for initial eligibility was not available, the study found that many Medicaid-eligible Trust Beneficiaries who were receiving mental health services prior to entering the ADOC, 28 percent were not receiving any Medicaid-funded mental health services after release. Among those not re-engaged in services, the State of Alaska is potentially losing the equivalent of an eight percent match in supplemental federal funds that might otherwise be used to pay for additional mental health services. As a result, there needs to be better identification of Trust Beneficiaries entering the ADOC who were receiving Medicaid or are Medicaid-eligible so that upon release assistance can be provided to help ensure continuity of care.

Since 2004, there has been a Memorandum of Understanding in place with the ADOC, the Social Security Administration and the Alaska Division of Public Assistance that allows the ADOC to facilitate Pre- and Post-Release Applications for severely mentally ill Trust Beneficiaries. ADOC mental health has a 100 percent approval rate for SSI/SSDI applications. ADOC could expand this working relationship to provide application assistance to individuals with other eligible diagnoses with additional staffing resources.

Recommendation 4: Implement more evidence-based services such as Forensic Assertive Community Treatment Teams or Forensic Intensive Case Managers (FACT/FICM) for the severely mentally ill Trust Beneficiary population exiting the ADOC.

Alaska's criminal justice system currently diverts Trust Beneficiaries from incarceration through a variety of avenues such as therapeutic mental health and addictions courts and some specialized release programs. The

3871

ADOC should continue to sustain and expand the existing APIC Reentry and other DOC mental health release programs for misdemeanors and felons. The ADOC should also consider expanding its partnership with community agencies to divert more Trust Beneficiaries from incarceration by implementing additional evidence-based services targeted to the population most at risk.

For example, national evidence-based best practice research suggests that Forensic Assertive Community Treatment (FACT) and Forensic Intensive Case Management (FICM) are the most promising approaches to managing correctional populations with severe mental illness. The main difference between the two FACT/FICM models largely surround organizational structure. FACT operates within the domain of a self-contained team providing direct services whereas FICM has case managers with individual caseloads who refer out to psychiatric treatment services in the community. Both models have generated positive results for correctional populations with severe mental illness.

Improving its efforts to ensure that Medicaid eligibility is sustained upon release and implementing evidence-based services (such as Forensic Assertive Community Treatment Teams or Forensic Intensive Case Managers (FACT/FICM) for the high-risk Trust Beneficiary population, the State would ultimately realize net institutional savings while at the same time improving public safety and generating better quality-of-life outcomes for the seriously mentally ill Trust Beneficiary population.

While there is clear and convincing evidence that incorporating diversion and best practice models does promote success, it is important to carefully identify appropriate candidates for diversion. Some individuals require a period of incarceration before release to appropriate programs in the community. Others could effectively be diverted pre or post charge.

Recommendation 5:
Expand more culturally sensitive programs for Alaska Natives.

Alaska Native Trust Beneficiaries receiving mental health care services after release from the ADOC have the highest rate of criminal recidivism. When compared to the general population of Alaska, the prevalence of Alaska Native Trust Beneficiaries sentenced to the ADOC (36%) is significantly higher than their prevalence in the general population (16%). While there are a number of other factors that are associated with the disproportionate arrest and detainment of Alaska Natives, the ADOC and community health care providers should consider introducing more culturally sensitive programming into the services they provide. The State of Alaska could partner with Alaska Native Tribal organizations to improve the design and delivery of behavioral health services.

Recommendation 6:
Develop more community-based mental health, substance abuse treatment and support services for Trust Beneficiaries exiting the Alaska Department of Corrections.

There is a general lack of community-based mental health and substance abuse treatment services for the growing number of Trust Beneficiaries exiting the Alaska Department of Corrections. In addition, safe and sober housing is inadequate to meet the current needs of the Trust Beneficiary population. The State should consider allocating additional funding for community-based alternatives to incarceration and increase capacity to deliver essential services to Trust Beneficiary probationers and parolees, including co-occurring substance abuse treatment. Developing an appropriate spectrum of community housing will be critical to Beneficiary success, ranging from independent to supportive living situations to structured options all with an emphasis on sobriety and consumer and public safety. Key stakeholders within the criminal justice system should work closely with mental health consumers, families and advocacy groups to improve services, develop new initiatives and involve all relevant agencies.

Should Convicted Felons Have Voting Rights?

by Bryan Knowles
Friday, June 9, 2000

As federal and state prison populations continue to swell and the 2000 elections are fast approaching, the issue of voting rights for convicted felons has gained increasing attention from candidates and the media. With the exceptions of Maine, Vermont and Massachusetts, the remaining 46 states and the District of Columbia prohibit inmates serving felony convictions from voting in any public elections. While a majority of states restore voting rights to convicted felons after they complete their prison terms or probation periods, at least ten states, including Virginia, Delaware and New Mexico permanently prohibit former felons from voting.

The legal authority of a state to revoke an inmate's voting rights is based upon the Fourteenth Amendment. While this amendment stipulates that, "no state shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States", it allows for the denying of the voting rights of individuals guilty of "participation in rebellion, or other crime". Under current law, the federal government may not infringe upon a state's authority to grant or rescind voting rights to prison inmates and former felons.

The legal disenfranchisement of inmates and former felons has come under increased scrutiny by civil rights and criminal justice groups. According to Human Rights Watch and The Sentencing Project, nearly 3.9 million people are prohibited from voting, a majority of whom are former convicts who completed their sentences. While legislation has been introduced in Congress that would allow former convicts to vote in federal elections if successful, the Supreme Court of New Hampshire ruled in March to strip incarcerated felons of all voting privileges.

On One Hand...

Assertions that the Fourteenth Amendment justifies the disenfranchisement of felons by states are dubious at best, especially when deciding what "other crimes" constitute the serious magnitude of "participation in rebellion." Disenfranchising inmates is counter to the American tradition of laboring for the expansion of voting rights for all citizens. In many states, the prohibiting of former convicts from voting has become a form of government-sanctioned discrimination against felons who have completed their restitution to society. This is especially true for African-American males who constitute a disproportionate percentage of disenfranchised former felons. Congress and state assemblies must support legislation that reverses this unconstitutional practice.

On the Other Hand...

The Fourteenth Amendment clearly demonstrates that the states have the Constitutional authority to disenfranchise both currently incarcerated and former felons for as long as they deem fit. In limiting the freedoms of convicted felons, incarceration is designed to punish inmates and impress upon them the magnitude of their crimes. As a privilege to be enjoyed by law-abiding citizens, prohibiting inmates from voting further drives this point home. Prohibiting former felons from voting for life ensures the integrity of the electoral process, especially in states and jurisdictions where

Surveys

Agree

Despite their convictions, felons are citizens and should be able to exercise their voting rights, especially after they have repaid their debt to society.

Disagree

Under the 14th Amendment, states are well within their powers to deny convicted felons all voting rights during and after their incarcerations.

Perspectives

Criminal Voters

The Disenfranchised

the populace directly elects judges, law enforcement officers and district attorneys.

- Alabama, Delaware, Florida, Iowa, Kentucky, Mississippi, Nevada, New Mexico, Virginia and Wyoming permanently prohibit voting rights for felons.
- According to Human Rights Watch and The Sentencing Project, "1.4 million African American men, or 13% of black men, are disenfranchised, a rate seven times the national average."
- At the conclusion of 1998, an estimated 5.9 million people were incarcerated or serving parole throughout the entire U.S. criminal justice system.
- Arizona and Maryland permanently disenfranchise felons after the conviction of a second offense.

Bureau of Justice Statistics, U.S. Department of Justice, Human Rights Watch, The Sentencing Project

Singleton v. State
921 P.2d 636
Alaska App.,1996.
Jul 05, 1996

Term

921 P.2d 636, 75 A.L.R.5th 701
Court of Appeals of Alaska.
Brenda J. ◆**SINGLETON,**◆ Appellant,
v.
◆**STATE**◆ of Alaska, Appellee.
No. A-5578.
July 5, 1996.

Ethan A. Berkowitz, Anchorage, for Appellant.
Cynthia L. Herren, Assistant Attorney General, Office of Special Prosecutions and Appeals, Anchorage, and Bruce M. Botelho, Attorney General, Juneau, for Appellee.

Before BRYNER, C.J., and COATS and MANNHEIMER, JJ.

OPINION

BRYNER, Chief Judge.

Brenda J. Singleton was convicted by a jury of robbery in the second degree, AS 11.41.510(a)(1). On appeal, she argues that the trial court erred in allowing an unqualified person to serve as a juror and that the state failed to preserve exculpatory evidence. We affirm.

Singleton and two codefendants, Dudley Fuqua, Jr., and Tyree McCray, were jointly indicted and tried for robbing Elaine G. Copeland. The robbery occurred outside Copeland's Anchorage apartment building. Singleton, Fuqua, and McCray--possibly accompanied by two other people--had driven to the building in a white van, ostensibly to enable Singleton to get money that she claimed Copeland owed her. An altercation between Singleton and Copeland ensued, culminating in Singleton forcibly taking a jacket, which had $201 cash in its pocket, from Copeland's person. After Singleton took the jacket, she, Fuqua and McCray left the area in the van.

The incident was immediately reported to the police by the manager of Copeland's apartment building. A short time later, the police found the van stopped on a nearby street, with Singleton, Fuqua, McCray, and two or three other people present. Copeland and a friend of her's who had witnessed the robbery were brought to the scene and identified Singleton, Fuqua, and McCray. They were arrested. Copeland and her friend evidently told the police that the other individuals present at the arrest scene had not been involved in the incident.

The state brought Singleton, Fuqua and McCray to trial on robbery charges. During the jury selection process, prospective juror Richard Porter disclosed that he had been convicted ten years previously of "felony retail theft" for stealing 52 cartons of cigarettes from a store in Chicago. Porter stated that he had served seventeen days in jail for the offense and had received three years' probation, which he had successfully completed. Because he never received any formal notice that his civil rights had been restored, Porter had not hunted or voted since his conviction. Porter did not believe the conviction would affect his ability to be fair and impartial.

All parties had the opportunity to question Porter about his prior

conviction and his fitness for jury service. All passed him for cause, and none exercised a peremptory challenge.

For the first time on appeal, Singleton questions Porter's qualifications to serve as a juror. Singleton cites AS 09.20.020(2), which provides that "[a] person is disqualified from serving as a juror if the person ... (2) has been convicted of a felony for which the person has not been unconditionally discharged[.]" Singleton argues that, since Porter's civil rights had apparently never been restored, he had not been "unconditionally discharged" and therefore did not qualify for jury duty. Singleton insists that, for this reason, the trial court was obligated to strike Porter from the panel *sua sponte*. Singleton maintains that Porter's inclusion on the panel violated her right to an impartial jury; she further maintains that she was deprived of due process because she was never personally informed of her right to challenge Porter for cause and did not knowingly waive that right.

Strong authority supports the conclusion that Singleton waived her argument on appeal by failing to exercise a challenge--either for cause or peremptory--after learning of Porter's potential disability. *See United States v. Boney*, 977 F.2d 624, 632-34 (D.C.Cir.1992); *Sirotiak v. H.C. Price Co.*, 758 P.2d 1271, 1275 n. 2 (Alaska 1988); *Sharp v. State*, 837 P.2d 718, 723 (Alaska App.1992). However, we need not decide the issue of waiver, for here the record fails to substantiate Singleton's claim that Porter was disqualified.

Singleton builds her argument for Porter's disqualification on the premise that formal restoration of Porter's civil rights--such as the right to vote or to carry a firearm--was a prerequisite to Porter's being "unconditionally discharged" from his prior felony conviction, as required under AS 09.20.020(2). However, the juror disqualification statute itself specifies that the term "unconditional discharge has the meaning given in AS 12.55.185." AS 09.20.020(2). Alaska Statutes 12.55.185 defines the term "unconditional discharge" to mean "that a defendant is released from all disability arising under a sentence, including probation and parole[.]" This definition conditions renewed eligibility for jury service upon release from all restrictions directly imposed "under a sentence," but not from collateral disabilities--such as loss of firearms or voting privileges--that flow from sources outside the judgment of conviction or sentencing order. Singleton cites no authority to support a departure from the apparent plain meaning of the statutory definition.

Moreover, adopting Singleton's argument would yield anomalous results. Alaska's voting laws illustrate the point. Under AS 15.05.030(a), any person convicted of a felony involving moral turpitude loses the right to vote "from the date of the conviction through the date of the unconditional discharge of the person." For purposes of this provision, the term "unconditional discharge" is defined in AS 15.60.010(33) to mean "that a person is released from all disability arising under a conviction and sentence, including probation and parole[.]" This definition is functionally identical to the definition of the same term set out in AS 12.55.185(12), which AS 09.20.020(2) adopts for purposes of determining juror qualification.

When viewed through the prism of the voting statutes, the flaw in Singleton's argument becomes apparent. For if, as Singleton argues, the right to vote must be restored as a prerequisite of unconditional discharge, then a person's right to vote could never be restored: under AS 15.05.030(a) a person who lost the right to vote upon conviction of a felony would be entitled to have that right restored only upon unconditional discharge, but unconditional discharge could occur only upon restoration of the right to vote. Singleton's definition of unconditional discharge would thus be wholly circular and entirely self-defeating.

[1] We conclude that the definition of "unconditional discharge" set forth in AS 12.55.185 must be interpreted in accordance with the statute's plain meaning. So interpreted, unconditional discharge

requires completion of any sentence of imprisonment, discharge from parole or probation, and release from any other restriction directly imposed as part of the judgment of conviction. Restoration of collaterally affected rights or privileges is not required.[[FN1]]

FN1. In this connection, it is worth noting that the Attorney General has interpreted "unconditional discharge" in the context of the voting rights statutes to require completion of probation or parole, but not formal restoration of collaterally affected civil rights. *See* 1985 Op. Att'y Gen. No. 103 (Alaska, Jan. 29, 1985).

[2] Applying this interpretation to Singleton's case, we conclude that the record fails to support Singleton's claim that juror Porter was disqualified from jury service under AS 09.20.020(2). Porter's testimony on *voir dire* indicated a prior conviction for a felony involving moral turpitude. But according to Porter, he had long ago been discharged after serving his sentence and successfully completing his probation. The record provides no reason to suspect that Porter had not been "released from all disability arising under [the] sentence" in his case, and so, no reason to conclude that he had not been "unconditionally discharged." AS 09.20.020(2). Under these circumstances, the status of Porter's voting or hunting rights was irrelevant to his qualification as a juror in Singleton's case.

Singleton next claims that the state violated her right to due process and her discovery rights under Criminal Rule 16 by failing to preserve the names of the witnesses who were at the scene when Singleton, Fuqua, and McCray were arrested. The argument is meritless. At a pretrial discovery hearing on June 16, 1994, Singleton's counsel mentioned that Singleton had not yet received copies of notes made by the officers who arrested her. Counsel went on to say: "The officers interviewed some people or at least spoke to some people at the scene of the--at the incident scene, and we don't have the names of those people. We're hoping they would appear in the officer notes." Superior Court Judge Elaine M. Andrews ordered the notes produced by June 23. Following this deadline, on July 1, 1994, Fuqua's attorney moved to compel discovery of the names and addresses of the interviewed witnesses. In an affidavit accompanying the motion, Fuqua's attorney indicated that police notes disclosed by the District Attorney's Office did not name the witnesses; the affidavit also indicated that all existing police notes had apparently already been transmitted by the police to the District Attorney's office. Fuqua thus requested a hearing to determine "the reason for the disappearance of the names and the appropriate sanction." The record provides no indication that Singleton joined in Fuqua's motion to compel.

Several days after Fuqua filed his motion to compel, Judge Andrews denied it, concluding that all police notes had been disclosed and that a failure to memorialize the names of bystanders at the scene of the arrest would not amount to a discovery violation or an impermissible failure to preserve evidence. In reaching this conclusion, the judge emphasized that, in the absence of notes, defense counsel's remedy was to interview the arresting officers:

Defense counsel is free to call the officers and ask them to name the witnesses that they claim to have been able to identify.... There is no basis to claim a "disappearance" of real evidence on the defense version of the facts.

At trial, one of Singleton's arresting officers mentioned that he had not taken notes of the names of bystanders at the arrest scene but that he "knew one of the individuals." The other arresting officer testified that he did not know of any previously undisclosed witnesses to the alleged robbery; when asked about an unidentified person at the arrest scene; the officer responded that the police did not know if that person had

been an eyewitness.
No further mention of the discovery issue was made by Fuqua or Singleton. The record is silent as to whether Singleton made any attempt to conduct pretrial interviews with the arresting officers. Neither Singleton nor Fuqua claimed any prejudice at trial.
Singleton fails to demonstrate any error by the trial court. As we have recently held:
While officers have a duty to preserve potentially exculpatory evidence actually gathered during a criminal investigation, the due process clause has never required officers to undertake a state-of-the-art investigation of all reported crimes. Officers investigating a crime need not "track down every conceivable investigative lead and seize every scintilla of evidence regardless of its apparent importance or lack of importance at the time, or run the risk of denying a defendant due process or his discovery rights." *Nicholson v. State*, 570 P.2d 1058, 1064 (Alaska 1977).
March v. State, 859 P.2d 714, 716 (Alaska App.1993).
[3] Here, officers at the scene of Singleton's arrest were evidently informed that no one other than Singleton, Fuqua, and McCray had been involved in the alleged robbery. The officers had no obvious basis to believe that other individuals at the arrest scene had "potentially exculpatory evidence." *Id.* If the other individuals were merely bystanders at the scene of the arrest, there is little reason to suppose that they had any material information to offer--exculpatory or inculpatory. If, on the other hand, the individuals at the arrest scene had been companions of Singleton in the van and had indeed witnessed the alleged robbery, their identities would presumably have been known by, or readily available to, Singleton without police assistance. Moreover, Singleton has failed to establish any effort on her part to determine the identities of potential witnesses through direct interview of her arresting officers, as suggested by Judge Andrews. And finally, it appears that Singleton failed even to join in Fuqua's motion to compel disclosure of the bystanders' names.
Under the circumstances, we find no discovery or due process violation. The conviction is AFFIRMED.
Alaska App.,1996.

FELON DISENFRANCHISEMENT IN ALASKA AND THE VOTING RIGHTS ACT OF 1965

CHRISTOPHER R. MURRAY*

Alaska and forty-seven other states have provisions that limit the voting rights of felons. In many of these states, including Alaska, minority groups are disproprtionately affected by these felon disenfranchisement laws. This Note examines the validity of these laws generally, and Alaska's laws in particular, under the the Voting Rights Act of 1965.

I. INTRODUCTION

Alaska limits the voting rights of felons.[1] Forty-seven other states have similar policies.[2] And, as in many of these other states, racial minorities in Alaska are disproportionately affected.[3] Indeed, the state's largest minority group, Alaska Natives, is overrepresented in the state's prison population, indicating a greater likelihood of disenfranchisement.[4] Because the right to vote is central to democratic government, any law that tends more frequently to disenfranchise racial minorities should be cause for

4. Alaska Natives constituted approximately sixteen percent of Alaska's general population as of 2000, United States Census, *available at* http://factfinder.census.gov (under "get a Fact Sheet for your community" enter "Alaska" into "state" field; then follow "2000" link) [hereinafter U.S. Census], but represent over thirty-seven percent of the state's prison population, ALASKA DEPT. OF CORRECTIONS, 2003 OFFENDER PROFILE 11 (2004), *available at* http://www.correct.state.ak.us/corrections/admin/docs/profile2003.pdf [hereinafter ALASKA OFFENDER PROFILE].

alarm. Nevertheless, because Alaska's felon disenfranchisement laws appear not to have been enacted with a discriminatory purpose, they likely do not violate the Federal Constitution.[5]

The laws may, however, run afoul of the Voting Rights Act of 1965 ("VRA"), which was amended in 1982 to invalidate state voting qualifications that have a racially disproportionate impact.[6] Recent litigation has challenged state felon disenfranchisement laws on this basis.[7] Though none of these challenges have succeeded—and two circuits have held that the VRA simply does not apply to felon disenfranchisement[8]—the Ninth Circuit recently allowed a VRA challenge to the State of Washington's felon disenfranchisement provision.[9]

To date, no case has been brought challenging felon disenfranchisement in Alaska. This Note is directed to that possibility. Part II puts Alaska's felon disenfranchisement laws into national context and explains why, even if they produce a racially discriminatory impact, they are likely not unconstitutional. Next, Part III assesses the circuit split over whether the VRA applies to felon disenfranchisement laws and the Ninth Circuit's decision that it does. Lastly, Part IV outlines the Ninth Circuit law that would govern a VRA challenge to Alaska's felon disenfranchisement laws in light of a recent similar challenge in Washington.

II. ALASKA'S FELON DISENFRANCHISEMENT LAWS

A. National Context

Disenfranchisement of criminals is neither a unique nor a recent phenomenon. The United Kingdom, Canada, and Australia all, to some degree, have voting qualifications based on criminal status.[10] The ancient Greeks and Romans disenfranchised those guilty of infamous crimes, and voting was among a range of civil

rights denied in post-Renaissance Europe on the theory that criminals suffer a "civil death."[11]

Today in the United States, disenfranchisement is among many collateral consequences of felony conviction such as exclusion from certain professions and restrictions on carrying a concealed weapon.[12] In a frequently quoted opinion, Judge Henry Friendly justified the practice on a Lockean social-contract theory by arguing that criminals, in breaking societal rules, waive their rights to participate in the rule-making.[13] Other courts have expressed an interest in preserving the "purity of the ballot box" from infection by those who by their acts have proven themselves morally unfit.[14]

Nevertheless, the practice is not without critics.[15] With respect to traditional justifications for criminal sanction—rehabilitation, retribution, and deterrence—felon disenfranchisement seems to fall short given the counter-productivity of keeping criminals from participating in civil society, the disproportionate application of, in some cases, lifetime disenfranchisement to a broad range of crimes, and the limited deterrent effect of the threat of disenfranchisement.[16] Abroad, felon disenfranchisement laws have been judicially rejected on political and human-rights grounds.[17]

INT'L L. 763, 778–79 (2005).

The modern practice of felon disenfranchisement in the United States is primarily a function of state law.[18] Forty-eight states and the District of Columbia have some form of felon disenfranchisement, generally consisting of constitutional provisions buttressed by statute.[19] Felon disenfranchisement expanded after the nation's founding, with most such laws enacted during the mid- to late-nineteenth century.[20] At the time the Reconstruction Amendments were enacted, twenty-nine of the thirty-six states had some form of felon disenfranchisement.[21]

Modern practice varies by state. At the extreme, at least three states impose lifetime voting bans on felons.[22] These jurisdictions go beyond the historical scope of felon disenfranchisement laws in the United States and the contemporary practice in other states and internationally.[23] The reach of these laws is striking—lifetime disenfranchisement may even be predicated upon crimes such as jaywalking, vagrancy, or breaking a water pipe.[24]

Alaska's felon disenfranchisement law is not as severe. The state constitution provides that "[n]o person may vote who has

24. Richardson v. Ramirez, 418 U.S. 24, 75–76 n.24 (1964) (Marshall, J., dissenting).

been convicted of a felony involving moral turpitude unless his civil rights have been restored."[25] The provision was adopted at Alaska's constitutional convention in 1956 and became law upon Alaska's admission to the union in 1959.[26] Congress approved Alaska's constitution, including the felon disenfranchisement provision, when it granted statehood.[27] The language mirrored that of contemporary provisions in other states' constitutions.[28]

The contours of the constitutional provision are set by statute. The term "felony involving moral turpitude" is defined to include nearly all felonies.[29] Voting registration is automatically cancelled upon conviction.[30] Voting rights are restored, and felons may re-register to vote upon completion of their sentences including any terms of parole or probation.[31] Felon disenfranchisement in Alaska, which is more lenient than the lifetime ban imposed in

some states, is in line with the policies of a majority of other states.[32]

B. Felon Disenfranchisement and Race

Though facially race-neutral, felon disenfranchisement laws were, historically, enacted with a discriminatory purpose. Authors have noted that many states enacted such laws in the aftermath of the Civil War as part of a larger defensive response to the Reconstruction Amendments' extension of the franchise to African-Americans.[33] This response included poll taxes, literacy tests, and other Jim Crow measures to suppress the voting power of African-Americans.[34] For example, a 1901 felon disenfranchisement provision to Alabama's state constitution was expressly intended to single out only those felonies believed to be more frequently committed by African-Americans.[35] In 1985, the Supreme Court struck down that provision in the case of *Hunter v. Underwood*.[36]

To the extent felon disenfranchisement laws were tailored to maximize a racially disparate impact, they have enjoyed considerable success.[37] Nationally, an estimated thirteen percent of African-American men are disenfranchised, with as many as thirty-one percent of African-American men in two states—Alabama and Florida—permanently disenfranchised.[38] Following a review of voting in the United States, the National Commission on Federal Election Reform, chaired by former presidents Jimmy Carter and Gerald Ford, urged states to scale back felon disenfranchisement laws, citing that as many as one in six African-Americans were disenfranchised in many states.[39] Even where discriminatory intent

has not been proven, discriminatory effect continues to be the reality.[40]

Alaska's experience is comparable. Although comprehensive studies of racial disparity in felon disenfranchisement in Alaska are unavailable, incarceration statistics provide a useful proxy.[41] Alaska's largest minority group, Alaska Natives, comprise approximately sixteen percent of the state's general population,[42] but they account for thirty-seven percent of its prison population.[43] Similar disparity exists in the cases of other minorities, including African-Americans, who account for over ten percent of the prison population[44] while representing less than four percent of the general population.[45] It has been suggested that cultural factors may make Alaska Natives more susceptible to felon disenfranchisement.[46] The precise mechanism by which racial bias in the criminal justice system may result in disproportionate disenfranchisement, and indeed whether racial bias is the cause of the disparity, is unclear and would require further study.

C. Constitutionality of Alaska's Felon Disenfranchisement Law

Felon disenfranchisement laws come under constitutional scrutiny in two ways. First, as a restriction on voting, the laws interfere with a fundamental right and implicate the Equal

40. In Florida, the Eleventh Circuit denied an equal protection challenge to the state's felon disenfranchisement laws for lack of demonstrated racially discriminatory intent, Johnson v. Governor of Fla., 405 F.3d 1214, 1223 (11th Cir. 2005), even though nearly one in three African-American men in Florida is permanently disenfranchised, *see* FELLNER & MAUER, *supra* note 2, pt. III.

41. Incarceration rates are, at best, an imprecise proxy for felon disenfranchisement. They are over-inclusive in that they include those inmates who are ineligible to vote, as well as those incarcerated for misdemeanors, and they are under-inclusive in that they do not include parolees or Alaska felons incarcerated outside of the state who are also unable to vote.

43. ALASKA OFFENDER PROFILE, *supra* note 4.

44. *Id.*

45. U.S. Census, *supra* note 4.

46. *See, e.g.*, Dave Stephenson, *For Alaska Natives: Extermination by Incarceration?*, INDIAN COUNTRY TODAY, June 26, 2003, *available at* http://www.indiancountry.com/content.cfm?id=1056628610 (advancing the argument that Alaska Natives may be more likely to confess to a crime upon arrest than are white arrestees, thereby reducing the likelihood of a plea agreement for a lesser charge or sentence). If true, such factors might make felony—as opposed to misdemeanor—conviction more likely, leading to longer incarceration periods and thereby exacerbating the impact of felon disenfranchisement.

Protection Clause of the Fourteenth Amendment. Second, because the laws affect the voting rights of racial minorities, they also implicate the Fifteenth Amendment's prohibition on disenfranchisement "on account of race."[47] Supreme Court decisions addressing both theories have concluded that felon disenfranchisement laws are constitutional unless it can be proved they were enacted with racially discriminatory intent.[48]

Ordinarily, a state law affecting a fundamental right, such as voting, would be subject to strict scrutiny.[49] However, in the 1974 case of *Richardson v. Ramirez*, the Supreme Court held that felon disenfranchisement laws are not subject to heightened scrutiny under Section 1 of the Fourteenth Amendment because Section 2 of that Amendment includes an "affirmative sanction" of such laws.[50] Section 2 of the Fourteenth Amendment, which reduces a state's representation in Congress in proportion to its disenfranchisement of otherwise qualified voters, provides an exception for disenfranchisement based on "participation in rebellion, or other crime."[51] Chief Justice Rehnquist, writing for a divided court, reasoned that "those who framed and adopted the Fourteenth Amendment could not have intended to prohibit outright in § 1 of that Amendment that which was expressly exempted from the lesser sanction of reduced representation imposed by § 2 of the Amendment."[52] Put another way, the voting

47. *See* U.S. CONST. amend. XV.

48. The Court has also heard and rejected Eighth Amendment challenges to felon disenfranchisement. *See* Trop v. Dulles, 356 U.S. 86, 96–97 (1958) (felon disenfranchisement is not punitive and merely designates a grounds for voting eligibility). For an in-depth treatment of felon disenfranchisement as punishment in the context of the Eighth Amendment, see Pamela A. Wilkins, *The Mark of Cain: Disenfranchised Felons and the Constitutional No Man's Land*, 56 SYRACUSE L. REV. 85 (2005).

49. *See, e.g.*, Kramer v. Union Free Sch. Dist., 395 U.S. 621, 627–28 (1969) (applying strict scrutiny to voting restrictions); Reynolds v. Sims, 377 U.S. 533, 561–62 (1964) ("Undoubtedly, the right of suffrage is a fundamental matter. . . ."); Yick Wo v. Hopkins, 118 U.S. 356, 370 (1886) ("[T]he political franchise . . . is regarded as a fundamental political right . . . .").

50. Richardson v. Ramirez, 418 U.S. 24, 54 (1974).

51. U.S. CONST. amend. XIV, § 2. The Amendment provides in pertinent part that "when the right to vote at any election . . . is denied . . . or in any way abridged, *except for participation in rebellion, or other crime*, the basis of representation [in Congress] shall be reduced . . . ." *Id.* (emphasis added).

52. *Richardson*, 418 U.S. at 43.

rights of *felons* are not protected as "fundamental" under the Equal Protection Clause.[53]

Nevertheless, even if *Richardson* shields felon disenfranchisement laws from strict scrutiny under the Equal Protection Clause,[54] Section 1 of the Fourteenth Amendment still operates independently to prevent purposeful racial discrimination. In *Hunter v. Underwood*,[55] the Supreme Court struck down a provision in Alabama's constitution disenfranchising those convicted of certain enumerated felonies.[56] The provision was enacted in 1901 with the purpose of disenfranchising on the basis of race and applied only to felonies believed committed more frequently by African-Americans.[57] Chief Justice Rehnquist, writing for the Court as he did in *Richardson*, explained that "[w]ithout again considering the implicit authorization of [felon disenfranchisement under § 2 of the Fourteenth Amendment], we are confident that § 2 was not designed to permit the purposeful

---

53. At least one circuit has framed the law in this way. *See* Owens v. Barnes, 711 F.2d 25, 27 (3d Cir. 1983).

54. *Richardson*'s reading of Section 2 of the Fourteenth Amendment has been widely criticized. *See, e.g.*, Carlos M. Portugal, *Democracy Frozen in Devonian Amber: The Racial Impact of Permanent Felon Disenfranchisement in Florida*, 57 U. MIAMI L. REV. 1317, 1325–26 (2003); John Hart Ely, *Interclausal Immunity*, 87 VA. L. REV. 1185, 1195 (2001). Dissenting, Justice Marshall argued in *Richardson* that Section 2 merely established a system of punitive reduction in representation for disenfranchisement as a compromise because wholesale enfranchisement of African-Americans would have been unpalatable and, therefore, that the scope of the language of Section 2 is limited to the operation of its punitive sanction and not to the entirety of the Fourteenth Amendment. *Richardson*, 418 U.S. at 73–74 (Marshall, J., dissenting).

For an argument that the Fifteenth Amendment effectively repealed Section 2 of the Fourteenth Amendment and, therefore, that the latter cannot shield felon disenfranchisement laws from equal protection scrutiny, see Gabriel J. Chin, *Reconstruction, Felon Disenfranchisement, and the Right to Vote: Did the Fifteenth Amendment Repeal Section 2 of the Fourteenth Amendment?*, 92 GEO. L.J. 259 (2004).

Richardson preempts the question of whether, without a Section 2 shield, felon disenfranchisement would survive strict scrutiny. For an argument that felon disenfranchisement fails strict scrutiny because it is over-inclusive and only tenuously related to the most commonly cited state interests, see Angela Behrens, Note, *Voting—Not Quite a Fundamental Right? A Look at Legal and Legislative Challenges to Felon Disenfranchisement Laws*, 98 MINN. L. REV. 231, 259–72 (2004).

55. 471 U.S. 222, 232 (1985).

56. *Id.* at 232.

57. *Id.* at 227–28; *see* discussion *supra* note 35.

racial discrimination attending the enactment and operation of [a law] which otherwise violates § 1 of the Fourteenth Amendment."[58]

Independently of the Fourteenth Amendment, the Fifteenth Amendment prohibits the denial of the right to vote "on account of race."[59] The Supreme Court has construed this prohibition to apply only to intentional discrimination.[60] In *City of Mobile v. Bolden*, the Supreme Court held that "action by a State that is racially neutral on its face violates the Fifteenth Amendment only if motivated by a discriminatory purpose."[61]

Alaska's felon disenfranchisement laws are facially neutral and would, therefore, be unconstitutional only if enacted with a discriminatory purpose. Because the laws do not appear to have been adopted with racially discriminatory intent,[62] they are subject to legal challenge, if at all, only under federal legislation.[63]

III. THE VOTING RIGHTS ACT OF 1965

A. The Voting Rights Act of 1965 and the 1982 Amendments

Though the Fifteenth Amendment was ratified in 1870, it took nearly one hundred years before Congress systematically addressed disenfranchisement of racial minorities.[64] The Voting Rights Act of 1965[65] was enacted by Congress to "banish the blight of racial discrimination in voting, which has infected the electoral process in parts of our country for nearly a century."[66] Congress was prompted to act after case-by-case litigation under previous legislation, including the Civil Rights Act of 1957, failed to

61. *Id.*

62. This Note assumes, for the purpose of analysis, that discriminatory intent did not drive enactment of Alaska's felon disenfranchisement laws—or, at the very least, that discriminatory purpose likely could not be proven in the context of a constitutional challenge.

63. Of course, less countermajoritarian methods of legal reform remain available to Alaskans, such as constitutional amendment and the state legislative process.

64. Portugal, *supra* note 54, at 1328.

65. 42 U.S.C. §§ 1971–1973 (2000), as amended in 1970, Pub. L. 91-285, 84 Stat. 314 (1970), and in 1982, Pub. L. 97-205, 96 Stat. 131 (1982). The VRA has been reauthorized and amended by Congress on several occasions, including in 1970, 1975, and 1982, and was reauthorized by the President in July 2006. *Bush Signs Extension of Voting Rights Act*, N.Y. TIMES, July 28, 2006, at A22.

66. South Carolina v. Katzenbach, 383 U.S. 301, 308 (1966).

adequately prevent disenfranchisement on account of race.[67] The VRA imposed bold measures, including section 5, which prohibited the use of discriminatory tests or devices, such as literacy tests, and required that any state making use of such devices would thereafter have to apply for pre-clearance from the U.S. Attorney General or a federal circuit judge in Washington, D.C. for any future changes to voting laws.[68] At the time of the VRA's enactment, Alaska employed a literacy test and was, therefore, designated a "covered jurisdiction" for these purposes.[69] Federal supervision of the voting laws of "covered jurisdictions," most of which are in the South, continues today.[70]

In 1966, the Supreme Court upheld the VRA as a valid exercise of Congress's enforcement powers under Section 2 of the Fifteenth Amendment.[71] In 1980, however, the Court narrowed the effect of the VRA in *City of Mobile v. Bolden*.[72] There, the Court held that section 2 of the VRA[73] had "an effect no different from that of the Fifteenth Amendment itself" and that a voting qualification law would only be struck down under the Act if it were proved that the law was enacted with a racially discriminatory purpose.[74] In so doing, the Court overruled the then-applicable "effects test" for voting qualifications.[75]

In 1982, Congress responded to *City of Mobile* by adding a "totality of the circumstances" test to section 2 of the VRA.[76]

Voting Rights Act of 1965, 89 Pub. L. 11, 79 Stat. 437 (1965).

74. *City of Mobile*, 446 U.S. at 61–62.

75. *See, e.g.*, White v. Regester, 412 U.S. 755, 769 (1973) (totality of the circumstances test applied to vote dilution case brought under section 2 of the VRA).

76. Thornburg v. Gingles, 478 U.S. 30, 43 (1986). The amended section 2 provides, in pertinent part:

Under the amended VRA, "plaintiffs [can] prevail by showing that, under the totality of the circumstances, a challenged election law or procedure [has] the effect of denying a protected minority an equal chance to participate in the electoral process."[77] As the Court later explained, "[t]he essence of a § 2 claim is that a certain electoral law, practice, or structure interacts with social and historical conditions" to cause unequal voting power.[78]

B. Applicability of the VRA to Felon Disenfranchisement Laws

Since the 1982 amendments to the VRA, several plaintiffs have sought to use it to invalidate felon disenfranchisement laws on the basis of their racially disproportionate effects.[79] Circuits have split over whether the VRA does, in fact, apply to felon disenfranchisement laws. The Second Circuit in *Hayden v. Pataki* and the Tenth Circuit in *Johnson v. Governor of Florida* both held the VRA inapplicable to felon disenfranchisement laws.[80] In contrast, in *Farrakhan v. Washington*,[81] the Ninth Circuit held that "[f]elon disenfranchisement is a voting qualification, and Section 2 is clear that *any* voting qualification that denies citizens the right to vote in a discriminatory manner violates the VRA."[82] Therefore, a claim against Alaska's felon disenfranchisement laws would be

---

> (a) No voting qualification or prerequisite to voting or standard, practice, or procedure shall be imposed or applied by any State or political subdivision *in a manner which results* in a denial or abridgement of the right of any citizen of the United States to vote on account of race or color . . . .
>
> (b) A violation of subsection (a) of this section is established if, based on the *totality of the circumstances*, it is shown that . . . members of [protected racial minorities] have less opportunity than other members of the electorate to participate in the political process and to elect representatives of their choice.

42 U.S.C. § 1973 (2000) (emphasis added).

77. *Gingles*, 478 U.S. at 44 n.8.

78. *Id.* at 47.

80. *Hayden*, 449 F.3d at 310; *see Johnson*, 405 F.3d at 1234.

81. Farrakhan v. Washington (*Farrakhan I*), 338 F.3d 1009, 1016 (9th Cir. 2003).

82. *Id.* The Sixth Circuit also considered a VRA challenge to Tennessee's felon disenfranchisement law in *Wesley v. Collins*, 791 F.2d 1255 (2d Cir. 1986). The court did not directly consider whether the VRA applies to felon disenfranchisement but appears to have assumed that it did. *See id.* at 1262 (affirming dismissal of the VRA claim on summary judgment).

"cognizable under Section 2 of the VRA" under Ninth Circuit precedent.[83]

The Second and Tenth Circuit opinions concluding that the VRA does not apply to felon disenfranchisement laws rely on three arguments: (1) that the Fourteenth Amendment authorizes felon disenfranchisement laws (the "affirmative sanction" argument); (2) that application of the VRA to felon disenfranchisement would be an unconstitutional exercise of Congress's enforcement power; and (3) that canons of statutory construction support construing the VRA not to apply to felon disenfranchisement laws. The relative merits of each argument are assessed in turn.

1. The "Affirmative Sanction" Argument. As discussed previously, the *Richardson* case established that felon disenfranchisement laws enacted without racially discriminatory intent do not violate the Equal Protection Clause.[84] This is because Section 2 of the Fourteenth Amendment's enforcement mechanism—that a state's representation in Congress will be reduced in proportion to the disenfranchisement of otherwise qualified voters—carries an express exception for disenfranchisement based on "participation in rebellion, or other crime."[85]

The Eleventh Circuit, in *Johnson*, seized on language in *Richardson* describing Section 2 of the Fourteenth Amendment as an "affirmative sanction" of felon disenfranchisement and cited it for the proposition that states have discretion to deny the vote to convicted felons.[86] The court argued that applying the VRA to Florida's felon disenfranchisement law would allow "a congressional statute to override the text of the Constitution."[87] More recently, the Second Circuit, in *Hayden*, cited Section 2 of the Fourteenth Amendment as the "starting point" in the analysis of the VRA's applicability to New York's felon disenfranchisement law.[88] The Second Circuit, while noting that felon

88. Hayden v. Pataki, 449 F.3d 305, 316 (2d Cir. 2006); *accord* Muntaqim v. Coombe, 366 F.3d 102, 122 (2d Cir. 2004). *Hayden* is the *en banc* rehearing of the *Muntaqim* decision, which is incorporated by reference. *Hayden*, 449 F.3d at 313–14.

disenfranchisement provisions are not entirely immune from constitutional or congressional scrutiny, found that the Fourteenth Amendment provided "explicit approval" of those types of laws.[89] Dissenting from the Ninth Circuit's denial of an *en banc* rehearing of the *Farrakhan* case, Judge Alex Kozinski argued that felon disenfranchisement laws were presumptively valid due to the Fourteenth Amendment's textual endorsement of such laws.[90]

Interestingly, neither the Second Circuit nor Judge Kozinski addressed the fact that the VRA was enacted to enforce the Fifteenth Amendment, not the Fourteenth. The Eleventh Circuit brushed off the distinction in a footnote.[91] The distinction is, however, the key weakness to the "affirmative sanction" argument because the Fifteenth Amendment grants its own protections that are not hindered by purported limitations to the scope of the Fourteenth Amendment.

Judge Barrington Daniels Parker, Jr. of the Second Circuit made this point in his dissent in *Hayden*. Pointing out that *Richardson's* "affirmative sanction" came in the context of a claim that felon disenfranchisement was a *per se* violation of the Fourteenth Amendment, Judge Parker noted that "*Richardson* did not grant felon disenfranchisement immunity against any other ground of invalidity. . . ."[92] As a textual matter, Section 2 of the Fourteenth Amendment at most "*declines to prohibit*" felon disenfranchisement and does not affirmatively immunize the practice relative to other constitutional protections.[93] As Judge Parker reasoned:

> The Constitution does not endorse felon disenfranchisement when it declines to prohibit the practice, any more than the Constitution endorses felon enslavement when the Thirteenth Amendment states: "Neither slavery nor involuntary servitude, *except as punishment for crime whereof the party shall have been duly convicted*, shall exist within the United States . . . ." Declining to prohibit something is not the same as protecting it.[94]

Nor does Section 2 of the Fourteenth Amendment *require* states to disenfranchise felons. If states can choose not to disenfranchise felons without running afoul of the Fourteenth Amendment, then Congress, acting pursuant to its power to

94. *Id.* (citation omitted).

enforce the Fifteenth Amendment, can compel the same result. Indeed, the "affirmative sanction" argument is more of a rhetorical device than an independent constitutional limitation on the VRA.

2. Arguments on the Constitutionality of the VRA as Enforcement Legislation. Enforcement legislation under the Fourteenth and Fifteenth Amendments is valid only to the extent that it remedies or prevents actual constitutional violations.[95] The Eleventh Circuit, Chief Judge John M. Walker, Jr.'s concurrence to the Second Circuit's *Hayden* opinion, and Judge Kozinski's dissent in the Ninth Circuit have all argued that the VRA would be unconstitutional as applied to felon disenfranchisement laws.[96]

The enforcement power is limited by two independent requirements. The first is that enforcement legislation must be supported by a history of constitutional violations.[97] The second is that the measures must be narrowly tailored to the constitutional ill sought to be avoided.[98] In his *Hayden* concurrence, Chief Judge Walker found no congressional record establishing that felon disenfranchisement laws have been used to discriminate against minority voters.[99] In *Johnson*, the petitioners had argued that specific examples of violations should not be required because Congress could not envision every possible means of racial discrimination.[100] The Eleventh Circuit rejected this argument, citing the widespread use of felon disenfranchisement laws at the time that the VRA was enacted.[101] Lastly, Judge Kozinski emphasized in his dissent from the Ninth Circuit's denial of a rehearing in *Farrakhan* that "[t]he theoretical, undocumented threat of unconstitutional felon disenfranchisement laws simply doesn't justify" application of section 2 to those state laws.[102]

102. Farrakhan v. Washington (*Farrakhan II*), 359 F.3d 1116, 1123 (9th Cir. 2004) (Kozinski, J., dissenting).

Lack of congressional findings of a pattern of historical discrimination through felon disenfranchisement laws[103] informs the analysis of the proportionality and congruence of the purported remedial measure at issue. Although the Supreme Court has repeatedly emphasized the importance that enforcement legislation be geographically targeted,[104] the VRA applies to all states regardless of their individual histories.[105] To the extent the VRA is either inadequately supported by findings of a pattern of discrimination or not narrowly tailored, application of the VRA to felon disenfranchisement would be unconstitutional.

The Ninth Circuit did not consider this issue in *Farrakhan* when it allowed a VRA challenge to Washington's felon disenfranchisement law to proceed.[106] On remand, the *Farrakhan* case was dismissed on summary judgment, mooting for now the question of constitutionality of the VRA as applied to felon disenfranchisement laws.[107] Indeed, the narrow issue of as-applied constitutionality of the VRA as enforcement legislation relative to felon disenfranchisement laws would not be ripe until such a law is actually invalidated. Rather, the constitutional doubt associated with application of the VRA to felon disenfranchisement serves primarily as a predicate for the statutory construction arguments discussed next.

3. Statutory Interpretation Arguments. The Ninth Circuit's interpretation of the VRA was the same as that pointedly expressed in a dissent by Judge Sonia Sotomayor of the Second Circuit: "[i]t is plain to anyone reading the Voting Rights Act that it applies to all 'voting qualification[s].'"[108] The majority in the

103. This is not to say that there is not an actual record of state use of felon disenfranchisement laws to discriminate on race. That states used felon disenfranchisement laws in order to discriminate is well documented. *See supra* notes 33-37 and accompanying text. Rather, that history is not part of the congressional findings made at the time of the enactment of the VRA and its relevant amendments. *See Hayden*, 449 F.3d at 330–31 (Walker, C.J., concurring).

104. *Farrakhan II*, 359 F.3d at 1124 (Kozinski, J., dissenting) (noting that a purported enforcement legislation was not geographically targeted and was therefore struck down in United States v. Morrison, 529 U.S. 598 (2000)).

105. Geographic targetedness is particularly relevant to the present analysis of Alaska and is addressed in Part IV.

106. *See* Farrakhan v. Washington (*Farrakhan I*), 338 F.3d 1009, 1016 (9th Cir. 2003).

107. *See* Farrakhan v. Gregoire (*Farrakhan III*), No. CV-96-076-RHW, 2006 U.S. Dist. LEXIS 45987, at *2 (E.D. Wash. July 7, 2006).

108. *Hayden*, 449 F.3d at 367–68 (Sotomayor, J., dissenting) (second alteration in original); *Farrakhan I*, 338 F.3d at 1016.

Second Circuit, though admitting that "[t]here is no question that the language of [section 2] is extremely broad . . . and could be read to include felon disenfranchisement provisions," nevertheless stressed the importance of interpretation in light of congressional intent, cryptically citing dated authority for the proposition that "[t]he circumstances of the enactment of particular legislation may persuade a court that Congress did not intend the words of common meaning to have their literal effect."[109]

Two canons of construction have been deployed to interpret the VRA away from felon disenfranchisement provisions: the avoidance canon and the clear statement rule. The Eleventh Circuit relied upon the avoidance canon, which counsels that, in the case of an ambiguous statute, "where an otherwise acceptable construction of a statue would raise serious constitutional problems, the Court will construe the statute to avoid such problems unless such construction is plainly contrary to the intent of Congress."[110]

The Second Circuit—both sitting *en banc* in *Hayden* and through the three-judge panel that decided *Muntaqim v. Coombe*, the predecessor to *Hayden*—distanced itself from the Eleventh Circuit's reliance on the avoidance canon.[111] The reason expressed in *Muntaqim* is that the clarity of the text of section 2 of the VRA is impossible to reconcile with the avoidance canon's ambiguity requirement.[112] Indeed, a concurring judge on the Eleventh Circuit conceded that the majority "overstates the case for constitutional avoidance" because "[a]s a purely textual matter, a voting

109. *Hayden*, 449 F.3d at 315 (quoting Watt v. Alaska, 451 U.S. 259, 266 (1981)).

110. DeBartolo Corp. v. Fla. Gulf Coast Bldg. & Constr. Trades Council, 485 U.S. 568, 575 (1988).

111. *See* 366 F.3d 102, 128 n.22 (2d Cir. 2004) ("[Section 2], while vague, does not seem ambiguous."), *aff'd en banc*, *Hayden*, 449 F.3d 305. The *Hayden* court barely mentioned the avoidance canon and made only passing reference to the Eleventh Circuit's reliance on it. 449 F.3d at 313, 328 n.24.

112. *See Muntaqim*, 366 F.3d at 128 n.22. The *Johnson* court, ironically, turned to the *Muntaqim* decision for the proposition that section 2 is ambiguous, citing that court's assessment that the meaning of section 2 is "exceedingly difficult to discern." Johnson v. Governor of Fla., 405 F.3d 1214, 1229 n.30 (11th Cir. 2005) (quoting *Muntaqim*, 366 F.3d at 116). In the quoted passage, however, the *Muntaqim* court referred to ambiguity in the degree of intent required to establish a violation of section 2, not the scope of the Act's coverage relative to felon disenfranchisement laws. *Johnson*, 405 F.3d at 1229 n.30; *Muntaqim*, 366 F.3d at 116–18.

qualification based on felony status . . . falls within the scope of the VRA."[113]

A stronger statutory construction argument, and the one adopted by the majority in *Hayden*, is premised on the so-called clear statement rule. The rule provides that "if Congress intends to alter the 'usual constitutional balance between the States and the Federal Government,' it must make its intention to do so 'unmistakably clear in the language of the statute.'"[114] The *Hayden* court held that the clear statement rule does not require ambiguity but only a lack of a clear statement, explaining that "we will apply the clear statement rule when a statute admits of an interpretation that would alter the federal balance but there is reason to believe . . . that Congress may not have intended such an alteration of the federal balance."[115] The rule is intended to prevent a statute from inadvertently affecting the federal-state balance of power. The Supreme Court has held, in another context, that "clear statement rules ensure Congress does not, by broad or general language, legislate on a sensitive topic inadvertently or without due deliberation."[116] Given that sweeping language alone may not satisfy the clear statement rule, the question becomes one of congressional intent.

Considerable evidence suggests that Congress did not intend the VRA to apply to felon disenfranchisement laws.[117] For example, though Congress expressly identified common forms of discriminatory voter qualifications, including literacy, educational, and moral character tests, it never mentioned felon disenfranchisement in the text of the VRA.[118] In fact, as noted by the *Hayden* court, the only reference to felon disenfranchisement in the legislative history of the VRA was to clarify that the VRA's character test provisions "would not result in the proscription of the frequent requirement of States and political subdivisions that an applicant for voting or registration for voting be free of conviction of a felony or mental disability."[119] Indeed, the *Hayden*

119. *Hayden*, 449 F.3d at 318 (quoting S. Rep. No. 89-162, at 24 (1965), *reprinted in* 1965 U.S.C.C.A.N. 2508, 2562); *see also* H.R. Rep. No. 89-439, at 19

court reasoned that, given the prevalence of felon disenfranchisement statutes, "it seems unfathomable that Congress would silently amend the Voting Rights Act in a way that would affect them."[120]

Whether application of the VRA to felon disenfranchisement laws would upset the federal-state balance is in dispute. In *Muntaqim*, the Second Circuit held that the federal-state balance would be upset because applying the VRA to felon disenfranchisement laws would exceed Congress's enforcement power and contradict Section 2 of the Fourteenth Amendment.[121] The Eleventh Circuit in *Johnson* concurred generally with that conclusion but did not rely on it.[122] On a rehearing of *Muntaqim* in *Hayden*, the Second Circuit hewed its analysis more directly to "three important state interests" that would be affected by applying the VRA to New York's felon disenfranchisement law: "(1) the regulation of the franchise; (2) the State's authority to craft its criminal law; and (3) the regulation of correctional institutions."[123]

Rejecting the federalism concerns similarly raised by the Tenth Circuit in *Johnson*, Judge Rosemary Barkett in dissent reasoned that federalism is not implicated by the VRA because the "Fourteenth and Fifteenth Amendments altered the constitutional balance between the two sovereigns—*not* the Voting Rights Act, which merely enforces the guarantees of those amendments."[124] This argument was repeated in Judge Parker's *Hayden* dissent.[125]

(1965), *reprinted in* 1965 U.S.C.C.A.N. 2437, 2457. Nor did the 1982 amendments expand the scope of the VRA. Chisom v. Roemer, 501 U.S. 380, 383–84 (1991) ("[T]he coverage provided by the 1982 amendment is coextensive with the coverage provided by the Act prior to 1982."). The 1982 amendments merely lowered the evidentiary burden to establish a violation by replacing an "intent" test with an "effects" test. *Id.* at 403–04.

120. *Hayden*, 449 F.3d at 317 (quoting Johnson v. Governor of Fla., 405 F.3d 1214, 1234 (11th Cir. 2005)).

121. *See* Muntaqim v. Coombe, 366 F.3d 102, 126 (2d Cir. 2004). Both arguments against applying the VRA to felon disenfranchisement discussed serve as predicates for application of the clear statement rule because they implicate federalism.

122. The court makes passing reference to the clear statement rule in a footnote. *See Johnson*, 405 F.3d at 1232 n.35.

123. *Hayden*, 449 F.3d at 326.

124. *Johnson*, 405 F.3d at 1250 (Barkett, J., dissenting) (citing a dissent from an equally divided court in the Second Circuit's first consideration of the question in *Baker v. Pataki*, 85 F.3d 919, 938 (2d Cir. 1996) (Feinberg, J., dissenting)).

125. *Hayden*, 449 F.3d at 358.

Whatever the uncertainties of the basis for these divergent circuit decisions, Ninth Circuit law is, for now, clear that a challenge to Alaska's felon disenfranchisement law is possible under section 2 of the VRA.

IV. ALASKA'S FELON DISENFRANCHISEMENT LAW AND THE VOTING RIGHTS ACT OF 1965

A. Ninth Circuit's Framework for Challenges Under Section 2 of the VRA

Nearly a decade before *Farrakhan*, the Ninth Circuit set a framework for challenges under section 2 of the VRA in *Smith v. Salt River*.[126] *Salt River* involved an Arizona agricultural district power board election rule that limited voting to landowners within the district.[127] African-American plaintiffs claimed that the voting qualification combined with racial disparities in land ownership rates had a racially disproportionate effect on voting rights in violation of section 2 of the VRA.[128]

The *Salt River* court affirmed that section 2 of the VRA "prohibits voting qualifications which *result in* discrimination on account of race or color . . . [and] requires proof only of a discriminatory result, not of discriminatory intent."[129] Further, the intent is judged under the "totality of the circumstances" test with reference to several non-exclusive, so-called Senate Factors identified in the legislative history of the VRA.[130]

---

126. Smith v. Salt River Project Agric. Improvement & Power Dist., 109 F.3d 586 (9th Cir. 1997).

127. *Id.* at 589.

128. *Id.* at 588.

129. *Id.* at 594 (citing Chisom v. Roemer, 501 U.S. 380, 394 (1991)).

130. *Id.* at 594 n.6. The Senate Factors are:

> (1) the extent of any history of official discrimination in the state or political subdivision that touched the right of the members of the minority group to register, to vote, or otherwise to participate in the democratic process[;]
> (2) the extent to which voting in the elections of the state or political subdivision is racially polarized;
> (3) the extent to which the state or political subdivision has used unusually large election districts, majority vote requirements, anti-single shot provisions, or other voting practices or procedures that may enhance the opportunity for discrimination against the minority group;
> (4) if there is a candidate slating process, whether the members of the minority group have been denied access to that process;
> (5) the extent to which members of the minority group in the state or political subdivision bear the effects of discrimination in such areas as

Significantly, in interpreting the "totality of the circumstances" test under the VRA, the *Salt River* court held that "a bare statistical showing of disproportionate *impact* on a racial minority does not satisfy the § 2 'results' inquiry. Instead, 'section 2 plaintiffs must show a causal connection between the challenged voting practice and [a] prohibited discriminatory result.'"[131]

As the Ninth Circuit explained, "[t]he real question this case presents is whether the land ownership requirement denies African-Americans the right and opportunity to vote . . . ."[132] Affirming the district court's dismissal for lack of a "causal connection," the Ninth Circuit, relying heavily on a stipulated lack of historical racial discrimination, concluded that "the statistical disparity in African-American and white home ownership does not prove the District has violated § 2."[133]

B. Applying the VRA in *Farrakhan*

In late 2000, the Eastern District of Washington dismissed for the first time a claim by Muhammad Shabazz Farrakhan and others that Washington's felon disenfranchisement law violated section 2 of the VRA.[134] The court held that "although the disenfranchisement provision clearly has a disproportionate impact on racial minorities, there is no evidence that the provision's enactment was motivated by racial animus, or that its operation *by*

---

education, employment and health, which hinder their ability to participate effectively in the political process;

(6) whether political campaigns have been characterized by overt or subtle racial appeals;

(7) the extent to which members of the minority group have been elected to public office in the jurisdiction;

Additional factors . . . are:

whether there is a significant lack of responsiveness on the part of elected officials to the particularized need of the members of the minority group; [and] whether the policy underlying the state or political subdivision's use of such voting qualification, prerequisite to voting, or standard, practice, or procedure is tenuous.

Id. (citing S. Rep. No. 97-417, at 28–29 (1982), *reprinted in* 1982 U.S.C.C.A.N. 177, 206–07).

131. *Id.* at 595 (alteration in original) (quoting Ortiz v. City of Philadelphia Office of the City Comm'rs Voter Registration Div., 28 F.3d 306, 312 (9th Cir. 1997)).

132. *Id.* at 596.

133. *Id.*

134. Farrakhan v. Locke, No. CS-96-76-RHW, 2000 U.S. Dist. LEXIS 22212, at *18 (E.D. Wash. Dec. 1, 2000), *rev'd in part sub nom.*, Farrakhan v. Washington (*Farrakhan I*), 338 F.3d 1009 (9th Cir. 2003).

itself has a discriminatory effect."[135] The court referenced the Senate Factors but declined to apply them directly.[136] Instead, the court reasoned that, factoring out racial discrimination in the criminal justice system, it was impossible to show a discriminatory effect from the disenfranchisement provision.[137]

The Ninth Circuit rejected the district court's reasoning and held that section 2 of the VRA required more than an isolated inquiry into the challenged voting qualification without reference to external factors.[138] Instead, the court emphasized that section 2's "totality of the circumstances" test "requires courts to consider how a challenged voting practice *interacts with* external factors such as 'social and historical conditions' to result in denial of the right to vote on account of race or color."[139] Holding that an inquiry into a "causal connection" between racial discrimination and denial of voting rights involves reference to the relevant Senate Factors, the court specifically noted that "racial bias in the criminal justice system" is relevant and encompassed in the factors.[140]

Having rejected the "by itself" causation standard applied by the district court, the Ninth Circuit remanded the case for an evaluation of the external factors that may establish a causal relationship between discrimination in the criminal justice system and the voting mechanism based on felony status.[141] The court explained that "a causal connection may be shown where the discriminatory impact of a challenged voting practice is attributable to racial discrimination in the surrounding social and historical circumstances."[142] The court illustrated the test with reference to the *Salt River* case.[143] There, the challenge failed because the external factor—a difference in land ownership rates—was not "*substantially explained by race.*"[144]

Captioned *Farrakhan v. Gregoire* on remand, the case was heard a second time by Judge Robert Whaley of the Eastern

District of Washington.[145] Reviewing statistical evidence of racial discrimination in Washington's criminal justice system, Judge Whaley wrote that "the Court is compelled to find that there is discrimination in Washington's criminal justice system on account of race . . . [and] this discrimination 'clearly hinder[s] the ability of racial minorities to participate effectively in the political process . . . .'"[146]

In spite of this finding, the court in *Farrakhan III* took the "totality of the circumstances" test as an opportunity to balance away intentional discrimination in the criminal justice system with reference to historical and social factors indicating a lack of discriminatory intent in Washington. Addressing the Senate Factors, the court cited a range of historical and social conditions such as: Washington's support for racial minorities; a lack of discriminatory intent in the enactment of the felon disenfranchisement law; the long tradition of felon disenfranchisement in the United States; and even the implicit endorsement of felon disenfranchisement in Section 2 of the Fourteenth Amendment.[147] Weighing the factors, the court concluded that "the totality of the circumstances does not support a finding that Washington's felon disenfranchisement law results in discrimination in its electoral process on account of race."[148]

C. Alaska's Felon Disenfranchisement Law in Light of *Farrakhan III*

The court in *Farrakhan III* found that Washington's felon disenfranchisement law did not violate section 2 of the VRA in spite of "compelling" evidence of racial discrimination in the criminal justice system.[149] Despite the Ninth Circuit's holding that a violation depends on the interaction between a voting mechanism and external factors, the court in *Farrakhan III* weighed "Washington's history, or lack thereof, of racial bias in its electoral process" to find that the totality of the circumstances test does not support a finding that Washington's felon disenfranchisement law violates the VRA.[150]

---

145. Farrakhan v. Gregoire (*Farrakhan III*), No. CV-96-076-RHW, 2006 U.S. Dist. LEXIS 45987 (E.D. Wash. July 7, 2006).

146. *Id.* at *18 (quoting *Farrakhan I*, 338 F.3d at 1020) (evaluating evidence under the summary judgment standard).

147. *Id.* at *23–*28.

148. *Id.* at *29.

149. *Id.* at *28.

150. *Id.* at *28–*29.

Significantly, the court in *Farrakhan III* allowed historical evidence to stand in for an analysis of the required causal connection between discrimination and racially disproportionate effects of a voting qualification. In *Salt River*, the disproportionate land ownership rates were not the result of discrimination—they were simply a statistical anomaly.[151] In *Farrakhan III*, disproportionate felony conviction was more than a statistical anomaly—it was evidence of racial discrimination.[152] Nevertheless, this causal nexus was deemed outweighed by other Senate Factors. Indeed, applying a balancing test to the Senate Factors may provide a back door for other arguments, such as the "affirmative sanction argument," which the Ninth Circuit has rejected.[153]

In Alaska, the statistics demonstrate that felon disenfranchisement has a racially disproportionate impact.[154] Compared with Washington, however, Alaska may not be able to rely so heavily on evidence of a historical lack of racial bias to defeat a challenge to its felon disenfranchisement law. One factor sure to be considered by any court hearing a VRA challenge to Alaska's felon disenfranchisement law will be that Alaska was designated a "covered jurisdiction" because of its use of a literacy test at the time of the VRA's enactment.[155] Although Alaska was able to demonstrate in 1966 that it had not made racially discriminatory use of that test for the preceding five years,[156] the stigma of having been singled out under section 5 of the VRA weighs in favor, perhaps, of additional scrutiny under section 2. Nevertheless, the outcome of a challenge to Alaska's felon disenfranchisement law is certain to be, as it was in *Salt River* and *Farrakhan III*, a fact-specific inquiry shaded by the trial court's view of the proper application of the totality of the circumstances test.

V. CONCLUSION

Felon disenfranchisement in Alaska will continue to be cause for concern as long as it works a racially disproportionate effect. Though recent decisions in the Tenth and Second Circuits have

151. Smith v. Salt River Project Agric. Improvement & Power Dist., 109 F.3d 586, 596 (9th Cir. 1997).

152. *Farrakhan III*, 2006 U.S. Dist. LEXIS 45987 at *28.

153. *See* Wesley v. Collins, 791 F.2d 1255, 1261 (6th Cir. 1986) (considering the Fourteenth Amendment as a factor in the totality of the circumstances test).

154. *See* discussion *supra* Part II.B.

155. *See supra* note 68 and accompanying text.

156. CITIZEN'S GUIDE, *supra* note 26, at 107 (noting that literacy tests in Alaska "lingered under a cloud of suspicion").

rejected claims against state felon disenfranchisement laws brought under section 2 of the Voting Rights Act of 1965, the Ninth Circuit has expressly held that such challenges can proceed. One such claim, in the State of Washington, was ultimately unsuccessful. Nevertheless, a case brought in Alaska, on different facts and before a different court, may well invalidate the state's practice of disenfranchising felons on the basis of its racially disproportionate impact.

Vision Statement

The Alaska Department of Corrections enhances the safety of our communities. We provide secure confinement, reformative programs, and a process of supervised community reintegration.

3917

Commissioner's Letter

The Mission of the Department of Corrections is to enhance the safety of our communities while providing secure confinement, reformative programs, and a process of supervised community reintegration.

I am pleased to make this profile available on line. This report is based on our best information and serves as a snapshot of a typical day. Data comes from our Offender Tracking Information System (OTIS), and is meant to give a general summary of Alaska's offender population.

The 2008 Offender Profile – which encompasses many hours of research and calculation on the part of department staff – serves as a valuable tool for our department in the successful accomplishment of our mission.

Joe Schmidt
Commissioner

Notes:
Count and admissions data include information about all offenders under the jurisdiction of the state of Alaska who are entered into the OTIS database.
Count information consists of monthly averages of daily counts; incarcerated offenders not entered into the OTIS database when a count was tallied were not included.
Admissions data includes all criminal admits (except transfers) for all offenders.

Notes:
Includes information about all offenders incarcerated in CRC's and treatment centers as well as those under electronic monitoring and those who are monitored by CRC's offsite who are entered into the OTIS database.
Consists of a snapshot of offenders incarcerated and entered into the OTIS database on or before December 31, 2008.
Alaska Native race category includes a small number of Native Americans not indigenous to Alaska.
Information about offenses is the most serious charge only.
Offense classes are semi-arbitrary.

Focus 2008
Information About Groups of Particular Interest

Notes:
Includes information about all offenders incarcerated in Alaskan and out-of-state institutions, CRC's, treatment centers, and those under electronic monitoring and offsite supervision who are entered into the OTIS database.
Consists of a snapshots of offenders incarcerated and entered into the OTIS database on December 31, 2008.
Alaska Native race category includes a small number of Native Americans not indigenous to Alaska.
Information about offenses is the most serious charge only.
Offense classes are semi-arbitrary.

3949

Alaska Natives

Notes:
Includes information about all offenders listed within the OTIS database as Indian or Alaska Native.
Includes information about a small number of Native Americans who are not indigenous to Alaska.

CRITICAL CONDITION

AFRICAN-AMERICAN YOUTH IN THE JUSTICE SYSTEM

Foreword by

3982

FOREWORD

By Hilary O. Shelton, Washington Bureau Director, NAACP

Recent events in Jena, Louisiana, have brought attention to critical issues facing the African-American community including the issues of racial disparities in the justice system, trying children in adult court, and the heinous practice of placing children in adult jails and prisons. The "Jena Six" cases captured the nation's attention when six teens faced overly aggressive prosecution and extended incarceration for fighting with a white classmate after a series of racial incidents that included the hanging of nooses in a tree at the local high school. One defendant, Mychal Bell, was jailed in an adult facility for nine months before being initially freed. Thousands converged in Jena on September 20, 2007 to demonstrate their outrage and as of this writing, the Jena Six are still being processed in the criminal justice system.

Unfortunately, the Jena Six cases are not isolated incidents but reflect larger system failures by the justice system. It is difficult for any American of conscience to say with conviction that our current legal system is operating with the creed "equal justice under the law." Shameful stories of disparate treatment from across the country prompted the NAACP to declare a national "State of Emergency" that requires immediate action by local and state authorities as well as the U.S. Department of Justice and the U.S. Congress.[1] This policy brief renews that call to action by presenting the latest data on African-American youth in the justice system.

It is well documented that African-American youth are treated more harshly by the justice system than white youth, for the same offenses, at all stages in the justice system. The National Council on Crime and Delinquency recognized that African-American youth face a "cumulative disadvantage" in the justice system (where the disparities grow deeper as a youth penetrates the justice system) in their landmark 2000 report, *And Justice for Some*, updated and reissued in 2007.[2] Disparities start at the beginning, when a decision is made to arrest a child or let him or her go with a warning: African-American youth make up 30% of those arrested while they only represent 17% of the overall youth population.[3] At the other extreme end of the system, African-American youth are 62% of the youth prosecuted in the adult criminal system, and are nine times more likely than white youth to receive an adult prison sentence.[4]

3983

There is no simple answer to the question of why African-American youth are being treated so poorly, and so unequally. Racial profiling, targeting patrols in certain low-income neighborhoods, and racial bias within the justice system all contribute to the stark disparities confirmed in this policy brief. However, the disparity in treatment between African-American youth and white youth by the court system is both a civil rights and racial justice issue that cannot continue to go unaddressed. It has been two decades since Congress first recognized these disparities through the Juvenile Justice and Delinquency Prevention Act (JJDPA). On this twentieth anniversary, we need a long-term commitment from the U.S. Congress and from the Administration that adequate resources will be provided to eradicate these inequities and ensure that "justice and equality" are not just empty words.

The decision to transfer youth to the adult criminal system – the most disparate point in the justice system – is really a decision about whether a youth is "redeemable" and should be rehabilitated by the juvenile justice system, or considered "unsalvageable" and prosecuted in the adult criminal system forever to be branded with an adult court conviction. As this brief shows, African-American youth have been disproportionately deemed unsalvageable by federal and state laws.

The NAACP opposes any policies, statutes, or laws that increase the number of youth transferred to the adult criminal justice system and the number of youth held in adult jails and prisons. Our organization's policy in opposition to the transfer of youth to the adult criminal justice system is included with this brief demonstrating our commitment to changes in federal and state law and practice. We are committed to working with other civil rights and children's rights organizations to try to put an end to all of the practices that result in the disparities in how children are treated when they become involved with the justice system.

We need to address these grave concerns now, in a coordinated effort that recognizes the seriousness of the problem and that our collective future is threatened. We must put ourselves in the shoes of our children, the ones who have been prosecuted as adults, placed in an adult jail or prison, children with adult convictions, whose future has effectively been abandoned by our system. The status of our children in the justice system is in critical condition. We must do better.

3984

- **"Overrepresentation"** exists when, at various stages of the justice system, the proportion of a certain population exceeds its proportion in the general population.
- **"Disparity"** refers to a situation in which different groups have different probabilities that certain outcomes will occur. Disparity may in turn lead to overrepresentation.
- **"Discrimination"** refers to differential decision-making among juvenile justice professionals affecting different groups of youth based on their gender, racial, and/or ethnic identity.

I. OVERVIEW

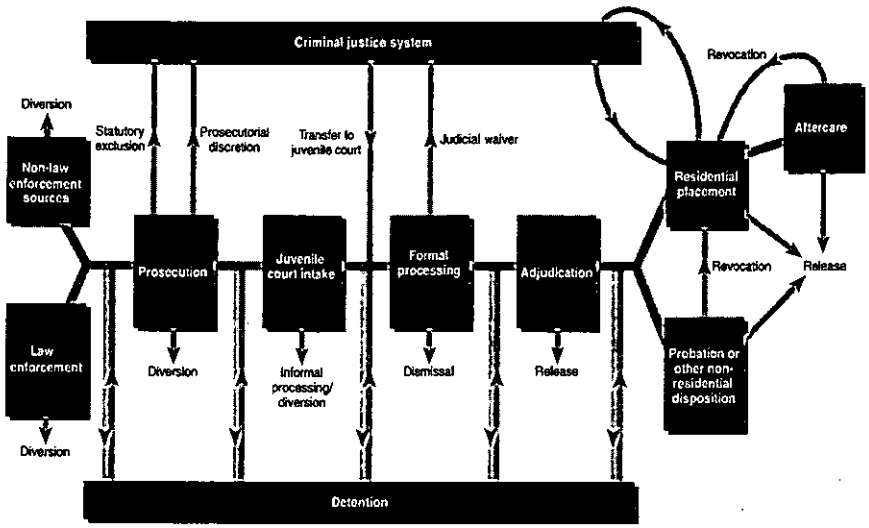
The juvenile justice system was originally enacted for the very purpose of separating youth from adult criminals; however, during the 1980s and 1990s every state except Nebraska enacted "get tough" juvenile policies making it easier to try youth as adults by: lowering the age at which juveniles can be prosecuted as adults; greatly expanding the categories of crimes for which youth are automatically prosecuted in criminal court; giving prosecutors the exclusive authority to decide which juveniles are charged as adults; and limiting the discretion of judges to overturn decisions by prosecutors and law enforcement officials.[5] As a result of these laws, thousands of African-American youth are prosecuted in the adult criminal justice system every year.

There are three primary ways children are sent to adult court (see Figure 1). Forty-six states have *judicial waiver*, the traditional path to the adult system wherein a juvenile court judge makes a decision to transfer a youth's case to adult court after considering several factors (e.g., age, offense, services available in the juvenile system).[6] In contrast to a judicial decisionmaker, the *prosecutorial discretion* transfer mechanism (also known as direct file) allows the prosecutor a choice between filing the case in juvenile or adult court, usually depending on cases that meet certain offense or offender criteria. Fifteen states

3985

grant prosecutors full discretion to decide whether certain cases will be tried in the adult system.[7] Finally, *statutory exclusion* (also known as automatic waiver or legislative waiver) provisions expressly prohibit the juvenile court from hearing certain types of cases. For example, thirteen states currently require all youth ages 16 or 17 (depending on the state) to be tried in the adult criminal system regardless of how minor the offense.[8] Twenty-nine states have mandatory transfer policies for certain violent offenses.[9] Thirty-four states have "once an adult, always an adult" provisions requiring that youth who have been tried or convicted as adults be prosecuted in the adult system for any subsequent offense.[10]

FIGURE 1: JUSTICE SYSTEM CASE PROCESSING[11]



When youth are prosecuted in the adult system, they are deprived of rehabilitative opportunities including education, mental health services, and other age-appropriate services that make it more likely that the youth will become a law-abiding productive citizen. In addition, youth prosecuted in the adult system can be held in adult jails and prisons where they are at great risk of assault, abuse, and suicide. Since enactment of these laws, new research has called into question the efficacy of these laws.

3986

In 2007, the U.S. Centers for Disease Control and Prevention's Task Force on Community Preventive Services found that youth who are tried as adults are, on average, 34% more likely to commit crimes than youth retained in the juvenile justice system. The Task Force also found that transfer to the adult criminal justice system typically increases rather than decreases rates of violence among transferred youth. As a result, the Task Force recommended against "laws or policies facilitating the transfer of juveniles from the juvenile to the adult judicial system."[12]

In August 2008, the Office of Juvenile Justice and Delinquency Prevention, the federal agency dedicated to juvenile justice issues at the U.S. Department of Justice, released, *Juvenile Transfer Laws: An Effective Deterrent to Delinquency?*, a bulletin finding that laws making it easier to transfer youth to the adult criminal court system have little or no general deterrent effect on crime (i.e., transfer laws do not prevent youth from engaging in criminal behavior). On the contrary, youth transferred to the adult system are more likely to be rearrested and to reoffend than youth who committed similar crimes, but were retained in the juvenile justice system. According to the bulletin, higher recidivism rates are due to a number of factors including:

- Stigmatization/negative labeling effects of being labeled as a convicted felon;
- Sense of resentment and injustice about being tried as an adult;
- Learning of criminal mores and behavior while incarcerated with adults;
- Decreased access to rehabilitation and family support in the adult system; and
- Decreased employment and community integration opportunities due to a felony conviction.[13]

With clear evidence that transfer laws do not protect public safety and are harmful to youth, this policy brief examines the racial disparities in the adult system and is intended to serve as a resource for federal and state policymakers, juvenile justice professionals, and others interested in reforming state and federal laws. The brief begins with a discussion of demographics and disparities in education, health care, child welfare, and economic opportunity that contribute to delinquency and the cycle of incarceration that disproportionately affects the African-American community. Second, this brief examines the self-reported criminal behaviors of African-American and white youth,

3987

and compares them to more traditional criminal justice statistics to show that African-American youth are not disproportionately committing crimes to justify the current disparities. Third, this brief takes an in-depth look at the disproportionate treatment that African-American youth receive at all major decision points in the justice system. Fourth, this brief looks at national initiatives aimed at reducing disparities and highlights recent law and policy changes that are helping African-American youth. Finally, the brief concludes with a series of recommendations for federal and state policymakers to address the pervasive racial disparities in the juvenile and adult criminal justice systems and minimize the negative impact of transfer laws on African-American youth.

II. DEMOGRAPHICS

Approximately 38 million African-American[i] people live in the United States, comprising 13% of the total population.[14] Black people live in every state of the country, and the states with the highest African-American populations are southern states and states with large urban centers (see Tables 1 and 2). In 2006, the vast majority (89%) of African Americans lived in urban settings, compared to 73% of whites.[15] Similarly, 90% of poor blacks live in urban areas.[16]

The African-American population is relatively young: 41% percent of African-Americans are under age 25, versus 34% of the total U.S. population. There are 5,325,000 African-American youth ages 10 to 17 in the United States, making up 16% of that age group overall.[17]

[i] The terms "African American" and "black" are used interchangeably. The terms "youth of color" or"minority youth" refer to black, Latino, Asian and Native-American youth.

3989

III. RISK AND PROTECTIVE FACTORS

Too many African-American youth are exposed to risk factors known to be common precursors to delinquency, including poverty, unemployment, school failure, unstable families, and neighborhoods plagued by violence. While the statistics below highlight the magnitude of disadvantage threatening the development of black children, it is important to remember that the majority of black youth are not involved with the juvenile or criminal justice systems. Sometimes these startling statistics may inadvertently reinforce stereotypes that African-American youth, particularly poor urban black boys, are prone to violence and criminal activity simply because they are considered "at risk."

Poverty. One in three African-American children under age 18 (35%) was living in poverty in 2007, more than three times the proportion of white youth (10%).[20] While the poverty status of African-American youth has improved dramatically since 1992, when nearly half (47%) of all black children were in poverty, poverty rates have not fallen fast enough.[21] Recent data have shown that poverty rates have not declined since 2001.[22]

Both the juvenile and adult justice systems disproportionately affect people with low incomes. Not only are poor youth more vulnerable to contact with law enforcement, but their families are less likely to be able to afford legal representation to protect them from penetrating further into the system. White youth are twice as likely as African-American youth to be able to retain private counsel. African-American youth whose families disproportionately have limited income are often provided indigent defense by lawyers who carry high case loads with meager resources.[23]

Families and the Impact of Incarceration. While many children are successfully raised by single parents and extended families, research shows that youth living without both parents are at increased risk for delinquency.[24] In 2006, 65% of African-American children under age 18 were not living with both parents, versus only 26% of white children.[25] Mass-incarceration has significant consequences for children and families in the African-American community. An estimated 1.7 million children had parents who were incarcerated in federal or state

3990

prison in 2007. Black children were seven and a half times more likely than white children to have a parent in prison.[26] Recent estimates are that 20% of all black children have a father with an incarceration history.[27] In 2006, one in every nine black men ages 20 to 34 was incarcerated, along with one out of every 100 black women ages 35 to 39.[28] If these trends continue, one in three black males born today can expect to spend time in prison during his lifetime.[29]

Education. There is a strong relationship between the education a child receives and his or her future life success. Negative educational outcomes, such as dropping out, being suspended, or being expelled increase the likelihood that youth will have contact with the juvenile or criminal justice system. Students who are suspended are more than twice as likely to be incarcerated than students who have never been suspended.[30] African-American youth are disproportionately suspended and expelled: in 2003, in grades K through 12, 20% of black students were suspended and 5% were expelled, compared to 9% and 1%, respectively, for white students.[31]

Dropping out of school triples the likelihood that a person will be arrested.[32] Without a high-school diploma or GED, youth transitioning into adulthood have significant difficulties obtaining employment or further education. Three-quarters of white students, but only half of black students, graduate from high school after four years.[33] In many of the nation's large urban districts, graduation rates for black youth are even lower (30% to 40% range).[34] Research demonstrates that increasing high school graduation rates would decrease violent crime by 20% and drug and property crimes by more than 10%. Economists have calculated that each black male who graduates from high school is associated with a savings to the criminal justice system of more than $55,000 (the estimate accounts for the expense of trials, sentencing, and incarceration).[35]

There are some signs of improvement in the education of African Americans. Black elementary school students have made significant improvements in test scores,[36] and black high school students participate in after-school activities at the same rate as white students.[37] African-American enrollment in undergraduate degree-granting institutions has also increased by 40% in the past decade.[38] In fact, blacks in 2007 made up 13% of the fall enrollment in degree-granting undergraduate institutions, about equal to their proportion of the total pop-

3991

ulation.[39] With the increasing value of a college degree on the job market, high post-secondary enrollment is a promising sign.

Employment: The lack of employment opportunities for both young African Americans and their parents substantially increases the risk of exposure to the justice system by encouraging participation in the illicit economy. In 2006, half of African-American children lived in a family in which no parent had full-time, year-round employment, versus only one-quarter of white children who lived in the same kind of family.[40] Eleven percent of African-American youth and young adults were unemployed in the years 2005 to 2007, almost twice the percentage of unemployed whites (6%) in that age group.[41]

Criminal justice system involvement also dramatically limits employment opportunities. Most states allow employers to deny jobs to anyone with a criminal record. In fact, in most states employers can deny jobs to people who were arrested but never convicted of a crime.[42] One study of employers found that more than 60% of employers probably would not hire an applicant with a criminal record.[43] Another study found that having a criminal record led to a 50% reduction in employment opportunities for white applicants, and a 64% reduction for African-American applicants.[44] Employers in a growing number of professions, including home health care, nursing, education, eyeglass dispensing, plumbing, and even barbering, are barred by state licensing agencies from hiring people with a wide range of criminal convictions, even convictions that are unrelated to the job or license sought.[45]

Health. The health disparities that begin before birth and continue throughout the lifespan for African Americans may also be linked to delinquency. African-American mothers often fail to receive adequate prenatal care, which resulted in 2005 a black infant mortality rate that was more than twice the rate for white children.[46] Black children are also at higher risk of exposure to environmental toxins which compromise proper development and impair cognitive functioning. From 2001 to 2004, black children ages 1 to 5 were more than twice as likely as white children in this age group to have elevated blood lead levels.[47] Many black children also have inadequate access to the health services they need either because they lack health insurance, or because their coverage is not sufficient. Twelve percent of African-American children (versus 7% of white children) did not have health

3992

insurance in 2007.[48] HIV poses a severe problem in the African-American community, especially for youth. In 33 states studied by the Centers for Disease Control and Prevention in 2006, black youth accounted for 70% of new HIV/AIDS cases diagnosed among adolescents ages 13 to 19.[49]

Despite longstanding health disparities between whites and African Americans, some indicators have shown improvement for African-American youth. Between 1991 and 2005, the birth rate for black teenagers ages 15 to 17 dropped 60% (from 86 to 35 per 1,000 females).[50] According to 2005 data, the child-death rate and the teen-death rate have also both fallen since 1999.[51]

School and Community Safety. Community supports are instrumental in helping African-American youth overcome significant challenges and avoid justice system involvement. Many African-American children live in unsafe communities or attend schools where parents fear for their children's safety. A 2003 national survey of parents of black children found that 32% did not feel that they lived in a supportive neighborhood, versus only 13% of parents of white children who felt this way. Thirty-one percent of African-American parents, versus only 8% of white parents, believed their child is never or only sometimes safe in their community or neighborhood.[52]

Even though there are no significant differences in the proportions of black and white students who report being threatened or injured with a weapon on school property, African-American youth and parents are more afraid of violence in their schools.[53] According to the 2005 National Crime Victimization Survey, 9% of African-American students and 4% of white students reported they were afraid of being attacked at school.[54] One-quarter of parents of African-American children believe that their child is never or only sometimes safe at school, as opposed to 6% of white parents.[55]

Gangs. Gang violence has garnered much attention in recent years even though estimates from law enforcement suggest that no more than 1% of all youth ages 10 to 17 are gang members.[56] In a 2005 survey of students ages 12 to 18, 37% of African Americans reported that gangs were present at their schools, versus only 17% of white students.[57] Self-report surveys conducted from 1997 to 2001 find that 12% of African Americans reported gang membership, versus 7% of

3993

whites.[58] Law enforcement estimates find greater racial discrepancies in gang membership than measures that directly survey youth. According to the 2004 National Youth Gang Survey, law enforcement agencies estimate that 37% of gang members are African American, as opposed to 8% white.[59] U.S. Sentencing Commission data from 2003 to 2006 also show that gang-related crime laws are disproportionately applied to minorities. Between 60% to 75% of individuals convicted under current gang-related statutes are minorities, even though minority groups only make up 33% of the general U.S. population.[60]

Part of the difficulty in addressing gang violence is that current research and policy solutions often fail to distinguish between serious gang behaviors and the minor, fleeting involvement characteristic of most gang members. In fact, the majority of youth "age out" of gang-related activities. Research demonstrates that half to two-thirds of gang members are affiliated for one year or less and are not members "for life."[61] Overly reactive and punitive responses to gang membership, such as gang databases or mandatory sentencing laws, may actually increase the likelihood that a youth remains in a gang. According to a 2007 report from the Justice Policy Institute, increased arrests and longer sentences actually create more cohesive and stronger gang identification.[62]

Victimization. Research has shown that childhood exposure to violence leads to an increased risk of being arrested for violent crime.[63] Being abused or neglected as a child increases the likelihood of arrest as a juvenile by 59%, as an adult by 28%, and for a violent crime by 30%.[64] African-American youth are almost twice as likely as white youth to be the victims of child maltreatment.[65] Black children make up 15% of the child population but 23% of child maltreatment victims[66] and 32% of the foster care population.[67] In addition to high rates of child abuse, African-American youth ages 16 to 19 are more likely than blacks of any other age group to be victims of violent crime. They are more than twice as likely as white youth in the same age group to be the victims of serious violent crimes including rape, sexual assault, robbery, and aggravated assault.[68] Black youth are nearly 15 times more likely than are white youth to die from homicide.[69] In fact, homicides accounted for 25% of deaths of African-Americans ages 10 to 17, the second leading cause of death for that age group in 2005.[70]

3994

IV. CRIMINAL ACTIVITY REPORTED BY AFRICAN-AMERICAN YOUTH

Self-report surveys help answer the question of whether African-American youth commit more crimes than white youth. Traditional criminal and delinquency statistics (e.g., arrest rates or court processing data) tell us only how government agencies respond to youth who have been arrested or brought to the attention of the authorities. To the extent that other factors or biases influence outcomes in the juvenile justice system, the official data may be open to multiple interpretations.[71] For example, an increase in juvenile arrest rates for drug-abuse violations may reflect increasing drug use, greater police monitoring, changing laws and policies, or a combination of factors. In contrast, self-report data (participants anonymously report on their own experiences and actions) reveal behavior that is never reported or detected by law enforcement and is more likely to reflect actual levels of criminal activity. Recognizing the importance of self-report data, the Centers for Disease Control and Prevention has surveyed the nation's youth since 1991 using the National Youth Risk Behavior Surveillance System (YRBSS). [72]

Drug and Alcohol Use. According to the 2007 YRBSS survey, African-American youth report lower rates than white youth of most drug- and alcohol-related behavior (see Table 3). These results have been largely consistent since 1991, when the YRBSS began.[73] The finding of lower rates of drug use for black youth has also been replicated in other self-report studies.[74] This finding has especially important implications because of the disproportionate rate at which African Americans are arrested and detained for drug violations, discussed in the following section.

3995

TABLE 3. SELF-REPORTED DRUG- AND ALCOHOL-RELATED RISK BEHAVIOR, 2007[75]

Risk Behavior	Black Students (%)	White Students (%)
Lifetime alcohol use (had at least one drink of alcohol during their life)	69	76
Episodic heavy drinking (had five or more drinks of alcohol within a couple of hours on at least one occasion during the last 30 days)	13	30
Lifetime cigarette use (ever tried cigarette smoking, even one or two puffs)	50	50
Lifetime marijuana use (used marijuana one or more times during their life)	40	38
Lifetime cocaine use (used any form of cocaine, including powder, crack, or freebase one or more times during their life)	2	7
Lifetime inhalant use (sniffed glue, breathed the contents of aerosol spray cans, or inhaled any paints or sprays to get high one or more times during their life)	9	14
Lifetime hallucinogenic drug use (used hallucinogenic drugs such as LSD, acid, PCP, angel dust, mescaline, or mushrooms one or more times during their life)	2	9
Lifetime methamphetamine use (used methamphetamines [also called speed, crystal, crank, or ice] one or more times during their life)	2	5
Lifetime ecstasy use (used ecstasy [also called MDMA] one or more times during their life)	4	6

Note: Shaded boxes are statistically significant differences based on t-test analyses, $p < .05$.

3996

TABLE 4. SELF-REPORTED VIOLENT AND DELINQUENT BEHAVIOR OF SECONDARY SCHOOL STUDENTS, 2007[76]

Risk Behavior	Black Students (%)	White Students (%)
In a physical fight (one or more times during the past 12 months)	45	32
Carried a weapon (for example, a gun, knife, or club during the past 30 days)	17	18
Carried a weapon on school property (for example, a gun, knife, or club during the past 30 days)	6	5
Carried a gun (during the past 30 days)	6	4

Note: Shaded boxes are statistically significant differences based on t-test analyses, $p < .05$.

TABLE 5. LIFETIME PREVALENCE OF SELF-REPORTED VIOLENT AND DELINQUENT BEHAVIOR BY AGE 17, 1997-2001[77]

Risk Behavior	Black Students (%)	White Students (%)
Vandalism (damaged or purposely destroyed property that did not belong to you)	33	39
Theft of less than $50	38	44
Theft of more than $50	15	12
Drug selling (ever sold or helped sell marijuana, hashish, or other hard drugs such as heroin, cocaine, or LSD)	13	17
Assault (attacked someone with the idea of seriously hurting them)	36	25
Carry a handgun	15	16
Runaway (left home, at least overnight, without parents permission)	18	21

Note: Shaded boxes are statistically significant differences based on t-test analyses, $p < .05$.

3997

Violent and Delinquent Behavior. According to the YRBSS survey and another self-report survey, the National Longitudinal Survey of Youth (NLSY) conducted by the U.S. Bureau of Labor Statistics, racial discrepancies exist in offending and these differences vary by offense (see Tables 4 and 5). In both surveys, African-American youth report that they are more likely than white youth to commit assault and be involved in serious physical altercations. However, white youth report that they are more likely to commit drug infractions, including both use and distribution, than are black youth. Black and white youth are equally likely to report carrying weapons, findings that have been largely consistent since the YRBSS began in 1991.[78]

The self-report data indicate that African-American youth are not disproportionately committing crimes or engaging in delinquent behavior to warrant the disparities currently seen in the justice system. In fact, with the exception of assaults and thefts of more than $50, white youth consistently report engaging in more criminal behavior than black youth.

V. DISPARITIES IN THE JUVENILE JUSTICE SYSTEM

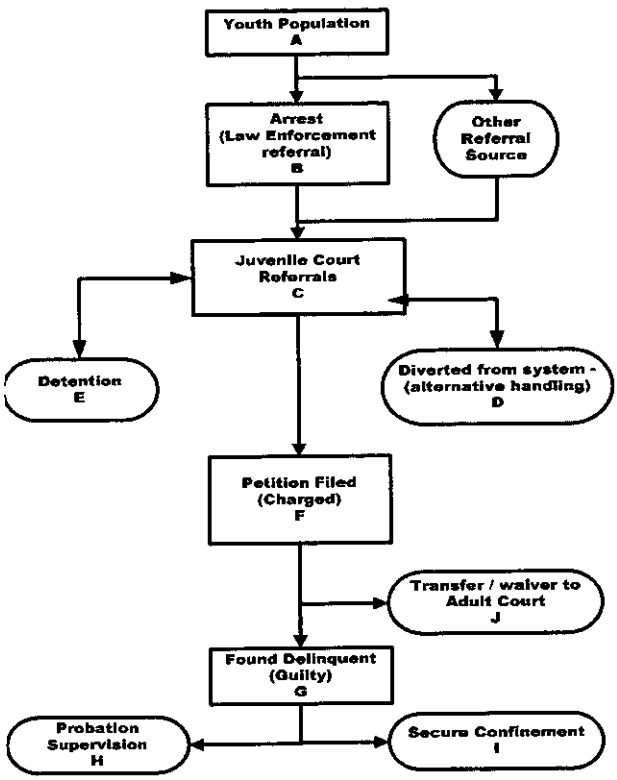
Congress first recognized the vast disparities in treatment between African-American and white youth in 1988 when the federal Juvenile Justice and Delinquency Prevention Act (JJDPA) required states to address the disproportionate confinement of minority youth (i.e., when the proportion of a minority group's youth in a state's secure facilities exceeded their proportion in the population) in their State plans. Four years later, Congress elevated the issue to a "core requirement" of the Act, meaning that federal funding eligibility was tied to compliance. In 2002, Congress broadened the requirement from a focus on disproportionate minority "confinement" to disproportionate minority "contact" with any part of the juvenile justice system. The "DMC" requirement now requires that states address disparities at each contact point (i.e., decisions to arrest, detain, charge, sentence, etc.) to maintain compliance with the law. Despite twenty years of explicit acknowledgement of the problem and some progress in specific jurisdictions, African-American youth continue to be overrepresented at most stages in the justice system.[79]

As African-American youth are disproportionately arrested compared to their proportion of the overall population, they are overrepresented at most stages of case processing.[80] This overrepresentation persists in further stages of the system regardless of how they are treated at other points in case processing. To identify precisely which justice system contact points contain disparities, a new tool, the Relative

3998

Rate Index (RRI) was developed. The Relative Rate Index measures disparities at each of the contact points where DMC may occur in the juvenile justice system (see Figure 2). Since youth prosecuted in the adult system via prosecutorial or statutory waivers don't have contact with the juvenile court, data is currently not available at the national level for those types of transfer mechanisms.

FIGURE 2: RELATIONSHIP OF DATA ELEMENTS FOR RELATIVE RATE INDEX CALCULATIONS[81]



The RRI "controls" for the disparities at arrest or other points in the system by comparing what happens at a particular decision point to the rates at the previous point in the system. For example, the RRIs for arrests are based on the differences in rates between points B and A, and the RRIs for whether a youth is adjudicated delinquent are based on the differences in rates between points G and F. An RRI that is greater than 1 indicates that black youth are more likely than white

3999

youth to be at that contact point; an RRI of less than 1 indicates that black youth are less likely than white youth to be at that contact point. Table 6 contains the absolute rates for African-American and white youth at each point of contact, as well as the RRI (shaded column) comparing the two groups. African-American youth are more than twice as likely to be arrested as white youth. After referral, white youth are 50% more likely than African-American youth to be diverted before adjudication, and African-American youth are 40% more likely than white youth to be detained before adjudication.

TABLE 6. RATES AND RELATIVE RATE INDICES (RRIS) FOR ALL DELINQUENCY OFFENSES, 2005[82]

Rate	All	White	Black	Black / White RRI
Juvenile arrests per 1,000 persons in population	56.2	49.1	101	2.1
Cases referred per 100 juvenile arrests	88.8	84.3	98.5	1.2
Cases diverted per 100 cases referred	26.6	29.6	20.7	0.7
Cases detained per 100 cases referred	21.7	19.3	26.5	1.4
Cases petitioned per 100 cases referred	55.5	52.2	61.9	1.2
Cases adjudicated per 100 cases petitioned	66	68.4	61.7	0.9
Probation cases per 100 adjudicated cases	60.9	63.1	56.5	0.9
Placement cases per 100 adjudicated cases	22.4	20.7	25.5	1.2
Cases judicially waived per 100 cases petitioned	0.8	0.7	0.8	1.1

4000

The disparities in treatment are exacerbated when considering specific offenses (see Table 7). The disparities are greatest in arrest rates for person offenses, for which African Americans are nearly four times more likely than whites to be arrested. For property and drug offenses, black youth are twice as likely to be arrested. The disparities in detention, diversion, and waiver to the adult court are greatest for drug offenses. White youth are twice as likely as black youth to be diverted before adjudication for a drug offense. African-American youth are more than twice as likely as white youth to be detained pre-adjudication for a drug offense. In addition, African Americans are 40% more likely than whites to be waived to adult court for a drug offense.[83]

TABLE 7. AFRICAN AMERICAN RELATIVE RATE INDICES BY OFFENSE CATEGORY, 2005[84]

RELATIVE RATES: Black	Total Delinquency Offenses	Person Offenses	Property Offenses	Drug Law Violations	Public Order Offenses
Arrest rate	2.1	3.6	1.9	2.0	1.7
Referral rate	1.2	0.9	1.1	0.8	1.5
Diversion rate	0.7	0.7	0.7	0.5	0.8
Detention rate	1.4	1.1	1.4	2.1	1.3
Petitioned rate	1.2	1.2	1.2	1.4	1.1
Adjudicated rate	0.9	0.9	0.9	0.9	0.9
Probation rate	0.9	0.9	0.9	0.8	0.9
Placement rate	1.2	1.2	1.2	2.0	1.1
Waiver rate	1.1	1.2	0.6	1.4	0.7

Note: Person offenses include, but are not limited to, homicide, assault, rape, and robbery. Property offenses include burglary, theft, and arson. Drug offenses include trafficking and possession. Public order offenses include weapons possession offenses.

4001

Compared to the self-report data discussed previously, the findings in Table 7 strongly suggest the presence of biases in the juvenile justice system's treatment of African-American youth. Whereas the self-report data suggest that African-American youth are roughly 40% more likely to be involved in a physical fight or assault, they are over 300% more likely to be arrested for aggravated assault and other assaults.[85] Even though white youth are more likely to report using drugs and 30% more likely to report selling drugs, African-American youth are more than twice as likely to be arrested and detained for drug offenses.[86]

Arrest Rates. After a peak in juvenile arrests in the mid 1990s, the juvenile arrest rate for all youth has remained near a 25-year low according to 2006 data.[87] However, while the arrest rate for white youth decreased 9% from 2001 to 2006, the arrest rate for black youth increased by 7% during this same this time period.[88] From 2001 to 2006, arrest rates of black youth increased 50% for robbery; almost 40% for curfew, loitering, and weapons violations; and almost 30% for disorderly conduct.[89] Although African-American youth were 17% of the population in 2005, they represented 30% of children arrested in the U.S.[90] In fact, the overall RRI for arrests of African-American youth in 2006 remained at the highest point in a decade.[91]

Most African-American youth are arrested for nonviolent crimes (see Table 8). The five most common offenses for which African-American youth are arrested are "other" assaults (i.e., not aggravated assaults), disorderly conduct, larceny-theft, drug abuse violations, and curfew and loitering laws. With the exception of alcohol-related offenses, black youth are disproportionately arrested for every offense.

TABLE 8. JUVENILE ARREST RATES BY RACE, 2006[92]

Offense, sorted by highest rate	Black (per 100,000 youth ages 10-17)	White (per 100,000 youth ages 10-17)	Relative Rate Index (RRI)
Total including suspicion	12179	5773	2.1
Other assaults	1753	566	3.1
Disorderly conduct	1524	469	3.3
Larceny-theft	1502	735	2.0
Drug abuse violations	1069	519	2.1
Curfew and loitering law violations	1054	369	2.9
Runaways	519	304	1.7
Burglary	477	214	2.2
Aggravated assault	463	131	3.5
Robbery	436	43	10.2
Vandalism	407	358	1.1
Weapons carrying, possessing, etc.	316	112	2.8
Motor vehicle theft	272	72	3.8
Liquor laws	124	495	0.2
Arson	27	25	1.1
Drunkenness	24	57	0.4
Forcible rape	21	8	2.5
Murder and nonnegligent manslaughter	14	2	7.0
Driving under the influence	13	71	0.2

Referral. Once a youth is arrested, law enforcement officers make the decision about whether to refer the case to juvenile court or divert the case out of the court system. Youth can also be referred to juvenile

4003

court by means other than arrest, such as through schools, social services, or family members. After arrest, African-American youth are 20% more likely than white youth to be referred to juvenile court.

At least for drug and person offenses, the overrepresentation of African-American youth at the stage of arrest seems to be slightly corrected at the referral stage. According to the RRIs from 2005, black youth arrested for drug and person offense arrests were less likely than white youth to be referred to court, suggesting that many black youth were unnecessarily arrested for their offenses. In contrast, black youth were 50% more likely than white youth to be referred for a public order offense, and 6% more likely to be referred for property offenses.[93]

Juvenile court intake. After referral to juvenile court, a youth's case may be dismissed, handled informally, or a petition may be filed in the juvenile court for formal intervention. A large proportion of juvenile cases are handled informally (44% in 2004),[94] in which case they may be dismissed if the youth consents to and complies with a set of conditions. After referral, African-American youth were 20% more likely to have their cases petitioned to the juvenile court for formal handling. Another way of looking at the data is that in 2005, white youth were nearly 50% more likely to have their case diverted to an alternative program than were African-American youth. The disparity in cases petitioned was greatest for drug law violations, for which African Americans were 40% more likely to be petitioned, and whites were twice as likely as blacks to have their drug cases diverted.[95]

Detention. Many youth are detained while waiting for trial, in both secure detention facilities and non-secure placements like group homes. When youth are detained, their lives are interrupted. According to the Justice Policy Institute report, *The Dangers of Detention: The Impact of Incarcerating Youth in Detention and Other Secure Facilities:*

> [Youth] can spend anywhere from a few days to a few months in locked custody. At best, detained youth are physically and emotionally separated from the families and communities who are the most invested in their recovery and success. Often,

> detained youth are housed in overcrowded, understaffed facilities—an environment that conspires to breed neglect and violence. [In addition,] detention has a profoundly negative impact on young people's mental and physical well-being, their education, and their employment. One psychologist found that for one-third of incarcerated youth diagnosed with depression, the onset of the depression occurred after they began their incarceration, and another suggests that poor mental health, and the conditions of confinement together conspire to make it more likely that incarcerated teens will engage in suicide and self-harm... the experience of detention may make it more likely that youth will continue to engage in delinquent behavior, and that the detention experience may increase the odds that youth will recidivate, further compromising public safety.[96]

African-American youth in 2005 were 40% more likely than white youth to be detained after arrest.[97] The disparity was greatest for drug law violations, for which African Americans were more than twice as likely to be detained.[98] As a result of these disparities, in many detention centers across the country the majority of youth locked up are African American. Nationally, African-American youth comprised 43% of youth detained in detention centers in 2006.[99]

African Americans are overrepresented in the number of youth detained in detention centers in every offense category: black youth make up 60% of the youth detained for drug trafficking, 43% of those detained for non-trafficking drug offenses, 44% of those detained for theft, 53% of those detained for weapons possession, and 34% of those detained for status offenses (youth such as runaways and truants whose activities would not be illegal but for their age).[100] One-third of the African-American females detained in detention centers in 2006 were held for technical violations or status offenses.[101]

There is evidence to suggest that many youth are unnecessarily detained before trial. In 2004, of African-American youth who were

detained, only 20% were placed in juvenile facilities following their adjudication, while 26% were released, 33% were given probation, and 19% were treated with other penalties such as fines, restitution, or community service.[102]

As the majority of African-American youth are detained for nonviolent offenses, it is likely that they could be better served with community-based services or other alternatives to detention.

Adjudication. A juvenile court "adjudication" is analogous to an adult court "conviction." In both cases a hearing is held to determine whether the person committed the alleged offense. In 2005, African Americans were slightly less likely than whites to be found guilty (have their cases adjudicated delinquent) once petitioned (RRI 0.9).[103] This holds almost equally across all offense categories. Based on these RRIs, it appears that the juvenile court hearing process does not exacerbate racial disparities, but may actually correct for disparities in previous stages. It may be that juvenile court judges at this stage are identifying youth who could have been more appropriately handled informally or diverted out of the juvenile justice system.

Youth Committed to Residential Placement. After a youth has been adjudicated (i.e., found guilty), the court develops a "disposition" (the equivalent to an adult court "sentence") to identify the necessary services and sanctions for the child to be rehabilitated. Possible dispositions for delinquent youth range from the most severe punishment of incarceration in a youth correctional facility to placement in other non-secure residential facilities such as group homes or treatment facilities, or lesser sanctions such as probation, fines, restitution, or community service. The vast majority of delinquency cases do not result in an incarceration sentence or out-of-home placement; only 10% of black adjudicated youth and 8% of white adjudicated youth are removed from their homes.[104] However, black youth are more likely to receive the harshest sentence, incarceration, after being found guilty. African-American youth are 23% more likely than white youth to be removed from home, and black youth are twice as likely to be removed from home for drug offenses.[105]

The majority of African-American youth who were placed outside of their homes (e.g., secure facility, residential treatment facility, or group home) were not being held for violent offenses. In 2006, more than

4006

60% of committed black youth had been found guilty of nonviolent offenses, including 24% committed for property offenses, 10% for drug offenses, 10% for public order offenses, 12% for technical violations, and 5% for status offenses. [106]

VI. DISPARITIES IN THE ADULT CRIMINAL JUSTICE SYSTEM

Although there is no national data system that collects data on youth transferred to the adult system, researchers estimate that as many as 200,000 youth are prosecuted as adults each year.[107] All available evidence indicates that African Americans are overrepresented in the population of youth tried as adults.

The only national data available on youth tried in the adult system is data on youth transferred to the adult system via judicial waiver. In 2005, 7,000 youth were transferred via judicial waivers, and 39% of these youth were African-American.[108] According to the 2005 RRIs, African-American youth were only 13% more likely than whites in 2005 to be waived to the adult court once petitioned (RRI 1.1). Black youth were much less likely than whites to be waived for property offenses (RRI 0.6) and public order offenses (RRI 0.7) and much more likely to be waived for drug law violations (RRI 1.4).[109] However, these RRIs significantly underestimate the racial disparities of youth transferred to the adult system because judicial waiver represents a very small portion of youth tried in the adult system.

In 2007, the Campaign for Youth Justice commissioned a study by Jolanta Juszkiewicz, Ph.D., to learn more about the characteristics of youth in the adult system. *To Punish a Few: Too Many Youth Caught in the Net of Adult Prosecution,* provides the most in-depth look at the issue of youth in the adult system through the lens of 40 jurisdictions from all the major regions of the country (West, Midwest, South, and Northeast) using the most recent available data from 1998.[110] The study analyzed data collected by the Bureau of Justice Statistics as part of the Juvenile Defendants in Criminal Courts, Survey of 40 Counties, 1998 (JDCC) program. The JDCC consisted of cases involving juveniles prosecuted for felony offenses in criminal courts in 40 large, urban jurisdictions. All the cases involving juveniles that were filed for felony offenses during calendar year 1998 in the state criminal courts were selected for the study. Please note that the study examined only felony cases, not misdemeanors, and did not include youth automatically transferred to the adult system via a reduced age of juvenile court jurisdiction. The key findings of *To Punish a Few* with respect to African-American youth are:

4007

Youth of color are disproportionately impacted by transfer policies. The overwhelming majority of cases (83%) that were filed in adult courts involved youth of color. African-American youth constituted 62% of the youth, and Latino youth were 19%. With the exception of two counties in the study, youth of color constituted between 60% and 100% of all youth prosecuted as adults in the 40 counties included in the study.

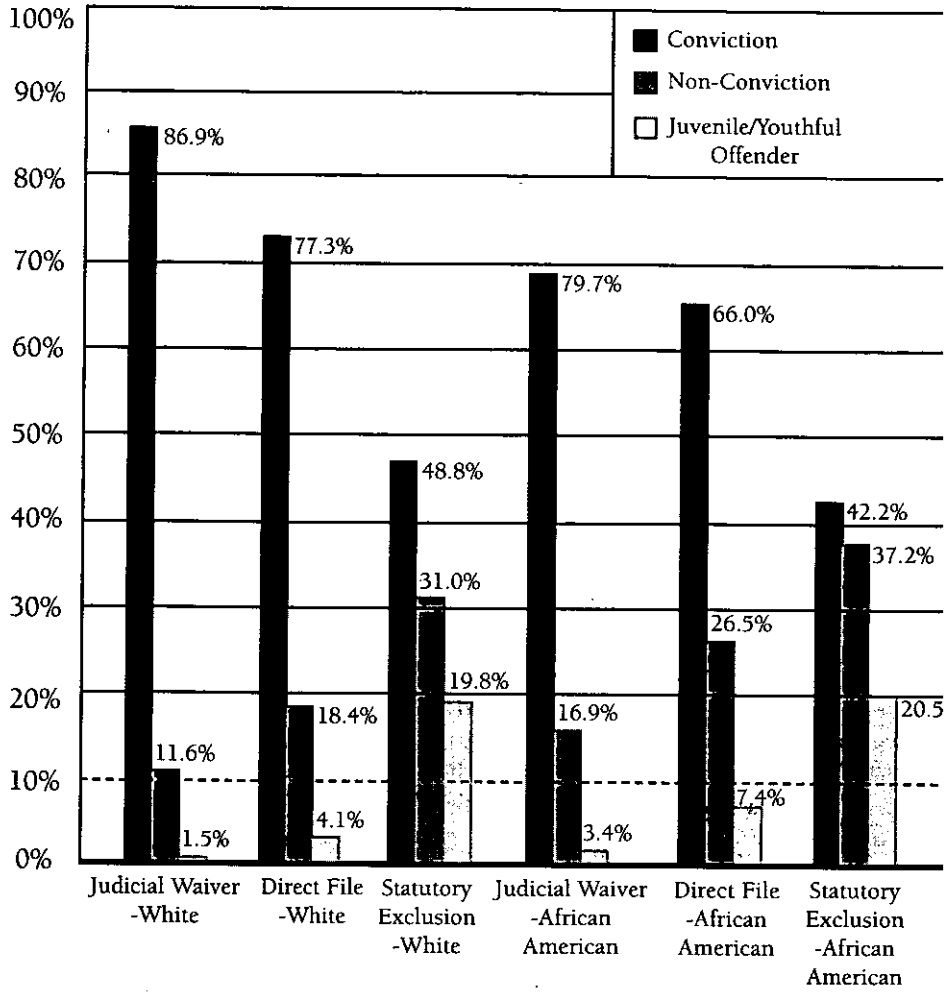
Most African-American youth do not receive the benefit of a juvenile court judge individually evaluating their case, but are transferred to the adult system via statutory exclusion or prosecutorial waiver mechanisms. Half (49.2%) of all cases involving African-American youth were filed in criminal court as a result of statutory exclusion. A third (31.9%) of cases were filed as a result of direct file/prosecutorial discretion. Only 18.9% were judicial waiver cases where a judge could make an individual decision after a hearing.

Many African-American youth tried in the adult system are not convicted, suggesting that cases brought against these youth are not very strong. More than 40% of all African-American youth prosecuted in adult court did not receive an adult court conviction (versus only 27.3% of white youth). A third of the youth (27.7%) were not convicted at all, and 12.7% were returned to juvenile court. In fact, African-American youth were more likely than other racial/ethnic groups to have their cases transferred back to juvenile court. This finding is disturbing because many youth will have been subject to detention in an adult facility, discussed below. In addition, African-American youth charged as a result of statutory exclusion laws or a direct file provision were much less likely to be convicted than youth transferred to adult court via judicial waiver (see Figure 3).

Similar to youth in the juvenile justice system, disparities vary by type of offense. Out of all youth cases in adult court, African-American youth accounted for 87% of those charged with drug offenses; 48% of those charged with property offenses; 59% of those charged with property offenses; and 63% of those charged with public order offenses.

4008

FIGURE 3: FINAL DISPOSITION BY FILING MECHANISM FOR AFRICAN-AMERICAN AND WHITE JUVENILE DEFENDANTS IN CRIMINAL COURTS, 1998



Drug cases were filed against African-American youth at nearly 5 times the rate of white youth. More than one-fifth (21.4%) of all African-American youth tried in adult court were charged with a drug offense, and one-quarter of these youth were charged with a drug offense that did not include sales or manufacturing (i.e., drug possession or possession of drug paraphernalia). More African-American youth charged with drug offenses were detained pretrial than white

4009

youth (86.2% of white youth with drug charges were released versus 65.8% of African-American youth).

Most youth prosecuted in the adult system are not serious violent offenders. A common misperception about youth transferred to the adult system is that the majority are charged with the most serious violent offenses of rape and murder. However, the top five offenses (75% of all cases) of African-American youth tried in adult court were for crimes that are regularly handled in juvenile courts: robbery (33.2%); assault (18.2%); drug sales/manufacture (16.1%); burglary (5.7%); and other drug offenses (5.3%).

African-American youth are routinely incarcerated in adult jails. Overall, a higher proportion of white youth were released pretrial (59.8%) than any other racial/ethnic categories. Only half (50.5%) of African-American youth were released pretrial. Of the African-American youth detained pretrial, 65.4% were held in adult jails and only 34.6% were held in juvenile facilities (72% of white youth were held in adult jails pretrial).

Most youth convicted in adult court do not receive an adult prison sentence, and most sentenced to adult prison are not convicted of a violent offense. The majority of African-American youth (55.5%) convicted in adult court do not receive an adult prison sentence. Of the African-American youth convicted in adult court, 44.5% received an adult prison sentence, 24.6% received probation, 16.6% were sentenced to jail, 10.3% received a juvenile sanction or bootcamp, and 4% were released for time served.

The majority of African-American youth (57.6%) sentenced to adult prison were not sentenced for a violent offense. Of the African-American youth sentenced to adult prison: 43.4% had a violent offense charge, 24.8% had a property offense charge; 12.5% had a drug offense charge; and 7.9% had a public order offense charge.

Racial disparities in youth serving time in adult prison. According to a report by the National Council on Crime and Delinquency, *And Justice for Some*, nearly three-quarters of youth admitted to adult prisons were youth of color in 2002 (the most recent data available). For every 10 youth admitted to adult prison, six were black youth. The rate of commitment to adult prison was more than nine times higher

for black youth than for white youth.[111] The five states with the highest prison commitment rates for African-American youth were Wisconsin (155 per 100,000), Oregon (143 per 100,000), South Carolina (101 per 100,000), North Carolina (101 per 100,000) and South Dakota (97 per 100,000).[112]

Racial disparities are also observed for youth serving life without parole sentences. According to a 2005 report by Human Rights Watch and Amnesty International, black youth are serving life without parole sentences at a rate that is ten times higher than white youth. African-American youth constitute 60% of the youth offenders serving life without parole sentences nationwide, compared with 29% of white youth.[113]

VII. PROMISING APPROACHES TO ADDRESSING DMC

Jurisdictions that have a commitment to reducing racial and ethnic disparities have demonstrated the ability to move toward more equitable treatment of youth of color as they move through and out of the justice system. Successful approaches to addressing DMC are targeted and tailored to the specific state, county, city or region; however, these approaches share some consistent commonalities including:

- *Strengthened leadership* through creation of DMC committees and focused state efforts on addressing the problem.
- *Collection and monitoring of state data* to improve states' ability to assess and address the root causes of DMC in their state.
- *Standardized and objective screening instruments* used by decision-makers, such as judges, to eliminate subtle stereotypes and biases.
- *Community-based prevention, intervention, and diversion* efforts to eliminate biases and encourage diversion of youth out of the juvenile justice system.
- *Community empowerment* by engaging communities at the local level to assist with DMC reduction activities.
- *Efforts to increase cultural sensitivity* (e.g., training) to make system stakeholders more sensitive to the needs of minority youth.
- *Legislative changes* to reduce the disparate impact of state laws. [114]

4011

Nationwide Initiatives to Reduce DMC

There are several nationwide efforts aimed at reducing disparities. For the past fifteen years, the Juvenile Detention Alternatives Initiative (JDAI), a project of the Annie E. Casey Foundation, has demonstrated that jurisdictions can safely reduce reliance on secure detention and generally strengthen their juvenile justice systems through a series of inter-related reform strategies. From the beginning, JDAI recognized that juvenile detention reform efforts must reflect the reality that minority youth bear the brunt of policies that lead to arrest, referral, detention, adjudication, and imprisonment of young people.[115] JDAI is now being replicated in over 80 jurisdictions across the country.

A key partner in the JDAI initiative is the W. Haywood Burns Institute, an organization working to reduce the overrepresentation of youth of color in juvenile justice systems since 2001.[116] The Burns Institute works with over 21 local jurisdictions across the country to reduce racial disparities in their juvenile justice systems by improving decision-making, court processes, and alternatives to incarceration. The Burns Institute provides technical assistance to jurisdictions prepared to implement institutional changes to remedy disparities. The Burns Institute engages traditional and non-traditional stakeholders in a data-driven examination of their policies and practices, followed by a remedial plan aimed at measurable results. A key component of reducing racial disparities is the use of effective, culturally-appropriate neighborhood-based programming that primarily serves communities of color.

The John D. and Catherine T. MacArthur Foundation began making grants in the field of juvenile justice in 1996. Since then, the foundation has launched Models for Change, an effort to create successful and replicable models of juvenile justice system reform through targeted investments in key states.[117] The Center for Children's Law and Policy's (CCLP) coordinates the DMC activities in each of the four Models for Change states (Illinois, Louisiana, Pennsylvania, and Washington).[118] CCLP staff work in Allegheny, Berks, and Philadelphia counties in Pennsylvania; on statewide policy in Illinois; in Jefferson and Rapides parishes in Louisiana; and in two counties and with state officials in Washington. In these sites, CCLP staff conduct quantitative and qualitative research to understand the racial and

ethnic disparities and learn how decisions are made at the local level, recommend interventions based on their analyses, and monitor the implementation of interventions. In addition, CCLP manages the DMC Action Network, a network of 12 sites across the country working to achieve sustainable reductions in racial and ethnic disparities in the juvenile justice system.

Reducing Racial Disparities without Compromising Public Safety in Illinois

In the early 1980s, Illinois was one of the first states to adopt a "tough on crime" approach by passing laws to automatically try youth in adult court for a range of offenses, including drug offenses. Illinois' drug transfer laws required that 15- and 16-year-olds be automatically tried as adults for drug offenses that occurred within 1,000 feet of schools or public housing. This automatic transfer provision prohibited judges from making individual determinations about whether children accused of certain drug offenses should remain in the juvenile justice system.

These policies subsequently proved to be racially biased as research demonstrated that of all youth transferred in 2003, 99% were minorities, and 92% were African-American. The overwhelming disproportionate impact on minority youth made the law "the most racially biased drug transfer law in the Nation."[119] Fueled by concern over the growing number of minority youth in adult court charged with nonviolent drug offenses, on August 12, 2005, Governor Blagojevich signed PA-94-0574 into law, repealing Illinois' nearly 20 year policy of automatically transferring youth charged with drug offenses to adult court.[120]

Nearly four years later, automatic transfers in Cook County have gone down by more than two-thirds without any corresponding increase in juvenile caseloads. The first year after PA 94-0574, the number of youth automatically transferred in Cook County went down by approximately two-thirds, from 361 in 2003 to 127 in 2005-2006. There was no corresponding increase in juvenile court petitions or judicial waivers to adult court. This same rate of reduction held steady in the second year, with the number of youth automatically transferred in Cook County declining again to 103 in 2006-2007 without a corresponding increase in juvenile court petitions or judicial waivers to adult court. The absence of any increase in juvenile

court caseloads after the law went into effect demonstrates that the rollback of Illinois' drug transfer law had no detrimental effect on public safety.[121]

Illinois was one of the first states to allow automatic transfer of youth, was one of the first to re-think its policies, and is now demonstrating that there are more fair and appropriate ways to treat youth who do not include transferring drug offenders to adult court. Illinois is continuing to reassess other aspects of their transfer policies as well. Legislation is pending in the Illinois Legislature to allow 17-year-olds facing misdemeanor charges to be returned to juvenile court jurisdiction. The legislation would also create a task force to review increasing the age of jurisdiction for youth charged with felonies.

Raising the Age of Juvenile Court Jurisdiction in Connecticut

Connecticut currently locks up more children in adult prisons than any other state in the nation. Approximately 425 youth are held in adult prisons in Connecticut each year. This is mainly because Connecticut is one of only three states that tries all 16- and 17-year-olds as adults – even those youth accused of minor and nonviolent offenses. Nearly 8,000 youth in Connecticut enter the adult court system each year, the vast majority for nonviolent crimes (96% of the 16- and 17-year-old youth arrested were charged with nonviolent crimes). The law has a disproportionate impact on youth of color. Although African-Americans represent only 13% of the youth population, more than 82% of youth held in adult corrections were youth of color. [122]

Deprived of the rehabilitative focus of the juvenile system, youth prosecuted in the adult system are denied appropriate services, given limited educational and employment opportunities, and exit the adult system with the stigma of a criminal conviction. In response to these concerns, two symbiotic efforts were started – a "Raise the Age CT" campaign coordinated by the Connecticut Juvenile Justice Alliance (CTJJA) and the Juvenile Jurisdiction Planning and Implementation Committee (JJPIC), a legislatively-mandated committee comprised of key stakeholders – were formed with the goal of raising the age of juvenile court jurisdiction in the state. The combined efforts of legislators, state agencies, law enforcement officials, judicial officers, advocacy and grassroots organizations, and parents and family members led the Connecticut state legislature to unanimously pass Public Act 07-4 in June 2007 returning 16- and 17-year-olds to juvenile court jurisdiction.[123]

4014

Although the law will not take effect until January 1, 2010, Connecticut has a strong plan for changing the policies that have negatively impacted African-American youth. The youth who will be returned to the juvenile justice system will have access to improved diversion programs, regional youth courts, and new services and supports to ensure that they are successful.

Dismantling the School to Prison Pipeline in Clayton County, Georgia

In 2003, community leaders in Clayton County, Georgia, voiced concerns about the numbers of children being sent to juvenile court by schools. Between 1993 and 2003, juvenile court referrals had jumped from about 200 to more than 1,100 each year largely as a result of school-based referrals. Even though serious school safety issues had not increased (felony referrals from schools were constant), school-based referrals were almost a quarter of all juvenile court referrals.

Troubled by these numbers, community leaders from schools, law enforcement, the juvenile court, the district attorney's office, child-serving programs, parents and other stakeholders came together in 2003 to explore ways to improve school safety and reduce referrals to court.

After several months, the group developed a collaborative agreement now referred to as the School Offense Protocol. This protocol zeros in on low-level misdemeanor offenses like disorderly conduct and affray, which had accounted for a majority of school referrals in Clayton County. For those offenses, the protocol establishes a system of graduated sanctions to standardize consequences for youth.

Everyone has seen tremendous gains from the School Offense Protocol. School Resource Officers (SROs) are no longer required to spend time arresting students for every minor infraction. As a result, school-based referrals of African Americans have been reduced by 46 percent.

An important lesson from Clayton County is that new sources of funding were not needed to reduce racial disparities, rather it required local leaders to come together and think about the best way to use existing resources more efficiently. Schools in Clayton County are not only safer places to learn as a result of the protocol, but now that fewer students are being referred to juvenile court, instructional time has increased and graduation rates are expected to improve as well.[124]

4015

VIII. POLICY RECOMMENDATIONS

To address the pervasive racial disparities in the juvenile and adult criminal justice system, and minimize the negative impact of transfer laws on African-American youth as documented in this policy brief, federal and state policymakers should take immediate action.

Congress should:

- Strengthen the "Disproportionate Minority Contact (DMC)" core requirement of the Juvenile Justice and Delinquency Prevention Act (JJDPA) by giving states specific guidance on action steps to reduce disparities such as identifying and analyzing key decision points to determine where disparities exist, collecting data, developing a work plan, and publicly reporting on progress.

- Close the loophole allowing youth charged as adults to be housed in adult jails. The "Jail Removal" and "Sight and Sound" core requirements of the JJDPA should be expanded to apply to youth who are charged in the adult system. In addition, states should be encouraged to house youth convicted in adult court in juvenile facilities, rather than adult prisons.

- Fully fund the JJDPA so that these recommendations can be effectively implemented by states.

- Invest in significant data collection efforts to identify and track youth prosecuted in the adult criminal system.

- Support proposals, including Representative Robert C. "Bobby" Scott's Youth PROMISE Act, that will effectively prevent crime before it occurs and provide intervention programs to redirect youth already involved with the juvenile or adult criminal justice systems toward law-abiding and productive futures.

- Repeal provisions of federal laws that make it more difficult for youth convicted in the adult system to reintegrate into the community successfully (e.g., limitations on the eligibility of financial aid for college, food stamps, or Medicaid).

- Oppose legislation that increases the transfer of youth to the adult criminal system.

- Oppose legislation that adds additional mandatory minimum sentences (e.g., gang enhancements).

4016

- Oppose legislation that increases the likelihood that youth will be incarcerated instead of receiving appropriate community-based treatment and services.

State Policymakers should:

- Reduce racial and ethnic disparities of youth tried in the adult criminal system in their state by identifying and bringing together stakeholders, collecting accurate and timely data, developing a work plan, and publicly reporting on progress.
- Immediately stop housing young people in adult jails and prisons.
- Increase the age of juvenile court jurisdiction to 18.
- Substantially reduce the prosecution of youth in adult court by providing judges with sole discretion to make the decision on whether or not to prosecute a youth in adult court.
- Invest in quality and effective legal counsel for youth.
- Redirect resources from incarceration to developmentally-appropriate and cost-effective treatment and services for youth.
- Reduce barriers to employment by sealing or expunging arrests that never led to conviction and conviction records after an appropriate period of time has lapsed.
- Repeal state laws (e.g., employment, voting, and other restrictions for people with criminal histories) that make it more difficult for youth convicted in the adult system to reintegrate into the community successfully.
- Enact laws that recognize a youth's ability to mature and be rehabilitated by permitting individualized reassessments of youth serving long sentences in the adult system (e.g., establishing a juvenile clemency board).

4017

NAACP Resolution*
Opposition to Transfer of Youth to the
Adult Criminal Justice System

WHEREAS the NAACP has previously resolved that prevention and rehabilitation are vital components of any juvenile justice policy, and that equal protection to youthful offenders be guaranteed under the law; and

WHEREAS youth of color receive more punitive treatment than their white peers for the same offenses at all stages of the justice system; and

WHEREAS African-American youth are disproportionately represented in cases transferred to adult court, representing 16% of the youth population but 35% of youth judicially transferred, and 58% of youth committed to state prison; and

WHEREAS, African-American youth are five times more likely than white youth to be charged in adult court for a drug offense; and

WHEREAS the adult criminal justice system is punitive and not rehabilitative by nature, resulting in youth being denied programming such as education, mental health treatment, and employment skills training which are essential to proper development; and

WHEREAS the historical role of the juvenile system is to rehabilitate and treat youthful offenders while holding them accountable and maintaining public safety, and it is therefore better equipped to work with youth than the adult criminal justice system; and

WHEREAS an average of 7,500 youth are held in adult jails each day in America, many of whom will be adjudicated back to the juvenile system or will not be convicted; and

WHEREAS there exists serious human rights concerns, as well as physical and emotional health concerns, for housing youth in adult jails as youth are 36 times more likely to commit suicide in an adult jail than in a juvenile detention facility, and youth comprise 21% of all substantiated victims of inmate-on-inmate sexual violence although they are only 1% of the jail population; and

4019

WHEREAS public safety is compromised, when youth transferred to the adult court are 34% more likely to reoffend than youth of a similar background and offense type treated in the juvenile system according to the federal Centers for Disease Control; and

WHEREAS the use of statutes or procedures that automatically exclude youth from the juvenile court without an assessment of individual circumstances by a judge denies youth basic fairness, and contradicts public opinions polls revealing that 92% of the U.S. public disagrees with such policies; and

WHEREAS the collateral consequences of an adult charge or conviction may cause youth to be denied opportunities to obtain education, employment, federal assistance, and voting rights, thereby creating further obstacles to rehabilitation.

THEREFORE, BE IT RESOLVED that the NAACP strongly opposes any policies, statutes, or laws that increase the number of youth transferred to the adult criminal justice system and the number of youth held in adult jails and prisons; and

THEREFORE, BE IT RESOLVED that the NAACP will work to end the practice of youth being tried in the adult criminal justice system and to ensure that young people are appropriately adjudicated in ways that enhance community rehabilitation, safety and stability; and

THEREFORE, BE IT RESOLVED that the NAACP strongly supports reforms that effectively reduce the overrepresentation and disparate treatment of African-American youth among youth who are prosecuted, detained, sentenced, and incarcerated as adults; and

THEREFORE BE IT FINALLY RESOLVED that the NAACP supports the creation and maintenance of programs and services that address the educational, health, mental health, and vocational needs of youth currently in and exiting from the juvenile and adult criminal justice systems.

*NAACP Resolution approved at the July 2008 National Convention.

Senate Bill 70, 26-LS0354\A

"An Act relating to naturopaths and to the practice of naturopathy; establishing an Alaska Naturopathic Medical Board; authorizing medical assistance program coverage of naturopathic services; and providing for an effective date."

Sponsor Statement

Expanded naturopathic practice helps bridge the shortage of primary care physician in Alaska

SB 70 greatly expands the practice of naturopathy in Alaska to establish its own board; to perform minor surgery; and to administer prescription drugs, vaccinations, hormones, and medical devices that are on the formulary approved by the department under AS 08.45.005. While there are only about 40 practicing naturopaths in Alaska, they claim that their education and experience qualifies them at least partially to bridge the growing shortage of primary care physicians in Alaska. Naturopaths state that their basic science education is similar to that of allopathic and osteopathic physicians (MDs and ODs) and point out that they already deal with many of the same patients whom they must refer to MDs for prescriptions and minor surgery; and that nurse practitioners and physician assistants already may obtain prescription endorsements. Importantly, SB 70 would also allow naturopaths to bill Medicare for patient services.

Alaska State Medical Association has opposed expanded naturopathic practice

Allopathic and osteopathic physicians in Alaska have for years opposed the expansion of naturopathic practice into "non-natural" areas of medical practice reserved to licensed physicians, including surgery and prescriptive drugs. Suggestions in recent years to place naturopaths under the Alaska State Medical Board have failed, perhaps due lack of interest, or increased expense, supervision, and liability required on the part of MDs, as well as lack of required malpractice insurance on the part of naturopaths. Primary care physicians claim this is not a turf war, but rather, a matter of public safety. They claim that naturopathic training programs do not provide the breadth and depth of education compared to medical and osteopathic medical schools; that naturopaths do not have the supervised postgraduate residency training for patient care, adverse medical effects, drug interactions, and patient safety prior to being licensed to practice independently; that recertification and continuing medical education is not the norm in naturopathy. SB 70 attempts to address some of those concerns.

A new Alaska Naturopathic Board

For purposes of expanding allowed practices and procedures of naturopaths and regulating the practice of naturopathic medicine in Alaska, SB 70 establishes an Alaska Naturopathic Board to the list of boards and professions under the Department of Commerce, Community, and Economic Development. The board will consist of three naturopaths, one licensed pharmacist, and one public member who may be a licensed physician. The department at board request will issue licenses and prescription endorsements, and will have authority to investigate and to discipline as required.

Minor surgery and prescription endorsement

SB 70 greatly expands the practice of naturopathy to include minor surgery, operative, electrical, and other methods of repair to superficial lacerations and abrasion or lesions, and removal of foreign bodies in superficial tissues; and allows the use of antiseptics and local anesthetics in connection with allowed procedures. The law prohibits naturopaths from performing major surgery, plastic surgery, and spinal and general anesthetics.

Additionally, SB 70 allows for the first time the new naturopathic board to request that the department issue a prescription endorsement to a naturopath licensed under this chapter who has practiced for five years; who has submitted proof of 60 hours of pharmacology education from an approved program; and who has met other requirements relating to administration and prescription of drugs, vaccinations, hormones, and medical devices which the board considers necessary. The prescription endorsement must be renewed every two years with proof of 15 hours continuing education.

35 hrs (typo, pg 7.0)

Medicare reimbursement

SB 70 adds "naturopathic services" to the list of services under AS 47.07.030(b) to allow Medicare reimbursement under state law. Allowing reimbursement to naturopaths for Medicare patients who wish to use the services of a naturopath or cannot find an allopathic or osteopathic physician who takes Medicare patients should improve patient care and expand naturopathic practice.

Naturopathic practice in other states

now 15 states

Thirteen states which license naturopaths and have instituted formulary laws include Arizona, Connecticut, Hawaii, Idaho, Kansas, Maine, Montana, New Hampshire, Oregon, Utah, Vermont, and Washington. Currently there are about 40 naturopaths practicing in Alaska, 802 in Washington, 715 in Oregon, 375 in Arizona, 210 in Connecticut, 117 in Vermont, 85 in Hawaii, 67 in Montana, 57 in New Hampshire, 27 in Maine, 18 in Utah, 11 in Kansas, and 8 in Idaho. While the scope of practice of Naturopathic Doctors varies from state to state, almost all deal to some extent with prescribing drugs. Of the 13 other states that license naturopaths, 9 of those states allow naturopaths to prescribe independently without any MD supervision or protocol. Arizona, which has the broadest formulary in the nation, allows naturopaths to prescribe all but IV medications, controlled substances except morphine, cancer chemotherapeutics, and antipsychotic drugs. At the same time, by contrast to many other states, naturopaths in Arizona are licensed under the state medical board with several other layers of control to protect the public. Kansas, which instituted licensure in 2003, requires MD supervision, and Maine requires collaboration with a physician for one year prior to independent prescribing. Massachusetts, on the other hand, refused in 2002 to license naturopaths at all after a two year intensive task force investigation and comparison to standard medical practice in 2002.

Conclusion

At a time when Alaska is experiencing a growing shortage of primary care physicians, as is true all over the country, SB 70 provides naturopaths as alternative caregivers with professional training, experience, and interest the healing arts. Naturopathic doctors focus on preventative care and in keeping patients healthy, and they usually rely much less than MDs on the use of drugs. Naturopaths seek prescriptive authority, among other reasons, to reduce the amount and combination of drugs patients are currently taking. Patients often turn to naturopathic doctors when traditional medicine has failed. Naturopaths regularly refer cases to MDs and ODs when deemed necessary, and it is expected under SB 70's expanded practice that they would continue to use professional judgment when in doubt. There are very few reported incidences of malpractice among naturopaths, but at the same time, there has been less opportunity for error in limited naturopathic practice. SB 70 is designed to reasonably expand the services of naturopaths only to areas collateral to the needs of their daily practice without infringing on the duties and responsibilities of medical doctors and osteopaths licensed by the State Medical Board.

MEMORANDUM February 2, 2009

SUBJECT: Sectional Summary of SB 70 (Work Order No. 26-LS0354\A)

TO: Senator Bettye Davis
Attn: Thomas Obermeyer

FROM: Alpheus Bullard
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Adds the Alaska Naturopathic Board to the list of boards and professions to which AS 08.01 applies.

Section 2. Adds the Alaska Naturopathic Board (board) to a list of boards that may request that the Department of Commerce, Community, and Economic Development (department) provide assistance and treatment to the boards' licensees who abuse alcohol, drugs, or other substances.

Section 3. Adds new sections to AS 08.45 (Naturopaths).

Sec. 08.45.003. Provides for the establishment and organization of the Alaska Naturopathic Board.

Sec. 08.45.005. Provides the duties and powers of the board.

Section 4. Amends AS 08.45.030 to provide that the board shall request the department to issue a license to practice naturopathy to an applicant who has provided satisfactory proof of the applicant's educational qualifications and paid the applicable fees.

Section 5. Amends AS 08.45.035(a) to provide that the board shall request that the department, and that the department may, issue a temporary license to practice naturopathy to an applicant who has provided satisfactory proof to the board of the applicant's qualifications and paid the applicable fees.

Section 6. Adds a new section to AS 08.45 defining the scope of practice of naturopaths.

Section 7. Amends AS 08.45.050 (Restrictions on the practice of naturopathy) to (1) allow a licensed naturopath under AS 08.45.056 to be able to prescribe certain substances and engage in minor surgery authorized under AS 08.45.045 and (2) prohibit a naturopath from using general or spinal anesthetics and administer ionizing radioactive substances for therapeutic purposes.

Section 8. Adds new sections to AS 08.45 (Naturopaths).

Sec. 08.45.056. Establishes a "prescription endorsement" allowing certain naturopaths to prescribe and administer certain prescription drugs and medical devices.

Sec. 08.45.058. Provides continuing education requirements.

Section 9. Amends AS 08.45.100 to provide that both the department and the board shall adopt regulations to implement AS 08.45.

Section 10. Adds a new section that provides what fees may be charged by the department under AS 08.45.

Section 11. Provides new definitions for AS 08.45.

Section 12. Adds naturopaths to the list of licensees whose practices are not limited by the statutes applicable to pharmacists in AS 08.80, as long as the naturopath is acting within the scope of the license or endorsement under AS 08.45.

Section 13. Adds naturopathic services to the list of services that are eligible for Medicare reimbursement under state law.

Section 14. Provides a definition of naturopathic services for AS 47.07 (Medical Assistance for Needy Persons).

Section 15. Adds a provision to uncodified law allowing the department to adopt regulations necessary to implement the Act.

Section 16. Adds a provision to uncodified law that provides transitional provisions governing the terms of the first members of the Alaska Naturopathic board.

Section 17. Adds a provision to uncodified law that provides for treatment of naturopathic licensees licensed before the effective date of the Act.

Section 18. Gives an immediate effective date to sec. 13 so that the regulations process can start before the rest of the bill takes effect (90 days after becoming law).

Section 19. Provides that the Act, except as provided in sec. 15, will take effect July 1, 2009.

ANALYSIS: *(Attach a separate page if necessary)*

This legislation would require the Medicaid program to cover naturopathy services. The Department does not anticipate increased expenditures of Medicaid services as naturopathy services would largely replace other covered services, and any increase in total covered services would be offset by payment of naturopaths at a lower rate than physicians. However, there would be a one-time cost to make system changes to the MMIS, the Department's Medicaid claims processing system. The Department is in the process of replacing its existing MMIS with a new system. Because this change would be made to the old system prior to replacement, it would not be eligible for matching federal reimbursement.

ANALYSIS: *(Attach a separate page if necessary)*

This legislation amends AS 08.45 to establish the Alaska Naturopathic Medical Board and expands the scope of practice of naturopaths to allow prescriptive authority through a prescription endorsement, authority to perform minor surgery, and to require proof of continuing education prior to license renewal.

The program is required to cover its costs with licensing fees under AS 08.01.065, and revenue generated by program fees must cover its full operating costs.

A detailed analysis of costs follows.

2009 LEGISLATIVE SESSION

BILL NO. SB 70

ANALYSIS CONTINUATION

Total PERSONAL SERVICES: $28.3
- One (1) Part-time Occupational Licensing Examiner position, Range 13, to staff the Board. A position is needed to support Board activities by keeping the official records and providing administrative support to the Board and the licensing program. The current licensing program is supported by a position that is assigned ten of the non-board licensing programs. Adding requirements to that position in support a Board is not realistic.

Total TRAVEL: $5.6
- The legislation establishes the Alaska Naturopathic Medical Board consisting of 5 members. In accordance with Section 3 of the bill, AS 08.45.003(b) requires the Board to meet at least twice a year. The estimated travel costs for 5 members and 1 staff will cover two meetings, assuming one held in Anchorage and one held in Juneau.

Total CONTRACTUAL: $2.0
- Contractual costs include public notices of meetings, regulations, legal review of regulations, communications, and printing expenses.

Total SUPPLIES: $0.5
- Supplies consists of standard operating desk top supplies (paper, etc.).

REVENUE: Revenue will be generated from license and endorsement fees. A majority of the fees will be collected biennially resulting from the biennial licensing period. The bill is set to take effect immediately upon passage. Current naturopath licenses are due to expire on March 31, 2010.

Current direct program costs average $5.9 annually; $11.8 biennially (representing the two-year licensing cycle). SB 70 is expected to increase costs by $36.4 annually, for a total direct program cost of $42.3 annually ($5.9 + $36.4); $84.6 over the biennial licensing cycle. Since fees are adjusted prior to the biennial license renewal period, fees will need to cover the biennial licensing costs every other year during renewal. Licensees are also expected to pay a share of division indirect costs per capita based on the number of current licensees, approximately $155.00 biennially.

At the end of FY08, there were 35 current licensees. The current 35 licensees can expect to pay license fees totaling $2,572 for the biennium ($84.6 divided by 35 = $2,417 + $155 program share of indirect), in comparison to the present biennial fee of $470.

License fees will be adjusted to cover actual expenses at the first renewal period following enactment of this bill.

MEMORANDUM January 16, 2009

SUBJECT: Draft bill relating to the practice of Naturopathy
(Work Order No. 26-LS0354\A)

TO: Senator Bettye Davis
Attn: Thomas Obermeyer

FROM: Alpheus Bullard TLAB
Legislative Counsel

This memorandum accompanies the work order described above.

I based the requested changes to Senate Bill 107 (Work Order No. 25-LS0702\O) of the 25th Legislature on an e-mail of December 17, 2008, from Dr. Emily Kane to Mr. Obermeyer. Despite permission from Tom, I was unable to speak to Dr. Kane to clarify the nature of the changes desired. Please review this draft carefully to ensure that it is consistent with your intent.

In addition to the changes that I interpreted Dr. Kane to request, I changed the draft's effective dates, and added provisions to ensure that naturopaths who are currently licensed in the state would maintain their license to practice despite the draft bill's amendments to the applicable preamendment licensing provision (AS 08.45.030) and that application for new licenses and license renewals would continue to be processed by the department until the board had established its application review procedures in regulations.

If my choices were made in error, if you have any questions, or if I can be of further assistance, please do not hesitate to contact me.

Jan 25, 2009

Dear Linda

I'm the main contact in Juneau tracking the progress of SB 70. I represent the Alaska Association of Naturopathic Physicians. I enjoyed working with Senator Davis last year and I'm very enthusiastic about the climate for bills such as this to get all the way through, making progress towards the goals of many legislators, of which Bettye is champion, to bring more healthcare relief to Juneau. As you might have seen in the packet of information (including a letter to Representative Herron, whom I'm trying to engage with Wes Keller, R-Wassila, to adopt the bill in the house as a committee bill) the AARP (American Association of Retired Persons) late last year conducted a survey of healthcare access in Alaska and published their conclusions: Alaska needs 200 more doctors ASAP. Simultaneously, the Alaska State Medical Society recently published a survey of Alaska MDs which more or less states these docs are "burned out" and not willing to practice family medicine.

If SB 70 is signed into law, the state would instantly have 40 more doctors who are seasoned family healthcare providers. This is 20% of what the AARP calls for. The governor, despite announcing hiring freezes and other budget cuts, has made clear her continued support of DeNali KidCare and other health promoting commitments. Money for healthcare is terrific, but Alaska also needs more primary care doctors.

Our bill requests that we be added to the ranks of Medicaid eligible providers, and opens our scope of practice (which our training largely prepares us for) to include basic, legend drugs (antibiotics, antihypertensives, glucose modulating medicine, etc) for those patients who need short-term drug therapy until we can turn them around, hopefully, with good diet, a working exercise plan, functional sleep, and an interest in being well. These will always be our primary tools of medicine.

Would you kindly keep me apprised of the HSS schedule for this bill? I would like to present testimony.

Best wishes,

Emily

Emily Kane

Subj: **DRAFT letter to Tom Obermeyer about SB 70. Kindly comment soon**
Date: 1/21/2009 10:51:39 P.M. Alaskan Standard Time
From: [redacted]
To: [redacted]
CC: [redacted]

Jan 21 2009

Dear Mr. Obermeyer,

I am very happy with SB 70. Thank you so much for your role in getting this moving. Wes Keller (co-chair with Bob Herron of House HSS) told me today he might request that the House version of the bill be adopted as a committee (HSS) bill. What do you think of that idea? Representative Munoz is also interested in sponsoring our bill, which would be another option. I anticipate that staff members or the legislators mentioned will be calling you with questions about the bill.

I have a few minor concerns with SB 70 and I hope this is the proper format in which to request changes. However, I don't want to hang up the scheduling of the bill for Senate HSS. Can small changes be negotiated on the floor? Or can you implement changes through Leg Legal before the committee hearing?

page 4, line 9
I would prefer that the word "previously" be deleted. For example, when I came to Alaska 15 years ago, I missed one of my 14 NPLEX exams by 1 point (the homeopathy portion -- not my strong point). I had to wait 6 months to re-take the exam, then got my license. The word "previously" in this context sounds to me as though it could make me ineligible for an Alaska ND license.

page 5, line 10
Since AS08.45.056 gives us prescription drugs, vaccinations and hormones, this sentence is obfuscating. I would prefer that line 10 be deleted, or modified to read "a narcotic" or "medical substances not permitted by the board."

page 5, line 15
I would prefer that this sentence be deleted. All national references to naturopaths trained in accredited schools call us "naturopathic physicians." My graduation diploma from Bastyr University (Seattle, WA) calls me a "naturopathic physician." All Alaska NDs passed their Naturopathic Physician Licensing Exams.

page 5, line 29
This is my most important concern with the language of the bill. Almost all the NDs in Alaska are in agreement that we are not interested in access to narcotics or chemotherapy, so I don't want to mandate the DEA registration -- which is expensive, as you know. Many nurse practitioners and even some MDs opt to not carry DEA registration. A DEA number is only needed when doctors (or nurse practitioners or PAs) want to prescribe narcotics or other controlled substances. I would prefer that the requirement for a DEA number be limited to those NDs who specialize in cancer care or pain management, and this stipulation could be legislated, or allocated to the Alaska Naturopathic Medical Board.

page 6, line 2
I believe the word "department" should be "board."

Thanks again for your attention. I look forward to your responses.
Best wishes,
Emily Kane ND

Rescue Alert

Health care is out of reach for too many Alaskans, especially fishermen and other seasonal workers, most of whom don't get health benefits.

LACK OF HEALTH INSURANCE is a big reason why Alaska leads the U.S. in state spending on health care per person—about $8,000. Then there's the doctor shortage. Alaska needs 200 more physicians, ASAP.

But the state also needs a new approach to making health care affordable. Our costs of care and insurance already exceed the U.S. average and are growing by 9 percent a year.

Everything would change if more Alaskans had health insurance, but 17 percent do not. Most seasonal and part-time employees never will, and they represent 35 percent of the workforce. Not surprisingly, Alaskans pay 13.6 percent more for premiums than if everyone had health coverage.

This is why state Sen. Hollis French (D-Dist. M) and Rep. Gabrielle LeDoux (R-Dist. 26) recently introduced bills that would provide vouchers enabling all Alaska residents to buy health insurance. "No longer can we wait for the federal government to take action on this important issue," they said.

Finding a solution to the health care dilemma is at the top of AARP's national agenda. Through its Divided We Fail initiative, AARP encourages elected officials and community and business leaders nationwide to develop bipartisan solutions to the pressing problems of health and financial security. Details are at www.dividedwefail.org.

Physicians' Foundation releases survey of 12,000 U.S. physicians

A recent survey of about 12,000 physicians nationwide that included more than 800,000 data points offers a unique and valuable insight into the practices and mindsets of today's doctors.

The results, which were broadcast on CNN Nov. 18, paint a grim picture that could have drastic implications for the nation's healthcare debate:

- An **overwhelming majority** of physicians (78%) believe there is a shortage of primary care doctors in the United States today.
- **49%** of physicians (more than 150,000 doctors) said that over the next three years they plan to reduce the number of patients they see or stop practicing entirely.
- **94%** said the time they devote to non-clinical paperwork in the last three years has increased, and 63% said that the same paperwork has caused them to spend less time per patient.
- **60%** of doctors would not recommend medicine as a career to young people.
- **82%** of doctors said their practices would be "unsustainable" if proposed cuts to Medicare reimbursement were made.
- **Over 33%** of physicians have closed their practices to Medicaid patients and 12% have closed their practices to Medicare patients.
- **Only 17%** rated the financial position of their practices as "healthy and profitable."
- If they had the financial means, **45%** of doctors would retire today.
- "Patient relationships" rated highest on the list of things physicians find *satisfying* about medicine, while "reimbursement issues" and "managed care issues" rated the highest on the list of issues physicians find *unsatisfying* about medicine.
- **Only 6%** described the professional morale of their colleagues as "positive." **42%** said the professional morale of their colleagues is

Heartbeat is published bimonthly for $15 per year by the Alaska State Medical Association, 4107 Laurel Street, Anchorage, AK 99508. POSTMASTER: Send address changes to above address. Phone: 907-562-0364. If your address changes, mail the label at right.

(Physicians' Foundation Survey, from Page 10)

either "poor" or "very low."

- 78% said medicine is either "no longer rewarding" or "less rewarding."
- 76% said they are either at "full capacity" or "overextended and overworked."

Combine these statistics with recent studies that medical schools are graduating fewer and fewer students who will choose to become primary care doctors -- and the future for both physicians and patients seems uncertain at best.

In the years ahead, the condition of America's primary care doctors as a profession will greatly affect the viability of our nation's healthcare system. A positive and functional system of practices and doctors will ensure a motivated workforce as well as encourage a new generation of quality physicians, while widespread physician disincentive could jeopardize the quality of our medical workforce as well as the number of physicians available to see patients.

In the words of one physician who responded to the survey, "Something has got to be done, and urgently, to assist physicians, especially primary care physicians" in order to maintain the viability of the medical profession and to ensure timely and effective access to the doctors on whom so many depend.

ABOUT THE SURVEY

"The Physicians' Perspective. Medical Practice in 2008" survey was funded and commissioned by the Physicians' Foundation. It was conducted between May and July of 2008 by physician search and consulting firm Merritt, Hawkins & Associates. It was mailed to virtually every physician engaged in active medical practice in the United States today. The total number of responses received was 11,950, with a margin of error of less than one percent.

ASMA Delegate Alex Maller, MD, serves on the Physicians' Foundation board as ASMA's representative.

Reminder!

All updates, new listings, and photos (with $20 photo fee for non-members) for the 2009 Medical Directory are due by Nov. 30! No exceptions!

Editorial

The Collapsing Health Care System

This editorial is being written just after the Dow Jones Industrial Average fell 778 points because of the failure to pass the $700 billion bailout bill. Another headline that appeared in the news today was that Medicaid costs will soon be spiraling out of control, primarily because of the increasing need for long-term care for the elderly and disabled. The presidential candidates have essentially stopped talking about their health care plans, because it is becoming clear that there will be little or no money for new programs and perhaps not enough money to continue some of the old programs. And we, the folks, worry that illness will mean bankruptcy.

A few weeks ago, the Associated Press reported that only two percent of graduating medical students plans to work in primary care internal medicine. Factors cited for the increasing preference for non-primary care specialties include high medical school debt, low insurance payments for office visits (when compared with various simple procedures), difficulty caring for the chronically ill and elderly with complex diseases (especially with the need to see so many patients per hour), and excessive amounts of paperwork. Because of the ongoing loss of front-line physicians, the American College of Physicians warned that the nation's primary care system is "at grave risk of collapse."

A study published September 2008 in the *New England Journal of Medicine* concluded that arthroscopic surgery for osteoarthritis of the knee (a procedure performed by highly paid specialists, some of whom decided not to go into primary care for the reasons cited above) doesn't do any good. Actually, we already knew that, because a 2002 study published in the same *New England Journal of Medicine* came to the same conclusion. But orthopedic surgeons continued performing the procedure about 250,000 times per year at a total cost of about $1.75 billion per year.

It was also reported recently that the use of insulin-sensitizing thiazolidinedione drugs, such as rosiglitazone (Avandia), which are used to treat diabetes, is associated with a two- to threefold increase in the risk of suffering an osteoporotic hip fracture. So, patients taking Avandia may eventually need to take alendronate (Fosamax) to keep their bones strong. Unfortunately, new research shows that the use of Fosamax is associated with a doubling of the risk of developing atrial fibrillation. So, the patient goes into atrial fibrillation, which is treated with amiodarone, which leads to severe pulmonary and hepatic toxicity, and now the patient is in real trouble and on the hook for serious medical bills. Brown rice, beans, chromium, and exercise would have been a lot cheaper and a much safer treatment for diabetes than Avandia.

It also turns out that some upstart drug company got the idea that it owns God's molecule, pyridoxal 5'-phosphate (PLP; the biologically active form of vitamin B6). Apparently, this company has spent money on research demonstrating that PLP is an effective treatment for cardiovascular disease. So, they have petitioned the Food and Drug Administration to have this vitamin declared a drug, so that only they will be allowed to sell it (no doubt at monopoly prices).

All of these stories are symptomatic of a system that has developed very large cracks and is on the verge of breaking.

In my 25 years of writing for the *Townsend Letter*, I have made many suggestions on how we could improve the public health and the health care system, while substantially reducing costs: Emphasize natural medicine. Tax unhealthful food and give a tax credit for healthful food, exercise equipment, and other health-promoting behaviors. Eliminate expensive defensive medicine and expensive malpractice insurance by reforming the tort system. Reconsider the wisdom of spending tens of thousands of dollars on intensive care for people in the last days of their lives. Stop performing expensive procedures that do not work. Emphasize home birth and other low-cost home remedies. Integrate mid-level practitioners (such as nurse practitioners and physician assistants) more fully into the system. Remind doctors that inexpensive older medicines often work just as well as newer, expensive ones.

When I made these suggestions, I did not believe they would be implemented, and most of them have not been. Our society was, and still is, too bound by the desire for money to hear the call of service and altruism. The medical student does not want to do primary care; the orthopedist does not want to stop doing lucrative but worthless operations; the drug companies do not want to stop pushing lucrative but dangerous drugs; and the upstarts want to usurp God's patents. As Paul said to Timothy, "the love of money is the root of all evil." But now, as the money threatens to dry up (the "liquidity crisis") or perhaps to sink the ship (necessitating a "bailout"), even the greedy will be forced to look elsewhere to find new roots.

Why does it take an earthquake, a hurricane, or a tsunami before we come to people's aid? If and when the next Great Depression hits, will we rediscover the joy of service?

Oh, people, look among you; it's there your hope must lie.[1]

Alan R. Gaby, MD

1. From "Rock Me on the Water," by Jackson Browne.

NEWS BRIEFS

Naturopathic Physicians to Receive Same Academic Recognition as MDs

NDs will be classified by the federal government in the same professional category as allopathic medical doctors under a new system recently approved by the U.S. Department of Education (USDE). The change becomes effective in July 2008.

William Keppler, former NCNM president, represented accredited naturopathic medical colleges in the US on a USDE task force that reviewed professional degree categories in 2006. The Integrated Postsecondary Education Data System (IPEDS) task force accepted his proposal to classify NDs with allopathic medical doctors, and recommended that the USDE approve the change.

After months of review, the USDE established three levels of doctoral degrees, and placed NDs in the "Doctor's Degree – Professional Practice" category along with MDs, dentists, chiropractors, optometrists, osteopaths, podiatrists, pharmacists, veterinarians and lawyers. PhDs and other doctoral degrees requiring dissertations or original research form a second category in the new USDE classification system. The third category is for honorary doctoral degrees.

The degree reclassification formalizes the growing national acceptance of naturopathic medicine as a field of knowledge equivalent to allopathic medicine. After the approval came through in January, Dr. Keppler said the change is "vitally important. It places naturopathic physicians on a level playing field with other professional doctoral degrees."

Sources: NCNM, US Dept. of Education

Study Suggests Use of Alternative Medicine is on the Rise

A Thomson Medstat survey examined trends in use of alternative medicine in the US. The recently released key findings include:

- More than 37% of US households have sought some form of alternative medicine in the past 12 months.
- Alternative medicine use is most used among those with annual incomes of more than $100,000 (49.9%) and those with post-graduate degrees (49.6%).
- About 42% of respondents said their alternative treatments were at least partially covered by insurance.
- Nearly two-thirds (64.1%) said their physicians were aware of their use of alternative treatments. The study mentions that this is due in large part to "grassroots efforts among doctors to ask patients about their use of alternative treatments" (p. 3).
- The most common reason for using an alternative treatment: to promote general wellness (40.7%), followed by to treat an illness (32.5%), to supplement traditional care (10.2%) and to prevent an illness (9.9%).
- Herbal supplements (23%) and massage/chiropractic care (22%) are most commonly used types of alternative medicine, followed by mind and body practices.

The three patients received infusions of roughly 50g of vitamin C at a rate of 1g per minute four times a day for four weeks, according to Christopher G. Lis, vice president of research and development at CTCA.

This first phase of the trial will attempt to determine the optimal dose for patients and whether the treatment is safe and can be tolerated. Additional studies will be needed to demonstrate effectiveness of the treatment.

Researchers continue to look for non-smoking patients of at least 18 years of age who have been told:

- They have an advanced stage, solid tumor
- They have no other treatment options that provide a clinical benefit
- They have a life expectancy of at least three months
- They have no other, scheduled cancer therapy.

For patients to be considered for participation in the trial, e-mail christopher.lis@ctca-hope.com.

Beverages Account for One-Quarter of Daily Caloric Intake

The recently released *What America Drinks* study characterized beverage consumption patterns of Americans. Results indicate that more than 99% of Americans consume at least one beverage other than plain water on a daily basis. Total fluid intake averaged more than 11 cups daily.

On average, beverages accounted for 22% of total calories in one day. The analysis used data from more than 10,000 Americans age 4 years and older who participated in the U.S. National Health And Nutrition Examination Survey (NHANES) 1999-2000 and 2001-2002, and

WELLSPRING

Integrative Medical Center

January 21, 2009

Dear Alaskan Legislators:

I write in support of establishment of a Naturopathic Medical Board consisting of three (3) Naturopathic Doctors (ND), one (1) pharmacist and one (1) member of the public. This board is needed to assure the Alaskan public of safe naturopathic care complying with the regulations of ND practice in Alaska.

Wellspring, an Integrative Medical Center, located in Juneau, Alaska, has employed a naturopathic doctor for nine years. Patients constantly acknowledge their gratefulness for this option. However, he has been unable to fully practice his profession in Alaska because there in no ND Board overseeing the totality of his practice for which he was educated for four years, post-baccalaureate degree.

Please support this ND bill to improve wellness and health care for Alaskans, to increase access to ND care and to provide cost-effective options for our communities.

Please contact me if you have further questions.

Sincerely,

C. Trollan, ANP
Advanced Nurse Practitioner
Owner

Identifying the Similarities and Differences:

An analysis of two medical training programs -- Bastyr University's Naturopathic Doctorate (ND) compared to the University of Washington's Medical Doctorate (MD) program

Admissions Criteria

Similarities -- Overall, a high degree of similarity exists between the programs.

- Both programs:
  - Expect applicants to have completed, but do not require completion of, a baccalaureate degree.
  - Encourage a strong background in the humanities and liberal arts.
  - Require a strong background in the sciences, including chemistry, biology, and physics.
    - While not required for admission, biochemistry is very strongly recommended.
  - Allow for waiving a limited number of academic requirements under exceptional circumstances.

Differences

- Medical College Admissions Test (MCAT):
  - Required for University of Washington (UW) medical school, taken no later than fall in the year prior to possible matriculation.
    - Under *exceptional* circumstances, GRE scores may be considered for admission, but MCAT must be taken prior to matriculation.
  - Not required for Bastyr University (BU) naturopathic medical school
- Required courses:
  - UW specifies science requirements by number of credit hours* for each:
    - Chemistry (18*), biology (12*), and physics (4*), plus additional "open" science credits (8*).
  - BU specifies science requirements by number of courses for each:
    - Chemistry (4, for science majors), physics (1, college level), algebra or pre-calculus (1, college level), and psychology (1, introductory course recommended).
    - Additionally, BU requires a minimum of 3 quarter credits in general biology for science majors, with a lab.
- Additional Notes:
  - UW provides mean statistics for the entering class 2004 – GPA 3.71, MCAT scores (Verbal 10.3; Physical Sciences 10.8; Biological Sciences 11.1 and mode of "Q" in writing) -- BU does not.
  - UW states:
    - "All candidates must demonstrate substantial academic ability in their major field as well as in the required science courses."
    - "Candidates should be proficient in the use of the English language and of basic mathematics, and are expected to have a basic understanding of personal computing and information technologies."
  - BU requires admissions committee review for all chemistry and biology courses not completed within 7 years of matriculation, and may require additional courses if deemed appropriate.
  - BU allows submission of test scores for prerequisite consideration as noted below:
    - AP, IB, CLEP, or GRE for math, psychology, or physics.
    - AP or IB for biology or chemistry.

*All credit hours stated for quarter calendar system, unless otherwise noted

Preclinical/Basic Sciences and Didactic Clinical Training

Similarities

- Both programs emphasize:
  - Anatomy, including gross (with cadaver dissection), histology, embryology and neuroscience
  - Physiology
  - Biochemistry
  - Pathology
  - Immunology and infectious disease
  - Clinical medicine – utilizing a systems-based approach, including
    - Cardiovascular, respiratory, endocrine/reproductive, urinary, musculoskeletal, skin and gastrointestinal systems
- Both programs include courses in:
  - Psychology
  - Pharmacology
  - Human Nutrition
  - Evaluation of medical research literature
  - Epidemiology and public health

Differences

- In some cases, both programs offer courses in a particular area, but one will emphasize it more heavily. For example:
  - BU more heavily emphasizes human nutrition, requiring four courses (12 credits*) to the UW's one (1 credit*).
  - BU more heavily emphasizes psychology/counseling, requiring five courses (12 credits*) to the UW's three (8 credits*).
  - UW more heavily emphasizes pharmacology, offering two courses (8 credits*) to BU's one (5 credits*).
- The BU didactic program includes a number of courses with no equivalent course at the UW. Examples of these include:
  - Naturopathic clinical theory and case analysis.
  - Specialty care for individuals at certain points in the life cycle, such as family medicine, pediatrics, and geriatrics
  - Overview courses in world traditional medical systems including Ayurvedic and Traditional Chinese Medicine
  - Traditional medical therapeutic approaches such as botanical, homeopathic, and physical medicine (i.e. massage, hydrotherapy, naturopathic manipulation).
  - More recent developments in natural health, including environmental medicine, clinical ecology, and clinical (orthomolecular) nutrition.
  - Medical law and practice management.
- Some courses offered at the UW as electives are required by BU, such as:
  - Medical ethics and the philosophy of healing/being a physician.
- Elective options:
  - BU provides a wide range of elective options for their ND students, and requires completion of 15 credits* for graduation. However, many are not all listed in BU's published curricular information.
  - The UW's published curricular information lists a minimum of 37 available elective credits* by course name and number. It remains unclear exactly how many elective credits are required for graduation and whether or not additional courses are offered but not listed.

Clinical Training

Similarities

- Both programs emphasize training in the clinical setting, where the student receives practical, hands-on training from licensed practicing physicians.

Differences

- BU naturopathic students complete a total of 25 shifts, all in the outpatient setting. The only specialized shifts completed are in physical medicine (4 shifts). Three shifts are completed as preceptorships, with independently practicing physicians.
- UW medical students complete 10 rotations of varying lengths in numerous areas of specialized as well as general medicine. Some of these are in the outpatient setting, others in an inpatient setting. In total, they complete a total of 58 weeks of these rotations, with the greatest emphasis on general medicine (12 weeks).
- All inpatient setting rotations such as surgery and trauma/emergency medicine are required by UW, but unavailable to BU naturopathic students (or with very limited availability as preceptoships).
- UW students are required to complete a rotation in obstetrics and gynecology; BU students complete rotations in childbirth only if enrolled in the separate midwifery program.
- UW students may complete elective rotations in rural/underserved community medicine; BU students may volunteer in these programs away from school (although preceptorship credits may be available).

Licensure Examinations

- Both MD and ND licensure require successful completion of a two-step examination process, one covering basic or pre-clinical sciences, and a second covering clinical sciences.
  - MD students complete the United States Medical Licensure Examination (USMLE) Part I at some point prior to their last year, and the USMLE Part II during their final year of enrollment at UW.
  - ND students complete the Naturopathic Physician Licensure Examination (NPLEX) Basic Sciences exams after their second academic year; and the Clinical Sciences exams post-graduation.

Assuring Safe Naturopathic Medical Practices for Alaskans

Executive Summary

Introduction:

Naturopathic Medicine is a traditional system of health care that blends centuries-old knowledge of effective, natural therapies with current scientific advances in the treatment of patients. The scope of practice of naturopathic doctors includes all aspects of natural medicine.

According to a recent editorial in the Anchorage Daily News, there is a severe doctor shortage in Alaska (see Appendix A: Doctor Shortage). They cite a report from the Alaska Physician Supply Task Force that found we would need an increase of 28% (375 doctors) in order to catch up with the lower 48. In the rural areas, the situation is even bleaker with one in six positions unfilled.

Alaska first licensed naturopathic doctors in 1987 (see Appendix B: History of Naturopathic Licensing in Alaska). In January, 2004, the Alaska Association of Naturopathic Physicians proposed legislation to the 23rd Alaska State Legislature that would have expanded the scope of practice for naturopathic doctors in Alaska. The purpose of this legislation was threefold:

1. To provide our patients with an integrated approach to medical care that draws from the best of conventional and alternative medicine without the barrier to optimal care created when well-trained naturopathic physicians are prohibited from prescribing appropriate medications, which they have been trained to prescribe (see Appendix C: Health Care Is Changing).

2. To calibrate our licensing law in accord with current trends in other states that license naturopathic physicians (see Appendix D: States' Prescriptive Authority and Minor Surgery Scope of Practice for Licensed Naturopathic Doctors).

3. To update our law to allow naturopathic physicians in Alaska a scope of practice commensurate with modern naturopathic education (see Appendix E: Comparison of Naturopathic and Major Medical Schools).

The proposed legislation easily passed in the Senate (19-1) but was stalled in the House in May, 2004. A re-written bill was passed that established a task force with representatives from the naturopathic, medical, nursing, pharmacist, physician's assistants professions to work with legislators in order to "...contribute to a better understanding of issues related to the safety and scope of the practice on naturopathy ..."[1]

In consultation with the task force and as we look at how naturopathic governance compares to other states (see Appendix G: Comparison of Naturopathic Governance), we have modified our scope of practice bill to include the following:

[1] SB 306, section 1.

1. Formation of an *Alaska Naturopathic Council* (see appendix H: Alaska Naturopathic Council) that would advise the Division of Corporations, Business and Professional Licensing on criteria for naturopaths seeking endorsement for prescription writing authority and a formulary of medications that naturopaths may prescribe.

2. Authorization to perform minor office procedures including repair of superficial lacerations and abrasions, superficial lesions and the removal of foreign bodies located in superficial tissues.

3. Establishment of continuing education requirements.

Naturopathic Education:

Naturopathic physicians licensed in Alaska have graduated from four year graduate level programs accredited by the Council on Naturopathic Medical Education and by their local accrediting agencies, all of which are federally recognized the US Department of Education. The USDE also recognizes the Liaison Committee on Medical Education that accredits medical education programs within the United States leading to the M.D. degree (see Appendix I: Accrediting Agencies).

Naturopathic physicians are obligated to keep up with changes in medicine and to critically and without bias evaluate methods which may be of benefit to their patients. In order to assure naturopathic doctors' prescriptive writing authority is up to date for all licensed doctors in Alaska, including those who graduated twenty or more years ago, naturopaths seeking such authority must fulfill certain criteria:

1. Completion of 60 hours training in pharmacology training based on the State of Arizona's program for naturopathic doctors (see Appendix J: Pharmacotherapeutics CE Program).

2. Once prescriptive authority has been granted, naturopathic physicians are required to acquire 30 hours of continuing education, half of which is instruction in pharmacology and phamacotherapeutics, every two years.

Alaska Naturopathic Council:

In states that allow naturopathic doctors to have prescription writing authority, most have a formulary of drugs that are permitted.

In the past year, Idaho and Washington State have formed advisory councils whose purpose is to advise their respective licensing authorities regarding appropriate formulary lists. These councils are multidisciplinary in nature. Washington's advisory council is comprised of pharmacists and naturopathic physicians; Idaho's is comprised of pharmacists, allopathic and naturopathic physicians.

Naturopathic Track Record of Safety

Fortunately, naturopathic physicians have been licensed in numerous other states for some time now and there is a track record of public safety which is impressive. (See Appendix K: Naturopathic Disciplinary Reports). Please note these reports include all complaints and disciplinary actions and are not restricted to complaints specific to prescription writing. However, it is important to recognize that unlike conventional providers, naturopathic providers see fewer patients per day (5-15 compared to 20-30). Naturopathic doctors typically spend more time with patients and, thus, get to know them better. They are inclined to use prescriptions as a last resort and are less likely to put people on multiple drug regimes than our conventional colleagues (see Appendix L: letter from Rick Chester, ND, RPh, LAc).

Why Now?

Alaskans are scrambling to find family doctors to address a wide variety of health care needs. Based on epidemiologic estimates, 20-30% of patients seen in a conventional provider's office are using alternative/complementary medicines.[2] Twenty percent of adults who take prescription medicine also rely on herbal products[3]; whether the provider knows or approves of this fact or not. Americans spend in excess of $10 billion annually on herbal and dietary supplements[4], often without the guidance of a health care professional or awareness of potential interactions with conventional therapies.

Naturopathic physicians have taken the lead on writing the texts on integrating the best scientifically validated complementary and alternative therapies along with conventional medicine[5]. This can be done safely to the benefit of the communities we serve.

Anchorage Daily News (Published: October 8, 2006)

Doctor Shortage
No easy solution, but these steps should help in the long run.

The report from the Alaska Physician Supply Task Force is blunt: "Alaska has a shortage of physicians. ... The shortage is very likely to worsen over the next 20 years as the state's population increases and ages."

It would take another 375 doctors -- a 28 percent increase, right now -- to deliver Alaskans the same level of care as in the Lower 48. In rural Alaska, doctors are already scarce; one in six positions goes unfilled.

While the shortage is not yet a crisis, according to the task force, it does leave patients scrambling to find doctors and drives up recruitment costs for hospitals and health centers.

Alaska's doctor shortage was a long time developing, and it will take a long time to fix. There is no instant solution. Simply raising pay rates for doctors, as a free-market economist might suggest, won't work. Alaskans already spend about 40 percent more on medical care than Lower 48 residents, and there is still a doctor shortage.

To fix it, we don't have to wait for global warming to turn Alaska into a more hospitable destination for doctors. We don't have to invest tens of millions of dollars to start a medical school here (although the task force suggested that would be a wonderful idea). Some relatively modest, practical steps should eventually help, according to the task force.

Alaskans are guaranteed 10 slots a year at the University of Washington's highly acclaimed medical school through a tuition-reduction arrangement known as WWAMI. Students have an incentive to set up shop in Alaska when they graduate; otherwise they have to pay back their tuition savings.

The report says Alaska should find the funding needed to add 20 slots to the WWAMI program. Since the medical students spend their first year doing course work here at the University of Alaska Anchorage, UAA would need some more money as well to handle them.

Students who don't enter the highly competitive WWAMI program should be able to get state loans to cover the high cost of medical school. To encourage them to return to Alaska, the state could forgive a portion for each year the new doctor's practice in Alaska.

Another way to attract doctors is to expand on-the-job training slots in Alaska for third- and fourth-year medical students. Alaska hospitals offer training in some medical specialties, which helps encourage doctors to settle here. States typically help hospitals underwrite these medical training slots; Alaska should see how it can most cost-effectively invest in this area.

If there were a huge pool of doctors nationwide, Alaska would have an easier time of it. But there's a squeeze across the country, in part because years ago medical schools thought they saw a doctor glut coming and capped the production of new physicians. At the same time, other changes helped make medicine less attractive as a career -- the long, demanding hours, combined with constant pressure to control costs and administrative hassles from private insurers, HMOs and government.

So Alaska will have a tough time getting all the physicians we need in the coming years. If state leaders will follow the task force's recommendations, though, the job will be more manageable.

BOTTOM LINE: There's hope for dealing with Alaska's doctor shortage, but progress won't be quick.

Assuring Safe Naturopathic Medical Practices for Alaskans

Appendix B: History of Naturopathic Licensing in Alaska

More than twenty years ago, the legal status of naturopathic physicians practicing in Alaska came to a head when the Alaska State Medical Board sent a notice to Patton Pettijohn, ND, to stop treating patients in his Anchorage office. There had never been a complaint filed against Dr. Pettijohn in the five years he had been treating patients in Alaska. However, because his naturopathic doctorate and his license were both from Oregon, their opinion was that he was practicing medicine without a license and he would have to stop. That was in September, 1984.

Licensing efforts in many states had become a consumer rights issue in the eighties. Consumers had a right to know that their health care provider had met rigorous standards for education, training and testing. Prior to this time, the Alaska's Attorney General had written a letter stating that, since the medical board refused to allow Dr. Cary Jasper to sit for the board exam; he could practice naturopathic medicine without a license and would not be under their jurisdiction. In 1986, the Alaska State Superior Court disagreed. The judge ruled that because there was no licensing for naturopathic physicians in Alaska, Dr. Pettijohn would fall under the jurisdiction of the medical board. He was forced to close his naturopathic office-a dark day for the profession in Alaska. Three other naturopathic physicians practicing in Alaska would have charges filed against them next. These four physicians, with overwhelming public support, lobbied the Alaska State Legislature to pass a naturopathic licensing bill. Within two months of the Pettijohn decision, Governor Bill Sheffield signed a law licensing naturopaths to practice in Alaska in May, 1986.

In January, 2004, the Alaska Association of Naturopathic Physicians proposed legislation to the 23rd Alaska State Legislature that would have expanded the scope of practice for naturopathic doctors in Alaska. The proposed legislation easily passed in the Senate (19-1) but was stalled in the House in May, 2004. A re-written bill was passed that established a task force with representatives from the naturopathic, medical, nursing, pharmacist, physician's assistants professions to work with legislators in order to "...contribute to a better understanding of issues related to the safety and scope of the practice on naturopathy ..."[1]

Licensing is still a consumer rights issue. Naturopathic physicians' focus on preventive measures lowers long term health costs. When a conventional prescription medication is indicated, having to make another appointment with another provider only presents an unnecessary barrier to appropriate care. The public has a right to access naturopathic medicine as a reliable health care option. Updating Alaska's naturopathic licensing law to reflect the current status of naturopathic medical education is in the best interests of communities throughout our great state.

Assuring Safe Naturopathic Medical Practices for Alaskans

Appendix C: Health Care is Changing

Patients are demanding to be seen as whole persons, not just a list of symptoms. They want time from their physicians, they want control over their own health, and they want preventive medicine, not quick fixes.

Modern medicine calls for doctors who know their science yet honor the body's innate wisdom to heal—doctors who function as teachers as well as healers, who acknowledge the value of time-honored traditional therapies and who recognize that, when given the chance, nature is the greatest healer of all.

The majority of patients who come for naturopathic care fall into one of four categories:

1. Patients who also see conventionally trained providers. We may be one of a cadre of providers including a medical doctor, a chiropractor, etc.
2. Patients for whom we are their primary care providers. Most of these patients respond well to interventions such as diet and lifestyle modification and natural therapies. Sometimes a higher level of intervention is required. In a perfect world, we could refer that patient to a provider with special expertise in this type of patient. However, it may be months before that patient can get in to see a specialist in Alaska. In the meantime, he or she may be walking around with dangerously high blood pressure, blood glucose, etc, and we need to be able to stabilize this patient in the interim.
3. Patients who are, for whatever reason, leery of conventional medicine and would not go to a conventional provider short of in an ambulance. Most of these patients would accept prescription medication from a naturopathic physician while we address the underlying causes of their conditions.
4. Patients who are already on multiple prescription medications and are having problems due to interactions and side effects. We need the flexibility to be able to adjust their dosages while we incorporate diet and lifestyle changes to reduce the need for prescription medications in a safe way.

Based on epidemiologic estimates, it may be that 20-30% of patients seen in a conventional provider's office are using alternative/complementary medicines.[1] Twenty percent of adults who take prescription medicine also rely on herbal products[2]; whether or not the prescriber knows or approves of this fact. Americans spend in excess of $10 billion annually on herbal and dietary supplements[3], often without the guidance of a health care professional or awareness of potential interactions with conventional

Appendix D: States' Prescriptive Authority and Minor Surgery Scope for Licensed Naturopathic Doctors

State	Rx Authority[1]	Controlled Substances Act Schedules[2]					Minor Surgery
		I	II	III	IV	V	
Alaska	No						No
Arizona	Yes		x	x	x	x	Yes
California	Yes[3]			x	x	x	Yes
Connecticut	No						Yes
Hawaii	No						No
Idaho	Yes						Yes
Kansas	Yes						No
Maine	Limited[4]						Yes
Montana	Yes		x	x			Yes
New Hampshire	Limited						No
Oregon	Yes		x	x	x	x	Yes
Utah	Yes						Yes
Vermont	Limited[5]			x	x		No
Washington DC	In Progress						In Progress
Washington State	Yes			x	x		Yes
Puerto Rico	No						No

[1] Prescriptive authority is the ability to prescribe controlled substances as identified in schedules I-IV of the Controlled Substance Act (21 USC, Sections 801-971). Maine's law refers to the "legend" and "non-legend" classifications of the official United States pharmacopoeia, rather than to the Controlled Substance Act. "Legend" drugs are those for which a prescription is required by federal law. In 2005, Washington State added some schedule 3-5 drugs to "legend" drugs that naturopathic doctors may prescribe.

[2] The schedules of the Controlled Substance Act are available on the US Drug Enforcement Agency's website at www.usdoj.gov/dea/pubs/scheduling.html.

[3] Pursuant to California Code §3640.5, NDs may only prescribe controlled drugs under the supervision of a medical doctor.

[4] In Maine, NDs are permitted to prescribe "non-controlled legend drugs" only after a twelve-month period of review by an allopathic physician. Such drugs may only be from the following categories: homeopathic remedies, vitamins and minerals, hormones, local anesthesia and immunizations that are designated by rule.

[5] Vermont only allows NDs to prescribe only testosterone from schedule III and codeine from schedule IV.

Assuring Safe Naturopathic Medical Practices for Alaskans

Appendix F: Licensed Medical Professionals in Alaska

Licensed Practical Nurse (LPN)	9 months to 2 year practical nursing program, the 1 year program being the most common
Registered Nurse (RN)	One of the following: ❖ A two year Associate's degree ❖ A three year Diploma program (hospital based) ❖ A four year Bachelor's degree in Nursing ❖ A four year Bachelor's degree in another discipline and a three year Master's degree in Nursing ❖ A four year Bachelor's degree in another discipline and a four year Nursing doctorate program
Advanced Nurse Practitioner (ANP)	In addition to holding a license as an RN, an ANP completes one of the following: ❖ A nine month to two year certificate program in specialty ❖ A two year Master's degree certified in specialty
Physician's Assistant (PA)	Admission requirements to an accredited Physician's Assistant program vary, but many require 2 years of college and some work experience in the health care field. Programs are usually at least two years and are full time[1]. Credential's awarded include: ❖ Certificate of Completion ❖ Associate's degree ❖ Bachelor's degree ❖ Master's degree Must pass the certifying examination administered by the National Commission on Certification of Physician Assistants (NCCPA). Must work under the supervision of a physician.
UW Medical School	Applicants are expected but not required to have a Bachelor's degree. Encouraged to have a strong background in the humanities and liberal arts. Require a strong background in the sciences, including chemistry, biology and physics. While not required for admission, biochemistry is strongly suggested. Medical College Admissions Test (MCAT) required. Allows for waiving of a limited number of academic requirements under exceptional circumstances.[2] Followed by two to five years of post-graduate training in allopathic medical school, internship and residency. Must pass United States Medical Licensure Examination (USMLE).
Bastyr University Naturopathic Medical School	Applicants are expected but not required to have a Bachelor's degree. Encouraged to have a strong background in the humanities and liberal arts. Require a strong background in the sciences, including chemistry, biology and physics. While not required for admission, biochemistry is strongly suggested. Allows for waiving of a limited number of academic requirements under exceptional circumstances[3] MCAT not required. Followed by four to five year post-graduate training in naturopathic medical school; externship required for graduation; residency options becoming more available. Naturopathic Physicians Licensing Exam (NPLEX) Basic and Clinical Science Exams required.

The Council of Naturopathic Medical Education (CNME)

The Council of Naturopathic Medical Education (CNME) is the agency recognized the US Department of Education to serve as the accrediting agency for naturopathic medical programs. The USDE also reviews the Liaison Committee on Medical Education that accredits medical education programs within the United States that grant degrees to medical doctors. The accrediting process serves to assist medical programs in maintaining and improving the quality of education and to provide the public, other education institutions and government agencies the assurance that approved programs and their graduates are meeting reasonable and appropriate national standards for primary care medical education. The CNME is an autonomous, freestanding public agency, not subordinate to either the naturopathic profession or its colleges.

Post-secondary Education Commission

In addition to accreditation by the CNME, naturopathic medical colleges must have accreditation from the Post-Secondary Education Commission in the state in which the college is located and from the individual state naturopathic licensing agency.

The Commission on Accreditation is responsible for administering the evaluation process and making accreditation decisions. The Commission uses institutional self-studies, followed by on-site campus visits to evaluate the quality of the education provided. Site visit teams are specially trained and have broad experience in education, accreditation and naturopathic medicine. The Commission renders its decision based on reports of the visits, along with materials provided by the institution. Evaluations of programs may be conducted jointly with a regional accrediting agency, although decisions are made separately.

The Commission on Accreditation, consisting of the Council members but not the institutional members, is responsible for administering the evaluation process and making accreditation decisions. (Peterson's Guide to Graduate Programs in Business, Education, Health, and Law, 1992).

General Introductory Material

for Pharmacy Continuing Education

What you need to know BEFORE you enroll in 60 hours of CME

Introduction
Necessary for all 4 parts of the CME pharmacy course
includes pharmacokinetics, pharmacodynamics, receptor systems and mechanisms.

Part I
Ancillary material for CME course Part I
Neuropharmacology and Controlled Substances
Mechanisms of action
includes neurotransmitter agonists and antagonists, medications affecting neurotransmitter levels, autonomics, serotonin, opiates, GABA, PDE

Part II
Ancillary material for CME course Part II
Cardiovascular Pharmacology
Mechanisms of action
includes renin-angiotensin system, medications affecting the kidney (diuretics), clotting cascade, platelet aggregation

Part III
Ancillary material for CME course Part III
Infectious Diseases and Antibiotics
Mechanisms of action
includes bacterial/viral synthesis, retroviral action and therapeutic interventions

Part IV
Ancillary material for CME course Part IV
Endocrine Pharmacology and Women's Medicine
Mechanisms of action
includes hormone agonists and antagonists and medications affecting hormone response and hormone level.

Alaska Association of Naturopathic Physicians, Inc.

Assuring Safe Naturopathic Medical Practices for Alaskans

Appendix K: Comparison of Allopathic and Naturopathic Disciplinary Reports

Medical boards receive complaints and after investigation met out disciplinary actions. Information on complaints and disciplinary actions is not available for several states. Of 13 states that license Naturopathic physicians, information on disciplinary actions could only be found for six states including Alaska, Arizona, Hawaii, Oregon, New Hampshire and Washington. These results are listed below (Table 1) for the years 2000-2003.

Table 1: Naturopathic Disciplinary Actions

		Dates	Alaska	Arizona	Hawaii	Oregon	New Hampshire	Washington
# Naturopaths			40	369	78	550	32	644
Avg. # complaints/yr				not available	0.2	22.75	not available	10.75
Disciplinary actions		2000-2003						
	Reprimand/Corrective action	"	0	1	0	0	0	1
	Probation	"	0	4	0	6	0	0
	Suspension	"	0	1	0	0	0	0
	Revocation/Surrender	"	0	1	0	2	0	0
	Total		0	7	0	8	0	1

The total number of naturopathic licensed naturopathic doctors in the states was 1,681.
The average number of disciplinary actions per year was 4 for 2000-2003
The yearly rate of disciplinary actions per 100 doctors per year is 0.24.

Arizona and Oregon are two of the three states with the largest population of naturopathic doctors and a long history of licensure. Disciplinary actions are compared between naturopathic and allopathic doctors for each state (see tables 2 and 3).

Alaska Association of Naturopathic Physicians, Inc.

Assuring Safe Naturopathic Medical Practices for Alaskans

Appendix K: Comparison of Allopathic and Naturopathic Disciplinary Reports

Table 2: Comparison of Naturopathic and Allopathic Disciplinary Actions in Arizona

Naturopathic Doctors	***Year***	***Letters of Concern****	***Reprimand***	***Probation***	***Suspension***	***Revocation***	***Surrender***	***Total Disciplinary***
# 369	2000	1	1	1				2

February 17, 2004

Representative Jim Holm
Alaska State Capital Building
Juneau, Alaska 99801-1182

Attn: Representative Holm

I am writing to support legislative bills HB434 and SB 306, both titled "An act relating to the practice of naturopathic medicine."

As a pharmacist and naturopathic physician, I taught pharmacology at the Southwest College of Naturopathic Medicine in Tempe Arizona and wrote pharmacology test questions for the naturopathic board exam. I also created the original formulary used in Arizona and later used in Oregon, which included drugs derived from natural sources. As an instructor, I taught students to thoroughly research the warnings and precautions of each drug they prescribed, so they were aware of the possible harm they might cause to their patients. The test questions I wrote required knowledge of pharmacology necessary to protect the public safety. The formulary system, which I have had to practice under, is antiquated and actually has a negative effect on public safety. The formulary forces naturopathic physicians to choose less than optimal drugs over more effective newer medications.

As a provider, I know that naturopathic physicians, like MDs, regularly prescribe a handful of drugs with which they are quite familiar. Unlike medical doctors, naturopathic physicians prescribe medications as a last resort, treat fewer patients each day, and are less likely to place individuals on multiple drug regimens, which lead to interactions and complications. As general practice physicians seeing fewer patients on a daily basis, naturopathic doctors have much more time to research the consequences of drug therapy than do their MD or DO colleagues.

In Oregon, where I practice, medical care has been shifted to nurse practitioners with less education than naturopathic physicians. It is irrational for trained primary care physicians to be limited to non-drug therapies at a time when access to quality health care is becoming scarce. Consequently, I support legislation that allows naturopathic physicians to practice commensurate with their education and to the full scope of their training. Please support this Bill.

Sincerely,

Rick Chester, ND, RPh. LAc

Honorable Bettye Davis
Chair, Senate Health and Social Services Committee
Alaska State Senate
State Capitol, Room 30
Juneau, AK 99801-1182

RE: SB70 – Naturopath, Scope of Practice Expansion

Dear Senator Davis:

The Alaska State Medical Association (ASMA) represents physicians statewide and is primarily concerned with the health of all Alaskans.

As stated in my letter to you dated February 24, 2009 (copy attached) ASMA opposes SB 70 and any expansion of a naturopath's scope of practice beyond that which is currently found in AS 08.45. This is a quality of care and patient safety issue.

Attached, also please find a copy of the American Medical Association's ,"Scope of Practice Data Series", that presents data about naturopaths.

Unfortunately, ASMA has been advised by legal counsel that we are unable to sit down outside the legislative process to discuss or agree on the content of SB 70.

A series of U.S. Supreme Court cases (collectively known as the Noerr-Pennington Doctrine) provides protection from claims of violation of restraint of trade laws for an association like ASMA only as long as its activities pertain to a government action, like a bill introduced by the Legislature. Noerr-Pennington, indeed, does not generally extend to ASMA activities outside the public arena with other groups of medical care providers to discuss or agree upon the contents of a bill. The concern is another group or person, not a party to such discussions, claiming that those groups that did meet, met in order to restrain trade by agreeing to something to their detriment. This is why task forces constituted by the Legislature have been formed to address this and other issues related to specific legislation.

ASMA questions that the naturopaths' education and training have the comparable depth and breadth as that of an MD or DO. The ability to prescribe drugs and perform "minor surgery" needs to be left with MD's and DO's. A parallel recently in the news was the pilot who safely landed his aircraft in the Hudson River – when a goose hits the turbine jet engine is it better to have a Captain Sullenberger at the controls or a VFR rated recreational pilot.

ASMA urges you and the Health and Social Services Committee to oppose SB 70.

Sincerely

By: Thomas Vasileff, MD, President
For: The Alaska State Medical Association

Re: SB70 – Naturopath, Scope of Practice Expansion

Dear Senator Davis:

The Alaska State Medical Association (ASMA) represents physicians statewide and is primarily concerned with the health of all Alaskans.

ASMA opposes SB70 and any expansion of a naturopath's scope of practice beyond that which is currently found in AS 08.45.

Naturopaths wish to have the same scope of practice as Primary Care Physicians (MD's and DO's). It is a difficult if not impossible task to determine if a naturopath's education and training is comparable to that of an MD or DO. ASMA questions that the naturopaths' education and training have the comparable depth and breadth as that of an MD or DO.

ASMA will oppose bills such as SB70 that expand the scope of practice beyond what is currently allowed in AS 08.45 until:

1. The U.S. and Canadian schools of naturopathy that grant doctoral degrees are accredited by the same accrediting bodies for the U.S. and Canadian medical schools – the Liason Committee on Medical Education (LCME) or the American Osteopath Association (AOA), Commission on Osteopathic College Accreditation (COCA);

2. All candidates for admission to U.S. and Canadian schools of naturopathy are required to take the Medical College Admission Test (MCAT);

3. All graduates of U.S. and Canadian schools of naturopathy pass all three steps/levels of the United States Medical Licensing Examination (USMLE) or the Comprehensive Osteopathic Medical Examination (COMLEX – USA), using the same passing criteria as the MD's or DO's respectively;

4079

4. All naturopaths seeking licensure must successfully complete at least a three year residency program that is accredited by the same accrediting body, Accreditation Council for Graduate Medical Education, for MD's and AOA approved residency programs for DO's; and

5. All naturopaths are subject to the same standard of care criteria as MD's and DO's for licensing sanction actions and in litigation including allegations of malpractice.

ASMA feels such requirements are appropriate to protect the public.

The Alaska State Medical Board (SMB) is a member of a federation of all states' licensing and disciplinary boards, the Federation of State Medical Boards (FSMB). FSMB's journal, "The Journal of Medical License and Discipline," contained, in its most recent edition (Volume 94, Number 3, 2008), an interesting article by David Alan Johnson, M.A., Vice President for Assessment Services – FSMB. The title of the article is "Prospects for a National Clearinghouse on International Medical Schools." It contains an interesting proposal that identifies a way to establish a clearinghouse that contains quality indicators for international medical schools.

There are about 1,800 international medical schools and currently international medical graduates (IMG's) comprise 25% of the U.S. physician workforce. According to Mr. Johnson the contribution of the U.S. licensed IMG's is considerable and data exists that they are more likely to practice in medically underserved areas than U.S. graduates. The FSMB has been dealing with trying to assess qualifications of the international medical schools for many years reported in articles in its journals dating back to 1916, according to Johnson. He states the challenge remains the same, "...how to assess the qualifications of physicians graduated from non-U.S. medical schools despite possessing limited information (at best) as to the educational curriculum of these schools...". However, he also stated that only 10 of these international schools contributed 60% of the IMG's in the U.S. between 1998 and 2002.

The approach for the clearinghouse includes data and information that parallel those quality and patent safety indicators innumerated above for naturopaths. Those indicators as put forth by Mr. Johnson are as follows:

- "admission requirements, including mandatory tests such as the MCAT;
- the number of years the medical school program has been in operation
- school policies related to providing advance standing for students entering from related health professions;
- the degree to which distance learning is utilized in the curriculum; the number of weeks of instruction – both classroom and clinical – culminating in a medical degree;
- the status of the school as it appears in other review processes involving licensure (e.g., the Medical Board of California review process), clinical clerkships (New York state's clerkship approval list) and eligibility for federal student loans (National Commission on Foreign Medical Education and Accreditation);
- aggregate USMLE performance data for students and/or graduates of the school;
- student progression rates toward successful completion of degree requirements;
- the school's success rate in placing students in ACGME or AOA-approved residency programs; and
- information on clinical clerkships, such as whether these are performed outside the host country where the school is located or if an affiliation agreement exists with the hospital(s) where clerkships are being conducted."

This approach is one of developing a "proxy" methodology short of an in depth, ongoing review of each of the 10 international medical schools which is not feasible as it obviously would not be for 1,800 such schools. This is a methodology that could be termed "The proof of the pudding is in the tasting".

ASMA does not believe that the Legislature has the objective information now, and is unlikely to have in the future, that would enable it to make the major patient safety, policy decision it is being asked to make in SB70.

Prescribing drugs and performing "minor surgery" (which could entail the excision of cancerous lesions) by a naturopath require that the naturopath have the equivalent training and education of an MD or DO. The most reasonable way to provide patient safety and public protections is to adopt a policy as suggested by ASMA.

ASMA urges you to oppose SB70 and any other measures to expand the naturopaths' scope of practice beyond that which currently exists in state law.

Sincerely,

Thomas Vasileff, MD
President

March 5th 2009

To Senator Bettye Davis

Please consider this our testimony on Senate Bill 70

My name is Tim Pampusch and I am the current president of the Alaska Academy of Physician Assistants. Our Academy here in Alaska represents nearly 200 practicing Physician Assistants around the state. Physician Assistants attend medical school, often sharing faculty and rotations alongside medical students with focused courses on anatomy and physiology, pharmacology, and applied training on authorization and dispensation of pharmaceuticals. We work in a collaborative fashion with our physician colleagues to help provide health care in every facet of the medical field.

I wish to speak to Senate bill 70, which would authorize prescriptive and minor surgical authority to naturopathic practitioners in Alaska. I have been pondering this issue for several years as it keeps arising during our legislative sessions.

I have several concerns with the current bill. As a Physician Assistant, I have nothing to gain personally from objecting to this bill. My concern is public safety for Alaskan citizens. My understanding of the naturopathic concept, both from my readings and friends who are practitioners, focus on the idea of illness being a disturbance in a person's "vital force". This is a concept removed from science in that it uses unmeasurable and untestable theories to try to approach problematic health concerns. Scientific studies are examining many aspects of naturopathic practice at this time, with unimpressive results so far. Indeed, one of the nationally recognized naturopathic web sites states that the national organization is working to reverse our current model of health care.

The real issue of concern is public safety. Practitioners who currently prescribe controlled medications have years of training and experience to enable understanding of the myriad drug interactions and adverse medical effects of those medications. In my mind, prescriptive authority must be based on training and supervision by those competent and knowledgeable in pharmaceutical effects using scientifically based criteria. This supervision with training, and continuing medical education appears to be an adequate safeguard for the public. In these days of major concerns and expenses dealing with health care reform and funding, we need outcome-based criteria rooted in science for our decision making.

Naturopathic practitioners come from many varied educational backgrounds. There are a few accredited schools with serious training, and there are many nonaccredited correspondence schools. One school offered a Ph.D. in naturopathy for $250, using life experience with no coursework.

Pharmaceutical distribution and surgery are science based activities. Giving permission to dispense drugs to those who reject the scientific methodology developed over the past 400 years would be a mistake. I know several naturopaths, and they are good and caring people, but a basic belief in "vital force" is a handicap to a clear understanding and focus on the scientific method. Giving surgical authority to a practitioner whose training includes this sort of nonvalid concept would be a lamentable risk to the people of Alaska, who, to a greater or lesser degree, understand that the scientific basis of medicine has proven efficacy.

Many naturopaths have been hiring Nurse Practitioners to write pharmaceutical prescriptions. This at least guarantees that the prescriber has completed the training required for safe dispensing. Some naturopaths may be well-suited for prescriptive authority, but there are no national criteria for training programs to provide this. The quality of the educational programs varies to an incredible degree. The Alaska Association of Naturopathic Physicians admits that there are "numerous diploma mill "NDs" throughout the country who certainly do not receive the rigorous training" that the authors obtained.

More to the point of this Senate bill, I ask the question: how could the training programs document equivalence to the training that MDs, Osteopaths, Physician Assistants and Nurse Practitioners receive, that being the basis of accepted criteria for prescriptive authority. Concern over authority for surgical procedures dwarfs the concern over prescriptive authority. Training would need to be documented with objective scientific outcome criteria, unobtainable from the diverse programs.

Because of the above concerns, we will stand along with our collaborative physicians in opposing Senate bill 70. I believe that this bill would allow an unacceptable risk to the residents of the State of Alaska at this time.

Tim Pampusch PA-C
President, Alaska Academy of Physician Assistants

Senator Davis, I appreciate the work you've done in health care. I would hope that our opposition to this bill will not impede our working together in the future for the well being of all Alaskans. As president of the PA Academy, I will continue to reach out to our Nurse Practitioner and Nurse colleagues to try to improve care on a state and national level. Please, let me know if I can be of assistance in any other health care issues.

Emily A. Kane, ND LAc

Naturopathic Doctor

Alaska License № 18

March 3, 2009

Dr. Thomas Vasileff
President, ASMA
4107 Laurel Street
Anchorage, AK 99508

Dear Dr. Vasileff,

Senator Bettye Davis has provided me with the letter from ASMA opposing SB 70, dated February 24, 2009. I have been charged to attempt to redirect your concerns about the naturopathic profession to my group, the Alaska Association of Naturopathic Physicians.

The Senator is the sponsor of this bill, as you know, and it therefore follows that since she and her chief of staff, Mr. Thomas Obermeyer, wrote this bill, they view the bill as part of the solution to Alaska's healthcare crisis. Public protection - the purpose of regulation - should indeed have top priority in scope of practice decisions. This encompasses the belief that the public should have access to providers who practice safely and competently.

Naturopathic doctors are not trying to be MDs or DOs. We practice a different kind of medicine. We are experts in diet, nutrition, exercise physiology, and traditional healing methods such as botanical medicine, physical manipulation, hydrotherapy techniques, and lifestyle counseling, all modalities that are in high demand for today's most common medical conditions. We are excellent diagnosticians. We use a wide range of tools to diagnose, including thorough physical exam, in-depth patient interview and whatever laboratory or imaging methods necessary to understand the patient's pathology. To give you a glimpse of my training, just as examples, I entered ND school as an Ivy league grad, took two years of cadaver anatomy at Bastyr University in Seattle, had five quarters of radiology, sliced and sewed countless pigs' feet, had 7 quarters of pharmacology and spent nearly 2500 hours in supervised clinical training at various clinics and hospitals before applying for licensure.

And now I have been in practice for 15 years without a hint of creating harm. I have over 2000 charts and serve as primary care provider for nearly 200 families in Juneau and SE Alaska. It is unlikely that I would still be in business if, as you suggest, my training lacked depth and breadth.

Practice acts should require licensees to demonstrate that they have the requisite training and competence to provide a service. The current regulations for naturopathic doctors in Alaska are outdated: they do not reflect the depth and breadth of our training. Naturopathic doctors have been dispensing drugs and offering minor surgery services (as part of a broader scope, obviously) in many Western states, in some cases for decades. NDs have been licensable as fully empowered mid-level providers in Oregon state since the early 1950s. Please consult with the primary malpractice insurer for the naturopathic profession to evaluate rates of harm (virtually zero): www.ncmic.com No group is better at assessing risk than the insurance companies. My malpractice insurance is $1600/year.

418 Harris Street, Suite 329 Juneau, AK 99801
Phone: 907-586-3655 FAX: 907-586-4326 email: DoctorEm@aol.com

2/ letter to Dr. Vasileff

There is no evidence of harm to a patient in Alaska at the hands of a legitimately trained naturopathic doctor. I also hold a license in Oregon (#1662) and if I were to move south I would instantly be able to perform biopsies, remove splinters and sutures, dispense well-indicated antibiotics or antihypertensives, as examples. I am the same doctor here in Alaska. Does the state of Oregon care less about public safety? I pursue rigorous annual CME, nearly half in pharmacology updates, as do all my fellow NDs in the state

Graduation from an approved school and a passing score on the Naturopathic Physicians Licensing Examination (NPLEX) demonstrates that a naturopathic physician has achieved competency to practice as taught in naturopathic medical school (www.nabne.org/nabne_page_23.php). Further, SB 70 stipulates that all NDs who wish to prescribe pharmaceuticals be required to obtain a federal DEA number.

I do not find much parallel between the FSMB's attempt to vet IMGs and the situation here. NDs are not aliens. Our training involves no distance learning. Our educational programs are all federally accredited and all offer access to federal student loans. Entry requirements to our programs include a bachelor's degree and current basic science competency. There are no advanced standing admission criteria other than licensed MDs, DOs and DCs applying for a dual ND degree.

The one parallel that I see between the IMGs and the NDs is that they often practice in medically underserved areas. Surely that is not a problem.

You state that you do not believe the Legislature "has the objective information... that would enable it to make the major patient safety, policy decision it is being asked to make is SB 70." With all due respect, it IS actually the legislators who create law. They read, and you may also read, about the academic curriculae of the accredited naturopathic medical schools in the United States and study the scope of our training in the links provided below.

All six of the North American schools granting the ND degree are accredited by the Council on Naturopathic Medical Education (www.cnme.org) The Council on Naturopathic Medical Education's mission is quality assurance: serving the public by accrediting naturopathic medical education programs that voluntarily seek recognition that they meet or exceed CNME's standards. Founded in 1978, CNME is accepted as the programmatic accrediting agency for naturopathic medical education by the four-year naturopathic colleges and programs in the United States and Canada. CNME advocates for high standards in naturopathic education, and its grant of accreditation to a program indicates prospective students and the public may have confidence in the educational quality of the program. The U.S. Secretary of Education recognizes CNME as the national accrediting agency for programs leading to the Doctor of Naturopathic Medicine (ND or NMD) or Doctor of Naturopathy (ND) degree.

3/ letter to Dr. Vasileff

Let's return to the situation in Alaska, where Medicaid providers are desperately needed, where "access to healthcare services" was rated 49th out of 50 states by the AARP last month, where chronic diseases of obesity, diabetes, alcoholism, tobacco abuse, cardiovascular disease are rampant. Part of our healthcare crisis is the erroneous concept that MDs and DOs can optimally and affordably handle all this demand. The majority of these chronic diseases can be capably managed by NDs, NPs and PAs as well, if not better, than MD specialists. Distributing patients to providers most inclined to serve their needs is going to be critical to the solution to this health care crisis.

NDs have considerably more training than nurse practitioners, yet this competent group of mid-level providers have all the practice scope that NDs seek. Expansion of scope for NPs, dental hygienists and
optometrists have only benefitted Alaskans. No doctor, dentist or opthalmologist has gone out of business due to improved access to mid-level providers, and the safety of Alaskans has not been compromised.

NDs have a well established history of practicing medicine safely. This is our bailiwick. We primarily use gentle, effective, low-tech therapies. It is not up to ASMA to police our profession. Our patients will continue to choose our care because it works for them. We don't need to have drugs and minor surgery, but we are capably trained in these arenas and would be of greater service to the constituents of Alaska were we legally empowered to choose those methods, when best indicated.

My colleagues and I enjoy pleasant and productive relationships with your colleagues. We share patients with many ASMA members, and on a doctor to doctor level, we cooperate well. I invite you to extend this cooperation more broadly for exactly the reason you cite as your chief concern: patient safety.

In health,

Dr. Emily A. Kane

Soldotna AK 99009

Dear Dr. Foland,

Senator Bettye Davis gave me a copy of your letter opposing SB 70, scheduled to be heard in Senate HSS on March 13, at 1:30 PM. She has asked that I respond to you in order to encourage "discussion, and a modicum of accomodation" before the committee hearing.

You make a good point that naturopathic doctors (called physicians in all other states where licensed) practice natural medicine and that our training includes deep investigation of nutritional therapies, the medicinal properties of plant medicine, exercise physiology, and a variety of other non-invasive modalities. However, our training is not limited, as you suggest, to "natural herbs and nutraceuticals not regulated by the FDA." There exists some understandable confusion about my profession because of numerous diploma mill "NDs" throughout the country who certainly do not receive the rigorous training that I and my professional colleagues underwent. It is not difficult to discern the "real" NDs. Only properly trained naturopathic physicians are eligible for membership in our national organization, will be affiliated with their local hospitals and community health establishments, and maintain proof of yearly CME.

Alaska ND licensure is dependent, in part, on ongoing affiliation with our national professional organization, the American Association of Naturopathic Physicians (www.naturopathic.org) which provides yearly continuing medical education (CME) opportunities, and requires both graduation from an accredited school and holding a state license in good standing. One of the objectives of SB 70 would be to mandate CME for NDs in Alaska, lack of which mandate is example of a gap in the current, inadequate, licensure regulations.

The principle objective of SB 70 is to bring the statutes governing naturopathic physicians in Alaska

into the 21st century.

I enclose for your perusal a "white paper" explaining the rationale of the Alaska Association of Naturopathic Physicians for updating our statutes. The white paper includes a curriculum comparison with a conventional medical school. I believe you might not be aware of the scope of our classroom training, nor the requirements for supervised clinical education before graduation.

My own medical education is fairly typical of NDs practicing in Alaska. I graduated from a 4-year college in 1978. Later, I went back to school for 2 years to become eligible to enroll in one of the 6 accredited schools of Naturopathic medicine in North America (Bastyr University, Seattle WA). I spent 6 years at Bastyr University which included just over 2500 hours of supervised clinical training beyond didactic courses. I passed national licensing exams (NPLEX) in 5 basic science topics and 14 clinical science topics. I spent 4 months in intensive hospital rotations after graduation. I spent another year in a clinical residency with a senior ND before opening my own practice.

I think it is not unreasonable to ask new naturopathic licensees to pass the USMLE exams. Are you aware of any precedent for mid-level providers taking these exams? I recently passed my Oregon Board of Naturopathic Licensing exams, which, as you might not know, qualifies me to apply for a DEA number and to perform minor surgery in Oregon. I'm not planning on moving to Oregon at this time! I simply wanted to make the point that I would be just as capable of safely dispensing low schedule drugs and engaging in minor surgery involving the epidermis in Alaska as I would be in Oregon. In the states where NDs have had prescriptive and minor surgeries privileges (in some states, for many decades) there is a stellar public safety record. This is because NDs tend to use prescription medicine as a last resort. However, it is costly and inefficient to not use a simple legend medicine when it is the best therapeutic choice.

Naturopathic physicians have significantly more training than nurse practitioners, but the NPs in Alaska have prescribing rights whereas NDs do not. That is simply because there are more of them, and they can afford a PAC and to hire a lobbyist. I currently have under my tutelage a young nurse practitioner who is studying topics of interest not available to her during her training. She is 20 years younger than me and has been in practice for 2 years, compared to my 15. Yet, when a patient of mine needs an antibiotic or a temporary antihypertensive, my student has to sign off on the prescription. That is just silly!

Last week I had a patient with culture-confirmed strep throat. I had known this patient for years and knew she was sensitive to penecillins. So, she needed a cephalosporin. If I had not been able to prevail upon my nurse practitioner student, my patient would have had to wait 2 weeks and spend another $200 to get into to see another doctor in town for 5 minutes to get the Keflex prescription. This would have wasted time, and wasted money, and caused my patient unnecessary suffering.

SB 70 addresses this waste by allowing NDs to create a board which would in turn determine the basic toolkit of prescription medication we need to work effectively as primary healthcare providers. The idea of this board is fully supported by the Department of Occupational Licensing, which currently governs NDs. Jenny Strickler, head of our DOL division, has told me she thinks it's high time NDs had a board. She has expressed to me personally, and would testify to, how inappropriate it is for a "lay person, such as myself, to be governing a healthcare professional." This board would consist of 3 naturopathic physicians, 1 pharmacist and one member of the public which could be an MD. **We would very much like a member of the AKAFP to express interest in working with us on this new board.**

In addition, SB 70 would update regulations governing naturopathic physicians to allow us to become Medicaid providers. The governor has expressed her support for expanding Medicaid. That's terrific! However, the state doesn't just need more federal dollars. It also needs providers. There is not one family doctor in Juneau right now who is accepting new Medicaid patients. SB 70 would instantly provide Alaskans with 40 seasoned, mature, established family doctors with a long track record of providing not only safe effective therapies for chronic illness, but doctors who focus on wellness and prevention. NDs have been Medicaid providers in Washington and Oregon, as examples, for several decades; NDs are deeply embedded in the public health systems of these forward-looking states. We will always use drugs as a last resort, and mostly we will make referrals for drug therapy. However, it is extremely inefficient to not be able to nip a simple problem in the bud, with access to all the tools which we are trained to use, and maintain.

Thank you for your attention to this letter. I do hope it has provided some assurances against your concerns for public safety in the hands of naturopathic physicians practicing as trained. The primary mission of my profession is adherence to our oath to "Do No Harm." We succeed well in this arena. We are also passionate about helping to reform the culture of "disease management" to one of wellness promotion, disease prevention and low-tech medicine whenever possible. There is increasing public demand for these services, and ultimately, it is the discerning public who will continue to bear out our safety record.

In my opinion, it would be best for healthcare reform in general, and for our shared patients specifically, if our professions could cooperate in our mutual mission to improve community health. However, the need and demand for naturopathic services will continue regardless.

While I do appreciate your concerns for public safety, in this case I think they are unfounded. I invite you to look fairly at public harm at the hands of MDs versus public harm due to NDs, especially in states such as Oregon, Washington and Arizona where NDs are allowed to practice as trained. Please let me know if I can provide any more materials about the training and work of naturopathic physicians.

Best wishes, in health,

Dr. Emily A. Kane
Vice President, Alaska Association of Naturopathic Physicians

Emily, the Sen. will be taking testimony on SB 70 at the hearing on the 13rh. You should plan to testify. This will be your opportunity to speak on behalf of the bill. This would also be a good time for anyone with an opinion/thought/concern to come forward to testify. The Sen. will try to give folks wishing to testify as much time as they need within limits. If we have a large number of folks to testify she will have to limit speaking time but she will make that decision at the time of the hearing. Hope that answers your question. Lynda

Naturopathic Doctor
Alaska License № 22
Licensed Acupuncturist
Alaska License № 18

Feb 17, 2009

Dear Senator Paskvan,

I am writing in support of SB 70.

I am one of 40 naturopathic doctors (ND) licensed in the state of Alaska. I have practiced medicine in Juneau for 15 years, with hospital privileges and full insurance reimbursement from all the major medical insurers. I enjoy excellent collegiate rapport with the MDs and other health professionals in town, almost without exception. I have over 2000 patient charts and serve as family doctor to several hundred Juneau families. I believe you recently met my Fairbanks colleague Dr. Mary Minor, who has provided healthcare services in Alaska for nearly 25 years.

I would like to point out the salient features of SB 70 and attempt to dispel some of the mischaracterizations of my profession recently provided in a letter from the Alaska State Medical Association. Many members of ASMA are part of my referral base. I had a long talk yesterday with the immediate past president of ASMA -- we share several patients and I send my more complicated diabetic patients to him in Anchorage. Dr. Ross Tanner explained to me that "docs" involved in groups such as ASMA are not only physicians, but also have political aspirations. I asked him how it could be that when I discuss patients with my fellow healthcare professionals, we have productive interactions and work together for the benefit of the patient, but I cannot for the life of me get an MD to support the updating of laws governing naturopathic physicians. Ross explained that such support would be "political suicide" for an MD, despite their almost universal recognition of the diagnostic capabilities of NDs, and our safe, effective therapeutics which they have witnessed for years in patients we share.

Several ASMA members locally have spent time with me "brainstorming" on how to overcome this problem. Dr. John Raster, a local otolarygologist and current speaker of the house for ASMA, suggested I focus on the fact that naturopathic physicians have significantly more training than nurse practitioners, but the NPs have way more prescribing rights. That is simply because there are more of them, and they can afford a PAC and to hire a lobbyist. I currently have under my tutelage a young nurse practitioner who is studying herbal medicine and some traditional healing methods. She is 20 years younger than me and has been in practice for 2 years, compared to my 15. Yet, when my patient needs an antibiotic or a temporary antihypertensive, she has to sign off on the prescription. That is just silly!

SB 70, a zero-note bill, would update regulations governing naturopathic physicians to allow us to become Medicaid providers. The governor has expressed her support for expanding Medicaid. That's terrific! However, the state doesn't just need more federal dollars. It also needs providers. There is not a one family doctor in Juneau right now who is accepting new Medicaid patients. SB 70 would instantly provide your constituents with 40 seasoned, mature, established family doctors with a long track record of providing not only safe effective therapies for chronic illness, but doctors who focus on wellness and prevention. NDs have been Medicaid providers in Washington and Oregon, as examples, for several decades; NDs are deeply embedded in the public health systems of these forward-looking states. The safety record of NDs in states where they have prescriptive and minor surgery authority is stellar. We will always use drugs as a last resort, and mostly we will make referrals for drug therapy. However, it is extremely inefficient to not be able to nip a simple problem in the bud. Last week I had a patient with culture-confirmed strep throat. I had known this patient for years and knew she was sensitive to penecillins. So, she needed a cephalosporin. If I had not been able to prevail upon my nurse practitioner student, my patient would have had to wait 2 weeks and spend another $200 to get into to see another doctor in town for 5 minutes to get the Keflex prescription. Wasted time, wasted money.

Phone: 907-586-3655 FAX: 907-586-4326 email: DoctorEm@aol.com

SB 70 addresses this waste by allowing NDs to create a board which would in turn determine the basic toolkit of prescription medication we need to work effectively as primary healthcare providers. The idea of this board is supported by the Department of Occupational Licensing, which currently governs NDs. Jenny Strickler, the capable head of our DOL division, has told me she thinks it's time NDs had a board. She has expressed to me personally, and I hope would testify to, her thoughts that it is inappropriate for a "lay person, such as myself, to be governing healthcare professionals." Ms. Strickler spent about an hour with me last month discussing the mechanism of how our board would interact with her department. This board would consist of 3 naturopathic physicians, 1 pharmacist and one member of the public which could be an MD.

SB 70 also calls for naturopathic doctors (NDs) who want to prescribe legend drugs to register with the federal Drug Enforcement Agency. Precedent exists for NDs having DEA registration in multiple states. Jenny Strickler has also endorsed this provision because it is her opinion that DEA registration requirement for NDs wanting prescriptive rights provides the state legislators with another layer of "security" for Alaskan residents. I agree.

We are not in competition with the MDs. We provide a different and unique service. Our patients will continue to come to us out of choice. It's a matter of freedom of choice in healthcare. Some patients prefer a "drug as the last resort" approach to their health and health problems. The issue of blocking the updating of our legislation is akin to dentists protesting dental hygienists, MDs blocking the nurse practitioners, opthalmologists blocking the optometrists. All the mid-level providers listed here except NDs have prevailed – and Alaskans are better served because of it. No dentist or MD has gone out of business because the mid-level providers have garnered legislation that allows a scope of practice commensurate with their training.

Like my fellow licensed Alaskan NDs, I have completed a vigorous medical education. I graduated from an Ivy League college in 1978. Later, I went back to school for 2 years to become eligible to enroll in one of the 6 accredited schools of Naturopathic medicine in north America (Bastyr University, Seattle WA). I spent 6 years at Bastyr University which included just over 2500 hours of supervised clinical training. I passed national licensing exams (NPLEX) in 5 basic science topics and 14 clinical science topics. I spent 4 months in intensive hospital rotations after graduation. I spent another year in a clinical residency with a senior ND before opening my own practice. My Alaska licensure is dependent, in part, on ongoing affiliation with my national professional organization, the American Association of Naturopathic Physicians which requires yearly continuing medical education (CME), graduation from an accredited school and a state license in good standing. SB 70 would also mandate CME, lack of which mandate is another example of a gap in the current, inadequate, licensure regulations. To summarize: The statutes governing naturopathic physicians in Alaska need to be brought into the 21st century.

If you have read through this letter, I thank you and appreciate your perseverance. The letter will copied to the current ASMA president, Dr. Thomas Vasileff, as well as directed to the bill's sponsor, Senator Bettye Davis.

I would enjoy an opportunity to discuss your concerns about the benefit of this bill to Alaskans. My clinic is 2 blocks away from the Capitol building and I hope you will call if you have further questions about the naturopathic medical profession, which has provided safe, effective, licensed healthcare services to Alaskan families since 1986.

Sincerely,

Dr. Emily A. Kane

The American Association of Naturopathic Physicians
www.naturopathic.org

Naturopathic Medicine, founded upon a holistic philosophy, combines safe and effective traditional therapies with the most current advances in modern medicine. Naturopathic medicine is appropriate for the management of a broad range of health conditions affecting all people of all ages.

Naturopathic physicians (NDs) are trained in the basic medical sciences and conventional diagnostics. Naturopathic education also includes therapeutic nutrition, botanical medicine, homeopathy, natural childbirth, classical Chinese medicine, hydrotherapy, naturopathic manipulative therapy, pharmacology and minor surgery. NDs are positioned to practice preventive health care – not only engaging patients in health promotion but also treating those with chronic disease to manage the entirety of their health. NDs will always turn to safe, natural, low-tech therapeutics first. However, they are thoroughly trained as primary healthcare providers with skills in physical exam, diagnostic lab and imaging analysis, and pharmacology, and these tools are employed as necessary to provide the best outcome for the patient.

Education and Training requirements for all licensed naturopathic physicians requires successful completion at one of our four year, graduate-level naturopathic medical schools, whose missions are educational excellence in the prevention, diagnosis, and treatment of disease and promotion of optimal health. Like conventional medical schools, the first two years of ND training concentrate on the basic biomedical sciences: anatomy, physiology, histology, embryology, pathology, and biochemistry. The second two years integrate the basic biomedical sciences with clinical sciences, focusing on a broad range of therapeutic interventions: clinical nutrition and diet, botanical medicine, homeopathy, naturopathic physical medicine and hydrotherapy, counseling and health psychology. Students are also trained in pharmacology and in minor office procedures, such as removal of superficial lesions and suturing of minor lacerations. All licensable NDs receive approximately 1400 hours of supervised clinical training, in clinics or hospitals, before graduation. Many NDs complete internships or preceptorships (similar to residencies) for 1 or more years following graduation.

After graduation from our accredited schools, naturopathic physicians have a debt level equal to that of allopathic medical school graduates, and a default rate of almost zero. They actively seek opportunities to work in rural and underserved areas as primary care providers, where they feel they can contribute the most. The need for primary health care services in urban and rural areas, especially for at-risk and underserved populations, is well documented. Naturopathic physicians are thoroughly, vigorously and uniquely trained in health and wellness promotion and can safely and effectively fill the void in health care that is jeopardizing our children, our families and our future.

Editorial

The Collapsing Health Care System

This editorial is being written just after the Dow Jones Industrial Average fell 778 points because of the failure to pass the $700 billion bailout bill. Another headline that appeared in the news today was that Medicaid costs will soon be spiraling out of control, primarily because of the increasing need for long-term care for the elderly and disabled. The presidential candidates have essentially stopped talking about their health care plans, because it is becoming clear that there will be little or no money for new programs and perhaps not enough money to continue some of the old programs. And we, the folks, worry that illness will mean bankruptcy.

A few weeks ago, the Associated Press reported that only two percent of graduating medical students plans to work in primary care internal medicine. Factors cited for the increasing preference for non-primary care specialties include high medical school debt, low insurance payments for office visits (when compared with various simple procedures), difficulty caring for the chronically ill and elderly with complex diseases (especially with the need to see so many patients per hour), and excessive amounts of paperwork. Because of the ongoing loss of front-line physicians, the American College of Physicians warned that the nation's primary care system is "at grave risk of collapse."

A study published September 2008 in the *New England Journal of Medicine* concluded that arthroscopic surgery for osteoarthritis of the knee (a procedure performed by highly paid specialists, some of whom decided not to go into primary care for the reasons cited above) doesn't do any good. Actually, we already knew that, because a 2002 study published in the same *New England Journal of Medicine* came to the same conclusion. But orthopedic surgeons continued performing the procedure about 250,000 times per year at a total cost of about $1.75 billion per year.

It was also reported recently that the use of insulin-sensitizing thiazolidinedione drugs, such as rosiglitazone (Avandia), which are used to treat diabetes, is associated with a two- to threefold increase in the risk of suffering an osteoporotic hip fracture. So, patients taking Avandia may eventually need to take alendronate (Fosamax) to keep their bones strong. Unfortunately, new research shows that the use of Fosamax is associated with a doubling of the risk of developing atrial fibrillation. So, the patient goes into atrial fibrillation, which is treated with amiodarone, which leads to severe pulmonary and hepatic toxicity, and now the patient is in real trouble and on the hook for serious medical bills. Brown rice, beans, chromium, and exercise would have been a lot cheaper and a much safer treatment for diabetes than Avandia.

It also turns out that some upstart drug company got the idea that it owns God's molecule, pyridoxal 5'-phosphate (PLP; the biologically active form of vitamin B6). Apparently, this company has spent money on research demonstrating that PLP is an effective treatment for cardiovascular disease. So, they have petitioned the Food and Drug Administration to have this vitamin declared a drug, so that only they will be allowed to sell it (no doubt at monopoly prices).

All of these stories are symptomatic of a system that has developed very large cracks and is on the verge of breaking.

In my 25 years of writing for the *Townsend Letter*, I have made many suggestions on how we could improve the public health and the health care system, while substantially reducing costs: Emphasize natural medicine. Tax unhealthful food and give a tax credit for healthful food, exercise equipment, and other health-promoting behaviors. Eliminate expensive defensive medicine and expensive malpractice insurance by reforming the tort system. Reconsider the wisdom of spending tens of thousands of dollars on intensive care for people in the last days of their lives. Stop performing expensive procedures that do not work. Emphasize home birth and other low-cost home remedies. Integrate mid-level practitioners (such as nurse practitioners and physician assistants) more fully into the system. Remind doctors that inexpensive older medicines often work just as well as newer, expensive ones.

When I made these suggestions, I did not believe they would be implemented, and most of them have not been. Our society was, and still is, too bound by the desire for money to hear the call of service and altruism. The medical student does not want to do primary care; the orthopedist does not want to stop doing lucrative but worthless operations; the drug companies do not want to stop pushing lucrative but dangerous drugs; and the upstarts want to usurp God's patents. As Paul said to Timothy, "the love of money is the root of all evil." But now, as the money threatens to dry up (the "liquidity crisis") or perhaps to sink the ship (necessitating a "bailout"), even the greedy will be forced to look elsewhere to find new roots.

Why does it take an earthquake, a hurricane, or a tsunami before we come to people's aid? If and when the next Great Depression hits, will we rediscover the joy of service?

Oh, people, look among you; it's there your hope must lie.[1]

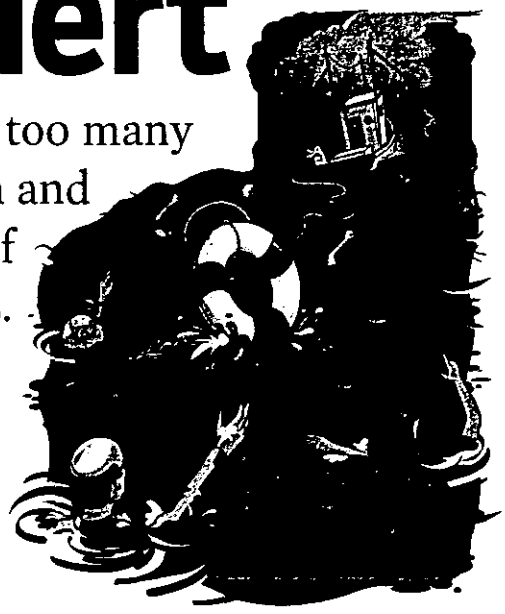
Rescue Alert

Health care is out of reach for too many Alaskans, especially fishermen and other seasonal workers, most of whom don't get health benefits.



LACK OF HEALTH INSURANCE is a big reason why Alaska leads the U.S. in state spending on health care per person—about $8,000. Then there's the doctor shortage. Alaska needs 200 more physicians, ASAP.

But the state also needs a new approach to making health care affordable. Our costs of care and insurance already exceed the U.S. average and are growing by 9 percent a year.

Everything would change if more Alaskans had health insurance, but 17 percent do not. Most seasonal and part-time employees never will, and they represent 35 percent of the workforce. Not surprisingly, Alaskans pay 13.6 percent more for premiums than if everyone had health coverage.

This is why state Sen. Hollis French (D-Dist. M) and Rep. Gabrielle LeDoux (R-Dist. 26) recently introduced bills that would provide vouchers enabling all Alaska residents to buy health insurance. "No longer can we wait for the federal government to take action on this important issue," they said.

Finding a solution to the health care dilemma is at the top of AARP's national agenda. Through its Divided We Fail initiative, AARP encourages elected officials and community and business leaders nationwide to develop bipartisan solutions to the pressing problems of health and financial security. Details are at www.dividedwefail.org.

REF: HSS committee sponsorship of House bill parallel to SB 70

Dear Representative Herron,

I had the pleasure of meeting your assistant Marianna yesterday and she received a "white paper" supporting the expansion of health care services in rural and urban Alaska.

There is a crisis in the shortage of family doctors in the U.S. Alaska, especially rural Alaska, as you well know, is not exempt from this problem. I believe one of your main interests is to promote the availability of both basic and specialty healthcare services for your region.

May I introduce you to a group of healthcare professionals who are primary care physicians specializing in prevention and treatment of chronic disease. These doctors routinely counsel patients in nutrition and healthy lifestyle changes, and treat using natural as well as conventional therapies. Their patients are typically able to largely reduce their health care costs as well as promoting optimal wellness.

I am one of these naturopathic doctors (ND) with training very similar to an MD, except that our therapeutic focus is not pharmaceutical medicine, but intervention with diet, exercise, herbal therapies and other effective, low-tech, low-cost, safe therapies.

We are, however, fully trained as family doctors. Please see a curriculum comparison in the "white paper." In all the western states, except for Alaska, the scope of practice for a naturopathic physician includes minor surgery, legend drugs (not controlled substances such as narcotics), vaccinations, Medicaid reimbursement, and school physicals. This is what we are asking for in our current Senate bill.

Although we are doctors who use expensive drugs and procedures as a last resort, I can assure you we are not shy to make referrals when indicated. I have practiced medicine in Juneau for 15 years, and have been professionally affiliated with our local hospital for nearly as long. I have good working relationships with my MD colleagues here in Juneau, without exception. Nevertheless the Alaska State Medical Association remains the primary obstacle to our bill, which has frustrated Senator Davis and my colleagues. This resistance is softening however, in part because so few MD candidates are chosing to go into family medicine. Increasingly, the mid-level providers such as nurse practitioners, physician assistant and naturopathic doctors are the ones working "in the trenches" in community health.

418 Harris Street, Suite 329 Juneau, AK 99801
Phone: 907-586-3655 FAX: 907-586-4326 email: DoctorEm@aol.com

As you know, despite necessary budget cuts, the Governor has stated her commitment to expanding DeNali KidCare. This can only happen with both more funding, and more doctors. One of the supporting documents I enclose today reveals the findings of a recent poll of ASMA (Alaska State Medical Society) medical doctors who overwhelming are "burnt out" by family medicine, wish they could retire, and no longer recommend medicine as a career.

Our bill (SB 70) sailed through the Senate during the past several sessions, but we have not had the sponsorship on the House side needed to move our bill into law. Naturopathic doctors desire the ability to fully serve our fellow Alaskans as trained. The documentation I gave Marianna will show you how our training compares to MD training (very comparable but we have many more hours in nutritional intervention, in other words, disease prevention). You will also be able to see our safety record (excellent) in states which have granted naturopathic doctors a full scope of practice, in some cases for many decades, such as in Washington and Oregon.

Our bill is designed to bring the scope of practice of a growing category of mid-level, fully trained, healthcare providers into the 21st century. In Alaska, we have significantly more training than an advanced nurse practitioner, but not nearly the scope of practice. I believe our bill marries well with your purpose of getting more broadly trained healthcare professionals into rural Alaska.

Tom Obermeyer (in Senator Davis' office) knows most about this bill: 465-3762. Senator Davis is very motivated to get this bill all the way through this year, and she would, naturally, welcome an enthusiastic partner on the house side.

Please contact me with any questions or requests for further supportive documentation. Thank you in advance for your consideration of supporting this bill. I look forward to meeting you.

Best wishes,

Dr. Emily A. Kane

WELLSPRING

Integrative Medical Center

RECEIVED
JAN 23 2009

January 21, 2009

Dear Alaskan Legislators:

I write in support of establishment of a Naturopathic Medical Board consisting of three (3) Naturopathic Doctors (ND), one (1) pharmacist and one (1) member of the public. This board is needed to assure the Alaskan public of safe naturopathic care complying with the regulations of ND practice in Alaska.

Wellspring, an Integrative Medical Center, located in Juneau, Alaska, has employed a naturopathic doctor for nine years. Patients constantly acknowledge their gratefulness for this option. However, he has been unable to fully practice his profession in Alaska because there in no ND Board overseeing the totality of his practice for which he was educated for four years, post-baccalaureate degree.

Please support this ND bill to improve wellness and health care for Alaskans, to increase access to ND care and to provide cost-effective options for our communities.

Please contact me if you have further questions.

Sincerely,

C. Trollan, ANP

The Honorable Senator Bettye Davis
State Capitol Bldg, Room 11
Juneau, AK 99801

re: SB 70

Dear Sen. Davis,

Thank you for supporting SB 70, a bill that would update naturopathic licensing and create a licensing board for my profession. This bill would make access to appropriate health care for my patience much easier. Although most of my patients do quite well with interventions including diet, lifestyle modification and natural therapies, some require medical management. When I have to refer that patient to another doctor, it can create a barrier to appropriate care that is unnecessary. The naturopathic licensing board would make a formulary of legend drugs that have been used safely by naturopathic doctors in states such as Washington, Oregon and Arizona.

SB 70 would also protect the public safety by requiring naturopathic doctors to keep their skills up with continuing education. This is common in almost every profession and should be the rule in Alaska as well. Also by increasing the ranks of well-trained doctors who can service Medicare patients, they should relieve some of the burden for conventional providers throughout the state.

Thank you once again for your dedication to the welfare of all Alaskans.

Yours in health,

Mary A. Minor, ND
CC: Senators Ellis, Thomas, Dyson and Paskavan.

Identifying the Similarities and Differences:

An analysis of two medical training programs -- Bastyr University's Naturopathic Doctorate (ND) compared to the University of Washington's Medical Doctorate (MD) program

Admissions Criteria

Similarities – Overall, a high degree of similarity exists between the programs.

- Both programs:
  - Expect applicants to have completed, but do not require completion of, a baccalaureate degree.
  - Encourage a strong background in the humanities and liberal arts.
  - Require a strong background in the sciences, including chemistry, biology, and physics.
    - While not required for admission, biochemistry is very strongly recommended.
  - Allow for waiving a limited number of academic requirements under exceptional circumstances.

Differences

- Medical College Admissions Test (MCAT):
  - Required for University of Washington (UW) medical school, taken no later than fall in the year prior to possible matriculation.
    - Under *exceptional* circumstances, GRE scores may be considered for admission, but MCAT must be taken prior to matriculation.
  - Not required for Bastyr University (BU) naturopathic medical school
- Required courses:
  - UW specifies science requirements by number of credit hours* for each:
    - Chemistry (18*), biology (12*), and physics (4*), plus additional "open" science credits (8*).
  - BU specifies science requirements by number of courses for each:
    - Chemistry (4, for science majors), physics (1, college level), algebra or pre-calculus (1, college level), and psychology (1, introductory course recommended).
    - Additionally, BU requires a minimum of 3 quarter credits in general biology for science majors, with a lab.
- Additional Notes:
  - UW provides mean statistics for the entering class 2004 – GPA 3.71, MCAT scores (Verbal 10.3; Physical Sciences 10.8; Biological Sciences 11.1 and mode of "Q" in writing) -- BU does not.
  - UW states:
    - "All candidates must demonstrate substantial academic ability in their major field as well as in the required science courses."
    - "Candidates should be proficient in the use of the English language and of basic mathematics, and are expected to have a basic understanding of personal computing and information technologies."
  - BU requires admissions committee review for all chemistry and biology courses not completed within 7 years of matriculation, and may require additional courses if deemed appropriate.
  - BU allows submission of test scores for prerequisite consideration as noted below:
    - AP, IB, CLEP, or GRE for math, psychology, or physics.
    - AP or IB for biology or chemistry.

*All credit hours stated for quarter calendar system, unless otherwise noted

Clinical Training

Similarities

- Both programs emphasize training in the clinical setting, where the student receives practical, hands-on training from licensed practicing physicians.

Differences

- BU naturopathic students complete a total of 25 shifts, all in the outpatient setting. The only specialized shifts completed are in physical medicine (4 shifts). Three shifts are completed as preceptorships, with independently practicing physicians.
- UW medical students complete 10 rotations of varying lengths in numerous areas of specialized as well as general medicine. Some of these are in the outpatient setting, others in an inpatient setting. In total, they complete a total of 58 weeks of these rotations, with the greatest emphasis on general medicine (12 weeks).
- All inpatient setting rotations such as surgery and trauma/emergency medicine are required by UW, but unavailable to BU naturopathic students (or with very limited availability as preceptoships).
- UW students are required to complete a rotation in obstetrics and gynecology; BU students complete rotations in childbirth only if enrolled in the separate midwifery program.
- UW students may complete elective rotations in rural/underserved community medicine; BU students may volunteer in these programs away from school (although preceptorship credits may be available).

Licensure Examinations

- Both MD and ND licensure require successful completion of a two-step examination process, one covering basic or pre-clinical sciences, and a second covering clinical sciences.
  - MD students complete the United States Medical Licensure Examination (USMLE) Part I at some point prior to their last year, and the USMLE Part II during their final year of enrollment at UW.
  - ND students complete the Naturopathic Physician Licensure Examination (NPLEX) Basic Sciences exams after their second academic year, and the Clinical Sciences exams post-graduation.

RECEIVED
DEC 16 2008

December 15, 2008

Alaska State Medical Association
4107 Laurel St
Anchorage AK 99508

Dear Officers of the Association,

This letter is in regard to legislative changes that will again be sought by Naturopathic Doctors in Alaska during the upcoming session. Our aim will be, as in previous years, to modify some of our statues governing the naturopathic medical profession which are no longer serving Alaskan citizens.

We are a well-trained group of mostly mature primary healthcare providers. Most of the naturopathic doctors in Alaska have been practicing medicine for over 10 years. I have been in practice in Juneau, with outpatient hospital privileges, for 15 years. Despite training in all aspects of primary healthcare, naturopathic doctors (ND) cannot perform minor surgery, nor prescribe any legend drugs. This means our patients may require costly, non-expedient referrals to other providers for basic services in which we are well versed, but currently restricted from providing.

The shortage of primary care, family doctors has become critical, as you know. Alaska in not exempt from this problem. In states where naturopathic doctors have expanded their scope of practice to include legend drugs and minor surgery per their training, there has been no evidence of public harm. I have documentation of these statistics, some of which date back to the 1950s, as well as charts comparing our training with medical doctors if you would like further information.

Our medical training exceeds that of nurse practitioners, yet they have prescription authority in Alaska while naturopathic doctors do not. I, and all my colleagues licensed in Alaska, have passed national licensing boards which include segments on pharmacology and minor surgery/laceration repair technique.

Drugs and surgery will never be our first lines of therapy. We are naturopathic doctors, mostly using diet, exercise and herbal therapies to help our patients achieve or maintain wellness. However, we have exceptionally thorough training and are certainly capable of providing the full scope of services in which we were trained. The principle reason our legislation has not yet passed is resistance from the medical community. Individual medical doctors in this community are, almost without exception, courteous, collegiate, supportive, and interested in mutual referrals. However, there seems to be a need to "resist" at a group level. I invite you to please consider what you could "live with" and not feel compelled to try to block, in the upcoming session. For example, could you be supportive of, or at least not resistant to, Naturopathic Doctors being able to provide vaccinations, school physicals, have a limited formulary and be permitted to perform superficial wound care?

418 Harris Street, Suite 329 Juneau, AK 99801
Phone: 907-586-3655 FAX: 907-586-4326 email: DoctorEm@aol.com

My aim is to work towards legislation that would create a Board for the naturopathic medical profession. The Board would consist of 5 members: 3 Naturopathic Doctors, 1 pharmacist and one member of the public who may be a medical doctor. In this way we invite your members to participate in advising Naturopathic Board subcommittees such as a formulary council.

We would welcome an opportunity to discuss with your Association what degree of expansion of scope of practice for naturopathic doctors your group would accept. I would very much appreciate working towards legislation that won't be met by resistance from ASMA. Legislators have generally been very interested in bringing mature primary healthcare providers, already installed in the state, to bear on the shortage of physicians in Alaska

I hope to hear from you before the beginning of session, January 20, 2009

Respectfully,

Dr. Emily A Kane

Subj: RE: SB 70

Dear Emily Kane,

The Alaska Pharmacists Association (AkPhA) would support the establishment of an Alaska Naturopathic Board with the purpose of regulation of the practice of the Naturopathic Doctors in the State of Alaska. We appreciate your inclusion of pharmacists in the development of the Naturopathic Board.

AkPhA appreciates the rigorous education and training many Naturopath Doctors have completed. We also understand that all Naturopath Doctors do not complete the same level or quality of training. Our hopes are that the development of a Naturopathic Board would develop standards for Naturopathic practitioners within the State of Alaska, including post graduate residency training and mandatory continuing education. AkPhA does not view naturopaths as an alternative to allopathic health care providers, but an addition to traditional practice. Naturopathic medicine is not meant as a replacement in areas where health care providers are of short supply or where there are not physicians accepting Medicare patients.

Finally, prescription endorsement regulations need to be developed in extensive detail beyond what is described in SB 70. AkPhA, with the assistance of the Board of Pharmacy, is willing to open a dialog concerning prescriptive authority guidelines for Naturopathic Doctors.

Respectfully,

Amber L Briggs, Pharm.D., BC-ADM

President, Alaska Pharmacists Association

ALASKA ACADEMY OF FAMILY PHYSICIANS

35555 Spur Highway #266, Soldotna, AK 99669 akafp@gci.net www.alaskaafp.org 907 258-2255 office 530 326-5612 fax

February 1, 2009

Dear Sen. Bettye Davis:

The Alaska Academy of Family Physicians represents over 360 primary care physicians practicing throughout Alaska. We have serious concerns about Senate Bill 70, which grants further medical and surgical privileges to naturopaths. By definition naturopaths practice holistic medicinal treatments limited to natural herbs and nutraceuticals not regulated by the FDA. That is their training, their experience, and their stated mission. Surgical procedures are considered invasive and not "natural." Prescription medicines are pharmaceutical agents and not under their scope of practice.

Naturopaths state that their education encompasses some course work in pharmacology. However naturopathic training programs clearly do not provide anywhere near the breadth and depth of education when compared to medical and osteopathic medical schools. In addition, they do not require carefully supervised postgraduate residency training for patient care, adverse medical effects, drug interactions, and patient's safety prior to health care providers being licensed to practice independently. The same argument goes for surgical interventions where focused supervised procedural training is the accepted norm. This is essential for assuring patient safety and competent providers. Continuing medical education and recertification are the norm in the medical profession. We know of no such requirements for naturopaths and this current senate bill is inadequate to assure patient safety and quality of care.

This is clearly an issue of public safety. With the small number of naturopaths in this state and limited number of primary care providers this is not a "turf" issue. It is however, a Pandora's box for our state considering these important scope of practice issues. In these times, the daily headlines are focusing on enhanced patient safety. It makes little practical or legal sense to license providers with minimal if any professional training in the complexities of drug prescribing and surgical interventions to perform these services for our fellow Alaskans.

To document the equivalence of such different training programs seems to be impossible. The only way I can imagine is to require naturopaths to take the Medical College Admission Test (MCAT) and have the same scores that would allow admission to M.D. or D.O. training programs. It would also be necessary to pass the same National Certification Tests (USMLE, COMLEX, PANCE, etc.) to document a minimum of training and education. The same credentialing, continuing medical education requirements and overview provided by the State Medical Board would also add to the reassurance that public safety is being protected.

I am certain this is also your goal and request you to reconsider this bill. Because of these concerns we must oppose Senate Bill 70.

Sincerely,

Mary Ann Foland, M.D.
President, Alaska Academy of Family Physicians

MAF/ILHS/cqc.BGX

March 30, 2009 RE: SB 70

To: Chairman & Members, HHS Committee

SB70 is as much a **consumer issue** as it is another step in the struggle by ND's and naturopathic medicine for just recognition and regulation.

I am nearly 60 years of age, have resided in Homer since 1977, and consider myself active and very much responsible for my health. I look to the State to do it's part in making the best choices for healthcare available to me, particularly those that help me help myself.

Since my first encounter with an ND in 1993 (Hawaii, a low back injury), I have progressively entrusted more and more of my healthcare decisions to the guidance of ND's and the naturopathic approach, which has led to more study, involvement, and responsibility on my part. I now consciously spend nearly 100 percent of my healthcare dollars, whether reimbursable or not, on a naturopathic approach and my primary care is clearly coming from my local ND. If this bill (SB70) had been enacted earlier, I could have obtained more of my needs (including pharmacy and minor surgery) from my primary care physician.

In recent years, I've observed steady growth in the "newcomers" at the doctor's office, where interestingly the patients tend to interact much more than at the "traditional doctor's office". Many of these older patients are having to pay out of pocket to get the care they want and this is clearly not sitting well with them. Although I am currently lucky enough to have insurance that covers me (for the doctor's time only), I will soon be of an age where Medicare coverage is a big consideration in my healthcare choices. The citizens of Alaska shouldn't have to decide whether to dig into their savings, or perhaps go to Arizona or Hawaii where the laws are more progressive, or settle for a lesser choice, simply because of a lack of enabling legislation.

If Alaska truly wants to encourage it's citizens to take responsibility for their own health (which is a positive for the financial health of the State), then the passing of SB70 is one good step in that direction.

Lastly, be prepared for the last minute scare tactics that will likely come from the ASMA, as I've seen on previous bills. They are clearly concerned about their members economic interests as opposed to my health and my finances. If anyone among the medical community understands and lives the tenet "First, do no harm", it is the ND's and their associates. That's exactly why we subscribers to naturopathic care are a growing number in spite of the laws and economic forces that make it a challenge.

Sincerely,

Wayne Aderhold

VII. State licensure and regulation

States that license naturopaths

Naturopaths must meet licensing requirements in all states that recognize naturopathy through licensure. Presently, 14 states and the District of Columbia regulate naturopaths through licensure: Alaska, Arizona, California, Connecticut, Hawaii, Idaho, Kansas, Maine, Montana, New Hampshire, Oregon, Utah, Vermont and Washington. Puerto Rico and the U.S. Virgin Islands similarly license naturopaths.

The rest of the country does not recognize the profession through licensure, with South Carolina and Tennessee both expressly prohibiting the practice of naturopathy.[144] Wyoming states the following in its case law:

> Our statute is clear, that the practice of naturopathy cannot be regarded as a separate and distinct profession like that of dentistry for instance, nor can any good reason be given why the legislature may not for the benefit of society require that those who practice the healing art should know and keep up with the improvements and advanced learning in that art.[145]

Florida abolished its naturopath licensing laws in 1959, and in 2004 a legislative committee concluded that an expanded scope might be harmful, and that naturopathic licensing is not cost-effective.[146] Several other states, including Texas and Virginia, have abolished previous naturopathy licensure provisions.[147]

It is critical to note that in most states and provinces where naturopathic medicine is not regulated, individuals may practice similar therapeutic approaches and/or call themselves naturopaths (whether or not they have been trained at a school for naturopathic medicine), because the terms "naturopath" and "naturopathic medicine" are not restricted terms.[148] Traditional naturopathy is not a medical practice and, therefore, is not regulated through statutes or regulations in the states.

One of the major initiatives of the AANP is to obtain licensure for naturopaths in all 50 states.[149] (See Figure 1 for more information on requirements for state licensure.)

State scope of practice regulations for naturopaths

Naturopaths' scope of practice varies by state. Naturopaths seek privileges to prescribe drugs, not only those considered "natural" (hormones, purified botanicals, etc.), but also legend drugs, up to and including schedule III and IV controlled substances. Specific information on naturopath scope of practice can be found in Figure 2.

State boards of naturopathy

Information on the authority, procedures of operation, composition and appointment procedures of state boards of naturopathy can be found in Figure 3. Additionally, a roster of state boards of naturopathy can also be found in the Appendix (page 35).

AMA Scope of Practice Data Series module distribution policy

The modules are advocacy tools used to educate legislators, regulatory bodies and other governmental decision-makers on the education and training of physician and nonphysician health care providers. As such, the AMA will distribute the modules to the following parties:

(1) State medical associations
(2) State medical boards
(3) National medical specialty societies
(4) National medical organizations

In line with the express purpose of the modules being governmentally directed advocacy, it will not be the policy of the AMA to provide the modules to individual physicians. Organizations supplied with the module shall mirror the intent, purpose and standards of the AMA distribution guidelines.

Acknowledgments

Many people have contributed to the compilation of information contained within this module. The American Medical Association (AMA) gratefully acknowledges the contributions of the Alaska State Medical Association, the Maine Medical Association, the Missouri State Medical Association and the American Osteopathic Association.

4111

I. Overview

The American Medical Association (AMA) Advocacy Resource Center has created this information module on naturopaths to serve as a resource for state medical associations, national medical specialty societies and policymakers. This guide is one of 10 separate modules collectively comprising the AMA Scope of Practice Data Series, each covering a specific nonphysician health care profession.

Without a doubt, limited licensure providers play an integral role in the delivery of health care in this country. Efficient delivery of care requires a team-based approach that cannot exist without inter-professional collaboration between physicians, nurses and other limited licensure health care providers. With the appropriate education, training and licensing, such providers can and do provide safe and essential health care to patients. The health and safety of patients are threatened, however, when limited licensure providers are permitted to perform services that are not commensurate with their education or training.

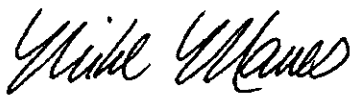
Each year in nearly every state and at times on the federal level, limited licensure health care providers lobby legislatures and regulatory boards to expand their scope(s) of practice. While some scope expansions may be appropriate, others definitely are not. It is important, therefore, to be able to explain to legislators and regulators the limitations in the education and/or training of limited licensure health care providers that can result in substandard or potentially harmful care of patients. Those limitations are brought clearly into focus when compared with the comprehensiveness and depth of the medical education and training of physicians.

Issues of access to qualified physicians in rural or underserved areas give limited licensure providers what, at first glance, seems to be a legitimate rationale for lobbying for expanded scope of practice. However, solutions to actual or perceived work force shortages simply cannot justify practice expansions that expose patients to unnecessary health risks.

In November 2005 the AMA House of Delegates approved Resolution 814, which called for the study of the qualifications, education, academic requirements, licensure, certification, independent governance, ethical standards, disciplinary processes and peer review of limited licensure health care providers. By surveying the type and frequency of bills introduced in state legislatures, and in consultation with state medical associations and national medical specialty societies, the AMA identified 10 distinct limited licensure professions that are currently seeking scope of practice expansions that may be potentially harmful to the public.

Each module in the AMA Scope of Practice Data Series is intended to assist in educating policymakers on the qualifications of a particular limited licensure health care profession, as well as on the qualifications physicians possess that prepare them to accept the responsibility for full, unrestricted licensure to practice medicine in all its branches. It is within the framework of education and training that health care professionals are best prepared to deliver safe, quality care under legislatively authorized state scopes of practice.

It is the AMA's intention that these Scope of Practice Data Series modules provide background information for state- and federal-based advocacy campaigns where the health and safety of patients may be threatened as a result of unwarranted scope-of-practice expansions sought by limited licensure providers.



Michael D. Maves, MD, MBA
Executive Vice President, Chief Executive Officer
American Medical Association

4112

II. Introduction

The American Medical Association (AMA) is pleased to offer this informative module to assist physicians in countering the advocacy efforts of naturopaths seeking licensure and/or expansion of their current scope of practice to include privileges or procedures unwarranted by their education and training.

This module examines the background, education and training of those practitioners who have earned a doctor of naturopathy or doctor of medical naturopathy degree, and who refer to themselves as "naturopathic physicians" or "naturopathic doctors." Through their state chapters and their national professional organization, the American Association of Naturopathic Physicians, these practitioners seek to establish licensure in the 50 states, as well as liberal prescribing authority, "primary care physician" status and, in many cases, mandated insurance coverage for services. This stands in contrast to the beliefs of "traditional" naturopaths—providers of natural health care who do not seek state recognition or regulation through licensure.

Naturopaths frequently argue that licensure allows patients the freedom to choose them as primary health care providers. At the same time they are looking to distinguish themselves from and assert privileges over their colleagues, the traditional naturopaths. A wide schism separates these two factions, which have a long, documented history of philosophical differences culminating in the divergence of the "naturopathic physician" (and the corresponding quest for state licensure) from the non-medical practice of traditional naturopathy.

Currently, 14 states and the District of Columbia license naturopaths. However, naturopaths may practice without a license in states where naturopathy is not expressly prohibited. In a few such states, this has provoked concern over whether naturopathic practitioners treating patients should be subject to some sort of state regulation (in the form of limited licensure, certification or registration) as a mean to protect the public. Official legislative reports from several states have unearthed specific shortcomings in the education, training and competency testing of naturopaths, and several of these recommend against licensure for naturopaths.

Naturopathy involves the application of natural (non-pharmaceutical and non-surgical) treatment modalities to encourage and facilitate the body's healing of itself. The practice of naturopathy involves the application of a number of healing systems or physical, nutritional or natural agent regimens. Common naturopathic care includes treatments of botanical medicine/herbology, conventional nutritional counseling, homeopathy, acupuncture and/or traditional Chinese medicine, massage and manipulative bodywork, mind/body treatments, hydrotherapy, as well as physical treatments such as ozone therapy, air and light therapy, and ultraviolet, ultrasound and electro-stimulation therapies.

Such treatment modalities are collectively known as complementary and alternative medicine (CAM), and their usage has significantly increased in popularity within the last decade. In 1998 the federal government created the National Center for Complementary and Alternative Medicine (NCCAM), an arm of the National Institutes of Health (NIH), to study the efficacy of CAM in the treatment of chronic and acute diseases. Its mission is to apply accepted scientific principles to CAM by providing funding and grants to support CAM clinical trials and research, in order to objectively assess the efficacy of CAM treatments as compared to conventional medical treatments and placebo.

Consumers use CAM as either a complete treatment or as an adjunct to conventional medical care. Typically categorized as therapies not widely taught in U.S. medical schools, proponents of CAM broadly extend its definition to include common patient self-help strategies such as low-fat, low-sodium diets, stretching and exercise, daily vitamins and minerals, and prayer. In 2004 the NCCAM reported the results of a survey indicating that 36 percent of U.S. adults use some form of CAM. According to this survey, when megavitamin therapy and prayer specifically for health reasons are included in the definition of CAM, that number rose to 62 percent.[1] With such a broad definition, it is little wonder CAM usage statistics are so high.

For medical professionals and policymakers alike, the naturopathic profession's reluctance and/or inability to apply evidence-based principles and scientific study its

1. Web. National Center for Complementary and Alternative Medicine. The use of CAM in the United States. *http://nccam.nih.gov/news/camsurvey_fs1.htm#use*. Retrieved December 5, 2007.

4113

treatment modalities is of great concern. For example, naturopaths' longstanding opposition to childhood vaccination has been demonstrated as recently as 1999, well after the remarkable decreases in childhood disease as a result of widespread vaccination had been documented (see page 17 for more information).

The mechanism of action and the efficacy of many naturopathic treatment modalities are not scientifically supported; yet practitioners of naturopathy continue to offer patients such treatments. Such behavior would not be tolerated in the practice of medicine. Care that is not premised on scientific evidence, and for which the patient is not informed of its experimental nature, would be considered unethical by the standards of the medical profession. Specifically, AMA Ethical Opinion E-3.01 states:

> It is unethical to engage in or to aid and abet in treatment which has no scientific basis and is dangerous, is calculated to deceive the patient by giving false hope, or which may cause the patient to delay in seeking proper care ... .[2]

Some naturopathic treatments are blatantly unsafe and place the health of the patient at great risk for additional health complications. The *Textbook of Natural Medicine*,[3] the foremost textbook used in schools of naturopathy, discusses naturopathic treatments that defy medical knowledge or, incredulously, omit discourse on the therapeutic benefits of pharmaceutical or surgical interventions. For example, the second edition of the book called for St. John's wort in the treatment of HIV-positive individuals. Results of an NIH-funded study published in February 2000—just months after the September 1999 release of the textbook—found that St. John's wort interacts with protease inhibitors commonly used in treating patients with HIV and significantly decreases their concentration in the blood.

Compared to medical school and residency training, a naturopathic education consists of relatively few contact hours of study on pharmacological treatment of disease, and provides virtually no clinical reinforcement of pharmaceutical intervention on patients during clinical rotations or optional post-graduate training. Most drugs are considered toxic by naturopaths, so alternative treatments are instead prescribed. One important component to consider in the debate over naturopath licensure is whether a practitioner with such limited exposure to pharmaceuticals can appropriately treat patients who take prescription medicines regularly or who would likely benefit from pharmacological intervention.

When faced with the claims of naturopaths that the rigors of their education and licensing exams parallel those of physicians, legislators should recognize that graduates of campus-based, four-year naturopathic programs who have passed a standardized examination may demonstrate *consistency* from one naturopathic practitioner to the next. But that says nothing about the *validity* of their practice, which can be determined only by reference to the laws of science or nature, and by rigorous testing of biologically plausible claims.[4] By failing to rigorously study all the treatments they provide, naturopaths may place patients' safety at risk.

According to a 2003 article in *MedScape General Medicine*, "without licensing standards, individuals with little or no formal education may proclaim themselves naturopathic physicians without medical school education or board testing. ... [T]he clear message is that such licensing implies competence. There is, however, no evidence that 'educated' naturopaths—i.e., the NDs or naturopathic 'physicians'—are more competent than others. If anything, 'traditional naturopaths' (i.e., those who did not attend the 'approved' schools) may be less of a threat to public health because they do not pretend to be primary care physicians."[5]

We hope the information contained in this module provides the tools necessary to help physicians present relevant facts in response to naturopaths' efforts to enact state licensure laws or expand their current scopes of practice. The AMA stands ready to assist state and specialty societies in their efforts to protect and preserve the health and safety of patients.

III. Naturopathy as a profession

Definition(s) of naturopathy

Webster's dictionary defines naturopathy as a system of treatment of disease that avoids drugs and surgery, and emphasizes the use of natural agents (such as air, water and herbs) and physical means (such as tissue manipulation and electrotherapy).[6] The National Center for Complementary and Alternative Medicine, a bureau of the National Institutes of Health, notes that naturopathy is a system of healing originating from Europe that views disease as a manifestation of alterations in the processes by which the body naturally heals itself. It emphasizes health restoration as well as disease treatment. The term naturopathy literally translates as "nature disease."[7]

Although the most visible professional organizations of naturopaths do not provide a formal definition of a naturopath, the American Association of Naturopathic Physicians (AANP) notes:

> [A] licensed naturopathic physician [ND] attends a four-year graduate level naturopathic medical school and is educated in all of the same basic sciences as an [MD] but also studies holistic and non-toxic approaches to therapy with a strong emphasis on disease prevention and optimizing wellness. In addition to a standard medical curriculum, the naturopathic physician is required to complete four years of training in clinical nutrition, acupuncture, homeopathic medicine, botanical medicine, psychology, and counseling (to encourage people to make lifestyle changes in support of their personal health). A naturopathic physician takes rigorous professional board exams so that he or she may be licensed by a state or jurisdiction as a primary care general practice physician.[8]

This module will focus mostly upon the education, training and qualifications of naturopathic "physicians," practitioners who attend four-year graduate schools of naturopathy and earn advanced degrees, as opposed to traditional naturopaths, who receive either apprenticeship-style training or attend unaccredited naturopathy schools.

Principles of naturopathy

Classical naturopathy training is guided by the following six principles. Students in naturopathy schools worldwide are taught to abide by these principles.

- **First do no harm** *(Primum no nocere)*
  Illness is a purposeful process of the organism. The process of healing includes the generation of symptoms that are, in fact, an expression of the life force attempting to heal itself. Therapeutic actions should be complementary to and synergistic with this healing process. The naturopathic physician's actions can support or antagonize the actions of the *vis mediatrix naturae*, the healing power of nature. Therefore, methods designed to suppress symptoms without removing the underlying causes are considered harmful and are to be avoided or minimized.

- **The healing power of nature** *(Vis mediatrix naturae)*
  The body has an inherent ability to establish, maintain and restore health. The healing process is ordered and intelligent; nature heals through the response of the life force. The naturopathic physician's role is to facilitate this process, to identify and remove obstacles to health and recovery, and to establish or restore a healthy internal and external environment.

- **Identify and treat the cause** *(Tolle causam)*
  Illness does not occur without cause. Underlying causes of disease must be discovered and removed or treated before a person can recover completely from illness. Symptoms express the body's attempt to heal, but are not the cause of disease and, therefore, should not be suppressed by treatment. Causes may occur on many levels including the physical, mental, emotional and spiritual. The naturopathic physician must evaluate fundamental underlying causes on all levels, directing treatment at root causes rather than at symptomatic expression.

- **Heal the whole person** *(Tolle totum)*
  Health and disease are conditions of the whole organism, a whole involving the complex interaction of many factors. The naturopathic physician must treat

4115

the whole person by taking these factors into account. The harmonious functioning of physical, mental, emotional and spiritual aspects is essential to the recovery from and the prevention of disease. This requires a comprehensive approach to diagnosis and treatment.

- **The physician as teacher** *(Docere)*
  A cooperative doctor-patient relationship has inherent therapeutic value. The naturopathic physician's major role is to educate and encourage the patient to take responsibility for their own health. The naturopathic physician is a catalyst for healthful change, empowering and motivating the patient to assume responsibility. It is the patient, not the doctor, who ultimately creates/accomplishes healing. Teaching with hope, knowledge and understanding, the physician acts to enable patients to heal.

- **Prevention** *(Praevenire)*
  The ultimate goal of any health care system should be prevention of disease. This is accomplished through education and the promotion of life habits that create good health. Naturopathic physicians learn to assess risk factors and to sharpen their deductive reasoning, and to understand the patient's circumstances. Appropriate interventions are then sought to avoid further harm or risk to the patient. Building health works better and more surely than fighting disease.[9]

General duties

Naturopaths assess and diagnose patient conditions, devise treatment plans using natural, complementary and alternative medicine (CAM), or conventional remedies, and provide counseling to patients. They typically focus on prevention and promoting the understanding that healing comes from within.[10,11,12]

Naturopathic practice may include the following diagnostic and treatment modalities: clinical and laboratory diagnostic testing, including diagnostic radiology and other imaging techniques; hair, skin and nail analysis; iridology; nutritional counseling, dietetics and therapeutic fasting; medicines of vitamin, mineral, animal and botanical/herbal origin; hormones and biosynthetic agents; hygiene and public health measures; homeopathy; acupuncture; traditional Chinese medicine; psychotherapy and counseling; minor surgery and naturopathic obstetrics (natural childbirth); naturopathic physical medicine including manipulation and massage; the use of hydrotherapies, heat, cold, ultrasound, ultraviolet light, magnetic and electrical fields; energy-based treatments, including reiki, biofeedback and therapeutic touch; and therapeutic exercise.[13,14]

Brief history of the profession

The modern form of naturopathy can be traced to 18th- and 19th-century healing systems in Germany and Austria. While naturopathy was being used in Europe during those time periods, it was not until the turn of the 20th century that the term surfaced in America. In 1902 Benedict Lust, a German immigrant, introduced naturopathy to the United States when he founded the American School of Naturopathy, which was later reorganized as the American Naturopathic Association in 1919.[15]

Once naturopathy was introduced in the United States, naturopathic schools were established and large numbers of naturopaths were trained for practice. However, the advent of scientific medicine in the 20th century greatly decreased the demand for naturopathic treatment. In the 1970s, when a "natural" counterculture movement espousing health foods and natural remedies began, many consumers sought out alternative treatments and CAM modalities enjoyed a surge in popularity.

4116

Additionally, in the late 20th century consumers began to utilize complementary and alternative approaches to healing as either adjunct or separate, distinct treatment modalities to traditional allopathic/osteopathic medical treatments. During this time, the number of complementary and alternative practitioners, including naturopaths, acupuncturists, homeopaths, energy healers, herbalists and bodywork technicians, grew and licensure efforts for these non-traditional practitioners expanded.

As discussed earlier, a naturopath (or naturopathic "physician") has graduated from a four-year graduate school of naturopathy with a doctor of naturopathy (ND) or doctor of medical naturopathy (NMD) degree, and is educated in both the basic sciences and complementary and alternative treatment modalities. In some of the 14 states where naturopaths maintain licensure, statutory language may allow them to be called naturopathic physicians.

Notably, doctoral-level graduate naturopathic education is not the norm in the rest of the world. In England and Germany, for example, four-year degrees are adequate to train naturopathic practitioners.[16] Nor are there two competing factions of naturopathic practitioners in most of the world. The norm is to practice traditional naturopathy. Moreover, in no other country are naturopathic practitioners referred to as naturopathic physicians.

The AANP, the organization that represents "naturopathic physicians," declares their members to be (*emphasis added*) "... educated in *all of the same basic sciences as an M.D.* but also [studied in] holistic and nontoxic approaches to therapy with a strong emphasis on disease prevention and optimizing wellness. *In addition to a standard medical curriculum*, the naturopathic physician is required to complete four years of training in clinical nutrition, acupuncture, homeopathic medicine, botanical medicine, psychology, and counseling (to encourage people to make lifestyle changes in support of their personal health). A naturopathic physician takes rigorous professional board exams so that he or she may be licensed by a state or jurisdiction as a *primary care general practice physician*."[17]

A traditional naturopath is a practitioner who has obtained his or her education through some combination of a mentorship program with another practitioner or an alternative clinic, or a distance learning program, and/or classroom schooling on natural health or otherwise holistic studies. These practitioners do not have naturopathy degrees from schools recognized as accredited by the U.S. Department of Education, but they may earn degrees from other schools or obtain certification from professional naturopathic organizations.[18] Traditional naturopaths' education and training is neither standardized nor accredited, and therefore their skill set and training varies widely.[19] No state currently permits the licensure of traditional naturopaths, therefore no minimum requirements for practice are mandated.[20]

The philosophical divide that separates traditional naturopaths from naturopathic "physicians" could not be wider. Traditional naturopaths, collectively represented by the American Naturopathic Medical Association (ANMA), actively oppose the licensure of naturopathy in any form, preferring to practice natural health care unlicensed.[21] Traditional naturopaths believe that licensure takes away their right to practice natural health care.[22] In fact, testimony from the ANMA or individual traditional naturopaths opposing the licensure of naturopaths can often be found in the legislative dockets of many states.

Accordingly, the ANMA offers this sample letter for their members to write their elected representatives on the licensing issue[23]:

4117

Dear (Representative):

My name is (Name) and I live in (Dist #) in the State of (Name). I am writing to urge you to vote No on H.R./S Bill (#).

My practice involves education of my clients, using natural therapies, including but not limited to fresh air, clean water, good diet, and exercise to attain a healthier body. I do not diagnose or treat disease and I represent the majority of practicing naturopaths. Naturopaths, Naturopathic Doctors, or Naturopathic Physicians have no business diagnosing, dispensing drugs, or performing surgeries as set out in the legislation in question. Naturopaths, Naturopathic Doctors, or Naturopathic Physicians simply don't have the experience or education required. When diagnosing, dispensing drugs, or performing surgeries is needed, clients should see those licensed and trained to do so. You owe it to the public to protect them from the group seeking this scope of practice for naturopaths. You should require those people to attend traditional medical school. I took an oath to "First do no harm" and I intend to do just that. Please do not take my right to practice away because of a few untrained who want to be "doctors" and have the right to practice as equals to DO's and MD's.

Thank you for considering a "NO" vote on (Bill #).

In a recent proposal by naturopaths for expansion of scope of practice in Washington state, the ANMA notes: "The naturopaths are asking for drugs, surgery and IV therapy which would cover chelation. These naturopaths are not just asking for any drug, they want narcotics under the Controlled Substances III & IV categories. It is obvious that these naturopaths want to be MDs without earning the education and doing an internship in hospitals. We urge you [ANMA members] to read this carefully, understand it, then write, call or e-mail a Washington State legislator whose name, address and phone number will appear on this page. We do not oppose properly trained doctors doing these practices. However, a naturopath pretending to have the knowledge to practice in this manner is definitely a 'danger to the public.'"[24]

Primer on complementary and alternative medicine

Greatly concerned with growing consumer use of CAM, in 1998 Congress established a new bureau of the National Institutes of Health, the National Center for Complementary and Alternative Medicine (NCCAM). Not a formal recognition of CAM, but rather a federal agency funded to apply rigorous scientific inquiry to the outcomes and safety of various CAM modalities, the stated mission of the NCCAM is to:

- Explore complementary and alternative healing practices in the context of rigorous science
- Train complementary and alternative medicine researchers
- Disseminate authoritative information to the public and professionals[25]

The NCCAM defines CAM as "a group of diverse medical and health care systems, practices, and products that are not presently considered to be part of conventional medicine. Conventional medicine is medicine as practiced by holders of M.D. (medical doctor) or D.O. (doctor of osteopathy) degrees and by their allied health professionals, such as physical therapists, psychologists, and registered nurses." The National Cancer Institute defines CAM as "forms of treatment that are used in addition to (complementary) or instead of (alternative) standard treatments. These practices generally are not considered standard medical approaches. Standard treatments go through a long and careful research process to prove they are safe and effective, but less is known about most types of CAM. CAM may include dietary supplements, megadose vitamins, herbal preparations, special teas, acupuncture, massage therapy, magnet therapy, spiritual healing, and meditation."

However, the common popular characterization of CAM is any treatment that does not involve pharmaceuticals or surgery. To that end, many conventional treatments are considered CAM by certain CAM practitioners and advocates. For example, nutritional counseling, vitamins, physical activity, the application of ice packs or heat compresses—all conventional treatments—have been adopted as CAM, and are typically counted in surveys and/or polls to indicate the surge of CAM in America. Other research includes prayer, meditation or other spiritual/contemplative thought into the broad definition of CAM as well.

24. *Id.*

25. Web. NCCAM. *http://nccam.nih.gov/about/ataglance/*. Retrieved October 2, 2006.

4118

The NCCAM categorizes CAM treatments into five distinct groupings. Below is a brief primer on the modalities in each NCCAM grouping,[26] many of which are commonly used by naturopaths.

Whole medical systems

Whole medical systems are built upon complete systems of theory and practice. Often, these systems have evolved earlier than and apart from the conventional medical approach used in the United States.

- Homeopathy—a whole medical system that originated in Europe. Homeopathy seeks to stimulate the body's ability to heal itself by giving very small doses of highly diluted substances that in larger doses would produce illness or symptoms (an approach called "like cures like").
- Traditional Chinese medicine (TCM)—a whole medical system that originated in China. TCM is based on the concept that disease results from disruption in the flow of qi and imbalance in the forces of yin and yang. Practices such as herbal therapy, meditation, massage and acupuncture seek to aid healing by restoring the yin-yang balance and the flow of qi.
- Ayurveda—a whole medical system that originated in India. Ayurveda aims to integrate the body, mind and spirit to prevent and treat disease. Therapies used include herbs, massage and yoga.
- Naturopathy—a whole medical system that originated in Europe. Naturopathy aims to support the body's ability to heal itself through the use of dietary and lifestyle changes together with CAM therapies such as herbs, massage and joint manipulation.

Mind-body medicine

Mind-body medicine uses a variety of techniques designed to enhance the mind's capacity to affect bodily function and symptoms. Some techniques that were considered CAM in the past have become mainstream, for example patient support groups and cognitive-behavioral therapy.

- Meditation—a conscious mental process using certain techniques, such as focusing attention or maintaining a specific posture, to suspend the stream of thoughts and relax the body and mind.
- Other—prayer, mental healing and therapies that use creative outlets such as art, music or dance.

Biologically based practices

Biologically based practices in CAM use substances found in nature, such as herbs, foods and vitamins. Some examples include dietary supplements, herbal products and the use of other so-called natural, but as yet scientifically unproven therapies (for example, using shark cartilage to treat cancer). The CAM domain of biologically based practices includes, but is not limited to, botanicals, animal-derived extracts, vitamins, minerals, fatty acids, amino acids, proteins, prebiotics and probiotics (which are live bacteria and sometimes yeasts found in foods such as yogurt or in dietary supplements), whole diets and functional foods.

Manipulative and body-based practices

Manipulative and body-based practices in CAM are based on manipulation, the application of controlled force to a joint, moving it beyond the normal range of motion in an effort to aid in restoring health. Manipulation may be performed as a part of other therapies or whole medical systems. Under the umbrella of manipulative and body-based practices is a heterogeneous group of CAM interventions and therapies including Tui Ná, rolfing, Bowen technique, Trager bodywork, Alexander technique, Feldenkrais method and a host of others.

- Chiropractic—a form of spinal manipulation whereby subluxations, or misalignments of the spine, interrupt or interfere with "nerve flow." The manipulation serves to "adjust" the vertebrae with the goal of correcting subluxations.[27]
- Massage—pressing, rubbing and moving muscles and other soft tissues of the body, primarily by using the hands and fingers. The aim is to increase the flow of blood and oxygen to the massaged area.

26. Web. This entire primer (with the exception of the separately footnoted definition of "chiropractic," below) is taken from the NCCAM Web site. What is CAM? *http://nccam.nih.gov/health/whatiscam/#4*. Retrieved December 10, 2007.

27. The NCCAM does not provide a formal definition of "chiropractic." This brief definition is condensed from information found on the NCCAM Web page: About chiropractic and its use in treating low back pain. *http://nccam.nih.gov/health/chiropractic/#1a*. Retrieved December 14, 2007.

4119

- Reflexology—a practice in which pressure is applied to points on the foot and sometimes the hand with the intent to promote relaxation or healing in other parts of the body.

Energy medicine

Energy therapies involve the use of energy fields. They are of two types.

1. **Biofield therapies** are intended to affect energy fields that purportedly surround and penetrate the human body. The existence of such fields has not yet been scientifically proven. Some forms of energy therapy manipulate biofields by applying pressure and/or manipulating the body by placing the hands in or through these fields. Biofields have defied measurement to date by reproducible methods.

Therapies involving these putative energy fields are based on the concept that human beings are infused with a subtle form of energy. This vital energy or life force is known by different names in different cultures, such as qi (pronounced "chi"). In traditional Chinese medicine, the vital energy or life force is supposed to regulate a person's spiritual, emotional, mental and physical health, and to be influenced by the opposing forces of yin and yang. Vital energy is believed to flow throughout the human body, but it has not been measured by means of conventional instrumentation. Nonetheless, therapists claim that they can work with this subtle energy, see it with their own eyes, and use it to effect changes in the physical body and influence health.

Examples of biofield therapy include:

- Qi gong—a component of traditional Chinese medicine that combines movement, meditation and controlled breathing. The intent is to improve blood flow and the flow of qi.
- Reiki—a therapy in which practitioners seek to transmit a universal energy to a person, either from a distance or by placing their hands on or near that person. The intent is to heal the spirit and thus the body.
- Therapeutic touch—a therapy in which practitioners pass their hands over another person's body with the intent to use their own perceived healing energy to identify energy imbalances and promote health.

2. **Bioelectromagnetic-based therapies** involve the unconventional use of electromagnetic fields, such as pulsed fields, magnetic fields, or alternating-current or direct-current fields. The veritable energies employ mechanical vibrations (such as sound) and electromagnetic forces, including visible light, magnetism, monochromatic radiation (such as laser beams) and rays from other parts of the electromagnetic spectrum. They involve the use of specific, measurable wavelengths and frequencies to treat patients.

Assessing the evidentiary basis for naturopathy

Naturopaths claim that their natural treatments have been in use for hundreds of years. In many cases, neither the mechanism of action nor the efficacy of the naturopathic treatment as prescribed have been documented or established. The lack of randomized controlled trials and other forms of rigorous scientific inquiry into naturopathic treatments has not gone unnoticed by the medical and scientific communities.[28,29]

Reinforcing the self-image of naturopathy as a distinct type of health care, according to one article, the AANP states that "naturopathic medicine has its own unique body of knowledge, evolved and refined for centuries" and is "effective in treating all health problems, whether acute or chronic."[30] This collective professional isolationist identity of naturopaths lays the groundwork for substandard patient care. Not only does naturopaths' insistence on practicing on the fringe of modern medicine produce providers of questionable medical competence through an educational system fraught with scientific inaccuracies and omissions of even the most basic established medical principles, it also propagates the unfortunate result of patient care that is devoid of current, evidence-based medically accepted concepts.

28. Web. Atwood KC. Naturopathy, pseudoscience, and medicine: Myths and fallacies vs. truths. March 25, 2004. *Med Scape Today*. *www.medscape.com/viewarticle/471156*. Retrieved December 26, 2007.

30. Web. American Association of Naturopathic Physicians. *www.aanp.org*. Retrieved December 16, 2007.

4120

A lack of scientific proof for many of their treatment modalities does not deter naturopaths, however. One article in the April 2006 issue of the *Journal of Alternative and Complementary Medicine* proposes that naturopaths disdain the application of evidence-based medicine (EBM) to their practice:

> This paper presents the voices of tradition-sensitive naturopathic practitioners in response to what they perceive as an ideologic assault by EBM advocates on the validity and integrity of natural medicine practice. Those natural medicine practices, which have tradition-based paradigms articulating vitalistic and holistic principles, may have significant problems in relating to the idea of EBM as developed in biomedical contexts. The paper questions the appropriateness of imposing a methodology that appears to minimize or bypass the philosophic and methodological foundations of natural medicine, and that itself seems primarily driven by political considerations.[31]

Is this "unique body of knowledge" not then subject to the same scientific, peer-reviewed scrutiny as are medical concepts? At least one mainstream medical journal article has acknowledged the inherent difficulty in using traditional, randomized, controlled clinical trials for CAM modalities. At the same time, it called for medicine to demand CAM "develop and defend a rational and coherent method for assessing causality and efficacy, though not necessarily one based on the results of controlled clinical trials."[32] To date, proponents of CAM and/or naturopathy have not proposed any alternative epistemology calculated to assess the efficacy of CAM treatments.

Nonetheless, naturopaths and other CAM providers have begun conducting limited research and contributing their results to the scientific body of literature. In many instances, such as the NCCAM-funded clinical trials discussed below, the efficacy of naturopathic treatments is not supported by clinical evidence. The NCCAM "Research Results" Web page lists the following examples[33]:

- "Pilot Study Provides New Insight on Effect of Ginkgo Extract on Dementia in the Elderly." Overall, in this study of the elderly, researchers did not find a reduction in progression to dementia in those using ginkgo versus those using placebo. (February 2008)
- "Drinking Black Tea Shows No Impact on Cardiovascular Risk Factors." It is commonly believed that polyphenol antioxidants, found in tea, have a variety of health benefits, including cardiovascular benefits. However, randomized trials to date have yielded mixed results on the effects of tea on cardiovascular risk factors. (October 2007)

Some naturopathic treatments have been subjected to the gold standard research design: the randomized controlled trial. However, many of the studies considered by the profession to be "naturopathic" in nature involve treatments that are not unique to naturopathy. For example, Bastyr University, Seattle, considered by many to be the top naturopathic school in the United States, lists current and past research projects on its Web site. Two of its current research projects include the nutritional studies, "Will a naturopathic diet improve glycemic management?" and "Effectiveness of two levels of pulse [beans/legumes] consumption on caloric restriction adherence and chronic disease risk."[34] Dietary modifications are hardly the sole province of naturopaths. However, results from these studies will add to the general scientific body of knowledge and should be encouraged.

Bastyr also posts that 40 research projects have been completed or are underway.[35] A cursory review of its "Current Research Studies" Web page reveals 11 current research projects.[36] Four are non-clinical research projects, seven are clinical research projects. Of these, one is an animal research project and six are human research projects, only one of which is identified as a randomized controlled trial.[37] Furthermore, of the 11 research projects listed, only two investigators listed are also named as faculty on Bastyr's Web site. In just one study is the *primary* investigator also a faculty member.[38]

4121

NCCAM funding for CAM clinical trials has increased every year since its inception in 1999. Congress appropriated $121.4 million to the NCCAM for the fiscal year 2007.[39] However, 2007 press releases on the results of NCCAM-funded botanical/herbal clinical trials note a lack of efficacy for many CAM modalities studied (naturopaths commonly employ herbal/botanical and nutritional counseling in their treatments):

Shark cartilage supplement does not extend the lives of lung cancer patients[40]
Researchers announced the results of an NCCAM and National Cancer Institute co-funded clinical trial showing that a shark cartilage supplement did not improve the overall survival of patients with lung cancer. Colleagues at the University of Texas M.D. Anderson Cancer Center conducted this phase III randomized, double-blind, placebo-controlled clinical trial at cancer centers throughout the U.S. and Canada. All 379 patients in the study received radiation and chemotherapy in addition to a shark cartilage supplement or a placebo pill. The study team found that those who took the supplement did not live any longer than those who took the placebo. A previous NCCAM-funded study also found shark cartilage did not benefit patients with advanced breast or colon cancer.

Echinacea for the prevention and treatment of colds in adults[41]
The research team tested three preparations of the roots of a species of echinacea called *Echinacea angustifolia*, which prior smaller studies had found to benefit adults with the common cold. The three preparations were made by extracting the root of *E. angustifolia* using procedures that represent some of the different ways that echinacea is available and used to treat the common cold. In this study, researchers found that none of the three preparations of *E. angustifolia* at the 900 mg daily dose had significant effects on whether volunteers became infected with the cold virus or on the severity or duration of symptoms among those who developed colds. However, critics of this study believe the dose of *E. angustifolia* used was too low.

St. John's wort and depression[42]
An extract of the herb St. John's wort was no more effective for treating major depression of moderate severity than placebo, according to research published in the *Journal of the American Medical Association*. The randomized, double-blind trial compared the use of a standardized extract of St. John's wort (*Hypericum perforatum*) to a placebo for treating major depression of moderate severity. The multisite trial, involving 340 participants, also compared the FDA-approved antidepressant drug sertraline (Zoloft®) to placebo as a way to measure how sensitive the trial was to detecting antidepressant effects.

Questions remain as to whether naturopaths are integrating such clinical evidence into their treatment protocols and, moreover, to what extent they are attempting to elucidate—for the benefit of their patients, as well as the scientific community—the mechanisms of their traditional treatments such as homeopathy, traditional Chinese medicine, and botanical or herbal preparations. In a 2006 editorial in the *Journal of Alternative and Complementary Medicine*, researchers from the National College of Naturopathic Medicine, Portland, Ore., and the Oregon College of Oriental Medicine, also in Portland, note that aside from the difficulty in applying the randomized controlled trial design to CAM treatments, "an equally important impediment is the paucity of our understanding of the basic mechanisms underlying most CAM therapies. Stated most directly, in the absence of knowing how a treatment 'works,' an appropriate sham control cannot be designed rationally. And, without an appropriate sham control, the efficacy of a treatment cannot be assessed adequately. It has even been suggested that sham controls are more appropriate for studying *why* CAM treatments are effective than *whether* they are effective."[43]

This module does not purport to be an exhaustive literature search on the natural remedies most commonly

4122

used by naturopaths, and should not be held as evidence of the efficacy or lack thereof of the particular naturopathic CAM modalities discussed. However, it should be noted that, without consideration of research design or methodology, through the most basic of PubMed literature searches on the efficacy of CAM modalities, several sources (NCCAM press releases and studies in peer-reviewed medical journals) demonstrated positive outcomes for directed uses of acupuncture. As discussed elsewhere in this module, naturopathic graduate education does not typically prepare naturopaths to practice acupuncture. Most states that license naturopaths require additional training beyond the ND or NMD degree for naturopaths to use acupuncture in practice.

Official state reports on naturopathy

Many states have commissioned investigative reports or special committees to study the issues related to licensure or, in states where naturopaths currently enjoy licensure, issues related to the expansion of scope-of-practice privileges. Most of these state legislative or agency reports exhibit significant research into the history of the naturopathic profession, both nationally and within the state, as well as other states' experiences with naturopath licensure and/or professional regulation. These reports are excellent resources for those states anticipating licensure or scope of practice expansion proposals by naturopaths.

Arizona (2000)

In 2000 the Arizona Office of the Auditor General conducted an audit and sunset review[44] of the Arizona Naturopathic Physicians Board of Medical Examiners pursuant to a June 16, 1999, resolution of the Joint Legislative Audit Committee. This audit noted significant concerns with the operative processes of the Arizona board, potentially attributable to lack of oversight. (*Note:* The Arizona Naturopathic Physicians Board of Medical Examiners was established in 1935 to regulate naturopathic physicians through licensure. Naturopaths were once restricted to using natural, drugless and nonsurgical methods, however, in 1992 the law was changed to allow naturopaths to perform many of the same activities performed by allopathic and osteopathic physicians.)

The audit report also concluded that the Arizona board needed to improve complaint processing to ensure that complaints were resolved in a timely and appropriate manner. At the time of the review, it had developed a backlog of cases. Of 13 unresolved complaints, five had been open for more than 1,000 days.[45]

The audit report also noted that Arizona naturopaths enjoyed the most liberal scope of practice and prescribing formulary in the nation, and suggested the Legislature review the board's statutes in order to ascertain whether "the Legislature intended such an extension of naturopaths' activities." With regard to the Arizona board's proposal to recognize 16 specialties within naturopathic medicine, including family medicine and minor surgery, internal medicine, neurology and psychiatry, and ophthalmology, the report authors concluded, "No other state that regulates naturopaths recognizes such a broad range of specialties."[46]

The audit report authors also suggested the Legislature review the Arizona Naturopathic Physicians Board of Medical Examiners statutes to determine if increased oversight should be provided on what prescriptions naturopaths can write. "The Board's statutes require it to develop a list of 'natural substances' that naturopaths can prescribe, but the statutes do not define what 'natural substances' are. The Board has developed an extensive list, or formulary, that includes not only vitamins and minerals, but also vaccines, antibiotics, oral contraceptives, anabolic steroids, and controlled substances such as morphine and cocaine. The U.S. Drug Enforcement Administration has recently approved Arizona naturopaths to prescribe controlled substances from the formulary because this appears to be in accordance with state law. Although some other states allow naturopaths to prescribe and dispense drugs, none has a list as extensive as what the Board has developed. Most of these states also have separate oversight bodies to develop or review the list, while Arizona does not."[47]

Most importantly, however, the Arizona Auditor General's Office found a disturbing lack of valid competency assessment of candidates for naturopathic licensure in the state (*emphasis added*):

44. Web. State of Arizona Office of the Auditor General. Naturopathic Physicians Board of Medical Examiners (June 2000, Report No. 00-9). Available at: *www.azauditor.gov/Reports/State_Agencies/*.

45. *Id.* Executive summary.

46. *Id.*

47. *Id.*

4123

> The Board needs to correct numerous problems with its three-part licensing examination, or adopt a national examination, to ensure that the naturopaths it licenses are competent. Since 1997, the Board has been administering a licensing examination it developed specifically for Arizona. Problems with this examination call into question its validity as a tool for measuring an applicant's competence to practice naturopathy. For example, *the Board has not ensured that the examination tests what a naturopath would need to know to practice safely* and has not shown that examination writers possess the necessary expertise and training to develop test questions. *Further, the Board has made extensive adjustments to examination scores.* For example, one licensure applicant received credit for 90 questions that she had answered incorrectly on one part of the February 1999 exam. *As a result of such scoring adjustments, no one has failed the Board's exam since September 1998.*

The shortcomings noted in the Auditor General's report indicate a serious and disconcerting lack of regard for public safety. The failure of the naturopathic profession in the state of Arizona to address professional complaints in a timely manner, to ensure the administration of licensing examinations of sufficient quality so as to protect the public from dangerous practitioners, and to maintain their professional scope of practice within the areas for which naturopaths are educated and trained, should instill a lack of public confidence in the naturopathic profession in Arizona.

Colorado (2005)

The state of Colorado performed a sunrise review of naturopaths in 2005.[48] The Colorado report found that naturopaths in the state presented evidence supporting their proposal request for state licensure and regulation. This report contains a valuable compilation of other states' licensure and scope of practice regulations for naturopaths as of 2005. For instance, the Colorado report illustrates the lack of recognized safeguards prevalent in the licensed practice of naturopathy in the United States:

- Four out of 15 states do not require licensed naturopaths to partake in any continuing medical education whatsoever.
- Only three out of 15 states mandate that licensed naturopaths carry professional liability insurance.

Additionally, the Colorado report provides an excellent psychometric analysis of the Naturopath Physicians Licensing Examination (NPLEX). The Colorado Office of Examination Services performed an analysis of the NPLEX test construction and scoring methods, and made several key observations:[49]

> To date, there is little generalizable evidence that NPLEX Part II clinical licensing examinations actually measure clinical competence.

> The thirteen years of NPLEX examination statistics presented ... indicate that the band within which we can be reasonably sure an examinee's true score lies can be variable and somewhat concerning if we are drawing conclusions about technical knowledge of a candidate based on his/her particular test score.

Unlike the NPLEX, the United States Medical Licensing Examination™ and the Comprehensive Osteopathic Medical Licensing Examination are three-part licensing examinations, each containing a separate Step/Level 3 that specifically assesses whether the examinee can apply medical knowledge and understanding of biomedical and clinical science essential for the unsupervised practice of medicine, with emphasis on patient management in ambulatory settings. Step/Level 3 provides a final assessment of physicians assuming independent responsibility for delivering general medical care.[50]

Florida (2004)

The "2004 Sunrise Report on Proposed Licensure of Naturopathic Physicians" concluded that there is "potential risk from licensing naturopathic physicians to allow them to provide a broad range of primary care services." The state of Florida abolished its licensing provisions for naturopathy in 1959, grandfathering in several practicing naturopaths who had been licensed at that time. The 2004 report was conducted as proponents for naturopathy again sought licensure in the state.

4124

The authors of the report concluded that:

- The proponents of regulation did not provide evidence that there is substantial harm or that the public is endangered from the unregulated practice of the profession.
- The department and other sources indicate there is a risk of harm to the public from licensing naturopathic physicians with an expanded scope of practice.[51]

Massachusetts (2002)

A legislative commission to study naturopathy and the prospect of licensure was established at the request of naturopaths in Massachusetts. In 2002 the Majority and Minority of the Massachusetts Special Commission on Complementary and Alternative Medical Practitioners presented their reports.[52]

Although the majority report recommended licensure for naturopaths be granted, the minority of the special commission was compelled to submit its own report, highlighting significant deficiencies in the majority's fact-finding process and in the information presented within the majority report. The minority report provides extensive examples of the unscientific basis for naturopathic treatment and calls into question the failure of the majority to report on the validity of treatments used by naturopaths in the care of patients. "Those [members of the commission] favoring licensure of naturopaths did not show an interest in investigating the validity of naturopathic practices. We ask the legislature to question why the proponents of naturopathy did not discuss the validity of specific naturopathic practices."

In addition, the minority report contains detailed significant findings related to the education and practice of naturopaths.[53] "Evidence shows that the course content of naturopathy schools is filled with unscientific assertions that strain credulity. ... Evidence was presented showing that both graduates and practicing naturopaths lack experience in recognition of disease and effects of treatment."

The authors of the minority report assert a logical approach in opposing licensure to naturopaths. "Standard naturopathic practice is substandard medical practice. Thus, an independent naturopathic board would legitimize unacceptable practices. ... [T]hus, the establishment of a self-regulating naturopathic board would, paradoxically, endorse practices that would be grounds for discipline if performed by a physician."

Though professional collaboration should be the norm among health professionals, the authors of the minority report state that serious problems would arise with regard to professional collaboration should naturopaths be granted licensure in Massachusetts. First, they argue, naturopaths by their very training are disinclined to refer patients for conventional medical care. Naturopaths consider naturopathy to be a "*distinct* system of complementary health care," not complementary to conventional medical care. In fact, the authors note that every naturopathic treatise or professional literature denigrates modern medicine as "treating only the symptoms, not the cause" of disease, and warns the reader about pharmaceuticals, which are consistently referred to as "toxins."[54] Therefore, it is highly unlikely, the authors conclude, that a naturopath would refer a patient to a physician for medical care.

These statements are corroborated by a 1999 study published in the *Archives of Pediatric and Adolescent Medicine*. Using professional naturopathic associations to identify possible subjects, the author surveyed practicing naturopaths and homeopaths in Massachusetts. Results showed that nearly all respondents reported treating children, but *fewer than half* of the responding practitioners reported any formal pediatric training. Most practitioners reported that they *did not* actively recommend immunizations and *fewer than half* of the nonphysician practitioners reported that they would refer a two-week-old neonate with a fever to a medical doctor or emergency medical facility. The author concluded that many of the patients using homeopathy and naturopathy are children. **"Failure on the part of these providers to recommend immunizations or recognize potentially serious illnesses is cause for concern."**[55]

4125

The Massachusetts minority report also notes that the medical code of ethics precludes physicians from collaborating with unscientific practitioners, such as naturopaths. In particular, AMA Ethical Opinion E-3.01 is referenced, which reads:

> It is unethical to engage in or to aid and abet in treatment which has no scientific basis and is dangerous, is calculated to deceive the patient, by giving false hope, or which may cause the patient delay in seeking proper care.

The report of the majority, as mentioned above, does not include any information on the safety, efficacy or scientific validity of naturopathic treatments. Instead, it provides recommendations for an administrative framework to support the implementation of naturopath licensure, as well as training standards for licensure that mirror the requirements of the accrediting body for naturopathic schools. Although presented with textbooks used in naturopathy schools, the majority "was not able to determine the quality or reliability of these books or the standards used in developing them."[56]

There is at least one statement in the majority report that is untrue. Under the section entitled "Criteria that suggest the need for licensure," the majority truthfully states that the accreditor of naturopathy schools, the Council on Naturopathic Medical Education (CNME), is a private accrediting agency not recognized by the federal government. The report then incorrectly states that the accrediting body for conventional medical schools is similarly not recognized by the federal government.[57] Nothing is further from the truth. The Liaison Committee on Medical Education, the accreditor of U.S. medical schools, has been continuously recognized by the U.S. Department of Education since 1952.[58] Instead, it was the CNME that had its recognition from the U.S. Department of Education revoked in 2001 (just prior to the release of the majority and minority Massachusetts reports) for failure to apply its own standards to a naturopathy school in candidate status for accreditation. At the time of the Massachusetts Commission's reports, the CNME was *not* recognized by the Department of Education, while the Liaison Committee on Medical Education previously had been and continues to be recognized by the Department of Education as the sole accreditor of U.S. medical schools awarding the MD degree. Likewise, the American Osteopathic Association's Commission on Osteopathic College Accreditation is recognized by the Department of Education as the sole accreditor of U.S. osteopathic medical colleges awarding the DO degree, and has continuously maintained its recognition since 1952.[59]

Missouri (2006)

A 2006 Report of the Senate Interim Committee on Naturopathic Medicine in Missouri[60] noted significant concerns with the education and standardized testing of naturopaths:

> Questions have been raised as to the extent to which the NPLEX (the Naturopathic Licensing Examination) effectively measures competency. ... Unlike the NPLEX, the USMLE (U.S. Medical Licensing Exam) has a third part (USMLE Part III) designed to test clinical competence and "assess whether medical graduates can apply medical knowledge and understanding of biomedical and clinical science essential for the unsupervised practice of medicine." The Committee views the absence of such an evaluation as a significant flaw in the NPLEX.
>
> The main accrediting organization for naturopathic colleges has been in and out of favor with the U.S. Department of Education. ... As a result, the Committee does not have full faith in the diligence of the CNME as an accrediting body."

Finally, emphasizing the inadequacy of the evidence presented them by proponents for naturopathic licensure, and also echoing public confusion regarding the

qualifications of naturopaths, the committee concluded, "it remains unclear to the committee ... who is a naturopath or what makes one a naturopath. This is a fundamental and necessary question that the committee was unable to determine."[61]

Nevada (An administrative history of the Board of Naturopathic Healing)

The Nevada Board of Naturopathic Healing was created in 1981. Nevada statutes required that the board consist of the following members appointed by the Governor: three licensed naturopaths engaged in the practice of naturopathic healing for more than two years in the state, one licensed physician who is a valid Nevada resident and one public member who is neither a licensed health practitioner nor a health administrator. The statute allowed the initial naturopaths on the board to be licensed and engaged in practice in another state, and authorized their appointment to the board to constitute their licensure in Nevada.

The first chairman of the Nevada Board of Naturopathic Healing submitted his resignation in 1982 and the three other members resigned in 1983, leaving the one non-health practitioner, who was unable to take any action for lack of a quorum. Until the governor appointed qualified members, the board remained inactive. Meanwhile, the legislative subcommittee received testimony and correspondence alleging that certain licensed naturopaths in the state were practicing with questionable, if not fraudulent credentials. The subcommittee recommended a modification of the board's membership, and that the skills and knowledge of all Nevada licensed naturopaths be thoroughly examined and verified. There appeared to be little board activity after 1983, and in 1987 the state assembly enacted a bill that rendered the board defunct. Any license issued by the Nevada Board of Naturopathic Healing expired on July 1, 1987.[62]

Demographics of the profession

Number of licensed naturopaths in the U.S. work force

In 2004 it was estimated there were 1,500 naturopaths practicing in the United States.[63] As of late 2005, the AANP reported approximately 4,000 naturopathic doctors were practicing in the United States, but a 2006 tally of naturopaths in the 15 states that permit licensure of naturopaths revealed approximately 3,300 licensed naturopaths. There is no practical estimate of the number of naturopaths practicing in states where licensure is not permitted, nor is there an estimate of the number of traditional naturopaths currently practicing in any or all states. (See Figure 1, page 46, for more information.)

Employment types/locales

Most naturopaths establish private naturopathic practices or teach at schools of naturopathy. Naturopathic practitioners may work with physicians or chiropractors, or in hospitals, nursing homes, clinics, health clubs or resorts.[64]

Salary data

A Seattle newspaper stated in December 2003 that most naturopaths established private practices and earned $35,000 to $100,000 annually.[65] A 2004 survey conducted by the National College of Naturopathic Medicine found that the median take-home pay for individuals working 32 hours or more per week was $45,000, while the average was $54,000. The high annual take-home pay was $250,000.[66]

The Princeton Review online, in its graduate school and careers section, notes that "according to a survey by the AANP, naturopathic doctors generally earn in the low to mid range of family practice doctors. A beginning ND, just starting up his or her practice, working part time or building a staff, may earn between $20,000 to $30,000 per year. However, an ND who runs or partners in a large, busy practice makes an average estimated income of $80,000 to $90,000 per year—and may make upwards of $200,000."[67]

IV. Billing for services

Medicare

Medicare does not provide for the reimbursement of naturopathy.[68] In 1968 the U.S. Department of Health, Education, and Welfare (now the U.S. Department of Health and Human Services) reported to Congress, recommending that naturopathic services not be added to Medicare coverage.[69] Naturopaths had requested coverage for the services of naturopathic physicians under Part B of the Supplementary Medical Insurance Program as independent practitioners serving as "points of entry," similar to doctors of medicine and osteopathy, but subject to restrictions in treatment as specified in state licensure laws.[70]

The report contained an enormous amount of research, and Congress ultimately declined the naturopaths' request for coverage, concluding that "naturopathic theory and practice are not based on the body of basic knowledge related to health, disease, and health care which has been widely accepted by the scientific community. Moreover, irrespective of its theory, the scope and quality of naturopathic education do not prepare the practitioner to make an adequate diagnosis and provide appropriate treatment."[71]

Medicaid

Medicaid will cover acupuncture and/or naturopathic services if the practitioner is licensed in the state where the service is provided and the service is considered a medical necessity.[72] The Medicaid Act does not define "medically necessary"; each state is allowed to develop its own definition for operation of the Medicaid program in the state.[73]

Private payers

More than 90 insurance carriers currently cover naturopathic medicine in the United States and Canada.[74] Increasingly, NDs are covered as specialists and primary care providers under corporate reimbursement plans.[75] Connecticut, Washington, Montana and Alaska have mandated insurance reimbursement for "medically necessary and appropriate naturopathic medical services."[76]

V. Education and training of naturopaths

Doctoral programs/degrees

As mentioned earlier, naturopathy has been in existence in the United States for more than 100 years, but modern graduate naturopathic education is relatively new. The oldest of the accredited U.S. schools of naturopathy was established in 1956, with the remaining three accredited schools first admitting students in the years 1978, 1992 and 1996, respectively.[77]

The ND and NMD programs lead to a doctoral degree in naturopathy and typically require four years of graduate study. Some schools offer ND degrees as correspondence courses with little or no requirement for supervised clinical practice. Programs accredited by the CNME that offer an ND or NMD degree require clinical internship during the third and fourth years of study.[78]

Accrediting bodies

Founded in 1978, the CNME is presently accepted as the programmatic accrediting agency for naturopathic education by the four-year naturopathic colleges and programs in the United States and Canada, by the American and Canadian national naturopathic professional associations, and by the North American Board of Naturopathic Examiners. The CNME received initial recognition from the U.S. Department of Education in 1987, lost recognition status in 2001 due to its failure to apply its own accreditation standards to a candidate school for accreditation, and ultimately regained recognition status in 2003. *(See next section for more information.)*

The American Naturopathic Medical Accreditation Board (ANMAB) also accredits U.S. schools of naturopathy leading to the ND degree, as well as schools that offer certificates, diplomas or coursework in the naturopathic arts and sciences.

U.S. Department of Education recognition of accrediting bodies

The U.S. Department of Education recognizes the CNME as the national programmatic accrediting agency for programs leading to the NMD or ND degree.[79] Accrediting agencies with the Department of Education's recognition have been found in compliance with the federal regulations that apply to educational accrediting agencies, and are determined to be reliable authorities as to the quality of education or training provided by the institutions of higher education and the higher education programs they accredit.[80] The Department of Education's recognition means the schools or specialized educational programs the accrediting agency accredits are eligible to seek participation in programs sponsored by federal agencies. Students and graduates of U.S. naturopathic medicine programs with CNME accreditation are eligible to apply for such federal programs as the Academic Research Enhancement Awards and the Loan Repayment Program, and receive federal student aid.[81]

Originally recognized by the Department of Education as an accrediting agency in 1987, the CNME was stripped of its recognized status Jan. 16, 2001, as a result of its failure to apply its own standards to a candidate school for accreditation, the Southwest College of Naturopathic Medicine and Health Sciences.[82] Before 1987, U.S. schools of naturopathy were not accredited by any body recognized by the U.S. Department of Education, thus providing no assurance as to the quality of the education received by naturopathic graduates prior to this time.

In order to be recognized by the Department of Education, an "accreditor must have standards for accreditation that assess, among other things, an institution's 'curricula,' 'faculty,' and 'fiscal and administrative facility.'"[83] Further, the accreditor must be one that "consistently applies and enforces standards that ensure that the course or programs ... are of sufficient quality to achieve ... the stated objectives for which the course of programs are offered."[84]

The CNME's standards for accreditation noted several particular situations that would lead the CNME to issue a show-cause letter to withdraw a candidate institution from contention for accreditation. One of these situations included the "inadequate financial support and control of the institution."[85]

The U.S. Department of Education found that during the period of 1996–1999, while Southwest College was a candidate for accreditation, "the entire financial structure [of the college] had become unstable." Because of financial constraints, the school had no president, senior vice president/chief operating officer or dean of students. Moreover, the college had "a large accumulated debt," and the school's tuition could not cover its operating expenses, much less its debt. The November 1997 CNME evaluation team believed the school was operating "under crisis management."[86]

A prior 1996 CNME evaluation visit to Southwest College, as well as the November 1997 visit, produced merely recommendations and scheduled future visits by the CNME. Situations had not improved in April 1998 or in March 1999. Regulations of the Department of Education require that candidate status for accreditation can last no longer than five years. In 1999, as the college's period for candidacy neared its end, its leadership announced a decision to close the school and classes were ultimately cancelled for two weeks.

The Department of Education denied the CNME recognition as an accreditor of naturopathic schools due to its failure to issue a show-cause letter to Southwest College, despite overwhelming evidence of the school's inadequate financial support and control. More succinctly, the "[c]onditions at [Southwest College] continued to deteriorate significantly," yet the CNME did not act (deliver a show-cause letter) until officials attempted to close the school. According to the Department of Education's memorandum, the CNME did not "take prompt adverse action" or "require [Southwest College] to bring itself into compliance" with CNME standards for accreditation.

The CNME was re-recognized by the U.S. Department of Education in 2003.[87] To regain its recognition, the CNME had to "consistently apply and enforce standards that ensure that the course or programs ... are of sufficient quality to achieve ... the stated objective for which the courses or the programs are offered" in the future. The CNME is scheduled for a renewal of recognition review by the Department of Education again in the spring of 2008.[88]

The ANMAB is not currently recognized by the U.S. Department of Education as a programmatic accreditor of post-secondary programs in naturopathy. However, four U.S. schools awarding ND degrees publicize their ANMAB accreditation on their Web sites.[89]

U.S. and Canadian schools granting ND or NMD degrees

Research has identified eight U.S. schools of naturopathy that grant doctoral degrees and two additional schools in Canada. There are four CNME-accredited doctoral programs in the United States, one in Canada, and one school in Canada that is a candidate for accreditation.[90] As of August 2006, among the four U.S.

4130

CNME-accredited schools, there were approximately 1,290 students enrolled in naturopathy programs.[91,92,93,94] The CNME-accredited schools in the United States are:

- Bastyr University in Kenmore, Wash. (est. 1978)
- National College of Naturopathic Medicine in Portland, Ore. (est. 1956)
- Southwest College of Naturopathic Medicine and Health Sciences in Tempe, Ariz. (est. 1992)
- University of Bridgeport (UB) College of Naturopathic Medicine in Bridgeport, Conn. (est. 1927, ND program est. 1996)

The sole CNME-accredited Canadian school, located in Ontario, is the Canadian College of Naturopathic Medicine. The CNME has granted candidate status to The Boucher Institute of Naturopathic Medicine located in British Columbia.[95] All U.S. and Canadian accredited schools operate their degree programs on campus (as opposed to distance or online learning).

The financial instability of the Southwest College of Naturopathic Medicine has been previously mentioned. The UB similarly faced significant fiscal and administrative problems when, as a result of declining enrollment in the 1980s and reduced state and federal funding for higher education during this period, the school's administration attempted to fire nearly 50 tenured faculty and demand a 30 percent decrease in salary from the rest of the faculty. What resulted was the longest strike of faculty in the history of U.S. higher education.[96]

Interestingly, a group called the Professors World Peace Academy (PWPA) offered financial assistance to the UB with a program of forgivable loans in 1992. The PWPA is a satellite group of the Unification Church of Sun Myung Moon[97] (a group commonly known as the "Moonies"). The amount loaned to the UB over the years nears $110 million.

According to one 1997 article on the Unification Church bailout of the UB:

> Instantly, there was a mass exodus of faculty from the university. Many professors did not want to be associated with a cult. The strikers settled with UB, but had to sign documents to the effect that they would never seek employment at the school again. The Law School, the university's only profitable program, dissolved its association and fled to Quinnipiac College in Hamden.
>
> The PWPA was given the right to name 60% of the UB board.
>
> UB has become a center for alternative and unproven pseudo-medical propaganda. It was the first U.S. university to officially create a College of Chiropractic. In the fall of 1996, the new school of Naturopathy was opened .... [T]hey are trying to gain acceptability through the legitimizing tonic of university affiliation.[98]

Average annual tuition and fees at the four U.S. CNME-accredited schools for the 2007–2008 academic year was $22,315.[99]

The four U.S. schools of naturopathy granting ND degrees that are accredited by the ANMAB include:

- Clayton College of Natural Health in Birmingham, Ala.
- Canyon College in Caldwell, Idaho
- Trinity College of Natural Health in Warsaw, Ind.
- The University of Natural Medicine in Santa Fe, N.M.

Graduates per year

Approximately 270 students graduated from CNME-accredited U.S. schools of naturopathy in 2005.[100]

Core competencies required for accreditation

The CNME accredits programs using the *Handbook of Accreditation*.[101] The following are the core accreditation standards for naturopathic programs:

- Program must have a well-defined mission and practical objectives
- Program is well-organized, administered and has a competent faculty
- Program is financially stable and financially well-managed
- Adequate student services
- Core curriculum must meet the following minimum standards:

1. **Academic program** presented over a period of 12 quarters (10–12 weeks per quarter) and has a minimum of 4,100 total clock hours, at least 1,200 of which must be devoted to clinical education
2. **Basic Sciences program** consisting of: anatomy (including gross anatomy, dissection and/or prosection, neuroanatomy, embryology, histology); physiology (lecture and lab); pathology; biochemistry; environmental/public health (also including immunology and infectious diseases); and pharmacology/pharmacognosy
3. **Clinical Sciences program** consisting of: diagnostic courses (physical, clinical, laboratory, diagnostic imaging and differential diagnosis); therapeutic courses (botanical medicine, homeopathy, emergency and legend drugs, nutrition, physical medicine [includes naturopathic, osseous and soft tissue manipulative therapy, physiotherapy, sports medicine, therapeutic exercise and hydrotherapy], psychological counseling, nature care, acupuncture and Oriental medicine, medical procedures/emergencies and minor surgery); and specialty courses (organ systems [includes cardiology, dermatology, endocrinology, EENT, gastroenterology, genitourinary system, gynecology, neurology, orthopedics, pulmonary], natural childbirth/obstetrics, pediatrics, geriatrics, rheumatology, oncology, jurisprudence, marketing principals and practice management)
4. Courses in the history, philosophy and principles of naturopathic medicine must also be offered in the curriculum

- Program must have a clinical education program designed to equip the students with the skills necessary for successful clinical practice
- Program must have adequate library/information resources
- Program must encourage research
- Program has sufficient physical resources, including instructional and research facilities[102]

There is no information available on the ANMAB standards for accreditation other than the following excerpt from their Web site[103]:

> The accreditation procedures adopted have become the standard recognized by the majority of practitioners, and institutions in the naturopathic profession. To become a recognized institution of learning, and to win approval of worthiness by ANMAB, an institution has voluntarily submitted its programs to a thorough investigation by ANMAB. To insure quality in programming, the following entities underwent close scrutiny before accreditation was bestowed:
>
> - Curricula, Faculty
> - Fiscal and administrative capacity
> - Student support services
> - Program length, tuition, and fees in relation to academic objectives and credit received
> - Student achievement (job placement, certification examination, etc.)
> - Student complaints received by, or available to, the accreditor
> - Credible recruiting, admissions practices, calendars, proper student records catalogues, and other publications, grading practices, advertising and publicity

Admission requirements

From surveying the four CNME-accredited U.S. naturopathic doctoral programs, general requirements for admission include a baccalaureate degree (or 90 credit hours of courses) with specific undergraduate course requirements detailed below, essays, letters of recommendation, personal interviews and a grade point average of 2.5–3.0.[104] No entrance examination, such as the Medical College Admissions Test, is required of applicants to schools of naturopathy.

Course	Average prerequisite credit hours
Algebra	0–3
Chemistry (including organic)	12–16
Biology	8–12
Physics	4–6
English	6
Humanities	6
Psychology	3–6

The Association of Accredited Naturopathic Medical Colleges (AANMC) was established in February 2001 "to propel and foster the naturopathic medical profession by actively supporting the academic efforts of accredited and recognized schools of naturopathic medicine."[105] However, unlike the Association of American Medical Colleges or the American Association of Colleges of Osteopathic Medicine, the AANMC does not compile statistics on applicants or matriculants to its member schools. Nor does the AANMC publish a journal or disseminate information to the public regarding educational teaching methods, noticeable trends or statistics in the student body and/or in the achievement of educational goals, or provide information as to advanced study of students' learning processes or faculty development programs. Therefore, a comparison of the average grade point averages, bachelor's degree attainment rates and the demographic makeup of matriculants to naturopathic schools cannot be made to matriculants of U.S. medical schools.

Naturopathy school curriculum requirements

The four CNME-accredited colleges that award ND degrees in the United States follow fairly standard curricula. CNME accreditation standards do not require minimum contact hours in any one discipline. Students typically take basic science courses comprising two years of didactic study, then spend the following two years in their clinical rotations.[106]

Didactic curriculum (years one and two)

Biological sciences[107]:

Course	Credits required for graduation
Anatomy (including neuroanatomy)	13–25.5
Embryology	2–3
Histology	0–4
Biochemistry	4–12
Physiology	9–21
Microbiology/Immunology	6–7
Public health/Epidemiology	0–3
Pathology	4–14
Correlative basic science	0–2

Naturopathic medicine studies and organ systems[108]:

Course	Credits required for graduation
Living anatomy (including massage, palpation)	1.5–4
Profession history and philosophy	2–4
Nutrition	8–13
Botanical medicine	7–14
Hydrotherapy	1.5–3.5
Oriental medicine	3–18
Homeopathic medicine	8–15
Naturopathic manipulative therapy	0–9
Diagnostic imaging	0–7
Medical genetics	1–2
Gynecology	3–4
Cardiology	2–3
Pediatrics	2–3
Minor surgery	1.5–5
Emergency procedure	2–5
Addictions and disorders	0–2
Obstetrics	2–3
EENT	1.5–2
Endocrinology	1.5–10.5
Neurology	1.5–2
Environmental medicine	1.5–4
Prevention/Therapeutic exercise	0–2
Geriatrics	1–2
Urology/Proctology	1.5–2
Oncology	1.5–2
Dermatology	1.5–2
Orthopedics/Sports medicine	1.5–4
Pharmacology	7–11

Other professional skills[109]:

History taking/Critical thinking	0–1
Counseling skills (class)	3–3.5
Psychological assessment	1.5–2
Practice management	3.5–6
Jurisprudence/Ethics	1.5–4
Diagnostic skills (class)	3–4
Doctor-patient relationship	0–2
Research	2–4

Naturopaths employ any number of CAM modalities in their treatment, claiming mastery of all such modalities, even while practitioners of each individual modality devote years of experience to mastering their craft. Whole-system modalities, such as traditional Chinese medicine and the Ayurvedic healing system from India, which are iconic forms of cultural healing in their respective countries, are covered in naturopathy schools in 33 (three credits) and 22 (two credits) contact hours, respectively.[110]

Additionally, in states where acupuncturists enjoy licensure, typical state requirements for licensure include board certification from the National Certification Commission for Acupuncture and Oriental Medicine (NCCAOM). Minimum standard requirements for NCCAOM certification include graduation from an accredited program leading to a Master of Acupuncture certificate. This course must be at least three academic years in length and consist of at least 105 credits of specified coursework, with at least 1,905 contact hours, 660 of which must be spent in supervised clinical experiences.[111] Naturopathy students at Bastyr University receive a three-credit (33 hour) didactic course on "the fundamental principles" of traditional Chinese medicine and unknown hours of supervised clinical experience with acupuncture technique.[112] Most schools of naturopathy do, however, offer optional extended study for their students to meet most state licensing requirements for acupuncture.

Greater contact hours are given to the botanical and nutritional curriculum, with Bastyr University requiring 22 credits (271 contact hours).[113] In contrast, the Bachelor of Science in Dietetics degree at Purdue

4134

University[114] requires 66 credits of specific dietetics- and nutrition-related course work after completion of prerequisites, such as one year of general biology, one year of general chemistry, one year of organic chemistry, and one semester each of microbiology and biochemistry.[115] In addition, 1,100 hours of supervised practica are required before the new graduate can sit for the registered dietitian examination.

Clinical curriculum (years three and four)

From surveying the four accredited naturopathic programs, many of the schools' curriculums have generic course titles for third- and fourth-year clinical courses or rotations (i.e., Clinical Rotation 1, Clinical Education I, Patient Care, etc.), and are not standardized with regard to when they are completed during the program.[116] Generally, all naturopathic students' clinical experience is gained through outpatient clinics. These clinical rotations may include specialization in organ system studies, physical medicine and naturopathic manipulative therapy.[117] It also appears that didactic education continues throughout the third and fourth years of study (i.e., these years are not wholly spent in clinical rotations), although with fewer lecture hours than in the first two years, further decreasing the time spent in clinical settings.

All CNME-accredited naturopathic doctoral programs require candidates for graduation to participate in clinical rotations.[118] The clinical education program begins in the third year of naturopathic education and must be at least 1,200 clock hours, with at least 60 percent of the program's required hours in direct patient care.[119] Therefore, the minimum requirement for direct patient care in a CNME-accredited naturopathic doctoral program is only 720 hours over two years.

The Textbook of Natural Medicine

Popularly hailed as the foremost reference book in naturopathy, the *Textbook of Natural Medicine* was written by Joseph E. Pizzorno, ND, and Michael T. Murray, ND. Pizzorno is the founding president, now emeritus, of Bastyr University, and Murray is a former faculty member at Bastyr. Originally published in 1985, the textbook, now in its third edition, is widely studied in schools of naturopathy.

In 2001 Arnold S. Relman, MD, professor emeritus, Medicine and Social Medicine, Harvard Medical School, and editor-in-chief emeritus of *The New England Journal of Medicine*, reviewed the second edition of the *Textbook of Natural Medicine* (1999) as part of a legislative inquiry into naturopathic medicine in Massachusetts.[120] Dr. Relman's thoughts appear below.

> [T]he licensing of naturopathic medical practitioners as independent providers of primary health care would endanger the health and safety of the public and would not result in health benefits commensurate with its risks. There is abundant evidence in the *Textbook* to support this conclusion, but I summarize below only a few of the most problematic examples of the deficiencies and dangers in naturopathic practices[121]:
>
> The *Textbook* describes the diagnosis and treatment of only 70 "specific health problems," and they are simply listed in alphabetical order, without regard to the nature of the condition or the organ(s) involved. In comparison, standard textbooks of conventional medicine provide a much more rational and systematic presentation that includes hundreds of disease conditions and describes them in much greater depth and detail. The *Textbook* includes in its 70 chapters on specific diseases nothing about cancer, diseases of the blood (including leukemias and anemias), nothing about heart attacks or serious abnormal rhythms

114. The Purdue University program in dietetics was ranked fourth in the nation out of 240 undergraduate dietetics/nutrition programs in 1998, as reported by the Gourman Report.

4135

of the heart (such as atrial fibrillation), and virtually nothing about kidney diseases, chronic obstructive pulmonary disease, cirrhosis of the liver, or about many common and serious infections such as pulmonary tuberculosis, malaria, syphilis, meningitis, encephalitis or bacterial endocarditis. Lacking adequate education about these diseases, naturopathic practitioners might fail to diagnose them in a timely fashion or delay in referring patients for appropriate medical treatment.[122]

Dr. Relman cited several examples of common, serious diseases that are dangerously mistreated in the textbook[123]:

> The chapter on the treatment of anginal (coronary artery) heart disease does not even mention the use of nitrates, beta-blockers or calcium-channel blockers—all of which are standard, effective, FDA-approved treatment for this condition. Failure to use one or more of these agents in the treatment of severe angina would probably be considered medical malpractice. There is no mention of "statin" drugs to lower cholesterol and prevent further progression of coronary heart disease. The use of angioplasty or bypass surgery for patients unresponsive to pharmacologic therapy is dismissed.
>
> The chapter on high blood pressure says nothing about the diagnostic workup that is often needed to rule out certain curable causes (such as certain diseases of the adrenal gland, or obstruction in the aorta or the renal arteries). It recommends diet lifestyle changes and the use of herbs, but admits that severe cases unresponsive to these "natural" measures may require treatment with pharmaceuticals (presumably under the management of a conventional medical doctor). However, it ends with the dangerous advice that once control of high blood pressure has been achieved with drugs, the naturopathic physician should have the patient "taper off" the medications. For some such patients, a reduction in medication risks sudden resurgence of severe hypertension and the possibility of a stroke or heart attack. Most patients with severe hypertension need to remain on medication indefinitely, or for many years.
>
> The chapter on diabetes says very little about the use of insulin, nothing about oral hypoglycemic drugs, and nothing about the diagnosis, prevention or treatment of diabetic acidosis—except to warn that it is a medical emergency that will require hospitalization.
>
> The chapter on HIV infection and AIDS advocates various types of herbal and "natural" remedies, but gives no information about conventional drug therapy. Although it is admitted that no clinical studies have yet demonstrated the effectiveness of naturopathic medical care in HIV infection when used alone, or even as a supplement to conventional medical treatment, the chapter nevertheless ends with this advice: 'We urge physicians to apply the principles of naturopathic medicine in the care of their HIV positive patients.' As if this neglect of the proven life-prolonging value of anti-viral pharmacotherapy were not shocking enough, the chapter also fails to recommend drug treatment of pregnant women with HIV infections, which is standard practice for the prevention of HIV transmission to the newborn. Neglect of such treatment would surely be considered malpractice in the medical profession.
>
> As already noted, naturopathic teaching (as exemplified in the *Textbook*) claims that "natural" herbal remedies are generally superior to pharmaceuticals in the treatment of most diseases—despite the fact that the FDA forbids the manufacturers of herbal preparations and dietary supplements from making therapeutic claims. The *Textbook* nevertheless devotes a large section to herbs and dietary supplements in which many such claims are made, often with little or no credible supporting evidence in the peer-reviewed scientific literature.[124]

Dr. Relman concludes his review by stating:

> Primary care practitioners whose education does not include the use of prescription drugs simply cannot be expected to provide effective and safe care for many serious conditions they are likely to encounter. While it is true that unnecessary or inappropriate use of drugs is harmful, and that even proper usage of drugs can sometimes cause serious reactions, there can be no doubt that on balance prescription drugs have been enormously beneficial, and that drugs will be even more important in

the future. The anti-pharmaceutical bias of naturopathic education (as illustrated in the *Textbook*) therefore poses real risks for patients who rely on naturopaths for the management of their illnesses. Without prompt and appropriate drug therapy many patients with serious diseases will die.[125]

Specific examples of other dangerous scientific inaccuracies in the second edition of the textbook include the following naturopathic treatment claims (with corresponding scientific commentary refuting the treatment claim):

St. John's wort for the treatment of HIV-positive patients

In 2000 the U.S. Food and Drug Administration (FDA) posted the following public health advisory* on its Web site: "[R]esults from a study conducted by The National Institutes of Health (NIH) that showed a significant drug interaction between St John's wort (*Hypericum perforatum*), an herbal product sold as a dietary supplement, and indinavir, a protease inhibitor used to treat HIV infection. In this study, concomitant administration of St. John's wort and indinavir substantially decreased indinavir plasma concentrations, potentially due to induction of the cytochrome P450 metabolic pathway. ... [B]ased on these results, it is expected that St John's wort may significantly decrease blood concentrations of all of the currently marketed HIV protease inhibitors (PIs) and possibly other drugs (to varying degrees) that are similarly metabolized, including the nonnucleoside reverse transcriptase inhibitors (NNRTIs). Consequently, concomitant use of St John's wort with PIs or NNRTIs is not recommended because this may result in suboptimal antiretroviral drug concentrations, leading to loss of virologic response and development of resistance or class cross-resistance."[126]

*This FDA public health advisory was released in February 2000. The second edition of the *Textbook of Natural Medicine* was published in September 1999.[127] Information on NIH-funded trials is public information.

Electrochemical silver solutions exhibit antimicrobial effectiveness

In 1999 the FDA stated it was "issuing a final rule [21 CFR Part 310] establishing that all over-the-counter (OTC) drug products containing colloidal silver ingredients or silver salts are not generally recognized as safe and effective, and are misbranded. FDA is issuing this final rule because many OTC drug products containing colloidal silver ingredients or silver salts are being marketed for numerous serious disease conditions and FDA is not aware of any substantial scientific evidence that supports the use of OTC colloidal silver ingredients or silver salts for these disease conditions."[128]

Publisher Churchill Livingstone released a third edition of the *Textbook of Natural Medicine* in November 2005. Critiques or analyses of this current edition are either not known to exist or are unavailable.[129]

Requirements for graduation

An ND or NMD degree generally requires four years of graduate study. Several ND programs allow students to extend study by one or two years. All students are required to complete both the didactic and clinical portions of the education program.[130]

Post-graduate training

Post-graduate training is not required of graduates of naturopathic schools except in the state of Utah, which currently requires one year of post-graduate naturopathic training. Each of the four CNME-accredited naturopathic schools offers a one-year post-doctoral training program. These "residencies" may include placement in naturopathic clinics or private practices, where naturopathic philosophy and treatment are applied to patients in primary care, pediatrics, emergency care, pharmacy compounding, geriatrics, nutritional counseling and obstetrics.[131]

In 2005 the CNME implemented an approval process for naturopathic post-graduate training programs. However, there are no standard requirements for naturopathy curriculum, rotations or experiences. In terms of program content, all that is required by the CNME is that the participant receive 35 hours a year of didactic instruction and participate in "scholarly activities that promote a spirit of inquiry, scholarship and critical thinking, such as discussions, rounds, study clubs, presentations, conferences, and local, regional or national professional associations and scientific societies."[132]

As an example of the limited exposure to patients experienced by naturopathic post-graduates, below is a description of the training offered by the UB.[133] Note in particular the administrative nature of the majority of the duties assigned to the "residents," the low number of hours spent in direct patient care and the absence of descriptions of patient pathology or patient populations expected to be seen by the residents.

> The [University of Bridgeport (UB)] residency program is part of the CNME approved residency program at National College of Naturopathic Medicine (NCNM). The UB residency offers a wide range of clinical experiences at three different settings. The resident will have an opportunity to supervise UB student clinicians at the UB Health Center and its satellite clinics. At the Integrative Medicine Center (IMC), which is affiliated with Yale Preventative Research Center (PRC) at Griffin Hospital, the resident will be working closely with conventional practitioners (MDs or a nurse practitioner) and a supervising Naturopathic physician to come up with appropriate diagnoses and treatment plans for patients. To increase patient exposures and to familiarize with conventional assessments and treatments, the resident will also have clinical rotations in different departments at Griffin Hospital and its affiliated clinics.
>
> **UB Health Center:**
>
> - Supervise UB student clinicians at the UB Health Center and its satellite clinics for five 4-hour shifts or 20 hours per week.
> - Perform administrative duties such as posting daily patient schedules and opening/closing the clinics.
> - Keep track of patient contacts to report to the NCNM residency program.
>
> **Integrative Medicine Center (IMC) at Griffin Hospital:**
>
> - Work at the IMC for three 4-hour shifts per week or 12 hours per week.
> - Discuss diagnoses and treatment plans with conventional practitioners and a supervising ND and present to patients.
> - Perform IVMT (Intravenous Micronutrients Therapy) or Myer's cocktail through IV push for fibromyalgia patients or Glutathione IV push for Parkinson's disease.
> - Conduct dictations for new patients.
> - Make follow-up phone calls to returning patients.
> - Present Fire Chat talks on topics of your choice on a monthly basis to local community at the IMC.
> - Keep track of patient contacts to report to the NCNM residency program.
> - The resident may be required to help with the research at the PRC.
>
> **Clinical Rotations at Griffin Hospital:**
>
> - Initiate and maintain clinical rotations in the departments of choice at Griffin hospital and its affiliated clinics for approximately two 5-hour shifts per week or 10 hours per week.
> - Select an interesting case from the rotations and present a grand round to medical students and residents at Griffin hospital.
> - Take a medical history, perform a physical exam, and present the case to attending physicians (MDs) before initiating diagnostic assessments and treatment plans.

VI. Naturopath licensure and board certification

Standardized national licensure examination

The North American Board of Naturopathic Examiners (NABNE) developed and administers the Naturopathic Physicians Licensing Exam (NPLEX).[134] The exam consists of two parts, unlike the United States Medical Licensing Examination (USMLE) or the Comprehensive Osteopathic Medical Licensing Examination (COMLEX-USA), which each contain three steps/levels.

NPLEX Part I, the "basic science" exam, is generally taken by students upon completion of their second year of naturopathy school. Eligibility requirements for Part I include enrollment in an accredited naturopathy school or an approved in-residence program, and completion of courses in the following subject areas to be tested: anatomy, physiology, biochemistry, microbiology and immunology, and pathology.[135] Each section contains 50 multiple choice questions and students are allotted 60 minutes to complete each section.[136]

Individuals are eligible for NPLEX Part II, the "core clinical science" exam, upon graduation from an approved naturopathic medical education program and after fulfilling the NABNE basic science requirement by either passing NPLEX Part I or by having been granted a waiver by the NABNE.[137] NPLEX Part II consists of eight sections that test the core clinical sciences: physical and clinical diagnosis, lab diagnosis and diagnostic imaging, emergency medicine and public health, pharmacology, botanical medicine, nutrition, physical medicine and counseling, behavioral medicine and health psychology. Each section contains 50 multiple choice questions and students are allotted 60 minutes per section. Additional time is given for the physical and clinical diagnosis (150 items, three hours) and lab diagnosis and diagnostic imaging (75 items, 90 minutes) sections.[138] Part II is offered over a course of three days.

NPLEX Part II also features three elective examinations in homeopathy, minor surgery and acupuncture.[139] Each of these elective examinations contains 50 multiple choice questions and runs 60 minutes. [140]

Notably, the state of Colorado, in its detailed analysis of the NPLEX series, found that NPLEX Part II does not adequately measure clinical competence. This deficiency in the assurance of providing competent health care providers to the public is not at issue in examining physicians for licensure. As noted earlier, the USMLE and COMLEX-USA both contain a separate third component to specifically assess whether the examinee can apply medical knowledge and understanding of biomedical and clinical science essential for the unsupervised practice of medicine, with emphasis on patient management in ambulatory settings. Step 3 of the UMSLE and Level 3 of the COMLEX-USA provide a final assessment of physicians assuming independent responsibility for delivering general medical care.[141]

Additionally, states may require candidates for naturopathic licensure pass a state-written and -administered examination for licensure. As mentioned previously, in 2000 the Arizona Office of the Auditor General reported a concerning lack of diligence by the Arizona Naturopathic Physicians Board of Medical Examiners in their examination of candidates for naturopathic licensure:

> The Board needs to correct numerous problems with its three-part licensing examination, or adopt a national examination, to ensure that the naturopaths it licenses are competent. Since 1997, the Board has been administering a licensing examination it developed specifically for Arizona. Problems with this examination call into question its validity as a tool for measuring an applicant's competence

4139

to practice naturopathy. For example, the Board has not ensured that the examination tests what a naturopath would need to know to practice safely and has not shown that examination writers possess the necessary expertise and training to develop test questions. Further, the Board has made extensive adjustments to examination scores. For example, one licensure applicant received credit for 90 questions that she had answered incorrectly on one part of the February 1999 exam. As a result of such scoring adjustments, no one has failed the Board's exam since September 1998.[142]

National board certification

There is no generalist board certification available for the practice of naturopathy. However, a naturopath may achieve specialty certification by any of several organizations. Several states require licensed naturopaths to obtain specialty certification in order to provide certain health care services. For example, it is most common for states to require naturopaths to achieve certification in naturopathic childbirth or acupuncture if they want to provide those services.

Naturopathic childbirth

The American College of Naturopathic Obstetrics (ACNO) is the credentialing arm of the American Association of Naturopathic Midwives. Eligibility to sit for the three-hour ACNO examination requires that (1) the candidate is a student of a CNME-accredited naturopathic school or hold a degree from such a school; (2) the candidate has sat through 100 contact hours of didactic instruction on midwifery at a CNME-accredited school; and (3) the candidate has attended 15 births.

A naturopathic midwife must hold a ND or NMD degree, but in essence receives the same certification as a certified professional midwife, more commonly known as a lay midwife. Many naturopathic colleges offer optional training programs that allow students or graduates to qualify for both the ACNO exam and the certified professional midwife exam offered by the North American Registry of Midwives.

The American Association of Naturopathic Midwives describes naturopathic midwives as:

> [T]he most extensively trained natural childbirth providers available to you and your family. Naturopathic midwives are trained to provide you with safe and effective midwifery care and their background as licensed naturopathic doctors broadens the scope of care you will experience from pregnancy and birth to full family natural health care. From preconception and infertility counseling through newborn and pediatric care, ongoing well woman and menopause concerns, naturopathic midwives are healthcare providers for all seasons of your family's health care needs.[143]

Again, it is significant to note that naturopaths who attend births and deliver newborns are licensed only to the extent of a certified professional midwife (also known as a lay midwife). The doctoral degree does not confer upon the naturopath any birthing privileges greater than those of a lay midwife.

Naturopathic acupuncture

States that permit naturopaths to perform acupuncture typically require specialty certification. Candidates must submit documentation of didactic instruction and supervised clinical experience. In addition, candidates must typically pass an examination, either the NPLEX Part II elective examination in acupuncture or a test offered by the National Certification Commission for Acupuncture and Oriental Medicine. In most cases, students of naturopathy who also want to practice acupuncture will need to extend their doctoral study by at least one year in order to fulfill state and/or examination requirements.

4140

VII. State licensure and regulation

States that license naturopaths

Naturopaths must meet licensing requirements in all states that recognize naturopathy through licensure. Presently, 14 states and the District of Columbia regulate naturopaths through licensure: Alaska, Arizona, California, Connecticut, Hawaii, Idaho, Kansas, Maine, Montana, New Hampshire, Oregon, Utah, Vermont and Washington. Puerto Rico and the U.S. Virgin Islands similarly license naturopaths.

The rest of the country does not recognize the profession through licensure, with South Carolina and Tennessee both expressly prohibiting the practice of naturopathy.[144] Wyoming states the following in its case law:

> Our statute is clear, that the practice of naturopathy cannot be regarded as a separate and distinct profession like that of dentistry for instance, nor can any good reason be given why the legislature may not for the benefit of society require that those who practice the healing art should know and keep up with the improvements and advanced learning in that art.[145]

Florida abolished its naturopath licensing laws in 1959, and in 2004 a legislative committee concluded that an expanded scope might be harmful, and that naturopathic licensing is not cost-effective.[146] Several other states, including Texas and Virginia, have abolished previous naturopathy licensure provisions.[147]

It is critical to note that in most states and provinces where naturopathic medicine is not regulated, individuals may practice similar therapeutic approaches and/or call themselves naturopaths (whether or not they have been trained at a school for naturopathic medicine), because the terms "naturopath" and "naturopathic medicine" are not restricted terms.[148] Traditional naturopathy is not a medical practice and, therefore, is not regulated through statutes or regulations in the states.

One of the major initiatives of the AANP is to obtain licensure for naturopaths in all 50 states.[149] (See Figure 1 for more information on requirements for state licensure.)

State scope of practice regulations for naturopaths

Naturopaths' scope of practice varies by state. Naturopaths seek privileges to prescribe drugs, not only those considered "natural" (hormones, purified botanicals, etc.), but also legend drugs, up to and including schedule III and IV controlled substances. Specific information on naturopath scope of practice can be found in Figure 2.

State boards of naturopathy

Information on the authority, procedures of operation, composition and appointment procedures of state boards of naturopathy can be found in Figure 3. Additionally, a roster of state boards of naturopathy can also be found in the Appendix (page 35).

VIII. Professional organizations in naturopathy

The AANP is the professional association for licensed and licensable NDs. The mission of the AANP is to gain licensure for "naturopathic physicians" in all 50 states and to help facilitate the medical paradigm shift from disease management to holistic health care. The AANP offers continuing education and other resources to its members, and referrals to naturopaths for health care consumers.[150]

American Association of Naturopathic Physicians
4435 Wisconsin Ave. N.W., Suite 403
Washington, DC 20016
Toll free: (866) 538-2267[151]

There are approximately 1,000 members of the AANP.[152] To become a "regular" or "graduate" member of the association, one must be a graduate of a college of naturopathy and must either: (1) hold a license as a naturopathic physician in a state or jurisdiction whose license is acceptable to the AANP, or (2) be an active regular member of a state association that is recognized by the AANP, such state association being the one which covers the state, commonwealth or territory in which she resides for the majority of each year.[153]

The AANP does not post its policies on the Web for public viewing. The "Positions and Practices" Web page is not available through "guest user" Web registration.

The American Naturopathic Medical Association (ANMA) is a nonprofit, scientific and educational organization, dedicated to exploring new frontiers of mind, body, medicine and health with approximately 4,000 members worldwide.[154]

The ANMA has a nondiscriminatory policy, with membership open to individuals with (ND) or NMD degrees, as well as those who practice in other health care fields. According to the Web site, some members hold other medical degrees, such as an MD, DO, DDS, OMD, HMD and DC.[155] **The ANMA vigorously opposes the state licensing of naturopathic physicians, which is one of the major initiatives of the American Association of Naturopathic Physicians.**

National association policy concerning naturopathy

American Academy of Family Physicians

Complementary Practice
The American Academy of Family Physicians (AAFP) is an advocate of patient access to quality health care and effective education and counseling of patients and consumers. The AAFP recognizes the availability in the market place of complementary and alternative practice and its approaches to healthcare.

The AAFP advocates the evaluation of these alternative treatments and complementary practice through various means including evidenced-based outcomes research as to their efficacy and effectiveness.

To this end, the AAFP believes that physicians can best serve their patients by recognizing and acknowledging the availability of such alternatives and by educating themselves concerning these non-traditional methods of healing in order to facilitate appropriate education, treatment and counseling of patients and consumers.

All clinical information regarding complementary or alternative practice presented or sponsored by the AAFP should include a discussion of the evidence on which it is based. (1997) (2003).

American Osteopathic Association

Non-Physician Clinicians
Whereas, non-physician clinicians can be categorized into one of the three following groups: midlevel professionals who are meant to work under the supervision of or in collaboration with physicians, non-physician independent traditional professionals who practice independently within specialty areas, and alternative medicine providers who follow and independently practice alternative therapies; and

Whereas, non-physician clinicians are gaining increased licensure and practice privileges in areas that were once only held by physicians including, but not limited to, prescribing drugs and medical or surgical treatments, practicing autonomously, performing surgery, and being reimbursed by all types of third-party payors; and

Whereas, non-physician clinicians are gaining even more expansive privileges that they already possess; and

Whereas, patient safety is the foremost concern when addressing issues of expanding scopes of practice for any healthcare profession; and

Whereas, patient safety and state laws mandate that physicians meet a minimum threshold of education, post-graduate training, examination, and regulation for an unlimited license to practice medicine; and

Whereas, many of these non-physician clinician professions are undertaking tasks that overlap with physician practice without being required to meet the equivalent threshold of education, post-graduate training, examination, and regulation established for physicians by state licensing boards; now, therefore, be it

RESOLVED, that the American Osteopathic Association adopt the attached policy paper as its position on non-physician clinicians including appropriate onsite supervision (2000, revised 2005). *www.osteopathic.org/pdf/aoa_postiong-n.pdf* (pages 98-104).

American Academy of Pediatrics

Scope of Practice Issues in the Delivery of Pediatric Health Care (select sections provided)
In recent years, there has been an increase in the number of nonphysician pediatric clinicians and an expansion in their respective scopes of practice. This raises critical public policy and child health advocacy concerns. The American Academy of Pediatrics (AAP) believes that optimal pediatric health care depends on a team-based approach with coordination by a physician leader, preferably a pediatrician. The pediatrician is uniquely suited to manage, coordinate, and supervise the entire spectrum of pediatric care, from diagnosis through all stages of treatment, in all practice settings. The AAP recognizes the valuable contributions of nonphysician clinicians, including nurse practitioners and physician assistants, in delivering optimal pediatric care. The AAP also believes that nonphysician clinicians who provide health care services in underserved areas should be supported by consulting pediatricians and other physicians using technologies including telemedicine. Pediatricians

4146

should serve as advocates for optimal pediatric care in state legislatures, public policy forums, and the media and should pursue opportunities to resolve scope of practice conflicts outside state legislatures. The AAP affirms that as nonphysician clinicians seek to expand their scopes of practice as providers of pediatric care, standards of education, training, examination, regulation, and patient care are needed to ensure patient safety and quality health care for all infants, children, adolescents, and young adults.

***

In recent years, the role of [complementary and alternative medicine] CAM has also received increased attention. Controversy exists about the efficacy of many of the modalities incorporated under the heading of CAM. Although many definitions exist, the National Center for Complementary and Alternative Medicine defines CAM as "those treatments and health care practices not taught widely in medical schools, not generally used in hospitals, and not usually reimbursed by medical insurance companies." According to the National Center for Complementary and Alternative Medicine, "some approaches are consistent with physiologic principles of Western medicine, while others constitute healing systems with a different origin. Although some therapies are far outside the realm of accepted Western medical theory and practice, others are becoming established in mainstream medicine."

Although this policy statement will not address the treatments but rather the training of individuals who provide such treatments to children, it is important to note that little scientific evidence exists regarding the safety and efficacy of CAM therapies in children. Indeed, there have been few randomized, controlled, double-blinded clinical trials on the use of CAM therapies in the pediatric population. Table 2 summarizes information on 5 of the most common practitioners of CAM. [Only the portion of Table 2 relevant to naturopaths is included below.]

Children may receive care from CAM practitioners without it being revealed to their pediatrician. A 1997 study reported that the percentage of American adults using CAM increased from 34% in 1990 to 42% in 1997. The estimate for CAM use by the general pediatric population is lower, ranging from approximately 11% in 1994 to 20% in 1999.The rate for children with chronic or serious illness, however, is much higher, varying according to age, background, and access to services from 30% to more than 70%, according to 1998 data. These figures raise serious concerns. The pediatrician

TABLE 2. Summary of 5 Major Providers of CAM *(Editors' note: Only naturopaths are included in this table.)*

	No. of Providers	No. of Programs or Schools	Length of Training	Content of Training	Pediatric-Specific Training
Naturopathy	Approx 1500	4 (3 US, 1 Canada) accredited by the Council on Naturopathic Medical Education. 4147

cannot be responsible for overseeing the actions of CAM providers, but can take a proactive role in asking patients and families about their use of CAM therapies. As advocates for their patients, pediatricians need to advise patients and their parents that the interactions between some CAM therapies and conventional medical treatments can cause complications and even death. Many people are unaware of this danger and view CAM therapies as natural and, therefore, safe, and so often do not report their use of CAM to their physicians. The AAP has recognized the importance of this issue and has published a series of recommendations on how to counsel families about CAM use for children with chronic illness or disability. The pediatric community has questioned the ability of CAM practitioners to identify serious or complex medical conditions that require referral to a physician for medical treatment. In addition, the opposition of some CAM practitioners to immunizations negatively affects the health and safety of children in their care.

No uniform standards exist across the country for scope of pediatric practice of chiropractors, naturopaths, and other CAM practitioners. As summarized in Table 2, pediatric training and experience are not specifically outlined or regulated. Studies documenting improved outcomes and efficacy of treatments in pediatric practice for CAM practitioners do not exist. In view of this lack of national standards for pediatric care by CAM practitioners, the absence of studies documenting that the quality of health care for children provided by these practitioners is comparable with that provided by conventional clinicians, and the more extensive training and education of pediatricians, the AAP has concerns about the provision of health care services to pediatric patients by CAM practitioners.

American Medical Association

E-3.01 Nonscientific Practitioners
It is unethical to engage in or to aid and abet in treatment which has no scientific basis and is dangerous, is calculated to deceive the patient by giving false hope, or which may cause the patient to delay in seeking proper care. Physicians should also be mindful of state laws which prohibit a physician from aiding and abetting an unlicensed person in the practice of medicine, aiding or abetting a person with a limited license in providing services beyond the scope of his or her license, or undertaking the joint medical treatment of patients under the foregoing circumstances. Physicians are otherwise free to accept or decline to serve anyone who seeks their services, regardless of who has recommended that the individual see the physician. (III, VI) Issued prior to April 1977; Updated June 1994 and June 1996.

D-35.991 Licensure of Naturopaths
Our AMA will work through the Scope of Practice Partnership and interested Federation partners to oppose the licensure of naturopaths and report back to the House of Delegates at the 2006 Interim Meeting. (Res. 209, A-06)

H-480.964 Alternative Medicine
Policy of the AMA on alternative medicine is: (1) There is little evidence to confirm the safety or efficacy of most alternative therapies. Much of the information currently known about these therapies makes it clear that many have not been shown to be efficacious. Well-designed, stringently controlled research should be done to evaluate the efficacy of alternative therapies. (2) Physicians should routinely inquire about the use of alternative or unconventional therapy by their patients, and educate themselves and their patients about the state of scientific knowledge with regard to alternative therapy that may be used or contemplated. (3) Patients who choose alternative therapies should be educated as to the hazards that might result from postponing or stopping conventional medical treatment. (CSA Rep. 12, A-97; Reaffirmed: BOT Rep. 36, A-02)

H-480.973 Unconventional Medical Care in the United States
Our AMA: (1) encourages the Office of Alternative Medicine of the National Institutes of Health to determine by objective scientific evaluation the efficacy and safety of practices and procedures of unconventional medicine; and encourages its members to become better informed regarding the practices and techniques of alternative or unconventional medicine; and (2) utilizes the National Institutes of Health's National Center for Complementary and Alternative Medicine's classification system of alternative medicine, "Major Domains of Complementary and Alternative Medicine," in order to promote future discussion and research about the efficacy, safety, and use of alternative medicine. (BOT Rep. 15-A-94; Reaffirmed and Modified by Sub. Res. 514, I-95; Appended: Res. 505, A-00)

4148

D-480.981 Increasing Awareness of the Benefits and Risks Associated with Complementary and Alternative Medicine
Our AMA will promote awareness among medical students and physicians of the wide use of complementary and alternative medicine, including its benefits, risks, and evidence of efficacy or lack thereof. (Sub. Res. 306, A-06)

H-35.990 Non-Physician Measurement Of Body Functions
In the public interest, the AMA recommends that non-physicians who perform tests such as blood pressure or blood sugar measurements advise the examinee to communicate these findings to a licensed physician. (Sub. Res. 59, I-80; CLRPD Rep. B, I-90; Reaffirmed: Sunset Report, I-00)

H-200.969 Definition of Primary Care
(1) The AMA rejects the definition of primary care as stated in the March 1996 report of the Institute of Medicine as "the provision of integrated accessible health care services by clinicians." The AMA believes that primary care consists of the provision of a broad range of personal medical care (preventive, diagnostic, palliative, therapeutic, curative, counseling and rehabilitative) in a manner that is accessible, comprehensive and coordinated by a licensed MD/DO physician over time. Care may be provided to an age-specific or gender-specific group of patients, as long as the care of the individual patient meets the above criteria. (2) The AMA encourages the efforts to define what constitutes primary care services. Data should be collected on which specialties currently provide these services, and how these services are integrated into the practice of physicians. Such data are essential to determine future physician workforce needs in primary care. (3) The AMA encourages that training programs for physicians who will practice primary care include appropriate educational experiences to introduce physicians to the required knowledge and skills, as well as to the types of services and the modes of practice that characterize primary care. (4) Where case management or coordination might limit access to appropriate medical care, patients should have the freedom to see a physician appropriate for the services they need, regardless of specialty. Above all, the best interests of the patient must be paramount. (BOT Rep. 12-A-94; Reaffirmed CMS Rep. 3, A-96; BOT Rep. 19, A-97; Amended: Res. 317, I-97; Reaffirmed: Res. 220, I-98)

H-285.933 Financial Liability Encountered in Referrals for Alternative Care
The AMA supports legislation that managed care organizations that offer alternative medicine as a covered service not require referral by the primary care physician for that service, and that the primary care physician not be held at risk financially for the costs of those provided alternative medical services. (Res. 702, A-98; Reaffirmed: BOT Rep. 36, A-02)

H-295.902 Alternative Medicine
(1) AMA policy states that courses offered by medical schools on alternative medicine should present the scientific view of unconventional theories, treatments, and practice as well as the potential therapeutic utility, safety, and efficacy of these modalities. (2) Our AMA will work with members of the Federation to convey physicians' and patients' concerns and questions about alternative care to the NIH Office of Alternative Medicine and work with them and other appropriate bodies to address those concerns and questions. (CSA Rep. 12, A-97; Appended by Res. 525, A-98)

H-480.957 Health Plan Liability for Complementary and Alternative Therapy Requests
Our AMA recommends that physicians include indemnification clauses for CAT referrals in all health plan contracts when such plans require referral for CAT. (BOT Rep. 36, A-02)

H-405.969 Definition of a Physician
The AMA affirms that a physician is an individual who has received a "Doctor of Medicine" or a "Doctor of Osteopathic Medicine" degree or an equivalent degree following successful completion of a prescribed course of study from a school of medicine or osteopathic medicine. (CME Rep. 4-A-94; Reaffirmed by Sub. Res. 712, I-94; Reaffirmed and Modified: CME Rep. 2, A-04)

Practice patterns of naturopathic physicians: Results from a random survey of licensed practitioners in two US States

Boon HS, Cherkin DC, Erro J, Sherman KJ, Milliman B, Booker J, Cramer EH, Smith MJ, Deyo RA, Eisenberg DM. *BMC Complement Altern Med.* 2004 Oct 20;4:14.

Leslie Dan, faculty of Pharmacy, University of Toronto, Toronto, Ontario, Canada. heather.boon@utoronto.ca

BACKGROUND: Despite the growing use of complementary and alternative medicine (CAM) by consumers in the U.S., little is known about the practice of CAM providers. The objective of this study was to describe and compare the practice patterns of naturopathic physicians in Washington State and Connecticut. METHODS: Telephone interviews were conducted with state-wide random samples of licensed naturopathic physicians and data were collected on consecutive patient visits in 1998 and 1999. The main outcome measures were: Sociodemographic, training and practice characteristics of naturopathic physicians; and demographics, reasons for visit, types of treatments, payment source and visit duration for patients. RESULT: One hundred and seventy practitioners were interviewed and 99 recorded data on a total of 1817 patient visits. Naturopathic physicians in Washington and Connecticut had similar demographic and practice characteristics. Both the practitioners and their patients were primarily White and female. Almost 75% of all naturopathic visits were for chronic complaints, most frequently fatigue, headache, and back symptoms. Complete blood counts, serum chemistries, lipids panels and stool analyses were ordered for 4% to 10% of visits. All other diagnostic tests were ordered less frequently. The most commonly prescribed naturopathic therapeutics were: botanical medicines (51% of visits in Connecticut, 43% in Washington), vitamins (41% and 43%), minerals (35% and 39%), homeopathy (29% and 19%) and allergy treatments (11% and 13%). The mean visit length was about 40 minutes. Approximately half the visits were paid directly by the patient. CONCLUSION: This study provides information that will help other health care providers, patients and policy makers better understand the nature of naturopathic care.

Characteristics of visits to licensed acupuncturists, chiropractors, massage therapists, and naturopathic physicians

Cherkin DC, Deyo RA, Sherman KJ, Hart LG, Street JH, Hrbek A, Davis RB, Cramer E, Milliman B, Booker J, Mootz R, Barassi J, Kahn JR, Kaptchuk TJ, Eisenberg DM. *J Am Board Fam Pract.* 2002 Nov-Dec;15(6):463-72.

Center for Health Studies, Group Health Cooperative, Seattle 98101, USA.

BACKGROUND: Despite growing popularity of complementary and alternative medical (CAM) therapies, little is known about the patients seen by CAM practitioners. Our objective was to describe the patients and problems seen by CAM practitioners. METHODS: We collected data on 20 consecutive visits to randomly sampled licensed acupuncturists, chiropractors, massage therapists, and naturopathic physicians practicing in Arizona, Connecticut, Massachusetts, and Washington. Data were collected on patient demographics, smoking status, referral source, reasons for visit, concurrent medical care, payment source, and visit duration. Comparative data for conventional physicians were drawn from the National Ambulatory Medical Care Survey. RESULTS: In each profession, at least 99 practitioners collected data on more than 1,800 visits. More than 80% of visits to CAM providers were by young and middle-aged adults, and roughly two thirds were by women. Children comprised 10% of visits to naturopathic physicians but only 1% to 4% of all visits to other CAM providers. At least two thirds of visits resulted from self-referrals, and only 4% to 12% of visits were from conventional physician referrals. Chiropractors and massage therapists primarily saw musculoskeletal problems, while acupuncturists and naturopathic physicians saw a broader range of conditions. Visits to acupuncturists and massage therapists lasted about 60 minutes compared with 40 minutes for naturopathic physicians and less than 20 minutes for chiropractors. Most visits to chiropractors and naturopathic physicians, but less than one third of visits to acupuncturists and massage therapists, were covered by insurance. CONCLUSIONS: This information will help inform discussions of the roles CAM practitioners will play in the health care system of the future.

Homeopathy and naturopathy: Practice characteristics and pediatric care
Lee AC, Kemper KJ. *Arch Pediatr Adolesc Med.* 2000 Jan;154(1):75-80.
Center for Holistic Pediatric Education and Research, Children's Hospital, Harvard Medical School, Boston, Mass. 02115, USA.

OBJECTIVE: To describe the practice characteristics and pediatric care of homeopathic practitioners (HPs) and naturopathic doctors (NDs). DESIGN: Cross-sectional, descriptive survey. SETTING: Homeopathic and naturopathic practices in Massachusetts. PARTICIPANTS: Homeopathic practitioners (N = 42) and NDs (N = 23) identified from the yellow pages, regional and national society membership lists, schools, magazine advertisements, and by word-of-mouth. The response rate was 55% (23/42) for HPs and 65% (15/23) for NDs. MAIN OUTCOME MEASURES: Demographics, practice characteristics, fee structure, and amount of pediatric care. Practitioners were asked for their approach to childhood immunizations and to treating a febrile neonate. Data were analyzed using simple descriptive statistics. RESULTS: Almost all respondents were white. Among the HPs, 13 (57%) were licensed medical doctors. Naturopathic doctors and HPs reported having an average of only 25 to 40 patient visits per week, but children and adolescents accounted for up to one third of these visits. Nearly all reported treating children, but fewer than half of the practitioners reported any formal pediatric training. Initial patient visits typically lasted more than 1 hour and cost $140 to $150. Follow-up visits were scheduled every 4 to 6 weeks and lasted more than 30 minutes on average. Insurance covered less than one third of the patient visits, and sliding scale payments were offered by less than half of the respondents. Most practitioners reported that they did not actively recommend immunizations and fewer than half of the nonphysician practitioners reported that they would refer a 2-week-old neonate with a fever to a medical doctor or emergency medical facility. CONCLUSIONS: Many patients using homeopathy and naturopathy are children. Visits to these providers are frequent and fees are primarily paid out-of-pocket. Failure on the part of these providers to recommend immunizations or recognize potentially serious illnesses is cause for concern.

A pilot and feasibility study on the effects of naturopathic botanical and dietary interventions on sex steroid hormone metabolism in premenopausal women
Greenlee H, Atkinson C, Stanczyk FZ, Lampe JW. *Cancer Epidemiol Biomarkers Prev.* 2007 Aug;16(8):1601-9.
Mailman School of Public Health, Columbia University, 7th Floor, 722 West 168th Street, New York, NY 10028, USA. hg2120@columbia.edu

Naturopathic physicians commonly make dietary and/or dietary supplement recommendations for breast cancer prevention. This placebo-controlled, parallel-arm, pilot study tested the effects of two naturopathic interventions over five menstrual cycles on sex steroid hormones and metabolic markers in 40 healthy premenopausal women. The intervention arms were as follows: combination botanical supplement (*Curcuma longa, Cynara scolymus, Rosmarinus officinalis, Schisandra chinensis, Silybum marinum,* and *Taraxacum officinalis*; n = 15), dietary changes (3 servings/d crucifers or dark leafy greens, 30 g/d fiber, 1-2 liters/d water, and limiting caffeine and alcohol consumption to 1 serving each/wk; n = 10), and placebo (n = 15). Early-and late-follicular phase serum samples from cycles 1 and 5 were analyzed for estrogens (estrone, estrone-sulfate, total estradiol, and free estradiol), androgens (dehydroepiandrosterone, dehydroepiandrosterone-sulfate, androstenedione, total testosterone, and free testosterone), sex hormone-binding globulin, and metabolic markers (insulin, insulin-like growth factor-I, insulin-like growth factor binding protein-3, and leptin). Serum samples collected during the mid-luteal phase of cycles 1 and 5 were analyzed for total estradiol, free estradiol, and sex hormone-binding globulin. Urine samples collected during the late follicular phase of cycles 1 and 5 were analyzed for 2-hydroxyestrone and 16alpha-hydroxyestrone. During the early follicular phase, compared with placebo, the

4151

botanical supplement decreased dehydroepiandrosterone (-13.2%; P = 0.02), dehydroepiandrosterone-sulfate (-14.6%; P = 0.07), androstenedione (-8.6%; P = 0.05), and estrone-sulfate (-12.0%; P = 0.08). No other trends or statistically significant changes were observed. When comparing dietary changes with placebo, no statistically significant differences were observed. Overall, in this pilot study, the naturopathic interventions had no substantial effects on estrogen measures. Early-follicular phase androgens decreased with the botanical supplement.

Deaths resulting from hypocalcemia after administration of edetate disodium: 2003–2005
Brown MJ, Willis T, Omalu B, Leiker R. *Pediatrics.* 2006 Aug;118(2):e534-6.
Lead Poisoning Prevention Branch, Division of Emergency and Environmental Health Services, National Center for Environmental Health, Centers for Disease Control and Prevention, Atlanta, Georgia 30341, USA. mjb5@cdc.gov

From 2003 to 2005, deaths of 3 individuals as a result of cardiac arrest caused by hypocalcemia during chelation therapy were reported to the Centers for Disease Control and Prevention. Two were children, both of whom were treated with edetate disodium. At the time of this writing, the adult case was still under investigation. No previous cases of death resulting from hypocalcemia during chelation have been reported. From our experience and review of the literature, we suggest that health care providers who are unfamiliar with chelation consult an expert before undertaking treatment and that hospital formularies evaluate whether stocking edetate disodium is necessary, given the risk for hypocalcemia and the availability of less toxic alternatives.

Why alternative medicine cannot be evidence-based
Tonelli MR, Callahan TC. *Acad Med.* 2001 Dec;76(12):1213-20.
Department of Medicine, Division of Pulmonary and Critical Care Medicine, University of Washington School of Medicine, Seattle, Washington, USA. tonelli@u.washington.edu

The concept of evidence-based medicine (EBM) has been widely adopted by orthodox Western medicine. Proponents of EBM have argued that complementary and alternative medicine (CAM) modalities ought to be subjected to rigorous, controlled clinical trials in order to assess their efficacy. However, this does not represent a scientific necessity, but rather is a philosophical demand: promoters of EBM seek to establish their particular epistemology as the primary arbiter of all medical knowledge. This claim is problematic. The methods for obtaining knowledge in a healing art must be coherent with that art's underlying understanding and theory of illness. Thus, the method of EBM and the knowledge gained from population-based studies may not be the best way to assess certain CAM practices, which view illness and healing within the context of a particular individual only. In addition, many alternative approaches center on the notion of non-measurable but perceptible aspects of illness and health (e.g., Qi) that preclude study within the current framework of controlled clinical trials. Still, the methods of developing knowledge within CAM currently have limitations and are subject to bias and varied interpretation. CAM must develop and defend a rational and coherent method for assessing causality and efficacy, though not necessarily one based on the results of controlled clinical trials. Orthodox medicine should consider abandoning demands that CAM become evidence-based, at least as "evidence" is currently narrowly defined, but insist instead upon a more complete and coherent description and defense of the alternative epistemic methods and tools of these disciplines.

Complementary and alternative medical treatment of breast cancer: A survey of licensed North American naturopathic physicians
Standish LJ, Greene K, Greenlee H, Kim JG, Grosshans C. *Altern Ther Health Med.* 2002 Jul-Aug;8(4):74-6, 78-81.
Bastyr University Research Institute, Kenmore, Wash, USA.

CONTEXT: Complementary and alternative medicine (CAM) use is on the rise in the United States, especially for breast cancer patients. Many CAM therapies are delivered by licensed naturopathic physicians using individualized treatment plans. OBJECTIVE: To describe naturopathic treatment for women with breast cancer. DESIGN: Cross-sectional mail survey in 2 parts: screening form and 13-page survey. SETTING: Bastyr University Cancer Research Center, Kenmore, Wash. PARTICIPANTS: All licensed naturopathic physicians in the United States and Canada (N=1,356) received screening forms; 642 (47%) completed the form. Of the respondents, 333 (52%) were eligible, and 161 completed the survey (48%). MAIN OUTCOME MEASURES: Demographics of naturopathic physicians, development of treatment plans, CAM therapies used, perceived efficacy of therapeutic interventions.

4152

RESULTS: Of those respondents screened, 497 (77%) had provided naturopathic care to women with breast cancer, and 402 (63%) had treated women with breast cancer in the previous 12 months. Naturopaths who were women were more likely than men to treat breast cancer (P < or = .004). Of the survey respondents, 104 (65%) practiced in the United States, and 57 (35%) practiced in Canada; 107 (66.5%) were women, and 54 (33.5%) were men. To develop naturopathic treatment plans, naturopathic physicians most often considered the stage of cancer, the patient's emotional constitution, and the conventional therapies used. To monitor patients clinically, 64% of the naturopathic physicians used diagnostic imaging, 57% considered the patient's quality of life, and 51% used physical examinations. The most common general CAM therapies used were dietary counseling (94%), botanical medicines (88%), antioxidants (84%), and supplemental nutrition (84%). The most common specific treatments were vitamin C (39%), coenzyme Q-10 (34%), and Hoxsey formula (29%).

Evidence-based medicine and naturopathy
Jagtenberg T, Evans S, Grant A, Howden I, Lewis M, Singer J. *J Altern Complement Med.* 2006 Apr;12(3):323-8.
School of Natural and Complementary Medicine, Southern Cross University, Lismore, Australia.

Evidence-based medicine (EBM) has been advocated as a new paradigm in orthodox medicine and as a methodology for natural medicines, which are often accused of lacking an adequate scientific basis. This paper presents the voices of tradition-sensitive naturopathic practitioners in response to what they perceive as an ideologic assault by EBM advocates on the validity and integrity of natural medicine practice. Those natural medicine practices, which have tradition-based paradigms articulating vitalistic and holistic principles, may have significant problems in relating to the idea of EBM as developed in biomedical contexts. The paper questions the appropriateness of imposing a methodology that appears to minimize or bypass the philosophic and methodological foundations of natural medicine, and that itself seems primarily driven by political considerations.

Naturopathic Public Awareness Campaign (*www.globalnpac.org/index.htm*). Based out of Southwest College of Naturopathic Medicine in Tempe, AZ, this organization is dedicated to furthering and supporting current and future public awareness efforts for naturopathic medicine in the United States and Canada. Our members are students of accredited four-year, graduate-level, in-residence naturopathic medical programs. In coordination with the AANP and the accredited naturopathic medical schools, NPAC seeks to further provide resources on the national level to support both federal and states' needs to educate the public and legislators about the importance of naturopathic medicine. We strive to expand public awareness of naturopathic medicine as a viable, affordable option for quality healthcare. As a strong naturopathic student organization, NPAC is an extremely effective vehicle for public health education and community outreach.

State	Work force number	Graduate education required	University accreditation	Clinical experience required	Examination required	Reciprocity for licensure	Continuing education required	Medicaid reimbursement	Specialization
Alabama	Does not license naturopaths.								
Alaska	34* (as of April 2008)	Graduate from a school of naturopathy that required four years of attendance at the school. (Sec. 08.45.030)	Accredited or a candidate for accreditation by the Council on Naturopathic Medical Education or a successor organization recognized by the United States Department of Education. (Sec. 08.45.030)	Not addressed.	Applicant must pass the Naturopathic Physicians Licensing Examination (NPLEX). (12 AAC 42.030, Sec. 08.45.030)	Yes. (12 AAC 42.010)	Not addressed.	Not addressed.	Not addressed.
Arizona	541 (as of April 2008)	Graduate of an approved school of naturopathic medicine. (§ 32-1522)	A school or college determined by the board to have an educational program that meets standards prescribed by the Council on Naturopathic Medical Education, or its successor agency. (§ 32-1501)	Internship, preceptorship or clinical training program required. (§ 32-1522)	NPLEX and state jurisprudence exams, passing score = 75%. (§ 32-1525, R4-18-201)	Yes. (§ 32-1523)	30 credit hours per year. Ten credit hours shall be in pharmacology as it relates to the diagnosis, treatment, or prevention of disease (R4-18-205)	Not addressed.	Must have satisfactorily completed a postdoctoral training program in the specialty. (A.R.S. § 32-1529)
Arkansas	Does not license naturopaths.								
California	237* (as of March 5, 2008)	Degree in naturopathic medicine from an approved naturopathic medical school. (8.2 C.C.A. § 3630)	Accredited by the Council on Naturopathic Medical Education or an equivalent federally recognized accrediting body for the naturopathic medical profession that meets specified criteria. (8.2 C.C.A. § 3623)	To qualify as an approved naturopathic medical school, it must require 1,200 hours of supervised clinical training. (C.C.A. § 3623)	NPLEX or an equivalent approved by the North American Board of Naturopathic Examiners. (C.C.A. § 3631, C.C.R. § 4220)	Yes. (C.C.A. § 3633)	60 credit hours biennially. At least 20 being in pharmacotherapeutics. (C.C.A. § 3635)	Not addressed.	Certification in naturopathic childbirth attendance. (C.C.A. § 3651)
Colorado	Does not license naturopaths.								

Figure 1. State licensure requirements for naturopaths

State	Work force number	Graduate education required	University accreditation	Clinical experience required	Examination required	Reciprocity for licensure	Continuing education required	Medicaid reimbursement	Specialization
Connecticut	223 (as of April 2008)	Graduate of a legally chartered, reputable school or college of natureopathy. (§ 20-37)	The secretary of the Board of Natureopathic Examiners files a list with the Department of Public Health every year of Bd.-recognized natureopathic colleges. (C.S.A. § 20-37)	A college or program of natureopathic medicine approved pursuant to section 20-37 may include within its curriculum such didactic and clinical training necessary for such college or program to qualify for accreditation by the Council on Natureopathic Medical Education, including such training that is outside the scope of the practice of natureopathy. (C.S.A. § 20-37a (2)(c))	Passing score on exam prescribed by the Department of Public Health with the advice and consent of the Board of Natureopathic Examiners. (C.S.A. § 20-37)	Yes. (C.A.S. § 20-37b)	Not addressed.	Payment for natureopathic services shall be available on behalf of all persons eligible for the Medical Assistance Program subject to the conditions and limitations which apply to these services. (Sec. 17b-262-550)	Not addressed.
District of Columbi	6 naturopathic doctors (as of April 2008)	Earned a degree of doctor of naturopathic medicine from an accredited college or university. (D.C.C.A. § 3-1205.04)	College or university accredited by The Council of Naturopathic Medical Education (CNME) or any other accrediting agency recognized by the United States Department of Education. (D.C.C.A. § 3-1205.04)	Not addressed.	Pass NPLEX or other Board or Mayor-approved exam. (D.C.C.A. § 3-1205.04)	Not addressed.	30 credit hours (D.C.M.R. § 17.5206.4)	Not addressed.	Can participate in naturopathic childbirth by passing a specialty examination and meeting other criteria. (D.C.C.A. § 3-1206.21)
Delaware	Does not license naturopaths.								
Florida	Licensed naturopaths until 1986 when provisions were repealed. (21N-1.001, F.A.C.-21N-4.001, F.A.C.) Naturopaths licensed prior to 1986 are governed under then existing provisions.								
Georgia	Does not license naturopaths.								
Hawaii	97 (as of January 2008)	Applicant shall be a graduate of a school, university, or college of naturopathy. (H.R.S.A. § 455-3)	School, university, or college of naturopathy that has received candidacy status with, or has been accredited by, a regional or a national accrediting body recognized by the United States Department of Education. (H.R.S.A. § 455-3)	Not addressed.	Passing score of 75 on all parts of NPLEX examination and examination on homeopathy. (C.H.R. § 16-88-12 - § 16-88-14)	Not addressed.	Not addressed.	Not addressed.	Not addressed.

Figure 2. State scope of practice for naturopaths

State	Statutory authority	Definition of naturopathy	Rx authority	Use of term "physician"
Alaska	Alaska Statutes Sec. 08.45.050, Alaska Statutes Sec. 08.45.200	The use of hydrotherapy, dietetics, electrotherapy, sanitation, suggestion, mechanical and manual manipulation for the stimulation of physiological and psychological action to establish a normal condition of mind and body; in this paragraph, "dietetics" includes herbal and homeopathic remedies. A person who practices naturopathy may not give, prescribe, or recommend in the practice: a prescription drug; a controlled substance; a poison; engage in surgery; use the word "physician" in the person's title.	No.	No. Use of the term "physician" is expressly prohibited. (45.08.45.050) See also disclosure/transparency requirements at 12 ACC 42.900.
Arizona	A.R.S. § 32-1501	A medical system of diagnosing and treating diseases, injuries, ailments, infirmities and other conditions of the human mind and body including by natural means, drugless methods, drugs, nonsurgical methods, devices, physical, electrical, hygienic and sanitary measures and all forms of physical agents and modalities.	Yes. (A.R.S. § 32-1581) A doctor of naturopathy may dispense a natural substance, drug, or device to a patient. A "natural substance" is a homeopathic, botanical, or nutritional supplement that does not require a prescription by federal law before it is dispensed but is prescribed to treat a medical condition diagnosed by the doctor. **HOWEVER:** A notice from the AZ Naturopathic Physicians Board of Medical Examiners dated August 22, 2002 , and addressed to Pharmacists states that "A licensed naturopathic physician will be able to prescribe any legend drug or controlled substance with the following exceptions: (1) intravenous medications (except vitamins, chelation therapy, and drugs used in emergency resuscitation); (2) controlled substances as listed in Schedule I or II (except morphine will be allowed); (3) cancer chemotherapeutics classified as legend drugs; and (4) antipsychotics. The notice also states that after January 1, 2005 only naturopaths who have completed pharmacotherapeutic training and passed a test in pharmacotherapeutics will continue to be authorized to prescribe legend drugs and controlled sub	Yes. A.R.S. §32-1501.36.
California	C.C.A. § 3640 - § 3643	A naturopathic doctor may order and perform physical and laboratory examinations for diagnostic purposes, including, but not limited to, phlebotomy, clinical laboratory tests, speculum examinations, orificial examinations, and physiological function tests. A naturopathic doctor may order diagnostic imaging studies, including X-ray, ultrasound, mammogram, bone densitometry, and others, consistent with naturopathic training as determined by the bureau, but shall refer the studies to an appropriately licensed health care professional to conduct the study and interpret the results. Hot or cold hydrotherapy; naturopathic physical medicine inclusive of the manual use of massage, stretching, resistance, or joint play examination but exclusive of small amplitude movement at or beyond the end range of normal joint motion; electromagnetic energy; colon hydrotherapy; and therapeutic exercise. Devices, including, but not limited to, therapeutic devices, barrier contraception, and durable medical equipment. Health education and health counseling. Repair and care incidental to superficial lacerations and abrasions, except suturing. Removal of foreign bodies located in the superficial tissues. A naturopathic doctor may utilize routes of administration that include oral, nasal, auricular, ocular, rectal, vaginal, transdermal, intradermal, subcutaneous, intravenous, and intramuscular.	Yes. (Cal. Bus. & Prof. Code § 3627) Licensed California naturopaths may prescribe drugs or products contained in the Naturopathic formulary. As of October 2006, a Formulary advisory committee has been established, and is currently meeting, but has not yet produced a naturopathic formulary. Drugs can be furnished by a naturopathic doctor "in accordance with standardized procedures or protocols developed by the naturopathic doctor and his or her supervising physician and surgeon." The furnishing and ordering of such drugs must occur under physician and surgeon supervision, may include Schedule III through Schedule V controlled substances, and may be further limited to those drugs specified in the standardized procedure between the naturopathic doctor and physician and surgeon.	No. Use of the term "physician" is prohibited. (Cal. Bus. & Prof. Code § 3641) "...shall not use any term or designation that would tend to indicate the practice of medicine, other than naturopathic medicine, unless otherwise licensed as a physician and surgeon, osteopathic doctor, or doctor of chiropractic." This section also contains disclosure requirements.
Connecticut	Conn. Ann. Stat. § 20-34	The practice of naturopathy means the science, art and practice of healing by natural methods as recognized by the Council of Natureopathic Medical Education and approved by the State Board of Natureopathic Examiners, with the consent of the commissioner, and shall include counseling and the practice of the mechanical and material sciences of healing as follows: The mechanical sciences such as mechanotherapy, articular manipulation, corrective and orthopedic gymnastics, physiotherapy, hydrotherapy, electrotherapy and phototherapy; and the material sciences such as nutrition, dietetics, phytotherapy, treatment by natural substances and external applications. .	No. "Natural substances" means substances which are not narcotic substances, do not require the written or oral prescription of a licensed practitioner to be dispensed and are only administered orally.	Unclear. Authority to use the term is neither expressly granted nor prohibited. The term "natureopathic physician" is used in CT code (373 § 20-37b). The term is used in the official posted minutes of the Connecticut Board of Natureopathic Examiners.
District of Columbia	DCCA § 3-1201.02, § 3-1206.21, Code of D.C. Regs. § 17-5003	A system of health care that utilizes education, natural medicines, and natural therapies to support and stimulate a patient's intrinsic self-healing processes to prevent, diagnose, and treat human conditions and injuries. Does not include the practices of physical therapy, physical rehabilitation, acupuncture, or chiropractic. Administer or provide for preventive and therapeutic purposes natural medicines by their appropriate route of administration, natural therapies, topical medicines, counseling, hypnotherapy, dietary therapy, naturopathic physical medicine, therapeutic devices, and barrier devices for contraception. For the purposes of this paragraph, the term "naturopathic physical medicine" means the use of the physical agents of air, water, heat, cold, sound, and light, and the physical modalities of electrotherapy, biofeedback, diathermy, ultraviolet light, ultrasound, hydrotherapy, and exercise, and includes naturopathic manipulation and mobilization therapy; and review and interpret the results of diagnostic procedures commonly used by physicians in general practice, including physical and orificial examinations, electrocardiograms, diagnostic imaging	No. An individual licensed to practice naturopathic medicine shall not prescribe, dispense, or administer any controlled substances, except those natural medicines authorized by this chapter.	No. Practitioners of naturopathy or naturopathic healing may use the title "Doctor of Naturopathy." (DC Municipal Regulations. Title 14, Ch. 50, 5003.1)

Figure 2. State scope of practice for naturopaths

State	Statutory authority	Definition of naturopathy	Rx authority	Use of term "physician"
		techniques, phlebotomy, clinical laboratory tests and examinations, and physiological function tests. An individual licensed to practice naturopathic medicine under this chapter shall not: Perform surgical procedures, except for minor office procedures, as defined by rule; Use for therapeutic purposes, any device regulated by the United States Food and Drug Administration ("FDA") that has not been approved by the FDA.		
Hawaii	H.R.S. § 455-1	The practice of: Natural medicine, natural therapeutics, and natural procedures, for the purpose of removing toxic conditions from the body and improving the quality, quantity, harmony, balance, and flow of the vital fluids, vital tissues, and vital energy; and diagnosing, treating, and caring for patients using a system of practice that bases its treatment of physiological functions and abnormal conditions on natural laws governing the human body; utilizing physiological, psychological, and mechanical methods, such as air, water, light, sunshine, heat and cold, earth, phytotherapy, physiotherapy, mechano-therapy, naturopathic corrections and manipulation, and natural methods or modalities, together with natural or homeopathic medicines, natural foods, and herbs, and nature's remedies of the type taught in education and training at naturopathic medical colleges. The practice of naturopathy excludes surgery and the application of x-rays.	No. The practice of naturopathy excludes prescribing, dispensing, or using prescription drugs except as provided for in the definition of natural medicine.	Yes. HRS §455-1.
Idaho	Idaho Statutes § 54-5104	A naturopathic physician may use physical and laboratory examinations consistent with naturopathic medical education and training for diagnostic purposes. A naturopathic physician may order and perform diagnostic and imaging tests consistent with naturopathic medical education and training. All diagnostic and imaging tests not consistent with naturopathic medical education and training must be referred for performance and interpretation by an appropriately licensed health care professional. Naturopathic physicians are authorized to dispense, administer and prescribe prescription drugs and medical devices determined by the naturopathic medical formulary council, and authorized by the board. A naturopathic physician may perform minor office procedures pursuant to privileges authorized by the board. A naturopathic physician may perform those therapies as trained and educated and authorized by the board.	Yes. (I.C.A. § 54-5110) A formulary council was established in 2005 to adopt a formulary for naturopathic physicians. "The formulary list may not go beyond the scope of prescription medicines and medical devices covered by approved naturopathic medical education and training and existing naturopathic medical formularies, or board-approved continuing education." Nothing herein shall allow a naturopathic physician to dispense, administer, or prescribe any prescription drug as defined in {Section 54-1705(28)}, unless such prescription drug is specifically included in the naturopathic medical formulary.	Yes. Idaho Statutes §54-5102.
Kansas	K.S.A. § 65-7202	A system of health care practiced by naturopathic doctors for the prevention, diagnosis and treatment of human health conditions, injuries and diseases, that uses education, natural medicines and therapies to support and stimulate the individual's intrinsic self-healing processes, and includes prescribing, recommending or administering: (A) Food, food extracts, vitamins, minerals, enzymes, whole gland thyroid, botanicals, homeopathic preparations, nonprescription drugs, plant substances that are not designated as prescription drugs or controlled substances, topical drugs as defined in subsection (a)(9) of this section, and amendments thereto; (B) health care counseling, nutritional counseling and dietary therapy, naturopathic physical applications, barrier contraceptive devices; (C) substances on the naturopathic formulary which are authorized for intramuscular or intravenous administration pursuant to a written protocol entered into with a physician who has entered into a written protocol with a naturopathic doctor registered under this act; (D) noninvasive physical examinations, venipuncture to obtain blood for clinical laboratory tests and orificial examinations, excluding endoscopies; (E) minor office procedures; and (F) naturopathic acupuncture. A naturopathic doctor may not perform surgery, obstetrics, administer ionizing radiation, or prescribe, dispense or administer any controlled substances as defined in K.S.A. 65-4101, and amendments thereto, or any prescription-only drugs except those listed on the naturopathic formulary adopted by the board pursuant to this act.	Yes. (K.A.R. § 100-72-8) Only those medicines approved by the Board on the Naturopathic Formulary and pursuant to a written protocol with a physician. The Naturopathic Formulary is available at K.A.R. § 100-72-8.	No. "Physician" means a person licensed to practice medicine and surgery. K.S.A. §65-7272(10).

Figure 2. State scope of practice for naturopaths

State	Statutory authority	Definition of naturopathy	Rx authority	Use of term "physician"
Maine	M.R.S.A. § 12522, CMR 02 502 006	A naturopathic doctor may use and order for preventative and therapeutic purposes the following natural medicines and therapies: food, food extracts, vitamins, minerals, enzymes, digestive aids, whole gland thyroid and other natural hormones, plant substances, all homeopathic preparations, immunizations, counseling, hypnotherapy, biofeedback, dietary therapy, naturopathic manipulative therapy, naturopathic physical medicine, therapeutic devices, barrier devices for contraception and office procedures. Naturopathic doctors may also prescribe medications, including natural antibiotics and topical medicines, within the limitations set forth in subsection 4. A naturopathic doctor may use physical examinations for diagnostic purposes including phlebotomy, clinical laboratory tests, speculum examinations and physiological function tests, excluding all endoscopies and physiological function tests requiring infusion, injection, inhalation or ingestion of medications to perform tests. A naturopathic doctor may order ultrasound, x-ray and electrocardiogram tests but must refer to an appropriate licensed health care professional for conducting and interpreting the tests. A naturopathic doctor may prescribe therapeutic devices or use noninvasive diagnostic procedures commonly used by allopathic or osteopathic physicians in general practice. Naturopathic doctors have a limited scope of prescriptive authority. A naturopathic doctor may not: Prescribe, dispense or administer any substance or device identified in Schedule I, II, III, IV or V as described in the federal Controlled Substance Act, 21 United States Code, Sections 801 to 971 (1988), or any controlled substances or devices; Perform surgical procedures except those office procedures authorized by this chapter; Practice emergency medicine except when a good Samaritan rendering gratuitous services in the case of emergency and except for the care of minor injuries; or Practice or claim to practice medicine and surgery, osteopathy, dentistry, podiatry, optometry, chiropractic, physical therapy or any other system or method of treatment not authorized in this chapter.	Yes. (M.R.S.A. § 12522) A naturopathic doctor may not prescribe, dispense, or administer any substance or device identified in Schedule I, II, III, IV, or V as described in the federal Controlled Substances Act; may prescribe nonprescription medications without limitation; and may only prescribe noncontrolled legend drugs from the following categories: homeopathic remedies, vitamins and minerals, hormones, local anesthesia, and immunizations that are designated by a subcommittee of the board which shall consist of naturopathic members, a pharmacist member, and an allopathic or osteopathic member. Prior to independently prescribing noncontrolled legend drugs, a naturopathic doctor shall establish and complete a 12-month collaborative relationship with a licensed allopathic or osteopathic physician to review the naturopathic doctor's prescribing practices. (MRS §12522)	No. Use of the title "physician" by naturopathic licensees is prohibited. M.R.S. Title 32, Ch. 113-B, §12521(2).
Montana	M.C.A § 37-26-103, M.C.A. §37-26-301	Naturopathic medicine is a system of primary health care practiced by naturopathic physicians for the prevention, diagnosis, and treatment of human health conditions, injury, and disease. Its purpose is to promote or restore health by the support and stimulation of the individual's inherent self-healing processes. This is accomplished through education of the patient by a naturopathic physician and through the use of natural therapies and therapeutic substances. Naturopathic physical applications include the therapeutic use by naturopathic physicians of the actions or devices of electrical muscle stimulation, galvanic, diathermy, ultrasound, ultraviolet light, constitutional hydrotherapy, and naturopathic manipulative therapy. A naturopathic physician may not: administer ionizing radioactive substances for therapeutic purposes; perform surgical procedures except those minor surgery procedures authorized by this chapter; or claim to practice any licensed health care profession or system of treatment other than naturopathic medicine unless holding a separate license in that profession. Naturopathic physicians may engage in and utilize health care counseling, nutritional counseling and dietary therapy, naturopathic physical applications, therapeutic devices, nonprescription drugs, barrier devices for contraception, naturopathic childbirth attendance, and minor surgery.	Yes. (M.C.A. 37-26-301) A naturopathic physician may not prescribe, dispense, or administer any legend drug [as defined in 50-31-301], except for whole gland thyroid; homeopathic preparations; and natural substances, drugs, and therapies described in subsection (2), which includes food, food extracts, vitamins, minerals, enzymes, whole gland thyroid, botanical medicines, homeopathic preparations, and oxytocin (pitocin).	Yes. M.C.A. §37-26-103(9).
New Hampshire	N.H.R.S.A. § 328-E:2, N.H.R.S.A. § 328-E:4	Naturopathic medicine is a system of primary health care for the prevention, diagnosis, and treatment of human health conditions, injuries, and diseases using education, natural medicines and therapies to support and stimulate the individual's intrinsic self-healing processes. Doctors of naturopathic medicine are authorized to use, for preventive and therapeutic purposes, natural medicines and therapies, counseling, hypnotherapy, biofeedback, dietary therapy, naturopathic physical medicine, therapeutic devices, and barrier devices for contraception. Naturopathic physical medicine is the therapeutic use of the physical agents of air, water, heat, cold, sound, light, and electromagnetic non-ionizing radiation and the physical modalities of electrotherapy, diathermy, ultraviolet light, ultrasound, hydrotherapy, naturopathic manipulative therapy, and therapeutic exercise. Doctors of naturopathic medicine may use, for diagnostic purposes physical and orificial examinations, X-rays, electrocardiograms, ultrasound, phlebotomy, clinical laboratory tests and examinations, and physiological function tests. Doctors of naturopathic medicine are not authorized to perform surgical procedures, practice emergency medicine, except as a good samaritan rendering gratuitous services in the case of emergency and except for the care of minor injuries, practice or claim to practice medicine and surgery, osteopathy, dentistry, podiatry, optometry, chiropractic, physical therapy, or any other system or method of treatment not authorized in this chapter.	Doctors of naturopathic medicine shall not prescribe, dispense, or administer any legend or controlled substances, except those natural medicines as authorized by this chapter. Doctors of naturopathic medicine with specialty certification in naturopathic childbirth, shall be authorized to use oxytocin and pitocin.	Likely not. Naturopathic licensees shall use the title "doctor of naturopathic medicine" and the recognized abbreviation "N.D." Doctors of naturopathic medicine shall have the exclusive right to use of the terms: "doctor of naturopathic medicine," "naturopathic doctor," "naturopath," ""doctor of naturopathy," "naturopathic medicine," "naturopathic health care," "naturopathy," and "N.D." N.H.R.S.A. § 328-E:3.

Figure 2. State scope of practice for naturopaths

State	Statutory authority	Definition of naturopathy	Rx authority	Use of term "physician"
Oregon	O.R.S. § 685.010	Naturopathic medicine is the discipline that uses physiotherapy, natural healing processes and minor surgery and has as its objective the maintaining of the body in, or of restoring it to, a state of normal health.	Yes. (Oregon Rules 850-060-0225). Naturopathic physicians may only prescribe, dispense, or administer those substances on the Oregon Naturopathic Formulary List.	Yes. Only licensees under this chapter may use any or all of the following terms, consistent with academic degrees earned: "Doctor of Naturopathy" or its abbreviation, "N.D.," "Naturopath" or "Naturopathic Physician." However, none of these terms, or any combination of them, shall be so used as to convey the idea that the physician who uses them practices anything other than naturopathic medicine. O.R. S. §685.020
Utah	U.C.A. § 58-71-102	Naturopathic medicine is a system of primary health care for the prevention, diagnosis, and treatment of human health conditions, injuries, and diseases using education, natural medicines and therapies to support and stimulate the individual's intrinsic self-healing processes by using naturopathic childbirth (if specified requirements are met), naturopathic mobilization therapy, physical medicine, minor office procedures, prescribing or administering natural medicine, prescribing medical equipment and devices, diagnosing by using medical equipment and devices, and administering therapy or treatment by the use of medical devices, prescribing barrier devices for contraception, dietary therapy, taking and using diagnostic x-rays, electrocardiograms, ultrasound, and physiological function tests, taking body fluids for clinical laboratory tests and using the results in diagnosis, taking a history from and conducting a physical examination upon a human patient and prescribing and administering natural medicines and medical devices.	Yes. (U.C.A. § 58-71-102) Natural medicines are food, food extracts, dietary supplements, all homeopathic remedies, and plant substances not designated as prescription drugs or controlled substances; over the counter medications; other nonprescription substances (the prescription or administration of which is not restricted under federal or state law); and prescription drugs that are not controlled substances as defined in [58-37-2], the prescription of which is consistent with the competent practice of naturopathic medicine, and the prescription of which is approved by the Naturopathic Formulary Advisory Peer committee. The Naturopathic Formulary can be found at U.C.A. R156-71-202.	Yes. Naturopathic licensees can use the designation "naturopathic physician," "naturopathic doctor," "naturopath," "doctor of naturopathic medicine," "doctor of naturopathy," "naturopathic medical doctor," "naturopathic medicine," "naturopathic health care," "naturopathy," "N.D.," "N.M.D." U.C.A. §58-71-102.
Vermont	V.S.A. § 4121, V.C.R. § 04-030-380,-3.7	Naturopathic medicine is a system of health care that utilizes education, natural medicines and natural therapies to support and stimulate a patient's intrinsic self-healing processes to prevent, diagnose and treat human health conditions and injuries. This includes administering or providing, for preventative and therapeutic purposes, nonprescription medicines, topical medicines, botanical medicines, homeopathic medicines, counseling, hypnotherapy, nutritional and dietary therapy, naturopathic physical medicine, naturopathic childbirth, therapeutic devices, barrier devices for contraception, and using diagnostic procedures such as physical and orificial examinations, electrocardiograms, diagnostic imaging techniques, phlebotomy, clinical laboratory tests and examinations, and physiological function tests. Naturopathic physical medicine is the use of the physical agents of air, water, heat, cold, sight, sound and light, ultrasound, hydrotherapy and exercise. Naturopathic medicine does not include physical therapy, physical rehabilitation or chiropractic.	Yes. (V.S.A. § 4121). An individual [licensed as a naturopathic physician] may administer or provide for preventative and therapeutic purposes nonprescription medicines, topical medicines, botanical medicines, homeopathic medicines, counseling, hypnotherapy, nutritional and dietary therapy, naturopathic physical medicine, naturopathic childbirth, therapeutic devices, barrier devices for contraception, and prescription medicine authorized by this chapter or by the formulary. The formulary can be found at Vermont Rules 13-140-061.	Yes. V.S.A. §26-81-4121(9).
Washington	R.C.W § 18.36A.040	Naturopathic medicine is the practice by naturopaths of the art and science of the diagnosis, prevention, and treatment of disorders of the body by stimulation or support, or both, of the natural processes of the human body. A naturopath is responsible and accountable to the consumer for the quality of naturopathic care rendered. The practice of naturopathic medicine includes manual manipulation (mechanotherapy), the prescription, administration, dispensing, and use, except for the treatment of malignancies, of nutrition and food science, physical modalities, minor office procedures, homeopathy, naturopathic medicines, hygiene and immunization, nondrug contraceptive devices, common diagnostic procedures, and suggestion; however, nothing in this chapter shall prohibit consultation and treatment of a patient in concert with a practitioner licensed under chapter 18.57 or 18.71 RCW *(osteopathic medicine provisions)*. No person licensed under this chapter may employ the term "chiropractic" to describe any services provided by a naturopath.	Yes. (RCW § 18.36A.020 and A.040). "Naturopathic medicines" means vitamins, minerals, botanical medicines, homeopathic medicines, hormones, and those legend drugs and controlled substances consistent with naturopathic medical practice in accordance with rules established by the Secretary. Controlled substances are limited to codeine and testosterone products that are contained in Schedules III, IV, and V in Chapter 69.50 RCW. A Legend Substance List is currently being updated.	Most likely/unclear. Statutory headings refer to "naturopathic physicians," but express authority to use the title "physician" cannot be located in state statutes or regulations.

January 28, 2009

Honorable Bettye Davis, Chair
Senate Health & Social Services Committee
State Capitol Room 30
Juneau, AK 99801

Dear Senator Davis:

The Department of Health and Social Services respectfully requests a hearing in the Senate Health & Social Services Committee on Senate Bill 82, "An Act providing for an effective date by delaying the effective date of the change of coverage of adult dental services under Medicaid; and providing for an effective date."

The bill extends the termination date for enhanced adult dental services under Medicaid for five years. The Legislature authorized an enhanced program in 2006. The program provides preventative and restorative services to needy eligible adults under the Medicaid program.

A copy of Governor Palin's transmittal letter providing additional information on the bill and the associated fiscal note should be on file with the committee.

Your favorable consideration of this request will be appreciated.

Sincerely,

Wilda Laughlin
Legislative Liaison

Sponsor Statement
January 29, 2009

SB 82, "An Act providing for an effective date by delaying the effective date of the change of coverage of adult dental services under Medicaid; and providing for an effective date."

This legislation is necessary to keep operating the Adult Preventative Dental Medicaid program beyond this fiscal year. In April 2007, Alaska began providing preventive and restorative dental care for adults age 21 and older enrolled in Medicaid for a trial period established by the Legislature to evaluate the new program. In the past, Medicaid only treated emergency dental as defined by minimum treatment for relief of pain and acute infection for adult Medicaid recipients. Without reauthorization of the services in the 2009 legislative session, the preventative and restorative dental services will sunset June 30, 2009.

This coverage expansion was added because infections in the mouth are no different than infections in other parts of the body in that they can affect the health and wellbeing of the individual. Dental infections cause pain and lost time at work, and affect overall health. Further, some of these emergent dental cases end up in the hospital emergency room for treatment and result in palliative care for pain relief but not dealing with the dental need causing the problem. Waiting until a dental emergency occurs can result in more expensive dental care and often was resulting in the need to extract teeth under previous level of Medicaid dental coverage for adults. Decayed and missing teeth can affect employability and job advancement opportunities.

Services provided under the Adult Preventative Dental Medicaid program must be preauthorized and are subject to a $1,150 annual cap per individual. Services include exams, cleanings, fillings, root canals and dentures. Total program costs have been limited to fiscal limits set by the legislature, ensuring that total program spending remains within the budgeted amount. This bill extends the sunset date for the Adult Preventative Dental program from June 30, 2009 to June 30, 2014.

The Adult Preventative Dental Medicaid program helps protect and promote the health of Alaskans by improving affordable access to dental care services to the nearly 40,000 eligible adult Alaskans enrolled in Medicaid annually. During fiscal year 2008 about 7,600 adults received treatment under this program with about 250 dental providers participating in the program. Total expenditures for these services in fiscal year 2008 were $4.6 million.

While the Department does not have evidence of immediate savings from the enhanced dental coverage to date, it continues to believe that the Medicaid program will eventually experience savings as long term access to preventive dental care reduces the need for more intensive dental procedures and improves the overall health status of adult Medicaid recipients, reducing the cost of treating other diseases. We will continue to analyze Medicaid data to determine if the evidence supports this hypothesis. Until then, the Department believes it is important to maintain this program that has such potential to reduce complications of other diseases and improve the quality of life for so many Alaskans.

ANALYSIS: *(Attach a separate page if necessary)*

This bill extends the sunset date for the Adult Preventative Dental program from June 30, 2009 to June 30, 2014. On July 1, 2014 dental services for adult Medicaid recipients will revert to emergent dental services (treatment for immediate relief of pain and acute infection). During FY2008 about 7,600 adults received treatment under this program. Forecasted expenditures are based on an analysis of paid claims. The estimated federal portion is based on projected federal financial participation rates for 2010 through 2014. The fiscal note amount for 2010 anticipates continuation of the adult dental program without anticipating program growth. FY 2010 projections will be updated to reflect the most recent trends during the course of the legislative session.

FISCAL NOTE # 1

STATE OF ALASKA

2009 LEGISLATIVE SESSION

BILL NO. SB 82

ANALYSIS CONTINUATION

In April 2007, Alaska began providing preventive and restorative dental care for adults age 21 and older enrolled in Medicaid. The Legislature established a three year trial period to evaluate the new program, which will end June 30, 2009, if not reauthorized. Services provided under the Adult Preventative Dental Medicaid program must be preauthorized and are subject to a $1,150 annual cap per individual. Services include exams, cleanings, fillings, root canals and dentures. Total program costs are limited to fiscal limits set by the legislature, ensuring that total program spending remains within the budgeted amount.

The Adult Preventative Dental Medicaid program helps protect and promote the health of Alaskans by improving affordable access to dental care services to the nearly 40,000 eligible adult Alaskans enrolled in Medicaid annually. During fiscal year 2008 about 7,600 adults received treatment under this program. In the past, Medicaid only treated emergency pain relief and acute infection for adult dental needs. This coverage expansion was added because infections in the mouth are no different than infections in other parts of the body. Dental infections cause pain and lost time at work, and affect overall health. Waiting until a dental emergency occurs can result in more expensive dental care. Missing teeth can affect employability.

The Alaska Mental Health Trust Authority contributed to state matching funds during the first three years of the program but will not do so after June 30, 2009. Fund source calculations for this fiscal note assume only GF match for the state portion. The federal portion is estimated for 2010 through 2014 based on the proportion of tribal and Title XIX reimbursable costs as forecast for 2010, and the estimates of federal matching percentages for 2010 through 2014. Approximately 18% of the claims are eligible for Indian Health Services and 100% federal reimbursement. The remaining 82% of claims are eligible for regular FMAP, which is projected to average 51.21% for state FY2010, 50.36% for FY2011 and 50% for FY 2012 to FY 2014.

Sectional Analysis

SB 82, "An Act providing for an effective date by delaying the effective date of the change of coverage of adult dental services under Medicaid; and providing for an effective date."

Section 1 provides for the repeal date of the enhanced (preventative and restorative) dental services on June 30, 2014.

Section 2 provides for adult dental services to revert back to emergent services on July 1, 2014 (dental services for immediate relief of pain and acute infection) after repeal of the enhanced dental services.

Section 3 provides for an effective date.

ALASKA PUBLIC HEALTH ASSOCIATION

Committed To Advancing Alaska's Public Health Since 1978

ALPHA

ALPHA RESOLUTION 5-2008

Support for Enhanced Dental Services for Adult Medicaid Recipients

Sponsor: Alaska Dental Access Coalition
Brad Whistler, DMD

WHEREAS, recognizing that decayed or missing teeth can be a significant factor in employability and/or job advancement, welfare recipients who received rehabilitative dental treatment (including fillings, extractions, and dentures) were "...twice as likely to receive favorable or neutral employment outcomes as they were to receive unfavorable employment outcomes."[1]

WHEREAS, acknowledging that improvement in dental care access helps those most in need, the American Dental Association recommends adult preventive and restorative dental services be included in all state Medicaid programs. Tribal health programs and community health centers share this service expansion initiative and stand ready to implement increased dental care to those most in need.

WHEREAS, knowing that studies show links between oral health and other systemic/chronic disease including diabetes and cardiovascular disease,[2] enhanced dental services may lead to reduced Medicaid expenses for clients with chronic diseases.

WHEREAS, understanding that maternal periodontal disease is linked with pre-term, low birth-weight (PTLBW) births, good oral health in pregnant women may result in a reduction in health care expenses for children with poor birth outcomes. One recent study indicated women with periodontal disease are 7.5 times more likely to have a PTLBW baby.[3]

WHEREAS, setting an annual maximum limit on non-emergent Medicaid dental services, such as the existing $1,150 annual limit per adult Medicaid recipient, controls Medicaid expenditures - it also encourages the dentist and client to discuss priorities and treatment options. The

[1] "Dental Treatment Highly Effective in Helping Welfare Recipients Gain Employment", University of California – San Francisco School of Dentistry, press release, March 10, 2004.
[2] Okero, CA et al., "Tooth Loss and Heart Disease: Findings from the Behavioral Risk Factor Surveillance System" *American Journal of Preventive Medicine*, 2005; 29:5 (supplement 1)
[3] Lieff S, Hared H, McKaig R et al., "Periodontitis and Preterm Low Birth Weight in Pregnant Women" *Journal of Dental Research*, 2000;79(supplemental):608

current amount of the annual limit allows for adult Medicaid recipients to receive a complete set of dentures over a two-year period.

WHEREAS, recognizing that studies show increased risks of early childhood caries in infants with mothers/caregivers who have active dental decay due to transmission of bacteria,[4] Alaskan children will experience better dental health and less dental infection and less dental infection if parents/caregivers can have their treatment needs met prior to the infant's teeth erupting..

WHEREAS, acknowledging that much of the focus on dental decay is on children, adults remain at high risk for two common health problems: dental decay and periodontal disease.

THEREFORE BE IT RESOLVED, that the Alaska Public Health Association supports and will advocate for continued coverage of non-emergent dental services (e.g., preventive and routine restorative dental services), specifically the legislative reauthorization of the services in the 2009 legislative session, for adult Medicaid recipients. .

BE IT FURTHER RESOLVED that the Alaska Public Health Association as an organization as well as individual Board Members and other Members will engage in low and no-cost advocacy efforts to promote coverage expansion such as, but not limited to, the following:

- Circulation of advocacy action requests to membership
- Circulation of advocacy action requests to partners and other individuals
- Posting of ALPHA resolutions on the Alaska Public Health Association's website and/or making this resolution available
- Participation in email advocacy campaigns
- Contact with policy makers via phone, letter, email and/or in-person meetings
- Public testimony in legislative hearings, town hall meetings, and other public forums
- Contribution of op-ed articles and/or letters to the editor
- Contributions to radio programs via calling-in or scheduled interviews
- Distribution of this resolution statement to policy makers and key officials such as the Governor's office and, at a minimum, members of Senate and House HESS and Finance Committees.

Fiscal & Public Health Impact Statement

Fiscal Impact on ALPHA: This action will result in minor costs associated with sending this resolution and accompanying cover letter to the Governor and key political leaders.

Public Health Impact: The enhanced dental services for adult Medicaid recipients makes available preventive and restorative dental services, in addition to the existing dental emergency services, for the 41, 000 adults enrolled in the Medicaid program.

To: **Members of the Senate HSS Committee**

From: **The Alaska Commission on Aging**

Date: **January 31, 2009**

Subject: **Support Letter for SB 82 (Senate Rules Committee by request of Governor Palin)**

The Alaska Commission on Aging (ACoA) encourages support of SB 82, a bill to reauthorize preventive and restorative dental services for adult Medicaid recipients sponsored by the Senate Rules Committee at the request of Governor Palin. Medicaid coverage for these services will sunset June 30, 2009 without legislative reauthorization.

Good nutrition is vital for health and wellness across the life span and depends on oral health. Dental pain, missing, and decayed teeth can affect employment and job advancement, contribute to missed work, and complicate management of other chronic diseases. Vulnerable older Alaskans are at risk of improper nutrition due to dental problems that may affect their dietary choices. Seniors are more prone to developing dental infections that have been associated with periodontal disease, diabetes, pneumonia, and other chronic diseases including cardiovascular disease.

Children are also at risk of developing dental infection. Research has shown that the bacteria involved with the dental decay process are typically passed from parent to child and from grandparent to grandchild, in situations where the grandparent is the primary caregiver. Part of the efforts to reduce dental decay in young children relates to reducing the level of dental infection in the caregiver (Berkowitz 2003). Those with dental coverage are more likely to access dental services for their children or grandchildren. Additionally, dental infections due to periodontal disease have been associated with adverse pregnancy outcomes (Lieff, Hared, and McKaig: 2000).

In addition to the health issues involved, decayed or missing teeth can be a factor in employability, which is of concern to all persons seeking employment, regardless of age. Preventive and restorative dental services result in fewer tooth extractions for Medicaid clients and offer increase chance of employment.

Currently, Medicaid dental services are limited to expensive emergency care for immediate relief of pain and acute infection, with no coverage for preventative and restorative dental care. These limited services often lead to extraction of permanent teeth. Services offered by the adult dental Medicaid program help contain future Medicaid costs for emergency dental work, assist in chronic disease prevention, and promote healthy lifestyles.

Since inception on April 1, 2007 through September 30, 2008, this program has served 9,267 unduplicated persons with 283 providers participating who have performed 42,268 procedures. During FY 2008 alone, 7,470 Alaskans received services through this program.

Because infections in the mouth are no different than infections in other parts of the body, ACoA believes that the enhanced Medicaid adult dental program should continue for as long as possible. Currently, the limit for services is $1,150 per year per Medicaid beneficiary. We suggest that the cap for services be re-considered in

light of the current costs for providing dental care. We understand that the average cost for dentures has increased to $1,700 or $1,800 for one set. According to estimates from the National Dental Advisory Service, for example, the estimated median charge in Alaska for a set of dentures is in excess of $2,900.

ACoA supports SB 82 and believes that this program is a wise public investment that will help reduce expensive emergency dental needs, associated costs in health care, and enhance health and wellness for elderly Alaskans. Please feel free to contact Denise Daniello, ACoA's executive director (465-4879), should you have any questions regarding our position. Thank you for your consideration.

Sincerely,

Sharon Howerton-Clark

Senate HESS Committee Members

This week all Legislators will receive a mailing from the Alaska Dental Society (ADS) on dental issues in Alaska. One of our focus areas this legislative session will be on dental Medicaid and changes we believe are long overdue to the Medicaid system. At this point in the legislative session we offer cautious support for SB65 and its companion bill HB26. We have had preliminary discussions with the House sponsor, Rep. Hawker but were unable to discuss our position with committee members before Monday's hearing. The ADS feels it would be better to repeal the sunset date rather than extending as the Governor's bill, SB82 does.

A letter outlining the ADS position on Medicaid will be in our packet of information; I have copied a portion below:

A limited "Adult Dental" Medicaid program that provides for basic preventative and restorative services to adults is set to sunset this year. The Alaska Dental Society **cautiously supports** the continuation of this program and the expansion of our Alaska Denali Kid Care Program under the State Children's Health Insurance Program (SCHIP).

While the intent of both of these programs is good -- to increase the level of dental care within the state, the fact is that the existing Medicaid delivery system for dental benefits is already severely strained and discourages dentists from participating.

Therefore the ADS recommends that bills repealing the sunset of the adult Medicaid program and extending adult benefits and bills expanding eligibility for the Denali Kid Care include meaningfully changes to the Medicaid program that will remove barriers to participation by providers.

To this end, the ADS has been working with coalitions of health care groups, advocacy groups, along with representatives of the Medicaid Division and private practitioners over the past two years. Progress has been made on some of the issues, while others remain a "work in progress." The ADS has become convinced that without legislative a mandate some or all of the progress that has been made may fall by the wayside.

The ADS is planning an informal meeting in February with legislators, the Medicaid program leaders and other stakeholders. We will be asking about dates shortly and hope that a time can be chosen to allow as many to participate as possible.

A separate sheet is enclosed listing some of the key issues and reasons change is needed is attached

If there are any questions on the issues raised I can be reached at drdave@acsalaska.net or 723-2884.

Re: Support for Reauthorization of Adult Dental Medicaid Program

Senator Davis:

The Alaska Mental Health Board and Advisory Board on Alcohol and Drug Abuse appreciate your acknowledgement of the need for continued access to preventative and restorative dental care for Alaskans living in poverty. For Alaskans experiencing a serious disability that prevents them from maintaining employment, lack of income and insurance often results in a lack of dental care. This can have serious health consequences.

We know that a variety of factors contribute to poor dental health among Alaskans experiencing serious mental illness and substance use disorders. Many of the medications prescribed to manage the symptoms of the most serious mental illnesses cause dental and oral health problems. Due to the barriers to preventive dental care that existed before Alaska began its Adult Dental Medicaid program, many people now require significant dental care critical to their overall health. By continuing this program — and its preventative dental care services — we can reduce the need for more costly critical services in these populations.

In FY2008, approximately 7,600 Alaskan adults received dental care under this program. By providing access to quality preventative and restorative care to these Alaskans, we improved their ability to secure employment, maintain employment, make healthy dietary choices, manage existing chronic diseases, and reduce risk factors related to pre-term births, diabetes, and cardiovascular disease. For this reason, we support the reauthorization of the Adult Dental Medicaid Program.

Thank you for your work, and please let us know if the Alaska Mental Health Board and Advisory Board on Alcoholism and Drug Abuse can assist in the effort to pass this important legislation.

Alaska State Capitol, Room 30
Juneau, AK 99801-1182

RE: SB 65 (Davis)--Support

Dear Chair Davis:

On behalf of the members of AARP in Alaska, we encourage your colleagues on the Senate Health and Social Services Committee to support SB 65, authored by you and co-sponsored by your Committee colleague Senator Johnny Ellis.

SB 65 would eliminate the sunset date on the adult dental benefit in the Medicaid program. This program has proven to be invaluable over the past years not only for dental exams, prevention, and treatment but also for providing dentures, primarily to older Alaskans in long term care facilities. In addition, adults who had low incomes and qualified for Medicaid were able to see a dentist and have the restorative work completed that allowed them to be able to successfully participate in job interviews.

Older Alaskans who have dental problems, missing teeth, or are in need of dentures often have accompanying nutrition problems. These nutrition problems can exacerbate other health issues and create an overall deterioration in health status. AARP believes that dental care is essential to quality health care. Funding for dental care should be considered sensible prevention with the long term possibility of saving Medicaid funds that would not need to be spent on more serious health care problems resulting from poor oral health status.

The current program has a limit of $1,150 per year per Medicaid beneficiary. Originally this figure was used because it was the amount that would pay for either upper or lower dentures. We understand that the average cost for dentures has gone up to $1,700 or $1,800 for just one set. We recommend that some appropriate increase in the annual benefit be included with the passage of SB 65. If possible, some form of "cost of dentures" inflation could be built into the program to keep up with dental inflation.

AARP requests an "AYE" vote on SB 65.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Alaska Dental Society Medicaid Priority List

- Removal of dentistry from state audits.
  - Superseded by federal audits
  - General consensus that this can be done
- Reimburse provider for treatment if patient is eligible for services at initial treatment date.
  - Currently payment will be denied if patient is eligible when treatment started but ineligible when treatment completed.
  - Key dental procedures such as crowns and dentures require 2-3 weeks to be completed after treatment is begun.
  - Insurance industry standard is 30 days to complete treatment if patient is eligible for benefits at time of initial treatment
- Provide yearly reimbursement adjustments.
  - Yearly increases will provide consistency and fairness to offset cost of delivering care. The 8 year gap between rate adjustments before fees were adjusted last year caused providers to drop out.
  - Set reimbursement at 65th percentile of UCR from a verifiable source.
- Remove eligibility from non federally mandated recipients who chronically abuse system.
  - Patients who schedule appointments and fail to show or cancel
  - Patients who use travel benefits then fail to show for appointments
  - Patients who engage in drug seeking
- Have Medicaid act as secondary insurance for non EPSDT recipients
  - Current system for patients with private insurance and Medicaid is confusing
  - Cost to Medicaid system would be less then acting as sole primary payer and forgoing private insurance
- Remove Hold Harmless provision from provider agreement
  - Opinion from AG's office it can be removed
  - Little legal consequence
  - Barrier to participation by providers

Advisory Board on Alcoholism and Drug Abuse

abada amhb

Alaska Mental Health Board

Governor's Council on Disabilities and Special Education

Alaskan Seniors Living Longer Growing Stronger

from the Alaska Commission on Aging

The TRUST

The Alaska Mental Health Trust Authority

Reauthorize preventative and restorative dental services for adult Medicaid recipients

The Governor's Council on Disabilities and Special Education, Alaska Mental Health Board, Advisory Board on Alcoholism and Drug Abuse, and Alaska Commission on Aging, in collaboration with the Alaska Mental Health Trust Authority, jointly support the reauthorization of preventive and restorative dental services for adult Medicaid recipients. Medicaid coverage for these services will sunset June 30, 2009 without legislative reauthorization.

- The Department of Health and Social Services reports that approximately 7,600 adult Medicaid recipients received these dental services in FY08 with 252 participating dental providers.
- The American Dental Association recommends adult preventive and restorative dental services be included in all state Medicaid programs, and as former U.S. Surgeon General C. Everett Koop stated, "You're not healthy without good oral health."[i]
- Trust beneficiaries continue to list dental services as a priority unmet health needs.
- Dental pain, missing and decayed teeth and infection can affect employment and job advancement, contribute to missed work, dietary choices for seniors, and complicate management of other chronic diseases.[ii]
- Individuals on public assistance who receive rehabilitative dental treatment (including fillings, extractions, and dentures) were ". . . twice as likely to receive favorable or neutral employment outcomes as they were to receive unfavorable outcomes."[iii]
- Dental infections due to periodontal disease have been associated with adverse pregnancy outcomes (e.g., pre-term births)[iv], management problems for individuals with diabetes, risks for pneumonia in nursing homes, and other chronic diseases including cardiovascular disease.[v]
- The bacteria involved with the dental decay process are typically passed parent to child. Part of the efforts to reduce dental decay in young children relates to reducing the level of dental infection in the caregiver.[vi] Additionally, parents with dental coverage are more likely to access dental services for their children.
- The coverage of preventive and restorative dental care for adult Medicaid recipients along with necessary behavioral changes, over the long term, offer the potential for

reduced utilization of emergent dental services (e.g., accessing the hospital emergency room for management of a dental infection).

Supporters: AARP-Alaska, Alaska Public Health Association, Alaska Dental Society All-Alaska Pediatric Partnership, ANTHC and Alaska Primary Care Association.

Thomas,

Martha King and I will be on the call this afternoon to answer questions.

As we discussed on the phone on Friday, Alaska's SCHIP program is a Medicaid expansion program and therefore must comply with Medicaid's cost-sharing rules as specified under the Deficit Reducation Act of 2005.

The following document summarizes these requirements and I would refer you to the summary on page 1 under the heading "Options for Premiums and Cost-sharing" and the "Important Links" on the bottom of page 2.
See the document here: http://www.cms.hhs.gov/DeficitReductionAct/Downloads/Costsharing.pdf

Under provisions of the Deficit Reduction Act of 2005, states generally cannot impose cost sharing on children in families with income below 150 percent of the federal poverty guidelines except in certain circumstances. In addition, even at more moderate-income levels, federal rules exempt some special services from any cost sharing requirements.

To create cost sharing requirements that differ from the Medicaid requirements, states can do so by submitting a waiver to and obtaining approval from the Centers for Medicare and Medicaid (CMS) or by creating a stand-alone SCHIP program.

For more information about cost sharing and SCHIP, please see the following CMS website:
http://www.cms.hhs.gov/MedicaidGenInfo/05_SCHIP%20Information.asp
(Scroll down to see the information under the heading "Cost Sharing.")

Re: Support for Expanding Eligibility for Denali KidCare

Senator Davis:

The Alaska Mental Health Board and Advisory Board on Alcohol and Drug Abuse appreciate your recognition of the need for quality health care for Alaska's children. An estimated 19,670 of Alaska's children live in poverty. For them, Denali KidCare is an important safety net – and the way we can insure that our children grown to be healthier and happier adults.

Medicaid-enrolled children who are up-to-date on their well-child checkups through age two years are 48% less likely to experience an avoidable hospitalization. Children with incomplete care are 60% more likely to visit an emergency department for any cause compared to children who are up-to-date on their well-child care. By providing regular preventative care to our children, we save on the cost and trauma of unnecessary hospitalizations.

Denali KidCare is especially important for children with serious emotional disturbances and other mental health needs. In Alaska, more than 75% of children with special health care needs who have Denali KidCare receive the mental health services they need. This is far better than the national rate for uninsured children: only 56.8% of uninsured children with special health care needs receive the necessary mental health services.

Children of families whose income exceeds the current 175% FPIG ceiling, but who still lack resources or insurance to pay for their children's health care, go without necessary health care. The costs of health care have continued to rise, and with that the number of uninsured children who go without care rises. In 2007, nearly 16% of uninsured children in the United States went without necessary care because the costs were prohibitive.

Thank you for your work, and please let us know if the Alaska Mental Health Board and Advisory Board on Alcoholism and Drug Abuse can assist in the effort to pass this important legislation.

Sincerely,

Debi Keith, Chair

Differences between SB 87 and the proposed CS for SB 87

1. The CS removes the requirement for a 20% co-pay for families earning above 250% of the federal poverty level (page 5, lines 10-13). This requirement was removed in response to concerns from the Department of Health and Social Services that it would be difficult to administer. Federal regulations prohibit states from collecting more than 5% of an eligible family's income in premiums and co-pays. Since health care providers have up to a year to submit claims to the state, it's challenging for DHSS to know when the 5% threshold has been met. Given that the premiums proposed in SB 87 are significant, it was decided to drop the additional requirement for a co-pay.

2. The effective date of the bill was moved back six months to enable the DHSS to work out any glitches in its new Medicaid payment system, which is scheduled to go on-line on June 2010.

3. Two new sections (6 and 7) were added to the bill. Section 6 states that the Act will only take effect if the U.S. Department of Health and Human Services has approved a revised Denali KidCare Plan from the state and provided sufficient funding for the expanded program. Section 7 requires the commissioner of DHSS to notify the reviser of statutes when the plan has been approved and sufficient funding provided.

CS FOR SENATE BILL NO. 87( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATOR WIELECHOWSKI

A BILL

FOR AN ACT ENTITLED

"An Act expanding medical assistance coverage for eligible children and pregnant women; relating to cost sharing for certain recipients of medical assistance; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

SHORT TITLE. This Act may be known as the No Child Left Uninsured Act.

*** Sec. 2.** AS 47.07.020(b) is amended to read:

(b) In addition to the persons specified in (a) of this section, the following optional groups of persons for whom the state may claim federal financial participation are eligible for medical assistance:

(1) persons eligible for but not receiving assistance under any plan of the state approved under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act, Supplemental Security Income) or a federal program designated as the successor to the

aid to families with dependent children program;

(2) persons in a general hospital, skilled nursing facility, or intermediate care facility, who, if they left the facility, would be eligible for assistance under one of the federal programs specified in (1) of this subsection;

(3) persons under 21 years of age who are under supervision of the department, for whom maintenance is being paid in whole or in part from public funds, and who are in foster homes or private child-care institutions;

(4) aged, blind, or disabled persons, who, because they do not meet income and resources requirements, do not receive supplemental security income under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act), and who do not receive a mandatory state supplement, but who are eligible, or would be eligible if they were not in a skilled nursing facility or intermediate care facility to receive an optional state supplementary payment;

(5) persons under 21 years of age who are in an institution designated as an intermediate care facility for the mentally retarded and who are financially eligible as determined by the standards of the federal program designated as the successor to the aid to families with dependent children program;

(6) persons in a medical or intermediate care facility whose income while in the facility does not exceed $1,656 a month but who would not be eligible for an optional state supplementary payment if they left the hospital or other facility;

(7) persons under 21 years of age who are receiving active treatment in a psychiatric hospital and who are financially eligible as determined by the standards of the federal program designated as the successor to the aid to families with dependent children program;

(8) persons under 21 years of age and not covered under (a) of this section, who would be eligible for benefits under the federal program designated as the successor to the aid to families with dependent children program, except that they have the care and support of both their natural and adoptive parents;

(9) pregnant women not covered under (a) of this section and who meet the income and resource requirements of the federal program designated as the successor to the aid to families with dependent children program;

(10) persons under 21 years of age not covered under (a) of this section who the department has determined cannot be placed for adoption without medical assistance because of a special need for medical or rehabilitative care and who the department has determined are hard-to-place children eligible for subsidy under AS 25.23.190 - 25.23.210;

(11) persons who can be considered under 42 U.S.C. 1396a(e)(3) (Title XIX, Social Security Act, Medical Assistance) to be individuals with respect to whom a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act) because they meet all of the following criteria:

(A) they are 18 years of age or younger and qualify as disabled individuals under 42 U.S.C. 1382c(a) (Title XVI, Social Security Act);

(B) the department has determined that

(i) they require a level of care provided in a hospital, nursing facility, or intermediate care facility for the mentally retarded;

(ii) it is appropriate to provide their care outside of an institution; and

(iii) the estimated amount that would be spent for medical assistance for their individual care outside an institution is not greater than the estimated amount that would otherwise be expended individually for medical assistance within an appropriate institution;

(C) if they were in a medical institution, they would be eligible for medical assistance under other provisions of this chapter; and

(D) home and community-based services under a waiver approved by the federal government are either not available to them under this chapter or would be inappropriate for them;

(12) disabled persons, as described in 42 U.S.C. 1396a(a)(10)(A)(ii)(XIII), who are in families whose income, as determined under applicable federal regulations or guidelines, is less than 250 percent of the official poverty line applicable to a family of that size according to the United States Department of Health and Human Services, and who, but for earnings in excess of the limit established under 42 U.S.C. 1396d(q)(2)(B), would be considered to be

individuals with respect to whom a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c; a person eligible for assistance under this paragraph who is not eligible under another provision of this section shall pay a premium or other cost-sharing charges according to a sliding fee scale that is based on income as established by the department in regulations;

(13) persons under 19 years of age who are not covered under (a) of this section and whose household income does not exceed **200** [175] percent of the federal poverty line as defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2);

(14) pregnant women who are not covered under (a) of this section and whose household income does not exceed **200** [175] percent of the federal poverty line as defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2);

(15) persons who have been diagnosed with breast or cervical cancer and who are eligible for coverage under 42 U.S.C. 1396a(a)(10)(A)(ii)(XVIII).

*** Sec. 3.** AS 47.07 is amended by adding a new section to read:

Sec. 47.07.022. Extended medical assistance coverage for children; costs. (a) In addition to the persons specified in AS 47.07.020, a person who resides in the state and who meets the criteria under (b) of this section is eligible for extended medical assistance coverage equivalent to the mandatory and optional services described under AS 47.07.030 if the person submits an annual application and contribution as specified in (c) of this section.

(b) The department shall administer a program of extended medical assistance coverage for a person

(1) who is under 19 years of age;

(2) whose household income is between 200 and 300 percent of the federal poverty guideline as defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2); and

(3) whose parent or legal guardian certifies that the person is not covered under a health insurance policy.

(c) The program administered under this section must include an annual

application and sliding scale contribution, payable under terms specified in regulations adopted by the department. The regulations must

(1) include the option of an assignment of an applicant's permanent fund dividend and the permanent fund dividend of a parent, legal guardian, or other authorized representative of an applicant; and

(2) set the annual contribution amount between $240 and $1,200, beginning with $240 for a person whose household income is between 201 percent and 225 percent of the federal poverty guideline and increasing progressively based on the person's household income.

*** Sec. 4.** AS 47.07.042(d) is amended to read:

(d) In addition to the requirements established under (a) and (b) of this section, the department **shall** [MAY] require premiums or cost-sharing contributions from recipients who are eligible for benefits under **AS 47.07.022. The** [AS 47.07.020(b)(13) AND WHOSE HOUSEHOLD INCOME IS BETWEEN 150 AND 175 PERCENT OF THE FEDERAL POVERTY LINE. IF THE DEPARTMENT REQUIRES PREMIUMS OR COST-SHARING CONTRIBUTIONS UNDER THIS SUBSECTION, THE] department

(1) shall adopt in regulation a sliding scale for those premiums or contributions based on household income;

(2) may not exceed the maximums allowed under federal law; and

(3) shall implement a system by which the department or its designee collects those premiums or contributions.

*** Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: REGULATIONS. The Department of Health and Social Services may proceed to adopt regulations necessary to implement the changes made by this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before the effective date of secs. 1 - 4 of this Act.

*** Sec. 6.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CONTINGENT EFFECT. Sections 2 - 4 of this Act take effect only if, before

January 1, 2011, the United States Department of Health and Human Services has approved all the changes in secs. 2 - 4 and provided sufficient funding for the changes.

*** Sec. 7.** The uncodified law of the State of Alaska is amended by adding a new section to read:

NOTIFICATION OF REVISOR. The commissioner of health and social services shall notify the revisor of statues of whether the United States Department of Health and Human Services has approved and provided funding for all the changes in secs. 2 - 4 of this Act before January 1, 2011.

*** Sec. 8.** Section 5 of this Act takes effect immediately under AS 01.10.070(c).

*** Sec. 9.** Except as provided in sec. 8 of this Act, this Act takes effect January 1, 2011.

MEMORANDUM February 9, 2009

SUBJECT: Sectional Summary (Work Order No. 26-LS0425\R)

TO: Senator Bill Wielechowski
Attn: Michele Sydeman

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Provides a short title for the bill.

Section 2. Amends optional medical assistance provisions for persons under 19 years of age and for pregnant women to increase an income eligibility standard in relation to the federal poverty guideline.

Section 3. Requires the Department of Health and Social Services to administer a program to extend mandatory and optional medical assistance coverage for persons under 19 years of age whose household income is above sec. 2's limits but below a set percentile range of the federal poverty guideline, and imposes contribution and copayment amounts for the coverage.

Section 4. Requires the Department of Health and Social Services to set premium and cost-sharing contributions for persons under 19 years of age and who meet eligibility criteria under sec. 3.

Section 5. Authorizes the Department of Health and Social Services to adopt regulations needed under the bill before the effective date of the bill.

Section 6. Makes secs. 2 - 4 effective only if the U.S. Department of Health and Social Services approves the changes made by those sections before January 1, 2011.

Section 7. Requires the Commissioner of the Department of Health and Social Services to notify the revisor of statutes of federal approval.

Section 8. Provides an immediate effective date for sec. 5.

Section 9. Provides a January 1 2011, effective date for secs. 1 - 4 and secs. 6 - 7.

SENATOR BILL WIELECHOWSKI

January, 26 2009

2/4

Senator Bettye Davis, Chair
Senate HESS Committee
Room 30, State Capitol
Juneau, Alaska 99801

I am writing to request a hearing on SB 87, "An act expanding medical assistance coverage for eligible children and pregnant women; relating to cost sharing for certain recipients of medical assistance; and providing for an effective date."

The intent of this bill is to make health insurance accessible to all children in Alaska, while asking those families who can afford it to make a meaningful financial contribution towards their coverage.

S.B. 87 raises the eligibility limit for participation in Denali KidCare from 175% to 200% of the federal poverty level (FPL). This proposal puts Alaska in line with other states, 41 of which allow participation by families at or above 200% of the FPL. Alaska currently has one of the lowest eligibility rates in the nation.

This bill would also allow families with incomes up to 300% of the FPL to buy into Denali KidCare using a sliding fee scale. Many children from working families in Alaska are unable to afford private insurance and go without coverage, which results in poorer health and greater costs in the long-run. Premiums for coverage would range from $240 annually for a participants living at 201% of the FPL to $1,200 annually. In addition, a 20 % co-pay would be required for those living at 250% and greater of the FPL. Those with the greatest means would reimburse the state roughly 90% of program costs.

Thank you for your consideration of this request.

Sincerely,

Senator Bill Wielechowski

ANALYSIS: *(Attach a separate page if necessary)*

This bill raises the income level for existing categories of pregnant women and children under Denali Kidcare to 200% of federal poverty guidelines (FPG) and creates a new category of eligibility for children between 200 and 300% of FPG subject to premiums and co-payments. The bill makes most provisions effective on July 1, 2010.

More than 200 pregnant women and nearly 3,000 children will qualify for medical assistance under this bill. This fiscal note represents the portion of benefit costs paid through the Behavioral Health Medicaid Services component.

FISCAL NOTE

STATE OF ALASKA

BILL NO. SB087

2009 LEGISLATIVE SESSION

ANALYSIS CONTINUATION

The Behavioral Health Medicaid Services component is allocated 1/3 of the total benefit costs for children (reduced by co-payments). Benefit costs for pregnant women and collections for premiums are reflected in another component (Medicaid Services).

Summary of All Components:
Total additional enrollment/year: 3,197 (2,979 children and 218 pregnant women)
Total additional benefit cost/year less premiums & co-payments: $6,365.6 ($3,657.2 fed/$1,483.0 GF/$1,225.4 SDPR)
Total premiums collected/year: $1,225.4 SDPR
Total co-payment offset/year: $547.7

Assumptions:
176-200% FPG (no cost-sharing): 1,277 children; $1,300 annual benefit cost per person; 65% federal match
176-200% FPG (no cost-sharing): 218 pregnant women; $2,934 annual benefit cost per person; 50% federal
201-250% FPG (premiums): 851 children; $2,780 annual benefit cost per person; 50% federal
251-300% FPG (premiums & co-payments): 851 children; $2,780 annual benefit cost per person; 50% federal

Requiring cost sharing may discourage enrollment. Half as many children in the groups that require premiums or co-payments will enroll compared to the group with no cost sharing. Native families with access to tribal providers will not choose to enroll their children because they can access health care services without paying premiums or making co-payments.

Children in the 176-200% FPG group are assumed to have an annual average cost similar to those in 151-175% FPG. Children above 200% are assumed to have an average cost similar to all Denali KidCare enrollees.

Uninsured children under age 19, between 201% and 300% of the prevailing FPG will be required to pay premiums to the state ranging between $240 and $1,200 per year per child. The average premium across all income groups is $720. Those above 250% FPG will also be responsible for co-payments equal to 20% of the cost of service. Co-payments are payable to the health care provider at the time of service and offset benefit costs. Federal law limits total out-of-pocket expenses to 5% of household income and precludes cost sharing for certain services, such as family planning, hospice and emergency services. The ceiling on cost sharing is not a factor in calculations for this fiscal note. The annual cost per person is expected to be lower than the average out-of-pocket limit, however, some children will likely reach cost sharing limits.

Fund sources are based on historical federal collections. We assume the SCHIP allotment remains at the FFY2009 level. The SCHIP allotment, which receives 65% federal match, is sufficient to fund costs for the additional 1,277 children in the 176-200% FPG group. Costs for the remaining children will be reimbursed at the regular Medicaid match rate of 50%. Pregnant women are not eligible for SCHIP and all their costs will be reimbursed at 50%. Collections for premiums are statutory designated program reciepts. Co-payments are offsets to benefits. Benefit cost projections for 2012 through 2015 assume 6.8% annual growth.

FISCAL NOTE

STATE OF ALASKA
2009 LEGISLATIVE SESSION

BILL NO. SB087

ANALYSIS CONTINUATION

System enhancements to the MMIS will cost approximately $150,000. These changes would accommodate the new Federal Poverty Level indicator and co-pay requirements and would be a one time cost in FY2010.

There will be increased referrals to the Department of Law for collections and appeals, this will result in approximately $125,000 in the contractual line starting in FY2011.

The Division of Health care Services anticipates the the following caseload increase from the passage of SB087:

For 176%-200% FPG (no cost-sharing): 1,277 kids and 218 pregnant women.
For premiums at 201%-300% FPG and co-payments at 251%-300% FPG: 851 kids at 201%-250% FPG and 851 kids from 251%-300% FPG
Total SB87 coverage: 3,197

We estimate two Accounting Technician I's, and a Medical Assistant Administrator I position will be needed to manage this additional work beginning in FY2010. In FY2011 a Medical Assistant Administrator II will be needed. The new extended Medicaid program increases complexity of the eligibility determination work and results in increased contact with applicants and enrollees.

Total Administrative Costs:
The increase in Medicaid applications and caseload creates the need for two Accounting Technician I, a Medical Assistant Administrator I, and a Medical Assistant Administrator II, all located in Anchorage. These annual costs are estimated to be:

2 Accounting Technician I's, $142.0 (Range 12 at a cost of $71.0, including benefits, per position).
1 Medical Assistant Administrator I, $89.0 (Range 16 at a cost of $89.0, including benefits, per position).
1 Medical Assistant Administrator II, $101.0 (Range 18 at a cost of $101.0, including benefits, per position).

It is assumed that one quarter year's personal services funding will be needed in FY10 to hire and train staff, the two Accounting Technician I's and the one Medical Assistant Administrator I in the Accounting and Recovery section, at the cost of $100.2, in order to be able to accept applications and make eligibility determinations effective July 1, 2010. The Medical Assistant Administrator II will be filled in FY2011.

With the additional caseload, a one time supplies cost will be incurred in FY2010, for computers and software with a cost of $2.6 for each additional staff for a total of $7.8 for three staff hired in FY2010 and $2.6 in FY2011 for the 4th new position. Annual costs for office space, phones and other contractual costs are calculated at a cost of $9.4, per additional staff for a total of $37.6 (prorated for 1/4 year in FY2010).

One time costs for office furniture (chairs, cubicle partitions, and cubical funiture) for three positions in FY2010 is estimated at $2.5 per person for a total of $7.5. In FY2011 furniture costs is estimated at $2.5.

FISCAL NOTE

STATE OF ALASKA

2009 LEGISLATIVE SESSION

BILL NO. SB087

ANALYSIS CONTINUATION

Health Care Services, Medicaid Services component is allocated 2/3 of the total costs for children (reduced by co-payments), all of the costs for pregnant women, and all of the collections for premiums. The Medicaid services component is responsible for all collections of premiums for the entire Medicaid program.

Summary of All Components:
Total additional enrollment/year: 3,197 (2,979 children and 218 pregnant women)
Total additional benefit cost/year less premiums & co-payments: $6,365.6 ($3,657.2 fed/$1,483.0 GF/$1,225.4 SDPR)
Total premiums collected/year: $1,225.4 SDPR
Total co-payment offset/year: $547.7

Assumptions:
176-200% FPG (no cost-sharing): 1,277 children; $1,300 annual benefit cost per person; 65% federal match
176-200% FPG (no cost-sharing): 218 pregnant women; $2,934 annual benefit cost per person; 50% federal
201-250% FPG (premiums): 851 children; $2,780 annual benefit cost per person; 50% federal
251-300% FPG (premiums & co-payments): 851 children; $2,780 annual benefit cost per person; 50% federal

Requiring cost sharing may discourage enrollment. Half as many children in the groups that require premiums or co-payments will enroll compared to the group with no cost sharing. Native families with access to tribal providers will not choose to enroll their children because they can access health care services without paying premiums or making co-payments.

Children in the 176-200% FPG group are assumed to have an annual average cost similar to those in 151-175% FPG. Children above 200% are assumed to have an average cost similar to all Denali KidCare enrollees.

Uninsured children under age 19, between 201% and 300% of the prevailing FPG will be required to pay premiums to the state ranging between $240 and $1,200 per year per child. The average premium across all income groups is $720. Those above 250% FPG will also be responsible for co-payments equal to 20% of the cost of service. Co-payments are payable to the health care provider at the time of service and offset benefit costs. Federal law limits total out-of-pocket expenses to 5% of household income and precludes cost sharing for certain services, such as family planning, hospice and emergency services. The ceiling on cost sharing is not a factor in calculations for this fiscal note. The annual cost per person is expected to be lower than the average out-of-pocket limit; however, some children will likely reach cost sharing limits.

Fund sources are based on historical federal collections. We assume the SCHIP allotment remains at the FFY2009 level. The SCHIP allotment, which receives 65% federal match, is sufficient to fund costs for the additional 1,277 children in the 176-200% FPG group. Costs for the remaining children will be reimbursed at the regular Medicaid match rate of 50%. Pregnant women are not eligible for SCHIP and all their costs will be reimbursed at 50%. Collections for premiums are SDPR. Co-payments are offsets to benefits. Benefit cost projections for 2012 through 2015 assume 6.8% annual growth.

ANALYSIS: *(Attach a separate page if necessary)*

This legislation increases the income standards for covering children and pregnant women under Denali KidCare to 200% of the federal poverty level (FPL), up from 175%.

This legislation also provides new Medicaid coverage for children in higher income categories. To qualify, children must be under age 19, have no insurance coverage, and their family income must be between 200% and 300% of the FPL. Families will be required to pay premiums to the State of Alaska ranging between $240 and $1,200 per year per child. Families with income above 250% of the FPL will also be responsible for co-payments equal to 20% of the cost of their children's medical service, payable to the provider at the time of service.

FISCAL NOTE

STATE OF ALASKA

2009 LEGISLATIVE SESSION

BILL NO. SB087

ANALYSIS CONTINUATION

Assumptions:

This fiscal note represents the administrative costs for managing the increase in applications, customer service, and eligibility determinations associated with expanding medical assistance coverage for pregnant women and children up to 200% of poverty, and instituting a new program for higher income groups that includes cost sharing. In addition to determining eligiblity based on income and household size, division staff will be required to calcuate the amount of the household's premium obligation, make adjustments to premium payments when household income changes, inform households and the Division of Health Care Services of the amount to be collected, confirm payment of the premium before Medicaid benefits are issued and suspend eligibilty when premiums are not collected. The casework complexity involved with this Medicaid exansion creates the need for additional eligibility staff and administrative support. Lead staff will be needed to provide outreach to medical providers and community service providers and the public to explain the program, initially and ongoing. An analyst is needed for the development of policy and processes and the creation of systems and supports for expanded medical coverage .

We estimate 13 positions will be needed to support this Medicaid program expansion:
2 Administrative Support Staff to provide customer service, manage phone lines, and clerical support ;
5 Eligibility Technicians to make decisions on applications and calculate premiums;
4 Lead Eligibilty Techicians to perform statewide outreach, quality assurance, training on program rules, and other lead worker duties;
1 Eligibility Supervisor to oversee and manage the work of the new staff ; and
1 Public Assistance Analyst for the development and management of the program policy and procedures and creation of systems and supports for the expanded coverage.

Modifications to DPA's Eligibility Information System (EIS) will also be necessary to facilitate the exchange of information between the Division of Public Assistance and the Division of Health Care Services regarding the calculation and payment of premiums .

FY 11- FY15 Total Annual Administrative Costs: $1,179.0

Personal Services: 13 staff at an annual cost of $948.1 (includes salary and benefits)
Travel: $15.0 for statewide outreach activities.
Contractual: $192.4 annual cost for phones/lease ($14.8 x 13 staff)=$192.4.
Supplies: $23.5 which includes $12.0 for Denali KidCare identification cards, renewal forms, and notices; $5.0 for outreach materials; and $6.5 for office supplies ($0.5 x 13 staff = $6.5).

FY10 Start-Up Costs: $691.9

Personal Services: $237.0 One quarter year's funding will be needed in FY10 to hire and train staff in order to be able to accept applications and make eligibility determinations effective July 1, 2010.
Travel: $3.8 to start community , public, and provider awareness about the new program.
Equipment: $150.0 for one time purchases which include a multi-function printer and personal computers, software, and workstations, and associated costs for 13 staff ($20.0 plus $10.0 x 13 = $150.0).
Contractual: $298.1 which includes $250.0 for modifications to DPA's Eligibility Information System (EIS) and $48.1 for phones and space to locate the additional staff.
Supplies: $3.0 for printing applications, outreach materials and office supplies.

Sponsor Statement for SB 87: No Child Left Uninsured

The intent of SB 87 is to make health insurance accessible to all children in Alaska, while asking those families who can afford it to make a substantial financial contribution towards their coverage. By ensuring that all children have access to health services, SB 87 will reduce costs to the state and its citizens over the long run.

An estimated 18,000 children in Alaska lack health insurance and the number is growing. According to the Robert Wood Johnson Foundation, the number of children covered by private health insurance has declined by 31% in the last decade. The vast majority of these children are from working families.

Uninsured children have much higher health risks than do covered children. They are more likely to develop chronic illnesses such as asthma and diabetes and to suffer from acute conditions such as eye and ear infections. While many lack a regular doctor and don't receive preventative care, they are four times more likely than insured children to use emergency rooms when medical attention is needed.

The high cost of this emergency care is often borne by other Alaskans, including businesses that purchase health insurance for their employees. For example, Providence and Alaska Regional hospitals provided $89 million in uncompensated care in 2006. These costs are passed on to other hospital users through higher charges for medical services, which ultimately results in increased premiums. These costs could be reduced by insuring that all children have access to health insurance.

SB 87 raises the eligibility limit for participation in the Denali KidCare program to 200% of the federal poverty level (FPL), currently $36,000/year for a single parent and child. This change puts Alaska in line with other states, 41 of which allow participation by families at or above this level. Roughly 70% of the costs of this program are currently covered by the federal government.

SB 87 would also allow families with incomes up to 300% of the FPL to buy into Denali KidCare using a sliding fee scale for premiums and a 20% co-pay. Those with the greatest means would reimburse the state roughly 90% of its costs. Participants would have to certify that they don't have access to health insurance at work.

With the "No Child Left Uninsured Act," Alaska joins states from Idaho to Illinois that are working to ensure that all children have access to health insurance. Please support this critical legislation.

Falling Through the Cracks: The Unmet Health Needs of Alaska's Uninsured Children

- The number of uninsured children in Alaska is estimated to be 17,880 or 9% of the population 18 and under (Urban Institute and Kaiser Commission on Medicaid and the Uninsured).

- Over the last decade, Alaska has seen a large decline (31%) in the number of children covered by private health insurance (Robert Wood Johnson Foundation).

- Nationally, more than 80% of uninsured children are from working families (Kaiser Commission on Medicaid and the Uninsured).

- Uninsured children have much higher health risks than do covered children. They receive less preventative care and are diagnosed at more advanced stages of illness (Kaiser Commission on Medicaid and the Uninsured).

- Uninsured children are more likely to develop viral soar throats, eye and ear infections, serious dental problems, and chronic conditions such as asthma and diabetes. They are more than 5 times as likely as insured children to have an unmet need for medical care and 9 times more likely not to have a regular doctor. They are also 4 times more likely to use emergency rooms (*Pediatrics* 105 and 113; Care for Children, *New England Journal of Medicine* 330; The Urban Institute).

- Almost 1/3 of uninsured children received no medical treatment during a 1-year period between 2002 and 2003 (Health Affairs 23, no. 5, September/October 2004).

- Uninsured children are 25% more likely to miss school than insured children (Children's Defense Fund Minnesota). Continued illness affects school performance and, in the long run, workforce participation (Southern Institute on Children and Families). A National Institute of Medicine study indicates that lack of insurance results in lost national economic productivity of $65-$130 billion annually.

Impact of the Uninsured on the Broader Population

- Hospitals often serve as primary care treatment facilities for those without access to other health care. Providence and Alaska Regional Hospitals in Anchorage report providing $89 million in uncompensated care in 2006. In 2005, the total cost of health care in Alaska for the uninsured (excluding costs paid out-of-pocket by the uninsured) was $125 million (Families USA).

- These costs are passed on to other Alaskans, businesses and government, raising premiums and out-of-pocket expenses for individuals, employers, and the State of Alaska.

- According to new research, private employers in Alaska pay an average of $1,466 more per family and $565 more per individual in health insurance premiums to cover the costs of health care for the uninsured. By 2010, this is expected to increases to $2,248 per family and $857 per individual (Families USA).

- The cost to the State of Alaska of providing health insurance for its 14,786 full-time, executive branch employees is estimated to be $18.9 million higher because health providers shift the cost of caring for the uninsured. (March 2006, Legislative Research Report).

- Some $17 billion is spent in the U.S. annually on unnecessary hospitalizations, according to a 2004 study in *Pediatrics*. The study, which surveyed parents and doctors of children admitted to the hospital, found that 13-46% of the admissions could have been avoided with better care at home or by primary care physicians.

- Nationally, individuals unable to pay medical bills are filing for bankruptcy at unprecedented rates. Between 1980 and 2001, medically driven bankruptcies increased 23 times (American Medical Association, 2005). Half of the 1.5 million American families that filed for bankruptcy in 2001 cited medical bills as the cause (Health Affairs, Feb. 2005).

- The pay-off from providing health insurance for low-income children is substantial. According to governing.com, "Immunizations, annual visits to a pediatrician, dental care, and screening for vision, hearing and developmental problems are all long-term money savers for the health care system as a whole." For example, every $1 spent on a mumps/measles/rubella shot, saves $26, according to Washington State Dept. of Health research.

Background on Denali KidCare

- Denali KidCare provides health insurance for children through age 18 and pregnant women who meet income guidelines. There is no cost for eligible children, teens and pregnant women. However, youth who are 18 may be required to pay a limited amount for some services.

- Denali KidCare pays for doctor's visits; eye exams and glasses; dental cleanings and fillings; hearing tests and aids; hospital care; speech, physical and mental health therapy; substance abuse treatment; lab tests; prescription drugs; and other care.

- Roughly 7,600 children were covered by Denali KidCare as of December 2006.

- Prior to the passage of SB 105 in 2003 (which lowered the eligibility guidelines for the program) 4,992 children with family incomes between 151% and 200% of the federal poverty level (FPL) were covered. Since passage, 3,440 fewer children with family incomes between 151% and 200% of the FPL are enrolled.

- The cost per child of providing this coverage is about $1,300/year.

- In recent calls to private insurers, the cost of a health insurance plan for a family of 3 (pregnant woman with two children) ranged from $8,000-$17,000 annually. Unlike Denali KidCare, this coverage comes with a $500 deductible, 20% co-pay, and no vision, dental or hearing benefits.

- **Alaska has one of the lowest program eligibility rates in the nation** (175% of the FPL). Forty-one states allow participation by families at or above 200% of the FPL. Seven have rates at or above 300% of the FPL.

- The federal government currently reimburses 70% of the cost of the Denali KidCare program up to the state's allocated funding level. After that, the reimbursement rate declines to 58%.

- In fiscal year 2006, the cost of Denali KidCare (also known as the State Children's Health Insurance Program) was $25.9 million, of which $18.2 million was paid by the federal government.

Why Coverage for Pregnant Women is Important:

- Alaska has one of the nation's highest documented pregnancy-associated mortality ratios – 58 per 100,000 live births during 1990-1999 (DHSS). National data indicate that women who receive no prenatal care are at increased risk of pregnancy-related death.

- Only 58% of women in Alaska receive adequate prenatal care, compared with 75% nationally.

- Mothers having late or no prenatal care are more likely to have low birth weight or pre-term infants and are at increased risk for pregnancy-related mortality and complications of childbirth (DHSS).

- The average cost of hospital care for a premature baby was $75,000 in 2001, compared with $1,300 for a healthy, full-term infant. The March of Dimes Prenatal Data Center reports that premature babies cost about $13.1 billion annually.

A Primer on the "No Child Left Uninsured" Act

- The intent of this bill is to make health insurance accessible to all children in Alaska, while asking those families who can afford it to make a meaningful financial contribution towards their coverage.

- The bill raises the eligibility limit for participation in Denali KidCare from 175% to 200% of the federal poverty level (FPL). This was the eligibility limit for the program until 2003, when SB 105 substantially lowered the limit.

- 200% of the FPL is currently $36,000/year for a single parent and child. The FPL is adjusted annually for inflation.

- This proposal puts Alaska in line with other states, 41 of which allow participation by families at or above 200% of the FPL. Seven states set the limit at or above 300% of the FPL. Alaska currently has one of the lowest eligibility rates in the nation.

- This bill would also allow families with incomes up to 300% of the FPL to buy into Denali KidCare using a sliding fee scale. Many children from working families in Alaska are unable to afford private insurance and go without coverage, which results in poorer health and greater costs in the long-run.

- Premiums for coverage would range from about $240-$1,200 annually depending on income. In addition, a 20% co-pay would be required. (This is still significantly less than the cost of comparable private health insurance.) Parents and/or guardians would have to certify that eligible children do not have other insurance coverage. Those with the greatest means would reimburse the state 90% of program costs.

- Several states have taken steps in recent years to ensure that all children have access to health insurance. For example, in Connecticut, uninsured children from families making 300% or more of the FPL can buy into "All Kids." In Illinois, coverage is available to any child that has been uninsured for 12 months or more, with the cost determined on a sliding scale basis. Similar proposals under are under consideration in Oregon, Wisconsin, Washington, California and New Mexico, among other states.

Bill boosts health care for children

CHIP: But final approval of measure remains uncertain.

By GEORGE BRYSON
gbryson@adn.com
(01/15/09 23:45:12)

More than 8,000 uninsured Alaska children could receive new health care benefits if a bill approved by the U.S. House on Wednesday is also approved by the Senate and signed into law next week as expected by then-newly inaugurated President Barack Obama.

The expansion of the State Child Health Insurance Program (CHIP), known in Alaska as Denali KidCare, could provide new health care coverage to more than 4 million uninsured kids nationwide, roughly half of all uninsured American children.

Almost half of the estimated 19,000 uninsured children in Alaska could be covered by the legislation too, according to an analysis by Families USA, a national nonprofit organization that advocates for high-quality, affordable health care for all Americans.

But that assumes that Alaska legislators in Juneau would be willing to provide the 35 percent matching funds for a program that would expand Denali KidCare coverage to families that earn up to 300 percent of the federal poverty level. Currently Alaska only provides coverage to families that earn up to 175 percent of the poverty threshold.

Created in 1997, CHIP provides health coverage to children in working families with incomes that are too high to qualify for Medicaid but too low to make private insurance affordable.

Legislation to reauthorize and expand the program was twice passed by Congress in 2007 -- with all three members of Alaska's congressional delegation voting in favor -- but President Bush vetoed both bills.

Obama, by comparison, released a statement Wednesday applauding House passage of the CHIP legislation and urged the Senate to quickly do the same -- "so that it can be one of the first measures I sign into law when I am president."

Alaska Congressman Don Young this week voted in favor of the House bill. "Economically we are going through some hard times now, and the health of our children should not suffer because of it," Young said.

On the Senate side, Republican Lisa Murkowski and Democrat Mark Begich are both expected to support the bill, which was approved Thursday by the Senate Finance Committee.

In remarks after her vote in favor of expanding the children's health care program a year ago, Murkowski said CHIP was necessary to ensure these children are not left out.

Recently sworn in as the state's junior senator after his close victory over longtime Alaska Sen. Ted Stevens, Begich campaigned on a platform that explicitly called for expanding Denali KidCare, which also provides health care to low-income pregnant women. Passage of the child health bill

would provide $32.3 billion over four years to continue coverage for seven million children currently covered by the program and to extend coverage to four million more.

Find George Bryson online at adn.com/contact/gbryson or call 257-4318.

CS FOR SENATE BILL NO. 96( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATE HEALTH AND SOCIAL SERVICES COMMITTEE

A BILL

FOR AN ACT ENTITLED

"An Act relating to nonpayment of child support, to the definition of the term "state" for the purposes of the Uniform Interstate Family Support Act, to certain judicial and administrative orders for medical support of a child, to periodic review and adjustment of child support orders, to relief from administrative child support orders, to child support arrearages, and to medical support of a child and the Alaska Native family assistance program; amending Rule 90.3, Alaska Rules of Civil Procedure; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

DEFINITION OF "STATE"; LEGISLATIVE INTENT. (a) It is the intent of the legislature that in order to bring Alaska into conformity with the nationwide Uniform Interstate Family Support Act (UIFSA), as approved by the American Bar Association on

February 9, 1993, and as in effect on August 22, 1996, including any amendments officially adopted as of that date by the National Conference of Commissioners on Uniform State Laws, it is necessary to amend AS 25.25.101 to include "an Indian tribe" and "the United States Virgin Islands" in the definition of "state."

*** Sec. 2.** AS 11.51.122(a) is amended to read:

(a) A person commits the crime of aiding the nonpayment of child support in the second degree if the person knows that an obligor has a duty under an administrative or judicial order for periodic payment of child support, **for cash medical support,** or for the provision of health care coverage for a child under a medical support order **or a cash medical support order, or both** and

(1) being a person with a statutory duty to disclose information to a child support enforcement agency intentionally withholds the information when it is requested by a child support enforcement agency;

(2) being an employer of the obligor, intentionally withholds information about the residence or employment of the obligor, the eligibility of the obligor's children for coverage under the employer's health insurance plan, or the cost of the coverage of the children under the plan, when that information is requested by a child support enforcement agency or when the employer is required by state or federal law to report the information without a request by a child support enforcement agency; or

(3) intentionally participates in a commercial, business, employment, or other arrangement with the obligor, knowing at the time that the arrangement is made that it will allow the obligor to avoid paying all or some of the support when it is due or to avoid having a lien placed on assets for the payment of delinquent support; receipt of a substantial asset for less than fair market value from an obligor after the obligor's support order has been established constitutes a rebuttable presumption that the person receiving the asset knew that the transfer would allow the obligor to avoid paying all or some of the support or to avoid having a lien placed on the asset.

*** Sec. 3.** AS 25.25.101(19) is amended to read:

(19) "state" means a state of the United States, the District of Columbia, the Commonwealth of Puerto Rico, **the United States Virgin Islands**, or

any territory or insular possession subject to the jurisdiction of the United States; the term "state" includes **an Indian tribe and** a foreign jurisdiction that has enacted a law or established procedures for issuance and enforcement of support orders that are substantially similar to the procedures under this chapter or under the Uniform Reciprocal Enforcement of Support Act or the Revised Uniform Reciprocal Enforcement of Support Act;

*** Sec. 4.** AS 25.27.060(c) is amended to read:

(c) In a court or administrative proceeding where the support of a minor child is at issue, the court or agency, as applicable, may order either **parent** or both parents to pay the amount necessary for support, maintenance, nurture, and education of the child. Regardless of whether a support order for periodic payments is issued, the court or agency shall issue a medical support order**, a cash medical support order, or both**. The medical support order shall require health care insurance coverage for the child if health care insurance coverage is available to either parent **or both parents** for the child at a reasonable cost. The court or agency shall consider whether the child is eligible for services through the Indian Health Service or other insurance coverage before ordering either parent **or both parents** to provide health care coverage through insurance**, cash medical support,** or other means **or a combination of insurance, cash medical support, or other means**. The court or agency shall allocate equally the cost of health care insurance for the child between the parents unless there is good cause to allocate the costs unequally. If the obligor has the duty to make periodic payments for non-medical child support, the obligor's periodic payments shall be decreased by the amount of the other parent's portion of payments for health insurance ordered by the court or agency and actually paid by the obligor. If the obligor has a duty to make periodic payments for non-medical child support, the periodic payments shall be increased by the obligor's portion of payments for health insurance if the other parent is ordered to and actually does obtain and pay for insurance. The court or agency shall allocate equally between the parents the cost of reasonable health care expenses not covered by private insurance unless there is good cause to allocate the costs unequally. One parent shall reimburse the other parent for the first parent's share of the uncovered expenses paid by the parent within 30 days after receipt by the first

parent of the bill for the health care, payment verification, and, if applicable, a health insurance statement indicating what portion of the cost is uncovered. The medical support order must meet the requirements of AS 25.27.063. Upon a showing of good cause, the court may order the parents required to pay support to give reasonable security for payments.

*** Sec. 5.** AS 25.27.160(c) is amended to read:

(c) If the agency is establishing only [A] medical support [ORDER], the notice and finding of financial responsibility must state

(1) that health care insurance shall be provided for the child to whom the duty of support is owed if health care insurance is available to the alleged obligor at a reasonable cost and that the alleged obligor and the other parent shall share equally the cost of the health care insurance and the costs of reasonable health care expenses not covered by insurance;

(2) **the sum of periodic payments of cash medical support for which either parent or both parents are found to be responsible under this chapter;**

(3) the name of the alleged obligee and the obligee's custodian;

(4) [(3)] that the alleged obligor may appear and show cause in a hearing held by the agency why the finding is incorrect, should not be finally ordered, and should be modified or rescinded, because

(A) no duty of support is owed;

(B) health care insurance for the child is not available to the alleged obligor at a reasonable cost;

(C) adequate health care is available to the child through the Indian Health Service or other insurance coverage; or

(D) there is good cause to allocate the costs of health insurance, **cash medical support,** or uninsured health care expenses unequally between the parents;

(5) [(4)] that, if the person served with the notice under this subsection does not request a hearing within 30 days, a copy of the medical support order will be sent to the person's employer under AS 25.27.063(b) without further notice or hearing

for inclusion of the child in family health coverage if it is available through the person's employer.

*** Sec. 6.** AS 25.27.193 is amended to read:

Sec. 25.27.193. Periodic review or adjustment of support orders. As necessary to comply with 42 U.S.C. 666, the agency, by regulation, shall provide procedures and standards for the modification, through **a three-year cycle of** [PERIODIC] review or adjustment, of a support order. Regulations adopted under this section must include procedures for periodic notice of the right to request review, procedures for hearings, and standards for adjustments regarding future periodic support payments. A modification under this section may be made without a showing of a material change in circumstances.

*** Sec. 7.** AS 25.27.195(a) is amended to read:

(a) A clerical mistake in an administrative order issued by the agency or an error arising from an oversight or omission by the agency may be corrected by the agency at any time [ON THE MOTION OF AN OBLIGOR].

*** Sec. 8.** AS 25.27.195(b) is amended to read:

(b) **The** [UPON THE MOTION OF AN OBLIGOR, THE] agency may, at any time, vacate an administrative support order issued by the agency under AS 25.27.160 that was based on a default amount rather than on the obligor's actual ability to pay.

*** Sec. 9.** AS 25.27.900(2) is repealed and reenacted to read:

(2) "arrearage" means a debt that is past due and equal to at least one monthly obligation under the support order for one or more of the following:

(A) monetary support;

(B) cash medical support;

(C) payment of health care costs or maintenance of health insurance;

(D) reimbursement of related costs;

(E) payment of attorney fees and legal costs and other fees;

(F) penalty, interest, and other relief as required by a support order;

*** Sec. 10.** AS 25.27.900(12) is amended to read:

(12) "support order" means any judgment, decree, or order that is issued by a tribunal for the support and maintenance of a child or of a parent with whom the child is living; "support order" includes a judgment, decree, or order

(A) on behalf of a child who has reached the age of majority if the judgment, decree, or order was lawfully issued; and

(B) for any or all of the following:

(i) monetary support, including arrearages;

(ii) payment of health care costs or maintenance of health insurance;

(iii) **payment of cash medical support;**

(iv) reimbursement of related costs;

(v) [(iv)] payment of attorney fees and legal costs and other fees; or

(vi) [(v)] penalty, interest, and other relief as required by a tribunal;

*** Sec. 11.** AS 47.07.025(b) is amended to read:

(b) Through the child support services agency or on its own behalf, the department may garnish the wages, salary, or other employment income of a person who

(1) is required by a medical support order**, cash medical support order, or both,** under AS 25.27.060(c) to provide **insurance or cash** coverage of the costs of medical care to a child who is eligible for medical assistance under this chapter;

(2) has received payment from a third party for the costs of the services; and

(3) has not used the payments to reimburse, as appropriate, the other parent or custodian of the child, the provider of the services, or the department.

*** Sec. 12.** AS 47.27.200(o) is amended to read:

(o) The applicability of AS 25.27 in the case of a recipient under an Alaska Native family assistance program includes the following:

(1) an obligor is liable to the Alaska Native family assistance program

in the amount of the family assistance provided by the program to a child to whom the obligor owes a duty of support except that, if a support order has been entered, the liability of the obligor for assistance provided by an Alaska Native family assistance program may not exceed the amount of support provided for in the support order, and, if a medical **support order, cash medical support order, or both,** [ORDER OF SUPPORT] has been entered, the liability of the obligor for assistance granted under AS 47.07 may not exceed the amount of support provided for in the medical **support order, cash medical support order, or both** [ORDER OF SUPPORT]; the child support services agency shall send notice of accruing liability under this paragraph in the same manner as required under AS 25.27.120(c), and, if the agency fails to comply with the notice requirement of this paragraph, interest does not accrue on the liability to the Alaska Native family assistance program unless a support order or medical support order**, or cash medical support order**, as applicable, has been entered;

(2) the child support services agency may appear in an action authorized under AS 25.27.045 at the agency's own discretion if an obligor under AS 25.27 is liable to the Alaska Native family assistance program under (1) of this subsection;

(3) an Alaska Native family assistance program to which the child support services agency erroneously disburses an overpayment of child support under an income withholding order is liable to the state for the amount disbursed, plus interest at the rate imposed under AS 25.27.062(*l*)(1);

(4) when the right to receive child support has been assigned to an Alaska Native family assistance program, an agreement under AS 25.27.065(a) that has not been adopted as an administrative order of the child support services agency is not effective during a period when the obligee is receiving assistance under an Alaska Native family assistance program;

(5) the child support services agency, on behalf of an Alaska Native family assistance program, shall take all necessary action permitted by law to enforce child support orders entered under AS 25.27, including petitioning the court for orders to aid in the enforcement of child support;

(6) if an obligor under AS 25.27 is liable to an Alaska Native family

assistance program under (1) of this subsection, the state is subrogated to the rights of the obligee to take actions authorized under AS 25.27.130(a);

(7) notwithstanding AS 25.27.130(c), the recovery of an amount for which an obligor under AS 25.27 is liable that exceeds the total assistance granted under AS 47.07 and this chapter shall be paid to the obligee;

(8) except as provided in AS 25.27.130(f), if an obligee under AS 25.27 is not receiving assistance under AS 47.07 or this chapter at the time the state recovers money in an action under AS 25.27.130(d) or (1) of this subsection, the recovery of any amount for which the obligor is liable shall be distributed to the obligee for support payments, including medical support payments, that had become due and unpaid since the termination of assistance under AS 47.07 or this chapter under a support order in favor of the obligee;

(9) after payment to the obligee under (8) of this subsection, the state may retain an amount not to exceed the total unreimbursed assistance paid on behalf of the obligee under AS 47.07 or this chapter;

(10) if an alleged obligor is liable to an Alaska Native family assistance program under (1) of this subsection, and a support order has not been entered, the child support services agency may, at its own discretion, undertake an action to establish paternity and a duty of support using the procedures prescribed in AS 25.27 and may enforce a duty of support using the procedures prescribed in AS 25.27; the agency may also institute administrative proceedings to determine the paternity of a child born out of wedlock upon application of an Alaska Native family assistance program; the agency may not recover costs of genetic tests required under this paragraph from a person who is a recipient of assistance under an Alaska Native family assistance program;

(11) when a hearing officer makes a determination under AS 25.27.170(d), the hearing officer shall, in addition to the factors described in AS 25.27.170(e), consider the amount of the alleged obligor's liability to an Alaska Native family assistance program under (1) of this subsection;

(12) notwithstanding AS 25.27.255(a), the child support services agency may not pay to an obligee any money that has been assigned to an Alaska

Native family assistance program.

*** Sec. 13.** The uncodified law of the State of Alaska is amended by adding a new section to read:

INDIRECT COURT RULE AMENDMENT. AS 25.27.060(c), amended by sec. 4 of this Act, has the effect of changing Rule 90.3, Alaska Rules of Civil Procedure, by changing standards for issuance of medical and other support orders by the court.

*** Sec. 14.** The uncodified law of the State of Alaska is amended by adding a new section to read:

APPLICABILITY. This Act applies to actions filed on or after the effective date of this section and to motions filed on or after the effective date in proceedings filed before, on, or after the effective date of this section.

*** Sec. 15.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: REGULATIONS. The Department of Revenue may proceed to adopt regulations necessary to implement this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before July 1, 2009.

*** Sec. 16.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CONDITIONAL EFFECT. Section 4 of this Act takes effect only if sec. 13 of this Act receives the two-thirds majority vote of each house required by art. IV, sec. 15, Constitution of the State of Alaska.

*** Sec. 17.** Section 15 of this Act takes effect immediately under AS 01.10.070(c).

*** Sec. 18.** Except as provided in sec. 17 of this Act, this Act takes effect July 1, 2009.

CS FOR SENATE BILL NO. 105(HSS~~EDC~~)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY THE SENATE HEALTH AND SOCIAL SERVICES~~EDUCATION~~ COMMITTEE

Offered:
Referred:

Sponsor(s): SENATORS DAVIS, Ellis

A BILL

FOR AN ACT ENTITLED

"An Act relating to continuing the secondary public education of a homeless student; relating to the purpose of certain laws as they relate to children; relating to tuition waivers and medical assistance for a child placed in out-of-home care by the state; relating to foster care; relating to children in need of aid; and relating to out-of-home care transition to independent living."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.096. Continuing the public education of a homeless student. (a) Except as provided in (b) and (d) of this section, the governing body of a school district shall comply with the requirements for continuing the public education of a homeless student in the student's school of origin and for providing comparable education and transportation services for the remainder of the current school year or, if the student is attending school for a summer term, for the remainder of the summer

term, under 42 U.S.C. 11431 - 11435 (McKinney-Vento Homeless Education Assistance Improvement Act of 2001), as those provisions existed on February 1, 2009.

(b) The requirements in (a) of this section do not apply if the student moves to a school district other than the school district in which the student's school of origin is located.

(c) If a homeless student is transferred to a school other than the student's school of origin, the school of origin shall provide a copy of the student's records to the student's new school within seven~~7~~ school days after notification of the transfer. The student's new school shall allow the student to attend school while awaiting the transfer of records under this subsection.

(d) A school district is required to comply with this section only

(1) if the legislature appropriates funds for the purpose; and

(2) to the extent possible using funds appropriated for the purpose.

(e) In this section,

(1) "homeless student" has the meaning given in 42 U.S.C. 11434a for "homeless child or youth," and the phrase "awaiting foster care placement" in that definition shall be interpreted to include all students who are placed in out-of-home care and in the custody of the Department of Health and Social Services under AS 47.10.080(c) or who are committed to the custody of the Department of Health and Social Services under AS 47.12.120(b)(1) or (3);

(2) "school of origin" means the school in which the student was last enrolled.

*** Sec. 2.** AS 14.43 is amended by adding a new section to read:

Article 3A. Free Tuition for a Person Who Was in Out-of-Home Care.

Sec. 14.43.086. Free tuition and fees for a person who was in out-of-home care. (a) A person who enrolls as a student in good standing in a state-supported educational institution in the state is entitled to a waiver of tuition, fees, and room and board expenses if the person provides adequate proof that the person

(1) was in the custody of the state under AS 47.10 or AS 47.14;

(2) was placed in out-of-home care for a period of not less than six

consecutive months on or after the person became 16 years of age; and

(3) is under 29 years of age.

(b) The amount of the waiver to which a person is entitled under this section is the amount of unmet need for tuition, room, and board expenses, as determined by the institution~~commission~~, after deducting funding for the school year from education loans, grants, or scholarships received by a person eligible for a waiver.

(c) The proceeds of an education loan, grant, or scholarship received by a person eligible for a waiver under this section must be paid to the educational institution to offset the person's tuition, fees, and room and board expenses.

(d) A state-supported educational institution in the state is required to provide a waiver under (a) of this section only if the legislature appropriates funds for the purpose of offsetting waivers under this section. If an appropriation is not sufficient to fully offset waivers for each person entitled to a waiver under (a) of this section, the institution may offer full or partial waivers to eligible applicants as funding permits and at the discretion of the institution.

(e) In this section, ~~* Sec. 3. AS 14.43.160 is amended by adding a new paragraph to read:~~

~~(7)~~ "out-of-home care" has the meaning given in AS 47.14.400.

*** Sec. 34.** AS 36.30.850(b)(42) is amended to read:

(42) grants and contracts with qualified entities for services under AS 47.18.330 for the **out-of-home** [FOSTER] care transition program;

*** Sec. 4.5.** AS 47.05.060 is amended to read:

Sec. 47.05.060. Purpose and policy relating to children. The purpose of this title as it relates to children is to secure for each child the care and guidance, preferably in the child's own home, **as well as an adequate education,** that will serve the moral, emotional, mental, **intellectual,** and physical welfare of the child and the best interests of the community; to preserve and strengthen the child's family ties unless efforts to preserve and strengthen the ties are likely to result in physical or emotional damage to the child, removing the child from the custody of the parents only as a last resort when the child's welfare or safety or the protection of the public cannot be adequately safeguarded without removal; and, when the child is removed from the family, to secure for the child adequate custody**, education,** and care and

adequate planning for permanent placement of the child.

*** Sec. 5.~~6.~~** AS 47.05.065 is amended to read:

Sec. 47.05.065. Legislative findings related to children. The legislature finds that

(1) parents have the following rights and responsibilities relating to the care and control of their child while the child is a minor:

(A) the responsibility to provide the child with food, clothing, shelter, education, and medical care;

(B) the right and responsibility to protect, nurture, train, and discipline the child, including the right to direct the child's medical care and the right to exercise reasonable corporal discipline;

(C) the right to determine where and with whom the child shall live;

(D) the right and responsibility to make decisions of legal or financial significance concerning the child;

(E) the right to obtain representation for the child in legal actions; and

(F) the responsibility to provide special safeguards and care, including appropriate prenatal and postnatal protection for the child;

(2) it is the policy of the state to strengthen families and to protect children from child abuse and neglect; the state recognizes that, in some cases, protection of a child may require removal of the child from the child's home; however,

(A) except in those cases involving serious risk to a child's health or safety, the Department of Health and Social Services should provide time-limited family support services to the child and the child's family in order to offer parents the opportunity to remedy parental conduct or conditions in the home that placed the child at risk of harm so that a child may return home safely and permanently; and

(B) the state also recognizes that when a child is removed from the home, visitation between the child and the child's parents or guardian and family members reduces the trauma for the child and enhances the likelihood

that the child will be able to return home; therefore, whenever a child is removed from the parental home, the Department of Health and Social Services should encourage frequent, regular, and reasonable visitation of the child with the child's parent or guardian and family members;

(3) it is the policy of the state to recognize that, when a child is a ward of the state, the child is entitled to reasonable safety, adequate care, and adequate treatment and that the Department of Health and Social Services as legal custodian and the child's guardian ad litem as guardian of the child's best interests and their agents and assignees, each should make reasonable efforts to ensure that the child is provided with reasonable safety, adequate care, and adequate treatment for the duration of time that the child is a ward of the state;

(4) it is in the best interests of a child who has been removed from the child's own home for the state to apply the following principles in resolving the situation:

(A) the child should be placed in a safe, secure, and stable environment;

(B) the child should not be moved unnecessarily;

(C) a planning process should be followed to lead to permanent placement of the child;

(D) every effort should be made to encourage psychological attachment between the adult caregiver and the child;

(E) frequent, regular, and reasonable visitation with the parent or guardian and family members should be encouraged; [AND]

(F) parents and guardians must actively participate in family support services so as to facilitate the child's being able to remain in the home; when children are removed from the home, the parents and guardians must actively participate in family support services to make return of their children to the home possible; **and**

(G) the child should continue to attend the child's school of origin as provided under AS 14.03.096;

(5) numerous studies establish that

(A) children undergo a critical attachment process before the time they reach six years of age;

(B) a child who has not attached with an adult caregiver during this critical stage will suffer significant emotional damage that frequently leads to chronic psychological problems and antisocial behavior when the child reaches adolescence and adulthood; and

(C) it is important to provide for an expedited placement procedure to ensure that all children, especially those under the age of six years, who have been removed from their homes are placed in permanent homes expeditiously.

* Sec. 6.~~7.~~ AS 47.07.020(b) is amended to read:

(b) In addition to the persons specified in (a) of this section, the following optional groups of persons for whom the state may claim federal financial participation are eligible for medical assistance:

(1) persons eligible for but not receiving assistance under any plan of the state approved under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act, Supplemental Security Income) or a federal program designated as the successor to the aid to families with dependent children program;

(2) persons in a general hospital, skilled nursing facility, or intermediate care facility, who, if they left the facility, would be eligible for assistance under one of the federal programs specified in (1) of this subsection;

(3) persons under 21 years of age who are under supervision of the department, for whom maintenance is being paid in whole or in part from public funds, and who are in **out-of-home care** [FOSTER HOMES] or private child-care institutions;

(4) aged, blind, or disabled persons, who, because they do not meet income and resources requirements, do not receive supplemental security income under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act), and who do not receive a mandatory state supplement, but who are eligible, or would be eligible if they were not in a skilled nursing facility or intermediate care facility to receive an optional state supplementary payment;

(5) persons under 21 years of age who are in an institution designated as an intermediate care facility for the mentally retarded and who are financially eligible as determined by the standards of the federal program designated as the successor to the aid to families with dependent children program;

(6) persons in a medical or intermediate care facility whose income while in the facility does not exceed $1,656 a month but who would not be eligible for an optional state supplementary payment if they left the hospital or other facility;

(7) persons under 21 years of age who are receiving active treatment in a psychiatric hospital and who are financially eligible as determined by the standards of the federal program designated as the successor to the aid to families with dependent children program;

(8) persons under 21 years of age and not covered under (a) of this section [,] who would be eligible for benefits under the federal program designated as the successor to the aid to families with dependent children program, except that they have the care and support of both their natural and adoptive parents;

(9) pregnant women not covered under (a) of this section and who meet the income and resource requirements of the federal program designated as the successor to the aid to families with dependent children program;

(10) persons under 21 years of age not covered under (a) of this section who the department has determined cannot be placed for adoption without medical assistance because of a special need for medical or rehabilitative care and who the department has determined are hard-to-place children eligible for subsidy under AS 25.23.190 - 25.23.210;

(11) persons who can be considered under 42 U.S.C. 1396a(e)(3) (Title XIX, Social Security Act, Medical Assistance) to be individuals with respect to whom a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act) because they meet all of the following criteria:

(A) they are 18 years of age or younger and qualify as disabled individuals under 42 U.S.C. 1382c(a) (Title XVI, Social Security Act);

(B) the department has determined that

(i) they require a level of care provided in a hospital, nursing facility, or

intermediate care facility for the mentally retarded;

(ii) it is appropriate to provide their care outside of an institution; and

(iii) the estimated amount that would be spent for medical assistance for their individual care outside an institution is not greater than the estimated amount that would otherwise be expended individually for medical assistance within an appropriate institution;

(C) if they were in a medical institution, they would be eligible for medical assistance under other provisions of this chapter; and

(D) home and community-based services under a waiver approved by the federal government are either not available to them under this chapter or would be inappropriate for them;

(12) disabled persons, as described in 42 U.S.C. 1396a(a)(10)(A)(ii)(XIII), who are in families whose income, as determined under applicable federal regulations or guidelines, is less than 250 percent of the official poverty line applicable to a family of that size according to the United States Department of Health and Human Services, and who, but for earnings in excess of the limit established under 42 U.S.C. 1396d(q)(2)(B), would be considered to be individuals with respect to whom a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c; a person eligible for assistance under this paragraph who is not eligible under another provision of this section shall pay a premium or other cost-sharing charges according to a sliding fee scale that is based on income as established by the department in regulations;

(13) persons under 19 years of age who are not covered under (a) of this section and whose household income does not exceed 175 percent of the federal poverty line as defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2);

(14) pregnant women who are not covered under (a) of this section and whose household income does not exceed 175 percent of the federal poverty line as defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2);

(15) persons who have been diagnosed with breast or cervical cancer

and who are eligible for coverage under 42 U.S.C. 1396a(a)(10)(A)(ii)(XVIII)**;**

(16) persons under 21 years of age who were in the custody of the department under AS 47.10 or AS 47.14 and who were placed in out-of-home care for a period of not less than six consecutive months on or after reaching 16 years of age.

* **Sec. 7.~~8.~~** AS 47.07.020 is amended by adding a new subsection to read:

(o) In this section, "out-of-home care" has the meaning given in AS 47.14.400.

* **Sec. 8.~~9.~~** AS 47.10.080(c) is amended to read:

(c) If the court finds that the child is a child in need of aid, the court shall

(1) order the child committed to the department for placement in an appropriate setting for a period of time not to exceed two years or in any event not to extend past the date the child becomes 19 years of age, except that the department or the child's guardian ad litem may petition for and the court may grant in a hearing

(A) one-year extensions of commitment that do not extend beyond the child's 19th birthday if the extension is in the best interests of the child; and

(B) **one-year extensions of commitment that do not extend beyond the child's 21st birthday** [AN ADDITIONAL ONE-YEAR PERIOD OF STATE CUSTODY PAST 19 YEARS OF AGE] if the continued state custody is in the best interests of the person and the person consents to it;

(2) order the child released to a parent, adult family member, or guardian of the child or to another suitable person, and, in appropriate cases, order the parent, adult family member, guardian, or other person to provide medical or other care and treatment; if the court releases the child, it shall direct the department to supervise the care and treatment given to the child, but the court may dispense with the department's supervision if the court finds that the adult to whom the child is released will adequately care for the child without supervision; the department's supervision may not exceed two years or in any event extend past the date the child reaches 19 years of age, except that the department or the child's guardian ad litem may petition for and the court may grant in a hearing

(A) one-year extensions of supervision that do not extend

beyond the child's 19th birthday if the extensions are in the best interests of the child; and

(B) an additional one-year period of supervision past 19 years of age if the continued supervision is in the best interests of the person and the person consents to it; or

(3) order, under the grounds specified in (o) of this section or AS 47.10.088, the termination of parental rights and responsibilities of one or both parents and commit the child to the custody of the department, and the department shall report quarterly to the court on efforts being made to find a permanent placement for the child.

* **Sec. 9.~~10.~~** AS 47.10.080 is amended by adding a new subsection to read:

(v) A social worker employed by or under contract with the department shall, not less than monthly, conduct visits with a child committed to the custody of the department under (c) of this section. The visits must be of sufficient substance and duration to address issues pertinent to case planning and service delivery to ensure the child's safety, permanency, and well-being. The majority of the visits conducted under this subsection must be at the location of the child's current placement. Nothing in this paragraph creates a private right of action against the department or the department's contractors. In this subsection, "visit" means face-to-face contact between social worker and child.

* **Sec. 10.~~11.~~** AS 47.10.990(3) is amended to read:

(3) "child" means a person **who is**

(A) under 18 years of age**;**

(B) [AND A PERSON] 19 years of age if that person was under 18 years of age at the time that a proceeding under this chapter was commenced**; and**

(C) under 21 years of age if that person is living in out-of-home care;

* **Sec. 11.~~12.~~** AS 47.10.990 is amended by adding a new paragraph to read:

(33) "out-of-home care" has the meaning given in AS 47.14.400.

* **Sec. 12.~~13.~~** AS 47.18.300(a) is amended to read:

(a) The department, in coordination with local public and private agencies, shall design, develop, and implement **an out-of-home care** [A FOSTER CARE] transition program to provide support and services to individuals who

(1) reach or have reached the age of 16 or older while in state **custody and placed in out-of-home** [FOSTER] care and have not yet reached 23 years of age; and

(2) meet other eligibility criteria established by the department under (b) of this section.

*** Sec. 13.~~14.~~** AS 47.18.310 is amended to read:

Sec. 47.18.310. Program design. The department, in coordination with local public and private agencies, shall design the program as a continuation of the training efforts related to independent living skills that were initiated **for a child in state custody who was placed in out-of-home care and** [WHEN THE STATE FOSTER CARE RECIPIENTS WERE] identified as being likely to remain in **out-of-home** [STATE FOSTER] care until reaching **not less than** the age of 18. The program design must require that program participants are directly involved in identifying the program activities that will prepare them for independent living.

*** Sec. 14.~~15.~~** AS 47.18.320(a) is amended to read:

(a) Subject to the availability of an appropriation made for the purposes of AS 47.18.300 - 47.18.390, the program may provide

(1) education and vocational training;

(2) assistance in obtaining basic education and training;

(3) career and employment services;

(4) training in basic life skills;

(5) housing and utility assistance;

(6) mentoring and counseling; and

(7) other appropriate services to complement the efforts of former state foster care recipients **or a child who was in state custody and placed in out-of-home care** to achieve self-sufficiency.

*** Sec. 15~~16~~.** AS 47.18 is amended by adding a new section to read:

Sec. 47.18.335. Monetary living expense stipend. (a) The department shall

provide a monthly monetary living expense stipend for a period not to exceed nine months in an amount described in (b) of this section to an individual ~~eligible for services under the program~~ who

(1) has left out-of-home care at age 18 or older;

(2) is participating in services in the program; and

(3) has ~~a~~ monthly contact with a social worker involved in the program.

(b) A stipend provided under this section shall be in an amount necessary to meet an eligible individual's living expense as determined~~set~~ by the department. The amount may not exceed

(1) for the first six months of eligibility, ~~that is not more than~~ the daily rate provided to a licensed foster parent; or

(2) for a period not to exceed three additional months during the period that follows the first six months of eligibility, half of the daily rate provided to a licensed foster parent.

(c) The department shall pay the stipend provided under this section until the later of the date that the individual

(1) reaches 21 years of age; or

(2) has left out-of-home care for six months.

(d) ~~for necessary living expenses. The stipend shall continue for a period of not more than one year and shall end before the individual is 23 years of age.~~ The department may adopt regulations to implement this section.

*** Sec. 16~~17~~.** AS 47.18.390(1) is amended to read:

(1) "program" means the **out-of-home** [FOSTER] care transition program authorized under AS 47.18.300 - 47.18.390;

*** Sec. 17.~~18.~~** AS 47.18.390(3) is repealed and reenacted to read:

(3) "out-of-home care" has the meaning given in AS 47.14.400.

MEMORANDUM February 16, 2009

SUBJECT: Definition of "state" in the Uniform Interstate Family Support Act (CSSB 96( ); Work Order No. 26-LS0485\E)

TO: Senator Bette Davis
Chair of the Senate Health and Social Services Committee
Attn: Lynda Zaugg

FROM: Donald M. Bullock Jr.
Legislative Counsel

Enclosed is a draft CS that includes the amended definition of "state" for purposes of the Uniform Interstate Family Support Act (UIFSA). The amended definition is in sec. 2 of the draft bill and is reflected in the title. Please review this draft carefully to ensure that it is consistent with your intent.

The definition of "state" in AS 25.25.101(19) is amended to include the United States Virgin Islands and Indian tribes. The amendment now encompasses all jurisdictions named in the definition of "state" in the UIFSA. Thus, the substance of the definition in AS 25.25.101(19) matches that in the UIFSA.

However, the definition in the amendment still varies from the most recent version of UIFSA that was last amended or revised in 2001.[1] The differences do not seem to be substantive, but you may wish to ask the Department of Law whether this is the time to align the definition of "state" in the state's version of UIFSA as closely as possible with the most recent official version of UIFSA.

If I may be of further assistance, please advise.

DMB:med
09-004.med

Enclosure

[1] The latest version of the UIFSA is published on the Internet at *http://www.law.upenn.edu/bll/archives/ulc/uifsa/final2001.pdf* (accessed Feb. 13, 2009). Federal law requires that UIFSA, as amended and as in effect on August 22, 1996, must be effective in each state. 42 U.S.C. 666. Thus the latest version of UIFSA is not required under current federal law.

Juneau, AK 99801-1182

RE: UIFSA Amendment
SB 96

Dear Senator Davis:

SB 96 is currently in the Senate Health and Social Services Committee. We are contacting you to request your assistance in adding an amendment to SB 96 (see attachment) that will ensure that Alaska continues to receive federal funding for child support programs. That funding amounted to 17 million dollars in the 08 fiscal year.

Specifically, we are proposing to amend a definition in Alaska's Uniform Interstate Family Support Act (AS 25.25.101(19)) in order to make Alaska's law consistent with the Uniform Act approved by the National Conference of Commissioners on Uniform State Laws. A brief explanation of the history of AS 25.25 will illustrate the issue.

In 1995, Alaska enacted a version of the Uniform Act that contained a different definition of "state" than contained in the Uniform Act. The following year, 1996, Congress passed legislation that mandated that States adopt the Uniform Act in order to be eligible to receive federal funding for child support programs. In Alaska's Uniform Interstate Family Support Act (UIFSA), the definition of "state" does not include two entities that are included in the Uniform Act. Those two entities are "the United States Virgin Islands" and "an Indian tribe." The amendment we are proposing would eliminate that difference.

I should also tell you that the State of Alaska recently requested a waiver from the U.S. Department of Health and Human Services concerning this issue. On January 29, 2009, we learned that our request had been denied. So, we are now in a

position where we must change the existing definition of "state" to conform to the Uniform Act, or risk losing our federal funds for child support programs.

We believe that the amendment does not constitute a substantive change to the jurisdiction of the State of Alaska in the area of child support programs. Specifically, it is our view that while enactment of the amendment is required in order to ensure that the State will continue to receive its share of federal child support funding, this change will not alter or diminish the authority of the State of Alaska in the area of child support programs.

That being said, if the amendment is enacted there is one difference that will result from this proposed change. Specifically, employers will be required to comply with income-withholding orders issued by an Indian tribe. I would note that in this context, "employer" includes all employers in Alaska, including the State of Alaska. The usual rights to contest the validity or enforcement of an order by an obligor would still apply to such an order.

The purpose of UIFSA is to unify state laws relating to child support orders, to provide efficient procedures for collecting child support in interstate cases, and to eliminate multiple support orders that were permitted under prior child support laws. We believe the proposed amendment is consistent with this purpose.

If have any questions on this matter please do not hesitate to contact me.

Sincerely yours,

TALIS J. COLBERG
ATTORNEY GENERAL

This e-mail is written for Bob Loesher:

Please find attached a communication from Peter Putzier, Alaska Department of Law, and proposed revisions to Section (b) intent language.

Additionally, please find attached our proposed testimony in support of the legislation when it is heard before the House Finance Committee at 1:30 p.m. this Thursday.

If the state attorney general and the administration is able to secure concurrence of this revision with other legislative parties, the Central Council would support a committee substitute amendment to the legislation as indicated in the attachments to this e-mail and in our newest draft testimony.

If you have any comments, questions, or concerns on this matter, we would appreciate it if you would call me at 723-8516 or reply to this e-mail.

Best Wishes,

Bob Loescher

Central Council Tlingit & Haida Indian Tribes of Alaska

HEARING: (H) FIN Apr 16 1:30 PM HOUSE FINANCE 519 TELECONFERENCE TELECONFERENCE

RE: House CS for CS for SB 96 (JUD)

My name is Bob Loescher. I am a member of the Central Council Tlingit & Haida Indians of Alaska Tribal Judiciary Committee. Our testimony today is in support of the enactment of House CS for CS for Senate Bill No. 96 (JUD) with a proposed revised and amended Section (b), as follows:

> (b) The proposed changes made in AS 25.25.101(19) under sec. 3 of this Act are conforming amendments that will result in procedural changes in Alaska for enforcement and modification of child support orders from other jurisdictions. UIFSA does not determine the authority of an Indian tribe to enter, modify, or enforce a child support order. ~~In adopting UIFSA conforming amendments, the legislature does not intend to grant or restrict tribal jurisdiction to enter, modify, or enforce child support orders, and the amendments are not intended, either directly or impliedly, to acknowledge, expand, or restrict tribal jurisdiction.~~ In adopting UIFSA conforming amendments, the legislative intent is to remain neutral on the issue of the underlying child support jurisdiction, if any, for the entities listed in the amended definition of "state." This legislation will not expand or restrict the child support jurisdiction, if any, of the listed "state" entities in the amended definition, nor does this legislation assume or express any opinion about whether those entities have child support jurisdiction either in fact or in law.

Mr. Chairman and members of the committee, we request that you amend the legislation as proposed above. We fully support the enactment of this law with these revisions.

Legislative Testimony

Robert Loescher
Tribal Judiciary Committee Member
Central Council Tlingit & Haida Indian Tribes of Alaska

HEARING: (H) FIN Apr 16 1:30 PM HOUSE FINANCE 519 TELECONFERENCE TELECONFERENCE

RE: SB 96 and HB 192 Section (b)

Before discussing specific objections to Section (b) language in SB 96 and HB 192, I would like to acknowledge support for SB 178, that requires the state administration's proposed amendment to amend the Alaska Employment Security Act to include a "federally recognized Indian tribe." Failure to bring Alaska in compliance by adding this amendment could result in the loss of up to 131 million dollars. Now if we look at the cost of failing to be in compliance with the child support statute, which is 85 million dollars, the cost of these two words "Indian Tribe" would total a 216 million dollar negative impact to the state's operating budget.

Here is the current language in SB 96 and HB 192 regarding legislative intent:

(b) The proposed changes made in AS 25.25.101(19) under sec. 3 of this Act are conforming amendments that will result in procedural changes in Alaska for enforcement and modification of child support orders from other jurisdictions. UIFSA does not determine the authority of an Indian Tribe to enter, modify or enforce a child support order. [In adopting UIFSA, conforming amendments, the legislature does not intend to grant or restrict tribal jurisdiction to enter, modify, or enforce child support orders, and the amendments are not intended, either directly or impliedly, to acknowledge, expand, or restrict tribal jurisdiction.]

The above underlined and bracketed language is what the Central Council Tribe objects to.

Counter-Proposal:

1) Eliminate section (b) language. Accept the SB 96 Legislative intent language prior to insertion of (b) intent language.
2) Alternatively, delete the last sentence of section (b) and add the following language as a preface to (b):

"The legislature recognizes that child support enforcement is a program of legislative policies and procedures developed and administered by Federal, State and Tribal entities that address the establishment of paternity and enforcement of support orders with UIFSA as the guide for the promotion of the general economic welfare in the best interest of dependent children, as required by the federal regulations."

4259

Introduction:

First of all, we have a problem with the last sentence in section (b) because it states that the legislature does not acknowledge tribal jurisdiction. We object to this language because "Indian Tribes" do exist in Alaska.

Central Council Tlingit and Haida Indian Tribes of Alaska is a federally recognized tribe. By granting federal recognition, the U.S. government acknowledges that Central Council has the immunities and privileges available to all other federally recognized Indian Tribes by virtue of their government to government relationship with the United States as well as the responsibilities, powers and limitations and obligations of such tribes. Along with this federal recognition, Central Council possesses the inherent right and sovereignty to govern ourselves to oversee the internal affairs of tribal members and family matters, which we native people have exercised for thousands of years.

The Alaska State Supreme Court in **John v. Baker**, 982 P.2d 738 Alaska,1999. Sep 08, 1999 addressed this very issue:

Issue: Do Alaska Native Tribes have inherent, non-territorial sovereignty allowing them to resolve domestic disputes between their own members?

Held: Alaska Native tribes, by virtue of their inherent powers as sovereign nations, do possess inherent, non-territorial sovereignty to resolve domestic disputes between tribal members. State and tribal courts have concurrent jurisdiction so long as the children are members or eligible for membership with the Tribe.

Next, Central Council objects to the above bracketed and underlined language in SB 96 and HB 192 for the following reasons:

1. Overall purpose of UIFSA is to provide a procedural vehicle for efficient processing of interstate child support cases.

2. The problem with the underlined, bracketed sentence is that it appears to be "disclaimer" language. The concern is when the state CSSD sees this language, what will it do with our child support orders when we request services, such as PFD garnishment, or when we request CSSD to provide any other service that it should be providing to our child support program?

3. Will the State CSSD tell us "Sorry, we do not "acknowledge" your authority to establish, enforce or modify child support orders, so we will not provide this single action PFD

service." This is contrary to federal rules requiring states and Tribes to cooperate towards the common goal of providing child support.

4. This language will put Alaska out of compliance with the intent of the UIFSA requirement that the definition of State includes the word, "Indian Tribe." The federal regulations require states and tribes to cooperate to ensure children and families receive child support services in interstate cases.

5. There are two separate federal regulations that govern the relationship between states and tribes for child support services.

    a. 45 CFR 302 details the state plan requirement for states to cooperate with other states in interstate child support cases. Section 302.36(a) (2) was modified to require states to provide the full range of services available under its child support program to all Tribal federally funded child support programs.

    b. 45 CFR 309.120 provides that the Tribe must extend the full range of services available in its plan to respond to all requests from and cooperate with State and other Tribal federally funded programs.

6. The problem is the proposed "disclaimer" language included in the section (b) amendment sends mixed messages to the CSSD agency, telling them they can't provide the Tribe with the full range of services because CSSD cannot acknowledge the Tribe's authority to create, enforce or modify child support orders.

7. Does this mean that every time our agency wants assistance from the State, that the state CSSD will say, "Sorry, we cannot acknowledge you." Thus, specifically, we have difficulty with the inclusion of the word, "acknowledgement" in section (b). The State CSSD's answer should be, "Yes, we will provide your agency with the full range of services." If the answer is in the negative, "No, we cannot provide services" then the State will be out of compliance with federal regulations.

8. The consequence of leaving the intent language in section (b) would be that the state CSSD will be out of compliance with 45 CFR 302 if it will not provide Tribes with the full range of services that it must provide to all other States and Tribes with federally funded child support programs.

9. This harms children and families and is contrary to the very intent of federal funding for all child support programs. Central Council has already seen this happen by CSSD refusing to recognize the Tribe's child support orders for PFD garnishments. This PFD garnishment service was provided to all other states and Tribes, but CSSD refused to provide this service to the Central Council.

Conclusion:

In conclusion, we come before you to ask for an amendment to delete the above underlined and bracketed language in our testimony or in the alterative, to delete the last sentence of section (b) and insert the language from our counter-proposal number two.

strike "acknowledge" in line 11 -

AMENDMENT

LS04585/C SB 96

BY COGHILL

Page 2, lin2 5:

Insert new subsection:

(b) The proposed changes made in AS 25.25.101(19) under sec. 3 of this Act are conforming amendments that will result in procedural changes in Alaska for enforcement and modification of child support orders from other jurisdictions. UIFSA does not determine the authority of an Indian tribe to enter, modify, or enforce a child support order. In Alaska, the scope of tribal authority to enter, modify, or enforce a child support order is an unsettled legal question. In adopting UIFSA conforming amendments, the legislature does not intend to grant or restrict tribal jurisdiction to enter, modify, or enforce child support orders, and the amendments are not intended, either directly or impliedly, to acknowledge, expand, or restrict tribal jurisdiction.

April 11, 2009

The Honorable Jay Ramras
Chair, Judiciary Committee
Alaska House of Representatives
Alaska State Capitol, Room 120
Juneau, AK 99801

Dear Representative Ramras;

There is only one difference between the Senate CS for SB 96 and the House CS for HB 192. On page 2 of both bills, Sec 1 included paragraph (a) of intent language but the Senate CS inadvertently left out paragraph (b) which is in CSHB 192 as follows:

"(b) The proposed changes made in AS 25.25.101(19) under sec. 3 of this Act are conforming amendments that will result in procedural changes in Alaska for enforcement and modification of child support orders from other jurisdictions. UIFSA does not determine the authority of an Indian tribe to enter, modify, or enforce a child support order. In Alaska, the scope of tribal authority to enter, modify, or enforce a child support order is an unsettled legal question, due in part to the lack of Indian country in most of the state. In adopting UIFSA conforming amendments, the legislature does not intend to grant or restrict tribal jurisdiction to enter, modify, or enforce child support orders, and the amendments are not intended to either directly or impliedly, to acknowledge, expand, or restrict tribal jurisdiction."

The Department supports including this intent language in CSSB 96 if that bill is to pass (H)JUD and move to (H)FIN for further consideration

Thank you for working with us on this issue.

Sincerely,

V Blaisdell

Ginger Blaisdell
Director

Legislative Testimony

Jessie M. Archibald
Staff Attorney, Tribal Child Support Unit
Central Council Tlingit & Haida Indian Tribes of Alaska
320 West Willoughby Ave., Suite 300
Juneau, Alaska 99801
HEARING: (H) JUD Apr 13 8:00 AM CAPITOL 120 TELECONFERENCE

My name is Jessie Archibald. I represent the Central Council Tlingit and Haida Indian Tribes of Alaska Tribal child support program. I would like to request that my written testimony be entered into the record. The purpose of my testimony is to explain the Tribe's objection to the Section 1. (b) language regarding the Definition of "State"; Legislative Intent, contained in CS for House Bill 192 (HHS), and respectfully request that section (b) language be deleted.

Reasons for Objections:

1. Section (b) language is not necessary because UIFSA has built in procedures for the non-registrant to raise objections about the issuing tribunal's subject matter jurisdiction, personal jurisdiction, and other matters that may make a specific order not entitled to recognition and enforcement in Alaska's tribunals.

2. The language specifically segregates out tribal child support orders for particular scrutiny, and carries a not-very-thinly-veiled implication that that scrutiny should be hostile, and even suggests that the legislature is pre-judging the validity of an objection based on a lack of Indian country, essentially endorsing the principal that a child support obligor should able to duck a child support obligation by objecting on that basis. The legislature should leave those issues to the individual litigants and the courts.

3. Child support is hard enough without the legislature of the State of Alaska putting into the statutes language that allows deadbeat parents to use legislative intent language to try to get out from under from having to pay support.

As an alternative, the Tribe would like to propose the following legislative intent language:

Section 1. The uncodified law of the State of Alaska is amended by adding a new section to read:

DEFINITION OF "STATE": LEGISLATIVE INTENT. (a) ....

(b) The legislature recognizes that child support enforcement programs are administered by Federal, State and Tribal entities that address the establishment of paternity and enforcement of

4267

support orders with the intent of promoting the general economic welfare and the best interest of dependent children. UIFSA provides a vehicle for the non-registrant to raise objections about the issuing tribunal's subject matter jurisdiction, personal jurisdiction, and other matters that may make a specific order not entitled to recognition and enforcement in Alaska's tribunals. The intent of the legislature is that tribal child support orders should be subject to the same types of objections, and to the same extent, as child support orders from tribunals of other jurisdictions. It is the intent of the legislature is to provide a procedural vehicle for Tribal child support orders for such orders to be registered in Alaska state tribunals in the same manner child support orders from other tribunals are registered. This legislation is not intended to prejudge the validity of any specific order or the validity of any objections to a specific order.

Short Description of Central Council Tribe's Child Support Program

1. Initially, federal funding was only provided to States that operate federally funded and approved child support programs.

2. More recently, with the adoption of the Final Rule on Child Support Enforcement Programs at 45 CFR 309, federally recognized Indian Tribes became eligible to receive federal funding to operate their own child support programs.

3. With the adoption of the Final Rule, the enforcement of child support has now become a Federal-State-Tribal partnership.

4. To receive federal funding for child support, the Tribe is required to adopt a plan that meets the requirements outlined in 45 CFR 309 which is the Final Rule on Child Support Enforcement Programs.

5. Central Council received federal funding and approval to operate a Tribal Child Support Program in March of 2007.

6. When Alaska initially was required to adopt UIFSA, it did not include the definition of "State" to include an Indian Tribe.

7. Now that Alaska Tribes are beginning to receive federal funding to operate child support programs, it is necessary for Alaska to amend the State UIFSA in order to come into compliance with the rest of the nation.

8. Alaska stands alone as the only state that has not adopted the federal uniform guidelines that define "state" to include an Indian Tribe, probably because when Alaska first adopted the

federal version of UIFSA, it was not considered that Tribes would be receiving federal grants to operate child support programs.

9. The Tribal Child support program is located within the Tribe's Employment and Training Department. Our program is referred to as the "Tribal Child Support Unit."

10. The Tribe's goal is to ensure that Tlingit and Haida children receive the financial and emotional support of both their parents. The program strives to support and affirm the traditions of the Tribe and families. We believe that child support should be a reliable source of income for families. TCSU focuses its efforts on the needs of children, and in doing so, we empower parents to ensure their children's needs are met. Our program has a cooperative approach to establishing and enforcing support obligations.

11. Here are some statements we want to hear our children shout out:

- I'm playing football this year, thanks Dad!
- I made the basketball team, thanks Mom!
- Thanks Dad, I'm getting good grades in school!
- I'm playing soccer this year...thank you Mom!
- I'm going to camp this summer, thank you Dad!
- Even though you're not with me, I know you care! Thanks Mom!

End

AMENDMENT

LS0458/C SB 96

BY COGHILL

Page 2, lin2 5:

Insert new subsection:

(b) The proposed changes made in AS 25.25.101(19) under sec. 3 of this Act are conforming amendments that will result in procedural changes in Alaska for enforcement and modification of child support orders from other jurisdictions. UIFSA does not determine the authority of an Indian tribe to enter, modify, or enforce a child support order. ~~In Alaska, the scope of tribal authority to enter, modify, or enforce a child support order is an unsettled legal question.~~ In adopting UIFSA conforming amendments, the legislature does not intend to grant or restrict tribal jurisdiction to enter, modify, or enforce child support orders, and the amendments are not intended, either directly or impliedly, to acknowledge, expand, or restrict tribal jurisdiction.

SB 96

TITLE: "An Act relating to nonpayment of child support: relating to certain judicial and administrative orders for medical support of a child;."

FLOOR STATEMENT

SB 96 puts Alaska in compliance with the federal requirements which assures that Alaska's children receive the medical support to which they are entitled.

In addition, adoption of SB 96 assures 85 million in federal dollars to Alaska in funds for Child Support Enforcement and Tem. Assistance for Needy Families (TANF). I appreciate your support of this important bill.

March 27, 2009

The Honorable John Coghill
Rules Chair, House of Representatives
Alaska State Capitol, Room 214
Juneau, AK 99801

Dear Representative Coghill;

In consideration of a letter of intent for HB 192 Child Support / Cash Medical, I am offering the following language that would clarify the changes to AS 25 and conform to Uniform Code.

> It is the intent of the legislature that in order to bring Alaska into conformity with the nationwide Uniform Interstate Family Support Act (UIFSA) as approved by the American Bar Association on February 9, 1993, and as in effect on August 22, 1996 including any amendments officially adopted as of such date by the National Conference of Commissioners on Uniform State Laws, it is necessary to amend AS 25.25.101 to include "an Indian tribe" and "the United States Virgin Islands" in the definition of "state."
>
> The proposed UIFSA amendments are conforming amendments which will result in procedural changes in Alaska for enforcement and modification of child support orders from other jurisdictions. UIFSA does not determine the authority of an Indian tribe to enter, modify or enforce a child support order. In Alaska, the scope of tribal authority to enter, modify or enforce child support orders is an unsettled legal question, due in part to the lack of Indian country in most of the state. In adopting UIFSA conforming amendments, the legislature does not intend either to grant or restrict tribal jurisdiction, if any, which may exist to enter, modify, or enforce child support orders, and the amendments are not intended either directly or impliedly to acknowledge, expand or restrict tribal jurisdiction.

Thank you for working with us on this issue.

Sincerely,

Ginger Blaisdell
Director

DEPARTMENT OF HEALTH & HUMAN SERVICES

Administration for
Children and Families

2201 Sixth Avenue, RX-70
Seattle, WA 98121

MAR 27 2009

Mr. John Mallonee, Director
Child Support Services Division
550 West 7th Avenue, Suite 310
Anchorage, AK 99501

Dear Mr. Mallonee:

This is in response to your request for clarification of the potential Federal consequences if a State fails to enact laws to meet the State plan requirements with section 466(f) of the Social Security Act (the Act). The Act mandates that on and after January 1, 1998, each State must have in effect the Uniform Interstate Family Support Act (UIFSA), as approved by the American Bar Association on February 9, 1993, and as in effect on August 22, 1996, including any amendments officially adopted as of such date by the National Conference of Commissioners on Uniform States Laws. Specifically, Alaska State's UIFSA does not include Indian tribes in the definition of 'State'.

In order for a State to receive Federal funding for the operation of its child support enforcement program, it must have an approved State IV-D plan which meets the requirements of section 454 of the Social Security Act (the Act). One of those requirements, specified at section 454(20)(A), is that the State must have in effect all of the laws required by section 466.

When a State fails to comply with any statutory requirement, its plan is subject to disapproval by the Office of Child Support Enforcement (OCSE). In accordance with sections 452(a)(3) and 455(a)(1)(A) of the Act, there would then be no authority to expend Federal funds under Title IV-D to operate the State's child support enforcement program.

Therefore, a determination that a State IV-D plan is disapproved may result in immediate suspension of all Federal payments for the State's child support enforcement program, and such payments will continue to be withheld until the State IV-D plan can be approved by OCSE. This suspension includes the Federal share of administrative expenditures as well as any performance based incentive payments to the State.

In addition, in order to be eligible for a block grant for Temporary Assistance to Needy Families (TANF), section 402(a)(2) of the Act requires a State to certify that it will operate a child support enforcement program under the State plan approved under part D. Therefore, Alaska should be aware that TANF funds may also be at risk if the State does not enact conforming child support legislation.

4280

In Federal Fiscal Year (FFY) 2008, the Federal share of Alaska's IV-D expenditures was $14,657,800 and the State's TANF award amount was $46,732,590. In addition, Alaska received $1,794,516 in child support incentives for FFY 2007 (the latest year with available data).

We trust this statement of requirements and penalties clarifies our position. We are attaching our Action Transmittal 97-05 issued April 28, 1997 which outlines our procedures for determining that a State IV-D Plan is disapproved. Due to the gravity of the consequences that may result, we urge you to take all necessary steps to have the required UIFSA legislation enacted and implemented as soon as possible.

If you have any questions, please contact John Cheng at (206) 615-2566.

Sincerely,

Linda Gillett
Regional Program Manager, Region 10
Office of Child Support Enforcement

Enclosure: Action Transmittal 97-05

cc: Ms. Donna Bonar, Acting Commissioner, OCSE

PROGRAM INSTRUCTION

ACTION TRANSMITTAL

OCSE-AT-97-05

April 28, 1997

TO:STATE AGENCIES ADMINISTERING CHILD SUPPORT ENFORCEMENT PLANS APPROVED UNDER TITLE IV-D OF THE SOCIAL SECURITY ACT AND OTHER INTERESTED INDIVIDUALS

SUBJECT:Procedures for Determining That a State IV-D Plan is Disapproved

BACKGROUND:Title III of the Personal Responsibility and Work Opportunity Reconciliation Act of 1996 (PRWORA), P.L. 104-193, made a number of amendments to sections 454 and 466 of the Social Security Act (the Act), requiring States to either establish new, or modify existing, procedures effective either October 1, 1996, March 1, 1997 or October 1, 1997. For States which require legislation in order to conform their State IV-D plans to the revised statute, section 395(b)(2) of PRWORA provides a grace period until not later than the 1st day of the 1st calendar quarter beginning after the close of the 1st regular session of the State legislature that begins after the date of enactment of PRWORA (August 22, 1996). In cases which require that the State constitution be amended, section 395(c) of PRWORA provides a grace period until one year after the effective date of the State constitutional amendment, but no later than five years after the date of enactment of PRWORA.

CSE is tracking the progress of each of the States in enacting the new State plan requirements and mandatory laws, and is noting the date when each State's 1997 legislative session ends in order to ascertain when these laws are required to be in effect and when the State must submit new or amended State plan material for approval by OCSE in order to operate a Child Support Enforcement program according to the requirements of title IV-D of the Act. If a State fails to submit the necessary State plan amendments, OCSE will have to determine that the State does not have an approvable State plan. A determination that a State IV-D plan is disapproved will result in immediate suspension of all Federal payments for the State=s child support enforcement program, and such payments will continue to be withheld until the State IV-D plan can be approved by OCSE.

STATUTORY

AUTHORITY:Section 455(a)(1)(A) of the Act specifies that funds appropriated under title IV-D shall be paid to States with approved State IV-D plans. There is no authority to expend Federal funds under title IV-D of the Act for the operation of a Child Support Enforcement program unless such State has an approved State IV-D plan.

Section 466 of the Act requires that all States, as a condition for approval of their State IV-D plan, must have in effect laws requiring the use of mandatory procedures to increase the effectiveness of their Child Support Enforcement programs. As a condition for State plan approval, section 454(20) of the Act provides that, to the extent required by section 466, States must have laws in effect and implement the procedures prescribed in or pursuant to such laws.

Section 454 of the Act sets the statutory requisites for the State IV-D plan. In addition, regulations at 45 CFR 301.10 define the State IV-D plan as a comprehensive statement submitted by the IV-D agency describing the nature and scope of its program. The State IV-D plan contains all the information necessary for the Office of Child Support Enforcement (OCSE) to determine whether the plan can be approved, as a basis for Federal financial participation in the State IV-D program.

Section 452(a)(3) of the Act requires that OCSE review and approve State plans for Child Support Enforcement programs under title IV-D of the Act. The authority to approve State plans is delegated to the Regional Office, but OCSE retains authority for determining that a State IV-D plan is not approvable.

As stated above, a determination that a State IV-D plan is disapproved will result in immediate suspension of all Federal payments for the State=s child support enforcement program, and such payments will continue to be withheld until the State IV-D plan can be approved by OCSE. If a State is dissatisfied with OCSE=s decision, reconsideration may be requested pursuant to 45 CFR 301.14. Withholding of Federal payments cannot be stayed pending reconsideration.

Section 402(a)(2) of the Act (as amended by PRWORA) provides that the chief executive officer of a State must certify that it will operate a child support enforcement program under an approved IV-D plan as a condition of eligibility for a TANF block grant under title IV-A of the Act. Therefore, States should be aware that TANF funds may also be at risk.

Although it is not required under Title IV-D of the Act, OCSE will give States an advance notice of "Intent to Disapprove" a previously approved State IV-D plan. The State will then be permitted the opportunity to waive reconsideration of the OCSE=s final decision and to exercise, prior to the State plan approval/disapproval decision, the right to a hearing under the procedures set forth a 45 CFR Part 213. If the State elects to pursue its hearing rights prior to issuance of OCSE's decision, no further administrative appeal will be allowed.

ATTACHMENT: Instructions for State Plan Disapproval

Timetable of Effective Dates

Anne F. Donovan

Acting Deputy Director

Office of Child Support Enforcement

Instructions for State Plan Disapproval

I. Notice of Intent to Disapprove

OCSE will issue a Notice of Intent to Disapprove a State Plan to the State umbrella agency head when it has been determined that either of the following situations exist:

Pursuant to the requirements at 45 CFR 301.13(d) the State IV-D plan no longer meets the requirements for an approved State plan based on relevant Federal statutes and guidelines.

Pursuant to the requirements at 45 CFR 301.13(e) or (f) the State IV-D plan or amendment submitted for approval does not meet the requirements under title IV-D of

the Act and regulations issued pursuant to the Act.

II. Notice Of Opportunity For Hearing

The Notice of Intent to Disapprove will provide opportunity for the State to request a hearing prior to the issuance of the final decision if the State waives its right to a reconsideration of OCSE's decision under 45 CFR 301.14. The State must request a hearing within 60 days of the date of the Notice of Intent to Disapprove. If the State does not request a hearing, OCSE shall proceed according to the procedures set forth under Determination to Withhold outlined below.

Upon request of the State for a hearing, OCSE will issue a Notice of Hearing which will state the time and place of the hearing, the issues which will be considered, and shall be published in the Federal Register. The hearing procedures contained in regulations at 45 CFR Part 213 shall apply to these proceedings.

III. Negotiations

As provided in regulations at 45 CFR 213.1(b) the hearing process does not preclude or limit negotiations between OCSE and the State, whether before, during or after the hearing to resolve the issues which are, or otherwise would be, considered at the hearing. Such negotiations and resolution of the issues are not part of the hearing, and are not governed by the hearing procedures, except as expressly provided for in such procedures.

IV. Determination to Withhold

If OCSE concludes that the State does not have an approved State IV-D plan under section I of these instructions, it will notify the State that further Federal payments under title IV-D of the Act will not be made to the State until a State IV-D plan is submitted and approved. Until a State IV-D plan is approved, no further Federal payments under title IV-D will be made to the State for any child support enforcement activities. Pursuant to 45 CFR 213.33, the effective date for the withholding of Federal funds shall not be earlier than the date of OCSE=s decision and shall not the later than the first day of the next calendar quarter following such decision.

V. Reconsideration

Any State which has not waived its right to reconsideration and is dissatisfied with OCSE=s decision that the State does not have an approvable State plan may request reconsideration of the decision pursuant to regulations at 45 CFR 301.14. Funding, however, will be suspended and may not be restored unless OCSE subsequently determines that the original decision to withhold Federal IV-D funding was incorrect.

CHILD SUPPORT LEGISLATION IN 104TH CONGRESS

TIMETABLE OF EFFECTIVE DATES FOR STATE REQUIREMENTS

Based on Dates in Text of Title III of PL 104-193

Personal Responsibility and Work Opportunity Reconciliation Act of 1996

Section 395 states that, except as specifically provided in the legislation, the effective date for provisions of PL 104-193 is 10/1/96 for provisions under "454 & 466 of the Act. Section 395 allows a grace period for State law changes and State constitutional amendments. For State law changes, the grace period is until the effective date of the State implementing provisions, but no later than the first day of the first quarter after the close of the first regular legislative session that begins after enactment of PL 104-193. For State constitutional amendments, the grace period is until one year after the effective date of the State constitutional amendment, but no later than five years after enactment of PL 104-193.

Requirements Effective 10/1/96

Income withholding ['314] -- '466(a)(1) and (b)

Locator networks; access to motor vehicle and law enforcement data ['315] -- '466(a)(12)

SSNs on applications for professional, commercial drivers, occupational and marriage licenses; on records of divorce decrees, support orders, and paternity determinations; and death records & certificates ['317] -- '466(a)(13)

Administrative enforcement in interstate cases ['323] -- '466(a)(14)

State laws providing expedited procedures, including:

Ordering genetic testing for paternity establishment; Issuing subpoenas for information and impose penalties for failure to respond; Requiring all entities in a State to promptly respond to inquiries by State agency and sanction failure to respond; Obtaining access to records of other State and local government agencies and records held by private entities including public utilities and financial institutions; Changing payee in cases subject to an assignment; Ordering income withholding; Securing assets to satisfy arrearages by intercepting or seizing periodic or lump-sum payments from a State or local agency and judgments, settlements, and lotteries; attach assets held by financial institutions; attach retirement funds; and impose liens; Increasing the amount of monthly support payments to include amounts for arrearages; Filing of information on location/identity of parties in State case registry upon entry of order; Statewide jurisdiction over orders and transfer of cases between local jurisdictions without additional filing; and Using of automated system to maximum extent feasible to implement expedited administrative procedures ['325] -- "466(c) & 454A(h)

State laws concerning paternity establishment, including:

Establish paternity before age 21 (retroactive to 8/16/84); Genetic tests in contested cases upon request w/sworn affidavits; Payment for genetic testing; Provide for a simple civil process for voluntarily acknowledging paternity with prior explanation/written notice to parents; Birth record agency must offer voluntary paternity establishment services, and other may; Name of father included on birth record only if both mother and father have signed an acknowledgment, or court or administrative authority has adjudicated paternity; Development of affidavit for voluntary acknowledgment of paternity which must be given full faith and credit in any other State; Procedures where voluntary acknowledgments and adjudication of paternity are filed with the State registry of birth records for comparison with State case registry; Admissibility of test results if performed by accredited laboratory; Rescission timeframe of 60 Days for signed voluntary paternity acknowledgments; elimination of judicial/administrative ratification proceedings on unchallenged paternity acknowledgments; Default orders; No right to jury trial in paternity cases; Issuance of temporary support orders in paternity cases; Evidentiary treatment of birth expenses/bills; and Opportunity for putative fathers to initiate paternity proceedings ['331(a)] -- '466(a)(5)

State plan requirements for paternity outreach activities ['332] -- '454(23)

Cooperation/good cause ['333] -- '454(29)

State use of definitions for collecting & reporting data ['343(b)] -- '454(30)

Simplified review & adjustment process ['351] -- '466(a)(10)

Voiding of fraudulent transfers ['364] -- '466(g)

Work requirement for persons owing child support ['365] -- '466(a)(15)

Reporting arrearages to credit bureaus ['367] -- '466(a)(7)

Liens on real/personal property by operation of law; full faith and credit to liens without registration of order ['368] -- '466(a)(4)

State law authorizing the suspension of licenses ['369] -- '466(a)(16)

International CSE -- State treatment of international requests ['371(b)] -- '454(32)

Financial institution data matches ['372] -- '466(a)(17)

Enforcing orders against grandparents in cases of minors ['373] -- '466(a)(18)

State cooperative agreements with Indian Tribes ['375(a)] -- '454(33)

Enforcement of orders for health care coverage ['382] -- '466(a)(19)

Explicit statutory requirement that Title IV-D services be provided to nonresident applicants; enforce child support & support due on behalf of child's custodian ['301(a)] -- "454(4)&(6)

Continuation of IV-D services for former recipients of IV-A assistance [301(b)] -- '454(25)

Requirements Effective 3/1/97

Use of forms by States in interstate cases ['324(b)] -- '454(9)(E)

Requirements Effective 10/1/97

Annual State self-reviews & reports ['342(a)] -- '454(15)

Data submitted on compliance with Federal performance requirements ['342(a)] --'454(15)

State privacy safeguards ['303(a)] -- '454(26)

State procedures-notices & copies of orders ['304(b)] -- 454(12)

State directory of new hires ['313] -- 454 (28)

ADP systems meeting all IV-D requirements enacted on or before Family Support Act ['344] -- '454(24)

Denial/restriction/revocation of passport if arrears greater than $5000 ['370] -- "452(k) & 454(31)

Requirements Effective 1/1/98

Adoption of UIFSA (with modifications) ['321] -- '466(f)

Requirements Effective 10/1/98

All support orders established or modified on or after 10/1/98 included in State central registry, which must be in place by 10/1/2000 ['311 and '344(a)(2)] -- '454A

Centralized automated unit for collections and disbursements ['312] -- '454(27)

Collection through State centralized collection unit of orders under wage withholding['312] -- '454B

State new hire reporting systems in existence prior to P.L. 104-193 must meet rest of new requirements ['313] -- '454(28)

Requirements Effective 10/1/99

End of optional exception period for local court collection of child support in lieu of State centralized collection unit ['312] -- '454B

Requirements Effective 10/1/2000

ADP systems must meet all IV-D requirements enacted on or before this law (with additional time tied to regulation issuance) ['344(A)(4)] -- '454(24)

State of Alaska

Department of Revenue

Administrative Services Division

SARAH PALIN, GOVERNOR
333 Willoughby Avenue, 11th Floor
P.O. Box 110400
Juneau, Alaska 99811-0405
Phone: (907) 465-2300
Fax: (907) 465-2394

March 20, 2009

The Honorable Bert Stedman
Chair, Senate Finance Committee
Alaska State Legislature
State Capitol, Room 516
Juneau, AK 99801

Dear Senator Stedman;

The Department of Revenue has requested a hearing to be scheduled for SB96 Child Support / Cash Medical. This bill was introduced by the Senate Health and Social Services Committee with support from the Governor. This letter outlines the need for the legislation to pass during this legislative session both for content of the bill and fiscal impact to the citizens of the state.

The Alaska Child Support Services Division (CSSD) needs to amend state law on three issues.

1. The requirement for cash medical support
2. The three year review cycle
3. The change of the definition of state in UIFSA

The first two amendments are less controversial and only require that child support orders include a provision for obligors to pay cash medical assistance to the custodial parent to help with health costs when insurance is not provided for that child, and that the division performs regular reviews of its cases.

The third amendment could be considered more sensitive. The Uniform Interstate Family Support Act (UIFSA) contains a definition of "state." Under federal law, all states must adopt the uniform act's definition of "state" that includes "the United States Virgin Islands" and "an Indian tribe." For Alaska, the impact of adopting a definition that would include Indian tribes, means Indian tribes can issue and serve income-withholding orders on employers. The obligor would be entitled to contest the jurisdiction of the tribe to issue the order and the usual rights to contest the validity or enforcement of an order by an obligor would still apply. The change would also affect the process for state recognition of tribal orders. A tribal child support order would be registered in the Alaska state courts under the UIFSA procedures instead of a comity process. These changes are consistent with the purpose of UIFSA. The purpose of UIFSA is to unify state laws relating to child support orders, to provide efficient procedures for collecting child support in interstate cases, and to eliminate multiple support orders that were permitted under prior child support laws.

One question raised by the changes required by UIFSA is whether the tribal amendment would result in an expansion of tribal authority. The Department of Law has examined this question and came to the

following conclusion:

> "UIFSA's underlying purpose is not to define jurisdiction. Nor does the state have the ability to define tribal jurisdiction. The overall purpose of UIFSA is simply to unify state laws relating to child support orders, to provide efficient procedures for collecting child support in interstate cases, and to eliminate multiple support orders that were permitted under prior child support laws. These purposes do not trigger broader jurisdictional concerns."

Intent language could be included in the introduced child support legislation (SB 96) to ease concerns of legislators who are not comfortable with issues related to Indian tribes. Or a letter of intent could be attached as a separate letter to the bill. I might suggest the following as an amendment:

LEGISLATIVE FINDINGS AND INTENT. (a) The legislature finds that

(1) failure to bring AS 25.25.101 into compliance with the federal Social Security Act Title IV-D could result in the loss of approximately $17,000,000 in administrative funding;

(2) of the 33 states that have federally recognized tribes, Alaska is the only state that has not yet passed conforming legislation; and

(3) to bring Alaska into conformity with UIFSA, the legislature finds that it is necessary to amend AS 25.25.101 to include "an Indian tribe" and "the United States Virgin Islands" in the definition of "state."

(b) It is the intent of the legislature that this Act not alter or expand in any way the governmental relationship between federally recognized tribes and the state.

A zero fiscal note accompanies the legislation because passage of the bill would result in no additional impact to the Department of Revenue, Child Support Services Division. The fiscal impact to non-passage of SB96, or another like bill, could be detrimental to 62,000 Alaska's children under age 19. If the state remains out of compliance after this legislative session, CSSD could lose nearly the entire operating budget required to operate the child support activities mandated by state and federal law and could jeopardize the entire TANF block grant received by the Department of Health and Social Services, Division of Public Assistance. (The division currently has a budget of $174,000 General Funds.)

$11,000,000	Federal receipts paid through Title IV-D of the Social Security Act for child support services.
$12,708,403	Each year CSSD collects funds from families who also receive state benefits through the State's TANF (Temporary Assistance for Needy Families) program. The collections received on behalf of the children receiving funding through TANF are retained by CSSD and used as match to obtain additional federal funding for child support, $6,070,137 state match, and $6,638,266 to be used as part of the total federal receipts to be paid to CSSD for its services. *FY08 totals

$ 1,025,761	Annual collections from obligors whose children are in state foster care are sent to the Department of Health and Social Services to help pay for foster care costs. *FY08 totals
$ 860,560	Annual collections from obligors whose children are institutionalized are sent to the Department of Health and Social Services to help pay for non-federal foster care. *FY08 totals
$60,000,000	Federal TANF Block Grant is part of the Social Security Act. If any part of the Act is not in compliance, the State would risk losing the entire block grant. The majority of this funding is appropriated in the Department of Health and Social Services. Action Transmittal OCSE-AT-97-05 dated April 28, 1997 describes that CSSD funding would be lost and that non-compliance could also put at risk Title IV-A funding. The language from this Action Transmittal follows:

AUTHORITY:Section 455(a)(1)(A) of the Act specifies that funds appropriated under title IV-D shall be paid to States with approved State IV-D plans. There is no authority to expend Federal funds under title IV-D of the Act for the operation of a Child Support Enforcement program unless such State has an approved State IV-D plan.

Section 466 of the Act requires that all States, as a condition for approval of their State IV-D plan, must have in effect laws requiring the use of mandatory procedures to increase the effectiveness of their Child Support Enforcement programs. As a condition for State plan approval, section 454(20) of the Act provides that, to the extent required by section 466, States must have laws in effect and implement the procedures prescribed in or pursuant to such laws.

Section 454 of the Act sets the statutory requisites for the State IV-D plan. In addition, regulations at 45 CFR 301.10 define the State IV-D plan as a comprehensive statement submitted by the IV-D agency describing the nature and scope of its program. The State IV-D plan contains all the information necessary for the Office of Child Support Enforcement (OCSE) to determine whether the plan can be approved, as a basis for Federal financial participation in the State IV-D program.

Section 452(a)(3) of the Act requires that OCSE review and approve State plans for Child Support Enforcement programs under title IV-D of the Act. The authority to approve State plans is delegated to the Regional Office, but OCSE retains authority for determining that a State IV-D plan is not approvable.

As stated above, a determination that a State IV-D plan is disapproved will result in immediate suspension of all Federal payments for the State's child support enforcement program, and such payments will continue to be withheld until the State IV-D plan can be approved by OCSE. If a State is dissatisfied with OCSE's decision, reconsideration may be requested pursuant to 45 CFR 301.14. Withholding of Federal payments cannot be stayed pending reconsideration.

Section 402(a)(2) of the Act (as amended by PRWORA) provides that the chief executive officer of a State must certify that it will operate a child support enforcement program under an approved IV-D plan as a condition of eligibility for a TANF block grant under title IV-A of the Act. Therefore, States should be aware that TANF funds may also be at risk.

In conclusion:

1. Monthly distribution of child support payments to custodial parents averages $9,350,000.

2. One out of six citizens (approximately 125,000 people) in Alaska are somehow involved in a child support case.

3. If this legislation does not pass in the next 30 days, Alaska risks losing its entire child support services program and could lose its state TANF block grant that serves low-income citizens in every community.

Thank you for working with us on this issue.

Sincerely,

Ginger Blaisdell

Fax: (907) 465-2394

March 16, 2009

The Honorable Hollis French
Chair, Senate Judiciary Committee
State Capitol, Room 417
Juneau, AK 99811

Dear Senator French,

This letter is in support of SB 96 to help inform the legislature of necessary actions required to bring Alaska into federal compliance with the federal law. If the state remains out of compliance after this legislative session, CSSD could lose more than $17 million federal dollars. This is nearly the entire operating budget required to operate the child support activities mandated by state and federal law.

The Alaska Child Support Services Division (CSSD) needs to amend state law on two issues. The first amendment is less controversial and only requires that child support orders include a provision for obligors to pay cash medical assistance to the custodial parent to help with health costs when insurance is not provided for that child.

The second amendment is more sensitive to certain legislators. The Uniform Interstate Family Support Act (UIFSA) contains a definition of "state." Under federal law, all states must adopt the uniform act's definition of "state" that includes "the United States Virgin Islands" and "an Indian tribe." For Alaska, the impact of adopting a definition that would include Indian tribes, means Indian tribes can issue and serve income-withholding orders on employers. The obligor would be entitled to contest the jurisdiction of the tribe to issue the order and the usual rights to contest the validity or enforcement of an order by an obligor would still apply. The change would also affect the process for state recognition of tribal orders. A tribal child support order would be registered in the Alaska state courts under the UIFSA procedures instead of a comity process. These changes are consistent with the purpose of UIFSA. The purpose of UIFSA is to unify state laws relating to child support orders, to provide efficient procedures for collecting child support in interstate cases, and to eliminate multiple support orders that were permitted under prior child support laws.

One question raised by the changes required by UIFSA is whether the tribal amendment would result in an expansion of tribal authority. The Department of Law has examined this question and came to the following conclusion:

> "UIFSA's underlying purpose is not to define jurisdiction. Nor does the state have the ability to define tribal jurisdiction. The overall purpose of UIFSA is simply to unify state laws relating to child support orders, to provide efficient procedures for collecting child support in interstate cases, and to eliminate multiple support orders that were permitted under prior child support laws. These purposes do not trigger broader jurisdictional concerns."

A letter of intent could be included in the introduced child support legislation (SB 96) to ease concerns of legislators who are not comfortable with issues related to Indian tribes. The letter of intent could be attached as a separate letter or as an amendment to the bill. I might suggest the following as an amendment:

LEGISLATIVE FINDINGS AND INTENT. (a) The legislature finds that

(1) failure to bring AS 25.25.101 into compliance with the federal Social Security Act Title IV-D could result in the loss of approximately $17,000,000 in administrative funding;

(2) of the 33 states that have federally recognized tribes, Alaska is the only state that has not yet passed conforming legislation; and

(3) to bring Alaska into conformity with UIFSA, the legislature finds that it is necessary to amend AS 25.25.101 to include "an Indian tribe" and "the United States Virgin Islands" in the definition of "state."

(b) It is the intent of the legislature that this Act not alter or expand in any way the governmental relationship between federally recognized tribes and the state.

Thank you for working with us on this issue.

Subject: SB96 CSSD legislation in (S)JUD

I've scanned the documents that have been included in the Senate Judiciary committee packets for tomorrow's hearing (please print the latest version of the bill off of Basis). Mike Ford and I met briefly with Cindy Smith (Sen French) to review the bill. She does not anticipate any push back from the committee unless there are questions from Senator Therriault. We hope that SB96 will be heard tomorrow and then brought up quickly in the next meeting under "bills previously heard" to pass out and move on to Senate Finance.

The order of the meeting will be:
Linda Zaugg (Sen Davis) will read the sponsor statement to open the meeting discussion
John Mallonee will provide his presentation of the bill
Stacy Steinberg will be on line to answer any legal questions
Ginger will be available to direct questions to those on the phone

SB96 is the only bill scheduled to tomorrow.

The Honorable Hollis French
Chair, Senate Judiciary Committee
Alaska State Legislature
State Capitol, Room 417
Juneau, AK 99801-1182

Dear Senator French:

The Senate Health and Social Services Committee introduced legislation on behalf of the Division of Child Support Services (CSSD). SB 96 passed out of (S) HSS on Monday, March 2, 2009 and has been transmitted to Senate Judiciary Committee for consideration.

SB 96 addresses two time sensitive amendments to the Uniform Interstate Family Support Act (UIFSA) that will bring the Division into federal compliance. Briefly, the two changes are; 1) providing for cash medical assistance for children in custodial homes, and 2) clarifying the definition of "state" to include the US Virgin Islands and Indian tribes. If these two amendments are not adopted during this state fiscal year, the Department of Revenue will be at risk to lose more than $17 million federal receipts to support the fiduciary services provided by CSSD.

I respectfully request that CSSB96(HSS) be scheduled for hearing in the Senate Judiciary Committee as early as possible. CSSB96(HSS) carries with it a zero fiscal note.

If the Committee requires any additional information, please contact me.

Sincerely,

G Blaisdell

In response to your request for a bill sponsored by the Senate HSS Committee concerning child support matters in the 11/12/08 draft 09-0026 bill.doc which you dropped off at Senator Davis's office, Senator Davis asked that I have Legis. Legal Svcs. Prepare draft 26-LS0485\A which is attached.

Note that our draft differs somewhat from that which you submitted. After title change indicating "non payment of child support" and the attendant penalties for non-compliance which are criminal, our bill first addresses related criminal law under Title 11, and then moves into child support under Title 25.

Senator Davis asks for your careful review and approval before we request a final draft from Legislative Legal Services for reading across and assignment of bill number.

SB 96

TITLE: "An Act relating to nonpayment of child support: relating to certain judicial and administrative orders for medical support of a child;."

SPONSOR STATEMENT (B)

In July 2008, the federal government issued new medical support regulations that require states to have guidelines addressing how either or both parents will provide for a child's healthcare needs through accessible health insurance coverage, cash medical support, or both. Under the federal regulations, states must order either or both parents to purchase reasonably-priced, accessible health insurance coverage, provide cash medical support or both. Cash medical support may be required in those cases where no reasonably-priced health insurance coverage is accessible to the child. If a parent is ordered to pay cash medical support, the Child Support Services Division must enforce the ongoing cash medical support obligation as well as collect any cash medical support arrears. Failure to satisfy these mandated jeopardizes 17 million dollars in federal funding for the state's child support program.

This bill adds to existing law the authority for a tribunal to order either or both parents to pay cash medical support, if warranted. In addition, the bill directs CSSD to review child support orders for modification on a federally mandated three-year cycle. The bill adds cash medical support to the definition of arrearage and the definition of support order thereby enabling CSSD to use

its existing enforcement tools to collect a cash medical support obligation on behalf of the child. Finally, the bill removes the language limiting who may request the correction of a clerical mistake in an administrative order or request the vacation of an administrative order based upon a default income.

This bill puts Alaska in compliance with the federal requirements. As explained above, this bill will assure that Alaska's children receive the medical support to which they are entitled.

MEMORANDUM February 27, 2009

SUBJECT: Sectional Summary (CSSB 96( ); (Work Order No. 26-LS0485\E))

TO: Senator Betty Davis
Attn: Lynda Zaugg

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Adds reference to cash medical support to the crime of aiding the nonpayment of child support in the second degree.

Section 2. Adds the Virgin Islands and Indian Tribes to the definition of "state."

Section 3. Amends order of support provision to include both parents, medical support, and insurance.

Section 4. Adds medical support to provision authorizing the initiation of administrative action to establish a duty of support.

Section 5. Amends periodic reviews of support orders to require a three year cycle of review.

Section 6. Deletes motion requirement for correcting an administrative mistake in a support order.

Section 7. Deletes motion requirement for vacating a support order that is based on a default amount.

Section 8. Redefines "arrearage" for child support purposes.

Section 9. Amends the definition of "support order" to include cash medical support.

Section 10. Amends garnishment provision to include insurance and cash medical support.

Section 11. Amends the Alaska Native family assistance program to include obligations for cash medical support.

Section 12. Provides for an indirect court rule amendment to Rule 90.3, Alaska Rules of Civil Procedure for changes made in the bill.

Section 13. Makes bill changes applicable to child support actions filed on or after the bill's effective date.

Section 14. Authorizes the Department of Revenue to proceed to adopt regulations needed under the bill.

Section 15. Provides for a conditional effect for the court rule amendment in sec. 12 only for two-thirds majority vote.

Section 16. Makes sec. 14 effective immediately.

Section 17. Provides for a July 1, 2009, effective date for all other bill sections.

MESSAGE TO THE SENATE

Mister President:

The House passed CS FOR SENATE BILL NO. 96(FIN) with the following amendment(s):

HOUSE CS FOR CS FOR SENATE BILL NO. 96(FIN)
"An Act relating to nonpayment of child support, to the definition of the term 'state' for the purposes of the Uniform Interstate Family Support Act, to certain judicial and administrative orders for medical support of a child, to periodic review and adjustment of child support orders, to relief from administrative child support orders, to child support arrearages, and to medical support of a child and the Alaska Native family assistance program; amending Rule 90.3, Alaska Rules of Civil Procedure; and providing for an effective date."

and it is returned for consideration.

SB 96

TITLE: "An Act relating to nonpayment of child support: relating to certain judicial and administrative orders for medical support of a child;."

SPONSOR STATEMENT (c)

SB 96 bring the state into compliance with federal government regulations adopted in July 2008, that require states to have guidelines addressing how either or both parents will provide for a child's healthcare needs. If a parent is ordered to pay for healthcare including cash medical support, the Child Support Services Division must enforce the ongoing medical support obligation as well as collect any cash medical support arrears. Failure to satisfy these mandated requirements jeopardizes 85 million dollars in federal funding for both Alaska's Child support program and Temporary Ass. To Needy Families (TANF).

1. This bill adds an Indian tribe and United States Virgin Island to the definition of state.

2. This bill adds to existing law the authority for a tribunal to order either or both parents to pay cash medical support, if warranted.

3. In addition, the bill directs Child Support Services Division (CSSD) to review child support orders for modification on a federally mandated three-year cycle.

4. The bill adds cash medical support to the definition of arrearage and the definition of support order thereby enabling CSSD to use its existing enforcement tools to collect a cash medical support obligation on behalf of the child.

5. Finally, the bill removes the language limiting who may request the correction of a clerical mistake in an administrative order or request the vacation of an administrative order based upon a default income.

SB 96 puts Alaska in compliance with the federal requirements which assure that Alaska's children receive the medical support to which they are entitled.

In addition, adoption of SB 96 assures 85 million in federal dollars to Alaska in funds for the Child Support Enforcement and Tem. Assistance for Needy Families (TANF) programs.

SB 96

TITLE: "An Act relating to nonpayment of child support: relating to certain judicial and administrative orders for medical support of a child;."

SPONSOR STATEMENT

In July 2008, the federal government issued new medical support regulations that require states to have guidelines addressing how either or both parents will provide for a child's healthcare needs through accessible health insurance coverage, cash medical support, or both. Under the federal regulations, states must order either or both parents to purchase reasonably-priced, accessible health insurance coverage, provide cash medical support or both. Cash medical support may be required in those cases where no reasonably-priced health insurance coverage is accessible to the child. If a parent is ordered to pay cash medical support, the Child Support Services Division must enforce the ongoing cash medical support obligation as well as collect any cash medical support arrears. Failure to satisfy these mandated jeopardizes 17 million dollars in federal funding for the state's child support program. ~~Alaska's request for a waiver was denied by the Federal government in January 2009.~~

This bill adds to existing law the authority for a tribunal to order either or both parents to pay cash medical support, if warranted. In addition, the bill directs CSSD to review child support orders for modification on a federally mandated three-year cycle. The bill adds cash medical support to the definition

of arrearage and the definition of support order thereby enabling CSSD to use its existing enforcement tools to collect a cash medical support obligation on behalf of the child. Finally, the bill removes the language limiting who may request the correction of a clerical mistake in an administrative order or request the vacation of an administrative order based upon a default income.

This bill puts Alaska in compliance with the federal requirements. As explained above, this bill will assure that Alaska's children receive the medical support to which they are entitled.

SB 96

TITLE: "An Act relating to nonpayment of child support: relating to certain judicial and administrative orders for medical support of a child;."

SPONSOR STATEMENT (c)

SB 96 brings the state into compliance with the federal Uniform Interstate Family Services Act (UIFSA) that require states to have guidelines addressing how either or both parents will provide for a child's healthcare needs and to include an "Indian tribe" in the definition of state. Both amendments to Alaska's child support state plan are conforming amendments which will result in procedural changes in Alaska for enforcement and modification of child support orders from other jurisdictions.

If a parent is ordered to pay for healthcare including cash medical support, the Child Support Services Division must enforce the ongoing medical support obligation as well as collect any cash medical support arrears. Including an "Indian tribe" in the definition of state does not expand or restrict tribal jurisdiction.

Failure to satisfy these mandated requirements jeopardizes 85 million dollars in federal funding for both Alaska's Child support program and Temporary Assistance To Needy Families (TANF).

4/10

1. This bill adds an "Indian tribe" and "United States Virgin Islands" to the definition of state.

2. This bill adds to existing law the authority for a tribunal to order either or both parents to pay cash medical support, if warranted.

3. In addition, the bill directs Child Support Services Division (CSSD) to review child support orders for modification on a federally mandated three-year cycle.

4. The bill adds cash medical support to the definition of arrearage and the definition of support order thereby enabling CSSD to use its existing enforcement tools to collect a cash medical support obligation on behalf of the child.

5. Finally, the bill removes the language limiting who may request the correction of a clerical mistake in an administrative order or request the vacation of an administrative order based upon a default income.

SB 96 puts Alaska in compliance with the federal requirements which assure that Alaska's children receive the medical support to which they are entitled.

In addition, adoption of SB 96 assures 85 million in federal dollars to Alaska for the Child Support Enforcement and Temporary Assistance for Needy Families (TANF) programs.

I appreciate your support of this important bill.

MEMORANDUM February 27, 2009

SUBJECT: Sectional Summary (CSSB 96( ); (Work Order No. 26-LS0485\E))

TO: Senator Betty Davis
Attn: Lynda Zaugg

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Adds reference to cash medical support to the crime of aiding the nonpayment of child support in the second degree.

Section 2. Adds the Virgin Islands and Indian Tribes to the definition of "state."

Section 3. Amends order of support provision to include both parents, medical support, and insurance.

Section 4. Adds medical support to provision authorizing the initiation of administrative action to establish a duty of support.

Section 5. Amends periodic reviews of support orders to require a three year cycle of review.

Section 6. Deletes motion requirement for correcting an administrative mistake in a support order.

Section 7. Deletes motion requirement for vacating a support order that is based on a default amount.

Section 8. Redefines "arrearage" for child support purposes.

Section 9. Amends the definition of "support order" to include cash medical support.

Section 10. Amends garnishment provision to include insurance and cash medical support.

Section 11. Amends the Alaska Native family assistance program to include obligations for cash medical support.

Section 12. Provides for an indirect court rule amendment to Rule 90.3, Alaska Rules of Civil Procedure for changes made in the bill.

Section 13. Makes bill changes applicable to child support actions filed on or after the bill's effective date.

Section 14. Authorizes the Department of Revenue to proceed to adopt regulations needed under the bill.

Section 15. Provides for a conditional effect for the court rule amendment in sec. 12 only for two-thirds majority vote.

Section 16. Makes sec. 14 effective immediately.

Section 17. Provides for a July 1, 2009, effective date for all other bill sections.

Senator Bettye Davis

Senate Bill 101

"An Act relating to questionnaires and surveys administered in the public schools."

Sponsor Statement

SB 101 is intended to allow for more student participation the Youth Risk Behavior Survey (YRBS) which is conducted as part of a national effort by the U.S. Centers for Disease Control and Prevention (CDC) to monitor health-risk behaviors of the nation's high school students. These behaviors, in turn, result in the most significant causes of both mortality and morbidity during youth and adulthood. The behaviors monitored by the Alaska YRBS include traffic safety; weapons and violence; suicide; tobacco use; alcohol and other drug use; sexual behavior; and diet, nutrition and exercise.

Prior to new language in SB 101 written parental consent was required to administer the YRBS. Under SB 101 only written refusal, or written non-consent to participate is required of parents or guardians of students. SB 101 provides that students themselves, independent of parental consent or non-consent, can elect not to answer certain questions or not to participate in the Youth Risk Behavior Survey or any questionnaire or survey. Moreover, SB 101 expands information required in the 2-week parental notice requirement to include date, sponsor, description of content, opportunity to review the questionnaire or survey, school contacts, and how to submit written permission or refusal for a student to participate. While studies have found that the vast majority of parents would consent to students participating in school questionnaires and surveys, non-response is more often due to apathy, oversight, or student omission or error in returning forms, rather than parental refusal.

The CDC determined that at least 60% of students in the selected sample must complete the YRBS for it to accurately represent student behavior across the entire state. In 2005, Alaska missed achieving an adequate response rate and was unable to use the data. As a result, lost were valuable measures of population-based information on youth which helps policy makers, educators, program planners, agencies, non-profits, and parents to better understand, fund, and track trends over time and help guide and evaluate important health and prevention programs. State and federal grant programs which rely on these surveys include tobacco prevention and control, obesity prevention, diabetes, heart disease and stroke, safe and drug free schools and other substance abuse prevention, and injury prevention, including violence and suicide prevention, HIV and STD prevention, and more.

Senate Bill 101, 26-LS0524\A

"An Act relating to questionnaires and surveys administered in the public schools."

Sectional Summary

Note: this sectional summary should not be considered an authoritative interpretation of the bill, as the bill itself is the best statement of its contents.

Section 1. Amends AS 14.03.110(a) to require a school district to obtain written permission to administer a questionnaire or survey, anonymous or not, with the exception of the Youth Risk Behavior Survey, as provided in Section 4 in new subsection AS 14.03.110(g).

Section 2. Repeals and reenacts AS 14.03.110(d) to require a school district provide to a student's parent or legal guardian written notice of a questionnaire or survey with detailed information as to the date, contents, sponsor, contacts at the school district, opportunity to review the questionnaire or survey, description of how to submit written permission or denial of permission to participate, including an anonymous or specific questionnaire or survey.

Section 3. Amends AS 14.03.110(e) to allow a student to participate but to refuse to "answer specific questions." Subsection (e) also requires that a parent or legal guardian may refuse to allow the student to participate in a specific questionnaire or survey "by submitting to the teacher or school principal a written denial of permission for the student's participation."

Section 4. Adds a new subsection AS 14.03.110(g) which provides that if a school district administers the Youth Risk Behavior Survey provided by the United States Centers for Disease Control and Prevention, written permission of the student's parent or legal guardian is not required, but the school district shall provide parents notice of the survey and the opportunity to submit to the teacher or school principal a written denial of permission to take the survey.

Note: Subsections AS 14.03.110(b) and (c) remain unchanged as to annual permission and two weeks notice for anonymous surveys under (b), and written permission and two weeks notice for surveys which are not anonymous under (c).

Position Statement on SB 101
Relating to Questionnaires and Surveys in Public Schools

AASB member districts need school-by-school data to increase student achievement and accurately assess the effectiveness of current programs. Since passage of HB 70 in 1999, schools have been unable to obtain an adequate sample of student information to provide reliable information. AASB supports modifying the requirements for parental or legal guardian permission for a student to participate in a questionnaire or survey administered in a public school.

Fact Sheet

COMMISSIONER'S OFFICE

FOR IMMEDIATE RELEASE: Nov. 19, 2007

Fact Sheet: 2007 Youth Risk Behavior Survey (YRBS)

What is the Youth Risk Behavior Survey (YRBS)?
The Youth Risk Behavior Survey (YRBS) is part of an epidemiological surveillance system that was established in 1990 by the Centers for Disease Control and Prevention (CDC). It was developed to monitor health risk behaviors that contribute markedly to the leading causes of death, disability, and social problems among youth and adults in the United States. These behaviors, often established during childhood and early adolescence, include:

- Tobacco use;
- Unhealthy dietary behaviors;
- Inadequate physical activity;
- Alcohol and other drug use;
- Sexual behaviors that contribute to unintended pregnancy and sexually transmitted diseases, including HIV infection; and
- Behaviors that contribute to unintentional injuries and violence.

What are the purposes of the YRBS?

- Determine the prevalence of health risk behaviors;
- Assess whether health risk behaviors increase, decrease, or stay the same over time;
- Provide comparable national, state and local data;
- Provide comparable data among subpopulations of youth; and
- Monitor progress toward achieving the Healthy People 2010 objectives and other program indicators.

How long has Alaska participated in the YRBS?
The YRBS high school survey was first implemented at the national level in 1990. Since that time CDC has sponsored national surveys from 1991 to the present on an every-other-year basis. Alaska first participated in the YRBS in 1995 and obtained representative statewide data. Due to external factors, the YRBS was not administered in 1997. It was administered in 1999; however the Anchorage School District did not participate. Without Anchorage the data were not representative of the state as a whole. The survey was administered in 2001, but unfortunately low student response rates rendered the data unusable. A major obstacle in 2001 was the constraint of the active parental consent law that had just gone into effect. In 2003 the survey was administered statewide with active parental consent and representative data were obtained, making this

the first statewide YRBS representative sample since 1995. The survey was again administered in 2005, however the response rate fell just below the target and the data was not used. In 2007, the survey was administered and achieved an adequate response rate, yielding important survey results.

What is the difference between active and passive consent?
Alaska's active parental consent law, AS 14.03.110, prohibits public schools from administering surveys or questionnaires that ask about personal or family affairs, or anything else that is not a matter of public record or readily observable in public, without first getting written permission from all participating students' parents or legal guardians. This law holds regardless of whether the surveys are anonymous and voluntary. Alaska is one of only a few states in the nation that has a school survey law requiring active parental consent for surveys of this type. Most states employ passive parental consent when administering such anonymous surveys. Passive parental consent involves notifying and informing the parents about the survey and assuming that students will participate unless the parent provides a written refusal to opt out of the survey.

How was the YRBS conducted?
A two-stage sample design was used to select the actual students for participation. The first stage consisted of selecting schools. Schools were selected with probability proportional to the size of their enrollment. Once a school was selected, classes were selected as the second stage. Eligible classes were those where a student would be enrolled in one and only one class at a time. For example second period or required English. This gave each student an equal opportunity of being selected. At any time a school district, an individual school, a student's parents, or a specific student had the opportunity to decline participation.

At the classroom level, teachers were given a script to read to students that established guidelines for student privacy and anonymity and the importance of the survey. Each student was given an unmarked envelope in which to seal his or her survey before turning it in. These survey envelopes remained sealed until received at a central state collection site. The Centers for Disease Control and Prevention and a CDC contractor analyzed the state survey data.

A national YRBS also was conducted in 2007, however, the results will not be available until early summer 2008. As a result, 2005 National YRBS results are being used for comparison purposes.

Who participated in the survey?
Forty one high schools from 19 districts were scientifically selected to be included in the survey. Thirty-eight (88 percent) schools participated and 1,318 (68 percent) students completed the survey resulting in an overall response rate of 60 percent. The CDC has determined that the overall response rate must be 60 percent or greater in order for the data to represent the high school population of the state. Therefore, these survey results represent 34,399 students grades 9 through 12 in public high schools (excluding private, alternative, boarding and correctional schools).

How are the data used?
The results of the YRBS are used to detect changes in risk behaviors over time and provide an important piece of program planning and evaluation, curriculum development and decision-making regarding the use of available resources. The information from the YRBS can be used to help schools and communities identify strengths and weaknesses in current programs and services. Additionally the results can be used by schools and communities when applying for grant funding to initiate or maintain programs that serve youth.

Who supported the YRBS in Alaska?
The YRBS in Alaska is a cooperative effort between the state departments of Health and Social Services and Education and Early Development. The survey is also endorsed by the following groups and boards:

- Association of Alaska School Boards
- Alaska Action for Healthy Kids
- All Alaska Pediatric Partnership
- American Heart Association, Pacific/Mountain Affiliate
- American Lung Association of Alaska
- American Cancer Society, Alaska
- Alaska Health Education Consortium
- Alaska Tobacco Control Alliance
- Alaska Native Tribal Health Consortium

Question:

Make this equation correct without changing the numbers: 8 - 8 = 91

YRBS -Nationally

The Youth Risk Behavior Survey (YRBS) is the largest and most respected source of data on the youth risk behaviors that contribute to the leading causes of mortality, morbidity, and social problems in the US. The YRBS was created by the Division of Adolescent School Health, Center for Disease Control, and representatives from more than 800 local, state, and federal health agencies in 1990. The YRBS measures behaviors that fall into the following 6 categories: Behaviors that result in unintentional injuries and violence, tobacco use, alcohol and other drug use, sexual behaviors that result in HIV infection, other STDs, and unintended pregnancies, dietary behaviors, physical activity.

YRBS- How Can This Short Survey Collect the Vital Behavioral Information We Need?

Amazingly, nationally 71% of all deaths for persons 10-24 years of age are due to only 4 causes: motor vehicle crashes, other unintentional injuries, homicide, and suicide. In addition, 800,000-900,000 teenaged girls become pregnant each year and an estimated 3 million STDs occur among persons ages 10-19. A limited number of behaviors usually established during youth contribute substantially to these causes of mortality and morbidity. These behaviors include: carrying a weapon, physical fighting, attempting suicide, drinking or using drugs while operating a motor vehicle, lack of seatbelt use while riding in a motor vehicle, lack of helmet use while riding a bicycle, and unprotected sexual intercourse that results in HIV infection, other STDs, or unintended pregnancies.

The Youth Risk Behavior Survey also surveys youth on the leading causes of adult morbidity and mortality as many individuals initiate the risk behaviors that lead to problems as adults in their adolescence. Among adults in the US aged 25 and older, 63% of deaths are due to only 2 causes: cardiovascular disease and cancer. A limited number of causes contribute to these health problems. These behaviors include: use of tobacco, unhealthy dietary behaviors, and physical inactivity.

YRBS - How it Works

The YRBS is administered in a collection of randomly drawn sample schools from nearly every state every other year. The survey is administered to high school aged students in a single class period and is completely anonymous. Some school districts choose to survey all of their high school students to better understand and measure risk behaviors in their communities. Strict precautions are in place to absolutely insure student confidentiality and participation in the survey is completely voluntary. Students answer the multiple choice questions about their current and past risk behaviors, which are collected and sent to the state for processing. State results are then shared federally with CDC.

YRBS - The Value

The YRBS results have tremendous value at the national, state, and local level. Results allow health and educational professionals to track the prevalence of youth risk behaviors over time, to compare their state to other states or to the nation, and even to empower local communities to measure themselves compared to the rest of the state. Understanding the extent to which youth practice health risk behaviors is critical for developing programs that address risk behaviors practiced in their jurisdiction and for measuring progress toward program goals. YRBS results also help with focusing school health education teacher training and instructional programs, supporting health-related legislation, and seeking funding for school health programs.

Alaska's YRBS

Alaska managed to collect enough student responses to the YRBS to get usable data twice since it began administering the survey in 1995. CDC determined that at least 60% of students in the selected sample must complete the survey for it to accurately represent student behavior across the entire state. Alaska was able to get 60% or more responses in 1995 and in 2003. In 2005, Alaska missed achieving an adequate response rate and was unable to use the data. Every effort is being made for a successful survey in 2007.

Here is a sample of Alaska 2003 YRBS data:

- 11.8% of high school boys reported carrying a weapon to school in the last 30 days
- 38.7% of high school students reported drinking alcohol in the last 30 days
- 47.5% of high school students reported having ever used marijuana
- 1 in 4 high school students reporting driving in a vehicle with a driver who drank alcohol in the last 30 days
- 1 in 5 high school girls reported seriously considering suicide in the last 12 months

For more information visit http://www.hss.state.ak.us/dph/chronic/school/pubs/YRBSreport2003.pdf.

DEAR PAT,

I am a health teacher who recently heard that Alaska has a law that requires parental consent for youth health surveys at school. I occasionally utilize classroom surveys with my students and now am concerned if I am following protocol. Is this true, and if so, what should I do? Signed, Alarmed in ABC School

Dear Alarmed in ABC School,

Alaska has had a law, AS 14.03.110, since 1999 that prohibits schools from administering surveys or questionnaires at public schools that inquire into personal or family affairs, or anything else that is not a matter of public record or readily observable in public (regardless of whether or not the surveys are anonymous and voluntary) without first getting written permission from all participating students' parents or legal guardians. This type of requirement is known as active parental consent.

According to the Centers for Disease Control Alaska is one of two or three states in the nation that has a school survey law requiring active parental consent for surveys that are anonymous and voluntary. Most states employ passive parental consent when administering such surveys. Under this system, written notice is sent out to parents informing them of the upcoming survey and the types of questions it will ask, and then permission to participate is assumed unless parents or students indicate otherwise. With passive parental consent all students and parents can decline to participate at any point in the process.

Classroom teachers need to be aware of this law as it applies to small informal surveys teachers may want to include in their instruction as well as to national surveys like the YRBS. Many teachers are surprised to learn of this law and its requirements, and are forced to revisit some of their current instructional assignments and practices to avoid violations. Teachers should check with their school administrators for further guidance.

Addressing active consent is a controversial topic. Advantages to active parental consent are greater parental involvement and less risk of students being included in surveys without parental approval. Disadvantages of active parental consent include the drastically increased costs and labor involved in conducting student surveys, the high failure rates for getting enough student responses to get usable data for larger surveys, the potential for leading to inaccurate/misrepresentative data, the research suggesting that the vast majority of parents consent to their students participating in such surveys, and that most parental failures to provide written permission are driven by apathy, oversight, or student error, not by refusal.

As a health teacher you can do several things to support collections of important health data for local, state and national use. First you can communicate with your site administrator to see if consent for surveys is built into your school's annual parental enrollment packet. Second, you can incorporate lessons on the YRBS into your curriculum, highlighting its findings and its importance. Student health projects could focus on raising community awareness and support for the YRBS and other youth risk behavior surveys. Finally, some students could choose to research Alaska's law around surveys in schools and its current effects on Alaska's youth risk behavior data collection efforts.

***Much of the information in this edition comes from CDC's 2005 Handbook for Conducting YRBS Surveys.

Planned Parenthood®
of the Great Northwest

March 9, 2009

The Honorable Bettye Davis
Alaska State Senate
State Capitol, Rm 30
Juneau, AK 99801-1182

Dear Senator Davis:

On behalf of Planned Parenthood of the Great Northwest (PPGNW), I'm writing in support of Senate Bill 101, "*An Act relating to questionnaires and surveys administered in the public schools.*"

Planned Parenthood relies on the results of the school-based Alaska Youth Behavior Risk Survey to determine where our efforts should be in terms of education and STI prevention programs. For accurate survey results it's critical to get as many survey responses as possible. Planned Parenthood recognizes that the current regulations of active parental consent for anonymous surveys decrease the response rate significantly.

Senate Bill 101 will increase the accuracy of the vital information Planned Parenthood and many other organizations rely on to serve Alaska's young people. Thank you for addressing this issue.

Sincerely,

Clover Simon
Vice President of Alaska
Planned Parenthood of the Great Northwest
(907) 770-9705
clover.simon@ppgnw.org

SB 101

ALASKA PUBLIC HEALTH ASSOCIATION

Committed To Advancing Alaska's Public Health Since 1978

ALPHA RESOLUTION 7-2008

Support for Passive Parental Consent for the Youth Risk Behavior Survey

Sponsor: **Jayne Andreen**

Whereas the Youth Risk Behavior Survey (YRBS) is part of an epidemiological surveillance system that was established in 1988 by the Centers for Disease Control and Prevention (CDC) to help monitor the prevalence of behaviors that put young people at risk for the most significant health and social problems that can occur during adolescence and adulthood.

Whereas the survey examines six categories of adolescent behavior including: 1) behaviors that result in unintentional and intentional injuries; 2) tobacco use; 3) alcohol and other drug use; 4) sexual behaviors that can result in HIV infection, other sexually transmitted diseases (STD's) and unintended pregnancies; 5) dietary behaviors; and 6) physical activity.[1]

Whereas Alaska's YRBS is a joint project between the Dept. of Education & Early Development and the Dept. of Health and Social Services and was established in Alaska in 1995.[2]

Whereas survey results are used at the national, state, and local level such as measuring progress towards the national Healthy People 2010 and the Healthy Alaskans 2010 health objectives.

Whereas, understanding the health risk behaviors of youth is critical for developing programs that address risk behaviors practiced and for measuring progress toward program goals.

Whereas Alaska's YRBS has been unable to collect reliable data consistently with the challenge of administering the survey under the active parental consent law AS 14.03.110, which requires written permission from all participating students' parents or legal guardians. [2]

Whereas employing active parental consent drastically increases costs and labor involved in conducting student surveys, and results in high failure rates for getting enough student responses to get usable data for larger surveys, and the potential for leading to inaccurate/misrepresentative data.[3]

Whereas Alaska is one of only three states in the nation that has a school survey law requiring active parental consent for surveys of this type.[3]

Whereas most states employ passive parental consent when administering such surveys which involves notifying and informing the parents about the survey and assuming that students will participate unless the parent provides a written refusal to opt out of the survey. [3]

Whereas it is believed that the majority of parents consent to their students participating in such surveys and that most parental failures to provide active parental consent (written permission to participate) are driven by apathy, oversight, or student error, not by refusal. [4]

Whereas the survey is anonymous and voluntary.

Therefore be it resolved that the Alaska Public Health Association supports the content and the implementation of the Youth Risk Behavior Survey in Alaska with parental notification and passive parental consent

And be it further resolved that the Alaska Public Health Association supports changing the requirement for participation in the survey from active parental consent to passive parental consent.

Sen. Bettye Davis

From: Gretchen Clarke [bhantelope@gci.net]
Sent: Sunday, March 22, 2009 9:48 AM
To: Sen. Bettye Davis; Sen. Joe Paskvan; Sen. Johnny Ellis; Sen. Joe Thomas; Sen. Fred Dyson
Subject: Support SB 101

Senators,

I urge you to support SB 101 (Davis) changes the parental permission for Youth Risk Behavior Survey (YRBS) to opt out procedure rather than the current opt in.
YRBS provides critical information regarding the health and behaviors of our young people. It is an anonymous survey and is the 'gold standard' for schools. The information collected by YRBS is crucial for schools and others who work with youth as it provides information that supports grant applications and other sources of youth support funding. However, in order for YRBS to be a useful tool for collecting information, a large number of youth need to take this survey so progress can be noted. Most parents do not object to their children taking part in YRBS. They are just busy and don't get the permission forms returned which leads to school districts spending additional resources to track down permission forms, all in effort to get enough student participation in the survey to get statistically valid results. Please support the change to parental passive consent; parents opposed to their children participating will still be able to refuse participation.
Thank you for your consideration,
Gretchen Clarke

Senator_Bettye_Davis@legis.state.ak.us
http://www.akdemocrats.org

Senator Bettye Davis

Senate Bill No. 105

"An Act relating to continuing the secondary public education of a homeless student; relating to the purpose of certain laws as they relate to children; relating to tuition waivers, loans, and medical assistance for a child placed in out-of-home care by the state; relating to foster care; relating to children in need of aid; relating to foster care transition to independent living; and relating to juvenile programs and institutions."

Sponsor Statement

SB 105 provides much needed additional educational, medical, financial, and housing assistance to foster care or "out-of-home" care children and students as they transition through and out of the Alaska state foster care system. An estimated 40% of the 2,000 Alaska foster care youth become homeless after being released from care. Many others wind up in poverty or are incarcerated at higher levels than their peers. SB 105 codifies and increases assistance beyond certain provisions of the federal McKinney-Vento Act, which was reauthorized as Title X, Part C, of the No Child Left Behind Act in January 2002. The McKinney-Vento Act is the primary piece of federal legislation dealing with the education of children and youth experiencing homelessness in U.S. public schools. Fourteen or more states have enacted foster care/educational legislation modeled after some provisions of the McKinney-Vento Act.

Children in foster care struggle academically and suffer more poverty, low self-esteem, emotional trauma, social stigma, and higher mobility than others. They are more likely to drop out of school, repeat grades, and be placed in special education. A 2004 study of Chicago Public School youth found that fifteen-year-old students in out-of-home care were half as likely as other students to have graduated from high school five years later, with 55% having dropped out and 10% having been incarcerated. Only 54% of young adults who age out of care have completed high school. Youth in foster care attending public schools score 16 to 20 percentile points below youth in the general population in statewide standardized tests. And Youth in foster care on average read at only at a 7th grade level after completing 10th or 11th grade. (Casey Family Programs, White Paper, Educating Children in Foster Care, McKinney-Vento and NCLB; also, ABANET.org/Child/Education).

Low educational outcomes are exacerbated by the high mobility of children in foster care. Frequent school changes are associated with an increased risk of failing a grade in school and of repeated behavior problems. By 6th grade, students who have changed schools four or more times have lost approximately 1 year of educational growth. A Casey Foundation study of 1,087 foster care alumni found that youth who

had one fewer placement change per year were almost twice as likely to graduate from high school before leaving care. The Legal Center for Foster Care and Education reported that children and youth in out-of-home care experience, on average, 1 or 2 foster care placement changes per year, citing U.S. Dept. of Health & Human Services Administration for Children and Families. One third of children in foster care stay in care for less than 5 months, and another 17% remain in care for one year or less.

MEMORANDUM April 7, 2009

SUBJECT: Sectional Summary (CSSB 105(EDC);
Work Order No. 26-LS0556\E)

TO: Senator Bettye Davis
Attn: Thomas Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Provides for the continuation of a public education in a student's school of origin for a homeless student under federal specifications. Provides exceptions for a move outside of a school district or for insufficient funding by the legislature. Modifies federal definition of homelessness to include students who are placed in out-of-home care by the state.

Section 2. Provides for a waiver of unmet need for tuition, fees, and room and board expenses at a state-supported educational institution for a person who was placed in out-of-home care at age 16 or older and who meets specified eligibility requirements. The waiver is subject to appropriation.

Section 3. Defines out-of-home care for purposes of student loans and waivers.

Section 4. Changes "foster care" to "out-of-home care" under the procurement code.

Section 5. Amends the state's purpose and policy related to children to include education and intellectual development.

Section 6. Amends the legislative intent related to children to include providing a public education as provided under section 1.

Section 7. Replaces the term "foster homes" with "out-of-home care" for purposes of establishing medical assistance eligibility for certain persons and adds a category of eligibility for persons under 21 years of age who were in out-of-home care for a specified period of time on or after the person's 16th birthday.

Section 8. Defines "out-of-home care" for purposes of medical assistance eligibility.

Section 9. Authorizes the extension of court orders for a child who is in state custody to age 21.

Section 10. Establishes mandatory monthly visits by social workers employed by the department to make monthly home visits, as described, to all children in the custody of the department.

Section 11. Amends the definition of "child" for purposes of the child in need of aid statutes.

Section 12. Defines "out-of-home care" for purposes of the child in need of aid statutes.

Sections 13 - 15. Changes "foster care" to "out-of-home care" for purposes of the transition to the independent living program.

Section 16. Defines "program" to mean "out-of-home care" transition program.

Section 17. Establishes a monetary stipend to be paid to persons who are eligible for the out-of-home care transition program.

Section 18 Defines "out-of-home care" for purposes of the transition program.

ANALYSIS: *(Attach a separate page if necessary)*

SB105 extends the current age limit for youth eligible to participate from 23 to 29. The impact of the age limit increase is difficult to predict. Older students could be more apt to take advantage of the opportunity for a higher education than their younger counterparts. It is estimated that each fiscal year 111 youth fit the initial eligibility requirements for this program and may be eligible to receive benefits under this program. If only 20% (22) of these youth enroll at the UA, this would equate to $266,200 per year. A 5% inflation increase is assumed for future fiscal years.

BILL NO. SB105

ANALYSIS CONTINUATION

For each student taking advantage of the Foster Youth Tuition Waiver Program, the cost in FY10 will be $12,100. This covers tuition and mandatory fees of $5,040 and room and board of $7,060. Under the current agreement with the Department of Health and Social Services, Office of Children's Services (OCS), the University of Alaska annually makes available ten Foster Youth Tuition Waiver Scholarships and the OCS provides additional financial support, up to $5,000 per academic year/per student for approved education related expenses such as; fees, books, supplies, room/board. Under this program youth are eligible until they turn 23 years of age.

FISCAL NOTE

STATE OF ALASKA

2009 LEGISLATIVE SESSION

BILL NO. SB105

ANALYSIS CONTINUATION

Assumptions applied to this fiscal note:

Foster care reimbursement payments will be made available to care for children who remain in the custody of the state, who are age 18 through 20;

Approximately 15% (17 children) of the 110 that turn age 18 annually will chose to stay in foster care until age 19; 10% (10) to age 20; 5% to 21 (6); totaling 33 children. This is based simply on program experience and the assumption that most children will want to leave foster care at age 18, but that others who have stable homes will decide to stay with their foster families and that most of these children will attend post secondary education programs.

In addition to the 33 children who may wish to participate in the program in its initial year, approximately 12 of those special needs children who are 18 years of age, 6 at age 19, and 6 at age 20 will remain in care for 2010, bringing the total for 2010 to 57 children. This is based on the current numbers of children who age out with special needs. We estimate that 18 children with special needs age out annually, with 6 of them already staying in foster care until age 20, leaving 12 that may chose to stay in care.

For years 2011 - 2015, the number of participants has been reduced to 35, where it may stabilize because OCS speculates those children reaching the age of 19 or 20 will more likely opt to chose the monetary stipend in this bill.

Calculations are based on 360 days at an average base foster care base rate of $35.33 a day: $35.33 x 30 = $1,060 a month. This calculation is used to equally distribute funding estimates, and makes very little difference to the resulting totals.

Currently, federal reimbursement for the extension of the foster program is not available. However, the Adoption and Guardianship Fostering Connections to Success and Increasing Adoptions Act of 2008 includes the option to extend the assistance age through 20. This fiscal note assumes that option will be implemented when available October 1, 2010, therefore is available for the final three quarters of state fiscal year 2011 forward only.

SFY	# of Children	Age	Annual Cost Per Child	Total Est.	FFP	GF
2010	57	18,19, 20	$12,719	$724,972	$0	$724,972
2011	35	18,19,20	$12,719	$445,158	$55,631	$389,527
2012	35	18,19,20	$12,719	$445,158	$73,862	$371,296

FISCAL NOTE

STATE OF ALASKA

2009 LEGISLATIVE SESSION

BILL NO. SB105

ANALYSIS CONTINUATION

Assumptions applied to this fiscal note:

The monetary stipends will be made available to children leaving out of home care, who are age 18 through 20, and does not need to be requested immediately upon leaving care;

70% of the 220 children currently participating in the Independent Living Program (IL) will become eligible for monetary stipends in FY2010 (ages 18, 19, and 20) – equating to about 155 FTEs (full time equivalents), resulting in higher program costs the first year the stipends are available. FTEs help provide a more stable count as it is assumed that recipients will migrate on and off the program and not all will receive a full year's stipends;

After the first year of stipends, it is assumed that about 1/3 of the IL population will be eligible for and request monetary stipends annually equaling 75 FTEs, and that number will remain somewhat static;

Calculations are based on 360 days at an average base foster care base rate of $35.33 a day: $35.33 x 30 = $1,060 a month.

Currently, federal reimbursement for the extension of the IL program is not available. However, the Adoption and Guardianship Fostering Connections to Success and Increasing Adoptions Act of 2008 includes the option to extend the assistance age through 20 under certain conditions. This fiscal note assumes those conditions will be established in regulation and when met, IV-E reimbursement will apply. This option is available October 1, 2010, therefore is available for the final three quarters of state fiscal year 2011.

	FTEs	Cost Per Month	Total Cost	Estimated FFP	GF

Covenant
House
Alaska
Crisis Center · Community Services Center · Transitional Living

Representative Les Gara and Senator Bettye Davis
State Capitol
Juneau, AK 99801

February 23, 2009

Dear Representative Gara and Senator Davis,

Thank you for introducing legislation to address the needs of foster care youth, both while they are in the state's custody and when they "age-out" of the current system. Providing resources and support to our foster care children decreases the need for long-term public assistance and criminal justice resources. Responding to research that clearly identifies proven strategies for assisting our youth to independent adulthood is not only compassionate, it is fiscally sound policy.

Between 35% and 50% of foster care youth become homeless after being released from care. Covenant House Alaska (CHA) serves the homeless and at-risk youth of our state through four main programs (50% of CHA youth have been involved in the foster care system). Our Crisis Center provides shelter, food, clothing, primary health care and support resources to homeless youth. Our Community Services Center is a drop-in center that provides case management, employment assistance, educational tutoring, counseling and substance abuse referrals and life skills training. Two different programs, Rights of Passage and Passage House help youth transition to independent living and self-sufficiency. Youth can participate in either program for 18 months with up to 12 months of additional aftercare.

Through these programs, CHA is certain that increased job training, educational opportunities, rental assistance and social worker visits will benefit children in foster care. Similarly, offering consistency whenever possible through maintaining one school for children despite changes in foster care placement is essential. CHA appreciates the multi-faceted approach HB 126 and SB 105 offers.

Thank you for sponsoring this legislation and providing a voice to youth in foster care.

Sincerely,

Deirdre A. Cronin
Executive Director

Educational Stability for Youth in Foster Care

The McKinney-Vento Act[1] applies to many children in DFCS custody and provides those children with rights that promote educational stability.

What is the McKinney-Vento Act?

- McKinney-Vento is a federal law that promotes stability, access, and academic success for homeless youth. McKinney-Vento also provides assistance for homeless youth with enrollment in a new school, transportation to school, and other educational and supplemental services. It promotes educational stability by allowing homeless youth to remain in their school of origin even if homelessness has caused them to move outside the school district. School of origin is defined as the school a student attended before becoming homeless or the school where the student was last enrolled.

Are children in foster care homeless?

- In order to be eligible for the benefits and services provided for by the McKinney-Vento Act, a student must meet the criteria for homelessness. Some children in foster care meet the criteria and are therefore considered homeless under the Act.
- The McKinney-Vento Act defines homeless children and youth as "(A) individuals who lack a fixed, regular and adequate nighttime residence…; and (B) includes – (i) children and youths who are sharing the housing of other persons due to loss of housing, economic hardship, or a similar reason; are living in motels, hotels, trailer parks, or camping grounds due to the lack of alternative accommodations; *are living in emergency or transitional shelters; are abandoned in hospitals*; *or are awaiting foster care placement*…."[2] Thus, some children in DFCS custody are considered homeless for the purpose of the McKinney-Vento Act, specifically children living in shelters, abandoned in hospitals, and children awaiting foster care placement
- Using McKinney-Vento to secure rights for children in foster care helps to minimize educational disruption. The child is able to remain in the same school, continue with the current academic curriculum, and is less likely to fall behind academically.

Are children covered by McKinney-Vento after they move into a foster home?

- Once the provisions of McKinney-Vento have been met, an eligible child remains eligible for services for the remainder of that school year even if s/he moves into a foster home.
- When the next school year begins, if the child continues to live in a foster home, s/he will no longer qualify under McKinney-Vento and at that time may have to transfer to a school in the district where s/he is residing.

What about the documents schools require to enroll a child in school?

- McKinney-Vento requires schools to immediately enroll homeless children in school even without records normally required for enrollment, such as previous academic records, medical records including immunization records, proof of guardianship, and proof of residency.
- The enrolling school must contact the last school attended to obtain relevant records to facilitate enrollment and the school should refer the child to the school liaison for assistance in obtaining immunization records.

What if the child has moved out of district and the old school refuses to allow the child to continue to attend?

- All decisions about where a homeless child shall be allowed to go to school must be made according to the child's best interests. In determining best interests of the child, the local educational agency shall "to the extent feasible, keep a homeless child or youth in the school of origin, except when doing so is contrary to the wishes of the child's or youth's parent or guardian."[3]

Tel 404.727.6664
www.childwelfare.net
childlaw@law.emory.edu

- ❖ Whenever there is a disagreement between a school and a parent, guardian, or youth, the school must:
  - Immediately enroll the student in the school the parent, guardian, or youth chooses;
  - Keep the student at that school until the disagreement is settled;
  - Explain, in writing, its decision and the right to have the disagreement settled; AND
  - Send the parent, guardian or youth to the Georgia Liaison/Coordinator of Education for Homeless Children and Youth to settle the disagreement quickly. Please see the contact information below.

What if it is best to transfer the child to a new school in the district where the foster parents or relative placement live?

- ❖ Homeless children and youth have the right to stay in the school they went to before they lost their housing, to stay at whatever school they were enrolled in last, or to attend the local school where they are now living.

Is there any help with transportation?

- ❖ If McKinney-Vento applies to the child, then the school district must provide or arrange transportation for the student to stay at the school of origin, even if the student moves to a different city, county, or school district.
  - If a student is living in the same school district as the school of origin, then that school district has to provide transportation. If the student moves across district lines, then both districts have to work together to provide transportation.

What type of transportation will the school provide?

- ❖ Schools can provide transportation in different ways, including:
  - Re-routing school buses and making sure buses go to shelters, group homes and other places where students live;
  - Providing passes for public buses and subways, including passes for caretakers when needed;
  - Using the transportation systems social services use;
  - Using approved van or taxi services;
  - Reimbursing parents, guardians or youth for gas;
  - Working with service providers and public assistance agencies to make transportation plans or provide transportation;
  - Getting local businesses or other agencies to help with transportation costs; and

Where can I get more information?

- ❖ The National Law Center on Homelessness & Poverty, www.nlchp.org.
- ❖ Georgia's Education for Homeless Children and Youth Coordinator is Mr. David Davidson. He can be reached at phone 404-651-7555 or e-mail ddavidso@doe.k12.ga.us.

origin, as determined in paragraph (3)(A), in accordance with the following, as applicable:

(I) If the homeless child or youth continues to live in the area served by the local educational agency in which the school of origin is located, the child's or youth's transportation to and from the school of origin shall be provided or arranged by the local educational agency in which the school of origin is located.

(II) If the homeless child's or youth's living arrangements in the area served by the local educational agency of origin terminate and the child or youth, though continuing his or her education in the school of origin, begins living in an area served by another local educational agency, the local educational agency of origin and the local educational agency in which the homeless child or youth is living shall agree upon a method to apportion the responsibility and costs for providing the child with transportation to and from the school of origin. If the local educational agencies are unable to agree upon such method, the responsibility and costs for transportation shall be shared equally.

(2) COMPLIANCE-

(A) IN GENERAL- Each plan adopted under this subsection shall also describe how the State will ensure that local educational agencies in the State will comply with the requirements of paragraphs (3) through (7).

(B) COORDINATION- Such plan shall indicate what technical assistance the State will furnish to local educational agencies and how compliance efforts will be coordinated with the local educational agency liaisons designated under paragraph (1)(J)(ii).

(3) LOCAL EDUCATIONAL AGENCY REQUIREMENTS-

(A) IN GENERAL- The local educational agency serving each child or youth to be assisted under this subtitle shall, according to the child's or youth's best interest--

(i) continue the child's or youth's education in the school of origin for the duration of homelessness--

(I) in any case in which a family becomes homeless between academic years or during an academic year; or

(II) for the remainder of the academic year, if the child or youth becomes permanently housed during an academic year; or

(ii) enroll the child or youth in any public school that nonhomeless students who live in the attendance area in which the child or youth is actually living are eligible to attend.

(B) BEST INTEREST- In determining the best interest of the child or youth under subparagraph (A), the local educational agency shall--

(i) to the extent feasible, keep a homeless child or youth in the school of origin, except when doing so is contrary to the wishes of the child's or youth's parent or guardian;

(ii) provide a written explanation, including a statement regarding the right to appeal under subparagraph (E), to the homeless child's or youth's parent or guardian, if the local

educational agency sends such child or youth to a school other than the school of origin or a school requested by the parent or guardian; and

(iii) in the case of an unaccompanied youth, ensure that the homeless liaison designated under paragraph (1)(J)(ii) assists in placement or enrollment decisions under this subparagraph, considers the views of such unaccompanied youth, and provides notice to such youth of the right to appeal under subparagraph (E).

(C) ENROLLMENT- (i) The school selected in accordance with this paragraph shall immediately enroll the homeless child or youth, even if the child or youth is unable to produce records normally required for enrollment, such as previous academic records, medical records, proof of residency, or other documentation.

(ii) The enrolling school shall immediately contact the school last attended by the child or youth to obtain relevant academic and other records.

(iii) If the child or youth needs to obtain immunizations, or immunization or medical records, the enrolling school shall immediately refer the parent or guardian of the child or youth to the local educational agency liaison designated under paragraph (1)(J)(ii), who shall assist in obtaining necessary immunizations, or immunization or medical records, in accordance with subparagraph (D).

(D) RECORDS- Any record ordinarily kept by the school, including immunization or medical records, academic records, birth certificates, guardianship records, and evaluations for special services or programs, regarding each homeless child or youth shall be maintained--

(i) so that the records are available, in a timely fashion, when a child or youth enters a new school or school district; and

(ii) in a manner consistent with section 444 of the General Education Provisions Act (20 U.S.C. 1232g).

(E) ENROLLMENT DISPUTES- If a dispute arises over school selection or enrollment in a school--

(i) the child or youth shall be immediately admitted to the school in which enrollment is sought, pending resolution of the dispute;

(ii) the parent or guardian of the child or youth shall be provided with a written explanation of the school's decision regarding school selection or enrollment, including the rights of the parent, guardian, or youth to appeal the decision;

(iii) the child, youth, parent, or guardian shall be referred to the local educational agency liaison designated under paragraph (1)(J)(ii), who shall carry out the dispute resolution process as described in paragraph (1)(C) as expeditiously as possible after receiving notice of the dispute; and

(iv) in the case of an unaccompanied youth, the homeless liaison shall ensure that the youth is immediately enrolled in school pending resolution of the dispute.

(F) PLACEMENT CHOICE- The choice regarding placement shall be made regardless of whether the child or youth lives with the homeless parents or has been temporarily placed elsewhere.

(G) SCHOOL OF ORIGIN DEFINED- In this paragraph, the term 'school of origin' means the school that the child or youth attended when permanently housed or the school in which the child or youth was last enrolled.

(H) CONTACT INFORMATION- Nothing in this subtitle shall prohibit a local educational agency from requiring a parent or guardian of a homeless child to submit contact information.

(4) COMPARABLE SERVICES- Each homeless child or youth to be assisted under this subtitle shall be provided services comparable to services offered to other students in the school selected under paragraph (3), including the following:

(A) Transportation services.

(B) Educational services for which the child or youth meets the eligibility criteria, such as services provided under title I of the Elementary and Secondary Education Act of 1965 or similar State or local programs, educational programs for children with disabilities, and educational programs for students with limited English proficiency.

(C) Programs in vocational and technical education.

(D) Programs for gifted and talented students.

(E) School nutrition programs.

(5) COORDINATION-

(A) IN GENERAL- Each local educational agency serving homeless children and youths that receives assistance under this subtitle shall coordinate--

(i) the provision of services under this subtitle with local social services agencies and other agencies or programs providing services to homeless children and youths and their families, including services and programs funded under the Runaway and Homeless Youth Act (42 U.S.C. 5701 et seq.); and

(ii) with other local educational agencies on interdistrict issues, such as transportation or transfer of school records.

(B) HOUSING ASSISTANCE- If applicable, each State educational agency and local educational agency that receives assistance under this subtitle shall coordinate with State and local housing agencies responsible for developing the comprehensive housing affordability strategy described in section 105 of the Cranston-Gonzalez National Affordable Housing Act (42 U.S.C. 12705) to minimize educational disruption for children and youths who become homeless.

(C) COORDINATION PURPOSE- The coordination required under subparagraphs (A) and (B) shall be designed to--

(i) ensure that homeless children and youths have access and reasonable proximity to available education and related support services; and

(ii) raise the awareness of school personnel and service providers of the effects of short-term stays in a shelter and other challenges associated with homelessness.

(6) LOCAL EDUCATIONAL AGENCY LIAISON-

(A) DUTIES- Each local educational agency liaison for homeless children and youths, designated under paragraph (1)(J)(ii), shall ensure that--

Foster kids find college help after 'aging out'

Associated Press

By ZINIE CHEN SAMPSON, Associated Press Writer
Fri Mar 13, 4:58 am ET

RICHMOND, Va. – Community colleges in several states are working to establish stronger support systems for former foster-care children, who are more likely to wind up homeless or in jail than earn a degree as they struggle to overcome unstable lives.

Among them is Virginia, where the Community College System's Great Expectations program uses grants and donations to provide money for tuition, transportation and living expenses. It also connects more than 120 students with mentors, career counselors and other help at seven of the state's two-year schools.

Many other states have started their own initiatives to help youths in foster care once they "age out" of the system and venture into adulthood. And it's needed: More than a quarter of foster-care youth will be incarcerated and more than 20 percent will be homeless before age 25, according to a 2007 report by public-policy group Pew Charitable Trusts.

Only 20 percent of foster-care youth nationally will seek education beyond high school, and fewer than 3 percent are expected to graduate from college.

"I never thought I'd ever get my high school diploma, and never thought I'd start college at 17, too," said Andrea Hatcher, who dropped out of high school and was shuffled among group homes and foster care in different cities after her mother lost custody of her when she was 14.

Hatcher, now 18, hopes to pursue a nursing degree now that she's completed her nursing assistant certificate at Southside Virginia Community College through the program, which started this school year. She regularly communicates with her academic adviser, who helped her navigate the education system and kept her on task.

In California, higher-education officials set up a support network for former foster children in the state's 110 community colleges, and the state's four-year systems offer similar help for housing, financial aid, academic advising and other needs. A 1996 state law called on state schools to expand services for former foster youth.

Federal legislation that took effect in 2003 helped such initiatives, said John Emerson, a postsecondary education adviser for Casey Family Programs, a foster-care advocacy group. It provided an initial $42 million, allocated to every state based on its percentage of foster-care youth, to cover up to $5,000 annually per student for college or job training.

And when Congress reauthorized the Higher Education Act last fall, it required some federally funded

programs to target students who had been in foster care, including initiatives that help low-income students pursue postsecondary education.

Giving foster-care students money for college or career-training courses opens the door but doesn't help them overcome poor academic preparation, lack of family support and homelessness, Emerson said.

"We've heard from students who have enrolled in college so they can find a place to sleep," he said. "They're using their survival skills to find a place to stay and food to eat — let alone transportation and health insurance."

Nationally, more than 800,000 children are in the foster-care system, according to the National Working Group on Foster Care and Education, a coalition of child-welfare groups.

Virginia has about 8,000 children in foster care, and about half — a higher percentage than any other state — leave the system without a permanent home, according to Great Expectations.

Many foster children must overcome their belief that everything in life is unstable because of their experiences moving from home to home, said Casey Irving, Hatcher's case worker at Southside Virginia Community College. They also must learn to trust others for guidance.

Hatcher admits her earlier attitude and behavior made things difficult.

After her mother lost custody of her and she moved in with an aunt, Hatcher said she skipped school to "party all night, and I would drink and get high and do pills every day." Her aunt eventually turned her over to the state, and such behavior got her booted from two group homes.

Two other group homes shut down, and Hatcher eventually moved into a foster home.

But with her social worker's help, Hatcher earned a high school equivalency diploma and finished her nursing assistant certificate in December. Now, she regularly checks in with Irving and others at the school.

"I always have somebody to go to — they're still there any time I need to talk to them," she said. "They'd do anything for me."

Senator Bettye Davis

CS for Senate Bill No. 105 ( ), 26-LS0056\R

"An Act relating to continuing the secondary public education of a homeless student; relating to the purpose of certain laws as they relate to children; relating to tuition waivers, loans, and medical assistance for a child placed in out-of-home care by the state; relating to foster care; relating to children in need of aid; and relating to out-of-home care transition to independent living.

Changes in CSSB 105( ), 26-LS0056\R from SB 105, 26-LS0056\A

- Extends McKinney-Vento Act provisions for comparable education and transportation of a homeless student to "school of origin" for the "remainder of the school year, or if the student is attending school for a summer term." (Section 1).
- Removes exemption of McKinney-Vento provisions regarding "school of origin" if the "superintendent of the school district makes a written finding that a waiver of the requirement is in the student's best academic interest and the finding is mailed to the school board and to the person in charge of children's services for the Department of Health and Social Services."
- Changes "foster care" to "out-of-home care" for purposes of the transition to the independent living program under Sections 13-15.
- Increases one-year extensions of commitment to state custody in the best interest of the child beyond age 19 from a maximum age of 20 to age 21. (Section 9).
- Eliminates state educational loans and deferred payment and interest for a child who was in out-of-home care and was eligible for a tuition waiver to offset the person's tuition, fees, and room and board expenses in a state-supported educational institution.
- Limits monetary stipend upon leaving foster care to not more than one year and shall end before individual is 23 years of age. (Section 17).

Subject: RE: SB 105 Fiscal Notes

Lynda, Mindy asked me to clarify with you that only the Family Preservation fiscal note changed. We've been instructed by OMB only to re-submit fiscal notes that change and let the senate secretary/house clerk revise the fiscal note number and publish date to reflect existing notes that still pertain to a CS. In this case, we mistakenly submitted all three. We may need to get this straightened out with the senate secretary's office. I can to you more about it tomorrow if you have questions.

Subject: SB 105 Homeless Students

Dear Senator Davis

As you know, the Anchorage School District has been supportive of this bill, but some of the recent changes raise a caution flag.

The extension of the transportation requirement through summer school is one possible problem. We do not provide transportation for summer school except for some of the Title I programs. If the homeless student wanted to attend summer school, and they were not in a Title I school, would we still be required to provide transportation? Also, not all of our schools have a summer school program. Would we be required to make the school of origin a summer school if there was a homeless student attending that school? The bill is not provide entirely clear answers to these questions.

Second, if the homeless or foster care student is living in Anchorage, but the school of origin is in Palmer, Kenai, or Nome, are we required to provide transportation? I think I know the answer to this one, but it is important that the legislative history make this clear in case it is challenged later.

Third, there are sometimes situations where it is important for the Superintendent to be allowed to issue a waiver. That was recently removed from this bill. For example, sometimes the homeless or foster care student would prefer to attend a school where his or her cousin attends rather than the school of origin. Sometimes that is in the student's best interests, and there should be a waiver process in place.

I will try to follow up on these three issues before this bill gets its next committee hearing, but I wanted to give you some advance notice of our potential concerns.

ANALYSIS: *(Attach a separate page if necessary)*

The intent of CS SB 105 is to address the educational, medical, financial, and housing challenges that face youth as they transition out of foster care and to support those care providers that are willing to help them during that period of transition.

The bill amends AS 47.18 by adding a new section which will allow a monetary stipend to individuals leaving out-of-home care. Fiscal analysis is not supported by data but based on assumptions from program experience. The note addresses the following assumptions:

The living expense stipend will be made available to youth between the ages of 18 and 21 (18, 19 & 20 year olds) (continued on next page)

FISCAL NOTE

STATE OF ALASKA **BILL NO.** CSSB105(HSS)

2009 LEGISLATIVE SESSION

ANALYSIS CONTINUATION

who have left out of home care and does not need to be requested immediately upon leaving care. The stipend will be available to youth who age out of foster care for 6 months at a maximum monthly rate of $1,060.00, and 3 months at an adjusted maximum rate of $525.00 per month. Any one stipend cannot exceed $6,120 per nine month period. Stipend availability expires at age 21 years.

An exception will be made for youth who remain in custody to age 21. The stipend will be available to youth who age out of foster care at age 21, for 6 months at a maximum monthly rate of $1,060.00 and 3 months at an adjusted maximum rate of $525.00 per month immediately after release from custody. Any one stipend cannot exceed $6,120. We anticipate that the youth who remain in custody to age 21 will fall within the 70% calculation used in this fiscal note. No additional funding has been requested for these youth as the numbers are minimal – 10 or less.

Approximately 70% of the 220 youth who currently participate in the Independent Living Program will continue their involvement in the program after being released from custody and will more likely than not apply for the living expense stipend. This note also assumes that 70% of those 155 youth likely to participate will apply during the first year the stipend is available. The remaining 30% will apply during the second year of the program.

OCS assumes that under regulation yet to be written, a scaled methodology to determine the exact amount of each stipend will be developed. To that point, the stipend will be available within the authorized funding only. It is assumed that the program is not meant to be an entitlement program but a definitive amount of limited funds distributed based on each youth's Independent Living Program participation plan.

Applying the previous assumption, this fiscal note is calculated on a daily rate based on the mean between a minimum of $300 and a maximum of $1,060 per month, or $680 per month. Federal fund participation is not available for an extension of the Independent Living Program until October 1, 2010, so therefore federal participation is adjusted to none for FY 2010 and three quarters for FY 2011.

Maximum availability of stipend:

$1,060.00	per month for 6 months	$6,360.00	annual maximum
$525.00	per month for 3 months	$1,575.00	annual maximum
	Total annual maximum	$7,935.00	

Program Participation:

FY 2010

220 average number of youth participating in Independent Living at any given time
70% assumption that 70% of those 220 youth will apply for stipends and continue participation in the IL progr
155 youth currently ages 18, 19, and 20 years will apply for stipends the first or second year of the program
70% of the 155 (109) youth will apply for stipends in the first year of the program
109 youth will participate in the program during FY 2010

FY 2011

70% assumption that 70% of those 110 youth will apply for stipends and continue in the IL program annually
75 youth who turn 18 each year and age out of foster care will apply for stipends
30% of the 155 (46) youth will apply for stipends in the second year of the program
121 youth will participate in the program during FY 2011

FY 2012 - FY 2105

110 average number of youth who turn 18 and age out of foster care annually
70% assumption that 70% of those 110 youth will apply for stipends and continue in the IL program annually
75 youth who turn 18 each year and age out of foster care will apply for stipends

Fiscal Year	FTEs Participating	Approximate Cost per 6 Months	Approximate Cost per 3 Months	Total Cost Per FTE for 9 Months	Total Program Cost	Estimated Federal Participation	Estimated General Fund
SFY 2010	109	$4,080.00	$1,020.00	$5,100.00	$555,900.00	0	$555,900.00

MEMORANDUM April 11, 2009

SUBJECT: Sectional Summary (CSSB 105(HSS);
Work Order No. 26-LS0556\C)

TO: Senator Bettye Davis
Attn: Thomas Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Provides for the continuation of a public education in a student's school of origin for a homeless student under federal specifications. Provides exceptions for a move outside of a school district or for insufficient funding by the legislature. Modifies federal definition of homelessness to include students who are placed in out-of-home care by the state.

Section 2. Provides for a waiver of unmet need for tuition, fees, and room and board expenses at a state-supported educational institution for a person who was placed in out-of-home care at age 16 or older and who meets specified eligibility requirements. The waiver is subject to appropriation.

Section 3. Changes "foster care" to "out-of-home care" under the procurement code.

Section 4. Amends the state's purpose and policy related to children to include education and intellectual development.

Section 5. Amends the legislative intent related to children to include providing a public education as provided under section 1.

Section 6. Replaces the term "foster homes" with "out-of-home care" for purposes of establishing medical assistance eligibility for certain persons and adds a category of

eligibility for persons under 21 years of age who were in out-of-home care for a specified period of time on or after the person's 16th birthday.

Section 7. Defines "out-of-home care" for purposes of medical assistance eligibility.

Section 8. Authorizes the extension of court orders for a child who is in state custody to age 21.

Section 9. Establishes mandatory monthly visits by social workers employed by the department to make monthly home visits, as described, to all children in the custody of the department.

Section 10. Amends the definition of "child" for purposes of the child in need of aid statutes.

Section 11. Defines "out-of-home care" for purposes of the child in need of aid statutes.

Sections 12 - 14. Changes "foster care" to "out-of-home care" for purposes of the transition to the independent living program.

Section 15. Defines "program" to mean "out-of-home care" transition program.

Section 16. Establishes a monetary stipend to be paid to persons who are participating in the out-of-home care transition program.

Section 17 Defines "out-of-home care" for purposes of the transition program.

CS FOR SENATE BILL NO. 105(HSS)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY THE SENATE HEALTH AND SOCIAL SERVICES COMMITTEE

Offered:
Referred:

Sponsor(s): SENATORS DAVIS, Ellis

4/13/09 accepted w/ mmt

A BILL

FOR AN ACT ENTITLED

"An Act relating to continuing the secondary public education of a homeless student; relating to the purpose of certain laws as they relate to children; relating to tuition waivers and medical assistance for a child placed in out-of-home care by the state; relating to foster care; relating to children in need of aid; and relating to out-of-home care transition to independent living."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.096. Continuing the public education of a homeless student. (a) Except as provided in (b) and (d) of this section, the governing body of a school district shall comply with the requirements for continuing the public education of a homeless student in the student's school of origin and for providing comparable education and transportation services for the remainder of the current school year or, if the student is attending school for a summer term, for the remainder of the summer

term, under 42 U.S.C. 11431 - 11435 (McKinney-Vento Homeless Education Assistance Improvement Act of 2001), as those provisions existed on February 1, 2009.

(b) The requirements in (a) of this section do not apply if the student moves to a school district other than the school district in which the student's school of origin is located.

(c) If a homeless student is transferred to a school other than the student's school of origin, the school of origin shall provide a copy of the student's records to the student's new school within seven school days after notification of the transfer. The student's new school shall allow the student to attend school while awaiting the transfer of records under this subsection.

(d) A school district is required to comply with this section only

(1) if the legislature appropriates funds for the purpose; and

(2) to the extent possible using funds appropriated for the purpose.

(e) In this section,

(1) "homeless student" has the meaning given in 42 U.S.C. 11434a for "homeless child or youth," and the phrase "awaiting foster care placement" in that definition shall be interpreted to include all students who are placed in out-of-home care and in the custody of the Department of Health and Social Services under AS 47.10.080(c) or who are committed to the custody of the Department of Health and Social Services under AS 47.12.120(b)(1) or (3);

(2) "school of origin" means the school in which the student was last enrolled.

*** Sec. 2.** AS 14.43 is amended by adding a new section to read:

Article 3A. Free Tuition for a Person Who Was in Out-of-Home Care.

Sec. 14.43.086. Free tuition and fees for a person who was in out-of-home care. (a) A person who enrolls as a student in good standing in a state-supported educational institution in the state is entitled to a waiver of tuition, fees, and room and board expenses if the person provides adequate proof that the person

(1) was in the custody of the state under AS 47.10 or AS 47.14;

(2) was placed in out-of-home care for a period of not less than six

consecutive months on or after the person became 16 years of age; and

(3) is under 29 years of age.

(b) The amount of the waiver to which a person is entitled under this section is the amount of unmet need for tuition, room, and board expenses, as determined by the institution, after deducting funding for the school year from education loans, grants, or scholarships received by a person eligible for a waiver.

(c) The proceeds of an education loan, grant, or scholarship received by a person eligible for a waiver under this section must be paid to the educational institution to offset the person's tuition, fees, and room and board expenses.

(d) A state-supported educational institution in the state is required to provide a waiver under (a) of this section only if the legislature appropriates funds for the purpose of offsetting waivers under this section. If an appropriation is not sufficient to fully offset waivers for each person entitled to a waiver under (a) of this section, the institution may offer full or partial waivers to eligible applicants as funding permits and at the discretion of the institution.

(e) In this section, "out-of-home care" has the meaning given in AS 47.14.400.

*** Sec. 3.** AS 36.30.850(b)(42) is amended to read:

(42) grants and contracts with qualified entities for services under AS 47.18.330 for the **out-of-home** [FOSTER] care transition program;

*** Sec. 4.** AS 47.05.060 is amended to read:

Sec. 47.05.060. Purpose and policy relating to children. The purpose of this title as it relates to children is to secure for each child the care and guidance, preferably in the child's own home, **as well as an adequate education,** that will serve the moral, emotional, mental, **intellectual,** and physical welfare of the child and the best interests of the community; to preserve and strengthen the child's family ties unless efforts to preserve and strengthen the ties are likely to result in physical or emotional damage to the child, removing the child from the custody of the parents only as a last resort when the child's welfare or safety or the protection of the public cannot be adequately safeguarded without removal; and, when the child is removed from the family, to secure for the child adequate custody**, education,** and care and adequate planning for permanent placement of the child.

* **Sec. 5.** AS 47.05.065 is amended to read:

Sec. 47.05.065. Legislative findings related to children. The legislature finds that

(1) parents have the following rights and responsibilities relating to the care and control of their child while the child is a minor:

(A) the responsibility to provide the child with food, clothing, shelter, education, and medical care;

(B) the right and responsibility to protect, nurture, train, and discipline the child, including the right to direct the child's medical care and the right to exercise reasonable corporal discipline;

(C) the right to determine where and with whom the child shall live;

(D) the right and responsibility to make decisions of legal or financial significance concerning the child;

(E) the right to obtain representation for the child in legal actions; and

(F) the responsibility to provide special safeguards and care, including appropriate prenatal and postnatal protection for the child;

(2) it is the policy of the state to strengthen families and to protect children from child abuse and neglect; the state recognizes that, in some cases, protection of a child may require removal of the child from the child's home; however,

(A) except in those cases involving serious risk to a child's health or safety, the Department of Health and Social Services should provide time-limited family support services to the child and the child's family in order to offer parents the opportunity to remedy parental conduct or conditions in the home that placed the child at risk of harm so that a child may return home safely and permanently; and

(B) the state also recognizes that when a child is removed from the home, visitation between the child and the child's parents or guardian and family members reduces the trauma for the child and enhances the likelihood that the child will be able to return home; therefore, whenever a child is

removed from the parental home, the Department of Health and Social Services should encourage frequent, regular, and reasonable visitation of the child with the child's parent or guardian and family members;

(3) it is the policy of the state to recognize that, when a child is a ward of the state, the child is entitled to reasonable safety, adequate care, and adequate treatment and that the Department of Health and Social Services as legal custodian and the child's guardian ad litem as guardian of the child's best interests and their agents and assignees, each should make reasonable efforts to ensure that the child is provided with reasonable safety, adequate care, and adequate treatment for the duration of time that the child is a ward of the state;

(4) it is in the best interests of a child who has been removed from the child's own home for the state to apply the following principles in resolving the situation:

(A) the child should be placed in a safe, secure, and stable environment;

(B) the child should not be moved unnecessarily;

(C) a planning process should be followed to lead to permanent placement of the child;

(D) every effort should be made to encourage psychological attachment between the adult caregiver and the child;

(E) frequent, regular, and reasonable visitation with the parent or guardian and family members should be encouraged; [AND]

(F) parents and guardians must actively participate in family support services so as to facilitate the child's being able to remain in the home; when children are removed from the home, the parents and guardians must actively participate in family support services to make return of their children to the home possible; **and**

(G) the child should continue to attend the child's school of origin as provided under AS 14.03.096;

(5) numerous studies establish that

(A) children undergo a critical attachment process before the

time they reach six years of age;

(B) a child who has not attached with an adult caregiver during this critical stage will suffer significant emotional damage that frequently leads to chronic psychological problems and antisocial behavior when the child reaches adolescence and adulthood; and

(C) it is important to provide for an expedited placement procedure to ensure that all children, especially those under the age of six years, who have been removed from their homes are placed in permanent homes expeditiously.

* **Sec. 6.** AS 47.07.020(b) is amended to read:

(b) In addition to the persons specified in (a) of this section, the following optional groups of persons for whom the state may claim federal financial participation are eligible for medical assistance:

(1) persons eligible for but not receiving assistance under any plan of the state approved under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act, Supplemental Security Income) or a federal program designated as the successor to the aid to families with dependent children program;

(2) persons in a general hospital, skilled nursing facility, or intermediate care facility, who, if they left the facility, would be eligible for assistance under one of the federal programs specified in (1) of this subsection;

(3) persons under 21 years of age who are under supervision of the department, for whom maintenance is being paid in whole or in part from public funds, and who are in **out-of-home care** [FOSTER HOMES] or private child-care institutions;

(4) aged, blind, or disabled persons, who, because they do not meet income and resources requirements, do not receive supplemental security income under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act), and who do not receive a mandatory state supplement, but who are eligible, or would be eligible if they were not in a skilled nursing facility or intermediate care facility to receive an optional state supplementary payment;

(5) persons under 21 years of age who are in an institution designated

as an intermediate care facility for the mentally retarded and who are financially eligible as determined by the standards of the federal program designated as the successor to the aid to families with dependent children program;

(6) persons in a medical or intermediate care facility whose income while in the facility does not exceed $1,656 a month but who would not be eligible for an optional state supplementary payment if they left the hospital or other facility;

(7) persons under 21 years of age who are receiving active treatment in a psychiatric hospital and who are financially eligible as determined by the standards of the federal program designated as the successor to the aid to families with dependent children program;

(8) persons under 21 years of age and not covered under (a) of this section [,] who would be eligible for benefits under the federal program designated as the successor to the aid to families with dependent children program, except that they have the care and support of both their natural and adoptive parents;

(9) pregnant women not covered under (a) of this section and who meet the income and resource requirements of the federal program designated as the successor to the aid to families with dependent children program;

(10) persons under 21 years of age not covered under (a) of this section who the department has determined cannot be placed for adoption without medical assistance because of a special need for medical or rehabilitative care and who the department has determined are hard-to-place children eligible for subsidy under AS 25.23.190 - 25.23.210;

(11) persons who can be considered under 42 U.S.C. 1396a(e)(3) (Title XIX, Social Security Act, Medical Assistance) to be individuals with respect to whom a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act) because they meet all of the following criteria:

(A) they are 18 years of age or younger and qualify as disabled individuals under 42 U.S.C. 1382c(a) (Title XVI, Social Security Act);

(B) the department has determined that

(i) they require a level of care provided in a hospital, nursing facility, or intermediate care facility for the mentally retarded;

(ii) it is appropriate to provide their care outside of an institution; and

(iii) the estimated amount that would be spent for medical assistance for their individual care outside an institution is not greater than the estimated amount that would otherwise be expended individually for medical assistance within an appropriate institution;

(C) if they were in a medical institution, they would be eligible for medical assistance under other provisions of this chapter; and

(D) home and community-based services under a waiver approved by the federal government are either not available to them under this chapter or would be inappropriate for them;

(12) disabled persons, as described in 42 U.S.C. 1396a(a)(10)(A)(ii)(XIII), who are in families whose income, as determined under applicable federal regulations or guidelines, is less than 250 percent of the official poverty line applicable to a family of that size according to the United States Department of Health and Human Services, and who, but for earnings in excess of the limit established under 42 U.S.C. 1396d(q)(2)(B), would be considered to be individuals with respect to whom a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c; a person eligible for assistance under this paragraph who is not eligible under another provision of this section shall pay a premium or other cost-sharing charges according to a sliding fee scale that is based on income as established by the department in regulations;

(13) persons under 19 years of age who are not covered under (a) of this section and whose household income does not exceed 175 percent of the federal poverty line as defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2);

(14) pregnant women who are not covered under (a) of this section and whose household income does not exceed 175 percent of the federal poverty line as defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2);

(15) persons who have been diagnosed with breast or cervical cancer and who are eligible for coverage under 42 U.S.C. 1396a(a)(10)(A)(ii)(XVIII);

(16) persons under 21 years of age who were in the custody of the department under AS 47.10 or AS 47.14 and who were placed in out-of-home care for a period of not less than six consecutive months on or after reaching 16 years of age.

* **Sec. 7.** AS 47.07.020 is amended by adding a new subsection to read:

(o) In this section, "out-of-home care" has the meaning given in AS 47.14.400.

* **Sec. 8.** AS 47.10.080(c) is amended to read:

(c) If the court finds that the child is a child in need of aid, the court shall

(1) order the child committed to the department for placement in an appropriate setting for a period of time not to exceed two years or in any event not to extend past the date the child becomes 19 years of age, except that the department or the child's guardian ad litem may petition for and the court may grant in a hearing

(A) one-year extensions of commitment that do not extend beyond the child's 19th birthday if the extension is in the best interests of the child; and

(B) **one-year extensions of commitment that do not extend beyond the child's 21st birthday** [AN ADDITIONAL ONE-YEAR PERIOD OF STATE CUSTODY PAST 19 YEARS OF AGE] if the continued state custody is in the best interests of the person and the person consents to it;

(2) order the child released to a parent, adult family member, or guardian of the child or to another suitable person, and, in appropriate cases, order the parent, adult family member, guardian, or other person to provide medical or other care and treatment; if the court releases the child, it shall direct the department to supervise the care and treatment given to the child, but the court may dispense with the department's supervision if the court finds that the adult to whom the child is released will adequately care for the child without supervision; the department's supervision may not exceed two years or in any event extend past the date the child reaches 19 years of age, except that the department or the child's guardian ad litem may petition for and the court may grant in a hearing

(A) one-year extensions of supervision that do not extend beyond the child's 19th birthday if the extensions are in the best interests of the

child; and

(B) an additional one-year period of supervision past 19 years of age if the continued supervision is in the best interests of the person and the person consents to it; or

(3) order, under the grounds specified in (o) of this section or AS 47.10.088, the termination of parental rights and responsibilities of one or both parents and commit the child to the custody of the department, and the department shall report quarterly to the court on efforts being made to find a permanent placement for the child.

*** Sec. 9.** AS 47.10.080 is amended by adding a new subsection to read:

(v) A social worker employed by or under contract with the department shall, not less than monthly, conduct visits with a child committed to the custody of the department under (c) of this section. The visits must be of sufficient substance and duration to address issues pertinent to case planning and service delivery to ensure the child's safety, permanency, and well-being. The majority of the visits conducted under this subsection must be at the location of the child's current placement. Nothing in this paragraph creates a private right of action against the department or the department's contractors. In this subsection, "visit" means face-to-face contact between social worker and child.

*** Sec. 10.** AS 47.10.990(3) is amended to read:

(3) "child" means a person **who is**

(A) under 18 years of age**;**

(B) [AND A PERSON] 19 years of age if that person was under 18 years of age at the time that a proceeding under this chapter was commenced**; and**

(C) under 21 years of age if that person is living in out-of-home care;

*** Sec. 11.** AS 47.10.990 is amended by adding a new paragraph to read:

(33) "out-of-home care" has the meaning given in AS 47.14.400.

*** Sec. 12.** AS 47.18.300(a) is amended to read:

(a) The department, in coordination with local public and private agencies,

shall design, develop, and implement **an out-of-home care** [A FOSTER CARE] transition program to provide support and services to individuals who

(1) reach or have reached the age of 16 or older while in state **custody and placed in out-of-home** [FOSTER] care and have not yet reached 23 years of age; and

(2) meet other eligibility criteria established by the department under (b) of this section.

*** Sec. 13.** AS 47.18.310 is amended to read:

Sec. 47.18.310. Program design. The department, in coordination with local public and private agencies, shall design the program as a continuation of the training efforts related to independent living skills that were initiated **for a child in state custody who was placed in out-of-home care and** [WHEN THE STATE FOSTER CARE RECIPIENTS WERE] identified as being likely to remain in **out-of-home** [STATE FOSTER] care until reaching **not less than** the age of 18. The program design must require that program participants are directly involved in identifying the program activities that will prepare them for independent living.

*** Sec. 14.** AS 47.18.320(a) is amended to read:

(a) Subject to the availability of an appropriation made for the purposes of AS 47.18.300 - 47.18.390, the program may provide

(1) education and vocational training;

(2) assistance in obtaining basic education and training;

(3) career and employment services;

(4) training in basic life skills;

(5) housing and utility assistance;

(6) mentoring and counseling; and

(7) other appropriate services to complement the efforts of former state foster care recipients **or a child who was in state custody and placed in out-of-home care** to achieve self-sufficiency.

*** Sec. 15.** AS 47.18 is amended by adding a new section to read:

Sec. 47.18.335. Monetary living expense stipend. (a) The department shall provide a monthly monetary living expense stipend for a period not to exceed nine

months in an amount described in (b) of this section to an individual who

(1) has left out-of-home care at age 18 or older;

(2) is participating in services in the program; and

(3) has monthly contact with a social worker involved in the program.

(b) A stipend provided under this section shall be in an amount necessary to meet an eligible individual's living expense as determined by the department. The amount may not exceed

(1) for the first six months of eligibility, the daily rate provided to a licensed foster parent; or

(2) for a period not to exceed three additional months during the period that follows the first six months of eligibility, half of the daily rate provided to a licensed foster parent.

(c) The department shall pay the stipend provided under this section until the later of the date that the individual

(1) reaches 21 years of age; or

(2) has left out-of-home care for six months.

(d) The department may adopt regulations to implement this section.

*** Sec. 16.** AS 47.18.390(1) is amended to read:

(1) "program" means the **out-of-home** [FOSTER] care transition program authorized under AS 47.18.300 - 47.18.390;

*** Sec. 17.** AS 47.18.390(3) is repealed and reenacted to read:

(3) "out-of-home care" has the meaning given in AS 47.14.400.

MEMORANDUM April 7, 2009

SUBJECT: Sectional Summary (CSSB 105(EDC);
Work Order No. 26-LS0556\E)

TO: Senator Bettye Davis
Attn: Thomas Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Provides for the continuation of a public education in a student's school of origin for a homeless student under federal specifications. Provides exceptions for a move outside of a school district or for insufficient funding by the legislature. Modifies federal definition of homelessness to include students who are placed in out-of-home care by the state.

Section 2. Provides for a waiver of unmet need for tuition, fees, and room and board expenses at a state-supported educational institution for a person who was placed in out-of-home care at age 16 or older and who meets specified eligibility requirements. The waiver is subject to appropriation.

Section 3. Defines out-of-home care for purposes of student loans and waivers.

Section 4. Changes "foster care" to "out-of-home care" under the procurement code.

Section 5. Amends the state's purpose and policy related to children to include education and intellectual development.

Section 6. Amends the legislative intent related to children to include providing a public education as provided under section 1.

Section 7. Replaces the term "foster homes" with "out-of-home care" for purposes of establishing medical assistance eligibility for certain persons and adds a category of eligibility for persons under 21 years of age who were in out-of-home care for a specified period of time on or after the person's 16th birthday.

Section 8. Defines "out-of-home care" for purposes of medical assistance eligibility.

Section 9. Authorizes the extension of court orders for a child who is in state custody to age 21.

Section 10. Establishes mandatory monthly visits by social workers employed by the department to make monthly home visits, as described, to all children in the custody of the department.

Section 11. Amends the definition of "child" for purposes of the child in need of aid statutes.

Section 12. Defines "out-of-home care" for purposes of the child in need of aid statutes.

Sections 13 - 15. Changes "foster care" to "out-of-home care" for purposes of the transition to the independent living program.

Section 16. Defines "program" to mean "out-of-home care" transition program.

Section 17. Establishes a monetary stipend to be paid to persons who are eligible for the out-of-home care transition program.

Section 18 Defines "out-of-home care" for purposes of the transition program.

ANALYSIS: *(Attach a separate page if necessary)*

The intent of SB 105 is to address the educational, medical, financial, and housing challenges that face youth as they transition out of foster care and to support those care providers that are willing to help them during that period of transition.

The Office of Children's Services Online Resource for the Children of Alaska (ORCA) data base is mandated by the federal government and must be continuously updated to reflect changes in both state and federal law and policy. The following provides the estimated cost of ORCA updates that will be required to implement this bill.

FISCAL NOTE

STATE OF ALASKA

2009 LEGISLATIVE SESSION

BILL NO. CSSB105(EDC)

ANALYSIS CONTINUATION

Assumptions applied to this fiscal note:

Foster care reimbursement payments will be made available to care for children who remain in the custody of the state, who are age 18 through 20;

Approximately 15% (17 children) of the 110 that turn age 18 annually will chose to stay in foster care until age 19; 10% (10) to age 20; 5% to 21 (6); totaling 33 children. This is based simply on program experience and the assumption that most children will want to leave foster care at age 18, but that others who have stable homes will decide to stay with their foster families and that most of these children will attend post secondary education programs.

In addition to the 33 children who may wish to participate in the program in its initial year, approximately 12 of those special needs children who are 18 years of age, 6 at age 19, and 6 at age 20 will remain in care for 2010, bringing the total for 2010 to 57 children. This is based on the current numbers of children who age out with special needs. We estimate that 18 children with special needs age out annually, with 6 of them already staying in foster care until age 20, leaving 12 that may chose to stay in care.

For years 2011 - 2015, the number of participants has been reduced to 35, where it may stabilize because OCS speculates those children reaching the age of 19 or 20 will more likely opt to chose the monetary stipend in this bill.

Calculations are based on 360 days at an average base foster care base rate of $35.33 a day: $35.33 x 30 = $1,060 a month. This calculation is used to equally distribute funding estimates, and makes very little difference to the resulting totals.

Currently, federal reimbursement for the extension of the foster program is not available. However, the Adoption and Guardianship Fostering Connections to Success and Increasing Adoptions Act of 2008 includes the option to extend the assistance age through 20. This fiscal note assumes that option will be implemented when available October 1, 2010, therefore is available for the final three quarters of state fiscal year 2011 forward only.

SFY	# of Children	Age	Annual Cost Per Child	Total Est.	FFP	GF
2010	57	18,19, 20	$12,719	$724,972	$0	$724,972
2011	35	18,19,20	$12,719	$445,158	$55,631	$389,527
2012	35	18,19,20	$12,719	$445,158	$73,862	$371,296
2013	35	18,19,20	$12,719	$445,158	$73,862	$371,296
2014	35	18,19,20	$12,719	$445,158	$73,862	$371,296
2015	35	18,19,20	$12,719	$445,158	$73,862	$371,296

ANALYSIS: *(Attach a separate page if necessary)*

The intent of CSSB105 is to address the educational, financial and housing challenges that face youth as they transition out of foster care, and to support foster care providers who are willing to help youth during that period of transition.

CSSB 105, as it relates to the Department of Health and Social Services, Office of Children's Services, amends AS 47.10.080(c) to provide the court the authority to commit a child to placement to age 21 if in the best interest of the youth and the youth is in agreement; amends AS 47.10.990(3) by further defining a child to include youth under 21 years of age if that youth is living in out-of-home care; and expands the current Foster Care Transition Program (AS 47.18.300-390) to include children in state custody who were placed in out-of-home care and

FISCAL NOTE

STATE OF ALASKA

2009 LEGISLATIVE SESSION

BILL NO. CSSB105(EDC)

ANALYSIS CONTINUATION

identified as likely to remain in out-of-home care until age 18; and allows for a one-year monetary living expense stipend to eligible youth who have left out-of-home care up to age 23. This fiscal note addresses increased costs related to the one-year monetary living expense stipend to eligible youth up to age 23 who have left out-of-home care.

The OCS, lacking historical data or comparative program results, has made the following assumptions and applied them to this fiscal note:

1) The monetary stipend will be made available to youth age 18 to 23 who leave out-of-home care at any time during that age span.
2) The monetary stipend is not tied to post secondary education.
3) The number of youth who age out of foster care will remain somewhat stagnant at about 110 youth annually;
4) Assumes that 70% of youth ages 18 to 23 who are eligible to participate in the Independent Living Program (IL) will make use of the monetary stipends in FY2010. This equates to approximately 380 full time equivalents (FTEs) who will become eligible, resulting in higher program costs the first year the stipend is available. FTEs are used to account for the constant change in the population as more youth turn 18 to 23 and move on and off the program at varying rates.
5) The out years will lose children aging out of foster care and pick up new youth between ages 19 and 23 who have not yet utilized the program, still maintaining the assumption that 70% will eventually utilize the program. There is no available data or program results upon which to base these assumptions.
6) Calculations are based on 360 days at an average daily rate of $35.33; $35.33 x 30 = $1,060/month.
7) Currently, federal reimbursement for the extension of the IL program is not available. However, the Adoption and Guardianship Fostering Connections to Success and Increasing Adoptions Act of 2008 includes the option to enhance the program. This fiscal note assumes that option can be implemented when available, October 1, 2010, and therefore is available for the final three quarters of FY2011 forward, only.
8) The foster care penetration rate and the Medical Assistance Percentage Rate will remain somewhat stable over the time period of this fiscal note.

	FFP	IL FTE	MOS FC/FTE	TOTAL EXP	Federal	GF
SFY 2010	0.00%	380	$1,060	$4,833,144	$0	$4,833,144

Senator Bettye Davis
State Capitol
Juneau, AK 99801

April 13, 2009

Dear Senator Davis,

Thank you for introducing SB 105, "An Act relating to continuing the secondary public education of a homeless student...". Covenant House Alaska (CHA) provides shelter, food, healthcare and transitional living assistance to Alaska's homeless youth. CHA strongly supports SB 105.

The proposed legislation provides access to educational, housing and life skills support that is vital for young people to successfully transition to adulthood. Nearly 50% of CHA youth have been involved with the foster care system at some point in their lives. They arrive on our door step with a plastic bag full of a few belongings. Many of these youth survive for a few months after being released from care, but find at the young age of 18 they don't have the resources and life skills required to live completely independently on their own. After living traumatized lives, they are faced with a new trauma and a new set of dangers that homelessness presents.

This legislation is fundamentally about providing to our foster care youth the resources we would naturally provide to our own children. Youth still require assistance with educational, occupational and housing needs past the age of 18. This bill ensures that while we cannot completely erase the trauma endured by foster care children, we can lessen it. We can actively take steps to help them in a responsible, reasonable fashion.

Thank you for your consideration of this letter and the proposed legislation. Please contact me with any questions you may have.

Sincerely,

Deirdre A. Cronin

A BILL

FOR AN ACT ENTITLED

"An Act relating to continuing the secondary public education of a homeless student; relating to the purpose of certain laws as they relate to children; relating to tuition waivers and medical assistance for a child placed in out-of-home care by the state; relating to foster care; relating to children in need of aid; and relating to out-of-home care transition to independent living."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.096. Continuing the public education of a homeless student. (a) Except as provided in (b) and (d) of this section, the governing body of a school district shall comply with the requirements for continuing the public education of a homeless student in the student's school of origin and for providing comparable education and transportation services for the remainder of the current school year or, if the student is attending school for a summer term, for the remainder of the summer

term, under 42 U.S.C. 11431 - 11435 (McKinney-Vento Homeless Education Assistance Improvement Act of 2001), as those provisions existed on February 1, 2009.

(b) The requirements in (a) of this section do not apply if the student moves to a school district other than the school district in which the student's school of origin is located.

(c) If a homeless student is transferred to a school other than the student's school of origin, the school of origin shall provide a copy of the student's records to the student's new school within seven~~7~~ school days after notification of the transfer. The student's new school shall allow the student to attend school while awaiting the transfer of records under this subsection.

(d) A school district is required to comply with this section only

(1) if the legislature appropriates funds for the purpose; and

(2) to the extent possible using funds appropriated for the purpose.

(e) In this section,

(1) "homeless student" has the meaning given in 42 U.S.C. 11434a for "homeless child or youth," and the phrase "awaiting foster care placement" in that definition shall be interpreted to include all students who are placed in out-of-home care and in the custody of the Department of Health and Social Services under AS 47.10.080(c) or who are committed to the custody of the Department of Health and Social Services under AS 47.12.120(b)(1) or (3);

(2) "school of origin" means the school in which the student was last enrolled.

*** Sec. 2.** AS 14.43 is amended by adding a new section to read:

Article 3A. Free Tuition for a Person Who Was in Out-of-Home Care.

Sec. 14.43.086. Free tuition and fees for a person who was in out-of-home care. (a) A person who enrolls as a student in good standing in a state-supported educational institution in the state is entitled to a waiver of tuition, fees, and room and board expenses if the person provides adequate proof that the person

(1) was in the custody of the state under AS 47.10 or AS 47.14;

(2) was placed in out-of-home care for a period of not less than six

consecutive months on or after the person became 16 years of age; and

(3) is under 29 years of age.

(b) The amount of the waiver to which a person is entitled under this section is the amount of unmet need for tuition, room, and board expenses, as determined by the institution~~commission~~, after deducting funding for the school year from education loans, grants, or scholarships received by a person eligible for a waiver.

(c) The proceeds of an education loan, grant, or scholarship received by a person eligible for a waiver under this section must be paid to the educational institution to offset the person's tuition, fees, and room and board expenses.

(d) A state-supported educational institution in the state is required to provide a waiver under (a) of this section only if the legislature appropriates funds for the purpose of offsetting waivers under this section. If an appropriation is not sufficient to fully offset waivers for each person entitled to a waiver under (a) of this section, the institution may offer full or partial waivers to eligible applicants as funding permits and at the discretion of the institution.

(e) In this section, ~~* **Sec. 3.** AS 14.43.160 is amended by adding a new paragraph to read:~~

~~(7)~~ "out-of-home care" has the meaning given in AS 47.14.400.

* **Sec. 34.** AS 36.30.850(b)(42) is amended to read:

(42) grants and contracts with qualified entities for services under AS 47.18.330 for the **out-of-home** [FOSTER] care transition program;

* **Sec. 4~~5~~.** AS 47.05.060 is amended to read:

Sec. 47.05.060. Purpose and policy relating to children. The purpose of this title as it relates to children is to secure for each child the care and guidance, preferably in the child's own home, **as well as an adequate education,** that will serve the moral, emotional, mental, **intellectual,** and physical welfare of the child and the best interests of the community; to preserve and strengthen the child's family ties unless efforts to preserve and strengthen the ties are likely to result in physical or emotional damage to the child, removing the child from the custody of the parents only as a last resort when the child's welfare or safety or the protection of the public cannot be adequately safeguarded without removal; and, when the child is removed from the family, to secure for the child adequate custody**, education,** and care and

adequate planning for permanent placement of the child.

* **Sec. 5.~~6.~~** AS 47.05.065 is amended to read:

Sec. 47.05.065. Legislative findings related to children. The legislature finds that

(1) parents have the following rights and responsibilities relating to the care and control of their child while the child is a minor:

(A) the responsibility to provide the child with food, clothing, shelter, education, and medical care;

(B) the right and responsibility to protect, nurture, train, and discipline the child, including the right to direct the child's medical care and the right to exercise reasonable corporal discipline;

(C) the right to determine where and with whom the child shall live;

(D) the right and responsibility to make decisions of legal or financial significance concerning the child;

(E) the right to obtain representation for the child in legal actions; and

(F) the responsibility to provide special safeguards and care, including appropriate prenatal and postnatal protection for the child;

(2) it is the policy of the state to strengthen families and to protect children from child abuse and neglect; the state recognizes that, in some cases, protection of a child may require removal of the child from the child's home; however,

(A) except in those cases involving serious risk to a child's health or safety, the Department of Health and Social Services should provide time-limited family support services to the child and the child's family in order to offer parents the opportunity to remedy parental conduct or conditions in the home that placed the child at risk of harm so that a child may return home safely and permanently; and

(B) the state also recognizes that when a child is removed from the home, visitation between the child and the child's parents or guardian and family members reduces the trauma for the child and enhances the likelihood

that the child will be able to return home; therefore, whenever a child is removed from the parental home, the Department of Health and Social Services should encourage frequent, regular, and reasonable visitation of the child with the child's parent or guardian and family members;
